Indonesian Communist Party (PKI)

The left movement in Indonesia began within the Sarekat Islam (Islamic Association), established in 1911. Henk Sneevliet established the Indische Sociaal Democratische Vereenigin (ISDV, Indies Social Democratic Association) in 1914 and worked within the Sarekat Islam. After the Russian Revolution of 1917 the ISDV increased its membership, and in May 1920 it changed its name to Partai Kommunist Indonesia (PKI, Communist Party of Indonesia), which became the first communist party in Asia. It was expelled by the Sarekat Islam. The PKI organized strikes, and Dutch authorities, alarmed, expelled leaders like Sneevliet and Tan Malaka. The policy of repression by the government made the PKI popular, and it organized large-scale strikes in 1926. In November the Republic of Indonesia was proclaimed. After proclamation of the Republic of Indonesia on August 17, 1945, by AHMED SUKARNO (1901–70) the PKI believed it to be Japanese sponsored and fascist. The republic successfully crushed two communist rebellions in 1946 and 1948.

There was a change in PKI's direction after 1950 under the leadership of Dipa Nusantara Aidit. It had an agenda of nationalist commitment and supported Sukarno's anticolonial policy. In the first general elections of 1955 the PKI was aligned with the Perserikatan Nasional Indonesia (PNI, Indonesian Nationalist Union), founded by Sukarno in June 1927. The PKI received 16.4 percent of the votes, and in the newly elected parliament it had 39 seats. With maneuvering and a dedicated party cadre, the PKI had become a political force to be reckoned with in the country.

In July 1957 the PKI made advances in municipal elections. The PKI had become vocal about the Dutch control of West New Guinea (Irian Jaya/Papua). In the wake of a campaign to annex it, the members of PKI as well as PNI seized control of Dutch industries in December 1957. The PKI's voice against the dominance of foreign capital in Indonesia gradually led to the nationalization of major industries. Religious parties like Islamist Masyumi were in favor of declaring the PKI illegal. The party had found Sukarno as an ally and supported his Guided Democracy. The PNI, PKI, and Nahdatul Ulama were among the major political parties that were allowed to function. After the abortive coup of February 1958, martial law was imposed by Sukarno, and the PKI supported it. By 1960 the PKI could influence Sukarno on internal and foreign policy of the country.

The situation in Indonesia during the 1960s was ripe for a communist insurrection, and the PKI exploited the situation to its maximum potential. The crop failure in central Java in February 1964 resulted in a starving population of 1 million. Both Sukarno and the PKI launched the Crush Malaysia campaign. PKI cadres crossed over the border and took part in guerrilla warfare in Sarawak and north Borneo. The United States terminated military aid in September 1963.

The PKI had begun a program of arming the people. It had become the third-largest communist party in the world, with a membership of 3.5 million. It had the direct support of 20 million people through its varied organizations. On the night of September 30, 1965, six top army generals were rounded up, taken to the Halim Air Force Base, and brutally killed. The identity of the perpetrators of the crime was not known, but blame was placed on the PKI. The *Gerakan* on September 30 resulted in violent retribution against the PKI. There was a slaughter of a half-million Communists, including the Chinese. The PKI was outlawed in March 1966.

General HAJI MOHAMED SUHARTO (1921–), who had taken leadership in crushing the coup, became the

acting president in March 1967. Sukarno remained under house arrest until his death on June 21, 1970. Suharto established the Kopkamtib (Operational Command for the Restoration of Security and Order) to scuttle the opposition, muzzle the press, and prevent the reemergence of the PKI. There was *otokritik* (self-criticism) by exiled PKI members in Beijing. In 1999 President Abdurrahman Wahid asked the exiled PKI leaders to come back to open a dialogue, but the proposal did not find favor with fundamentalist Islamic groups.

Indo-Pakistani Wars (Kashmir)

After the departure of the British in August 1947, India and Pakistan became successor states. The partition of the British Indian Empire into India and Pakistan left a legacy of mutual discord that is felt to the present day. India's foreign policy after independence was centered around world issues; relations with India dominated Pakistan's security concerns. Kashmir remained the major bone of contention between the two countries. The state of Jammu and Kashmir was Muslim-dominated, with Hindus and others constituting about 48 percent of the population. It had boundaries with both India and Pakistan. The ruler, Maharaja Hari Singh, vacillated over whether to join India or Pakistan. Pakistan sponsored an attack on the state on October 22, 1947, leading Hari Singh to sign the Instrument of Accession with the governor-general of independent India, LORD MOUNTBATTEN on October 26, 1947. The next day it was accepted by India. The sovereignty of Kashmir became a source of conflict, as Pakistan did not recognize the merger of its state with India. India agreed to Hari Singh's request for military assistance after accepting the Instrument of Accession, and thus the first war between India and Pakistan began.

India airlifted reinforcements and deployed the 161st Infantry Brigade into Kashmir. Pakistan had occupied about one-third of the state and named it Azad Kashmir (Free Kashmir). In late December the war turned in favor of Pakistan when it gained control of the Punch, Mirpur, and Jhanger regions. By 1948 a stalemate had developed. Prime Minister JAWAHARLAL NEHRU (1889–1964) of India took the matter to the UNITED NATIONS (UN) despite some opposition in the cabinet, which saw Kashmir as an internal problem of India. The terms of the cease-fire outlined in the UN resolution of August 13, 1948, called for withdrawal of Pakistani troops and the holding of a plebiscite to determine the desire of the Kashmir people. On December 31, 1948, a cease-fire was declared, and the demarcation line after the end of hostilities became the line of control (LOC) between the two countries. The Kashmir valley, Jammu, and Ladakh came under Indian control, and the state became the only Muslim majority province of secular India. Swat, Gilgat, Hunza, Nagar, and Baltistan constituted Pakistan-administered Kashmir.

CONTINUING CONFLICT

Neither India nor Pakistan adhered to the August resolutions, and the conflict over Kashmir continued. Pakistan insisted on a plebiscite, while India demanded Pakistan's withdrawal from territory it controlled (Azad Kashmir). In February the Constituent Assembly of the state of Jammu and Kashmir ratified accession to India, and, after two years, the state became one of the provinces of the Indian Union.

After a boundary agreement between China and Pakistan was negotiated in March 1963, the situation became still more complicated because China gained a large portion of the Trans-Karakoram Tract, ceded by Pakistan. The defeat of India in the 1962 October War by China encouraged Pakistan to enter another round of war. It was widely believed that hawkish elements in Pakistan began the war so as to snatch an easy victory from a humiliated India after the Sino-Indian War. The second Indo-Pakistan conflict began after a series of border clashes starting in March 1965. The border skirmishes, which began in the Rann of Kutch region of Gujarat, were contained in June after British mediation. A tribunal gave Pakistan 350 square miles of territory in 1968. The president, MUHAMMAD AYUB KHAN (1907–74), ordered Operation Gibraltar in August 1964 and sent infiltrators to Indian-held Kashmir.

The skirmishes between the forces of India and Pakistan began on August 6 and escalated into a large

battle nine days later. The Indian army captured the strategic Haji Pir Pass inside Pakistan totalling 710 square miles of Pakistani territory, while Pakistan occupied 210 square miles of Indian territory. The UN Security Council called for a cease-fire on September 22 and the war ended the next day.

A meeting between the prime minister of India, LAL BAHADUR SHASTRI, and Ayub Khan was arranged in the city of Tashkent by Soviet premier Alexey Kosygin. Under the TASHKENT AGREEMENT of January 10, the armies of both India and Pakistan went back to the positions they had held before August 5. Both agreed to resolve their disputes by peaceful means and not to interfere in each others' internal affairs.

The Tashkent declaration proved to be a temporary respite in the deteriorating relationship between India and Pakistan. Ayub was blamed for Pakistan's debacle and Pakistan's foreign minister, ZULFIKAR BHUTTO, resigned. Internally, East Pakistan was simmering with discontent; its leader, SHEIKH MUJIBUR RAHMAN, criticized the government for neglecting the security of East Pakistan at the time of the 1965 war. When East Pakistan declared its independence, the Pakistani army retaliated with brutality against the people of East Pakistan.

Indian prime minister INDIRA GANDHI declared the support of her government of Bangladesh (the name for independent East Pakistan). Next, India signed a 20-year Treaty of Peace, Friendship, and Cooperation with the Soviet Union in August 1971 to checkmate either Chinese or U.S. interference in case of a war with Pakistan and gave support to Bangladesh's revolt.

On December 3 the Pakistani air force began preemptive air strikes against eight airfields in East Pakistan. India retaliated and began an air, land, and sea attack on Pakistani forces in the east, marching toward Dhaka, the capital of Bangladesh. More than 1 million people in Bangladesh perished before Pakistan's army surrendered in Dhaka. Bhutto and Gandhi signed the Shimla Accords on July 2, 1972, by which both countries recognized the line of control (LOC) after the war of 1971. India and Pakistan resolved to refrain from the use of force against each other and to solve disputes bilaterally without third-party mediation.

Starting in the mid-1980s, a sizable number of the people of Kashmir expressed a desire for independence and received support from Pakistan. Human rights abuses by the terrorists and the Indian army drew international attention. In 1998 both India and Pakistan conducted nuclear tests and their relations became more volatile. In spite of this, both prime ministers, Atal

Bihari Vajpayee of India and Nawaz Sharif of Pakistan, signed the Lahore Declaration for solving the Kashmir dispute peacefully.

In February 1999 a war that would last for 73 days began on May 8 on the Kargil ridges, situated about 120 miles from Srinagar, the capital of Indian Kashmir. Both armies had to fight in the inhospitable terrain of the Kargil mountains. On July 14 both India and Pakistan ended military operations without boundary changes.

Kashmir has remained an unresolved problem between the two nations. It has assumed dangerous proportions with the potential for a nuclear conflict. However, summit talks have begun between leaders of both nations.

PATIT PABAN MISHRA

Institutional Revolutionary Party (PRI)

For more than seven decades (1929–2000) Mexico was governed by a single ruling party that dominated Mexican politics in a so-called one-party democracy. Dubbed the “perfect dictatorship” in 1990 by the conservative Peruvian novelist Mario Vargas Llosa, the ruling party went through several name changes and transformed in important ways as the century progressed, but it also retained a high degree of institutional continuity.

Following the Mexican Revolution (1910–20), the constitution of 1917, and the turmoil of the Cristero Rebellion (1926–29), the party was founded in 1929 by Supreme Chief (Jefe Máximo) and President Plutarco Elías Calles (1929–34). It was called the Revolutionary National Party (Partido Nacional Revolucionario, or PNR). In 1938, soon after nationalizing the properties of foreign oil companies, President Lázaro Cárdenas

(1934–40) changed its name to the Mexican Revolutionary Party (Partido Revolucionario Mexicana, or PRM). Its final name change came under President Miguel Alemán Valdés (1946–52), when in 1946 it became the Institutional Revolutionary Party (Partido Revolucionario Institucional, or PRI), as it has remained into the 21st century.

The PRI and its forebears (hereafter referred to as the PRI) won every national election from 1934 to 2000, when it was defeated at the polls by Vicente Fox, candidate of the opposition party Partido de Acción Nacional (National Action Party, or PAN). While the PRI did not outlaw opposition parties—in fact, encouraging their existence to lend greater legitimacy to its rule—its grip on the reins of state power remained unassailable by virtue of its domination of the machinery of state, the major media, and the electoral process, and by its capacity to repress or coopt opposition and to garner popular support by its selective dispensation of government patronage. Its strategies of rule and modes of domination were similar to the political machines that dominated major U.S. urban centers, such as Mayor Richard J. Daley’s political machine in Chicago (1955–76).

Despite its origins in the aftermath of the Mexican Revolution and its ostensibly “revolutionary” orientation, the PRI grew increasingly conservative, authoritarian, and corrupt after the major reforms of the Cárdenas years. Cárdenas in effect forged an authoritarian corporatist state, in which all major social sectors were represented in the state and party’s bureaucratic and administrative structures: the military, labor unions, the agrarian sector, and the popular sector. Unlike the situation in many Latin American countries, the Mexican army and police remained firmly subordinated to civilian authority. Organized labor was represented by the Mexican Workers’ Federation (Confederación de Trabajadores de México, or CTM), an increasingly bureaucratized union founded under Cárdenas and firmly integrated into state structures. Independent or insurgent labor unions were either repressed or coopted. The agrarian sector was represented by the National Peasant Confederation (Confederación Nacional Campesino, or CNC) and other state-controlled organizations.

In the six decades from 1940 to 2000, the PRI was characterized by its conservatism at home and, from the 1950s, its rhetorical support for leftist and revolutionary movements abroad, such as the CUBAN REVOLUTION. Under President Manuel Ávila Camacho (1940–46), the PRI supported the Allies in World War

II and in 1942 agreed to the BRACERO PROGRAM with the United States, permitting a specified number of temporary Mexican laborers into that country annually to work in mining, commercial agriculture, and related industries. Conceived as a wartime measure, under pressure from the U.S. government and commercial interests, the program was extended until 1965.

Dispensing with much of the socialist rhetoric and orientation of the Cárdenas years, the Camacho administration slowed the pace of agrarian reform; installed the moderate Fidel Velásquez as head of the CTM (which he dominated until his death in 1997); established a state-run national bank (Nacional Financiera); loosened restrictions on foreign ownership of Mexican resources; expanded public works programs; and embarked on an export-led model of national development.

These trends continued under Camacho's successors Miguel Alemán Valdés (1946–52), Adolfo Ruiz Cortines (1952–58), Adolfo López Mateos (1958–64), and Gustavo Díaz Ordaz (1964–70). These were the years of the so-called Mexican Miracle, when relative social peace prevailed, state-led industrialization made major strides, and economic growth rates were the highest in the nation's history. The government's principal source of foreign exchange derived from state control of the Mexican oil industry through PEMEX (Petróleos Mexicanos), established in 1938. In the 1960s many Mexicans grew increasingly disenchanted with the ruling party's authoritarianism and corruption. A major crack in the PRI's ideological edifice came in the October 1968 Tlatelolco massacre in Mexico City, on the eve of the country's hosting of the Olympics, when the police and state security forces violently repressed popular demonstrations calling for greater democracy.

The PRI's corruption, graft, nepotism, and violent repression of opposition mounted in the 1970s under presidents Luis Echeverría Álvarez (1970–76) and José López Portillo (1976–82). Oil revenues were at an all-time high, though much of the income was squandered in bribes, kickbacks, inflated salaries, and wasteful projects. Numerous protest movements by workers, students, farmers, and others were violently suppressed, including a guerrilla movement in the state of Guerrero led by former schoolteacher Lucio Cabañas.

Government debt rose dramatically, with world financial markets flush with petrodollars and transnational financial institutions like the WORLD BANK eager to extend low-interest loans to "developing" economies like Mexico's. In 1982, under President Miguel de

la Madrid (1982–88), a combination of a global recession, low world oil prices, record-high debt (\$80 billion in 1982), galloping inflation, and massive government expenditures led to the effective bankruptcy of the Mexican state. Devaluation of the peso and a restructuring of the international debt followed, though in December 1988, when de la Madrid left office, foreign debt had risen to a record \$105 billion, second only to Brazil's.

As a consequence of these and related crises, the administrations of presidents Carlos Salinas de Gortari (1988–94) and Ernesto Zedillo (1994–2000) embarked on a major effort to rein in inflation and slash the size of the federal government through privatization of state-owned industries and pursuit of fiscal austerity measures recommended by the INTERNATIONAL MONETARY FUND.

The combination of prolonged economic crises and erosion of the PRI's ideological legitimacy led to the party's defeat in the 2000 elections, though it continued to play a major role in the National Assembly and in state and local governments throughout Fox's tenure, as it promised to play in the administration of PAN-affiliated President Felipe Calderón, elected in 2006.

MICHAEL J. SCHROEDER

International Monetary Fund (IMF)

Since its foundation at the end of World War II, the International Monetary Fund (IMF, or Fund) has been one of the world's most powerful and controversial multilateral economic institutions. Debates on the role of the IMF in the global economy have intensified in recent decades, especially from the 1990s. Like its "sister institution," the WORLD BANK, the IMF was conceived at the Bretton Woods Conference of 1944 and formally established the following year, its official mandate "to promote international monetary cooperation . . . to facilitate the expansion and balanced growth of international

trade . . . to promote exchange stability . . . to assist in . . . the elimination of foreign exchange restrictions which hamper the growth of world trade . . . to give confidence to members by making the general resources of the Fund temporarily available to them . . . ” (Article I, Purposes, Articles of Agreement of the IMF).

Headquartered in Washington, D.C., since its foundation, in 2007 it had 184 member countries, with a staff of 2,716 in 165 countries. In pursuit of its mandate, the IMF purports to engage in three principal activities: (1) surveillance through the “monitoring of economic and financial developments”; (2) providing loans; and (3) providing technical assistance. It is governed by its Board of Governors, one from each member country. The Executive Board, comprised of 24 directors, is responsible for its daily operation.

Eight of these 24 Executive Board members are appointed by the IMF’s largest “quota holders” (the United States, Japan, Germany, France, and the United Kingdom). A member’s quota “is broadly determined by its economic position relative to other members.” In 2007 the United States had the largest quota, based on “special drawing rights” (SDRs), with SDR 37.1 billion (equivalent to \$55.1 billion). In essence, the IMF’s largest contributors wield the most power within the institution.

Critics charge that the IMF and the “neoliberal” economic paradigm that it promotes locks underdeveloped countries into positions of structural subordination within the global capitalist system. Especially controversial are IMF policy prescriptions for “austerity measures” and “structural adjustment” that include privatization of state-run entities, reduced public expenditures, and radically curtailed intervention of national governments in their national economies. Opposition to IMF policies and their underlying rationales has intensified in recent decades, as evidenced in part by the rise of left-leaning neo-populist regimes in Venezuela, Brazil, Argentina, Chile, Peru, and elsewhere in Latin America from the 1990s. Denouncing IMF policies as unjust, immoral, corporate welfare, and a major contributor to poverty, unemployment, and human misery worldwide, critics characterize the IMF and associated multilateral institutions and treaties (the World Bank, the G-7, the World Trade Organization [WTO], NAFTA, and many others) as instruments of the wealthy and powerful and major obstacles to social justice, economic well-being, and political rights among the world’s poor. As economic globalization accelerates in the 21st century, debates on the role of the IMF are likely to intensify.

Further reading: International Monetary Fund Web site. www.imf.org (accessed February 12, 2007); O’Brien, Robert, et al., *Contesting Global Governance: Multilateral Economic Institutions and Global Social Movements*. New York: Cambridge University Press, 2000.

MICHAEL J. SCHROEDER

interstate highway system, U.S.

In 1919 shortly after the conclusion of World War I, the United States Army organized a convoy that departed Washington, D.C., bound for San Francisco, California. The objectives of the cross-country trek were to test military vehicles and ascertain the feasibility of mass transport on a nationwide scale. The trip took 62 days. Twenty-five years later General Eisenhower commanded the invasion of Europe during World War II and noted the ease and freedom of movement for the troops.

Early attempts to construct a national highway system in the United States were woefully underfunded; President Franklin Delano Roosevelt had proposed such a project as a means of putting the unemployed to work during the Great Depression and World War II. Elected president in 1952, Eisenhower advanced an agenda that led to the Federal-Aid Highway Act of 1954, under which state and federal governments would match road and bridge construction costs. Two years later, Eisenhower signed the Federal-Aid Highway Act of 1956, which provided federal funding of \$25 billion for a highway system.

The roads were designed to accommodate traffic volumes expected 20 years later. Lanes were required to be 12 feet wide with a paved 10-foot shoulder; a minimum of two lanes in each direction had to carry cars at speeds of 50 to 70 miles per hour. More than 41,000 miles of highway would be built. North-south roadways were designated with numbers ending in odd integers; east-west interstates were given even numbers. Alaska is the only state without an interstate highway.

Eisenhower may have considered a highway system necessary for the efficient movement of military equipment and personnel or the effective evacuation of cities in event of a nuclear attack, but the effects on the economy were much wider-reaching. Suburbs grew, construction jobs were created, and commercial freight was transported; more automobiles were built, and roadside businesses developed. There were drawbacks as well, some becoming clear only later. Many older cities embraced interstate projects only to find that downtown business

The creation of the U.S. interstate highway system had far-reaching effects on the economy and the way of American life.

districts could now be bypassed entirely. Interstate routes disrupted urban neighborhoods and slashed across farmers' fields. The ease of interstate travel discouraged mass transit and helped speed the demise of long-haul passenger rail service. Interstate maintenance and capacity issues continued to create friction between the federal and state governments.

JOHN M. MAYERNIK

Intifada (first)

The first intifada (the Intifada, from the Arabic for “shaking off”) was a popular uprising among Palestinians against Israel’s military occupation, confiscation of their land, and suppression of their collective identity. The uprising started on December 8, 1987, in the Palestinian refugee camp Jabalya in the Gaza Strip, and quickly spread to the rest of Gaza and the West Bank,

including East Jerusalem, all of which had been under Israeli occupation since the 1967 ARAB-ISRAELI WAR.

The Intifada was a spontaneous popular phenomenon caused by a number of domestic and international factors. The most important of these factors was a sense of hopelessness that had pervaded the occupied territories and the belief among Palestinians that neither the military efforts of the Arab states nor diplomatic efforts by the PALESTINE LIBERATION ORGANIZATION (PLO) and Arab states would end the occupation. According to some analysts, the final catalyzing factor emerged in November 1987 when the Arab leaders at the Summit Conference in Amman, Jordan—just 40 miles away from the occupied territories—placed the IRAN-IRAQ WAR at the top of the Arab political agenda and relegated the Palestinian question to the end of the list. In addition, the Palestinian economy had declined since the 1967 war, and the territories had become a reservoir for cheap labor for Israel and its second-biggest export market after the United States. The average income of the Palestinian worker had declined, and a growing number of Jewish settlers had moved into the territories.

The Intifada used mainly low-key violence and avoided the use of weapons. It was largely limited to political demonstrations, strikes, refusal to pay taxes, and some stone throwing. Nevertheless, the Israeli authorities moved to suppress the uprising; Defense Minister Yitzhak Rabin ordered the troops “to break the bones of the Palestinian demonstrators.” Following high casualties among Palestinians, the UNITED NATIONS Security Council announced that it deplored the Israeli repression, but the confrontation continued and in the first 13 months of the Intifada more than 300 Palestinians and 12 Israelis lost their lives. The economic price of the Intifada was also high. Between 1987 and 1990 the GNP in Gaza declined at least 30 percent; the situation in the West Bank was not much better. By the middle of 1990 the Intifada had lost much of its earlier impetus, and popular frustrations resulted in the killing of real or suspected collaborators.

In spite of these hardships and the lack of success, the Intifada was seen by the Palestinians as a major event in their recent history. It was a popular action that encompassed all social strata and groups. The popular committees in towns and villages mobilized the population and looked after the families of the dead and wounded. However, the Intifada failed to achieve the long-term goal of self-determination and the end of the Israeli occupation.

In November 1988 the Palestinian National Council at Algiers declared an independent Palestinian state, but

Israel deemed the declaration null and void. Although the PLO did not initiate the Intifada, it tried to play a leading role in the struggle, in the course of which the PLO and HAMAS became political rivals. This internal division weakened the popular movement. The Intifada did succeed in bringing international attention back to the Palestinian cause and was a factor behind the U.S. sponsorship of the Madrid Conference in November 1991.

ANDREJ KREUTZ

Intifada, al-Aqsa

The al-Aqsa Intifada (uprising) of Palestinians broke out in September 2000 following a provocative visit by Ariel Sharon and 400 Israeli soldiers to the Haram al-Sharif in Jerusalem. The Haram al-Sharif complex includes the al-Aqsa Mosque, which is viewed by Muslims as the third-most-sacred site in Islam. Many Jews believe the site is also the location of the ancient temple of Solomon and refer to it as the Temple Mount. Some also hope to rebuild the temple on the site in the future. Owing to these conflicting religious and historic claims, the site has been a flash point for confrontations between Palestinians and Israelis.

The al-Aqsa Intifada was also evidence of continued Palestinian opposition to the Israeli occupation and the failure to achieve meaningful national independence. The uprising fed Israeli fears and the determination by those on the Israeli right to retain control of the territories. Since the 1967 ARAB-ISRAELI WAR, the Israeli military government had controlled more than 1.9 million Palestinians through military orders; these included arrests, detention without trial, restrictions on movement, collective punishment, and land appropriation as well as appropriation of water resources.

Under dual governance, Israeli settlers in the territories—some 200,000 by 2006—came under Israeli law, but Palestinians remained under military rule. Under the Oslo Accords Israel had agreed to trade land for

peace and had gradually withdrawn from some territory in the West Bank.

The Palestinians had hoped that Oslo would be a step toward the creation of an independent Palestinian state. Disillusioned and angry over the continued Israeli occupation and the perceived failures and corruption of the PALESTINE LIBERATION ORGANIZATION (PLO), led by YASIR ARAFAT and Fatah, many young Palestinians turned to the more radical HAMAS and Islamic Jihad. They adopted a new tactic of using suicide bombers to attack not only Israeli soldiers and settlers in the occupied territories but also Israeli civilians across the so-called green line inside the pre-1967 Israeli borders. These attacks undermined support for the peace process in Israel and strengthened the position of Israeli hard-liners who were opposed to returning any territory. Further Israeli settlements also continued to be built even after Oslo in 1993. Ariel Sharon, known for his hawkish stance and support for the settlers, was elected Israeli prime minister in 2001.

In 2002 Israeli forces reoccupied much of the West Bank territory that had been turned over to the Palestine Authority. In Jenin the Israelis met with armed Palestinian opposition. Israeli forces retaliated by reducing much of the town to rubble, and many were killed or made homeless. Israeli forces also laid siege to Bethlehem, where several wanted Palestinians had taken refuge in the Church of the Nativity. Arafat's compound in Ramallah was also surrounded, and he spent most of the last two years of his life under virtual house arrest. Israel also assassinated Sheik Ahmed Yassin and Abdul Aziz al-Rantissi, two key Hamas leaders. Yet the suicide attacks inside Israel continued, resulting in a number of civilian deaths. By 2004 over 4,000 Palestinians and 900 Israelis had died, more than had died in the six years of the first Intifada.

Israel also began to build a wall to separate the territories. At 360 kilometers long, with guard towers at about every 300 meters, trenches, and barbed wire, the wall was twice as long as and three times higher than the Berlin Wall. Built entirely on Palestinian land occupied by Israel since the 1967 war, the wall separated Palestinians from one another, limited access to Jerusalem, and isolated some communities entirely. However, the wall did not prevent further suicide attacks. Following Arafat's death in 2004, Mahmoud Abbas, known as Abu Mazen, became the new Palestinian president. But in spite of concerted efforts he failed to revive the peace process or to stop the suicide bombers. Hamas won the free and open Palestinian elections in 2006, and Ismail Haniyeh, a popular and charismatic Hamas leader from the Gaza Strip, became the prime minister. Israel and its ally the United

States refused to deal with Hamas, which the United States considered a terrorist organization. Much-needed foreign aid was halted or constricted, and the economic situation in the territories became increasingly dire.

Prime Minister Sharon adopted a policy of sequential unilateral decisions whereby he made policy regarding the territories without consultation with the Palestinians. In 2005 he withdrew Israeli troops from the Gaza Strip and dismantled several Israeli settlements, but Israel retained control over land, air, and sea entries into Gaza and periodically attacked or invaded, often in retaliation for attacks by Palestinians.

After Sharon was incapacitated following a series of strokes, Ehud Olmert—a former mayor of Jerusalem—became the Israeli prime minister in 2006. He pledged to continue Sharon's policies and supported a massive Israeli invasion into Lebanon in the summer of 2006 in a failed attempt to eradicate HIZBOLLAH attacks. Hence the cycle of violence and retaliation continued to escalate and the lives of both Israelis and Palestinians became less safe.

JANICE J. TERRY

Iran, contemporary

The Islamic Republic of Iran was established in April 1979 after the revolution overthrew the monarchy of Shah Mohammad Reza Pahlavi. Years of turbulence preceded the revolution, led by exiled Shi'i cleric AYATOLLAH RUHOLLAH KHOMEINI.

Khomeini was an Islamic scholar from the conservative city of Qom; under the shah's regime he had been exiled to Iraq. After being expelled from Iraq, at the shah's prodding, Khomeini moved to France, where he coordinated a revolution using the press, radio, and audio cassettes to incite Iranians to rise up against the shah. After the shah fled the country, Khomeini returned to Iran in 1979.

The Ayatollah exhorted Iranian citizens (male and female) over 16 years of age to vote for the creation of an Islamic Republic. In free and open elections 98 percent voted in favor of the republic. The overthrow of the monarchy—although celebrated by most Iranians tired

of rampant corruption, overspending, and the police state created by the shah—nevertheless worried many secularists who were alarmed by the new government, which was controlled by the mullahs, or Shi'i clergy.

Under the new 1979 constitution a supreme leader ruled over a theocracy; beneath the supreme leader a 12-member cabinet, or Council of Guardians, oversaw the constitution and had veto power over legislation passed by the Majlis, or parliament. Khomeini served as the first supreme leader until his death in 1989. Khomeini sought to establish a government that adhered to a strict Shi'i code of law and conduct. Iranian women, who had the right to vote and to work outside the home, nevertheless were restricted regarding dress and modes of behavior. The secularists within the government who had struggled against the shah were marginalized by the new Islamist forces, and many fled the country for Europe and the United States.

Following the shah's overthrow, Iranian relations with the United States, a strong ally of the Pahlavi dynasty, deteriorated. When the shah entered the United States for cancer treatment in 1979, riots broke out in Tehran and angry students stormed the U.S. embassy and took many hostages. Khomeini encouraged the students and labeled the United States the "Great Satan." Many Iranians blamed the United States for its support of the shah and his repressive regime. The students demanded that the shah be handed over to the new Islamic regime for trial in exchange for the release of the embassy hostages. The United States refused to return the shah and severed diplomatic relations with the Islamic Republic. The resulting crisis dragged on for more than a year before the hostages were released, and diplomatic relations between the United States and Iran had yet to be resumed.

Neighboring Arab governments were also alarmed at Khomeini's attempts to export Islamic revolution to other Muslim nations. Neighboring Iraq, with its large Shi'i population, was particularly concerned. The Iraqi government led by SADDAM HUSSEIN, with at least the tacit support of other Arab states and the United States, decided to preempt the Islamic revolution by attacking Iran in 1980. Although the Iranians were taken by surprise, Hussein severely underestimated the national determination of Iran, and a long, eight-year war of attrition began. The IRAN-IRAQ WAR lasted from 1980 to 1988 and caused massive casualties and destruction on both sides. Western and Arab governments provided arms and assistance to Iraq, while several communist-bloc countries, Libya, and Syria provided support to Iran. By 1988 both nations were exhausted and agreed to a United Nations-brokered truce.

Khomeini died the next year, and Ali al-Khameini became the new supreme leader. Ali Akbar Rafsanjani, a mullah who advocated resumption of relations with the West, was elected president and purged many hard-line members from his cabinet. However, reformist governments elected by wide margins in the 1990s were thwarted in implementing reforms and liberalization by the hard-line Council of Guardians, who retained final say on legislation. Although the youthful Iranian population, many born after the revolution, wanted liberalization of the media, social life, and dress, the conservative mullahs clung to power.

In the 1990s Iran also started to build up its nuclear capabilities. Prior to the 1979 revolution Iran had signed the Nuclear Non-Proliferation Treaty, which gave Iran the right to use and research nuclear energy for peaceful purposes. However, after the 2005 election of Mahmud Ahmadinejad, a conservative and controversial populist, as president, Iran's nuclear research appeared to escalate. The United States threatened sanctions and military action were Iran to continue its nuclear ambitions, but Ahmadinejad appealed to Iranian nationalism and argued that Iran had the right to develop nuclear weapons as other nations such as Israel, Pakistan, and India had done.

After the occupation of Iraq in the SECOND GULF WAR, Iran emerged as a major regional power. It continued to lend financial and military support to Shi'i communities in Iraq and to HIZBOLLAH in Lebanon. Its oil reserves also gave Iran considerable leverage economically, as it threatened to switch from selling oil in dollar prices and move to gold or the euro; this could devastate the dollar and weaken the U.S. economy. Mired in protracted conflict in Afghanistan and Iraq, the United States protested Iranian policies but had few options to force it to drop its support for Islamist movements or its nuclear program.

KATIE BELLIEL

Iran-contra affair

The Iran-contra affair involved an attempt by the National Security Council (NSC) of the RONALD REAGAN administration to circumvent congressional limita-

tions on aid to the contras (Nicaraguan guerrillas) and to secure the release of U.S. hostages held in the Middle East through the sale of arms to Iran. The revelation of this attempt undercut the popularity of the president and led to the indictment of several aides. The affair arose from parallel events in Central America and the Middle East. In Central America, the Reagan administration was supporting the contras, an amalgam of individuals and groups who opposed the Sandinista regime in Nicaragua. Despite a reputation for ineffectiveness and drug dealing, the contras were considered by the Reagan administration to be the best alternative to the Marxist Sandinistas. Congress passed the Boland Amendment in 1982, which prohibited funding for the "overthrow of the government of Nicaragua." The amendment allowed humanitarian aid but specifically prohibited covert aid by the Central Intelligence Agency (CIA).

At the same time in the Middle East, terrorist organizations such as Islamic Jihad were increasing their harassment of U.S. citizens in response to the Israeli invasion of Lebanon and the U.S. organization of a UNITED NATIONS peacekeeping force in Beirut. Over a dozen U.S. citizens were kidnapped and taken hostage between 1982 and 1984. The Reagan administration responded to this provocation by vowing never to negotiate with terrorists, while blaming the Iranians for supporting these organizations.

Additionally the Iranians were locked in a war with the SADDAM HUSSEIN-led country of Iraq. Running from 1980 to 88, the IRAN-IRAQ WAR would be bloody but ultimately inconclusive. In the course of the fighting the Iranians began to run into a significant problem. Most of their military hardware had been purchased from the United States before the 1979 overthrow of the shah. As the war dragged on, Iran began to run short of ammunition and spare parts, which they could not acquire from the United States because of a congressional ban on arms sales to the Iranians stemming from the hostage crisis of 1979–81.

The NSC, led by National Security Advisor John Poindexter and CIA director William Casey, proposed the following arrangement to the president and his advisers. Through private arms dealers and Israel, the United States would sell arms to the Iranians above cost. In return, the United States expected Iran to pressure the terrorists to free the U.S. hostages. The profits from the arms sales would be secretly diverted to the contras to keep their activities afloat. Reagan approved the idea despite opposition from Secretary of State George Shultz and some dissent from Secretary of Defense Caspar Weinberger.

The first arms shipments took place in 1985, and more were sent in 1986. Despite pressure and apparent promises, only one hostage and the body of a second were released. The money and additional supplies were funneled to the contras until October 1986, when a CIA-chartered plane crashed in Nicaragua. Its pilot confessed to running supplies to the contras. On November 3 a Lebanese journal, *Al-Shira*, revealed the existence of the arms sales to Iran. The Reagan administration acknowledged the existence of the arms sales and contra supplies in a speech by the president on November 13.

Witnesses such as NSC staff member Colonel Oliver North testified before both Congress and the Tower Commission, admitting to the arms sales and funding while portraying the president as a “hands-off” administrator. Reagan’s own appearance before the commission revealed the president’s shaky grasp of details and apparently poor memory of events. In the Tower Commission’s final report, the president’s lack of control over his staff was strongly criticized, but most of the blame for the scandal was placed on the National Security Council and its staff.

RICHARD M. FILIPINK, JR.

Iran hostage crisis

The Iran hostage crisis was a diplomatic conflict between the United States and Iran that formally began on November 4, 1979, when Islamic militants overran the U.S. embassy in Tehran and seized its staff as hostages. This situation lasted through the end of President JIMMY CARTER’s term and hurt him politically in the presidential election against RONALD REAGAN.

Relations between the United States and Iran began to break down during the IRANIAN REVOLUTION in early 1979. Prior to this Iran’s ruler, Shah Mohammad Reza Pahlavi, had been an ally of the United States. The shah had purchased billions of dollars’ worth of U.S. arms and had committed Iran to a program of Western-style modernization—a program that by the 1970s had

created a political and cultural backlash by Islamic fundamentalists (chief among them the AYATOLLAH RUHOLLAH KHOMEINI). In an attempt to blunt this backlash, the shah resorted to increasingly heavy-handed internal measures, but only succeeded in alienating the Iranian populace. In January 1979 the shah was overthrown and forced into exile, and an Islamic-style theocracy, led by the Ayatollah Khomeini, assumed power. The U.S. embassy in Tehran, Iran’s capital, warned President Carter soon afterward that allowing the shah into the United States would precipitate a crisis with the new Iranian government, but the shah, ill with cancer, was admitted to a New York hospital on October 23. By this time the exiled shah had been legally deposed and formally sentenced to death in Iran. Less than two weeks later the long-brewing crisis of anti-U.S. feelings broke out when a mob of Iranian militants seized the U.S. embassy, detained 66 members of the staff as hostages, and demanded the extradition of the shah to Iran in return for the release of the hostages. President Carter rejected this, but in December 1979 the shah left the United States, first for Panama and then to Egypt, where he died on July 27, 1980.

Since the hostage taking violated diplomatic convention and international law, Carter was able to rally world opinion against Iran and impose an economic embargo. The White House attempted several failed diplomatic initiatives. The Ayatollah Khomeini, who had privately sanctioned the actions of the hostage takers, refused to see U.S. emissaries and rebuffed U.S. diplomatic efforts. In the only successful diplomatic measure, PALESTINE LIBERATION ORGANIZATION (PLO) representatives gained the release of 13 female and African-American hostages. On April 7, 1980, the United States officially broke diplomatic ties with Iran.

Despite continued pressure on Iran, the hostages remained in captivity five months after the crisis began, and domestic pressure mounted on the Carter administration to find a solution. After much deliberation, President Carter decided that direct intervention was needed. Carter then authorized Operation Desert Claw, an ill-fated military rescue plan. The April 24, 1980, rescue mission suffered from having to traverse great distances by air, unexpected sandstorms, and untimely mechanical failures. The final mishap came during a desert refueling stop, when a helicopter collided with a tanker plane loaded with high-octane aviation fuel, killing eight U.S. servicemen.

The failure of the rescue mission did not end negotiations, but the Carter administration appeared to be paralyzed by the crisis. Finally, on January 19, 1981,

Vice President George Bush welcomes Colonel Thomas E. Schaefer, one of the Americans held hostage by Iran.

U.S. secretary of state Cyrus Vance quietly signed the Algiers Accord, which established the pre–November 4, 1979, situation. Its main clause was the restitution of frozen Iranian financial assets in the United States. In return, on January 20 Iran released the U.S. hostages after 444 days of captivity, just minutes after Ronald Reagan’s inauguration.

KEITH BUKOVICH

Iranian revolution

The Iranian revolution of 1979 overthrew the Pahlavi dynasty and established an Islamic republic. In 1953 when it appeared that the monarchy was about to be

overthrown, the Central Intelligence Agency (CIA) helped to orchestrate a counter coup that kept Shah Mohammad Reza Pahlavi in power. Iran, under the shah, was closely allied with the United States and in the COLD WAR Iran was a staunchly pro-Western buffer on the southern flank of the Soviet Union. Iran was used as a base for United States military and intelligence gathering aimed at the Soviet Union. The United States also supplied considerable assistance to the shah.

In 1961 the shah announced an ambitious plan of development known as the White Revolution. The six-point plan included improvements in women’s rights, healthcare, and education, as well as privatization of state-owned factories and land reform. The proposed nationalization of land owned by the clergy and landed elites led to major demonstrations against the government. The shah repressed all political opposition, and his secret police, SAVAK, imprisoned and often tortured opponents of the regime, especially members of the Iranian communist Tudeh Party.

Conservative businessmen in the Tehran bazaar, traditionally a major force in Iranian politics, and the clergy were also offended by the lifestyles of the elite, who emulated Western dress, consumed alcohol (forbidden to Muslims), and practiced open relations between the sexes. Even the Iranian middle class was dismayed by the extravagant expenses of the 1967 formal coronation of the shah and his wife and the 1971 celebration of the 2,500th anniversary of the Peacock Throne at Persepolis. In the 1970s Iran became a regional power when the shah used increased revenues from petroleum to buy sophisticated armaments, mostly from the United States.

A number of Iranian intellectuals laid the groundwork for the revolution in books and treatises critical of the Pahlavi regime. Samad Behrangi (1939–68) wrote popular folktales that were in fact veiled critiques of the shah’s regime. He also wrote against what he called “west struckness,” or intoxication with all things Western. Jalal Al-e Ahmad (1923–69), a writer from a clerical family, described those Iranians who copied the West as diseased. Ali Shari’ati (1933–77) was the most influential Iranian social critic. A sociologist, Shari’ati was educated at the Sorbonne. He was familiar with Marxist thought but fused it with Islam, arguing that independent reasoning should be applied to interpreting the Qu’ran to create a new society. A prolific writer, Shari’ati was a major influence on a new generation of Iranian students. In an attempt to halt his writing and political activity, the government arrested Shari’ati, who was tortured, released,

and then placed under house arrest. His books were banned, and he died in exile in London.

The clergy also opposed the shah's efforts to undermine their authority and stop government subsidies for religious schools. AYATOLLAH RUHOLLAH KHOMEINI, a leading cleric in Qom, a conservative center for the training of Shi'i mullahs, was particularly outspoken in his hostility to the shah. An expert on Islamic law, Khomeini spoke against the acquisition of U.S. military equipment and favored treatment in Iran, and he was arrested several times in the 1960s. In 1964 he was sent into exile to Turkey, and he then took up residence in the Shi'i holy city of Najaf in Iraq, where his activities were closely monitored by the Iraqi government. In 1978 the shah convinced SADDAM HUSSEIN to oust Khomeini, who then moved to France, where he had access to the media, enjoyed freedom of movement, and attracted a loyal following among dissident Iranians.

The shah's regime was accused of increased corruption and nepotism while the gap between the wealthy who lived lavish lifestyles and the poor in the countryside and urban slums widened. The revolt against the regime began in January 1978, with riots in Qom protesting an anti-Khomeini article published in a newspaper. Police forces moved in to crush the riot and killed 100 protesters. To commemorate their deaths as martyrs, protests took place in Tabriz and Yazd in March; these demonstrations led to more deaths when the police moved in to stop them. This initiated a 40-day cycle of riots and repression, with inevitable deaths. In May riots broke out in 34 towns. The demonstrators were encouraged by speeches by Khomeini on cassette tapes that were smuggled into the country. Khomeini emerged as the symbol of opposition to the shah's regime.

In August a fire set by the shah's appointees at a cinema in Abadan killed an estimated 400 students who had gathered to protest the regime. This was followed by "Black Friday" in September, when demonstrators were massacred in Tehran. By the fall a new pattern of strikes by students, teachers, and their supporters emerged. In December, government workers and employees in the petroleum industry as well as the army joined the protests. Women were also active participants in these demonstrations. Most of those who lost their lives were young Iranians, often from the Left. The clergy remained largely in the background but would emerge as the major political force after the fall of the monarchy. The United States failed to find a substitute for the shah, who seemed convinced that Washington would step in to save his regime.

In the face of mounting violence and lack of support even within the military, the shah, ill with cancer, fled the country in January 1979. He left a caretaker government under Shapour Bakhtiar, who had no base of support. Khomeini returned amid massive demonstrations of support in February. Following Khomeini's triumphal return, Bakhtiar fled Iran and was replaced by Mehdi Bazargan. The Iranian Islamic Republic was established on April 1, 1979.

The shah was allowed into the United States for medical treatment in the fall of 1979; this inflamed Iranians, who had demanded his return for trial. The shah, who had difficulty finding a country to grant him asylum, died in Egypt in 1980. In Tehran students, many of them members of newly formed, self-appointed committees (*kometehs*), stormed and took the U.S. embassy and held U.S. hostages for over a year. Khomeini used the resulting crisis and chaos to help cement the clergy's control over the new government. Right-wing Hojatieh groups supporting militant Islam also emerged; they were supported by some ayatollahs and bazaaris.

The 1979 constitution provided for a Majlis (parliament), a president elected by direct representation, and a *velayat e faqif*, a spiritual leader, to act as the final authority in the nation. Khomeini was named the first *faqif*. The Council of Guardians acted as a supreme court to review all legislation of the Majlis. The council frequently rejected parliamentary legislation such as trade nationalization and land reform as un-Islamic. Abolhassan Bani-Sadr was elected the first president by a wide margin in 1980, but he was removed from office by Khomeini in the summer of 1981. Sadr then went into exile to France. Khomeini repressed political opponents and purged members of the old regime as well as the leftist opposition, such as the Fedayin al-Khalq.

The Iranian Revolution had a huge impact on the Islamic world, and many young Muslims, discouraged by the corruption and ineffectiveness of the governments in their own countries, looked to Iran as a possible model for future changes. Khomeini's open support for regime change in neighboring Arab nations aroused the fears of Saudi Arabia and other states and led to the IRAN-IRAQ WAR. However, in spite of internal contradictions, domestic opposition, and condemnation by many international forces, the Islamic regime proved to be remarkably flexible and long lasting.

JANICE J. TERRY

Iran-Iraq War (1980–1988)

The Algiers Treaty of March 6, 1975, signed by Iran's Shah Mohammad Reza Pahlavi and then vice president of Iraq SADDAM HUSSEIN, was intended to solve long-standing border and waterway disputes between the two neighboring countries.

However, with the overthrow of the shah in 1979, which put Iran in the hands of Islamic fundamentalists, the political dynamics changed. By 1980 Iran's new leaders started to hint that they did not feel obligated by the shah's earlier commitments, and Iraqi leaders were complaining that Iran still had not returned certain border areas promised under the 1975 treaty.

In September 1980 Iraqi armed forces moved to reclaim those lands, and on September 22 they crossed the border into Iran. The invasion had consequences that Iraqi president Hussein had not expected. In launching the attack on Iran, Hussein thought the war would be brief and would lead to the downfall of Iran's religious leader, the AYATOLLAH KHOMEINI, whom Hussein disliked. Instead, the power of Khomeini and other Islamic revolutionaries increased as Iranians united and rallied to support the war.

Few had expected Iraq to win the war outright. Although Iraq had better technology, more weapons, and a stronger air force, Iran had three times the population and about four times the geographic area of Iraq. Thus the Iran-Iraq War seesawed back and forth for eight grueling years. Some methods of World War I were employed; Iran, for example, often conducted useless infantry attacks, using "human assault waves" made up in part by young, untrained conscripts, as in the Kerbala offensives, which were repulsed by the superior air- and firepower of the Iraqis. Iraq, concerned with the war's trench warfare and stalemate, had its overtures for a peace agreement undercut when its reputation was tainted by UNITED NATIONS reports that it had used deadly (and illegal) chemical weapons against Iranian troops in 1984.

Although both Iran and Iraq attacked each other's oil-tanker shipping in the Persian Gulf, Iran's attacks on Kuwait's and other gulf states' tankers caused the

United States and several Western European nations to station battleships in the gulf to protect those tankers. This in turn led, on July 3, 1988, to the accidental shooting down of an Iranian civil airliner by the U.S. cruiser *Vincennes*, which killed all 290 crew members and passengers aboard.

As many as 1 million people died in the Iran-Iraq War, approximately 1.7 million were wounded, about 1.5 million were forced to flee as refugees, and major cities were destroyed on both sides. The oil industries of both countries also suffered extensive damage due to the fighting; oil exports, and earnings from those exports, naturally dropped. More important, the large oil reserves of Iran and Iraq represented the potential for significant international economic power, but both nations had together largely wasted \$400 billion on the war and along with that the chance to build up their societies.

The effects of the war clearly reached beyond the two combatants. Iran's need for additional weapons led to a compromising relationship for the administration of U.S. president RONALD REAGAN in 1985. In the secret IRAN-CONTRA AFFAIR, Iran was able to obtain weapons from the United States (the country that Khomeini had called "the great Satan") in exchange for the release of hostages in Lebanon. At about the same time U.S. aid of all types began to appear in Iraq, whereas the Soviet Union supplied about two-thirds of Iraq's weapons. The Iran-Iraq War also ended Khomeini's attempts to spread his fundamentalist Islamic revolution abroad. Although stymied in his ambitions to make Iraq the leading power in the Persian Gulf (and the Arab world), Iraqi president Hussein learned new fighting strategies that he would later use against another neighboring country, Kuwait, which had been his ally during the conflict.

By the time a cease-fire finally arrived on August 20, 1988, the Iran-Iraq War had been the longest and most destructive conflict in the post-World War II era, and none of the basic friction points between Iran and Iraq had been settled. However, in August-September 1990, while Iraq was busy with its invasion of Kuwait, Iraq and Iran quietly restored diplomatic relations, and Iraq agreed to Iranian terms for the settlement of the war: the removal of Iraqi troops from Iranian territory, division of sovereignty over the Shatt al Arab waterway, and an exchange of prisoners of war.

KEITH BUKOVICH

Iraq revolution (1958)

The Hashemite dynasty in Iraq was overthrown in a bloody revolution in 1958. A group of disgruntled nationalistic army officers headed by General Abdul Karim Qassem and Colonel Abd al-Salam Arif copied the takeover of the Egyptian government by the Free Officers, led by GAMAL ABDEL NASSER, in 1952. On July 14, 1958, the Iraqi forces took over the radio station, post office, royal palace, and government centers in Baghdad.

The royal family was killed. Nuri al-Said, the grand old man of Iraqi politics who had served as prime minister on numerous occasions, was captured trying to escape disguised as a woman and was torn apart by an angry mob. As violence mounted in the capital, the officers declared martial law and established a three-person sovereignty council of one Kurd, one Sunni, and one Shi'i, in an attempt to include the main sectarian groups in Iraq. Qassem became prime minister and minister of defense. Show trials were held of members of the ancien régime, and the new government announced its intention to purge the system of corruption and imperial control.

Qassem was a notable champion for the poor and strongly supported eradicating the slum areas around Baghdad and providing low-cost housing. Under a new land reform program, property confiscated from the old ruling class was distributed to the peasants but without the formation of cooperatives or government planning as in Egypt. As a result, there was a decline in agricultural productivity. The new regime also focused on improving and widening access to education. In a highly popular move most of the oil industry, Iraq's major source of income, was taken over. Politically Qassem played the Iraqi communists against the Arab nationalist forces, especially the BA'ATH PARTY.

The new Iraqi regime supported both the Palestinian and Algerian nationalist movements and withdrew from the hated Western-dominated CENTO, OR BAGHDAD PACT. Internationally it drew closer to the Soviet Union. In the era of COLD WAR politics the West, especially the United States, viewed the Iraqi revolution as a victory for the Soviets and blamed Nasser for the overthrow of the old monarchy.

Although Nasser initially supported the new regime and was pleased at the collapse of the Hashemite monarchy, he had not actually been behind the takeover. Hoping to enlarge the pan-Arab movement and convince Iraq to join the UNITED ARAB REPUBLIC, Nasser invited Qassem to Egypt on several occasions, but Qassem found excuses to refuse, and the relationship between the two nations grew increasingly hostile.

Suspected of plotting a coup, Arif was arrested in late 1958, but Qassem pardoned his old ally and permitted him to leave for Europe. Several attempted coups and an attempted assassination of Qassem by Ba'athists failed in 1959. SADDAM HUSSEIN was one of the plotters behind the failed assassination, and he subsequently fled to Egypt. Relationships between the government and the Kurds, led by Mustafa Barzani, also soured, and by 1961 a full-scale war was being waged between the Iraqi army and Kurdish nationalist forces. In the face of mounting political instability, Qassem's personal behavior became more erratic. After Britain declared Kuwait an independent country, Qassem claimed it as an integral part of Iraq in 1961. British and Saudi troops moved into Kuwait to protect it, and Iraq was forced to withdraw its claim and recognize Kuwait as an independent nation.

In 1963 a coup by army officers, including Arif, overthrew Qassem, who was taken prisoner. Although he pleaded for his life, Qassem was executed on orders given by Arif. Abd al-Salam Arif died in 1966, and his brother Abd al-Rahman Arif succeeded him, but the regime was plagued by political instability and the ongoing conflict with the Kurds. In the summer of 1968 Ba'athists led by Ahmed Hasan al-Bakr took over. To protect the new Ba'ath regime from domestic opposition, Bakr had his protégé Hussein control the internal security forces. Hussein gradually consolidated his power within the party and ruthlessly eliminated potential enemies.

The new regime instituted a more far-reaching land reform program and nationalized the oil industry in 1972. Escalating oil revenues in the 1970s were used to build infrastructure, including road and communication lines, and to modernize the education and health care systems. The regime also negotiated a settlement with the Kurds, who obtained an autonomous region in the north. Relations with the Soviet Union were also strengthened. In 1979 Bakr, who had been in poor health for some time, stepped down in favor of Hussein, who ruled Iraq until his regime was overthrown in a U.S.-led military invasion in 2003.

See GULF WAR, SECOND (IRAQ WAR).

Irish Republican Army (IRA)

The Irish Republican Army (IRA) is a clandestine paramilitary organization that devoted itself to the removal of the British presence from Northern Ireland and the ending of the partition of the island. Though it was active since the Anglo-Irish War (1920–21), it gained international notoriety only in the last four decades of the 20th century. This campaign was waged against a number of (Protestant) loyalist militias, as well as the British army itself. The group's aims were shared by the Sinn Féin political party, which was labeled the IRA's "political wing" but that always officially disavowed any such connection. Although both groups claimed to speak for all of Ireland, neither enjoyed the support of more than a minority of Northern Ireland's Catholic population.

The roots of the IRA can be traced back to 1919. In that year, nationalist leader Michael Collins melded the various nationalist militias who had participated in the 1916 Easter Rising into a guerrilla army that would supplement the parliamentary maneuverings of the Sinn Féin-dominated Irish Daíl (parliament). Collins ordered the IRA against, first, the British intelligence and police forces in Ireland, and then the "Black and Tan" auxiliary forces that were deployed against them by the British government. Ultimately the IRA succeeded in forcing a truce with the British, the result of which was the negotiation of an Anglo-Irish Treaty in December 1921. Unhappy with the terms of this treaty, a minority of deputies, led by President Éamon de Valera, walked out of the Daíl and vowed to continue fighting for a republic. The IRA split as well. This led to the Irish Civil War

(1922–23), in which the pro-treaty Free State forces defeated the anti-treaty Republicans.

After the civil war the Free State forces became the regular Irish army; the IRA was driven underground. This situation did not improve when de Valera and his new political party, Fianna Fáil, entered the Daíl in 1927 and were elected to power in 1932. Relations between de Valera, now a constitutional Republican, and the IRA worsened until finally, in 1935, the de Valera government declared the IRA an illegal organization. The 1938 Irish constitution achieved many of de Valera's (and the IRA's) stated objectives. However, it did not end partition, and thereafter the IRA's sole raison d'être would be directed toward that end.

The organization engaged in a bombing campaign on the British mainland during the late 1930s and gave some material support to German agents operating both in Britain and in the republic during World War II. Neither of these actions proved successful, and by the 1950s it was hard to view the IRA as anything but a spent force. The IRA was reborn out of the crisis that beset Northern Ireland in the late 1960s. Inspired by the U.S. CIVIL RIGHTS MOVEMENT, Catholics in Ulster began to demonstrate for better access to housing and fairer wages. In August 1969 the demonstrations deteriorated into rioting, police repression, and the eventual deployment of the British army. Initially the IRA was caught unawares, as the Belfast graffiti "IRA = I Ran Away" testifies. Largely as a result of this embarrassment, the IRA split in 1970. A group calling itself the "Provisional IRA" (or "Provos") broke off and rededicated itself to a united Ireland through terrorist activity. Within two years the Provos had far surpassed the Officials in popular support, and the three-decades-long war that came to be known euphemistically as "the Troubles" had begun.

In August 1971 the British government introduced a policy of internment of IRA suspects without charge for up to seven days. When by 1972 these methods had not deterred the IRA or contained the crisis, the Loyalist parliament at Stormont fell; Britain introduced direct rule of Northern Ireland from London, and internment was phased out. Beginning with the Troubles, IRA prisoners had enjoyed the status of political prisoners. In 1976 this status was abolished. The IRA turned to hunger strikes. Bobby Sands's 66-day-long hunger strike, which lasted until his death on May 5, 1981, attracted international publicity. Any lasting benefit that might have resulted

A Republican poster, in support of the Provisional Irish Republican Army, in 1974, commemorates the 1916 Easter Rising.

for the IRA was canceled out by the negative reaction to the IRA's assassination of LORD MOUNTBATTEN of Burma in August 1979, and its near miss of MARGARET THATCHER in October 1984.

Away from the world stage the cycle of attacks by, and reprisals against, the IRA continued apace. Hope for an end to the struggle surfaced in 1994, with a cease-fire brokered by Sinn Féin leader Gerry Adams, British prime minister John Major, Irish taoiseach Albert Reynolds, and U.S. president BILL CLINTON. After the ratification of the Good Friday accords in 1999 and the progress of the Northern Irish peace process, the relevance of the IRA was called into question. In 2005 the provisional IRA announced the end of its armed campaign. The organization surrendered its weapons under the supervision of UNITED NATIONS inspectors.

ANDREW KELLETT

Islamist movements

Islamist movements flourished in many parts of the Muslim world in the late 20th century. These movements sought to revitalize Islam as a political force and to create Islamic governments that would rule under sharia (Islamic law). Islam is the world's second-largest religion, with 1.3 billion adherents, compared to Christianity, with 2.2 billion. It is the fastest-growing religion in Africa. The most predominantly Muslim states are in Africa and Asia, but substantial numbers of Muslims also live in the Western Hemisphere and Europe. With 57 member states, the Organization of Islamic Conference (OIC) was established in 1969 to represent Muslim interests.

Islamist movements were particularly attractive to the large population of young people in Muslim states who were disillusioned by the failures of their governments to provide jobs or to open up authoritarian regimes to meaningful political participation. During the COLD WAR authoritarian regimes in predominantly Muslim countries systematically crushed—often with tacit support of Western nations, especially the United States—all political opposition from the left. They refused to open up their systems to legitimate change. For many young Muslims, both Western capitalism and the Soviet model of state capitalism seemed to have failed to reform and revitalize their countries.

Many also faced an identity crisis brought on by sweeping cultural changes and globalization that threatened old traditions and made the youth feel alienated from their own societies. Dynamic and forceful Islamic leaders stepped in to fill the void.

Most contemporary Islamist movements have been influenced by the Muslim Brotherhood, established in the 1920s in Egypt. The writings of the

Egyptian President Anwar el-Sadat (left) and U.S. President Jimmy Carter in 1980. Sadat was killed in 1981 by Egyptian Islamists.

Egyptian Muslim activist SAYYID QUTB provided the philosophic underpinnings for many Islamist organizations. Qutb was executed by the Egyptian government in the 1960s and became a martyr in the eyes of many Muslims. By the latter part of the century, many young people considered the brotherhood too moderate and looked to a new generation of more radical activists.

The 1979 IRANIAN REVOLUTION and the writings of AYATOLLAH RUHOLLAH KHOMEINI also served as a model for future Islamic revolutions. The Iranian revolution also sparked a revival of Shi'i political and religious activism in nations with large Shi'i populations such as Lebanon and Iraq.

RADICAL ORGANIZATIONS

With its vast revenues from petroleum, Saudi Arabia financed madrasas (schools) teaching Wahhabism, their particular militant and puritanical brand of Islam, in Pakistan, AFGHANISTAN, and other nations. For many poor families these schools were the only way to provide any education for their children, who were then socialized in this narrow and inflexible interpretation of Islam. Many of the most radical Islamists were products of these schools. These schools also provided recruits for radical Islamist organizations such as the TALIBAN and AL-QAEDA in Afghanistan.

Much like Christian televangelists in the West, fiery activist imams also used the modern media of television, radio, and cassette tapes to proselytize converts to the Islamist programs. Disaffected youth in Europe, espe-

cially France and Great Britain, were heavily influenced by these leaders. Many Muslims were also angered by the failure to resolve the Arab-Israeli conflict and the perceived support of the United States and other Western nations for Israel over the rights of the Palestinians to self-determination. Much opposition to the United States was based not so much on its values as on what it did in the Middle East. Following the killing of Muslims in Somalia, Bosnia, and Chechnya, many Muslims, whether correctly or not, concluded that the West valued its own victims more than it valued Muslim victims. Negative stereotyping of Muslims in much of the Western media also contributed to mounting hostility.

The war against the Soviets in Afghanistan in the 1980s was another factor in the rise of Islamist movements. Many Muslim nations, especially Saudi Arabia and the Gulf states, provided volunteers and financial support for the mujahideen (Muslim fighters), who fought a jihad (holy war) against the Soviet occupation. In the midst of the cold war many mujahideen were supported, trained, and armed by the United States. After the defeat and withdrawal of the Soviet Union from Afghanistan in 1989, many of these volunteers returned to their own countries, such as Algeria, where they sought to establish Islamic regimes by force if necessary. In Islam jihad is a defensive struggle to protect the community of believers from outside attack, as well as an internal struggle for spiritual enlightenment.

The concept of jihad was sometimes used, or misused, by Islamists to justify violence and TERRORISM. These approaches were discredited and disavowed by some leading Muslim experts, who argued that the Qu'ran specifically forbids terrorism and suicide.

EGYPT

In Egypt following the death of GAMAL ABDEL NASSER in 1970, his successor Anwar al-Sadat attempted to undercut the power of liberal leftists in his government by releasing members of the Muslim Brotherhood from prison and allowing them access to the print and electronic media. The brotherhood and more radical Islamists organizations such as the Islamic Liberation Organization and Holy Flight or Islamic Group soon turned against Sadat. They opposed the increasingly repressive regime as well as Sadat's negotiations with Israel that resulted in the 1979 Egyptian-Israeli peace treaty. They gained members from among disaffected youth throughout the countryside, especially in upper Egypt. In 1981 Khaled al-Islambuli and other Islamists, who had infiltrated the military, assassinated Sadat.

They anticipated that Sadat's death would lead to a massive popular uprising to overthrow the regime. Although some riots broke out in upper Egypt, especially in the town of Asyut, a center of opposition, the regime under Hosni Mubarak maintained control, and the Islamist organizations were brutally repressed. A long period of low-level warfare between government forces and Islamist rebels ensued. After Islamist rebels killed a number of tourists at Deir el-Bahari in upper Egypt in 1997, many Egyptians who were heavily dependent on tourist revenues spoke out against the radicals. However, because the government failed to provide much-needed housing and economic reforms and refused to open up the system to meaningful democratic participation, the Muslim Brotherhood and other Islamist movements remained major political forces.

In Egypt the so-called new Islamists eschewed violence and argued that to combat extremism, social justice and educational reform were vital for the regeneration of Egyptian society. The new Islamists demonstrated remarkable political and social flexibility and supported reforms in education, gradualism, and peaceful dialogue. They included Yusuf al-Qaradawy; Kamal Abul Magd, a lawyer and former government official; and others. New Islamists wanted Islamic states based on *wassatteyya*, or moderate Islamic tradition, without violence or terrorism.

SUDAN

In the Sudan HASAN AL-TURABI led the Islamist movement and was a major political force until he was removed from office by the military in the 1990s. In Tunisia the Islamic Tendency Movement (ITM), led by Rashid al-Ghannouchi, who had been educated at the Sorbonne, actively opposed the well-entrenched regime of HABIB BOURGUIBA in the 1980s. In 1987 a number of ITM members were arrested and tried, but after Bourguiba was removed from office in a bloodless military coup led by General Zine al Abidine ben Ali, many of them were released or allowed to go into exile. Although ben Ali's regime was able to provide some economic stability, it too became increasingly authoritarian, and ben Ali tightened control over the Islamist parties in the 1990s. Ghannouchi went into exile to Europe and renounced violence.

ALGERIA AND LEBANON

In Algeria the major Islamist party, the Islamic Salvation Front (FIS), was led by Abbas Madani, a professor of psychology; Sheikh Ben Azzouz; and Ali Belhadj, a charismatic and popular preacher. When

the FIS won the first round of free and democratic elections in 1991, the military regime of the National Liberation Front (FLN) cancelled the elections, precipitating a civil war that resulted in tens of thousands of deaths. Many FIS leaders were jailed until 2003. Madani then seemed to drop out of politics, but Belhadj remained unrepentant. As long as the Algerian government failed to solve the basic problems of jobs, housing, and education, Algerian youth—who made up a large percentage of the population—continued to be attracted to Islamist parties.

During the 1980s HIZBOLLAH (Party of God), led by Sheikh Hassan Nasrallah, a leading Shi'i cleric, emerged as a major force among Shi'i Lebanese, the largest but most disaffected Lebanese sect. Hizbollah actively fought against the continued Israeli occupation of southern Lebanon, and when Israel finally withdrew from most of southern Lebanon in 2000, Hizbollah gained most of the credit.

Hizbollah then transformed itself into a major political force, and its members were elected to a number of seats in Parliament. It also continued to attack Israeli forces in the disputed Lebanese territory of Shaaba Farms, which Israel argued was Syrian territory. Hizbollah sometimes attacked within Israeli borders as well and was viewed by Israel and the United States as a terrorist organization.

In retaliation Israeli launched a major air, sea, and ground offensive into Lebanon in 2006. As in the 1982 Israeli war against the PALESTINE LIBERATION ORGANIZATION (PLO) in Lebanon, the 2006 attack not only inflicted heavy losses on Hizbollah but it also devastated the Lebanese infrastructure and caused many civilian deaths. Many Lebanese and even secular Arabs were impressed by Hizbollah's determined military defense against the Israeli attack, and the war actually led to an increase of support and recruits among many Lebanese and Muslims.

PALESTINE

Similarly HAMAS, the major Palestinian Islamist organization, began in the late 1980s in the Gaza Strip as a reaction to the long Israeli occupation. Hamas was led by Sheikh Ahmad Yassin, who was blind and confined to a wheelchair, and Dr. Abdel Aziz al-Rantissi, both of whom were killed by Israel. Many Palestinians, who were overwhelmingly supportive of the secular PLO, hoped that the 1993 Oslo Accords would lead to a truly independent Palestinian state.

However, when the PLO-dominated Palestinian Authority (PA) came to be perceived as increasingly

August 14, 2007: Images of Hizbollah chief Hassan Nasrallah are seen among scores of Hizbollah and Lebanese national flags being waved by Hizbollah supporters during a ceremony to mark the first anniversary of the war with Israel.

ineffective and corrupt and when the Israeli military occupation and continued takeover of Palestinian land for Jewish settlements continued, many young Palestinians turned to Hamas and other more radical Islamist organizations. Some adopted the tactic of suicide missions directed not only against the Israeli military but against Israeli civilians inside Israel's 1967 borders, or the so-called green line. Hamas won the fair and open elections in 2006, and Ismail Haniya, a popular Hamas leader from Gaza, became the prime minister over the PA. Increased Israeli repression and refusal to deal with Hamas contributed to further disillusionment and anger.

During the 1980s–1990s even secular Turkey saw an Islamic revival; Islamic parties became increasingly influential and won democratic elections in the 1990s. However, the Islamic movement in Turkey and in other

Muslim states is not a coordinated monolith. Islamist parties vary greatly both in their outlook regarding what sort of Islamic states they would like to see and their social and political programs. For example, in some, like the Taliban and al-Qaeda, women play no political role whatsoever.

The Taliban was opposed to education for women and banned music and the depiction of the human form in books, even medical textbooks. In contrast, women play an active role in both Hizbollah and Hamas. As authoritarian regimes in Muslim nations as diverse as Egypt, Algeria, and Tunisia refused to liberalize the political system and failed to provide much-needed economic improvements, especially in housing and education, Islamic movements and parties remained popular and continued to attract large numbers of disaffected youth.

JANICE J. TERRY

Janata Party

The Bharatiya Janata Party (BJP), or Indian People's Party, is a pro-Hindu Indian political party that formed the main opposition to the Congress Party in postindependence India. It defeated the Congress Party in the 1977 general election. The BJP asserts that the Indian government should follow Hindu principles and values and has been highly critical of the secular policies espoused by the Congress Party.

It has attracted the sympathies of high-caste Hindus and has an electoral stronghold in the northern part of the country. Its success in securing a larger following among the lower castes has not been complete. The fortunes of the party have been linked to the intensity of anti-Muslim feeling in the country, and it has been repeatedly accused of political and religious extremism.

The forerunner of the BJP was the Bharatiya Jana Sangh (BJS), or Indian People's Association, established in 1951 as the political faction of the Hindu paramilitary group Rashtriya Swayamsevak Sangh (RSS, National Volunteers Corps) by Shyama Prasad Mukherjee. The BJS started to gain support in the northern regions of India in the late 1960s, defeating the Congress Party in the state election in 1967.

Ten years later the leader of the BJS, Atal Bihari Vajpayee, formed, together with other minor political parties, the Janata Party and successfully challenged the premiership of **INDIRA GANDHI**. In the general election of 1976, the Janata Party was able to capi-

talize on the discontent caused by the authoritarian methods of Gandhi and on the corruption charges leveled against her, her family, and government. The Janata Party won the majority of seats in Parliament and obtained the external support of the communists. Morarji Desai, a veteran fighter for the country's independence, became prime minister, but the Janata government collapsed in 1979, after only two years, because of factionalism.

After the Desai government collapsed the Janata Party was dissolved, and the BJP was formed under the leadership of **ATAL BIHARI VAJPAYEE**. It started to appeal to the Indian masses in the late 1980s, when it campaigned to build a Hindu temple in an area of Uttar Pradesh considered sacred but already occupied by the Muslim Babri Masjid mosque.

The mosque was eventually destroyed in 1992 by organizations that many considered allies of the BJP. The demolition of the mosque caused widespread rioting throughout the nation. Yet the party obtained a surprising electoral victory in 1996, becoming the largest political party in the lower house of Parliament.

In 1998 Vajpayee formed a coalition government, in power for only 13 months. Vajpayee contested the 1999 election, leading the BJP to become the first party of the National Democratic Alliance (NDA), a coalition of parties against the Congress. Because of this electoral success he was once again appointed prime minister, governing for a full term until 2004, when he unexpectedly lost the general election to the Congress,

led by Italian-born SONIA GANDHI, the widow of Indira Gandhi's son RAJIV.

LUCA PRONO

Al Jazeera

Al Jazeera (meaning "Island" or "Peninsula"), the Arab satellite TV news station, was established in Qatar in 1996. Start-up investment was provided by the Qatari emir, Sheikh Hamad bin Khalifa al-Thani. In stark contrast to the government-controlled media throughout the Arab world, Al Jazeera quickly earned a reputation and a widespread global audience for its independent programming and content.

With a motto of "the opinion and the other opinion," Al Jazeera covered the activities and political philosophy of Osama bin Laden as early as 1999. Following the 9/11 terrorist attacks in the United States, bin Laden sent the station cassettes with his political messages. Journalists and talk show hosts at Al Jazeera covered hitherto forbidden topics such as the human rights and political failures of Arab regimes. They also interviewed Israelis on a wide variety of issues. Al Jazeera earned the enmity of Arab governments, many of which made no secret of their desire to preempt or stop its programs. Al Jazeera's talk shows focused on sensitive subjects.

Al Jazeera's independent coverage was initially praised in the West, but after the station carried negative stories about the U.S. war and subsequent occupation in Iraq from 2003 onward, the United States, under the GEORGE W. BUSH administration, publicly criticized Al Jazeera's coverage as biased. At the same time, the United States was accused of planting or paying for positive stories to be carried in the Iraqi media.

The success of Al Jazeera in attracting a huge audience demonstrated the impact of technology and highlighted the importance of information sources to audiences around the world in the 21st century.

JANICE J. TERRY

Jesus movement

The Jesus movement flourished in the late 1960s and early 1970s in the United States and Europe. Young people involved in the hippie, or counterculture, movement were targeted by unorthodox evangelists or found their own way to Christianity. Previous experimentation with drugs, Eastern religion, the occult, and communal lifestyles affected the way these young Christians approached their faith. Just as important was the deep alienation many young people felt toward "anyone over thirty" and the traditional or conventional institutions, including the churches, they controlled. Culturally quite conservative, older church people were often offended by the clothes and hairstyles favored by the young and adamantly resisted making any concessions to their sensibilities or desires regarding worship.

Originally based in innovative churches, Jesus movement churches served as bases for vigorous evangelism on university campuses, beaches, and the streets. Many Jesus people joined more traditional churches, usually evangelical Protestant but also Catholic, Orthodox, or Episcopal. By the 1980s–1990s most evangelical churches had accommodated the worship styles and sensibilities pioneered by the Jesus movement.

For many the belief in an imminent apocalypse led to an interest in "prophecy," which often became a conduit for conservative politics during the COLD WAR. Perhaps ironically, the Jesus movement helped lay the foundation for the New Christian Right. Contemporary evangelical Protestantism was deeply affected by the Jesus movement, absorbing its moral intensity. The latter can be seen most vividly in the revolution that has occurred in worship and popular Christian music.

JOHN HAAS

Jiang Zemin (Chiang Tse-min)

(1926–) *Chinese leader*

Jiang Zemin was the general secretary of the Chinese Communist Party (CCP) from 1989 until 2002, and the president of the People's Republic of China from 1993 until 2003. Jiang was born in 1926, at Yangzhou, Jiangsu (Kiangsu) Province. He joined the Chinese Communist Party in 1946. In the same year he studied at Jiaotong (Chaio-t'ung) University in Shanghai, graduating with a degree in electrical engineering.

At the end of the Chinese civil war Jiang was appointed commercial counselor at the Chinese embassy in Moscow, a post he held until 1956. He was appointed assistant to the minister, First Ministry of Machine Building, running the Changchun First Automobile Plant. In September 1978, he became vice chairman of the Society of Mechanical Engineering, the position he held before the Cultural Revolution. He then became vice minister on the State Commission on Imports and Exports in 1980, and vice minister of the electronics industries two years later. In 1983 he became minister of electronics industries, a post he held until 1985, when he became mayor of Shanghai.

In 1982 Jiang became a member of the Central Committee of the CCP, and in 1987 he joined the Politburo. A supporter of China's then paramount leader DENG XIAOPING (Teng Hsaio-p'ing), Jiang was also a political ally of the premier Li Peng during the suppression of the pro-democracy student demonstrations in 1989. Subsequently Jiang succeeded Zhao Ziyang (Chao Tzu-jiang) as general secretary of the CCP on June 24, and was also elevated to the Politburo Standing Committee. Later that year he succeeded Deng as chairman of the CCP's central military commission. Four years later, on March 27, 1993, Jiang became president of the National People's Congress, and hence the head of state of China.

When Deng Xiaoping died in 1997, Jiang rose to become paramount leader. He was economically more conservative than Deng, who had been critical of the slow pace of some reforms. However, he started a program of privatization, which loosened state control over 300,000 industrial concerns. The massive economic growth that resulted saw the Chinese economy boom and the emerging business class flourish, many

of whom were encouraged to join the CCP. In December 2001 China gained membership in the World Trade Organization (WTO), a move that would have been unimaginable only 10 years earlier. The Chinese economy then started growing at an even faster pace.

In foreign affairs, Jiang improved Chinese relations with the United States and many other countries in the West. In 1997 he took part in the first U.S.-China summit conference, and at a follow-up meeting in the next year he openly defended China's human-rights record. In 2001 Beijing won the contest to host the 2008 Summer Olympics, a move that marked China's emergence from the self-imposed policy of isolation of previous decades.

On November 15, 2002, Jiang resigned as general secretary of the CCP and, on March 15, 2003, from the presidency of the National People's Congress. He was succeeded by HU JINTAO in a remarkably smooth transition, but remained the chair of the central military commission until September 2004. He remained an influential figure in Chinese politics.

JUSTIN CORFIELD

John Paul II

(1920–2005) *pope*

Karol Józef Wojtyła (*Voy-TEE-wah*) was born on May 18, 1920, to Emilia Kaczorowska and Karol Wojtyła, a lieutenant in the Polish army. The couple had two other children years earlier: a daughter, who died in infancy, and Edmund, who became a medical doctor. When Karol Józef was born, the family lived in Wadowice, Poland, in a flat owned by a Jewish family, directly across from St. Mary's church, where Karol was baptized. His father retired from the army in 1927. Karol's mother died in 1929. Edmund died three years later in Kraków. Karol and his father would live together until the latter's death in Kraków at the start of the German occupation, while Karol was still a teenager.

From 1939 to 1945, Wojtyła eked out an education. Before the Gestapo shut down the Jagiellonian University in Kraków, he had begun studies in Polish

The spiritual leader of the world's Catholics, Pope John Paul II traveled the continents, including visits to the United States (above). The pope was a political leader as well, and during his pontificate, 83 countries established diplomatic relations with the Holy See.

philology. Professors who escaped deportation opened an underground university, which Wojtyła attended. To support himself, he worked in a rock quarry and later in a chemical plant, surrounding himself with books and teaching himself languages.

From his father and parish priests in Wadowice, Wojtyła had learned the importance of prayer. In occupied Kraków, prayer was his lifeline to hope. There young Wojtyła met Jan Tyranowski, a tailor, mystic, and spiritual director. Tyranowski created what he called a “living Rosary”: a group of 15 young men who received from him spiritual instruction and who were commissioned to pass it on to other young people. From Tyranowski, Wojtyła learned contemplative prayer, especially the spirituality of St. John of the Cross.

After his father's death in February 1941, Wojtyła joined Archbishop Sapieha's underground seminary and was ordained by him in November 1946. Sent to Rome, Wojtyła earned the first of two doctoral degrees in theology. Upon his return, Fr. Wojtyła had to devise ways to disguise his ministry. Throughout the 1950s he published

plays, poems, and articles under an alias; chaperoned college students on hiking and kayaking trips to teach the faith without observation; and counseled engaged couples on marital sexuality. He taught at two universities, as a professor of philosophy at the Jagiellonian, and of social ethics at the Catholic University of Lublin. In 1958 Pius XII named Wojtyła auxiliary bishop of Kraków, and in 1963 Paul VI appointed him that city's archbishop.

The Second Vatican Council (1962–65) brought the young archbishop to Rome, into the company of bishops from everywhere. Wojtyła spoke frequently in assemblies large and small, helped draft documents such as the Pastoral Constitution *Gaudium et Spes* (The Church in the Modern World), and published poetry and articles for the people back home describing what the council meant for the church.

Karol Wojtyła was made a cardinal in 1967 and remained archbishop of Kraków for 15 years. He led a synod for the archdiocese, which met 119 times over seven years. He strengthened the seminary and the Jagiellonian theology faculty, inaugurated marriage

preparation programs and family ministries, encouraged youth movements, organized parish-based charitable committees, and made lengthy visitations to his parishes. He continued teaching and publishing without letup.

When Paul VI died in August 1978, Cardinal Wojtyła participated in the conclave that elected Albino Luciani, whose double name John Paul signaled his wish to continue the work of popes John XXIII and Paul VI. Wojtyła returned to Kraków. But the new pope died a month later. Wojtyła departed again for Rome, fearing that he might remain there. He did eventually return, but not as archbishop. On October 16, 1978, Cardinal Wojtyła was elected the 264th successor of Peter and the first Polish pope ever. Like Luciani, he took the double name of John Paul. Immediately, the whirlwind of activities that characterized his papacy began: visits to parishes in Rome, travels outside the Vatican, meetings, writings, and long hours prostrate in prayer. Within three months, his marathon series of international journeys began with a pastoral visit to Mexico. In June 1979, much to the dismay of the communist government, he made the first of several visits to Poland.

The Soviet authorities realized that this pope was dangerous. On May 13, 1981, Mehmet Ali Ağca, hired by the Bulgarian secret police at the behest of the Soviet KGB, shot John Paul as he rode through St. Peter's Square. The wound was serious but not fatal. Though recovery was slow and fraught with complications, the pope resumed his travels as soon as he could, even visiting Poland again in 1983. The most widely traveled pope in history, John Paul II visited a total of 129 countries, plus 145 trips within Italy, and visits to 317 of the 328 parishes in the diocese of Rome.

John Paul intended his papacy to address two major goals. First, he wished to implement Vatican II, a council full of hope for the church's future. He promulgated in 1983 the revised Code of Canon Law for the Latin Church, and in 1990 the revised Code for the Eastern Churches, both built on council teachings. To restore clarity to church teaching, he commissioned the publication of the *Catechism of the Catholic Church*. He delivered hundreds of catechetical addresses. In 14 papal encyclicals, 15 apostolic exhortations, 45 "apostolic letters," and numerous other writings, he taught on morality, life issues, the dignity of work, the dignity of women, the role of the family, the nature of the Trinity, and the meaning of the Creed. To provide models of the holiness called for in Vatican II, John Paul canonized 1,342 saints,

more than the combined total of persons canonized since the 16th century.

A second goal was to prepare the church for the advent of the third millennium, an era John Paul saw as a springtime of hope. To that end, he announced a "new evangelization" of the world. His biennial World Youth Days attracted millions of young people from the world over. His first encyclical, published in 1979, had mentioned this jubilee as the beginning of a "new Advent" of the Son of God in human history.

A pope is a political, as well as a religious, leader. He is widely credited with a major role in the 1989 collapse of European communism. Perseverance, back-door negotiations, and providential coincidences resulted in the creation of diplomatic relations between the Holy See and the state of Israel in 1993. During John Paul's pontificate, 83 countries established diplomatic relations with the Holy See. Through dogged effort, his ambassadors at the UNITED NATIONS were able to forestall activist efforts to reshape marriage and promote abortion on demand at the 1994 Cairo and 1995 Beijing women's conferences.

But some problems proved insurmountable. The number of priests and seminarians continued to decline during John Paul's papacy. Radical feminists persisted in challenging the church's refusal to ordain women to the priesthood. Ecumenical dialogue with most Orthodox churches stalled. Archbishop Marcel Lefebvre, excommunicated in 1988 for ordaining bishops without authorization, died unreconciled despite efforts to reinstate him. The pope was criticized for appointing weak bishops and for failing to reform religious orders.

John Paul's decline in health appeared to begin after the 1981 assassination attempt. Intestinal disorders and a series of falls in the early 1990s led to repeated hospitalizations. In 1994 he was diagnosed with Parkinson's disease, which gradually sapped his physical strength. On April 2, 2005, he died of complications from Parkinson's. Karol Wojtyła's reign as John Paul II lasted 26 years and 5 months, the third-longest papal tenure up to that time.

Johnson, Lyndon B.

(1908–1973) *U.S. president*

Lyndon Baines Johnson, nicknamed LBJ, was the 36th president of the United States. Prior to that, he had been vice president during the presidency of JOHN F. KENNEDY. He is best remembered for presiding over the United States during the VIETNAM WAR, and also for his efforts in promoting CIVIL RIGHTS in the southern parts of the United States.

Lyndon Johnson was born on August 27, 1908, at Gillespie County, Texas, the eldest of five children. His father was Sam Ealy Johnson Jr., a businessman who was also a member of the Texas House of Representatives, and his mother was Rebekah (née Baines), who was the daughter of Joseph Baines, another state legislator. Johnson left high school in 1924, and, after three years working in odd jobs, he studied at the Southwest Texas State Teachers College at San Marcos, Texas, and then taught at Cotulla, Texas.

In 1930 Johnson worked for Democrat Richard Kleberg, who was standing for Congress, accompanying him to Washington, D.C., when he was elected. Four years later he married Claudia Alta Taylor, who became known as “Lady Bird.” It was in Washington that Johnson came to meet Sam Rayburn, the Texan chairman of the House Committee on Interstate and Foreign Commerce. Johnson became director of the National Youth Administration for two years and then stood as a Democratic Party candidate for the 10th congressional district, winning his seat.

Johnson won a seat in the Senate in 1948 and spent 12 years there, becoming Democratic whip in 1951, minority leader in 1953, and majority leader in 1955. Johnson survived a serious heart attack in 1955, and became well known for his negotiating talent, using bluster, discipline, persuasiveness, and ruthlessness. In 1960 Johnson lost the Democratic Party’s presidential nomination to Kennedy by 809 to 409 on the first ballot. He then accepted the vice-presidential slot.

As vice president, Johnson found himself unable to do much of the negotiating that he had enjoyed. On November 22, 1963, when Kennedy was assassinated, Johnson took the oath of office as president on *Air Force One*, the presidential plane, just before it took off from Love Field, Dallas, to take Kennedy’s body back to Washington. Johnson immediately set up a commission to investigate the assassination, appointing Earl Warren, chief justice of the U.S. Supreme Court, to chair it.

Lyndon B. Johnson takes the oath of office on Air Force One following the assassination of John F. Kennedy.

Johnson had a hard task maintaining the dignity and authority of the office of the president and ensuring some form of continuity. He had long been a supporter of civil rights, and in February 1964 managed to get the Civil Rights Act introduced in Congress. It was passed by the Senate in June 1964. After it was signed into law on July 2, 1964, ending segregation and any discrimination on grounds of race or sex, the law was challenged in the Supreme Court, which found it was valid. Hoping for the success of this legislation, Johnson made his famous speech on May 22, 1964, at the University of Michigan, Ann Arbor, in which he announced his plans for the “GREAT SOCIETY.”

In 1964 the Republican Party chose Arizona Senator Barry Goldwater to run against Johnson, giving the incumbent an easier election campaign than he had expected. Johnson won 486 of the electoral college seats to 52 for Goldwater, with Johnson taking 61 percent of the vote, the largest percentage ever taken in a presidential election.

The emerging problem for Johnson was, however, the growing war in Vietnam. In August 1964 news stories revealed that North Vietnamese gunboats had attacked a U.S. destroyer and then launched another attack several days later. It subsequently emerged that the second attack had not taken place, and there are many doubts over the nature of the first attack. Nevertheless Johnson did believe that the U.S. destroyers had been attacked and launched a retaliatory air strike against North Vietnam. He also managed to get Congress to approve the Gulf of Tonkin Resolution, giving

him the authority to do whatever was needed to deal with the communists in Vietnam. Public support for the war effort fell as the United States suffered huge casualties. By 1967 there were large demonstrations, and by 1968 Johnson had become increasingly unpopular.

On January 23, 1968, the USS *Pueblo*, an American intelligence-gathering ship, was seized by North Korea after ending up in their waters. The crew of 80 were all captured and held for 11 months until the U.S. government apologized and obtained their release, later retracting their apology. Johnson had ordered the USS *Enterprise* into the region, but acted with caution.

In the week after the seizing of the *Pueblo*, the Vietcong launched the Tet Offensive, with television coverage of Vietcong capturing the U.S. embassy. General William Westmoreland had promised that the war was nearly over three months earlier. The United States and South Vietnam quickly managed to defeat the Vietcong attacks, but most people refused to believe the administration's protestations that victory was close. Johnson decided not to contest the election and on March 31, 1968, in a national address on television, stated that he would neither seek nor accept the Democrat Party's renomination.

The 1968 election campaign saw the assassination of MARTIN LUTHER KING JR., the African-American civil rights leader, on April 4, leading to rioting in Washington, D.C., and many other cities. The assassination of presidential candidate and former attorney general Robert F. Kennedy in Los Angeles on June 6 resulted in widespread political unease. Vice President Hubert Humphrey was guaranteed the Democrat Party nomination when the party convention was held in Chicago, but antiwar protestors converged on the city intent on making their opposition to the war heard.

Johnson tried to help Humphrey, who called for an unconditional U.S. halt to the bombing of North Vietnam, and in October, a week before the election, Johnson announced the end of all U.S. bombing to open the way for peace talks. It was too late for many people, and they voted for RICHARD NIXON.

In January 1969 Johnson retired to his L.B.J. Ranch near Johnson City, Texas. Johnson suffered a heart attack, and died on January 22, 1973, in San Antonio, Texas, only five days before the Paris Peace Accords stopped the fighting in Vietnam. Lyndon Johnson was buried at his ranch.

JUSTIN CORFIELD

Jordan, Hashemite monarchy in

For most of Jordan's modern history, Jordanians knew only one king as architect of the kingdom's domestic development and of its foreign policy. King Hussein consolidated the Hashemite regime in Jordan and defended it against internal and external challenges, neither of which were in short supply. From the foundation of the Hashemite state onward, Jordan maintained close strategic ties to Britain and later the United States. After World War II, and with the onset of the COLD WAR, Jordan also established stronger links with the United States. Western powers came to view Jordan as a conservative bulwark against communism and radical forms of Pan-Arabism, and as a moderating element in the Arab-Israeli conflict. From the beginning, then, Jordan had close ties to powerful Western states and depended heavily on foreign aid from these countries to keep the kingdom afloat.

Jordan's centrality in Middle East politics and geography also carried with it a strategic vulnerability. In the 1950s, when the kingdom was still young and viewed by many Pan-Arab nationalists as an artificial "paper tiger," some Jordanian officials feared that another regional conflict might eliminate the Hashemite state entirely. In 1957 Hussein headed off an attempted coup d'état by pro-Nasserist military officers and used the opportunity to solidify Hashemite royal control.

By the late 1960s the regime was forced to focus outward once again as regional tensions escalated especially between Israel and GAMAL ABDEL NASSER's regime in Egypt. In the 1967 ARAB-ISRAELI War, Israeli forces launched what they viewed as a preemptive strike on Arab forces in Egypt, Jordan, and Syria, inflicting a devastating defeat on all three countries. The complete failure of the Arab war effort led to Israeli occupation of the Sinai from Egypt, the Golan Heights from Syria, and East Jerusalem and the West Bank from Jordan. In less than six days, Jordan lost some of its most prized territory, including the agriculturally rich West

Bank and the more religiously significant East Jerusalem. Tens of thousands of Palestinian refugees poured across the border into Jordan in June 1967, changing the demographics and ultimately the domestic stability of the kingdom. That uneasy situation collapsed in September 1970, when guerrilla forces of the PALESTINE LIBERATION ORGANIZATION fought the royalist forces of the Hashemite government. This Jordanian civil war resulted in a bloody Hashemite victory and the expulsion of PLO guerrilla forces from Jordan.

More than half the population of Jordan today is of Palestinian origin. Although this West Bank/East Bank ethnic divide is sometimes overstated, it remains a significant feature of Jordan's society, its political economy, and of the Jordanian state itself. Much of the Jordanian government, public sector, and military is dominated by East Bank Jordanians, while much of the private sector is dominated by Palestinians.

Following the disastrous 1967 war, the Hashemite regime maintained its claim to the West Bank and East Jerusalem for two decades. But in 1988 in the midst of the first INTIFADA, it renounced these claims and turned instead toward consolidating its rule east of the Jordan River. Indeed, Jordan remained under martial law from the 1967 war until it was lifted in 1992 as part of the overall political liberalization process.

The regime's concerns for stability were underscored dramatically in 1989 by domestic unrest triggered by an economic austerity program initiated under the aegis of the INTERNATIONAL MONETARY FUND. With the intifada raging west of the Jordan River, and domestic unrest erupting in Jordan itself, King Hussein initiated measures to address public demands and to reestablish the stability of the regime. That opening

helped reestablish the regime's base of domestic support, thereby shoring up its stability and allowing it to sign a controversial peace treaty with the State of Israel in 1994.

In 1999 King Hussein died after a long battle with cancer. In a surprise move, the king had abruptly changed the line of succession merely weeks before his death, dismissing his brother Hasan as crown prince and appointing instead his eldest son, Abdullah. With Hussein's death, King Abdullah II ascended the Hashemite throne. His reign was marked by strong efforts to continue the economic liberalization process, emphasizing a neoliberal model of development and shoring up Jordan's relations with key Western powers and international economic institutions. But this emphasis on economic development and stable foreign relations also forced political liberalization to a lower priority level. Under Abdullah, the kingdom survived still more regional unrest and even began battling terrorism within Jordan itself. These internal and external security concerns did not dissuade the monarchy from its emphasis on economic development, but they often provided the pretext for lack of progress in reviving Jordan's seemingly stalled program of political liberalization.

CURTIS R. RYAN

K

Karmal, Babrak

(1929–1997) *Afghan politician*

Babrak Karmal was an Afghan revolutionary figure, a politician, and an ambassador. He served as the third president of AFGHANISTAN from 1980 to 1986 during the rule of the communist Democratic Republic of Afghanistan. An effective orator and an educated politician, Karmal is best known as one of the founders of the People's Democratic Party of Afghanistan (PDPA) and for leading a puppet regime with Soviet financial and military support.

Born in Kamari, a small village east of Kabul on January 6, 1929, Karmal came from a wealthy Tajik military family. His father, Major General Mohammad Hussain, had close relations with the royal family, especially King Mohammad Zahir and Prime Minister General Mohammad Daoud. After graduating from high school Karmal enrolled in law school, pursuing a degree in law and political science, at the Kabul University in 1951. While a student he was arrested and put in prison for five years for organizing demonstrations in support of an Afghani popular revolutionary figure, Abdul Rahman Mahmudi. In prison he befriended pro-Soviet Union leftist political figures like Mear Mohammad Siddeq Farhang. Karmal increasingly became a staunch supporter of the Leninist-Stalinist form of Marxism, identifying the Soviet model as the best way to modernize Afghanistan.

After graduation Karmal continued his close relations with Farhang. The friendship enabled him to play

a major role in establishing the PDPA on January 1, 1965, Afghanistan's first major Marxist political party. Like many other PDPA members who aimed for parliamentary seats, Karmal became a candidate and was elected to the National Assembly from 1965 to 1973, where he was able to gain a reputation for his antireligious and anti-imperialistic communist viewpoints.

Due to internal ideological differences the PDPA split into the Khalq (People) and the Parcham (Flag) factions in 1967. Karmal became the leader of the more cosmopolitan, moderate Parcham bloc. Karmal's faction shared power with Mohammad Daoud's regime after the coup d'état of 1973, when the monarchy was overthrown. Though the alliance was short-lived, since Daoud dismissed the Parcham faction from the presidential cabinet, Karmal was able to reunite the PDPA after much Soviet pressure. In April 1978 the PDPA gained power through a military coup. When Nur Mohammad Taraki, a member of the Khalq bloc, was pronounced the president of the new Democratic Republic of Afghanistan (DRA), instituting a regime that had the full backing of the Soviet Union until 1992, the two factions of PDPA began internal fighting.

Karmal and his mistress, Anahita Ratebzd, were sent into "exile" as ambassadors to Czechoslovakia and Yugoslavia, respectively, while Hifzullah Amin, another major Khalq political leader, became the prime minister on March 28, 1979. Karmal later left Prague for Moscow for fear of assassination or execution on his return to Kabul. On December 5, 1978, when the Taraki government initiated a major friendship treaty with

the Soviet Union, numerous uprisings spread around Afghanistan against the Soviet-backed regime. Taraki's radical reform projects for transforming Afghanistan from a traditional religious to a secular modern society led the way to the rise of the mujahideen (or Muslim fighters), who opposed the Soviet-style westernization of the country. Tensions between Taraki and Amin factions within the Khalq bloc led to the assassination of Taraki on October 10, 1979, which eventually led to the Soviet invasion of Afghanistan on December 27, 1979. Karmal, the leader of the Parcham faction, returned to Kabul with the full support of the Soviets and was declared the president.

As the third president of the republic, Karmal's most important accomplishments were his call for clemency for political prisoners, the change of the Marxist-style national flag, the promulgation of the basic principles of the Democratic Republic of Afghanistan, the recognition of the Muslim clerical establishment, and the compensation for the loss of property. Karmal's poor leadership skills and his inability to bring an end to the ongoing guerrilla warfare between the Soviet-backed government and the mujahideen gradually made him a highly unpopular figure. With the full backing of Moscow throughout his presidency, Karmal was regarded as a Soviet puppet, both domestically and internationally. In May 1986 Karmal was replaced as the communist leader by Mohammad Najibullah, and in October 1986 he was relieved of the presidency. After a number of trips between the Soviet Union and Afghanistan after his presidency, Karmal finally settled in Moscow, where he died of liver dysfunction on December 6, 1996.

BABAK RAHIMI

Karzai, Hamid

(1957–) *Afghan president*

Hamid Karzai was the first elected president of the Islamic Republic of AFGHANISTAN. At the conclusion of the presidential election on October 9, 2004, Karzai was declared its winner, with 55.4 percent of the vote. On December 7, 2004, Karzai took the oath of office as the first democratically elected leader of Afghanistan.

Hamid Karzai was born on December 24, 1957, in the village of Karz, near Kandahar in southern Afghanistan. His grandfather, Khair Mohammed Khan, was a key figure in Afghanistan's war of independence. Karzai's father, Abdul Ahad Karzai, was a popular national figure who was also an influential member of the parliament during the 1960s.

The early education of Hamid Karzai took place in various Afghan schools, including Mahmood Hotaki Elementary School, Sayeed Jamaluddin Afghani School, and Habibia High School. Later, Karzai went to India, where he received graduate education in international relations and political science from the Himachal Pradesh University in Simla.

After the formation of the mujahideen government in 1989, Karzai was made the director of the Foreign Relations Section in the Office of the President, Burhauddin Rabbani. He became a deputy foreign minister in 1992. When the civil war between the contending mujahideen groups engulfed Afghanistan in 1994, Karzai resigned from his official position. He strove for a free and open national assembly (*loya jirga*).

In August 2000, when the fundamentalist TALIBAN regime was ruling Afghanistan, Karzai formed resistance groups and vowed to oust them from power. There was an element of personal revenge to his actions, as his father had been assassinated by the Taliban. After the 9/11 terrorist attacks on New York and Washington, Karzai, in coordination with U.S. forces, worked to overthrow the Taliban regime of Mullah Omar.

On December 5, 2001, exiled Afghanistan political leaders representing various ethnic tribes gathered in Bonn, Germany, and named Karzai the chair of a 29-member governing committee and the leader of Afghanistan's interim government.

Karzai has traveled extensively around the world and has pleaded for donations in order to rebuild infrastructure and other facilities in his country. Karzai married Dr. Zeenat Quraishi in 1999. He has one sister and six brothers, including Ahmed Wali Karzai, who helps coordinate humanitarian relief operations in the province of Kandahar.

See also AL-QAEDA.

MOHAMMED BADRUL ALAM

Kaunda, Kenneth

(1924–) *first Zambian president*

Kenneth Kaunda, a Zambian nationalist, led the struggle for independence against the British and became the first president of independent Zambia in 1964. Kaunda was born in what was then Northern Rhodesia and, like many first-generation African nationalists, he was educated at Christian mission schools. He worked as a miner, as a teacher, and, for a short period of time, as an instructor in the army. Kaunda joined several African nationalist movements and in Lusaka became secretary-general of the African National Congress (ANC). He quit the ANC to form the Zambia African National Congress (ZANC); when the British banned ZANC in 1959, Kaunda was imprisoned. Upon his release Kaunda became president of the new United National Independence Party (UNIP) that replaced the banned ZANC; he supported demonstrations and civil disobedience against British control. Kaunda became president of newly independent Zambia in 1964 and held the presidency until 1991.

During his tenure in power, Kaunda became increasingly authoritarian and, in a trajectory similar to other African rulers in the 1970s–1980s, declared Zambia a one-party state in 1972. As agricultural productivity faltered, Zambia's economy became dependent on copper exports, and Kaunda was accused of corruption and responsibility for the economic problems. In face of mounting political opposition, Kaunda stepped down from power, and Frederick Chiluba replaced him as president in 1991. Chiluba maneuvered to prevent Kaunda from contesting further elections and, after being accused of involvement in an attempted coup d'état, Kaunda retired from politics in 1997.

JANICE J. TERRY

Kennedy, John F.

(1917–1963) *U.S. president*

John F. Kennedy was the 35th president of the United States, serving from 1961 until his assassination in November 1963. Prior to that he had a prominent military career, served in the House of Representatives

and then in the Senate from 1947 to 1960, and was the youngest person to be elected president. He is also the only Roman Catholic to be elected president.

John Fitzgerald Kennedy was born on May 29, 1917, in Brookline, Massachusetts, the second son of Joseph P. Kennedy and Rose (née Fitzgerald). He attended Dexter School, Riverdale Country School, Canterbury School, and later Choate School. Graduating in 1935, he went to London to study at the London School of Economics but fell ill and returned to the United States where he attended Princeton University briefly. He then went to Harvard College, spending the summer holidays in 1937, 1938, and 1939 in Europe. John Kennedy was in Germany in August 1939, returning to London by September 1, 1939, when Germany invaded Poland.

In 1940 Kennedy completed his honors thesis, "Appeasement in Munich," which was subsequently published as *Why England Slept*. In May and June 1941 Kennedy went to South America. He volunteered for the U.S. Army but was rejected because of his bad back. However, using contacts in the Office of Naval Intelligence, he was accepted for the navy in September, and when war broke out with Japan in December 1941, he served in the Pacific. On August 2, 1943, the boat which Kennedy was in, the PT-109, was rammed by the Japanese destroyer *Amagiri* while on a night-time patrol near New Georgia in the Solomon Islands. He towed a wounded man to safety and was personally involved in rescuing two others.

Initially, John Kennedy had some thoughts about becoming a journalist. The death of his older brother, Joe, in 1944, however, propelled him into politics and in 1946 he ran for a seat in the House of Representatives as a Democrat for Massachusetts, winning with a large majority. In 1952 he defeated the incumbent Republican Henry Cabot Lodge for the U.S. Senate, and served in the Senate from 1953 to 1960. His book, *Profiles in Courage*, was published in 1956, winning the Pulitzer Prize for biography in 1957. Kennedy's connections with Senator Joe McCarthy were to damage his standing in the liberal establishment, but he did support the Civil Rights Act of 1957. On September 12, 1953, John Kennedy married Jacqueline Lee Bouvier. They had four children: a daughter, stillborn in 1956; Caroline Bouvier Kennedy, born in 1957; John Fitzgerald Kennedy Jr., born in 1960; and Patrick Bouvier Kennedy, born in 1963.

In 1960 Kennedy ran for president. What was particularly noteworthy was the first television debate that Kennedy had with his Republican opponent,

Minutes before the assassination: Texas governor John Connally and his wife (seated, front); Kennedy and the First Lady (back).

RICHARD NIXON. Kennedy defeated Nixon in a tightly fought race, with the Democrats gaining 303 electoral college seats against 219 for the Republicans. An independent, Harry Byrd, picked up the remaining 15 electoral college seats.

On January 20, 1961, Kennedy was sworn in as the 35th president. The first controversy of his presidency concerned the government of FIDEL CASTRO, which had come to power two years earlier. The Eisenhower administration had allowed anti-Castro Cubans to be secretly trained in the southern United States, mainly in Louisiana and Florida, and they had planned to invade Cuba. The plan had been drawn up before Kennedy came to power, and on April 17, 1961, Kennedy approved it. However, he cancelled the air support that was to have been provided by the U.S. Air Force. When the Cuban exiles landed at the BAY OF PIGS in Cuba, they were quickly overwhelmed by the Communists.

The next major crisis, the CUBAN MISSILE CRISIS, took place from October 14, 1962, when American U-2 spy planes photographed a Soviet Intermediate Range Ballistic Missile site under construction in Cuba. He decided that an attack on the site might result in nuclear war, but that inaction would be seen as a sign of weakness. In the end, he resolved to order a military blockade of the island and eventually came to an agreement with the Soviet Union's premier, NIKITA KHRUSHCHEV, that the Soviet Union would remove the missiles, and the United States would promise never to invade Cuba, and withdraw some missiles from bases in Turkey.

Kennedy was interested in rapprochement with the Soviet Union, but he had to be perceived as "tough," especially in Europe. On June 26, 1963, he visited West Berlin and addressed a large public crowd with the famous "Ich bin ein Berliner" speech. In August 1963 Kennedy was able to sign into law the Nuclear Test Ban Treaty, which prohibited atomic testing on the ground, in the atmosphere, and underwater, but did not prohibit testing underground.

Another foreign policy problem that Kennedy faced was the increased fighting in Laos and VIETNAM. In the former, the Kennedy administration backed a neutral government, and in the latter, the United States was heavily involved in supporting the anticommunist South Vietnamese government led by President NGO DINH DIEM. By 1963 there were 15,000 U.S. military advisers in South Vietnam. Diem had ruled South Vietnam since late 1954 and was becoming increasingly authoritarian. Kennedy felt that it was Diem's brother, Ngo Dinh Nhu, who was a major problem and wanted Diem to get rid of Nhu. Diem realized that Nhu was his most powerful supporter and refused. This led the Kennedy administration to give the go-ahead for Buddhist South Vietnamese generals to overthrow Ngo Dinh Diem, who, along with Nhu, was murdered. The new regime was inherently unstable, causing the United States to commit more combat soldiers, escalating the war.

The domestic program introduced by Kennedy was known as the New Frontier. He tried to legislate to prevent the continuance of racial discrimination. He also proposed tax reforms and promised federal funding for education, more medical care for the elderly, and government intervention to boost the economy of the nation. Most of these measures were to be introduced by Kennedy's successor, LYNDON B. JOHNSON. It was Johnson who, in the Civil Rights Act of 1964, introduced the measures that Kennedy had supported.

John Kennedy is also well known for his commitment to the space program. With the Soviet Union managing to win all the first stages of the space race, Kennedy pushed for greater effort from the American people. The moon landing took place on July 20, 1969, during Nixon's presidency.

As John Kennedy had only narrowly won the 1960 presidential election, he began his campaign for reelection early. This involved trying to win support from the southern states. He went to Texas in November 1963, where, on November 22, in Dallas, at 12:30 P.M., he was assassinated. A loner, Lee Harvey Oswald, was arrested about 80 minutes later and charged with murdering a Texas policeman. He was then also charged

with murdering John F. Kennedy. Before Oswald could be brought to trial, two days later, on November 24, he was shot dead by nightclub owner Jack Ruby.

There has been much written about the assassination of John F. Kennedy. On November 29, five days after the shooting of Oswald, Kennedy's successor, Lyndon B. Johnson, created the President's Commission on the Assassination of President Kennedy, known as the Warren Commission because it was chaired by Chief Justice Earl Warren. It concluded that Kennedy was killed by Lee Harvey Oswald acting alone, a view later endorsed by the U.S. House of Representatives Select Committee on Assassinations reporting in 1979. Most people now view the Warren Commission report with disdain for the evidence that it missed.

John F. Kennedy was buried at Arlington National Cemetery, Arlington, Virginia. The bodies of two of his children, his first daughter, and Patrick, his youngest son who died on August 9, 1963, were brought to Arlington and buried with him.

JUSTIN CORFIELD

Kenya

Present-day Kenya is a mix of colonial struggle and capitalist vigor. The road to Kenyan independence began in earnest in October 1952. Kenya, under a state of emergency that would last seven years, began its march toward decolonization. The Mau Mau rebellion against British colonial rule prompted the successful request for a state of emergency. Britain rallied its own troops, in addition to African troops, to suppress the rebellion. With new-found intelligence data gathered during the integration of General China, Britain embarked on Operation Anvil on April 24, 1954, in hopes of ending a successful rebellion against them. Operation Anvil severely restricted the already limited freedoms of the citizens of Nairobi. Mau Mau supporters left in the capital were moved from the

city to detention camps. Although the Mau Mau rebellion was not officially over until 1959, the capture of Dedan Kimathi on October 21, 1956, decreased the optimism of those fighting for the end of colonial rule.

The end of the Mau Mau rebellion's main military offensive in 1956 opened the door for voluntary British withdrawal. The first direct elections for Africans to the Legislative Council were in 1957. With moderates making up the majority of the Legislative Assembly, the British government had hoped that power could be passed to those who wished to see a minimal British presence in Kenya. However, the Kenya African National Union (KANU) and extremist JOMO KENYATTA formed the government shortly before Kenya became officially independent on December 12, 1963.

Single-party leadership continued after Kenyatta's death in 1978 with Daniel arap Moi. President arap Moi survived an abortive military coup attempt on August 1, 1982, masterminded by air force serviceman Senior Private Hezekiah Ochuka. Ochuka attempted to take the capital, but the coup was suppressed by loyalist forces led by the army, the general service unit, and later the regular police. Intimidated by the strength of the air force, arap Moi disbanded the Kenyan Air Force.

Moi was unsuccessful in nurturing Kenya's postcolonial economy. Sensing radical changes to Kenya's governmental institutions, Moi enacted constitutional reform during the 1988 elections. Elections were opened to the *mlolongo* system, by which voters lined up behind their selected candidate. Over the course of the next years several clauses from the constitution were changed in order to reestablish Kenya's failing political and economic systems. The first democratic elections were held in 1992. Moi was reelected and again in 1997. In the 2002 elections, Moi was constitutionally barred from running, and Mwai Kibaki was elected for the National Rainbow Coalition.

With the absence of civil war in Kenya the country remained relatively stable, but it continued to be a single-party state until the 2002 elections. President Kibaki instituted long-needed reforms, but continued Kenya's tradition of corruption at the highest levels. A draft constitution put forth in November 2005 was defeated by the Kenyan electorate when it was discovered it would only decrease transparency in government. In response, Kibaki dismissed his entire cabinet and appointed new ministers, many of whom belonged to political parties with which he was aligned.

Natural disaster plagued Kenya in the late 1990s, compounding the already poor economic situation. Severe flooding destroyed roads, bridges, and crops; epidemics of

malaria and cholera overran the health care system; and ethnic clashes erupted. Desperate to win back INTERNATIONAL MONETARY FUND (IMF) and WORLD BANK funding to assist the millions in need, President Moi appointed his high-profile critic and political opponent, Richard Leakey, as head of the civil service in 1999. A third generation white Kenyan, Leakey was fired by Moi two years later for apparently engaging in corruption. This prompted the ruling party to put forth an anticorruption law in August 2001, whose failure to pass ended Kenya's chances for renewed international aid.

Corruption continued under President Kabaki. His anticorruption minister, John Githongo, resigned in February 2005 over frustrations that he was prevented from investigating scandals. In early 2006 investigations showed that the government was linked to two corruption scandals. Economic devastation brought on by severe droughts compounded the systemic corruption.

Elections in December 2007 sparked weeks of violence, resulting in more than 1,000 deaths. Former UN secretary-general Kofi Annan brokered a deal to form a new government, thus halting the possible threat of civil war.

RIAN WALL

Kenyatta, Jomo

(1889–1978) *Kenyan president*

Jomo Kenyatta was born in Kenya and as a infant was named Kamau wa Ngengi; he took the name Jomo in 1938. Kenyatta was keenly interested in local traditions and social customs, particularly those of the Kikuyu. His study, *Facing Mount Kenya* (1938), remains one of the definitive works on the Kikuyu. As a youngster Kenyatta helped his grandfather, a traditional healer, but after being educated at a mission school he converted to Christianity. As a young man, Kenyatta worked for an Indian Asian merchant and in a European business firm.

In the 1920s Kenyatta became the leader of the Kikuyu Central Association (KCA), which represented the Kikuyu in their land cases against the British, who had

confiscated large tracts of Kikuyu farmland that was then taken by white, usually British, settlers. Kenyatta represented the Kikuyu on negotiating missions to England and visited the Soviet Union in 1930. Upon his return to England as a teacher, Kenyatta was falsely accused of communist ties.

Kenyatta participated in the fifth Pan Africa Congress, which met in Manchester, England, in 1945. Upon returning to Kenya after World War II, he assumed leadership of the Kenyan nationalist movement. In 1952 he was arrested and accused of managing the Kenya nationalist armed movement, known in the West as the Mau Mau; he served nine years in prison or under virtual house arrest. The Mau Mau was accused of terrorist acts against the white, mostly British settlers. Although the Mau Mau revolt was responsible for violence and the murder of some settlers, the Western media exaggerated the levels of violence.

Kenyatta became president of the Kenya African National Union (KANU) in 1961 and led a delegation to London to negotiate full independence, or *Uhuru*. In 1964, Kenyatta became the president of the independent Kenyan, republic. Known as *Baba wa Taifa*, father of the nation, Kenyatta maintained economic stability in Kenya, but his opponents also charged him with cronyism and corruption. He died while still in power in 1978 and was succeeded by Daniel arap Moi, who faced increased opposition to his mounting dictatorial powers.

JANICE J. TERRY

Khan, Liaquat Ali

(1896–1951) *Pakistani leader*

Born on October 1, 1896, in the United Provinces of pre-partition India, Liaquat became the first prime minister of Pakistan and a founding father when it became independent on August 14, 1947. He graduated from Aligarh College, and he became interested in the Indian nationalist movement. Afterward, he traveled to Britain to continue his education, obtaining a degree in law

from Oxford University in 1921, and was called to the bar in 1922. Liaquat returned to India in 1923.

He began to identify with the Muslim cause. He joined the Muslim League, which sought to represent Muslims across the subcontinent. In 1926 Liaquat won his first election as a member in the United Provinces Legislative Assembly, although as an independent. In 1940 he was elected to the Central Legislative Assembly, where he established a reputation as a successful politician of principle, integrity, and eloquence. Although he sought to promote the interests of Muslim Indians, he also worked to quell communal discord. In 1936 he was elected honorary secretary of the Muslim League, and he held the office until independence in 1947. He became increasingly influential within the Muslim League, as illustrated by his appointment as deputy leader of the Muslim League Parliamentary Party in 1940, where he forged a close working relationship as the lieutenant of Mohammed Ali Jinnah, the leader of the Muslim League and later the father of Pakistan.

After partition, Liaquat accepted the prime ministership and also served as minister of defense under Jinnah, governor-general of Pakistan. The nation was not only divided into East (now Bangladesh) and West Pakistan, it was also plagued by a refugee crisis as migrating Hindus, Muslims, and Sikhs fled across the subcontinent before and immediately after the partition. With Jinnah's death in 1948, Liaquat became the dominant leader in Pakistan.

Although Pakistan's political establishments were strongly pro-Western, Islam began to broaden its influence. Pakistan's disputes with India over trade and the division of Kashmir dominated foreign policy, and relations between the two nations remained tense.

Liaquat was assassinated in October 1951. His death ushered in a chaotic period, and democracy soon floundered, culminating in the military seizure power in a coup in 1958.

RYAN TOUHEY

Khomeini, Ayatollah Ruhollah

(c. 1900–1989) *Iranian religious and political leader*

Ruhollah Khomeini, an Iranian religious leader known by the Islamic title of ayatollah, was the driving force behind the movement that overthrew Shah Mohammad Reza Pahlavi in 1979; he then became Iran's highest political and religious authority for the next 10 years.

Although Khomeini was born into a poor family, he was the grandson and son of mullahs (Shi'i religious leaders). When he was five months old, his father was killed in a dispute. The young Khomeini was then raised by his mother, later his aunt, and finally his older brother Murtaza. Khomeini was educated in various Islamic schools and received the sort of instruction expected of a mullah's son. Khomeini was an attentive, intelligent, hardworking, and serious student. In about 1922 he settled in the city of Qom, and around 1930 he assumed the surname of Khomeini from his birthplace, Khomein (or Khomeyn). As a respected Shi'i scholar and teacher, Khomeini authored many works on Islamic philosophy, law, and ethics. It was his outspoken opposition to Iran's ruler, Shah Mohammad Reza Pahlavi, plus Khomeini's resolute advocacy of Islamic purity, that garnered him support in Iran. In the 1950s Khomeini received the religious title of ayatollah by popular acclaim; by the early 1960s he had received the title of grand ayatollah, which made him one of the supreme religious leaders of the Shi'i community in Iran.

In 1962–63 Khomeini publicly opposed the shah's land-reform program; he also spoke out against the Western-style emancipation of women in Iran. These criticisms led to Khomeini's arrest, which quickly sparked anti-government riots. After a year's imprisonment Khomeini was forced into exile in November 1964; he eventually settled in the Shi'i holy city of Najaf, Iraq, from which he continued to call for the shah's removal from power.

From the mid-1970s Khomeini's stature inside Iran grew. When Khomeini's continued denunciations of the shah caused political difficulties in Iraq, Iraq's ruler SADDAM HUSSEIN expelled Khomeini from the country in October 1978. Khomeini and his second wife then settled in Neauphle-le-Château, a suburb of Paris. From there the Ayatollah Khomeini directed the movement to unseat the shah. Khomeini's call for a general strike in October 1978 led to a crippling strike in the Iranian oil fields in November. These and other strikes resulted in massive demonstrations, riots, and civil unrest, which in turn forced the departure of the shah from the country on January 16, 1979. Khomeini arrived in the Iranian capital of Tehran on February 1 and was popularly acclaimed as

the religious leader of Iran's revolution. The Ayatollah Khomeini appointed a government on February 5 and then moved to live in the holy city of Qom. In December 1979 a new constitution was adopted, which created an Islamic republic in Iran. Khomeini was named Iran's political and religious leader (*fagih*) for life.

Although the Ayatollah Khomeini held no official government office, he proved implacable in his determination to transform Iran into a theocratically ruled Islamic state. He directed the revival of traditional, fundamentalist Islamic values, customs, laws, and legal procedures, explaining how they were to affect all public and private activities in Iran. Khomeini also acted as arbiter among the various feuding secular and religious factions vying for power in the new revolutionary state. Still, Khomeini made final decisions on important matters requiring his personal authority.

The main theme of Khomeini's foreign policy was the total abandonment of the shah's pro-Western position and the adoption of an attitude of hostility to both the United States and the Soviet Union. At the same time, Khomeini's Iran tried to export its version of Islamic fundamentalism to neighboring Muslim countries. After Iranian militants seized the U.S. embassy in Tehran on November 4, 1979, Khomeini sanctioned their holding of U.S. diplomatic personnel as hostages for more than a year, souring diplomatic relations with the United States for many years. Khomeini also refused to permit an early peaceful solution to the IRAN-IRAQ WAR, which had begun in 1980, by insisting that it be prolonged in hopes of overthrowing Iraq's president, Saddam Hussein. Khomeini finally approved a cease-fire in 1988 that effectively ended the conflict.

Iran's path of economic development almost came to nothing under Khomeini's rule, and his pursuit of victory in the Iran-Iraq War ultimately proved pointless and extremely costly to Iran. Nevertheless Khomeini was able to retain, by sheer force of personality, his hold over Iran's Shi'i masses, and until his death in 1989 he remained the supreme political and religious arbiter in the country.

KEITH BUKOVICH

Khrushchev, Nikita

(1894–1971) *Soviet leader*

Nikita Sergeyeovich Khrushchev was first secretary of the Communist Party and de facto leader of the Soviet Union between 1953 and 1964; he concurrently served as premier from 1958 to 1964. Colorful and highly controversial, Khrushchev was a reformer whose shrewd intellect was frequently overshadowed by his impulsive personality. He abolished the most ruthless aspects of the political system and tried with limited success to catch up with and overtake the U.S. economy. In foreign affairs he forcefully maintained the unity of the EASTERN BLOC and veered between "peaceful coexistence" and several dangerous confrontations with the United States. He was, without question, one of the most important figures of the COLD WAR.

Khrushchev was born in April 1894 in Kalinovka, Russia, near the border with Ukraine. His parents were illiterate peasants, and young Nikita was more familiar with hard labor than formal education. The family relocated to Ukraine in 1908, where he worked various factory jobs and got involved in the organized labor movement. In 1917 he joined the revolutionary Bolsheviks and he later fought for the Red Army. After the war he obtained some Marxist training at a technical college and was assigned a political post in the Ukraine. Over the next 20 years Khrushchev would rise rapidly through the ranks of the Communist Party, and in 1939 he became a full member of the Politburo. His success was largely due to his loyalty to Stalin. During World War II he helped organize the defense of the Ukraine and the relocation of heavy industry into the Russian interior, and he was at Stalingrad when the Red Army turned the tide of the war against Germany.

After the war Khrushchev remained an influential member of the Politburo, and when Stalin died in March 1953, he battled with Georgy Malenkov, Lavrenty Beria, and Nikolai Bulganin for the leadership. Malenkov was made premier and initially seemed to be the true successor, but as first secretary of the Communist Party, Khrushchev possessed the real power. By early 1955 he had emerged as the clear leader of the Soviet Union.

Once in firm control, Khrushchev embarked on ambitious economic reforms. Khrushchev also continued the policy of spending heavily on the military. Under his leadership, the Soviet Union kept pace in the nuclear arms race with the United States and developed a space program that had significant successes.

Soviet leader Nikita Khrushchev, shown here at the United Nations, initiated radical reforms after the death of Joseph Stalin.

The launch of the *Sputnik* satellite in 1957 and the first manned space flight in 1961 were great technical triumphs for the Soviet Union.

Khrushchev also decided, in a very risky move, to expose the horrors of the Stalinist era and to promote political reforms. In February 1956 he gave a speech to the 20th Party Congress that denounced Stalin's "cult of personality," documented various crimes of the old regime, and introduced the policy of "de-Stalinization." The speech sparked hopes that Khrushchev would tolerate autonomy and perhaps even democracy within the Eastern bloc. These hopes proved illusory when a popular 1956 uprising in Hungary was suppressed by a brutal military intervention authorized by Khrushchev.

This action shocked the West, which had welcomed the assurances of Khrushchev that the Soviet Union desired "peaceful coexistence" between capitalism and communism. Khrushchev seemed unable to resist the temptation to taunt the West periodically, and he had several alarming showdowns with the United States. He tried fruitlessly to force the United States and its allies out of Berlin between 1958 and 1961, eventually building the infamous Berlin Wall. He also humiliated Eisenhower in 1960 by revealing the capture of a U.S. U-2 spy plane and its pilot.

Riskiest of all, in 1962 Khrushchev secretly placed nuclear missiles in communist Cuba. The purpose of this gamble was to protect Cuba from U.S. attack and to provide the Soviet Union with instant strategic parity. When U.S. spy planes detected the missiles, however,

a standoff resulted that brought the world alarmingly close to nuclear war.

In the end the CUBAN MISSILE CRISIS was resolved through diplomatic back channels, with the Soviets removing the missiles in exchange for a U.S. pledge not to invade Cuba and the removal of U.S. missiles from Turkey. Both sides gained something, but Khrushchev was widely perceived to have backed down in the face of U.S. resolve. By this time he had already made too many enemies within the Soviet Union. Finally, in late 1964, Khrushchev was removed from power by a conservative faction led by LEONID BREZHNEV. His life was spared, perhaps a testament to the success of his political reforms, but Khrushchev spent the rest of his life under house arrest. He died in Moscow in September 1971.

CHRIS PENNINGTON

Kim Il Sung (1912–1994)/ Kim Jong Il (1942–)

Korean political leaders

Together, father and son Kim Il Sung and Kim Jong Il form a dynasty that has ruled the Democratic People's Republic of Korea, or Communist North Korea, since its creation in 1948. Because of the personality cult established by Kim Il Sung and because Korea remains a tightly closed society, details about the lives of the two men remain scarce. The information that is disseminated officially is so flattering that it is highly suspect. For example, one biography of Kim Il Sung reports that he fought more than 100,000 times against the Japanese in the seven years between 1932 and 1945 and was always victorious.

Kim Il Sung (originally Kim Sung Chu) was born in 1912 in a northeastern province of Korea. His father was a schoolteacher who took his family to Chinese Manchuria in 1925 to escape Japan's harsh colonization of their homeland. For the next 14 years, Kim lived in Manchuria, where he joined the Communist Party in 1931. In 1939 Kim went to the Soviet Union, where he received further military training and was part of the Soviet military force that invaded and occupied Pyongyang in 1945.

According to the terms of the Yalta agreement, the United States and the Soviet Union divided Korea into North and South. Kim stayed in the north with the Soviets, who helped him prevail over other factions and become premier of the new Democratic People's Republic in 1948. Under Soviet and Chinese sponsorship Kim instigated the KOREAN WAR, which lasted until 1953.

A great admirer of Stalin, Kim patterned his rule after the Soviet leader. During the years following the Korean War, Kim solidified his power, purged his enemies, drove out foreign influences, and established himself as almost a god. He also managed, through rigorous control of the press, to exalt his family, raising many of them to the status of national heroes. He decreed that no newspaper could be published without his picture on the front page and without all the stories approved by government censors. His pictures and statues were also in every public building in the nation.

These and other actions were undertaken as part of Kim's self-proclaimed doctrine of *Juchie*, which encompassed the total economic, social, and political philosophy of the country. North Korean citizens born after the Korean War had little or no knowledge of the outside world, since anything foreign was prohibited. His birthday became a national holiday. Since 1976, the Loyalty Festival Period has included February 16 (Kim Jong Il's birthday) and April 15 (Kim Il Sung's birthday).

According to some reports, Korea went to extraordinary lengths to prolong Kim Il Sung's life. Purportedly a clinic staffed with 2,000 specialists was constructed solely for the purpose of caring for Kim and his son. Staff at the clinic experimented with diets and drugs on two teams of men who were similar to the leaders in age and body makeup. These efforts to extend his life all failed and the elder Kim died in 1994.

Kim Jong Il, the eldest son of Kim Il Sung, became his country's next dictator. He was born in 1941 while his father was training in the Soviet Union. The Soviets had established a school for the children of Korea's guerrilla fighters, the Mangyongdae Revolutionary School, where Jong Il received his early education. After two years of training at the Air Academy in East Germany, the young Kim returned to Korea and attended Kim Il Sung University.

Kim Jong Il's portraits began to appear with his father's, and he was referred to by titles such as "the sun of the communist future." He made official visits to China and the Soviet Union in the 1980s, further indicating that he would follow his father as ruler. But he was not immediately named as his father's successor.

The title of the country's president was reserved for his father by a constitutional amendment.

Little information is available about the personal life of Kim Jong Il. Some sources report that his half-brother is being groomed as his successor while other reports indicate that his sons are embroiled in a struggle to become heir.

JEAN SHEPHERD HAMM

King, Martin Luther, Jr.

(1929–1968) U.S. civil rights leader

Martin Luther King, Jr., was a civil rights leader whose campaigns for African-American racial equality made him an American icon. King was born in Atlanta, Georgia, on January 15, 1929, the son of the Reverend Martin Luther King, Sr., and Alberta Williams King. He was part of a ministerial dynasty at Atlanta's Ebenezer Baptist Church, which was begun by his grandfather, who served the church from 1914 to 1931. King preached there from 1960 until his death.

King's initial education was in the segregated Atlanta school system. He left high school at age 15 after gaining early acceptance at Atlanta's prestigious Morehouse College. From Morehouse he went north to attend Crozer Theological Seminary in Pennsylvania, becoming president of his senior class, and gaining his B.D. degree in 1951. He then accepted a fellowship that allowed him to pursue a doctorate at Boston University, finishing his preliminary studies in 1953 and receiving his degree in 1955. It was during this time that he met and married Coretta Scott on June 18, 1953. Following Dr. King's death Coretta King emerged as a promoter of civil rights and social justice in her own right. She served as leader of the King Foundation until her death in 2006.

In 1953 King became pastor of the Dexter Avenue Baptist Church in Montgomery, Alabama, at age 26 and began to condemn Jim Crow segregation in the course of promoting civil rights reform for the African-American citizens of Alabama. In 1955 he joined the Montgomery Bus Boycott. The boycott lasted for more than a year and King faced retribution and death threats, including the bombing of his home. As with many other

Martin Luther King, Jr., was the most eloquent leader of the American civil rights movement in the 1960s.

civil rights developments, the U.S. Supreme Court ultimately proved the driving force that finally ended segregation on intrastate buses in 1956.

In 1957 King took on the leadership of the Southern Christian Leadership Conference (SCLC), which became the springboard for his authority and that of the emerging CIVIL RIGHTS MOVEMENT. The movement began in black communities and churches but soon drew members from the broader population outside the south. King shaped the SCLC philosophy toward nonviolent protest and pressure, drawing upon Christian teachings, but also inspired by the successful protests of Mohandas K. Gandhi. King was also on the executive committee of the National Association for the Advancement of Colored People (NAACP).

Through these leadership positions and through growing televised media attention, King became a national figure and a major force in U.S. politics. The movement often faced a violent response to its activi-

ties, particularly as its agenda expanded to include a full range of civil rights issues. The speed of change proved dramatic and unstoppable and received national attention through events such as the 1963 March on Washington, which was inspired by and coordinated with other civil rights leaders but made famous by King's "I Have a Dream" speech.

It has been argued that the focus of this demonstration became less angry and more embracing because of pressure put on King by President JOHN F. KENNEDY, who believed the wrong approach could damage support for civil rights legislation. King's ascendance to national prominence was revealed when he became *Time* magazine's Man of the Year for 1963. These protests helped in the passing, during the presidency of LYNDON B. JOHNSON, of the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Martin Luther King, Jr., received recognition for his gigantic influence when he was made a Nobel laureate in 1964, being awarded the Peace Prize in recognition of his many efforts.

It was in the mid-1960s that King tried to take the civil rights movement to the north, beginning in Chicago in 1966. King and Ralph Abernathy made an effort to confront the poor's living conditions by moving to the slums. Here he faced violence and discrimination as well as Mayor Richard J. Daley's Chicago political administration, which undercut reform activities whenever possible. Eventually King and Abernathy returned to the South, but left a then-young follower, Jesse Jackson, in Chicago to carry on their work. From this base Jackson later built his own organization.

King started to reevaluate his positions on many areas and issues, including social and economic reform as well as the VIETNAM WAR. His rhetoric and speeches took on new tones that seemed to challenge not only segregation, racial justice, and civil rights but also issues potentially far more controversial to the mainstream. His turn to issues of poverty and its eradication led to his and SCLC's involvement in the "Poor People's Campaign" in 1968, which was to culminate in another major march on Washington demanding that the government address the needs of the poorest communities and members of U.S. society.

In April 1968 his campaign took him to Memphis, Tennessee, where he offered his support to the Memphis Sanitation Workers' strike for better wages and conditions. King saw the solution to many of these problems in government-driven job programs to reduce and reverse poverty in the nation in the form of a poor people's bill of rights. While staying at the Lorraine Motel in Memphis on April 4, 1968, in preparation for a local

march in support of the strikers, King appeared on the balcony at 6:01 P.M. and was assassinated by rifle shot. He was pronounced dead at 7:05 P.M. King's death was met with shock and dismay. President Johnson declared a day of national mourning, and the vice president, Hubert Humphrey, attended the funeral along with a crowd estimated at 300,000.

A national and international manhunt was launched for the killer, and two months later in London, England, James Earl Ray was apprehended on a passport violation and extradited to Tennessee, where he was charged with King's murder and confessed on March 10, 1969. Ray received a 99-year sentence and spent the rest of his life denying his guilt and requesting a trial. He argued that King had been killed by others and that he was only a fall guy in the midst of a larger conspiracy. Ray and several other inmates escaped from Brushy Mountain State Penitentiary in Petros, Tennessee, on June 1977, not long after Ray testified to the House Select Committee on Assassinations.

Controversy has surrounded the Ray conviction and there are many who believe that sinister forces manipulated and orchestrated the assassination plot. Issues have been raised concerning fingerprint evidence and ballistic tests on the rifle used in the crime. In 1997 Ray was visited in prison by King's son Dexter, who supported Ray's demand for a trial. In 1999 the King family instigated a wrongful death civil action against Loyd Jowers, a local Memphis restaurant owner who claimed a role in the assassination. A local jury found that Jowers, even though he had failed a lie detector test in regard to his claim, was guilty and that other government agencies were involved in the assassination. These claims were investigated in detail by the Department of Justice in 2000 and no evidence in support of the allegations was found.

The assumptions concerning a high-level conspiracy were enhanced because of King's conflicts with J. Edgar Hoover and the FBI. Initially they investigated communist associates of King and the organization, and maintained wiretaps at various times, including intruding on King's privacy and threatening him with exposure of his extramarital affairs. These tapes were placed in the National Archives and will be sealed until 2027.

Besides these attacks on the King legacy and honor, there were concerns expressed in the 1980s over plagiarism. This did lead to a formal inquiry in regards to his doctoral dissertation by Boston University, which concluded that almost a third of his work was taken from another student. Yet the university decided not to revoke his degree. It was also argued that many of his

other writings and speeches received the benefit of literary assistance in the form of ghostwriters.

Nevertheless even in the face of these questions as to his character, Martin Luther King, Jr., remains a major force in U.S. history whose name is one of the most easily recognized in the land. His boyhood home in Atlanta became a national historic site in 1980 and in November 1983 President RONALD REAGAN endorsed a bill creating a Martin Luther King National Holiday, which occurs on the third Monday in January. In addition his name was added to many streets and other public buildings throughout the United States and a King National Memorial in Washington, D.C., began with the purchase of land near the National Mall in 1999. Final design approval came in 2005.

THEODORE W. EVERSOLE

Koizumi, Junichiro

(1942–) *Japanese prime minister*

Junichiro Koizumi was born to a political family in Kanagawa Prefecture and educated at Keio University and University College London. He began his political career as a secretary to Takeo Fukuda, who later became prime minister. Koizumi was elected to the House of Representatives (lower house of the Diet) in 1970 as a member of the Liberal Democratic Party. He became minister of posts and telecommunications in 1992 and served three terms as minister of health and welfare, the first beginning in 1996. Koizumi ran unsuccessfully for the presidency of the Liberal Democratic Party in 1995 and 1999 before he was successful in 2001. He became prime minister of Japan on August 26, 2001, and was reelected in 2003 and 2005; he stepped down in 2006.

Koizumi was very popular when first elected. Although his popularity fluctuated over his years in office, he was the longest-serving Japanese prime

minister in two decades. His greatest efforts were directed at revitalizing the Japanese economy. To this end he proposed privatizing the Japan Post, a public corporation that offers banking and life insurance as well as postal and package delivery services. This proposed privatization was a controversial issue in Japan for several reasons, not the least of which is the fact that it employed one-third of all Japanese government employees, who feared the elimination of their jobs. Koizumi also decreased traditional subsidies for infrastructure and industrial development in rural areas, part of an attempt to shift the base of support for the Liberal Democratic Party from rural areas to a more urban core.

Koizumi made several visits to the Yasakuni Shrine in Tokyo, which honors the Japanese war dead, beginning in 2001. Because 14 Class-A war criminals are honored at the shrine, these visits drew international criticism, especially from China and South Korea, Japan's victims. Koizumi's decision to send members of the Japan Self-Defence Force to Iraq in support of U.S. operations in 2003 was also controversial, even though the Japanese troops were theoretically only involved in humanitarian activities.

Koizumi's personal style was quite different from that projected by most Japanese politicians: he called himself a *kakumei no hito*, or revolutionary, although some of his critics considered him more of a *henjin*, an eccentric. His personal appearance, complete with relatively long and unkempt hair and fashionable suits, and his much-publicized interest in rock music, suggested cultivation of this image.

SARAH BOSLAUGH

Korea, Democratic People's Republic of

With an area of 120,410 square kilometers, the Democratic People's Republic of Korea (DPRK), or North

Korea, occupies slightly more than half of the northern part of the Korean Peninsula in northeast Asia. North Korea shares common borders with the Republic of Korea to the south, the People's Republic of China (PRC) to the north, and Russia to the northeast. A four-kilometer-wide demilitarized zone, which runs 238 kilometers across land and another three kilometers into the sea, marks the boundary between the two Koreas near the 38th parallel. The estimated population of DPRK in 2004 was 22,697,553. Pyongyang is the national capital. North Korea remained one of the most isolated states in the contemporary world.

North Korea is a communist state. Its leader, KIM JONG IL succeeded to the position of supreme leadership in 1994 after the death of his father, KIM IL SUNG, although this was not formalized until four years later. Both father and son dominated the North Korean government since its inception. A newly amended constitution in 1998 conferred on the deceased Kim the title of president for life and abolished the office of the president. Kim Jong Il heads the National Defense Commission (NDC), which functions as the chief administrative authority in the country. He is also supreme commander of the Korean People's Army (KPA) and general secretary of the Korean Workers' Party (KWP).

The separate state of North Korea was created as a result of the military situation at the end of World War II. When Japan surrendered in August 1945, the northern part of the peninsula was occupied by Soviet forces, while the southern half came under U.S. military authority. The peninsula was consequently divided into two military occupation zones at the 38th parallel. The Soviet occupation authority turned to Kim Il Sung, who had fought the Japanese in Manchuria, to provide leadership in its zone. In September 1948 Kim launched the Democratic People's Republic of Korea, with himself as the premier.

In early 1950 Kim Il Sung lobbied his communist allies in the Soviet Union and the People's Republic of China (PRC) to support a North Korean effort to reunite the two Koreas. On June 23, 1950, the commanders of seven combat divisions of the North Korean People's Army amassed near the border and received orders to initiate the "war of liberation." Crossing the 38th parallel, North Korean forces quickly overwhelmed South Korean forces before they themselves were stopped and then pushed back across the border by a UNITED NATIONS (UN) force led by the United States. In November PRC sent "volunteers" to fight alongside the North Koreans when UN forces neared the Yalu River, North Korea's border with China. An

armistice was signed in 1953, establishing a demilitarized zone roughly at the 38th parallel.

The wartime situation gave Kim Il Sung the opportunity to consolidate his position and establish himself as the absolute power in North Korea. In a series of show trials and purges, potential rivals were eliminated. In 1956 members of rival factions were purged from the KWP. In fact, some were made to shoulder the blame for the failure of the unification effort. Two years later the KWP announced that it had ended intra-party dissent. Kim Il Sung was now the undisputed leader, controlling virtually all aspects of North Korean society.

A personality cult soon emerged around the person of Kim Il Sung, who was elevated to the status of “Great Leader,” and his past as a guerrilla fighter against the Japanese, his defiance of the United States, and his exploits in building the nation were mythologized in song and poetry. Institutions such as universities and museums bear his name, and important places in his life are national shrines. A similar personality cult developed around his son and successor, Kim Jong Il, with mythical events written into his biography. Revered as “Dear Leader,” the younger Kim is said to be imbued with extraordinary intellectual and artistic abilities.

North Korea adopted as its guiding ideology *juch’*e**, or self-reliance. Occasionally dubbed Kim Il-Sungism, the concept, which emerged in the mid-1950s, is an amalgamation of Marxist-Leninist doctrines with Maoism, Confucianism, and Korean traditions. *Juch’*e** in operational terms involves the creation of a self-sustaining national economy and a strong military that can provide self-defense.

After the KOREAN WAR, Kim Il Sung focused on economic development. With a centrally planned command economy, North Korea at first appeared to be making great strides. It recovered quickly from the devastation of the Korean War. In the spirit of *juch’*e**, economic planners focused on industrialization and the collectivization of agriculture. Equally important for North Korean economic survival was Soviet economic assistance, although limited, and the preferential treatment that North Korean goods received in the Soviet Union, PRC, and the East European satellites through the late 1970s–80s.

The changing geopolitical situation reduced such outside assistance to almost nothing and exposed the vulnerabilities in the North Korean economy. The consequences of a decades-old inefficient economic system could no longer be kept hidden. Energy and food shortages plagued North Korea, a country with little arable land and no oil reserves. Cycles of natural disasters exacerbated the situation. From the late

1990s onward North Korea had to rely on food aid from other countries, including South Korea, to stave off widespread famine.

The relationship between the two Koreas continued a seesaw trend in the Kim Jong Il era. From the mid-1990s onward there were intermittent talks between the two governments. In 1998 when South Korean president Kim Dae Jung initiated his Sunshine Policy, which held out hope for reconciliation between the two Koreas, he found a receptive audience in the north partly because North Korea saw this as a means of securing the necessary economic assistance.

In 2002 the North Korean government also began to abandon some features of its tightly controlled command economy. In addition, it adopted some market features, such as removing price and wage controls. The government also began to court foreign investment and foreign trade, including from the Republic of Korea.

In the late 20th and early 21st centuries, North Korea once again garnered attention because of its nuclear weapons program, weapons sales to Iran, and its withdrawal from the Nuclear Non-Proliferation Treaty. Six-party talks involving North Korea, South Korea, Japan, the PRC, Russia, and the United States did not yield definitive results. In 2005, North Korea tested a missile over the Sea of Japan. This approach increased the level of tension and raised the specter of a military confrontation in the Northeast Asia region. In October 2007, North Korea agreed to disable its nuclear facilities by late 2008 in exchange for economic aid.

SOO CHUN LU

Korea, Republic of

With an area of 98,480 square kilometers, the Republic of Korea (ROK), or South Korea, occupies slightly less than half of the Korean Peninsula. It is bordered to the north by the Democratic People’s Republic of Korea (DPRK, or North Korea), to the south by the East

China Sea, to the east by the Sea of Japan, and to the west by the Yellow Sea. A four-kilometer-wide demilitarized zone, which runs 238 kilometers across land and another three kilometers over the sea, marks the boundary between the two Koreas. The estimated population of ROK in 2005 was 48,422,644. Seoul, located near the border with North Korea, is the capital city.

South Korea has a republican government based on a presidential model. A popularly elected president, who is the head of state, appoints a prime minister as well as other members of the cabinet. A unicameral National Assembly functions as the legislative branch, and the Supreme Court and Constitutional Court make up the judicial branch.

In August 1945 Allied forces led by the United States landed on the Korean Peninsula in the south while Soviet forces moved down from the north, eventually liberating Korea from Japanese colonial rule. The 38th parallel became the boundary dividing the occupation forces from 1945 to 1948. What began as the separation of two administrative units dictated by the Yalta agreement between the U.S. and the Soviet Union in 1945 eventually led to the creation of two separate states dictated by the political and ideological divisions of the COLD WAR.

Domestic developments further complicated the matter. Throughout the war years, various Korean nationalist factions operating at home and in exile jostled to position themselves as the representatives of an independent Korea. In the immediate postwar era, the United States eventually turned to SYNGMAN RHEE, an exiled popular anticommunist nationalist to provide leadership in the south.

In 1947 the newly formed UNITED NATIONS (UN) created a commission to oversee national elections in Korea. Barred from access to the Soviet occupation zone, the commission oversaw the election of the National Assembly in the south in 1948. This body then elected Rhee as the first president. The Republic of Korea was formally established in May 1948.

War once again broke out on the Korean Peninsula when North Korean troops crossed the 38th parallel in a failed attempt to reunify the nation under communist rule. The United States promptly intervened in the conflict as part of a UN police action.

The KOREAN WAR cemented the patron-client relationship between the United States and South Korea. In 1954 the two countries signed a mutual defense treaty that formalized their bilateral security arrangements. Although their numbers were reduced after the 1970s, U.S. troops were stationed in South Korea from then

on. Additionally, the United States continued to supply generous military aid to build up South Korea's defense capabilities. South Korea contributed forces to help the United States in Vietnam from 1965 to 1973.

Authoritarian rule characterized the government of South Korea. Rhee combined bellicose rhetoric against the north with repressive tactics at home to silence political opposition. In 1952 he pushed for a change to the popularly elected presidency. Four years later he pushed through a questionable constitutional amendment that permitted a lifelong presidency. This allowed him to run for president again in 1956 and 1960. Meanwhile, domestic, social, and economic problems generated widespread student protests. Rhee resigned and fled to Hawaii, where he lived in exile until his death in 1965.

After a short interregnum during which the country turned to a new constitution that established parliamentary democracy, three military men followed as presidents in South Korea. The first, General Park Chung Hee, launched a coup in May 1961 to overthrow the nine-month-old parliamentary government and placed the Republic of Korea under military rule for two years. At the end of 1963 the country adopted a new constitution that permitted presidents to serve two four-year terms, and Park was duly elected to the office. But he would continue to manipulate constitutional processes, or, in some cases, suspend them altogether, in order to remain in power. In 1971 he declared a state of emergency, suspended the constitution, dissolved the National Assembly, and then promulgated a new Yushin (revitalization) constitution. The Korean Central Intelligence Agency (KCIA), which he established, was used to intimidate South Korean dissenters. Park relied on emergency decrees to repress this opposition to his regime; protesters were given long jail terms, a number of students were executed, and the press faced increasingly harsh censorship. Park's regime finally came to an end when the director of the KCIA assassinated him in October 1979.

During the Park Chung Hee era, South Korea made its transition to a modern economy. Inspired by the Japanese economic miracle, the government adopted a series of five-year development plans aimed at transforming an agrarian nation to an industrial power. Comparatively low labor costs allowed South Korea to compete effectively in such labor-intensive industries as textiles. In the 1970s the country shifted its focus away from labor-intensive light industries to heavy industries. This government-controlled economic development effort bore fruit as economic growth rates increased.

The capital of the Republic of Korea is Seoul (above), located near the border with North Korea. The Republic of Korea had an estimated population of 48,422,644 in 2005 and has a government based on a presidential model.

In December 1979 General Chun Doo Hwan, a veteran of the VIETNAM WAR, came to power in a coup. Within months he declared martial law. Charging that pro-democracy student demonstrations in Kwangju Province had been instigated by North Korean infiltrators, he acquired emergency powers that would allow him to disregard any constitutionally recognized rights of the people. He also embarked on a campaign to root out those who criticized his regime. Among those he arrested were three longtime civilian critics of authoritarian rule: Kim Young Sam, Kim Dae Jung, and Kim Jong Pil. But protests persisted, and in 1987 Chun stepped aside in favor of his handpicked successor, Roh Tae Woo, who won a presidential election with only 36 percent of the vote.

Under Roh, South Korea began to pursue new directions in foreign policy in keeping with the geopolitical

trend that hearkened the end of antagonistic camps in the cold war. Roh followed up on an earlier proposal to exchange visits between North and South Korea. Following sports and cultural exchanges, the two countries signed the 1991 Basic Agreement on Reconciliation, Non-Aggression, and Cooperation of Exchanges.

Politics in South Korea followed a pattern of democratization from the late 1980s onward. Kim Young Sam, a longtime critic of Park Chung Hee's authoritarian rule, emerged victorious in the 1992 presidential elections, becoming the first civilian president in more than three decades. Kim initiated a campaign to root out longtime corruption in government. Both the former presidents Chun and Roh were indicted for corruption and their roles in the 1979 military coup.

Kim Young Sam also faced pressure to liberalize the South Korean economy. Widely recognized as one of the

economic miracles in Asia, South Korea had an average per capita income of \$10,600. By 1997 economic growth in South Korea showed signs of abatement due to the effects of the Asian financial crisis. The resulting labor and student protests eventually led to the victory of a longtime opposition leader, Kim Dae Jung, in the presidential elections.

Kim Dae Jung presided over a country in the throes of an economic downturn. He pushed for bold reforms to ameliorate the situation. The South Korean leadership worked with the INTERNATIONAL MONETARY FUND in its rescue effort. By 1999 the economy was well on its way to recovery.

It was in foreign relations that President Kim Dae Jung would leave his mark. He pursued efforts to build a more cordial relationship with his northern neighbor by providing economic assistance to the beleaguered north. Such efforts, Kim hoped, would end North Korean isolation and eventually change its governmental system. Although Kim's policy did not yield concrete results, his summit meeting with North Korean leader Kim Jong Il in 2000 raised hopes about eventual reconciliation between the two Koreas. For his efforts, President Kim won the Nobel Peace Prize in 2000.

Roh Moo-hyun of the Millennium Democratic Party (MDP) became president after the 2002 elections.

SOO CHUN LU

Korean War (1950–1953)

The first major conflict of the COLD WAR began in June 1950 and ended in an inconclusive armistice on July 27, 1953. Long considered a “forgotten war” in which almost 4 million people, including 136,000 U.S. citizens, were killed or wounded, the Korean conflict attracted increased academic and popular attention in the early 21st century.

Partition of the ancient former kingdom of Korea resulted from Allied maneuvers near the end of World War II. Occupied by Japan during the war, Korea was divided in 1945 at the 38th parallel. The Soviets occu-

pied the northern area while the United States supervised the southern sector. As the cold war between these former allies intensified, this partition line became a new “Iron Curtain” dividing Koreans from each other.

So when the U.S. State Department learned in June 1950 that Communist North Korean forces had crossed the 38th parallel into anticommunist South Korea, President Harry S. Truman feared that South Korean forces alone would be unable to stop apparent Soviet plans to make all of Korea a communist regime. Taking advantage of a temporary Soviet boycott of the UNITED NATIONS (UN) Security Council, Truman persuaded UN members to declare North Korea the aggressor. This, rather than a congressional declaration of war, became the justification for fielding a joint UN force, dominated by U.S. officers and troops, to launch a “police action” in Korea.

UN forces were overwhelmed and pushed ever southward by the North Koreans until September, when General Douglas MacArthur, a World War II hero and Japan's postwar governor, executed a daring amphibious assault at Inchon, just west of South Korea's capital of Seoul. By October the 38th parallel was once again under UN control. But MacArthur wanted to go further. Meeting in October with the president MacArthur assured Truman that neighboring China would not interfere if UN forces reunited Korea under U.S. protection. China, fresh from its own communist revolution in 1949 and secretly armed by Soviet leader Joseph Stalin, took exception.

By the bitter winter of 1951 waves of Chinese soldiers had entered Korea and were again pushing UN troops southward. Yet MacArthur continued hostile moves against the Chinese and accused Commander in Chief Truman of “appeasement.” By the time Truman, supported unanimously by his Joint Chiefs of Staff, fired MacArthur for insubordination in April, the Korean conflict had settled into a violent stalemate centered on the original partition line. Peace negotiations began in June 1951, but foundered on the issue of repatriation. Many Chinese and North Korean war prisoners were unwilling to return to the regimes that had sent them into war.

The Korean stalemate became a venomous election issue in the United States, inspiring Republicans like Senator Joe McCarthy of Minnesota to question Truman's and the Democrats' patriotism. Elected president by a large margin in 1952, former General Dwight D. Eisenhower, a Republican, visited the Korean front lines after taking office, but no formal peace treaty ever resulted. A July cease-fire was declared, and the 38th

With her brother carried on her back, a Korean girl walks past a stalled U.S. M-26 tank at Haengju, Korea.

parallel, augmented by a DMZ (demilitarized zone) on either side, again marked the continuing division between North and South Korea. Over the years fighting occasionally broke out along the DMZ. North Korea remained a secretive and fanatically communist regime, while South Korea, despite difficulties adapting democratic political processes, became a major manufacturing power in Asia, rivaling Japan.

MARSHA E. ACKERMANN

Kubitschek, Juscelino

(1902–1976) *Brazilian president*

A canny political centrist best remembered for the construction of the new capital city of Brasília during his term as president of Brazil (1956–61), Juscelino Kubitschek bequeathed a complex political and economic legacy. Coming on the heels of the populist military dictatorship of Getúlio Vargas (president 1930–45, 1951–54), Kubitschek dispensed with Vargas's sympathies toward fascism and dictatorial style of governance, distanced himself from the military while endeavoring to placate it, and retained many of his predecessor's

populist policies—including state-supported industrialization and aggressive promotion of foreign investment and economic development. His term saw rapid economic growth and major advances in all major industries. It also left behind record government debt, a highly-mobilized and polarized civil society, and a disgruntled military. Three years after he left office, Brazil descended into military dictatorship that lasted until the mid-1980s (1964–85).

Kubitschek de Oliveira was born in the small back-country town of Diamantina in the state of Minas Gerais on September 12, 1902. His father, a salesman, died when he was two; his mother, a schoolteacher of Slovak ancestry, raised him. Educated as a medical doctor, in 1934 he was elected to the Minas Gerais State Assembly, a position he resigned in 1937 upon Vargas's announcement of his quasi-fascist *Estado Novo* (New State). Serving as mayor of Belo Horizonte from 1940 and the Minas Gerais State Assembly from 1945, he won the presidency in 1955 on the ticket of the Progressive Social Party (*Partido Social Progresista*) under the slogan “fifty years of progress in five.” His critics later lambasted his administration for causing “fifty years of inflation in five.” On taking office, he and his technocrats drew up a Program of Goals, identifying specific growth targets for each economic sector. The basic idea was to bring private capital under state direction to achieve rapid economic growth by focusing on key industries and infrastructure. When he left office, Brazil had a sustainable automobile industry, for instance, built virtually from scratch. Similar growth targets were met in electrification, road construction, and related sectors.

This rapid growth carried a high price, however. As state expenditures grew, Brazil's foreign debt grew, inflation soared, and economic inequality—already among the world's starkest—increased. Working to placate a resurgent left, a recalcitrant right, and an increasingly disenchanting military, Kubitschek ended up with far more adversaries than allies. His administration met many of its targets for growth, investment, and industrialization, while leaving to his successor a macroeconomic mess and sharpened political divisions that culminated in a prolonged military takeover. After the 1964 coup he went into exile, living in Europe and North America, before returning to Brazil in 1967. Nine years later, on October 22, 1976, he died in a car crash.

MICHAEL J. SCHROEDER

Kurds

The Kurds were most likely an Indo-European people who migrated from Central Asia to Asia Minor and northern Mesopotamian regions, living among Assyrian and Babylonian inhabitants sometime between the second and first millennium B.C.E. For centuries the Kurds maintained their own civilization, establishing a number of kingdoms and tribal fiefdoms in the high mountain areas in the Iran-Mesopotamia regions. The modern Kurdish people are the descendants of the original Kurds who were living in the Zagros Mountains and northern Mesopotamia, and they now populate territories known as Kurdistan, regions stretching from northwestern Iran to southeastern Turkey, northern Iraq, and northeastern Syria. Kurdish tribes can also be found in other countries such as ARMENIA, AZERBAIJAN, Georgia, and Lebanon.

Kurds are the fourth-largest ethnic population living in southwest Asia. Most sources indicate that today there are more than 30 million Kurds. Kurdish societal structure remains tribal, with loyalty of each Kurdish group directed toward an immediate family clan, but many modern Kurds now live in large cities. They do share a common cultural heritage that goes beyond their tribal social structure. The distinct Kurdish language belongs to the Iranian subgroup of the Indo-European languages.

The Kurds are mainly Sunni Muslims of the Shafi'i theological school of thought, which places more emphasis on the consensus of the community than on the authority of individual clerical scholars as a source of interpreting Islamic law. Many Kurds in Iraq, Iran, and Turkey also adhere to Sufism, or the mystical branch of Islam. Kurdish Islam evolved into a distinct form of vernacular religion with unique Kurdish cultural characteristics. A minority of Kurds are also Shi'i Muslims, Smaller Baha'i, and Christian; Jewish communities can also be found among the Kurdish population, with the Jewish Kurds mainly living in Israel.

The modern political history of the Kurds has been a quest for national autonomy. Although the 19th century saw a number of rebellions, Kurdish nationalism made its first appearance with the 1880 revolt of the Kurdish

League, led by the charismatic Sheikh 'Ubaydallah of Nehri. Despite defeat by the Ottomans, Sheikh 'Ubaydallah's movement marked the first Kurdish national rebellion that included Kurds of the Ottoman Empire and Qajar Persia. With the rise of the Young Turks Revolution in 1908, which removed the rule of 'Abdülhamid and restored the 1887 constitution, the Kurds began to form their own political parties. Following the demise of the Ottoman Empire, on August 10, 1920, Britain, France, and Italy designed the Treaty of Sèvres, which officially recognized Kurdish claims for national autonomy and an independent Kurdistan. The treaty was signed by the Allies and Turkey, recognizing that the Kurds have the right to exercise local autonomy.

Following the signing of the Lausanne Treaty in 1923, which mainly settled the boundaries between Armenia, Greece, and Turkey, the newly founded Atatürk government rejected the Treaty of Sèvres and subsequently found an opportunity to suppress the Kurdish right for national independence. The Kurds revolted against the Turkish state in 1925, 1930, and 1937, all three revolts led by Sheikh Sa'id and Sayyid Reza of Dersim, and all three brutally defeated. After that, all Kurdish nationalist movements experienced the same fate.

A recent liberation movement for national autonomy was led by the Kurdish Worker's Party, or *Partiya Karkeren Kurdistan* (PKK). The Marxist nationalist party was founded in 1973 and toward the end of the 1970s expanded its influence in the Kurdish regions of Turkey by using guerrilla warfare and terrorism as a way to destabilize the Turkish authority. The PKK proved to be the most violent of all Kurdish political groups in the modern history of Turkish nationalism. In return the Turkish army used various violent means to put down the Kurdish rebellion. These included the arbitrary murder and detention of Kurdish civilians, and the repression of Kurdish thinkers, journalists, and businessmen. The PKK lost much of its strength with the 1999 capture of the organization's leader, Abdullah Öcalan. On August 2004 the party declared a unilateral cease-fire.

The struggle for Kurdish nationalism, however, was most fruitful in Iraq. From 1919 to 1945 all the Kurdish rebellions against the British Army and the Iraqi regime were ruthlessly crushed. The Barzani family played a central role in these rebellions. Mustafa Barzani's Kurdistan Democratic Party (KDP) led the struggle when, on July 14, 1958, the monarchy was overthrown by General Abdul Karim Qassim. The republican coup raised the Kurdish expectation for more equal participation in the Iraqi state. But Qasim's regime quickly discarded

Barzani's call for Kurdish independence, and in 1961 he renewed fighting with the Kurds. From 1961 to 1963 and from 1974 to 1975, Mustafa Barzani led an armed struggle. Later in the 1970s Barzani went into exile in the United States, where he died in 1979.

In 1979 Masoud Barzani succeeded his father to lead the KDP. With the help of thousands of armed fighters, the *peshmargan*, he gained control of major parts of northern Iraq. After the FIRST GULF WAR the KDP emerged as one of the most significant Kurdish political organizations, operating with relative freedom to govern sections of northern Iraq while achieving the first enduring semiautonomous Kurdish state in history. In the early 21st century Barzani continued to play a major role in Kurdish politics in Iraq, where he shared power with his Kurdish rival Jalal Talabani.

Talabani was a major Kurdish nationalist and the leader of the Patriotic Union of Kurdistan (PUK), which was established in 1975. Formed mainly by urban intellectuals and leftist thinkers, the PUK emerged as KDP's main political competitor. In the early 1990s he helped the Kurdish uprising against the Ba'athist state while working closely with the United States, the United Kingdom, and France to establish the no-fly zone over northern Iraq to protect the Kurds from bombing and chemical attacks by SADDAM HUSSEIN's army. After years of rivalry, the PUK joined forces with the KDP and other Kurdish parties to create the Democratic Patriotic Alliance of Kurdistan to represent the Kurds in the Iraqi National Assembly elections of 2005 and 2006. In post-Ba'athist Iraq, Talabani was named the president of Iraq on April 6, 2005, and again on April 22, 2006, by the Iraqi National Assembly.

BABAK RAHIMI

Kuwait

Kuwait is one of the Gulf States, located at the head of the Persian Gulf, with Iraq to its north and east and Saudi Arabia to its south. Iran is located directly across

Minaret towers in Kuwait City. The tiny nation became the center of world attention in the early 1990s after Iraq invaded it.

the Gulf waters. The geography of Kuwait is dominated by mostly flat deserts interspersed with a few oases in Kuwait's 6,880 square miles of territory. *Kuwait* is a diminutive form of the word for fort. The official language is Arabic.

From the 19th century onward the Sabah clan allied with the indigenous commercial elites, and Kuwait developed as a thriving mercantile community with an economy based on foreign trade. Although never directly under Ottoman rule, the Al-Sabahs paid financial tributes to the empire and recognized the sultan's power, but Ottoman threats to annex Kuwait pushed the Sabahs to ally with Britain. An 1899 treaty gave Britain control over Kuwait's foreign affairs, and Kuwait became a British protectorate. From that time forward, border issues continually plagued the country. The British relinquished control in 1961.

After independence the Sabah family governed Kuwait as emirs with a constitutional monarchy. The emir ruled the country through the council of ministers, which mostly consisted of family members appointed by the emir himself. The judicial system was based on Islamic law, or sharia, particularly the Maliki school of jurisprudence, but many of the criminal and commercial laws were based on prior British laws. The legislative branch was composed of a National Assembly (Majlis al-Ummah), whose 50 members were elected to four-year terms.

Political parties are legally banned and instead, several organizations have representatives in parliament. Prior to 2005, voting was restricted to men who were able to prove that their ancestry in Kuwait dated prior to 1920 and who were not members of the armed forces. In 2005, women were granted the right to vote. After 2005 the government granted citizenship to 5,000 *biduns*, people without documents—originally from Syria, Iraq, and Jordan—per year. Foreigners, called expatriate workers in Kuwait, are needed to fill positions in the workforce and especially in the oil, construction, and service sectors. Since these immigrant workers are not entitled to free government services and benefits and cannot become citizens, there is some hostility between the native Kuwaiti population and the majority immigrant population.

The economy is mostly based on oil and overseas investments. In the 1970s the petroleum industry increased its extraction and processing capabilities, and by the mid-1980s 80 percent of the oil extracted in Kuwait was also being refined there. Oil production led to a Kuwaiti economic boom, with both direct and indirect services and products. By 2006 Kuwait had one of the highest per capita incomes in the world.

Kyoto Treaty

The purpose of the Kyoto Treaty, also known as the Kyoto Protocol, is to reduce global warming by reduc-

ing greenhouse gas emissions. Countries that ratify the Kyoto Treaty agree to reduce their greenhouse gas emissions to 5 percent below their 1990 level by the year 2012.

The treaty was first proposed in 1997. The Kyoto Treaty took effect on February 16, 2005, after ratification by Russia met the requirement that the treaty be ratified by countries accounting for at least 55 percent of global carbon emissions. As of September 2005 156 countries representing over 61 percent of global greenhouse gas emissions had signed the treaty; notable exceptions included the United States and Australia. Developing countries such as China and Russia are exempt from the requirement that they reduce greenhouse gas emissions.

Greenhouse gases contribute to global warming through what is known as the “greenhouse effect.” The analogy refers to a greenhouse used for gardening, in which sun rays are allowed to penetrate the glass walls and ceiling and warm the air within the greenhouse, and the warmed air is prevented from leaving the greenhouse by those same glass walls and ceiling. In the case of Earth, the planet is warmed by solar radiation which can penetrate Earth’s atmosphere, but a proportion of radiation reflected off the Earth cannot escape back through the atmosphere due to its different wavelength. Scientists estimate that without the greenhouse effect, the average surface temperature on Earth would be -18°C .

The Kyoto Treaty allows nations to engage in carbon emissions trading. This means that a signatory may increase their carbon emissions and remain within compliance by purchasing “credits” from countries that have decreased their emissions. Countries can also qualify for credits by engaging in clean energy programs and fostering forests and other natural systems referred to as “carbon sinks” because they remove carbon dioxide from the environment.

The current concern with greenhouse gases has to do with the increasing quantities of those gases, and the role they are believed to play in global warming, that is, an increase in the average temperature of the Earth’s surface and atmosphere. It is the consensus scientific opinion that global temperature has risen $0.4\text{--}0.8^{\circ}\text{C}$ since the late 19th century and that human activities are the cause of most of this change. Scientists who endorse the global warming hypothesis predict that the rise in temperature will continue to intensify with increasing industrial development and the resultant increase in greenhouse gas emissions. Predicted effects of continued global warming include a rise in sea level, leading to

coastal flooding, extreme weather, and food shortages due to crop failures.

Not all scientists accept the global warming hypothesis, however. Alternative explanations include the argument that the increase in temperature has not been clearly established, that it is within the range of normal variation to be expected over time, or that it is due to the period when measurement began having been unusually cold. Others argue that although the global temperature does seem to be rising, there is no proof that the rise in temperature was caused by human activity.

Latin American culture

Latin American culture is as diverse as its people. The region is vast: 8 million square miles of land organized into 20 countries, spread across South and Central America, Mexico, and the Caribbean. Centuries of colonization created a rich ethnic mix, combining indigenous peoples with settlers from Europe and slaves from Africa, along with smaller populations of imported workers from Asia and the Middle East. What is now seen as the common culture of the region is the result of generations of adaptation and change.

The traditional music of early indigenous civilizations was mostly lost during the first violent decades of colonization. Early Spanish adventurers noted that the music of Mesoamericans was exclusively for religious ceremony, not for entertainment. They played wind instruments, such as wooden panpipes and a clay flute called the *tlapitzalli*, or percussion instruments.

The Spanish brought with them stringed instruments and a mature musical style derived from their own multiethnic background. Later, African slaves added their unique vocal rhythms and their instruments—including the marimba, the clave, conga drums, and maracas. Together, these elements were fused into a variety of new and different musical and vocal styles that came to worldwide acclaim in the 20th century.

Music and dance grew together; most popular dance styles carry the same name as their musical styles. Latin dance tends to be highly physical, with steps and patterns drawn from different ethnic and cultural styles.

The tango, for example, developed in the port cities of Argentina in the early 20th century, first as a music form blending several ethnic styles, including the Argentine and Uruguayan *milonga*, the Cuban habanera, the Slavic polka and mazurka, Italian street music, the Spanish contredanse and flamenco, and African-Uruguay an *candombe*. Originally the music of the underclass, the tango became popular in Europe and America in the 1920s, spurred by the Italian-born film star Rudolph Valentino, who had been an exhibition dancer specializing in the tango before he became the first sex symbol of the movies. It was the first in a long line of Latin dance styles to gain popularity both inside and outside their native lands.

Other forms of Latin music and dance include the samba, the rumba, the cha-cha, the paso doble, the mambo, salsa, and merengue, among many others.

From the beginning of the colonial period to the 19th century, Latin American painting was dominated by European styles. Early Latin art was also dominated by Catholic iconography. Local artists learned the techniques of Spanish, Portuguese, French, German, and Flemish masters, frequently interlacing these styles with the themes and traditions of their precolonial world.

With the advent of independence in the early years of the 19th century, Latin American art began to move away from the baroque towards a more simple, neo-classical style, strongly influenced by current French trends. As nations began to build their own identities, artists were on hand to memorialize revolutionary leaders and pivotal events. Spanish and colonial themes were still present, but when it came time to set up their

universities and art institutes, it was French institutions that provided the model. Latin art remained focused on portraiture, landscape and decorative art until the 1920s, missing out almost entirely on the Impressionist movement and its offshoots.

Muralism was the first major art movement to bring Latin American artists world acclaim. The movement arose in Mexico in the 1920s, when a group of established artists began using public spaces for huge paintings that usually focused on themes of social justice and equality. Through their work, such artists as Diego Rivera, José Clemente, and David Alfaro Siqueiros became active participants in shaping the political and social movements of the time. Murals were public art, meant to challenge and inspire all citizens. Muralism quickly spread outside of Mexico, inspiring artists from the United States to the Chile.

By 1945 many Latin artists were turning away from nationalistic themes and toward the international avant-garde and modernist movements. In recent decades, artists have focused on the relationship between the modern era and the distant past as well as the national and the international, and mix a variety of media, often drawing from the folk art traditions of indigenous peoples.

Latin American literature began with the conquistadors and missionaries of the 16th century and was dominated by Spanish and Portuguese styles and techniques for generations. Early Latin American writers benefited from the literary movements in Europe in the 17th and 18th centuries, and elements of French classicism were present by the early 1700s. Mexico City, Lima, Quito, Bogotá, Caracas, and Buenos Aires grew into literary centers on a par with European salons.

With independence in the early 1800s most Latin American writers turned to nation-building as they joined the effort to create a national identity out of the ashes of colonialism. They also had a new form to play with: fiction, a genre long forbidden by the Spanish crown. The first Latin American novel was published in 1816. Politics and literature were closely intertwined throughout the 19th century, with new works not only by essayists and historians but also poets, playwrights, and novelists. Romanticism also struck a deep chord in Latin American art and literature during the period.

Contemporary Latin American literature runs the gamut from cosmopolitan intellectualism to magical realism drawn from traditions of the rural past. Since the 1960s it has taken a prominent place in the international literary world. Poets Gabriela Mistral, Pablo Neruda, and Octavio Paz were awarded the Nobel Prize

in literature in 1945, 1971, and 1990, respectively; Miguel Angel Asturias took the Nobel Prize in literature in 1967, and Gabriel García Márquez won in 1982.

Cinema came to Latin America in the early years of the 20th century, but it took many years for it to spread evenly across the region. Only Mexico, Argentina, and Brazil had the kind of large, stable economies necessary to launch a film industry. Even in these countries, early directors were marginalized by European and American studios that dominated the film distribution systems and monopolized Latin markets. This did not change until the Great Depression and World War II, when financial and political concerns slowed down the flow of foreign films. However, by the mid-1950s, the industry had drifted back toward the prewar status quo.

Latin American film came into its own in the 1960s–70s, as native-born directors tapped into the new experimental film techniques coming out of Europe and the social and political movements sweeping across their countries to create a unique cinematic voice. The last 25 years have seen an expansion and maturation of Latin American cinema. As in the United States, the industry is constantly trying to find a balance between popular entertainment and more artistic ventures.

HEATHER K. MICHON

Latin American politics

On a December day in 1956 a small band of armed men pushed off from the shores of eastern Mexico with their eyes on Cuba. FIDEL CASTRO and ERNESTO “CHE” GUEVARA were among this group of revolutionaries, and they dreamt of a new Cuba free from social classes, capitalism, and American imperialism. After two years of guerrilla warfare, Castro and his band succeeded in overthrowing the Cuban government and seized power. Almost immediately their new vision of a socially just society unfolded as the new regime expropriated foreign holdings, transferred industries to state ownership, and “volunteered” Cuban citizens to work on state-run farms. This new vision of Cuba stemmed from the growing tide of Latin American nationalists turning toward Marxist theories in the decades after World War II. This

brand of Marxism centered on erasing centuries of inequity and poverty with far-reaching change aimed at dismantling capitalism and promoting social justice for all. The struggle between rich and poor dominated the rhetoric of Latin American Marxism, but with a unique spin that included U.S. multinational corporations among the rich. The CUBAN REVOLUTION presented a new political paradigm to Latin America, one driven by Marxist ideology and armed revolution. It would influence Latin American politics for the rest of the 20th century.

As the economic boom of World War II faded in the 1950s, international demand for Latin American exports—chiefly agricultural—waned. High machinery costs driven by postwar rebuilding in Europe held back industrialization and economic growth in Latin America. Economic hard times fused with the legacy of conquest and colonialism incited demands for sweeping, fundamental change. Some Latin Americans, including Fidel Castro, explored and then embraced Marxist ideology as a viable solution to ending the region's poverty and economic dependency on industrialized nations.

The COLD WAR wore heavily on U.S.–Latin American relations, and the Cuban Revolution signaled an alarming turn to an American government in the throes of the “red scare.” Even more distressing to American policymakers was Castro's involvement in the launching of the Organization of Latin American Solidarity (OLAS) in 1967 to encourage Marxist revolutions throughout the region. Leftist revolutionaries such as the Farabundo Martí National Liberation Front (FMLN) in El Salvador, the Montoneros and People's Revolutionary Army (ERP) in Argentina, and the Nicaraguan Sandinista National Liberation Front (FSLN) are some of the armed Marxist guerrilla movements supported by Castro and OLAS. The United States sponsored a military alliance with anticommunist governments throughout Latin America.

This national security doctrine increased the power of the military in Latin American societies as the United States encouraged military involvement in cracking down on Marxist guerrillas and their supporters. Soon some military leaders viewed civilian democratic governments as corrupt and a hindrance to social and economic change. These generals believed that the solution to Latin American problems lie in rapid social and economic development. During the 1970s almost every Latin American country succumbed to military rule. Many of these authoritarian governments looked to a free market economy as the means to change and seized upon low interest rates to borrow heavily to finance development. Any protests or cries for change, which increasingly came from urban residents-turned-guerrillas, were vehemently

suppressed. In Argentina, scholars estimate that as many as 20,000 people “disappeared” at the hands of the military. The El Salvadoran military massacred peasants thought to be aiding leftist guerrillas, and in Guatemala, tens of thousands of indigenous people suspected of similar actions were killed by the military.

By the 1980s government deficit spending coupled with a wavering global economy resulted in skyrocketing inflation and foreign debts. This economic crisis provoked criticism of the status quo from citizens and accusations that military leadership represented incompetent government. One by one, Latin America's military regimes retreated to the barracks and handed leadership back to civilians. The 1990s saw many democratic, civilian leaders embracing neoliberalism, a philosophy centered on making Latin America competitive on the global market. State-owned industry was privatized, protective tariffs reduced, military budgets cut, foreign investment encouraged, and social programs and bureaucratic structure streamlined. More benefits of modernity came to Latin America, especially technology, yet most Latin Americans remained too poor to participate in free market capitalism as consumers. A few guerrilla movements continued to flourish, like Sendero Luminoso (SHINING PATH) in Peru, violently working toward their goal of revolution.

Latin American politics from the 1950s represents tumultuous decades, marred by the violence of “dirty wars” perpetuated by U.S.-backed military regimes. Marxist guerrillas throughout this time period sought revolutionary change of Latin American society.

By the 2000s the move to the left in Latin American politics saw LUIZ INÁCIO LULA DA SILVA winning the presidential elections in Brazil in December 2002, Evo Morales being elected as president of Bolivia in December 2005, and, in the following month, Michelle Bachelet won the second round of the presidential elections in Chile, becoming the first woman president of Chile and the first left-wing president since the overthrow of SALVADOR ALLENDE. Moreover, the move by Venezuelan president HUGO CHÁVEZ, a socialist, toward a national referendum in 2007 to reelect him to the presidency despite constitutional limits, foretold a continuing left-wing power center in Latin America.

KATHLEEN LEGG

Latin American social issues

The recent history of Latin America is a story of profound political and economic change. During the second half of the 20th century, Latin America witnessed a transformation of society as the region struggled to find itself in the face of modernity and economic expansion. Crushing poverty facilitated alternative forms of religious faith that spoke to the condition of many Latin Americans. Migration from the countryside to the city and north to the United States spoke to a yearning for a better life. A thriving drug trade centered on a global market employed organized violence against national governments that tried to curb the trade. Centuries of oppression led to an organized and influential indigenous movement that mobilized to demand Indian rights and autonomy. Latin American countries plunged into the uncertainty of the oil industry with the hopes of increased revenues and instead found unpredictable results and mixed blessings. These factors offer a window into the dramatic social transformation of Latin America from 1950 to the present.

