A squadron of cuirassiers now charged, sword in hand, over dead and wounded, amid useless cries of "Mind the fallen," and drove the people before them. The sight was awful. Husbands were seen dragging their fainting wives from the scene of massacre; fathers snatching up their children, with pale faces and clenched teeth, hurried away to put their young ones in safety, and then to come out in arms against the monarchy. Women clung to railings, trees, or to the wall, or fell fainting on the stones. More than a hundred persons who saw the soldiers level, fell in time to save their lives, and then rose and hastened to quit the spot. Utter strangers shook hands and congratulated one another on their escape. In a few minutes, a deputy of the opposition, Courtais, now commanding the national guard, was on the spot and making inquiries into the cause of this fearful affair. "Sir," said he, warmly addressing the colonel in command, "you have committed an action, unworthy of a French soldier." The Colonel, overwhelmed with sorrow and shame, replied, that the order to fire was a mistake. It appeared that a ball, from a gun which went off accidentally, had struck his horse's leg, and that thinking he was attacked, he had ordered a discharge. "Monsieur le Colonel," added the honorable deputy, "you are a soldier, I believe in your good faith; but remember that an awful responsibility rests on your head." Tremendous indeed, for he had sealed the fate of the tottering monarchy!

A word before we proceed. When the proclamation was made that the Guizot ministry had been dismissed, the military were gradually withdrawn, and wherever this occurred, tranquillity followed. No serious attacks were made upon any public building; in fact, the people contented themselves with breaking a few windows; everywhere the cry "Light the lamps," was not obeyed. Guizot, however, conscious of the intense hatred which was felt toward him, kept his house guarded like a fortress. The display of military force was tremendously imposing, both within and without the hoel. Had none been stationed outside, whatever he had in, the causes which kept crowds standing round, would have been removed, and the people would not have been irritated. It was the overcare of his own person shown by Guizot, which caused this frightful catastrophe. Like every other event of this great week, with all its momentous consequences, this is to be traced to the utter incapacity of Guizot, in politics. . . .

Meanwhile, Courtais had hurried to the National office, while a body of men, now no longer hindered by the soldiers, proceeded to remove the heaps of dead and dying, whose groans must have been plainly heard by the ex-minister in his hotel. The wounded, and those bodies which were claimed, were borne to houses in

the neighborhood, while some of the national guards in uniform were carried to their respective town halls, everywhere as the bloody banner of insurrections. Seventeen corpses, however, were retained and placed upon a cart. Ghastly was the spectacle of torch and gaslight, of that heap of dead, a few minutes before alive, merry, anxious, full of hopes, and perhaps, lofty aspirations for their country. Round about were men, no less pale and ghastly, bearing pikes and torches, while others drew the awful cartload along.

Frederick Douglass's Speech on American Slavery

Date: 1850

This speech, given by Frederick Douglass in Rochester, New York, was the first of a series of lectures on slavery. Opposition to slavery went back at least as far as 1688 and had become a heated topic between the northern and southern states in the first half of the 1800s. Douglass, a former slave, first gained recognition in 1841 as a speaker at the Massachusetts Anti-Slavery Society's convention, and he soon became a living symbol against claims that blacks were inferior. His speech elicited sympathy for the millions of slaves in the South by using the oppression of Ireland for comparison: No matter how badly the Irish were treated, they were still masters of their own body and soul. Earlier that same year, Congress produced the Great Compromise, which strengthened the Fugitive Slave Law and outraged abolitionists.

I come before you this evening to deliver the first lecture of a course which I purpose to give in this city, during the present winter, on the subject of American Slavery.

I make this announcement with no feelings of self-sufficiency. If I do not mistake my own emotions, they are such as result from a profound sense of my incompetency to do justice to the task which I have just announced, and now entered upon.

If any, then, demand of me why I speak, I plead as my apology, the fact that abler and more eloquent men have failed to speak, or what, perhaps, is more true, and therefore more strong, such men have spoken only on the wrong side of the question, and have thus thrown their influence against the cause of liberty, humanity and benevolence.

There are times in the experience of almost every community, when even the humblest member thereof may properly presume to teach—when the wise and great ones, the appointed leaders of the people, exert their powers of mind to complicate, mystify, entangle and obscure the simple truth—when they exert the noblest gifts which heaven has vouchsafed to man to mislead the popular mind, and to corrupt the public heart, —then the humblest may stand forth and be excused for opposing even his weakness to the torrent of evil.

That such a state of things exists in this community, I have abundant evidence. I learn it from the Rochester press, from the Rochester pulpit, and in my intercourse with the people of Rochester. Not a day passes over me that I do not meet with apparently good men, who utter sentiments in respect to this subject which would do discredit to savages. They speak of the enslavement of their fellow-men with an indifference and coldness which might be looked for only in men hardened by the most atrocious and villainous crimes.

The fact is, we are in the midst of a great struggle. The public mind is widely and deeply agitated; and bubbling up from its perturbed waters, are many and great impurities, whose poisonous miasma demands a constant antidote.

Whether the contemplated lectures will in any degree contribute towards answering this demand, time will determine.

Of one thing, however, I can assure my hearers—that I come up to this work at the call of duty, and with an honest desire to promote the happiness and well-being of every member of this community, as well as to advance the emancipation of every slave.

The audience will pardon me if I say one word more by way of introduction. It is my purpose to give this subject a calm, candid and faithful discussion. I shall not aim to shock nor to startle my hearers; but to convince their judgment and to secure their sympathies for the enslaved. I shall aim to be as stringent as truth, and as severe as justice; and if at any time I shall fail of this, and do injustice in any respect, I shall be most happy to be set right by any gentleman who shall hear me, subject, of course to order and decorum. I shall deal, during these lectures, alike with individuals and institutions—men shall no more escape me than things. I shall

have occasion, at times, to be even personal, and to rebuke sin in high places. I shall not hesitate to arraign either priests or politicians, church or state, and to measure all by the standard of justice, and in the light of truth. I shall not forget to deal with the unrighteous spirit of caste which prevails in this community; and I shall give particular attention to the recently enacted fugitive slave bill. I shall keep my eye upon the Congress which is to commence to-morrow, and fully inform myself as to its proceedings. In a word, the whole subject of slavery, in all its bearings, shall have a full and impartial discussion.

A very slight acquaintance with the history of American slavery is sufficient to show that it is an evil of which it will be difficult to rid this country. It is not the creature of a moment, which to-day is, and to-morrow is not; it is not a pigmy, which a slight blow may demolish; it is no youthful upstart, whose impertinent pratings may be silenced by a dignified contempt. No: it is an evil of gigantic proportions, and of long standing.

Its origin in this country dates back to the landing of the pilgrims on Plymouth rock. . . . It was here more than two centuries ago. The first spot poisoned by its leprous presence, was a small plantation in Virginia. The slaves, at that time, numbered only twenty. They have now increased to the frightful number of three millions; and from that narrow plantation, they are now spread over by far the largest half of the American Union. Indeed, slavery forms an important part of the entire history of the American people. Its presence may be seen in all American affairs. It has become interwoven with all American institutions, and has anchored itself in the very soil of the American Constitution. It has thrown its paralysing arm over freedom of speech, and the liberty of the press; and has created for itself morals and manners favorable to its own continuance. It has seduced the church, corrupted the pulpit, and brought the powers of both into degrading bondage; and now, in the pride of its power, it even threatens to bring down that grand political edifice, the American Union, unless every member of this republic shall so far disregard his conscience and his God as to yield to its infernal behests.

That must be a powerful influence which can truly be said to govern a nation; and that slavery governs the American people, is indisputably true. If there were any doubt on this point, a few plain questions (it seems to me) could not fail to remove it. What power has given this nation its Presidents for more than fifty years? Slavery. What power is that to which the present aspirants to presidential honors are bowing? Slavery. We may call it "Union," "Constitution," "Harmony," or "American institutions," that to which such men as Cass, Dickinson, Webster, Clay and other distinguished men of this country, are devoting their energies, is nothing more nor less than American slavery. It is for this that they are writing letters, making speeches, and promoting the holding of great mass meetings, professedly in favor of "the Union." These men know the service most pleasing to their master, and that which is most likely to be richly rewarded. Men may "serve God for nought," as did Job; but he who serves the devil has an eye to his reward. "Patriotism," "obedience to the law," "prosperity to the country," have come to mean, in the mouths of these distinguished statesmen, a mean and servile acquiescence in the most flagitious and profligate legislation in favor of slavery. I might enlarge here on this picture of slave power, and tell of its influence upon the press in the free States, and upon the condition and rights of the free colored people of the North; but I forbear for the present. . . . Enough has been said, I trust, to convince all that the abolition of this evil will require time, energy, zeal, perseverance and patience; that it will require fidelity, a martyr-like spirit of self-sacrifice, and a firm reliance on Him who has declared Himself to be "the God of the oppressed." Having said thus much upon the power and prevalence of slavery, allow me to speak of the nature of slavery itself; and here I can speak, in part, from experience—I can speak with the authority of positive knowledge. . . .

First of all, I will state, as well as I can, the legal and social relation of master and slave. A master is one (to speak in the vocabulary of the Southern States) who claims and exercises a right of property in the person of a fellow man. This he does with the force of the law and the sanction of Southern religion. The law gives the master absolute power over the slave. He may work him, flog him, hire him out, sell him, and, in certain contingencies, kill him, with perfect impunity. The slave is a human being, divested of all rights—reduced to the level of a brute—a mere "chattel" in the eye of the law—placed beyond the circle of human brotherhood—cut off from his kind—his name, which the "recording angel" may have enrolled in heaven, among the blest, is impiously inserted in a master's ledger, with horses, sheep and swine. In law, the slave has no wife, no children, no country, and no home. He can own nothing, possess nothing, acquire nothing, but what must belong to another. To eat the fruit of his own toil, to clothe his person with the work of his own hands, is considered stealing. He toils that another may reap the fruit; he is industrious that another may live in idleness; he eats unbolted meal, that another may eat the bread of fine flour; he labors in chains at home, under a burning sun and a biting lash, that another may ride in ease and splendor abroad; he lives in ignorance, that another may be educated; he is abused, that another may be exalted; he rests his toil-worn limbs on the cold, damp ground, that another may repose on the softest pillow; he is clad in coarse and tattered raiment, that another may be arrayed in purple and fine linen; he is sheltered only by the wretched hovel, that a master may dwell in a magnificent mansion; and to this condition he is bound down as by an arm of iron.

From this monstrous relation, there springs an unceasing stream of most revolting cruelties. The very accompaniments of the slave system, stamp it as the offspring of hell itself. To ensure good behavior, the slaveholder relies on the whip; ; to induce proper humility, he relies on the whip; ; to rebuke what he is pleased to

term insolence, he relies on the whip, ; to supply the place of wages, as an incentive to toil, he relies on the whip, ; to bind down the spirit of the slave, to imbrute and to destroy his manhood, he relies on the whip, , the chain, the gag, the thumb- screw, the pillory, the bowie-knife, the pistol, and the blood-hound. These are the necessary and unvarying accompaniments of the system. . . .

Nor is slavery more adverse to the conscience than it is to the mind.

This is shown by the fact that in every State of the American Union, where slavery exists, except the State of Kentucky, there are laws, absolutely prohibitory of education among the slaves. The crime of teaching a slave to read is punishable with severe fines and imprisonment, and, in some instances, with death itself.

Nor are the laws respecting this matter, a dead letter. Cases may occur in which they are disregarded, and a few instances may be found where slaves may have learned to read; but such are isolated cases, and only prove the rule. The great mass of slaveholders look upon education among the slaves as utterly subversive of the slave system. I well remember when my mistress first announced to my master that she had discovered that I could read. His face colored at once, with surprise and chagrin. He said that "I was ruined, that my value as a slave was destroyed; that a slave should know nothing but to obey his master; that to give a Negro an inch would lead him to take an ell; that having learned how to read, I would soon want to know how to write; and that, bye and bye, I would be running away." I think my audience will bear witness to the correctness of this philosophy, and to the literal fulfilment of this prophecy.

It is perfectly well understood at the South that to educate a slave is to make him discontented with slavery, and to invest him with a power which shall open to him the treasures of freedom; and since the object of the slaveholder is to maintain complete authority over his slave, his constant vigilance is exercised to prevent everything which militates against, or endangers the stability of his authority. Education being among the menacing influences, and, perhaps, the most dangerous, is therefore, the most cautiously guarded against.

It is true that we do not often hear of the enforcement of the law, punishing as crime the teaching of slaves to read, but this is not because of a want of disposition to enforce it. The true reason, or explanation of the matter is this, there is the greatest unanimity of opinion among the white population of the South, in favor of the policy of keeping the slave in ignorance. There is, perhaps, another reason why the law against education is so seldom violated. The slave is too poor to be able to offer a temptation sufficiently strong to induce a white man to violate it; and it is not to be supposed that in a community where the moral and religious sentiment is in favor of slavery, many martyrs will be found sacrificing their liberty and lives by violating those prohibitory enactments.

As a general rule, then, darkness reigns over the abodes of the enslaved, and "how great is that darkness!"

We are sometimes told of the contentment of the slaves, and are entertained with vivid pictures of their happiness. We are told that they often dance and sing; that their masters frequently give them wherewith to make merry; in fine, that they have little of which to complain. I admit that the slave does sometimes sing, dance, and appear to be merry. But what does this prove? It only proves to my mind, that though slavery is armed with a thousand stings, it is not able entirely to kill the elastic spirit of the bondman. That spirit will rise and walk abroad, despite of whips and chains, and extract from the cup of nature, occasional drops of joy and gladness. No thanks to the slaveholder, nor to slavery, that the vivacious captive may sometimes dance in his chains, his very mirth in such circumstances, stands before God, as an accusing angel against his enslaver.

But who tell us of the extraordinary contentment and happiness of the slave? What traveller has explored the balmy regions of our Southern country and brought back "these glad tidings of joy"? Bring him on the platform, and bid him answer a few plain questions, we shall then be able to determine the weight and importance that attach to his testimony. Is he a minister? Yes. Were you ever in a slave State, sir? Yes. May I inquire the object of your mission South? To preach the gospel, sir. Of what denominations are you? A Presbyterian, sir. To whom were you introduced? To the Rev. Dr. Plummer. Is he a slaveholder, sir? Yes, sir. Has slaves about his house? Yes, sir. Were you then the guest of Dr. Plummer? Yes, sir. Waited on by slaves while there? Yes, sir. Did you preach for Dr. Plummer? Yes, sir. Did you spend your nights at the great house, or at the quarter among the slaves? At the great house. You had, then, no social intercourse with the slaves? No, sir. You fraternized, then, wholly with the white portion of the population while there? Yes, sir. This is sufficient, sir; you can leave the platform.

Nothing is more natural than that those who go into slave States, and enjoy the hospitality of slaveholders, should bring back favorable reports of the condition of the slave. If that ultra republican, the Hon. Lewis Cass could not return from the Court of France, without paying a compliment to royalty simply because King Louis Phillippe patted him on the shoulder, called him "friend," and invited him to dinner, it is not to be expected that those hungry shadows of men in the shape of ministers, that go South, can escape a contamination even more beguiling and insidious. Alas! for the weakness of poor human nature! "Pleased with a rattle, tickled with a straw!"

Why is it that all the reports of contentment and happiness among the slaves at the South come to us upon the authority of slaveholders, or (what is equally significant), of slaveholders' friends? Why is it that we do not hear from the slaves direct? The answer to this question furnishes the darkest features in the American slave system.

It is often said, by the opponents of the anti-slavery cause, that the condition of the people of Ireland is more deplorable than that of the American slaves. Far be it from me to underrate the sufferings of the Irish people. They have been long oppressed; and the same heart that prompts me to plead the cause of the American bondman, makes it impossible for me not to sympathize with the oppressed of all lands. Yet I must say that there is no analogy between the two cases. The Irishman is poor, but he is not a slave. He may be in rags, but he is not a slave. He is still the master of his own body, and can say with the poet, "The hand of Douglass is his own." "The world is all before him, where to choose," and poor as may be my opinion of the British Parliament, I cannot believe that it will ever sink to such a depth of infamy as to pass a law for the recapture of Fugitive Irishmen! The shame and scandal of kidnapping will long remain wholly monopolized by the American Congress! The Irishman has not only the liberty to emigrate from his country, but he has liberty at home. He can write, and speak, and co-operate for the attainment of his rights and the redress of his wrongs.

The multitude can assemble upon all the green hills, and fertile plains of the Emerald Isle—they can pour out their grievances, and proclaim their wants without molestation; and the press, that "swiftwinged messenger," can bear the tidings of their doing to the extreme bounds of the civilized world. They have their "Conciliation Hall" on the banks of the Liffey, their reform Clubs, and the newspapers; they pass resolutions, send forth addresses, and enjoy the right of petition. But how is it with the American slave? Where may he assemble? Where is his Conciliation Hall? Where are his newspapers? Where is his right of petition? Where is his freedom of speech? his liberty of the press? and his right of locomotion? He is said to be happy; happy men can speak. But ask the slave—what is his condition?—what his state of mind?—what he thinks of this enslavement? and you had as well address your inquiries to the silent dead. There comes no voice from the enslaved, we are left to gather his feelings by imagining what ours would be, were our souls in his soul's stead.

If there were no other fact descriptive of slavery, than that the slave is dumb, this alone would be sufficient to mark the slave system as a grant aggregation of human horrors.

Most who are present will have observed that leading men, in this country, have been putting forth their skill to secure quiet to the nation. A system of measures to promote this object was adopted a few months ago in Congress.

The result of those measures is known. Instead of quiet, they have produced alarm; instead of peace, they have brought us war, and so must ever be.

While this nation is guilty of the enslavement of three millions of innocent men and women, it is as idle to think of having a sound and lasting peace, as it is to think there is no God, to take cognizance of the affairs of men. There can be no peace to the wicked while slavery continues in the land, it will be condemned, and while it is condemned there will be agitation; Nature must cease to be nature; Men must become monsters; Humanity must be transformed; Christianity must be exterminated; all ideas of justice, and the laws of eternal goodness must be utterly blotted out from the human soul, ere a system so foul and infernal can escape condemnation, or this guilty Republic can have a sound and enduring Peace.

Giuseppe Mazzini: On Nationality

Date: 1852

Giuseppe Mazzini was a leader of the Italian unification movement. As a law student at the University of Genoa, he was exposed to literature and political thought. His goal was that Italy be united as a republic. His activities led to his imprisonment by the government. In 1830 he chose to go into exile in Marseille, France, where he founded Young Italy, a patriotic society committed to republicanism and democracy. Its members swore to proselytize and fight for democracy, national independence, and unity, and to wage relentless war on tyrants. He saw the creation of a democratic Italian state as crucial to Italy's development.

Mazzini's republicanism differentiated him from both the monarchists and the socialists. His philosophy called for cooperation across class lines. He believed that the unity of workers and employers—educated and uneducated—was an essential precondition for the triumph of democratic movements.

Eventually, Italian unification did become a reality, but not as a democratic republic. It was united as a monarchy.

The following segments are excerpts from the original document.

Europe no longer possesses unity of faith, of mission, or of aim. Such unity is a necessity in the world. Here, then, is the secret of the crisis. It is the duty of every one to examine and analyse calmly and carefully the probable elements of this new unity. But those who persist in perpetuating, by violence or by Jesuitical compromise, the external observance of the old unity, only perpetuate the crisis, and render its issue more violent.

There are in Europe two great questions; or, rather, the question of the transformation of authority, that is to say, of the Revolution, has assumed two forms; the question which all have agreed to call social, and the question of nationalities. The first is more exclusively agitated in France, the second in the heart of the other peoples of Europe. I say, which all have agreed to call social, because, generally speaking, every great revolution is so far social, that it cannot be accomplished either in the religious, political, or any other sphere, without affecting social relations, the sources and the distribution of wealth; but that which is only a secondary consequence in political revolutions is now the cause and the banner of the movement in France. The question there is now, above all, to establish better relations between labour and capital, between production and consumption, between the workman and the employer.

It is probable that the European initiative, that which will give a new impulse to intelligence and to events, will spring from the question of nationalities. The social question may, in effect, although with difficulty, be partly resolved by a single people; it is an internal question for each, and the French Republicans of 1848 so understood it, when, determinately abandoning the European initiative, they placed Lamartine's [Note: A French poet and politician] manifesto by the side of their aspirations towards the organisation of labour. The question of nationality can only be resolved by destroying the treaties of 1815, and changing the map of Europe and its public Law. The question of Nationalities, rightly understood, is the Alliance of the Peoples; the balance of powers based upon new foundations; the organisation of the work that Europe has to accomplish. . . .

It was not for a material interest that the people of Vienna fought in 1848; in weakening the empire they could only lose power. It was not for an increase of wealth that the people of Lombardy fought in the same year; the Austrian Government had endeavoured in the year preceding to excite the peasants against the landed proprietors, as they had done in Galicia; but everywhere they had failed. They struggled, they still struggle, as do Poland, Germany, and Hungary, for country and liberty; for a word inscribed upon a banner, proclaiming to the world that they also live, think, love, and labour for the benefit of all. They speak the same language, they bear about them the impress of consanguinity, they kneel beside the same tombs, they glory in the same tradition; and they demand to associate freely, without obstacles, without foreign domination, in order to elaborate and express their idea; to contribute their stone also to the great pyramid of history. It is something moral which they are seeking; and this moral something is in fact, even politically speaking, the most important question in the present state of things. It is the organisation of the European task. It is no longer the savage, hostile, quarrelsome nationality of two hundred years ago which is invoked by these peoples. The nationality . . . founded upon the following principle:-Whichever people, by its superiority of strength, and by its geographical position, can do us an injury, is our natural enemy; whichever cannot do us an injury, but can by the amount of its force and by its position injure our enemy, is our natural ally, -is the princely nationality of aristocracies or royal races. The nationality of the peoples has not these dangers; it can only be founded by a common effort and a common movement; sympathy and alliance will be its result. In principle, as in the ideas formerly laid down by the men influencing every national party, nationality ought only to be to humanity that which the division of labour is in a workshop-the recognised symbol of association; the assertion of the individuality of a human group called by its geographical position, its traditions, and its language, to fulfil a special function in the European work of civilisation.

The map of Europe has to be remade. This is the key to the present movement; herein lies the initiative. Before acting, the instrument for action must be organised; before building, the ground must be one's own. The social idea cannot be realised under any form whatsoever before this reorganisation of Europe is effected; before the peoples are free to interrogate themselves; to express their vocation, and to assure its accomplishment by an alliance capable of substituting itself for the absolutist league which now reigns supreme.

The Gettysburg Address

Date: November 19, 1863

President Abraham Lincoln delivered the Gettysburg Address, one of his most memorable public speeches, on November 19, 1863. Lincoln's brief remarks officially dedicated the Soldiers' National Cemetery at Gettysburg, Pennsylvania, where in July 1863 the Union Army of the Potomac had won a major victory over the Confederate Army of Northern Virginia. At the conclusion of the battle, the battlefield contained the bodies of more than 7,500 soldiers.

Lincoln's opening sentences portray a new type of nation based on liberty and equality. He then portrays the events as a test as to whether this type of nation "can long endure." His summation essentially states ". . . that we here highly resolve that . . . [this new type, or form of government of the people] shall not perish from the earth."

Four score and seven years ago our fathers brought forth on this continent a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great Civil War, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as the final resting place of those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense we can not dedicate—we can not consecrate—we can not hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.

One Day under the Paris Commune

Date: 1871

According to the terms of the 1871 Treaty of Versailles, which ended the Franco-Prussian War, France ceded to Germany some 4,700 square miles of territory and agreed to pay 5 billion francs for indemnification within three years. The Red Republicans, or Communists, rebelled against these humiliating terms, and the capital fell into the hands of the Commune of Paris. By order of the national government the regular army was called in, and a second siege of Paris took place, infinitely more full of horrors than the previous one by the Germans. The government at length gained control, and the Third Republic was fully organized under the presidency of Louis-Adolphe Thiers. John Leighton, the author of the following extract, was in Paris at the time of the Commune.

The following is an excerpt from the original document. Original spellings have been retained in this document.

THE roaring of cannon close at hand, the whizzing of shells, volleys of musketry. I hear this in my sleep, and awake with a start. I dress and go out. I am told the troops have come in. "How? Where? When?" I ask of the National Guards who come rushing down the street, crying out, "We are betrayed!" They, however, know but very little. They have come from the Trocadero, and have seen the red trousers of the soldiers in the distance. Fighting is going on near the viaduct of Auteuil, at the Champ de Mars. Did the assault take place last night or this morning? It is quite impossible to obtain any reliable information. Some talk of a civil engineer having made signals to the Versaillais; others say a captain in the navy was the first to enter Paris. Suddenly about thirty men rush into the streets, crying, "We must make a barricade." I turn back, fearing to be pressed into the service. The cannonading appears dreadfully near. A shell whistles over my head. I hear

some one say, "The batteries of Montmartre are bombarding the Arc de Triomphe"; and strangely enough, in this moment of horror and uncertainty, the thought crosses my mind that now the side of the arch on which is the bas-relief of Rudé will be exposed to the shells. On the Boulevard there is only here and there a passenger hurrying along. The shops are closed; even the cafes are shut up; the harsh screech of the mitrailleuse grows louder and nearer. The battle seems to be close at hand, all round me. A thousand contradictory suppositions rush through my brain and hurry me along, and here on the Boulevard there is no one that can tell me anything. I walk in the direction of the Madeleine, drawn there by a violent desire to know what is going on, which silences the voice of prudence. As I approach the Chaussee d'Antin, I perceive a multitude of men, women, and children running backwards and forwards, carrying paving-stones. A barricade is being thrown up; it is already more than three feet high. Suddenly I hear the offing of heavy wheels; I turn, and a strange sight is before me—a mass of women in rags, livid, horrible, and yet grand, with the Phrygian cap on their heads, and the skirts of their robes tied around their waists, were harnessed to a mitrailleuse, which they dragged along at full speed; other women pushing vigorously behind. The whole procession, in its somber colors, with dashes of red here and there, thunders past me; I follow it as fast as I can. The mitrailleuse draws up a little in front of the barricade, and is hailed with wild clamors by the insurgents. The Amazons are being unharnessed as I come up. "Now," said a young gamin, such as one used to see in the gallery of the Theatre Porte St.-Martin, "don't you be acting the spy here, or I will break your head open as if you were a Versaillais."—"Don't waste ammunition," cried an old man with a long white beard—a patriarch of civil war—"don't waste ammunition; and as for the spy, let him help to carry paving-stones. Monsieur," said he, turning to me with much politeness, "will you be so kind as to go and fetch those stones from the corner there?"

I did as I was bid, although I thought, with anything but pleasure, that if at that moment the barricade were attacked and taken, I might be shot before I had the time to say, "Allow me to explain." But the scene which surrounds me interests me in spite of myself. Those grim hags, with their red head-dresses, passing the stones I give them rapidly from hand to hand, the men who are building them up only leaving off for a moment now and then to swallow a cup of coffee, which a young girl prepares over a small tin stove; the rifles symmetrically piled; the barricade, which rises higher and higher; the solitude in which we are working—only here and there a head appears at a window, and is quickly withdrawn; the ever-increasing noise of the battle; and, over all, the brightness of a dazzling morning sun—all this has something sinister, and yet horribly fascinating about it. While we are at work they talk; I listen. The Versaillais have been coming in all night. The Porte de la Muette and the Porte Dauphine have been surrendered by the 13th and the 113th battalions of the first arrondissement. "Those two numbers 13 will bring them ill luck," says a woman. Vinoy is established at the Trocadero, and Douai at the Point du Jour: they continue to advance. The Champ de Mars has been taken from the Federals after two hours' fighting. A battery is erected at the Arc de Triomphe, which sweeps the Champs Elysees and bombards the Tuileries. A shell has fallen in the Rue du Marche Saint-Honore. In the Cours-la-Reine the 138th battalion stood bravely. The Tuileries is armed with guns, and shells the Arc de Triomphe. In the Avenue de Marigny the gendarmes have shot twelve Federals who had surrendered; their bodies are still lying on the pavement in front of the tobacconist's. Rue de Sevres, the Vengeurs de Flourens have put to flight a whole regiment of the line: the Vengeurs have sworn to resist to a man. They are fighting in the Champs Elysees, around the Ministere de la Guerre, and on the Boulevard Haussmann. Dombrowski has been killed at the Chateau de la Muette. The Versaillais have attacked the Western Saint-Lazare Station, and are marching towards the Pepiniere barracks. "We have been sold, betrayed, and surprised; but what does it matter, we will triumph. We want no more chiefs or generals; behind the barricades every man is a marshal!"

Close to Saint-Germain l'Auxerrois women are busy pulling down the wooden seats; children are rolling empty wine-barrels and carrying sacks of earth. As one nears the Hotel de Ville the barricades are higher, better armed, and better manned. All the Nationals here look ardent, resolved, and fierce. They say little, and do not shout at all. Two guards, seated on the pavement, are playing at picquet. I push on, and am allowed to pass. The barricades are terminated here, and I have nothing to fear from paving-stones. Looking up, I see that all the windows are closed, with the exception of one, where two old women are busy putting a mattress between the window and the shutter. A sentinel, mounting guard in front of the Cafe de la Compagnie du Gaz, cries out to me, "You can't pass here!"

I therefore seat myself at a table in front of the cafe, which has doubtless been left open by order, and where several officers are talking in a most animated manner.

One of them rises and advances towards me. He asks me rudely what I am doing there. I will not allow myself to be abashed by his tone, but draw out my pass from my pocket and show it to him, without saying a word. "All right," says he; and then seats himself by my side, and tells me, "I know it already, that a part of the left bank of the river is occupied by the troops of the Assembly, that fighting is going on everywhere, and that the army on this side is gradually retreating.—Street fighting is our affair, you see," he continues. "In such battles as that, the merest gamin from Belleville knows more about it than MacMahon . . . It will be terrible. The enemy shoots the prisoners." (For the last two months the Commune had been saying the same thing.) "We shall give no quarter."—I ask him, "Is it Delescluze who is determined to resist?"—"Yes,"

he answers. "Lean forward a little. Look at those three windows to the left of the trophy. That is the Salle de l'Etat-Major. Delescluze is there giving orders, signing commissions. He has not slept for three days. Just now I scarcely knew him, he was so worn out with fatigue. The Committee of Public Safety sits permanently in a room adjoining, making out proclamations and decrees."—"Ha, ha!" said I, "decrees!"—"Yes, citizen, he has just decreed heroism!" The officer gives me several other bits of information: tells me that "Lullier this very morning has had thirty réfractaires shot, and that Rigault has gone to Mazas to look after the hostages."

While he is talking, I try to see what is going on in the Place de l'Hôtel de Ville. Two or three thousand Federals are there, some seated, some lying on the ground. A lively discussion is going on. Several little barrels are standing about on chairs; the men are continually getting up and crowding round the barrels, some have no glasses, but drink in the palms of their hands. Women walk up and down in bands, gesticulating wildly. The men shout, the women shriek. Mounted expresses gallop out of the Hotel, some in the direction of the Bastille, some towards the Place de la Concorde. The latter fly past us crying out, "All's well!" "A man comes out on the balcony of the Hotel de Ville and addresses the crowd. All the Federals start to their feet enthusiastically. —"That's Valles," says my neighbor to me. I had already recognized him. I frequently saw him in the students' quarter in a little crémérie in the Rue Serpente. He was given to making verses, rather bad ones by the bye; I remember one in particular, a panegyric on a green coat. They used to say he had a situation as a professional mourner. His face even then wore a bitter and violent expression. He left poetry for journalism, and then journalism for politics. Today he is spouting forth at a window of the Hôtel de Ville. I cannot catch a word of what he says; but as he retires he is wildly applauded. Such applause pains me sadly. I feel that these men and these women are mad for blood, and will know how to die. Alas! how many dead and dying already! Neither the cannonading nor the musketry has ceased an instant.

I now see a number of women walk out of the Hôtel, the crowd makes room for them to pass. They come our way. They are dressed in black, and have black crape tied round their arms and a red cockade in their bonnets. My friend the officer tells me that they are the governesses who have taken the places of the nuns. Then he walks up to them and says, "Have you succeeded?"—"Yes," answers one of them, "here is our commission. The school-children are to be employed in making sacks and filling them with earth, the eldest ones are to load the rifles behind the barricades. They will receive rations like National Guards, and a pension will be given to the mothers of those who die for the republic. They are mad to fight, I assure you. We have made them work hard during the last month; this will be their holiday!" The woman who says this is young and pretty, and speaks; with a sweet smile on her lips. I shudder. Suddenly two staff officers appear and ride furiously up to the Hôtel de Ville; they have come from the Place Vendôme. An instant later and the trumpets sound. The companies form in the Place, and great agitation reigns in the Hôtel. Men rush in and out. The officers who are in the cafe where I am get up instantly, and go to take their places at the head of their men. A rumor spreads that the Versaillais have taken the barricades on the Place de la Concorde.—"By Jove! I think you had better go home," says my neighbor to me, as he clasps his sword-belt; "we shall have hot work here, and that shortly." I think it prudent to follow this advice.

One glance at the Place before I go. The companies of Federals have just started off by the Rue de Rivoli and the quays at a quick march, crying, "Vive la Commune!" a ferocious joy beaming in their faces. A young man, almost a lad, lags a little behind; a woman rushes up to him, and lays hold of his collar, screaming, "Well, and you! are you not going to get yourself killed with the others?"

I reach the Rue Vieille-du-Temple, where another barricade is being built up. I place a paving-stone upon it and pass on. Soon I see open shops and passengers in the streets. This tradesmen's quarter seems to have outlived the riot of Paris. Here one might almost forget the frightful civil war which wages so near, if the conversation of those around did not betray the anguish of the speakers, and if you did not hear the cannon roaring out unceasingly, "People of Paris, listen to me! I am ruining your houses. Listen to me! I am killing your children."

On the Boulevards more barricades; some nearly finished, others scarcely commenced. One constructed near the Porte Saint-Martin looks formidable. That spot seems destined to be the theater of bloody scenes, of riot and revolution. In 1852, corpses lay piled up behind the railing, and all the pavement was tinged with blood. I return home profoundly sad; I can scarcely think—I feel in a dream, and am tired to death; my eyelids droop of themselves; I am like one of those houses there with closed shutters.

Near the Gymnase I meet a friend who I thought was at Versailles. We shake hands sadly. "When did you come back?" I ask.—"Today; I followed the troops." —Then turning back with me he tells me what he has seen. He had a pass, and walked into Paris behind the artillery and the line, as far as the Trocadero, where the soldiers halted to take up their line of battle. Not a single man was visible along the whole length of the quays. At the Champ de Mars he did not see any insurgents. The musketry seemed very violent near Vaugirard on the Pont Royal and around the Palais de l'Industrie. Shells from Montmartre repeatedly fell on the quays. He could not see much, however, only the smoke in the distance. Not a soul did he meet. Such frightful noise in such solitude was fearful. He continued his way under the shelter of the parapet. On one place he saw some gamins cutting huge pieces of flesh off the dead body of a horse that was lying in the path. There must have been fighting there. Down by the water a man fishing while two shells fell in the river, a little higher up, a yard or two from the shore. Then he thought it prudent to get nearer to the Palais de l'Industrie. The fighting was

nearly over then, but not quite. The Champs Élysées was melancholy in the extreme; not a soul was there. This was only too literally true, for several corpses lay on the ground. He saw a soldier of the line lying beneath a tree, his forehead covered with blood. The man opened his mouth as if to speak as he heard the sound of footsteps, the eyelids quivered and then there was a shiver, and all was over.

My friend walked slowly away. He saw trees thrown down and bronze lamp-posts broken; glass crackled under his feet as he passed near the ruined kiosques. Every now and then turning his head he saw shells from Montmartre fall on the Arc de Triomphe and break off large fragments of stone. Near the Tuileries was a confused mass of soldiery against a background of smoke. Suddenly he heard the whizzing of a ball and saw the branch of a tree fall. From one end of the avenue to the other, no one; the road glistened white in the sun. Many dead were to be seen lying about as he crossed the Champs Élysées. All the streets to the left were full of soldiery; there had been fighting there, but it was over now. The insurgents had retreated in the direction of the Madeleine. In many places tricolor flags were hanging from the windows, and women were smiling and waving their handkerchiefs to the troops. The presence of the soldiery seemed to reassure everybody. The concierges were seated before their doors with pipes in their mouths, recounting to attentive listeners the perils from which they had escaped; how balls pierced the mattresses put up at the windows, and how the Federals had got into the houses to hide. One said, "I found three of them in my court; I told a lieutenant they were there, and he had them shot. But I wish they would take them away; I cannot keep dead bodies in my house." Another was talking with some soldiers, and pointing out a house to them. Four men and a corporal went into the place indicated, and an instant afterwards my friend heard the cracking of rifles. The concierge rubbed his hands and winked at the bystanders, while another was saying, "They respect nothing, those Federals; during the battle they came in to steal. They wanted to take away my clothes, my linen, everything I have; but I told them to leave that, that it was not good enough for them, that they ought to go up to the first floor, where they would find clocks and plate, and I gave them the key. Well, messieurs, you would never believe what they have done, the rascals! They took the key and went and pillaged everything on the first floor!" My friend had heard enough, and passed on. The agitation everywhere was very great. The soldiers went hither and thither, rang the bells, went into the houses and brought out with them pale-faced prisoners. The inhabitants continued to smile politely but grimly. Here and there dead bodies were lying in the road. A man who was pushing a truck allowed one of the wheels to pass over a corpse that was lying with its head on the curbstone. "Bah!" said he, "it won't do him any harm." The dead and wounded were, however, being carried away as quickly as possible.

The cannon had now ceased roaring, and the fight was still going on close at hand—at the Tuileries doubtless. The townspeople were tranquil and the soldiery disdainful. A strange contrast; all these good citizens smiling and chatting, and the soldiers, who had come to save them at the peril of their lives, looking down upon them with the most careless indifference. My friend reached the Boulevard Haussmann; there the corpses were in large numbers. He counted thirty in less than a hundred yards. Some were lying under the doorways; a dead woman was seated on the bottom stair of one of the houses. Near the church of "La Trinité" were two guns, the reports from which were deafening; several of the shells fell in a bathing establishment in the Rue Taitbout opposite the Boulevard. On the Boulevard itself, not a person was to be seen. Here and there dark masses, corpses doubtless. However, the moment the noise of the report of a gun had died away, and while the gunners were reloading, heads were thrust out from doors to see what damage had been done—to count the number of trees broken, benches torn up, and kiosques overturned. From some of the windows rifles were fired. My friend then reached the street he lived in and went home. He was told during the morning they had violently bombarded the Collège Chaptal, where the Zouaves of the Commune had fortified themselves; but the engagement was not a long one, they made several prisoners and shot the rest.

My friend shut himself up at home, determined not to go out. But his impatience to see and hear what was going on forced him into the streets again. The Pepinière barracks were occupied by troops of the line; he was able to get to the New Opera without trouble, leaving the Madeleine, where dreadful fighting was going on, to the right. On the way were to be seen piled muskets, soldiers sitting and lying about, and corpses everywhere. He then managed, without incurring too much danger, to reach the Boulevards, where the insurgents, who were then very numerous, had not yet been attacked. He worked for some little time at the barricade, and then was allowed to pass on. It was thus that we had met. Just as we were about to turn up the Faubourg Montmartre a man rushed up saying that three hundred Federals had taken refuge in the church of the Madeleine, followed by gendarmes, and had gone on fighting for more than an hour. "Now," he finished up by saying, "if the curé were to return, he would find plenty of people to bury!"

I am now at home. Evening has come at last; I am jotting down these notes just as they come into my head. I am too much fatigued both in mind and body to attempt to put my thoughts into order. The cannonading is incessant, and the fusillade also. I pity those that died, and those that kill! Oh! poor Paris, when will experience make you wiser?

Charles Darwin: *The Descent of Man*

Date: 1871

Charles Darwin, an English biologist, was one of a number of scientists considering theories of evolution. He published On the Origin of Species in 1859 and set forth his theory that animals evolved through variation and natural selection of those most fit to survive in particular environments. In The Descent of Man (1871) he applied his theory directly to the question of human beings. Far from standing aside from the social, racial and religious consequences of his theories, Darwin, as we see below, jumped right into the fray.

The following segments are excerpts from the original document.

The main conclusion here arrived at, and now held by many naturalists who are well competent to form a sound judgment, is that man is descended from some less highly organised form. The grounds upon which this conclusion rests will never be shaken, for the close similarity between man and the lower animals in embryonic development, as well as in innumerable points of structure and constitution, both of high and of the most trifling importance,—the rudiments which he retains, and the abnormal revisions to which he is occasionally liable,—are facts which cannot be disputed. They have long been known, but until recently they told us nothing with respect to the origin of man. Now when viewed by the light of our knowledge of the whole organic world their meaning is unmistakable. The great principle of evolution stands up clear and firm, when these groups of facts are considered in connection with others, such as the mutual affinities of the members of the same group, their geographical distribution in past and present times, and their geological succession. It is incredible that all these facts should speak falsely. He who is not content to look, like a savage, at the phenomena of nature as disconnected, cannot any longer believe that man is the work of a separate act of creation. He will be forced to admit that the close resemblance of the embryo of man to that, for instance, of a dog—the construction of his skull, limbs and whole frame on the same plan with that of other mammals, independently of the uses to which the parts may be put—the occasional re-appearance of various structures, for instance of several muscles, which man does not normally possess, but which are common to the *Quadrumana*—and a crowd of analogous facts—all point in the plainest manner to the conclusion that man is the co-descendant with other mammals of a common progenitor.

We have seen that man incessantly presents individual differences in all parts of his body and in his mental faculties. These differences or variations seem to be induced by the same general causes, and to obey the same laws as with the lower animals. In both cases similar laws of inheritance prevail. Man tends to increase at a greater rate than his means of subsistence; consequently he is occasionally subjected to a severe struggle for existence, and natural selection will have effected whatever lies within its scope. A succession of strongly-marked variations of a similar nature is by no means requisite; slight fluctuating differences in the individual suffice for the work of natural selection; not that we have any reason to suppose that in the same species, all parts of the organisation tend to vary to the same degree.

By considering the embryological structure of man,—the homologies which he presents with the lower animals,—the rudiments which he retains,—and the reversions to which he is liable, we can partly recall in imagination the former condition of our early progenitors; and can approximately place them in their proper place in the zoological series. We thus learn that man is descended from a hairy, tailed quadruped, probably arboreal in its habits, and an inhabitant of the Old World. This creature, if its whole structure had been examined by a naturalist, would have been classed amongst the *Quadrumana*, as surely as the still more ancient progenitor of the Old and New World monkeys. The *Quadrumana* and all the higher mammals are probably derived from an ancient marsupial animal, and this through a long line of diversified forms, from some amphibian-like creature, and this again from some fish-like animal. In the dim obscurity of the past we can see that the early progenitor of all the *Vertebrata* must have been an aquatic animal, provided with branchiæ, with the two sexes united in the same individual, and with the most important organs of the body (such as the brain and heart) imperfectly or not at all developed. This animal seems to have been more like the larvæ of the existing marine *Ascidians* than any other known form.

The high standard of our intellectual powers and moral disposition is the greatest difficulty which presents itself, after we have been driven to this conclusion on the origin of man. But every one who admits the principle of evolution, must see that the mental powers of the higher animals, which are the same in kind with those of man, though so different in degree, are capable of advancement. . . .

The moral nature of man has reached its present standard, partly through the advancement of his reasoning powers and consequently of a just public opinion, but especially from his sympathies having been rendered more tender and widely diffused through the effects of habit, example, instruction, and reflection. It is not improbable that after long practice virtuous tendencies may be inherited. With the more civilised races, the conviction of the existence of an all-seeing Deity has had a potent influence on the advance of morality. Ultimately man does not accept the praise or blame of his fellows as his sole guide though few escape this

influence, but his habitual convictions, controlled by reason, afford him the safest rule. His conscience then becomes the supreme judge and monitor. Nevertheless the first foundation or origin of the moral sense lies in the social instincts, including sympathy; and these instincts no doubt were primarily gained, as in the case of the lower animals, through natural selection.

The belief in God has often been advanced as not only the greatest but the most complete of all the distinctions between man and the lower animals. It is however impossible, as we have seen, to maintain that this belief is innate or instinctive in man. On the other hand a belief in all-pervading spiritual agencies seems to be universal, and apparently follows from a considerable advance in man's reason, and from a still greater advance in his faculties of imagination, curiosity and wonder. I am aware that the assumed instinctive belief in God has been used by many persons as an argument for His existence. But this is a rash argument, as we should thus be compelled to believe in the existence of many cruel and malignant spirits, only a little more powerful than man; for the belief in them is far more general than in a beneficent Deity. The idea of a universal and beneficent Creator does not seem to arise in the mind of man, until he has been elevated by long-continued culture. . . .

