A DICTIONARY

OF

GREEK AND ROMAN ANTIQUITIES.

EDITED BY

WILLIAM SMITH, LL.D.,
HON. D.C.L. OXFORD; HON. PH.D. LEIPZIG;

WILLIAM WAYTE, M.A.,
FORMERLY FELLOW OF KING'S COLLEGE, CAMBRIDGE;

G. E. MARINDIN, M.A.,
FORMERLY FELLOW OF KING'S COLLEGE, CAMBRIDGE.

THIRD EDITION, REVISED AND ENLARGED.

IN TWO VOLUMES.—VOL. I.

LONDON:
JOHN MURRAY, ALBEMARLE STREET.
1890.

LONDON:
PRINTED BY WILLIAM CLOWES AND SONS, LIMITED,
STAMFORD STREET AND CHARING CROSS.

LIST OF WRITERS IN THE NEW EDITION.

INITIALS.	NAMES.
W. C. F. A.	W. C. F. Anderson, M.A. Professor of Classics in Firth College, Sheffield.
J. I. B.	J. I. Beare, M.A. Fellow of Trinity College, Dublin.
A. H. C.	A. H. Cooke, M.A. Fellow and Tutor of King's College, Cambridge.
J. L. S. D.	J. L. Strachan Davidson, M.A. Fellow and Tutor of Balliol College, Oxford.
J. H. F.	J. H. Flather, M.A. Master of Cavendish College, Cambridge.
W. W. F.	W. Warde Fowler, M.A. Sub-Rector of Lincoln College, Oxford.
E. A. G.	Ernest A. Gardner, M.A. Fellow of Caius College, Cambridge; Director of the British Archaeological School, Athens.
P. G.	Percy Gardner, M.A., Litt.D. Professor of Archaeology in the University of Oxford.
A. G.	Alfred Goodwin, M.A. Professor of Classics in University College, London; formerly Fellow of Balliol College, Oxford.
J. G.	James Gow, Litt.D. Headmaster of High School, Nottingham; formerly Fellow of Trinity College, Cambridge.
A. H. G.	A. H. Greenidge, B.A. Fellow of Hertford College, Oxford.
H. H.	Hermann Hager, Ph.D. Professor in Owens College, Manchester.
E. G. H.	E. G. Hardy, M.A. Formerly Fellow of Jesus College, Oxford.
C. B. H.	C. B. Heberden, M.A. Principal of Brasenose College, Oxford.
M. R. J.	Montague Rhodes James, B.A. Fellow of King's College, Cambridge.
R. C. J.	R. C. Jebb, Litt.D., LL.D. Professor of Greek in the University of Cambridge.

INITIALS.	NAMES.
W. M. L.	**Wallace M. Lindsay, M.A.** Fellow of Jesus College, Oxford.
G. E. M.	**G. E. Marindin, M.A.** Examiner in Greek in the University of London; formerly Fellow of King's College, Cambridge.
J. M.	**John Marshall, B.A.** Late Scholar of Trinity College, Cambridge.
J. H. M.	**J. H. Middleton, M.A.** Slade Professor in the University of Cambridge, and Fellow of King's College.
D. B. M.	**David B. Monro, M.A.** Provost of Oriel College, Oxford.
J. B. M.	**J. B. Moyle, D.C.L.** Fellow and Tutor of New College, Oxford.
J. R. M.	**J. R. Mozley, M.A.** Formerly Fellow of King's College, Cambridge.
A. S. M.	**A. S. Murray, LL.D., F.S.A.** Keeper of Greek and Roman Antiquities in the British Museum.
E. M.	**Ernest Myers, M.A.** Formerly Fellow of Wadham College, Oxford.
H. N.	**H. Nettleship, M.A.** Professor of Latin in the University of Oxford.
C. T. N.	**Sir C. T. Newton, K.C.B.**
J. H. O.	**John Henry Onions, M.A.** Late Student of Christ Church, Oxford.
H. F. P.	**Henry F. Pelham, M.A.** Camden Professor of Ancient History in the University of Oxford, and Fellow of Exeter College.
H. A. P.	**H. A. Perry, M.A.** Fellow of King's College, Cambridge.
L. C. P.	**L. C. Purser, M.A.** Fellow of Trinity College, Dublin.
F. T. R.	**F. T. Richards, M.A.** Fellow of Trinity College, Oxford.
W. R–y.	**William Ridgeway, M.A.** Fellow of Caius College, Cambridge; Professor of Greek in Queen's College, Cork.
H. J. R.	**H. J. Roby, M.A.** Honorary Fellow of St. John's College, Cambridge.
G. Mc. N. R.	**G. Mc. Neile Rushforth, M.A.** Formerly Scholar of St. John's College, Oxford.
A. H. S.	**A. H. Smith, M.A.** Assistant in the Department of Greek and Roman Antiquities in the British Museum.

INITIALS.	NAMES.
C. S.	Cecil Smith. Assistant in the Department of Greek and Roman Antiquities in the British Museum.
H. B. S.	Henry Babington Smith, M.A. Of the Education Office; Fellow of Trinity College, Cambridge.
W. S.	William Smith, D.C.L., LL.D., Ph.D. Formerly Classical Examiner in the University of London.
H. A. T.	H. Arnold Tubbs, B.A. Formerly Scholar of Pembroke College, Oxford.
E. W.	E. Warre, D.D. Headmaster of Eton College.
W. W.	William Wayte, M.A. Examiner in Greek in the University of London; formerly Fellow of King's College, Cambridge, and Professor of Greek in University College, London.
E. A. W.	E. A. Whittuck, M.A. Fellow and Tutor of Oriel College, Oxford.
A. S. W.	A. S. Wilkins, Litt.D., LL.D. Professor of Latin in Owens College, Manchester.
W–k W–h.	Warwick Wroth. Assistant in the Department of Coins in the British Museum.

LIST OF WRITERS IN THE OLD EDITION.

INITIALS.	NAMES.
A. A.	ALEXANDER ALLEN, Ph.D.
W. F. D.	WILLIAM FISHBURN DONKIN, M.A. Fellow of University College, Oxford.
W. A. G.	WILLIAM ALEXANDER GREENHILL, M.D. Trinity College, Oxford.
B. J.	BENJAMIN JOWETT, M.A., Master of Balliol College, Oxford.
C. R. K.	CHARLES RANN KENNEDY, M.A. Late Fellow of Trinity College, Cambridge.
T. H. K.	THOMAS HEWITT KEY, M.A. Professor of Comparative Grammar in University College, London.
H. G. L.	HENRY GEORGE LIDDELL, D.D. Dean of Christ Church, Oxford.
G. L.	GEORGE LONG, M.A. Late Fellow of Trinity College, Cambridge.
J. S. M.	JOHN SMITH MANSFIELD, M.A. Fellow of Trinity College, Cambridge.
C. P. M.	CHARLES PETER MASON, B.A. Fellow of University College, London.
W. R.	WILLIAM RAMSAY, M.A. Professor of Humanity in the University of Glasgow.
A. R.	ANTHONY RICH, Jun., B.A. Late of Caius College, Cambridge.
L. S.	LEONHARD SCHMITZ, Ph.D., F.R.S.E. Rector of the High School of Edinburgh.
P. S.	PHILIP SMITH, B.A. Of the University of London.
W. S.	WILLIAM SMITH, LL.D., Ph.D.
R. W.	ROBERT WHISTON, M.A. Fellow of Trinity College, Cambridge.
R. N. W.	RALPH NICHOLSON WORNUM.
J. Y.	JAMES YATES, M.A., F.R.S.

PREFACE

TO

THE THIRD EDITION.

THE first Edition of the Dictionary of Greek and Roman Antiquities was published in 1842; the second, improved and enlarged, appeared in 1848, since which time the work has been reprinted from the stereotyped plates without alteration. The fact that forty-two years have elapsed since any change was made in the work shows of itself that a new Edition has become necessary. Moreover, these years have been a period of quite exceptional activity both in classical research and exploration; and in most, and indeed nearly all, the subjects treated in this work, recent treatises and recent discoveries have amplified or superseded much of the information which was available for the writers of the articles in the former Editions. These are especially subjects relating to constitutional history and law, religious offices and festivals, architecture and arts in general, coins, dress, and domestic life. The views held on many of these subjects have been greatly altered by newly discovered inscriptions, by additions to museums in this country and elsewhere, and by the labours of recent scholarship bestowed upon such collections.

Epigraphy alone has revolutionised several departments of knowledge. The inscriptions known to Boeckh and Orelli forty years ago are almost insignificant in amount compared with the wealth of material which has accumulated under their successors. In many cases the discovery of single inscriptions has had results of unexpected importance. We may instance the new light thrown upon the laws of Crete by the inscription at Gortyn, and upon Roman municipal law by those at Malaca and Salpensa, in Spain. Nor has epigraphy been the only department of archaeological research. The excavations of ancient sites have not only thrown new light upon the temples, tombs, theatres, and domestic architecture of the Greeks and Romans, but have yielded many treasures of art, pottery, and ornaments, illustrating the domestic life of the ancients. It is only necessary to allude to the excavations of the pre-historic sites of Troy, Mycenae, and Tiryns, of Olympia, Halicarnassus, and Ephesus, of the Acropolis of

Athens, and of many others which cannot be enumerated in the limit of a Preface.

The literary activity of the period, in reference to classical subjects has been scarcely less marked than the vigour of its archaeologica explorations. The constitutional histories both of Greece and Rome hav been rewritten. When the last edition was published, only a small part o the great work of Grote had appeared: this, since its completion, has now been supplemented by the researches of Ernst Curtius, Busolt, and others while the works of Mommsen and his school have opened up new views o Roman constitutional law and provincial government. At the same time, the life of the Greeks and Romans, so long treated as the only "ancients" worth studying, has come to be regarded less and less as an isolated group of phenomena. The application of the comparative method to history (including the history of religions) and philology has furnished a key to much that before seemed arbitrary and inexplicable. The phrases "Ancient Law" and "Primitive Culture" have acquired a new meaning in the hands of eminent writers: much that had been thought characteristic of man only in the savage state has been shown to have coexisted with, and even to have survived, the flowering-time of Graeco-Roman, not to say of modern civilisation. Political changes, too, have not been without influence upon the modern representatives of the two great nations of antiquity. The Italians of the Kingdom are pursuing with renewed vigour and originality the studies which they had never suffered to fall into decay: the Greeks, in the happier circumstances of the last few years, have thrown themselves with zeal, if not always with discretion, into the records of their glorious past. It is not surprising, therefore, that the archaeological hand-books, to which the former editions of this work were so much indebted, have either been rewritten (as, for instance, the *Attische Process*, the *Antiquities* of K. F. Hermann and the Becker-Marquardt series), or altogether superseded by later works.

Accordingly, it has been found necessary to rewrite a great part, and remodel the remainder, of the articles in the present Edition, which may therefore be regarded, to a great extent, as a new work. It contains eight hundred pages more than the old Edition. One-third of the articles has been entirely rewritten. The remaining two-thirds have been in all cases greatly altered: scarcely twenty have been reprinted as they originally stood. There are, besides, about two hundred additional articles which did not appear in the old Edition, many of considerable length and importance, by which it is hoped that all omissions have been supplied. The subjects are more extensively illustrated than formerly: there are upwards of four hundred and fifty new woodcuts in the present Edition.

It would take up too much space to give a list of even the most important works which have been used in the preparation of the articles, nor is it necessary, as they are in all cases quoted in their proper places. We may be allowed to mention, as illustrations of the difficulties under which works like the present are produced, and in explanation of the length of time during which it has been in progress, that the "Dictionnaire des Antiquités Grecques et Romaines" edited by Daremberg and Saglio, commenced in 1877, has as yet only reached the letter D; that the new series of Hermann's *Antiquities*, edited by Blümner and others, was announced for completion in 1884 and is still unfinished in 1890; and that the valuable work of Iwan Müller is still incomplete. From all these, so far as they have been available, the greatest assistance has been derived, and is here thankfully acknowledged.

To the Keepers of Classical Antiquities in the British Museum we must also express our obligations for much assistance and advice in the course of the work.

It remains to say a few words respecting the references to ancient writers. These references are now brought as much as possible to a uniformity, though an absolute uniformity cannot be claimed for them. Following recent German (and English) works, we have quoted the Greek and Latin authors, wherever practicable, from the Editions published by Teubner. There is only one way, among scholars, of quoting such authors as Plato, Strabo, Plutarch, and Athenaeus; yet even this amount of uniformity was not attained by our predecessors. In these, it is believed, absolute uniformity has now been introduced. In Thucydides and Herodotus, when the chapters are long, the sections also have been added, though not uniformly. Such authors as Polybius and Diodorus are now for the first time quoted from the Teubner editions, in which the fragments discovered by Mai and others are now incorporated; whereas in the former Edition there were many references to Mai and other collections not easily to be procured.

In the Orators we follow all German and most recent English scholars in quoting by the §§ of Bekker's Berlin edition, which differ from those in the Oxford. In the less voluminous orators this single reference has been deemed sufficient; but as few students could find their way among the sixty Demosthenic orations without further help, in these the usually cited pages (Reiske's) have been added.

Of the numerous references to Cicero, some were to the larger, others to the smaller chapters in the old edition; the *double reference*, deemed essential by most scholars, has now been supplied throughout.

In Plautus and Terence contributors have been allowed to quote either by the lines of the play, or by acts and scenes, both being marked in recent editions. But Pliny's Natural History is now quoted, according to the modern fashion, uniformly by the marginal sections of Sillig and Jan.

The references to Clemens Alexandrinus were sometimes difficult to verify, when only a chapter of twenty or more pages was named; they are now all to Potter's pages, marked in the margin of all subsequent editions.

The Comic Fragments, to which the references are unusually copious, are cited by Meineke's *numbers* (omitting the name of the play), so as to be verified either in his larger or smaller editions. The more recent edition of Kock was incomplete while our work was in progress; there are a few references to it.

The case of Aristotle's works is peculiar. The books of the Politics, as is known, are arranged in different orders; and where contributors have referred both to Bekker's and Susemihl's arrangement, this has been allowed to stand. But in most cases (though not quite in all) the works of Aristotle are cited by the pages *and lines* of Bekker's Berlin Edition, which removes all uncertainty.

In conclusion, I have to express my warm thanks to my two colleagues for the unwearied labour and assiduity which they have bestowed upon the Work. Mr. Wayte undertook the direction of Vol. I., and Mr. Marindin that of Vol. II. They have, under my superintendence, selected the contributors, revised the articles and the proofs as they went through the press, and have themselves written a large number of important articles.

WILLIAM SMITH.

November, 1890.

A
DICTIONARY
OF
GREEK AND ROMAN ANTIQUITIES.

ABACTORES. [ABIGEI.]

ABACTUS VENTER. [ABORTIO.]

ABACULUS (ἀβακίσκος), diminutive of ABACUS, denoted a tile of marble, glass, or any other substance used for making ornamental pavements. They were of various colours (Plin. *H. N.* xxxvi. § 199; Moschion, *ap.* Ath. v. 207 d.) [MUSIVUM OPUS.] [W. W.]

ABACUS (ἄβαξ), a word probably of Eastern origin, which has been explained from two different Semitic roots: (1) *abaq*, "sand, dust," a derivation propounded by several eminent French scholars and accepted by Daremberg and Saglio (*Dict. des Antiq.* s. v.); or (2) *abak*, "to raise or lift up," recently suggested in Wölfflin's *Thesauri Latini specimen*, 1884. According to the former, the oldest meaning is that of the sanded board for calculations, rendered necessary at an early period by the rise of commerce between the East and the West. The latter has the merit of accounting more completely for the various usages of the word; but neither derivation can be regarded as anything more than a more or less probable conjecture.

Adopting, for the sake of classification, the primary meaning of "anything raised," we have:

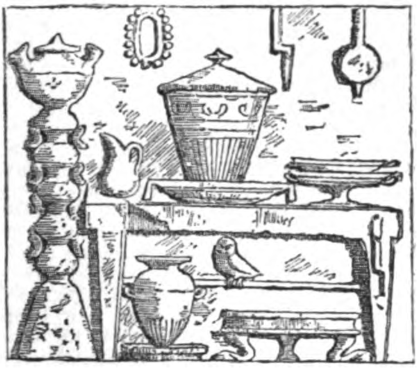
I. A table, dresser, or stand for supporting vessels of any kind.

(1) The simplest kind was no doubt that enumerated by Cato among farm requisites, and distinguished by him from *mensa* (*R. R.* 10, 4; 11, 3). Of a more elaborate sort was—

(2) A table or sideboard, used for the display of plate, of a square form, supported by a *trapezophoron*, as the leg or legs were sometimes called; but the word *trapezophoron* also signified the table itself. (Pollux, x. 69; Cic. *Fam.* vii. 23, 3; Dig. 33, tit. 3, s. 3.) The abacus was supported sometimes by four legs, sometimes by one, which were made of marble, ivory, bronze, or silver, highly ornamented. Cf. Juv. iii. 203:

> Urceoli sex,
> Ornamentum abaci, nec non et parvulus infra
> Cantharus et recubans sub eodem marmore Chiron.

Here the "Chiron" was the *trapezophoron*; and similar ones representing sphinxes and griffins are found in museums. The use of abaci (*mensae vasariae*) in private houses was first introduced at Rome (according to Liv. xxxix. 6, 7; and Plin. *H. N.* xxxiv. § 14) from Asia Minor after the victories of Cn. Manlius Vulso, B.C. 187, and their introduction was regarded as one of the marks of the growing luxury of the age. (Varr. *L. L.* ix. § 46; Cic. *Verr.* iv. 16, 35; *Tusc.* v. 21, 61; Juv. iii. 204; Plin. *H. N.* xxxvii. § 14; Petron. 73; Auson. *Epigr.* viii. 2.) Sidonius Apollinaris (*Carm.* xvii. 7) speaks of "per multiplices abaco splendente *cavernas*." These *cavernae* were probably shelves under the abacus in which ornaments were placed, somewhat resembling cabinets in modern drawing-rooms. *Mensae Delphicae* appear to have been a variety of abacus, but distinguished from it, as being round tables with three legs, and taking their name from resemblance to the Delphic tripod (Procop. *B. Vand.* i. 21; Cic. *Verr.* iv. 59, 131; Mart. xii. 66). The abacus or sideboard was used also in temples and at the festivals of the gods, where offerings of food were placed upon it, or sacred objects exposed to view (Becker-Göll, *Gallus*, ii. p. 353; Marquardt,



Abacus or Sideboard.
(From a sarcophagus in the British Museum.)

Röm. Alterth. vii. p. 310; Tyrrell, *Corresp. of Cicero*, ii. p. 239).

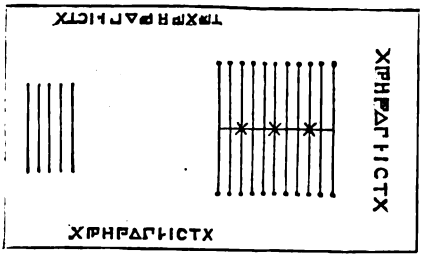
(3) A wooden tray, platter, or trencher, used for a variety of purposes in domestic economy. It was, for instance, a name given to the mactra (*μάκτρα*) or trough for kneading dough (Cratin. *Fragm.* 86, Meineke; Pollux, vi. 86, 90, x. 105; Plin. *H. N.* xxxvii. § 18, *ib.* 21; Apul. *Met.* ii. 7; Hesych. *s. v. μάκτρα*).

II. A board for playing a variety of games, either with dice or counters or figures, called *latrunculi*, and divided into compartments like the abaci described below (Pollux, x. 150; Caryst. *ap.* Ath. x. p. 435 d; joined with *latrunculi*, Macrob. *Sat.* i. 5, § 11). We may distinguish two kinds, one more resembling a backgammon board [Duodecim Scripta]; the other corresponding to the chess or draught board [Latrunculi]. The game of *πεσσοί* being traditionally said to have been invented by Palamedes, we find the board called *τὸ Παλαμήδειον ἀβάκιον* (Eustath. *in Od.* i. 107). The abacus mentioned by Suetonius was a kind of table, on which toy-chariots could be made to run ("cum eburneis quadrigis in abaco luderet," Suet. *Ner.* 22).

III. A calculating table. This might be—

(*a*) A tablet with a frame or rim, covered with sand, in which lines or figures could be drawn either with the finger or some pointed instrument; and used in geometry, arithmetic, &c. (Pers. i. 131; Apul. *Apol.* c. 16, p. 426; Sen. *Ep.* 74, 27; Plut. *Cat. min.* 70; *eruditus pulvis*, Cic. *N. D.* ii. 18, 48.) The name Arenarius applied to the elementary teacher, *qui calculare monstrabat* (Mart. Cap. vii. *init.*), implies that this sort of abacus was used by school-children.

(*b*) A development of this simple form was the abacus on which *ψῆφοι*, *calculi*, pebbles or counters, were employed to calculate with. It was a board marked off by ridges or grooves (along which balls, counters, or buttons could be moved) into compartments, for the several orders of numbers. We have examples of both Greek and Roman abaci: of the former, one found by Rangabé at Salamis is figured here (Rangabé, Letronne, and Vincent in *Revue Archéol.* année iii. p. 295 ff., p. 401 ff.). It is of marble, about 40 inches long by 28 broad. At a distance of 10 inches from one of the sides are marked five parallel lines. At 20 inches' distance from the last of these, eleven others are marked and bisected by a cross line, the point of whose intersection with the third, sixth, and ninth lines is marked by a star. Along three of the sides is arranged a series of characters in the same order, and so as to be read with equal ease whichever way the abacus is turned: the series on one side having two more characters than the others. These characters (⊢ being known as = drachma) give the following scale, reckoned from the left of ⊢:—

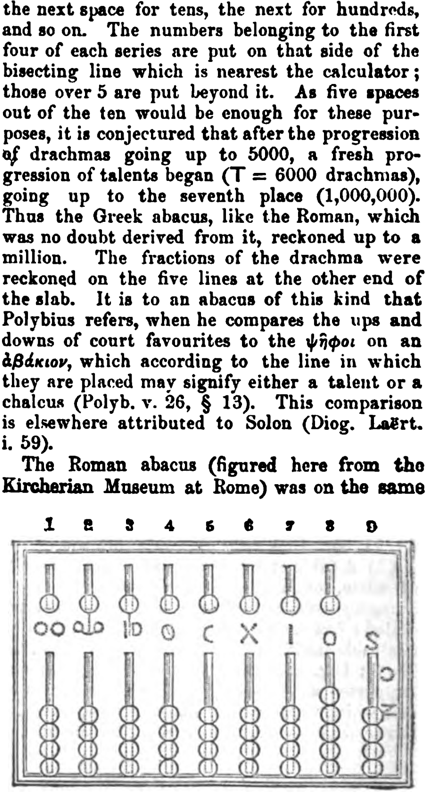


Greek Abacus or Calculating Table.

⊢	𐅃	Δ	𐅄	Η	𐅅	Χ
1	5	10	50	100	500	1000

A short explanation of these characters, which are of great antiquity, will facilitate the study of the numerous inscriptions in which public accounts have been preserved. ⊢ is a mutilated E, initial of *ἕν*; 𐅃. an old form of Π, *i.e. πέντε*; Δ obviously represents *δέκα*, and Χ *χίλιοι*: while of the three remaining characters Η is for HEKATON, the old way of writing *ἑκατόν*, 𐅄 is 𐅃 with Δ inscribed, 𐅅 𐅃 with Η. The characters on the right of ⊢ are Ι = obol, C = ½ obol, Τ = ¼ obol, Χ = *χαλκοῦς*, ⅛ obol. The two additional characters in the left-hand series are 𐅆 = 5000 (𐅃 with Χ inscribed), and Τ = talent (of 6000 drachmas); so that the lowest and highest money units are at the two ends of the scale. To understand the use of this abacus, the calculator must be supposed sitting before one of its long sides, and putting counters into the spaces between the marked lines. Each space represents an order of numerals, the space on the right hand being intended for units, the next space for tens, the next for hundreds, and so on. The numbers belonging to the first four of each series are put on that side of the bisecting line which is nearest the calculator; those over 5 are put beyond it. As five spaces out of the ten would be enough for these purposes, it is conjectured that after the progression of drachmas going up to 5000, a fresh progression of talents began (Τ = 6000 drachmas), going up to the seventh place (1,000,000). Thus the Greek abacus, like the Roman, which was no doubt derived from it, reckoned up to a million. The fractions of the drachma were reckoned on the five lines at the other end of the slab. It is to an abacus of this kind that Polybius refers, when he compares the ups and downs of court favourites to the *ψῆφοι* on an *ἀβάκιον*, which according to the line in which they are placed may signify either a talent or a chalcus (Polyb. v. 26, § 13). This comparison is elsewhere attributed to Solon (Diog. Laërt. i. 59).

The Roman abacus (figured here from the Kircherian Museum at Rome) was on the same system. It is divided into eight lower and eight higher (somewhat shorter) grooves: there is



Roman Abacus or Calculating Table.

also a ninth lower groove, without an upper groove to correspond. Four sliding buttons are attached to each lower groove except the eighth, which has five: each upper groove has one button. Between the two sets of grooves the following numbers are marked:—

X̄	CCCIↃↃↃ	CCIↃↃ	CIↃ	C	X	I
1,000,000	100,000	10,000	1,000	100	10	1

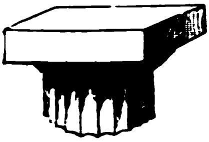
The units of any other number when not above 4 are marked by moving a corresponding number of buttons along the lower groove upwards, the button in the upper groove = 5. The eighth row was used by reckoning fractions (*aes recurrens*) on the duodecimal system, by ounces, or twelfth of the *as*, and is accordingly marked O or Θ = uncia: each of its five lower buttons = 1 ounce, and the upper one = 6. Fractions below an ounce were reckoned on the ninth groove, marked:

S	Ɔ	Z or 2
semuncia.	sicilicus.	duella.
½ oz.	¼ oz.	⅓ oz.

(Marquardt, vii. p. 97 *seq.*; Becker-Göll, *Gallus*, ii. p. 100; Daremberg and Saglio, *s. v.*) [LOGISTICA.]

IV. In architecture—

(*a*) A painted panel, coffer, or square compartment in the wall or ceiling of a chamber. (Plin. *H. N.* xxxiii. § 159, xxxv. §§ 3, 32; Vitruv. vii. 3, § 10: Letronne, *Peinture mur.*, p. 476.)



Abacus of a Column.

(*b*) The flat square tone which constituted the highest member of a column, being placed immediately under the architrave (Vitruv. iii. 5, § 5; iv. 1, § 11). The annexed figure is drawn from that in the British Museum, which was taken from the Parthenon at Athens, and is a perfect specimen of the capital of a Doric column. [COLUMNA.] [A. G.] [J. H. O.]

ABALIENA'TIO. [MANCIPIUM.]

ABDICA'TIO. [MAGISTRATUS.]

ABIG'EI, ABIGEATO'RES or **ABACTO'RES**, terms used to signify the class of thieves who commit the crime of cattle stealing (*abigeatus*), which was distinguished from ordinary *furtum* and punished as a special offence. Abigeatus was committed by stealing beasts of pasture, as horses, oxen, sheep, goats, and pigs; but only if the theft was of a sufficiently serious kind. The stealing of one horse and perhaps of an ox made the thief abigeus; but it was thought that to steal less than ten sheep, or than four or perhaps five pigs, was not abigeatus, but simple furtum. It was abigeatus, however, if the aggregate of sheep or pigs stolen on separate occasions amounted to the above numbers. It appears that a person who stole cattle was not abigeus unless it was his practice to steal cattle. (Dig. 47, 14, 1, § 1: "et abigendi studium quasi artem exercent;" but see Platner, *De jure crim. quaest.*, p. 447.) An abigeus who took cattle from a stable was punished more severely than one who drove them from pasture ground. (Dig. 47, 14, 3, § 1, "plenius coercendum;" but see Cujas, *Obs.* vi. 8.) Abigeatus was not prosecuted by a judicium publicum, but fell under the extraordinary jurisdiction of the magistrate, who punished it according to his discretion. The different punishments by which the crime was visited are enumerated in a rescript of Hadrian (Collat. xi. 7; Dig. 47, 14). They included different forms of death, the mines, and other kinds of penal servitude for a term or for life, but a person of superior rank was only liable to banishment (*relegatio*) and degradation from his rank. For an abigeus to carry arms was a great aggravation of his offence. Ulpian does not think the exposure of armed abigei to wild beasts too severe a punishment. Pastoral districts were at times devastated by armed and mounted bands of cattle stealers. (Paul. *Sent.* v. 18, *de Abactoribus;* Collat. xi. *de Abigeatoribus;* Dig. 47, 14, *de Abigeis;* Cod. ix. 37, *de Abigeis;* L. Platner, *Quaestio de jure crim.* pp. 445–449; Rein, *Das Criminalrecht der Röm.* pp. 323–325, Leipzig, 1844.) [E. A. W.]

ABOLLA, a thick, double cloak, which, according to Servius (*ad* Verg. *Aen.* v. 421), resembled the chlamys, and which he identifies with the *duplex pannus* of Horace (*Ep.* i. 17, 25). It was of foreign origin; and in a Roman inscription (A.D. 202) found in Mauretania, there is mentioned the *abolla cenatoria* in a *Lex vestis peregrinae* (*C. I. L.* viii. 4508). The generally accepted identification of the word with the Greek ἀναβολή is questionable etymologically; and it is rightly pointed out by Daremberg and Saglio (*s. v.*), that the Greek word applies especially to the manner of wearing *any* cloak (thrown back over the shoulder), while the Latin denotes a cloak of a particular form. Varro (*ap.* Nonium, p. 538, 16) contrasts it with the toga as a distinctively military garment (*vestis militaris*), much as the sagum and toga are commonly contrasted. The sagum (*q. v.*) appears as early as Cato (*R. R.* 59) to have been not confined to military wear; and the abolla similarly had become in imperial times an indiscriminately worn garment. Thus we find it used as an outdoor dress in Juvenal, iv. 76. Ptolemy of Mauretania offended Caligula by the splendour of his *purpurea abolla* (Suet. *Cal.* 35), and Martial satirizes a similar extravagance in the fop Crispinus (*abolla Tyria*, viii. 48). While for rich and fashionable wearers the original

Abolla, Military Cloak.

military form of the abolla was probably altered, and its rough texture exchanged for fine linen, it seems to have retained or exaggerated its simple coarseness when adopted by philosophers. It was thus worn by the cynic, serving alike for day- and night-clothes (Martial, iv. 53, 5; Hor. *Ep. l. c.*, same as the τρίβων διπλοῦς, Diog. Laërt. vi. 22). Hence *facinus majoris abollae* (Juv. iii. 115) means "a crime committed by a deep philosopher." The abolla as worn by soldiers is probably to be recognised in the bas-relief from the arch of Septimius Severus, figured above; as worn by philosophers, in the annexed representation from a silver vase in the Paris Cabinet des Médailles (*apud* Daremberg and Saglio, *s. v.*; cf. Marquardt, *Röm. Alterth.* vii. p. 553). [A. G.] [W. S.]

Abolla, Cloak of Philosophers.

ABOR'TIO, ABORTUS, "immature birth," "miscarriage." If we may judge from poets and satirists, it was not an uncommon practice among the Romans to procure abortion (Plaut. *Truc.* 202; Juv. ii. 32, vi. 368). Cicero (*Cluent.* 12) relates a case where a testator, leaving his wife pregnant, endeavours to secure the birth of his son by leaving his wife a handsome bequest if his son become heir, and nothing if he does not. Cicero charges Oppianicus with paying the amount contingently bequeathed to the widow, and procuring abortion in order that Oppianicus' son may succeed to the inheritance. A woman at Miletus, who in similar circumstances procured abortion by the use of drugs, was condemned to death in the time of Cicero's proconsulate. Similar cases or charges are recorded in Tac. *Ann.* xiv. 63; Suet. *Dom.* 22; Amm. Marc. xvi. 10. It was probably some such dangers that led to the Lex Cornelia making it a criminal offence to give love-potions or medicines for abortion, the penalty being death if the patient died; if not, then banishment and partial confiscation for persons of a higher rank, work in the mines for those of a lower rank (Paul. *Sent.* v. 23, 214). And women who procured abortion (*vim visceribus suis intulerunt; partum abegerunt*) were, by a rescript of Severus and Caracalla, condemned to exile (Dig. 47, 11, 4; 48, 7, 8), at least if divorced, and so acting in order to avoid bearing a son to their estranged husbands (Dig. 48, 19, 39).

Of the practice and law in Greece still less is known. Lysias in a speech (or declamation) impeached Antigonus for procuring abortion (κατ' Ἀντιγόνου ἀμβλώσεως, *Fragm.* 10, ed. Bait. and Sauppe). Plato recommended it in certain circumstances in his ideal Republic (*Rep.* v. 9, p. 461 c), and so also Aristotle, but only πρὶν αἴσθησιν ἐγγενέσθαι καὶ ζωήν (*Polit.* iv. (vii.) 16). [H. J. R.]

ABRASAX, ABRAXAS, gems. This subject belongs exclusively to Christian antiquities. See *Dict. of Christ. Biog.* s. v. ABRASAX. [W. S.]

ABROGA'TIO MAGISTRA'TUS. The deposition of a magistrate from his office by any legal process was, strictly speaking, unknown to the Roman constitution (Becker, *Rhein. Mus.* N. S., iv. 293). The only legitimate termination of the magistrate's power was his own abdication. But (1) it was in the power of a superior magistrate to forbid an inferior one to exercise his official functions (*vetare quicquam agere pro magistratu*): thus the dictator L. Quinctius in B.C. 458 suspended the consul L. Minucius from his office (Liv. iii. 29, 2; Dionys. x. 25); and this action was followed by the abdication of Minucius. (2) The people, by the exercise of its sovereign legislative power, could put an end to a magistrate's tenure of office. Thus, according to the tradition followed by Cicero (*Brut.* 14, 53; *de Off.* iii. 10, 40), and held by Schwegler (ii. 43, note 2) to be older than that of Livy and Dionysius, one of the first two consuls was deposed from his consulship (*Brutus . . . collegae suo imperium abrogavit*). The right of the people to do this was never challenged, and was admitted in terms by the Lex Cassia (cf. Ascon. p. 78), *ut quem populus damnasset* cuive imperium abrogasset *in senatu non esset.* There are no other instances of the *abrogatio* of a consul, except in the troubled times of the Civil Wars; *e.g.* Cinna (Vell. ii. 20: *ex auctoritate senatus consulatus ei abrogatus est*), who refused to regard it, because the deposition proceeded from the senate, not from the people. But there are two cases of the actual abrogation of proconsular *imperium* (cf. Appian, *Iber.* 83; Asconius, p. 78), and two more in which it was threatened (Liv. xxvii. 20, 21; xxix. 19, 6). The strict legality of the deposition of the tribune M. Octavius by the people, on the proposal of Ti. Gracchus, was never called in question, and Mommsen now withdraws the statement made in his earlier editions that "deposition was a constitutional impossibility" (cf. *Gesch.* ii. 88; *Röm. Staatsr.* i. pp. 512–3). See also LEX. [A. S. W.]

ABSIS or **APSIS** (the former more correct in Latin) (ἀψίς), in its literal meaning from ἅπτω, is a fastening of any kind; for example, the meshes of a net. (Hom. *Il.* v. 487.) It was applied specially to the joining together the extremities of a piece of wood, so as to give it the shape of a bow; and hence it came to signify anything of that shape, such as a bow, an arch, or a wheel. (Hes. *Op.* 424; Herod. iv. 72.) A potter's wheel is described, in the Anthology, as κύκλος ἀψῖδος. The next transition of meaning is to anything *vaulted* (for example, ἡ ὑπουρανία ἀψίς, *the vault of heaven*, Plat. *Phaedr.* p. 247 b); and in this sense it was adopted in architecture, first, for any building or portion of a building of a circular form, or vaulted (Plin. *Epist.* ii. 17, § 18), and more especially for the circular and vaulted end of a Basilica. (Paul. Nol. *Ep.* 12; Augustin, *Ep.* 203; Isid. *Orig.* xv. 8.) For the application of the word in Christian churches, see *Dict. of Christ. Ant.* s. v. APSE. [P. S.]

ABSOLU'TIO. [JUDEX.]

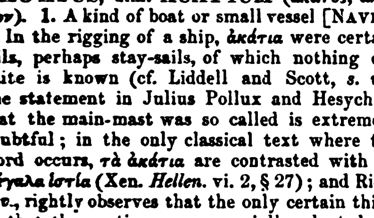
ABSTINENDI BENEFI'CIUM. [HERES.]

ABU'SUS. [USUS FRUCTUS.]

ACAENA (ἀκαίνη, ἄκαινα, or in later Greek ἄκενα, in one place ἄκαινον) is a very ancient Greek word, for it is said to have been derived from the Thessalians or from the Pelasgians. It seems originally to have meant a pointed stick: thus it was applied both to a goad and to a shepherd's staff. Afterwards it came (like our *pole* and *perch*, and the German *Stange*) to mean a measuring rod of the length of ten Greek feet, or, according to Hesychius, 9⅔ *πήχεις*, which is the same thing. It was used in measuring land, and thus it resembles the Roman decempeda. It is doubtful whether there was a corresponding square measure. (Schol. *in* Apoll. Rhod. iii. 1326; Suid. *s. v.*; Hesych. *s. v.*; Schow, *Hesych. Restit.* p. 648; Olympiodor. *ad* Aristot. *Meteorolog.* p. 25; Heron. *ap.* Salmas. *ad Solin.* p. 481; Wurm, *de Pond.* p. 93; Hultsch, *Griech. u. Röm. Metrol.* p. 36.) [ACNA.] [P. S.]

ACAPNA, sc. ligna (*ξύλα ἄκαπνα*), firewood specially prepared in order to burn without smoke. Owing to the primitive simplicity of ancient chimneys, smokeless fuel was in great request. At least three different processes are mentioned in ancient writers. 1. The wood might be simply dried and scorched over a fire, without however being converted into charcoal; these were also called *ligna cocta*, Dig. 32, 55, 7, and *coctilia*, Trebell. *Claud.* 14. 2. After peeling off the bark, it might be soaked in water and then well dried before being used (Theophr. *Hist. Plant.* xv. 10). 3. It might be smeared with oil-lees (*amurca*), and afterwards exposed to the sun (Cato, *R. R.* 130; Plin. *H. N.* xv. § 33). In Martial, *Ep.* xiii. 15, the lemma has *ligna acapna*, but the epigram itself throws no light on the mode of preparation. ACAPNON MEL, honey taken from the hive without smoking the bees, which was preferred, as usually there was a slight taste of smoke. (Colum. vi. 33, § 2; Plin. *H. N.* xi. § 45.) [W. W.]

ACATUS, dim. **ACATIUM** (*ἄκατος, ἀκάτιον*). 1. A kind of boat or small vessel [NAVIS]. 2. In the rigging of a ship, *ἀκάτια* were certain sails, perhaps stay-sails, of which nothing definite is known (cf. Liddell and Scott, *s. v.*). The statement in Julius Pollux and Hesychius that the main-mast was so called is extremely doubtful; in the only classical text where the word occurs, *τὰ ἀκάτια* are contrasted with *τὰ μέγαλα ἱστία* (Xen. *Hellen.* vi. 2, § 27); and Rich, *s. v.*, rightly observes that the only certain thing is that the acatium was especially adapted for fast sailing with light winds. 3. A drinking-vessel, so named from its shape, somewhat like our modern sauce-boat. The above figures are from the collection in the Louvre (*ap.* Daremberg and Saglio). The *ἀκάτια* are expressly distinguished from larger cups (Epicrat. *ap.* Ath. xi. p. 782 f., fr. 9, Meineke); but there was also a *μεγάλη ἄκατος* used in libations (Antiph. *ap.* Ath. xv. p. 692 f., fr. 5, Meineke). [W. W.]



Acatia, boat-shaped Cups.

ACCENSI, properly "supernumeraries," from *accenseo* (the other derivations given by Varro, *Ling. Lat.* vi. 89, Müll., are impossible and absurd). The word is used in four senses.

1. Livy (i. 43, 7) adds to the fifth class of citizens in the Servian classification a century of *accensi* (*in his accensi, cornicines, tubicinesque, in tres centurias distributi*); and Cicero, in a fragmentary passage (*de Rep.* ii. 22, 40), writes *quin etiam accensis velatis, liticinibus, cornicinibus, proletariis* .... Lange corrects Livy, reading *in his accensis*, and takes *accensi* to be the general name for the fifth class, accepting also the earlier correction *in II. centurias* (approved by Sir G. C. Lewis). This has the advantage of bringing the total number of centuries (193 instead of 194) into harmony with the statements of Dionysius and Cicero, and giving an odd number instead of an even one. Whether Livy was mistaken, or his text is corrupt, may be doubtful; but the view that *accensi* denotes the whole of the fifth class can hardly be disputed. The alternative hypothesis of Niebuhr, that the *accensi* were those citizens who possessed between 12,500 and 7000 asses, while those possessing between 7000 and 1500 were called *velati*, has but slight support, and is generally abandoned.

2. As a military term, *accensi* denotes the reserve-soldiers, who, at the time when each soldier had to find his own arms, could provide themselves with nothing better than sticks and stones. Besides serving as light infantry, they would add force to the impact of the phalanx by pressing on from behind. From their lack of defensive armour they were known as *velati*; but when any heavy-armed soldiers were killed or wounded, the *accensi* took their places, and used their armour and weapons (Varro, *L. L.* vii. 56; Paul. D. s. v. *adscripticii*). They were also called *ferentarii*, probably as Cato says (*ap.* Paul. D. *l. c.*) *quod tela ac potiones militibus pugnantibus ministrabant*; not as Varro suggests, *qui ea modi habebant arma quae ferrentur, ut jaculum.* (Corssen, *Krit. Beitr.* p. 178, suggests a wholly different derivation.) After B.C. 352, when soldiers received pay from the state, the *accensi* provided themselves with better weapons; but we find even on the Column of Trajan a soldier armed with stones alone. At this later stage the term *rorarii* was in use for the light-armed slingers, while the *accensi* denoted the *proletarii* who were *ad legionum censum adscripti.* The term *accensi* was also used to denote the attendants on the cavalry, who held their spare horses (Paul. D. s. v. *pares equi*; Varr. *L. L.* v. 82), and the orderlies of the centurions (Fest. s. v. *optio*: *optio qui nunc dicitur, antea appellabatur accensus; is adjutor dabatur centurioni a tribuno militum*).

3. The magistrates who were attended by lictors had also supernumerary attendants (*accensi*), who did not bear the fasces, but were ready to replace a lictor if occasion should arise. So long as the custom lasted that the two colleagues were preceded by the fasces on alternate days, an *accensus* attended on the one *penes quem fasces non erant.* There is no sufficient reason to assume with some that these attendants were always chosen from the class of *accensi*; in later times they were generally the freedmen of the magistrates whom they served. (Cic. *ad Q. fr.* i. 1, 4, 12; *in Verr.* iii. 67, 157; *ad Att.* iv. 6, 12, and often in inscriptions.) Among the duties of an *accensus* was to summon the people to the *comitia* (Varr. *L. L.* vi. 88):

the *accensus* of the consul, and afterwards of the praetor, also proclaimed the third, the sixth, and the ninth hour of the day in the *comitium*.

4. On inscriptions of the time of the Empire mention is made of *accensi velati*, who formed a college of 100 members, charged with the superintendence of the public roads. They consisted largely of knights and high officials, and were exempt *a tutelis et curis* (*Frag. Jur. Rom. Vat.* § 189: cf. Mommsen in *Annali dell' Instit. Arch.* 1849, p. 209). It is probable that they derived their name and functions from the *centuria accensorum velatorum*, mentioned above, who may have had charge of the communications of the army in the field (Marquardt, *Staatsr.* ii. 319). [A. S. W.]

ACCEPTILA'TIO is a formal mode of extinguishing a verbal obligation. The debtor says to the creditor, "Quod ego tibi promisi, habesne acceptum?" and the creditor answers, "Habeo" (Gai. iii. 169); or the form might be, "Accepta facis decem" (sc. sestertia), answer "Facio" (Dig. 43, 4, 7). This method of release was not regarded as peculiar to Romans, but a part of general law (*juris gentium est*), and thus the words might be Greek without impairing the effect. The term Acceptilatio must have been originally borrowed from bookkeeping, and in this connexion we find *acceptum* (*accepto*) *ferre* used in Dig. 21, 2, 4, § 1; 32, 1, 29, § 2, &c.: and in a metaphorical sense, "to credit with," in Val. Max. ii. 7, Ext. 2; viii. 2, § 3; Sen. *Ep.* 78, § 2. But *acceptum facere* or *fieri* is used in the sense of putting an end to an obligation in Cic. *Verr.* iii. 60, § 139; Plin. *Ep.* ii. 4, vi. 34; and in the lawyers frequently and indiscriminately with *acceptum fieri*. For the declinable *acceptum accepto* (dative?) is sometimes used by the lawyers. *Acceptum* (*accepto*) *rogare* is used of the debtor who seeks to be freed. The spoken words constituted an acceptilatio, but a record of the act would, as in other cases, be written and preserved. An *apocha* was what we call a receipt. (See examples in Bruns, *Fontes*, pt. ii. 8.) It was evidence of a payment, but might be rebutted by proof that the repayment had never actually taken place. But acceptilatio was a formal release of the obligation, and operated effectually whether payment had or had not been received. "Velut solvisse videtur qui acceptilatione solutus est" (Dig. 46, 4, 16 and 19). In form an acceptilatio must be absolute, not conditional, and must release at once, and not at a deferred date (*ib.* ss. 4, 5). It was applicable only to debts contracted by stipulation; the form of release must strictly follow the form of obligation, and the parties to the stipulation must (themselves or their heirs or slaves) be present and parties to the release. But the difficulty arising from these restrictions was got over by a new stipulation being entered into referring to the existing obligation, and giving it a new form suitable to the intended release. [See NOVATIO.] Hence a future debt was converted into a present one,—a debt due from Titius was converted into one due from his procurator; and an obligation arising from a loan or sale, &c., was stated in a stipulation and verbally promised (*ib.* s. 13, § 10). The new verbal obligation extinguished the old obligation, and was in turn itself extinguished by the formal acceptilatio. Gallus Aquilius invented a formula for reducing the whole liabilities of one party to another to a single obligation, in order that it might be thus extinguished. The formula is given in s. 18, Inst. iii. 29, § 2, and is called the *Aquiliana stipulatio*.

What is invalid as a release may sometimes take effect as an agreement (*pactum*, s. 19; 2, 14, 27, § 9). And in other cases, *e.g.* of a *donatio mortis causa*, or a gift between husband and wife, the operation of an acceptilatio was suspended till the death of the donor (Dig. 39, 6, 24; 24, 1, 32, § 23). The chief authorities are Gai. iii. 169–172; Dig. 46, 4; Inst. iii. 29, §§ 1, 2. [H. J. R.]

ACCESSIO, "addition," is not strictly a technical word, but is used frequently in certain connexions in a somewhat technical manner. The verb *accedere* is similarly used.

1. In some bargains it was not unusual, besides the price, to stipulate for certain extra payments (*accessiones*). In the draft contracts given by Cato we have mention of allowances both in money and kind made to a contractor for gathering the olives (*R. R.* 144); of allowances of oil and salt to the contractor for pressing the oil, besides a small sum for the use of vessels (*vasarium*, ib. 145). If the olive-harvest was sold before gathering (*olea pendens*), one of the conditions of sale was that the buyer should pay the auctioneer's fee (*praeconium*) and 1 per cent. more than the price (*amplius quam quanti emerit omnis pecuniae centesima accedet*, ib. 146). This was a commission paid to the banker or collector of the sale-moneys (cf. Cic. *Rab. P.* 11; Lex Metall. Vipasc. init. *apud* Bruns, p. 141). Such a commission may probably have been the pretext for the considerable sums of money which Verres' agents extorted from the Sicilian farmers over and above (*accessionis*) the quantity of corn due or demanded (Cic. *Verr.* iii. 32, 36, 49, 50). Columella (i. 7, § 2) speaks of wood and other extras, besides the rent, due from farming tenants (*coloni*). And among the regulations for market-sales issued by the aediles is a provision that, in case a sale is annulled, the buyer should recover besides the price any money he has given *accessionis nomine* (Dig. 21, 1, 25, § 9; cf. ss. 27, 33, &c.). An auctioneer is said by Pliny to have sold a candelabrum for 50,000 sesterces and thrown a humpback into the bargain: *accessio candelabri fuit* (*H. N.* xxxiv. § 11).

2. In the law writers both noun and verb are used in speaking of such appurtenances and accessories as share the legal fate of the principal (*accessio cedit principali*). It is especially used to include accretions from without as opposed to growths (cf. *fructibus et causis et omnibus accessionibus*, in the heading of Dig. 22, 1). Such accretions are buildings erected on land, trees planted in gradual deposits on a river bank, writing on paper, gold setting of a jewel, embroidery on dresses (Dig. 4, 1, 23). A controversy existed whether a painting by one man on another's panel should be regarded as principal or accessory. Justinian decided in favour of the painter, who, as in other similar cases, would have to reimburse the owner of the panel (Inst. ii. 1, §§ 29–38). But not only such secondary objects as are in *physical* connexion with a thing (to which class of appurtenances modern lawyers would confine the term: cf.

Wächter, *Pand.* § 65; Böcking, *Pand.* §§ 78, 81) are called *accessiones*, but even such as the terms of a bargain or the intention of a testator may have made accessory (Dig. 21, 1, 1, § 1; ss. 32, 33; 30, 1, 63, &c.). For the general law see also Keller, *Inst.* § 67.

Accessio is also specially used (3) in reckoning the length of time necessary for resuccession, when a possessor has the benefit of the addition of the time during which another person (*e.g.* a vendor or donor or testator) to whose rights he succeeds had the possession (Dig. 41, 2, 13; 44, 3, 6, 14–16); and (4) of *fidejussores* and other sureties who were regarded as accessories to the principal debtor (Gai. iii. 126; Dig. 46, 1, s. 3; s. 34, &c.). [H. J. R.]

ACCLAMATIO was the public expression of approbation or disapprobation, pleasure or displeasure, &c. by loud acclamations. For the special forms of *acclamatio* at marriages, funerals and triumphs, see MATRIMONIUM, FUNUS, TRIUMPHUS. Orators were usually praised by such expressions as *Bene et praeclare*, *Belle et festive*, *Non potest melius*, &c. (Cic. *de Orat.* iii. 26, 101.) For the applause given to authors reciting their own compositions, see RECITATIO. Under the Empire the expression of popular applause in the circus and the theatre was reduced to a system. All the audience rose at the entrance of the emperor, and greeted him with an acclamation in a set form of words, and in a fixed rhythm. Nero developed this, selecting more than 5000 among the Roman knights and citizens (called *Augustani* or *Augustales*) to be trained in the Oriental method of musical salutation (*modulatis laudationibus*, Suet. *Ner.* 20), so as to greet him at his entrance in accordance with a time for which the signal was given by one of his suite (Dio, xliii. 15; lxi. 20). The name *acclamationes* was also given to the decrees passed by the senate in honour of the emperor, and to the congratulations addressed to him, inasmuch as these were always carried by acclamation. Under Trajan these were entered in the *Acta*, and engraved upon bronze. (Plin. *Panegyr.* 75, &c.; Capitol. *Maxim. duo*, 16, 26, *Gordian. tres*, 11; Lamprid. *Alexand. Sever.* 6–12; Vopisc. *Tac.* 4, 5, 7, *Prob.* 11.) Many instances of *acclamationes* are given by Ferrarius, *De Veterum Acclamationibus et Plausu*, in Graevius, *Thesaur. Rom. Antiq.* vol. vi. Cf. also Henzen, *Acta Fratr. Arval.* p. 75 b. [W. S.] [A. S. W.]

ACCUBATIO, or **ACCUBITIO**, the act of reclining at meals. [CENA.] [W. S.]

ACCUBITUM, a couch used for reclining upon at meals, which in the imperial period took the place of the more ancient *triclinium*. It seems to have held any number of guests, whereas the triclinium only accommodated three. (Schol. *ad* Juv. v. 17, "apud veteres accubitorum usus non erat;" Lamprid. *Heliog.* 19, 25, Casaub. and Salmas. *ad loc.*; *C. I. L.* iii. 4441, "porticum cum accubito . . . restituit;" Labbaei, *Glossa*, "accubitum, ἀνακλιντήριον;" Marquardt, *Röm. Alterth.* vii. p. 298; cf. Lamprid. *Alex. Sev.* 34, "numerus accubitionum crescebat et multitudo convivarum.") The accubitum was lower and more luxurious than the triclinium, and its coverings and pillows were called *accubitalia*. (Trebell. Poll. *Claud.* 14.) [W. S.]

ACCUSATIO. [JUDEX.]

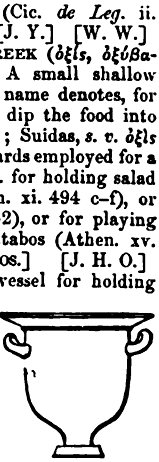
ACERRA, the incense box used in sacrifices. (Hor. *Carm.* iii. 8, 2; Verg. *Aen.* v. 745.) The incense was taken out of the acerra and let fall upon the burning altar: hence we have the expression *de acerra libare*. (Ov. *ex Pont.* iv. 8, 39; Pers. ii. 5.) It was distinct from the *turibulum* or censer in which incense was burnt; and was the more common mode of offering incense. [TURIBULUM.] The acerra represented above is taken from a frieze in the museum of the Capitol. Another figure, from a bas-relief at Rome (*ap.* Daremberg and Saglio, *s.v.*), illustrates the mode of using it. The acerra was also, according to Festus (*s. v.*), a small altar, placed before the dead, on which perfumes were burnt. There was a sumptuary law in the Twelve Tables which restricted the use of acerrae at funerals. (Cic. *de Leg.* ii. 24, 60.) [J. Y.] [W. W.]

Acerra, Incense Box.

Servant carrying the Acerra.

ACETABULUM. I. GREEK (ὀξίς, ὀξύβαφον, ὀξυβάφιον, ἐμβάφιον). A small shallow vessel, used originally, as the name denotes, for holding vinegar or sauces, to dip the food into (Poll. vi. 85; Athen. xi. 494 b; Suidas, *s. v.* ὀξίς and ὀξύβαφον). It was afterwards employed for a variety of other purposes, *e.g.* for holding salad (Athen. ii. 64 a), wine (Athen. xi. 494 c–f), or honey (Alex. Com. *Frag.* 3, 462), or for playing one form of the game of cottabos (Athen. xv. 667 e; Poll. x. 86). [COTTABOS.] [J. H. O.]

II. ROMAN. Originally a vessel for holding vinegar (*acetum*, Isidor. xx. 4, 12); then any similar vessel (Quintil. *Inst. Or.* viii. 6, § 35). It was sometimes made of silver (Dig. 34, 2, 19, § 9). The word is used of the socket of the hip-bone (Plin. *H. N.* xxviii. § 179); the suckers in the arms of polypi (id. ix. § 86); and the cup of a flower (id. xviii. § 245), from which we get the general idea of a small vessel of bell shape with a wide mouth. The first cut represents an acetabulum, given in Dennis's *Etruria*, vol. i. p. cxii.; the second, from Cassini's *Pitture antiche*,



Acetabulum.

Rome, 1783 (*ap.* Daremberg and Saglio, *s. v.*), shows two such vessels, probably containing condiments, placed on either side of a sucking pig that has been served up in a lanx. Similar vessels were used by conjurers in their tricks (Sen. *Ep.* 45, 7, with Lipsius's note); and the name was also applied to a kind of cymbal (Isid. iii. 21, 11). [A. G.]

Dish showing two small Acetabula.

ACETA'BULUM, a Roman measure of capacity, fluid, and dry, equivalent to the Greek ὀξύβαφον. It was one-fourth of the hemina; and therefore one-eighth of the sextarius. It contained the weight in water of fifteen Attic drachmae. (Plin. *H. N.* xxi. § 185.) [P. S.]

ACHAICUM FOEDUS (τὸ Ἀχαϊκόν), the league or confederation of a number of towns on the north-west coast of Peloponnesus. In speaking of the Achaean league we must distinguish between two periods, an earlier and a later one. The former, though formed for mutual protection, was mainly of a religious character, whereas the latter was pre-eminently a political confederation to protect the towns against the domination of Macedonia.

1. *The earlier League.*—When the Herakleidae took possession of Peloponnesus, which until then had been inhabited chiefly by the Achaean race, a portion of the latter, under Tisamenos, turned northwards and took possession of the northern coast of the peninsula, which was called Αἰγιαλός: the Ionians, who had hitherto occupied that country, took refuge in Attica and on the west coast of Asia Minor. The country thus occupied by the Achaeans, from whom it derived its name of Achaia, contained twelve towns which had been leagued together even in the time of their Ionian inhabitants. They were governed by the descendants of Tisamenos, until, after the death of king Ogyges, they abolished the kingly rule and established democratic institutions. The time when this happened is not known. In the time of Herodotus (i. 145; comp. Strab. viii. p. 483 foll.) the twelve towns of which the league consisted were: Pellene, Aegeira, Aegae, Bura, Helike, Aegion, Rhypes, Patrae, Pharae, Olenos, Dyme, and Tritaea. After the time of Herodotus, Rhypes and Aegae disappear from the number of the confederate towns, as they had decayed and become deserted (Paus. vii. 23, 25; Strab. viii. p. 387), and Leontion and Keryneia stepped into their place (Polyb. ii. 41; comp. Paus. vii. 6). Helike appears to have been their common place of meeting; but this town, together with Bura, was swallowed up by the sea during an earthquake in B.C. 373, whereupon Aegion was chosen as the place of meeting for the confederates (Strab. viii. p. 384; Diod. xv. 48; Paus. vii. 24). Of the constitution of this league very little is known; but it is clear that the bond which united the different towns was very loose, and less a political than a religious one, as is shown by the common sacrifice offered at Helike to Poseidon. When that town was destroyed and Aegion had become the central point of the league, the common sacrifice was offered up to the principal divinities of Aegion, *i.e.* to Zeus, surnamed Homagyrios, and to Demeter Panachaea (Paus. vii. 24). The looseness of the connexion among the towns in a political point of view is evident from the fact that some of them acted occasionally quite independent of the rest (Thuc. ii. 9). The confederation generally kept aloof from the troubles of other parts of Greece, on which accordingly it exercised no particular influence down to the time when the league was broken up by the Macedonians. But they were nevertheless highly respected by the other Greek states on account of their honesty, sincerity, and wise moderation. Hence after the battle of Leuktra they were chosen to arbitrate between the Thebans and Lakedaemonians (Polyb. ii. 39). Demetrios, Kassander, and Antigonos Gonatas placed garrisons in some of their towns, while in others they favoured the rising of tyrants. The towns were thus separated from one another, and the whole confederation was gradually destroyed.