Latin American spirituality underwent profound changes in recent history. Liberation theology spoke to a new turn in the role of the Catholic Church in Latin America, although it was not a phenomenon unique to the region. For centuries, the church stood as a conservative element in association with the state; the church legitimized authoritarian rule. However, beginning in the 1960s, many priests, nuns, and lay workers drew on their personal experiences working with the poor to question the responsibility of the church in the unequal distribution of wealth in Latin America. Some Latin American theologians began to speak of the role of the church and Christians in helping the poor, a mission clearly laid out in the Bible. Liberation theology is an understanding of the Christian faith developed out of the suffering and social injustice experienced by the poor. As such, it is a critique of society and the ideologies supporting the dominant hegemony, including the traditional role of the Catholic Church. It gave the poor a voice and created new forms

of community-based activism. Liberation theology was a formidable force in Latin America for a few decades—especially in Central America, Brazil, and Chile.

Liberation theory gained momentum in 1968 when a group of 130 Latin American bishops met in Medellín, Colombia to discuss the church and its relationship to the populace. The bishops promoted an empowering education program for illiterate rural peasants that affirmed the dignity and self worth of the students. This education was carried out in small community-based groups where people could gather together to read the Bible and discuss its relevance to their lives without a priest or church building. Engaging Catholicism without a priest represented a new idea. Rural priests often served thousands of parishioners and could only visit some communities once a year. Priests, nuns, and lay people used the Medellín conference as a springboard for a new approach to their work with the poor.

Those Catholic personnel dedicated to the poor quickly learned through their charitable work that the condition of the lowest classes of Latin American society could only be relieved through sweeping structural changes. This would involve direct political action. Some base communities served as the vehicle for political action as participants experienced an awakening, or consciousness-raising about their devalued position in society. Many Christian-based communities served not only as sites of literacy education and Bible study but also places where a reinterpretation of traditional religion promoted a transformative perspective on the world. Some groups worked toward improvements in local basic services, such as healthcare and transportation. In spite of this, base communities represented a small fraction of Catholics, and by the 1980s, enthusiasm for liberation theology waned.

Protestantism is a relatively new player in Catholic Latin America. Brazil is home to Latin America's largest Protestant community with half of the region's estimated 40 million Protestants, but Central America boasts the largest number of evangelicals in terms of the percentage of the population. European migration to the continent brought the traditional Protestant churches, such as German Lutheranism and British Anglicanism. Despite the influence of European immigrants, North American missionaries bear the responsibility for the tremendous growth in Protestantism in Latin America, especially evangelical forms like Pentecostalism. Sharing liberation theology's sense of consciousness-raising, Pentecostalism allows participants a refuge from suffering and social injustice by providing a spiritual space in which believers can regain some feeling of control over their lives.

Additionally, unlike Catholicism and mainstream Protestantism, Pentecostalism permitted anyone to become a spiritual leader, even the illiterate and poverty stricken. Women, in particular, have been attracted to evangelical churches due to their inclusive nature.

Evangelicalism has taken hold throughout the war-torn countries of Central America, especially in rural areas. In Guatemala rural Mayan women, mostly widows, fill evangelical churches in search of a sense of community that has been lost. These churches provide a network of support that replaces destroyed kinship ties. Protestant churches offer a religious alternative and a message of hope to the underdogs of society. For women, the evangelical Protestant ban on drinking alcohol makes Protestant husbands an attractive marriage partner. In addition, the phenomenon associated with Pentecostalism in particular, such as speaking in tongues and faith healing, has given women positions of power within their religious communities. Despite North American origins, evangelical Protestantism in Latin America is a unique phenomenon. Its churches emphasize the notion of community and belonging more than its northern counterparts. In addition, in Latin America being an evangelical does not necessarily denote a right-wing conservative political identity as it tends to in North America.

Latin America's economic setbacks have not only influenced new religious movements but have also led to mass migrations of people. Latin Americans have moved from the countryside to the city and from Latin America to North America. Prior to the 1930s the majority of Latin America's population resided in rural areas. The global economic depression of the 1930s dealt a hard blow to the Latin American export economy, and rural residents began to leave the countryside. This exodus peaked over a 30-year period from 1950 to 1980 and succeeded in transforming Latin America's social structure from predominantly rural to overwhelmingly urban.

By 1980 family-based farming was no longer viable as market-oriented modern agribusiness became the norm. Thousands streamed into Latin America's major cities in search of industrial jobs and a better life. Women comprised a majority of the rural-urban migrants, as industrialization opened many jobs for female workers. Rapid urbanization quickly outpaced housing, basic services, and job markets. Rural residents arrived in the cities to find dirty, disease-ridden, and overcrowded shantytowns with spotty electrical power and water shortages. Rural-urban migration caused a labor surplus, which led to the rise of a vast informal sector of the economy consisting of street vendors, rubbish scavengers, and prostitutes.

Latin Americans also migrated north to the United States for economic, political, and social reasons. Mexicans currently represent the greatest percentage of Latin Americans immigrating to the United States. They often have come looking for work, and many resided in the southwest long before it belonged to the United States. During the 19th century and the beginning of the 20th century, Mexicans and Mexican Americans routinely crossed back and forth over the border, with little or no regulation. During the 1930s, the government supported the repatriation of Mexican workers to provide more jobs for Americans. However, with the onset of World War II, labor shortages fueled the BRACERO PROGRAM, which allowed Mexican agricultural workers to come into the country on a temporary basis. The Bracero Program lasted until 1964. The Immigration Reform and Control Act of 1986 called for penalties for those hiring undocumented workers, but also granted amnesty to many undocumented immigrants already living in the United States. The Immigration Act of 1990 favored the legal immigration of family members of U.S. citizens and permanent residents.

CUBAN IMMIGRANTS

Many Cuban immigrants came to the United States fleeing a repressive political regime. Cubans enjoyed a privileged status in relation to other Latin American immigrants due to the U.S. foreign policy on Cuba. As early as 1960 the U.S. government had created a special center for Cuban refugees, and their path to legal residence in the United States was easily cleared. These first waves of immigrants represented the Cuban elite and middle class and individuals and families with financial resources, specialized job training, and American connections. In 1980 FIDEL CASTRO opened the door for Cubans to leave the island, and a deluge of mostly male semi- and unskilled workers flowed into south Florida. This migration overwhelmed U.S. authorities, and many of the refugees were placed in detention camps for months. Currently U.S. officials observe a quota on Cuban immigrants, but the Cuban-American community continues to thrive and grow.

Central Americans also have migrated to the United States seeking refuge from wars and violence that have disrupted the economy and everyday life, especially in El Salvador and Guatemala. In the 1980s migrants from El Salvador left their homes due to civil war and political repression. Unlike Cubans fleeing political repression, many Salvadorans were denied permanent residency and deported. Churches in the U.S. southwest developed a "sanctuary movement" to protest U.S. treatment of these refugees, providing a safe haven for those fleeing

violence. In the 1990s a small minority of Salvadoran immigrants brought violence to the United States in the form of street gangs. Many of these gang members were targeted by U.S. immigration officials in Los Angeles, California, and sent back to El Salvador.

Not only are Latin Americans moving north, Latin America drugs are making the trip as well. One of the largest social problems facing Latin America is drug trafficking, especially in Bolivia, Colombia, and Peru. The drug trade embodies simple supply and demand economics. This multinational drug trade negatively affects U.S.–Latin American relations as many of the region's leaders believe that the U.S. war on drugs focuses unfairly on the supply side of the equation. Unfortunately, in countries suffering from crushing poverty, drugs represent a viable economic option. The debt crisis of the 1980s and the collapse of prices for tin and coffee on the international market fueled the Latin American drug trade. In several Latin American countries, Peru and Bolivia in particular, the drug trade acted as an economic buffer, offering alternative sources of income when other options vanished. The drug trade creates an atmosphere of violence. Drug cartels breed corruption and threaten the integrity and stability of the state, democracy, security, public health, moral values, and international reputation.

DRUG TRADE

Poverty and unemployment in Peru, Bolivia, and Colombia—along with the high prices Latin American cocaine fetched in the United States—fueled the drug trade and offered viable economic alternatives. Colombia and Bolivia saw a significant boost to its national economy from drug revenues, but violence and corruption went hand-in-hand with the economic boom. In Peru, the world's largest producer of coca leaves, the environmental destruction wrought by the drug trade is appalling. Large tracks of rain forest have been clear-cut for cultivation, and the pesticides and herbicides used for growing coca have leached into forest water systems. The involvement of guerrillas in the drug trade has further complicated the situation, and threats to the integrity of the state continue in these nations. Despite billions of U.S. dollars poured into curbing the Latin American drug trade, major traffickers have been affected very little.

The drug trade has impacted Latin American indigenous groups in remote rural areas, as they are often caught in the crossfire between traffickers and the government. In Peru many have fled the countryside for shantytowns in the cities, hoping to escape the violence brought on by traffickers and guerrillas, especially the SHINING PATH. Such issues have led to an explosion of indigenous

groups organizing for a better life. The sophistication and power of indigenous organizations forced many Latin American states to negotiate with Indian peoples and create new legislation that protected their rights. The traditional relationship between the state and its native peoples is changing, with *indigenismo* policies that strove for assimilation abandoned in favor of embracing multiculturalism and pluriethnicity. Despite claims of embracing multiculturalism, not all Latin American states have actually implemented policies aimed at improving the lives of indigenous peoples.

One of the best-known indigenous movements occurred in 1994 in Chiapas, Mexico. Landless Maya formed the ZAPATISTA Army of National Liberation (EZLN) as an outlet for their struggle for rights and recognition in national life. The EZLN briefly occupied several towns in Chiapas. When negotiations with the Mexican state began, the first demands of the Zapatistas centered on Indian autonomy and rights. The EZLN did not advocate a separation from the Mexican nation-state, but rather called for the state to implement the tenets of the constitution of 1917 regarding indigenous peoples. The Zapatistas drew international attention to the plight of Mexico's indigenous population and provided inspiration to other Indian groups in Latin America.

OIL INDUSTRY

The oil industry directly affects the quality of life for all Latin Americans; unpredictable oil prices have varying impacts on the economy as a whole. Latin America has a few significant oil-producing countries: Mexico, Venezuela, Ecuador, and Bolivia. In fact, Mexico and Venezuela have become key suppliers to the United States. Latin America's oil industry has undergone many transformations. From the 1930s to the 1970s, foreign owners controlled significant portions of the Latin American oil economy, with the exception of Mexico, which nationalized its oil industry in 1938. By the 1970s Latin America's oil industry was mostly nationalized, as foreign investors looked to the oil fields of the Middle East instead.

The Latin American oil industry has been subject to the volatile political, economic, and social history of Latin America, with varying degrees of success. While some nations expected their large oil reserves to clear the way for economic development, the region's major oil-exporting economies experienced obstacles in transforming oil revenues into a continuous source of funding. High oil prices aided significant producers that were dependent on exports for revenue and foreign exchange, like Mexico, Venezuela, and Ecuador. For oil-importing countries, such as Brazil, Peru and Chile, the price of

oil served as a vital factor in inflation, production costs, the trade balance, and currency strength. In the past 20 years, oil prices have been more precarious than any other export commodity. The impact of an unpredictable oil market fluctuates depending on a nation's reliance on oil production and exports. The historical and current state of Latin America's oil industry suggests that it is the management of oil resources, not oil wealth itself, that can create economic problems.

Latin America's tremendous economic growth and development after 1950 transformed the region but intensified the misery of many Latin Americans. Rapid growth and urbanization led to mass migrations of people trying to find a niche in a hostile environment. Industrial progress brought thousands of rural residents into Latin America's major cities with the hope of a living wage, but failed to alleviate poverty. Devastating poverty fuels the drug trade, which for many peasants and indigenous people offers the only viable economic endeavor for survival. The oil industry, especially in Mexico and Venezuela, promised hope but has seemingly failed to materialize into concrete change for the better. Liberation theology and the growth of evangelical Protestantism speak to a suffering poor searching for a ray of light in a bleak world. The promises of prosperity that accompanied economic growth proved to be empty for many people in Latin America. Although Latin America experienced economic progress, true transformations of society and social justice continue to elude the region.

KATHLEEN LEGG

Lebanese civil war

The modern boundaries of Lebanon were drawn under the French Mandate, which replaced Ottoman rule after the latter's defeat in World War I. Under Ottoman rule,

Lebanon had been limited to the area of Mount Lebanon, which was inhabited by two major religious communities—Maronite Christians and Druze. With the conception of “greater Lebanon” in 1920, predominantly Sunni Muslim coastal cities such as Tripoli, Beirut, and Sidon, and the predominantly Shi'i Muslim south were annexed to Mount Lebanon, yet the 51 percent majority remained Maronite Christians. The Maronites and Sunnis made an agreement in 1943 in the National Pact, which distributed the presidency of the republic, the parliament, and the government posts according to religion in a confessional system that favored the Christians in a 6 to 5 ratio.

In the 1970s, the demographics changed in Lebanon, and the Maronites made up around one-third of the population, with two-thirds of the population being Muslims. When the Muslims called for more constitutional power to reflect the population change, the Christians refused. To complicate matters, the influx of Palestinians into Lebanon following the events of Black September in Jordan in 1970 served to exacerbate Maronite fears of an Arab-Muslim takeover. The National Front, the umbrella organization representing left-wing organizations and Muslim groups, endorsed the Palestinian cause and used the PALESTINE LIBERATION ORGANIZATION (PLO) to pressure the Maronite-oriented right-wing groups. The confessional government receded into a state of paralysis that undermined public confidence. This resulted in the formation of militias on both sides: Christians aiming to keep the status quo and Muslims and leftists fighting for change.

On April 13, 1975, the date marking the beginning of the Lebanese civil war, unidentified gunmen fired on a church in Ain El Rimmaneh, a Christian suburb of Beirut, killing four people, including two men from the Phalange militia, a Maronite armed group. The Phalange accused the Palestinians, and later that day, the Phalange massacred 26 Palestinians traveling on a bus in Ain El Rimmaneh. The incident sparked full-scale hostilities between the Lebanese Front militias and National Movement. Between April 1975 and October 1976, when the Arab summits in Riyadh and Cairo dispatched the Arab Deterrent Force, Lebanon broke down into its sectarian parts. As the Lebanese army disintegrated, Christian militias massacred Palestinian inhabitants of Debayeh, Karantina, and Tel El Zaatar, and the Palestinians massacred Christians in Damour. The Lebanese president Sleiman Franjeh then asked the Syrian army to intervene. In 1978, under the pretext of increased PLO attacks from Lebanon, the Israeli army invaded southern Lebanon but withdrew the same year, creating a security zone controlled by proxy through the

South Lebanon Army (SLA). Meanwhile, alarmed by the hostilities in southern Lebanon, the UNITED NATIONS (UN) created the UN Interim Force in Lebanon.

In 1982 Israel reinvaded Lebanon; this time its troops reached Beirut and laid siege to the city. Through international mediation, the PLO left Beirut, and the pro-Israeli Bashir Gemayel was elected president. After Gemayel's assassination in September 1982, under the watch of the Israeli troops, Gemayel's supporters entered the Palestinian refugee camps of Sabra and Shatila and massacred around 1,500 Palestinian civilians. After the massacre, the American-French-Italian Multinational Force (MNF), which had overseen the PLO evacuation, returned to Beirut.

In 1983, as the IDF unilaterally withdrew to southern Lebanon, French, U.S. military headquarters, and the U.S. embassy in Beirut were bombed. The first "reconciliation" conference held in Switzerland failed. Hostilities between the Lebanese factions escalated, and the MNF left Beirut. Lebanon descended into chaos as various groups battled for dominance, radical Shi'i groups kidnapped Western nationals, and the Shi'i Amal movement laid siege to the Palestinian refugee camps.

In 1988 the term of Lebanese president Amin Gemayel (Bashir's brother) expired without the parliament electing a new president. In East Beirut, Gemayel assigned the commander of the army, General Michel Aoun, as the head of an anti-Syrian caretaker military government. In West Beirut, Syria set up a rival government. General Aoun declared war on Syria and Syrian troops, with the help of their Lebanese allies, and laid siege to East Beirut. In November 1989 the Lebanese parliament met in Taif, Saudi Arabia, and agreed on a formula to end the war. General Aoun rejected the Taif Agreement and the election of President René Moawad and claimed the authority of the prime minister, issuing a decree dissolving the parliament. In November President Moawad was assassinated, and President Elias Hrawi was elected. Early in 1990 the Lebanese parliament approved the constitutional amendments that embodied the political reforms of the Taif Agreement.

In 1991, the year that the fighting ended, the Lebanese government gained legitimacy and approval from most Lebanese; it then ordered the disarmament and dissolution of militias and the release of the Western hostages taken during the 1980s. The fragile peace continued to hold during the following decade.

Lebanon was the site of years of civil war and external invasions, creating turmoil in an already troubled part of the world. Above: U.S. Marines prepare to leave at the conclusion of a multinational peacekeeping operation in the mid-1980s.

RAMZI ABOU ZEINEDDINE

Liberal Democratic Party (Japan)

The dominant political party in Japan from 1955 to 1993 was the Liberal Democratic Party (LDP). It began in 1955 with the merging of Shigeru Yoshida's Liberal Party and Ichiro Hatoyama's Japan Democratic Party, because both shared a common opposition to the Japan Socialist Party. However the roots of the LDP date to the late 19th–20th century. Two Japanese political figures, Itagaki Taisuke and Saigo Takamori, played roles in the emergence of the modern LDP.

Japanese political development before the occupation by the United States after World War II can best be viewed in broad cycles. Modern Japanese history begins with the Meiji Restoration of 1868. Facing a continued challenge from the West to modernize and change their isolationist policies, Japanese feudal lords, samurai, and others overthrew the Tokugawa Shogunate that had ruled from 1603 to 1867. The result was a complete alteration of the Japanese system in order to compete with the West. Japan then changed many of its old political, economic, and social institutions to conform with Western-style examples. From the Meiji Restoration came a series of cycles in Japanese political history that would continue until after World War II.

First came the Freedom and People's Rights Era, with its associated demands for more liberalization, which lasted from 1878 to 1889. Japan then underwent a militarist period from 1894 to 1905 that was characterized by wars with both China and Russia. Afterward, a cycle of liberalization known as the Taisho Democracy dominated the politics from 1912 to 1915 and again from 1918 to 1930. An age of militarism, again marked by international aggression, dominated the politics of Japan from 1931 to 1945. The beginnings of the Liberal Democratic Party can be traced to the Freedom and People's Rights Era.

Itagaki Taisuke claimed a powerful role in late 19th-century Japan. He used his position to advocate peace instead of rebellion in order for the Japanese people to

gain a voice in government. In 1874 Itagaki and his supporters penned the Tosa Memorial, a criticism of the seemingly unchecked power of the oligarchy and a call for representative government. By 1878 Itagaki had become impatient at the lack of reform and moved to create the Aikokusha, the Society of Patriots, in order to achieve representative government. In 1877 the Satsuma rebellion pitted the samurai led by Saigo Takamori against the citizen-based Meiji army. The Meiji victory solidified its position over the samurai. By 1881 Itagaki founded the Jiyuto, the Liberal Party, which favored the adoption of French styles of political representation.

At the same time, Okuma Shigenobu emerged as a voice in favor of the British model of representative government. Okuma founded the Rikken Kaishinto, the Constitutional Progressive Party, in 1882. The two opposition parties led to a pro-government party called the Rikken Teiseito, or the Imperial Rule Party, in 1882. A number of violent and nonviolent demonstrations among the political parties soon led to government suppression and restrictions on political activism. Restrictions on the political parties led to fighting within the parties as well as with others. The Jiyuto, which had fought against the Kaishinto, fell apart in 1884. Okuma also resigned his leadership of the Kaishinto party. A call for more democratic governance, through the movement for Freedom and People's Rights, added to growing demands for a more politically liberal Japanese system of governance.

By 1889 popular demand led to the enactment of the Meiji constitution. Modeled after that of Prussia, the constitution resulted in a limited democracy. A representative body, the Diet, of directly elected members came into being. Ultimately, the government was run by bureaucrats much like its Prussian example.

By 1890 the call for more direct representation resulted in the first national election. Both the Jiyuto and Kaishinto reorganized for the elections and combined to win over half of the seats in the House of Representatives. The first two decades of the 20th century brought the transformation of the Freedom and People's Rights into the Liberal Party and later the Seiyukai. The era of political parties, however, gave way to the militarist period of 1931 to 1945. After the war the modern Liberal Democratic Party (LDP) emerged as the result of a merger between the Liberal Party and the Democratic Party. The LDP reflected a broad coalition of those calling for military protection by the United States and the economic rebuilding of the war-torn infrastructure under a capitalist system. The first postwar government

was LDP-created, and the party would dominate until the 1990s.

MATTHEW H. WAHLERT

Liberian civil wars (1989–1996 and 1999–2003)

The small West African state of Liberia has suffered almost constant civil war since the National Patriotic Front of Liberia (NPFL), led by Charles Taylor, launched an uprising against the Liberian government in December 1989. The civil war quickly became a chaotic conflict with seven distinct factions contesting control of the nation. All of the groups fought for possession of Liberia's natural resources: iron ore, exotic timber, rubber, and especially diamonds. The resources were used to fund war efforts as the nation's economy collapsed, and because it had little global strategic importance, aid from major world powers was not forthcoming.

An attempt was made by the Nigerian-dominated Economic Community of West African States (ECOWAS) and ECOWAS Monitoring Group (ECOMOG) to mediate and end the violence between 1990 and 1992 through peacekeeping and helping to hold new elections. Charles Taylor's forces attacked the interim government, derailing the process. A new coalition government was formed by Charles Taylor's enemies in 1993 but fighting continued as the coalition tried to form a democratic government. In early 1996 Taylor's forces attacked the capital, Monrovia, destroying much of the city in prolonged fighting. All sides then came together to negotiate and agreed on disarmament and demobilization of their forces. Elections were held in July 1997, and Charles Taylor won using the campaign slogan "He killed my Ma, he killed my Pa, but I'll vote for him." Many Liberians simply wanted the war to end and believed that Taylor would continue to fight if he was not elected. Peace returned to Liberia, but Taylor cracked down on his former enemies.

A coalition of Taylor opponents formed the Liberians United for Reconciliation and Democracy (LURD)

army in 1999. The LURD invaded Lofa County to gain control of the diamond fields. LURD forces pushed south from northern Liberia toward the capital and captured two-thirds of the country by 2003 before laying siege to Monrovia.

During the course of the Liberian civil war, a rebel group in neighboring Sierra Leone, known as the Revolutionary United Front (RUF) and led by Foday Sankoh, was sponsored by Charles Taylor. Fighting lasted from 1991 to 2002. Taylor used the RUF as a way to destabilize Sierra Leone, which was serving as the base for the ECOMOG peacekeepers who were trying to stop Taylor from winning control of Liberia. The RUF began their terror campaign in 1991, brutally punishing all who were not part of the RUF. They were exceptionally harsh toward civilians whom they accused of supporting the Sierra Leone government. Mass murder, systematic rape, and widespread amputation of hands, arms, and feet were the tools that the RUF used to control the population. Hands were chopped off to prevent voting, which required a thumb for fingerprinting.

To fill their ranks, the RUF also practiced widespread abduction of children. Boys starting as young as nine years old were forced to fight, often under the influence of drugs and alcohol. Girls were used as servants and sex slaves. Like Taylor in Liberia, the RUF targeted the resources of Sierra Leone to fund their war effort. During the course of the struggle against the RUF, several national governments existed, led by military juntas or civilians. Several attempts were made by ECOMOG at mediation, and talks were held to form coalition governments, but the RUF always broke agreements and returned to fighting. Between 2000 and 2002 the RUF was defeated by attacks from government forces, ECOMOG, and Guinean troops. In May 2002 elections were held, and the RUF won no seats in parliament. Over the next three years the fighting subsided and the peacekeepers left. During both of the conflicts, the UNITED NATIONS (UN) was absent despite evidence of ethnic cleansing.

In August 2003 President Charles Taylor resigned and fled to Nigeria. In the summer of 2006 Taylor was captured and sent to the Hague to be tried for war crimes. Foday Sankoh was arrested in 2000 after his soldiers fired on protesters. Foday Sankoh had stopped fighting after signing the Lome Peace Accord in 1999. He was held in UN custody and died from a stroke while awaiting trial for war crimes.

The legacy of more than a decade of constant fighting has been continuing misery for the peoples of Liberia and Sierra Leone. Both countries have many thousands

of amputees who are unable to care for themselves; education has broken down; a whole generation suffers from posttraumatic stress disorder; the economy is ruined; the infrastructure is in shambles; and both nations rank at the bottom of the Human Development Index according to the United Nations.

COLLIN BOYD

Libya

Following the defeat of the Libyan forces led by Omar Mukhtar in the 1930s, Italy consolidated its imperial control over the three main provinces of Libya: Cyrenaica, Tripolitania, and Fezzan. During World War II Libya became a battleground between the Axis forces and the Allied forces of France and Great Britain. By 1942 the Italians had been defeated, the British occupied Tripolitania and Cyrenaica; and the French occupied Fezzan. In Tripolitania the British retained direct control, but in Cyrenaica they granted greater autonomy; the French administered Fezzan through direct military control.

After the war a number of different solutions were offered regarding the future of the Libyan territories. Italy demanded the return of Libya to its jurisdiction. Other Western nations suggested a trusteeship, while some advocated independence. Egypt, Libya's neighbor to the east, was interested in acquiring control over the territory. Competing Libyan political forces also had conflicting goals. Some wanted the continuation of Sayyid Idris's Sanussi leadership, while a political society of young educated Libyans like Mukhtar pushed for unity and complete independence.

When the powers failed to agree, the matter was turned over to the newly formed UNITED NATIONS (UN). After protracted negotiations the UN General Assembly recommended in 1949 that Libya—comprising Cyrenaica, Tripolitania, and Fezzan—should constitute a unified state that should obtain independence no later than January 1, 1952. Thus for the first time in its history, the General Assembly acted as a world legislator with binding authority.

In 1951 Libya became a unified nation under the monarchy of King Idris. At the time Libya was one of the poorest countries in the world, and Idris relied heavily on Western assistance. He also retained considerable executive power and drew support from tribal leaders, traditional politicians, and a few successful businessmen. This narrow power base alienated many, who grew increasingly disaffected with the old regime. Idris continued to rule Libya until he was overthrown in 1969 by MUAMMAR QADDAFI.

HISHAM M. SABKI

Lin Biao (Lin Piao)

(1908–1971) *Chinese communist general*

Although his contributions to the development of modern Communist China are overshadowed by those of Chairman Mao Tse-tung, the leader of both the Chinese Communist Party (CCP) and the country, Lin Biao nevertheless played an important role.

Lin Biao was born in Wuhan, China, in 1908. The son of a landowner, he joined the Socialist Youth League in 1926. Attending the Whampoa Military Academy he met another future communist leader, ZHOU ENLAI.

After the collapse of the Qing (Ch'ing) dynasty in China in 1911, much of China countryside was ruled by warlords. During the 1920s there was a push to reunify the country. Two of the main groups were the new CCP, formed in 1921, and the Kuomintang (KMT), the Nationalist Party. The emerging leader in the KMT was Chiang Kai-shek. Lin Biao managed to survive the purges, and, along with Mao and the remaining communists, escaped into China's interior. He participated in the Long March; 30,000 survived out of 100,000 who had begun the trek. They included leader Mao, LIU SHAOQI, and Zhou Enlai.

When the Japanese invaded China in 1937, Lin Biao utilized guerrilla tactics to fight the invaders behind enemy lines, something that gave the CCP patriotic prestige. At the end of World War II, war broke out again between the CCP and the KMT. The CCP created the People's Liberation Army (PLA), in which Lin Biao served as a commander. On October 1, 1949, Mao proclaimed the creation of the PEOPLE'S REPUBLIC

OF CHINA (PRC). Lin continued to play a major role in both the government and the military and commanded “volunteers” from China in the KOREAN WAR (1950–53); he was promoted to the rank of marshal.

In 1968 Mao embarked on the GREAT PROLETARIAN CULTURAL REVOLUTION to attack his critics and regain control of the party. Mao set out to eliminate his competition. Lin Biao worked closely with Mao and fought against the faction led by Liu Shaoqi, who had been state chairman since 1959. Lin was also instrumental in assembling Mao’s writings into the *Quotations of Chairman Mao*, or the “Little Red Book,” which received nationwide distribution.

Lin’s power rose when Red Guards, Mao’s young supporters, began to fight one another adding chaos that grew into anarchy. The minister of defense was called by Mao to meet the enemy to suppress the Red Crosses in 1967. For this he was appointed vice chairman of the CCP and Mao’s successor at the 9th Party Congress in 1969.

However, Mao became increasingly suspicious of him as the Lin’s power grew. Conversely Lin’s impatience to replace Mao culminated in a failed assassination attempt in 1971. Lin and his wife attempted to flee to the Soviet Union, but the plane that their air force officer son piloted crashed in Outer Mongolia, and all were killed.

Lin’s rise and fall demonstrate the murderously unstable politics in Maoist China.

MITCHELL NEWTON-MATZA

literature

Since 1950, vast numbers of new books have been published, and many from before 1950 have been republished as new editions, facsimiles of old editions, and, in recent years, as digital books. From the 1970s, there was also the emergence of what became known

as “airport fiction,” describing books that were sold to air travelers with plenty of time to occupy. Digital books in particular have allowed access to many old and formerly out-of-print books and offer computer-searchable functions giving readers and scholars the ability to find information more quickly. While this has allowed easier access to reference works, the vast majority of works of fiction continue to be published in book form. While many writers have other means of income, some have become very successful through their book sales, with British writer J. K. Rowling, the creator of Harry Potter, becoming the first writer to make more than \$1 billion from sales of her books.

BRITISH WRITERS

British writers have dominated much of the English-speaking world, with Bertrand Russell winning the Nobel Prize in literature in 1950, Sir Winston Churchill winning in 1953, William Golding—author of *Lord of the Flies*—winning in 1983, V. S. Naipaul in 2001, and Harold Pinter in 2005. Since 1950, other important British novelists include Richard Adams, author of *Watership Down*; Kingsley Amis, author of *Lucky Jim*; Martin Amis; Julian Barnes; H. E. Bates; Malcolm Bradbury, author of *The History Man*; John Braine, author of *Room at the Top*; Anita Brookner, author of *Hotel du Lac*; Anthony Burgess, author of *Clockwork Orange*; postfeminist writer Angela Carter; Norman Collins; Margaret Drabble; Daphne du Maurier; novelist and poet Lawrence Durrell, author of the Alexandria Quartet, and his younger brother naturalist and zoologist Gerald Durrell, author of *My Family and Other Animals*; John Fowles, author of *The French Lieutenant’s Woman*; Graham Greene; L. P. Hartley, author of *The Go-Between*; Laurie Lee, author of *Cider with Rosie*; Malcolm Lavry, author of *Under the Volcano*; Jessica Mitford, author of *Hons and Rebels*; John Mortimer, creator of Rumpole of the Bailey; Iris Murdoch, author of *The Sea, The Sea*, the 1978 winner of the Booker Prize; Anthony Powell, author of *A Dance to the Music of Time*; V. S. Pritchett, author of *The Spanish Temper*; Dame Edith Sitwell; Sir Osbert Sitwell; and C. P. Snow. There were also a number whose major literary work was in the first half of the 20th century who also produced more works in the second half, including W. H. Auden; Robert Graves, author of *I, Claudius*; Aldous Huxley, author of *Brave New World*; W. Somerset Maugham; J. B. Priestley; Welsh-born novelist Howard Spring; Dylan Thomas, author of *Under Milk Wood*; and P. G. Wodehouse, creator of Jeeves.

There have been many writers of historical fiction, including a number who set their books during the Napoleonic Wars: Bernard Cornwell (pseudonym for Bernard Wiggins), creator of Sharpe; C. S. Forester (pseudonym for Cecil Louis Troughton Smith), creator of Horatio Hornblower; Alexander Kent (pseudonym for Douglas Reeman), creator of Richard Bolitho; Patrick O'Brian (pseudonym for Richard Patrick Russ), creator of the Aubrey-Maturin series; and Northcote Parkinson, creator of Richard DeLancey. Other writers of historical novels include: Charlotte Bingham; Catherine Cookson; George Macdonald Fraser, who resurrected Flashman from *Tom Brown's Schooldays* for the "Flashman Papers"; Robert Harris; and Jean Plaidy (pseudonym for Eleanor Hibbert). Colonial and postcolonial themes have been explored by writers Joy Adamson, author of *Born Free*; Rumer Godden; Elspeth Huxley, author of *The Flame Trees of Thika*; Ruth Praver Jhabvala, author *Heat and Dust*, the 1975 winner of the Booker Prize; M. M. Kaye, author of *The Far Pavilions*; Richard Mason, author of *The World of Suzie Wong*; John Masters, author of *Bhowani Junction*; R. K. Narayan, author of *Vendor of Sweets*; Paul Scott, author of "The Raj Quartet"; and Leslie Thomas, author of *The Virgin Soldiers*. James Clavell, author of *Shogun*, covered Asian historical topics. Romance novelists include Barbara Cartland, author of 723 titles; Anne Baker; Barbara Taylor Bradford; Jackie Collins; Lena Kennedy; Anne Mather, author of over 150 novels; Betty Neels, author of over 130 titles. The publishers Mills and Boon print thousands of romance titles, many written to a formula.

Popular thriller writers include Eric Ambler; former politician Jeffrey Archer; Desmond Bagley; Len Deighton; Ian Fleming, creator of James Bond; Ken Follett; Frederick Forsyth, author of *The Day of the Jackal*; John le Carré (pseudonym for David Cornwell), creator of George Smiley; Alastair Maclean; and Douglas Reeman. War stories by Paul Brickhill; Nicholas Monsarrat (pseudonym for John Turney), author of *The Cruel Sea*; and Eric Williams, author of *The Wooden Horse* and *The Tunnel* have also sold well. Crime writers include Edward Aarons, author of the "Assignment" books; Margery Allingham; Agatha Christie; John Creasey; P. D. James (pseudonym for Phyllis White); and Ruth Rendell; and there have also been others who have set their stories during particular historical events such as Ellis Peters (pseudonym for Edith Pargeter), creator of Cadfael in medieval Shropshire; and H. R. F. Keating, who set his Inspector Ghote novels in British India. Mention should also be made of Josephine Tey whose novel *The*

Daughter of Time changed the way many people have viewed *Richard III*. Playwrights include Arnold Wesker, who wrote *Chicken Soup with Barley*, and Terence Rattigan, author of *Separate Tables*. Poets include T. S. Eliot, who won the Nobel Prize in 1948, and D. J. Enright, author of *The Laughing Hyena*.

Fantasy writers such as C. S. Lewis, creator of Narnia; Mervyn Peake; Terry Pratchett; and J. R. R. Tolkien, author of *The Hobbit* and *The Lord of the Rings*, have all been very popular. In science fiction, Douglas Adams, author of *The Hitchhiker's Guide to the Galaxy*; J. G. Ballard, who became famous for his semi-autobiographical *The Empire of the Sun* rather than his science fiction; Arthur C. Clarke, author of *2001: A Space Odyssey*; and John Wyndham have all been popular, with their books published in many languages.

Children's story writers include Enid Blyton, creator of Noddy; Anthony Buckeridge, creator of Jennings; Richmal Crompton, author of *Just Williams*; and the historical fiction of Cynthia Harnett, Rosemary Sutcliff, Geoffrey Trease, and Ronald Welch (pseudonym for Ronald Felton). The most famous playwrights include Harold Pinter, the Nobel laureate; John Osborne, author of *Look Back in Anger*; Dennis Potter, author of *Son of Man*; Tom Stoppard. Poets include John Betjeman, Ted Hughes, and Philip Larkin. Historians include Alan Bullock, E. H. Carr, Leonard Cottrell, Antonia Fraser, Christopher Hibbert, Christopher Hill, James/Jan Morris, John Prebble, and Hugh Trevor-Roper. There have also been a range of accounts of adventure, including Sir John Hunt's *The Ascent of Everest*; Colonel P. H. Fawcett's *Exploration Fawcett*; *A Dragon Apparent* by Norman Lewis; Patrick Leigh Fermor's *The Travellers Tree*, and similar books. Mention should also be made of Cornish writers A. L. Rowse and Derek Tangye. Travel writers include H. V. Morton; Eric Newby, author of *A Short Walk in the Hindu Kush*; and Freya Stark, author of *Beyond the Euphrates* and other books about the Middle East.

AMERICAN WRITERS

There have also been many prominent U.S. writers in this era, including four who won the Nobel Prize in literature: Ernest Hemingway in 1954, John Steinbeck in 1962, Canadian-born Saul Bellow in 1976, and Toni Morrison in 1993. Others include James Baldwin, author of *Another Country*; Paul Bowles, who moved to Tangier, Morocco, in 1952; Allen Drury, author of *Advise and Consent*; Alex Haley, author of *Roots*; Harper Lee, author of *To Kill a Mockingbird*, which won the Pulitzer Prize for fiction in 1961; Mary McCarthy, author of

Hanoi; Norman Mailer, author of *Armies of the Night*; James Michener; Chaim Potok; J. D. Salinger, author of *The Catcher in the Rye*; John Updike, author of *Rabbit, Run* and *The Witches of Eastwick*; Gore Vidal, author of *Myra Breckenridge* and historical novels; and Richard Wright, author of *The Outsider*. In recent years the writer who has achieved the largest number of sales has been Dan Brown, author of *The Da Vinci Code*.

Cowboy books have always been popular. Historical novelists include Steven Saylor, author of the Roma Sub-Rosa novels featuring Gordianus "the finder," and surgeon and novelist Frank Slaughter. War stories include those by Irwin Shaw, author of *The Young Lions*; and Herman Wouk, author of *The Caine Mutiny*, which won the Pulitzer Prize for fiction in 1952. Crime writers such as Truman Capote, author of *In Cold Blood*; Patricia Highsmith; and Mario Puzo, author of *The Godfather* have also sold many copies of their books.

Science fiction writers such as Isaac Asimov, fantasy writers such as Ursula Le Guin, and horror writers such as Stephen King have sold well. There have been many popular writers such as V. C. Andrews; Clive Cussler; John Grisham; Thomas Harris; Robert Ludlum, author of *The Bourne Identity*; satirist P. J. O'Rourke; Danielle Steel; and Kathleen Windsor, author of *Forever Amber*. Playwrights include Arthur Miller, author of *The Crucible*; Eugene O'Neill, whose *Long Day's Journey into Night* was published posthumously in 1956; Thornton Wilder who started writing in the 1920s but whose plays included *The Matchmaker*; and Tennessee Williams whose most famous works such as *A Streetcar Named Desire* were written in the 1940s, and who won the 1955 Pulitzer Prize with *Cat on a Hot Tin Roof*. Mention should also be made of Edward Albee, author of *Who's Afraid of Virginia Woolf?*, his first full-length play. There have also been many important nonfiction writers, including Rachel Carson, author of *Silent Spring* (1963); political commentator Noam Chomsky; economist and Professor J. K. Galbraith; and John Gunther, author of the "Inside" books. American poets include Robert Lowell, Ogden Nash, and Sylvia Plath.

OTHER AUTHORS IN ENGLISH

Elsewhere in the English-speaking world, there have been many other Nobel laureates, including Samuel Beckett from Ireland, in 1969, author of *Waiting for Godot*; Patrick White from Australia, in 1973; Wole Soyinka from Nigeria, in 1986; Nadine Gordimer from South Africa, in 1991 (and the Booker Prize in 1974); Derek Walcott from St. Lucia, in 1992; Seamus Heaney

from Ireland, in 1995; and J. M. Coetzee, author of *The Life and Times of Michael K*, from South Africa, in 2003. Prolific South African writer Bryce Courtney, author of *The Power of One*, moved to Australia.

Irish writers include Brendan Behan, author of *Borstal Boy*; James Donleavy, author of *The Ginger Man*; Frank McCourt, author of *Angela's Ashes*; and William Trevor, author of *The Old Boys*. Australian writers include Thea Astley; Peter Carey; Albert Facey; feminist Germaine Greer; Xavier Herbert, author of *Poor Fellow My Country*; George Johnston, author of *My Brother Jack*; Thomas Keneally, author of *Schindler's Ark*; Colleen McCullough, author of *The Thorn Birds*; David Malouf, author of *Fly Away Peter*; Alan Moorehead, author of *The White Nile*; poet Les Murray; Neville Shute (pseudonym for Nevil Shute Norway); Christina Stead; Arthur Upfield, creator of the aboriginal detective "Bonaparte"; and Morris West, author of *The Devil's Advocate* and *The Ambassador*. New Zealand writers include Janet Frame, author of *Owls Do Cry*, crime writer Ngaio Marsh, and Alan Duff, author of *Once Were Warriors*.

The writer most strongly identified with South Africa is Wilbur Smith, who set most of his books in South Africa and Rhodesia/Zimbabwe. Other South African authors include Stuart Cloete, author of *Rags of Glory*, and Alan Paton, author of *Cry, The Beloved Country*. There have also been many Canadian authors, perhaps the most famous from this period being novelist Margaret Atwood and Thomas Costain.

EUROPEAN AND SOUTH AMERICAN WRITERS

French writers since 1950 include Nobel laureates François Mauriac (1952), Algerian-French writer and philosopher Albert Camus (1957), diplomat and poet Saint-John Perse (1960), Jean-Paul Sartre (1964; he declined the prize), and Claude Simon (1985). Other famous writers of this period include writer and philosopher Simone de Beauvoir; structural anthropologist Claude Lévi-Strauss, author of *Anthropologie structurale*; André Malraux; historical novelist Zoë Oldenburg; and Jean Tardieu. Belgian writer Georges Simenon created Inspector Maigret and wrote over 500 books; and Frenchman Gerard de Villiers wrote the best-selling "S.A.S." murder mysteries set in various countries around the world. Writers in Germany who won the Nobel Prize in literature include German-Swedish writer Nelly Sachs, in 1966; Heinrich Böll, in 1972; Günter Grass for *The Tin Drum*, in 1999; and Austrian feminist playwright and novelist Elfriede Jelinek, in 2004. Mention should also be made of Bul-

garian-born novelist Elias Canetti, who won the prize in 1981 for his writing in German. The Italian Nobel laureates were lyrical poet Salvatore Quasimodo, in 1959; poet and writer Eugenio Montale, in 1975; and playwright and theater director Dario Fo, in 1997. Possibly the best-known Italian writers are Giuseppe di Lampedusa, who wrote *The Leopard*, which he completed just before his death, the book being published posthumously; Lois de Bernières, author of *Captain Corelli's Mandolin*; and Alberto Moravia, author of *Women of Rome* and *Roman Tales*.

A number of writers in Spanish won the Nobel Prize in literature: Juan Ramón Jiménez, in 1956, Vicente Aleixandre, in 1977, and Camilo José Cela, in 1989. Salvador de Madariaga wrote many books on Spain and the Spanish-speaking world, most of which were translated into English. The others were the Guatemalan Miguel Ángel Asturias, in 1967; Chilean poet Pablo Neruda (pen name for Ricardo Elicer Neftali Reyes Basoalto), in 1971; the Colombian Gabriel García Márquez, author of *One Hundred Years of Solitude*, in 1982; and the Mexican Octavio Paz, in 1990. From Portugal, José Saramago won the Nobel Prize in 1998, and in recent years there has been extensive literature about Portuguese Africa. Portuguese-language poets include the Angolan nationalist and later president Agostinho Neto; there have also been many books by Brazilian lyricist Paulo Coelho.

From the Soviet Union, Boris Pasternak, author of *Doctor Zhivago*, was awarded the Nobel Prize in literature in 1958 but declined it. Other Russians who became Nobel laureates include novelist Mikhail Sholokhov (1965), dissident novelist and dramatist Aleksandr Solzhenitsyn (1970), and Joseph Brodsky (1987). Mention should also be made of Russian-born writer Vladimir Nabokov. From Eastern Europe, Jewish-Hungarian writer and concentration camp survivor Imre Kertész won the Nobel Prize in 2002; writer and poet Jaroslav Seifert from the Czech Republic won the prize in 1984. Polish-born American writer Isaac Bashevis Singer won the prize in 1978 for his work in Yiddish, poet Czesław Miłosz in 1980, and Wisława Szymborska in 1996. In 1961 the Yugoslav writer and diplomat Ivo Andrić won the Nobel Prize for his *Bosnian Chronicles*, which covers many aspects of Bosnian history. Two Greeks became Nobel laureates: poet and diplomat Giorgos Seferis, in 1963, and modernist poet Odysseas Elytis, in 1979.

From Scandinavia, Nobel laureates since 1950 include Swedes Pär Lagerkvist, in 1951, Eyvind John-

son, and poet Harry Martinson, in 1974, and Icelandic writer Halldór Laxness, in 1955. There was also much renewed interest in the Viking sagas, many of which were translated and published in English and French during this period.

THE MIDDLE EAST AND INDIA

For Middle Eastern literature, Israeli writer Shmuel Yosef Agnon was one of the joint Nobel Prize winners in 1966 for his work in Hebrew. Other important works of Israeli literature include Menachem Begin's *The Revolt*, and books about Jerusalem by Teddy Kollek. Palestinian writers include American resident Edward Said and Lebanese writer Edward Atiyah, author of *An Arab Tells His Story* and *Lebanon Paradise*. North African writers include Naguib Mahfouz from Egypt who won the Nobel Prize in literature in 1988; Gamal al-Ghitani from Cairo has written many books, including *Zayni Barakat* about the Mamluks in Egypt; and Algerian writer Albert Memmi wrote *The Pillar of Salt*. There have also been many prominent Turkish writers, including Yashar Kemal, author of *Memed, My Hawk*; Irgan Orga, who did much to explain Turkish history and culture to English-language readers; and postmodernist writer Orhan Pamuk, who won the Nobel Prize in 2006. Most African books tend to have been written in English, French, or other European languages, but the author of what has been described as the most quintessentially African story is Camara Laye, from French Guinea, author of *The Dark Child*, or *The African Child*.

In India, there have also been large numbers of writers who have written in English, including Dom Moraes; India's first prime minister JAWAHARLAL NEHRU, who wrote *The Discovery of India*; and Salman Rushdie, author of the controversial *Midnight's Children* and the even more controversial *The Satanic Verses*.

ASIAN WRITERS

Mao Zedong, the leader of China from 1949 until his death in 1976, wrote poetry, but is best known as a writer for his "Little Red Book," for which 900 million copies were issued in Chinese, and in other languages, including Arabic, English, French, German, Italian, Japanese, Korean, Malay, Spanish, and Vietnamese. It was first published in April 1964, and its red plastic cover made it well known around the world. Many other Communist Party publications, such as the *Selected Works of Mao Tse-tung*, also had millions of copies printed. To help promote new literary works

published in China, the monthly journal *Chinese Literature* was published from 1951.

Of the other Chinese writers since 1950, perhaps the best-known is Han Suyin, whose five-volume autobiographical saga began with *The Crippled Tree* and whose *A Many Splendoured Thing* became a best seller around the world. In more recent times, Jung Chang wrote *Wild Swans: Three Daughters of China*, describing the family's life during the Cultural Revolution. Mention should also be made of the prolific writer and academic Lin Yutang and de Lucy Ching, author of *One of the Lucky Ones*. Xingjian Gao, who wrote about the Tiananmen Square protests, was declared a persona non grata in China; he won the Nobel Prize for literature in 2000.

Two Japanese writers won the Nobel Prize in literature: Kawabata Yasunari in 1968, and Oe Kenzaburo in 1994. However, the most famous Japanese writers of this period were undoubtedly Abe Kobo and Mishima Yukio. Many Korean works have been translated into English and published by Heinemann Asia, but apart from translations of Lady Hong's *Memoirs of a Korean Queen*, few Korean books have managed to achieve much literary interest outside Korea. The works of North Korean leaders KIM IL SUNG and KIM JONG IL have been published in many different editions and several languages, by the Foreign Languages Press in Pyongyang.

For mainland Southeast Asia, there have been many books published in Burmese, Khmer, Thai, and Vietnamese, and even a number being published in Lao. After independence, there have been many books published in Burmese, including many items on Burmese history. With the import of books now restricted, this has helped the Burmese publishing industry and local literature. Prior to 1970, there were a number of novels published in Khmer, with a massive increase in the Khmer-language publishing industry from 1970 to 1975, including the work of Long Boret, prime minister from 1973 to 1975.

Similarly Vietnamese literature has followed political trends, with many books published in South Vietnam until 1975, and then few works of literature published in Vietnam until the 1990s. In Thailand, the prosperity of the country has ensured a regular number of books in Thai being published. After Malaya became independent, the Dewan Bahasa dan Pustaka in Kuala Lumpur encouraged writing in Malay, which has flourished. In neighboring Singapore, there have been many books published, a large number being historical works covering aspects of Singapore's history, but also many nostal-

gic novels about the country's colonial past and a number of stories set in modern Singapore.

JUSTIN CORFIELD

Li Zongren (Li Tsung-jen)

(1891–1969) *Chinese general and politician*

Li Zongren (Li Tsung-jen) was an important military and political leader of Guangxi (Kwangsi) Province, along with Bai Chongxi (Pai Chung-hsi), between 1925 and 1949. He joined the Kuomintang (KMT, or Nationalist Party), founded by Sun Yat-sen, and commanded the Seventh Army; it played an important part in the Northern Expedition (1926–28) that brought the Koumintang to power. Li distinguished himself as a skilled military commander in the Northern Expedition and the Sino-Japanese War, where he commanded the Nationalist troops in an important victory in 1938 at Taierzhuang in Shandong (Shantung) Province. Li and Bai, however, represented the Warlord Era, joining the KMT in part to preserve and expand their regional power by controlling their army as distinct units that often disobeyed the central government. Their group is called the "Guangxi clique" and fought against the central government in Nanjing (Nanking) between 1929 and 1930. They also allowed the fleeing Chinese Communists to pass of through Guangxi during the Long March.

When the National Assembly convened in Nanjing in 1948 to implement the new constitution, Li was elected vice president of China (Chiang Kai-shek was president). Li became acting president when Chiang resigned in 1949. However, Chiang still retained most of his power and the loyalty of key army commanders, and when Li failed to negotiate a settlement with the CCP in the civil war, Chiang abruptly resigned, and Bai chose to flee to Taiwan.

After Li's departure for New York, Chiang resumed the presidency in Taiwan. Li refused to join the Nationalists on Taiwan and was impeached in absentia. The United States became an outspoken critic of Chiang's rule. Li remained in the United States until 1966, when he returned to mainland China and voiced support of the Communist government. He died shortly afterward.

SARAH BOSLAUGH

Lumumba, Patrice

(1925–1961) *Congolese prime minister*

Patrice Lumumba was the first prime minister of the independent Republic of the Congo. Born in Kasai Province in the eastern Congo, he came from a small tribe or ethnic group—the Batatele. This background was to handicap him in future dealings with rivals who came from major tribal groupings.

Lumumba was born July 2, 1925. Educated by Protestant missionaries, he entered the postal service and became a contributor to the nascent Congolese press. He also became active in trade union activities, and by 1955 was president of a regional labor union. Convicted of post office embezzlement, Lumumba, after his release from prison in 1957, went on to forge a nationwide political party, the Congolese Nationalist Movement, in October 1958. After attending an All-African Peoples' Conference in newly independent Ghana in December 1958, Lumumba became a militant nationalist.

In 1959 he joined other nationalist leaders in opposing the Belgian plan for gradual independence in five years. The Belgians were forced to promise independence by June 30, 1960. Elections held in May 1960 gave Lumumba's party the largest number of votes, and he was offered the position of prime minister. At that time he began to talk about economic and social changes. Because some of the rhetoric sounded socialist, many in the West feared that the anticolo-

Patrice Lumumba (center) became the first prime minister of the independent Republic of the Congo in May 1960.

nialist tone in his speeches meant an alliance with the Soviet Union.

After he formed an independent government, on June 23, 1960, Lumumba faced disorder seven days later. Army units rebelled, the province of Katanga seceded, and Belgium sent in troops. Lumumba called upon the UNITED NATIONS (UN) to restore order; however, it did not intervene. He then turned to the Soviet Union for planes to transport his troops. He also asked independent African states to support him. These steps were ineffective and caused his internal allies to turn away from him. On September 5 the president of the Congo, Joseph Kasavubu, who had advocated a more moderate course and favored some form of autonomy, declared Lumumba deposed. On September 14 the army head, Joseph Mobutu, seized power with the approval of Kasavubu. Mobutu and Kasavubu soon reached an accommodation with the UN, which recognized the government in October 1960.

Now powerless, Lumumba sought to travel to Stanleyville (now Kisangani) in northeast Congo, where he still had support. On his way there, however, he was intercepted by soldiers of Joseph Mobutu. After an imprisonment of three months, Mobutu turned Lumumba over to Moïse Tshombe, the head of secessionist Katanga Province, on January 17, 1961. Lumumba was murdered that same night. In retrospect, Lumumba's ideas and rhetoric do not appear so radical. He supported a united Congo as opposed to its division along regional/ethnic/tribal lines. He supported the end of colonialism and

proclaimed neutrality in the COLD WAR, with an emphasis on “Africanist” values. These sentiments ultimately led to his undoing.

NORMAN C. ROTHMAN

M

Macao (1999)

Macao (or Macau) is a tiny peninsula of eight square miles located 40 miles west of HONG KONG on the southern China coast. It became a Portuguese settlement and trading center in 1557; Portugal paid the Chinese government rent for the land until 1849, after which it became a de facto Portuguese colony. By the late 20th century Macao had just under half a million people, about 96 percent Chinese, 2–3 percent Eurasians of mixed Portuguese-Chinese ancestry, and 1 percent Portuguese from Portugal. Despite long Portuguese control, few Chinese residents learned Portuguese, the official language of the colony. As a result few Chinese worked in the government. Most Eurasians, called Macanese, were bilingual; many of them worked for the government bureaucracy. The government was nonelected until 1974, when a revolution in Portugal brought in a liberal government there that enacted new laws established by a partially elected legislative assembly. The main sources of government revenue were tourism, light industry, and gambling casinos.

Negotiations for the return of Macao to China began in the 1980s. However, China gave priority to its negotiations for the return of the much more important British colony of Hong Kong, and it was not until agreement had been reached for Hong Kong's rendition that talks between Portugal and China began in earnest. Because of the asymmetry of power between China and Portugal the Chinese government imposed most of the terms of Macao's rendition. A Joint Decla-

ration was signed in April 1987, and a Sino-Portuguese Joint Liaison Group was created in 1988 to manage the transition and prepare for the handover in 1999. As in the case of Hong Kong, Macao was given the status of a Separate Administrative Region (SAR) and assured of autonomy governing many aspects of its life for 50 years. However, China could control its foreign affairs and defense, a Chinese-appointed chief administrator would head its administration, and the Chinese People's Congress would have final say in judicial decisions.

The handover took place at the end of 1999. According to Macao Basic Law, the government of Macao consists of a Western-style partially elected legislature, with a framework of separation of power among the executive, legislative, and judicial branches of government, an independent judiciary, and freedom of expression and the press.

JIU-HWA LO UPSHUR

Macapagal-Arroyo, Gloria

(1947–) *Philippine president*

Gloria Macapagal-Arroyo is the daughter of former Philippine president Diosdado Macapagal. When she

ascended to the presidency in January 2001, Arroyo joined the small group of female Asian leaders who had followed in their fathers' footsteps to assume prominent political positions in their respective countries.

An economist by training, Macapagal-Arroyo spent two years at Georgetown University in Washington, D.C. She then returned to the Philippines, where she graduated from Assumption College in Manila in 1968 with a degree in commerce and economics. She went on to earn graduate degrees in economics from Ateneo de Manila University and the University of Philippines.

In 1968 she married José Miguel Arroyo. The couple had three children. She spent her early professional life as an economics professor and held teaching positions in various institutions in the Philippines, including all three of her alma maters.

Macapagal-Arroyo entered government service when she was invited by President Corazon Aquino to join the Department of Trade and Industry as assistant secretary in 1987. In 1989 she became the undersecretary. At the same time she also held the post of executive director of the Garment and Textile Export Board.

Macapagal-Arroyo made her first foray into politics when she campaigned successfully for a seat in the Philippine Senate in 1992. Three years later she was overwhelmingly reelected. She drew upon her own academic training and experience to push for social and economic reform legislation.

In 1998 she entered presidential politics as a vice presidential candidate, running with presidential candidate José De Venecia. While she emerged victorious with almost 13 million votes, the largest number ever earned by a presidential or vice presidential candidate, her running mate lost to the incumbent vice president, Joseph Estrada.

President Estrada appointed his vice president to the cabinet as secretary of the Department of Social Welfare and Development. But the Estrada administration quickly became embroiled in a corruption scandal. Macapagal-Arroyo resigned her cabinet post and joined in the chorus calling for Estrada's resignation. In January 2001, the Philippine Supreme Court removed Estrada from office, and Macapagal-Arroyo ascended to the presidency.

As president Macapagal-Arroyo faced many challenges, not the least of which was questions about the legitimacy of the court's action. She had to contend with demonstrations by pro-Estrada supporters in May 2001. She declared a State of Rebellion, which was lifted a few days later. Two years later she faced another challenge to her authority when junior officers and sol-

diers mutinied to push for reforms to the armed forces. The incident ended in their peaceful surrender.

A more pressing problem was the Philippine economy. The Asian financial crisis, the SECOND GULF WAR, and the mounting deficit contributed to turbulent economic times. Late in 2001 Macapagal-Arroyo announced the implementation of Holiday Economics, a policy that involved adjustments to national holidays so that Filipinos could enjoy longer weekends. The government hoped this would promote domestic tourism and in turn stimulate economic growth. The program yielded mixed results.

National security issues also preoccupied Macapagal-Arroyo. In the wake of the September 11, 2001, terrorist attacks on the United States, Macapagal-Arroyo quickly pledged Filipino support for President GEORGE W. BUSH's War on Terror in the hope that her domestic problems could now be subsumed under the fight against international terrorism. After the U.S. invasion, the Philippines sent a small number of troops to Iraq to work on civic and humanitarian projects, but Macapagal-Arroyo ordered their withdrawal to free a Filipino civilian who had been taken hostage in July 2004.

In 2004 Macapagal-Arroyo decided to seek another six-year term. In a four-way race, Macapagal-Arroyo emerged victorious in May 2004, but questions about legitimacy continued to dog her presidency when revelations involving her remarks to an election officer about needing a certain number of electoral votes surfaced, leading to accusations of corrupt electoral practices.

SOO CHUN LU

Makarios III

(1913–1977) *Cypriot political leader*

Archbishop Makarios was born in the village of Panayia in the Paphos district of Cyprus on August 13, 1913, and died on August 3, 1977. Makarios, meaning *blessed*, was the name chosen by Mikhalis Khristodoulou Mouskos when he was ordained as a deacon

in 1938. After being ordained, Makarios enrolled in the theological school at the University of Athens, Greece. While studying in Athens during World War II, Makarios lived under the Nazi occupation. After the Allies liberated Greece, Makarios traveled to Boston to further his theological studies. In 1948, while in the United States, Makarios was elected bishop of Kitium, Cyprus.

Shortly upon his return to Cyprus, Makarios became involved in the Cypriot *enosis* movement for a union with Greece, and in 1950 he was elected archbishop of Cyprus. His association with EOKA (National Organization of Cypriot Fighters), an underground organization that focused its attention on freeing the island from British colonial rule, caused Makarios to be exiled to the Seychelles by the British, who charged him with encouraging acts of terrorism. One year later he was allowed to return to Cyprus; when the British withdrew, Makarios was elected the first president of Cyprus. With his new outlook on the independent nation of Cyprus, Makarios distanced himself from the *enosis* movement. He attended the Belgrade Conference of the Heads of State of Non-Aligned Countries; his political position made him a target for the supporters of *enosis*.

In 1965, when his term of office was to expire, the Cypriot people extended his term to 1968. In 1968 and 1973 he won reelection. Makarios was heavily pressured by the Greek government to increase Greek influence on Cypriot politics. Athens had been under the control of a military junta, which disliked Makarios and his reluctance to push for *enosis*. Makarios replied to the GREEK JUNTA in the form of a letter demanding that the remaining Greek National Guard stationed in Cyprus be withdrawn. He also accused the junta of plotting against his life and against Cyprus. Thirteen days later, the junta ordered the Greek National Guard in Cyprus to overthrow Makarios and take control of the island. Makarios survived the attempted coup and escaped to England. The coup caused permanent damage in Cyprus by giving Turkey a pretext for a Turkish invasion that split the island in two, separating the Turkish Cypriot and Greek Cypriot communities. After a brief exile, Makarios returned to Cyprus in December 1974 to resume his presidency until his death in 1977.

BRIAN M. EICHSTADT

Malaysia, Federation of

The modern nation of Malaysia came to being at one minute past midnight on September 16, 1963, and within weeks was embroiled in controversy. Its formation was not looked upon kindly by its neighbor Indonesia, and soon scores of "spontaneous" demonstrations filled the streets of Jakarta as angry Indonesians shouted their displeasure outside Malaysia's new embassy. Indonesian foreign ministry spokesmen made their feelings clear to Australia: Indonesia did not like being encircled by what it saw as the British Commonwealth.

From that shaky start Malaysia emerged as a prosperous nation keen to embrace the world of new technology. In 2006 Malaysia was a nation of around 25 million people, building its own cars, possessing a burgeoning manufacturing industry, and exploiting its waters for oil, gas, and fish.

Four areas—all British colonial possessions—were combined to make up Malaysia: the Federated Malay States, Singapore, British North Borneo, and Sarawak. Brunei, which had expressed interest, did not become a part of Malaysia. The four component parts of the new country had developed a common identity following Japanese occupation during World War II. Indonesia and the Philippines opposed the union and Indonesia supported military rebels in Malaysia after its formation.

The new country was led by Prime Minister Abdul Rahman, who had been a principal figure before independence, and his premiership lasted until September 22, 1970. Known generally as Tunku—a Malaysian title for a prince—Abdul Rahman had trained as a lawyer in Britain, and upon his return to Malaysia worked as a prosecutor. He became a leader of UNMO, the leading nationalist party, and became the natural choice to lead the campaign for independence from Britain. This was achieved for the new nation of Malaya in 1957, with Abdul Rahman as its prime minister. Regional discussions then took place about including the other British possessions in the region, the island of Singapore, and, to balance the racial mix, the eastern states of Sabah and Sarawak in the new nation. As a result, Malaysia was formed in

1963. Abdul Rahman went on to become the prime minister, leading the Alliance Party. He died in 1990.

Several issues troubled the new nation. One was the exit of Singapore from Malaysia in 1965 to become a sovereign country. The VIETNAM WAR of the United States and its allies against the North Vietnamese Army and the Vietcong was another issue.

In 1969 racial riots broke out between Malays and non-Malays, chiefly over attempts to make Bahasa Malaysia the national language and over privileges that had been conferred on people of Malay race. Hundreds of people were killed in the riots. The government acted to cement the position of Malays with the creation of the title *bumiputra*, or son of the soil, which was given to the indigenous peoples of Sarawak and Sabah as well as Malays. Many of Chinese descent left the country as a result.

Malaysia's internal policies and its external relations were dominated for years by the often-aggressive Prime Minister Mahathir Mohamed, who came to power in 1981. Mahathir saw Malaysia prosper through his vision for the country's future. A series of five-year plans were installed with the aim of having the country become a fully industrialized nation by 2020. This plan seemed successful until 1997, when economic crisis beset Southeast Asia, and a recession ensued.

Internal politics gained international notoreity in September 1999 when a dispute between the deputy prime minister, Anwar Ibrahim, and the prime minister became public. Anwar was arrested and, after a trial for alleged sodomy held in the full glare of world publicity, was sentenced to six years in jail. He was released before serving the full prison term.

Geographically, Malaysia is split in two. Peninsular Malaysia borders Thailand at its northern end. In the south the island nation of Singapore is connected to Malaysia by a causeway. Kuala Lumpur is the capital, with several universities and major industries as well as government institutions. Eastern Malaysia, with only about 15 percent of the population, occupies about fourth of the island of Borneo—Indonesia owns the lower section, with tiny Brunei surrounded by Malaysia on the western coast.

Politically the population of nearly 24 million is divided into 13 states, four of which have a governor, with the remainder ruled by hereditary sultans. All states have unicameral state legislatures relected every five years that deal with state matters. One of the nine sultans is elected for five years to be the paramount ruler of Malaysia.

Major industries include the harvesting and export of palm oil, rubber processing, electronics, tin mining, light manufacturing, timber logging, petroleum production, and agriculture processing. Malaysia also exports electronic equipment.

Malaysia's foreign affairs are dominated by its relationships with neighboring giant Indonesia, the tiny island of Singapore, and a sometimes testy relationship with the West. Forest burning in Indonesia is a source of irritation between Malaysia and Indonesia as well as offshore oil exploration claims. An ongoing rebellion in Thailand's Muslim-majority southern provinces also causes border tension.

Malaysia has been a member of the ASSOCIATION OF SOUTHEAST ASIAN NATIONS (ASEAN) since its founding in 1967. It now includes 10 nations and over 500 million people. ASEAN primarily exists to promote economic growth, friendship, and regional stability.

With its series of five-year economic plans, Malaysia aims to become a fully industrialized nation by 2020.

THOMAS A. LEWIS

Malcolm X

(1925–1965) *American civil rights leader*

The militant African-American leader was born Malcolm Little, later taking the Muslim name el-Hajj Malik el-Shabazz. His life story, *The Autobiography of Malcolm X*, was published posthumously in 1965, making him a hero among African Americans.

Malcolm Little was born on May 19, 1925, in Omaha, Nebraska. His father was Earl Little, a lay preacher and supporter of Marcus Garvey. One of Earl Little's uncles had been lynched, and three of his brothers died at the hands of whites. His mother's family was from Grenada. The family moved to Milwaukee, Wisconsin, in 1926, and then to Lansing, Michigan, where Malcolm grew up. He saw his family's house burned down by the Ku Klux Klan. Two years later, in 1931, his father was found dead after having been run over by a street car; it was believed that he had been murdered by the group who set fire to his house. Soon afterward Malcolm's mother was declared insane and was moved to a mental institution. Malcolm did well at junior high

school, graduating at the top of his class, but a teacher he admired told him that it was unrealistic for African Americans to aspire to be lawyers. After several years in foster homes, Malcolm spent some time in a detention home and then moved to Boston to be with his sister.

He found work shining shoes, then joined the New Haven Railroad, but he quickly found himself involved in crime. He was refused an army position in World War II after allegedly claiming that as soon as he had a gun, he would organize other African Americans. In 1946, he was arrested with another African American and two white women stealing goods to sell to a pawnshop. The women claimed that they had been coerced into the crime, and Malcolm was jailed for 10 years. In prison, Malcolm joined the Nation of Islam, which held the belief in the inherent superiority of black people. Released from prison in 1952, he visited the Nation of Islam headquarters in Chicago, where he met with Elijah Muhammad, the leader of the sect. Many African Americans believe that their surnames came to them from white slave owners; Malcolm Little changed his family name to “X.”

Over several years, Malcolm X toured the United States and was regarded as one of the best speakers and organizers for the Nation of Islam. He talked much of the exploitation of African Americans by whites and urged black separatism rather than integration and racial equality. Indeed, he felt that there should be greater black self-dependence and that violence was justified for self-protection. This latter belief alienated him from many of the civil rights leaders at the time who urged for nonviolent resistance to racism. In 1959 Malcolm X went to Africa for the first time, visiting the United Arab Republic (Egypt), Sudan, Nigeria, and Ghana, partially to help organize a tour by Elijah Muhammad that followed. The Nation of Islam in the United States grew in numbers, and in 1961 he founded *Muhammad Speaks*, the official journal for the Nation of Islam. Settling in Harlem, New York, he became a minister at Mosque Number Seven.

Malcolm X had become a controversial figure in the Black Muslim movement, meeting with Cuban leader FIDEL CASTRO in September 1960 when the Cuban politician was in New York to address the UNITED NATIONS General Assembly. The Cuban delegation refused to stay in the Shelburne Hotel after being asked to pay in advance, and moved to the Hotel Theresa in Harlem, where Malcolm X and other African-American community leaders met them.

Malcolm X is most associated with the militant struggle for civil rights for African Americans in the United States.

In 1963 Elijah Muhammad suspended him from the movement when he described the assassination of U.S. President JOHN F. KENNEDY as a “case of chickens coming home to roost,” a remark that was regarded as extremely controversial. In March 1964 Malcolm X left the Nation of Islam and in the following month went on a pilgrimage to Mecca. He had wanted to set up his own organization as a more radical wing of the Nation of Islam, but his time in Saudi Arabia led him to see that whites were not necessarily innately evil and that compromise was possible. In October 1964 he reaffirmed that he had embraced orthodox Islam, but this did not prevent death threats from white extremists and also rival Black Muslims. He was shot dead on February 21, 1965, at a Harlem ballroom. Three Black Muslims were later convicted of the murder. *The Autobiography of Malcolm X*, compiled by writer Alex Haley from numerous interviews with Malcolm X shortly before the latter’s murder, was published posthumously and became an overnight best seller. Malcolm X had married Betty X (née Sanders) in Lansing, Michigan, and

they had six daughters; the youngest two, twins, were born after Malcolm's murder.

JUSTIN CORFIELD

Mandela, Nelson

(1918–) *South African leader*

Nelson Mandela was considered by many to be the most respected world leader alive in the early 21st century. During the struggle to end apartheid in South Africa, he remained unembittered by a regime that offered him only indignity and poverty. His story cannot be separated from that of his family, colleagues, and supporters in the AFRICAN NATIONAL CONGRESS (ANC) and a wider coalition of liberation groups in South Africa. In his fight for the right to live an ordinary life, Mandela gave up career and family, lived the life of an outlaw, and endured 27 years of imprisonment.

Mandela was born on July 18, 1918, the eldest child of his father's third wife, Nosekeni Fanny, in the village of Mvezo, Umtata, the capital of the Transkei, in the southeast of South Africa, and was called Rolihlahla. He was given the name Nelson Mandela at age seven when he attended a mission school, the first member of his family to do so. Madiba, as ANC leaders call him affectionately, is his clan name. Following his father's defiance of a local magistrate, the family lost their inheritance and moved to Qunu, a large village north of Mvezo, where Mandela enjoyed an idyllic childhood as a herd boy. When he was nine, his father died and he was sent to the house of Chief Jongintaba Dalindyebo, the acting regent of the Thembu people, who raised him to become an adviser to the Thembu royal house.

Through education Mandela gradually developed a tribal and national identity. Tribal elders expected him to learn by observation and passed down Xhosa history and culture to him. He witnessed the free speech and consensus decision-making of the men of the Thembu court, and also learned about British

and Dutch imperialism. At 16, he was circumcised, a traditional site of passage into manhood. Following his mother he became Christian, was baptized into the Methodist Church, and enrolled in a number of mission schools. At the Clarkebury Boarding Institute, Mandela reveled in sports and learned that ability was more important than lineage. He then attended Healdtown, the Wesleyan College at Fort Beaufort, 175 miles southwest of Umtata, the largest liberal arts school for Africans south of the equator, and was appointed prefect. His education made him both an Anglophile and an African, as he came to admire British manners, to meet people from other tribes, and to think independently.

At 21, Mandela entered University College, Fort Hare, the only institution for higher education for blacks in South Africa. He studied law and joined the Student Christian Association, where he met Oliver Tambo. Mandela started a B.A., but did not complete it until 1943 because he disagreed with the principal about the voting system for the Student Representative Council. At 23, to escape an arranged marriage, Mandela ran away to Johannesburg, where he lived on a meager wage and studied at night to complete his degree at the University of South Africa. Mandela was so poor that he went without food, wore patched clothes, and walked six miles to and from work to save the bus fare. Although the partners at the law firm discouraged politics, Walter Sisulu and Gaur Radebe—a fellow articulated clerk—believed that politics was the only long-term solution to the problem of race relations in South Africa. In the 1950s Mandela opened the first firm of black African lawyers with Oliver Tambo.

Mandela joined the ANC in 1943 and helped transform it from a deferential nongovernmental organization to a mass movement. Founded in 1912, the ANC was the oldest African organization in South Africa and advocated multiracialism. By the 1940s, however, the ANC was more concerned with maintaining the privilege of elite black South Africans. Mandela enrolled in the law program at the University of Witwatersrand, where he met white and Indian students his own age who would also become leaders in the struggle. The ANC formed a Youth League on Easter Sunday 1944, and adopted its proposal for boycotts, strikes, and protest demonstrations. The Youth League had been inspired by Indian demonstrations in 1946 in response to laws restricting their movement and their right to buy property.

The National Party won national elections in 1948 and passed the Group Areas Act in 1950. Apartheid, or the separation of black and white into urban areas on

the basis of white superiority, became law. On Freedom Day, May 1, 1948, two-thirds of African workers stayed at home, and the government banned meetings by anti-apartheid activists. A coalition of groups organized a National Day of Protest (NDP) on June 26, 1950.

The Defiance Campaign, in which 8,500 volunteers defied laws and went to jail on the anniversary of the NDP in 1952, was Mandela's apprenticeship as a freedom fighter. Mandela believed that the form of resistance was determined by the enemy, and that nonviolent resistance was a tactic rather than a principle. He traveled the country explaining the campaign and training volunteers to respond to police nonviolently. The government began to ban people, which was like informal imprisonment, and to conduct arrests and raids of the homes and offices of people linked to nongovernmental organizations.

The government increased repression with the Sophiatown evictions in 1953, the Bantu Education Act of 1955—which transferred control of education to the Native Affairs Department—and the massacre of 69 peaceful protesters at Sharpeville in 1960. Oliver Tambo left the country and formed the external wing of the ANC. Mandela was arrested for treason in 1956, and when the trial ended in 1961, the government began to appoint its own judges, to use torture in prison, and—starting at the end of 1963—to harass and imprison wives of freedom fighters, including Nomzamo Winifred Madikizela, whom Mandela had married in 1958.

For the next two years Mandela went underground and became an outlaw, disguising himself as a chauffeur, chef, or garden boy. By 1962 the ANC had established a military wing, Umkhonto we Sizwe (MK), which adopted a policy of sabotage of infrastructure. Mandela studied guerrilla warfare and surveyed the country's industrial areas, transport system, and communications network. He attended the Pan African Freedom Movement for East, Central and Southern Africa in Addis Ababa, and organized financial support for the MK. The government passed the Sabotage Act, which allowed house arrests that were not subject to challenge in court, restricted the printing of the words of banned people, and passed the Ninety-Day Detention Law, which allowed detention without charge.

On his return to South Africa Mandela was arrested and sentenced to five years' imprisonment. He defended himself against the charges of inciting the country to strike and leaving the country without travel documents. Standing in the courtroom in his kaross, or traditional clothing, he put the state on trial, arguing that in a state where there was no justice without representation,

he had no option but to follow his conscience in defiance of the law.

In late May 1963 Mandela was transferred to Robben Island, to the north of Cape Town. He knew about the island from childhood stories of Xhosa warriors who had been banished there. Nine months into his sentence the police discovered Rivonia, the house from which the ANC had operated underground; they arrested the commanders of the MK and charged them with sabotage and conspiracy to overthrow the government. Realizing they could face the death penalty, the accused defended themselves on moral grounds. Mandela rejected the allegation that he was a communist and admitted his African nationalism and support for British parliamentary democracy. The MK, seeking to respond to increased Afrikaner repression and growing African restlessness, had adopted a policy of sabotage to prevent civil war and to provide the best conditions for future relations.

PRISON LIFE

Mandela was sentenced to life imprisonment; he would be imprisoned for 27 years. By 1962 Robben Island had become the toughest correctional facility in South Africa. Prisoners were classified into four groups according to political opinion and the extent to which they were prepared to adopt servile behavior. D prisoners could write and receive only one letter of 500 words every six months to or from their immediate families, defined according to Western culture. Prisoners were not permitted to touch their relatives or to speak in their native language. They were given insufficient clothing, bedding, and food. In 1979, after 15 years of protests, African, Indian, and mixed-race prisoners received the same food as white prisoners, including fresh vegetables and meat.

Mandela considered the struggle in prison a microcosm of the struggle in the country. He refused to be robbed of his dignity, to show emotion, or to despair. He fought for reforms such as better food, study privileges, and dismissal of officers, communicating his complaints during the visits of dignitaries such as the Red Cross, three justices of the Supreme Court, and Mrs. Helen Suzman, the only member of the Liberal Progressive Party in the parliament and the sole parliamentary opposition to apartheid. Mandela's first protest was against short trousers. He refused a pair of long trousers until all prisoners were given them in 1965. He endured 13 years of hard labor in the limestone quarry until it was abolished in 1977. It took three years to convince the authorities that prisoners needed sunglasses, and when they were given them, the prisoners had to pay for these

glasses themselves. Sunday services with a sympathetic preacher, books, games, tournaments, plays, concerts, and gardening provided some relief.

Beginning in the early 1980s, Mandela sought to bring the government and the ANC to the point of talks. In March 1982 Mandela was transferred off Robben Island, and in 1988 he was relocated to a cottage within Victor Verster prison, in the town of Paarl, northeast of Cape Town. South African president F. W. de Klerk began to dismantle apartheid. He seemed prepared to negotiate with Mandela, but often sought to secure his own power through the guise of equality.

On February 3, 1990, Mandela was released and greeted by a great crowd in Cape Town. He challenged the people to bring the government to the negotiating table. After his release Mandela knew that his dream of a simple family life would again be sacrificed as he worked for a new South Africa. (His first marriage, to Evelyn, had ended in 1955 when she became more interested in the Jehovah's Witnesses than in politics.) In 1992 Mandela and Winnie separated. Democratic elections were held in 1994. Mandela was elected president for a five-year term and immediately embarked upon an ambitious program of reconstruction, which remained the struggle for South Africans into the 21st century.

JULIA PITMAN

Manley, Michael

(1924–1997) *Jamaican political leader*

A leading spokesperson for Third World socialist movements and social justice for the world's downtrodden and underprivileged, Michael Norman Manley dominated Jamaican politics from the time of his father's death in 1969 until his retirement from politics in 1992. Serving three terms as prime minister (1972–76, 1976–80, and 1989–92), he headed Jamaica's People's National Party (PNP), founded in 1938 by his father, Norman

Manley, which led the drive for Jamaican independence from Great Britain, achieved in 1962. Likened in his impact on global affairs to INDIRA GANDHI of India, JULIUS NYERERE of Tanzania, KWAME NKRUMAH of Ghana, and other prominent Third World figures of the cold war era, Manley was born in Kingston, Jamaica on December 10, 1924. His Jamaican-born black father, an Oxford-trained attorney, was a leading figure in the island's political life from the 1930s until his death; his England-born white mother, Edna Swithenbank Manley, was a highly regarded artist and sculptor.

Despite his privileged background, which he readily acknowledged, in 1942 at age 18 Manley enlisted in the Royal Canadian Air Force, serving in the European theater but seeing no combat. After the war he attended the London School of Economics, becoming a protégé of prominent British socialist Harold Laski. Returning to Jamaica, in the early 1950s he became involved in the country's burgeoning trade union movement; in 1962 he was appointed to a Senate seat in the newly independent nation-state and became vice president of the PNP. Described as "tall, handsome, charismatic, and a spellbinding orator," Manley promoted a pragmatic left-socialist democratic populism that resonated among large sectors of the Jamaican electorate.

Determined to improve the living conditions of his country's poor majority and to enhance Jamaica's standing vis-à-vis the more advanced industrial world, during his first term as prime minister he increased the state's role in the country's bauxite industry, the country's principal export commodity and a major source of foreign exchange. He also instituted a range of left-populist policies in the arenas of health, education, and unemployment. A shrewd politician, he cast himself as an authentic expression of the needs and aspirations of Jamaica's poor and dispossessed, allying himself with the religio-nationalist Rastafarian movement and integrating reggae music and other forms of Afro-Caribbean artistic expression into his political repertoire. After his 1980 electoral defeat by Conservative E. P. G. Seaga, and in the context of the neoliberalism of the Reagan-Thatcher years, Manley recast his policies during his third and final term in office (1989–92), privatizing some industries, cutting government spending, and pursuing more orthodox monetary, trade, and investment policies, while never relinquishing his rhetorical or practical commitment to improving the living standards of the majority.

MICHAEL J. SCHROEDER

Marcos, Ferdinand and Imelda

(1917–1989 and 1929–) *Filipino leaders*

Although popularly elected at first, Ferdinand Marcos and his wife, Imelda, transformed the Philippines into a police state during the early 1970s. With the financial and political backing of the United States, which valued their strong anticommunist policies, the Marcoses ruled for 15 years before being forced from power by popular protest in mid-1986.

Ferdinand Marcos was born in Llocos Norte Province at the northwestern tip of Luzon, a rice- and tobacco-growing region. His father was a politician and educator, his mother a teacher from a prominent local family. Marcos was a brilliant law student in the 1930s; he successfully convinced the Philippine Supreme Court to drop a murder conviction against him for shooting a political rival of his father. During World War II, Marcos fought in the Battle of Bataan and claimed to have led a guerrilla unit, the *Maharlikas*, against Japan. Many critics doubted the veracity of his claims.

In 1949 Marcos won a seat in the Philippine House of Representatives. In 1954, he married Imelda Romualdez, a well-connected former beauty queen. He became a senator in 1959 and served as president of the senate from 1963 to 1965. He was elected president of the Philippines in 1965.

During his first term, Marcos championed a number of large-scale development projects that earned him the support of both elites and peasants. He built roads, bridges, schools, and hospitals. Politically, such programs fared far better than the land reform agenda that Marcos had made a key part of his campaign. Much of the money for these projects came from the United States, which was eager for the support of Asian nations in its struggle against communism.

Marcos won a second term in 1969. Soon after, the situation within the country deteriorated; economic stagnation, crime, and political instability came to characterize national life. A communist insurgency erupted in the countryside. With the instability as pretext, and, as later accounts would reveal, actually engineering much of it, Marcos began arrogating more powers to himself. In September 1972 he instituted

From left: Lady Bird Johnson, Ferdinand Marcos, Lyndon B. Johnson, and Imelda Marcos stand in front of the White House.

martial law and would rule by decree for much of the next decade and a half.

During this period Marcos proclaimed the beginning of a New Society, which would cast away the personal and political values of colonialism in favor of modern values. But even as Marcos and his supporters called for self-sacrifice they began to pocket enormous sums of money from the public till. Marcos broke up many of the business conglomerates run by some of the country's leading families and handed these profitable enterprises to his own family members and loyal supporters. He also nationalized industries and created monopolies to enrich himself and his supporters.

Marcos ended martial law in January 1981 with Proclamation 2045. Although he appeared to loosen his grip on power, the New Republic proved to be little more than a repackaged version of the corrupt and repressive New Society. Because of a boycott by the main opposition parties, Marcos won a large victory in the June 1981 presidential election.

However, years of corruption began to affect the economy as its national debt climbed to \$25 billion by early 1985. Marcos's health also began to fail. Because he suffered from what was believed to be kidney disease, his wife Imelda took on more responsibilities, including meeting foreign dignitaries. The United States also began to withdraw its support of Marcos.

The assassination of Benigno "Ninoy" Aquino Jr., the main opposition leader, in August 1983 ignited a people's movement that would result in the exile of the Marcoses three years later. Aquino and his wife, Corazon, had been

long-term rivals of Marcos. It is widely believed that had martial law not been declared, Aquino would have won the 1972 presidential election. Although a high-level commission blamed Marcos loyalists for the killing, the government ignored its findings. Aquino's murder and the subsequent cover-up became the rallying point for a diverse group of opponents.

Still confident of his popularity, in November 1985 Marcos called a "snap" election for February 1986, 16 months before the end of his term. After the Marcos-controlled National Assembly declared him the victor, Catholic Primate of the Philippines Cardinal Jaime Sin, Minister of Defense Juan Ponce Enrile, and Lieutenant General Fidel V. Ramos rallied around the legitimate winner, Aquino's widow Corazon Cojuangco Aquino. The People Power Movement forced Marcos out of office on the day of his inauguration. He fled in a U.S. Air Force plane with his family and closest supporters and eventually settled in Honolulu, Hawaii.

In ensuing months details emerged about how he had used his office to accumulate vast amounts of wealth. Filipino officials estimated that Marcos and his wife and supporters stole between \$5 and \$10 billion. The great symbol of this corruption amid poverty became Imelda Marcos's collection of shoes, handbags, and formal gowns, which numbered in the thousands. Ferdinand Marcos died on September 28, 1989, in Hawaii. Imelda Marcos returned to the Philippines in 1992, served in the House of Representatives from 1995 to 2001, and lost two bids for the presidency.

THOMAS ROBERTSON

Marshall, Thurgood

(1908–1993) *U.S. Supreme Court justice*

Thurgood Marshall was special counsel for the National Association for the Advancement of Colored People (NAACP) and a U.S. Supreme Court justice during the 20th-century CIVIL RIGHTS MOVEMENT of the United States. Marshall is lionized for his argument before the Supreme Court in the case *BROWN V. BOARD OF EDUCATION*, which ended the federal sanction of segregation

in public schools. He was also the first African-American Supreme Court justice.

Thurgood Marshall was born Thoroughgood Marshall on June 2, 1908, in Baltimore, Maryland. His father was a steward at a country club, and his mother was an elementary school teacher. Marshall was named for his paternal grandfather, a slave from the Congo who won his freedom. His grandfather had chosen the name Thoroughgood when he enlisted in the Union Army during the Civil War. At age six, Marshall legally had his name changed to Thurgood due to criticism from his peers.

Marshall was a self-proclaimed hell-raiser in elementary school and was first introduced to the Constitution of the United States when he was forced to read it as punishment. He took great interest in Article III, which concerned the judiciary branch, and also in the Bill of Rights. Even from an early age, he was troubled by civil rights abuses.

Marshall graduated with honors from Douglas High School in Baltimore, Maryland, and then attended the all-black Lincoln University in Oxford, Pennsylvania, the oldest African-American institute of higher education in the country. In his junior year Marshall married his first wife, Vivian Burey. The next year, Marshall graduated Lincoln University.

Experience on the debate team at Lincoln University had inspired Marshall to major in prelaw. After graduation Marshall applied to the University of Maryland Law School, but was rejected due to his race. He then turned to Howard University Law School in Washington, D.C. It was there that Marshall met Charles Hamilton Houston, the vigorous vice dean of the Howard law school. Houston inspired Marshall's interest in constitutional law and instilled in him the idea of lawyers as "social engineers" capable of effecting change for the African-American community.

Marshall graduated Howard University Law School as valedictorian and opened a law practice in Baltimore. Marshall acted as legal counsel to the local chapter of the NAACP. In 1933 Marshall argued his first major court case with the NAACP, in which he won the first African-American student, Donald Gaines Murray, a place in the University of Maryland Law School, the school that had rejected Marshall. In fact, Murray was the first African-American student to enter a state law school below the Mason-Dixon Line.

In 1935 Charles Hamilton Houston became chief counsel for the NAACP. A year later, Marshall joined the New York City chapter of the NAACP as Hous-

Thurgood Marshall was the first African-American justice on the United States Supreme Court.

ton's assistant. When Houston retired to private practice in 1938, Marshall took over as chief counsel for the NAACP. Marshall founded the NAACP Legal Defense and Education Fund (LDF) to attack segregation through judicial and legislative means.

Throughout the 1950s Marshall traveled the South arguing civil rights cases before state and federal courts. He received several death threats during this tour and narrowly avoided a lynching. Of the 32 cases Marshall argued before the Supreme Court on behalf of the NAACP, he won 29. In 1954 Marshall won the landmark case for the NAACP, *Brown v. Board of Education of Topeka*. The unanimous Supreme Court decision overruled the *Plessy v. Ferguson* precedent. A year after the *Brown v. Board* decision, Marshall's wife, Vivian Burey, died; Marshall remarried the same year. His second wife, Cecilia Suyat, was a secretary at the NAACP's New York City office.

In 1962 President JOHN F. KENNEDY appointed Thurgood Marshall to the U.S. Court of Appeals, 2nd Circuit. Marshall struggled with the decision to leave behind 23 years as the NAACP head counsel, but ultimately followed his sense of duty to his coun-

try. After serving three years on the Court of Appeals, Marshall was appointed by President LYNDON B. JOHNSON as solicitor general of the United States, the third-highest office in the Justice Department. President Johnson proceeded to nominate Marshall to the Supreme Court in 1967. Marshall's nomination was confirmed in the Senate 69 to 11, and he was sworn in as the first African-American Supreme Court justice on October 2, 1967. Marshall served on the court for almost 24 years.

On the liberal Warren court, Marshall joined a majority in favor of civil rights for minorities and the expansion of rights for all citizens. Marshall focused his energy on negotiating unanimity among his fellow justices to increase the weight of the Warren Court's rulings. However, as the court grew more conservative in the 1970s and 1980s, Marshall became famous for his vehement minority dissents, arguing in favor of affirmative action, due process, and First Amendment rights, and against the death penalty.

Thurgood Marshall died of heart failure in Bethesda, Maryland, on January 24, 1993. His legacy as Mr. Civil Rights marked him in history alongside activists such as MALCOLM X and MARTIN LUTHER KING, JR.

ANNA BROWN

Marshall Plan

World War II decimated Europe's infrastructure and economy, leaving bombed and gutted buildings, destroyed factories and businesses, and high unemployment. Hit heaviest were areas of industrial production and transportation. With Europe debt-ridden and financial reserves depleted by the war, the problems could not be easily fixed. Both U.S. and European officials put forth several plans, all of which were rejected. The one alternative for recovery called for German reparations.

However, many officials felt such a plan would be the same mistake that was made after World War I and opted instead for U.S. investment in Europe.

The United States initiated the European Recovery Program (ERP), generally referred to as the Marshall Plan. On June 5, 1947, U.S. Secretary of State George C. Marshall, in addressing the graduating class of Harvard University, outlined the U.S. government's intentions for aiding European recovery. Marshall called for Europeans to create a plan that the United States, whose economy had grown rapidly during the war and the one major power whose infrastructure remained intact, would then subsidize. State Department officials would work with the nations of Europe to develop the program, which was named for Marshall.

A month after Marshall's speech European officials, led by British foreign secretary Ernest Bevin and French foreign minister Georges Bidault, met in Paris to discuss options for the proposal at the Conference of European Economic Cooperation (CEEC). Invited by the Western powers as a sign of good faith, the Soviet Union attended the conference as well. However, Foreign Minister Vyacheslav M. Molotov walked out, calling for Soviet rejection of the plan. Seeing it as a U.S. scheme to subjugate Europe by promoting free trade and economic unity, Soviet premier Joseph Stalin pressured Czechoslovakia, Poland, and Hungary into rejecting it as well.

In September the CEEC approved the formation of the Organisation for European Economic Cooperation (OEEC) to oversee the European side of the recovery program. Except for Germany and Spain, every nation outside the Soviet sphere joined.

On April 2, 1948, the U.S. Congress formally authorized the ERP through passage of the Economic Cooperation Act, which President Truman signed the next day. Truman appointed Paul G. Hoffman, president of the Studebaker automobile corporation, as head of the Economic Cooperation Administration (ECA), the U.S. agency that operated the ERP. W. Averell Harriman, a Lend-Lease representative to Britain and secretary of commerce under Truman, was made special representative to the participating countries to advise them on the program. Beginning operations in July 1948, the ECA had the objectives of strengthening European currencies, encouraging the development of industrial production, and facilitating international trade within Europe and its partners, especially the United States.

Meanwhile, the OEEC met to determine European needs prior to any distribution of appropriations under the act. The revitalization plan proposed to the United States asked for \$22 billion in aid. Congress approved

a Truman-backed \$17-billion aid package with strong bipartisan support. The amount of aid received varied by country on a per capita basis. For instance, Great Britain received an approximate total of \$3.3 billion while Iceland received only \$43 million. Moreover, Allied nations and major industrial powers were given priority aid over those that had sided with the Axis powers or had remained neutral during the war. The same went for countries seen as strategic in the fight against communism, like West Germany.

The basic idea of the plan was simple: The United States gave monetary grants to participating countries, which then utilized that aid to buy the materials needed for recovery—typically from the United States. The ECA and local governments jointly administered and processed the exchange, examining and distributing the aid where needed. As a result the U.S. economy flourished as the European recovery effort grew. Early on, imports consisted mostly of essential items like food, fuel, and materials for reconstruction; however, as western Europe stabilized and the COLD WAR heated up, aid went more toward rebuilding military capabilities to defend against communist expansion.

On the other hand, eastern Europe's forced rejection of the Marshall Plan clearly showed the division in Europe leading toward the cold war. Unlike its former allies, the Soviet Union imposed large reparations on former Axis nations in its sphere of influence. Finland, Hungary, Romania, and East Germany were all forced to pay large stipends to the Soviet Union as well as to provide supplies and raw materials. Consequently the economies of eastern Europe did not recover as quickly, if at all, under Soviet rule.

Over the four years of the Marshall Plan's existence, participating countries received in total close to \$13 billion in economic aid; with the exception of West Germany, the economies of all surpassed prewar levels when the program ended in 1951. Under the provisions of the plan none of the aid had to be repaid, as it was absorbed and reinvested in the economies of Europe and the United States. The lone exception was West Germany, which had to repay the United States a reduced amount of \$1 billion; the final payment came in 1971. Seen as the first instrument of sustained European economic integration, the European Recovery Program removed tariff barriers, ended protectionism, and established institutions that could control the economy on a continental level—an idea European leaders had sought to institute in the past.

STEVE SAGARRA

McCarthyism

The term *McCarthyism* defined a period of U.S. history during the 1950s when there was intense concern about Communist infiltration of American society. It took its name from U.S. Senator Joseph McCarthy, a Republican from Wisconsin, who was involved in accusing many people of being Communist or having Communist sympathies. These people were then often subjected to aggressive investigations, questioning by congressional committees. In many cases they faced harassment and, in some cases, what became known as “selective prosecution.”

After World War II, the U.S. government became increasingly worried about the establishment of Communist or pro-Communist governments throughout all of eastern Europe. Many people in the United States started to feel threatened by the Soviet Union. This certainly increased in 1949, when the Soviet Union exploded its first atomic bomb and the Communists were victorious in the Chinese civil war in the same year. With the start of the KOREAN WAR the following year, the idea of communism seeking to expand over the whole world was seen in many circles in the United States as a very real possibility.

In January 1950 Alger Hiss, a high-level official in the State Department, was convicted of perjury. He would have been charged with espionage, but the statute of limitations had run out. Instead, he was charged with lying when he testified before the House Committee on Un-American Activities, the major group involved in questioning suspected Communists.

On February 9, 1950, Senator Joe McCarthy produced a piece of paper that he claimed contained a list of 205 people working in the State Department who were known to the secretary of state as having been members of the Communist Party. McCarthy received much press coverage, and the term *McCarthyism* has been traced to a *Washington Post* cartoon by Herblock, published on

March 29, 1950, showing a tottering pillar on which an elephant—the symbol of the Republican Party—is being asked to stand.

In July 17, 1950, Julius and Ethel Rosenberg were arrested. Both were members of the Communist Party, and the couple both worked on the Manhattan Project at the Los Alamos National Laboratory during the war. With the American government eager to find out how the Soviet Union had managed to explode their atomic bomb so quickly, investigations led to the Rosenbergs, who were charged with stealing atomic bomb secrets for the Soviet Union. The Rosenbergs were found guilty, although doubts were cast on the constitutionality and the applicability of the Espionage Act of 1917, under which they were tried, as well as the perceived bias of the trial judge, Irving R. Kaufman. The Rosenbergs were executed on June 19, 1953, being the first U.S. civilians to be executed for espionage, and the first Americans ever to be executed for espionage in peacetime.

With many high-profile cases like those of Alger Hiss and the Rosenbergs, it was not long before the FBI director, J. Edgar Hoover, started assigning increasingly large numbers of his agents to investigating Communists and suspected Communists. In this, the FBI were subsequently found to have broken laws, being involved in burglaries, opening mail, and installing illegal wiretaps.

From 1947 on, the House Un-American Activities Committee had started to question people connected with Hollywood, serving subpoenas on film actors, directors, and some screenwriters. The first 10, known as the “Hollywood Ten,” refused to cooperate and pleaded the First Amendment’s guarantee of free speech and free assembly. The defense was rejected, and eight of the 10 were jailed for a year, and two for six months. Thereafter, witnesses tended to plead the protection of the Fifth Amendment, refusing to give any evidence that might incriminate them. Those questioned could either use this as a defense or name other Communists.

Senator McCarthy came to head the Senate Permanent Subcommittee on Investigations. He then started searching through the card catalogs of the overseas library program of the State Department, finally getting them to remove books which were deemed to be communist or pro-communist. The blacklists then started, although in many ways these had been operating since November 1947, when Eric Johnston, president of the Motion Picture Association of America, issued a press release that came to be known as the Waldorf Statement.

Several hundred people were jailed during the McCarthy period, as it became known, with between 10,000

and 12,000 losing their jobs. A few scholars, such as John D’Emilio, have managed to show that more people were targeted for homosexuality than communism. In the film industry more than 300 actors, actresses, writers, and directors were not able to find work because of the blacklists.

In 1952 the U.S. Supreme Court voted to uphold the decision made in lower courts in *Alder v. Board of Education of New York* that state-based loyalty review panels could fire any teachers deemed subversive. As tensions mounted, Arthur Miller launched his attack on McCarthyism in his play *The Crucible*, using the Salem witch trials of 1692 as a metaphor in which the accusation was tantamount, in the public mind, to guilt.

It was Edward R. Murrow, the CBS broadcast journalist, who criticized McCarthy on March 9, 1954, on his “Report on Joseph R. McCarthy,” stating that the senator had been abusive toward witnesses. Soon afterward, when McCarthy attacked the U.S. Army’s chief counsel, Joseph Welch, Welch replied, “Have you no sense of decency, sir? At long last, have you left no sense of decency?” It was a rebuke that slowly led to a move away from McCarthyism.

Gradually, even President Dwight D. Eisenhower began to see McCarthy as extremely distasteful. In November 1954, when the Republicans lost control of the Senate, McCarthy was dumped from the Government Committee on Operations of the Senate. Soon afterward he was formally censured by a vote of 67 to 22 for conduct “contrary to Senate traditions.” McCarthy remained as a senator for another two years. He had always been a heavy drinker and died on May 2, 1957, from cirrhosis of the liver.

JUSTIN CORFIELD

Meir, Golda

(1898–1978) *Israeli politician*

Known for most of her life as Goldie Mabovitch, Golda Meir spent her formative years in Kiev, Ukraine, where

Israel’s first woman prime minister, Golda Meir, was noted for both her idealism and her practical nature.

pogroms and anti-Semitism plagued her life. Golda’s only memories of this time were of being afraid, hungry, and cold. Tired of their lives in Kiev, the Mabovitch family moved to Byelorussia in 1903 and then to Milwaukee, Wisconsin, in 1906. Upon graduation as valedictorian from junior high school, Meir pleaded with her parents to allow her to attend high school and become a teacher.

At 14 she ran away from home to live with her sister in Denver. She attended high school and worked at a restaurant, where she overheard debates about Zionism, anarchism, socialism, and suffrage. Meir met Morris Meirson in 1915, and they moved back to Wisconsin so she could finish high school. With her parents’ support she enrolled in Wisconsin’s normal school for teaching in 1916 and taught Yiddish the following year. Meir and Meirson married in 1917, and she began working with the Poalei Tzion movement.

Meir and Morris then moved to Palestine. Their first child was born in 1924. That same year Meir was elected as an officer of Histadrut, where she met influential Zionists including David Ben-Gurion, with whom she would be professionally connected for much of her career. She

was elected secretary of the Women's Labor Council in 1928 and separated from her husband; however, they never officially divorced. Meir helped found Mapai, Israel's major labor party, which led every coalition government for the first three decades of its existence. In the mid-1930s Meir was elected to the executive board of Histadrut, became the fundraiser for the Jewish Agency, and was elected as the head of the agency's Political Department.

Following Israel's declaration of independence in 1948, Ben-Gurion appointed Meir as Israel's ambassador to the Soviet Union. Unhappy to leave the newly established Israel, she returned and was appointed minister of labor and national insurance, in which post she remained until 1956. She adopted the Hebrew name Golda Meir. As foreign minister from 1956 to 1966, she attempted to build bridges with the emerging independent countries in Africa via an assistance program based on Israel's nation-building experience. Diagnosed with cancer in 1963, Meir retired from the Knesset; however, her retirement was short-lived. Supportive of the Mapai Party merger and multiparty alignment, she was elected secretary general of the coalition in 1966. When Prime Minister Eshkol died in 1969, Golda Meir became the world's third female prime minister.

Combining idealism and practicality, Meir led a full professional and personal life. She dedicated her career to leading Israel's struggle in survival and peace. Both of these objectives were thwarted when Egypt and Syria attacked Israel during Yom Kippur in 1973. Meir was blamed for overestimating the strength of the Israel Defense Forces and misjudging the surrounding Arab countries' intentions. In 1974 she resigned and during the following four years worked on her autobiography and spent time with her family until her death in 1978.

JENNA LEVIN

Menchú, Rigoberta

(1959–) *Guatemalan peace activist*

Catapulted to international fame by her moving testimonial, *I, Rigoberta Menchú* (1983), Rigoberta Menchú

Tum was born on January 9, 1959, to a poor family of Quiché-Maya Guatemalan Indians, among the largest of Guatemala's 26 indigenous ethno-linguistic groups. Her gripping narrative of her life, her community, and their struggles for peace and justice in the highlands, coffee plantations, and cities of Guatemala was the principal impetus behind her receipt of the Nobel Peace Prize in 1992. In recognition of her work for social justice and ethno-cultural reconciliation based on respect for the rights of indigenous peoples, the prize committee stated that ". . . Rigoberta Menchú stands out as a vivid symbol of peace and reconciliation across ethnic, cultural and social dividing lines, in her own country, on the American continent, and in the world. . . . In her social and political work, she has always borne in mind that the long-term objective of the struggle is peace."

In 1999 her narrative was challenged as partly fabricated. The allegations opened up a wide-ranging debate about the veracity of her account and the nature of truth in testimonial narratives. Challenges to specific episodes in her account did not question the genocidal nature of the Guatemalan government's anti-insurgency campaigns; the extremes of exploitation, oppression, and violence suffered by the country's indigenous peoples; or Menchú's moral courage or commitment to peace and justice. In response to the controversy, the Nobel Prize Committee reaffirmed its decision.

As a vast anthropological and historical literature attests, Guatemala's indigenous population has been subject to centuries of victimization and oppression by more powerful groups. This is the context for understanding Rigoberta Menchú's narrative, life, and struggles for justice. In her teens she became involved in the social justice initiatives of the Catholic Church and in the women's rights movement. Her father, Vicente Menchú, was a political activist, jailed and tortured for his alleged involvement in the death of a plantation owner. Upon his release he joined the Peasant Union Committee (CUC), and in 1979 Rigoberta did the same. The next year Vicente was killed by security forces during a peaceful protest action at the Spanish embassy in Guatemala City. Soon after, she became involved in a strike by farm workers on the Pacific coast and in other anti-government actions, and in 1981 was compelled to flee the country. In exile she became a leading figure in the international movement for indigenous rights in Guatemala. In 1983 she narrated her testimony to a Venezuelan anthropologist, who published her account the following year. The book proved enormously influential, used in colleges and universities worldwide. In 1999 a U.S. anthropologist detailed numerous discrepancies in her account. Controversy has raged

since. A predominant consensus acknowledges many of the discrepancies while affirming the essential veracity of Menchú's account. Since 1992 she has received many honors and prizes and in 2007 remained active in the struggle for the rights of indigenous peoples and women in Guatemala and Latin America.

MICHAEL J. SCHROEDER

Mexico, agrarian reform in

Among the principal causes of the Mexican revolution (1910–20) were the country's highly unequal landowning patterns and growing landlessness among the rural majority, especially during the regime of dictator Porfirio Díaz (1876–1910). The 1917 constitution, which has governed Mexico since that time, included among its provisions several articles addressing the land issue, most prominently Article 27, which states in part: "The nation shall at all times have the right to impose on private property such limitations as the public interest may demand, as well as the right to regulate the utilization of natural resources . . . in order to conserve them and to ensure a more equitable distribution of public wealth."

Article 27 also stipulated that only *ejidos* (inalienable village-owned collective lands, generally distributed by villages to individual heads of households) and individual Mexican citizens could own Mexican land or subsoil rights. In the early 1920s, under intense international pressure, Article 27 was watered down in a series of constitutional amendments to permit foreign firms, most notably U.S. oil companies, to be granted concessions on Mexican territory for the exploitation of natural resources.

Actual implementation of Article 27 varied greatly in accordance with the proclivities of individual presidents. In the 23 years from 1917 and 1940, approximately 30.6 million hectares were redistributed to villages and individuals. Around one-third of this total (34 percent) was redistributed from 1917 to 1934 under the presidencies of Venustiano Carranza

(1917–20), Alvaro Obregón (1920–24), and Plutarco Calles and his subordinates (1924–34), amounting to a little over 10.5 million hectares. The remaining two-thirds (66 percent), amounting to some 20.1 million hectares, was distributed by the administration of Lázaro Cárdenas (1934–40).

After 1940, the popular clamor for land declined substantially, in consequence of both the aggressive implementation of the constitution's land reform provisions under Cárdenas; formal representation of rural producers in national and local governments via the National Peasant Confederation (Confederación Nacional Campesino, or CNC); and the growth of rural-urban migration and the attendant shift in the nation's demographic structure. According to one leading scholar, "[the] era of agrarian violence that began in 1810 finally ended with the land reform of the 1930s." (Tutino, *From Insurrection to Revolution*, p. 348.)

After 1940, the national government under the PRI favored large commercial agricultural enterprises at the expense of smaller production units, resulting in growing impoverishment among rural dwellers. Under President Luis Echevarría (1970–76), the government again emphasized the *ejido* sector, adding some 17 million hectares to the *ejido* total. This was the last major redistribution of Mexican land. In 1992 the government radically altered the nature of the *ejido*, in effect privatizing it by permitting *ejido*-holders (*ejidatarios*) to sell, rent, lease, or mortgage their properties. The neoliberal, free market, privatization-oriented reforms under President Vicente Fox (2000–06) continued the erosion of the *ejido*, though the institution remained important in many rural areas, while local struggles for land (as waged by the ZAPATISTA movement in Chiapas, for instance) promised to continue into the foreseeable future.

MICHAEL J. SCHROEDER

Mobutu Sese Seko

(1930–1997) *Congolese president*

Mobutu Sese Seko, a member of the Ngbandi ethnic group, was born in Lisala, Belgian Congo, in 1930. After receiving a Catholic education from white missionaries,

he began his public life by serving in the Belgian Colonial Army. He was a colonel by 1960 and appointed chief of staff of the Congolese Army by newly independent Congolese prime minister PATRICE LUMUMBA.

The struggle for Congolese independence left behind ethnic fighting and soon civil war. By September 1961 fighting erupted between Congolese troops and the UNITED NATIONS (UN) forces sent to quiet the growing civil discontent. Sensing growing political disarray in the Congo, Mobutu seized power on November 24, 1965, in a successful coup over President Kasavubu following a power struggle between Kasavubu and his prime minister, Moïse Tshombe. Mobutu declared himself president for a five-year term, placed Moïse Tshombe on trial for treason, and condemned him to death.

Mobutu took full executive powers into his own hands. The coup marked the beginning of the Second Congolese Republic and the reestablishment of minimal law and order. Mobutu appointed Colonel Leonard Mulamba as his prime minister and inaugurated a campaign of national reconstruction. This was highlighted by the 1966 establishment of the Movement de la Révolution (MPR), with himself as president. Mobutu went on to eliminate all opposition to his control while centralizing all decision making into his own presidency.

Mobutu's rule was not made official until 1967 when he instituted a new constitution. However, the years between 1967 and 1970 saw substantial clashes with students who had become disillusioned with Mobutu and his authoritarian rule. Nevertheless he was reelected president in 1970.

Like many African leaders who would follow, Mobutu embarked on a campaign of pro-African cultural awareness, renaming the country the Republic of Zaïre in October 1971. He ordered all Africans to drop their Christian names, and priests were warned that they would face five years' imprisonment if they were caught baptizing a Zaïrois child with a Christian name.

The Shaba Wars of 1977 and 1978 threatened Mobutu's constitutionally entrenched presidency. Several thousand soldiers of ex-prime minister Tshombe's former Katanga army exiled in Angola had become suspicious of Mobutu's offers of amnesty. In 1977 these same soldiers crossed the border into Shaba province.

The continuing economic slump, combined with the attack by the Katanga troops, forced Mobutu to solicit foreign aid to restabilize the country. France, motivated by the opportunity to defeat Communist-backed troops in Africa, airlifted 1,500 elite Moroccan paratroopers into the Shaba region. The rebel army retreated but

advanced again a year later in greater numbers. Mobutu persisted in his requests for international assistance and this time received help from Belgium and France, with logistical support from the United States.

The rebels were defeated again. In return for their assistance, France and Morocco urged Mobutu to democratize his increasingly hostile regime. Mobutu responded with pseudo-elections with a secret ballot that allowed 2,000 candidates to contest 270 seats in the legislative council and another 167 candidates to contest 18 elective seats in the political bureau. Mobutu was reelected.

The remainder of Mobutu's presidency would focus on high-profile foreign relations efforts meant to polish the tarnished image of his nation. He restored relations with Israel in 1982 and sent troops into Chad as part of a peacekeeping mission in 1983. Mobutu went on to suspend Zaïre's membership in the ORGANIZATION OF AFRICAN UNITY in 1984 in support of Morocco's walk-out over the Western Sahara question.

Recognizing the failing economic situation in Zaïre, in 1990 Mobutu called for a dialogue between the state and the people of Zaïre. The resulting dialogue saw 100 demonstrating students massacred by troops at Lubumbashi in May of that year. Mobutu announced his resignation as chair of the MPR in an attempt to rise above the problems within the party. He went on to establish a special commission to draft a new constitution by April 1991 that finally allowed free operation of political parties.

In January 1993 the High Council of the Republic declared Mobutu guilty of treason and threatened impeachment unless he recognized the legitimacy of the transitional parliament set up by the new constitution of 1991. Strikes and disorder followed while Mobutu attempted to reassert his authority. He reconvened the dormant national assembly as a rival to the High Council of the Republic and created a conclave that appointed Faustin Birindwa as prime minister. He announced the dissolution of the High Council and the dismissal of the Birindwa government in January 1994.

Mobutu was overthrown in the First Congo War by Laurent-Désiré Kabila. When Mobutu's government issued an order in November 1996 forcing Tutsis to leave Zaïre on penalty of death, they erupted in rebellion. From eastern Zaïre, with the support of presidents Paul Kagame of Rwanda and Yoweri Museveni of Uganda, they launched an offensive to overthrow Mobutu. Ailing with prostate cancer, Mobutu was unable to coordinate the resistance. On May 16, 1997, following failed peace talks, Mobutu went into temporary exile in Togo,

but lived mostly in Morocco. Mobutu died on September 7, 1997, in exile in Rabat, Morocco.

RIAN WALL

Montgomery, Alabama, bus boycott

The bus boycott in Montgomery, Alabama, served as the most prominent example of effective grassroots activism within the CIVIL RIGHTS MOVEMENT of the 1950s, while also demonstrating the limits of such activism in the absence of support from the federal government. The boycott centered on the Jim Crow laws that governed the Montgomery bus system. The buses were segregated, with white riders allowed to sit in the front while black riders were limited to the back of the bus. The bus drivers, all of whom were white, were empowered to order black riders out of their seats to allow whites to sit if necessary.

The immediate catalyst for the boycott was the arrest of Rosa Parks, the secretary for the Montgomery chapter of the National Association for the Advancement of Colored People (NAACP), for refusing to vacate her seat to allow a white man to sit down. Parks's arrest on Friday, December 5, 1955, became a rallying point for the African-American community. A committee called the Montgomery Improvement Association (MIA) was formed that weekend, and decided to boycott the bus system until a set of limited demands were met. The association chose the 26-year-old pastor of the Dexter Avenue Baptist Church, Dr. MARTIN LUTHER KING, JR., as its primary spokesperson.

White leaders in Montgomery initially believed that the boycott would fizzle out due to the winter season and the fact that most of the African Americans in Montgomery utilized the buses to travel to work. The bus company desired a settlement. City officials, on the other hand, with the support of racist organizations, decided to try to break the boycott through legal pressure, harassment, and intimidation. The city threatened to cancel the insurance of black-owned taxi companies, ticketed cars containing more than one passenger, and arrested the leaders of the association on felony conspiracy charges.

The NAACP, although somewhat critical of the boycott, led a legal challenge to Montgomery's laws segregating public transportation. A federal district court ruled in the NAACP's favor, leading to an appeal by Alabama officials to the Supreme Court (*Browder v. Gayle*). On November 13, 1956, the Court ruled that the segregation of public transportation violated the Fourteenth Amendment's equal protection clause. The buses were integrated within a month. Despite this victory, the rest of the Jim Crow laws governing race relations in Montgomery remained intact, as did the segregation of transportation across most of the rest of the South. Furthermore, the response of Montgomery leaders provided an indication of the willingness of many whites to resist even limited African-American attempts to obtain civil rights.

The boycott did have some positive consequences. It demonstrated the potential effectiveness of nonviolent protest accompanied by aggressive legal action. It also launched the public career of Martin Luther King Jr., who shortly thereafter founded the Southern Christian Leadership Conference to continue to organize further peaceful grassroots protests across the South, setting up the more extensive and successful efforts of the 1960s.

RICHARD M. FILIPINK, JR.

Montoneros (Argentine urban guerrillas, 1970s)

In the early 1970s in response to the military dictatorship in Argentina, a number of left-wing urban guerrilla groups formed in opposition to government authority. The most audacious and active of these groups was the Montoneros, which engaged in a number of high-profile kidnappings, bank robberies, bombings, and assassinations from 1970 to 1977 before being crushed by the military as part of a broader crackdown on "subversion" and dissent in that country's Dirty War. Most Montoneros were young, disaffected university students and would-be professionals from the urban middle class who engaged in acts of violence to advance their

political goals. Many were also women, in keeping with the sexual revolution then transforming much of North America and Europe.

In previous decades, leftist guerrilla groups had formed in the Argentine backcountry, though most had had little impact on the country's political life. These included the Tigermen (Uturuncos) in 1959, modeled on Cuban revolutionary FIDEL CASTRO's July 26 Movement; the People's Guerrilla Army, active in the early 1960s; and the 17th of October group, formed in 1968. In March 1970 a new group, the Argentine Liberation Front (Frente Argentino de Liberación), kidnapped the Paraguayan consul. In June 1970 another group, claiming the mantle of the deposed president JUAN PERÓN and calling itself the Montoneros, kidnapped and executed former Argentine president Pedro E. Aramburu, in reprisal for Aramburu's 1956 execution of the Peronist general Juan José Valle and 27 of his compatriots after a failed rebellion.

By the end of 1970 at least four leftist guerrilla organizations, three Peronist and one Trotskyist, were active in Argentina, each with fewer than several hundred members. In 1971–72 the Peronist groups, active mostly in and around Buenos Aires, staged a number of sensational, Robin Hood–like operations. In addition to bank robberies and assassinations, the guerrillas kidnapped government officials, prominent businessmen, and executives of multinational corporations, who were released for cash payments to Buenos Aires' poorest residents. In 1973 the Peronist guerrilla groups coalesced into the Montoneros, led by Mario Firmenich, leader of the original Montoneros formed in June 1970.

Proclaiming traditional unions decadent and corrupt, and popular social revolution as their goal, the group aimed to precipitate a generalized crisis that would usher in a period of radical social transformation, empowering the poor and redistributing the country's wealth in favor of workers and peasants. On June 20, 1973, during events marking Perón's second return from exile, pitched battles broke out between the Montoneros and pro-union paramilitaries in which scores, perhaps hundreds, died (the "Ezeiza massacre"). After Perón's reelection as president in September 1973, the Montoneros stepped up their attacks against Peronist unions, most spectacularly in their assassination of José Rucci, general secretary of the Confederación General del Trabajo. In September 1974 they received an estimated \$60 million in cash and \$1.2 million in charity distributed to

the poor as ransom for the release of several prominent businessmen.

The army, police, and affiliated right-wing paramilitary groups (most notably the "Triple A," or Alianza Anticomunista Argentina) responded to the upsurge in Montonero violence with a generalized crackdown on organized dissent. Thousands were imprisoned and tortured and thousands more executed and "disappeared" in the Argentine Dirty War (1976–83). In 1976 there were an estimated 7,000 Montoneros. A year later the organization ceased to exist as a viable guerrilla force.

MICHAEL J. SCHROEDER

Morocco

Following the establishment of the French protectorate over Morocco in 1912, numerous nationalist movements emerged; after World War II these parties, especially the Istiqlal (Independence) led by Allal al-Yusuf, mobilized opposition to the French regime. There was also a small urban-based Communist Party led Mehdi Ben Barka. The Sultan Muhammad Ben Yusuf, the king of the old Alaouite dynasty, supported the nationalist demands. In 1947 he gave a rousing speech in the international city of Tangier in which he pointedly did not declare his loyalty to the French. This was seen as support for the nationalist cause and was a turning point in the struggle.

After riots broke out in the major port city of Casablanca, the French promptly appointed a hard-line military man to restore order. As discontent continued to escalate, the sultan demanded the establishment of his own government. In 1953 the French sent Muhammad into exile, but he did not abdicate. The French attempted to install the highly unpopular Muhammad Ben Arafa, a prince of the Glawi house, as their puppet ruler, but he barely escaped an assassination attempt by Moroccan nationalists. Violence increased, and Arafa fled. Faced with mounting violence and an ongoing war in Algeria, the French granted Morocco independence in 1956. Muhammad returned to become King Muhammad V in 1957.

Morocco gradually reasserted its authority over Spanish-held territory in the north but the Spanish retained

control over a small enclave and several offshore islands that they hold until the present day. In 1959 Tangier lost its special status and was integrated into Morocco as a free port.

Although the Istiqlal remained a key force in the Cabinet, Muhammad V had widespread governmental authority and enjoyed popular support as well as religious respect based on *baraka*, or good fortune. After his death in 1962, his son succeeded as King Hassan II. Hassan instituted a new constitution in 1962 but continued to exercise wide executive powers. The Istiqlal split in 1959, and a new group, the Union Nationale des Forces Populaire (UNFP), supported by Ben Barka, emerged. Following increased political opposition, Hassan proclaimed a state of emergency with full legislative and executive powers in 1965. Ben Barka went into exile in France, where he was kidnapped and presumably killed with the complicity of the Moroccan government in 1965. Political demonstrations against the regime continued in major cities throughout Morocco in the late 1960s, but Hassan remained in power owing to a combination of loyal courtiers, army officers, and security police.

In 1971 armed cadets stormed the royal palace during Hassan's birthday party, but when they failed to kill the king the attempted coup collapsed. In 1972 Hassan survived an airplane attack orchestrated by the formerly loyal general Mohammad Oufkir. The coup plotters, including Oufkir, were killed or imprisoned. In spite of ongoing charges of corruption and nepotism, Hassan remained in power.

Economically, Morocco was predominately an agricultural country but phosphates were its primary export and source of hard currency. Tourism was another major source of income. With a growing young population, Morocco, like many poor countries in the global south, found it increasingly difficult to provide adequate education or jobs for its youth. Many attempted to flee the poverty of the countryside by moving to the cities, where they joined the ranks of the unemployed, or by traveling to Europe as migrant workers. In the 1990s and afterward, these disaffected youth often sympathized with or joined Islamist movements.

In 1975 Hassan claimed the territory of the Western Sahara, formerly held by Spain, as part of Morocco and launched the so-called "Green March" of hundreds of thousands of Moroccans to take the territory. An ongoing war ensued; although the United Nations demanded a referendum to settle the issue, Morocco has consistently delayed the election and the matter remains unresolved until the present day.

U.S. secretary of defense Caspar W. Weinberger meets with King Hassan (right) of Morocco.

Although Morocco has had some success in furthering education and welfare projects and modernizing its economy, wide disparities between urban and rural areas and differing population and tribal groups remain. Following Hassan's death in 1999, his oldest son succeeded as King Mohammed VI. Well educated, Mohammed VI was keen to modernize the country; he also liberalized the political system, releasing many political prisoners from his father's regime. In 2004 he also instituted a new family code to grant women more power.

Islamists, many of whom opposed Morocco's close ties with the West and the modernizing programs, remained the major opponents to King Muhammad VI's regime.

JANICE J. TERRY

Mossadeq, Mohammad

(1882–1967) *Iranian nationalist*

Mohammad Mossadeq led the oil nationalization movement in Iran in the early 1950s. Mirza Mohammad Khan (later Mossadeq al-Saltaneh) was born in 1882 into a wealthy aristocratic family closely connected to the royal family of the Qajar dynasty. His father, Mirza Hedayat Ashtiyani, served the Qajar government as the minister of budget and finance from 1874 to 1895. Mossadeq, who was deeply influenced by his mother's progressive opinions about female roles in society, tried to extend the rights of women in Iran.

When his father died, Mossadeq succeeded him in the family profession as a *mostowfi* (auditor). He was appointed chief *mostowfi* in the province of Khorasan at the age of 14. Mossadeq, who supported the Constitutional Revolution, was elected to the First National Assembly as a deputy from Isfahan.

However, his credentials were rejected because he had not yet attained the minimum legal age to serve as a deputy in Parliament. He studied public finance in Paris and obtained a doctoral degree in law at Neuchâtel University in Switzerland in 1914. After returning to Iran, he held several important posts successively, including vice minister of finance, governor of Fars, minister of finance, governor of Azerbaijan, and foreign minister.

After Reza Khan ousted the Qajar shah from the throne during the 1921 coup and established the Pahlavi dynasty in 1925, Mossadeq became a leader in the nationalist opposition to the Pahlavi dictatorship. Mossadeq was imprisoned in 1940. When Reza Shah was dethroned by the Allies in 1941 for sympathizing with the Nazis, and his son Mohammad Reza was installed as the new shah, Mossadeq was released. In 1944 Mossadeq was elected as a deputy from Tehran to the 14th Parliament. During that time, he played a significant

role in enacting the Single-Article Bill, which forbade the government from granting foreign concessions without the approval of parliament.

In October 1949 a group of politicians, university students, merchants, and guilds in the Tehran *bazaar* (marketplace) gathered in front of the shah's palace to protest the rigging of the 16th parliamentary election. These protesters, led by Mossadeq, established the National Front. Under Mossadeq's leadership, the National Front drove the movement to nationalize the British-run petroleum industry. The oil nationalization law was approved by both the Senate and Parliament in March 1951.

Mossadeq was elected prime minister on April 30, 1951. The British government and the Anglo-Iranian Oil Company (AIOC) opposed the oil nationalization law and sued the Iranian government in the International Court in the Hague. Mossadeq attempted to establish Iranian political and economic independence and to democratize the system established by the Pahlavis; he favored both the nationalization of the oil industry and domestic reforms. However, his government fell in August 1953 as the result of a coup d'état that was backed by the United States that opposed the oil nationalization and Mossadeq's alleged communist ties. Mohammad Reza returned to power and Mossadeq was imprisoned on charges of acting against Iran. He was subsequently placed under house arrest; Mossadeq died at age 85 on March 5, 1967. He is regarded as a national hero.

MARI NUKI

Mountbatten, Louis, Lord (earl Mountbatten of Burma)

(1900–1979) *British political leader*

Lord Louis Mountbatten was the youngest son of Prince Louis of Battenburg and Princess Victoria of Hesse. His mother, a granddaughter of Great Britain's Queen Victoria, was the daughter of Queen Victoria's second daughter, Princess Alice, who, in turn, had married

Grand Duke Louis IV of Hesse. The Battenberg family was descended through morganatic marriage from the grand duke of Hesse and by Rhine. Lord Mountbatten was born on June 25, 1900, at Frogmore House, Windsor, England. His family included his sisters Princess Alice, the mother of Philip, duke of Edinburgh; Queen Louise of Sweden; and a brother, George Mountbatten, later the second marquess of Milford Haven.

Following in his father's footsteps, Mountbatten entered the navy in 1913 and saw service on the *Lion* and the *Elizabeth* during World War I. His father was first sea lord at the outbreak of conflict, but because of his German ancestry was forced to resign. Anti-German feeling grew during the course of the war, and this led King George V to relinquish all German names and titles. Accordingly the royal family name became Windsor, and *Battenburg* became *Mountbatten*.

In the interwar years, Lord Louis continued his career in the navy. He married Edwina Cynthia Ashley in 1922. Although Mountbatten's marriage lasted until the death of his wife in 1960 and appeared a close one, there remained claims of adultery and sensational affairs on both parts throughout the course of the marriage.

A captain at the start of World War II, Mountbatten commanded destroyers, losing the destroyer *Kelly* in battle off Crete in 1940. During these early years of conflict he saw action in the North Sea, the Mediterranean, and the Western Approaches. He became a commodore in 1941 and rose to become, in a relatively short period, chief of combined operations. In this post he took on a key role in planning for the Allied invasion of continental Europe. His appointment as supreme allied commander, South East Asia Command, in 1943 gave him the rank of acting admiral. Consequently he was instrumental in Allied operations to drive the Japanese from Burma, and in 1945 he accepted the Japanese surrender in Malaya. His command required diplomatic skills to balance the different Allied commanders in this theatre of operations.

Mountbatten's distinguished wartime service was awarded with nobility, becoming first Viscount Mountbatten of Burma in 1946 and then Earl Mountbatten of Burma and Baron Romsey in 1947. In the same year Mountbatten was appointed viceroy of India, and after partition he remained as governor-general until 1948. This meant overseeing the Indian and Pakistan drive to independence, and in this process he became a close friend of the Indian National Congress leader JAWAHARLAL NEHRU. Apparently this close relationship did not extend to Pakistan's Muslim League leader

Mohammed Ali Jinnah. The partition of India was not an easy affair, and much violence and death came as a result. Some critics held Mountbatten responsible for these difficulties because he rushed partition and independence without proper security arrangements being in place.

After India, Mountbatten remained in the navy and performed a number of critical duties. He became first sea lord in 1955 and served in the important post of chief of defense staff from 1959 to 1965.

Mountbatten was assassinated by the Provisional IRISH REPUBLICAN ARMY on August 27, 1979, while on vacation in County Sligo in the Republic of Ireland. A bomb was planted on his boat. The explosion killed his eldest daughter's mother-in-law, the Dowager Baroness Brabourne; his elder daughter's fourth son, Nicholas Knatchbull; and Paul Maxwell, a crew member.

The murder was widely condemned by both the president and the prime minister of Ireland. Mountbatten was buried in Romsey Abbey. The investigation that followed led to the arrest and conviction of Thomas McMahon in 1979 for the murders; although given a life sentence, he was released from prison following the Good Friday Agreement of 1998.

THEODORE W. EVERSOLE

Mugabe, Robert

(1924–) *Zimbabwean president*

Robert Mugabe was educated in mission schools and earned a degree in higher education from Fort Hare University in South Africa. As a young man, he joined the Zimbabwe African People's Union (ZAPU) with Joshua Nkomo, but split off to form the Zimbabwe African National Union (ZANU), which led a guerrilla warfare struggle against the white-dominated Ian Smith regime in Rhodesia. After protracted negotiations with Great Britain, Zimbabwe finally attained full independence under a one-person, one-vote rubric in 1979. Mugabe initially led a coalition government with his rival Nkomo, but gradually evolved a one-party state under his sole rule. In the 1980s Mugabe was hailed as an African statesman

by Western governments. Zimbabwe had a biracial government and made economic progress; Mugabe's regime also was successful in raising educational levels for boys and girls, with one of the highest literacy rates in Africa. In the 1990s Mugabe became increasingly dictatorial and refused to cede power even in face of the 2000 elections, when the opposition electoral vote was clearly the majority. Amid widespread charges of corruption and vote rigging, Mugabe's ZANU party declared victory in the spring 2005 elections. Mugabe also retained the right personally to select two dozen members of parliament. He also ordered the confiscation of white-owned land that was then distributed to his supporters. On the pretext of urban renewal, he also tore down urban shanty towns that were centers of political opposition to his regime. The resultant political crisis contributed to economic chaos and declining productivity as well as wide-spread condemnation from European nations, but, in spite of his advanced age, Mugabe announced his determination to remain in power, despite an apparent victory by the opposition in the national March 29, 2008, elections.

JANICE J. TERRY

Musharraf, Pervez

(1943–) *Pakistani leader*

Born in Delhi on August 11, 1943, to an educated middle-class family, Pervez Musharraf immigrated with his family to Pakistan during the Indian partition later that decade. Musharraf's education included enrollment at the Pakistan Military Academy, the Staff College in Quetta, and the National Defence College. He rose very quickly through the Pakistani military ranks despite the fact that he and his family were not members of the Punjab upper class, which dominated the Pakistani officer corps. His military career began in 1964 with various commands that included artillery and infantry units and then leadership over commando units. Musharraf graduated from the Royal College of Defence Studies in the United Kingdom before being named the director-general of the mili-

tary by Prime Minister BENAZIR BHUTTO, and he participated in the INDO-PAKISTANI WARS of 1965 and 1971.

In 1998 Musharraf became the army chief two days after the resignation of General Jehangir Karamat, the first army chief of staff to ever step down. Some analysts suggested that the appointment of the non-Punjab Musharraf by Prime Minister Nawaz Sharif was designed to prevent him from becoming too powerful. But Musharraf, along with other military officers, soon became frustrated with the prime minister's diplomatic efforts to resolve the crisis with India. A crisis that resulted would end Pakistan's democratic experiment.

General Musharraf took over the government of Pakistan in a bloodless coup on October 12, 1999, and became the 12th president of the Islamic Republic of Pakistan on June 20, 2001. The coup began when Prime Minister Nawaz Sharif attempted to fire Musharraf and replace him with the director of the Pakistani Intelligence Services, or the ISI, Khwaja Ziauddin. Out of the country when the crisis began, Musharraf immediately returned to Pakistan, and, with the support of senior military officials, Musharraf landed and assumed control of the government, ultimately exiling Sharif. He then suspended the national assembly.

In April 2002 Musharraf held a national referendum in order to legitimize his rule, which was extended for five years. The majority of Pakistani political parties, however, boycotted the election, and voter participation was believed to have been about 3 percent. In October 2002 general elections were held, and the pro-Musharraf PML-Q party won a number of seats. On December 14, 2003, a bomb exploded just minutes after Musharraf's motorcade crossed a bridge in Rawalpindi. Eleven days later another attempt to assassinate him resulted in the death of 16 people nearby. Musharraf temporarily broke the deadlock in December of 2004 in order to pass the Seventeenth Amendment, which legalized his 1999 coup. In January 2004 another referendum extended his presidency until October 2007. Several significant issues marked Musharraf's presidency. After the September 11, 2001, attacks on the United States Musharraf allied with the United States in the War on Terrorism. Radicals within Pakistan continued to target him for assassination. In November Musharraf declared emergency rule and dismissed the Supreme Court. He arrested opposition leaders and restricted media. In late November his new, personally appointed Supreme Court dropped all challenges to his legitimacy as president, and Musharraf renounced his military role. On December 15, 2007, Musharraf ended the state of emergency, ahead of the scheduled January 8 elections. The December 27 assassination of Benazir Bhutto, however, intensified the opposition to Musharraf,

and his party was soundly defeated in delayed parliamentary elections in February.

MATTHEW H. WAHLERT

music

Since 1950 there have been many styles of music and large numbers of important musicians who have influenced people throughout the world. It has also been a period where—although concerts continued to be held—for many people, music was heard on the radio, television, played on record players, tape recorders, video players, CD players, and also on Walkmans, MP3 players, and iPods. The use of juke boxes has gradually fallen from favor; “musac” was installed in many hotels, shopping centers and supermarkets, and during the 1990s there was the emergence—initially in Japan, and later elsewhere—of karaoke. Many of the major companies—HMV, Sony, CBS, and others—have been quick to move with the changes in technology. With large numbers of countries becoming independent, there has also been the composing of many national anthems, and the active encouragement of local music, both traditional and contemporary. The period from 1950 also saw the emergence of film music by many famous film music composers, including Erich Wolfgang Korngold (1897–1957), and also other musicians and singers. There have also been more developments, including the increasing importance of music in schools, with most primary and secondary schools around the world teaching music, and many millions of students learning to play musical instruments, with the mass production of quality instruments reducing the costs of acquiring a good instrument.

CLASSICAL AND STAGE MUSIC

Classical music during this period has remained strong, with the well-known musical works from early periods—by Bach, Beethoven, Mozart, Wagner and others—remaining popular; indeed Beethoven’s “Ode to Joy” has become the European anthem. In addition there have been new classical composers, such as Benjamin Britten (later Baron Britten of Aldeburgh; 1913–

1976), then Dmitry Shostakovich (1906–1975), with George Gershwin (1898–1937) contributing “classical jazz.” There have also been many great classical soloists of the period, with a few to remember being violinists Yehudi Menuhin (later Lord Menuhin of Stoke d’Abernon; 1916–99), David Oistrakh (1908–74), Alfredo Campoli (1906–91), and Nigel Kennedy (b. 1956); cellists Jacqueline du Pres (1945–87), Pablo Casals (1876–1973); Mstislav Rostropovich (1927, 2007); flautist James Galway (b. 1939); and classical guitarist John Williams (b. 1941). There were also some others such as pianist Richard Clayderman (b. 1953), who sold tens of thousands of recordings. In addition there have been important conductors of classical music such as Herbert von Karajan (1908–89) of the Vienna State Orchestra, Daniel Barenboim (b. 1942); Andre Previn (b. 1929), Antal Dorati (1906–88); Vladimir Askenazy (b. 1937), Zubin Mehta (b. 1936); Raphael Kubelak (1914–96), and Leonard Bernstein (1918–90), who was also a composer of *West Side Story* (1957) and much else.

Mention should also be made of minimalist compositions during the 1960s made by Terry Riley, Steve Reich, and Philip Glass, with early 21st-century composers being Oliver Knussen, Thomas Adès, and Michael Daugherty.

Singing, which had been very popular before the 1950s, had a resurgence of interest with the Eurovision Song Contest and other events. The Australian-born operatic soprano and concert singer Joan Sutherland (b. 1926) is internationally acclaimed for her coloratura roles; and the New Zealander Dame Kiri Te Kanawa (b. 1944) is also a popular opera singer. Other operatic singers who have been famous include the Three Tenors: Luciano Pavarotti (1935–2007); Plácido Domingo (b. 1941); and José Carreras (b. 1946). Singers include British duos Pearl Carr and Teddy Johnson, and Lennie Peters (1939–92) and Dianne Lee (b. 1950). There has also been a revival of interest in musicals with Andrew Lloyd Webber’s (b. 1948) *Jesus Christ Superstar* (1971), *Evita* (1978), *Cats* (1981), and *The Phantom of the Opera* (1986) playing to packed audiences. *Cats* became the longest-running musical in the history of British theater, and it only closed on Broadway, New York, in 2000 after 7,485 performances. Composer Richard Rodgers (1902–79) and lyricist Oscar Hammerstein (1895–1960) were extremely influential. Famous singers include Bing Crosby (1903–77); Cliff Richard (b. 1940), who operated with the backing band “The Shadows”; Frank Sinatra (1915–98); Tommy Steele (b. 1936); Liberace (1919–87); singer and songwriter Barry Manilow (b. 1943); Elton John

(b. 1947), who was also a pianist and one of the most popular entertainers of the late 20th century; and American Eartha Kitt (b. 1927), who became famous for her sultry vocal style.

Protest music has had an important role, with many lyric writers and singers having a major political message. They include the Australian Peter Garrett (b. 1953) of Midnight Oil, now a politician, and Raul Alarcon, who led the “No Waltz” in a protest against the Chilean dictator General AUGUSTO PINOCHET UGARTE, adapting music from *Blue Danube* by Strauss. Others include American singer Joan Baez (b. 1941), who protested against the VIETNAM WAR, and Irish “mouth musician” Sinéad O’Connor (b. 1966). Some protest groups came together at Woodstock, New York, in 1969. Folk music has long been popular throughout the world and has had a revival, with traditional folk music from Bob Dylan (b. 1941) and other singer-songwriters attracting large audiences.

FUSION

The early 1950s saw country and bluegrass music come into the mainstream. At the same time, rock and roll was taking shape from the musical intersection of blues, rhythm and blues, and some injections of that same country music. Though at times the listeners and marketers of country and rock music would seem demographically and geographically different, as the decades progressed musical creativity would spark lively interconnections and fusions between the styles.

With each new generation of musicians and listeners through the latter half of the 20th century and the start of the 21st, country and rock would each return to their beginnings in the music of earlier days. In the 1950s and 1960s much of that earlier music was being brought back to popular attention by the artists of the folk music revival.

Artists such as Pete Seeger, Woody Guthrie, the Weavers, and Leadbelly—who had taken up music as a tool of social protest during the Great Depression and World War II—would inspire newer generations of singers, songwriters, and players. These musicians would find in music a tool not only for political comment but for personal introspection.

Though it is often of a much rawer and rowdier nature, such personal emotional expression is a defining factor in the blues. Many folk revival musicians of the 1960s revered blues heroes such as Son House and Robert Johnson. A decade earlier in the Mississippi Delta, where that music had its genesis, a white singer had started making records that would cross the

boundaries of country, blues, pop, and folk in a way no one had done before. His name was Elvis Presley.

Presley grew up poor in rural Mississippi. He was working as a truck driver in Memphis when he stopped by Sun Studios one day to record a birthday song for his mother. Studio owner Sam Phillips heard in Presley’s style something he’d been on the look out for: a white singer who had the sound of the black Delta in his voice. Presley’s first single, released in 1954, was a textbook exercise in fusion and changes to come: The A side was “That’s All Right Mama,” written by blues musician Arthur “Big Boy” Crudup, while the B side was bluegrass giant Bill Monroe’s “Blue Moon of Kentucky.” Presley’s early recordings are some of the strongest bridges between folk, blues, country, pop, and rock and roll. His voice, too, remained distinctive, however far from the energy of those roots he sometimes strayed.

An occasional drop-in at Presley’s early Memphis sessions was another singer with a distinctive voice who would go on to become a towering and long-lived presence in country, folk, gospel, and rock and roll. Johnny Cash’s authentic yet mysterious image as The Man in Black was as unique as his music, and his troubled life as well as his religious commitment drew listeners on both sides of that divide to his music, which ranged from the folk-tinged “Folsom Prison Blues” to the fiery “I Walk the Line” to the roots-rock hybrid “Get Rhythm.” That fusion of blues, country, rock, and gospel with an up-tempo danceable beat appealed to teenagers across the country and across the races in the 1950s, but by the end of that decade it had begun to die off as a style. It would be a temporary lull, though, as San Antonio native and California transplant Rosie Flores and others would revive it beginning in the 1980s.

Another singer with a memorable voice and strong writing style had a far briefer career than either Presley or Cash, but his music did as much as theirs to intermingle the rivers of sound that flowed from country, rock, and folk during that decade and beyond. Hank Williams fused blues and longing and honky-tonk country melodies so successfully that his rural-themed images helped his music cross over to pop and rock listeners. Songs such as “I’m So Lonesome I Could Cry” and “Hey Good Lookin’” became standards in the 1950s and remained so well into the 21st century, for audiences across pop, bluegrass, and country.

The late 1950s and early 1960s saw country music become sugar-coated with strings and choral arrangements, in what was called the Nashville sound. Producers there were going after a pop market that was mired in productions that valued sound over substance. These

producers had their successes, and some good or at least interesting music came out of them—Patsy Cline crossed over to pop success, as did Roger Miller and Jeannie C. Riley—but it was not long before restless offshoots of both country and pop began taking the sounds in new directions. In pop, the motor city of Detroit saw the birth of the Motown sound and the popularity of artists such as Smokey Robinson, the Temptations, and the Supremes, and the beginning of musical integration as white listeners came in droves to hear black artists. In Memphis, Stax records and Booker T and the MGs proved vital forces.

THE SONGWRITER

Many artists drew from the folk music revival and expanded on it. The strongest of these were the evolution of the folk songwriter from a balladeer who told stories of events or history to one who wrote and sang powerfully of his or her own emotions, and the parallel return of musician as social rebel and commentator on social injustice.

The decade of the 1960s saw the emergence of the songwriter as a major and lasting force in country and popular music. Record buyers and concert goers began to notice and remember who wrote the songs. The time was filled with good, passionate, and original tunesmiths such as Tom Paxton and Ian and Sylvia Tyson, as well as with singers and players whose gift was to interpret the songs of others.

Bob Dylan's poetic, iconoclastic imagery was for many the defining music of the decade. Although Dylan was not a powerhouse singer himself, the power of his ideas nonetheless drew people to buy his records and come to his concerts. Fellow artists covered his songs as well, with the top three women artists of the folk music revival, Joan Baez, Judy Collins, and Carolyn Hester, among those who made Dylan's songs an integral part of their work.

The Minnesota-born Dylan counted dust-bowl folk troubadour Woody Guthrie as an essential hero, and like Guthrie, Dylan was not willing to be bound by some-one else's idea of who or what he should be as an artist. In 1965 he played an electric guitar onstage at the famed Newport Folk Festival. That shook things up at the time and raised questions about the limits and bounds of folk, rock, and country that still prompt vital discussion today.

Gram Parsons was another songwriter of the 1960s with a legacy as a writer and as a performer who blurred the boundaries between rock and country, a legacy that has endured despite his early death. Raised in Florida

and Georgia, the Harvard dropout found his way out to California not long after Dylan's tradition-breaking set on the stage at Newport. Parsons joined the Byrds, a rock band that quickly became more folk and country oriented under Parsons's influence. The list of songs Parsons had written already included the country and folk classics "Brass Buttons" and "Luxury Liner." The Byrds' 1968 release, *Sweetheart of the Rodeo*, contained another, "Hickory Wind," which is perhaps the song that best shows Parsons's love for and understanding of traditional country.

Country music was a door Parsons opened for Emmylou Harris, who was his duet partner during the last years of his life. Harris was singing at folk clubs in the Washington, D.C., area when Parsons first heard her. A year later, with a recording contract for his solo debut in hand, he hired her to sing on the project. Two years later, a return to the drug and alcohol abuse he thought he'd conquered led to Parsons's death.

While Harris was forging ways to stay true to her vision of country music, rocker Bruce Springsteen was moving closer to folk, and country artists such as Uncle Tupelo, the Tractors, and singer-songwriter Marty Stuart—who got his start in bluegrass—were moving toward rock rhythms and styles. The lines between roots rock and alternative country in band settings continued to blur, defined more by volume and dress, and occasionally by lyrical content, than by differences in melody. Singers and songwriters like Stuart, Gretchen Peters, and Mark Selby, while rooted in country, also found chart success with songs recorded by pop, blues, and rock artists.

Peters, a thoughtful songwriter and gifted singer who made the move from Colorado to Nashville in the mid-1980s, just about the time Marty Stuart was scoring chart hits, wrote music that found her equally at home performing at the Folk Alliance convention, cowriting with rocker Bryan Adams, and seeing her tunes cut by country new traditionalist Patty Loveless, blues rocker Bonnie Raitt, and pop country superstar Shania Twain.

Though she recorded one of Gretchen Peters's songs on her first release, Shania Twain soon turned to making recordings of songs she wrote herself or with her husband, rock producer Robert John Lange. The more rock-laced they got the more controversy followed her country music career, but it was a clearly a combination that fueled millions of dollars in music sales and brought many listeners into the country section of record stores who had never ventured there before.

Alison Krauss, known for the clarity of her voice and her wide-ranging song selection, might have seemed to

be going in a far different direction than Twain, but the two had more in common than sharing a stage. Twain reached pop and rock audiences with a blend of lyrics and style that crossed both those boundaries. Krauss built her foundation on traditional bluegrass and continued to play it, but took her listeners to true bluegrass versions of pop and rock songs they would likely not have encountered.

It is a characteristic that has marked all the artists who have been involved in the fusion of country music and rock: a musical imagination that can see and hear beyond borders, and an understanding of what can be changed and what can remain the same, where the heart of the music lies. The period since 1950 has seen a massive increase in popular music, or “Pop Music,” as it has come to be known. The earliest type was probably the blues, evolving from African-American traditions and gaining popularity in the United States during the 1930s, with jazz taking over as an art form characterized by blue notes and improvisation. By the 1950s, records of jazz music were sold throughout the world. Jazz musicians from 1950 include many who played from the 1920s and 1930s: Louis Armstrong (1901–71), Count Basie (1904–84), and Duke Ellington (1899–1974). There have also been a number of major political figures who have played jazz in public, including Prince Norodom Sihanouk of Cambodia, King Rama IX (BHUMIBOL) of Thailand, and former U.S. president BILL CLINTON.

POPULAR STYLES

Country music, often known as country and western music, officially started in Tennessee in 1927 with Jimmie Rodgers, and became popular with the increased sale of records. This style of music remained popular in the United States and in Australia. Australian country musicians include Slim Dusty (1927–2003); Australian country and western music enthusiasts meet regularly at Tamworth, New South Wales, each year.

Although the rock and roll period is usually regarded as the late 1950s and the 1960s, some of the traditions go back to the late 1920s. Nevertheless, most of the important rock and roll musicians date from the 1950s: Chuck Berry (b. 1926), Fats Domino (b. 1928), and Elvis Presley (1935–77) being three of the earliest well-known names in this style, with Presley’s title of “King of Rock and Roll.” He recorded over 450 original songs, not least “Blue Suede Shoes” (1956), “Jailhouse Rock” (1958), “Little Sister” (1961), “Viva Las Vegas” (1964), and “Suspicious Minds” (1969). The Beatles, which included Paul McCartney (b. 1942), John Lennon (1940–80), George Harrison

Dubbed the “King of Rock ‘n Roll,” Elvis Presley came to prominence in the United States in the 1950s.

(1943–2001), and Ringo Starr (b. 1940), was the most famous of the early bands. Jim Morrison (1943–71), of The Doors, used tempo and lyrics that had the ability to tap the mood of American youth in 1967. He left the United States in 1971 to move to Paris, where he died three months later.

Other pop groups include ABBA, Adam and the Ants, the Boomtown Rats, the Dead Kennedys, NXS, The Osmonds, The Rolling Stones, the Spice Girls, U2, and The Who. The British television series *Top of the Pops* helped promote many of the groups, and also a large number of prominent pop stars including Bono (b. 1960) from U2, Bob Geldof (b. 1951), Boy George (b. 1961), Gary Glitter (b. 1944), rock guitarist and singer Jimi Hendrix (1942–70), Michael Jackson (b. 1958), Mick Jagger (b. 1943), Jonathan King (b. 1944), Madonna (b. 1958), and Marilyn (b. 1962). Geldof

became even more famous with his Live Aid (1985) musical recordings, which raised money for his Ethiopian famine appeal; and Madonna has been involved in songwriting, acting in films, and many other parts of the entertainment industry. Progressive rock came about largely from the 1960s in Britain and also in Europe, with bands such as Alice Cooper, led by Alice Cooper (b. 1948), Pink Floyd (made famous with “Dark Side of the Moon”), and Genesis.

The mid-1970s saw the emergence of punk rock, with hard rock music played at fast speeds with simple lyrics and fewer than three chords. The groups include Television, the Ramones, and the Sex Pistols—the latter with Sid Vicious (1957–79) and Johnny Rotten (b. 1956) gaining notoriety. These generally used electric guitars, electric bass, and drums—with other subtypes developing, such as grunge, with Nirvana’s Kurt Cobain (1967–94), pop punk; Emo (emotionally charged punk rock); and Gothic rock.

There were also heavy metal groups, which tended to have aggressive and driving rhythms, with the music highly amplified and distorted, and grandiose lyrics, with many of the audience involved in “head banging.” Groups included A.C./D.C., Aerosmith, Black Sabbath (starring Ozzy Osbourne, b. 1948), Deep Purple, Led Zeppelin, Meatloaf, and The Sisters of Mercy.

Other types of music of the period from 1950 include funk, hip hop, salsa, soul, and disco. Some early developments in African-American music included gospel and also, in the Caribbean, steel bands. Funk music originated from African Americans, with the most famous musician in this style being James Brown (1933–2006), the “Godfather of Soul.”

Hip hop music tends to have rapping and largely came about with disc jockeys trying to repeat the percussion rhythms of funk or disco songs. Salsa music largely came from the Caribbean and became popular in many Latin countries in Central and South America and in the Mediterranean. It is also very popular among Cuban exiles in the United States. Soul music grew out of the African-American gospel singing and blues tradition from the 1950s, with musicians such as Aretha Franklin becoming well known.

Disco music, for dance, essentially drew from funk, salsa, and from the Caribbean soul music, being popular in night clubs. Reggae music, some associated with the Rastafarian movement, has also become popular in Britain and other places with large expatriate West

Indian communities. The most famous reggae musician, Bob Marley (1945–81), incorporated a rock-influenced hybrid, making Marley an international superstar.

In the 1990s, there was a development of New Age music, representing some form of connection to Mother Earth or Gaia. This included the sound of animals, as well as quiet songs that had the idea of aiding meditation and helping energize yoga sessions, having a calming influence, and representing essentially a cultural backlash and alternative to punk rock and heavy metal. This has also been reflected in a rise in interest in choir music by the King’s College Choir from Cambridge, England; the Mormon Tabernacle Choir from Utah; Welsh male voice choirs; and British marching bands from the coal mines in the north. There has also been a resurgence of the massive Estonian choirs, and renewed interest in Australian Aboriginal music, with the Yothu Yindi band being probably the best-known group. There has, similarly, been a revival of Zulu and other African chants, and also music from remote places such as harp music from Paraguay and Tibetan music.

There has also been much music around the world often collectively known as world music, for instance, in Greece, Nana Mouskouri (b. 1934). There have also been many internationally acclaimed African singers and musicians, the most famous probably being Ali Farka Touré (1939–2006) from Mali. There have also been many Algerian and Egyptian singers. In India, music played on a sitar by Ravi Shankar and others has been popular in its own right and in Bollywood films.

In China, Chinese operatic music has remained, in spite of China becoming communist—although there were major changes in Chinese music during the CULTURAL REVOLUTION from 1966, with Jiang Qing (Madam Mao) taking part in promoting new revolutionary themes in music. Elsewhere in Southeast Asia, Gamelan music in Java and Bali continues, and there has been much interest in pop music, with “45” records of the music of Sim Sisamouth of Cambodia and others being popular during the early 1970s.

JUSTIN CORFIELD

N

Namibia

Namibia's government is a multiparty, multiracial democracy. The country is bounded on the north by Angola and Zambia, on the east by Botswana and South Africa, on the south by South Africa, and on the west by the Atlantic Ocean. The total area of Namibia is 824,269 square kilometers. Windhoek is the capital and the main city. The population was estimated at about 2 million in 2005. The dominant religion is Christianity, mostly Lutheran, with English and Afrikaans as the common languages.

Namibia spent much of the 20th century under colonial rule. As South West Africa, it was a possession of Germany. From 1904 to 1906 the Namibians rose against their German rulers. The rebellion was crushed, and most of the indigenous people were stripped of their land. On July 19, 1915, the last German troops surrendered to the South African expeditionary corps at Khorab, and the South African military occupation of Namibia began. Namibia was seen as a valuable asset to whoever controlled it because of its mineral wealth and agricultural potential.

On December 17, 1920, South Africa received official approval from the League of Nations to rule Namibia under a "C" mandate. This type of mandate was designated for former German territories that were not considered to be likely to pass into independence in the foreseeable future. It led to decades of tension. Although the South Africans publicly claimed that the mandate should be viewed as a position of great trust

and honor, in practice it offered profits and advantages to South African nationals. For all essential purposes, Namibia had been annexed to South Africa, with the interests of Namibians subordinate to those of whites.

The South-West Africa People's Organization (SWAPO), a Marxist guerrilla group founded in 1960, began fighting for Namibia's independence in 1966. In 1966 the UNITED NATIONS (UN) passed Resolution 2145, which revoked South Africa's mandate and changed the country's name to Namibia. The UN brokered a peace agreement in 1977 in which South Africa accepted UN control over Namibia. Only in 1988, however, did South Africa agree to withdraw from Namibia. The new government held UN-supervised elections in 1989, which SWAPO won decisively. Sam Nujomo, one of the leaders of the independence movement, became Namibia's first president. After independence, the government pursued a policy of compromise with opposition groups and worked to address racial inequalities.

There is an extreme disparity between the income levels of blacks and whites. However, the living standards of blacks have been steadily improving, and the major economic resources in the country are no longer controlled exclusively by whites. The country's modern market sector produces most of its wealth, while a traditional subsistence agricultural sector supports most of its labor force. The principal exports are diamonds, copper, uranium, gold, lead, cattle, and fish. Ranching is still controlled largely by white citizens and foreign interests. In other industries—notably mining, fishing, and tourism—the participation of indigenous entrepreneurs has

been increased to provide economic opportunities for blacks. The unemployment rate of nearly 40 percent in 2000 primarily affected the black majority.

Namibia struggled to bring equality to its indigenous population. Racially, in 2005, black Africans made up 87.5 percent of the population, with white Africans numbering 6 percent and people of mixed race making up 6.5 percent.

By law, all indigenous groups participate equally in decisions affecting their lands, cultures, traditions, and allocations of natural resources. However, Namibia's indigenous citizens were unable to fully exercise these rights as a result of minimal access to education, limited economic opportunities under colonial rule, and their relative isolation. Virtually all of the country's minorities are represented in Parliament, in senior positions in the cabinet, and at other levels of government. The San, also known as Bushmen, are particularly disadvantaged. The government took numerous measures to end societal discrimination against the San. However, many San children do not attend school, making advancement difficult.

The future of Namibia remained in doubt at the start of the 21st century. The spread of the human immunodeficiency virus (HIV) held the possibility of devastating the country. Over 20 percent of Namibian adults were infected with HIV. Additionally the presence of numerous refugees from nearby war-torn nations held the potential to drag down the economy and involve Namibians in cross-border conflicts. Desertification, land degradation, and wildlife poaching were likely to remain issues of concern in the foreseeable future.

STEVEN DIETER

Nasser, Gamal Abdel

(1918–1970) *Egyptian president*

Gamal Abdel Nasser led the 1952 EGYPTIAN REVOLUTION that overthrew the corrupt and ineffective monar-

Gamal Abdel Nasser (center left) led the 1952 Egyptian revolution that overthrew the corrupt monarchy of King Farouk.

chy of King Farouk. Nasser was born into a working-class family in Asyut province. His father was a postal clerk. Nasser graduated from the Royal Military Academy in Cairo and served in the Sudan. He fought in the 1948 ARAB-ISRAELI WAR at Falluja, where Egyptian forces held out against Israel until the war's end. After the 1948 war, Nasser and other junior officers blamed King Farouk for the war's substandard weaponry and lack of military strategy.

Nasser was one of the founders of the secret Free Officers group that was determined to oust Farouk and set Egypt on a different path. Although the older and better-known Brigadier-General Muhammad Naguib was put forward to the public as the head of the officers' group, Nasser was in fact the acknowledged leader. He was known for carefully listening to all viewpoints and then making decisions. On July 22, 1952, the Free Officers overthrew the monarchy in a practically bloodless coup d'état. A Revolutionary Command Council (RCC) was established with Naguib as its head. Nasser and Naguib clashed over whether to keep a parliamentary system or to establish a one-party state with populist support, a course Nasser favored. The majority of the officers favored Nasser, and a single party, the Liberation Rally, was established in 1953. After a failed assassination attempt on Nasser in 1954, the Muslim

Brotherhood, with whom Naguib had close ties, was banned, and Naguib was removed from power. A new constitution was implemented in 1956 and Nasser was elected president by a huge majority of Egyptian voters. He was twice reelected to the position. A highly charismatic figure and a brilliant speaker in colloquial Arabic, Nasser was extremely popular with the majority of Egyptians and among average Arabs everywhere.

Not an ideologue, Nasser was a pragmatic political leader who sought to develop Egypt economically and socially. He moved toward socialism and the Soviet Union after his requests for military aid had been rebuffed by the United States. His regime jailed members of both the Egyptian Communist Party and the Muslim Brotherhood on the right.

After attending the BANDUNG CONFERENCE in 1955, Nasser joined with JAWAHARLAL NEHRU of India and MARSHAL TITO of Yugoslavia in championing positive neutralism, in which Third World nations would not forge solid alliances with either the United States or the Soviet Union in the COLD WAR but would instead act in their own best interests. Neither of the superpowers liked this approach, but the United States was particularly hostile to it. Steering a neutral course, Nasser opposed the Western-led CENTO/BAGHDAD PACT and opposed Arab regimes such as the Hashemite monarchies in Iraq and Jordan and the conservative, extremely pro-Western Saudi Arabian monarchy.

Nasser also spoke of Egypt belonging to three circles: the Arab, African, and Islamic worlds. Under Nasser, Egypt became a center for African and Arab political leaders and students. Although he was personally a devout Muslim, Nasser was committed to secular government and persecuted Islamists, particularly the Muslim Brotherhood, which sought to establish a state based on Muslim religious law and practice.

Like all Arab leaders, Nasser supported the Palestinian cause and their right to self-determination. He permitted some fedayeen (self-sacrificers) guerrilla attacks from the Egyptian-administered Gaza Strip in Israel, but he also recognized the superiority of Israel's military. Consequently he initially sought, through back channels, to negotiate settlements to the conflict with Israel. Israel insisted on face-to-face negotiations, and the attempts all failed.

In 1956 after the United States had refused to grant aid for building the ASWĀN DAM, Nasser nationalized the Suez Canal. The nationalization led to the 1956 ARAB-ISRAELI WAR, in which Great Britain, France, and Israel jointly attacked Egypt. The war was a mili-

tary loss for Egypt but a political victory after which Nasser became indisputably the most popular man in the entire Arab world.

During the so-called Arab cold war Nasser's influence dominated the liberal, progressive, and socialist governments in Syria and elsewhere, versus the conservative pro-Western monarchies, including Jordan and Saudi Arabia. With the formation of the UNITED ARAB REPUBLIC of Egypt and Syria in 1958, Nasser perhaps reached the peak of his popularity.

Following the devastating military losses in the 1967 ARAB-ISRAELI WAR, Nasser accepted responsibility and resigned. Massive and generally spontaneous public demonstrations calling for his return led him to resume the Egyptian presidency, but he never regained the unquestioning support throughout the Arab world that he had previously enjoyed.

In 1970 Nasser was called upon to mediate a truce between the PALESTINE LIBERATION ORGANIZATION (PLO) and King Hussein of Jordan in the bloody war between the two. Shortly thereafter he suffered a massive heart attack, in part brought on by the tensions of the negotiation, and died in late September. Although Nasser was mistrusted and opposed in most of the West and Israel, millions of mourning Egyptians joined his funeral cortege. The legacy of Nasserism, secular pan-Arab nationalism, and state-directed socialism, spread throughout most of the Arab world during Nasser's lifetime, but declined and, except in Lebanon, largely diminished after his death.

JANICE J. TERRY

Ne Win

(1911–2002) *Burmese ruler*

U Ne Win was one of the central figures in 20th-century Burmese history and bears a heavy responsibility for creating one of the most vicious, despotic regimes of the modern world.

Ne Win was born into a middle-class family in Burma as it was becoming more firmly integrated into the British Empire. His original name was Shu Maung, and he

studied at University College, Rangoon. When Japanese troops invaded Burma in World War II, he was one of many Burmese who welcomed their defeat of the British. He became one of the “30 Comrades” who received secret military training from the Japanese and subsequently led the Burma Independence Army (BIA) into Rangoon. By this time, he had changed his name to Ne Win, or Brilliant Sun. However, he subsequently became disillusioned with Japanese rule and, together with Aung San, nationalist leader of the Burmese, he switched the allegiance of the BIA to the Allied forces. When Burma won independence in 1948, he was appointed to command the military forces of the country and played an important role in dealing with the conflict between the central government and ethnic minority groups.

U Nu was ruling the country during the early post-independence years as head of the Anti-Fascist People's Freedom League (AFPFL), which had been created by Aung San. However, the gradual breakdown of unity within the AFPFL led U Nu to invite Ne Win and his Burmese Socialist Party to form a caretaker government. Ne Win yielded power at the 1960 general election but then seized power in 1962 on the grounds that the policies of U Nu's new government had led to a renewal of fighting and religious conflict.

As ruler, Ne Win announced the Burmese Way of Socialism, which combined elements of socialism, anti-imperialism, and forced puritanism. The results were increasingly disastrous for Burma's economy and society. Despite progressive strengthening of control over power, intensive censorship, isolationism, and mass arrests, his government was never fully able to suppress the opposition. The international community was critical of his rule, but he was able to gain support from China to maintain his rule. As time went on his personal idiosyncrasies became more prominent, which included increasing reliance on mysticism and superstition. One bizarre move was his insisting that all currency be issued in denominations divisible by nine or in other numbers he considered to be auspicious.

In 1987 rioting intensified across the country and led to Ne Win's resignation the following year. Power passed to the State Law and Order Restoration Committee (SLORC), which renamed the country Myanmar. Ne Win maintained some behind-the-scenes role in the government.

versity Press, 2006; Maung, Mya. “The Burma Road from the Union of Burma to Myanmar.” *Asian Survey* 30, no. 6 (January 1990).

JOHN WALSH

Nehru, Jawaharlal

(1889–1964) *Indian leader*

Jawaharlal Nehru came from a distinguished Kashmiri Brahmin family. His father, Motilal Nehru (1861–1931), was a successful lawyer who joined the Indian National Congress (INC), becoming its president in 1920. The elder Nehru founded a nationalist newspaper named *The Independent* and was elected to the Indian Legislative Assembly in accordance with the India Act (or Mongatu-Chelmsford Reform of 1919) between 1923 and 1924, and in 1926. He was also the author of the 1918 Nehru Report, which advocated dominion status for India.

Jawaharlal Nehru was educated at Harrow and Cambridge University in England, returning to India in 1912. He had a brief career as a barrister but soon gave up the legal profession and joined the Indian National Congress. He became a follower of Mohandas Gandhi, accompanying him in civil disobedience campaigns for self-government for India and serving many terms in jail. He rose quickly in the Congress, becoming leader of its left wing, its secretary between 1929 and 1939, and also its president. He used five months of internment in Ahmadnagar Fort in 1944 to write a book titled *The Discovery of India* that explored India's cultural heritage. When freed from prison, he participated in negotiating sessions with British authorities in attempts to find mutually acceptable formulas for advancing India's quest for independence. Although he condemned the provisions of the India Act of 1935 as totally inadequate, he nevertheless campaigned for the legislative elections that it authorized, winning impressive majorities in all non-Muslim provinces in 1937. Triumphant Nehru stated that henceforth there were “only two parties” in India, the British-controlled government and the INC. Such statements motivated Mohammed Ali Jinnah, president of the All India Muslim League (which won in the Muslim majority provinces) to rally Indian Muslims to work toward a separate nation, Pakistan.

World War II shattered hopes of Hindu-Muslim unity. While the Congress refused to cooperate with the British war effort without first achieving independence

and ordered all its provincial ministries to resign, the League hailed the day that the order was given as a day of deliverance for Muslims. League ministries cooperated with British authorities throughout the war and thereby gained valuable governing experience. Nehru spent the war years in jail for leading campaigns of noncooperation, and out of jail negotiating with British missions on the timetable for the transfer of power to Indians. His longest stint in prison was between August 1942 and March 1945.

Elections in Britain in 1945 had brought the Labour Party to power. Prime Minister Clement Attlee appointed LOUIS, LORD MOUNTBATTEN, Allied supreme commander in the Southeast Asia war theater, the last viceroy to India to complete the handover of power, set for August 1947. By that time the Muslim League had become firmly committed to Pakistan, and Gandhi and Nehru were forced to concede to a partition of the subcontinent into India and Pakistan, which was accompanied by communal rioting and large-scale movement of refugees, with countless killed. Nehru became the first prime minister of independent India.

The years between 1947 and 1964, when Nehru was prime minister and the Congress Party held a majority in the Indian parliament, are called the Nehru Era. Economically, Nehru was committed to industrial expansion and adopted many features of the planned economy of communist nations, although he also allowed free enterprise. He abandoned the Gandhian vision of handicraft industries. India's neutral stance and leadership among the nonaligned nations resulted in both the Communist and the Western blocs giving large amounts of economic aid to India. Farming remained in private hands, and there was no state-sponsored land distribution to the peasants. Economic development was stymied by rapid population growth, spurred by medical advances that increased life expectancy. Nehru conceded that India had to run fast in order to stand still because, despite steady gains in gross national product, per capita income showed little growth, and most of the population remained very poor.

Under Nehru (and afterward), India's main international problem was Pakistan. The two newly independent nations went to war immediately over control of Kashmir, a princely state in the north with a Muslim majority population but ruled by a Hindu prince. Under the terms of the partition all princely states had to choose to join either India or Pakistan, and the ruler of Kashmir opted to join India, which immediately sent in its military. Pakistani forces also crossed into Kashmir, touching off the first INDO-

PAKISTANI WAR. A cease-fire under a UNITED NATIONS mandate went into effect in 1948, but the dispute remained unsettled, and Kashmir remained partitioned in 2006. A small war in 1961 expelled the Portuguese from their enclave, called Goa, in southwestern coastal India. As a republic, India remained a member of the COMMONWEALTH OF NATIONS. Nehru's foreign policy was aimed at securing Indian leadership among the nonaligned nations in the COLD WAR; most of them were newly independent countries in Asia and Africa. However, he found his quest for leadership challenged by the PEOPLE'S REPUBLIC OF CHINA, which, although communist, also sought to lead the Third World. Nehru's friendship with China hit a roadblock over Tibet, a Chinese territory that Great Britain had sought to draw into its sphere of influence since the late 19th century. Tibet had enjoyed autonomy under the weak Chinese republican governments after 1912, which ended when the communist government of China militarily took control of Tibet and began consolidating its power there. A disputed boundary between the two nations remained unresolved, China contending that the McMahon Line drawn by the British in 1914 included 52,000 square miles of Chinese territory in India. Relations were exacerbated when a failed Tibetan revolt against China led to the flight of the Tibetan leader, the DALAI LAMA, to India, which gave him and his followers political asylum. A brief war broke out between India and China (September–November 1962) in which the Indian army was decisively defeated. The victorious Chinese army, however, did not advance beyond the area in dispute. The war was a severe blow to Nehru's prestige.

JIU-HWA LO UPSHUR

Nepal civil war

The Nepal Maoist/communist rebellion, more often called the Nepal civil war, started on February 13, 1996, as an armed attempt by communist forces to overthrow the mainstream government and replace it with a targeted "People's Republic of Nepal." The rebellion was

The country of Nepal, nestled in the Himalya Mountains, faces a civil war as communist forces try to overthrow the mainstream government and replace it with the People's Republic of Nepal.

spurred by growing dissatisfaction and unrest with the monarchy and mainstream political groups. In late 2006, the conflict was ongoing.

The war's origins can be traced back to Nepal's political past. Nepal started out as a monarchy in the 17th century under the Shah dynasty and came under British rule in 1816 as a result of defeat in the Anglo-Nepalese War. Nepal gained independence from British rule in 1923. During this period, some Nepalese became interested in communism while others favored democracy. In 1959 an experimental democratic government was instituted, but it was overthrown by King Mahendra in 1961.

Communists were present in Nepal in the 1960s, but King Mahendra had banned political parties. When King Birendra allowed political parties to exist again

in 1990, with Nepal's government transforming into a constitutional monarchy, the communists formed the United People's Front (UPF). In 1994 the antigovernment element of the UPF split, forming the Communist Party of Nepal (CPN), which upheld the communist principles of Mao Zedong. Tensions in the country, because of corruption and controversy in elections, led the CPN to decide that an armed uprising was the only way to achieve their goals.

On February 13, 1996, the CPN launched simultaneous attacks on police and government targets. The leader of the communists is a shadowy figure called Prachanda. However, the methods used by the communists within Nepal can be considered something short of terrorism; there have been reports of torture, random killings, bombings, abductions, and intimidation

of civilians and government officials. The Royal Nepal Army fought the communist forces in what they called a police action, and have not declared war.

Kilo Sera 2, launched in June–August 1998, was a government operation cracking down on the communist rebels. The government believed that enforcement of law and order was all that was needed to quell the rebellion. The operation is considered to have added fuel to the rebellion instead of discouraging it, since the people were more sympathetic to the rebels.

In June 2001 Crown Prince Dipendra went on a shooting rampage and killed most of the royal family—including his father, King Birendra, and his mother, Queen Aishwarya. As a result, Gyanendra, the late king's brother, took the kingship, although he let the parliamentary government continue operating. Although disagreement on the prince's choice of wife was considered the reason for the rampage, conspiracy theories circulated that made King Gyanendra the mastermind of the killings for the purpose of seizing power in Nepal.

In 2002, under the banner of the War on Terror after the September 11, 2001, terrorist attacks, the United States, Europe, and India began supporting the Nepalese government with supplies and financial aid. On February 1, 2005, King Gyanendra dismissed Prime Minister Sher Bahadur Deuba, restoring an absolute monarchy in Nepal and further fueling suspicions that he had masterminded the 2001 royal family killings. This action, however, caused further aid from other countries to cease.

In April 2006 King Gyanendra agreed to cease his absolute monarchy and return power to his parliament, led by Prime Minister G. P. Koirala. In May 2006 the Nepalese government called a cease-fire and started peace talks with the rebels, though the rebels participated in talks without agreeing to lay down their arms. In July, a UNITED NATIONS delegation came to mediate peace terms, and both the government and the rebels agreed to let the UN team mediate.

As of 2006 more than 12,700 casualties had been reported, and 150,000 people had been displaced as a result of the war. On November 21, 2006, a peace accord was signed between the rebel forces led by the mysterious Prachanda and Prime Minister Girija Prasad Koirala, officially ending hostilities. But it remains to be seen whether this will be the end of long-term tensions in the country.

CHINO FERNANDEZ

Ngo Dinh Diem

(1901–1963) *South Vietnamese leader*

Ngo Dinh Diem was president of South Vietnam from 1955 until his death in 1963. He was born into a privileged family from the Vietnamese elite. Ngo Dinh Diem's ancestors were among the first to convert Vietnamese to Catholicism in the 17th century. As a Catholic, he was closely aligned with the French colonial rule in Vietnam.

In 1933 Ngo Dinh Diem was appointed to the Ministry of the Interior under the emperor Bao Dai, who ruled under French tutelage. However, he was soon forced to resign since the French opposed his proposed reforms. For 12 years he resided in Hue without holding public office. He did not return to power until 1954, when Bao Dai invited him to join his new government. Nevertheless, within a year he had engineered the ousting of the emperor and established himself as president of South Vietnam with dictatorial powers. He had been able to achieve this because of the support of the United States, which believed that his opposition to communism would make him the best candidate to lead a pro-Western united Vietnam.

The United States was soon frustrated by Ngo Dinh Diem's intransigence and refusal to accede to the terms under which the United States had backed him. These included most notably the implementation of the Geneva Accords, which required general elections throughout the country in 1956. Instead he appointed members of his family to senior positions within the administration.

When it became clear that he had no intention of following U.S. policies, U.S. authorities withdrew their support and permitted Vietnamese army officers to assassinate him in November 1963.

Nguyen Van Thieu

(1923–2001) *South Vietnamese leader*

Nguyen Van Thieu was president of South Vietnam (Republic of Vietnam) from 1967 until it fell to the Communist North Vietnamese forces in 1975. He played a major part in the U.S. war in Vietnam and lived the remainder of his life in exile.

Nguyen Van Thieu was the son of a small land-owning family in a Vietnam colonized by the French. He aspired to freedom for his country and joined HO CHI MINH's liberation struggle in 1945. However, he subsequently defected to fight on the side of the French against his former allies. His ability as a military leader was soon recognized and, from 1954, he took command of the Vietnamese Military Academy of South Vietnam after it won independence from France. He served under NGO DINH DIEM but also took part in Ngo's assassination in 1963, with the tacit support of U.S. authorities. He subsequently took a leading role in Nguyen Cao Ky's military government, and was elected president of the Republic of Vietnam in 1967 and then reelected unopposed in 1971.

Nguyen Van Thieu's administration tended toward authoritarianism, with U.S. support possibly because the United States had no alternatives. Nguyen Van Thieu was nevertheless critical of U.S. policies and politicians. He resented their lack of interest in Vietnamese culture and history, refusal to learn the Vietnamese language, and demands for democracy. Even as he was airlifted out of Saigon in 1975 just before it fell to communism, he accused the United States of running away and abandoning his country.

He was as an ally of U.S. president LYNDON B. JOHNSON and then RICHARD NIXON, as he led the South Vietnamese state against the Communist forces. He worked with U.S. military advisers and then with the large-scale deployment of U.S. and allied forces. As the Communists gained ground, he agreed to participate in negotiations that resulted in the peace

agreement of 1973. As U.S. forces withdrew from South Vietnam and the North Vietnamese advanced, he ordered all South Vietnamese forces to protect Saigon, but was unsuccessful. As the city fell he resigned as president and fled to exile, first in London and then in the United States.

JOHN WALSH

Nicaraguan revolution (1979–1990)

On July 19, 1979, a multiclass coalition led by the SANDINISTA NATIONAL LIBERATION FRONT (Frente Sandinista de Liberación Nacional, [FSLN], or Sandinistas) overthrew the 43-year Somoza dictatorship, inaugurating the period of the Nicaraguan (or Sandinista) revolution. Nicaragua, under the FSLN, is considered the last major battleground of the COLD WAR in the Western Hemisphere. In the early 1980s the revolutionary regime embarked on a series of successful programs in health care, literacy, and related arenas and enjoyed wide spread support. By the mid-1980s the regime and revolutionary process began to weaken, largely the result of a crippling U.S. trade embargo and the U.S.-supported CONTRA WAR under U.S. President RONALD REAGAN. On February 25, 1990, a coalition of anti-Sandinista political parties defeated the ruling regime at the polls, effectively ending the 11-year revolutionary experiment.