I am aware that the conclusions arrived at in this work will be denounced by some as highly irreligious; but he who denounces them is bound to shew why it is more irreligious to explain the origin of man as a distinct species by descent from some lower form, through the laws of variation and natural selection, than to explain the birth of the individual through the laws of ordinary reproduction. The birth both of the species and of the individual are equally parts of that grand sequence of events, which our minds refuse to accept as the result of blind chance. The understanding revolts at such a conclusion, whether or not we are able to believe that every slight variation of structure,—the union of each pair in marriage,—the dissemination of each seed,—and other such events, have all been ordained for some special purpose.

Sexual selection has been treated at great length in this work, for, as I have attempted to shew, it has played an important part in the history of the organic world. I am aware that much remains doubtful, but I have endeavoured to give a fair view of the whole case. In the lower divisions of the animal kingdom, sexual selection seems to have done nothing: such animals are often affixed for life to the same spot, or have the sexes combined in the same individual, or what is still more important, their perceptive and intellectual faculties are not sufficiently advanced to allow of the feelings of love and jealousy, or of the exertion of choice. When, however, we come to the Arthropoda and Vertebrata, even to the lowest classes in these two great Sub-Kingdoms, sexual selection has effected much. . . .

Sexual selection depends on the success of certain individuals over others of the same sex, in relation to the propagation of the species; whilst natural selection depends on the success of both sexes, at all ages, in relation to the general conditions of life. The sexual struggle is of two kinds; in the one it is between the individuals of the same sex, generally the males, in order to drive away or kill their rivals, the females remaining passive; whilst in the other, the struggle is likewise between the individuals of the same sex, in order to excite or charm those of the opposite sex, generally the females, which no longer remain passive, but select the more agreeable partners. . . .

The main conclusion arrived at in this work, namely that man is descended from some lowly organised form, will, I regret to think, be highly distasteful to many. But there can hardly be a doubt that we are descended from barbarians. The astonishment which I felt on first seeing a party of Fuegians on a wild and broken shore will never be forgotten by me, for the reflection at once rushed into my mind—such were our ancestors. These men were absolutely naked and bedaubed with paint, their long hair was tangled, their mouths frothed with excitement, and their expression was wild, startled, and distrustful. They possessed hardly any arts, and like wild animals lived on what they could catch; they had no government, and were merciless to every one not of their own small tribe. He who has seen a savage in his native land will not feel much shame, if forced to acknowledge that the blood of some more humble creature flows in his veins. For my own part I would as soon be descended from that heroic little monkey, who braved his dreaded enemy in order to save the life of his keeper, or from that old baboon, who descending from the mountains, carried away in triumph his young comrade from a crowd of astonished dogs—as from a savage who delights to torture his enemies, offers up bloody sacrifices, practises infanticide without remorse, treats his wives like slaves, knows no decency, and is haunted by the grossest superstitions.

Man may be excused for feeling some pride at having risen, though not through his own exertions, to the very summit of the organic scale; and the fact of his having thus risen, instead of having been aboriginally placed there, may give him hope for a still higher destiny in the distant future. But we are not here concerned with hopes or fears, only with the truth as far as our reason permits us to discover it; and I have given the evidence to the best of my ability. We must, however, acknowledge, as it seems to me, that man with all his noble qualities, with sympathy which feels for the most debased, with benevolence which extends not only to other men but to the humblest living creature, with his god-like intellect which has penetrated into the movements and constitution of the solar system—with all these exalted powers—Man still bears in his bodily frame the indelible stamp of his lowly origin.

Kingdom of Choson (Korea) Treaty

Date: May 22, 1882

The Kingdom of Choson Treaty was unique in that it was framed not as a relationship between two governments but between two heads of state: “There shall be perpetual peace and friendship between the President of the United States and the King of Chosen [Choson],” then secondarily between “the citizens and subjects of their respective Governments.” Scholars regard the treaty as one of the more enlightened documents of 19th-century East-West relations. The treaty was signed by the United States and the kingdom of Choson, at Yin Chuen, Choson (present-day Korea).

Korea was the last of the three major Asian empires, after China and Japan, with which the United States established commercial relations. In addition to the customary articles establishing trade and diplomatic relations between the countries, there were articles specifically prohibiting the opium trade and controlling trade in foodstuffs (at critical times), arms and munitions, and an article that encouraged cultural exchange:

The following entry contains excerpts from the original document.

VII The Governments of the United States and of Chosen mutually agree and undertake that subjects of Chosen shall not be permitted to import opium into any of the ports of the United States, and citizens of the United States shall not be permitted to import opium into any of the open ports of Chosen, to transport it from one open port to another open port, or to traffic in it in Chosen. This absolute prohibition, which extends to vessels owned by the citizens or subjects of either Power, to foreign vessels employed by them, and to vessels owned by the citizens or subjects of either Power, and employed by other persons for the transportation of opium, shall be enforced by appropriate legislation on the part of the United States and of Chosen, and offenders against it shall be severely punished.

VIII Whenever the Government of Chosen shall have reason to apprehend a scarcity of food within the limits of the kingdom, His Majesty may by Decree temporarily prohibit the export of all breadstuffs, and such Decree shall be binding on all citizens of the United States in Chosen upon due notice having been given them by the authorities of Chosen through the proper officers of the United States; but it is to be understood that the exportation of rice and breadstuffs of every description is prohibited from the open port of Yin-Chuen.

Chosen having of old prohibited the exportation of red ginseng, if citizens of the United States clandestinely purchase it for export, it shall be confiscated and the offenders punished.

IX Purchase of cannon, small arms, swords, gunpowder, shot, and all munitions of war is permitted only to officials of the Government of Chosen, and they may be imported by citizens of the United States only under a written permit from the authorities of Chosen. If these articles are clandestinely imported, they shall be confiscated, and the offending party shall be punished.

A provision was also included that specifically encouraged cultural exchange:

XI Students of either nationality, who may proceed to the country of the other, in order to study the language, literature, law, or arts, shall be given all possible protection and assistance in evidence of cordial goodwill.

Andrew Carnegie: “The Gospel of Wealth”

Date: 1889

Andrew Carnegie was a successful businessman, with his fortune derived from supplying iron and steel to railroads. Nevertheless, Carnegie recalled his roots as a young radical in Scotland. He developed the idea of the gospel of wealth. As a Social Darwinist, he believed wealth was a natural phenomenon, but he also

believed that it imposed a social obligation on those who gained it. He bequeathed much of his fortune to founding libraries and to supporting international efforts to establish peace.

The following entry contains excerpts from the original document.

The problem of our age is the administration of wealth, so that the ties of brotherhood may still bind together the rich and poor in harmonious relationship. The conditions of human life have not only been changed, but revolutionized, within the past few hundred years. In former days there was little difference between the dwelling, dress, food, and environment of the chief and those of his retainers. . . . The contrast between the palace of the millionaire and the cottage of the laborer with us today measures the change which has come with civilization.

This change, however, is not to be deplored, but welcomed as highly beneficial. It is well, nay, essential for the progress of the race, that the houses of some should be homes for all that is highest and best in literature and the arts, and for all the refinements of civilization, rather than that none should be so. Much better this great irregularity than universal squalor. Without wealth there can be no Maecenas [Note: a rich Roman patron of the arts]. The "good old times" were not good old times. Neither master nor servant was as well situated then as to day. A relapse to old conditions would be disastrous to both-not the least so to him who serves-and would sweep away civilization with it. . . .

We start, then, with a condition of affairs under which the best interests of the race are promoted, but which inevitably gives wealth to the few. Thus far, accepting conditions as they exist, the situation can be surveyed and pronounced good. The question then arises-and, if the foregoing be correct, it is the only question with which we have to deal-What is the proper mode of administering wealth after the laws upon which civilization is founded have thrown it into the hands of the few? And it is of this great question that I believe I offer the true solution. It will be understood that fortunes are here spoken of, not moderate sums saved by many years of effort, the returns from which are required for the comfortable maintenance and education of families. This is not wealth, but only competence, which it should be the aim of all to acquire.

There are but three modes in which surplus wealth can be disposed of. It can be left to the families of the decedents; or it can be bequeathed for public purposes; or, finally, it can be administered during their lives by its possessors. Under the first and second modes most of the wealth of the world that has reached the few has hitherto been applied. Let us in turn consider each of these modes. The first is the most injudicious. In monarchical countries, the estates and the greatest portion of the wealth are left to the first son, that the vanity of the parent may be gratified by the thought that his name and title are to descend to succeeding generations unimpaired. The condition of this class in Europe today teaches the futility of such hopes or ambitions. The successors have become impoverished through their follies or from the fall in the value of land. . . . Why should men leave great fortunes to their children? If this is done from affection, is it not misguided affection? Observation teaches that, generally speaking, it is not well for the children that they should be so burdened. Neither is it well for the state. Beyond providing for the wife and daughters moderate sources of income, and very moderate allowances indeed, if any, for the sons, men may well hesitate, for it is no longer questionable that great sums bequeathed oftener work more for the injury than for the good of the recipients. Wise men will soon conclude that, for the best interests of the members of their families and of the state, such bequests are an improper use of their means.

. . . As to the second mode, that of leaving wealth at death for public uses, it may be said that this is only a means for the disposal of wealth, provided a man is content to wait until he is dead before it becomes of much good in the world. . . . The cases are not few in which the real object sought by the testator is not attained, nor are they few in which his real wishes are thwarted. . . .

The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. . . . Of all forms of taxation, this seems the wisest. Men who continue hoarding great sums all their lives, the proper use of which for public ends would work good to the community, should be made to feel that the community, in the form of the state, cannot thus be deprived of its proper share. By taxing estates heavily at death, the state marks its condemnation of the selfish millionaire's unworthy life. . . . This policy would work powerfully to induce the rich man to attend to the administration of wealth during his life, which is the end that society should always have in view, as being that by far most fruitful for the people. . . . There remains, then, only one mode of using great fortunes: but in this way we have the true antidote for the temporary unequal distribution of wealth, the reconciliation of the rich and the poor-a reign of harmony-another ideal, differing, indeed from that of the Communist in requiring only the further evolution of existing conditions, not the total overthrow of our civilization. It is founded upon the present most intense individualism, and the race is prepared to put it in practice by degrees whenever it pleases. Under its sway we shall have an ideal state, in which the surplus wealth of the few will become, in the best sense, the property of the many, because administered for the common good, and this wealth, passing through the hands of the few, can be made a much more potent force for the elevation of our race than if it had been distributed in small sums to the people themselves. Even the poorest can be made to see this, and to

agree that great sums gathered by some of their fellowcitizens and spent for public purposes, from which the masses reap the principal benefit, are more valuable to them than if scattered among them through the course of many years in trifling amounts.

. . . This, then, is held to be the duty of the man of Wealth: First, to set an example of modest, unostentatious living, shunning display or extravagance; to provide moderately for the legitimate wants of those dependent upon him; and after doing so to consider all surplus revenues which come to him simply as trust funds, which he is called upon to administer, and strictly bound as a matter of duty to administer in the manner which, in his judgment, is best calculated to produce the most beneficial result for the community—the man of wealth thus becoming the sole agent and trustee for his poorer brethren, bringing to their service his superior wisdom, experience, and ability to administer—doing for them better than they would or could do for themselves.

Pope Leo XIII's *Rerum Novarum*

Date: May 15, 1891

The Rerum Novarum (Of New Things) was an encyclical issued by Pope Leo XIII. It was an open letter, passed on to all Catholic bishops, that addressed the condition of the working class. It discussed the relationships between government, business, labor, and the church.

It supported the rights of labor to form unions, and rejected socialism, pointing out that, ". . . perpetual conflict necessarily produces confusion and savage barbarity." It spoke directly to the duties and responsibilities of the wealthy owners and masters of labor, or employers. This encyclical is generally accepted to be the founding document of Christian Democracy.

The following entry contains excerpts from the original document.

RERUM NOVARUM

ENCYCLICAL OF POPE LEO XIII ON CAPITAL AND LABOR

To Our Venerable Brethren the Patriarchs, Primates, Archbishops, Bishops, and other ordinaries of places having Peace and Communion with the Apostolic See.

Rights and Duties of Capital and Labor

That the spirit of revolutionary change, which has long been disturbing the nations of the world, should have passed beyond the sphere of politics and made its influence felt in the cognate sphere of practical economics is not surprising. The elements of the conflict now raging are unmistakable, in the vast expansion of industrial pursuits and the marvellous discoveries of science; in the changed relations between masters and workmen; in the enormous fortunes of some few individuals, and the utter poverty of the masses; the increased self reliance and closer mutual combination of the working classes; as also, finally, in the prevailing moral degeneracy. The momentous gravity of the state of things now obtaining fills every mind with painful apprehension; wise men are discussing it; practical men are proposing schemes; popular meetings, legislatures, and rulers of nations are all busied with it - actually there is no question which has taken deeper hold on the public mind.

Highlights of the encyclical

Paragraph 19:

The great mistake made in regard to the matter now under consideration is to take up with the notion that class is naturally hostile to class, and that the wealthy and the working men are intended by nature to live in mutual conflict. So irrational and so false is this view that the direct contrary is the truth. Just as the symmetry of the human frame is the result of the suitable arrangement of the different parts of the body, so in a State is it ordained by nature that these two classes should dwell in harmony and agreement, so as to maintain the balance of the body politic. Each needs the other: capital cannot do without labor, nor labor without capital. Mutual agreement results in the beauty of good order, while perpetual conflict necessarily produces confusion and savage barbarity. Now, in preventing such strife as this, and in uprooting it, the efficacy of Christian insti-

tutions is marvellous and manifold. First of all, there is no intermediary more powerful than religion (whereof the Church is the interpreter and guardian) in drawing the rich and the working class together, by reminding each of its duties to the other, and especially of the obligations of justice.

Paragraph 20:

Of these duties, the following bind the proletarian and the worker: fully and faithfully to perform the work which has been freely and equitably agreed upon; never to injure the property, nor to outrage the person, of an employer; never to resort to violence in defending their own cause, nor to engage in riot or disorder; and to have nothing to do with men of evil principles, who work upon the people with artful promises of great results, and excite foolish hopes which usually end in useless regrets and grievous loss. The following duties bind the wealthy owner and the employer: not to look upon their work people as their bondsmen, but to respect in every man his dignity as a person ennobled by Christian character. They are reminded that, according to natural reason and Christian philosophy, working for gain is creditable, not shameful, to a man, since it enables him to earn an honorable livelihood; but to misuse men as though they were things in the pursuit of gain, or to value them solely for their physical powers - that is truly shameful and inhuman. Again justice demands that, in dealing with the working man, religion and the good of his soul must be kept in mind. Hence, the employer is bound to see that the worker has time for his religious duties; that he be not exposed to corrupting influences and dangerous occasions; and that he be not led away to neglect his home and family, or to squander his earnings. Furthermore, the employer must never tax his work people beyond their strength, or employ them in work unsuited to their sex and age. His great and principal duty is to give every one what is just. Doubtless, before deciding whether wages are fair, many things have to be considered; but wealthy owners and all masters of labor should be mindful of this - that to exercise pressure upon the indigent and the destitute for the sake of gain, and to gather one's profit out of the need of another, is condemned by all laws, human and divine. To defraud any one of wages that are his due is a great crime which cries to the avenging anger of Heaven. "Behold, the hire of the laborers... which by fraud has been kept back by you, crieth; and the cry of them hath entered into the ears of the Lord of Sabaoth." (The Bible - James 5:4) Lastly, the rich must religiously refrain from cutting down the workmen's earnings, whether by force, by fraud, or by usurious dealing; and with all the greater reason because the laboring man is, as a rule, weak and unprotected, and because his slender means should in proportion to their scantiness be accounted sacred. Were these precepts carefully obeyed and followed out, would they not be sufficient of themselves to keep under all strife and all its causes?

Theodor Herzl: On the Jewish State

Date: 1896

Jewish leaders had advocated the return of Jews to Palestine for many years before Theodor Herzl wrote, The Jewish State, a pamphlet defining the movement. Herzl's arguments led to a more defined political movement, aiming at the establishment of a homeland in Palestine. Herzl convened the first Zionist Congress in 1897, the year after the publication of his pamphlet. Herzl was willing to consider other locations than Palestine for the homeland, and investigated other possibilities, including lands in what is now the nation of Uganda.

The following segments are excerpts from the original document.

The idea which I have developed in this pamphlet is a very old one: it is the restoration of the Jewish State. The world resounds with outcries against the Jews, and these outcries have awakened the slumbering idea.

WE ARE A PEOPLE—ONE PEOPLE.

We have honestly endeavored everywhere to merge ourselves in the social life of surrounding communities and to preserve the faith of our fathers. We are not permitted to do so. In vain are we loyal patriots, our loyalty in some places running to extremes; in vain do we make the same sacrifices of life and property as our fellowcitizens; in vain do we strive to increase the fame of our native land in science and art, or her wealth by trade and commerce. In countries where we have lived for centuries we are still cried down as strangers, and often by those whose ancestors were not yet domiciled in the land where Jews had already had experience of suffering. The majority may decide which are the strangers; for this, as indeed every point which arises in the relations between nations, is a question of might. I do not here surrender any portion of our prescriptive right, when I make this statement merely in my own name as an individual. In the world as it now is and for an

indefinite period will probably remain, might precedes right. It is useless, therefore, for us to be loyal patriots, as were the Huguenots who were forced to emigrate. If we could only be left in peace. . . .

[However,] oppression and persecution cannot exterminate us. No nation on earth has survived such struggles and sufferings as we have gone through. Jew-baiting has merely stripped off our weaklings; the strong among us were invariably true to their race when persecution broke out against them. . . .

However much I may worship personality—powerful individual personality in statesmen, inventors, artists, philosophers, or leaders, as well as the collective personality of a historic group of human beings, which we call a nation—however much I may worship personality, I do not regret its disappearance. Whoever can, will, and must perish, let him perish. But the distinctive nationality of Jews neither can, will, nor must be destroyed. It cannot be destroyed, because external enemies consolidate it. It will not be destroyed; this is shown during two thousand years of appalling suffering. It must not be destroyed. . . . Whole branches of Judaism may wither and fall, but the trunk will remain.

THE JEWISH QUESTION

No one can deny the gravity of the situation of the Jews. Wherever they live in perceptible numbers, they are more or less persecuted. Their equality before the law, granted by statute, has become practically a dead letter. They are debarred from filling even moderately high positions, either in the army, or in any public or private capacity. And attempts are made to thrust them out of business also: "Don't buy from Jews!"

Attacks in Parliaments, in assemblies, in the press, in the pulpit, in the street, on journeys—for example, their exclusion from certain hotels—even in places of recreation, become daily more numerous. The forms of persecutions varying according to the countries and social circles in which they occur. . . .

THE PLAN

Let the sovereignty be granted us over a portion of the globe large enough to satisfy the rightful requirements of a nation; the rest we shall manage for ourselves.

The creation of a new State is neither ridiculous nor impossible. We have in our day witnessed the process in connection with nations which were not largely members of the middle class, but poorer, less educated, and consequently weaker than ourselves. The Governments of all countries scourged by Anti-Semitism will be keenly interested in assisting us to obtain the sovereignty we want.

The plan, simple in design, but complicated in execution, will be carried out by two agencies: The Society of Jews and the Jewish Company.

The Society of Jews will do the preparatory work in the domains of science and politics, which the Jewish Company will afterwards apply practically.

The Jewish Company will be the liquidating agent of the business interests of departing Jews, and will organize commerce and trade in the new country.

We must not imagine the departure of the Jews to be a sudden one. It will be gradual, continuous, and will cover many decades. The poorest will go first to cultivate the soil. In accordance with a preconceived plan, they will construct roads, bridges, railways and telegraph installations; regulate rivers; and build their own dwellings; their labor will create trade, trade will create markets and markets will attract new settlers, for every man will go voluntarily, at his own expense and his own risk. The labor expended on the land will enhance its value, and the Jews will soon perceive that a new and permanent sphere of operation is opening here for that spirit of enterprise which has heretofore met only with hatred and obloquy.

John Hay: Circular Letter

Date: 1899

A letter of September 6, 1899, written by U.S. Secretary of State John Hay, that announced the Open Door policy toward China and was an attempt to protect American commercial interests at a time when European nations were establishing spheres of influence in China. Hay's letter instructed U.S. embassies in Germany, Russia, Great Britain, France, Italy, and Japan to seek assurances that those powers would respect the trading rights of other nations within their spheres of influence, that the Chinese treaty tariff would apply to all spheres of influence and would be collected by the Chinese government, and that discriminatory tariffs and fees would not be applied to any nation. Though the various nations gave evasive replies, on March 20, 1900, Hay announced the acceptance of the Open Door policy as "final and definitive."

Germany.
Mr. Hay to Mr. White.
Department of State, Washington, September 6, 1899.

Sir: At the time when the Government of the United States was informed by that of Germany that it had leased from His Majesty the Emperor of China the port of Kiao-chao and the adjacent territory in the province of Shantung, assurances were given to the ambassador of the United States at Berlin by the Imperial German minister for foreign affairs that the rights and privileges insured by treaties with China to citizens of the United States would not thereby suffer or be in anywise impaired within the area over which Germany had thus obtained control.

More recently, however, the British Government recognized by a formal agreement with Germany the exclusive right of the latter country to enjoy in said leased area an the contiguous "sphere of influence or interest" certain privileges, more especially those relating to railroads and mining enterprises; but, as the exact nature and extent of the rights thus recognized have not been clearly defined, it is possible that serious conflicts of interest may at any time arise, not only between British and German subjects within said area, but that the interests of our citizens may also be jeopardized thereby.

Earnestly desirous to remove any cause of irritation and to insure at the same time to the commerce of all nations in China the undoubted benefits which should accrue from a formal recognition by the various powers claiming "spheres of interest" that they shall enjoy perfect equality of treatment for their commerce and navigation within such "spheres," the Government of the United States would be pleased to see His German Majesty's Government give formal assurances and lend its cooperation in securing like assurances from the other interested powers that each within its respective spheres of whatever influence. . . .

First. Will in no way interfere with any treaty port or any vested interest within any so-called "sphere of interest" or leased territory it may have in China.

Second. That the Chinese treaty tariff of the time being shall apply to all merchandise landed or shipped to all such ports as are within said "sphere of interest" (unless they be "free ports"), no matter to what nationality it may belong, and that duties so leviable shall be collected by the Chinese Government.

Third. That it will levy no higher harbor dues on vessels of another nationality frequenting any port in such "sphere" than shall be levied on vessels of its own nationality, and no higher railroad charges over lines built, controlled, or operated within its "sphere" on merchandise belonging to citizens or subjects of other nationalities transported through such "sphere" than shall be levied on similar merchandise belonging to its own nationals transported over equal distances.

The liberal policy pursued by His Imperial German Majesty in declaring Kiao-chao a free port and in aiding the Chinese Government in the establishment there of a custom-house are so clearly in line with the proposition which this Government is anxious to see recognized that it entertains the strongest hope that Germany will give its acceptance and hearty support.

The recent ukase of His Majesty the Emperor of Russia declaring the port of Ta-lien-wan open during the whole of the lease under which it is held from China, to the merchant ships of all nations, coupled with the categorical assurances made to this Government by His Imperial Majesty's representative at this capital at the time, and since repeated to me by the present Russian ambassador, seem to insure the support of the Emperor to the proposed measure. Our ambassador at the Court of St. Petersburg has, in consequence, been instructed to submit it to the Russian Government and to request their early consideration of it. A copy of my instruction on the subject to Mr. Tower is herewith enclosed for your confidential information.

The commercial interests of Great Britain and Japan will be so clearly served by the desired declaration of intentions, and the views of the Governments of these countries as to the desirability of the adoption of measures insuring the benefits of equality of treatment of all foreign trade throughout China are so similar to those entertained by the United States, that their acceptance of the propositions herein outlined and their cooperation in advocating their adoption by the other powers can be confidently expected. I inclose herewith copy of the instruction which I have sent to Mr. Choate on the subject.

In view of the present favorable conditions, you are instructed to submit the above considerations to His Imperial German Majesty's minister for foreign affairs, and to request his early consideration of the subject.

Copy of this instruction is sent to our ambassadors at London and at St. Petersburg for their information.

I have, etc.,

John Hay.

(Inclosures:) To London, September 6, 1899, No. 205; to St. Petersburg, September 6, 1899, No. 82.

PRIMARY DOCUMENTS: CRISIS AND ACHIEVEMENT—1900 TO 1950

Lenin: “What Is to Be Done?”

Date: 1902

In this essay, Vladimir Ilyich Lenin argued for a socialist party that would be open only to dedicated revolutionaries, rather than to a broad political base of ideological supporters. The more open and democratic model characterized the socialist parties of the period in Europe and the Americas, but Lenin conceived of the party as an apparatus for revolution. When his wing of the Russian Social Democratic Party briefly dominated one meeting, they declared themselves Bolsheviks, or the majority wing, even though the more open wing of the party outnumbered them. The name stuck, and Lenin’s dedicated revolutionary wing of the Social Democrats were henceforth known internationally as Bolsheviks. In this essay, Lenin harshly criticizes other Social Democrats for believing that a middle-class style political victory would be possible in Russia, and instead he urges that the party not use political means but organize itself as a tough, centrally-controlled elite that would work to establish a socialist state in the interests of the wider proletariat.

The history of all countries shows that the working class, exclusively by its own effort, is able to develop only trade union consciousness, i.e., it may itself realise the necessity for combining in unions, for fighting against the employers and for striving to compel the government to pass necessary labour legislation, etc. The theory of socialism, however, grew out of the philosophic, historical and economic theories that were elaborated by the educated representatives of the propertied classes, the intellectuals. According to their social status, the founders of modern scientific socialism, Marx and Engels, themselves belonged to the bourgeois intelligentsia. Similarly, in Russia, the theoretical doctrine of Social Democracy arose quite independently of the spontaneous growth of the labour movement; it arose as a natural and inevitable outcome of the development of ideas among the revolutionary socialist intelligentsia. At the time of which we are speaking, i.e., the middle of the nineties, this doctrine not only represented the completely formulated programme of the Emancipation of Labour group, but had already won the adherence of the majority of the revolutionary youth in Russia.

It is only natural that a Social Democrat, who conceives the political struggle as being identical with the “economic struggle against the employers and the government,” should conceive of an “organisation of revolutionaries” as being more or less identical with an “organisation of workers.” And this, in fact, is what actually happens; so that when we talk about organisation, we literally talk in different tongues. I recall a conversation I once had with a fairly consistent Economist, with whom I had not been previously acquainted. We were discussing the pamphlet *Who Will Make the Political Revolution?* and we were very soon agreed that the principal defect in that brochure was that it ignored the question of organisation. We were beginning to think that we were in complete agreement with each other—but as the conversation proceeded, it became clear that we were talking of different things. My interlocutor accused the author of the brochure just mentioned of ignoring strike funds, mutual aid societies, etc.; whereas I had in mind an organisation of revolutionaries as an essential factor in “making” the political revolution. After that became clear, I hardly remember a single question of importance upon which I was in agreement with that Economist!

What was the source of our disagreement? The fact that on questions of organisation and politics the Economists are forever lapsing from Social Democracy into trade unionism. The political struggle carried on by the Social Democrats is far more extensive and complex than the economic struggle the workers carry on against the employers and the government. Similarly (and indeed for that reason), the organisation of a revolutionary Social Democratic Party must inevitably differ from the organisations of the workers designed for the latter struggle. A workers’ organisation must in the first place be a trade organisation; secondly, it must be as wide as possible; and thirdly, it must be as public as conditions will allow (here, and further on, of course, I have only autocratic Russia in mind). On the other hand, the organisations of revolutionaries must consist first and foremost of people whose profession is that of a revolutionary (that is why I speak of organisations of revolutionaries, meaning revolutionary Social Democrats). In view of this common feature of the members of such an organisation, all distinctions as between workers and intellectuals, and certainly distinctions of trade and profession, must be obliterated. Such an organisation must of necessity be not too extensive and as secret as possible.

I assert:

- that no movement can be durable without a stable organisation of leaders to maintain continuity;
- that the more widely the masses are spontaneously drawn into the struggle and form the basis of the movement and participate in it, the more necessary is it to have such an organisation, and the more stable must it be (for it is much easier for demagogues to sidetrack the more backward sections of the masses);
- that the organisation must consist chiefly of persons engaged in revolutionary activities as a profession;

that in a country with an autocratic government, the more we restrict the membership of this organisation to persons who are engaged in revolutionary activities as a profession and who have been professionally trained in the art of combating the political police, the more difficult will it be to catch the organisation, and the wider will be the circle of men and women of the working class or of other classes of society able to join the movement and perform active work in it. . . .

The active and widespread participation of the masses will not suffer; on the contrary, it will benefit by the fact that a “dozen” experienced revolutionaries, no less professionally trained than the police, will centralise all the secret side of the work—prepare leaflets, work out approximate plans and appoint bodies of leaders for each urban district, for each factory district and to each educational institution, etc. (I know that exception will be taken to my “undemocratic” views, but I shall reply to this altogether unintelligent objection later on.) The centralisation of the more secret functions in an organisation of revolutionaries will not diminish, but rather increase the extent and the quality of the activity of a large number of other organisations intended for wide membership and which, therefore, can be as loose and as public as possible, for example, trade unions, workers’ circles for self-education and the reading of illegal literature, and socialist and also democratic circles for all other sections of the population, etc, etc. We must have as large a number as possible of such organisations having the widest possible variety of functions, but it is absurd and dangerous to confuse those with organisations of revolutionaries, to erase the line of demarcation between them, to dim still more the masses already incredibly hazy appreciation of the fact that in order to “serve” the mass movement we must have people who will devote themselves exclusively to Social Democratic activities, and that such people must train themselves patiently and steadfastly to be professional revolutionaries.

Aye, this appreciation has become incredibly dim. The most grievous sin we have committed in regard to organisation is that by our primitiveness we have lowered the prestige of revolutionaries in Russia. A man who is weak and vacillating on theoretical questions, who has a narrow outlook who makes excuses for his own slackness on the ground that the masses are awakening spontaneously; who resembles a trade union secretary more than a people’s tribune, who is unable to conceive of a broad and bold plan, who is incapable of inspiring even his opponents with respect for himself, and who is inexperienced and clumsy in his own professional art—the art of combating the political police—such a man is not a revolutionary but a wretched amateur!

Let no active worker take offense at these frank remarks, for as far as insufficient training is concerned, I apply them first and foremost to myself. I used to work in a circle that set itself great and all-embracing tasks; and every member of that circle suffered to the point of torture from the realisation that we were proving ourselves to be amateurs at a moment in history when we might have been able to say, paraphrasing a well-known epigram: “Give us an organisation of revolutionaries, and we shall overturn the whole of Russia!”

The Souls of Black Folk

Date: 1903

The Souls of Black Folk was a landmark 1903 work on the African-American experience by African-American scholar and civil rights activist W. E. B. DuBois. In his writings, DuBois charted the psychological and social toll of historical subjugation on black Americans. His scholarship influenced his militant activism on behalf of equal rights. *The Souls of Black Folk*, a collection of essays detailing the spiritual and psychological underpinnings of black life in turn-of-the-century segregated America, revealed the main currents of DuBois’s thought. In characterizing the aspirations of African Americans, DuBois asserted that what blacks wanted and were entitled to by birth was equal social status and economic opportunity. He spelled out his indictment of black leader Booker T. Washington, whose accommodationist strategy to win black social and economic advancement, DuBois asserted, would achieve only illusory gains while perpetuating the institutions and attitudes of segregation.

The following entry contains excerpts from the original document.

The Souls of Black Folk (1903)

The Forethought

Herein lie buried many things which if read with patience may show the strange meaning of being black here in the dawning of the Twentieth Century. This meaning is not without interest to you, Gentle Reader; for the problem of the Twentieth Century is the problem of the colorline.

I pray you, then, receive my little book in all charity, studying my words with me, forgiving mistake and foible for sake of the faith and passion that is in me, and seeking the grain of truth hidden there.

I have sought here to sketch, in vague, uncertain outline, the spiritual world in which ten thousand Americans live and strive. First, in two chapters I have tried to show what Emancipation meant to them, and what was its aftermath. In a third chapter I have pointed out the slow rise of personal leadership, and criticised candidly the leader who bears the chief burden of his race to-day. Then, in two other chapters I have sketched in swift outline the two worlds within and without the Veil, and thus have come to the central problem of training men for life. Venturing now into deeper detail, I have in two chapters studied the struggles of the massed millions of the black peasantry, and in another have sought to make clear the present relations of the sons of master and man.

Leaving, then, the world of the white man, I have stepped within the Veil, raising it that you may view faintly its deeper recesses,—the meaning of its religion, the passion of its human sorrow, and the struggle of its greater souls. All this I have ended with a tale twice told but seldom written.

Some of these thoughts of mine have seen the light before in other guise. For kindly consenting to their republication here, in altered and extended form, I must thank the publishers of *The Atlantic Monthly*, *The World's Work*, *The Dial*, *The New World*, and the *Annals of the American Academy of Political and Social Science*.

Before each chapter, as now printed, stands a bar of the Sorrow Songs,—some echo of haunting melody from the only American music which welled up from black souls in the dark past. And, finally, need I add that I who speak here am bone of the bone and flesh of the flesh of them that live within the Veil?

W. E. B. DuBois
Atlanta, Ga., Feb. 1, 1903.

Herein is Written

I. OF OUR SPIRITUAL STRIVINGS

O water, voice of my heart, crying in the sand, All night long crying with a mournful cry, As I lie and listen, and cannot understand The voice of my heart in my side or the voice of the sea, O water, crying for rest, is it I, is it I? All night long the water is crying to me.

Unresting water, there shall never be rest Till the last moon droop and the last tide fail, And the fire of the end begin to burn in the west; And the heart shall be weary and wonder and cry like the sea, All life long crying without avail, As the water all night long is crying to me.

Arthur Symons.

Between me and the other world there is ever an unasked question: unasked by some through feelings of delicacy; by others through the difficulty of rightly framing it. All, nevertheless, flutter round it. They approach me in a half-hesitant sort of way, eye me curiously or compassionately, and then, instead of saying directly, How does it feel to be a problem? they say, I know an excellent colored man in my town; or, I fought at Mechanicsville; or, Do not these Southern outrages make your blood boil? At these I smile, or am interested, or reduce the boiling to a simmer, as the occasion may require. To the real question, How does it feel to be a problem? I answer seldom a word.

And yet, being a problem is a strange experience,—peculiar even for one who has never been anything else, save perhaps in babyhood and in Europe. It is in the early days of rollicking boyhood that the revelation first bursts upon one, all in a day, as it were. I remember well when the shadow swept across me. I was a little thing, away up in the hills of New England, where the dark Housatonic winds between Hoosac and Taghkanic to the sea. In a wee wooden schoolhouse, something put it into the boys' and girls' heads to buy gorgeous visiting-cards—ten cents a package—and exchange. The exchange was merry, till one girl, a tall newcomer, refused my card,—refused it peremptorily, with a glance. Then it dawned upon me with a certain suddenness that I was different from the others; or like, mayhap, in heart and life and longing, but shut out from their world by a vast veil. I had thereafter no desire to tear down that veil, to creep through; I held all beyond it in common contempt, and lived above it in a region of blue sky and great wandering shadows. That sky was bluest when I could beat my mates at examination-time, or beat them at a foot-race, or even beat their stringy heads. Alas, with the years all this fine contempt began to fade; for the worlds I longed for, and all their dazzling opportunities, were theirs, not mine. But they should not keep these prizes, I said; some, all, I would wrest from them. Just how I would do it I could never decide: by reading law, by healing the sick, by telling the wonderful tales that swam in my head,—some way. With other black boys the strife was not so fiercely sunny: their youth shrunk into tasteless sycophancy, or into silent hatred of the pale world about them and mocking distrust of everything white; or wasted itself in a bitter cry, Why did God make me an outcast and a stranger in mine own house? The shades of the prison-house closed round about us all: walls strait and stubborn to the whitest, but relentlessly narrow, tall, and unscalable to sons of night who must plod darkly on in resignation, or beat unavailing palms against the stone, or steadily, half hopelessly, watch the streak of blue above.

After the Egyptian and Indian, the Greek and Roman, the Teuton and Mongolian, the Negro is a sort of seventh son, born with a veil, and gifted with second-sight in this American world,—a world which yields him no true self-consciousness, but only lets him see himself through the revelation of the other world. It is a peculiar sensation, this double-consciousness, this sense of always looking at one's self through the eyes of others, of measuring one's soul by the tape of a world that looks on in amused contempt and pity. One ever feels his two-ness,—an American, a Negro; two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder.

The history of the American Negro is the history of this strife,—this longing to attain self-conscious manhood, to merge his double self into a better and truer self. In this merging he wishes neither of the older selves to be lost. He would not Africanize America, for America has too much to teach the world and Africa. He would not bleach his Negro soul in a flood of white Americanism, for he knows that Negro blood has a message for the world. He simply wishes to make it possible for a man to be both a Negro and an American, without being cursed and spit upon by his fellows, without having the doors of Opportunity closed roughly in his face.

This, then, is the end of his striving: to be a co-worker in the kingdom of culture, to escape both death and isolation, to husband and use his best powers and his latent genius. These powers of body and mind have in the past been strangely wasted, dispersed, or forgotten. The shadow of a mighty Negro past flits through the tale of Ethiopia the Shadowy and of Egypt the Sphinx. Throughout history, the powers of single black men flash here and there like falling stars, and die sometimes before the world has rightly gauged their brightness. Here in America, in the few days since Emancipation, the black man's turning hither and thither in hesitant and doubtful striving has often made his very strength to lose effectiveness, to seem like absence of power, like weakness. And yet it is not weakness,—it is the contradiction of double aims. The double-aimed struggle of the black artisan—on the one hand to escape white contempt for a nation of mere hewers of wood and drawers of water, and on the other hand to plough and nail and dig for a poverty-stricken horde—could only result in making him a poor craftsman, for he had but half a heart in either cause. By the poverty and ignorance of his people, the Negro minister or doctor was tempted toward quackery and demagoguery; and by the criticism of the other world, toward ideals that made him ashamed of his lowly tasks. The would-be black savant was confronted by the paradox that the knowledge his people needed was a twice-told tale to his white neighbors, while the knowledge which would teach the white world was Greek to his own flesh and blood. The innate love of harmony and beauty that set the ruder souls of his people a-dancing and a-singing raised but confusion and doubt in the soul of the black artist; for the beauty revealed to him was the soul-beauty of a race which his larger audience despised, and he could not articulate the message of another people. This waste of double aims, this seeking to satisfy two unreconciled ideals, has wrought sad havoc with the courage and faith and deeds of ten thousand thousand people,—has sent them often wooing false gods and invoking false means of salvation, and at times has even seemed about to make them ashamed of themselves.

Away back in the days of bondage they thought to see in one divine event the end of all doubt and disappointment; few men ever worshipped Freedom with half such unquestioning faith as did the American Negro for two centuries. To him, so far as he thought and dreamed, slavery was indeed the sum of all villainies, the cause of all sorrow, the root of all prejudice; Emancipation was the key to a promised land of sweeter beauty than ever stretched before the eyes of wearied Israelites. In song and exhortation swelled one refrain—Liberty; in his tears and curses the God he implored had Freedom in his right hand. At last it came,—suddenly, fearfully, like a dream. With one wild carnival of blood and passion came the message in his own plaintive cadences:—

“Shout, O children! Shout, you're free! For God has bought your liberty!”

Years have passed away since then,—ten, twenty, forty; forty years of national life, forty years of renewal and development, and yet the swarthy spectre sits in its accustomed seat at the Nation's feast. In vain do we cry to this our vastest social problem:—

“Take any shape but that, and my firm nerves Shall never tremble!”

The Nation has not yet found peace from its sins; the freedman has not yet found in freedom his promised land. Whatever of good may have come in these years of change, the shadow of a deep disappointment rests upon the Negro people,—a disappointment all the more bitter because the unattained ideal was unbounded save by the simple ignorance of a lowly people.

The first decade was merely a prolongation of the vain search for freedom, the boon that seemed ever barely to elude their grasp,—like a tantalizing will-o'-the-wisp, maddening and misleading the headless host. The holocaust of war, the terrors of the Ku-Klux Klan, the lies of carpet-baggers, the disorganization of industry, and the contradictory advice of friends and foes, left the bewildered serf with no new watch-word beyond the old cry for freedom. As the time flew, however, he began to grasp a new idea. The ideal of liberty demanded for its attainment powerful means, and these the Fifteenth Amendment gave him. The ballot, which before he had looked upon as a visible sign of freedom, he now regarded as the chief means of gaining and perfecting the liberty with which war had partially endowed him. And why not? Had not votes made war and

emancipated millions? Had not votes enfranchised the freedmen? Was anything impossible to a power that had done all this? A million black men started with renewed zeal to vote themselves into the kingdom. So the decade flew away, the revolution of 1876 came, and left the half-free serf weary, wondering, but still inspired. Slowly but steadily, in the following years, a new vision began gradually to replace the dream of political power,—a powerful movement, the rise of another ideal to guide the unguided, another pillar of fire by night after a clouded day. It was the ideal of “book-learning”; the curiosity, born of compulsory ignorance, to know and test the power of the cabalistic letters of the white man, the longing to know. Here at last seemed to have been discovered the mountain path to Canaan; longer than the highway of Emancipation and law, steep and rugged, but straight, leading to heights high enough to overlook life.

Up the new path the advance guard toiled, slowly, heavily, doggedly; only those who have watched and guided the faltering feet, the misty minds, the dull understandings, of the dark pupils of these schools know how faithfully, how piteously, this people strove to learn. It was weary work. The cold statistician wrote down the inches of progress here and there, noted also where here and there a foot had slipped or some one had fallen. To the tired climbers, the horizon was ever dark, the mists were often cold, the Canaan was always dim and far away. If, however, the vistas disclosed as yet no goal, no resting-place, little but flattery and criticism, the journey at least gave leisure for reflection and self-examination; it changed the child of Emancipation to the youth with dawning self-consciousness, self-realization, self-respect. In those sombre forests of his striving his own soul rose before him, and he saw himself,—darkly as through a veil; and yet he saw in himself some faint revelation of his power, of his mission. He began to have a dim feeling that, to attain his place in the world, he must be himself, and not another. For the first time he sought to analyze the burden he bore upon his back, that dead-weight of social degradation partially masked behind a half-named Negro problem. He felt his poverty; without a cent, without a home, without land, tools, or savings, he had entered into competition with rich, landed, skilled neighbors. To be a poor man is hard, but to be a poor race in a land of dollars is the very bottom of hardships. He felt the weight of his ignorance,—not simply of letters, but of life, of business, of the humanities; the accumulated sloth and shirking and awkwardness of decades and centuries shackled his hands and feet. Nor was his burden all poverty and ignorance. The red stain of bastardy, which two centuries of systematic legal defilement of Negro women had stamped upon his race, meant not only the loss of ancient African chastity, but also the hereditary weight of a mass of corruption from white adulterers, threatening almost the obliteration of the Negro home.

A people thus handicapped ought not to be asked to race with the world, but rather allowed to give all its time and thought to its own social problems. But alas! while sociologists gleefully count his bastards and his prostitutes, the very soul of the toiling, sweating black man is darkened by the shadow of a vast despair. Men call the shadow prejudice, and learnedly explain it as the natural defence of culture against barbarism, learning against ignorance, purity against crime, the “higher” against the “lower” races. To which the Negro cries Amen! and swears that to so much of this strange prejudice as is founded on just homage to civilization, culture, righteousness, and progress, he humbly bows and meekly does obeisance. But before that nameless prejudice that leaps beyond all this he stands helpless, dismayed, and well-nigh speechless; before that personal disrespect and mockery, the ridicule and systematic humiliation, the distortion of fact and wanton license of fancy, the cynical ignoring of the better and the boisterous welcoming of the worse, the all-pervading desire to inculcate disdain for everything black, from Toussaint to the devil,—before this there rises a sickening despair that would disarm and discourage any nation save that black host to whom “discouragement” is an unwritten word.

But the facing of so vast a prejudice could not but bring the inevitable self-questioning, self-disparagement, and lowering of ideals which ever accompany repression and breed in an atmosphere of contempt and hate. Whisperings and portents came borne upon the four winds: Lo! we are diseased and dying, cried the dark hosts; we cannot write, our voting is vain; what need of education, since we must always cook and serve? And the Nation echoed and enforced this self-criticism, saying: Be content to be servants, and nothing more; what need of higher culture for half-men? Away with the black man’s ballot, by force or fraud,—and behold the suicide of a race! Nevertheless, out of the evil came something of good,—the more careful adjustment of education to real life, the clearer perception of the Negroes’ social responsibilities, and the sobering realization of the meaning of progress.