2. *The later League.*—The ancient confederacy had thus ceased to exist for some time when events took place which in some towns roused the ancient spirit of independence. When in B.C. 281 Antigonos Gonatas attempted to drive Ptolemaeos Keraunos from the throne of Macedonia, the Achaeans availed themselves of the opportunity of shaking off the Macedonian yoke and renewing the ancient confederation. The grand object however now was no longer a common worship, but a real political union among the confederate towns. The places which first shook off the yoke of the oppressors were Dyme and Patrae, and the alliance concluded between them was speedily joined by the towns of Tritaea and Pharae (Polyb. ii. 41). One town after another now expelled the Macedonian garrisons and tyrants; and when in B.C. 275 Aegion, the head of the ancient league, followed the example of the other towns, the foundation of the new confederation was complete, and the main principles of its constitution were settled, though afterwards many changes and modifications were introduced. The fundamental laws were that henceforth the confederacy should form one inseparable state; that every town which should join it should have equal rights with the others; and that all members in regard to foreign countries should be regarded as dependent, and be bound in every respect to obey the federal government and those officers who were entrusted with the executive (Polyb. ii. 37 foll.). No town, therefore, was allowed to treat with any foreign power without the sanction of the others. Aegion, for religious reasons, was at first appointed the seat of the government, and retained this distinction until the time of Philopoemen, who proposed a measure according to which the national meetings should be held in rotation in any of the other towns (Liv. xxxviii. 30); but whether this plan was adopted is uncertain. At Aegion, therefore, the citizens of the various towns met at stated and regular times to deliberate upon the common affairs of the confederation, and if necessary upon those of any separate town or even individuals, and to elect the officers of the league. After having thus established a

firm union among themselves, the Achaeans zealously exerted themselves in delivering other towns also from their tyrants and oppressors. The league however did not acquire any great strength until B.C. 251, when Aratos united Sikyon, his native place, with it, and some years later also gained Corinth for it. Megara, Troezen, and Epidauros soon followed their example. Afterwards Aratos prevailed upon all the more important towns of Peloponnesus to join the confederacy; and Megalopolis, Argos, Hermione, Phlius, and others were added to it. In a short time the league thus reached its highest power, for it embraced Athens, Aegina, Salamis, and the whole of Peloponnesus with the exception of Sparta, Tegea, Orchomenos, Mantinein, and Elis. Greece seemed to revive, and promised to become stronger and more united than ever, but it soon showed that its new power was employed only in self-destruction and its own ruin. We cannot here enter into the history of this new confederation, but must confine ourselves to giving an outline of its constitution, as it existed at the time of its full development.

Polybius (ii. 38) remarks that there was no other constitution in the world in which all the members of the community had such a perfect equality of rights and so much liberty, and, in short, which was so perfectly democratic and so free from all selfish and exclusive regulations, as the Achaean league; for all its members had equal rights, whether they had belonged to it from the beginning or had only recently joined it, and whether they were large or small towns. Their common affairs were regulated at general meetings by the citizens of all the towns, and were held regularly twice every year, in the spring and in the autumn. These meetings, which lasted three days, were held in a grove of Zeus Homagyrios, in the neighbourhood of Aegion, and near a sanctuary of Demeter Panachaea. (Polyb. ii. 54, iv. 37, v. 1, xxix. 9; Liv. xxxii. 22, xxxviii. 32; Strab. viii. p. 385; Paus. vii. 24.) In cases of urgent necessity, however, extraordinary meetings might be convened, either at Aegion or in any other of the confederate towns (Liv. xxxi. 25; Polyb. xxv. 1, xxix. 8; Plut. *Arat.* 41). Every citizen, both rich and poor, who had attained the age of thirty, might attend the assemblies, speak, and propose any measure, to which they were invited by a public herald (Polyb. xxix. 9; Liv. xxxii. 20). Under these circumstances the assemblies were sometimes of the most tumultuous kind, and a wise and experienced man might sometimes find it difficult to gain a hearing among the crowds of ignorant and foolish people (Polyb. xxviii. 4). It is, however, natural to suppose that the ordinary meetings, unless matters of great importance were to be discussed, were attended chiefly by the wealthier classes, who had the means of paying the expenses of their journey, for many lived at a considerable distance from the place of meeting.

The subjects to be brought before the assembly were prepared by a council (*βουλή*), which seems to have been permanent (Polyb. xxiii. 7, xxviii. 3, xxix. 9; Plut. *Arat.* 53). The principal subjects on which the assembly had to decide were —peace and war (Polyb. iv. 15 foll.); the reception of new towns into the confederacy (Polyb. xxv. 1); the election of the magistrates of the confederation (Polyb. iv. 37, 82; Plut. *Arat.* 41); the punishment of offences committed by the magistrates, though sometimes special judges were appointed for that purpose, as well as the honours and distinctions to be conferred upon them (Polyb. iv. 14, viii. 14, xl. 5, 8; Paus. vii. 9). The ambassadors of foreign states had to deliver their messages to the assembly, where they were discussed by the assembled people (Polyb. iv. 7, xxiii. 7 foll., xxviii. 7; Liv. xxxii. 9). The assembly further had the power to determine as to whether negotiations were to be carried on with any foreign power or not, and no single town was allowed to send an embassy to a foreign power on its own responsibility, even on matters of merely local importance, although otherwise every individual town managed its own internal affairs at its own discretion, so long as it did not interfere with the interests of the league. No town, moreover, was allowed to accept presents from a foreign power (Polyb. xxiii. 8; Paus. vii. 9). The votes in the assembly were given according to towns; each town, whether large or small, having one vote (Liv. xxxviii. 22 foll.).

The principal officers of the Achaean league were:—

1. At first two strategi (*στρατηγοί*), but after the year B.C. 255 there was only one (Strab. viii. p. 385), who, in conjunction with the hipparchus (*ἵππαρχος*) or commander of the cavalry (Polyb. v. 95, xxviii. 6) and an under-strategus (*ὑποστρατηγός*, Polyb. iv. 59), commanded the army furnished by the confederate towns, and was entrusted with the whole conduct of the war.

2. A state-secretary (*γραμματεύς*).

3. An apparently permanent council of ten men, called the *δημιουργοί* (Strab. viii. p. 385; Liv. xxxii. 22, xxxviii. 30; Polyb. v. 1, xxiii. 10, where they are called *archontes*). These demiurgi, whom Polybius in another passage (xxxviii. 5) calls *γερουσία*, appear to have presided at the great assemblies, which either they or the strategus might convene, though it seems that the latter could do so only when the people were convened in arms or for military purposes (Polyb. iv. 7; Liv. xxv. 25).

All the officers of the league were elected in the assembly held in the spring, at the rising of the Pleiades (Polyb. ii. 43; iv. 6, 37; v. 1), and legally they were invested with their several offices only for one year; but it often happened that men of great merit, like Aratos and Philopoemen, were re-elected for several successive years (Plut. *Arat.* 24, 30; *Cleom.* 15). If an officer died during the period of his office, his place was filled by his predecessor, until the time for the new elections arrived (Polyb. xl. 2). The close union subsisting among the confederates was, according to Polybius (ii. 37), strengthened by their adopting common weights, measures, and coins. Many Achaean coins are preserved in various collections.

The Achaean league might at one time have become a great power, and might have united at least the whole of Peloponnesus into one state; but the original objects of the league were in the course of time so far forgotten that it sought the protection of those against whom it had been formed; and the perpetual discord among its members, the hostility of Sparta, the intrigues of the Romans, and the folly and rashness of the last strategi brought about not only the dissolution and destruction of the confederacy, but the political annihilation of the whole of Greece in the year B.C. 146. After a time the Romans again allowed certain national confederations to be renewed (Paus. vii. 16), but they had no political influence, and were entirely dependent upon the Roman governor of Macedonia, until in the reign of Augustus all Greece was constituted as a Roman province under the name of Achaia. (Comp. Schorn, *Gesch. Griechenlands von der Entstehung des Aetol. u. Achaeischen Bundes*, p. 49 foll. and p. 60 foll.; Drumann, *Ideen zur Gesch. des Verfalls der Griech. Staaten*; K. F. Hermann, *Griech. Staatsalterthümer*, § 185 foll.; Thirlwall, *Hist. of Greece*, vol. viii. p. 86 foll.; Hertzberg, *Gesch. Griechenlands unter den Römern*, vol. i.; Schömann, *Griech. Alterthümer*, vol. ii. p. 106 foll.) [L. S.]

ACHANE (ἀχάνη), a Persian and Boeotian measure, equivalent to 45 Attic medimni. (Aristot. *ap.* Schol. *ad* Aristoph. *Acharn.* 108, 109; Suid. *s. v.*) According to Hesychius, a Boeotian ἀχάνη was equal to one Attic medimnus. (Hultsch, *Griech. u. Röm. Metrol.* pp. 257, 275.) [P. S.]

ACHARISTIAS DIKÊ (ἀχαριστίας δίκη), mentioned among private actions by Pollux, viii. 31; but according to Xenophon, *Mem.* ii. 2, § 13, the law recognised no ἀχαριστία except towards parents. [KAKOSIS.] [W. W.]

AC'IES. [EXERCITUS.]

ACI'NACES (ἀκινάκης). a Persian sword, whence Horace (*Carm.* i. 27, 5) speaks of the *Medus acinaces.* It was a short and straight weapon, and thus differed from the Roman *sica*, which was curved. (Pollux, i. 138; Joseph. *Ant. Jud.* xx. 7, § 10.) [SICA.] It was worn on the right side of the body ("insignis *acinace dextro*," Val. Flacc. *Argon.* vi. 701), whereas the Greeks and Romans usually had their swords suspended on the left side.

Acinaces or Persian Sword.

The form of the acinaces, with the method of using it, is illustrated by the preceding Persepolitan figures. In all the bas-reliefs found at Persepolis, the acinaces is invariably straight, and is commonly suspended over the right thigh, never over the left, but sometimes in front of the body. The form of the acinaces is also seen in the statues of the god Mithras.

A golden acinaces was frequently worn by the Persian nobility, and it was often given to individuals by the kings of Persia as a mark of honour. (Herod. viii. 120; Xen. *Anab.* i. 2, § 27; 8, § 29.) That of Mardonius was among the spoils of the battle of Plataea in the Acropolis at Athens; it weighed 300 darics (Demosth. *c. Timocr.* p. 741, § 129). The acinaces was also used by the Caspii (Herod. vii. 67). It was an object of religious worship among the Scythians and many of the northern nations of Europe (Herod. iv. 62: comp. Mela, ii. 1; Amm. Marc. xxxi. 2). [J. Y.] [W. W.]

Statue of Mithras with Acinaces.

ACIS'CULUS. [ASCIA.]

ACLYS or **ACLIS.** [CATEIA.]

ACNA or **ACNUA** (also spelt *agna* and *agnua*) was, according to Varro, the Italian name, but, according to Columella and Isidore, the common Baetican name of the *actus quadratus.* [ACTUS.] An old writer, quoted by Salmasius, says "agnua habet pedes XIIII. CCCC," *i.e.* 14,400 square feet. It is very doubtful whether the word is connected with the Greek ἄκαινα or ἄκενα, seeing that the measure is so very different, and that it is quite uncertain to what language *acna* belongs. (Varro, *R. R.* i. 10, § 2; Colum. *R. R.* v. 1, § 5; Schneider, *Comment. ad ll. cc.*; Isidor. *Orig.* xv. 15; Salmasius, *ad* Solin. p. 481.) [P. S.] [A. S. W.]

ACON'TION (ἀκόντιον). [HASTA.]

ACRATISMA (ἀκράτισμα), the early breakfast (πρωϊνὸν ἄριστον), which the Greeks took immediately after rising, corresponding to the first breakfast of the French or Germans. It consisted of bread dipped in unmixed wine (ἄκρατος οἶνος), whence the name ἀκράτισμα. [See CENA.] [W. S.]

ACRATOPH'ORUM (ἀκρατοφόρον), a vessel for containing pure and unmixed wine (ἄκρατος), thus distinct from the *crater*, in which the wine was mixed with water. It differed also from the *oenophorum* in being placed upon the table [CRATER; OENOPHORUM], while Julius Pollux compares it to the ψυκτήρ [PSYCTER]. The Greek word was early naturalised in Latin (Varro, *R. R.* i. 8, 5; Cic. *de Fin.* iii. 4, § 15). The shape, as might be expected, varied considerably; but the cut in the next column from Buonarotti

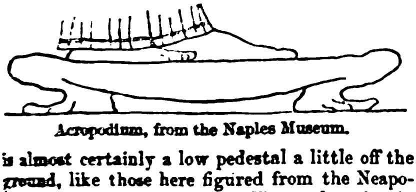
(*Vasi di Vetro*, p. 31, *ap.* Rich) is probably a common type. It is from a marble vase bearing an inscription to Silvanus (Silenus), and ornamented with a wreath of vine-leaves; and it is identical in shape with two others delineated by the Pompeian artists (*Mus. Borbon.* vii. 56, 62), one of which is placed in the hands of the god Acratus. (Cf. Marquardt, vii. p. 630.) [W. W.]

Acratophorum or Bowl.

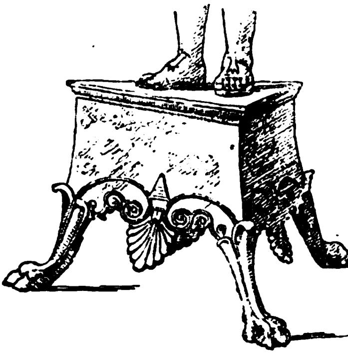
ACROA'MA (ἀκρόαμα), anything heard, and especially anything heard with pleasure, signifies properly a musical piece, e.g. *vetera acroamata* (Suet. *Vesp.* 19); but also a play, a dance (Plin. *Ep.* vi. 31, 13), or a recitation, such as were common at meals. The word is also applied to the actors and musicians who were employed to amuse guests during an entertainment (Cic. *Verr.* iv. 22, 49; *pro Arch.* 9, 20; Suet. *Octav.* 74; Macrob. *Sat.* ii. 4), or even an actor on the stage (Cic. *pro Sest.* 54, 116: *ille maximus ludius, non solum spectator, sed actor et acroama* (an artiste), *qui omnia sororis embolia novit*). See Friedländer, *Sittengesch. Roms*, i.³ p. 334; Marquardt, *Röm. Alterth.* vii. p. 327; and it is sometimes used to designate the *anagnostes* (Nep. *Att.* 14). [ANAGNOSTAE.] [W. S.] [A. S. W.]

ACROLITHI (ἀκρόλιθοι), statues of which the extremities (face, feet, and hands, or toes and fingers only) were of marble, and the remaining part of the body either gilt or, what seems to have been more used, covered with drapery. The word occurs only in the Greek Anthology (Brunck, *Anal.* iii. p. 155, No. 20; *Anth. Pal.* xii. 40), and in Vitruvius (ii. 8, § 11); but statues of the kind are frequently mentioned by Pausanias (ii. 4, § 1; vi. 25, § 4; vii. 21, § 4 or 10; vii. 23, § 5; viii. 25, § 4 or 6; viii. 31, § 1 or 2, and § 3 or 6; ix. 4, § 1). It is a mistake to suppose that all the statues of this kind belonged to an earlier period. They continued to be made at least down to the time of Praxiteles. (Comp. Jacobs, *Comment. in Anthol. Graec.* vol. iii. pt. 1, p. 298; Winckelmann, *Gesch. der Kunst*, P. i. c. 2, § 13; Müller, *Archäol.* § 69.) [P. S.]

ACROPOD'IUM (ἀκροπόδιον). The only passage of an ancient author where the word occurs is in Hygin. *Fab.* 88, where a sword is said to be hidden *sub acropodio Minervae.* This is almost certainly a low pedestal a little off the ground, like those here figured from the Neapolitan and British Museums. The explanation in the new edition of Stephens's *Thesaurus*, s. v. ἀκροπόδιον, that it is equivalent to ἄκροι πόδες, the toes of the statue itself, is much less satisfactory. [W. W.]



Acropodium, from the Naples Museum.



Acropodium, from the British Museum.

ACROP'OLIS (ἀκρόπολις). In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of *acropolis* was given. Thus we read of an acropolis at Athens, Corinth, Argos, Messene, and many other places. The Capitolium at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Agathocles at Utica (App. *Pun.* 14), and that of Antonia at Jerusalem (Joseph. *B. J.* v. § 8; *Act. Apostol.* xxi. 34). At Athens, the Acropolis served as the treasury; and as the names of all public debtors were registered there, the expression "registered in the Acropolis" (ἐγγεγραμμένος ἐν Ἀκροπόλει) always means a public debtor (ἐν ἀκροπόλει γεγραμμένοι, Dem. *c. Theocr.* p. 1337, § 48; Böckh, *Publ. Econ. of Athens*, p. 388). For an account of the Acropolis at Athens, see *Dict. of Geogr.* i. p. 265 foll. [W. S.]

ACROSTOL'IUM (ἀκροστόλιον). [NAVIS.]

ACROTE'RIUM (ἀκρωτήριον) signifies an extremity of anything. It is generally used in the plural. **1.** In Architecture it was used originally in the same sense as the Latin *fastigium*, namely, for the sloping roof of a building, and more particularly for the ornamental front or gable of such a roof; that is, *the pediment.* (Plut. *Caes.* 63, compared with Cic. *Phil.* ii. 43, 110, and Suet. *Caes.* 81.) The usual meaning of *acroteria*, however, is the pedestals placed on the summit of a pediment to receive statues or other ornamental figures. There were three *acroteria*, one above each angle of the pediment. Vitruvius says that those over the outer angles (*acrot. angularia*) should be as high as the apex of the tympanum, the central one (*acrot. mediana*) an eighth part higher (Vitruv. iii. 3, or iii. 5, § 12). Some writers include the statues themselves as well as the bases under the same (Salmas. in Ael. Spart. *Pescenn. Nig.* 12; Bursian ap. Pauly, *s. v.*), but this appears to be a mistake; in Plato, *Criti.* 116 D, the pinnacles or *flèches* of a temple are all that is meant. **2.** The extremities of the prow of a vessel, which were usually taken from a conquered vessel as a mark of victory: the act of doing so was called ἀκρωτηριάζειν. (Xen. *Hell.* ii. 3, § 8; vi. 2, § 36; Herod. iii. 59, viii. 121.)

3. The extremities of a statue, wings, feet, hands, &c. (Dem. *c. Timocr.* p. 738, § 121; Athen. v. p. 199 c.) [P. S.] [W. W.]

ACTA. 1. Signified the public acts and orders of a Roman magistrate possessing the *jus agendi cum populo*, which after the expiration of his office were submitted to the senate for approval or rejection. (Suet. *Jul.* 19, 23; Cic. *Phil.* i. 7, 16, &c.) After the death of Julius Caesar, the triumvirs swore, and compelled all the other magistrates to swear (Dio, xlvii. 48), to observe and maintain all his acta (*in acta jurare*: cf. Tac. *Ann.* i. 72; Suet. *Tib.* 67); and hence it became the custom on the accession of each emperor for the new monarch to swear to observe and respect all the acta of his predecessors from Julius Caesar downwards, with the exception of those who had been branded with infamy after death, such as Nero and Domitian (Tac. *Ann.* iv. 42; Dio, lvi. 33, &c.). The senate also swore that it would recognise the validity of the acts of the new emperor. Every year all the magistrates upon entering office on the 1st of January swore approval of the acts of the reigning emperor: this oath was originally taken by one magistrate in each department on behalf of his colleagues, but subsequently it was the usual practice for each magistrate to take the oath personally. (Dio, xlvii. 18, liii. 28; Tac. *Ann.* xvi. 22, with the Excursus of Lipsius; Dio, lviii. 17, lx. 25.)

2. ACTA SENATUS, called also COMMENTARII SENATUS (Tac. *Ann.* xv. 74) and ACTA PATRUM (*Ann.* v. 4), contained an account of the various matters brought before the senate, the opinions of the chief speakers, and the decision of the house. We may infer from a passage of Suetonius ("Inito honore primus omnium instituit, ut tam senatus quam populi diurna acta confierent et publicarentur," *Jul.* 20), that the proceedings of the senate were not usually published till the first consulship of Julius Caesar, B.C. 59; but under the direction of the presiding magistrate, assisted by certain senators appointed for the purpose (*qui scribendo adfuerunt*), the decrees of the senate had been written down and recorded in the Aerarium long previously, and the debates on the Catilinarian conspiracy had been widely circulated by Cicero (*p. Sull.* 14, 15) from notes taken by some friends of his among the senators. Julius Caesar ordered that the proceedings of the senate, which had been only occasionally published before, should henceforth be published regularly every day (*senatus acta diurna*) under the authority of government, from the notes of shorthand writers taken *inter loquendum* (Sen. *de mort. Claud.* 9). Augustus forbade the publication of the proceedings of the senate, but they still continued to be preserved; and one of the senators, who received the title *ab actis senatus*, was chosen by the emperor to compile the account. (Tac. *Ann.* v. 4; Spart. *Hadr.* 3; Orelli, *Inscr.* No. 2274, 3186.) This office was generally held as an annual one, after the quaestorship (Spart. *Hadr.* 3), but before the praetorship or aedileship. The persons entrusted with this office must not be confounded with the various clerks (*actuarii, servi publici, scribae*; see also CENSUALES), who were present in the senate to take notes of its proceedings, and who were only excluded when the senate passed a *senatusconsultum tacitum*;
that is, when they deliberated on a subje
the greatest importance, respecting which sec
was necessary or advisable (Capit. *Gord.*
It was doubtless from notes and papers of t
clerks that the acta were compiled by
senator, who was entrusted with this office.
acta were deposited in the imperial arch
(*tabularium*) or in particular departments of
public libraries, to which access could only
obtained by the express permission of the *p*
fectus urbi. They were consulted and
frequently referred to by the later histori
(Vopisc. *Prob.* 2; Lamprid. *Sever.* 56; Capi
Opil. Macr. 6), and many extracts from th
were published in the Acta Diurna.

3. ACTA DIURNA, a gazette published da
at Rome by the authority of the governm
during the later times of the republic, a
under the empire, corresponding in some meas
to our newspapers. (Tac. *Ann.* iii. 3, xiii. 31, x
22.) In addition to the title *Acta Diurna*, we fi
them referred to under the names of *Diurn*
Acta Publica, Acta Urbana, Acta Rerum Ur
narum, Acta Populi, and they are frequent
called simply *Acta*. The Greek writers
Roman history call them *τὰ ὑπομνήματα*,
δημόσια ὑπομνήματα, τὰ δημόσια γράμματα, a
τὰ κοινὰ ὑπομνήματα. The nature of their co
tents will be best seen from the followin
passage of Petronius (c. 53), where an imitatio
of them is given by the actuarius of Trimalchio
—"Actuarius—tanquam acta urbis recitavit
vii. Kal. Sextiles in praedio Cumano, quod es
Trimalchionis, nati sunt pueri XXX, puellae XL
sublata in horreum ex area tritici millia modiun
quingenta; boves domiti quingenti. Eodem di
Mithridates servus in crucem actus est, qui
Gai nostri genio maledixerat. Eodem die i
arcam relatum est, quod collocari non potuit
sestertium centies. Eodem die incendium factum
est in hortis Pompeianis, ortum ex aedibus
Nastae villici . . . Jam etiam edicta aedilium
recitabantur, et saltuariorum testamenta, quibus
Trimalchio cum elogio exheredabatur; jam
nomina villicorum et repudiata a circitore
liberta in balneatoris contubernio deprehensa;
atriensis Baias relegatus; jam reus factus dispensator; et judicium inter cubicularios actum."
From this passage, and from the numerous passages in ancient writers, in which the Acta Diurna are quoted (references to which are given by Hübner), it would appear that they usually contained the following matters:—(1) The number of births and deaths in the city, an account of the money paid into the treasury from the provinces, and everything relating to the supply of corn. These particulars would be extracted from the *tabulae publicae*. By an ancient regulation, ascribed to Servius Tullius (Dionys. iv. 15), all births were registered in the temple of Venus, and all deaths in that of Libitina; and we know that this practice was continued under the empire, only that at a later time the temple of Saturn was substituted for that of Venus for the registration of births. (Jul. Cap. *M. Aurel.* 9.) (2) Extracts from the Acta Forensia, containing the edicts of magistrates, the testaments of distinguished men, reports of trials, with the names of those who were acquitted and condemned, and likewise a list of the magistrates who were elected. (3) Extracts from the Acta Senatus, especially all

the decrees and acclamationes [ACCLAMATIO] in honour of the reigning emperor. (4) A court circular, containing an account of the births, deaths, festivals, and movements of the imperial family. (5) Curious and interesting occurrences, such as prodigies and miracles, the erection of new edifices, the conflagration of buildings, funerals, sacrifices, a list of the various games, and especially amatory tales and adventures, with the names of the parties. (Comp. Cic. *ad Fam.* ii. 15.) News of private affairs seem to have been communicated to the official editor by way of advertisement (cf. Quint. ix. 3, 17, where a widower speaks of himself as *saucius pectus*). The fragments of some Acta Diurna have been published by Pighius and Dodwell, but their genuineness is more than doubtful. (Cf. Heinze, *de spuriis diurnorum act. fragmentis*, Greifswald, 1860.)

It is certain that these acta were published under the authority of the government, but it is not stated under whose superintendence they were drawn up (Hübner, p. 65). It is probable, however, that this duty devolved upon the magistrates, who had the care of the *tabulae publicae*, namely, the censors under the republic (Liv. iv. 8, xliii. 16), and sometimes the quaestors, sometimes the *praefecti aerarii* under the empire (Tac. *Ann.* xiii. 28). By a regulation of Alexander Severus, seven of the fourteen *curatores urbis*, whom he appointed, had to be present when the acta were drawn up (Lamprid. *Alex. Sev.* 33). The actual task of compiling them was committed to subordinate officers, called *actuarii* or *actarii*, who were assisted by various clerks, and by reporters (*notarii*), who took down in shorthand the proceedings in the courts, &c. After the acta had been drawn up, they were exposed for a time in some public place in the city *in albo*, where persons could read them and take copies of them. Many scribes, whom Cicero speaks of under the name of *operarii*, made it their business to copy them or make extracts from them for the use of the wealthy in Rome, and especially in the provinces, where they were eagerly sought after and extensively read (Cic. *ad Fam.* viii. 1, xiii. 8; Tac. *Ann.* xvi. 22). After the acta had been exposed in public for a certain time, they were deposited, like the Acta Senatus, in some of the record offices, or the public libraries.

The style of the acta, as appears from the passage in Petronius, was very simple and concise. They contained a bare enumeration of facts without any attempt at ornament.

Hübner has proved against Becker (*Handbuch*, i. pp. 30 and 32) that these acta were first published in the first consulship of Julius Caesar. Previous to this time it was common for a MS. chronicle of public events at Rome to be compiled by scribes, and forwarded along with private letters to friends at a distance (Cic. *ad Fam.* viii. 1, 2, 8, 11, ii. 8, xii. 22, xv. 6: cp. Hübner, p. 39; Mommsen, *Hist.* iv. 606).

There is no evidence to support an opinion adopted by many modern writers, that the publication of the acta first commenced in B.C. 133, to supply the place of the Annales Maximi, which were discontinued in that year (Cic. *de Orat.* ii. 12), while on the contrary the great difference of their contents renders it improbable that such was the case. The Annales Maximi dealt with the affairs of the republic generally, especially wars, &c.; but the Acta Urbana, as their name implies, were restricted to the news of the city. The Acta Diurna are last mentioned by Vopiscus (*Prob.* c. 2), and probably continued in use to the downfall of the Western empire, or at least till the removal of the seat of government to Constantinople, but they were never published at the latter city.

4. ACTA FORENSIA. These were of two kinds. (1) The Romans were accustomed to keep their private accounts with so much accuracy that their books *accepti et expensi*, bonds (*chirographa*) and contracts (*syngrapha*) were admitted as legal evidence. Frequently witnesses (*pararii*, Sen. *de Ben.* ii. 23, § 2) were employed to establish their authenticity. At a later date notaries (*tabelliones*) who had offices (*stationes*) in the public streets drew up these documents, which were ratified by the signature (*subscriptio*) of the parties. A senatus consultum passed under Nero (Suet. *Ner.* 17; Quintil. xii. 8, 13; Paul. *Sent. Recept.* v. 25, 6) prescribed the legal form of such documents.

(2) *Acta judiciorum* contained the record of all proceedings of the magistrates, alike in contentious and in non-contentious business. The latter included such matters as adoptions, *cessio in jure*, manumissions, the appointment of guardians, and the like. Such magisterial functions could be discharged anywhere, even in the baths or in the streets (Instit. Just. i. 5, 2). Under the republic there is no evidence of the method of legal attestation in these cases; but under the empire it was customary for the parties to have a formal statement drawn up by a public official (*acta* or *gesta*), and confirmed by the magistrate (Instit. Just. i. 11, 2, and 12, 8). In the case of contentious business, so long as the *legis actiones* were in use [ACTIO], there was no need of a written record, for the *litis contestatio* was attested by witnesses. On the other hand, when *formulae* came into use, these were necessarily in writing, though the decision of the *judex* was given *viva voce*. There was a special form of action (*judicati actio*) against a defendant who denied the existence of a decision given against him. There is evidence of the existence of a record (*acta*, Frag. Vat. Jur. 112) under the empire. The *cognitiones extraordinariae* increased the importance of this. But the existence of a written decision was not compulsory before the Constitutions of Valentinian, Valens, and Gratian (c. 213, Cod. Just. *de sent. ex peric. recitandis*, vii. 44, &c.). From this date the *acta judiciorum* prepared by the officials of the courts (*officiales*) become extremely numerous (cf. Rudorff, *Röm. Rechtsgesch.* i. p. 299).

5. ACTA MILITARIA contained an account of the duties, numbers, and expenses of each legion (Veget. ii. 19), and of the amount of property possessed by each soldier (*peculium castrense*). They were probably preserved among the official papers of the several legions. The soldiers who drew up these acta are frequently mentioned in inscriptions and ancient writers under various titles, as *librarius legionis*, *actuarius* or *actarius legionis*, *tabularius castrensis* (cf. Renier, *Inscriptions romaines de l'Algérie*, 343, 551, 799).

(Lipsius, *Excursus ad Tac. Ann.* v. 4; Ernesti, *Excursus ad Suet. J. Caes.* 20; Schlosser, *Ueber die Quellen der spätern latein Geschichtschreiber*, *besonders über Zeitungen*, &c. in the *Archiv für Geschichte*, 1830, pp. 80–106; Prutz, *De Fontibus, quos in conscribendis rebus inde a Tiberio usque ad mortem Neronis gestis auctores veteres secuti videantur*, Halle, 1840; Zell, *Ueber die Zeitungen der Alten*, Friburg, 1834; Le Clerc, *Des Journaux chez les Romains*, Paris, 1838; Lieberkühn, *De Diurnis Romanorum Actis*, Wiemar, 1840; and especially Hübner, *De senatus populique Romani actis*, Lips. 1860.) [A. S. W.]

AC'TIA (**Ἄκτια**), a festival of Apollo Actius, celebrated at Nicopolis in Epirus, with wrestling, musical contests, horse-racing, and sea-fights. It was established by Augustus, in commemoration of his victory over Antony off Actium, and was probably the revival of an ancient festival; for there was a celebrated temple of Apollo at Actium, which is mentioned by Thucydides (i. 29) and Strabo (vii. p. 325), and which was enlarged by Augustus. The games instituted by Augustus were celebrated every four years (*πεντετηρίς*, *ludi quinquennales*) at Nicopolis, probably on Sept. 2, the anniversary of the battle of Actium; they received the title of a sacred Agon, and ranked next after the four great games of Greece. Some counted by *Actiads* instead of Olympiads. (Joseph. *B. Jud.* i. 20, 4; Strab. *l. c.*; Dio Cass. li. 1; Suet. *Aug.* 18; Stat. *Silv.* ii. 2, 6; Böckh, *Corp. Inscr.* No. 1720, 1793; Krause, *Olympia*, p. 221.)

Actia were also celebrated at the same time at Rome by the orders of the senate. (Dio Cass. liii. 1, liv. 19; Mommsen, *Res gest. D. Aug.* p. 27.) They are frequently mentioned in inscriptions, and were also celebrated in other parts of the empire. (Friedländer, *Sittengesch.* ii. p. 304.) [W. S.] [A. S. W.]

AC'TIO. An action or proceeding in the technical sense is the lawfully recognised mode of enforcing one's rights, and usually took place under the control of a magistrate and in forms prescribed by the law. Three principal systems of judicial procedure prevailed successively among the Romans, the first however continuing along with the second for certain classes of cases.

I. The first mode has to be collected principally from the fragments of the Twelve Tables and the mutilated account of Gaius, iv. 11 foll., whose statements however may not be perfectly accurate respecting the early times. The sources are so meagre that a good deal of assumption is necessary, and there is no part of the history of Roman law which has given rise to more discussion and to greater divergences of opinion. A plaintiff summons his opponent into court: if he does not go, the plaintiff calls a bystander to witness the summons and refusal, and then takes the defendant by force if he shirks or resists. If illness or age prevents his going, the plaintiff has to provide a beast to carry (or draw?) him, but is not obliged to furnish a cushioned car if he does not choose. ("Si in jus vocat, ito: ni it, antestamino: igitur em capito: si calvitur pedemve struit manum endo jacito. Si morbus aevitasve vitium escit qui in jus vocabit jumentum dato; si nolet arceram ne sternito." XII. Tab.; cf. Gell. xx. i. "Pedem struit" was explained by Serv. Sulpicius as meaning *fugit*: perhaps "fixes his foot" was the real meaning; cp. Fest. p. 313.) The *antestatio* was accompanied by the plaintiff's touching the ear of the witness, as a symbolical way of bidding him listen to the summons (cf. Hor. *Sat.* i. 9, 76; Plaut. *Pers.* 747, 748). The defendant had two courses open to him in lieu of obedience; viz., he might either find an adequate defender (*vindex*, Gai. iv. 46; *Lex Rubr.* 21) to accept suit in his place, or he might settle the difference at once (Dig. 2, 4, 22). For a proletarius (*i.e.* a citizen assessed at not more than 1500 asses) any one might serve as vindex; a richer defendant required a richer vindex. ("Assiduo vindex assiduus esto; proletario jam civi qui volet vindex esto," XII. Tab.; cf. Gell. xvi. 10; Cic. *Rep.* ii. 22. The words, however, are by some referred to a different stage of the proceedings; cf. Demotius and Lenel in *Zeitschrift für R. G.* xv.) If no settlement was made, then, if we may trust the scanty fragments of the Twelve Tables, both parties before noon, either in the comitium or in the forum, stated their case (*causam coiciunto*). If one was present and the other not, the property in question was after noon assigned to the one present. The proceedings were not continued beyond sunset; and if the case was not concluded, bail (*vades*) was given for future appearance. Gaius (iv. 16, 17) gives us fuller though still imperfect information of the proceedings in court. If some piece of property was in dispute—*e.g.* a slave, an animal, or some other movable article—it was brought into court. If it was a flock of sheep, one sheep or a lock of wool was brought in; if it was land or a house or ship, a sod or brick or piece of the ship was brought in, and these were made the subjects of the formal acts just as if they were the whole of the property in dispute. Then the claimant, holding a rod (*festuca*), laid hold of the slave or other article claimed, and said, "Hunc ego hominem ex jure Quiritium meum esse aio secundum suam causam. Sicut dixi, ecce tibi vindictam imposui," and at the same time put his rod upon the slave, thereby giving physical expression to the claim contained in his words, "sicut dixi;" cf. Liv. viii. 9, § 8. (Some connect "sicut dixi" with "suam causam," and both are by some put with what precedes, by others with what follows.) "Ecce tibi" (See you there) is addressed to the defendant. The thing was claimed subject to special grounds or restrictions ("secundum suam causam:" cf. Dig. 13, 7, 18, § 2; 44, 2, 11, § 2, &c.). The rod represented a spear, which was the symbol of the most absolute right of ownership, that acquired by conquest in war. A similar claim (*vindicatio*), with like words and gestures, was made by the other party, and there was thus a symbolical strife (*manum conserebant*) over the thing. The praetor bade them take their rods off; which being done, the first claimant demanded of his opponent on what ground he had made his claim; the other answered, "Jus feci sicut vindictam imposui." The former then replied by denying the rightfulness of the other's claim, and challenging him to a trial by the devotion (*sacramento*) of fifty pounds of copper (*asses*), or, if the property was worth 1000 pounds or more, by the devotion of 500 pounds. The other claimant then went through the like forms and made the same challenge. The praetor assigned the possession of the disputed thing itself (not its representative in court) to one of the parties, and ordered him to give sureties to the other for the eventual delivery, if the possessor were defeated, of the thing itself, and of any profits which accrued before the final decision of the case. These sureties were called "praedes litis et vindiciarum, id est" (as Gaius says, §§ 16, 94) "rei et fructuum." Further bail was demanded by the praetor from both parties for the amount devoted, as that was forfeited by the losing party to the public treasury.

The next step was for a judge to be appointed to try the case. This before the Lex Primaria (A.U. 282? 322?) was done immediately, but by that law notice was given to come to court on the thirtieth day to have a judge appointed (*ad judicem accipiundum*). On the judge being appointed, notice was given of trial on the next day but one (*comperendinum diem denuntiabant*). They appeared before the judge and stated their case briefly, and then proceeded to the fuller statement. This *causae conjectio*, or brief statement, is spoken of by Gaius as occurring before the judge. How witnesses were summoned, and generally what was the procedure for supporting a case by evidence, is not told us. A fragment of the Twelve Tables, *cui testimonium defuerit is tertiis diebus ob portum obvagulatum ito*, may perhaps belong here, but its purport is obscure. Serious illness (*morbus sonticus*), or an appointment for a trial with a foreigner (*status condictus dies cum hoste*), whether affecting judge or defendant (or plaintiff, Festus v. *rem*), was a good ground for adjournment (Cic. *Off.* i. 12; Gell. xx. 1, § 27).

Gellius (xx. 10) tells of a time when the praetor accompanied the parties to the place where the thing (*e.g.* a piece of land) was, and the formal claims at least were made on the spot. When the territory grew and the praetor became more occupied, the parties left the court and went to the place and brought a turf or piece of the disputed property into court. A still later stage is given us in Cicero's satirical attack on lawyers in the speech *pro Murena*, 12. After the claim is made to a field in the Sabine territory, the claimant proceeds, *Inde ibi ego te ex jure manum consertum voco*—"Thereupon (*inde*) I summon thee there (*ibi*, perhaps only an enclitic to *inde*: Karlowa, *C. P.* p. 79, note) to join hands in accordance with law." (So Huschke, *Z. R. G.* vii. 186; others generally take *ex jure*, "out of court.") The opponent retorts, *Unde tu me ex jure manum consertum vocasti, inde ibi ego te revoco*—"I in turn call you," &c. The praetor then says, *Suis utrisque superstitibus praesentibus istam viam dico: ite viam*—"Each party having their witnesses present, I order you that way; go ye that way;" and immediately afterwards, "Come back that way." The proceedings had then become a mere formality, the parties not leaving the court; and probably any article serving as dummy for the distant property, or even for the clod, its original representative.

But this *sacramenti actio* was applicable, not only to suits in which claims to the ownership of property were urged, but also to claims upon particular persons, *e.g.* to repay loans, or to pay compensation for injuries done by them, &c. Gaius' account is mutilated, but the ritual was probably as like the other as circumstances allowed. In Valerius Probus (ed. Krüger, p. 144) we have probably some of the phrases preserved, beginning with *Aio te mihi dare oportere*, and followed by a sacramental challenge. Different reconstructions may be seen in Huschke's edit. of Gaius, iv. § 5; Rudorff, *Röm. Rechtsgesch.* ii. § 21 (p. 78); Karlowa, *Civil-Prozess*, p. 110, &c.

The distinctions just referred to between actions *in rem* and *in personam* are of great importance. An action *in rem* is a suit to establish your right to a particular thing or animal, or to a share of a particular thing, or your right to use a road, or to take water, or enjoy uninterrupted light, or to establish a personal right, such as liberty. Such claims or suits are maintainable against all the world, though in practice they are brought only against those withholding the possession or enjoyment, or disputing the right. But an *actio in personam* is a right only against a certain person or persons who by some act or omission on their part have become bound (*obligatus*) to us. The obligation may have arisen from a contract, or from a tort (*delictum*), *i.e.* an injurious act for which they are bound to make reparation, or from some course of action or neglect which in the eye of the law is tantamount to a contract (*quasi ex contractu*), or tantamount to a tort (*quasi ex delicto*). By a real action (*actio in rem*) we claim *rem nostram esse* or *jus aliquod nobis competere*; by a personal action (*actio in personam*) we claim that some one *dare oportere*. If we sue for a field, we cannot say that the possessor *ought to give* it us, for we say it is ours (*i.e.* our property) already; if we sue for the repayment of a loan, we cannot say that the money is ours, for our money (*i.e.* our actual coins lent, cf. *Lex Rubr.* 21 n.) is spent, and what we claim is that a like amount be handed over to us, to become thereby our property. Real actions are called *vindicationes*; personal actions (at least of some kinds) were called *condictiones* in the wider sense of the term (Dig. 44, 7, 25, pr.).

The second *legis actio* named by Gaius is that *per judicis postulationem*, but his account of it is lost. It is reasonable to suppose that this was the proper proceeding when an inheritance was to be divided among co-heirs, or boundaries to be regulated between neighbours, or accounts to be taken between guardian and ward, or like matters required judicial administration (cf. Rudorff, *Röm. R. G.* ii. § 22). The ridicule of Cicero (*Mur.* 12), and the formula given by Valerius Probus, *te praetor judicem arbitrumve postulo uti des*, have led some to think that this proceeding was alternative to the *actio sacramenti*, and applicable whenever a party was in some uncertainty about the extent of his rights; and fearing the loss of his case, and consequently of his *sacramentum*, if he claimed too much, sought authoritative arbitration. An analogy for this view is found in proceedings for an injunction (Gai. iv. 163 foll.). Or again, in many cases, whether of personal or real actions, an assessment of damages for the breach of contract or for the tort, or for the value of the property rightfully claimed but not duly restored, would be necessary, and an arbiter *liti aestimandae* (so in Valer. Prob.) might be demanded. But nothing is really known. (Gaius' criticism of the *actio per condictionem* (iv. 20) has been wrongly taken to imply that the process *per judicis postulationem*, as well as the *sacramenti actio*, was applicable to claims for sums of money certain, or other certain things. But Gaius has chosen to speak of the whole sphere of *quod dari oportet*, and this sphere comprises certain and uncertain claims, some of which are enforceable by *actio sacramenti*, some *per judicis postulationem*, some by both.)

The third *legis actio* is *per condictionem*. Apparently the first stage of the formal proceedings before the praetor was dispensed with, and the action was commenced by notice (*condictio = denuntiatio*) by the plaintiff to the defendant to appear on the thirtieth day to have a judge assigned. (Many writers, however, on account of Gai. iv. 29, think unnecessarily that this notice and all proceedings took place in court.) This proceeding *per condictionem* was introduced by the Lex Silia for a claim to an amount of money certain, and extended by the Lex Calpurnia to a claim for any certain amount. Gaius (iv. 20) was ignorant of any good reason for introducing such special procedure. But besides the above-named shortening of the process, two other characteristics of the new procedure have been suggested with great probability, viz., (1) that either party might tender an oath to the other as to the truth of his contention, and thereby all further proof be saved; and (2) if this were not done, a wager to the amount of one-third of the sum in question should be entered into, and thus the risk to the wrongful party be increased. There can be no doubt that the *actio de pecunia certa credita* or *si certum petitur* is the continuation of the *legis actio per condictionem lege Silia* (cf. D. 12, 1, rubr. and 13, 3, 1). Then the position of the title *de jurejurando* in the Digest (D. 12, 2; cf. Paul. *Sent.* ii. 1) and certain passages of Plautus (*Rud.* 14 *sq.*; *Pers.* 478; *Curc.* 496) go far to prove the first characteristic: and the use of *legitimae* in Cic. *Rosc. Com.* 4, § 14, compared with ib. § 14; Gai. iv. 171, go far to prove the second (Rudorff on Puchta, *Curs.* § 162 f; Huschke, *Multa*, p. 501). The *condictio triticaria* (D. 13, 3) is clearly the continuation of the action created by the Lex Calpurnia. The name *condictio* was afterwards applied to other personal actions, excepting *bonae fidei* actions, civil actions arising from torts, and praetorian actions on the case (cf. Savigny, *Syst.* v. p. 503 *sqq.*; Bethmann-Hollweg, ii. p. 274).

Of the fourth *legis actio* (*per manus injectionem*) we have a fuller account in Gaius, iv. 21–25; Gell. xx. i. 42 foll.; and the recently discovered Lex Ursonensis, cap. 61 (Bruns, pt. i. 3, 9). It was the early form of execution of a judgment, and was sanctioned by the Twelve Tables. If a man admitted the debt, or if judgment was given against him, the plaintiff laid hold of him, stating in a recognised form the fact of the judgment or admission, and the amount thereby due. The defendant then had two courses only open to him, either to pay the amount, or to find a vindex who would take legal measures in his defence, and in fact assume entire responsibility in his stead. He was no longer allowed to defend himself. (The words of the Twelve Tables as to the sufficiency of the person coming forward as vindex would apply here also; according to some writers, here only.) If neither course was taken, he was assigned (*addicebatur*, Gell. *l. c.*) to the plaintiff, who led him off to the plaintiff's house (*secum ducito*), and bound him either in the stocks (*nervo*), or with shackles on his feet (*compedibus*), the weight of the shackles to be not less (more ?) than fifteen pounds. The prisoner might, if he chose, find his own provisions; if he did not, his creditor had to give him at least a pound of corn (*far*) a day. This position lasted, if debtor and creditor did not come to terms, for sixty days, during which he had to be produced on three market days in succession before the praetor in the comitium, and the amount of his debt declared. On the third occasion, if the debt was not paid, the final step was taken. Sext. Caecilius (Gell. *l. c.*) describes it thus, the debtors *capite poenas dabant aut trans Tiberim peregre venum ibant*. If there were more creditors than one, the Twelve Tables declared *tertiis nundinis partes secanto: si plus minusve secuerunt se fraude esto*, which was taken by Sext. Caecilius and Quintilian (iii. 6, § 84) to mean that the creditors might slice the debtor's body, without incurring any risk if they happened to cut more or less than their share. Sext. Caecilius says (so also Dio Cass. *Fragm.* 17, § 8) that he never read or heard of this actually taking place. This view has been adopted by most modern writers (Kuntze, *Excurs.* p. 140, ed. 2, quotes some analogies from old German law), but is opposed by Huschke (*Nexum*, p. 89), Schwegler (*R. G.* iii. 38), Karlowa (*Civ. Proc.* p. 163), and Münderloh (*Z. R. G.* xii. p. 196). Comparing such expressions as *sectio oppidi* (Caes. *B. G.* ii. 33), *sector Pompeii* (Cic. *Phil.* ii. 26), *sectio alicujus* (Varr. *L. L.* ii. 10, § 4), we may reasonably translate "they shall make a dividend," and may apply the words to the proceeds of the sale of the debtor's person and his property. Münderloh gives as the meaning of the clause *si plus*, &c., that whether the dividend each creditor got came to more or less than the amount of his debt, there was no further responsibility of the debtor to him or of him to the debtor. In the case of a single creditor, the debtor would probably not be killed, but either be sold, or kept and made or allowed to work off his debt. At any rate the class of *addicti* are spoken of as numerous (Liv. vi. 27, 9, &c.). Neither Gaius nor the Lex Ursonensis mentions any further proceedings after the debtor was *vinctus* by his creditor, the old procedure having been long altered—as is generally supposed, by a law passed in A.U. 428, commonly called Lex Poetelia. Savigny considered the *manus injectio* and its consequences to have been originally confined to debts for money borrowed (*Verm. Schr.* ii. p. 206 foll.).

Gaius states (iv. 22) that the procedure *per manus injectionem* was made by a Lex Publilia applicable against any one who had not within six months reimbursed his surety (*sponsor*) for money expended on his behalf, and by many other laws in other cases. Thus a recently discovered inscription at Luceria (Bruns, pt. i. 3) forbids defilement of a grove under penalty of *manus injectio*. Other laws made the procedure applicable, but in a modified form, to further cases. The words *pro judicato* were omitted in the formal declaration, and the effect was that the debtor was then not disabled from making his own defence. The same relaxation was by a Lex Vallia introduced in all cases, except only the case of a judgment-debtor, or of one who had not repaid his surety. For them the harshness of the old law continued as long as this *legis actio* lasted.

It thus appears that *agere sacramento* was probably the normal way of conducting a suit at law, and applicable generally to all disputed claims which admitted of being brought to a simple issue. The *postulatio judicis* was probably applicable to matters where several persons in common sought authoritative arrangement or distribution. The *condictio* was probably a summary method of enforcing a perfectly simple claim for a liquidated amount. The *manus injectio* was a mode, originally perhaps the only mode, of obtaining execution of a judgment. But *lege agere* is used also of surrender in court (*in jure cessio*) because the form of a real action is applied to effect an amicable conveyance (Gai. ii. 24 foll.). Most lawyers, Gaius tells us (iv. 29), reckoned as a *legis actio* the old proceeding of seizing a pledge (*pignoris capio*), but only on the ground of its being accompanied by a declaration in set words. Others objected to ranking it as a *legis actio*, because it was not done in court, it was often done in the absence of the debtor, and it might be done on any day, even on those when *lege agere* was not allowed. These objections seem decisive.

The rigour of the statutable actions is given by Gaius as the reason why they went out of use. The smallest error was fatal to a man's case (iv. 30). The very words of the statute had to be strictly followed (ib. 11); a suitor must appear in person, and could not be represented by any agent or attorney, except in certain cases (ib. 82). (What they were is much disputed, see Keller, *Röm. C. P.* 254, ed. Wach. The vindex was not so much the representative of the defendant as a new defendant in his room.) Whenever security had to be given, personal sureties were required (ib. 94). A suit once brought could not be brought again on the same matter, and there was no such use of equitable pleas against the strict technical right as was allowed in Gaius' time (ib. 108). Yet in some way it must have been possible for a defendant, *e.g.*, to show that he was a minor, and by the Lex Plaetoria was not liable on a loan; or that the action had been tried and decided before; or that he had never received the loan which the stipulation on which the plaintiff was proceeding was intended to secure. The general view among modern lawyers is that such matters were urged before the magistrate, who, if he found them valid, refused to allow the *legis actio;* and that if investigation were needed, a wager (*sponsio*) to determine the point was entered into between the parties (cf. Sell. *de exceptionum usu*, 1875; B.-Hollweg, i. 338, citing Plaut. *Rud.* v. 3, 22 *sqq.*). Others maintain that all, or at least some, such grounds of defence were made the subject of a counter action, the possibility of which was often enough to deter the plaintiff from proceeding with his unjust claim (Ihering, *Geist*, iii. § 52; Karlowa, *C. P.* § 46). Huschke, but in a special way, favours the former view (*Multa*, p. 224). Be that as it may, the whole system of the *legis actiones*, as a form of contentious procedure, went out of general use under the influence of the Lex Aebutia (date quite uncertain; generally put between 150 and 250 years B.C.) and two *leges Juliae* (perhaps of Augustus). The *actio sacramenti* was retained in suits before the Court of the Hundred Men (*centumviri*), and an action on the statute might be, but in practice was not, used in the case of *damnum infectum* (Gai. iv. 30). The non-contentious procedure on the statute remained, and could be exercised not only before the praetor, but also before a consul (D. 1, 10), a proconsul (ib. 16, l. 1), a governor of a province (ib. 18, l. 10) and a juridicus (ib. 20). Adoption and emancipation were acts which could take place before those magistrates *apud quos legis actio fuit* (cf. D. 1, 7, l. 4; 16, l. 2; l. 3; Gell. v. 19, § 3), and hence are often regarded as themselves forms of non-contentious "proceeding on the statute."

In Cicero *lege agere* or *agi* is used in *Div. c. Caecil.* § 19, of proceeding under the *lex de provinciis repetundis*, but in general appears to refer to the suits under the statute of the Twelve Tables, *i.e.* to the *actio sacramenti* (*de Or.* i. 36, 167; *Verr.* i. 45, 115; ii. 16, 39; *Caecin.* 33, 97; *Mur.* 11, 25). So in Plautus (*Mil.* 453; *Aul.* 458; Ter. *Phorm.* 984). In Liv. xxvi. 15, *lege agito*, addressed to a lictor, is probably merely equivalent to "execute the law."

II. *Per formulas litigare.* The procedure on the statute was succeeded by a method more flexible, and better adapted to promote a judgment on the merits of a case. The change consisted in omitting the ancient ceremonial, and giving the praetor power to state the issue to be decided in a way which would enable the equitable claims of both parties to be duly regarded. The proceeding commenced as before by a summons given by the plaintiff to the defendant to appear in court, and non-appearance was visited by the praetor with a fine (D. 2, 5, 2, pr.). Future appearances after the first were secured by his being compelled to enter into a formal arrangement for this purpose. The defendant was said *vadimonium facere*, the plaintiff *vadari reum.* Such *vadimonium* was defined by the edict according to circumstances: either a simple promise (*purum vad.*), or a promise secured by bail (*vades*), or an oath, or a forfeit, the amount of the forfeit being usually fixed by oath of the plaintiff, but in case of a judgment debt, or of money actually paid out, it was the value of the matter in dispute (Gai. iv. 186). Persons of certain official dignity were exempt from liability to summons; so also parents and patrons, and any persons actually engaged in attending a funeral, or being married, or keeping close in their own house (D. 2, 4, s. 2; s. 4; s. 18; s. 19). On the parties appearing and stating the nature of their case the praetor appointed a judge or judges to determine the questions of fact, and gave him instructions which showed both the claim of the plaintiff, so far as it deserved legal recognition, and the duty of the judge if the facts were found to support or negative the claim. These instructions were comprised in a short formula, varied according to the equities and circumstances. The essential parts of it were two: the claim (*intentio*), and the judge's duty (*adjudicatio* or *condemnatio*). Frequently the matter in question required to be briefly stated: this was called *demonstratio.* Then came the claim. If the suit was one for partition of an inheritance or of any common property, or for defining the borders of neigbouring estates, the formula closed with a direction to the judge to adjudicate this or that thing or part to the claimant or to the defendant. In other cases it closed with a *condemnatio* or *absolutio*, i.e. with a direction to the judge, if certain things were found to be or not to be the fact, to order the defendant to pay so much money as damages to the plaintiff, or to acquit the defendant of all liability. Occasionally, where a preliminary question has to be decided (*praejudicium*) this question might be stated simply by itself, e.g. *An A. Agerius libertus sit?* or *Quanta Murciae dos sit?* Gaius (iv. 44) considers in these cases the formula to consist of the *intentio* only. As an example of a simple formula, we may take this.

L. Titius judex esto.

Quod A. Agerius N. Negidio hominem vendidit, (*Demonstratio*)

Si paret N. Negidium A. Agerio sestertium x milia dare oportere, (*Intentio*)

L. Titi, N. Negidium A. Agerio sestertium x milia condemna: si non paret, absolve. (*Condemnatio.*)

As an example of a formula in a suit for partition may be taken this (which is partly hypothetical).

L. Titius judex esto.

Quod fundus Cornelianus A. Agerio et N. Numidio communis est, (*Demonstratio*)

Quantum ejus fundi A. Agerio adjudicari oportet,

Tantum Titius A. Agerio adjudicato: reliquum N. Numidio adjudicato. (*Adjudicatio.*) Gai. iv. 42.

A distinction of much importance in many respects is found in the issue raised by the claim (*intentio*). It may state a matter of fact, and then the formula is said to be *in factum concepta*; or it may state a question of law, *formula in jus concepta*. It is an issue merely of fact if, *e.g.*, the plaintiff asserts that the defendant has been duly cited and has not appeared in court, nor produced an adequate representative (*vindex*, Gai. iv. 46). An issue of law is raised if the plaintiff asserts, *e.g.*, that anything is his property, or that something ought to be given to him; the first being a real action, the second a personal one, but both raising a question as to the legal right of the plaintiff. In the case of a deposit or a loan (*commodatum*), the formula might be shaped either way. If the complaint was merely of the refusal to restore a thing deposited with the defendant, or lent to him for use, the facts only of deposit (or loan) and non-restoration required to be proved to entitle the plaintiff to judgment in his favour. The formula then, in the case of a deposit, runs thus (Gai. iv. 47):

L. Titius judex esto. Si paret A. Agerium apud N. Negidium mensam argenteam deposuisse, eamque dolo malo N. Negidii A. Agerio redditam non esse, quanti ea res erit, tantam pecuniam judex N. Negidium A. Agerio condemnato: si non paret, absolvito.

It is true that the second fact thus stated is not quite a simple one, for an article returned in a damaged condition was deemed to be not returned, and *dolo malo* 'maliciously' is a qualification which both restricts and amplifies the conception of non-restoration. Still the question is one which, as we should say, is a question for the jury. Has the defendant restored, or honestly done his best to restore, the article deposited?

The *formula in jus concepta* has a wider range of considerations:—

L. Titius judex esto. Quod A. Agerius apud N. Negidium mensam argenteam deposuit, qua de re agitur, quidquid ob eam rem N. Negidium A. Agerio dare facere oportet ex fide bona, ejus judex N. Negidium A. Agerio condemnato; si non paret, absolvito. (We have omitted the words *nisi restituat*, given in many editions of Gaius, because they are very doubtful: cf. Keller, *Inst.* p. 115). Here the fact of deposit is not put in issue, presumably because it was not disputed. But by the formula so shaped the judge is directed to decide upon the whole of the mutual obligations created between the two parties by the deposit, and to give judgment, not for the value of the table, but for less or more according to circumstances.

In the case of all formulae the condemnation "sounds in damages"; it directs not this or that act to be performed, but, if the sentence is against the defendant, a sum of money to be paid. The injury, be it what it may, is estimated at its money value, and this money value it is for the defendant to pay. Sometimes a fixed amount (*certa pecunia*) is stated in the formula as the damages; sometimes it is left uncertain and indefinite, and the judge has to ascertain it; sometimes a maximum is named (e.g. *dumtaxat sestertium x milia*). The judge is bound to give judgment for a specific sum of money, neither exceeding the amount if a maximum is named, nor varying at all from it if a specific sum is named, nor leaving the amount undetermined if the amount is left uncertain in the formula. In the first two cases, if he does so, he is said to make the suit his own (*litem suam facit*, Gai. iv. 52; D. 4, 13, 6), *i.e.* he is responsible to the injured party for his malfeasance. In actions for a thing (*in rem*) or for the production of a thing (*ad exhibendum*) and in many *bonae fidei actions*, the judge might, and naturally often would, direct the restitution or production of the thing, or proper security for future action, and only in case this was refused condemn the defendant in damages, or at any rate in damages to the full amount otherwise proper. If a defendant maliciously or obstinately (*dolo malo aut contumacia*) refused compliance or put it out of his own power to comply, the judge had an additional weapon. He could, instead of assessing the damages himself, allow the plaintiff to assess them himself on oath (*in litem jurare*), and the assessment so sworn would as a rule be entered as judgment against the defendant (D. 8, 5, 7) unless indeed the judge, on proof being given, thought the amount excessive (D. 12, 3, 2; 4, §§ 2, 3; s. 5). It does not appear that the judge ever forcibly executed his own order for restoration, as long as the formulary process was in use. The passage (D. 6, 1, 68) quoted from Ulpian, which speaks of forcible restorations, *manu militari officio judicis ab eo possessio transfertur*, is generally considered to contain words interpolated by the compilers of the Digest. (Cf. Savigny, *Syst.* v. 123; Wächter, *Pand.* i. 565.) Those actions in which the judge had the power to direct specific performance, and only in case this was refused to condemn in damages, were sometimes called *arbitrariae* (Just. *Inst.* 4, 31; Dig. 4, 2, 14, § 4. &c.). The formula would contain the words *nisi restituat* or the like (cf. Cic. *Verr.* ii. 12, 31; Dig. *l. c.* § 11).