The origins of the revolution lie in decades of politically exclusionary dictatorship under the three Somozas; the long history of U.S. military, economic, and political intervention in Nicaraguan affairs; the crushing poverty suffered by the majority of the country's citizens; and the political and military organizing efforts of the FSLN. Named after Augusto C. Sandino, the nationalist rebel who fought the U.S. Marines to a stalemate from 1927 to 1932, the FSLN was founded in 1961 by CARLOS FONSECA AMADOR, Tomás Borge, and other Nicaraguans inspired by the example of FIDEL CASTRO and the CUBAN REVOLUTION. After nearly two decades of organizing and struggle, and the death of Fonseca in 1976, by the late 1970s the Sandinistas had garnered the support of the majority of western Nicaragua's

urban poor and a substantial segment of its business and landowning class. Their political program emphasized opposition to the Somoza dictatorship (*Somocismo*) and U.S. imperialism; nationalism, democracy, and social justice at home; and political nonalignment abroad. In 1979 a divided elite, the intransigence and corruption of the regime of Anastasio Somoza Debayle, and a relatively benign U.S. administration under President JIMMY CARTER combined to create a strategic political opening, which the FSLN exploited to defeat Somoza's National Guard (Guardia Nacional) and seize state power. An estimated 50,000 Nicaraguans died in the uprisings and insurrections against the Somoza regime, around 1.7 percent of the country's population of 3 million. The economy was devastated, with GDP declining 7.2 percent in 1978 and 25.9 percent in 1979, and the country saddled with \$1.6 billion in foreign debt and severe shortages of food, medicine, and other basic commodities.

REVOLUTIONARY STATE

After ousting Somoza, the Sandinistas embarked on a far-reaching program of social and economic reform. The preexisting national government was abolished, replaced by the Governing Junta of National Reconstruction (JGRN, or Junta), established in Costa Rica in early 1979 and the country's supreme political authority. From 1979 to 1984 de facto political power was wielded by the FSLN's nine-member Joint National Directorate (DN), whose policy prescriptions guided the JGRN.

The Fundamental Statute of the Republic of Nicaragua, decreed by the JGRN in August 1979, abolished the previous constitution and established three branches of government: executive (the JGRN, comprised of five members); legislative (the Council of State, inaugurated in May 1980 and composed at that time of 47 members); and judicial (the Courts of Justice). After national elections in November 1984, the National Assembly replaced the Council of State, and the JGRN was dissolved, replaced by elected president Daniel Ortega. In January 1987 a new constitution was promulgated codifying these and other changes.

Promoting democracy from below, the revolutionary regime found much of its legitimacy in the many popular organizations (*organizaciones populares*) that helped bring the Sandinistas to power, and which continued to play a key role in the revolution after 1979. Chief among these were the Sandinista Defense Committees (CDSs, or neighborhood committees); the Sandinista Workers Federation (CST), the Rural Workers

Association (ATC), the National Union of Farmers and Ranchers (UNAG), and the Luisa Amada Espinosa Nicaraguan Women's Association (AMNLAE).

Incorporating gender equality into its platform, the FSLN focused considerable attention on women's issues, including maternal health, child care, political equality, and others, though critics later charged that the party largely reproduced the patriarchal norms of the larger society.

The new government also abolished the National Guard and police forces, and in their stead created the Popular Sandinista Army (Ejército Popular Sandinista, or EPS), under the direction of the Ministry of Defense; and the Sandinista Police and State Security Forces, under the Ministry of Interior. One of the major tasks of the new regime was to launch extensive land reforms through its Ministry of Agricultural Development and Agrarian Reform (MIDINRA), headed by DN member Jaime Wheelock. Sandinista agrarian reform efforts in the 1980s, like those of Cuba in the 1960s, have been the topic of enormous controversy. On seizing power, the government expropriated all land owned by Somoza and his allies, a total of some 800,000 hectares, or 20 percent of the country's arable land. Most was given over to various types of state-run cooperatives. Criticized for favoring these state-run farms over privately owned peasant farms through differential loan and credit policies, MIDINRA's post-expropriation policies were among the chief reasons cited by opponents of the regime for the growth of counter revolutionary (*contra*) forces within the country beginning in the early 1980s.

SOCIAL AND CULTURAL POLICIES

In the realm of popular welfare, the revolutionary government embarked on a wide range of reforms. These included a more extensive social security system; large state subsidies for housing and staple foods; the creation of a national health care system; a major expansion of public schooling; and a Literacy Crusade that earned the UNESCO Literacy Prize in 1980. In the cultural arena, the Ministry of Culture promoted a host of revolutionary cultural products and forms including music, theater, dance, and visual arts, in part through the Sandinista Association of Cultural Workers (ASTC).

A major issue through the 1980s was the relationship between the Sandinista regime and the ethnic minorities of the Atlantic coast region, which had a very different history and culture from mestizo-dominated, Spanish-speaking western Nicaragua. Despite the FSLN's efforts to grant the Atlantic coast population substantial

political and cultural autonomy, from the early 1980s opposition to the regime mounted among the region's indigenous (Miskitu, Sumu, and Rama Amerindians), Garifuna (Afro-Amerindian), and English-speaking Afro-Caribbean (or Creole) population—minorities that together comprised around 35 percent of the coastal (*costeño*) population of some 270,000.

Another major issue concerned the revolution's relationship to the Roman Catholic Church. Critics of the regime emphasized the disrespect shown to Pope John Paul II in his visit to Managua in March 1983, which they argued was emblematic of the FSLN's anti-Catholicism, while the regime's supporters stressed the influence of liberation theology on Sandinista efforts to promote equal rights and social justice.

On November 4, 1984, the Sandinistas held national elections—to be held every six years—in which they garnered 67 percent of the vote and won 61 of 96 seats in the newly created National Assembly. The elections were denounced as fraudulent by the United States but judged as fair by international observers from Europe and the Americas, including the Latin American Studies Association.

INTERNATIONAL RELATIONS

Internationally, the Sandinista government pursued a policy of nonalignment, garnering the support of the Nonaligned Movement, and forging alliances with and receiving foreign assistance from western Europe (including France, West Germany, Spain, Italy, The Netherlands, Sweden, Finland, and Denmark), as well as Cuba, the East bloc, and the Soviet Union. The United States, under President Reagan, interpreted the regime as a Cuban and Soviet beachhead and bulwark of communism.

On April 1, 1981, the Reagan administration announced a cutoff of aid, thereafter successfully depriving the regime of credits and loans from the Inter-American Development Bank and other U.S.-dominated transnational financial institutions. On December 1, 1981, Reagan issued a Presidential Finding authorizing the Central Intelligence Agency to “support and conduct paramilitary operations against . . . Nicaragua,” which included support for contra forces, composed principally of several thousand former members of Somoza's National Guard exiled in Honduras. In February and March 1984 the United States mined the harbor at Puerto Corinto, western Nicaragua's largest port, and in May 1985 Reagan announced a U.S. trade embargo against Nicaragua. These and related hostile acts galvanized a growing peace and justice movement,

in solidarity with the revolution, in the United States, Europe, and Latin America.

END OF THE REVOLUTIONARY EXPERIMENT

By the late 1980s the regime was beleaguered by the combined effects of the trade embargo, the contra war, hyperinflation, and growing popular discontent in consequence of the devastation of the contra war, severe economic dislocations, and the policy of universal military conscription. Losing the February 1990 elections to Violeta Chamorro and the National Opposition Union (UNO), the regime peacefully ceded power, leaving the country with some \$12 billion in debt. After 1990 the legacy of the revolution continued to exercise a major influence on the country's social, political, and cultural life, while a retooled FSLN wielded considerable political power in a series of coalition governments. A substantially reconfigured Sandinista Party regained the presidency in 2006 with the election of Daniel Ortega.

MICHAEL J. SCHROEDER

Nigeria

Nigeria is located in western Africa on the Gulf of Guinea between Benin and Cameroon. It occupies 923,768 square kilometers (356,667 square miles), making it one-third larger than the U.S. state of Texas. Nigeria stretches 1,600 kilometers (1,000 miles) from north to south, and is 1,100 kilometers (700 miles) wide from the Atlantic coast to its eastern border.

Nigeria's population has grown extremely rapidly from 35 million to over 137 million in 2004. It is home to one out of every six Africans. The population is extremely diverse and contains as many as 250 separate ethnic groups and a reported 500 languages. The major population divisions include the Hausa (29 percent), who live in the north; the Yoruba (21 percent), who occupy the southwest; the Igbo or Ibo (18 percent), who are in the southeast; and the Ijaw (10 percent), who reside in the east. The Fulani (9 percent), found primarily in the north, along with a large number of smaller groups, complete the essential Nigerian

ethnic matrix. This societal complexity makes for enormous governing difficulties. There is also the divide of religion, with the north heavily Muslim and the south largely Christian. One attempt to foster better unity was the adoption of English as the nation's official language. Fifty percent of the population now has a basic command, although there are many more who speak a smattering of broken or "pidgin" English.

Administratively the nation is currently divided into 36 states and one capital territory. Abuja, located in the center of the country, became the nation's capital in 1991, replacing in this capacity the large port city of Lagos with its over 13 million people.

Modern Nigeria is a product of the late 19th-century British Empire builders. Before this time it was part of a wide-ranging section of West Africa made up of many peoples and territories, all occupying much smaller tribal areas. Lagos became a full British colony in 1861. The country's name is taken from the river Niger. The actual official designation of Nigeria is often attributed to the wife of a colonial official who in 1898 merged Niger with "ia" to create today's identity, which means literally "black area."

All of West Africa, including Nigeria, was the subject of even earlier European interest. The Portuguese came to the area in the late 15th century, attracted by the lucrative slave trade with local tribes. The profits were such that the Portuguese slave trading monopoly was broken in the 16th century as other Europeans, including the British, wanted a share of the riches. Lagos and Badagry became important markets for the exchange of a variety of products, particularly gin and firearms.

Although the slave trade was abolished in the British Empire and in the United States after 1807, British commercial interest in the area didn't decline, and the penetration of the interior rivers by steamships began in earnest after the 1840s. Lagos became a key base and, in 1886, the National African Company, later the Royal Niger Company, received a royal charter to oversee trade in the Niger Delta, which included governing rights. The company's interests also expanded northward. These operations became too expensive and, in 1897, the company's governing provisions were removed, and the British government asserted its authority, creating in 1900 a North Nigeria Protectorate. By 1902 after a time of armed resistance, the Sokoto Caliphate and Kano submitted to British authority.

Lugard, who had become governor-general, now combined all the protectorates with Lagos to form, in January 1914, the Federation of Nigeria. A policy of

indirect rule followed during which local tribal leaders, emirs, and sultans administered their areas in conjunction with the colonial civil service. As late as the 1930s only a few hundred British officers were in country. Infrastructure was improved, including railroad construction to the north, but education in the Muslim areas lagged behind Christian-led efforts in the south. The north remained essentially a distinct enclave.

Nationalism became an increasing factor during the 1930s and was essentially motivated by the notion of Pan-Africanism. Yet a Nigerian sense of nationalism was made more difficult by the area's many regional and tribal divides. The end of World War II left Britain weary of the demands and costs of empire, and moves toward change occurred as early as 1946. At this time a constitutional reform was introduced that created in the first instance three regional legislatures. A fourth midwest regional legislature was added in 1963. Full self-government came to these regions in the 1950s. The desired goal was the formation of a federal legislative structure for all of Nigeria, a system that the north finally agreed to join in 1959. Direct elections occurred in 1959, and a federal government was founded. This new government, meeting for the first time in 1960, declared Nigeria's independence on October 1.

This sense of national hope proved short-lived. Old antagonisms emerged and threatened any idea of lasting unity. The conflicts came quickly with the Yoruba opposing western regional reorganizations. This lack of stability undermined the national government, creating a pattern for the future that would include ethnic fighting and massive corruption. In 1963 Nigeria became a federal republic with an elected president in an effort to strengthen central authority. The elections in 1964 produced more arguments and rioting over suspected electoral fraud. The Nigerian National Alliance took control of parliament, and the United Progressive Grand Alliance of eastern and western groups became their main opposition. This unsettled situation led eastern Igbo-dominated army officers to stage a coup in January 1966. Major General Johnson Aguiyi-Ironsi took command and instituted bloody purges of the political establishment. Fighting broke out within the army itself. After only four months in charge General Ironsi was dead, and Yakubu Gowon, a lieutenant colonel soon to be general, had taken over as leader of the military government.

The situation failed to settle, particularly after the Hausa murdered approximately 20,000 Igbo who lived in the north. Retaliations led to more discord, motivating the eastern region's military governor, Lieutenant

Colonel Odemugwu Ojukwu, to declare on May 30, 1967, the eastern region an independent entity called the Republic of Biafra. This situation led to a bloody civil war, perhaps the worst in modern African history. The war lasted three years and cost numerous lives. At war's end the victorious Federal side declared a period of reconciliation and launched a campaign to reconstruct the devastated area.

Nigeria was now firmly in the hands of Gowon's Supreme Military Council, which did promise a return to civilian rule in 1976. Efforts were made to transform the economy from its agricultural base to a more modern mixed economy. There were serious attacks on corruption and moves to control the government's role in the expanding oil industry, which from the late 1960s saw Nigeria become one of the world's largest exporters. Criticism of Gowon's rule was steadily mounting. While attending a 1975 Organization of African Unity conference, Gowon found himself the victim of another coup led by the Sandhurst-trained brigadier general Murtala Mohammed.

General Mohammed consolidated his authority, purged government offices, created more administrative states, and put military governors in control of the media. He also imported new Soviet aircraft for the military. His time in office, though, proved short-lived. He was assassinated by fellow officers in 1976. His replacement was General Olusegun Obasanjo, a Yoruba, who would years later become Nigeria's president. In 1979 Obasanjo produced a new constitution based on the U.S. model and prepared for elections to return the country to civilian rule.

The fall in oil prices in 1981 brought problems for the new government as debts mounted. The result was a poor business climate. Blame was projected onto many quarters, violence was frequent, and foreign workers were expelled. The unrest also brought an end to the Shagari presidency, which again saw a disgruntled military react, cancelling Shagari's 1983 election. Mohammed Buhari, the chief of the army, took over the government with the standard promises to end corruption and reverse the fortunes of the state. However, Buhari didn't last long, and in August 1985 he was overthrown by General Ibrahim Babangida. General Sani Abacha gave his support to this coup, and in 1990 he positioned himself for later rule when he became minister of defense.

Army control did not reverse the economic crisis, which was now dire. Currency devaluation was demanded as a term for continued INTERNATIONAL MONETARY FUND (IMF) and WORLD BANK financial support in the form of loans. Again a return to civilian rule was planned,

and state elections were scheduled for 1991, with a presidential election to follow in 1993. To the military's surprise, Moshood Abiola won. The military, however, rejected the result, Babangida imprisoned Abiola, and in the midst of continuing confusion General Sani Abacha took over as military president.

Nigeria's perennial problems did not disappear under Abacha. Corruption, mismanagement, inefficiency, and waste were continuing factors in government and civilian life. Opponents were persecuted, foreign debt increased enormously, and all reforms failed as poverty increased so rapidly that Nigeria became by the late 1990s one of the world's poorest countries.

The government particularly punished the Ogoni people who occupied the southeastern oil areas, suppressing their politicians and executing many of them. Although international condemnation of these many rights abuses was considerable, the political situation did not loosen until Abacha's death in 1998 of a suspected heart attack. His successor, General Abdulsalam Abubakar, once again said that civilian rule would return. Another new constitution came in 1998 and elections followed in 1999. Olusegun Obasanjo, who had been freed from prison only months before, led the People's Democratic Party to election victory and thus ended nearly 16 years of military rule.

The new government attempted to reverse Nigeria's deep-seated economic and social problems and gave particular attention to reclaiming the billions that were stolen during the rule of General Abacha. However, reform proved illusory, and corruption and waste remained major factors in Nigeria's continued poor economic and social performance. Violence also mounted between the Muslim and Christian sections of society. This situation became worse after 2000 following the institution of sharia law in the Muslim-dominated north.

The 2003 elections represented the first time in Nigeria's history that one civilian government gave way to another without military intervention. The elections even included the former Biafran leader, Colonel Emeka Odumegwu-Ojukwu. Voting irregularities were also considerable, and violence and ethnic fighting were frequent. There were attempts to make the presidential election more national in focus to reflect more broadly based issues. The ultimate hope was that more unity might result. Obasanjo's party won a majority in both houses, and with 60 percent of the vote he secured a second four-year term as president.

It remained to be seen whether a more democratic government could cope with Nigeria's significant number of problems. The average Nigerian became poorer in the

civilian transition, and disputes loomed among many of its peoples over ethnic and religious differences. In the Niger Delta, the Ijaw people campaigned for a bigger share from the oil industry, which led to serious disruptions, kidnappings, and strikes. These violent outbursts hurt oil production. The vast wealth that oil was supposed to bring has not filtered through Nigerian society.

The question remains: Can the instability, political and economic corruption, and grinding poverty be reversed?

THEODORE W. EVERSOLE

Nixon, Richard

(1913–1994) *U.S. president*

Richard M. Nixon was the 36th vice president of the United States from January 20, 1953, until January 20, 1961, and was the 37th president of the United States, serving from January 20, 1969 until August 9, 1974. He was the only person ever elected twice as vice president and twice as president, and was the only president to have resigned the presidency.

Richard Milhous Nixon was born on January 9, 1913, at Yorba Linda, California, the son of Frank Nixon, an owner of a service station, and Hannah (née Milhous), a strong Quaker. Richard, the second of five children, attended Whittier College, then Duke University Law School, graduating in 1937. He then returned to Whittier where he practiced law, and also met Thelma Catherine (“Pat”) Ryan when the two were cast in the same play at a local community theater. They married in 1940.

Moving to Washington, D.C., Nixon worked in the Office of Price Administration and in August 1942 joined the U.S. Navy, becoming an aviation ground officer in the Pacific and ending up as a lieutenant commander at the end of the war. He then entered politics and in 1946 was elected to the U.S. House of Representatives for the 12th district of California, defeating the incumbent, Democratic Congressman Jerry Voorhis. Voorhis had been elected for five consecutive terms, and Nixon was critical of him for his liberal views. In 1948

Nixon was able to win both the Democratic and the Republican primaries, and on his return to Washington, became a leading member of the House Un-American Activities Committee (HUAAC) until 1950. He rose to national, if not international, attention in his investigation of Alger Hiss.

Nixon’s cross-examination of Hiss before the HUAC established his anticommunist credentials, and in 1950, Nixon ran for the Senate against the Democrat Helen Gahagan Douglas. This campaign also included innuendoes, with “pink sheets” being distributed comparing how Douglas voted in the Senate with the voting record of Vito Marcantonio, a left-wing senator from New York. This led to Nixon earning his nickname “Tricky Dick,” coined by a small Californian newspaper, the *Independent Review*, and taken up by Douglas.

In 1952 Nixon managed to win the vice presidential nomination on a ticket with Dwight D. Eisenhower. Nixon was seen as an uncompromising anticommunist, but was tainted with allegations of corruption. Journalists discovered that Nixon had operated a slush fund with money from Southern Californian businessmen, and Nixon went on the attack. He listed his family’s assets, admitting that his six-year-old daughter Tricia had received, as a gift, a cocker spaniel called Checkers, and he announced that the family would be keeping it. The public responded favorably to Nixon’s frankness, and the Eisenhower-Nixon ticket won 442 electoral college votes.

Nixon had two terms as vice president and during that time is said to have redefined the role of the office. He became a prominent spokesman for the Eisenhower administration, particularly on aspects of foreign policy. Nixon chaired a number of cabinet sessions when Eisenhower was incapacitated owing to illness, but Eisenhower left most power with some advisers, with Nixon always excluded from the inner circle. He also went on a tour of Latin America in 1958, his progress being followed by anti-American demonstrators, and to the Soviet Union in 1959 where he met with Soviet premier NIKITA KHRUSHCHEV.

Nominated as the Republican Party’s presidential candidate in 1960, Nixon used his experience as vice president to try to upstage the Democrat Party’s choice of JOHN F. KENNEDY. The campaign has become best-known for the first television debates between the two candidates. Kennedy was able to portray himself as representing a generational change in leadership, looking younger and “fresher” than Nixon. He was certainly able to respond to Nixon’s attacks, but although Nixon

President Richard Nixon speaks with guests during his daughter Tricia's wedding at the White House.

looked terrible in some of his television appearances, many people who listened to the debates on the radio felt that he did better than Kennedy. The election was close, with Nixon losing by fewer than 120,000 votes, with queries about the voting in Illinois and Texas. Nixon chose not to challenge the results too much, and his dignity won him the support of many.

Retiring to private life in California, Nixon then wrote a book, *Six Crises*, in which he described his role facing six crises in his career as a congressman, senator, and then vice president. It was influential, and Mao Zedong was to read it in preparation for Nixon's 1972 visit to China. Nixon contested the governorship of California in 1962, losing to the incumbent, Democrat Edmund G. ("Pat") Brown. He then again retired from politics and went to New York, where he practiced law as the senior partner in Nixon, Mudge, Rose, Guthrie and Alexander.

He was disappointed when Barry Goldwater was chosen as the Republican Party choice in the 1964 elections, writing that Goldwater lost the entire campaign

when he (Goldwater) declared that "extremism in the defense of liberty is no vice." By contrast, Nixon built up a reputation as a moderate and an expert in foreign policy, which contributed to the Republican Party choosing him as their candidate in 1968.

By 1968 Nixon had put together a coalition of supporters that managed to ally itself with Southern conservatives led by Strom Thurmond of South Carolina. Nixon promised to name a Southerner to the Supreme Court, oppose court-ordered "busing" urged by the civil rights movement, and chose a hard-line vice-presidential candidate who would have Southern support. His choice was Maryland governor Spiro Agnew. Nixon stood against a disunited Democratic Party, which was split between supporters of Eugene McCarthy and Robert Kennedy who opposed the VIETNAM WAR, and Hubert Humphrey, choice of the mainstream Democratic Party. Robert Kennedy's assassination had resulted in Humphrey being chosen as the candidate after a torrid party gathering at Chicago which led to fighting in the streets. Nixon promised that he would get "peace with honor" in Vietnam but was not specific about how he was going to achieve this. It did not stop him criticizing Vice President Humphrey, who, as part of the LYNDON B. JOHNSON administration, was blamed for the increasing casualties there, especially with the Tet Offensive at the start of the election campaign. Nixon, however, was more worried that the candidacy of George Wallace, as a pro-segregationist party, might split his vote in the South. Nixon won comfortably with 301 electoral college seats to Humphrey's 191 and Wallace's 46. However, the popular vote was far closer: Nixon, 31.7 million, and Humphrey, 30.9 million.

After the election, Nixon was determined to introduce a number of reforms. As soon as he became president, he changed the civil rights and law enforcement legislation. He established the Environmental Protection Agency, the National Oceanic and Atmospheric Administration, the National Railroad Passenger Corporation, the Drug Enforcement Administration, and the Office of Minority Business Enterprise. Nixon pushed through the space project, with Neil Armstrong landing on the Moon on July 20, 1969, and speaking to Nixon from the Moon. In January 1972 Nixon also approved the Space Shuttle Program. He also launched, in his State of the Union speech in January 1971, an additional \$100 million to be added to the National Cancer Institute budget for cancer research, inaugurating his "War on Cancer." He had also proposed the Family Assistance Program (FAP) to replace the Aid to Families with Dependent Children (AFDC), which

would have provided poor families with a guaranteed annual income. The move was defeated in the Senate, but it did lead to the Supplemental Security Income program and many other related programs. Overall, Nixon's aim was to reduce inflation by limiting government spending, but from 1971 the government ran up what was then the biggest deficit in U.S. history.

Nixon's main aim was to achieve an "honorable" settlement to the conflict in Vietnam. To achieve this, his first major task was to increase "Vietnamization," by which the United States reduced the number of its soldiers while increasing the number of South Vietnamese soldiers. This became known as the Guam Doctrine, or the Nixon Doctrine. With the U.S. command worried about the state of readiness of the South Vietnamese troops, Nixon resumed the bombing of North Vietnam, which had been suspended by Lyndon Johnson just before the 1968 elections. In fact, Nixon expanded the war by organizing the secret bombing of Cambodia in March 1969, and supporting the overthrow of Cambodia's ruler, Prince Norodom Sihanouk, in March 1970. Straight after this, the Vietnamese Communists tried to gain control of Cambodia, and soon afterwards Nixon ordered U.S. soldiers and South Vietnamese forces to attack Viet Cong sanctuaries in Cambodia.

NIXON AND CHINA

Nixon also started a series of initially secret negotiations with the North Vietnamese through his National Security Advisor, Henry Kissinger, who met with the North Vietnamese foreign minister, Le Duc Tho. As these progressed, Nixon began establishing links with the PEOPLE'S REPUBLIC OF CHINA. The United States lifted its trade and travel restrictions in 1971. When the Chinese indicated that they would favor high-level contacts, the U.S. and Chinese table-tennis teams took part in reciprocal visits, with Kissinger visiting China, and then Nixon making his own visit to China in February–March 1972—the first by a U.S. president while in office. Nixon felt that better relations with China would put pressure on the Soviet Union. Before Nixon left China, the Shanghai Communiqué recorded that Nixon acknowledged the "one China" policy by which the United States accepted that Taiwan is a part of one China. In May 1972 Nixon visited the Soviet Union and began détente, with several talks on limiting nuclear weapons such as the Strategic Arms Limitation Talks (SALT).

By October 1972 Nixon was close to reaching an agreement with the North Vietnamese, having achieved most of his objectives just before the U.S. presidential elections. The South Vietnamese raised objections, while

the North Vietnamese refused to compromise, knowing how much Nixon wanted the agreement. No agreement was reached by the elections, with the Christmas bombings of North Vietnam forcing the North Vietnamese back to the negotiation tables, and the final agreement being signed in January 1973 in Paris.

All U.S. military personnel were to be withdrawn, all prisoners of war were to be released, and there would be a ceasefire, along with a heavy rearming of the South Vietnamese. Kissinger and Le Duc Tho were awarded the 1973 Nobel Peace Prize, but Tho declined to receive it.

Nixon also was involved in controversial actions around the world. He oversaw the channeling of millions of dollars to the Chilean opposition, and supported the military overthrow of SALVADOR ALLENDE in Chile in 1973, allying itself to the subsequent government of General AUGUSTO PINOCHET. In the Middle East, Nixon supported Israel during the Yom Kippur War, an action that led to the 1973 oil crisis. The administration also supported General Yahya Khan in the INDO-PAKISTAN WAR of 1971, seriously affecting relations between India and the United States for many years.

In 1972 Nixon was renominated for the presidential election along with Spiro Agnew. This led to the formation of the Campaign for the Reelection of the President (CRP), which was nicknamed by his opponents CREEP. On June 17, 1972, five men were arrested for being involved in a burglary at the Democratic Party national headquarters in the Watergate Hotel complex in Washington, D.C. It soon emerged that these men had been hired by the CRP and were charged. With no evidence available at the time linking Watergate to Nixon, Nixon easily won the November 1972 elections with 520 electoral college votes.

THE COVER-UP

The Watergate scandal became a major issue in 1973, with Nixon having White House counsel John Dean organize a "cover-up." Two journalists from the *Washington Post*, Bob Woodward and Carl Bernstein, felt there was more in the Watergate story than was made out, and started receiving information from a source who went by the code name "Deep Throat," who later turned out to be Mark Felt, deputy director of the FBI. In February 1973 the Senate Select Committee on Presidential Campaign Activities, chaired by Senator Sam Ervin, was established to investigate the Watergate affair, and John Dean was interviewed in televised hearings. He started accusing Nixon of involvement in the cover-up of Watergate, with other witnesses testifying

about illegal activities by Nixon and his administration, which initiated an organized program of harassment of other politicians, journalists, and others.

It became evident that Nixon had installed a recording system in the Oval Office soon after he became president, but Nixon refused to comply with a subpoena. Nixon then ordered his attorney general to fire Archibald Cox, the special prosecutor who was investigating Watergate.

When the attorney general, Elliot Richardson, resigned, Nixon fired Richardson's assistant when he also refused to fire Cox. He then managed to get solicitor-general Robert Bork to fire Cox. Finally in July 1974 the Supreme Court ruled unanimously that Nixon's claim of "executive privilege" was no excuse. A transcript of one of Nixon's conversations, made available on August 5, 1974, showed that the president had discussed the use of the Central Intelligence Agency to block the FBI investigation of the Watergate break-in. Three days later Nixon, faced with the prospect of impeachment by the House of Representatives and conviction in the Senate, announced his resignation effective at noon the following day.

Nixon's vice president, Spiro Agnew, had resigned his office in 1973 after facing charges of bribery, extortion, and tax evasion. He had been replaced by GERALD FORD, who followed Nixon as president. On September 8, 1974, President Ford gave Nixon a presidential pardon. In retirement, Nixon and his wife settled at San Clemente, California, and he wrote his memoirs. He then spent most of the rest of his life writing about foreign policy. He was partly able to restore some of his reputation as an elder statesman. In 1980 he flew to Egypt, where he was present at the funeral of the former shah of Iran, being highly critical of the JIMMY CARTER administration's handling of Iran. Pat Nixon died on June 22, 1993, and Richard Nixon died from a massive stroke on April 22, 1994, in New York City.

JUSTIN CORFIELD

Nkrumah, Kwame

(1909–1972) *Ghanaian prime minister*

Kwame Nkrumah was born in the British-controlled Gold Coast (present-day Ghana) in West Africa. He trained as a teacher and studied in both the United States and England. Nkrumah helped to organize the 1945 Pan Africa Congress and remained a staunch supporter of African union and cooperation. An ardent nationalist, Nkrumah served as general secretary of the United Gold Coast Convention but split from the party to establish the Convention People's Party (CPP) in 1949. His book, *I Speak for Freedom*, was an impassioned defense of African independence.

Nkrumah was jailed by the British for his activist campaigns but was freed in 1951. He led the Gold Coast to complete independence in 1957. The newly independent nation of Ghana had a sound economy and under Nkrumah's leadership was looked to for direction by other African states. Nkrumah championed the Organization of African Unity (OAU), formed in 1963. He also was an outspoken opponent of the apartheid white-dominated regime in South Africa.

However, Nkrumah became increasingly dictatorial and established Ghana as a one-party state in 1964 when he took the title of president for life. A cult of personality arose around Nkrumah, and a trend of one-party states under dictatorial "rulers for life" emerged in many African states during the 1970s. Nkrumah was overthrown in a military coup d'état in 1966; in subsequent years he lived in exile and died in Romania in 1972.

JANICE J. TERRY

Noriega, Manuel

(1938–) *general and dictator of Panama*

A close ally of the U.S. military and intelligence establishment from the late 1950s to the late 1980s, General Manuel Noriega was the dictator of Panama from 1983 to 1989. Intimately involved with U.S. covert efforts

General Manuel Noriega walks to his seat aboard a U.S. Air Force aircraft, escorted by agents from the Drug Enforcement Agency (DEA). The former Panamanian leader was flown to the United States, where he was held for trial on drug charges.

to overthrow the Sandinista regime in Nicaragua and to combat leftist revolutionary movements elsewhere in Central America, Noriega ran afoul of U.S. policymakers in the aftermath of the IRAN-CONTRA AFFAIR; was indicted on federal drug charges in February 1988; and was overthrown in late December 1989 in the U.S. invasion of Panama. He surrendered to U.S. officials in early January 1990; was transported to the United States; tried for drug trafficking in April 1992; found guilty in September; and sentenced to 40 years in prison, where he has remained. Convicted in France for money laundering, and in Panama in absentia for murder, it is unlikely that he will ever be freed.

Manuel Antonio Noriega Moreno was born on February 11, 1938, in Panama City, the illegitimate child of a poor single woman who died when he was a small boy. Raised by his godmother in Panama City, he entered the military and was trained at the Military School of Chor-

rillos in Peru, where in the late 1950s he was recruited by the U.S. Central Intelligence Agency. His relationship with U.S. intelligence agencies deepened during his training at the SCHOOL OF THE AMERICAS in Fort Gulick, Panama, where he completed his coursework in 1967. Commissioned as an intelligence officer in the Panama National Guard the same year, he rose rapidly in rank. In 1969 he helped dictator General Omar Torrijos fend off a coup attempt, and soon after was appointed the country's Chief of Military Intelligence.

A shrewd political operator who deftly played both sides of the fence, through the 1970s he received hundreds of thousands of dollars as a CIA informant, and passed U.S. secrets to FIDEL CASTRO and other U.S. adversaries. Allegedly complicit in the July 1981 plane crash that resulted in Torrijos's death, with U.S. backing he became the country's de facto head of state in August 1983.

By this time he was working closely with the administration of U.S. president RONALD REAGAN in its efforts to overthrow the Sandinistas. He also used Panama's strict secrecy laws to launch drug money-laundering operations, actively collaborating with the drug cartels of Medellín, Colombia. Washington turned a blind eye to his role in the drug trade, emphasizing instead his collaboration with U.S. hemispheric "war on drugs." Despite mounting evidence of Noriega's involvement in the drug trade, in 1987 Attorney General Edwin Meese issued Panama the Drug Enforcement Agency's "highest commendation" for the country's anti-narcotics efforts. Meanwhile Noriega's base of support, in Washington and at home, had eroded. The Iran-contra scandal purged Washington of many of his top supporters, while opposition in Panama mounted, mainly in consequence of his brutality in dealing with his opponents. The ax fell in February 1988 with a 12-count indictment on racketeering and narcotics charges issued by U.S. federal prosecutors. After nearly two years of escalating tensions, on December 20, 1989, U.S. forces launched "Operation Just Cause," invading Panama, killing an estimated 300 civilians, wounding 3,000, and seizing Noriega. Launched in the name of the "war on drugs," the invasion had a negligible impact on the hemispheric drug trade, which has grown rapidly since.

MICHAEL J. SCHROEDER

North American Free Trade Agreement (NAFTA)

The North American Free Trade Agreement (NAFTA) is a trilateral trade pact among the United States, Mexico, and Canada. Implemented on January 1, 1994, the agreement is intended to foster open and unrestricted commercial relations among its three signatories. Supplemental agreements, also part of NAFTA, are the North American Agreement on Environmental Cooperation (NAAEC), the North American Agreement on Labor Cooperation (NAALC), and the Understanding

on Emergency Action (Safeguards). Administered in the United States by the International Trade Administration of the Department of Commerce, NAFTA is one of several regional trading blocs in the Western Hemisphere. These include the Andean Community of Nations (CAN, among Bolivia, Colombia, Venezuela, Ecuador, and Peru, f. 1969); the Caribbean Community and Common Market (CARICOM, f. 1973), the Southern Common Market (MERCOSUR, among Brazil, Argentina, Uruguay, Venezuela, and Paraguay, f. 1991), and the Central America–Dominican Republic–United States Free Trade Agreement (CAFTA-DR, f. 2004). NAFTA's supporters conceive of the agreement as an important stepping stone in the creation of a Free Trade Area of the Americas (FTAA), which would include the 34 nation-states and territories of the Western Hemisphere. In its goal of fostering unrestricted commercial relations, NAFTA follows the principles of the General Agreement on Tariffs and Trade (GATT) and its successor, the World Trade Organization (WTO).

NAFTA has sparked a huge debate between its supporters and opponents. Its principal supporters in the private sector consist of the hemisphere's largest corporations, most of which are based in the United States. They argue that in all three countries NAFTA will increase living standards, create new jobs, protect the environment; and ensure compliance with labor laws. Its principal opponents include labor, environmental, faith-based, indigenous rights, and consumer rights groups. They maintain that NAFTA, like the WTO, promotes a "race to the bottom" by favoring large corporations over smaller enterprises, benefiting the rich more than the poor; increasing inequality, causing a net loss of jobs, fostering environmental degradation, and failing to adequately protect the rights of workers. The communiqués of sub-commander Marcos, spokesperson of the ZAPATISTAS of Chiapas, Mexico—a group whose rebellion against the Mexican government was timed to coincide with NAFTA's implementation—convey many of the principal arguments of NAFTA's opponents.

A large scholarly literature mirrors this debate. On the whole, the evidence demonstrates that NAFTA has increased trade dramatically while failing to meet its supporters' expectations with regard to employment, poverty, inequality, the environment, and labor rights. In Mexico, poverty, inequality, and unemployment have all increased substantially since NAFTA's implementation. In the United States and Canada, the creation of new jobs has not kept pace with the outflows of capital and jobs traceable to NAFTA. The leftward tilt in Latin American politics since the 1990s has buttressed that

continent's opposition to multilateral trade agreements like NAFTA, the WTO, and the proposed FTAA.

MICHAEL J. SCHROEDER

North Atlantic Treaty Organization (NATO)

The NATO alliance is dedicated to the maintenance of the democratic freedoms and territorial integrity of its 26 European and North American member countries through collective defense. This alliance has been the dominant structure of European defense and security since its founding in 1949 and continues to serve as the most formal symbol of the United States' commitment to defend Europe against aggression. Following the end of the COLD WAR, the organization also took on a peacekeeping and stabilizing role within Eurasia.

NATO was founded with the Washington Treaty of April 4, 1949, which was signed by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Great Britain, and the United States. The 12 founding members were later joined by 14 others, including Greece and Turkey, which allowed the alliance to secure the Mediterranean. From the outset, NATO was intended to deter Soviet expansion into central and western Europe.

The Washington Treaty reflected the will of the signatories to further democratic values and economic cooperation, to share the obligations of defense individually and collectively, to consult together in the face of threats, to regard an attack against one member as an attack against all members, and to collectively and individually assist the victims of an attack. The treaty also delineated the geographic boundaries of the alliance, created the North Atlantic Council to implement the treaty, made provisions for new members to join, governed ratification according to constitutional processes, and made provisions for review of the treaty.

NATO's civil and military organization materialized during 1949–95. The basic structures developed during this period remained into the 21st century. The civilian headquarters for the North Atlantic Council

Hungarian troops under NATO command stand on guard at NATO headquarters in Kosovo.

(NAC), which maintains effective political authority and powers of decision in NATO, is located in Brussels, Belgium. NATO's secretary-general chairs the NAC and oversees the work of the International Staff (IS). Member countries maintain permanent representatives. The council serves as a forum for frank and open diplomatic consultation and the coordination of strategic, defense, and foreign policy among the alliance members. Action is agreed upon on the basis of common consensus rather than majority vote. Twice a year the defense ministers of the member countries meet at the NAC, and summit meetings involving the heads of state of each member country occur, during which major decisions over grand strategy or policy must be made. After the end of the cold war, the NAC was supplemented by the Euro-Atlantic Partnership Council (EAPC) as well as the NATO-Russia Joint Council. These newer bodies facilitate peaceful coordination and cooperation between NATO and the Russian Federation and other former members of the Soviet-led WARSAW PACT alliance.

The secretary-general of NATO also chairs the Defence Planning Committee (DPC), which is tasked with planning for the collective defense of the member countries. The DPC provides guidance to the alliance's military authorities to improve common measures of collective defense and military integration. The DPC consists of the permanent representatives; like the NAC, the DPC also serves as a forum for meetings between the defense ministers of the member states twice a year.

The senior military representatives of the member states form the Military Committee. The Military

Committee is subordinate to the NAC and consists of the chiefs of staff of the member nations, who advise the NAC on all military matters and who oversee the implementation of the measures necessary for the collective defense of the North Atlantic area. The committee is supported by the International Military Staff (IMS), which meets twice a year at chiefs of staff level and more often at the national military representatives level. Until 2003 operational control of military forces operating under the NATO flag fell to Allied Command Europe and Allied Command Atlantic.

In 2003 NATO undertook a major restructuring of its military commands. The Supreme Headquarters Allied Powers Europe (SHAPE) became the Headquarters of Allied Command Operations (ACO). ACT is tasked with driving transformation in NATO and establishing future capabilities, while ACO is responsible for current operations.

Throughout the cold war NATO faced a powerful counter-alliance in the Warsaw Pact and turmoil within the organization itself. Indeed, in 1949 the alliance members could only marshal 14 divisions of military personnel against an estimated 175 Soviet divisions. At the NAC meeting in 1952, the members established a goal of fielding 50 divisions backed up by several thousand aircraft by the end of the year and 96 divisions by 1955. Also in 1952 the alliance introduced a new strategic concept: mass conventional defense of Europe coupled with long-range nuclear strikes against the Soviet Union and other Warsaw Pact members. However, the cost of raising the 96 divisions required to implement this strategy proved too great, and it was quickly abandoned. In 1953 Dwight Eisenhower put forward a new strategy, which focused more on nuclear deterrence. The new strategy came to be known as “massive retaliation” and would have involved extensive use of nuclear weapons against the Soviet Union and eastern Europe if their forces had broken through NATO’s conventional defenses in central Europe.

Nuclear crises over Berlin and Cuba in the late 1950s and early 1960s suggested a need for a more gradual strategy than massive retaliation. President JOHN F. KENNEDY endorsed a strategy of “flexible response” in 1961–63, which favored deploying more conventional forces in central and northern Europe from both the United States and the other NATO members. Disagreement over this new strategy led France to withdraw from NATO’s integrated military command structure in 1967. NATO adopted a new doctrine in December 1967, which endorsed a flexible conventional and nuclear response to Soviet aggres-

sion. At the same time, the NAC adopted a new grand strategy favoring stable and peaceful relations with the Warsaw Pact countries.

NATO was further challenged in the mid-1970s when the Soviet Union deployed large numbers of intermediate-range nuclear missiles in Europe that were capable of striking all of the European NATO allies. In response the members agreed to deploy Pershing II and cruise missiles in West Germany, the United Kingdom, the Low Countries, and Italy. However, a more cordial relationship between the alliance and the Warsaw Pact during the 1980s led to the dismantling of these intermediate weapons at the end of that decade.

After the end of the cold war, NATO retained several important formal and informal functions. First, it serves as a permanent and institutionalized link between the United States and an ever-growing number of European allies. In addition, it prevents the renationalization of European defense policies. Moreover, NATO allows an institutionalized relationship with Russia and several of the former Warsaw Pact countries that have yet to join the alliance. Finally, it serves peacekeeping and stability functions in Europe and Asia.

NATO invoked article 5 of the Washington Treaty for the first time following the September 11, 2001, attacks against the United States. Many NATO countries participated in the U.S.-led war in AFGHANISTAN against AL-QAEDA and the TALIBAN.

SCOTT FITZSIMMONS

Numeiri, Jaafar

(1930–) *Sudanese leader*

Jaafar Numeiri was born in January 1930 in Omdurman, the Sudan. In 1952 Numeiri graduated from the Sudan Military College, and in 1966 he gradu-

ated from the U.S. Army Command College in Texas. Influenced by GAMAL ABDEL NASSER's Free Officers Movement in Egypt, Numeiri joined a group of military officers sympathetic to pan-Arab, socialist ideas. In 1969 Numeiri, with the help of four other officers, orchestrated a coup to overthrow the Sudanese government. He then became the new prime minister and chairman of the Revolutionary Command Council (RCC) and renamed the country the Democratic Republic of the Sudan.

In July 1971 Sudanese communists staged a coup, and Numeiri was imprisoned. Shortly after his incarceration, Numeiri escaped and rallied loyal forces to put down the revolt and brutally crush the communists. Numeiri quickly moved to strengthen his base of political support by changing domestic and foreign policies. In the 1971 referendum on the presidency, Numeiri received a 98.6 percent affirmative vote and was sworn in for a six-year term as president. Spurred by Numeiri's view of Arab socialism, in 1969 the Sudan agreed in the Tripoli Charter to coordinate foreign policies with Libya and Egypt. This union, which developed into a federation of Arab Republics, was extremely short-lived and was never really implemented.

Numeiri inherited the problem of civil war in the southern Sudan, which had begun in 1955, even before Sudanese independence. A positive step toward resolving the war was taken in 1972 with the signing of the Addis Ababa Agreement. A cease-fire was declared in the south, and autonomy was granted to the non-Muslim southern region of the Sudan. In an effort to bolster support for his regime, Numeiri imposed sharia, Islamic law, over all of the Sudan in 1983. He also unilaterally decreed the division of the south into three regions corresponding to the old provinces; these decisions led to the resumption of the civil war.

The mounting economic crisis led to urban riots, and spreading famines in rural areas marked the final phase of the Numeiri era. In April 1985, while Numeiri was out of the country on official business, the military launched a successful coup against his regime. Until 1999, when he was allowed to return to the Sudan, Numeiri remained in exile in Egypt while the Sudan continued to suffer through civil war, drought, famines, and mounting political repression from Islamist forces.

BRIAN M. EICHSTADT

Nunavut Territory, Canada

As early as 1963, some natives of Canada's Northwest Territories began agitating for greater autonomy within a nation where the vast majority live within 200 miles of the U.S. border. In particular the eastern Inuit (formerly called Eskimos) sought to control more aspects of their Arctic lives above the tree line. Not until 1999 was Nunavut ("our land" in the Inuktitut language) separated from other northern territories by an act of Parliament. On April 1, 1999, the Territory of Nunavut was born with Iqaluit, a city of 6,000, as its capital.

Canada's creation of Nunavut was a dramatic example of the growing awareness of indigenous rights in several nations. As in the United States, where Native Americans began rallying for recognition and respect, creating the AMERICAN INDIAN MOVEMENT, aboriginal groups in Australia and Canada's 630 officially recognized "First Nations" likewise began demanding greater self-determination. In 1973 after a long period of refusing to abide by most treaty rights, Canada changed course and signed six major treaties, including Nunavut's.

Straddling the Arctic Circle, and including Ellesmere and Baffin islands and Cape Dorset—a center of Inuit indigenous art—Nunavut has a population of 29,500, 80 percent of it Inuit, in 26 settlements spread across 770,000 square miles, a fifth of Canada's total land mass. Most of this vast territory is inaccessible by road or rail; everything arrives, expensively, by air. The government of Nunavut, whose first premier was lawyer Paul Okalik, oversees an annual budget of about \$500 million (U.S.), more than \$18,000 per resident. About 84 percent comes from the federal government in Ottawa.

Prior to the 1950s most Inuit were still leading traditional lives based on hunting and fishing. The COLD WAR changed that. In an agreement with Canada, the United States built the Distant Early Warning, or DEW, Line, a system of radar installations designed to detect Soviet invasion across the North Pole. Although the DEW Line was useless against nuclear submarines or intercontinental ballistic missiles, it remained in place for 30 years. In 1985 Canadian prime minister Brian Mulroney and U.S. president RONALD REAGAN signed a new defense agreement. Abandoned DEW Line installations littered

the Arctic landscape, in some cases leaching PCBs and industrial solvents into the ground.

Around the same time as the DEW Line's installation, Canada's government began to move Inuit families into permanent settlements where they were offered health care, education, and other services, but at a price. Their new lifestyle pushed many Inuit communities from subsistence hunting to fur trapping for the cash needed to buy newly available "southern" goods.

Reliable sources of income remain scarce in Nunavut, although mining, fisheries, tourism, and cultural products are being aggressively explored. The Internet plays a significant role, allowing Nunavut's widely separated citizens to communicate with each other and the world via expensive satellite hookups that leaders hope to replace with fiber-optic installations.

The emergence of global warming patterns in the Arctic poses both threats and opportunities. Some believe that the storied Northwest Passage, now frozen most of the year, will soon be navigable in summer, cutting almost 5,000 miles from a sea voyage between Europe and Asia. Nunavut's government has discussed building a deep-water port and a 185-mile all-season road. On the other hand, climate change would likely further endanger Inuit ecology and traditions of self-sufficiency.

MARSHA E. ACKERMANN

Nyerere, Julius

(1922–1999) *Tanzanian president*

Julius Kambarage Nyerere, born in 1922, attended a mission school in Tanganyika, Makerere University College in Tanganyika, and the University of Edinburgh. He returned to teach at a Roman Catholic school near

Dar es Salaam and was known as *Mwalimu*, or teacher. In 1954 he organized the Tanganyika African National Union (TANU) and was elected to the legislature as Tanganyika prepared for full independence in 1961. Nyerere was elected as the first prime minister of the newly independent state and became President of the Republic in 1962. When Tanganyika and Zanzibar unified as Tanzania, Nyerere became the nation's first president in 1964.

In the 1967 Arusha Declaration, Nyerere instituted a state program of *ujamaa* (familyhood) based on collective sharing, traditional African values of the family, and collectivization of farms. *Ujamaa*, a form of African socialism, was supported by the PEOPLE'S REPUBLIC OF CHINA, but in the global economic system, Nyerere's *ujamaa* failed to bring economic growth, and in 1976 he was forced to admit defeat and end the program.

Nyerere was an effective spokesperson in the campaign to end the apartheid system in South Africa and was also one of the founders of the Organization of African Unity (OAU). He hosted the African National Congress and Pan-African Congress, as well as other African nationalist movements that struggled against western imperial forces in Mozambique and Rhodesia. He was also a sharp critic of African dictatorships and publicly condemned Idi Amin's dictatorship in Uganda. In the first contemporary military intervention by an African state against another, under Nyerere's leadership, the Tanzania military attacked Amin and forced him out of power.

Refusing to run for reelection, Nyerere retired voluntarily in 1985. He was succeeded by Ali Hassan Mwinyi and served as a sort of elder statesman in Africa until his death in 1999.

JANICE J. TERRY

Olympics (1950–present)

One of the goals of Baron Pierre de Coubertin—founder of the modern Olympic Games and organizer of the first modern games in 1896—was to encourage international understanding through sports, and help to create a more peaceful world. But after 50 years and two world wars—the bloodiest and most violent wars the world had yet seen—the Olympic dream of de Coubertin seemed very distant indeed. Too often the competition between nations would overshadow the competition of the athletes, and occasionally even the athletes themselves would be the center of controversy.

In fact the Olympic Games found themselves, in 1948, in the middle of the geopolitics of the COLD WAR. The world found itself poised on the brink of nuclear confrontation between the United States and the Soviet Union, and it seemed the world needed the Olympic Games and de Coubertin's vision of peace now more than ever. Often, however, the Games would be just another proxy in the ideological battle between liberal democracy and communism.

One of the most famous incidents of the 1956 Melbourne Games was the water polo match between the Soviet Union and Hungary. This match followed the Soviet quashing of the Hungarian uprising; because of political tension between the countries, the match was contested with such intensity that blood was seen in the swimming pool.

But in addition to political theater, the games also provided many moments of genuine human drama,

Towering over the city, the Olympic Stadium in Montreal, Canada, was built for the 1976 Summer Olympics.

where athletes strove to best one another under daunting pressure, after years of sacrifice and training.

For the 1960 Summer Games, held at Rome, the games were broadcast live on television throughout Europe. Highlights of the games were Cassius Clay's (Muhammad Ali) gold medal in boxing, and Abebe Bikila's barefoot gold medal-winning performance in the marathon.

The 1968 Winter Olympics were held at Grenoble, France, with many events spread around the region. The French skier Jean-Claude Killy, aged 24, won all three Alpine skiing gold medals. The 1968 Summer Games were held at Mexico City; the high altitude brought athletes in as much as a month early to acclimatize. Bob Beamon broke the world long jump record at the games; his record stood until 1991. The 1972 Summer Olympics were held at Munich, Germany, where U.S. swimmer Mark Spitz won seven gold medals and the Soviet Union's gymnast Olga Korbut won three gold medals. These games also featured the controversial results of men's basketball in which the American team believed that it had been cheated out of the gold medal. The games are best remembered, however, for the attack by Palestinian terrorists on the Israeli team, which resulted in the death of 17 people.

At the 1976 Olympics held at Montreal, Canada, extra security was introduced. These games featured a boycott by African nations that protested the presence of New Zealand. The cause was a match between a New Zealand rugby team and a team from South Africa. This was in violation of a Commonwealth boycott of South Africa. The major stories of the games were Lase Viren winning both the 5,000 m and the 10,000 m again, and the Romanian gymnast Nadia Comaneci, aged 14, winning gold medals with the first-ever perfect score in Olympic gymnastic competition.

At the 1980 Lake Placid Winter Olympics, artificial snow was used, and the U.S. speed skater Eric Heiden won five gold medals. This also marked the presence of the first Chinese Olympic team since 1948 (prior to the Communists taking over). For the United States, these games will always be remembered for the "Miracle on Ice," the victory of the American ice hockey team over the superior Soviet squad; for many, the American victory was seen as a win over communism. The 1980 Summer Games were held at Moscow, USSR, with 100,000 people at the opening ceremony. However, the United States led a boycott over the Soviet Union's invasion of AFGHANISTAN in the previous year. The games were best remembered for the rivalry between British runners Sebastian Coe and Steve Ovett; each won

one gold medal. The 1984 Summer Games were held at Los Angeles. The Soviet Union and its close allies organized a boycott in retaliation for the U.S.-led one four years earlier. The best-remembered events of these games included the 200 m record set by U.S. runner Carl Lewis, who also won the 100 m, the long jump and the sprint relay, matching the feats of Jesse Owens in 1936; and also another U.S. runner Mary Decker falling over in the women's 3,000 m race and blaming the British/South African runner Zola Budd. The Los Angeles Olympics was also the first summer games to which China sent a team since 1948. There was also some international concern over the high level of advertising and commercial endorsements during the games.

At the 1988 Summer Games held at Seoul, South Korea, there were no major boycotts or security problems in spite of worries about North Korea's hostility to the games. In the track events, Florence Griffith-Joyner won three gold medals for sprinting, and Kristin Otto of East German won six gold medals. The Seoul Olympic Games also saw Ben Johnson, a Canadian sprinter, winning the 100 m race in world record time only to be stripped of his gold medal three days later after he failed a drug test.

The 1992 Summer Olympic Games, held in Barcelona, Spain, saw the athletes of the former Soviet Union contesting as a single team for the last time, the return of South Africa, and also a team sent by the reunited Germany. In 1994 the Olympic Winter Games were held, this time at Lillehammer, Norway, beginning a different timetable for the Winter Olympics.

At the Atlanta Summer Olympics in 1996, the centenary games, a bomb killed two people in the Centennial Olympic Park, but fears of international terrorists proved unfounded with a local man arrested for the bombing. At the Nagano Winter Olympics held in 1998, curling, women's ice hockey, and snow boarding were all introduced as new Olympic sports.

The Sydney Olympic Games in 2000 saw the summer games return to the Southern Hemisphere for the first time since 1956. The new events introduced included the triathlon and tae kwon do. The public cheered the presence of the team from East Timor at the Opening Ceremony, and also the North Korean and South Korean athletes who marched together.

The highlight was Australian Aboriginal runner Cathy Freeman winning the women's 100 m race in front of a home crowd. It saw the U.S. team win 40 gold medals, 24 silver medals, and 33 bronze medals; Australia's team won 16 gold medals, 25 silver medals, and 17 bronze medals.

The 2002 Winter Olympic Games were held at Salt Lake City, Utah. The choice of Salt Lake City saw accusations of corruption and bribery that had first occurred following Atlanta being awarded the Olympics in 1989. A number of members of the International Olympic Committee (IOC) were found to have received bribes in exchange for their votes, with files held in Salt Lake City revealing demands for and expectations of bribes by IOC delegates being made public. In a similar story, during the pairs figure skating competition, a judge was accused of collusion in awarding the gold medal to the Russian pair over the Canadian skaters; the situation was resolved when both figure skating pairs were awarded the gold.

In 2004 the Summer Olympic Games were held at Athens, Greece, the site of the first of the modern Olympic Games held in 1896. These games witnessed several scandals, the majority of them involving performance-enhancing drugs. At least 20 violations were noted, the most of any Olympic Games. The issue of athletes taking drugs to gain an edge over rivals has become one of the dominant concerns of the games in the 21st century. In addition, the International Olympic Committee must also deal with the issue of letting professional athletes into a competition that was originally designed just for amateurs. Some critics contend that allowing professional athletes will give developed nations an unfair advantage over underdeveloped nations, while others contend that the records set at the Olympics will mean little unless the best athletes are allowed to compete. Despite these challenges—and the ever-present fear of terrorist attacks—the Athens Games saw a record 202 nations participate with over 11,000 athletes.

The Olympic Games have proved to be a tempting avenue for nations to express a political point of view, or in more drastic fashion, commit violence in the name of one cause or another. Despite the intrusion of politics, it is perhaps a testament to de Coubertin's dream that athletes the world over still strive together in peaceful competition along the ideals expressed in the Olympic motto: *Citius, Altius, Fortius* (Faster, Higher, Stronger).

JUSTIN CORFIELD

Organization of American States (OAS)

The Organization of American States (OAS) was founded on April 30, 1948, in Bogotá, Colombia, by 21 member states. Successor organization to the Pan-American Union (1889–1947) and retooled to correspond to the changed security environment of the post-World War II era, the OAS was founded as a regional agency of the United Nations. Its purposes, according to its official charter, are “to strengthen the peace and security of the continent; to promote and consolidate representative democracy, with due respect for the principle of non-intervention; to seek the solution of political, juridical, and economic problems . . . ; [and] to eradicate extreme poverty,” among others. Headquartered in Washington, D.C., since its founding, in 2007 the OAS counted 35 member states, with Cuba suspended from participation since 1962, making 34 active member states.

Mirroring the organizational structures of the UNITED NATIONS, the OAS is governed by a General Assembly and Permanent Council and led by a secretary-general elected every five years. It has numerous affiliated organizations, organs, and entities, including the Inter-American Commission on Human Rights (IACHR, f. 1959); the Inter-American Drug Abuse Control Commission (CICAD, f. 1968); Inter-American Committee Against Terrorism (CICTE, f. 1999); and many others. Four “Protocols” introduced major revisions to the original OAS Bogotá Charter: the Protocols of Buenos Aires (1967), Cartagena de Indias (1985), Washington (1992), and Managua (1993). In 1994 the OAS organized the first Summit of the Americas, an event henceforth held every few years.

Since its founding, the OAS has been dominated by the United States. During the the COLD WAR era, its overriding concern was limiting Soviet and communist influence in the Western Hemisphere. Because Marxist, communist, and socialist doctrines proved popular in many parts of Latin America in the postwar era, OAS member states could pursue one of three options: openly defy the United States and adopt a socialist or

Marxist-oriented government; ally with the United States in its anticommunist policies; or pursue a “third way” by aligning with neither the Soviet nor the U.S. bloc. In a handful of instances, OAS member states openly defied the United States, such as in Guatemala (1944–54), Bolivia (1952–64), Cuba (1961–), Chile (1970–73), Nicaragua (1979–90), Grenada (1983), Panama (1989), and Venezuela (1999–). In these and other cases, the United States violated the OAS charter regarding nonintervention, which stipulated that “No State or group of States has the right to intervene, directly or indirectly, for any reason whatever, in the internal or external affairs of any other State” (Chapter IV, Article 19). More often, OAS member states cooperated with U.S. anticommunist efforts or sought to pursue a nonaligned stance in international affairs. The United States most commonly interpreted the latter as alignment with international communism and therefore a direct threat to its national security. In the post-cold war era, the OAS has exerted a greater degree of autonomy from U.S. domination.

MICHAEL J. SCHROEDER

Organization of Petroleum Exporting Countries (OPEC)

The Organization of Petroleum Exporting Countries (OPEC) was established in 1960. Its first meeting was held in 1961, and, beginning in 1965, it was headquartered in Vienna. The charter members included Venezuela, IRAN, Iraq, KUWAIT, and SAUDI ARABIA. Abd Allah al-Tariki, the Saudi director of petroleum affairs, played a leading role in the organization’s inception. OPEC membership was later expanded to include LIBYA, Algeria, Indonesia, Qatar, NIGERIA, UAR, Gabon, and Ecuador. In 1968 the major Arab oil-producing nations formed OAPEC (Organization of Arab Petroleum Exporting Countries). OPEC members met on a regular basis to set quotas for production; however, the organization lacked the mechanism to enforce the quotas,

which were frequently ignored or openly flouted by individual producing nations.

Nations with large populations such as Iran, Algeria, and Nigeria tended to push for price increases. Nations with small populations and lesser economic domestic demands preferred stable prices. Because of their production capacity and huge reserves, Saudi Arabia and Kuwait were able to increase production to prevent price increases or to keep prices low. In the 1980s Saudi Arabia’s proven oil reserves contained over 168 billion barrels, Kuwait had over 66 billion barrels, and Iraq had 43 billion barrels, as compared to 27.3 billion barrels in the United States. By the 1980s the United States was also importing over half its oil, as compared to only 25 percent in the early 1970s.

In 1970 the new revolutionary government in Libya under MUAMMAR QADDAFI forced production cuts to secure higher royalties. The petroleum companies—dominated by the so-called seven sisters, Western-owned corporations—bitterly opposed such pressure tactics, but because of ever-increasing demands they ultimately agreed to Libyan terms. The rest of the oil-producing nations soon followed suit and secured similar concessions. The price of oil then rose from \$2 to \$3 per barrel and then to \$5 per barrel.

During the peak of the oil boom in the 1970s Sheik Ahmad Zaki Yamani, secretary-general of OPEC from 1968 to 1969, served as the Saudi Arabian minister of petroleum. During the 1973 ARAB-ISRAELI WAR King Faysal in Saudi Arabia was persuaded to use oil as a weapon, and cuts in supplies to those nations supporting Israel were announced. However, Faysal was a staunch anticommunist, and, when the United States and Egyptian president Anwar el-Sadat argued that the oil boycott could increase the threat of communism in the Arab and Muslim world, King Faysal effectively ended the boycott by withdrawing Saudi support in 1974. In 1986, when Yamani supported raising oil prices, King Fahd removed him from office.

With its huge reserves Saudi Arabia, and, to a lesser extent, Kuwait, could force price modifications by simply increasing production. By 1996 Saudi Arabia had become the world’s largest petroleum exporter. After the IRAN-IRAQ WAR Kuwait began to flood the market, exceeding its quota and driving down prices. The lower prices hurt Iraq at the very time that it was desperately trying to increase revenues to rebuild its economy; this was a contributing factor in the Iraqi invasion of Kuwait in 1990 and the resulting FIRST

GULF WAR. Depressed prices, largely caused by high production by the Arab Gulf states and Saudi Arabia, also contributed to Ecuador's withdrawal from OPEC in 1992.

Owing to increased demand by burgeoning Indian and Chinese economies and ongoing wars in Afghanistan and the Middle East, the price of oil reached \$60 per barrel in 2006 and prices continued to rise. High prices resulted in huge profits for Western oil companies as well as for the oil-producing nations. In one quarter of 2006 Exxon-Mobil, the world's largest petroleum corporation, posted profits of over \$7 billion. Although governments talked about cost control measures, alternative fuel sources, and conservation, few practical programs were adopted either in the

West or in Asia. Thus it remained certain that petroleum would continue to be the world's primary energy source for the foreseeable future.

JANICE J. TERRY

Pakistan People's Party

The Pakistan People's Party was founded by Berkeley- and Oxford-educated politician and lawyer ZULFIKAR BHUTTO. During the presidency of General Ayub Khan, Bhutto served as a cabinet member and eventually as foreign minister. Ayub went to war with India over Kashmir in 1965, and eventually, with the intervention of the Soviet Union, signed the TASHKENT AGREEMENT, which restored prewar boundaries and diplomatic relations between the two countries. Bhutto opposed Ayub's signing of the Tashkent Agreement, resigned his post, and formed the Pakistan People's Party in 1967.

The People's Party championed the causes of socialism and democracy and denounced the Ayub regime as a dictatorship. Bhutto's countrywide campaign against Ayub also drew support from businessmen, small factory owners, students, and rural dwellers. Under the pressure of mounting public unrest, Ayub resigned in 1969 and handed over power to General Yahya Khan. When elections were held in 1970, the People's Party captured a majority of votes in West Pakistan, whereas a clear majority was won in East Pakistan by the AWAMI LEAGUE of Sheik Mujibur Rahman. While the Awami League promoted greater autonomy for East Pakistan, the People's Party argued for a strong centralized government. Differences between the two parties, and General Yahya's inability to play a neutral role in the conflict, led to civil war. In 1971 East Pakistan seceded to become BANGLADESH, and the People's Party formed a government in Pakistan.

In power, the People's Party stood for the nationalization of industry and education and for land reform. At the same time, Bhutto drafted the country's fourth constitution, according to which he gave himself the title of prime minister, reduced the president to a figurehead, and granted himself powers that were as broad as those held by the military dictator whom he had opposed. Factionalism within the People's Party, accusations of preferential politics, a tribal uprising in Baluchistan over the exploitation of local resources such as natural gas, and underrepresentation of Baluchis in the structures of the state undermined Bhutto's government. The deaths of thousands in the uprising in Baluchistan, oppressive measures taken by Bhutto against political opponents, and accusations of having rigged the elections of 1977 led to a military coup by the army chief of staff General MUHAMMAD ZIA-ul-HAQ.

Bhutto was tried for orchestrating the murder of a political opponent, found guilty, and hanged on April 4, 1979. The leadership of the People's Party was assumed by his daughter, BENAZIR BHUTTO. After General Zia was killed in a plane crash, rumored to be sabotage, the People's Party came to power under Benazir Bhutto in the elections of 1988. However, her government was short-lived, she was arrested, and her government dissolved by Ghulam Ishaq Khan, the president at the time.

The People's Party next came to power in 1993, but the government was again short-lived; violence between ethnic and linguistic groups erupted frequently in Karachi, the government lost control of the urban

center, and a power struggle between Benazir Bhutto and her brother Mir Murtaza Bhutto led to divisions within the party. In 1996, during his sister's tenure as prime minister, Murtaza Bhutto was shot dead outside his residence in a police encounter. Opposition leaders accused the People's Party of state terrorism against its political opponents, and the government was dismissed in 1996 again under charges of mismanagement and corruption. Benazir Bhutto continued to head the party in exile and upon her return to Pakistan in 2007. After her assassination on December 27, her husband and 19-year-old son were appointed party co-chairmen.

TAYMIYA R. ZAMAN

Palestine Liberation Organization (PLO)

The Palestine Liberation Organization (PLO) was established in 1964 under Ahmed Shukairy to represent Palestinian national demands for self-determination. In 1964 the Palestine National Council (PNC, or parliament) of 350 representatives met in East Jerusalem and voted on the Palestine National Charter, or declaration of independence, that declared historic Palestine as the homeland of the Palestinian Arabs. The charter has been amended several times. In 1968 the charter added that "armed struggle is the only way to liberate Palestine." In 1988 the PLO under YASIR ARAFAT's orders agreed to drop the use of terrorism, recognize Israel's right to exist, and essentially accept the establishment of the independent state of Palestine in the Occupied Territories of the Gaza Strip, East Jerusalem, and the West Bank—the so-called mini-state solution. Although some Palestinian groups opposed Arafat on these issues—the changes were agreed upon by the Palestine National Council, dominated by pro-Fatah Arafat supporters. Fatah (the Palestine National Liberation Movement) continued to dominate the PLO until 2006.

After the Arab defeat in the 1967 ARAB-ISRAELI WAR, Shukairy stepped down as chairman of the PLO, and Yasir Arafat, the leader of Fatah, the largest guerrilla group,

was elected chairman. Arafat remained the leader of the Palestinian national movement until his death in 2004. The PLO constantly struggled to remain independent from any Arab government and often found it difficult to steer a neutral course among rival Arab governments.

Secular and all-inclusive, the PLO was an umbrella organization of some 10 different Palestinian groups, including the Marxist-Leninist Popular Front for the Liberation of Palestine (PFLP), under Dr. George Habash, and the Popular Democratic Front for the Liberation of Palestine (PDFLP), led by Naif Hawatmeh; the Arab Liberation Front, supported by Iraq; and the Popular Front for the Liberation of Palestine—General Command, a PFLP splinter group supported by Syria and sometimes Libya.

The Palestine National Council operated until the 1993 Oslo Accords as a government in exile. The PNC comprised over 300 members, including fighters, union members, students, and women. The Palestine Central Council acted as an advisory board of approximately 60 representatives from all the various factions. The Executive Committee ran the PLO on a daily basis and comprised 15 members. In contrast to many other Arab governments, the PLO was highly democratic and engaged in lively and often public debates about strategies and tactics.

The Palestine Liberation Army (PLA) was the PLO's military wing and was often made up of fedayeen (self-sacrificers). By the 1970s the PLA had an estimated 10,000 fighters based mostly in Lebanon and Syria. After the 1982 Israeli invasion of Lebanon the PLA was forced to scatter to a number of Arab countries. After the establishment of the Palestine Authority (PA) under the 1993 Oslo Accords, many soldiers were subsumed under the police force.

The Palestine National Fund was the PLO's economic arm. The fund was financed by donations from Palestinians in exile as well as taxes levied on Palestinians working in some Arab nations such as Libya. Individual Arab governments, such as oil-rich Saudi Arabia and Kuwait, also provided aid. Those regimes cut off aid after the PLO supported SADDAM HUSSEIN and Iraq in the FIRST GULF WAR.

After the 1967 war, some groups within the PLO endorsed terrorist attacks on civilians. The PFLP simultaneously skyjacked four planes, landing them at a remote airstrip in Jordan in 1970; this incident precipitated "Black September," when the Jordanian army attacked and defeated Palestinian forces and ousted the PLO, which then moved its base of operations to Lebanon. Attacks on Israeli athletes at the Munich Olympics

followed in 1972. The cycle of violence escalated as PLO groups launched raids inside and outside of Israel and Israel assassinated Palestinian leaders in the Middle East and Europe. As a result many innocent civilians on both sides were killed and wounded.

Within the Arab world the PLO was recognized as the sole legitimate representative of the Palestinian people. Although it was condemned as a terrorist organization by Israel and the United States, the PLO gradually gained international recognition, and, once it renounced terrorism and recognized Israel's right to exist, even Israel and the United States entered into both public and secret negotiations with it.

The PLO also established an extensive network of social services, including schools, orphanages, and hospitals. The Palestine Red Crescent was active in providing health and emergency care. SAMED provided an economic infrastructure of small businesses, workshops, and factories manufacturing textiles and even office furniture in Lebanon and Syria. Many of these institutions were destroyed in the 1982 Israeli invasion of Lebanon. In the 1970s the PLO also sponsored some agricultural cooperatives in Sudan, SOMALIA, and other African nations. It also sponsored art and cultural events. The Palestine Research Center, based in Beirut, focused on collecting materials and publishing books and articles on Palestinian history in order to preserve its cultural heritage. The center was also destroyed, and materials were taken by the Israelis in the 1982 war. The PLO also maintained information bureaus and had diplomatic representatives in major world capitals.

In the midst of the 1987 INTIFADA, or Palestinian uprising, in the occupied territories, a rival Islamist organization, HAMAS, emerged to challenge Fatah's leadership. Financed by devout Muslims, especially in conservative Arab countries such as Saudi Arabia, Hamas prospered first among poor Palestinian refugees in the Gaza Strip. Because it competed with the PLO, Israel initially ignored Hamas but subsequently found that in many ways it proved a more dangerous enemy. When the PLO, in spite of concessions to Israel, failed to achieve a viable Palestinian state, many more young Palestinians who had grown up under Israeli military occupation joined Hamas.

When the Palestine Authority was established in the territories evacuated by the Israeli military in 1994, Arafat became the leader of the PA; he won a clear-cut majority as president in open and fair elections in 1996. However, the PA leaders, most of whom were members of Fatah who had spent years outside the Occupied Territories, were also accused of corruption and inefficiency. After Arafat's death Mahmud Abbas was elected president in

A banner featuring Yasir Arafat, who was the leader of the Palestinian national movement until his death in 2004.

2005. Fatah dominated the Palestinian parliament until it was defeated by the Islamist Hamas party in the 2006 elections and Ismail Haniyeh became prime minister. As the two main political forces—Fatah and Hamas—competed for power and the Israeli occupation of most of the territories continued, the future of the PLO remained uncertain.

JANICE J. TERRY

Park Chung Hee

(1917–1979) *South Korean president*

Park Chung Hee became president of South Korea after leading a military junta that instigated a coup in 1963. He held this position until his death in 1979.

Born Pak Chong-hui in 1917 in the farming village of Sonsan in southeastern Korea, Park was the youngest of seven children of a poor farmer. His teachers recommended he continue his education at a normal school

in the provincial capital, where he trained to become a grammar school teacher.

After teaching for only two years Park enrolled in a Japanese military academy, in spite of being a Korean. During the last years of World War II, Park served as a second lieutenant in the Japanese army. He returned to South Korea after the end of World War II, received further military training, and became a captain in the army of the Republic of Korea (South Korea). Under suspicion of having cooperated with the communist forces in the north, Park resigned from the army, but was quickly called back into service.

As soon as U.S. and Soviet troops withdrew from Korea in 1949, the Democratic People's Republic (North Korea), under the leadership of KIM IL SUNG, invaded the south in an attempt to reunite the nation. The resulting Korean conflict lasted until 1953 and involved not only the two Koreas but also troops from the United States, CHINA, the USSR, and a number of other nations. At the close of the conflict a "demilitarized zone" was established roughly along the 38th parallel between the two countries. Park had continued to rise in the South Korean army to the rank of brigadier general.

The combined effects of long years of brutal Japanese occupation and two wars left South Korea in severe distress. Its problems were exacerbated by the corrupt administration of President SYNGMAN RHEE. On April 19, 1960, after Korean students rebelled against the government, President Rhee declared martial law, but the army did not support him. Rhee resigned, making way for an ineffective new government. After nine months, a military coup led by Park Chung Hee overthrew the new government and established the Military Revolutionary Committee as the nation's governing body.

The Revolutionary Committee was later renamed the Supreme Council for National Reconstruction (SCNR), which was invested with legislative, executive, and judicial powers. This military regime was tightly controlled by a few leaders with Park as chairman. A few months later the Political Activities Purification Law was passed, making it illegal for civilian leaders who had served in the First and Second Republics to engage in political activity. President Yun Po-Sun resigned in protest in March 1962, enabling Park to become acting president. Park and the Supreme Council undertook a drastic revision of Korea's constitution, giving the president control of the National Assembly and giving him broad emergency powers. In August 1963 Park resigned from the military and joined the Democratic Republican Party. He easily won the fol-

lowing election and served as president of the Third Republic of Korea beginning in 1963.

Although Park was no longer a member of the military, there was no doubt that the military upheld his regime. In the following years Park promoted an extensive industrialization program, instituted educational reform, and extended diplomatic relations, but his regime became increasingly authoritarian and repressive.

Park Chung Hee was easily reelected president in 1967, and in 1969 he again instituted constitutional changes. This time he had the constitution amended to allow him to run for a third term, which he won in 1971. Student demonstrations and increasing dissatisfaction among the general public at the beginning of his third term led Park again to change the constitution, creating a stronger centralized power in the new Fourth Republic. Park called this the Yushin Honpop, or Revitalizing Reforms Constitution. When protests against his increased powers erupted they were quickly and violently quelled.

Park Chung Hee was shot to death by the head of the Korean Central Intelligence Agency on October 26, 1979, allegedly accidentally as he was arguing with another dinner guest, but questions remain.

JEAN SHEPHERD HAMM

Pathet Lao

The term *Pathet Lao* (land of Lao) is generally used to describe the communist movement of Laos that began in 1945 and continued until 1975, when Laos became communist. It was one of three groups active in the politics of Laos, the other two being the Royal Lao Government (RLG) and the neutralists.

Laos became a French protectorate in 1893. During World War II, the Japanese took control of Laos and declared it independent from French colonial rule on March 9, 1945. After Japan's surrender, an independent Lao Issara (Free Laos) government was proclaimed on September 1, joined by the Pathet Lao,

with its strong nationalist leanings. There was a Lao committee section in the Indochinese Communist Party, and the separate existence of the Lao communist movement was established in 1945. The leader of the Pathet Lao, Prince Souphanouvong, had met the Vietnamese Communist leader HO CHI MINH in 1945 and gained control of central Laos with the help of Vietnamese troops. The prince had nurtured the communist movement and was prepared to fight against the French, who had seized the capital city, Vientiane, in 1946. Laos was soon engulfed in the FIRST INDOCHINA WAR, and the Pathet Lao fought along with the Vietminh and the Khmer Rouge. The granting of limited independence on July 19, 1949, by the French was not accepted by the communists. However, Souvanna Phouma joined the new French-sponsored government in February 1950, where Souphanouvong proclaimed the parallel government of Pathet Lao along with its political organ, Neo Lao Issara (Lao Free Front).

The French defeat at Dien Bien Phu on May 7, 1954, ended its colonial rule in Indochina. The Pathet Lao was recognized as a political party with control over Phong Saly and Sam Neua Provinces and began to consolidate its position.

In December 1959 the military-dominated government of Phoumi Nosavan arrested the Pathet Lao members of the National Assembly, although Souphanouvong escaped. Laos was plunged into civil war. North Vietnam supported the Pathet Lao by sending arms, ammunitions, and troops. The U.S. government included Laos in its containment strategy defense against North Vietnam and China. Another attempt was made to bring peace to Laos with the Geneva Accords of 1962. But the attempt failed, and Laos was soon embroiled in the VIETNAM WAR.

A three-pronged coalition between the Pathet Lao, the royal government, and the neutralists did not last long, and the United States and Hanoi stepped up economic and military assistance to their respective allies. War in Laos became a sideshow in the Vietnam War, marked by heavy civilian death toll. The Pathet Lao military advance captured more territory and by 1972 controlled four-fifths of the land and half the population of Laos.

Finally, the signing of the Paris Peace Agreements on Vietnam in 1973 led to accelerated negotiations in Laos. An agreement on Restoring Peace and Achieving National Concord on Laos was signed in the same year. With the United States out of South Vietnam, the North Vietnamese conquered the south in 1975. After the fall of South Vietnam, the Pathet Lao assumed effective

control of Laos, and the coalition government in Laos was dissolved. On December 2, 1975, the Lao People's Democratic Republic (LPDR) was formed with Souphanouvong as president.

PATIT PABAN MISHRA

Paz Estenssoro, Victor

(1907–2001) *Bolivian revolutionary*

Leader of Bolivia's Revolutionary Nationalist Movement (Movimiento Nacionalista Revolucionaria, or MNR) and a leading figure in the BOLIVIAN REVOLUTION, Victor Paz Estenssoro was elected to the presidency four times and played a major role in Bolivia's 20th century history. His overall political trajectory over four decades can be described as a gradual shift from the militant left to the neoliberal right, though whether that transformation entailed an abandonment of principles or growing pragmatism remains a matter of debate.

Born in Tarija, Bolivia, on October 2, 1907, to a prominent family, he received his law degree from San Andrés University in La Paz in 1927. Thereafter he occupied a variety of administrative posts before serving as deputy in the National Congress, where he emerged as a leading figure in the opposition movement. In 1941 he cofounded the MNR, a leftist political party advocating far-reaching social and economic reforms. From 1943 to 1946, he served in the cabinet of Colonel Gualberto Villarroel but was forced out by domestic and U.S. opposition. Finishing third in the 1947 presidential elections, he triumphed in 1951, results nullified by the oligarchic regime of Mamerto Urriolagoitia. There followed a period of widespread social unrest, spearheaded by labor unions and peasant leagues, culminating in April 1952 in the overthrow of the government and the MNR's assumption of power.

In his first administration, Paz Estenssoro launched an ambitious program of social and economic reform—slashing the size of the military, extending the franchise,

nationalizing the tin mines, breaking up large estates, and instituting universal public education—that met many of the demands of his constituency but galvanized right-wing opposition to MNR rule. That opposition mounted during the administration of his successor and MNR cofounder Hernán Siles Zuazo, as did the political polarization of the country. During Siles Zuazo's presidency, Paz Estenssoro served as ambassador to Great Britain before returning to Bolivia to seek another term as president. He won handily, and in his second term struggled to keep the fragmenting MNR together and consolidate the gains of the revolution, while fending off a resurgent oligarchy and military and growing challenge from an increasingly militant left, led by his vice president, the labor leader and populist Juan Lechín. Expelling Lechín from the MNR and amending the constitution to permit his reelection, he won a third term in 1964 but was promptly ousted in the military coup of November 3, 1964, which ended the Bolivian revolution.

Going into exile in Lima, Peru, he returned to Bolivia to lend his support to the left-leaning military regime of Hugo Banzer Suárez, an action that led to a break with Siles Zuazo and undermined his populist credentials. Soon repudiating the Banzer regime, in 1974 he was expelled from the country and went into exile in the United States. He returned in 1978 to run again for president, came in third, and after the results were nullified by the military, ran again in 1979, coming in second. The military again intervened, and in 1980 Paz Estenssoro again went into exile. In 1985 he was elected as president for the fourth and last time, during which he followed a neoliberal model, slashing state expenditures and reining in hyperinflation. He retired from politics in 1989 and died on June 7, 2001, leaving a complex political legacy.

MICHAEL J. SCHROEDER

Peace Corps, U.S.

The Peace Corps started in 1960 as part of U.S. efforts to win the COLD WAR and as an attempt to better the lives of people in Latin America, Africa, and Asia. It is the brainchild of President JOHN F. KENNEDY. The

Peace Corps has sent more than 180,000 volunteers to over 135 countries in its many years of existence.

The Peace Corps is one of the most enduring legacies of the Kennedy administration. Kennedy, then a candidate for the presidency, first mentioned the Peace Corps when he challenged students in a speech at the University of Michigan on October 14, 1960, to dedicate several years of their lives to helping people in the developing countries of the world. The students responded so enthusiastically that, in his inaugural address on January 20, 1961, Kennedy repeated his call. The president, concerned with the image of the “ugly American” who lacked compassion for those suffering from disease and the effects of poverty, argued that the Third World needed technical, managerial, and skilled labor. He wanted the United States to forge a new relationship with developing nations.

Kennedy issued an executive order creating the Peace Corps on March 1, 1961. Sargent Shriver became its first director. On September 22, 1961, Congress passed legislation authorizing the Peace Corps to promote world peace and friendship.

The agency aims to help the people of interested countries meet their need for trained workers, promote a better understanding of Americans among the peoples served, and promote a better understanding of other people on the part of Americans. By demonstrating the benefits of the U.S. system and capitalism, it also helped contain communism during the cold war. By respecting the cultures of their host countries, volunteers built a goodwill that was politically useful.

Goodwill was also achieved through good works. Peace Corps volunteers have been road surveyors, nurses, agricultural technicians, engineers, and teachers as well as information technology experts and business development consultants. At the start of the new millennium, the agency also committed volunteers as part of the President's Emergency Plan for AIDS Relief. From its beginnings the agency encouraged women to enroll. African Americans were also welcomed. However, not every volunteer was accepted by the agency.

Since the start of the Peace Corps only one in five applicants has been accepted. A bachelor's degree is the minimum education required for acceptance. The Peace Corps prefers more education as well as experience in a given field. At the start of the process volunteers are grouped into six programming categories: environment, agriculture, health, community development, business and skilled trades, and education. Volunteers are then interviewed and rejected if they are not U.S. citizens, are under 18 years of age, are under supervised

A Peace Corps volunteer teaches children at the St. Vincents Home for Amerasian Children in Pup'yong, Korea. Peace Corps volunteers have traveled to more than 135 countries in virtually every continent around the world.

probation, have been involved in intelligence organizations such as the Central Intelligence Agency, possess dependents, or do not have skills needed by the agency. During the evaluation process the Peace Corps recruitment office looks at an applicant's motivation, commitment, emotional maturity, social sensitivity, and cultural awareness. A background check is performed, and the agency assigns a worker to a particular nation in need of the volunteer's skills.

For those volunteers who are chosen, training programs are exhaustive, often running from 7:00 A.M. to 10:00 P.M. seven days a week. The agency has written its own textbooks for every nation.

The countries that have welcomed Peace Corps volunteers include such African nations as Cameroon, Chad, Ghana, Guinea, Kenya, Madagascar, Malawi, Mali, Namibia, Niger, Senegal, and Tanzania. Latin American and Caribbean countries that have had Peace Corps volunteers include Belize, Bolivia, Chile, Costa Rica, Grenada, Guatemala, Haiti, Jamaica, Montser-

rat, and Nicaragua. In Asia volunteers have served in Fiji, Mongolia, Nepal, Papua New Guinea, Philippines, Solomon Islands, Tonga, Western Samoa, Turkmenistan, and Uzbekistan. In Europe volunteers have worked in Albania, Armenia, Bulgaria, Estonia, and Poland. Former Peace Corps countries include Afghanistan, Argentina, Brazil, India, Iran, Libya, Liberia, Pakistan, Somalia, South Korea, and Venezuela.

Perón, Juan Domingo

(1895–1974) *president of Argentina*

Subject of what many consider the most powerful political mythology in the modern history of Argentina—that of Peronismo (Peronism)—Juan Domingo Perón remains, despite his eminently public life, a deeply enigmatic figure—at once a populist, a man of the people, a friend of the working class, a dictator, a demagogue, an enemy and ally of the military, and the politician most responsible for a host of failed government policies that nonetheless continue to resonate among large segments of the populace. For three decades—from his burst onto the political stage in 1944–45 until his death in office in 1974—Perón dominated the Argentine political landscape, while his ambiguous and divisive legacy endured long after his death. Understanding modern Argentine history requires understanding the complex political legacy he bequeathed.

Born on October 8, 1895, in a small town near Lobos in the province of Buenos Aires to a farming family, by some accounts out of wedlock, Perón entered the military at age 16 and rose gradually in rank. In 1929 he married Aurelia Tizón, who died nine years later of uterine cancer. In 1938, the year of his wife's death, he traveled widely in Europe, where he came to admire the regime of Italian fascist dictator Benito Mussolini. In 1943 he participated in a coup against the conservative regime of Ramón Castillo, and soon after became head of the Department of Labor—one of the weakest government ministries—which he used as a platform to build his own power base, forging alliances with segments of Buenos Aires's powerful labor unions. Named vice president and secretary of war, on October 9, 1945, he was ousted and jailed by enemies in the military. There followed one of the defining events of modern Argentine history, when mass demonstrations by *los descamisados* (the shirtless ones) forced his release on October 17. Four days later he married the actress Eva (Evita) Duarte. Until her death, also from uterine cancer, in July 1952 at age 33, Evita was wildly popular among working people and coequal in creating and popularizing the Perón mythology.

Building on his strong political momentum, Perón was elected president in February 1946. During his first term (1946–52), at the height of his political power, he implemented a host of populist policies intended to solidify his support among the country's powerful labor unions, proclaiming his populist vision a “third position” between capitalism and communism. His policies sparked rising government debt and growing

economic crisis while polarizing Argentine society into Peronist and anti-Peronist factions. Reelected in 1951, he was ousted in September 1955 in a military coup. For the next 18 years he lived in exile, mainly in Spain, in 1961 marrying nightclub singer María Estela Martínez, or Isabel Perón. Following years of military dictatorship marked by growing social discord and political polarization, he returned to Argentina in 1973 and won his third term as president. He died in office on July 1, 1974, his wife and vice president, Isabel, succeeding him until her ouster by a military coup in March 1976.

MICHAEL J. SCHROEDER

Philippine revolution (1986)

A popular, spontaneous, nonviolent, and distinctly religious movement restored democracy to the Philippines, on February 22–25, 1986. After nearly 400 years of colonization by Spain and the United States of America in the first half of the 20th century, the Philippines enjoyed a democratic form of government until Ferdinand Marcos became president in 1965. However, in 1972 Marcos declared martial law, citing communist insurgency but in reality because he faced the prospect of defeat in the presidential elections.

Martial law (lifted in 1981) was disastrous for the country. Government-sanctioned atrocities occurred frequently, the media was rigidly controlled, and anyone suspected of being a dissident was imprisoned. One such political prisoner was Benigno Aquino Jr. (nicknamed “Ninoy”), a brilliant politician who was elected to the National Senate at the age of 35 and became Marcos's most serious rival to the presidency. He was imprisoned for eight years.

In 1980 Aquino was allowed to travel to the United States for surgery, and, for the next three years, he lived in Cambridge, Massachusetts, with his family. But he was assassinated in 1983 upon returning to the Philippines. An independent panel investigating his murder put the blame on a military conspiracy involving “some of the country's highest ranking officers,” but without giving any names. The event galvanized the nation as

Philippine president Corazon Aquino addresses workers at a rally at Remy Field concerning jobs for Filipino citizens.

millions of Filipinos mourned his death and led to the “People Power” movement.

However, it took three more years before People Power would become a reality. In the interim, opposition to the Marcos regime became more frequent and vocal. Public rallies and demonstrations were often met by military reprisals. Eventually the military, too, became divided, with some calling for reform.

Late in 1985 Marcos called a “snap” presidential election on February 7, 1986. It was a move calculated to restore his popular mandate. Many people welcomed this, although it was a foregone conclusion that there would be massive electoral fraud. Corazon (“Cory”) Aquino, the assassinated leader’s widow, with neither political aspirations nor experience emerged as the popular candidate.

Expectedly, Marcos declared himself the winner. But the People Power nonviolent revolution would eventually triumph by the defection of two men in Marcos’s camp: the civilian defense minister and a high-ranking general of the armed forces. They were supported by the archbishop of Manila, Cardinal Jaime Sin, who called on Filipino civilians for help. At first a trickle, then hundreds of thousands of ordinary Filipinos from all economic strata responded, converging on the streets with no weapons, calling on the advancing soldiers and marines to join the protest.

FIRST WOMAN PRESIDENT

Within four days, the number of defecting soldiers made it clear that Marcos no longer controlled the military. The United States asked Marcos to step down from power and to desist from military action. Fearing for their lives, Marcos and his family were flown out of the country and took refuge in Hawaii. Corazon Aquino was inaugurated as president on that day, the first woman president of the Philippines.

The popular and nonviolent People Power revolution of 1986 restored democracy, but it did not solve all the problems of the country. Twenty years later, the country still faces many political, economic, and social ills. But what People Power demonstrated was the moral superiority of nonviolent and prayerful resistance to political tyranny and moral evil.

JAKE YAP

Pinochet Ugarte, Augusto

(1915–2006) *general and dictator of Chile*

President and dictator of Chile from the bloody overthrow of democratically elected Marxist president SALVADOR ALLENDE on September 11, 1973, until his resignation from the presidency in March 1990, General Augusto Pinochet (pee-noh-CHET) ranks among the most controversial figures in modern Chilean history. The years of his rule as president and dictator (1973–90) saw large-scale human rights abuses by the Chilean military, with an estimated 3,200 dissidents killed and

disappeared, and thousands more imprisoned, tortured, and exiled. The 17 years of his dictatorship also saw major neoliberal reforms of the country's economy, as promoted by the "CHICAGO BOYS," that resulted in the privatization of many state industries and entitlement programs—most notably the social security system—and that severely circumscribed the role of the state in the national economy. A polarizing figure, revered by some and decried by others, Pinochet left a complex legacy of state repression and radical economic reform with which Chileans continue to grapple.

Born in the Pacific port city of Valparaiso on November 25, 1915, the son of a custom's inspector, Pinochet graduated from Santiago's military academy in 1937. In 1971 he was appointed to the key post of commander of the Santiago army garrison. In the midst of rising social and political tensions sparked by Allende's socialist policies, Pinochet garnered the trust of the president, who in August 1973 named him commander in chief of the army. Three weeks later Pinochet led the coup that resulted in Allende's overthrow and imposition of military dictatorship. The months following the coup were the most violent of the regime, with tens of thousands of Allende supporters rounded up, interrogated, and imprisoned, and hundreds executed. Among the most enduring images of the Pinochet dictatorship was the scene in the Santiago's main sports stadium in late 1973, used as a clearinghouse for recently arrested prisoners, with a sunglasses-clad Pinochet overseeing the detention and interrogation process. In 1980 a new constitution made the nation's military the "guarantors of institutionality" and imposed a range of limitations on citizens' political activities. In 1988 a plebiscite showed a solid majority opposed to continuing dictatorship, and in 1990 he stepped aside to permit national elections and a return to democratic government. The human rights violations of the Pinochet regime were documented in the final report of the National Commission on Truth and Reconciliation (the Truth Commission, or Rettig Report), presented in February 1991 to then-President Patricio Aylwin.

On stepping down as army chief, Pinochet was granted a permanent seat in the country's Senate, immunizing him from prosecution. Human rights activists pursued a novel legal strategy by charging him for genocide, torture, and kidnapping in a Spanish court. In October 1998 he was arrested in Britain on the charges. There ensued a 16-month legal battle over the Spanish court's extradition order. In 2000 he returned to Chile and was declared unfit to stand trial due to mental and physical ailments. Living the rest of his life in seclusion with his family, dogged by lawsuits and legal charges, he died on

December 10, 2006. Public opinion polls after his death showed that slightly more than half of Chileans believed that he should have been prosecuted for his regime's human rights violations.

MICHAEL J. SCHROEDER

Poland (1991–present)

Poland was the most rebellious of the Soviet-bloc countries, with mass protests in 1956, 1968, 1970–71, 1976, and 1980–81. The society was heavily influenced by the Catholic Church, and the memory of the Polish pope, JOHN PAUL II, remains very strong. After the political changes of 1990, Poland made fast progress toward achieving a market economy and a democratic government and making Polish democracy work effectively by civic engagement in public discourses.

Roundtable talks on Poland's first free elections took place in 1988–89. In April 1989 the communist leadership agreed with the Solidarity leadership on competitive elections, where just 35 percent of the seats were open to genuine competition. During the following presidential elections, in November 1990, Lech Wałęsa—a former electrician, shipyard worker, and leader of the opposition since 1980—became the first democratically elected president of Poland. Later on, the parliamentary elections were held with the participation of over 100 political parties. The country saw a rough democratic start, and elections were declared again in 1993. At that time, the successor of the communist party, the Alliance of the Democratic Left (SLD), received the largest share of the votes. In November 1995, in the second presidential elections, Aleksander Kwasniewski defeated Wałęsa and became the second president of democratic Poland.

The leading political issue of the last years of the 1990s was negotiations with the NORTH ATLANTIC TREATY ORGANIZATION (NATO). Poland joined the defense organization in 2000. During subsequent years, talks with the EUROPEAN UNION (EU) regarding the Polish accession received much attention. Poland joined the EU in May 2004.

In the presidential elections of 2000 and the parliamentary elections of 2001, the successor of the Communist Party, the SLD, won. However, that government lost popularity rapidly after it failed to fulfill promises to upgrade the road network of the country and to undertake a profound reform of the national health system. In addition, these years saw corruption scandals. Right after Poland's admission to the EU, the cabinet resigned and a new cabinet was formed, with Marek Belka as prime minister. Secrecy in the governing party and scandals contributed to the outcome of the presidential and parliamentary elections of 2005, when the conservative Law and Justice (PiS) and Citizens Platform (PO) became the largest parties in the Polish parliament, the Sejm. PiS leader Jarosław Kaczyński declined the option of becoming prime minister because his twin brother, Lech Kaczyński, was still in the race for the presidential seat. Kazimierz Marcinkiewicz was nominated for that post; however, Jarosław Kaczyński is still considered one of the most influential persons in contemporary Polish politics. Lech Kaczyński did win the presidential election. The main emphasis of his presidency was on combining modernization with tradition and Christianity. The influence of the Kaczyński might increase European skepticism and the focus on Polish Catholic traditions in the near future.

In the second half of the 1980s Poland's economy struggled with mounting macroeconomic imbalances, which culminated in 1989, when hyperinflation and an extremely high central budget deficit hit the country. After that time, Poland was regarded as one of the most successful transition economies in eastern and central Europe. The country's GDP per capita rose from 31 percent of the EU average in 1992 to 41 percent by the end of the 1990s. One of the challenges of the economic policy was transforming the excessive and poor investment inheritance from the command economy, which was achieved by injecting new technologies into old plants. In addition, most industry subsidies were removed, and the market was opened up to international cooperation.

Between the early 1990s and the mid-2000s, the country received over \$50 billion in direct foreign investment. With the collapse of COMECON in 1990, Poland had to reorient its trade, and in few years Germany had become its most important trade partner, followed by other EU countries. Despite all of Poland's economic successes, there has been an unusually complicated situation in Polish agriculture and rural areas. Poland was the only country in the Soviet bloc whose farmland remained for the most part in private hands.

The farmers' dramatically low income levels affected their farms in terms of production and development. Over half of the farms produce only for their own needs, with minimal commercial sales. Despite its small farms, Poland is the leading producer of potatoes and rye in Europe and a large producer of sugar beets.

Unlike the dramatic developments in Polish politics and economics, its society changed at a different pace. The political transformation of 1989–90 was the culmination of radical social change, which profoundly affected Polish society. New social movements and the fundamentals of a civic society were in place by the late 1980s. Disappointment in the society in the early 1990s was in large part due to high expectations of the rapid political and economic changes, which exceeded the possibilities of the weak economy. A significant share of Polish society is Euro-skeptic, opposing globalization and stressing traditional national and Catholic values.

Polish cultural life flourished even under communist rule, but the political and economic changes opened up new possibilities for generations of artists. Polish jazz, with its special national flavor, is known worldwide, and the film industry of the country has been one of the most important in Europe. Polish avant-garde theater, along with various high-culture music festivals and art exhibitions, are world famous, and Polish popular culture has been receiving growing attention and sponsorship within the country as well.

VIKTOR PAL

Pol Pot

(1925–1998) *Cambodian communist leader*

Pol Pot (born Sar Saloth) came from a rather wealthy peasant family in the central Cambodian Kampong Thum

Province. Through family connections to the Cambodian Royal Court, he was able to gain access to a formal education in both Cambodia and France. He was not the best student and ended up in a technical school. While studying in France, Pol Pot joined several communist organizations and student groups, including the Cercle Marxist, whose members would later provide the leadership of the Cambodian Communist Party.

Antidemocratic policies imposed by Cambodian King Sihanouk and rampant corruption in the electoral process after the 1954 Geneva Conference convinced the left that they would never gain control over Cambodia through peaceful means. A 1962 government roundup of Cambodian leftist and communist leaders left Pol Pot in charge of the party. In 1963 Pol Pot went into hiding in the jungle near the Vietnamese border and contacted the North Vietnamese government hoping that it would aid his communist movement and revolutionary aims. Help was not forthcoming due to North Vietnam's agreements with Sihanouk over their use of the border for the Ho Chi Minh Trail. It was in the border camps that Pol Pot fashioned the Khmer Rouge ideology. The Khmer Rouge held that Cambodia's rural peasant farmers were the working-class proletarians. This was necessary because Cambodia had almost no industrial working class and because most of the Khmer Rouge leaders came from peasant backgrounds.

In 1968 Pol Pot transformed himself into an absolutist leader and minimized collective decision making in the Khmer Rouge leadership. This coincided with a continuing growth of the party due to successive waves of government repression, which also shifted the loyalty of the peasants toward the Khmer Rouge. In 1970 the national assembly voted to remove Sihanouk from power and expel the Vietnamese from the border region. This caused an antigovernment alliance between the Khmer Rouge and Sihanouk. Their main military force consisted of 40,000 Vietnamese sent to secure access to the Ho Chi Minh Trail.

During this time, the Khmer Rouge began to “liberate” significant portions of Cambodia and remolded society into their view of agrarian paradise. Communes were organized, private property was banned, and the trappings of wealth were removed from the people. They evacuated all cities and towns they controlled and sent their people to work in rice fields. Former military and government officials, along with the rich and those who had an education, were “purged” (murdered). These policies were applied to the entire country and even Khmer Rouge members after Phnom Penh fell in 1975. Eventually, more than one-quarter of Cambodia's

population of 8 million was killed through starvation, sickness, or murder. Education all but ceased after most intellectuals were murdered.

In late 1978 Vietnam invaded Cambodia after a series of border clashes instigated by the Cambodians. A new Vietnamese-backed regime was installed in January 1979 after Pol Pot and the Khmer Rouge fled the capital for the Thai border region. For the next 19 years, Pol Pot led an insurgency against the new government until his death. The legacy of the Khmer Rouge has been continuing misery brought on by their sowing of millions of Chinese-supplied land mines over significant areas of Cambodia.

COLLIN BOYD

Portugal (1930–present)

Portugal has been a land of paradoxes. For much of the 20th century, it was simultaneously a weak, agrarian, poverty-stricken, isolated state on the periphery of Europe and the seat of a vast colonial empire. It had used an alliance with Britain to sustain this paradox for a long time. Portugal relied on Britain to keep Spain at bay and to secure its claim to its colonial holdings. In return, the Royal Navy enjoyed access to a far-flung network of colonial ports to be used as coaling stations. Modern nationalism in Portugal dates from the popular reaction to the British ultimatum of 1890, which foiled a Portuguese scheme to connect Angola and Mozambique by seizing the intervening territory. For half of the 20th century, the country was governed by Western Europe's most enduring authoritarian regime. Then, in 1974–76, it became the only NORTH ATLANTIC TREATY ORGANIZATION (NATO) country to experience a full-fledged social revolution. After approaching the precipice of civil war, Portuguese society backed down and built a working democracy.

Portugal overthrew its monarchy in 1910. The country established a new constitution the following year and became Europe's third republic, after Switzerland

and France. There were several coups over a 16-year period. In reaction to labor unrest in the early 1920s, extra-parliamentary right-wing organizations arose. These groups lent their support to a bloodless military coup in 1926.

Two years later, in the wake of financial crisis, the military regime brought an economics professor out of the obscurity of the University of Coimbra and named him minister of finance. António de Oliveira Salazar had a limited set of priorities in that office: to generate a budget surplus and to stockpile gold. He proved to be quite effective at what he set out to do. He quickly overshadowed a succession of military prime ministers and won supporters among officers, clergy, businessmen, bankers, and landowners.

THE NEW STATE

The military regime was a little more stable than its predecessor. Salazar, whose star was already rising within the regime, founded a new party in 1930, the National Union (União Nacional), to unify the regime's supporters. In 1932, as the Great Depression advanced, he was appointed prime minister, a position he would hold for the next 36 years.

Salazar promulgated a new constitution in 1933, establishing the New State (Estado Novo). The National Assembly, consisting of the Chamber of Deputies and the Corporatist Chamber, had severely limited powers. Salazar selected nearly all candidates personally. Rights and liberties proclaimed by the constitution were nullified by government regulation. Various sectors of society were organized from above in corporatist fashion. The political police maintained surveillance over potential opponents, many of whom fled into exile. Censors erased any hint of dissent.

From 1936 to 1944 Salazar was also minister of war. In that position he found he could shrink the size of the army and control officers' salaries, transfers, retirements, and even marriages. Officers were encouraged to marry wealthy women so that their salaries could be kept low. A politicized government-run militia, the Portuguese Legion (Legião Portuguesa), partially offset the army's influence.

Thus it was Salazar, not the military, who consolidated the authoritarian regime. His was a conservative, corporatist police state, but it was not a true fascist state. It did not seek to overthrow traditional elites or mobilize society around its goals. Rather, Salazar sought to demobilize—or even freeze—society and to reject modernity. Rather than exalting war, Salazar strove for a kind of neutrality. In any event,

his austere policies left the armed forces with a very low level of effectiveness.

SPAIN AND WORLD WAR II

Salazar viewed Spain's leftist Popular Front government as a threat. When General Francisco Franco rebelled against it in 1936, launching the Spanish civil war, Portugal officially followed the lead of Britain and France by promising nonintervention, but surreptitiously funneled aid to Franco. Franco's agents were allowed to operate on Portuguese territory. Thousands of volunteers went to Spain to fight against the Republican cause. At the end of the war, in March 1939, Salazar and Franco signed a treaty of friendship and nonaggression, known informally as the Iberian Pact.

Salazar declared Portugal's neutrality in World War II on September 1, 1939, the very day Poland was invaded. He also sought to keep the war as far away as possible by bolstering Spain's neutrality. In the wake of its civil war, Spain was in no condition to take an active role in World War II, but Portugal's position highlighted the potential costs of even a passive role, as in allowing the Germans to pass through to take the British stronghold of Gibraltar.

The strategic situation changed for the Iberian Peninsula as the Germans became tied down in the Soviet Union and the Allies moved into North Africa and Italy. It was now highly unlikely that Spain would intervene on Germany's side. Salazar allowed himself to be persuaded to join the Allied cause, albeit passively. From the Allied perspective, the Azores were the key objective. Situated in the mid-Atlantic, these Portuguese islands would be useful bases both for antisubmarine warfare and for refueling transatlantic flights in the buildup prior to the great invasion of France. First Britain, and then the United States, acquired access to facilities there, and Portugal ceased selling tungsten to Germany while still claiming to be neutral.

POSTWAR PORTUGAL

Portugal's shift put it on the winning side, improving its bargaining position in postwar Europe and increasing its chances of getting back East Timor and Macao, which had been occupied by the Japanese. Still, the semifascist state was in an ambiguous position after the war. It began to describe itself as an "organic democracy" rather than a "civilian police dictatorship," an expression that had been used in the 1930s.

Portugal was not invited to the San Francisco conference, which established the UNITED NATIONS, and was denied UN membership until 1955. Portugal was,

however, a founding member of NATO chiefly because the United States still wanted access to bases in the Azores. Portugal's relations with the United States and NATO replaced its traditional alliance with Britain. Unlike Britain's earlier guarantee of Portugal's overseas territories, however, NATO's area of responsibility was expressly restricted to Europe to avoid its being drawn into colonial wars.

A certain "softening" marked the Salazar regime in the postwar era. There was no real institutional change, but some of the more fascistlike institutions were allowed to erode. On the other hand, after a dissident general managed to win 25 percent of the vote in presidential elections in 1958, the direct election of the president was discontinued. A degree of economic liberalization led to the growth of the service sector and a larger middle class in the 1960s. Industry, previously limited to textile production, added electrical, metallurgical, chemical, and petroleum sectors.

A stroke immobilized the dictator in 1968, although he lingered for two more years. His successor was Marcello José das Neves Caetano, who, not coincidentally, had also succeeded him in his chair at the University of Coimbra. Caetano brought technocrats into the regime, retired some of Salazar's old-school hangers-on, and favored economic development over cultivated stagnation, but again the basic system remained.

AFRICA

War was spreading in the African colonies of Portuguese Guinea (Guinea-Bissau), Angola, and Mozambique. The policy of the New State had been to instill pride among the Portuguese in their empire, a legacy of Portugal's glory in the age of discovery. The state also reasserted national control over the colonies, where foreign corporations had conducted much of the economic activity.

African farmers were compelled to shift from subsistence crops to cotton for the Portuguese market in the 1930s, and more so as World War II disrupted other trade sources. Portuguese investment in Africa began to take off in the years after the war. Portuguese emigration tripled the white population of Mozambique and quadrupled that of Angola between 1940 and 1960. Initially, even the outbreak of the wars of national liberation spurred economic growth, as the state responded by boosting civil and military investments. All of these changes disrupted the lives of the Africans, and many of them also undermined the few existing bases of support for Portuguese rule.

In 1961 a revolt against forced cotton cultivation broke out in Angola. Fighting escalated with retributions and counterretributions; it spread to Guinea in 1963 and Mozambique in 1964. The government quickly repealed

forced cultivation and forced labor. It also mobilized troops and dispatched them to Africa. Large numbers of Africans were concentrated in strategic villages (*aldeamentos*) where their actions could be controlled. In 1961 the United States called on Portugal to decolonize. The insurgents sought and received military aid from the Soviet bloc and China.

In order to fight the leftist insurgency most effectively, the military high command assigned junior officers to read the political tracts of African revolutionary leaders, such as Amílcar Cabral of Guinea-Bissau. To their ultimate surprise, a sizable number of junior officers were convinced that the insurgents were right. Some of them also concluded that Portugal itself was an underdeveloped Third World country in need of "national liberation."

REVOLUTION OF THE CARNATIONS

A diverse group of disgruntled junior officers in 1973 formed a clandestine political organization, the Armed Forces Movement (Movimento das Forças Armadas, MFA). On April 25, 1974, the MFA deposed Caetano. The New State collapsed without resistance. Holding red carnations, demonstrators had persuaded other military units not to resist. The MFA then stepped back, but this proved only temporary. The young officers would soon be in the midst of a political free-for-all to determine the direction of the revolution. They too coalesced into a number of factions built around competing political orientations and personalities. Captain Otelo Saraiva de Carvalho became the focal point of one radical faction, once styling himself as the FIDEL CASTRO of Europe. Colonel Vasco Gonçalves began as a moderate, but moved to a position close to the Portuguese Communist Party. A moderate faction, later dubbed the Group of Nine, formed around Lieutenant Colonel Melo Antunes. Finally, further behind the scenes until the last stages of the revolution were the "operationals," a group of officers largely concerned with professional military matters and associated with Lieutenant Colonel António Ramalho Eanes.

The Junta of National Salvation (Junta de Salvação Nacional) was formed from moderate senior officers. General António de Spínola, a former military governor of Guinea-Bissau, was invited to lead the junta as provisional president of the republic. Palma Carlos, a liberal law professor, was named provisional prime minister. Political parties of all stripes were legalized, and political prisoners were released. Political exiles streamed back into the country. Cease-fires were arranged in Africa. In one of the most fateful decisions of the new regime, the leaders promised elections for a constituent

assembly within a year, the first real elections in over half a century, and with universal suffrage and proportional representation.

The revolution had released popular tensions that had been building up for decades. Turmoil spread quickly in the newfound freedom, and rival power centers competed to control the situation. Spurred on by the newly legalized Portuguese Communist Party, Maoists and other leftist groups and workers staged strikes and seized factories, shops, and offices. Students took over schools and denounced teachers for “fascist sympathies.” Services broke down, and shortages became common. Right-wing groups, especially in the conservative rural north, began to mobilize and arm themselves.

In July the Palma Carlos government collapsed amid the turmoil, and prominent members of the MFA moved into key positions. Carvalho was promoted to brigadier general and put in charge of the army’s new Continental Operational Command (Comando Operacional do Continente, COPCON), which became the principal arbiter of order as the police disintegrated. Colonel Vasco Gonçalves was appointed to the position of prime minister. The MFA radicals regularly overruled Spínola’s decisions and also forced him to accept the independence of the colonies. In September a major demonstration planned by Spínola to bolster his position forced a confrontation with COPCON, which resulted in Spínola’s resignation. General Francisco da Costa Gomes, who was more sympathetic to the left, assumed the presidency.

The most radical phase of the revolution began in March 1975. Spínola launched an unsuccessful coup attempt on March 11. In response, the radical wing of the MFA abolished the Junta of National Salvation and formed the Revolutionary Council (Conselho da Revolução), some 20 officers responsible only to the MFA Delegates’ Assembly. The council nationalized the banking system, press, utilities, and insurance companies. With elections for the Constituent Assembly scheduled for April 25, the anniversary of the revolution, the MFA pressed a “constitutional pact” on the six largest parties, which recognized the permanent supervisory role of the MFA in a “guided” democracy.

Turnout was high for the elections, in which 12 parties competed, but the outcome shocked the radicals. The moderate Socialist Party came in first with 37.9 percent, followed by the right-of-center Social Democrats (originally called the Popular Democrats) with 26.4 percent. The Communists, the electoral ally of the MFA radicals, garnered only 12.5 percent.

TALK OF CIVIL WAR

The MFA responded during the “hot summer” (*verão quente*) of 1975 by styling itself as a national-liberation movement. In the south, landless agricultural laborers seized large estates and declared them collective farms. Moderate Socialists and Social Democrats resigned from the government. Small freehold farmers formed armed groups, held counterrevolutionary demonstrations, and bombed the offices of leftist parties. Plans were drawn up for a possible alternative government in the north. COPCON was beginning to disintegrate, and individual army units were under pressure to declare their political orientation. Both society and the MFA itself were becoming increasingly polarized, and there was talk of civil war.

As a consequence of the growing tension, Gonçalves and his government were pressed to resign at the end of August, and they did so. A new, more moderate provisional government was installed.

Dissatisfied with this outcome and determined not to “lose” the revolution, radical paratroopers attempted to organize a coup in November 1975. Like Spínola’s coup attempt, however, this backfired. Lieutenant Colonel António Ramalho Eanes, of the MFA’s professional military faction, led a purge of the MFA radicals. COPCON was disbanded and Otelo, its commander, placed under house arrest. Eanes was named army chief of staff and made a member of the Revolutionary Council. The “constitutional pact” was renegotiated in February 1976. Elections were held for the new Assembly of the Republic in April, and Eanes was elected president in June with 61.5 percent of the vote in the first round.

The Constituent Assembly sought to avoid both the weak, unstable governments of the 1911 constitution and also the authoritarianism of the 1933 constitution. Based on the French model, the new system called for both an elected president with real powers and an executive prime minister chosen by a majority party or coalition in a freely elected parliament. The renegotiated constitutional pact still called for socialism as the goal of government and society and institutionalized the legacy of the revolution. Moreover, it retained the Revolutionary Council, still a self-appointed and purely military institution, and gave it the power to safeguard the legacy of the revolution and judge the constitutionality of legislation passed by the civilian government.

The first elected government was led by Mário Soares of the moderately leftist Socialist Party. In 1979 however, a center-right government of Social Democrats and Christian Democrats was elected. The inherent tension between the elected government and the essentially

undemocratic council became evident as the cabinet sought to privatize portions of the economy.

After a standoff that lasted roughly from 1979 to 1982, a process of normalization set in and the undemocratic vestiges of the revolution were gradually excised. In particular, a constitutional reform in 1982 abolished the Revolutionary Council and sent the army back to the barracks. In the elections of 1986 Soares became Portugal's first civilian president in 60 years, replacing Eanes. Another constitutional reform, in 1989, eliminated the requirement to keep the nationalized sector of the economy. The moderate Socialist and Social Democratic parties had increasingly come to dominate the political system, reducing the need for multiparty coalitions and increasing the stability of government. Portugal had become a far less hierarchical and far more pluralistic, democratic, and dynamic society than it had been before 1974.

In 1986 the EUROPEAN ECONOMIC COMMUNITY (now the EUROPEAN UNION) accepted Portugal and Spain simultaneously as members. The opening to trade, the inflow of European investments for infrastructure and other purposes, and the constitutional changes of 1989 spurred growth and helped transform the economy. Economic growth surpassed the European average in the 1990s and until 2002. While, like any country, Portugal was not without its scandals, controversies, and disagreements, by the end of the century it had become integrated as a solidly democratic, stable, and respected member of the European community.

SCOTT C. MONJE

Prague Spring

Czechoslovakia became fully communist in February 1948 and was a member of both the WARSAW PACT and

the Council for Mutual Economic Assistance (COM-ECON, the Soviet counterpart to the MARSHALL PLAN). As such, it had very close ties to the Soviet Union, politically as well as economically. During the 1960s, following the ascension of NIKITA KHRUSHCHEV to the position of premier, the Soviet Union's relations with its satellite nations in eastern Europe softened, leading to greater flexibility in their political and economic policies. One of the greatest tests of how far this new flexibility would stretch was initiated by Alexander Dubček, the political head of Czechoslovakia. Another factor influencing these events was the spread of student movements across the continent of Europe, particularly in West Germany, Italy, and France. In 1967 these student movements spilled over into Czechoslovakia and dovetailed with increasing intellectual dissent among some of the Communist Party membership.

Internally there were deep-rooted fissures in the unity of the state. The Communist Party of Czechoslovakia was fragmented, stemming from the political trials of the 1950s, which revolved around questioning party comrades' commitment to Stalinism. As the party discussed economic changes, two unforeseen developments occurred. Some among the party began to call for relaxed censorship, and Slovak nationalists began to demand a greater share of political power. These events led to the resignation of president and first secretary of the Party Antonín Novotný. Later in March Ludwig Svoboda assumed the post of president, due to legislation that mandated that these two positions be separated, as Novotný's criticism of early reforms foundered.

Dubček then implemented a series of radical reforms collectively known as the Action Program. These reforms allowed freedom of expression rather than strict censorship; promoted open, public discussion of important national issues; democratized the KSC; provided amnesty for all political prisoners for the first time in 20 years; encouraged greater economic freedom; allowed noncommunists to assume high-ranking government positions; and opened investigations into the political trials of the 1950s. These reforms became known as the Prague Spring, harkening back to the 1956 attempts of Hungarian Imre Nagy to redefine the role of the Communist Party within the state. The reforms were officially approved by the government on April 5, 1968; however, a rift between liberal communists, who supported Dubček, and hard-line communists, who supported Moscow's policy, became more clearly defined. Czechoslovak intellectuals responded by calling for long-term commitment, through the publication of a manifesto, which became known as the "Two Thousand

Words.” The Soviet reaction to this manifesto was swift and critical, which pushed Dubček’s government to officially condemn its ideas in order to preserve its delicate relations with the Soviet Union.

Czechoslovakia’s Warsaw Pact neighbors saw this blossoming of freedoms, particularly the “Two Thousand Words,” as a potential danger that threatened to spill over the border and raise public protest within their own nations. However, initially through a series of meetings, it seemed as if the Warsaw Pact nations would allow these experiments to continue. In late July and early August of 1968, at the border village of Cierna nad Tisou, the political leadership of Czechoslovakia and the Soviet Union met to discuss these developments. This meeting was followed by an additional conference, adding delegates from Bulgaria, East Germany, Hungary, and POLAND, which convened at Bratislava on August 3. These meetings ended with promises of renewed friendship and commitment to socialism; yet Warsaw Pact troops began to mass along the border with Czechoslovakia.

Suddenly, during the night of August 20–21, 1968, the Soviet Union and other Warsaw Pact nations sent 500,000 troops across the border, while Soviet aircraft landed special forces directly in the capital city of Prague, seizing control of key transportation junctures and communication networks. The native population responded with defiance, seen in public protests and demonstrations, and more than 80,000 political refugees streamed into the West, seeking asylum. The Soviets suffered minor military losses of 96 killed and 87 wounded; only 11 of those killed died due to direct confrontation with Czechoslovak citizens. By mid-September, Warsaw Pact troops had killed more than 80 Czechoslovakian citizens, seriously wounded another 266, and lightly wounded an additional 436. The Soviet Union was unable to establish an alternative government, and initially kept Alexander Dubček in his post. Dubček gave in to Soviet demands and repealed his progressive policies. In April 1969 the Soviets installed Gustav Husák as Dubček’s replacement, and Husák then carried out “normalization” efforts and presided over a purge of the KSC.

Prague Spring marked the end to the flexibility of Khrushchev, but it also stood as a harbinger of MIKHAIL GORBACHEV’s policies of glasnost and perestroika of the 1980s. Under the leadership of LEONID BREZHNEV this autonomy would cease to exist, a trend that lasted until the time of Gorbachev and the early rumblings of the revolutions of 1989. Brezhnev made this policy shift clear; essentially the “Brezhnev Doctrine” meant that although the Soviet Union would not normally interfere in the affairs of its satellite states, if the system of social-

ism itself was under direct threat the Soviet Union would help any communist regime maintain power against the threat of overthrow.

LAURA J. HILTON

presidential impeachment, U.S.

The framers of the U.S. Constitution sought to check presidential power by creating a process for Congress to remove the president for reasons of “treason, bribery, or high crimes and misdemeanors.” No president has ever been removed from office in this fashion, but two presidents in the second half of the 20th century were subject to impeachment inquiries based on congressional definitions of “high crimes and misdemeanors”: RICHARD NIXON, a Republican, and BILL CLINTON, a Democrat.

The process for impeaching the president is spelled out in the Constitution, but has seen an added step produced by the committee system in Congress. The House Judiciary Committee originates the indictment against the president, producing one or more articles of impeachment to define the president’s “high crimes and misdemeanors.” The articles are then subject to a vote by the full House of Representatives and require a majority approval to impeach the president. The Senate then tries the president, with the chief justice of the Supreme Court presiding. At the end of the trial the Senate votes; a two-thirds majority is needed to remove the president.

The attempt to impeach Richard Nixon centered on the illegal activities committed by members of his administration and the attempted cover-up in which he participated. During the first term of his presidency, Nixon engaged in questionably legal activities such as the authorization of the FBI to tap the phones of administration officials and reporters to prevent leaks, and the authorization of the creation of an in-house investigative group, the Plumbers, to prevent leaks and embarrass “enemies” such as Daniel Ellsberg and Senator Edward Kennedy. This willingness to circumvent the law led directly to attempts by the Committee to Re-elect the President (CREEP) to undermine potential

Democratic candidates and to seek information from the headquarters of the Democratic National Committee in the WATERGATE office complex. When men who were employed by CREEP staffers G. Gordon Liddy and E. Howard Hunt were apprehended in the Watergate on June 17, 1972, Nixon and his top aides responded by attempting to cover up the president's involvement in the affair. A bipartisan majority of the House Judiciary Committee approved three articles of impeachment against President Nixon, centering on the abuse of power, obstruction of justice, and defiance of a congressional subpoena to turn over the tapes of recorded conversations. To avoid certain removal Nixon resigned from office on August 9, 1974.

At least in part, the attempt to impeach Bill Clinton appeared to grow out of a desire for revenge over the Nixon impeachment attempt. The Clinton administration was subject to several investigations by independent counsels and, after 1994, by the Republican-controlled Congress, both about the behavior of administration officials during his presidency and questions about the financial dealings of the president and his wife, Hillary Rodham Clinton. Although Congress and independent counsel Kenneth Starr failed to uncover criminal activity by the president or his wife, they did determine that President Clinton had lied about conducting an extramarital affair with a White House intern.

The House Judiciary brought two articles of impeachment against the president on December 19, 1998, centering on lying to Congress and obstruction of justice. The full House voted to impeach the president on both articles on a near-party line vote. After trial by the Senate President Clinton was acquitted of both articles of impeachment on February 12, 1999. President Clinton served out his term in office.

Since in both cases of impeachment the president's party did not control Congress, the process of impeachment has been tarred by the charge that partisanship, rather than presidential malfeasance, has been the primary motive for action. This charge had more resonance in the impeachment of President Clinton than in that of President Nixon because of the criminal acts committed by Nixon and his associates. Nevertheless, the process of impeachment remains a potential check on presidential power.

RICHARD M. FILIPINK, JR.

Putin, Vladimir

(1952–) *Russian president*

Vladimir Vladimirovich Putin was born in Leningrad on October 7, 1952, and was very much a product of the Soviet system. His family background was ordinary and reflected the hardships of postwar Soviet life. Putin applied himself to improving his position in the Soviet order and looked, once he graduated in law from Leningrad State University, to a career in the security services (KGB) as the best method of doing so.

Following initial duties dealing with Leningrad dissidents, Putin took up from 1985 to 1989 a KGB posting in East Germany. After the collapse of the East German regime, Putin moved to the international affairs section of his old university and within a short time joined the Leningrad politician Anatoly Sobchak as an aide; following Sobchak's election in 1991 as mayor, Putin became deputy mayor. His abilities were noticed in Moscow, and he joined the Kremlin staff in 1996 as an assistant to Pavel Borodin overseeing Russian economic assets. This post soon brought him to the attention of President BORIS YELTSIN, who, in 1998, appointed Putin head of the Federal Security Service (the replacement for the KGB), from which post Putin quickly rose to be head of the Security Council in 1999.

These times were unstable ones for Yeltsin and the Russian Federation. Within a period of 18 months several prime ministers came and went. When Yeltsin fired Sergei Stepashin in August 1999, he appointed Putin prime minister. He was now in position for succession to the presidency, which unexpectedly came his way when Yeltsin resigned on December 31, 1999, and Putin became acting president. A presidential election followed in March 2000, and Putin won convincingly. The backing of the security services and many economic reformers gave him a political base to overcome any threats from the nationalist Fatherland Front.

In his first years in office, Putin faced a number of crises stemming from the unrest and malaise of the Yeltsin years. Chechnya, controlled by Islamic militants, was clearly the most significant. He attempted to resolve the war, but terrorist bombings in Moscow brought a swift and punishing military retaliation.

Vladimir Putin was elected president of Russia in March 2000, after the turbulent years of the Boris Yeltsin administration.

In addition, he wanted to reverse some of the decentralizing traits of the Yeltsin years, and this meant imposing more Moscow control over the outlying regions through a system of appointed governors. He moved against the oligarchs who had profited during the Yeltsin years. The crisis following the sinking of the submarine *Kursk* in August 2000 hurt Putin's reputation when the government appeared incapable of reacting to the disaster.

In terms of policy, Putin wanted to restore something of the order and pride that had existed during the Soviet era. This meant that some old symbols of state were preserved along with the belief in centralizing control over both the economy and the media. Following Putin's Unity Party landslide victory in the 2003 parliamentary election, it was suggested that control of the state media produced the favorable results.

On March 14, 2004, Putin won decisively his second term in office. He continued his campaign to strengthen state powers. There were also improvements in the justice system and reform of the difficult tax laws that inhibited investment and development. Some see recent actions as a reflection of the antidemocratic instincts that lurk behind the scenes in Putin's adminis-

tration. Putin's 2004 support of Viktor Yanukovych in the Ukrainian election was viewed by critics as an exercise in undue influence on the affairs of a neighboring independent state.

In foreign affairs, Putin built positive relationships with much of the West, including the president of the United States, although he opposed the SECOND GULF WAR. However, after the events of September 11, 2001, he was generally supportive of U.S. action in the War on Terror, including the use of bases in former Soviet Central Asian territories. His country's own campaign against Islamic terror made him a willing ally. His provision of nuclear technology and advanced weapons to Iran raised doubts as to his sincerity. He also reluctantly accepted the U.S. abrogation of the ABM treaty as part of America's missile defense program.

Putin cooperated with the enlargement of the NORTH ATLANTIC TREATY ORGANIZATION, which now includes former Baltic Soviet Republics bordering Russia. Relations with Europe were strengthened by an agreement in 2005 with Germany to construct a major oil pipeline that should bring economic benefits to both Russia and Germany. Putin also attempted to build favorable relationships—economic and political—with his Asian neighbors, China and Japan.

It is too early to determine Putin's legacy but he maintained his popularity with campaigns against corruption and the oligarchs. Economic improvements and stability were welcomed by a public often left in turmoil following the collapse of the Soviet Union. Although not an open democracy on Western terms, and with features that suggest the possibility of returning to old ways, Russia remains a world force and one that has the unrealized potential for full democratic development.

THEODORE W. EVERSOLE

Qaddafi, Muammar

(1942–) *Libyan leader*

Muammar Qaddafi was born in the desert region of Sidra (Sirte), LIBYA, in 1942. He was the youngest child from a nomadic Bedouin family. Qaddafi attended the Sebha preparatory school in Fezzan, where he formed a secret society, the Free Officers, patterned on GAMAL ABDEL NASSER's group in Egypt that championed the causes of pan-Arabism and Arab socialism. In 1961 Qaddafi was expelled from Sebha because of his political activism. In April 1963 Qaddafi became a trainee officer at the military academy in Benghazi and began to work his way up through the army officer corps. In 1966 he volunteered to go and study with the Royal Corps of Signals in Britain, where he learned radio electronics and telecommunications. He was able to develop a code that the secret Free Officers group used to maintain contact with one another throughout Libya.

Qaddafi and his close friends from Sebha became the core of the revolutionary group that overthrew King Idris and removed Italian influence from Libya. Qaddafi called off the projected coup against the king twice before going ahead with it on September 1, 1969. While Idris was out of the country, the Free Officers arrested the king's leading supporters in a bloodless coup. The first objective was to take control of the main barracks and the radio station. After securing the radio station, Qaddafi gave an impromptu speech announcing that the monarchy had ended and that Libya had been given back to the people. Qaddafi was appointed

president of the Revolutionary Command Council, the main governing body of the country. The Free Officers promptly refused to renew agreements with Britain and the United States for their military bases in Libya; they also emphasized Arab unity. They nationalized most banks and other business and declared Islam the religion of the state while stating that religious freedom would be accorded to all other faiths. In the midst of the COLD WAR, the Western nations,—particularly the United States—were hostile to these changes and Qaddafi's fiery brand of Arab nationalism.

In hopes of creating a pan-Arab state, Qaddafi proclaimed the Federation of Arab Republics (Libya, Egypt, and Syria) in 1972, but the three countries could not agree on specific terms. In 1973 Qaddafi talked for the first time about his third universal theory, an economic and political philosophy that was neither capitalist nor communist. At this time he also nationalized all foreign petroleum assets. Increased revenues from petroleum during the 1970s enabled Qaddafi to initiate massive programs of domestic development and to build a modern infrastructure. At the same time, Libyan forces occupied the 60-mile-wide Aouzou Strip on the border of Chad. The skirmishes between Libya and Chad continued sporadically for years to come. Qaddafi gave massive amounts of financial aid to African nations and was a prominent figure in the Organization of African Unity.

In 1974 Qaddafi gave up all his political and administrative functions, but still remained head of state and commander in chief of the armed forces. On March 2,

1974, Qaddafi proclaimed that Libya was to be known as the Socialist People's Libyan Arab Jamahiriya. He subsequently stepped down from all public offices but remained the real ruler of Libya from behind the scenes.

In 1975, Qaddafi published the first of three documents called *The Green Book*, which expounded his personal philosophy and political belief translated into a program of action. *The Green Book* became part of every Libyan's life and was studied in schools; extracts were broadcast daily, and its slogans were publicized throughout the nation. Part one of the book, *The Solution of the Problem of Democracy—The Authority of the People*, concentrated on the political structure of Libya and rejected the concept of parliamentary democracy. Part two, published in 1977 and entitled *The Solution of the Economic Problem—Socialism*, discussed the weaknesses of both communism and capitalism. Part three, published in 1981 and entitled *The Social Basis of the Third Universal Theory*, dealt with a wide range of issues including nationalism and the status of minorities and women.

Qaddafi's hostility toward Israel and the West brought him closer to the Soviet Union. Western governments also blamed him for a series of terrorist attacks against civilian targets. In 1981 U.S. and Libyan air forces clashed over the Gulf of Sidra. Hoping to stop terrorist attacks, President RONALD REAGAN authorized a bombing raid to assassinate Qaddafi in 1986. Although his adopted daughter died in the attack, Qaddafi survived this and other attempts on his life.

During the 1990s, Qaddafi began to adopt a more moderate approach to the West and provided financial compensation for some terrorist victims in order to repair diplomatic relations. Although domestic opposition to his regime continued to mount, he remained in power and seemingly began to groom his son as his successor.

al-Qaeda

Al-Qaeda (Arabic for "the base") is a worldwide Sunni Islamist militant insurgent group. Founded by Osama bin Laden in 1988 in Afghanistan, al-Qaeda is now dedicated to driving the United States out of the Middle

This propaganda poster featuring al-Qaeda leader Osama bin Laden was found by U.S. troops in Afghanistan.

East specifically and out of Muslim countries generally, to destroying Israel, and to toppling pro-Western governments in Islamic countries and replacing them with Islamic fundamentalist governments. These three goals lead to the organization's ultimate goal, which is the reestablishment of the caliphate, a nation uniting Muslims and spanning the Islamic world.

The organization is believed to be highly redundant, both financially and operationally. While the various cells that make up the organization are accountable to higher-level leadership, operations appear to be left to the individual cells, while higher levels provide material and logistical support. Ideas and targets coming from the upper echelons filter down to the individual cells responsible for coordinating and executing the attacks. This redundancy increases the organization's resiliency; when cells are destroyed or captured, the losses can be contained more effectively than if al-Qaeda were a more linear organization.

Al-Qaeda's training camps are likewise well organized. The extent of the training and organization is best seen in the group's multivolume *Encyclopedia of Jihad*. Several thousand pages in length, the encyclopedia details the bureaucratic workings of the group. Covered topics include guerrilla warfare, assembling booby traps, tactics for fighting against armored or aerial combat units, urban warfare, intelligence security, data gathering, and chemical weapons tactics.

The group has been linked to or accused of taking part in terrorist acts across the globe beginning in the early 1990s. A list of the attacks against U.S. interests attributed to al-Qaeda includes the 1992 hotel bombings in Aden, Yemen; the February 6, 1993, bombing of the World Trade Center in New York City; attacks carried out on U.S. military forces in Somalia in 1993 and 1994; the June 25, 1996, truck bombing of the Khobar Towers residential compound in Dhahran, Saudi Arabia; the near-simultaneous bombings of U.S. embassies in Nairobi, Kenya, and Dar es Salaam, Tanzania, on August 7, 1998; the suicide bombing of the USS *Cole* in Yemen on October 12, 2000; and the September 11, 2001, airline hijackings and attacks on the Pentagon and the WORLD TRADE CENTER.

The United States is not the group's only target, however. Al-Qaeda also is linked to the April 2002 bombing of the El Ghriba synagogue in Tunisia; the October 2002 nightclub bombing in Bali, Indonesia; the November 2003 bombings of synagogues and a British bank in Istanbul, Turkey; the March 11, 2004, train bombings in Madrid, Spain; and the July 7, 2005, London transit bombings.

Al-Qaeda is most often represented and understood in regard to its founder, Osama bin Laden (aka Abu Abdallah). Bin Laden was born in Riyadh, Saudi Arabia, on March 10, 1957. When he was six months old, his father, Muhammad bin Laden, the Yemeni immigrant who established the Saudi Binladin Group, relocated to Jeddah, where Osama grew up.

The Soviet Union's December 1979 invasion of AFGHANISTAN galvanized the Muslim world in defense of Afghanistan and provided the West with a proxy war through which to combat the Soviet Union. Bin Laden, who had studied economics at King Abdul Aziz University in Jeddah, was one of many spurred to action in defense of Afghanistan. He made his first trip to neighboring Pakistan in 1980, where he sought ways to contribute to the jihad. Bin Laden made several monetary contributions to the mujahideen, but quickly began looking for other ways to contribute.

Bin Laden joined with Palestinian cleric Abdullah Azzam to found the Services Bureau (Makhtab al-

Khidimat, or MAK) in Pakistan in 1984. Azzam, who had taught at King Abdul Aziz University while bin Laden studied there, was indispensable in recruiting. In addition to providing relief to war victims in Afghanistan, the MAK organized and coordinated the volunteers, donations, and weapons coming into Pakistan and Afghanistan in support of the jihad.

Azzam believed that the young Arab men streaming to Pakistan to participate in the jihad should be scattered among the Afghan functions. Azzam felt that such a mixing of Arabs among the local forces would reap benefits both in Afghanistan and abroad. Bin Laden saw the situation differently and sought to create his own separate Arab fighting force. He believed that such a force would be a superior fighting unit compared to local Afghan forces. Bin Laden broke with Azzam and established training camps for his Arab force near Jaji, in eastern Afghanistan. From this base, which they dubbed al-Masadah (the Lion's Den), bin Laden's "Arab Afghans" engaged the Soviets in the battle of Jaji in the spring of 1987. It was at this time that bin Laden grew closer to the Egyptian Islamic Jihad (EIJ) and one of its most prominent members, Ayman al Zawahiri, who would become bin Laden's deputy in al-Qaeda.

When the Soviets announced their planned withdrawal in April 1988, bin Laden began preparations to perpetuate and expand his forces. He began by moving his unit to the area around Jalalabad, Afghanistan, which became known as al-Qaeda; bin Laden would later say that the name remained with the group by accident. Following the Soviet withdrawal in 1989, bin Laden returned to Saudi Arabia. When Saddam Hussein invaded Kuwait on August 2, 1990, bin Laden, who had consistently expressed his contempt for the "atheist" Hussein and his Ba'athist government, approached the Saudi king with a plan to use his Arab Afghans to drive Hussein's forces from Kuwait. The Saudi government sought to restrict his movements within the kingdom. Bin Laden obtained permission in early 1991 to travel to Pakistan on the pretext of checking in on some business interests and never returned to Saudi Arabia.

In early 1992 bin Laden and al-Qaeda moved to Sudan, where they remained until 1996. Al-Qaeda and the National Islamic Front (NIF), the ruling party in Sudan, enjoyed a symbiotic relationship. The NIF granted al-Qaeda a safe haven and freedom of movement, while bin Laden made substantial investments in Sudanese industry and agriculture and undertook several large-scale construction projects to develop the infrastructure and agricultural and industrial production capacity of Sudan.

While in the Sudan, bin Laden directed his forces in actions against the communist government of South Yemen. The Arab Afghans also were sent to Bosnia, where they had a substantial impact on that conflict. Bin Laden dispatched al-Qaeda forces into Somalia in response to the buildup of U.S. forces. In December 1992 President GEORGE H. W. BUSH sent 28,000 U.S. troops into Somalia on a humanitarian mission in support of UNITED NATIONS (UN) relief efforts. Bin Laden and al-Qaeda dismissed all humanitarian claims and interpreted the U.S. presence as a way of putting pressure on Islamic regimes and as an effort to establish another base from which to attack Muslim nations.

Al-Qaeda regarded Yemen as a major victory. First, even though the hotels bombed in Yemen did not house U.S. personnel, the transfer of U.S. troops out of Yemen shortly after the hotel bombings indicated to al-Qaeda that they had been successful in driving the Americans from Yemen. Bin Laden also claimed that the militarily superior U.S. forces were driven from Somalia by a poor, ill-armed people whose only strength was their faith. In his 1996 fatwa declaring war against the United States, bin Laden claimed that the most important lesson to be learned from Somalia was that the United States would flee at the first sign of resistance.

The year 1994 was a watershed for bin Laden. He survived two assassination attempts and in April was stripped of his Saudi citizenship in response to the growing threat he represented to the regime. A final step in his radicalization came in August, when the Saudi government imprisoned clerics Salman al Awdah and Safar al Hawali, who were among the first and most prominent of the clerics circulating cassettes of their sermons against the continued U.S. presence in the Arabian Peninsula, and whose imprisonment bin Laden would later mention in his 1996 fatwa.

Bin Laden and al-Qaeda left Sudan in 1996 and returned to Afghanistan, a move prompted by several factors. In addition to the assassination attempts, bin Laden faced international pressure on the NIF and its de facto leader, HASSAN AL-TURABI. The United States and Saudi Arabia sought to have bin Laden silenced and his activities curtailed, and al-Turabi found it increasingly difficult to maneuver and protect bin Laden. When Sudan started pressuring bin Laden, he returned to Jalalabad. There bin Laden and al-Qaeda entered into a symbiotic relationship with the Taliban (“the students”), who were in the process of consolidating their control over much of the country. This relationship was similar to that

with the NIF in Sudan; bin Laden and his organization gained considerable freedom of movement and protection, while his benefactors benefited from agricultural, infrastructural, and industrial investment and development.

It was during the period between bin Laden’s return to Afghanistan and the 1998 fatwa that civilians became targets. Both the 1996 fatwa and bin Laden’s 1997 CNN interview spoke of civilians as collateral damage, not as legitimate targets in and of themselves. By 1998 this had changed, and the fatwa issued February 22, 1998, explicitly stated that Americans and their allies, civilians and military alike, were now al-Qaeda targets anywhere they could be found.

Communications from al-Qaeda repeatedly stress their belief that Western governments oppress Muslims and Muslim nations and are engaged in a war against Islam. Bin Laden describes the presence of U.S. forces in “the Land of the Two Holy Places” (Saudi Arabia) as the greatest insult and threat faced by the Islamic world since Muhammad’s lifetime. In addition to decrying U.S. support for Israel, the group condemns U.S. support for what it considers “apostate regimes,” particularly Egypt and Saudi Arabia. Bin Laden also points to the sanctions imposed on Iraq following the Gulf War as one reason to reject any human rights arguments coming from the West.

Al-Qaeda’s idea of the *ummah* (community of believers; the Islamic world) in opposition to the world derives from the teachings of two prominent Islamic scholars. Ibn Taymiyyah (1263–1328) was a 14th-century Islamic scholar who taught that jihad is the duty of each individual Muslim when Islam is attacked, that the Qu’ran should be interpreted literally, and that all Muslims should read the Qu’ran and Hadith (the sayings of the Prophet) for themselves and not rely on a learned clergy. A second influence on al-Qaeda was SAYYID QUTB (1906–66), an Islamist associated with the Egyptian Muslim Brotherhood. Describing the world as existing between states of belief (Islam) and unbelief (*jahiliyya*), Qutb condemned Western and Christian civilization. Urging jihad against all enemies of Islam, Qutb believed that there is no middle ground and that all Muslims must take to jihad when Islam is threatened.

These influences are apparent in al-Qaeda’s activities and rhetoric. Bin Laden believes that since the Christians, Jews, and Hindus have nuclear weapons, it is only fitting that Muslims obtain them as well. Bin Laden also echoes Ibn Taymiyyah in his assertions that the Saudi government is aiding the “crusaders” in plundering the wealth of the *ummah*, the vast Middle

Eastern oil reserves, and by acting to keep oil prices below fair-market value.

Al-Qaeda's leadership cadre is well educated. Bin Laden has a university degree in economics, and his inner circle contains doctors; agricultural, civil, and electrical engineers; and computer scientists, but no religious scholars. Rahman's fatwa echoed the call to attack the United States and its allies—civilian and military, anywhere in the world—and contained exhortations to sink ships, shoot down airplanes, and burn corporations and businesses. Two separate attacks on U.S. warships were made in subsequent years, with the USS *Cole* attack following an unsuccessful attack on the USS *The Sullivans* one year earlier. On September 11, 2001, the plot masterminded by Ramzi Binalshibh and Khalid Sheikh Mohammed, who were arrested in Pakistan in 2002 and 2003, respectively, proceeded along the lines of Rahman's fatwa.

ANTHONY SANTORO

Quebec sovereignty movement

Canadian history has been plagued by issues of national identity since 1763, when Britain conquered New France in the French and Indian War. Britain's Québec Act of 1774 recognized the rights of French-speaking Roman Catholics. The British North America Act of 1867, the basis for Canada's constitution, is premised on a doctrine of "two founding nations" in which the English-speaking and French-speaking cultures are recognized as equal partners. Because the two national identities exist in a country that has traditionally

A patriotic motorist displays the flag of Quebec, known as the Fleurdelisé, which resembles an ancient French military banner.

avored Anglophones, Quebec (Québec), the heart of Francophone Canada, and its leaders have tried to assert their nationalism as a distinct cultural community within Canada.

The modern sovereignty movement is a product of the 1960s. It is a demand for political independence for Quebec combined with economic association with the rest of Canada. It was introduced by René Lévesque, a former Liberal cabinet minister and popular broadcast journalist who organized the Parti Québécois (PQ) in 1968. PQ gained support when the 1969 Official Languages Act seemed to trivialize Quebec's demand for special status.

In the October Crisis of 1970, a radical fringe group called the Front de Libération du Québec kidnapped James Cross, the British trade commissioner in Montreal, and Pierre Laporte, Quebec's minister of labor and immigration. Quebec soon asked the Canadian armed forces to intervene, and the next day the federal government banned the FLQ under the War Measures Act. Laporte's body was found October 17, and a group holding Cross released him in return for safe passage to Cuba in early December. A federal inquiry later ruled that the suspension of normal civil liberties had been illegal.

In 1976, the PQ gained control of Quebec's government and promised to consult the people of Quebec before taking any steps toward independence and secession. Four years later, majority-French provincial voters soundly rejected a referendum to authorize sovereignty negotiations with Ottawa. Even so, the PQ was reelected in 1981, and in 1982 it refused to accept

the new Canadian constitution. When the PQ removed sovereignty-association from its party platform in 1985, the Liberal Party regained control of the Quebec assembly.

Reorganized under the leadership of former finance minister Jacques Parizeau, the PQ again promised to declare Quebec independent after the voters of Quebec voted *oui* in a referendum. The Meech Lake Accord, which agreed to conditions that Quebec had placed on its acceptance of the national constitution, collapsed in 1990 due to opposition. A subsequent package of constitutional reforms, presented to voters in a 1992 national referendum, was also defeated.

By 1994 the Bloc Québécois, a national party devoted to Quebec sovereignty, had won enough votes to become the official opposition party in Ottawa. Another sovereignty referendum in 1995 lost narrowly. Canada was startled in November 2006 when Conservative prime minister Stephen Harper proposed a resolution, passed overwhelmingly by Parliament, stating that the 7 million “Québécois form a nation within a united Canada.” Although this recognition was called “symbolic,” it was unclear whether it might spark a renewed push for Quebec’s independence.

DAVID MILLER PARKER

Qutb, Sayyid

(1906–1966) *Egyptian Islamist theoretician*

Sayyid Qutb was born in an Egyptian village in 1906. Although the family was poor, Qutb’s father was educated and was an early supporter of the Egyptian nationalist movement. As a boy Qutb attended the local religious school (*kuttab*), where he reputedly had memorized the Qu’ran before his teenage years. He attended a teacher’s college in Cairo and in 1933 earned a degree from Dar al-Ulam, the prestigious secular Egyptian university established in the late 19th century. After graduation Qutb worked for the Ministry of Education. A

prolific writer, Qutb wrote fiction, poetry, and news articles during the 1930s.

Qutb studied for a master’s degree in education in the United States on a scholarship from 1948 to 1950. Qutb’s enmity toward the West seems to date from his stay in the United States, where he was infuriated by the racism, materialism, and casual social exchanges between the sexes that he observed there. After traveling through Europe, he returned to Egypt and resigned from the Ministry of Education. In 1953 he joined the Muslim Brotherhood and was appointed director of the brotherhood’s propaganda section.

In the early 1950s Qutb may have been the brotherhood’s go-between with GAMAL ABDEL NASSER’s Free Officers Group; he initially supported the 1952 revolution and the overthrow of the corrupt monarchy of King Farouk. But after Nasser refused to institute an Islamic state, the brotherhood opposed him. After a failed assassination attempt on Nasser in 1954, members of the brotherhood were persecuted, and Qutb was imprisoned and tortured. He observed other brotherhood members being tortured and killed and concluded that violence was justifiable to overthrow Muslim leaders and regimes that were unjust and did not adhere to the sharia and Islamic precepts.

While in prison Qutb wrote a commentary on the Qu’ran and an Islamic manifesto, *Ma’alim fi al-Tariq* (Milestones). He became more radical as the repression of the brotherhood intensified. Qutb condemned Western civilization as primitive and materialistic and argued that Muslim leaders who adopted or cooperated with the West were in conflict with Islamic culture and tradition. He warned of *jahiliyyah* (ignorance), which he believed was imposed by the adoption of Western culture. He rejected the ideologies of Charles Darwin, Sigmund Freud, and Karl Marx, asserting that Marxism resulted in the enslavement of mankind. Qutb held an ultraconservative view of the role of women in society. He argued that although the Qu’ran mandated the equality of all humans the role of women was to maintain family values, with men as the head of households.

For Qutb the Qu’ranic text, and to a lesser degree the Hadith, were the sources of all law; he believed that the Qu’ran provided a comprehensive guideline for the conduct of all aspects of human life. Authority emanated from God and the Qu’ran; therefore jihad, or holy war against the modernization of the West and against unjust, corrupt Muslim rulers was the duty of true believers. He advocated the creation of committed cadres of devout

believers to teach Muslim youth and to struggle against “ignorant” or unjust regimes in the Islamic world as well as against the West.

Qutb was released from prison in 1964, but shortly thereafter was imprisoned again on charges of sedition and terrorism. Although in *Milestones* he had fallen just short of advocating the overthrow of Nasser’s regime, he was found guilty after a public trial. Qutb was executed in 1966 and promptly became a martyr for members of the brotherhood and a myriad of breakaway Islamist organizations.

For Qutb a theocracy was an ideal, and he envisioned the creation of a new society and government. He was a major force in 20th century ISLAMIST MOVEMENTS. His books were translated into many languages and influenced a wide variety of contemporary Islamist

movements in Tunisia, Egypt, Palestine, Lebanon, and Iran. Qutb’s brother taught in SAUDI ARABIA, where he also influenced future Islamist radicals. The Egyptian Ayman Zawahiri followed Qutb’s precepts and in turn became a theoretical mentor to Osama bin Laden. Qutb’s works have also remained a major force for the Muslim Brotherhood, an important factor in Egyptian politics until the present day.

JANICE J. TERRY

R

Rabin, Yitzhak

(1922–1995) *Israeli general and prime minister*

Yitzhak Rabin was a key Israeli military and political leader. Born in Jerusalem in 1922, Rabin earned a degree from an agricultural college and joined the elite Palmach forces that fought in the 1948 Arab-Israeli War. He became chief of staff and led the army during the stunning Israeli victory in the 1967 war. Rabin was the Israeli ambassador to the United States from 1968 to 1973. After returning to Israel, he ran for the Knesset on the Labor Party ticket. He vied with his rival Shimon Peres for the position of prime minister after GOLDA MEIR's government fell and defeated Peres for the leadership position. Rabin served as prime minister from 1974 to 1977 and was instrumental in rebuilding the army after the 1973 war (Yom Kippur War). He also signed the initial disengagement agreement with Egypt over the Sinai Peninsula. Following reports of his wife having had, under Israeli law, an illegal bank account in the United States, Rabin stepped down as prime minister.

For much of his military career, Rabin was a hard-liner with regard to the Palestinians and Arab nations. He advocated the use of strong force to crush the Palestinian INTIFADA when it erupted in the Occupied Territories (the Gaza Strip and the West Bank) in 1987. Rabin was again elected prime minister in 1992. Following protracted secret negotiations, he agreed to the 1993 Oslo accords and signed a much-publicized agreement with the PALESTINE LIBERATION ORGANIZATION (PLO), represented by YASIR ARAFAT, in a ceremony hosted by then president BILL

CLINTON on the White House lawn. Under the agreement the Israelis agreed to a gradual pullout from selected portions of the West Bank and Gaza in exchange for full recognition by the PLO. The agreement was opposed by both Israeli and Palestinian extremists and hard-liners. In 1994 Rabin signed a peace treaty with King Hussein of Jordan, with whom—in contrast to Arafat—he had cordial relations. Rabin was awarded the 2004 Nobel Peace Prize along with Peres and Arafat.

Rabin was assassinated by Yigal Amir, an Israeli fanatic who opposed the settlement with the Palestinians, in 1995. The assassination shocked Israeli society but it also reflected the deep divisions within Israel over the exchange of peace for land.

JANICE J. TERRY

Rahman, Sheikh Mujibur

(1920–1975) *Bangladeshi leader*

The founding father of Bangladesh, Banga Bandhu (Friend of Banga) Sheikh Mujibur Rahaman, was born

on March 17, 1920, in Tungipara village in the Faridpur district in erstwhile East Pakistan. He was the third child of Sheikh Luthfur Rahman and Sheikh Sahara Khatun. After the partition of India in 1947, Mujibur built his career in East Pakistan as an active politician championing the cause of Bengalis. Although religion was the common factor in East and West Pakistan, there were economic, social, and linguistic differences. East Pakistan (East Bengal until 1956) was less developed than the west, and the discriminatory policies of West Pakistan increased the marginalization of the eastern part of the country.

Mujibur was emerging as a prominent leader in the wake of the imposition of Urdu as the official language. His Muslim Students League formed an All-Party State League Action Council in March 1948. Mujibur, also called Mujib, became the joint secretary of the East Pakistan Awami Muslim League (called the AWAMI LEAGUE from 1954) when it was formed in June 1949. In 1952 the police brutally crushed the movement to make Bengali one of the official languages of Pakistan. Cracks had already opened in united Pakistan, and it was Mujib who spearheaded the cause of separation from the west.

Mujib contested as a candidate of the United Front, which had been formed by the Awami League for the 1954 general elections. The following year the Awami League demanded autonomy for the eastern wing of Pakistan. Under the presidency of General Mohammad Ayub Khan the Bengalis were further alienated. Mujib and the people of East Pakistan witnessed a harsh military regime exploiting and dominating the eastern wing. The Ayub government was dismayed at Mujib's popularity and imprisoned him many times.

Mujib spelled out a six-point program in February 1966 demanding autonomy for all provinces of Pakistan. He was accused of engineering the secession of East Pakistan, and proceedings were initiated against him in the Agartala Conspiracy Case of 1968. In the 1970 elections to the National Assembly of Pakistan, Mujib's Awami League secured an absolute majority, winning 162 seats out of 313. The new president of Pakistan, Muhammad Yahya Khan, was in no mood to give power to Mujib. The convening of the National Assembly was postponed. On March 25 Mujib declared the independence of East Pakistan, which was renamed Bangladesh. He was taken to West Pakistan in March 1971 to be tried for treason.

With Indian military assistance Bangladesh was liberated on December 16, 1971. Meanwhile, the government of Pakistan had sentenced Mujib to death. But

because of international pressure, he was finally released and became the first prime minister of Bangladesh on January 12, 1972.

Mujib faced the difficult task of governing the nation, which faced the challenges of rehabilitation and reconstruction. Disagreements with Pakistan remained. Mujib signed a 25-year friendship treaty with India. Most countries recognized Bangladesh, which also became a member of the UNITED NATIONS. Mujib followed a nonaligned foreign policy. He promulgated a constitution in 1971 containing the principles of secularism, socialism, and democracy. Mujib also launched welfare programs.

The Awami Party won the elections of 1973 with a massive majority. But poor governance, corruption, opposition from disgruntled elements, and natural disasters created problems. Mujib declared a state of emergency in 1975. A presidential form of government was initiated with Mujib as president for life. In June the Awami League became the only legal party. On August 15, 1975, Mujib and 15 of his family members were assassinated by young army officers. The military government that followed passed the infamous Indemnity Ordinance giving indemnity to the assassins. It was not until 1998 that the culprits were sentenced to death, when the Awami League government of Sheikh Hasina, daughter of Mujib, came to power.

PATIT PABAN MISHRA

Reagan, Ronald

(1911–2004) U.S. president

Ronald Wilson Reagan was an actor who served two terms as the 33rd governor of California and later served two terms as the 40th president of the United States. Reagan's presidency contributed to the end of the COLD WAR between the United States and the Soviet Union and witnessed the collapse of communism in eastern Europe. At the end of Reagan's admin-

istration, the United States was enjoying its longest period of peacetime prosperity without recession or depression. His administration cut taxes, reformed the tax code, offered a temporary solution to the Social Security issue, reduced inflation, continued deregulation of business, and increased military spending. Critics have commented that Reagan was unconcerned with income inequality, and his dedication to military spending increased the federal deficit as well as trade deficits internationally and may have been instrumental in causing the stock market crash of 1987. Overall, Reagan was one of the most popular U.S. presidents of the 20th century, exiting office more popular than when he began. Nicknamed the Great Communicator by the media, Reagan dominated the decade of the 1980s in the United States to such an extent that the two are linked inextricably together.

Reagan was born on February 6, 1911, in Tampico, Illinois, and was raised with strong Christian values. He attended high school in the nearby town of Dixon. In 1928 Reagan entered Eureka College, where he studied economics and sociology. Reagan graduated in 1932. After graduation, he worked as a radio sports announcer.

Following a 1937 screen test, Reagan won a Hollywood contract and began a lengthy acting career, appearing in 53 films over the next two decades. In 1940 he played the role of George Gipp in the film *Knute Rockne, All American*. In the film, Reagan delivers the memorable line “Win one for the Gipper!” From this role, Reagan acquired the nickname “the Gipper,” which he retained throughout his life. In 1935 Reagan was commissioned as a reserve cavalry officer in the U.S. Army. After the 1941 attack on Pearl Harbor, the United States became involved in World War II, and Reagan was activated and assigned to the First Motion Picture Unit in the U.S. Army Air Forces, which made training and propaganda films. Reagan’s efforts to go overseas for combat were rejected due to his astigmatism. While in Hollywood, Reagan married actress Jane Wyman in 1940 and had a daughter, Maureen, and later adopted a son, Michael. Following his divorce, Reagan married Nancy Davis, also an actress, in 1952, and had two children, Patricia Ann and Ronald Prescott.

Reagan became president of the Screen Actors Guild from 1947 to 1952 and again from 1959 to 1960. Although raised in a strong Democratic household, Reagan shifted his political views, primarily because of the Republican Party’s strong condemnation of communism. He became involved in disputes over the issue of communism in the film industry. During the 1950s

One of the most popular American presidents in recent history, Ronald Reagan and his policies dominated the 1980s.

Senator Joseph McCarthy initiated a series of hearings to root out communism in the United States. Particular scrutiny was placed on Hollywood, and actors marked as communists faced exile from the film industry. Reagan claimed that Hollywood was being infiltrated by communists and kept watch on suspected actors for the Federal Bureau of Investigation (FBI).

As Reagan’s film career waned, he moved to television, hosting and performing for, *General Electric Theater* and starring in television movies. His employment for General Electric required extensive travel as a GE spokesman. Reagan delivered numerous anticommunist speeches, which brought him to the attention of the Republicans.

In 1966 Reagan was elected governor of California by a margin of 1 million votes, and he was reelected in 1970. During his first term Reagan froze government hiring but approved tax increases to balance the budget. In 1969 Reagan sent 2,200 National Guard troops to disband a student protest on the Berkeley campus of the University of California. He worked to reform

welfare and opposed construction projects that hindered conservation or transgressed onto American Indian ranches. Although Reagan supported capital punishment, his efforts to enforce this position were hindered by the Supreme Court of California's decision to invalidate all death sentences passed prior to 1972. A constitutional amendment quickly overturned this decision.

Reagan's first attempt to secure the Republican nomination for president in 1968 was unsuccessful. He tried again in 1976 against incumbent GERALD FORD, but was narrowly defeated at the Republican National Convention. In 1980 Reagan won the Republican nomination and selected as his running mate former Texas congressman GEORGE H. W. BUSH. The United States was suffering from a period of high inflation and unemployment, fuel shortages resulting from instability in the petroleum market, and the international humiliation of the yearlong confinement of U.S. hostages in Iran. Reagan became popular, consequently winning in a landslide over incumbent JIMMY CARTER. The Republican presidential victory accompanied a 12-seat change in the Senate, the first Republican Senate majority in over 25 years.

FIRST DAYS

Reagan assumed the office of president on January 20, 1981. The IRAN HOSTAGE CRISIS ended with the release of the U.S. captives the same day, which led to allegations that a covert agreement delaying their release had been negotiated between the Iranian government and Reagan's future cabinet. On March 30 Reagan was nearly killed in an assassination attempt but quickly recovered and returned to office. Reagan's first official act was to end oil price controls. In 1981 Reagan fired the majority of federal air traffic controllers when they embarked on an illegal strike, setting limits for public employees unions and signaling the acceptability of businesses' taking stronger bargaining positions with unions.

Reagan steered his desired domestic legislation through Congress in an effort to stimulate economic growth and reduce inflation and unemployment. He followed a plan calling for cutbacks on taxes and government expenditures, refusing to deviate from this course when the strengthening of national defenses increased the national deficit. To curb inflation, Reagan supported Federal Reserve Board chairman Paul Volcker's plan to tighten the monetary supply by dramatically increasing interest rates. Reagan also sponsored wide-ranging tax cuts to boost business investment. Reagan simultaneously limited the growth of

welfare and other social programs. Beginning in 1983 the economy began to recover. However, increased military spending as part of Reagan's cold war policy caused the national deficit to soar.

A renewal of U.S. self-confidence due to a recovering economy and heightened international prestige propelled Reagan and Bush to win their second term in an unprecedented landslide against Democratic challengers Walter Mondale and Geraldine Ferraro, winning the electoral votes in 49 out of 50 states.

During his second term, Reagan overhauled the income tax code, eliminating many deductions and exempting millions of people with low incomes. Although Reagan's opponents claimed his economic policies increased the gap between the rich and the poor, the income of all economic groups rose in real terms. He also passed the Civil Liberties Act of 1988, granting compensation to Japanese Americans who had been interned during World War II. Reagan signed legislation authorizing capital punishment for offenses involving murder in the context of illegal drug trafficking and launched a "war on drugs," which was led by Nancy Reagan.

Reagan was staunchly against abortion. Although his appointees to the Supreme Court—including Sandra Day O'Connor, the first woman Supreme Court justice—shifted the balance in favor of conservatism, the Supreme Court voted to uphold *ROE V. WADE*, which legalized abortion. The gay rights movement criticized Reagan for not responding adequately to the arrival of HIV-AIDS in the mid-1980s. However, the Reagan administration spent almost \$6 billion on HIV and AIDS research. By 1986, Reagan had endorsed large-scale prevention and research efforts. In 1984, Reagan was the first U.S. president to invite an openly homosexual couple to spend an evening at the White House.

FOREIGN POLICY

Reagan's foreign policy during his presidency called for "peace through strength" and a close alliance with Britain. Reagan confronted the Soviet Union head-on, arguing that only from a position of military superiority could the United States negotiate an end to the cold war and secure U.S. interests abroad. Reagan reasoned that the Soviet Union could not keep up with the United States in a full-scale arms race. He increased defense spending 35 percent while seeking improved diplomatic relations with Soviet leader MIKHAIL GORBACHEV.

In keeping with this Reagan Doctrine, he actively supported anticommunist efforts in Latin America,

Europe, Asia, and Africa. The Reagan administration supported Afghani insurgents, including Osama bin Laden; POLAND's SOLIDARITY MOVEMENT; the contras in Nicaragua; and rebel forces in Angola. The United States increased military funding for anticommunist dictatorships in Latin America and was accused of assassinating several Latin American heads of state. A communist attempt to seize power in GRENADA in 1983 prompted a U.S. invasion.

Reagan and Gorbachev negotiated a treaty to eliminate intermediate-range nuclear missiles and to continue disarmament. However, Reagan supported the Strategic Defense Initiative (SDI), which proposed the launching of a space-based defense system to render the United States invulnerable to a nuclear attack. Opponents of the plan labeled it Star Wars and argued that the plan was unrealistic and violated international treaties.

In 1985 Reagan conducted a goodwill visit to Germany. He visited Kolmeshohe Cemetery to pay respects to the soldiers there, unaware that many had been members of Nazi dictator Adolf Hitler's Waffen-SS. Reagan also visited the Bergen-Belsen concentration camp, where he condemned the Holocaust.

Reagan declared war against international terrorism, taking a strong stand against the Lebanese HIZBOLLAH terrorist organization, which was holding Americans as hostages and attacking civilian targets following Israel's invasion of Lebanon in 1982. Reagan's administration also took a strong stance against Palestinian terrorists in the West Bank and Gaza. U.S. involvement in Lebanon led to a limited UNITED NATIONS mandate for an international force. The September 16, 1982, massacre of Palestinians in Beirut prompted Reagan to form a new international force. Diplomatic pressure forced a peace agreement between Israel and Lebanon and U.S. forces withdrew following an October 1983 bombing that killed over 200 marines. Reagan sent U.S. bombers to LIBYA after evidence revealed government involvement in an attack on U.S. soldiers in a West Berlin nightclub. Reagan's administration maintained the controversial position that the Salvadoran FMLN and Honduran guerrilla fighters, as well as a wing of the anti-apartheid African National Congress (ANC), constituted terrorist organizations.

During the IRAN-IRAQ WAR, Reagan sent naval escorts to the Persian Gulf to maintain the free flow of oil for U.S. use. The Reagan administration came to increasingly side with Iraq under the assumption that Iraqi president SADDAM HUSSEIN was less a threat than Iranian leader AYATOLLAH KHOMEINI. While support-

ing Iraq, the United States covertly supplied Iran with military weapons in order to fund contra rebels in Nicaragua. This arrangement, known as the IRAN-CONTRA AFFAIR, became a huge scandal. Reagan declared his ignorance of the arrangement. As a result, 10 members of Reagan's administration were convicted and many others were forced to resign.

Reagan addressed the nation from the White House one last time in January 1989, prior to the inauguration of George H. W. Bush as the 41st president. Reagan returned to his estate, Rancho del Cielo, in California, eventually moving to Bel Air, Los Angeles. In 1989 Reagan received an honorary British knighthood and was made Grand Cordon of the Japanese Order of the Chrysanthemum. In the early 1990s he made occasional appearances for the Republican Party and in 1993 was granted the Presidential Medal of Freedom.

In 1994 Reagan was diagnosed with Alzheimer's disease. His health worsened following a fall in January 2001 that shattered his hip and rendered him immobile. By late 2003 Reagan had entered the final stages of Alzheimer's disease, and he died of pneumonia on June 5, 2004. He was buried at the Ronald Reagan Presidential Library in Simi Valley, California.

ERIC MARTONE

Rhee, Syngman

(1875-1965) *South Korean president*

Syngman Rhee was the controversial, strongly anticommunist, and increasingly authoritarian first president of South Korea, serving from April 1948 until April 1960. He gained office through a popular election in 1948, led South Korea through the KOREAN WAR, and was reelected twice, although not without controversy, before being forced from office in the wake of the fraudulent 1960 election.

Born in Hwanghae Province on March 26, 1875, Rhee—also known as Yi Sung-man—labored passionately to create a modern, independent Korea. Having studied the Chinese classics and repeatedly failed the civil service examinations, Rhee enrolled in and eventually taught at a Western-style school run by U.S. Methodists. In 1896 he helped found the Independence Club, a Western-leaning nationalist organization hoping to fend off the growing interventions by Japan, Russia, and China in Korean affairs. Weary of his proposed reforms, the conservative Korean government imprisoned Rhee for seven years, during which time he was tortured and also converted to Christianity, which he considered “the religion of liberty.”

Freed in 1904, Rhee traveled to the United States to petition U.S. president Theodore Roosevelt to help Koreans oppose expanded Japanese influence. This effort failed, and Japan increased its control and formally annexed Korea in 1910. Rhee stayed on in the United States, where he earned a B.A. from George Washington University in 1907, an M.A. from Harvard in 1908, and a Ph.D. in theology from Princeton in 1910.

He returned to Korea in 1910 as chief Korean secretary of the Young Men’s Christian Association in Seoul. A year later he was forced into exile because of his organizing against Japanese rule. He would spend the next 33 years in Hawaii and Washington, D.C., where he would continue working on behalf of a modern, independent Korea. In 1920 he became the first president of the exiled Provisional Government of the Republic of Korea. His main strategy was to build support for Korea in the international community, particularly the United States.

After defeating the Japanese in World War II, the United States occupied the southern half of Korea. Rhee, by now back in the country, helped found the National Society for the Rapid Realization of Korean Independence. In 1948 he handily won United Nations (UN)–sponsored elections for president of the REPUBLIC OF KOREA (South Korea). He was known for his desire to reunite the Korean Peninsula, his commitment to democracy, and his strong opposition to communism. In the two years after his election, Rhee intensified COLD WAR tensions in East Asia by calling for a “march north” to destroy KIM IL SUNG’s communist regime. But it was Kim’s Communist forces that invaded South Korea in June 1950.

After the Korean War broke out in June 1950, Rhee proved a steady, but difficult, ally of the United States. In 1951 he reorganized the military in order to

root out corruption and inefficiency. But he also routinely undermined U.S. efforts by rejecting any peace deal that stopped short of reunifying Korea. He also called on the United States to counter Chinese intervention more aggressively, including bombing China. By August 1953, however, the prospect of intensified hostilities with the north and worsening relations with the United States forced Rhee to accept a divided Korea. The United States deployed troops along the demilitarization zone both to protect the south from invasion from the north and to thwart Rhee’s aggressive tendencies.

For most of the 1950s, Rhee repeatedly worked to consolidate his hold on power. In 1951 he founded the Liberal Party. In 1952 he engineered changes in the constitution to guarantee his victory in the election. When these changes were rejected in favor of a parliamentary system, he declared martial law. In the ensuing general election, Rhee won 72 percent of the vote. As the 1956 election approached, Rhee once again forced changes into the constitution to eliminate the provisions limiting presidents to two terms. He then won the election with 55 percent of the vote, a low number considering that his rival, Sin Ik-hui, had suffered a heart attack and died 10 days earlier.

South Korea made significant economic and social progress under Rhee. The expansion of the school system after independence and the modernization of the military contributed greatly to the changes that transformed Korea. Massive U.S. aid combined with the government’s import-substitution policies yielded strong growth.

In 1960 Rhee and the Liberal Party once again rigged the presidential election. This time, however, a protest movement led by students became widespread, and governmental security forces killed 142 protesters. These events forced Rhee’s resignation. He fled to the United States and died five years later in 1965 in Hawaii.

THOMAS ROBERTSON

Rhodesia/Zimbabwe independence movements

Zimbabwe, or Rhodesia, as it was known until 1980, is a landlocked nation of 13 million people occupying the plateau between the Limpopo and Zambezi Rivers, bordered by Zambia to the north, Botswana to the west, Mozambique to the east, and South Africa to the south. While the rest of Britain's African colonies, including two of Rhodesia's neighbors—Northern Rhodesia (Zambia) and Nyasaland (Malawi)—gained independence as part of a wave of decolonization, Rhodesia remained a bastion of minority white rule because of its influential European population. Even after the country gained majority rule in 1980, white control of land continued to be a crucial issue in Zimbabwe.

At midcentury, mostly because of the country's substantial mineral wealth and fertile soil for tobacco cultivation, Rhodesia's white population enjoyed one of the highest standards of living in the world. The country's black residents, however, who made up over 95 percent of the population, possessed little political power and received just 5 percent of the nation's income. Having gained control by force roughly a half-century earlier, whites made up one-twentieth of the population but held one-third of the land.

At the end of World War II the political winds began to change. Britain moved to grant independence to many of its colonies in Asia and Africa. Rhodesia, which had been a British-chartered corporate colony at the turn of the century and a self-governing British colony since 1923, took on a new political form in 1953 with the establishment of the Central African Federation. Southern Rhodesia dominated this confederation; it exploited the copper of Northern Rhodesia and the labor of Nyasaland.

The arrival of independent rule in Northern Rhodesia (Zambia) and Nyasaland (Malawi) in 1964 brought considerable anxiety to the white population of Southern Rhodesia, who believed that Britain favored majority rule. In response, in November of 1965, Ian Douglas Smith, an unabashed champion of white rule, announced the Unilateral Declaration of Independence, which cut the country's ties with Britain and established the independent nation of Rhodesia. In a referendum,

overwhelming numbers of the white population supported Smith. Britain responded by imposing diplomatic and economic sanctions.

The COLD WAR struggle between the United States and the Soviet Union for influence around the world, including in the nations of Africa, complicated these developments. U.S. relations with Ian Smith's white-ruled Rhodesia at the time shows the ambivalent position of the United States. On the one hand the United States valued the support of Rhodesia, which contained vast reserves of strategic minerals, especially chromium, and adopted a strongly anticommunist stance. Yet, at the same time, the United States worried that support for Smith's white supremacist government would cost it needed friends in rapidly decolonizing Africa.

In 1965 U.S. president LYNDON B. JOHNSON condemned Smith's unilateral declaration of independence and, following Britain's lead, imposed economic sanctions. Although these sanctions could have been even stronger, U.S. trade there declined from \$29 million in 1965 to \$3.7 million in 1968, a real blow to the Rhodesian economy. At the same time, though, Rhodesia received substantial support from some within the United States. The Byrd Amendment of 1971, which was enacted with the support of the RICHARD NIXON administration, punched a significant hole in the sanctions against Rhodesia. According to this law, the United States could not ban the importation from a non-communist nation any material needed for national defense if that same material would otherwise be purchased from a communist nation. Since chromium, a key resource for many modern weapon systems, was also imported from the Soviet Union, the United States was forced to allow trade with Rhodesia. Imports of chromium grew from \$500,000 in 1965, to \$13 million in 1972, to \$45 million in 1975.

Organized black resistance to white rule in Rhodesia took shape in the late 1950s, and the two main oppositional parties, parties that would dominate Zimbabwean politics well beyond independence, were established in the early 1960s. In 1957 the AFRICAN NATIONAL CONGRESS, based in Bulawayo, and the African National Youth League, based in Salisbury (present-day Harare), combined to form the Southern Rhodesian African National Congress under Joshua Nkomo. Banned in 1959, this group was succeeded by the National Democratic Party, which was itself banned in December 1961. Shortly thereafter, the Zimbabwe African People's Union (ZAPU) was established. A major split occurred in 1963, resulting in the formation of the Zimbabwe

African National Union (ZANU). ZAPU was mostly Ndebele and Chinese-leaning; ZANU was mostly Shona and Soviet-leaning.

ZAPU and ZANU adopted different strategies at different times. During the 1960s, as white Rhodesians like Ian Smith grew more extreme, African nationalist methods became more militant and confrontational. Both ZANU and ZAPU began attacking white farms in 1964, but they quickly realized they were outmatched by the Rhodesian military. A more moderate group, the African National Council—organized by Bishop Abel Muzorewa—sprang up during the early 1970s. None of these groups had much success.

The situation began to shift during the late 1970s. In 1975, after long wars, two Portuguese colonies in southern Africa, Mozambique and Angola, gained their independence. Black-ruled Mozambique became a safe haven for many of the guerrilla groups opposing the white regime in Rhodesia. In 1975 the two most important of these groups—ZANU, under ROBERT MUGABE, and ZAPU, under Joshua Nkomo—joined forces to become the Patriotic Front. JIMMY CARTER's victory in the U.S. presidential election of 1976 also played a role in shifting the context of Rhodesian politics. Concerned about the U.S. reputation in other parts of black Africa, the Carter administration began to push for a settlement to the conflict. In general, the United States supported majority rule with protection of white interests.

The British called the Lancaster House Conference in an attempt to broker a lasting solution. The resulting settlement guaranteed majority rule for Zimbabwe, a transitional period for whites, and a multiparty system. At the center of the settlement was a new constitution, which gave the vote to all Africans 18 years and older, reserved 28 seats in the parliament for whites for 10 years, and guaranteed private property rights. In the election of February 1980, voting mostly followed ethnic lines. ZANU–Popular Front won a clear majority, making its leader, Robert Mugabe, the prime minister. ZAPU–Popular Front, which had recently split from ZANU–PF, joined the white members of parliament in opposition. Taking its name from the 14th- and 15th-century stone city of Great Zimbabwe, Rhodesia became Zimbabwe on April 18, 1980. The war for majority rule, which had cost over 25,000 lives, most of them black, was over.