So dawned the time of Sturm und Drang: storm and stress to-day rocks our little boat on the mad waters of the world-sea; there is within and without the sound of conflict, the burning of body and rending of soul; inspiration strives with doubt, and faith with vain questionings. The bright ideals of the past,—physical freedom, political power, the training of brains and the training of hands,—all these in turn have waxed and waned, until even the last grows dim and overcast. Are they all wrong,—all false? No, not that, but each alone was over-simple and incomplete,—the dreams of a credulous race-childhood, or the fond imaginings of the other world which does not know and does not want to know our power. To be really true, all these ideals must be melted and welded into one. The training of the schools we need to-day more than ever,—the training of deft hands, quick eyes and ears, and above all the broader, deeper, higher culture of gifted minds and pure hearts. The power of the ballot we need in sheer self-defence,—else what shall save us from a second

slavery? Freedom, too, the long-sought, we still seek,—the freedom of life and limb, the freedom to work and think, the freedom to love and aspire. Work, culture, liberty,—all these we need, not singly but together, not successively but together, each growing and aiding each, and all striving toward that vaster ideal that swims before the Negro people, the ideal of human brotherhood, gained through the unifying ideal of Race; the ideal of fostering and developing the traits and talents of the Negro, not in opposition to or contempt for other races, but rather in large conformity to the greater ideals of the American Republic, in order that some day on American soil two world-races may give each to each those characteristics both so sadly lack. We the darker ones come even now not altogether empty-handed: there are to-day no truer exponents of the pure human spirit of the Declaration of Independence than the American Negroes; there is no true American music but the wild sweet melodies of the Negro slave; the American fairy tales and folk-lore are Indian and African; and, all in all, we black men seem the sole oasis of simple faith and reverence in a dusty desert of dollars and smartness. Will America be poorer if she replace her brutal dyspeptic blundering with light-hearted but determined Negro humility? or her coarse and cruel wit with loving jovial good-humor? or her vulgar music with the soul of the Sorrow Songs?

Merely a concrete test of the underlying principles of the great republic is the Negro Problem, and the spiritual striving of the freedmen's sons is the travail of souls whose burden is almost beyond the measure of their strength, but who bear it in the name of an historic race, in the name of this the land of their fathers' fathers, and in the name of human opportunity.

And now what I have briefly sketched in large outline let me on coming pages tell again in many ways, with loving emphasis and deeper detail, that men may listen to the striving in the souls of black folk.

Niagara Movement Declaration of Principles

Date: July 1905

This declaration was a manifesto issued by the Niagara movement on its formal organization at Niagara Falls, Ontario, in July 1905. African-American intellectuals, led by the sociologist and civil rights activist W. E. B. DuBois, gathered on the Canadian side of Niagara Falls (no hotel on the U.S. side would let them register) to found a black protest movement, a militant forerunner of the National Association for the Advancement of Colored People (NAACP). DuBois's 1903 work The Souls of Black Folk, a complex historical and psychological examination of the African-American experience of subjugation, provided the intellectual impetus for the movement. The Niagara initiative was a reaction against both the U.S. Supreme Court's landmark 1896 Plessy v. Ferguson ruling, which propounded the segregationist doctrine of "separate but equal," and black leader Booker T. Washington's accommodationist strategies for black social and economic advancement, as expressed in his 1895 Atlanta Compromise address. The Niagara declaration demanded an end to all forms of racial prejudice and discrimination in the United States and called for equality of economic and educational opportunity. Until such demands were met, the manifesto warned, the movement would protest publicly to dramatize racial injustice.

PROGRESS

The members of the conference, known as the Niagara Movement, assembled in annual meeting at Buffalo, July 11th, 12th and 13th, 1905, congratulate the Negro-Americans on certain undoubted evidences of progress in the last decade, particularly the increase of intelligence, the buying of property, the checking of crime, the uplift in home life, the advance in literature and art, and the demonstration of constructive and executive ability in the conduct of great religious, economic and educational institutions.

SUFFRAGE

At the same time, we believe that this class of American citizens should protest emphatically and continually against the curtailment of their political rights. We believe in manhood suffrage; we believe that no man is so good, intelligent or wealthy as to be entrusted wholly with the welfare of his neighbor.

CIVIL LIBERTY

We believe also in protest against the curtailment of our civil rights. All American citizens have the right to equal treatment in places of public entertainment according to their behavior and deserts.

ECONOMIC OPPORTUNITY

We especially complain against the denial of equal opportunities to us in economic life; in the rural districts of the South this amounts to peonage and virtual slavery; all over the South it tends to crush labor and small business enterprises; and everywhere American prejudice, helped often by iniquitous laws, is making it more difficult for Negro Americans to earn a decent living.

EDUCATION

Common school education should be free to all American children and compulsory. High school training should be adequately provided for all, and college training should be the monopoly of no class or race in any section of our common country. We believe that, in defense of our own institutions, the United States should aid common school education, particularly in the South, and we especially recommend concerted agitation to this end. We urge an increase in public high school facilities in the South, where the Negro-Americans are almost wholly without such provisions. We favor well-equipped trade and technical schools for the training of artisans, and the need of adequate and liberal endowment for a few institutions of higher education must be patent to sincere well-wishers of the race.

COURTS

We demand upright judges in courts, juries selected without discrimination on account of color and the same measure of punishment and the same efforts at reformation for black as for white offenders. We need orphanages and farm schools for dependent children, juvenile reformatories for delinquents, and the abolition of the dehumanizing convict-lease system.

PUBLIC OPINION

We note with alarm the evident retrogression in this land of sound public opinion on the subject of manhood rights, republican government and human brotherhood, and we pray God that this nation will not degenerate into a mob of boasters and oppressors, but rather will return to the faith of the fathers, that all men were created free and equal, with certain unalienable rights.

HEALTH

We plead for health—for an opportunity to live in decent houses and localities, for a chance to rear our children in physical and moral cleanliness.

EMPLOYERS AND LABOR UNIONS

We hold up for public execration the conduct of two opposite classes of men: The practice among employers of importing ignorant Negro-American laborers in emergencies, and then affording them neither protection nor permanent employment; and the practice of labor unions in proscribing and boycotting and oppressing thousands of their fellow-toilers, simply because they are black. These methods have accentuated and will accentuate the war of labor and capital, and they are disgraceful to both sides.

PROTEST

We refuse to allow the impression to remain that the Negro-American assents to inferiority, is submissive under oppression and apologetic before insults. Through helplessness we may submit, but the voice of protest of ten million Americans must never cease to assail the ears of their fellows, so long as America is unjust.

COLOR-LINE

Any discrimination based simply on race or color is barbarous, we care not how hallowed it be by custom, expediency, or prejudice. Differences made on account of ignorance, immorality, or disease are legitimate methods of fighting evil, and against them we have no word of protest; but discriminations based simply and solely on physical peculiarities, place of birth, color or skin, are relics of that unreasoning human savagery of which the world is and ought to be thoroughly ashamed.

“JIM CROW” CARS

We protest against the “Jim Crow” car, since its effect is and must be to make us pay first-class fare for third-class accommodations, render us open to insults and discomfort and to crucify wantonly our manhood, womanhood and self-respect.

SOLDIERS

We regret that this nation has never seen fit adequately to reward the black soldiers who, in its five wars, have defended their country with their blood, and yet have been systematically denied the promotions which their abilities deserve. And we regard as unjust, the exclusion of black boys from the military and navy training schools.

WAR AMENDMENTS

We urge upon Congress the enactment of appropriate legislation for securing the proper enforcement of those articles of freedom, the thirteenth, fourteenth and fifteenth amendments of the Constitution of the United States.

OPPRESSION

We repudiate the monstrous doctrine that the oppressor should be the sole authority as to the rights of the oppressed. The Negro race in America stolen, ravished and degraded, struggling up through difficulties and oppression, needs sympathy and receives criticism; needs help and is given hindrance, needs protection and is given mob-violence, needs justice and is given charity, needs leadership and is given cowardice and apology, needs bread and is given a stone. This nation will never stand justified before God until these things are changed.

THE CHURCH

Especially are we surprised and astonished at the recent attitude of the church of Christ—on the increase of a desire to bow to racial prejudice, to narrow the bounds of human brotherhood, and to segregate black men in some outer sanctuary. This is wrong, unchristian and disgraceful to the twentieth century civilization.

AGITATION

Of the above grievances we do not hesitate to complain, and to complain loudly and insistently. To ignore, overlook, or apologize for these wrongs is to prove ourselves unworthy of freedom. Persistent manly agitation is the way to liberty, and toward this goal the Niagara Movement has started and asks the co-operation of all men of all races.

HELP

At the same time we want to acknowledge with deep thankfulness the help of our fellowmen from the abolitionist down to those who to-day still stand for equal opportunity and who have given and still give of their wealth and of their poverty for our advancement.

DUTIES

And while we are demanding, and ought to demand, and will continue to demand the rights enumerated above, God forbid that we should ever forget to urge corresponding duties upon our people:

- The duty to vote.
- The duty to respect the rights of others.
- The duty to work.
- The duty to obey the laws.
- The duty to be clean and orderly.
- The duty to be send our children to school.
- The duty to respect ourselves, even as we respect others.
- This statement, complaint and prayer we submit to the American people, and Almighty God.

Treaty of Portsmouth

Date: September 5, 1905

Brokered by U.S. president Theodore Roosevelt, the Treaty of Portsmouth (Portsmouth, New Hampshire) ended the Russo-Japanese War, which much to Europe's surprise and chagrin marked the defeat of a world power by a new Asian aggressor. The humiliated Russian czar, his ambitions checked in Asia, and his rule at home seriously destabilized, turned an imperialist eye toward the Balkans. There—where a century's worth of entangling alliances sought to prop up the ailing Austro-Hungarian Empire and hold the line on the crumbling domain of the Ottoman Turks—Russia's face-saving meddling would help to light the fuse for World War I.

By the treaty, Russia recognized Japan's conquest of Korea, and Russia transferred to Japan its lease of Port Arthur and the Liaodong Peninsula, in addition to ceding the southern half of Sakhalin. Two of the articles laid the foundation for regulating the two nations' commerce in Manchuria, specifically restricting

the use of rail lines built by Japan and Russia to commerce rather than warfare. Not only had Japan gained control of Korea, the Liaodong Peninsula, and Port Arthur (and the South Manchurian Railroad that led to Port Arthur), but a chastened Russia meekly agreed to evacuate southern Manchuria.

The following entry contains excerpts from the original document

II The Imperial Russian Government, acknowledging that Japan possesses in Korea paramount political, military, and economical interests, engage neither to obstruct nor interfere with the measures of guidance, protection, and control which the Imperial Government of Japan may find it necessary to take in Korea.

It is understood that Russian subjects in Korea shall be treated exactly in the same manner as the subjects or citizens of other foreign Powers—that is to say, they shall be placed on the same footing as the subjects or citizens of the most-favored nation.

It is also agreed that, in order to avoid all causes of misunderstanding, the two High Contracting Parties will abstain, on the Russo-Korean frontier, from taking any military measures which may menace the security of Russian or Korean territory.

And Russia transferred to Japan its lease of Port Arthur and the Liaodong Peninsula, in addition to ceding the southern half of Sakhalin:

V The Imperial Russian Government transfer and assign to the Imperial Government of Japan, with the consent of the Government of China, the lease of Port Arthur, Ta-lien, and adjacent territory and territorial waters and all rights, privileges, and concessions connected with or forming part of such lease, and they also transfer and assign to the Imperial Government of Japan all public works and properties in the territory affected by the above-mentioned lease.

The two High Contracting Parties mutually engage to obtain the consent of the Chinese Government mentioned in the foregoing stipulation. The Imperial Government of Japan on their part undertake that the proprietary rights of Russian subjects in the territory above referred to shall be perfectly respected.

VI The Imperial Russian Government engage to transfer and assign to the Imperial Government of Japan, without compensation and with the consent of the Chinese Government, the railway between Changchun (Kwang-cheng-tsze) and Port Arthur and all its branches, together with all rights, privileges, and properties appertaining thereto in that region, as well as all coal-mines in the said region, belonging to or worked for the benefit of the railway.

The two High Contracting Parties mutually engage to obtain the consent of the Government of China mentioned in the foregoing stipulation . . .

VII Japan and Russia engage to exploit their respective railways in Manchuria exclusively for commercial and industrial purposes, and in nowise for strategic purposes.

It is understood that this restriction does not apply to the railway in the territory affected by the lease of the Liao-tung Peninsula.

VIII The Imperial Governments of Japan and Russia, with a view to promote and facilitate intercourse and traffic will, as soon as possible, conclude a separate convention for the regulation of their connecting railway services in Manchuria.

IX The Imperial Russian Government cede to the Imperial Government of Japan in perpetuity and full sovereignty the southern portion of the Island of Sakhalin and all islands adjacent thereto and public works and properties thereon.

The fiftieth degree of north latitude is adopted as the northern boundary of the ceded territory. The exact alignment of such territory shall be determined in accordance with the provisions of additional Art. II annexed to this treaty.

Japan and Russia mutually agree not to construct in their respective possessions on the Island of Sakhalin or the adjacent islands any fortifications or other similar military works. They also respectively engage not to take any military measures which may impede the free navigation of the straits of La Perouse and Tartary.

Address to the Indian National Congress

Date: 1907

A group of English-speaking intellectuals in India created the Indian National Congress in 1885. Although originally quite moderate in tone, the group evolved into one demanding self-rule in a more strident tone. A leader of those asking for swaraj, or self-rule, was Bal Gangadhar Tilak. In the following extract from an address by Tilak to the Indian National Congress, he calls for a boycott of British imports. One can see, in Tilak's approach, early evidence of the nonviolent protest and political methods employed later to great effect by Mohandas Gandhi.

Two new words have recently come into existence with regard to our politics, and they are Moderates and Extremists. These words have a specific relation to time, and they, therefore, will change with time. The Extremists of today will be Moderates tomorrow, just as the Moderates of today were Extremists yesterday. When the National Congress was first started and Mr. Dadabhai's views, which now go for Moderates, were given to the public, he was styled an Extremist, so that you will see that the term Extremist is an expression of progress. We are Extremists today and our sons will call themselves Extremists and us Moderates. Every new party begins as Extremists and ends as Moderates. The sphere of practical politics is not unlimited. We cannot say what will or will not happen 1,000 years hence—perhaps during that long period, the whole of the white race will be swept away in another glacial period. We must, therefore, study the present and work out a program to meet the present condition.

It is impossible to go into details within the time at my disposal. One thing is granted, namely, that this government does not suit us. As has been said by an eminent statesman—the government of one country by another can never be a successful, and therefore, a permanent government. There is no difference of opinion about this fundamental proposition between the old and new schools. One fact is that this alien government has ruined the country. In the beginning, all of us were taken by surprise. We were almost dazed. We thought that everything that the rulers did was for our good and that this English government has descended from the clouds to save us from the invasions of Tamerlane and Chingis Khan, and, as they say, not only from foreign invasions but from internecine warfare, or the internal or external invasions, as they call it. . . . We are not armed, and there is no necessity for arms either. We have a stronger weapon, a political weapon, in boycott. We have perceived one fact, that the whole of this administration, which is carried on by a handful of Englishmen, is carried on with our assistance. We are all in subordinate service. This whole government is carried on with our assistance and they try to keep us in ignorance of our power of cooperation between ourselves by which that which is in our own hands at present can be claimed by us and administered by us. The point is to have the entire control in our hands. I want to have the key of my house, and not merely one stranger turned out of it. Self-government is our goal; we want a control over our administrative machinery. We don't want to become clerks and remain [clerks]. At present, we are clerks and willing instruments of our own oppression in the hands of an alien government, and that government is ruling over us not by its innate strength but by keeping us in ignorance and blindness to the perception of this fact. Professor Seeley shares this view. Every Englishman knows that they are a mere handful in this country and it is the business of every one of them to befool you in believing that you are weak and they are strong. This is politics. We have been deceived by such policy so long. What the new party wants you to do is to realize the fact that your future rests entirely in your own hands. If you mean to be free, you can be free; if you do not mean to be free, you will fall and be for ever fallen. So many of you need not like arms; but if you have not the power of active resistance, have you not the power of self-denial and self-abstinence in such a way as not to assist this foreign government to rule over you? This is boycott and this is what is meant when we say, boycott is a political weapon. We shall not give them assistance to collect revenue and keep peace. We shall not assist them in fighting beyond the frontiers or outside India with Indian blood and money. We shall not assist them in carrying on the administration of justice. We shall have our own courts, and when time comes we shall not pay taxes. Can you do that by your united efforts? If you can, you are free from tomorrow. Some gentlemen who spoke this evening referred to half bread as against the whole bread. I say I want the whole bread and that immediately. But if I can not get the whole, don't think that I have no patience.

I will take the half they give me and then try for the remainder. This is the line of thought and action in which you must train yourself. We have not raised this cry from a mere impulse. It is a reasoned impulse. Try to understand that reason and try to strengthen that impulse by your logical convictions. I do not ask you to blindly follow us. Think over the whole problem for yourselves. If you accept our advice, we feel sure we can achieve our salvation thereby. This is the advice of the new party. Perhaps we have not obtained a full recognition of our principles. Old prejudices die very hard. Neither of us wanted to wreck the Congress, so we compromised, and were satisfied that our principles were recognized, and only to a certain extent. That does not mean that we have accepted the whole situation. We may have a step in advance next year, so that within a few years our principles will be recognized, and recognized to such an extent that the generations who come

after us may consider us Moderates. This is the way in which a nation progresses, and this is the lesson you have to learn from the struggle now going on. This is a lesson of progress, a lesson of helping yourself as much as possible, and if you really perceive the force of it, if you are convinced by these arguments, then and then only is it possible for you to effect your salvation from the alien rule under which you labor at this moment.

Theodore Roosevelt: "New Nationalism" Speech

Date: August 31, 1910

This speech, delivered by former U.S. president Theodore Roosevelt at Osawatomie, Kansas, on August 31, 1910, outlined his progressive New Nationalism program. Breaking with conservatives in his own Republican Party, Roosevelt called for a strong national government, federal regulation of the corporate system, and the protection of human rights over property rights. He argued for the Square Deal (a term he had coined in 1904 to stand for his ideas on government's responsibilities as an even-handed mediator between special interest groups), for equal opportunity for all citizens, for fair wages and working conditions, for a government free of control by special interests, and for prohibitions on corporate funding of political activity. "The object of government," he said, "is the welfare of the people."

We come here to-day to commemorate one of the epoch-making events of the long struggle for the rights of man—the long struggle for the uplift of humanity. Our country—this great republic—means nothing unless it means the triumph of a real democracy, the triumph of popular government, and, in the long run, of an economic system under which each man shall be guaranteed the opportunity to show the best that there is in him. That is why the history of America is now central feature of the history of the world; for the world has set its face hopefully toward our democracy; and, O my fellow citizens, each one of you carries on your shoulders not only the burden of doing well for the sake of your own country, but the burden of doing well and seeing that this nation does well for the sake of mankind.

There have been two great crises in our country's history: first, when it was formed, and then, again, when it was perpetuated; and, in the second of these great crises—in the time of stress and strain which culminated in the Civil War, on the outcome of which depended the justification of what had been done earlier, you men of the Grand Army, you men who fought through the Civil War, not only did you justify your generation, not only did you render life worth living for our generation, but you justified the wisdom of Washington and Washington's colleagues. If this republic had been founded by them only to be split asunder into fragments when the strain came, then the judgment of the world would have been that Washington's work was not worth doing. It was you who crowned Washington's work, as you carried to achievement the high purpose of Abraham Lincoln.

Now, with this second period of our history the name of John Brown will be forever associated; and Kansas was the theater upon which the first act of the second of our great national life dramas was played. It was the result of the struggle in Kansas which determined that our country should be in deed as well as in name devoted to both union and freedom; that the great experiment of democratic government on a national scale should succeed and not fail. In name we had the Declaration of Independence in 1776; but we gave the lie by our acts to the words of the Declaration of Independence until 1865; and words count for nothing except in so far as they represent acts. This is true everywhere; but, O my friends, it should be truest of all in political life. A broken promise is bad enough in private life. It is worse in the field of politics. No man is worth his salt in public life who makes on the stump a pledge which he does not keep after election; and, if he makes such a pledge and does not keep it, hunt him out of public life. I care for the great deeds of the past chiefly as spurs to drive us onward in the present. I speak of the men of the past partly that they may be honored by our praise of them, but more that they may serve as examples for the future.

It was a heroic struggle; and, as is inevitable with all such struggles, it had also a dark and terrible side. Very much was done of good, and much also of evil; and, as was inevitable in such a period of revolution, often the same man did both good and evil. For our great good fortune as a nation, we, the people of the United States as a whole, can now afford to forget the evil, or, at least, to remember it without bitterness, and to fix our eyes with pride only on the good that was accomplished. Even in ordinary times there are very few of us who do not see the problems of life as through a glass, darkly; and when the glass is clouded by the murk of furious popular passion, the vision of the best and the bravest is dimmed. Looking back, we are all of us now able to do justice to the valor and the disinterestedness and the love of the right, as to each it was given to

see the right, shown both by the men of the North and the men of the South in that contest which was finally decided by the attitude of the West. We can admire the heroic valor, the sincerity, the self-devotion shown alike by the men who wore the blue and the men who wore the gray; and our sadness that such men should have had to fight one another is tempered by the glad knowledge that ever hereafter their descendants shall be found fighting side by side, struggling in peace as well as in war for the uplift of their common country, all alike resolute to raise to the highest pitch of honor and usefulness the nation to which they all belong. As for the veterans of the Grand Army of the Republic, they deserve honor and recognition such as is paid to no other citizens of the republic; for to them the republic owes its all; for to them it owes its very existence. It is because of what you and your comrades did in the dark years that we of to-day walk, each of us, head erect, and proud that we belong, not to one of a dozen little squabbling contemptible commonwealths, but to the mightiest nation upon which the sun shines.

I do not speak of this struggle of the past merely from the historic standpoint. Our interest is primarily in the application to-day of the lessons taught by the contest of half a century ago. It is of little use for us to pay lip loyalty to the mighty men of the past unless we sincerely endeavor to apply to the problems of the present precisely the qualities which in other crises enabled the men of that day to meet those crises. It is half melancholy and half amusing to see the way in which well-meaning people gather to do honor to the men who, in company with John Brown, and under the lead of Abraham Lincoln, faced and solved the great problems of the nineteenth century, while, at the same time, these same good people nervously shrink from, or frantically denounce, those who are trying to meet the problems of the twentieth century in the spirit which was accountable for the successful solution of the problems of Lincoln's time.

Of that generation of men to whom we owe so much, the man to whom we owe most is, of course, Lincoln. Part of our debt to him is because he forecast our present struggle and saw the way out. He said:—

I hold that while man exists it is his duty to improve not only his own condition, but to assist in ameliorating mankind.

Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration.

If that remark was original with me, I should be even more strongly denounced as a communist agitator than I shall be anyhow. It is Lincoln's. I am only quoting it; and that is one side; that is the side the capitalist should hear. Now, let the workingman hear his side.

Capital has its rights, which are as worthy of protection as any other rights . . . Nor should this lead to a war upon the owners of property. Property is the fruit of labor . . . property is desirable; is a positive good in the world.

Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.

It seems to me that, in these words, Lincoln took substantially the attitude that we ought to take; he showed the proper sense of proportion in his relative estimates of capital and labor, of human rights and property rights. Above all, in this speech, as in many others, he taught a lesson in wise kindness and charity; an indispensable lesson to us of to-day. But this wise kindness and charity never weakened his arm or numbed his heart. We cannot afford weakly to blind ourselves to the actual conflict which faces us to-day. The issue is joined, and we must fight or fail.

In every wise struggle for human betterment one of the main objects, and often the only object, has been to achieve in large measure equality of opportunity. In the struggle for this great end, nations rise from barbarism to civilization, and through it people press forward from one stage of enlightenment to the next. One of the chief factors in progress is the destruction of special privilege. The essence of any struggle for healthy liberty has always been, and must always be, to take from some one man or class of men the right to enjoy power, or wealth, or position, or immunity, which has not been earned by service to his or their fellows. That is what you fought for in the Civil War, and that is what we strive for now,

At many stages in the advance of humanity, this conflict between the men who possess more than they have earned and the men who have earned more than they possess is the central condition of progress. In our day it appears as the struggle of free men to gain and hold the right of self-government as against the special interests, who twist the methods of free government into machinery for defeating the popular will. At every stage, and under all circumstances, the essence of the struggle is to equalize opportunity, destroy privilege, and give to the life and citizenship of every individual the highest possible value both to himself and to the commonwealth. That is nothing new. All I ask in civil life is what you fought for in the Civil War. I ask that civil life be carried on according to the spirit in which the army was carried on. You never get perfect justice, but the effort in handling the army was to bring to the front the men who could do the job. Nobody grudged promotion to Grant, or Sherman, or Thomas, or Sheridan, because they earned it. The only complaint was when a man got promotion which he did not earn.

Practical equality of opportunity for all citizens, when we achieve it, will have two great results. First, every man will have a fair chance to make of himself all that in him lies; to reach the highest point to which his capacities, unassisted by special privilege of his own and unhampered by the special privilege of others, can

carry him, and to get for himself and his family substantially what he has earned. Second, equality of opportunity means that the commonwealth will get from every citizen the highest service of which he is capable. No man who carries the burden of the special privileges of another can give to the commonwealth that service to which it is fairly entitled.

I stand for the square deal. But when I say that I am for the square deal, I mean not merely that I stand for fair play under the present rules of the game, but that I stand for having those rules changed so as to work for a more substantial equality of opportunity and of reward for equally good service. One word of warning, which, I think, is hardly necessary in Kansas. When I say I want a square deal for the poor man, I do not mean that I want a square deal for the man who remains poor because he has not got the energy to work for himself. If a man who has had a chance will not make good, then he has got to quit. And you men of the Grand Army, you want justice for the brave man who fought, and punishment for the coward who shirked his work. Is not that so?

Now, this means that our government, national and state, must be freed from the sinister influence or control of special interests. Exactly as the special interests of cotton and slavery threatened our political integrity before the Civil War, so now the great special business interests too often control and corrupt the men and methods of government for their own profit. We must drive the special interests out of politics. That is one of our tasks to-day. Every special interest is entitled to justice—full, fair, and complete,—and, now, mind you, if there were any attempt by mob violence to plunder and work harm to the special interest, whatever it may be, that I most dislike, and the wealthy man, whomsoever he may be, for whom I have the greatest contempt, I would fight for him, and you would if you were worth your salt. He should have justice. For every special interest is entitled to justice, but not one is entitled to a vote in Congress, to a voice on the bench, or to representation in any public office. The Constitution guarantees protection to property, and we must make that promise good. But it does not give the right of suffrage to any corporation.

The true friend of property, the true conservative, is he who insists that property shall be the servant and not the master of the commonwealth; who insists that the creature of man's making shall be the servant and not the master of the man who made it. The citizens of the United States must effectively control the mighty commercial forces which they have themselves called into being.

There can be no effective control of corporations while their political activity remains. To put an end to it will be neither a short nor an easy task, but it can be done.

We must have complete and effective publicity of corporate affairs, so that the people may know beyond peradventure whether the corporations obey the law and whether their management entitles them to the confidence of the public. It is necessary the laws should be passed to prohibit the use of corporate funds directly or indirectly for political purposes; it is still more necessary that such laws should be thoroughly enforced. Corporate expenditures for political purposes, and especially such expenditures by public service corporations, have supplied one of the principal sources of corruption in our political affairs.

It has become entirely clear that we must have government supervision of the capitalization, not only of public service corporations, including, particularly, railways, but of all corporations doing an interstate business. I do not wish to see the nation forced into the ownership of the railways if it can possibly be avoided, and the only alternative is thoroughgoing and effective regulation, which shall be based on a full knowledge of all the facts, including a physical valuation of property. This physical valuation is not needed, or, at least, is very rarely needed, for fixing rates; but it is needed as the basis of honest capitalization.

We have come to recognize that franchises should never be granted except for a limited time, and never without proper provision for compensation to the public. It is my personal belief that the same kind and degree of control and supervision which should be exercised over public service corporations should be extended also to combinations which control necessities of life, such as meat, oil, and coal, or which deal in them on an important scale. I have no doubt that the ordinary man who has control of them is much like ourselves. I have no doubt he would like to do well, but I want to have enough supervision to help him realize that desire to do well.

I believe that the officers, and, especially, the directors, of corporations should be held personally responsible when any corporation breaks the law.

Combinations in industry are the result of an imperative economic law which cannot be repealed by political legislation. The effort at prohibiting all combination has substantially failed. The way out lies, not in attempting to prevent such combinations, but in completely controlling them in the interest of the public welfare. For that purpose the Federal Bureau of Corporations is an agency of first importance. Its powers, and, therefore, its efficiency, as well as that of the Interstate Commerce Commission, should be largely increased. We have a right to expect from the Bureau of Corporations and from the Interstate Commerce Commission a very high grade of public service. We should be as sure of the proper conduct of the interstate railways and the proper management of interstate business as we are now sure of the conduct and management of the national banks, and we should have as effective supervision in one case as in the other. The Hepburn Act, and the amendment to the Act in the shape in which it finally passed Congress at the last session, represent a long step in advance, and we must go yet further.

There is a widespread belief among our people that, under the methods of making tariffs which have hitherto obtained, the special interests are too influential. Probably this is true of both the big special interests and the little special interests. These methods have put a premium on selfishness, and, naturally, the selfish big interests have gotten more than their smaller, though equally selfish, brothers. The duty of Congress is to provide a method by which the interest of the whole people shall be all that receives consideration. To this end there must be an expert tariff commission, wholly removed from the possibility of political pressure or of improper business influence. Such a commission can find the real difference between cost of production, which is mainly the difference of labor cost here and abroad. As fast as its recommendations are made, I believe in revising one schedule at a time. A general revision of the tariff almost inevitably leads to log-rolling and the subordination of the general public interest to local and special interests.

The absence of effective state, and, especially, national, restraint upon unfair money getting has tended to create a small class of enormously wealthy and economically powerful men, whose chief object is to hold and increase their power. The prime need is to change the conditions which enable these men to accumulate power which it is not for the general welfare that they should hold or exercise. We grudge no man a fortune which represents his own power and sagacity, when exercised with entire regard to the welfare of his fellows. Again, comrades over there, take the lesson from your own experience. Not only did you not grudge, but you gloried in the promotion of the great generals who gained their promotion by leading the army to victory. So it is with us. We grudge no man a fortune in civil life if it is honorably obtained and well used. It is not even enough that it should have been gained without doing damage to the community. We should permit it to be gained only so long as the gaining represents benefit to the community. This, I know, implies a policy of a far more active governmental interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in governmental control is now necessary.

No man should receive a dollar unless that dollar has been fairly earned. Every dollar received should represent a dollar's worth of service rendered—not gambling in stocks, but service rendered. The really big fortune, the swollen fortune, by the mere fact of its size acquires qualities which differentiate it in kind as well as in degree from what is possessed by men of relatively small means. Therefore, I believe in a graduated income tax on big fortunes, and in another tax which is far more easily collected and far more effective—a graduated inheritance tax on big fortunes, properly safeguarded against evasion and increasing rapidly in amount with the size of the estate.

The people of the United States suffer from periodical financial panics to a degree substantially unknown among the other nations which approach us in financial strength. There is no reason why we should suffer what they escape. It is of profound importance that our financial system should be promptly investigated, and so thoroughly and effectively revised as to make it certain that hereafter our currency will no longer fail at critical times to meet our needs.

It is hardly necessary for me to repeat that I believe in an efficient army and a navy large enough to secure for us abroad that respect which is the surest guarantee of peace. A word of special warning to my fellow citizens who are as progressive as I hope I am. I want them to keep up their interest in our internal affairs; and I want them also continually to remember Uncle Sam's interests abroad. Justice and fair dealing among nations rest upon principles identical with those which cannot justice and fair dealing among the individuals of which nations are composed, with the vital exception that each nation must do its own part in international police work. If you get into trouble here, you can call for the police; but if Uncle Sam gets into trouble, he has got to be his own policeman, and I want to see him strong enough to encourage the peaceful aspirations of other peoples in connection with us. I believe in national friendships and heartiest good will to all nations; but national friendships, like those between men, must be founded on respect as well as on liking, on forbearance as well as upon trust. I should be heartily ashamed of any American who did not try to make the American government act as justly toward the other nations in international relations as he himself would act toward any individual in private relations. I should be heartily ashamed to see us wrong a weaker power, and I should hang my head forever if we tamely suffered wrong from a stronger power.

Of conservation I shall speak more at length elsewhere. Conservation means development as much as it does protection. I recognized the right and duty of this generation to develop and use the natural resources of our land; but I do not recognize the right to waste them, or to rob, by wasteful use, the generations that come after us. I ask nothing of the nation except that it so behave as each farmer here behaves with reference to his own children. That farmer is a poor creature who skins the land and leaves it worthless to his children. The farmer is a good farmer who, having enabled the land to support himself and to provide for the education of his children, leaves it to them a little better than he found it himself. I believe the same thing of a nation.

Moreover, I believe that the natural resources must be used for the benefit of all our people, and not monopolized for the benefit of the few, and here again is another case in which I am accused of taking a revolutionary attitude. People forget now that one hundred years ago there were public men of good character who advocated the nation selling its public lands in great quantities, so that the nation could get the most money out of it, and giving it to the men who could cultivate it for their own uses. We took the proper democratic ground that the land should be granted in small sections to the men who were actually to till it and

live on it. Now, with the water power, with the forests, with the mines, we are brought face to face with the fact that there are many people who will go with us in conserving the resources only if they are to be allowed to exploit them for their benefit. That is one of the fundamental reasons why the special interests should be driven out of politics. Of all the questions which can come before this nation, short of the actual preservation of its existence in a great war, there is none which compares in importance with the great central task of leaving this land even a better land for our descendants than it is for us, and training them into a better race to inhabit the land and pass it on. Conservation is a great moral issue, for it involves the patriotic duty of insuring the safety and continuance of the nation. Let me add that the health and vitality of our people are at least as well worth conserving as their forests, waters, lands, and minerals, and in this great work the national government must bear a most important part.

I have spoken elsewhere also of the great task which lies before the farmers of the country to get for themselves and their wives and children not only the benefits of better farming, but also those of better business methods and better conditions of life on the farm. The burden of this great task will fall, as it should, mainly upon the great organizations of the farmers themselves. I am glad it will, for I believe they are all well able to handle it. In particular, there are strong reasons why the Departments of Agriculture of the various states, the United States Department of Agriculture, and the agricultural colleges and experiment stations should extend their work to cover all phases of farm life, instead of limiting themselves, as they have far too often limited themselves, in the past, solely to the question of the production of crops. And now a special word to the farmer. I want to see him make the farm as fine a farm as it can be made; and let him remember to see that the improvement goes on indoors as well as out; let him remember that the farmer's wife should have her share of thought and attention just as much as the farmer himself.

Nothing is more true than that excess of every kind is followed by reaction; a fact which should be pondered by reformer and reactionary alike. We are face to face with new conceptions of the relations of property to human welfare, chiefly because certain advocates of the rights of property as against the rights of men have been pushing their claims too far. The man who wrongly holds that every human right is secondary to his profit must now give way to the advocate of human welfare, who rightly maintains that every man holds his property subject to the general right of the community to regulate its use to whatever degree the public welfare may require it.

But I think we may go still further. The right to regulate the use of wealth in the public interest is universally admitted. Let us admit also the right to regulate the terms and conditions of labor, which is the chief element of wealth, directly in the interest of the common good. The fundamental thing to do for every man is to give him a chance to reach a place in which he will make the greatest possible contribution to the public welfare. Understand what I say there. Give him a chance, not push him up if he will not be pushed. Help any man who stumbles; if he lies down, it is a poor job to try to carry him; but if he is a worthy man, try your best to see that he gets a chance to show the worth that is in him. No man can be a good citizen unless he has a wage more than sufficient to cover the bare cost of living, and hours of labor short enough so that after his day's work is done he will have time and energy to bear his share in the management of the community, to help in carrying the general load. We keep countless men from being good citizens by the conditions of life with which we surround them. We need comprehensive workmen's compensation acts, both state and national laws to regulate child labor and work for women, and, especially, we need in our common schools not merely education in book learning, but also practical training for daily life and work. We need to enforce better sanitary conditions for our workers and to extend the use of safety appliances for our workers in industry and commerce, both within and between the states. Also, friends, in the interest of the workingman himself we need to set our faces like flint against mob violence just as against corporate greed; against violence and injustice and lawlessness by wage workers just as much as against lawless cunning and greed and selfish arrogance of employers. If I could ask but one thing of my fellow countrymen, my request would be that, whenever they go in for reform, they remember the two sides, and that they always exact justice from one side as much as from the other. I have small use for the public servant who can always see and denounce the corruption of the capitalist, but who cannot persuade himself, especially before election, to say a word about lawless mob violence. And I have equally small use for the man, be he a judge on the bench, or editor of a great paper, or wealthy and influential private citizen, who can see clearly enough and denounce the lawlessness of mob violence, but whose eyes are closed so that he is blind when the question is one of corruption in business on a gigantic scale. Also remember what I said about excess in reformer and reactionary alike. If the reactionary man, who thinks of nothing but the rights of property, could have his way, he would bring about a revolution; and one of my chief fears in connection with progress comes because I do not want to see our people, for lack of proper leadership, compelled to follow men whose intentions are excellent, but whose eyes are a little too wild to make it really safe to trust them. Here in Kansas there is one paper which habitually denounces me as the tool of Wall Street, and at the same time frantically repudiates the statement that I am a Socialist on the ground that that is an unwarranted slander of the Socialists.

National efficiency has many factors. It is a necessary result of the principle of conservation widely applied. In the end it will determine our failure or success as a nation. National efficiency has to do, not only

with natural resources and with men, but it is equally concerned with institutions. The state must be made efficient for the work which concerns only the people of the state; and the nation for that which concerns all the people. There must remain no neutral ground to serve as a refuge for lawbreakers, and especially for lawbreakers of great wealth, who can hire the vulpine legal cunning which will teach them how to avoid both jurisdictions. It is a misfortune when the national legislature fails to do its duty in providing a national remedy, so that the only national activity is the purely negative activity of the judiciary in forbidding the state to exercise power in the premises.

I do not ask for overcentralization; but I do ask that we work in a spirit of broad and far-reaching nationalism when we work for what concerns our people as a whole. We are all Americans. Our common interest are as broad as the continent. I speak to you here in Kansas exactly as I would speak in New York or Georgia, for the most vital problems are those which affect us all alike. The national government belongs to the whole American people, and where the whole American people are interested, that interest can be guarded effectively only by the national government. The betterment which we seek must be accomplished, I believe, mainly through the national government.

The American people are right in demanding that New Nationalism, without which we cannot hope to deal with new problems. The New Nationalism puts the national need before sectional or personal advantage. It is impatient of the utter confusion that results from local legislatures attempting to treat national issues as local issues. It is still more impatient of the impotence which springs from overdivision of governmental powers, the impotence which makes it possible for local selfishness or for legal cunning, hired by wealthy special interests, to bring national activities to a deadlock. This New Nationalism regards the executive power as the steward of the public welfare. It demands of the judiciary that it shall be interested primarily in human welfare rather than in property, just as it demands that the representative body shall represent all the people rather than any one class or section of the people.

I believe in shaping the ends of government to protect property as well as human welfare. Normally, and in the long run, the ends are the same; but whenever the alternative must be faced, I am for men and not for property, as you were in the Civil War. I am far from underestimating the importance of dividends; but I rank dividends below human character. Again, I do not have any sympathy with the reformer who says he does not care for dividends. Of course, economic welfare is necessary, for a man must pull his own weight and be able to support his family. I know well that the reformers must not bring upon the people economic ruin, or the reforms themselves will go down in the ruin. But we must be ready to face temporary disaster, whether or not brought on by those who will war against us to the knife. Those who oppose all reform will do well to remember that ruin in its worst form is inevitable if our national life brings us nothing better than swollen fortunes for the few and the triumph in both politics and business of a sordid and selfish materialism.

If our political institutions were perfect, they would absolutely prevent the political domination of money in any part of our affairs. We need to make our political representatives more quickly and sensitively responsive to the people whose servants they are. More direct action by the people in their own affairs under proper safeguards is vitally necessary. The direct primary is a step in this direction, if it is associated with a corrupt practices act effective to prevent the advantage of the man willing recklessly and unscrupulously to spend money over his more honest competitor. It is particularly important that all moneys received or expended for campaign purposes should be publicly accounted for, not only after election, but before election as well. Political action must be made simpler, easier, and freer from confusion for every citizen. I believe that the prompt removal of unfaithful or incompetent public servants should be made easy and sure in whatever way experience shall show to be most expedient in any give class of cases.

One of the fundamental necessities in a representative government such as ours is to make certain that the men to whom the people delegate their power shall serve the people by whom they are elected, and not the special interests. I believe that every national officer, elected or appointed, should be forbidden to perform and service or receive any compensation, directly or indirectly, from interstate corporations; and a similar provision could not fail to be useful within the states.

The object of government is the welfare of the people. The material progress and prosperity of a nation are desirable chiefly so far as they lead to the moral and material welfare of all good citizens. Just in proportion as the average man and woman are honest, capable of sound judgment and high ideals, active in public affairs,—but, first of all, sound in their home life, and the father and mother of healthy children whom they bring up well,—just so far, and no farther, we may count our civilization a success. We must have—I believe we have already—a genuine and permanent moral awakening, without which no wisdom of legislation or administration really means anything; and, on the other hand, we must try to secure the social and economic legislation without which any improvement due to purely moral agitation is necessarily evanescent. Let me again illustrate by a reference to the Grand Army You could not have won simply as a disorderly and disorganized mob. You needed generals; you needed careful administration of the most advanced type; and a good commissary—the cracker line. You well remember that success was necessary in many different lines in order to bring about general success. You had to have the administration at Washington good, just

as you had to have the administration in the field; and you had to have the work of the generals good. You could not have triumphed without that administration and leadership; but it would all have been worthless if the average soldier had not had the right stuff in him. He had to have the right stuff in him, or you could not get it out of him. In the last analysis, therefore, vitally necessary though it was to have the right kind of organization and the right kind of generalship, it was even more vitally necessary that the average soldier should have the fighting edge, the right character. So it is in our civil life. No matter how honest and decent we are in our private lives, if we do not have the right kind of law and the right kind of administration of the law, we cannot go forward as a nation. That is imperative; but it must be an addition to, and not a substitution for, the qualities that make us good citizens. In the last analysis, the most important elements in any man's career must be the sum of those qualities which, in the aggregate, we speak of as character. If he has not got it, then no law that the wit of man can devise, no administration of the law by the boldest and strongest executive, will avail to help him. We must have the right kind of character—character that makes a man, first of all, a good man in the home, a good father, a good husband—that makes a man a good neighbor. You must have that, and, then, in addition, you must have the kind of law and the kind of administration of the law which will give to those qualities in the private citizen the best possible chance for development. The prime problem of our nation is to get the right type of good citizenship, and, to get it, we must have progress, and our public men must be genuinely progressive.

Balfour Declaration

Date: November 2, 1917

British Foreign Secretary Arthur James Balfour sought to gain Jewish support for the Allies in World War I. In a letter to Lord Rothschild, Balfour pledged British support for the creation of a Jewish homeland in Palestine, the basis for the later creation of the state of Israel. Balfour made it clear that the creation of such a homeland would not prejudice the rights of the non-Jewish residents of Palestine, nor would it suggest that the rights of Jews in any other country would be altered. The letter was published in the Times (London).

Foreign Office
November 2nd, 1917

Dear Lord Rothschild:

I have much pleasure in conveying to you on behalf of His Majesty's Government, the following declaration of sympathy with Jewish Zionist aspirations which has been submitted to, and approved by, the Cabinet:

His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.

I should be grateful if you would bring this declaration to the knowledge of the Zionist Federation.

Yours,
Arthur James Balfour

Woodrow Wilson: "Fourteen Points" Address

Date: January 8, 1918

This address by U.S. President Woodrow Wilson, delivered to Congress on January 8, 1918, set forth his program for a just and enduring world peace. These points became the basis for negotiating an end to World War I (1914–18). Wilson called for "open covenants of peace, openly arrived at"; absolute freedom of the seas, in peace and war; equality of trade conditions among nations; reductions of national armaments; impartial adjustment of colonial claims; self-determination for Russia and the peoples of the former Austria-Hungary; restoration or adjustments of Belgian, French, Italian, Rumanian, Serbian, and Montenegrin borders; autonomy for nationalities formerly under Turkish rule, but sovereignty for Turkey; opening of the Dardanelles to all nations; establishment of an independent Poland; and the formation of an association of nations to guarantee "political independence and territorial integrity to great and small states alike."

Gentlemen of the Congress: Once more, as repeatedly before, the spokesmen of the Central Empires have indicated their desire to discuss the objects of the war and the possible bases of a general peace. Parleys have been in progress at Brest-Litovsk between representatives of the Central Powers, to which the attention of all the belligerents has been invited for the purpose of ascertaining whether it may be possible to extend these parleys into a general conference with regard to terms of peace and settlement. The Russian representatives presented not only a perfectly definite statement of the principles upon which they would be willing to conclude peace, but also an equally definite programme of the concrete application of those principles. The representatives of the Central Powers, on their part, presented an outline of settlement which, if much less definite, seemed susceptible of liberal interpretation until their specific programme of practical terms was added.