An error in the formula might have disastrous effect. If indeed the error was in the statement of circumstances (*demonstratio*), so as to make the statement really false, the matter which was really meant being thereby not brought forward, the proceeding was nugatory. The plaintiff was not however precluded from bringing on the case again with an amended formula (Gai. iv. 58). An error in the allegation (*intentio*) was similar if the error consisted in claiming a different thing altogether from what the plaintiff was justified in claiming, as for instance if he claimed a slave Stichus instead of the slave Eros, or based his claim on a will instead of on a formal verbal contract. But if the allegation contained the right subject-matter, but the claim was excessive (*plus* or *pluris petitio*), the plaintiff must fail (*causa cadit*). It might be excessive from claiming either too large a sum, or payment in the wrong place, or before the due time, or by restricting the choice of payment which the defendant was entitled to. If the plaintiff's claim was specific, but less than he was entitled to, he was not thereby hindered from gaining so much as his allegation covered, but he could not, within the same praetor's term of office, claim the residue. Both these could obviously only occur where the allegation of claim was specific in quantity. If the terms were general (e.g. *quidquid dare facere oportet*), no excessive or defective claim was possible (Gai. iv. 53–56).

The formula in *bonae fidei* suits was always general in terms, and it was the duty of the judge, though not expressed in the formula, to take account of any counter-claim and allow one to be set off against the other. The judgment was then only for the balance. In a banker's account with a customer all present debits and credits are taken as *ipso facto* neutralising one another; and therefore the banker cannot sue his debtor for all he has debited him, but only for the balance in account. The allegation in the formula is of this kind: *si paret Titium argentario x milia dare oportere amplius quam ipse Titio debet* (Gai. iv. 64–68).

If the damages are put at an excessive amount, the defendant can claim annulment of the formula (*restitutio in integrum*), and the case must be brought anew. If the damages are put at too little, the plaintiff cannot recover more, nor can he bring another suit for the remainder. (Gai. iv. 57.)

In some cases, where a similar danger might await the plaintiff, it was possible to obviate it by prefixing to the formula a limitation (*praescriptio*) of the matter to be put in issue. If a man entitled to an annuity brought an action to enforce payment of the sum actually due, he had to prefix the words *ea res agatur cujus rei dies fuit*, i.e. "that only is to be in suit of which the due time has already come." Then the claims to the future payments remained unaffected, not having been brought into issue in this suit (cf. Cic. *Orat.* i. 37, § 168). So if a man sued for conveyance of an estate bought, unless he specified that he sued only for the formal conveyance (*ea res agatur de fundo mancipando*), he might be held to have no further right to sue for actual delivery of the thing (Gai. iv. 130–132). Gaius says that at one time similar *praescriptiones* were prefixed in the interest of the defendant to prevent a minor issue being held to conclude a greater one, but in Gaius' day such limitations took the form of special pleas (*exceptiones*, ib. § 133).

A general denial by the defendant was outside of the formula; but any special plea which he might urge, if such as the praetor recognised to be good in itself, was by him inserted in the *intentio* of the formula in the shape of an exception or negative condition. That is to say, the allegation of the plaintiff was qualified in the formula so that it should hold good, only if the plea of the defendant was found to be untrue, or at any rate if the plea was not proved. Many such special pleas were set forth by the praetor in his edict; others were framed by the praetor to fit the particular circumstances which disclosed an equity on the side of the defendant. Pleas regularly in use are such as fraud, agreement, intimidation, &c. (D. 44, 4; 2, 14). For instance, if I sue a man on a stipulation which was entered into as a security for money lent him, and I have never paid him the money, the stipulation is still valid in strict law, but the praetor allows him to plead fraud on my part, and my claim is defeated. So an agreement not to sue for a debt does not nullify the obligation, for the regular maxim is *obligatio pacto convento non tollitur*; but the agreement may be pleaded (*pacti conventi exceptio*), and the suit is thus blocked. So intimidation or compulsion may be pleaded against any attempt to enforce an obligation entered into under them. The plea of fraud would take the form *si in ea re nihil dolo malo A. Agerii factum sit neque fiat*; that of agreement not to sue would be *si inter A. Agerium et N. Negidium non convenit ne ea pecunia peteretur*, and the claim of the plaintiff would succeed, only if these propositions (*i.e.* the absence of fraud or the absence of an agreement not to sue) were proved. Otherwise the judge would acquit the defendant (Gai. iv. 115–119).

A plea might be absolute (*peremptoria*), or dilatory (*dilatoria*). Absolute pleas are valid without limitation, such as fraud, intimidation, contravention of a statute, previous decision of the same matter, agreement not to sue at all. Dilatory pleas are good only for a time or against certain persons, &c., such as agreement not to sue within five years. In this case if, on the plea being brought forward, I withdraw from the suit, I can bring it again after the period of five years has expired; but if I persist, the matter is then brought to trial, and the plea being proved defeats my suit. If I then on the expiration of the period bring the suit again, I may be met by a fresh plea (*exceptio rei in judicium deductae*) that the matter has been already decided, and my suit is thus again defeated. Another dilatory plea is *litis dividuae*, which is good against my suing for the rest of a sum of money of which I have already sued for part. The plea is good against the further suit within the same praetorship; after that I am free. (But for the later law see Just. *Inst.* iv. 6, § 34.) Again, I may have appointed an attorney (*cognitor*) to sue for me; my suit may be defeated by a dilatory plea if I persist in suing, though I was not authorised to appoint an attorney at all (disgraced persons, *infames*, and women are in this plight, D. 3, 1, 5, § 5), or not authorised to appoint the persons whom I have appointed (some persons being not allowed to act as attorneys). Gai. iv. 120–125.

The plea may admit of a replication (*replicatio*) on the part of the plaintiff: *e.g.* an agreement not to sue may be followed by another agreement allowing me to sue. Then the plea *si non convenerit ne eam pecuniam peterem* would be met by the replication *si non postea convenit* *ut mihi eam pecuniam petere liceret*, and both would be inserted in the formula. The defendant may however have a rejoinder (*duplicatio*), and to this the plaintiff may have a surrejoinder (*triplicatio*), and so on. (Gai. iv. 126–129.)

A still further extension of the formulae was due to the praetor's bold recognition of equities requiring protection. A person whom the praetor had recognised as equitably entitled to a deceased's estate obtained the *bonorum possessio*, *i.e.* the *de facto* rights of an heir, but was not the heir *de jure* (Gai. iii. 32). He could not in strict law claim any of the property as *his*, nor could he enforce payment of a debt due to the estate as due to him. The difficulty was got over by a *fiction*. The formula was made to apply to him, on condition that it would have applied if he had been heir. And this was stated in the formula: *L. Seius judex esto. Si A. Agerius L. Titio heres esset* (*fictio*), *tum si eum fundum de quo agitur ex jure Quiritium ejus esse oporteret* (*intentio*), *L. Sei, N. Negidium, A. Agerio x milia condemna; si non oporteret* (or *paret oportere?*) *absolve* (*condemnatio*).

A similar fiction was made in favour of the *bonorum emptor*, i.e. the person who bought the insolvent estate of a deceased. But here another frame, invented by P. Rutilius, was sometimes given to the formula, the object being achieved by allowing the *intentio* still to run in the name of the heir, but inserting in the condemnatory clause the name of the purchaser of the inheritance (as plaintiff), instead of that of the heir. Still more boldly, if a foreigner sued or was sued for theft or for injury under Aquilius' statute, it was feigned that he was a Roman citizen: e.g. *si paret a Dione Hermaei filio furtum factum esse paterae aureae, quamobrem eum si civis Romanus esset pro fure damnum decidere oporteret*, &c. (Gai. iv. 34–38). In the Lex Rubria, cap. 20 (*Corp. I. L.* i. 115; Bruns, p. 91, ed. 4), prescribing analogous jurisdiction in the province to that which prevailed at Rome, we have an instance of a formula to be used in the case of a person who ought to have given security against possible damage to another from his buildings, but had not done so before the damage occurred. *Judex esto. Sei, antequam id judicium qua de re agitur factum est, Q. Licinius damnei infectei, eo nomine qua de re agitur, eam stipulationem, quam is quei Romae inter peregreinos jus deicet in albo propositam habet, L. Seio repromeisisset, tum quicquid eum Q. Licinium ex ea stipulatione L. Seio dare facere oporteret ex fide bona, dumtaxat H. S. . . . ejus judex Q. Licinium L. Seio, sei ex decreto IIvirei IIIIvirei praefecteive Mutinensis, quod ejus is IIvir IIIIvir praefectusve ex lege Rubria seive id plebeiscitum est decreverit, Q. Licinius eo nomine qua de re agitur L. Seio damnei infectei repromittere noluit, condemnato; sei non paret, absolvito.* "If before the present trial Q. Licinius had given L. Seius a guaranty against possible damage on account of the matter in question, the guaranty being couched in the standing form approved by the praetor at Rome who presides over cases between aliens (*fiction*), then whatsoever Q. Licinius ought to pay or do to L. Seius in accordance with the said guaranty, all equities being duly considered, and the amount not exceeding . . . sesterces (part of the *intentio*), so much shall the judge direct Q. Licinius to pay or do to L. Seius (*condemnatio*), if Q. Licinius has refused to give L. Seius a guaranty against possible damage on account of the matter in question, in compliance with a decree of the duumvir or quattuorvir or praefect of Mutina, so far as said decree is made in accordance with the statute, or Commons' resolution, proposed by Rubrius" (part of the *intentio*); "if this is not the case, acquit him."

The proceedings before the judge are explained under JUDICIUM.

Actions were brought or defended either by the parties in person or by attorneys. In the ante-Justinian Law an attorney was either a cognitor or procurator. A cognitor was an attorney appointed in set words by the party in person in presence of his opponent. Such words might be for the plaintiff: *Quod ego tecum agere volo, in eam rem L. Titium cognitorem do;* for the defendant: *Quia tu mecum agere vis, in eam rem P. Maevium cognitorem do.* Strict precision in the words, at any rate in Ulpian's time, was not necessary (Gai. iv. 83; *Vat. Fr.* 318, 319). If the person so apppointed was absent, he did not become attorney until he undertook the business. A procurator might be appointed by simple mandate or even by his practically undertaking the business, and neither the presence nor knowledge of the adversary was necessary to his appointment. When persons were represented by others, the formula contained the name of the representative instead of the principal in the clause of condemnation, but not in that of allegation (*intentio*).

Persons under the age of 17 years, and deaf persons, were not allowed to plead their own cause. If they had no advocate of their own, the praetor gave them one (D. 3, 1, 1, § 4). Some persons were disqualified from acting as attorneys for others. Such were soldiers (D. 3, 3, 8, § 2), women, blind persons, and those who had been convicted of a capital offence or of dishonesty in suing or defending a suit (*calumnia*), or of hiring oneself out to fight beasts in the arena. Further, all persons who were *infames*, "disgraced," were disqualified from acting for any others except for near relations, either by blood or marriage, or for a patron or patron's child. Under this head of *infames* came stage-players; persons who had had judgment against them or made a compromise in suits implying disgraceful conduct; persons dismissed ignominiously from the army; panders and persons who had married, or as fathers had consented to the marriage of, a widow before the expiration of the statutable period of mourning (which before 350 A.D. was ten months, afterwards a year: *Cod.* v. 9, l. 2). Bankrupts were apparently in ante-Justinian times disqualified. (See under INFAMIA.) Persons under guardianship were represented in suits by their guardians (*tutores et curatores*), and a disqualification for acting for others was waived in case of a guardian (Gai. iv. 92; D. 3, 1, 1, § 6), as it was in some few other cases (D. *ibid.* s. 6; s. 10).

A plaintiff suing in his own person or by a cognitor was not required in any case to give security. But a plaintiff's procurator or guardian had to give security that his principal would ratify his acts (*ratam rem dominum habiturum*), otherwise the defendant might be exposed to a fresh suit by the principal, whereas a cognitor's acts bound his principal as much as his own acts would. A defendant was in a different position. If the action was *in rem*, whether he appeared himself or by others, the plaintiff was entitled to receive security for due restitution of the disputed property or its equivalent. If the action was *in personam*, and the defendant was represented by a cognitor, the defendant had to give security; if by a procurator or guardian, the representative had to give security for the due performance of the judgment (*judicatum solvi*). If he appeared in person, he might in special circumstances be required to give security, either on account of the nature of the action, as for instance an action on a judgment or for money paid out by a surety (*depensi*); or the old action *de moribus mulieris* (cf. Just. *Cod.* 5, 17, 11, § 2); or on account of his own character—if for instance he was insolvent or was an heir suspected by the praetor to have insufficient means (Gai. iv. 88–102; D. 42, 5, 31).

Checks were provided in several ways against heedless litigation. The plaintiff was exposed to four risks. (1) To an action for *calumnia*, in which he was condemned if he was shown to have consciously brought an unjust claim. The penalty was a tenth (of the claim ?), excepting in a suit to prove a man free, in which case the penalty was a third (of the value of the slave ?). (2) To a counter trial (*contrarium judicium*). This was allowed in a few cases only, viz. in an action for *injuriae*, the penalty being one tenth part, and in two other special actions, the penalty being one fifth part. The plaintiff in the former action, now defendant, was condemned if he had not succeeded in the action impugned. (3) In some actions a wager (*sponsio*) and counter-wager (*restipulatio*) used to be made for a third part in an action for a specific sum of money lent, and for a half in an action for an agreed debt (*pecunia constituta*), and this was dependent simply on success or failure in the action. (4) Moreover the defendant might put the plaintiff on his oath as to his honesty in bringing the suit. If the oath was executed, the plaintiff was no longer liable to the other risks; and generally a defendant might bring one only of the actions named (Gai. iv. 174–181).

The defendant was similarly exposed to risk if he allowed the action to proceed. (1) In the case of actions on a judgment or on money paid out (*depensi*), or injury under Aquilius' statute, or legacies (*per damnationem*), if the defendant denied and judgment went against him, the damages were doubled. (2) In the cases of loan certain and of an agreed debt a wager was made, and the defendant had to pay if he lost the suit. (3) An oath might be tendered him on the honesty of his denial (Gai. iv. 171–173). (4) Further, any one condemned in certain actions become disgraced (*ignominiosus*). These actions were theft, robbery with violence, insult (*injuriae*), actions of partnership, trust, guardianship, commission, deposit. And in the case of the first three ignominy was incurred by making a compromise as well as by condemnation (Gai. iv. 182). *Ignominia* in Gaius appears to be identical with *infamia* in the Praetor's Edict (D. 3, 2, 1).

Many distinctions and divisions of actions are made. Some of the most important are the following.

Actio civilis and *actio honoraria*. The former is an action given by the civil law, the latter one created by the praetor. All actions belong to one or other of these classes (D. 44, 7, 25, § 2). As examples may be taken the ordinary actions *in rem*, as opposed to the *Publiciana actio*, which the praetor gave to protect one who, without formally valid conveyance, had had delivery on good ground from the owner, but had not yet held a thing long enough for usucapion to have taken effect (D. 6, 2, 1). So an action for a sum of money if founded on a formal verbal contract (*stipulatio*) is *civilis*; if on informal agreement (e.g. *pecunia constituta*), is *honoraria*. The distinction was important, not merely historically but in practice, because as a rule honorary actions could be brought only within the period of the praetor's office, *i.e.* only within one year. Civil actions were not so limited; nor indeed were those honorary actions (*e.g.* actions on contract) which aimed at recovering one's property or what is due to one, rather than inflicting damage on another. These latter actions might be brought also against the heir of the person bound; others only so far as the heir was enriched by his predecessor's wrong act (D. 44, 7, 35).

Actio directa and *actio contraria*. Some relations are essentially two-sided, and an action to enforce the rights of the one party is as likely to be required as an action to enforce the rights of the other. Such for instance are the actions *ex empto* and *ex vendito*, the purchaser suing for the delivery of the thing purchased, the seller for the purchase money. But in other cases an action is more inherently likely on one side than on the other, but yet the relations may beget occasion for an action in the reverse direction. Thus for instance an *actio commodati* or *depositi* is usually *directa*, i.e. to enforce the rights of the person who has deposited or lent a thing; but circumstances may make the recall of the thing lent unfair to the borrower, and then he has an *actio commodati contraria* (D. 13, 6, 17); or the receiver may have had to incur expenses for the protection or other care of the deposit, and he has then an *actio depositi contraria* (D. 16, 3, 5, pr. See also Cic. *Off.* iii. 17, 30). This use of *in factum* must be carefully distinguished from *actio in factum concepta*.

Actio directa and *actio utilis*. The term *directa*, besides being opposed to *contraria*, is also opposed to *utilis*. Here the great sphere of the praetor's action is seen. The precise action granted by the civil law was not applicable to numerous cases which came within its spirit but not within its letter. The praetor allowed an action which was not the same in theory, but analogous to it, and this was called a *serviceable* action, or not infrequently an "action on the case" (*actio in factum*). The Aquillian statute was noticeably extended in this way by the praetor. A person who did not actually with his own person kill a slave did not come strictly within the statute; but if he pushed the horse or mare so that they killed the slave, an *actio in factum* was granted (D. 9, 2, 7, § 3). A usufructuary was not properly an owner: this statute gave the action to the owner; but the praetor extended it to the usufructuary, and he therefore had an *actio utilis* (D. 9, 2, 11, § 10). The incidents of such an action were of course conformable to those of the prototype, the actual case being by a fiction (see above) treated as identical in its claim to remedy with the statutable or original action. The name of the prototype was often used with *quasi* prefixed for that of the analogous action, e.g. *quasi Serviana* (D. 16, 1, 13).

Actio stricti juris and *actio bonae fidei*. The stern simplicity of the old law, which would hear of nothing but definite obligations created by precise words, had to give way before the complicated circumstances and countervailing equities of the business of the world. The *actio ex stipulato* was the type of the former; commercial intercourse gave rise to many instances of the latter. Gaius enumerates the latter as sale and purchase, letting and hiring, unasked agency (*negotiorum gestorum*), commission, deposit, trust (*fiduciae*, i.e. mortgage), partnership, guardianship (and here the passage is mutilated, but we may probably add) wife's property, loan, pledge, division of inheritance, partition, actions on the case (Gai. iv. 62; Just. *Inst.* iv. 6, § 28). In all these the judge was instructed to examine and estimate the rights of the parties in the matter so far as they were founded on good faith (Cic. *Off.* iii. 17, 30). And of course therefore any debt due from the plaintiff to the defendant might be set off against anything due to the plaintiff on his claim. Justinian in some degree broke down the distinction between those two classes of actions (*Inst.* iv. 6, §§ 29, 30).

The word *actio* itself is in some passages opposed to *petitio* and *persecutio*, as for instance by Papinian (D. 44, 7, 28) *actio in personam infertur; petitio in rem; persecutio in rem vel in personam rei persequendae gratia:* and Ulpian (D. 5, 16, 178) refers *persecutio* to extraordinary proceedings, such as those for enforcing a trust (*fidei commissum*). But this must be regarded as only applicable to some particular uses; *e.g.* in the Aquillian stipulation (D. 46, 4, 18) and other places where the words are obviously to be distinguished from each other. Otherwise *actio* is general, and even includes interdicts (D. 44, 7, 37). *Judicium* is often found as equivalent to it, but there appears to have been an inclination to use the latter word in preference in cases where both parties might be regarded as indiscriminately plaintiff and defendant. Such are the *judicia finium regundorum* (D. 10, 1), *familiae erciscundae* (ib. 2), *communi dividundo* (ib. 3).

Poenalis actio was one where neither the recovery of a thing nor of damages proper (both of which were said to be *rei persequendae causa*) was the object, but the pecuniary penalty affixed by the law to certain acts (*poenae persequendae causa*). Such was the *actio furti* and the *actio injuriarum* (Gai. iv. 7). In other actions, such as those in which denial exposed the defendant to the risk of double damages (see above), both damages and penalty were the object of the action (Gai. iv. 9). A penal action did not lie against the heir, unless it had been commenced in the life of his predecessor (D. 44, 7, 26; s. 33).

The same fact often gave opportunity for several actions; sometimes the plaintiff had to choose between them, sometimes he might bring one, and then if his claim was not satisfied by that bring another action of a different class for the residue (D. 44, 7, 34; s. 31).

The plaintiff is usually called actor or is *qui agit*, sometimes *agens* or (especially in actions *in rem*) *petitor*. The defendant is *reus*, or is *unde petitur*, or *cum quo agitur*, or *qui convenitur*, or (in actions *in rem*) possessor. The plaintiff is said *agere*, *petere*, or *actionem*, *intendere*, *experiri*, *convenire;* the defendant *convenire*, *suscipere*, *actionem* or *judicium*, &c.

III. Beside this formulary procedure, in which the praetor gave instructions to a judge or judges, and this judge actually tried the issue so directed, there were other matters which the praetor himself heard and decided (*causa cognita decrevit*). From this hearing by the praetor himself, these trials were called *cognitiones*. These were partly of an executive character, such as issuing injunctions (*interdicta*) to stop apprehended wrong, or conferring security, or putting a party into possession of disputed property. But there were other matters which, on account of the delicacy of their character, were not passed through the usual forms. Of these the most important were trusts (*fidei commissa*), which, being regarded at first not as legal obligations, but as matters of honour and propriety, were not subjects for ordinary procedure, but required the special cognizance of a high officer of state (Gai. ii. 278; Ulp. xxv. 12). Similarly claims for alimony by parents against children or the reverse (D. 25, 3, 5); questions of the proper remuneration of physicians, teachers, advocates, &c. (D. 5, 13, 1), and some other matters (*e.g.* Gai. i. 53) were also placed outside the rank of ordinary suits (*extra ordinem*). In the course of time, after the period of the classical jurists, this system became universal. The various officials of the empire heard and decided all suits themselves, and the distinction of *praetor* and *judex*, *jus* and *judicium*, ceased, the general principles of decision remaining the same. Exactly how and when this change in the form was brought about we do not know. A law of Diocletian A.D. 297 (*Cod.* iii. 3, 2), which directed governors of provinces (*praesides*) to decide cases themselves, so far as their public duties allowed them, instead of appointing *pedaneos judices*, is regarded by most writers as the origin of the change, and Constantius (A.D. 342) abolished the formulae (*Cod.* ii. 57 (58), 1). Justinian says, "all trials are now *extra ordinem*" (*Inst.* iv. 15, 8; iii. 12, pr.). But the power of delegating their jurisdiction, at least in less important cases, was still reserved to the governors (*Cod.* iii. 3).

In the extraordinary trials by the praetor the defendant was summoned (*evocatus*), not by the plaintiff but by the praetor by notice (*denuntiatio*), either conveyed to him or affixed to the praetor's notice-board (cf. D. 42, 1, 53, § 1). The notice was repeated three times, and, if the defendant did not appear, the case was proceeded with in his absence (Paul. *Sent.* v. 52, § 7). In Justinian's time suits were begun generally by a written bill of complaint (*libellus*) delivered to the judge, and by him communicated to the defendant.

The checks against reckless litigation were simplified by Justinian, and these consisted (1) in an oath taken by each party of his *bona fide* action, and (2) in the costs of the suit being thrown on the loser (*Cod.* iii. 1, 13, § 6), *i.e.* probably if he had no reasonable case (cf. *Inst.* iv. 16, § 1, *improbus litigator*, D. 5, 1, 79; 31, 78, § 2).

For further details respecting the constitution of the courts and proceedings at trials, see JUDICIUM; for criminal procedure, see also

CRIMEN. The principal actions will be dealt with under their respective names.

The best treatises on the subject are Keller's *Civil-Prozess* (5th ed. edited by A. Wach, 1876), which gives references to the other writers; and the elaborate work of Bethmann-Hollweg, *Die römische Civil-Prozess*, 1865, foll. [H. J. R.]

ACTOR generally means a plaintiff in a civil action, but is sometimes used for a prosecutor in a public or criminal trial. The plaintiff in a civil action is also called *petitor*, and one who prosecutes another for a crime *accusator* (Cic. *ad Att.* i. 16; Dig. 48, tit. 2). The defendant was called *reus*, both in private and public causes; *reus*, however, in a general sense, meant a party to an action or other legal proceeding, and so is used by Cicero for the plaintiff as well as the defendant (*De Orat.* ii. 43). In a private action the defendant was often called *adversarius* but either party might be called *adversarius* in opposition to the other. As free persons who were under *potestas* had no independent property, they could not, as a rule, be plaintiffs in an action, but certain actions could be maintained by *filii*, as well as *patres familias* (Dig. 9, 44, 7). In respect to *peculium castrense* and *quasi-castrense* a *filius familias* was in the position of an independent person. Actions on behalf of wards (*pupilli*) who were below the age of seven were brought by their guardian (*tutor*); actions on behalf of wards above the age of seven were either brought by their guardian, or, as was more commonly the case, the action was brought in the name of the ward with the sanction (*auctoritas*) of the guardian. *Peregrini* or aliens could not maintain an action under the early form of procedure called *legis actio;* in later procedure, partly by means of feigned assumptions of citizenship (Gaius, iv. 37), they became capable of suing and being sued. Persons who appeared in actions as representatives of the parties directly concerned were called *cognitores* or procuratores [ACTIO]. A universitas or corporate body was represented for the purposes of procedure by an agent, who was called *actor* or *syndicus* (Dig. 3, tit. 4).

Actor has also the sense of an agent or manager of another's business generally; so a slave who was given the management of an estate, and put over other slaves, is termed *actor*. (Plin. *Ep.* iii. 19, § 2; Paul. *Sent.* iii. 6, 47, 48.)

The *actor publicus* was the officer who had the superintendence or care of slaves belonging to the state; he was himself a slave or freedman. In the case mentioned by Pliny (*Ep.* vii. 18, § 2) the *actor publicus* was the representative of the community (*respublica*) of Comum (Tac. *Ann.* ii. 30; iii. 67).

The *actor rerum privatarum nostrarum* was the manager of the emperor's private estate (Cod. Just. iii. 26, 9). [G. L.] [E. A. W.]

ACTOR in the theatre. [HISTRIO.]

ACTUA'RIAE NAVES. [NAVIS.]

ACTUA'RII, or **ACTA'RII**, clerks who compiled the Acta Publica. [ACTA.] The name is also sometimes given to the *Notarii*, or short-hand writers, who took down the speeches in the senate and the courts (Suet. *Jul.* 55; Sen. *Ep.* 33, 9); respecting whom and the use of short-hand among the Romans, see NOTARII.

2. A clerk who kept the accounts of a private person (Petron. 53).

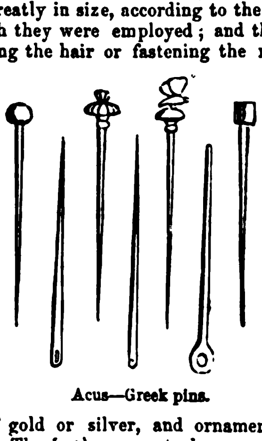
3. Military officers whose duty it was to keep the accounts of the army, to see that the contractors supplied the soldiers with provisions according to agreement, &c. (Aurel. Vict. *Caes.* 33, 13; Amm. Marc. xx. 5; Cod. Just. xii. tit. 38, s. 5, 16; xii. tit. 50.)

4. The title of certain physicians at the court of Constantinople. [MEDICUS.] [W. S.]

ACTUS, a Roman measure of land, which formed the basis of the whole system of land measurement. The word *actus* sometimes denotes a way between fields, along which cattle could be driven (Dig. 8, 1, 5; 5, 4, &c.). Varro (*L. L.* v. 34, Müller) asserts that the name of the measure was derived from this, but couples this remark with an absurd derivation of *ager: ut ager quo agi poterat, sic qua agi actus.* According to Varro, Columella (v. 1, 5, on the authority of Varro) and Festus, *s. v.*, the *actus simplex* or *minimus* was 120 (Roman) feet long and 4 feet wide. The *actus quadratus*, or simply *actus*, was a square of 120 feet each way, containing thus 14,400 square feet. Pliny (xviii. § 9) says of it: *actus in quo boves agerentur cum aratro uno impetu justo* (i.e. without turning); *hic erat cxx pedum.* Mommsen (*Hist.* i. 215) explains *actus*, "the driving," to be properly a measure of labour, denoting the half-day's work, with reference to the marked division of the day in Italy by the noontide siesta. The *jugerum*, or "yoking," the double of the *actus*, would thus denote the day's work. This is far more probable than the earlier explanations. The *actus* furnishes an example of the combination of the duodecimal with the decimal system, its length being twelve times the standard DECEMPEDA. Columella (*l. c.* § 6) says that the Gauls called the *actus quadratus*, *arepennis;* but this could only be an approximate identification, for the *actus quadratus* is somewhat smaller than the great French *arpent* and much larger than the small *arpent*. (Compare ACNA; Niebuhr, *Hist. of Rome*, vol. ii. Appendix I.) [A. S. W.]

ACTUS. [SERVITUTES.]

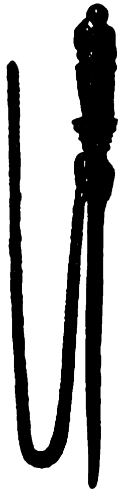
ACUS. I. GREEK—(*βελόνη, βελονίς, ῥαφίς, ἀκέστρα*), a pin or needle, made sometimes of metal, sometimes of wood, bone, or ivory. They varied greatly in size, according to the purposes for which they were employed; and those used in dressing the hair or fastening the robe were often of gold or silver, and ornamented with figures. The *ῥαφίς* seems to have answered to our sewing-needle, the *ἀκέστρα* (from *ἀκέομαι*) to our darning-needle, while *βελόνη* was appa-



Acus—Greek pins.

rently a wider term, corresponding both to our pin and needle (cf. Pollux, vii. 42; x. 136). The preceding engraving represents a few of the more ordinary types. [J. H. O.]

II. ROMAN—a pin or needle (*qua sarcinatrix vel etiam ornatrix utitur*, Festus, *s. v.*). As a pin the *acus* seems to have been specially used for women's hair (*acus crinalis*, Apul. *Met.* c. 13, or *comatoria*, Petron. 21; or simply *crinale*, Ov. *Met.* v. 53), and is accordingly figured, together with a comb, on the funeral monument of an *ornatrix* or *coiffeuse*. The *acus crinalis* was used to part the hair; hence called *discriminalis* (Hieron. *in Rufin.* 3, 42); and other *acus* served to curl, dye, or perfume it (Ov. *Amor.* i. 14, 15, and 30; Quintil. ii. 5, § 12; Juv. ii. 94, vi. 498). When the coiffure was complete, an ornamental pin, such as the one figured in the annexed illustration, confined the plaits or ribbons. The length of these hair-pins varies from 6 to 9 inches; the material is generally gold or silver. Pins used for other purposes, such as fastening parts of the dress, were of course smaller, though adorned with equal art; the material is various, bone, ivory, and metal being all found. As a needle, the *acus* is mentioned in embroidery (*pingere acu*, Verg. *Aen.* ix. 582; Mart. viii. 28, 17, xiv. 150) and in surgical use for sewing wounds (Celsus, vii. 16).



Acus. Roman gold Hair-pin from British Museum.

The mode of plaiting the hair, and then fastening it with a pin or needle (*figat acus tortas sustineatque comas*, Mart. xiv. 24), is shown in the annexed figure of a female head, taken from a marble group which was found at Apt, in the south of France. (Montfaucon, *Ant. Exp. Suppl.* iii. 3.) This fashion has been continued to our own times by the females of Italy, and of some parts of Germany, as, for instance, in the neighbourhood of Coblenz. (Böttiger, *Sabina*, i. p. 163; Becker-Göll, *Gallus*, iii. p. 272.) [A. G.]

Hair fastened with Pin.

ADDICTI. [Nexi.]

ADDICTIO. [Actio.]

ADDIX (ἄδδιξ), a Greek measure of capacity, equal to four χοίνικες. (Aristoph. *Fr.* 573 Dind., 689 Meineke, *ap.* Eustath. *in Od.* p. 1854, 12; Phot. p. 8, 6; Bekk. *Anecd.* p. 342, 26; *Etym. M.* p. 16, 53; 17, 46; Hultsch, *Metrol.* p. 275.) The form ἄδδιξις is merely a corrupt reading in Hesych. *s. v.* [P. S.] [W. W.]

ADEIA (ἄδεια), freedom from fear, or security, in any public action. When any one in Athens, who had not the full privileges of an Athenian citizen, such as a foreigner, a slave, &c., wished to accuse a person of any offence against the people, he was obliged to obtain first permission to do so, which permission was called *adeia*. (Andoc. *de Myst.* p. 2, § 11; Plut. *Pericl.* 31.) The *adeia* of a citizen did not protect the false accuser (Andoc. *l. c.* p. 4, § 20). An Athenian citizen who had incurred *atimia* was also obliged to obtain *adeia* before he could take part in public affairs (Plut. *Phoc.* 26); and it was not lawful for any one to propose to the people, that an *atimos* should be restored to his rights as a citizen, or that a public debtor should be released from his debt, till *adeia* had been granted for this purpose by a decree passed in an assembly of 6000 citizens voting secretly by ballot. (Dem. *c. Timocr.* p. 715, § 47; Böckh, *Public Economy of Athens*, p. 292.) [W. S.] [W. W.]

ADEM'PTIO. [Legatum.]

ADGNA'TI. [Cognati.]

ADGNA'TIO. [Heres; Testamentum.]

ADI'TIO HEREDITA'TIS. [Heres.]

ADJUDICA'TIO. [Actio.]

ADLECTI or ALLECTI. 1. Those who were chosen to fill up a vacancy in any office or collegium, and especially those who were chosen to fill up the proper number of the senate. As these would be generally equites, Festus (*s. v.*) defines the *adlecti* to be equites added to the senate, distinguishing between the *patres qui sunt patricii generis*, and the *conscripti*, *qui in senatu sunt scriptis annotati*; cf. also Festus, s. v. *Conscripti.* Livy (ii. 1) says *conscriptos in novum senatum appellabant lectos.* [W. S.]

2. Under the empire, by *adlectio*, which answers to the *lectio* under the republic (Mommsen, *Staatsr.* ii. 877, note), those added to the senate by the emperor were admitted to a place among the senators who had held the rank of consul, praetor, tribune or quaestor, according to the emperor's pleasure. Such were styled *adlecti inter consulares*, *praetorios*, *tribunicios*, or *quaestorios*, all which titles are found as inscriptions. The full form, however, in use even in the time of Claudius, was *adlectus in senatum et inter tribunicios relatus* (*Corp. Inscr.* v. No. 3117; cf. Mommsen, *Röm. Staatsr.* ii. 878, note 2); the abbreviated expression does not occur before Vespasian (*Corp. Inscr.* iii. 335; vi. 1359, &c.); the expression *adlectus inter consulares* apparently not before the 3rd century (Orelli, *Inscr.* 1178). Mommsen distinguishes this *adlectio* from the conferring of *ornamenta consularia*, &c. It is more probable that the two represent the same institution at different periods (cf. Willems, *Le Sénat Romain*, i. pp. 626–633).

3. *Adlecti* was also the name applied to those admitted by a decree of the council of a *municipium* or *colonia* to a seat in this body, an admission which generally involved heavy charges (cf. Plin. *Ep.* x. 112, 113; Orell. *Inscr.* 3721; Marquardt, *Staatsv.* i. 499, 507–8). [A. S. W.]

ADLECTOR, a collector of taxes in the provinces in the time of the Roman emperors. (*Cod. Theod.* xii. tit. 6, s. 12; Orelli, 369, 3654.) [W. S.]

ADLOCUTIO. This was the Roman technical term for a speech or address made by an Imperator to his troops; such as stood in the place of a modern proclamation or a general order. In this sense the word occurs only upon coins. The emperors on visiting a district or province made usually a formal speech to the troops quartered there. Such a scene is represented on the accompanying coin of Trajan and medallion of Gordian III., where the emperor, accompanied by the prefect of the camp, is addressing the army represented in an abridged form by standard-bearers. [P. G.]

Adlocutio on coins of Trajan and Gordian III.

ADMISSIO, reception or audience at court. At first all visitors were admitted without distinction to the *atria* of their wealthy friends. According to Seneca (*de Benef.* vi. 33; *de Clem.* i. 10), C. Gracchus and Livius Drusus were the first to receive some privately and others in a limited number, doubtless for political reasons. Afterwards these distinctions became the rule, and it was the exception for any one to open his doors to all comers (Cic. *ad Att.* vi. 2, 5). Under the empire friends were distinguished as *amici admissionis primae, secundae*, &c. The first alone could enter without delay, and could pay a separate visit. The rest had to await, and sometimes to purchase the favour, of the porter. At the imperial court there was a body of slaves and freedmen, acting as the introducers of visitors (*officium admissionis*, Suet. Vesp. 14; *servi ab admissione*, Orell. 2888, or *ab officiis et admissione*, and later as *admissionales*, Lamprid. *Alex. Sev.* 4). The head of the *officium admissionis* was the *magister admissionum*, subordinate himself to the *magister officiorum*. The *magister admissionum* himself introduced the most exalted visitors, and, at least in the time of Justinian, none were introduced by the *admissionales* but such as were *illustres* (Amm. Marc. xxii. 7). Hence the *admissionales* seem to have been at this time of a higher rank than most of the attendants on the court. (Cf. Marquardt, *Privatalt.* pp. 149, 231, 264.) [A. S. W.]

ADMISSIONALES. [Admissio.]

ADOLESCENS. [Infans.]

ADONIA (Ἀδώνια), a festival celebrated in honour of Adonis, the beloved of Aphrodite. It had been introduced into Greece from the East, probably about the time of the Persian wars, and, like many other Eastern rites, was celebrated in most of the Greek cities (Aristoph. *Lys.* 362; *Pax*, 410). The time and duration of the solemnities differed in the different towns and countries; but in Greece generally they seem to have lasted two days, the first being the day on which Adonis disappeared (ἀφανισμός), and the second on which his body was sought (ζήτησις) by the women in what were called "the gardens of Adonis," *i.e.* small earthen vessels which were placed before the door of private houses and at the entrance of the temple of Adonis, and in which quickly-growing and quickly-decaying herbs were planted as a symbol of the brief duration of human life. The first of these days was a day of mourning, and the second one of rejoicing and amusements of various kinds, such as the proposing of riddles, because on that day Adonis was conceived to be coming to life again to dwell with Aphrodite for six months (Plut. *Alcib.* 18; *Nic.* 13; Athen. p. 451 b; Hesych. and Suidas, *s. v.*; Roulez, *Mélanges*, vol. iii. p. 1 ff.). Other particulars respecting the worship and festivals of Adonis are given under Adonis in the *Dict. of Biogr. and Mythol.* [L. S.]

ADOPTIO, adoption. The idea of the conservation of families lay at the root of Greek and Roman, as of Hindoo, adoption; and Isaeus (*Menecl.* § 29) speaks of it as in use both among Greeks and barbarians.

I. Greek, was called by the Athenians εἰσποίησις, or sometimes simply ποίησις or θέσις. The Greek writers use θέσις also as equivalent to the Roman *adoptio*, and θετοί as equivalent to *adoptivi*. (App. *B. C.* iii. 13, 14.) The adoptive father was said ποιεῖσθαι, εἰσποιεῖσθαι, or sometimes ποιεῖν: and the father or mother (for a mother after the death of her husband could consent to her son being adopted) was said ἐκποιεῖν; the son was said ἐκποιεῖσθαι, with reference to the family which he left; and εἰσποιεῖσθαι, with reference to the family into which he was received. The son, when adopted, was called ποιητός, εἰσποιητός, or θετός: in opposition to the legitimate son born of the body of the father, who was called γνήσιος.

A man might adopt a son either in his lifetime or by his testament, provided he had no male offspring and was of sound mind. He might also, by testament, name a person to take his property, in case his son or sons should die under age. (Lex ap. Demosth. ii. *Steph.* p. 1133, § 14.) If he had male offspring, he could not dispose of his property. This rule of law was closely connected with the rule as to adoption; for if he could have adopted a son when he had male children, such son would have shared his property with the rest of his male children, and to that extent the father would have exercised a power of disposition which the law denied him.

Only Athenian citizens could be adopted; but females could be adopted (by testament at least) as well as males. (Isaeus, *Hagn.* §§ 8, 41.) The adopted child was transferred from his own family and demus into those of the adoptive father; he inherited his property and maintained the sacra of his adoptive father. It was not necessary for him to take his new father's name, but he was registered as his son.

The adopted son might return to his former family, but only in case he left a child to represent the family of his adoptive father (Isaeus, *Philoctem.* § 53: *ὁ γὰρ νόμος οὐκ ἐᾷ ἐπανιέναι ἐὰν μὴ υἱὸν καταλίπῃ γνήσιον*). Unless he so returned, he lost all right which he might have had on his father's side if he had not been adopted: *οὐδεὶς γὰρ πώποτε ἐκποιητὸς γενόμενος ἐκληρονόμησε τοῦ οἴκου ὅθεν ἐξεποιήθη, ἐὰν μὴ ἐπανέλθῃ κατὰ τὸν νόμον* (Isae. *Astyph.* § 4). But he retained all rights which he might have on his mother's side, for the act of adoption had no effect so far as concerned the mother of the adopted person; she still continued his mother after the act of adoption (Isae. *Apollod.* § 31).

If the adopted son were a minor, the consent of his natural parents was required; the contrary has been maintained, but the right of refusal may be considered as proved by a passage in Isaeus (*Menecl.* § 26): *ἀλλ' οὐκ ἂν αὐτῷ ἔδωκεν, ἄπαιδα αὐτὸν καθιστάς*.

The next of kin of an Athenian citizen were entitled to his property if he made no disposition of it by will, or made no valid adoption during his lifetime; they were, therefore, interested in preventing fraudulent adoptions. The whole community were also interested in preventing the introduction into their body of a person who was not an Athenian citizen. To protect the rights of the next of kin against unjust claims by persons who alleged themselves to be adopted sons, it was required that the father should enter his son, whether born of his body or adopted, in the register of his phratria (*φρατρικὸν γραμματεῖον*) at a certain time, the Thargelia (Isae. *Apollod.* §§ 3, 5), with the privity of his kinsmen and phratores (*γεννῆται, φράτορες*). Subsequently to this, it was necessary to enter him in the register of the adoptive father's demus (*ληξιαρχικὸν γραμματεῖον*), without which registration it appears that he did not possess the full rights of citizenship as a member of his new demus.

If the adoption was by testament, registration was also required, which we may presume that the person himself might procure to be done, if he was of age, or, if not, his guardian or next friend. If a dispute arose as to the property of the deceased (*κλήρου διαδικασία*) between the son adopted by testament and the next of kin, there could properly be no registration of the adopted son until the testament was established. If a man died childless and intestate, his next of kin according to the Athenian rules of succession took his property (*ἀγχιστεία κατὰ γένος*: Dem. *Leochar.* §§ 2, 6, 7, &c.). Though registration might in this case also be required, there was no adoption properly so called, as some modern writers suppose; for the next of kin necessarily belonged to the family of the intestate.

The rules as to adoption among the Athenians may be mainly deduced from the orations of Isaeus, and those of Demosthenes against Macartatus and Leochares. These last two speeches are instructive examples of opposite cases: in the former, the plaintiff claims as an adopted son; in the latter, the next of kin resist a similar claim. [G. L.] [W. W.]

II. ROMAN.—1. This was the subjecting of a Roman citizen to the fatherly power of another otherwise than through marriage. The person adopting became the lawful (*justus*) father of one who was not his natural child, but who thereupon became his lawful son or daughter, and a member of his family. Accordingly the adopted child received the name of the adopter, adding to it, as an additional cognomen, either a derivative from the name, or the name itself, of his former family. Thus the son of L. Aemilius Paullus, when adopted by P. Cornelius Scipio, became P. Cornelius Scipio Aemilianus; and Q. Servilius Caepio Brutus was the name of M. Brutus after his adoption by Caepio. If the person who thus entered into a new family was dependent (*filius familias*), the matter was of less legal importance, and required less solemnity than when a head of a family (*pater familias*), *i.e.* a man not under the power of another (*sui juris*), and presumably having property and perhaps children, was to become subject to another's power. Of the latter, the best-known case was that of P. Clodius, who, though a senator, got himself adopted by P. Fonteius, a plebeian of twenty years of age, in order to qualify himself to be elected a tribune of the Commons. He retained his old name, perhaps, as suggested by Lange (*Röm. Alt.* i. p. 139, ed. 3), because the adoption was only a form (*fiduciae causa*, like the co-emptions of women, Gai. i. 114, 115), and he was immediately emancipated. Cicero's discussion of this case (*Dom.* 13, 14) gives us the state of law of the period. According to him, the college of priests (*pontifices*) used to inquire into the reason of the adoption, the suitability of the transaction to the dignity of the two families, and the security for the due maintenance of the sacred rites of the family which was thus losing a representative. The adopter ought to be one who had been married, who had no children, and could not have any, and who, in age, might have been the natural father of the adoptee. On the favourable report, or on the proposal of the priests, a bill (*rogatio*) authorising the adoption had still to be passed by the *curiae*. Gellius (vi. 19; comp. also Cic. *Dom.* 29) gives this form: "Velitis jubeatis uti L. Valerius L. Titio, tam jure legeque filius siet, quam si ex eo patre matreque familias ejus natus esset, utique ei vitae necisque in eum potestas siet uti patri endo filio est. Haec ita uti dixi, ita vos Quirites rogo." From this procedure by bill the term *adrogatio* was applied to the adoption of a person *sui juris*. The earliest uses that we know is in Gaius and A. Gellius. Cicero uses *adoptio*, or *adoptatio* of both forms, and so do the lawyers, frequently distinguishing them as *adoptio quae per* (or *apud*) *populum fit*, and *ad quae apud praetorem fit*. The difference relates to the form and conditions of the act, and not to the legal position thereby acquired.

2. *Adoptio per populum*, or *arrogatio*.—The procedure in the case of arrogation was inquiry before the priests and a bill passed by the *curiae*. But even in Cicero's time the *curiae* were not assembled, but were represented by thirty lictors (Cic. *Rull.* ii. 12, § 31). Some have thought that the *pontifices* took their place (Vangerow, § 251), but there seems no ground either from Gellius, *l. c.*, or from Tac. *Hist.* i. 15, *si te privatus lege curiata apud pontifices ut moris est adoptarem*, to assign to them any other function than they always had in this matter, though no doubt this function gained in relative importance as the curial assembly became a mere form. At length

a rescript of the emperor was substituted for both, and the arrogation took place before the magistrate (comp. Gai. i. 98 with Just. *Inst.* i. 17, § 1). The first mention, by some considered the first Constitution, of this is in a law of Diocletian (Cod. viii. 47, 2). The arrogator had to appear in person (Dig. 1, 7, 25). The *detestatio sacrorum* mentioned by Gellius (xv. 27; vi. 12) is taken by Savigny (*Verm. Schr.* i. 197) to be part of the ceremony, viz. the formal abandonment of the sacred rites of the gens on the part of the arrogatus. (Danz, *Sacral. Schutz.* p. 87, opposes; Vehring, *Röm. Erbr.* p. 124, supports this view.)

In Gaius' time arrogation still required the authority of the people, and consequently could take place at Rome only, and when he wrote some of his Institutes (i. 101), according to the better opinion, applied only to males; so also Ulpian (*Fr.* 25). But later on Gaius tells us (if the quotation in the Digest [1, 7, 21; cf. *Cod.* viii. 47, 8] has not been altered), by a rescript of the emperor the arrogation was allowed. Whether a younger could adopt by either form an elder was, in his time (i. 106), still undecided. Later it was held that the adopter must be older than the adopted by the age of full puberty, *i.e.* by a period of eighteen years (D. 1, 7, 15, § 3; s. 40, § 1). Unless, indeed, some special reason of health or intimacy existed, an arrogator ought to be sixty years old (s. 15, § 2).

The effect of arrogation was to transfer, as a whole (*per universitatem*), the property and future acquisitions of the person arrogated to his new father (Justinian allowed him only the usufruct, and only on the son's death unemancipated gave him the property in fee, *Inst.* iii. 10, § 2). All the children who were in his power fell under the same power as himself, and became grandchildren of the adopter of their father (s. 15, s. 40; Gai. i. 107). Hence Tiberius was made to adopt Germanicus before he himself was adopted *lege curiata* by Augustus (Suet. *Tib.* 15). But the change of civic person (*capitis deminutio*, Gai. i. 162) brought about by his adoption caused a loss altogether of rights attached to his person, viz. any usufruct vested in him (repealed by Justinian, *Cod.* iii. 33, 16), any services which his freedman had sworn to render him (cf. D. 38, 1, 7; 9), and some others (Gai. iii. 83). At the same time all debts owed by the arrogatus on his own account did not, in strict law, become chargeable on the arrogator, but dropped altogether. The praetor, however, interfered, and gave the creditors a right, if their claims were not duly satisfied, to obtain payment by selling all the property that would have been their debtor's if he had not been adopted. If, however, the debts were owing by the arrogatus, in capacity of heir to some one else, the arrogator took the burden as parcel of the inheritance (Gai. iii. 84). A will made by a person adopted was broken, unless he was emancipated before his death (Gai. ii. 147; D. 29, 7, 8, § 3).

A person under the age of puberty (*impubes* or *pupillus*) could not be arrogated until a letter of Antoninus (Pius) allowed it under certain circumstances and conditions (Gell. v. 19, § 10; Gai. i. 102). If the arrogator had a child or children already, the propriety of the adoption was very questionable. In any case the consent of all the guardians was required (*Cod.* v. 59, 5), and the adoption must be shown to be for the youth's interest, due inquiry having been made into the morals of the arrogator and into the means of both parties; and the arrogator had to give security to a public officer (*servus publicus* or *tabellarius*) that, if the arrogatus died before the age of puberty, he would restore all the property of the arrogatus to those who would have been entitled if the adoption had not taken place (Just. i. 11, 3; D. 1, 7, 17; 18). On the death of the arrogator, the son, if surviving, and even though emancipated, unless for good cause, was entitled to the same; and in addition to one-fourth part of the arrogator's property (D. 1, 7, 22; *Cod.* viii. 37, 2; D. 38, 5, 13). This fourth part is often called *Quarta divi Pii.* A guardian or curator was not allowed to adopt one who had been his ward, lest it should be done to avoid giving account of his charge (D. 1, 7, 17). A stepfather, being guardian, was allowed by Antoninus Pius to adopt his stepson (s. 32), and the stepson (or any adopted *impubes*?) could, on reaching puberty and showing adequate cause, sometimes obtain emancipation (ss. 32, 33).

After the time of Claudius the adoption of a minor (s. 8) required the consent of his curator (s. 8).

3. *Adoptio apud praetorem.*—Adoption, in the narrower sense of the term, as opposed to *arrogatio*, came under somewhat different considerations. The natural father had to give his consent (besides the consent, actual or tacit, of the child, s. 5); and this was a safeguard of the adoptee's interests (Theoph. *Inst.* i. 11, § 3). Moreover, the adoptee would, as *filius-* or *filiafamilias*, have no property (except perhaps *castrense peculium*, and that would not pass to the adopter: D. 49, 17, 12). Nor would his children, if any, leave the family of their grandfather (D. 1, 7, 40, pr.). Persons of either sex and of any age could be adopted either at Rome before the praetor, or in the provinces before the proconsul or legate (Gai. i. 101, 102). The procedure was the result of the person to be adopted not being *sui juris*. The link with the natural family had to be dissolved before the link with the adoptive family could be made. The law held that not until a father had mancipated his son three times (a daughter or grandchild only once: Gai. i. 132) was the son deemed free from the father's control. Accordingly, on the first mancipation, the person to whom he was thus transferred set him free. The father's old power at once attached. The second mancipation and manumission had the same result. The father then mancipated him a third time. If he were manumitted, he would be free from the control of his father, and indeed would be *sui juris*. So, instead of manumission, the adopter claims (*vindicat*) him as his son, and on no counterclaim being asserted the magistrate assigns (*addicit*) him to the adopter. This ceremony was sometimes transacted merely between the natural and the adoptive father, who, in that case, on receiving him from the natural father on the third mancipation, did not manumit him, but remancipated him to his natural father, from whom he then claimed him as his son. This was the usual and more convenient course. But sometimes a third person was employed, to whom the father mancipated the son. In that

case, on the third mancipation, the adoptive father interfered and claimed him as his son (Gai. i. 134). This form is referred to in Cicero's words "filium in adoptionem D. Silano emancipaverat" (*Fin.* i. 7, § 24), and in Suetonius: "Gaium et Lucium adoptavit (Augustus) domi per assem et libram emptos a patre Agrippa" (*Aug.* 64). Justinian abolished this antiquated form, and substituted simple declaration by deed (*actis intervenientibus*), both parties being present before the magistrate (*Cod.* viii. 47, 11). A child did not lose by adoption all his rights in his natural family. He was still a cognate, and as such entitled to succeed in the third degree to the inheritance of an intestate father (Gai. iii. 31). If emancipated by his adoptive father, he reverted to the position and rights of an emancipated son of his natural father (Gai. ii. 137).

A Constitution of Justinian (*Cod.* viii. 47, 10; *Inst.* i. 11, § 2) greatly altered the effect of this adoption. The adoptee no longer either lost his natural rights, or acquired and conferred any, except a right to succeed in due place to the inheritance of the adopter if he died intestate without having emancipated him. If, however, the adopter was a maternal or (if the father was emancipated) a paternal grandfather, in this case, natural and adopted ties concurring, the old effect of adoption remained.

4. In all adoption the rule holds: "Adoptio non jus sanguinis sed jus agnationis adfert" (D. 1, 7, 23), and a person adopted became *agnate* to all to whom his adoptive father is *agnate* (D. 38, 8, 1, § 4; 16, 2, § 3), and brothers and sisters by adoption were called *consanguinei* as well as those by birth (D. 38, 16, 1, § 11; cf. *Collat.* xvi. 6). But the adopted son was not related either to the mother or to the emancipated children of the adopter or to his wife, unless the wife were *in manu*, in which case she would be legally a sister to the adopter. (Cf. Gai. iii. 14.) The son of an adopted person was himself in an adoptive position (D. 1, 7, 27). Emancipation of an adopted child broke all connexion between him and the adoptive family (s. 13), excepting that marriage between the adopter and his adopted daughter or granddaughter, though emancipated, remained unlawful (Gai. i. 59). No re-adoption by the same person, not being the natural father, was possible (D. 1, 7, 37).

A person might be adopted into the place of son, or grandson (even if the adopter had no son), or great-grandson, &c., and the same applies analogously to the adoption of girls. Further, the adoption into the place of grandson might specifically connect him with a particular son of the adopter, and thus make him brother of that son's children, if any. But the son's consent was required. If the son did not consent, the adoptee would not fall into the son's power on the death of the adopter (D. 1, 7, 6, 10, 43, 44).

The adoption of another person's freedman was not allowed (D. 1, 7, 15, § 3), probably lest the patron's rights should be impaired. Nor could a slave be adopted in the time of Sabinus (Gell. v. 19, § 3), though in early days it was allowed, the slave of course being mancipated and then claimed as son, as in the adoption of a *filius familias* (cf. Schlesinger, *Zeitschr. R. G.* vi. 119 ff.). The adoption of illegitimate children by their father was forbidden by Justin, A.D. 519 (*Cod.* vii. 27, 7).

5. Besides feelings of affection, other causes sometimes led to adoptions. In early times there was the desire to maintain the family and its sacred rites (cf. Cic. *Legg.* ii. 19); in the time of Claudius the desire to qualify under the provisions of the Lex Julia et Papia Poppaea (cf. Gell. ii. 15), or escape the penalties on childless persons. A decree of the senate declared that no such pretended adoption (manumission having at once followed the adoption) should have any effect (Tac. *Ann.* xv. 19), and so we find adopted children were not counted so as to excuse from public offices (D. 50, 5, 2, § 2). And a trust conditional on the death of sons leaving no children was not defeated by their leaving an adopted child (D. 35, 1, 76).

6. Testators, at the time of Cicero, and later in several cases, coupled the grant of part of their estate with a direction to the heir to bear the testator's name; and this is often spoken of by historians as an adoption. So in the case of a Crassus, spoken of by Cicero (*Brut.* 58, § 212); of Atticus, adopted by will by his uncle Q. Caecilius (Nep. *Att.* 5); and especially of Octavius, adopted by Julius Caesar (Suet. *Jul.* 83). In this last case a *lex curiata* was obtained to confirm it (Appian, *Civ.* iii. 94; Dio Cass. xliv. 35, xlv. 3–5, &c.). No such adoption (though recognised by Greek law; cf. Isae. *Dicaeog.* § 6) is mentioned by Roman lawyers, and it obviously lacks both the due form and the substance of fatherly power obtained over the adopted. Some modern writers have regarded it as an appointment of heir conditional on bearing the testator's name (cf. Cic. *Att.* vii. 8, § 3). Suetonius tells of Tiberius taking an inheritance but declining the name attached (*Tib.* 6). But this conduct is not wholly destitute of legal support (cf. D. 36, 1, 63, § 10); and, in any case, acts either of Octavius or of others of the imperial family are scarcely to be trusted as indications of general law.

Another pseudo-adoption is found in the rescript of Diocletian (*Cod.* viii. 47, 5; cf. D. 5, 2, 2, § 3) allowing women to adopt a son. Rights of inheritance would probably be the only legal result.

The principal authorities are Cic. *pro Domo*; Gaius, i. 97–107, 134, iii. 83, 84; Ulpian, *Fr.* 8; Just. *Inst.* i. 11, iii. 10; Dig. 1, 7; *Cod.* viii. 47 (48). [G. L.] [H. J. R.]