Under Robert Mugabe's rule, Zimbabwe in the 1980s pursued socialist-leaning policies not unlike those of many other countries in Africa. It expanded social programs that had been denied under white rule. And, although it claimed to want to redistribute land,

in reality it moved slowly to break up successful white farms. This cost the regime politically but it enabled Zimbabwe to continue to feed itself. Overall, during the early 1980s many Zimbabweans saw real improvements in the quality of their lives.

As the 1980s unfolded, Mugabe began to show authoritarian tendencies. Even early on he rounded up opponents, censored the press, and gave broad authority to security forces. At first he was able to get away with this because of his wide support, especially in rural areas. Mugabe won the March 1996 election with 92.7 percent of the vote, but only a very small number of Zimbabweans bothered to vote. The decrease in voter participation revealed the growing discontent of Zimbabweans with Mugabe. On top of this, in the early 1980s a civil war that would last until 1987 broke out in Matabeleland, a stronghold of the ZAPU–PF.

In the late 1990s Mugabe initiated two very controversial programs. In 1997, he began seizing white-owned land without compensation and quietly encouraging landless blacks to move onto white farms. These farms had previously fed the nation and provided work for large numbers of people, mostly black. In 2002 Mugabe appropriated the remaining white land and ordered white farmers to offer payments to former workers. Because many of the blacks who moved onto the white land had few farming skills, the nation soon faced a food crisis. Critics, moreover, claimed that Mugabe handed out the best land to his family, friends, and close supporters. In another controversial move, in 1998 Mugabe deployed the military in the DEMOCRATIC REPUBLIC OF THE CONGO to help its government fend off an armed rebellion.

The situation in Zimbabwe seems precarious. During the 2002 elections Mugabe rigged the voting and jailed opponents, especially the supporters of the Movement for Democratic Change, led by Morgan Tsvangirai. Neighboring nations supported Mugabe but other African nations, such as KENYA and GHANA, condemned his move. Famine conditions persist in Zimbabwe, and the people struggle with skyrocketing prices and extremely high unemployment. That no system is in place to determine a successor to the aging Mugabe portends a divisive struggle to come.

TOM ROBERTSON

Roe v. Wade

The landmark 1973 U.S. Supreme Court ruling in *Roe v. Wade* struck down state abortion laws as illegal because of their infringement on the privacy rights inherent in the U.S. Constitution. This case was the climax of a series of actions by doctors’ organizations, state legislatures, and women’s groups to legalize abortion in order to regulate surgical procedures. However, the case was widely seen by Christian groups and political conservatives as opening the floodgates for unfettered aborting of viable human beings. The aftermath of *Roe* included the formation of coherent pro-choice and pro-life organizations, a struggle with definitions of when life is created, and the magnification of the state management of abortions to a topic handled by Congress, the Supreme Court, and the president.

Debates over the legality of abortion were ignited by a physicians’ movement to allow abortions during the 1940s and 1950s. Led by Drs. Alan and Manfred Guttmacher, a group of doctors lobbied state legislatures to allow abortions. Their activism in favor of abortion was a reaction to the unsanitary and dangerous illegal abortions that were being performed throughout the United States. Indeed, their lobbying was effective in getting states like New York and Hawaii to liberalize their abortion policies.

Another factor in the abortion debate was the growth of a well-organized feminist movement in the 1960s. The commercial viability of a contraceptive pill, funded by Sarah McCormick in 1960, and the subsequent focus of the KENNEDY and JOHNSON administrations on family planning encouraged more assertive control by women over their own bodies. The creation of the National Organization for Women (NOW) in 1966 and the National Abortion Rights Action League (NARAL) in 1969 gave avenues of political strength to women throughout the United States.

A significant pre-*Roe* ruling by the Supreme Court was *Griswold v. Connecticut*, in which the Supreme Court ruled against Connecticut state law regulating birth control. Justice William Douglas used the right to

privacy interpretation of the Third, Fourth, Fifth, and Ninth Amendments to justify ruling against state law. Justice Byron White opined that the state laws did not ensure the welfare of the public as part of a strict interpretation of the law. *Griswold* proved to be a strong legal predecessor to *Roe v. Wade*, as many of the same justifications were applied to the majority opinion.

The plaintiff in *Roe v. Wade* was Norma McCorvey, a pregnant woman who wanted to have an abortion in Dallas County, Texas, but was unable to due to Texas legislation banning the act. McCorvey was not pregnant by the time the Supreme Court heard and deliberated the case, which became a factor in the dissents of Byron White and William Rehnquist. The defending party in the case was Henry Wade, the Dallas County district attorney, joined by defense attorney John Tolle. Tolle’s defense for the Texas legislation was that the fetus was alive at conception and the state’s duty is to protect all people, especially those in utero. Writing an amicus brief on the plaintiff’s behalf were Planned Parenthood of America and NOW, representing the more liberal interpretation of the issue. In contrast, groups like Americans United for Life wrote amicus briefs on behalf of the state of Texas.

PLAINTIFF’S FAVOR

The decision in *Roe v. Wade* came on January 22, 1973. The Supreme Court decided 7-2 in favor of the plaintiff and, in an opinion written by Justice Harry Blackmun, provided a vague caveat to abortion laws, a prescription for how state legislatures could deal with the issue of abortion, and no ruling on the viability of life. Blackmun stated that abortion was not clearly a right beyond reproach but felt that the greater harm to due process rights inherent in the Fourteenth Amendment did not justify keeping abortion illegal.

The opinion also provided states with limits as to how they could legislate abortion. In the first trimester, states could not prevent abortions. States would be allowed to regulate or limit abortions in the second trimester and could prohibit abortions in the third trimester.

Several justices, while agreeing with Blackmun’s general assessment, wrote concurring opinions. Justice William Douglas, a proponent of privacy in *Griswold*, used the same reasoning for his decision in *Roe*. Justice Potter Stewart felt that the time was right for the freedom of choice. Justice Warren Burger concurred with Blackmun’s interpretation of the due process clause of the Fourteenth Amendment and leaned toward Douglas’s interpretation in *Griswold* of a multifaceted constitutional basis for privacy rights.

In dissent were Justices Byron White and William Rehnquist. Justice White dissented for purely constitutional reasons, stating that overturning Texas laws against abortion was out of the jurisdiction of the Supreme Court. Rehnquist held a firm, conservative line on abortion. In the first place, he wrote, the plaintiff was not pregnant during the case and therefore her case was inappropriate. Rehnquist felt that even if McCorvey were pregnant during the case, her right to privacy was not violated by rejection of an abortion. Finally, Rehnquist felt that the Court ruling in favor of legal abortion was too sweeping of an act for a judicial body.

While *Roe* legalized abortion throughout the United States, the pro-life movement that protested this decision became a prevalent cultural force in America in the decades that followed. As women's groups and pro-choice groups grew around the beginning of the 1970s, pro-life groups organized to lobby for maximum legal restrictions and to restrict access to clinics performing abortions. In the immediate aftermath of *Roe*, the American Right to Life Committee was established as an organizing body against abortion. The Friends of Life, established by Joseph Scheidler, established branches around the country to protest abortion clinics. The more extreme pro-life groups turned to violence to prove their point, with the first abortion clinic bombing taking place in 1982.

NICHOLAS KATERS

Rosenberg, Julius and Ethel

(1918–1953 and 1915–1953) *accused American spies*

Julius and Ethel Rosenberg were accused of illegally giving information about U.S. atomic research to the Soviet Union. They were convicted of espionage on March 29, 1951, and executed on June 19, 1953. Their codefendant in the trial, Morton Sobell, received a 30-year sentence. The trial was highly publicized and took place during the so-called Red Scare, when many in the United States felt their way of life was threatened by

the Soviet Union and by the expansion of communism in general. For this and other reasons, including anti-Semitism, many believe that the Rosenbergs did not get a fair trial and that Ethel Rosenberg in particular was not guilty of the charges.

Julius Rosenberg was born in New York City and attended religious and public schools and City College, from which he graduated with a degree in electrical engineering. He was active in the Steinmetz Club, a branch of the Young Communists League, and later joined the American Communist Party. Rosenberg was a civilian employee of the U.S. Army Signal Corps from 1940 to 1945. Ethel Greenglass Rosenberg also attended public and religious schools in New York City and went to work for a shipping firm after graduation from high school. She was active as a union organizer and joined the Young Communist League and later the American Communist Party. The Rosenbergs were married in 1939 and had two sons, Michael and Robert.

The Rosenberg trial can only be understood in the context of the development of atomic weaponry and the COLD WAR. The United States is the only nation ever to have used atomic weapons: Atomic bombs were dropped on the Japanese cities of Hiroshima and Nagasaki in the closing days of World War II. Information regarding the production of such weapons was closely guarded, and the United States believed it was the only country with the scientific knowledge to produce an atomic bomb. When the USSR tested its first atomic weapon in 1949, people were shocked at how rapidly they had developed atomic weapons capability. The explanation was simple: The Soviets had access to some of the information the United States believed had been kept secret. In 1950 the German/British scientist Klaus Fuchs, who had worked in the United States on the Manhattan Project, which developed the atomic bomb, confessed to having passed essential information to the Soviet Union. The investigation resulting from this confession led FBI agents to David Greenglass, Ethel Rosenberg's brother, who confessed his own involvement in a spy ring that he said also included his wife, Ruth, and his brother-in-law, Julius Rosenberg.

The "Venona Cables" were a key source of evidence in the investigation of Soviet spy operations in the United States in the 1940s. These cables carried encrypted messages to and from the Soviet Union and revealed the extent of Soviet espionage activity in the United States during that time. The Venona Cables presented clear evidence that Julius Rosenberg was guilty of espionage and implicated David and Ruth Greenglass as well. They did not provide similar evidence against Ethel

Rosenberg, who was convicted largely on the testimony of her brother, David Greenglass. He later admitted that at least some of his testimony against the Rosenbergs was false and that he lied in order to protect his wife, who was granted immunity from prosecution.

Many people around the world were shocked by the Rosenbergs' execution, particularly when more important spies received lighter sentences. For instance, Klaus Fuchs, who provided the Soviet Union with information essential to building an atomic weapon, was sentenced to 14 years in prison and served nine. The execution of Ethel Rosenberg in particular shocked many people, since there was little evidence against her and it was presumed that the threat of execution was meant to coerce her to testify against her husband or him to testify against others. Both Rosenbergs refused to confess or to name others, a decision that may have led to their deaths. There were many protests worldwide against their convictions and appeals stop the execution, including one from Pope Pius XII.

Public interest in the Rosenberg trial remained strong, and Julius and Ethel Rosenberg assumed a place as characters and symbols in popular culture.

SARAH BOSLAUGH

Russian Federation

In the years after 1991 Russia experienced a revolution in the name of reform. The Union of Soviet Socialist Republics had been a one-party dictatorship that strove to control all aspects of life. Its collapse unleashed a host of social forces and triggered an array of experiments as people sought simultaneously to create a democratic government, a market economy, and a civil society. Other countries, including other remnants of the Soviet Union, were attempting similar experiments on different scales at the same time. No one, however, had ever

attempted this before, and there was no blueprint to follow. During this period, the administration of BORIS YELTSIN would be identified with the destruction of the old structures, a struggle among alternative visions, and chaotic and sometimes contradictory efforts to build something new. The administration of VLADIMIR PUTIN would represent a longing to reestablish order, stability, and security.

The Soviet collapse in 1991 came with remarkable rapidity. Unlike the collapse of czarist Russia in 1917, which was also sudden, this one was neither preceded by a world war nor followed by a civil war. There were relatively few violent conflicts, and those tended to be clashes between rival nationalisms.

The last Soviet leader, MIKHAIL GORBACHEV, had underestimated the attraction of nationalism to his country's various constituent peoples and had overestimated people's loyalty to the communist system. In forcing people, officials and citizens alike, to conceal their personal beliefs as well as inconvenient political and economic facts, the Soviet system had denied its own leaders the ability to gauge the true situation and had denied people in general the possibility of fully developing their own ideas. Gorbachev's efforts to reform the system, in part by releasing the energies of the citizenry in the hope of using them against a sclerotic bureaucracy, resulted in the system's demise.

Free multicandidate elections to a new national legislature in 1989 and elections to republic-level legislatures in 1990 unleashed a mass of rebellious and conflicting demands. In the course of the year, most of the republics declared "sovereignty" within the Soviet Union, that is, they asserted that republic law would henceforth be above federal law. The Russian Soviet Federative Socialist Republic, as the Russian portion of the Soviet Union was officially known, did so on June 12, 1990. At about the same time, the media began to free itself of government control. On the anniversary of the sovereignty declaration, June 12, 1991, while the republic was still part of the Soviet Union, Boris Yeltsin, a former Communist Party official who had fallen out with the leadership, became Russia's first elected president.

A failed reactionary coup launched by party, military, and police officials in August 1991 was the final blow in the centrifugal process that was tearing the Soviet Union apart. In the aftermath, the Communist Party was dissolved and no comparable integrative institution was created to replace it. Yeltsin began appearing alongside Gorbachev, the Soviet president, as a coequal. Key republics, especially UKRAINE, began to

believe they would be better off without the “burden” of the other republics and moved toward independence. At the very least, they ceased forwarding tax receipts to the capital, compelling Russia to take over responsibility for financing central state functions.

On December 8, 1991, confronted with Ukraine’s precipitous unilateral independence, Yeltsin and the leaders of Ukraine and Belarus declared their republics a Commonwealth of Independent States (CIS), even though Russia had never formally withdrawn from the Soviet Union. Leaders of other republics, petrified at the prospect of their sudden isolation, immediately demanded membership in the CIS as well. On December 25, 1991, Gorbachev resigned from the presidency in frustration. No one attempted to replace him, and the Union of Soviet Socialist Republics legally ceased to exist. In many ways it had already evaporated, although just when this occurred is difficult to determine.

After a brief attempt to maintain unified CIS armed forces, the republics took control of the military assets of their respective territories and created their own armies. Republics with nuclear arms stationed on their territories agreed to send them to Russia. Each republic also acquired its portion of the assets of the Committee for State Security, which continued to exist in some form. In Russia the KGB underwent a series of renamings and reorganizations that ultimately left it as five separate entities: one each for internal security, foreign intelligence, border defense, communications security, and the personal protection of state leaders.

REDEFINITION

With the Soviet Union gone, the next question was what would replace it. The Russian Soviet Federative Socialist Republic eventually renamed itself the Russian Federation. The re-creation of a Russian national identity was somewhat complicated, not only by the presence of more than 120 ethnic minorities within the federation’s borders and by the fact that some 25 million ethnic Russians were now living as minorities in the 14 other successor states of the Soviet Union, but also by the fact that the pre-Soviet Russian state had included the entire Soviet territory. In the other former Soviet republics, as in Eastern Europe, the communist system could be viewed as something imposed by the Russians. There, nationalists, anticommunists, democrats, and economic reformers could form coalitions, at least in the beginning. In the Russian Federation, although some Russian nationalists had seen the other republics as a burden, others had identified with the Soviet Union as a great power and saw its collapse as a tragedy.

Some adherents of the Soviet system and some Russian nationalists nostalgic for the old empire saw in the CIS a potential replacement that would ultimately amount to a rebirth of the Soviet Union. This never came about. The leaders of the various republics focused on their own entities, and the CIS itself failed to develop into an alternative power center. Rather, the CIS functioned as a loose association that oversaw the peaceful severing of the numerous ties that linked the republics to one another. Russia, not the CIS, inherited the Soviet Union’s nuclear weapons, UNITED NATIONS seat, overseas embassies, and foreign debt. This, however, did not prevent Russia from pressuring the more reluctant successor states into joining the CIS during the 1990s. Only the three BALTIC STATES remained outside.

In the early days, Russians were concerned that the unraveling might not stop with the collapse of the Soviet Union. Within the Russian Federation were former “autonomous soviet socialist republics,” now simply termed “republics,” regions with a substantial non-Russian ethnic population. Several of these declared sovereignty over their natural resources and asserted the primacy of their laws over federation law. Some appeared to be contemplating independence. In March 1992 all but Tatarstan and Chechnya signed the new Federation Treaty; Yeltsin was compelled to renegotiate center-periphery relations on an ad hoc basis with several individual republics and even ethnic Russian regions. Tatarstan signed such an agreement in February 1994. In the end only Chechnya carried out the secessionist threat, triggering two wars with the Russian army.

Politically, two tendencies were prominent in the early years of Russian independence. For members of the first group, the highest-priority goals were the establishment of democratic norms and the rule of law, the creation of a viable market economy, and integration into the Western world. For the second group, the highest priorities were building a state strong enough to defend itself, both internally and externally; assuring that national industries survived; and preserving Russian uniqueness.

Constitutionally, the form that the Russian government was to take was also under dispute. The much-amended constitution of 1978 remained in force while negotiations continued over a new Russian constitution. In this, as in economic policy, Yeltsin and the legislature took strongly opposed positions. The legislature at the time continued the cumbersome form innovated in the Gorbachev era: a Congress of People’s Deputies, with 1,068 members, that was supposed to meet twice a year, vote on the most important issues, and elect

Saint Basil's Cathedral in the Kremlin in Moscow during the Soviet era. The Soviet Union was a significant example of communism in the world. With the splintering of the Soviet Union, the different republics that had formed the union sought to redefine themselves.

from among its own members a smaller legislature—the Supreme Soviet—to meet between its own sessions. The constitution's provision that the legislature was the supreme state body was not modified after the creation of the elected Russian presidency in 1991.

CRISIS AND CONFRONTATION

The period from the end of 1991 to late 1993 was marked by economic crisis and political confrontation that ended in bloodshed. The two poles of confrontation centered on the reformist presidency and the holdover parliament, the Congress of People's Deputies, which fought a protracted battle over who held ultimate authority.

For the post of prime minister, Yeltsin named Yegor Gaidar, a young academic who had taught himself market economics during the late Soviet period, but the legislature refused to confirm him. Gaidar, nonetheless, continued in office as acting prime minister for one year.

The economy was in dire shape, quite apart from the normal inefficiencies of the centrally planned Soviet system. In the name of economic reform the Gorbachev government had ceased issuing orders to state-owned economic enterprises, but he had failed to establish the institutions of a market economy, resulting in a state-run system that did not work properly. The breakup of the Soviet state exacerbated the situation by disrupting economic ties between regions.

Gaidar's response was a rapid shift, often termed "shock therapy," to free prices, balanced budgets, and monetary restraint. This went into effect on January 1, 1992, and resulted in an enormous leap in prices in addition to the already existing shortages of supply. Normally, the shortages and rising prices should have worked as an incentive for enterprises to increase production. State enterprises, however, had not been privatized, and adequate market-based incentives had not been established. Wholesale trade, at the time, was still widely regarded as a form of illegal "speculation."

The implicit assumption that an economy dominated by gigantic plants producing military equipment could instantaneously convert to the production of consumer goods was probably naive in any event. Managers commonly viewed the inflation as an opportunity to increase revenues while working less. When monetary restraint restricted cash flows, enterprise managers informally extended credit to each other and expended their political influence trying to get subsidies reinstated.

The Congress of People's Deputies was the main focus of their attention. Elected in March 1990, the Congress was permeated with state-enterprise managers and former communists, most of whom now called themselves "independents." It repeatedly doled out payments to bankrupt enterprises, undermining the intended impact of Gaidar's policies; issued resolutions that contradicted government policies; and threatened the president with impeachment. For his part, Yeltsin responded with the threat to establish a "presidential republic." Each side ignored the acts of the other, contributing to a growing general disregard for the law.

The personification of resistance to the president was the speaker of the Congress, Ruslan Khasbulatov; he and vice president Aleksandr Rutskoi moved steadily closer to the opposition. Both had been Yeltsin allies at the beginning of the transition.

In late 1992 Gaidar left the office of prime minister. His replacement, Viktor Chernomyrdin, was initially more acceptable to the Congress. Chernomyrdin was a hybrid bureaucrat-entrepreneur. As minister of the gas industry, he had participated in a "spontaneous privatization" that converted the ministry into one of Russia's largest and most profitable companies, Gazprom. Nonetheless Chernomyrdin and his finance minister, Boris Fedorov, maintained the austerity policies and even closed some inefficient state enterprises. A referendum on economic reform and the division of power between the executive and legislative branches in April 1993 gave Yeltsin enough support to press ahead with his programs. Yeltsin and the legislature each began drawing up a new draft constitution.

The crisis came to a head in September 1993. To break the impasse, Yeltsin dissolved the Congress of People's Deputies and called for a referendum on a new constitution and elections for a new legislature in December. Meeting in emergency session, the Congress impeached Yeltsin and declared Rutskoi president. On Yeltsin's order, army units surrounded the legislative headquarters on September 27, but 180 members refused to leave. After a standoff of several days, Rutskoi called for a popular uprising, which

led to some street disorders but not the outpouring of support that he had anticipated. Armed men seized the mayor's office on October 3 and attempted to take the Ostankino television facility, where a firefight with Interior Ministry troops lasted for several hours. At this point, the army dropped the neutral position it had sought to maintain. On October 4 tanks opened fire, and by that afternoon the rebel leaders—including Khasbulatov and Rutskoi—had emerged and surrendered. After the "October events," no parliament would defy the president so openly again. Disputes, however, were far from over.

CONSTITUTION AND ELECTIONS

Yeltsin's draft constitution was approved by referendum in December 1993, in the shadow of the October events. It created a bicameral legislature, called the Federal Assembly (Federal'noe Sobranie). The upper house, the Federation Council (Soviet Federatsii), had two members representing each of the country's constituent regions, territories, and republics. The lower house, the State Duma (Gosudarstvennaia Duma), had 450 members, half of them elected from single-member districts and half from party lists.

The legislature was real, not a rubber stamp, but the constitution clearly gave the preponderance of power to the president. The president named the prime minister and cabinet, who were responsible to him. The cabinet, therefore, did not have to reflect the distribution of parties in the State Duma, so there was no incentive to form coalitions to build a parliamentary majority. Initially, committee chairmanships were doled out among parties and factions in proportion to the number of seats they held.

Technically, the State Duma had the right to approve or disapprove the president's choice for prime minister, but if it rejected three candidates it was the legislature, not the government, that was subject to dissolution. Moreover, the president had the power to issue decrees on his own.

The first post-Soviet parliamentary elections were held simultaneously with the referendum approving the constitution, two years after the collapse of the Soviet Union. A number of political organizations had essentially evaporated in the interim. The parties that did exist were often small, fractious, personalistic, and only loosely connected to the electorate. Parties arose, combined, split, recombined, and vanished with great ease. The most substantial and organized party was the newly constituted Communist Party of the Russian Federation, although it lacked anything resembling the

status and power of the former Communist Party of the Soviet Union.

The results of the elections were far from what Yeltsin and the reformers would have hoped for. The largest percentage of votes in the party-list portion of the ballot went to the Liberal Democratic Party of Russia, a misnamed authoritarian, ultranationalistic grouping with a leader, Vladimir Zhirinovskiy, who was once described as a “dangerous buffoon.” The communists came in second. The reformists had split the vote by dividing into four separate parties that constantly squabbled among themselves, the two most important being Gaidar’s neoliberal Russia’s Choice and the more social-democratic Yabloko.

Despite the evident potential for renewed polarization, Russian politics did not return to the chaos of the pre-October days but settled down into a relatively normal pattern. Politicians of various stripes gradually became accustomed to open politics and even adept at it. Despite their extremist rhetoric, the ultranationalists proved relatively supportive of the government, and the communists could be counted on for a backroom deal when the need arose. The fractious reform parties, never satisfied with compromise, often created the greatest difficulty for the reform process.

Gaidar’s original reform plan came to be implemented more consistently, without Gaidar. Prime Minister Chernomyrdin became increasingly prominent, while Yeltsin occasionally receded into the background amid rumors of drinking and the state of his health. Economic policy was no longer undermined by subsidies granted to bankrupt factories by the legislature. Also, the privatization program made progress, although this required a presidential decree. The economic situation began to stabilize, but it did not fully recover and grow.

With new legislative elections planned in December 1995, Yeltsin eliminated elections for the upper house and determined that each jurisdiction would be represented by its governor and its legislative speaker. He also attempted to create two new parties as the basis for a two-party system: One, a center-right organization intended to become the government party, was led by Prime Minister Chernomyrdin; the other, envisioned as a center-left loyal opposition, was led by Ivan Rybkin. Chernomyrdin’s party, called Our Home Is Russia, managed to draw about 10 percent of the vote as long as he was prime minister. The second party, which was actually listed on the ballot as “Ivan Rybkin’s bloc,” never got off the ground. The relatively poor showing, if nothing else, indicated the limits on Yeltsin’s ability to manipulate the electorate.

Forty-three parties participated in the 1995 elections, but only four of them surpassed the 5 percent threshold necessary to obtain seats under the proportional-representation system. The four that did succeed were the Communists, the ultranationalist Liberal Democrats, Our Home Is Russia, and the social-democratic Yabloko. The Communists received the largest share this time, setting the stage for Russia’s first post-Soviet presidential election, to be held in two rounds in June and July 1996.

The Communists’ hard core of support constituted about 20–30 percent of the electorate at this time. Support was especially strong among pensioners and others who had suffered extreme hardships during the inflation and chaos of the early reform period. They had trouble, however, breaking beyond that core. Yeltsin, who had been doing very poorly in opinion polls, ran an anti-Communist campaign and eked out a plurality of 35 percent in the first round. Communist candidate Gennadii Zyuganov finished just behind him with 32 percent. Eight other candidates were eliminated from the second round. After hiring the third-place candidate as his national security adviser, Yeltsin then managed to consolidate the anti-Communist vote and was reelected in the second round, 54 percent to 40 percent. Significantly, all sides accepted the results of the election without protests or claims of fraud.

PRIVATIZATION AND OLIGARCHS

The establishment of new start-up businesses and the privatization of state enterprises proved difficult in Russia. Gigantic state enterprises had been designed as monopolies from the beginning, and adapting them to a competitive economy would be a true challenge. Moreover, private business was widely considered unseemly if not criminal; even small-scale street vendors were deemed an unsightly embarrassment. Russians found private ownership of land and natural resources objectionable. Few people, of course, had the money to start a business. Nor were inflation and rising crime good incentives to invest. Five years into the reform period, Russia had only half as many start-up businesses as Poland, a country with a fourth as many people.

A small number of people, however, discovered a way of manipulating the half-reformed economy of the late 1980s and early 1990s to accumulate vast amounts of capital. Officials in economic ministries would declare portions of the ministry to be private companies. Factory managers would establish private businesses on the side and then lease the factory’s facilities to themselves.

Oil proved an especially useful asset for wealth generation. Fearing the political consequences of allowing domestic oil prices to rise to world levels, Russian leaders had made it possible to export oil at world prices, but maintained controlled domestic prices at less than 1 percent of the world price. Using connections and borrowed money, some people were able to buy large quantities of oil at domestic prices and sell it abroad for 100 times what they had paid. When large-scale privatization of state enterprises became a government priority, these were the people who had the resources and the connections to take advantage of it.

In the first phase of official privatization, starting in December 1991, small enterprises were sold off and larger ones were reorganized as joint-stock corporations. Arrangements were made for the workers and managers of smaller enterprises to acquire controlling interests for little or no money. This meant that the same managers continued to control an enterprise, but reformers hoped the fact of ownership would give them a stake in the factory's success and sever their dependence on the state budget. If nothing else, this would undermine the political strength of the state economic bureaucracy, a center of resistance to reform.

In June 1992 a new element was added: a voucher program for the privatization of the now-corporatized medium and larger enterprises. Each citizen was issued a voucher worth 10,000 rubles, a total of some 144 million vouchers, to be invested in corporations or investment funds or simply traded or sold. This program was intended to accelerate privatization and to give common citizens a stake in the economy and the reform process, but since the vouchers were distributed for free it did not generate revenues for the state. The voucher phase was largely completed by mid-1994. Some 100,000 enterprises had been privatized, and they employed 80 percent of the workforce.

Many people had simply sold their vouchers for cash or later sold their shares, allowing well-placed people—such as factory managers and former government functionaries—to gain control of plants. This eroded the objective of encouraging widespread ownership, although it did not completely nullify it. The advantages that accrued to insiders generated resentment in the population.

The next phase of privatization called for the direct sale of shares in large enterprises, especially those in the energy and raw materials sectors, for cash. Because of resistance to this in the State Duma, the procedure was implemented by presidential decree in July 1994. It generated even more public skepticism and resent-

ment. In 1995 the cash-strapped state offered shares in enterprises as collateral for bank loans, under rules established by the banks themselves. As expected, the state did not have the funds to repay a loan. The bank then auctioned off the shares, and generally the bank proved to be the only bidder. In this way the banks, and the oligarchs behind them, came to acquire control over large industrial empires at a fraction of their assessed value.

The Communists sought to make a campaign issue of the privatization scandal in the presidential election. Several oligarchs eagerly financed Yeltsin's 1996 reelection campaign and put their media resources at his service. To neutralize the privatization issue at the national level, Yeltsin transferred ownership of 6,000 state enterprises to the regional governments to be auctioned, with the regions keeping the proceeds. The "loans for shares" program was reinstated after the election. The oligarchs became increasingly prominent, through their own media outlets and through their growing role as government advisers and officials, during Yeltsin's second term.

CRISIS AND TURNAROUND

Six years after the beginning of economic reform, the Russian economy was still shrinking, although it was no longer in the free fall of 1992. The government was still unable to collect taxes, and many enterprises failed to pay their debts to each other. Barter had become the basis of much of economic life, with workers being paid in kind or in IOUs.

Yeltsin dismissed Chernomyrdin as prime minister in the spring of 1998 and appointed a young banker, Sergei Kirienko. A new team of reformers set out to establish a long-overdue legal framework for economic activity, to impose more predictability into the system in the place of what they called the existing "unlimited semi-bandit capitalism." They were too late.

A severe financial crisis struck the Russian economy in the summer of 1998. In part, this was a reflection of the 1997 crisis in East Asia. Even more, it reflected the sudden decline in international oil prices. Oil exports had been the economy's, and the government's, principal revenue generator, paying for imports to cover the failure of domestic production to recover and compensating for the government's lack of domestic tax revenues. With export revenues falling, the highly indebted government found it difficult to issue new bonds. Investors began moving their money out of Russia.

The INTERNATIONAL MONETARY FUND provided a loan of \$17.1 billion in return for a package of reforms

to rationalize the tax code and reduce government expenditures, but this failed to stem the outflow of capital. After desperately trying to avoid either default on Russia's foreign and domestic debt or devaluation of its currency, Kirienko, on August 17, 1998, did both. Prices skyrocketed and most oligarch banks failed, although the oligarchs themselves generally survived by shuffling their assets. Kirienko's term in office proved brief, and he was just the first of four prime ministers during Yeltsin's last three years as president.

Unexpectedly, the crisis also proved the turning point in the country's economic recovery. Unable to afford imports, Russia began to produce things for itself again, and production continued as international oil prices recovered. In the following year, 1999, the economy grew for the first time in the post-Soviet era; in 2000 it grew 10 percent.

CHECHNYA I

In the early years, the leaders of the new Russian Federation were worried that Russia could unravel along ethnic lines as the Soviet Union had done. They responded strongly to the one ethnic republic that did attempt to secede, Chechnya, even though that response was delayed by the general chaos prevailing in Russia in the early 1990s.

The Chechens were a Muslim people of the Caucasus Mountains who, in the 19th century, had fought a prolonged war against the Russian occupation of their region. Like several other Soviet minorities they had been accused by Stalin of collaborating with the Nazis, and they were all deported to Soviet Central Asia afterward. NIKITA KHRUSHCHEV allowed their return, but when the Soviet Union collapsed, the Chechens sought secession. Under Dzhokhar Dudayev, a former Soviet air force general, Chechnya declared independence in 1991.

Yeltsin declared a state of emergency in Chechnya, issued a warrant for the arrest of Dudayev, and sent a detachment of Interior Ministry troops. The Chechens easily repulsed the half-hearted intervention, by ruse more than by force, and seized strategic facilities within their republic. Yeltsin ordered an economic blockade and then, given the chaotic state of Russia at the time, basically ignored the situation for the next three years. The lack of any police force facilitated smuggling and other criminal operations. In a search for outside resources and allies, the Chechens made contacts with mafias from Russia and Islamist extremists from the Middle East. Corruption spread, the economic situation grew dire, and Dudayev became more dictatorial.

After supporting a failed attempt by a rival Chechen faction to seize power, Russia sent three armored columns into Chechnya on December 11, 1994. The Russian legislature, which had not been informed, protested vociferously. The invasion did not go smoothly. The Russians made a hasty and ill-prepared assault on Grozny, the republic's capital, which they seized only after a month-long bombardment that killed an estimated 25,000 people and left the city a ruin. Dudayev and his fighters receded into the mountains, from where they conducted an extended guerrilla campaign. Civilian casualties continued to run high. The struggle attracted Islamist volunteers from North Africa, the Middle East, and AFGHANISTAN.

In March 1996, with presidential elections looming in Russia, Yeltsin offered to negotiate with Dudayev through an intermediary. A Russian missile killed Dudayev in April. Fighting flared again in June, and the Chechens reoccupied parts of three cities, including Grozny. A cease-fire was finally signed in August. Russian troops began to withdraw. Although the agreement left Chechnya's permanent status to be decided, the republic proceeded to act as if it were independent.

Aslan Maskhadov, the chief of staff of the Chechen armed forces and a former Soviet army colonel, was elected president of the republic in January 1997. Little rebuilding was accomplished, however, and Maskhadov was unable to establish order. In the prevailing lawlessness, kidnapping for profit became a widespread practice. In an effort to outflank the Islamists in factional infighting, he imposed Islamic law and courts.

CHECHNYA II, PUTIN, AND CONSOLIDATION

Chechnya became the focus of attention again in 1999. Shamil Basayev, formerly a field commander and briefly a prime minister under Maskhadov, had broken with the Chechen regime. In April 1998 he and a Jordanian-born Islamist founded the Congress of the Peoples of Chechnya and Dagestan, which proposed to unite these two adjacent ethnic republics. In August 1999 they launched a raid into Dagestan and then declared that the republic had seceded from Russia. The following month, a series of bombs exploded in apartment buildings in Moscow and other Russian cities. The act was widely attributed to the Chechens.

On August 9, 1999, Yeltsin dismissed Sergei Stepashin, who had been prime minister for three months, and appointed Vladimir Putin to replace him. Putin had catapulted through a number of Kremlin staff positions to become head of internal security in July 1998. He was still generally unknown to the public when he was

named prime minister, but he quickly became associated with the new Chechen war, which was known as Putin's "antiterrorist operation." Opinion polls gave Putin an approval rating of 33 percent in August, 52 percent in September, and 65 percent in October, in a land where few politicians rose above single digits.

In October Russian armor was once again moving into Chechnya, without any distinction being made between the Chechen government and renegade commanders. The army performed more effectively this time. The cities were taken quickly, and a pro-Russian Chechen administration was put in place. Resistance, however, would drag on year after year in the countryside, and there would be terrorist attacks in other parts of Russia. Russian forces would respond at times with extreme brutality. With the bomb blasts fresh in people's minds, however, this Chechen war was far more popular with the Russian public than the previous one.

Four months before the legislative elections of December 1999, Yeltsin once again created a new party from scratch, Unity, a party completely dependent on the Kremlin for funding, expertise, and personnel. Putin gave it his public endorsement, and the party, too, became identified with the Chechen war effort. Unity won 23 percent of the party-list vote and 64 single-member districts, leaving it second only to the Communist Party. In third place was Fatherland–All Russia, a coalition of personalistic parties built around prominent governors. For the first time, the State Duma had a dominant bloc of parties that were not ideological adversaries of the Kremlin.

Yeltsin, within seven months of the end of his second term in office, surveyed a political landscape that suddenly appeared quite favorable. He then shocked the world by promptly resigning on December 31, 1999, and naming Putin as acting president. An early presidential election was called for March 26, 2000, which Yeltsin's chosen successor would now approach with all the advantages of incumbency while other candidates were caught off guard. Indeed, Putin won in the first round with 52.9 percent of the vote against 10 other candidates, despite having been a virtual unknown the previous August. He promptly obliged his predecessor by issuing a blanket pardon for anything Yeltsin might have done during his years in office.

As president, Putin no longer devoted himself solely to the prosecution of the war. Economic reform continued but Putin's primary focus appeared to be order, stability, security, and consolidation of the Russian state. Russia was very much in need of order by that time, but Putin's notion of consolidating the state reflected his

upbringing within the Soviet Union. Rather than make state institutions more effective, he set out to make all institutions dependent on the president.

Putin remained a largely unknown quantity, allowing others to see in him what they wanted. Moreover he surrounded himself with two distinct sets of officials: a group of economic reformers known as the "technocrats" and a group of people tied, as he himself was, to the military, police, and internal security services. For all his talk of order and predictability, Putin allowed these officials free rein to discredit and undermine each other's initiatives.

Some measures did improve the effectiveness of the Russian state. Reforms were introduced and carried out in a more orderly fashion. The Duma no longer spent its time debating impeachment and censure bills. New requirements for the registration of a political party, including a minimum membership of 10,000, introduced some order into the chaotic party system. The tax code was reformed, instituting a 13 percent flat tax on both individuals and corporations, and it was actually enforced. This reduced nominal tax rates, but, because of previous evasion, it increased revenues. Annual budget surpluses suddenly became routine.

Power was being centralized in stages. The outcome of the December 1999 election had already strengthened Putin's position. Relations between president and legislature became more productive. In 2001 Unity and the Fatherland–All Russia bloc were merged into a new pro-Putin party, eventually named United Russia, which was clearly the largest in the State Duma.

In the Federation Council, Putin replaced the elected governors and regional legislative heads with appointed representatives. Next, Putin interposed a new layer of government, grouping Russia's 89 constituent jurisdictions into seven supraregional federal districts and placing an appointed presidential representative in charge of each. All federal employees in the regions, who had become increasingly dependent on the governors under Yeltsin, were now to answer to these representatives. Another new law then gave the president the right to remove elected governors accused of wrongdoing.

Another round of centralization began in 2004. Putin declared that the threat of separatist violence required a strengthening of the state. Thus in December 2004 he signed a law abolishing the election of governors, who would now be presidential appointees. At the same time, the minimum membership of a political party was raised from 10,000 to 50,000. Another law followed in May 2005 that eliminated single-member

districts from the Duma, leaving all seats to be elected by proportional representation from party lists and raising the minimum threshold for representation from five percent of the vote to seven percent. How these measures would have helped Beslan remained unclear, but the latter was likely to end the independent existence of Yabloko and the Union of Right Forces (the successor party to Russia's Choice), which by 2003 no longer mustered even five percent of the vote and entered the Duma only through single-member districts.

Far from alienating the electorate, Putin was rewarded at the polls for his perceived efforts to impose order and the improving economic situation. In the legislative elections of December 2003, his new party, United Russia, became the first ever to win an absolute majority in the State Duma. In the presidential elections of March 2004, Putin was reelected in the first round, over five other candidates, with 71.3 percent of the vote. International election observers, however, criticized the skewed electoral coverage in the media.

PUTIN AND THE OLIGARCHS

Putin sought to distance himself from the oligarchs, who had become closely identified with the Yeltsin administration in the public mind. In some cases he went so far as to intimidate and harass them. Rumors told of a tacit deal: If the oligarchs stayed out of politics, Putin would not order the police to investigate how they had become oligarchs. Not all oligarchs abided by the deal.

Putin's first targets were Boris Berezovsky and Vladimir Gusinsky, both of whom had accumulated many enemies and both of whom controlled large media empires that had criticized the handling of the Chechen war. Berezovsky was well known and particularly disliked. Although he had actively supported Putin's election, he spoke soon afterward of the need to form a new opposition party. Gusinsky had gone so far as to endorse the wrong presidential candidate in 2000. Whatever the specific reason, both ended up living in self-imposed exile and being stripped of many of their assets. In 2001 Gusinsky's NTV, the country's largest independent television network, was taken over by Gazprom, the gas giant. Thus, not only oligarchs but also journalists were put on warning. This was particularly true of journalists in the electronic media, and they soon learned especially not to criticize the Russian war effort in Chechnya. The unsolved murders of several investigative reporters further reinforced caution.

The next assault on the oligarchs was directed against Mikhail Khodorkovsky and Yukos, Russia's largest private oil conglomerate. Khodorkovsky was also known

for making large contributions to opposition political parties. In 2003 he found himself under arrest on charges of tax evasion, and he was later sentenced to nine years in prison. Yukos was assessed back taxes and fees that amounted to some \$27 billion. When it was unable to pay, its main production unit, Yuganskneftegaz, was taken over by Rosneft, a state-owned entity. Sibneft, an oil company that had been on the verge of merging with Yukos, instead became a part of Gazprom.

Although presented as a rectification of the unethical privatization schemes of the 1990s, the Yukos affair symbolized for many observers just how random and arbitrary the use of state power had become. Putin's technocratic advisers, with open disdain, referred to the government's approach as "tax terrorism." Unlike many other oligarchs, Khodorkovsky had become the model of good corporate governance in the Russian business world, recruiting experienced foreign executives to introduce Western standards of accounting and management. Even if Putin's intention was not to renationalize large sectors of the economy, as many outsiders assumed it was, his actions ran the risk of discouraging foreign and domestic investment and of spurring new rounds of capital flight.

The hypothesis that the oligarch cases really represented the criminalization of political opposition activity received reinforcement in 2005 with the Mikhail Kasyanov affair. Kasyanov was not an oligarch but rather a technocrat and former finance minister with a shady reputation. He served as prime minister throughout Putin's first term but was dismissed in 2004 without any public explanation. The following year, Kasyanov began to issue public criticisms of the administration's political direction. He openly hinted that he might run for president in 2008. Within weeks, the police opened an investigation into how he had acquired his country house outside Moscow, which according to television reports was worth \$30 million.

QUESTION OF SUBVERSION

Russia maintained generally cooperative relations with the outside world after 1991, even with such former adversaries as the United States and the NORTH ATLANTIC TREATY ORGANIZATION (NATO). This was true despite the fact that by the early 2000s several former East European allies and the three Baltic republics had joined NATO and the United States had established air bases in former Soviet republics in Central Asia. Below the surface, however, resentments simmered over what some Russians considered unequal treatment and Western gloating over the outcome of

the COLD WAR. On occasion, resentment and suspicion rose to the surface, as was the case with what Russians called the “colored revolutions.”

After the collapse of the Soviet Union, Western governments and foundations had given financial support, advice, and encouragement to a variety of independent civic groups in former Soviet republics that advocated the protection of human rights, democratic reform, and similar causes. Western leaders saw the development of “civil society” as a prerequisite for the further development of democracy. Indeed, civil society in Russia had progressed tremendously since Soviet times, when all independent entities were proscribed by law. Outside Russia, such civic groups were central to the organization of massive demonstrations that protested fraudulent elections and eventually toppled authoritarian and semi-authoritarian regimes in Georgia in 2003, Ukraine in 2004, and Kyrgyzstan in 2005. In each case, the successor regime was less favorably inclined toward Russia than its predecessor. In the Ukrainian case, in particular, Putin had taken an open stance in support of the side that was toppled.

Russian officials began to speak of the civic groups as instruments of subversion directed by Western intelligence agencies. Internal security officers described a conspiracy of loosely associated entities engaging in “network warfare.” In response, a law was passed in December 2005 requiring all nongovernmental organizations to register with the state and to submit regular reports on their activities and spending. The state was empowered to review compliance and to shut down any entity that violated the rules, but exactly which activities were prohibited was left vague.

Perhaps more ominous was the sudden rise of a new organization, a pro-Putin youth movement called Nashi (“Ours”). Founded in March 2005, Nashi was capable of mobilizing 60,000 people for a rally in May of that year. Its leaders described the group’s purpose as preventing a coup against the Russian government. The Kremlin denied any links to the organization, but Nashi was permitted to hold its founding congress in a facility of the Russian Academy of Sciences, and its leaders were granted a personal interview with Putin. The rhetoric suggested to some observers that Nashi was being readied to replace an insufficiently reliable United Russia party as the country’s main political organization.

TRENDS OF THE FUTURE?

Boris Yeltsin, in his revolution, unleashed a host of competing regional, bureaucratic, political, and economic forces. Then he attempted to rule by playing them off

against one another. The informal interplay, backroom power struggles, deals, and personal connections often proved more important than the formal institutions of government, which he had also created in an arbitrary and self-serving manner. Increasingly, however, ill health, depression, and bouts of drinking kept him from engaging the game. The system became increasingly chaotic. Putin then set out to impose order and hierarchy by subordinating institutions and private-sector groups to the presidency.

On the positive side, few people believe anymore that Russia faces the threat of economic, social, or political collapse. The country under Putin is still much freer than it was as part of the Soviet Union. It is more open, and it has more human contact and a freer flow of ideas with the outside world. It is more responsive to the wishes of its citizens. There still are regular elections, and civil society survives, although it faces new threats. Real debate continues in the print media. Although it depends too heavily on favorable international oil prices, the economy continues to show signs of recovery. Putin’s efforts to impose hierarchy could simply fail. There is, in a word, hope.

Nonetheless, there have been undeniable negative trends. The turmoil of the 1990s discredited the words “reform” and “democrat” in the eyes of many honest citizens. Corruption reached intolerable levels. The Soviet Union’s collapse, the loss of superpower status, the subsequent rise of poverty, and the perceived mistreatment at the hands of other powers left a reservoir of resentment and latent hostility that may be looking for an outlet. The brutal war in Chechnya gives little cause for satisfaction with either side, even when the Russians say it is part of the common fight against terrorism. Even the nature of Russia’s more competitive manufactured exports may give some cause for concern.

The stifling of the electronic media, the virtual renationalization of certain large enterprises, the abolishing of gubernatorial elections, and the concentration of power in the hands of the president all give an insight into the fragility of some of the country’s most important achievements. The government, moreover, has shown a disturbing willingness to criminalize political opposition. Even if these actions are supposed to be temporary, or are simply intended to rein in the excesses of a chaotic time and reestablish order, there is still a risk that they could go too far. Putin’s administration was initially associated with economic recovery, but the perceived assault on private property, the partial reinsertion of the state into the economy, and the simultaneous rigidification of the state could easily stifle investment,

encourage capital flight, generate bottlenecks, and otherwise induce economic erosion in the longer run.

It is, of course, too soon to draw any serious conclusions about the history of the Russian Federation since 1991. Which trends finally emerge as dominant will have long-lasting consequences for the future of Russia and perhaps the rest of the world as well.

SCOTT C. MONJE

Rwanda/Burundi conflict

Rwanda and Burundi were, until World War I, occupied by the Germans, being a part of German East Africa. Captured by the Allied armed forces, they were administered as Ruanda-Urundi by Belgium under League of Nations trusteeship and, from 1945, under UNITED NATIONS (UN) trusteeship. The entity was split in 1959 into Burundi and Rwanda, and on July 1, 1962, the two countries became independent with the formation of the Kingdom of Burundi and the Republic of Rwanda. Both faced regular ethnic problems centering on the Tutsi-Hutu rivalry, with the Hutu forming 85 percent of the population of each country and the Tutsi being a much better educated minority.

In the year before Burundi became independent, there was political trouble that followed the UN-supervised elections of September 1961 that saw the Parti de l'Unité et Progrès National winning but their leader, Prince Louis Rwagsore, being assassinated several weeks later. There was more instability when two prime ministers, Pierre Ngendandumwe and Joseph Bamina, were assassinated before an attempted coup d'état took place in October 1965. Thousands were killed as the government sought to maintain its power. However, it gave too much power to the army, which, in November 1966, overthrew the monarchy and established a republic under President Michel Micombero.

The last former king, Ntare V. Ndizeye, staged a coup attempt in 1972 but was killed in the attempt, which was immediately blamed on the Hutu—the government being drawn from the Tutsi minority. As the Tutsi government sought revenge on its opponents, some 100,000 Hutu were massacred. In 1976 Micombero was overthrown in a military coup, and the new president, Jean-Baptiste Bagaza, tried to moderate the government and introduce reforms that stopped the oppression of the Hutu. However, Bagaza was overthrown in 1987 in a coup d'état organized by Major Pierre Buyoya, who suspended the 1981 constitution and dissolved opposition parties. In August 1988 some 20,000 Hutu were massacred by the government, and many Hutu refugees fled to Rwanda.

In Rwanda, the monarchy was removed in 1959, before independence, and at independence, in 1962, the Hutu-led Parti du Mouvement de l'Emancipation Hutu—led by Grégoire Kayibanda—came to power. There were massacres of some 20,000 Tutsi, and in 1973 Kayibanda was overthrown by General Juvénal Habyarimana, a former defense minister, who became president. He formed the Mouvement Révolutionnaire National pour le Développement. It was not until 1978 that the constitution was restored; Habyarimana was reelected in 1983 and again in January 1989. It was the 1988 ethnic tensions in Burundi that sent large numbers of Hutu refugees from Burundi across the Rwanda-Burundi border. Many Tutsis also settled in Uganda, where they became Anglophiles, in contrast with the Rwandan and Burundi governments, which maintained connections with France.

Fighting in both countries came to a brief halt, and in April 1994, when negotiations to end the fighting were starting to make progress, the plane carrying Habyarimana back to Kigali, the Rwandan capital, was shot down with a French missile. All on board, including President Ntaryamira of Burundi, were killed. This was the opportunity that the extreme Rwandan Hutus were eagerly awaiting to try to take over control of Rwanda. It is not known for certain who shot down the plane, but the Hutu government of Rwanda blamed the Rwanda Patriotic Front (RPF)—Tutsi rebels who were based in Uganda—while the RPF blamed the hard-liners in the government who did not want to share power. The killing of the president gave the extreme Hutus an excuse to unleash their Interahamwe militia on the Tutsis and moderate Hutus, killing up to 900,000 of them in horrific massacres. Several UN soldiers were killed while protecting moderate politicians in Kigali, and the remainder of the UN forces was evacuated from

the country. The UN Security Council—Rwanda was a member at the time—did nothing to try to stop the genocide, which only ended as the RPF forces won the civil war, capturing Kigali soon afterward. The RPF inherited a devastated country and did their best to arrest the perpetrators of the genocide but hundreds of thousands of Hutus—extremists and their supporters—fled into the neighboring DEMOCRATIC REPUBLIC OF THE CONGO.

Since the coming to power of the government of President Paul Kagame in Rwanda, there has been a concerted effort to rebuild the country shattered by ethnic tensions, war, and genocide. With a large number of the intelligentsia of the country murdered or in exile overseas, Kagame has managed gradually to rebuild the infrastructure of the country and at the same time prosecute those guilty of horrendous atrocities.

The United Nations Security Council did adopt Resolution 977 in February 1995, setting up the International Criminal Tribunal based in Tanzania. The Kagame government has objected to it because it has refused to sanction the death penalty even for the most heinous of crimes. Some of those caught in Rwanda, in some cases having been found guilty of murdering

hundreds of people with machetes, have been tried and executed, with others jailed. In spite of the tensions and hatreds engendered by the war, the civil society is gradually being improved in Rwanda, with conditions also improving in Burundi.

Prior to the recent civil war, many tourists had visited Rwanda to see the mountain gorillas. These numbers had increased following the film *Gorillas in the Mist* (1988) about Dian Fossey who lived with the gorillas and nurtured many of them, especially one known as “Digit.” After the war it was revealed that most of the gorillas survived, and some tourist groups are, once again, visiting Rwanda.

JUSTIN CORFIELD

Sahel, ecological crisis in

The Sahel region is the semi-arid part of western and north-central Africa that is located between the Sahara in the north, and the humid savannah of the south—much of it being in what was formerly French West Africa.

It covers the region from the Atlantic Ocean, covering northern Senegal, southern Mauritania, Mali, Burkina Faso (formerly Upper Volta), southern Niger, northeastern Nigeria, south-central Chad, and through to the Sudan. Some descriptions have it including a small part of southwestern Morocco (formerly Western Sahara), and going through to ERITREA.

In the second part of the 20th century, with a large increase in the population of the Sahel, there has been massive soil erosion and desertification. Much tree and scrub cover has been removed to allow for the collection of firewood and for the creation of more farmland. Subsequent rainstorms have taken away much of the topsoil, destroying the fertility of the land and turning much of it into wasteland. Overgrazing has continued to make the situation worse, accentuated by bad land management. This in turn has led to the expansion of the Sahara in spite of a number of attempts to prevent this.

A bad drought in 1968 led to the destruction of many of the crops grown in the Sahel, and, with more years of drought in the early 1970s, the problems became worse. In 1972 the entire Sahel received almost no rain, and in the following year the Sahara

started increasing up to 60 miles (100 km) a day in the south. Some 100,000 people died from starvation and related diseases in 1973, and, although international relief aid managed to help, severe drought and famine hit the Sahel again in the period 1983–85. In recent years, as the situation has become far worse, it has been associated with global warming and greenhouse gases, although direct human activity is certainly to blame.

The situation was so bad that in 1973 the UNITED NATIONS Sahelian Office (UNSO) was created to try to address the problems facing the Sahel. The International Fund for Agricultural Development was founded in 1977 to deal with this and similar environmental problems; in the 1990s the United Nations Convention to Combat Desertification (UNCCD) was adopted. Although the UNCCD has managed to make progress, the ecological crisis has exacerbated many tribal and other tensions in the region, such as in DARFUR.

JUSTIN CORFIELD

San Francisco, treaty of

The Treaty of San Francisco, signed on November 8, 1951, and implemented on April 28, 1952, restored full sovereignty to Japan after its unconditional surrender at the end of World War II and ended the U.S. occupation. The negotiations over the treaty revealed differing notions of what had caused World War II and of what Japan's role in the world should be. Engineered primarily by the United States, the treaty quickly became caught up in the COLD WAR rivalries.

In March 1947 U.S. general Douglas MacArthur, who headed the Allied Occupation Authority in Japan, ignited a heated debate about the proper terms of Japan's rehabilitation when he publicly stated his preference for a relatively short U.S. occupation, believing that Japan had been democratized and demilitarized and that a long occupation would only create resentment.

This view was countered by those who pushed for massive reparations from Japan as well as its complete demilitarization. This group believed that the lax enforcement of the Versailles Treaty, which had ended World War I and established terms for the German reparations and demilitarization, had created the conditions for World War II.

A different assessment of the Versailles Treaty emerged among those who advocated a "soft" approach to the peace treaty. This group, which eventually included U.S. secretary of state Dean Acheson as well as MacArthur, argued that it was the harsh conditions of Versailles that had, by humiliating and isolating Germany, contributed to the rise of Nazism. This group also worried that the United States should be careful not to overextend its military presence in Japan.

The negotiations were complicated by cold war diplomacy. The United States worried about granting Soviet Russia and the newly established communist PEOPLE'S REPUBLIC OF CHINA a significant role. It also wanted to guarantee that Japan would become a U.S.-friendly bulwark against communism in East Asia. In particular, the U.S. military wanted to retain control over Japan for an extended period to guarantee access to its military bases in the area.

The United States eventually adopted a "piecemeal strategy" of granting Japan full sovereignty and disregarding the calls for a longer occupation. It met the concerns of the British COMMONWEALTH OF NATIONS with a U.S.-backed security network that would include Australia and New Zealand. It satisfied the

concerns of the Philippines with promises of aid and security. The United States also decided that neither the Chinese Communist nor the Chinese Nationalist governments would be invited to the treaty conference. This formula won significant bipartisan support in the United States.

The official treaty conference took place in San Francisco in 1951. Fifty-one nations were represented (India chose not to attend). The United States engineered the final result, causing delegates from the Soviet Union, Poland, and Czechoslovakia to walk out. Eventually 48 nations signed the treaty.

The final terms of the treaty reflected a victory for the pragmatists who had worried that overly harsh conditions would push Japan away from the West. Although it stripped Japan of all territory gained since 1895 and rejected the pardoning of war criminals, the treaty established immediate sovereignty for Japan and limited reparations it owed to its World War II victim nations. The United States–Japan Security Treaty, signed two hours after the peace treaty, guaranteed a U.S. military presence.

Not all Japanese were happy with the treaty. Many Japanese wanted to see the process of democratization and demilitarization continued. They were surprised by the number of bases the United States maintained in Japan as well as the ban on diplomatic relations and trade with communist China.

In retrospect, the relatively generous terms of the treaty reformed Japan as an important member of the Western camp during the cold war. Japan never again threatened the security interests of the West or of other East Asian nations.

THOMAS ROBERTSON

Sandinista National Liberation Front

The Sandinista National Liberation Front (Frente Sandinista de Liberación Nacional, or FSLN, or Sandinistas) was a neo-Marxist politico-military organization founded in 1961–62 by a small group of Nicaraguan revolutionaries inspired by the example of the CUBAN REVOLUTION. Its goals were to overthrow the Somoza dictatorship and establish a nationalist, socialist, dem-

ocratic, internationally nonaligned revolutionary state. As such, it was but one of several dozen revolutionary groups to emerge in Latin America in the 1950s and 1960s, and remained relatively obscure until the late 1970s. On July 19, 1979, it became one of only two revolutionary organizations in modern Latin American history to seize state power after a prolonged armed conflict (the other was FIDEL CASTRO's 26th of July Movement). It ruled Nicaragua from 1979 to 1990, when it was voted out of office, after which it became a minority party in a series of coalition governments. In 2006 a reconstituted FSLN captured the presidency with the election of longtime Sandinista leader and former president Daniel Ortega.

The group was named after Nicaraguan rebel leader Augusto C. Sandino (1895–1934) at the insistence of FSLN leader CARLOS FONSECA AMADOR, who envisioned blending the group's neo-Marxism with the country's homegrown traditions of popular struggle, and interpreted Sandino as “a kind of path” and a potent symbol by which to more effectively generate popular support. In addition to Fonseca, FSLN founders included Tomás Borge Martínez, Noel Guerrero Santiago, Pedro Pablo Ríos, Bayardo Altamirano, Silvio Mayorga, Iván Sánchez, and Faustino Ruiz. Of this group only Borge survived to witness the revolution's triumph; after 1979 he became Interior Minister. Other early members included Germán Pomares and Santos López, the latter the only early FSLN member who had fought in Sandino's army (1927–34).

In the 1960s and 1970s the movement went through several phases and was shaped by a complex sequence of events. In general, the organization shifted its emphasis from the military to the political realm (gaining the political sympathies of the populace), and from organizing rural folk (*campesinos*) to organizing students, workers, and the urban poor. Among the most significant events marking the early history of the movement were the 1963 Coco River and Bocay campaign and the 1967 Pancasán offensive in the mountains near Matagalpa, the latter nearly destroying the group and, coming the same year as CHE GUEVARA's capture and execution in Bolivia, compelled a strategic rethinking. Thereafter, most organizing efforts shifted to urban areas. The aftermath of the December 23, 1972, Managua earthquake, which killed some 10,000 people, left 250,000 homeless, and exposed the corruption of the Somoza regime, enhanced the stature of the FSLN and other dissident groups. In December 1974, in an audacious raid on the home of wealthy businessman Chema Castillo, the group captured and ransomed for

\$1 million several high-ranking officials and forced the release from prison of 14 Sandinista leaders.

In retaliation, from 1975 the Somoza regime arrested and killed many Sandinistas, including Carlos Fonseca in 1976. In the late 1970s the group fractured into three main “tendencies”: the “Prolonged People's War” faction (led by Tomás Borge, Henry Ruiz, and Bayardo Arce); the “Proletarian Tendency” (led by Jaime Wheelock, Luis Carrion, and Carlos Nuñez); and the “Insurreccional Tendency,” or “Third Way” (led by Daniel Ortega, his brother Humberto Ortega, and Victor Tirado López). In 1978–79 a series of insurrections in Managua, León, Estelí, and other cities, led by the Insurreccional Tendency, spelled the demise of the Somoza regime. After July 1979 these three factions were reunited in the nine-member National Directorate, which exercised de facto political power during the years of Sandinista rule.

MICHAEL J. SCHROEDER

Saudi Arabia

The Kingdom of Saudi Arabia is the largest Arab country on the Arabian Peninsula. Bordering Jordan, Iraq, Bahrain, KUWAIT, Qatar, the UNITED ARAB EMIRATES, Oman, and YEMEN, Saudi Arabia has played an important strategic role in the Middle East. Islam's two holiest cities, Mecca and Medina, are located in Saudi Arabia.

Saudi Arabia is divided into 13 provinces, and, until the 1960s, most of the population was nomadic. Most Saudis are ethnically Arab, although some are of mixed ethnic origins. Many Arabs from neighboring countries work and live in Saudi Arabia but are not citizens. Of a population numbering approximately 26 million, 7 million are foreign citizens, mostly from South Asia. There are also a significant number of Westerners living in Saudi Arabia. All citizens are required to be Muslims.

Saudi Arabia is a monarchy ruled by King Abdullah bin Abd al-Aziz al-Saud, who assumed the throne upon the death of his half brother Fahd bin Abd al-Aziz al-Saud in 2005. The 1992 Basic Law established the system of government and the rights of citizens and

Secretary of Defense Robert M. Gates (left) attends a meeting with King Abdullah bin Abdul al-Saud in 2006.

provided for rule according to sharia, which is Islamic law. The Qu'ran is the constitution of the land, and there is no separation of church and state.

The country held its first municipal elections in 2005. The king is an absolute monarch whose powers are tempered only by the sharia and other Saudi traditions. The king consults with the Majlis al-Shura, or Consultative Council; the Council of Ministers; the *ulema* (religious leaders); and other senior members of the Saudi royal family. The Council of Ministers approves legislation, which must be compatible with sharia. While the Basic Law provides for an independent judiciary, the king serves as the highest court. The Saudi judicial system imposes amputations of hands and feet for serious robbery, floggings for lesser crimes such as sexual deviance and drunkenness, and beheadings for more serious crimes. Religious police enforce strict social rules.

The Saudi economy is based on petroleum and gas resources, and the government controls most of the revenues. Approximately 40 percent of the economy is privatized. Saudi Arabia contains nearly 25 percent of the world's oil reserves and is the largest exporter of petroleum in the world. Saudi Arabia has also played a central role in the ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC).

Oil production increased during the reign of King Faisal ibn Abd al-Aziz; Faisal became king following the abdication of his inept half brother King Saud ibn Abd al-Aziz. He introduced various reforms and attempted to modernize the kingdom. With the support of his wife, Queen Iffat, Faisal introduced educa-

tion for females. A devout Muslim, Faisal also worked to increase the Islamic political identity in the Arab world. After the 1967 ARAB-ISRAELI WAR, Saudi Arabia's strategic importance increased, and Faisal built up the nation's military capabilities. During the 1973 ARAB-ISRAELI WAR, Faisal moved to mix oil and politics by withdrawing Saudi oil from nations that supported Israel. He also advocated the return of Jerusalem to Muslim rule. In 1975 Faisal was assassinated by a nephew, and his half brother, King Khaled ibn Abd al-Aziz, known for his pro-United States stance, assumed the throne. Following his death in 1982, Fahd ibn Abd al-Aziz became king.

The Saudi government supported the growth of the private sector to decrease economic dependence on oil and to increase employment opportunities. In the 1990s, water shortages hampered efforts toward agricultural self-sufficiency and the per capita income decreased from almost \$25,000 in the 1980s to about \$8,000 by 2000. In order to increase employment for its citizens, the government attempted to Saudize the economy by replacing foreign labor with Saudi workers.

Counterterrorism efforts dominated Saudi politics in the early 21st century. After 15 Saudi hijackers perpetrated the September 11, 2001, terrorist attacks in the United States, the Saudi government intensified its anti-terrorism campaign. However, the future of the authoritarian monarchy remained uncertain as the Saudi government attempted to combine sweeping programs of modernization with the continuation of traditional and puritanical ways of life.

JULIE EADEH

School of the Americas

The School of the Americas—called by its critics the “School of the Assassins”—was founded by the United States in 1946 in Fort Gulick, Panama, as the Latin American Ground School (LAGS). In 1949 it was renamed the U.S. Army Caribbean School-Spanish Instruction and in 1963 the U.S. Army School of the

Americas (SOA). In 2001, largely in response to years of protests by human rights organizations, the U.S. Congress renamed it the Western Hemisphere Institute for Security Cooperation (WHISC) and relocated it to Fort Benning, Georgia. Despite these formal changes in its name, the School of the Americas has remained consistent in its core mission: to provide U.S. Army-directed, Spanish-language military training to Latin American militaries. Since its founding, the SOA has trained an estimated 60,000 soldiers in counterinsurgency warfare; interrogation techniques; commando and psychological warfare; sniping; military intelligence; civil-military relations; and related courses of study.

According to a June 1996 report issued by a four-person independent Intelligence Oversight Board (IOB) appointed by U.S. President Bill Clinton, the SOA “used improper instruction materials in training Latin American officers from 1982 to 1991 [that] condone practices such as execution of guerrillas, extortion, physical abuse, coercion, and false imprisonment.” The findings echoed the criticisms of human rights organizations that include America’s Watch and Amnesty International, and of the UNITED NATIONS Truth Commission Report on El Salvador (1993), which found that many of the most egregious violators of human rights in El Salvador’s 12-year civil war were graduates of the SOA.

Their crimes included the assassination of Archbishop Oscar Romero (1980); the El Mozote Massacre (1980, in which more than 900 civilians were killed); and scores of other massacres in El Salvador. In 2002 the Center for Justice and Accountability won a \$54.6 million lawsuit in the U.S. District Court in Florida against two former Salvadoran generals and SOA graduates (General Carlos Eugenio Vides Casanova, Director-General of the Salvadoran National Guard, 1979–83, and General José Guillermo García, Minister of Defense, 1979–83) for their role in a series of human rights abuses in El Salvador in the 1980s.

The organization “School of the Americas Watch” (SOA Watch), awarded the 2004 International Alfonso Comín Award for its promotion of peace and justice in the Americas, has compiled data linking SOA graduates to tortures, murders, massacres, and other human rights abuses in Argentina, Bolivia, Brazil, Chile, Colombia, El Salvador, Guatemala, Haiti, Honduras, Mexico, Paraguay, Peru, and Uruguay. SOA Watch’s list of “notorious graduates” includes MANUEL NORIEGA (Panama), Efraín Ríos Montt (Guatemala), Roberto D’Aubuisson (El Salvador), and scores of others. WHISC acknowledges that some SOA graduates have

committed human rights abuses, while maintaining that “[the] purpose of the Institute is to provide professional education and training to eligible personnel of nations of the Western Hemisphere within the context of the democratic principles set forth in the Charter of the ORGANIZATION OF AMERICAN STATES... while fostering mutual knowledge, transparency, confidence, and cooperation among the participating nations and promoting democratic values, respect for human rights, and knowledge and understanding of United States customs and traditions.” In 2007 WHISC’s operating budget was \$7.5 million.

Shanghai Communiqué

A Joint Communiqué was issued in Shanghai on February 27, 1972, by the United States and China on the occasion of President RICHARD. NIXON’s visit to the PEOPLE’S REPUBLIC OF CHINA. The Shanghai Communiqué would officially break the cycle of antagonism between the two countries and would be the instrument on which their new relationship would be built. The communiqué is also important because it allowed the two sides to embrace friendly relations while deferring the contentious issue of the status of Taiwan.

The first steps toward reconciliation were taken in 1969 when the United States relaxed certain trade and travel restrictions to China. By 1970 the two sides had reopened informal talks in Warsaw. In April of 1971 Chinese officials invited the U.S. table tennis team to Beijing, resulting in a well-publicized visit and a warm welcome by the Chinese government. By June of 1971 President Nixon had revoked the 21-year trade embargo with China.

On July 9 of the same year, U.S. National Security Advisor Henry Kissinger secretly visited Beijing in order to lay the foundation for President Nixon’s trip and to take steps toward the normalization of relations between the two countries. On July 15, 1971, Nixon shocked the world by announcing that he would visit

China to seek the normalization of relations between the two nations.

From February 21 to February 28, 1972, Nixon visited China, meeting with Chinese leaders including the chairman of the Communist Party Mao Zedong (Mao Tse-tung). Toward the end of the trip, the two sides announced the Shanghai Communiqué, which was the product of months of intensive negotiations.

The communiqué announced that progress toward the normalization of relations between China and the United States was in the interests of all countries. It stated that both sides wished to reduce the danger of international military conflict and that neither should seek “hegemony” in the Asia-Pacific region. It also asserted that each was opposed to efforts by any other country or group of countries to establish such hegemony.

On the issue of Taiwan, both sides outlined their respective positions. The Chinese stated that the government of the People’s Republic of China was the “sole legal government of China” and that Taiwan was a province of China. The Chinese further argued that all U.S. forces and military installations must be withdrawn from Taiwan. The United States declared that the U.S. government would not challenge that position. The United States also expressed its hope for peaceful settlement of the “Taiwan question.” The United States further affirmed its ultimate objective as the withdrawal of all U.S. forces and military installations from Taiwan. In the meantime, the United States pledged to reduce its forces and military installations on Taiwan.

The two sides agreed to the expansion of cultural, technological, and commercial contacts to complement the normalization of diplomatic relations. Both expressed their hope that the gains achieved during Nixon’s visit would open up new prospects between the two countries and would contribute to the relaxation of tensions in Asia and the world.

President Nixon would refer to his visit to China as the week that “changed the world.” His visit reflected China’s alignment with the West against the Soviet Union and resulted in a fundamental change in the global balance of power. The United States no longer had to prepare for war against China and could focus its resources against the Soviet Union. Better relations would have benefits for the People’s Republic of China as well. They allowed China an ally in a potential confrontation with the Soviet Union. The format of the communiqué allowed China to claim an equal footing with the United States in the world, something it had long sought. Mao would hail the visit as a “great diplomatic victory” for China.

Despite this progress, U.S. support for Taiwan would prevent the establishment of formal U.S.-Chinese diplomatic relations for several years. On January 1, 1979, the United States would finally establish normal diplomatic relations with China, removing its troops from Taiwan and abrogating the U.S.-Taiwan Defense Treaty. Despite opposition from Chinese officials, the United States continued to maintain the right to sell defensive weapons to Taiwan.

MICHAEL A. RIDGE JR.

Shastri, Lal Bahadur

(1904–1966) *Indian prime minister*

Lal Bahadur Shastri, Indian prime minister at the time of the INDO-PAKISTANI WAR of 1965, was born on October 2, 1901, at Mughalsarai, Uttar Pradesh. Shastri graduated from Kashi Vidya Peeth in Varanasi in 1926, attaining the degree of *shastri* (equivalent to a bachelor’s degree). His surname, Shastri, was taken by him from this degree. He was attracted to the freedom movement while at school and participated in the noncooperation and civil disobedience movements launched by Mohandas K. Gandhi.

After India’s independence Shastri became the home minister of Uttar Pradesh state. He then joined politics on the national level, became the general secretary of the All India Congress Committee (AICC) in 1951, under JAWAHARLAL NEHRU as president, and became a close confidant of Nehru. Shastri was a humble man and tolerant of opposing viewpoints, but never wavered from his convictions. He resigned as railway minister after an accident near Ariyalur, Tamil Nadu, taking responsibility for the event. Shastri was a very capable organizer of the Congress Party and contributed to the success of his party in general elections.

After Nehru’s death on May 27, 1964, party stalwarts favored the noncontroversial Shastri as his successor as

prime minister. As prime minister, he tried to solve the rising problem of food shortage in the country and worked to ameliorate the condition of the peasantry.

Shastri showed strong determination and iron will in his dealings with Pakistan. These had been bad since independence. But the second Indo-Pakistani Wars began during Shastri's premiership. India had been humiliated in the Sino-Indian War of 1962, and Pakistan exploited the situation by fomenting trouble on the western border of India. Shastri made diplomatic efforts to solve the problem but failed. The conflict began in the Rann of Kutch region in Gujarat in March 1965 when Pakistani infiltrators entered Kashmir. The war was a stalemate. The UNITED NATIONS Security Council called for a cease-fire on September 22. Then a meeting of the premiers of India and Pakistan, arranged by Soviet premier Alexei Kosygin, took place in the city of Tashkent.

The TASHKENT AGREEMENT was signed by Shastri and Pakistani president AYUB KHAN on January 10, 1966. It restored normal relations between India and Pakistan. Both armies went back to the positions they had held before the war, and the cease-fire line became the de facto border between the two countries. Shastri suffered a heart attack and died the next day. A grateful nation awarded him with the highest honor, Bharat Ratna, posthumously. Shastri had left an indelible mark in Indian politics because of his leadership quality, honesty, and steadfast determination.

PATIT PABAN MISHRA

Shining Path

Founded in the 1960s but not active in guerrilla activities until May 1980, the Maoist-oriented Communist Party of Peru (Partido Comunista del Perú), popularly known as the Shining Path (Sendero Luminoso), was the brainchild of former university professor Abimael Guzmán.

For 12 years, from 1980 until Guzmán's capture by the Peruvian military on September 12, 1992, in Lima, Shining Path waged a rural and urban guerrilla campaign against the Peruvian state.

Based mainly in rural areas, Shining Path controlled sections in the south and central part of the highlands, and had taken their struggle to the shantytowns of Lima and other cities. The insurgency prompted a security crackdown by three successive presidents in which the Peruvian military committed tens of thousands of documented human rights abuses. The Shining Path movement provided President Fujimori with a pretext for his "self-coup" of April 1992, when he dissolved the Peruvian Congress and suspended constitutional guarantees, soon followed by a purge of the judiciary and his assumption of dictatorial powers. The Shining Path movement, in conjunction with the Tupac Amaru Revolutionary Movement (Movimiento Revolucionario Túpac Amaru, MRTA)—and the state repression that these guerrilla movements engendered—had the effect of heightening the militarization of the country and creating a legacy of violence and impunity that endured into the 21st century.

The ideology inspiring Shining Path's guerrilla movement was an amalgam of various strains of leftist and Marxist theories of imperialism, capitalism, and armed struggle that gave primacy to the political thought of Chinese Communist leader Mao Zedong. *Senderistas* (as members of the group were known) rejected the concept of "human rights." In keeping with this ideology, Shining Path's principal weapon was its use of terror and violence against civilians it identified as its enemies. Alienating large sectors of the peasantry, not only by its brutality but by its lack of respect for indigenous and rural customs, the group also tried to outlaw alcohol, ban community celebrations, and close markets in city and countryside, with the aim of starving Lima and ultimately seizing state power. Many peasant communities responded by forming *rondas*, or community patrols, to defend themselves against Sendero assaults. The group survived its leader's 1992 capture, though its activities dropped off markedly, and it no longer posed a threat to the state. According to the Final Report of the Truth and Reconciliation of Peru, in the final two decades of the 20th century a total of 69,280 civilians were killed or disappeared by Shining Path, the MRTA, paramilitary squads, and the Peruvian military, with the Shining Path responsible for more than half (54 percent) of the total.

University Press, 1998; Taylor, Lewis. *Shining Path: Guerrilla War in Peru's Northern Highlands, 1980–1997*. Liverpool: Liverpool University Press, 2006.

MICHAEL J. SCHROEDER

Silva, Luiz Inácio Lula da

(1945–) *Brazilian president*

A former shoeshine boy, street vendor, metalworker, and longtime labor leader, Luiz Inácio Lula da Silva (universally known as “Lula”) was elected president of Brazil in 2002 with some 61 percent of the popular vote; four years later, despite an unfolding corruption scandal, he was reelected for a second term. His rise to political power represented a key element in a broader shift in Latin American politics in the 1990s and 2000s toward a pragmatic and democratic left-populism that viewed the neoliberal economic policies espoused by the United States and international financial institutions (particularly the INTERNATIONAL MONETARY FUND and WORLD BANK) as antithetical to the interests of their nations’ citizens and of Latin America’s and the world’s poor. Along with HUGO CHÁVEZ in Venezuela, Néstor Kirchner in Argentina, Evo Morales in Bolivia, and other political leaders swept into office in the post-COLD WAR era, President Lula has worked to deepen democratic institutions and improve the living standards of the majority, while at the same time working within the structures of global capitalism dominated by the more advanced industrial countries of Europe and North America.

Born in October 1945 to a poor peasant family in the state of Pernambuco in Brazil’s impoverished northeast, as a small child Lula moved with his mother and seven siblings to the coastal city of Guarujá in São Paulo state. Like many poor working-class children, he received a spotty education, instead working in the city’s informal economy to help his family make ends meet. When he was 11, his family moved to São Paulo, where he worked in a number of factories, including a copper processing facility and an automobile plant. As a young man he became increasingly involved in union politics; this was during the period of military dictatorship (1964–85), when state authorities violently suppressed militant labor activism.

Lula’s involvement in the labor movement deepened through the 1970s and 1980s. In 1978, following an AFL-CIO-sponsored tour of the United States earlier in the decade, he was elected president of a local steel-

worker’s union. After being arrested and jailed for illegal union and strike activities, in 1980 he helped found the Worker’s Party (Partido dos Trabalhadores, or PT); three years later he was a founding member of the Central Worker’s Union (Central Única dos Trabalhadores, or CUT). In 1982, in the midst of these union and political activities, and with the country still in the grip of military dictatorship, he ran for office in the São Paulo state assembly. He was defeated, but four years later, following the democratic opening after 1985, won a seat in the National Congress as a Worker’s Party member. Using his congressional seat as a platform, he ran for president in 1989, losing the election but gaining national attention for his plainspoken left-populism.

He ran again in 1994 and 1998 and, after softening his party’s platform to ease the jitters of the investment and financial sectors, captured the presidency in 2002. His administration’s policies can be described as moderately left-reformist, with an expansion of public sector spending in health care, education, social security, energy, and related arenas, coupled with careful debt and monetary management. The response of the international financial community, and of the Brazilian electorate, has been mostly positive, though many of his erstwhile supporters have expressed disappointment at what they see as excessive compromise and dilution of his socialist vision. Whether his administration will be able to maintain the delicate balance between meeting the needs and aspirations of transnational capital and of the country’s laboring classes remains to be seen.

MICHAEL J. SCHROEDER

Singapore

Singapore became an independent country on August 9, 1965. This island nation at the southern tip of western MALAYSIA has since become a regional powerhouse. Singapore’s 4 million citizens, by marked contrast with many other countries of Southeast Asia, enjoy a high standard of living second only to Japan’s in Asia.

Singapore has ancient beginnings. It was part of the Sultanate of Johore until 1819, when Sir Thomas

Stamford Raffles, representing Great Britain, made a treaty with the sultan and established the island as a British trading settlement. The name Singapore comes from the word *Singapura*, meaning “Lion City.”

As a Crown Colony of the British Empire, it became an impregnable fortress. In 1941 Japan entered World War II, simultaneously attacking Pearl Harbor, the Philippines, and Malaysia. By early 1942 the Japanese army was progressing rapidly down the peninsula. The city was shelled and bombed, and several thousand troops and civilians were killed in the fighting. The garrison on Singapore surrendered on February 15, 1942. Thousands of Allied troops were marched into captivity. The Japanese found themselves in possession of a valuable stronghold and significant quantities of Allied weapons and ammunition. Japan established an infamous prisoner of war camp at Changi, where Allied prisoners languished under inhumane conditions.

After World War II Singapore resumed its busy trading focus, and in 1959 it became a self-governing Crown Colony with Lee Kuan Yew, a British-educated barrister, as its first prime minister. On September 2, 1962, a referendum was held on whether to form a union with Malaya. Seventy-three percent of the electorate voted in favor. On September 16, 1963, Singapore became part of the new nation of Malaysia, a self-governing dominion of the British Commonwealth.

Four areas were combined to make up Malaysia: the Federated Malay States, Singapore, British North Borneo, and Sarawak. Indonesia and the Philippines opposed the union, and Indonesia supported rebels in Malaysia after its formation.

In 1965 Singapore left the Malaysia Federation to become a sovereign country. The island section of Malaysia was expelled over the status of ethnic Malay and Chinese in the population.

Singapore, as a separate nation, was a success. On September 21, 1965, it became the 117th member of the UNITED NATIONS. President Lee Kuan Yew is regarded as the father of modern Singapore. As leader and founder of the People’s Action Party (PAP), he campaigned energetically to form a multiracial government along nonracial lines. He maintained law and order and emphasized hard work. The government is famous for efficiency, and its people for being hard-working and forward looking.

In August 1967 Singapore joined Indonesia, the Philippines, Malaysia, and Thailand to form ASEAN—the ASSOCIATION OF SOUTHEAST ASIAN NATIONS. The association pursued aims of accelerating economic growth, social progress, and cultural

development, and the promotion of peace and stability in the region. In 1971 Britain ended its military association with Singapore with the closure of the British Far East Command.

Lee retired in 1990 as Singapore’s reputation for efficiency and hard work grew. Today, the nation-state is crowded—population density in 2003 was just over 6,000 people per square kilometer. Life expectancy is 77 years for males and 81 for females. Singapore has become the success story of Southeast Asia.

THOMAS A LEWIS

Singh, Manmohan

(1932–) *Indian prime minister*

India’s 14th prime minister since independence in 1947, Manmohan Singh was born on September 26, 1932, in the Punjab before the partition of the subcontinent. Singh graduated from Punjab University in 1948 and attended Cambridge University in Britain, earning a First Class Honours degree in economics in 1957. He continued with his graduate studies at Oxford University and achieved a doctorate in economics in 1962. He returned to India, lecturing at Punjab University and at the Delhi School of Economics. In 1971 he joined the Indian civil service as an economic adviser in the commerce ministry. His talents were quickly rewarded, and he was appointed chief economic adviser in the ministry of finance in 1972.

Singh made the transition from bureaucrat to politician in 1991 when he was appointed a member of India’s upper house of parliament (the Rajya Sabha). While a member of the upper house between 1991 and 1996, he also became the finance minister in Prime Minister P. V. Narasimha Rao’s government. With Rao’s support, he initiated successful economic reforms aimed at slashing India’s infamous red tape, enhancing productivity, and liberalizing the economy. His goals were to end protectionism and open the Indian economy to foreign investment so that India would evolve to a mixed economy saving it from

the verge of bankruptcy. As a result the economy became reinvigorated, inflation was controlled, and Indian industry began to show signs of strength.

Singh's political career was turbulent because he was neither charismatic nor a traditional politician. He lost the only time he contested a parliamentary election for the lower house (Lok Sabha). From 1998 to 2004 he was leader of the opposition but became prime minister in May 2004 when the Congress Party won a coalition majority in the national election. This is because Sonia Gandhi turned down the prime ministership. Singh became India's first Sikh prime minister. This is impressive due to the troubled relationship between India's Sikhs and the Hindu majority during the 1980s. (In 1984 government forces stormed the sacred Sikh Golden Temple in Amritsar to root out Sikh militants. Prime Minister INDIRA GANDHI's Sikh bodyguards avenged this act by assassinating her months later.)

Although governing such a diverse nation as India with a coalition is difficult, during his first two years in office Singh achieved a measure of success. The Indian economy continued to grow at an impressive rate. The fractured relationship with Pakistan showed signs of slowly improving, although the deeper issue of who controls Kashmir remained unresolved. Equally as important, political and trade relations with the United States improved considerably.

The government also spearheaded a massive project aimed at eradicating rural poverty. In large part due to Singh's reforms and pragmatic managerial style, India's economy continued to expand and under his government, showed signs of emerging as a global economic power.

India's Unexpected Leader." *The Economist* (May 22–28, 2004); www.news.bbc.co.uk/2/hi/south_asia (cited May 2007).

RYAN TOUHEY

Sino-Soviet Treaty (1950)

The PEOPLE'S REPUBLIC OF CHINA was proclaimed on October 1, 1949, and won immediate recognition from the Soviet Union and Eastern European communist nations. Not yet secure after winning the civil war

against the Nationalists, China needed support from the Soviet Union. Thus Mao Zedong (Mao Tse-tung), chairman of the Chinese Communist Party (CCP), declared his "lean to one side" policy to form an international united front with the Soviet Union.

Mao went to Moscow in December 1949, his first trip abroad, ostensibly to help celebrate Joseph Stalin's 70th birthday but more importantly to negotiate a treaty with the Soviet Union. A 30-year treaty of friendship, alliance, and mutual assistance was signed on February 14, 1950, clearly directed against the United States. A second agreement allowed the Soviet Union to continue its presence in Port Arthur and Dairen in China's southern Manchuria and to operate a railway in the region (rights Stalin had obtained at Yalta in 1945 without agreement from China) until 1952. The treaty provided for a \$300 million loan from the Soviet Union in five equal annual installments between 1950 and 1955.

During the next decade the Soviet Union sent tens of thousands of scientists and advisers to help the Chinese army, navy, air force, and 156 industrial enterprises during China's First Five-Year Plan. A total of 6,500 Chinese students went for advanced studies to the Soviet Union instead of Western countries; Russian replaced English as the compulsory second language in Chinese schools. In 1952 the Soviet Union returned to China the over U.S. \$1 billion of loot it had taken from Manchuria at the end of World War II. China agreed to recognize independence for Outer Mongolia, a part of China that had become a Soviet satellite in 1924. In October 1950 China intervened in the KOREAN WAR to prevent the collapse of North Korea, an ally of both China and the Soviet Union.

By the late 1950s the Moscow-Beijing Axis was collapsing for many reasons. Although both nations were ruled by communist parties, the CCP had from its inception resented Moscow's domination and interference. Although Mao respected Stalin's seniority in the communist world, he firmly rejected NIKITA KHRUSHCHEV's similar claim after Stalin's death, and Mao offered himself as the world communist leader. Mao also denounced Khrushchev as revisionist for his de-Stalinization policy after 1956. In 1959 Khrushchev withdrew an earlier promise to help China build a nuclear bomb and recalled Soviet aid workers from China. Mao called Khrushchev a coward for backing down before the United States in the CUBAN MISSILE CRISIS in 1962.

Mao's claim to be an original contributor to Marxism-Leninism, with special relevance to the non-

Western world, was rejected by Moscow. Finally, China felt aggrieved over large territorial losses to imperial Russia in the 19th century and wanted the Soviet Union to acknowledge that they were the result of unequal and therefore illegal treaties, claims that the Soviet Union firmly rejected. Relations deteriorated further when Soviet leader LEONID BREZHNEV sent troops to Czechoslovakia in 1968 and announced his doctrine that the Soviet Union had the right to intervene in communist countries that deviated from its interpretation of the socialist cause. Serious border clashes between the Soviet Union and China occurred in 1969, and war loomed.

JIU-HWA LO UPSHUR

Solidarity movement

Despite the fact that from 1945 to 1989 the Soviet Union imposed significant control over the internal and external affairs of eastern European nations, that control was never complete. At one time or another that situation was true in all EASTERN BLOC nations, but nowhere so much as in Poland. The Poles demonstrated their independent streak at intervals in the 1950s, 1960s, and early 1970s.

In many instances there were riots and bloodshed, and Soviet troops stationed in Poland ostensibly as defense against a Western attack were used to keep order. In 1953 the Polish premier informed the Soviets that while he would accept military assistance from Soviet troops already in the country, he would mobilize the entire Polish army to fight them if more were sent in. In 1980 a labor union that named itself Solidarity would come into being. It would eventually play a principle role in the ending of the communist regime in Poland.

Solidarity (logo shown above) was founded in September 1980 in response to increasing food prices.

Solidarity was founded in September 1980 in immediate response to increasing food prices, which had already precipitated several strikes. There was already a basic organization in place around which representatives of the striking workers could meet and discuss issues. This was the Workers Defense Committee, which had come into being as a result of strikes, riots, and the killing and injuring of workers in the 1970s.

The month before Solidarity was formed, almost 20,000 workers struck at the Lenin Shipyard in the city of Gdańsk. These strikers, led by Lech Wałęsa, a shipyard electrician, locked themselves in the shipyard and were soon communicating with other groups who were joining in strikes of their own. The workers presented a list of demands that were granted by the government, which included the ability to organize free unions that were not sponsored or sanctioned by the Polish Government. With this victory, Solidarity would come into being, replace the old Workers Defense Committee, and then begin to grow throughout the country.

In December another group, calling itself Rural Solidarity, which was the agricultural equivalent to the industrialized organization, also came into being. Growth was dramatic, and by mid-1981, nearly all laborers were members of or represented by Solidarity.

The Polish government, which had made the concessions that allowed Solidarity to legally come into being, began to view developments with alarm. The same concern applied to the Soviet leadership. LEONID BREZHNEV and members of the Soviet Politburo made their concerns increasingly clear to Poland's head of state, General Wojciech Jaruzelski, who would feel pressure from the Soviet Union and at home.

Encouraged by its newfound legalized existence and successes thus far, Solidarity became active in 1981, calling for additional strikes and increasing its demands. By late 1981, faced with the demands of Solidarity, Jaruzelski was coming under increased pressure. He received frequent calls from Brezhnev demanding that he put a stop to Solidarity's activities.

At the same time the Soviet army moved closer to the Polish border and conducted substantial maneuvers with other Warsaw Pact troops, thus underlining the threat that if he did not act on his own, Jaruzelski could face an invasion. At least that is what Jaruzelski said years later when on trial for treason. That trial, from which he was later acquitted, tried to resolve whether Jaruzelski had saved Poland from invasion by what he did to Solidarity or had betrayed Poland's independence, however limited that might be.

In mid-December 1981 Jaruzelski finally took action. Solidarity was suppressed. Lech Wałęsa and the other leaders of the union were imprisoned, and martial law was imposed. The Polish army now ran everything in the country, and any union activities, strikes, or demonstrations would be met with force.

Eventually the leaders of Solidarity were quietly released, and, although the organization was illegal, it did remain active. Its leaders remained in contact with each other, and an underground organization, based on those that had existed during World War II, emerged. Western journalists were able to bring to the West a picture of Solidarity, no longer legal and not functioning as it had but still alive.

Having imposed order, Jaruzelski was now compelled to improve the Polish economy. Brezhnev had died in 1982, and his two immediate successors were also dead by 1985 when MIKHAIL GORBACHEV assumed responsibility for leading the Soviet Union. In the 1980s the Soviets were beginning to exercise looser control and endless assistance to the Eastern bloc nations. Jaruzelski's attempts at reform were now opposed by Solidarity, which was reemerging as a political force.

Widespread strikes in Poland forced Jaruzelski to begin conversations with Wałęsa and the Solidarity leadership. Solidarity was once again legalized in April 1989, and that same year it won a crushing majority in the national elections. A coalition of Solidarity and Communists formed a government in August 1989, and Wałęsa, who less than 10 years before had been jailed for his union activities, was now president of Poland.

Since that time, Solidarity has declined in both membership and influence. There were personality and

philosophical clashes among several of the leaders, not least of whom was Wałęsa. It can also be argued that once it had defeated a common enemy that posed a major threat, it could not maintain cohesion on all issues. It did not have any of its candidates elected in 2001, and the membership is about a tenth of what it was in the early 1980s.

ROBERT STACY

Somalia (1950–2006)

Following the end of World War II, the British administered Somalia until 1950, when it was divided, with southern Somalia put under Italian trusteeship and the Ogaden returned to Ethiopia, with the remainder of Somalia, held by the British, prepared for independence. The decision to allow the Italians to supervise any part of Somalia was controversial given their colonial record in the region, and it sparked riots in 1950. Elections were held in southern Somalia in 1956, and these were won by the Somali Youth League. In February the Somali National League won a majority in elections in northern Somalia. The platforms of both groups were to reunify Somalia and achieve independence which was granted on July 1, 1960.

The first president of Somalia was Aden Abdullah Osman Daar, who had served in the Italian colonial administration until 1941. He had been president of the National Assembly until 1960 when he became president of the Constituent Assembly, a position he held until independence. The first prime minister, Mohammed Ibrahim Egal, was from British Somaliland; he joined the Somali National League Party in 1956 and became its secretary-general two years later. He held the position for just over two weeks before stepping down on July 12, 1960, to become minister of defense. Replacing him

A crying Somali toddler walks past a Botswana Defense Force soldier during an arms raid on the Bakara Market.

was Abdirashid Ali Shermarke, from the Somali Youth League, who had studied political science at the University of Rome. Unfortunately, not long after independence, Somalia became embroiled in a dispute with the British who granted the Somali-dominated Northern Frontier District of Kenya to the Republic of KENYA. Somalia broke off diplomatic relations with Britain in 1963.

The main problem facing Somalia was the integration of the two halves of the country, plagued by ethnic rivalries, and worries that infrastructure development in one part of the country was disadvantaging the other. Tensions with Kenya and Ethiopia proved intractable. War with the latter broke out over the Ogaden in 1964. Although it did not last long, it served to destabilize the country, which was becoming beset with factional troubles and the proliferation of political parties and corruption. In 1964 Shermarke was replaced as prime minister by Abdirizak Haji Husain, also from the Somali Youth League, and on July 10, 1967, Shermarke was elected as president of Somalia, a post he held until his assassination on October 15, 1969, by Somali police officers. The assassination led to a military coup six days later, which brought Major-General Mohammed Siad Barre to power. He then became president of the Supreme Revolutionary Council and head of state, also serving as prime minister until January 30, 1987.

Siad Barre was involved in introducing a program he called “scientific socialism,” by which he sought to

integrate Somalia. One of these policies was the creation and dissemination of a written Somali language. In 1975 a drought struck Somalia, and this led to a famine which saw thousands of people in Somalia, and also in neighboring Ethiopia, dying. Two years later Somalia attacked Ethiopia, with Siad Barre keen to create his Greater Somalia which was to include the Ogaden (from Ethiopia), Djibouti, and also northern Kenya. In 1977 Somalia was in news headlines all over the world when a German Lufthansa Flight 181 from Majorca, Spain, was hijacked to the Somali capital, Mogadishu. There the GSG-9, a crack German antiterrorist commando force formed after the 1972 Munich Olympics massacre, stormed the plane and released the hostages unharmed.

FORCED TO FLEE

Surviving an attempted military coup in April 1978, Siad Barre came to lead an increasingly autocratic regime that started to face trouble from internal Somali resistance groups. In particular, the Somalia Salvation Democratic Front used bases in Ethiopia to attack Somali soldiers, eventually overrunning parts of northern Somalia.

In August 1990 the Somalia Salvation Democratic Front allied with two other groups, the Somali Patriotic Front and the Somali National Movement (SNM), to form a loose coalition. Siad Barre himself had been seriously injured in a car accident in May 1986, but remained in control of Mogadishu. He was forced to flee the country on January 26, 1991, going first to Kenya and eventually settling in Nigeria in 1992.

With the victorious rebels seizing control of Mogadishu, Ali Mahdi Muhammad became the president of the country, with the task of bringing together the various factions. Northern Somali separatists appointed the leader of the SNM, Abdurahman Ahmed Ali, as president of the breakaway Somaliland Republic. Fighting continued, and Ali Mahdi hastily left the Somali capital in November 1991 after the supporters of General Mohammad Farrah Aydid attacked Mogadishu, capturing the city after bloody street fighting. Aydid then proclaimed himself head of the new government, managing to fight off an attack in April 1992 by supporters of Siad Barre.

Aid agencies estimated that as many as 2,000 people were dying each day from hunger in and around Mogadishu alone. With Aydid holding food supplies only for his supporters, the UNITED NATIONS felt the duty to act, and on August 12, 1992, they had permission from Aydid to deploy troops to protect the aid workers. The result was 500 armed United Nations soldiers being deployed and a massive relief operation taking place. This part of the aid operation went well, although there were some

problems in the towns of Baidoa and Bardera in the west of the country.

By mid-1993 the aid mission had been changed with the U.S. marines being deployed to achieve political objectives. This seemed to include the overthrow of the Aydid government, which led to a U.S. helicopter attack on an alleged Aydid munitions base on July 12, 1993, killing a large number of Somali clan leaders who had gathered for a conference. The political climate moved against the Americans as the clan alliances reformed. On October 3, 1993, some 140 U.S. marines abseiled from Black Hawk helicopters into Mogadishu, with their mission being to abduct two senior lieutenants of Aydid. The operation was planned to last no longer than an hour, but some U.S. Marines were pinned down by thousands of armed Somalis; by the time they were evacuated the following morning, there were 18 U.S. Marines killed and more than 70 badly injured.

FACTIONAL SHIFTS

With the United States clearly against General Aydid, he moved to form alliances with some of his erstwhile enemies, the Americans unable to keep up with the factional shifts. In November 1994 Aydid called a General Conference on Somali Reconciliation, but Ali Mahdi boycotted it, as did the Somali Salvation Alliance. In June 1995 Aydid himself was ousted by Osman Ali Ato. Following the death of Aydid in 1996, his son, Hussein Aydid, a former U.S. Marine who had been involved in the Somali operation, became the leader of the United Somali Congress and took his father's title as interim president of Somalia.

Hussein Aydid refused to take part in the National Salvation Council when it was formed by leaders of 26 of Somalia's factions in January 1997. They agreed on a peace formula that saw the introduction of a federal system for the country, allowing the warlords to retain their local power bases.

This meant that by 1998 the country was effectively divided into three parts: Somalia, consisting of the southern provinces around Mogadishu; the former British areas in the north becoming Somaliland; and Puntland in the northeast. Frequent peace conferences were to be held to try to work out common policies on certain issues.

Although the infighting had died down, the problems over the famine continued with 650,000 people facing food shortages in April 2000. This led to food riots and instability in Mogadishu, forcing the warring factions to declare Baidoa the "provisional capital." By this time, large numbers of educated Somalis had fled.

An interim Somali National Assembly was formed in October 2001 with Salad Hassan Abdikassim (Abdiqasim Salad Hassan) as the interim president. Problems with Ethiopia continued, and the interim prime minister, Ali Khalif Galaydh, accused Ethiopia of trying to destabilize the country, supporting some of the clans that wanted separatism. Abdikassim appointed himself interim president of the Transitional National Government, and in November 2001 Abshir Farah Hassan was elected as the interim prime minister.

The September 11, 2001, attacks on the United States and the subsequent War on Terror saw the U.S. military take a keen interest in Somalia and the level of Islamic fundamentalist influence in the country. Since then the Somali "government" has gradually come to support, however reluctantly, the United States in its War on Terror. The United States has consequently rewarded pro-U.S. groups in the country. On October 14, 2004, Abdullah Yusuf Ahmed became president, taking over from Salad Hassan Abdikassim, and in November 2004, Ali Mohammed Ghadi became prime minister of the transitional federal government. However, after a failed assassination attempt, Prime Minister Ghadi fled Mogadishu, returning in 2006 when Ethiopian troops, aided by the United States, backed him and on December 21, 2006, started a new war in Somalia.

JUSTIN CORFIELD

South East Asia Treaty Organization (SEATO)

The South East Asia Treaty Organization (SEATO), or the Manila Pact, was formed in Manila on September 8, 1954, by the United States, Great Britain, France, Australia, New Zealand, Pakistan, Thailand, and the Philippines. A special protocol added Cambodia, Laos, and South Vietnam to the protection of SEATO.

The main reason behind the formation of a collective defense treaty in Southeast Asia was the containment of communism. The United States in the COLD WAR period wanted to prevent communism from spreading. After the defeat of the French in Indochina the Geneva Conference had been called in 1954. While the peacemaking process was going on in Geneva, the United States initiated SEATO. The main architect was the U.S. secretary of state, John Foster Dulles, who wanted collective defense against communist aggression. After the establishment of communism in China, there was apprehension in the United States that South and Southeast Asia faced a threat from communists. North Vietnam had become communist, and in Laos the PATHET LAO had become powerful.

Bangkok was the headquarters of SEATO. The post of secretary-general was instituted in 1957, and a Thai diplomat named Pote Sarasin was the first person to hold the post. The articles of the treaty spelled out the motives, principles, and functioning of SEATO. In the preamble, the sovereign equality of states was recognized. The members pledged under the provisions of article I to settle disputes by peaceful means. Article III envisaged economic cooperation and social well-being. SEATO had a provision that all members should agree on intervention in case of a dispute. This became an obstacle to intervening in the crises of Cambodia, Laos, and VIETNAM, as there was no unanimity among members for intervention. There were joint military exercises each year among the signatories. According to the provisions of the Geneva Conference Cambodia, Laos, and South Vietnam could not join a military alliance. A Pacific Charter was added to the treaty at the insistence of the Philippines, calling for the upholding of the principles of self-determination and equal rights. Any attempt to destroy the sovereignty and territorial integrity of member states would be checked. There would also be cooperation in economic development and social welfare among signatories.

The treaty was viewed as another attempt to bring the cold war to South and Southeast Asia. Only three Asian states, Pakistan, the Philippines, and Thailand, had joined it. India, Indonesia, Sri Lanka, and Myanmar were in favor of a policy of nonalignment. In its ongoing conflict with India, Pakistan thought SEATO might be helpful. It also had a dispute with another neighbor state, AFGHANISTAN.

The Philippines and Thailand had close military cooperation with the United States. Manila was in favor of a multilateral pact due to the influence of the

United States. The joining of the Philippines invited criticism from the Afro-Asian bloc, alleging that it was serving the designs of neocolonialism in the region. Thailand joined SEATO because of security concerns. Great Britain wanted its presence felt in the region and was also concerned with the security of Hong Kong and Malaya. France lost interest after the debacle in Indochina but it considered SEATO a barrier to the expansion of communism. Australia and New Zealand were committed even though an alliance with the United States, the ANZUS pact, had been signed in 1951.

The Soviet Union, China, and North Vietnam condemned the treaty. They pointed out that the inclusion of Cambodia, Laos, and South Vietnam in the sphere of action of SEATO was contrary to the spirit of the Geneva Conference of 1954. China attacked SEATO for threatening peace in Asia.

SEATO was not helpful to the United States and Thailand in preventing ongoing communist victories in Indochina, including during the VIETNAM WAR. Thailand and the Philippines helped the administration of the United States by providing air bases and sending troops, but in the civil war in Laos in 1961–62, it was more out of their close relations with the United States rather than an obligation under SEATO. One of the factors was the clause that demanded unanimity before action could be taken. In the meeting of the SEATO Council of Ministers on March 27, 1961, multilateral intervention was not possible due to the French opposition. Great Britain also did not support intervention, lest it jeopardize the peace effort in Geneva in 1961 pertaining to Laos.

It was only a question of time before SEATO would end. The United States relied on its military might in the Vietnam War while Great Britain, France, Australia, and New Zealand did not want to get involved. Pakistan and France withdrew from SEATO in November 1973 and June 1974, respectively. After the communist victory in the Indochinese states in 1975, SEATO became an anachronism in the region, and it was decided to disband the treaty in a meeting in September 1975 held in New York. SEATO was formally dissolved two years afterward.

PATIT PABAN MISHRA

Southern Baptist Convention

The Southern Baptist Convention (SBC) is the largest Protestant body in the United States. Baptists emerged after the First Great Awakening in New England and quickly found the southern United States a fertile region for growth. Committed in equal degrees to a conservative doctrine, aggressive evangelism, and local congregational autonomy, Baptists felt the strains of slavery. In 1845 tensions led to the formation of the SBC, which allowed Baptists in the South to pursue missions and educational efforts on their own. Their regional seclusion protected the denomination from the schisms of the early 20th century. Indeed, Baptists eschewed the kind of denominational controls exercised by many other churches, particularly regarding doctrine.

Free of theological controversies and experiencing numerical, institutional, and regional expansion, Southern Baptists enjoyed great self-confidence. Baptists believed that they were called to convert the South, that the South would lead the nation, and that the United States would lead the world. Denominational unity was critical to fulfilling this mission, but by the second half of the century expansion brought diversity, and a series of small theological rifts in SBC educational efforts portended greater controversies in the future.

Although their divisions were mild in comparison with debates in other denominations, Baptists in the South suffered a more shattering blow during the CIVIL RIGHTS controversies of the 1940s–70s. Many southerners saw these changes as a threat to their traditional way of life. Conservatives grew anxious and less tolerant of change of any kind; progressives felt remorse over decades of SBC inaction. By the 1970s prosperity and urbanization seemed to be taking the South into the secular currents sweeping the rest of the nation. It was against that background that a bitter battle between conservatives and moderates exploded during the 1980s.

For years, conservatives contended, denominational boards and seminaries had been controlled by liberals who were allowing liberalism to undercut the theological foundation of the church's evangelistic mission. Now they were organizing to take back their church. From the moderates' perspective this same effort appeared a departure from Baptist traditions of respect for local

autonomy and the right of believers to interpret the Bible for themselves. Moderates charged that conservatives were advocating the kind of coercive denominational intrusions and the mingling of religion and politics that Baptists traditionally rejected. Conservatives successfully framed the debate as one of accepting or rejecting the Bible, and the majority of SBC members sided with them. Moderates charged them with securing power through questionable parliamentary maneuvers, but, by the end of the 1980s, the conservative takeover of the SBC was all but complete.

JOHN HAAS

Soviet Union, dissolution of the

In 1989 eastern European countries of the WARSAW PACT, which had been beholden to the Soviet Union since the end of World War II, had their communist governments replaced with noncommunist governments. For the first time in over 30 years the borders between eastern and western Europe were opened. The following year the Congress of People's Deputies changed the Soviet constitution and removed the Communist Party's monopoly from the constitution by allowing multiple parties. In March the BALTIC STATES held elections and their national independence parties gained majorities in each of the republics. At this time Lithuania decided to declare its independence from the Soviet Union, the first republic to do so.

In June 1990 Russia declared its right to rule itself separate from the Communist Party of the Soviet Union. During the remainder of the summer the other republics also declared their right to self-rule. MIKHAIL GORBACHEV tried to find a way to salvage the Soviet Union. His efforts were to be put to a vote in August 1991, but hard-line communists launched an unsuccessful coup in Moscow. The failed coup brought the Communist Party down, and none of the republics was interested in trying to save the Soviet Union. On Christmas Day 1991 Gorbachev resigned, ending the Soviet Union.

Throughout 1989 Poland, East Germany, Hungary, Czechoslovakia, Romania, and Bulgaria, which had been

under Soviet control since the end of World War II, established democratic governments and cut their ties with the Soviet Union. Seeing these events, the Baltic countries started to voice their desire to be free of the Soviet Union also. The Baltic countries had been absorbed by the Soviet Union as part of a treaty (the Nazi-Soviet Pact) it had made with Nazi Germany in 1939. Gorbachev did not care how a republic had come to be part of the Soviet Union; in his view none of the republics should be allowed to leave the Soviet Union. Seeing the events in eastern Europe only encouraged the Baltic republics. Attempts to buy off the republics with token freedoms only encouraged them to continue to push for separation from the Soviet Union.

Following the Baltic republics' lead was the Moldavian Republic. Originally part of Romania, Moldavia was given to the Soviet Union as part of the Nazi-Soviet Pact. Independence movements also appeared in the Trans-Caucasian region of the Soviet Union, made up of the republics of Georgia, ARMENIA, and AZERBAIJAN. In Armenia and Azerbaijan, the growth in nationalistic parties also led to a dispute between them over the Nagorno-Karabakh region. In Georgia, the massacre of female protesters in the capital of Tbilisi in April 1989 only fueled the desire to be free of the Soviet Union.

In early February 1990, the Communist Party's Central Committee met to consider a draft proposal to allow multiple parties. The congress also created the office of the president of the Soviet Union and elected Gorbachev to the office.

After the congress, in April, Gorbachev announced the Law of Secession, which laid out the process that the republics would have to follow in order to gain their independence. The process was long and drawn out. One of the first uses of the law was to pressure Lithuania to do as the Soviet government said or face the consequences. Lithuanian president Vytautas Landsbergis refused, saying that a foreign power had no right to make decisions about how his country should be run. On April 18, the Soviet government started an economic blockade of Lithuania. The Soviets lifted the blockade on June 29 when the Lithuanian parliament suspended the independence decree. Latvia (May 4) and Estonia (May 8) followed Lithuania's lead, and even though Gorbachev outlawed their decrees, they did not suffer the blockade as Lithuania did.

The Baltic republics were not the only ones moving toward independence. In Russia, the Russian Supreme Soviet elected BORIS YELTSIN as chairman on May 29. Running against 13 other candidates, Yeltsin intro-

duced a platform that pushed for Russian sovereignty in the Soviet Union, making Russian law take precedent over Soviet law; provided for multiparty democracy; and declared that Russia should conduct its own foreign policy with all other countries, including other republics of the Soviet Union. The actual declaration came on June 12, 1990, at which time Russia also declared its right to control the natural resources of its country. Other republics followed suit.

Through the end of 1990 Lithuania continued to try to work out a deal with the Soviet government, but the Soviets continued to stall. Therefore, on January 2, 1991, Landsbergis withdrew the suspension of the independence decree. In response to this action, paramilitary police in Vilnius (the capital of Lithuania) and Riga (the capital of Latvia) seized various buildings. Then on January 7 the Soviet Ministry of Defense ordered troops into all three of the Baltic States as well as Moldavia, Georgia, and the Ukraine. The Soviet military continued to occupy buildings belonging to the Lithuanian government, and on January 13 it attacked the capital's television center and in the process killed 14 people and wounded over 200. At about the same time, Gorbachev was telling the Soviet government that force would not be used against the people of Lithuania. These contradictory actions and talk hurt Gorbachev, who claimed not to have had any advanced knowledge of what the military was going to do.

A few days later, on January 20, violence broke out in Latvia when Soviet paramilitary police stormed a government building in Latvia and killed two local police officers. The Baltic republics gained support from Russia when Yeltsin signed a document recognizing the independence of the Baltic States on behalf of Russia, which was exerting its right to conduct its own foreign policy separate from that of the Soviet Union.

Although the Baltic republics had started out leading the move toward independence from the Soviet Union, Russia now began to take a more prominent role. In January 1991 Gorbachev issued a decree that the Soviet army was to patrol the streets of the larger cities in the Soviet Union to help stop crime and control protests; Russia objected. When Yeltsin attacked Gorbachev during a television interview, Yeltsin found himself under attack by various groups. Although Gorbachev's actions might be decidedly anti-independence for the republics, he still had the support of many of the people in the Soviet Union and Western countries.

On March 17, 1991, the idea of maintaining a union of the republics was put to a vote of the people of the Soviet Union. The vote passed, although six of the

republics (Lithuania, Latvia, Estonia, Armenia, Georgia, and Moldavia) did not participate in the referendum since they claimed that they were not part of the Soviet Union. Yeltsin claimed that the referendum was nothing more than an attempt by Gorbachev to generate support for his leadership. Gorbachev then called a conference and invited Yeltsin and the presidents of eight other republics to talk about a proposal for a new Union Treaty and new Union Constitution. Gorbachev and the other presidents signed a declaration supporting the drafting of a new treaty and constitution.

May saw more changes as the republics continued to move away from the Soviet Union. On May 5 the Russian branch of the KGB separated itself from the Soviet Union's institution. Moldavia changed its official name to the Moldavian Republic, dropping the words Soviet and Socialist. Then on May 26 Georgia had its first-ever direct presidential election.

THE COUP

Gorbachev and Yeltsin continued to work out the details of the new Union Treaty. The treaty would keep the Soviet Union alive, but would limit the areas over which it could exercise control and make participation in the union voluntary. Before the treaty was enacted, a group of hard-line communists launched a coup to remove Gorbachev from power. The coup lasted for only three days. The committee in charge of the coup announced a state of emergency and placed Gorbachev under house arrest, cutting off his ability to communicate with the outside world. They then tried to get him to sign a decree declaring a state of emergency, but he refused. With Gorbachev's refusal to cooperate, the coup started to come unraveled. The plotters had planned to arrest Yeltsin also, but missed their chance. Instead, Yeltsin went to the Russian Parliament building and appealed to the citizens of Moscow to ignore the unlawful coup. The military was unwilling to move against the civilians, and the coup ended on August 21.

Gorbachev returned to Moscow. Because of the coup, Yeltsin became the hero of the hour, and his popularity grew rapidly. Unfortunately for Gorbachev, his popularity plummeted and accelerated the decline of the Soviet Union. Yeltsin forced Gorbachev to return control of the natural resources and enterprises on Russian territory back to Russia from the Soviet Union.

December saw the Soviet Union brought to an end. On December 1 the Ukraine held a referendum to allow the people to vote in support of or against the declara-

tion of independence from the Soviet Union. The referendum passed by a wide margin. Then the leaders of Russia, the Ukraine, and Belarus met to determine the future of the Soviet Union and their republics. On December 8 they announced the end of the Soviet Union and the creation of a Commonwealth of Independent States (CIS). Membership in the CIS was open to all former members of the Soviet Union and any other state interested in joining.

On December 12 Kazakhstan, Kyrgyzstan, Tajikistan, and Turkmenistan joined the CIS. More meetings were held on December 21, and Moldavia, Azerbaijan, and Armenia joined. During this meeting the republics agreed to abolish the position of president of the Soviet Union. Gorbachev still held the position, but on December 25, he announced his resignation. With Gorbachev's resignation the remaining members of the Soviet Parliament had the Soviet flag removed from the Kremlin, and at midnight on December 31, 1991, the Soviet Union ceased to exist.

DALLACE W. UNGER, JR.

space exploration

Humankind's exploration of space began in the 1950s, with the first satellite, the Russian *Sputnik*, launched by rocket on October 4, 1957. It was followed on November 3 by another, carrying a dog named Laika. The United States moved into space exploration on February 1, 1958, with *Explorer I*. A stream of similar robotic craft followed from both countries, carrying instruments that made various important discoveries.

Early space pioneering efforts built on the works of pre-World War II inventors such as the Russian schoolmaster Konstantin Tsiolkovsky, whose writings set out the basic principles for rocket propulsion, suggested multistage vehicles, and proposed liquid hydrogen as a fuel. In the United States, Professor Robert Goddard suggested a method for reaching the moon. Goddard built rockets too, and in 1935 successfully launched one

that reached a height of two kilometers. Rocketry in World War II saw the invention of the V2 missile, with a range of around 300 kilometers, a top speed of 6,000 KPH, and a payload of over a ton. Following the war many German rocket engineers, including Wernher von Braun, were brought to the United States, while Soviet forces captured personnel and equipment from the V2 launching site of Peenemunde.

On April 12, 1961, the Soviets again led the way with the launch of Yuri Gagarin, a Russian cosmonaut, into space to become the first human to leave Earth. His mission lasted 1 hour and 48 minutes; he made a single orbit of the planet. The United States countered with a Mercury space capsule carrying Alan B. Shepard on May 5.

The effects of space travel on humans were of course largely unknown. The early manned missions resulted in considerable study of the physical damage of g-force, radiation, and weightlessness. Rapid developments in hundreds of areas followed, as spacesuits, living quarters, and methodologies for delivering food were all pioneered, along with rapid improvements in the speed, range, and payload of rockets.

Meanwhile, robot explorers were recovering more data to inform manned missions. The first probe to journey to the Moon was launched on September 12, 1959, by the Soviet Union. *Luna 2* reached its destination in 34 hours. The U.S. probes in the main were spurred by President JOHN F. KENNEDY's address to the U.S. Congress on May 25, 1961. The Ranger probes explored the Moon's surface, photographing it before crashing into it; the probe therefore provided transmitted data that resolved images of around half a meter across, in contrast to the best telescopes of the time, which could only resolve to around 500 meters. There was much debate on what the surface of the Moon actually looked like and whether it could support the landing of a heavy manned craft. Was the surface so rough no spacecraft could touch down without damage? Was the Moon dust so thick that any spacecraft would sink into huge drifts?

The Lunar Orbiter series of probes were designed to map the surface of the Moon so the best sites for exploration could be chosen. By the end of the five missions, 99 percent of the moon had been photographed to a resolution of 66 meters or better, and smaller areas had been photographed to within one meter. The space race saw the Americans and the Russians competing as to who could reach the moon first; the dual projects were underscored by the COLD WAR and the military implications of mastering space flight. In the end, the

Russians never put a man onto the surface of the Moon but instead landed several robot explorers.

Both sides were, by the mid-1960s, progressing further down the road of manned spacecraft that could carry more than one astronaut. The rockets to launch the progressively heavier spacecraft began to increase in size, with the eventual development of the Saturn series, which still remain some of the most powerful lifting devices ever built. In the United States, the Mercury one-person spacecraft was followed by the two-person Gemini craft. The three-person Apollo vehicles were developed, a two-part craft that included a lunar lander as well as a command section that would stay in orbit while the lander descended to the Moon's surface.

The Russian program saw many achievements. The first female in space was Valentina Tereshkova, who completed 48 orbits in the Soviet Union's *Vostok 6* on June 16, 1963. The first space walk—a weightless venture outside a capsule—was achieved by Aleksei Leonov on March 18, 1965. The walk lasted for 10 minutes. However, the Soviet Union's space program was not without human cost: On April 23, 1967, the landing parachutes of the *Soyuz 1* space capsule failed and cosmonaut Vladimir Komarov was killed. On January 27, 1967, the new U.S. Apollo program experienced tragedy when a fire broke out in the command module during a launch of the first piloted flight, designated AS-204. Three astronauts died: Mercury and Gemini mission veteran Virgil Grissom; Edward White; and Roger Chaffee, an astronaut preparing for his first spaceflight. The subsequent investigation and report saw substantial improvements to mission safety. The AS-204 mission craft was renamed *Apollo 1* in honor of the crew.

Powered by the enormous Saturn V three-stage rockets, the Apollo missions grew in their ability to take the astronauts further from the surface of Earth. On October 11, 1968, the first manned Apollo mission flew successfully; around the same time Russian spacecraft carrying live animals were successfully orbiting the Moon before returning to Earth. *Apollo 8* made the first human-manned circumnavigation of the Moon in December 1968. *Apollo 10* was a “full dress rehearsal” of the proposed landing and carried out all of the proposed operations short of an actual descent to the lunar surface, although it descended to within nine miles of the Moon in the detached lunar module.

On July 20, 1969, after a four-day trip, *Apollo 11*'s lander separated from the main spacecraft with astronauts Neil Armstrong and Edwin Aldrin on board, while Michael Collins remained in orbit. The

lunar module, named *Eagle*, successfully touched down, and, shortly afterward, filmed by the remotely controlled camera attached to the outside of the spacecraft, Armstrong emerged to back down the short ladder to the surface. His steps were watched by millions of people via a television signal beamed back to Earth, with many millions more listening via radio. As Armstrong's foot touched the surface of the Moon, he spoke the words, "That's one small step for a man, one giant leap for mankind." Mankind had reached another world.

A total of seven lunar landings were made, with significant achievements made on each mission. Some 381.6 kilograms of lunar rocks were brought back to Earth, and each successive landing after *Apollo 11* left behind an automated surface laboratory. The last three missions carried extremely sophisticated mapping cameras, and other instruments measured magnetic fields, chemical composition, and radioactivity.

CRAFT FAILURE

Apollo 13's mission was aborted due to craft failure. An oxygen tank on the spacecraft had blown up and the normal supply of electricity, light, and water to the craft was lost around 200,000 miles from Earth. A unique and innovative program of rigged repairs and procedure invention followed, resulting in the eventual safe return of the three astronauts to Earth. Apollo missions continued until December 1972, with different sites visited and a wheeled lunar rover successfully deployed to carry astronauts further from the spacecraft. The missions increased the duration of time spent on the surface from hours to days. Twelve astronauts walked on the lunar surface. The last astronaut to leave the Moon was scientist Jack Schmitt.

Further space exploration programs commenced with *Skylab*, a section of a Saturn V rocket that was successfully placed in orbit and visited on several occasions by teams of astronaut/scientists who stayed in residence for ever-lengthening periods to conduct experiments. The program terminated in 1979. A Soviet-American rendezvous in space, the Apollo-Soyuz mission, took place in 1975. The development of the space shuttle, a reusable craft capable of returning in a glide to Earth's surface, began in 1970, centering around the idea of a cheaper alternative to previous craft. The program used these spacecraft from their first flight in 1981 until the present. The shuttle fleet can each carry a payload of 30,000 kilograms to orbit. Mission loads have consisted of satellites, experiments, and materials for the *International Space Station*.

The Soviets also pursued a permanent presence in space. A series of space stations called *Salyut* were launched, using Soyuz spacecraft on ferry missions. In 1986 *Salyut* was followed by the modular space station *Mir*. Following improved relations between Russia and other nations at the end of the COLD WAR, Russian cosmonauts joined with the other countries contributing to, and working within, the *International Space Station*.

STARK REMINDERS

Space flight is not without its hazards, as was discovered in the early days of space exploration with the loss of the *Soyuz 1* and *Apollo 1* crews. Improvements in safety through redesign and development of spacecraft and propulsion systems have greatly reduced risk of catastrophic failure. Nevertheless, the severe stresses placed on spacecraft and their systems, together with the risk associated with the application of cutting-edge technology, continue to make manned spaceflight inherently dangerous. Stark reminders of this were the loss of the spacecraft and crew of the space shuttles *Challenger* and *Columbia*.

The *Hubble Space Telescope* is the largest astronomical telescope ever sent into space. Launched in 1990 by a space shuttle, the telescope's placement outside Earth's atmosphere gives it a unique view of the universe. Built by the Lockheed Missiles and space company, the space telescope has a length of 13.3 meters, or 43 feet 6 inches; a diameter of 3.1–4.3 meters, or 10–14 feet; and a weight of 11,600 kilograms, or 25,500 pounds.

NASA named the world's first space-based optical telescope after the U.S. astronomer Edwin P. Hubble. Dr. Hubble confirmed an "expanding" universe, which provided the foundation for the big bang theory.

With a mission duration of up to 20 years, *Hubble* is visited regularly by space shuttle crews for regular servicing. At an altitude of 380 miles (612 kilometers) in a low-Earth orbit, the telescope completes an orbit of Earth every 97 minutes. Sensitive to ultraviolet through near infrared light, the telescope relays to Earth three to four gigabytes of information per day. Powered by two 25-foot solar panels, the telescope has revealed new information on the age of the universe, made findings on black holes, and provided visual proof that dust disks around young stars are common, reinforcing the assumption that planetary systems are plentiful in the universe.

HUBBLE'S REPLACEMENT

Scheduled for launch in 2011, the *James Webb Space Telescope* is intended to replace *Hubble*. This telescope

will see objects 400 times fainter than those visible with Earth-based telescopes. By contrast, the *Hubble* can see objects 60 times fainter than those visible with Earth-based telescopes.

The first components for the *International Space Station* were taken into orbit in 1998, and the station received its first crew on November 2, 2000, marking the first day a permanent human presence in space was achieved. The space station has grown and evolved into an unprecedented laboratory complex. Offering a microgravity environment that cannot be duplicated on Earth, the station furthers knowledge of science and of how the human body functions for extended periods of time in space. By the time the station had been operating for five years, 89 scientific investigations had been conducted. A complete characterization study of the radiation environment in the station was done, with evaluation of models of radiation shielding by the station's structure. With 15,000 cubic feet of habitable volume assembled by late 2005, the space station at that point had more room than a conventional three-bedroom house. Astronauts and scientists from a variety of nations have visited and worked in the space station.

Civilian and private missions into space have been achieved. The California millionaire and former NASA rocket scientist Dennis Tito was the first private space tourist to visit the *ISS* for a 10-day excursion in April 2001. Test pilot Mike Melvill took the privately built rocket plane *SpaceShip One* to an altitude of more than 100 kilometers, the acknowledged point at which space begins, on July, 12, 2004.

Robot explorers have also achieved an enormous amount in the conquest of space. The first interplanetary explorer, the United States' *Mariner II*, was launched on August, 26, 1962, to explore Venus and successfully reported a high surface temperature and the absence of a magnetic field.

In January 2004 two NASA robot explorers named *Spirit* and *Opportunity* landed on Mars. The six-wheeled craft crawled over the surface, measuring, photographing, and analyzing, and surprised their controllers by continuing to function for over a year, during which time they traveled for several miles. On December 25, 2004, the NASA *Cassini* spacecraft, nearing Saturn, released the European Space Agency's Huygens probe toward the surface of the ringed planet's largest moon, Titan. Parachuting to the Moon's surface, the probe's cameras and spectrometers analyzed the chemical composition of Titan and transmitted data back to scientists on Earth.

Behind for many of the first years of the space race, the United States won the ultimate prize: the first man on the Moon.

Other probes have been sent to all of the planets in the solar system, including distant Pluto with the launch of the *New Horizons* probe in January 2006. Some probes have had lengthy careers and considerable success. The *Pioneer* space probe, launched on March 2, 1972, was the first spacecraft to travel through the asteroid belt and the first spacecraft to make direct observations and obtain close-up images of Jupiter. It made its closest encounter with Jupiter on December 3, 1973, passing within 81,000 miles. *Pioneer's* last, very weak signal was received on January 23, 2003. *Pioneer 10* continues into interstellar space, heading for the red star Aldebaran, about 68 light years away. It will take *Pioneer* over 2 million years to reach its destination.

Another development of the post-Moon program has been the space community's understandings of asteroid dangers. A "dinosaur-killer" strike is now thought to be avoidable, due to a program of surveying and tracking all heavenly bodies. Such ambitious ideas have been supported by the success of missions such as the *Stardust* spacecraft, launched in 1999. This mission managed to capture particles from a comet beyond the Earth-Moon orbit and return them to Earth.

Other aspects of space exploration are numerous. The discovery of other planets orbiting distant stars has been made possible; the Earth is ringed by satellites enabling advanced communications and a Global Positioning System (GPS); and superior meteorology and detailed imaging have been developed. Various spin-offs

from the space program for the everyday world include such variables as the development of freeze-dried foods and materials such as Teflon.

Progress has been not as fast as science fiction written from the 1930s to the 1980s depicted—space flight has proved expensive and difficult, and the manned Moon bases and Martian cities have not happened. However, other nations besides the United States and the Soviet Union—a collective European approach and manned missions from China—have begun space exploration and plans are under way to see a human presence on both the Moon and Mars.

Two basic difficulties have to be overcome if human exploration of other stars and their solar systems is to succeed. The first is the speed of the spacecraft. The fastest vessel ever built (by 2006) was the *New Horizons* probe, which achieved a speed shortly after launch of 10.07 miles per second, or 36,256 MPH. The nuclear-powered craft crossed the Moon's orbit around nine hours after liftoff. Even at this speed, the estimated mission duration to Pluto is around nine years. If the mission were manned, this would mean an overall duration of 18 years traveling plus the exploration time. If this craft's speed were applied to reach the nearest star system to Earth, the mission time would be hundreds of years. Therein lies the second major problem—the duration humans can withstand space conditions.

The long-term effects of weightless space flight are still being studied, but it is doubtful that such missions could be withstood by a human crew. Scientists believe the craft would have to have some sort of gravitational compensation. A manned, one-way, long-term mission is also an unknown, although science fiction has done a great deal to explore both of these issues.

Indeed, space flight may have provided some answers by extrapolating various scenarios from the work of physicists that may get around interstellar exploration problems. If space is not an empty vacuum and contains distortions, as has been proved, then the “warps” in space may provide points where great distances can be surpassed, rather in the way a fly can travel from one end of a curved scarf to the other end by simply flying between the two points rather than walking the entire length of the scarf. There may also be ways to build spacecraft that fly at much faster speeds; light sails, antimatter rockets, and drives utilizing alternative theories of gravity and electromagnetism might allow much greater speeds. But then other problems arise: that of the relativity time-space equation, for example, and how to get humans to cope with the acceleration and deceleration speeds such a spacecraft would demand.

Although the difficulties of exploring beyond the solar system are great, they may not be insurmountable. One fact remains: If humans want to survive beyond the certain degradation of our own star and its planetary system, then space exploration must be continued.

THOMAS A. LEWIS

Spain

Post–World War II Spain was still affected strongly by the results of the Spanish civil war of 1936–39. Francisco Franco's authoritarian regime continued to censor the press and did not abide by a constitution. After the defeat of fascist governments in World War II, Franco did mitigate some fascist tendencies within his government, stressing instead the Roman Catholic Church, the monarchy, and society as the corporatist pillars of Spain, but not enough to prevent economic isolation by other international actors. However, at the same time industrialization and economic development contributed to a contrary force of secularization. The corporatism of the state thus began to depend more and more on Franco.

Spain's colonial influence would not succeed Franco, either. The Spanish ended their rule over Spanish Morocco in 1956, and over the rest of their African colonies over the next two decades. In 1968 Spanish Guinea gained independence and renamed itself Equatorial Guinea. Right before Franco died, Morocco's King Hassan II took advantage of Spain's weakness and took over Spain's only remaining colony—Western Sahara—in the Green March. However, despite these colonial losses, Franco did pass on to his successor, King Juan Carlos, the beginnings of an economic and political liberalization that would reap the “Spanish Miracle.”

Indeed, the hierarchical nature of the state did not persist after Franco's death in 1975. Juan Carlos appointed Prime Minister Adolfo Suárez to rush in an era of democratization through legislation sometimes referred to as the “new Bourbon restoration.” Suárez was elected in 1977 under the Unión de Centro

Democrático party. After the elections, the Spanish constitution was drafted in 1978 by a committee made up of the deputies of most of the main political groups. It was signed by the king in 1979. Suárez's power weakened, however, and he resigned as president and party leader on January 29, 1981. Finding a successor was difficult in what became a very tense political and economic climate due to economic struggle, difficulty creating a new territorial organization of Spain, Euskadi Ta Askatasuna (or ETA, a Basque separatist organization) terrorist attacks, and the army's lukewarm support of democratic institutions.

In this political atmosphere, democratic governance in Spain was tested by a 1981 coup that was called 23-F and El Tejerazo. Antonio Tejero, with 200 armed officers from the Guardia Civil, stormed the Spanish Congress of Deputies as it was electing Leopoldo Calvo Sotelo the new Spanish president. Tejero and the officers held the cabinet and parliament hostage. No one was harmed and the coup ended largely because the king called upon the army to abide by the orders of the democratically elected civilian authorities.

Social democratic rule began in 1982 with Felipe González's Socialist Party winning the elections. Spain's democratic rule was fairly stable from that point until 1996. Domestic reforms under González's administration included the legalization of abortion, education reforms, and increased personal freedoms. Also during this era, Spain made many advances in integrating back into the international economic and political community. It joined the NORTH ATLANTIC TREATY ORGANIZATION (NATO) and the EUROPEAN ECONOMIC COMMUNITY in 1986. With integration came some important changes for the Spanish economy. Technological and industrial investment in the country increased, despite its persistently high unemployment rate. Ironically, although Spain was able to make progress in international integration, it still suffered from regional separatism and regional groups seeking autonomy from Spain.

In 1996 González was defeated, in part due to government corruption, and José María Aznar's Popular Party (PP) took over. During the PP's term, Spain's economy benefited from high domestic demand and export-led growth. It continued down the path of European integration, joining the Economic and Monetary Union (EMU) and adopting the euro in 1999. Yet again Spain suffered from internal divisions. ETA attacked tourists and Spanish officials again in 1999. Nevertheless, the PP won the 2000 elections. The attacks continued. In 2001 army Lieutenant Colonel Pedro Antonio Blanco García was assassinated. An enormous street

demonstration of over 1 million Spaniards protesting the assassination occurred the next day. Unfortunately, the killings continued. After some ETA members were killed in a car bomb that August, the ETA retaliated with a series of the bloodiest attacks since 1992, which included the assassination of Supreme Court justice José Francisco Querol Lombardero, his driver, bodyguard, and a bystander, and injuries to 60 others.

In 2003 Aznar supported the U.S. "War on Terror" in the IRAQ WAR, possibly resulting in the March 11, 2004, train bombings in Madrid. Nearly 200 people were killed and over 1,500 injured. Although the government blamed ETA, AL-QAEDA operatives carried out the attacks. In the elections that followed, the PP lost to the Socialist Party. José Luis Rodríguez Zapatero took over as prime minister. Aznar, however, had decided not to run, despite not being barred from running for a third term.

Zapatero immediately withdrew Spanish troops from Iraq. Under his administration, Spain approved a same-sex marriage law with the support of a majority of the population. In contrast to Aznar, Zapatero's relations with the United States were strained. However, he maintained good relations with the UNITED NATIONS and the EUROPEAN UNION.

ASHLEY THIRKILL-MACKELPRANG

Sri Lanka

The island nation of the Democratic Socialist Republic of Sri Lanka gained independence from British rule on February 4, 1948. The country followed a nonaligned foreign policy and participated in various world bodies such as the UNITED NATIONS, the WORLD BANK, the INTERNATIONAL MONETARY FUND, and the ASIAN DEVELOPMENT BANK.

Sri Lanka also became a member of the South Asian Association for Regional Cooperation (SAARC). For 10 years the country was ruled by the United National Party (UNP) of Don Stephen Senanayake (1884–1952). After facing hardship under a socialist economy, Sri

Lanka became the first country in South Asia to liberalize its economy.

The government passed the 1956 Sinhala Only Act, which made Sinhala the official language. The onslaught of Sinhalese nationalism marginalized the Tamils. The Tamils, living in the north and east, constituted about 18 percent of the population. They feared dominance by the Sinhala majority, who were 74 percent of the population. A separatist movement was launched, resulting in confrontation between the two communities.

The concept of *Tamil Elam* (homeland) was broached by several Tamil militant groups. The Liberation Tigers of Tamil Eelam (LTTE), under the leadership of Velupillai Prabhakaran, was emerging as the leading militant group. A large-scale riot broke out in 1977, and in the 1980s civil war broke out. Terrorist attacks by the LTTE and riots became common. Indian premier RAJIV GANDHI was assassinated by Tamil militants in the state of Tamil Nadu, India. The president of Sri Lanka, Ranasinghe Premadasa, also was assassinated in Colombo.

After two decades of bloodshed, there was a formal cease-fire in February 2002 under the auspices of the government of Norway. Chandrika Bandaranaike of the Sri Lanka Freedom Party became president. Meanwhile, the country was devastated by a tsunami in 2004. A lasting solution to the ethnic conflict had proved illusory, and large-scale human rights violations were committed by the army and the LTTE. Civil war began again in 2005, and violence continued in 2006. Peace talks were held in February and April 2006 in Geneva, but these did not produce any concrete results. In July and August 2006 there was heavy fighting in the Muslim-dominated Muttur region.

PATIT PABAN MISHRA

St. Lawrence Seaway

Begun in 1954 and completed in 1959, the St. Lawrence Seaway, a wonder of engineering for its time, is a 2,342-mile-long series of canals, locks, and seaways constructed

jointly by Canada and the United States to allow ocean-going vessels access to the Great Lakes. It streamlined shipping and created additional hydroelectric facilities along its route.

The seaway opened to commercial traffic on April 25, 1959. The total cost was \$470 million, of which Canada provided \$336.2 million and the United States \$133.8 million. Canada's St. Lawrence Seaway Management Corporation manages 13 locks, while the U.S. St. Lawrence Seaway Development Corporation manages two locks. The hydroelectric facilities are administered by Ontario Power and the New York State Power Authority. Depending on weather conditions and ice management, the seaway is generally open from April to mid-December, approximately 250 days per year.

There are seven locks between Montreal and Lake Ontario, a distance of 187 miles. Each lock is 766 feet in length, 80 feet wide, and 30 feet deep, and all channels are dredged to a depth of 27 feet. To ensure proper depth it was necessary to flood some areas, displacing and relocating residents of river towns. Technically not part of the seaway, the two Soo Locks in Sault Ste. Marie, Michigan, are slightly larger and connect the upper Great Lakes with Lake Superior.

Ninety percent of the freight shipped consists of bulk commodities. Westbound traffic primarily carries cargoes of steel, coal, and iron ore; 40 percent of eastbound cargo is grain. Inter-lake trade accounts for four times the tonnage handled for international markets.

In recent years, proposals by the U.S. and Canadian governments to deepen the seaway and enlarge its locks have met with resistance. Those who seek to expand seaway traffic point out that the St. Lawrence project is operating at only half the capacity envisioned when the project began in the 1950s, while another, even older, water "highway," the Panama Canal, is achieving full capacity and more.

Opponents of the seaway's expansion fear damage to water quality in the world's greatest freshwater system and point to damage already caused by invasive animal and plant species introduced by shipping on the seaway. Studies claim that 182 nonnative species have entered the Great Lakes system, two-thirds of them since 1959 when the seaway opened.

JOHN M. MAYERNIK

student movements (1960s)

The most striking result of the BABY BOOM was the activism of college students during the 1960s. In the United States, the initial impetus for student activism came from the CIVIL RIGHTS MOVEMENT. As the decade wore on, students in the United States and elsewhere found more elements of the “establishment” that required political action: the VIETNAM WAR, the draft, and charges that universities were complicit with the military.

The first major student protest organization, the Student Non-Violent Coordinating Committee (SNCC), was founded in 1960 by Ella Baker, who had organized the Southern Christian Leadership Conference for MARTIN LUTHER KING, JR. She believed that existing civil rights organizations were out of touch with African-American students who were willing to push the movement further. Also in 1960 Students for a Democratic Society (SDS) emerged from the Student League for Industrial Democracy, created in the 1930s to try to build a political left in Great Depression America.

SDS became the central institution of what would soon be called the New Left. In June 1962, 59 SDS members and sympathizers, including some SNCC members, assembled at an AFL-CIO camp in Port Huron, Michigan, to develop a political manifesto. The resulting Port Huron Statement was written by student Tom Hayden. It suggested that U.S. universities should become the locus for a new movement concerned with empowering individuals and communities.

SNCC was the first of these organizations to achieve national prominence. Its members, who had initiated sit-ins at segregated lunch counters, took part in the Freedom Rides of 1961, testing federal court orders desegregating interstate bus terminals. They conducted voter registration programs in several southern cities and demonstrated against segregation.

In 1964 SNCC and CORE (the Congress of Racial Equality) staged “Freedom Summer,” during which white college students were invited to teach African-American children and assist with voter registration efforts in Mississippi. During that summer, three student activists, whites Michael Schwerner and Andrew Goodman and African-American James Chaney, were murdered by white racists. The University of California, Berkeley’s FREE SPEECH MOVEMENT began when students returning from Freedom Summer found their university restricting political activity on campus.

White resistance to the Civil Rights Act of 1964 and the 1965 Voting Rights Act led activists in both SDS and SNCC to see themselves as allies of revolutionaries in

Students demonstrate against the war in Vietnam during the March on the Pentagon in 1967.

the rest of the world and to move further left. Stokely Carmichael (later Kwame Ture), who became chairman of SNCC in 1966, coined the slogan “BLACK POWER” to express African-American pride, which had the effect of driving white activists out of the organization.

SDS and other white-dominated activist groups had, by this time, become outraged at the escalation of the war in Vietnam. The first “teach-in” against the war took place at the University of Michigan during the spring of 1965. In April a march on Washington organized by SDS drew 20,000 protesters. It was the first of many.

Concentration on antiwar politics had an unforeseen consequence. In 1964 SNCC staffers Mary King

and Casey Hayden anonymously circulated a position paper noting male dominance in movement organization. Later, they publicly raised the importance of FEMINISM in civil rights and antiwar groups. Some men in the movement saw women's issues as a trivial distraction from their own concerns about the draft. King and Hayden's work led to women's caucuses.

Between 1964 and 1969 many of the nation's college campuses became stages for student activism, whether connected to the war or not. Black students occupied buildings at the University of Chicago, Brandeis, and Cornell (armed with rifles). University officials were held hostage at Columbia University, Trinity College, and San Fernando Valley State College (now California State University Northridge). Students stormed boards of regents meetings and occupied buildings and offices.

In May 1968 youth uprisings in Paris nearly brought down the government of CHARLES DE GAULLE. A general strike led by elite Sorbonne university students, joined by many French workers, decried France's education system and its role in the Vietnam War. That same year, Czechoslovakia's "PRAGUE SPRING" tried to implement "socialism with a human face" in the teeth of Soviet domination. In August WARSAW PACT troops crushed the movement, while in the United States riots erupted between Chicago police and student activists during the Democratic National Convention.

Violence escalated in 1970 when National Guard units shot and killed students protesting the Vietnam War at Kent State and Jackson State Universities, touching off protests on many other campuses. But by then SNCC and SDS were collapsing. SDS had splintered at its 1969 convention into a number of groups, the best known of which, the Weathermen, took its name from a Bob Dylan song. Renamed the Weather Underground, this group is best remembered for a Greenwich Village explosion in which three members blew themselves up while assembling explosives. Broad-based student activism declined after the draft was discontinued in 1973.

DAVID MILLER PARKER

suburbanization, U.S.

Suburbanization describes a process by which U.S. city dwellers moved from central cities into residential areas characterized by single-family homes with lawn space. It is generally associated with the period directly following World War II, but suburbanization is a much older process. The term "suburb" has been in use since 1800. Although it originally applied to a pastoral existence, connected to but outside the central city, it is now associated with the basic ideals of U.S. family life.

The form of the U.S. city has been changing since the development of the steam engine. As the railroad replaced the stagecoach as a means of transportation, it became possible to live farther from the center of the city while still working in the central business district. The streetcar accelerated this outward movement, and automobiles accelerated it even more, creating "bedroom communities" with access to commuter trains, buses and ferries, and parking lots. By 1940 only 20 percent of U.S. citizens lived in the suburbs, which were regarded as communities for the upper class.

A shortage of housing in cities with significant concentrations of war-related industries led to the building of suburban communities to house workers during World War II, but the diversion of resources for the war effort created a national housing shortage for returning servicemen. Ninety-seven percent of all new single-family dwellings built between 1946 and 1956 were surrounded by their own plots.

The period saw the cottage industry of single-family home construction transformed into a major manufacturing process. The most famous example of this is Levittown, which is named after the family who built it. In 1946 Levittown was 4,000 acres of potato fields in Long Island, New York; by 1950 it was a town with 17,400 separate houses. Similarly the developers of Lakewood, in Los Angeles County, California, purchased 3,500 acres in 1949 and had built and sold 17,500 houses by 1953.

The new suburbs were characterized by low density, architectural monotony, and economic and racial homogeneity. Soon businesses, especially retailers, opened branch stores in the suburbs, creating shopping malls to reach consumers who had moved there. The suburbs continue to grow as the urban/suburban relationship in the nation's metropolitan areas evolves. This is evident in the explosive growth of suburbia in the formerly rural hinterlands of cities in the southern and southwestern United States, now known as the Sun

Belt, which attract homeowners with promises of fine weather, large acreages, and air-conditioning.

DAVID MILLER PARKER

Sudanese civil wars (1970–present)

The Sudan has been the theater for several major inter-communal conflicts since the 1950s. During the British administration of the Sudan under the Condominium Agreement, North and South Sudan had been administered separately. The north, with historic ties to Egypt, was predominantly Muslim and Arabic speaking. The population in the south was primarily black and a mixture of Christians and animists, speaking a variety of African languages. The British restricted Sudanese living north of the 10th parallel from traveling farther south, and the Sudanese living below the 8th parallel from traveling north. This helped sow the seeds of future conflicts.

The first Sudanese civil war broke out shortly before Sudanese independence in 1956 and lasted until 1972. The Addis Ababa Agreement was signed in 1972, ending hostilities and giving the southern Sudan considerable self-rule and autonomy. The peace held until President JAAFAR MUHAMMAD NUMEIRI broke the agreement in 1983 by trying to create a federated Sudan. President Numeiri moved to implement Islamic sharia law over all of the Sudan, including the Christian population. Newly discovered oil reserves in the southern territory also provided a motive for more northern interference in the region. Led by Colonel John Garang, the Sudan People's Liberation Movement and the Sudan People's Liberation Army (SPLA) launched an all-out war against northern domination, further weakening Numeiri.

The Numeiri regime was overthrown in a military-led coup in 1985, but the civil war continued as Islamist forces gained power in Khartoum. Negotiations for a cease-fire ended in 1986 when SPLA forces shot down a civilian aircraft. The National Islamic Front (NIF) then joined the northern forces to ensure that Islamic law was retained. This endangered hopes for future peace talks because one of the primary demands of those in the south had been the repeal of Islamic law.

Southern forces retained control over most of the southern countryside, and in 1989 further negotiations collapsed over the issue of Islamic law. In 1991 the tide changed when the Ethiopian government was deposed, depriving the south of its main ally and arms supplier. Inter-rival fighting among groups in the south further weakened the resistance against the north. As almost all of the fighting had occurred in southern provinces, the region had experienced massive population displacement, food shortages, and destruction. Throughout the 1990s, the south was torn apart by inter-tribal warfare as well as numerous offensives from the north.

With substantial international pressure, the 2003 peace talks made progress, and the two sides signed the Naivasha Treaty on January 9, 2005. The treaty guaranteed autonomy for southern Sudan for six years, after which a referendum was to be held regarding complete independence. Monies from oil reserves were to be divided equally between the north and south, and both north and south armies were allowed to remain in place. The peace treaty was imperiled after John Garang, the new co-vice president, was killed in a helicopter crash. Riots broke out in the south, where many believed the regime in Khartoum had been responsible for Garang's death. However, a tentative peace held, and Salva Kiir Mayardit became the new SPLA leader and Sudanese vice president.

The UNITED NATIONS (UN) established the UN Mission to Sudan under UN Security Council Resolution 1590 in March 2005; the mission was to protect and promote human rights in southern Sudan and to help to maintain the peace. However, an uprising in the western DARFUR region put the mission and Sudanese unity in danger.

The Darfur region, predominantly Muslim, rebelled in 2003, accusing the government of neglect; it used this as a basis for secessionist claims. The central government launched a brutal campaign of scorched earth against Darfur and aligned itself with Arab militias known as the Janjaweed. Many in Darfur fled into neighboring Chad, thereby creating an international crisis. By 2006 the government in Khartoum claimed victory and signed the Darfur Peace Agreement supervised by the African Union Mission in Sudan, but this failed to halt hostilities, and the conflict continues.

These ongoing civil wars have decimated large sectors of the Sudanese economy. The fluctuating price of cotton, the primary cash crop, has further weakened Sudan's economic prospects. The discovery of small oil reserves raised hopes, but with the ongoing violence, it is difficult to gauge the positive effects of this resource. Severe labor shortages and the emigration of

large portions of the educated elite in both the north and south have also had negative impacts on Sudan's recovery. Therefore it seems likely that the Sudan will remain a volatile and unstable region for the foreseeable future.

KATIE BELLIEL

Suharto, Haji Mohammad

(1921–2008) *Indonesian president*

The second president of Indonesia after SUKARNO, General Haji Mohammad Suharto was born June 8, 1921, in Kemusuk Argamulja, central Java. His military career began with the Japanese occupation from 1942 to 1945. After Sukarno's declaration of independence in 1945, Suharto fought against the Dutch and later joined the Indonesian National Army. In the violent upheaval of 1965, he was instrumental in crushing the Partai Komunis Indonesia (PKI, or INDONESIAN COMMUNIST PARTY) coup and rose rapidly after this event.

As Sukarno's political authority weakened, Suharto began to strengthen his position. By an executive order in 1966, Sukarno was forced to grant emergency powers to Suharto. Under Suharto Orde Baru (New Order) was established, emphasizing economic development and social harmony. Relations with Western countries improved and confrontation with Malaysia ended, but relations with China deteriorated. Indonesia became a founding member of the ASSOCIATION OF SOUTHEAST ASIAN NATIONS (ASEAN). The military became powerful and extended its hold over economic management, which led to large-scale corruption. Suharto also restricted political party activity. By March 1967 he was the acting president and he was elected president on March 21, 1968. He continued to hold the office until 1998, being reelected unopposed five times. His Golkar Party also won every election during this time.

Suharto's regime suppressed secessionist movements and added Western New Guinea, a former Dutch colony under UNITED NATIONS (UN) temporary executive authority after a stage-managed election in 1969. However, he had to deal with the Organisasi Papua Merdeka (OPM, or Free Papua Movement) and its guerrilla campaign against the government of Indonesia.

Suharto also faced problems from the province of Aceh after the formation of the Gerakan Aceh Merdeka (GAM, or Free Aceh Movement), which demanded independence in 1976. He suppressed the rebellion by force and martial law, but discontent remained.

East Timor was a former Portuguese colony. Suharto ordered an invasion and incorporated it into Indonesia in 1976. A guerrilla war against Indonesian occupation continued amid reports of brutality by the army. In 1998 talks between Portugal, Indonesia, and the United Nations resulted in a plebiscite for the East Timorese people. However, the Indonesian army and a pro-Indonesian militia unleashed a reign of terror in the region that killed more than 1,300 people and sent 300,000 people fleeing into West Timor.

Suharto faced challenges on the economic front also, as his profligate spending and corruption forced the economy to falter. Beginning in the 1990s, opposition to his authoritarian regime gained intensity. The financial crisis of Asia in 1997 resulted in the plummeting value of the Indonesia currency, which lost 80 percent of its value in 1998. Riots escalated after May 1998, causing him to resign on May 21, 1998. He was replaced by Vice President Jusuf Habibie.

Suharto was placed under house arrest in 2000. In 2003 the Human Rights Commission of Indonesia began to examine atrocities committed under his regime. By then Suharto was in poor health, often hospitalized, and therefore spared prosecution. Indonesia returned to democratic government after his fall. Suharto died in Jakarta on January 27, 2008, from multiple organ failure.

PATTI PABAN MISHRA

Sukarno, Ahmed

(1901–1970) *Indonesian leader*

A charismatic leader, Ahmed Sukarno left an indelible imprint on the history and politics of Indonesia. Born

on June 6, 1901, he was the most important leader of the nationalist movement and the first president of the Indonesian Republic. After graduating from Bandung Technische Hoogeschool in 1926, Sukarno joined the nationalist movement and was instrumental in establishing the Perserikatan Nasional Indonesia (PNI, Indonesian Nationalist Union) on July 4, 1927. The PNI voiced the indigenous sentiment against colonial rule. He was imprisoned and exiled, returning to Jakarta after the Japanese occupation in 1942. Sukarno had a flair for flamboyant oratory. Sukarno enumerated the Pancasila, or five moral postulates, on June 1, 1945, as guidelines for governing Indonesia: nationalism, internationalism, consent, social justice, and belief in God. Unable to suppress the independence movement, the Netherlands signed the Hague Agreement of December 27, 1949, ending its colonial rule. Sukarno and Muhammad Hatta became president and prime minister, respectively.

The new constitution provided for a parliamentary form of government in which president Sukarno was a mere figurehead, with his rivals dominating the political scene. There was political instability and the collapse of five successive cabinets in six years. There were revolts against the central authority in West Java, Kalimantan, south Sulawesi, and Sumatra. Sukarno criticized the ineffective government and began to assert his authority gradually from 1955, instituting a "guided democracy" in 1957 that replaced democratic with authoritarian rule. On July 5, 1959, Sukarno reinstated the 1945 constitution, assuming executive authority, ruling by decree. In July 1963 Sukarno was made president for life by a compliant assembly.

From the early 1960s Sukarno directed his attention to grandiose plans of projecting Indonesia into the international arena and himself as leader of the nonaligned bloc.

Examples of his image building were his hosting of the 29-nation Afro-Asian conference at Bandung in 1955. He also hosted the Asian Games and the games of the Newly Emerging Forces (NEF). In

1957 he nationalized Dutch businesses. In 1963 he annexed the western half of Papua New Guinea, or Dutch New Guinea.

Sukarno broke off relations with the newly formed Malaysia in 1963 and attempted to destabilize it by guerrilla attacks. Indonesia withdrew from the UNITED NATIONS after the admission of Malaysia. Sukarno then consulted communist nations with Moscow responding with foreign aid. Domestically, inflation, corruption, deficit spending, and victimization of the Chinese business community led to economic ruin. Inflation reached a staggering proportion, and the economy was on the brink of collapse.

The attempted coup in September 1965 sealed Sukarno's fate. General HAJI MOHAMMAD SUHARTO took leadership in crushing the coup on September 30. As a result, the political authority of Sukarno was fatally weakened by Suharto, who became the president in March 1967. Sukarno, stripped of presidential powers, was banned from any political activity and remained under house arrest in Jakarta until his death on June 21, 1970.

There was a revival of the popularity of Sukarno in 1980s, because many people had become disenchanted with the dictatorial military regime of Suharto. They honored his struggle against colonialism. Megawati Sukarnoputri, his eldest daughter, became the symbol of the pro-democracy movement that opposed Suharto, and she was elected president of Indonesia from 2001 to 2004.

PATIT PABAN MISHRA

Taiwan (Republic of China)

The Nationalist (Kuomintang, or KMT) government of the Republic of China (ROC) lost the civil war against the Chinese Communist Party in 1949 and retreated to Taiwan, an island province that had been seized by Japan in 1895 and returned to China after World War II. About 2 million people from mainland China fled to Taiwan, joining about 6 million people who had earlier migrated to the island, mainly from the Fujian (Fukien) province across the Taiwan Strait.

Chiang Kai-shek, who was elected president of China under the constitution in 1947 and who had stepped down in 1949, resumed his presidency in 1950. He was reelected president four more times and died in 1975. Chiang ruled Taiwan in an authoritarian manner and invoked martial law because of the threat of invasion from the communist-ruled PEOPLE'S REPUBLIC OF CHINA (PRC). With the failure of the George Marshall mission to mediate the Chinese civil war, the United States became a bystander in the Chinese conflict until the invasion of Communist North Korea (later aided by "volunteers" from the PRC) of pro-Western South Korea in 1950. The U.S. Seventh Fleet then began to patrol the Taiwan Strait to prevent a PRC invasion of Taiwan, and in 1952 the United States and the ROC signed a Mutual Defense Treaty (ended in 1979), which provided protection for Taiwan.

By 1954 Chiang's government had completed a successful equitable land reform that transferred ownership to cultivators. Resource-poor Taiwan relied on social

and educational reforms to produce a literate citizenry. U.S. economic aid helped to reform all aspects of the economy so that an even greater rate of growth became possible when it ended in 1964. Industrial development began with labor-intensive light industries that capitalized on a literate workforce. Infrastructure building allowed the economy to shift to heavy, and later high technology, industries.

In 1978 the National Assembly elected CHIANG CHING-KUO (son of Chiang Kai-shek) president; he was reelected in 1984 and died in 1989. Chiang Ching-kuo accelerated the rapid economic development of Taiwan, called an economic miracle by the rest of the world. He began political reforms that ended martial law, granted freedom of the press, and allowed opposition political parties. The Chiang "dynasty" ended with Chiang Ching-kuo's death (he had disavowed succession by his family members), and he was followed by his vice president, Lee Teng-hui. Lee continued democratization and won two more terms, the second by a universal suffrage vote (rather than election by the National Assembly) under an amended constitution. In the 2000 election, the opposition Democratic Progressive Party candidate won the presidency. Taiwan thus added to its accomplishments the "political miracle" of a peaceful transformation from one-party rule to multiparty democracy without violence. With a population of 23 million, it continued to be one of the most advanced and prosperous nations in Asia. However, Taiwan's political future remained unclear because of the PRC's stated goal of national unification, by force if necessary.

JIU-HWA LO UPSHUR

Taliban

Osama bin Laden was born on March 10, 1957, in Riyadh, into a family who owned a construction dynasty estimated worth \$5 billion by the mid-1990s. When the Soviets invaded AFGHANISTAN in 1979, they began a war in which 1 million people were killed and 5 million were sent into exile. During the war, Osama bin Laden, then 22, lobbied his family and friends to support the cause of the Afghan freedom fighters, the mujahideen, and made several trips to Pakistan, where he continued his fund-raising work. During this time the United States also supported the cause of the mujahideen against the Soviets. The REAGAN administration authorized the CIA to establish training camps for the mujahideen in Afghanistan and Pakistan and asked King Fahd of Saudi Arabia to match U.S. contributions. King Fahd instructed the minister of intelligence, Turki al-Faisal, to raise money from private sources and Faisal, knowing of bin Laden's efforts toward the cause, entrusted bin Laden with the task of raising money. Besides raising money for the effort, bin Laden helped encourage Arab volunteers to fight in Afghanistan against the Soviets. He kept a database of his volunteers; the word *database* translates to Arabic as AL-QAEDA.

When the Soviets left Afghanistan in 1989, the United States withdrew its support for the mujahideen, and the country was plunged into chaos and civil war. When Iraq, built up as a major military power by the United States against Iran, invaded KUWAIT, the United States sent thousands of troops into Saudi Arabia. The U.S.-Saudi alliance was criticized by bin Laden, who objected to the presence of U.S. troops on land sacred to Muslims. Bin Laden began publicly criticizing the

Saudi regime. As a result, he was placed under house arrest. He convinced King Fahd that he had business to take care of in Pakistan as a means of escaping the country, and eventually found refuge in Sudan with HASAN AL-TURABI, the leader of the country's Islamic Front. While in Sudan, bin Laden opposed the presence of U.S. troops in Somalia, and al-Qaeda affiliates in Yemen bombed two hotels housing American troops in transit to Somalia. Following an attack by al-Qaeda on the World Trade Center in 1993, the Saudi government froze bin Laden's assets in the country and stripped him of his citizenship.

Meanwhile, in 1994, the Taliban (translated as "students"), a small group of graduates from madrassas (schools of Islamic learning) led by Mullah Muhammad Umar, took control of the city of Kandahar, Afghanistan. The Taliban were able to seize leaders of warring factions, and called for the city to disarm. Fatigued by two years of anarchy, the city willingly agreed to the restoration of order. The Taliban announced that it was their duty to set up an Islamic society in Afghanistan, and gained popular support. By 1996 they had taken Kabul and established a government willing to provide sanctuary to Osama bin Laden and to accept his support of their regime. In 2000, bin Laden was linked to the attack on the American guided missile destroyer USS *Cole* in Aden Harbor, Yemen, and on SEPTEMBER 11, 2001, al-Qaeda was held responsible by the United States for the attack on the twin towers and the Pentagon. While the Taliban regime fell as a result of U.S. attacks on Afghanistan on October 10, 2001, the United States was unable to capture Osama bin Laden or destroy the Taliban.

TAYMIYA R. ZAMAN

Tamil Tigers

The Tamil Tigers, officially known as the Liberation Tigers of Tamil Eelam, or LTTE, concentrate operations

predominantly in Sri Lanka with the goal of achieving a separate state for the majority Tamil regions located in north and east Sri Lanka. The rebel group gains much of its internal support from the Tamil agricultural workers and dislocated Tamil youths. Tamil Tiger operations have targeted both military and political objectives since the early 1970s. The United States, the EUROPEAN UNION, CANADA, and INDIA all consider the Tamil Tigers a terrorist organization. Under the leadership of its founder, Velupillai Prabhakaran, the LTTE argues that they are freedom fighters.

Until the 1970s the Tamils insisted upon autonomy but did not resort to violent methods. After a long period of attempts to negotiate, Tamils adopted the belief that the Sinhalese-dominated Sri Lankan government was unwilling to negotiate. A number of militant organizations were created—including the New Tamil Tigers and the Liberation Tigers of Tamil Eelam. In 1979 the LTTE began a campaign of attacking military targets, including a July 1983 killing of 16 army soldiers that led to the killing of thousands of Tamil civilians. In response to the violence, LTTE membership dramatically increased. By 1984 the LTTE had begun higher intensity attacks and created a naval unit called the Sea Tigers. In 1987 a special elite unit of LTTE members known as the Black Tigers was formed. By 2001 the LTTE inexplicably dropped its call for a separate Tamil state and reduced its demands to regional autonomy. Norway negotiated a cease-fire, which as of mid-2006 was tenuous at best. In the summer of 2006 calls for a “Final War” for Tamil Eelam independence emerged.

The LTTE, in addition to its military activities, provides a host of government services. The LTTE’s de facto government funds schools, hospitals, police stations, courts, and other municipal services. The LTTE informal government operates under the precepts of socialism. The LTTE also has a political wing, the Tamil National Alliance, although formal attempts have not been made by the LTTE to create political parties.

External support for the Tamil Tigers has come from a number of Indian regimes. That support ended with a LTTE associate’s assassination of Indian prime minister RAJIV GANDHI. In addition the international arms of the Tamil Tigers, located in London and Paris, have facilitated a number of purchases of weaponry. Funding for activities originates in expatriate Tamil communities in the West. Other fund-raising activities include extortion and illegal trade as well as legitimate business fronts and charities. Many terror analysts note that part of the Tamil network includes cargo ships. This has prompted concerns over the use of the fleet in terror operations.

Very few Tamil rebels are captured alive. This is because of a rigorous training regime that includes political indoctrination emphasizing the importance of not being captured. Hence Tamil recruits typically wear a capsule of cyanide around their necks and are encouraged to commit suicide rather than face capture. In addition, the LTTE were one of the first modern terrorist groups to encourage suicide bombings. Much has also been written concerning the LTTE practice of recruiting children to fight in the rebellion. The rebel organization has participated in both a conventional war and attacks targeting civilians. The Tamil Tigers have also been accused of ethnic cleansing. Specifically, the Tamil Tigers attempted to remove all non-Tamil residents from the Tamil state of Jaffna in 1990.

MATTHEW H. WAHLERT

Tashkent Agreement

The Tashkent Agreement of 1966 brought a temporary end to the 1965 war between India and Pakistan and was important subsequently in regulating negotiations over the disputed territory of Kashmir.

The UNITED NATIONS (UN) had organized a cease-fire in 1965 when it became clear that the fighting had the possibility of endangering large population centers. After 17 days of fighting, neither side wished to resume hostilities owing to the vulnerability of their people, the lack of ammunition and supplies, and the lack of war goals that could be held. Arms suppliers in the United States and the United Kingdom as well as in China were unwilling to provide more weapons. Consequently, all parties were amenable to finding a means of diplomatically resolving the confrontation.

Soviet prime minister Alexei Nikolaevich Kosygin invited both sides to a conference at Tashkent in the southern Soviet Uzbek Republic. The subsequent agreement was signed by the president of Pakistan, MOHAMMAD AYUB KHAN, and the Indian prime minister, LAL BAHADUR SHASTRI, on January 10, 1966. Unfortunately,

Shastri died the following day of a heart attack. The main provisions included the withdrawal of all troops to their prewar positions, the restoration of diplomatic relations, the promise not to intervene in the internal affairs of the other side, and the agreement to hold discussions concerning various social and economic issues. The oversight of the withdrawal of forces was conducted by the United Nations Military Observer Group in India and Pakistan (UNMOGIP) and the United Nations India-Pakistan Observation Mission (UNIPOM). These missions were successfully concluded.

The permanent end to war and the renunciation of terrorist activities in Kashmir were not included in the final treaty, and both India and Pakistan suffered from some measure of internal disorder. In the case of Pakistan, unrest forced the resignation of Ayub Khan, the head of a military government, in 1969. Meanwhile, Shastri was succeeded by INDIRA GANDHI, whose administration was troubled by right-wing opposition. The two countries were at war again in 1971 as part of the secession of East Bengal from Pakistan and the creation of Bangladesh.

JOHN WALSH

Tlatelolco massacre (1968)

In one of the most important and controversial episodes in postwar Mexican history, on October 2, 1968, police and army units violently suppressed a demonstration in Tlatelolco Square in the heart of Mexico City. The government's version of events differed starkly from those of eyewitnesses and the version that gained currency among much of the populace. The crackdown contributed to a growing crisis of legitimacy for the ruling party, the Partido Revolucionario Institucional (PRI), fueling popular sentiments that the PRI was corrupt, dictatorial, and antidemocratic, and tarnishing Mexico's image on the eve of the country's hosting of the 1968 Summer Olympics.

The roots of the October 1968 events in Tlatelolco have been traced to the upsurge in student and worker democratic and anti-PRI activism from the late 1950s, including the Teachers' Movement in 1958; the Railway Workers' Movement in 1958–59; demonstrations in support of the Cuban Revolution (1959); a massive student strike at the National University (UNAM, spring 1966); and protest movements in the states of Puebla (1964), Morelia (1966), and Sonora and Tabasco (1967).

More immediate antecedents include the government's mobilization of an antiriot paramilitary squad, the *granaderos*, in response to street fights between two Mexico City schools in July 1968, and again in response to student protests commemorating the anniversary of FIDEL CASTRO'S 26th of July Movement. Tensions mounted throughout August as students held huge demonstrations at the UNAM and the National Polytechnic Institute.

The events prompted the formation of a National Student Strike Committee, which issued a list of demands that included disbandment of the *granaderos* and release of all political prisoners. An estimated 500,000 people, mostly students and workers, participated in antigovernment demonstrations in Mexico City's central square (Zócalo) on August 27, to that date the country's single largest mass protest. Law enforcement agencies responded with tanks and armored cars, killing at least one student. In mid-September, President Gustavo Díaz Ordaz ordered 10,000 army troops to occupy the UNAM campus. Some 500 protesters were jailed, and in the ensuing weeks tensions throughout Mexico City ran high.

The exact sequence of events on the evening of October 2 in the Plaza de las Tres Culturas (Plaza of the Three Cultures) in the District of Tlatelolco, where 5,000 to 10,000 protesters had gathered, remains disputed. The next day the government claimed that terrorists had opened fire on the police from a nearby building and that police had responded to the unprovoked attack. Most newspapers at the time reported from 20 to 28 protestors killed. Eyewitnesses recalled with near unanimity that police and army units had instigated the violence, dropping flares from helicopters before spraying machine-gun and small-arms fire indiscriminately into the crowd, killing hundreds.

The British newspaper *The Guardian* estimated after "careful investigation" that 325 were killed, a figure cited by Mexican writer Octavio Paz as the most plausible. In the ensuing days and weeks, thousands were jailed. Memories of Tlatelolco remained fresh into

the 1990s and after, evidenced by a 1997 congressional investigation into the massacre and the 2006 indictment of ex-president and then-interior minister Luis Echevarría for his role in the events, which remain a festering wound in the nation's collective memory.

MICHAEL J. SCHROEDER

Teilhard de Chardin, Pierre

(1881–1955) *scientist, mystic, writer*

Pierre Teilhard de Chardin was one of the most eloquent 20th-century voices for religion in an increasingly secular world. As a distinguished paleontologist and a Jesuit priest, he tried to synthesize evolutionary science with the incarnation of Christ. His ideas were new, speculative, and bold enough to figure into deliberations as diverse as the founding of the UNITED NATIONS and the formulation of several Vatican Council documents. Even today his name is cited for a spiritual perspective on the convergence of human communication due to the Internet.

He was born in France into a devout Catholic family of 11 children in 1881. His father was an intellectual and a farmer, and his mother was a great-grandniece of Voltaire. Teilhard's father provided his son a keen interest in science, and his mother an inclination toward mysticism. He received a top-notch Jesuit education and entered their novitiate program by 1899. By 1911 he was ordained a priest after doing assignments in England and Egypt. World War I interrupted further studies in geology, and he saw action on the front lines. His close calls with death prompted him to consider a more speculative approach to science.

After the war he brilliantly defended his doctorate at the Sorbonne in 1922. Soon thereafter he accepted the chair of the geology department at the Institut Catholique. From this platform he now began to publicize ideas about the synthesis of science and religion, and the resulting controversy cost him his license at the Institut and forced him abroad to do his research and study.

For almost the rest of his career he lived abroad, almost as in a self-imposed exile. Most of that time he

spent in China (1926–46), and there he collaborated with the Chinese Geological Survey and helped to discover the Peking Man skull. He wrote his important books, *The Divine Milieu* and *The Human Phenomenon*, during these years.

For one brief time after World War II he returned to France, but the Jesuits refused to allow him to take an academic position lest he receive more critical scrutiny. He was banned from lecturing in public or publishing his writings. He decided to go to New York in 1951. Lonely and suffering, he died on Easter Sunday, 1955, and is buried in a Jesuit cemetery there.

From a scientific point of view it is difficult to establish the methodology and provability of Teilhard's ideas. He has clearly advanced the fields of geology, stratigraphy, and paleontology, with a supreme competence in the areas of China and the Far East. However, his dominant interest and the source of his infamy was in "anthropogenesis," a new study focusing on the evolutionary position of humanity.

He proposed that evolution had entered a new phase with the emergence of humanity, whereby complexity and consciousness converged and spiritualized evolution. The final development of humanity he termed the "Omega Point," and he connected this perfection with Christ.

In 1962 the Catholic Church issued a warning against the uncritical acceptance of Teilhard's theories, though it did not question his scientific contributions or his integrity of faith. The best way of categorizing his unsystematized though eloquent speculation is as process theology, or perhaps even as a form of Christian pantheism.

Teresa of Calcutta, Mother

(1910–1997) *Albanian religious leader*

Small of stature but solid in fortitude, Mother Teresa was born on August 26, 1910, in Skopje, Albania. The youngest of the children of Nikola and Dran Bojaxhiu, she was baptized Gonxha Agnes. Her father's sudden death when Gonxha was eight left the family in

Mother Teresa's life bore witness to the joy of loving, the dignity of every human person, and the surpassing worth of faith in God.

difficult financial straits and left her mother as her guide for character and vocation. Her local Jesuit parish also contributed strongly to her formation.

At 18, desiring to become a missionary, Gonxha joined the Institute of the Blessed Virgin Mary (Sisters of Loretto) in Ireland. There she received the name Sister Mary Teresa after St. Thérèse of Lisieux. In December she departed for India, arriving in Calcutta on January 6, 1929. After making her first profession of vows in May 1931, Sister Teresa was assigned to the Loretto Entally community in Calcutta and taught at St. Mary's School for girls. On May 24, 1937, she made her final vows. From that time on she was called Mother Teresa. She continued teaching at St. Mary's and in 1944 became the school's principal.

On September 10, 1946, during the train ride from Calcutta to Darjeeling for her annual retreat, Mother Teresa said she experienced a divine love for souls, a force within her that motivated her for the rest of her

life. She felt called to establish a religious community, the Missionaries of Charity sisters, dedicated to the service of the poorest of the poor. Nearly two years passed in discernment before Mother Teresa received permission to begin. On August 17, 1948, she dressed for the first time in a white, blue-bordered sari and left Loretto to enter the world of the poor. On December 21 she went for the first time to the slums to find and serve among "the unwanted, the unloved, the uncared for." After some months she was joined by a number of her former students.

On October 7, 1950, the new congregation of the Missionaries of Charity was officially established in Calcutta. By the early 1960s Mother Teresa began to send her sisters to other parts of India. In February 1965 she opened a house in Venezuela. It was soon followed by foundations in Rome and Tanzania and, eventually, on every continent. During the years of rapid growth the world began to focus its attention on Mother Teresa. Numerous awards honored her work. An increasingly interested media began to follow her activities. Her humble stature and effective work also attracted the attention of many intellectuals and celebrities, many of whom were touched by her spirit.

Mother Teresa's life bore witness to the joy of loving, the dignity of every human person, the value of little things done faithfully, and the surpassing worth of faith in God. But only after her death was it revealed that her interior life was marked by a painful experience of feeling separated from God. At times she grappled with profound doubts and fears about her work and her faith. Despite increasingly severe health problems, she continued to govern her society of sisters and respond to the needs of the poor and the church. By 1997 Mother Teresa's sisters numbered nearly 4,000 and were established in 610 foundations in 123 countries. In March 1997 she handed on her duties as superior to a newly elected successor.

On September 3, 1997, Mother Teresa died. She was given a state funeral by the government of India, and her body was buried in the headquarters of her order. Her tomb quickly became a place of pilgrimage. Less than two years later, in view of Mother Teresa's widespread reputation of holiness and the miracles reported as connected to her intercession, Pope JOHN PAUL II permitted official discussions about her canonization as a saint to begin. On October 19, 2003, he beatified Mother Teresa before a crowd of at least 300,000.

BRIAN KOLODIEJCHUK

terrorism

Terrorism—attacks on civilians and noncombatants for political purposes—has an ancient history. In earlier eras, terrorism was often religiously motivated. In the first century C.E. Jewish Zealots fought the Romans; the Assassins, a Shi'i sect of Islam, killed Muslims who disagreed with their practices in the 11th century; and Hindu Thugees in India killed innocents as part of ritualistic practices from the 7th to the 19th century.

From the 18th to the late 20th century, most terrorists were motivated by nationalist or political causes. Contemporary terrorism is systematic, political, conveys a message, and generates fear. Terrorism may be committed by a state or by individual groups, although some dispute the use of the term for governmental actions. In

English the term *terrorism* derives from the French revolutionary reign of terror under Maximilien Robespierre, when thousands were sent to their deaths, often at the guillotine, in 1793–94.

After World War II nonstate groups often adopted terrorist tactics to achieve political goals. Terrorism was usually the tactic of the weak and disaffected who lacked access to or possession of high technology and sophisticated weapons of war. In the modern era, the media and instant communications provided terrorists with ready platforms to publicize their programs and grievances. Publicity on a global scale permitted terrorists to have a psychological impact far beyond single deeds, thereby greatly magnifying their effects.

In their struggles against imperial powers, Third World liberation movements sometimes adopted terrorist tactics by attacking civilians as well as colonial armed forces to achieve national independence. Third World leaders often argued that these tactics were no less “terrifying” or horrific than the bombing of villages, the use of napalm, or the imprisonment of thousands in concentration camps. However, governments tended

The Pentagon in Washington, D.C., was damaged by a terrorist attack on September 11, 2001, concurrently with attacks on the World Trade Center using hijacked airliners filled with passengers. Nearly 3,000 people lost their lives in the attack.

to apply the term *terrorist* only to those groups they disliked or opposed, and to ignore or downplay those groups or countries that used similar tactics against their own citizens or enemies.

During the 1960s–70s leftist groups were responsible for numerous terrorist attacks in Europe. The Baader Meinhof Gang, militant German anarchists, bombed U.S. military installations and police stations and attempted to assassinate Alexander Haig, the supreme Allied commander of NATO, as well as bankers and media moguls. After most of their leaders had been imprisoned or had died, the Meinhof Gang's attacks ended in the 1990s. The communist Italian Red Brigades also kidnapped and killed leading establishment figures. In its struggle against the British, the nationalist Provisional IRISH REPUBLICAN ARMY (IRA) planted bombs in shopping malls and killed Lord LOUIS MOUNTBATTEN, first earl Mountbatten of Burma, and narrowly missed killing British prime minister MARGARET THATCHER. Similarly, the nationalist Basque party (ETA) attacked Spanish leaders and placed bombs at targets with heavy civilian use.