That programme proposed no concessions at all either to the sovereignty of Russia or to the preferences of the populations with whose fortunes it dealt, but meant, in a word, that the Central Empires were to keep every foot of territory their armed forces had occupied,—every province, every city, every point of vantage,—as a permanent addition to their territories and their power. It is a reasonable conjecture that the general principles of settlement which they at first suggested originated with the more liberal statesmen of Germany and Austria, the men who have begun to feel the force of their own peoples' thought and purpose, while the concrete terms of actual settlement came from the military leaders who have no thought but to keep what they have got. The negotiations have been broken off. The Russian representatives were sincere and in earnest. They cannot entertain such proposals of conquest and domination.

The whole incident is full of significance. It is also full of perplexity. With whom are the Russian representatives dealing? For whom are the representatives of the Central Empires speaking? Are they speaking for the majorities of their respective parliaments or for the minority parties, that military and imperialistic minority which has so far dominated their whole policy and controlled the affairs of Turkey and of the Balkan states which have felt obliged to become their associates in this war? The Russian representatives have insisted, very justly, very wisely, and in the true spirit of modern democracy, that the conferences they have been holding with the Teutonic and Turkish statesmen should be held within open, not closed doors, and all the world has been audience, as was desired. To whom have we been listening, then? To those who speak the spirit and intention of the Resolutions of the German Reichstag of the ninth of July last, the spirit and intention of the liberal leaders and parties of Germany, or to those who resist and defy that spirit and intention and insist upon conquest and subjugation? Or are we listening, in fact, to both, unreconciled and in open and hopeless contradiction? These are very serious and pregnant questions. Upon the answer to them depends the peace of the world.

But, whatever the results of the parleys at Brest-Litovsk, whatever the confusions of counsel and of purpose in the utterances of the spokesmen of the Central Empires, they have again attempted to acquaint the world with their objects in the war and have again challenged their adversaries to say what their objects are and what sort of settlement they would deem just and satisfactory. There is no good reason why that challenge should not be responded to, and responded to with the utmost candor. We did not wait for it. Not once, but again and again, we have laid our whole thought and purpose before the world, not in general terms only, but each time with sufficient definition to make it clear what sort of definitive terms of settlement must necessarily spring out of them. Within the last week Mr. Lloyd George has spoken with admirable candor and in admirable spirit for the people and Government of Great Britain. There is no confusion of counsel among the adversaries of the Central Powers, no uncertainty of principle, no vagueness of detail. The only secrecy of counsel, the only lack of fearless frankness, the only failure to make definite statement of the objects of the war, lies with Germany and her Allies. The issues of life and death hang upon these definitions. No statesman who has the least conception of his responsibility ought for a moment to permit himself to continue this tragical and appalling outpouring of blood and treasure unless he is sure beyond peradventure that the objects of the vital sacrifice are part and parcel of the very life of Society and that the people for whom he speaks think them right and imperative as he does.

There is, moreover, a voice calling for these definitions of principle and of purpose which is, it seems to me, more thrilling and more compelling than any of the many moving voices with which the troubled air of the world is filled. It is the voice of the Russian people. They are prostrate and all but helpless, it would seem, before the grim power of Germany, which has hitherto known no relenting and no pity. Their power, apparently, is shattered. And yet their soul is not subservient. They will not yield either in principle or in action. Their conception of what is right, of what is humane and honorable for them to accept, has been stated with a frankness, a largeness of view, a generosity of spirit, and a universal human sympathy which must challenge the admiration of every friend of mankind; and they have refused to compound their ideals or desert others that they themselves may be safe. They call to us to say what it is that we desire, in what, if in anything, our purpose and our spirit differ from theirs; and I believe that the people of the United States would wish me to respond, with utter simplicity and frankness. Whether their present leaders believe it or not, it is our heartfelt desire and hope that some way may be opened whereby we may be privileged to assist the people of Russia to attain their utmost hope of liberty and ordered peace.

It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view.

We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The programme of the world's peace, therefore, is our programme; and that programme, the only possible programme, as we see it, is this:

- I. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.
- II. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.
- III. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.
- IV. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.
- V. A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.
- VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest and cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.
- VII. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.
- VIII. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interests of all.
- IX. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

- X. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.
- XI. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.
- XII. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.
- XIII. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.
- XIV. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right we feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved; but only because we wish the right to prevail and desire a just and stable peace such as can be secured only by removing the chief provocations to war, which this programme does remove. We have no jealousy of German greatness, and there is nothing in this programme that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world,—the new world in which we now live,—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party and the men whose creed is imperial domination.

We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole programme I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safely with one another, whether they be strong or weak. Unless this principle be made its foundation no part of the structure of international justice can stand. The people of the United States could act upon no other principle; and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The normal climax of this the culminating and final war for human liberty has come, and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test.

Covenant of the League of Nations

Date: April 28, 1919

Part I of the 1919 Treaty of Versailles enunciated the goals and the organizational framework of the proposed new international body, the League of Nations. Finalized by an Allied committee on April 28, 1919, the covenant became effective in January 1920, with the creation of the league. Its signatories agreed to protect each other against aggression and to accept mediation in settling their disputes. The league was to consist of a general assembly (one representative from each member state), a council (representatives from the five main Allied powers, plus four others chosen by rotation), and a permanent Geneva-based secretariat, headed by a secretary-general. A permanent court of international justice was to be established. Disarmament, labor, health reforms, and international cooperation were other key concerns. In 1946, after World War II, its activities were taken over by the United Nations.

The High Contracting Parties,

In order to promote international co-operation and to achieve international peace and security

by the acceptance of obligations not to resort to war,

by the prescription of open, just and honourable relations between nations,

by the firm establishment of the understandings of international law as the actual rule of conduct among Governments, and

by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organised peoples with one another,

Agree to this Covenant of the League of Nations.

ARTICLE 1

The original Members of the League of Nations shall be those of the Signatories which are named in the Annex to this Covenant and also such of those other States named in the Annex as shall accede without reservation to this Covenant. Such accession shall be effected by a Declaration deposited with the Secretariat within two months of the coming into force of the Covenant. Notice thereof shall be sent to all other Members of the League.

Any fully self-governing State, Dominion or Colony not named in the Annex may become a Member of the League if its admission is agreed to by two-thirds of the Assembly, provided that it shall give effective guarantees of its sincere intention to observe its international obligations, and shall accept such regulations as may be prescribed by the League in regard to its military, naval and air forces and armaments.

Any Member of the League may, after two years notice of its intention so to do, withdraw from the League, provided that all its international obligations and all its obligations under this Covenant shall have been fulfilled at the time of its withdrawal.

ARTICLE 2

The action of the league under this Covenant shall be effected through the instrumentality of an Assembly and of a Council, with a permanent Secretariat.

ARTICLE 3

The Assembly shall consist of Representatives of the Members of the League.

The Assembly shall meet at stated intervals and from time to time as occasion may require at the Seat of the League or at such other place as may be decided upon.

The Assembly may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

At meetings of the Assembly each Member of the League shall have one vote, and may have not more than three Representatives.

ARTICLE 4

The Council shall consist of Representatives of the Principal Allied and Associated Powers, together with Representatives of four other Members of the League. These four Members of the League shall be selected by the Assembly from time to time in its discretion. Until the appointment of the Representatives of the four Members of the League first selected by the Assembly, Representatives of Belgium, Brazil, Spain and Greece shall be members of the Council.

With the approval of the majority of the Assembly, the Council may name additional Members of the League whose Representatives shall always be members of the Council; the Council with like approval may increase the number of Members of the League to be selected by the Assembly for representation on the Council.

The Council shall meet from time to time as occasion may require, and at least once a year, at the Seat of the League, or at such other place as may be decided upon.

The Council may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

Any Member of the League not represented on the Council shall be invited to send a Representative to sit as a member at any meeting of the Council during the consideration of matters specially affecting the interests of that Member of the League

At meetings of the Council, each Member of the League represented on the Council shall have one vote, and may have not more than one Representative.

ARTICLE 5

Except where otherwise expressly provided in this Covenant or by the terms of the present Treaty, decisions at any meeting of the Assembly or of the Council shall require the agreement of all the Members of the League represented at the meeting.

All matters of procedure at meetings of the Assembly or of the Council, including the appointment of Committees to investigate particular matters, shall be regulated by the Assembly or by the Council and may be decided by a majority of the Members of the League represented at the meeting. The first meeting of the Assembly and the first meeting of the Council shall be summoned by the President of the United States of America.

ARTICLE 6

The permanent Secretariat shall be established at the Seat of the League. The Secretariat shall comprise a Secretary General and such secretaries and staff as may be required.

The first Secretary General shall be the person named in the Annex; thereafter the Secretary General shall be appointed by the Council with the approval of the majority Assembly.

The secretaries and staff of that Secretariat shall be appointed by the Secretary General with the approval of the Council.

The Secretary General shall act in the capacity at all meetings of the Assembly and of the Council.

The expenses of the Secretariat shall be borne by the Members of the League in accordance with the apportionment of the expenses of the International Bureau of the Universal Postal Union.

ARTICLE 7

The Seat of the League is established at Geneva.

The Council may at any time decide that the Seat of the League shall be established elsewhere.

All positions under or in connection with the League, including the Secretariat, shall be open equally to men and women.

Representatives of the Members of the League and officials of the League when engaged on the business of the League shall enjoy diplomatic privileges and immunities.

The buildings and other property occupied by the League or its officials or by Representatives attending its meetings shall be inviolable.

ARTICLE 8

The Members of the League recognise that the maintenance of peace requires the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations.

The Council, taking account of the geographical situation and circumstances of each State, shall formulate plans for such reduction for the consideration and action of the several Governments.

Such plans shall be subject to reconsideration and revision at least every ten years.

After these plans shall have been adopted by the several Governments, the limits of armaments therein fixed shall not be exceeded without the concurrence of the Council.

The Members of the League agree that the manufacture by private enterprise of munitions and implements of war is open to grave objections. The Council shall advise how the evil effects attendant upon such manufacture can be prevented, due regard being had to the necessities of those Members of the League which are not able to manufacture the munitions and implements of war necessary for their safety.

The Members of the League undertake to interchange full and frank information as to the scale of their armaments, their military, naval and air programmes and the condition of such of their industries as are adaptable to war-like purposes.

ARTICLE 9

A permanent Commission shall be constituted to advise the Council on the execution of the provision of Articles 1 and 8 and on military, naval and air questions generally.

ARTICLE 10

The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League. In case of any such aggression or in case of any threat or danger of such aggression the Council shall advise upon the means by which this obligation shall be fulfilled.

ARTICLE 11

Any war or threat of war, whether immediately affecting any of the Members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such emergency should arise the Secretary General shall on the request of any Member of the League forthwith summon a meeting of the Council.

It is also declared to be the friendly right of each Member of the League to bring to the attention of the Assembly or of the Council any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends.

ARTICLE 12

The Members of the League agree that if there should arise between them any dispute likely to lead to a rupture, they will submit the matter either to arbitration or to inquiry by the Council, and they agree in no case to resort to war until three months after the award by the arbitrators or the report by the Council.

In any case under this Article the award of the arbitrators shall be made within a reasonable time, and the report of the Council shall be made within six months after the submission of the dispute.

ARTICLE 13

The Members of the League agree that whenever any dispute shall arise between them which they recognise to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject-matter to arbitration.

Disputes as to the interpretation of a treaty, as to any question of international law, as to the existence of any fact which if established would constitute a breach of any international obligation, or as to the extent and nature of the reparation to be made for any such breach, are declared to be among those which are generally suitable for submission to arbitration.

For the consideration of any such dispute the court of arbitration to which the case is referred shall be the Court agreed on by the parties to the dispute or stipulated in any convention existing between them.

The Members of the League agree that they will carry out in full good faith any award that may be rendered, and that they will not resort to war against a Member of the League which complies therewith. In the event of any failure to carry out such an award, the Council shall propose what steps should be taken to give effect thereto.

ARTICLE 14

The Council shall formulate and submit to the Members of the League for adoption plans for the establishment of a Permanent Court of International Justice. The Court shall be competent to hear and determine any dispute of an international character which the parties thereto submit to it. The Court may also give an advisory opinion upon any dispute or question referred to it by the Council or by the Assembly.

ARTICLE 15

If there should arise between Members of the League any dispute likely to lead to a rupture, which is not submitted to arbitration in accordance with Article 13, the Members of the League agree that they will submit the matter to the Council. Any party to the dispute may effect such submission by giving notice of the existence of the dispute to the Secretary General, who will make all necessary arrangements for a full investigation and consideration thereof.

For this purpose the parties to the dispute will communicate to the Secretary General, as promptly as possible, statements of their case with all the relevant facts and papers, and the Council may forthwith direct the publication thereof.

The Council shall endeavour to effect a settlement of the dispute, and if such efforts are successful, a statement shall be made public giving such facts and explanations regarding the dispute and the terms of settlement thereof as the Council may deem appropriate.

If the dispute is not thus settled, the Council either unanimously or by a majority vote shall make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto.

Any Member of the League represented on the Council may make public a statement of the facts of the dispute and of its conclusions regarding the same.

If a report by the Council is unanimously agreed to by the members thereof other than the Representatives of one or more of the parties to the dispute, the Members of the League agree that they will not go to war with any party to the dispute which complies with the recommendations of the report.

If the Council fails to reach a report which is unanimously agreed to by the members thereof, other than the Representatives of one or more of the parties to the dispute, the Members of the League reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.

If the dispute between the parties is claimed by one of them, and is found by the Council, to arise out of a matter which by international law is solely within the domestic jurisdiction of that party, the Council shall so report, and shall make no recommendation as to its settlement.

The Council may in any case under this Article refer the dispute to the Assembly. The dispute shall be so referred at the request of either party to the dispute, provided that such request be made within fourteen days after the submission of the dispute to the Council.

In any case referred to the Assembly, all the provisions of this Article and of Article 12 relating to the action and powers of the Council shall apply to the action and powers of the Assembly, provided that a report made by the Assembly, if concurred in by the Representatives of those Members of the League

represented on the Council and of a majority of the other Members of the League, exclusive in each case of the Representatives of the parties to the dispute, shall have the same force as a report by the Council concurred in by all the members thereof other than the Representatives of one or more of the parties to the dispute.

ARTICLE 16

Should any Member of the League resort to war in disregard of its covenants under Articles 12, 13 or 15, it shall ipso facto be deemed to have committed an act of war against all other Members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a Member of the League or not.

It shall be the duty of the Council in such case to recommend to the several Governments concerned what effective military naval or air force the Members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League.

The Members of the League agree, further, that they will mutually support one another in the financial and economic measures which are taken under this Article, in order to minimise the loss and inconvenience resulting from the above measures, and that they will mutually support one another in resisting any special measures aimed at one of their number by the covenant-breaking State, and that they will take the necessary steps to afford passage through their territory to the forces of any of the Members of the League which are co-operating to protect the covenants of the League.

Any Member of the League which has violated any covenant of the League may be declared to be no longer a Member of the League by a vote of the Council concurred in by the Representatives of all the other Members of the League represented thereon.

ARTICLE 17

In the event of a dispute between a Member of the League and a State which is not a Member of the League, or between States not Members of the League, the State or States not Members of the League shall be invited to accept the obligations of membership in the League for the purposes of such dispute, upon such conditions as the Council may deem just. If such invitation is accepted, the provisions of Articles 12 to 16 inclusive shall be applied with such modifications as may be deemed necessary by the Council

Upon such invitation being given the Council shall immediately institute an inquiry into the circumstances of the dispute and recommend such action as may seem best and most effectual in the circumstances.

If a State so invited shall refuse to accept the obligations of membership in the League for the purposes of such dispute, and shall resort to war against a Member of the League, the provisions of Article 16 shall be applicable as against the State taking such action.

If both parties to the dispute when so invited refuse to accept the obligations of membership in the League for the purposes of such dispute, the Council may take such measures and make such recommendations as will prevent hostilities and will result in the settlement of the dispute.

ARTICLE 18

Every treaty or international engagement entered into hereafter by any Member of the League shall be forthwith registered with the Secretariat and shall as soon as possible be published by it. No such treaty or international engagement shall be binding until so registered.

ARTICLE 19

The Assembly may from time to time advise the reconsideration by Members of the League of treaties which have become inapplicable and the consideration of international conditions whose continuance might endanger the peace of the world.

ARTICLE 20

The Members of the League severally agree that this Covenant is accepted as abrogating all obligations or understandings inter se which are inconsistent with the terms thereof, and solemnly undertake that they will not hereafter enter into any engagements inconsistent with the terms thereof.

In case any Member of the League shall, before becoming a Member of the League, have undertaken any obligations inconsistent with the terms of this Covenant, it shall be the duty of such Member to take immediate steps to procure its release from such obligations.

ARTICLE 21

Nothing in this Covenant shall be deemed to affect the validity of international engagements, such as treaties of arbitration or regional understanding like the Monroe doctrine, for securing the maintenance of peace.

ARTICLE 22

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States which formerly governed them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well-being and development of such peoples form a sacred trust of civilisation and that securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practical effect to this principle is that the tutelage of such peoples should be entrusted to advanced nations who by reason of their resources, their experience or their geographical position can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as Mandatories on behalf of the League.

The character of the mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognised subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

Other peoples, especially those of Central Africa, are at such a stage that the Mandatory must be responsible for the administration of the territory under conditions which will guarantee freedom of conscience and religion, subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defence of territory, and will also secure equal opportunities for the trade and commerce of other Members of the League.

There are territories, such as South-West Africa and certain of the South Pacific Islands, which, owing to the sparseness of their population, or their small size, or their remoteness from the centres of civilisation, or their geographical contiguity to the territory of the Mandatory, and other circumstances, can be best administered under the laws of the Mandatory as integral portions of its territory, subject to the safeguards above mentioned in the interests of the indigenous population.

In every case of mandate, the Mandatory shall render to the Council an annual report in reference to the territory committed to its charge.

The degree of authority, control, or administration to be exercised by the Mandatory shall, if not previously agreed upon by the Members of the League, be explicitly defined in each case by the Council.

A permanent Commission shall be constituted to receive and examine the annual reports of the Mandatories and to advise the Council on all matters relating to the observance of the mandates.

ARTICLE 23

Subject to and in accordance with the provisions of international conventions existing or hereafter to be agreed upon, the Members of the League:

- (a) will endeavour to secure and maintain fair and humane conditions of labour for men, women, and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and for that purpose will establish and maintain the necessary international organisations;
- (b) undertake to secure just treatment of the native inhabitants of territories under their control;
- (c) will entrust the League with the general supervision over the execution of agreements with regard to the traffic in women and children, and the traffic in opium and other dangerous drugs;
- (d) will entrust the League with the general supervision of the trade in arms and ammunition with the countries in which the control of this traffic is necessary in the common interest;
- (e) will make provision to secure and maintain freedom of communications and of transit and equitable treatment for the commerce of all Members of the League. In this connection, the special necessities of the regions devastated during the war 1914-1918 shall be borne in mind;
- (f) will endeavour to take steps in matters of international concern for the prevention and control of disease.

ARTICLE 24

There shall be placed under the direction of the League all international bureaux already established by general treaties if the parties to such treaties consent. All such international bureaux and all commissions for regulation of matters of international interest hereafter constituted shall be placed under the direction of the League.

In all matters of international interest which are regulated by general conventions but which are not placed under the control of international bureaux or commissions, the Secretariat of the League shall, subject to the consent of the Council and if desired by the parties, collect and distribute all relevant information and shall render any other assistance which may be necessary or desirable.

The Council may include as part of the expenses of the Secretariat the expenses of any bureau or commission which is placed under the direction of the League.

ARTICLE 25

The Members of the League agree to encourage and promote the establishment and co-operation of duly authorized voluntary national Red Cross organizations having as purposes the improvement of health, the prevention of disease and the mitigation of suffering throughout the world.

ARTICLE 26

Amendments to this Covenant will take effect when ratified by the Members of the League whose Representatives compose the Council and by a majority of the Members of the League whose Representative compose the Assembly.

No such amendment shall bind any Member of the League which signifies its dissent therefrom, but in that case it shall cease to be a Member of the League.

Mohandas K. Gandhi: *Freedom's Battle*

Date: 1922

Mohandas K. Gandhi was born in Porbandar, India. A student of Hindu philosophy, Gandhi was committed to truth and nonviolence. He was educated at University College London as a lawyer. In India he became a community organizer in impoverished villages. He rallied others to take pride in themselves, to clean up their villages, and to build schools and hospitals. As a leader, Gandhi was addressed by the people as Bapu (Father) and Mahatma (Great Soul). This is why he is known as Mahatma Gandhi.

He, like many, was opposed to the British rule of India and supported Indian independence from Britain. In December 1921 Gandhi became associated with the Indian National Congress, a group in the forefront of the independence movement.

Noncooperation and peaceful resistance were Gandhi's weapons in the fight against injustice. Gandhi expanded his nonviolence platform to include the swadeshi policy (an economic strategy) in the boycotting of all foreign-made goods, especially British goods. Gandhi also urged the people to boycott British educational institutions and law courts, to resign from government employment, and to forsake British titles and honors. He led a national campaign of nonviolent mass civil disobedience, organized protests, and strikes.

Freedom's Battle is one of the many writings of Gandhi and it represents his philosophy.

The following entry contains excerpts from the original document.

I. INTRODUCTION

After the great war it is difficult, to point out a single nation that is happy; but this has come out of the war, that there is not a single nation outside India, that is not either free or striving to be free.

It is said that we, too, are on the road to freedom, that it is better to be on the certain though slow course of gradual unfoldment of freedom than to take the troubled and dangerous path of revolution whether peaceful or violent, and that the new Reforms are a half-way house to freedom.

The new constitution granted to India keeps all the military forces, both in the direction and in the financial control, entirely outside the scope of responsibility to the people of India. What does this mean? It means that the revenues of India are spent away on what the nation does not want. But after the mid-Eastern complications and the fresh Asiatic additions to British Imperial spheres of action. This Indian military servitude is a clear danger to national interests.

The new constitution gives no scope for retrenchment and therefore no scope for measures of social reform except by fresh taxation, the heavy burden of which on the poor will outweigh all the advantages of any reforms. It maintains all the existing foreign services, and the cost of the administrative machinery high as it already is, is further increased.

The reformed constitution keeps all the fundamental liberties of person, property, press, and association completely under bureaucratic control. All those laws which give to the irresponsible officers of the Executive Government of India absolute powers to override the popular will, are still unrepealed. In spite of the tragic price paid in the Punjab for demonstrating the danger of unrestrained power in the hands of a foreign bureaucracy and the inhumanity of spirit by which tyranny in a panic will seek

to save itself, we stand just where we were before, at the mercy of the Executive in respect of all our fundamental liberties.

Not only is Despotism intact in the Law, but unparalleled crimes and cruelties against the people have been encouraged and even after boastful admissions and clearest proofs, left unpunished. The spirit of unrepentant cruelty has thus been allowed to permeate the whole administration.

THE MUSSALMAN AGONY

To understand our present condition it is not enough to realise the general political servitude. We should add to it the reality and the extent of the injury inflicted by Britain on Islam, and thereby on the Mussalmans of India. The articles of Islamic faith which it is necessary to understand in order to realise why Mussalman India, which was once so loyal is now so strongly moved to the contrary are easily set out and understood. Every religion should be interpreted by the professors of that religion. The sentiments and religious ideas of Muslims founded on the traditions of long generations cannot be altered now by logic or cosmopolitanism, as others understand it. Such an attempt is the more unreasonable when it is made not even as a bonafide and independent effort of proselytising logic or reason, but only to justify a treaty entered into for political and worldly purposes.

The Khalifa is the authority that is entrusted with the duty of defending Islam. He is the successor to Muhammad and the agent of God on earth. According to Islamic tradition he must possess sufficient temporal power effectively to protect Islam against non-Islamic powers and he should be one elected or accepted by the Mussalman world.

The Jazirat-ul-Arab is the area bounded by the Red Sea, the Arabian Sea, the Persian Gulf, and the waters of the Tigris and the Euphrates. It is the sacred Home of Islam and the centre towards which Islam throughout the world turns in prayer. According to the religious injunctions of the Mussalmans, this entire area should always be under Muslim control, its scientific border being believed to be a protection for the integrity of Islamic life and faith. Every Mussalman throughout the world is enjoined to sacrifice his all, if necessary, for preserving the Jazirat-ul-Arab under complete Muslim control.

The sacred places of Islam should be in the possession of the Khalifa. They should not merely be free for the entry of the Mussalmans of the world by the grace or the license of non-Muslim powers, but should be the possession and property of Islam in the fullest degree.

It is a religions obligation, on every Mussalman to go forth and help the Khalifa in every possible way where his unaided efforts in the defence of the Khilifat have failed.

The grievance of the Indian Mussalmans is that a government that pretends to protect and spread peace and happiness among them has no right to ignore or set aside these articles of their cherished faith.

According to the Peace Treaty imposed on the nominal Government at Constantinople, the Khalifa far from having the temporal authority or power needed to protect Islam, is a prisoner in his own city. He is to have no real fighting force, army or navy, and the financial control over his own territories is vested in other Governments. His capital is cut off from the rest of his possessions by an intervening permanent military occupation. It is needless to say that under these conditions he is absolutely incapable of protecting Islam as the Mussulmans of the world understand it.

The Jazirat-ul-Arab is split up; a great part of it given to powerful non-Muslim Powers, the remnant left with petty chiefs dominated all round by non-Muslim Governments.

The Holy places of Islam are all taken out of the Khalifa's kingdom, some left in the possession of minor Muslim chiefs of Arabia entirely dependent on European control, and some relegated to newly-formed non-Muslim states.

In a word, the Mussalman's free choice of a Khalifa such as Islamic tradition defines is made an unreality.

THE HINDU DHARMA

The age of misunderstanding and mutual warfare among religions is gone. If India has a mission of its own to the world, it is to establish the unity and the truth of all religions. This unity is established by mutual help and understanding between the various religions. It has come as a rare privilege to the Hindus in the fulfilment of this mission of India to stand up in defence of Islam against the onslaught of the earth-greed of the military powers of the west.

The Dharma of Hinduism in this respect is placed beyond all doubt by the Bhagavat Gita.

Those who are the votaries of other Gods and worship them with faith—even they, O Kaunteya, worship me alone, though not as the Shastra requires—IX, 23.

Whoever being devoted wishes in perfect faith to worship a particular form, of such a one I maintain the same faith unshaken,—VII 21.

Hinduism will realise its fullest beauty when in the fulfilment of this cardinal tenet, its followers offer themselves as sacrifice for the protection of the faith of their brothers, the Mussalmans.

If Hindus and Mussalmans attain the height of courage and sacrifice that is needed for this battle on behalf of Islam against the greed of the West, a victory will be won not alone for Islam, but for Christianity itself. Militarism has robbed the crucified God of his name and his very cross and the World has been

mistaking it to be Christianity. After the battle of Islam is won, Islam and Hinduism together can emancipate Christianity itself from the lust for power and wealth which have strangled it now and the true Christianity of the Gospels will be established. This battle of non-cooperation with its suffering and peaceful withdrawal of service will once for all establish its superiority over the power of brute force and unlimited slaughter.

What a glorious privilege it is to play our part in this history of the world, when Hinduism and Christianity will unite on behalf of Islam, and in that strife of mutual love and support each religion will attain its own truest shape and beauty.

AN ENDURING TREATY

Swaraj for India has two great problems, one internal and the other external. How can Hindus and Mussalmans so different from each other form a strong and united nation governing themselves peacefully? This was the question for years, and no one could believe that the two communities could suffer for each other till the miracle was actually worked. The Khilafat has solved the problem. By the magic of suffering, each has truly touched and captured the other's heart, and the Nation now is strong and united. Not internal strength and unity alone has the Khilafat brought to India. The great block in the way of Indian aspiration for full freedom was the problem of external defence. How is India, left to herself defend her frontiers against her Mussalman neighbours? None but emasculated nations would accept such difficulties and responsibilities as an answer to the demand for freedom. It is only a people whose mentality has been perverted that can soothe itself with the domination by one race from a distant country, as a preventative against the aggression of another, a permanent and natural neighbour. Instead of developing strength to protect ourselves against those near whom we are permanently placed, a feeling of incurable impotence has been generated. Two strong and brave nations can live side by side, strengthening each other through enforcing constant vigilance, and maintain in full vigour each its own national strength, unity, patriotism and resources. If a nation wishes to be respected by its neighbours it has to develop and enter into honourable treaties. These are the only natural conditions of national liberty; but not a surrender to distant military powers to save oneself from one's neighbours.

The Khilafat has solved the problem of distrust of Asiatic neighbours out of our future. The Indian struggle for the freedom of Islam has brought about a more lasting "entente" and a more binding treaty between the people of India and the people of the Mussalman states around it than all the ententes and treaties among the Governments of Europe. No wars of aggression are possible where the common people on the two sides have become grateful friends. The faith of the Mussulman is a better sanction than the seal of the European Diplomats and plenipotentiaries. Not only has this great friendship between India and the Mussulman States around it removed for all time the fear of Mussulman aggression from outside, but it has erected round India, a solid wall of defence against all aggression from beyond against all greed from Europe, Russia or elsewhere. No secret diplomacy could establish a better "entente" or a stronger federation than what this open and non-governmental treaty between Islam and India has established. The Indian support of the Khilafat has, as if by a magic wand, converted what was once the Pan-Islamic terror for Europe into a solid wall of friendship and defence for India.

THE BRITISH CONNECTION

Every nation like every individual is born free. Absolute freedom is the birthright of every people. The only limitations are those which a people may place over themselves. The British connection is invaluable as long as it is a defence against any worse connection sought to be imposed by violence. But it is only a means to an end, not a mandate of Providence of Nature. The alliance of neighbours, born of suffering for each other's sake, for ends that purify those that suffer, is necessarily a more natural and more enduring bond than one that has resulted from pure greed on the one side and weakness on the other. Where such a natural and enduring alliance has been accomplished among Asiatic peoples and not only between the respective governments, it may truly be felt to be more valuable than the British connection itself, after that connection has denied freedom or equality, and even justice.

THE ALTERNATIVE

Is violence or total surrender the only choice open to any people to whom Freedom or Justice is denied? Violence at a time when the whole world has learnt from bitter experience the futility of violence is unworthy of a country whose ancient people's privilege, it was, to see this truth long ago.

Violence may rid a nation of its foreign masters but will only enslave it from inside. No nation can really be free which is at the mercy of its army and its military heroes. If a people rely for freedom on its soldiers, the soldiers will rule the country, not the people. Till the recent awakening of the workers of Europe, this was the only freedom which the powers of Europe really enjoyed. True freedom can exist only when those who produce, not those who destroy or know only to live on other's labour, are the masters.

Even were violence the true road to freedom, is violence possible to a nation which has been emasculated and deprived of all weapons, and the whole world is hopelessly in advance of all our possibilities in the manufacture and the wielding of weapons of destruction.

Submission or withdrawal of co-operation is the real and only alternative before India. Submission to injustice puts on the tempting garb of peace and, gradual progress, but there is no surer way to death than submission to wrong.

Primary Source Citation: Gandhi, Mahatma. *Freedom's Battle*, Second Edition, 1922.

Adolf Hitler: *Mein Kampf*

Also known as: *My Struggle*; *Alois Schickelgruber*.

Date: 1925

Mein Kampf is a two-volume work, written by German Nazi politician Adolf Hitler.

In 1924 Hitler tried to overthrow the Weimar Republic in the Beer Hall Putsch. He was sentenced to five years in Landsberg am Lech prison and was released after serving a sentence of only eight months. The first part of *Mein Kampf* was written while he was in prison in 1924, with the aid of Rudolf Hoess. The second part was written after his release from prison, in the period between 1925 to 1927.

The volumes contained Hitler's vision of the creation of a nationalistic Aryan state, which would be both self-sufficient and racially pure. He stated his concept of a future Germany, returned to greatness after its defeat in World War I. He stated that Austria should become united with Germany, as should other German-speaking lands.

Hitler declared that the Aryan race was in fact the "chosen people," and that they were responsible for advances in science, technology, and culture.

He felt that the Jews were involved in a conspiracy to undermine the Aryans' superiority and that they should be excluded from the nationalist state. He condemned France and Bolshevism, both of which, he wrote, were dominated by Jews.

Mein Kampf became the bible of Nazism (National Socialism) and was extremely popular, selling more than 5.2 million copies by 1939.

An excerpt from *Mein Kampf*, Volume 1.: A Reckoning. Chapter 11: Nation and Race.

If we pass all the causes of the German collapse in review, the ultimate and most decisive remains the failure to recognize the racial problem and especially the Jewish menace.

The defeats on the battlefield in August, 1918, would have been child's play to bear. They stood in no proportion to the victories of our people. It was not they that caused our downfall; no, it was brought about by that power which prepared these defeats by systematically over many decades robbing our people of the political and moral instincts and forces which alone make nations capable and hence worthy of existence.

In heedlessly ignoring the question of the preservation of the racial foundations of our nation, the old Reich disregarded the sole right which gives life in this world. Peoples which bastardize themselves, or let themselves be bastardized, sin against the will of eternal Providence, and when their ruin is encompassed by a stronger enemy it is not an injustice done to them, but only the restoration of justice. If a people no longer wants to respect the Nature-given qualities of its being which root in its blood, it has no further right to complain over the loss of its earthly existence.

Everything on this earth is capable of improvement. Every defeat can become the father of a subsequent victory, every lost war the cause of a later resurgence, every hardship the fertilization of human energy, and from every oppression the forces for a new spiritual rebirth can come - as long as the blood is preserved pure.

The lost purity of the blood alone destroys inner happiness forever, plunges man into the abyss for all time, and the consequences can never more be eliminated from body and spirit.

Only by examining and comparing all other problems of life in the light of this one question shall we see how absurdly petty they are by this standard. They are all limited in time - but the question of preserving or not preserving the purity of the blood will endure as long as there are men.

All really significant symptoms of decay of the pre-War period can in the last analysis be reduced to racial causes.

Whether we consider questions of general justice or cankers of economic life, symptoms of cultural decline or processes of political degeneration, questions of faulty schooling or the bad influence exerted on grown-ups by the press, etc., everywhere and always it is fundamentally the disregard of the racial needs of our own people or failure to see a foreign racial menace.

And that is why all attempts at reform, all works for social relief and political exertions, all economic expansion and every apparent increase of intellectual knowledge were futile as far as their results were concerned. The nation, and the organism which enables and preserves its life on this earth, the state, did not grow inwardly healthier, but obviously languished more and more. All the illusory prosperity of the old Reich could not hide its inner weakness, and every attempt really to strengthen the Reich failed again and again, due to disregarding the most important question.

It would be a mistake to believe that the adherents of the various political tendencies which were tinkering around on the German national body - yes, even a certain section of the leaders - were bad or malevolent men in themselves. Their activity was condemned to sterility only because the best of them saw at most the forms of our general disease and tried to combat them, but blindly ignored the virus. Anyone who systematically follows the old Reich's line of political development is bound to arrive, upon calm examination, at the realization that even at the time of the unification, hence the rise of the German nation, the inner decay was already in full swing, and that despite all apparent political successes and despite increasing economic wealth, the general situation was deteriorating from year to year. If nothing else, the elections for the Reichstag announced, with their outward swelling of the Marxist vote, the steadily approaching inward and hence also outward collapse. All the successes of the so-called bourgeois parties were worthless, not only because even with so-called bourgeois electoral victories they were unable to halt the numerical growth of the Marxist flood, but because they themselves above all now bore the ferments of decay in their own bodies. Without suspecting it, the bourgeois world itself was inwardly infected with the deadly poison of Marxist ideas and its resistance often sprang more from the competitor's envy of ambitious leaders than from a fundamental rejection of adversaries determined to fight to the utmost. In these long years there was only one who kept up an imperturbable, unflagging fight, and this was the *Jew*. His Star of David rose higher and higher in proportion as our people's will for self-preservation vanished.

Therefore, in August, 1914, it was not a people resolved to attack which rushed to the battlefield; no, it was only the last flicker of the national instinct of self-preservation in face of the progressing pacifist-Marxist paralysis of our national body. Since even in these days of destiny, our people did not recognize the inner enemy, all outward resistance was in vain and Providence did not bestow her reward on the victorious sword, but followed the law of eternal retribution.

On the basis of this inner realization, there took form in our new movement the leading principles as well as the tendency, which in our conviction were alone capable, not only of halting the decline of the German people, but of creating the granite foundation upon which some day a state will rest which represents, not an alien mechanism of economic concerns and interests, but a national organism.

Munich Pact

Date: September 29, 1938

The Sudetenland had been part of the Austro-Hungarian Empire, and ethnic Germans were the majority of the population. After World War I, they had proclaimed themselves the German-Austrian province of Sudetenland in October 1918, voting to join the newly declared Republic of German Austria in November 1918. The Sudeten Germans did not wish to become a part of Czechoslovakia.

This was forbidden by the Allied powers after the war by the Treaty of Saint-Germain and by the Czechoslovakian government. Most Sudeten Germans rejected the affiliation with Czechoslovakia because they had been refused the right to self-determination, as promised by U.S. president Woodrow Wilson in his Fourteen Points of January 8, 1918.

The specter of a new European war loomed in August through September of 1938, as Hitler's Germany contested the Czechoslovakian right to the Sudetenland. Although Czechoslovakia had alliances with both France and the Soviet Union, neither of these was prepared for a war, and the powers in western Europe did not want a war. Adolf Hitler's demands to annex the Sudetenland from Czechoslovakia led to the worst crisis on the European continent since World War I. British prime minister Neville Chamberlain attempted to use appeasement to avoid war in Europe.

On September 22, 1938, Chamberlain met Hitler in the German city of Godesberg. Chamberlain found the demands of the German leader unreasonable and postponed all action on a treaty in order to confer with the Allies. He then met Hitler a week later in Munich, where Chamberlain agreed to allow German armies to take the Sudetenland in exchange for a promise that no further territorial possessions would be demanded. Hitler agreed, and the two men signed an understanding, known as the Munich Pact.

Britain, France, Germany, and Italy participated in the agreement—the Soviet Union did not. Czechoslovakia was excluded from the conference and later stated that it would resist the Germans, but France and Britain insisted on Czechoslovakia's submission in order to maintain peace in Europe.

Chamberlain returned home to jubilant crowds, who thought he had helped to avert a second calamitous war in Europe. But time would tell that Chamberlain's appeasement of Hitler had only emboldened the German dictator. This would lead to the occupation of Czechoslovakia in March 1939 and the outbreak of war in September.

Munich Pact. Munich, September 29, 1938.

Germany, the United Kingdom, France and Italy, taking into consideration the agreement which has been already reached in principle for the cession to Germany of the Sudeten German territory, have agreed on the following terms and conditions governing the said cession and the measures consequent thereon, and by this Agreement they each hold themselves responsible for the steps necessary to secure its fulfillment:

1. The evacuation will begin on 1st October.
2. The United Kingdom, France and Italy agree that the evacuation of the territory shall be completed by 10th October without any existing installations having been destroyed, and that the Czechoslovak Government will be held responsible for carrying out the evacuation without damage to the said installations.
3. The conditions governing the evacuation will be laid down in detail by an international commission composed of representatives of Germany, the United Kingdom, France, Italy and Czechoslovakia.
4. The occupation by stages of the predominantly German territory by German troops will begin on 1st October. The four territories marked on the attached map will be occupied by German troops in the following order: the territory marked No. I on the 1st and 2nd October; the territory marked No. II on the 2nd and 3rd October; the territory marked No. III on the 3rd, 4th and 5th October; the territory marked No. IV on the 6th and 7th October. The remaining territory of preponderatingly German character will be ascertained by the aforesaid international commission forthwith and be occupied by German troops by the 10th October.
5. The international commission referred to in paragraph 3 will determine the territories in which a plebiscite is to be held. These territories will be occupied by international bodies until the plebiscite has been completed. The same commission will fix the conditions in which the plebiscite is to be held, taking as a basis the conditions of the Saar plebiscite. The commission will also fix a date, not later than the end of November, on which the plebiscite will be held.
6. The final determination of the frontier will be carried out by the international commission. This commission will also be entitled to recommend to the four Powers—Germany, the United Kingdom, France and Italy—in certain exceptional cases minor modifications in the strictly ethnographical determination of the zones which are to be transferred without plebiscite.
7. There will be a right of option into and out of the transferred territories, the option to be exercised within six months from the date of this Agreement. A German-Czechoslovak commission shall determine the details of the option, consider ways of facilitating the transfer of population and settle questions of principle arising out of the said transfer.
8. The Czech Government will, within a period of four weeks from the date of this Agreement, release from their military and police forces any Sudeten Germans who may wish to be released, and the Czech Government will, within the same period, release Sudeten German prisoners who are serving terms of imprisonment for political offenses.

Annex

His Majesty's Government in the United Kingdom and the French Government have entered into the above agreement on the basis that they stand by the offer, contained in paragraph 6 of the Anglo-French

proposals of 19th September, relating to an international guarantee of the new boundaries of the Czech State against unprovoked aggression.

When the question of the Polish and Hungarian minorities in Czechoslovakia has been settled, Germany and Italy, for their part, will give a guarantee to Czechoslovakia.

Declaration

The heads of the Governments of the four Powers declare that the problems of the Polish and Hungarian minorities in Czechoslovakia, if not settled within three months by agreement between the respective Governments, shall form the subject of another meeting of the heads of the Governments of the four Powers here present.

Supplementary Declaration

All questions which may arise out of the transfer of the territory shall be considered as coming within the terms of reference of the international commission.

The four heads of Governments here present agree that the international commission provided for in the Agreement signed by them today shall consist of the Secretary of State in the German Foreign Office, the British, French and Italian Ambassadors accredited in Berlin, and a representative to be nominated by the Government of Czechoslovakia.

The day after the pact was concluded, Hitler and the British prime minister, Neville Chamberlain, issued a joint declaration:

Anglo-German Declaration. Munich, 30 September 1938.

We, the German Fuhrer and Chancellor and the British Prime Minister, have had a further meeting today and are agreed in recognizing that the question of Anglo-German relations is of the first importance for the two countries and for Europe.

We regard the agreement signed last night and the Anglo-German Naval Agreement as symbolic of the desire of our two peoples never to go to war with one another again.

We are resolved that the method of consultation shall be the method adopted to deal with any other questions that may concern our two countries, and we are determined to continue our efforts to remove possible sources of difference and thus to contribute to assure the peace of Europe.

[Signed] A. HITLER

[Signed] NEVILLE CHAMBERLAIN

Winston Churchill: "Blood, Toil, Tears and Sweat"

Date: May 13, 1940

Winston Churchill, appointed prime minister of a coalition government in Britain, gave this speech before the House of Commons and accepted the position. With the continuing uncertainties of the war (World War II [1939–45]) and now a new government, Britain was at a crucial juncture and needed a clear definition

of goals and a renewed fighting spirit. Churchill, with his eloquence, provided just that in this speech. Churchill's powerful style of oratory, characterized by clear, short sentences, the use of Anglo-Saxon rather than Latinate forms where possible, and his clear commitment to his ideas, proved a great asset to Britain by holding up morale during World War II.

On Friday evening last I received from His Majesty the mission to form a new administration. It was the evident will of Parliament and the nation that this should be conceived on the broadest possible basis and that it should include all parties.

I have already completed the most important part of this task.

A war cabinet has been formed of five members, representing, with the Labour, Opposition, and Liberals, the unity of the nation. It was necessary that this should be done in one single day on account of the extreme urgency and rigor of events. Other key positions were filled yesterday. I am submitting a further list to the king tonight. I hope to complete the appointment of principal ministers during tomorrow.

The appointment of other ministers usually takes a little longer. I trust when Parliament meets again this part of my task will be completed and that the administration will be complete in all respects. I considered it in the public interest to suggest to the Speaker that the House should be summoned today. At the end of today's proceedings, the adjournment of the House will be proposed until May 21 with provision for earlier meeting if need be. Business for that will be notified to MPs at the earliest opportunity.

I now invite the House by a resolution to record its approval of the steps taken and declare its confidence in the new government.

The resolution:

“That this House welcomes the formation of a government representing the united and inflexible resolve of the nation to prosecute the war with Germany to a victorious conclusion.”

To form an administration of this scale and complexity is a serious undertaking in itself. But we are in the preliminary phase of one of the greatest battles in history. We are in action at many other points—in Norway and in Holland—and we have to be prepared in the Mediterranean. The air battle is continuing, and many preparations have to be made here at home.

In this crisis I think I may be pardoned if I do not address the House at any length today, and I hope that any of my friends and colleagues or former colleagues who are affected by the political reconstruction will make all allowances for any lack of ceremony with which it has been necessary to act.

I say to the House as I said to ministers who have joined this government, I have nothing to offer but blood, toil, tears, and sweat. We have before us an ordeal of the most grievous kind. We have before us many, many months of struggle and suffering.

You ask, what is our policy? I say it is to wage war by land, sea, and air. War with all our might and with all the strength God has given us, and to wage war against a monstrous tyranny never surpassed in the dark and lamentable catalogue of human crime. That is our policy.

You ask, what is our aim? I can answer in one word. It is victory. Victory at all costs—Victory in spite of all terrors—Victory, however long and hard the road may be, for without victory there is no survival.

Let that be realized. No survival for the British Empire, no survival for all that the British Empire has stood for, no survival for the urge, the impulse of the ages, that mankind shall move forward toward his goal.