ADORA'TIO (*προσκύνησις*) was paid to the gods in the following manner:—The person prostrated himself (*pronus*, Juv. xi. 47) before the statue of the god whom he wished to honour, then kissed his hand and waved it to the statue (cf. Apul. *Met.* iv. 28, *admoventes oribus suis dexteram, primore digito in erectum pollicem residente — adorationibus venerabantur*). While doing this he moved round his whole body, usually from left to right, but sometimes (*e.g.* in Gaul, Plin. *H. N.* xxviii. § 25; and in the temple of Aesculapius at Rome; *Corp. Inscr. Gr.* 5980) from right to left, for which custom Plutarch (*Num.* 14) gives some curious reasons; but the true reason is quite unknown. Hence the *convertere se* is used for *adorare* in Liv. v. 21 (cf. Plaut. *Curc.* i. 1, 69). It was also the practice to have the head and ears covered, so that only the forepart of the face remained uncovered (Plin. *l. c.*; Minucius Felix, 2; Lucret. v. 1197). The *adoratio* differed from the *oratio* or prayers, which were offered with the palms open and upturned to heaven, the suppliant usually kneeling. (*Il.* vii. 177; ὑπτιάσματα χερῶν, Aesch. *Prom.* 1005; *caelo supinas ferre manus*, Hor. *Carm.* iii. 23, 1.) Clasping of the hands (*digitis inter se pectine iunctis*, Ov. *Met.* ix. 299; *digitis pectinatim inter se implexis*, Plin. *H. N.* xxviii. § 59) was a gesture only resorted to by witches, as a means of hindering childbirth. The adoration paid to the Roman emperors was borrowed from the Eastern mode of adoration, and consisted in prostration on the ground, and kissing the feet and knees, or even the dress (cf. Amm. Marc. xxi. 9, *adorari purpuram principis*) of the emperor (but this did not become the ordinary etiquette of the court before the time of Diocletian). Instances, however, of this servile adoration occur much earlier; thus Vitellius "adored" Caius Caesar when returning from Syria: *capite velato circumvertensque se deinde procumbens* (Suet. *Vit.* 2). This mode of prostration is also called *adulatio* (Liv. ix. 18, 4, *humi jacentium adulationes*; cf. xxx. 16, 5). [A. S. W.]

ADULTE'RIUM, adultery. 1. Greek. Among the Athenians, if a man caught another in the act of criminal intercourse (μοιχεία) with his wife, he might kill him with impunity. According to Lysias (*de Caede Eratosth.* § 2) the law was the same in all Greek states, oligarchical or democratic, and without reference to the rank or position of the offender (cf. Xen. *Hiero*, iii. 3). Other punishments short of death are alluded to in Aristophanes (*Nub.* 1083; *Plut.* 168) and Lucian (*de Morte Peregr.* § 9). The right of vengeance extended to the cases of a wife, mother, sister, daughter, or even a concubine (παλλακή), if she were the mother of free children (Lys. *l. c.* § 31; Dem. *Aristocr.* p. 637, § 53). But it was no adultery for a man to have connexion with a married woman who prostituted herself, or who was engaged in selling anything in the agora (Dem. *c. Neaer.* p. 1367, § 87). The husband might, if he pleased, take a sum of money from the adulterer by way of compensation, and detain him till he found sureties for the payment. If the alleged adulterer had been unjustly detained, he might bring an action against the husband; and, if he gained his cause, he and his sureties were released. If he failed, the law required the sureties to deliver up the adulterer to the husband before the court, to do what he pleased with him, except that he was not to use a knife or dagger. (Dem. *l. c.* p. 1367, § 85.)

The husband might also prosecute the adulterer in the action called μοιχείας γραφή. If the act of adultery was proved, the husband could no longer cohabit with his wife under pain of losing his privileges as a citizen (ἀτιμία). The adulteress was excluded even from those temples which foreign women and slaves were allowed to enter; and if she was seen there, any one might treat her as he pleased, provided he did not kill her or mutilate her. (Dem. *l. c.* p. 1374, § 115; Aeschin. *c. Timarch.* § 183.)

Lysias further tells us (*l. c.* § 32) that the law punished seduction more than actual violence: *τοὺς βιαζομένους ἐλάττονος ζημίας ἀξίους ἡγήσατο εἶναι ἢ τοὺς πείθοντας.* The infidelities of a husband, as might be expected, were viewed more leniently, and gave the wife no right of action for divorce. [G. L.] [W. W.]

2. Roman. Adulterium properly signifies, in the Roman law, the offence committed by a man, married or unmarried, having sexual intercourse with a woman whom he knows to be another man's wife. Stuprum (called by the Greeks φθορά) signifies intercourse with an unmarried woman, but to live with a woman in the state of concubinage was not stuprum (D. 25, 7, 3, § 7). It was the condition of the female which determined the legal character of adultery; there was no adultery unless the female was married. The infidelity of the husband was restrained simply by moral and not by legal sanctions (Cato, *ap.* Gell. x. 23, § 5). The male who committed adultery was *adulter*, the female *adultera*. The Latin writers were puzzled about the etymology of the word *adulterium*; but if we look to its various significations besides that of illegal sexual intercourse, we find that we may safely refer it to the same root as that which appears in *adultus*. The notion is that of "growing to," "fixing" or "fastening to" one thing on another and extraneous thing; hence, among other meanings, the Romans used *adulterium* and *adulteratio* as we use the word "adulteration," to express the corrupting of a thing by mixing something with it of less value. Early Roman law appears to have left the punishment of adultery to private revenge and the jurisdiction of the family. (Dionys. ii. 25; Suet. *Tib.* 35.) The husband and also the father of the adulteress were allowed to take the law into their own hands, and put to death the two guilty parties. The Lex Julia de Adulteriis deprived the husband of the right of killing his wife taken in adultery; under this law he was not entitled to kill the adulterer, unless the latter was an infamous person, and had been detected in the husband's house. (Paul. ii. 26, 1-7; Coll. Leg. iv. 8.) The Lex Julia left the father the power of killing his daughter. This power was strictly limited. Thus he was not entitled to put one of the parties to death and spare the other (if he killed only one of the parties, he brought

himself within the penalties of the Cornelian law de Sicariis); the punishment had to be inflicted at once and on both; the father had only jurisdiction when the offence was detected in his own house or in that of the husband (Dig. 48, 5, 23, § 4; cf. Quint. iii. 11. 7, 5. 10, 104. 7, 1. 6). If the father were a *filius familias*, he had not by the Lex Julia any power of killing, but notwithstanding this he was permitted to exercise it (Paul. *Sent.* 26, 2). He had no jurisdiction over an emancipated child. The Lex Julia de Adulteriis coercendis, passed in the time of Augustus (probably B.C. 17), repealed in its first chapter some prior enactments on the same subject, the exact purport of which is unknown. Horace (*Carm.* iv. 5, 21) alludes to the Julian law. By this enactment the husband and father of the adulteress were given the right of prosecuting the adulterer and adulteress; but if they did not do so within sixty days, any other person might prosecute (Dig. 48, 5; Tac. *Ann.* ii. 85). A woman convicted of adultery was mulcted in half of her *dos* and the third of her separate property, and was banished (*relegata*) to some island. The adulterer forfeited half his property, and was banished in like manner, but not to the same island as the woman. The adulterer and adulteress were subjected also to civil incapacities. This law did not inflict the punishment of death on either party; and in those instances under the emperors in which death was inflicted, it must be considered as an extraordinary punishment, and beyond the provisions of the Julian law (Tac. *Ann.* ii. 50; iii. 24). By the Julian law, if a husband kept his wife after an act of adultery was known to him, and let the adulterer off, he was guilty of the offence of *lenocinium.* If the wife was divorced for adultery, the husband was entitled to retain part of the *dos* (Ulp. *Fr.* vi. 12). The husband, by the fifth chapter of the Julian law, could detain for twenty hours the adulterer whom he had caught in the act, for the purpose of calling in witnesses to prove the adultery. The Emperor Constantine limited the right of prosecuting under the Lex Julia to the husband, father, brother, and uncle of the accused woman. In the same Constitution of Constantine, the offence of the adulterer was made capital (*sacrilegos autem nuptiarum gladio puniri oportet, Cod.* ix. 9, 29). By the legislation of Justinian (*Nov.* 134, c. 10), the law of Constantine was probably only confirmed; but the adulteress was put into a convent, after being first whipped. If her husband did not take her out in two years, she was compelled to assume the habit, and to spend the rest of her life in the convent. Justinian also provided for the disposal of the forfeited property of the adulterer and adulteress.

The authorities for the Lex Julia de Adulteriis are collected by Rein, *Das Criminalrecht der Römer;* cf. Wächter, *Abh.* i. 102–122; Rudorff, *Röm. Rechtsgesch.* [G. L.] [E. A. W.]

ADULTUS. [Infans.]

ADVENTUS. The arrival of an emperor in one of the provinces is an event frequently commemorated in bronze coins issued at Rome. The specimen engraved in the next column represents the arrival of Hadrian in Judaea, Judaea being represented by a female figure accompanied by children. [P. G.]

ADVERSA'RIA, note-book, memorandum-book, posting-book, in which the Romans entered memoranda of any importance, especially of money received and expended, which were afterwards transcribed, usually every month, into a kind of ledger. (*Tabulae justae, codex accepti et expensi.*) The *adversaria* were not admitted as legal evidence, although the *tabulae* were (cf. Gaius, § 128–133; Ortolan, *Explic. Hist.* iii. 244 ff.). They were probably called *adversaria* because they lay always open before the eyes. (Cic. *p. Rosc. Com.* 2, 7; Propert. iii. 23, 20.) [W.S.] [A.S.W.]

Adventus on coin of Hadrian.

ADVERSA'RIUS. [Actor.]

ADVOCA'TUS seems originally to have signified any person who supported another in a cause or other business, as a witness for instance (Varro, *de Re Rust.* ii. 5), or as an assistant in taking possession of disputed property (Cic. *pro Caec.* 8, § 22). It was specially used in the time of the republic for a person who accompanied a party to an action into court, in order to give him legal advice or the support of his presence. The advocatus did not, like the orator or patronus, speak on behalf of the party he was assisting. (Schol. *ad* Cic. *Divin.* i. 11, Orelli, p. 104.) Under the empire the terms patronus and advocatus ceased to be distinct in meaning. (Tac. *Ann.* x. 6.) Advocatus then meant a person who in any way assisted another in conducting an action in court. (Dig. 50, tit. 13, s. 1.) The great jurists sent written opinions (*responsa*), and were not themselves present at the hearing of causes. The office of advocate was originally regarded as a purely honorary one. The Lex Cincia (550 A.U.C.) expressly prohibited patroni from taking any remuneration for their services. Under Augustus, advocati who accepted pay were made liable to a penalty (Dio Cass. liv. 18). Claudius allowed advocati to take fees not amounting to more than 10,000 sesterces. (Tac. xiii. 5; Quint. xii. 7, § 11.) Diocletian made further regulations as to the amount of the fee. The fee was not recoverable as due on a contract of letting and hiring (*locatio conductio*), but payment of it, as a honorarium, was enforced by the magistrate under his *extraordinaria cognitio.*

There came to be attached to each court of justice under the empire a limited number of advocates, who had a monopoly of practice. Such advocates (*statuti*) were appointed by the judge of the court to which they belonged, their names being entered on a register (*matricula*) kept for the purpose. The advocates of each court constituted a corporation.

The advocatus fisci, an officer instituted by

Hadrian (Spart. *Hadr.* 60), was the first in rank of such advocates. It was his business to look after the interests of the fiscus or the imperial treasury, and, among other things, to maintain its title to *bona caduca*. The various meanings of advocatus in the Middle Ages are given by Du Cange, *Gloss.* (Dig. 28, tit. 4, s. 3; Hollweg, *Civil-Prozess*, i. §§ 16, 17.) [E. A. W.]

ADY'NATI (*ἀδύνατοι*), persons supported by the Athenian state, who, on account of infirmity or bodily defects, were unable to obtain a livelihood. The sum which they received from the state appears to have varied at different times. In the time of Lysias (*Or.* 24, § 29) one obolus a day was given; later, seemingly about the time of Aristotle, it was increased to two oboli. As to the date of this change authorities differ; compare Harpoc. *s. v.* with Bekk. *Anecd.* p. 345. Another sum, intermediate between the two, 9 drachmas (=54 oboli) per month, is mentioned by Philochorus, *ap.* Harpocrat. The bounty was restricted to persons whose property was under three minae. It was awarded by a decree of the people, but the examination of the individuals belonged to the senate of the Five Hundred: the payments were made by prytanies. Peisistratus is said to have been the first to introduce a law for the maintenance of those persons who had been mutilated in war; but, according to others, this provision derived its origin from a law of Solon. (Plut. *Solon.* 31; Schol. *Aeschin.* p. 738, Reiske; Aeschin. *c. Tim.* § 103; Harpocrat., Suid., Hesych. *s. v.*; Lysias, *Or.* 24, *Pro Inval.*, a speech written for an individual in order to prove that he was entitled to be supported by the state; Böckh, *Public Econ. of Athens*, p. 242 ff.) [W. S.] [W. W.]

ADY'TUM. [Templum.]

AEACEIA (*αἰάκεια*), a festival of the Aeginetans in honour of Aeacus, the details of which are not known. The victor in the games which were solemnised on the occasion consecrated his chaplet in the magnificent temple of Aeacus. (Schol. *ad* Pind. *Ol.* vii. 156, xiii. 109; *Nem.* v. 78; Müller, *Aeginetica*, p. 140.) [L. S.]

AEDES. [Domus; Templum.]

AEDES VITIO'SAE, RUINO'SAE. [Damnum Infectum.]

AEDI'CULA signifies in the singular a room (Plaut. *Epid.* 402), but in the plural a small house (Ter. *Phorm.* 663). It is, however, more frequently used in the sense of a shrine, whether attached to a temple (Liv. xxxv. 9, *aediculam Victoriae virginis prope aedem Victoriae M. Porcius Cato dedicavit*), or quite an independent building, of which there are many representations in works of art; or finally niches in the walls of temples or houses, containing images of gods and goddesses, like that here figured (Overbeck, *Bildwerke*, pl. 30, 1). (Liv. xxxv. 41; Plin. *H. N.* xxxiii. § 19; Petron. 29; Apul. *Met.* p. 96: *Eponae deae simulacrum residens aediculae.*) The topographers of Rome speak of 423 *aediculae* in Rome, one for every *vicus*; these were probably partly chapels, partly niches, and were usually placed at the cross-ways. They contained the images of the tutelary deity of the *vicus*. On the other hand, the *aediculae* within the house contained images of the Lares and Penates. There were also portable shrines, often of precious materials, like those made at Ephesus (*Act. Ap.* xix. 4). [A. S. W.]

Aedicula or Shrine.

AEDI'LES. I. Aediles plebis. In the year B.C. 494, after the secession of the plebs to the Mons Sacer, this body was organised for the first time under magistrates of its own, answering to those of the patrician community. As the *tribuni plebis* corresponded to the consuls, so the *aediles plebis* corresponded to the quaestors; they were the subordinate officers of the tribunes, at first perhaps appointed by them, but after the Lex Publilia elected in the plebeian assembly under their presidency, placed under the same *leges sacrae*, and possessing a sacrosanct character (Dionys. vi. 90). The origin of their name is not certain, but the best interpretation is that which explains it from their functions as guardians of the temple of Ceres, in which copies of all the decrees of the senate were preserved (so Niebuhr, *Hist.* i. 621; Lange, *R. A.* i. p. 715; Mommsen, *Staatsr.* ii. 447).* After the Lex Publilia they were no longer mere assistants of the tribunes, but *collegae minores*. By degrees, as the political side of the functions of the tribunes became the more important, the aediles came to play a more independent part within the sphere that was left to them. In B.C. 454, the Lex Aternia Tarpeia conferred upon them the *ius multae dictionis*; this carried with it the *ius contionis*, and the *ius edicendi*, the right of convening and addressing a meeting of the citizens, and of declaring beforehand the principles on which they meant to act; but the *ius auspiciorum* was still wanting; so that they could not be reckoned as, strictly speaking, *magistratus populi Romani*. The recorded instances of their action at this period are such as were due to the direction either of the tribunes or of the senate. Thus, acting under the orders of the former, they arrested accused men (Dionys. vi. 90), and carried out sentences of death (when confirmed by the popular assembly) by hurling from the Tarpeian rock (Dionys. vii. 35, xi. 6; Plut. *Cor.* 18; Liv. vi. 20). Their superintendence of the publication of the Twelve Tables (Liv. iii. 57), of the exclusion of foreign deities and forms of worship (Liv. iv. 30), of the corn supplies (Plin. *H. N.* xviii. § 15), and of the plebeian (Pseud. Ascon. p. 143, Or.) and Roman (Liv. vi. 42) games, seems to have been the result of special commissions from the senate or the consuls. As the aediles thus ceased by degrees to be the mere assistants of the tribunes, they gradually lost their sacrosanct character, which attached to them only as agents of the inviolable tribunes, and were ranked in

---

* Madvig, *Verf.* i. 422, prefers the old derivation from *aedes* in the most general sense, arguing both from the application of the name also to the patrician magistrates and from the fact that the title was common in the *municipia*, where no such special relation can be supposed.

this respect with other lesser magistrates (Liv. iii. 55). But they never ceased to be plebeian magistrates, and none but plebeians were eligible; they had no insignia of office; and were always chosen apart from the curule aediles at the comitia tributa, under the presidency of a tribune.

II. AEDILES CURULES. Livy's story (vi. 42) is that in commemoration of the passing of the Licinian Rogations, the senate ordered that a fourth day should be added to the *ludi Romani*; the plebeian aediles were reluctant to bear the burden thus imposed upon them; the young patricians volunteered to undertake it; and a resolution of the senate empowered the dictator to propose to the people the election of two patrician *aediles curules*. This story is altogether rejected by Niebuhr (*Hist.* iii. 33 f.), and it is far more probable that we have here an instance of the desire to absorb into the constitution of the united community an office which was originally characteristic of the plebeian revolution (Mommsen, *Staatsr.* ii. 457). Hence we find after this no traces of any especial connexion between the aediles and the tribunes: but plebeian and curule aediles alike are regarded as the subordinates of the consuls (Liv. xxxix. 14). Hence too the curule aedileship was opened in the year after its institution to the plebeians (Liv. vii. 1); but by a curious provision it was arranged that the office should be held, not by a patrician and a plebeian as colleagues, but by two patricians and two plebeians alternately. This arrangement lasted till B.C. 91, when the plebeian M. Marcellus appears in the place of a patrician (Mommsen, *Röm. Forsch.* i. 97–102), and after that date it was entirely abandoned.* The reason for it seems to lie in the fact that the curule aediles were jointly responsible for the cost of the games, and this might more probably have led to discord if the colleagues had belonged to different orders (Mommsen, *Staatsr.* ii. 488). The curule aediles were distinguished by the bordered robe (*toga praetexta*) and the use of the *sella curulis*, which we find figured on their coins, while the plebeian aediles wore only the ordinary toga, and their official seat was the *subsellium* or *bisellium*. The former were elected in the comitia tributa, under the presidency of a magistrate *cum imperio*, usually the consul, and had from the first the *auspicia minora*, which were only conferred on the latter at a later date (before B.C. 340, when we find *aediles plebis vitio creati*, Liv. xxx. 39).

Cicero (*de Leg.* iii. 3, 7) defines the aediles as *curatores urbis, annonae, ludorumque sollemnium.* We may arrange their functions under these three heads:—

1. *Cura urbis* (including the district within a mile of the town: cf. Lex Jul. Mun. l. 69): *i.e.* the superintendence of the repair and cleansing of the roads and streets, of the public baths, fountains and aqueducts, of eating-houses and brothels; the aediles also took care that the streets were not encumbered by goods offered for sale, or by the deposit of rubbish, by funerals or carriage traffic (which was strictly limited and regulated: Lex Jul. Mun. l. 58 f.), nor encroached upon by private buildings. Further, they had a general control in matters of police. We find them either inflicting fines themselves or acting as prosecutors before the comitia tributa in cases of witchcraft (Plin. *H. N.* xviii. § 42), *stuprum* (Val. Max. vi. 1, 7; Liv. viii. 22; Plut. *Marcell.* 2), fraud on the part of the *pecuarii* (Liv. x. 23, 47, &c.), insolent language (Gell. x. 6), stone-throwing from a window (Gell. iv. 14), usury (Liv. vii. 28; x. 23; xxxv. 41, &c.), and the like. The fines so inflicted were spent upon public buildings and works of general utility; but more important works, for which the treasury paid, were in charge of the censors. In many respects the police functions of the aediles appear to supplement those of the censors, especially during the period when the censors were not in office, but their action was doubtless more strictly limited to the punishment of offences against positive law (Lange, p. 729). Their control of public buildings does not appear to have extended beyond a general supervision of their condition and proper use; the charge of building and repairs lay rather with the censors or their special commisioners (*Vviri muris turribusque reficiendis, IIIviri reficiendis aedibus*: Liv. xxv. 7; xlii. 6).

2. *Cura annonae.* This is properly only one aspect of the general charge of the market, which was so important a part of the duty of the aediles that it gave them the name by which they are called in Greek writers, ἀγορανόμοι (Dionys. vi. 90). As it was their duty to superintend trade of all kinds, especially in cattle and slaves, to look after the quality of the goods exposed for sale (Plaut. *Rud.* 374), to destroy unjust weights and measures (Juv. x. 100; Pers. i. 129), and to put down usury (Plin. *H. N.* xxxiii. § 19; Liv. x. 23, &c.), so it was especially incumbent upon them to provide for a proper supply of corn, partly by punishing *dardanarii* (forestallers, and regraters), and partly by purchasing themselves and supplying it at a low rate (Liv. x. 11: cf. xxx. 26; xxxi. 4, 50; xxxiii. 42).

3. *Cura ludorum.* This must be distinguished from the general police control of the popular amusements, exercised for instance when the aediles prohibited the people from pelting an unpopular man, who was giving a show of gladiators, with anything but fruit (Macrob. ii. 6, 1). It must be distinguished also from the *presidency* of the games, which was held by a consul or praetor. The aediles had only to organise the games. This was done nominally at the expense of the state. Up to the time of the First Punic War, 500,000 asses were annually allowed for this (Dionys. vii. 71), besides an extra allowance for any official festivals (Liv. xxii. 10; xxxi. 9, &c.). But these sums by no means sufficed to defray the expenses, especially under the later republic, when the aediles were expected to spend largely from their own resources, so that the office became exceedingly burdensome. Milo and Scaurus especially are noted as having spent large fortunes on their aedileships (Ascon. *Scaur.* p. 18; *Mil.* p. 32, Orell.). Cicero kept within moderate limits (*de Off.* ii. 17, 59), but as a rule an aedile who did so lost all chance of election to higher office (*pro Mur.* 19, 40), and Sulla failed as a candidate for the praetorship because he had not been aedile, and given the splendid shows which the people expected of him (Plut. *Sull.* 5). It was a common custom, though forbidden by law (Liv. xl. 44), for the aediles to receive much

---

* Livy's phrase in vii. 1, "postea promiscuum fuit," is misleading, as is seen from his own account.

assistance, nominally by way of loan, from the provinces in decorating the forum, theatre, and circus with statues and other works of art (*ad Att.* v. 21, vi. 1; *Verr.* iv. 59, 133; *ad Qu. fr.* i. 1, 9, &c.; Plin. *H. N.* xxxv. § 173). The aediles had to provide the general decorations and costumes, to organise the processions and the games, to arrange the seats and preserve order; when plays were given, they selected the piece, and paid and had also the power of chastising the actors (Liv. xxxiv. 44; Plaut. *Truc.* 990; Tac. *Ann.* i. 70, &c.).

Lange (p. 725) has well shown that the *cura ludorum*, like most of the functions of the aediles, arose from their general character as acting under commissions from the superior magistrates. The *ludi Romani* and *Megalenses* were always in charge of the curule, the *ludi plebeii* in that of the plebeian aediles; other games, such as the *Cerealia* and *Floralia*, were superintended by either without distinction, sometimes acting singly, but more commonly as a college.

III. Aediles Cereales. In B.C. 44 Julius Caesar added two aediles, with special charge of the *annona* and the *ludi Cereales* (Dig. 1, 2, 2, § 32; cf. Suet. *Caes.* 41). These continued under the empire, and are mentioned in inscriptions and on coins.

IV. But the functions of the aediles were greatly restricted by Augustus and his successors; their powers were gradually diminished, and their functions exercised by new officers created by the emperors. After the battle of Actium, Augustus appointed a praefectus urbi, who exercised the general police, which had formerly been one of the duties of the aediles. Their right of jurisdiction was further transferred to the praetor (Dio Cass. liii. 2), who also assumed henceforth the superintendence of the games (Dio Cass. liv. 2; Tac. *Ann.* i. 15; Plin. *Ep.* vii. 11, 4). Augustus also took from the aediles, or exercised himself, the office of superintending the religious rites, the banishing from the city of all foreign ceremonials, and the superintendence of the temples. Hence no one was willing to hold so contemptible an office, and Augustus was therefore reduced to the necessity of compelling persons to take it: persons were accordingly chosen by lot, out of those who had served the office of quaestor and tribune; and this was done more than once (Dio Cass. lv. 24). The last recorded instance of the splendours of the aedileship is the administration of Agrippa, who volunteered to take the office, and repaired all the public buildings and all the roads at his own expense, without drawing anything from the treasury. (Dio Cass. xlix. 43; Plin. *H. N.* xxxvi. § 122.) The aedileship had, however, lost its true character before this time. Agrippa had already been consul before he accepted the office of aedile. Augustus appointed the curule aediles specially to the office of putting out fires, and placed a body of 600 slaves at their command; but the praefecti vigilum afterwards performed this duty (Dio Cass. lv. 21). In like manner the *curatores viarum* were appointed by him to superintend the roads near the city, and the quatuorviri to superintend those within Rome. The *curatores operum publicorum* and the *curatores alvei Tiberis*, also appointed by Augustus, stripped the aediles of the remaining few duties that might be called honourable. They lost also the superintendence of wells or springs, and of the aqueducts. [Aquaeductus.] They retained, under the early emperors, the superintendence of the markets, the duty of repressing open licentiousness and disorder: thus the baths, eating-houses, and brothels were still subject to their inspection, and the registration of prostitutes was still within their duties (Tac. *Ann.* ii. 85). We read of the aediles under Augustus making search after libellous books, in order that they might be burnt; and also under Tiberius (Tac. *Ann.* iv. 35).

The last mention of aediles is under Gordian III. (A.D. 238–244): cf. Orell. *Inscript.* 977.

The history, powers, and duties of the aediles are stated with great minuteness by Schubert, *De Romanorum Aedilibus*, lib. iv. Regimontii, 1828. See Hofmann, *De Aedilibus Romanorum*, Berlin, 1842; cf. Rein in Pauly's *Realenkykl.* vol. i. p. 208 ff.; Lange, *Röm. Alt.* i.^{2} 715–735; Mommsen, *Staatsr.* ii. 443–491. Full details as to their municipal duties are given in the Lex Julia Municipalis on the *Tabula Heracleensis* (*C. I. L.* i. p. 122), with the commentary of Dirksen, *Civil. Abh.* Berlin, 1820. [G. L.] [A. S. W.]

AEDIT'UI (*νεωκόροι, ζάκοροι, ἱεροφύλακες*), more anciently called Aeditumi or Aeditimi (Varr. *R. R.* i. 2, § 1; *L. L.* vii. 12, viii. 61; Gell. xii. 10, § 4: *aedituentes*, Lucr. vi. 1275; Gell. xii. 10, § 8), persons who took care of the temples, and attended to the cleaning of them. Notwithstanding this menial service, they partook of the priestly character, and are sometimes even called priests by the Greek grammarians. (Suid., Hesych., *Etym. M.* s. v. *ζάκορος*; Pollux, i. 14.) In many cases they were women, as Timo in Herodotus (vi. 134), who also speaks of her as *ὑποζάκορος*, from which it is clear that in some places several of these priests must have been attached to one and the same temple, and that they differed among themselves in rank. Subsequently the menial services connected with the office of the *Neocori* were left to slaves, and the latter became a title given to priestly officers of high rank, of whom an account is given in a separate article. [Neocori.] The aeditui lived in the temples, or near them, and acted as ciceroni to those persons who wished to see them. (Plaut. *Curc.* i. 3, 48; Cic. *Verr.* iv. 44, 96; Liv. xxx. 17; Schol. *ad* Hor. *Ep.* ii. 1, 230; Suet. *Dom.* 1.) They seem also to have had the administration of the property of the temple, and were anciently held in great honour (Serv. *ad* Verg. *Aen.* ix. 648). They were probably the same as the *curatores templi*, frequently mentioned in inscriptions (Orelli, *Inscr.* 220, 6: cf. Paul. Diac. *s. v.*; Varr. *L. L.* vii. 12; Cic. *de Har. Resp.* 14, 31). [W. S.]

AEGINETA'RUM FE'RIAE (*Αἰγινητῶν ἑορτή*), a festival in honour of Poseidon, which lasted sixteen days, during which time every family took its meals quietly and alone, no slave being allowed to wait, and no stranger invited to partake of them. From the circumstance of each family being closely confined to itself, those who solemnised this festival were called *μονοφάγοι*. Plutarch (*Quaest. Graec.* 44) traces its origin to the Trojan war, and says that, as many of the Aeginetans had lost their lives, partly in the siege of Troy and partly on their return home, those who reached their native island were received indeed with joy by their kinsmen; but, in order to avoid hurting the feelings of those families who had to lament the loss of their friends, they thought it proper neither to show their joy nor to offer any sacrifices in public. Every family, therefore, entertained privately their friends who had returned, and acted themselves as attendants, though not without rejoicings. [L. S.]

AEGIS (αἰγίς), the shield of Zeus. The origin of the word appears to have been confused by the ancients themselves; in the Homeric sense it is probably from the root of ἀΐσσω, to move violently, but it was early taken to come from αἴξ (Herod. iv. 189). According to the mythologers, the aegis worn by Zeus was the hide of the goat Amaltheia, which had suckled him in his infancy. Hyginus relates (*Astron. Poet.* 13) that, when he was preparing to resist the Titans, he was directed, if he wished to conquer, to wear a goat-skin with the head of the Gorgon. To this particular goat-skin the term aegis was afterwards confined. Homer always represents it as part of the armour of Zeus, whom on this account he distinguishes by the epithet *aegis-bearing* (αἰγίοχος). He, however, asserts that it was borrowed on different occasions both by Apollo (*Il.* xv. 229, 307–318, 360, xxiv. 20), and by Athena (*Il.* ii. 447–449, xviii. 204, xxi. 400).

The skins of various quadrupeds having been used by the most ancient inhabitants of Greece for clothing and defence, we cannot wonder that the goat-skin was employed in the same manner. It must also be borne in mind that the heavy shields of the ancient Greeks were in part supported by a belt or strap (τελαμών, *balteus*) passing over the right shoulder, and, when not elevated with the shield, descending transversely to the left hip. In order that a goat-skin might serve this purpose, two of its legs would probably be tied over the right shoulder of the wearer, the other extremity being fastened to the inside of the shield. In combat the left arm would be passed under the hide, and would raise it together with the shield, as is shown in a marble statue of Athena, preserved in the Museum at Naples, which, from its style of art, may be reckoned among the most ancient in existence.

Aegis worn by Athena.
From Museum at Naples.

Other statues of Athena represent her in a state of repose, and with the goat-skin falling obliquely from its loose fastening over her right shoulder, so as to pass round the body under the left arm. It thus appears in the left-hand figure below, from a statue of Athena at Dresden.

Aegis worn by Athena.
From Torso at Dresden. From Statue at Florence.

Another mode of wearing this garment, also of peaceful expression, is seen in another statue of Athena at Dresden, of still higher antiquity than that last referred to, and in the very ancient image of the same goddess from the temple of Zeus at Aegina. In both of these the aegis covers the right as well as the left shoulder, the breast, and the back, falling behind so as almost to reach the feet. Schorn (in Böttiger's *Amalthea*, ii. 215) considers this as the original form of the aegis.

By a figure of speech, Homer uses the term aegis to denote not only the goat-skin, which it properly signified, but together with it the shield to which it belonged. By thus understanding the word, it is easy to comprehend both why Athena is said to throw her father's aegis round her shoulders (*Il.* v. 738, xviii. 204), and why on one occasion Apollo is said to hold it in his hand and to shake it so as to terrify and confound the Greeks (*Il.* xv. 229, 307–321), and on another occasion to cover with it the dead body of Hector in order to protect it from insult (xxiv. 20). In these passages we must suppose the aegis to mean the shield, together with the large expanded skin or belt by which it was suspended from the right shoulder.

As the Greeks prided themselves greatly on the rich and splendid ornaments of their shields, they supposed the aegis to be adorned in a style corresponding to the might and majesty of the father of the gods. In the middle of it was fixed the appalling Gorgon's head (*Il.* v. 741), and its border was surrounded with golden tassels (θύσανοι), each of which was worth a hecatomb (ii. 446–449). In the figures given above and below, the serpents of the Gorgon's head are transferred to the border of the skin.

By the later poets and artists, the original conception of the aegis appears to have been forgotten or disregarded. They represent it as a breast-plate covered with metal in the form of scales, not used to support the shield, but extending equally on both sides from shoulder to shoulder; as in the right-hand figure in the preceding column, from a statue at Florence.

The Roman poets sometimes regard it as a shield and sometimes as a breast-plate. Thus it is represented as the shield of Jupiter (Verg. *Aen.* viii. 354; Sil. xii. 720), and as the shield of Pallas or Minerva ("protegit aegide fratrem," Ov. *Met.* v. 46; "contra sonantem Palladis aegida," Hor. *Carm.* iii. 4, 57); but it more frequently appears as the breast-plate of Minerva with the Gorgon's head in the centre ("positam in pectore aegida," Ov. *Met.* ii. 754; Verg. *Aen.* viii. 435–438; on which Servius says, "munimentum pectoris aereum, habens in medio Gorgonis caput;" Sil. ix. 442, 443; Val. Flacc. vi. 174).

It is remarkable that, although the aegis properly belonged to Zeus, yet we seldom find it as an attribute of Zeus in works of art. There is, however, in the Museum at Leyden, a marble statue of Zeus, found at Utica, in which the aegis hangs over his left shoulder. The annexed figure is taken from an ancient cameo. Zeus is here represented with the aegis wrapped round the fore part of his left arm. The shield is placed underneath it, at his feet.

Zeus with the Aegis on the left arm.
From an ancient cameo.

The Roman emperors also assumed the aegis, intending thereby to exhibit themselves in the character of Jupiter. Of this the armed statue of Hadrian in the British Museum presents an example. In these cases the more recent Roman conception of the aegis is of course followed, coinciding with the remark of Servius (*Aen.* viii. 435), that this breast-armour was called aegis when worn by a god; *lorica*, when worn by a man. (Comp. Mart. vii. 1.) [J. Y.] [W. W.]

AEINAUTAE (ἀειναῦται), magistrates at Miletus, consisting of the chief men in the state, who obtained the supreme power on the deposition of the tyrants, Thoas and Damasenor. Whenever they wished to deliberate on important matters, they embarked on board ship (hence their name), put out at a distance from land, and did not return to shore till they had transacted their business. (Plut. *Quaest. Graec.* 32.) [W. S.]

AEIPHY'GIA (ἀειφυγία). [EXSILIUM.]

AEISITI (ἀείσιτοι). [PRYTANEIUM.]

AENEATO'RES (ahenatores, Amm. Marc. xxiv. 4) were those who blew upon wind instruments in the Roman army, namely, the *bucinatores*, *cornicines*, *tubicines*, *liticines*, and they were so called because all these instruments were made of *aes* or bronze. (Paul. Diac. p. 20, Müll.; Mommsen, *I. R.* No. 4232; Suet. *Caes.* 32.) Aeneatores were also employed in the public games. (Sen. *Ep.* 84.) A *collegium aeneatorum* is mentioned in inscriptions. (Orelli, *Inscr.* No. 4059.) [W. S.]

AENIGMA (αἴνιγμα), a riddle. It appears to have been a very ancient custom among the Greeks, especially at their symposia, to amuse themselves by proposing riddles to be solved. Their partiality for this sort of amusement is attested by the fact that some persons, such as Theodectes of Phaselis and Aristonymus, acquired considerable reputation as inventors and writers of riddles. (Athen. x. pp. 451, 452; xii. p. 538.) Those who were successful in solving the riddle proposed to them received a prize, which had been previously agreed upon by the company, and usually consisted of wreaths, taeniae, cakes, and other sweetmeats, or kisses, whereas a person unable to solve a riddle was condemned to drink in one breath a certain quantity of wine, sometimes mixed with salt water. (Athen. x. p. 457; Pollux, vi. 107; Hesych. *s. v.* γρῖφος.) Those riddles which have come down to us are mostly in hexameter verse, and the tragic as well as comic writers not unfrequently introduced them into their plays. Pollux (*l. c.*) distinguishes two kinds of riddles, the αἴνιγμα and γρῖφος, and, according to him, the former was of a jocose and the latter of a serious nature; but in the writers whose works have come down to us, no such distinction is observed; and there are passages where the name γρῖφος is given to the most ludicrous jokes of this kind. (Aristoph. *Vesp.* 20; Becker-Göll, *Charikles*, ii. p. 363; K. F. Hermann, *Gottesdienstl. Alt.* § 62, 29.) The Romans seem to have been too serious to find any great amusement in riddles; and when Gellius (xviii. 2) introduces some Romans at a banquet engaged in solving riddles, we must remember that the scene is laid at Athens; and we do not hear of any Romans who invented or wrote riddles until a very late period. Apuleius wrote a work entitled *Liber Ludicrorum et Griphorum*, which is lost. After the time of Apuleius, several collections of riddles were made, some of which are still extant in MS. in various libraries. [L. S.]

AE'NUM, or AHE'NUM (sc. *vas*), a brazen vessel, used for boiling, is defined by Paullus to be a vessel hanging over the fire, in which water was boiled for drinking, whereas food was boiled in the *caccabus* or saucepan [CACCABUS]. (Dig. 33, tit. 7, s. 18, § 3.) This distinction is not, however, always observed; for we read of food being cooked in the *aënum.* (Juv. xv. 81; Ov. *Met.* vi. 645.) The word is also frequently used in the sense of a dyer's copper; and, as purple was the most celebrated dye of antiquity, we find the expressions *Sidonium aënum, Tyrium aënum,* &c. (Ov. *Fast.* iii. 822; Mart. xiv. 133.) The coppers which contained the water for supplying a bath were also called *aëna.* (Vitruv. v. 10, 1.) [BALNEAE.] [W.S.] [W.W.]

Aenum, or brazen vessel used for boiling.

AEO'RA, or **EO'RA** (*αἰώρα, ἐώρα*). **1.** A festival at Athens, accompanied with sacrifices and banquets, whence it is sometimes called *εὔδειπνος*. The common account of its origin is as follows:—Icarius was killed by the shepherds to whom he had given wine, and who, being unacquainted with the effects of this beverage, fancied in their intoxication that he had given them poison. Erigone, his daughter, guided by a faithful dog, discovered the corpse of her father, whom she had sought a long time in vain; and, praying to the gods that all Athenian maidens might perish in the same manner, hung herself. After this occurrence, many Athenian women actually hung themselves, apparently without any motive whatever; and when the oracle was consulted respecting it, the answer was that Icarius and Erigone must be propitiated by a festival (Hygin. *Poet. Astron.* ii. 4). According to the *Etymologicum Magnum,* the festival was celebrated in honour of Erigone, daughter of Aegisthus and Clytaemnestra, who came to Athens to bring the charge of matricide against Orestes before the Areiopagus; and, when he was acquitted, hung herself, with the same wish as the daughter of Icarius, and with the same consequences. According to Hesychius, the festival was celebrated in commemoration of the tyrant Temaleus, but no reason is assigned. Eustathius (*ad* Hom. pp. 339, 1535) calls the maiden who hung herself Aiora. But as the festival is also called Ἀλῆτις (apparently from the wanderings of Erigone, the daughter of Icarius), the legend which was first mentioned seems to be the most entitled to belief. Pollux (iv. 7, § 55) mentions a song made by Theodorus of Colophon, which persons used to sing whilst swinging themselves (*ἐν ταῖς αἰώραις*). It is, therefore, probable that the Athenian maidens, in remembrance of Erigone and the other Athenian women who had hung themselves, swung themselves during this festival, at the same time singing the above-mentioned song of Theodorus. (See Athen. xiv. p. 618; Schömann, *Griech. Alterth.* vol. ii. p. 434.) [L. S.]

2. A swing, which formed a favourite amusement in Greece, as in England at the present da (cf. Suidas, *s. v.*; Zonaras, *s. v.*; Pausan. x. 29 The following cut shows a group swinging on another. [J. H. O.]

Aeora, or Swing, from Panofka.

AEQUIPON'DIUM. [LIBRA; TRUTINA.]

AERA. [CHRONOLOGIA.]

AERA'RII, a class of Roman citizens, excluded from the tribes, and liable to pay a poll-tax, at the discretion of the censors. They consisted of three classes:—

1. *Municipes sine suffragio.* These were the inhabitants of conquered towns, which had been deprived of their local self-government. Their citizens obtained the *conubium* and *commercium,* but no political rights. As Caere was the first *municipium sine suffragio* (about B.C. 353), the lists of the burghers of Caere were called the *tabulae Caeritum;* and this came to be the general name for the lists of the citizens who held only this inferior franchise. Hence *in tabulas Caeritum referri* came to be equivalent to *aerarium fieri* (Ps. Ascon. on Cic. *Div. in Caec.* 3, p. 103 Orell.; Schol. Cruq. on Hor. *Ep.* i. 6, 62; Gell. xvi. 13, § 7; Cic. *pro Cluent.* 43, 122: cf. Madv. *Opusc.* i. 233; Mommsen, *Röm. Trib.* 160 f.).

2. *Infames,* i.e. those who had incurred legal *infamia,* by (1) some dishonouring *act,* such as bigamy; (2) a dishonouring *profession,* such as that of *leno,* actor, gladiator; (3) a *judicium turpe,* such as condemnation in a prosecution for *furtum, injuria, dolus,* or in a *judicium tutelae, pro socio,* or *mandati* (cf. Lex Jul. munic. ll. 110–125: Cic. *Cluent.* 42, 119; *Caec.* 3, 8; *Rosc. Com.* 6, 16; *de Orat.* i. 36, 166, &c.).

3. Those visited by the severest *nota censoria,* who were said to be *tribu moti et aerarii facti* (Liv. iv. 24; xxiv. 18, 43; xlii. 10; xliv. 16; xlv. 15).

All these three classes were *aerarii,* as they had to pay protection-money (*aes*); their exclusion from the tribes and the centuries involved the loss of the suffrage, and doubtless also (though this has been denied) the *ius honorum.* The only instance of a magistracy held by an aerarius is to be regarded as the result of an amnesty passed by the supreme authority of the people. The *infames* were always excluded from military service (Liv. vii. 2; Val. Max. ii. 4, 4), and could not rise above the class of *aerarii:* the *municipes sine suffragio* served in the legions, or formed a special corps (e.g. *legio Campana*), and ceased to be *aerarii* when they attained the full franchise, as all the Italians did by the *leges Julia* and *Plautia Papiria* (q. v.). Those *notati* by the censors generally had more burdensome conditions of service (Liv. xxiv. 18), but the *nota* could be removed by succeeding censors.

The origin of the class of *aerarii* is a much disputed question, the ancient authorities only referring to the class as existing. Mommsen (*Hist.* i. 101; cf. *Forsch.* i. 389) and Lange (*Röm. Alt.* i. 406) held that they were originally resident aliens (*metoeci*) holding no freeholds, and therefore not included in the tribes. Niebuhr (*Hist.* i. 472) held that they consisted of artisans and freedmen, a view not widely differing from that of Mommsen in practice, though based upon a different idea. Madvig (*Verf.* i. 122) maintains that they were only a class of degraded citizens, not including either the *cives sine suffragio* or the artisans, who would be classed according to their property. Willems (*Droit Romain*, p. 97, note 4), following Göttling, argues that these could not have been citizens in any sense, and that the class cannot be traced back as far as Servius Tullius, but probably grew up by degrees. The first view is perhaps the most correct. (Comp. Zonaras, vii. 9; Huschke, *Verfassung des Serv. Tull.* p. 494, &c.; Göttling, *Gesch. der Röm. Staatsverf.* p. 260, &c.; Becker, *Handbuch der Röm. Alterth.* vol. ii. pp. 183–196; Lange, *Röm. Alt.* i. pp. 408–9, 678–9.) [A. S. W.]

AERA'RII TRIBU'NI. [AES EQUESTRE; TRIBUNI.]

AERA'RIUM (τὸ δημόσιον), the public treasury at Rome. After the banishment of the kings the temple of Saturn and Ops was employed, upon the proposition of Valerius Poplicola, as the place for keeping the public money, and it continued to be so used till the later times of the empire. (Plut. *Popl.* 12, *Quaest. Rom.* 42; Festus, *s. v. Aerarium*; Serv. *on Aen.* viii. 322.*) Besides the public money and the accounts connected with its receipts, expenditure, and debtors, various other things were preserved in the treasury. Of these the most important were:—1. The standards of the legions (Liv. iii. 69, iv. 22, vii. 23). 2. The various laws passed from time to time, engraven on brazen tables (Suet. *Caes.* 28). 3. The decrees of the senate, which were entered there in books kept for the purpose, though the original documents were preserved in the temple of Ceres under the custody of the aediles. (Joseph. *Ant.* xiv. 10, § 10; Plut. *Cat. Min.* 17; Tac. *Ann.* iii. 51.) [AEDILES.] 4. Various other public documents, the reports and despatches of all generals and governors of provinces, the names of all foreign ambassadors that came to Rome [LEGATUS], &c.

The *aerarium* was the common treasury of the state, and is sometimes spoken of as the *publicum* (*e.g.* Liv. ii. 5, 1; 16, 7; 42, 2). Niebuhr's view that the *publicum* was the treasury of the *populus* or patricians (*Hist.* ii. notes 386, 954) is erroneous, and has been disproved, among others, by Schwegler, *Gesch.* ii. 286. Under the republic the aerarium was divided into two parts: the *common* treasury, in which were deposited the regular taxes [TRIBUTUM; VECTIGALIA], and from which were taken the sums of money needed for the ordinary expenditure of the state; and the *sacred* treasury (*aerarium sanctum* or *sanctius*, Liv. xxvii. 10; Flor. iv. 2; Caes. *B. C.* i. 14; Cic. *ad Att.* vii. 21), which was never touched except in cases of extreme peril. Both of these treasuries were in the temple of Saturn, but in distinct parts of the temple. The sacred treasury seems to have been first established soon after the capture of Rome by the Gauls, in order that the state might always have money in the treasury to meet the danger which was ever most dreaded by the Romans—a war with the Gauls. (Appian, *B. C.* ii. 41.) At first, probably part of the plunder which the Romans gained in their wars with their neighbours was paid into this sacred treasury; but a regular means for augmenting it was established in B.C. 357 by the Lex Manlia, which enacted that a tax of five per cent. (*vicesima*) upon the value of every manumitted slave should be paid into this treasury. This money was kept in the treasury in bars of gold: hence Livy speaks of *aurum vicesimarium* (Liv. vii. 16, xxvii. 10, 11; comp. Cic. *ad Att.* ii. 16). A portion of the immense wealth obtained by the Romans in their conquests in the East was likewise deposited in the sacred treasury; and though we cannot suppose that it was spared in the civil wars between Marius and Sulla, yet Julius Caesar, when he appropriated it to his own use on the breaking out of the second civil war, B.C. 49, still found in it enormous sums of money. (Plin. *H. N.* xxxiii. §§ 55, 56; Dio Cass. xli. 17; Oros. vi. 15; Lucan, iii. 155.) Quintilian (x. 3, § 3) speaks of it, in a metaphor, as still remembered, if not actually existing.

Upon the establishment of the imperial power under Augustus there was an important change made in the public income and expenditure. He divided the provinces and the administration of the government between the senate, as the representative of the old Roman people, and the Caesar: all the property of the former continued to be called *aerarium*, and that of the latter received the name of *fiscus* [FISCUS]. The *aerarium* consequently received all the taxes from the provinces belonging to the senate, and likewise most of the taxes which had formerly been levied in Italy itself, such as the revenues of all public lands still remaining in Italy, the tax on manumissions, the custom-duties, the water-rates for the use of the water brought into the city by the aqueducts, the sewer-rates, &c.

Besides the *aerarium* and the *fiscus*, Augustus established a third treasury, to provide for the pensions due to veterans on their discharge, and this received the name of *aerarium militare*. It was founded in the consulship of M. Aemilius Lepidus and L. Arruntius, A.D. 6. Augustus paid a very large sum into the treasury upon its foundation, and promised to do so every year. In the *Monumentum Ancyranum* (iii. 35–39), Augustus says that he paid into the treasury in the consulship of Aemilius and Arruntius 170 millions of sesterces; it has been suggested that this sum is probably the entire amount which he

---

* The remains of this temple are now recognised beyond doubt in the portico of eight Ionic columns on the Clivus Capitolinus, not (as by Becker, *Röm. Alterth.* i. 318) in the three adjoining Corinthian columns (Dyer, in *Dict. Geogr.* ii. 781; Burn, *Rome and the Campagna*, p. 93, where the two ruins are figured together).

contributed to it during his whole reign. As he reigned eight years and a half after the establishment of the treasury, he would in that case have contributed ten millions of sesterces every half year; but there is no authority for this view. He also imposed several new taxes to be paid into this aerarium. (Suet. *Aug.* 49; Dio Cass. lv. 23–25, 32; *Res Gestae D. Aug.* ed. Mommsen.) Of these the most important was the *vicesima hereditatum et legatorum*, a tax of five per cent., which had to be paid by every Roman citizen upon any inheritance or legacy being left to him, with the exception of such as were left to a citizen by his nearest relatives, or such as were below a certain amount. (Dio Cass. lv. 25, lvi. 28; Plin. *Paneg.* 37–40; Capitol. *M. Anton.* 11.) This tax was raised by Caracalla to ten per cent., but subsequently reduced by Macrinus to five (Dio Cass. lxxvii. 9, lxxviii. 12), and eventually abolished altogether. (Cod. vi. tit. 33, s. 3.) There was also paid into the aerarium militare a tax of one per cent. upon everything sold at auctions (*centesima rerum venalium*), reduced by Tiberius to half per cent. (*ducentesima*), and afterwards abolished by Caligula altogether for Italy (Tac. *Ann.* i. 78, ii. 42; Suet. *Cal.* 16); and likewise a tax upon every slave that was purchased, at first of two per cent. (*quinquagesima*), and afterwards of four per cent. (*quinta et vicesima*) of its value. (Dio Cass. lv. 31; Tac. *Ann.* xiii. 31; Orelli, *Inscr.* No. 3336.) Besides these taxes, no doubt the booty obtained in war and not distributed among the soldiers was also deposited in the military treasury.

The distinction between the aerarium and the fiscus continued to exist at least as late as the reign of M. Aurelius (τὸ βασιλικὸν καὶ τὸ δημόσιον, Dio Cass. lxxi. 33; Vulcat. Gallic. *Avid. Cass.* 7); but, as the emperor gradually concentrated the administration of the whole empire into his hands, the aerarium likewise became exclusively under his control, and this we find to have been the case even in the reign of M. Aurelius, when the distinction between the aerarium and the fiscus was still retained. (Dio Cass. lxxi. 33.) When the aerarium ceased to belong to the senate, this distinction between the aerarium and the fiscus naturally ceased also, as both of them were now the treasury of the Caesar; and accordingly later jurists used the words *aerarium* and *fiscus* indiscriminately, though properly speaking there was no treasury but that of the Caesar. The senate, however, still continued to possess the management of the municipal chest (*arca publica*) of the city. (Vopisc. *Aurelian.* 20.) The officers in charge are called in inscriptions *praefecti aerarii Saturni;* but the inscriptions which make mention of *quaestores aerarii Saturni*, who have been supposed to be their assistants under Hadrian and Severus (Gudius, *Ant. Inscr.* p. 125, n. 6, p. 131, n. 3; Gruter, p. 1027, n. 4), are of doubtful genuineness: the genuine inscriptions refer to the time of Claudius (Mommsen, *Staatsr.* ii. 525). These prefects had jurisdiction; and before their court in the temple of Saturn all informations were laid respecting property due to the aerarium and fiscus. (Plin. *Paneg.* 36; Dig. 49, tit. 14, ss. 13, 15.)

In the time of the republic, the entire management of the revenues of the state belonged to the senate; and under the superintendence an control of the senate the quaestors had th charge of the aerarium. [SENATUS; QUAESTOR. With the exception of the consuls, who had th right of drawing from the treasury whateve sums they pleased, the quaestors had not th power to make payments to any one, even to a dictator, without a special order from the senate. (Polyb. vi. 12, 13; Liv. xxxviii. 55; Zonar. vii. 13.) In B.C. 45, when no quaestors were chosen, two prefects of the city had the custody of the aerarium (Dio Cass. xliii. 48); but it doubtless passed again into the hands of the quaestors, when they were elected again in the following year. In their hands it seems to have remained till B.C. 28, when Augustus deprived them of it and gave it to two prefects, whom he allowed the senate to choose from among the praetors at the end of their year of office; but as he suspected that this gave rise to canvassing, he enacted, in B.C. 23, that two of the praetors in office should have the charge of the aerarium by lot. (Suet. *Octav.* 36; Dio Cass. liii. 2, 32; Tac. *Ann.* xiii. 29.) They were called *praetores aerarii* (Tac. *Ann.* i. 75; Frontin. *de Aquaeduct.* 100), or *ad aerarium* (Orelli, *Inscr.* No. 723). This arrangement continued till the reign of Claudius, who restored to the quaestors the care of the aerarium, depriving them of certain other offices which they had received from Augustus (Tac. *Ann.* xiii. 29; Suet. *Claud.* 24; Dio Cass. lx. 24); but as their age seemed too young for so grave a trust, Nero took it from them and gave it to those who had been praetors or consuls, and who received the title of *praefecti aerarii.* (Tac. *Ann.* xiii. 28, 29.) In the time of Vespasian we read of *praetores aerarii* (Tac. *Hist.* iv. 9); but in the reign of Trajan, if not before, it was again entrusted to praefects, who appear to have held their office for two years; and henceforth no further change seems to have been made. (Plin. *Paneg.* 91, 92, *Ep.* x. 20; Suet. *Claud.* 24.)

The *aerarium militare* was under the care of distinct praefects, who were first appointed by lot from among those who had filled the office of praetor, but were afterwards nominated by the emperor. (Dio Cass. lv. 25; comp. Tac. *Ann.* v. 8.) They frequently occur in inscriptions under the title of *praefecti aerarii militaris*, e.g. Wilmanns, 1144, 1202, 1214, 1720, &c.; Walter, *Geschichte des Römischen Rechts*, §§ 58, 179, 329, 405, 3rd edition, Bonn, 1860; Marquardt, *Staatsverwaltung*, ii. 293–305; Lipsius, *ad* Tac. *Ann.* xiii. 29. [W. S.] [A. S. W.]

AERO, a basket made of osiers, rushes, or sedge (Donat. *ad* Ter. *Phorm.* i. 2, 72; Vitruv. v. 12), and used to contain sand (Plin. *H. N.* xxvi. § 96), or wheat (Dig. 19, 2, 31). Rich identifies as *aerones* large baskets, somewhat wider at the top than the bottom, carried by soldiers employed on excavations, &c., on the bas-reliefs of Trajan's column. [J. H. F.]

AES (χαλκός). Much confusion arises from the fact that both Greeks and Romans use only one term for copper and for that mixture of copper and tin which we call bronze. Excepting perhaps gold, copper is the easiest of metals to find and fashion, being found in lumps, and not, like iron, hidden in ore. Hesiod and Lucretius, and ancient writers generally, made the age of Bronze precede that of Iron, and that they were right is abundantly proved by the excavations of modern times. There seems to have been a time immediately succeeding the Stone age when implements were beaten out of pure copper, but it did not last long; the custom of adding tin to copper was introduced, and from that time until the close of ancient history copper unmixed was seldom used for any purpose, various metals being added to it to increase its hardness. Bronze, containing about 12 to 14 per cent. of tin and 88 to 86 per cent. of copper, was used at a very early period in Egypt and Asia. The use of it was introduced into Greece in pre-historic times, probably by the Phoenicians. Tin is not found in Greece, and in fact exists but in few parts of Europe; the Phoenicians are supposed to have travelled in search of it as far as Cornwall and India. The likeness of the Greek word for tin (*κασσίτερος*) to the Sanskrit *kastira* seems to indicate that the original supply of Greek tin came from India. To account however for the enormous quantity of tin which in the Bronze age must have circulated through Europe is not easy.

In Homer's time bronze is the usual material for tripods, vessels, armour of defence, and even spears, though iron was beginning to be used for offensive weapons. It is probable that soon after the Homeric age weapons of bronze fell out of use. This compound however continued to be largely employed for utensils of all kinds, for works of art and other purposes. The interior of the treasuries of Mycenae and Orchomenus were lined with bronze; bronze was used in historical times for vessels, candelabra, chariots, for the inscribing of treaties and laws, for personal ornament, and in places for coin. Also all instruments used for religious purposes were made of bronze from motives of religious conservatism. The abundance of copper sufficiently accounts for its general use among the ancients. We have a remarkable result of this fact in the use of χαλκεύς and χαλκεύειν, where working in iron is meant (Hom. *Od.* ix. 391; Aristot. *Poët.* 25). One of the chief sources of copper in antiquity was Cyprus; from the name of that island is derived the Low-Latin *cuprum*, and our word copper. The metal was also procured in Euboea, near the town of Chalcis, and in other parts of Greece; also in Campania in Italy, in Germany and elsewhere. But the most celebrated bronze did not come from those regions, but was an object of special manufacture elsewhere. Two of the most celebrated mixtures were the Delian (Plin. xxxiv. § 9) and the Aeginetan (*l.c.* § 10), which were much used in art; we learn that Myron used the former mixture, Polycleitus the latter. The Delian was reckoned the more precious of these, but still more valuable was the *hepatizon* or liver-coloured bronze, and most valuable of all the Corinthian. With regard to the last-mentioned a silly story was told that it was produced by a fortuitous concourse of melted metals on the occasion of the burning of Corinth by Mummius. Pliny (xxxiv. § 7) sensibly remarks that this story is absurd, because most of the authors of the highly valued works in Corinthian bronze lived at a much earlier period. A large number of varieties of bronze of various colours were known to the ancients, and it seems that they tinted their statues by making them of a judicious mixture of sorts. Thus we hear of a bronze Jocasta which was pale, of an Athamas which was blushing (Plin. xxxiv. § 140), and of a Pallas with ruddy cheeks, made by Pheidias. Not only were the ancients clever at producing varieties in the metal, but they seem to have understood the art of hardening it by dipping in water and exposure to air. There is a passage even in Homer which is supposed to allude to this process (*Od.* ix. 391), and recent experiments have proved that this is a possibility, contrary to the usual opinion of metallurgists. The mixture of copper and zinc which we call brass was also known in antiquity, at all events in later Greek and Roman times. It is of this compound that Roman sestertii and dupondii were made, as has been proved by analysis. As Pliny (xxxiv. § 4) specially states that these were made of orichalcum, it seems that that term, which was in early times of quite vague meaning, was afterwards narrowed to the meaning *brass*. This is further shown by a passage in Cicero (*de Offic.* iii. 23, 92), who says that gold and orichalcum may be confused in consequence of their superficial resemblance.

The chief authority as regards the kinds and working of bronze is Pliny (*Hist. Nat.* xxxiv.). He distinguishes copper ore into two kinds: cadmea, found in Italy and Germany, and chalcitis, in Cyprus and elsewhere. Of Corinthian bronze (§ 8) he distinguishes three kinds; in the first silver predominates, in the second gold, in the third the metals are balanced and harmonized. Of Cyprian bronze (§ 94) the chief classes are *coronarium*, which is of golden hue when divided into thin layers, and *regulare*, which can be hammered and drawn out into bars and wires. A commoner kind of copper (not Cyprian), called *caldarium*, does not give to the hammer, and is only fit for melting. At Capua they added to copper to make bronze 10 per cent. of Spanish plumbum argentarium, which was made of tin and lead in equal proportions. Pliny states that copper was largely used in medicine (§ 100, foll.), being either mixed with milk or sulphur for external application to wounds, or taken internally, mixed with honey, in order to cause vomiting. For a mass of details of this character we must refer the reader to Pliny himself.