In the Middle East small Palestinian Marxist-Leninist groups skyjacked civilian airliners in dramatic and well-publicized attacks that brought world attention to the Palestinian national cause. The PALESTINE LIBERATION ORGANIZATION (PLO) also launched terrorist attacks against Israeli civilians as well as the military. At the 1972 Munich Olympic Games, Palestinians attacked and killed Israeli athletes. Israel retaliated by killing Palestinian leaders in Beirut and in Europe. The Kurdish Workers Party (PKK), under Abdullah Ocalan, mounted a separatist insurgency against TURKEY; the PKK placed bombs on buses and other civilian sites and was outlawed by the Turkish government.

In Asia the nationalist TAMIL TIGERS in Sri Lanka attacked civilians, and the Japanese Red Army, a leftist paramilitary group, launched attacks in Europe and elsewhere. In 1995 the group Aum Shinrikyo released the poison gas sarin in the Tokyo subway.

Terrorism escalated throughout much of South America and Latin America in the 1970s–80s. During the 1970s the Argentina military junta and right-wing death squads terrorized and killed opponents. In Chile General AUGUSTO PINOCHET's regime tortured and "disappeared" opponents. The Pinochet regime was also implicated in the car bombing assassinations of a Chilean diplomat and Pinochet opponent, Orlando Letelier, and a U.S. colleague in downtown Washington, D.C., in 1976. During the same period, the SHINING PATH terrorized villagers and political leaders in Peru,

while narco-terrorism by criminal drug cartels killed judges, police, and others in Colombia. Similarly, left-wing guerrilla forces and right-wing death squads killed thousands of civilians as well as religious and nongovernmental volunteers from the international community in El Salvador. The government in Guatemala used terrorism to repress its Amerindian population.

From the 1960s onward a wide variety of political groups opposing the VIETNAM WAR and the conservative establishment or struggling for civil rights in the United States also adopted terrorist tactics. The Weathermen and other groups kidnapped high-profile individuals, bombed military and research installations, and sometimes killed law enforcement officers. In 1995 terrorists from the far right bombed a federal office building in Oklahoma City, killing over 100 people and wounding 400.

There was a revival of religiously motivated terrorism beginning in the later part of the 20th century. As YUGOSLAVIA split apart, sectarian violence escalated. Similarly, clashes among Hindus, Muslims, and Sikhs in INDIA proliferated. Prime Minister INDIRA GANDHI was killed by her Sikh bodyguard, and the Mumbai stock exchange was bombed. The 1979 Islamic Revolution in Iran provided the impetus and support for numerous Islamist groups in the Middle East, including HIZBOLLAH in Lebanon and HAMAS in the occupied Palestinian territories of the Gaza Strip and the West Bank. Both of these groups used suicide bombers in an attempt to achieve their goals.

When their governments failed to provide the means for legitimate political dissent or jobs, many disillusioned Muslim young people around the world joined Islamist organizations that used encouraged *jihadis* (fighters of holy war) to use terrorism to oust corrupt regimes and establish regimes based on sharia, Islamic law. Many Islamic groups were hostile to the West, particularly the United States. Much of their anger was fueled by the spread of Western culture, which threatened or undermined old traditions and practices. Many young jihadis gained military training and experience fighting with the TALIBAN and other Islamic mujahideen groups against the Soviet occupation in AFGHANISTAN in the 1980s. After the Soviet defeat in Afghanistan, the Taliban managed to wrest power from its rivals and established an extreme theocracy. Its leader, Mullah Omar, provided a safe haven for one of the most extreme Islamic groups, AL-QAEDA, which was led by a disaffected Saudi Arabian, Osama bin Laden. In 1998 bin Laden issued a fatwa (religious proclamation) urging jihad against the United States.

Al-Qaeda members placed bombs that killed hundreds in Nairobi, Kenya, and attacked a U.S. military ship in Yemen.

On suicide missions al-Qaeda members skyjacked planes that crashed into the WORLD TRADE CENTER in New York City and the Pentagon in Washington, D.C., on September 11, 2001. These were the most devastating terror attacks that the United States had ever experienced on its home territory. The United States and coalition forces retaliated and successfully overthrew the pro-al-Qaeda Taliban regime in Afghanistan; however they failed to destroy either the Taliban or al-Qaeda. Osama bin Laden managed to escape and continued to orchestrate terror attacks against U.S. forces and supporters. These included suicide bomb attacks on trains in Madrid, Spain, and the transit system in London, England.

JANICE J. TERRY

Thatcher, Margaret baroness Thatcher of Kesteven

(1925–) *British prime minister*

Margaret Thatcher, Britain's first woman prime minister and leader of the Conservative Party, helped reverse the economic decline of her country. Even her enemies grudgingly respected the strong-willed "iron lady." She rejected the "consensus" politics that had characterized Britain since World War II in favor of polarizing "conviction" politics.

During her 10 years as the head of the British government, she created a successful free-market economy, but at a high price: deindustrialization of many old factory towns and, for several years, massive unemployment. Strongly nationalistic, Thatcher fought for Britain within and sometimes against the EUROPEAN UNION. She was lucky that the main body of the Labour Party moved to the left and Labour moderates broke away to form their own party; she defeated her divided opponents at general elections without

ever winning over a majority of the voters. She also was lucky to have the opportunity to fight a short, successful, and very popular war with distant Argentina, whose brutal military dictatorship had seized a sparsely populated and almost unknown British colony, the Falkland Islands. Labour eventually accepted her basic policies. She succeeded in changing the language of political discourse. Except for those from a few stubborn socialists, proposals for the nationalization of major industries disappeared from the debate over public policy.

In part because Thatcher was personally abrasive, she was controversial in her own Conservative Party. It was a rebellion among her nominal supporters that ended her political career. According to rumor, moreover, she did not get along with the other important woman in the British government, Queen Elizabeth II.

Intelligence and hard work, not family connections, explain Thatcher's rise to power. Her principles owed much to the middle-class values of her upbringing. Thatcher was born Margaret Hilda Roberts on October 13, 1925, in Grantham, a small town in eastern England. Her father was a grocer, and the family lived over his shop. Active in civic affairs, her father served for many years on the city council and at one point held the title of mayor. After attending local state schools Margaret Roberts studied chemistry at Somerville College, a women's college that was part of Oxford University. Already politically minded, she was elected president of Oxford's student Conservative organization in 1946, the year after Labour had crushed her party in the general election that followed the defeat of Nazi Germany.

After university she worked for several years as a research chemist. In addition, she stood for Parliament, always for seats that were hopeless for her party. During her political campaigns she met Dennis Thatcher, a wealthy businessman, whom she married in 1951. She left her first career as a research chemist to study law. In 1953 she gave birth to twins, Carol and Mark. Thatcher was in her mid-30s when in 1959 she was elected to the House of Commons for the safe Conservative seat of Finchley in north London. Two years later she was appointed to a junior position in the Harold Macmillan government as parliamentary secretary at the ministry of pensions and national service. Thatcher's first cabinet office came in the Edward Heath government. In 1970 she was appointed minister for education. As part of broader cuts in spending she eliminated free milk for

British Prime Minister Margaret Thatcher led an uncompromising conservative government in the United Kingdom during the 1980s.

school- children. The Labour Party attacked her as the heartless “Thatcher, the milk snatcher.”

Heath’s failure to stand up to the trade unions successfully and his defeat in two 1974 general elections cost him the support of many Conservatives. Despite his weakness, his principal colleagues were reluctant to challenge him. Thatcher, a midlevel figure in the Conservative Party with limited ministerial experience, dared in 1975. After the first ballot Heath withdrew, and on the second ballot Thatcher was elected leader of the Conservative Party. Four years later, the Conservatives won the general election, and Thatcher became prime minister. She also led her party to victory in the next two general elections.

Her policies during her more than a decade as prime minister came to be called “Thatcherism.” She acknowledged that many of her ideas came from an older Conservative politician, Sir Keith Joseph. He argued that Britain needed to revive its entrepreneurial spirit.

Thatcher became prime minister during a two-sided economic crisis: a depression accompanied by rising prices. She made her first priority fighting double-digit inflation. She cut government spending, with higher education suffering particularly hard. She increased interest rates and sales taxes and eventually income taxes too. Manufacturing shrank, and several million workers lost their jobs. It took years for this bitter medicine to cure runaway inflation, but it did. Some members of Thatcher’s own party thought that the human cost of her policies was unacceptable.

Convinced that the welfare state had ruined Britain, Thatcher wanted to encourage individualism and discourage reliance on the state. Consequently, she made it easy for tenants in council houses (public housing) to

buy their homes. Pressured by an increase in rent, hundreds of thousands did. As property owners, they were more inclined to vote Conservative.

Committed to competition and capitalism, Thatcher regarded the nationalized industries as a deadweight handicapping the British economy. In the early 1980s she sold off minor parts of the state’s array of industries, such as the railroad hotels, but it was not until the mid-1980s that privatization became dramatic. At this time Thatcher sold the telephone system, the gas industry, the principal automobile and truck manufacturers, the steel industry, and water companies.

Thatcher worried that the power of Britain’s militant trade unions crippled the economy. She decided to tame them. In 1984 Parliament enacted legislation that required a majority vote by secret ballot for a legal strike. In the same year, the leader of the coal miners challenged the management of one of the last nationalized industries. He hoped to block the closing of unprofitable mines. He used outside militants to intimidate working miners. These tactics offended public opinion. Worried about their own jobs, few other unions supported the miners. After nearly a year, the strike collapsed. As a result of competition from oil and natural gas, the coal mining industry soon shrank to almost nothing.

Priding herself on her decisiveness and rarely conciliatory toward opponents, Thatcher did not care how many people she alienated. She rejected compromise as weakness. Victory over Argentina in the FALKLANDS WAR was perhaps her only success that nearly everybody applauded. She refused any compromise when members of the IRISH REPUBLICAN ARMY, imprisoned in Ulster, started a hunger strike to be recognized as political prisoners. Ten IRA men died of starvation. Labour controlled many local councils, including that of greater London. Thatcher considered their spending profligate, and so she had Parliament abolish the troublesome councils. She regarded the European Community without enthusiasm. Protective of British sovereignty, she was suspicious of the trend toward economic and political centralization within the EUROPEAN UNION.

In contrast to her ambivalence toward Europe, she was a staunch ally of the United States. She was particularly close to President RONALD REAGAN. Although they were much alike in their economic and foreign policies and their insistence upon law and order, Thatcher did not share Reagan’s concern for moral issues in politics. She voted to decriminalize homosexuality and to legalize abortion. Thatcher’s relationship with the United States was, in part, the result of political realism. The world’s

most powerful nation was a useful ally. Her realism also showed in her conciliatory relationship toward MIKHAIL GORBACHEV, the last ruler of the Soviet Union. She recognized the importance of the reforms that he advocated in changing the nature of communism in his powerful country and the flexibility that he showed outside the Soviet Union. Unlike Reagan, she was not so entranced with Gorbachev as to propose mutual nuclear disarmament, but she did think the Soviet leader was somebody with whom she could “do business.”

In her last years as prime minister Thatcher blundered politically, which gave an opening to her numerous enemies within the Conservative Party. In her biggest mistake, she proposed a reform of local government finance widely denounced as an unfair poll tax. Except for the well-off, nearly all households would pay more than they had in the past. Perhaps because she was preparing for war against Iraq in alliance with the United States, Thatcher paid insufficient attention to the political situation at home. She also erred by making provocatively anti-European Union remarks that caused her foreign secretary to resign. One of her old enemies, a former defense secretary, challenged Thatcher for the party leadership in late 1990. When she failed to win on the first ballot, she withdrew and threw her support to one of her loyalists, John Major. After Major became Conservative Party leader and prime minister, Thatcher quickly alienated her one-time favorite. Calling herself a “good back-seat driver,” she interfered too much, undermining the new prime minister’s authority.

In retirement Thatcher took a nonhereditary peerage (baroness Thatcher of Kesteven) that made her a member of the House of Lords. She also wrote her memoirs. She outraged public opinion by visiting the former Chilean dictator AUGUSTO PINOCHET while he was under house arrest in Britain. Most people believed that he was guilty of torturing and murdering opponents in his home country.

By the first years of the 21st century, Thatcher’s physical and mental health began to fail. She rarely made public appearances and no longer gave speeches. Her husband died in 2003, and her children sometimes proved to be an embarrassment. Her son, Mark, became involved in an abortive coup against an African government. Her daughter, Carol, appeared on a widely viewed and undignified “reality” television program. According to her, Thatcher suffered from a form of dementia that destroyed her short-term memory.

DAVID M. FAHEY

Third World/Global South

The term *Third World* applies to those nations in Africa, the Middle East, Asia, and the Western Hemisphere that mostly secured independence from the imperial powers after World War II. In the COLD WAR construct the First World, dominated by the United States, also included Western Europe, Canada, Australia, New Zealand, and Japan. These nations were wealthy, highly industrialized, urban, largely secular, democratic, and had capitalist economies. The Second World consisted of the Soviet bloc, dominated by the Soviet Union. These nations were industrialized but not as wealthy as the First World; they were secular, authoritarian, and had socialist economics. The Third World nations, consisting of two-thirds of the world’s population, were poor, rural, and agrarian, with traditional societies. After the breakup of the Soviet bloc and the collapse of the Soviet Union in 1991, the terms no longer applied and because most of the nations of the Third World were south of the equator the term *Global South* came to be used as a collective label for these nations.

The gap between rich and poor nations grew in the 20th century. As the Indian prime minister JAWAHARLAL NEHRU commented, “The poor have to run fast just to keep up.” Third World countries were caught in a cycle of poverty, with low incomes and low production. After independence many became dictatorships and attempted to improve their economies, usually unsuccessfully, by adopting socialist systems on the Soviet state capitalist model. Economists often referred to the poor developing nations as low-GDP (low Gross Domestic Product) countries, meaning they produced little in the way of goods and services. Countries in the Global South adopted a wide variety of methods to break out of the cycle of poverty. In China Mao Zedong led a socialist revolution and mobilized the masses, but only with privatization after his death did the Chinese economy begin to take off. INDIA, the world’s most populous democracy, adopted a capitalist approach; India also successfully applied the technology of the GREEN REVOLUTION, the use of

hybrid seeds to increase agricultural productivity. At the beginning of the 20th century, India suffered major famines but by the end of the century it was exporting foodstuffs. India and many other poor nations also invested heavily in education. In Southeast Asia educated workers became the backbone of industrialization and the development of high-tech firms.

Other nations built huge development projects, such as the ASWĀN DAM in Egypt and the Three Gorges Dam in China. Following Western advice in the 1950s and 1960s, many Third World nations concentrated on industrialization, to the detriment of the agricultural sector. That, along with ecological changes, droughts along wide bands of Africa, civil wars, political corruption, and instability, contributed to large famines and mass starvation in many African nations. In the Middle East oil-producing nations joined a cartel, the ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC), to gain increased revenues from their major resource. They then used the new revenues to build modern infrastructures. Kuwait was able to provide a complete welfare system from cradle to grave for its small population.

Other countries, such as the “little dragons” in Southeast Asia (Taiwan, South Korea, and Singapore), attracted foreign businesses and industries. Many nations in South America and Africa also borrowed vast amounts of money from private and public Western banks, such as the WORLD BANK, to bring much-needed capital into their countries. Nongovernmental organizations (NGOs) also provided assistance in welfare, food, education, and healthcare. Brazil used foreign loans to create new industries and provide jobs, but it, along with many other countries, became ensnared in a web of indebtedness that was impossible to repay. By the 1990s rich nations promised but often failed to deliver increased foreign aid and to forgive or restructure the debts of these nations, especially the poorest in Africa. Other nations had some modest successes in adopting APPROPRIATE TECHNOLOGY to establish small, inexpensive grassroots projects.

Population growth also contributed to economic problems. In Kenya the population doubled every 18 years and in Egypt every 26 years, compared to every 92 in the United States. By 2000 the world’s population had exceeded 6 billion, from 1 billion in 1800. It was expected to reach 9 billion by 2054. In poor countries high infant mortality contributed to the desire to have many children in hopes that at least some would survive to adulthood and be able to care for their parents, especially their mothers, in their old age. To limit its population China adopted a draconian

one-child policy and strictly enforced it through its totalitarian system. India adopted numerous approaches in attempts to limit population growth; these were often accepted by urban elites, but peasants continued to value large families. In societies where women had low status, having children, especially boys, brought status and the hope of some security. The educational status of many improved, and literacy rates improved, although in many countries boys enjoyed higher rates of education than girls. While programs to empower women were often successful, they were also resisted by traditional and religious leaders. Women’s work continued to be undervalued and underpaid. Child labor was yet another problem. Globalization and privatization in the late 20th century actually caused some nations to become poorer as prices for agricultural goods and raw materials dropped.

In some Global South nations, such as India, a few people became millionaires, but most remained desperately poor. In the 1990s, incomes in 54 nations actually declined, and in Zimbabwe life expectancy fell from 56 to 331, compared to over 80 in the United States and Japan. Disease, especially AIDS, contributed to further economic and social problems, particularly in many southern African countries.

At the 2000 Millennium Summit, world leaders agreed to institute programs aimed at cutting in half the number of people living on under \$1 a day and at halving the number of people suffering from hunger by 2015. Five years later the commitments of the donor nations, especially the United States, had fallen short of the promises made, and it remained uncertain whether the goals would be met.

JANICE J. TERRY

Tiananmen Square massacre

Throughout the 20th century, Tiananmen Square in central Beijing, China, has been the center of protest movements, the first being on May 4, 1919, when students and others demonstrated against the Treaty of Versailles,

which had handed the formerly German-occupied Chinese city of Qingdao to Japan. Another large protest was held there in April 1976 by supporters of the former premier ZHOU ENLAI, who had recently died.

In 1989 student protest movements started in Tiananmen Square following the April 15 death of Hu Yaobang, who had been general secretary of the Chinese Communist Party. Some of the students felt that Hu Yaobang had been made a scapegoat for government failures in 1987. By April 18, some 10,000 students were in Tiananmen Square taking part in protests in front of the Zhongnanhai, the seat of the government. Three days later, there were 100,000 students and others in the square, and on May 4 some 100,000 students and workers marched through Beijing, demanding a formal dialogue between the student leaders and the government and the removal of all restrictions on the media, which the government rejected.

The protest reached its first peak on May 13, just before the Soviet leader MIKHAIL GORBACHEV came to visit Beijing. Some of the protestors urged for the reforms that Gorbachev had introduced in the Soviet Union and saw him as a possible ally, but Gorbachev diplomatically refused to become involved. Early in the morning of May 19, Zhao Ziyang, the general secretary of the Chinese Communist Party, urged the students to end their protests and a hunger strike they had started. However, the demonstrations continued, and on May 30 a statue that became known as the “Goddess of Democracy” was erected in the square. It was not long after that protests and strikes started taking place in factories and in other parts of China. On May 27 some 300,000 people gathered in Hong Kong to protest in support of the students in Beijing.

By this time the Communist Party leadership was split as to how to deal with the protestors. Premier Li Peng urged for a hardline stance, supported by President Yang Shangkun, with Zhao Ziyang still urging for a moderate approach. Although Yang Shangkun’s presidency was a largely ceremonial role, it did, however, mean that he was the commander in chief of the armed forces. Martial law had been declared on May 20, and soldiers rushed to Beijing late in the evening of June 3. Tanks entered the square, and the accompanying soldiers cleared the square of demonstrators by the early morning. On June 5, in a famous photograph by Jeff Widener, a lone protestor stood in front of tanks advancing on the square, and the tank stopped and tried to drive around him. The lone demonstrator, never identified, was later pulled into the crowd. Nobody knows how many were killed in Tiananmen Square on

those two days in June and in the subsequent crack-down around the country. Casualty estimates range from 200 civilians and several dozen soldiers—made by the mayor of Beijing, defending the actions of the soldiers—to estimates from foreign commentators that many thousands died.

GEOFFREY GOLSON

Tibetan Revolt (1959)

Tibet’s political ties with China began in the seventh century. It was annexed into the Yuan dynasty by Kublai Khan and came under tight Mongol control in the 13th century. Under the subsequent Ming dynasty (1366–1644), China conferred titles on local Tibetan leaders but exercised only loose supervision over them. The Qing (Ch’ing) dynasty (1644–1911) exerted considerable control over Tibet during its prime, stationing imperial commissioners and garrisons in its major centers. The Qing rulers also honored Tibet’s spiritual leaders the Dalai and Panchen Lamas. Tibet became a pawn in international politics in the late 19th century; with the Qing dynasty in decline both Great Britain and Russia became interested in controlling Tibet and interfered in its internal politics, which neither China nor local Tibetans could resist. Weak Chinese central governments in the republican period were too beset by other problems to deal effectively with Tibet, which enjoyed autonomy. No country, however, recognized Tibet as an independent nation.

An important goal of the PEOPLE’S REPUBLIC OF CHINA was to assert control over Tibet. The Panchen Lama, the second leader of Tibet who was headquartered in Tashilhumpo, accepted Chinese sovereignty. The DALAI LAMA’s government in Lhasa vainly tried to obtain international assistance in resisting China in 1950. His representatives then signed a Seventeen-Point Agreement in Beijing (Peking) in 1951 that allowed the Tibetans to maintain their traditional religious (Tibetan Buddhism), political (theocracy), and economic (large estates owned by monasteries and aristocrats) systems, under Chinese control. The Dalai Lama visited Beijing in 1954, had conversations

with Chinese leader Mao Zedong (Mao Tse-tung), and expressed optimism that he could “work out a synthesis of Buddhist and Marxist doctrines.”

The Chinese Communists, however, looked at the traditional Tibetan Buddhist society, the theocratic government, and the landed estate system with extreme distaste and began a program to dismantle both. By 1957 armed resistance had begun in eastern Tibet that culminated in an uprising in Lhasa against the Chinese government in 1959.

Realizing that the revolt was suicidal and fearing that he would be captured by the Chinese, the Dalai Lama and his advisers fled Lhasa in disguise in March 1959 and headed for the Indian border. After putting down the revolt, China implemented a program that brought Tibet more in line with the rest of the country.

Chinese-Indian relations, warm after the establishment of the People's Republic, had become antagonistic by 1959, partly over Tibet. Popular sentiment in India sympathized with the Tibetans. In April the Dalai Lama and his party crossed into India and were granted political asylum. The Indian government also gave political asylum to 13,000 Tibetan refugees and allowed the Dalai Lama to establish a government in exile in Dharmasala, a Himalayan town near the Chinese border.

These acts further soured Chinese-Indian relations and exacerbated a border dispute that negotiations between the premiers of the two countries failed to resolve, and that culminated in a border war in 1962.

JIU-HWA LO UP SHUR

Tito, Marshal (Josip Broz)

(1892–1980) *Yugoslav leader*

Josip Broz was born on May 7, 1892, and died on May 4, 1980. His life was caught up in some of the

most momentous events of the 20th century. He fought in World War I, took part in the Russian Revolution, became a leader of guerrilla resistance to the German occupation of Yugoslavia, and after World War II until his death he was the leader of the country. During this period, he defied Joseph Stalin over the communist consolidation of power in Yugoslavia. “Tito” was a pseudonym that he adopted during his underground activities, and it was with this name that he became well known during World War II.

Tito was born in the village of Kumroves, some 50 kilometers northwest of Zagreb in what was then Austria-Hungary. His native village is located in the valley of the river Sutla, which served as a boundary between Croatia and Slovenia. Tito's father was a Croatian peasant, and his mother was Slovenian from a village across the river. In 1907, at the age of 15, he left home and went to the town of Sisak (Croatia), where he became an apprentice to a locksmith. Tito completed his apprenticeship in 1910 and began a series of mechanic jobs, which took him to factories across central Europe.

In the autumn of 1913 Tito was called up for his military service, which he did with the 25th Croatian Territorial Infantry Regiment based in Zagreb. When Austria-Hungary attacked Serbia in July 1914, Tito, already a sergeant, was sent to fight on the Serbian front. In January 1915 his regiment was transferred to Galicia in anticipation of a Russian offensive. There Tito was put in charge of a reconnoitering section operating behind enemy lines. However, during a Russian attack in April 1915, he was seriously wounded and taken as a prisoner of war (POW). It was during this time that Tito began sympathizing with the ideas of Bolshevism. In June 1917 he escaped from the POW camp and made his way to Petrograd in search of work, but the suppression of Bolshevik demonstrations forced him to flee to Finland. While attempting to cross the border he was captured and sent back to the POW camp, but he escaped on the way and arrived in Bolshevik-controlled Omsk in Siberia in autumn 1917. He enrolled in the Red Guard and applied for membership in the Communist Party. When the Bolsheviks retook Omsk in 1919, he started making his way back to Croatia. Tito returned to Kumrovec in October 1920, where he found that his village had become part of the new Kingdom of Serbs, Croats, and Slovenes (changed to Yugoslavia in 1929).

Upon his return he joined the newly founded Communist Party in Zagreb and became active in the union movement. During the 1920s he worked as a mechanic

in factories across Yugoslavia. In 1927 he became secretary of the Metalworkers' Union of Croatia. His activities brought him to the attention of the police, and in August 1928 he was arrested. Upon his release from prison in 1934 Tito resumed full-time clandestine activities for the Yugoslav Communist Party.

In February 1935 he was sent to Moscow for training with the Balkan Department of the Comintern. He stayed there until September 1936, when he was sent back to consolidate the Yugoslav party and recruit volunteers to fight in the Spanish civil war. During 1937 the factionalism within the Yugoslav Communist Party increased, and in the atmosphere of uncertainty Tito asserted his authority by setting up an interim secretariat under his leadership. Moscow offered him provisional approval in the beginning of 1939, and Tito was officially confirmed as a secretary at a party congress in October 1940.

In April of 1941 the Axis powers invaded, occupied, and partitioned Yugoslavia, which triggered a civil war in the country. Tito formed the Partisan Army of National Liberation, which waged guerrilla war against the occupying forces. In the process Tito's partisans also turned against rival guerrilla organizations, in particular the internationally recognized "Chetniks" of Draža Mihailović.

Tito and his partisans emerged victorious from the war, and, despite his promises to form a government of national unity, he immediately began consolidating his authority and establishing communist rule over the territory of Yugoslavia. At the same time Tito was entertaining ideas of leading a Balkan federation involving Albania, Bulgaria, and potentially Greece. The prospect of a regional federation under Tito's leadership seemed likely during 1947 and brought Tito into a direct confrontation with Stalin.

In 1948 the Yugoslav Communist Party was excluded from the Cominform (the postwar name for the Comintern), and this turned Tito into the first communist leader to break with the Soviet Union. This gave him both new international prominence and domestic appeal, which helped him consolidate his position in Yugoslavia.

In domestic affairs Tito promoted the principles of brotherhood and workers' self-management (a form of market-oriented socialism), in parallel with his ongoing suppression of internal dissent. His death in 1980 was a shock for the country, and the seeming stability of Yugoslavia began to crack under the strains of national factionalism. Many commentators trace the origins of the 1990s Yugoslav dissolution to Tito's authoritarian rule.

EMILIAN KAVALSKI

Togo

Togo is a small, narrow republic in western Africa. Slightly fewer than 22,000 square miles, with a north-south distance of about 340 miles, Togo is situated between GHANA and Benin. The capital and largest city of Lomé is located on the western side of the 56-kilometer coastline on the Gulf of Guinea. In spite of its small size, Togo's population is diverse. There are 37 ethnic groups among its nearly 6 million people, who practice traditional religions, Christianity, and Islam. French is the official language although the African languages Ewe and Kabiyé are also taught. Togo has one of Africa's highest rates of population growth and highest rates of deforestation. Over two-thirds of the population are engaged in agriculture and lives in areas with limited safe drinking water. In addition to other serious health problems, either HIV or AIDS results in about 10,000 deaths per year.

The slave trade was carried on in Togo during and after the 1600s. Germany made the territory the protectorate of Togoland in 1884 and during the next decade determined the permanent boundaries through agreements with France and Britain. The port city of Lomé was built by the Germans for shipment of goods from the interior. In 1914 Germany surrendered Togoland to British and French troops. After World War I, France received Togoland in exchange for interior land granted to the British. After World War II, the UNITED NATIONS gave Britain and France joint control of the territory.

In 1956 British Togo became part of the Gold Coast, which later became Ghana, while French Togo moved for independence. Under the leadership of Sylvanus Olympio, the National Union Party gained control of French Togo and refused an overture to unite with Ghana. The United Nations granted membership to the new country in 1960. Three years later, Premier Olympio was assassinated in a military coup that installed Nicolas Grunitzky as president. A new constitution was drafted and approved by the nation.

When the army staged a second coup in 1967, the new government, headed by Étienne Eyadéma, dismissed the legislature and threw out the constitution.

Eyadéma and his party, Rassemblement du Peuple Togolais (RPT, or Togolese People's Assembly), created a new constitution. In the elections that followed, Eyadéma was almost unanimously reelected president. On the 13th anniversary of his takeover of the government, Eyadéma announced the Third Togolese Republic. Unrest continued to plague Togo, and in 1986 France sent troops to help quell another attempted coup. Eyadéma was reelected to another seven-year term the same year. Eyadéma agreed in 1991 to work with a transitional government until general elections could be held. A national referendum in 1992 approved a new constitution. Among the provisions of the constitution were the establishment of multiparty elections and term limits for officials. In the 1993 election Eyadéma was still able to emerge as the victor for another term.

The elections resulted in a new legislature, which demanded concessions. In 1994 he appointed Edem Kodjo prime minister of a new coalition government. Nevertheless Eyadéma was reelected in 1998 and in 2003, after the legislature removed the term limits from the constitution. When President Eyadéma died in February 2005, he was succeeded by his son Faure Gnassingbe. The succession, supported by the military but not by the constitution, was challenged by popular protest and a threat of sanctions from regional leaders. Gnassingbe easily won the elections he held in April 2005.

JEAN SHEPHERD HAMM

Torrijos, Omar

(1929–1981) *Panamanian military chief*

General Omar Efraín Torrijos Herrera was the de facto ruler of Panama from his coup d'état of 1968 until his death in an airplane crash on July 31, 1981, after which he was succeeded by General MANUEL NORIEGA. Best known for successfully negotiating a series of treaties in 1977 with the United States for the return of the Panama Canal to Panama in 2000, Torrijos (torr-EE-yos) was a staunch U.S. ally who instituted a range of popular reforms while also suppressing dissent and committing many human rights abuses during his years as

the country's supreme military ruler. Never elected to office, Torrijos dominated Panama's political life for 13 years, his rule representing a significant departure from the country's previous regimes, dominated by the country's traditional landowning and commercial elite concentrated in Panama City. Denounced by many as a false populist whose dictatorship ruthlessly crushed dissent, paid lip service to anti-imperialism, and selectively dispensed government patronage to defuse and coopt opposition, Torrijos was born on February 13, 1929, in the town of Santiago, southwest of Panama City. In 1952 he joined the U.S.-created National Guard, was promoted to captain in 1956, and attended the U.S.-run SCHOOL OF THE AMERICAS. As a lieutenant colonel, in 1968 he and Major Boris Martínez overthrew the democratically elected president Arnulfo Arias.

Torrijos cultivated the political support of the urban and rural poor, the working class, the middle class, and students through government largesse, legal reforms, and the populist, nationalist, anti-imperialist rhetoric espoused by his People's Party (Partido del Pueblo, or PdP). Leaving existing property relations largely intact, he excluded the country's traditional powerholders from office, dissolving the national legislature and outlawing other political parties. The high point of his rule came in the 1977 treaties with the United States, though his expenditure of political capital in securing the treaties' passage compelled him to approve amendments to the constitution in 1978 that paved the way for a return to civilian rule. The circumstances of his death remain the topic of considerable controversy, with some implicating his successor, Noriega, in the plane crash that killed him in 1981.

MICHAEL J. SCHROEDER

Touré, Ahmed Sékou

(1922–1984) *Guinean president*

Sékou Touré, a prominent West African politician and anticolonial agitator, became president of the Republic of Guinea in 1958 and ruled the country as a single-party state until his death in 1984. Touré was born on

January 9, 1922, in Faranah and was a member of the Malinke people. Touré came from humble family circumstances. He improved his nationalist credentials by claiming the well-known anti-French resistance figure Samory Touré as his grandfather.

Touré's rise to power did not come through local social prominence and family connections but as the result of his success as a labor union organizer. His views were bitterly anticolonial, and complete independence from France was his desired goal. To achieve such a result he needed a strong political organization to promote his ambitions, and the Guinean Democratic Party (RDA), founded in 1946, became this vehicle. Through this affiliation he also linked with other emerging African politicians, such as Félix Houphouët-Boigny, a later president of the Ivory Coast. In 1952 Touré assumed the party leadership, and in 1956 he was elected to the French National Assembly.

Touré was committed throughout the 1950s to the drive for a total break from France, and he argued against any half measures such as partial independence under an associated Francophone union. This brought him into serious conflict with General CHARLES DE GAULLE. Touré took the total independence option on October 2, 1958, when he became Guinea's president. France responded abruptly and harshly by ending all political and economic cooperation. Relations between France and the Republic of Guinea hardened, and eventually in 1965 all links were broken.

The strong stand taken by Guinea proved costly, although it fitted the anticolonial mood. It also forced Touré to look to other powers for aid and assistance. Given his early Marxist orientation and admiration for Vladimir Lenin, it was not surprising that he found a ready friend in the Soviet Union and its satellites. His country's extensive bauxite reserves gave him a tool to maintain his position and attract international interest.

He was also keenly supported by KWAME NKRUMAH of Ghana, who in 1957 led his country to independence from Great Britain. In 1978 Touré partially mended his political disagreements with France, and in that year President Valéry Giscard d'Estaing made a conciliatory gesture and visited Guinea.

Touré had for a time friendly relations with the United States, especially during the JOHN F. KENNEDY administration. By the late 1960s he feared Soviet intervention, but he was equally worried that U.S. involvement might undermine his regime. This suspicion of outside interference was confirmed when Portuguese Guinea in 1970 unsuccessfully invaded Guinea. This act, some have

argued, caused Touré to abandon democratic principles and impose a harsh one-man, one-party political system. Although elections were held during this period, there was not a serious voice of opposition. Most other local political forces were either exiled or imprisoned. Touré abandoned some of his Marxist-Socialist roots in the late 1970s in an attempt to improve the country's economic fortunes.

To maintain his power and authority, Sékou Touré did not reject all communist practices. He particularly made use of the labor camp as a tool for the state's domination of its people. His camps became watchwords for African oppression, brutality, and human rights abuses. He created the typical personality cult found in so many communist-inspired regimes. He also loaded his regime's offices with members of his extended family and exploited tribal rivalries to his benefit. Relations with the INTERNATIONAL MONETARY FUND (IMF) floundered toward the end of his rule; Guinea's foreign debt increasingly mounted, and repayments fell into arrears.

This dismal performance did not dampen Touré's ambitions for a wider political stage. In the years immediately preceding his death, he saw himself as a statesman. Touré's health declined in the early 1980s, and he died of complications following heart surgery in Cleveland, Ohio, on March 26, 1984. Upon his death the military seized power under the leadership of Colonel Lansana Conte and a new constitution was written. Elections saw Conte assume the presidency in 1993.

Although there are claims that Touré was warmly regarded by his people, the imprisonment and murder of his opponents makes this assumption hard to assess. His lasting legacy seems to be one of failure, and Guinea and its people seem to be the principal victims. Political instability and impoverishment remain the country's fate, and international estimates list Guinea as a prime example of a failed state.

Trudeau, Pierre

(1919–2000) *Canadian politician*

Pierre Trudeau served as prime minister of Canada from 1968 to 1979 and 1980 to 1984. Born to an affluent Montreal family on October 18, 1919, he was educated at Jean-de-Brébeuf, an elite Jesuit preparatory school, received a law degree from the University of Montreal, and studied at Harvard University, the École des Sciences Politiques in Paris, and the London School of Economics. During a brief teaching career, he acted as the assistant professor of law at the University of Montreal from 1961 to 1965.

His 1965 election to the Canadian House of Commons marked the beginning of his ascendancy in Canadian politics. Lester B. Pearson appointed him parliamentary secretary in 1966 and then minister of justice and attorney general. Trudeau won the passage of social welfare reform measures regarding gun control, abortion, and homosexuality.

As the leader of the Liberal Party, he became the prime minister in 1968, largely due to his opposition to the Quebec separatist group Front de Libération du Québec (FLQ). In 1972 his Liberal Party was weakened, possessing a minority of seats in the House of Commons, and relied on the support of the New Democratic Party (NDP) to pass its agenda. Trudeau struggled against economic and domestic problems throughout the 1970s. In 1979 Trudeau lost his position as prime minister to the Progressive Conservative Party; he regained power in the election of 1980, beginning his fourth term on March 3 of that year. His administration witnessed the defeat of a referendum in May 1980 on the separation of Quebec.

Trudeau's legacy as prime minister includes his successfully patriating the Canadian Constitution from the British Parliament, an act that gave Canada the power to amend the document without the need to seek the approval of the British Crown. He had included a Charter of Rights and Freedoms, which guaranteed certain civil liberties, in the constitution that year. Sensitive to the linguistic preferences of Francophone Canadians, he passed laws that made Canada an officially bilingual nation and used his office to support multiculturalism.

Canadian journalists named Trudeau the top Canadian newsmaker of the 20th century in 1999. In 1971, at age 51, he married 22-year-old Vancouver socialite Margaret Sinclair. Their union, which produced three children and was the subject of enormous press coverage, ended in divorce in 1984. Trudeau's works include *Federalism and the French Canadians*, *Approaches*

to Politics, and *Conversations with Canadians*. Pierre Trudeau, the 15th Canadian prime minister, died on September 28, 2000.

CHRISTOPHER M. COOK

Turabi, Hassan 'abd Allah al-

(1932–) *Sudanese Islamist and politician*

Hassan al-Turabi was born into a respected and educated family in the central Sudan in 1932. His father was a judge, and al-Turabi is related by marriage to Sadiq al-Mahdi, the great-grandson of the 19th-century Mahdi and a former Sudanese prime minister. He is also related by marriage to the Saudi Arabian Islamist Osama bin Laden.

As a youth, Turabi received an Islamic education, but he also earned a law degree from Khartoum University and a doctorate in law from the Sorbonne in Paris. In the 1950s he joined the Sudanese Muslim Brotherhood and later the Islamic Charter Front (ICF), an offshoot of the brotherhood. The party's goal was the creation of an Islamic state as delineated in the Islamic Charter for an Islamic State. The constitution, as revised by Turabi in the 1960s, provided for the full equality of women and non-Muslims but also advocated the creation of a presidential rather than a parliamentary state. The ICF also encouraged missionary efforts to spread Islam throughout the south. Turabi opposed the military dictatorship of Ibrahim Abboud (r. 1958–64), who was overthrown in 1964. Turabi won a parliamentary seat in the 1965 elections. When Sadiq al-Mahdi became prime minister, Turabi's influence increased until Mahdi's political fortunes waned by 1968.

In 1969 JAAFAR NUMEIRI, with the support of Sudanese communist allies, successfully overthrew the parliamentary government in a military coup d'état, and Charter Front members were arrested. Turabi was jailed and then went into exile in Libya. Numeiri, struggling

to retain power, disavowed his former communist allies and moved closer to the Islamic forces in the Sudan.

Turabi was permitted to return in 1977 and was subsequently appointed attorney general. With Turabi's support in 1983 Numeiri instituted sharia law in Sudan, thereby exacerbating relations with the large Christian population in the southern Sudanese provinces. This directly contributed to an escalation in the ongoing civil war between the predominantly Muslim government in the north and the southern Christian and animist south. During this period the brotherhood's influence in key institutions, especially schools and the military, markedly increased. In 1985 Numeiri, who had become increasingly isolated from all his former allies, was overthrown in a bloodless coup led by General Abdel Rahman Mohammed Hassan Siwar al-Dahab.

In 1991 Turabi established the Popular Arab and Islamic People's Congress, an umbrella organization of Islamist groups, and worked to bring Sunni and Shi'i Muslims closer together. He was elected secretary-general of the Congress in 1992. In the same year Turabi toured Europe, Canada, and the United States, speaking on behalf of the creation of liberal, nonviolent Islamic states. During the 1990s he also offered protection to the radical Osama bin Laden after bin Laden left Saudi Arabia for Sudan. Turabi was elected to Parliament in 1996 and became speaker of Parliament under the military dictatorship of Colonel Umar Hasan al-Bashir, who had seized power in 1989. But in 2004 al-Bashir had Turabi imprisoned; he was freed in 2005. After that time, Turabi adopted a far lower public profile, and although he was thought to exercise considerable political influence in the government, his exact role or impact remained unclear.

Turabi has never published a comprehensive study of his ideology, but his career has demonstrated considerable political flexibility. Under his leadership Islamist forces in the Sudan have played key roles in the Sudanese civil service, professions, and military. He also supported the export of Islamic movements to neighboring African nations in the north and east, particularly in Egypt.

See also SUDANESE CIVIL WARS (1970–PRESENT).

JANICE J. TERRY

Turkey

Present-day Turkey lies in southeastern Europe and southwestern Asia and shares borders with Greece, Bulgaria, ARMENIA, AZERBAIJAN, Georgia, IRAN, Iraq, and Syria. It is made up of 780,580 square kilometers. It contains the Bosphorus Strait, which connects the Black and Marmara seas, and is one of the busiest shipping lanes in the world. Turkey also has coastline on the Aegean and Mediterranean seas. Turkey has 81 provinces, and Ankara is the capital city. Turkey's population is almost 70 million, of which a majority are Turkish, with a significant minority of KURDS, as well as Armenians, Greeks, Jews, Circassians, Assyrians, Arabs, and Laz communities. Turkey is overwhelmingly Muslim.

Turkey is a republican parliamentary democracy with a civil law system derived from several European legal systems such as the Swiss Code. The legislative branch is the unicameral Grand National Assembly, which contains 550 popularly elected seats.

Turkey's economy is a mix of industrial, agricultural, and commercial. The private sector is expanding, but the state still controls most basic industries and the banking, transport, and communication sectors. The main export industries are textile and clothing production, with automotive and electronic export production close behind. The main agricultural products include tobacco, cotton, grain, olives, sugar beets, pulses, citrus products, and livestock. In the 1990s Turkey's economy suffered severe fluctuations, which culminated in financial disaster in February 2001. The INTERNATIONAL MONETARY FUND (IMF) provides heavy backing, but the economy faces high debt and deficits.

Ismet İnönü took over as president upon the death of Mustafa Kemal Atatürk in 1938, and the Republican People's Party (RPP) held the majority until 1950. İnönü managed to stay out of World War II until 1945, when Turkey declared war on Germany as a symbolic gesture in order to qualify as a founder of the newly forming UNITED NATIONS. Under the Truman Doctrine, Turkey, due to its close proximity to the Soviet Union, qualified for massive financial aid. Despite these achievements, the economy was weak, and the RPP and İnönü grew increasingly unpopular. Turkey had by then formed a multiparty system, and in 1950 the Democratic Party (Demokrati Partisi, or DP) received the majority in the elections, forcing the RPP to relinquish its 27-year majority.

Celal Bayar became president, and Adnan Menderes became prime minister. The economic boom of the early 1950s strengthened Menderes and the DP's position. By

1952 Turkey had become a member of the North Atlantic Treaty Organization (NATO), largely due to the fact that Turkey had immediately volunteered troops for the KOREAN WAR. Turkey's entry into NATO ensured protection along its borders and allowed NATO a closer position against the USSR.

After the 1954 elections the DP became more authoritarian. Conflict was exacerbated when a Greek citizen placed a bomb at the Turkish consulate in Thessalonica. The island of CYPRUS, under British control and with an 80 percent Greek majority, also became a point of conflict. These two issues culminated in riots in 1955 that targeted Greek homes, shops, and businesses and wrought havoc throughout Istanbul. Many Turkish citizens of Greek origin fled Turkey after these riots. During this period, Greek nationalists of the EOKA movement on Cyprus also began a struggle against the British forces. Turkey strongly opposed British suggestions that the Greeks might be allowed to annex Cyprus. Ultimately Cyprus became an independent nation.

The DP lacked the support of the military, which had been vital to the RPP. This led to the DP's downfall in 1960. Because of training, aid, and financial support gained as a result of joining NATO, the Turkish military was a strong and powerful mechanism within Turkey. Menderes grew increasingly unpopular with the military. In 1960, the military overthrew the Menderes government. The coup was popular among students, who had been repressed by the DP. A new constitution was drawn up that justified military intervention if the ruling government acted unconstitutionally. The military was also given a role in government. In January 1961 political activity was allowed once again, and 11 parties registered for the elections to be held at the end of 1961. One of the parties, the Justice Party (Adalet Partisi, or JP) appeared to be a phoenix of the old, outlawed DP. Menderes and two of his cabinet members were tried by a military tribunal and executed in September 1961. Elections were held in October 1961.

The Justice and Republican People's Parties formed a shaky coalition. In 1965 the JP, led by Süleyman Demirel, won a major victory in elections. Under Demirel, Turkey saw significant economic growth. The JP espoused Islamist and traditional beliefs that ran directly counter to communist and leftist thought. The left grew increasingly popular among the student population and industrial proletariat. The right also emerged as a strong force in the 1960s, setting the stage for the crisis of the 1970s. The formation of two strong, Islamic-leaning parties,

the National Action Party (Milliyetçi Hareket Partisi) and the National Order Party (Millî Nizam Partisi), seriously threatened the JP's hold on the government in 1969.

Demirel's JP government started to fall apart in 1971. On March 12, 1971, the army forced the Demirel government from office.

Free elections were held in 1973, with a victory by Bülent Ecevit's RPP. However, because they failed to capture the majority vote, they were forced into coalition governments. This continued throughout the 1970s as rightist and leftist violence escalated. Kurdish separatism also flared up in the 1970s. Kurdish nationalist Abdullah Öcalan formed the left-leaning Kurdistan Worker's Party (PKK) in 1978. The sectarian violence escalated, and the military stepped in. After the IRANIAN REVOLUTION in 1979, Islamic groups in Turkey were suspected of receiving aid from Iran. The religious demonstrations in Konya in September 1980 provided an excuse for direct military intervention.

THE PURGE

The military suspended all political parties and groups and instituted martial law and curfews. General Kenan Evren was declared acting head of state. The National Security Council (NSC) arrested 122,000 people during 1980–81 in order to stop the violence. Academics and politicians were purged from the system. A new constitution was enacted in 1982. Kenan Evren was then elected president, and the military began to restructure the political system.

Elections were held in 1983, with the Motherland Party (Anavatan Partisi) gaining the majority under Turgut Özal. The old parties then reincarnated and changed their names in order to enter the 1984 elections. After Kenan Evren's term ended in 1989, Turgut Özal became president. Turgut Özal's presidency, although fraught with corruption and scandal, was also marked by impressive modernization.

The 1990s were also marked by the rise of the PKK. After the 1980 coup the Kurdish language was forbidden, as was the term Kurdish as a separate identity. Abdullah Öcalan had fled to Damascus after the 1980 coup. Turkey until 1991 refused to acknowledge the presence of Kurds in the country and referred to them as "mountain Turks." The government forbade their language, songs, customs, and names.

Öcalan's followers carried out their missions with an almost religious zeal. Talabani of the Kurdish PUK faction based in Iran helped Öcalan get financial support from Kurds living throughout the Middle East, which

The Hagia Sophia mosque in Istanbul, Turkey. Though a secular state, Turkey is a Muslim nation (mostly Sunni, but significant Shi'i, Alevi, and Sufi communities are present), where only 0.2 percent of the population are Christian or Jewish.

brought the PKK beyond the sphere of Turkey. The PKK also received support from Kurds living in Europe. The PKK used guerrilla warfare to launch attacks within Turkey. The Turkish army responded brutally to the terrorist attacks. Villages thought to be harboring PKK terrorists were destroyed, and thousands were arrested, detained, and tortured. Many innocent people were killed and their homes destroyed.

After the U.S. defeat of Iraq in 1991, Turkey feared the creation of a Kurdish state in northern Iraq that would be used as a base for Kurdish attacks on Turkey. Subsequently, President Özal officially recognized the existence of Kurds in Turkey and implemented a bill that would allow the Kurdish language to be used in everyday conversations but not in business, government, or any other official agency. Despite this, the PKK stepped

up their campaigns against the Turkish government, committing more atrocities, which further enraged the Turkish public. Öcalan was captured in Nairobi, Kenya, by Turkish commandos in 1999. He was sentenced to death and imprisoned on an island in the Marmara Sea, where he remained for years.

In 1993 the True Path Party came into power, and Tansu Çiller became the first female prime minister of Turkey. Necmettin Erbakan was the leader of Refah, which was supported by the young, professional middle class and students. Erbakan did not engage in a radical Islamic changeover. He personally championed reforms to change the working hours during Ramadan and loosen control of the Directorate of Religious Affairs to make it harder for the government to monitor Islam. Erbakan also proposed lifting the

ban against wearing headscarves in universities and government institutions. The Erbakan/Çiller coalition also made significant overtures to LIBYA and Iran, and at the same time condemned Israel. With the advent of new freedoms under Erbakan, many other Islamic leaders eagerly expressed their long-silent opinions. Refah wanted to abolish the Swiss legal code instituted by Atatürk, and secularists feared a return to sharia, or Islamic law. Erbakan and Çiller both left government, and in 1998 the Constitutional Court formally disbanded Refah and forced its members out of Parliament. Bülent Ecevit emerged as the new president, in large part because of his handling of Öcalan and the Kurdish conflict. In 1999 a huge earthquake struck İzmit, near Istanbul, killing between 15,000 and 40,000 people. The government was extremely slow to respond, and the public was enraged by the lack of support from both the government and the military. Memories of the earthquake played a role the emer-

gence of the Justice and Development Party (JDP, or Ak Partisi). In the 2002 elections the JDP, led by Recep Tayyip Erdoğan, won a majority in the Grand National Assembly. Although the JDP espoused a moderate Islamic line, it was careful to respect the secular state. Erdoğan also instituted reforms to help pull Turkey out of its financial troubles. Erdoğan and the JDP also scored a major victory with the October 2005 decision by the EUROPEAN UNION (EU) to start Turkey's EU membership bid.

U

Uganda (1950–present)

The area known today as Uganda was part of the charter of the British East Africa Company in 1888, and was ruled as a protectorate in 1894. As more territory was added to the British claims, the boundaries of what now form Uganda took shape in 1914. It was ruled as a British protectorate until given autonomy in 1962.

Apollo Milton Obote was prime minister of Uganda from 1962 to 1966 and state president from 1966 to 1971 and again from 1980 to 1985. Although he began his adult life as a schoolteacher, he is best known for leading Uganda to independence on October 9, 1962, in a relatively peaceful revolution. Prior to independence, Obote served on the Ugandan legislative council beginning in 1957, and in 1960 he founded the Ugandan People's Congress. Obote created a political coalition with his rival, Sir Edward Mutesa, king of Buganda, in preparation for the peaceful handover of colonial power to indigenous black African rule. Obote used the position of his rival political leader to gain political favor in the region of Buganda. In a practical political move, Mutesa was installed as president with Obote as prime minister.

As prime minister, Obote held formal state power in his hands. His nominally socialist rule after independence made him unpopular with Western states, particularly Britain. While the country was peaceful and economically stable, the period immediately following independence in Uganda was a difficult time for both Mutesa's presidency and Obote's prime ministership. At

the time of independence, Uganda was the only peaceful nation in the region and it became a safe haven for refugees from Zaïre, Sudan, and Rwanda. This placed a huge drain on Uganda's scarce resources and economy.

This period also made it clear that Obote was not going to share power with coalition president Mutesa. This made confrontation inevitable. The trigger for confrontation was Obote's indictment in a gold-smuggling plot with Idi Amin, then deputy of the Ugandan Armed Forces. Instead of complying with President Mutesa's investigations, Obote suspended the Ugandan constitution under the power of his prime ministership, abolishing the role of the leaders of Uganda's five tribal kingdoms, removing power from Mutesa, and giving himself unlimited emergency powers. The corrupt Ugandan judiciary cleared Obote of all charges of gold smuggling. The incident, however, incited Obote and his supporters to stage a coup against Mutesa in 1966. He then had himself installed as president on March 2. Obote's first act as president was to have his attorney general, Godfrey Binaisa, rewrite the Ugandan constitution, transfer all powers to Obote's presidency, and nationalize all foreign assets.

Obote's first presidency did not last long. In 1971 Obote was disposed of by his army chief, Idi Amin, who had assisted him in overthrowing Mutesa fewer than 10 years prior. Obote fled to Tanzania with many of his supporters. After nine years in exile, Obote gathered Ugandan exiles in Tanzania and ousted Amin in 1979. In an attempt finally to gain Western support for his second presidency, Obote ordered that Uganda be ruled

by a presidential commission before democratic elections were to be held in 1980. Although Obote won the 1980 elections, his second rule was marked by civil war, further distancing him from Western approval.

Believing the 1980 elections to be rigged, the opposition parties staged a guerrilla rebellion under Yoweri Museveni's National Resistance Army. Obote was deposed in July 1985, again by his own army commander, Bazilio Okello, and General Tito Okello in a military coup. This time Obote fled to Zambia. Obote remained in southern Africa until his death on October 10, 2005, of kidney failure at a hospital in Johannesburg, South Africa.

Idi Amin is perhaps best known for ousting his predecessor, Apollo Milton Obote, and for instituting a totalitarian regime that would devastate Uganda both politically and economically. Amin's rise to power began in January 1971, when President Obote headed off to the Commonwealth Heads of Government meetings in Singapore. Suspecting trouble, Obote left his staff with the order to have Amin and his supporters arrested upon his departure. On the morning of January 25, 1971, forces loyal to Amin stormed strategic military targets in Kampala and the airport in Entebbe. The first shells fired at Entebbe Airport killed two Roman Catholic priests, setting off a wave of violence throughout the country. Despite the initial disorganization on the part of Amin and his troops, they managed to carry out mass executions of pro-Obote troops and supporters. Obote chose exile in Tanzania.

MILITARY DICTATORSHIP

After assuming power, Amin repudiated Obote's soft socialist foreign policy, resulting in Uganda's recognition by Israel, Britain, and the United States. However, many African nations and organizations, including the Organization of African Unity, refused to recognize Amin and his military government. Nevertheless, Amin embraced the label "totalitarian" and renamed the government house the Command House, later instituting an advisory defense council composed of military commanders. In an attempt to place Uganda under his military dictatorship, he extended military rule to his cabinet members, who, if not drawn from the military, were advised that they would be subjected to military discipline. Army commanders, with Amin's blessing, acted like warlords, representing the coercive arm of the government.

Foreign policy was revised again in 1972 so that the country could obtain financial assistance and technical support from LIBYA. In doing so, Amin expelled

all remaining Israeli advisers and became anti-Israeli in accordance with Libyan policy. Amin went in search of foreign help in the form of monetary aid from Saudi Arabia. In doing so, Amin rediscovered Uganda's previously neglected Islamic heritage. In attempts to recoup profits from lost Western foreign aid, Amin went on to expel the Asian minority in Uganda and seize their property. However, this appropriation proved disastrous for the already failing Ugandan economy, which was fueled by export crops. Yet the money from the sale of export crops was being recycled back into the purchase of imports for the army. As a result, rural farmers turned to smuggling from neighboring countries. This became an obsession for Amin toward the end of his rule. He went on to appoint his mercenary adviser, British citizen Bob Astles, to take all necessary steps to end the problem.

The end of Amin's rule also faced another problem—a counterattack from former Ugandan leader Obote. Amin feared this with good reason. Shortly after Amin expelled the Asian minority in 1972, Obote did attempt an attack into southern parts of Uganda. Although the attack was launched by a small contingent of only 27 army trucks, his ambition was to capture the strategic military post of Masaka near the border. Obote's troops decided to settle in and wait for a general uprising against Amin, which did not occur. Obote also attempted a seizure of Entebbe Airport by allegedly hijacking an East African Airways flight out of Tanzania. The attempt failed to accomplish much when the pilot blew out the tires on the passenger plane, and the flight remained in Tanzania.

Amin is internationally known for the hostage crisis at Entebbe Airport in June 1976, when Amin offered Palestinian hijackers of an Air France jet from Tel Aviv a protected base from which they could press their demands in exchange for the release of Israeli hostages. The dramatic rescue of the hostages by Israeli commandos was a severe blow to Amin. Amin's rule is also marked by a number of disappearances of priests and ministers in the 1970s. The matter reached a climax with the formal protest against army terrorism and death squad activity in 1977 by Church of Uganda ministers, led by Archbishop Janani Luwum. In response to Luwum's outspoken agenda against Amin's violent domestic policies, it appears that Amin had Luwum assassinated. Although Luwum's body was recovered from a clumsily contrived "auto accident," subsequent investigations revealed that Luwum had been shot by Amin himself.

This last in a long line of atrocities was greeted with international condemnation, but apart from the

continued trade boycott initiated by the United States in July 1978, verbal condemnation was not accompanied by action. Amin went on to claim that Tanzanian president JULIUS NYERERE—his perennial enemy, partially due to Nyerere's acceptance of Obote after the coup—had been at the root of his troubles. Amin accused Nyerere of waging war against Uganda. Amin invaded Tanzanian territory and formally annexed a section across the Kagera River boundary on November 1, 1978. Declaring a formal state of war against Uganda, Nyerere mobilized his citizen army reserves and counterattacked, joined by Ugandan exiles united as the Uganda National Liberation Army (UNLA). The Ugandan Army retreated steadily. Libya's MUAMMAR QADDAFI sent 3,000 troops to aid fellow Muslim Amin, but the Libyans soon found themselves on the front line. Tanzanian troops and the UNLA took Kampala in April 1979, aided by Obote, and Amin fled by air, first to Libya and later into permanent exile in Jiddah, Saudi Arabia, where he died on August 16, 2003, after being in a coma for over a month. The current president of Uganda is Yoweri Museveni, who was elected in February 2006.

RIAN WALL

Ukraine

Since 1991, Ukraine has been an independent state, the sovereignty of which is now recognized by all the countries of the world. Ukraine is one of the biggest European states (603,700 square kilometers). Ukraine has common borders with seven countries (Poland, Slovakia, Hungary, Romania, Moldova, Russia, and Byelorussia), and the Black and Azov Seas are on its southern border.

Ukraine consists of 24 regions (*oblast*) and the Crimea Autonomous Republic. The capital of Ukraine is Kiev. A Pan-Ukrainian population census in 2001 found the total number of inhabitants at 48,416,000. The majority are city inhabitants, and 32 percent live in the countryside. Over 100 ethnicities and nationalities are represented in contemporary Ukraine. Among them

are Ukrainians, Russians, Belorussians, Moldavians, Crimean Tatars, and Bulgarians. Most of the population of Ukraine belongs to the Orthodox Christian Church.

Striving for national and state independence was a key issue in Ukraine in the 20th century. This aspiration, partly realized during the hard days of 1917–20, remained potent political motivation for Ukrainians living all over the world. The democracy brought by MIKHAIL GORBACHEV's perestroika inspired ethnic minorities in the Soviet Union to activate national liberation movements. Revision of the Ukrainian nation historical past, promoted by representatives of the Ukrainian Helsinki Group of human rights activists; a rise in national identity supported and developed by artists, poets, writers, and scientists; and the people's movement known as "meeting democracy" had created the necessary background for historical action. On July 16, 1990, the Verkhovna Rada (Parliament) of Ukraine, first among the republics of the former Soviet Union, adopted a declaration of state sovereignty of Ukraine. The next step was a coup that took place in the Soviet Union on August 19–21, 1994, and that resulted in the pronouncement of the Act of State Independence of Ukraine by Verkhovna Rada of Ukraine. Soon afterward the first elections were held for president of independent Ukraine (Leonid Kravchuk won and was president from 1991 to 1994), combined with an all-Ukrainian referendum for endorsement of the independence of Ukraine.

Since that time a series of measures aimed at the organization of bodies and institutions necessary for an independent Ukraine have been undertaken. Some acts were compromises with the Russian Federation; because of the deep economic integration of both countries, it was hard to become separated at once. Issues included the state border between Ukraine and Russia in the Azov Sea; the presence of the Russian navy in Sevastopol in Crimea and the status of that city; and the problem of the frontier with Romania around Zmeinyi Island. Some others still remain only partially solved. On December 7–8, 1991, the presidents of Russia, Ukraine, and Belorussia signed a document denouncing the union treaty of 1922, according to which the Union of Soviet Socialist Republics had been organized. A treaty establishing a Commonwealth of Independent States was signed instead. Since that time, Ukraine has been free to conduct its internal policy.

During 1991–94 a series of democratic reforms were instituted in Ukraine, among which the most important were beginning a constitutional process, the improvement of the multiparty system, the formulation of basic

principles of foreign policy and international cooperation, the formulation of a military doctrine, introduction of economic reforms, the elaboration of an ethnic policy, and the creation of relationships with the different churches represented in Ukraine.

The presidential and parliamentary elections of 1994 opened a new phase in the political development of Ukraine. The keystone of the political history of Ukraine at that time was the adoption of a new constitution (June 28, 1996), a long and hard process that repeatedly caused political and parliamentary crisis. It was the beginning of parliamentary and presidential opposition, which led to growing tension during Kuchma's presidency in relation to the composition of parliament factions and their representation.

The presidential elections of 2004 and the following Orange Revolution opened a new era in the political history of Ukraine, characterized by general democratization and liberalization of the political process. Ukrainians dissatisfied with officially announced results of the runoff election between presidential candidate Viktor Yanukovich and leader of the opposition Viktor Yushchenko demonstrated in the principal square of Kiev—the Maidan (Square) of Independence—and for several weeks people from various cities, towns, and villages in Ukraine marched for democracy, for their political rights, and for the possibility to make their political choices freely.

ORANGE REVOLUTION

Representatives of different political parties and movements united their efforts in this process, and the Orange Revolution ended in a victory for democracy in Ukraine. A coalition government, with the participation of all “orange” parties and movements, was formed, with Julia Timoshenko as the first woman prime minister in the history of Ukraine.

In local administrations, thousands of former functionaries of different levels have been replaced by “orange” democrats. New priorities in foreign policy, a tendency toward integration with the EUROPEAN UNION (EU) and cooperation with the NORTH ATLANTIC TREATY ORGANIZATION (NATO) and reorientation of trade relationships have been elaborated.

Nevertheless, as early as the beginning of September 2005, Julia Timoshenko's government was dismissed, and it became clear that there were serious discrepancies among Orange Revolution leaders and representatives of different orange parties.

Political reform that implies the transition of Ukraine from presidential to parliamentary republic was adopted

by the parliament and became a point of serious discussion among “orange” revolutionaries, social democrats, representatives of the Party of Regions, and communists. The ideals of democracy and freedom still remain the essence of the Viktor Yushchenko presidency, as was shown by the first free parliamentary election in March 2006.

Shortly after its independence, Ukraine faced problems during the transitional period of economic development from planned socialism to free-market forms. The destruction of traditional Soviet resources, marketing, and energetic and macroeconomic networks, along with the extreme difficulty of creating new ones in the European community, and the urgent need for modernization of basic equipment and production techniques, negatively influenced the general state and the prospects of further development of the economy of Ukraine. A so-called shadow economy sprang up and grew rapidly with substantial support from the highest administration of Ukraine, which appeared to be corrupt.

Inflation, accompanied by a decrease in purchasing power, indicated that the standard of living of Ukrainians decreased to a crucial level, creating a need for the state administration to finance a series of social programs. Pension reform, changes in support for families with low income, support for veterans of World War II, and many other social actions were undertaken. Broad-scale raising of salaries, stipends, and pensions began in 2004 under the government headed by Viktor Yanukovich on the eve of presidential elections. The new president of Ukraine, Viktor Yushchenko, and his ministries consequently instituted a series of social programs aimed at improving the standard of living.

A series of economic reforms, including the introduction of new currency, privatization in agriculture and industry, promotion of national producers and national product exportation, searches for new investments and new sources of power supply abroad, and cooperation with the WORLD BANK, gradually contributed to a general slow growth of the Ukrainian economy after 2000. The creation of a new macroeconomic network, tending toward integration with the European Union (EU) and the World Trade Organization (WTO), is the principal strategic goal proclaimed by President Yushchenko.

The organization of an independent state of Ukraine led to a new trend in the development of the ideology and culture of the country, connected with the formation of the ideas of national unity and ethnic and national self-identification. The process of national memory revival, studies of the cultural and historical past of the Ukrainian nation, rediscovering cultural heritage, the revival of the folk culture of national minorities,

and the establishment of fruitful connections with the Ukrainian diaspora are key aspects of the cultural development of Ukraine in the new millennium.

One of the sharpest debates in the context of cultural development is the discussion of an official language of Ukraine. It was demonstrated in the presidential election of 2004 and the parliamentary election of 2006 that a strong Russian-speaking opposition still exists in Ukraine.

The activation of religious life in independent Ukraine after the dismantling of a totalitarian ideology brought a series of conflicts, first of all among representatives of different branches of Orthodox Christianity. As stated by the constitution of Ukraine, the nonobligatory character of any religion creates the background necessary for religious pluralism and freedom of people's consciousness.

OLENA V. SMYNTYNA

United Arab Emirates (UAE)

The United Arab Emirates (UAE), an oil-rich Arab country, is located on the southeast side of the Arabian Peninsula. This country, bordering Oman and Saudi Arabia, comprises seven emirates: Abu Dhabi, Ajman, Dubai, Al Fujayrah, Ras al-Khaymah, Shariqah, and Um Al Qaywayn. Formerly known as the Trucial States, a term dating from the 19th-century agreement between British and Arab leaders, the UAE was created when six of the emirates merged in 1971; Ras al-Khaymah joined in 1972.

Sheikh Zayed bin Sultan Al Nahyan served as president from the country's founding until his death in 2004. His son, Khalifa bin Zayed Al Nahyan, succeeded as president. The Supreme Council comprises the individual rulers of the seven emirates, and the president and vice president are elected by the council

every five years. The position of the presidency is an unofficial hereditary post for the Al Nahyan family. The council also elects the Council of Ministers and an appointed Federal National Council reviews legislation. The federal court system includes all the emirates except Dubai and Ras Al-Khaymah. All of the emirates have a mix of secular law and sharia (Islamic law) with civil, criminal, and high courts.

The UAE is a member of the UNITED NATIONS and the Arab League, and has diplomatic relationships with more than 60 countries. It plays a moderate role in the ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC) and the Gulf Cooperation Council (GCC). The UAE plays a vital role in the affairs of the region because of its massive foreign development and moderate foreign policy positions. Unlike its neighbors, the UAE, under the leadership of Sheikh Zayed, promotes religious tolerance. Sheikh Zayed also encouraged foreign development and investment.

The UAE is one of the largest producers of oil, after SAUDI ARABIA and Iran, in the Middle East. Since its formation, the UAE has transformed from an impoverished desert country to a modern, wealthy country. Zayed invested the country's oil revenues in hospitals, schools, and universities and gave all citizens free and universal access to these public services. He distributed free land and held *majlis* (traditional Arab consultation councils) that were open to the public. Zayed was a contemporary liberal who advocated for women's rights and for the education and participation of women in the work force. Education was one of the most significant achievements in the rapid transformation of the UAE. The country boasts numerous universities and colleges and hundreds of schools.

JULIE EADEH

United Arab Republic (UAR)

The United Arab Republic, a union of Egypt and Syria, lasted from 1958 to 1961. As Syrian political parties on

the left and right vied for power, Syria became enmeshed in a cycle of political instability and short-lived coalition governments. The BA'ATH PARTY, under pressure from the Syrian Communist Party, was instrumental in approaching GAMAL ABDEL NASSER in Egypt to propose a union between the two Arab nations early in 1968. Recognizing the difficulties posed by the lack of a contiguous border, with Israel between them, and the political and economic differences between the two countries, Nasser was reluctant to join such a union. The Ba'athists, who mistakenly thought they would control the direction of the union from behind the scenes, convinced Nasser to become the leader of the union. A February 1958 plebiscite on the union received nearly unanimous support from the citizens of both Egypt and Syria, and the union was implemented in late February. The Yemeni imam, or ruler, also joined the union, but Yemen was never fully integrated into the UAR.

Nasser served as president, and the Syrian leader Shukri al-Quwatli became vice president, but the real power rested with Egypt, which was by far the larger, more populous, and more powerful of the two nations. Shortly after the establishment of the UAR, Nasser made a tumultuous tour of Syria, where he received overwhelming popular support. It was the apogee of pan-Arabism, but the honeymoon was short-lived. Under the terms of the union all Syrian political parties were dissolved, although the Ba'ath Party had anticipated that it would play a key role. In addition, Egyptian political and economic policies, including land reform, were instituted. Although health services and conditions for the working and urban middle classes improved the Syrian upper class, many Ba'athists and the military grew increasingly disenchanted with Nasser. Initially Nasser's close associate General Abd al-Hakim Amer was appointed to oversee the government in Syria, but by 1960 the former Syrian interior minister, Abd al-Hamid Sarraj, became the strongman within the administration. Syrians chafed under his heavy-handed rule.

The UAR also faced considerable opposition from conservative Arab regimes and Western nations, especially the United States. To counter Nasser's growing strength, the Hashemite monarchs in Jordan and Iraq announced a union between their two nations, but it was never really implemented. Saudi Arabia was also opposed to the union and feared the political shift toward the left. The United States viewed the union through the prism of the COLD WAR and was determined to prevent possible Soviet expansion into the region. The civil war in Lebanon and the revolution in Iraq, both in 1958, accentuated the rivalries between the progressive, leftist

Arab regimes dominated by Nasser and the conservative monarchies in what has been called the Arab cold war. The West blamed Nasser for both the LEBANESE CIVIL WAR and the Iraqi revolution. Although Nasser supported both, he was not primarily responsible for either.

The nationalization of banks and many large businesses in the summer of 1961 created a form of state socialism that was unpopular in Syria. In reaction, army officers led a coup in September 1961 to withdraw from the union, and Nasser reluctantly agreed to the breakup. Nasser blamed Syrian feudal elites and conservative Arab regimes, particularly Saudi Arabia, for the collapse of the union. For the remainder of the 1960s he turned increasingly to the left and to support from the Soviet Union. In Syria the breakup of the UAR allowed the Ba'ath Party gradually to become the dominant political force. Following the 1967 ARAB-ISRAELI WAR, HAFEZ AL-ASSAD, a committed Ba'athist, seized power and established a regime that remained in power into the 21st century. Although both Nasser and the Ba'ath Party continued to advocate Arab union, no effective political or economic unions among Arab nations were formed after the collapse of the UAR.

JANICE J. TERRY

United Nations

The United Nations, already six decades old, has traversed a long, strife-formed COLD WAR. Not a super-state above the states, it collectively approaches issues of war, peace, development, and justice, and has sufficient transforming potentials to create a new, better world order. Since the end of the cold war, it has acquired new dynamism, but at the same time it has to be restructured to cope with an emerging complex world of nation-states, various movements, and unforeseen challenges like TERRORISM.

The United Nations, founded in the aftermath of World War II, was established at the San Francisco Conference in 1945 on the principle of collective security. It was the successor to the League of Nations, which had

Indonesian peacekeepers board an aircraft in Jakarta, Indonesia, en route to Lebanon to support the United Nations Interim Force in Lebanon (UNIFIL). The peacekeeping force monitored the cease-fire between Hizbollah and Israel.

been established after World War I but failed to organize world order on the principles of universality. The United Nations, therefore, took care to avoid the mistakes of its predecessor, and five major powers were given special power and responsibility through the mechanism of “veto” power in the most important organ of the United Nations—the Security Council.

The goals of the United Nations were enshrined in the Charter: to maintain international peace and security, to develop friendly relations among nations, to achieve international cooperation, and to work as a harmonizer among nations. Security was the principal goal of the United Nations. Unlike in the league, however, security was not narrowly conceived in the United Nations but was broadened to include socioeconomic justice, human rights, and development. Like the league, the United Nations was based on the principles of collective security. The new principle on

which the league and the United Nations were based does not consider security as the individual affair of states or regions but as a collective affair of all states, and aggression against one state is considered aggression against all others. All states are obliged to take collective action against the aggressor.

FROM THE LEAGUE

The UN Charter provided for six major organs, four of which evolved out of the League of Nations. The General Assembly was based on the democratic principle of “one country, one vote,” irrespective of size and power, and was essentially a deliberative organ. The countries of the THIRD WORLD used the body for organizing themselves and took up issues of colonialism and racialism. The Charter provided for some supervisory functions of the General Assembly. The council and assembly had joint functions as well. The Security Council, the most

important organ of the United Nations, reflected the reality of power. The United States, the Soviet Union, France, Great Britain, and China were the five permanent members with veto power and had special responsibility to maintain world peace and security. However, veto became a mechanism of obstruction, and the Soviet Union frequently used it; while the United States did not use it in earlier years, the frequency of veto increased after 1970. The Security Council was based on the assumption that the major powers would agree on issues of war and peace, but the onset of the cold war around 1945 made the United Nations a helpless spectator.

The Charter provided for a mechanism of maintaining peace, whereby the council may call upon members states to apply sanctions against the aggressor and may form a Military Staff Committee consisting of the chief of staff of permanent members of the Security Council. The enforcement of peace was possible in the KOREAN WAR, and a united command was formed under the United States. It placed an embargo on the export of strategic materials to China and North Korea. Subsequently the provision could not be replicated for a long time.

It was only after the closing stages of the cold war that the Security Council became effective again; consultations and coordination among the major powers in the council have been frequent, as in the Persian Gulf crisis and more recently over Iran's nuclear ambitions.

For about five decades of the cold war, the United Nations never appeared to play the role envisaged at San Francisco in the realm of peace and security; it was bypassed in major flash points across the globe, such as the Panama Canal crisis, Hungary, the BERLIN BLOCKADE, the CUBAN MISSILE CRISIS, ARAB-ISRAELI conflicts, the India-China border war, VIETNAM and INDOCHINA, and the Sino-Soviet border war. The United Nations was a passive bystander as major powers professed to settle scores outside the United Nations. When the United Nations was hamstrung due to the use of veto, the General Assembly sought a way out through the Uniting for Peace Resolution to consider measures in a situation of breach of peace.

After the end of the cold war, the United Nations became more active again, although in the process it acquired new functions, in line with but not envisaged in the Charter. During the turn of the 21st century this function, known as peacekeeping—traditionally denoting acting as a buffer between contending parties or monitoring ceasefire agreements—expanded to other areas. Now peacekeeping also means the provision of humanitarian relief, removal of mines, repatriation of refugees, and reconstruction of national infrastructure in devastated

areas, such as AFGHANISTAN. The costs of all of these functions have been enormous, especially in recent peacekeeping operations: South Africa, Rwanda, Iraq-Kuwait, Mozambique, SOMALIA, Haiti, and Liberia. Sometimes the United Nations has drawn flak; the UN troops have also been targeted, as in Somalia and Bosnia.

COOPERATION

Unlike during the cold war years, however, the United Nations finds cooperation among major powers to repulse aggression. In the FIRST GULF WAR, MOSCOW supported U.S. efforts to impose sanctions against Iraq, which had annexed Kuwait. The machinery of the United Nations was used. Other major powers contributed troops, particularly France and Britain. Japan and Germany too accepted new security roles.

Besides war and peace, the United Nations has been instrumental in various humanitarian efforts. A large amount of credit must go to the United Nations for ending apartheid in South Africa, improving life expectancy in Africa, helping children suffering from malnutrition, and fighting diseases. It has not been as successful in the removal of global poverty, but it has launched efforts in that direction.

Now the United Nations finds itself playing a new role against international terrorism. It has not been as successful, and the United States acted unilaterally in 1998 when AL-QAEDA attacked U.S. embassies in East Africa. Subsequently, following September 11, 2001, the United States took drastic steps, and the United Nations was more involved than before; terrorism became a key issue of international and United Nations concern.

The United Nations has been moving into new, uncharted areas. In a world where millions of children die days after they are born, the issue of human rights has become a major arena of international attention. The Universal Declaration of Human Rights, adopted by the UN General Assembly in 1948, has been enshrined in constitutions of states. Now the United Nations has also been a force in expanding the frontiers of democracy worldwide, believing that democracy fosters world peace.

While the United Nations is engaged in redefining issues of war, peace, development, and freedom, reforming the world body has become a burning issue since the end of the cold war, and more particularly since 1998, when 185 states met to celebrate 50 years of the United Nations. There is also demand to restructure the Security Council and to add new permanent members—with or without veto power. Brazil, Germany, INDIA, Japan, and some African countries are key candidates demanding permanent places on the Security Council.

The major powers with vetos—the United States, Russia, China, Britain, and France—themselves differ about who should be permanent members in a reformed council. Reforms are, however, necessary to make the United Nations more in tune with the changes of the end of the 20th century and the beginning of the 21st century.

U Nu

(1907–1995) *Burmese leader*

U Nu was the prime minister of Burma (now the Union of Myanmar) from 1948 to 1958 and from 1960 to 1962 and was an important leader earlier in the struggle for independence from Britain.

U Nu was born in a period during which the British colonization of Burma was coming under increasing pressure from nationalist Burmese and opposition in Britain. U Nu graduated from the University of Rangoon and worked for several years as a schoolteacher. In 1934 he returned to the university to study law and became involved with nationalist politics. He became leader of the student union and was subsequently expelled from the university, along with Aung San. The subsequent student strike was one of the earliest confrontations between the Burmese and the British, which intensified in the following years. U Nu joined the We-Burmans Association (Dobama Asi-ayone), which had been formed in the wake of the 1932 anti-Indian riots and was a center for nationalism. The association was dominated at first by the Rangoon University student union, but under U Nu and others it expanded its activities. It was influenced by a combination of Marxism, democratic socialism, and Irish nationalism. The leaders, including U Nu, took the forename Thakin, or master, to demonstrate that they were not subservient to the British. The forename “U” is an honorific.

When World War II broke out in Asia, British authorities arrested U Nu and others, and they were imprisoned until Burma was invaded and occupied by the Japanese. The Japanese established a puppet government under Ba Maw, and U Nu served in his cabinet for a period. In the years between the end of the war and independence, U Nu assumed the leading position in the nationalist movement following Aung San’s assassination in 1947. Consequently, he headed the Anti-Fascist People’s Freedom League and became the first prime minister of independent Burma in 1948. Winning two subsequent elections, he remained in office for a decade, with only a brief hiatus in 1956–57.

His time as prime minister was marked by numerous communist insurgencies and independence struggles by ethnic minority peoples, and a decline in the value of rice exports. His government proved unable to improve the lot of the people. He resigned in 1958, and the government was taken over by General NE WIN as a result of widespread social disorder. U Nu returned to power in a brief return to democracy from 1960 to 1962, but the subsequent military coup returned the country to the repressive regime that remained in power into the 21st century.

U Nu was imprisoned by Ne Win and not released until 1969. He made several subsequent attempts to return to power, the first when he attempted to organize resistance to the military government in 1969. He was then forced into exile in INDIA, although he returned to Rangoon to become a Buddhist monk in 1980. He had throughout his life been a devoted Buddhist and had introduced several laws to support the religion. In 1988 it briefly appeared that democracy would return to Burma, but U Nu’s attempt to seize power was crushed and he was put under house arrest. He was freed in 1992 and died in Rangoon three years later.

JOHN WALSH

U.S.-Japan Mutual Defense Treaty

This was an agreement between the United States and Japan, which concluded in 1955, that allowed the United

States to maintain its major security presence in Japan. Because of the communist threat in the COLD WAR, the government of YOSHIDA SHIGERU of Japan agreed to a U.S. proposal to create the Self-Defense Force (SDF) at a modest size of 180,000 troops in 1954. By allowing the Japanese government to train a modestly sized defense force, the constitution of 1947 was kept intact.

The original treaty was replaced in 1960 by the Treaty of Mutual Cooperation and Security, which marked a significant change from the one-sided alliance to a more balanced relationship based on shared responsibility for defense. For the Japanese, the treaty provided a commitment from the United States to defend Japan against an armed attack, and it also required the United States to consult the Japanese government on the use of military bases on its soil. Consultation was required to ensure that any major changes to U.S. operations or force deployments would be approved by both governments. For the Eisenhower administration, the treaty ensured a greater commitment to a stable alliance to support U.S. interests in Northeast Asia. Gradually Japan took a greater share for its defense. In 1962 Japan began to pay some of the cost of U.S. military installations in Japan. The United States returned Okinawa and the Ryukyu Islands to Japanese control. Beginning in the mid-1970s, U.S. forces were gradually reduced in Japan.

In the late 1970s a new series of agreements were implemented to transfer the responsibility for protecting specific sea lanes to Japan. Along with its expanded commitments, Japan broke the former 1 percent spending cap for defense and began purchasing American-made aircraft.

The collapse of the Soviet Union brought renewed focus to the U.S.-Japan defense alliance and lessened the need for a major U.S. military presence in northeast Asia. At the same time, Japan began to take on a greater international role. However, in 1991, the Japanese government was forced to decline requests to send troops to participate in the FIRST GULF WAR, bowing to parliamentary opposition. The next year, the Japanese government passed a new law authorizing Japan to participate in UNITED NATIONS peacekeeping operations, with contingents of Japanese troops. The expansion of Japan's international commitments were reaffirmed in 1996 with the Clinton-Hashimoto Security Declaration, in which the U.S. committed to maintain 100,000 troops in the Western Pacific region that included Japan.

In 1999 the Japanese Diet passed the Law Concerning Measures to Ensure the Peace and Security of Japan in Situations in Areas Surrounding Japan. It authorized the

use of force in "rear areas" surrounding Japan, partly in response to Communist North Korea's development of nuclear weapons. After 2001 Japan's Self-Defense Forces and Maritime Defense Forces participated in U.S.-led military actions in Iraq and Afghanistan. Washington encouraged and supported Japanese efforts to contribute to the war on terror.

DAN FITZSIMMONS

U.S. relations with China (Nixon)

The visit of U.S. president RICHARD NIXON to China in February 1972 marked a turning point in U.S.-China relations. It gave maneuvering space to the United States in the strategic contest with the USSR.

Their confrontation in the KOREAN WAR began two decades of confrontation at a number of strategic points, especially in the Taiwan Straits and in Vietnam, where the United States was embroiled in a ground war supporting South Vietnam and while China provided backing to its then-ally North Vietnam.

The turn in U.S.-China ties from confrontation to rapprochement was a result of a host of factors, but mainly because both nations were concerned about the dangers posed by the Soviet Union. The U.S. Senate began a review of U.S.-China policy. China too was moving from Maoist ideological puritanism toward greater pragmatism, spurred on by the Sino-Soviet border dispute. The Soviet Union's intervention in Czechoslovakia in August 1968 led to its pronouncement of the Brezhnev Doctrine that as the leading country of the Marxist bloc, the USSR had the right to determine the correct interpretation of Marxism and to intervene in socialist countries that deviated from the correct line. Since China under Mao Zedong (Mao Tse-tung) had developed its own version of Marxism, it feared that it could become a Soviet target for its deviations. Hence came China's quest to end its diplomatic isolation with a rapprochement with the United States.

The Nixon administration saw an opening with China as a graceful way out of the VIETNAM WAR. It therefore needed China's leverage to facilitate a U.S. withdrawal from Vietnam. The opening came when U.S. and Chinese table tennis teams met in an international table tennis tournament, with the result that the U.S. team was invited to China. President Nixon took steps to expedite visas for visitors from China to the United States, relaxed currency controls, and lifted restrictions on U.S. oil companies to provide fuel to ships and aircraft traveling to and from China.

Since Washington and Beijing had no diplomatic ties, Pakistan acted as intermediary. In July 1971 National Security Advisor Henry Kissinger secretly visited China via Pakistan "to seek normalization of relations" and an exchange of views of common interest.

The announcement heralded an atmosphere of warmth and cordiality in U.S.-China relations, which had been frozen for two decades. Meanwhile the United States had also departed from its hard-line stand that blocked the PEOPLE'S REPUBLIC OF CHINA from seating its legitimate representation in the UNITED NATIONS. In August 1971 the United States dropped its opposition, paving the way for the seating of China in the United Nations.

In his report to the U.S. Congress on February 9, 1971, Nixon stressed the importance of his forthcoming visit to China as the starting point for changing "the post-war landscape." While a quick resolution of outstanding issues were not possible, it signaled the end of "a sterile and barren interlude" in ties.

Nixon arrived in Beijing on February 21, 1972, accompanied by Secretary of State William P. Rogers and Henry Kissinger. The visit generated global interest as a watershed in redefining the balance of power of the world. Transcending previous differences, Nixon emphasized "common interests" in a new era. The two countries signed the SHANGHAI COMMUNIQUÉ, wherein China stated its stand on Cambodia, Korea, and Vietnam. The United States envisaged "the ultimate withdrawal" of all forces from Indochina; significantly, both countries declared opposition to hegemony in the Asia-Pacific area, implying that both had an interest in limiting Soviet power in the region. The Taiwan issue evaded a solution, but U.S.-China ties had moved from deep hostility to détente, facilitating major changes in the global balance of power.

R.G. PRADHAN

U.S.-Republic of Korea Mutual Defense Treaty

The U.S.-Republic of Korea (ROK, South Korea) Mutual Defense Treaty was signed October 1, 1953, and became effective in 1954. It committed the United States to the defense of the ROK against future attacks by the Democratic People's Republic of Korea (DPRK, North Korea). In early 1953, as the KOREAN WAR armistice talks opened, U.S. president Dwight D. Eisenhower sought a way to convince ROK president SYNGMAN RHEE to accept a truce with DPRK. Rhee, who had insisted that no truce short of military reunification of the two Koreas would suffice, balked at the U.S. demand that he sign an armistice with DPRK. Rhee flatly rejected any agreement that would allow the Chinese People's Volunteer Army (Chinese Communists) to remain in Korea following a ceasefire because he maintained that such an agreement would be tantamount to ROK's signing its own death warrant. Despite Eisenhower's assurances that the United States would pursue all peaceful means of reunification, and offers to enter a mutual security pact with the ROK, Rhee sought a mutual defense treaty with the United States as a precondition for any armistice.

Rhee's unilateral release of 25,000 DPRK prisoners of war on June 25, 1953, complicated negotiations and increased pressure on the United States to bring the ROK leader to agree to an armistice. To that end, Eisenhower sent Assistant Secretary of State Walter Robinson to offer Rhee a mutual security pact and promised economic incentives in return for Rhee's agreement. The Robinson mission was successful, and when Rhee did not stand in the way of the armistice, which was signed on July 27, 1953, the two countries set about crafting the bilateral treaty.

On August 8, 1953, Secretary of State John Foster Dulles initiated negotiations that culminated in a treaty of six articles, based on the model of existing treaties between the United States and the Philippines, and the United States and Australia and New Zealand. The NORTH ATLANTIC TREATY ORGANIZATION model was

rejected because it would have given the president the authority to consider an external attack on ROK as an attack on American territory.

Seeking to limit its commitment and to contain its ally, the United States defined its responsibilities as extending only to territory under ROK control at the time the treaty was signed or subsequently recognized as lawfully incorporated into the ROK. During the ratification debates in the U.S. Senate a note of understanding was added to the treaty clarifying the U.S. position that the mutual defense agreement extended only to attacks from external forces. It received ratification on January 26, 1954, and the president accepted the Senate's recommendations on February 5, 1954, subject to the agreement on the limitation of commitment. ROK agreed to the change, and the treaty came into effect when ratification documents were exchanged in Washington, D.C., on November 17, 1954. The treaty remains in effect, and U.S. forces remain stationed in the ROK.

ANTHONY SANTORO

U.S.-Taiwan Mutual Defense Treaty

The United States and the Republic of China (Taiwan) signed a mutual defense treaty in 1954 in which the United States would provide protection for the ROC in case of invasion by the PEOPLE'S REPUBLIC OF CHINA (PRC). The treaty was approved by U.S. president Dwight Eisenhower and Taiwan's president Chiang Kai-shek and was fully ratified by their respective legislatures.

The treaty was a product of U.S. COLD WAR policy. The United States had washed its hands of China's civil war in 1948, but had become concerned about communist expansion when Communist North Korea attacked pro-Western South Korea in 1950. The United States then sent the Seventh Fleet to patrol the waters in Taiwan Strait.

In September 1954 the PRC attacked the ROC. The terms of the treaty committed the U.S. government to deploy land, sea, and air forces in and around Taiwan as required for its defense. The treaty also stipulated that the ROC and the United States would aid each other

to increase their capacity to resist an armed attack or communist subversive activities directed against either country's territorial integrity. Furthermore, both sides agreed to maintain peace and security in the region and refrain from the use of force in any manner inconsistent with their obligations to the UNITED NATIONS.

Following the 1954 crisis with the PRC, the United States became concerned that the nationalist government of Taiwan might deploy force against the mainland. This could possibly involve American troops despite the treaty's defensive nature. United States Secretary of State John Foster Dulles met with ROC president Chiang Kai-shek to urge against attacking the PRC.

An incident occurred in 1958 when the PRC shot down two Nationalist F-84s on patrol. The PRC also renewed attacks on the offshore islands in midsummer 1958, testing the commitment of the United States to the treaty. In response, the United States deployed an aircraft carrier battle group to the region that included combat aircraft and transports. Nationalist forces were escorted safely by their ships to supply their offshore islands.

Both the United States and the Soviet Union urged a peaceful solution. Throughout the 1950s–60s the United States remained sympathetic to the cause of the ROC but also acted to restrain the ROC from acts that might provoke the PRC.

Beginning in 1971 the United States began to negotiate with the PRC. In 1972 President RICHARD NIXON visited China. The visit culminated in the SHANGHAI COMMUNIQUE in which China declared that Taiwan was a part of China and that differences should be resolved peacefully.

In 1978 President JIMMY CARTER established formal diplomatic relations with the PRC, effective in 1979, thereby severing relations with the ROC and ending the U.S.-ROC Mutual Defense Treaty. A Taiwan Relations Act enacted by the U.S. Senate in 1979 authorized non-official relations with the ROC that also provided for the U.S. sale of weapons to the ROC.

DAN FITZSIMMONS

Vajpayee, Atal Bihari

(1924–) *Indian political leader*

Atal Bihari Vajpayee is the former leader of the BHARATIYA JANATA PARTY (BJP), or Indian People's Party, a pro-Hindu political movement that seeks to define Indian culture and society according to Hindu religious values. Vajpayee was twice prime minister of INDIA, in 1996 and from 1998 to 2004. He is considered the leader of Hindu nationalism and served as a member of parliament for almost 50 years. During his six years as prime minister, Vajpayee worked to modernize the Indian economy and settle long-standing disputes with Pakistan. His government has been accused of fostering racism against Muslims and political extremism. Alongside his political activity Vajpayee also earned a reputation as a poet, publishing collections of poetry.

Vajpayee was born in Gwailor in Madhya Pradesh in 1924. He earned a master's degree in political science from Victoria College and DAV College. His involvement with politics started at a very early age. Although initially close to communism he soon shifted to the right, finding inspiration in the campaigns of Syama Prasad Mookerjee for the inclusion of the Muslim majority state of Kashmir in the Indian Union. In 1957 Vajpayee won his first parliamentary seat, and, after Mookerjee's death, he took on the leadership of the BJS, becoming one of the major and most respected voices of opposition to the Congress Party. Yet, although the BJS increasingly won strong support in the northern regions of the country, it repeatedly failed to remove the Congress from power.

During the Indian Emergency of 1975–77, proclaimed by then-prime minister INDIRA GANDHI, Vajpayee was a vocal critic of the government and the suspensions of civil rights. He was also briefly put in jail. Upon his release he helped to form the Janata Coalition.

In his two years in government and in spite of his Hindu nationalism, Vajpayee worked to improve diplomatic relationships with Pakistan and China, visiting both countries and establishing trade relations with them. As the Janata government folded, destroyed by internal rifts, Vajpayee founded the Bharatiya Janata Party (BJP), which became the new party of Hindu nationalism and conservatism. The party performed badly in the 1984 election, in which it won only two seats in Parliament, in part because of the wave of sympathy for the Congress Party that swept the nation after the murder of Indira Gandhi by her Sikh bodyguards. The anti-Muslim sentiment that took hold of large sectors of the nation in the 1980s and early 1990s led to an impressive growth in the BJP.

With strong parliamentary support, Vajpayee embarked on a large program of economic reforms, encouraging the private sector and limiting state involvement in the industrial sector to contain waste and public debt. He also stimulated foreign investments and research in information technology, making India one of the major powers in the field. During Vajpayee's government, India experienced one of its fastest periods of economic growth. Yet critics argue that the poorer sectors of Indian society were left out of this prosperity. Vajpayee's foreign policy record is equally mixed. His decision to

conduct five underground nuclear tests in Rajasthan provoked international criticism.

Yet his government made historic progress in the establishment of normal relations with Pakistan, and President BILL CLINTON's official visit to India signaled the beginning of a new diplomatic entente between the United States and India after the tensions of the COLD WAR. The economic and diplomatic successes of his government, however, were not enough to assure Vajpayee's reelection.

LUCA PRONO

Vatican II Council (1962–1965)

The Second Vatican Council was one of the most significant events in the history of the Roman Catholic Church. As an ecumenical council Vatican II attempted to redirect the Catholic Church. Its effect was considerable, both in its intended and unintended results.

The council was called by Pope John XXIII in January 1959. He signaled the need for renewal so that the church could more effectively impact the world. The first session of the council was held in fall 1962. Shortly after its conclusion, Paul VI replaced John XXIII as pope. The

Vatican City is a landlocked sovereign city-state whose territory consists of a walled enclave within the city of Rome.

council continued for three more sessions, concluding on December 8, 1965. It issued 16 documents, the most authoritative being the Constitutions on the Liturgy, the Church, Revelation, and the Church in the Modern World.

The council envisioned serious change. It directed a major revision of the liturgy, the services of the Catholic Church that had practically not changed for four centuries. It promoted the use of the Bible and emphasized its authority, mandated a restoration of the college of bishops in the governing of the church, reversed the earlier rejection of the ecumenical movement among the Christian churches, took a positive approach to other religions and to modern society, and reversed the traditional Catholic position upholding the ideal of the governmental establishment of the church.

The council opened the door to change, and a period of rapid, confusing, and often unintended change then began. For instance, shortly after the council, the liturgy began to be celebrated in the vernacular, the Eucharist was celebrated with the priest facing the people, and women stopped wearing head-coverings. For many, there was shock that the unchangeable had changed. For others, when Pope Paul VI refused to change the ruling against artificial contraception in 1967, there was shock that the changes would not include the elimination of many unpopular teachings and practices. Many Catholics took a secularizing approach, many a conservative resisting approach; many clergy and laity left, and soon there was a common conviction the Catholic Church was in crisis.

Pope JOHN PAUL II, who had participated in the council as archbishop of Kraków, began a process of stabilization after becoming pope in 1978. The Extraordinary Synod of Bishops in 1985 under his leadership reaffirmed the value of Vatican II and urged Catholics to avoid the deviations of extreme rejection and of promotion of secularization. As a result of his papacy, Vatican II has been accepted as the charter of the modern church and may turn out to be the source of renewal that was hoped for.

STEPHEN B. CLARK

Velasco Ibarra, José

(1893–1979) *president of Ecuador*

The “father of Ecuadorian populism,” José María Velasco Ibarra was the country’s president five times from the 1930s to the 1970s. A gifted orator, charismatic and mercurial, he is perhaps best known for his boast, “Give me a balcony, and I will be president!” Beginning with his campaign for his second term (1944–47), Velasco Ibarra cultivated a large personal following, mainly among coastal urban dwellers, by employing a host of modern campaign techniques that included radio, public address systems, and mass-produced leaflets. In subsequent years, he forged a national state far more activist and populist in orientation. Pitching his appeal principally to the urban working and middle classes, he alienated many of the country’s traditional landowning and military elite while leaving traditional relations of power and privilege largely intact. In keeping with broader 20th-century trends in Latin America, he also promoted the expansion of internal infrastructure and public works (especially roads); implemented universal suffrage; and used nationalist discourse to bolster his own popularity and unify his compatriots vis-à-vis other countries. The populist legacy he bequeathed continues to shape Ecuador’s political landscape.

Born in Quito on March 19, 1893, to a middle-class family, he graduated from the capital city’s Central University law school and soon established a reputation as one of the country’s leading writers and intellectuals. In 1932 he was named president of the House of Deputies and in 1933 won the country’s presidential election. Serving only a year before being overthrown by the military, he went into exile in Colombia and Argentina. From exile he built a formidable following, returning in 1944 to wide popular acclaim, mobilizing strikes and protests and forcing the resignation of the sitting president. As provisional president he supervised a constitutional convention and triumphed in the 1944 presidential election that followed. His populist policies alienated many of his elite supporters, prompting his overthrow by the military in 1947. Again going into exile, he returned for the 1952 presidential campaign and won in a landslide. He was reelected in 1960, only to be overthrown by the military a year later; the same sequence unfolded in his election of 1968 and overthrow in 1972.

Like most populists of the era he was also a nationalist, and his emphasis on Ecuadorian national sovereignty prompted him to enforce the 1952 Declaration of Santiago among Ecuador, Chile, and Peru, which

extended these countries’ territorial waters 200 miles into the Pacific to protect their rich fishing grounds. The United States, the Soviet Union, and other countries recognized only a 12-mile limit. The result was the so-called tuna war of the late 1960s and early 1970s, when the Velasco Ibarra regime impounded U.S. tuna boats that had not paid the requisite average \$10,000 special fee, prompting a cutoff in most U.S. aid. His populist policies, causing a growing economic crisis and fiscally unsustainable, prompted his final overthrow in 1972. He died on March 30, 1979, leaving a complex legacy of heightened political mobilization, resurgent nationalism, and unmet political and economic aspirations on the part of the country’s poor majority.

MICHAEL J. SCHROEDER

Vietnam, Democratic Republic of

The Democratic Republic of Vietnam (DRV), or North Vietnam, as it became commonly known after the 1954 Geneva Accords, came into existence on September 2, 1945. Following the Japanese surrender in World War II, Vietnamese Communist Party (Vietminh) leader HO CHI MINH seized the opportunity and declared Vietnamese independence. Vietminh strength was centered in the north. The French, however, were disinclined to accept this, and moved to reimpose their colonial rule over the entire region. They quickly established control in the south, although they could not effectively control the countryside.

Since the French and the Vietminh hoped to avoid a full-scale war, both sides entered into intermittent negotiations. In March 1946 the French provisionally recognized the DRV in exchange for Ho’s agreement to include the north in a proposed French Union. Final agreement remained elusive, however, and the relationship between the two sides continued to deteriorate. In November 1946 the French shelled the port of Haiphong. Ho and his supporters escaped into the mountains in the north and began a war of nationwide resistance.

With fear showing on their faces, women and children scurry past the bodies of three Vietcong killed in the fighting in May 1968.

The war against the French unfolded against the backdrop of the emerging COLD WAR. On the battlefield, the Vietminh relied on the military genius of General VO NGUYEN GIAP. They also seized land belonging to French landowners and alleged traitors and redistributed it to peasants, winning popular support. The French were decisively defeated at the Battle of Dien Bien Phu in May 1954. At the Geneva Conference that followed, Ho was pressured by the Soviet Union and the PEOPLE'S REPUBLIC OF CHINA to accept a compromise. The result was the partitioning of Vietnam, with the promise of nationwide elections in 1956. Those elections never took place. Although he had envisioned the establishment of an independent government over all of Vietnam, Ho had to accept a truncated Democratic Republic of Vietnam north of the 17th parallel.

With the official formation of the DRV, North Vietnam became the first communist state in Southeast Asia, with Ho Chi Minh as president and Hanoi as its capital. Political power rested in the Communist Party, or the Vietnamese Workers' Party (VWP), as it had been renamed in 1951. The power nucleus of the VWP was the Politburo, which was responsible for day-to-day decision making.

The primary task that confronted Ho and his colleagues was the need to consolidate their rule. At Geneva the DRV leadership had issued a directive that indicated its intention to proceed cautiously and take gradual steps toward establishing a socialist economy. In order

to reassure the population, the government announced that the country would operate with a mixed economy, indicating acceptance of private wealth and property. At the same time, the government also stated its intention to respect the freedom of religion.

These pronouncements failed to reassure many in the north, and after the partition some 800,000 refugees made the trek south. An official policy of fair treatment for Catholics notwithstanding, many leaders in the VWP and others in local party and government structures continued to nurture suspicion of them, and harsh treatment of Catholics bred resentment in some areas.

The economy, which had been devastated by years of war, posed a tremendous challenge to the government. Moreover, fleeing refugees left many businesses abandoned. The DRV government moved to nationalize certain sectors of the economy such as utilities, banking, and some large enterprises. Prices and wages also came under government regulation.

The industrial sector had remained underdeveloped under French rule. In 1961 the government launched the first Five-Year Plan to develop heavy industry. By the middle of the decade war with the United States diverted resources from industrial development and stalled these efforts. The agricultural sector required immediate attention since food was in chronically short supply. This, as well as the need to win over the rural population, seemed to demand land reform. In 1955 the government launched a program to confiscate land from wealthy landlords for redistribution.

The land reform program, however, produced mixed results. On the positive side it increased the rates of landownership, increased rice production, reduced the influence of wealthy landlords, and won the support of numerous poor peasants who reaped the benefits. On the negative side, overzealous cadres and poor peasants often denounced those who owned only medium-sized holdings, and local tribunals executed many. In 1956 the hostility eventually erupted in a peasant uprising in the province of Nghe An. Ho Chi Minh publicly admitted that errors had been made and slowed the pace of land reform. But within two years the government initiated a large-scale collectivization effort that brought most of the rural population into some form of state-controlled cooperative farming.

The VWP also created party-run organizations that recruited different segments of Vietnamese society, including veterans, workers, farmers, youths, and women. By mobilizing the population into various communist-led organizations, the VWP realized its domination of Vietnamese society.

The consolidation and nation-building efforts in the north also included increasingly harsh efforts to silence criticism and dissent. Freedom of expression was curbed. Authors of protest literature came under increasing public attack from 1958 onward. Culprits were sent to work in agricultural cooperatives or work camps to be reeducated.

The South Vietnamese government's decision to boycott the elections planned for 1956 compelled the North Vietnamese leadership to decide the priority it would give to reunification. By and large the DRV leadership decided to adhere to the decision to build socialism in the north while searching for some means to reunify the country. Debates in the VWP Central Committee in the mid-1950s, however, suggested that the leadership anticipated reunification to be realizable only after a military struggle.

In 1959 the VWP shifted to a more activist approach and began to approve efforts to increase pressure on NGO DINH DIEM's regime in the south. By this point a broad-based resistance movement against Diem had gained strength. In late 1960, largely at the behest of southern cadres, the National Liberation Front was created as an umbrella organization that rallied a broad range of anti-Diem resistance.

The road to the reunification of Vietnam led the DRV to war against the United States, whose commitment to a noncommunist South Vietnam had grown steadily. Between 1965 and 1973 U.S. combat troops fought in the VIETNAM WAR. Some evidence suggests that Hanoi had begun infiltrating troops into the south in late 1964. Supplies and men flowed south along the Ho Chi Minh Trail through Laos and Cambodia.

In January 1973, after several rounds of peace talks, the Paris Peace Accords ended U.S. involvement. The cease-fire between north and south broke down, and the war resumed. On April 30, 1975, victorious North Vietnamese forces captured Saigon and achieved Ho's dream of a unified Vietnam. In his honor Saigon was renamed Ho Chi Minh City in 1976, in a country now renamed the Socialist Republic of Vietnam.

SOO CHUN LU

Vietnam, Republic of

The Republic of Vietnam was the portion of southern Vietnam that fought against communist North Vietnam in the Second Indochina War (VIETNAM WAR). It was created after the defeat of previous colonial masters, the French, and ceased to exist with the seizure of its capital, Saigon, by communist forces.

Southern Vietnam was historically the home of the Cham peoples. When the French arrived in the 19th century, they made the southern part of the country, which they named Cochin-China, a full colony. It was, therefore, more firmly French-run than the rest of Indochina. Saigon was more thoroughly internationalized than the remainder of the country, and the people were more familiar with the capitalist system and French culture. The French created the state of Vietnam in 1949, which centered on the Cochin-China colony and had the emperor as head of state. The defeat of the French and the Geneva Conference of 1954 established the state as occupying the territory south of the 17th parallel. In the following year the Republic of Vietnam was announced after Emperor Bao Dai was deposed.

The first president of the republic was NGO DINH DIEM, who had been involved in the ousting of the emperor and who adopted an authoritarian approach to ruling the country. When Diem was deposed and killed, a brief interlude under Nguyen Cao Ky was succeeded by military rule, which began in 1965. In 1967 NGUYEN VAN THIEU was elected president and then was reelected unopposed four years later. Despite the massive outlay of lives and matériel to resist the North Vietnamese, after the withdrawal of U.S. troops in 1973 as a result of the Paris Accord, the capture of Saigon in 1975 seems to have been inevitable.

Although the Republic of Vietnam had developed a sophisticated bicameral parliamentary system, its existence was tainted more or less throughout by corruption and by the authoritarian rule of its presidents and rulers. A number of people have characterized the state as little more than a puppet U.S. state, and certainly it would not have lasted so long without large-scale U.S. military support. However, it would be

scarcely fair to consider the presidents of the republic, notably Nguyen Van Thieu, as mere puppets. Indeed Nguyen Van Thieu was often trenchant in his criticisms of U.S. leaders and intransigent in pursuing policies of his own devising.

JOHN WALSH

Vietnam War

The Vietnam War was America's longest war. In total, the conflict in Vietnam lasted from 1946 to 1975. The official dates of U.S. involvement were 1964–73. The Vietnam War was extremely costly and destructive and had a profound effect on both the soldiers who fought it and the civilians who lived through it. The Tonkin Gulf Resolution was signed by LYNDON B. JOHNSON in 1964 and gave him the power to wage war in Vietnam.

Throughout the 1940s and into the 1950s, the Vietminh under HO CHI MINH were fighting the French colonial presence in Vietnam. By 1954 the United States was paying 80 percent of the cost of France's war against the Vietminh. In July 1954 the French and the Vietminh signed an armistice in Geneva, which divided Vietnam at the 17th parallel. Ho Chi Minh controlled the north, and Vietnam-wide elections were to be held in 1956. The United States did not sign the agreement, and plans were put in place to stop Ho Chi Minh's plans to conquer all of Vietnam. President Dwight Eisenhower was afraid that if Vietnam fell to communism, the rest of Southeast Asia would follow.

Not wanting Vietnam to be under the control of a communist leader, the United States pushed aside the French puppet leader and replaced him with NGO DINH DIEM, a Vietnamese nationalist. Many were confident that Diem could rally Vietnam against communism. The United States increased aid to South Vietnam, and the first U.S. advisers arrived there in early 1955. These decisions laid the groundwork for the Vietnam War.

Ho Chi Minh was frustrated that Vietnam was not yet independent and unified, so in 1957 the Vietminh in South Vietnam began to revolt against the Diem regime. In May 1959 communist North Vietnam came to the

aid of the revolutionaries in the south. As a result, the United States increased its aid to South Vietnam.

In South Vietnam conditions deteriorated rapidly. Diem's regime never gained popular support. In 1960 anti-Diem communists and Buddhists created the National Liberation Front, with the Vietcong as its military wing, and began operations against Diem's forces. The United States had pledged in the 1954 SOUTH EAST ASIA TREATY ORGANIZATION pact to defend South Vietnam against external aggression, and President JOHN F. KENNEDY lived up to that obligation.

To Kennedy and other politicians, Vietnam was another COLD WAR battlefield. Signs of weakness would lead the Soviet Union to believe that the United States was weak and vulnerable. As such, South Vietnam also became a testing facility for counterinsurgency units. The U.S. Green Berets advised the South Vietnamese army, and civilians provided medical and technical aid and economic and political reforms, all in an effort to "win the hearts and minds" of the Vietnamese.

There was a general consensus in Kennedy's administration about the consequences of losing Vietnam to communism; there were others who feared the worst. Undersecretary of State George Ball told Kennedy that within five years there would be 300,000 U.S. soldiers in Vietnam. However, Ball was incorrect: within five years nearly 400,000 soldiers were in Vietnam.

Even with his advisers calling for escalation, Kennedy proceeded cautiously. By the middle of 1962 he had increased the number of military advisers from 700 to 12,000. He added another 5,000 in 1963. As the number of casualties increased, the prospects of withdrawing became increasingly difficult. In the face of so many problems, Kennedy gave the order to overthrow Diem. On November 1, South Vietnamese military officials, with the assistance of the U.S. embassy in Saigon, arrested Diem and his brother. While in custody, both were assassinated. However, the plan backfired. A number of inexperienced military officers took command in South Vietnam with little support and were unable to govern effectively. The country sank deeper into trouble and the role of the United States increased.

After President Kennedy was assassinated on November 22, 1963, the issue of Vietnam fell to President Lyndon B. Johnson; Johnson was deeply troubled over Vietnam and had been for some time. During the rest of the months leading up to the November 1964 election, Johnson tried all he could to keep the issue of Vietnam in the background, fearing it would hurt his chances of being elected. In many of his conversations with Robert McNamara, secretary of defense, Johnson

discussed doing all he could to keep the public thinking that he had made no final decisions on Vietnam. Some advisers were trying to give Johnson suggestions for getting out of Vietnam and still saving face; meanwhile, the Joint Chiefs of Staff were advising him that preventing the loss of South Vietnam was of overriding importance to the United States.

Robert McNamara visited Saigon. He reported to Johnson that conditions had worsened there since General Khanh took over power in January 1964. Many officials there favored increased pressure on North Vietnam, including air strikes. McNamara, aware of Johnson's wish to be ambiguous to the public regarding his stance, offered to take a lot of the heat. Johnson, knowing the conditions in Vietnam, understood that in order to achieve the ambitious conditions set out in McNamara's policy statement, an escalation of military power in the country would have to be undertaken.

The Gulf of Tonkin Resolution was passed in Congress on August 7, 1964. It provided the legal authority for Johnson to escalate the Vietnam War. On August 2 North Vietnamese gunboats had attacked the USS *Maddox* in the Gulf of Tonkin. On August 4 the *Maddox* and another vessel, the USS *Turner Joy*, reported being under attack. Many doubts exist about whether or not the second attack actually took place, but the Johnson administration used it as a pretext for retaliation. Johnson ordered the first U.S. air strikes against North Vietnam. The resolution was passed 88-2.

Johnson won the 1964 presidential election by a landslide. In addition to his domestic agenda, the GREAT SOCIETY, Vietnam was the largest issue he dealt with. Still relying on trusted advisers like Richard Russell, even though he would not take his advice, Johnson had countless discussions about Vietnam. Johnson's rationalization was what he considered a treaty commitment inherited from Eisenhower and Kennedy. No matter what Johnson said to him, Russell stuck to his conviction that Vietnam was not the place to invest U.S. blood and treasure. Johnson told Everett Dirksen, Senate minority leader, that communist propaganda, his advice from Eisenhower, and the domino theory informed his policies with regard to Vietnam.

MAJOR ESCALATION

After July 1965 the war escalated into a major international conflict. The North Vietnamese army numbered in the thousands, and they supported an estimated National Liberation Front force of 80,000. From 6,000 U.S. troops in Vietnam in July 1965, the number increased to over 536,000 by 1968, with an additional 800,000 South Vietnamese troops. Both sides played to

The social activism and antiwar movements of the late 1960s spurred many protests against the Vietnam War.

their own strengths. The United States had great wealth, modern weapons, and a highly trained military force under the command of General William Westmoreland. Using bombing raids and search-and-destroy missions, it sought to force the opponent to surrender.

The National Liberation Front and the North Vietnamese army, under the exceptional direction of Vo NGUYEN GIAP, used a different strategy altogether. They were lightly armed and knew the area. They relied on the guerrilla warfare tactics of stealth and mobility. Giap wanted to wear down the United States and its allies by harassment missions.

Between 1965 and 1967 the United States did untold amounts of damage to Vietnam. Bombing increased from 63,000 tons in 1965 to over 226,000 tons in 1967. The U.S. military strategy failed to produce clear results. The war dragged on, and opposition to the conflict in the United States intensified. Countless protests took place in cities and on college campuses. Troops who returned home were often treated poorly, quite the opposite of the heroes' welcome experienced by returning veterans of World War II.

The Tet Offensive of 1968 brought a new phase of the war. In late 1967 the North Vietnamese launched operations in remote areas to draw U.S. forces away from cities. On January 31, 1968, the National Liberation Front launched massive attacks on the unsecured urban areas. They led strikes on 36 provincial capitals, 5 major cities in the south, and 64 district capitals. They also attacked the U.S. embassy in Saigon and captured Hue for a period. Although the Tet Offensive failed overall, it had a profound psychological effect on the people of the United States. Protests increased, and murmurs that

the war was unwinnable became much more audible. As a result of developments in Vietnam and widespread unrest across the country, Lyndon Johnson announced that he would not seek reelection in 1968.

After the Tet Offensive, ensuing peace talks failed to produce any agreement. The problem of Vietnam fell to the fourth U.S. president involved in the Vietnam conflict, RICHARD NIXON. In 1969 he expanded the war into neighboring Cambodia, a move that he kept from the press, further increasing the gap in the people's trust in the government when he went public about the decision in 1970. The domestic backlash led to a new wave of protests, during which four students died at Kent State University in Ohio, and two more at Jackson State University in Mississippi.

Nixon's involvement in Vietnam was marked by increased domestic opposition. After the Cambodian affair, Congress repealed the Tonkin Gulf Resolution. The trial of Lieutenant William Calley, commander of a unit that murdered 500 South Vietnamese civilians at My Lai, raised fundamental moral questions about the war. Finally, the Pentagon Papers were published in 1971, which deepened public distrust in the government. Polls showed that more than 70 percent of Americans felt that the United States had erred when it sent troops into Vietnam. During 1972–73 the U.S. phase of the war ended.

A peace agreement was signed in Paris on January 27, 1973. It allowed for the extraction of U.S. military forces from Vietnam and the return of U.S. prisoners of war but did not address the fundamental issues over which the war had been fought. North Vietnam was allowed to leave 150,000 troops in the south, and the future of South Vietnam was not directly and clearly spelled out. Fighting broke out between the north and the south, and the U.S. Congress drastically cut military and economic aid to South Vietnam.

When Richard Nixon resigned because of the WATERGATE SCANDAL, the Vietnam War issue was passed to its fifth president, GERALD FORD. Congress rejected his request for \$722 million in aid for South Vietnam, agreeing to only \$300 million in emergency aid to extract the remaining U.S. personnel from the south. The climax of this came on May 1, 1975, with a harrowing rooftop helicopter evacuation.

The total cost of the war was extensive. South Vietnamese military casualties exceeded 350,000, and estimates of North Vietnamese losses range between 500,000 and 1 million. Civilian deaths cannot be accurately counted but ran into the millions. More than 58,000 U.S. troops were killed, and over 300,000 were

injured. The total financial cost of the war exceeded \$167 billion.

Many of Johnson's Great Society reforms were cut back because of the increased military expenditures. Veterans returning home experienced long-lasting effects, which ranged from flashbacks to posttraumatic stress disorder to the effects of exposure to chemicals. Furthermore, the war saw no tangible results. Once the United States evacuated Saigon, the North overran the city, and Vietnam was united under communist rule.

Vo Nguyen Giap

(1911–) *Vietnamese military leader*

In the history of communist Vietnam, Giap is second only to HO CHI MINH in the impact he had. Ho named Giap commander in chief of the Vietminh forces fighting the French at the end of World War II. Giap orchestrated the defeat of the French at Dien Bien Phu in 1953 and was named minister of defense of the DEMOCRATIC REPUBLIC OF VIETNAM. Giap was also the chief military strategist against the U.S. led VIETNAM WAR.

Giap was born in central Annam, just north of the 17th parallel, on August 25, 1911, to Nguyen Thi Kien and Vo Quang Nghiem. His early life was spent in one of the poorest sections of Vietnam. However, Giap's father was a member of the tiny middle class of his region, a rice farmer who tilled his own land and rented another small portion, in addition to being a practitioner of traditional Asian medicine.

From age five until eight, he attended school in An Xa. The school was supervised by the French but taught by Vietnamese. In 1923 he received a certificate for finishing elementary studies, which was not very common. The following year he took the entrance examination to qualify for additional education at Hue but failed. He studied diligently and passed the exam in 1925. He attended school at the Quoc Hoc, which was a known

seedbed of revolution; his leadership abilities and intelligence helped him excel as a student.

Giap then became a history teacher, a profession he retained throughout the 1930s. At the same time, he was active in various revolutionary movements. He joined the Communist Party in 1934, and assisted in founding the Democratic Front in 1936. He was a devoted scholar of military tactics and studied Napoleon and the ancient Chinese military tactician Sunzi extensively. The French outlawed communism in 1939, so Giap, along with Ho Chi Minh, fled to China, where he studied guerrilla warfare.

From 1939 until around 1947 Giap was busy developing and directing the military plan that defeated the French and eventually caused the United States to abandon its efforts in Vietnam. It was a multifaceted plan that included gathering popular support for his efforts and mobilizing the people to join the communist cause. Giap's military strategies caused millions of people to lose their lives, including millions of Vietnamese, both North and South, and over 58,000 Americans. Many American soldiers were impressed with the diligence of the Vietnamese, the skill of the North Vietnamese army, and their discipline. Much of this was due to the leadership of Giap.

When the Socialist Republic of Vietnam was established in 1975, when North Vietnam conquered the south and united the nation, Giap served as deputy prime minister and minister of defense. After his retirement, he wrote several books. In 1992, he was awarded the Golden Star Award, Vietnam's highest decorative honor.

Philadelphia: Recon Publishing, 1976.

JAMES E. SEELYE, JR.

Vorster, B. J.

(1915–1983) *South African prime minister*

Balthazar Johannes (John) Vorster was South African prime minister from 1966 to 1978. He is perhaps best known for having legislated into power some of apartheid's most discriminatory and racial policies. Born on December 13, 1915, in Uitenhage, Eastern Cape, John

Vorster was the 13th child of a wealthy sheep farmer. After receiving his primary and secondary education in the Eastern Cape, he went on to receive his bachelor of law degree from Stellenbosch University and set up a law practice in Port Elizabeth in the late 1930s. With the onset of World War II, he ardently opposed South Africa's involvement in support of the Allies by becoming a member of the pro-Nazi Ossewa-Brandwag. His support of the Nazi regime under Adolf Hitler landed Vorster in jail during much of World War II. However, this did little to deter his radical ideology, and he maintained that the dictatorial regime in Germany at the time was a more productive and suitable model for South African governance than the parliamentary system already in place. When Vorster was released from jail in 1944, his right-wing political and social views led him to join the growing South African National Party.

Vorster worked his way up the ranks of the party cadre, and in 1953 he was elected to parliament in Cape Town as a National Party representative. After one session in parliament he was appointed deputy minister of education in 1958; he rigidly enforced apartheid's Bantu education policies. Under Prime Minister Verwoerd he became minister of justice in 1961. During this time, the government sent South African Defense Force soldiers to support Ian Smith's white regime in Rhodesia, with the popular support of most of white South Africa.

Vorster succeeded Prime Minister Verwoerd unopposed after Verwoerd was assassinated in 1966. His brief and uneventful time as a cabinet minister under Verwoerd meant that he knew little about the workings of departments other than his own. He knew little about the African population and the inner workings of the huge departments that governed their lives. However, during the year he came to succeed Verwoerd, Vorster combined the Justice portfolio with that of Police and Prisons, strengthening the power of the department and the South African Police Service. Although Vorster continued with the basic tenets of separate development policies, he alienated extremist factions of the National Party early in his prime ministership by pursuing diplomatic relations with African countries and by agreeing to let black African diplomats live in white areas. However, Vorster's tenure as prime minister was marked mainly by an increase in racial discrimination and violence in all of South Africa, including an increase in detention without trial.

Although Vorster's government is mainly known for streamlining and harshly enforcing apartheid's policies, his foreign policy initiatives are generally viewed

as moderate and conciliatory. He began by unofficially supporting Rhodesia, which at the time was struggling to gain independence from British rule under prime minister Ian Smith. Although publicly he espoused the white public opinion in South Africa, he did not wish to alienate potential political allies such as the United States by extending diplomatic recognition to Rhodesia. He exerted his pressure as a hegemon in the region by persuading Smith to negotiate with Mozambique during the regional civil war that was ongoing in southern Africa. Vorster began cutting off vital supplies to Smith and even went so far as to refuse calls made by the Rhodesian prime minister. International pressure continued to squeeze South Africa for the remainder of apartheid.

Vorster, in an attempt to regain South African public approval, invaded Angola in the 1970s in order to protect South-West Africa (present-day Namibia) against rebel attempts by Angola to invade the country for diamonds. Continuing his conciliatory initiatives in September 1974, Vorster announced in Cape Town his famous *Détente* with Africa policy. Despite regional efforts in Angola at the time, Vorster promised cooperation with the leaders of neighboring black African nations. The negotiations over Rhodesia and attempts to make peace with black Africa were predicated on the hopes that such maneuvers would postpone Vorster's day of reckoning in South Africa. His hope was that emerging Zimbabwean and Mozambican states would feel indebted to South Africa for its role in liberating these countries.

The 1970s were a turbulent time for Vorster. He harshly suppressed the Soweto uprising in 1976, which would draw more international pressure in the form of economic and social sanctions. He granted independence to the Transkei in 1976 and Bophuthatswana in 1977 in accordance with apartheid's separate development policies, although economic development within them would stagnate.

He maintained the view that Africans could exercise political rights only in their homelands regardless of where they actually lived. On September 12, 1977, Steve Biko, the Black Consciousness leader, died in horrifying circumstances while in police custody. Vorster's response was personally to ban 18 organizations. This step helped him to an overwhelming victory in the general election of November 1977.

However, Vorster did take the first, unconscious steps toward a more equal South Africa. Vorster's minister of sport and recreation, Dr. Piet Koornhof, managed to secure some limited desegregation of sport by invoking the fiction of multinationalism: Each national group had to play sport separately, but they might play against each other in multinational events. Similarly higher-class hotels and restaurants might acquire multinational status and thereby admit people of all races. An elaborate system of permits for mixed gatherings, events, and venues was initiated. Vorster saw many apartheid policies as unnecessary and began the slow process of weeding them out.

In the late 1970s Vorster was implicated in what became known as Muldergate (so named after Dr. Connie Mulder, the information cabinet minister at the center of the scandal). Although Vorster was certainly a victim of the scandal, in a sense the scandal arose from circumstances that he himself had perpetrated. Vorster was implicated in the use of a slush fund to buy the loyalty of *The Citizen*, the only major English-language newspaper favorable to the National Party. The official investigation concluded that Vorster, in conjunction with the head of the South African Police Services, General H. J. van den Bergh, had not only conspired to manipulate *The Citizen* but also to buy the U.S.-based *Washington Star*.

It was discovered that in 1973 Vorster had agreed to Mulder's plan to shift about 64 million rands from the defense budget for a series of propaganda campaigns. In what became a National Party embarrassment, a commission of inquiry finally concluded in 1979 that Vorster had been aware of the fund and had tolerated it. After the scandal, Vorster retired from the position of prime minister in 1978. Vorster died in Cape Town in 1983.

Wajed, Sheikh Hasina

(1947–) *Bangladeshi leader*

Sheikh Hasina Wajed is the president and head of the Bangladesh AWAMI LEAGUE. She is the daughter of SHEIKH MUJIBUR RAHMAN, the popular Bangladeshi leader who played a leading role in the founding of Bangladesh. Sheikh Hasina Wajed was one of only two members of the Mujib family to survive a bloody August 15, 1975, military coup.

Sheikh Hasina Wajed was born on September 28, 1947, in the city of Tungipara in the Gopalganj district of Bangladesh. She earned her B.A. from Dhaka University in 1973. During her school days, she became active in politics, becoming the chief of the Student Union at the Government Intermediate College for Women in 1966. She and other members of her family were imprisoned several times by Pakistan's military government leading up to the Bangladesh liberation struggle in 1971.

After the assassination of Mujibur Rahman in 1975, Wajed was forced by the military government of General Ziaur Rahman to live in exile until 1981. In 1981 she became the president of the Bangladesh Awami League.

With an absolute majority secured by her Awami League in the 1996 election, Wajed became the prime minister of Bangladesh on June 23. She took many measures to alleviate rural poverty, enhance per capita income, create job opportunities, and increase agricultural production. She also introduced new

welfare schemes, innovative housing programs in rural areas that reversed the trend of migration from rural to urban areas.

She was the leader of the opposition in the Bangladeshi parliament from 1986 to 1987, 1991 to 1993, and 2001 forward. Under her stewardship, the Awami League boycotted parliament until June 2004, accusing the government of Khaleda Zia of corruption and nepotism.

Wajed is a fierce, enigmatic leader who believes in political parties based in the needs of the masses and in mobilizing the party cadre to win elections. Coming from a political family and with a father who was a highly revered personality in Bangladesh politics, Wajed is a political force to be reckoned with and is likely to play a prominent role in Bangladeshi politics for the foreseeable future. She is also an author of repute.

MOHAMMED BADRUL ALAM

Warsaw Pact

Warsaw Pact is the informal title given to the Warsaw Treaty Organization (WTO), a group of Eastern European nations and the Soviet Union pledged to mutual assistance and defense. In 1955 the member nations signed the Treaty of Friendship, Cooperation, and Mutual Assistance. The Warsaw Pact's objectives from its inception to its demise in 1991 changed, but throughout that time, the organization served as the means by which the Soviet Union bound its Eastern European client states together militarily.

The Warsaw Pact agreement replaced a series of bilateral treaties of defense and friendship between the Soviet Union and these nations. Albania, Bulgaria, Czechoslovakia, Hungary, Poland, and Romania joined with the Soviet Union. The NORTH ATLANTIC TREATY ORGANIZATION (NATO) had been in existence since 1949, but NATO announced in May 1955 that it would include West Germany as a member; this prompted the formation of the Warsaw Pact. Thus only 10 years after the end of World War II, the Soviet Union not only was engaged in a COLD WAR with the West but also faced a resurgent Germany.

It was not only an external threat that moved the Soviets to change their agreements with these nations, but there was the matter of internal stability as well. Following World War II, there had been significant armed resistance to the Soviets, who had entered these nations while advancing against the retreating German armies. Polish anti-Soviet partisans opposed the Soviets until well into the late 1940s. Demonstrations against the Soviets caused real concern about the stability of the communist elites running these countries. By bringing in Soviet troops to occupy these countries as part of Warsaw Pact activities, the Soviet Union allowed itself to more easily defend any attacks that might come from the West and, at the same time, to keep these friendly regimes stable. East Germany joined in 1956. Yugoslavia did not join at any time.

The treaty clearly stated that national sovereignty would be respected and that all of the signatories were independent. The treaty was to last for 20 years, with an automatic 10-year extension. Each member nation could unilaterally leave the organization; the reality proved to be very different. In 1956 the Hungarian government of Imre Nagy declared that it would no longer be allied with the Soviet Union but would become a neutral. Part of this neutrality process would be its withdrawal from the pact.

Regardless of any promises, the Soviet Union acted quickly to defeat this rebellion. Using the request of

some Hungarian Communist Party members as an invitation to act, Soviet infantry and armor invaded the country and after a two-week struggle replaced Imre Nagy's government with a more compliant government under János Kádár. Although the Soviets cited the danger of breaking up the alliance to justify the invasion, it was only Soviet troops that took part in the operation.

In the early days of the Warsaw Pact, the nature of the alliance was somewhat vague. Each of the member nations, while influenced by the Soviet Union, still had a certain amount of independence in its tactical doctrine and did not coordinate its training with either the Soviet Union or other members. That situation would change in the coming years. From 1961 on, combined exercises were conducted, and Soviet-manufactured weapons and equipment were purchased by the member nations. High-ranking Soviet officers were assigned to the defense ministries of Warsaw Pact members to ensure a uniformity of training and to keep the national militaries subservient to and a part of the armed forces of the Soviet Union.

Although the Warsaw Pact gained cohesion in terms of command and control, there were movements that served to weaken it. In 1962 there was another defection from the Warsaw Pact, this time a successful one. In this case it involved Albania strengthening its ties to China and distancing itself from the Soviet Union. Because Albania did not border on any other Warsaw Pact member, the Soviet Union had no choice but to accept this action. The Soviets thus lost access to a Mediterranean port. Albania's formal defection in 1968 merely ratified what already existed.

INDEPENDENT STREAKS

Another unhappy member of the alliance was Romania. This country managed to conduct a very successful balancing act in staying within the alliance, exercising a surprising degree of independence, and not paying a very high price for its actions. Romania's independent streak began as early as 1958, when it stated that Soviet troops were not welcome on its territory, continuing through 1968, when it would not participate in the invasion of Czechoslovakia. Romania's position was that the pact existed only for self-defense and not to maintain communist elites in the separate nations. In part because Romania was loyal in other ways and because it was not close to the potential front with Germany, this independent streak went unpunished.

Not every nation was so fortunate. In late 1967 a reform movement within the Czechoslovak Communist Party caused a major change in leadership. These events

were closely monitored by the Soviet leadership. After the attempted defection by Hungary 10 years before, Albania's departure, and Romania's distancing itself, the Soviets were concerned that any reform or liberalization might weaken their control over this state. The continued freedom of the press and freedom of expression forced the Soviets to act. On the night of August 20–21, Soviet troops, assisted by forces from Hungary, East Germany, Bulgaria, and Poland, invaded. Combined Warsaw Pact exercises had been taking place that summer, and the Warsaw Pact nations had been able to stage their invasion and subsequently move quickly into the country. The Czechoslovak government was changed, and there was no more discussion of changing Czechoslovakia's role in the Warsaw Pact.

Thirteen years later, the Warsaw Pact's invasion of Czechoslovakia influenced another nation. This time it was Poland, where vigorous opposition appeared in the form of the labor union SOLIDARITY. By the end of 1981, after almost two years of liberalization, the Communist government of Poland imposed martial law. Union leaders were imprisoned, the union was declared illegal, and Polish soldiers took over many of the government's functions. The rationale for this move was that the imposition of martial law by Polish authorities would eliminate the possibility of a repetition of the events of 1968.

SOVIET LEADERSHIP

As the 1980s wore on, there were significant changes in Soviet leadership. LEONID BREZHNEV, who had ordered the invasion of Czechoslovakia and threatened the same for Poland, died in 1982. He was succeeded by Yuri Andropov, who had, earlier in his career, restored order to Hungary after its unsuccessful rebellion in 1956. Andropov, died in 1984 and was for a few months succeeded by Konstantin Chernenko. With the accession of MIKHAIL GORBACHEV to power in 1985, relationships between the Soviet Union and the Warsaw Pact slowly changed. That year the Warsaw Pact came up for renewal, and the members agreed to another 20-year term to be followed by a 10-year extension, as had been done 30 years before. It became recognized that there would be no more interventions such as the ones that had taken place in Czechoslovakia and had been threatened in Poland.

The Warsaw Pact still, however, existed as a force with over 6,300,000 soldiers—20 percent of whom were non-Soviet. The resolution of the Euromissile crisis and changing politics within the Soviet Union were leading to other changes. At the end of 1988 Gorbachev announced that there would be troop withdraw-

als from East Germany, Hungary, Czechoslovakia, and Poland. The power elites did not look forward to this, as their position within their own countries had been strengthened against dissidents and other opposition by the presence of the Soviet army.

Early in 1989 the Hungarian government removed its barbed wire barriers along its border with Austria, and Solidarity scored well in a partially free election. Before the year was out, the regimes had changed in Bulgaria, Romania, East Germany, and Czechoslovakia. Although there were some attempts to keep the Warsaw Pact alive as a political organization, the Warsaw Pact ended in 1991. Eight years later three former members of the Warsaw Pact—Czechoslovakia, Poland, and Hungary—joined NATO. In 2004 former members Bulgaria, Romania, and Slovakia joined, as did three former republics of the Soviet Union—Lithuania, Latvia, and Estonia.

The Warsaw Pact never functioned as smoothly as desired. There was a great deal of distrust between the Soviet Union and the member states and among the member states themselves. Several of these countries had not enjoyed good relations before World War II and still harbored ill feelings toward each other. Also, although the Soviet Union, could compel these nations to buy Soviet equipment and essentially to become part of the Soviet army, they could not force complete obedience in all matters. Despite Soviet demands that pact members buy substantial amounts of military equipment, many of the nations refused to do so.

The purchase of military equipment presented another difficulty. Arms purchases would bring in cash desired by the Soviet Union, and it wanted these nations to field equipment compatible with Soviet issue. On the other hand, the Soviets did not want other pact members to have armies, air forces, or navies that could present obstacles to the Soviet Union. Although the Warsaw Pact sent advisers and provided military aid to Soviet clients, there never was a conflict between NATO and the Warsaw Pact. To predict that pact forces would have fought unreservedly to protect the Soviet Union and socialism is an unrealistic assumption.

ROBERT N. STACY

Watergate scandal

Watergate is an impressive hotel, apartment, and office complex that overlooks the Potomac River near an old canal lock. It was built between 1964 and 1971. The name evolved to become an all-embracing label for political corruption, intrigue, and the misuse of presidential authority. Watergate, in the lexicon of U.S. politics, is simply synonymous with scandal. In the period from 1972 to 1974 the scandal emerged as an interconnected series of events and deeds that would destroy the RICHARD NIXON presidency and lead to his resignation on August 9, 1974. In its wake, Watergate produced a national crisis in leadership and a lasting sense of national betrayal.

The Watergate crisis began with a burglary on June 17, 1972. A security guard discovered a suspicious tape holding a stairwell door open, and this prompted him to contact Washington police. The police discovered and arrested on the scene Bernard Barker, Virgilio Gonzalez, Eugenio Martinez, James W. McCord, Jr., and Frank Sturgis. The men were in the process of breaking into the Democratic National Committee Headquarters. They also had wiretapping equipment. McCord, a former CIA operative, was the chief of security at the Committee to Re-elect the President (CRP, or CREEP), and in his possession was the telephone number of E. Howard Hunt, a possible incriminating direct link to the White House.

After a White House dismissal of the affair, the burglary could have passed into obscurity in this 1972 presidential election year if there had not been continuing media attention, driven by the efforts of *Washington Post* reporters Carl Bernstein and Bob Woodward. Making use of FBI sources, the reporters launched a deep probe of the events. The outcome was that the burglary began to appear as one part of a complex dirty-tricks campaign by Nixon cronies.

The basis for such suspicions rested largely with E. Howard Hunt and G. Gordon Liddy, who were tied to the Special Investigations Unit of the White House, known as the "Plumbers." This group was active in undermining administration opponents through a variety of nefarious schemes such as breaking into the offices of Daniel Ellsberg, a former Pentagon and State

Department employee. As the future would reveal, these actions would have unfortunate consequences for the president. The Watergate burglary itself had the approval of former attorney general John Mitchell and the support of leading White House personnel such as Charles Colson and John Ehrlichman, in addition to the president's campaign manager, Jeb Magruder. Few believed that any of these men would have acted without the personal approval of the president.

The Watergate burglars, along with Liddy and Hunt, went on trial in January 1973. All pleaded guilty except McCord and Liddy. All were convicted of burglary, wiretapping, and conspiracy. The defendants initially refused to talk, and the judge, John Sirica, ordered long sentences unless there was greater cooperation. This brought about McCord's admission that the campaign was behind the burglary and had arranged payments to guarantee silence.

With the McCord admission, the political stakes were considerably raised, leading to a Senate investigation chaired by Senator Sam Ervin. Watergate was now on the national agenda, and White House staff faced subpoenas to testify. Nixon's close advisers H. R. Haldeman and Ehrlichman resigned, and White House counsel John Dean was fired. A new attorney general, Elliot Richardson, was also appointed. Richardson appointed Archibald Cox to head an independent inquiry.

The Senate investigation was televised from May 17 until August 7, 1973, and many former White House officials testified, including John Dean. The testimonies produced disastrous results for the president. The situation became even more complex after a White House official, Alexander Butterfield, admitted the existence of a White House taping system, which seemed to offer a way of finding the truth. The tapes then became part of the subpoena process.

Nixon thought that this particular intrusion represented an attack on executive privilege. He ordered the attorney general to dismiss Cox if he didn't cancel the subpoena. This led to what has come to be known as the "Saturday Night Massacre," which produced the resignation of Richardson and his deputy, William French Smith. Nixon appointed a new special prosecutor, Leon Jaworski, and as a desperate compromise gesture released the tapes in an edited form. The tapes seemed to cause not less but more distress for Nixon, particularly after it was revealed that there had been an 18-minute erasure as well as many additional erasures. Ultimately, the issue of the tapes was resolved on July 24, 1974, when the Supreme Court in its decision

United States v. Nixon denied the presidential claim of executive privilege.

Nixon's position throughout 1974 had also been progressively undercut through an ever-increasing series of guilty pleas by White House associates. In January campaign aide Herbert Porter admitted lying to the FBI; in February Nixon's lawyer, Herbert Kalmbach, pleaded guilty to illegal electioneering; and in March the so-called Watergate Seven were all indicted for conspiring to interfere with the Watergate investigation. To make matters worse, other Watergate grand jury indictments followed in April when Ed Reinecke, a lieutenant governor of California and a Nixon campaigner, was charged with three counts of perjury. Also in April Dwight Chapin, Nixon's appointments secretary, admitted perjury and lying to the Senate and a grand jury.

The situation for Nixon was now without redemption. The House of Representatives began preparations for impeachment following a July 27, 1974, vote of 27 to 11 by the House Judiciary Committee on obstruction of justice charges. Other impeachment articles followed on July 29 and 30. The release in early August of a damning tape from June 23, 1972, which revealed Nixon and Haldeman discussing possibilities for blocking FBI investigations, proved to be the final blow that toppled Nixon from power.

Without support in the House and little promise of support in the Senate, Richard M. Nixon announced to the nation on August 8, 1974, that he would resign as of noon on August 9, 1974, becoming the first U.S. president to do so. He was succeeded by GERALD FORD. Ford, on September 8, pardoned Nixon and thus saved him from criminal prosecution. Until his death, Nixon maintained his innocence. Watergate poisoned the political waters of the nation and left a jaundiced, cynical view of politicians and their promises. When stripped of their offices and the emblems of power, the politicians appeared disgraceful, dishonest purveyors of power for power's sake without regard for the well-being of the democracy. This would create a lasting legacy of paranoid suspicions and give rise to a climate receptive to conspiracy theories.

On a more positive note, the events surrounding Watergate led to reforms in campaign financing as well as the passage of the Freedom of Information Act in 1986. The media became a much stronger voice, particularly as the nation moved toward news coverage on a 24-7 basis. This led to the quandary of instant analysis, often incorrect, which can shape policy and possibly undermine the best democratic interests of the nation.

Richard Nixon (right) departs the White House after his resignation. His administration was devastated by the Watergate scandal.

The cult of personality and celebrity has now perhaps replaced the cult of power.

THEODORE W. EVERSOLE

Wen Jiabao (Wen Chia-Pao)

(1942–) *Chinese politician*

Wen Jiabao was born in Tianjin, China, and attended Nankai High School. He graduated from the Beijing Geological Institute, joined the Communist Party in 1965, and began his career in the Gansu provincial geological bureau.

Wen moved to Beijing in the 1980s and advanced through the ranks of the General Office of the Central

Committee of the Communist Party. He worked closely with Zhao Ziyang in the late 1980s and was demoted after Zhao's fall from grace following the TIANANMEN SQUARE MASSACRE. Unlike Zhao's, Wen's career recovered quickly, and he was able to continue to work under JIANG ZEMIN, becoming an alternate member of the Politburo in 1992. In 1998 premier Zhu Rongji entrusted him with oversight of agriculture, finance, and environment policies.

Wen became premier of China in 2003, succeeding Zhu Rongji. He is noted for his encyclopedic knowledge, practical approach, and consensual management style. He has proven himself to be a political survivor and has built up a network of influential friends during his political career. Wen has shifted the focus of China's economic policies from growth and development at all costs to consideration of social goals such as public health and education, more egalitarian development, and an awareness of the costs of development such as pollution and workers' illness and injury.

Wen has not been afraid to deal publicly with controversial matters involving public health and safety. In 2003 he ended public silence over the Severe Acute Respiratory Syndrome (SARS) outbreak, which began in Guangdong Province in November 2002. He was also the first Chinese official to address the AIDS problem in China. AIDS is already a serious and growing problem in China, and some experts estimate that there will be 10–20 million cases by 2010 if the problem is not addressed aggressively. In his efforts to address rural poverty Wen indicated the seriousness of his concern by making numerous unannounced visits to rural areas, thus avoiding elaborate preparations by local officials to cover up problems that exist.

SARAH BOSLAUGH

Western Saharan War

Spain ruled the western Saharan region known as Río de Oro as part of its colonial empire. The region was sparsely populated by mostly Sunni Muslim nomadic peoples of mixed Berber and Arab ancestry who were Arabic speaking. The region contained some of the

world's richest phosphate mines but was otherwise desperately poor. In the early 1970s the Polisario Front (Popular Front for the Liberation of Saguia al Hamra and Río de Oro) initiated an armed nationalist struggle for independence from Spain.

After the death of Francisco Franco, a committed imperialist, the new Spanish government granted the territory independence in 1975. Although the UNITED NATIONS declared that the Sahrawi should have self-determination, Morocco and Mauritania both immediately claimed the territory. King Hassan II of Morocco launched the "Green March" of over 300,000 unarmed Moroccans to march into the territory and incorporate it into Morocco.

Because of its rivalry with Morocco as well as its desire for access to a port on the Atlantic Ocean, Algeria supported the Polisario, supplying it with arms and assistance. The Polisario proclaimed the Sahrawi Arab Democratic Republic (SADR) in 1976. Recognized by some 70 nations, SADR became a full-fledged member of the African Union.

The war between the Polisario, Morocco, and Mauritania lasted from 1975 to 1984. The Polisario was able to defeat Mauritania, which withdrew its claims in 1979, but it was largely defeated by Morocco, which obtained arms from the United States. Moroccan troops moved into the northern sector of the territory and occupied the huge phosphate mines at Bu Craa. The war and Moroccan occupation resulted in the displacement of over 200,000 Sahrawi, who continue to live in refugee camps in surrounding regions to the present day.

By the early 1980s Morocco controlled the majority of the territory, and SADR administered the remainder as liberated territory. To protect its holdings, Morocco built a 380-mile earth wall studded with electronic sensors and antipersonnel radar provided by the United States. The wall effectively enclosed the Moroccan-held sections of Western Sahara.

The United Nations called for a referendum, for the people to vote for independence or for union with Morocco. The Polisario supported the referendum, but Morocco moved in settlers, who probably now outnumber the indigenous Sahrawis, to the territory it held. Morocco argued that the settlers, presumably all in favor of union, should be allowed to vote in the proposed referendum. Not surprisingly, SADR and its supporters strongly rejected Morocco's claim.

Both the United Nations and the United States attempted to mediate but failed to break the impasse. It appeared that Morocco would refuse any referendum until it could guarantee a victory in the election. An esti-

mated 160,000 Moroccan soldiers continued to occupy the territory, which had a population of some 267,000 Sahrawi people. In 1983 King Hassan II negotiated an agreement with Algeria, which then halted its support for the Polisario, although many Sahrawis remained refugees in Algeria and other neighboring countries.

After Hassan's death in 1999 his son King Muhammad VI announced his desire for a resolution to the problem, but he also opposed holding a referendum on independence. In 2005 riots by supporters of the referendum in Moroccan-held territory broke out; Moroccan forces quickly quelled the riots and repressed SADR supporters. Hence one of the longest liberation struggles in the contemporary era continued to be unresolved.

JANICE J. TERRY

World Bank

Founded at Bretton Woods, New Hampshire, in July 1944 by representatives of 44 governments, the International Bank for Reconstruction and Development (IBRD), commonly known as the World Bank, was conceived as a mechanism through which financial resources could be funneled to Europe to aid in the rebuilding effort in the aftermath of World War II. Initially based solely in Washington, D.C. (where its world headquarters remains), and from its founding to the present day dominated by the United States, the World Bank played a key role in the COLD WAR between the United States and the Soviet Union: at first in western Europe, and then through its loans to nation-states in Asia, Africa, and Latin America (the so-called Third World), considered by the United States key sites in the struggle against international communism.

From the 1950s the World Bank broadened its mandate to encompass economic development and poverty issues in Third World countries through its International Finance Corporation (IFC), its International Development Association (IDA), its International Centre for Settlement of Investment Disputes (ICSID), and its Multilateral Investment Guarantee Agency (MIGA), which together with the IBRD compose the World Bank Group. In 2007 the World Bank

Group had 185 member states, with close coordination between the activities of its five entities and some 40 percent of its staff based outside the United States. Its governing structure consists of a board of governors, with a representative from each member state; a board of executive directors; and a president.

In the decades following its foundation, the World Bank underwent a number of broad shifts, from funding postwar reconstruction to large development projects in Third World countries to its current focus on the alleviation of poverty and sustainable development. Scholarly interpretations of the World Bank's role in world affairs vary widely. Neoclassical and neoliberal economists and social scientists tend to interpret the World Bank in positive terms, as a force for progressive social change. In contrast, many left-leaning social scientists tend to view it as serving the interests of multinational corporations and facilitating the foreign policy goals of the world's advanced industrial countries, particularly the United States.

The bank itself acknowledges many of its past mistakes, particularly its support for massive "white elephant" projects in Africa and Latin America that lined the pockets of corrupt politicians and business owners while doing little to alleviate poverty or advance genuine economic development. Such projects included the Kariba Dam in Zambia and Zimbabwe (Southern Rhodesia) in the 1950s, which displaced and impoverished thousands of Tonga people; the Singrauli thermal coal mining projects in India (financed from the mid-1970s to the early 1990s and accused of causing massive environmental damage and human misery); and the Yacyreta Dam in Paraguay and Argentina (financed in the 1980s and early 1990s and denounced as an environmental catastrophe and a "monument to corruption").

Despite divergent interpretations, all observers agree that the World Bank and the closely affiliated International Monetary Fund, also founded at Bretton Woods in 1944, have been among the most important international financial entities of the postwar era.

MICHAEL J. SCHROEDER

World Trade Center, September 11, 2001

The United States of America and, in fact, the world, would not be the same after the terrorist attacks on the World Trade Center and the Pentagon on September 11, 2001. The term *9/11* was added to the U.S. vocabulary, symbolizing armed aggression holding humankind for ransom. American Airlines Flight 11, United Airlines Flight 175, American Airlines Flight 77, and United Airlines Flight 93 were hijacked by AL-QAEDA, a group owing allegiance to the militant Islamic leader Osama bin Laden.

The aircraft, respectively, were crashed into the north tower of the World Trade Center (WTC), the south tower of the WTC, the Pentagon headquarters, and a field near Shanksville, Pennsylvania. About 3,000 people died, and property worth billions of dollars was lost.

Bin Laden, the son of Saudi Arabian construction tycoon Mohammed Awad bin Laden, was the mastermind behind the September 11 attacks. Bin Laden had a deep hatred of the U.S. policy in the Middle East and called for the liberation of the region from the United States.

PREVIOUS TARGET

The United States had previously been the target of terrorist attacks such as the World Trade Center bombing (February 1993), a truck bomb at the Murrah Federal Building in Oklahoma City (April 1995), bomb attacks on U.S. barracks in Dhahran (June 1996), the bombing of U.S. embassies in Dar es Salaam and Nairobi (August 1998), a bomb attack on the USS *Cole* (October 2000), and year 2000 millennium attack plots. But these were not like September 11 in magnitude and precision. Bin Laden was linked with many terrorist attacks all over the world. The successful execution of the attack inside U.S. territory by 19 Islamic militants was a demonstration of the failure of U.S. intelligence. The terrorists dispatched by al-Qaeda passed through security checkpoints of airports easily and performed their mission. It was one of the greatest failures of U.S. intelligence since Pearl Harbor.

The militants had visited the United States and stayed there. Targets, as well as the type of aircraft, were being modified until the final decision. The plan had begun with Operation Bojinka, which was conceived by Khalid Shaikh Mohammed and Ramzi Yousef as early as 1995 in Manila. While Khalid was in AFGHANISTAN, he presented al-Qaeda with the argument that instead of using

aircraft loaded with explosives, commercial planes could be used to hit the targets. Nine planes were to be crashed into different targets such as the WTC, the Pentagon, the White House, and the Capitol. A 10th plane was to be hijacked by Khalid himself. It would be landed in the United States after all the male passengers were killed. Bin Laden decided to use four planes. The WTC, the Pentagon, and the United States Capitol were to be the targets. A new terrorist cell was established in Hamburg, Germany, and militants were chosen by bin Laden.

Bin Laden was eager to carry out the plan. At a January 2000 meeting held in Kuala Lumpur, militants discussed the USS *Cole* bombing and the September 11 attacks. Some of the members had already been to the United States, renting apartments and undergoing training as students at flight schools. By June 2000 al-Mihdhar, al-Hazmi, Mohammed Atta, and Marwan al-Shehhi were already in the United States. Omar al-Bayoumi had been in San Diego, California, since 1995. The terrorists often changed their places of residence, spent money on airline tickets, and got driver's licenses by obtaining mailboxes. In the final preparations, four teams were chosen and airline tickets were purchased.

The first plane, AA Flight 11, crashed into the north tower of the WTC and had on board the hijackers Walid Al Shehri, Wail Alsheri, Mohammad Atta, Abdul Alomari, and Satam Sugami. UA Flight 175 hit the south tower of the WTC and had on board Marawn Alshehhi, Fayez Ahmed, Mohald Alshehri, Hamza Al Ghamdi, and Ahmed Al Ghamdi. The Pentagon was hit by AA Flight 77, this third plane carrying Khalid al-Mihdhar, Majed Moqued, Nawaf Al Hazmi, and Salem Al Hazmi. Ahmed Al Haznawi, Ahmed Alnami, Ziad Jarrah, and Saeed Alghamdi had overpowered the fourth plane, UA Flight 93, which eventually crashed into the ground in Shanksville. Flight 11 crashed into the north tower of the World Trade Center at 8:46:40 A.M. local time and at 9:03:11 A.M. Flight 175 crashed into the south tower. Millions of people watched the live collapse of the north and south towers. The casualty figure was 2,986.

SHOCK AROUND THE WORLD

The whole world was shocked by the attacks. Some European countries observed three minutes of silence. Messages of sympathy poured in to the administration and the people of the United States. The UNITED NATIONS, in Resolution 1368, expressed its support to the United States in defending its homeland. The member countries of the NORTH ATLANTIC TREATY ORGANIZATION (NATO) declared that the attack on the United States was an attack against all NATO members. The

The September 11 attacks on the World Trade Center and the Pentagon shocked the world. The ruins of the twin towers are seen in an aerial shot. The towers had previously been the target of a terrorist attack in 1993.

immediate reaction of shock and fear gave way to anger and vengeance afterward in the United States. President GEORGE W. BUSH addressed the nation on the evening of September 11, saying that the United States was not going to be cowed by the acts of mass murder. The United States declared al-Qaeda the prime suspect, and bin Laden became a wanted man.

Patriotism reached a new height, and sales of the U.S. flag soared. Donations to charitable organizations topped half a billion dollars within two weeks after September 11. Blood donations increased. A \$40-billion emergency fund was granted by the U.S. Congress to tackle terrorism and help in recovery operations in New York and Washington after the attack.

Counterterrorism laws were introduced by the Bush administration infringing on the personal liberty of citizens. A Council for Homeland Security was established for internal counterterrorism efforts. The USA Patriot Act empowered federal authorities to prosecute terrorism suspects and detain them without charges. The Information Awareness Office (IAO), created in 2002, initiated measures for collecting information pertaining to Internet activity, credit card purchase histories, air-

line ticket purchases, medical records, driver's licenses, and personal information.

The Joint Inquiry into Intelligence Community Activities Before and After the Terrorist Attacks of September 11, 2001, released its final report in December 2002. The National Commission on Terrorist Attacks Upon the United States (9/11 Commission), the bipartisan commission created by Congressional legislation, made its report public on July 22, 2004.

The attacks also had significant economic repercussions, pushing the United States deeper into a recession. U.S. stocks lost \$1.2 trillion in value in a week, after the stock market was reopened six days after the attack. Recovery operations took months to complete, and the WTC fire was extinguished after burning for three months. The September attack led to the "War on Terror," with the United States increasing its military operations, putting pressure on terrorist groups, threatening governments sheltering the militants, and waging war in Afghanistan and afterward in Iraq.

Operation Enduring Freedom, which lasted for two months, began on October 7, 2001, against the TALIBAN regime in Afghanistan. Although a cooperative

government was installed in Afghanistan, bin Laden was not captured. But initial support for the War on Terror waged by the United States began to drop significantly after the invasion of Iraq in 2003.

PATIT PABAN MISHRA

Yahya Khan

(1917–1980) *Pakistani president*

Yahya Khan was the president of Pakistan and chief of army staff from 1969 to 1971, following the resignation of Mohammad Ayub Khan. As soon as he rose to power, Yahya Khan declared martial law to quell the widespread riots caused by discontent in the aftermath of the INDO-PAKISTANI WAR of 1965. Yahya Khan also dissolved the National Assembly and terminated the constitution. His two years as president were marked by strong tensions in East Pakistan, leading to the Bangladesh Liberation War and the eventual secession of BANGLADESH in 1971.

Yahya was born in Chakwal on February 4, 1917, into a family of Persian origins, descended from the military elite. He attended Punjab University and graduated first in his class from the Indian Military Academy. Yahya joined the British army, and during World War II he served in Iraq, Italy, and North Africa. After the partition of INDIA, he became the youngest brigadier general in the Pakistani army, commander in chief of the army in 1966, and when President Ayub Khan resigned, he turned to his faithful aide Yahya Khan to maintain order in the country. Yahya was resolute in his restoration of order in the country. To make this suspension of political and civil liberties more palatable, he also started a large-scale renovation of the country's civil service personnel. He also announced restrictions on economic monopolies and a more equal distribution of wealth.

Yet Yahya's reforms and his government were swept away by the conflict that erupted in 1971 between East and West Pakistan. SHEIKH MUJIBUR RAHMAN, leader of the AWAMI LEAGUE, launched a campaign for the creation of a federation in which East Pakistan would enjoy great autonomy. The League performed extremely well in the 1970 election, winning 160 out of 162 seats in East Pakistan. However the party did not get a single seat in western constituencies, which overwhelmingly went to ZULFIKAR BHUTTO's PAKISTAN PEOPLE'S PARTY. Since neither Bhutto nor Mujibur would support the other as prime minister, Yahya decided to solve the political impasse by sending the army to East Pakistan to crush the Awami League. The acts of brutality committed by the army caused millions to flee to India for Indian intervention, forcing the West Pakistani army to surrender. East Pakistan declared its independence, establishing the state of Bangladesh in 1972. Yahya Khan's only option was to hand power to Zulfikar Bhutto, who put him under arrest. He spent his later years far from the political scene.

LUCA PRONO

Yeltsin, Boris*(1931–2007) Russian president*

Boris Yeltsin was the first president of Russia following the collapse of the communist Union of Soviet Socialist Republics (USSR). Yeltsin struggled against the vestiges of the former regime and the chaos following its collapse to introduce a stable, democratic system.

Yeltsin was born in the region of Sverdlovsk in 1931. He studied construction at the Ural Polytechnic Institute, graduating in 1955. Yeltsin served in the Communist Party of the Soviet Union (CPSU) from 1961 to 1990. He first became a party administrator in 1969 and continued to develop contacts within the Soviet system.

Yeltsin rose to the top of the CPSU during the 1980s through connections with General Secretary MIKHAIL GORBACHEV, the de facto leader of the country, and other reformers. Gorbachev appointed Yeltsin to the Politburo. Yeltsin portrayed himself as a reformer and people's champion despite his lavish lifestyle. His initiatives became popular. However, Yeltsin repeatedly shuffled and fired staff members and underwent criticism by hard-line Communists. Soon Gorbachev also began to criticize Yeltsin. In 1987 Gorbachev removed Yeltsin from his high-ranking party positions. Yeltsin became a harsh critic of Gorbachev and advocated a slow pace of reform, which became a hallmark of his later policies. This was an effort to counter Gorbachev's favoring of a decentralization of power to create hurried reform. In response, Yeltsin was demoted. He vented in the Congress of People's Deputies, a parliamentary body established by Gorbachev. Yeltsin's detractors attempted to undermine his integrity, accusing him of being heavily intoxicated in public.

Growing dissatisfaction with the Soviet system made men who opposed it, such as Yeltsin, popular. In 1989 Yeltsin ascended to the Congress of People's Deputies as delegate from the Moscow district and gained a seat on the Supreme Soviet. In 1990 Yeltsin became chairman of the Supreme Soviet of the Russian Soviet Federated Socialist Republic (RSFSR). In June 1990 the Congress of People's Deputies of the RSFSR adopted a declaration of sovereignty. Soon after, Yeltsin resigned from the CPSU. During the 1991 democratic presidential elections, Yeltsin won 57 percent of the vote. In August 1991 hard-line Communists launched a coup against Gorbachev, who was held in the Crimea. Yeltsin returned to his presidential office in Moscow, which was surrounded by troops, to deal with the coup. From a tank turret, Yeltsin made a rousing speech that rallied the troops to defect in the face of mass popular demonstrations. The leaders of the coup were dispersed; Yeltsin emerged a national hero.

Gorbachev returned to power with diminished authority. Throughout 1991 the Russian government continued to take over the Soviet Union government. In November, Yeltsin banned the CPSU in the RSFSR. In December, Yeltsin met with the presidents of Ukraine and Belarus to discuss the Soviet Union's dissolution and its replacement with a voluntary Commonwealth of Independent States. On December 24 the Russian federation took the Soviet Union's place in the UNITED NATIONS. The next day, Gorbachev declared that the Soviet Union would cease to exist.

Despite the Soviet system's collapse, its vestiges remained. The Supreme Soviet contained many opposed to Yeltsin's policies, and local elites collaborated with criminal organizations. Yeltsin bypassed the Supreme Soviet and deliberated policy with his own inner circle. Throughout 1992 Yeltsin attempted to implement economic reforms by decree and declined to hold new elections. In January, Yeltsin removed state control over the prices of most goods, thereby reintroducing a capitalist system and stabilizing currency. The administrative elite of the Soviet era retained control of factories, shops, offices, and farms. Consequently they retarded implementation of Yeltsin's reforms. Lobbyist groups pressured Yeltsin, who granted a concession continuing governmental subsidies and guarantees that the denationalization of companies would not hinder directors' and workers' immediate interests. To appease his detractors, Yeltsin appointed their candidates to some key positions. In the face of skyrocketing inflation Yeltsin fired his premier and replaced him with Viktor Chernomyrdin, who introduced limits on profit rates for several goods.

Popular disenchantment with Yeltsin increased, and the country descended into crisis. Many farmers went unpaid for deliveries to state purchasing agents, and industrial production declined. Crime continued to grow. Several Russian republics rebelled. Yeltsin reasserted central authority, enacting a no-tolerance policy toward separatist movements to maintain the Russian state's integrity during the implementation of reforms.

Yeltsin maneuvered around cabinet members appointed to appease the opposition. He had inherited a constitution enabling the Congress of People's Deputies to intervene in any organ's jurisdiction. Former Communist elites in positions of power were concerned with securing their dominance and engaged in a power struggle with Yeltsin. In April 1993 Congress unsuccessfully attempted Yeltsin's impeachment. In response, Yeltsin held a national referendum concerning popular trust in his socioeconomic policies. The results encouraged Yeltsin, who dissolved the Russian parliament in September. Some of Yeltsin's detractors barricaded

themselves in the parliament building; Yeltsin ordered the seizure of the building and their forced removal and arrest. Yeltsin briefly declared a state of emergency. In December new elections were held under limited censorship, and Yeltsin initiated a new constitution increasing presidential authority. Yeltsin reappointed his favored cabinet and quickly implemented reforms. He continued to position his supporters as provincial governors. Russia's inability to establish a stable multiparty system gave Yeltsin freedom to maneuver. In late 1993 remaining price controls were lifted, and privatization continued. By 1994, however, Yeltsin realized that economic reform was happening too fast, and conditions were improving unevenly throughout the country.

Yeltsin's politics verged on opportunism. Following the nationalists' success in the 1993 elections, Yeltsin pursued nationalist policies. Following the Communists' success in 1995, Yeltsin adopted Communist policies. In December 1994 Yeltsin ordered Russian troops into the breakaway republic of Ichkeria. His military campaigns were unsuccessful and unpopular, damaging his political reputation and his image as protector of Russia's integrity. In 1995 Yeltsin suffered a heart attack. In 1996 he narrowly won the presidency in the face of a Communist resurgence resulting from disillusionment with democracy. Yeltsin became increasingly unstable, and his alcohol consumption mounted. He resumed his economic reforms and reduced the budget deficit. However, Yeltsin did little to curb the corrupt practices carried out by his administration. That same year Yeltsin announced Russia's default on its debts; financial markets panicked; and Russia's currency collapsed. In 1999 Yeltsin again fired his entire cabinet. His approval rating plummeting, Yeltsin resigned as president in favor of Prime Minister VLADIMIR PUTIN.

ERIC MARTONE

Yemen

The Arab Republic of Yemen is located on the southern part of the Arabian Peninsula, sharing borders with Saudi Arabia and Oman. Three-quarters of its popula-

tion in 2004 lived in rural areas, and its topography ranges from coastal plains to highlands to desert.

The British occupation and colonization of southern Yemen (Aden) continued until the late 1950s, when the United Kingdom promised to grant independence to the six states under its control in the south. Two southern Yemeni groups, the Front for the Liberation of Occupied South Yemen (FLOSY) and the National Liberation Front (NLF), fought the plans as well as each other, forcing the British to declare in 1967 that they would hand over power to any group that could set up a government. In November 1967 the last British troops were withdrawn, and the NLF formed a government with Aden as its capital. The federation was officially called the People's Democratic Republic of Yemen (PDRY). The name reflected the Marxist leanings of the government. Other communist countries, including the Soviet Union, CHINA, and Cuba, provided the impoverished nation with economic aid and assistance.

In 1962 the ruling religious leader (imam) in northern Yemen, Imam Ahmad, was overthrown by military officers with the support of Egypt. Fighting ensued between the royalists, supported by SAUDI ARABIA, and the republicans, supported by Egypt. Following their defeat in the 1967 ARAB-ISRAELI WAR, the Egyptians were forced to withdraw their troops. The republicans forged a peace with the remaining royalist tribes and obtained backing from the Saudis. The fighting ended in 1970, and a government was formed of both royalists and republicans as the Yemen Arab Republic (YAR), known as North Yemen or Yemen, with Sanaa as the capital. The republicans eventually took over the reins of government, exiling the imam's son to Britain.

In 1972 the two Yemeni governments fought over their common border. The dispute was mediated by the Arab League and resulted in the surprising Cairo Treaty, which anticipated the unification of the two sides within 12 months. The merger was delayed, and the two sides moved further right and left. The late 1970s was a period of assassination of leaders, upheaval, and armed clashes between the two sides.

During the 1980s a trend emerged: The two Yemens would fight, they would sign an agreement to unify the country, and the proposed merger would fail. In addition, in the mid-1980s oil was discovered in the Rub Al-Khali, the desert that straddled the two Yemens. In May 1988 the two Yemens agreed on a neutral zone so that each could use the oil in cooperation with the other. The resolution of this issue and the boost to their economies helped to pave the way for a concrete 14-month plan for unification. Declining assistance from

the crumbling Soviet bloc also encouraged the south to take reunification plans more seriously. In 1990 the border was demilitarized, and currencies were made valid in both Yemens. On May 22, 1990, the two Yemens were united as the Republic of Yemen, with the political capital in Sanaa and the economic capital in Aden. A referendum ratified the unification, and generally fair and open elections were held in April 1993.

Despite these political developments, the unification was seen by some Yemenis as too favorable to the north. During the 1990–91 Gulf crisis, Yemen declared its support for an Arab solution to the invasion of KUWAIT, demanding the Iraqis leave Kuwait and the U.S. troops withdraw from the region. In retaliation, Saudi Arabia expelled tens of thousands of Yemeni workers. Income plummeted as unemployment rose. In early 1994 violence spread and a new civil war broke out. With no outside support, the south was soon overrun.

After the 1994 war, Yemeni unity was reinforced, and all national parties now support national unity. In 1997 a second fair and calm parliamentary election was held, and President Ali Abdullah Saleh was elected to a seven-year term. With wide executive powers he appointed a vice president, cabinet members, a prime minister, and the 111 members of the Shura Council. However, the regime is threatened by mounting pressure from Islamist groups and local leaders.

RANDA KAYYALI

Yoshida Shigeru

(1878–1967) *Japanese diplomat and politician*

Yoshida Shigeru was both a diplomat and a politician; he served as prime minister of Japan from 1946 to 1947 and from 1948 to 1954. Yoshida led Japan through much of the U.S. occupation of Japan. His leadership ultimately allowed Japan to emerge from the economic, psychological, and physical damage of World War II. His policies led Japan to rapid economic recovery, and he was willing to give up independence in foreign affairs in exchange for military protection from the United States. As a result, Yoshida outlined much of the policy for Japan during the COLD WAR era. His

belief that the United States would provide the necessary security appealed to the United States as well as many of Japan's conservatives.

Yoshida was born in Tokyo on September 22, 1878, and educated at the Tokyo Imperial University. Like many of the Japanese military and diplomatic leaders of the early 20th century, he joined the Japanese diplomatic corps. In 1938 Yoshida retired while posted in London. He spent a brief time in prison after World War II for his participation in the Japanese government. He emerged as a key postwar leader.

On May 22, 1946, Yoshida became the prime minister of Japan. Allied occupation forces held him in high regard for his pro-United States and pro-British stances as well as his familiarity with Western cultures. On May 24, 1947, Tetsu Katayama replaced Yoshida as prime minister, but he regained the position on October 15, 1948, and would continue to serve in the position until 1954. Yoshida's policies for Japan concentrated on the economic growth required to rebuild the war-torn infrastructure. His policies were quite popular, and he was reelected for three consecutive terms—1949, 1952, and 1953.

Yoshida's most complicated role was bridging the gap from World War II Japan to Japan under occupation to the modern and contemporary economic power. Yoshida brought stability to Japan but also, in the direction he planned for Japan, offered an opportunity for regional peace and economic prosperity. Yoshida died on October 20, 1967. The decade during which he led Japan is called the Yoshida Years.

MATTHEW H. WAHLERT

Yugoslavia, breakup and war in

The wars that attended the breakup of Yugoslavia during the 1990s tend to be explained by indicating some historical predisposition of Balkan nationalities toward violence against one another. Although the legacy of the past did play a role in the conflict, it did not determine the bloodshed. In this respect there is no single reason for the dissolution of the Socialist Federated Republic

U.S. Marines set up a roadblock to check for weapons near the village of Koretin, Kosovo. Units were deployed as an enabling force for KFOR, the NATO-led peacekeeping mission in the Balkan region.

of Yugoslavia. Instead, there is a complex array of economic, cultural, and systemic factors.

Many of these factors can be traced to the federal design imposed on the state by Marshal Tito (Josip Broz), which began to unravel soon after his death. The April 1981 Albanian riots in Kosovo marked a turning point in the history of the Yugoslav state, which saw an escalation in interethnic tensions during the 1980s. These were underpinned by regional economic disparities. Gradually, economic nationalism impacted political developments. The ethnically based structure of the federation ensured that the political elites of individual republics relied on the support of their respective republics. Political programs, therefore, were increasingly influenced by nationalist agendas.

SLOBODAN MILOŠEVIĆ

These developments would not have sufficed to take Yugoslavia down the path of intercommunal violence

had it not been for the agency of individual republican leaders. Most commentators agree that it was the rise to power in Serbia of Slobodan Milošević that led to war. His manipulation of Serb nationalist sentiments allowed him to become president of Serbia in 1989. Under Milošević's leadership the Serbian parliament amended the constitution of the republic in March 1989. The provinces of Kosovo and Vojvodina lost their autonomy. In December 1990 Milošević ordered the National Bank of Yugoslavia to allocate unauthorized credits to Serbian-owned enterprises, which both triggered hyperinflation and stiffened the resolve of other republics to secede from Yugoslavia. Milošević's chauvinistic rhetoric and policies pushed the country into war.

From April to December 1990 all republics held multiparty elections. The overall success of nationalist formations at the ballot box precipitated the impasse that Yugoslavia reached in 1991. In October 1990 Slovenia and Croatia tabled a formal proposal for the

transformation of Yugoslavia into a loose confederation. Milošević rejected it. The crisis came in spring 1991 when Serbia announced that it was going to block the rotation of the federal presidency. In May 1991 the Serb representative refused to step down, which forced Slovenia and Croatia to declare independence on June 25, 1991, starting a series of wars.

The shortest of those conflicts was the so-called 10-day war in Slovenia. It started on June 27, 1991, when units of the Yugoslav People's Army (JNA) crossed into Slovenia from Croatia, and JNA units around Ljubljana moved in to occupy the airport. Yet what the authorities in Belgrade did not anticipate was the resolve of the fledgling Slovenian army and Slovenian citizens. By deploying effectively, Slovenian detachments engaged in attacks and ambushes of JNA convoys, besieged JNA barracks, and blocked roads. On July 5 the two sides agreed to a cease-fire, and on July 7, 1991, under the auspices of the European Community, the heads of Yugoslavia's republics signed the Brioni Agreement, which allowed for Slovenia's independence.

The Brioni Agreement, however, did not address the situation in Croatia. In February 1991 there were skirmishes between Croatian police and Serb militias. In April 1991 the self-proclaimed Serbian Autonomous Region of Krajina declared its secession from Croatia. By June, fighting in this area had already begun. JNA forces retreating from Slovenia lent their support to Serb militias, and in July 1991 a full-fledged war began in Croatia. The JNA attack targeted towns across Croatia. The city of Vukovar in particular became a symbol of the barbarity of the war. Completely surrounded by Serb forces in August, it was under siege for nearly 90 days, by the end of which the entire town was leveled.

“ETHNIC CLEANSING”

The war in Croatia witnessed the first instances of “ethnic cleansing”—a policy for “clearing” a particular territory of rival ethnic groups by either killing or expelling them. In October 1991, JNA forces began bombing the old city of Dubrovnik on the Dalmatian coast. This marked a turning point in the wars of Yugoslav dissolution as it urged international actors to get involved in stopping the violence. In late November all sides to the conflict agreed to a cease-fire, which was brokered by the UNITED NATIONS (UN).

The truce allowed for the establishment of a United Nations Protection Force (UNPROFOR). This ended the first phase of the war in Croatia. The cease-fire held from 1992 to 1994. In May 1995 the Croatian army took the offensive again, starting the second phase of

the war, and retook most of the Serb-controlled areas in western Slavonia and in the region of Krajina. This triggered an exodus of almost all the Serbs who lived in the country. The war in Croatia ended in December 1995.

In many respects the fighting in Croatia marked the next stage in the dissolution of Yugoslavia—the attempt to carve ethnically homogeneous states. On December 19, 1991, the Serbian-controlled western Slavonia and the region of Krajina declared themselves the Republic of Serbian Krajina, and on December 26, 1991, the government in Belgrade declared the establishment of the Federal Republic of Yugoslavia, consisting of Serbia, Montenegro, and Serbian Krajina. This formation attested to Milošević's strategy of carving out a “Greater Serbia” under the guise of a smaller Yugoslavia.

This approach was tragically confirmed during the war in Bosnia-Herzegovina. The republic was one of the most ethnically heterogeneous in former Yugoslavia. In 1990 the JNA had already begun transferring weapons to Serb militias in Bosnia-Herzegovina. In August 1991 Milošević met with the Bosnian Serb leader Radovan Karadžić to discuss a strategy for annexing portions of the republic to Serbia. In September the JNA began establishing, securing, and arming Serbian areas in Bosnia-Herzegovina, which in January 1992 proclaimed themselves the Republika Srpska (Serbian Republic). At the same time, the Croatian president Franjo Tuđman was also plotting to annex the Croat-dominated areas of Bosnia-Herzegovina. Despite the ongoing fighting between Serbia and Croatia, Milošević and Tuđman met secretly in September 1991 to discuss the division of Bosnia-Herzegovina.

The war in Bosnia-Herzegovina began in April 1992. The initial stages saw Serbian forces confronting Bosniaks and Herzegovinian Croats. The Serb forces unleashed a campaign of ethnic cleansing. In response to the violence, the United Nations designated as “safe areas” the cities of Sarajevo, Bihać, Gorazde, Srebrenica, Tuzla, and Zepa; dispatched UNPROFOR troops; and declared Bosnia-Herzegovina a no-fly zone. The international community presented a peace plan in January 1993 that proposed the division of the country between the Serbs, the Croats, and the Bosniaks. This proposal was rejected. Fighting continued until March 1994, when the Bosniaks and Croats formed a Bosniak-Croat Federation of Bosnia-Herzegovina.

Another front line was opened between the Bosniak forces themselves. The confrontation started in 1993 and went on until 1995. The intensity of the fighting in Bosnia-Herzegovina, and in particular the massacre of 7,000 Bosniak men and boys as a result of

the capture of the “safe area” of Srebrenica by Bosnian Serb forces, urged the international community to act. During November 1995 all sides met in Dayton and negotiated a peace agreement, which ended the war in Bosnia-Herzegovina.

In his first act as president of Serbia in 1989, Milošević had revoked the autonomy of Kosovo. This exacerbated the tensions between the Kosovo Albanians (Kosovars) and the Serbs in the province. Although the Kosovars organized a peaceful resistance, some of them formed the Kosovo Liberation Army (KLA) in 1996. The KLA began to carry out sporadic attacks on Serbian police in the province. In 1998 the tensions started to escalate, and both the United Nations and the North Atlantic Treaty Organization (NATO) tried to mediate in the conflict. It was the January 1999 massacre of Albanians in the village of Racak by Serb forces that urged the international community to put more pressure on the two sides. During February and March 1999 the international community organized a conference at Rambouillet (in France). Its failure and the continued violence in Kosovo forced NATO to initiate a bombing campaign of Yugoslavia on

March 24, 1999. NATO’s campaign, which lasted for 78 days, was its first-ever peace-enforcing mission without a UN mandate.