I take up my task in buoyancy and hope. I feel sure that our cause will not be suffered to fail among men. I feel entitled at this juncture, at this time, to claim the aid of all and to say, “Come then, let us go forward together with our united strength.”

Axis Pact

Also known as: Tripartite Pact; Pact of the Axis Powers

Date: September 27, 1940

The Axis Pact, or the Tripartite Pact, as it is sometimes called, served as the primary treaty in the alliance of the three major fascist powers in World War II—Germany, Italy, and Japan. Throughout the war, the world called these three countries—bent on conquest and expansion—the Axis powers, whose unconditional surrender became the goal of the Allied nations.

The following entry contains the original document without signatories:

The governments of Germany, Italy and Japan, considering it as a condition precedent of any lasting peace that all nations of the world be given each its own proper place, have decided to stand by and co-operate with one another in regard to their efforts in greater East Asia and regions of Europe respectively wherein it is their prime purpose to establish and maintain a new order of things calculated to promote the mutual prosperity and welfare of the peoples concerned. Furthermore, it is the desire of the three governments to extend co-operation to such nations in other spheres of the world as may be inclined to put forth endeavours along lines similar to their own, in order that their ultimate aspirations for world peace may thus be realized.

Accordingly, the governments of Germany, Italy and Japan have agreed as follows:

ARTICLE 1

Japan recognizes and respects the leadership of Germany and Italy in establishment of a new order in Europe.

ARTICLE 2

Germany and Italy recognize and respect the leadership of Japan in the establishment of a new order in greater East Asia.

ARTICLE 3

Germany, Italy and Japan agree to co-operate in their efforts on aforesaid lines. They further undertake to assist one another with all political, economic and military means when one of the three contracting powers is attacked by a power at present not involved in the European war or in the Chinese-Japanese conflict.

ARTICLE 4

With the view to implementing the present pact, joint technical commissions, members which are to be appointed by the respective governments of Germany, Italy and Japan will meet without delay.

ARTICLE 5

Germany, Italy and Japan affirm that the aforesaid terms do not in any way affect the political status which exists at present as between each of the three contracting powers and Soviet Russia.

ARTICLE 6

The present pact shall come into effect immediately upon signature and shall remain in force 10 years from the date of its coming into force. At the proper time before expiration of said term, the high contracting parties shall at the request of any of them enter into negotiations for its renewal.

In faith whereof, the undersigned duly authorized by their respective governments have signed this pact and have affixed hereto their signatures.

Done in triplicate at Berlin, the 27th day of September, 1940, in the 19th year of the fascist era, corresponding to the 27th day of the ninth month of the 15th year of Showa [the reign of Emperor Hirohito].

Franklin Roosevelt: "Four Freedoms" Speech

Also known as: "Four Freedoms" Address; State of the Union Address, 1941

Date: January 6, 1941

This address was delivered by U.S. President Franklin Delano Roosevelt on January 6, 1941, in his annual message to Congress. Roosevelt called for a world founded on "four essential human freedoms": freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear. Urging citizens to relinquish the false security of isolationism, he described a national policy committed to all-inclusive national defense, full

support of other nations trying to preserve democracy, and refusal to buy peace at the cost of other people's freedom. He urged the United States to serve as an arsenal—providing ships, planes, tanks, and guns—for those countries already struggling against international aggression during World War II (1939–45).

Mr. President, Mr. Speaker, Members of the Seventy-seventh Congress:

I address you, the Members of the Seventy-seventh Congress, at a moment unprecedented in the history of the Union. I use the word "unprecedented", because at no previous time has American security been as seriously threatened from without as it is today.

Since the permanent formation of our Government under the Constitution, in 1789, most of the periods of crisis in our history have related to our domestic affairs. Fortunately, only one of these—the four-year War Between the States—ever threatened our national unity. Today, thank God, one hundred and thirty million Americans, in forty-eight States, have forgotten points of the compass in our national unity.

It is true that prior to 1914 the United States often had been disturbed by events in other Continents. We had even engaged in two wars with European nations and in a number of undeclared wars in the West Indies, in the Mediterranean and in the Pacific for the maintenance of American rights and for the principles of peaceful commerce. But in no case had a serious threat been raised against our national safety or our continued independence.

What I seek to convey is the historic truth that the United States as a nation has at all times maintained clear, definite opposition, to any attempt to lock us in behind an ancient Chinese wall while the procession of civilization went past. Today, thinking of our children and of their children, we oppose enforced isolation for ourselves or for any other part of the Americas.

That determination of ours, extending over all these years. was proved, for example, during the quarter century of wars following the French Revolution.

While the Napoleonic struggles did threaten interests of the United States because of the French foothold in the West Indies and in Louisiana, and while we engaged in the War of 1812 to vindicate our right to peaceful trade, it is nevertheless clear that neither France nor Great Britain, nor any other nation, was aiming at domination of the whole world.

In like fashion from 1815 to 1914—ninety-nine years—no single war in Europe or in Asia constituted a real threat against our future or against the future of any other American nation.

Except in the Maximilian interlude in Mexico, no foreign power sought to establish itself in this Hemisphere; and the strength of the British fleet in the Atlantic has been a friendly strength.

Even when the World War broke out in 1914, it seemed to contain only small threat of danger to our own American future. But, as time went on, the American people began to visualize what the downfall of democratic nations might mean to our own democracy.

We need not overemphasize imperfections in the Peace of Versailles. We need not harp on failure of the democracies to deal with problems of world reconstruction. We should remember that the Peace of 1919 was far less unjust than the kind of "pacification" which began even before Munich, and which is being carried on under the new order of tyranny that seeks to spread over every continent today. The American people have unalterably set their faces against that tyranny.

Every realist knows that the democratic way of life is at this moment being directly assailed in every part of the world—assailed either by arms, or by secret spreading of poisonous propaganda by those who seek to destroy unity and promote discord in nations that are still at peace.

During sixteen long months this assault has blotted out the whole pattern of democratic life in an appalling number of independent nations, great and small. The assailants are still on the march, threatening other nations, great and small.

Therefore, as your President, performing my constitutional duty to "give to the Congress information of the state of the Union," I find it, unhappily, necessary to report that the future and the safety of our country and of our democracy are overwhelmingly involved in events far beyond our borders.

Armed defense of democratic existence is now being gallantly waged in four continents. If that defense fails, all the population and all the resources of Europe, Asia, Africa and Australasia will be dominated by the conquerors. Let us remember that the total of those populations and their resources in those four continents greatly exceeds the sum total of the population and the resources of the whole of the Western Hemisphere—many times over.

In times like these it is immature—and incidentally, untrue—for anybody to brag that an unprepared America, single-handed, and with one hand tied behind its back, can hold off the whole world.

No realistic American can expect from a dictator's peace international generosity, or return of true independence, or world disarmament, or freedom of expression, or freedom of religion— or even good business.

Such a peace would bring no security for us or for our neighbors. "Those, who would give up essential liberty to purchase a little temporary safety, deserve neither liberty nor safety."

As a nation, we may take pride in the fact that we are soft-hearted; but we cannot afford to be soft-headed. We must always be wary of those who with sounding brass and a tinkling cymbal preach the "ism" of appeasement.

We must especially beware of that small group of selfish men who would clip the wings of the American eagle in order to feather their own nests.

I have recently pointed out how quickly the tempo of modern warfare could bring into our very midst the physical attack which we must eventually expect if the dictator nations win this war.

There is much loose talk of our immunity from immediate and direct invasion from across the seas. Obviously, as long as the British Navy retains its power, no such danger exists. Even if there were no British Navy, it is not probable that any enemy would be stupid enough to attack us by landing troops in the United States from across thousands of miles of ocean, until it had acquired strategic bases from which to operate.

But we learn much from the lessons of the past years in Europe—particularly the lesson of Norway, whose essential seaports were captured by treachery and surprise built up over a series of years.

The first phase of the invasion of this Hemisphere would not be the landing of regular troops. The necessary strategic points would be occupied by secret agents and their dupes—and great numbers of them are already here, and in Latin America.

As long as the aggressor nations maintain the offensive, they—not we—will choose the time and the place and the method of their attack.

That is why the future of all the American Republics is today in serious danger.

That is why this Annual Message to the Congress is unique in our history.

That is why every member of the Executive Branch of the Government and every member of the Congress faces great responsibility and great accountability.

The need of the moment is that our actions and our policy should be devoted primarily—almost exclusively—to meeting this foreign peril. For all our domestic problems are now a part of the great emergency.

Just as our national policy in internal affairs has been based upon a decent respect for the rights and the dignity of all our fellow men within our gates, so our national policy in foreign affairs has been based on a decent respect for the rights and dignity of all nations, large and small. And the justice of morality must and will win in the end.

Our national policy is this:

First, by an impressive expression of the public will and without regard to partisanship, we are committed to all-inclusive national defense.

Second, by an impressive expression of the public will and without regard to partisanship, we are committed to full support of all those resolute peoples, everywhere, who are resisting aggression and are thereby keeping war away from our Hemisphere. By this support, we express our determination that the democratic cause shall prevail; and we strengthen the defense and the security of our own nation.

Third, by an impressive expression of the public will and without regard to partisanship, we are committed to the proposition that principles of morality and considerations for our own security will never permit us to acquiesce in a peace dictated by aggressors and sponsored by appeasers. We know that enduring peace cannot be bought at the cost of other people's freedom.

In the recent national election there was no substantial difference between the two great parties in respect to that national policy. No issue was fought out on this line before the American electorate. Today it is abundantly evident that American citizens everywhere are demanding and supporting speedy and complete action in recognition of obvious danger.

Therefore, the immediate need is a swift and driving increase in our armament production.

Leaders of industry and labor have responded to our summons. Goals of speed have been set. In some cases these goals are being reached ahead of time; in some cases we are on schedule; in other cases there are slight but not serious delays; and in some cases—and I am sorry to say very important cases—we are all concerned by the slowness of the accomplishment of our plans.

The Army and Navy, however, have made substantial progress during the past year. Actual experience is improving and speeding up our methods of production with every passing day. And today's best is not good enough for tomorrow.

I am not satisfied with the progress thus far made. The men in charge of the program represent the best in training, in ability, and in patriotism. They are not satisfied with the progress thus far made. None of us will be satisfied until the job is done.

No matter whether the original goal was set too high or too low, our objective is quicker and better results.

To give you two illustrations:

We are behind schedule in turning out finished airplanes; we are working day and night to solve the innumerable problems and to catch up.

We are ahead of schedule in building warships but we are working to get even further ahead of that schedule.

To change a whole nation from a basis of peacetime production of implements of peace to a basis of wartime production of implements of war is no small task. And the greatest difficulty comes at the beginning of the program, when new tools, new plant facilities, new assembly lines, and new ship ways must first be constructed before the actual materiel begins to flow steadily and speedily from them.

The Congress, of course, must rightly keep itself informed at all times of the progress of the program. However, there is certain information, as the Congress itself will readily recognize, which, in the interests of our own security and those of the nations that we are supporting, must of needs be kept in confidence.

New circumstances are constantly begetting new needs for our safety. I shall ask this Congress for greatly increased new appropriations and authorizations to carry on what we have begun.

I also ask this Congress for authority and for funds sufficient to manufacture additional munitions and war supplies of many kinds, to be turned over to those nations which are now in actual war with aggressor nations.

Our most useful and immediate role is to act as an arsenal for them as well as for ourselves. They do not need man power, but they do need billions of dollars worth of the weapons of defense.

The time is near when they will not be able to pay for them all in ready cash. We cannot, and we will not, tell them that they must surrender, merely because of present inability to pay for the weapons which we know they must have.

I do not recommend that we make them a loan of dollars with which to pay for these weapons—a loan to be repaid in dollars.

I recommend that we make it possible for those nations to continue to obtain war materials in the United States, fitting their orders into our own program. Nearly all their materiel would, if the time ever came, be useful for our own defense.

Taking counsel of expert military and naval authorities, considering what is best for our own security, we are free to decide how much should be kept here and how much should be sent abroad to our friends who by their determined and heroic resistance are giving us time in which to make ready our own defense.

For what we send abroad, we shall be repaid within a reasonable time following the close of hostilities, in similar materials, or, at our option, in other goods of many kinds, which they can produce and which we need.

Let us say to the democracies: "We Americans are vitally concerned in your defense of freedom. We are putting forth our energies, our resources and our organizing powers to give you the strength to regain and maintain a free world. We shall send you, in ever-increasing numbers, ships, planes, tanks, guns. This is our purpose and our pledge."

In fulfillment of this purpose we will not be intimidated by the threats of dictators that they will regard as a breach of international law or as an act of war our aid to the democracies which dare to resist their aggression. Such aid is not an act of war, even if a dictator should unilaterally proclaim it so to be.

When the dictators, if the dictators, are ready to make war upon us, they will not wait for an act of war on our part. They did not wait for Norway or Belgium or the Netherlands to commit an act of war.

Their only interest is in a new one-way international law, which lacks mutuality in its observance, and, therefore, becomes an instrument of oppression.

The happiness of future generations of Americans may well depend upon how effective and how immediate we can make our aid felt. No one can tell the exact character of the emergency situations that we may be called upon to meet. The Nation's hands must not be tied when the Nation's life is in danger.

We must all prepare to make the sacrifices that the emergency—almost as serious as war itself—demands. Whatever stands in the way of speed and efficiency in defense preparations must give way to the national need.

A free nation has the right to expect full cooperation from all groups. A free nation has the right to look to the leaders of business, of labor, and of agriculture to take the lead in stimulating effort, not among other groups but within their own groups.

The best way of dealing with the few slackers or trouble makers in our midst is, first, to shame them by patriotic example, and, if that fails, to use the sovereignty of Government to save Government.

As men do not live by bread alone, they do not fight by armaments alone. Those who man our defenses, and those behind them who build our defenses, must have the stamina and the courage which come from unshakable belief in the manner of life which they are defending. The mighty action that we are calling for cannot be based on a disregard of all things worth fighting for.

The Nation takes great satisfaction and much strength from the things which have been done to make its people conscious of their individual stake in the preservation of democratic life in America. Those things have toughened the fiber of our people, have renewed their faith and strengthened their devotion to the institutions we make ready to protect.

Certainly this is no time for any of us to stop thinking about the social and economic problems which are the root cause of the social revolution which is today a supreme factor in the world.

For there is nothing mysterious about the foundations of a healthy and strong democracy. The basic things expected by our people of their political and economic systems are simple. They are:

Equality of opportunity for youth and for others.
Jobs for those who can work.
Security for those who need it.
The ending of special privilege for the few.
The preservation of civil liberties for all.
The enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living.

These are the simple, basic things that must never be lost sight of in the turmoil and unbelievable complexity of our modern world. The inner and abiding strength of our economic and political systems is dependent upon the degree to which they fulfill these expectations.

Many subjects connected with our social economy call for immediate improvement.

As examples:

We should bring more citizens under the coverage of old-age pensions and unemployment insurance.

We should widen the opportunities for adequate medical care.

We should plan a better system by which persons deserving or needing gainful employment may obtain it.

I have called for personal sacrifice. I am assured of the willingness of almost all Americans to respond to that call.

A part of the sacrifice means the payment of more money in taxes. In my Budget Message I shall recommend that a greater portion of this great defense program be paid for from taxation than we are paying today. No person should try, or be allowed, to get rich out of this program; and the principle of tax payments in accordance with ability to pay should be constantly before our eyes to guide our legislation.

If the Congress maintains these principles, the voters, putting patriotism ahead of pocketbooks, will give you their applause.

In the future days, which we seek to make secure, we look forward to a world founded upon four essential human freedoms.

The first is freedom of speech and expression—everywhere in the world.

The second is freedom of every person to worship God in his own way—everywhere in the world.

The third is freedom from want—which, translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants— everywhere in the world.

The fourth is freedom from fear—which, translated into world terms, means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world.

That is no vision of a distant millennium. It is a definite basis for a kind of world attainable in our own time and generation. That kind of world is the very antithesis of the so-called new order to tyranny which the dictators seek to create with the crash of a bomb.

To that new order we oppose the greater conception—the moral order. A good society is able to face schemes of world domination and foreign revolutions alike without fear.

Since the beginning of our American history, we have been engaged in change—in a perpetual peaceful revolution—a revolution which goes on steadily, quietly adjusting itself to changing conditions—without the concentration camp or the quick-lime in the ditch. The world order which we seek is the cooperation of free countries, working together in a friendly, civilized society.

This nation has placed its destiny in the hands and heads and hearts of its millions of free men and women; and its faith in freedom under the guidance of God. Freedom means the supremacy of human rights everywhere. Our support goes to those who struggle to gain those rights or keep them. Our strength is our unity of purpose.

To that high concept there can be no end save victory.

Winston Churchill: "Iron Curtain" Speech

Date: March 5, 1946

On March 5, 1946, Winston Churchill addressed an assembly at Westminster College in Fulton, Missouri, accepting an honorary degree. Churchill introduced the phrase "Iron Curtain" to describe the line of division between Western democracies and the satellite states dominated by the Soviet Union. Combined with the announced Truman Doctrine in 1947, these documents represent the beginning of the cold war. A portion of the speech is presented here.

The United States stands at this time at the pinnacle of world power. It is a solemn moment for the American democracy. For with this primacy in power is also joined an awe-inspiring accountability to the future. As you look around you, you must feel not only the sense of duty done, but also you must feel anxiety lest you fall below the level of achievement. Opportunity is here now, clear and shining, for both our countries. To reject it or ignore it or fritter it away will bring upon us all the long reproaches of the aftertime.

It is necessary that constancy of mind, persistency of purpose, and the grand simplicity of decision shall rule and guide the conduct of the English-speaking peoples in peace as they did in war. We must, and I believe we shall, prove ourselves equal to this severe requirement.

I have a strong admiration and regard for the valiant Russian people and for my wartime comrade, Marshal Stalin. There is deep sympathy and goodwill in Britain—and I doubt not here also—toward the peoples of all the Russias and a resolve to persevere through many differences and rebuffs in establishing lasting friendships.

It is my duty, however, to place before you certain facts about the present position in Europe.

From Stettin in the Baltic to Trieste in the Adriatic an iron curtain has descended across the Continent. Behind that line lie all the capitals of the ancient states of Central and Eastern Europe. Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest and Sofia; all these famous cities and the populations around them lie in what I must call the Soviet sphere, and all are subject, in one form or another, not only to Soviet influence but to a very high and in some cases increasing measure of control from Moscow.

The safety of the world, ladies and gentlemen, requires a unity in Europe, from which no nation should be permanently outcast. It is from the quarrels of the strong parent races in Europe that the world wars we have witnessed, or which occurred in former times, have sprung.

Twice the United States has had to send several millions of its young men across the Atlantic to fight the wars. But now we all can find any nation, wherever it may dwell, between dusk and dawn. Surely we should work with conscious purpose for a grand pacification of Europe within the structure of the United Nations and in accordance with our Charter.

In a great number of countries, far from the Russian frontiers and throughout the world, Communist fifth columns are established and work in complete unity and absolute obedience to the directions they receive from the Communist center. Except in the British Commonwealth and in the United States where Communism is in its infancy, the Communist parties or fifth columns constitute a growing challenge and peril to Christian civilization.

The outlook is also anxious in the Far East and especially in Manchuria. The agreement which was made at Yalta, to which I was a party, was extremely favorable to Soviet Russia, but it was made at a time when no one could say that the German war might not extend all through the summer and autumn of 1945 and when the Japanese war was expected by the best judges to last for a further eighteen months from the end of the German war.

I repulse the idea that a new war is inevitable—still more that it is imminent. It is because I am sure that our fortunes are still in our own hands and that we hold the power to save the future, that I feel the duty to speak out now that I have the occasion and the opportunity to do so.

I do not believe that Soviet Russia desires war. What they desire is the fruits of war and the indefinite expansion of their power and doctrines.

But what we have to consider here today while time remains, is the permanent prevention of war and the establishment of conditions of freedom and democracy as rapidly as possible in all countries. Our difficulties and dangers will not be removed by closing our eyes to them. They will not be removed by mere waiting to see what happens; nor will they be removed by a policy of appeasement.

What is needed is a settlement, and the longer this is delayed, the more difficult it will be and the greater our dangers will become.

From what I have seen of our Russian friends and allies during the war, I am convinced that there is nothing they admire so much as strength, and there is nothing for which they have less respect than for weakness, especially military weakness.

For that reason the old doctrine of a balance of power is unsound. We cannot afford, if we can help it, to work on narrow margins, offering temptations to a trial of strength.

Last time I saw it all coming and I cried aloud to my own fellow countrymen and to the world, but no one paid any attention. Up till the year 1933 or even 1935, Germany might have been saved from the awful fate which has overtaken her and we might all have been spared the miseries Hitler let loose upon mankind.

There never was a war in history easier to prevent by timely action than the one which has just desolated such great areas of the globe. It could have been prevented, in my belief, without the firing of a single shot, and Germany might be powerful, prosperous and honored today; but no one would listen and one by one we were all sucked into the awful whirlpool.

We must not let it happen again. This can only be achieved by reaching now, in 1946, a good understanding on all points with Russia under the general authority of the United Nations Organization and by the maintenance of that good understanding through many peaceful years, by the whole strength of the English-speaking world and all its connections.

If the population of the English-speaking Commonwealth be added to that of the United States, with all that such cooperation implies in the air, on the sea, all over the globe, and in science and in industry, and in moral force, there will be no quivering, precarious balance of power to offer its temptation to ambition or adventure. On the contrary there will be an overwhelming assurance of security.

If we adhere faithfully to the Charter of the United Nations and walk forward in sedate and sober strength, seeking no one's land or treasure, seeking to lay no arbitrary control upon the thoughts of men, if all British moral and material forces and convictions are joined with your own in fraternal association, the high roads of the future will be clear, not only for us but for all, not only for our time but for a century to come.

Winston Churchill—March 5, 1946

Rudolf Hoess, Commandant of Auschwitz: Testimony at Nuremburg

Also known as: Rudolf Franz Ferdinand Höß, Höss, or Hoeß.

Date: April 5, 1946

Rudolf Hoess joined the Nazi SS in 1934. Hoess became the commander of the extermination center of Auschwitz in 1940. Auschwitz was the German name of the city of Oswiecim, Poland. During World War II, Auschwitz was the largest of the concentration and death camps. It was a vast slave labor and death camp, where an estimated 1.1–1.6 million people were killed. Auschwitz was liberated on January 27, 1945. Many postwar trials of major war criminals were held at Nuremburg, and the following is Hoess's confession of April 5, 1946.

I, RUDOLF FRANZ FERDINAND HOESS, being first duly sworn, depose and say as follows:

1. I am 46 years old, and have been a member of the NSDAP since 1922; a member of the SS since 1934; a member of the Waffen-SS since 1939. I was a member from 1 December 1934 of the SS Guard Unit, the so-called Death's Head Formation (Totenkopf Verband).

2. I have been constantly associated with the administration of concentration camps since 1934, serving at Dachau until 1938; then as Adjutant in Sachsenhausen from 1938 to 1 May, 1940, when I was appointed Commandant of Auschwitz. I commanded Auschwitz until 1 December, 1943, and estimate that at least 2,500,000 victims were executed and exterminated there by gassing and burning, and at least another half million succumbed to starvation and disease, making a total dead of about 3,000,000. This figure represents about 70% or 80% of all persons sent to Auschwitz as prisoners, the remainder having been selected and used for slave labor in the concentration camp industries. Included among the executed and burnt were approximately 20,000 Russian prisoners of war (previously screened out of Prisoner of War cages by the Gestapo) who were delivered at Auschwitz in Wehrmacht transports operated by regular Wehrmacht officers and men. The remainder of the total number of victims included about 100,000 German Jews, and great numbers of citizens (mostly Jewish) from Holland, France, Belgium, Poland, Hungary, Czechoslovakia, Greece, or other countries. We executed about 400,000 Hungarian Jews alone at Auschwitz in the summer of 1944.

4. Mass executions by gassing commenced during the summer 1941 and continued until fall 1944. I personally supervised executions at Auschwitz until the first of December 1943 and know by reason of my continued duties in the Inspectorate of Concentration Camps WVHA that these mass executions

continued as stated above. All mass executions by gassing took place under the direct order, supervision and responsibility of RSHA. I received all orders for carrying out these mass executions directly from RSHA.

6. The “final solution” of the Jewish question meant the complete extermination of all Jews in Europe. I was ordered to establish extermination facilities at Auschwitz in June 1941. At that time there were already in the general government three other extermination camps; BELZEK, TREBLINKA and WOLZEK. These camps were under the Einsatzkommando of the Security Police and SD. I visited Treblinka to find out how they carried out their exterminations. The Camp Commandant at Treblinka told me that he had liquidated 80,000 in the course of onehalf year. He was principally concerned with liquidating all the Jews from the Warsaw Ghetto. He used monoxide gas and I did not think that his methods were very efficient. So when I set up the extermination building at Auschwitz, I used Cyclon B, which was a crystallized Prussic Acid which we dropped into the death chamber from a small opening. It took from 3 to 15 minutes to kill the people in the death chamber depending upon climatic conditions. We knew when the people were dead because their screaming stopped. We usually waited about onehalf hour before we opened the doors and removed the bodies. After the bodies were removed our special commandos took off the rings and extracted the gold from the teeth of the corpses.

7. Another improvement we made over Treblinka was that we built our gas chambers to accommodate 2,000 people at one time, whereas at Treblinka their 10 gas chambers only accommodated 200 people each. The way we selected our victims was as follows: we had two SS doctors on duty at Auschwitz to examine the incoming transports of prisoners. The prisoners would be marched by one of the doctors who would make spot decisions as they walked by. Those who were fit for work were sent into the Camp. Others were sent immediately to the extermination plants. Children of tender years were invariably exterminated since by reason of their youth they were unable to work. Still another improvement we made over Treblinka was that at Treblinka the victims almost always knew that they were to be exterminated and at Auschwitz we endeavored to fool the victims into thinking that they were to go through a delousing process. Of course, frequently they realized our true intentions and we sometimes had riots and difficulties due to that fact. Very frequently women would hide their children under the clothes but of course when we found them we would send the children in to be exterminated. We were required to carry out these exterminations in secrecy but of course the foul and nauseating stench from the continuous burning of bodies permeated the entire area and all of the people living in the surrounding communities knew that exterminations were going on at Auschwitz .

8. We received from time to time special prisoners from the local Gestapo office. The SS doctors killed such prisoners by injections of benzine. Doctors had orders to write ordinary death certificates and could put down any reason at all for the cause of death.

9. From time to time we conducted medical experiments on women inmates, including sterilization and experiments relating to cancer. Most of the people who died under these experiments had been already condemned to death by the Gestapo.

10. Rudolf Mildner was the chief of the Gestapo at Kattowicz and as such was head of the political department at Auschwitz which conducted third degree methods of interrogation from approximately March 1941 until September 1943. As such, he frequently sent prisoners to Auschwitz for incarceration or execution. He visited Auschwitz on several occasions. The Gestapo Court, the SS Standgericht, which tried persons accused of various crimes, such as escaping Prisoners of War, etc., frequently met within Auschwitz, and Mildner often attended the trial of such persons, who usually were executed in Auschwitz following their sentence. I showed Mildner throughout the extermination plant at Auschwitz and he was directly interested in it since he had to send the Jews from his territory for execution at Auschwitz.

I understand English as it is written above. The above statements are true; this declaration is made by me voluntarily and without compulsion; after reading over the statement, I have signed and executed the same at Nurnberg, Germany on the fifth day of April 1946.

Truman on Truman Doctrine

Date: March 12, 1947

In this speech, U.S. President Harry S. Truman asks Congress for support of an aid program to both Greece and Turkey. The document represents a turning point in several ways. It marks the shift away from British hegemony in the region to American influence. Even more striking, it represents the open admission of a state of conflict between the United States and the Soviet-supported communist insurgents in the region. Thus the Truman Doctrine announced in this speech represents one of the first indications of the cold war that existed between the two superpowers for approximately 40 years, from the 1940s to the late 1980s.

President Harry S. Truman's Address before a Joint Session of Congress, March 12, 1947

Mr. President, Mr. Speaker, Members of the Congress of the United States:

The gravity of the situation which confronts the world today necessitates my appearance before a joint session of the Congress. The foreign policy and the national security of this country are involved.

One aspect of the present situation, which I wish to present to you at this time for your consideration and decision, concerns Greece and Turkey.

The United States has received from the Greek Government an urgent appeal for financial and economic assistance. Preliminary reports from the American Economic Mission now in Greece and reports from the American Ambassador in Greece corroborate the statement of the Greek Government that assistance is imperative if Greece is to survive as a free nation.

I do not believe that the American people and the Congress wish to turn a deaf ear to the appeal of the Greek Government.

Greece is not a rich country. Lack of sufficient natural resources has always forced the Greek people to work hard to make both ends meet. Since 1940, this industrious and peace loving country has suffered invasion, four years of cruel enemy occupation, and bitter internal strife.

When forces of liberation entered Greece they found that the retreating Germans had destroyed virtually all the railways, roads, port facilities, communications, and merchant marine. More than a thousand villages had been burned. Eighty-five per cent of the children were tubercular. Livestock, poultry, and draft animals had almost disappeared. Inflation had wiped out practically all savings.

As a result of these tragic conditions, a militant minority, exploiting human want and misery, was able to create political chaos which, until now, has made economic recovery impossible.

Greece is today without funds to finance the importation of those goods which are essential to bare subsistence. Under these circumstances the people of Greece cannot make progress in solving their problems of reconstruction. Greece is in desperate need of financial and economic assistance to enable it to resume purchases of food, clothing, fuel and seeds. These are indispensable for the subsistence of its people and are obtainable only from abroad. Greece must have help to import the goods necessary to restore internal order and security, so essential for economic and political recovery.

The Greek Government has also asked for the assistance of experienced American administrators, economists and technicians to insure that the financial and other aid given to Greece shall be used effectively in creating a stable and self-sustaining economy and in improving its public administration.

The very existence of the Greek state is today threatened by the terrorist activities of several thousand armed men, led by Communists, who defy the government's authority at a number of points, particularly along the northern boundaries. A Commission appointed by the United Nations security Council is at present investigating disturbed conditions in northern Greece and alleged border violations along the frontier between Greece on the one hand and Albania, Bulgaria, and Yugoslavia on the other.

Meanwhile, the Greek Government is unable to cope with the situation. The Greek army is small and poorly equipped. It needs supplies and equipment if it is to restore the authority of the government throughout Greek territory. Greece must have assistance if it is to become a self-supporting and self-respecting democracy.

The United States must supply that assistance. We have already extended to Greece certain types of relief and economic aid but these are inadequate.

There is no other country to which democratic Greece can turn.

No other nation is willing and able to provide the necessary support for a democratic Greek government.

The British Government, which has been helping Greece, can give no further financial or economic aid after March 31. Great Britain finds itself under the necessity of reducing or liquidating its commitments in several parts of the world, including Greece.

We have considered how the United Nations might assist in this crisis. But the situation is an urgent one requiring immediate action and the United Nations and its related organizations are not in a position to extend help of the kind that is required.

It is important to note that the Greek Government has asked for our aid in utilizing effectively the financial and other assistance we may give to Greece, and in improving its public administration. It is of the utmost importance that we supervise the use of any funds made available to Greece; in such a manner that each dollar spent will count toward making Greece self-supporting, and will help to build an economy in which a healthy democracy can flourish.

No government is perfect. One of the chief virtues of a democracy, however, is that its defects are always visible and under democratic processes can be pointed out and corrected. The Government of Greece is not perfect. Nevertheless it represents eighty-five per cent of the members of the Greek Parliament who were chosen in an election last year. Foreign observers, including 692 Americans, considered this election to be a fair expression of the views of the Greek people.

The Greek Government has been operating in an atmosphere of chaos and extremism. It has made mistakes. The extension of aid by this country does not mean that the United States condones everything that the Greek Government has done or will do. We have condemned in the past, and we condemn now, extremist measures of the right or the left. We have in the past advised tolerance, and we advise tolerance now.

Greece's neighbor, Turkey, also deserves our attention.

The future of Turkey as an independent and economically sound state is clearly no less important to the freedom-loving peoples of the world than the future of Greece. The circumstances in which Turkey finds itself today are considerably different from those of Greece. Turkey has been spared the disasters that have beset Greece. And during the war, the United States and Great Britain furnished Turkey with material aid.

Nevertheless, Turkey now needs our support.

Since the war Turkey has sought financial assistance from Great Britain and the United States for the purpose of effecting that modernization necessary for the maintenance of its national integrity.

That integrity is essential to the preservation of order in the Middle East.

The British government has informed us that, owing to its own difficulties can no longer extend financial or economic aid to Turkey.

As in the case of Greece, if Turkey is to have the assistance it needs, the United States must supply it. We are the only country able to provide that help.

I am fully aware of the broad implications involved if the United States extends assistance to Greece and Turkey, and I shall discuss these implications with you at this time.

One of the primary objectives of the foreign policy of the United States is the creation of conditions in which we and other nations will be able to work out a way of life free from coercion. This was a fundamental issue in the war with Germany and Japan. Our victory was won over countries which sought to impose their will, and their way of life, upon other nations.

To ensure the peaceful development of nations, free from coercion, the United States has taken a leading part in establishing the United Nations. The United Nations is designed to make possible lasting freedom and independence for all its members. We shall not realize our objectives, however, unless we are willing to help free peoples to maintain their free institutions and their national integrity against aggressive movements that seek to impose upon them totalitarian regimes. This is no more than a frank recognition that totalitarian regimes imposed on free peoples, by direct or indirect aggression, undermine the foundations of international peace and hence the security of the United States.

The peoples of a number of countries of the world have recently had totalitarian regimes forced upon them against their will. The Government of the United States has made frequent protests against coercion and intimidation, in violation of the Yalta agreement, in Poland, Rumania, and Bulgaria. I must also state that in a number of other countries there have been similar developments.

At the present moment in world history nearly every nation must choose between alternative ways of life. The choice is too often not a free one.

One way of life is based upon the will of the majority, and is distinguished by free institutions, representative government, free elections, guarantees of individual liberty, freedom of speech and religion, and freedom from political oppression.

The second way of life is based upon the will of a minority forcibly imposed upon the majority. It relies upon terror and oppression, a controlled press and radio; fixed elections, and the suppression of personal freedoms.

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

I believe that we must assist free peoples to work out their own destinies in their own way.

I believe that our help should be primarily through economic and financial aid which is essential to economic stability and orderly political processes.

The world is not static, and the status quo is not sacred. But we cannot allow changes in the status quo in violation of the Charter of the United Nations by such methods as coercion, or by such subterfuges as political infiltration. In helping free and independent nations to maintain their freedom, the United States will be giving effect to the principles of the Charter of the United Nations.

It is necessary only to glance at a map to realize that the survival and integrity of the Greek nation are of grave importance in a much wider situation. If Greece should fall under the control of an armed minority, the effect upon its neighbor, Turkey, would be immediate and serious. Confusion and disorder might well spread throughout the entire Middle East.

Moreover, the disappearance of Greece as an independent state would have a profound effect upon those countries in Europe whose peoples are struggling against great difficulties to maintain their freedoms and their independence while they repair the damages of war.

It would be an unspeakable tragedy if these countries, which have struggled so long against overwhelming odds, should lose that victory for which they sacrificed so much. Collapse of free institutions and loss of independence would be disastrous not only for them but for the world. Discouragement and possibly failure would quickly be the lot of neighboring peoples striving to maintain their freedom and independence.

Should we fail to aid Greece and Turkey in this fateful hour, the effect will be far reaching to the West as well as to the East.

We must take immediate and resolute action.

I therefore ask the Congress to provide authority for assistance to Greece and Turkey in the amount of \$400,000,000 for the period ending June 30, 1948. In requesting these funds, I have taken into consideration the maximum amount of relief assistance which would be furnished to Greece out of the \$350,000,000 which I recently requested that the Congress authorize for the prevention of starvation and suffering in countries devastated by the war.

In addition to funds, I ask the Congress to authorize the detail of American civilian and military personnel to Greece and Turkey, at the request of those countries, to assist in the tasks of reconstruction, and for the purpose of supervising the use of such financial and material assistance as may be furnished. I recommend that authority also be provided for the instruction and training of selected Greek and Turkish personnel.

Finally, I ask that the Congress provide authority which will permit the speediest and most effective use, in terms of needed commodities, supplies, and equipment, of such funds as may be authorized.

If further funds, or further authority, should be needed for purposes indicated in this message, I shall not hesitate to bring the situation before the Congress. On this subject the Executive and Legislative branches of the Government must work together.

This is a serious course upon which we embark.

I would not recommend it except that the alternative is much more serious. The United States contributed \$341,000,000 toward winning World War II. This is an investment in world freedom and world peace.

The assistance that I am recommending for Greece and Turkey amounts to little more than 1 tenth of 1 per cent of this investment. It is only common sense that we should safeguard this investment and make sure that it was not in vain.

The seeds of totalitarian regimes are nurtured by misery and want. They spread and grow in the evil soil of poverty and strife. They reach their full growth when the hope of a people for a better life has died. We must keep that hope alive.

The free peoples of the world look to us for support in maintaining their freedoms.

If we falter in our leadership, we may endanger the peace of the world—and we shall surely endanger the welfare of our own nation.

Great responsibilities have been placed upon us by the swift movement of events.

I am confident that the Congress will face these responsibilities squarely.

The UN Universal Declaration of Human Rights

Date: December 10, 1948

The first section of an International Bill of Human Rights was adopted (by a vote of 48 to 0) and announced by the United Nations General Assembly in Paris on December 10, 1948. Nine members (the Soviet Bloc countries, Saudi Arabia, and South Africa) abstained. Eleanor Roosevelt, chairman of the UN Commission on Human Rights, was instrumental in the drafting of the Declaration of Human Rights, one of the most authoritative documents in world history to have addressed the spectrum of human rights. The significance of its impact on the nations of the world may be compared to what the Bill of Rights and the Constitution represent to the United States. The declaration proclaimed fundamental freedoms and rights as a "common standard of achievement for all peoples and all nations," and the United Nations secretary-general was

requested to have it disseminated all over the world in various languages. Its 30 articles took the Commission on Human Rights nearly three years to draft. In 1948 the commission began preparing the other two sections of the International Bill of Human Rights—a Convention of Human Rights and its implementation policies. In 1948 the General Assembly also adopted a Convention on the Prevention and Punishment of the Crime of Genocide.

PREAMBLE

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law,

Whereas it is essential to promote the development of friendly relations between nations,

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom,

Whereas Member States have pledged themselves to achieve, in co-operation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms,

Whereas a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge,

Now, Therefore THE GENERAL ASSEMBLY proclaims THIS UNIVERSAL DECLARATION OF HUMAN RIGHTS as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

Article 1. All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article 2. Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

Article 3. Everyone has the right to life, liberty and security of person.

Article 4. No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

Article 5. No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

Article 6. Everyone has the right to recognition everywhere as a person before the law.

Article 7. All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

Article 8. Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

Article 9. No one shall be subjected to arbitrary arrest, detention or exile.

Article 10. Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

Article 11. (1) Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defence.

(2) No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offence was committed.

Article 12. No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

Article 13. (1) Everyone has the right to freedom of movement and residence within the borders of each state.

(2) Everyone has the right to leave any country, including his own, and to return to his country.

Article 14. (1) Everyone has the right to seek and to enjoy in other countries asylum from persecution.

(2) This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

Article 15. (1) Everyone has the right to a nationality.

(2) No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

Article 16. (1) Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

(2) Marriage shall be entered into only with the free and full consent of the intending spouses.

(3) The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

Article 17. (1) Everyone has the right to own property alone as well as in association with others.

(2) No one shall be arbitrarily deprived of his property.

Article 18. Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

Article 19. Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

Article 20. (1) Everyone has the right to freedom of peaceful assembly and association.

(2) No one may be compelled to belong to an association.

Article 21. (1) Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.

(2) Everyone has the right of equal access to public service in his country.

(3) The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

Article 22. Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

Article 23. (1) Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.

(2) Everyone, without any discrimination, has the right to equal pay for equal work.

(3) Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.

(4) Everyone has the right to form and to join trade unions for the protection of his interests.

Article 24. Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

Article 25. (1) Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.

(2) Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

Article 26. (1) Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.

(2) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.

(3) Parents have a prior right to choose the kind of education that shall be given to their children.

Article 27. (1) Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.

(2) Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Article 28. Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

Article 29. (1) Everyone has duties to the community in which alone the free and full development of his personality is possible.

(2) In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

(3) These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

Article 30. Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

Mao Zedong (Mao Tse-tung): The Chinese People Have Stood Up

Also known as: MaoTse-tung

Date: September 21, 1949

Mao Zedong attended college in Beijing and was exposed to Marxism. Mao quickly embraced the philosophy, and in 1921 he helped to found the Chinese Communist Party (CCP). At that time China was being united by Nationalist forces under President Sun Yat-sen and Chiang Kai-shek. The Communists joined them in an unlikely coalition to fight various warlords, until 1927, when Nationalist forces under Chiang suddenly turned and attacked their allies. Mao and his cohorts fled into the interior, where they established the Kiangsi Soviet. Here Mao honed his revolutionary beliefs, which were very different from the industrial proletariat ideals espoused by Vladimir Lenin. Mao originated the idea of a revolutionary peasantry, based in the countryside and not in the city, which would spearhead and perpetuate a communist revolution. In 1934 Nationalist forces drove Mao's guerrillas from their mountain stronghold in Jiangxi (Kiangsi) Province into what became the epic 6,000-mile "Long March" to distant Shaanxi Province. They were spared

annihilation when the Japanese attacked China in 1937. Over the next eight years Mao consolidated his stronghold and established friendly contacts with the peasantry, who provided the bulk of his support. And by deliberately fighting the invaders instead of simply defending the interior like the Nationalists, the Communists gained both military expertise and broad popular appeal. World War II ended in 1945, but the following year Mao precipitated the Chinese civil war against Chiang's Nationalists, which ended four years later in a Communist victory. On October 1, 1949, Mao proclaimed the creation of the People's Republic of China, with himself as chairman and Zhou Enlai (Chou En-lai) as premier. Against great odds the theory of revolutionary peasantry had triumphed.

The Chinese People Have Stood Up!

Opening address at the First Plenary Session of the Chinese People's Political Consultative Conference.

Fellow Delegates,

The Political Consultative Conference so eagerly awaited by the whole nation is herewith inaugurated.

Our conference is composed of more than six hundred delegates, representing all the democratic parties and people's organizations of China, the People's Liberation Army, the various regions and nationalities of the country and the overseas Chinese. This shows that ours is a conference embodying the great unity of the people of the whole country.

It is because we have defeated the reactionary Kuomintang government backed by U.S. imperialism that this great unity of the whole people has been achieved. In a little more than three years the heroic Chinese People's Liberation Army, an army such as the world has seldom seen, crushed all the offensives launched by the several million troops of the U.S.-supported reactionary Kuomintang government and turned to the counter-offensive and the offensive. At present the field armies of the People's Liberation Army, several million strong, have pushed the war to areas near Taiwan, Kwangtung, Kwangsi, Kweichow, Szechuan and Sinkiang, and the great majority of the Chinese people have won liberation. In a little more than three years the people of the whole country have closed their ranks, rallied to support the People's Liberation Army, fought the enemy and won basic victory. And it is on this foundation that the present People's Political Consultative Conference is convened.

Our conference is called the Political Consultative Conference because some three years ago we held a Political Consultative Conference with Chiang Kai-shek's Kuomintang. The results of that conference were sabotaged by Chiang Kai-shek's Kuomintang and its accomplices; nevertheless the conference left an indelible impression on the people. It showed that nothing in the interest of the people could be accomplished together with Chiang Kai-shek's Kuomintang, the running dog of imperialism, and its accomplices. Even when resolutions were reluctantly adopted, it was of no avail, for as soon as the time was ripe, they tore them up and started a ruthless war against the people. The only gain from that conference was the profound lesson it taught the people that there is absolutely no room for compromise with Chiang Kai-shek's Kuomintang, the running dog of imperialism, and its accomplice—overthrow these enemies or be oppressed and slaughtered by them, either one or the other, there is no other choice. In a little more than three years the Chinese people, led by the Chinese Communist Party, have quickly awakened and organized themselves into a nation-wide united front against imperialism, feudalism, bureaucrat-capitalism and their general representative, the reactionary Kuomintang government, supported the People's War of Liberation, basically defeated the reactionary Kuomintang government, overthrown the rule of imperialism in China and restored the Political Consultative Conference.

The present Chinese People's Political Consultative Conference is convened on an entirely new foundation; it is representative of the people of the whole country and enjoys their trust and support. Therefore, the conference proclaims that it will exercise the functions and powers of a National People's Congress. In accordance with its agenda, the conference will enact the Organic Law of the Chinese People's Political Consultative Conference, the Organic Law of the Central People's Government of the People's Republic of China and the Common Programme of the Chinese People's Political Consultative Conference; it will elect the National Committee of the Chinese People's Political Consultative Conference and the Central People's Government Council of the People's Republic of China; it will adopt the national flag and national emblem of the People's Republic of China; and it will decide on the seat of the capital of the People's Republic of China and adopt the chronological system in use in most countries of the world.