In all early bronze-work found in Greece and Etruria, the processes of manufacture are simple. The usual process for cups, utensils, and ornaments is working plates with the hammer into the required shape, fastening them together with nails or (sometimes) with solder, and beating up a pattern on them in *repoussé* work and finishing with a graving-tool. Small figures are sometimes cast in the lump, but nothing large. The hammering process was called by the Greeks *σφυρηλατεῖν*. The British Museum possesses the effigy of a deity thus worked in plates; similar was no doubt the bronze statue earliest erected at Rome, that dedicated by Sp. Cassius to Ceres. When we are told that the Greeks Rhoecus and Theodorus first cast in bronze (*Θεόδωρον καὶ Ῥοῖκον Σαμίους εἶναι τοὺς διαχέαντας χαλκὸν πρώτους*, Pausan. ix. 41, § 1), we must perhaps understand by this that these artists introduced the method of casting statues hollow, not solid, as their predecessors had done. These artists may have lived about the 60th

Olympiad, and certainly soon after that time bronze statuary spread with great rapidity over Greece; and indeed bronze continued a favourite material with sculptors until the decay of art. Of the formative process we have a vivid picture on a Greek vase of good period, engraved as the frontispiece to Mr. Murray's *History of Greek Sculpture*. The extraordinary abundance of works of art in bronze, found on almost all ancient sites, especially at Herculaneum and Pompeii, is a notable fact.

Copper as Coin.—In the coinage of the Greeks and Romans copper is seldom unalloyed. A number of analyses made of late years of Greek coins show a proportion of tin of from 10 to 16 per cent., and an occasional 2 to 5 per cent. of lead. Roman aes signatum in republican times shows a proportion of 5 to 8 per cent. of tin and 16 to 29 of lead. After the time of Augustus a change was introduced in the composition of Roman coin. Thenceforward sestertii and dupondii were made of brass, that is to say, of a mixture containing 20 per cent. of zinc and 80 of copper; while the asses were made entirely of copper. Money of copper and bronze stood on a very different footing in Italy to that on which it stood in Hellas and Asia. For in Western countries copper was the usual medium of exchange and measure of value; the chief currency consisted in early times of huge ingots of copper stamped with an official type; and when gold and silver came into use, they at first passed merely as the equivalents and representatives of so much copper. In the East, on the other hand, where gold and silver were the true media of exchange, and copper was used only for very small values, it was seldom minted save as money of account. [See NUMMUS.] The Ptolemies of Egypt minted copper pieces of full value; and Brandes (*Gewichtswesen*, p. 292) is disposed to think that the early Athenian and other copper money was minted up to full weight for a time. But this was exceptional; and in almost all Hellenic settlements copper money was a currency of tokens; and the weight of it is consequently most irregular. Copper money was first minted in Greece towards the end of the 5th century, at which period the cities of South Italy, Sicily, and Hellas alike began to strike copper pieces in place of the minute silver coins which had hitherto passed as small change. Conservatives objected to the innovation, as we know from Aristophanes (*Frogs*, v. 725). [CHALCUS.]

Since the most ancient coins in Rome and the old Italian states were made of aes, this name was given to money in general, so that Ulpian (Dig. 50, tit. 16, s. 159) says, *Etiam aureos nummos aes dicimus.* (Compare Hor. *Ars Poët.* 345; *Ep.* i. 7, 23.) For the same reason we have *aes alienum*, meaning debt, and *aera* in the plural, pay to the soldiers. (Liv. v. 4; Plin. *H. N.* xxxiv. § 1.) The Romans had no other coinage except copper, till B.C. 269, five years before the First Punic War, when silver was first coined; gold was not coined till sixty-two years after silver. (Plin. *H. N.* xxxiii. § 42, foll.) For this reason Argentinus, in the Italian mythology, was made the son of Aesculanus. (*Quia prius aerea pecunia in usu esse coepit, post argentea:* August. *Civ. Dei*, iv. 21.) For a further account of Roman copper money, see AS.

As to the relations in value of the three metals, gold, silver, and copper, see ARGENTUM.

For a fuller account of the use of bronze in antiquity the reader may consult: Rossignol, *Les Métaux dans l'Antiquité;* Guillaume, *La Sculpture en Bronze;* J. Evans, *Ancient Bronze Implements.* The ancient testimonies as to gold, silver, and copper mines are collected by Sabatier, *Production de l'Or, de l'Argent et du Cuivre chez les Anciens* (1850). [P. G.]

AES CIRCUMFORA'NEUM, money borrowed from the Roman bankers (*argentarii*), who had shops in porticoes round the forum. (Cic. *ad Att.* ii. 1.) [ARGENTARII.] [W. S.]

AES CORIN'THIUM. [AES, p. 39, a.]

AES EQUESTRE, AES HORDEA'RIUM, and **AES MILITA'RE**, were the ancient terms for the pay of the Roman soldiers, before the regular *stipendium* was introduced. The *aes equestre* was the sum of money given for the purchase of the horse of an eques; the *aes hordearium*, the sum of money paid yearly for the keep of the horse of an eques—in other words, the pay of an eques; and the *aes militare*, the pay of a foot-soldier. (Gaius, iv. 27.)

The *aes equestre* was probably introduced in the Constitution of Servius Tullius, by way of compounding for the horse previously supplied at the public cost to the country. It amounted, according to Livy (i. 43), to 10,000 asses: according to the method probably followed in Livy's estimates [CENSUS], this sum represents 2000 libral asses, or pounds of copper. As each knight had two horses (Paul. p. 221)—one for himself, one for his attendant squire—this tallies with Varro's statement (*L. L.* viii. 71), *equum publicum mille assarium esse.*

The *aes hordearium* was the money paid annually by the state for the purchase of corn (*hordeum*) for the *equi publici.* It was derived from the contributions of the *viduae et orbi*, i.e. the unmarried women (whether widows or not), orphans, and perhaps also childless old men, past the age for military service. The sum allowed to each knight was 2000 asses, *i.e.* 400 pounds of copper: the total amount paid to the 1800 knights was therefore 720,000 libral asses. There can be little doubt that this sum was levied upon the *viduae et orbi* in proportion to their rateable property, and paid into the *aerarium*, whence, like the *aes equestre*, it was distributed by the *tribuni aerarii* [q. v.]. Both Gaius (iv. 27) and Gellius (vii. 10) expressly tell us that the knights had a right of distraint (*pignoris capio*) against the *tribuni* (or, as Gaius says, *is qui distribuebat*), and there is nothing in the principles of Roman law to make us doubt this. The statement of Cicero that this practice was introduced by Tarquinius Priscus is probably only based upon the erroneous notion that it was borrowed from Corinth (*de Rep.* ii. 20). Cf. Lange, *Röm. Alt.* i. 474–478; Marquardt, *Röm. Staatsv.* ii. 90 ff. [W. S.] [A. S. W.]

AES GRAVE. This term was applied to the early Italian copper or bronze coins, as being heavy money, of intrinsic value, and not mere money of account, like later issues of copper. [AS.] [P. G.]

AES MANUA'RIUM was the money won in playing with dice, *manibus collectum. Manus* was the throw in the game. All who threw certain numbers were obliged to put down a piece of money; and whoever threw the Venus (the highest throw) won the whole sum, which was called the *aes manuarium*. (Gell. xviii. 13, § 4; Suet. *Aug.* 71.) [W. S.]

AES MILITA'RE. [Aes Equestre.]

AES RUDE. The blocks of copper of rude square or oblong form, and roughly stamped with a type which preceded money in Italy. [As.] [P. G.]

AES UXO'RIUM, a tax paid by men who reached old age without having married. It was first imposed by the censors, M. Furius Camillus and M. Postumius, in B.C. 403, but we do not know whether it continued to be levied afterwards. (Festus, *s. v.*; Val. Max. ii. 9, § 1; Plut. *Cam.* 2.) [Lex Julia et Papia Poppaea.] [W. S.]

AESTIMA'TIO LITIS. [Judex.]

AESYMNE'TES (*αἰσυμνήτης*, from *αἶσα*, "a just portion," hence "a person who gives every one his just portion") originally signified merely a judge in the heroic games, but afterwards indicated an individual who was occasionally invested voluntarily by his fellow-citizens with unlimited power in a Greek state. His power, according to Aristotle, partook in some degree of the nature both of kingly and tyrannical authority; since he was appointed legally and ruled over willing subjects, but at the same time was not bound by any laws in his public administration. (Aristot. *Polit.* iii. 9, § 5, iv. 8, § 2; Hesych. *s. v.*) Hence Theophrastus calls the office *τυραννὶς αἱρετή*, and Dionysius (v. 73) compares it with the dictatorship at Rome. It was not hereditary; but it was sometimes held for life, and at other times only till some object was accomplished, such as the reconciling of the various factions in the state, and the like. We have only one express instance in which a person received the title of Aesymnetes, namely, that of Pittacus, in Mytilene, who was appointed to this dignity because the state had been long torn asunder by the various factions, and who succeeded in restoring peace and order by his wise regulations and laws. (Dionys. v. 73; Strab. xiii. p. 617; Plut. *Solon*, 4; Diog. Laërt. i. 75; Plehn, *Lesbiaca*, pp. 46, 48.) There were, however, no doubt many other persons who ruled under this title for a while in the various states of Greece, and those legislators bore a strong resemblance to the aesymnetes, whom their fellow-citizens appointed with supreme power to enact laws, as Dracon, Solon, Zaleucus, and Charondas. In some states, such as Cyme and Chalcedon, it was the title borne by the regular magistrates. (Wachsmuth, *Hellen. Alterthum.* i. pp. 423, 441, 2nd ed.; Tittmann, *Griech. Staatsw.* p. 76, &c.; Schömann, *Antiq. Jur. Publ. Graec.* p. 88; Hermann, *Staatsalterth.* § 63.) [W. S.]

AETAS. [Infans; Impubes.]

AETNAEA (*Αἴτναια*), a festival celebrated in honour of Zeus Aetnaeus, so called from Mount Aetna, where a statue had been erected to him. No particulars of this festival are known. (Schol. *ad* Pind. *Ol.* vi. 162.) [L. S.]

AETO'LICUM FOEDUS (*τὸ κοινὸν τῶν Αἰτωλῶν*), a confederation of the Aetolian towns and tribes, which was afterwards joined by towns and cantons of Greece which did not belong to Aetolia proper. The league appears to have been formed shortly after the battle of Chaeroneia, in B.C. 338, to counteract the influence of Macedonia on the affairs of Greece. Its primary object therefore was the same as that of the later league of the Achaeans. It has been suggested by Schömann (*Griech. Alterth.* ii. p. 102) that there had existed from very early times a loose kind of confederacy among the Aetolians, the centre of which was the sanctuary of Apollo at Thermon. (Hom. *Il.* ii. 638; xiii. 217.) In the time of Thucydides (iii. 119) the several Aetolian tribes between the rivers Achelous and Evenus appear to have been quite independent of one another, although they were designated by the common name of Aetolians; but we nevertheless find that on certain occasions they acted in concert, as, for example, when they sent embassies to foreign powers, or when they had to ward off the attacks of a common enemy. (Thuc. *l. c.* iii. 95, &c.) It may therefore be admitted that there did not exist any regularly organised league among the tribes of Aetolia, and that it was only their common danger that made them act in concert; but such a state of things, at any rate, facilitated the formation of a league, when the time came at which it was needed. The league appears as a very powerful one very soon after the death of Alexander the Great, viz. during the Lamian war against Antipater. (Diod. xix. 66; xx. 99.) How far its organisation was then regulated is unknown, though a certain constitution must have existed as early as that time, since we find that Aristotle wrote a work on the Aetolian constitution. (Strab. vii. p. 321.) But it was certainly wanting in internal solidity, and not based upon any firm principles. In B.C. 204, two of the heads of the confederacy, Dorimachos and Scopas, were commissioned to regulate its constitution, and it was perhaps in consequence of their regulation, that a cancelling of debts was decreed two years later. (Polyb. xiii. 1, *Fragm. Hist.* 68.) The characteristic difference between the Aetolian and Achaean leagues, was that the former originally consisted of a confederacy of nations or tribes, while the latter was a confederacy of towns. Hence the ancient and great towns of the Aetolians, throughout the period of the league, are of no importance and exercise no influence whatever. Even Thermon, although it was the head of the league, and the place where the ordinary meetings of the confederates were held (Polyb. v. 8, xviii. 31, xxviii. 4; Strab. x. p. 463), did not serve as a fortress in times of war; and whenever the Aetolians were threatened by any danger, they preferred withdrawing to their impregnable mountains.

The sovereign power of the confederacy was vested in the general assemblies of all the confederates (*κοινὸν τῶν Αἰτωλῶν*, *concilium Aetolorum*), and this assembly unquestionably had the right to discuss all questions respecting peace and war, and to elect the great civil and military officers of the league. It is however clear that those assemblies could not be attended by all the Aetolians, for many of them were poor, and lived at a great distance, in addition to which the roads were much more impassable than in other parts of Greece. The constitution of the league was thus in theory a democracy, but under the cover of that name it was in reality an aristocracy, and the name *Panaetolicum*, which Livy (xxxi. 29) applies to the Aetolian assembly, must be understood accordingly as an assembly of the wealthiest and most influential persons, who occasionally passed the most arbitrary resolutions, and screened the maddest and most unlawful acts of the leading men under the fine name of a decree of all the Aetolians.

We have already mentioned that the ordinary place of meeting was at Thermon, but on extraordinary occasions assemblies were also held in other towns belonging to the league, though they were not situated in the country of Aetolia proper, *e.g.* at Heracleia (Liv. xxxiii. 3), Naupactus (xxxv. 12), Hypata (xxxvi. 2, 8), and Lamia (xxxv. 43, 44). The questions which were to be brought before the assembly were sometimes discussed previously by a committee, selected from the great mass, and called Apocleti (ἀπόκλητοι, Suid. *s. v.*; Liv. xxxvi. 28). Some writers believe that the Apocleti formed a permanent council, and that the thirty men sent out to negotiate with Antiochus were only a committee of the Apocleti. (Polyb. iv. 9, xx. 10, xxi. 3; Tittmann, *Griech. Staatsverf.* p. 727.)

The general assembly usually met in the autumn, when the officers of the league were elected. (Polyb. iv. 37.) The highest among them, as among those of the Achaean league, bore the title of *στρατηγός*, whose office lasted only for one year. The first whose name is known was Eurydamos, who commanded the Aetolians in the war against the Galatians. (Paus. x. 16, § 2.) The strategus had the right to convoke the assembly; he presided in it, introduced the subjects for deliberation, and levied the troops. (Liv. xxxviii. 4.) He had his share of the booty made in war, but was not allowed to vote in decisions upon peace or war. (Liv. xxxv. 25.) This was a wise precaution, as a sanguine strategus might easily have involved the league in wars which would have been ruinous to the nation. His name was signed to all public documents, treaties, and decrees of the general assembly. An exception occurs in the peace with the Romans, because they themselves dictated it and abandoned the usual form. (Polyb. xxii. 15.) Respecting the mode of election, we are told by Hesychius (s. *v. κυάμῳ πατρίῳ*), that it was decided by white and black beans, and not by voting, but by drawing lots. The authority on which the statement of Hesychius is based can be of no weight, and we must suppose that the election was made by voting (see Schömann, *Griech. Alt.* ii. p. 105).

The officers next in rank to the strategus were the hipparchus and the public scribe. (Polyb. xxii. 15; comp. Liv. xxxviii. 11.) We further hear of *σύνεδροι*, who act as arbiters (Böckh, *Corp. Inscr.* vol. ii. p. 633), and *νομογράφοι*, who however may have had no more to do with the making of laws than the Athenian nomothetae. (Böckh, *l. c.* pp. 857, 858.)

With the exception of the points above mentioned, the constitution of the Aetolian league is involved in great obscurity. There are, however, two things which appear to have had an injurious effect upon the confederacy: first, the circumstance that its members were scattered over a large tract of country, and that besides Aetolia proper and some neighbouring countries, such as Locris and Thessaly, it embraced towns in the heart of Peloponnesus, the island of Cephallenia in the west, and in the east the town of Cios on the Propontis; in the second place, many of the confederates had been forced to join the league, and were ready to abandon it again as soon as an opportunity offered. (Polyb. iv. 25; comp. xxii. 13, 15; Liv. xxxviii. 9, 11.) The towns which belonged to the league of course enjoyed isopolity; but, as it endeavoured to increase its strength in all possible ways, the Aetolians also formed connections of friendship and alliances with other states which did not join the league. (Polyb. ii. 46.) The political existence of the league was destroyed in B.C. 189 by the treaty with Rome, whereby they became subjects of Rome; and the treachery of the Roman party among the Aetolians themselves caused in B.C. 167 five hundred and fifty of the leading patriots to be put to death, and those who survived the massacre were carried to Rome as prisoners. (Liv. xlv. 31; Justin. xxxiii. 2.) An Aetolian, like an Achaean, league continued to exist under the Roman dominion as late as the time of Pausanias (x. 38), but it was without any political significance. (Comp. Tittmann, *Darstellung der Griech. Staatsverf.* p. 721, &c.; Lucas, *Ueber Polyb. Darstellung des Aetol. Bundes*, Königsberg, 1827, 4to; K. F. Hermann, *Griech. Staatsalterth.* § 183; Schorn, *Geschichte Griechenl.* p. 25, &c.; Brandstäter, *Die Gesch. des Aetol. Landes, Volkes und Bundes*, p. 298, &c.) [L. S.]

AETO'MA (*ἀέτωμα*). [FASTIGIUM.]

AFFI'NES, AFFI'NITAS, or ADFI'NES, ADFI'NITAS. Affinitas is the term used in Roman law to express the relationship of the husband to the *cognati* of his wife, and of wife to the *cognati* of her husband. The *cognati* of the husband and of the wife are not *affines* to one another.

Affinitas is created by and continues only during marriage, but its legal consequences may come into operation after the termination of the marriage on which it was founded. (Gaius, i. 63; *Frag. Vat.* § 303.)

By mere betrothal a relationship was created which is treated to some extent as equivalent to *affinitas*. It is sometimes described by that term. (Dig. 38, 10, 6, § 1.)

Although *affines* may be more or less nearly connected, they are not, like *cognati*, distinguished by degrees (*gradus*), but by particular terms.

The father of a husband is the *socer* of the husband's wife, and the father of a wife is the *socer* of the wife's husband; the term *socrus* expresses the same affinity with respect to the husband's and wife's mothers. A son's wife is *nurus* or daughter-in-law to the son's parents; a wife's husband is *gener* or son-in-law to the wife's parents. Thus the *avus, avia—pater, mater*—of the wife become by the marriage respectively, the *socer magnus, prosocrus*, or *socrus magna—socer, socrus*—of the husband, who becomes with respect to them severally *progener* and *gener*.

In like manner, the corresponding ancestors of the husband respectively assume the same names with respect to the son's wife, who becomes, with respect to them, *pronurus* and *nurus*. The son and daughter of a husband or wife born of a prior marriage are called *privignus* and *privigna*, with respect to their step-father or step-mother;

and with respect to such children the step-father and step-mother are severally called *vitricus* and *noverca*. The husband's brother becomes *levir* with respect to the wife, and his sister becomes *glos* (the Greek γάλως).

Affinity in the direct line was always impediment to marriage, but not collateral (Cic. *de Div.* i. 46; Val. Max. i. 5, § 4). Marriage with a brother's widow and with a wife's sister were prohibited by imperial Constitutions (Cod. v. 5, ss. 5, 8, 9; Dig. 38, 10, 4, § 3; Puchta, § 196). [G. L.] [E. A. W.]

AGALMA (ἄγαλμα). [STATUARIA.]

AGAMIOU GRAPHE' (ἀγαμίου γραφή). At Sparta, proceedings might be taken against those who married too late (γραφὴ ὀψιγαμίου) or unsuitably (γραφὴ κακογαμίου) as well as against those who did not marry at all (ἀγαμίου). The penalty was ἀτιμία. (Pollux, viii. 40; Plut. *Lycurg.* 15.) [MATRIMONIUM.]

Whether there was any such interference with individual liberty at Athens during the democratic period is more than doubtful. The evidence of passages in Plutarch (*de Am. Prolis*, p. 493 *e*) and Pollux (iii. 48) is rejected by Meier (*Att. Process*, p. 287), Westermann (in Pauly, *s. v.* ἄγαμοι), and Caillemer (in Daremberg and Saglio). No mention of ἀγαμίου γραφή occurs in the orators, even when we might most expect it; as when proof is required that a man had died unmarried (Demosth. *c. Leochar.* p. 1086, § 18; 1089, § 30). On the other hand, certain disabilities attached, at Athens, to the state of celibacy; those who entered public life, as ῥήτορες or στρατηγοί, were required παιδοποιεῖσθαι κατὰ τοὺς νόμους (Deinarch. *c. Demosth.* p. 99, § 72). Plato characteristically proposes to enforce marriage on all citizens before their 35th year by fines and atimia (*Leg.* iv. p. 721 A, B), and lays down the rule that in choosing a wife every one ought to consult the interest of the state, and not his own pleasure (*Leg.* vi. p. 773). [W. W.]

AGA'SO, a groom, a slave whose business it was to take care of the horses. (Plaut. *Merc.* v. 2, 11; Liv. xliii. 5; Plin. *H. N.* xxxv. § 134.) The word is also used for a driver of beasts of burthen (Apul. *Met.* vi. c. 18, vii. c. 18), and is sometimes applied to a slave who had to perform the lowest menial duties. (Hor. *Serm.* ii. 8, 72; Pers. v. 76.) [W. S.]

AGATHOERGI (ἀγαθοεργοί). In time of war the kings of Sparta had a body-guard of 300 knights (ἱππεῖς), of whom the five eldest retired every year, and were employed for one year, under the name of *agathoergi*, in missions to foreign states. (Herod. i. 67.) It has been maintained by some writers that the *agathoergi* did not attain that rank merely by seniority, but were selected from the ἱππεῖς by the ephors without reference to age. (Ruhnken, *Ad Timaei Lexic. Plat.* s. v.; Hesych. s. v.; Bekker, *Anecd.* vol. i. p. 209.) [W. S.]

AG'ELA (ἀγέλη), an assembly of young men in Crete, who lived together from their seventeenth year till the time of their marriage. Up to the end of their sixteenth year they remained in their father's house; and from the circumstance of their belonging to no *agela*, they were called ἀπάγελοι. They were then enrolled in *agelae*, which were of an aristocratic nature, and gave great power to particular families. An *agela* always consisted of the sons of the most noble citizens, who were usually under the jurisdiction of the father of the youth who had been the means of collecting the *agela*. It was the duty of this person, called ἀγελάτης, to superintend the military and gymnastic exercises of the youths (who were called ἀγέλαστοι), to accompany them to the chase, and to punish them when disobedient. He was accountable, however, to the state, which supported the *agela* at the public expense. All the members of an *agela* were obliged to marry at the same time. When they ceased to belong to an *agela*, they partook of the public meals for men (ἀνδρεῖα) [SYSSITIA]. These institutions were afterwards preserved in only a few states of Crete, such for instance as Lyctus. (Ephorus, *ap.* Strab. x. p. 480, &c.; Heracl. Pont. c. 3; Höck, *Creta*, iii. p. 100, &c.; Müller, *Dor.* iv. 5, § 3; Hermann, *Griech. Staatsalterthümer*, § 22; Wachsmuth, *Hellen. Alterthumskunde*, vol. i. p. 362, 2nd ed.; Krause, *Die Gymnastik u. Agonistik d. Hellenen*, p. 690, &c.) At Sparta the youths left their parents' houses at seven years of age and entered the βοῦαι. [W. S.]

AGE'MA (ἄγημα, from ἄγω), the name of a chosen body of troops in the Macedonian army, forming the royal guard, consisting of horse-soldiers and foot-soldiers, but usually of the former. It seems to have varied in number; sometimes it consisted of 150 men, at other times of 300, and in later times it contained as many as 1000 or 2000 men. (Arrian, *Anab.* i. 1, § 11; ii. 8, § 3; iv. 24, § 1; Diod. xix. 27, 28; Liv. xxxvii. 40; xlii. 51, 58; Curt. iv. 13; Polyb. v. 25, 65, xxxi. 3; Appian, *Syr.* 32; Hesych. and Suid. *s. v.*; Eustath. *ad Od.* i. p. 1399, 62.) [W. S.]

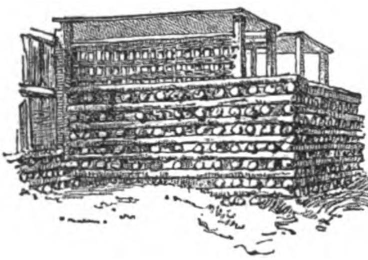
AGEORGIOU DIKE' (ἀγεωργίου δίκη) is nowhere mentioned in the classical writers, but is thus explained by grammarians: σημαίνει τὸ ἐπειδάν τις χώριον παραλαβὼν ἀγεώργητον καὶ ἀνέργαστον ἐάσῃ, ἔπειτα ὁ δεσπότης δικάζηται τῷ παραλαβόντι (Bekk. *Anecd.* pp. 20, 336). It has been argued from the use of the word παραλαβεῖν that the right of bringing this action was confined to the owner of mortgaged land as against the mortgagee or incumbrancer, and did not extend to ordinary tenancy (μισθώσασθαι); but it was probably general (Caillemer, *s. v.* in Daremberg and Saglio, against Büchsenschütz, *Besitz und Erwerb*, p. 93). [W. W.]

AGER and **AGER PUBLICUS.** [AGRARIAE LEGES; AGRIMETATIO.]

AGER SANCTUS (τέμενος). For an account of the lands in Greece devoted to the service of religion, see TEMENOS; for an account of those in Rome, see SACERDOS. [W. S.]

AGETO'RIA (ἀγητόρια). [CARNEIA.]

AGGER (χῶμα), from *ad* and *gero*, was used in general for a heap or mound of any kind which might be made of stones, wood, earth, or any other substance. It was more particularly applied to a mound, usually composed of earth, which was raised round a besieged town, and which was gradually increased in breadth and height, till it equalled or overtopped the walls. Hence we find the expressions *aggere oppidum oppugnare*, *aggere oppidum cingere;* and the making of the agger is expressed by the verbs *exstruere*, *construere*, *jacere*, *facere*, &c. Some of these *aggeres* were gigantic works, flanked with towers to defend the workmen and soldiers, and surmounted by parapets, behind which the soldiers could discharge missiles upon the besieged towns. At the siege of Avaricum, Caesar raised in twenty-five days an agger 330 feet broad, and 80 feet high. (*B. G.* vii. 24.) As the agger was sometimes made of wood, hurdles, and similar materials, we read of its being set on fire. (Liv. xxxvi. 23; Caes. *B. G.* vii. 24, *B. C.* ii. 14, 15.) The word *agger* was also applied to the earthen wall surrounding a Roman encampment, composed of the earth dug from the ditch (*fossa*), which was usually nine feet broad and seven feet deep; but if any attack was apprehended, the depth was increased to twelve feet, and the breadth to thirteen feet. Sharp stakes, &c., were usually fixed upon the agger, which was then called *vallum*. When both words are used (as in Caesar, *B. G.* vii. 72, *agger ac vallum*), the agger means the mound of earth; and the vallum the sharp stakes (*valli*) which were fixed upon the agger.



Agger, from Column of Trajan.

At Rome, the formidable rampart erected by Servius Tullius to protect the north-eastern side of Rome was called *agger*. It extended seven stadia, or about 1400 yards, from the Porta Collina to the Porta Esquilina, at the back of the Esquiline hill, where Rome is least fortified by nature. It was fifty feet broad, and protected by a ditch a hundred feet wide and thirty feet deep; and the Servian wall was carried along the top of it. (Cic. *de Rep.* ii. 6; Dionys. ix. 68.) Pliny (*H. N.* iii. § 67) attributes the erection of this rampart to Tarquinius Superbus, who may have completed the work of his predecessor. Recent excavations have greatly cleared up the subject of this *agger*, which the older writers sometimes failed to distinguish from the wall itself. (See Burn, *Rome*, p. 48 ff., and the map facing p. 49.) [W. S.] [W. W.]

AGITATO'RES. [CIRCUS.]

AGMEN. [EXERCITUS.]

AGNA'TI. [COGNATI.]

AGNO'MEN. [NOMEN.]

AG'OLUM, a shepherd's staff (*pastorale baculum quo pecudes aguntur*, Festus, *s. v.*), identified by Rich with the staff of the modern drovers of the Campagna, "formed by a long straight shoot of prickly pear." [J. H. F.]

AGONA'LES. [SALII.]

AGONA'LIA, AGO'NIA or **AGONA'LES DIES**, a name given to four festivals in the Roman calendar. Many different explanations have been given of the name (cf. Ov. *Fast.* i. 319–332; Fest. *Epit.* s. v.; Varr. *L. L.* vi. 12), most of them quite absurd. There can be little doubt that it is derived from the Old Latin *agonia*, "a victim," or *agonium*, "a festival," a word also found in other Italian dialects (Corssen, i.^{2} 396; Curtius, *Principles*, i. 209).

1. On Jan. 9 the *rex* offered in the *regia* a ram in honour of Janus (Cal. Praenest.; Ov. *Fast.* i. 333). This sacrifice was said to have been instituted by Numa (Macrob. i. 4, 7).

2. On March 17, the day of the Liberalia, called according to Masurius (*apud* Macrob. i. 4, 15) the *Agonium Martiale*, a victim was offered by the *Salii agonales* on the Mons Quirinalis, hence sometimes called *Mons Agonus*, in honour of Mars, or more probably of Quirinus. (Cal. Vatic.)

3. On May 21 there was a festival called in the Cal. Venus. *Agon. Vediovi*, when a victim was offered to Vejovis in his temple on the Capitoline hill.

4. On Dec. 11 there was, according to Festus, a festival called *Septimontium*, when sacrifice was offered on each of the seven hills. This is denoted in the Fasti Amiternini (*C. I. L.*, p. 325) AG. IN., interpreted by Mommsen as *Agoniu Inui*. (Cf. Marquardt, *Röm. Staatsv.* iii. p. 310, note; Huschke, *Das alte röm. Jahr*, Breslau, 1869, pp. 247–8.) [A. S. W.]

AGO'NES (ἀγῶνες), the general term among the Greeks for the contests at their great national games. [OLYMPIA, PYTHIA, NEMEA, ISTHMIA.] The word was also used to signify lawsuits, and was especially employed in the phrase ἀγῶνες τιμητοὶ and ἀτίμητοι. [TIMEMA.] [W. S.]

AGONOTHETAE (ἀγωνοθέται) were persons, in the Grecian games, who decided disputes and adjudged the prizes to the victors. Originally, the person who instituted the contest and offered the prize was the *agonothetes*, and this continued to be the practice in those games which were instituted by kings or private persons. But in the great public games, such as the Isthmian, Pythian, &c., the *agonothetae* were either the representatives of different states, as the Amphictyons at the Pythian games, or were chosen from the people in whose country the games were celebrated. During the flourishing times of the Grecian republics, the Eleians were the *agonothetae* in the Olympic games, the Corinthians in the Isthmian games, the Amphictyons in the Pythian games, and the Corinthians, Argives, and inhabitants of Cleonae in the Nemaean games. The ἀγωνοθέται were also called αἰσυμνῆται, ἀγωνάρχαι, ἀγωνοδίκαι, ἀθλοθέται, ῥαβδοῦχοι or ῥαβδονόμοι (from the staff they carried as an emblem of authority), βραβεῖς, βραβευταί. [OLYMPIA, PYTHIA, NEMEA, ISTHMIA.] [W. S.]

AG'ORA (ἀγορά). 1. Agora means an assembly of any nature, and is usually employed by Homer for the general assembly of the people. The agora seems to have been considered an essential part in the constitution of the early Grecian states, since the barbarity and uncivilised condition of the Cyclops is characterised by their wanting such an assembly. (Hom. *Od.* ix. 112.) The agora, though usually convoked by the king, appears to have been also summoned at times by some distinguished chieftain, as, for example, by Achilles before Troy. (Hom. *Il.* i. 54.) The king occupied the most important seat in these assemblies, and near him sat the nobles, while the people sat in a circle around them. The power and rights of the people in these assemblies have been the subject of much dispute. Platner, Tittmann, and Nitzsch in his commentary on the Odyssey, maintain that the people was allowed to speak and vote; while Müller (*Dor.* iii. 1, § 3), who is followed by Grote (*Hist. of Greece*, vol. ii. p. 91), maintains that the nobles were the only persons who proposed measures, deliberated, and voted, and that the people was only present to hear the debate, and to express its feeling as a body; which expressions might then be noticed by a prince of a mild disposition. The latter view of the question is confirmed by the fact, that in no passage in the Odyssey is any common man represented as taking part in the discussion; while, in the Iliad, Ulysses inflicts personal chastisement upon Thersites, for presuming to attack the nobles in the agora. (*Il.* ii. 211–277.) The people appear to have been only called together to hear what had been already agreed upon in the council of the nobles, which is called *βουλή* (*Il.* ii. 53, vi. 114, *γέροντες βουλευταί*), and *θόωκος* (*Od.* ii. 26), and sometimes even *ἀγορά* (*Od.* ix. 112; *ἀγοραὶ βουληφόροι*). Justice was administered in the agora by the king or chiefs (Hes. *Theog.* 85; Hom. *Il.* xviii. 497, *Od.* xii. 439), &c., but the people had no share in its administration, and the agora served merely the purpose of publicity. The common phrases used in reference to the agora are *εἰς ἀγορὴν καλέειν*; *ἀγορὴν ποιεῖσθαι, τίθεσθαι*; *εἰς τὴν ἀγορὴν εἰσιέναι, ἀγείρεσθαι*, &c. (Wachsmuth, *Hellen. Alterthumsk.* vol. i. p. 346, 2nd ed.; Hermann, *Lehrbuch. d. Griech. Staatsalt.* § 55; Grote, *Hist. of Greece*, vol. ii. pp. 91–101.)

Among the Athenians, the proper name for the assembly of the people was *ἐκκλησία*, and among the Dorians *ἁλία*. The term *agora* was confined at Athens to the assemblies of the phylae and demi. (Aesch. *c. Ctes.* § 27, p. 50, 37; Schömann, *de Comitiis Athen.* p. 27, *Antiq. Jur. Publ. Graec.* pp. 203, 205; Böckh, *Corp. Inscrip.* vol. i. p. 125.) In Crete the original name *ἀγορά* continued to be applied to the popular assemblies till a late period. (Bekker, *Anecdot.* vol. i. p. 210.) [W. S.]

2. Agora was also the place of public assembly in a Greek city, both for traffic and for the transaction of all public business. It answers to the Roman *forum*; and, in fact, it is impossible to keep these two subjects entirely separate.

In the earliest times, the agora was merely an open piece of ground, which was generally in front of the royal palace, and in seaport towns close to the harbour. The agora of Troy was in the citadel. Here the chiefs met in council and sat in judgment, and the people assembled to witness athletic games. It was evidently also the place of traffic and of general intercourse; in one passage of Homer we have a lively picture of the idlers who frequented it. It was enclosed with large stones sunk into the earth, and seats of marble were placed in it for the chiefs to sit in judgment, and it was hallowed by the shrine of one or more divinities. In the agora which Homer particularly describes —that of the Phaeacians—there was a temple of Poseidon. (Hom. *Il.* ii. 788, vii. 345, 346, xviii. 497–506; *Od.* vi. 263–285, viii. 16, 109, xvi. 361.)

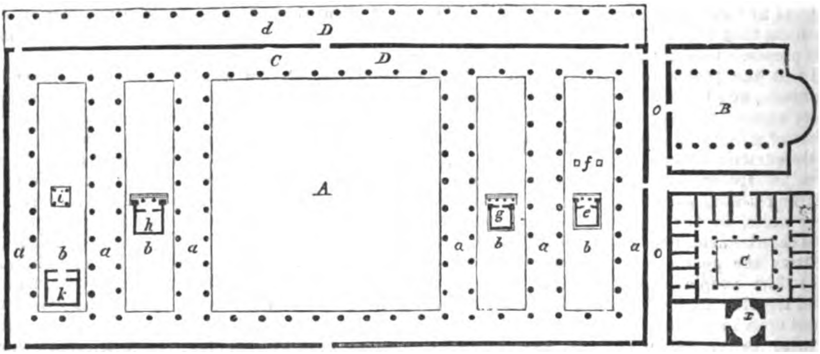
Out of this simple arrangement arose the magnificent *ἀγορά* of later times, which consisted of an open space, enclosed by porticoes or colonnades, divided into separate parts for the various occupations which were pursued in it, adorned with statues, altars, and temples, and built about with edifices for the transaction of public and private business, and for the administration of justice.

Our information respecting these edifices is rather scanty. The chief authorities are Pausanias and Vitruvius. The existing ruins are in such a state as to give us very little help.

We have, first of all, in this, as in other departments of architecture, to distinguish the ancient style from that introduced by the Greeks of Ionia after the Persian war, and more especially by Hippodamus of Miletus [see *Dict. of Biog.* s. v.], whose connexion with the building of *ἀγοραί* of a new form is marked by the name *Ἱπποδαμεία*, which was applied to the agora in the Peiraeus. (Harpocr. *s. v.* *Ἱπποδαμεία*.) The general character of the Greek *ἀγορά* is thus described by Vitruvius (v. 1): "The Greeks arrange their fora in a square form, with very wide double colonnades, and adorn them with columns set near one another, and with stone or marble entablatures, and they make walks in the upper stories."

Among the *ἀγοραί* described by Pausanias, that of the Eleians is mentioned by him (vi. 24) as being "not on the same plan as those of the Ionians and the Greek cities adjoining Ionia, but it is built in the more ancient fashion, with porticoes separated from one another, and streets between them. But the name of the agora in our days is *hippodromos*, and the people of the country exercise their horses there. But of the porticoes, the one towards the south is of the Dorian style of work, and the pillars divide it into three parts (in this the Hellanodicae generally pass the day); but against these (pillars) they place altars to Zeus... To one going along this portico, into the agora, there lies on the left, along the further side of this portico, the dwelling of the Hellanodicae (*ὁ Ἑλλανοδικεών*); and there is a street which divides it from the agora . . . And near the portico where the Hellanodicae pass the day is another portico, there being one street between them: this the Eleians call the Corcyraean portico" (because it was built from the tithe of spoil taken from the Corcyraeans in war). "But the style of the portico is Dorian and double, having columns on the one side towards the agora, and on the other side towards the parts beyond the agora; and along the middle of it is a wall, which thus supports the roof; and images are placed on both sides against the wall." He then proceeds to mention the ornaments of the agora,—namely, the statue of the philosopher Pyrrhon; the temple and statue of Apollo Acesius; the statues of the Sun and Moon; the temple of the Graces, with their wooden statues, of which the dress was gilt, and the hands and feet were of white marble; the temple of Seilenus, dedicated to him alone, and not in common with Dionysus; and a monumental shrine, of peculiar form, without walls, but with oak pillars supporting the roof, which was reported to be the monument of Oxylus. The agora also contained the dwelling of the sixteen females, who wove in it the sacred robe for Hera. It is worthy of remark that several of these details confirm the high antiquity which Pausanias assigns to this agora.

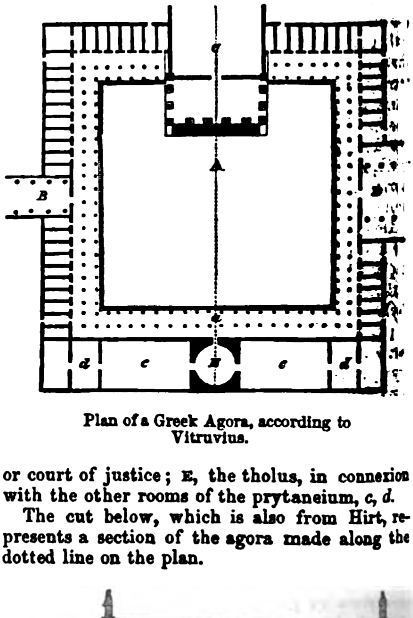
Hirt has drawn out the following plan from the description of Pausanias. (*Geschichte der Baukunst bei den Alten*, Taf. xxi. fig. 5.) We give it, not as feeling satisfied of its complete accuracy, but as a useful commentary on Pausanias.



Ground-plan of the old Agora at Elis.

A, the chief open space of the agora, called, in the time of Pausanias, *hippodromus*; *a*, colonnades separated by streets, *b*; B, the stoa in which the Hellanodicae sat, divided from the agora by a street *o*; C, the house of the Hellanodicae; *x*, the tholus; D, the Corcyraean stoa, composed of two parts, *c* looking into the agora, and *d* looking away from it; *e*, *g*, *h*, small temples; *f*, statues of the Sun and Moon; *i*, monument of Oxylus; *k*, house of the sixteen women.

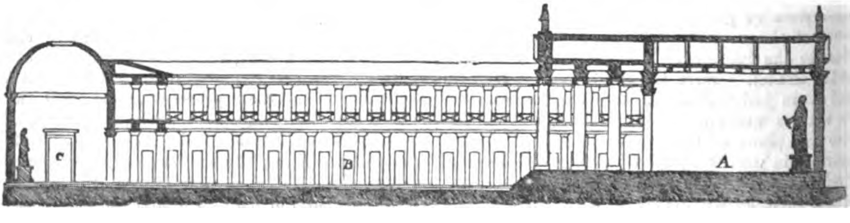
In this agora the stoa, B, answers to the later *basilica*, and the house, C, to the *prytaneium* in other Greek *ἀγοραί*. With respect to the other parts, it is pretty evident that the chief open space, A, which Pausanias calls *τὸ ὕπαιθρον τῆς ἀγορᾶς*, was devoted to public assemblies and exercise, and the *στοαί* (*a*), with their intervening streets (*b*), to private business and traffic. Hirt traces a resemblance of form between the Eleian agora and the forum of Trajan. It is evident that the words of Vitruvius, above quoted, refer to the more modern, or Ionian form of the agora, as represented in the following plan, which is also taken from Hirt (*Geschichte der Baukunst*, xxi. fig. 1):—



Plan of a Greek Agora, according to Vitruvius.

A, the open court, surrounded by double colonnades and shops; B, the curia; C, the chief temple, also used as a treasury; D, the basilica, or court of justice; E, the tholus, in connexion with the other rooms of the prytaneium, *c*, *d*.

The cut below, which is also from Hirt, represents a section of the agora made along the dotted line on the plan.



Section of the same.

We gain further information respecting the buildings connected with the agora, and the works of art with which it was adorned, chiefly from the statements of Pausanias respecting those of particular cities, such as Athens (i. 5, § 2), Thebes (ix. 17, § 1), Sicyon (ii. 7, § 7, 9, § 6), Argos (ii. 21), Sparta (iii. 11), Tegea (viii. 47, § 3), Megalopolis (viii. 30, § 2), to which passages the reader is referred for the details. The buildings mentioned in connexion with the agora are:—1. Temples of the gods and shrines of heroes [TEMPLUM], besides altars and statues of divinities. The epithet *ἀγοραῖος* is often applied to a divinity who was thus worshipped in the agora (Paus. *ll. cc.*; Aesch. *Eumen.* 976; Soph. *Oed. Tyr.* 161, where mention is made of the circular throne of Artemis in the agora), and Aeschylus expressly refers to the *θεοὶ ἀγορᾶς ἐπισκόποι* (*Sept. c. Theb.* 271, 272). 2. The senate-house (*Βουλευτήριον*), and other places for the meetings of the governing bodies, according to the constitution of the particular state: in the agora at Sparta, for example, there were the senate-house of the Gerontes and the places of meeting of the Ephori, the Nomophylaces, and the Bidiaei. 3. The residence of the magistrates for the time being [PRYTANEIUM]. 4. Courts of justice [BASILICA]. 5. The public treasury [THESAURUS]. 6. The prison [CARCER]. 7. The police-station, if such a term may be applied to an ancient agora. At Athens, for example, the station of the thousand Scythian bowmen, who formed the police force of the state, was in the middle of the agora; this does not, however, seem to have been a permanent building, but only a number of tents. 8. Buildings used for the regulation of the standards of measure, and so forth; such as the building vulgarly called the Temple of the Winds at Athens [HOROLOGIUM], and the Milliarium Aureum at Rome, which seems to have been imitated from a similar standard at Athens [MILLIARIUM]. To these various buildings must be added the works of art with which the open area and the porticoes of the agora were adorned; which were chiefly in celebration of gods and heroes who figured in the mythology, of men who had deserved well of the state, of victories and other memorable events, besides those which obtained a place there purely by their merits as masterpieces of art. As a specimen we may take the agora at Athens, a portico of which, thence called the *στοὰ ποικίλη*, was adorned with the paintings of Polygnotus, Micon, and others, and in which also stood the statues of the ten heroes (*ἀρχηγέται*) after whom the Phylae of Cleisthenes were named, of Solon, of Harmodius and Aristogeiton, of the orator Lycurgus, and of very many others. It was customary also to build new porticoes out of the spoils taken in great wars, as examples of which we have the Corcyraean portico at Elis, mentioned above, and the Persian portico at Sparta.

The open area of the agora was originally the place of public assembly for all purposes, and of general resort. Its use for political purposes is described in the preceding article. Here also were celebrated the public festivals. At Sparta, the part of the agora in which stood the statues of Apollo, Artemis, and Leto, was called *χορός*, because the choruses of the Ephebi performed their dances there at the festival of the Gymnopaedia. (Paus. iii. 9.) Lastly, it was the place of social and fashionable resort. At Athens, fashionable loungers were called *ἀγάλματα ἀγορᾶς*.

Originally the agora was also the market, and was surrounded with shops, as shown in the above plan. As commerce increased, it was found convenient to separate the traffic from the other kinds of business carried on in the agora, and to assign to each its distinct place, though this was by no means universally the case. The market, whether identical with or separate from the agora for political and other assemblies, was divided into parts for the different sorts of merchandise, each of course furnished with colonnades, which the climate rendered necessary, and partly with shops and stalls, partly with temporary booths of wicker-work (*σκηναί*, Harpocr. *s. v.* *σκηνίτης*; Demosth. *de Cor.* p. 234). Each of these parts was called a *κύκλος*. It is generally stated that this term was applied only to that division of the market where meat, fish, and such things were sold; but Becker has shown that it was used also for other parts of the market (Becker-Göll, *Charikles*, ii. p. 195). The several divisions of the market were named according to the articles exposed for sale in them. (Poll. ix. 47, x. 19.) Of these divisions, the following were the most important.

The part in which fish and other delicacies for the table were exposed for sale was called *ἰχθῦς ὄψον*, or *ἰχθυόπωλις ἀγορά*, and was the chief centre of business. It was open only for a limited time, the signal for commencing business being given by the sound of a bell, which was obeyed with an eagerness that is more than once pleasantly referred to by the ancient writers. (Plutarch, *Sympos.* iv. 4, 2; Strab. xiv. p. 658.) The coarseness and impositions of the fishsellers, and the attempts of purchasers to beat them down, are frequently alluded to by the comic poets. (Amphis, *ap.* Ath. vi. p. 224, e; Alexis, *ibid.*; Xenarch. *ibid.* p. 225, c; Alexis, *ibid.* p. 226, a, b; comp. Plat. *Leg.* xi. p. 917.) It is not quite clear whether meat, poultry, and so forth, were sold in the same place as the fish, or had a separate division of the market assigned to them. Bread was partly sold in the assigned place in the market, which was perhaps the same as the meal-market (*τὰ ἄλφιτα*), and partly carried round for sale: the sellers were generally women, and were proverbially abusive. (Aristoph. *Ran.* 857; *Vesp.* 1389.) In another part of the market, called *μυῤῥίναι*, were the women who sold garlands of myrtle and flowers for festivals and parties. (Plut. *Arat.* 6; Aristoph. *Thesm.* 448, 457.) Near these, probably, were the sellers of ribands and fillets for the head. (Demosth. *in Eubul.* p. 1308, § 31.) The wholesale traffic in wine, as distinct from the business of the *κάπηλος* [CAUPO], was carried on in the market, the wine being brought in from the country in carts, from which it was transferred to amphorae; the process is represented in two pictures at Pompeii. (Alexis, *ap.* Ath. x. p. 431, e; *Mus. Borbon.* vol. iv. Relaz. d. Scav. A., and vol. v. p. 48.) [AMPHORA.] The market for pottery was called *χύτραι*; and must not be confounded with the place where cooks sat and offered themselves for hire, with their cooking utensils: this latter place was called *μαγειρεῖα*. (Poll. ix. 48; Alexis, *ap.* Ath. iv. p. 164, f.) In short, every kind of necessary or luxury was exposed for sale in its assigned place. Thus we find, besides those already mentioned, the market for onions (*τὰ κρόμυα*), for garlic (*τὰ σκόροδα*), for nuts (*τὰ κάρυα*), for apples (*τὰ μῆλα*), for fresh cheese (*ὁ χλωρὸς τυρός*), for oil (*τοὔλαιον*), for perfumes and unguents (*τὰ μύρα*), for frankincense (*ὁ λιβανωτός*), for spice (*τὰ ἀρώματα*), for couches (*αἱ κλῖναι*), for new and old clothes (*ἀγορὰ ἱματιόπωλις*, or *σπειρόπωλις*, Poll. vii. 78), for books (*βιβλιοθήκη*), and for slaves (*τὰ ἀνδράποδα*, Poll. x. 19). Lastly, a part of the market was devoted to the money-changers (τραπεζῖται). [ARGENTARII.] Mention is sometimes made of the women's market, γυναικεία ἀγορά, a term which has given rise to much doubt. (Theophr. *Char.* 2; Poll. x. 18.) The common explanation is, that it was the part of the market to which women resorted to purchase what they wanted for household uses. But it appears clearly that purchases were seldom made in the market by women, and never by free women. The only plausible explanation is, either that a distinct part of the market was assigned to those commodities the sellers of which were women, such as the ἀρτοπώλιδες, λεκιθοπώλιδες, ἰσχαδοπώλιδες, στεφανοπώλιδες, and others, or else that the term was applied to that part of the market where articles for the use of women were sold. But the matter is altogether doubtful. The above list of commodities, sold in the respective divisions of the market, might be still further extended. Indeed, with reference to the Athenian market, to which the description chiefly applies, there can be no doubt that every article of home produce or of foreign commerce from the known world was there exposed for sale. (See Thuc. ii. 18; Xen. *Oecon. Ath.* ii. 7; Isocr. *Paneg.* 64; Ath. xiv. p. 640, b, c.)

It is not to be supposed, however, that the sale of these various articles was confined to the market. Frequent mention is made of shops in other parts of the city (*e.g.* Thuc. viii. 95); and some articles, such as salt fish, seem to have been sold outside the gates. (Aristoph. *Equit.* 1246.)

The time during which the market was frequented was the forenoon; but it is difficult to determine precisely how much of the forenoon is denoted by the common phrases πλήθουσα ἀγορὰ, περὶ πλήθουσαν ἀγορὰν, πληθώρη ἀγορᾶς. (Herod. ii. 173, vii. 223.) Suidas (*s. v.*) explains πλήθουσα ἀγορά as ὥρα τρίτη, but elsewhere (*s. v.* περὶ πλήθ. ἀγ.) he says that it was either the fourth, or fifth, or sixth hour. We might infer that the whole period thus designated was from nine to twelve o'clock (equinoctial time); but Herodotus, in two passages (iii. 104, iv. 181), makes a distinction between πλήθουσα ἀγορά and μεσημβρία. (Comp. Liban. *Ep.* 1084.) The time of the conclusion of the market was called ἀγορᾶς διάλυσις (Herod. iii. 104, comp. Xenoph. *Oecon.* 12, 1; and for a further discussion respecting the time of the full market, see Duker, *ad* Thuc. viii. 92; Wesseling, *ad* Diod. Sic. xiii. 48; Perizon. *ad* Aelian. *V. H.* xii. 30; Gesner and Reiz, *ad* Lucian. *Philops.* 11, vol. iii. p. 38; Bähr, *ad* Herod. ii. 173). During these hours the market was a place not only of traffic but of general resort. Thus Socrates habitually frequented it as one of the places where he had the opportunity of conversing with the greatest number of persons. (Xen. *Mem.* i. 1, § 10; Plat. *Apol.* p. 17.) It was also frequented in other parts of the day, especially in the evening, when many persons might be seen walking about or resting upon seats placed under the colonnades. (Demosth. *in Con.* p. 1258, § 7; Pseudo-Plut. *Vit. X. Or.* p. 849, d; Lucian, *Jup. Trag.* 16, vol. ii. p. 660.) Even the shops themselves, not only those of the barbers, the perfumers, and the doctors, but even those of the leather-sellers and the harness-makers, were common places of resort for conversation; and it was even esteemed discreditable to avoid them altogether. (Aristoph. *Plut.* 337, *Av.* 1439; Xen. *Mem.* iv. 2, §
Lysias, *in Pancl.* §§ 3, 7, *pro Inval.* § 2
Demosth. *in Aristog.* i. p. 786, § 52.)

The persons who carried on traffic in th
market were the country people (ἀγοραῖοι), wh
brought in their commodities into the city, an
the retail dealers (κάπηλοι) who exposed th
goods purchased of the former, or of produce
of any kind (αὐτοπῶλαι), or of foreign merchant
(ἔμποροι), for sale in the markets. (Plat. *d*
Repub. ii. p. 371; Xen. *Mem.* iii. 7, § 6; Plut
Arat. 8.) [CAUPO.] A certain degree of disgrac
was attached to the occupation of a retail deale
though at Athens there were positive enactment
to the contrary. (Andoc. *de Myst.* p. 68; Aristot
de Repub. i. 10, iii. 5; Plat. *Leg.* xi. pp. 918
919; Diog. Laërt. i. 104, ix. 66; Aristoph. *Eq*
181; Demosth. *c. Eubul.* p. 1308, § 30.) There i
an interesting but very difficult question as t
the effect which the occupation of selling in the market had upon the social position of women who engaged in it. (Demosth. *in Neaer.* p. 1367, § 67; Plut. *Sol.* 23; Harpocr. and Suid. *s. v.* Πωλῶσι; Becker-Göll, *Charikles*, ii. p. 189 foll.) The wholesale dealers also sold their goods by means of a sample (δεῖγμα), either in the market, or in the place called δεῖγμα attached to the port. (Harpocr. *s. v.* δεῖγμα: Poll. ix. 34; Plut. *Demosth.* 23; Plat. *Leg.* vii. p. 788; Diphil. *ap.* Ath. xi. p. 499, e; Böckh, *Econ. of Ath.* p. 58, 2nd ed.) The retail dealers either exposed their goods for sale in their shops, or hawked them about. (Aristoph. *Acharn.* 33; Plut. *Apophth. Lacon.* 62, p. 236.) The privilege of freely selling in the market belonged to the citizens: foreigners had to pay a toll. (Demosth. *in Eubul.* p. 1309, § 34; Böckh, *Econ. of Ath.* p. 313.)

Most citizens either made their own purchases in the market (Aeschin. *c. Timarch.* § 65; Aristoph. *Lysistr.* 555–559), or employed a slave, who was called, from his office, ἀγοραστής (Xen. *Mem.* i. 5, § 2; comp. Ath. iv. p. 171; Poll. iii. 126; Terent. *Andr.* ii. 2, 31.) Sometimes female slaves performed this office (Lysias, *de Caed. Eratosth.* p. 18; comp. p. 11), but such an appearance in public was not permitted to any free woman, except a courtesan (Machon, *ap.* Ath. xiii. p. 580.) The philosopher Lynceus, of Samos, wrote a book for the guidance of purchasers in the market. (Ath. vi. p. 228.) It was esteemed disreputable for people to carry home their purchases from the markets, and there were therefore porters in attendance for that purpose, who were called προύνεικοι, παιδαρίωνες, and παιδῶνες. (Theophrast. *Char.* xvii.–xxii.; Hesych., *s. v.* προύνεικοι.) The preservation of order in the market was the office of the AGORANOMI.

Both the architectural details of the agora and the uses of its several parts might be further illustrated by the remains of the ἀγορά or ἀγοραί (for it is even doubtful whether there were two or only one) at Athens; but this would lead us too far into topographical details. This part of the subject is fully discussed in the following works:—Leake, *Topography of Athens*; Krause, *Hellas*, vol. ii.; Müller, in Ersch and Grüber's *Encyclopädie*, art. *Attica*; Hirt, *Lehre d. Gebäude*, ch. v. supp. 1; Wachsmuth, *Hellen. Alterthumsk.* vol. i. supp. 6, b, 2nd ed.

For the whole subject the chief modern authorities are the following:—Hirt, *Lehre d. Gebäude* *d. Griechen und Römer*, ch. v.; Stieglitz, *Archäol. d. Baukunst*; Wachsmuth, *Hellenische Alterthumskunde*; Böckh, *Public Economy of Athens*; and especially Becker-Göll, *Charikles*, 4th scene, ii. pp. 177-212. [P. S.]

AGORAN'OMI (ἀγορανόμοι) were public functionaries in most of the Grecian states, whose duties corresponded in many respects to those of the Roman aediles; whence Greek writers on Roman affairs call the aediles by this name. Under the Roman empire, the agoranomi were called λογισταί (Schol. *ad* Aristoph. *Acharn.* 688); they enjoyed in later times great honour and respect, and their office seems to have been regarded as one of the most honourable in the Greek states. We frequently read in inscriptions of their being rewarded with crowns, of which many instances are given by Müller (*Aeginetica*, p. 138). They were called by the Romans *curatores reipublicae*. (Cod. 1, tit. 54, s.3.)

Agoranomi existed both at Sparta and Athens, and, as inscriptions prove, in almost every Greek state. Our knowledge of the Spartan agoranomi is very limited, and derived almost entirely from inscriptions. They stepped into the place of the ancient *empelori* (ἐμπέλωροι) in the time of the Romans. They formed a collegium (συναρχία), with one at their head called πρέσβυς (Böckh, *Corp. Inscr.* vol. i. p. 610; and Sauppe in *Rheinisches Museum*, vol. iv. p. 159, new series). The Athenian agoranomi were regular magistrates during the flourishing times of the republic. They were ten in number, five for the city and five for the Peiraeus, and were chosen by lot, one from each tribe. (Dem. *c. Timocr.* p. 735, § 112; Aristoph. *Acharn.* 689.) The reading in Harpocration (*s. v.* ἀγορανόμοι), which mentions twenty agoranomi—fifteen for the city, and five for the Peiraeus—is false. (Böckh, *Corp. Inscr.* vol. i. p. 337.)