After the war in Kosovo, the only republics to remain in Yugoslavia were Serbia and Montenegro. The latter became increasingly vocal about its desire for independence, and in February 2003 the EUROPEAN UNION brokered an agreement for the creation of a UNION of Serbia and Montenegro. In June 2006 both Montenegro and Serbia declared their independence as two separate nations. This act formally ended the existence of Yugoslavia.

EMILIAN KAVALSKI

Zapatistas

In the heavily Mayan Indian state of Chiapas in southeastern Mexico, on New Year's Day, 1994, a group of rebels carrying automatic rifles, axes, and sledgehammers, wearing black ski masks, and calling themselves the Zapatista National Liberation Army (EZLN) proclaimed themselves in rebellion against the Mexican government. The uprising was timed to coincide with the implementation of the NORTH AMERICAN FREE TRADE AGREEMENT (NAFTA) between Mexico, the United States, and CANADA. The Mexican government responded by sending some 25,000 soldiers into Chiapas, armed with automatic weapons, tanks, and helicopters.

On January 12 the government declared a cease-fire, saying it would respond with force only if attacked. By this time around 150 people had been reported killed, most by government security forces. Talks between the EZLN and government negotiators began on February 20. The Zapatista spokesperson, who called himself Sub-Commander Marcos, soon became an international celebrity. In what has been called the world's first post-modern rebellion—waged against not only a national government but an international trade agreement, its principal weapons not guns but words, grassroots organizing, and the Internet, and launched not with the goal of military victory but of gaining indigenous rights and national and international solidarity—the Zapatista movement continued into the 21st century, posing a thorny challenge to the Mexican state and local power-holders. In 2007 the rebellion still simmered, centered

in dozens of Zapatista “autonomous municipalities” in the heart of the Chiapas Lacondón rain forest, central highlands, and northern zones.

Home to some of the oldest civilizations on Earth, Mexico's Maya zones have seen a long series of protest movements against local, regional, national, and imperial authorities that stretch back to the initial Spanish invasion in 1522 and continued with the Tzeltal Revolt of 1712, the Jacinto Canek Revolt of 1761, the Caste War of Yucatán from 1848 and its aftermath, and subsequent revolts and resistance movements. After the Mexican Revolution (1910–20) and the establishment of a “one party democracy” under the PRI (Institutional Revolutionary Party) in 1929, Chiapas remained one of the poorest and most marginalized states in the Mexican States United (Estados Unidos Mexicanos). In 1994 its 3.5 million people, spread over some 76,000 square kilometers, included large concentrations of Maya Indians, some two-thirds living in rural areas and divided into numerous ethno-linguistic groups, including Tzeltales, Tzotziles, Choles, Zoques, and Tojolabales.

At least half of the indigenous people did not have access to potable water and were illiterate; two-thirds did not have sewage systems; and 90 percent had little or no income. In 1992 President Carlos Salinas and the PRI-dominated houses of Congress approved far-reaching changes to Article 27 of the 1917 Constitution, effectively privatizing the *ejidos* (collective village lands) that had been a cornerstone of Mexico's postrevolutionary agrarian reform laws. The terms of NAFTA further accelerated decades-long trends toward privatization

and the opening of the Mexican economy to transnational corporations and unfettered trade.

The rebels named their army after Emiliano Zapata, a village leader from the state of Morelos and one of the leading figures in the Mexican Revolution, whose honesty, rectitude, and uncompromising demands for “land and liberty” made him a heroic figure among the country’s poor and Indian population. The Zapatista spokesperson, Sub-Commander Marcos, remains an enigmatic figure. Never photographed without his black ski mask, he is thought to be Rafael Sebastián Guillén Vicente, a Jesuit-educated former professor of philosophy at the Metropolitan Autonomous University in Mexico City who began working and organizing among the Maya of Chiapas in the mid-1980s. His name is presumed to be an acronym for the municipalities first taken over by the rebel army (Las Margaritas, Amatenango del Valle, La Realidad, Comitán, Ocosingo, and San Cristóbal de Las Casas). He is called the group’s “sub-commander” because the EZLN is based on grassroots participatory democracy, and he is therefore considered not the group’s leader but a subordinate to the people in whose name he speaks.

Peace talks between representatives of the EZLN and the national government began at San Andrés Larrainzar in April 1995. On February 17, 1996, the parties agreed to the terms of the Accords on Indigenous Rights and Culture, known as the San Andrés Accords. The Accords called for revision of Article Four of the 1917 Constitution to require the Mexican state to “recognize the right of Indian peoples to freely determine their own forms of social, economic, political, and cultural organization.” In essence, the accords would have permitted an autonomous parallel state and political structure within Mexico, including an independent judicial system based on indigenous practices.

Meanwhile, the military buildup by the Mexican army and security forces in Chiapas intensified as the government waged a low-intensity war against EZLN forces throughout the region. Local paramilitaries, growing out of the “white guards” (*guardias blancas*) organized by the region’s cattle and landowning oligarchy and active since the early 1980s, also stepped up their attacks against EZLN activists and supporters. New anti-EZLN paramilitaries formed, including the Indigenous Revolutionary Anti-Zapatista Movement (MIRA) and the Red Mask. Attacks, assaults, and human rights abuses against EZLN supporters mounted. On December 22, 1997, the Red Mask massacred 45 people at Acteal, including 21 women and 15 children.

In this context of growing militarization and violence, in August 1996 the EZLN sponsored an International Conference for Humanity Against Neoliberalism (called by Marcos the “Intergalactic Encuentro”), attended by intellectuals, activists, and celebrities from around the world. In January 1997 President Ernesto Zedillo proposed a watered-down version of the San Andrés Accords that eliminated the provisions recognizing indigenous rights. The EZLN rejected the revisions, and henceforth the accords remained a dead letter.

PROPAGANDA OFFENSIVE

The EZLN’s propaganda offensive continued in marches, demonstrations, solidarity agreements with various sectors of civil society, and a flurry of communiqués and declarations from Sub-Commander Marcos. In March 2001 Zapatista commanders headed a caravan to Mexico City, where they rallied with supporters to demand legislation implementing the original San Andrés accords. Instead, the government passed a law denounced by indigenous rights groups. The Zapatistas responded with a four-year period of “strategic silence,” which they broke in June 2005 with their “Sixth Declaration of the Lacandón Jungle,” inaugurating a series of grassroots meetings and a national tour, the “Other Campaign,” to form a coalition of left groups.

Typical of the EZLN’s approach to waging war was the assault by the “Zapatista Air Force” against a Mexican military installation in January 2000, in which rebels launched hundreds of paper airplanes into the camp, each bearing handwritten messages such as: “Soldiers, we know that poverty has made you sell your lives and souls. I also am poor, as are millions. But you are worse off, for defending our exploiter Zedillo and his group of moneybags.” Part of a broader resurgence of indigenous political organizing in Mexico, Central America, and the Andes, in 2007 the EZLN controlled over 30 autonomous municipalities, while the struggle in Chiapas and beyond showed no signs of abating.

Zhou Enlai (Chou En-lai)

(1898–1976) *Chinese communist leader*

Zhou Enlai came from a gentry family, studied in Tianjin (Tientsin), and participated in the student movement before sailing for France in 1920. He was a founding member of the Chinese Communist Youth Corps in France, in charge of political indoctrination. He also joined the Nationalist Party (or Kuomintang, KMT) in 1923, his dual-party membership made possible by the united front that KMT leader Sun Yat-sen negotiated with the Soviet Union. After returning to China in 1924, he became the deputy director of the political department of the Whampoa Military Academy, which Chiang Kai-shek headed, in which position he recruited young cadets for the Chinese Communist Party (CCP) to infiltrate the KMT officer corps.

Zhou was able to escape Chiang's dragnet when the latter purged communists from the KMT in 1927, visited the Soviet Union, and finally surfaced in Ruijin (Juichin), the CCP headquarters in Jiangxi (Kiangsi) Province, in 1931. In Ruijin the Zhou–Mao Zedong (Mao Tse-tung) collaboration began, and lasted until Zhou's death in 1976. Zhou participated in the Long March (1934–35) and was a negotiator for the CCP in the formation of the Second United Front with the KMT, which came about as a result of Japan's all-out war against China in 1937. He represented the CCP in China's wartime capital Chongqing (Chungking) as a member of the People's Political Council and successfully undermined the KMT with his personal charisma and the reasonable image he projected of the CCP. Zhou represented the CCP in post–World War II talks with the KMT, mediated by U.S. special ambassador George Marshall. Zhou employed the “now talk; now fight” strategy, which contributed to the United States washing its hands of China and the CCP victory over the KMT in 1949.

When the PEOPLE'S REPUBLIC OF CHINA (PRC) was established in 1949, Zhou became both premier and foreign minister. He personally handled China's important international negotiations even after he ceded the foreign minister post to Chen Yi in 1958. Besides taking numerous negotiating trips to the Soviet Union, he also represented China at the Geneva Conference, which ended the FIRST INDOCHINA WAR in 1954, and at the BANDUNG CONFERENCE of 29 Afro-Asian states in 1955, where China was accepted as the leader of the “anti-imperialist” bloc of nations.

He mediated between the Soviet Union, Hungary, and Poland in 1957 but failed to find a peaceful solution with INDIA in the Sino-Indian boundary dispute. He was the lone leader of moderation during the violence and

chaos of the Cultural Revolution after 1966 and played a key role in bringing about the rapprochement between China and the United States that culminated in President RICHARD NIXON's visit to China in 1972. In his last years Zhou promoted pragmatist DENG XIAOPING (Teng Hisao-p'ing) to be his vice premier. Deng consolidated power and began economic reforms after Mao's death. Among Mao's senior associates, Zhou alone escaped being purged in a long career.

JIU-HWA LO UPSHUR

Zia, Khaleda

(1945–) *Bangladeshi prime minister*

Khaleda Zia became the prime minister of BANGLADESH for the third time in October 2001 for a five-year term. She was born on August 15, 1945, in Jalpaiguri (now in Bengal, India), the third of her parents' five children. Zia had her early school education at Dinajpur Government Girl School and her post-secondary education at Surendranath College. She was married to Ziaur Rahman, then a captain in the Pakistan army, in August 1960. Ziaur Rahman later broke away from the Pakistan army to join the pro-independence forces of Bangladesh on March 25, 1971. After her husband's assassination in 1981, his party, the Bangladesh Nationalist Party (BNP), chose Zia as the president on March 10, 1984.

In the 1991 election the BNP received a massive mandate, securing an absolute majority, and Zia began her tenure as Bangladesh's first female prime minister (1991–96). During her first tenure she brought about major educational changes by mandating free and compulsory education for girls. She introduced incentives such as stipends for young female students and revitalized the economy by taking poverty alleviation measures.

Zia became prime minister for the second consecutive term when the BNP scored a landslide victory in the February 1996 general election. During her second

term she increased the age limit for entry into government service to 30 years of age. She also made efforts to safeguard the traditional and cultural identity of underdeveloped hill and tribal people of Bangladesh by providing them with employment opportunities, education, and other facilities to improve their standard of living. She was elected prime minister for the third time in October 2001, when she led a four-party alliance to win a two-thirds majority in the parliamentary poll, but was deposed in 2007.

In foreign affairs she promoted regional cooperation with Bangladesh's South Asian neighbors, including India. She also actively supported United Nations peacekeeping efforts.

On the environment she took measures for planned usage of water resources, prevention of erosion of riverbanks, and maintaining ecological balance through conservation of forests. In local government and people's empowerment she decentralized the power at the village, union, district, and sub-district levels through a four-tier, autonomous, and democratic local self-governance.

MOHAMMED BADRUL ALAM

Zia-ul-Haq, Mohammad

(1924–1988) *Pakistani president*

Mohammad Zia-ul-Haq was president of Pakistan for more than a decade from 1977, when he overthrew the government of ZULFIKAR BHUTTO, to 1988, the year of his death in a plane crash. As the president of Pakistan, in 1978, Zia established a totalitarian and dictatorial regime based on the enforcement of martial law, the suppression of political opponents, and the dissolution of all political parties.

When he decided to partially restore democracy, he made key amendments to the constitution ensuring the president the right to overrule parliamentary decisions in the national interest. As president he tried to maintain close links to Islam and to revive the country's declining economy, while his foreign policy was marked by the support of the mujahideens in the Soviet-Afghan War.

Zia was born in Jalandhar on August 12, 1924, the son of a teacher in the British army. He first attended the Government High School in Simla, and then went on to earn his B.A. at St. Stephen College, Delhi. He was commissioned in the British army when he was 19 years old. At the time of the Indian partition he, like most Muslims, chose to continue his career in the Pakistani army. In the early 1960s Zia trained in the United States, and he was later sent to Jordan to help the formation of the country's army.

In April 1976 Prime Minister Zulfikar Ali Bhutto surprisingly appointed Zia chief of army staff instead of more senior generals. Bhutto probably underestimated Zia's political abilities, ambitions, and his following in the army. Yet when the opposition coalition of the Pakistan National Alliance charged Bhutto with rigging the electoral results, Zia took advantage of the situation, leading a military coup against Bhutto and decreeing martial law to reestablish order. Zia consolidated his grip on the government and created the Disqualification Tribunal, which forced many politicians and members of Parliament to retire from public life.

He also decided to dissolve parliament and replace it with the Majlis-i-Shoora, an assembly of 284 member from the different classes of Pakistani society who were, however, selected by the president himself. Former prime minister Bhutto was hanged in 1979 after a long and controversial trial. When Zia finally decided to call elections in the mid-1980s, he first secured his right to continue to be president with a referendum that closely linked his presidency with the Islamization of Pakistan.

He overwhelmingly won the referendum and appointed Muhammad Khan Junejo as the prime minister. Tensions between the president and the prime minister soon surfaced, and he removed Junejo from office in 1988. The president soon found himself in a difficult position due to the return to Pakistan of Bhutto's daughter, BENAZIR BHUTTO, who had started to gather the forces of opposition. Zia had not been able to decide how to solve his intricate political situation before he died in a plane crash near Bhawalpur on August 17, 1988.

Code of Hammurabi

Date: 18th century B.C.E.

The situations described in the Code of Hammurabi offer the modern-day reader a glimpse into the workings of a Mesopotamian society of nearly 3,800 years ago. Hammurabi I ruled Babylon from 1792 to 1750 B.C.E., in the period of the First Dynasty (c. 1900–1595 B.C.E.). He was a contemporary of Rim-Sin I (1822–1763 B.C.E.), king of Larsa, and Zimri-Lim (1776–1761 B.C.E.), ruler of Mari, both of whom he defeated in battle late in his reign, incorporating their cities into his empire. His law code, which was part of an even earlier tradition, was a means of imposing order over the territories he conquered, much as the gods Anu (An) and Enlil oversaw the organization of heaven and earth. The codification of responses to certain—and probably recurring—problems would also have served the purpose of simplifying and standardizing the administration of justice in his empire.

While his laws existed in various copies, the version that is now in the Louvre was inscribed in Akkadian cuneiform on a stela, or stone slab, and set up—according to the inscription itself—in “E-Sagil” (also spelled Sagil and Esagila), the temple of Marduk at Babylon. A few hundred years after the First Dynasty of Babylon fell, the Elamite king Shutruk-Nabhumte (ruled c. 1185–1155 B.C.E.) carted off the stela to Susa, his capital in southwestern Iran, where the French archaeologist Jacques de Morgan found it about 3,000 years later, in 1901.

The inscription can be divided into three parts: an introduction, the code, and an epilogue. In the first section, Hammurabi justifies his position as ruler of Babylon by describing it as a consequence of the divine ordering of the world and boasts of his achievements as a conqueror and restorer of temples. This section lists the names of known cities such as Nippur and Sippara (Sippar) but also cities such as Dur-ilu, which are unidentifiable today. Also mentioned are the Akkadian names of gods (thus Sin rather than Nanna; Shamash rather than Utu; Nebo rather than Nabu) and their temples. Enlil’s main temple at Nippur was E-kur (“mountain house”); E-babbar (“white temple”) was the temple of the sun god Shamash at Larsa; E-anna (“sky house”) that of the sky god Anu. As with the place-names, some of the gods and temples mentioned are of uncertain identity.

*The second section is the code itself. It consists of 282 statements pronouncing judgment on various problems that might occur in a complex society. The judgments treat a wide range of matters, from stolen property to inheritance rights to hired labor. The situations described are very specific, with each occurrence phrased in a conditional “if” clause, followed by the appropriate response to that occurrence. To modern readers of the code, one of its most striking features is the harshness of many of the penalties. Death was prescribed for offenses ranging from murder (number 153) to harboring a runaway slave (number 16) to robbery (number 22). It is often pointed out that the code, most notably in the laws dealing with personal injury (numbers 194 to 214), calls for the *lex talionis*, or law of reciprocal punishment—the familiar “eye for an eye” (number 196). Yet not all of the prescribed punishments are overly severe, as evidenced by those concerning farmers (numbers 42–56) and merchants (numbers 100–107). And, while the laws illustrate the highly patriarchal organization of Babylonian society, women are accorded a certain amount of rights, as shown by numbers 137 and 179.*

The third section, the epilogue, can itself be broken into two parts. In the first half, Hammurabi reasserts his authority as ruler, stating that he set up these laws to protect the people of Akkad and Sumer. In the second half, he prays that the gods make life very unpleasant for any future rulers who dare to corrupt or destroy his words.

Original spellings have been retained in this document. The following is an excerpt.

CODE OF LAWS

1. If any one ensnare another, putting a ban upon him, but he can not prove it, then he that ensnared him shall be put to death.
2. If any one bring an accusation against a man, and the accused go to the river and leap into the river, if he sink in the river his accuser shall take possession of his house. But if the river prove that the accused is not guilty, and he escape unhurt, then he who had brought the accusation shall be put to death, while he who leaped into the river shall take possession of the house that had belonged to his accuser.
3. If any one bring an accusation of any crime before the elders, and does not prove what he has charged, he shall, if it be a capital offense charged, be put to death.
4. If he satisfy the elders to impose a fine of grain or money, he shall receive the fine that the action produces.
5. If a judge try a case, reach a decision, and present his judgment in writing; if later error shall appear in his decision, and it be through his own fault, then he shall pay twelve times the fine set by him in the case, and he shall be publicly removed from the judge’s bench, and never again shall he sit there to render judgement.

6. If any one steal the property of a temple or of the court, he shall be put to death, and also the one who receives the stolen thing from him shall be put to death.

7. If any one buy from the son or the slave of another man, without witnesses or a contract, silver or gold, a male or female slave, an ox or a sheep, an ass or anything, or if he take it in charge, he is considered a thief and shall be put to death.

8. If any one steal cattle or sheep, or an ass, or a pig or a goat, if it belong to a god or to the court, the thief shall pay thirtyfold therefor; if they belonged to a freed man of the king he shall pay tenfold; if the thief has nothing with which to pay he shall be put to death.

9. If any one lose an article, and find it in the possession of another: if the person in whose possession the thing is found say "A merchant sold it to me, I paid for it before witnesses," and if the owner of the thing say, "I will bring witnesses who know my property," then shall the purchaser bring the merchant who sold it to him, and the witnesses before whom he bought it, and the owner shall bring witnesses who can identify his property. The judge shall examine their testimony—both of the witnesses before whom the price was paid, and of the witnesses who identify the lost article on oath. The merchant is then proved to be a thief and shall be put to death. The owner of the lost article receives his property, and he who bought it receives the money he paid from the estate of the merchant.

10. If the purchaser does not bring the merchant and the witnesses before whom he bought the article, but its owner bring witnesses who identify it, then the buyer is the thief and shall be put to death, and the owner receives the lost article.

11. If the owner do not bring witnesses to identify the lost article, he is an evil-doer, he has traduced, and shall be put to death.

12. If the witnesses be not at hand, then shall the judge set a limit, at the expiration of six months. If his witnesses have not appeared within the six months, he is an evil-doer, and shall bear the fine of the pending case.

14. If any one steal the minor son of another, he shall be put to death.

15. If any one take a male or female slave of the court, or a male or female slave of a freed man, outside the city gates, he shall be put to death.

16. If any one receive into his house a runaway male or female slave of the court, or of a freedman, and does not bring it out at the public proclamation of the major domus, the master of the house shall be put to death.

17. If any one find runaway male or female slaves in the open country and bring them to their masters, the master of the slaves shall pay him two shekels of silver.

18. If the slave will not give the name of the master, the finder shall bring him to the palace; a further investigation must follow, and the slave shall be returned to his master.

19. If he hold the slaves in his house, and they are caught there, he shall be put to death.

20. If the slave that he caught run away from him, then shall he swear to the owners of the slave, and he is free of all blame.

21. If any one break a hole into a house (break in to steal), he shall be put to death before that hole and be buried.

22. If any one is committing a robbery and is caught, then he shall be put to death.

23. If the robber is not caught, then shall he who was robbed claim under oath the amount of his loss; then shall the community, and . . . on whose ground and territory and in whose domain it was compensate him for the goods stolen.

24. If persons are stolen, then shall the community and . . . pay one mina of silver to their relatives.

25. If fire break out in a house, and some one who comes to put it out cast his eye upon the property of the owner of the house, and take the property of the master of the house, he shall be thrown into that self-same fire.

26. If a chieftain or a man (common soldier), who has been ordered to go upon the king's highway for war does not go, but hires a mercenary, if he withholds the compensation, then shall this officer or man be put to death, and he who represented him shall take possession of his house.

27. If a chieftain or man be caught in the misfortune of the king (captured in battle), and if his fields and garden be given to another and he take possession, if he return and reaches his place, his field and garden shall be returned to him, he shall take it over again.

28. If a chieftain or a man be caught in the misfortune of a king, if his son is able to enter into possession, then the field and garden shall be given to him, he shall take over the fee of his father.

29. If his son is still young, and can not take possession, a third of the field and garden shall be given to his mother, and she shall bring him up.

30. If a chieftain or a man leave his house, garden, and field and hires it out, and some one else takes possession of his house, garden, and field and uses it for three years: if the first owner return and claims his house, garden, and field, it shall not be given to him, but he who has taken possession of it and used it shall continue to use it.

31. If he hire it out for one year and then return, the house, garden, and field shall be given back to him, and he shall take it over again.

32. If a chieftain or a man is captured on the “Way of the King” (in war), and a merchant buy him free, and bring him back to his place; if he have the means in his house to buy his freedom, he shall buy himself free: if he have nothing in his house with which to buy himself free, he shall be bought free by the temple of his community; if there be nothing in the temple with which to buy him free, the court shall buy his freedom. His field, garden, and house shall not be given for the purchase of his freedom.

33. If a . . . or a . . . enter himself as withdrawn from the “Way of the King,” and send a mercenary as substitute, but withdraw him, then the . . . or . . . shall be put to death.

34. If a . . . or a . . . harm the property of a captain, injure the captain, or take away from the captain a gift presented to him by the king, then the . . . or . . . shall be put to death.

35. If any one buy the cattle or sheep which the king has given to chieftains from him, he loses his money.

36. The field, garden, and house of a chieftain, of a man, or of one subject to quit-rent, can not be sold.

37. If any one buy the field, garden, and house of a chieftain, man, or one subject to quit-rent, his contract tablet of sale shall be broken (declared invalid) and he loses his money. The field, garden, and house return to their owners.

38. A chieftain, man, or one subject to quit-rent can not assign his tenure of field, house, and garden to his wife or daughter, nor can he assign it for a debt.

39. He may, however, assign a field, garden, or house which he has bought, and holds as property, to his wife or daughter or give it for debt.

40. He may sell field, garden, and house to a merchant (royal agents) or to any other public official, the buyer holding field, house, and garden for its usufruct.

41. If any one fence in the field, garden, and house of a chieftain, man, or one subject to quit-rent, furnishing the palings therefor; if the chieftain, man, or one subject to quit-rent return to field, garden, and house, the palings which were given to him become his property.

42. If any one take over a field to till it, and obtain no harvest therefrom, it must be proved that he did no work on the field, and he must deliver grain, just as his neighbor raised, to the owner of the field.

43. If he do not till the field, but let it lie fallow, he shall give grain like his neighbor’s to the owner of the field, and the field which he let lie fallow he must plow and sow and return to its owner.

44. If any one take over a waste-lying field to make it arable, but is lazy, and does not make it arable, he shall plow the fallow field in the fourth year, harrow it and till it, and give it back to its owner, and for each ten gan (a measure of area) ten gur of grain shall be paid.

45. If a man rent his field for tillage for a fixed rental, and receive the rent of his field, but bad weather come and destroy the harvest, the injury falls upon the tiller of the soil.

46. If he do not receive a fixed rental for his field, but lets it on half or third shares of the harvest, the grain on the field shall be divided proportionately between the tiller and the owner.

47. If the tiller, because he did not succeed in the first year, has had the soil tilled by others, the owner may raise no objection; the field has been cultivated and he receives the harvest according to agreement.

48. If any one owe a debt for a loan, and a storm prostrates the grain, or the harvest fail, or the grain does not grow for lack of water; in that year he need not give his creditor any grain, he washes his debt-tablet in water and pays no rent for this year.

49. If any one take money from a merchant, and give the merchant a field tillable for corn or sesame and order him to plant corn or sesame in the field, and to harvest the crop; if the cultivator plant corn or sesame in the field, at the harvest the corn or sesame that is in the field shall belong to the owner of the field and he shall pay corn as rent, for the money he received from the merchant, and the livelihood of the cultivator shall he give to the merchant.

50. If he give a cultivated corn-field or a cultivated sesame-field, the corn or sesame in the field shall belong to the owner of the field, and he shall return the money to the merchant as rent.

51. If he have no money to repay, then he shall pay in corn or sesame in place of the money as rent for what he received from the merchant, according to the royal tariff.

52. If the cultivator do not plant corn or sesame in the field, the debtor’s contract is not weakened.

53. If any one be too lazy to keep his dam in proper condition, and does not so keep it; if then the dam break and all the fields be flooded, then shall he in whose dam the break occurred be sold for money, and the money shall replace the corn which he has caused to be ruined.

54. If he be not able to replace the corn, then he and his possessions shall be divided among the farmers whose corn he has flooded.

55. If any one open his ditches to water his crop, but is careless, and the water flood the field of his neighbor, then he shall pay his neighbor corn for his loss.

56. If a man let in the water, and the water overflow the plantation of his neighbor, he shall pay ten gur of corn for every ten gan of land.

57. If a shepherd, without the permission of the owner of the field, and without the knowledge of the owner of the sheep, lets the sheep into a field to graze, then the owner of the field shall harvest his crop, and

the shepherd, who had pastured his flock there without permission of the owner of the field, shall pay to the owner twenty gur of corn for every ten gan.

58. If after the flocks have left the pasture and been shut up in the common fold at the city gate, any shepherd let them into a field and they graze there, this shepherd shall take possession of the field which he has allowed to be grazed on, and at the harvest he must pay sixty gur of corn for every ten gan.

59. If any man, without the knowledge of the owner of a garden, fell a tree in a garden he shall pay half a mina in money.

60. If any one give over a field to a gardener, for him to plant it as a garden, if he work at it, and care for it for four years, in the fifth year the owner and the gardener shall divide it, the owner taking his part in charge.

61. If the gardener has not completed the planting of the field, leaving one part unused, this shall be assigned to him as his.

62. If he do not plant the field that was given over to him as a garden, if it be arable land (for corn or sesame) the gardener shall pay the owner the produce of the field for the years that he let it lie fallow, according to the product of neighboring fields, put the field in arable condition and return it to its owner.

63. If he transform waste land into arable fields and return it to its owner, the latter shall pay him for one year ten gur for ten gan.

64. If any one hand over his garden to a gardener to work, the gardener shall pay to its owner two-thirds of the produce of the garden, for so long as he has it in possession, and the other third shall he keep.

65. If the gardener do not work in the garden and the product fall off, the gardener shall pay in proportion to other neighboring gardens.

[Here a portion of the text is missing, apparently comprising thirty-four paragraphs.]

Book of the Dead

Also known as: *pert em hru* (excerpts)

Date: 1567–1085 B.C.E.

Known by the Egyptians as pert em hru, "coming forth by day," the Book of the Dead is the general title now given to the collection of Egyptian funerary texts from the New Kingdom (1567–1085 B.C.E.). The ancient Egyptians placed these spells, hymns, and incantations (which were illustrated with vignettes) in tombs for the deceased to recite and thereby successfully achieve a new existence in the afterlife. Written on papyri in hieratic script, they developed from the Pyramid Texts of the Old Kingdom (2698–2181 B.C.E.) and the Coffin Texts of the Middle Kingdom (1991–1786 B.C.E.). While these earlier texts were used respectively by royalty and the elite, the spells in the Book of the Dead were available to anyone who could afford them. The incantations, drawn from particular chapters, could be varied according to an individual's taste and financial means.

The first two selections, "A Hymn to the Setting Sun" and an excerpt from "A Hymn and Litany to Osiris," are from the papyrus of Ani. Ani, a scribe, was the person for whom this particular collection of hymns and prayers was assembled, probably during the 18th Dynasty (1567–1320 B.C.E.). This papyrus is currently in the British Museum. The third selection is a different version of "A Hymn to the Setting Sun" from a 19th Dynasty papyrus now located in Dublin. The final selection is from the papyrus of Nu, an example of the "Chapter of Coming Forth by Day."

In the first and third selections, the two hymns to the setting Sun, the texts refer to the journey of the sun god Re (Ra) from his birth each morning in the arms of the sky goddess Nut to his death in her arms each evening. The repetition of this journey symbolized the rebirth of the dead soul. The first hymn, from chapter 15 of the Ani papyrus, can more accurately be described as a hymn to both the rising and the setting sun, as is stated in the hymn's first lines. Ani is also named in these lines. The second hymn, from the Dublin papyrus, may not have been purchased by anyone. The space in the last line where the owner's name would appear (here marked with ellipses) was left blank. This papyrus includes a more elaborate description of the underworld than does the hymn in the Ani papyrus.

The second selection, also from chapter 15 of the Ani papyrus, is a hymn and an excerpt from the litany to Osiris. Osiris, god of the underworld, was violently murdered by his brother, Seth, and then reborn with the help of his wife, Isis. The litany includes a series in which the deceased addresses Osiris by a variety of titles and functions, along with the repetition of a prayer for safe passage through the underworld. Repetition is also a feature of the fourth selection here, an example from one of the many chapters of "Coming Forth by

Day.” The first lines include the name of the deceased, Nu, and give his occupation as “chancellor-in-chief.” The focus in this text on Nu’s “mastery” over various parts of his body would probably refer to how his ka, or the “double” of his human body, would exist after death.

A HYMN TO THE SETTING SUN

A hymn of praise to Re when he riseth upon the horizon, and when he setteth in the land of life. Osiris, the scribe Ani, saith:

“Homage to thee, O Re, when thou risest as Tem-Heru-khuti (Tem-Harmakhis). Thou art adored by me when thy beauties are before mine eyes, and when thy radiance falleth upon my body. Thou goest forth to thy setting in the Sektet boat with the fair winds, and they heart is glad; the heart of the Matet boat rejoiceth. Thou stridest over the heavens in peace, and all thy foes are cast down; the never-resting stars sing hymns of praise unto thee, and the stars which rest, and the stars which never fail, glorify thee as thou sinkest to rest in the horizon of Manu, O Thou who art beautiful at morn and at eve, O thou lord who livest and art established, O my lord!

“Homage to thee, O thou who art Re when thou risest, and Tem when thou settest in beauty. Thou risest and shinest on the back of my mother Nut, O thou who art crowned king of the gods! Nut doeth homage unto thee, and everlasting and never-changing order embraceth thee at morn and at eve. Thou stridest over the heaven, being glad of heart, and the Lakes of Testes is content thereat. The Sebau Fiend hath fallen to the ground; his arms and his hands have been hacked off, and the knife hath severed the joints of his body. Re hath a fair wind; the Sektet boat goeth forth and, sailing along, it cometh into port. The gods of the south and of the north, of the west and of the east, praise thee, O thou divine substance, from whom all forms of life come into being. Thou sendest forth the word, and the earth is flooded with silence, O thou only One, who didst dwell in heaven before ever the earth and the mountains came into existence. O Runner, O Lord, O only One, thou maker of things which are, thou hast fashioned the tongue of the company of the gods, thou hast produced whatsoever cometh forth from the waters, and thou springest up from them over the flooded land of the Lake of Horus. Let me snuff the air which cometh forth from thy nostrils, and the north wind which cometh forth from my mother Nut. Oh, make thou to be glorious my shining form, O Osiris, make thou to be divine my soul! Thou art worshipped in peace (or in setting), O Lord of the gods, t’with thy rays of light upon my body day by day, upon me, Osiris the scribe, the teller of the divine offerings of all the gods, the overseer of the granary of the lords of Abtu (Abydos), the royal scribe in truth who loveth thee; Ani, victorious in peace.”

HYMN AND LITANY TO OSIRIS

“Praise be unto thee, O Osiris, lord of eternity, Unnefer, Heru-khuti (Harmakhis), whose forms are manifold, and whose attributes are majestic, Ptah-Seker-Tem in Annu (Heliopolis), the lord of the hidden place, and the creator of Het-ka-Ptah (Memphis) and of the gods therein, the guide of the underworld, whom the gods glorify when thou settest in Nut. Isis embraced thee in peace, and she driveth away the fiends from the mouth of thy paths. Thou turnest thy face upon Amentet, and thou makest the earth to shine as with refined copper. Those who have lain down (i.e., the dead) rise up to see thee, they breathe the air and they look upon thy face when the Disk riseth on its horizon; their hearts are at peace inasmuch as they behold thee, O thou who art Eternity and Everlastingness!”

LITANY

“Homage to thee, O Lord of starry deities in Annu, and of heavenly beings in Kher-aba; thou god Unti, who art more glorious than the gods who are hidden in Annu; oh, grant thou unto me a path whereon I may pass in peace, for I am just and true; I have not spoken lies wittingly, nor have I done aught with deceit.

“Homage to thee, O An in Antes, Heru-khuti (Harmakhis), with long strides thou stridest over heaven, O Heru-khuti. Oh, grant thou unto me a path whereon I may pass in peace, for I am just and true; I have not spoken lies wittingly, nor have I done aught with deceit.

“Homage to thee, O Soul of everlastingness, thou Soul who dwellest in Tattu, Unnefer, son of Nut; thou art lord of Akert. Oh, grant thou unto me a path wherein I may pass in peace, for I am just and true; I have not spoken lies wittingly, nor have I done aught with deceit.

“Homage to thee in thy dominion over Tattu; the Ureret crown is established upon thy head; thou art the One who maketh the strength which protecteth himself, and thou dwellest in peace in Tattu. Oh, grant thou unto me a path whereon I may pass in peace, for I am just and true; I have not spoken lies wittingly, nor have I done aught with deceit.

“Homage to thee, O Lord of the Acacia tree, the Seker boat is set upon its sledge; thou turnest back the Fiend, the worker of evil, and thou caustest the Utchat to rest upon its seat. Oh, grant thou unto me a path whereon I may pass in peace, for I am just and true; I have not spoken lies wittingly, nor have I done aught with deceit.”

A HYMN TO THE SETTING SUN

A hymn of praise to Re-Heru-Khuti (Re-Harmakhis) when he setteth in the western part of heaven. He (i.e., the deceased) saith:

“Homage to thee, O Re who in thy sitting art Tem-Heru-khuti (Tem-Harmakhis), thou divine god, thou self-created being, thou primeval matter from which all things were made. When thou appearest in the bows of thy bark men shout for joy at thee, O maker of the gods! Thou didst stretch out the heavens wherein thy two eyes might travel, thou didst make the earth to be a vast chamber for thy Khus, so that every man might know his fellow. The Sektet boat is glad, and the Matet boat rejoiceth; and they greet thee with exaltation as thou journeyest along. The god Nu is content, and thy mariners are satisfied; the uraeus-goddess hath overthrown thine enemies, and thou hast carried off the legs of Apep. Thou art beautiful, O Re, each day, and thy mother Nut embraceth thee; thou settest in beauty, and thy heart is glad in the horizon of Manu, and the holy beings therein rejoice. Thou shinest there with thy beams, O thou great god, Osiris, the everlasting Prince. The lords of the zones of the Tuat in their caverns stretch out their hands in adoration before thy Ka (double), and they cry out to thee, and they all come forth in the train of thy form shining brilliantly. The hearts of the lords of the Tuat (underworld) are glad when thou sendest forth thy glorious light in Amentet; their two eyes are directed toward thee, and they press forward to see thee, and their hearts rejoice when they do see thee. Thou harkenest unto the acclamations of those that are in the funeral chest, thou doest away with their helplessness and drivest away the evils which are about them. Thou givest breath to their nostrils and they take hold of the bows of thy bark in the horizon of Manu. Thou art beautiful each day, O Re, and may thy mother Nut embrace Osiris . . . , victorious.”

COMING FORTH BY DAY

The chapter of coming forth by day. The overseer of the palace, the chancellor-in-chief, Nu, triumphant, saith:

“The doors of heaven are opened for me, the doors, of earth are opened for me, the bars and bolts of Seb are opened for me, and the first temple hath been unfastened for me by the god Petra. Behold, I was guarded and watched, but now I am released; behold, his hand had tied cords round me and his had darted upon me in the earth. Re-hent hath been opened for me and Re-hent hath been unfastened before me, Re-hent hath been given unto me, and I shall come forth by day into whatsoever place I please. I have gained the mastery over my heart; I have gained the mastery over my breast; I have gained the mastery over my two hands; I have gained the mastery over my two feet; I have gained the mastery over my mouth; I have gained the mastery over sepulchral offerings; I have gained the mastery over the waters; I have gained the mastery over air; I have gained the mastery over the canal; I have gained the mastery over the river and over the land; I have gained the mastery over the furrows; I have gained the mastery over the male workers for me; I have gained the mastery over the female workers for me; I have gained the mastery over all the things which were ordered to be done for me upon the earth, according to the entreaty which ye spake for me, saying, ‘Behold, let him live upon the bread of Seb.’ That which is an abomination unto me, I shall not eat; nay, I shall live upon cakes made of white grain, and my ale shall be made of the red grain of Hapi (i.e., the Nile). In a clean place shall I sit on the ground beneath the foliage of the date-palm of the goddess Hathor, who dwelleth in the spacious Disk as it advanceth to Annu (Heliopolis), having the books of the divine words of the writings of the god Thoth. I have gained the mastery over my heart; I have gained the mastery over my heart’s place (or breast); I have gained the mastery over my mouth; I have gained the mastery over my two hands; I have gained the mastery over the waters; I have gained the mastery over the canal; I have gained the mastery over the rivers; I have gained the mastery over the furrows; I have gained the mastery over the men who work for me; I have gained the mastery over the women who work for me in the underworld; I have gained the mastery over all things which were ordered to be done for me upon earth and in the underworld. I shall lift myself up on my left side, and I shall place myself on my right side; I shall lift myself up on my right side, and I shall place myself on my left side. I shall sit down, I shall stand up, and I shall place myself in the path of the wind like a guide who is well prepared.”

If this composition be known by the deceased he shall come forth by day, and he shall be in a position to journey about over the earth among the living, and he shall never suffer diminution, never, never.

Daodejing

Also known as: *Tao-te Ching*; *Daode Jing*; *Tao Te Ching*

Date: eighth. century–third century B.C.E.

Daoism (or Taoism), one of the three major religions of China (Confucianism and Buddhism being the other two), was founded during a turbulent time in China’s history. Though hard to define in English, Daoism

stresses the Way, or the Path, a sort of energy that flows through the world, and the concept of wuwei, or "action through inaction." The Daodejing; (or Tao-te Ching; translated as The Way and Its Power) is one of the central texts in Daoism. Originally attributed to Laozi, the traditional founder of Daoism, the text is now thought to have been written anywhere between the eighth and the third century B.C.E.

The following is an excerpt from the first section. Original spellings have been retained in this document.
Tao-te Ching, Attributed to Laozi, Translated by: James Legge

PART I.

Ch. 1

1. The Tao that can be trodden is not the enduring and unchanging Tao. The name that can be named is not the enduring and unchanging name.
2. (Conceived of as) having no name, it is the Originator of heaven and earth; (conceived of as) having a name, it is the Mother of all things.
3. Always without desire we must be found, If its deep mystery we would sound; But if desire always within us be, Its outer fringe is all that we shall see.
4. Under these two aspects, it is really the same; but as development takes place, it receives the different names. Together we call them the Mystery. Where the Mystery is the deepest is the gate of all that is subtle and wonderful.

Ch. 2

1. All in the world know the beauty of the beautiful, and in doing this they have (the idea of) what ugliness is; they all know the skill of the skilful, and in doing this they have (the idea of) what the want of skill is.
2. So it is that existence and non-existence give birth the one to (the idea of) the other; that difficulty and ease produce the one (the idea of) the other; that length and shortness fashion out the one the figure of the other; that (the ideas of) height and lowness arise from the contrast of the one with the other; that the musical notes and tones become harmonious through the relation of one with another; and that being before and behind give the idea of one following another.
3. Therefore the sage manages affairs without doing anything, and conveys his instructions without the use of speech.
4. All things spring up, and there is not one which declines to show itself; they grow, and there is no claim made for their ownership; they go through their processes, and there is no expectation (of a reward for the results). The work is accomplished, and there is no resting in it (as an achievement). The work is done, but how no one can see; 'Tis this that makes the power not cease to be.

Ch. 3

1. Not to value and employ men of superior ability is the way to keep the people from rivalry among themselves; not to prize articles which are difficult to procure is the way to keep them from becoming thieves; not to show them what is likely to excite their desires is the way to keep their minds from disorder.
2. Therefore the sage, in the exercise of his government, empties their minds, fills their bellies, weakens their wills, and strengthens their bones.
3. He constantly (tries to) keep them without knowledge and without desire, and where there are those who have knowledge, to keep them from presuming to act (on it). When there is this abstinence from action, good order is universal.

Ch. 4

1. The Tao is (like) the emptiness of a vessel; and in our employment of it we must be on our guard against all fullness. How deep and unfathomable it is, as if it were the Honoured Ancestor of all things!
2. We should blunt our sharp points, and unravel the complications of things; we should attemper our brightness, and bring ourselves into agreement with the obscurity of others. How pure and still the Tao is, as if it would ever so continue!
3. I do not know whose son it is. It might appear to have been before God.

Ch. 5

1. Heaven and earth do not act from (the impulse of) any wish to be benevolent; they deal with all things as the dogs of grass are dealt with. The sages do not act from (any wish to be) benevolent; they deal with the people as the dogs of grass are dealt with.
2. May not the space between heaven and earth be compared to a bellows? 'Tis emptied, yet it loses not its power; 'Tis moved again, and sends forth air the more. Much speech to swift exhaustion lead we see; Your inner being guard, and keep it free.

Ch. 6

1. The valley spirit dies not, aye the same; The female mystery thus do we name. Its gate, from which at first they issued forth, Is called the root from which grew heaven and earth. Long and unbroken does its power remain, Used gently, and without the touch of pain.

Ch. 7

1. Heaven is long-enduring and earth continues long. The reason why heaven and earth are able to endure and continue thus long is because they do not live of, or for, themselves. This is how they are able to continue and endure.

2. Therefore the sage puts his own person last, and yet it is found in the foremost place; he treats his person as if it were foreign to him, and yet that person is preserved. Is it not because he has no personal and private ends, that therefore such ends are realised?

Constitution of Ancient Japan

Date: 604 B.C.E.

The Seventeen Article Constitution (in Japanese, Kenpo Jushichijo) was an early piece of Japanese writing and represented the basis of Japanese government through much of Japanese history. The constitution reflects Confucian principles (together with a number of Buddhist elements). The Constitution emphasized the Confucian values of harmony, regularity, and the importance of the moral development of government officials.

THE SEVENTEEN ARTICLE CONSTITUTION OF PRINCE SHOTOKU

1. Harmony is to be valued, and an avoidance of wanton opposition to be honored. All men are influenced by class-feelings, and there are few who are intelligent. Hence there are some who disobey their lords and fathers, or who maintain feuds with the neighboring villages. But when those above are harmonious and those below are friendly, and there is concord in the discussion of business, right views of things spontaneously gain acceptance. Then what is there which cannot be accomplished!

2. Sincerely reverence the three treasures. The three treasures: the Buddha, the Law, and the Priesthood, [The Buddha, the Law of Dharma, and the Sangha, or order of male and female monks, are the three treasures, or key elements, of Buddhism] are the final refuge . . . and are the supreme objects of faith in all countries. What man in what age can fail to reverence this law? Few men are utterly bad. They may be taught to follow it. But if they do not go to the three treasures, how shall their crookedness be made straight?

3. When you receive the Imperial commands, fail not scrupulously to obey them. The lord is Heaven, the vassal is Earth. Heaven overspreads, and Earth upbears. When this is so, the four seasons follow their due course, and the powers of Nature obtain their efficacy. If the Earth attempted to overspread, Heaven would simply fall in ruin. Therefore is it that when the lord speaks, the vassal listens; when the superior acts, the inferior yields compliance. Consequently when you receive the Imperial commands, fail not to carry them out scrupulously. Let there be a want of care in this matter, and ruin is the natural consequence.

4. The Ministers and functionaries should make decorous behavior their leading principle, for the leading principle of the government of the people consists in decorous behavior. If the superiors do not behave with decorum, the inferiors are disorderly: if inferiors are wanting in proper behavior, there must necessarily be offenses. Therefore it is that when lord and vassal behave with propriety, the distinctions of rank are not confused: when the people behave with propriety, the Government of the Commonwealth proceeds of itself . . .

6. Chastise that which is evil and encourage that which is good. This was the excellent rule of antiquity. Conceal not, therefore, the good qualities of others, and fail not to correct that which is wrong when you see it. Flatterers and deceivers are a sharp weapon for the overthrow of the State, and a pointed sword for the destruction of the people. Sycophants are also fond, when they meet, of speaking at length to their superiors on the errors of their inferiors; to their inferiors, they censure the faults of their superiors. Men of this kind are all wanting in fidelity to their lord, and in benevolence toward the people. From such an origin great civil disturbances arise.

7. Let every man have his own charge, and let not the spheres of duty be confused. When wise men are entrusted with office, the sound of praise arises. If unprincipled men hold office, disasters and tumults are multiplied. In this world, few are born with knowledge: wisdom is the product of earnest meditation. In all things, whether great or small, find the right man, and they will surely be well managed: on all occasions, be they urgent or the reverse, meet but with a wise man, and they will of themselves be amenable. In this way will the State be lasting and the Temples of the Earth and of Grain will be free from danger. Therefore did the wise sovereigns of antiquity seek the man to fill the office, and not the office for the sake of the man. . . .

10. Let us cease from wrath, and refrain from angry looks. Nor let us be resentful when others differ from us. For all men have hearts, and each heart has its own leanings. Their right is our wrong, and our right is their wrong. We are not unquestionably sages, nor are they unquestionably fools. Both of us are simply ordinary men. How can any one lay down a rule by which to distinguish right from wrong? For we are all, one with another, wise and foolish, like a ring which has no end. Therefore, although others give way to anger, let us on the contrary dread our own faults, and though we alone may be in the right, let us follow the multitude and act like men. . . .

11. Give clear appreciation to merit and demerit, and deal out to each its sure reward or punishment. In these days, reward does not attend upon merit, nor punishment upon crime. You high functionaries who have charge of public affairs, let it be your task to make clear rewards and punishments. . . .

15. To turn away from that which is private, and to set our faces toward that which is public—this is the path of a Minister. Now if a man is influenced by private motives, he will assuredly feel resentments, and if he is influenced by resentful feelings, he will assuredly fail to act harmoniously with others. If he fails to act harmoniously with others, he will assuredly sacrifice the public interests to his private feelings. When resentment arises, it interferes with order, and is subversive of law. . . .

16. Let the people be employed [in forced labor] at seasonable times. This is an ancient and excellent rule. Let them be employed, therefore, in the winter months, when they are at leisure. But from Spring to Autumn, when they are engaged in agriculture or with the mulberry trees, the people should not be so employed. For if they do not attend to agriculture, what will they have to eat? If they do not attend the mulberry trees, what will they do for clothing?

17. Decisions on important matters should not be made by one person alone. They should be discussed with many. But small matters are of less consequence. It is unnecessary to consult a number of people. It is only in the case of the discussion of weighty affairs, when there is a suspicion that they may miscarry, that one should arrange matters in concert with others, so as to arrive at the right conclusion.

Hebrew Bible, Old Testament

Date: c. 571–562 B.C.E.

In this excerpt from the Hebrew Bible, or the Old Testament, the Jewish prophet Ezekiel describes the destruction of Egypt, as well as Ethiopia and Libya, by the Babylonian king Nabuchodonosor (Nebuchadnezzar). Written about 570–562 B.C.E. during the period of the Babylonian exile, the text refers to events that occurred probably about 593–570 B.C.E. This chapter is part of a section (chapters 25–32) of prophecies against the enemies of the kingdom of Judah. Egypt is cursed in chapters 29–32.

Ezekiel 30:1–26. Douay version, 1609–1610

The desolation of Egypt and her helpers: all her cities shall be wasted.

30:1. And the word of the Lord came to me, saying:

30:2. Son of man prophesy, and say: Thus saith the Lord God: Howl ye, Woe, woe to the day:

30:3. For the day is near, yea the day of the Lord is near: a cloudy day, it shall be the time of the nations.

30:4. And the sword shall come upon Egypt: and there shall be dread in Ethiopia, when the wounded shall fall in Egypt, and the multitude thereof shall be taken away, and the foundations thereof shall be destroyed.

30:5. Ethiopia, and Libya, and Lydia, and all the rest of the crowd, and Chub, and the children of the land of the covenant, shall fall with them by the sword.

30:6. Thus saith the Lord God: They also that uphold Egypt shall fall, and the pride of her empire shall be brought down: from the tower of Syene shall they fall in it by the sword, saith the Lord the God of hosts.

30:7. And they shall be desolate in the midst of the lands that are desolate, and the cities thereof shall be in the midst of the cities that are wasted.

30:8. And they shall know that I am the Lord: when I shall have set a fire in Egypt, and all the helpers thereof shall be destroyed.

30:9. In that day shall messengers go forth from my face in ships to destroy the confidence of Ethiopia, and there shall be drey among them in the day of Egypt: because it shall certainly come.

30:10. Thus saith the Lord God: I will make the multitude of Egypt to cease by the hand of Nabuchodonosor the king of Babylon.

30:11. He and his people with him, the strongest of nations, shall be brought to destroy the land: and they shall draw their swords upon Egypt: and shall fill the land with the slain.

30:12. And I will make the channels of the rivers dry, and will deliver the land into the hand of the wicked: and will lay waste the land and all that is therein by the hands of strangers, I the Lord have spoken it.

30:13. Thus saith the Lord God: I will also destroy the idols, and I will make an end of the idols of Memphis: and there shall: be no more a prince of the land of Egypt and I will cause a terror in the land of Egypt.

30:14. And I will destroy the land of Phatures, and will make a fire in Taphnis, and will execute judgments in Alexandria. Alexandria . . . In the Hebrew, No: which was the ancient name of that city, which was afterwards rebuilt by Alexander the Great, and from his name called Alexandria.

30:15. And I will pour out my indignation upon Pelusium the strength of Egypt, and will cut off the multitude of Alexandria.

30:16. And I will make a fire in Egypt: Pelusium shall be in pain like a woman in labour, and Alexandria shall be laid waste, and in Memphis there shall be daily distresses.

30:17. The young men of Heliopolis, and of Bubastus shall fall by the sword, and they themselves shall go into captivity.

30:18. And in Taphnis the day shall be darkened, when I shall break there the sceptres of Egypt, and the pride of her power shall cease in her: a cloud shall cover her, and her daughters shall be led into captivity.

30:19. And I will execute judgments in Egypt: and they shall know that I am the Lord.

30:20. And it came to pass in the eleventh year, in the first month, in the seventh day of the month, that the word of the Lord came, me, saying:

30:21. Son of man, I have broken the arm of Pharaoh king of Egypt: and behold it is not bound up, to be healed, to be tied up with clothes, and swathed with linen, that it might recover strength, and hold the sword.

30:22. Therefore, thus saith the Lord God: Behold, I come against Pharaoh king of Egypt, and I will break into pieces his strong arm, which is already broken: and I will cause the sword to fall out of his hand:

30:23. And I will disperse Egypt among the nations, and scatter them through the countries.

30:24. And I will strengthen the arms of the king of Babylon, and will put my sword in his hand: and I will break the arms of Pharaoh, and they shall groan bitterly being slain before his face.

30:25. And I will strengthen the arms of the king of Babylon, and the arms of Pharaoh shall fall: and they shall know that I am the Lord, when I shall have given my sword into the hand of the king of Babylon, and he shall have stretched it forth upon the land of Egypt.

30:26. And I will disperse Egypt among the nations, and will scatter them through the countries, and they shall know that I am the Lord.

Sunzi (Sun Tzu): *Art of War*

Date: c.400 B.C.E.

Also known as: Sun Tzu, Sun-tzu

An English translation of the Chinese treatise, Sunzi Bingfa, on the subject of war and strategy was written about 400 B.C.E. by the Chinese general Sunzi (Sun-Tzu). The basic premise is that if a commander knows his enemy as well as he knows his own troops, he can win any battle. It reveals a profound understanding of the practical and philosophical bases of war, emphasizing politics, tactics, and intelligence (secret agents). "All warfare is based on deception," said Sunzi, who instructed his followers: "Hold out

baits to entice the enemy. Feign disorder, and crush him.” Modern strategists have been clearly influenced by his tactics concerning guerrilla warfare: “Know the enemy, know yourself . . . Know the ground, know the weather; your victory will then be total.” Sunzi wrote that success comes from avoiding an enemy’s strength and striking his weakness.

The following is an excerpt from the first section. Original spellings have been retained in this document.

I. LAYING PLANS

1. Sun Tzu said: The art of war is of vital importance to the State.
2. It is a matter of life and death, a road either to safety or to ruin. Hence it is a subject of inquiry which can on no account be neglected.
3. The art of war, then, is governed by five constant factors, to be taken into account in one’s deliberations, when seeking to determine the conditions obtaining in the field.
4. These are: (1) The Moral Law; (2) Heaven; (3) Earth; (4) The Commander; (5) Method and discipline.
- 5, 6. The MORAL LAW causes the people to be in complete accord with their ruler, so that they will follow him regardless of their lives, undismayed by any danger.
7. HEAVEN signifies night and day, cold and heat, times and seasons.
8. EARTH comprises distances, great and small; danger and security; open ground and narrow passes; the chances of life and death.
9. The COMMANDER stands for the virtues of wisdom, sincerity, benevolence, courage and strictness.
10. By METHOD AND DISCIPLINE are to be understood the marshaling of the army in its proper subdivisions, the graduations of rank among the officers, the maintenance of roads by which supplies may reach the army, and the control of military expenditure.
11. These five heads should be familiar to every general: he who knows them will be victorious; he who knows them not will fail.
12. Therefore, in your deliberations, when seeking to determine the military conditions, let them be made the basis of a comparison, in this wise:
 13. (1) Which of the two sovereigns is imbued with the Moral law? (2) Which of the two generals has most ability? (3) With whom lie the advantages derived from Heaven and Earth? (4) On which side is discipline most rigorously enforced? (5) Which army is stronger? (6) On which side are officers and men more highly trained? (7) In which army is there the greater constancy both in reward and punishment?
14. By means of these seven considerations I can forecast victory or defeat.
15. The general that hearkens to my counsel and acts upon it, will conquer: let such a one be retained in command! The general that hearkens not to my counsel nor acts upon it, will suffer defeat: let such a one be dismissed!
16. While heading the profit of my counsel, avail yourself also of any helpful circumstances over and beyond the ordinary rules.
17. According as circumstances are favorable, one should modify one’s plans.
18. All warfare is based on deception.
19. Hence, when able to attack, we must seem unable; when using our forces, we must seem inactive; when we are near, we must make the enemy believe we are far away; when far away, we must make him believe we are near.
20. Hold out baits to entice the enemy. Feign disorder, and crush him.
21. If he is secure at all points, be prepared for him. If he is in superior strength, evade him.
22. If your opponent is of choleric temper, seek to irritate him. Pretend to be weak, that he may grow arrogant.
23. If he is taking his ease, give him no rest. If his forces are united, separate them.
24. Attack him where he is unprepared, appear where you are not expected.
25. These military devices, leading to victory, must not be divulged beforehand.
26. Now the general who wins a battle makes many calculations in his temple ere the battle is fought. The general who loses a battle makes but few calculations beforehand. Thus do many calculations lead to victory, and few calculations to defeat: how much more no calculation at all! It is by attention to this point that I can foresee who is likely to win or lose.

Plato's Republic

Date: c. 385–370 B.C.E.

The Republic is a long dialogue in 10 books on the nature of justice. In this excerpt from Book 7, the main speaker, the philosopher and teacher of Plato, Socrates, uses the parable of the cave to show how the philosopher, the true “lover of wisdom,” must escape from the bonds of the physical world and see the “real” world of ideas. The other speaker is Socrates’ friend Glaucon. Plato’s philosophy is based on the idea that reality lies not in what the eye can see but in “forms” or “ideas” of those things. Whoever apprehends these forms will acquire wisdom. The parable of the cave, with its image of humans who are capable only of seeing shadows of objects and not the objects themselves, is Plato’s method of illustrating this concept.

And now, I said, let me show in a figure how far our nature is enlightened or unenlightened—Behold! human beings living in a underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

I see.

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent. You have shown me a strange image, and they are strange prisoners. Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

True, he said; how could they see anything but the shadows if they were never allowed to move their heads?

And of the objects which are being carried in like manner they would only see the shadows?

Yes, he said.

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

Very true.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

No question, he replied.

To them, I said, the truth would be literally nothing but the shadows of the images.

That is certain.

And now look again, and see what will naturally follow if the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision,—what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them,—will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

Far truer.

And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take refuge in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

True, he said.

And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he is forced into the presence of the sun himself, is he not likely to be pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?

Certainly.

Last of all he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

Certainly.

He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

Clearly, he said, he would first see the sun and then reason about him.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

Certainly, he would.

And if they were in the habit of conferring honours among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer, 'Better to be the poor servant of a poor master,' and to endure anything, rather than think as they do and live after their manner?

Yes, he said, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Mencius

Also known as: *Mengzi*.

Date c. 300 B.C.E.

The word Mengzi was "Latinized" in the West to Mencius. The Mencius is a collection of philosopher's conversations elaborating on Confucian ideas, which are presented in no particular order.

The Chinese philosopher Mengzi was schooled in Confucianism and developed many of its principles in his own work, recorded by his disciples in The Sayings of Mencius, of which this is Book I. Mencius lived during the Warring States Period (403–221 B.C.E.), when dynastic power had eroded and feudal states fought against each other. Mencius traveled to many of the warring states, trying to persuade the feudal lords to respect their vassals and live virtuously.

ON GOVERNMENT

Mencius had an audience with King Hui of Liang. The king said, “Sir, you did not consider a thousand li too far to come. You must have some ideas about how to benefit my state.” Mencius replied, “Why must Your Majesty use the word ‘benefit?’ All I am concerned with are the benevolent and the right.

If Your Majesty says, ‘How can I benefit my state?’ your officials will say, ‘How can I benefit my family?’ and officers and common people will say, ‘How can I benefit myself?’ Once superiors and inferiors are competing for benefit, the state will be in danger. When the head of a state of ten thousand chariots is murdered, the assassin is invariably a noble with a fief of a thousand chariots, When the head of a fief of a thousand chariots is murdered, the assassin is invariably head of a subfief of a hundred chariots. Those with a thousand out of ten thousand, or a hundred out of a thousand, had quite a bit. But when benefit is put before what is right, they are not satisfied without snatching it all. By contrast there has never been a benevolent person who neglected his parents or a righteous person who put his lord last. Your Majesty perhaps will now also say, ‘All I am concerned with are the benevolent and the right. Why mention ‘benefit?’”

After seeing King Xiang of Liang, Mencius to someone, “When I saw him from a distance he did not look like a ruler, and when I got closer, I saw nothing to command respect. But he asked ‘How can the realm be settled?’ I answered, ‘It can be settled through unity.’ ‘Who can unify it?’ he asked. I answered, ‘Someone not fond of killing people.’ ‘Who could give it to him?’ I answered ‘Everyone in the world will give it to him. Your Majesty knows what rice plants are? If there is a drought in the seventh and eighth months, the plants wither, but if moisture collects in the sky and forms clouds and rain falls in torrents, plants suddenly revive. This is the way it is; no one can stop the process. In the world today there are no rulers disinclined toward killing. If there were a ruler who did not like to kill people, everyone in the world would crane their necks to catch sight of him. This is really true. The people would flow toward him the way water flows down. No one would be able to repress them.”

King Xuan of Qi asked, “Is it true that King Wen’s park was seventy li square,” Mencius answered, “That is what the records say.” The King said, “Isn’t that large?” Mencius responded, “The people considered it small.” “Why then do the people consider my park large when it is forty li square?” “In the forty square li of King Wen’s park, people could collect firewood and catch birds and rabbits. Since he shared it with the people, isn’t it fitting that they considered it small? When I arrived at the border, I asked about the main rules of the state before daring to enter. I learned that there was a forty-li park within the outskirts of the capital where killing a deer was punished like killing a person. Thus these forty li are a trap in the center of the state. Isn’t it appropriate that the people consider it too large?”

After an incident between Zou and Lu, Duke Mu asked, “Thirty-three of my officials died but no common people died. I could punish them, but I could not punish them all. I could refrain from punishing them but they did angrily watch their superiors die without saving them. What would be the best course for me to follow?” Mencius answered, “When the harvest failed, even though your granaries were full, nearly a thousand of your subjects were lost—the old and weak among them dying in the gutters, the able-bodied scattering in all directions. Your officials never reported the situation, a case of superiors callously inflicting suffering on their subordinates. Zengzi said, ‘Watch out, watch out! What you do will be done to you.’ This was the first chance the people had to pay them back. You should not resent them. If Your Highness practices benevolent government, the common people will love their superiors and die for those in charge of them.”

King Xuan of Qi asked, “Is it true that Tang banished Jie and King Wu took up arms against Zhou?” Mencius replied, “That is what the records say.” “Then is it permissible for a subject to assassinate his lord?” Mencius said, “Someone who does violence to the good we call a villain; someone who does violence to the right we call a criminal. A person who is both a villain and a criminal we call a scoundrel I have heard that the scoundrel Zhou was killed, but have not heard that a lord was killed

King Xuan of Qi asked about ministers Mencius said, “What sort of ministers does Your Majesty mean?” The king said ‘Are there different kinds of ministers?’ “There are. There are noble ministers related to the ruler and ministers of other surnames.” The king said, “I’d like to hear about noble ministers.” Mencius replied, “When the ruler makes a major error, they point it out. If he does not listen to their repeated remonstrations, then they put someone else on the throne.” The king blanched. Mencius continued, “Your Majesty should not be surprised at this. Since you asked me, I had to tell you truthfully.” After the king regained his composure, he asked about unrelated ministers. Mencius said, “When the king makes an error, they point it out. If he does not heed their repeated remonstrations, they quit their posts.”

Bo Gui said, “I’d like a tax of one part in twenty. What do you think?” Mencius said, “Your way is that of the northern tribes. Is one potter enough for a state with ten thousand households?” “No, there would

not be enough wares. The northern tribes do not grow all the five grains, only millet. They have no cities or houses, no ritual sacrifices. They do not provide gifts or banquets for feudal lords, and do not have a full array of officials. Therefore, for them, one part in twenty is enough. But we live in the central states. How could we abolish social roles and do without gentlemen? If a state cannot do without potters, how much less can it do without gentlemen? Those who want to make government lighter than it was under Yao and Shun are to some degree barbarians. Those who wish to make government heavier than it was under Yao and Shun are to some degree [tyrants like] Jie.”

ON HUMAN NATURE

Mencius said, “Everyone has a heart that is sensitive to the sufferings of others. The great kings of the past had this sort of sensitive heart and thus adopted compassionate policies. Bringing order to the realm is as easy as moving an object in your palm when you have a sensitive heart and put into practice compassionate policies. Let me give an example of what I mean when I say everyone has a heart that is sensitive to the sufferings of others. Anyone today who suddenly saw a baby about to fall into a well would feel alarmed and concerned. It would not be because he wanted to improve his relations with the child’s parents, nor because he wanted a good reputation among his friends and neighbors, nor because he disliked hearing the child cry. From this it follows that anyone who lacks feelings of commiseration, shame, and courtesy or a sense of right and wrong is not a human being. From the feeling of commiseration benevolence grows; from the feeling of shame righteousness grows; from the feeling of courtesy ritual grows; from a sense of right and wrong wisdom grows. People have these four germs, just as they have four limbs. For someone with these four potentials to claim incompetence is to cripple himself; to say his ruler is incapable of them is to cripple his ruler. Those who know how to develop the four potentials within themselves will take off like a fire or burst forth like a spring. Those who can fully develop them can protect the entire land while those unable to develop them cannot even take care of their parents.”

Gaozi said, “Human nature is like whirling water. When an outlet is opened to the east, it flows east; when an outlet is opened to the west, it flows west. Human nature is no more inclined to good or bad and water is not inclined to east or west.” Mencius responded, “Water, it is true is not inclined to either east or west, but does it have no preference for high or low? Goodness is to human nature like flowing downward to water. There are no people who are not good and no water that does not flow down. Still water if splashed can go higher than your head; if forced, it can be brought up a hill. This isn’t the nature of water; it is the specific circumstances. Although people can be made to be bad, their natures are not changed.”

Selections from the Writings of Han Fei

Date: c. 230 B.C.E.

Legalism in China reached a kind of peak in the late third century B.C.E. in the writings of Han Feizi (Master Han Fei) as well as in the policies of Emperor Qin Shi Huangdi. Before he committed suicide in 233 B.C.E., Han Fei wrote a number of essays on how to construct a stable and peaceful state. The selections below present the major principles of Han Fei’s political philosophy.

HAVING REGULATIONS

No country is permanently strong. Nor is any country permanently weak. If conformers to law are strong, the country is strong; if conformers to law are weak, the country is weak. . . .

Any ruler able to expel private crookedness and uphold public law, finds the people safe and the state in order; and any ruler able to expunge private action and act on public law, finds his army strong and his enemy weak. So, find out men following the discipline of laws and regulations, and place them above the body of officials. Then the sovereign cannot be deceived by anybody with fraud and falsehood. . . .

Therefore, the intelligent sovereign makes the law select men and makes no arbitrary promotion himself. He makes the law measure merits and makes no arbitrary regulation himself. In consequence, able men cannot be obscured, bad characters cannot be disguised; falsely praised fellows cannot be advanced, wrongly defamed people cannot be degraded.

To govern the state by law is to praise the right and blame the wrong.

The law does not fawn on the noble. . . . Whatever the law applies to, the wise cannot reject nor can the brave defy. Punishment for fault never skips ministers, reward for good never misses commoners. Therefore, to correct the faults of the high, to rebuke the vices of the low, to suppress disorders, to decide against mistakes, to subdue the arrogant, to straighten the crooked, and to unify the folkways of the masses, nothing could match the law. To warn the officials and overawe the people, to rebuke obscenity and danger, and to forbid falsehood and deceit, nothing could match penalty. If penalty is severe, the noble cannot discriminate against the humble. If law is definite, the superiors are esteemed and not violated. If the superiors are not violated, the sovereign will become strong and able to maintain the proper course of government. Such was the reason why the early kings esteemed Legalism and handed it down to posterity. Should the lord of men discard law and practice selfishness, high and law would have no distinction.

THE TWO HANDLES

The means whereby the intelligent ruler controls his ministers are two handles only. The two handles are chastisement and commendation. What are meant by chastisement and commendation? To inflict death or torture upon culprits, is called chastisement; to bestow encouragements or rewards on men of merit, is called commendation.

Ministers are afraid of censure and punishment but fond of encouragement and reward. Therefore, if the lord of men uses the handles of chastisement and commendation, all ministers will dread his severity and turn to his liberality. The villainous ministers of the age are different. To men they hate they would by securing the handle of chastisement from the sovereign ascribe crimes; on men they love they would by securing the handle of commendation from the sovereign bestow rewards. Now supposing the lord of men placed the authority of punishment and the profit of reward not in his hands but let the ministers administer the affairs of reward and punishment instead, then everybody in the country would fear the ministers and slight the ruler, and turn to the ministers and away from the ruler. This is the calamity of the ruler's loss of the handles of chastisement and commendation.

Cicero: *On the Republic*

Date: 54–51 B.C.E.

Marcus Tullius Cicero was the eldest son of an equestrian, though not noble, family. He was born in 105 b.c.e. and was beheaded by Antony's soldiers in 43 B.C.E. The path for a "new man" [i.e., without a family who had held a magistracy in Rome] to receive political honors was through the law, and at 26, after a thorough Greek and Latin education, Cicero pleaded his first case. The next year he successfully defended Publius Sextus Roscius against the favorite of Sulla, the dictator, and thought it best, during the rest of Sulla's dictatorship, to travel for his education and his health. At 32 he was elected quaestor to Sicily, and because of his integrity while holding this magistracy, was soon afterwards chosen by the Sicilians to prosecute their former governor Verres for extortion. Cicero was curule aedile in 69 B.C.E., and praetor urbanus in 66 B.C.E. In this year he supported Pompey for the eastern command, and the two remained friends. Cicero was consul in 63 B.C.E., and put down the conspiracy of Catiline.

Cicero wrote a major work discussing the nature of politics, written in six books, between 54–51 B.C.E. The original Latin name is De re publica or, alternatively, De republica and today is known to some as The Republic, similar to the dialogue of Plato, the style of which Cicero copied. The work is also known as On the Republic and On the Commonwealth. The series of books are a philosophical political dialogue written in the format of a Socratic dialogue. Cicero's characters were renowned Romans of a generation or two before him. The classical style of the books and the use of characters familiar to the Romans made Cicero's work very popular in its own time. The politics he wrote about, however, were the divisive politics and current affairs of his day. He presented his opinions and those of his political allies, as well as those of his political adversaries. Cicero's books were considered politically controversial in Rome.

ON THE REPUBLIC

Book I.

35. Then Laelius said: But you have not told us, Scipio, which of these three forms of government you yourself most approve.

Scipio: You are right to shape your question, which of the three I most approve, for there is not one of them which I approve at all by itself, since, as I told you, I prefer that government which is mixed and composed of all these forms, to any one of them taken separately. But if I must confine myself to one of the particular forms simply and exclusively, I must confess I prefer the royal one, and praise that as the first and

best. In this, which I here choose to call the primitive form of government, I find the title of father attached to that of king, to express that he watches over the citizens as over his children, and endeavors rather to preserve them in freedom than reduce them to slavery. So that it is more advantageous for those who are insignificant in property and capacity to be supported by the care of one excellent and eminently powerful man. The nobles here present themselves, who profess that they can do all this in much better style; for they say that there is much more wisdom in many than in one, and at least as much faith and equity. And, last of all, come the people, who cry with a loud voice, that they will render obedience neither to the one nor to the few; that even to brute beasts nothing is so dear as liberty; and that all men who serve either kings or nobles are deprived of it. Thus, the kings attract us by affection, the nobles by talent, the people by liberty; and in the comparison it is hard to choose the best.

Laelius: I think so, too, but yet it is impossible to dispatch the other branches of the question, if you leave this primary point undetermined.

36. *Scipio:* We must, then, I suppose, imitate Aratus, who, when he prepared himself to treat of great things, thought himself in duty bound to begin with Jupiter.

Laelius: Why Jupiter? And what is there in this discussion which resembles that poem?

Scipio: Why, it serves to teach us that we cannot better commence our investigations than by invoking him whom, with one voice, both learned and unlearned extol as the universal king of all gods and men.

Laelius: How so?

Scipio: Do you, then, believe in nothing which is not before your eyes? Whether these ideas have been established by the chiefs of states for the benefit of society, that there might be believed to exist one Universal Monarch in heaven, at whose nod (as Homer expresses it) all Olympus trembles, and that he might be accounted both king and father of all creatures; for there is great authority, and there are many witnesses, if you choose to call all many, who attest that all nations have unanimously recognized, by the decrees of their chiefs, that nothing is better than a king, since they think that all the gods are governed by the divine power of one sovereign; or if we suspect that this opinion rests on the error of the ignorant, and should be classed among the fables, let us listen to those universal testimonies of erudite men, who have, as it were, seen with their eyes those things to the knowledge of which we can hardly attain by report.

Laelius: What men do you mean?

Scipio: Those who, by the investigation of nature, have arrived at the opinion that the whole universe [is animated] by a single Mind. . . . [Text missing].

37. *Scipio:* But if you please, my *Laelius*, I will bring forward evidences, which are neither too ancient, nor in any respect barbarous.

Laelius: Those are what I want.

Scipio: You are aware, that it is now not four centuries since this city of ours has been without kings.

Laelius: You are correct, it is less than four centuries.

Scipio: Well, then, what are four centuries in the age of a state or city; is it a long time ?

Laelius: It hardly amounts to the age of maturity.

Scipio: You say truly, and yet not four centuries have elapsed since there was a king in Rome.

Laelius: And he was a proud king.

Scipio: But who was his predecessor?

Laelius: He was an admirably just one; and, indeed, we must bestow the same praise on all his predecessors, as far back as Romulus, who reigned about six centuries ago.

Scipio: Even he, then, is not very ancient.

Laelius: No, he reigned when Greece was already becoming old.

Scipio: Agreed. Was Romulus, then, think you, king of a barbarous people?

Laelius: Why, as to that, if we are to follow the example of the Greeks, who say that all people are either Greeks or barbarians, I am afraid that we must confess that he was a king of barbarians; but if this name belong rather to manners than to languages, then I believe the Greeks were just as barbarous as the Romans.

Scipio: But with respect to the present question, we do not so much need to inquire into the nation as into the disposition. For if intelligent men, at a period so little remote, desired the governing of kings, you will confess that I am producing authorities that are neither antiquated, rude, nor insignificant.

38. *Laelius:* I see, *Scipio*, that you are very sufficiently provided with authorities; but with me, as with every fair judge, authorities are worth less than arguments.

Scipio: Then, *Laelius*, you shall yourself make use of an argument derived from your own senses.

Laelius: What senses do you mean ?

Scipio: The feelings which you experience when at any time you happen to feel angry at anyone.

Laelius: That happens rather oftener than I could wish.

Scipio: Well, then, when you are angry, do you permit your anger to triumph over your judgment?

Laelius: No, by Hercules! I imitate the famous Archytas of Tarentum, who, when he came to his villa, and found all its arrangements were contrary to his orders, said to his steward "Ah! you unlucky scoundrel, I would flog you to death, if it were not that I am in a rage with you."

Scipio: Capital. Archytas, then, regarded unreasonable anger as a kind of sedition and rebellion of nature, which he sought to appease by reflection. And so, if we examine avarice, the ambition of power or glory, or the lusts of concupiscence and licentiousness, we shall find a certain conscience in the mind of man, which, like a king, sways by the force of counsel all the inferior faculties and propensities; and this, in truth, is the noblest portion of our nature; for when conscience reigns, it allows no resting place to lust, violence, or temerity.

Laelius: You have spoken the truth.

Scipio: Well, then, does a mind thus governed and regulated meet your approbation ?

Laelius: More than anything on earth.

Scipio: Then you would not approve that the evil passions, which are innumerable, should expel conscience, and that lusts and animal propensities should assume an ascendancy over us?

Laelius: For my part, I can conceive nothing more wretched than a mind thus degraded, or a man animated by a soul so licentious.

Scipio: You desire, then, that all the faculties of the mind should submit to a ruling power, and that conscience should reign over them all?

Laelius: Certainly, that is my wish.

Scipio: How, then, can you doubt what opinion to form on the subject of the commonwealth? in which, if the state is thrown into many hands, it is very plain that there will be no presiding authority; for if power be not united, it soon comes to nothing.

39. *Laelius*: But what difference is there, I should like to know, between the one and the many, if justice exists equally in many?

Scipio: Since I see, my *Laelius*, that the authorities I have adduced have no great influence on you, I must continue to employ yourself as my witness in proof of what I am saying.

Laelius: In what way are you going to make me again support your argument?

Scipio: Why thus. I recollect when we were lately at Formiae that you told your servants repeatedly to obey the orders of not more than one master only.

Laelius: To be sure, those of my steward.

Scipio: What do you at home? do you commit your affairs to the hands of many persons?

Laelius: No, I trust them to myself alone.

Scipio: Well, in your whole establishment, is there any other master but yourself ?

Laelius: Not one.

Scipio: Then I think you must grant me that as respects the state, the government of single individuals, provided they are just, is superior to any other.

Laelius: You have conducted me to this conclusion, and I entertain very nearly that opinion.

40. *Scipio*: You would still further agree with me, my *Laelius*, if, omitting the common comparisons, that one pilot is better fitted to steer a ship, and a physician to treat an invalid, provided they be competent men in their respective professions, than many could be, I should come at once to more illustrious examples.

Laelius: What examples do you mean?

Scipio: Do you observe that it was the cruelty and pride of one single Tarquin only, that made the title of king unpopular among the Romans ?

Laelius: Yes, I acknowledge that.

Scipio: You are also aware of this fact, on which I think I shall debate in the course of the coming discussion, that after the expulsion of King Tarquin, the people were transported by a wonderful excess of liberty. Then, innocent men were driven into banishment; then the estates of many individuals were pillaged, consulships were made annual, public authorities were overawed by mobs, popular appeals took place in all cases imaginable; then secessions of the lower orders ensued; and lastly, those proceedings which tended to place all powers in the hands of the populace.

Laelius: I must confess this all too true.

Scipio: All these things now happened during periods of peace and tranquility, for licence is wont to prevail when there is too little to fear, as in a calm voyage, or a trifling disease. But as we observe the voyager and invalid implore the aid of some competent director, as soon as the sea grows stormy and the disease alarming! so our nation in peace and security commands, threatens, resists, appeals from, and insults its magistrates, but in war obeys them as strictly as kings; for public safety is after all rather more valuable than popular licence. And in the most serious wars, our countrymen have even chosen the entire command to be deposited in the hands of some single chief, without a colleague; the very name of which magistrate indicates the absolute character of his power. For though he is evidently called dictator because he is appointed, yet do we still observe him, my *Laelius*, in our sacred books entitled *Magister Populi*, the master of the people.

Laelius: This is certainly the case.

Scipio: Our ancestors, therefore, acted wisely.

Aeneid of Virgil

Date: c. 29–19 B.C.E.

As the author of the *Eclogues* and the *Georgics*, Virgil was already an established, even famous, poet when he began writing the *Aeneid* around 29 B.C.E. The poem, an epic in 12 books published after Virgil's death in 19 B.C.E., had a tremendous impact because it effectively created a political, historical, and literary identity for Rome in a way that no work had previously done.

The *Aeneid* tells the story of Aeneas, a survivor of the Trojan War, who struggles to reach Italy and establish a kingdom that will one day be known as the Roman Empire. The first six books describe the wanderings of the Trojans in search of a homeland, and the remaining books tell the story of the war between the Trojans and the native-born Italians. The poem ends with Aeneas victorious in combat over the Italian Turnus. This somewhat simplistic narrative is only one layer of a work of great depth and complexity.

A close study of the poem reveals, among other things, that Virgil had an astounding knowledge of history, philosophy, and literature. In crafting an epic that took as its subject the founding of Rome, he made use of many sources, both Greek and Latin. From its first line, "I sing arms and the man" (*Arma virumque cano*), the *Aeneid* makes reference to its two greatest models, the *Iliad* and *Odyssey* of Homer. In the sixth book, Aeneas descends to the underworld to see his father Anchises. Although one of the models for this scene is book 11 of the *Odyssey*, Virgil writes the scene as an expression of Roman culture and ideals, which culminates in a pageant of Roman history. In this passage (lines 788–853 in the Latin) Anchises directs Aeneas's sight to a line of his descendants, among whom (according to this invented genealogy) will be the Emperor Augustus. After describing Augustus and his deeds, Anchises then recounts a brief history of Rome, from the time when it was ruled by kings through the early and late Republic, describing the names and deeds of famous men. Yet after this display of Rome's glory, the passage concludes with a warning. Anchises cautions Aeneas with the words, "Romane, memento," or "Roman, remember": Remember who you are, and that as ruler of the world, while it is your duty to "tame the proud," it is equally important to foster peace and to be sparing to the weak. At the end of the poem, when Aeneas stands with sword drawn over the wounded Turnus, the reader may recall these words. Although Turnus begs for his life and appeals to Aeneas in the name of his father, Anchises, Aeneas only hesitates for a second before plunging the sword into Turnus's chest.

The following is an excerpt from: *The Aeneid*, Book 6.

Now fix your sight, and stand intent, to see
 Your Roman race, and Julian progeny.
 The mighty Caesar waits his vital hour,
 Impatient for the world, and grasps his promis'd pow'r.
 But next behold the youth of form divine,
 Ceasar himself, exalted in his line;
 Augustus, promis'd oft, and long foretold,
 Sent to the realm that Saturn rul'd of old;
 Born to restore a better age of gold.
 Afric and India shall his pow'r obey;
 He shall extend his propagated sway
 Beyond the solar year, without the starry way,
 Where Atlas turns the rolling heav'ns around,
 And his broad shoulders with their lights are crown'd.
 At his foreseen approach, already quake
 The Caspian kingdoms and Maeotian lake:
 Their seers behold the tempest from afar,
 And threat'ning oracles denounce the war.
 Nile hears him knocking at his sev'nfold gates,
 And seeks his hidden spring, and fears his nephew's fates.
 Nor Hercules more lands or labors knew,
 Not tho' the brazen-footed hind he slew,
 Freed Erymanthus from the foaming boar,
 And dipp'd his arrows in Lernaean gore;
 Nor Bacchus, turning from his Indian war,
 By tigers drawn triumphant in his car,
 From Nisus' top descending on the plains,
 With curling vines around his purple reins.
 And doubt we yet thro' dangers to pursue

The paths of honor, and a crown in view?
But what's the man, who from afar appears?
His head with olive crown'd, his hand a censer bears,
His hoary beard and holy vestments bring
His lost idea back: I know the Roman king.
He shall to peaceful Rome new laws ordain,
Call'd from his mean abode a scepter to sustain.
Him Tullus next in dignity succeeds,
An active prince, and prone to martial deeds.
He shall his troops for fighting fields prepare,
Disus'd to toils, and triumphs of the war.
By dint of sword his crown he shall increase,
And scour his armor from the rust of peace.
Whom Ancus follows, with a fawning air,
But vain within, and proudly popular.
Next view the Tarquin kings, th' avenging sword
Of Brutus, justly drawn, and Rome restor'd.
He first renews the rods and ax severe,
And gives the consuls royal robes to wear.
His sons, who seek the tyrant to sustain,
And long for arbitrary lords again,
With ignominy scourg'd, in open sight,
He dooms to death deserv'd, asserting public right.
Unhappy man, to break the pious laws
Of nature, pleading in his children's cause!
Howe'er the doubtful fact is understood,
'T is love of honor, and his country's good:
The consul, not the father, sheds the blood.
Behold Torquatus the same track pursue;
And, next, the two devoted Decii view:
The Drusian line, Camillus loaded home
With standards well redeem'd, and foreign foes o'ercome
The pair you see in equal armor shine,
Now, friends below, in close embraces join;
But, when they leave the shady realms of night,
And, cloth'd in bodies, breathe your upper light,
With mortal hate each other shall pursue:
What wars, what wounds, what slaughter shall ensue!
From Alpine heights the father first descends;
His daughter's husband in the plain attends:
His daughter's husband arms his eastern friends.
Embrace again, my sons, be foes no more;
Nor stain your country with her children's gore!
And thou, the first, lay down thy lawless claim,
Thou, of my blood, who bearist the Julian name!
Another comes, who shall in triumph ride,
And to the Capitol his chariot guide,
From conquer'd Corinth, rich with Grecian spoils.
And yet another, fam'd for warlike toils,
On Argos shall impose the Roman laws,
And on the Greeks revenge the Trojan cause;
Shall drag in chains their Achillean race;
Shall vindicate his ancestors' disgrace,
And Pallas, for her violated place.
Great Cato there, for gravity renown'd,
And conqu'ring Cossus goes with laurels crown'd.
Who can omit the Gracchi? who declare
The Scipios' worth, those thunderbolts of war,
The double bane of Carthage? Who can see
Without esteem for virtuous poverty,

Severe Fabricius, or can cease t' admire
 The plowman consul in his coarse attire?
 Tir'd as I am, my praise the Fabii claim;
 And thou, great hero, greatest of thy name,
 Ordain'd in war to save the sinking state,
 And, by delays, to put a stop to fate!
 Let others better mold the running mass
 Of metals, and inform the breathing brass,
 And soften into flesh a marble face;
 Plead better at the bar; describe the skies,
 And when the stars descend, and when they rise.
 But, Rome, 't is thine alone, with awful sway,
 To rule mankind, and make the world obey,
 Disposing peace and war by thy own majestic way;
 To tame the proud, the fetter'd slave to free:
 These are imperial arts, and worthy thee."

Acts

Also known as the Acts of the Apostles—attributed to Luke
 Date: c. 60–90 C.E.

Like an early Christian Odyssey, this passage from the New Testament Acts describes Paul's journey by sea from Jerusalem to Rome in about 60 C.E., providing a fascinating eyewitness account of ancient ship travel. The evangelist Luke wrote Acts (also called Acts of the Apostles) in koine, or common dialect Greek, between 60 and 90 C.E. The 28-chapter book documents the lives of Christ's followers after his crucifixion. Much of the narrative of Acts focuses on Paul, formerly Saul, of Tarsus. Following his conversion, which is described in chapter 9:1–30, Paul undertook several missionary journeys in Greece and Asia Minor. Upon his return to Jerusalem, he was arrested by the authorities. As a Roman citizen, he appealed to Caesar and after two years was sent to Rome to stand trial. Chapter 27 describes the journey taken by Paul and the author (note how the narrative uses the pronoun "we") and the storm that wrecks their ship on the island of Malta (Melita). The remainder of the excerpt, chapter 28:1–14, describes the travelers' reception on the island and their eventual arrival at Rome.

Describing Paul's voyage

27:1 And when it was determined that we should sail into Italy, they delivered Paul and certain other prisoners unto one named Julius, a centurion of Augustus' band. 27:2 And entering into a ship of Adramyttium, we launched, meaning to sail by the coasts of Asia; one Aristarchus, a Macedonian of Thessalonica, being with us. 27:3 And the next day we touched at Sidon. And Julius courteously entreated Paul, and gave him liberty to go unto his friends to refresh himself. 27:4 And when we had launched from thence, we sailed under Cyprus, because the winds were contrary. 27:5 And when we had sailed over the sea of Cilicia and Pamphylia, we came to Myra, a city of Lycia. 27:6 And there the centurion found a ship of Alexandria sailing into Italy; and he put us therein. 27:7 And when we had sailed slowly many days, and scarce were come over against Cnidus, the wind not suffering us, we sailed under Crete, over against Salmone; 27:8 And, hardly passing it, came unto a place which is called The fair havens; nigh where unto was the city of Lasea.

27:9 Now when much time was spent, and when sailing was now dangerous, because the fast was now already past, Paul admonished them, 27:10 And said unto them, "Sirs, I perceive that this voyage will be with hurt and much damage, not only of the lading and ship, but also of our lives." 27:11 Nevertheless the centurion believed the master and the owner of the ship, more than those things which were spoken by Paul. 27:12 And because the haven was not commodious to winter in, the more part advised to depart thence also, if by any means they might attain to Phenice, and there to winter; which is an haven of Crete, and lieth toward the south west and north west.

27:13 And when the south wind blew softly, supposing that they had obtained their purpose, loosing thence, they sailed close by Crete. 27:14 But not long after there arose against it a tempestuous wind, called Euroclydon. 27:15 And when the ship was caught, and could not bear up into the wind, we let her drive. 27:16 And running under a certain island which is called Claudia, we had much work to come by the boat: 27:17 Which when they had taken up, they used helps, undergirding the ship; and, fearing lest they should fall into the quicksands, strake sail, and so were driven. 27:18 And we being exceedingly tossed with a tempest, the next day they lightened the ship; 27:19 And the third day we cast out with our own hands the tackling of the ship. 27:20 And when neither sun nor stars in many days appeared, and no small tempest lay on us, all hope that we should be saved was then taken away.

27:21 But after long abstinence Paul stood forth in the midst of them, and said, "Sirs, ye should have hearkened unto me, and not have loosed from Crete, and to have gained this harm and loss. 27:22 And now I exhort you to be of good cheer: for there shall be no loss of any man's life among you, but of the ship. 27:23 For there stood by me this night the angel of God, whose I am, and whom I serve, 27:24 Saying, 'Fear not, Paul; thou must be brought before Caesar: and, lo, God hath given thee all them that sail with thee.' 27:25 Wherefore, sirs, be of good cheer: for I believe God, that it shall be even as it was told me. 27:26 Howbeit we must be cast upon a certain island."

27:27 But when the fourteenth night was come, as we were driven up and down in Adria, about midnight the shipmen deemed that they drew near to some country; 27:28 And sounded, and found it twenty fathoms: and when they had gone a little further, they sounded again, and found it fifteen fathoms. 27:29 Then fearing lest we should have fallen upon rocks, they cast four anchors out of the stern, and wished for the day. 27:30 And as the shipmen were about to flee out of the ship, when they had let down the boat into the sea, under colour as though they would have cast anchors out of the foreship, 27:31 Paul said to the centurion and to the soldiers, "Except these abide in the ship, ye cannot be saved." 27:32 Then the soldiers cut off the ropes of the boat, and let her fall off.

27:33 And while the day was coming on, Paul besought them all to take meat, saying, "This day is the fourteenth day that ye have tarried and continued fasting, having taken nothing. 27:34 Wherefore I pray you to take some meat: for this is for your health: for there shall not an hair fall from the head of any of you." 27:35 And when he had thus spoken, he took bread, and gave thanks to God in presence of them all: and when he had broken it, he began to eat. 27:36 Then were they all of good cheer, and they also took some meat. 27:37 And we were in all in the ship two hundred threescore and sixteen souls. 27:38 And when they had eaten enough, they lightened the ship, and cast out the wheat into the sea.

27:39 And when it was day, they knew not the land: but they discovered a certain creek with a shore, into the which they were minded, if it were possible, to thrust in the ship. 27:40 And when they had taken up the anchors, they committed themselves unto the sea, and loosed the rudder bands, and hoised up the mainsail to the wind, and made toward shore. 27:41 And falling into a place where two seas met, they ran the ship aground; and the forepart stuck fast, and remained unmoveable, but the hinder part was broken with the violence of the waves. 27:42 And the soldiers' counsel was to kill the prisoners, lest any of them should swim out, and escape. 27:43 But the centurion, willing to save Paul, kept them from their purpose; and commanded that they which could swim should cast themselves first into the sea, and get to land: 27:44 And the rest, some on boards, and some on broken pieces of the ship. And so it came to pass, that they escaped all safe to land.

28:1 And when they were escaped, then they knew that the island was called Melita. 28:2 And the barbarous people shewed us no little kindness: for they kindled a fire, and received us every one, because of the present rain, and because of the cold. 28:3 And when Paul had gathered a bundle of sticks, and laid them on the fire, there came a viper out of the heat, and fastened on his hand. 28:4 And when the barbarians saw the venomous beast hang on his hand, they said among themselves, No doubt this man is a murderer, whom, though he hath escaped the sea, yet vengeance suffereth not to live. 28:5 And he shook off the beast into the fire, and felt no harm. 28:6 Howbeit they looked when he should have swollen, or fallen down dead suddenly: but after they had looked a great while, and saw no harm come to him, they changed their minds, and said that he was a god.

28:7 In the same quarters were possessions of the chief man of the island, whose name was Publius; who received us, and lodged us three days courteously. 28:8 And it came to pass, that the father of Publius lay sick of a fever and of a bloody flux: to whom Paul entered in, and prayed, and laid his hands on him, and healed him.

28:9 So when this was done, others also, which had diseases in the island, came, and were healed: 28:10 Who also honoured us with many honours; and when we departed, they laded us with such things as were necessary. 28:11 And after three months we departed in a ship of Alexandria, which had wintered in the isle, whose sign was Castor and Pollux. 28:12 And landing at Syracuse, we tarried there three days. 28:13 And from thence we fetched a compass, and came to Rhegium: and after one day the south wind blew, and we came the next day to Puteoli: 28:14 Where we found brethren, and were desired to tarry with them seven days: and so we went toward Rome.

Bhagavad Gita

Also known as: *Song of the Lord*.

Date: c. 100 C.E.

The Bhagavad Gita is a Sanskrit poem forming part of the sixth book of the Hindu epic, the Mahabharata. Probably written in the first or second century C.E., it is often regarded as the greatest philosophical expression of Hinduism. The poem itself is a dialogue between Lord Krishna (as an incarnation of Vishnu) and Prince Arjuna on the eve of the Battle of Kurukshetra. Krishna eases Arjuna's concerns about the coming battle and instructs him on the importance of absolute devotion (bhakti) to a personal god as a means of salvation. As such, the Bhagavad Gita represents a fundamental departure from the brahman-atman (world-spirit and self) doctrine of the Vedas.

CHAPTER XIV

Gunatrayavibhagayog, or The Book of Religion by Separation from the Qualities.

Krishna.

Yet farther will I open unto thee
 This wisdom of all wisdoms, uttermost,
 The which possessing, all My saints have passed
 To perfectness. On such high verities
 Reliant, rising into fellowship
 With Me, they are not born again at birth
 Of Kalpas, nor at Pralyas suffer change!
 This Universe the womb is where I plant
 Seed of all lives! Thence, Prince of India, comes
 Birth to all beings! Whoso, Kunti's Son!
 Mothers each mortal form, Brahma conceives,
 And I am He that fathers, sending seed!
 Sattwan, Rajas, and Tamas, so are named
 The qualities of Nature, "Soothfastness,"
 "Passion," and "Ignorance." These three bind down
 The changeless Spirit in the changeful flesh.
 Whereof sweet "Soothfastness," by purity
 Living unsullied and enlightened, binds
 The sinless Soul to happiness and truth;
 And Passion, being kin to appetite,
 And breeding impulse and propensity,
 Binds the embodied Soul, O Kunti's Son!
 By tie of works. But Ignorance, begot
 Of Darkness, blinding mortal men, binds down
 Their souls to stupor, sloth, and drowsiness.
 Yea, Prince of India! Soothfastness binds souls
 In pleasant wise to flesh; and Passion binds
 By toilsome strain; but Ignorance, which blots
 The beams of wisdom, binds the soul to sloth.
 Passion and Ignorance, once overcome,
 Leave Soothfastness, O Bharata! Where this
 With Ignorance are absent, Passion rules;
 And Ignorance in hearts not good nor quick.
 When at all gateways of the Body shines
 The Lamp of Knowledge, then may one see well
 Soothfastness settled in that city reigns;
 Where longing is, and ardour, and unrest,

Impulse to strive and gain, and avarice,
 Those spring from Passion—Prince!—engrained; and where
 Darkness and dulness, sloth and stupor are,
 'Tis Ignorance hath caused them, Kuru Chief!
 Moreover, when a soul departeth, fixed
 In Soothfastness, it goeth to the place—
 Perfect and pure—of those that know all Truth.
 If it departeth in set habitude
 Of Impulse, it shall pass into the world
 Of spirits tied to works; and, if it dies
 In hardened Ignorance, that blinded soul
 Is born anew in some unlighted womb.
 The fruit of Soothfastness is true and sweet;
 The fruit of lusts is pain and toil; the fruit
 Of Ignorance is deeper darkness. Yea!
 For Light brings light, and Passion ache to have;
 And gloom, bewilderments, and ignorance
 Grow forth from Ignorance. Those of the first
 Rise ever higher; those of the second mode
 Take a mid place; the darkened souls sink back
 To lower deeps, loaded with witlessness!
 When, watching life, the living man perceives
 The only actors are the Qualities,
 And knows what rules beyond the Qualities,
 Then is he come nigh unto Me!
 The Soul,
 Thus passing forth from the Three Qualities—
 Whereby arise all bodies—overcomes
 Birth, Death, Sorrow, and Age; and drinketh deep
 The undying wine of Amrit.
 Arjuna.
 Oh, my Lord!
 Which be the signs to know him that hath gone
 Past the Three Modes? How liveth he? What way
 Leadeth him safe beyond the threefold Modes?
 Krishna.
 He who with equanimity surveys
 Lustre of goodness, strife of passion, sloth
 Of ignorance, not angry if they are,
 Not wishful when they are not: he who sits
 A sojourner and stranger in their midst
 Unruffled, standing off, saying—serene—
 When troubles break, “These be the Qualities!”
 He unto whom—self-centred—grief and joy
 Sound as one word; to whose deep-seeing eyes
 The clod, the marble, and the gold are one;
 Whose equal heart holds the same gentleness
 For lovely and unlovely things, firm-set,
 Well-pleased in praise and dispraise; satisfied
 With honour or dishonour; unto friends
 And unto foes alike in tolerance;
 Detached from undertakings,—he is named
 Surmounter of the Qualities!
 And such—
 With single, fervent faith adoring Me,
 Passing beyond the Qualities, conforms
 To Brahma, and attains Me!
 For I am
 That whereof Brahma is the likeness! Mine
 The Amrit is; and Immortality
 Is mine; and mine perfect Felicity!

Tacitus: *The Histories*

Date: 106–107 C.E.

This passage from The Histories illustrates why Tacitus (c. 56/57–c. 117 C.E.) is considered one of Rome's greatest writers. It describes the battle that took place in the city of Rome on December 20, 69 C.E., and the death of the emperor Vitellius (15–69 C.E.). In the struggle for control of the empire, Vitellius was the third emperor in less than a year, and he would not be the last. Like his predecessors Galba and Otho, he fell to the leader of a more powerful army. The man who would succeed him, Vespasian (9–79 C.E.), was serving as the governor of Judaea when his army (called Flavians after Vespasian's full name, Titus Flavius Vespasianus) proclaimed him emperor in the summer of 69. When the Flavians reached Rome that December, they had already won a decisive victory against the Vitellians at Bedriacum in northern Italy in October. It was the second time that year that a battle for the succession had been fought there.

Tacitus begins his narrative of the events that occurred in Rome that day, not with an account of the main actors, but by focusing on the crowd that has gathered to watch. He describes their behavior and the fighting in detail noting the historical significance of both. The account of the battle at the camp of the Praetorian Guard is brief yet effective in its narrative flow and in its mixture of military detail with the reported thoughts of the soldiers. The defeat of the Vitellians there leads to the palace and a description of the final actions of Vitellius himself. In a chilling account, Tacitus relates how, in a panic, the emperor attempted to escape, but was ultimately unable to avoid his fate.

The Histories (Book 3, chapters 83–85) (c. 106–107 C.E.)

The following is an excerpt.

The people came and watched the fighting, cheering and applauding now one side, now the other, like spectators at a gladiatorial contest. Whenever one side gave ground, and the soldiers began to hide in shops or seek refuge in some private house, they clamoured for them to be dragged [our] and killed, and thus got the greater part of the plunder for themselves: for while the soldiers were busy with the bloody work of massacre, the spoil fell to the crowd. The scene throughout the city was hideous and terrible: on the one side fighting and wounded men, on the other baths and restaurants: here lay heaps of bleeding dead, and close at hand were harlots and their companions—all the vice and licence of luxurious peace, and all the crime and horror of a captured town. One might well have thought the city mad with fury and mad with pleasure at the same time. Armies had fought in the city before this, twice when Sulla mastered Rome, once under Cinna. Nor were there less horrors then. What was now so inhuman was the people's indifference. Not for one minute did they interrupt the life of pleasure. The fighting was a new amusement for their holiday. Caring nothing for either party, they enjoyed themselves in riotous dissipation and took a frank pleasure in their country's disaster.

The storming of the Guards' camp was the most troublesome task. It was still held by some of the bravest as a forlorn hope, which made the victors all the more eager to take it, especially those who had originally served in the Guards. They employed against it every means ever devised for the storming of the most strongly fortified towns, a 'tortoise', artillery, earthworks, firebrands. This, they cried, was the crown of all the toil and danger they had undergone in all their battles. They had restored the city to the senate and people of Rome, and their Temples to the gods: the soldier's pride is his camp, it is his country and his home. If they could not regain it at once, they must spend the night in fighting. The Vitellians, for their part, had numbers and fortune against them, but by marring their enemy's victory, by postponing peace, by fouling houses and altars with their blood, they embraced the last consolations that the conquered can enjoy. Many lay more dead than alive on the towers and ramparts of the walls and there expired. When the gates were torn down, the remainder faced the conquerors in a body. And there they fell, every man of them facing the enemy with all his wounds in front. Even as they died they took care to make an honourable end.

When the city was taken, Vitellius left the Palace by a back way and was carried in a litter to his wife's house on the Aventine. If he could lie hid during the day, he hoped to make his escape to his brother and the Guards at Tarracina. But it is in the very nature of terror that, while any course looks dangerous, the present

state of things seems worst of all. His fickle determination soon changed and he returned to the vast, deserted Palace, whence even the lowest of his menials had fled, or at least avoided meeting him. Shuddering at the solitude and hushed silence of the place, he wandered about, trying closed doors, terrified to find the rooms empty; until at last, wearied with his miserable search, he crept into some shameful hiding-place. There Julius Placidus, an officer of the Guards, found him and dragged him out. His hands were tied behind his back, his clothes were torn, and thus he was led forth—a loathly spectacle at which many hurled insults and no one shed a single tear of pity. The ignominy of his end killed all compassion. On the way a soldier of the German army either aimed an angry blow at him, or tried to put him out of his shame, or meant, perhaps, to strike the officer in command; at any rate, he cut off the officer’s ear and was immediately stabbed.

With the points of their swords they made Vitellius hold up his head and face their insults, forcing him again and again to watch his own statues hurtling down, or to look at the Rostra and the spot where Galba had been killed. At last he was dragged along to the Ladder of Sighs, where the body of Flavius Sabinus had lain. One saying of his which was recorded had a ring of true nobility. When some officer flung reproaches at him, he answered, ‘And yet I was once your emperor.’ After that he fell under a shower of wounds, and when he was dead the mob abused him as loudly as they had flattered him in his lifetime—and with as little reason.

Edict of Milan

Date: 313 C.E.

With this decree, issued in 313 C.E., the coemperors Constantine (c. 285–337 C.E.) and Licinius (c. 263–325 C.E.) granted freedom of worship to all people throughout the Roman Empire. The decree was directed primarily at Christians, who, persecuted since the time of Nero (37–68 C.E.), had been subjected more recently to extremely brutal treatment under the emperors Diocletian (ruled from 284 to 305 C.E.) and Galerius (ruled as augustus from 305 to his death in 311 C.E.). Although Galerius had issued an edict of toleration in the last year of his reign, his successor, Maximinus II Daia, ignored it and continued the persecutions. The jointly issued decree of Constantine and Licinius not only restated the government’s toleration of Christian worship but also returned confiscated property to the Christians.

The text in which the edict has been preserved, On the Deaths of the Persecutors, is a history of the Christian persecutors in the Roman Empire. It was written in Latin between 300 and 318 C.E. by Lucius Caecilius Firmianus Lactantius, a converted Christian from North Africa. The edict as recorded by Lactantius is not technically an edict but a letter, written to a provincial governor, who, at the close, is instructed to announce the decree publicly.

Constantine and Licinius

When I, Constantine Augustus, as well as I, Licinius Augustus, had fortunately met near Mediolanum (Milan), and were considering everything that pertained to the public welfare and security, we thought that among other things which we saw would be for the good of many, that those regulations pertaining to the reverence of the Divinity ought certainly to be made first, so that we might grant to the Christians and to all others full authority to observe that religion which each preferred; whence any Divinity whatsoever in the seat of the heavens may be propitious and kindly disposed to us, and all who are placed under our rule. And thus by this wholesome counsel and most upright provision, we thought to arrange that no one whatever should be denied the opportunity to give his heart to the observance of the Christian religion or of that religion which he should think best for himself, so that the supreme Deity, to whom worship we freely yield our hearts, may show in all things his usual favor and benevolence. Therefore, your Worship should know that it has pleased us to remove all conditions whatsoever, which were in the rescripts formerly given to you officially, concerning the Christians, and now any one of these who wishes to observe the Christian religion may do so freely and openly, without any disturbance or molestation. We thought it fit to commend these things most fully to your care that you may know that we have given to those Christians free and unrestricted opportunity of religious worship. When you see that this has been granted to them by us, your Worship will know that we have also conceded to other religions the right of open and free observance of their worship for the sake of the peace of our times, that each one may have the free

opportunity to worship as he pleases; this regulation is made that we may not seem to detract aught from any dignity or any religion.

Moreover, in the case of the Christians especially, we esteemed it best to order that if it happens that anyone heretofore has bought from our treasury or from anyone whatsoever, those places where they were previously accustomed to assemble, concerning which a certain decree had been made and a letter sent to you officially, the same shall be restored to the Christians without payment or any claim of recompense and without any kind of fraud or deception. Those, moreover, who have obtained the same by gift, are likewise to return them at once to the Christians. Besides, both those who have purchased and those who have secured them by gift, are to appeal to the vicar if they seek any recompense from our bounty, that they may be cared for through our clemency. All this property ought to be delivered at once to the community of the Christians through your intercession, and without delay. And since these Christians are known to have possessed not only those places in which they were accustomed to assemble, but also other property, namely the churches, belonging to them as a corporation and not as individuals, all these things which we have included under the above law, you will order to be restored, without any hesitation or controversy at all, to these Christians, that is to say the corporations and their conventicles:—providing, of course, that the above arrangements be followed so that those who return the same without payment, as we have said, may hope for an indemnity from our bounty. In all these circumstances you ought to tender your most efficacious intervention to the community of the Christians, that our command may be carried into effect as quickly as possible, whereby, moreover, through our clemency, public order may be secured. Let this be done so that, as we have said above, Divine favor towards us which, under the most important circumstances we have already experienced, may, for all time, preserve and prosper our successes together with the good of the state. Moreover, in order that the statement of this decree of our good will may come to the notice of all, this rescript, published by your decree, shall be announced everywhere and brought to the knowledge of all, so that the decree of this, our benevolence, cannot be concealed.

Confessions of St. Augustine

Date: 397–400 c.e.

Augustine wrote his Confessions between 397 and 400 c.e., about 85 years after Constantine and Licinius signed the Edict of Milan, which legalized Christianity in the Roman Empire. Despite the new religion’s increasing popularity, Roman culture was at this time still largely, if not primarily, pagan. Many continued to worship the old gods and to read Cicero and Homer, whose texts glorified these gods and the mortals who served them. As Christianity’s influence increased, the extent to which Christians should partake of this classical culture became an issue among church leaders such as Augustine and Jerome. In this section of his spiritual autobiography, Augustine, a converted Christian, intersperses the narrative of events in his childhood with pleas to God to forgive him for what he now views as sinful behavior. Here, in Book 1, he describes how he was given a traditional education in classical literature. He relates with shame that as a boy he loved the Aeneid, but, expressing the frustration of anyone who has struggled with learning a foreign language, he tells how he hated Homer because he was unable to understand the Greek.

But now, my God, cry Thou aloud in my soul; and let Thy truth tell me, “Not so, not so. Far better was that first study.” For, lo, I would readily forget the wanderings of Aeneas and all the rest, rather than how to read and write. But over the entrance of the Grammar School is a vail drawn! true; yet is this not so much an emblem of aught recondit, as a cloak of error. Let not those, whom I no longer fear, cry out against me, while I confess to Thee, my God, whatever my soul will, and acquiesce in the condemnation of my evil ways, that I may love Thy good ways. Let not either buyers or sellers of grammar-learning cry out against me. For if I question them whether it be true that Aeneas came on a time to Carthage, as the poet tells, the less learned will reply that they know not, the more learned that he never did. But should I ask with what letters the name “Aeneas” is written, every one who has learnt this will answer me aright, as to the signs which men have conventionally settled. If, again, I should ask which might be forgotten with least detriment to the concerns of life, reading and writing or these poetic fictions? who does not foresee what all must answer who have not wholly forgotten themselves? I sinned, then, when as a boy I preferred those empty to those more profitable

studies, or rather loved the one and hated the other. “One and one, two”; “two and two, four”; this was to me a hateful singsong: “the wooden horse lined with armed men,” and “the burning of Troy,” and “Creusa’s shade and sad similitude,” were the choice spectacle of my vanity.

Why then did I hate the Greek classics, which have the like tales? For Homer also curiously wove the like fictions, and is most sweetly vain, yet was he bitter to my boyish taste. And so I suppose would Virgil be to Grecian children, when forced to learn him as I was Homer. Difficulty, in truth, the difficulty of a foreign tongue, dashed, as it were, with gall all the sweetness of Grecian fable. For not one word of it did I understand, and to make me understand I was urged vehemently with cruel threats and punishments. Time was also (as an infant) I knew no Latin; but this I learned without fear or suffering, by mere observation, amid the caresses of my nursery and jests of friends, smiling and sportively encouraging me. This I learned without any pressure of punishment to urge me on, for my heart urged me to give birth to its conceptions, which I could only do by learning words not of those who taught, but of those who talked with me; in whose ears also I gave birth to the thoughts, whatever I conceived. No doubt, then, that a free curiosity has more force in our learning these things, than a frightful enforcement. Only this enforcement restrains the roving of that freedom, through Thy laws, O my God, Thy laws, from the master’s cane to the martyr’s trials, being able to temper for us a wholesome bitter, recalling us to Thyself from that deadly pleasure which lures us from Thee.

Yoruba Creation Myth

Date: Unknown

The Yoruba are a people and a culture in West Africa and represent one of the largest language groups in Africa. Historically, the Yoruba have occupied the region of southwestern Nigeria, Benin, and Togo. It is believed that people migrated to this area around 900 and that the kingdom of Ile-Ife came into being around 1100. The golden age of the Yoruba civilization between 1100 and 1700 occurred due to the expansion of the kingdom's influence, power, and economic wealth.

The cultural and societal identity of the Yoruba people is based on their creation myths, or cosmogony—they believe they are in direct lineage to the Creator. The Yoruba Creation Myth states that in the beginning, there was nothing but an enormous ocean that reached the heavens. The Gods and their sons consulted and decided to build a city on dry land for all living creatures. It is taught that in later years the children of these gods became the kings and queens of Yorubaland.

In the beginning was only the sky above, water and marshland below. The chief god Olorun ruled the sky, and the goddess Olokun ruled what was below. Obatala, another god, reflected upon this situation, then went to Olorun for permission to create dry land for all kinds of living creatures to inhabit. He was given permission, so he sought advice from Orunmila, oldest son of Olorun and the god of prophecy. He was told he would need a gold chain long enough to reach below, a snail's shell filled with sand, a white hen, a black cat, and a palm nut, all of which he was to carry in a bag. All the gods contributed what gold they had, and Orunmila supplied the articles for the bag.

When all was ready, Obatala hung the chain from a corner of the sky, placed the bag over his shoulder, and started the downward climb. When he reached the end of the chain he saw he still had some distance to go. From above he heard Orunmila instruct him to pour the sand from the snail's shell, and to immediately release the white hen. He did as he was told, whereupon the hen landing on the sand began scratching and scattering it about. Wherever the sand landed it formed dry land, the bigger piles becoming hills and the smaller piles valleys. Obatala jumped to a hill and named the place Ife. The dry land now extended as far as he could see. He dug a hole, planted the palm nut, and saw it grow to maturity in a flash. The mature palm tree dropped more palm nuts on the ground, each of which grew immediately to maturity and repeated the process. Obatala settled down with the cat for company. Many months passed, and he grew bored with his routine. He decided to create beings like himself to keep him company. He dug into the sand and soon found clay with which to mold figures like himself and started on his task, but he soon grew tired and decided to take a break. He made wine from a nearby palm tree, and drank bowl after bowl. Not realizing he was drunk, Obatala returned to his task of fashioning the new beings; because of his condition he fashioned many imperfect figures. Without realizing this, he called out to Olorun to breathe life into his creatures. The next day he realized what he had done and swore never to drink again, and to take care of those who were deformed, thus becoming Protector of the Deformed.

The new people built huts as Obatala had done and soon Ife prospered and became a city. All the other gods were happy with what Obatala had done, and visited the land often, except for Olokun, the ruler of all below the sky. She had not been consulted by Obatala and grew angry that he had usurped so much of her kingdom. When Obatala returned to his home in the sky for a visit, Olokun summoned the great waves of her vast oceans and sent them surging across the land. Wave after wave she unleashed, until much of the land was underwater and many of the people were drowned. Those that had fled to the highest land beseeched the god Eshu who had been visiting, to return to the sky and report what was happening to them. Eshu demanded sacrifice be made to Obatala and himself before he would deliver the message. The people sacrificed some goats, and Eshu returned to the sky. When Orunmila heard the news he climbed down the golden chain to the earth, and cast many spells which caused the flood waters to retreat and the dry land reappear. So ended the great flood.

The Qur'an

Also known as: Quran; Koran.

Date: c. 610–632

The Qur'an is the sacred book of Islam. According to Islamic belief, the Qur'an (Koran) was revealed by God to the prophet Muhammad. Its tenets are strictly followed by devout Muslims around the world. The Qur'an is sacred in the same way to Muslims as the Bible is to Christians and Jews.

Allah is the Arabic name for the Supreme Being, or God. Qur'an, in Arabic, means "recitation." Muslims, or followers of Islam, believe that Muhammad received the word of Allah through the mediacy of the angel Gabriel and then recited it to the faithful. Islam, which means "submission to the word of God," is one of the world's great monotheistic religions, along with Judaism and Christianity. Devout Muslims believe that Allah sent several prophets, including Moses, Jesus, and, last but not most important, Muhammad, to save humankind from its sins. The teachings of Muhammad were passed orally among believers until they were recorded in book form after his death in 632. Devout Muslims regard the written text of the Qur'an to be an earthly copy of a book that exists as an eternal entity of the universe.

According to tradition, Muhammad, while in a heavenly trance, received the Qur'an from the angel Gabriel, a few verses at a time over the years 610 through 632, the year Muhammad died. Thus the teachings of the Qur'an follow the events of his life. Each time Muhammad awoke from his trance, he repeated Allah's revelations in Arabic to his followers. Legend states that scribes recorded the revelations on paper, palm-leaves, stone, or other objects that were on hand. Muhammad's followers then memorized the passages and recited them to other Arabs.

Surah 1

1: 1. In the name of ALLAH, the Gracious, the Merciful.

1: 2. All praise is due to ALLAH alone, Lord of all the worlds.

1: 3. The Gracious, the Merciful.

1: 4. Master of the Day of Judgment.

1: 5. THEE alone do we worship and THEE alone do we implore for help.

1: 6. Guide us in the straight path,

1: 7. The path of those on whom THOU hast bestowed THY favours, those who have not incurred THY displeasure and those who have not gone astray.

Surah 47

47: 1. In the name of ALLAH, the Gracious, the Merciful.

47: 2. Those who disbelieve and hinder men from the way of ALLAH—HE renders their works vain.

47: 3. But as for those who believe and do righteous deeds and believe in that which has been revealed to Muhammad—and it is the truth from their Lord—HE removes from them their sins and sets right their affairs.

47: 4. That is because those who disbelieve follow falsehood while those who believe follow the truth from their Lord. Thus does ALLAH set forth for men their lessons by similitudes.

47: 5. And when you meet in regular battle those who disbelieve, smite their necks; and, when you have overcome them, by causing great slaughter among them, bind fast the fetters—then afterwards either release them as a favour or by taking ransom—until the war lays down its burdens. That is the ordinance. And if ALLAH had so pleased, HE could have punished them Himself, but HE has willed that HE may try some of you by others. And those who are killed in the way of ALLAH—HE will never render their works vain.

47: 6. HE will guide them to success and will improve their condition.

47: 7. And will admit them into the Garden which HE has made known to them.

47: 8. O ye who believe! if you help the cause of ALLAH, HE will help you and will make your steps firm.

47: 9. But those who disbelieve, perdition is their lot; and HE will make their works vain.

47: 10. That is because they hate what ALLAH has revealed; so HE has made their works vain.

47: 11. Have they not traveled in the earth and seen what was the end of those who were before them? ALLAH utterly destroyed them, and for the disbelievers there will be the like thereof.

47: 12. That is because ALLAH is the Protector of those who believe, and the disbelievers have no protector.

47: 13. Verily, ALLAH will cause those who believe and do good works to enter the Gardens underneath which streams flow; While those who disbelieve enjoy themselves and eat even as the cattle eat, and the Fire will be their last resort.

47: 14. And how many a township, mightier than thy town which has driven thee out, have WE destroyed, and they had no helper.

47: 15. Then, is he who takes his stand upon a clear proof from his Lord like those to whom the evil of their deeds is made to look attractive and who follow their low desires?

47: 16. A description of the Garden promised to the righteous: Therein are streams of water which corrupts not; and streams of milk of which the taste changes not; and streams of wine, a delight to those who drink; and streams of clarified honey. And in it they will have all kinds of fruit, and forgiveness from their Lord. Can those who enjoy such bliss be like those who abide in the Fire and who are given boiling water to drink so that it tears their bowels?

47: 17. And among them are some who seems to listen to thee till, when they go forth from thy presence, they say to those who have been given knowledge, 'What has he been talking about just now?' These are they upon whose hearts ALLAH has set a seal, and who follow their own evil desires.

47: 18. But as for those who follow guidance, HE adds to their guidance, and bestows on them righteousness suited to their condition.

47: 19. The disbelievers wait not but for the Hour, that it should come upon them suddenly. The Signs thereof have already come. But of what avail will their admonition be to them when it has actually come upon them.

47: 20. Know, therefore, that there is no god other than ALLAH, and ask protection for thy human frailties, and for believing men and believing women. And ALLAH knows the place where you move about and the place where you stay.

47: 21. And those who believe say, 'Why is not a Surah revealed?' But when a decisive Surah is revealed and fighting is mentioned therein, thou seest those in whose hearts is a disease, looking towards thee like the look of one who is fainting on account of approaching death. So woe to them!

47: 22. Their attitude should have been one of obedience and of calling people to good. And when the matter was determined upon, it was good for them if they were true to ALLAH.

47: 23. Would you not then, if you are placed in authority, create disorder in the land and sever your ties of kinship?

47: 24. It is these whom ALLAH has cursed, so that HE has made them deaf and has made their eyes blind.

47: 25. Will they not, then, ponder over the Qur'an, or, is it that there are locks on their hearts?

47: 26. Surely, those who turn their backs after guidance has become manifest to them, Satan has seduced them and holds out false hopes to them.

47: 27. That is because they said to those who hate what ALLAH has revealed, 'We will obey you in some matters, and ALLAH knows their secrets.

47: 28. But how will they fare when the angels will cause them to die, smiting their faces and their backs?

47: 29. That is because they followed that which displeased ALLAH, and disliked the seeking of HIS pleasure. So HE rendered their works vain.

47: 30. Do those in whose hearts is a disease suppose that ALLAH will not bring to light their malice?

47: 31. And if WE pleased, WE could show them to thee so that thou shouldst know them by their marks. And thou shalt, surely, recognize them by the tone of their speech. And ALLAH knows your deeds.

47: 32. And WE will, surely, try you, until WE make manifest those among you who strive for the cause of ALLAH and those who are steadfast. And WE will make known the true facts about you.

47: 33. Those, who disbelieve and hinder men from the way of ALLAH and oppose the Messenger after guidance has become manifest to them, shall not harm ALLAH in the least; and HE will make their works fruitless.

47: 34. O ye who believe! obey ALLAH and obey the Messenger and make not your works vain.

47: 35. Verily, those who disbelieve and hinder people from the way of ALLAH, and then die while they are disbelievers—ALLAH certainly, will not forgive them.

47: 36. So be not slack and sue not for peace, for you will, certainly, have the upper hand. And ALLAH is with you, and HE will not deprive you of the reward of your actions.

47: 37. The life of this world is but a sport and a pastime, and if you believe and be righteous, HE will give you your rewards, and will not ask of you your wealth.

47: 38. Were HE to ask it of you and press you, you would be niggardly, and HE would bring to light your malice.

47: 39. Behold! You are those who are called upon to spend in the way of ALLAH; but of you there are some who are niggardly. And whoso is niggardly, is niggardly only against his own soul. And ALLAH is Self-Sufficient, and it is you who are needy. And if you turn your backs, HE will bring in your place another people; then they will not be like you.

Antiochus Strategos: Account of the Sack of Jerusalem

Date: 614

Byzantine law was tolerant to Jews [Theodosian Code 16.8.21], but there remained a general prejudice against Jews. The following is an account of the fall of Jerusalem to the Persians in 614, by the monk Antiochus Strategos, who lived in the monastery (lavra) of St. Sabas in Jerusalem and expresses that prejudice. It provides a Byzantine version of what transpired and may also, of course, reflect Jewish resistance to Byzantine restrictions and oppression.

Finally, despite Antiochus's account, the Persians of this period seem to have been significantly more tolerant of religious diversity than almost any other contemporary government. They began the system, long continued and later known (under the Turks) as the millet system, by which each religious group governed itself in religious and family matters.

The beginning of the struggle of the Persians with the Christians of Jerusalem was on the 15th April, in the second indiction, in the fourth year of the Emperor Heraclius. They spent twenty days in the struggle. And they shot from their ballistas with such violence, that on the twenty-first day they broke down the city wall. Thereupon the evil; foemen entered the city in great fury, like infuriated wild beasts and irritated serpents. The men however, who defended the city wall fled, and hid themselves in caverns, fosses and cisterns in order to save themselves; and the people in crowds fled into churches and altars; and there they destroyed them. For the enemy entered in a mighty wrath, gnashing their teeth in violent fury; like evil beasts they roared, bellowed like lions, hissed like ferocious serpents, and slew all whom they found. [Like] mad dogs they tore with their teeth the flesh of the faithful, and respected non at all, neither male nor female, neither young nor old, neither child nor baby, neither priest no monk, neither virgin nor widow. . . .

Meanwhile the evil Persians, who had no pity in their hearts, raced to every place in the city and with one accord extirpated all the people. Anyone who ran away in terror they caught hold of; and if any cried out from fear, they roared at them with gashing teeth, and by breaking their teeth on the ground forced them to close their mouths. They slaughtered tender infants on the ground, and then with loud yelps called their parents. The parents bewailed the children with vociferations and sobbings, but were promptly despatched along with them. Any that were caught armed were massacred with their own weapons. Those who ran swiftly were pierced with arrows, the unresisting and quiet they slew without mercy. They listened not to the appeals of supplicants, nor pitied youthful [beauty] nor had compassion on old men's age, nor blushed before the humility of the clergy. On the contrary they destroyed persons of every age, massacred them like animals, cut them into pieces, mowed sundry of them down like cabbages, so that all alike had severally to drain the cup full of bitterness. Lamentation and terror might be seen in Jerusalem. Holy churches were burned with fire, other were demolished, majestic altars fell prone, sacred crosses were trampled underfoot, life-giving icons were spat upon by the unclean. Then their wrath fell upon priests and deacons; they slew them in their churches like dumb animals.

Thereupon the vile Jews, enemies of the truth and haters of Christ, when they perceived that the Christians were given over into the hands of the enemy, rejoiced exceedingly, because they detested the Christians; and they conceived an evil plan in keeping with their vileness about the people. For in the eyes of the Persians their importance was great, because they were the betrayers of the Christians. And in this season then the Jews approached the edge of the reservoir and called out to the children of God, while they were shut up therein, and said to them: "If ye would escape from death, become Jews and deny Christ; and then ye shall step up from your place and join us. We will ransom you with our money, and ye shall be benefited by us." But their plot and desire were not fulfilled, their labours proved to be in vain; because the children of the Holy Church chose death for Christ's sake rather than to live in godlessness: and they reckoned it better for their flesh to be punished, rather than their souls ruined, so that their portion were not with the Jews. And when the unclean Jews saw the steadfast uprightness of the Christians and their immovable faith, then they were agitated with lively ire, like evil beasts, and thereupon imagined an other plot. As of old they bought the Lord from the Jews with silver, so they purchased Christians out of the reservoir; for they gave the Persians silver, and they bought a Christian and slew him like a sheep. The Christians however rejoiced because they were being slain for Christ's sake and shed their blood for His blood, and took on themselves death in return for His death. . . .

When the people were carried into Persia, and the Jews were left in Jerusalem, they began with their own hands to demolish and burn such of the holy churches as were left standing. . . .

How many souls were slain in the reservoir of Mamel! How many perished of hunger and thirst! How many priests and monks were massacred by the sword! How many infants were crushed under foot, or perished

by hunger and thirst, or languished through fear and horror of the foe! How many maidens, refusing their abominable outrages, were given over to death by the enemy! How many parents perished on top of their own children! How many of the people were bought up by the Jews and butchered, and became confessors of Christ! How many persons, fathers, mothers, and tender infants, having concealed themselves in fosses and cisterns, perished of darkness and hunger! How many fled into the Church of the Anastasis, into that of Sion and other churches, and were therein massacred and consumed with fire! Who can count the multitude of the corpses of those who were massacred in Jerusalem?

Ordinance of Louis the Pious

Date: 817

Louis I was the son and successor of Charlemagne and, as his name suggests, a deeply devout man. In 817 he divided the Frankish Empire among his three sons, as detailed in this ordinance. This act would have far-reaching consequences, for when Louis awarded land to a fourth son from a different marriage in 829, his three other sons went to war against him, deposing him in 833. Although he eventually regained the throne and made peace with his sons, Louis left a much weaker and more vulnerable empire than the one he had inherited.

Original spellings have been retained in this document

In the name of the Lord God and of our Saviour Jesus Christ. Louis, the divine power ordaining, august emperor. While we in the name of God, in the year 817 of the incarnation of the Lord, in the tenth indiction, and in the fourth year of our reign, in the month of July, had assembled in our palace at Aix in our accustomed manner a sacred synod and the generality of our people to treat of ecclesiastical needs and the needs of our whole empire, and were intent upon these, suddenly, by divine inspiration, it came about that our faithful ones warned us that, while we still remained safe and peace on all sides was granted by God, we should, after the manner of our forefathers, treat of the condition of the whole kingdom and of the case of our sons. But although this admonition was devoutly and faithfully given, nevertheless it seems good neither to us nor to those who know what is salutary' that for the love or for the sake of our sons the unity of the empire preserved to us by God should be rent by human division; lest by chance from this cause a scandal should arise in the holy church and we should incur the offending of Him in whose power are the laws of all kingdoms. Therefore we thought it necessary that by fastings and prayers and the giving of alms we should obtain from Him that which our infirmity did not presume. Which being duly performed for three days, by the will of Almighty God, as we believe, it was brought about that both our own wishes and those of our whole people concurred in the election of our beloved first-born Lothar. And so it pleased both us and all our people that he, thus manifested by the divine dispensation, being crowned in solemn manner with the imperial diadem, should, by common wish, be made our consort and successor to the empire if God should so wish. But as to his other brothers, Pippin, namely, and Louis our namesake, it seemed good by common counsel to distinguish them by the name of kings, and to fix upon the places named below, in which after our decease they may hold sway with regal power under their elder brother according to the clauses mentioned below, in which are contained the conditions which we have established among them. Which clauses, on account of the advantage of the empire, and of preserving perpetual peace among them, and for the safety of the whole church, it pleased us to deliberate upon with all our faithful ones; and having deliberated, to write down; and having written down, to confirm with our own hands: so that, God lending His aid, as they had been passed by all with common consent, so by common devotion they should be inviolably observed by all, to the perpetual peace of themselves and of the whole Christian people; saving in all things our imperial power over our sons and our people, with all the subjection which is exhibited by a father to his sons and to an emperor and king by his people.

1. We will that Pippin shall have Aquitania and Gascony, and all the March of Toulouse, and moreover four counties: namely, in Septimania Carcassone, and in Burgundy Autun, l'Avalonnais and Nevers.

2. Likewise we will that Louis shall have Bavaria and Carinthia, and the Bohemians, Avars, and Slavs, who are on the eastern side of Bavaria; and furthermore, two demesne towns to do service to him, in the county of Nortgau, Lauterburg and Ingolstadt.

3. We will that these two brothers, who are called by the name of king, shall possess power of themselves to distribute all honours within the range of their jurisdiction; provided that in the bishoprics and abbeys the ecclesiastical order shall be held to, and in giving other honours, honesty and utility shall be observed.

4. Likewise we will, that once a year, at a fitting times either together or individually, according as the condition of things allows, they shall come to their elder brother with their gifts, for the sake of visiting him, and seeing him, and treating with mutual fraternal love of those things which are necessary, and which pertain to the common utility and to perpetual peace. And if by chance one of them, impeded by some inevitable necessity, is unable to come at the accustomed and fitting time, he shall signify this to his elder brother by sending legates and gifts; so, nevertheless, that at whatever suitable time it may be possible for him, he shall not avoid coming through any feigned excuse.

5. We will and order that the elder brother, when one or both of his brothers shall come to him, as has been said, with gifts, shall, according as to him, by God's will, greater power has been attributed, likewise himself remunerate them with pious and fraternal love, and a more ample gift.

6. We will and order that the elder brother shall, either in person, or through his faithful envoys and his armies, according as reason dictates and time and occasion permits send help to his younger brothers when they shall reasonably ask him to come to their aid against external nations.

7. We likewise will that without the counsel and consent of the elder brother they by no means presume to make peace with, or engage in war against, foreign nations, and those that are hostile to this empire, which is in the care of God.

8. But as to envoys, if such are sent by external nations either for the sake of making peace, or engaging in war, or surrendering castles, or of arranging any other important matters, they, the younger brothers, shall by no means give them an answer without the knowledge of the elder brother, nor shall they send them away. But if envoys shall be sent to him from any place, he of the younger brothers to whom they shall first come, shall receive them with honour, and shall cause them, accompanied by faithful envoys, to come into his (the older brother's) presence. But in minor matters, according to the nature of the embassy, they may answer of themselves. But we add this warning, that in whatever condition affairs within their confines may be, they shall not neglect to keep their elder brother always informed, that he may be found always interested and ready to give his attention to whatever things the necessity and utility of the kingdom shall demand.

9. It seems best for us also to require that after our decease the vassal of each one of the brothers, for the sake of avoiding discord, shall have a benefice only in the domain of his ruler, and not in that of one of the others. But his own property and heritage, wherever it be, each one may possess according to his law, and without unjust interference, justice being observed, with honour and security; and each free man who has not a lord shall be allowed to commend himself to whichever of the three brothers he may wish.

10. But if, what God avert and what we least of all wish, it should happen that any one of the brothers, on account of desire for earthly goods, which is the root of all evils, shall be either a divider or oppressor of the churches or the poor, or shall exercise tyranny, in which all cruelty consists: first, in secret, according to the precept of God, he shall be warned once, twice, and thrice, through faithful envoys, to amend; and if he refuse them, being summoned by one brother before the other he shall be admonished and punished with fraternal and paternal love. And if he shall altogether spurn this healthful admonition, by the common sentence of all it shall be decreed what is to be done concerning him; so that him whom a healthful admonition could not recall from his wicked ways, the imperial power and the common sentence of all may coerce.

11. But the rulers of the churches of Francia shall have such power over the possessions of the same, whether in Aquitania or in Italy, or in other regions and provinces subject to this empire, as they had in the time of our father, or are known to have in our own.

12. Whatever of tribute, moreover, and rents and precious metals can be exacted or obtained within their confines, they shall possess; so that from these they may provide for their necessities, and may the better be able to prepare the gifts to be brought to their elder brother.

13. We will, also, that if to any one of them, after our decease, the time for marrying shall come, he shall take a wife with the counsel and consent of his elder brother. This, moreover, we decree shall be guarded against, for the sake of avoiding discords and removing harmful opportunities: that any one of them shall presume to take a wife from external nations. But the vassals of all of them, in order that the bonds of peace may be drawn more closely, may take their wives from whatever places they wish.

14. But if any one of them, dying, shall leave lawful children, his power shall not be divided among them; but rather the people, coming together in common, shall elect one of them who shall be pleasing to God; and this one the elder brother shall receive as a brother and a son, and, himself being treated with paternal honour, shall observe this constitution towards him in every way. But in the matter of the other children they shall, with pious love, discuss how they may keep them and give them advice, after the manner of our parents.

15. But if any one of them shall die without lawful children, his power shall revert to the elder brother. And if he shall happen to have children from concubines we exhort the elder brother to act mercifully towards them.

16. But if at our death either of them shall happen not yet to be of lawful age according to Ripuarian law, we will that, until he arrive at the established term of years, just as now by us, so by his elder brother, both himself and his kingdom shall be cared for and governed. And when he shall come to be of lawful age, he shall in all things possess his power according to the manner laid down.

17. But to our son, if God will that he be our successor the kingdom of Italy shall in the aforesaid manner be subject in all things, just as it was subject to our father, and remains subject in the present time to us, by the will of God.

18. We exhort also the devotion of our whole people and that firmness of a most sincere faith, the fame of which has spread among almost all nations, that if our son, who by the divine ale shall succeed to us, shall depart from this life without legitimate heirs, they shall, for the sake of the salvation of all, and the tranquillity of the church and the unity of the empire, follow the conditions that we have made in the matter of his election, and elect one of our sons, if they shall survive their brother; so that in choosing him they shall seek to fulfil, not a human will, but the will of God.

Genji Monogatari, or The Tale of Genji

Date: c. 1000

Murasaki Shikibu, also known as Lady Murasaki, (c. 973–1030) wrote what is widely considered to be the world's first novel, the Genji Monogatari (The Tale of Genji). The daughter of a Japanese provincial governor, Murasaki wrote her novel during Japan's cultural renaissance, the Heian period (794–1192). The Tale of Genji reflects the aristocratic culture that marked this era. It is also the cultural flower of a distinctively Japanese literary tradition, removed from the influence of Chinese hegemony.

The Tale of Genji represents a zenith in Heian writing during the 10th and 11th centuries. Because Murasaki Shikibu wrote it in Japanese and not Chinese, its popularity signaled a new appreciation for the Japanese language and for the women who utilized it.

CHAPTER I: THE CHAMBER OF KIRI

Some time had now elapsed since the death of the Emperor's favorite, but he was still often haunted by her image. Ladies were introduced into his presence, in order, if possible, to divert his attention, but without success.

There was, however, living at this time a young Princess, the fourth child of a late Emperor. She had great promise of beauty, and was guarded with jealous care by her mother, the Empress-Dowager. The Naishi-no-Ske, who had been at the Court from the time of the said Emperor, was intimately acquainted with the Empress and familiar with the Princess, her daughter, from her very childhood. This person now recommended the Emperor to see the Princess, because her features closely resembled those of Kiri-Tsubo.

"I have now fulfilled," she said, "the duties of my office under three reigns, and, as yet, I have seen but one person who resembles the departed. The daughter of the Empress-Dowager does resemble her, and she is singularly beautiful."

"There may be some truth in this," thought the Emperor, and he began to regard her with awakening interest.

This was related to the Empress-Dowager. She, however, gave no encouragement whatever to the idea, "How terrible!" she said. "Do we not remember the cruel harshness of the mother of the Heir-apparent, which hastened the fate of Kiri-Tsubo!"

While thus discountenancing any intimacy between her daughter and the Emperor, she too died, and the princess was left parentless. The Emperor acted with great kindness, and intimated his wish to regard her as his own daughter. In consequence of this her guardian, and her brother, Prince Hiub-Ku, considering that life at Court would be better for her and more attractive for her than the quiet of her own home, obtained for her an introduction there.

She was styled the Princess Fuji-Tsubo (of the Chamber of Wistaria), from the name of the chamber which was assigned to her.

There was, indeed, both in features and manners a strange resemblance between her and Kiri-Tsubo. The rivals of the latter constantly caused pain both to herself and to the Emperor; but the illustrious birth of the Princess prevented any one from ever daring to humiliate her, and she uniformly maintained the dignity of her position. And to her alas! the Emperor's thoughts were now gradually drawn, though he could not yet be said to have forgotten Kiri-Tsubo.

The young Prince, whom we now style Genji (the Gen), was still with the Emperor, and passed his time pleasantly enough in visiting the various apartments where the inmates of the palace resided. He found the companionship of all of them sufficiently agreeable; but beside the many who were now of maturer years, there was one who was still in the bloom of her youthful beauty, and who more particularly caught his fancy, the Princess Wistaria. He had no recollection of his mother, but he had been told by Naishi-no-Ske that this lady was exceedingly like her; and for this reason he often yearned to see her and to be with her.

The Emperor showed equal affection to both of them, and he sometimes told her that he hoped she would not treat the boy with coldness or think him forward. He said that his affection for the one made him feel the same for the other too, and that the mutual resemblance of her own and of his mother's face easily accounted for Genji's partiality to her. And thus as a result of this generous feeling on the part of the Emperor, a warmer tinge was gradually imparted both to the boyish humor and to the awakening sentiment of the young Prince.

The mother of the Heir-apparent was not unnaturally averse to the Princess, and this revived her old antipathy to Genji also. The beauty of her son, the Heir-apparent, though remarkable, could not be compared to his, and so bright and radiant was his face that Genji was called by the public Hikal-Genji-no-Kimi (the shining Prince Gen).

When he attained the age of twelve the ceremony of Gembuk¹ (or crowning) took place. This was also performed with all possible magnificence. . . . The Royal chair was placed in the Eastern wing of the Seiriu-Den, where the Emperor dwells, and in front of it were the seats of the hero of the ceremony and of the Sadaijin, who was to crown him and to regulate the ceremonial.

About ten o'clock in the forenoon Genji appeared on the scene. The boyish style of his hair and dress excellently became his features; and it almost seemed matter for regret that it should be altered. The Okura-Kiu-Kurahito, whose office it was to rearrange the hair of Genji, faltered as he did so. As to the Emperor, a sudden thought stole into his mind. "Ah! could his mother but have lived to have seen him now!" This thought, however, he at once suppressed. After he had been crowned the Prince withdrew to a dressing-room, where he attired himself in the full robes of manhood. Then descending to the Court-yard he performed a measured dance in grateful acknowledgment. This he did with so much grace and skill that all present were filled with admiration; and his beauty, which some feared might be lessened, seemed only more remarkable from the change. And the Emperor, who had before tried to resist them, now found old memories irresistible.

Sadaijin had by his wife, who was a Royal Princess, an only daughter. The Heir-apparent had taken some notice of her, but her father did not encourage him. He had, on the other hand, some idea of Genji, and had sounded the Emperor on the subject. He regarded the idea with favor, and especially on the ground that such a union would be of advantage to Genji, who had not yet any influential supporters.

Now all the Court and the distinguished visitors were assembled in the palace, where a great festival was held; Genji occupied a seat next to that of the Royal Princess. During the entertainment Sadaijin whispered something several times into his ear, but he was too young and diffident to make any answer.

Sadaijin was now summoned before the daos of the Emperor, and, according to custom, an Imperial gift, a white 'Uchiki (grand robe), and a suit of silk vestments were presented to him by a lady. Then proffering his own wine-cup, the Emperor addressed him thus:

"In the first hair-knot² of youth,
Let love that lasts for age be bound!"

This evidently implied an idea of matrimony. Sadaijin feigned surprise and responded:

"Aye! if the purple³ of the cord,
I bound so anxiously, endure!"

He then descended into the Court-yard, and gave expression to his thanks in the same manner in which Genji had previously done. A horse from the Imperial stables and a falcon from the Kurand-Dokoro⁴ were on view in the yard, and were now presented to him. The princes and nobles were all gathered together in front of the grand staircase, and appropriate gifts were also presented to each one of them. Among the crowd baskets and trays of fruits and delicacies were distributed by the Emperor's order, under the direction of Udaiben; and more rice-cakes and other things were given away now than at the Gembuk of the Heir-apparent.

In the evening the young Prince went to the mansion of the Sadaijin, where the espousal with the young daughter of the latter was celebrated with much splendor. The youthfulness of the beautiful boy was well pleasing to Sadaijin; but the bride, who was some years older than he was, and who considered the disparity in their age to be unsuitable, blushed when she thought of it.

Not only was this Sadaijin himself a distinguished personage in the State, but his wife was also the sister of the Emperor by the same mother, the late Empress; and her rank therefore was unequivocal. When to this we add the union of their daughter with Genji, it was easy to understand that the influence of Udaiben, the

grandfather of the Heir-apparent, and who therefore seemed likely to attain great power, was not after all of very much moment.

Sadaijin had several children. One of them, who was the issue of his Royal wife, was the Kurand Shiushiu.

Udaijin was not, for political reasons, on good terms with this family; but nevertheless he did not wish to estrange the youthful Kurand. On the contrary, he endeavored to establish friendly relations with him, as was indeed desirable, and he went so far as to introduce him to his fourth daughter, the younger sister of the Koki-Den.

Genji still resided in the palace, where his society was a source of much pleasure to the Emperor, and he did not take up his abode in a private house. Indeed, his bride, Lady Aoi (Lady Hollyhock), though her position insured her every attention from others, had few charms for him, and the Princess Wistaria much more frequently occupied his thoughts. "How pleasant her society, and how few like her!" he was always thinking; and a hidden bitterness blended with his constant reveries.

The years rolled on, and Genji being now older was no longer allowed to continue his visits to the private rooms of the Princess as before. But the pleasure of overhearing her sweet voice, as its strains flowed occasionally through the curtained casement . . . made him still glad to reside in the Palace. Under these circumstances he seldom visited the home of his bride, sometimes only for a day or two after an absence of five or six at Court.

His father-in-law, however, did not attach much importance to this, on account of his youth; and whenever they did receive a visit from him, pleasant companions were invited to meet him, and various games likely to suit his taste were provided for his entertainment.

In the Palace, Shigeisa, his late mother's quarters, was allotted to him, and those who had waited on her waited on him. The private house, where his grandmother had resided, was beautifully repaired for him by the Shuri Takmi—the Imperial Repairing Committee—in obedience to the wishes of the Emperor. In addition to the original loveliness of the landscape and the noble forest ranges, the basin of the lake was now enlarged, and similar improvements were effected throughout with the greatest pains. "Oh, how delightful would it not be to be in a place like that which such an one as one might choose!" thought Genji within himself.

FOOTNOTES:

- 1: The ceremony of placing a crown or coronet upon the head of a boy. This was an ancient custom observed by the upper and middle classes both in Japan and China, to mark the transition from boyhood to youth.
- 2: Before the crown was placed upon the head at the Gembuk, the hair was gathered up in a conical form from all sides of the head, and then fastened securely in that form with a knot of silken cords of which the color was always purple.
- 3: The color of purple typifies, and is emblematical of, love.
- 4: A body of men who resembled "Gentlemen-at-arms," and a part of whose duty it was to attend to the falcons.

Al Biruni's *Chronology*

Also known as: *The Existing Monuments* or *Chronology*.

Date: c. 1030

Al Biruni, also known as Abu ar-Rayhan Muhammad ibn Ahmad al-Biruni; Abu Raihan Muhammad al-Biruni; al-Ustadh (973–1048)

Al Biruni was one of the earliest Arab writers to be regarded as a true historian. He was a leading scientist of his day and also a geographer. He composed more than 138 treatises. These include treatises on the subjects of astronomy, weather, mineralogy, pharmacology, and trigonometry. He wrote extensive works on India, covering the philosophical and cosmological theories of Hinduism. His Al-Kanun al-Masudi is an encyclopedia of astronomy. Al Biruni's most important work is considered to be his Chronology, which is his Chronology of the Ancient Peoples.

The following is an excerpt.

Praise be to God who is high above all things, and blessings be on Muhammed, the elected, the best of all created beings, and on his family, the guides of righteousness and truth.

One of the exquisite plans in God's management of the affairs of his creation, one of the glorious benefits which he has bestowed upon the entirety of his creatures, is that categorical decree of his, not to leave in his world any period without a just guide, whom he constitutes as a protector for his creatures, with whom to take refuge in unfortunate and sorrowful cases and accidents, and upon whom to devolve their affairs, when they seem indissolubly perplexed, so that the order of the world should rest upon—and its existence be supported by—his genius. And this decree (that the affairs of mankind should be governed by a prophet) has been settled upon them as a religious duty, and has been linked together with the obedience toward God, and the obedience toward his prophet, through which alone a reward in future life may be obtained—in accordance with the word of him, who is truth and justice—and his word is judgment and decree, "O ye believers, obey God, and obey the prophets, and those among yourselves who are invested with the command."

ERA OF THE CREATION.

The first and most famous of the beginnings of antiquity is the fact of the creation of mankind. But among those who have a book of divine revelation, such as the Jews, Christians, Magians, and their various sects, there exists such a difference of opinion as to the nature of this fact, and as to the question how to date from it, the like of which is not allowable for eras. Everything, the knowledge of which is connected with creation and with the history of bygone generations, is mixed up with falsifications and myths, because it belongs to a far remote age; because a long interval separates us therefrom, and because the student is incapable of keeping it in memory, and of fixing it (so as to preserve it from confusion). God says: "Have they not got the stories about those who were before them? None but God knows them." (Surahix, 71.) Therefore it is becoming not to admit any account of a similar subject, if it is not attested by a book, the correctness of which is relied upon, or by a tradition, for which the conditions of authenticity, according to the prevalent opinion, furnish grounds of proof.

If we now first consider this era, we find a considerable divergence of opinion regarding; it among these nations. For the Persians and Magians think that the duration of the world is 12,000 years, corresponding to the number of signs in the zodiac and of the months; and that Zarathustra, the founder of their law, thought that of those there had passed, till the time of his appearance, 3,000 years, intercalated with the day-quarters, for he himself had made their computation, and had taken into account that defect, which had accrued to them on account of the day-quarters, 'till the time when they were intercalated and made to agree with real time. From his appearance to the beginning of the Era of Alexander, they count 258 years; therefore they count from the beginning of the world to Alexander 3,258 years. However, if we compute the years from the creation of Gayomard, whom they hold to be the first man, and sum up the years of the reign of each of his successors—for the rule of Iran remained with his descendants without interruption—this number is, for the time 'till Alexander, the sum total of 3,354 years. So the specification of the single items of the addition does not agree with the sum total.

A section of the Persians is of the opinion that those past 3,000 years which we have mentioned are to be counted from the creation of Gayomard; because, before that, already six thousand years had elapsed—a time during which the celestial globe stood motionless, the natures (of created beings) did not interchange, the elements did not mix—during which there was no growth, and no decay, and the earth was not cultivated. Thereupon, when the celestial globe was set a-going, the first man came into existence on the equator, so that part of him in longitudinal direction was on the north, and part south of the line. The animals were reproduced, and mankind commenced to reproduce their own species and to multiply; the atoms of the elements mixed, so as to give rise to growth and decay; the earth was cultivated, and the world was arranged in conformity with fixed forms.

The Jews and Christians differ widely on this subject; for, according to the doctrine of the Jews, the time between Adam and Alexander is 3,448 years, whilst, according to the Christian doctrine it is 5,180 years. The Christians reproach the Jews with having diminished the number of years with the view of making the appearance of Jesus fall into the fourth millennium in the middle of the seven millennia, which are, according to their view, the time of the duration of the world, so as not to coincide with that time at which, as the prophets after Moses had prophesied, the birth of Jesus from a pure virgin at the end of time, was to take place.

ERA OF THE DELUGE.

The next following era is the era of the great deluge, in which everything perished at the time of Noah. Here, too, there is such a difference of opinions, and such a confusion, that you have no chance of deciding as to the correctness of the matter, and do not even feel inclined to investigate thoroughly its historical truth. The reason is, in the first instance, the difference regarding the period between the Era of Adam and the Deluge, which we have mentioned already; and secondly, that difference, which we shall have to mention, regarding the period between the Deluge and the Era of Alexander. For the Jews derive from the Torah, and the following books, for this latter period 1,792 years, whilst the Christians derive from their Torah for the same period 2,938 years.

The Persians, and the great mass of the Magians, deny the Deluge altogether; they believe that the rule of the world has remained with them without any interruption ever since Gayomard Gilshah, who was,

according to them, the first man. In denying the Deluge, the Indians, Chinese, and the various nations of the East, concur with them. Some, however, of the Persians admit the fact of the Deluge, but they describe it in a different way from what it is described in the books of the prophets. They say, a partial deluge occurred in Syria and the West at the time of Tahmurath, but it did not extend over the whole of the then civilized world and only a few nations were drowned in it; it did not extend beyond the peak of Hulwan, and did not reach the empires of the East. Further, they relate, that the inhabitants of the West, when they were warned by their sages, constructed buildings of the kind of the two pyramids that have been built in Egypt, saying: "If the disaster comes from heaven we shall go into them; if it comes from the earth, we shall ascend above them." People are of opinion that the traces of the water of the Deluge, and the efforts of the waves, are still visible on these two pyramids half-way up, above which the water did not rise. Another report says, that Joseph had made them a magazine where he deposited the bread and victuals for the years of drought.

It is related that Tahmurath on receiving the warning of the Deluge—231 years before the Deluge—ordered his people to select a place of good air and soil in his realm. Now they did not find a place that answered better to this description than Ispahan. Thereupon, he ordered all scientific books to be preserved for posterity and to be buried in a part of that place least exposed to obnoxious influences. In favor of this report we may state that in our time in Jay, the city of Ispahan, there have been discovered hills, which, on being excavated, disclosed houses, filled with many loads of that tree-bark with which arrows and shields are covered and which is called Tuz, bearing inscriptions, of which no one was able to say what they are and what they mean.

These discrepancies in their reports inspire doubts in the student, and make him inclined to believe what is related in some books, that Gayomard was not the first man, but that he was Gomer ben Yaphet ben Noah, that he was a prince to whom a long life was given, that he settled on the Mount Dumbawand, where he founded an empire, and that finally his power became very great, whilst mankind was still living in elementary conditions, similar to those at the time of creation and of the first stage of the development of the world. Then he, and some of his children, took control of the guidance of the world. Toward the end of his life, he became tyrannical, and called himself Adam, saying: "If anybody calls me by another name than this, I shall cut off his head."

Concordat of Worms

Date: 1122

The Concordat of Worms was a compromise between Pope Calixtus II and the Holy Roman Emperor Henry V regarding the control of church offices. A conflict had erupted between the emperor and pope over which man had the authority to appoint bishops and abbots, who in turn controlled substantial amounts of land and wealth. The agreement allowed the Vatican the spiritual authority to direct the appointments, with the emperor overseeing the process and mediating possible disputes. It also granted secular (land) titles to the bishops. In return, the bishops paid homage to the Crown, recognizing the emperor as the final secular authority.

Original spellings have been retained in this document.

(a.) Privilege of Pope Calixtus II.

I, bishop Calixtus, servant of the servants of God, do grant to thee beloved son, Henry-by the grace of God august emperor of the Romans-that the elections of the bishops and abbots of the German kingdom, who belong to the kingdom, shall take place in thy presence, without simony and without any violence; so that if any discord shall arise between the parties concerned, thou, by the counsel or judgment of the metropolitan and the co-provincials, may'st give consent and aid to the party which has the more right. The one elected, moreover, without any exaction may receive the regalia from thee through the lance, and shall do unto thee for these what he rightfully should. But he who is consecrated in the other parts of thy empire (i.e. Burgundy and Italy) shall, within six months, and without any exaction, receive the regalia from thee through the lance, and shall do unto thee for these what he rightfully should. Excepting all things which are known to belong to the Roman church. Concerning matters, however, in which thou dost make complaint to me, and dost demand aid, I, according to the duty of my office, will furnish aid to thee. I give unto thee true peace, and to all who are or have been on thy side in the time of this discord.

(b.) Edict of the Emperor Henry IV.

In the name of the holy and indivisible Trinity, I, Henry, by the grace of God august emperor of the Romans, for the love of God and of the holy Roman church and of our master pope Calixtus, and for the healing of my soul, do remit to God, and to the holy apostles of God, Peter and Paul, and to the holy catholic church, all investiture through ring and staff; and do grant that in all the churches that are in my kingdom or empire there may be canonical election and free consecration. All the possessions and regalia of St. Peter which, from the beginning of this discord unto this day, whether in the time of my father or also in mine, have been abstracted, and which I hold: I restore to that same holy Roman church. As to those things, moreover, which I do not hold, I will faithfully aid in their restoration. As to the possessions also of all other churches and princes, and of all others lay and clerical persons which have been lost in that war: according to the counsel of the princes, or according to justice, I will restore the things that I hold; and of those things which I do not hold I will faithfully aid in the restoration. And I grant true peace to our master pope Calixtus, and to the holy Roman church, and to all those who are or have been on its side. And in matters where the holy Roman church shall demand aid I will grant it; and in matters concerning which it shall make complaint to me I will duly grant to it justice. All these things have been done by the consent and counsel of the princes. Whose names are here adjoined: Adalbert archbishop of Mainz; F. archbishop of Cologne; H. bishop of Ratisbon; O. bishop of Bamberg; B. bishop of Spire; H. of Augsberg; G. of Utrecht; Ou. Of Constance; E. abbot of Fulda; Henry, duke; Frederick, duke; S. duke; Pertolf, duke; Margrave Teipold; Margrave Engelbert; Godfrey, count Palatine; Otto, count Palatine; Berengar, count.

I, Frederick, archbishop of Cologne and archchancellor, have given my recognizances.

The Great Fair at Thessalonica

Date: c. 1150

Thessalonica was the site of the most well-known fair in the Byzantine world, and in later centuries was almost as important a city as the capital at Byzantium. Merchants came to Thessalonica from all over the East as well as the West. This fair was probably larger in size than the famous contemporary fair at Champagne in France. The following description is taken from the Timarion, a satirical work in the style of the ancient writer Lucian. It describes the fair of Thessalonica as it was in the mid-12th century (about 1150 c.e.), a period in which that city not only was of economic importance but was becoming significant culturally as well.

The Demetria is a festival, like the Panathenaea at Athens and the Panionia among the Milesians, and it is at the same time the most important fair held in Macedon'ia. Not only do the natives of the country flock together to it in great numbers, but multitudes also come from all lands and of every race—Greeks, wherever they are found, the various tribes of Mysians [i.e. people of Moesia] who dwell on our borders as far as the Ister and Scythia, Campanians and other Italians, Lusitanians, and Transalpine Celts [this is Byzantine way of describing the Bulgarians, Neapolitans, Spaniards, Portuguese, and French]; and, to make a long story short, the shores of the ocean send pilgrims and suppliants to visit the martyr, so widely extended is his fame throughout Europe. For myself, being a Cappadocian from beyond the boundaries of the empire, [this country was now under the Seljuk sultans of Iconium] and having never before been present on the occasion, but having only heard it described, I was anxious to get a bird's eye view of the whole scene, that I might pass over nothing unnoticed. With this object I made my way up to a height close by the scene of the fair, where I sat down and surveyed everything at my leisure. What I saw there was a number of merchants' booths, set up in parallel rows opposite one another; and these rows extended to a great length, and were sufficiently wide apart to leave a broad space in the middle, so as to give free passage for the stream of the people. Looking at the closeness of the booths to one another and the regularity of their position, one might take them for lines drawn lengthwise from two opposite points. At right angles to these, other booths were set up, also forming rows, though of no great length, so that they resembled the tiny feet that grow outside the bodies of certain reptiles. Curious indeed it was, that while in reality there were two rows, they presented the appearance of a single animal, owing to the booths being so near and so straight; for lines suggested a long body, while the crossrows at the sides looked like the feet that supported it. I declare than when I looked down from the heights above on the ground plan of the fair, I could not help comparing it to a centipede, a very long insect with innumerable small feet under Its belly.

And if you are anxious to know what it contained, my inquisitive friend, as I saw it afterwards when I came down from the hills—well, there was every kind of material woven or spun by men or women, all those that come from Boeotia and the Peloponnese, and all that are brought in trading ships from Italy to Greece. Besides this, Phoenicia furnishes numerous articles, and Egypt, and Spain, and the pillars of Hercules, where the finest coverlets are manufactured. These things the merchants bring direct from their respective countries to old Macedonia and Thessalonica; but the Euxine also contributes to the splendour of the fair by sending across its products to Constantinople, whence the cargoes are brought by numerous horses and mules. All this I went through and carefully examined afterwards when I came down; but even while I was still seated on the height above I was struck with wonder at the number and variety of the animals, and the extraordinary confusion of their noises which assailed my ears—horses neighing, oxen lowing, sheep bleating, pigs grunting, and dogs barking, for these also accompany their masters as a defence against wolves and thieves.

Averroës on Free Will and Predestination

Also known as: *On the Harmony of Religions and Philosophy*, in Arabic as *Kitab fasl al-maqal*, with its appendix (*Damina*).

Date: c. 1190

Ibn Rushd, commonly known as Averroës (1126–1198)

The Islamic philosopher Ibn Rushd, known as Averroës or Averroës of Córdoba, is also known as Abu al-Walid Muhammad ibn Ahmad ibn Muhammad ibn Rushd and Abu l-Walid Muhammad Ibn Rushd.

Ibn Rushd has been considered one of the greatest thinkers and scientists of the 12th century. He was studied in theology, mathematics, medicine, jurisprudence, and philosophy and wrote extensively in these areas. He wrote major works on Aristotle and Plato. In medicine he wrote on prevention of diseases, diagnoses, and on cures. He also wrote a treatise on astronomy and the motion of the spheres.

Averroës’s writings on philosophy and religion included works on questions of theology; in them he applied his knowledge of philosophy and logic. Averroës’s books were translated into Hebrew and Latin—his Latin translations were the most important source of Greek philosophy for the Christian religious and secular scholars of the Middle Ages.

The following is an excerpt.

PROBLEM THIRD: OF FATE AND PREDESTINATION

This is one of the most intricate problems of religion. For if you look into the traditional arguments (Hadith) about this problem you will find them contradictory; such also being the case with arguments of reason. The contradiction in the arguments of the first kind is found in the Qur’an and the Hadith. There are many verses of the Qur’an, which by their universal nature teach that all the things are predestined and that man is compelled to do his acts; then there are verses which say that man is free in his acts and not compelled in performing them. The following verses tell us that all the things are by compulsion, and are predestined, “Everything have We created bound by a fixed degree” [Qur’an 56.49]; again, “With Him everything is regulated according to a determined measure” [Qur’an 13.9]. Further, He says, “No accident happened in the earth, nor in your persons, but the same was entered in the Book verily it is easy with God” [Qur’an 57.22]. There may be quoted many other verses on this subject.

Now, as to the verses which say that man can acquire deeds by free will, and that things are only possible and not necessary, the following may be quoted: “Or He destroys them (by ship-wreck), because of that which their crew have merited; though He pardons many things” [Qur’an 42.32]. And again, “Whatever misfortune befalls you is sent you by God, for that which your hands have deserved” [Qur’an 42.32]. Further, He says, “But they who commit evil, equal thereunto” [Qur’an 10.28]. Again, He says, “It shall have the good which it gains, and it shall have the evil which it gains” [Qur’an 2.278]. And, “And as to Thamud, We directed them, but they loved blindness better than the true directions” [Qur’an 41.16].

Sometimes contradiction appears even in a single verse of the Qur’an. For instance, He says, “After a misfortune has befallen you (you had already attained two equal advantages), do you say, whence comes this? Answer, This is from yourselves” [Qur’an 3.159]. In the next verse, He says, “And what happened unto you, on the day whereon the two armies met, was certainly by permission of the Lord” [Qur’an 3.160]. Of this kind also is the verse, “Whatever good befalls you, O man, it is from God; and whatever

evil befalls you, it is from yourself" [Qur'an 4.81]; while the preceding verse says, "All is from God" [Qur'an 4.80].

Such is also the case with the hadith. The Prophet says, "Every child is born in the true religion; his parents afterwards turn him into a Jew or a Christian." On another occasion he said, "The following people have been created for hell, and do the deeds of those who are fit for it. These have been created for heaven, and do deeds fit for it." The first hadith says that the cause of disbelief is one's own environments; while faith and belief are natural to man. The other hadith says that wickedness and disbelief are created by God, and man is compelled to follow them.

This condition of things has led Muslims to be divided into two groups. The one believed that man's wickedness or virtue is his own acquirement, and that according to these he will be either punished or rewarded. These are the Mutazilites. The belief of the other party is quite opposed to this. They say that man is compelled to do his deeds. They are the Jabarites. The Asharites have tried to adopt a mean between these two extreme views. They say that man can do action, but the deeds done, and the power of doing it, are both created by God. But this is quite meaningless. For if the deed and the power of doing it be both created by God, then man is necessarily compelled to do the act. This is one of the reasons of the difference of opinion about this problem.

As we have said there is another cause of difference of opinion about this problem, than the traditional one. This consists of the contradictory arguments advanced. For if we say that man is the creator of his own deeds, it would be necessary to admit that there are things which are not done according to the will of God, or His authority. So there would be another creator besides God, while the Muslims are agreed that there is no creator but He. If, on the other hand, we were to suppose that man cannot act freely, we admit thus he is compelled to do certain acts, for there is no mean between compulsion and freedom. Again, if man is compelled to do certain deeds, then on him has been imposed a task which he cannot bear; and when he is made to bear a burden, there is no difference between his work and the work of inorganic matter. For inorganic matter has no power, neither has the man the power for that which he cannot bear. Hence all people have made capability one of the conditions for the imposition of a task, such as wisdom. We find Abul Maali, saying in his *Nizamiyyah*, that man is free in his own deeds and has the capability of doing them. He has established it upon the impossibility of imposing a task which one cannot bear, in order to avoid the principle formerly disproved by the Mutazilites, on account of its being unfit by reason. The succeeding Asharites have opposed them. Moreover, if man had no power in doing a deed, then it will be only by chance that he may escape from evil, and that is meaningless. Such also would be the case with acquiring goodness. In this way all those arts which lead to happiness, as agriculture, etc., would become useless. So also would become useless all those arts the purpose of which is protection from, and repulsion of danger, as the sciences of war, navigation, medicine, etc. Such a condition is quite contrary to all that is intelligible to man.

Now it may be asked that if the case is so, how is this contradiction which is to be found both in hadith and reason to be reconciled we would say, that apparently the purpose of religion in this problem is not to divide it into two separate beliefs, but to reconcile them by means of a middle course, which is the right method. It is evident that God has created in us power by which we can perform deeds which are contradictory in their nature. But as this cannot be complete except by the cause which God has furnished for us, from outside, and the removal of difficulties from them, the deeds done are only completed by the conjunction of both these things at the same time. This being so, the deeds attributed to use are done by our intention, and by the fitness of the causes which are called the Predestination of God, which He has furnished for us from outside. They neither complete the works which we intend nor hinder them, but certainly become the cause of our intending them -- one of the two things. For intention is produced in us by our imagination, or for the verification of a thing, which in itself is not in our power, but comes into being by causes outside us. For instance, if we see a good thing, we like it, without intention, and move towards acquiring it. So also, if we happen to come to a thing which it is better to shun, we leave it without intention. Hence our intentions are bound and attached to causes lying outside ourselves.

To this the following words of God refer: "Each of them have angels, mutually succeeding each other, before him and behind him; they watch him by the command of God" [Qur'an 13.12]. As these outside causes take this course according to a well-defined order and arrangement, and never go astray from the path which their Creator has appointed for them, and our own intentions can neither be compelled, nor ever found, on the whole, but by their fitness, so it is necessary that actions too should also be within well-defined limits, that is, they be found in a given period of time and in a given quantity. This is necessary because our deeds are only the effects of causes, lying outside us; and all the effects which result from limited and prearranged causes are themselves limited, and are found in a given quantity only. This relation does not exist only between our actions and outside causes, but also between them and the causes which God has created in our body, and the well-defined order existing between the inner and outer causes. This is what is meant by Fate and predestination, which is found mentioned in the Qur'an and is incumbent upon man. This is also the "Preserved Tablet" [Qur'an 85.22]. God's knowledge of these causes, and that which pertains to them, is the cause of their existence. So no one can have a full knowledge of these things except God, and hence He is the only Knower of

secrets, which is quite true; as God has said, “Say, None either in heaven or earth, know that which is hidden besides God” [Qur’an 27.67].

A knowledge of causes is a knowledge of secret things, because the secret is a knowledge of the existence of a thing, before it comes into being, and as the arrangement and order of causes bring a thing into existence or not at a certain time, there must be a knowledge of the existence or non-existence of a thing at a certain time. A knowledge of the causes as a whole is the knowledge of what things would be found or not found at a certain moment of time. Praised be He, Who has a complete knowledge of creation and all of its causes. This is what is meant by the “keys of the secret, “ in the following words of God, “with Him are the keys of secret things; none know them besides Himself” [Qur’an 6.59].

All that we have said being true, it must have become evident how we can acquire our deeds, and how far they are governed by predestination and fate. This very reconciliation is the real purpose of religion by those verses and hadith which are apparently contradictory. When their universal nature be limited in this manner, those contradictions should vanish by themselves, and all the doubts which were raised before, about the contradictory nature of reason, would disappear. The existent things from our volition are completed by two things, our intention and the other causes. But when the deeds are referred to only by one of these agencies, doubts would rise. It may be said [this] is a good answer, and here reason is in perfect agreement with religion, but it is based upon the principles that these are agreed that there are creative causes bringing into existence other things; while the Muslims are agreed that there is no Creator but God. We would say that whatever they have agreed upon is quite right, but the objection can be answered in two ways. One of them is that this objection itself can be understood in two ways; one of them being that there is no Creator but God, and all those causes which He has created, cannot be called creators, except speaking figuratively.

Their existence also depends upon Him. He alone has made them to be causes, nay, He only preserves their existence as creative agents, and protects their effects after their actions. He, again, produces their essences at the moment when causes come together. He alone preserves them as a whole. Had there been no divine protection they could not have existed for the least moment of time. Abu Hamid (Al-Ghazzali) has said that a man who makes any of the causes to be co-existent with God is like a man who makes the pen share the work of a scribe in writing; that is, he says that the pen is a scribe and the man is a scribe too. He means that “writing “ is a word which may be applied to both, but in reality they have no resemblance in anything but word, for otherwise there is no difference between them. Such is also the case with the word Creator, when applied to God and the Causes. We say that in this illustration there are doubts. It should have been clearly shown, whether the scribe was the Creator of the essence (Jawhar) of pen, a preserver of it, as long as it remains a pen, and again a preserver of the writing after it is written, a Creator of it after it has come in touch with the pen, as we have just explained that God is the Creator of the essences (Jawahir) of everything which comes into contact with its causes, which are so called only by the usage. This is the reason why there is no creator but God -- a reason which agrees with our feelings, reason and religion. Our feelings and reason see that there are things which produce others.

The order found in the universe is of two kinds: that which God has put in the nature and disposition of things; and that which surround the universe from outside. This is quite clear in the movement of the heavenly bodies. For it is evident that the sun and the moon, the day and night, and all other stars are obedient to us; and it is on this arrangement and order which God has put in their movements that our existence and that of all other things depends. So even if we imagine the least possible confusion in them, with them in any other position, size and rapidity of movement which God has made for them, all the existent things upon the earth would be destroyed. This is so because of the nature in which God has made them and the nature of the things which are effected by them. This is very clear in the effects of the sun and the moon upon things of this world; such also being the case with the rains, winds, seas and other tangible things. But the greater effect is produced upon plants, and upon a greater number, or all, on the animals. Moreover, it is apparent that had there not been those faculties which God has put in our bodies, as regulating them that could not exist even for a single moment after birth. But, we say, had there not been the faculties found in all the bodies of the animals, and plants and those found in the world by the movement of the heavenly bodies, then they would not have existed at all, not even for a twinkling of the eye.

So praised be the “Sagacious, the Knowing” [Qur’an 67.14]. God has called our attention to this fact in His book, “And He has subjected the night and the day to your service; and the sun and the moon and the stars, which are compelled to serve by His Command” [Qur’an 77.14]; again, “Say, what think you, if God should cover you with perpetual night, until the day of Resurrection” [Qur’an 16.12]; and again, “Of His mercy, He has made you night and the day, that you may rest in the one, and may seek to obtain provision for yourselves of His abundance, by your industry; in the other” [Qur’an 28.71]; and, “And He obliges whatever is in heaven or on earth to serve you” [Qur’an 18.73]. Further He says, “He likewise compels the sun and the moon, which diligently perform their courses, to serve you; and have subjected the day and night to your service” [Qur’an 45.12]. There may be quoted many other verses on the subject. Had there been any wisdom in their existence by which God has favored us, and there would not have been those blessings for which we are to be grateful to Him.

The second answer to the objection is that we say that the things produced out of it are of two kinds: essences and substances; and movements, hardness, coldness and all other accidents. The essences and substances are not created by any but God. Their causes effect the accidents of those essences, and not the essences themselves. For instance, man and woman are only the agents, while God is the real creator of the child, and the life in it. Such is also the case with agriculture. The earth is prepared and made ready for it, and the seed scattered in it. But it is God who produces the ear of the grain. So there is no creator but God, while created things are but essences. To this refer the words of God. "O men, a parable is propounded unto you, therefore, hearken unto it. Verily the idols which you invoke, besides God, can never create a single fly, although they may all assemble for the purpose; and if the fly snatch anything from them they cannot turn the same from it. Weak is the petitioner and the petitioned" [Qur'an 22.72]. This is where the unbeliever wanted to mislead Abraham, when he said, "I give life and kill" [Qur'an 22.260]. When Abraham saw that he could understand it, he at once turned to the conclusive argument and said, "Verily, God brings the sun from the east; do you bring it from the west."

On the whole, if the matter about the creator and the doer be understood on this wise, there would be no contradiction, either in Hadith or in reason. So we say that the word "Creator" does not apply to the created things by any near or far-fetched metaphor, for the meaning of the creator is the inventor of the essences. So God has said, "God created you, and that which you know" [Qur'an 2.260]. It should be known that one who denies the effect of the causes on the results of them, also denies philosophy and all the sciences. For science is the knowledge of the things by their causes, and philosophy is the knowledge of hidden causes. To deny the causes altogether is a thing which is unintelligible to human reason. It is to deny the Creator, not seen by us. For the unseen in this matter must always be understood by a reference to the seen.

So those men can have no knowledge of God, when they admit that for every action there is an actor. It being so, the agreement of the Muslims on the fact that there is no Creator but God cannot be perfect, if we understand by it the denial of the existence of an agent in the visible world. For from the existence of the agent in it, we have brought an argument for the Creator in the invisible world. But when we have once admitted the existence of the Creator in the invisible world, it becomes clear that there is no Creative agent except one by His command and will. It is also evident that we can perform our own deeds, and that one who takes up only one side of the question is wrong, as is the case with the Mutazilites and the Jabarites. Those who adopt the middle course, like the Asharites, for discovering the truth cannot find it. For they make no difference for a man between the trembling and the movement of his hand by intention. There is no meaning in their admitting that both the movements are not by ourselves. Because if they are not by ourselves we have no power to check them, so we are compelled to do them. Hence there is no difference between trembling of hand and voluntary movement, which they could call acquired. So their is no difference between them, except in their names, which never effect the things themselves. This is all clear by itself.

Magna Carta

Also known as: Magna Charta, or Great Charter.

Date: 1215

The Magna Carta became the foundation of the English constitution and the basis of modern constitutional government. The document restricted the absolute power of the monarch.

Prior to this time, kings had honored the practices of the feudal order, deferring certain rights and powers to their nobles. Certain privileges, freedoms, and representation had been established under the practices of feudal common-law custom. Henry II, who ruled from 1154 to 1189, had implemented numerous legal reforms. His son, King John Lackland (1199–1216), had lost Normandy and most of the holdings on the continent at the Battle of the Bowines in 1214. This led to his greater assertion of royal rights of power of the king and greater taxation, due to the cost of war. In 1213 he imposed a new tax on knights, after which the barons led an open rebellion against the king. Those rebellious against the monarch included the clergy, the nobility, and the citizens of London—a free city.

The feudal barons had a list of grievances and rights. The initial document was drawn up and with the help of Stephen Langton, the archbishop of Canterbury, in November 1214.

The rebellion between the nobles and the king ended with the king's loss at the Battle of Runnymede, a meadow near Windsor in Surrey County, England. There the king was forced by the barons to sign a newly

redrafted document, which included more rights and demands, on June 15, 1215. This document was called the Great Charter, or, as it was written in Latin, the Magna Carta.

The Magna Carta asserted the authorities and rights of the English aristocracy and the independence of the church. It reestablished feudal common-law custom and the privileges of free cities, such as London. To a lesser extent it implied the rights of subject people. Rights were granted, such as the right not to be jailed without charges, or habeas corpus, and the right to a trial by jury. It reestablished other rights that were formally recognized.

To enforce the charter a tribunal of 25 barons was established to hear complaints of the king breaking any of the rules of the charter. This tribunal had the legal power to use any means necessary against the king. King John immediately appealed to Pope Innocent III to annul the Magna Carta, which he said was signed under duress and force of arms. It was annulled by the pope on August 24, 1215.

The Magna Carta was reinstated with changes in 1216, 1217, and 1225 and became the framework on which modern constitutional government was founded.