Fellow Delegates, we are all convinced that our work will go down in the history of mankind, demonstrating that the Chinese people, comprising one quarter of humanity, have now stood up. The Chinese have always been a great, courageous and industrious nation; it is only in modern times that they have fallen behind. And that was due entirely to oppression and exploitation by foreign imperialism and domestic reactionary governments. For over a century our forefathers never stopped waging unyielding struggles against domestic and foreign oppressors, including the Revolution of 1911 led by Dr. Sun Yat-sen, our great forerunner in the Chinese revolution. Our forefathers enjoined us to carry out their unfulfilled will. And we have

acted accordingly. We have closed our ranks and defeated both domestic and foreign oppressors through the People's War of Liberation and the great people's revolution, and now we are proclaiming the founding of the People's Republic of China. From now on our nation will belong to the community of the peace-loving and freedom-loving nations of the world and work courageously and industriously to foster its own civilization and well-being and at the same time to promote world peace and freedom. Ours will no longer be a nation subject to insult and humiliation. We have stood up. Our revolution has won the sympathy and acclaim of the people of all countries. We have friends all over the world.

Our revolutionary work is not completed, the People's War of Liberation and the people's revolutionary movement are still forging ahead and we must keep up our efforts. The imperialists and the domestic reactionaries will certainly not take their defeat lying down; they will fight to the last ditch. After there is peace and order throughout the country, they are sure to engage in sabotage and create disturbances by one means or another and every day and every minute they will try to stage a come-back. This is inevitable and beyond all doubt, and under no circumstances must we relax our vigilance.

Our state system, the people's democratic dictatorship, is a powerful weapon for safeguarding the fruits of victory of the people's revolution and for thwarting the plots of domestic and foreign enemies for restoration, and this weapon we must firmly grasp. Internationally, we must unite with all peace-loving and freedom-loving countries and peoples, and first of all with the Soviet Union and the New Democracies, so that we shall not stand alone in our struggle to safeguard these fruits of victory and to thwart the plots of domestic and foreign enemies for restoration. As long as we persist in the people's democratic dictatorship and unite with our foreign friends, we shall always be victorious.

The people's democratic dictatorship and solidarity with our foreign friends will enable us to accomplish our work of construction rapidly. We are already confronted with the task of nation-wide economic construction. We have very favourable conditions: a population of 475 million people and a territory of 9,600,000 square kilometres. There are indeed difficulties ahead, and a great many too. But we firmly believe that by heroic struggle the people of the country will surmount them all. The Chinese people have rich experience in overcoming difficulties. If our forefathers, and we also, could weather long years of extreme difficulty and defeat powerful domestic and foreign reactionaries, why can't we now, after victory, build a prosperous and flourishing country? As long as we keep to our style of plain living and hard struggle, as long as we stand united and as long as we persist in the people's democratic dictatorship and unite with our foreign friends, we shall be able to win speedy victory on the economic front.

An upsurge in economic construction is bound to be followed by an upsurge of construction in the cultural sphere. The era in which the Chinese people were regarded as uncivilized is now ended. We shall emerge in the world as a nation with an advanced culture.

Our national defense will be consolidated and no imperialists will ever again be allowed to invade our land. Our people's armed forces must be maintained and developed with the heroic and steeled People's Liberation Army as the foundation. We will have not only a powerful army but also a powerful air force and a powerful navy.

Let the domestic and foreign reactionaries tremble before us! Let them say we are no good at this and no good at that. By our own indomitable efforts we the Chinese people will unswervingly reach our goal.

The heroes of the people who laid down their lives in the People's War of Liberation and the people's revolution shall live forever in our memory!

Hail the victory of the People's War of Liberation and the people's revolution!

Hail the founding of the People's Republic of China!

Hail the triumph of the Chinese People's Political Consultative Conference!

Simone de Beauvoir: *The Second Sex*

Also known as: *Le Deuxième Sexe*

Date: October 28, 1949

Simone de Beauvoir's existentialist and feminist ideas led her to author many books. In The Second Sex (1949) she undermines the notion that women's lives are tied irrevocably to their maternal function by declaring that it is society that has made women think this. The book's title is a reference to the idea that women throughout history have been defined as the "other" sex.

Beauvoir wrote The Second Sex in part to discover the extent to which the course of her own life was determined by the fact that she was born female instead of male. Using her life as a springboard, she goes on to analyze women's roles in society through mythology, political theory, history, and psychology. Her conclusion, stated in the introduction to the section on childhood, is that "A person is not born a woman, a person becomes one." In other words, while an individual may be born female, it is the society in which one lives—through parents, schools, churches, and other social institutions—that turns the female person into a woman. She advises women to pursue interests beyond the home and family, because, in her view, marriage and motherhood render women into "relative beings," that is, individuals whose lives are dependent upon their relationship to others, not upon themselves.

This is an excerpt from part 2 of *The Second Sex*.

On the Master-Slave Relation

Certain passages in the argument employed by Hegel in defining the relation of master to slave apply much better to the relation of man to woman. The advantage of the master, he says, comes from his affirmation of Spirit as against Life through the fact that he risks his own life; but in fact the conquered slave has known this same risk. Whereas woman is basically an existent who gives Life and does not risk her life, between her and the male there has been no combat. Hegel's definition would seem to apply especially well to her. He says: 'The other consciousness is the dependent consciousness for whom the essential reality is the animal type of life; that is to say, a mode of living bestowed by another entity.' But this relation is to be distinguished from the relation of subjugation because woman also aspires to and recognizes the values that are concretely attained by the male. He it is who opens up the future to which she also reaches out. In truth women have never set up female values in opposition to male values; it is man who, desirous of maintaining masculine prerogatives, has invented that divergence. Men have presumed to create a feminine domain – the kingdom of life, of immanence—only in order to lock up women therein. But it is regardless of sex that the existent seeks self-justification through transcendence – the very submission of women is proof of that statement. What they demand today is to be recognized as existents by the same right as men and not to subordinate existence to life, the human being to its animality.

An existentialist perspective has enabled us, then, to understand how the biological and economic condition of the primitive horde must have led to male supremacy. The female, to a greater extent than the male, is the prey of the species; and the human race has always sought to escape its specific destiny. The support of life became for man an activity and a project through the invention of the tool; but in maternity woman remained closely bound to her body, like an animal. It is because humanity calls itself in question in the matter of living—that is to say, values the reasons for living above mere life—that, confronting woman, man assumes mastery. Man's design is not to repeat himself in time: it is to take control of the instant and mould the future. It is male activity that in creating values has made of existence itself a value; this activity has prevailed over the confused forces of life; it has subdued Nature and Woman. We must now see how this situation has been perpetuated and how it has evolved through the ages. What place has humanity made for this portion of itself which, while included within it, is defined as the Other? What rights have been conceded to it? How have men defined it?

The Freedom Charter

Date: June 26, 1955

This document, adopted at the Congress of the People at Kliptown, South Africa, on June 26, 1955, established a vision for an alternative to the apartheid-based society that predominated in South Africa.

Originally suggested at the Congress of the African National Congress (ANC) in 1953, the idea of creating a statement of fundamental principles for a new South Africa was quickly accepted by the ANC's key allies, the South African Indian Congress, the South African Coloured People's Organization, and the South African Congress of Democrats. Over the next several years key principles and statements were worked out.

On June 25 and 26, 1955, the Congress of the People met in Kliptown, near Johannesburg. The points of the charter were read aloud and approved by acclamation. As a sign of the difficulties ahead, at the end of the meeting, heavily armed police officers arrived on the scene, and alleging that treason was probably being undertaken, they took the names of the almost 3,000 delegates and ordered them to leave. In this way, at the same time that the announcement of the charter ushered in a vision of a new future for South Africa, the police response indicated the obstacles and tactics that would have to be overcome in order to achieve that future.

We, the People of South Africa, declare for all our country and the world to know:

that South Africa belongs to all who live in it, black and white, and that no government can justly claim authority unless it is based on the will of all the people;

that our people have been robbed of their birthright to land, liberty and peace by a form of government founded on injustice and inequality;

that our country will never be prosperous or free until all our people live in brotherhood, enjoying equal rights and opportunities;

that only a democratic state, based on the will of all the people, can secure to all their birthright without distinction of colour, race, sex or belief;

And therefore, we, the people of South Africa, black and white together equals, countrymen and brothers adopt this Freedom Charter;

And we pledge ourselves to strive together, sparing neither strength nor courage, until the democratic changes here set out have been won.

The People Shall Govern!

Every man and woman shall have the right to vote for and to stand as a candidate for all bodies which make laws;

All people shall be entitled to take part in the administration of the country;

The rights of the people shall be the same, regardless of race, colour or sex;

All bodies of minority rule, advisory boards, councils and authorities shall be replaced by democratic organs of self-government.

All National Groups Shall have Equal Rights!

There shall be equal status in the bodies of state, in the courts and in the schools for all national groups and races;

All people shall have equal right to use their own languages, and to develop their own folk culture and customs;

All national groups shall be protected by law against insults to their race and national pride;

The preaching and practice of national, race or colour discrimination and contempt shall be a punishable crime;

All apartheid laws and practices shall be set aside.

The People Shall Share in the Country's Wealth!

The national wealth of our country, the heritage of South Africans, shall be restored to the people;

The mineral wealth beneath the soil, the Banks and monopoly industry shall be transferred to the ownership of the people as a whole;

All other industry and trade shall be controlled to assist the wellbeing of the people;

All people shall have equal rights to trade where they choose, to manufacture and to enter all trades, crafts and professions.

The Land Shall be Shared Among Those Who Work It!

Restrictions of land ownership on a racial basis shall be ended, and all the land re-divided amongst those who work it to banish famine and land hunger;

The state shall help the peasants with implements, seed, tractors and dams to save the soil and assist the tillers;

Freedom of movement shall be guaranteed to all who work on the land;

All shall have the right to occupy land wherever they choose;

People shall not be robbed of their cattle, and forced labour and farm prisons shall be abolished.

All Shall be Equal Before the Law!

No-one shall be imprisoned, deported or restricted without a fair trial; No-one shall be condemned by the order of any Government official;

The courts shall be representative of all the people;

Imprisonment shall be only for serious crimes against the people, and shall aim at re-education, not vengeance;

The police force and army shall be open to all on an equal basis and shall be the helpers and protectors of the people;

All laws which discriminate on grounds of race, colour or belief shall be repealed.

All Shall Enjoy Equal Human Rights!

The law shall guarantee to all their right to speak, to organise, to meet together, to publish, to preach, to worship and to educate their children;

The privacy of the house from police raids shall be protected by law;

All shall be free to travel without restriction from countryside to town, from province to province, and from South Africa abroad;

Pass Laws, permits and all other laws restricting these freedoms shall be abolished.

There Shall be Work and Security!

All who work shall be free to form trade unions, to elect their officers and to make wage agreements with their employers;

The state shall recognise the right and duty of all to work, and to draw full unemployment benefits;

Men and women of all races shall receive equal pay for equal work;

There shall be a forty-hour working week, a national minimum wage, paid annual leave, and sick leave for all workers, and maternity leave on full pay for all working mothers;

Miners, domestic workers, farm workers and civil servants shall have the same rights as all others who work;

Child labour, compound labour, the tot system and contract labour shall be abolished.

The Doors of Learning and Culture Shall be Opened!

The government shall discover, develop and encourage national talent for the enhancement of our cultural life;

All the cultural treasures of mankind shall be open to all, by free exchange of books, ideas and contact with other lands;

The aim of education shall be to teach the youth to love their people and their culture, to honour human brotherhood, liberty and peace;

Education shall be free, compulsory, universal and equal for all children; Higher education and technical training shall be opened to all by means of state allowances and scholarships awarded on the basis of merit;

Adult illiteracy shall be ended by a mass state education plan;

Teachers shall have all the rights of other citizens;

The colour bar in cultural life, in sport and in education shall be abolished.

There Shall be Houses, Security and Comfort!

All people shall have the right to live where they choose, be decently housed, and to bring up their families in comfort and security;

Unused housing space to be made available to the people;

Rent and prices shall be lowered, food plentiful and no-one shall go hungry;

A preventive health scheme shall be run by the state;

Free medical care and hospitalisation shall be provided for all, with special care for mothers and young children;

Slums shall be demolished, and new suburbs built where all have transport, roads, lighting, playing fields, creches and social centres;

The aged, the orphans, the disabled and the sick shall be cared for by the state;

Rest, leisure and recreation shall be the right of all;

Fenced locations and ghettos shall be abolished, and laws which break up families shall be repealed.

There Shall be Peace and Friendship!

South Africa shall be a fully independent state which respects the rights and sovereignty of all nations; South Africa shall strive to maintain world peace and the settlement of all international disputes by negotiation—not war;

Peace and friendship amongst all our people shall be secured by upholding the equal rights, opportunities and status of all;

The people of the protectorates Basutoland, Bechuanaland and Swaziland shall be free to decide for themselves their own future;

The right of all peoples of Africa to independence and self-government shall be recognised, and shall be the basis of close co-operation.

Let all people who love their people and their country now say, as we say here:

These Freedoms We Will Fight For, Side By Side, Throughout Our Lives, Until We Have Won Our Liberty.

Let Flowers of Many Kinds Blossom

Also Known as: Let One Hundred Flowers Bloom

Date: May 26, 1956

In this speech delivered by Lu Ting-yi, director of the Propaganda Department of the Central Committee of the Chinese Communist Party, on the party's Policy on Art, Literature, and Science, May 26, 1956, the regime of Mao Zedong urged the Chinese people to give free expression to a wide variety of ideas. However, soon after the period of freedom, the Cultural Revolution suppressed dissent throughout China. In this speech, Lu Ting-yi makes clear that freedom of expression is not to extend to counterrevolutionary elements, such as the bourgeoisie.

The following is an excerpt from the original document.

Mr. Kuo Mo-jo, President of the Chinese Academy of Sciences and Chairman of the All-China Federation of Literary and Art Circles, has asked me to speak on the policy of the Chinese Communist Party on the work of artists, writers and scientists.

To artists and writers, we say, "Let flowers of many kinds blossom." To scientists we say, "Let diverse schools of thought contend." This is the policy of the Chinese Communist Party. It was announced by Chairman Mao Tse-tung at the Supreme State Conference. . . .

If we want our country to be prosperous and strong, we must, besides consolidating the people's state power, developing our economy and education and strengthening our national defense, have a flourishing art, literature and science. That is essential.

If we want art, literature and science to flourish, we must apply a policy of letting flowers of many kinds blossom, letting diverse schools of thought contend. . . .

"Letting flowers of many kinds blossom, diverse schools of thought contend" means that we stand for freedom of independent thinking, of debate, of creative work; freedom to criticize and freedom to express, maintain and reserve one's opinions on questions of art, literature or scientific research.

The freedom we uphold is not the same as that based on the type of democracy advocated by the bourgeoisie. The freedom advocated by the bourgeoisie really means freedom for only a minority, with little or no freedom for the working people. The bourgeoisie exercises a dictatorship over the working people. Jingos in the United States bellow about the "free world"—a free world in which jingos and reactionaries have all the freedom and every freedom, while the Rosenbergs are put to death because they stand for peace. We, on the contrary, hold that there must be democratic liberties among the people, but that no freedom should be extended to counter-revolutionaries: for them we have only dictatorship. This is a question of drawing a political demarcation line. A clear political line must be drawn between friend and foe.

"Let flowers of many kinds blossom, diverse schools of thought contend": that means freedom among the people. And we urge that, as the people's political power becomes progressively consolidated, such freedom should be given ever fuller scope.

Among the people there are points of agreement and points of difference. Our country has a constitution and it is a public duty to abide by it—this is an agreement among the people. That is to say, the people agree among

themselves that they should love their country and support socialism. But there are other matters on which they do not agree with one another. In ideology there is the difference between materialism and idealism. . . .

Members of the Communist Party are dialectical materialists. We Communists of course stand for materialism and against idealism—nothing can change that. But, precisely because we are dialectical materialists and understand the laws governing the development of society, we hold that a strict distinction must be made between the battle of ideas among the people and the struggle against counter-revolutionaries. Among the people themselves there is freedom not only to spread materialism but also to propagate idealism. Provided he is not a counter-revolutionary, everyone is free to expound materialism or idealism. There is also freedom of debate between the two. This is a struggle between conflicting ideas among the people, but that is quite different from the struggle against counter-revolutionaries. We must suppress and put an end to the activities of counter-revolutionaries. We also have to wage a struggle against backward, idealist ways of thinking among the people. The latter struggle can be quite sharp, too; but we embark on it with the intention of strengthening unity, ending backwardness and creating an ever closer unity among the people. When it comes to questions of ideas, administrative measures will get us nowhere. Only, through open debate can materialism gradually conquer idealism.

There will be diverse opinions, too, on matters of a purely, artistic, academic or technological nature. This is, of course, quite all right. In matters of this sort, there is freedom to voice different opinions, to criticize, counter-criticize and debate.

In short, we hold that while it is necessary to draw a clear political line between friend and foe, we must have freedom among the people. . . .

Let flowers of many kinds blossom, diverse schools of thought contend: that is a policy to mobilize all the positive elements. It is also, therefore, a policy that will in the end strengthen unity.

On what basis are we to unite? On the basis of patriotism and socialism.

What do we unite for? To build a new, socialist China and combat our enemies both at home and abroad.

There are two kinds of unity: one is built on mechanical obedience and the other on our own conscious, free will. What we want is the latter.

Are those engaged in art, literature and science united? Yes, they are. Compare the situation in the days when the Chinese People's Republic was just founded with what we have now and you find we now have a far closer unity among artists, writers and scientists. This has come about as a result of our work for social reforms and changes in our ways of thought. It would be wrong to deny or ignore this. But even so, we cannot say that our unity is all it should be: there is still room for improvement.

In what respect? Well, first and foremost, some Communist Party members have forgotten Comrade Mao Tse-tung's warning about the evils of sectarianism. Success turns some people's heads and they get swelled-headed and sectarian. . . .

As everyone knows, in the past few years we have fought a series of battles in the Party against sectarianism in artistic, literary and scientific circles. We have waged this struggle in organizations dealing with public health and research in the natural sciences, in literature and art, and in the social sciences. We shall go on waging this struggle and we call on all Party members working in these fields to make an end of this sectarianism. . . .

Finish with sectarianism and unite with all who are ready to co-operate, all who possibly can co-operate with us. Put aside the desire to monopolize things. Get rid of unreasonable rules and commandments, and apply the policy of letting flowers of many kinds blossom, letting diverse schools of thought contend. Do not think only of the interests of your own department; try to give more help to others and to other departments. Don't be self-conceited and cocksure. Be modest and discreet and respect others. That is how to rid themselves of the shortcomings which have marred our work in building up unity; that is how to strengthen our unity to the utmost. . . .

In regard to criticism, our policy of letting flowers of many kinds blossom, diverse schools of thought contend means freedom to criticize and freedom to counter-criticize. . . .

There are two kinds of criticism. One is criticism directed against the enemy—what people call criticism that “kills at a blow,” criticism with no holds barred. The other is criticism directed against the honestly mistaken—well-meant, comradely criticism, made in the cause of unity, intended to achieve unity through struggle. In making this kind of criticism, one must always bear the whole situation in mind. The critic should rely on reasoning, and his aim should be to help others. . . .

It is quite common for people to make mistakes in all innocence. There is no such person as a man who never makes mistakes. We must make a sharp distinction between mistakes like this and statements consciously directed against the revolution. Criticism of such mistakes must only be made for the good of others; it must be cool-headed criticism, well reasoned. In making it, we must bear the whole situation in mind and act in a spirit of unity, with the intention of achieving unity. We must do all we can to help those who have made mistakes correct them, and those criticized should have no apprehensions about being criticized.

It is easy to make mistakes. But mistakes should be rectified immediately, the sooner the better. It is sticking to one's mistakes that does the harm. As far as being criticized is concerned, one should stick to what is right, and dissent if others are wrong in their criticism. But if the other party is right you must rectify your mistakes and humbly accept others' criticism. To admit a mistake frankly, to root out the causes of it, to analyse the situation in which it was made and thoroughly discuss how to correct it is, as far as a political

party is concerned, the hallmark of a mature party. As far as the individual is concerned, it is the hallmark of a realist. To accept criticism when one has made a mistake is to accept the help of others. Besides helping the person concerned, that also helps the progress of science, art and literature in our country; and there is certainly nothing wrong with that!

As regards study in general, we must continue to see to it that the study of Marxism-Leninism is organized on a voluntary basis. At the same time, we must acquire a broad range of general knowledge; we must critically study things both past and present, things at home and from abroad, and critically learn from both friends and foes.

Marxism-Leninism is being enthusiastically studied by most of our intellectuals. That is a good thing. The scientific theories of Marx and Lenin are the cream of human knowledge, truth that is everywhere applicable. Once there were people who thought that Marxism-Leninism was not applicable in China; but such ideas have been proved sheer nonsense. Without scientific Marxist-Leninist theory to guide us, it is unthinkable that the revolution could have been victorious in China. It is also unthinkable that we could have achieved the tremendous successes and made the rapid progress that we have in construction and in scientific and cultural work. . . .

As they conic from the people things are often not systematically developed or are crude or lack theoretical explanation. Some of them have more than a bit of the “quack” about them, or a taint of the superstitious. There is nothing surprising about that. It is the duty of our scientists, artists and writers not to despise these things but to make a careful study of them, to select, cherish and foster the good in them, and, where necessary, put them on a scientific basis.

We must have our national pride, but we must not become national nihilists. We oppose that misguided attitude known as “wholesale Westernization.” But that does not mean that we can afford to be arrogant and refuse to learn good things from abroad. Our country is still a very backward one; we can make it prosperous and strong only by- doing our best to learn all we can from foreign countries. Under no circumstances is national arrogance justified.

We must learn from the Soviet Union, from the People’s Democracies, and from the peoples of all lands.

To learn from the Soviet Union—that is a correct watchword. We have already learnt a little, but much remains to be learnt. The Soviet Union is the world’s first socialist state, the leader of the world camp of peace and democracy. It has the highest rate of industrial development. It has a rich experience in socialist construction. In not a few important branches of science it has caught up with and surpassed the most advanced capitalist countries. It stands to reason that it is worth our while to learn from such a country and such a people. It is utterly wrong not to learn from the Soviet Union.

Nevertheless, in learning from the Soviet Union we must not mechanically copy everything in the Soviet Union in a doctrinaire way. We must make what we have learnt fit our actual conditions. That is a point we must pay attention to. Otherwise, we shall run into trouble. . . .

Apart from learning from our friends, we must see what we can learn from our enemies—not to learn what is reactionary in their systems but to study what is good in their methods of management or in their scientific techniques. Our aim in this is to speed the progress of our socialist construction, so as to build up our strength to ward off aggression and safeguard peace in Asia and throughout the world. . . .

Now that this policy—let flowers of many kinds blossom, diverse schools of thought contend”—has been put forward, many problems will crop up one after the other and demand solutions. I hope all of you will do some hard thinking on such questions. Today I have only touched upon some matters of principle, and anything I say is open to correction.

TASS on Eisenhower Doctrine

Date: January 14, 1957

In this official statement released by TASS, the Soviet news service, the Soviet Union condemns the announcement of the Eisenhower Doctrine, which in effect extended the Truman Doctrine from Greece and Turkey to the Arab countries of the Middle East. The Soviets interpreted Eisenhower’s extension of support for regimes in the area against Communist insurrection or invasion as a new form of colonialism, substituting American influence for that of Britain and France over the region.

The President of the United States of America, Mr. Dwight D. Eisenhower, on January 5 addressed a special message to Congress on the policy of the United States in the Middle East countries. In his message, which

abounds in anti-Soviet remarks, the President, describing the present situation in the Middle East as “critical,” demanded the authority to use the armed forces of the United States in the Middle East at any moment he might consider it necessary, without asking for the consent of Congress as is envisaged in the country’s Constitution. The President of the United States also demanded that he be empowered to render military and economic “aid” to the countries of the Middle East. It is envisaged, specifically, that 200 million dollars will be spent for “economic support” to countries of that area.

President Eisenhower’s message runs counter to the principles and the purposes of the United Nations and is fraught with grave danger to peace and security in the Middle East area. . . .

In his message to Congress the President of the United States speaks of the sympathy which, he claims, the United States entertains for the Arab countries. Life, however, shows that in actual fact the American ruling circles are setting themselves obviously selfish aims in that area. It is a fact that when Egypt, as a result of the military aggression of Britain, France and Israel, was threatened with the loss of her national independence, the United States refused to pool its efforts with the Soviet Union in the United Nations in order to take resolute measures to cut short the aggression. The primary concern of the United States was not the defense of peace and the national independence of the Arab countries, but the desire to take advantage of the weakening of Britain and France in the Middle East to capture their positions.

At present, when a favourable situation has developed in the Middle East and real possibilities for consolidating peace and settling outstanding issues in that area have been created, the government of the United States has come forward with a programme which envisages flagrant interference by the United States in the affairs of the Arab countries, up to and including military intervention. The aggressive trend of this programme and its colonialist nature with regard to the Arab countries are so obvious that this cannot be disguised by any nebulous phrases about the love for peace and the concern claimed to be shown by the United States for the Middle East countries.

It is permissible to ask: Of what love for peace do the authors of the “Eisenhower doctrine” speak when the threat to the security of the Middle East countries emanates precisely from member-states of N.A.T.O., in which the United States plays first fiddle? What concern for the aforementioned countries can be in question when it is the United States and its N.A.T.O. partners that regard those countries merely as sources of strategic raw materials and spheres for the investment of capital, with the object of extracting maximum profits? Is it not clear that the uninvited “protectors” of the Middle East countries are trying to impose on that area nothing else but the regime of a kind of military protectorate, and to set back the development of these countries for many years? . . .

The United States ruling circles consider that the weakening of the positions of the Anglo-French colonialists in the Middle East and the successes of the Arab countries in consolidating their independence have produced a “vacuum,” which they would like to fill by their military and economic intervention in the internal affairs of those countries. But what “vacuum” can be in question here? Since when do countries which have liberated themselves from colonial oppression and have taken the road of independent national development constitute a “vacuum”? It is clear that the strengthening of the national independence of the Arab countries, the intensification of their struggle against colonial oppression by no means create some kind of “vacuum,” but are a restoration of the national rights of the Middle East peoples and constitute a progressive factor in social development. The United States tries to present its policy as an anti-colonialist one. But it is not difficult to see the falseness of these assertions, clearly designed to blunt the vigilance of the peoples in the Middle East. The programme of the United States insistently stresses that the Middle East must recognize its interdependence with the western countries, that is, with the colonialists—specifically with regard to oil, the Suez Canal, etc. In other words, the United States is stubbornly seeking to impose a “trusteeship” of the colonialists on the peoples of the Middle East countries. . . .

The authors of the colonialist programme try to sweeten it by a promise of economic “aid” to the Middle East countries. Every intelligent person, however, understands that in reality the United States is offering as charity to the peoples of the Arab countries only a small fraction of what the American monopolies have received and are receiving by plundering, by exploiting the natural wealth belonging to those countries. The United States promises the countries of the Middle East 200 million dollars in the financial years of 1958 and 1959, whereas in 1955 alone the American and British oil monopolies extracted 150 million tons of oil in the Middle East at a total cost of 240 million dollars, and made a net profit of 1,900 million dollars on this oil. Such is the real picture of American “philanthropy.” . . .

Seeking to cover up gross intervention in the internal affairs of the Middle East countries and their aggressive policy with regard to these countries, the United States ruling circles resort to inventions about a threat to the Arab countries emanating from the Soviet Union. These slanderous assertions will deceive no one. The peoples of the Middle East have not forgotten that the Soviet Union has always defended the self-determination of peoples, the gaining and consolidating of their national independence. They have learned from experience that in relations with all countries the Soviet Union steadfastly pursues the policy of equality and non-interference in internal affairs. They also know very well that the Soviet Union is actively supporting the right of each people to dispose of its natural wealth and use it at its own discretion.

It was not the Soviet Union, but Britain and France—the United States’ chief partners in the North Atlantic bloc—which committed aggression against Egypt, inflicting great losses and suffering on the Egyptian people. This

is borne out by the fresh ruins of Port Said and other Egyptian cities, as well as by the new plans for United States economic, political and military expansion in the Middle East proclaimed by the American President. These aggressive plans of the American imperialists express their striving for world domination, of which they speak now quite shamelessly, presenting this aspiration as the need for “energetic leadership” of the world by the United States.

In the days of hard trials for the Arab peoples it was the Soviet Union, and no one else, who came out as their sincere friend and, together with the peace loving forces of the whole world, took steps to end the aggression against Egypt. All this is well known. . . .

It is well known that the Soviet Union, as distinct from the United States, does not have and does not seek to have any military bases or concessions in the Middle East with the object of extracting profits, does not strive to gain any privileges in that area, since all this is incompatible with the principles of Soviet foreign policy.

The Soviet Union is vitally interested in the maintenance of peace in the Middle East area, situated as it is in direct proximity to its frontiers. It is sincerely interested in consolidating the national independence of those countries and in their economic prosperity and regards this as a reliable guarantee of peace and security in that area.

In our age the national liberation movement of the peoples is a historical force that cannot be repressed.

The Soviet Union, loyal to the great Leninist principles of recognizing and respecting the rights of peoples, large and small, to independent development, regards as one of its prime tasks the rendering of every assistance and support to the countries fighting to consolidate their national independence and their sovereignty. That is why it welcomes the growing unity of the peoples of the Arab countries in their struggle for peace, security, national freedom and independence.

The Soviet Union opposes any manifestations of colonialism, any “doctrines” which protect and cover up colonialism. It is opposed to unequal treaties and agreements, the setting up of military bases on foreign territories, dictated by strategic considerations, and plans for establishing the world domination of imperialism. It proceeds from the premise that the natural wealth of the underdeveloped countries is the inalienable national possession of the peoples of those countries, who have the full right to dispose of it independently and to use it for their economic prosperity and progress. The need to strengthen peace and security demands the wide development of political, economic and cultural ties between all countries. The development of these ties is an important prerequisite for using the achievements of contemporary science and technology for the good of mankind. The policy of establishing closed aggressive military blocs, such as N.A.T.O., S.E.A.T.O. and the Baghdad Pact, and the raising of artificial economic barriers hampering normal relations between states seriously impairs the cause of peace. The Soviet Union, striving to render assistance to peoples fighting for the consolidation of their national independence and the earliest elimination of the aftermath of colonial oppression, is willing to develop all-round co-operation with them on the principles of full equality and mutual benefit. . . .

Authoritative Soviet circles hold that the steps with regard to the Middle East area outlined by the United States government, which envisage the possibility of employing United States armed forces in that area, might lead to dangerous consequences, the responsibility for which will rest entirely with the United States government.

John F. Kennedy: Inaugural Address

Also known as: “Ask Not What Your Country Can Do for You” Speech

Date: January 20, 1961

This address was delivered by John F. Kennedy on January 20, 1961, at his inauguration as the 35th president of the United States. Speaking to and for a new generation of Americans, Kennedy announced to the world that the United States would “pay any price, bear any burden, meet any hardship . . . to assure the survival and the success of liberty.” He pledged loyalty to old allies, support for new ones, and an “alliance for progress” with Latin America. He offered to America’s adversaries a new request for peace and cooperation, and for arms control and inspection. He challenged all Americans to join in a struggle against tyranny, poverty, disease, and war: “Ask not what your country can do for you. Ask what you can do for your country.”

Mr. Chief Justice, President Eisenhower, Vice President Nixon, President Truman, reverend clergy, fellow citizens, we observe today not a victory of party, but a celebration of freedom—symbolizing an end, as well as a beginning—signifying renewal, as well as change. For I have sworn before you and Almighty God the same solemn oath our forebears prescribed nearly a century and three quarters ago.

The world is very different now. For man holds in his mortal hands the power to abolish all forms of human poverty and all forms of human life. And yet the same revolutionary beliefs for which our forebears fought are still at issue around the globe—the belief that the rights of man come not from the generosity of the state, but from the hand of God.

We dare not forget today that we are the heirs of that first revolution. Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans—born in this century, tempered by war, disciplined by a hard and bitter peace, proud of our ancient heritage—and unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed, and to which we are committed today at home and around the world.

Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, in order to assure the survival and the success of liberty.

This much we pledge—and more.

To those old allies whose cultural and spiritual origins we share, we pledge the loyalty of faithful friends. United, there is little we cannot do in a host of cooperative ventures. Divided, there is little we can do—for we dare not meet a powerful challenge at odds and split asunder.

To those new States whom we welcome to the ranks of the free, we pledge our words that one form of colonial control shall not have passed away merely to be replaced by a far greater iron tyranny. We shall not always expect to find them supporting our view. But we shall always hope to find them strongly supporting their own freedom—and to remember that, in the past, those who foolishly sought power by riding the back of the tiger ended up inside.

To those peoples in the huts and villages across the globe struggling to break the bonds of mass misery, we pledge our best efforts to help them help themselves, for whatever period is required—not because the Communists may be doing it, not because we seek their votes, but because it is right. If a free society cannot help the many who are poor, it cannot save the few who are rich.

To our sister republics south of our border, we offer a special pledge—to convert our good words into good deeds, in a new alliance for progress, to assist free men and free governments in casting off the chains of poverty. But this peaceful revolution of hope cannot become the prey of hostile powers. Let all our neighbors know that we shall join with them to oppose aggression or subversion anywhere in the Americas. And let every other power know that this hemisphere intends to remain the master of its own house.

To that world assembly of sovereign states, the United Nations, our last best hope in an age where the instruments of war have far outpaced the instruments of peace, we renew our pledge of support—to prevent it from becoming merely a forum for invective—to strengthen its shield of the new and the weak—and to enlarge the area in which its writ may run.

Finally, to those nations who would make themselves our adversary, we offer not a pledge but a request: that both sides begin anew the quest for peace, before the dark powers of destruction unleashed by science engulf all humanity in planned or accidental self-destruction.

We dare not tempt them with weakness. For only when our arms are sufficient beyond doubt can we be certain beyond doubt that they will never be employed.

But neither can two great and powerful groups of nations take comfort from our present course—both sides overburdened by the cost of modern weapons, both rightly alarmed by the steady spread of the deadly atom, yet both racing to alter that uncertain balance of terror that stays the hand to mankind's final war.

So let us begin anew—remembering on both sides that civility is not a sign of weakness, and sincerity is always subject to proof. Let us never negotiate out of fear. But let us never fear to negotiate.

Let both sides explore what problems unite us instead of laboring those problems which divide us.

Let both sides, for the first time, formulate serious and precise proposals for the inspection and control of arms—and bring the absolute power to destroy other nations under the absolute control of all nations.

Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths, and encourage the arts and commerce.

Let both sides unite to heed in all corners of the earth the command of Isaiah—to “undo the heavy burdens and to let the oppressed go free.”

And if a beachhead of cooperation may push back the jungle of suspicion, let both sides join in creating a new endeavor, not a new balance of power, but a new world of law, where the strong are just and the weak secure and the peace preserved.

All this will not be finished in the first 100 days. Nor will it be finished in the first 1,000 days, nor in the life of this administration, nor even perhaps in our lifetime on this planet. But let us begin.

In your hands, my fellow citizens, more than in mine, will rest the final success or failure of our course. Since this country was founded, each generation of Americans has been summoned to give testimony to its national loyalty. The graves of young Americans who answered the call to service surround the globe.

Now the trumpet summons us again—not as a call to bear arms, though arms we need; not as a call to battle, though embattled we are; but a call to bear the burden of a long twilight struggle, year in, and year out, “rejoicing in hope, patient in tribulation”—a struggle against the common enemies of man: tyranny, poverty, disease, and war itself.

Can we forge against these enemies a grand and global alliance, North and South, East and West, that can assure a more fruitful life for all mankind? Will you join in that historic effort?

In the long history of the world, only a few generations have been granted the role of defending freedom in its hour of maximum danger. I do not shrink from this responsibility—I welcome it. I do not believe that

any of us would exchange places with any other people or any other generation. The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world.

And so, my fellow Americans, ask not what your country can do for you: Ask what you can do for your country.

My fellow citizens of the world: Ask not What America will do for you, but what together we can do for the freedom of man.

Finally, whether you are citizens of America or citizens of the world, ask of us the same high standards of strength and sacrifice which we ask of you. With a good conscience our only sure reward, with history the final judge of our deeds, let us go forth to lead the land we love, asking His blessing and His help, but knowing that here on earth God's work must truly be our own.

Secretary-General U Thant: The Congo Problem

Date: August 20, 1962

The mine-rich province of Katanga sought to secede from the Congo. Although the Congo regime was in chaos as the elected prime minister, Patrice Lumumba, was overthrown by military forces under Joseph Mobutu, the secession of a province, sponsored by outside financial interests, would set a precedent that could lead to the further breakup of African nations into ever-smaller entities. The United Nations worked towards a solution to the problem through the establishment of a federal system for the Congo and through the threat of economic sanctions on Katanga if it did not consent to such an arrangement. Lumumba was murdered under mysterious circumstances in Katanga. Although Katanga was reincorporated in the Congo, the government of Mobutu evolved into one of the most corrupt in the 20th century, and the term kleptocracy was coined to describe a regime based on personal theft of the resources of a nation.

Comments by Secretary-General of the United Nations, U Thant, August 20, 1962

Since in press and corridor recently there has been much comment and speculation about certain "proposals" which I am said to have in mind, some clarifying words from me on this subject would seem appropriate. . . .

I am instructing my representative in Leopoldville, Mr. Robert Gardiner, to present a programme of measures to Mr. Adoula, the Prime Minister, and, with his agreement, to Mr. Tshombé, the Provincial President of Katanga. These measures have my full support. The main elements of the programme are set forth in the following paragraphs.

A constitution for a federal system of government in the Congo is now in preparation and all provincial governments and interested political groups have been invited to submit their views. The United Nations, on request of the Government of the Congo, is assisting this process by making available international experts in federal constitutional law. It is my hope that work on a draft constitution will be completed in thirty days.

A new law is needed to establish definitive arrangements for the division of revenues between the Central Government and the provincial governments, as well as regulations and procedures for the utilization of foreign exchange. The Central Government should submit such new law to Parliament only after consultations with provincial governments. Until that process is completed, the Central Government and the Provincial authorities of Katanga should agree: (a) to share on a fifty-fifty basis revenues from all taxes or duties on exports and imports and all royalties from mining concessions; (b) to pay to the Monetary Council or institution designated by it, which is acceptable to the parties concerned, all foreign exchange earned by any part of the Congo. The Monetary Council should control the utilization of all foreign exchange and make available for the essential needs of Katanga at least 50 per cent of the foreign exchange generated in that province.

The Central Government should request assistance from the International Monetary Fund in working out a national plan of currency unification, and put such a plan into effect in the shortest possible time.

Rapid integration and unification of the entire Congolese army is essential. A three-member commission of representatives from the Central Government, Katanga Province and the United Nations, should prepare within thirty days a plan to bring this about. Two months thereafter should be adequate to put the plan into effect.

Only the Central Government should maintain government offices or representation abroad.

As an essential aspect of national reconciliation, the Central Government should be reconstituted to provide representation for all political and provincial groups. It is noted that Mr. Adoula, the Prime Minister, has already made certain specific offers in this regard.

Reconciliation should be served by a general amnesty for political prisoners. In addition, all Congolese authorities, national, state, and local, should co-operate fully with the United Nations in its task of carrying out United Nations resolutions.

The proposed steps toward national reconciliation are fully in accord with the statement made on 29 July by Mr. Adoula. They likewise should be acceptable to Katanga and all other provinces of the Congo, judging from recent statements of Congolese leaders. Mr. Tshombé, therefore, should be able to indicate his acceptance promptly. The United Nations, of course, stands ready to give all possible assistance in their implementation. I urge Member Governments to support these approaches by urging Congolese of all sectors and views to accept them forthwith.

While consultations on these approaches are going on I would hope that no actions will be taken to distract from this new effort to achieve agreement. At the same time certain actions are required by the Central Government, by the Provincial authorities of Katanga and by neighbouring States, both to begin putting the proposals into effect, and to prevent any distracting incidents from any quarter. All Member States of the United Nations should take the necessary measures to assure that there are no unauthorized movements to the Congo of mercenaries, arms, war material or any kind of equipment capable of military use.

I believe that the Katanga authorities must consider these proposals and respond to them affirmatively within a quite brief period so that concrete steps can begin, according to a time-table which Mr. Gardiner is authorized to propose. If, however, after this period Katangese agreement is not forthcoming, I will emphatically renew an appeal to all governments of Member States of the United Nations to take immediate measures to ensure that their relations with the Congo will be in conformity with laws and regulations of the Government of the Congo. Further, failing such agreement, as I indicated in my statement of 31 July: "I have in mind economic pressure upon the Katangese authorities of a kind that will bring home to them the realities of their situation and the fact that Katanga is not a sovereign State and is not recognized by any Government in the world as such...this could justifiably go to the extent of barring all trade and financial relations." In pursuance of this, a firm request would be made by me to all Member Governments to apply such a ban especially to Katangese copper and cobalt.

Dr. Martin Luther King, Jr.: "Letter from Birmingham Jail"

Date: April, 1963

This letter was written by the Reverend Dr. Martin Luther King, Jr., during his nine-day imprisonment in Birmingham, Alabama, April 12–20, 1963, for organizing a series of antisegregation demonstrations. The letter was a reply to an appeal that had been issued in January 1963, by eight white Birmingham clergymen. Titled "An Appeal for Law and Order and Common Sense," the clergymen's letter had urged civil rights leaders to seek redress for racial injustice through the courts rather than through mass demonstrations. King responded in biblical terms, likening his activities to those of Old Testament prophets and early Christian apostles. Tracing the failed negotiations that had preceded the demonstrations, King concluded that nonviolent protest was the only possible response to the injustice of legalized racial segregation.

My Dear Fellow Clergymen:

While confined here in the Birmingham city jail, I came across your recent statement calling present activities "unwise and untimely." Seldom do I pause to answer criticism of my work and ideas. If I sought to answer all the criticisms that cross my desk, my secretaries would have little time for anything other than such correspondence in the course of the day, and I would have no time for constructive work. But since I feel that you are men of genuine good will and that your criticisms are sincerely set forth, I want to try to answer your statement in what I hope will be patient and reasonable terms.

I think I should indicate why I am here in Birmingham, since you have been influenced by the view which argues against "outsiders coming in." I have the honor of serving as President of the Southern Christian Leadership Conference, an organization operating in every southern state, with headquarters in Atlanta, Georgia. We have some eighty-five affiliated organizations across the South, and one of them is the Alabama Christian Movement for Human Rights. Frequently we share staff, educational and financial resources with our affli-

ates. Several months ago the affiliate here in Birmingham asked us to be on call to engage in a nonviolent direct-action program if such were deemed necessary. We readily consented, and when the hour came we lived up to our promise. So I, along with several members of my staff, am here because I was invited here. I am here because I have organizational ties here.

But more basically, I am in Birmingham because injustice is here. Just as the prophets of the eighth century B.C. left their villages and carried their "thus saith the Lord" far beyond the boundaries of their home towns, and just as the Apostle Paul left his village of Tarsus and carried the gospel of Jesus Christ to the far corners of the Greco-Roman world, so am I compelled to carry the gospel of freedom beyond my own home town. Like Paul, I must constantly respond to the Macedonian call for aid.

Moreover, I am cognizant of the interrelatedness of all communities and states. I cannot sit idly in Atlanta and not be concerned about what happens in Birmingham. Injustice anywhere is a threat to justice everywhere. We are caught in an inescapable network of mutuality, tied in a single garment of destiny. Whatever affects one directly, affects all indirectly. Never again can we afford to live with the narrow, provincial "outside agitator" idea. Anyone who lives inside the United States can never be considered an outsider anywhere within its bounds.

You deplore the demonstrations taking place in Birmingham. But your statement, I am sorry to say, fails to express a similar concern for the conditions that brought about the demonstrations. I am sure that none of you would want to rest content with the superficial kind of social analysis that deals merely with effects and does not grapple with underlying causes. It is unfortunate that demonstrations are taking place in Birmingham, but it is even more unfortunate that the city's white power structure left the Negro community with no alternative.

In any nonviolent campaign there are four basic steps: collection of the facts to determine whether injustices exist; negotiation; self-purification; and direct action. We have gone through all these steps in Birmingham. There can be no gain saying the fact that racial injustice engulfs this community. Birmingham is probably the most thoroughly segregated city in the United States. Its ugly record of brutality is widely known. Negroes have experienced grossly unjust treatment in the courts. There have been more unsolved bombings of Negro homes and churches in Birmingham than in any other city in the nation. These are the hard, brutal facts of the case. On the basis of these conditions, Negro leaders sought to negotiate with the city fathers. But the latter consistently refused to engage in good-faith negotiation.