The principal duty of the agoranomi was, as their name imports, to inspect the market, and to see that all the laws respecting its regulation were properly observed. They had the inspection of all things which were sold in the market, with the exception of corn, which was subject to the jurisdiction of the σιτοφύλακες. [SITOPHYLAKES.] The agoranomi had in fact chiefly to attend to retail trade (καπηλεία); wholesale trade was not much carried on in the market-place, and was under the jurisdiction of the ἐπιμεληταὶ τοῦ ἐμπορίου. They regulated the price and quantity of all things which were brought into the market, and punished all persons convicted of cheating, especially by false weights and measures. They had in general the power of punishing all infraction of the laws and regulations relating to the market, by imposing a slight fine (ἐπιβολή) upon the citizens. That they had the further power of inflicting personal chastisement upon foreigners and slaves, and even bore whips as a badge of office, must be pronounced very doubtful, as contrary to what we know of Athenian police regulations. The statement rests only on the authority of scholiasts and grammarians (Schol. Aristoph. *Acharn.* 724; Pollux, x. 177).* They had the care of all the temples and fountains in the market-place, and received the tax (ξενικὸν τέλος) which foreigners and aliens were obliged to pay for the privilege of exposing their goods for sale in the market. (Schol. *ad* Aristoph. *Acharn.* 689; Plat. *Leg.* vi. p. 763, viii. p. 849, xi. pp. 917, 918; Liban. *Declam.* 46; ἀγορᾶς τέλος, Aristoph. *Acharn.* 861, and Schol.; Phot. *s. v.* κατὰ τὴν ἀγοράν.) The public prostitutes were also subject to their regulations, as was the case at Corinth (Justin. xxi. 5), and they fixed the πορνικὸν τέλος or license duty which they paid; not, as late grammarians like Suidas and Zonaras (*s. v.* διάγραμμα) absurdly represent, the remuneration which they were to receive. The duties of the agoranomi resembled those of the astynomi. [ASTYNOMI.] (Meier and Schömann, *Att. Process*, pp. 89-92; Böckh, *Publ. Econ. of Athens*, pp. 48, 333.) [W. S.] [W. W.]

AGRA'PHIOU GRAPHE' (ἀγραφίου γραφή). The names of all persons at Athens who owed any sum of money to the state (οἱ τῷ δημοσίῳ ὀφείλοντες) were registered by the practores (πράκτορες) upon tablets kept for that purpose in the temple of Athena, on the Acropolis (Dem. *c. Aristog.* i. p. 791, § 70; Harpocr. and Suidas, *s. v.* ψευδεγγραφή); and hence the expression of being registered on the Acropolis (ἐγγεγραμμένος ἐν Ἀκροπόλει) always means being indebted to the state. (Dem. *c. Theocrin.* p. 1337, § 64.) Whoever paid his fine after registration was erased, either wholly or in part, according to the amount paid; but if a person's name was improperly erased, he was subject to the action for non-registration (ἀγραφίου γραφή), which was under the jurisdiction of the thesmothetae. If an individual was not registered, he could only be proceeded against by ἔνδειξις, and was not liable to the ἀγραφίου γραφή. (Dem. *c. Theocrin.* p. 1328, § 67.) This action might also, apparently, be brought against public officers who, through favour or carelessness, omitted to register debtors (κατὰ τῶν μὴ ἐγγραφόντων τοὺς ὀφείλοντας is the correct reading for κατὰ τῶν ἐγγραφόντων τοὺς μὴ ὀφείλοντας in *Etym. M.* p. 13, 17, and Bekk. *Anecd.* p. 199, 28). Hesychius, whose account has been followed by Hemsterhuis and Wesseling, appears to have been mistaken in saying that the ἀγραφίου γραφή could be instituted against debtors who had not been registered. (Meier, *Att. Process*, pp. 353, 354; Böckh, *Publ. Econ. of Athens*, pp. 388, 389.) [W. S.] [W. W.]

AGRAPHOU METALLOU GRAPHE' (ἀγράφου μετάλλου γραφή) was an action brought before the thesmothetae at Athens, against an individual who worked a mine without having previously registered it. The state required that all mines should be registered, because the twenty-fourth part of their produce was payable to the public treasury. (Böckh, *Publ. Econ. of Athens*, p. 664, 2nd ed.; Meier, *Att. Process*, p. 354.) [W. S.]

AGRA'RIAE LEGES. The laws so called were laws dealing with the distribution of Roman public land (*ager publicus*), and in general may be said to have been laws providing for giving to the poorer citizens allotments out of the land which belonged to the state, and regulating the tenure on which these allotments and the remaining bulk should be held. Modern discussion of the subject is founded on the brilliant exposition by

---

* Schömann, in his later writings (*Antiq.* p. 416, E. T.) appears to have changed his views on this point, which however has escaped the attention of the recent editor of the *Att. Process*, pp. 101-104.

Niebuhr, whose views have been in their principal features universally adopted. The main difficulty in coming to a positive opinion on the precise details of the matter is that our earliest authority (except the fragments of the Lex Thoria) is Cicero; the earliest historians are still later, Livy and Dionysius, and the most definite accounts are from the second century of the Christian era, viz. from the Roman land-surveyors and the historian Appian. We hear of assignments of land as early as Romulus (Varr. *R. R.* i. 10, § 2, fol.; cf. Cic. *Rep.* ii. 14, 26). The first agrarian law, according to Livy, was that proposed by Sp. Cassius, B.C. 486; but the aspect of the matter which was present to the minds of Cicero and his age was that given by the laws of the Gracchi, and the violent action of Sulla; the legal arrangements present to the Roman land surveyors were those of the early empire, after numerous assignments, with or without colonies, had been made to their veterans by Julius and Augustus Caesar and their successors. The surveys made under the Gracchi seem to have been the oldest of which clear traces remained in the official records which the land surveyors had before them. One can feel no confidence in the historical accuracy, either of the language used or of the legal conceptions involved, when Romans, with different arrangements before their eyes, were writing of the proposals of Cassius or Licinius, four or more centuries removed from Cicero, and more than six centuries from Appian or the Gromatici. But the general character of the policy, its grounds and its hindrances, is clear enough.

The agrarian laws dealt with the state lands. These lands were the result of conquest in war. It was not till towards the end of the republic that we hear of the state's acquiring territory by the last will of a foreign prince. War in the ancient world made the bodies and belongings of the vanquished the absolute property of the victors. No doubt either policy or pity generally interfered to prevent the full exercise of the power. In Italy especially the persons were not usually made slaves; but, though the conquered community was allowed to exist, it was deprived of part, often of a third part, of its lands. These confiscated lands had sometimes been utterly wasted in war, sometimes were still unhurt and in a state of cultivation, sometimes consisted of moorland and wood. Each kind requires separate treatment.

1. The cultivated lands were dealt with in one, or it may be in all, of four ways.

(*a.*) Part was sold by the quaestors, and hence called *agri quaestorii*. According to the Gromatici (pp. 115, 136, 152, ed. Lachmann), the land for this purpose was measured and divided by balks (*limites*) into square plots (*laterculi*), measuring 10 *actus* each side, and containing fifty jugera, *i.e.* 31 acres, each. As containing 100 square *actus*, it was sometimes called *centuria*. The earliest instance recorded of a sale was in the case of Pometia, where, although the city was surrendered when about to be stormed, some of the chiefs were slain, some of the husbandmen were sold as slaves, the town was destroyed, and the land sold (Liv. ii. 17). Such sales are referred to in Liv. iv. 48; Dionys. viii. 73; and the general principle is mentioned by Appian, *Bell. Civ.* i. 7; Plut. *Tib. Gr.* 8. In the second Punic war relief was given to the treasury by a sale of part of the Campanian territory (Liv. xxviii. 46; xxxii. 7), in one case by the quaestors (i.e. *quaestores urbani*), in another by the censors. Possibly in early days the quaestor attached to the army sold the land either in block or rough parcels to Roman speculators. The sale under the spear (*sub hasta*) gave full rights of ownership (Gai. iv. 16). Conquest had extinguished all previous title or claims to the land, and the state would of course give legal effect to its own acts of transfer. The Gromatici appear to speak of conditions being imposed (p. 115); of this nothing is known, and the Gromatici had in view probably much later arrangements.

(*b.*) Part was given and assigned in full ownership to Roman citizens. This land was duly surveyed, measured, divided by balks into centuries, each containing 200 jugera (125 acres), and assigned by lot to Roman citizens. Such land was called *agri dati adsignati* (Grom. pp. 117, 118; 154–156, &c.). The oldest assignments were two jugera to each man; this formed an hereditament (*heredium*), i.e. he had not the mere use or life interest of the plot, but it passed to his heirs after him. The lots of 100 men thus formed one century (*cent-uir-ia*). Later on seven jugera were regarded as the normal size of a lot (Plin. *H. N.* xviii. § 18), but in fact there was great variety, the amount naturally depending upon the extent of land open to distribution and the number of citizens to share in it. The survey and distribution were effected by a special commission of three, five, or ten men (Cic. *Agr.* ii. 7), called *IIIviri A. D. A.*, i.e. *agris dandis adsignandis*. Sometimes the distribution was accompanied by the establishment of a colony at the place; at other times the allottees were incorporated into some existing colony or borough; sometimes they remained at Rome and had their allotments as well. The two former are principally regarded by the Gromatici (*e.g.* p. 2); the last—called by Niebuhr (*R. H.* ii. 622, Eng. Tr.), from a passage in Festus, *ager viritanus*—has been described by Mommsen (*C. I. L.* i. p. 88; but see *Röm. Stadtrecht*, ii. p. 618, ed. 2) as having two characteristics: the assignment was made to all Roman citizens, or at least to as many as the land admitted; and the measurement of it was by *saltus* of four centuries each; whereas the colonial distributions were to a number of persons specified in the law, and the land was divided by centuries. *Viritim dividere* or *adsignare*, says Mommsen, might be applied to the colonial land, but was properly applicable only to a non-colonial distribution. This distinction, however, appears to rest on quite insufficient grounds; it is inconsistent with Livy's language in iv. 47, 48, and v. 24, where *viritim dividere* is used, without further explanation, of colonies. (See however Mommsen, *ll. cc.*) Neither Festus nor Varro appear to have had the distinction in view; and the passage in Sic. Flacc., p. 154, quoted in support of it, when compared with p. 160, is seen to apply to colonies and to have been misunderstood by Mommsen. Siculus Flaccus is merely showing that division and assignment are different things, and may be found together (which is the usual case) or separately. But land, whether for a colony or for a non-colonial distribution, was generally divided into centuries, sometimes into oblong blocks (*strigae* or *scamna*, Grom. p. 2). Of the number or mode of selecting the persons to share in a non-colonial assignment, nothing is known. When the territory was at a distance of more than a few miles from Rome, the applicants would hardly be more numerous, as a rule, for an assignment which would attach the holder to an existing colony, than for one which would make him member of a new colony. And these assignments were evidently intended as ground for residents, not as a mere money gift in the form of land. They were however, as a fact, frequently bought up by some wealthy neighbour. There is nothing to show that Varro in explaining *saltus* is not referring to colonial land. The use and application of such a *saltus* is unknown, as also is that of a *saltus* of 25 centuries mentioned by Siculus Flaccus (Grom. p. 158).

(*c*.) Part of the lands confiscated were given back (*redditi*) to their former proprietors. In some cases, where a man owned pieces separated from one another, an exchange was made, so that his possessions might be continuous. These were noted in the official register as *redditi commutati pro suis* (Grom. 117, 55, &c.). No rent was imposed on these plots any more than on those newly assigned to Roman citizens (p. 116).

(*d*.) Part was neither sold, nor assigned, nor restored to the former owners. This happened where the number to share in the distribution was not large enough for the quantity of land taken from the enemy. The whole land, so far at least as it was cultivated, was or might be duly surveyed, and divided into centuries, and allotted as far as was required. The remainder was let for a rent (*vectigal*). In some cases the letting or selling (for both terms were often used: see Gai. iii. 145; Dig. 19, 2, 2) was for a short period, apparently from year to year (*per annos*, Grom. p. 116), or for a lustrum (some editors adding *quinos:* cf. pp. 117, 163; Dionys. viii. 73); in other cases for 100 years or more (*in annos centenos pluresve*, so Huschke and Mommsen, *Stadtrecht*, ii. p. 52, ed. 2). For these long periods the lessees were state-contractors (*mancipes*), who then sublet to the nearest occupiers. There are however two difficulties in the passage of Hyginus, from which this account is taken. *Mancipes qui emerunt lege dicta jus vectigalis ipsi per centurias locaverunt aut vendiderunt proximis quibusque possessoribus* (p. 116). What is *jus vectigalis?* and what is *per centurias?* *Jus vectigalis* was understood by Niebuhr (ii. p. 140) and others as the right of collecting the ground rent, but with this the following part of the sentence seems scarcely to accord. (Voigt, *Jus Nat.* iv. 587; Degenkolb, *Platzrecht*, p. 238.) Hyginus had before his eyes the same facts probably that Siculus Flaccus had. From Grom. pp. 162, 163, we see what these facts were. The two classes of vacant lands which formed *agri vectigales* were oddments and unallotted centuries. Whether these were retained by the Roman state, or granted to the colony, or restored to the borough or other commonwealth from which the district for allotment was taken, they were treated in much the same way. They were sold or let. If they were let, the rent was called *vectigal*. Whether it was in money or kind, whether a lump sum for the particular piece of land or so much per acre, whether a fixed amount or a certain proportion of the produce (cf. p. 235), is not stated, and may have varied considerably in different places, times, and circumstances. Nor is anything said of the persons who actually did the cultivation. They might be slaves or freemen, but they are not recognised as having any right in the soil any more than the plough-cattle, or the plough and other farming gear; but each, according to its nature, would, if the farming was to succeed, have to be maintained in active usefulness—*i.e.* fed, if animals; repaired, if things. To the proprietor who did not farm the land himself the *vectigal* was the evidence of ownership, and the realised permanent result. The interposition of a *manceps* between the owner and the actual cultivation of the land did not really alter this. For the *manceps* was not a mere collector of rents fixed by others than himself, he was the lessee; he could work the land himself if he chose, or engage with others to cultivate it: if he did the latter, he received a rent from them such as he chose or could get; and he in his turn, according to his agreement with the owner, paid a rent to him (cf. Dig. 19, 2, 53). Such share of the produce as was more than was requisite, physically and commercially, for the actual cultivator, represented the worth of the land to the *manceps;* and the same, less what was similarly requisite for the remuneration of the *manceps*, represented the worth of the land in these circumstances to the owner. Given no tenant-right in the actual cultivator—no right either to hold the land, or to pay only a fixed amount or share—the *jus vectigalis* is the same thing as the *reditus* (p. 162), and to buy this *jus vectigalis* is to be lessee of the land. The view of Niebuhr is here too narrow, because it assumes a right in the cultivator which minimises the position and the possible and legal profits of the *manceps*. But there is a natural propriety in the use of this term where a writer speaks of *buying*. The *manceps* did not buy the land from the state, as was the case with the *agri quaestorii;* he only bought, as the ancients regarded it, the produce. This last was really his own: he had the whole, not merely a percentage or poundage out of it. He paid the state for the privilege, but the payment by him has no legal connexion with, no defined proportion to, the payment to him. He does not (or at least did not originally) have an estate in the land: he buys the fruits, and the land is put into his possession merely as the easiest way for the owner to fulfil his bargain with him.

In this view the fact often mentioned in the Gromatici, that the persons who eventually worked the oddments or unallotted centuries were the nearest occupiers, is natural enough. A mere collector of taxes would be one for the whole of a district, not each adjoining occupier; but the latter is just the man for the practical cultivation of the plot in the neighbourhood of his own farm.

The second difficulty is *per centurias*. It might mean "by centuries," *i.e.* in plots of a century each. But this does not apply well to the oddments. It rather means "throughout the centuries," "in each century;" that is to say, whether the land to be dealt with was an oddment or a whole century, in either case it would have neighbours: in the first case possibly it would be let to an occupier in the same century; in the second case, and possibly in the first also, it would be let to some working occupier in the next century, or at any rate to some one near enough to work the land. For the meaning above given to *per centurias* compare *saepe enim et viarum publicarum per centurias modus exceptus est* (Hyg. p. 121); *scio quibusdam regionibus, cum adsignarentur agri, adscriptum aliquid per centurias et flumini* (ib. p. 125), and *per omnes centurias* (Grom. p. 157), *per singulos agros* (p. 146).

Hyginus mentions a long term for a lease, viz. 100 years (or more, according to Mommsen's reading), as well as a short one—five years or one. This long term probably led to what we find in Gaius and the Digest, where *agri vectigales* are defined as those lands which are let *in perpetuum*, the conditions being that so long as the rent (*vectigal*) was paid the lessees were not to be disturbed. Such leases were only found in the case of lands belonging to municipal or religious corporations (Gai. iii. 145; Dig. 6, 3). Longer terms than five years were forbidden by the law of the colony at Ossuna (cap. 82; Bruns, p. 116). The nearest analogy in English law is that of the church and college leases, which were continually renewed on the payment of a fine for the renewal, besides the annual rent. A claim was urged by these lessees to a perpetual tenure on the same terms, but was overruled, and the tenure is now dying out. In the days of the Republic the exigencies of the treasury led to a peculiar but similar tenure. In B.C. 200 those persons to whom the third instalment of a loan made ten years before (Liv. xxvi. 36) was due, had their demands satisfied by a grant of lands to the value of their claim within fifty miles of Rome, that tenure being determinable only on the lessees preferring to receive their money instead, and the seignorial rights of the state being served by a rent of one *as* per juger being imposed. These lands were called *trientabula* (Liv. xxxi. 13). Mention is also made of them in the fragments of the Lex Thoria, line 31, but nowhere else.

2. Besides the cultivated lands still in condition to be sold or let, there were the mountain pastures and woods. The mountain pastures and woods were often granted (*concessa*) to the old proprietors, or to the municipality, or to the new Roman colony, or reserved to the state. And other tracts of land were often useful as pastures where there were not sufficient farmers to require them as arable land (Grom. pp. 21, 133, 201, &c.). Sometimes a small rent was required, and then they came under the head of *agri vectigales* (pp. 203, 205). Sometimes strips of wood on the mountain were annexed by the original assignment to the different estates (*fundi*) of private persons (pp. 48). Pastures in like manner were sometimes appropriated to individuals, but held *pro indiviso;* sometimes made common to the whole of the community (Grom. p. 48). Appian (*Bell. Civ.* i. 7) says that taxes were laid for the use of the common pastures, both for larger and smaller animals, *i.e.* horned cattle and sheep. The last was collected by the publicans. All animals turned on to these pastures were declared to the tax-farmer, and registered in their books (Varr
R. R., i. 16; Festus, v. *scripturarius*, p. 333),
and the word *scriptura* was frequently used
both of the registration and of the tax itself
(*e.g.* Cic. *Verr.* ii. 70, 169; Lex Thor. 19,
&c.). Pliny mentions that even in his day the
term for revenue in the censor's books was
pascua (cf. Cic. *Agr.* i. 1, § 3), because for a
time this was the only *vectigal* (*H. N.* xviii. 11).
The farmers of this tax were called (p. 37)
publicani scripturarii. The *pecuarii* in Liv. x.
23, § 13, are by some taken to be farmers o
this tax (Marquardt, *Staatsverw.* ii. 292), b
Huschke to be large occupiers (*Varr.* p. 8). Ovi
(*Fast.* v. 283) speaks of a time when persons
used to send their herds on the public pastures
without being *fined* for it. No doubt the practice
of imposing a tax for the use of the pasture, and
collecting it through tax-farmers, was no
adopted or regularly enforced till the adminis
tration of the republican finances had grown ou
of its infancy.

In the early times indeed the Romans must,
like other nations, have lived more on the produce of their sheep and cattle than on the produce of tilled land. And this is supported, a
Mommsen has shown, by the smallness of th
allotments first spoken of—two jugera. A slav
required, according to Cato (§ 51), fifty-one pecks
(*modios*) of corn in the year; a jugerum required
five pecks for seed, and produced twenty-fiv
pecks. Hence the *heredium* would, if al
given to corn, produce forty pecks a year
after deducting the seed. It is clear therefore that it could not support a man an
his family on wheat. And spelt is still le
profitable as food (*Gesch. R.* i. pp. 184-187
notes). The common pasture was therefore
necessity. So in England, a tenant in former
times (says Joshua Williams, *Real Prop.* p. 496,
ed. 13) "required a house to live in, arable lan
for his maintenance, pasture for his cattle, acorn
for his pigs, and wood for fuel and repairs."
Hence "common appendant is the common la
right which every free tenant of arable land i
a manor had to depasture upon the lord's waste
all cattle subservient to the tillage and m
nurance of such land; namely, horses, beasts, an
sheep" (*ib.* p. 509).

3. Appian, in the passage above referred t
says that "the larger part of the lands take
from the conquered had been wasted by wa
and uncultivated (ἀργὸν ἐκ τοῦ πολέμου). A
the Romans had no time to distribute it, the
gave notice that any one who liked might tem
porarily work it, paying a tax of a yearly tent
of the seed crops, and a fifth of the plantatio
(*i.e.* fruits, for instance olives and grapes)."
There is no other authority for this defini
historical statement of a notice and a ta
(Plut. *Tib. Gr.* 8 is of doubtful reference.) Th
Gromatici speak frequently of *agri occupator*
i.e. lands belonging to squatters, and expla
that it was conquered land occupied by indiv
duals. *Singuli deinde terram, nec tantum occupaverunt quod colere potuissent sed quantum in
spem colendi reservavere* (Sic. Flac. p. 137; cf.
Hygin. 115; Festus, p. 241, s. v. *possessiones*).
Livy (iv. 36), speaking of the year 422 B.C.,
says that some candidates for the tribuneship of
the soldiers held out hopes of putting a rent
(*vectigal*) on the holders of the public land, and

applying it to the pay of the soldiers. The first regular pay was made in 406 B.C. (Liv. iv. 59); nothing is there said of the imposition of a ground rent on the occupiers of the public land, but the pay is defrayed from a tax upon every one (*tributum*).

The word most frequently used to denote this occupation is *possidere*; the occupiers are *possessores*, the lands are *possessiones*. These are the natural expressions for the fact which was patent, and do not by themselves denote or imply anything respecting the title by which the occupiers held. The possession, however, was something different from the actual physical possession. In the case of land this will always be the case. The one or two square feet on which a man stands is not what is meant when a person is said to be in possession of a piece of land. Control as owner, real or apparent, is the meaning of possession generally, and particularly in the case of land. Whether this control is recognised, and to what extent, by the law, is another question. That the occupation was recognised by the law in the case of the public lands is clear from the fact that interference with it by the state was the subject not of judicial proceedings but of legislative enactment. It was indeed a standing principle of Roman law that what is taken from the enemy in war becomes at once the property of the captor (*capientium fit*, D. 41, 1, 5, § 7; Gai. ii. 69, iv. 16); and the captor in the case of land would be the Roman people, acting in the first instance through the commander of the victorious army. An allied though not identical principle was that land or anything else which was found without an owner became the property of him who seized it (*capientium fit, occupanti conceditur*, D. 41, 1, .1; 3; 7, § 3). Here comes in the language of the Gromatici above quoted, and of Livy, who makes Licinius speak of the election of a plebeian consul as necessary to effect a *modum agros occupandi* (vi. 37 *init.*). But an occupation of lands known to belong to the state could give no right to possess as against the state. Possession was protected by the law without regard to title, but on the negative condition that it had been obtained neither by force, nor by stealth, nor by request (*nec vi, nec clam, nec precario*) from the opposing litigant. And the state therefore lost none of its rights by the occupation by private persons of the territory it had conquered. Whether forcible or secret, or by permission, the occupation gave no rights to the possessor which were good against the state. (D. 41, 3, 9; 24.)

In the above it has been assumed that the principles respecting possession, which in later times were embodied in the praetor's edict, existed in effect long before. Niebuhr has suggested that the occupation of the public lands gave rise to the establishment of legal protection in the form of equitable injunctions (*interdicta praetoris*) for possessors, and that by analogy these rules were applied to land not belonging to the public, but otherwise occupied in a similar manner. And Savigny has supported this view (*Recht des Besitzes*, § 12 A, p. 197, ed. 7. See however Puchta, *Cursus*, § 227; Schwegler, *R. G.* ch. xxv. 6; Böcking, *Pand.* 1, § 123, n. 30). Be that as it may, the conditions of protection of possession (in the case of parts of the public land assigned as private property) are expressed in the usual words in the oldest document we have, viz. the Lex Thoria, v. 18; and applied to cases of illicit occupation of public lands in Cicero's third speech against Rullus (3, § 11).

Cicero's language is the more important because he is the earliest extant writer on the subject; and, as a statesman who had actually to deal with proposals by Rullus and by Flavius (*Att.* i. 18, § 6; 19, § 4), for agrarian laws is, if we make allowance for the language of a party-orator, as competent a writer as we could desire. Sulla's outrageous confiscations of private property, and his grants of large tracts of land to his favourites and to his soldiers, were scarcely twenty years old, and were intended to be confirmed by the law of Rullus; and Cicero in the discussion of Flavius's law proposed the same (*Sullanorum hominum possessiones confirmabam*). In the following year (B.C. 59) Julius Caesar carried an agrarian law, and it is of Julius Caesar that he is speaking in the second book (24, 84) of the *de Officiis*, written shortly after Caesar's death.

Cicero says (*Agr.* ii. 26), *antea cum erat a tribuno plebis mentio legis agrariae facta, continuo qui agros publicos aut possessiones invidiosas tenebant pertimescebant*, the latter part of which is illustrated by *Agr.* iii. 3, 12. *Sunt multi agri lege Cornelia publicati nec cuiquam assignati neque venditi qui a paucis hominibus inpudentissime possidentur.* The use of *possidere* and its derivatives is not precise throughout these speeches (cf. Savigny, *Recht des Besitzes*, § 8, p. 104, d. 7). The words are applied to owners just as we speak of a person's *possessions*, or what he *possesses*, without any intention of distinguishing between ownership and possession (*e.g.* ii. 29, § 81; 30, § 82; 31, § 85; iii. 4, § 15); but land could not, properly speaking, be public (*i.e.* owned by the state) and private as well. Hence *possess* is naturally applicable to public land, and possession of the public land had sometimes an unjust origin in Cicero's time, as we may well believe it had in earlier times. But Cicero lays great stress on length of possession, even of public property. Land in the provinces being conquered territory was, by Roman law, incapable of absolute ownership by private persons. They could, to use the phrase of English law, only hold an estate in these lands. *In provinciali solo dominium populi Romani est vel Caesaris, nos autem possessionem tantum vel usumfructum habere videmur* (Gai. ii. 7; cf. Frontin. *Grom.* p. 35). Thus Cicero says of some Sicilian land: *Qui agrum Recentoricum possident, vetustate possessionis se non iure, misericordia senatus non agri condicione defendunt, nam illum agrum publicum esse fatentur, se moveri possessionibus, amicissimis sedibus ac dis penatibus negant oportere* (*Agr.* ii. 21, 57). In the *de Officiis* (ii. 22, 78), with Caesar's measures in his mind, he classes together the expulsion of possessors, which was the object of agrarian laws, and the wiping out debts incurred by loan of money, which was another democratic measure. Cicero speaks of both proposals in the same language as measures weakening the foundations of the state. These foundations are common feeling and equity (*concordia et aequitas*). Common feeling is weakened when moneys are taken from some and given to others. Equity is utterly destroyed if individuals are not allowed to keep their property (*si habere suum cuique non licet*). *Quam autem habet aequitatem ut agrum multis annis aut etiam saeculis ante possessum, qui nullum habuit, habeat, qui autem habuit amittat?* He instances the action of Aratus, who, when he overthrew a despotism which had lasted at Sicyon for fifty years, brought with him a large number (*sexcentos*) of exiles who had been the richest men in the state. He then had to deal with the opposing claims of these to their former property (*bona*), and of the men who had enjoyed them for so long a period. In that time fair claims had grown up. *Jam longo spatio multa hereditatibus, multa emptionibus, multa dotibus tenebantur sine injuria.* It was *iniquissimum* that the old proprietors should be in want, it was *non nimis aequum* that fifty years' possession should be disturbed (*ib.* 23, § 81). Appian puts similar arguments into the mouths of the rich. They pleaded the improvements they had effected on the land, their plantations (vines and olives?), and buildings; some of the land they had bought from their neighbours; it held their fathers' tombs; it had been distributed like ancestral property; they had invested in it the dowries of their wives, and given it in dowry with their daughters. Mortgagees complained that they held it as security for loans (*Bell. Civ.* i. 10). In the speeches made, according to Dionysius, by Appius and Sempronius Atratinus on the occasion of Sp. Cassius's proposals, there is an acknowledgment that parts of the public land had been occupied by private persons unjustly, by force or stealth, and the proposal was made and approved by the senate that the public land should be ascertained, marked out, and partly allotted to the plebeians, partly let for five years (viii. 73–76). And Livy (iv. 51) describes an agrarian law (B.C. 413) as one which *possesso per injuriam agro publico patres pellebat*, and the people as feeling that if a distribution were not made of the land recently taken and then vacant, it would soon be the prey of the few. The language used in reference to the Licinian laws is not certainly applicable, as—though it is usually regarded as an agrarian law dealing with the public lands (see Madvig, *Verfassung*, ii. p. 372)—Huschke, followed by Clason (bk. iv. cap. 2), and apparently Marquardt (*Staatsverw.* i. 102, ed. 2), holds that it was a general measure limiting the extent of land to be held by any one on whatever title, and related not only to the occupation of the public land but to private land also. The penalty was a fine; subject to the fine the land could be held. Whatever may have been the real truth of the matter, the Licinian laws were treated of by Appian and Plutarch in connexion with the agrarian laws of the Gracchi.

On the whole it does not seem probable that any definite arrangement was made in early times for the occupation of public land which was not assigned or sold or leased; and the legal claim of the state to deal with it was as incontestable in theory as it was difficult to enforce without the destruction of those reasonable expectations, arising from long use, which are the foundation of the statesman's view of property. It is disputed whether the patricians alone (to the exclusion of the plebeians) had, before the Licinian laws, the right to hold the public land (see Schwegler, ch. xxv. 9; Madvig, *Verf.* pp. 90, 91): as a fact it was probably the case. They were originally, and continued for long to be, the holders of the government, and they were, as a rule, the richest. Now the occupation of tracts of land wasted in war was not a poor Roman's business; it was at a distance; it required capital; and it was insecure, partly from the enemy on the border, and partly from the state's not having assigned it as private property. Neither the peasant nor the small capitalist would find the occupation of such land at a distance from Rome attractive; moreover, he was liable to be called off to serve in war. The rich man could risk something, could employ slave-labour, could judge of the political prospects, and have a potential voice in the actions of the state. Such possessions had a natural tendency to accumulate in the hands of the few. The holders added field to field (*continuare agros*, cf. Cic. *Agr.* iii. 4, § 14; Liv. xxxiv. 4, § 9), partly by purchase from their poorer neighbours, partly by violence, partly by taking in any vacant land adjoining (Sall. *Jug.* 41; Sen. *Ep.* 90, § 39; Front. *Grom.* pp. 48, 53). Thus were formed the large estates (*latifundia, lati fundi, Grom.* pp. 157, 161) which, worked by slaves, drove out, or gave no opening for, free peasants, and, portending the ruin of Italy (*verum confitentibus latifundia perdidere Italiam*, Plin. xviii. § 35), roused the Gracchi to their famous legislation.

See further under the headings Lex Licinia. Sempronia, Thoria. The political struggles in reference to these and other enactments are treated in general histories.

An echo of the old controversies was roused by Vespasian, who made fresh assignments to veterans, and in doing so probably had his attention directed to the quantity of oddments (*subseciva*) and unallotted lands which had never been formally dealt with, and, in consequence, had been usurped by the local community or by the adjoining occupiers. He proceeded to sell them for the benefit of the imperial chest. But deputations came to the emperor, and piteously represented the general alarm which this disturbance of long-standing occupations had occasioned—*quassabatur universus Italiae possessor.* Vespasian stayed his hand, but Titus resumed the action. Domitian issued an edict granting the oddments throughout Italy to the occupiers (*Grom.* pp. 53, 133, 163). Suetonius uses a metaphor when he says "subseciva veteribus possessoribus *ut usucapta* concessit" (*Dom.* 9). [H. J. R.]

AGRAU'LIA (ἀγραυλία) was a festival celebrated by the Athenians in honour of Agraulos, the daughter of Cecrops. (*Dict. of Biogr.* s. v.) We possess no particulars respecting the time or mode of its celebration; but it was, perhaps, connected with the solemn oath which all Athenians, when they arrived at manhood (ἔφηβοι), were obliged to take in the temple of Agraulos, that they would fight for their country, and always observe its laws. (Lycurg. c. *Leocr.* § 76; Dem. *de F. L.* p. 438, § 303; Plut. *Alcib.* 15; Stobaeus, *Serm.* xli. 141; Schömann, *de Comitiis*, p. 332; Wachsmuth, *Hellen. Alterth.* vol. i. p. 476, 2nd ed.)

Agraulos was also honoured with a festival in Cyprus, in the month Aphrodisius, at which human victims were offered. (Porphyr. *de Abstin. ab Anim.* i. 2.) [W. S.]

AGRICULTU'RA, agriculture.

Authorities.—When we remember that agriculture, in the most extended acceptation of the term, was for many centuries the chief, we may say almost the sole, peaceful occupation followed by any large portion of the free population in those European nations which first became highly civilised, we shall not be surprised to find that Varro (*R. R.* i. 1, § 7 foll.) was able to mention upwards of fifty Greek writers who had contributed to this science. But although the Homeric poems are filled with a series of the most charming pictures derived from the business of a country life; although Hesiod supplies abundance of wise saws and pithy aphorisms, the traditional wisdom accumulated during many successive generations; although Xenophon has bequeathed to us a most graceful essay on the moral beauty of rustic pursuits, interspersed with not a few instructive details; and although much that belongs to the Natural History of the subject will be found treasured up in the vast storehouses of Aristotle and Theophrastus, yet nothing which can be regarded in the light of a formal treatise upon the art, as exhibited in the pastures and cornfields of Hellas, has descended to us, except a volume, divided into twenty books, commonly known as the *Geoponica* (Γεωπονικά), whose history is somewhat obscure, but which, according to the account commonly received, was drawn up at the desire of Constantine VI. (A.D. 780–802) by a certain Cassianus Bassus, and consists of extracts from numerous writers, chiefly Greek, many of whom flourished in the second, third, and fourth centuries. This collection is systematically arranged, and comprehends all the chief branches; but it has never been considered of much value, except in so far as it tends to confirm or illustrate the statements found elsewhere. The information conveyed by it is, upon many points, extremely meagre, the materials were worked up at a late period by an editor with whose history and qualifications for his task we are altogether unacquainted, while the most important quotations are taken from authors of whom we know little or nothing, so that we cannot tell whether their precepts apply to the same or to different climates, whether they give us the fruit of their own experience, or, as we have great reason to suspect in many instances, were themselves mere compilers.

The Romans, during the brightest periods of their history, were devotedly attached to the only lucrative profession in which any citizen could embark with honour; and from the first dawn until the decline of their literature, rural economy formed a favourite theme for composition both in prose and verse. The works of the Sasernae, father and son, those of Tremellius Scrofa, of Julius Hyginus, of Cornelius Celsus, of Julius Atticus, and of Julius Graecinus, have perished; but we still possess, in addition to Virgil, four "Scriptores de Re Rustica," two at least of whom were practical men. We have, in the first place, 162 chapters from the pen of the elder Cato (B.C. 234–149), a strange medley, containing many valuable hints for the management of the farm, the olive garden, and the vineyard, thrown together without order or method, and mixed up with medical prescriptions, charms for dislocated and broken bones, culinary receipts, and sacred litanies; the whole forming a remarkable compound of simplicity and shrewdness, quaint wisdom and blind superstition, bearing, moreover, a strong impress of the national character; in the second place, we have the three books of Varro (B.C. 116–28), drawn up at the age of eighty, by one who was not only the most profound scholar of his age, but likewise a soldier, a politician, an enthusiastic and successful farmer; in the third place, the thirteen books of Columella (A.D. 40 [?]), more minute than the preceding, especially in all that relates to the vine, the olive, gardening, and fruit-trees, but evidently proceeding from one much less familiar with his subject; and, lastly, the fourteen books of Palladius (a writer of the fourth century who closely copies Columella), of which twelve form a farmer's calendar, the different operations being ranged according to the months in which they ought to be performed. Besides the above, a whole book of Pliny and many detached chapters are devoted to matters connected with the labours of the husbandman; but in this, as in the other portions of that remarkable encyclopaedia, the assertions must be received with caution, since they cannot be regarded as exhibiting the results of original investigation, nor even a very correct representation of the opinions of others.

We ought not here to pass over unnoticed the great work of Mago the Carthaginian, who, as a native of one of the most fertile and carefully cultivated districts of the ancient world, must have had ample opportunities for acquiring knowledge. This production, extending to twenty-eight books, had attained such high fame that, after the destruction of Carthage, it was translated into Latin by orders of the senate; a Greek version, with additions from the Greek authorities and omissions, was executed by Cassius Dionysius of Utica, and published in twenty books during the century before the commencement of our era; and this, again, was a few years afterwards condensed into six books by Diophanes of Nicaea, and presented to King Deiotarus. In what follows, Cato, Varro, and Columella will be our chief supports, although references will be made to and illustrations drawn from the other sources indicated above. (Varr. *R. R.* i. 1; Col. *R. R.* i. 1; Plin. *H. N.* xviii. § 9 foll.; Proleg. *ad Geopon.* in ed. Niclas; cf. Teuffel, *Roman Lit.* i. p. 73 foll.)

Division of the Subject.

Rural Economy may be treated of under two distinct heads—

A. Agriculture proper (*Agricultura*), or the art of tilling the soil.

B. The management of stock (*Pastio*).

A. AGRICULTURA.

Agriculture proper teaches the art of raising the various crops necessary for the sustenance and comfort of man and of the domestic animals, in such a manner that the productive energies of the soil may be fully developed but not exhausted or enfeebled, and teaches, further, how this may be accomplished with the least possible expenditure of capital. The crops to which the Greeks and Romans chiefly directed their attention were—1. Different kinds of grain, such as wheat and barley; leguminous vegetables cultivated for their seeds, such as beans, peas, and lupines; herbs cut green for forage, such as grass, tares, and lucerne; and plants which furnished the raw material for the textile fabrics, such as hemp and flax. 2. Fruit trees, especially the vine, the olive, and the fig. 3. Garden stuffs.—For the second of these divisions we refer to the articles OLEA and VINEA; and we shall not touch at all upon gardening, since the minute details connected with this topic are of little or no service in illustrating the classics generally.

Agriculture in its restricted sense comprehends a knowledge—

I. Of the subject of our operations, that is, the farm (*fundus*, *praedium*), which must be considered: *a.* with reference to its situation and soil (*quo loco et qualis*), and *b.* with reference to the dwelling-house and steading (*villa et stabula*).

II. Of the instruments (*instrumenta*) required to perform the various operations (*quae in fundo opus sint ac debeant esse culturae causa*), these instruments being twofold: *a.* men (*homines*); and *b.* the assistants of men (*adminicula hominum*), viz. domestic animals (*boves*, *equi*, *canes*, &c.), together with tools (*instrumenta*), properly so called, such as ploughs and harrows. (Varro, i. 18.)

III. Of the operations themselves, such as ploughing, harrowing, and sowing (*quae in fundo colendi causa sint facienda*), and of the time when they are to be performed (*quo quidquid tempore fieri conveniat*). (Varro, i. 5.)

IV. Of the object of these operations, viz. the different plants considered with reference to their species, varieties, and habits. Under this head we may also conveniently include what is termed the rotation of crops; that is, the order in which they ought to succeed each other upon the same ground.

I. *a.* COGNITIO FUNDI.

Knowledge of the Farm.—In selecting a farm, the two points which first demanded attention were: 1. The healthiness of the situation (*salubritas*), a matter of the greatest anxiety in Italy, where the ravages of malaria appear to have been not less fatal in ancient than they have proved in modern times; and, 2. The general fertility of the soil. It was essential to be fully satisfied upon both of these particulars; for to settle in a pestilential spot was to gamble with the lives and property of all concerned (*non aliud est atque alea domini vitae et rei familiaris*: Varro, i. 4, 5); and no man in his senses would undertake to till land which was not likely to yield a fair return for his outlay of money and labour (*fructus pro impensa ac labore*). The next object of solicitude was a good aspect. The property was, if possible, to have a southerly exposure (Cato, i. 3), to be sheltered by a wooded hill from the sweep of boisterous and cutting winds (Varro, i. 12), and not to be liable to sudden misfortunes (*ne calamitosum siet*), such as inundations or violent hail-storms. It was highly important that it should be in the vicinity of a populous town (*oppidum validum*), or, if not, that it should be readily accessible either by sea or by a navigable stream (*amnis qua naves ambulant*), or by a good well-frequented road (*via bona celebrisque*); that there should be an abundant supply of water (*bonum aquarium*); that it should be so situated that the proprietor, if he did not live upon the estate, might be able to give active and constant personal superintendence; and, finally, that it should be moderate in size, so that every portion might be brought into full cultivation (*laudato ingentia rura, Exiguum colito*: Verg. *G.* ii. 412).

These preliminary matters being ascertained, the soil might be considered in reference: *a.* to its general external features (*forma*); *β.* to its internal qualities (*qualis sit terra*).

a. In so far as its external features were concerned it might be flat (*solum campestre*), or upland rolling ground (*collinum*), or high lying (*montanum*), or might comprise within its limits all three, which was most desirable, or any two of them. These variations would necessarily exercise important influence on the climate, on the description of crops which might be cultivated with advantage, and on the time chosen for performing the various operations, the general rule being that as we ascend the temperature falls, that corn and sown crops in general (*segetes*) succeed best on plains, vineyards (*vineae*) on gentle slopes, and timber trees (*silvae*) upon elevated sites, and that the different labours of the rustic may be commenced earlier upon low than upon high ground. When flat, it was better that it should incline gently and uniformly in one direction (*aequabiliter in unam partem vergens*) than be a dead level (*ad libellam aequus*), for in the latter case, the drainage being necessarily imperfect, it would have a tendency to become swampy; but the worst form was when there were converging slopes, for there the water collected into pools (*lacunas*). (Varro, i. 6.)

β. In so far as its internal qualities were concerned, soil might be classed under six heads, forming three antagonistic pairs:—

1. The deep and fat (*pingue*). 2. The shallow and lean (*macrum*, *jejunum*). 3. The loose (*solutum*). 4. The dense (*spissum*). 5. The wet (*humidum*, *aquosum*, *uliginosum*). 6. The dry (*siccum*): while the endless gradations and combinations of which the elementary qualities were susceptible produced all the existing varieties. These are named sometimes from their most obvious constituents: the stony (*lapidosum*), the gravelly (*glareosum*), the sandy (*arenosum*), the mortary (*sabulosum*), the chalky (*cretosum*), the clayey (*argillosum*); sometimes from their colour: the black (*nigrum*), the dark (*pullum*), the grey (*subalbum*), the red (*rubicundum*), the white (*album*); sometimes from their consistency: the crumbling (*putre*, *friabile*, *cinericium*), as opposed to the tenacious (*densum*, *crassum*, *spissum*); sometimes from their natural products: the grassy (*graminosum*, *herbosum*), the weedy (*spurcum*); sometimes from their taste: the salt (*salsum*), the bitter (*amarum*); *rubrica* seems to have been a sort of red chalky clay, but what the epithets *rudecta* and *materina* applied to earth (*terra*) by Cato may indicate it is hard to determine (Cato, 34; comp. Plin. *H.N.* xviii. § 163 ff.), probably "poor" and "hard." The great object of the cultivator being to separate the particles

as finely as possible (*neque enim aliud est colere quam resolvere et fermentare terram*), high value was attached to those soils which were not only rich, but naturally pulverulent. Hence the first place was held by *solum pingue et putre*, the second by *pinguiter densum*, while the worst was that which was at once dry, tenacious, and poor (*siccum pariter et densum et macrum*). The ancients were in the habit of forming an estimate of untried ground, not only from the qualities which could be detected by sight and touch, but also from the character of the trees, shrubs, and herbage growing upon it spontaneously,—a test of more practical value than any of the others enumerated in the second Georgic (177–258).

When an estate was purchased, the land might be either in a state of culture (*culta novalia*), or in a state of nature (*rudis ager*).

The comparative value of land under cultivation, estimated by the crops which it was capable of bearing, is fixed by Cato (1), according to the following descending scale:—

1. Vineyards (*vinea*), provided they yielded good wine in abundance. 2. Garden ground well supplied with water (*hortus irriguus*). 3. Osier beds (*salictum*). 4. Olive plantations (*oletum*). 5. Meadows (*pratum*). 6. Corn land (*campus frumentarius*). 7. Groves which might be cut for timber or fire-wood (*silva caedua*). 8. *Arbustum.* This name was given to fields planted with trees in regular rows. Upon these vines were trained, and the open ground cultivated for corn or leguminous crops in the ordinary manner, an arrangement extensively adopted in Campania and many other parts of Italy in modern times, but by no means conducive to good husbandry. 9. Groves yielding acorns, beech-mast, and chestnuts (*glandaria silva*). The fact that, in the above scale, corn land is placed below meadows shows how, even in the time of Cato, the Sicilian slave-grown corn was lowering the profits of corn-growing in Italy. Varro (i. 7, 10) places *prata* first of all (cf. Mommsen, *Hist.* ii. 376).

When waste land was to be reclaimed, the ordinary procedure was to root out the trees and brushwood (*fruteta*) by which it might be encumbered, to remove the rocks and stones which would impede the labours of men and oxen, to destroy by fire or otherwise troublesome weeds, such as ferns and reeds (*filices, junci*), to drain off the superfluous moisture, to measure out the ground into fields of a convenient size, and to enclose these with suitable fences. The three last-mentioned processes alone require any particular notice, and we therefore subjoin a few words upon DRAINS, LAND-MEASURES, FENCES.

DRAINS (*fossae, sulci alveati, incilia*) were of two kinds:—

1. Open (*patentes*). 2. Covered (*caecae*).

1. *Fossae patentes*, open ditches, alone were formed in dense and chalky soil. They were wide at top, and gradually narrowed in wedge fashion (*imbricibus supinis similes*) as they descended.

2. *Fossae caecae*, covered drains, or *sivers* as they are termed in Scotland, were employed where the soil was loose, and emptied themselves into the *fossae patentes*. They were usually sunk from three to four feet, were three feet wide at top and eighteen inches at bottom; one-half of the depth was filled up with small stones, sharp gravel (*nuda glarea*), or brushwood tied in bundles (*sarmentis colligatis*, Cato, c. 43), and the earth which had been dug out was thrown in above until the surface was level. Where stones or gravel could not readily be procured, green willow poles were introduced, crossing each other in all directions (*quoquoversus*), or a sort of rope was constructed of twigs twisted together so as to fit exactly into the bottom of the drain; above this the leaves of some of the pine tribe were trodden down, and the whole covered up with earth. To prevent the apertures being choked by the falling down of the soil, the mouths were supported by two stones placed upright, and one across (*utilissimum est . . . ora earum binis utrimque lapidibus statuminari et alio superintegi*, Plin. xviii. § 47). To carry off the surface-water from land under crop, open furrows (*sulci aquarii, elices*) were left at intervals, which discharged themselves into cross furrows (*colliquiae*) at the extremities of the fields, and these again poured their streams into the ditches. (Cat. 43, 155; Col. ii. 2, 8–10, viii. 3, xi. 2; Pallad. vi. 3; Plin. *H. N.* xviii. § 179; Verg. *Georg.* i. 113.)

MEASURES OF LAND.—The measure employed for land in Latium was the *jugerum*, which was a double *actus quadratus;* the actus quadratus, anciently called *acna*, or *acnua*, or *agnua*, being a square whose side was 120 Roman feet. The subdivisions of the *as* were applied to the jugerum, the lowest in use being the *scripulum*, properly the twelfth part of an *uncia:* hence, when applied to land, a square whose side was ten feet. Two jugera formed a *heredium*, 100 *heredia* a *centuria*, a term which is said to have arisen from the allotments of land made by Romulus to the citizens; for these being at the rate of two jugera to each man, 200 jugera would be assigned to every hundred men. Lastly, four centuriae made a *saltus*. We thus have the following table:—

1 scripulum = 100 square ft., Roman measure.
144 scripula = 1 actus = 14,400 square feet.
2 actus = 1 jugerum = 28,800 square ft.
200 jugera = 1 centuria.
4 centuriae = 1 saltus.

Now, since three actus quadrati contained 4800 square yards, and since the English imperial acre contains 4840 square yards, and since the Roman foot was about three-fifths of an inch less than the imperial foot, it follows that the Roman juger was less than two-thirds of an imperial acre by about 500 square yards.

In Campania the measure for land was the *versus quadratus*, a square whose side was 100 feet, the words *actus* and *versus* marking the ordinary length of furrow in the two regions. (Varr. *R. R.* i. 10, *L. L.* iv. 4; Col. v. 1; Plin. *H. N.* xviii. § 10.)

FENCES (*saepes, saepimenta*) were of four kinds:—

1. *Saepimentum naturale*, the quickset hedge (*viva saepes*).

2. *Saepimentum agreste*, a wooden paling made with upright stakes (*pali*) interlaced with brushwood (*virgultis implicatis*), or having two or more cross-spars (*amites, longuria*) passed through holes drilled in the stakes, after the manner of what are now termed *flakes* (*palis*

latis perforatis et per ea foramina trajectis longuriis fere binis aut ternis). (Varr. i. 14.)

3. *Saepimentum militare*, consisting of a ditch (*fossa*) with the earth dug out and thrown up inside so as to form an embankment (*agger*), a fence used chiefly along the sides of public roads or on the banks of rivers.

4. *Saepimentum fabrile*, wall (*maceria*), which might be formed either of stones, as in the vicinity of Tusculum, or of baked bricks as in the north of Italy, or of unbaked bricks as in Sabinum, or of masses of earth and stone pressed in between upright boards (*in formis*), and hence termed *formacei*. These last were common in Spain, in Africa, and near Tarentum, and were said to last for centuries uninjured by the weather. (Varr. i. 14; Plin. *H. N.* xxxv. § 169; comp. Col. v. 10, x. 3; Pallad. i. 34, vi. 3.)

Finally, after the land had been drained, divided, and fenced, the banks which served as boundaries and the road-sides were planted with trees, the elm and poplar being preferred, in order to secure a supply of leaves for the stock and timber for domestic use. (Cat. vi. 3.)

I. *b*. VILLA RUSTICA.

In erecting a house and offices, great importance was attached to the choice of a favourable position. The site selected was to be elevated rather than low, in order to secure good ventilation and to avoid all danger of exhalations from running or stagnant water; under the brow of a hill, for the sake of shelter; facing the east, so as to enjoy sunshine in winter and shade in summer; near, but not too near, to a stream, and with plenty of wood and pasture in the neighbourhood. The structures were to be strictly in proportion to the extent of the farm; for if too large, the original cost is heavy, and they must be kept in repair at a great expense; if too small, the various products would run the risk of being injured by the want of proper receptacles (*ita aedifices ne villa fundum quaerat neve fundus villam*, Cat. *R. R.* 3). The buildings were usually arranged round two courts, with a tank in the centre of each, and divided into three parts, named according to the purposes for which they were destined. 1. (*Pars*) *Urbana*. 2. (*Pars*) *Rustica*. 3. (*Pars*) *Fructuaria*.

1. *Urbana*. This comprehended that part of the building occupied by the master and his family, consisting of eating room (*cenationes*) and sleeping apartments (*cubicula*), with different aspects for summer and winter, baths (*balnearia*), and porticoes or promenades (*ambulationes*). Columella recommends that this portion of the mansion should be made as commodious as the means of the proprietor will permit, in order that he himself may be tempted to spend more time there, and that the lady of the family (*matrona*) may be more willing to bear her husband company.

2. *Rustica*. This comprehended that part of the building occupied by the servants, consisting of a large and lofty kitchen (*culina*), to which they might at all times resort, baths (*balnea*) for their use on holidays, sleeping closets (*cellae*) for the *servi soluti*, a gaol (*ergastulum*) under ground for the *servi vincti*. In this division were included also the stables, byres, sheds, folds, courts, and enclosures of every description (*stabula bubilia, saepta, ovilia, cortes*) for the working oxen (*domiti boves*), and other stock kept at home, together with a magazine or storehouse (*horreum*) where all the implements of agriculture (*omne rusticum instrumentum*) were deposited; and within this, a lock-up room for the reception of the iron tools (*ferramenta*). In so far as the distribution of rooms was concerned, the overseer (*vilicus*) was to have his chamber beside the main entrance (*janua*), in order that he might observe all who came in or went out; the book-keeper (*procurator*) was to be placed over the gate, that he might watch the *vilicus* as well as the others; while the shepherds (*opiliones*), oxherds (*bubulci*), and such persons were to be lodged in the immediate vicinity of the animals under their charge.

3. *Fructuaria*. This comprehended that part of the building where the produce of the farm was preserved, consisting of the oil cellar (*cella olearia*), the press-house (*cella torcularia*), the vault for wines in the cask (*cella vinaria*), the boiling-room for inspissating must (*defrutaria*), all of which were on the ground-floor, or a little depressed below the level of the soil. Above were hay-lofts (*faenilia*), repositories for chaff, straw, leaves, and other fodder (*palearia*), granaries (*horrea, granaria*), a drying-room for newly cut wood (*fumarium*) in connexion with the rustic bath flues, and store-rooms (*apothecae*) for wine in the amphora, some of which communicated with the *fumarium*, while others received the jars whose contents had been sufficiently mellowed by the influence of heat.

In addition to the conveniences enumerated above, a mill and bake-house (*pistrinum et furnum*) were attached to every establishment; at least two open tanks (*piscinae, lacus sub dio*), one for the cattle and geese, the other for steeping lupines, osiers, and objects requiring maceration; and, where there was no river or spring available, covered reservoirs (*cisternae sub tectis*) into which rain-water was conveyed for drinking and culinary purposes. (Cat. 3, 4, 14; Varr. i. 11–14; Col. i. 6; *Geopon.* ii. 3.)

II. INSTRUMENTA.

The instrumenta employed to cultivate the ground were two-fold: *a*. Persons (*homines*); *b*. Aids to human toil (*adminicula hominum*), namely, oxen and other animals employed in work; together with tools (*instrumenta*), in the restricted sense of the word.

a. HOMINES.

The men employed to cultivate a farm might be either, 1. free labourers (*operarii*), or 2. slaves (*servi*).

1. *Free labourers*. Cato considers the facility of procuring persons of this description as one of the circumstances that ought to weigh with a purchaser in making choice of a farm; for although a large proportion of the work upon great estates was, during the later ages at least of the Roman republic, always performed by slaves, it was considered advantageous to employ hirelings for those operations where a number of hands were required for a limited period, as in hay-making, the corn harvest, and the vintage, or, according to the cold-blooded recommendation of Varro (i. 17, 2), in unhealthy situations where slaves would have died off fast, entailing a heavy loss on their owner. *Operarii* were

usually hired in gangs (*conducticiae liberorum operae*), who entered into an engagement with a contractor (*mercennarius*), who in his turn bargained with the farmer for some piece of work in the slump, or else they were persons who had incurred debt which they paid off in work to their creditors. This, which was an ordinary practice in the earlier ages of the Roman republic, seems in later times to have been confined to foreign countries, being common, according to Varro, especially in Asia, Egypt, and Illyria. The *mercennarius politor* spoken of by Cato (c. 5) was, according to Mommsen (*Hist.* ii. 363 note, and 368), a reaper, or more strictly a thresher, who was paid for his labour by a certain share of the corn.

2. Slaves (*servi*). Rustic slaves were divided into two great classes,—those who were placed under no direct personal restraint (*servi soluti*), and those who worked in fetters (*servi vincti*) when abroad, and when at home were confined in a kind of prison (*ergastulum*), where they were guarded and their wants supplied by a gaoler (*ergastularius*). Slaves, moreover, in large establishments, were ranked in bodies according to the duties which they were appointed to perform, it being a matter of obvious expediency that the same individuals should be regularly employed in the same tasks. Hence there were the ox-drivers (*bubulci*), who for the most part acted as ploughmen also (*aratores*), the stable-men (*jugarii*), who harnessed the domestic animals and tended them in their stalls, the vine-dressers (*vinitores*), the leaf-strippers (*frondatores*), the ordinary labourers (*mediastini*), and many other classified bodies. These, according to their respective occupations, worked either singly, or in small gangs placed under the charge of inspectors (*magistri operum*). When the owner (*dominus*) did not reside upon the property, and in person superintended the various operations in progress, the whole farming establishment was under the control of a general overseer (*vilicus*), himself a slave or freedman, who regulated the work, distributed food and clothing to the labourers, inspected the tools, kept a regular account of the stock, performed the stated sacrifices, bought what was necessary for the use of the household, and sold the produce of the farm, for which he accounted to the proprietor, except on very extensive estates where there was usually a steward (not a slave) (*procurator*) who managed the pecuniary transactions, and held the *vilicus* in check. With the vilicus was associated a female slave (*contubernalis mulier*) called *vilica*, who took charge of the female slaves, and the indoor details of the family. The duties and qualifications of a vilicus will be found enumerated in Cat. c. 5, and Colum. i. 8; comp. *Geopon.* ii. 44, 45; Varro, i. 17, 3; Mommsen, ii. 366.

The food of the slaves composing the household (*familia*) was classed under three heads: 1. *Cibaria.* 2. *Vinum.* 3. *Pulmentarium.*

1. *Cibaria.* The *servi compediti*, being kept constantly in confinement, received their food in the shape of bread at the rate of 4 pounds (Roman pound = 11½ oz. avoirdupois) per diem in winter, and 5 pounds in summer, until the figs came in, when they went back to 4 pounds. The *servi soluti* received their food in the shape of corn, at the rate of 4 modii (pecks) of wheat per month in winter, and 4½ in summer. Those persons, such as the *vilicus*, the *vilica*, and the shepherd (*opilio*), who had no hard manual labour to perform, were allowed one-fourth less if Cato's text is (c. 56) sound; but cf. Wordsworth's *Specimens of early Latin*, p. 617.

2. *Vinum.* The quantity of wine allowed varied much according to the season of the year and the severity of the toil imposed, but a *servus solutus* received about 8 amphorae (nearly 48 imperial gallons) a year, and a *servus compeditus* about 10 amphorae, besides *lora* [see VINUM] at discretion for three months after the vintage. (Cato, 57.)

3. *Pulmentarium.* As pulmentaria they received olives which had fallen from the trees (*oleae caducae*), then those ripe olives (*oleae tempestivae*), from which the least amount of oil could be expressed, and, after the olives were all eaten up, salt fish (*halec*), and vinegar (*acetum*). In addition to the above, each individual was allowed a sextarius (very nearly an imperial pint) of oil per month, and a modius of salt per annum, rather more than the allowance in the Bengal jails at present.

The clothing (*vestimenta*) of the rustic labourers was of the most coarse description, but such as to protect them effectually from cold and wet, enabling them to pursue their avocations in all weathers. It consisted of thick woollen shirts (*tunicae*) 3½ ft. long, skin coats with long sleeves (*pelles manicatae*), cloaks with hoods (*saga cucullata, cuculiones*), patch-work wrappers (*centones*) made out of the old and ragged garments, together with strong sabots or wooden shoes (*sculponeae*). A tunic, a *sagum*, and a pair of *sculponeae* were given every other year.