PREAMBLE

John, by the grace of God, king of England, lord of Ireland, duke of Normandy and Aquitaine, and count of Anjou, to the archbishop, bishops, abbots, earls, barons, justiciaries, foresters, sheriffs, stewards, servants, and to all his bailiffs and liege subjects, greetings. Know that, having regard to God and for the salvation of our soul, and those of all our ancestors and heirs, and unto the honor of God and the advancement of his holy Church and for the rectifying of our realm, we have granted as underwritten by advice of our venerable fathers, Stephen, archbishop of Canterbury, primate of all England and cardinal of the holy Roman Church, Henry, archbishop of Dublin, William of London, Peter of Winchester, Jocelyn of Bath and Glastonbury, Hugh of Lincoln, Walter of Worcester, William of Coventry, Benedict of Rochester, bishops; of Master Pandulf, subdeacon and member of the household of our lord the Pope, of brother Aymeric (master of the Knights of the Temple in England), and of the illustrious men William Marshal, earl of Pembroke, William, earl of Salisbury, William, earl of Warenne, William, earl of Arundel, Alan of Galloway (constable of Scotland), Waren Fitz Gerold, Peter Fitz Herbert, Hubert De Burgh (seneschal of Poitou), Hugh de Neville, Matthew Fitz Herbert, Thomas Basset, Alan Basset, Philip d'Aubigny, Robert of Roppesley, John Marshal, John Fitz Hugh, and others, our liegemen.

1. In the first place we have granted to God, and by this our present charter confirmed for us and our heirs forever that the English Church shall be free, and shall have her rights entire, and her liberties inviolate; and we will that it be thus observed; which is apparent from this that the freedom of elections, which is reckoned most important and very essential to the English Church, we, of our pure and unconstrained will, did grant, and did by our charter confirm and did obtain the ratification of the same from our lord, Pope Innocent III, before the quarrel arose between us and our barons: and this we will observe, and our will is that it be observed in good faith by our heirs forever. We have also granted to all freemen of our kingdom, for us and our heirs forever, all the underwritten liberties, to be had and held by them and their heirs, of us and our heirs forever.

2. If any of our earls or barons, or others holding of us in chief by military service shall have died, and at the time of his death his heir shall be full of age and owe "relief", he shall have his inheritance by the old relief, to wit, the heir or heirs of an earl, for the whole barony of an earl by £100; the heir or heirs of a baron, £100 for a whole barony; the heir or heirs of a knight, 100s, at most, and whoever owes less let him give less, according to the ancient custom of fees.

3. If, however, the heir of any one of the aforesaid has been under age and in wardship, let him have his inheritance without relief and without fine when he comes of age.

4. The guardian of the land of an heir who is thus under age, shall take from the land of the heir nothing but reasonable produce, reasonable customs, and reasonable services, and that without destruction or waste of men or goods; and if we have committed the wardship of the lands of any such minor to the sheriff, or to any other who is responsible to us for its issues, and he has made destruction or waster of what he holds in wardship, we will take of him amends, and the land shall be committed to two lawful and discreet men of that fee, who shall be responsible for the issues to us or to him to whom we shall assign them; and if we have given or sold the wardship of any such land to anyone and he has therein made destruction or waste, he shall lose that wardship, and it shall be transferred to two lawful and discreet men of that fief, who shall be responsible to us in like manner as aforesaid.

5. The guardian, moreover, so long as he has the wardship of the land, shall keep up the houses, parks, fishponds, tanks, mills, and other things pertaining to the land, out of the issues of the same land; and he shall restore to the heir, when he has come to full age, all his land, stocked with ploughs and wainage, according as the season of husbandry shall require, and the issues of the land can reasonable bear.

6. Heirs shall be married without disparagement, yet so that before the marriage takes place the nearest in blood to that heir shall have notice.

7. A widow, after the death of her husband, shall forth-with and without difficulty have her marriage portion and inheritance; nor shall she give anything for her dower, or for her marriage portion, or for the inheritance which her husband and she held on the day of the death of that husband; and she may remain in the house of her husband for forty days after his death, within which time her dower shall be assigned to her.

8. No widow shall be compelled to marry, so long as she prefers to live without a husband; provided always that she gives security not to marry without our consent, if she holds of us, or without the consent of the lord of whom she holds, if she holds of another.

9. Neither we nor our bailiffs will seize any land or rent for any debt, as long as the chattels of the debtor are sufficient to repay the debt; nor shall the sureties of the debtor be distrained so long as the principal debtor is able to satisfy the debt; and if the principal debtor shall fail to pay the debt, having nothing wherewith to pay it, then the sureties shall answer for the debt; and let them have the lands and rents of the debtor, if they desire them, until they are indemnified for the debt which they have paid for him, unless the principal debtor can show proof that he is discharged thereof as against the said sureties.

10. If one who has borrowed from the Jews any sum, great or small, die before that loan be repaid, the debt shall not bear interest while the heir is under age, of whomsoever he may hold; and if the debt fall into our hands, we will not take anything except the principal sum contained in the bond.

11. And if anyone die indebted to the Jews, his wife shall have her dower and pay nothing of that debt; and if any children of the deceased are left under age, necessaries shall be provided for them in keeping with the holding of the deceased; and out of the residue the debt shall be paid, reserving, however, service due to feudal lords; in like manner let it be done touching debts due to others than Jews.

12. No scutage nor aid shall be imposed on our kingdom, unless by common counsel of our kingdom, except for ransoming our person, for making our eldest son a knight, and for once marrying our eldest daughter; and for these there shall not be levied more than a reasonable aid. In like manner it shall be done concerning aids from the city of London.

13. And the city of London shall have all its ancient liberties and free customs, as well by land as by water; furthermore, we decree and grant that all other cities, boroughs, towns, and ports shall have all their liberties and free customs.

14. And for obtaining the common counsel of the kingdom anent the assessing of an aid (except in the three cases aforesaid) or of a scutage, we will cause to be summoned the archbishops, bishops, abbots, earls, and greater barons, severally by our letters; and we will moreover cause to be summoned generally, through our sheriffs and bailiffs, and others who hold of us in chief, for a fixed date, namely, after the expiry of at least forty days, and at a fixed place; and in all letters of such summons we will specify the reason of the summons. And when the summons has thus been made, the business shall proceed on the day appointed, according to the counsel of such as are present, although not all who were summoned have come.

15. We will not for the future grant to anyone license to take an aid from his own free tenants, except to ransom his person, to make his eldest son a knight, and once to marry his eldest daughter; and on each of these occasions there shall be levied only a reasonable aid.

16. No one shall be distrained for performance of greater service for a knight's fee, or for any other free tenement, than is due therefrom.

17. Common pleas shall not follow our court, but shall be held in some fixed place.

18. Inquests of novel disseisin, of mort d'ancestor, and of darrein presentment shall not be held elsewhere than in their own county courts, and that in manner following; We, or, if we should be out of the realm, our chief justiciar, will send two justiciaries through every county four times a year, who shall alone with four knights of the county chosen by the county, hold the said assizes in the county court, on the day and in the place of meeting of that court.

19. And if any of the said assizes cannot be taken on the day of the county court, let there remain of the knights and freeholders, who were present at the county court on that day, as many as may be required for the efficient making of judgments, according as the business be more or less.

20. A freeman shall not be amerced for a slight offense, except in accordance with the degree of the offense; and for a grave offense he shall be amerced in accordance with the gravity of the offense, yet saving always his "contentment"; and a merchant in the same way, saving his "merchandise"; and a villein shall be amerced in the same way, saving his "wainage" if they have fallen into our mercy: and none of the aforesaid ameracements shall be imposed except by the oath of honest men of the neighborhood.

21. Earls and barons shall not be amerced except through their peers, and only in accordance with the degree of the offense.

22. A clerk shall not be amerced in respect of his lay holding except after the manner of the others aforesaid; further, he shall not be amerced in accordance with the extent of his ecclesiastical benefice.

23. No village or individual shall be compelled to make bridges at river banks, except those who from old were legally bound to do so.

24. No sheriff, constable, coroners, or others of our bailiffs, shall hold pleas of our Crown.

25. All counties, hundred, wapentakes, and trithings (except our demesne manors) shall remain at the old rents, and without any additional payment.

26. If anyone holding of us a lay fief shall die, and our sheriff or bailiff shall exhibit our letters patent of summons for a debt which the deceased owed us, it shall be lawful for our sheriff or bailiff to attach and enroll the chattels of the deceased, found upon the lay fief, to the value of that debt, at the sight of law worthy men, provided always that nothing whatever be thence removed until the debt which is evident shall be fully paid to us; and the residue shall be left to the executors to fulfill the will of the deceased; and if there be nothing due from him to us, all the chattels shall go to the deceased, saving to his wife and children their reasonable shares.

27. If any freeman shall die intestate, his chattels shall be distributed by the hands of his nearest kinsfolk and friends, under supervision of the Church, saving to every one the debts which the deceased owed to him.

28. No constable or other bailiff of ours shall take corn or other provisions from anyone without immediately tendering money therefor, unless he can have postponement thereof by permission of the seller.

29. No constable shall compel any knight to give money in lieu of castle-guard, when he is willing to perform it in his own person, or (if he himself cannot do it from any reasonable cause) then by another responsible man. Further, if we have led or sent him upon military service, he shall be relieved from guard in proportion to the time during which he has been on service because of us.

30. No sheriff or bailiff of ours, or other person, shall take the horses or carts of any freeman for transport duty, against the will of the said freeman.

31. Neither we nor our bailiffs shall take, for our castles or for any other work of ours, wood which is not ours, against the will of the owner of that wood.

32. We will not retain beyond one year and one day, the lands those who have been convicted of felony, and the lands shall thereafter be handed over to the lords of the fiefs.

33. All kydells for the future shall be removed altogether from Thames and Medway, and throughout all England, except upon the seashore.

34. The writ which is called praecipe shall not for the future be issued to anyone, regarding any tenement whereby a freeman may lose his court.

35. Let there be one measure of wine throughout our whole realm; and one measure of ale; and one measure of corn, to wit, "the London quarter"; and one width of cloth (whether dyed, or russet, or "halberget"), to wit, two ells within the selvedges; of weights also let it be as of measures.

36. Nothing in future shall be given or taken for awrit of inquisition of life or limbs, but freely it shall be granted, and never denied.

37. If anyone holds of us by fee-farm, either by socage or by burage, or of any other land by knight's service, we will not (by reason of that fee-farm, socage, or burage), have the wardship of the heir, or of such land of his as if of the fief of that other; nor shall we have wardship of that fee-farm, socage, or burage, unless such fee-farm owes knight's service. We will not by reason of any small serjeancy which anyone may hold of us by the service of rendering to us knives, arrows, or the like, have wardship of his heir or of the land which he holds of another lord by knight's service.

38. No bailiff for the future shall, upon his own unsupported complaint, put anyone to his "law", without credible witnesses brought for this purpose.

39. No freemen shall be taken or imprisoned or disseised or exiled or in any way destroyed, nor will we go upon him nor send upon him, except by the lawful judgment of his peers or by the law of the land.

40. To no one will we sell, to no one will we refuse or delay, right or justice.

41. All merchants shall have safe and secure exit from England, and entry to England, with the right to tarry there and to move about as well by land as by water, for buying and selling by the ancient and right customs, quit from all evil tolls, except (in time of war) such merchants as are of the land at war with us. And if such are found in our land at the beginning of the war, they shall be detained, without injury to their bodies or goods, until information be received by us, or by our chief justiciar, how the merchants of our land found in the land at war with us are treated; and if our men are safe there, the others shall be safe in our land.

42. It shall be lawful in future for anyone (excepting always those imprisoned or outlawed in accordance with the law of the kingdom, and natives of any country at war with us, and merchants, who shall be treated as if above provided) to leave our kingdom and to return, safe and secure by land and water, except for a short period in time of war, on grounds of public policy—reserving always the allegiance due to us.

43. If anyone holding of some escheat (such as the honor of Wallingford, Nottingham, Boulogne, Lancaster, or of other escheats which are in our hands and are baronies) shall die, his heir shall give no other relief, and perform no other service to us than he would have done to the baron if that barony had been in the baron's hand; and we shall hold it in the same manner in which the baron held it.

44. Men who dwell without the forest need not henceforth come before our justiciaries of the forest upon a general summons, unless they are in plea, or sureties of one or more, who are attached for the forest.

45. We will appoint as justices, constables, sheriffs, or bailiffs only such as know the law of the realm and mean to observe it well.

46. All barons who have founded abbeys, concerning which they hold charters from the kings of England, or of which they have long continued possession, shall have the wardship of them, when vacant, as they ought to have.

47. All forests that have been made such in our time shall forthwith be disafforsted; and a similar course shall be followed with regard to river banks that have been placed "in defense" by us in our time.

48. All evil customs connected with forests and warrens, foresters and warreners, sheriffs and their officers, river banks and their wardens, shall immediately be inquired into in each county by twelve sworn knights of the same county chosen by the honest men of the same county, and shall, within forty days of the said inquest, be utterly abolished, so as never to be restored, provided always that we previously have intimation thereof, or our justiciar, if we should not be in England.

49. We will immediately restore all hostages and charters delivered to us by Englishmen, as sureties of the peace of faithful service.

50. We will entirely remove from their bailiwicks, the relations of Gerard of Athee (so that in future they shall have no bailiwick in England); namely, Engelard of Cigogne, Peter, Guy, and Andrew of Chanceaux, Guy of Cigogne, Geoffrey of Martigny with his brothers, Philip Mark with his brothers and his nephew Geoffrey, and the whole brood of the same.

51. As soon as peace is restored, we will banish from the kingdom all foreign born knights, crossbowmen, sergeants, and mercenary soldiers who have come with horses and arms to the kingdom's hurt.

52. If anyone has been dispossessed or removed by us, without the legal judgment of his peers, from his lands, castles, franchises, or from his right, we will immediately restore them to him; and if a dispute arise over this, then let it be decided by the five and twenty barons of whom mention is made below in the clause for securing the peace. Moreover, for all those possessions, from which anyone has, without the lawful judgment of his peers, been disseised or removed, by our father, King Henry, or by our brother, King Richard, and which we retain in our hand (or which as possessed by others, to whom we are bound to warrant them) we shall have respite until the usual term of crusaders; excepting those things about which a plea has been raised, or an inquest made by our order, before our taking of the cross; but as soon as we return from the expedition, we will immediately grant full justice therein.

53. We shall have, moreover, the same respite and in the same manner in rendering justice concerning the disafforestation or retention of those forests which Henry our father and Richard our brother afforsted, and concerning the wardship of lands which are of the fief of another (namely, such wardships as we have hitherto had by reason of a fief which anyone held of us by knight's service), and concerning abbeys founded on other fiefs than our own, in which the lord of the fee claims to have right; and when we have returned, or if we desist from our expedition, we will immediately grant full justice to all who complain of such things.

54. No one shall be arrested or imprisoned upon the appeal of a woman, for the death of any other than her husband.

55. All fines made with us unjustly and against the law of the land, and all amercements, imposed unjustly and against the law of the land, shall be entirely remitted, or else it shall be done concerning them according to the decision of the five and twenty barons whom mention is made below in the clause for securing the peace, or according to the judgment of the majority of the same, along with the aforesaid Stephen, archbishop of Canterbury, if he can be present, and such others as he may wish to bring with him for this purpose, and if he cannot be present the business shall nevertheless proceed without him, provided always that if any one or more of the aforesaid five and twenty barons are in a similar suit, they shall be removed as far as concerns this particular judgment, others being substituted in their places after having been selected by the rest of the same five and twenty for this purpose only, and after having been sworn.

56. If we have disseised or removed Welshmen from lands or liberties, or other things, without the legal judgment of their peers in England or in Wales, they shall be immediately restored to them; and if a dispute arise over this, then let it be decided in the marches by the judgment of their peers; for the tenements in England according to the law of England, for tenements in Wales according to the law of Wales, and for tenements in the marches according to the law of the marches. Welshmen shall do the same to us and ours.

57. Further, for all those possessions from which any Welshman has, without the lawful judgment of his peers, been disseised or removed by King Henry our father, or King Richard our brother, and which we retain in our hand (or which are possessed by others, and which we ought to warrant), we will have respite until the usual term of crusaders; excepting those things about which a plea has been raised or an inquest made by our order before we took the cross; but as soon as we return (or if perchance we desist from our expedition), we will immediately grant full justice in accordance with the laws of the Welsh and in relation to the foresaid regions.

58. We will immediately give up the son of Llywelyn and all the hostages of Wales, and the charters delivered to us as security for the peace.

59. We will do towards Alexander, king of Scots, concerning the return of his sisters and his hostages, and concerning his franchises, and his right, in the same manner as we shall do towards our other barons of England, unless it ought to be otherwise according to the charters which we hold from William his father, formerly king of Scots; and this shall be according to the judgment of his peers in our court.

60. Moreover, all these aforesaid customs and liberties, the observances of which we have granted in our kingdom as far as pertains to us towards our men, shall be observed by all of our kingdom, as well clergy as laymen, as far as pertains to them towards their men.

61. Since, moreover, for God and the amendment of our kingdom and for the better allaying of the quarrel that has arisen between us and our barons, we have granted all these concessions, desirous that they should enjoy them in complete and firm endurance forever, we give and grant to them the underwritten security, namely, that the barons choose five and twenty barons of the kingdom, whomsoever they will, who shall be bound with all their might, to observe and hold, and cause to be observed, the peace and liberties we have granted and confirmed to them by this our present Charter, so that if we, or our justiciar, or our bailiffs or any one of our officers, shall in anything be at fault towards anyone, or shall have broken any one of the articles of this peace or of this security, and the offense be notified to four barons of the foresaid five and twenty, the said four barons shall repair to us (or our justiciar, if we are out of the realm) and, laying the transgression before us, petition to have that transgression redressed without delay. And if we shall not have corrected the transgression (or, in the event of our being out of the realm, if our justiciar shall not have corrected it) within forty days, reckoning from the time it has been intimated to us (or to our justiciar, if we should be out of the realm), the four barons aforesaid shall refer that matter to the rest of the five and twenty barons, and those five and twenty barons shall, together with the community of the whole realm, distrain and distress us in all possible ways, namely, by seizing our castles, lands, possessions, and in any other way they can, until redress has been obtained as they deem fit, saving harmless our own person, and the persons of our queen and children; and when redress has been obtained, they shall resume their old relations towards us. And let whoever in the country desires it, swear to obey the orders of the said five and twenty barons for the execution of all the aforesaid matters, and along with them, to molest us to the utmost of his power; and we publicly and freely grant leave to everyone who wishes to swear, and we shall never forbid anyone to swear. All those, moreover, in the land who of themselves and of their own accord are unwilling to swear to the twenty five to help them in constraining and molesting us, we shall by our command compel the same to swear to the effect foresaid. And if any one of the five and twenty barons shall have died or departed from the land, or be incapacitated in any other manner which would prevent the foresaid provisions being carried out, those of the said twenty five barons who are left shall choose another in his place according to their own judgment, and he shall be sworn in the same way as the others. Further, in all matters, the execution of which is entrusted to these twenty five barons, if perchance these twenty five are present and disagree about anything, or if some of them, after being summoned, are unwilling or unable to be present, that which the majority of those present ordain or command shall be held as fixed and established, exactly as if the whole twenty five had concurred in this; and the said twenty five shall swear that they will faithfully observe all that is aforesaid, and cause it to be observed with all their might. And we shall procure nothing from anyone, directly or indirectly, whereby any part of these concessions and liberties might be revoked or diminished; and if any such things has been procured, let it be void and null, and we shall never use it personally or by another.

62. And all the will, hatreds, and bitterness that have arisen between us and our men, clergy and lay, from the date of the quarrel, we have completely remitted and pardoned to everyone. Moreover, all trespasses occasioned by the said quarrel, from Easter in the sixteenth year of our reign till the restoration of peace, we have fully remitted to all, both clergy and laymen, and completely forgiven, as far as pertains to us. And on this head, we have caused to be made for them letters testimonial patent of the lord Stephen, archbishop of Canterbury, of the lord Henry, archbishop of Dublin, of the bishops aforesaid, and of Master Pandulf as touching this security and the concessions aforesaid.

63. Wherefore we will and firmly order that the English Church be free, and that the men in our kingdom have and hold all the aforesaid liberties, rights, and concessions, well and peaceably, freely and quietly, fully and wholly, for themselves and their heirs, of us and our heirs, in all respects and in all places forever, as is aforesaid. An oath, moreover, has been taken, as well on our part as on the part of the barons, that all these conditions aforesaid shall be kept in good faith and without evil intent. Given under our hand—the above named and many others being witnesses—in the meadow which is called Runnymede, between Windsor and Staines, on the fifteenth day of June, in the seventeenth year of our reign.

Saint Thomas Aquinas: *Summa theologia*

Also known as: *Summa theologiae*

Date: 1265–1274

A philosophical treatise written by Roman Catholic theologian and philosopher Saint Thomas Aquinas from approximately 1265 to 1274, it summarized Christian theology in its entirety. The work was divided into three parts, with the first treating the existence and nature of God; the second, ethical and moral questions; and the third, Christ, the Sacraments, and the salvation of man's soul. Throughout the work Aquinas's arguments were aided by the methodology of Aristotelian logic, whereby ultimate causes were deduced from facts based on experience. At the same time, Aquinas relied on divine revelation, or the Holy Scriptures, for his ultimate conclusions about the Christian faith. The work has been the basis, up to the present day, for the teachings of the Roman Catholic Church.

QUESTION 27

OF THE CAUSE OF LOVE

(In Four Articles)

We must now consider the cause of love: and under this head there are four points of inquiry:

- (1) Whether good is the only cause of love?
- (2) Whether knowledge is a cause of love?
- (3) Whether likeness is a cause of love?
- (4) Whether any other passion of the soul is a cause of love?

FIRST ARTICLE [I–II, Q. 27, ART. 1]

Whether Good Is the Only Cause of Love?

Objection 1: It would seem that good is not the only cause of love. For good does not cause love, except because it is loved. But it happens that evil also is loved, according to Ps. 10:6: “He that loveth iniquity, hateth his own soul”: else, every love would be good. Therefore good is not the only cause of love.

Obj. 2: Further, the Philosopher says (Rhet. ii, 4) that “we love those who acknowledge their evils.” Therefore it seems that evil is the cause of love.

Obj. 3: Further, Dionysius says (Div. Nom. iv) that not “the good” only but also “the beautiful is beloved by all.”

On the contrary, Augustine says (De Trin. viii, 3): “Assuredly the good alone is beloved.” Therefore good alone is the cause of love.

I answer that, As stated above (Q. 26, A. 1), Love belongs to the appetitive power which is a passive faculty. Wherefore its object stands in relation to it as the cause of its movement or act. Therefore the cause of love must needs be love's object. Now the proper object of love is the good; because, as stated above (Q. 26, AA. 1, 2), love implies a certain connaturalness or complacency of the lover for the thing beloved, and to everything, that thing is a good, which is akin and proportionate to it. It follows, therefore, that good is the proper cause of love.

Reply Obj. 1: Evil is never loved except under the aspect of good, that is to say, in so far as it is good in some respect, and is considered as being good simply. And thus a certain love is evil, in so far as it tends to that which is not simply a true good. It is in this way that man “loves iniquity,” inasmuch as, by means of iniquity, some good is gained; pleasure, for instance, or money, or such like.

Reply Obj. 2: Those who acknowledge their evils, are beloved, not for their evils, but because they acknowledge them, for it is a good thing to acknowledge one's faults, in so far as it excludes insincerity or hypocrisy.

Reply Obj. 3: The beautiful is the same as the good, and they differ in aspect only. For since good is what all seek, the notion of good is that which calms the desire; while the notion of the beautiful is that which calms the desire, by being seen or known. Consequently those senses chiefly regard the beautiful, which are the most cognitive, viz. sight and hearing, as ministering to reason; for we speak of beautiful sights and beautiful sounds. But in reference to the other objects of the other senses, we do not use the expression “beautiful,” for we do not speak of beautiful tastes, and beautiful odors. Thus it is evident that beauty adds to goodness a relation to the cognitive faculty: so that “good” means that which simply pleases the appetite; while the “beautiful” is something pleasant to apprehend.

SECOND ARTICLE [I–II, Q. 27, ART. 2]

Whether Knowledge Is a Cause of Love?

Objection 1: It would seem that knowledge is not a cause of love. For it is due to love that a thing is sought. But some things are sought without being known, for instance, the sciences; for since “to have them is the same as to know them,” as Augustine says (QQ. 83, qu. 35), if we knew them we should have them, and should not seek them. Therefore knowledge is not the cause of love.

Obj. 2: Further, to love what we know not seems like loving something more than we know it. But some things are loved more than they are known: thus in this life God can be loved in Himself, but cannot be known in Himself. Therefore knowledge is not the cause of love.

Obj. 3: Further, if knowledge were the cause of love, there would be no love, where there is no knowledge. But in all things there is love, as Dionysius says (Div. Nom. iv); whereas there is not knowledge in all things. Therefore knowledge is not the cause of love.

On the contrary, Augustine proves (De Trin. x, 1, 2) that “none can love what he does not know.”

I answer that, As stated above (A. 1), good is the cause of love, as being its object. But good is not the object of the appetite, except as apprehended. And therefore love demands some apprehension of the good that is loved. For this reason the Philosopher (Ethic. ix, 5, 12) says that bodily sight is the beginning of sensitive love: and in like manner the contemplation of spiritual beauty or goodness is the beginning of spiritual love. Accordingly knowledge is the cause of love for the same reason as good is, which can be loved only if known.

Reply Obj. 1: He who seeks science, is not entirely without knowledge thereof: but knows something about it already in some respect, either in a general way, or in some one of its effects, or from having heard it commended, as Augustine says (De Trin. x, 1, 2). But to have it is not to know it thus, but to know it perfectly.

Reply Obj. 2: Something is required for the perfection of knowledge, that is not requisite for the perfection of love. For knowledge belongs to the reason, whose function it is to distinguish things which in reality are united, and to unite together, after a fashion, things that are distinct, by comparing one with another. Consequently the perfection of knowledge requires that man should know distinctly all that is in a thing, such as its parts, powers, and properties. On the other hand, love is in the appetitive power, which regards a thing as it is in itself: wherefore it suffices, for the perfection of love, that a thing be loved according as it is known in itself. Hence it is, therefore, that a thing is loved more than it is known; since it can be loved perfectly, even without being perfectly known. This is most evident in regard to the sciences, which some love through having a certain general knowledge of them: for instance, they know that rhetoric is a science that enables man to persuade others; and this is what they love in rhetoric. The same applies to the love of God.

Reply Obj. 3: Even natural love, which is in all things, is caused by a kind of knowledge, not indeed existing in natural things themselves, but in Him Who created their nature, as stated above (Q. 26, A. 1; cf. I, Q. 6, A. 1, ad 2).

THIRD ARTICLE [I–II, Q. 27, ART. 3]

Whether Likeness Is a Cause of Love?

Objection 1: It would seem that likeness is not a cause of love. For the same thing is not the cause of contraries. But likeness is the cause of hatred; for it is written (Prov. 13:10) that “among the proud there are always contentions”; and the Philosopher says (Ethic. viii, 1) that “potters quarrel with one another.” Therefore likeness is not a cause of love.

Obj. 2: Further, Augustine says (Confess. iv, 14) that “a man loves in another that which he would not be himself: thus he loves an actor, but would not himself be an actor.” But it would not be so, if likeness were the proper cause of love; for in that case a man would love in another, that which he possesses himself, or would like to possess. Therefore likeness is not a cause of love.

Obj. 3: Further, everyone loves that which he needs, even if he have it not: thus a sick man loves health, and a poor man loves riches. But in so far as he needs them and lacks them, he is unlike them. Therefore not only likeness but also unlikeness is a cause of love.

Obj. 4: Further, the Philosopher says (Rhet. ii, 4) that “we love those who bestow money and health on us; and also those who retain their friendship for the dead.” But all are not such. Therefore likeness is not a cause of love.

On the contrary, It is written (Ecclus. 13:19): “Every beast loveth its like.”

I answer that, Likeness, properly speaking, is a cause of love. But it must be observed that likeness between things is twofold. One kind of likeness arises from each thing having the same quality actually: for example, two things possessing the quality of whiteness are said to be alike. Another kind of likeness arises from one thing having potentially and by way of inclination, a quality which the other has actually: thus we may say that a heavy body existing outside its proper place is like another heavy body that exists in its proper place: or again, according as potentiality bears a resemblance to its act; since act is contained, in a manner, in the potentiality itself.

Accordingly the first kind of likeness causes love of friendship or well-being. For the very fact that two men are alike, having, as it were, one form, makes them to be, in a manner, one in that form: thus two men

are one thing in the species of humanity, and two white men are one thing in whiteness. Hence the affections of one tend to the other, as being one with him; and he wishes good to him as to himself. But the second kind of likeness causes love of concupiscence, or friendship founded on usefulness or pleasure: because whatever is in potentiality, as such, has the desire for its act; and it takes pleasure in its realization, if it be a sentient and cognitive being.

Now it has been stated above (Q. 26, A. 4), that in the love of concupiscence, the lover, properly speaking, loves himself, in willing the good that he desires. But a man loves himself more than another: because he is one with himself substantially, whereas with another he is one only in the likeness of some form. Consequently, if this other's likeness to him arising from the participation of a form, hinders him from gaining the good that he loves, he becomes hateful to him, not for being like him, but for hindering him from gaining his own good. This is why "potters quarrel among themselves," because they hinder one another's gain: and why "there are contentions among the proud," because they hinder one another in attaining the position they covet.

Hence the Reply to the First Objection is evident.

Reply Obj. 2: Even when a man loves in another what he loves not in himself, there is a certain likeness of proportion: because as the latter is to that which is loved in him, so is the former to that which he loves in himself: for instance, if a good singer love a good writer, we can see a likeness of proportion, inasmuch as each one has that which is becoming to him in respect of his art.

Reply Obj. 3: He that loves what he needs, bears a likeness to what he loves, as potentiality bears a likeness to its act, as stated above.

Reply Obj. 4: According to the same likeness of potentiality to its act, the illiberal man loves the man who is liberal, in so far as he expects from him something which he desires. The same applies to the man who is constant in his friendship as compared to one who is inconstant. For in either case friendship seems to be based on usefulness. We might also say that although not all men have these virtues in the complete habit, yet they have them according to certain seminal principles in the reason, in force of which principles the man who is not virtuous loves the virtuous man, as being in conformity with his own natural reason.

FOURTH ARTICLE [I-II, Q. 27, ART. 4]

Whether Any Other Passion of the Soul Is a Cause of Love?

Objection 1: It would seem that some other passion can be the cause of love. For the Philosopher (*Ethic.* viii, 3) says that some are loved for the sake of the pleasure they give. But pleasure is a passion. Therefore another passion is a cause of love.

Obj. 2: Further, desire is a passion. But we love some because we desire to receive something from them: as happens in every friendship based on usefulness. Therefore another passion is a cause of love.

Obj. 3: Further, Augustine says (*De Trin.* x, 1): "When we have no hope of getting a thing, we love it but half-heartedly or not at all, even if we see how beautiful it is." Therefore hope too is a cause of love.

On the contrary, All the other emotions of the soul are caused by love, as Augustine says (*De Civ. Dei* xiv, 7, 9).

I answer that, There is no other passion of the soul that does not presuppose love of some kind. The reason is that every other passion of the soul implies either movement towards something, or rest in something. Now every movement towards something, or rest in something, arises from some kinship or aptness to that thing; and in this does love consist. Therefore it is not possible for any other passion of the soul to be universally the cause of every love. But it may happen that some other passion is the cause of some particular love: just as one good is the cause of another.

Reply Obj. 1: When a man loves a thing for the pleasure it affords, his love is indeed caused by pleasure; but that very pleasure is caused, in its turn, by another preceding love; for none takes pleasure save in that which is loved in some way.

Reply Obj. 2: Desire for a thing always presupposes love for that thing. But desire of one thing can be the cause of another thing's being loved; thus he that desires money, for this reason loves him from whom he receives it.

Reply Obj. 3: Hope causes or increases love; both by reason of pleasure, because it causes pleasure; and by reason of desire, because hope strengthens desire, since we do not desire so intensely that which we have no hope of receiving. Nevertheless hope itself is of a good that is loved.

The Travels of Marco Polo

Date: c. 1271–1298

With the influence of the Golden Horde in eastern Europe, Europeans became more aware of and concerned with Asian issues. Papal and political diplomatic missions were sent out, such as that of the Italian Giovanni da Pian del Carpine in 1245–47 and the Flemish William of Rubrouck in 1253–55. European traders followed. In 1271–75, Italian merchants Maffeo Polo, Niccolò Polo, and Marco Polo traveled across Central Asia to Cambaluc (present-day Beijing), the new Mongol capital founded by Genghis's successor Kubilai Khan. Marco Polo, in 1275–92, explored on behalf of the khan, visiting other parts of China, Tibet, Southeast Asia, Indonesia, Mongolia, and possibly Siberia. His book, The Travels of Marco Polo, with descriptions of Mongol customs, was influential in Europe over the next two centuries and influenced Christopher Columbus in his 1492 attempt to reach the Orient by way of the Atlantic Ocean.

The following entry contains excerpts from the original document.

BOOK I: CHAPTER LX.

CONCERNING THE KAAAN'S PALACE OF CHAGANNOR.

At the end of those three days you find a city called CHAGAN NOR [which is as much as to say White Pool], at which there is a great Palace of the Grand Kaan's; and he likes much to reside there on account of the Lakes and Rivers in the neighbourhood, which are the haunt of swans and of a great variety of other birds. The adjoining plains too abound with cranes, partridges, pheasants, and other game birds, so that the Emperor takes all the more delight in staying there, in order to go a-hawking with his gerfalcons and other falcons, a sport of which he is very fond.

There are five different kinds of cranes found in those tracts, as I shall tell you. First, there is one which is very big, and all over as black as a crow; the second kind again is all white, and is the biggest of all; its wings are really beautiful, for they are adorned with round eyes like those of a peacock, but of a resplendent golden colour, whilst the head is red and black on a white ground. The third kind is the same as ours. The fourth is a small kind, having at the ears beautiful long pendent feathers of red and black. The fifth kind is grey all over and of great size, with a handsome head, red and black.

Near this city there is a valley in which the Emperor has had several little houses erected in which he keeps in mew a huge number of *cators* which are what we call the Great Partridge. You would be astonished to see what a quantity there are, with men to take charge of them. So whenever the Kaan visits the place he is furnished with as many as he wants.

CHAPTER LXI.

OF THE CITY OF CHANDU, AND THE KAAAN'S PALACE THERE.

And when you have ridden three days from the city last mentioned, between north-east and north, you come to a city called CHANDU, which was built by the Kaan now reigning. There is at this place a very fine marble Palace, the rooms of which are all gilt and painted with figures of men and beasts and birds, and with a variety of trees and flowers, all executed with such exquisite art that you regard them with delight and astonishment.

Round this Palace a wall is built, inclosing a compass of 16 miles, and inside the Park there are fountains and rivers and brooks, and beautiful meadows, with all kinds of wild animals (excluding such as are of ferocious nature), which the Emperor has procured and placed there to supply food for his gerfalcons and hawks, which he keeps there in mew. Of these there are more than 200 gerfalcons alone, without reckoning the other hawks. The Kaan himself goes every week to see his birds sitting in mew, and sometimes he rides through the park with a leopard behind him on his horse's croup; and then if he sees any animal that takes his fancy, he slips his leopard at it, and the game when taken is made over to feed the hawks in mew. This he does for diversion.

Moreover [at a spot in the Park where there is a charming wood] he has another Palace built of cane, of which I must give you a description. It is gilt all over, and most elaborately finished inside. [It is stayed on gilt and lackered columns, on each of which is a dragon all gilt, the tail of which is attached to the column whilst the head supports the architrave, and the claws likewise are stretched out right and left to support the architrave.] The roof, like the rest, is formed of canes, covered with a varnish so strong and excellent that no amount of rain will rot them. These canes are a good 3 palms in girth, and from 10 to 15 paces in length. [They are cut across at each knot, and then the pieces are split so as to form from each two hollow tiles, and with these the house is roofed; only every such tile of cane has to be nailed down to prevent the wind from lifting it.] In short, the whole Palace is built of these canes, which (I may mention) serve also for a great variety of other useful purposes. The construction of the Palace is so devised that it can be taken down and put up again with great celerity; and it can all be taken to pieces and removed whithersoever the Emperor may command. When erected, it is braced [against mishaps from the wind] by more than 200 cords of silk.

The Lord abides at this Park of his, dwelling sometimes in the Marble Palace and sometimes in the Cane Palace for three months of the year, to wit, June, July, and August; preferring this residence because it is by no means hot; in fact it is a very cool place. When the 28th day of [the Moon of] August arrives he takes his departure, and the Cane Palace is taken to pieces. But I must tell you what happens when he goes away from this Palace every year on the 28th of the August [Moon].

You must know that the Kaan keeps an immense stud of white horses and mares; in fact more than 10,000 of them, and all pure white without a speck. The milk of these mares is drunk by himself and his family, and by none else, except by those of one great tribe that have also the privilege of drinking it. This privilege was granted them by Chinghis Kaan, on account of a certain victory that they helped him to win long ago. The name of the tribe is HORIAD.

Now when these mares are passing across the country, and any one falls in with them, be he the greatest lord in the land, he must not presume to pass until the mares have gone by; he must either tarry where he is, or go a half-day's journey round if need so be, so as not to come nigh them; for they are to be treated with the greatest respect. Well, when the Lord sets out from the Park on the 28th of August, as I told you, the milk of all those mares is taken and sprinkled on the ground. And this is done on the injunction of the Idolaters and Idol-priests, who say that it is an excellent thing to sprinkle that milk on the ground every 28th of August, so that the Earth and the Air and the False Gods shall have their share of it, and the Spirits likewise that inhabit the Air and the Earth. And thus those beings will protect and bless the Kaan and his children and his wives and his folk and his gear, and his cattle and his horses, his corn and all that is his. After this is done, the Emperor is off and away.

But I must now tell you a strange thing that hitherto I have forgotten to mention. During the three months of every year that the Lord resides at that place, if it should happen to be bad weather, there are certain crafty enchanters and astrologers in his train, who are such adepts in necromancy and the diabolic arts, that they are able to prevent any cloud or storm from passing over the spot on which the Emperor's Palace stands. The sorcerers who do this are called TEBET and KESIMUR, which are the names of two nations of Idolaters. Whatever they do in this way is by the help of the Devil, but they make those people believe that it is compassed by dint of their own sanctity and the help of God. [They always go in a state of dirt and uncleanness, devoid of respect for themselves, or for those who see them, unwashed, unkempt, and sordidly attired.]

These people also have a custom which I must tell you. If a man is condemned to death and executed by the lawful authority, they take his body and cook and eat it. But if any one die a natural death then they will not eat the body.

There is another marvel performed by those BACSI, of whom I have been speaking as knowing so many enchantments. For when the Great Kaan is at his capital and in his great Palace, seated at his table, which stands on a platform some eight cubits above the ground, his cups are set before him [on a great buffet] in the middle of the hall pavement, at a distance of some ten paces from his table, and filled with wine, or other good spiced liquor such as they use. Now when the Lord desires to drink, these enchanters by the power of their enchantments cause the cups to move from their place without being touched by anybody, and to present themselves to the Emperor! This every one present may witness, and there are oftentimes more than 10,000 persons thus present. 'Tis a truth and no lie! and so will tell you the sages of our own country who understand necromancy, for they also can perform it.

And when the Idol Festivals come round, these Bacsı go to the Prince and say: "Sire, the Feast of such a god is come" (naming him). "My Lord, you know," the enchanter will say, "that this god, when he gets no offerings, always sends bad weather and spoils our seasons. So we pray you to give us such and such a number of black-faced sheep," naming whatever number they please. "And we beg also, good my lord, that we may have such a quantity of incense, and such a quantity of signaloes, and" so much of this, so much of that, and so much of t'other, according to their fancy "that we may perform a solemn service and a great sacrifice to our Idols, and that so they may be induced to protect us and all that is ours."

The Bacsı say these things to the Barons entrusted with the Stewardship, who stand round the Great Kaan, and these repeat them to the Kaan, and he then orders the Barons to give everything that the Bacsı have asked for. And when they have got the articles they go and make a great feast in honour of their god, and hold great ceremonies of worship with grand illuminations and quantities of incense of a variety of odours, which they make up from different aromatic spices. And then they cook the meat, and set it before the idols, and sprinkle the broth hither and thither, saying that in this way the idols get their bellyful. Thus it is that they keep their festivals. You must know that each of the idols has a name of his own, and a feast-day, just as our Saints have their anniversaries. They have also immense Minsters and Abbeys, some of them as big as a small town, with more than two thousand monks (i.e. after their fashion) in a single abbey. These monks dress more decently than the rest of the people, and have the head and beard shaven. There are some among these Bacsı who are allowed by their rule to take wives, and who have plenty of children.

Then there is another kind of devotees called SENSIN, who are men of extraordinary abstinence after their fashion, and lead a life of such hardship as I will describe. All their life long they eat nothing but bran, which they take mixt with hot water. That is their food: bran, and nothing but bran; and water for their drink. 'Tis a lifelong

fast! so that I may well say their life is one of extraordinary asceticism. They have great idols, and plenty of them; but they sometimes also worship fire. The other Idolaters who are not of this sect call these people heretics . . . because they do not worship their idols in their own fashion. Those of whom I am speaking would not take a wife on any consideration. They wear dresses of hempen stuff, black and blue, and sleep upon mats; in fact their asceticism is something astonishing. Their idols are all feminine, that is to say, they have women's names.

Now let us have done with this subject, and let me tell you of the great state and wonderful magnificence of the Great Lord of Lords; I mean that great Prince who is the Sovereign of the Tartars, CUBLAY by name, that most noble and puissant Lord.

Boccaccio Describing the Black Death

Date: 1348

Giovanni Boccaccio was an Italian author and poet (1313–75) who wrote The Decameron. It is believed that the Black Death entered Europe as a result of Italian trade with the Orient. At that time, merchants and traders from Genoa owned the major trading port of Caffa on the north coast of the Black Sea. The Genoese traders fled the city and arrived dead and dying in their ships on the Italian coast. From 1347 to 1348 the Black Death spread rapidly from Messina to Genoa and Venice, and through the rest of Italy and Europe. Prior to the plague hitting Europe, there was a massive plague in China and Central Asia.

The description of the Black Death is from Giovanni Boccaccio's famous work The Decameron, which is a collection of 100 short tales. The opening tale in the book is about the Black Death and its horror, with people of means fleeing the city to live in the country.

Giovanni Boccaccio grew up in Florence and studied at the University of Naples. He returned to Florence in 1341. In 1350 he met and became friends with Petrarch, or Francesco Petrarca (1304–1374), the Italian poet and humanist, who had an enormous impact on his intellectual life.

The onset of the Black Death as described by Giovanni Boccaccio.

I say, then, that the years of the beatific incarnation of the Son of God had reached the tale of one thousand three hundred and forty eight, when in the illustrious city of Florence, the fairest of all the cities of Italy, there made its appearance that deadly pestilence, which, whether disseminated by the influence of the celestial bodies, or sent upon us mortals by God in His just wrath by way of retribution for our iniquities, had had its origin some years before in the East, whence, after destroying an innumerable multitude of living beings, it had propagated itself without respite from place to place, and so calamitously, had spread into the West.

In Florence, despite all that human wisdom and forethought could devise to avert it, as the cleansing of the city from many impurities by officials appointed for the purpose, the refusal of entrance to all sick folk, and the adoption of many precautions for the preservation of health; despite also humble supplications addressed to God, and often repeated both in public procession and otherwise by the devout; towards the beginning of the spring of the said year the doleful effects of the pestilence began to be horribly apparent by symptoms that shewed as if miraculous.

Not such were they as in the East, where an issue of blood from the nose was a manifest sign of inevitable death; but in men a women alike it first betrayed itself by the emergence of certain tumors in the groin or the armpits, some of which grew as large as a common apple, others as an egg, some more, some less, which the common folk called gavoccioli. From the two said parts of the body this deadly gavocciolo soon began to propagate and spread itself in all directions indifferently; after which the form of the malady began to change, black spots or livid making their appearance in many cases on the arm or the thigh or elsewhere, now few and large, then minute and numerous. And as the gavocciolo had been and still were an infallible token of approaching death, such also were these spots on whomsoever they shewed themselves. Which maladies seemed set entirely at naught both the art of the physician and the virtue of physic; indeed, whether it was that the disorder was of a nature to defy such treatment, or that the physicians were at fault—besides the qualified there was now a multitude both of men and of women who practiced without having received the slightest tincture of medical science—and, being in ignorance of its source, failed to apply the proper remedies; in either case, not merely were those that covered few, but almost all within three

days from the appearance of the said symptoms, sooner or later, died, and in most cases without any fever or other attendant malady.

Moreover, the virulence of the pest was the greater by reason the intercourse was apt to convey it from the sick to the whole, just as fire devours things dry or greasy when they are brought close to it, the evil went yet further, for not merely by speech or association with the sick was the malady communicated to the healthy with consequent peril of common death; but any that touched the clothes the sick or aught else that had been touched, or used by these seemed thereby to contract the disease.

So marvelous sounds that which I have now to relate, that, had not many, and I among them, observed it with their own eyes, I had hardly dared to credit it, much less to set it down in writing, though I had had it from the lips of a credible witness.

I say, then, that such was the energy of the contagion of the said pestilence, that it was not merely propagated from man to man, but, what is much more startling, it was frequently observed, that things which had belonged to one sick or dead of the disease, if touched by some other living creature, not of the human species, were the occasion, not merely of sickening, but of an almost instantaneous death. Whereof my own eyes (as I said a little before) had cognisance, one day among others, by the following experience. The rags of a poor man who had died of the disease being strewn about the open street, two hogs came thither, and after, as is their wont, no little trifling with their snouts, took the rags between their teeth and tossed them to and fro about their chaps; whereupon, almost immediately, they gave a few turns, and fell down dead, as if by poison, upon the rags which in an evil hour they had disturbed.

In which circumstances, not to speak of many others of a similar or even graver complexion, divers apprehensions and imaginations were engendered in the minds of such as were left alive, inclining almost all of them to the same harsh resolution, to wit, to shun and abhor all contact with the sick and all that belonged to them, thinking thereby to make each his own health secure. Among whom there were those who thought that to live temperately and avoid all excess would count for much as a preservative against seizures of this kind. Wherefore they banded together, and dissociating themselves from all others, formed communities in houses where there were no sick, and lived a separate and secluded life, which they regulated with the utmost care, avoiding every kind of luxury, but eating and drinking moderately of the most delicate viands and the finest wines, holding converse with none but one another, lest tidings of sickness or death should reach them, and diverting their minds with music and such other delights as they could devise. Others, the bias of whose minds was in the opposite direction, maintained, that to drink freely, frequent places of public resort, and take their pleasure with song and revel, sparing to satisfy no appetite, and to laugh and mock at no event, was the sovereign remedy for so great an evil: and that which they affirmed they also put in practice, so far as they were able, resorting day and night, now to this tavern, now to that, drinking with an entire disregard of rule or measure, and by preference making the houses of others, as it were, their inns, if they but saw in them aught that was particularly to their taste or liking; which they, were readily able to do, because the owners, seeing death imminent, had become as reckless of their property as of their lives; so that most of the houses were open to all comers, and no distinction was observed between the stranger who presented himself and the rightful lord. Thus, adhering ever to their inhuman determination to shun the sick, as far as possible, they ordered their life. In this extremity of our city's suffering and tribulation the venerable authority of laws, human and divine, was abased and all but totally dissolved for lack of those who should have administered and enforced them, most of whom, like the rest of the citizens, were either dead or sick or so hard bested for servants that they were unable to execute any office; whereby every man was free to do what was right in his own eyes.

Not a few there were who belonged to neither of the two said parties, but kept a middle course between them, neither laying the same restraint upon their diet as the former, nor allowing themselves the same license in drinking and other dissipations as the latter, but living with a degree of freedom sufficient to satisfy their appetite and not as recluses. They therefore walked abroad, carrying in the hands flowers or fragrant herbs or divers sorts of spices, which they frequently raised to their noses, deeming it an excellent thing thus to comfort the brain with such perfumes, because the air seemed to be everywhere laden and reeking with the stench emitted by the dead and the dying, and the odours of drugs.

Some again, the most sound, perhaps, in judgment, as they were also the most harsh in temper, of all, affirmed that there was no medicine for the disease superior or equal in efficacy to flight; following which prescription a multitude of men and women, negligent of all but themselves, deserted their city, their houses, their estates, their kinsfolk, their goods, and went into voluntary exile, or migrated to the country parts, as if God in visiting men with this pestilence in requital of their iniquities would not pursue them with His wrath wherever they might be, but intended the destruction of such alone as remained within the circuit of the walls of the city; or deeming perchance, that it was now time for all to flee from it, and that its last hour was come.

Of the adherents of these divers opinions not all died, neither did all escape; but rather there were, of each sort and in every place many that sickened, and by those who retained their health were treated after the example which they themselves, while whole, had set, being everywhere left to languish in almost total neglect. Tedious were it to recount, how citizen avoided citizen, how among neighbors was scarce found

any that shewed fellow-feeling for another, how kinsfolk held aloof, and never met, or but rarely; enough that this sore affliction entered so deep into the minds of men and women, that in the horror thereof brother was forsaken by brother nephew by uncle, brother by sister, and oftentimes husband by wife: nay, what is more, and scarcely to be believed, fathers and mothers were found to abandon their own children, untended, unvisited, to their fate, as if they had been strangers. Wherefore the sick of both sexes, whose number could not be estimated, were left without resource but in the charity of friends (and few such there were), or the interest of servants, who were hardly to be had at high rates and on unseemly terms, and being, moreover, one and all, men and women of gross understanding, and for the most part unused to such offices, concerned themselves no further than to supply the immediate and expressed wants of the sick, and to watch them die; in which service they themselves not seldom perished with their gains. In consequence of which dearth of servants and dereliction of the sick by neighbors, kinsfolk and friends, it came to pass—a thing, perhaps, never before heard of—that no woman, however dainty, fair or well-born she might be, shrank, when stricken with the disease, from the ministrations of a man, no matter whether he were young or no, or scrupled to expose to him every part of her body, with no more shame than if he had been a woman, submitting of necessity to that which her malady required; wherefrom, perchance, there resulted in after time some loss of modesty in such as recovered. Besides which many succumbed, who with proper attendance, would, perhaps, have escaped death; so that, what with the virulence of the plague and the lack of due attendance of the sick, the multitude of the deaths, that daily and nightly took place in the city, was such that those who heard the tale—not to say witnessed the fact—were struck dumb with amazement. Whereby, practices contrary to the former habits of the citizens could hardly fail to grow up among the survivors.

It had been, as to-day it still is, the custom for the women that were neighbors and of kin to the deceased to gather in his house with the women that were most closely connected with him, to wail with them in common, while on the other hand his male kinsfolk and neighbors, with not a few of the other citizens, and a due proportion of the clergy according to his quality, assembled without, in front of the house, to receive the corpse; and so the dead man was borne on the shoulders of his peers, with funeral pomp of taper and dirge, to the church selected by him before his death. Which rites, as the pestilence waxed in fury, were either in whole or in great part disused, and gave way to others of a novel order. For not only did no crowd of women surround the bed of the dying, but many passed from this life unregarded, and few indeed were they to whom were accorded the lamentations and bitter tears of sorrowing relations; nay, for the most part, their place was taken by the laugh, the jest, the festal gathering; observances which the women, domestic piety in large measure set aside, had adopted with very great advantage to their health. Few also there were whose bodies were attended to the church by more than ten or twelve of their neighbors, and those not the honorable and respected citizens; but a sort of corpse-carriers drawn from the baser ranks, who called themselves *becchini* and performed such offices for hire, would shoulder the bier, and with hurried steps carry it, not to the church of the dead man's choice, but to that which was nearest at hand, with four or six priests in front and a candle or two, or, perhaps, none; nor did the priests distress themselves with too long and solemn an office, but with the aid of the *becchini* hastily consigned the corpse to the first tomb which they found untenanted. The condition of the lower, and, perhaps, in great measure of the middle ranks, of the people shewed even worse and more deplorable; for, deluded by hope or constrained by poverty, they stayed in their quarters, in their houses where they sickened by thousands a day, and, being without service or help of any kind, were, so to speak, irredeemably devoted to the death which overtook them. Many died daily or nightly in the public streets; of many others, who died at home, the departure was hardly observed by their neighbors, until the stench of their putrefying bodies carried the tidings; and what with their corpses and the corpses of others who died on every hand the whole place was a sepulchre.

It was the common practice of most of the neighbors, moved no less by fear of contamination by the putrefying bodies than by charity towards the deceased, to drag the corpses out of the houses with their own hands, aided, perhaps, by a porter, if a porter was to be had, and to lay them in front of the doors, where any one who made the round might have seen, especially in the morning, more of them than he could count; afterwards they would have biers brought up or in default, planks, whereon they laid them. Nor was it once twice only that one and the same bier carried two or three corpses at once; but quite a considerable number of such cases occurred, one bier sufficing for husband and wife, two or three brothers, father and son, and so forth. And times without number it happened, that as two priests, bearing the cross, were on their way to perform the last office for some one, three or four biers were brought up by the porters in rear of them, so that, whereas the priests supposed that they had but one corpse to bury, they discovered that there were six or eight, or sometimes more. Nor, for all their number, were their obsequies honored by either tears or lights or crowds of mourners rather, it was come to this, that a dead man was then of no more account than a dead goat would be to-day.

Excerpts from the Journal of Christopher Columbus

Date: 1492

Columbus's journal no longer exists in its original form. The available text was abridged and edited by the Spanish priest Bartolomé de Las Casas, an early missionary in the New World and a noted champion of Native peoples. The revisions by Las Casas account for the variant use of first and third person in reference to Columbus throughout the manuscript. In the following section, Columbus recounts his departure from the city of Granada in May, the discovery of land the following October, and describes the indigenous people he mistakenly named Indians. Columbus assumed the people were simple because they were naked and did not have metal weapons. He also assumed that they would be readily converted to Christianity "as they appear to have no religion." He may have been attempting to construct an idea of the Natives as future Christians in order to please his sponsors, King Ferdinand and Queen Isabella, the Catholic monarchs who instituted the Spanish Inquisition in 1478 to create a homogenous Christian population in Spain. Columbus would undertake three more journeys across the Atlantic in his lifetime, exploring Trinidad, Venezuela, the Orinoco River delta, Cape Honduras, Nicaragua, Costa Rica, Veragua, and Panama, but never reaching the spice-rich Orient he set out to find. He died in Spain in 1506, still believing he had reached "the Indies."

The following are excerpts from the journal Christopher Columbus kept during his first voyage to the Americas in 1492.

Hereupon I left the city of Granada, on Saturday, the twelfth day of May, 1492, and proceeded to Palos, a seaport, where I armed three vessels, very fit for such an enterprise, and having provided myself with abundance of stores and seamen, I set sail from the port, on Friday, the third of August, half an hour before sunrise, and steered for the Canary Islands of your Highnesses which are in the said ocean, thence to take my departure and proceed till I arrived at the Indies, and perform the embassy of your Highnesses to the Princes there, and discharge the orders given me. For this purpose I determined to keep an account of the voyage, and to write down punctually every thing we performed or saw from day to day, as will hereafter appear. Moreover, Sovereign Princes, besides describing every night the occurrences of the day, and every day those of the preceding night, I intend to draw up a nautical chart, which shall contain the several parts of the ocean and land in their proper situations; and also to compose a book to represent the whole by picture with latitudes and longitudes, on all which accounts it behooves me to abstain from my sleep, and make many trials in navigation, which things will demand much labor.

Friday, 12 October. At two o'clock in the morning the land was discovered, at two leagues' distance; they took in sail and remained under the square-sail lying to till day, which was Friday, when they found themselves near a small island, one of the Lucayos, called in the Indian language Guanahani. Presently they descried people, naked, and the Admiral landed in the boat, which was armed, along with Martin Alonso Pinzon, and Vincent Yanez his brother, captain of the Nina. The Admiral bore the royal standard, and the two captains each a banner of the Green Cross, which all the ships had carried; this contained the initials of the names of the King and Queen each side of the cross, and a crown over each letter. Arrived on shore, they saw trees very green many streams of water, and diverse sorts of fruits. The Admiral called upon the two Captains, and the rest of the crew who landed, as also to Rodrigo de Escovedo notary of the fleet, and Rodrigo Sanchez, of Segovia, to bear witness that he before all others took possession (as in fact he did) of that island for the King and Queen his sovereigns, making the requisite declarations, which are more at large set down here in writing. Numbers of the people of the island straightway collected together. Here follow the precise words of the Admiral: "As I saw that they were very friendly to us, and perceived that they could be much more easily converted to our holy faith by gentle means than by force, I presented them with some red caps, and strings of beads to wear upon the neck, and many other trifles of small value, wherewith they were much delighted, and became wonderfully attached to us. Afterwards they came swimming to the boats, bringing parrots, balls of cotton thread, javelins, and many other things which they exchanged for articles we gave them, such as glass beads, and hawk's bells; which trade was carried on with the utmost good will. But they seemed on the whole to me, to be a very poor people. They all go completely naked, even the women, though I saw but one girl. All whom I saw were young, not above thirty years of age, well made, with fine shapes and faces; their hair short, and coarse like that of a horse's tail, combed toward the forehead, except a small portion which they suffer to hang down behind, and never cut. Some paint themselves with black, which makes them appear like those of the Canaries, neither black nor white; others with white, others with red, and others with such

colors as they can find. Some paint the face, and some the whole body; others only the eyes, and others the nose. Weapons they have none, nor are acquainted with them, for I showed them swords which they grasped by the blades, and cut themselves through ignorance. They have no iron, their javelins being without it, and nothing more than sticks, though some have fish-bones or other things at the ends. They are all of a good size and stature, and handsomely formed. I saw some with scars of wounds upon their bodies, and demanded by signs the of them; they answered me in the same way, that there came people from the other islands in the neighborhood who endeavored to make prisoners of them, and they defended themselves. I thought then, and still believe, that these were from the continent. It appears to me, that the people are ingenious, and would be good servants and I am of opinion that they would very readily become Christians, as they appear to have no religion. They very quickly learn such words as are spoken to them. If it please our Lord, I intend at my return to carry home six of them to your Highnesses, that they may learn our language. I saw no beasts in the island, nor any sort of animals except parrots.” These are the words of the Admiral.

The Praise of Folly

Date: 1511

This prose satire was written in Latin by Erasmus (Encomium Moriae) in 1509 and first published in 1511. It was composed in its earliest form at the Chelsea home of Sir Thomas More, and its original title is a pun on More's name, as Erasmus's dedication to him makes plain. In it the goddess Folly, in a formal oration, addresses the multitude of her disciples and congratulates herself on how all mankind is enrolled in her train: princes, courtiers, statesmen, scholars, poets, lawyers, philosophers, and, most pointedly, theologians. The satire on the follies of churchmen was the heart of the work and provoked much fury from its victims. The work was an extraordinary best seller: 42 Latin editions appeared in Erasmus's lifetime and it was soon translated into French (1520), German (1520), and English (1549).

The following entry is an excerpt from the original.

The Praise of Folly
An oration, of feigned matter,
spoken by Folly in her own person.

At what rate soever the world talks of me (for I am not ignorant what an ill report Folly has got, even among the most foolish), yet that I am that she, that only she, whose deity recreates both gods and men, even this is a sufficient argument, that I no sooner stepped up to speak to this full assembly than all your faces put on a kind of new and unwonted pleasantness. So suddenly have you cleared your brows, and with so frolic and hearty a laughter given me your applause, that in truth as many of you as I behold on every side of me seem to me no less than Homer's gods drunk with nectar and nepenthe; whereas before, you sat as lumpish and pensive as if you had come from consulting an oracle. And as it usually happens when the sun begins to show his beams, or when after a sharp winter the spring breathes afresh on the earth, all things immediately get a new face, new color, and recover as it were a certain kind of youth again: in like manner, by but beholding me you have in an instant gotten another kind of countenance; and so what the otherwise great rhetoricians with their tedious and long-studied orations can hardly effect, to wit, to remove the trouble of the mind, I have done it at once with my single look.

But if you ask me why I appear before you in this strange dress, be pleased to lend me your ears, and I'll tell you; not those ears, I mean, you carry to church, but abroad with you, such as you are wont to prick up to jugglers, fools, and buffoons, and such as our friend Midas once gave to Pan. For I am disposed awhile to play the sophist with you; not of their sort who nowadays boozle young men's heads with certain empty notions and curious trifles, yet teach them nothing but a more than womanish obstinacy of scolding; but I'll imitate those ancients who, that they might the better avoid that infamous appellation of “sophi” or “wise”, chose rather to be called sophists. Their business was to celebrate the praises of the gods and valiant men. And the like encomium shall you hear from me, but neither of Hercules nor Solon, but my own dear self, that is to say, Folly. Nor do I esteem a rush that call it a foolish and insolent thing to praise one's self. Be it as foolish as they would make it, so they confess it proper: and what can be more than that Folly be her own

trumpet? For who can set me out better than myself, unless perhaps I could be better known to another than to myself? Though yet I think it somewhat more modest than the general practice of our nobles and wise men who, throwing away all shame, hire some flattering orator or lying poet from whose mouth they may hear their praises, that is to say, mere lies; and yet, composing themselves with a seeming modesty, spread out their peacock's plumes and erect their crests, while this impudent flatterer equals a man of nothing to the gods and proposes him as an absolute pattern of all virtue that's wholly a stranger to it, sets out a pitiful jay in other's feathers, washes the blackamoor white, and lastly swells a gnat to an elephant. In short, I will follow that old proverb that says, "He may lawfully praise himself that lives far from neighbors." Though, by the way, I cannot but wonder at the ingratitude, shall I say, or negligence of men who, notwithstanding they honor me in the first place and are willing enough to confess my bounty, yet not one of them for these so many ages has there been who in some thankful oration has set out the praises of Folly; when yet there has not wanted them whose elaborate endeavors have extolled tyrants, agues, flies, baldness, and such other pests of nature, to their own loss of both time and sleep. And now you shall hear from me a plain extemporaneous speech, but so much the truer. Nor would I have you think it like the rest of orators, made for the ostentation of wit; for these, as you know, when they have been beating their heads some thirty years about an oration and at last perhaps produce somewhat that was never their own, shall yet swear they composed it in three days, and that too for diversion: whereas I ever liked it best to speak whatever came first out.

But let none of you expect from me that after the manner of rhetoricians I should go about to define what I am, much less use any division; for I hold it equally unlucky to circumscribe her whose deity is universal, or make the least division in that worship about which everything is so generally agreed. Or to what purpose, think you, should I describe myself when I am here present before you, and you behold me speaking? For I am, as you see, that true and only giver of wealth whom the Greeks call "Moria", the Latins "Stultitia", and our plain English "Folly". Or what need was there to have said so much, as if my very looks were not sufficient to inform you who I am? Or as if any man, mistaking me for wisdom, could not at first sight convince himself by my face the true index of my mind? I am no counterfeit, nor do I carry one thing in my looks and another in my breast. No, I am in every respect so like myself that neither can they dissemble me who arrogate to themselves the appearance and title of wise men and walk like asses in scarlet hoods, though after all their hypocrisy Midas' ears will discover their master. A most ungrateful generation of men that, when they are wholly given up to my party, are yet publicly ashamed of the name, as taking it for a reproach; for which cause, since in truth they are "morotatoi", fools, and yet would appear to the world to be wise men and Thales, we'll even call them "morosophous", wise fools.

The Prince

Also known as: *Il Principe*

Date: 1513

A political treatise in 25 chapters by Niccolò Machiavelli, The Prince also contains a conclusion urging the redemption of Italy from barbarian forces. It was originally written in 1513 and dedicated to Giuliano de' Medici but was revised in 1516 and dedicated to Giuliano's nephew Lorenzo before he became duke of Urbino. Machiavelli's ideas had developed during his active career (1498–1512) in the Florentine republic, when he had become familiar with all manner of political problems and conflicts and had, as a member of important missions, directly dealt with such powerful figures as Cesare Borgia.

The Prince concerns what is necessary for the successful seizure and exercise of political power and considers the means available to achieve this end, without reference to individual morality or ultimate religious truths. The secular point of view and the ambiguous tone arising from Machiavelli's procedure of presenting his firmly held opinions in a purely descriptive guise were largely responsible for the work's unjustified reputation in the later 16th century as an epitome of atheism and wickedness. It and its author were frequently alluded to in Elizabethan writings. Il Principe was the subject of an anonymous Tudor translation of about 1560, which was edited by Hardin Craig and first published at Chapel Hill in 1944. The first printed English translation (1640), by E. Dacres and entitled Nicholas Machiavel's Prince, was reprinted in the Tudor Translations series (1905). The Prince is included in A. H. Gilbert's The Chief Works of Machiavelli (Durham, N.C., 1965). George Bull's translation was first issued in the Penguin Classics series in 1961, and there is also an Oxford World's Classics edition by Peter Bondanella, with the translation by Bondanella and Mark Musa

(Oxford, 1984). Parallel Italian and English texts feature in Musa's earlier edition of the work (New York, 1964).

The following entry contains excerpts from the original document.

THE PRINCE, by Niccolò Machiavelli

CHAPTER I
HOW MANY KINDS OF PRINCIPALITIES THERE ARE, AND BY WHAT MEANS THEY ARE ACQUIRED

ALL STATES, all powers, that have held and hold rule over men have been and are either republics or principalities. Principalities are either hereditary, in which the family has been long established; or they are new.

The new are either entirely new, as was Milan to Francesco Sforza, or they are, as it were, members annexed to the hereditary state of the prince who has acquired them, as was the kingdom of Naples to that of the King of Spain.

Such dominions thus acquired are either accustomed to live under a prince, or to live in freedom; and are acquired either by the arms of the prince himself, or of others, or else by fortune or by ability.

CHAPTER II
CONCERNING HEREDITARY PRINCIPALITIES

I WILL leave out all discussion on republics, inasmuch as in another place I have written of them at length, [1] and will address myself only to principalities. In doing so I will keep to the order indicated above, and discuss how such principalities are to be ruled and preserved.

I say at once there are fewer difficulties in holding hereditary states, and those long accustomed to the family of their prince, than new ones; for it is sufficient only not to transgress the customs of his ancestors, and to deal prudently with circumstances as they arise, for a prince of average powers to maintain himself in his state, unless he be deprived of it by some extraordinary and excessive force; and if he should be so deprived of it, whenever anything sinister happens to the usurper, he will regain it.

We have in Italy, for example, the Duke of Ferrara, who could not have withstood the attacks of the Venetians in '84, nor those of Pope Julius in '10, unless he had been long established in his dominions. For the hereditary prince has less cause and less necessity to offend; hence it happens that he will be more loved; and unless extraordinary vices cause him to be hated, it is reasonable to expect that his subjects will be naturally well disposed towards him; and in the antiquity and duration of his rule the memories and motives that make for change are lost, for one change always leaves the tooting for another.

1. Discourses.

CHAPTER III
CONCERNING MIXED PRINCIPALITIES

BUT the difficulties occur in a new principality. And firstly, if it be not entirely new, but is, as it were, a member of a state which, taken collectively, may be called composite, the changes arise chiefly from an inherent difficulty which there is in all new principalities; for men change their rulers willingly, hoping to better themselves, and this hope induces them to take up arms against him who rules: wherein they are deceived, because they afterwards find by experience they have gone from bad to worse. This follows also on another natural and common necessity, which always causes a new prince to burden those who have submitted to him with his soldiery and with infinite other hardships which he must put upon his new acquisition.

In this way you have enemies in all those whom you have injured in seizing that principality, and you are not able to keep those friends who put you there because of your not being able to satisfy them in the way they expected, and you cannot take strong measures against them, feeling bound to them. For, although one may be very strong in armed forces, yet in entering a province one has always need of the goodwill of the natives.

For these reasons Louis XII, King of France, quickly occupied Milan, and as quickly lost it; and to turn him out the first time it only needed Lodovico's own forces; because those who had opened the gates to him, finding themselves deceived in their hopes of future benefit, would not endure the ill-treatment of the new prince. It is very true that, after acquiring rebellious provinces a second time, they are not so lightly lost afterwards, because the prince, with little reluctance, takes the opportunity of the rebellion to punish the delinquents, to clear out the suspects, and to strengthen himself in the weakest places. Thus to cause France to lose Milan the first time it was enough for the Duke Lodovico to raise insurrections on the borders; but to cause him to lose it a second time it was necessary to bring the whole world against him, and that his armies should be defeated and driven out of Italy; which followed from the causes above mentioned.

Nevertheless Milan was taken from France both the first and the second time. The general reasons for the first have been discussed; it remains to name those for the second, and to see what resources he had, and

what any one in his situation would have had for maintaining himself more securely in his acquisition than did the King of France.

Now I say that those dominions which, when acquired, are added to an ancient state by him who acquires them, are either of the same country and language, or they are not. When they are, it is easier to hold them, especially when they have not been accustomed to self-government; and to hold them securely it is enough to have destroyed the family of the prince who was ruling them; because the two peoples, preserving in other things the old conditions, and not being unlike in customs, will live quietly together, as one has seen in Brittany, Burgundy, Gascony, and Normandy, which have been bound to France for so long a time: and, although there may be some difference in language, nevertheless the customs are alike, and the people will easily be able to get on amongst themselves. He who has annexed them, if he wishes to hold them, has only to bear in mind two considerations: the one, that the family of their former lord is extinguished; the other, that neither their laws nor their taxes are altered, so that in a very short time they will become entirely one body with the old principality.

But when states are acquired in a country differing in language, customs, or laws, there are difficulties, and good fortune and great energy are needed to hold them, and one of the greatest and most real helps would be that he who has acquired them should go and reside there. This would make his position more secure and durable, as it has made that of the Turk in Greece, who, notwithstanding all the other measures taken by him for holding that state, if he had not settled there, would not have been able to keep it. Because, if one is on the spot, disorders are seen as they spring up, and one can quickly remedy them; but if one is not at hand, they heard of only when they are one can no longer remedy them. Besides this, the country is not pillaged by your officials; the subjects are satisfied by prompt recourse to the prince; thus, wishing to be good, they have more cause to love him, and wishing to be otherwise, to fear him. He who would attack that state from the outside must have the utmost caution; as long as the prince resides there it can only be wrested from him with the greatest difficulty.

The other and better course is to send colonies to one or two places, which may be as keys to that state, for it necessary either to do this or else to keep there a great number of cavalry and infantry. A prince does not spend much on colonies, for with little or no expense he can send them out and keep them there, and he offends a minority only of the citizens from whom he takes lands and houses to give them to the new inhabitants; and those whom he offends, remaining poor and scattered, are never able to injure him; whilst the rest being uninjured are easily kept quiet, and at the same time are anxious not to err for fear it should happen to them as it has to those who have been despoiled. In conclusion, I say that these colonies are not costly, they are more faithful, they injure less, and the injured, as has been said, being poor and scattered, cannot hurt. Upon this, one has to remark that men ought either to be well treated or crushed, because they can avenge themselves of lighter injuries, of more serious ones they cannot; therefore the injury that is to be done to a man ought to be of such a kind that one does not stand in fear of revenge.

But in maintaining armed men there in place of colonies one spends much more, having to consume on the garrison all income from the state, so that the acquisition turns into a loss, and many more are exasperated, because the whole state is injured; through the shifting of the garrison up and down all become acquainted with hardship, and all become hostile, and they are enemies who, whilst beaten on their own ground, are yet able to do hurt. For every reason, therefore, such guards are as useless as a colony is useful.

Again, the prince who holds a country differing in the above respects ought to make himself the head and defender of his powerful neighbours, and to weaken the more powerful amongst them, taking care that no foreigner as powerful as himself shall, by any accident, get a footing there; for it will always happen that such a one will be introduced by those who are discontented, either through excess of ambition or through fear, as one has seen already. The Romans were brought into Greece by the Aetolians; and in every other country where they obtained a footing they were brought in by the inhabitants. And the usual course of affairs is that, as soon as a powerful foreigner enters a country, all the subject states are drawn to him, moved by the hatred which they feel against the ruling power. So that in respect to these subject states he has not to take any trouble to gain them over to himself, for the whole of them quickly rally to the state which he has acquired there. He has only to take care that they do not get hold of too much power and too much authority, and then with his own forces, and with their goodwill, he can easily keep down the more powerful of them, so as to remain entirely master in the country. And he who does not properly manage this business will soon lose what he has acquired, and whilst he does hold it he will have endless difficulties and troubles.

The Romans, in the countries which they annexed, observed closely these measures; they sent colonies and maintained friendly relations with the minor powers, without increasing their strength; they kept down the greater, and did not allow any strong foreign powers to gain authority. Greece appears to me sufficient for an example. The Achaeans and Aetolians were kept friendly by them, the kingdom of Macedonia was humbled, Antiochus was driven out; yet the merits of the Achaeans and Aetolians never secured for them permission to increase their power, nor did the persuasions of Philip ever induce the Romans to be his friends without first humbling him, nor did the influence of Antiochus make them agree that he should retain any lordship over the country. Because the Romans did in these instances what all prudent princes ought to do, who have to regard not only present troubles, but also future ones, for which they must prepare with every

energy, because, when foreseen, it is easy to remedy them; but if you wait until they approach, the medicine is no longer in time because the malady has become incurable; for it happens in this, as the physicians say it happens in hectic fever, that in the beginning of the malady it is easy to cure but difficult to detect, but in the course of time, not having been either detected or treated in the beginning, it becomes easy to detect but difficult to cure. Thus it happens in affairs of state, for when the evils that arise have been foreseen (which it is only given to a wise man to see), they can be quickly redressed, but when, through not having been foreseen, they have been permitted to grow in a way that every one can see them, there is no longer a remedy. Therefore, the Romans, foreseeing troubles, dealt with them at once, and, even to avoid a war, would not let them come to a head, for they knew that war is not to be avoided, but is only put off to the advantage of others; moreover they wished to fight with Philip and Antiochus in Greece so as not to have to do it in Italy; they could have avoided both, but this they did not wish; nor did that ever please them which is for ever in the mouths of the wise ones of our time:— Let us enjoy the benefits of the time—but rather the benefits of their own valour and prudence, for time drives everything before it, and is able to bring with it good as well as evil, and evil as well as good.

But let us turn to France and inquire whether she has done any of the things mentioned. I will speak of Louis [XII] (and not of Charles [VIII]) as the one whose conduct is the better to be observed, he having held possession of Italy for the longest period; and you will see that he has done the opposite to those things which ought to be done to retain a state composed of divers elements.

King Louis was brought into Italy by the ambition of the Venetians, who desired to obtain half the state of Lombardy by his intervention. I will not blame the course taken by the king, because, wishing to get a foothold in Italy, and having no friends there—seeing rather that every door was shut to him owing to the conduct of Charles—he was forced to accept those friendships which he could get, and he would have succeeded very quickly in his design if in other matters he had not made some mistakes. The king, however, having acquired Lombardy, regained at once the authority which Charles had lost: Genoa yielded; the Florentines became his friends; the Marquess of Mantua, the Duke of Ferrara, the Bentivoglio, my lady of Forli, the Lords of Faenza, of Pesaro, of Rimini, of Camerino, of Piombino, the Lucchesi, the Pisans, the Sienese—everybody made advances to him to become his friend. Then could the Venetians realize the rashness of the course taken by them, which, in order that they might secure two towns in Lombardy, had made the king master of two-thirds of Italy.

Let any one now consider with what little difficulty the king could have maintained his position in Italy had he observed the rules above laid down, and kept all his friends secure and protected; for although they were numerous they were both weak and timid, some afraid of the Church, some of the Venetians, and thus they would always have been forced to stand in with him, and by their means he could easily have made himself secure against those who remained powerful. But he was no sooner in Milan than he did the contrary by assisting Pope Alexander to occupy the Romagna. It never occurred to him that by this action he was weakening himself, depriving himself of friends and those who had thrown themselves into his lap, whilst he aggrandized the Church by adding much temporal power to the spiritual, thus giving it great authority. And having committed this prime error, he was obliged to follow it up, so much so that, to put an end to the ambition of Alexander, and to prevent his becoming the master of Tuscany, he was himself forced to come into Italy.

And as if it were not enough to have aggrandized the Church, and deprived himself friends, he, wishing to have the kingdom of Naples, divides it with the King of Spain, and where he was the prime arbiter of Italy he takes an associate, so that the ambitious of that country and the malcontents of his own should have where to shelter; and whereas he could have left in the kingdom his own pensioner as king, he drove him out, to put one there who was able to drive him, Louis, out in turn.

The wish to acquire is in truth very natural and common, and men always do so when they can, and for this they will be praised not blamed; but when they cannot do so, yet wish to do so by any means, then there is folly and blame. Therefore, if France could have attacked Naples with her own forces she ought to have done so; if she could not, then she ought not to have divided it. And if the partition which she made with the Venetians in Lombardy was justified by the excuse that by it she got a foothold in Italy, this other partition merited blame, for it had not the excuse of that necessity.

Therefore Louis made these five errors: he destroyed the minor powers, he increased the strength of one of the greater powers in Italy, he brought in a foreign power, he did not settle in the country, he did not send colonies. Which errors, if he had lived, were not enough to injure him had he not made a sixth by taking away their dominions from the Venetians; because, had he not aggrandized the Church, nor brought Spain into Italy, it would have been very reasonable and necessary to humble them; but having first taken these steps, he ought never to have consented to their ruin, for they, being powerful, would always have kept off others from designs on Lombardy, to which the Venetians would never have consented except to become masters themselves there; also because the others would not wish to take Lombardy from France in order to give it to the Venetians, and to run counter to both they would not have had the courage.

And if any one should say: King Louis yielded the Romagna to Alexander and the kingdom to Spain to avoid war, I answer for the reasons given above that a blunder ought never be perpetrated to avoid war,

because it is not to be avoided, but is only deferred to your disadvantage. And if another should allege the pledge which the king had given to the Pope that he would assist him in the enterprise, in exchange for the dissolution of his marriage and for the hat to Rouen, to that I reply what I shall write later on concerning the faith of princes, and how it ought to be kept.

Thus King Louis lost Lombardy by not having followed any of the conditions observed by those who have taken possession of countries and wished to retain them. Nor is there any miracle in this, but much that is reasonable and quite natural. And on these matters I spoke at Nantes with Rouen, when Valentino, [1] as Cesare Borgia, the son of Pope Alexander, was usually called, occupied the Romagna, and on Cardinal Rouen observing to me that the Italians did not understand war, I replied to him that the French did not understand statecraft, meaning that otherwise they would not have allowed the Church to reach such greatness. And in fact it has been seen that the greatness of the Church and of Spain in Italy has been caused by France, and her ruin may be attributed to them. From this a general rule is drawn which never or rarely fails: that he who is the cause of another becoming powerful is ruined; because that predominancy has been brought about either by astuteness or else by force, and both are distrusted by him who has been raised to power.

1. So called—in Italian—from the duchy of Valentinois, conferred on him by Louis XII.

Martin Luther: The Ninety-five Theses

Date: October 31, 1517

At this time in history, there was only one church in Europe, which amounted to a monopoly. Over the centuries, popes and theologians had developed a broad range of actions that were considered sins. Those who committed any type of sin and wished to be forgiven for their sins had to be absolved by the church. This act of forgiveness of a sin committed, or the remission of punishments because a sin was committed, is referred to as an indulgence. The sinner confessed to a priest and received absolution. Anyone wishing an indulgence would in turn make a donation to the church. Over time, selling indulgences became quite profitable for the church. While St. Peter's Basilica in Rome was being rebuilt, the pope dispatched priests charged with selling indulgences to raise money for the project.

Martin Luther was a German monk of the Roman Catholic Church and a doctor of theology. Being a theologian and scholar, Luther reasoned that only God can forgive mankind, and that man cannot forgive man. Luther made a protest over the sale of indulgences by the church in a letter to Albert, the archbishop of Mainz and Magdeburg, on October 31, 1517. This protest letter was titled "Disputation of Dr. Martin Luther on the Power and Efficacy of Indulgences." This letter has become known as the Ninety-five Theses, and is a list of 95 items.

It is said that Martin Luther nailed his protest letter on the door of the Castle Church in Wittenburg, Germany, and many viewed this as an act of defiance against the Roman Catholic Church; however, in Luther's time, any announcement, event, or public posting would be posted on a church door. This was the age of the printing press, and Luther's letter was translated from Latin into German and into other languages, and within a few months it was being read throughout Europe. This event and Martin Luther's writings started the Reformation movement.

Disputation of Dr. Martin Luther on the Power and Efficacy of Indulgences, also known as: The 95 Theses.

Out of love for the truth and the desire to bring it to light, the following propositions will be discussed at Wittenberg, under the presidency of the Reverend Father Martin Luther, Master of Arts and of Sacred Theology, and Lecturer in Ordinary on the same at that place. Wherefore he requests that those who are unable to be present and debate orally with us, may do so by letter.

In the Name our Lord Jesus Christ. Amen.

1. Our Lord and Master Jesus Christ, when He said Poenitentiam agite, willed that the whole life of believers should be repentance.

2. This word cannot be understood to mean sacramental penance, i.e., confession and satisfaction, which is administered by the priests.

3. Yet it means not inward repentance only; nay, there is no inward repentance which does not outwardly work divers mortifications of the flesh.

4. The penalty [of sin], therefore, continues so long as hatred of self continues; for this is the true inward repentance, and continues until our entrance into the kingdom of heaven.

5. The pope does not intend to remit, and cannot remit any penalties other than those which he has imposed either by his own authority or by that of the Canons.

6. The pope cannot remit any guilt, except by declaring that it has been remitted by God and by assenting to God's remission; though, to be sure, he may grant remission in cases reserved to his judgment. If his right to grant remission in such cases were despised, the guilt would remain entirely unforgiven.

7. God remits guilt to no one whom He does not, at the same time, humble in all things and bring into subjection to His vicar, the priest.

8. The penitential canons are imposed only on the living, and, according to them, nothing should be imposed on the dying.

9. Therefore the Holy Spirit in the pope is kind to us, because in his decrees he always makes exception of the article of death and of necessity.

10. Ignorant and wicked are the doings of those priests who, in the case of the dying, reserve canonical penances for purgatory.

11. This changing of the canonical penalty to the penalty of purgatory is quite evidently one of the tares that were sown while the bishops slept.

12. In former times the canonical penalties were imposed not after, but before absolution, as tests of true contrition.

13. The dying are freed by death from all penalties; they are already dead to canonical rules, and have a right to be released from them.

14. The imperfect health [of soul], that is to say, the imperfect love, of the dying brings with it, of necessity, great fear; and the smaller the love, the greater is the fear.

15. This fear and horror is sufficient of itself alone (to say nothing of other things) to constitute the penalty of purgatory, since it is very near to the horror of despair.

16. Hell, purgatory, and heaven seem to differ as do despair, almost-despair, and the assurance of safety.

17. With souls in purgatory it seems necessary that horror should grow less and love increase.

18. It seems unproved, either by reason or Scripture, that they are outside the state of merit, that is to say, of increasing love.

19. Again, it seems unproved that they, or at least that all of them, are certain or assured of their own blessedness, though we may be quite certain of it.

20. Therefore by "full remission of all penalties" the pope means not actually "of all," but only of those imposed by himself.

21. Therefore those preachers of indulgences are in error, who say that by the pope's indulgences a man is freed from every penalty, and saved;

22. Whereas he remits to souls in purgatory no penalty which, according to the canons, they would have had to pay in this life.

23. If it is at all possible to grant to any one the remission of all penalties whatsoever, it is certain that this remission can be granted only to the most perfect, that is, to the very fewest.

24. It must needs be, therefore, that the greater part of the people are deceived by that indiscriminate and high-sounding promise of release from penalty.

25. The power which the pope has, in a general way, over purgatory, is just like the power which any bishop or curate has, in a special way, within his own diocese or parish.

26. The pope does well when he grants remission to souls [in purgatory], not by the power of the keys (which he does not possess), but by way of intercession.

27. They preach man who say that so soon as the penny jingles into the money-box, the soul flies out [of purgatory].

28. It is certain that when the penny jingles into the money-box, gain and avarice can be increased, but the result of the intercession of the Church is in the power of God alone.

29. Who knows whether all the souls in purgatory wish to be bought out of it, as in the legend of Sts. Severinus and Paschal.

30. No one is sure that his own contrition is sincere; much less that he has attained full remission.

31. Rare as is the man that is truly penitent, so rare is also the man who truly buys indulgences, i.e., such men are most rare.

32. They will be condemned eternally, together with their teachers, who believe themselves sure of their salvation because they have letters of pardon.

33. Men must be on their guard against those who say that the pope's pardons are that inestimable gift of God by which man is reconciled to Him;

34. For these “graces of pardon” concern only the penalties of sacramental satisfaction, and these are appointed by man.

35. They preach no Christian doctrine who teach that contrition is not necessary in those who intend to buy souls out of purgatory or to buy confessionalia.

36. Every truly repentant Christian has a right to full remission of penalty and guilt, even without letters of pardon.

37. Every true Christian, whether living or dead, has part in all the blessings of Christ and the Church; and this is granted him by God, even without letters of pardon.

38. Nevertheless, the remission and participation [in the blessings of the Church] which are granted by the pope are in no way to be despised, for they are, as I have said, the declaration of divine remission.

39. It is most difficult, even for the very keenest theologians, at one and the same time to commend to the people the abundance of pardons and [the need of] true contrition.

40. True contrition seeks and loves penalties, but liberal pardons only relax penalties and cause them to be hated, or at least, furnish an occasion [for hating them].

41. Apostolic pardons are to be preached with caution, lest the people may falsely think them preferable to other good works of love.

42. Christians are to be taught that the pope does not intend the buying of pardons to be compared in any way to works of mercy.

43. Christians are to be taught that he who gives to the poor or lends to the needy does a better work than buying pardons;

44. Because love grows by works of love, and man becomes better; but by pardons man does not grow better, only more free from penalty.

45. Christians are to be taught that he who sees a man in need, and passes him by, and gives [his money] for pardons, purchases not the indulgences of the pope, but the indignation of God.

46. Christians are to be taught that unless they have more than they need, they are bound to keep back what is necessary for their own families, and by no means to squander it on pardons.

47. Christians are to be taught that the buying of pardons is a matter of free will, and not of commandment.

48. Christians are to be taught that the pope, in granting pardons, needs, and therefore desires, their devout prayer for him more than the money they bring.

49. Christians are to be taught that the pope’s pardons are useful, if they do not put their trust in them; but altogether harmful, if through them they lose their fear of God.

50. Christians are to be taught that if the pope knew the exactions of the pardon-preachers, he would rather that St. Peter’s church should go to ashes, than that it should be built up with the skin, flesh and bones of his sheep.

51. Christians are to be taught that it would be the pope’s wish, as it is his duty, to give of his own money to very many of those from whom certain hawkers of pardons cajole money, even though the church of St. Peter might have to be sold.

52. The assurance of salvation by letters of pardon is vain, even though the commissary, nay, even though the pope himself, were to stake his soul upon it.

53. They are enemies of Christ and of the pope, who bid the Word of God be altogether silent in some Churches, in order that pardons may be preached in others.

54. Injury is done the Word of God when, in the same sermon, an equal or a longer time is spent on pardons than on this Word.

55. It must be the intention of the pope that if pardons, which are a very small thing, are celebrated with one bell, with single processions and ceremonies, then the Gospel, which is the very greatest thing, should be preached with a hundred bells, a hundred processions, a hundred ceremonies.

56. The “treasures of the Church,” out of which the pope grants indulgences, are not sufficiently named or known among the people of Christ.

57. That they are not temporal treasures is certainly evident, for many of the vendors do not pour out such treasures so easily, but only gather them.

58. Nor are they the merits of Christ and the Saints, for even without the pope, these always work grace for the inner man, and the cross, death, and hell for the outward man.

59. St. Lawrence said that the treasures of the Church were the Church’s poor, but he spoke according to the usage of the word in his own time.

60. Without rashness we say that the keys of the Church, given by Christ’s merit, are that treasure;

61. For it is clear that for the remission of penalties and of reserved cases, the power of the pope is of itself sufficient.

62. The true treasure of the Church is the Most Holy Gospel of the glory and the grace of God.

63. But this treasure is naturally most odious, for it makes the first to be last.

64. On the other hand, the treasure of indulgences is naturally most acceptable, for it makes the last to be first.

65. Therefore the treasures of the Gospel are nets with which they formerly were wont to fish for men of riches.

66. The treasures of the indulgences are nets with which they now fish for the riches of men.

67. The indulgences which the preachers cry as the "greatest graces" are known to be truly such, in so far as they promote gain.

68. Yet they are in truth the very smallest graces compared with the grace of God and the piety of the Cross.

69. Bishops and curates are bound to admit the commissaries of apostolic pardons, with all reverence.

70. But still more are they bound to strain all their eyes and attend with all their ears, lest these men preach their own dreams instead of the commission of the pope.

71. He who speaks against the truth of apostolic pardons, let him be anathema and accursed!

72. But he who guards against the lust and license of the pardon-preachers, let him be blessed!

73. The pope justly thunders against those who, by any art, contrive the injury of the traffic in pardons.

74. But much more does he intend to thunder against those who use the pretext of pardons to contrive the injury of holy love and truth.

75. To think the papal pardons so great that they could absolve a man even if he had committed an impossible sin and violated the Mother of God -- this is madness.

76. We say, on the contrary, that the papal pardons are not able to remove the very least of venial sins, so far as its guilt is concerned.

77. It is said that even St. Peter, if he were now Pope, could not bestow greater graces; this is blasphemy against St. Peter and against the pope.

78. We say, on the contrary, that even the present pope, and any pope at all, has greater graces at his disposal; to wit, the Gospel, powers, gifts of healing, etc., as it is written in I. Corinthians xii.

79. To say that the cross, emblazoned with the papal arms, which is set up [by the preachers of indulgences], is of equal worth with the Cross of Christ, is blasphemy.

80. The bishops, curates and theologians who allow such talk to be spread among the people, will have an account to render.

81. This unbridled preaching of pardons makes it no easy matter, even for learned men, to rescue the reverence due to the pope from slander, or even from the shrewd questionings of the laity.

82. To wit: -- "Why does not the pope empty purgatory, for the sake of holy love and of the dire need of the souls that are there, if he redeems an infinite number of souls for the sake of miserable money with which to build a Church? The former reasons would be most just; the latter is most trivial."

83. Again: "Why are mortuary and anniversary masses for the dead continued, and why does he not return or permit the withdrawal of the endowments founded on their behalf, since it is wrong to pray for the redeemed?"

84. Again "What is this new piety of God and the pope, that for money they allow a man who is impious and their enemy to buy out of purgatory the pious soul of a friend of God, and do not rather, because of that pious and beloved soul's own need, free it for pure love's sake?"

85. Again: "Why are the penitential canons long since in actual fact and through disuse abrogated and dead, now satisfied by the granting of indulgences, as though they were still alive and in force?"

86. Again: "Why does not the pope, whose wealth is to-day greater than the riches of the richest, build just this one church of St. Peter with his own money, rather than with the money of poor believers?"

87. Again: "What is it that the pope remits, and what participation does he grant to those who, by perfect contrition, have a right to full remission and participation?"

88. Again: "What greater blessing could come to the Church than if the pope were to do a hundred times a day what he now does once, and bestow on every believer these remissions and participations?"

89. "Since the pope, by his pardons, seeks the salvation of souls rather than money, why does he suspend the indulgences and pardons granted heretofore, since these have equal efficacy?"

90. To repress these arguments and scruples of the laity by force alone, and not to resolve them by giving reasons, is to expose the Church and the pope to the ridicule of their enemies, and to make Christians unhappy.

91. If, therefore, pardons were preached according to the spirit and mind of the pope, all these doubts would be readily resolved; nay, they would not exist.

92. Away, then, with all those prophets who say to the people of Christ, "Peace, peace," and there is no peace!

93. Blessed be all those prophets who say to the people of Christ, "Cross, cross," and there is no cross!

94. Christians are to be exhorted that they be diligent in following Christ, their Head, through penalties, deaths, and hell;

95. And thus be confident of entering into heaven rather through many tribulations, than through the assurance of peace.

Aztec Account of Cortés

Date: 1519

In 1519 Hernán Cortés sailed from Cuba, landed in Mexico and made his way to the Aztec capital. Miguel León Portilla, a Mexican anthropologist, gathered accounts by the Aztecs, some of which were written shortly after the conquest. It is said that the Aztecs had a tradition and belief that one day a god would descend from the heavens and return to them, and that this return of a deity had been prophesied by the Aztec priests. It has been written that when Cortés arrived, he was showered with gifts and greeted by Moctezuma (Montezuma) II as an incarnation of the deity Quetzalcóatl, the god of learning, or the Feathered Serpent.

Yet other historians believe that history is written by the victor and not by the vanquished. It is known that before the arrival of the Spaniards in his lands, Moctezuma had his people and spies watching the Spaniards conquer the cities of other coastal peoples and that he had runners keeping him informed of all of the actions of this newly arriving army.

Some posit that Moctezuma, knowing that Cortés had already destroyed so many other cities, strategically chose to welcome Cortés as an honored guest and to bestow gifts upon him rather than risk going to war against him. They propose that this approach would have allowed Moctezuma to study this potential enemy.

The following dialogue is an excerpt.

SPEECHES OF MOTECUHZOMA AND CORTÉS

When Motecuhzoma [Montezuma] had given necklaces to each one, Cortés asked him: "Are you Motecuhzoma? Are you the king? Is it true that you are the king Motecuhzoma?"

And the king said: "Yes, I am Motecuhzoma." Then he stood up to welcome Cortés; he came forward, bowed his head low and addressed him in these words: "Our lord, you are weary. The journey has tired you, but now you have arrived on the earth. You have come to your city, Mexico. You have come here to sit on your throne, to sit under its canopy.

"The kings who have gone before, your representatives, guarded it and preserved it for your coming. The kings Itzcoatl, Motecuhzoma the Elder, Axayacatl, Tizoc and Ahuitzol ruled for you in the City of Mexico. The people were protected by their swords and sheltered by their shields.

"Do the kings know the destiny of those they left behind, their posterity? If only they are watching! If only they can see what I see!

"No, it is not a dream. I am not walking in my sleep. I am not seeing you in my dreams. I have seen you at last! I have met you face to face! I was in agony for five days, for ten days, with my eyes fixed on the Region of the Mystery. And now you have come out of the clouds and mists to sit on your throne again.

"This was foretold by the kings who governed your city, and now it has taken place. You have come back to us; you have come down from the sky. Rest now, and take possession of your royal houses. Welcome to your land, my lords! "

When Motecuhzoma had finished, La Malinche translated his address into Spanish so that the Captain could understand it. Cortés replied in his strange and savage tongue, speaking first to La Malinche: "Tell Motecuhzoma that we are his friends. There is nothing to fear. We have wanted to see him for a long time, and now we have seen his face and heard his words. Tell him that we love him well and that our hearts are contented." Then he said to Motecuhzoma: "We have come to your house in Mexico as friends. There is nothing to fear." La Malinche translated this speech and the Spaniards grasped Motecuhzoma's hands and patted his back to show their affection for him.

The account continues regarding a later incident.

Cuba's governor Pánfilo de Narváez was said to be jealous of Hernán Cortés. Narváez conducted an expedition from Cuba to Mexico, intending to arrest his rival conquistador for overstepping the authority granted to him. Cortés set out from Tenochtitlán, the Aztec capital, to meet the governor's forces, leaving

the imperial city in the hands of one Pedro de Alvarado. Overcoming Narváez's army proved no great task; Cortés suborned 900 of his opponent's men and employed them in defeating the balance of the expeditionary army. Narváez lost an eye in the battle, and it was he, and not Cortés, who was placed under arrest.

While Spaniards fought Spaniards in the Mexican countryside, Pedro de Alvarado, back in Tenochtitlán, initiated an action that was to typify white-Indian relations for the next four centuries. He turned his soldiers loose on the people, giving them leave to slaughter all men, women, and children. This provoked the people, who had so far meekly submitted to conquest, to rise up in heated rebellion. They laid siege to the palace where the Spaniards had taken refuge and where soldiers now held Moctezuma captive. Returning in the midst of this rebellion, Cortés took charge of his men and fought his way into and then out of the palace and city, plundering what he could as he went. During the evacuation—on June 30, 1520, called by the Spanish the Noche Triste (Sad Night)—Moctezuma was murdered. Spanish accounts claimed he had been assassinated by his own people; the Aztecs attributed his death to the Spanish.

The following entry is an excerpt.

MASSACRE IN THE MAIN TEMPLE

During this time, the people asked Motecuhzoma how they should celebrate their god's fiesta. He said: "Dress him in all his finery, in all his sacred ornaments."

During this same time, The Sun commanded that Motecuhzoma and Itzcohuatzin, the military chief of Tlatelolco, be made prisoners. The Spaniards hanged a chief from Acolhuacan named Nezahualquenzin. They also murdered the king of Nauhtla, Cohualpopocatzin, by wounding him with arrows and then burning him alive. For this reason, our warriors were on guard at the Eagle Gate. The sentries from Tenochtitlan stood at one side of the gate, and the sentries from Tlatelolco at the other. But messengers came to tell them to dress the figure of Huitzilopochtli. They left their posts and went to dress him in his sacred finery: his ornaments and his paper clothing. When this had been done, the celebrants began to sing their songs. That is how they celebrated the first day of the fiesta. On the second day they began to sing again, but without warning they were all put to death. The dancers and singers were completely unarmed. They brought only their embroidered cloaks, their turquoises, their lip plugs, their necklaces, their clusters of heron feathers, their trinkets made of deer hooves. Those who played the drums, the old men, had brought their gourds of snuff and their timbrels.

The Spaniards attacked the musicians first, slashing at their hands and faces until they had killed all of them. The singers—and even the spectators—were also killed. This slaughter in the Sacred Patio went on for three hours. Then the Spaniards burst into the rooms of the temple to kill the others: those who were carrying water, or bringing fodder for the horses, or grinding meal, or sweeping, or standing watch over this work.

The king Motecuhzoma, who was accompanied by Itzcohuatzin and by those who had brought food for the Spaniards, protested: "Our lords, that is enough! What are you doing? These people are not carrying shields or macanas. Our lords, they are completely unarmed!"

The Sun had treacherously murdered our people on the twentieth day after the captain left for the coast. We allowed the Captain to return to the city in peace. But on the following day we attacked him with all our might, and that was the beginning of the war

Second Letter of Cortés to Charles V

Date: 1520

Hernán Cortés (c. 1485–1547) wrote five letters to Charles V of Spain to provide him with an accounting of his actions in present-day Mexico. The second letter (Segunda Carta de Relación), dated October 30, 1520, was published at Seville in 1522. In this section, Cortés gives a detailed description of the city of Tenochtitlán (here called Temixtitán) in addition to the type and extent of power wielded by its ruler, Motecuhzoma Xocoyotzin II the Younger (fl.1502–d. 1520; here spelled Muteczuma). The passage is of further interest because, in addition to providing an account of the buildings and other physical aspects of the city, Cortés comments on the city's social, cultural, and religious aspects. Moreover, his descriptions of the temples, and of his own actions in some of them, reveals Cortés's intention to convert the Aztecs to Christianity.

Tenochtitlán, the Aztec capital, was founded in 1235. Over the course of nearly three centuries the city grew both in size and grandeur, particularly during the reign of Motecuhzoma I (1440–1469). When Cortés

arrived there in November 1519, he was amazed at what he saw. In this passage, he describes a city of great sophistication and beauty, with a system of bridges and canals, thriving outdoor markets, shops, restaurants, and grand temples. The palaces of Motechuzoma II, he writes, were so beautiful as to be nearly indescribable: “I can only say that in Spain there is nothing equal to them.” After Tenochtitlán fell in 1521, Cortés razed the buildings that he had so highly praised, and built his own city on top of the ruins.

The passage also offers an outsider’s view of Motechuzoma II that supplements the Aztec ruler’s self-description in chapter 4 of the same letter. In the earlier passage, Motecuhzoma tells Cortés that despite what his subjects may believe, he is no god, but flesh and blood. While Motecuhzoma may not have considered himself a god, he was treated like one. Cortés writes that the ruler had 600 nobles in attendance upon him and that he never ate off of the same plate twice. When he summoned any of the local chieftains (*caciques*) to his presence, they would bow their heads and avert their gaze “from excessive modesty and reverence.” When Motecuhzoma appeared in public, some “turned away without looking towards him, and others prostrated themselves until he had passed.”

Chapter 5 (excerpt)

In order, most potent, Sire, to convey to your Majesty a just conception of the great extent of this noble city of Temixtitan, and of the many rare and wonderful objects it contains; of the government and dominions of Mutezuma, the sovereign, of the religious rites and customs that prevail, and the order that exists in this as well as other cities appertaining to his realm: it would require the labor of many accomplished writers, and much time for the completion of the task. I shall not be able to relate an hundredth part of what could be told respecting these matters; but I will endeavor to describe, in the best manner in my power, what I have myself seen; and imperfectly as I may succeed in the attempt, I am fully aware that the account will appear so wonderful as to be deemed scarcely worthy of credit; since even we who have seen these things with our own eyes, are yet so amazed as to be unable to comprehend their reality. But your Majesty may be assured that if there is any fault in my relation, either in regard to the present subject, or to any other matters of which I shall give your Majesty an account, it will arise from too great brevity rather than extravagance or prolixity in the details; and it seems to me but just to my Prince and Sovereign to declare the truth in the clearest manner, without saying any thing that would detract from it, or add to it.

Before I begin to describe this great city and the others already mentioned, it may be well for the better understanding of the subject to say something of the configuration of Mexico, in which they are situated, it being the principal seat of Mutezuma’s power. This Province is in the form of a circle, surrounded on all sides by lofty and rugged mountains; its level surface comprises an area of about seventy leagues in circumference, including two lakes, that overspread nearly the whole valley, being navigated by boats more than fifty leagues round. One of these lakes contains fresh, and the other, which is the larger of the two, salt water. On one side of the lakes, in the middle of the valley, a range of highlands divides them from one another, with the exception of a narrow strait which lies between the highlands and the lofty sierras. This strait is a bow-shot wide, and connects the two lakes; and by this means a trade is carried on between the cities and other settlements on the lakes in canoes without the necessity of travelling by land. As the salt lake rises and falls with its tides like the sea, during the time of high water it pours into and on the other lake with the rapidity of a powerful stream; and on the other hand, when the tide has ebbed, the water runs from the fresh into the salt lake.

This great city of Temixtitan [Mexico] is situated in this salt lake, and from the main land to the denser parts of it, by whichever route one chooses to enter, the distance is two leagues. There are four avenues or entrances to the city, all of which are formed by artificial causeways, two spears’ length in width. The city is as large as Seville or Cordova; its streets, I speak of the principal ones, are very wide and straight; some of these, and all the inferior ones, are half land and half water, and are navigated by canoes. All the streets at intervals have openings, through which the water flows, crossing from one street to another; and at these openings, some of which are very wide, there are also very wide bridges, composed of large pieces of timber, of great strength and well put together; on many of these bridges ten horses can go abreast. Foreseeing that if the inhabitants of this city should prove treacherous, they would possess great advantages from the manner in which the city is constructed, since by removing the bridges at the entrances, and abandoning the place, they could leave us to perish by famine without our being able to reach the main land—as soon as I entered it, I made great haste to build four brigantines, which were soon finished, and were large enough to take ashore three hundred men and the horses, whenever it should become necessary.

This city has many public squares, in which are situated the markets and other places for buying and selling. There is one square twice as large as that of the city of Salamanca, surrounded by porticoes, where are daily assembled more than sixty thousand souls, engaged in buying and selling; and where are found all kinds of merchandise that the world affords, embracing the necessaries of life, as for instance articles of food, as well as jewels of gold and silver, lead, brass, copper, tin, precious stones, bones, shells, snails, and feathers. There are also exposed for sale wrought and unwrought stone, bricks burnt and unburnt, timber hewn and unhewn, of different sorts. There is a street for game, where every variety of birds found in the country are

sold, as fowls, partridges, quails, wild ducks, fly-catchers, widgeons, turtle-doves, pigeons, reedbirds, parrots, sparrows, eagles, hawks, owls, and kestrels; they sell likewise the skins of some birds of prey, with their feathers, head, beak, and claws. There are also sold rabbits, hares, deer, and little dogs, which are raised for eating and castrated. There is also an herb street, where may be obtained all sorts of roots and medicinal herbs that the country affords. There are apothecaries' shops, where prepared medicines, liquids, ointments, and plasters are sold; barbers' shops, where they wash and shave the head; and restauranters, that furnish food and drink at a certain price. There is also a class of men like those called in Castile porters, for carrying burthens. Wood and coals are seen in abundance, and brasiers of earthenware for burning coals; mats of various kinds for beds, others of a lighter sort for seats, and for halls and bedrooms. There are all kinds of green vegetables, especially onions, leeks, garlic, watercresses, nasturtium, borage, sorrel, artichokes, and golden thistle; fruits also of numerous descriptions, amongst which are cherries and plums, similar to those in Spain; honey and wax from bees, and from the stalks of maize, which are as sweet as the sugar-cane; honey is also extracted from the plant called maguey, which is superior to sweet or new wine; from the same plant they extract sugar and wine, which they also sell. Different kinds of cotton thread of all colors in skeins are exposed for sale in one quarter of the market, which has the appearance of the silk-market at Granada, although the former is supplied more abundantly. Painters' colors, as numerous as can be found in Spain, and as fine shades; deer-skins dressed and undressed, dyed different colors, earthenware of a large size and excellent quality; large and small jars, jugs, pots, bricks, and an endless variety of vessels, all made of fine clay, and all or most of them glazed and painted; maize, or Indian corn, in the grain and in the form of bread, preferred in the grain for its flavor to that of the other islands and terra-firma; patés of birds and fish; great quantities of fish, fresh, salt, cooked and uncooked; the eggs of hens, geese, and of all other birds I have mentioned in great abundance, and cakes made of eggs; finally, every thing that can be found throughout the whole country is sold in the markets, comprising articles so numerous that to avoid prolixity, and because their names are not retained in my memory, or are unknown to me, I shall not attempt to enumerate them. Every kind of merchandise is sold in a particular street or quarter assigned to it exclusively, and thus the best order is preserved. They sell every thing by number or measure; at least so far we have not observed them to sell any thing by weight. There is a building in the great square that is used as an audience house, where ten or twelve persons, who are magistrates, sit and decide all controversies that arise in the market, and order delinquents to be punished. In the same square there are other persons who go constantly about among the people observing what is sold, and the measures used in selling; and they have been seen to break measures that were not true.

This great city contains a large number of temples, or houses for their idols, very handsome edifices, which are situated in the different districts and the suburbs; in the principal ones religious persons of each particular sect are constantly residing, for whose use beside the houses containing the idols there are other convenient habitations. All these persons dress in black, and never cut or comb their hair from the time they enter the priesthood until they leave it; and all the sons of the principal inhabitants, both nobles and respectable citizens, are placed in the temples and wear the same dress from the age of seven or eight years until they are taken out to be married; which occurs more frequently with the first-born who inherit estates than with the others. The priests are debarred from female society, nor is any woman permitted to enter the religious houses. They also abstain from eating certain kinds of food, more at some seasons of the year than at others. Among these temples there is one which far surpasses all the rest, whose grandeur of architectural details no human tongue is able to describe; for within its precincts, surrounded by a lofty wall, there is room enough for a town of five hundred families. Around the interior of this enclosure there are handsome edifices, containing large halls and corridors, in which the religious persons attached to the temple reside. There are full forty towers, which are lofty and well built, the largest of which has fifty steps leading to its main body, and is higher than the tower of the principal church at Seville. The stone and wood of which they are constructed are so well wrought in every part, that nothing could be better done, for the interior of the chapels containing the idols consists of curious imagery, wrought in stone, with plaster ceilings, and wood-work carved in relief, and painted with figures of monsters and other objects. All these towers are the burial places of the nobles, and every chapel in them is dedicated to a particular idol, to which they pay their devotions.

There are three halls in this grand temple, which contain the principal idols; these are of wonderful extent and height, and admirable workmanship, adorned with figures sculptured in stone and wood; leading from the halls are chapels with very small doors, to which the light is not admitted, nor are any persons except the priests, and not all of them. In these chapels are the images or idols, although, as I have before said, many of them are also found on the outside; the principal ones, in which the people have the greatest faith and confidence, I precipitated from their pedestals, and cast them down the steps of the temple, purifying the chapels in which they had stood, as they were all polluted with human blood, shed in the sacrifices. In the place of these I put images of Our Lady and the Saints, which excited not a little feeling in Mutezuma and the inhabitants, who at first remonstrated, declaring that if my proceedings were known throughout the country, the people would rise against me; for they believed that their idols bestowed on them all temporal good, and if they permitted them to be ill-treated, they would be angry and withhold their gifts, and by this means the people would be deprived of the fruits of the earth and perish with famine. I answered, through the interpreters, that

they were deceived in expecting any favors from idols, the work of their own hands, formed of unclean things; and that they must learn there was but one God, the universal Lord of all, who had created the heavens and the earth, and all things else, and had made them and us; that he was without beginning and immortal, and they were bound to adore and believe him, and no other creature or thing. I said every thing to them I could to divert them from their idolatries, and draw them to a knowledge of God our Lord. Mutezuma replied, the others assenting to what he said, "That they had already informed me they were not the aborigines of the country, but that their ancestors had emigrated to it many years ago; and they fully believed that after so long an absence from their native land, they might have fallen into some errors; that I having more recently arrived must know better than themselves what they ought to believe; and that if I would instruct them in these matters, and make them understand the true faith, they would follow my directions, as being for the best." Afterwards, Mutezuma and many of the principal citizens remained with me until I had removed the idols, purified the chapels, and placed the images in them, manifesting apparent pleasure; and I forbade them sacrificing human beings to their idols, as they had been accustomed to do; because, besides being abhorrent in the sight of God, your sacred Majesty had prohibited it by law, and commanded to put to death whoever should take the life of another. Thus, from that time, they refrained from the practice, and during the whole period of my abode in that city, they were never seen to kill or sacrifice a human being.

The figures of the idols in which these people believe surpass in stature a person more than ordinary size; some of them are composed of a mass of seeds and leguminous plants, such as are used for food, ground and mixed together, and kneaded with the blood of human hearts taken from the breasts of living persons, from which a paste is formed in a sufficient quantity to form large statues. When these are completed they make them offerings of the hearts of other victims, which they sacrifice to them, and besmear their faces with the blood. For every thing they have an idol, consecrated by the use of the nations that in ancient times honored the same gods. Thus they have an idol that they petition for victory in war; another for success in their labors; and so for every things in which they seek or desire prosperity, they have their idols, which they honor and serve.

This noble city contains many fine and magnificent houses; which may be accounted for from the fact, that all the nobility of the country, who are the vassals of Mutezuma, have houses in the city, in which they reside a certain part of the year; and besides, there are numerous wealthy citizens who also possess fine houses. All these persons, in addition to the large and spacious apartments for ordinary purposes, have others, both upper and lower, that contain conservatories of flowers. Along one of the causeways that lead into the city are laid two pipes, constructed of masonry, each of which is two paces in width, and about five feet in height. An abundant supply of excellent water, forming a volume equal in bulk to the human body, is conveyed by one of these pipes, and distributed about the city, where it is used by the inhabitants for drinking and other purposes. The other pipe, in the mean time, is kept empty until the former requires to be cleansed, when the water is let into it and continues to be used till the cleansing is finished. As the water is necessarily carried over bridges on account of the salt water crossing its route, reservoirs resembling canals are constructed on the bridges through which the fresh water is conveyed. These reservoirs are of the breadth of the body of an ox, and of the same length as the bridges. The whole city is thus served with water, which they carry in canoes through all the streets for sale, taking it from the aqueduct in the following manner: the canoes pass under the bridges on which the reservoirs are placed, when men stationed above fill them with water, for which service they are paid. At all the entrances of the city, and in those parts where the canoes are discharged, that is, where the greatest quantity of provisions is brought in, huts are erected, and persons stationed as guards, who receive a certum quid of every thing that enters. I know not whether the sovereign receives this duty or the city, as I have not yet been informed; but I believe that it appertains to the sovereign, as in the markets of other provinces a tax is collected for the benefit of their cacique. In all the markets and public places of this city are seen daily many laborers and persons of various employments waiting for some one to hire them. The inhabitants of this city pay a greater regard to style in their mode of living, and are more attentive to elegance of dress and politeness of manners, than those of the other provinces and cities; since, as the Cacique Mutezuma has his residence in the capital, and all the nobility, his vassals, are in the constant habit of meeting there, a general courtesy of demeanor necessarily prevails. But not to be prolix in describing what relates to the affairs of this great city, although it is with difficulty I refrain from proceeding, I will say no more than that the manners of the people, as shown in their intercourse with one another, are marked by as great an attention to properties of life as in Spain, and good order is equally well observed; and considering that they are a barbarous people, without the knowledge of God, having no intercourse with civilized nations, these traits of character are worthy of admiration.

In regard to the domestic appointments of Mutezuma, and the wonderful grandeur and state that he maintains, there is so much to be told, that I assure your Highness, I know not where to begin my relation, so as to be able to finish any part of it. For, as I have already stated, what can be more wonderful, than that a barbarous monarch, as he is, should have every object found in his dominions imitated in gold, silver, precious stones, and feathers; the gold and silver being wrought so naturally as not to be surpassed by any smith in the world; the stone work executed with such perfection that it is difficult to conceive what instruments could have been used; and the feather work superior to the finest productions in wax or embroidery. The extent of

Muteczuma's dominions has not been ascertained, since to whatever point he despatched his messengers, even two hundred leagues from his capital, his commands were obeyed, although some of his provinces were in the midst of countries with which he was at war. But as nearly as I have been able to learn, his territories are equal in extent to Spain itself, for he sent messengers to the inhabitants of a city called Cumatan, (requiring them to become subjects of your Majesty,) which is sixty leagues beyond that part of Putunchán watered by the river Grijalva, and two hundred and thirty leagues distant from the great city; and I sent some of our people a distance of one hundred and fifty leagues in the same direction. All the principal chiefs of these provinces, especially those in the vicinity of the capital, reside, as I have already stated, the greater part of the year in that great city, and all or most of them have their oldest sons in the service of Muteczuma. There are fortified places in all the provinces, garrisoned with his own men, where are also stationed his governors and collectors of the rents and tribute, rendered him by every province; and an account is kept of what each is obliged to pay, as they have characters and figures made on paper that are used for this purpose. Each province renders a tribute of its own peculiar productions, so that the sovereign receives a great variety of articles from different quarters. No prince was ever more feared by his subjects, both in his presence and absence. He possessed out of the city as well as within, numerous villas, each of which had its peculiar sources of amusement, and all were constructed in the best possible manner for the use of a great prince and lord. Within the city his palaces were so wonderful that it is hardly possible to describe their beauty and extent; I can only say that in Spain there is nothing equal to them.

There was one palace somewhat inferior to the rest, attached to which was a beautiful garden with balconies extending over it, supported by marble columns, and having a floor formed of jasper elegantly inlaid. There were apartments in this palace sufficient to lodge two princes of the highest rank with their retinues. There were likewise belonging to it ten pools of water, in which were kept the different species of water birds found in this country, of which there is a great variety, all of which are domesticated; for the sea birds there were pools of salt water, and for the river birds, of fresh water. The water is let off at certain times to keep it pure, and is replenished by means of pipes. Each species of bird is supplied with the food natural to it, which it feeds upon when wild. Thus fish is given to birds that usually eat it; worms, maize, and the finer seeds, to such as prefer them. And I assure your Highness, that to the birds accustomed to eat fish there is given the enormous quantity of arrobas every day, taken in the salt lake. The emperor has three hundred men whose sole employment is to take care of these birds; and there are others whose only business is to attend to the birds that are in bad health.

Over the pools for the birds there are corridors and galleries, to which Muteczuma resorts, and from which he can look out and amuse himself with the sight of them. There is an apartment in the same palace in which are men, women and children, whose faces, bodies, hair, eyebrows, and eyelashes are white from their birth. The emperor has another very beautiful palace, with a large court-yard, paved with handsome flags, in the style of a chess-board. There were also cages, about nine feet in height and six paces square, each of which was half covered with a roof of tiles, and the other half had over it a wooden grate, skillfully made. Every cage contained a bird of prey, of all the species found in Spain, from the kestrel to the eagle, and many unknown there. There was a great number of each kind; and in the covered part of the cages there was a perch, and another on the outside of the grating, the former of which the birds used in the night time, and when it rained; and the other enabled them to enjoy the sun and air. To all these birds fowls were daily given for food, and nothing else. There were in the same palace several large halls on the ground floor, filled with immense cages built of heavy pieces of timber, well put together, in all or most of which were kept loins, tigers, wolves, foxes, and a variety of animals of the cat kind, in great numbers, which were also fed on fowls. The care of these animals and birds was assigned to three hundred men. There was another palace that contained a number of men and women of monstrous size, and also dwarfs, and crooked and ill-formed persons, each of which had their separate apartments. These also had their respective keepers. As to the other remarkable things that the emperor had in his city for his amusement, I can only say that they were numerous and of various kinds.

He was served in the following manner. Every day as soon as it was light, six hundred nobles and men of rank were in attendance at the palace, who either sat, or walked about the halls and galleries, and passed their time in conversation, but without entering the apartment where his person was. The servants and attendants of these nobles remained in the court-yards, of which there were two or three of great extent, and in the adjoining street, which was also very spacious. They all remained in attendance from morning till night; and when his meals were served, the nobles were likewise served with equal profusion, and their servants and secretaries also had their allowance. Daily his larder and wine-cellar were open to all who wished to eat and drink. The meals were served by three or four hundred youths, who brought on an infinite variety of dishes; indeed, whenever he dined or supped, the table was loaded with every kind of flesh, fish, fruits, and vegetables, that the country produced. As the climate is cold, they put a chafing-dish with live coals under every plate and dish to keep them warm. The meals were served in a large hall, in which Muteczuma was accustomed to eat, and the dishes quite filled the room, which was covered with mats and kept very clean. He sat on a small cushion curiously wrought of leather. During the meals there were present, at a little distance from him, five or six elderly caciques, to whom he presented some of the food. and there was constantly in attendance one

of the servants, who arranged and handed the dishes, and who received from others whatever was wanted for the supply of the table. Both at the beginning and end of every meal, they furnished water for the hands; and the napkins used on these occasions were never used a second time; it was the same also with the chafing-dishes. He is also dressed every day in four different suits, entirely new, which he never wears a second time. None of the caciques who enter his palace have their feet covered, and when those for whom he sends enter his presence, they incline their heads and look down, bending their bodies; and when they address him, they do not look him in the face; this arises from excessive modesty and reverence. I am satisfied that it proceeds from respect, since certain caciques reproved the Spaniards for their boldness in addressing me, saying that it showed a want of becoming deference. Whenever Mutezcuma appeared in public, which was seldom the case, all those who accompanied him, or whom he accidentally met in the streets, turned away without looking towards him, and others prostrated themselves until he had passed. One of the nobles always preceded him on these occasions, carrying three slender rods erect, which I suppose was to give notice of the approach of his person. And when they descended from the litters, he took one of them in his hand, and held it until he reached the place where he was going. So many and various were the ceremonies and customs observed by those in the service of Mutezcuma, that more space than I can spare would be required for the details, as well as a better memory than I have to recollect them; since no sultan or other infidel lord, of whom any knowledge now exists, ever had so much ceremonial in their courts.

Pedro de Cieza de León: *Chronicles of the Incas*

Also known as: *Chronica del Perú*

Date: 1540

Pedro de Cieza de León (c. 1520–1554) was a Spanish conquistador who wrote journals about Colombia, Peru, and the Incas. It is known that Pedro de Cieza de León was in the New World at least as early as 1536 and that he returned to Seville, Spain, in 1551. His Chronicles of the Incas was published in three parts. He published the first part of the chronicles in Seville in 1553. He died in 1554, and long after his death the second part of his chronicles was edited and published in 1871. The third part of his chronicles was published in 1909. In his Chronicles of the Incas he wrote of the history of Peru, the Incan gentry and the government and economy, Incan civil wars, and the Spanish conquest of the Incas. He also described native Peruvian animal species and vegetables, ethnography, and geography.

The following is a view of the Incas by Pedro de Cieza de León providing information about the redistributive aspects of the Incan economy.

It is told for a fact of the rulers of this kingdom that in the days of their rule they had their representatives in the capitals of all the provinces, for in all these places there were larger and finer lodgings than in most of the other cities of this great kingdom, and many storehouses. They served as the head of the provinces or regions, and from every so many leagues around the tributes were brought to one of these capitals, and from so many others, to another. This was so well-organized that there was not a village that did not know where it was to send its tribute. In all these capitals the Incas had temples of the Sun, mints, and many silversmiths who did nothing but work rich pieces of gold or fair vessels of silver; large garrisons were stationed there, and a steward who was in command of them all, to whom an accounting of everything that was brought in was made, and who, in turn, had to give one of all that was issued. . . . The tribute paid by each of these provinces, whether gold, silver, clothing, arms and all else they gave, was entered in the accounts of those who kept the quipus and did everything ordered by the governor in the matter of finding the soldiers or supplying whom-ever the Inca ordered, or making delivery to Cuzco; but when they came from the city of Cuzco to go over the accounts, or they were ordered to go to Cuzco to give an accounting, the accountants themselves gave it by the quipus, or went to give it where there could be no fraud, but everything had to come out right. Few years went by in which an accounting was not made . . .

At the beginning of the new year the rulers of each village came to Cuzco, bringing their quipus, which told how many births there had been during the year, and how many deaths. In this way the Inca and the governors knew which of the Indians were poor, the women who had been widowed, whether they were able

to pay their taxes, and how many men they could count on in the event of war, and many other things they considered highly important. The Incas took care to see that justice was meted out, so much so that nobody ventured to commit a felony or theft. This was to deal with thieves, rapists, or conspirators against the Inca.

As this kingdom was so vast, in each of the many provinces there were many storehouses filled with supplies and other needful things; thus, in times of war, wherever the armies went they drew upon the contents of these storehouses, without ever touching the supplies of their confederates or laying a finger on what they had in their settlements . . . Then the storehouses were filled up once more with the tributes paid the Inca. If there came a lean year, the storehouses were opened and the provinces were lent what they needed in the way of supplies; then, in a year of abundance, they paid back all they had received. No one who was lazy or tried to live by the work of others was tolerated; everyone had to work. Thus on certain days each lord went to his lands and took the plow in hand and cultivated the earth, and did other things. Even the Incas themselves did this to set an example. And under their system there was none such in all the kingdom, for, if he had his health, he worked and lacked for nothing; and if he was ill, he received what he needed from the storehouses. And no rich man could deck himself out in more finery than the poor, or wear different clothing, except the rulers and the headmen, who, to maintain their dignity, were allowed great freedom and privilege.

New Laws of the Indies

Date: 1542

The “Laws and ordinances newly made by His Majesty for the government of the Indies and good treatment and preservation of the Indians” created a set of pro-Indian laws. They were so pro-Indian that some had to be revoked in Mexico and in Peru due to settler opposition. One viceroy was killed when he attempted to enforce them. The conflict was between “feudalists,” who favored the encomienda system because it maintained society as in the Old World, and the more centralizing “regalists,” who wanted to preserve royal power in Spain’s new empire. Eventually the encomienda was allowed to continue.

Charles by the divine clemency Emperor ever august, King of Germany. . . . To the Most Illustrious Prince Don Philip our very dear and very beloved grandson and son, and to the Infantes our grandsons and sons, and to the President, and those of our Council of the Indies, and to our Viceroys, Presidents and Auditors of our Audiencias and royal Chanceries of our said Indies, Islands and Continent of the Ocean Sea; to our Governors, Alcaldes mayores and our other Authorities thereof, and to all the Councils, magistrates, regidores, knights, esquires, officers, and commoners of all the cities, towns, and villages of our said Indies, Islands, and Tierra-firme of the Ocean Sea, discovered and to be discovered; and to any other persons, captains, discoverers, settlers, and inhabitants dwelling in and being natives thereof, of whatever state, quality, condition and pre-eminence they may be. . . .

Know ye, That having for many years had will and intention as leisure to occupy ourselves with the affairs of the Indies, on account of their great importance, as well in that touching the service of God our Lord and increase of his holy Catholic faith, as in the preservation of the natives of those parts, and the good government and preservation of their persons; and although we have endeavoured to disengage ourselves to this effect, it has not been possible through the many and continual affairs that have occurred from which we were not able to excuse ourselves, and through the absences from these kingdoms which 1 the King have made for most necessary causes, as is known to all: and although this incessant occupation has not ceased this present year, nevertheless we commanded persons to assemble of all ranks, both prelates and knights and the clergy with some of our Council to discuss and treat of the things of most importance, of which we had information that they ought to be provided for: the which having been maturely debated and consulted upon, and in presence of me the King divers times argued and discussed: and finally having taken the opinion of all, we resolved on commanding to enact and ordain the things contained below: which besides the other Ordinances and Provisions that at different times we have commanded to be made, as by them shall appear, we command to be from henceforwards kept inviolably as laws. . . .

Whereas one of the most important things in which the Audiencias are to serve us is in taking very especial care of the good treatment of the Indians and preservation of them, We command that the said Audiencias enquire continually into the excesses or ill treatment which are or shall be done to them by governors or private persons; and how the ordinances and instructions which have been given to them, and are made for the good treatment of the said Indians have been observed. And if there had been any excesses, on the part of the said Governors, or should any be committed hereafter, to take care that such excesses are properly corrected,

chastizing the guilty parties with all rigour conformably to justice. The Audiencias must not allow that in the suits between Indians, or with them, there be ordinary proceedings at law, nor dilatory expedients, as is wont to happen through the malice of some advocates and solicitors, but that they be determined summarily, observing their usages and customs, unless they be manifestly unjust; and that the said Audiencias take care that this be so observed by the other, inferior judges.

Item, We ordain and command that from henceforward for no cause of war nor any other whatsoever, though it be under title of rebellion, nor by ransom nor in other manner can an Indian be made a slave, and we will that they be treated as our vassals of the Crown of Castile since such they are.

No person can make use of the Indians by way of Naboria or Tapia or in any other manner against their will.

As We have ordered provision to be made that from henceforward the Indians in no way be made slaves, including those who until now have been enslaved against all reason and right and contrary to the provisions and instructions thereupon, We ordain and command that the Audiencias having first summoned the parties to their presence, without any further judicial form, but in a summary way, so that the truth may be ascertained, speedily set the said Indians at liberty unless the persons who hold them for slaves show title why they should hold and possess them legitimately. And in order that in default of persons to solicit the aforesaid, the Indians may not remain in slavery unjustly, We command that the Audiencias appoint persons who may pursue this cause for the Indians and be paid out of the Exchequer fines, provided they be men of trust and diligence.

Also, We command that with regard to the lading of the said Indians the Audiencias take especial care that they be not laden, or in case that in some parts this cannot be avoided that it be in such a manner that no risk of life, health and preservation of the said Indians may ensue from an immoderate burthen; and that against their own will and without their being paid, in no case be it permitted that they be laden, punishing very severely him who shall act contrary to this. In this there is to be no remission out of respect to any person.

Because report has been made to us that owing to the pearl fisheries not having been conducted in a proper manner deaths of many Indians and Negroes have ensued, We command that no free Indian be taken to the said fishery under pain of death, and that the bishop and the judge who shall be at Veneçuela direct what shall seem to them most fit for the preservation of the slaves working in the said fishery, both Indians and Negroes, and that the deaths may cease. If, however, it should appear to them that the risk of death cannot be avoided by the said Indians and Negroes, let the fishery of the said pearls cease, since we value much more highly (as is right) the preservation of their lives than the gain which may come to us from the pearls.

Whereas in consequence of the allotments of Indians made to the Viceroy, Governors, and their lieutenants, to our officials, and prelates, monasteries, hospitals, houses of religion and mints, offices of our Hazienda and treasury thereof, and other persons favoured by reason of their offices, disorders have occurred in the treatment of the said Indians, it is our will, and we command that forthwith there be placed under our Royal Crown all the Indians whom they hold and possess by any title and cause whatever, whoever the said parties are, or may be, whether Viceroy, Governor, or their lieutenants, or any of our officers, as well of Justice as of our Hazienda, prelates, houses of religion, or of our Hazienda, hospitals, confraternities, or other similar institutions, although the Indians may not have been allotted to them by reason of the said offices; and although such functionaries or governors may say that they wish to resign the offices or governments and keep the Indians, let this not avail them nor be an excuse for them not to fulfill what we command.

Moreover, We command that from all those persons who hold Indians without proper title, having entered into possession of them by their own authority, such Indians be taken away and be placed under our Royal Crown.

And because we are informed that other persons, although possessing a sufficient title, have had an excessive number of Indians allotted to them, We order that the Audiencias, each in its jurisdiction diligently inform themselves of this, and with all speed, and reduce the allotments made to the said persons to a fair and moderate quantity, and then place the rest under our Royal Crown notwithstanding any appeal or application which may be interposed by such persons: and send us a report with all speed of what the said Audiencias have thus done, that we may know how our command is fulfilled. And in New Spain let it be especially provided as to the Indians held by Joan Infante, Diego de Ordas, the Maestro Roa, Francisco Vasquez de Coronado, Francisco Maldonado, Bernardino Vazquez de Tapia, Joan Xaramillo, Martin Vazquez, Gil Gongales de Venavides, and many other persons who are said to hold Indians in very excessive quantity, according to the report made to us. And, whereas we are informed that there are some persons in the said New Spain who are of the original Conquistadores and have no repartimiento of Indians, We ordain that the President and Auditors of the said New Spain do inform themselves if there be any persons of this kind, and if any, to give them out of the tribute which the Indians thus taken away have to pay, what to them may seem fit for the moderate support and honourable maintenance of the said original Conquistadores who had no Indians allotted to them.

So also, The said Audiencias are to inform themselves how the Indians have been treated by the persons who have held them in encomienda, and if it be clear that in justice they ought to be deprived of the said Indians for their excesses and the ill-usage to which they have subjected them, We ordain that they take away and place such Indians under our Royal Crown. And in Peru, besides the aforesaid, let the Viceroy and Audiencia

inform themselves of the excesses committed during the occurrences between Governors Pizarro and Almagro in order to report to us thereon, and from the principal persons whom they find notoriously blameable in those feuds they then take away the Indians they have, and place them under our Royal Crown.

Moreover, We ordain and command that from henceforward no Viceroy, Governor, Audiencia, discoverer, or any other person have power to allot Indians in encomienda by new provision, or by means of resignation, donation, sale, or any other form or manner, neither by vacancy nor inheritance, but that the person dying who held the said Indians, they revert to our Royal Crown. And let the Audiencias take care to inform themselves then particularly of the person who died, of his quality, his merits and services, of how he treated the said Indians whom he held, if he left wife and children or what other heirs, and send us a report thereof with the condition of the Indians and of the land, in order that we may give directions to provide what may be best for our service, and may do such favour as may seem suitable to the wife and children of the defunct. If in the meantime it should appear to the Audiencia that there is a necessity to provide some support for such wife and children, they can do it out of the tribute which the said Indians will have to pay, or allowing them a moderate pension, if the said Indians are under our Crown, as aforesaid.

Item, We ordain and command that our said Presidents and Auditors take great care that the Indians who in any of the ways above mentioned are taken away, and those who may become vacant be very well treated and instructed in the matters of our holy Catholic faith, and as our free vassals. This is to be their chief care, that on which we principally desire them to report, and in which they can best serve us. They are also to provide that they be governed with justice in the way and manner that the Indians who are under our Royal Crown are at present governed in New Spain. . . .

Copernicus: *De revolutionibus orbium coelestium*

Date: 1543

Nicolaus Copernicus was born February 19, 1473, in Poland. He entered the University of Kraków in 1491 and went to Padua in 1495 to study medicine. In 1500 he was called to Rome and took the chair of mathematics there. In about 1507 he began to believe that Earth traveled around the Sun and, from that time until his death, worked more or less intermittently on his exposition of this theory. He delayed the publication of this exposition because of the fear of being accused of heresy. Copernicus died May 24, 1543, just as his book was published. The knowledge of that time was not sufficient to prove his theory; his great argument for it was from its simplicity, as compared to the epicycle hypothesis.

Nicolaus Copernicus: An excerpt from *The Revolutions of the Heavenly Bodies*, 1543

That the universe is spherical. FIRST WE must remark that the universe is spherical in form, partly because this form being a perfect whole requiring no joints, is the most complete of all, partly because it makes the most capacious form, which is best suited to contain and preserve everything; or again because all the constituent parts of the universe, that is the sun, moon and the planets appear in this form; or because everything strives to attain this form, as appears in the case of drops of water and other fluid bodies if they attempt to define themselves. So no one will doubt that this form belongs to the heavenly bodies.

That the earth is also spherical. That the earth is also spherical is therefore beyond question, because it presses from all sides upon its center. Although by reason of the elevations of the mountains and the depressions of the valleys a perfect circle cannot be understood, yet this does not affect the general spherical nature of the earth. This appears in the following manner. To those who journey towards the North the North pole of the daily revolution of the heavenly sphere seems gradually to rise, while the opposite seems to sink. Most of the stars in the region of the Bear seem not to set, while some of the Southern stars seem not to rise at all. So Italy does not see Canopus which is visible to the Egyptians. And Italy sees the outermost star of the Stream, which our region of a colder zone does not know. On the other hand to those who go towards the South the others seem to rise and those to sink which are high in our region. Moreover, the inclination of the poles to the diameter of the earth bears always the same relation, which could happen only in the case of a sphere. So it is evident that the earth is included between the two poles, and is therefore spherical in form. Let us add that the inhabitants of the East do not observe the eclipse of the sun or of the moon which occurs in the evening, and the inhabitants of the West those which occur in the morning, while those who dwell between see those later and these earlier. That the water also has the same form can be

observed from the ships, in that the land which cannot be seen from the deck, is visible from the mast-tree. And conversely if a light be placed at the masthead it seems to those who remain on the shores gradually to sink and at last still sinking to disappear. It is clear that the water also according to its nature continually presses like the earth downward, and does not rise above its banks higher than its convexity permits. So the land extends above the ocean as much as the land happens to be higher.

Whether the earth has a circular motion, and concerning the location of the earth. As it has been already shown that the earth has the form of a sphere, we must consider whether a movement also coincides with this form, and what place the earth holds in the universe. Without this there will be no secure results to be obtained in regard to the heavenly phenomena. The great majority of authors of course agree that the earth stands still in the center of the universe, and consider it inconceivable and ridiculous to suppose the opposite. But if the matter is carefully weighed it will be seen that the question is not yet settled and therefore by no means to be regarded lightly. Every change of place which is observed is due, namely, to a movement of the observed object or of the observer, or to movements of both, naturally in different directions, for if the observed object and the observer move in the same manner and in the same direction no movement will be seen. Now it is from the earth that the revolution of the heavens is observed and it is produced for our eyes. Therefore if the earth undergoes no movement this movement must take place in everything outside of the earth, but in the opposite direction than if everything on the earth moved, and of this kind is the daily revolution. So this appears to affect the whole universe, that is, everything outside the earth with the single exception of the earth itself. If, however, one should admit that this movement was not peculiar to the heavens, but that the earth revolved from west to east, and if this was carefully considered in regard to the apparent rising and setting of the sun, the moon and the stars, it would be discovered that this was the real situation. Since the sky, which contains and shelters all things, is the common seat of all things, it is not easy to understand why motion should not be ascribed rather to the thing contained than to the containing, to the located rather than to the location. From this supposition follows another question of no less importance, concerning the place of the earth, although it has been accepted and believed by almost all, that the earth occupies the middle of the universe. But if one should suppose that the earth is not at the center of the universe, that, however, the distance between the two is not great enough to be measured on the orbits of the fixed stars, but would be noticeable and perceptible on the orbit of the sun or of the planets: and if one was further of the opinion that the movements of the planets appeared to be irregular as if they were governed by a center other than the earth, then such an one could perhaps have given the true reasons for the apparently irregular movement. For since the planets appear now nearer and now farther from the earth, this shows necessarily that the center of their revolutions is not the center of the earth: although it does not settle whether the earth increases and decreases the distance from them or they their distance from the earth.

Refutation of the arguments of the ancients that the earth remains still in the middle of the universe, as if it were its center. From this and similar reasons it is supposed that the earth rests at the center of the universe and that there is no doubt of the fact. But if one believed that the earth revolved, he would certainly be of the opinion that this movement was natural and not arbitrary. For whatever is in accord with nature produces results which are the opposite of those produced by force. Things upon which force or an outside power has acted, must be injured and cannot long endure: what happens by nature, however, preserves itself well and exists in the best condition. So Ptolemy feared without good reason that the earth and all earthly objects subject to the revolution would be destroyed by the act of nature, since this latter is opposed to artificial acts, or to what is produced by the human spirit. But why did he not fear the same, and in a much higher degree, of the universe, whose motion must be as much more rapid as the heavens are greater than the earth? Or has the heaven become so immense because it has been driven outward from the center by the inconceivable power of the revolution; while if it stood still, on the contrary, it would collapse and fall together? But surely if this is the case the extent of the heavens would increase infinitely. For the more it is driven higher by the outward force of the movement, so much the more rapid will the movement become, because of the ever increasing circle which must be traversed in twenty-four hours; and conversely if the movement grows the immensity of the heavens grows. So the velocity would increase the size and the size would increase the velocity unendingly. According to the physical law that the endless cannot wear away nor in any way move, the heavens must necessarily stand still. But it is said that beyond the sky no body, no place, no vacant space, in fact nothing at all exists; then it is strange that some thing should be enclosed by nothing. But if the heaven is endless and is bounded only by the inner hollow, perhaps this establishes all the more clearly the fact that there is nothing outside the heavens, because everything is within it, but the heaven must then remain unmoved. The highest proof on which one supports the finite character of the universe is its movement. But whether the universe is endless or limited we will leave to the physiologues; this remains sure for us that the earth enclosed between the poles is bounded by a spherical surface. Why therefore should we not take the position of ascribing to a movement conformable to its nature and corresponding to its form, rather than suppose that the whole universe whose limits are not and cannot be known moves? And why will we not

recognize that the appearance of a daily revolution belongs to the heavens, but the actuality to the earth; and that the relation is similar to that of which one says: "We run out of the harbor, the lands and cities retreat from us." Because if a ship sails along quietly, everything outside of it appears to those on board as if it moved with the motion of the boat, and the boatman thinks that the boat with all on board is standing still, this same thing may hold without doubt of the motion of the earth, and it may seem as if the whole universe revolved.

What shall we say, however, of the clouds and other things floating, falling or rising in the air—except that not only does the earth move with the watery elements belonging with it, but also a large part of the atmosphere, and whatever else is in any way connected with the earth; whether it is because the air immediately touching the earth has the same nature as the earth, or that the motion has become imparted to the atmosphere. A like astonishment must be felt if that highest region of the air be supposed to follow the heavenly motion, as shown by those suddenly appearing stars which the Greeks call comets or bearded stars, which belong to that region and which rise and set like other stars. We may suppose that part of the atmosphere, because of its great distance from the earth, has become free from the earthly motion. So the atmosphere which lies close to the earth and all things floating in it would appear to remain still, unless driven here and there by the wind or some other outside force, which chance may bring into play; for how is the wind in the air different from the current in the sea? We must admit that the motion of things rising and falling in the air is in relation to the universe a double one, being always made up of a rectilinear and a circular movement. Since that which seeks of its own weight to fall is essentially earthy, so there is no doubt that these follow the same natural law as their whole; and it results from the same principle that those things which pertain to fire are forcibly driven on high. Earthly fire is nourished with earthly stuff, and it is said that the flame is only burning smoke. But the peculiarity of the fire consists in this that it expands whatever it seizes upon, and it carries this out so consistently that it can in no way and by no machinery be prevented from breaking its bonds and completing its work.

The expanding motion, however, is directed from the center outward; therefore if any earthly material is ignited it moves upward. So to each single body belongs a single motion, and this is evinced preferably in a circular direction as long as the single body remains in its natural place and its entirety. In this position the movement is the circular movement which as far as the body itself is concerned is as if it did not occur. The rectilinear motion, however, seizes upon those bodies which have wandered or have been driven from their natural position or have been in any way disturbed. Nothing is so much opposed to the order and form of the world as the displacement of one of its parts. Rectilinear motion takes place only when objects are not properly related, and are not complete according to their nature because they have separated from their whole and have lost their unity. Moreover, objects which have been driven outward or away, leaving out of consideration the circular motion, do not obey a single, simple and regular motion, since they cannot be controlled simply by their lightness or by the force of their weight, and if in falling they have at first a slow movement the rapidity of the motion increases as they fall, while in the case of earthly fire which is forced upwards—and we have no means of knowing any other kind of fire—we will see that its motion is slow as if its earthly origin thereby showed itself.

The circular motion, on the other hand, is always regular, because it is not subject to an intermittent cause. Those other objects, however, would cease to be either light or heavy in respect to their natural movement if they reached their own place, and thus they would fit into that movement. Therefore if the circular movement is to be ascribed to the universe as a whole and the rectilinear to the parts, we might say that the revolution is to the straight line as the natural state is to sickness. That Aristotle divided motion into three sorts, that from the center out, that inward toward center, and that around about the center, appears to be merely a logical convenience, just as we distinguish point, line and surface, although one cannot exist without the others, and none of them are found apart from bodies. This fact is also to be considered, that the condition of immovability is held to be more noble and divine than that of change and inconstancy, which latter therefore should be ascribed rather to the earth than to the universe, and I would add also that it seems inconsistent to attribute motion to the containing and locating element rather than to the contained and located object, which the earth is. Finally since the planets plainly are at one time nearer and at another time farther from the earth, it would follow, on the theory that the universe revolves, that the movement of the one and same body which is known to take place about a center, that is the center of the earth, must also be directed toward the center from without and from the center outward. The movement about the center must therefore be made more general, and it suffices if that single movement be about its own center. So it appears from all these considerations that the movement of the earth is more probable than its fixity, especially in regard to the daily revolution, which is most peculiar to the earth.

Nahuatl History

Date: c. 1550

This long and complex Nahuatl poem is an exhortation to the Huexotzincos to go to war. The Huexotzincos, who lived in the Puebla valley, were defeated by the Tlaxcalans in the 15th century. The poem is from a collection of Nahuatl poetry recorded by the Spanish after the conquest in the 16th century. The poem's title may be slightly misleading in that Tezozomoc, or Tezozomoc, the Tepanec king who ruled in the mid-14th century, is mentioned only briefly here, and even though the speaker addresses Tezozomoc directly in the 10th verse, it is uncertain whether the poem's events took place during his reign. Nor is it easy to distinguish who is allied with whom. Another difficulty is that the poem refers to both the Colhuacan and the Acolhuacan, but according to the translator, the term Colhuacan can also be understood to refer to the Acolhuacan.

The poem has 29 verses. It begins by alluding to Nahuatl origins in Chicomoztoc and proceeds with a brief history of Nahuatl leaders (1–3). The next verses suggest that some of the present-day leaders gathered to hold a war council (4–7). The tone changes in the eighth verse when the narrator addresses the men of Huexotzinco, indicating that they have suffered losses among the Acolhuacan, and in the 10th verse, he asks Tezozomoc why he has not gone to war with the Acolhuacan. The next part includes the opinion of the narrator concerning the need to go to war (11–17). According to the translator, the manuscript is corrupt at verse 18, and, therefore, his translation is tentative. As it stands, this and the following verse call for the Huexotzinco to go to war against the men of Tlaxcala (here spelled Tlaxcalla) (18–19). The next two verses describe the destruction in Huexotzinco (20–21); in verse 23, the Tlaxcalans themselves are addressed. In the following two verses the speaker indicates that preparations have been made, and he asks when this meeting in war will occur (24–25); verse 26 is another exhortation. The three last verses return to the theme of the destruction of the land. The final verse begins and ends with the same question, whose answer seems to the narrator to be only too clear. Mictlan is the Aztec underworld.

Reign of Tezozomoc (c. 16th century)

1. From the land of the tzihuac bushes, from the land of the mezquite bushes, where was ancient Chicomoztoc, thence came all your rulers hither.
2. Here unrolled itself the royal line of Colhuacan, here our nobles of Colhuacan, united with the Chichimecs.
3. Sing for a little while concerning these, O children, the sovereign Huitzilihuitl, the judge Quauhxilol, of our bold leader Tlalnahuatl, of the proud bird Ixtlilxochitl, those who went forth, and conquered and ruled before God, and bewail Tezozomoc.
4. A second time they left the mezquite bushes in Hue Tlalpan, obeying the order of God.
5. They go where are the flowers, where they may gain grandeur and power, dividing asunder they leave the mountain Atloyan and Hue Tlalpan, obeying the order of the Giver of Life.
6. It is cause of rejoicing, that I am enabled to see our rulers from all parts gathering together, arranging in order the words of the Giver of Life, and that their souls are caused to see and to know that God is precious, wonderful, a sweet ointment, and that they are known as flowers of wise counsel in the affairs of war.
7. There were Tochin, with many boats, the noble Acolmiztlan, the noble Catocih, Yohuallatonoc, and Cuetzpaltzin, and Iztaccoyotl, bold leaders from Tlaxcalla, and Coatziteuctli, and Huitlalotzin, famed as flowers on the field of battle.
8. For what purpose do you make your rulers, men of Huexotzinco? Look at Acolhuacan where the men of Huexotzinco are broken with toil, are trod upon like paving stones, and wander around the mountain Atloyan.
9. There is a ceiba tree, a cypress tree, there stands a mezquite bush, strong as a cavern of stone, known as the Giver of Life.
10. Ruler of men, Nopiltzin, Chicimec, o Tezozomoc, why hast thou made us sick, why brought us to death, through not desiring to offer war and battle to Acolhuacan?
11. But we lift up our voice and rejoice in the Giver of life; the men of Colhuacan and the Mexican leader have ruined us, through not desiring to offer war and battle to Acolhuacan.
12. The only joy on earth will be again to send the shield-flower again to rejoice the Giver of Life; already are discontented the faces of the workers in filth.
13. Therefore you rejoice in the shield-flowers, the flowers of night, the flowers of battle; already are ye clothed, ye children of Quetzalmamatzin and Huitznahuatl.
14. Your shield and your wall of safety are where dwells the sweet joy of war, where it comes, and sings and lifts its voice, where dwell the nobles, the precious stones, making known their faces; thus you give joy to the Giver of Life.
15. Let your dancing, and banqueting be in the battle, there be your place of gain, your scene of action, where the noble youths perish.

16. Dressed in their feathers they go rejoicing the Giver of Life to the excellent place, the place of shards.
17. He lifted up his voice in our houses like a bird, that man of Huexotzinco, Iztaccoyotl.
18. Whoever is aggrieved let him come forth with us against the men of Tlaxcallan, let him follow where the city of Huexotzinco lets drive its arrows.
19. Our leaders will lay waste, they will destroy the land, and your children, O Huexotzincos, will have peace of mind.
20. the mezquite was there, the tzihuac was there, the Giver of Life has set up the cypress; be sad that evil has befallen Huexotzinco, that it stands alone in the land.
21. In all parts there are destruction and desolation, no longer are there protection and safety, nor has the one only God heard the song; therefore speak it again, you children;
22. That the words may be repeated, you children, and give joy to the Giver of Life at Tepeyacan.
23. And since you are going, you Tlaxcallans, call upon Tlacomihuatzin that he may yet go to this divine war.
24. The Chichimecs and the leaders and Iztaccoyatl have with difficulty and vain labor arranged and set in order their jewels and feathers.
25. At Huexotzinco the ruler Quiauhtzin hates the Mexicans, hates the Acolhuacans; when shall we go to mix with them, to meet them?
26. Set to work and speak, you fathers, to your rulers, to your lords that they may make a blazing fire of the smoking tzihuac wood.
27. the Acolhuacans were at Chalco, the Otomies were in your cornfields at Quauhquechollan, they laid them waste by the permission of God.
28. The fields and hills are ravaged, the whole land has been laid waste.
29. What remedy can they turn to? Water and smoke have spoiled the land of the rulers; they have gone back to Mictlan attaching themselves to the ruler Cacamatl. What remedy can they turn to?

St. Francis Xavier: Letter from Japan to the Society of Jesus at Goa

Date: 1551

Francis Xavier was born in the Navarre province of Spain and studied in Paris. Years later he met Ignatius of Loyola, and they and several others founded the Society of Jesus, the Jesuit order. He was ordained a priest in Venice in 1537. He spent years in service to his Jesuit order in Rome. In 1540, he was named papal nuncio to the Indies. King João III of Portugal sponsored him in a missionary expedition to the Portuguese colony of Goa, India. From 1542 he spent next three years traveling through India, winning many converts and establishing missions. From 1545 through 1546 he carried on missionary work in the Malay Peninsula, the Indonesian archipelago, and the Spice Islands, or Moluccas. Returning to India, Francis Xavier supervised the assignment of additional Jesuit missionaries to posts in India.

In 1549 he led a group of missionaries to Japan, landing at Kagoshima on southernmost Kyushu Island, he met up with the Portuguese traveler Fernão Mendes Pinto. Francis Xavier and his Jesuit brothers spent two years traveling in Japan, during which time he was permitted to open a number of missions and Christian settlements. After Fernão Mendes Pinto, he was one of the first Europeans to visit Japan, providing early descriptions of that land and its people in his many letters to his fellow Jesuits in India and in Europe.

Here is a descriptive from one of his letters.

Last year, dearest brethren, I wrote to you from Cagoxima concerning our voyage, our arrival in Japan, and what had been done in the interests of Christianity up to that time. Now I will relate what God had done by our means since last year. On our arrival at the native place of our good Paul, we were received very kindly indeed by his relations and friends. They all of them became Christians, being led by what Paul told them; and that they might be thoroughly confirmed in the truth of our religion, we remained in that place a whole year and more. In that time more than a hundred were gathered into the fold of Christ. The rest might have done so

if they had been willing, without giving any offence to their kinsfolk or relations. But the bonzes admonished the prince (who is very powerful, the lord of several towns), that if he allowed his people to embrace the Christian religion, his whole dominion would be destroyed, and the ancestral gods of the country, which they call pagodas, would come to be despised by the natives. For the law of God was contrary to the law of Japan, and it would therefore result that any who embraced that law would repudiate the holy founders of the ancient law of their forefathers, which could not be done without great ruin to the town and realm. Let him look, therefore, with reverence on those most holy men who had been the legislators of Japan, and, considering that the law of God was opposed and hostile to the law of his fathers, let him issue an edict forbidding, under penalty of death, that any one in future should become a Christian. The prince was moved by this discourse of the bonzes, and issued the edict as they had requested.

The interval after this was spent in instructing our converts, in learning Japanese, and in translating into that tongue the chief heads of the Christian faith. We used to dwell shortly on the history of the creation of the world, as seemed useful for the men we had to deal with, as, for instance, that God was the Maker and Creator of the universe, a truth which they were entirely ignorant of, and the other truths necessary for salvation, but principally the truth that God had taken on Himself the nature of man. On this account we translated diligently all the great mysteries of the life of Christ until His Ascension into heaven, and also the account of the last Judgment. We have now translated this book, for such it was, into Japanese with great labor, and have written it in our own characters. Out of this we read what I have mentioned to those who came to the faith of Christ, that the converts might know how to worship God and Jesus Christ with piety and to their souls' health. And when we went on to expound these things in our discourses, the Christians delighted in them very much, as seeing how true the things were which we had taught them. The Japanese are certainly of remarkably good dispositions, and follow reason wonderfully. They see clearly that their ancestral law is false and the law of God true, but they are deterred by fear of their prince from submitting to the Christian religion.

When the year came to an end, seeing the lord of the town to be opposed to all extension of our religion, we determined to pass to another place. We therefore bade farewell to our converts; they loved us so much that they shed many tears, and giving us great thanks for having shown them the way of eternal salvation at the cost of so much labour of our own, were very sorrowful at our departure. We left with them Paul, their own townsman, who is an excellent Christian, to finish their instruction in the precepts of religion. We then went to another town, where the lord of the place received us very kindly; there we remained a few days, and made about a hundred Christians. None of us knew Japanese; nevertheless, by reading the semi-Japanese volume mentioned, and talking to the people, we brought many of them to the worship of Christ.

I charged Cosmo Torres with the care of these converts, and went on with Joan Fernandez to Yamaguchi, the seat of a very wealthy daimyo, as he is thought among the Japanese. The city contains more than ten thousand households; all the houses are of wood. We found many here, both of the common people and of the nobility, very desirous to become acquainted with the Christian law. We thought it best to preach twice a day in the streets and cross roads, reading out parts of our book, and then speaking to the people about the Christian religion. Some of the noblemen also invited us to their houses, that they might hear about our religion with more convenience. They promised of their own accord, that if they came to think it better than their own, they would unhesitatingly embrace it. Many of them heard what we had to say about the law of God very willingly; some, on the other hand, were angry at it, and even went so far as to laugh at what we said. So, wherever we went through the streets of the city, we were followed by a small crowd of boys of the lowest dregs of the populace, laughing at us and mocking us with some such words as these: "There go the men who tell us that we must embrace the law of God in order to be saved, because we cannot be rescued from destruction except by the Maker of all things and by His Son! There go the men who declare that it is wicked to have more than one wife!" In the same way they made a joke and play of the other articles of our religion.

We had spent some days in this office of preaching, when the king, who was then in the city, sent for us and we went to him. He asked us wherever did we come from? why had we come to Japan? And we answered that we were Europeans sent thither for the sake of preaching the law of God, since no one could be safe and secure unless he purely and piously worship God and His Son Jesus Christ, the Redeemer and Saviour of all nations. Then the king commanded us to explain to him the law of God. So we read to him a good part of our volume; and although we went on reading for an hour or more, he listened to us diligently and attentively as long as we were reading, and then he sent us away. We remained many days in that city, and preached to the people in the streets and at the cross roads. Many of them listened to the wonderful deeds of Christ with avidity, and when we came to His most bitter death, they were unable to restrain their tears. Nevertheless, very few actually became Christians.

Finding, therefore, that the fruit of our labours was small, we went on to Kyoto, the most famous city in all Japan. We spent two months on the road, and passed through many dangers, because we had to go through countries in which war was raging. I say nothing of the cold of those parts, nor of the roads so

infested by frequent robberies. When we arrived at Kyoto, we waited for some days that we might obtain leave to approach the king, and ask of him to give us permission to publish the divine law in his kingdom. But we found all ways of access to him altogether closed. And as we discovered that the edicts of the king were generally thought little of among the princes and rulers, we laid aside our design of obtaining from him any such licence, and I determined to sound and try the minds and dispositions of the people themselves, so as to find out how disposed that city was to receive the worship of Christ. But as the people were under arms, and under the pressure of a severe war, I judged that the time was most inopportune for the preaching of the Gospel. Kyoto was formerly a very large city; but now, on account of the perpetual calamities it has undergone in war, it is a great part in ruins and waste. At one time, as they say, it contained one hundred and eighty thousand dwellings. It seems to me very likely that it was so, for the wall which encircles it shows that the city was very extensive indeed. Now, although a great part of it is in ruins, it yet contains more than a hundred thousand houses.

When we found that the city of Kyoto was neither at peace nor prepared to receive the Gospel, we returned to Yamaguchi, and we presented to the king there the letters and presents which had been sent as signs of friendship by the Governor of India and the Bishop of Goa. The king was very much delighted both with the letters and with the presents, and that he might reward us, he offered us a great amount of gold and silver. These gifts we sent back, and then asked him that, if he desired to make some acceptable present to the strangers who had come to his city, he would give us leave to announce the law of God to his people, saying that nothing could possibly be more pleasing to us than such a gift. This he granted us with the greatest goodwill.

He accordingly affixed edicts in the most crowded places of the city, declaring that it was pleasing to him that the law of heaven should be announced in his dominions; and that it was lawful for any, who desired, to embrace it. At the same time, he assigned an empty monastery for us to inhabit. A great many used to come to us to this place for the sake of hearing about the new religion. We used to preach twice a day, and after the sermon there was always a good long dispute concerning religion.

Thus we were continually occupied either in preaching or in answering questions. Many bonzes were often present at the sermons, and a great number of others, both of the common people and of the nobility. The house was always full of men—so full, that at times some were shut out for want of space. Those who asked us questions pressed them so well home, that the answers we gave enabled them thoroughly to understand the falsehood of their own laws and founders, and the truth of the Christian law. After disputes and questionings for many days, they at last began to give in and betake themselves to the faith of Christ.

The first of all to do this were those who in the discussions and questions had shown themselves our most strenuous adversaries. Many of these were persons of good birth, and, when they had embraced Christianity, they became our friends with an amount of warmth which I can find no words to describe. And these new Christians told us with the greatest faithfulness the mysteries, or rather the absurdities, of the Japanese religion. As I said at first, there are as many as nine sects in Japan, and they are very different one from another in their teaching and ordinances. When we got to know the opinions of these sects, we began to look up arguments by which to refute them. So we used to press hard by daily questions and arguments the sorcerer bonzes and other enemies of the Christian law, and we did this so effectually, that at last they did not venture to open their mouths against us when we attacked and refuted them.

When the Christians saw the bonzes convicted and silenced they were of course full of joy, and were daily more and more confirmed in the faith of our Lord. On the other hand, the heathen, who were present at these discussions, were greatly shaken in their own religion, seeing the systems of their fore-fathers giving way. The bonzes were much displeased at this, and when they were present at the sermons and saw that a great number became Christians daily, they began to accuse them severely for leaving their ancestral religion to follow a new faith. But the others answered that they embraced the Christian law because they had made up their minds that it was more in accordance with nature than their own, and because they found that we satisfied their questions while the bonzes did not.

The Japanese are very curious by nature, and as desirous of learning as any people ever were. So they go on perpetually telling other people about their questions and our answers. They desire very much to hear novelties, especially about religion. Even before our arrival, as we are told, they were perpetually disputing among themselves, each one contending that his own sect was the best. But after they had heard what we had to say, they left off their disputes about their own rules of life and religion, and all began to contend about the Christian faith. It is really very wonderful that in so large a city as Yamaguchi in every house and in every place men should be talking constantly about the law of God. But if I were to go into the history of all their questionings, I should have to write on for ever.

The Japanese have a very high opinion of the wisdom of the Chinese, whether as to the mysteries of religion or as to manners and civil institutions. They used to make that a principal point against us, that if things were as we preached, how was it that the Chinese knew nothing about them? After many disputations and questions, the people of Yamaguchi began to join the Church of Christ, some from the lower orders and some from the nobility. In the space of two months quite as many as five hundred have become

Christians. Their number is daily being added to; so that there is great cause for joy, and for thanking God that there are so many who embrace the Christian faith, and who tell us all the deceptions of the bonzes, and the mysteries contained in their books and taught by their sects. For those who have become Christians used to belong, one to one sect, another to another; the most learned of each of them explained to us the institutions and rules of his own way of belief. If I had not had the work of these converts to help me, I should not have been able to become sufficiently acquainted with, and so attack, these abominable religions of Japan. It is quite incredible how much the Christians love us. They are always coming to our house to ask whether we have anything at all which we wish them to do for us. All the Japanese appear naturally very obliging; certainly the Christians among them are so very good to us that it would be impossible to exceed their extreme kindness and attentiveness.

May God in His mercy repay them with His favor, and give us all His heavenly bliss! Amen.

Sidi Ali Reis: *Mirat ul Memalik*

Also known as: *The Mirror of Countries*

Date: 1557

The book of the Turkish Admiral Sidi Ali Reis, entitled Mirat ul Memalik (The Mirror of Countries), is interesting in many ways. It reveals the personality of the author, a man of varied accomplishments—a genuine type of the Islamic culture of his time and a representative of that class of officials and military dignitaries under whose influence it is chiefly due that the Ottoman Empire, extending over three continents, attained the height of culture it occupied during the reign of Suleiman the Great. Sidi Ali was the descendant of an illustrious family, connected with the arsenal at Galata, in whom love for the sea seems to have been hereditary, and, hence, as the Turkish publisher points out in his preface, Sidi Ali, being thoroughly acquainted with the nautical science of his day, excels as author on maritime subjects.

As a man of general culture, he was, in harmony with the prevailing notions of his time, a mathematician, astronomer, and geographer, as well as a poet and theologian. Adept in all branches of general literature, he sometimes wielded his pen to write lyrical or occasional verses, at other times entering into keen controversial disputes upon certain Qur'anic theses or burning schismatic questions.

Besides all this, he was a warrior, proving himself as undaunted in fighting the elements as in close combat with the Portuguese, who in point of accoutrement had far the advantage over him. But what stands out above all these accomplishments is his patriotism and his unwavering faith in the power and the greatness of the Ottoman Empire. He boasts that he never ceases to hope to see Gujarat and Ormuz joined to the Ottoman realm; his one desire is to see his Padishah ruler of the world, and wherever he goes and whatever he sees, Rum (Turkey) always remains in his eyes the most beautiful, the richest, and the most cultured land of the whole world. The Turkish admiral has, moreover, a singularly happy way of expressing himself on this subject of his preference for his own Padishah and his native land, and this required no small amount of courage and tact where he had to face proud Humayun or Thamasp, no less conceited than the former.

The following entry contains excerpts from the original document.

When Sultan Suleiman had taken up his winter residence in Aleppo, I, the author of these pages, was appointed to the Admiralty of the Egyptian fleet, and received instructions to fetch back to Egypt the ships (15 galleys), which some time ago had been sent to Basrah on the Persian Gulf. But, "Man proposes, God disposes." I was unable to carry out my mission, and as I realized the impossibility of returning by water, I resolved to go back to Turkey by the overland route, accompanied by a few tried and faithful Egyptian soldiers. I traveled through Gujarat, Hind, Sind, Balkh, Zabulistan, Bedakhshan, Khotlan, Turan, and Iran, i.e., through Trans-oxania, Khorassan, Kharezm, and Deshti-Kiptchak; and as I could not proceed any farther in that direction, I went by Meshed and the two Iraqs, Kazwin and Hamadan, on to Baghdad.

Our travels ended, my companions and fellow-adventurers persuaded me to write down our experiences, and the dangers through which we had passed, an accurate account of which it is almost impossible to give; also to tell of the cities and the many wonderful sights we had seen, and of the holy shrines we had visited. And so this little book sees the light; in it I have tried to relate, in simple and plain language, the troubles and difficulties, the suffering and the distress which beset our path, up to the time that we reached Constantinople. Considering the

matter it contains this book ought to have been entitled, "A tale of woe," but with a view to the scene of action I have called it "Mirror of Countries," and as such I commend it to the reader's kind attention.

THE BEGINNING OF THE STORY

When the illustrious Padishah was holding his court at Aleppo, in Ramazan of the year 960 (1552), I was commanded to join the army. I celebrated Ramzam-Bairam in attendance on his Majesty, later on, however, I went to Sidi-Ghazi, made a pilgrimage in Konia to the tomb of Molla-i-Rumi, and visited the shrines of the Sultan ul-Ulema, and Shemsî Tebrîzi, and of the Sheik Sadr-ed-din-Koniavi; at Kassarie I made a pilgrimage to the graves of the Sheiks Awhad-ed-din Kirmani, Burham-ed-din, Baha-ed-din Zade, Ibrahim Akserayi, and Davud Kaissari. Returned to Haleb (Aleppo), I visited the graves of Daud, Zakeriah, and Balkiah, as also those of Saad and Said, companions of the Prophet. The Kurban-Bairam I spent again in attendance on the Sultan.

I must here mention that Piri Bey, the late Admiral of the Egyptian fleet, had, some time previous to this, been dispatched with about 30 ships (galleys and galleons) from Suez, through the Red Sea, touching Jedda and Yemen, and through the straits of Bab-i-Mandeb, past Aden and along the coast of Shahar. Through fogs and foul weather his fleet became dispersed, some ships were lost, and with the remainder he proceeded from Oman to Muscat, took the fortress and made all the inhabitants prisoners; he also made an incursion into the islands of Ormuz and Barkhat, after which he returned to Muscat. There he learned from the captive infidel captain that the Christian [Portuguese] fleet was on its way, that therefore any further delay was inadvisable, as in case it arrived he would not be able to leave the harbor at all. As a matter of fact it was already too late to save all the ships; he therefore took only three, and with these just managed to make his escape before the arrival of the Portuguese. One of his galleys was wrecked near Bahrein, so he brought only two vessels back to Egypt. As for the remainder of the fleet at Basrah, Kubad Pasha had offered the command of it to the Chief Officer, but he had declined, and returned to Egypt by land.

When this became known in Constantinople the command of the fleet had been given to Murad Bey, formerly Sanjakbey of Catif, then residing in Basrah. He was ordered to leave two ships, five galleys, and one galleon at Basrah, and with the rest, i.e., 15 galleys (one galley had been burned in Basrah) and two boats, he was to return to Egypt. Murad Bey did start as arranged, but opposite Ormuz he came upon the Portuguese fleet, a terrible battle followed in which Suleiman Reis, Rejeb Reis, and several of the men, died a martyr's death. Many more were wounded and the ships terribly battered by the cannon-balls. At last, night put a stop to the fight. One boat was wrecked off the Persian coast, part of the crew escaped, the rest were taken prisoners by the infidels, and the boat itself captured.

When all this sad news reached the capital, toward the end of Zilhija of the said year 960 (1552), the author of these pages was appointed Admiral of the Egyptian fleet.

I, humble Sidi Ali bin Husein, also known as Kiatibi-Rumi [the writer of the West, i.e., of Turkey], most gladly accepted the post. I had always been very fond of the sea, had taken part in the expedition against Rhodes under the Sultan Suleiman, and had since had a share in almost all engagements, both by land and by sea. I had fought under Khairuddin Pasha, Sinan Pasha, and other captains, and had cruised about on the Western [Mediterranean] sea, so that I knew every nook and corner of it. I had written several books on astronomy, nautical science, and other matters bearing upon navigation. My father and grandfather, since the conquest of Constantinople, had had charge of the arsenal at Galata; they had both been eminent in their profession, and their skill had come down to me as an heirloom.

The post now entrusted to me was much to my taste, and I started from Aleppo for Basrah, on the first of Moharram of the year 961 (7 Dec. 1553). I crossed the Euphrates at Biredjik and when in Reka (i.e., Orfah), I undertook a pilgrimage to the tomb of Abraham, having visited on the way between Nisebin and Mossul the holy graves of the prophets Yunis and Djerdjis and of the sheiks Mohammed Garabili, Feth Mosuli, and Sazib-elban-Mosuli. On the way to Baghdad I made a little detour from Tekrit to Samira, and visited the graves of Iman Ali-el-Hadi and Iman Haman Askeri, after which I came past the towns of Ashik and Maas-huk, and through Harbi, past the castle of Semke, on to Baghdad. We crossed the Tigris near Djisr and, after visiting the graves of the saints there, I continued my journey past the fortress of Teir, to Bire, and crossing the Euphrates near the little town of Wasib, I reached Kerbela (Azwie), where I made a pilgrimage to the graves of the martyrs Hasan and Husein.

Turning into the steppe near Shefata, I reached Nedjef (Haira) on the second day, and visited the graves of Adam, Noah, Shimun, and Ali, and from there proceeded to Kufa, where I saw the mosque with the pulpit under which the prophets of the house of Ali are buried, and the tombs of Samber and Duldul. Arrived at the fortress of Hasinia, I visited the grave of the prophet Zilkefl, the son of Aaron, and in Hilla I made pilgrimages to the graves of Iman Mohammed Mehdi and Iman Akil, brother of Ali, and also visited there the mosque of Shem. Again crossing the Euphrates (this time by a bridge), I resumed my journey to Bagdad and went from there by ship to Basrah. On the way we touched Medain, saw the grave of Selmas Faris, admired Tak Resri and the castle of Shah Zenan, and went past Imare Bugazi, on the road of Vasit to Zekya, past the strongholds of Adjul and Misra to Sadi-es Sueiba and on to Basrah, where I arrived toward the end of Safar of the said year (beginning of February, 1554).

ABOUT WHAT HAPPENED IN BASRA

On the day after my arrival I had an interview with Mustafa Pasha, who, after seeing my credentials, made over to me the 15 galleys which were needing a great deal of repair. As far as could be, they were put in order, calked and provided with guns, which, however, were not to be had in sufficient quantity either from the stores there or from Ormuz. A water-supply had also to be arranged for, and as it was yet five months before the time of the monsoon, I had plenty of leisure to visit the mosque of Ali and the graves of Hasan Basri, Talha, Zobeir, Uns-bin-Malik, Abdurrahman-bin-Anf, and several martyrs and companions of the Prophet. One night I dreamed that I lost my sword, and as I remembered that a similar thing had happened to Sheik Muhieddin and had resulted in a defeat, I became greatly alarmed, and, just as I was about to pray to the Almighty for the victory of the Islam arms, I awoke. I kept this dream a secret, but it troubled me for a long time, and when later on Mustafa Pasha sent a detachment of soldiers to take the island of Huweiza (in which expedition I took part with five of my galleys), and the undertaking resulted in our losing about a hundred men all through the fickleness of the Egyptian troops, I fully believed this to be the fulfilment of my dream. But alas! there was more to follow—for “What is decreed must come to pass, No matter, whether you are joyful or anxious.”

When at last the time of the monsoon came, the Pasha sent a trusty sailor with a frigate to Ormuz, to explore the neighborhood. After cruising about for a month he returned with the news that, except for four boats, there was no sign of any ships of the infidels in those waters. The troops therefore embarked and we started for Egypt.

WHAT TOOK PLACE IN THE SEA OF ORMUZ

On the first of Shavval we left the harbor of Basrah, accompanied, as far as Ormuz, by the frigate of Sherifi Pasha. We visited on the way from Mehzari the grave of Khidr, and proceeding along the coast of Duspul (Dizful), and Shushter in Charik, I made pilgrimages to the graves of Imam Mohammed, Hanifi, and other saints. From the harbor in the province of Shiraz we visited Rishehr (Bushir) and after reconnoitering the coasts and unable to get any clue as to the whereabouts of the enemy by means of the Tshekleva, I proceeded to Katif, situated near Lahsa and Hadjar on the Arabian coast. Unable to learn anything there, I went on to Bahrein, where I interviewed the commander of the place, Reis Murad. But neither could he give me any information about the fleet of the infidels. There is a curious custom at Bahrein. The sailors, provided with a leather sack, dive down into the sea and bring the fresh water from the bottom for Reis Murad's use. This water is particularly pleasant and cold in the spring time, and Reis Murad gave me some. God's power is boundless! This custom is the origin of the proverb: Maradj ul bahreia jaltakian and hence also the name “Bahrein.”

Next we came to Kis, i.e., old Ormuz, and Barhata, and several other small islands in the Green Sea, i.e., the waters of Ormuz, but nowhere could we get any news of the fleet. So we dismissed the vessel, which Mustafa Pasha had sent as an escort, with the message that Ormuz was safely passed. We proceeded by the coasts of Djilgar and Djadi, past the towns of Keizzar or Leime, and forty days after our departure, i.e., on the tenth of Ramazan, in the forenoon, we suddenly saw coming toward us the Christian fleet, consisting of four large ships, three galleons, six Portuguese guard ships, and twelve galleys, 25 vessels in all. I immediately ordered the canopy to be taken down, the anchor weighed, the guns put in readiness, and then, trusting to the help of the Almighty, we fastened the lilandra to the mainmast, the flags were unfurled, and, full of courage and calling upon Allah, we commenced to fight. The volley from the guns and cannon was tremendous, and with God's help we sank and utterly destroyed one of the enemy's galleons. Never before within the annals of history has such a battle been fought, and words fail me to describe it.

The battle continued till sunset, and only then the Admiral of the infidel fleet began to show some signs of fear. He ordered the signal-gun to fire a retreat, and the fleet turned in the direction of Ormuz. With the help of Allah, and under the lucky star of the Padishah, the enemies of Islam had been defeated. Night came at last; we were becalmed for awhile, then the wind rose, the sails were set and as the shore was near . . . until daybreak. The next day we continued our previous course. On the day after we passed Khorfakan, where we took in water, and soon after reached Oman, or rather Sohar. Thus we cruised about for nearly 17 days. When on the sixth of Ramazan, i.e., the day of Kadr-Ghedjesi, a night in the month of Ramazan, we arrived in the vicinity of Maskat and Kalhat, we saw in the morning, issuing from the harbor of Maskat, 12 large boats and 22 gurabs, 32 vessels in all, commanded by Captain Kuya, the son of the Governor. They carried a large number of troops.

The boats and galleons obscured the horizon with their mizzen sails and Peneta all set; the guard-ships spread their round sails (Chember-yelken), and, gay with bunting, they advanced toward us. Full of confidence in God's protection we awaited them. Their boats attacked our galleys; the battle raged, cannon and guns, arrows and swords made terrible slaughter on both sides. The Badjoalushka penetrated the boats and the Shai-kas and tore large holes in their hulls, while our galleys were riddled through by the Darda thrown down upon us from the enemy's turrets, which gave them the appearance of bristling porcupines; and they showered down upon us. . . . The stones which they threw at us created quite a whirlpool as they fell into the sea.

One of our galleys was set on fire by a bomb, but strange to say the boat from which it issued shared the like fate. God is merciful! Five of our galleys and as many of the enemy's boats were sunk and utterly wrecked, one of theirs went to the bottom with all sails set. In a word, there was great loss on both sides; our rowers were now insufficient in number to manage the oars, while running against the current, and to fire the cannon. We were compelled to drop anchor (at the stern) and to continue to fight as best we might. The boats had also to be abandoned.

Alemshah Reis, Rara Mustafa, and Kalfat Memi, captains of some of the foundered ships, and Derzi Mustafa Bey, the Serdar of the volunteers, with the remainder of the Egyptian soldiers and 200 carpenters, had landed on the Arabian shore, and as the rowers were Arabs they had been hospitably treated by the Arabs of Nedjd. The ships (gurabs) of the infidel fleet had likewise taken on board the crews of their sunken vessels, and as there were Arabs amongst them, they also had found shelter on the Arabian coast. God is our witness. Even in the war between Khaiveddin Pasha and Andreas Doria no such naval action as this has ever taken place.