Then, last September, came the opportunity to talk with leaders of Birmingham's economic community. In the course of the negotiations, certain promises were made by the merchants—for example, to remove the stores' humiliating racial signs. On the basis of these promises, the Reverend Fred Shuttlesworth and the leaders of the Alabama Christian Movement for Human Rights agreed to a moratorium on all demonstrations. As the weeks and months went by, we realized that we were the victims of a broken promise. A few signs, briefly removed, returned; the others remained.

As in so many past experiences, our hopes had been blasted, and the shadow of deep disappointment settled upon us. We had no alternative except to prepare for direct action, whereby we would present our very bodies as a means of laying our case before the conscience of the local and the national community. Mindful of the difficulties involved, we decided to undertake a process of self-purification. We began a series of workshops on nonviolence, and we repeatedly asked ourselves: "Are you able to accept blows without retaliation?" "are you able to endure the ordeal of jail?" We decided to schedule our direct-action program for the Easter season, realizing that except for Christmas, this is the main shopping period of the year. Knowing that a strong economic-withdrawal program would be the by-product of direct action, we felt that this would be the best time to bring pressure to bear on the merchants for the needed change.

Then it occurred to us that Birmingham's mayoralty election was coming up in March, and we speedily decided to postpone action until after election day. When we discovered that the Commissioner of Public Safety, Eugene "Bill" Connor, had piled up enough votes to be in the run-off, we decided again to postpone action until the day after the run-off so that the demonstrations could not be used to cloud the issues. Like many others, we waited to see Mr. Connor defeated, and to this end we endured postponement after postponement. Having aided in this community need, we felt that our direct-action program could be delayed no longer.

You may well ask: "Why direct action? Why sit-ins, marches, and so forth? Isn't negotiation a better path?" You are quite right in calling for negotiation. Indeed, this is the very purpose of direct action. Nonviolent direct action seeks to create such a crisis and foster such a tension that a community which has constantly refused to negotiate is forced to confront the issue. It seeks so to dramatize the issue that it can no longer be ignored. My citing the creation of tension as part of the work of the nonviolent-resister may sound rather shocking. But I must confess that I am not afraid of the word "tension." I have earnestly opposed violent tension, but there is a type of constructive, nonviolent tension which is necessary for growth. Just as Socrates felt that it was necessary to create a tension in the mind so that individuals could rise from the bondage of myths and half-truths to the unfettered realm of creative analysis and objective appraisal, so must we see the need for nonviolent gadflies to create the kind of tension in society that will help men rise from the dark depths of prejudice and racism to the majestic heights of understanding and brotherhood.

The purpose of our direct-action program is to create a situation so crisis-packed that it will inevitably open the door to negotiation. I therefore concur with you in your call for negotiation. Too long has our beloved Southland been bogged down in a tragic effort to live in monologue rather than dialogue.

One of the basic points in your statement is that the action that I and my associates have taken in Birmingham is untimely. Some have asked: "Why didn't you give the new city administration time to act?" The only answer that I can give to this query is that the new Birmingham administration must be prodded about as much as the outgoing one, before it will act. We are sadly mistaken if we feel that the election of Albert Boutwell as mayor will bring the millennium to Birmingham. While Mr. Boutwell is a much more gentle person than Mr. Connor, they are both segregationists, dedicated to maintenance of the status quo. I have hoped that Mr. Boutwell will be reasonable enough to see the futility of massive resistance to desegregation. But he will not see this without pressure from devotees of civil rights. My friends, I must say to you that we have not made a single gain in civil rights without determined legal and nonviolent pressure. Lamentably, it is an historical fact that privileged groups seldom give up their privileges voluntarily. Individuals may see the moral light and voluntarily give up their unjust posture; but as Reinhold Niebuhr has reminded us, groups tend to be more immoral than individuals.

We know through painful experience that freedom is never voluntarily given by the oppressor, it must be demanded by the oppressed. Frankly, I have yet to engage in a direct-action campaign that was "well timed" in view of those who have not suffered unduly from the disease of segregation. For years now I have heard the word "wait!" It rings in the ear of every Negro with piercing familiarity. This "Wait" has almost always meant "Never." We must come to see, with one of our distinguished jurists, that "justice too long delayed is justice denied."

We have waited for more than 340 years for our constitutional and God-given rights. The nations of Asia and Africa are moving with jetlike speed toward gaining political independence, but we still creep at horse-and-buggy pace toward gaining a cup of coffee at a lunch counter. Perhaps it is easy for those who have never felt the stinging darts of segregation to say, "Wait." But when you have seen vicious mobs lynch your mothers and fathers at will and drown your sisters and brothers at whim; when you have seen hate-filled policemen curse, kick, and even kill your black brothers and sisters; when you see the vast majority of your twenty million Negro brothers smothering in an airtight cage of poverty in the midst of an affluent society; when you suddenly find your tongue twisted and your speech stammering as you seek to explain to your six-year-old daughter why she can't go to the public amusement park that has just been advertised on television, and see tears welling up in her eyes when she is told that Funtown is closed to colored children, and see ominous clouds of inferiority beginning to form in her little mental sky, and see her beginning to distort her personality by developing an unconscious bitterness toward white people; when you have to concoct an answer for a five-year-old son who is asking, "Daddy, why do white people treat colored people so mean?"; when you take a cross-country drive and find it necessary to sleep night after night in the uncomfortable corners of your automobile because no motel will accept you; when you are humiliated day in and day out by nagging signs reading "white" and "colored" when your first name becomes "Nigger," your middle name becomes "boy" (however old you are) and your last name becomes "John," and your wife and mother are never given the respected title "Mrs."; when you are harried by day and haunted by night by the fact that you are a Negro, living constantly at tiptoe stance, never quite knowing what to expect next, and are plagued with inner fears and outer resentments; when you are forever fighting a degenerating sense of "nobodiness" then you will understand why we find it difficult to wait. There comes a time when the cup of endurance runs over, and men are no longer willing to be plunged into the abyss of despair. I hope, sirs, you can understand our legitimate and unavoidable impatience.

You express a great deal of anxiety over our willingness to break laws. This is certainly a legitimate concern. Since we so diligently urge people to obey the Supreme Court's decision of 1954 outlawing segregation in the public schools, at first glance it may seem rather paradoxical for us consciously to break laws. One may ask: "How can you advocate breaking some laws and obeying others?" The answer lies in the fact that there are two types of laws: just and unjust. I would be the first to advocate obeying just laws. One has not only a legal but a moral responsibility to obey just laws. Conversely, one has a moral responsibility to disobey unjust laws. I would agree with St. Augustine that "an unjust law is no law at all."

Now, what is the difference between the two? How does one determine whether a law is just or unjust? A just law is a man-made code that squares with the moral law or the law of God. An unjust law is a code that is out of harmony with the moral law. To put it in the terms of St. Thomas Aquinas: An unjust law is a human law that is not rooted in eternal law and natural law. Any law that uplifts human personality is just. Any law that degrades human personality is unjust. All segregation statutes are unjust because segregation distorts the soul and damages the personality. It gives the segregator a false sense of superiority and the segregated a false sense of inferiority. Segregation, to use the terminology of the Jewish philosopher Martin Buber, substitutes an "I-it" relationship for an "I-thou" relationship and ends up relegating persons to the status of things. Hence segregation is not only politically, economically and sociologically unsound, it is morally wrong and sinful. Paul Tillich has said that sin is separation. Is not segregation an existential expression of man's tragic separation, his awful estrangement, his terrible sinfulness? Thus is it that I can

urge men to obey the 1954 decision of the Supreme Court, for it is morally right; and I can urge them to disobey segregation ordinances, for they are morally wrong.

Let us consider a more concrete example of just and unjust laws. An unjust law is a code that a numerical or power majority group compels a minority group to obey but does not make binding on itself. This is difference made legal. By the same token, a just law is a code that a majority compels a minority to follow and that it is willing to follow itself. This is sameness made legal.

Let me give another explanation. A law is unjust if it is inflicted on a minority that, as a result of being denied the right to vote, had no part in enacting or devising the law. Who can say that the legislature of Alabama which set up that state's segregation laws was democratically elected? Throughout Alabama all sorts of devious methods are used to prevent Negroes from becoming registered voters, and there are some counties in which, even though Negroes constitute a majority of the population, not a single Negro is registered. Can any law enacted under such circumstances be considered democratically structured?

Sometimes a law is just on its face and unjust in its application. For instance, I have been arrested on a charge of parading without a permit. Now, there is nothing wrong in having an ordinance which requires a permit for a parade. But such an ordinance becomes unjust when it is used to maintain segregation and to deny citizens the First-Amendment privilege of peaceful assembly and protest.

I hope you are able to see the distinction I am trying to point out. In no sense do I advocate evading or defying the law, as would the rabid segregationist. That would lead to anarchy. One who breaks an unjust law must do so openly, lovingly, and with a willingness to accept the penalty. I submit that an individual who breaks a law that conscience tells him is unjust, and who willingly accepts the penalty of imprisonment in order to arouse the conscience of the community over its injustice, is in reality expressing the highest respect for law.

Of course, there is nothing new about this kind of civil disobedience. It was evidenced sublimely in the refusal of Shadrach, Meshach, and Abednego to obey the laws of Nebuchadnezzar, on the ground that a higher moral law was at stake. It was practiced superbly by the early Christians, who were willing to face hungry lions and the excruciating pain of chopping blocks rather than submit to certain unjust laws of the Roman Empire. To a degree, academic freedom is a reality today because Socrates practiced civil disobedience. In our own nation, the Boston Tea Party represented a massive act of civil disobedience.

We should never forget that everything Adolf Hitler did in Germany was "legal" and everything the Hungarian freedom fighters did in Hungary was "illegal." It was "illegal" to aid and comfort a Jew in Hitler's Germany. 'Even so, I am sure that, had I lived in Germany at the time, I would have aided and comforted my Jewish brothers. If today I lived in a Communist country where certain principles dear to the Christian faith are suppressed, I would openly advocate disobeying that country's anti-religious laws.

I must make two honest confessions to you, my Christian and Jewish brothers. First, I must confess that over the past few years I have been gravely disappointed with the white moderate. I have almost reached the regrettable conclusion that the Negro's great stumbling block in his stride toward freedom is not the White Citizen's Council or the Ku Klux Klanner, but the white moderate, who is more devoted to "order" than to justice; who prefers a negative peace which is the absence of tension to a positive peace which is the presence of justice; who constantly says, "I agree with you in the goal you seek, but I cannot agree with your methods of direct action"; who paternalistically believes he can set the timetable for another man's freedom; who lives by a mythical concept of time and who constantly advises the Negro to wait for a "more convenient season." Shallow understanding from people of good will is more frustrating than absolute misunderstanding from people of ill will. Lukewarm acceptance is much more bewildering than outright rejection.

I had hoped that the white moderate would understand that law and order exist for the purpose of establishing justice and that when they fail in this purpose they become the dangerously structured dams that block the flow of social progress. I had hoped that the white moderate would understand that the present tension in the South is a necessary phase of the transition from an obnoxious negative peace, in which the Negro passively accepted his unjust plight, to a substantive and positive peace, in which all men will respect the dignity and worth of human personality. Actually, we who engage in nonviolent direct action are not the creators of tension. We merely bring to the surface the hidden tension that is already alive. We bring it out in the open, where it can be seen and dealt with. Like a boil that can never be cured so long as it is covered up but must be opened with all its ugliness to the natural medicines of air and light injustice must be exposed with all the tension its exposure creates, to the light of human conscience and the air of national opinion, before it can be cured.

In your statement you assert that our actions, even though peaceful, must be condemned because they precipitate violence. But is this a logical assertion? Isn't this like condemning a robbed man because his possession of money precipitated the evil act of robbery? Isn't this like condemning Socrates because his unswerving commitment to truth and his philosophical inquiries precipitated the act by the misguided populace in which they made him drink hemlock? Isn't this like condemning Jesus because his unique God-consciousness and never-ceasing devotion to God's will precipitated the evil act of crucifixion? We must come to see that, as the federal courts have consistently affirmed, it is wrong to urge an individual to cease his efforts to gain his basic constitutional rights because the quest may precipitate violence. Society must protect the robbed and punish the robber.

I had also hoped that the white moderate would reject the myth concerning time in relations to the struggle for freedom. I have just received a letter from a white brother in Texas. He writes: "All Christians know that the colored people will receive equal rights eventually, but it is possible that you are in too great a religious hurry. It has taken Christianity almost two thousand years to accomplish what it has. The teachings of Christ take time to come to earth." Such an attitude stems from a tragic misconception of time, from the strangely irrational notion that there is something in the very flow of time will inevitably cure all ills. Actually, time itself is neutral; it can be used either destructively or constructively. More and more I feel that the people of ill will have used time much more effectively than have the people of good will. We will have to repent in the generation not merely for the hateful words and actions of the bad people, but for the appalling silence of the good people. Human progress never rolls in on wheels of inevitability; it comes through the tireless efforts of men willing to be co-workers with God, and without this hard work, time itself becomes an ally of the forces of stagnation. We must use time creatively, in the knowledge that the time is always ripe to do right. Now is the time to make real the promise of democracy and transform our pending national elegy into a creative psalm of brotherhood. Now is the time to lift our national policy from the quicksand of racial injustice to the solid rock of human dignity.

You speak of our activity in Birmingham as extreme. At first I was rather disappointed that fellow clergyman would see my nonviolent efforts as those of an extremist. I began thinking about the fact that I stand in the middle of two opposing forces in the Negro community. One is a force of complacency, made up in part of Negroes who, as a result of long years of oppression, are so drained of self-respect and a sense of "somebodiness" that they have adjusted to segregation; and in part of a few middle-class Negroes who, because of a degree of academic and economic security and because in some ways they profit by segregation, have become insensitive to the problems of the masses. The other force is one of bitterness and hatred, and it comes perilously closed on advocating violence. It is expressed in the various black nationalist groups that are springing up across the nation, the largest and best-known being Elijah Muhammad's Muslim movement. Nourished by the Negro's frustration over the continued existence of racial discrimination, this movement is made up of people who have lost faith in America, who have absolutely repudiated Christianity, and who have concluded that the white man is an incorrigible "devil."

I have tried to stand between these two forces, saying that we need emulate neither the "do-nothingism" of the complacent nor the hatred and despair of the black nationalist. For there is the more excellent way of love and nonviolent protest. I am grateful to God that, through the influence of the Negro church, the way of nonviolence became an integral part of our struggle.

If this philosophy had not emerged, by now many streets of the South would, I am convinced, be flowing with blood. And I am further convinced that if our white brothers dismiss as "rabble-rousers" and "outside agitators" those of us who employ nonviolent direct action, and if they refuse to support our nonviolent efforts, millions of Negroes will, out of frustration and despair, seek solace and security in black-nationalist ideologies—a development that would inevitably lead to a frightening racial nightmare.

Oppressed people cannot remain oppressed forever. The yearning for freedom eventually manifests itself, and that is what has happened to the American Negro. Something within has reminded him of his birthright of freedom, and something without has reminded him that it can be gained. Consciously or unconsciously, he has been caught up by the Zeitgeist, and with his black brothers of Africa and his brown and yellow brothers of Asia, South America, and the Caribbean, the United States Negro is moving with a sense of great urgency toward the promised land of racial justice. If one recognizes this vital urge that has engulfed the Negro community, one should readily understand why public demonstrations are taking place. The Negro has many pent-up resentments and latent frustrations, and he must release them. So let him march; let him make prayer pilgrimages to the city hall; let him go on freedom rides—and try to understand why he must do so. If his repressed emotions are not released in nonviolent ways, they will seek expression through violence; this is not a threat but a fact of history. So I have not said to my people, "Get rid of your discontent." Rather, I have tried to say that this normal and healthy discontent can be channeled into the creative outlet of nonviolent direct action. And now this approach is being termed extremist.

But though I was initially disappointed at being categorized as an extremist, as I continued to think about the matter I gradually gained a measure of satisfaction from the label. Was not Jesus an extremist for love: "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." Was not Amos an extremist for justice: "Let justice roll down like waters and righteousness like an ever-flowing stream." Was not Paul an extremist for the Christian gospel: "I bear in my body the marks of the Lord Jesus." Was not Martin Luther an extremist: "Here I stand; I cannot do otherwise, so help me God." And John Bunyan: "I will stay in jail to the end of my days before I make a butchery of my conscience." And Abraham Lincoln: "This nation cannot survive half slave and half free." And Thomas Jefferson: "We hold these truths to be self-evident, that all men are created equal. . . ." So the question is not whether we will be extremists, but what kind of extremists we will be. Will we be extremists for hate or for love? Will we be extremists for the preservation of injustice or for the extension of justice? In that dramatic scene on Calvary's hill three men were crucified. We must never forget that all three were cruci-

fied for the same crime—the crime of extremism. Two were extremists for immorality, and thus fell below their environment. The other, Jesus Christ, was an extremist for love, truth, and goodness, and thereby rose above his environment. Perhaps the South, the nation, and the world are in dire need of creative extremists.

I had hoped that the white moderate would see this need. Perhaps I was too optimistic; perhaps I expected too much. I suppose I should have realized that few members of the oppressor race can understand the deep groans and passionate yearnings of the oppressed race, and still fewer have the vision to see that injustice must be rooted out by strong, persistent, and determined action. I am thankful, however, that some of our white brothers in the South have grasped the meaning of this social revolution and committed themselves to it. They are still all too few in quantity, but they are big in quality. Some—such as Ralph McGill, Lillian Smith, Harry Golden, James McBride Dabbs, Ann Braden, and Sarah Patton Boyle—have written about our struggle in eloquent and prophetic terms. Others have marched with us down nameless streets of the South. They have languished in filthy, roach-infested jails, suffering the abuse and brutality of policemen who view them as “dirty nigger-lovers.” Unlike so many of their moderate brothers and sisters, they have recognized the urgency of the moment and sensed the need for powerful “action” antidotes to combat the disease of segregation.

Let me take note of my other major disappointment. I have been so greatly disappointed with the white church and its leadership. Of course, there are some notable exceptions. I am not unmindful of the fact that each of you has taken some significant stands on this issue. I commend you, Reverend Stallings, for your Christian stand on this past Sunday, in welcoming Negroes to your worship service on a nonsegregated basis. I commend the Catholic leaders of this state for integrating Spring Hill College several years ago.

But despite these notable exceptions, I must honestly reiterate that I have been disappointed with the church. I do not say this as one of those negative critics who can always find something wrong with the church. I say this as a minister of the gospel, who loves the church; who was nurtured in its bosom; who has been sustained by its spiritual blessings and who will remain true to it as long as the cord of life shall lengthen.

When I was suddenly catapulted into the leadership of the bus protest in Montgomery, Alabama, a few years ago, I felt we would be supported by the white church. I felt that the ministers, priests, and rabbis of the South would be among our strongest allies. Instead, some have been outright opponents, refusing to understand the freedom movement and misrepresenting its leaders; all too many others have been more cautious than courageous and have remained silent behind the anesthetizing security of stained-glass windows.

In spite of my shattered dreams, I came to Birmingham with the hope that the white religious leadership of this community would see the justice of our cause and, with deep moral concern, would serve as the channel through which our just grievances could reach the power structure. I had hoped that each of you would understand. But again I have been disappointed.

I have heard numerous southern religious leaders admonish their worshipers to comply with a desegregation decision because it is the law, but I have longed to hear white ministers declare: “Follow this decree because integration is morally right and because the Negro is your brother.” In the midst of blatant injustices inflicted upon the Negro, I have watched white churchmen stand on the sideline and mouth pious irrelevancies and sanctimonious trivialities. In the midst of a mighty struggle to rid our nation of racial and economic injustice, I have heard many ministers say: “Those are social issues, with which the gospel has no real concern.” And I have watched many churches commit themselves to a completely otherworldly religion which makes a strange, un-Biblical distinction between body and soul, between the sacred and the secular.

I have traveled the length and breadth of Alabama, Mississippi, and all the other southern states. On sweltering summer days and crisp autumn mornings I have looked at the South’s beautiful churches with their lofty spires pointing heavenward. I have beheld the impressive outlines of her massive religious-education buildings. Over and over I have found myself asking: “What kind of people worship here? Who is their God? Where were their voices when the lips of Governor Barnett dripped with words of interposition and nullification? Where were they when Governor Wallace gave a clarion call defiance and hatred? Where were their voices of support when bruised and weary Negro men and women decided to rise from the dark dungeons of complacency to the bright hills of creative protest?”

Yes, these questions are still in my mind. In deep disappointment I have wept over the laxity of the church. But be assured that my tears have been tears of love. Yes, I love the church. How could I do otherwise? I am in the rather unique position of being the son, the grandson, and the great-grandson of preachers. Yes, I see the church as the body of Christ. But, oh! How we have blemished and scarred that body through social neglect and through fear of being nonconformists.

There was a time when the church was very powerful—in the time when the early Christians rejoiced at being deemed worthy to suffer for what they believed. In those days the church was not merely a thermometer that recorded the ideas and principles of popular opinion; it was a thermostat that transformed the mores of society. Whenever the early Christians entered a town, the people in power became disturbed and immediately sought to convict the Christians for being “disturbers of the peace” and “outside agitators.” But the Christians pressed on, in the conviction that they were “a colony of heaven,” called to obey God rather than man. Small in number, they were big in commitment. They were too God-intoxicated to be “astronomically intimidated.” By their effort and example they brought an end to such ancient evils as infanticide and gladiatorial contests.

Things are different now. So often the contemporary church is a weak, ineffectual voice with an uncertain sound. So often it is an arch-defender of the status quo. Far from being disturbed by the presence of the church, the power structure of the average community is consoled by the church's silent—and often even vocal—sanction of things as they are. But the judgment of God is upon the church as never before. If today's church does not recapture the sacrificial spirit of the early church, it will lose its authenticity, forfeit the loyalty of millions, and be dismissed as an irrelevant social club with no meaning for the twentieth century. Every day I meet young people whose disappointment with the church has turned into outright disgust.

Perhaps I have once again been too optimistic. Is organized religion to inextricably bound to the status quo to save our nation and the world? Perhaps I must turn my faith to the inner spiritual church, the church within the church, as the true ekklesia and the hope of the world. But again I am thankful to God that some noble souls from the ranks of organized religion have broken loose from the paralyzing chains of conformity and joined us as active partners in the struggle for freedom. They have left their secure congregations and walked the streets of Albany, Georgia, with us. They have gone down the highways of the South on tortuous rides for freedom. Yes, they have gone to jail with us. Some have been dismissed from their churches, have lost the support of their bishops and fellow ministers. But they have acted in the faith that right defeated is stronger than evil triumphant. Their witness has been the spiritual salt that has preserved the true meaning of the gospel in these troubled times. They have carved a tunnel of hope through the dark mountain of disappointment.

I hope the church as a whole will meet the challenge of this decisive hour. But even if the church does not come to the aid of justice, I have no despair about the future. I have no fear about the outcome of our struggle in Birmingham, even if our motives are at present misunderstood. We will reach the goal of freedom in Birmingham and all over the nation, because the goal of America is freedom. Abuse and scorned though we may be, our destiny is tied up with America's destiny. Before the pilgrims landed at Plymouth, we were here. For more than two centuries our forebears labored in this country without wages; they made cotton king; they built the homes of their masters while suffering gross injustice and shameful humiliation—and yet out of bottomless vitality they continued to thrive and develop. If the inexpressible cruelties of slavery could not stop us, the opposition we not face will surely fail. We will win our freedom because the sacred heritage of our nation and the eternal will of God are embodied in our echoing demands.

Before closing I feel impelled to mention one other point in your statement that has troubled me profoundly. You warmly commended the Birmingham police force for keeping "order" and "preventing violence." I doubt that you would so quickly commend the policemen if you were to observe their ugly and inhumane treatment of Negroes here in the city jail; if you were to watch them push and curse old Negro women and young Negro girls; if you were to see them slap and kick Negro men and young boys; if you were to observe them, as they did on two occasions, refuse to give us food because we wanted to sing our grace together. I cannot join you in your praise of the Birmingham police department.

It is true that the police have exercised a degree of discipline in handling the demonstrations. In this sense they have conducted themselves rather "nonviolently" in public. But for what purpose? To preserve the evil system of segregation. Over the past few years I have consistently preached that nonviolence demands that the means we use must be as pure as the ends we seek. I have tried to make clear that it is wrong to use immoral means to attain moral ends. But now I must affirm that it is just as wrong, or perhaps even more so, to use moral means to preserve immoral ends. Perhaps Mr. Connor and his policemen have been rather nonviolent in public, as was Chief Pritchett in Albany, Georgia, but they have used the moral means of nonviolence to maintain the immoral end or racial injustice. As T. S. Eliot has said, "The last temptation is the greatest treason: To do the right deed for the wrong reason."

I wish you had commended the Negro sit-inners and demonstrators of Birmingham for their sublime courage, their willingness to suffer, and their amazing discipline in the midst of great provocation. One day the South will recognize its real heroes. They will be the James Merediths, with the noble sense of purpose that enables them to face jeering and hostile mobs, and with the agonizing loneliness that characterizes the life of the pioneer. They will be old, oppressed, battered Negro women, symbolized in a seventy-two-year-old woman in Montgomery, Alabama, who rose up with a sense of dignity and when her people decided not to ride segregated buses, and who responded with ungrammatical profundity to one who inquired about her weariness: "My feets is tired, but my soul is at rest." They will be the young high school and college students, the young ministers of the gospel and a host of their elders, courageously and nonviolently sitting in at lunch counters and willingly going to jail for conscience' sake. One day the South will know that when these disinherited children of God sat down at lunch counters, they were in reality standing up for what is best in the American dream and for the most sacred values in our Judaeo-Christian heritage, thereby bringing our nation back to those great wells of democracy which were dug deep by the founding fathers in their formulation of the Constitution and the Declaration of Independence.

Never before have I written so long a letter. I'm afraid it is much too long to take your precious time. I can assure you that it would have been much shorter if I had been writing from a comfortable desk, but what else can one do when he is alone in a narrow jail cell, other than write long letters, think long thoughts, and pray long prayers?

If I have said anything in this letter that overstates the truth and indicates an unreasonable impatience, I beg you to forgive me. If I have said anything that understates the truth and indicates my having a patience that allows me to settle for anything less than brotherhood, I beg God to forgive me.

I hope this letter finds you strong in the faith. I also hope that circumstances will soon make it possible for me to meet each of you, not as an integrationist or a civil-rights leader but as a fellow clergyman and a Christian brother. Let us all hope that the dark clouds of racial prejudice will soon pass away and the deep fog of misunderstanding will be lifted from our fear-drenched communities, and in some not too distant tomorrow the radiant stars of love and brotherhood will shine over our great nation with all their scintillating beauty.

Yours for the cause of Peace and Brotherhood, Martin Luther King, Jr.

Sayyid Qutb: *Milestones (Ma'alim fi al-Tariq)*

Date: 1964

Milestones, or Ma'alim fi al-Tariq, is a book that presents the beliefs of the Egyptian Muslim Brotherhood theorist and Islamist author Sayyid Qutb. The author's theory is that before the onset of Islam, the world lived in ignorance. Sayyid Qutb refers to this as Jahiliyyah. He states that the modern world has lapsed back into this state of ignorance. In Milestones, he lays out a plan to re-create the Muslim world in strict accord with the Qur'an. This ideology is referred to as Qutbism.

The following are excerpts from chapter 7: "Islam Is the Real Civilization." Original spellings have been retained in this document.

Islam knows only two kinds of societies, the Islamic and the jahili. The Islamic society is that which follows Islam in belief and ways of worship, in law and organization, in morals and manners. The jahili society is that which does not follow Islam and in which neither the Islamic belief and concepts, nor Islamic values or standards, Islamic laws and regulations, or Islamic morals and manners are cared for. . . .

If the family is the basis of the society, and the basis of the family is the division of labor between husband and wife, and the upbringing of children is the most important function of the family, then such a society is indeed civilized. In the Islamic system of life, this kind of a family provides the environment under which human values and morals develop and grow in the new generation; these values and morals cannot exist apart from the family unit. If, on the other hand, 97 free sexual relationships and illegitimate children become the basis of a society, and if the relationship between man and woman is based on lust, passion and impulse, and the division of work is not based on family responsibility and natural gifts; if woman's role is merely to be attractive, sexy and flirtatious, and if woman is freed from her basic responsibility of bringing up children; and if, on her own or under social demand, she prefers to become a hostess or a stewardess in a hotel or ship or air company, thus spending her ability for material productivity rather than in the training of human beings, because material production is considered to be more important, more valuable and more honorable than the development of human character, then such a civilization is 'backward' from the human point of view, or 'jahili' in the Islamic terminology.

The family system and the relationship between the sexes determine the whole character of a society and whether it is backward or civilized, jahili or Islamic. Those societies which give ascendance to physical desires and animalistic morals cannot be considered civilized, no matter how much progress they may make in industry or science. This is the only measure which does not err in gauging true human progress.

In all modern jahili societies, the meaning of 'morality' is limited to such an extent that all those aspects which distinguish man from animal are considered beyond its sphere. In these Societies, illegitimate sexual relationships, even homosexuality, are not considered immoral. The meaning of ethics is limited to economic affairs or sometimes to political affairs which fall into the category of 'government interests'. For example, the scandal of Christine Keeler and the British minister Profumo was not considered serious to British society because of its sexual aspect; it was condemnable because Christine Keeler was also involved with a naval attache of the Russian Embassy, and thus her association with a cabinet minister lied before the British Parliament! Similar scandals come to light in the American Senate. Englishmen and Americans who get involved in

such spying scandals usually take refuge in Russia. These affairs are not considered immoral because of sexual deviations, but because of the danger to state secrets!

Among jahili societies, writers, journalists and editors advise both married and unmarried people that free sexual relationships are not immoral. However, it is immoral if a boy uses his partner, or a girl uses her partner, for sex, while feeling no love in his or her heart. It is bad if a wife continues to guard her chastity while her love for her husband has vanished; it is admirable if she finds another lover. Dozens of stories are written about this theme; many newspaper editorials, articles, cartoons, serious and light columns all invite to this way of life.

From the point of view of 'human' progress, all such societies are not civilized but are backward.

The line of human progress goes upward from animal desires toward higher values. To control the animal desires, a progressive society lays down the foundation of a family system in which human desires find satisfaction, as well as providing for the future generation to be brought up in such a manner that it will continue the human civilization, in which human characteristics flower to their full bloom. Obviously a society which intends to control the animal characteristics, while providing full opportunities for the development and perfection of human characteristics, requires strong safeguards for the peace and stability of the family, so that it may perform its basic task free from the influences of impulsive passions. On the other hand, if in a society immoral teachings and poisonous suggestions are rampant, and sexual activity is considered outside the sphere of morality, then in that society the humanity of man can hardly find a place to develop.

Thus, only Islamic values and morals, Islamic teachings and safeguards, are worthy of mankind, and from this unchanging and true measure of human progress, Islam is the real civilization and Islamic society is truly civilized.

U.S. State Department on Vietnam

Date: March 22, 1965

In 1964 Congress approved the Gulf of Tonkin Resolution, which gave the president the power to conduct military operations without needing an act of Congress declaring war.

There were an estimated 5,000 guerrillas in South Vietnam in 1959. By 1964 this number grew to an estimated 100,000. After an attack on a U.S. Marine barracks in Pleiku on March 2, 1965, the National Security Council recommended an escalation of the bombing of North Vietnam. There were several attacks on U.S. Air Force bases, and on March 8, 1965, 3,500 U.S. Marines were dispatched to South Vietnam. The Marines' assignment was a defensive one. By December the U.S. deployment would be increased to nearly 200,000 men.

In this statement from the U.S. State Department, the reasons for the United States's opposition to the establishment of a communist regime in South Vietnam are clearly expressed.

“Aggression from the North, February 27, 1965” from *Department of State Bulletin*, March 22, 1965

South Vietnam is fighting for its life against a brutal campaign of terror and armed attack inspired, directed, supplied, and controlled by the Communist regime in Hanoi. This flagrant aggression has been going on for years, but recently the pace has quickened and the threat has now become acute.

The war in Vietnam is a new kind of war, a fact as yet poorly understood in most parts of the world. Much of the confusion that prevails in the thinking of many people, and even governments, stems from this basic misunderstanding. For in Vietnam a totally new brand of aggression has been loosed against an independent people who want to make their way in peace and freedom.

Vietnam is not another Greece, where indigenous guerrilla forces used friendly neighboring territory as a sanctuary.

Vietnam is not another Malaya, where Communist guerrillas were, for the most part, physically distinguishable from the peaceful majority they sought to control.

Vietnam is not another Philippines, where Communist guerrillas were physically separated from the source of their moral and physical support.

Above all, the war in Vietnam is not a spontaneous and local rebellion against the established government.

There are elements in the Communist program of conquest directed against South Vietnam common to each of the previous areas of aggression and subversion. But there is one fundamental difference. In Vietnam a Communist government has set out deliberately to conquer a sovereign people in a neighboring state. And to

achieve its end, it has used every resource of its own government to carry out its carefully planned program of concealed aggression. North Vietnam's commitment to seize control of the South is no less total than was the commitment of the regime in North Korea in 1950. But knowing the consequences of the latter's undisguised attack, the planners in Hanoi have tried desperately to conceal their hand. They have failed and their aggression is as real as that of an invading army.

This report is a summary of the massive evidence of North Vietnamese aggression obtained by the Government of South Vietnam. This evidence has been jointly analyzed by South Vietnamese and American experts.

The evidence shows that the hard core of the Communist forces attacking South Vietnam were trained in the North and ordered into the South by Hanoi. It shows that the key leadership of the Vietcong (VC), the officers and much of the cadre, many of the technicians, political organizers, and propagandists have come from the North and operate under Hanoi's direction. It shows that the training of essential military personnel and their infiltration into the South is directed by the Military High Command in Hanoi. In recent months new types of weapons have been introduced in the VC army, for which all ammunition must come from outside sources. Communist China and other Communist states have been the prime suppliers of these weapons and ammunition, and they have been channeled primarily through North Vietnam.

The directing force behind the effort to conquer South Vietnam is the Communist Party in the North, the Lao Dong (Workers) Party. As in every Communist state, the party is an integral part of the regime itself. North Vietnamese officials have expressed their firm determination to absorb South Vietnam into the Communist world.

Through its Central Committee, which controls the Government of the North, the Lao Dong Party directs the total political and military effort of the Vietcong. The Military High Command in the North trains the military men and sends them into South Vietnam. The Central Research Agency, North Vietnam's central intelligence organization, directs the elaborate espionage and subversion effort . . .

Under Hanoi's overall direction the Communists have established an extensive machine for carrying on the war within South Vietnam. The focal point is the Central Office for South Vietnam with its political and military subsections and other specialized agencies. A subordinate part of this Central Office is the liberation front for South Vietnam. The front was formed at Hanoi's order in 1960. Its principle function is to influence opinion abroad and to create the false impression that the aggression in South Vietnam is an indigenous rebellion against the established Government.

For more than 10 years the people and the Government of South Vietnam, exercising the inherent right of self-defense, have fought back against these efforts to extend Communist power south across the 17th parallel. The United States has responded to the appeals of the Government of the Republic of Vietnam for help in this defense of the freedom and independence of its land and its people.

In 1961 the Department of State issued a report called *A Threat to the Peace*. It described North Vietnam's program to seize South Vietnam. The evidence in that report had been presented by the Government of the Republic of Vietnam to the International Control Commission (ICC). A special report by the ICC in June 1962 upheld the validity of that evidence. The Commission held that there was "sufficient evidence to show beyond reasonable doubt" that North Vietnam had sent arms and men into South Vietnam to carry out subversion with the aim of overthrowing the legal Government there. The ICC found the authorities in Hanoi in specific violation of four provisions of the Geneva Accords of 1954.

Since then, new and even more impressive evidence of Hanoi's aggression has accumulated. The Government of the United States believes that evidence should be presented to its own citizens and to the world. It is important for free men to know what has been happening in Vietnam, and how, and why. That is the purpose of this report . . .

The record is conclusive. It establishes beyond question that North Vietnam is carrying out a carefully conceived plan of aggression against the South. It shows that North Vietnam has intensified its efforts in the years since it was condemned by the International Control Commission. It proves that Hanoi continues to press its systematic program of armed aggression into South Vietnam. This aggression violates the United Nations Charter. It is directly contrary to the Geneva Accords of 1954 and of 1962 to which North Vietnam is a party. It is a fundamental threat to the freedom and security of South Vietnam.

The people of South Vietnam have chosen to resist this threat. At their request, the United States has taken its place beside them in their defensive struggle.

The United States seeks no territory, no military bases, no favored position. But we have learned the meaning of aggression elsewhere in the post-war world, and we have met it.

If peace can be restored in South Vietnam, the United States will be ready at once to reduce its military involvement. But it will not abandon friends who want to remain free. It will do what must be done to help them. The choice now between peace and continued and increasingly destructive conflict is one for the authorities in Hanoi to make.

Black Panther Party Platform and Program

Date: 1966

This document states the platform of the Black Panther Party, a militant black political rights organization founded by Bobby Seale and Huey Newton in October 1966, in Oakland, California. The 10-point platform made a number of demands for African Americans: full employment, an end to police brutality, decent housing and education, repatriation for slavery, exemption from military service, and the release of all black prisoners from jail. The platform claimed that these prisoners had not received fair treatment from the white-run judicial system and called for new trials with juries made up of members of the black community. Marxist and socialist influences can be felt with regard to the party's position on full employment for blacks. The platform states that if "white American businessmen" deny African Americans meaningful employment, then the "means of production should be taken from the businessmen and placed in the community so that the people of the community can organize and employ all of its people." Although the Panthers advocated revolutionary social and political changes, they were inspired to institute these changes for many of the same reasons that the American colonists broke free from English rule. The party closes its platform by quoting the opening paragraphs of the Declaration of Independence. "We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights. . . That, to secure these rights, governments are instituted among men. . . that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute a new government."

THE BLACK PANTHER PARTY
Platform & Program
October 1966

WHAT WE WANT
WHAT WE BELIEVE

WE WANT freedom. We want power to determine the destiny of our Black Community.

WE BELIEVE that black people will not be free until we are able to determine our destiny.

WE WANT full employment for our people.

WE BELIEVE that the federal government is responsible and obligated to give every man employment or a guaranteed income. We believe that if the white American businessmen will not give full employment, then the means of production should be taken from the businessmen and placed in the community so that the people of the community can organize and employ all of its people and give a high standard of living.

WE WANT an end to the robbery by the CAPITALIST of our Black Community.

WE BELIEVE that this racist government has robbed us and now we are demanding the overdue debt of forty acres and two mules. Forty acres and two mules was promised 100 years ago as restitution for slave labor and mass murder of black people. We will accept the payment in currency which will be distributed to our many communities. The Germans are now aiding the Jews in Israel for the genocide of the Jewish people. The Germans murdered six million Jews. The American racist has taken part in the slaughter of over fifty million black people; therefore, we feel that this is a modest demand that we make.

WE WANT decent housing, fit for the shelter of human beings.

WE BELIEVE that if the white landlords will not give decent housing to our black community, then the housing and the land should be made into cooperatives so that our community, with government aid, can build and make decent housing for its people.

WE WANT education for our people that exposes the true nature of this decadent American society. We want education that teaches us our true history and our role in the present-day society.

WE BELIEVE in an educational system that will give to our people a knowledge of self. If a man does not have knowledge of himself and his position in society and the world, then he has little chance to relate to anything else.

WE WANT all black men to be exempt from military service.

WE BELIEVE that Black people should not be forced to fight in the military service to defend a racist government that does not protect us. We will not fight and kill other people of color in the world who, like black people, are being victimized by the white racist government of America. We will protect ourselves from the force and violence of the racist police and the racist military, by whatever means necessary.

WE WANT an immediate end to POLICE BRUTALITY and MURDER of black people.

WE BELIEVE we can end police brutality in our black community by organizing black self-defense groups that are dedicated to defending our black community from racist police oppression and brutality. The Second Amendment to the Constitution of the United States gives a right to bear arms. We therefore believe that all black people should arm themselves for self-defense.

WE WANT freedom for all black men held in federal, state, county and city prisons and jails.

WE BELIEVE that all black people should be released from the many jails and prisons because they have not received a fair and impartial trial.

WE WANT all black people when brought to trial to be tried in court by a jury of their peer group or people from their black communities, as defined by the Constitution of the United States.

WE BELIEVE that the courts should follow the United States Constitution so that black people will receive fair trials. The 14th Amendment of the U.S. Constitution gives a man a right to be tried by his peer group. A peer is a person from a similar economic, social, religious, geographical, environmental, historical and racial background. To do this the court will be forced to select a jury from the black community from which the black defendant came. We have been, and are being tried by all-white juries that have no understanding of the “average reasoning man” of the black community.

WE WANT land, bread, housing, education, clothing, justice and peace. And as our major political objective, a United Nations supervised plebiscite to be held throughout the black colony in which only black colonial subjects will be allowed to participate, for the purpose of determining the will of black people as to their national destiny.

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bonds which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and nature’s God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

WE HOLD these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. **That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.** Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. **But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security.**

President Nasser: Statement to Members of the Egyptian National Assembly

Date: May 29, 1967

Egyptian President Gamal Abdul (Abdel) Nasser was the most popular Arab leader of his day. Nasser was seen as the leader of the Arab world, inspiring Arab unity. He pushed for action by Arab states to confront the “imperialist” West. Nasser had allied the Arab states of Syria, Jordan, and Iraq with Egypt in order to enter into a battle for the annihilation of Israel. Nasser called for the withdrawal of United Nations Emergency Force (UNEF) troops from the Sinai Peninsula. UN Secretary-General U Thant complied with that demand. Nasser remilitarized the Sinai with Egyptian Forces, and on May 23 he closed the Straits of Tiran to all Israeli ships and set up a blockade of the Israeli port of Eilat.

The Egyptians had planned a surprise attack on Israel on May 27 with the intention of destroying it. Israeli intelligence found out about the surprise plan and told the United States, which alerted the Soviets, who in turn told the Egyptian government. Nasser called off the attack.

In this speech on May 29, just one week before the Six-Day War, Nasser stated “. . . I have already said in the past that we will decide the time and place and not allow them to decide. . . .”

However, on June 5, 1967, Israel stunned the Arabs and the world by responding preemptively and launching a massive air attack on some two dozen Arab airfields, destroying more than 400 Egyptian, Syrian, and Jordanian aircraft on the ground. Israeli ground forces invaded the Sinai Peninsula, Jerusalem’s Old City, Jordan’s West Bank, the Gaza Strip, and the Golan Heights, seizing and occupying these areas.

Brothers, when Brother Anwar as-Sadat informed me of your decision to meet me I told him that I myself was prepared to call on you at the National Assembly, but he said you were determined to come. I therefore responded to this and I thank you heartily for your consideration.

I was naturally not surprised by the law which Brother Anwar as-Sadat read because I was notified of it before I came here. However, I wish to thank you very much for your feelings and for the powers given me. I did not ask for such powers because I felt that you and I were as one, that we could cooperate and work for the sublime interest of this country, giving a great example of unselfishness and of work for the welfare of all. Thanks be to God, for four years now the National Assembly has been working and has given great examples. We have given great examples in cooperation and unselfishness and in placing before us the sublime and highest objective—the interest of this nation.

I am proud of this resolution and law. I promise you that I will use it only when necessary. I will, however, send all the laws to you. Thank you once again. The great gesture of moral support represented by this law is very valuable to my spirit and heart. I heartily thank you for this feeling and this initiative.

The circumstances through which we are now passing are in fact difficult ones because we are not only confronting Israel but also those who created Israel and who are behind Israel. We are confronting Israel and the West, as well the West which created Israel and which despised us Arabs and which ignored us before and since 1948. They had no regard whatsoever for our feelings, our hopes in life, or our rights. The West completely ignored us, and the Arab nation was unable to check the West's course.

Then came the events of 1956, the Suez battle. We all know what happened in 1956. When we rose to demand our rights, Britain, France and Israel opposed us, and we were faced with the tripartite aggression. We resisted, however, and proclaimed that we would fight to the last drop of our blood. God gave us success and God's victory was great.

Subsequently we were able to rise and to build. Now, eleven years after 1956, we are restoring things to what they were in 1956. This is from the material aspect. In my opinion this material aspect is only a small part, whereas the spiritual aspect is the great side of the issue. The spiritual aspect involves the renaissance of the Arab nation, the revival of the Palestine question, and the restoration of confidence to every Arab and to every Palestinian. This is on the basis that if we were able to restore conditions to what they were before 1956, God will surely help and urge us to restore the situation to what it was in 1948.

Brothers, the revolt, upheaval and commotion which we now see taking place in every Arab country are not only because we have returned to the Gulf of Aqaba or rid ourselves of the UNEF, but because we have restored Arab honour and renewed Arab hopes.

Israel used to boast a great deal, and the Western Powers, headed by the United States and Britain, used to ignore and even despise us and consider us of no value. But now that the time has come—and I have already said in the past that we will decide the time and place and not allow them to decide—we must be ready for triumph and not for a recurrence of the 1948 comedies. We shall triumph, God willing.

Preparations have already been made. We are now ready to confront Israel. They have claimed many things about the 1956 Suez war, but no one believed them after the secrets of the 1956 collusion were uncovered – that mean collusion in which Israel took part. Now we are ready for the confrontation. We are now ready to deal with the entire Palestine question.