The number of hands required to cultivate a farm depended almost entirely on the nature of the crops.

An arable farm of 200 jugers, where the ordinary crops of corn and leguminous vegetables were raised, required two pairs of oxen, two bubulci and six ordinary labourers, if free from trees; but if laid out as an arbustum, three additional hands.

An olive-growing farm of 240 jugers required three pairs of oxen, three asses for carrying manure (*asini ornati clitellarii*), one ass for turning the mill, five score of sheep, a vilicus, a vilica, five ordinary labourers, three bubulci, one ass-driver (*asinarius*), one shepherd (*opilio*), one swineherd (*subulcus*); in all twelve men and one woman.

A vineyard of 100 jugers required one pair of oxen, one pair of draught asses (*asini plostrarii*), one mill ass (*asinus molaris*), a vilicus, a vilica, one bubulcus, one asinarius, one man to look after the plantations of willows used for withes (*salictarius*), one subulcus, ten ordinary labourers; in all fifteen men and one woman. Varro points out that the number in some instances need not be increased in proportion to the increased size of the farm; *e.g.* one vilicus and one vilica will suffice for a much larger estate. (Cat. 5, 10, 11; Varr. i. 19; Colum. i. 7, 8, ii. 12.)

The proprietor was usually himself the farmer, but occasionally, quite as the exception, land was let (*locare*) to a tenant, who paid his rent either in money (*pensio; ad pecuniam numeratam conduxit*), as seems to have been the practice when Columella wrote, or by making over to the landlord a fixed proportion of the produce (*non nummo sed partibus locare*), according to the system described by Cato, and alluded to by the younger Pliny. These *coloni* sometimes tilled the same farm from father to son for generations (*coloni indigenae*), and such were considered the most desirable occupants, since they had a sort of hereditary interest in the soil, while on the other hand frequent changes could scarcely fail to prove injurious. The worst tenants were those who did not cultivate in person, but, living in towns (*urbanus colonus*), employed gangs of slaves. Upon the whole Columella recommends the owner of an estate to keep it in his own hands, except when it is very barren, the climate unhealthy, or the distance from his usual place of abode so great that he can seldom be upon the spot. Cato gives a table of the proportion which the *partiarius* ought to pay, according to the nature of the crop and the fertility of the region; but as he says nothing with regard to the manner in which the cost of cultivation was divided between the parties, his statement gives us no practical insight into the nature of these leases (Cat. 136, 137; Colum. i. 7; Plin. *Ep.* ix. 37, cf. iii. 19; Mommsen, ii. 364 *n.*).

b. ADMINICULA HOMINUM.

The domestic animals employed in labour and their treatment will be considered under the second great division of our subject, *Pastio*, or the management of stock.

The tools (*instrumenta*) chiefly used by the farmer were the plough (*aratrum*), the grubber (*irpex*), harrows (*crates, crates dentatae*), the rake (*rastrum*), the spade (*ligo, pala*), the hoe (*sarculum, bidens*), the mattock (*marra*), the spud or weeding-hook (*runco*), the scythe and sickle (*falx*), the thrashing-machine (*plostellum Poenicum, tribulum*), the cart (*plostrum*), the axe (*securis, dolabra*). These will be described as we go along in so far as may be necessary to render our observations intelligible, but for full information the reader must consult the separate articles devoted to each of the above words.

III. The Operations of Agriculture.

The most important operations performed by the husbandman were:—1. Ploughing (*aratio*). 2. Manuring (*stercoratio*). 3. Sowing (*satio*). 4. Harrowing (*occatio*). 5. Hoeing (*saritio*). 6. Weeding (*runcatio*). 7. Reaping (*messio*). 8. Threshing (*tritura*). 9. Winnowing (*ventilatio*). 10. Storing up (*conditio*).

The Flamen who offered sacrifice on the Cerealia to Ceres and Tellus, invoked twelve celestial patrons of these labours by the names *Vervactor; Reparator; Imporcitor; Insitor; Obarator; Occator; Saritor; Subruncator; Messor; Convector; Conditor; Promitor*,—significant appellations, which will be clearly understood from what follows. The functions of the last deity alone do not fall within our limits; but we shall add another to the list in the person of *Stercutius* or *Sterculius* (Serv. *ad* Verg. *Georg.* i. 21; Plin. *H. N.* xvii. § 50; Lactant. i. 20; Macrob. *Sat.* i. 7, 25; Prudent. *Peristeph.* ii. 449; Augustin. *de Civ. Dei*, xviii. 15).

1. *Ploughing* (*aratio*).

The number of times that land was ploughed, varying from two to nine, as well as the season at which the work was performed, depended upon the nature of the soil and the crop for which it was prepared. The object of ploughing being to keep down weeds, to pulverise the earth as finely as possible (Verg. *Georg.* ii. 204), and to expose every portion of it in turn to the action of the atmosphere, the operation was repeated again and again (Verg. *Georg.* i. 47), until these objects were fully attained. When stiff low-lying soil (*campus uliginosus*) was broken up for wheat, it was usual to plough it four times: first (*proscindere* or *vervagere*) as early in spring as the weather would permit (Verg. *Georg.* i. 63), after which the land was termed *vervactum*, and hence the god *Vervactor;* for the second time (*offringere, iterare, vervacta subigere*), about the summer solstice, under the patronage of the god *Reparator*, and on this occasion the field was cross-ploughed (Verg. *Georg.* i. 97); for the third time (*tertiare*), about the beginning of September; and for the fourth time, shortly before the equinox, when it was ribbed (*lirare*) for the reception of the seed, the ribbing being executed under favour of the god *Imporcitor* (from *porca*, the ridge between the furrows), by adding two mouldboards to the plough (*aratrum auritum*), one on each side of the share. (Varr. i. 29; Pallad. i. 43.) Rich soil on sloping ground was ploughed three times only, the ploughing in spring or at the beginning of September being omitted; light (*exilis*) moist soil also three times, at the end of August, early in September, and about the equinox; whilst the poorest hill soil was ploughed twice in rapid succession, early in September, so that the moisture might not be dried up by the summer heat. (Verg. *Georg.* i. 70; Col. ii. 4.)

The greatest care was taken not to plough ground that had been rendered miry by rain, nor that which after a long drought had been wetted by showers which had not penetrated beyond the surface (Col. ii. 4, 5; Pallad. ii. 3); but whether this last is really the *terra cariosa* of Cato, as Columella seems to think, is by no means clear. (Cat. 5, 34; comp. Plin. *H. N.* xvii. § 34.)

With regard to the depth to which the share was to be driven, we have no very precise directions; but Columella recommends generally for Italy deep ploughing (ii. 2, 23; comp. Plin. *H. N.* xviii. § 170) in preference to mere scratching (*scarificatio*) with light shares (*exiguis vomeribus et dentalibus*), which is proper for Numidia or Egypt.

The plough was almost invariably drawn by oxen, although Homer (*Il.* x. 351; *Od.* viii. 124) prefers mules, yoked close together in such a manner as to pull by their necks and not by the horns, guided and stimulated chiefly by the voice. The lash was used very sparingly, and the young steer was never pricked by the goad (*stimulus*), since it was apt to render him restive and unmanageable. The animals were allowed to rest at the end of each furrow, but not to stop in the middle of it: when unharnessed, they were carefully rubbed down, allowed to cool, and watered, before they were tied up in the stall, their mouths having been previously washed with wine. (Col. ii. 2, 22–28.)

The ploughman (*bubulcus*) was required to make perfectly straight and uniform furrows (*sulco* *vario ne ares*, Cat. 61), so close to each other as altogether to obliterate the mark of the share, and was particularly cautioned against missing over any portion of the ground, and thus leaving *scamna*; that is, masses of hard unstirred earth (*necubi crudum solum et immotum relinquat*, *quod agricolae scamnum vocant*, Col. ii. 2, 25). The normal length of a furrow was 120 feet; any greater length was considered to try the oxen too much. A distinction is drawn between *versus* and *versura*, the former being properly the *furrow*, the latter the extremity of the furrow, or the turning point; but this is far from being strictly observed. (Col. ii. 2, §§ 27, 28.)

Four days were allowed for the four ploughings of a juger of rich low-lying land (*jugerum talis agri quatuor operis expeditur*, Col. ii. 4, 8). The first ploughing (*proscissio*) occupied two days, the second (*iteratio*) one day, the third (*tertiatio*) three-fourths of a day, and ribbing for the seed one-fourth of a day (*in liram satum redigitur quadrante operae*, ib.). The same time is allowed for the three ploughings of rich upland soil (*colles pinguis soli*) as for the four ploughings of the uliginosus campus, the fatigue being much greater, although the difficulties presented by the acclivity were in some measure relieved by ploughing hills in a slanting direction, instead of straight up and down. (Varr. i. 27, 29; Col. ii. 2, 4; Plin. *H. N.* xviii. § 178; Pallad. i. 6, ii. 3, viii. 1, x. 1; *Geopon.* ii. 23; and comp. Hom. *Il.* xiii. 704, xviii. 370, 540; *Od.* v. 127.)

2. *Manuring* (*stercoratio*).

Manure (*fimus*, *stercus*). This was of three kinds: (1) the dung of birds (*stercus columbinum*); (2) of the ordinary domestic animals (*bubulum*, *ovillum*, *caprinum*, *suillum*, *equinum*, *asininum*, &c.); (3) human excrements. These differed considerably in quality, and hence those who raised different kinds of crops are enjoined to keep the different sorts of dung separate, in order that each might be applied in the most advantageous manner. That derived from pigeon-houses (*columbariis*), from aviaries where thrushes and blackbirds were fattened (*ex aviariis turdorum ac merularum*, Varro, i. 38), and from birds in general, except water-fowl, was considered the hottest and most powerful, and always placed apart, being sown by the hand exactly as we deal with guano at the present moment. The dung of swine was considered of the least value (Col. ii. 38). The ancient writers very emphatically point out the necessity of procuring large supplies of manure, which the Romans regarded under the special patronage of *Stercutius*, and farmers were urged to collect straw, weeds, leaves of all sorts, hedge-clippings, and tender twigs, which were first used to litter the stock, and then, when mixed with ashes, sweepings of the house, road-scrapings, and filth of every description, served to swell the dunghills (*sterquilinia*). These were at least two in number, one being intended for immediate use, the other for the reception of fresh materials, which were allowed to remain for a year (Varro, i. 13); dung, when old and well rotted, being accounted best for all purposes, except for top-dressing of meadows, when it was used as fresh as possible. The dunghills were formed on ground which had been hollowed out and beaten down or paved, so that the moisture might not escape through the soil, and they were covered over with brushwood or hurdles to prevent evaporation. In this way the whole mass was kept constantly moist, and fermentation was still further promoted by turning it over very frequently and incorporating the different parts. (Col. ii. 14.)

The particular crops to which manure was chiefly applied will be noticed hereafter; but in so far as regards the time of application it was laid down in September or October, on the ground that was to be autumn sown; and in the course of January or February, on the ground that was to be spring sown. A full manuring (*stercoratio*) for a juger of land on an upland slope (*quod spissius stercoratur*) was 24 loads (*vehes*), each load being 80 modii or pecks; while for low-lying land (*quod rarius stercoratur*) 18 loads were considered sufficient. (Col. ii. 5.) The dung was thrown down in small heaps of the bulk of five modii, it was then broken small, was spread out equally and ploughed in instantly that it might not be dried up by the rays of the sun, great care being taken to perform these operations when the moon was waning, and if possible with a west wind. According to the calculations of Columella (ii. 14), the live-stock necessary for a farm of two hundred jugers ought to yield 1440 loads per year; that is, enough for manuring 60 jugers at the rate of 24 loads to the juger. In what proportions this was distributed is nowhere very clearly defined, and must necessarily have varied according to circumstances. If we take two statements of Cato in connexion with each other, we shall be led to conclude that he advises one-half of the whole manure made upon a farm to be applied to the raising of green crops used as fodder (*pabulum*), one-fourth to the top-dressing of meadows, and the remaining fourth for the olives and fruit-trees. Columella recommends the manuring of light soil (*exilis terra*) before the second ploughing; but when rich lands were summer fallowed previous to a corn crop, no manure was considered requisite. (Hom. *Od.* xvii. 297; Theophrast. *Caus. Phys.* iii. 25; Cat. 5, 7, 29, 36, 37, 61; Varr. i. 13, 38; Colum. ii. 5, 14, 15, xi. 2; Pallad. i. 33, x. i.; Cic. *de Senect.* 15, §§ 51, 54; Plin. *H. N.* xvii. §§ 50–55, xviii. §§ 192–194; *Geopon.* ii. 21, 22.)

The system of manuring by penning and feeding sheep upon a limited space of ground was neither unknown nor neglected, as we perceive from the precepts of Cato (30), Varro (ii. 2, 12), and Pliny (*H. N.* xviii. § 194), all of whom recommend the practice.

The ashes obtained by burning weeds, bushes, prunings, or any sort of superfluous wood, were found to have the best effect (Verg. *Georg.* i. 81; Colum. ii. 15, 4; Plin. xvii. § 49; *Geopon.* xii. 4), and sometimes, as we know from Virgil (*Georg.* i. 84), it was deemed profitable to set fire to the stubble standing in the fields (Plin. *H. N.* xviii. § 300). Caustic lime was employed as a fertiliser by some of the tribes of Transalpine Gaul in the time of Pliny, but in Italy its application seems to have been very limited and to have been confined to vines, olives, and cherry-trees. (Cat. 38; Pallad. i. 6; Plin. *H. N.* xvii. § 53.)

Marl also (*marga*) of different kinds was known to the Greeks, was applied by the Megarenses to wet cold lands, and was extensively employed in Gaul and Britain; but not being found in Italy, did not enter into the agricultural arrangements of the Latins. Pliny devotes several chapters to an elaborate discussion upon these earths, of which he describes various sorts which had been made the subject of experiment, classifying them according to their colour, their constitution, and their qualities: the white (*alba*), the red (*rufa*), the dove-coloured (*columbina*), the clayey (*argillacea*), the sandy (*arenacea*), the tufaceous (*tofacea*), which was either fat (*pinguis*) or rough (*aspera*). Some of them we recognise at once, as, for example, the fat white clayey marl chiefly used in Britain, the effects of which were believed to endure for eighty years. (Plin. *H. N.* xvii. §§ 42, 45; comp. Varro, i. 7, *In Gallia Transalpina intus ad Rhenum aliquot regiones accessi . . . ubi agros stercorarent candida fossicia creta.*) Daubeny believes (p. 134) that the virtue ascribed to marl as a manure, which he says is worthless *as such*, is due to the large quantity of phosphate of lime found in some soils which bear that name.

Somewhat analogous to the use of marl was the system strongly recommended by Theophrastus and Columella, but condemned by Pliny, of combining soils in which some quality existed in excess, with those possessing opposite characters —dry gravel with chalky clay, or heavy wet loam with sand,—the object being frequently attained to a certain extent by subsoil ploughing, which was greatly approved of as a means of renovating fields exhausted by severe cropping. (Theophrast. *Caus. Phys.* iii. 25; Colum. ii. 15; Plin. *H. N.* xvii. § 41.)

When ordinary manures could not be procured in sufficient quantity, a scheme was resorted to which was at one time pursued in this country, and is still adopted with considerable success in many parts of Italy and in the sandy tracts of southern France. The field was sown about the middle of September with beans or lupines, which were ploughed into the ground the following spring, in all cases before the pod was fully formed, and at an earlier stage of their growth on light than on stiff soils. Nay, many crops, such as beans, peas, lupines, vetches, lentils (*ervilia, cicerula*), even when allowed to come to maturity, were supposed to exercise an ameliorating influence, provided their roots were immediately buried by the plough, although perhaps in this case the beneficial effect may have resulted from the manure applied before they were sown. On the other hand, corn in general, poppies, fenugreek, and all crops pulled up by the roots, such as cicer and flax, were supposed to exhaust (*urere*) the soil, which then required either repose or manure to restore its powers. (Theophrast. *Caus. Phys.* viii. 9; Cat. 37; Varr. i. 23; Verg. *Georg.* i. 77; Colum. ii. 13–15, xi. 2; Pallad. i. 6, vi. 4, x. 9; Plin. *H. N.* xvii. § 56, xviii. § 182.)

3. *Sowing* (*satio*)

May be considered under three heads. 1. The time of sowing. 2. The manner of sowing. 3. The choice, preparation, and quantity of the seed.

1. The seed-time (*sementis*), κατ' ἐξοχήν, commenced at the autumnal equinox, and ended fifteen days before the winter solstice. Few, however, began before the setting of the Pleiades (23rd October), unless on cold wet ground, or in those localities where bad weather set in soon; indeed, it was an old proverb that, while a late sowing often disappointed the hopes of the husbandman, an early one never realised them (*maturam sationem saepe decipere solere, seram nunquam quin mala sit*); and the Virgilian maxim is to the same purpose (*Georg.* i. 219). Spring sowing (*trimestris satio*) was practised only in very deep stiff land, which would admit of being cropped for several years in succession (*restibilis ager*), or where, from peculiar circumstances connected with the situation or climate, such as the great inclemency of the winters, it was impossible for the farmer to sow in autumn; and hence, generally speaking, was resorted to very sparingly, and for the most part from necessity rather than inclination.

2. We can infer from incidental notices in agricultural writers, that the seed was committed to the ground in at least three different modes.

a. The seed was cast upon a flat surface finely pulverised by the plough and harrow, and then covered up by ribbing the land (*tertio cum arant,* JACTO SEMINE, *boves lirare dicuntur*). (Varr. i. 29; comp. Colum. ii. 13.)

b. The land was ribbed, the seed was then dropped upon the tops of the *lirae* or elevated ridges, according to our fashion for turnips, LIRAS *autem rustici vocant easdem porcas cum sic aratum est, ut inter duos latius distantes sulcos, medius cumulus siccam sedem frumentis praebeat.* (Colum. ii. 4, § 8.) This plan was followed on wet land to secure a dry bed for the seed, which would probably be covered up by hand-rakes (*rastris*).

c. The land was ribbed as in the former case; but the seed, instead of being dropped upon the ridge of the *lira*, was cast into the depression of the furrow, and might be covered up either by the harrow or by ploughing down the middle of the lira. This was practised on light, sloping, and therefore dry, land (*neque in lira sed sub sulco talis ager seminandus est*, Colum. ii. 4, § 11).

Vetches, fenugreek, and some other crops, as will be noticed below, were frequently thrown upon land unprepared (*cruda terra*), and the seeds then ploughed in. The seed seems to have been cast out of a three-peck basket (*trimodiam satoriam*, sc. *corbem*), which from superstitious motives was sometimes covered over with the skin of a hyaena (Col. ii. 9, 9). Pliny points out how necessary it was that the hand of the sower should keep time with his stride, in order that he might scatter the grains with perfect uniformity.

3. The points chiefly attended to in the choice of seed corn were, that it should be perfectly fresh and free from mixture or adulteration, and of an uniform reddish colour throughout its substance. When the crop was reaped, the largest and finest ears were selected by the hand, or, where the produce was so great as to render this impossible, the heaviest grains were separated by a sieve (*quidquid exteratur capisterio expurgandum erit*, Col. ii. 9, 11) and reserved. In addition to these precautions it was not unusual to doctor seeds of all sorts (*medicare semina*) by sprinkling them with an alkaline liquor (*nitrum*, i. e. probably carbonate of soda), or with the deposit left by newly-expressed oil (*amurca*), or by steeping them in various preparations, of which several are enumerated by Columella and Pliny (cf. Verg. *Georg.* i. 193); the object being twofold, in the first place to increase the quan-

tity and quality of the produce, and in the second place to protect it from the ravages of vermin, especially the little animal called *curculio*, probably the same insect with our weevil.

The quantity of seed sown varied according to the soil, the situation, the season, and the weather, the general rule being that less was required for rich and finely pulverised (*pingue et putre*), or light and sharp (*gracile*), or thin poor soil (*macrum, exile*) than for such as was stiff and heavy (*crassum, cretosum*), or moderately tenacious; less for an open field than for an *arbustum*, less at the beginning of the season than towards the close (although this is contradicted by Pliny, *H. N.* xviii. § 196), and less in rainy than in dry weather, maxims which are fully explained by the authorities quoted below. The average amount of seed used for the three principal species of grain—wheat, spelt, and barley—was respectively five, ten, and six modii per juger, which Daubeny (p. 129) shows to correspond pretty nearly with our own practice. (Xenoph. *Oecon.* 17; Theophrast. ii. 6, and iii. 25; Cat. 34, 35; Varr. i. 29, 34, 40, 44, 52; Colum. ii. 2, 3, 8–10, 13, xii. 2; Pallad. i. 6, 34, x. 2; Verg. *Georg.* i. 193, 212, 225; Plin. *H. N.* xviii. §§ 198 ff., 304 ff.; *Geopon.* ii. 15–20.)

4. *Harrowing* (*occatio*)

Might be performed at two different periods: after the first or second ploughing, in order to powder the soil completely; and after sowing, in order to cover up the seed. When the land was encumbered with roots and deep-seated weeds, a grubber (*irpex*, Cat. 10; Varr. *L. L.* v. 136) formed of a strong plank set with iron spikes was employed, but in ordinary cases wicker hurdles (*vimineae crates*), sometimes fitted with teeth (*dentatae*), were dragged over the ground; or the clods were broken with hand-rakes (*rastra*). The seed, as we have seen above, being for the most part ploughed in, and the operation for that reason placed under the patronage of a god *Obarator*, the second harrowing (*iteratio*) was omitted, except where the surface still rose in lumps (Verg. *Georg.* i. 104); but since it was the duty of a good farmer to have his fields in the best order before he began to sow, the older Roman writers considered harrowing after sowing as a proof of bad husbandry.—"Veteres Romani dixerunt male subactum agrum, qui satis frugibus occandus sit." (Colum. ii. 4, 13, xi. 2, 82; Plin. *H. N.* xviii. § 180; Verg. *Georg.* i. 94, 104.)

5. *Hoeing* (*saritio*).

The next care, after covering up the seed, was to loosen the earth round the roots of the young blades, in order that air and moisture might gain free access and enable them to send forth more numerous and more vigorous shoots and fibres (*ut fruticare possint*). This process was termed *σκαλεία*, *saritio*, or *sarculatio*, and was carried on by hand with an instrument called *sarculum*, the form of which is not known. Corn was usually hoed twice, for the first time in winter, as soon as it fairly covered the ground (*cum sata sulcos contexerint*), provided there was no frost; and for the second time in spring, before the stalk became jointed (*antequam seges in articulum eat*); great care being taken at all times not to injure the root. On the first occasion, and then only, where the ground was dry and the situation warm, the plants, in addition to a simple hoeing (*plana saritio*), were earthed up (*adobruere*). Columella recommends saritio for almost all crops, except lupines; but authorities differed much as to the necessity or propriety of performing the operation in any case, and those who advocated its expediency most warmly, agreed that the periods at which it ought to be executed, and the number of times that it ought to be repeated, must depend upon the soil, climate, and a variety of special circumstances. (Cat. 37; Varr. i. 18, 29, 36; Colum. ii. 11, xi. 2; Plin. *H. N.* xviii. § 184; *Geopon.* ii. 24: comp. Plaut. *Capt.* iii. 5, 3; Verg. *Georg.* i. 155.)

6. *Weeding* (*runcatio*).

Hoeing was followed by weeding (*βοτανισμός*, *runcatio*), which in the case of grain crops took place immediately before they began to blossom, or immediately after the flower had passed away. The weeds were either pulled up by the roots (*evulsis inutilibus herbis*), or cut over with a bill-hook, which Palladius terms *runco*. (Cat. 37; Varr. i. 30; Colum. ii. 11, xi. 2; Pallad. i. *sub fin.*; Plin. *H. N.* xviii. § 185; *Geopon.* ii. 24.)

But after the farmer had laboured with unremitting zeal in cleaning and pulverising the soil, in selecting and medicating the seed, in hoeing the young blades, and in extirpating the common noxious weeds (*lolium*, *tribuli*, *lappae*, *cardui*, *rubi*, *avena*), the safety of the crop was threatened by a vast number of assailants (*tum variae illudant pestes*, Verg. *Georg.* i. 181); such as worms of various kinds (*vermiculi*) attacking both root and ear, caterpillars (*uricae*), spiders (*phalangia*), snails (*limaces*, *cocleae*), mice (*mures*), moles (*talpae*), and the whole race of birds, besides which each kind of plant was believed to have its own special vegetable enemy, which, if not carefully watched, would spring up, choke, and destroy it. But the foe dreaded above all others in the vineyard and the cornfield was a peculiar blight or mildew termed *robigo*, which wrought such havoc in damp low-lying situations that it was regarded as a manifestation of wrath on the part of a malignant spirit, whose favour the rustic sought to propitiate by the annual festival of the *Robigalia*. [ROBIGALIA.] (Plin. *H. N.* xviii. § 154; Verg. *Georg.* i. 151.)

Another danger of an opposite description arose from the grain shooting up so rapidly that the stalk was likely to become immoderately long and weak. The danger in this case was averted by pasturing down the too luxuriant herbage with sheep (*luxuriem segetum tenera depascit in herba*), or by dragging over it an iron-toothed harrow (*cratis et hoc genus dentatae stilis ferreis*), by which it was said to be combed (*pectinari*). (Verg. *Georg.* i. 112; Plin. *H. N.* xviii. § 186.)

7. *Reaping* (*messio*).

The corn was reaped as soon as it had acquired a uniform yellow tint, without waiting until it had become dead ripe, in order to avoid the loss sustained by shaking, and by the ravages of animals. The necessity of pursuing this course with regard to barley is especially insisted upon; but it is quite at variance with modern practice. There was a saying that it was better to reap two days too soon than two days too late. (Colum. ii. 9; Plin. xviii. § 298.)

Varro (i. 50) describes three distinct methods of reaping (*tria genera messionis*).

1. That followed in Umbria, where the stalk was shorn close to the ground with a hook (*falx*). Each handful was laid down; and when a number of these had accumulated, the ears were cut off, thrown into baskets (*corbes*), and sent to the threshing-floor, the straw (*stramentum*) being left upon the field, and afterwards gathered into a heap.

2. That followed in Picenum, where they used a small iron saw (*serrula ferrea*) fixed to the extremity of a crooked wooden handle (*ligneum incurvum batillum*); with this they laid hold of a bundle of ears which were cut off, the straw being left standing to be mown subsequently.

3. That followed in the vicinity of Rome and most other places, where the stalks were grasped in the left hand and cut at half their height from the ground, the whole of the portion detached being conveyed in baskets to the threshing-floor, and the part left standing being cut afterwards.

The last two methods only are particularly noticed by Columella, who describes the instruments employed in the second under the names of *pectines* and *mergae* (*multi mergis, alii pectinibus spicam ipsam legunt*); and those employed in the third as *falces veruculatae* (*multi falcibus veruculatis, atque iis vel rostratis vel denticulatis medium culmum secant*); for which comp. Paul. ex Fest. p. 124, Müll. and Schneider's note on Col. ii. 20; Ven. i. 51, 2. In addition to the above, Pliny and Palladius describe a reaping-machine worked by oxen, which was much used in the extensive plains of Gaul. Pliny also describes another kind of reaping: *stipulae alibi mediae falce praeciduntur atque inter duas mergites spica destringitur*, where *mergites* seems to be the same as Columella's *mergae*. Daubeny supposes that *inter duas mergites* = "by a pair of shears," which can hardly be right. Virgil (*Georg.* i. 316), perhaps, alludes to binding up the corn in sheaves; but his words are not so clear upon this point as those of Homer in the charming picture of a harvest-field contained in the eighteenth book of the *Iliad*. (Varr. i. 50; Colum. ii. 20; Plin. *H. N.* xviii. § 296; Pallad. vii. 2; *Geopon.* ii. 25; comp. Hom. *Il.* xi. 67, xviii. 550.)

8. *Threshing* (*tritura*).

After the crop had been properly dried and hardened (*torrefacta*) by exposure to the sun, it was conveyed to the threshing-floor (ἅλως, ἀλωή, or ἀλωή, *area*). This was an open space, on some elevated spot over which the wind had free course, of a circular form, slightly raised in the centre to allow moisture to run off. The earth was compressed by heavy rollers (*gravi cylindro, molari lapide*), pounded with rammers (*paviculis*), and reduced to a solid consistency with clay and chaff, so as to present an even unyielding surface; or, better still, paved with hard stones. Here the corn was spread out and beaten with flails (*baculis excutere, fustibus cudere, perticis flagellare*); or more commonly, except when the ears alone had been brought from the field, trodden out (*exterere*) by the feet of a number of men or horses, who were driven backwards and forwards within the ring. To produce the effect more easily and more perfectly, the cattle were frequently yoked to a machine (*tribulum, tribula, trahea, traha*), consisting of a board made rough by attaching to it stones or pieces of iron, and loaded with some heavy weight; or what was termed a Punic wain (*plostellum Poenicum*) was employed, being a set of toothed rollers covered with planks, on which sat the driver who guided the team.

Attached to the area was a huge shed or half-enclosed barn (*nubilarium*), of sufficient dimensions to contain the whole crop. Here the corn was dried in unfavourable seasons before being threshed, and hither it was hurriedly conveyed for shelter when the harvest work was interrupted by any sudden storm. (Cat. 91, 129; Varr. i. 13, 51, 52; Colum. i. 6, ii. 19; Pallad. i. 36, viii. 1; Plin. *H. N.* xviii. § 298; Hom. *Il.* xiii. 588, xx. 495, xxi. 77; Verg. *Georg.* i. 178; *Geopon.* ii. 26.)

9. *Winnowing* (*ventilatio*).

When the grain was mixed with chaff, it was laid down in small piles upon the area, in order that the lighter particles might be borne away by the passing breeze; but when the wind was not sufficiently strong, it became necessary to winnow (*eventilare*) it. This was effected by a labourer (λικμητήρ, *ventilator*), who tossed it up from a broad basket (*vannus*), sieve (*capisterium*) or shovel (πτύον, *ventilabrum*), when the heavy portion fell down in a heap, and the chaff floated off through the air. When it was intended to keep the corn for any length of time, it was common to repeat the process (*repurgare, repolire*). that it might be thoroughly cleaned. (Varr. i. 52; Colum. ii. 9, 20; cf. Hom. *Il.* v. 499, xiii. 588.)

10. *Preservation of Corn* (*de frumento servando*).

After the corn had been threshed out and winnowed, or at least the ears separated from the stalk, the next care was to store up (*condere*) the grain in fitting repositories (*granaria, horrea*). The great object in view being to preserve it from becoming mouldy or rotten, and to protect it from the ravages of vermin, especially the weevil (*curculio*), we find that very great diversity of opinion existed as to the means by which those ends might best be attained. By some the store-houses were built with brick walls of great thickness, for the purpose, it would seem, of securing a uniform temperature, and had no window or aperture, except a hole in the roof, through which they were filled. Others, again, raised these structures aloft on wooden columns, and allowed currents of air to pass through on all sides and even from below; while others admitted particular winds only,—such, namely, as were of a drying character. Many plastered the walls with a sort of hard stucco, worked up with amurca, which was believed to act as a safeguard against vermin, while others considered the use of lime under any form as decidedly injurious. These and many different opinions, together with receipts for various preparations wherewith to sprinkle the corn, will be found detailed in the authorities cited below, among whom Pliny very sensibly observes that the principal consideration ought to be the condition of the grain itself when housed; since, if not perfectly dry, it must of necessity breed mischief. In many countries, as in Thrace, Cappadocia, Spain, and Africa, the corn was laid up in pits (*scrobibus*) sunk in a perfectly dry soil and well lined with chaff, a practice now extensively adopted in Tuscany. Wheat in the ear (*cum spica sua*) might, according to Varro, if the air was excluded, be preserved in such receptacles for fifty years, and millet for a hundred. Modern experiments (comp. British Association Reports for 1850) have shown that seeds very rarely retain their vitality for as much as forty years. (Cat. 92; Varr. i. 57; Colum. i. 6; Pallad. i. 19; Plin. *H. N.* xviii. § 307; *Geopon.* ii. 27–31.)

IV. Crops.

Crops, as already remarked, may be divided into four classes:—1. Grain or corn crops. 2. Leguminous crops, or pulse. 3. Crops cut green for forage. 4. Crops which supplied the raw materials for the textile fabrics. We might extend the number of classes did we purpose to treat of certain plants, such as poppies (*papavera*) and *sesamum*, raised to a small extent only, and confined to particular localities; but our limits do not permit us to embrace so wide a field of inquiry.

In addition to the above, much attention was devoted to what may be termed secondary crops; these, namely, which did not afford directly food or clothing for man or beast, but which were required in order to facilitate the cultivation and collection of the primary crops. Thus, beds of willows (*salicta*) for baskets and withes, and of reeds (*arundineta*) for vine-props, were frequently in favourable situations very profitable, just as land in certain districts of Kent yields a large return when planted with young chestnuts for hop-poles.

1. *Corn Crops* (*frumenta*).

The word applied in a general sense to denote what we now call "the cereal grasses" was *frumenta*; but of these wheat being by far the most important, it is not wonderful that the term in question should be employed frequently to denote wheat specially, and occasionally in such a manner as to exclude other kinds of grain, as when Pliny remarks, "calamus altior frumento quam hordeo," meaning "in wheat the stalk is longer than in barley." The only frumenta which it will be necessary for us to consider particularly in this place are—

a. Triticum and *Far*; *b. Hordeum*; *c. Panicum* and *Milium*.

a. Triticum and *Far*. No one entertains any doubt that *triticum* (*πυρὸς* in Greek, and in the later writers *σῖτος*) is the generic name for the grain which we denominate *wheat*; but when we proceed to examine the different species or varieties, we are involved in many difficulties, for the botanical descriptions transmitted to us by the ancients are in all cases so imperfect, and in many instances so directly at variance with one another, that it becomes almost impossible to identify with certainty the objects to which they refer, with those familiar to ourselves. Columella (ii. 6; comp. Dioscorid. ii. 107; Theophr. *H. P.* viii. 1, 4), who attempts a systematic classification, assigns the first place among "frumenta" to *Triticum* and *Semen adoreum*, each of which contained several species or varieties. Among many different kinds of triticum he deems the following only deserving of particular notice:—

1. *Robus*, possessing superior weight and brilliancy (*nitor*).

2. *Siligo*, very white, but deficient in weight. (Colum. ii. 9, § 13; Plin. *H. N.* xviii. § 85.)

3. *Trimestre* (*τριμηνιαῖος*, s. *τρίμηνος*), a sort of siligo, receiving its name from lying three months only in the ground, being spring-sown. We find this kind sometimes denominated *δίμηνος* also, since in very warm situations it came to maturity in two months after it was sown.

Among the different kinds of *Semen adoreum*, the following are particularly noticed:—

1. *Far Clusinum*, distinguished by its whiteness.

2. *Far venuculum rutilum.* } Both heavier than
3. *Far venuculum candidum.* } the *Clusinum*.

4. *Halicastrum* or *Semen trimestre*, very heavy and of fine quality. Here we must remark that although *robus*, *siligo*, and *trimestre* are set down as particular species or varieties of the more general term *triticum*, which is used in contradistinction to *semen adoreum*, it is much more usual to find *triticum* used in a restricted sense to denote ordinary winter wheat, in opposition to both *siligo* and *adoreum*, and hence Pliny declares that the most common kinds of grain were "*Far*, called *adoreum* by the ancients, *siligo*, and *triticum*."

Now, with regard to the three kinds of *triticum* enumerated above, we shall have little difficulty in deciding that they were not distinct species, but merely varieties of the same species; for we are assured by Columella (ii. 9), that triticum, when sown in wet land, passed in the course of three years into *siligo*, and by Pliny (*l. c.*) that *siligo*, in most parts of Gaul, passed, at the end of two years, into *triticum*; again, Columella, in describing *trimestre*, admits (although contradicted by Plin. *H. N.* xviii. § 70) that it is a variety of *siligo*, while modern experience teaches us that winter and spring wheats are convertible by subjecting them to peculiar modes of cultivation. Hence we conclude that *robus* and *siligo* were varieties of what is now termed by botanists *Triticum hibernum*, and that *trimestre* was a variety of our *Triticum aestivum*, which is itself a variety of the *hibernum*.

The question with regard to *Far*, *Ador*, *Semen adoreum*, *Semen*, *Adoreum*, names used indifferently by the Latin writers, does not admit of such an easy solution. But after a careful examination of the numerous, vague, perplexing, and contradictory statements scattered over the classics, the discussion of which separately would far exceed our limits, we may with considerable confidence decide that *far* was a variety of the Greek *ζέα* or *ζεία*, and of the modern *Triticum spelta*, if not absolutely identical with one or both. Spelt, which is fully recognised by botanists as a distinct species of triticum, is much more hardy than common wheat, succeeding well in high exposed situations where the latter would not ripen, and its chaff adheres with singular firmness to the grain, both of which circumstances were prominent characteristics of *far*. (Colum. ii. 8; Plin. *H. N.* xviii. § 83.) Indeed, it was found impossible to get rid of the thick double case in which it was enclosed, by the ordinary modes of threshing; therefore it was stored up with the chaff attached (*convenit cum palea sua condi et stipula tantum et aristis liberatur*); and when used as food it was necessary to pound it in a mortar, or rub it in a mill of a peculiar construction, in order to separate the tenacious husks—a process altogether distinct from grinding, and indicated by the words *pinsere*, *pistura*, *pistores*. (Varr. *L. L.* v. 138; Plin. *H. N.* xviii. § 97 ff.) The idea entertained by some commentators, that the distinction between triticum and far consisted in the circumstance that the latter was awned while the former was beardless, is altogether untenable; for not only does Pliny say expressly in one passage (xviii. § 92), *far sine arista est*, and in another (xviii. § 298) as distinctly that *far* had *aristae*, but it is perfectly clear from Varro (i. 48; compare Plin. *H. N.* xviii. § 53) that ordinary triticum had a beard, and from Pliny that siligo was generally, although not uniformly, without one—a series of assertions whose contradictory nature need occasion no surprise, since it is now well known that this, like colour, is a point which does not amount to specific difference, for white, red, awned, and beardless wheats are found to change and run into each other, according to soil, climate, and mode of culture. Another fact noticed by Pliny, to which, if correct, botanists seem not to have given due attention, is, that *triticum* had four joints in its stalk, *far* six, and barley eight.

All agree that triticum (we shall use the word hereafter in the restricted sense of common winter-wheat) succeeded best in dry, slightly elevated, open ground, where the full influence of the sun's rays was not impeded by trees, while siligo and far were well adapted for low damp situations and stiff clayey soils (Cato, 34, 35; Varr. i. 9; Colum. ii. 6; Plin. xviii. §§ 94, 95).

The finest Italian wheat weighed from twenty-five to twenty-six pounds the modius, which corresponds to upwards of seventy English pounds avoirdupois to the imperial bushel, the Roman pound being very nearly 11·8 oz. avoird., and the modius ·99119 of an imperial peck. The lightest was that brought from Gaul and from the Chersonese. It did not weigh more than twenty pounds the modius. Intermediate were the Sardinian, the Alexandrian, the Sicilian, the Baetican, and the African, the two last approaching most nearly in excellence to the Italian. (Plin. *H. N.* xviii. § 75.)

The proportion which the produce bore to the seed sown varied, when Cicero and Varro wrote, in the richest and most highly cultivated districts of Sicily and Italy from 8 to 10 for 1; 15 for 1 was regarded as an extraordinary crop obtained in a few highly favoured spots only, while in the age of Columella, when agriculture had fallen into decay, the average return was less than 4 for 1. Parts of Egypt, the region of Byzacium in Africa, the neighbourhood of Gadara in Syria, and the territory of Sybaris were said to render a hundred or even a hundred and fifty fold; but these accounts were in all likelihood greatly exaggerated. (Cic. *in Verr.* iii. 47, § 112; Varr. i. 44; Colum. iii. 3, § 4; Plin. *H. N.* xviii. §§ 89–92.)

Far is uniformly represented as having been the first species of grain ever cultivated in Italy, and as such was employed exclusively in religious ceremonies. Hence also *farina* became the generic term for flour or meal whether derived from far, from triticum, or from any other cereal. Thus we read of *triticea farina*, *siliginea farina*, *hordeacea farina*, even *avenacea farina* (Plin. *H. N.* xviii. § 88, xx. § 135, xxii. § 122). In the expressions *far triticeum*, *far hordeaceum*, found in Columella (viii. 5, 11), *far* is evidently used for *farina*, and we shall see that even *siligo* is in like manner used to denote, not only the solid grain, but the flour produced by grinding it. This being premised, we may proceed to examine the meaning of the terms *pollen*, *similago* s. *simila*, *cibarium*, *siligo*, *flos*, *alica*, *amylum*, *granea*, &c., several of which have never been clearly explained. Here again we can give the result only of an investigation, in the course of which we are obliged to thread our way through statements at once obscure and irreconcilable. Regarding *triticum* and *siligo* as two well distinguished varieties of wheat, their products when ground were thus classed by millers:—

From triticum,

1. *Pollen*, the finest flour dust, double dressed.
2. *Simila*, or *Similago*, the best first flour.
3. *Cibarium secundarium*, seconds flour.
4. *Furfures*, bran.

From siligo,

1. *Siligo*, the finest double-dressed flour, used exclusively for pastry and fancy bread.
2. *Flos* (*siliginis*), first flour.
3. *Cibarium secundarium*, seconds flour.
4. *Furfures*, bran.

It would appear that Celsus (ii. 18), considering wheat generally as triticum, called the finest and purest flour *siligo*; ordinary flour, *simila*; the whole produce of the grain, bran, and flour mixed together, *αὐτόπυρος*. (Plin. *H. N.* xviii. §§ 89 ff., 138.)

Alica is placed by Pliny among the different kinds of corn (xviii. § 50), and is probably the same with the *Halicastrum*, *Alicastrum*, or spring-sown *far* of Columella (ii. 6). But *alica* is also used to denote, not only the grain, but a particular preparation of it, most clearly described in another passage of Pliny (xviii. § 109). The finest was made from Campanian zea, which was first rubbed in a wooden mortar to remove the husk, and then (*excussis tunicis*) the pure grain (*nudata medulla*) was pounded. In this manner three sorts were produced and classed according to their fineness,—the *minimum*, the *secundarium*, and the coarsest or *aphaerema*,—and each was mixed with a kind of fine white marl (*creta*), found between Naples and Puteoli, which became intimately amalgamated with it (*transit in corpus, coloremque et teneritatem adfert*). This compound was the principal ingredient in a sort of porridge also called *alica*, while *alicarius*, signifying properly one who pounded alica, sometimes denotes a miller in general. (Plin. *H. N.* xviii. § 109, xxii. § 124; Cat. 76; Cels. vi. 6; Mart. ii. 37, xiii. 6; *Geopon.* iii. 7.)

Amylum is starch, and the modes of preparing it are described by Cato (87), and Pliny (*H. N.* xviii. § 76). It was used both in medicine and for the kitchen.

Granea was wheat, not ground, but merely divested of its husk, and made into a sort of porridge by boiling it in water and then adding milk. (Cat. 86.) Pliny (xviii. § 116) speaks of it as an inferior kind of alica.

b. *Hordeum* s. *Ordeum* (κριθαί; κρῖ, Hom.). Next in importance to *triticum* and *adoreum* was *hordeum* or barley, which was a more appropriate food for the lower animals than wheat, was better for man when made into *polenta* than wheat of an indifferent quality, and furnished excellent straw and chaff (*stramentum*, *palea*).

The species most generally cultivated, termed *hexastichum* or *cantherinum*, was, we can scarcely doubt, identical with the hardy species, now almost confined to Scotland, which we now call *bere* or *bigg*, the *Hordeum hexastichon* or six-rowed barley of botanists. It was sown after the vernal equinox (hence called τρίμηνος, Theophr. *H. P.* viii. 1), upon land that had been twice ploughed, at the rate of five modii to the juger; succeeded best in a dry, loose, rich soil; and being an exhausting crop, the land from which it had been reaped was summer fallowed, or recruited by manure. It was cut as soon as it was ripe; for the stalk being brittle, was liable to be beaten down; and the grain not being enclosed in an outer husk, was easily shaken.

Another species, termed *Galaticum* or *distichum*, the same apparently with the modern *Hordeum vulgare*, or with the *Hordeum distichum*, varieties of the common two-rowed barley, was remarkable for its weight and whiteness, and answered well for mixing with wheaten flour in baking bread for slaves. It was sown in autumn, winter, or early spring, at the rate of six modii to the juger. Five modii of seed hordeum required six days and a half of labour to bring it to the threshing-floor; viz. ploughing three days, harrowing (*occatoria opera*) one, hoeing (*sarritoria*) one and a half, reaping (*messoria*) one.

Pliny speaks of hordeum as the lightest of all frumenta, weighing only 15 pounds to the modius (Roman pound = 11·8 oz. avoird.). In mild climates it might be sown early in autumn. (Theophr. *H. P.* viii. 1; Cat. 35; Varr. i. 34; Colum. ii. 9, §§ 14—16; Verg. *Georg.* i. 210; Plin. *H. N.* xviii. § 62; *Geopon.* ii. 14.)

c. *Panicum* and *Milium* are commonly spoken of together, as if they were only varieties of the same grain. The first is in all probability the *Panicum miliaceum* or *common millet* of botanists, the ἔλυμος or μελίνη of the Greeks: the second is perhaps the *Setaria Italica* or *Italian millet*, which corresponds to the description of κέγχρος; while the large-grained species noticed by Pliny as having been brought from India less than ten years before the period when he wrote is, we can scarcely doubt, the *Sorghum vulgare*, or *Doora* of the Arabs. (*H. N.* xviii. § 55.)

Panicum and milium were sown in spring (Verg. *Georg.* i. 216), towards the end of March, at the rate of four sextarii (pints) only to the juger, but they required repeated hoeing and weeding to keep them clean. They succeeded well in light loose soil, even on sand if well irrigated; and as soon as the ears were fairly formed, they were gathered by the hand, hung up to dry in the sun, and in this state would keep for a longer period than any other grain. Milium was baked into bread or cakes, very palatable when eaten hot; and both panicum and milium made good porridge (*puls*). Although not much used by the population of Italy, except perhaps in Campania, they formed a most important article of food in the Gauls, in Pontus, in Sarmatia, and in Ethiopia. (Cat. 6; Colum. ii. 9, § 17; Plin. *H. N.* xviii. §§ 100, 101; Pallad. iv. 3; *Geopon.* ii. 38; Theophr. *C. P.* ii. 17, *H. P.* viii. 3; Dioscor. ii. 119.)

Secāle, rye, the *Secale cereale* of botanists, is not mentioned by any of the Greek writers unless it be the βρίζα described by Galen (*de Aliment Facult.* i. 2) as cultivated in Thrace and Macedonia (but this, in all probability, was a coarse variety of spelt), nor by Cato, Varro, Columella, nor Palladius. Pliny alone (*H. N.* xviii. § 141) speaks of it, and in the following terms:—"Secale Taurini sub Alpibus *Asiam* vocant, deterrimum, sed tantum ad arcendam famem: fecunda sed gracili stipula, nigritia triste, pondere praecipuum. Admiscetur huic far ut mitiget amaritudinem ejus; et tamen sic quoque ingratissimum ventri est. Nascitur qualicunque solo cum centesimo grano, ipsumque pro laetamine est." In the previous chapter he makes it identical with *silicia* (fenugreek) and *farrago*; that is, corn sown for the purpose of being cut green as fodder. See remarks upon *Farrago* below.

Avena, the oat (βρόμος s. βρῶμος, Theophr. *H. P.* viii. 4; Dioscorid. ii. 16), the *Avena sativa* of botanists, need scarcely be noticed in this place, since it cannot be raised as a grain with any advantage in a climate so warm as that of Greece or of Italy. Columella (ii. 10, § 9) and Pliny (*H. N.* xviii. § 143, *Avena Graeca*) recommended that it should be sown for green fodder; and the latter, who considers it a degenerate kind of *hordeum*, remarks that it became a sort of corn (*frumenti fit instar*) in Germany, where it formed a regular crop, and where oatmeal porridge was a national dish (*neque alia pulte vivant*, *H. N.* xviii. §§ 44, 149). In another passage (*H. N.* xxii. § 137) the same author prescribes oatmeal (*avenacea farina*) steeped in vinegar as a remedy for spots on the skin. The *Avena* condemned as a troublesome weed by Cato (*R. R.* 36, § 5) and Virgil (*steriles avenae*, *Georg.* i. 154) is probably the *Avena fatua* of botanists, although Pliny (*H. N.* xviii. § 149) makes no distinction between this and the cultivated kind.

Other cereals we may dismiss very briefly.

Oryza (ὄρυζα, ὄρυζον), rice, was imported from the East, and was much esteemed for making gruel (*ptisana*). Pliny's description of the plant is quite incorrect.

Zea (ζέα, ζεῖα), *Olyra* (ὄλυρα), *Tiphe* (τίφη), and *Arinca*, of which the first two are named by Homer, must be regarded as varieties of the *Triticum Spelta* or *Far* (Herod. ii. 36; Theophr. *H. P.* ii. 5, viii. 9; Dioscorid. ii. 110; Galen. *de Aliment. Facult.* i. 2, 13). The statements found in the eighteenth book of Pliny's Natural History in reference to these four are altogether unintelligible when compared with each other. He evidently copied, as was too often his custom, from a number of discordant authorities without attempting to reconcile or thinking it necessary to point out their contradictions. In one place (xviii. § 92) he says distinctly that *Arinca* is the *Olyra* of Homer, and in another he seems to say (xviii. § 62) that Olyra in Egypt became Far (*far in Ægypto ex olyra conficitur*). Herodotus (ii. 36) asserts that Olyra and Zea were synonymous, and that these exclusively were cultivated by the Egyptians, but Sir J. G. Wilkinson has proved this to be incorrect. He holds that *olyra* was *doora*. The wheat which has been raised recently from the seeds discovered in the mummy cases is probably *Triticum monococcum*.

With regard to *Irio* and *Horminum*, of which the former seems to have been called *ἐρύσιμον* by the Greeks, both enumerated by Pliny among *frumenta*, although he afterwards somewhat qualifies this assertion, we do not hazard a conjecture. (Plin. *H. N.* xviii. § 49; xxii. § 158.)

We may conclude this section with an enumeration of the technical terms employed to denote the different parts of an ear and stalk of corn.

The whole ear was named *spica*; the beard or awn, *arista*; the ear, when beardless, *spica mutica*; the white solid substance of the grain, *intimum solidum — nudata medulla—granum*; the husk which immediately envelopes the granum, *gluma*, with which *cortex*, *tunica*, *folliculus*, are used as synonymous; the outer husk, *acus*; the outer husk with the short straw attached, *palea*; the stem, *stipula*, *culmus*, to which *scapus*, *caulis* correspond in leguminous plants; the knots or joints in the stem, *geniculi*, *articuli*; the sheath-like blade in the stem from which the ear issues forth, *vagina*.

2. *Leguminous Crops* (*χέδροπα*, *Legumina*).

The vegetables falling properly under this head, chiefly cultivated by the ancients, were: *a. Faba*; *b. Lupinus*; *c. Lens* s. *Lenticula*; *d. Cicer*; *e. Cicercula*; *f. Phaseolus*; *g. Pisum*; to which, in order to avoid multiplying subdivisions, we may add *Napi* and *Rapa*, since in common with the legumina they served as food both for men and cattle.

a. Faba. The ancient *faba*, the *κύαμος* of the Greeks, notwithstanding all that has been urged to the contrary, was certainly one of the varieties of our common field bean, the *Vicia Faba*, or *Faba vulgaris arvensis* of botanists. It required either rich and strong, or well-manured land. If sown upon moist low-lying ground that had remained long uncropped (*veteretum*), no previous preparation was necessary, but the seed was scattered and at once ploughed in; the field was then ribbed and finally harrowed (*cum semen crudo solo ingesserimus, inarabimus, imporcatumque occabimus*), the object being to bury the seed as deep as possible. But if beans were to be sown upon land from which a corn crop had been just reaped (*restibilis ager*), after the stubble was cleared away, manure was spread at the rate of twenty-four *vehes* to the juger, and then the remaining operations were the same as above. Rich land required from four to six modii to the juger, poorer soil somewhat more. A portion of the seed was committed to the ground about the middle (*media sementi*), the remainder at the end of the corn-sowing season (*septimontialis satio*). Virgil (*Georg.* i. 215), indeed, following the practice of his own district, directs that beans should be sown in spring; but this was disapproved of in the rest of Italy because the stalks (*caules—fabalia*), the pods (*siliquae*), and the husks (*acus fabaginum*), all of which were of great value as food for cattle, were less luxuriant in the spring-sown (*trimestris faba*) than in the autumnal crop. Columella recommends that beans should be hoed three times, in which case they required no weeding. When they had arrived at maturity, they were reaped close to the ground, were made up into sheaves (*fasciculi*), were threshed by men who tossed the bundles with forks, trampled them under foot, and beat them with flails (*baculis*), and finally were cleaned by winnowing. The harvest took place in Central Italy about the end of May, and hence the first of June was named *Calendae Fabariae*, because on that day new beans were used in sacred rites. From four to six modii of seed required two days' work of the ploughman, if the land was newly broken up, but only one if it had been cropped the previous season; harrowing occupied one day and a half, the first hoeing one day and a half, the second and third each one day, reaping one day; in all seven or eight days.

Bean meal (*lomentum*, *σμῆγμα*) was baked into bread or cakes (*ἄρτος κυάμινος*), especially if mixed with the flour of wheat or millet; when made into porridge (*fabacia*, *puls fabata*), it was accounted an acceptable offering to the gods and termed *Refriva*,—a name properly applied to the beans brought home and set apart for holy purposes. (Hom. *Il.* xiii. 589; Cat. 35; Varr. i. 44; Colum. ii. 10, 12; Pallad. ii. 9, vii. 3; Plin. *H. N.* xviii. §§ 117, 119; *Geopon.* ii. 35; Dioscorid. ii. 127; Theophr. *H. P.* iv. 2, vii. 3, viii. 1: comp. Fest. s. v. *Refriva*; Gell. iv. 11, x. 15; Macrob. *Sat.* i. 12; Cic. *de Div.* i. 30, § 62; Ov. *Fast.* v. 436.)

b. Lupinus, the *θέρμος* of the Greeks, seems to include the *Lupinus albus*, the *L. luteus*, and the *L. pilosus* of botanists, the common white, yellow, and rose lupines of our gardens. The first of the above species was that chiefly cultivated by the Romans, and is pronounced by Columella to be the most valuable of the legumina, because it demanded very little labour, was a sure crop, and, instead of exhausting, actually refreshed and manured the land. Steeped in water and afterwards boiled, it formed an excellent food for oxen in winter, and might be used even for man during periods of scarcity. It could be sown as soon as threshed, might be cast upon ground unprepared by ploughing or any other operation (*crudis novalibus*), and was covered up anyhow, or not covered up at all, being protected by its bitterness from the attacks of birds and other animals.

The proper season for sowing was early in autumn, in order that the stalks might acquire vigour before the cold weather set in; the quantity of seed was ten modii to the juger, and the crop was reaped after it had remained a year in the ground. It succeeded well in any dry light land, especially in reddish soil, but not in wet tenacious soil. Ten modii required in all only three days' work; one for covering up, one for harrowing, and one for reaping, and of these operations, the two first might, if there was a press of work, be dispensed with. (Cat. 34; Colum. ii. 10, 16, xi. 2; Pallad. i. 6, ii. 9, vi. 3, vii. 3, ix. 2; Plin. *H. N.* xviii. § 135; *Geopon.* ii. 39; Verg. *Georg.* i. 75.)

c. Lens s. *Lenticula*, the *φακός* of the Greeks, the modern *Ervum Lens*, *Vicia Lens*, or Lentile, was sown twice a year, late in autumn (*per mediam sementim*) and early in spring, on dry light soil, in the proportion of rather more than a modius to the juger. It was recommended to mix the seed with dry manure, and, after leaving it in this state for four or five days, then to scatter it. A modius and a half required eight days' work—ploughing, three; harrowing, one; hoeing two; weeding, one; pulling, one. (Cat. 35; Verg. *Georg.* i. 228; Colum. ii. 10, 12;

xi. 2; Plin. *H. N.* xviii. § 123; Pallad. xii. 11; Theophr. *H. P.* viii. 3; Dioscorid. ii. 129; *Geopon.* ii. 37: comp. Martial, xiii. 9, 1; Gell. xviii. 8.)

d. Cicer, the ἐρέβινθος of the Greeks. The *Cicer arietinum* (κριός) and the *Cicer Punicum*, varieties of our common chick-pea, were sown in rich soil, during the month of March, in the proportion of three modii to the juger, the seeds having been previously steeped to make them germinate more readily. The crop was considered injurious to the soil, and therefore avoided by prudent husbandmen. Three modii of Cicer required four days for ploughing and sowing, two days for harrowing, one day for hoeing, one day for weeding, and three days for pulling (*vellantur tribus*). (Colum. ii. 10, 12; Plin. *H. N.* xviii. § 124; Dioscorid. ii. 126; Theophr. viii. 1, 3, 5, 6; *Geopon.* ii. 36.)

e. Cicercula, the λάθυρος of the Greeks, the *Lathyrus sativus* of botanists, which Pliny seems to regard as a small variety of the *Cicer*, was sown in good land either at the end of October or at the beginning of the year, in the proportion of three modii to the juger. None of the legumina proved less hurtful to the ground, but it was rarely a successful crop, for it suffered most from the dry weather and hot winds which usually prevailed when it was in flower. Four modii of Cicercula required six days' work—ploughing, three; harrowing, one; weeding, one; pulling, one. (Colum. ii. 10, 12; Plin. *H. N.* xviii. *l. c.*; Pallad. ii. 5, iii. 4; Theophr. *H. P.* viii. 3; comp. Plutarch. *Quaest. Rom.*)

f. Phaselus s. *Phaseolus* (φασῆλος; φασῆολος; φασίολος), the common kidney-bean, succeeded best in rich land regularly cropped, and was sown towards the end of October in the proportion of four modii to the juger. These four modii required three or four days' work,—ploughing, one or two, according to the soil; harrowing, one; reaping, one. The pods of the phaselus were sometimes eaten along with the seeds, according to our own custom. (Verg. *Georg.* i. 227; Colum. ii. 10, 12, xi. 2; Plin. *H. N.* xviii. § 125; Pallad. ix. 12, x. 1.)

g. Pisum (πίσον; πίσος; πίσσος), the common field pea, succeeded best in a loose soil, a warm situation, and a moist climate. It was sown immediately after the autumnal equinox, in the proportion of rather less than four modii to the juger, and cultivated exactly in the same manner as the *phaselus*. (Colum. ii. 10, 13; Plin. *H. N.* xviii. § 123; Theophr. *H. P.* iii. 27, viii. 3, 5.)