When night came, and we were approaching the bay of Ormuz, the wind began to rise. The boats had already cast two Lenguurta, i.e., large anchors, the Lushtas were tightly secured, and, towing the conquered gurabs along, we neared the shore while the galleys, dragging their anchors, followed. However, we were not allowed to touch the shore, and had to set sail again. During that night we drifted away from the Arabian coast into the open sea, and finally reached the coasts of Djash, in the province of Kerman. This is a long coast, but we could find no harbor, and we roamed about for two days before we came to Kichi Mekran. As the evening was far advanced we could not land immediately, but had to spend another night at sea. In the morning a dry wind carried off many of the crew, and at last, after unheard-of troubles and difficulties, we approached the harbor of Sheba.

Here we came upon a Notak, i.e., a brigantine, laden with spoils, and when the watchman sighted us they hailed us. We told them that we were Muslims, whereupon their captain came on board our vessel; he kindly supplied us with water, for we had not a drop left, and thus our exhausted soldiers were invigorated. This was on Bairam day, and for us, as we had now got water, a double feast-day.

Escorted by the said captain we entered the harbor of Guador. The people there were Beluchistanis and their chief was Malik Djelaeddin, the son of Malik Dinar. The Governor of Guador came on board our ship and assured us of his unalterable devotion to our glorious Padishah. He promised that henceforth, if at any time our fleet should come to Ormuz, he would undertake to send 50 or 60 boats to supply us with provisions, and in every possible way to be of service to us. We wrote a letter to the native Prince Djelaeddin to ask for a pilot, upon which a first-class pilot was sent us, with the assurance that he was thoroughly trustworthy and entirely devoted to the interests of our Padishah.

WHAT WE SUFFERED IN THE INDIAN OCEAN

God is merciful! With a favorable wind we left the port of Guador and again steered for Yemen. We had been at sea for several days, and had arrived nearly opposite to Zofar and Shar, when suddenly from the west arose a great storm known as fil Tofani. We were driven back, but were unable to set the sails, not even the trinquetla (stormsail). The tempest raged with increasing fury. As compared to these awful tempests the foul weather in the western seas is mere child's play, and their towering billows are as drops of water compared to those of the Indian sea. Night and day were both alike, and because of the frailty of our craft all ballast had to be thrown overboard. In this frightful predicament our only consolation was our unwavering trust in the power of the Almighty. For ten days the storm raged continuously and the rain came down in torrents. We never once saw the blue sky.

I did all I could to encourage and cheer my companions, and advised them above all things to be brave, and never to doubt but that all would end well. A welcome diversion occurred in the appearance of a fish about the size of two galley lengths, or more perhaps, which the pilot declared to be a good omen. The tide being very strong here and the ebb slow, we had an opportunity of seeing many sea-monsters in the neighborhood of the bay of Djugd, sea-horses, large sea-serpents, turtles in great quantities, and eels.

The color of the water suddenly changed to pure white, and at sight of it the pilot broke forth into loud lamentations; he declared we were approaching whirlpools and eddies. These are no myth here; it is generally believed that they are only found on the coasts of Abyssinia and in the neighborhood of Sind in the bay of Djugd, and hardly ever a ship has been known to escape their fury. So, at least, we are told in nautical books. We took frequent soundings, and when we struck a depth of five Kuladj (arm-lengths) the mizzen-sails (Orta Yelken) were set, the bowsprits . . . and . . . heeling over to the left side, and flying the commander's flag, we drifted about all night and all day until at last, in God's mercy, the water rose, the storm somewhat abated, and the ship veered right round.

The next morning we slackened speed and drew in the sails. A stalwart cabin boy (or sailor) was tied to the Djondu, whereby the post at the foot of the mizzenmast was weighted down, and the sailrope slightly raised. Taking a survey of our surroundings we caught sight of an idol-temple on the coast of Djamher. The sails were drawn in a little more; we passed Formyan and Menglir, and directing our course toward Somenat,

we passed by that place also. Finally we came to Div, but for fear of the unbelievers which dwell there we further drew in our sails and continued on our course with serderma.

Meanwhile, the wind had risen again, and as the men had no control over the rudder, large handles had to be affixed with long double ropes fastened to them. Each rope was taken hold of by four men, and so with great exertion they managed to control the rudder. No one could keep on his feet on deck, so of course it was impossible to walk across. The noise of the . . . and the . . . was deafening; we could not hear our own voices. The only means of communication with the sailors was by inarticulate words, and neither captain nor boatswain could for a single instant leave his post. The ammunition was secured in the storeroom, and after cutting the . . . from the . . . we continued our way.

It was truly a terrible day, but at last we reached Gujarat in India, which part of it, however, we knew not, when the pilot suddenly exclaimed: "On your guard! a whirlpool in front!" Quickly the anchors were lowered, but the ship was dragged down with great force and nearly submerged. The rowers had left their seats, the panic-stricken crew threw off their clothes, and, clinging some to casks and some to jacks, had taken leave of one another. I also stripped entirely, gave my slaves their liberty, and vowed to give 100 florins to the poor of Mecca. Presently one of the anchors broke from its crook and another at the podjuz; two more were lost, the ship gave a terrible jerk—and in another instant we were clear of the breakers. The pilot declared that had we been wrecked off Fisht-Kidsur, a place between Diu and Daman; nothing could have saved us. Once more the sails were set, and we decided to make for the infidel coast; but after duly taking note of tide and current, and having made a careful study of the chart, I came to the conclusion that we could not be very far off the mainland. I consulted the horoscope in the Qur'an, and this also counseled patience. So we commenced to examine the hold of the ship and found that the storeroom was submerged, in some places up to the walls, in some places higher still. We had shipped much water, and all hands set to work at once to bale it out. In one or two places the bottom had to be ripped up to find the outlet so as to reduce the water.

Toward afternoon the weather had cleared a little, and we found ourselves about two miles off the port of Daman, in Gujarat in India. The other ships had already arrived, but some of the galleys were waterlogged not far from the shore, and they had thrown overboard oars, boats, and casks, all of which wreckage eventually was borne ashore by the rapidly rising tide. We were obliged to lie to for another five days and five nights, exposed to a strong spring-tide, accompanied by floods of rain; for we were now in the Badzad, or rainy season of India, and there was nothing for it but to submit to our fate. During all this time we never once saw the sun by day, nor the stars by night; we could neither use our clock nor our compass, and all on board anticipated the worst. It seems a miracle that of the three ships lying there, thrown on their sides, the whole crew eventually got safely to land.

Will Adams on Japan

Date: 1611

Will Adams was the first Englishman to make his home in Japan. His knowledge of shipbuilding made him so useful to the emperor that, although he was treated with honors and liberality, he was not allowed to leave the country. The Japanese of the street in Yedo that was named for him still hold an annual celebration in his memory. The letter from which the following excerpts are taken was written in 1611. It begins with his departure from the coast of Peru.

My Coming to Japan, 1611. Will Adams.

It was agreed that we should leave the coast of Peru and direct our course for Japan, having understood that cloth was good merchandise there and also how upon that coast of Peru the king's ships were out seeking us, having knowledge of our being there, understanding that we were weak of men, which was certain, for one of our fleet for hunger was forced to seek relief at the enemies' hands in Saint Ago. So we stood away directly for Japan, and passed the equinoctial line together, until we came in twenty-eight degrees to the northward of the line, in which latitude we were about the twenty-third of February, 1600. We had a wondrous storm of wind as ever I was in, with much rain, in which storm we lost our consort, whereof we were very sorry. Nevertheless with hope that in Japan we should meet the one the other, we proceeded on our former intention for Japan, and in the height of thirty degrees sought the northernmost cape of the fore-named island, but found it not by reason that it lay false in all cards and maps and globes; for the cape lies in thirty-five degrees and one

half, which is a great difference. In the end, in thirty-two degrees and one half we came in sight of the land, being the nineteenth day of April. So that between the Cape of St. Maria and Japan we were four months and twenty-two days; at which time there were no more than six besides myself that could stand upon his feet.

So we in safety let fall our anchor about a league from a place called Bungo. At which time came to us many boats and we suffered them to come aboard, being not able to resist them, which people did us no harm, neither of us understanding the one the other. The king of Bungo showed us great friendship, for he gave us a house and land, where we landed our sick men, and had all refreshing that was needful. We had when we came to anchor in Bungo, sick and whole, four and twenty men, of which number the next day three died. The rest for the most part recovered, saving three, which lay a long time sick, and in the end also died.

In the which time of our being here, the emperor hearing of us sent presently five galleys, or frigates, to us to bring me to the court where His Highness was, which was distant from Bungo about eighty English leagues. So that as soon as I came before him, he demanded of me of what country we were. So I answered him in all points, for there was nothing that he demanded not, both concerning war and peace between country and country; so that the particulars here to write would be too tedious. And for that time I was commanded to prison, being well used, with one of our mariners that came with me to serve me.

A two days after, the emperor called me again, demanding the reason of our coming so far. I answered: We are a people that sought all friendship with all nations, and to have trade in all countries, bringing such merchandise as our country did afford into strange lands in the way of traffic. He demanded also as concerning the wars between the Spaniards or Portugal and our country and the reasons; the which I gave him to understand of all things, which he was glad to hear, as it seemed to me.

In the end I was commanded to prison again, but my lodging was bettered in another place. So that thirty-nine days I was in prison, hearing no more news, neither of our ship nor captain, whether he were recovered of his sickness or not, nor of the rest of the company; in which time I looked every day to die, to be crossed [crucified] as the custom of justice is in Japan, as hanging in our land. In which long time of imprisonment, the Jesuits and the Portuguese gave many evidences against me and the rest to the emperor that we were thieves and robbers of all nations, and, were we suffered to live, it should be against the profit of His Highness and the land; for no nation should come there without robbing; His Highness's justice being executed, the rest of our nation without doubt should fear and not come here any more: thus daily making access to the emperor and procuring friends to hasten my death. But God, that is always merciful at need, showed mercy unto us and would not suffer them to have their wills of us. In the end, the emperor gave them answer that we as yet had not done to him nor to none of his land any harm or damage; therefore against reason and justice to put us to death. If our countries had war the one with the other, that was no cause that he should put us to death; with which they were out of heart that their cruel pretense failed them. For which God be forever-more praised.

Now in this time that I was in prison the ship was commanded to be brought so near to the city where the emperor was as she might be (for grounding her); the which was done. Forty-one days being expired, the emperor caused me to be brought before him again, demanding of me many questions more, which were too long to write. In conclusion he asked me whether I were desirous to go to the ship to see my countrymen. I answered very gladly, the which he bade me do. So I departed and was free from imprisonment. And this was the first news that I had that the ship and company were come to the city. So that with a rejoicing heart I took a boat and went to our ship, where I found the captain and the rest recovered of their sickness; and when I came aboard with weeping eyes was received, for it was given them to understand that I was executed long since. Thus, God be praised, all we that were left alive came together again.

From the ship all things were taken out, so that the clothes which I took with me on my back I only had. All my instruments and books were taken. Not only I lost what I had in the ship, but from the captain and the company generally what was good or worth the taking was carried away; all which was done unknown to the emperor. So in process of time having knowledge of it, he commanded that they which had taken our goods should restore it to us back again; but it was here and there so taken that we could not get it again, saving 50,000 R in ready money was commanded to be given us and in his presence brought and delivered in the hands of one that was made our governor, who kept them in his hands to distribute them unto us as we had need for the buying of victuals for our men with other particular charges. In the end the money was divided according to every man's place; but this was about two years that we had been in Japan, and when we had a denial that we should not have our ship, but to abide in Japan. So that the part of every one being divided, every one took his way where he thought best. In the end, the emperor gave every man, much as was worth eleven or twelve ducats a year, namely, myself, the captain, and mariners all alike.

So in process of four or five years the emperor called me, as divers times he had done before. So one time above the rest he would have me to make him a small ship. I answered that I was no carpenter and had no knowledge thereof. "Well, do your endeavor," said he; "if it be not good, it is no matter." Wherefore at his command I built him a ship of the burden of eighty tons or thereabout; which ship being made in all respects as our manner is, he coming aboard to see it, liked it very well; by which means I came in favor with him, so that I came often in his presence, who from time to time gave me presents, and at length a yearly stipend

to live upon, much about seventy ducats by the year with two pounds of rice a day daily. Now being in such grace and favor by reason I learned him some points of geometry and understanding of the art of mathematics with other things, I pleased him so that what I said he would not contrary. At which my former enemies did wonder, and at this time must entreat me to do them a friendship, which to both Spaniards and Portuguese have I done, recompensing them good for evil. So to pass my time to get my living, it hath cost me great labor and trouble at the first; but God hath blessed my labor.

In the end of five years I made supplication to the king to go out of this land, desiring to see my poor wife and children according to conscience and nature. With the which request the emperor was not well pleased, and would not let me go any more for my country, but to bide in his land. Yet in process of time, being in great favor with the emperor, I made supplication again, by reason we had news that the Hollanders were in Shian and Patania; which rejoiced us much with hope that God should bring us to our country again by one means or other. So I made supplication again, and boldly spoke myself with him, at which he gave me no answer. I told him if he would permit me to depart, I would be a means that both the English and Hollanders should come and traffic there. But by no means he would let me go. I asked him leave for the captain, the which he presently granted me. So by that means my captain got leave, and in a Japan junk sailed to Pattan; and in a year's space came to Hollanders. In the end, he went from Patane to Ior, where he found a fleet of nine sail, of which fleet Matleef was general, and in this fleet he was made master again, which fleet sailed to Malacca and fought with an armado of Portugal; in which battle he was shot and presently died; so that, as I think, no certain news is known whether I be living or dead. Therefore I do pray and entreat you in the name of Jesus Christ to do so much as to make my being here in Japan known to my poor wife, in a manner a widow and my two children fatherless; which thing only is my greatest grief of heart and conscience. I am a man not unknown in Ratcliffe and Limehouse, by name to my good Master Nicholas Diggines and M. Thomas Best and M. Nicholas Isaac and William Isaac, brothers, with many others; also to M. William Jones and M. Becket. Therefore may this letter come to any of their hands or the copy, I do know that compassion and mercy is so that my friends and kindred shall have news that I do as yet live in this vale of my sorrowful pilgrimage; the which thing again and again I do desire for Jesus Christ his sake.

Mayflower Compact

Date: November 11, 1620

Often regarded as the first constitutional document of the colonies, the Mayflower Compact was an agreement signed by settlers aboard the ship Mayflower off Cape Cod, on November 11, 1620, prior to their settlement at Plymouth in what became the colony and later the state of Massachusetts.

The central core group of the 102 English colonists who sailed to North America on the Mayflower in 1620 was a group of 41 Puritan Separatist Congregationalists. We refer to them as the Pilgrims.

The Anglican Church had been established and had been the church authority in England after the split with the Catholic Church. These Puritan Separatists believed that the Anglican Church was still too close to the Catholic Church in organization and in traditions of ceremonies. They rejected the ideas of hierarchical authority within the church and favored the concept of local authority within each church congregation. By establishing their own separatist congregations, they were pursued by the authorities of the established church and fined and imprisoned. Many fled in mass to Holland in 1608, where the Dutch churches had much greater independence and reform.

A minority of these Puritan Separatist English exiles in Holland believed that the New World would offer them even greater independence and religious freedoms. Their representatives, Deacon John Carver and Robert Cushman, negotiated with Thomas Weston and with Weston's merchant investors to form a joint-stock company in 1619. This new company was similar in concept to the Virginia Company and other English venture groups. Their company contract deemed that all property and profits of the new settlement become the communal property of the company for profit for a period of seven years. Their ship was bound for Jamestown and the Virginia Colony.

The Virginia Colony had already established governance and law. Their ship, the Mayflower, arrived off the coast of Cape Cod on November 11, 1620. These new settlers were to be put ashore in an area outside of the bounds of the Virginia Colony. This created two new issues: first, that there was no existing establishment of governance and of the king's law there, and, second, that the Pilgrims were outside of the domain of the original company charter and contract.

Owing to these new circumstances, the Puritan leaders created a compact—or agreement—by which all Puritan and non-Puritan settlers would unite together as one colony rather than splitting up and creating separate settlements. All 41 adult men on board the Mayflower agreed to sign the Mayflower Compact, in which they agreed to accept a democratically elected communal government and to establish a rule of law. The Mayflower anchored in Plymouth Bay on December 16, 1620 and the Plymouth Colony was established.

Agreement Between the Settlers at New Plymouth : 1620

IN THE NAME OF GOD, AMEN. We, whose names are underwritten, the Loyal Subjects of our dread Sovereign Lord King James, by the Grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith, &c. Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a Voyage to plant the first Colony in the northern Parts of Virginia; Do by these Presents, solemnly and mutually, in the Presence of God and one another, covenant and combine ourselves together into a civil Body Politick, for our better Ordering and Preservation, and Furtherance of the Ends aforesaid: And by Virtue hereof do enact, constitute, and frame, such just and equal Laws, Ordinances, Acts, Constitutions, and Officers, from time to time, as shall be thought most meet and convenient for the general Good of the Colony; unto which we promise all due Submission and Obedience. IN WITNESS whereof we have hereunto subscribed our names at Cape-Cod the eleventh of November, in the Reign of our Sovereign Lord King James, of England, France, and Ireland, the eighteenth, and of Scotland the fifty-fourth, Anno Domini; 1620.

René Descartes: *Discourse on Method*

Also known as: *Discours de la méthode*

Date: 1637

Metaphysical essay written by French philosopher René Descartes and published anonymously in 1637 containing his "method," through which, Descartes held, one could attain certainty with regard to the truth of ideas. His method stipulated that one could not accept anything as true unless all doubt as to its truth could be dispelled, and that all opinions that were not understood with perfect clarity had to be analyzed systematically and in detail. Descartes also acknowledged the possibility that all man's beliefs could be false and, consequently, that truth might never be known definitively by man. This possibility Descartes dismissed with his dictum "Cogito, ergo sum" ("I think, therefore I am"), a dictum that, according to Descartes, was indubitable and therefore proof that absolute certainty could be attained. The famous essay served as a preface to a book containing his works, Geometry, Dioptrics and Meteors.

PART 1

Good sense is, of all things among men, the most equally distributed; for every one thinks himself so abundantly provided with it, that those even who are the most difficult to satisfy in everything else, do not usually desire a larger measure of this quality than they already possess. And in this it is not likely that all are mistaken the conviction is rather to be held as testifying that the power of judging aright and of distinguishing truth from error, which is properly what is called good sense or reason, is by nature equal in all men; and that the diversity of our opinions, consequently, does not arise from some being endowed with a larger share of reason than others, but solely from this, that we conduct our thoughts along different ways, and do not fix our attention on the same objects.

For myself, I have never fancied my mind to be in any respect more perfect than those of the generality; on the contrary, I have often wished that I were equal to some others in promptitude of thought, or in clearness and distinctness of imagination, or in fullness and readiness of memory. And besides these, I know of no other qualities that contribute to the perfection of the mind; for as to the reason or sense, inasmuch as it is that alone which constitutes us men, and distinguishes us from the brutes, I am disposed to believe that it is to be found complete in each individual; and on this point to adopt the common opinion of philosophers, who say that the difference of greater and less holds only among the accidents, and not among the forms or natures of individuals of the same species.

From my childhood, I have been familiar with letters; and as I was given to believe that by their help a clear and certain knowledge of all that is useful in life might be acquired, I was ardently desirous of instruction. But as soon as I had finished the entire course of study, at the close of which it is customary to be admitted into the order of the learned, I completely changed my opinion. For I found myself involved in so many doubts and errors, that I was convinced I had advanced no farther in all my attempts at learning, than the discovery at every turn of my own ignorance. And yet I was studying in one of the most celebrated schools in Europe, in which I thought there must be learned men, if such were anywhere to be found. I had been taught all that others learned there; and not contented with the sciences actually taught us, I had, in addition, read all the books that had fallen into my hands, treating of such branches as are esteemed the most curious and rare. I knew the judgment which others had formed of me; and I did not find that I was considered inferior to my fellows, although there were among them some who were already marked out to fill the places of our instructors. And, in fine, our age appeared to me as flourishing, and as fertile in powerful minds as any preceding one. I was thus led to take the liberty of judging of all other men by myself, and of concluding that there was no science in existence that was of such a nature as I had previously been given to believe.

I was especially delighted with the mathematics, on account of the certitude and evidence of their reasonings; but I had not as yet a precise knowledge of their true use; and thinking that they but contributed to the advancement of the mechanical arts, I was astonished that foundations, so strong and solid, should have had no loftier superstructure reared on them. On the other hand, I compared the disquisitions of the ancient moralists to very towering and magnificent palaces with no better foundation than sand and mud: they laud the virtues very highly, and exhibit them as estimable far above anything on earth; but they give us no adequate criterion of virtue, and frequently that which they designate with so fine a name is but apathy, or pride, or despair, or parricide.

I revered our theology, and aspired as much as any one to reach heaven: but being given assuredly to understand that the way is not less open to the most ignorant than to the most learned, and that the revealed truths which lead to heaven are above our comprehension, I did not presume to subject them to the impotency of my reason; and I thought that in order competently to undertake their examination, there was need of some special help from heaven, and of being more than man.

Of philosophy I will say nothing, except that when I saw that it had been cultivated for many ages by the most distinguished men, and that yet there is not a single matter within its sphere which is not still in dispute,

and nothing, therefore, which is above doubt, I did not presume to anticipate that my success would be greater in it than that of others; and further, when I considered the number of conflicting opinions touching a single matter that may be upheld by learned men, while there can be but one true, I reckoned as well-nigh false all that was only probable.

It is true that, while busied only in considering the manners of other men, I found here, too, scarce any ground for settled conviction, and remarked hardly less contradiction among them than in the opinions of the philosophers. So that the greatest advantage I derived from the study consisted in this, that, observing many things which, however extravagant and ridiculous to our apprehension, are yet by common consent received and approved by other great nations, I learned to entertain too decided a belief in regard to nothing of the truth of which I had been persuaded merely by example and custom; and thus I gradually extricated myself from many errors powerful enough to darken our natural intelligence, and incapacitate us in great measure from listening to reason. But after I had been occupied several years in thus studying the book of the world, and in essaying to gather some experience, I at length resolved to make myself an object of study, and to employ all the powers of my mind in choosing the paths I ought to follow, an undertaking which was accompanied with greater success than it would have been had I never quitted my country or my books.

PART 2

. . . Among the branches of philosophy, I had, at an earlier period, given some attention to logic, and among those of the mathematics to geometrical analysis and algebra,—three arts or sciences which ought, as I conceived, to contribute something to my design. But, on examination, I found that, as for logic, its syllogisms and the majority of its other precepts are of avail—rather in the communication of what we already know, or even as the art of Lully, in speaking without judgment of things of which we are ignorant, than in the investigation of the unknown; and although this science contains indeed a number of correct and very excellent precepts, there are, nevertheless, so many others, and these either injurious or superfluous, mingled with the former, that it is almost quite as difficult to effect a severance of the true from the false as it is to extract a Diana or a Minerva from a rough block of marble. Then as to the analysis of the ancients and the algebra of the moderns, besides that they embrace only matters highly abstract, and, to appearance, of no use, the former is so exclusively restricted to the consideration of figures, that it can exercise the understanding only on condition of greatly fatiguing the imagination; and, in the latter, there is so complete a subjection to certain rules and formulas, that there results an art full of confusion and obscurity calculated to embarrass, instead of a science fitted to cultivate the mind. By these considerations I was induced to seek some other method which would comprise the advantages of the three and be exempt from their defects. And as a multitude of laws often only hampers justice, so that a state is best governed when, with few laws, these are rigidly administered; in like manner, instead of the great number of precepts of which logic is composed, I believed that the four following would prove perfectly sufficient for me, provided I took the firm and unwavering resolution never in a single instance to fail in observing them.

The first was never to accept anything for true which I did not clearly know to be such; that is to say, carefully to avoid precipitancy and prejudice, and to comprise nothing more in my judgement than what was presented to my mind so clearly and distinctly as to exclude all ground of doubt.

The second, to divide each of the difficulties under examination into as many parts as possible, and as might be necessary for its adequate solution.

The third, to conduct my thoughts in such order that, by commencing with objects the simplest and easiest to know, I might ascend by little and little, and, as it were, step by step, to the knowledge of the more complex; assigning in thought a certain order even to those objects which in their own nature do not stand in a relation of antecedence and sequence.

And the last, in every case to make enumerations so complete, and reviews so general, that I might be assured that nothing was omitted.

The long chains of simple and easy reasonings by means of which geometers are accustomed to reach the conclusions of their most difficult demonstrations, had led me to imagine that all things, to the knowledge of which man is competent, are mutually connected in the same way, and that there is nothing so far removed from us as to be beyond our reach, or so hidden that we cannot discover it, provided only we abstain from accepting the false for the true, and always preserve in our thoughts the order necessary for the deduction of one truth from another. And I had little difficulty in determining the objects with which it was necessary to commence, for I was already persuaded that it must be with the simplest and easiest to know, . . .

In this way I believed that I could borrow all that was best both in geometrical analysis and in algebra, and correct all the defects of the one by help of the other.

PART 4

I am in doubt as to the propriety of making my first meditations in the place above mentioned matter of discourse; for these are so metaphysical, and so uncommon, as not, perhaps, to be acceptable to every one. And yet, that it may be determined whether the foundations that I have laid are sufficiently secure, I find myself in

a measure constrained to advert to them. I had long before remarked that, in relation to practice, it is sometimes necessary to adopt, as if above doubt, opinions which we discern to be highly uncertain, as has been already said; but as I then desired to give my attention solely to the search after truth, I thought that a procedure exactly the opposite was called for, and that I ought to reject as absolutely false all opinions in regard to which I could suppose the least ground for doubt, in order to ascertain whether after that there remained aught in my belief that was wholly indubitable. Accordingly, seeing that our senses sometimes deceive us, I was willing to suppose that there existed nothing really such as they presented to us; and because some men err in reasoning, and fall into paralogisms, even on the simplest matters of geometry, I, convinced that I was as open to error as any other, rejected as false all the reasonings I had hitherto taken for demonstrations; and finally, when I considered that the very same thoughts (presentations) which we experience when awake may also be experienced when we are asleep, while there is at that time not one of them true, I supposed that all the objects (presentations) that had ever entered into my mind when awake, had in them no more truth than the illusions of my dreams. But immediately upon this I observed that, whilst I thus wished to think that all was false, it was absolutely necessary that I, who thus thought, should be somewhat; and as I observed that this truth, I think, therefore I am (COGITO ERGO SUM), was so certain and of such evidence that no ground of doubt, however extravagant, could be alleged by the sceptics capable of shaking it, I concluded that I might, without scruple, accept it as the first principle of the philosophy of which I was in search.

In the next place, I attentively examined what I was and as I observed that I could suppose that I had no body, and that there was no world nor any place in which I might be; but that I could not therefore suppose that I was not; and that, on the contrary, from the very circumstance that I thought to doubt of the truth of other things, it most clearly and certainly followed that I was; while, on the other hand, if I had only ceased to think, although all the other objects which I had ever imagined had been in reality existent, I would have had no reason to believe that I existed; I thence concluded that I was a substance whose whole essence or nature consists only in thinking, and which, that it may exist, has need of no place, nor is dependent on any material thing; so that “I,” that is to say, the mind by which I am what I am, is wholly distinct from the body, and is even more easily known than the latter, and is such, that although the latter were not, it would still continue to be all that it is.

British Bill of Rights

Date: 1689

Following the “Glorious Revolution” of 1688, which overthrew King James II and installed Mary and William of Orange on the English throne, Parliament secured a bill of rights. Many of the provisions of this document were later emulated in colonial charters in the English colonies in the New World, and, later, in the Constitution and Bill of Rights of the United States of America. The following text is drawn from the official Revised Statutes, 1871.

Whereas the said late King James II having abdicated the government, and the throne being thereby vacant, his Highness the prince of Orange (whom it hath pleased Almighty God to make the glorious instrument of delivering this kingdom from popery and arbitrary power) did (by the advice of the lords spiritual and temporal, and diverse principal persons of the Commons) cause letters to be written to the lords spiritual and temporal, being Protestants, and other letters to the several counties, cities, universities, boroughs, and Cinque Ports, for the choosing of such persons to represent them, as were of right to be sent to parliament, to meet and sit at Westminster upon the two and twentieth day of January, in this year 1689, in order to such an establishment as that their religion, laws, and liberties might not again be in danger of being subverted; upon which letters elections have been accordingly made.

And thereupon the said lords spiritual and temporal and Commons, pursuant to their respective letters and elections, being new assembled in a full and free representation of this nation, taking into their most serious consideration the best means for attaining the ends aforesaid, do in the first place (as their ancestors in like case have usually done), for the vindication and assertion of their ancient rights and liberties, declare:

1. That the pretended power of suspending laws, or the execution of laws, by regal authority, without consent of parliament is illegal.

2. That the pretended power of dispensing with the laws, or the execution of law by regal authority, as it hath been assumed and exercised of late, is illegal.

3. That the commission for erecting the late court of commissioners for ecclesiastical causes, and all other commissions and courts of like nature, are illegal and pernicious.

4. That levying money for or to the use of the crown by pretense of prerogative, without grant of parliament, for longer time or in other manner than the same is or shall be granted, is illegal.

5. That it is the right of the subjects to petition the king, and all commitments and prosecutions for such petitioning are illegal.

6. That the raising or keeping a standing army within the kingdom in time of peace, unless it be with consent of parliament, is against law.

7. That the subjects which are Protestants may have arms for their defense suitable to their conditions, and as allowed by law.

8. That election of members of parliament ought to be free.

9. That the freedom of speech, and debates or proceedings in parliament, ought not to be impeached or questioned in any court or place out of parliament.

10. That excessive bail ought not to be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

11. That jurors ought to be duly impaneled and returned, and jurors which pass upon men in trials for high treason ought to be freeholders.

12. That all grants and promises of fines and forfeitures of particular persons before conviction are illegal and void.

13. And that for redress of all grievances, and for the amending, strengthening, and preserving of the laws, parliament ought to be held frequently.

And they do claim, demand, and insist upon all and singular the premises, as their undoubted rights and liberties. . . .

Having therefore an entire confidence that his said Highness the prince of Orange will perfect the deliverance so far advanced by him, and will still preserve them from the violation of their rights, which they have here asserted, and from all other attempt upon their religion, rights, and liberties:

The said lords spiritual and temporal, and commons, assembled at Westminster, do resolve that William and Mary, prince and princess of Orange, be, and be declared, king and queen of England, France, and Ireland. . . .

Upon which their said Majesties did accept the crown and royal dignity of the kingdoms of England, France, and Ireland, and the dominions thereunto belonging, according to the resolution and desire of the said lords and commons contained in the said declaration.

Act to Settle the Trade to Africa

Date: 1698

The act of Parliament ending the Royal African Company's monopoly on the British slave trade. Under a 1672 charter from the British parliament, the Royal African Company's shareholders held exclusive rights to trade in slaves from Africa. In 1698, Parliament yielded to the mounting demands of rival English merchants and opened the slave trade to all. However, the 1698 act declared the forts maintained by the RAC on Gold Coast "undoubtedly necessary" for the success of the trade. Newcomers to the trade were given permission to practice as "separate traders," but expected—as were all merchants who traded to Africa—to contribute to the maintenance of the forts.

These independent traders were required to pay a 10 percent tax to the Royal African Company on all exports to Africa, as well as an additional 10 percent on all direct imports to Britain from Northwest Africa between Capes Blanco and Monte. Exports to the Americas, including slaves, were not taxed. In return for their support, traders were granted rights at the company's forts. Despite the alleged benefits, the "Ten-Per-centers," as these independent merchants came to be known, complained about the imposed taxes and often paid them late or not at all. The taxes were finally remitted altogether in 1712. With the end of the Royal African Company's monopoly, the number of slaves transported on English ships would increase dramatically, to an average of over 20,000 a year. By the end of the 17th century, England led the world in the trafficking of slaves.

The original spellings have been retained in this excerpt.

I. Whereas the Trade to Africa is highly beneficial and advantageous to this kingdom, and to the Plantations and Colonies thereunto belonging: and whereas Forts and Castles are undoubtedly necessary for the preservation and well carrying on the said Trade. . . . Be it therefore enacted by the King's most Excellent Majesty and by and with the Advice and Consent of the Lords Spiritual and Temporal and Commons in Parliament assembled and by the Authority of the same That from and after the Four and twentieth Day of June in the Year One thousand six hundred ninety and eight the said Royal African Company their Successors and Assigns by and with their Stock, and Duties herein after appointed to be paid, shall maintain, support and defend all such Forts and Castles as the said African Company now have in their Possession or shall hereafter purchase or erect . . . and at all times hereafter as occasion shall require shall supply with Men Artillery, Ammunition and Provision, and all other Necessaries and incident Charges whatsoever.

II. And the better to enable the said Royal African Company, their Successors and Assigns, to maintain the said Castles and Forts and for the Preservation and well carrying on the said Trade to and for the Advantage of England and the Plantations and Colonies thereunto belonging: Be it further enacted That it shall and may be lawfull to and for any of the Subjects of His Majesties Realm of England as well as for the said Company from and after the said Four and Twentieth Day of June to trade from England, and from and after the First of August One thousand six hundred ninety and eight from any of His Majesties Plantations and Colonies in America, to and for the Coast of Africa between Cape Mount and the Cape of Good Hope, the said Company and all other the said Subjects answering and paying for the Uses aforesaid a Duty of Ten Pounds per Centum ad Valorem for [of the value of] the Goods and Merchandize to be exported from England or from any of His Majesties Plantations or Colonies in America to and for the Coast of Africa between Cape Mount and the Cape of Good Hope and in proportion for a greater or lesser Value in Manner and Forme as herein after expressed. . . .

XIV. Provided always and be it enacted by the Authority aforesaid That all Persons being the natural born Subjects of England trading to the Coast of Africa as aforesaid and paying the Duties by this Act imposed, shall have the same Protection Security and Defence for their Persons Ships and Goods by from and in all the said Forts and Castles and the like Freedom and Security for their Negotiations and Trade to all Intents and Purposes whatsoever as the said Company their Agents Factors and Assigns and their Ships and Goods have, may or shall have, and that all and every person and Persons trading to Africa and paying the Duties as aforesaid may and are hereby impowered at their own Charge to Settle Factories [establishments for traders carrying on business in a foreign country] on any part of Africa within the Limits aforesaid according as they shall judge necessary and convenient for the carrying on their Trade without any Lett Hindrance or Molestation from the said Company, their Agents Factors or Assigns, and that all Persons not Members of the said Company so trading and paying the said Duties as aforesaid shall, together with their Shippes and Goods, be free from all Molestations Hindrances Restraints Arrests Seizures Penalties or other Impositions whatsoever from the said Company, their Agents Factors or Assigns, for or by reason of their so trading, Any Charter Usage or Custom to the contrary in any wise notwithstanding. . . .

XX. And be it enacted by the Authority aforesaid, That no Governor or Deputy Governor of any of his Majesties Colonies or Plantations in America or His Majesties Judges in any Courts there for the time being nor any other Person or Persons for the use or on behalf of such Governor or Deputy Governor or Judges from and after the Nine and twentieth Day of September One thousand six hundred ninety eight shall be a Factor or Factors, Agent or Agents for the said Company, or any other Person or Persons for the Sale or disposal of any Negroes and that every Person offending herein shall Forfeit Five hundred pounds . . .

Provided that this Act shall continue and be in Force Thirteen Years and thence to the end of the next Sessions of Parliament and no longer.

Treaty of Utrecht

Date: 1713

The Treaty of Utrecht ended the War of the Spanish Succession as well as its North American phase, Queen Anne's War. Not only did the treaty bring about a basic equilibrium in Europe until about 1740, it established the foundation of the English hegemony in North America, giving to Great Britain the Hudson Bay region, Nova Scotia, and Newfoundland. By the Anglo-Spanish agreement that is part of the Treaty of Utrecht (signed

July 13, 1713), Spain ceded Gibraltar and Minorca to Great Britain and the asientio (privilege) of exclusively introducing African slaves into its American possessions, a right that was subsequently extended to general trading privileges. The Utrecht documents and an additional agreement, the Treaty of Rastadt (March 16, 1714), marked the end of French aggrandizement under the ancien régime and the dramatic diminution of Spain as a power among the European states.

All Offenses, Injurys, and Damages, which the aforesaid Queen of Great Britain, and her subjects, or the aforesaid most Christian King, and his Subjects, have suffered the one from the other, during the War, shall be buried in Oblivion; so that neither on account, or under pretence thereof, or of any other thing, shall either hereafter, of the Subjects of either, do or give, cause or suffer to be done or given to the other, any Hostility, Enmity, Molestation, or Hindrance, by themselves, or by others, secretly or openly, directly or indirectly, under color of Right, or by any way of fact.

More specifically, the treaty acknowledged that “the most destructive Flame of War . . . arose chiefly from hence, that the Security and Libertys of Europe could by no means bear the Union of the Kingdoms of France and Spain under one and the same King” and made its principal thrust clear: “that this Evil”—the union of France and Spain under one crown—“should in all times to come be obviated, by means of Renunciations drawn in the most effectual Form, and executed in the most solemn Manner.”

TREATY OF UTRECHT

Whereas the most destructive Flame of War which is to be extinguished by this Peace, arose chiefly from hence, that the Security and Libertys of Europe could by no means bear the Union of the Kingdoms of France and Spain under one and the same King; And whereas it has at length been brought to pass by the Assistance of the Divine Power, upon the most earnest Instances of her Sacred Royal Majesty of Great Britain, and with the Consent both of the most Christian and of the Catholick King, that this Evil should in all times to come be obviated, by means of Renunciations drawn in the most effectual Form, and executed in the most solemn Manner, the Tenor whereof is as follows.

LETTERS PATENT BY THE KING, WHICH ADMIT THE RENUNCIATION OF THE KING OF SPAIN TO THE CROWN OF FRANCE, AND THOSE OF MONSIEUR THE DUKE OF BERRY AND OF MONSIEUR THE DUKE OF ORLÉANS, TO THE CROWN OF SPAIN.

LEWIS, by the Grace of God, King of France and Navarre: To all People present and to come, Greeting. During the various Revolutions of a War, wherein we have fought only to maintain the Justice of the Rights of the King, our most dear and most beloved Grandson to the Monarchy of Spain, we have never ceased to desire Peace. The greatest Successes did not at all dazzle us, and the contrary Events, which the Hand of God made use of to try us rather than to destroy us, did not give birth to that Desire in us, but found it there. But the Time marked out by Divine Providence for the Repose of Europe was not yet come; the distant Fear of seeing one Day our Crown and that of Spain upon the Head of one and the same Prince, did always make an equal Impression on the Powers which were united against us; and this Fear, which had been the principal Cause of the War, seemed also to lay an insuperable Obstacle in the way to Peace. At last, after many fruitless Negotiations, God being moved with the Sufferings and Groans of so many People, was pleased to open a surer way to come at so difficult a Peace. But the same Alarms still subsisting, the first and principal Condition, which was proposed to us by our most dear and most beloved Sister the Queen of Great Britain, as the essential and necessary Foundation of Treating, was, That the King of Spain, our said Brother and Grandson, keeping the Monarchy of Spain and of the Indies, should renounce for himself and his Descendants for ever, the Rights which his Birth might at any time give him and them to our Crown; that on the other hand, our most dear and most beloved Grandson the Duke of Berry, and our most dear and most beloved Nephew the Duke of Orleans, should likewise renounce for themselves, and for their Descendants, Male and Female for ever, their Rights to the Monarchy of Spain and the Indies. Our said Sister caused it to be represented to us, that without a formal and positive Assurance upon this Point, which alone could be the Bond of Peace, Europe would never be at rest; all the Powers which share the same being equally persuaded, That it was for their general Interest, and for their common Security, to continue a War, whereof no one could foresee the End, rather than to be exposed to behold the same Prince become one day Master of two Monarchys, so powerful as those of France and Spain. But as this Princess (whose indefatigable Zeal for re-establishing the general Tranquillity we cannot sufficiently praise) was sensible of all the Reluctancy we had to consent that one of our Children, so worthy to inherit the Succession of our Forefathers, should necessarily be excluded from it, if the Misfortunes wherewith it has pleased God to afflict us in our Family, should moreover take from us, in the Person of the Dauphin, our most dear and most beloved great Grandson, the only Remainder of those Princes which our Kingdom has so justly lamented with us; she entered into our Pain, and after having jointly sought out gentler means of securing the Peace, we agreed with our said Sister to propose the King of Spain other Dominions, inferior indeed to those which he possesses, yet the Value thereof would so much the more

increase under his Reign, in as much as in that case he would preserve his Rights, and annex to our Crown a part of the said Dominions, if he came one time or other to succeed us. We employed therefore the strongest Reasons to persuade him to accept this Alternative. We gave him to understand, that the Duty of his Birth was the first which he ought to consult; that he owed himself to his House, and to his Country, before he was obliged to Spain; that if he were wanting to his first Engagements, he would perhaps one day in vain regret his having abandoned those Rights, which he would be no more able to maintain. We added to these Reasons the personal motives of Friendship and of tender Love, which we thought likely to move him; the Pleasure we should have in seeing him from time to time near us, and in passing some part of our days with him, which we might promise ourselves from the Neighborhood of the Dominions that were offered him; the Satisfaction of instructing him ourselves concerning the State of our Affairs, and of relying upon him for the future; so that, if God should preserve to us the Dauphin, we could give our Kingdom, in the Person of the King our Brother and Grandson, a Regent instructed in the Art of Government; and that, if this Child so precious to us and to our Subjects, were also taken from us, we shou'd at least have the Consolation of leaving to our People a virtuous King, fit to govern them, and who would likewise annex to our Crown very considerable Dominions. Our Instances, reiterated with all the force, and with all the tender affection necessary to persuade a Son who so justly deserves those Efforts which we made for preserving him to France, produced nothing but reiterated Refusals on his part, ever to abandon such brave and faithful Subjects, whose Zeal for him had been distinguished in those Conjunctions, when his Throne seemed to be the most shaken. So that persisting with an invincible Firmness in his first Resolution, asserting likewise, that it was more glorious and more advantageous for our House, and for our Kingdom, than that which we pressed him to take, he declared in the Meeting of the States of the Kingdom of Spain, assembled at Madrid for that purpose, that for obtaining a general Peace, and securing the Tranquillity of Europe by a Ballance of Power, he of his own proper Motion, of his own free Will, and without any Constraint, renounced for himself, for his Heirs and Successors for ever and ever, all Pretensions, Rights and Titles, which he, or any of his Descendants, have at present, or may have at any time to come whatsoever, to the Succession of our Crown: That he held for excluded therefrom himself, his Children, Heirs, and Descendants for ever: That he consented for himself and for them, that now, as well as then, his Right, and that of his Descendants, should pass over and be transferred to him among the Princes, whom the Law of Succession, and the Order of Birth calls, or shall call to inherit our Crown, in default of our said Brother and Grandson the King of Spain, and of his Descendants, as it is more amply specified in the Act of Renunciation, approved by the States of his Kingdom; and consequently he declared, that he desisted particularly from the Right which hath been added to that of his Birth, by our Letters Patent of the Month of December 1700, whereby we declared, that it was our Will, that the King of Spain and his Descendants should always preserve the Rights of their Birth and Original, in the same manner as if they resided actually in our Kingdom; and from the Registry which was made of our said Letters Patent, both in our Court of Parliament, and in our Chamber of Accounts at Paris, we are sensible as King and as Father, how much it were to be desired that the general Peace could have been concluded without a Renunciation, which makes so great a Change in our Royal House, and in the ancient Order of succeeding to our Crown: but we are yet more sensible how much it is our Duty to secure speedily to our Subjects a Peace which is so necessary for them. We shall never forget the Efforts which they made for us, during the long continuance of a War, which we could not have supported, if their Zeal had not been much more extensive than their Power. The Welfare of a People so faithful, is to us a supreme Law, which ought to be preferred to any other Consideration. It is to this Law that We this day sacrifice the Right of a Grandson, who is so dear to us; and by the Price which the general Peace will cost our tender Love, we shall at least have the Comfort of shewing our Subjects, that even at the Expence of our Blood, they will always keep the first place in our Heart.

For these Causes, and other important Considerations us thereunto moving, after having seen in our Council the said Act of Renunciation of the King of Spain our said Brother and Grandson, of the fifth of November last, as also the Acts of Renunciations, which our said Grandson the Duke of Berry, and our said Nephew the Duke of Orleans, made reciprocally of their Rights to the Crown of Spain, as well for themselves as for their Descendants Male and Female, in consequence of the Renunciation of our said Brother and Grandson the King of Spain, the whole hereunto annexed, with a Copy collated of the said Letters Patent of the Month of December 1700, under the Counter-Seal of our Chancery; of our special Grace, full Power, and Royal Authority, we have declared, decreed and ordained, and by these Presents signed with our Hand, we do declare, decree and ordain, we will, and it is our Pleasure, That the said Act of Renunciation of our said Brother and Grandson the King of Spain, and those of our said Grandson the Duke of Berry, and of our said Nephew the Duke of Orleans, which we have admitted, and do admit, be registered in all our Courts of Parliament, and Chambers of our Accounts in our Kingdom, and other Places where it shall be necessary, in order to their being executed according to their Form and Tenor. And consequently, we will and intend, that our said Letters Patent of the Month of December 1700, be and remain null, and as if they had never been made; that they be brought back to us, and that in the Margin of the Registers of our said Court of Parliament, and of our said Chamber of Accounts, where the Enrolment of the said Letters Patent is, the Extract of these Presents be placed and inserted, the better to signify our Intention as to the Revocation, and Nullity of the said

Letters. We will that in conformity to the said Act of Renunciation of our said Brother and Grandson the King of Spain, he be from henceforth looked upon and considered as excluded from our Succession; that his Heirs, Successors, and Descendants be likewise excluded for ever, and looked upon as incapable of enjoying the same. We understand that in failure of them, all Rights to our said Crown, and succession to our Dominions, which might at any time whatsoever belong and appertain to them, be and remain transferred to our most dear, and most beloved Grandson the Duke of Berry, and to his Children and Descendants, being Males born in lawful Marriage; and successively in failure of them, to those of the Princes of our Royal House, and their Descendants, who in Right of their Birth, or by the Order established since the Foundation of our Monarchy, ought to succeed to our Crown. And so we command our beloved and trusty Counsellors, the Members of our Court of Parliament at Paris, that they do cause these Presents, together with the Acts of Renunciation made by our said Brother and Grandson the King of Spain, by our said Grandson the Duke of Berry, and by our said Nephew the Duke of Orleans, to be read, publish'd and registered, and the Contents thereof to be kept, peaceably, and perpetually; ceasing, and causing to cease all Molestations and Hindrances, notwithstanding any Laws, Statutes, Usages, Customs, Decrees, Regulations, and other matters contrary thereunto: whereto, and to the Derogations of the Derogations therein contained, we have derogated, and do derogate by these Presents, for this purpose only and without being brought into Precedent. For such is our Pleasure.

And to the end that this may be a matter firm and lasting for ever, we have caused our Seal to be affixed to these Presents. Given at Versailles, in the Month of March in the Year of our Lord 1713, and of our Reign the 70th. Sign'd Lewis, and underneath, by the King, Phelypeaux. Visé, Phelypeaux. And sealed with the Great Seal on green Wax, with strings of red and green Silk.

Read and published, the Court being assembled, and registered among the Rolls of the Court, the King's Attorney General being heard and moving for the same, to the end that they may be executed according to their Form and Tenor, in pursuance of, and in conformity to, the Acts of this Day. At Paris, in Parliament the 15th of March, 1713.

Sign'd
DONGOIS

For his part, King Philip V of Spain reciprocally renounced any claim to the French throne for himself or his heirs. By the July 13, 1713, agreement, Spain pledged "free Use of Navigation and Commerce" between itself and England, ceded Minorca and Gibraltar, and, through the Pacto de el Assiento de Negros, granted Great Britain an exclusive right to introduce African slaves into her American possessions.

PRIMARY DOCUMENTS: AGE OF REVOLUTION AND EMPIRE—1750 TO 1900

Jean-Jacques Rousseau: *The Social Contract*

Also known as: *Du contrat social*

Date: 1762

Rousseau's Du contrat social; ou principes du droit politique was first published in Amsterdam in 1762. The French philosopher Jean-Jacques Rousseau stated the concept of a social contract as the basis of society. Unlike John Locke, who saw such a contract between the governed and the governors, Rousseau perceived the contract as being between all people of a society. He grounded his idea of liberties on the basis of a natural law, and those he influenced began to speak of natural rights.

In Rousseau's view, all members of society were equal and therefore shared equal obligations to the society at large. The will of society at large became the general will, and each individual was therefore obligated to surrender his rights to the general will. The general will would be represented by the state, and the state should be headed by a responsible monarch. An arrangement such as this was considered ideal, as all citizens would retain equality with respect to one another. Citizens would retain ultimate power as they had the right to remove the king from power at will.

ORIGIN AND TERMS OF THE SOCIAL CONTRACT

Man was born free, but everywhere he is in chains. This man believes that he is the master of others, and still he is more of a slave than they are. How did that transformation take place? I don't know. How may the restraints on man become legitimate? I do believe I can answer that question. . . .

At a point in the state of nature when the obstacles to human preservation have become greater than each individual with his own strength can cope with. . . . , an adequate combination of forces must be the result of men coming together. Still, each man's power and freedom are his main means of selfpreservation. How is he to put them under the control of others without damaging himself . . . ?

This question might be rephrased: "How is a method of associating to be found which will defend and protect—using the power of all—the person and property of each member and still enable each member of the group to obey only himself and to remain as free as before?" This is the fundamental problem; the social contract offers a solution to it.

The very scope of the action dictates the terms of this contract and renders the least modification of them inadmissible, something making them null and void. Thus, although perhaps they have never been stated in so many words, they are the same everywhere and tacitly conceded and recognized everywhere. And so it follows that each individual immediately recovers his primitive rights and natural liberties whenever any violation of the social contract occurs and thereby loses the contractual freedom for which he renounced them.

The social contract's terms, when they are well understood, can be reduced to a single stipulation: the individual member alienates himself totally to the whole community together with all his rights. This is first because conditions will be the same for everyone when each individual gives himself totally, and secondly, because no one will be tempted to make that condition of shared equality worse for other men. . . .

Once this multitude is united this way into a body, an offense against one of its members is an offense against the body politic. It would be even less possible to injure the body without its members feeling it. Duty and interest thus equally require the two contracting parties to aid each other mutually. The individual people should be motivated from their double roles as individuals and members of the body, to combine all the advantages which mutual aid offers them. . . .

INDIVIDUAL WILLS AND THE GENERAL WILL

In reality, each individual may have one particular will as a man that is different from—or contrary to—the general will which he has as a citizen. His own particular interest may suggest other things to him than the common interest does. His separate, naturally independent existence may make him imagine that what he owes to the common cause is an incidental contribution—a contribution which will cost him more to give than their failure to receive it would harm the others. He may also regard the moral person of the State as an imaginary being since it is not a man, and wish to enjoy the rights of a citizen without performing the duties of a subject. This unjust attitude could cause the ruin of the body politic if it became widespread enough.

So that the social pact will not become meaningless words, it tacitly includes this commitment, which alone gives power to the others: Whoever refuses to obey the general will shall be forced to obey it by the whole body politic, which means nothing else but that he will be forced to be free. This condition is indeed the one which by dedicating each citizen to the fatherland gives him a guarantee against being personally

dependent on other individuals. It is the condition which all political machinery depends on and which alone makes political undertakings legitimate. Without it, political actions become absurd, tyrannical, and subject to the most outrageous abuses.

Whatever benefits he had in the state of nature but lost in the civil state, a man gains more than enough new ones to make up for them. His capabilities are put to good use and developed; his ideas are enriched, his sentiments made more noble, and his soul elevated to the extent that-if the abuses in this new condition did not often degrade him to a condition lower than the one he left behind-he would have to keep blessing this happy moment which snatched him away from his previous state and which made an intelligent being and a man out of a stupid and very limited animal. . . .

PROPERTY RIGHTS

In dealing with its members, the State controls all their goods under the social contract, which serves as the basis for all rights within the State, but it controls them only through the right of first holder which individuals convey to the State. . . .

A strange aspect of this act of alienating property rights to the state is that when the community takes on the goods of its members, it does not take these goods away from them. The community does nothing but assure its members of legitimate possession of goods, changing mere claims of possession into real rights and customary use into property. . . . Through an act of transfer having advantages for the public but far more for themselves they have, so to speak, really acquired everything they gave up. . . .

INDIVISIBLE, INALIENABLE SOVEREIGNTY

The first and most important conclusion from the principles we have established thus far is that the general will alone may direct the forces of the State to achieve the goal for which it was founded, the common good. . . . Sovereignty is indivisible . . . and is inalienable. . . . A will is general or it is not: it is that of the whole body of the people or only of one faction. In the first instance, putting the will into words and force is an act of sovereignty: the will becomes law. In the second instance, it is only a particular will or an administrative action; at the very most it is a decree.

Our political theorists, however, unable to divide the source of sovereignty, divide sovereignty into the ways it is applied. They divide it into force and will; into legislative power and executive power; into the power to tax, the judicial power, and the power to wage war; into internal administration and the power to negotiate with foreign countries. Now we see them running these powers together. Now they will proceed to separate them. They make the sovereign a being of fantasy, composed of separate pieces, which would be like putting a man together from several bodies, one having eyes, another arms, another feet-nothing more. Japanese magicians are said to cut up a child before the eyes of spectators, then throw the pieces into the air one after the other, and then cause the child to drop down reassembled and alive again. That is the sort of magic trick our political theorists perform. After having dismembered the social body with a trick worthy of a travelling show, they reassemble the pieces without anybody knowing how. . . .

If we follow up in the same way on the other divisions mentioned, we find that we are deceived every time we believe we see sovereignty divided. We find that the jurisdictions we have thought to be exercised as parts of sovereignty in reality are subordinate to the [one] sovereign power. They presuppose supreme wills, which they merely carry out in their jurisdictions. . . .

NEED FOR CITIZEN PARTICIPATION, NOT REPRESENTATION

It follows from the above that the general will is always in the right and inclines toward the public good, but it does not follow that the deliberations of the people always have the same rectitude. People always desire what is good, but they do not always see what is good. You can never corrupt the people, but you can often fool them, and that is the only time that the people appear to will something bad. . . .

If, assuming that the people were sufficiently informed as they made decisions and that the citizens did not communicate with each other, the general will would always be resolved from a great number of small differences, and the deliberation would always be good. But when blocs are formed, associations of parts at the expense of the whole, the will of each of these associations will be general as far as its members are concerned but particular as far as the State is concerned. Then we may say that there are no longer so many voters as there are men present but as many as there are associations. The differences will become less numerous and will yield less general results. Finally, when one of these associations becomes so strong that it dominates the others, you no longer have the sum of minor differences as a result but rather one single [unresolved] difference, with the result that there no longer is a general will, and the view that prevails is nothing but one particular view. . . .

But we must also consider the private persons who make up the public, apart from the public personified, who each have a life and liberty independent of it. It is very necessary for us to distinguish between the respective rights of the citizens and the sovereign and between the duties which men must fulfill in their role as subjects from the natural rights they should enjoy in their role as men.

It is agreed that everything which each individual gives up of his power, his goods, and his liberty under the social contract is only that part of all those things which is of use to the community, but it is also necessary to agree that the sovereign alone is the judge of what that useful part is.

All the obligations which a citizen owes to the State he must fulfill as soon as the sovereign asks for them, but the sovereign in turn cannot impose any obligation on subjects which is not of use to the community. If fact, the sovereign cannot even wish to do so, for nothing can take place without a cause according to the laws of reason, any more than according to the laws of nature [and the sovereign community will have no cause to require anything beyond what is of communal use. . . .

Government . . . is wrongly confused with the sovereign, whose agent it is. What then is government? It is an intermediary body established between the subjects and the sovereign to keep them in touch with each other. It is charged with executing the laws and maintaining both civil and political liberty. . . . The only will dominating government . . . should be the general will or the law. The government's power is only the public power vested in it. As soon as [government] attempts to let any act come from itself completely independently, it starts to lose its intermediary role. If the time should ever come when the [government] has a particular will of its own stronger than that of the sovereign and makes use of the public power which is in its hands to carry out its own particular will—when there are thus two sovereigns, one in law and one in fact—at that moment the social union will disappear and the body politic will be dissolved.

Once the public interest has ceased to be the principal concern of citizens, once they prefer to serve State with money rather than with their persons, the State will be approaching ruin. Is it necessary to march into combat? They will pay some troops and stay at home. Is it necessary to go to meetings? They will name some deputies and stay at home. Laziness and money finally leave them with soldiers to enslave their fatherland and representatives to sell it. . . .

Sovereignty cannot be represented. . . . Essentially, it consists of the general will, and a will is not represented: either we have it itself, or it is something else; there is no other possibility. The deputies of the people thus are not and cannot be its representatives. They are only the people's agents and are not able to come to final decisions at all. Any law that the people have not ratified in person is void, it is not a law at all.

SOVEREIGNTY AND CIVIL RELIGION

Now then, it is of importance to the State that each citizen should have a religion requiring his devotion to duty; however, the dogmas of that religion are of no interest to the State except as they relate to morality and to the duties which each believer is required to perform for others. For the rest of it, each person may have whatever opinions he pleases. . . .

It follows that it is up to the sovereign to establish the articles of a purely civil faith, not exactly as dogmas of religion but as sentiments of social commitment without which it would be impossible to be either a good citizen or a faithful subject. . . . While the State has no power to oblige anyone to believe these articles, it may banish anyone who does not believe them. This banishment is not for impiety but for lack of social commitment, that is, for being incapable of sincerely loving the laws and justice or of sacrificing his life to duty in time of need. As for the person who conducts himself as if he does not believe them after having publicly stated his belief in these same dogmas, he deserves the death penalty. He has lied in the presence of the laws.

The dogmas of civil religion should be simple, few in number, and stated in precise words without interpretations or commentaries. These are the required dogmas: the existence of a powerful, intelligent Divinity, who does good, has foreknowledge of all, and provides for all; the life to come; the happy rewards of the just; the punishment of the wicked; and the sanctity of the social contract and the laws. As for prohibited articles of faith, I limit myself to one: intolerance. Intolerance characterizes the religious persuasions we have excluded.

Proclamation of 1763

Date: October 7, 1763

The French and Indian War (1754–63) was brought to an end by the Treaty of Paris (1763). About six months later King George III issued the Proclamation of 1763, which set a western boundary beyond which British colonials would not be allowed to settle. This was in part to acknowledge the debts that the British government owed to its Indian allies for their support in the war against the French. The British officials also wanted to end the continued frontier fighting caused by colonial settlers and the Native Americans over land rights west of the Appalachians. In addition to this, the fighting and raiding were interfering with the lucrative commerce in fur

trading and tobacco, and the royal taxes upon this commerce. By the king's royal proclamation and decree, the Native Americans were given the use of his lands as a hunting ground, without the incursion of the colonists. The king's colonials were not allowed to trespass on these lands.

The enforcement of the proclamation by British authorities was another matter. By the time that the proclamation had been issued, there were already many small towns and villages west of the Appalachians in New York, Pennsylvania, Virginia, and some settlements in what is now Ohio and Kentucky. Many more settlers were continuing to travel west to the land of free farmland for the taking. Another problem was that many of the original charters of the colonies themselves had granted them land as far west as each colony chose to claim.

Many Native American tribes respected the proclamation from the British king. The frontier fighting did subside, and life returned to normal by 1764. Over time, however, they saw that the colonists were not honoring the proclamation, and so the raiding and fighting continued.

Whereas we have taken into our royal consideration the extensive and valuable acquisitions in America secured to our Crown by the late definitive treaty of peace concluded at Paris on the 10th day of February last; and being desirous that all our loving subjects, as well of our kingdom as of our colonies in America, may avail themselves, with all convenient speed, of the great benefits and advantages which must accrue therefrom to their commerce, manufactures, and navigation; we have thought fit, with the advice of our Privy Council, to issue this our Royal Proclamation, hereby to publish and declare to all our loving subjects that we have, with the advice of our said Privy Council, granted our letters patent under our Great Seal of Great Britain, to erect within the countries and islands ceded and confirmed to us by said treaty, four distinct and separate governments, styled and called by the names of Quebec, East Florida, West Florida, and Grenada, and limited and bounded as follows, viz . . .

First, the Government of Quebec, bounded on the Labrador coast by the river St. John, and from thence by a line drawn from the head of that river, through the lake St. John, to the south end of the lake Nipissim; from whence the said line, crossing the river St. Lawrence and the lake Champlain in 45 degrees of north latitude, passes along the high lands which divide the rivers that empty themselves into the said river St. Lawrence from those which fall into the sea . . .

Secondly, the Government of East Florida, bounded to the westward by the Gulf of Mexico and the Apalachicola River; to the northward, by a line drawn from that part of the said river where the Chatahoochee and Flint Rivers meet, to the source of the St. Mary's river, and by the course of the said river to the Atlantic Ocean . . .

Thirdly, the Government of West Florida, bounded to the . . . westward, by the Lake Pontchartrain, the lake Maurepas, and the river Mississippi; to the northward, by a line drawn due east from that part of the river Mississippi which lies in 31 degrees north latitude, to the river Apalachicola or Chatahoochee; and to the eastward, by the said river . . .

We have also, with the advice of our Privy Council aforesaid, annexed to our Province of Georgia all the lands lying between the rivers Altamaha and St. Mary's . . .

And whereas it is just and reasonable, and essential to our interest and the security of our colonies, that the several nations or tribes of Indians with whom we are connected, and who live under our protection, should not be molested or disturbed in the possession of such parts of our dominions and territories as, not having been ceded to or purchased by us, are reserved to them, or any of them, as their hunting-grounds; we do therefore, with the advice of our Privy Council, declare it to be our royal will and pleasure, that no Governor or commander in chief, in any of our colonies of Quebec, East Florida, or West Florida, do presume, upon any pretence whatever, to grant warrants of survey, or pass any patents for lands beyond the bounds of their respective governments, as described in their commissions; as also that no Governor or commander in chief of our other colonies or plantations in America do presume for the present, and until our further pleasure be known, to grant warrants of survey or pass patents for any lands beyond the heads or sources of any of the rivers which fall into the Atlantic Ocean from the west or northwest; or upon any lands whatever, which, not having been ceded to or purchased by us, as aforesaid, are reserved to the said Indians, or any of them.

And we do further declare it to be our royal will and pleasure, for the present as aforesaid, to reserve under our sovereignty, protection, and dominion, for the use of the said Indians, all the land and territories not included within the limits of our said three new governments, or within the limits of the territory granted to the Hudson's Bay Company; as also all the land and territories lying to the westward of the sources of the rivers which fall into the sea from the west and northwest as aforesaid; and we do hereby strictly forbid, on pain of our displeasure, all our loving subjects from making any purchases or settlements whatever, or taking possession of any of the lands above reserved, without our special leave and license for that purpose first obtained.

And we do further strictly enjoin and require all persons whatever, who have either willfully or inadvertently seated themselves upon any lands within the countries above described, or upon any other lands which, not having been ceded to or purchased by us, are still reserved to the said Indians as aforesaid, forthwith to remove themselves from such settlements.

And whereas great frauds and abuses have been committed in the purchasing lands of the Indians, to the great prejudice of our interests, and to the great dissatisfaction of the said Indians; in order, therefore, to prevent such irregularities for the future, and to the end that the Indians may be convinced of our justice and determined resolution to remove all reasonable cause of discontent, we do, with the advice of our Privy Council, strictly enjoin and require, that no private person do presume to make any purchase from the said Indians of any lands reserved to the said Indians within those parts of our colonies where we have thought proper to allow settlement; but that if at any time any of the said Indians should be inclined to dispose of the said lands, the same shall be purchased only for us, in our name, at some public meeting or assembly of the said Indians, to be held for that purpose by the Governor or commander in chief of our colony respectively within which they shall lie: and in case they shall lie within the limits of any proprietary government, they shall be purchased only for the use and in the name of such proprietaries, conformable to such directions and instructions as we or they shall think proper to give for that purpose. And we do, by the advice of our Privy Council, declare and enjoin, that the trade with the said Indians shall be free and open to all our subjects whatever, provided that every person who may incline to trade with the said Indians do take out a license for carrying on such trade, from the Governor or commander in chief of any of our colonies respectively where such person shall reside, and also give security to observe such regulations as we shall at any time think fit, by ourselves or commissaries to be appointed for this purpose, to direct and appoint for the benefit of the said trade. And we do hereby authorize, enjoin, and require the Governors and commanders in chief of all our colonies respectively, as well those under our immediate government as those under the government and direction of proprietaries, to grant such licenses without fee or reward, taking especial care to insert therein a condition that such license shall be void, and the security forfeited, in case the person to whom the same is granted shall refuse or neglect to observe such regulations as we shall think proper to prescribe as aforesaid.

And we do further expressly enjoin and require all officers whatever, as well military as those employed in the management and direction of Indian affairs within the territories reserved as aforesaid, for the use of the said Indians, to seize and apprehend all persons whatever who, standing charged with treasons, misprisions of treason, murders, or other felonies or misdemeanors, shall fly from justice and take refuge in the said territory, and to send them under a proper guard to the colony where the crime was committed of which they shall stand accused, in order to take their trial for the same.

Given at our Court at St. James's, the 7th day of October 1763, in the third year of our reign.

Declaration of Independence

Date: July 4, 1776

The Declaration of Independence was penned by Thomas Jefferson and made public on July 4, 1776. It opened with the theoretical explanation for America's separation from Great Britain, justifying the split with an appeal to the doctrine of natural rights. Arguing that governments derive "their just powers from the consent of the governed," Jefferson went on to assert the right to revolt against an unjust government. The abuses of King George III against the colonists were then listed to legitimize the renunciation of all ties with Great Britain. Though edited by members of the Second Continental Congress (notably Benjamin Franklin and John Adams), Jefferson's ideas remained basically intact. Revisions were completed on July 4 and sent immediately to a printer in Philadelphia who printed it under that date. The official signing of the document by all the delegates to the Congress took place on August 2, 1776; most of the 56 names on the document were signed before August 6, but at least six signatures were attached later.

The original spellings have been retained in this document.

When in the course of human events it becomes necessary for one people to dissolve the political bonds which have connected them with another, and to assume among the powers of earth the separate and equal station to which the laws of nature and of nature's god entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with inherent and inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness. Prudence indeed will dictate that governments long established should not be changed for light and transient causes. And accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, begun at a distinguished period and pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to expunge their former systems of government. The history of the present king of Great Britain is a history of unremitting injuries and usurpations, among which appears no solitary fact to contradict the uniform tenor of the rest, but all have in direct object the establishment of an absolute tyranny over these states. To prove this let facts be submitted to a candid world, for the truth of which we pledge a faith yet unsullied by falsehood.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has neglected utterly to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature; a right in-estimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative houses repeatedly and continually, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time after such dissolutions to cause others to be elected whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise, the state remaining in the meantime exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migrations hither; and raising the conditions of new appropriations of lands.

He has suffered the administration of justice totally to cease in some of these states, refusing his assent to laws for establishing judiciary powers.

He has made our judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices by a self-assumed power, and sent hither swarms of officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies and ships of war, without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions and unacknowledged by our laws; giving his assent to their acts of pretended legislation for quartering large bodies of armed troops among us;

For protecting them by a mock-trial from punishment for any murders which they should commit on the inhabitants of these states;

For cutting off our trade with all parts of the world;

For imposing taxes on us without our consent;

For depriving us of the benefits of trial by jury;

For transporting us beyond seas to be tried for pretended offenses;

For abolishing the free system of English laws in a neighboring province, establishing therein in arbitrary government, and enlarging its boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these states;

For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments;

For suspending our own legislatures, and declaring themselves to be invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, withdrawing his governors, and declaring us out of his allegiance and protection.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries, to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy unworthy the head of a civilized nation.

He has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions of existence.

He has incited treasonable insurrections of our fellow citizens, with the allurements of forfeiture and confiscation of property.

He has constrained others, taken captives on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people, who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian king of Great Britain. Determined to keep open a market where MEN should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or restrain this execrable commerce; and that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, by murdering the people upon whom he also obtruded them: thus paying off former crimes committed against the liberties of one people, with crimes which he urges them to commit against the lives of another.

In every stage of these oppressions we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a people who mean to be free. Future ages will scarce believe that the hardness of one man adventured, within the short compass of twelve years only, to lay a foundation, so broad and undisguised, for tyranny over a people fostered and fixed in principles of freedom.

Nor have we been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend a jurisdiction over these our states. We have reminded them of the circumstances of our emigration and settlement here, no one of which could warrant so strange a pretension: that these were affected at the expence of our own blood and treasure, unassisted by the wealth or the strength of Great Britain: that in constituting indeed our several forms of government, we had adopted one common king, thereby laying a foundation for perpetual league and amity with them: but that submission to their parliament was no part of our constitution, nor ever in idea, if history may be credited: and we appealed to their native justice and magnanimity, as well as to the ties of our common kindred, to disavow these usurpations, which were likely to interrupt our condition and correspondence. They too have been deaf to the voice of justice and of consanguinity; and when occasions have been given them, by the regular course of their laws, of removing from their councils the disturbers of our harmony, they have by their free election re-established them in power. At this very time, too, they are permitting their chief magistrate to send over not only soldiers of our common blood, but Scotch and foreign mercenaries to invade and destroy us. These facts have given the last stab to agonizing affection; and manly spirit bids us to renounce forever these unfeeling brethren. We must therefore endeavor to forget our former love for them, and to hold them as we hold the rest of mankind, enemies in war, in peace friends. We might have been a great and free people together; but a communication of grandeur and of freedom, it seems, is below their dignity. Be it so, since they will have it. The road to happiness and to glory is open to us too; we will climb it apart from them, and acquiesce in the necessity which denounces our eternal separation!

We therefore the Representatives of the United States of America in General Congress assembled, do, in the name and by the authority of the good people of these states, reject and renounce all allegiance and subjection to the kings of Great Britain, and all others who may hereafter claim by, through, or under them; we utterly dissolve all political connection which may heretofore have subsisted between us and the people or parliament of Great Britain; and finally we do assert and declare these colonies to be free and independent states, and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

Joseph Priestley: *Discovery of Oxygen*

Date: 1776

Oxygen was discovered nearly simultaneously and independently by three researchers. In 1771 or 1772, Carl Wilhelm Scheele first isolated oxygen, but he delayed publication of his findings until 1777. Joseph Priestley was the first to publish his experiments with oxygen in 1774. In 1778 Antoine Lavoisier gave oxygen its name, on the assumption that oxides when dissolved in water always generated acids. Thus the word oxygen, meaning “acid-generator,” derived from two Greek words, took hold. In this second edition of Priestley’s work, published in 1776, Priestley describes how he discovered oxygen. Together, the work of the three researchers overthrew the prevailing theory of combustion, based on the concept of “phlogiston,” a mysterious substance supposedly given off during combustion. The simultaneous discovery of oxygen demonstrated a recurrent phenomenon during the scientific revolution, when independent researchers, confronted with the same existing scientific problems or anomalies, and working with similar technical devices, reached similar conclusions within months or even days of each other.

An excerpt from *The Discovery of Oxygen. Experiments and Observations on Different Kinds of Air*.

The contents of this section will furnish a very striking illustration of the truth of a remark which I have more than once made in my philosophical writings, and which can hardly be too often repeated, as it tends greatly to encourage philosophical investigations: viz. that more is owing to what we call chance, that is, philosophically speaking, to the observation of events, arising from unknown causes, than to any proper design, or preconceived theory in this business. . . .

I wish my reader be not quite tired with the frequent repetition of the word surprise, and other of similar import; but I must go on in that style a little longer. For the next day I was more surprised than ever I had been before, with finding that, after the above mentioned mixture of nitrous air and the air from mercurius calcinatus, had stood all night, (in which time the whole diminution must have taken place; and, consequently had it been common air, it must have been made perfectly noxious, and entirely unfit for respiration or inflammation) a candle burned in it, and even better than in common air.

I cannot, at this distance of time, recollect what it was that I had in view in making this experiment; but I know I had no expectation of the real issue of it. Having acquired a considerable degree of readiness in making experiments of this kind, a very slight and evanescent motive would be sufficient to induce me to do it. If, however, I had not happened, for some other purpose, to have had a lighted candle before me, I should probably never have made the trial; and the whole train of my future experiments relating to this kind of air might have been prevented. Still, however, having no conception of the real cause of this phenomenon, I considered it as something very extraordinary; but as a property that was peculiar to air that was extracted from these substances, and adventitious; and I always spoke of the air to my acquaintance as being substantially the same with common air. I particularly remember my telling Dr. Price, that I was myself perfectly satisfied of its being common air, as it appeared to be so by the test of nitrous air; though, for the satisfaction of others, I wanted a mouse to make the proof quite complete.

On the 8th of this month I procured a mouse, and put it into a glass vessel, containing two ounce-measures of the air from mercurius calcinatus. Had it been common air, a full-grown mouse, as this was, would have lived in it about a quarter of an hour. In this air, however, my mouse lived a full hour; and though it was taken out seemingly dead, it appeared to have been only exceedingly chilled; for, upon being held to the fire, it presently revived, and appeared not to have received any harm from the experiment.

Adam Smith: *The Wealth of Nations*

Date: 1776

In this extract from *The Wealth of Nations*, the “founder” of economics, Adam Smith, analyzes the mercantile system. In this passage, he criticizes those who believe that a nation’s wealth can be measured by its surplus in gold derived from control of international and colonial trade. Instead he argues that wealth derives from efficiencies of production and consumption, and that mercantile barriers to protect the industries of a country can in fact diminish its wealth. His logic led, in later years, to the concept of international free trade.

THE PRINCIPLE OF THE MERCANTILE SYSTEM, 1776

Some of the best English writers upon commerce set out with observing, that the wealth of a country consists, not in its gold and silver only, but in its lands, houses, and consumable goods of all different kinds. In the course of their reasoning, however, the lands, houses, and consumable goods seem to slip out of their memory, and the strain of their argument frequently supposes that all wealth consists in gold and silver, and that to multiply those metals is the great object of national industry and commerce. The two principles being established, however, that wealth consisted in gold and silver, and that those metals could be brought into a country which had no mines only by the balance of trade, or by exporting to a greater value than it imported; it necessarily became the great object of political economy to diminish as much as possible the importation of foreign goods for home consumption, and to increase as much as possible the exportation of the produce of domestic industry. Its two great engines for enriching the country, therefore, were restraints upon importation, and encouragements to exportation. . . .

BY restraining, either by high duties, or by absolute prohibitions, the importation of such goods from foreign countries as can be produced at home, the monopoly of the home market is more or less secured to the domestic industry employed in producing them. Thus the prohibition of importing either live cattle or salt provisions from foreign countries secures to the grazers of Great Britain the monopoly of the home market for butcher's meat. The high duties upon the importation of grain, which in times of moderate plenty amount to a prohibition, give a like advantage to the growers of that commodity. The prohibition of the importation of foreign woollens is equally favorable to the woollen manufacturers. The silk manufacture, though altogether employed upon foreign materials, has lately obtained the same advantage. The linen manufacture has not yet obtained it, but is making great strides towards it. Many other sorts of manufacturers have, in the same manner, obtained in Great Britain, either altogether, or very nearly a monopoly against their countrymen. . . . That this monopoly of the home-market frequently gives great encouragement to that particular species of industry which enjoys it, and frequently turns towards that employment a greater share of both the labor and stock of the society than would otherwise have gone to it, cannot be doubted. But whether it tends either to increase the general industry of the society, or to give it the most advantageous direction, is not, perhaps, altogether so evident. . . .

THOUGH the encouragement of exportation, and the discouragement of importation, are the two great engines by which the mercantile system proposes to enrich every country, yet with regard to some particular commodities, it seems to follow an opposite plan: to discourage exportation and to encourage importation. Its ultimate object, however, it pretends, is always the same, to enrich the country by an advantageous balance of trade. It discourages the exportation of the materials of manufacture, and of the instruments of trade, in order to give our own workmen an advantage, and to enable them to undersell those of other nations in all foreign markets; and by restraining, in this manner, the exportation of a few commodities, of no great price, it proposes to occasion a much greater and more valuable exportation of others. It encourages the importation of the materials of manufacture, in order that our own people may be enabled to work them up more cheaply, and thereby prevent a greater and more valuable importation of the manufactured commodities. . . .

Consumption is the sole end and purpose of all production; and the interest of the producer ought to be attended to, only so far as it may be necessary for promoting that of the consumer. The maxim is so perfectly self-evident, that it would be absurd to attempt to prove it. But in the mercantile system, the interest of the consumer is almost constantly sacrificed to that of the producer; and it seems to consider production, and not consumption, as the ultimate end and object of all industry and commerce. . . .

In the system of laws which has been established for the management of our American and West Indian colonies the interest of the home-consumer has been sacrificed to that of the producer with a more extravagant profusion than in all our other commercial regulations. A great empire has been established for the sole purpose of raising up a nation of customers who should be obliged to buy from the shops of our different producers, all the goods with which these could supply them. For the sake of that little enhancement of price which this monopoly might afford our producers, the home-consumers have been burdened with the whole expense of maintaining and defending that empire. For this purpose, and for this purpose only, in the two last wars, more than two hundred millions have been spent, and a new debt of more than a hundred and seventy millions has been contracted over and above all that had been expended for the same purpose in former wars. The interest of this debt alone is not only greater than the whole extraordinary profit, which, it ever could be pretended, was made by the monopoly of the colony trade, but than the whole value of that trade, or than the whole value of the goods, which at an average have been annually exported to the colonies. It cannot be very difficult to determine who have been the contrivers of this whole mercantile system; not the consumers, we may believe, whose interest has been entirely neglected; but the producers, whose interest has been so carefully attended to; and among this latter class our merchants and manufacturers have been by far the principal architects.

The importation of gold and silver is not the principal much less the sole benefit which a nation derives from its foreign trade. Between whatever places foreign trade is carried on, they all of them derive two distinct benefits from it. It carries out that surplus part of the produce of their land and labor for which there is no

demand among them, and brings back in return for it something else for which there is a demand. It gives a value to their superfluities by exchanging them for something else, which may satisfy a part of their wants, and increase their enjoyments. By means of it, the narrowness of the home market does not hinder the division of labor in any particular branch of art or manufacture from being carried to the highest perfection. By opening a more extensive market for whatever part of the produce of their labor may exceed the home consumption, it encourages them to improve its productive powers and to augment its annual produce to the utmost, and thereby to increase the real revenue and wealth of the society.

Voltaire on John Locke

Date: c. 1778

From *Letters on the English* or *Lettres Philosophiques*, c. 1778

François-Marie Arouet, known by his assumed name of Voltaire, was born in Paris, November 21, 1694. His father was a well-to-do notary, and François was educated under the Jesuits at the Collège Louis-le-Grand. He began writing verse early and was noted for his freedom of speech, a tendency which led to his being twice exiled from Paris and twice imprisoned in the Bastille. In 1726 he took refuge in England, and the two years spent there had great influence on his later development. Some years after his return he became historiographer of France and gentleman of the king's bedchamber; from 1750 to 1753 he lived at the court of Frederick the Great, with whom he ultimately quarreled, and he spent the last period of his life, from 1758 to 1778, on his estate of Ferney, near Geneva, where he produced much of his best work. He died in Paris, May 30, 1778.

*It will be seen that Voltaire's active life covers nearly the whole 18th century, of which he was the dominant and typical literary figure. Every department of letters then in vogue was cultivated by him; in all he showed brilliant powers, and in several he reached all but the highest rank. Apart from his *Henriade*, an epic on the classical model, and the burlesque *La Pucelle*, most of his verse belongs to the class of satire, epigram, and vers de société. Of real poetical quality it has little, but abounds in technical cleverness. For the stage he was the most prominent writer of the time, his most successful dramas including *Zaïre*, *Oedipe*, *La Mort de César*, *Alzire*, and *Mérope*. His chief contribution in this field was the development of the didactic and philosophic element. In prose fiction he wrote *Zadig*, *Candide*, and many admirable short stories; in history, his *Age of Louis XIV* is only the best known of four or five considerable works; in criticism, his commentary on *Corneille* is notable. His scientific and philosophic interests are to some extent indicated in the following letters, which also show his admiration for the tolerance and freedom of speech in Britain, which it was his greatest service to strive to introduce into his own country.*

Letter XIII: On Mr. Locke

Perhaps no man ever had a more judicious or more methodical genius, or was a more acute logician than Mr. Locke, and yet he was not deeply skilled in the mathematics. This great man could never subject himself to the tedious fatigue of calculations, nor to the dry pursuit of mathematical truths, which do not at first present any sensible objects to the mind; and no one has given better proofs than he, that it is possible for a man to have a geometrical head without the assistance of geometry. Before his time, several great philosophers had declared, in the most positive terms, what the soul of man is; but as these absolutely knew nothing about it, they might very well be allowed to differ entirely in opinion from one another.

In Greece, the infant seat of arts and of errors, and where the grandeur as well as folly of the human mind went such prodigious lengths, the people used to reason about the soul in the very same manner as we do.

The divine Anaxagoras, in whose honour an altar was erected for his having taught mankind that the sun was greater than Peloponnesus, that snow was black, and that the heavens were of stone, affirmed that the soul was an aerial spirit, but at the same time immortal. Diogenes (not he who was a cynical philosopher after having coined base money) declared that the soul was a portion of the substance of God: an idea which we must confess was very sublime. Epicurus maintained that it was composed of parts in the same manner as the body.

Aristotle, who has been explained a thousand ways, because he is unintelligible, was of opinion, according to some of his disciples, that the understanding in all men is one and the same substance.

The divine Plato, master of the divine Aristotle, and the divine Socrates, master of the divine Plato, used to say that the soul was corporeal and eternal. No doubt but the demon of Socrates had instructed him in the nature of it. Some people, indeed, pretend that a man who boasted his being attended by a familiar genius must infallibly be either a knave or a madman, but this kind of people are seldom satisfied with anything but reason.

With regard to the Fathers of the Church, several in the primitive ages believed that the soul was human, and the angels and God corporeal. Men naturally improve upon every system. St. Bernard, as Father Mabillon confesses, taught that the soul after death does not see God in the celestial regions, but converses with Christ's human nature only. However, he was not believed this time on his bare word; the adventure of the crusade having a little sunk the credit of his oracles. Afterwards a thousand schoolmen arose, such as the Irrefragable Doctor, the Subtile Doctor, the Angelic Doctor, the Seraphic Doctor, and the Cherubic Doctor, who were all sure that they had a very clear and distinct idea of the soul, and yet wrote in such a manner, that one would conclude they were resolved no one should understand a word in their writings. Our Descartes, born to discover the errors of antiquity, and at the same time to substitute his own; and hurried away by that systematic spirit which throws a cloud over the minds of the greatest men, thought he had demonstrated that the soul is the same thing as thought, in the same manner as matter, in his opinion, is the same as extension. He asserted, that man thinks eternally, and that the soul, at its coming into the body, is informed with the whole series of metaphysical notions: knowing God, infinite space, possessing all abstract ideas-in a word, completely endued with the most sublime lights, which it unhappily forgets at its issuing from the womb.

Father Malebranche, in his sublime illusions, not only admitted innate ideas, but did not doubt of our living wholly in God, and that God is, as it were, our soul.

Such a multitude of reasoners having written the romance of the soul, a sage at last arose, who gave, with an air of the greatest modesty, the history of it. Mr. Locke has displayed the human soul in the same manner as an excellent anatomist explains the springs of the human body. He everywhere takes the light of physics for his guide. He sometimes presumes to speak affirmatively, but then he presumes also to doubt. Instead of concluding at once what we know not, he examines gradually what we would know. He takes an infant at the instant of his birth; he traces, step by step, the progress of his understanding; examines what things he has in common with beasts, and what he possesses above them. Above all, he consults himself; the being conscious that he himself thinks.

"I shall leave," says he, "to those who know more of this matter than myself, the examining whether the soul exists before or after the organisation of our bodies. But I confess that it is my lot to be animated with one of those heavy souls which do not think always; and I am even so unhappy as not to conceive that it is more necessary the soul should think perpetually than that bodies should be for ever in motion."

With regard to myself, I shall boast that I have the honour to be as stupid in this particular as Mr. Locke. No one shall ever make me believe that I think always: and I am as little inclined as he could be to fancy that some weeks after I was conceived I was a very learned soul; knowing at that time a thousand things which I forgot at my birth; and possessing when in the womb (though to no manner of purpose) knowledge which I lost the instant I had occasion for it; and which I have never since been able to recover perfectly.

Mr. Locke, after having destroyed innate ideas; after having fully renounced the vanity of believing that we think always; after having laid down, from the most solid principles, that ideas enter the mind through the senses; having examined our simple and complex ideas; having traced the human mind through its several operations; having shown that all the languages in the world are imperfect, and the great abuse that is made of words every moment, he at last comes to consider the extent or rather the narrow limits of human knowledge. It was in this chapter he presumed to advance, but very modestly, the following words: "We shall, perhaps, never be capable of knowing whether a being, purely material, thinks or not." This sage assertion was, by more divines than one, looked upon as a scandalous declaration that the soul is material and mortal. Some Englishmen, devout after their way, sounded an alarm. The superstitious are the same in society as cowards in an army; they themselves are seized with a panic fear, and communicate it to others. It was loudly exclaimed that Mr. Locke intended to destroy religion; nevertheless, religion had nothing to do in the affair, it being a question purely philosophical, altogether independent of faith and revelation. Mr. Locke's opponents needed but to examine, calmly and impartially, whether the declaring that matter can think, implies a contradiction; and whether God is able to communicate thought to matter. But divines are too apt to begin their declarations with saying that God is offended when people differ from them in opinion; in which they too much resemble the bad poets, who used to declare publicly that Boileau spake irreverently of Louis XIV., because he ridiculed their stupid productions. Bishop Stillingfleet got the reputation of a calm and unprejudiced divine because he did not expressly make use of injurious terms in his dispute with Mr. Locke. That divine entered the lists against him, but was defeated; for he argued as a schoolman, and Locke as a philosopher, who was perfectly acquainted with the strong as well as the weak side of the human mind, and who fought with weapons whose temper he knew. If I might presume to give my opinion on so delicate a subject after Mr. Locke, I would say, that men have long disputed on the nature and the immortality of the soul. With regard to its immortality, it is impossible to give a demonstration of it, since its nature is still the subject of controversy; which, however, must be thoroughly understood before a person can be able to

determine whether it be immortal or not. Human reason is so little able, merely by its own strength, to demonstrate the immortality of the soul, that it was absolutely necessary religion should reveal it to us. It is of advantage to society in general, that mankind should believe the soul to be immortal; faith commands us to do this; nothing more is required, and the matter is cleared up at once. But it is otherwise with respect to its nature; it is of little importance to religion, which only requires the soul to be virtuous, whatever substance it may be made of. It is a clock which is given us to regulate, but the artist has not told us of what materials the spring of this clock is composed.

I am a body, and, I think, that's all I know of the matter. Shall I ascribe to an unknown cause, what I can so easily impute to the only second cause I am acquainted with? Here all the school philosophers interrupt me with their arguments, and declare that there is only extension and solidity in bodies, and that there they can have nothing but motion and figure. Now motion, figure, extension and solidity cannot form a thought, and consequently the soul cannot be matter. All this so often repeated mighty series of reasoning, amounts to no more than this: I am absolutely ignorant what matter is; I guess, but imperfectly, some properties of it; now I absolutely cannot tell whether these properties may be joined to thought. As I therefore know nothing, I maintain positively that matter cannot think. In this manner do the schools reason.

Mr. Locke addressed these gentlemen in the candid, sincere manner following: At least confess yourselves to be as ignorant as I. Neither your imaginations nor mine are able to comprehend in what manner a body is susceptible of ideas; and do you conceive better in what manner a substance, of what kind soever, is susceptible of them? As you cannot comprehend either matter or spirit, why will you presume to assert anything?

The superstitious man comes afterwards and declares, that all those must be burnt for the good of their souls, who so much as suspect that it is possible for the body to think without any foreign assistance. But what would these people say should they themselves be proved irreligious? And indeed, what man can presume to assert, without being guilty at the same time of the greatest impiety, that it is impossible for the Creator to form matter with thought and sensation? Consider only, I beg you, what a dilemma you bring yourselves into, you who confine in this manner the power of the Creator. Beasts have the same organs, the same sensations, the same perceptions as we; they have memory, and combine certain ideas. In case it was not in the power of God to animate matter, and inform it with sensation, the consequence would be, either that beasts are mere machines, or that they have a spiritual soul.

Methinks it is clearly evident that beasts cannot be mere machines, which I prove thus. God has given to them the very same organs of sensation as to us: if therefore they have no sensation, God has created a useless thing; now according to your own confession God does nothing in vain; He therefore did not create so many organs of sensation, merely for them to be uninformed with this faculty; consequently beasts are not mere machines. Beasts, according to your assertion, cannot be animated with a spiritual soul; you will, therefore, in spite of yourself, be reduced to this only assertion, viz., that God has endued the organs of beasts, who are mere matter, with the faculties of sensation and perception, which you call instinct in them. But why may not God, if He pleases, communicate to our more delicate organs, that faculty of feeling, perceiving, and thinking, which we call human reason? To whatever side you turn, you are forced to acknowledge your own ignorance, and the boundless power of the Creator. Exclaim therefore no more against the sage, the modest philosophy of Mr. Locke, which so far from interfering with religion, would of be use to demonstrate the truth of it, in case religion wanted any such support. For what philosophy can be of a more religious nature than that, which affirming nothing but what it conceives clearly, and conscious of its own weakness, declares that we must always have recourse to God in our examining of the first principles?

Besides, we must not be apprehensive that any philosophical opinion will ever prejudice the religion of a country. Though our demonstrations clash directly with our mysteries, that is nothing to the purpose, for the latter are not less revered upon that account by our Christian philosophers, who know very well that the objects of reason and those of faith are of a very different nature. Philosophers will never form a religious sect, the reason of which is, their writings are not calculated for the vulgar, and they themselves are free from enthusiasm. If we divide mankind into twenty parts, it will be found that nineteen of these consist of persons employed in manual labour, who will never know that such a man as Mr. Locke existed. In the remaining twentieth part how few are readers? And among such as are so, twenty amuse themselves with romances to one who studies philosophy. The thinking part of mankind is confined to a very small number, and these will never disturb the peace and tranquillity of the world.

Neither Montaigne, Locke, Bayle, Spinoza, Hobbes, the Lord Shaftesbury, Collins, nor Toland lighted up the firebrand of discord in their countries; this has generally been the work of divines, who being at first puffed up with the ambition of becoming chiefs of a sect, soon grew very desirous of being at the head of a party. But what do I say? All the works of the modern philosophers put together will never make so much noise as even the dispute which arose among the Franciscans, merely about the fashion of their sleeves and of their cowls.

The Declaration of the Rights of Man and of the Citizen

Also known as: La Déclaration des droits de l'Homme et du citoyen

Date: August 26, 1789

The Declaration of the Rights of Man and of the Citizen is one of the fundamental documents of the French Revolution. It was a proclamation of principles written during the first months of the revolution and was intended as a guide for the men would be charged with writing a new constitution for the new republic. Its 17 articles affirmed human liberties and served as a preface to the French constitution of 1791.

The philosophical and political principles of the Enlightenment are reflected in the document, based on the writings of philosophers Jean-Jacques Rousseau and Thomas Hobbes. These ideas are put forth with terms that express the natural rights of each man, all men being equal in rights, the general will, and the usage of the term society rather than the word government.

It is pointed out that the document directly reflects some of the rights and items in the documents of the American Revolution, the Declaration of Independence (July 4, 1776), and the Virginia state legislature's 1776 Declaration of Rights. It also contains many concepts which were put forth at approximately the same time in the United States Constitution (1787) and in the United States Bill of Rights (1789).

The Declaration of the Rights of Man and of the Citizen was drafted by Emmanuel J. Sieyès (Abbé Sieyès), with input from others. Among these was the famed general of the American Revolution the marquis de Lafayette. Before being submitted to the National Assembly, the document was reviewed by Thomas Jefferson, who was at that time the U.S. ambassador to France in Paris, as well as being the author of the Declaration of Independence.

The Declaration of the Rights of Man and of the Citizen was approved by the National Assembly, or the National Constituent Assembly (Assemblée nationale constituante), in Paris on August 27, 1789, and was signed by France's King Louis XVI on October 5, 1789.

Declaration of the Rights of Man and of the Citizen

The representatives of the French people, organized as a National Assembly, believing that the ignorance, neglect, or contempt of the rights of man are the sole cause of public calamities and of the corruption of governments, have determined to set forth in a solemn declaration the natural, unalienable, and sacred rights of man, in order that this declaration, being constantly before all the members of the Social body, shall remind them continually of their rights and duties; in order that the acts of the legislative power, as well as those of the executive power, may be compared at any moment with the objects and purposes of all political institutions and may thus be more respected, and, lastly, in order that the grievances of the citizens, based hereafter upon simple and incontestable principles, shall tend to the maintenance of the constitution and redound to the happiness of all. Therefore the National Assembly recognizes and proclaims, in the presence and under the auspices of the Supreme Being, the following rights of man and of the citizen:

Articles:

Article I Men are born and remain free and equal in rights. Social distinctions may be founded only upon the general good.

Article II The aim of all political association is the preservation of the natural and imprescriptible rights of man. These rights are liberty, property, security, and resistance to oppression.

Article III The principle of all sovereignty resides essentially in the nation. No body nor individual may exercise any authority which does not proceed directly from the nation.

Article IV Liberty consists in the freedom to do everything which injures no one else; hence the exercise of the natural rights of each man has no limits except those which assure to the other members of the society the enjoyment of the same rights. These limits can only be determined by law.

Article V Law can only prohibit such actions as are hurtful to society. Nothing may be prevented which is not forbidden by law, and no one may be forced to do anything not provided for by law.

Article VI Law is the expression of the general will. Every citizen has a right to participate personally, or through his representative, in its foundation. It must be the same for all, whether it protects or punishes. All citizens, being equal in the eyes of the law, are equally eligible to all dignities and to all public

positions and occupations, according to their abilities, and without distinction except that of their virtues and talents.

Article VI No person shall be accused, arrested, or imprisoned except in the cases and according to the forms prescribed by law. Any one soliciting, transmitting, executing, or causing to be executed, any arbitrary order, shall be punished. But any citizen summoned or arrested in virtue of the law shall submit without delay, as resistance constitutes an offense.

Article VIII The law shall provide for such punishments only as are strictly and obviously necessary, and no one shall suffer punishment except it be legally inflicted in virtue of a law passed and promulgated before the commission of the offense.

Article IX As all persons are held innocent until they shall have been declared guilty, if arrest shall be deemed indispensable, all harshness not essential to the securing of the prisoner's person shall be severely repressed by law.

Article X No one shall be disquieted on account of his opinions, including his religious views, provided their manifestation does not disturb the public order established by law.

Article XI The free communication of ideas and opinions is one of the most precious of the rights of man. Every citizen may, accordingly, speak, write, and print with freedom, but shall be responsible for such abuses of this freedom as shall be defined by law.

Article XII The security of the rights of man and of the citizen requires public military forces. These forces are, therefore, established for the good of all and not for the personal advantage of those to whom they shall be intrusted.

Article XIII A common contribution is essential for the maintenance of the public forces and for the cost of administration. This should be equitably distributed among all the citizens in proportion to their means.

Article XIV All the citizens have a right to decide, either personally or by their representatives, as to the necessity of the public contribution; to grant this freely; to know to what uses it is put; and to fix the proportion, the mode of assessment and of collection and the duration of the taxes.

Article XV Society has the right to require of every public agent an account of his administration.

Article XVI A society in which the observance of the law is not assured, nor the separation of powers defined, has no constitution at all.

Article XVII Since property is an inviolable and sacred right, no one shall be deprived thereof except where public necessity, legally determined, shall clearly demand it, and then only on condition that the owner shall have been previously and equitably indemnified.

Edmund Burke: *Reflections on the Revolution in France*

Date: 1790

Edmund Burke's political philosophical commentary regarding the French Revolution (1789–99) was originally written as a letter and then published as a book. The book contains Burke's harsh criticisms of the French Revolution.

Burke was supportive of social change. His political philosophy, however, was grounded in the belief that society and civilization were held together by tradition and heritage. He believed that respect for author-

ity, ancestors, and traditions preserved the good of society and that civilization was passed on from one generation to the next through education and culture, thus preserving the best of the historical past. This included the influences of art, music, architecture, traditional education, religion, the family, and the right to private property. To Burke, these formed the cultural foundations for law, stability, and order in a society. This would become known as the values of Burkean conservatism, this idea of preserving the best of the past. It is said that Edmund Burke's political philosophy marks the origin of modern conservative thought.

Edmund Burke believed that social change should be proper and gradual and not an abrupt revolution overthrowing traditional systems. Burke supported the rights of people in cases where they were defending their traditional political liberties and rights. He defended the British revolution in 1640 and the Glorious Revolution of 1688, in that these did not discard the past wholesale, but preserved the valuable traditions of English law and civilization. As a member of the British parliament, Burke had supported the American colonists in their initial protests against the British government, which led to the Declaration of Independence. The American Revolution of 1776 was in the British tradition of preserving English liberties and rights, and Burke approved of it.

Burke was philosophically opposed to sudden political change without respect for past traditions and other cultural aspects. He believed that the complete overthrow of traditional institutions would produce a nightmare of violence and disorder rather than creating improvements and progress. Burke foresaw disaster in the French Revolution. One of the better known quotes from Edmund Burke is "Learning will be cast into the mire and trodden down under the hoofs of a swinish multitude."

The concept of a social contract for Burke was something quite different than the ideas of a social contract theorized by Rousseau. To Burke, the true social contract is a long-term, cultural phenomenon between the past, the present, and the future within a society. It was not, as it is in Rousseau, something that you could define in your ideas as a new social philosophy and then apply to a society.

In Burke's view, the revolutionary French were trying to overthrow and dismantle the whole structure of their ancien régime (old regime) and to replace it with ideas or theories which were not "time tested" in tradition, rather than to restore tradition. Edmund Burke's *Reflections on the Revolution in France* stands as an indictment of the aspects of the Enlightenment that were embodied in the French revolt.

In direct response to Edmund Burke's *Reflections on the Revolution in France*, Mary Wollstonecraft published her *A Vindication of the Rights of Woman* in 1790 (see p. 119) and Thomas Paine published his *Rights of Man* in 1791.

The following is an excerpt from the original document.
Original spellings have been retained in this document.

Kings, in one sense, are undoubtedly the servants of the people: because their power has no other rational end than that of the general advantage; but it is not true that they are, in the ordinary sense, (by our constitution at least), anything like servants; the essence of whose situation is to obey the commands of some other, and to be removable at pleasure. But the king of Great Britain obeys no other person; all other persons are individually, and collectively too, under him, and owe to him a legal obedience. The law which knows neither to flatter nor to insult, calls this high magistrate not our servant, as this humble divine calls him, but "our sovereign Lord the king"; and we, on our parts have learned to speak only the primitive language of the law, and not the confused jargon of their Babylonian pulpits.

As he is not to obey us, but as we are to obey the law in him, our constitution has made no sort of provision towards rendering him, as a servant, in any degree responsible. Our constitution knows nothing of a magistrate like the Justicia of Aragon; nor of any court legally appointed, nor of any process legally settled, for submitting the king to the responsibility belonging to all servants. In this he is not distinguished from the Commons and the Lords; who, in their several public capacities, can never be called to an account of their conduct; although the Revolution Society chooses to assert in direct opposition to one of the wisest and most beautiful parts of our constitution, that "a king is no more than the first servant of the public, created by it, and responsible to it."

Ill would our ancestors at the Revolution [of 1688] have deserved their fame for wisdom, if they had found no security for their freedom, but in rendering their government feeble in its operations and precarious in its tenure; if they had been able to contrive no better remedy against arbitrary power than civil confusion. Let these gentlemen state who that representative public is to whom they will affirm the king, as a servant, to be responsible. It will be then time enough for me to produce to them the positive statute law which affirms that he is not.

The ceremony of cashiering kings of which these gentlemen talk so much at their ease, can rarely, if ever, be performed without force. It then becomes a case of war, and not of constitution. Laws are commanded to hold their tongues amongst arms; and tribunals fall to the ground with the peace they are no longer able to uphold. The Revolution of 1688 was obtained by a just war, in the only case in which any war, and much more a civil war, can be just. "Justa bella quibus necessaria." ["Wars are just to those to whom they are necessary."] The

question of dethroning, or, if these gentlemen like the phrase better “cashiering kings,” will always be, as it has always been, an extraordinary question of state, and wholly out of the law; a question (like all other questions of state) of dispositions, and of means, and of probable consequences, rather than of positive rights. As it was not made for common abuses, so it is not to be agitated by common minds. The speculative line of demarcation, where obedience ought to end, and resistance must begin, is faint, obscure, and not easily definable. It is not a single act, or a single event, which determines it. Governments must be abused and deranged indeed, before it can be thought of; and the prospect of the future must be as bad as the experience of the past. When things are in that lamentable condition, the nature of the disease is to indicate the remedy to those whom nature has qualified to administer in extremities this critical, ambiguous, bitter | potion to a distempered state. Times, and occasions, and provocations, will teach their own lessons. The wise will determine from the gravity of the case; the irritable, from sensibility to oppression; the highminded, from disdain and indignation at abusive power in unworthy hands; the brave and bold, from the love of honourable danger in a generous cause; but, with or without right, a revolution will be the very last resource of the thinking and the good.

The third head of right, asserted by the pulpit of the Old Jewry, namely, the “right to form a government for ourselves,” has, at least, as little countenance from anything done at the Revolution [of 1688- Ed.], either in precedent or principle, as the two first of their claims. The Revolution was made to preserve our ancient, indisputable laws and liberties, and that ancient constitution of government which is our only security for law and liberty. If you are desirous of knowing the spirit of our constitution, and the policy which predominated in that great period which has secured it to this hour, pray look for both in our histories, in our records, in our acts of parliament, and journals of parliament, and not in the sermons of the Old Jewry, and the afterdinner toasts of the Revolution Society. In the former you will find other ideas and another language. Such a claim is as ill-suited to our temper and wishes as it is unsupported by an appearance of authority. The very idea of the fabrication of a new government is enough to fill us with disgust and horror. We wished at the period of the Revolution, and do now wish, to derive all we possess as an inheritance from our forefathers. Upon that body and stock of inheritance we have taken care not to inoculate any scion alien to the nature of the original plant. All the reformations we have hitherto made have proceeded upon the principle of reverence to antiquity: and I hope, nay I am persuaded, that all those which possibly may be made hereafter, will be carefully formed upon analogical precedent, authority, and example.

Our oldest reformation is that of Magna Charta. You will see that Sir Edward Coke, that great oracle of our law, and indeed all the great men who follow him, to Blackstone, are industrious to prove the pedigree of our liberties. They endeavour to prove, that the ancient charter, the Magna Charta of King John, was connected with another positive charter from Henry 1, and that both the one and the other were nothing more than a reaffirmance of the still more ancient standing law of the kingdom. In the matter of fact, for the greater part, these authors appear to be in the right; perhaps not always; but if the lawyers mistake in some particulars, it proves my position still the more strongly; because it demonstrates the powerful prepossession towards antiquity, with which the minds of all our lawyers and legislators, and of all the people whom they wish to influence, have been always filled; and the stationary policy of this kingdom in considering their most sacred rights and franchises as an inheritance.

In the famous law of the 3rd of Charles I, called the Petition of Right, the parliament says to the king, “Your subjects have inherited this freedom,” claiming their franchises not on abstract principles “as the rights of men,” but as the rights of Englishmen, and as a patrimony derived from their forefathers. Selden, and the other profoundly learned men, who drew this Petition of Right, were as well acquainted, at least, with all the general theories concerning the “rights of men,” as any of the discourses in our pulpits, or on your tribune, full as well as Dr. Price, or as the Abbé Siéyès. But, for reasons worthy of that practical wisdom which superseded their theoretic science, they preferred this positive, recorded, hereditary title to all which can be dear to the man and the citizen, to that vague speculative right, which exposed their sure inheritance to be scrambled for and torn to pieces by every wild, litigious spirit.

The same policy pervades all the laws which have since been made for the preservation of our liberties. In the 1st of William and Mary, in the famous statute, called the Declaration of Right, the two Houses utter not a syllable of “a right to frame a government for themselves.” You will see, that their whole care was to secure the religion, laws, and liberties that had been long possessed, and had been lately endangered. “Taking into their most serious consideration the best means for making such an establishment, that their religion, laws, and liberties might not be in danger of being again subverted,” they auspicate all their proceedings, by stating as some of those best means, “in the first place” to do “as their ancestors in like cases have usually done for vindicating their ancient rights and liberties, to declare”;-and then they pray the king and queen, “that it may be declared and enacted, that all and singular the rights and liberties asserted and declared, are the true ancient and indubitable rights and liberties of the people of this kingdom.

You will observe that from Magna Charta to the Declaration of Right, it has been the uniform policy of our constitution to claim and assert our liberties as an entailed inheritance derived to us from our forefathers, and to be transmitted to our posterity; as an estate specially belonging to the people of this kingdom, without any reference whatever to any other more general or prior right. By this means our constitution preserves a

unity in so great a diversity of its parts. We have an inheritable crown; an inheritable peerage; and a House of Commons and a people inheriting privileges, franchises, and liberties, from a long line of ancestors.

This policy appears to me to be the result of profound reflection; or rather the happy effect of following nature, which is wisdom without reflection, and above it. A spirit of innovation is generally the result of a selfish temper, and confined views. People will not look forward to posterity, who never look backward to their ancestors. Besides, the people of England well know, that the idea of inheritance furnishes a sure principle of conservation, and a sure principle of transmission; without at all excluding a principle of improvement. It leaves acquisition free; but it secures what it acquires. Whatever advantages are obtained by a state proceeding on these maxims, are locked fast as in a sort of family settlement; grasped as in a kind of mortmain for ever. By a constitutional policy, working after the pattern of nature, we receive, we hold, we transmit our government and our privileges, in the same manner in which we enjoy and transmit our property alad our lives. The institutions of policy, the goods of fortune, the gifts of providence, are handed down to us, and from us, in the same course and order. Our political system is placed in a just correspondence and symmetry with the order of the world, and with the mode of existence decreed to a permanent body composed of transitory parts; wherein, by the disposition of a stupendous wisdom, moulding together the great mysterious incorporation of the human race, the whole, at one time, is never old, or middle-aged, or young, but, in a condition of unchangeable constancy, moves on through the varied tenor of perpetual decay, fall, renovation, and progression. Thus, by preserving the method of nature in the conduct of the state, in what we improve, we are never wholly new; in what we retain, we are never wholly obsolete. By adhering in this manner and on those principles to our forefathers, we are guided not by the superstition of antiquarians, but by the spirit of philosophic analogy. In this choice of inheritance we have given to our frame of polity the image of a relation in blood; binding up the constitution of our country with our dearest domestic ties; adopting our fundamental laws into the bosom of our family affections; keeping inseparable, and cherishing with the warmth of all their combined and mutually reflected charities, our state, our hearts, our sepulchres, and our altars.

Through the same plan of a conformity to nature in our artificial institutions, and by calling in the aid of her unerring and powerful instincts to fortify the fallible and feeble contrivances of our reason, we have derived several others, and those no small benefits, from considering our liberties in the light of an inheritance. Always acting as if in the presence of canonized forefathers, the spirit of freedom, leading in itself to misrule and excess, is tempered with an awful gravity. This idea of a liberal descent inspires us with a sense of habitual native dignity, which prevents that upstart insolence almost inevitably adhering to and disgracing those who are the first acquirers of any distinction. By this means our liberty becomes a noble freedom. It carries an imposing and majestic aspect. It has a pedigree and illustrating ancestors. It has its bearings and its ensigns armorial. It has its gallery of portraits; its monumental inscriptions; its records, evidences, and titles. We procure reverence to our civil institutions on the principle upon which nature teaches us to revere individual men; on account of their age, and on account of those from whom they are descended. All your sophisters cannot produce anything better adapted to preserve a rational and manly freedom than the course that we have pursued, who have chosen our nature, rather than our speculations, our breasts rather than our inventions, for the great conservatories and magazines of our rights and privileges.

You [in France-Ed.] might, if you pleased, have profited of our example, and have given to your recovered freedom a correspondent dignity. Your privileges, though discontinued, were not lost to memory. Your constitution, it is true, whilst you were out of possession, suffered waste and dilapidation; but you possessed in some parts the walls, and, in all, the foundations, of a noble and venerable castle. You might have repaired those walls; you might have built on those old foundations. Your constitution was suspended before it was perfected; but you had the elements of a constitution very nearly as good as could be wished. In your old states you possessed that variety of parts corresponding with the various descriptions of which your community was happily composed; you had all that combination, and all that opposition of interests, you had that action and counteraction, which, in the natural and in the political world, from the reciprocal struggle of discordant powers, draws out the harmony of the universe. These opposed and conflicting interests, which you considered as so great a blemish in your old and in our present constitution, interpose a salutary check to all precipitate resolutions. They render deliberation a matter not of choice, but of necessity; they make all change a subject of compromise, which naturally begets moderation; they produce temperaments preventing the sore evil of harsh, crude, unqualified reformations; and rendering all the headlong exertions of arbitrary power, in the few or in the many, for ever impracticable. Through that diversity of members and interests, general liberty had as many securities as there were separate views in the several orders; whilst by pressing down the whole by the weight of a real monarchy, the separate parts would have been prevented from warping, and starting from their allotted places.

U.S. Bill of Rights

Date: 1791

The first 10 amendments to the U.S. Constitution, which enumerate the fundamental rights of citizens, were introduced in the First Congress, to overcome fears that the new federal system would not protect individual liberties. They went into effect in 1791. The First Amendment deals with freedom of religion, speech, assembly, and the press. The Second and Third Amendments protect the civilian population against military excesses by granting citizens the right to keep and bear arms and by prohibiting the quartering of troops in private homes in peacetime. The Fourth, Fifth, Sixth, and Eighth Amendments safeguard rights in criminal cases, and the Seventh Amendment preserves the right to jury trial in civil cases. The Ninth Amendment says that no rights are abridged merely because they are not enumerated in the Constitution, and the Tenth Amendment reserves to the states or the people all powers not delegated to the federal government by the Constitution. Initially the Bill of Rights was binding only on the U.S. government, but the Fourteenth Amendment applied these guarantees to state governments as well.

AMENDMENT 1

FREEDOM OF RELIGION, SPEECH, PRESS, ASSEMBLY, AND PETITION

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

AMENDMENT 2

RIGHT TO KEEP ARMS

A well regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

AMENDMENT 3

RIGHTS FROM TROOPS

No soldier shall, in time of peace, be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

AMENDMENT 4

SEARCH AND SEIZURE; WARRANTS

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

AMENDMENT 5

RIGHTS OF ACCUSED PERSONS

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

AMENDMENT 6

AMENDMENT TO SPEEDY TRIAL

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

AMENDMENT 7

JURY TRIAL IN CIVIL CASES

In Suits at common law, where the value in controversy shall exceed \$20, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States than according to the rules of the common law.

AMENDMENT 8

BAILS, FINES, PUNISHMENTS

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

AMENDMENT 9

POWERS RESERVED TO THE PEOPLE

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

AMENDMENT 10

POWERS RESERVED TO THE STATES

The powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.

Mary Wollstonecraft: *A Vindication on the Rights of Woman*

Date: 1792

A Vindication on the Rights of Woman is a seminal feminist text written by British author Mary Wollstonecraft. Although published in Britain, her book had a profound effect on feminist theory in the United States. Her treatise argues for the education and equal rights of women within the context of ideas shaped by the British Enlightenment and French Revolution. In this excerpt she announces, "Let woman share the rights, and she will emulate the virtues of man; for she must grow more perfect when emancipated, or justify the authority that chains such a weak being to her duty." These words written in 1792 still resonate today in what has become a classic work of feminist literature.

The following is an excerpt from the original document. Original spellings have been retained in this document.

To render women truly useful members of society, I argue that they should be led, by having their understandings cultivated on a large scale, to acquire a rational affection for their country, founded on knowledge, because it is obvious that we are little interested about what we do not understand. And to render this general knowledge of due importance, I have endeavoured to show that private duties are never properly fulfilled unless the understanding enlarges the heart; and that public virtue is only an aggregate of private. But, the distinctions established in society undermine both, by beating out the solid gold of virtue, till it becomes only the tinsel-covering of vice; for whilst wealth renders a man more respectable than virtue, wealth will be sought before virtue; and, whilst women's persons are caressed, when a childish simper shows an absence of mind—the mind will lie fallow. Yet, true voluptuousness must proceed from the mind—for what can equal the sensations produced by mutual affection, supported by mutual respect?

What are the cold, or feverish caresses of appetite, but sin embracing death, compared with the modest overflowings of a pure heart and exalted imagination? Yes, let me tell the libertine of fancy when he despises understanding in woman—that the mind, which he disregards, gives life to the enthusiastic affection from which rapture, short-lived as it is, alone can flow! And, that, without virtue, a sexual attachment must expire like a tallow candle in the socket, creating intolerable disgust. To prove this, I need only observe, that men who have wasted great part of their lives with women, and with whom they have sought for pleasure with eager thirst, entertain the meanest opinion of the sex. Virtue, true refiner of joy!—if foolish men were to fright thee from earth, in order to give loose to all their appetites without a check—some sensual wight of taste would scale the heavens to invite thee back, to give a zest to pleasure!

That women at present are by ignorance rendered vicious, is, I think, not to be disputed; and, that salutary effects tending to improve mankind might be expected from a REVOLUTION in female manners, appears, at least, with a face of probability, to rise out of the observation. For as marriage has been termed the parent of those endearing charities which draw man from the brutal herd, the corrupting intercourse

that wealth, idleness, and folly, produce between the sexes, is more universally injurious to morality than all the other vices of mankind collectively considered. To adulterous lust the most sacred duties are sacrificed, because before marriage, men, by a promiscuous intimacy with women, learned to consider love as a selfish gratification—learned to separate it not only from esteem, but from the affection merely built on habit which mixes a little humanity with it. Justice and friendship are also set at defiance, and that purity of taste is vitiated which would naturally lead a man to relish an artless display of affection rather than affected airs. But that noble simplicity of affection, which dares to appear unadorned, has few attractions for the libertine, though it be the charm, which by cementing the matrimonial tie, secures to the pledges of a warmer passion the necessary parental attention; for children will never be properly educated till friendship subsists between parents. Virtue flies from a house divided against itself—and a whole legion of devils take up their residence there.

The affection of husbands and wives cannot be pure when they have so few sentiments in common, and when so little confidence is established at home, as must be the case when their pursuits are so different. That intimacy from which tenderness should flow, will not, cannot subsist between the vicious.

Contending, therefore, that the sexual distinction which men have so warmly insisted upon, is arbitrary, I have dwelt on an observation, that several sensible men, with whom I have conversed on the subject, allowed to be well founded; and it is simply this, that the little chastity to be found amongst men, and consequent disregard of modesty, tend to degrade both sexes; and further, that the modesty of women, characterised as such, will often be only the artful veil of wantonness instead of being the natural reflection of purity, till modesty be universally respected.

From the tyranny of man, I firmly believe, the greater number of female follies proceed; and the cunning, which I allow makes at present a part of their character, I likewise have repeatedly endeavoured to prove, is produced by oppression.

Were not dissenters, for instance, a class of people, with strict truth, characterised as cunning? And may I not lay some stress on this fact to prove, that when any power but reason curbs the free spirit of man, dissimulation is practised, and the various shifts of art are naturally called forth? Great attention to decorum, which was carried to a degree of scrupulosity, and all that puerile bustle about trifles and consequential solemnity, which Butler's caricature of a dissenter brings before the imagination, shaped their persons as well as their minds in the mould of prim littleness. I speak collectively, for I know how many ornaments in human nature have been enrolled amongst sectaries; yet, I assert, that the same narrow prejudice for their sect, which women have for their families, prevailed in the dissenting part of the community, however worthy in other respects; and also that the same timid prudence, or headstrong efforts, often disgraced the exertions of both. Oppression thus formed many of the features of their character perfectly to coincidence with that of the oppressed half of mankind; for is it not notorious that dissenters were, like women, fond of deliberating together, and asking advice of each other, till by a complication of little contrivances, some little end was brought about? A similar attention to preserve their reputation was conspicuous in the dissenting and female world, and was produced by a similar cause.

Asserting the rights which women in common with men ought to contend for, I have not attempted to extenuate their faults; but to prove them to be the natural consequence of their education and station in society. If so, it is reasonable to suppose that they will change their character, and correct their vices and follies, when they are allowed to be free in a physical, moral, and civil sense.

Let woman share the rights, and she will emulate the virtues of man; for she must grow more perfect when emancipated, or justify the authority that chains such a weak being to her duty. If the latter, it will be expedient to open a fresh trade with Russia for whips: a present which a father should always make to his son-in-law on his wedding day, that a husband may keep his whole family in order by the same means; and without any violation of justice reign, wielding this sceptre, sole master of his house, because he is the only thing in it who has reason—the divine, indefeasible earthly sovereignty breathed into man by the Master of the universe. Allowing this position, women have not any inherent rights to claim; and, by the same rule, their duties vanish, for rights and duties are inseparable.

Be just then, O ye men of understanding: and mark not more severely what women do amiss than the vicious tricks of the horse or the ass for whom ye provide provender—and allow her the privileges of ignorance, to whom ye deny the rights of reason, or ye will be worse than Egyptian task-masters expecting virtue where Nature has not given understanding.

Sir William Eton: *A Survey of the Turkish Empire*

Date: 1799

Published as a book, A Survey of the Turkish Empire, the writings of Sir William Eton draw a picture of the decline of the great Ottoman Empire. His observations create a historical view of this time period. It also details the lessening of power of the empire. Sir William Eton's writings are viewed as a historical account of the Turkish Empire but may also be seen as a military intelligence report. This section provides a none-too-complimentary view of the ability of the Turkish army.

The following is an excerpt from the original document.

It is undeniable that the power of the Turks was once formidable to their neighbors not by their numbers only, but by their military and civil institutions, far surpassing those of their opponents. And they all trembled at the name of the Turks, who with a confidence procured by their constant successes, held the Christians in no less in contempt as warriors than they did on account of their religion. Proud and vainglorious, conquest was to them a passion, a gratification, and even a means of salvation, a sure way of immediately attaining a delicious paradise. Hence their zeal for the extension of their empire; hence their profound respect for the military profession, and their glory even in being obedient and submissive to discipline.

Besides that the Turks refuse all reform, they are seditious and mutinous; their armies are encumbered with immense baggage, and their camp has all the conveniences of a town, with shops etc. for such was their ancient custom when they wandered with their hordes. When their sudden fury is abated, which is at the least obstinate resistance, they are seized with a panic, and have no rallying as formerly. The cavalry is as much afraid of their own infantry as of the enemy; for in a defeat they fire at them to get their horses to escape more quickly. In short, it is a mob assembled rather than an army levied. None of those numerous details of a well-organized body, necessary to give quickness, strength, and regularity to its actions, to avoid confusion, to repair damages, to apply to every part to some use; no systematic attack, defense, or retreat; no accident foreseen, nor provided for . . .

The artillery they have, and which is chiefly brass, comprehends many fine pieces of cannon; but notwithstanding the reiterated instruction of so many French engineers, they are ignorant of its management. Their musket-barrels are much esteemed but they are too heavy; nor do they possess any quality superior to common iron barrels which have been much hammered, and are very soft Swedish iron. The art of tempering their sabers is now lost, and all the blades of great value are ancient. The naval force of the Turks is by no means considerable. Their grand fleet consisted of not more than seventeen or eighteen sail of the line in the last war [Russo-Turkish war of 1787-92], and those not in very good condition; at present their number is lessened.

The present reigning Sultan, Selim III, has made an attempt to introduce the European discipline into the Turkish army, and to abolish the body of the Janissaries. [He has] caused a corps to be recruited, set apart a branch of the revenue for their maintenance, and finally declared his intention of abolishing the institution of Janissaries. This step, as might be expected, produced a mutiny, which was only appeased by the sultan's consenting to continue their pay during their lifetimes; but he at the same time ordered that no recruits should be received into their corps. The new soldiers in the corps are taught their exercise with the musket and bayonet, and a few maneuvers. When they are held to be sufficiently disciplined, they are sent to garrison the fortresses on the frontiers. Their officers are all Turks and are chosen out of those who perform their exercise the best.

Johann Gottlieb Fichte: *Addresses to the German Nation*

Also known as: *Reden an die deutsche Nation*

Date: 1807

Matters of the expression of thought and the significant study of languages became a major area of study and of great intellectual debate during the Enlightenment. As a quintessential characteristic of human society, language was a target of attention for Enlightenment thinkers. Philosophers such as John Locke, who helped characterize words and ideas as relevant objects of study in his Essay Concerning Human Understanding (1689), discussed the nature of language and the ways in which it might be improved via rational principles.

*This linguistic research, study, and debate would develop for over a century. The trends toward categorizing languages and seeing them as formative of identity reached its fullest form at the beginning of the 19th century with Johann Gottlieb Fichte. As the Napoleonic Wars got fully under way, language theory combined with national pique to serve as the foundation for a particularistic view of languages. By 1807, French troops had occupied Berlin, and Fichte, who lived and worked there, used the opportunity to draw sharp distinctions between Germans and the French invaders. In his *Reden an die deutsche Nation* (Addresses to the German Nation, 1807), Fichte expressly connected linguistic tradition with virtue. Language and culture made the Germans noble and profound and the French ignoble and superficial. The tendency to identify national virtues through exclusive linguistic traditions did not stop with Fichte, however, but became fundamental to public attitudes across Europe in the 19th century.*

In this selection Johann Gottlieb Fichte exhorts people of German ancestry to love their fatherland. This passage serves as an example of romantic nationalism.

The following is an excerpt from the original document.
Original spellings have been retained in this document.

Love that is truly love, and not a mere transitory lust, never clings to what is transient; only in the eternal does it awaken and become kindled, and there alone does it rest. Man is not able to love even himself unless he conceives himself as eternal; apart from that he cannot even respect, much less approve, of himself. Still less can he love anything outside himself without taking it up into the eternity of his faith and of his soul and binding it thereto. He who does not first regard himself as eternal has in him no love of any kind, and, moreover, cannot love a fatherland, a thing which for him does not exist. He who regards his invisible life as eternal, but not his visible life as similarly eternal, may perhaps have a heaven and therein a fatherland, but here below he has no fatherland, for this, too, is regarded only in the image of eternity—eternity visible and made sensuous, and for this reason also he is unable to love his fatherland. If none has been handed down to such a man, he is to be pitied. But he to whom a fatherland has been handed down, and in whose soul heaven and earth, visible and invisible meet and mingle, and thus, and only thus, create a true and enduring heaven—such a man fights to the last drop of his blood to hand on the precious possession unimpaired to his posterity.

Hence, the noble-minded man will be active and effective, and will sacrifice himself for his people. Life merely as such, the mere continuance of changing existence, has in any case never had any value for him, he has wished for it only as the source of what is permanent. But this permanence is promised to him only by the continuous and independent existence of his nation. In order to save his nation he must be ready even to die that it may live, and that he may live in it the only life for which he has ever wished.

So it has always been, although it has not always been expressed in such general terms and so clearly as we express it here. What inspired the men of noble mind among the Romans, whose frame of mind and way of thinking still live and breathe among us in their works of art, to struggles and sacrifices, to patience and endurance for the fatherland? They themselves express it often and distinctly. It was their firm belief in the eternal continuance of their Roma, and their confident expectation that they themselves would eternally continue to live in this eternity in the stream of time. In so far as this belief was well-founded, and they themselves would have comprehended it if they had been entirely clear in their own minds, it did not deceive them. To this very day there still lives in our midst what was truly eternal in their eternal Roma. . . .

In this belief in our earliest common forefathers, the original stock of the new culture, the Germans, as the Romans called them, bravely resisted the oncoming world dominion of the Romans. Did they not have before their eyes the greater brilliance of the Roman provinces next to them and the more refined enjoyments in those provinces, to say nothing of laws and judges, seats and lictors, axes and fasces in superfluity? Were not the Romans willing enough to let them share in all these blessings? In the case of several of their own princes, who did no more than intimate that war against such benefactors of mankind was rebellion, did they not experience proofs of the belauded Roman clemency? To those who submitted the Romans gave marks of distinction in the form of kingly titles, high commands in their armies, and Roman fillets; and if they were driven out by their countrymen, did not the Romans provide for them a place of refuge and a means of subsistence in their colonies? Had they no appreciation of the advantages of Roman civilization, of the superior organization of their armies, in which even Arminius did not disdain to learn the trade of war? Their descendants, as soon as they could do so without losing their freedom, even assimilated Roman culture, so far as this was possible without losing their individuality.

Freedom to them meant just this: remaining Germans and continuing to settle their own affairs, independently and in accordance with the original spirit of their race, going on with their development in accordance with the same spirit, and propagating this independence in their posterity. All those blessings which the Romans offered them meant slavery to them because then they would have to become something that was not German, they would have to become half-Roman. They assumed as a matter of course that every man would rather die than become half a Roman, and that a true German could only want to live in order to be, and to remain, just a German and to bring up his children as Germans.

They did not all die; they did not see slavery; they bequeathed freedom to their children. It is their unyielding resistance which the whole modern world has to thank for being what it now is. Had the Romans suc-

ceeded in bringing them also under the yoke and in destroying them as a nation, which the Romans did in every case, the whole development of the human race would have taken a different course, a course that one cannot think would have been more satisfactory. It is they whom we must thank—we, the immediate heirs of their soil, their language, and their way of thinking—for being Germans still, for being still borne along on the stream of original and independent life. It is they whom we must thank for everything that we have been as a nation since those days, and to them we shall be indebted for everything that we shall be in the future, unless things come to an end with us now and the last drop of blood inherited from them has dried up in our veins. To them the other branches of the race, whom we now look upon as foreigners, but who by descent from them are our brothers, are indebted for their very existence. When our ancestors triumphed over Roma the eternal, not one of all these peoples was in existence, but the possibility of their existence in the future was won for them in the same fight . . .

Simón de Bolívar: Message to the Congress of Angostura

Date: 1819

The address was given by Simón de Bolívar at a congress called by him in Angostura (now Ciudad Bolívar, Venezuela) in 1819 for the purpose of providing a temporary basis of political organization for the newly created state of Gran Colombia (comprising Venezuela, New Granada, and Quito—now Ecuador). Believing that only democracy was capable of providing absolute liberty, in his famous address Bolívar proposed a type of constitution and political organization that he maintained would ensure liberty: a strong centralized representative republic with full administrative authority, one that guaranteed “the sovereignty of the people, the division of powers, civil liberty, the prohibition of slavery, [and] the abolition of monarchy and special privileges.” In its combination of realism and vision, Bolívar’s address is considered one of his two most outstanding social and political documents.

The following is an excerpt from the original document.

We are not Europeans; we are not Indians; we are but a mixed species of aborigines and Spaniards. Americans by birth and Europeans by law, we find ourselves engaged in a dual conflict: we are disputing with the natives for titles of ownership, and at the same time we are struggling to maintain ourselves in the country that gave us birth against the opposition of the invaders. Thus our position is most extraordinary and complicated. But there is more. As our role has always been strictly passive and political existence nil, we find that our quest for liberty is now even more difficult of accomplishment; for we, having been placed in a state lower than slavery, had been robbed not only of our freedom but also of the right to exercise an active domestic tyranny. . . We have been ruled more by deceit than by force, and we have been degraded more by vice than by superstition. Slavery is the daughter of darkness: an ignorant people is a blind instrument of its own destruction. Ambition and intrigue abuses the credulity and experience of men lacking all political, economic, and civic knowledge; they adopt pure illusion as reality; they take license for liberty, treachery for patriotism, and vengeance for justice. If a people, perverted by their training, succeed in achieving their liberty, they will soon lose it, for it would be of no avail to endeavor to explain to them that happiness consists in the practice of virtue; that the rule of law is more powerful than the rule of tyrants, because, as the laws are more inflexible, every one should submit to their beneficent austerity; that proper morals, and not force, are the bases of law; and that to practice justice is to practice liberty.

Although those people [North Americans], so lacking in many respects, are unique in the history of mankind, it is a marvel, I repeat, that so weak and complicated a government as the federal system has managed to govern them in the difficult and trying circumstances of their past. But, regardless of the effectiveness of this form of government with respect to North America, I must say that it has never for a moment entered my mind to compare the position and character of two states as dissimilar as the English-American and the Spanish-American. Would it not be most difficult to apply to Spain the English system of political, civil, and religious liberty: Hence, it would be even more difficult to adapt to Venezuela the laws of North America.

Nothing in our fundamental laws would have to be altered were we to adopt a legislative power similar to that held by the British Parliament. Like the North Americans, we have divided national representation into two chambers: that of Representatives and the Senate. The first is very wisely constituted. It enjoys all its proper functions, and it requires no essential revision, because the Constitution, in creating it, gave it the form and powers which the people deemed necessary in order that they might be legally and properly represented. If the Senate were hereditary rather than elective, it would, in my opinion, be the basis, the tie, the very soul of our republic. In political storms this body would arrest the thunderbolts of the government and would repel any violent popular reaction. Devoted to the government because of a natural interest in its own preservation, a hereditary senate would always oppose any attempt on the part of the people to infringe upon the jurisdiction and authority of their magistrates. . . . The creation of a hereditary senate would in no way be a violation of political equality. I do not solicit the establishment of a nobility, for as a celebrated republican has said, that would simultaneously destroy equality and liberty. What I propose is an office for which the candidates must prepare themselves, an office that demands great knowledge and the ability to acquire such knowledge. All should not be left to chance and the outcome of elections. The people are more easily deceived than is Nature perfected by art; and although these senators, it is true, would not be bred in an environment that is all virtue, it is equally true that they would be raised in an atmosphere of enlightened education. The hereditary senate will also serve as a counterweight to both government and people; and as a neutral power it will weaken the mutual attacks of these two eternally rival powers.

The British executive power possesses all the authority properly appertaining to a sovereign, but he is surrounded by a triple line of dams, barriers, and stockades. He is the head of government, but his ministers and subordinates rely more upon law than upon his authority, as they are personally responsible; and not even decrees of royal authority can exempt them from this responsibility. The executive is commander in chief of the army and navy; he makes peace and declares war; but Parliament annually determines what sums are to be paid to these military forces. While the courts and judges are dependent on the executive power, the laws originate in and are made by Parliament. Give Venezuela such an executive power in the person of a president chosen by the people or their representatives, and you will have taken a great step toward national happiness. No matter what citizen occupies this office, he will be aided by the Constitution, and therein being authorized to do good, he can do no harm, because his ministers will cooperate with him only insofar as he abides by the law. If he attempts to infringe upon the law, his own ministers will desert him, thereby isolating him from the Republic, and they will even bring charges against him in the Senate. The ministers, being responsible for any transgressions committed, will actually govern, since they must account for their actions.

A republican magistrate is an individual set apart from society, charged with checking the impulse of the people toward license and the propensity of judges and administrators toward abuse of the laws. He is directly subject to the legislative body, the senate, and the people: he is the one man who resists the combined pressure of the opinions, interests, and passions of the social state and who, as Carnot states, does little more than struggle constantly with the urge to dominate and the desire to escape domination. This weakness can only be corrected by a strongly rooted force. It should be strongly proportioned to meet the resistance which the executive must expect from the legislature, from the judiciary, and from the people of a republic. Unless the executive has easy access to all the administrative resources, fixed by a just distribution of powers, he inevitably becomes a nonentity or abuses his authority. By this I mean that the result will be the death of the government, whose heirs are anarchy, usurpation, and tyranny. . . . Therefore, let the entire system of government be strengthened, and let the balance of power be drawn up in such a manner that it will be permanent and incapable of decay because of its own tenuity. Precisely because no form of government is so weak as the democratic, its framework must be firmer, and its institutions must be studied to determine their degree of stability...unless this is done, we will have to reckon with an ungovernable, tumultuous, and anarchic society, not with a social order where happiness, peace, and justice prevail.

Treaty of Nanking

Also known as: Treaty of Nanjing

Date: 1842

The Treaty of Nanking ended the Opium War of 1839–42 between Great Britain and China. The treaty was completed August 29, 1842, in Nanjing (Nanking), China.

By the terms of the treaty the Chinese would agree to pay an indemnity of \$20 million to Great Britain. China would cede Hong Kong to Great Britain in perpetuity. China would open the ports of Guangzhou, Xiamen, Fuzhou (Foochow), Ningbo, and Shanghai to unrestricted British trade and residence. The Chinese agreed to extraterritoriality, by which British residents in China were not subject to Chinese legal jurisdiction and were exclusively subject to the jurisdiction of their own countries' courts.

Peace Treaty between the Queen of Great Britain and the Emperor of China

HER MAJESTY the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty the Emperor of China, being desirous of putting an end to the misunderstandings and consequent hostilities which have arisen between the two countries, have resolved to conclude a Treaty for that purpose, and have therefore named as their Plenipotentiaries, that is to say:

Her Majesty the Queen of Great Britain and Ireland, Sir Henry Pottinger, Bart., a Major-General in the service of the East India Company;

And His Imperial Majesty the Emperor of China, the High Commissioners Keying, a member of the Imperial House, a Guardian of the Crown Prince, and General of the garrison of Canton; and Elepoo, of the Imperial Kindred, graciously permitted to wear the insignia of the first rank, and the distinction of a peacock's feather, lately Minister and Governor-General, &c., and now Lieutenant General commanding at Chapoo;

Who, after having communicated to each other their respective Full Powers, and found them to be in good and due form, have agreed upon and concluded the following Articles:

I There shall henceforward be peace and friendship between Her Majesty the Queen of the United Kingdom of Great Britain and Ireland and His Majesty the Emperor of China, and between their respective subjects, who shall enjoy full security and protection for their persons and property within the dominions of the other.

II His Majesty the Emperor of China agrees, that British subjects, with their families and establishments, shall be allowed to reside, for the purposes of carrying on their mercantile pursuits, without molestation or restraint, at the cities and towns of Canton, Amoy, Foochowfoo, Ningpo, and Shanghai; and Her Majesty the Queen of Great Britain, &c., will appoint Superintendents, or Consular officers, to reside at each of the above-named cities or towns, to be the medium of communication between the Chinese authorities and the said merchants, and to see that the just duties and other dues of the Chinese Government, as hereafter provided for, are duly discharged by Her Britannic Majesty's subjects.

III It being obviously necessary and desirable that British subjects should have some port whereat they may careen and refit their ships when required, and keep stores for that purpose, His Majesty the Emperor of China cedes to Her Majesty the Queen of Great Britain, &c., the Island of Hong-Kong, to be possessed in perpetuity by Her Britannic Majesty, her heirs and successors, and to be governed by such laws and regulations as Her Majesty the Queen of Great Britain, &c., shall see fit to direct.

IV The Emperor of China agrees to pay the sum of 6,000,000 of dollars, as the value of the opium which was delivered up at Canton in the month of March, 1839, as a ransom for the lives of Her Britannic Majesty's Superintendent and subjects, who had been imprisoned and threatened with death by the Chinese High Officers.

V The Government of China having compelled the British merchants trading at Canton to deal exclusively with certain Chinese merchants, called Hong merchants (or Co-Hong), who had been licensed by the Chinese Government for that purpose, the Emperor of China agrees to abolish that practice in future at all ports where British merchants may reside, and to permit them to carry on their mercantile transactions with whatever persons they please; and His Imperial Majesty further agrees to pay to the British Government the sum of 3,000,000 of dollars, on account of debts due to British subjects by some of the said Hong merchants (or Co-Hong), who have become insolvent, and who owe very large sums of money to subjects of Her Britannic Majesty.

VI The Government of Her Britannic Majesty having been obliged to send out an expedition to demand and obtain redress for the violent and unjust proceedings of the Chinese High Authorities towards Her Britannic Majesty's officer and subjects, the Emperor of China agrees to pay the sum of 12,000,000 of dollars, on account of the expences incurred; and Her Britannic Majesty's Plenipotentiary voluntarily agrees, on behalf of Her Majesty, to deduct from the said amount of 12,000,000 of dollars, any sums which may have been received by Her Majesty's combined forces, as ransom for cities and towns in China, subsequent to the 1st day of August, 1841.

VII It is agreed, that the total amount of 21,000,000 of dollars, described in the 3 preceding Articles, shall be paid as follows:

6,000,000 immediately.

6,000,000 in 1843; that is, 3,000,000 on or before the 30th of the month of June, and 3,000,000 on or before the 31st of December.

5,000,000 in 1844; that is, 2,500,000 on or before the 30th of June, and 2,500,000 on or before the 31st of December.

4,000,000 in 1845; that is, 2,000,000 on or before the 30th of June, and 2,000,000 on or before the 31st of December.

And it is further stipulated, that interest, at the rate of 5 per cent. per annum, shall be paid by the Government of China on any portion of the above sums that are not punctually discharged at the periods fixed.

VIII The Emperor of China agrees to release, unconditionally, all subjects of Her Britannic Majesty (whether natives of Europe or India), who may be in confinement at this moment in any part of the Chinese empire.

IX The Emperor of China agrees to publish and promulgate, under his Imperial sign manual and seal, a full and entire amnesty and act of indemnity to all subjects of China, on account of their having resided under, or having had dealings and intercourse with, or having entered the service of Her Britannic Majesty, or of Her Majesty's officers; and His Imperial Majesty further engages to release all Chinese subjects who may be at this moment in confinement for similar reasons.

X His Majesty the Emperor of China agrees to establish at all the ports which are, by the IInd Article of this Treaty, to be thrown open for the resort of British merchants, a fair and regular tariff of export and import customs and other dues, which tariff shall be publicly notified and promulgated for general information; and the Emperor further engages, that when British merchandize shall have once paid at any of the said ports the regulated customs and dues, agreeable to the tariff to be hereafter fixed, such merchandize may be conveyed by Chinese merchants to any province or city in the interior of the Empire of China, on paying a further amount as transit duties, which shall not exceed * per cent. on the tariff value of such goods.

XI It is agreed that Her Britannic Majesty's Chief High Officer in China shall correspond with the Chinese High Officers, both at the capital and in the provinces, under the term "communication"; the subordinate British Officers and Chinese High Officers in the provinces, under the terms "statement" on the part of the former, and on the part of the latter, "declaration"; and the subordinates of both countries on a footing of perfect equality: merchants and others not holding official situations, and therefore not included in the above, on both sides, to use the term "representation" in all papers addressed to, or intended for the notice of, the respective Governments.

XII On the assent of the Emperor of China to this Treaty being received, and the discharge of the first instalment of money, Her Britannic Majesty's forces will retire from Nanking and the Grand Canal, and will no longer molest or stop the trade of China. The military post at Chinhai will also be withdrawn; but the Islands of Koolangsoo, and that of Chusan, will continue to be held by Her Majesty's forces until the money payments, and the arrangements for opening the ports to British merchants, be completed.

XIII The ratification of this Treaty by Her Majesty the Queen of Great Britain, &c., and His Majesty the Emperor of China, shall be exchanged as soon as the great distance which separates England from China will admit; but in the meantime, counterpart copies of it, signed and sealed by the Plenipotentiaries on behalf of their respective Sovereigns, shall be mutually delivered, and all its provisions and arrangements shall take effect.

Done at Nanking, and signed and sealed by the Plenipotentiaries on board Her Britannic Majesty's ship Cornwallis, this 29th day of August, 1842; corresponding with the Chinese date, 24th day of the 7th month, in the 22nd year of Taoukwang.

[L.S.] HENRY POTTINGER.

[SIGNATURES OF THE THREE CHINESE PLENIPOTENTIARIES]

DECLARATION RESPECTING TRANSIT DUTIES

Whereas by the Xth Article of the Treaty between Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty the Emperor of China, concluded and signed on board Her Britannic Majesty's ship Cornwallis, at Nanking, on the 29th day of August, 1842, corresponding with the Chinese date 24th day of the 7th month, in the 22nd year of Taoukwang, it is stipulated and agreed, that His Majesty the Emperor of China shall establish at all the ports which; by the IInd Article of the said Treaty,

are to be thrown open for the resort of British merchants, a fair and regular tariff of export and import customs and other dues, which tariff shall be publicly notified and promulgated for general information; and further, that when British merchandize shall have once paid, at any of the said ports, the regulated customs and dues, agreeable to the tariff to be hereafter fixed, such merchandize may be conveyed by Chinese merchants to any province or city in the interior of the Empire of China, on paying a further amount of duty as transit duty;

And whereas the rate of transit duty to be so levied was not fixed by the said Treaty;

Now, therefore, the undersigned Plenipotentiaries of Her Britannic Majesty, and of His Majesty the Emperor of China, do hereby, on proceeding to the exchange of the Ratifications of the said Treaty, agree and declare, that the further amount of duty to be so levied on British merchandize, as transit duty, shall not exceed the present rates, which are upon a moderate scale; and the Ratifications of the said Treaty are exchanged subject to the express declaration and stipulation herein contained.

In witness whereof the respective Plenipotentiaries have signed the present declaration, and have affixed thereto their respective seals.

Done at Hong-Kong, the 26th day of June, 1843, corresponding with the Chinese date, Taoukwang 23rd year, 5th month, and 29th day.

[L.S.] HENRY POTTINGER.

Women Miners in the English Coal Pits

Date: 1842

The following extracts from reports to the British parliament describe working conditions for women and children in the coal mines of England. The reports show that while industrial and mining conditions for the new class of laborers were terrible, reformers were beginning to investigate conditions and to consider means of regulating them.

From *Great Britain, Parliamentary Papers, 1842*, Vol. XVI, pp. 24, 196.

In England, exclusive of Wales, it is only in some of the colliery districts of Yorkshire and Lancashire that female Children of tender age and young and adult women are allowed to descend into the coal mines and regularly to perform the same kinds of underground work, and to work for the same number of hours, as boys and men; but in the East of Scotland their employment in the pits is general; and in South Wales it is not uncommon.

West Riding of Yorkshire: Southern Part—In many of the collieries in this district, as far as relates to the underground employment, there is no distinction of sex, but the labour is distributed indifferently among both sexes, except that it is comparatively rare for the women to hew or get the coals, although there are numerous instances in which they regularly perform even this work. In great numbers of the coalpits in this district the men work in a state of perfect nakedness, and are in this state assisted in their labour by females of all ages, from girls of six years old to women of twenty-one, these females being themselves quite naked down to the waist.

"Girls," says the Sub-Commissioner [J. C. Symons], -regularly perform all the various offices of trapping, hurrying [Yorkshire terms for drawing the loaded coal corves], filling, riddling, tipping, and occasionally getting, just as they are performed by boys. One of the most disgusting sights I have ever seen was that of young females, dressed like boys in trousers, crawling on all fours, with belts round their waists and chains passing between their legs, at day pits at Hunshelf Bank, and in many small pits near Holmfirth and New Mills: it exists also in several other places. I visited the Hunshelf Colliery on the 18th of January: it is a day pit; that is, there is no shaft or descent; the gate or entrance is at the side of a bank, and nearly horizontal. The gate was not more than a yard high, and in some places not above 2 feet.

"When I arrived at the board or workings of the pit I found at one of the sideboards down a narrow passage a girl of fourteen years of age in boy's clothes, picking down the coal with the regular pick used by the

men. She was half sitting half lying at her work, and said she found it tired her very much, and 'of course she didn't like it.' The place where she was at work was not 2 feet high. Further on were men lying on their sides and getting. No less than six girls out of eighteen men and children are employed in this pit.

"Whilst I was in the pit the Rev Mr Bruce, of Wadsley, and the Rev Mr Nelson, of Rotherham, who accompanied me, and remained outside, saw another girl of ten years of age, also dressed in boy's clothes, who was employed in hurrying, and these gentlemen saw her at work. She was a nice-looking little child, but of course as black as a tinker, and with a little necklace round her throat.

"In two other pits in the Huddersfield Union I have seen the same sight. In one near New Mills, the chain, passing high up between the legs of two of these girls, had worn large holes in their trousers; and any sight more disgustingly indecent or revolting can scarcely be imagined than these girls at work—no brothel can beat it.

"On descending Messrs Hopwood's pit at Barnsley, I found assembled round a fire a group of men, boys, and girls, some of whom were of the age of puberty; the girls as well as the boys stark naked down to the waist, their hair bound up with a tight cap, and trousers supported by their hips. (At Silkstone and at Flockton they work in their shifts and trousers.) Their sex was recognizable only by their breasts, and some little difficulty occasionally arose in pointing out to me which were girls and which were boys, and which caused a good deal of laughing and joking. In the Flockton and Thornhill pits the system is even more indecent: for though the girls are clothed, at least three-fourths of the men for whom they "hurry" work stark naked, or with a flannel waistcoat only, and in this state they assist one another to fill the corves 18 or 20 times a day: I have seen this done myself frequently.

"When it is remembered that these girls hurry chiefly for men who are not their parents; that they go from 15 to 20 times a day into a dark chamber (the bank face), which is often 50 yards apart from any one, to a man working naked, or next to naked, it is not to be supposed but that where opportunity thus prevails sexual vices are of common occurrence. Add to this the free intercourse, and the rendezvous at the shaft or bullstake, where the corves are brought, and consider the language to which the young ear is habituated, the absence of religious instruction, and the early age at which contamination begins, and you will have before you, in the coal-pits where females are employed, the picture of a nursery for juvenile vice which you will go far and we above ground to equal."

Two Women Miners

From Great Britain, Parliamentary Papers, 1842, Vol. XV, p. 84, and ibid., Vol. XVII, p. 108.

Betty Harris, age 37: I was married at 23, and went into a colliery when I was married. I used to weave when about 12 years old; can neither read nor write. I work for Andrew Knowles, of Little Bolton (Lancs), and make sometimes 7s a week, sometimes not so much. I am a drawer, and work from 6 in the morning to 6 at night. Stop about an hour at noon to eat my dinner; have bread and butter for dinner; I get no drink. I have two children, but they are too young to work. I worked at drawing when I was in the family way. I know a woman who has gone home and washed herself, taken to her bed, delivered of a child, and gone to work again under the week.

I have a belt round my waist, and a chain passing between my legs, and I go on my hands and feet. The road is very steep, and we have to hold by a rope; and when there is no rope, by anything we can catch hold of. There are six women and about six boys and girls in the pit I work in; it is very hard work for a woman. The pit is very wet where I work, and the water comes over our clog-tops always, and I have seen it up to my thighs; it rains in at the roof terribly. My clothes are wet through almost all day long. I never was ill in my life, but when I was lying in.

My cousin looks after my children in the day time. I am very tired when I get home at night; I fall asleep sometimes before I get washed. I am not so strong as I was, and cannot stand my work so well as I used to. I have drawn till I have bathe skin off me; the belt and chain is worse when we are in the family way. My feller (husband) has beaten me many a times for not being ready. I were not used to it at first, and he had little patience.

I have known many a man beat his drawer. I have known men take liberties with the drawers, and some of the women have bastards.

Patience Kershaw, age 17, Halifax: I go to pit at 5 o'clock in the morning and come out at 5 in the evening; I get my breakfast, porridge and milk, first; I take my dinner with me, a cake, and eat it as I go; I do not stop or rest at any time for the purpose, I get nothing else until I get home, and then have potatoes and meat, not every day meat.

Friederich Engels: *Industrial Manchester*

Date: 1844

Manchester, in southeast Lancashire, rapidly rose from obscurity to become the premier center of cotton manufacturing in England. This was largely due to geography. Its famously damp climate was better for the manufacture of cotton than the drier climate of the older eastern English cloth manufacture centers. It was close to the Atlantic port of Liverpool (and was eventually connected by one of the earliest rail tracks, as well as an ocean ship-capable canal—although 30 miles inland, it was long a major port). It was also close to power sources—first the water power of the Pennine mountain chain and, later, the coal mines of central Lancashire. As a result, Manchester became perhaps the first modern industrial city.

Friedrich Engels's father was a German manufacturer, and Engels worked as an agent in his father's Manchester factory. As a result, he combined both real experience of the city with a strong social conscience. This experience informs his The Condition of the Working-Class in England in 1844.

The following segments are excerpts from the original document.

Manchester lies at the foot of the southern slope of a range of hills, which stretch hither from Oldham, their last peak, Kersall moor, being at once the racecourse and the Mons Sacer of Manchester. Manchester proper lies on the left bank of the Irwell, between that stream and the two smaller ones, the Irk and the Medlock, which here empty into the Irwell. On the left bank of the Irwell, bounded by a sharp curve of the river, lies Salford, and farther westward Pendleton; northward from the Irwell lie Upper and Lower Broughton; northward of the Irk, Cheetham Hill; south of the Medlock lies Hulme; farther east Chorlton on Medlock; still farther, pretty well to the east of Manchester, Ardwick. The whole assemblage of buildings is commonly called Manchester, and contains about four hundred thousand inhabitants, rather more than less. The town itself is peculiarly built, so that a person may live in it for years, and go in and out daily without coming into contact with a working-people's quarter or even with workers, that is, so long as he confines himself to his business or to pleasure walks. This arises chiefly from the fact, that by unconscious tacit agreement, as well as with outspoken conscious determination, the working-people's quarters are sharply separated from the sections of the city reserved for the middle-class . . .

I may mention just here that the mills almost all adjoin the rivers or the different canals that ramify throughout the city, before I proceed at once to describe the labouring quarters. First of all, there is the old town of Manchester, which lies between the northern boundary of the commercial district and the Irk. Here the streets, even the better ones, are narrow and winding, as Todd Street, Long Millgate, Withy Grove, and Shude Hill, the houses dirty, old, and tumble-down, and the construction of the side streets utterly horrible. Going from the Old Church to Long Millgate, the stroller has at once a row of old-fashioned houses at the right, of which not one has kept its original level; these are remnants of the old pre-manufacturing Manchester, whose former inhabitants have removed with their descendants into better built districts, and have left the houses, which were not good enough for them, to a population strongly mixed with Irish blood. Here one is in an almost undisguised working-men's quarter, for even the shops and beer houses hardly take the trouble to exhibit a trifling degree of cleanliness. But all this is nothing in comparison with the courts and lanes which lie behind, to which access can be gained only through covered passages, in which no two human beings can pass at the same time. Of the irregular cramming together of dwellings in ways which defy all rational plan, of the tangle in which they are crowded literally one upon the other, it is impossible to convey an idea. And it is not the buildings surviving from the old times of Manchester which are to blame for this; the confusion has only recently reached its height when every scrap of space left by the old way of building has been filled up and patched over until not a foot of land is left to be further occupied.

The south bank of the Irk is here very steep and between fifteen and thirty feet high. On this declivitous hillside there are planted three rows of houses, of which the lowest rise directly out of the river, while the front walls of the highest stand on the crest of the hill in Long Millgate. Among them are mills on the river, in short, the method of construction is as crowded and disorderly here as in the lower part of Long Millgate. Right and left a multitude of covered passages lead from the main street into numerous courts, and he who turns in thither gets into a filth and disgusting grime, the equal of which is not to be found—especially in the courts which lead down to the Irk, and which contain unqualifiedly the most horrible dwellings which I have yet beheld. In one of these courts there stands directly at the entrance, at the end of the covered passage, a privy without a door, so dirty that the inhabitants can pass into and out of the court only by passing through foul pools of stagnant urine and excrement. This is the first court on the Irk above Ducie Bridge—in case any one should care to look into it. Below it on the river there are several tanneries which fill the whole neighbourhood with the stench of animal putrefaction. Below Ducie Bridge the only entrance to most of the houses is by means of narrow, dirty stairs and over heaps of refuse and filth. The first court below Ducie Bridge, known as Allen's Court, was in such a state at the time of the cholera that the sanitary police ordered it evacuated,

swept, and disinfected with chloride of lime. Dr. Kay gives a terrible description of the state of this court at that time. Since then, it seems to have been partially torn away and rebuilt; at least looking down from Ducie Bridge, the passer-by sees several ruined walls and heaps of debris with some newer houses. The view from this bridge, mercifully concealed from mortals of small stature by a parapet as high as a man, is characteristic for the whole district. At the bottom flows, or rather stagnates, the Irk, a narrow, coal-black, foul-smelling stream, full of debris and refuse, which it deposits on the shallower right bank.

In dry weather, a long string of the most disgusting, blackish-green, slime pools are left standing on this bank, from the depths of which bubbles of miasmatic gas constantly arise and give forth a stench unendurable even on the bridge forty or fifty feet above the surface of the stream. But besides this, the stream itself is checked every few paces by high weirs, behind which slime and refuse accumulate and rot in thick masses. Above the bridge are tanneries, bone mills, and gasworks, from which all drains and refuse find their way into the Irk, which receives further the contents of all the neighbouring sewers and privies. It may be easily imagined, therefore, what sort of residue the stream deposits. Below the bridge you look upon the piles of debris, the refuse, filth, and offal from the courts on the steep left bank; here each house is packed close behind its neighbour and a piece of each is visible, all black, smoky, crumbling, ancient, with broken panes and window frames. The background is furnished by old barrack-like factory buildings. On the lower right bank stands a long row of houses and mills; the second house being a ruin without a roof, piled with debris; the third stands so low that the lowest floor is uninhabitable, and therefore without windows or doors. Here the background embraces the pauper burial-ground, the station of the Liverpool and Leeds railway, and, in the rear of this, the Workhouse, the "Poor-Law Bastille" of Manchester, which, like a citadel, looks threateningly down from behind its high walls and parapets on the hilltop, upon the working-people's quarter below.

Above Ducie Bridge, the left bank grows more flat and the right bank steeper, but the condition of the dwellings on both banks grows worse rather than better. He who turns to the left here from the main street, Long Millgate, is lost; he wanders from one court to another, turns countless corners, passes nothing but narrow, filthy nooks and alleys, until after a few minutes he has lost all clue, and knows not whither to turn. Everywhere half or wholly ruined buildings, some of them actually uninhabited, which means a great deal here; rarely a wooden or stone floor to be seen in the houses, almost uniformly broken, ill-fitting windows and doors, and a state of filth! Everywhere heaps of debris, refuse, and offal; standing pools for gutters, and a stench which alone would make it impossible for a human being in any degree civilised to live in such a district. The newly-built extension of the Leeds railway, which crosses the Irk here, has swept away some of these courts and lanes, laying others completely open to view. Immediately under the railway bridge there stands a court, the filth and horrors of which surpass all the others by far, just because it was hitherto so shut off, so secluded that the way to it could not be found without a good deal of trouble. I should never have discovered it myself, without the breaks made by the railway, though I thought I knew this whole region thoroughly. Passing along a rough bank, among stakes and washing-lines, one penetrates into this chaos of small one-storied, one-roomed huts, in most of which there is no artificial floor; kitchen, living and sleeping-room all in one. In such a hole, scarcely five feet long by six broad, I found two beds—and such bedsteads and beds!—which, with a staircase and chimney-place, exactly filled the room. In several others I found absolutely nothing, while the door stood open, and the inhabitants leaned against it. Everywhere before the doors refuse and offal; that any sort of pavement lay underneath could not be seen but only felt, here and there, with the feet. This whole collection of cattle-sheds for human beings was surrounded on two sides by houses and a factory, and on the third by the river, and besides the narrow stair up the bank, a narrow doorway alone led out into another almost equally ill-built, ill-kept labyrinth of dwellings. . . .

If we leave the Irk and penetrate once more on the opposite side from Long Millgate into the midst of the working-men's dwellings, we shall come into a somewhat newer quarter, which stretches from St. Michael's Church to Wither Grove and Shude Hill. Here there is somewhat better order. In place of the chaos of buildings, we find at least long straight lanes and alleys or courts, built according to a plan and usually square. But if, in the former case, every house was built according to caprice, here each lane and court is so built, without reference to the situation of the adjoining ones. . . .

. . . Here, as in most of the working-men's quarters of Manchester, the pork-raisers rent the courts and build pig-pens in them. In almost every court one or even several such pens may be found, into which the inhabitants of the court throw all refuse and offal, whence the swine grow fat; and the atmosphere, confined on all four sides, is utterly corrupted by putrefying animal and vegetable substances. . . .

Such is the Old Town of Manchester, and on re-reading my description, I am forced to admit that instead of being exaggerated, it is far from black enough to convey a true impression of the filth, ruin, and uninhabitableness, the defiance of all considerations of cleanliness, ventilation, and health which characterise the construction of this single district, containing at least twenty to thirty thousand inhabitants. And such a district exists in the heart of the second city of England, the first manufacturing city of the world. If any one wishes to see in how little space a human being can move, how little air—and such air!—he can breathe, how little of civilisation he may share and yet live, it is only necessary to travel hither. True, this is the Old Town, and the people of Manchester emphasise the fact whenever any one mentions to them the frightful condition of

this Hell upon Earth; but what does that prove? Everything which here arouses horror and indignation is of recent origin, belongs to the industrial epoch.

The Communist Manifesto

Also known as: *Manifesto of the Communist Party*; *Manifest der Kommunistischen Partei*.

Date: February 21, 1848

This tract or pamphlet was written in 1847 for a meeting of the Communist League (in London) by the German social philosopher Karl Marx and his associate and compatriot Friedrich Engels. In the manifesto of the league, the authors attempted to explain scientifically how society had developed to a point where a classless society would begin to emerge. According to the authors, the workers of their day, who had been exposed to the vicissitudes of the capitalist market and who had been exploited by it, had grown to such numbers as to be able to unite and together abolish all ownership of property by the bourgeoisie, and to place, forcibly if necessary, the machinery that controlled the economy in the hands of the workers. Ultimately, the authors claimed, the state would be ruled by the workers, and a socialist, classless society would emerge.

The Manifesto of the Communist Party was written and published in German as a pamphlet and was printed in London in 1848. It is commonly referred to as The Communist Manifesto. The document was eventually translated into almost every language and would stir social change in many parts of the world. Its famous final line is usually rendered as “Workers of the world, unite!”

[From the English edition of 1888, edited by Friedrich Engels]

The following segments are excerpts from the original document. Original spellings have been retained in this document.

Manifesto of the Communist Party

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communistic by its opponents in power? Where is the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London, and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages. . . .

The history of all hitherto existing societies is the history of class struggles. . . .

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes, directly facing each other: Bourgeoisie and Proletariat. . . .

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his “natural superiors,” and has left remaining no other nexus between man and man than naked self-interest, than callous “cash payment.” . . .

In proportion as the bourgeoisie, i.e., capital, is developed, in the same proportion is the proletariat, the modern working class, developed—a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piece-meal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market. . . .

Modern industry has converted the little workshop of the patriarchal master into the great factory of the industrial capitalist. Masses of labourers, crowded into the factory, are organised like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeois class, and of the bourgeois State; they are daily and hourly enslaved by the machine, by the over-looker, and, above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is. . . .

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows, and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalised, in proportion as machinery obliterates all distinctions of labour, and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crises, make the wages of the workers ever more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (Trades Unions) against the bourgeois; they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots. . . .

This organization of the proletarians into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. . . .

It has become evident, that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him sink into such a state, that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society.

The essential condition for the existence, and for the sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage-labour. Wage-labour rests exclusively on competition between the laborers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, is its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable. . . .

The immediate aim of the Communist is the same as that of all the other proletarian parties: formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat. . . .

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products, that is based on class antagonisms, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property. . . .

The Communists are further with desiring to abolish countries and nationality.

The working men have no country. We cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself the nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world-market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilised countries at least, is one of the first conditions for the emancipation of the proletariat. . . .

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production in the hands of the State, i.e., of the proletariat organised as the ruling class; and to increase the total of productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which, in the course of the movement, outstrip themselves, necessitate further inroads upon the old social order, and are unavoidable as a means of entirely revolutionising the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries, the following will be pretty generally applicable.

1. Abolition of property in land and application of all rents of land to public purposes.
2. A heavy progressive or graduated income tax.
3. Abolition of all right of inheritance.
4. Confiscation of the property of all emigrants and rebels.
5. Centralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.
6. Centralisation of the means of communication and transport in the hands of the State.
7. Extension of factories and instruments of production owned by the State; the bringing into cultivation of waste-lands, and the improvement of the soil generally in accordance with a common plan.
8. Equal liability of all to labour. Establishment of industrial armies, especially for agriculture.
9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equable distribution of the population over the country.
10. Free education for all children in public schools. Abolition of children's factory labour in its present form. Combination of education with industrial production, etc., etc.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organised power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organise itself as a class, if, by means of a revolution, it makes itself the ruling class, and, as such, sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all. . . .

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communistic revolution. The proletarians have nothing to lose but their chains. They have a world to win.

Workingmen of all countries, unite!

Percy B. St. John: *Eyewitness to the French Revolution in 1848*

Date: February 22, 1848

During this time period in France, suffrage was restricted only to men who owned a certain amount of property. Among the disenfranchised masses, opposition parties and organized protest movements had been held for years. On February 22, 1848, a mass protest banquet was arranged to demand universal manhood suffrage. François-Pierre-Guillaume Guizot (1787–1874), the French premier under King Louis-Philippe (1773–1850), was informed of the planned event and immediately issued a decree forbidding the banquet. In response to Guizot's provocative decree, Parisians gathered at the banquet hall and street fighting broke

out. The violence reached its height on February 23, when troops clashed with demonstrators. Although some of the soldiers fired into the mob, others laid down their arms and joined the Parisians. Guizot resigned immediately, and Louis-Philippe abdicated on February 24. The Chamber of Deputies created a Committee of Public Safety, headed by the renowned poet Alphonse de Lamartine (1790–1869), which quickly created the Second French Republic. The Second Republic endured until 1852, when Louis-Napoleon-Bonaparte proclaimed himself Napoleon III.

Percy B. St. John was a journalist and author. By 1846 he was editor of The Mirror of Literature. His book is titled French Revolution in 1848: The Three Days of February 1848, by Percy B. St. John, An Eye-Witness Of The Whole Revolution, and was published by Richard Bentley, New Burlington Street, London, 1848. St. John went on to become the editor of The Guide to Literature, Science, Art and General Information in 1853, and in 1861 became the editor of The London Herald.

The following segments are excerpts from the original document.

Tuesday, February 22. The journals of the opposition appeared with the notice, in large letters, at the head of their papers, that the banquet was given up, and an appeal to the population of Paris to keep order, formed a very prominent part of the announcement. The Left were evidently alarmed, while ministers were confident and their journals sang a triumphant song of victory. From an early hour detachments of municipal guard, troops of the line and cavalry, were seen moving toward the boulevards and the Chamber of Deputies; it became known that heavy squadrons of cavalry had entered Paris during the night, while others were concealed within the Hippodrome, or were bivouacked round the fortifications. The spies of the government reported during the night that there was a total absence of conspiracy. . . .

The weather was disagreeable, even wet. A somber and threatening sky hung over the town, but from six in the morning the boulevards presented an animated appearance. Crowds of workmen, of shopkeepers, began to move toward the Church of the Madeleine, in front of which the procession was to have met and formed. Many were not aware that the banquet was given up, and went to witness the departure of the cortege, while those who knew that the opposition had abandoned their intention of holding the meeting, went with a vague desire to see what would happen. Hundreds went with a settled determination to bring things to an issue; for early on Tuesday morning I saw swords, and daggers, and pistols concealed under the blouses of the workmen. . . .

Between nine and ten I walked to the Place de la Madeleine. It was covered with knots of men and women of all classes, talking, whispering, looking about with a vague air of uncertainty and alarm. . . .

The neighborhood of the Chamber of Deputies were then occupied militarily. A strong force was placed upon the Pont de la Concorde, and on attempting to pass, I and others were driven back by the military. No one was allowed to cross save deputies, who carried their medals, or persons bearing tickets. The other approaches to the legislature were equally well guarded. Between the Quai d'Orsay and the Invalides, two regiments of the line and six pieces of artillery were stationed.

Meanwhile, everywhere the crowd increased; all Paris seemed moving to the boulevards, to the Madeleine, to the Champs Elysees, and to the Place de la Concorde. As yet there was no menacing aspect in the masses, many artisans, with their wives on their arms, hung about looking on and listening. Not a policeman in uniform was seen, but many a mouchard face could be distinguished in the crowd.

About ten o'clock, a considerable body of workmen, and young men belonging to the different schools of Paris collected on the Place du Pantheon, and set out for the Madeleine by the Rues St. Jacques, des Gres, the Pont Neuf, the Rue St. Honore, etc., crying as they went, *Vive la Reforme*, and singing the Marseillaise and the chant of the Girondins. . . .

This procession, which had gradually swelled as it went, came out upon the boulevards by the Rue Duphot, and as they passed, it was impossible not to admire the courage of this body of young men, who, wholly unarmed, thus braved the strict orders of a government, backed by an immense army and whole parks of artillery. They were liable at every moment to be charged or fired on. . . .

Having reached the Madeleine, the procession halted before the house in which the central committee of the electors of the opposition were in the habit of assembling, and asked for Barrot, who, however, was not there. The Ministry of Foreign Affairs, up to the time this procession passed before its door, had the gate open, with soldiers standing before utterly unarmed. . . .

An officer of dragoons advanced alone to a large group of spectators, who were collected in the basin of one of the fountains, and begged them to retire, which many of them at once did. A few persisted; but suddenly the water beginning to play, they jumped out amid loud laughter. In fact, with few exceptions, the crowd, amidst whom were many well-dressed ladies and gentlemen, were excessively good humored. The majority seemed persuaded that the vast display of unarmed Parisians who had turned out would induce the ministry to give way. The municipal guard, however, like the gendarmes and Swiss of the July Revolution, seemed doomed to mar all. This body, detested by the Parisians as police, kept up continued charges upon the crowd as it gradually dispersed. . . .

About twelve, passing by the Ministry of Foreign Affairs, I noticed, in the back court, a heavy detachment of dragoons, in addition to which, soon after, the front door was closed and guarded by numerous sentries. A powerful mob, with sticks and iron bars, strove to burst open the gate and inflict summary vengeance on Guizot. The windows were broken with stones. Loud cries of *Vive la Reforme!* were followed by a *bas Guizot!* A single municipal guard strove to get out at the front gate, as if to go for a reinforcement. He was pelted with stones and driven back within shelter of the hotel [i.e., the Ministry].

About this time a most imposing military force marched down upon the hotel, which assumed the air of a fortress. A line of soldiers, with their arms loaded and bayonets fixed, occupied the pavement. The long garden wall was guarded by a cordon of troops, and municipal guards on horseback stood before the door. These latter took up their position with so much carelessness, as to knock down and severely wound one of the crowd. Shortly after, one of these police having rushed out to seize a rioter, was unhorsed and severely handled, after which he was taken to the same doctor's shop where was the wounded man of the people. From that moment all disturbance finished on this point for the day, and Guizot was able to go to the Chamber of Deputies. The passengers were in this neighborhood compelled to turn out on to the carriage way, the whole pavement being occupied by soldiers. . . .

At this very time [about three], having returned to my residence to write a letter, I was witness to a scene, which described minutely, may give an idea of many similar events. My residence is situated in the Rue St. Honore. . . . Called to my window by a noise, I saw several persons standing at the horses' heads of an omnibus. The driver whipped, and tried to drive on. The people insisted. At length, several policemen in plain clothes interfered, and as the party of the people was small, disengaged the omnibus, ordered the passengers to get out, and sent the vehicle home amid the hootings of the mob. A few minutes later, a cart full of stones and gravel came up. A number of boys seized it, undid the harness, and it was placed instantly in the middle of the street, amid loud cheering. A brewer's dray and hackney cab were in brief space of time added, and the barricade was made. The passers-by continued to move along with the most perfect indifference. . . .

Next door to me is an armorer's. Suddenly the people perceived the words *Prelat, armourier*, over the door. A rush is made at his shutters, stones are raised at his windows, and those of the house he occupied, many of which smash the panes in neighboring houses. Every window is, however, filled by anxious spectators. Suddenly the shutters of the shop give way, they are torn down and borne to the barricade, while the windows being smashed, the people rush into the warehouse. There are no arms! The night before they have been removed or concealed. Still, a few horns of gunpowder, and some swords and pistols are taken. Though the mob was through the whole of the vast hotel, a portion of which was occupied by the armorer, nothing but arms were taken away. . . .

On Wednesday, however, it was impossible to conceal from the *liing* that the movement was general, that the people were flying to arms, that barricades were rising in every quarter, and worse than all, the colonels of the national guard reported, one after another, that their men demanded, nay, insisted on the dismissal of Guizot. The generals of the line were interrogated. Not one would answer for the troops if the national guard sided with the people. The saying of an artillery officer near the Hotel de Ville was reported "Fire on the people? No! Fire on the people who pay us? We shall do nothing of the kind. If we have to choose between massacring our brothers and abandoning the monarchy, there can be no hesitation." Louis Philippe saw the critical nature of the position, and hesitated no longer. Guizot and his colleagues were dismissed. . . .

Toward seven o'clock, the general aspect of Paris was peaceable. On the Petit Bourse, near the Opera, the funds had risen forty centimes on the arrival of the news that the ministry had been dismissed. Aides-de-camp and general officers galloped here and there, proclaiming the intelligence. Everywhere the people delivered the prisoners made during the day, and then they went away rejoicing. Nevertheless, the barricades were not abandoned. The strongest and most artistically made were guarded by some hundreds of young men, between the Rue du Temple and the Rue St. Martin, and about the Rue Transnonain. Though repeatedly told of the dismissal of Guizot, they replied that they must have guarantees, and with this they posted sentries at every issue, and prepared to bivouac for the night, many without food, many without fire. Among these were numbers of the better classes, who had placed blouses over their clothes and joined the people, to encourage and direct them.

Between eight and nine o'clock, darkness having completely set in, the streets began to present an unusual aspect—that of an illumination. With rare exceptions, at every window of the lofty houses on the quarter of the Tuileries, candles or lamps were placed, and by their light could be seen ladies and gentlemen looking down upon the dense and happy crowd who filled the streets to overflowing. Loud cheers greeted the presence of the spectators, while groans and threats of demolishing their windows were the punishment of the sulky few who refused to join in the general manifestation. They gained nothing by it but to let their ill will be seen, for the populace compelled them to follow the general example. All, however, was gayety and good humor.

After witnessing the fine coup-d'oeil presented by the Rue St. Honore, the longest street in the world, I believe, I attempted to gain the boulevards by the Place Vendome. I found it, however, occupied by a dense mass of some ten thousand men, who were striving to force the denizens of the Hotel de Justice to light up. As no attention was paid to their demand, and Hebert [minister of Justice] was peculiarly hated, they began to break his windows, and even set fire to the planks which shelved off from the door, as well as to the sentry box. A heavy body of cuirassiers however, and several detachments of national guards came down, and using vigorous, but gentle measures,

re-established order. To lessen the crowd, they drew a line across the Rue Castiglione, and allowed no one to pass. Standing in the crowd, I heard many republicans conversing. Their tone was that of bitter disappointment. They said that the people were deceived, that a Molé ministry was a farce, and that if the populace laid down their arms, it would be but to take them up again. Still, the majority rejoiced. To have carried this point was a great thing, and no greater proof of the patriotism of the workingmen can be given. They gained nothing by the change but mental satisfaction, with which a vast majority seemed amply satisfied.

But a terrible and bloody tragedy was about to change the aspect of the whole scene. . . .

Wednesday, February 23d. About a quarter past ten, while on my way, by another route, to the boulevards, I suddenly, with others, was startled by the aspect of a gentleman who, without his hat, ran madly into the middle of the street, and began to harangue the passersby. "To arms!" he cried, "we are betrayed. The soldiers have slaughtered a hundred unarmed citizens by the Hôtel des Capucines. Vengeance!" and having given the details of the affair, he hurried to carry the intelligence to other quarters. The effect was electric; each man shook his neighbor by the hand, and far and wide the word was given that the whole system must fall.

As this tragic event sealed the fate of the Orleans dynasty, I have been at some pains to collect a correct version of it, and I have every reason to believe those who were eyewitnesses will bear me out in my description. I went immediately as near to the spot as possible, I conversed to numerous parties who saw it, and myself saw many of the immediate consequences.

The boulevards were, like all the other streets, brilliantly illuminated, and everywhere immense numbers of promenaders walked up and down, men, women, and children, enjoying the scene, and rejoicing that the terrific struggle of the day had ceased. The footpaths were quite covered, while the carriage way, in part occupied by cavalry, was continually filled by processions of students, working men, and others, who sang songs of triumph at their victory. Round the Hôtel des Capucines, where Guizot resided, there was a heavy force of military, of troops of the line, dragoons, and municipal guard, who occupied the pavement and forced everyone on to the carriage way. A vast crowd, principally of accidental spectators, ladies, gentlemen, English, etc., in fact curious people in general, were stationed watching a few men and boys who tried to force the inmates to light up.

For some time all was tranquil, but presently a column of students and artisans, unarmed, but singing "Mourir pour la patrie," came down the boulevards; at the same instant a gun was heard, and the 14th Regiment of Line leveled their muskets and fired. The scene which followed was awful. Thousands of men, women, children, shrieking, bawling, raving, were seen flying in all directions, while sixty-two men, women, and lads, belonging to every class of society, lay weltering in their blood upon the pavement. Next minute an awful roar, the first breath of popular indignation was heard, and then flew the students, artisans, the shopkeepers, all, to carry the news to the most distant parts of the city, and to rouse the population to arms against a government whose satellites murdered the people in this atrocious manner.