The issue now at hand is not the Gulf of Aqaba, the Straits of Tiran, or the withdrawal of the UNEF, but the rights of the Palestine people. It is the aggression which took place in Palestine in 1948 with the collaboration of Britain and the United States. It is the expulsion of the Arabs from Palestine, the usurpation of their rights, and the plunder of their property. It is the disavowal of all the UN resolutions in favour of the Palestinian people.

The issue today is far more serious than they say. They want to confine the issue to the Straits of Tiran, the UNEF and the right of passage. We demand the full rights of the Palestinian people. We say this out of our belief that Arab rights cannot be squandered because the Arabs throughout the Arab world are demanding these Arab rights.

We are not afraid of the United States and its threats, of Britain and its threats, or of the entire Western world and its partiality to Israel. The United States and Britain are partial to Israel and give no consideration to the Arabs, to the entire Arab nation. Why? Because we have made them believe that we cannot distinguish between friend and foe. We must make them know that we know who our foes are and who our friends are and treat them accordingly.

If the United States and Britain are partial to Israel, we must say that our enemy is not only Israel but also the United States and Britain and treat them as such. If the Western Powers disavow our rights and ridicule and despise us, we Arabs must teach them to respect us and take us seriously. Otherwise all our talk about Palestine, the Palestine people and Palestinian rights will be null and void and of no consequence. We must treat enemies as enemies and friends as friends.

I said yesterday that the States that champion freedom and peace have supported us. I spoke of the support given us by India, Pakistan, Afghanistan, Yugoslavia, Malaysia, the Chinese People's Republic and the Asian and African States.

After my statements yesterday I met the War Minister Shams Badran and learned from him what took place in Moscow. I wish to tell you today that the Soviet Union is a friendly Power and stands by us as a friend. In all our dealings with the Soviet Union—and I have been dealing with the USSR since 1955—it has not made a single request of us. The USSR has never interfered with our policy or internal affairs. This is the USSR as we have always known it. In fact, it is we who have made urgent requests of the USSR. Last year we asked for wheat and they sent it to us. When I also asked for all kinds of arms they gave them to us. When I met Shams Badran yesterday he handed me a message from the Soviet Premier Kosygin saying that the USSR supported us in this battle and would not allow any Power to intervene until matters were restored to what they were in 1956.

Brothers, we must distinguish between friend and foe, friend and hypocrite. We must be able to tell who is making requests, who has ulterior motives and who is applying economic pressure. We must also know those who offer their friendship to us for no other reason than a desire for freedom and peace.

In the name of the UAR people, I thank the people of the USSR for their great attitude which is the attitude of a real friend. This is the kind of attitude that we expect. I said yesterday that we had not requested the USSR or any other State to intervene because we really want to avoid any confrontation which might lead to a world war and also because we really work for peace and advocate world peace. When we voiced the policy of non-alignment, our chief aim was world peace.

Brothers, we will work for world peace with all the power at our disposal, but we will also hold tenaciously to our rights with all the power at our disposal. This is our course. On this occasion, I address myself to our brothers in Aden and say: Although occupied with this battle, we have not forgotten you. We are with you. We have not forgotten the struggle of Aden and the occupied South for liberation. Aden and the occupied South must be liberated and colonialism must end. We are with them. Present matters have not taken our minds from Aden.

I thank you for taking the trouble to pay this visit. Moreover, your presence is an honour to the Qubbah Palace, and I am pleased to have met you. Peace be with you.

Leonid Brezhnev, Soviet Communist Party Secretary, on Prague Spring

Date: 1968

The Soviet Union adopted a policy of suppressing the democracy movement in Czechoslovakia that developed there under Alexander Dubček. The 1968 liberalization was known as the Prague Spring, and the Soviet response was known as the Brezhnev Doctrine. In November 1968, speaking before an assemblage of Polish workers, Brezhnev gave the following justification for the invasion of Czechoslovakia by Soviet troops.

The Brezhnev Doctrine, 1968

In connection with the events in Czechoslovakia the question of the correlation and interdependence of the national interests of the socialist countries and their international duties acquire particular topical and acute importance.

The measures taken by the Soviet Union, jointly with other socialist countries, in defending the socialist gains of the Czechoslovak people are of great significance for strengthening the socialist community, which is the main achievement of the international working class.

We cannot ignore the assertions, held in some places, that the actions of the five socialist countries run counter to the Marxist-Leninist principle of sovereignty and the rights of nations to self-determination.

The groundlessness of such reasoning consists primarily in that it is based on an abstract, nonclass approach to the question of sovereignty and the rights of nations to self-determination.

The peoples of the socialist countries and Communist parties certainly do have and should have freedom for determining the ways of advance of their respective countries.

However, none of their decisions should damage either socialism in their country or the fundamental interests of other socialist countries, and the whole working class movement, which is working for socialism.

This means that each Communist party is responsible not only to its own people, but also to all the socialist countries, to the entire Communist movement. Whoever forget this, in stressing only the independence of the Communist party, becomes onesided. He deviates from his international duty.

Marxist dialectics are opposed to onesidedness. They demand that each phenomenon be examined concretely, in general connection with other phenomena, with other processes.

Just as, in Lenin's words, a man living in a society cannot be free from the society, one or another socialist state, staying in a system of other states composing the socialist community, cannot be free from the common interests of that community.

The sovereignty of each socialist country cannot be opposed to the interests of the world of socialism, of the world revolutionary movement. Lenin demanded that all Communists fight against smallnation narrowmindedness, seclusion and isolation, consider the whole and the general, subordinate the particular to the general interest.

The socialist states respect the democratic norms of international law. They have proved this more than once in practice, by coming out resolutely against the attempts of imperialism to violate the sovereignty and independence of nations.

It is from these same positions that they reject the leftist, adventurist conception of "exporting revolution," of "bringing happiness" to other peoples.

However, from a Marxist point of view, the norms of law, including the norms of mutual relations of the socialist countries, cannot be interpreted narrowly, formally, and in isolation from the general context of class struggle in the modern world. The socialist countries resolutely come out against the exporting and importing of counterrevolution

Each Communist party is free to apply the basic principles of Marxism Leninism and of socialism in its country, but it cannot depart from these principles (assuming, naturally, that it remains a Communist party).

Concretely, this means, first of all, that, in its activity, each Communist party cannot but take into account such a decisive fact of our time as the struggle between two opposing social systems-capitalism and socialism.

This is an objective struggle, a fact not depending on the will of the people, and stipulated by the world's being split into two opposite social systems. Lenin said: "Each man must choose between joining our side or the other side. Any attempt to avoid taking sides in this issue must end in fiasco."

It has got to be emphasized that when a socialist country seems to adopt a "nonaffiliated" stand, it retains its national independence, in effect, precisely because of the might of the socialist community, and above all the Soviet Union as a central force, which also includes the might of its armed forces. The weakening of any of the links in the world system of socialism directly affects all the socialist countries, which cannot look indifferently upon this.

The antisocialist elements in Czechoslovakia actually covered up the demand for so-called neutrality and Czechoslovakia's withdrawal from the socialist community with talking about the right of nations to self-determination.

However, the implementation of such "self-determination," in other words, Czechoslovakia's detachment from the socialist community, would have come into conflict with its own vital interests and would have been detrimental to the other socialist states.

Such "self-determination," as a result of which NATO troops would have been able to come up to the Soviet border, while the community of European socialist countries would have been split, in effect encroaches upon the vital interests of the peoples of these countries and conflicts, as the very root of it, with the right of these people to socialist self-determination.

Discharging their internationalist duty toward the fraternal peoples of Czechoslovakia and defending their own socialist gains, the U.S.S.R. and the other socialist states had to act decisively and they did act against the antisocialist forces in Czechoslovakia.

Ronald Reagan: "Tear Down This Wall" Speech

Date: June 12, 1987

This speech was delivered to the people of West Berlin, yet it was also audible on the east side of the Berlin Wall. The president spoke at 2:20 p.m. at the Brandenburg Gate. In his opening remarks, he referred to West German Chancellor Helmut Kohl. Prior to his remarks President Reagan met with West German President Richard von Weizsacker and the governing mayor of West Berlin, Eberhard Diepgen, at Schloss Bellevue, President Weizsacker's official residence in West Berlin. Following the meeting, President Reagan went to the Reichstag, where he viewed the Berlin Wall from the East Balcony. President Reagan's speech was made at the Brandenburg Gate in West Berlin, Germany, on June 12, 1987.

Thank you very much.

Chancellor Kohl, Governing Mayor Diepgen, ladies and gentlemen: Twenty-four years ago, President John F. Kennedy visited Berlin, speaking to the people of this city and the world at the City Hall. Well, since then two other presidents have come, each in his turn, to Berlin. And today I, myself, make my second visit to your city.

We come to Berlin, we American presidents, because it's our duty to speak, in this place, of freedom. But I must confess, we're drawn here by other things as well: by the feeling of history in this city, more than 500 years older than our own nation; by the beauty of the Grunewald and the Tiergarten; most of all, by your courage and determination. Perhaps the composer Paul Lincke understood something about American presidents. You see, like so many presidents before me, I come here today because wherever I go, whatever I do: Ich hab noch einen Koffer in Berlin. [I still have a suitcase in Berlin.]

Our gathering today is being broadcast throughout Western Europe and North America. I understand that it is being seen and heard as well in the East. To those listening throughout Eastern Europe, a special word: Although I cannot be with you, I address my remarks to you just as surely as to those standing here before me. For I join you, as I join your fellow countrymen in the West, in this firm, this unalterable belief: Es gibt nur ein Berlin. [There is only one Berlin.]

Behind me stands a wall that encircles the free sectors of this city, part of a vast system of barriers that divides the entire continent of Europe. From the Baltic, south, those barriers cut across Germany in a gash of barbed wire, concrete, dog runs, and guard towers. Farther south, there may be no visible, no obvious wall. But there remain armed guards and checkpoints all the same—still a restriction on the right to travel, still an instrument to impose upon ordinary men and women the will of a totalitarian state. Yet it is here in Berlin where the wall emerges most clearly; here, cutting across your city, where the news photo and the television screen have imprinted this brutal division of a continent upon the mind of the world. Standing before the Brandenburg Gate, every man is a German, separated from his fellow men. Every man is a Berliner, forced to look upon a scar.

President von Weizsacker has said, "The German question is open as long as the Brandenburg Gate is closed." Today I say: As long as the gate is closed, as long as this scar of a wall is permitted to stand, it is not the German question alone that remains open, but the question of freedom for all mankind. Yet I do not come here to lament. For I find in Berlin a message of hope, even in the shadow of this wall, a message of triumph.

In this season of spring in 1945, the people of Berlin emerged from their air-raid shelters to find devastation. Thousands of miles away, the people of the United States reached out to help. And in 1947 Secretary of State—as you've been told—George Marshall announced the creation of what would become known as the Marshall Plan. Speaking precisely 40 years ago this month, he said: "Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation, and chaos."

In the Reichstag a few moments ago, I saw a display commemorating this 40th anniversary of the Marshall Plan. I was struck by the sign on a burnt-out, gutted structure that was being rebuilt. I understand that Berliners of my own generation can remember seeing signs like it dotted throughout the western sectors of the city. The sign read simply: "The Marshall Plan is helping here to strengthen the free world." A strong, free world in the West, that dream became real. Japan rose from ruin to become an economic giant. Italy, France, Belgium—virtually every nation in Western Europe saw political and economic rebirth; the European Community was founded.

In West Germany and here in Berlin, there took place an economic miracle, the Wirtschaftswunder. Adenauer, Erhard, Reuter, and other leaders understood the practical importance of liberty—that just as truth can flourish only when the journalist is given freedom of speech, so prosperity can come about only when the farmer and businessman enjoy economic freedom. The German leaders reduced tariffs, expanded free trade, lowered taxes. From 1950 to 1960 alone, the standard of living in West Germany and Berlin doubled.

Where four decades ago there was rubble, today in West Berlin there is the greatest industrial output of any city in Germany—busy office blocks, fine homes and apartments, proud avenues, and the spreading lawns of parkland. Where a city's culture seemed to have been destroyed, today there are two great universities, orchestras and an opera, countless theaters, and museums. Where there was want, today there's abundance—food, clothing, automobiles—the wonderful goods of the Ku'damm. From devastation, from utter ruin, you Berliners have, in freedom, rebuilt a city that once again ranks as one of the greatest on earth. The Soviets may have had other plans. But my friends, there were a few things the Soviets didn't count on—Berliner Herz, Berliner Humor, ja, und Berliner Schnauze. [Berliner heart, Berliner humor, yes, and a Berliner Schnauze.]

In the 1950s, Khrushchev predicted: "We will bury you." But in the West today, we see a free world that has achieved a level of prosperity and well-being unprecedented in all human history. In the Communist world, we see failure, technological backwardness, declining standards of health, even want of the most basic kind—too little food. Even today, the Soviet Union still cannot feed itself. After these four decades, then, there stands before the entire world one great and inescapable conclusion: Freedom leads to prosperity. Freedom replaces the ancient hatreds among the nations with comity and peace. Freedom is the victor.

And now the Soviets themselves may, in a limited way, be coming to understand the importance of freedom. We hear much from Moscow about a new policy of reform and openness. Some political prisoners have been released. Certain foreign news broadcasts are no longer being jammed. Some economic enterprises have been permitted to operate with greater freedom from state control.

Are these the beginnings of profound changes in the Soviet state? Or are they token gestures, intended to raise false hopes in the West, or to strengthen the Soviet system without changing it? We welcome change and openness; for we believe that freedom and security go together, that the advance of human liberty can only

strengthen the cause of world peace. There is one sign the Soviets can make that would be unmistakable, that would advance dramatically the cause of freedom and peace.

General Secretary Gorbachev, if you seek peace, if you seek prosperity for the Soviet Union and Eastern Europe, if you seek liberalization: Come here to this gate! Mr. Gorbachev, open this gate! Mr. Gorbachev, tear down this wall!

I understand the fear of war and the pain of division that afflict this continent—and I pledge to you my country's efforts to help overcome these burdens. To be sure, we in the West must resist Soviet expansion. So we must maintain defenses of unassailable strength. Yet we seek peace; so we must strive to reduce arms on both sides.

Beginning 10 years ago, the Soviets challenged the Western alliance with a grave new threat, hundreds of new and more deadly SS-20 nuclear missiles, capable of striking every capital in Europe. The Western alliance responded by committing itself to a counter-deployment unless the Soviets agreed to negotiate a better solution; namely, the elimination of such weapons on both sides. For many months, the Soviets refused to bargain in earnestness. As the alliance, in turn, prepared to go forward with its counter-deployment, there were difficult days—days of protests like those during my 1982 visit to this city—and the Soviets later walked away from the table.

But through it all, the alliance held firm. And I invite those who protested then—I invite those who protest today—to mark this fact: Because we remained strong, the Soviets came back to the table. And because we remained strong, today we have within reach the possibility, not merely of limiting the growth of arms, but of eliminating, for the first time, an entire class of nuclear weapons from the face of the earth.

As I speak, NATO ministers are meeting in Iceland to review the progress of our proposals for eliminating these weapons. At the talks in Geneva, we have also proposed deep cuts in strategic offensive weapons. And the Western allies have likewise made far-reaching proposals to reduce the danger of conventional war and to place a total ban on chemical weapons.

While we pursue these arms reductions, I pledge to you that we will maintain the capacity to deter Soviet aggression at any level at which it might occur. And in cooperation with many of our allies, the United States is pursuing the Strategic Defense Initiative—research to base deterrence not on the threat of offensive retaliation, but on defenses that truly defend; on systems, in short, that will not target populations, but shield them. By these means we seek to increase the safety of Europe and all the world. But we must remember a crucial fact: East and West do not mistrust each other because we are armed; we are armed because we mistrust each other. And our differences are not about weapons but about liberty. When President Kennedy spoke at the City Hall those 24 years ago, freedom was encircled, Berlin was under siege. And today, despite all the pressures upon this city, Berlin stands secure in its liberty. And freedom itself is transforming the globe.

In the Philippines, in South and Central America, democracy has been given a rebirth. Throughout the Pacific, free markets are working miracle after miracle of economic growth. In the industrialized nations, a technological revolution is taking place—a revolution marked by rapid, dramatic advances in computers and telecommunications.

In Europe, only one nation and those it controls refuse to join the community of freedom. Yet in this age of redoubled economic growth, of information and innovation, the Soviet Union faces a choice: It must make fundamental changes, or it will become obsolete.

Today thus represents a moment of hope. We in the West stand ready to cooperate with the East to promote true openness, to break down barriers that separate people, to create a safe, freer world. And surely there is no better place than Berlin, the meeting place of East and West, to make a start. Free people of Berlin: Today, as in the past, the United States stands for the strict observance and full implementation of all parts of the Four Power Agreement of 1971. Let us use this occasion, the 750th anniversary of this city, to usher in a new era, to seek a still fuller, richer life for the Berlin of the future. Together, let us maintain and develop the ties between the Federal Republic and the Western sectors of Berlin, which is permitted by the 1971 agreement.

And I invite Mr. Gorbachev: Let us work to bring the Eastern and Western parts of the city closer together, so that all the inhabitants of all Berlin can enjoy the benefits that come with life in one of the great cities of the world.

To open Berlin still further to all Europe, East and West, let us expand the vital air access to this city, finding ways of making commercial air service to Berlin more convenient, more comfortable, and more economical. We look to the day when West Berlin can become one of the chief aviation hubs in all central Europe.

With our French and British partners, the United States is prepared to help bring international meetings to Berlin. It would be only fitting for Berlin to serve as the site of United Nations meetings, or world conferences on human rights and arms control or other issues that call for international cooperation.

There is no better way to establish hope for the future than to enlighten young minds, and we would be honored to sponsor summer youth exchanges, cultural events, and other programs for young Berliners from the East. Our French and British friends, I'm certain, will do the same. And it's my hope that an authority can be found in East Berlin to sponsor visits from young people of the Western sectors.

One final proposal, one close to my heart: Sport represents a source of enjoyment and ennoblement, and you may have noted that the Republic of Korea—South Korea—has offered to permit certain events of the 1988 Olympics to take place in the North. International sports competitions of all kinds could take place in both parts of this city. And what better way to demonstrate to the world the openness of this city than to offer

in some future year to hold the Olympic games here in Berlin, East and West? In these four decades, as I have said, you Berliners have built a great city. You've done so in spite of threats—the Soviet attempts to impose the East-mark, the blockade. Today the city thrives in spite of the challenges implicit in the very presence of this wall. What keeps you here? Certainly there's a great deal to be said for your fortitude, for your defiant courage. But I believe there's something deeper, something that involves Berlin's whole look and feel and way of life—not mere sentiment. No one could live long in Berlin without being completely disabused of illusions. Something instead, that has seen the difficulties of life in Berlin but chose to accept them, that continues to build this good and proud city in contrast to a surrounding totalitarian presence that refuses to release human energies or aspirations. Something that speaks with a powerful voice of affirmation, that says yes to this city, yes to the future, yes to freedom. In a word, I would submit that what keeps you in Berlin is love—love both profound and abiding.

Perhaps this gets to the root of the matter, to the most fundamental distinction of all between East and West. The totalitarian world produces backwardness because it does such violence to the spirit, thwarting the human impulse to create, to enjoy, to worship. The totalitarian world finds even symbols of love and of worship an affront. Years ago, before the East Germans began rebuilding their churches, they erected a secular structure: the television tower at Alexander Platz. Virtually ever since, the authorities have been working to correct what they view as the tower's one major flaw, treating the glass sphere at the top with paints and chemicals of every kind. Yet even today when the sun strikes that sphere—that sphere that towers over all Berlin—the light makes the sign of the cross. There in Berlin, like the city itself, symbols of love, symbols of worship, cannot be suppressed.

As I looked out a moment ago from the Reichstag, that embodiment of German unity, I noticed words crudely spray-painted upon the wall, perhaps by a young Berliner: "This wall will fall. Beliefs become reality." Yes, across Europe, this wall will fall. For it cannot withstand faith; it cannot withstand truth. The wall cannot withstand freedom.

And I would like, before I close, to say one word. I have read, and I have been questioned since I've been here about certain demonstrations against my coming. And I would like to say just one thing, and to those who demonstrate so. I wonder if they have ever asked themselves that if they should have the kind of government they apparently seek, no one would ever be able to do what they're doing again.

Thank you and God bless you all.

Nelson Mandela: Speech on Release from Prison

Date: February 11, 1990

Nelson (Rolihlala Dalibhunga) Mandela cofounded the Youth League of the African National Congress (ANC) in 1944. In 1952 Mandela and Oliver Tambo established the first all-black legal service in South Africa while the African National Congress commenced a campaign of passive civil disobedience. In 1962 Nelson Mandela was convicted of inciting workers to strike and received a sentence of five years in prison. His sentence was changed to life imprisonment after documents later surfaced surrounding his guerrilla activities. Mandela spent the next 27 years behind bars, confined to a seven-by-seven-foot cell.

Mandela became the symbol of injustice and of the fight against racial oppression for the anti-apartheid movement. In 1982 a worldwide campaign against apartheid in South Africa began pressuring the South African regime to release Mandela, and other governments backed their words with economic sanctions against South Africa.

The tempo of events accelerated with the rise of a new white leader, Frederik W. de Klerk. De Klerk realized that the policies of apartheid were doomed. De Klerk began releasing political prisoners unconditionally in 1989, and on February 2, 1990, Mandela was finally freed. His emergence was greeted by throngs of cheering supporters as the end of apartheid was at hand. Nelson Mandela gave a speech to the world's press. This speech, together with his decades of service to the cause of his people, catapulted him onto the international stage as a world figure.

On April 27, 1994, the 75-year-old Mandela was elected as the president of South Africa, after winning 62 percent of the votes cast. In 1993 Mandela shared the Nobel Peace Prize with de Klerk for finally slaying the scourge of apartheid.

Comrades and fellow South Africans, I greet you all in the name of peace, democracy and freedom for all. I stand here before you not as a prophet but as a humble servant of you, the people. Your tireless

and heroic sacrifices have made it possible for me to be here today. I therefore place the remaining years of my life in your hands.

On this day of my release, I extend my sincere and warmest gratitude to the millions of my compatriots and those in every corner of the globe who have campaigned tirelessly for my release. I extend special greetings to the people of Cape Town, the city which has been my home for three decades. Your mass marches and other forms of struggle have served as a constant source of strength to all political prisoners.

I salute the African National Congress. It has fulfilled our every expectation in its role as leader of the great march to freedom.

I salute our president, Comrade Oliver Tambo, for leading the ANC even under the most difficult circumstances.

I salute the rank-and-file members of the ANC: You have sacrificed life and limb in the pursuit of the noble cause of our struggle.

I salute combatants of Umkhonto We Sizwe (the ANC's military wing) who paid the ultimate price for the freedom of all South Africans.

I salute the South African Communist Party for its sterling contribution to the struggle for democracy: You have survived 40 years of unrelenting persecution. The memory of great Communists like Bram Fisher and Moses Mabhida will be cherished for generations to come.

I salute General Secretary Joe Slovo, one of our finest patriots. We are heartened by the fact that the alliance between ourselves and the party remains as strong as it always was.

I salute the United Democratic Front, the National Education Crisis Committee, the South African Youth Congress, the Transvaal and Natal Indian Congresses, and COSATU, and the many other formations of the mass democratic movement.

I also salute the Black Sash and the National Union of South African Students. We note with pride that you have endured as the conscience of white South Africans, even during the darkest days of the history of our struggle. You held the flag of liberty high. The large-scale mass mobilization of the past few years is one of the key factors which led to the opening of the final chapter of our struggle.

I extend my greetings to the working class of our country. Your organized strength is the pride of our movement: You remain the most dependable force in the struggle to end exploitation and oppression.

I pay tribute to the many religious communities who carried the campaign for justice forward when the organizations of our people were silenced.

I greet the traditional leaders of our country: Many among you continue to walk in the footsteps of great heroes.

I pay tribute for the endless heroism of youth: You, the young lions, have energized our entire struggle.

I pay tribute to the mothers and wives and sisters of our nation: You are the rock-hard foundation of our struggle. Apartheid has inflicted more pain on you than on anyone else.

On this occasion, we thank the world, we thank the world community for their great contribution to the anti-apartheid struggle. Without your support, our struggle could not have reached this advanced stage.

The sacrifice of the front-line states will be remembered by South Africans forever.

My celebrations will be incomplete without expressing my deep appreciation for the strength that has been given to me during my long and gloomy years in prison by my beloved wife and family. I am convinced that your pain and suffering was far greater than my own.

Before I go any further, I wish to make the point that I intend making only a few preliminary comments at this stage. I will make a more complete statement only after I have had the opportunity to consult with my comrades.

Today, the majority of South Africans, black and white, recognize that apartheid has no future. It has to be ended by our own decisive mass action in order to build peace and security.

The mass campaigns of defiance and other actions of our organizations and people can only culminate in the establishment of democracy.

The apartheid's destruction on our subcontinent is incalculable. The fabric of family life of millions of my people has been shattered. Millions are homeless and unemployed. Our economy lies in ruins and our people are embroiled in political strife.

Our resort to the armed struggle in 1960 with the formation of the military wing of the ANC (Umkhonto We Sizwe) was a purely defensive action against the violence of apartheid. The factors which necessitated the armed struggle still exist today. We have no option but to continue. We express the hope that a climate conducive to a negotiated settlement would be created soon, so that there may no longer be the need for the armed struggle.

I am a loyal and disciplined member of the African National Congress. I am therefore in full agreement with all of its objectives strategies and tactics.

The need to unite the people of our country is as important a task now as it always has been. No individual leader is able to take all this enormous task on his own. It is our task as leaders to place our views before our organization and to allow the democratic structures to decide on the way forward.

On the question of democratic practice, I feel duty-bound to make the point that a leader of the movement is a person who has been democratically elected at a national congress. This is a principle which must be upheld without any exception.

Today, I wish to report to you that my talks with the government have been aimed at normalizing the political situation in the country. We have not yet begun discussing the basic demands of the struggle. I wish to stress that I myself have at no time entered negotiations about the future of our country, except to insist on a meeting between the ANC and the government.

Mr. de Klerk has gone further than any other nationalist president in taking real steps to normalize the situation. However, there are further steps, as outlined in the Harare declaration, that have to be met before negotiations on the basic demands of our people can begin.

I reiterate our call for, inter-alia, the immediate ending of the state of emergency and the freeing of all—and not only some—political prisoners.

Only such a normalized situation, which allows for free political activity, can allow us to consult our people in order to obtain a mandate.

The people need to be consulted on who will negotiate and on the content of such negotiations.

Negotiations cannot take their place above the heads or behind the backs of our people.

It is our belief that the future of our country can only be determined by a body which is democratically elected on a non-racial basis.

Negotiations on the dismantling of apartheid will have to address the overwhelming demands of our people for a democratic, non-racial and unitary South Africa.

There must be an end to white monopoly on political power and a fundamental restructuring of our political and economic systems to ensure that the inequalities of apartheid are addressed, and our society thoroughly democratized.

It must be added that Mr. de Klerk himself is a man of integrity who is acutely aware of the dangers of a public figure not honoring his undertaking.

But as an organization, we base our policy and our strategy on the harsh reality we are faced with, and this reality is that we are still suffering under the policies of the nationalist government.

Our struggle has reached a decisive moment: We call on our people to seize this moment, so that the process toward democracy is rapid and uninterrupted.

We have waited too long for our freedom. We can no longer wait. Now is the time to intensify the struggle on all fronts. To relax our efforts now would be a mistake which generations to come will not be able to forgive.

The sight of freedom looming on the horizon should encourage us to redouble our efforts. It is only through disciplined mass action that our victory can be assured.

We call on our white compatriots to join us in the shaping of a new South Africa. The freedom movement is a political home for you, too.

We call on the international community to continue the campaign to isolate the apartheid regime. To lift sanctions now would run the risk of aborting the process toward the complete eradication of apartheid.

Our march toward freedom is irreversible. We must not allow fear to stand in our way.

Universal suffrage on a common voters roll in a united, democratic and non-racial South Africa is the only way to peace and racial harmony.

In conclusion, I wish to go to my own words during my trial in 1964—they are as true today as they were then:

I have fought against white domination, and I have fought against black domination. I have cherished the ideal of a democratic and free society in which all persons live together in harmony and with equal opportunity. It is an ideal which I hope to live for and to achieve. But, if need be, it is an ideal for which I am prepared to die.

United Nations Millennium Declaration

Date: September 8, 2000

United Nations secretary-general Kofi Annan called for a summit of the 2000 Millennium Assembly of the United Nations, with the General Assembly Resolution 202 of December 17, 1998. The Millennium Summit sought to create global goals for the early 21st century. On March 15, 2000, with Resolution 254, the United Nations General Assembly decided that the summit would be composed of plenary sessions and four interactive roundtable sessions. In September 2000 some 8,000 delegates and 4,500 Secretariat employees attended the summit, and 5,500 journalists covered the gathering. The result of this summit would be the United Nations Millennium Declaration, on September 8, 2000.

The United Nations Millennium Declaration had eight major objectives: eradicate extreme poverty and hunger; achieve universal primary education; promote gender equality and empower women; reduce child

mortality; improve maternal health; combat HIV/AIDS, malaria, and other diseases; ensure environmental sustainability; and develop a global partnership for development.

By the conclusion of the summit, the assembled nations, often with very divergent views about issues such as development and human rights, overwhelmingly approved a declaration of the world's hopes for the 21st century. They agreed on six "fundamental values" essential to international relations: freedom, equality, solidarity, tolerance, respect for nature, and a sense of shared responsibility. The declaration also set specific goals, including to halve by 2015 the number of people living on less than \$1 a day or living in hunger, or those having no access to clean water; to assure that by 2015 all children completed primary school and that there would be no gender inequality in education; to reduce maternal mortality by three-fourths and the deaths of children under five by two-thirds; to stop the spread of HIV/AIDS, malaria, and other infectious diseases; to achieve significant improvement in the lives of at least 100 million slum dwellers; to promote gender equality and the empowerment of women; to encourage the pharmaceutical industry to make essential drugs more widely available; and to provide the benefits of new technologies to all the world's peoples.

The General Assembly passed a resolution to guide the implementation of the Millennium Declaration on December 14, 2000. At the World Summit of 2005 the implementation of the declaration would be reviewed.

United Nations Millennium Declaration

General Assembly resolution 55/2 of 8 September 2000

The General Assembly

Adopts the following Declaration:

United Nations Millennium Declaration

I. Values and principles

1. We, heads of State and Government, have gathered at United Nations Headquarters in New York from 6 to 8 September 2000, at the dawn of a new millennium, to reaffirm our faith in the Organization and its Charter as indispensable foundations of a more peaceful, prosperous and just world.

2. We recognize that, in addition to our separate responsibilities to our individual societies, we have a collective responsibility to uphold the principles of human dignity, equality and equity at the global level. As leaders we have a duty therefore to all the world's people, especially the most vulnerable and, in particular, the children of the world, to whom the future belongs.

3. We reaffirm our commitment to the purposes and principles of the Charter of the United Nations, which have proved timeless and universal. Indeed, their relevance and capacity to inspire have increased, as nations and peoples have become increasingly interconnected and interdependent.

4. We are determined to establish a just and lasting peace all over the world in accordance with the purposes and principles of the Charter. We rededicate ourselves to support all efforts to uphold the sovereign equality of all States, respect for their territorial integrity and political independence, resolution of disputes by peaceful means and in conformity with the principles of justice and international law, the right to self-determination of peoples which remain under colonial domination and foreign occupation, non-interference in the internal affairs of States, respect for human rights and fundamental freedoms, respect for the equal rights of all without distinction as to race, sex, language or religion and international cooperation in solving international problems of an economic, social, cultural or humanitarian character.

5. We believe that the central challenge we face today is to ensure that globalization becomes a positive force for all the world's people. For while globalization offers great opportunities, at present its benefits are very unevenly shared, while its costs are unevenly distributed. We recognize that developing countries and countries with economies in transition face special difficulties in responding to this central challenge. Thus, only through broad and sustained efforts to create a shared future, based upon our common humanity in all its diversity, can globalization be made fully inclusive and equitable. These efforts must include policies and measures, at the global level, which correspond to the needs of developing countries and economies in transition and are formulated and implemented with their effective participation.

6. We consider certain fundamental values to be essential to international relations in the twenty-first century. These include:

- Freedom. Men and women have the right to live their lives and raise their children in dignity, free from hunger and from the fear of violence, oppression or injustice. Democratic and participatory governance based on the will of the people best assures these rights.

- Equality. No individual and no nation must be denied the opportunity to benefit from development. The equal rights and opportunities of women and men must be assured.

- Solidarity. Global challenges must be managed in a way that distributes the costs and burdens fairly in accordance with basic principles of equity and social justice. Those who suffer or who benefit least deserve help from those who benefit most.

- Tolerance. Human beings must respect one other, in all their diversity of belief, culture and language. Differences within and between societies should be neither feared nor repressed, but cherished as a precious asset of humanity. A culture of peace and dialogue among all civilizations should be actively promoted.

- Respect for nature. Prudence must be shown in the management of all living species and natural resources, in accordance with the precepts of sustainable development. Only in this way can the immeasurable riches provided to us by nature be preserved and passed on to our descendants. The current unsustainable patterns of production and consumption must be changed in the interest of our future welfare and that of our descendants.

- Shared responsibility. Responsibility for managing worldwide economic and social development, as well as threats to international peace and security, must be shared among the nations of the world and should be exercised multilaterally. As the most universal and most representative organization in the world, the United Nations must play the central role.

7. In order to translate these shared values into actions, we have identified key objectives to which we assign special significance.

II. Peace, security and disarmament

8. We will spare no effort to free our peoples from the scourge of war, whether within or between States, which has claimed more than 5 million lives in the past decade. We will also seek to eliminate the dangers posed by weapons of mass destruction.

9. We resolve therefore:

- To strengthen respect for the rule of law in international as in national affairs and, in particular, to ensure compliance by Member States with the decisions of the International Court of Justice, in compliance with the Charter of the United Nations, in cases to which they are parties.

- To make the United Nations more effective in maintaining peace and security by giving it the resources and tools it needs for conflict prevention, peaceful resolution of disputes, peacekeeping, post-conflict peacebuilding and reconstruction. In this context, we take note of the report of the Panel on United Nations Peace Operations and request the General Assembly to consider its recommendations expeditiously.

- To strengthen cooperation between the United Nations and regional organizations, in accordance with the provisions of Chapter VIII of the Charter.

- To ensure the implementation, by States Parties, of treaties in areas such as arms control and disarmament and of international humanitarian law and human rights law, and call upon all States to consider signing and ratifying the Rome Statute of the International Criminal Court.

- To take concerted action against international terrorism, and to accede as soon as possible to all the relevant international conventions.

- To redouble our efforts to implement our commitment to counter the world drug problem.

- To intensify our efforts to fight transnational crime in all its dimensions, including trafficking as well as smuggling in human beings and money laundering.

- To minimize the adverse effects of United Nations economic sanctions on innocent populations, to subject such sanctions regimes to regular reviews and to eliminate the adverse effects of sanctions on third parties.

- To strive for the elimination of weapons of mass destruction, particularly nuclear weapons, and to keep all options open for achieving this aim, including the possibility of convening an international conference to identify ways of eliminating nuclear dangers.

- To take concerted action to end illicit traffic in small arms and light weapons, especially by making arms transfers more transparent and supporting regional disarmament measures, taking account of all the recommendations of the forthcoming United Nations Conference on Illicit Trade in Small Arms and Light Weapons.

- To call on all States to consider acceding to the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-personnel Mines and on Their Destruction, as well as the amended mines protocol to the Convention on conventional weapons.

10. We urge Member States to observe the Olympic Truce, individually and collectively, now and in the future, and to support the International Olympic Committee in its efforts to promote peace and human understanding through sport and the Olympic Ideal.

III. Development and poverty eradication

11. We will spare no effort to free our fellow men, women and children from the abject and dehumanizing conditions of extreme poverty, to which more than a billion of them are currently subjected. We are committed to making the right to development a reality for everyone and to freeing the entire human race from want.

12. We resolve therefore to create an environment - at the national and global levels alike - which is conducive to development and to the elimination of poverty.

13. Success in meeting these objectives depends, inter alia, on good governance within each country. It also depends on good governance at the international level and on transparency in the financial, monetary and trading systems. We are committed to an open, equitable, rule-based, predictable and non-discriminatory multilateral trading and financial system.

14. We are concerned about the obstacles developing countries face in mobilizing the resources needed to finance their sustained development. We will therefore make every effort to ensure the success of the High-level International and Intergovernmental Event on Financing for Development, to be held in 2001.

15. We also undertake to address the special needs of the least developed countries. In this context, we welcome the Third United Nations Conference on the Least Developed Countries to be held in May 2001 and will endeavour to ensure its success. We call on the industrialized countries:

- To adopt, preferably by the time of that Conference, a policy of duty- and quota-free access for essentially all exports from the least developed countries;
- To implement the enhanced programme of debt relief for the heavily indebted poor countries without further delay and to agree to cancel all official bilateral debts of those countries in return for their making demonstrable commitments to poverty reduction; and
- To grant more generous development assistance, especially to countries that are genuinely making an effort to apply their resources to poverty reduction.

16. We are also determined to deal comprehensively and effectively with the debt problems of low- and middle-income developing countries, through various national and international measures designed to make their debt sustainable in the long term.

17. We also resolve to address the special needs of small island developing States, by implementing the Barbados Programme of Action and the outcome of the twenty-second special session of the General Assembly rapidly and in full. We urge the international community to ensure that, in the development of a vulnerability index, the special needs of small island developing States are taken into account.

18. We recognize the special needs and problems of the landlocked developing countries, and urge both bilateral and multilateral donors to increase financial and technical assistance to this group of countries to meet their special development needs and to help them overcome the impediments of geography by improving their transit transport systems.

19. We resolve further:

- To halve, by the year 2015, the proportion of the world's people whose income is less than one dollar a day and the proportion of people who suffer from hunger and, by the same date, to halve the proportion of people who are unable to reach or to afford safe drinking water.
- To ensure that, by the same date, children everywhere, boys and girls alike, will be able to complete a full course of primary schooling and that girls and boys will have equal access to all levels of education.
- By the same date, to have reduced maternal mortality by three quarters, and under-five child mortality by two thirds, of their current rates.
- To have, by then, halted, and begun to reverse, the spread of HIV/AIDS, the scourge of malaria and other major diseases that afflict humanity.
- To provide special assistance to children orphaned by HIV/AIDS.
- By 2020, to have achieved a significant improvement in the lives of at least 100 million slum dwellers as proposed in the "Cities Without Slums" initiative.

20. We also resolve:

- To promote gender equality and the empowerment of women as effective ways to combat poverty, hunger and disease and to stimulate development that is truly sustainable.
- To develop and implement strategies that give young people everywhere a real chance to find decent and productive work.
- To encourage the pharmaceutical industry to make essential drugs more widely available and affordable by all who need them in developing countries.
- To develop strong partnerships with the private sector and with civil society organizations in pursuit of development and poverty eradication.
- To ensure that the benefits of new technologies, especially information and communication technologies, in conformity with recommendations contained in the ECOSOC 2000 Ministerial Declaration, are available to all.

IV. Protecting our common environment

21. We must spare no effort to free all of humanity, and above all our children and grandchildren, from the threat of living on a planet irredeemably spoilt by human activities, and whose resources would no longer be sufficient for their needs.

22. We reaffirm our support for the principles of sustainable development, including those set out in Agenda 21, agreed upon at the United Nations Conference on Environment and Development.

23. We resolve therefore to adopt in all our environmental actions a new ethic of conservation and stewardship and, as first steps, we resolve:

- To make every effort to ensure the entry into force of the Kyoto Protocol, preferably by the tenth anniversary of the United Nations Conference on Environment and Development in 2002, and to embark on the required reduction in emissions of greenhouse gases.
- To intensify our collective efforts for the management, conservation and sustainable development of all types of forests.
- To press for the full implementation of the Convention on Biological Diversity and the Convention to Combat Desertification in those Countries Experiencing Serious Drought and/or Desertification, particularly in Africa.
- To stop the unsustainable exploitation of water resources by developing water management strategies at the regional, national and local levels, which promote both equitable access and adequate supplies.
- To intensify cooperation to reduce the number and effects of natural and man-made disasters.
- To ensure free access to information on the human genome sequence.

V. Human rights, democracy and good governance

24. We will spare no effort to promote democracy and strengthen the rule of law, as well as respect for all internationally recognized human rights and fundamental freedoms, including the right to development.

25. We resolve therefore:

- To respect fully and uphold the Universal Declaration of Human Rights.
- To strive for the full protection and promotion in all our countries of civil, political, economic, social and cultural rights for all.
- To strengthen the capacity of all our countries to implement the principles and practices of democracy and respect for human rights, including minority rights.
- To combat all forms of violence against women and to implement the Convention on the Elimination of All Forms of Discrimination against Women.
- To take measures to ensure respect for and protection of the human rights of migrants, migrant workers and their families, to eliminate the increasing acts of racism and xenophobia in many societies and to promote greater harmony and tolerance in all societies.
- To work collectively for more inclusive political processes, allowing genuine participation by all citizens in all our countries.
- To ensure the freedom of the media to perform their essential role and the right of the public to have access to information.

VI. Protecting the vulnerable

26. We will spare no effort to ensure that children and all civilian populations that suffer disproportionately the consequences of natural disasters, genocide, armed conflicts and other humanitarian emergencies are given every assistance and protection so that they can resume normal life as soon as possible.

We resolve therefore:

- To expand and strengthen the protection of civilians in complex emergencies, in conformity with international humanitarian law.
- To strengthen international cooperation, including burden sharing in, and the coordination of humanitarian assistance to, countries hosting refugees and to help all refugees and displaced persons to return voluntarily to their homes, in safety and dignity and to be smoothly reintegrated into their societies.
- To encourage the ratification and full implementation of the Convention on the Rights of the Child and its optional protocols on the involvement of children in armed conflict and on the sale of children, child prostitution and child pornography.

VII. Meeting the special needs of Africa

27. We will support the consolidation of democracy in Africa and assist Africans in their struggle for lasting peace, poverty eradication and sustainable development, thereby bringing Africa into the mainstream of the world economy.

28. We resolve therefore:

- To give full support to the political and institutional structures of emerging democracies in Africa.
- To encourage and sustain regional and subregional mechanisms for preventing conflict and promoting political stability, and to ensure a reliable flow of resources for peacekeeping operations on the continent.
- To take special measures to address the challenges of poverty eradication and sustainable development in Africa, including debt cancellation, improved market access, enhanced Official Development Assistance and increased flows of Foreign Direct Investment, as well as transfers of technology.

- To help Africa build up its capacity to tackle the spread of the HIV/AIDS pandemic and other infectious diseases.

VIII. Strengthening the United Nations

29. We will spare no effort to make the United Nations a more effective instrument for pursuing all of these priorities: the fight for development for all the peoples of the world, the fight against poverty, ignorance and disease; the fight against injustice; the fight against violence, terror and crime; and the fight against the degradation and destruction of our common home.

30. We resolve therefore:

- To reaffirm the central position of the General Assembly as the chief deliberative, policy-making and representative organ of the United Nations, and to enable it to play that role effectively.
 - To intensify our efforts to achieve a comprehensive reform of the Security Council in all its aspects.
 - To strengthen further the Economic and Social Council, building on its recent achievements, to help it fulfil the role ascribed to it in the Charter.
 - To strengthen the International Court of Justice, in order to ensure justice and the rule of law in international affairs.
 - To encourage regular consultations and coordination among the principal organs of the United Nations in pursuit of their functions.
 - To ensure that the Organization is provided on a timely and predictable basis with the resources it needs to carry out its mandates.
 - To urge the Secretariat to make the best use of those resources, in accordance with clear rules and procedures agreed by the General Assembly, in the interests of all Member States, by adopting the best management practices and technologies available and by concentrating on those tasks that reflect the agreed priorities of Member States.
 - To promote adherence to the Convention on the Safety of United Nations and Associated Personnel.
 - To ensure greater policy coherence and better cooperation between the United Nations, its agencies, the Bretton Woods Institutions and the World Trade Organization, as well as other multilateral bodies, with a view to achieving a fully coordinated approach to the problems of peace and development.
 - To strengthen further cooperation between the United Nations and national parliaments through their world organization, the Inter-Parliamentary Union, in various fields, including peace and security, economic and social development, international law and human rights and democracy and gender issues.
 - To give greater opportunities to the private sector, non-governmental organizations and civil society, in general, to contribute to the realization of the Organization's goals and programmes.
31. We request the General Assembly to review on a regular basis the progress made in implementing the provisions of this Declaration, and ask the Secretary-General to issue periodic reports for consideration by the General Assembly and as a basis for further action.
32. We solemnly reaffirm, on this historic occasion, that the United Nations is the indispensable common house of the entire human family, through which we will seek to realize our universal aspirations for peace, cooperation and development. We therefore pledge our unstinting support for these common objectives and our determination to achieve them.