Napus, the βουνιάς of Dioscorides, is the modern Rape, the *Brassica rapa* of botanists. *Rapum*, the γογγυλίς of Theophrastus, is the modern Turnip, the *Brassica Napus* of botanists. The value of these plants was in a great measure overlooked by the earlier Roman writers, while the Greeks regarded them too much in the light of garden herbs; but Pliny enlarges upon their merits, and by the Gauls beyond the Po, who wintered their oxen upon them, their culture was deemed next in importance to that of corn and wine. They were highly useful as food for man, for cattle, and even for birds; both the leaf and bulb were available; being very hardy, they could be left in the ground, or would keep well if stored up, and thus one crop might be made to hold out until another came in. They required loose, well-pulverised, and highly-manured soil. Rapa succeeded best in low, moist situations, and were sown at the end of June after five ploughings (*quinto sulco*); napi, which were more adapted for dry sloping land, at the end of August or the beginning of September, after four ploughings (*quarto sulco*); both, however, in warm and well-watered spots, might be sown in spring. A juger required four sextarii (about four imperial pints) of turnip seed and five of rape seed, because the napus does not, like the rapum, expand into an ample bulb (*non in ventrem latescit*), but sends a thin root straight down (*sed tenuem radicem deorsum agit*). Columella, however, distinctly states that the rapum and napus passed into each other, under the influence of a change of soil or climate. *Rapina* is the term for a bed or field of turnips. (Daubeny, p. 118 foll.; Dioscorid. ii. 134, 136; Cat. v. 35; Colum. ii. 10; Plin. *H. N.* xviii. § 131.)

3. *Green Forage Crops* (*Pabula*).

This term included all those crops which were cut green and employed exclusively as forage for the lower animals. The most important were:—*a. Medica. b. Faenum Graecum. c. Vicia. d. Cicera. e. Ervum, Ervilia. f. Farrago, Ocinum. g. Faenum.* The description of the last will involve an account of the system pursued in the management of meadows.

a. Medica (Μηδική s. πόα), the modern lucerne. The most important of all the plants cultivated for stock exclusively was Medica, so called because introduced into Greece during the Persian wars. When once properly sown, it would last many years, might be cut repeatedly during the same season, renovated rather than exhausted the soil, was the best fattener of lean cattle, the best restorative for those that were sick, and so nourishing that a single juger supplied sufficient food for three horses during a whole year. Hence the greatest care was bestowed upon its culture.

The spot fixed upon, which was to be neither dry nor spongy, received a first ploughing about the beginning of October, and the upturned earth was allowed to be exposed to the weather for the winter; it was carefully ploughed a second time, at the beginning of February, when all the stones were gathered off, and the larger clods broken by the hand; in the month of March it was ploughed for a third time and harrowed. The ground thus prepared was divided into plots or beds (*areae*) as in a garden, each fifty feet long and ten feet broad, so that ready access might be gained by the walks between for supplying water and extirpating the weeds. Old dung was then spread over the whole, and the sowing took place at the end of April, a cyathus (about $\frac{1}{12}$ of an imperial pint) of seed being allowed for each bed of the dimensions described above. The seed was immediately covered in with wooden rakes (*ligneis rastellis*), and the operations of hoeing and weeding were performed repeatedly with wooden implements. It was not cut for the first time until it had dropped some of its seed, but afterwards might be cut as tender as the farmer thought fit. After each cutting it was well watered, and, as soon as the young blades began to sprout, every weed was sedulously removed. Managed in this manner, it might be cut six times a year for ten

(Pliny says thirty) years. It was necessary to use caution in giving it at first to cattle, since it was apt to inflate them, and make blood too rapidly, but when they were habituated to its use it might be supplied freely. It is very remarkable that this species of forage, to which so much importance was attached by the Romans, has altogether disappeared from Italy. We are assured by M. Chateauvieux that not a single plant of it is now to be seen. In England it is almost confined to Kent and the Channel Islands. (Varr. i. 42; Colum. ii. 10, 28; Verg. *Georg.* i. 215; Pallad. iii. 6, v. 1; Plin. *H. N.* xviii. § 144 ff.; Dioscorid. ii. 177; Theophr. *H. P.* viii. 7.)

b. Faenum-Graecum, variously termed *τῆλις*, *βούκερως* s. *βούκερας*, *κερατῖτις* and *αἰγόκερως*, the *Trigonella faenum Graecum*, or common Fenugreek of botanists, was called *Siliqua* by country people, *Silicia* by Pliny, and succeeded best when totally neglected, care being taken in the first place not to bury the seed deep (*scarificatione seritur*). Six or seven modii, which was the allowance for a juger, required two days for sowing, and one for reaping. (Cat. 35; Colum. ii. 10, xi. 2; Plin. *H. N.* xviii. § 140, xxiv. § 184; Dioscorid. ii. 124; Theophr. *H. P.* iii. 17, viii. 6.)

c. Vicia (*σάρακον*, the *βικίον* of Galen), some one of the varieties of the *Vicia sativa*, the Vetch or Summer (or Winter) Tare of botanists. It might be sown on dry land at different periods of the year, usually about the autumnal equinox when intended for green fodder; in January or later when raised for seed. (But see Plin. *H. N.* xviii. §§ 137, 138.) The quantity required in the former case was seven modii to the juger, in the latter six. Particular care was taken not to cast the seed when there was dew or moisture of any sort upon the surface of the ground; the period of the day selected for the operation was therefore some hours after sunrise, and no more was scattered than could be covered up before night. It required little labour—ploughing two days, harrowing one, reaping one; in all, four days' work for six or seven modii. (Cat. 35; Varr. i. 31; Verg. *Georg.* i. 75; Colum. ii. 10, 29; 12, 3; Plin. *H. N.* xviii. §§ 137, 138; comp. Ov. *Fast.* v. 267.)

d. Cicera, the *ὦχρος* of Theophrastus, the *Lathyrus Cicera* of botanists, was sown after one or two ploughings (*primo vel altero sulco*), in the month of March, the quantity of seed varying, according to the richness of soil, from two and a half to four modii for the juger. In southern Spain it was given to the cattle crushed (*cicera fresa*), steeped in water, and then mixed with chaff. Twelve pounds of *ervum* were considered equivalent to sixteen of *cicera*, and sufficient for a yoke of oxen.

Cicera was cultivated for its seed also, and formed a not unpalatable food for man, differing little if at all in taste from the cicercula, but being of a darker colour. (Colum. ii. 11, § 1, 12; Pallad. iv. 6; Theophr. *H. P.* iv. 2.)

e. Ervum, Ervilia, the *ὄροβος* of Dioscorides, are apparently varieties of the *Ervum Ervile*, or Wild Tare of botanists. *Ervum* succeeded best in poor dry land; might be sown at any time between the autumnal equinox and the beginning of March, at the rate of five modii to the juger, and demanded little care. The above quantity required six days' labour—ploughing and sowing two, harrowing one, hoeing one, weeding one, reaping one. (Varr. i. 32; Verg. *Ecl.* iii. 100; Colum. ii. 10, 34; ii. 12, 3; ii. 13, 1; vi. 3; xi. 2; Pallad. ii. 8; Plin. *H. N.* xviii. § 139; Theophr. *H. P.* ix. 22; Dioscorid. ii. 131; comp. Plaut. *Mostell.* i. 1.)

f. Farrago, Ocinum. On comparing the various authorities quoted at the end of this paragraph, although they abound in contradictions, we shall be led to conclude—

1. That *farrago* was the general term employed to denote any kind of corn cut green for fodder. The name was derived from *far*, the refuse of that grain being originally sown for this purpose (*farrago ex recrimentis farris praedensa seritur*, Plin.), but afterwards rye (*secale*), oats (*avenae*), and barley were employed; the last-mentioned, used especially in Africa, being, in the estimation of Columella, the best; and these grains were not always sown alone, but frequently with an admixture of the vetch and various legumina. Hence *farrago* is used by Juvenal to denote a confused medley of heterogeneous topics.

2. That as *farrago* properly denoted corn cut green for fodder, so *ocinum* was the name given to plants of the bean kind, when used in the same manner, before they came to maturity, and formed pods. Mamilius Sura (quoted by Pliny) gives the proportions of ten modii of beans, two of vetches, and two of erviliae to the juger; and this combination was said to be improved by the addition of *Avena Graeca*, sown in autumn. Of the three forms *ocinum, ocimum, ocymum*, the first is the most accurate; the name was, according to Varro, given on account of the rapidity of its growth in spring. From the expression of Pliny, "Apud antiquos erat pabuli genus quod Cato *Ocinum* vocat," and the silence of Columella, who mentions the garden herb *ocinum* (basil) only, we infer that this sort of pabulum was little used after the time of Varro. The notion of Gesner that ocinum is clover, the *ὠκύθοον τριπέτηλον* of Callimachus, is directly at variance with the statements of Pliny, who mentions *trifolium* as a distinct plant. (Cat. 27, 53, 54; Varr. i. 23, 31; Colum. ii. 10, §§ 31, 35, xi. 3, § 29; Plin. *H. N.* xviii. § 143.)

g. Faenum, Prata. So much importance was attached to stock, that many considered a good meadow as the most valuable species of land, requiring little trouble or outlay, subject to none of the casualties to which other crops were exposed, affording a sure return every year, and that twofold, in the shape of hay and pasture. The meadows were of two kinds, the Dry Meadow (*siccaneum pratum*) and the Irrigated or Water Meadow (*pratum riguum*). The hay produced from a meadow whose own rich natural moisture did not require an artificial stimulus was the best. Any land which declined with a gentle slope, if either naturally rich and moist, or capable of irrigation, might be laid down as a meadow, and the most approved method of procedure was the following:—The land having been thoroughly ploughed and well laboured in summer, was in autumn sown with rapa, or napi or beans, the following year with wheat, and in the third year, all trees, bushes, and rank weeds having been extirpated, with the vetch (*vicia*) mixed with grass seeds. The clods were broken down with rakes, the surface accurately levelled by wicker hurdles, so that the scythe of the mower (*faeniseca*) might nowhere encounter any obstacle. The vetches were not cut until they had arrived at maturity and begun to drop their seed; and after they had been removed, the grass, when it had attained to a proper height, was mown and made into hay. Then the irrigation commenced, provided the soil was stiff, for in loose earth it was necessary to allow the grass roots to obtain a firm hold. For the first year no stock were permitted to graze, lest their feet should poach up the soft ground, but the young blades were cut from time to time. In the second year, after the hay-making was over, if the ground was moderately dry and hard, the smaller animals were admitted, but no horses or oxen until the third. About the middle of February in each year, an abundant top-dressing of manure mixed with grass-seeds was applied to the upper part of the field, the benefit of which was extended to the lower portions by the flow either of natural rain or of artificial streams. When old meadows became mossy, the best remedy was to sprinkle ashes copiously, which in many cases killed the moss; but when this failed, the most sure plan was to break up the land afresh, which, having lain long undisturbed, was certain to afford abundant crops.

In making hay, the grass was to be cut (*falcibus subsecari*) before the stem had begun to lose its natural moisture, while the seed was not yet perfectly ripe; and in drying, it was essential to avoid the two extremes of exposing it for too long or too short a time to the sun and air. In the former case, the juices were sucked out, and it became little better than straw; in the latter, it was liable to ferment, heat, and take fire. After being properly turned over with forks (*furcillis versari*) it was collected and laid in regular swathes (*coartabimus in strigam*), and then bound into sheaves or bundles (*atque ita maniplos vincimus*). The loose stalks were next raked together (*rastellis eradi*) and the whole crop (*faenisicia*) carried home and stored in lofts, or, if this was not convenient, built up in the field into conical ricks (*in metas extrui conveniet*). Lastly, the inequalities passed over by the mowers (*quae faeniseces praeterierunt*) were cut close and smooth (*sicilienda prata, id est, falcibus consectanda*, an operation termed *sicilire pratum*); the gleanings thus obtained, which formed a sort of aftermath, being called *faenum cordum*, or *sicilimenta*. (Cat. 5, 8, 9, 29, 50; Varr. i. 7, 49; Colum. ii. 16–18, 22, 3; Pallad. ii. 2, iii. 1, iv. 2, x. 10.)

4. *Crops affording Materials for textile Fabrics.*

Of these the most important were, *a. Cannabis*; *b. Linum*.

a. Cannabis (**κάνναβις, κάνναβος**), the *Cannabis sativa*, or Common Hemp of botanists, required rich, moist, well-watered, deeply trenched, and highly manured land. Six grains were sown in every square foot of ground during the last week in February, but the operation might be delayed for a fortnight if the weather was rainy. Columella is unable to give any details with regard to the amount of time and labour necessary for raising a crop of hemp. (Varr. i. 23; Colum. ii. 10, 12, 21; Plin. *H. N.* xix. § 173; Dioscorid. iii. 165.)

b. Linum (**λίνον**), the *Linum usitatissimum*, or Common Flax of botanists, being regarded as a very exhausting crop, was altogether avoided, unless the soil happened to be peculiarly suitable, or the price which it bore in the district very inviting (*nisi pretium proritat*, Col.). It was sown from the beginning of October until the end of the first week in December, in the proportion of eight modii to the juger, and sometimes in February at the rate of ten modii. On account of its scourging qualities (Verg. *Georg.* i. 77), it was generally grown upon rich land, such being less liable to be seriously injured, but some sowed it very thick upon poor land, in order that the stalks might be as thin, and therefore the fibres as delicate as possible. (Verg. *Georg.* i. 212; Colum. ii. 10, 14; Plin. *H. N.* xix. § 2 ff.; Pallad. xi. 2; *Geopon.* ii. 10; Dioscorid. ii. 125; Theophr. *H. P.* viii. 7.)

Succession or Rotation of Crops.

It is evident from the instructions given by Columella (ii. 4) for ploughing the best land, that a summer fallow usually preceded a corn crop. For since the first ploughing was early in spring, the second in summer, and the third in autumn, it is impossible that a crop could have been raised upon the ground during any portion of the period here indicated; and the same author expressly states elsewhere (ii. 9), in accordance with the Virgilian precept (*Georg.* i. 71), that the land upon which wheat (*far, siligo*) was grown ought to repose every other year; in which case, however, manure might be dispensed with. Nor did this plan apply to corn alone, for it would seem to have been the general practice to permit nearly one half of the farm to remain at rest, while the productive energies of the other moiety were called into action. It will be seen from the calculations with regard to time and labour for an arable farm containing 200 jugers (Colum. ii. 12), that 100 jugers only were sown in autumn, 50 with wheat, 50 with leguminous or green crops; and, if spring sowing was resorted to, which was by no means general, 30 more, so that out of 200 jugers, at least 70, and more frequently 100, were left fallowed.

There were, indeed, exceptions to this system. Some land was so peculiarly deep and rich that it might be cropped for two or more years in succession (*terra restibilis*); but in this case it was relieved by varying the crop, the field from which winter wheat (*far*) had been reaped being highly manured and sown immediately with beans, or the ground which had borne lupines, beans, vetches, or any renovating crop, was allowed to lie fallow during winter, and then sown with spring wheat (*far*) (Verg. *Georg.* i. 73; comp. Plin. *H. N.* xvii. § 56, xviii. § 184 ff.), while a third rotation, still more favourable, was to take two leguminous or renovating crops after one exhausting or corn crop. In Campania, the extraordinary fertility of the soil allowed them to tax its energies much more severely, for there it was common to sow barley, millet, turnips (*rapa*), and then barley or wheat again, the land receiving manure before the millet and turnips, but never remaining vacant; while that peculiarly favoured district near Naples, called the *Campi Laborini*, or *Terrae Laboriae*, now the *Terra di Lavoro*, yielded an uninterrupted series of corn crops, two of far, and one of millet, without a moment of repose (*seritur toto anno, panico semel, bis farre*). (Cat. 35; Varr. i. 44; Verg. *Georg.* i. 71, &c.; Colum. ii. 9, 10, 12; Plin. *H. N.* xviii. § 186 ff.)

It will be proper, before bringing this part of the subject to a close, to explain a word which may occasion embarrassment in consequence of its signification being variously modified by the Roman agricultural writers. This is the adjective *novalis*, which frequently appears as a substantive, and in all the three genders, according as *ager*, *terra*, or *solum* is understand.

1. The original meaning of *novalis* or *novale*, looking to its etymology, must have been *land newly reclaimed* from a state of nature; and in this sense it is used by Pliny (*H. N.* xvii. § 39), *Talis* (sc. *odor*) *fere est in novalibus caesa vetere silva.* (Comp. Callistr. in Dig. 47, 21, 3.)

2. Varro, in his treatise *De Lingua Latina* (v. 39; comp. vi. 59, ed. Müller), places *novalis ager*, land which is allowed occasionally to repose, in opposition to *restibilis ager*, land which is cropped unceasingly,—*Ager restibilis qui restituitur ac reseritur quotquot annis; contra qui intermittitur a novando novalis*,—and hence Pliny (*H. N.* xviii. § 176), *Novale est quod alternis annis seritur.*

3. Varro, in his treatise *De Re Rustica* (i. 29), defines *Seges* to mean a field which has been ploughed and sown; *arvum*, a field ploughed but not yet sown; *novalis ubi satum fuit antequam secunda aratione renovetur*,—ambiguous words, which may be interpreted to denote a field which has borne a crop, but which has not been ploughed for a second crop; in which case it will be equivalent to *a fallow field.*

4. Columella, in one passage (vi. praef. § 1), employs *novale solum* for new or virgin land untouched by the plough; for in contrasting the tastes of the agriculturist and the grazier, he remarks that the former delights *quam maxime subacto et puro solo*, the latter *novali graminosoque;* and Varro (ii. praef. § 4) in like manner places *novalis* as pasture land, in opposition to *seges*, as corn land,—*bos domitus causa fit ut commodius nascatur frumentum in segete et pabulum in novali.*

5. Columella, in another passage, places *culta novalia*, land under tillage in a general sense, in opposition to *rudis ager*, land in a state of nature; and thus we must understand the *haec tam culta novalia* in Virgil's first *Eclogue* (v. 71), and *tonsas novales*, the cultivated fields from which a crop has been reaped,—a phrase which forms the connecting link between this meaning and that noticed above under 3. Hence the force in Juv. xiv. 148 = *segetes.* (Comp. Pallad. i. 6, ii. 10.)

B. PASTIO.

The second great department of our subject is *Pastio*, s. *Res Pastoricia*, s. *Scientia Pastoralis*, these terms being all alike understood to denote the art of providing and feeding stock so as to yield the most ample profit.

But *Pastio* must be considered under the twofold forms of

α. *Pastio Agrestis* s. *Res Pecuaria*, and
β. *Pastio Villatica*,

the former comprehending the management of cattle, sheep, horses, &c.; the latter of poultry, game, fish, bees, and some other animals to be noticed hereafter.

α. PASTIO AGRESTIS *s.* RES PECUARIA.

Contains three heads (Varro, Book ii.):

I. *Minores Pecudes*, including, 1. Sheep; 2. Goats; 3. Swine.

II. *Majores Pecudes*, including, 1. Kine; 2. Horses; 3. Asses; 4. Mules. Varro indeed, for no reason apparently except to preserve a sort of numerical symmetry, places mules in the third division; but as they evidently belong to the same class as horses and asses, we have to this extent departed from his arrangement.

III. Animals provided not for the profit which they yield directly in the market, but necessary for the proper maintenance of the foregoing: these are—

1. Dogs (*canes*); 2. Herdsmen (*pastores*).

Again, in each of these nine subdivisions (with the exception of mules, who do not breed) attention must be directed to nine different circumstances, of which four are to be considered in the purchase of stock (*in pecore parando*), four in the feeding of stock (*in pecore pascendo*), while the ninth, of a more general character, relates to number (*de numero*).

The four circumstances which demand attention in purchasing stock are: *a.* The age of the animal (*aetas*). *b.* His points (*cognitio formae*), by which we determine whether he is good of his kind. *c.* His breeding (*quo sit seminio*), by which we determine whether he is of a good kind. *d.* The legal forms (*de jure in parando*) essential to render a sale valid, and the warranty which the buyer may demand (*quemadmodum quamque pecudem emi oporteat civili jure*).

The four circumstances to be considered after a breeding stock has been acquired are: *e.* The mode of feeding (*pastio*), in answer to the questions *where*, *when*, and *with what* (*in qua regione, et quando et queis*). *f.* The impregnation of the female, the period of gestation, and her treatment while pregnant, all of which are embodied in the word *fetura.* *g.* The rearing of the young (*nutricatus*). *h.* The preservation of their health, and treatment when diseased (*de sanitate*).

i. The ninth and last inquiry (*de numero*) relates to the number of flocks and herds which can be maintained with advantage in a given space, the number of individuals which it is expedient to combine into one flock or herd, and the proportions to be observed with regard to the sex and age of the members of each flock and herd.

In following the divisions and topics indicated above, we omit the discussions on the diseases of stock and their remedies, which abound in the agricultural writers, and which form the subject of an elaborate treatise (*Mulo-medicina* s. *De Arte Veterinaria*), bearing the name of *Vegetius*, which is probably a translation or compilation from the works of the Greek *ἱππίατροι*, or veterinary surgeons, executed at a late period.

I. MINORES PECUDES.

1. Sheep (*pecus ovillum* s. *oviarium*) were divided into two classes with reference to their wool.

(1.) *Pecus hirtum*, whose fleeces were not protected artificially.

(2.) *Pecus Tarentinum* s. *Pecus Graecum* s.

Oves pellitae s. *Oves tectae*, whose fleeces were protected from all external injury by skin jackets. Their wool being thus rendered finer, and being more easily scoured and dyed, brought a higher price than any other.

Sheep were likewise divided into two classes according as they were home-fed or reared in extensive and distant pastures; we will first consider them under this point of view.

Home-fed sheep (*greges villatici*) were allowed to pasture in the fields around a farm during a portion of the year, wherever the nature of the country and the system of cultivation pursued rendered this practicable, or, more frequently, were kept constantly confined in sheds (*stabula*—*saepta*—*ovilia*), built in warm and sheltered situations, with hard floors sloping outwards to prevent the accumulation of moisture, which was regarded as particularly injurious to both the feet and the fleece. They were fed upon cytisus, lucerne, barley, and leguminous seeds, or, when such rich and succulent food could not be obtained, on hay, bran, chaff, grape husks, and dry leaves, especially those of the elm, oak, and fig, being at all times plentifully supplied with salt. They were littered with leaves and twigs, which were frequently changed, and the pens were kept carefully clean.

The more numerous flocks, which were reared in extensive pastures (*qui in saltibus pascuntur*), usually passed the winter in the low plains upon the coast, and were driven by regular drift roads (*calles publici*) in summer to the mountains of Central Italy, just as in modern times vast droves pass every autumn from the Abruzzi to seek the more genial climate of Puglia or the Maremma. Those who were employed to watch them (*opiliones*), being often at a great distance from home, were furnished with beasts of burden for transporting the materials required in the construction of folds and huts, at their halting-places, and all the stores necessary for themselves and their charge. The sheep were usually collected every night to secure them against robbers and beasts of prey; in summer they fed in the morning and evening, and reposed during the noontide heat in sheltered spots, while in winter they were not allowed to go out until the frost was off the ground. The flocks were often very numerous, containing sometimes 15,000 head, one shepherd (*opilio*) being allowed to every five or six score.

The breeds most prized by the early Romans were the Calabrian, the Apulian, which were short-woolled (*breves villo*), the Milesian, and, above all, the Tarentine; but in the time of Columella those of Cisalpine Gaul from the vicinity of Altinum (Mart. xiv. 153), and those from the Campi Macri round Parma and Mutina were especially esteemed. The system of crossing was by no means unknown; for M. Columella, the uncle of the author, produced an excellent variety by crossing the *tectae oves* of Cadiz with some wild rams from Africa, and again crossing their progeny with the Tarentines. In purchasing stock attention was always paid to the localities where they were to be maintained: thus sheep of large size (*procerae oves*) were naturally deemed best fitted for rich plains, stout compact animals (*quadratae*) for light hilly soils, and the smaller kinds (*exiguae*) for mountainous regions; just as in this country the Leicesters are kept with greatest advantage in the low-lying luxuriant pastures of Lincolnshire, Cheviots in the grass hills from which they derive their name, and the black-faced on the lofty mountains of Wales and Scotland. As to colour, pure white was most sought after; but certain natural tints, such as the dark grey (*pullus*), which distinguished the flocks of Pollentia in Liguria (*fuscique ferax Pollentia villi*, Silius, viii. 599), the yellowish brown (*fuscus*) in those of Corduba (so often celebrated by Martial, v. 37, viii. 2. 8, ix. 62, xiv. 188; comp. Juv. xii. 40), and the red brown (*ruber*) in some of the Asiatic varieties, were highly prized.

The points characteristic of a good animal and the warranty usually required of the seller will be found fully detailed in Varro (ii. 2) and Columella (vii. 2, 3).

Those which were smooth and bare under the belly (*ventre glabro*), anciently called *apicae*, were always rejected, and particular care was taken that the fleece of the ram should be perfectly pure, or at least uniform in colour, his tongue also being examined in order to ascertain that it was not black or spotted, since such defects would have been transmitted to his progeny. (Verg. *Georg.* iii. 387; Colum. vii. 3.)

Ewes were not considered fit for breeding until they were two years old, and they continued to produce until they had reached the age of seven; rams (*arietes*) were believed to be in vigour from three years old until eight. The most favourable period for impregnation in the case of ewes that had not previously brought forth was the latter end of April, about the Palilia (21st April); for others, from the setting of Arcturus (13th May) to the setting of the Eagle (23rd July); and, since the period of gestation was about 150 days, the earliest lambs (*agni*, *agnae*) would be yeaned in September, the latest about the middle of December, these being, as was remarked by Celsus, the only animals produced with advantage in midwinter. Ewes when about to lamb (*incientes*) were placed apart, constantly watched, and assisted in parturition. As soon as they had brought forth, the first milk, or *beestings*, which was of a thick consistence, and called *colostra*, was carefully withdrawn, being considered injurious in all animals, and productive of a disease named *colostratio*. The lambs were now tended with the greatest solicitude, were generally kept in the house near a fire for some days, were not allowed to go forth to pasture for a considerable time, but were partially reared by the hand on the most tender and nourishing food, being finally weaned at the age of four months. Those lambs which were carried in the womb longer than the regular time were termed *chordi*; those born late in the season, *serotini*; those which, in consequence of their mothers being unable to supply milk, were suckled by others, *subrumi*. Castration was not performed upon such as were intended for wethers (*verveces*) until five months old. The males set apart to supply the deficiencies in the breeding flock (*quos arietes submittere volunt*) were selected from the progeny of such ewes as usually gave birth to twins, those which were polled (*mutili*) being preferred on the whole to those with horns (*cornuti*).

The management of *oves pellitae* differed from that of the ordinary *greges villatici* merely in the amount of care with which they were tended. They were furnished with an ample supply of the most nutritious food, each individual receiving daily in winter three sextarii (pints) of barley or of beans crushed in their pods (*fresae cum suis valvulis fabae*), in addition to hay, lucerne, dry or green cytisus, and other fodder. Their stalls were usually paved with stone, and kept scrupulously clean; they seldom left the house, and, when allowed to pasture, it was looked upon as essential that the ground should be free from bushes and briars of every description which might tear their fleece or its covering. The jackets were frequently taken off to cool the animals, the wool was combed out at least thrice a year, and well washed and anointed with oil and wine. The wethers were killed at two years old, their skin being then in perfection.

Sheep-shearing (*tonsura*) commenced in warm districts in April; but in cold situations was deferred until the solstice. A fine day was chosen, and the operation was performed before the sun had attained to its full power, in order that the sheep might not be hot and the wool not moist. The most careful placed a rug under the animal (*tegeticulis subjectis oves tondere solent*, Varr.) that no portion of the clip might be lost or damaged (*ne qui flocci intereant*). The wool, when fresh shorn, and still impregnated with the sweat of the animal, was called *lana sucida;* the fleeces when rolled up were termed *vellera*, or *velumina*. *Oves hirtae*, when shorn, were immediately smeared with wine and oil, to which white wax and hog's lard were occasionally added; while the jackets of the *oves pellitae* were anointed with the same mixture, and then replaced on the animals. Instead of this, some rubbed in a wash composed of equal parts of boiled lupine juice, lees of old wine, and amurca. Any wound inflicted during the process was dressed with tar (*pix liquida*). On the fourth day they were bathed, if possible, in the sea; if not, in rain-water mixed with salt. In Spain and some other places it was customary to shear the sheep twice a year, under the belief that the additional labour was more than compensated by the increased quantity of wool. The ancient practice of plucking the wool instead of shearing it still lingered in certain districts even when Pliny wrote. Varro derives the name *vellus* from this, but incorrectly. (Varr. ii. 1. § 5, 16. 20, ii. 2; Colum. i. Praef. § 26, vii. 2–4, xi. 2. § 14; Plin. *H. N.* viii. § 187 ff.; Pallad. ii. 16, v. 7, vi. 8, vii. 6, viii. 4, xii. 13.)

2. Goats (*pecus caprinum*) were divided into two classes, the *genus mutilum et raripilum*, the polled and thin-haired, and the *genus cornutum et setosum*, the horned and shaggy; but there does not appear to have been any difference in the mode of rearing them, nor indeed do they seem to have been kept distinct; but it was considered advisable that the old he-goat, the *dux gregis*, should be *mutilus*, because he was then less troublesome and pugnacious.

The points characteristic of a good animal will be found enumerated in Varro (ii. 3, § 2–5) and in Columella (vii. 6). The most high-bred had always two long flaps of skin (*verruculae*, *laciniae*) depending from the throat. One peculiarity connected with the sale of goats was that they were never warranted in good health, for they were believed to be always more or less labouring under fever.

The management of goats was in most respects the same as that of sheep, except that, although intolerant of frost and cold, they throve better in mountainous craggy ground or among copsewood, where they browsed with great eagerness on the young twigs, than in open grassy plains. Both from their wandering nature and their liability to contract disease when crowded in pens, not more than fifty were kept together in a flock under the charge of the same goatherd (*caprarius*), the proportion of one male (*caper*, *hircus*) to about fifteen females (*caprae*, *capellae*) being commonly observed.

When in stalls (*caprilia*), the sloping floor was usually formed out of the native rock or paved with smooth stones, for no litter was placed beneath their feet. The houses were swept out daily; and it was deemed essential to their health that no moisture or dirt of any kind should be allowed to accumulate. The she-goat was capable of breeding from one year old until eight; but the progeny of a mother under three years old were not worth keeping permanently, but sold off. The best time for impregnation was the end of autumn; for, the period of gestation being five months, the kids (*haedi*) were thus born in spring. If the dam was of a good stock, she generally produced two or even three at a birth, which were weaned at the end of three months, and then transferred at once to the flock (*submittuntur et in grege incipiunt esse*).

The hair (*pili*) of goats was shorn or plucked (*capras vellere* is the technical phrase) out regularly, and used in the manufacture of coarse stuffs, Verg. *Georg.* iii. 313; Varro, ii. 11 (*usum in castrorum et miseris velamina nautis,—pilos ministrant ad usum nauticum et ad bellica tormenta*). The cloths woven from this material were termed *Cilicia*, because the goats in the southern and central provinces of Asia Minor, like the modern Angora species, were remarkable for the length of their hair. (*In Cilicia circaque Syrtes villo tonsili vestiuntur*, are the words of Pliny, who here alludes to the goats from the Cinyps in Libya, the "Cinyphii hirci" of Virgil, *l. c.*) (Colum. i. praef. § 26, vii. 6; Plin. *H. N.* viii. § 203; Pallad. xii. 13; Varr. ii. 3, ii. 1, §§ 5, 28.)

3. Swine (*pecus suillum*) were divided into two classes,—the *sues densae*, usually black in colour, thickly covered with bristles; and the *sues glabrae*, generally white, and comparatively smooth; but there seems to have been little difference in the management of the two breeds, except that the former was the more hardy.

The points characteristic of a good animal, and the warranty usually required by the purchaser, will be found in Varro (ii. 4), Columella (vii. 9), and Palladius (iii. 26).

During a great portion of the year, wherever it was practicable, they were driven out to feed early in the morning in woods where acorns, beech-mast, wild fruits, and berries abounded; and in the middle of the day they reposed, if possible, in swampy ground, where they had not only water but mud also wherein to wallow; in the cool of the evening they fed again, were taught to assemble when the swineherd (*subulcus*) sounded his horn, and were then driven home to the farm. In winter they were not allowed to go forth when frost was hard upon the ground. When kept in the house their chief food was acorns, or, when the supply of these failed, beans, barley, and other kinds of grains and pulse. The number in each herd varied from 100 to 150, or even more, according to circumstances and the means of the proprietor, and the proportion of one boar to ten sows was usually observed.

The sows were not considered fit for breeding until upwards of a year old, and continued prolific to the age of seven; boars (*verres*) were in full vigour from one year old till four; the best time for impregnation was from the middle of February up to the vernal equinox, the period of gestation was four months, and, the pigs being weaned at the end of two, a double farrow might be procured in a year.

Each breeding sow (*scrofa*) brought up her pigs (*porcus, porca, porcellus*) in a separate stye (*hara*), constructed in such a manner that the superintendent (*custos, porculator*) might easily see into the interior and thus be prepared to relieve the progeny, which were in constant danger of being crushed by the weight of the mother, who was supposed to bring forth as many young as she had teats, and was capable of suckling eight at first; but when they increased in size, it was deemed advisable to withdraw one half of that number. Sucking pigs (*lactentes*) when ten days old were accounted pure for sacrifice, and hence were anciently termed *sacres;* after the suckling time (*nutricatus, porculatio*), which lasted two months, was over, they were denominated *delici*, and sometimes *nefrendes*, because not yet able to crunch hard food. The males not reserved for breeding were castrated when from six to twelve months old, and were then termed *majales*. (Varr. ii. 4; Colum. vii. 9, praef. i. § 26; Plin. *H. N.* viii. § 206 foll.; Pallad. iv. 26.)

II. Majores Pecudes.

1. Kine (*pecus bubulum, armentum bubulum*) were divided into classes, according as they were kept at home and employed in the labours of the farm (*boves domiti*), or pastured in large herds (*armenta*).

Boves domiti, wherever the nature of the soil and the mode of culture pursued permitted, were allowed to pasture; since growing grass (*viride pabulum*) was considered the most suitable of all food; when this could not be supplied, it became necessary to stall-feed them (*alere ad praesepia*); but they were allowed to stand in the open air during the hot weather, while in winter they were kept in spacious byres (*stabula, consaepta*) built with a southerly aspect, so as to be sheltered from cold winds, the floors being hard and sloping to prevent moisture from being absorbed, and to allow it to run off freely, while, to promote the warmth and comfort of the animals, they were bedded with abundance of litter (*stramentum pecori et bubus diligenter substernatur*, Cat. 5), usually straw, or leaves, such as those of the ilex, which were supposed to yield little nourishment. Their staple food from the middle of April until the middle of June was vetches, lucerne, clover, and other fodder cut green; from the middle of June to the beginning of November the leaves of trees, those of the elm, the oak, and the poplar being regarded as the best; from the beginning of November until April meadow hay (*faenum pratense*), and, where hay could not be procured, chaff, grape husks, acorns, and dry leaves were substituted, mixed with barley, or with some of the leguminous seeds, such as beans, lupines, or chick-peas previously steeped in water (*maceratae*), or crushed (*fresae*). When an ox was fed upon hay, from 30 to 40 pounds weight (Roman pound = 11⅗ oz. avoird.) was an ample allowance, except during the months of November and December, that is, during the ploughing and sowing season, when they received from the feeder (*pabulatorius*) as much food of the most nutritious kind as they could consume. Lumps of salt placed near the *consaepta* proved very attractive to the animals and conduced to their health.

Large herds were pastured chiefly in woods where there was abundance of grass, leaves, and tender twigs, shifting to the coast in winter and to the cool shady hills in summer, under the charge of herdsmen (*armentarii*), a class altogether distinct from the *bubulci*, or hinds, who worked and tended the *boves domestici*. The common number in a herd was from 100 to 120, the animals were carefully inspected every year, and the least promising (*rejiculae*) weeded out. The proportion of two bulls, a yearling and a two-year old, to 60 or 70 cows was usually observed, but Columella doubles the number of males. The Umbrian oxen, especially those on the Clitumnus, were the largest and finest in Italy; those of Etruria, Latium, and Gaul were smaller, but strongly made and well adapted for labour; those of Thrace were valued for sacrificial purposes in consequence of being for the most part pure white; but the cattle of Epirus, the most important pastoral district of the Roman world, were superior to all others.

The points characteristic of a good animal, and the warranty usually demanded by the buyer, will be found fully detailed in Varro (ii. 5), in Columella, who here copies the description of the Carthaginian Mago (vi. 1, 20, 21), and in Palladius (iv. 11, 12).

Cows (*vaccae*) were not fit for breeding until they were upwards of two years old, and they continued to produce until they had reached the age of ten. Considerable variation is to be found in the agricultural writers as to the age at which the bulls arrived at full vigour, Varro considering that they might be employed when a year old, Columella and Pliny recommending that they should be kept until four. The former, however, is the precept of the practical man, and is consonant with modern experience. The time of gestation being nearly ten (lunar) months, the most favourable period for impregnation was from the middle of June to the end of July, for thus the calves (*vituli*) would be born when spring was well advanced (*maturo vere*). When parturition was approaching, the pregnant cow (*horda vacca*) was carefully watched, fed richly, and protected from the assaults of the gad-fly and other tormenting insects; the calf for some time after its birth was allowed to suck freely, but as it increased in strength was tempted with green food, in order that it might in some degree relieve the mother, and after six months had elapsed, was fed regularly with wheat bran, barley-meal, or tender grass, and gradually weaned entirely.

Castration was performed at the age of two years. The vituli intended for labour were to be handled (*tractari*) from an early age to render them tame, but were not to be broken in to work (*domari*) before their third, nor later than their fifth year. The method of breaking (*domitura*) those taken wild from the herd is fully described by Columella (vi. 2), and Palladius fixes the end of March as the time most appropriate for commencing the operation. The members of a herd, according to age and sex, were termed, *Vitulus, Vitula ; Juvencus, Juvenca ; Bos novellus, Bucula ; Bos vetulus, Taurus, Vacca ;* a barren cow was named *Taura*. (Cat. 5, 30 ; Varr. ii. 1, 5 ; Colum. vi. 1–3, 20–24 ; Plin. *H. N.* viii. § 176 ff. ; Pallad. iv. 11, 12, vi. 7, viii. 4.)

2. Horses (*pecus equinum* s. *equitium, armentum equinum*) are divided by Columella into *Generosi*, blood horses ; *Mulares*, horses adapted for breeding mules ; *Vulgares*, ordinary horses.

The points of a horse, the method of ascertaining his age up to seven years old, and the warranty usually given by the seller, are detailed in Varro (ii. 7, §§ 4–6), in Columella (vi. 29), and in Palladius (iv. 13).

Horses either pastured in grass fields or were fed in the stable upon dry hay (*in stabulis ac praesepibus*), to which barley was added when the animal was required to undergo an extraordinary fatigue. Brood mares were frequently kept in large troops which shifted, like sheep and oxen, from the mountains to the coast, according to the season ; two mounted men being attached to each herd of fifty. The mare (*equa*) was considered fit for breeding at two years old, and continued prolific up to the age of ten ; the stallion (*admissarius*) remained in vigour from three years old until twenty, but when young was limited to twelve or fifteen females. The period of gestation being twelve lunar months and ten days, the best time for impregnation was from the vernal equinox to the summer solstice, since parturition would then take place during the most favourable season. High-bred mares were not allowed to produce more than once in two years. Ten days after birth the foal (*pullus equinus, equuleus*) was permitted to accompany its dam to pasture ; at the age of five months, it was customary to begin feeding them with barley-meal and bran, and when a year old, with plain unground barley : but the best colts were allowed to continue sucking until they had completed two years, and at three years they were broken in for the toil to which they were destined, whether for racing (*ad cursuram*), for draught (*ad redam*), for carrying burthens (*ad vecturam*), or for military service (*ad ephippium*), but they were not regularly worked until four off.

Race and war horses were not castrated ; but the operation was frequently performed on those destined for the road, from the conviction that the gelding (*canterius*), while less bold and spirited, was more safe and tractable (*in viis habere malunt placidos*, Varr.).

It is to be observed that horses were, and indeed are, very little used for agricultural purposes in Italy and Southern Europe, the ordinary toils being carried on almost exclusively by oxen, and hence they never were by any means objects of such general interest to the farmer as among ourselves.

We may remark that Varro, Columella, and many other writers repeat the absurd story embellished by the poetry of Virgil, that mares in some districts of Spain became pregnant by the influence of a particular wind, adding that the colts conceived in this manner did not live beyond the age of three years. (Varr. i. praef. § 26, ii. 1. § 18, 7. § 7 ; Colum. vi. 27, 29 ; Plin. *H. N.* viii. § 166 ; Pallad. iv. 13.)

3. *Asses* (*asinus, asina*) were divided into two classes, the *Genus mansuetum*, or common domestic quadruped (*asinus, asellus*), and the *Genus ferum*, the wild ass (*onager, onagrus*), which was common in Phrygia and Lycaonia, was easily tamed and made an excellent cross.

The most celebrated breeds were those of Arcadia and of Reate. The latter was so highly esteemed in the time of Varro, that a single individual of this stock had been known to fetch sixty thousand sesterces (about 500*l.* sterling), and a team of four, as much as four hundred thousand (upwards of 3300*l.* sterling). Such animals were of course delicately nurtured, being fed chiefly upon *far* and barley bran (*furfures hordeacei*). The inferior description of asses (*minor asellus*) were valued by farmers because they were very hardy, not subject to disease, capable of enduring much toil, required little food, and that of the coarsest kind, such as the leaves and twigs of thorny shrubs, and might be made serviceable in various ways, as in carrying burdens (*aselli dossuarii*), turning corn mills, and even in ploughing where the soil was not stiff. The time of impregnation, the period of gestation, and the management of the foals (*pulli*), were the same as in horses. They were seldom kept in sufficient numbers to form a herd. (Varr. ii. 1, § 14, ii. 6 ; Colum. vii. 1 ; Plin. *H. N.* viii. § 167 ff. ; Pallad. iv. 14.)

4. Mules. *Mulus* and *Mula* were the general terms for the hybrid between a horse and an ass, but in practice a distinction was drawn between *Muli* and *Hinni*. *Hinni* were the progeny of a stallion and a she-ass, *Muli* of a male ass and a mare. The latter were larger in proportion, and more esteemed than the former. A cross sometimes was formed between the mare and the onager as a matter of curiosity.

Uncommon care was taken by breeders of mules in the selection of parents. A strong large-boned mare, powerful rather than swift, was usually chosen. The male asses at their birth were removed from their mother, suckled by mares, reared upon the most nourishing food (hay and barley), and attained to full vigour when three years old. A good admissarius from Arcadia or Reate was worth from thirty to forty thousand sesterces (250*l.* to 330*l.* sterling). The period of gestation was observed to be a little longer than in the case of the pure horse or ass, extending to thirteen lunar months ; in all other respects their management, habits, and mode of sale were the same.

The great use of mules was in drawing travelling carriages (*hisce enim binis conjunctis omnia vehicula in viis ducuntur*, Varr.) ; they were also employed, like asses, in carrying burdens upon pack saddles (*clitellae*), and in ploughing light land. The finer kinds, when kept in herds, were driven in summer from the rich plains of Rosea on the Velinus to the Montes Gurgures. (Varr.

ii. 1, § 16, ii. 8; Colum. vi. 36, 37; Plin. *H. N.* viii. § 171 ff.; Pallad. iv. 14.)

III.

1. Dogs (*canes*) were divided into three classes: *a.* *Canes Villatici*, watch-dogs, whose office was to guard farm-houses against the aggressions of thieves.

b. *Canes Pastorales* s. *Canes Pecuarii*, to protect the flocks and herds from robbers and wild beasts. Each opilio was generally attended by two of these, equipped with spiked collars (*mellum*), to serve as a defence in their encounters with wolves and other adversaries.

c. *Canes Venatici.* Sporting dogs.

Varro and Columella describe minutely the points of the first two classes, with which alone the former was concerned, and these seem to be identical with the animals employed for the same purpose at the present day in the Abruzzi. They were fed upon barley-meal and whey, or, in places where no cheese was made, on wheaten bread moistened with the warm liquor in which beans had been boiled. (Varr. ii. 9; Colum. vii. 12.)

2. Herdsmen (*pastores*).

The flocks and herds which fed in the immediate neighbourhood of the farms were usually tended by old men, boys, or even women; but those which were driven to distant and mountainous pastures were placed under the care of persons in the vigour of life, who always went well armed and were accompanied by beasts of burden (*jumenta dossuaria*), carrying all the apparatus and stores required during a protracted absence; the whole body of men and animals being under the command of an experienced and trustworthy individual, styled *Magister Pecoris*, who kept all the accounts and possessed a competent knowledge of the veterinary art.

We may conclude this part of the subject with a few words upon the management of dairy produce, which was treated as a distinct science (τυροποιία) by the Greeks, who wrote many treatises upon the topic.

Cheese-making commenced in May, and the method followed by the Romans was substantially the same as that now practised. The milk unskimmed was used as fresh as possible, was slightly warmed, the rennet (*coagulum*) was then added; as soon as the curd formed, it was transferred to baskets (*fiscellae*, *calathi*) or wooden chessets (*formae*) perforated with holes, in order that the whey (*serum*) might drain off quickly, and was pressed down by weights to hasten the process. The mass was then taken out of the frame, sprinkled with salt, and placed upon a wicker crate or wooden board in a cool dark place; when partially dried, it was again pressed more powerfully than before, again salted and again shelved,—operations which were repeated for several days until it had acquired a proper consistency. It might be flavoured with thyme, with pine cones, or any other ingredient, by mixing the condiments with the warm milk.

The rennet or coagulum was usually obtained from the stomach of the hare, kid, or lamb (*coagulum leporinum*, *haedinum*, *agninum*), the two former being preferred to the third, while some persons employed for the same purpose the milky juice expressed from a fig-tree branch, vinegar, and a variety of other substances.

The cheeses from cows' milk (*casei bubuli*) were believed to contain more nourishment, but to be more indigestible, than those from ewes' milk (*casei ovilli*); the least nourishing and most digestible were those from goats' milk (*casei caprini*), the new and moist cheeses in each case being more nourishing (*magis alibiles*) and less heavy (*in corpore non resides*) than those which were old and dry.

Butter (*butyrum*) is mentioned by Varro (ii. 2, § 16), but seems to have been scarcely used as an article of food (Varr. ii. 1, § 28, 11; Colum. vii. 8; Plin. *H. N.* xi. § 239, xxviii. § 133; Pallad. vi. 9).

β. VILLATICA PASTIO.

Villaticae Pastiones, from which many persons towards the close of the republic and under the empire derived large revenues, were separated into two departments, according to the names given to the buildings or enclosures adapted to the different animals:—

I. *Aviaria* s. *Ornithones*.
II. *Vivaria*.

I. *Aviaria* s. *Ornithones*, in the most extended acceptation of the term, signified receptacles for birds of every description, whether wild or tame, terrestrial or amphibious, but it is frequently and conveniently employed in a more limited sense to denote the structures formed for birds caught in their wild state by the fowler (*auceps*), from whom they were purchased, and then shut up and sold at a profit after they became fat.

In this way we may distinguish between, *a.* *Cohors in plano*, *b.* *Columbarium*, *c.* *Ornithon*, of which the first two only were known to the earlier Romans.

a. *Cohors in plano* was the poultry-yard, including the houses and courts destined for those domestic fowls which were bred and fed on the farm, and which were not able or not permitted to fly abroad. Of these the chief were, 1. Barn-door fowls or chickens (*gallinae*). 2. Guinea fowls (*gallinae Numidicae* s. *Africanae*). 3. Pheasants (*phasiani*). 4. Peacocks (*pavones*). 5. Geese (*anseres*). 6. Ducks (*anates*). 7. Teal (*querquedulae*).

b. *Columbarium*, the dove-cote.

c. The *Ornithon* proper, the inmates of which were chiefly: 1. Thrushes and blackbirds (*turdi*, *merulae*), especially the former. 2. Quails (*coturnices*). 3. Turtledoves (*turtures*). 4. Ortolans (*miliariae*), all of which are in Italy birds of passage arriving in great flocks at particular seasons.

II. In like manner the term *Vivaria*, which may be employed to denote all places contrived for the reception of animals used for food or which supplied articles of food and did not fall under the denomination of *pecudes* or *aves*, must be separated into those designed for the reception of land animals and those for fishes.

a. *Leporaria*, *Apiaria*, *Coclearia*, *Gliraria*, and *β.* *Piscinae*.

a. *Leporaria*. The animals kept in leporaria were chiefly: 1. Hares and rabbits (*lepores*). 2. Various species of deer (*cervi*, *capreae*, *oryges*). 3. Wild boars (*apri*), and under the same category rank: 4. Bees (*apes*). 5. Snails (*cocleae*). 6. Dormice (*glires*).

β. *Piscinae* or fish-ponds, divided into—

1. *Piscinae aquae dulcis*, fresh-water ponds; and
2. *Piscinae aquae salsae*, salt-water ponds.

We commence then with a description of the inhabitants of the *Cohors in plano* and their dwelling.

I. AVIARIA.

a. Cohors in plano.

In the science of rearing poultry (*Ratio Cohortalis*, **ὀρνιθοτροφία**), three precepts were of general application. The birds were to be kept scrupulously clean, were to be abundantly supplied with fresh air and pure water, and were to be protected from the attacks of weasels, hawks, and other enemies. The two former objects were attained by the choice of a suitable situation, and by incessant attention upon the part of the superintendents (*curatores, custodes*); the latter was effected by overlaying the walls of the houses and courts, both inside and out, with coats of smooth hard plaster or stucco, and by covering over the open spaces with large nets.

Again, the attention of those who desired to rear poultry with profit was chiefly occupied by five considerations: 1. The choice of a good breeding stock (*de genere*). 2. The impregnation of the hens (*de fetura*). 3. The management of the eggs during incubation (*de ovis*). 4. The rearing of the pullets (*de pullis*). 5. Fattening them for the market (*de fartura*), this last process being, however, frequently conducted not by the farmer (*rusticus*), but by persons who made it their sole occupation (*fartores*).

1, 2. Chickens (*gallinae*). Of the different species of domestic fowls, the most important were *gallinae*, which were divided into three classes: *a. Gallinae Villaticae* s. *Cohortales*, the common chicken; *b. Gallinae Africanae* s. *Numidicae*, the same probably with the *μελεαγρίδες* of the Greeks, the distinctions pointed out by Columella scarcely amounting to a specific difference; and *c. Gallinae Rusticae*. The last were found in great abundance in the Insula Gallinaria, but it is so difficult to determine from the descriptions transmitted to us what they really were, that we know not whether we ought to regard them as pheasants, as red-legged partridges, as wood-grouse, or as some species of game different from any of these. The *Africanae*, always scarce and dear, were treated almost exactly in the same manner as peacocks, and never became of importance to the farmer; the *Rusticae* are little spoken of except as objects of curiosity, and Columella declares that they would not breed in confinement (*in servitute non fetant*). We therefore confine our observations to the *Villaticae*.

Among the breeds celebrated for fighting were the Tanagrian, the Rhodian, and the Chalcidian; but these were not the most profitable for the market. The points of a good barn-door fowl are minutely described by Varro, Columella, and Palladius, who all agree in recommending the breeder to reject such as were white, for they were more delicate and less prolific than those whose plumage was darker. Some were permitted to roam about (*vagae*) during the day, and pick up what they could, but the greater number were constantly shut up (*clausae*) in a poultry yard (*gallinarium, ὀρνιθοβοσκεῖον*), which was an enclosed court (*saeptum*) with a warm aspect, strewed with sand or ashes wherein they might wallow, and covered over with a net. It contained hen-houses (*caveae*) to which they retired at night and roosted upon poles stretched across (*perticae*) for their convenience, nests (*cubilia*) for the laying hens being constructed along the walls. The whole establishment was under the control of a poultry man (*aviarius custos* s. *curator gallinarius*), who occupied an adjoining hut, usually assisted by an old woman and a boy, for the flocks were often very large, containing upwards of two hundred. The proportion of one cock (*gallus*) to five hens was commonly observed, the males not required for breeding being killed young or made into capons (*capi*). Their food consisted of barley with the husk removed (*hordeum pinsitum*), millet, vetches, and lentils, when these articles could be procured cheap, but when too dear they were supplied with the refuse of wheat, bran with a little of the flour adhering, the seeds of cytisus, and the like.

The laying season began in January and continued until the autumnal equinox. From twenty-five to thirty eggs, the number being increased or diminished according as the weather was hot or cold, were placed beneath a clucking hen (*gallina glociens*) from one to two years old, who was kept constantly shut up except at feeding time, or even furnished with food while on the nest. The curator made his rounds regularly during the twenty days of incubation, turning the eggs, that they might all receive equal heat, and rejecting those which upon examination were found to contain no embryos. Such as were not required for hatching were preserved by rubbing them with strong brine, and then storing them up in chaff or bran. The chicks for fifteen days were fed by hand on polenta mixed with nasturtium (cress) seed.

Chickens, when fattened for sale, were shut up in dark narrow cribs, light and motion being unfavourable to the process; or each bird was swung separately in a basket, with a small hole at each end, one for the head, the other for the rump, and bedded upon the softest hay or chaff, but so cramped in space that he could not turn round. In this state they were crammed with wheat, linseed, barley-meal kneaded with water into small lumps (*turundae*), and other farinaceous food, the operation requiring from twenty to twenty-five days. (Varr. iii. 9; Colum. viii. 2, &c., 12; Plin. *H. N.* x. § 46 ff.; Pallad. i. 27, 29.)

3. Pheasants (*phasiani*) are not mentioned among domestic poultry by Varro or Columella, but find a place in the compilation of Palladius, who directs that young birds, that is, those of a year old, should be selected as breeders in the proportion of one cock to two hens, and that the eggs should be hatched by barn-door fowls. The chicks were to be fed for the first fortnight on cold boiled barley lightly sprinkled with wine, afterwards upon bruised wheat, locusts, and ants' eggs, and were to be prevented from having access to water. They became fat in thirty days if shut up and crammed with wheat flour made up into small lumps (*turundae*) with oil. (Pallad. i. 29.)

4. **Peacocks** (*pavones, pavi, pavae*) are said to have been first introduced as an article of food by Q. Hortensius at a banquet on his installation as an augur (*augurali aditiali cena*). They speedily became so much in request that soon afterwards a single full-grown bird sold for fifty denarii (upwards of a guinea and a half), and a single egg for five (upwards of three shillings), while one breeder, M. Aufidius Lurco, derived an income of 60,000 sesterces (about £500 sterling) from this source alone. The most favourable situations for rearing peacocks were afforded by the small rocky but well-wooded islets off the Italian coast, where they roamed in freedom without fear of being lost or stolen, provided their own food, and brought up their young. Those persons who could not command such advantage kept them in small enclosures roofed over, or under porticoes, perches (*perticae*) being supplied for them to roost upon, with a large grassy court in front, surrounded by a high wall and shaded by trees. They were fed upon all kinds of grain, but chiefly barley; did not arrive at full maturity for breeding until three years old, when one cock was allowed to five hens, and care was taken to supply each bird with a separate nest (*discreta cubilia*). The hatching process was most profitably performed by common barn-door fowls, for in this way the pea-hen laid three times in a season, first five eggs (*ova pavonina*), then four, and lastly two or three, but if allowed to incubate herself could rear only one brood. In the time of Varro, three chicks (*pulli pavonini*) for each full-grown bird were considered a fair return. (Varr. iii. 6; Colum. viii. 11; Pallad. i. 28; Plin. *H. N.* x. § 43; comp. Juv. i. 143.)

5. Geese (*anseres*) were easily reared, but were not very profitable and somewhat troublesome, for a running stream or a pond with a good supply of herbage was essential, and they could not be turned out to graze in the vicinity of growing crops, which they tore up by the roots, being supposed at the same time, by a vulgar error, to injure vegetation by their dung. (Verg. *Georg.* i. 119; Pallad. i. 30.) Birds for breeding were always selected of a large size and pure white, the grey variety (*varii vel fusci*) being regarded as inferior on the supposition that they were more nearly allied to the wild species. Their feed consisted of clover, fenugreek, lettuce, together with leguminous plants, all of which were sown for their use, and especially a herb called *σέρις* by the Greeks, which seems to have been a sort of endive. Impregnation took place about mid-winter, one gander being allowed to three females, who, when the laying season, which was early in spring, approached, were shut up in a structure (*χηνοβοσκεῖον*) consisting of a court (*cohors*), surrounded by a high wall with a portico inside containing receptacles (*harae, cellae, speluncae*), from two to three feet square, built of hewn stone or brick, well lined with chaff for the eggs. Incubation, according to the weather, lasted from twenty-five to thirty days, during which period the mothers were supplied by the custos with barley crushed in water. The goslings remained in the house for about ten days, and were fed upon polenta, poppy seed, and green cresses (*nasturtium*) chopped in water, after which they were taken out in fine weather to feed in marshy meadows and pools. It was found in practice most advantageous to employ barn-door hens to hatch the eggs, since they made more careful mothers; and in this case the goose would lay three times in a season, first five eggs, then four, and lastly three.

Goslings, when from four to six months old, were shut up to fatten in dark warm coops (*saginarium*), where they were fed with barley pottage and fine flour moistened with water, being allowed to eat and drink three times a day as much as they could swallow. In this way they became fit for the market in two months or less. A flock of geese furnished not only eggs but feathers also, for it was customary to pluck them twice a year, in spring and autumn, and the feathers were worth five denarii (about three shillings and fourpence) a pound. (Varro, iii. 10; Colum. viii. 13; Plin. *H. N.* x. § 51 ff.; Pallad. i. 30.)

6. Ducks (*anates*). The duck-house (*νησσοτροφεῖον*) was more costly than the chenoboscium, for within its limits were confined, not only ducks, but querquedulae, phalerides, boscades (whatever these may have been), and similar birds which seek their food in pools and swamps. A flat piece of ground, if possible marshy, was surrounded by a wall fifteen feet high, well stuccoed within and without, along the course of which upon an elevated ledge (*crepido*) a series of covered nests (*tecta cubilia*) were formed of hewn stone, the whole open space above being covered over with a net or trellis work (*clatris superpositis*). A shallow pond (*piscina*) was dug in the centre of the enclosure, the margin formed of *opus signinum*, and planted round with shrubs; through this flowed a small stream which traversed the court in a sort of a canal, into which was thrown food for the inmates, consisting of wheat, barley, millet, acorns, grape-skins, small crabs or cray-fish, and other water animals. The eggs were generally hatched by common hens, the precautions taken during incubation and the rearing of the ducklings being the same as in the case of pullets. (Varr. iii. 11; Colum. viii. 15.)

b. Columbarium.

Pigeons (*columbus, columba*). Varro distinguishes two species or varieties: the one, *Genus saxatile* s. *agreste*, probably the *Columba livia* of naturalists, which was shy and wild, living in lofty turrets (*sublimes turriculae*), flying abroad without restraint, and generally of a darkish colour, dappled, and without any admixture of white; the other kind more tame (*clementius*), feeding about the doors of the farm, and for the most part white. Between these a cross breed (*miscellum*) was usually reared for the market in a lofty edifice (*περιστεροτροφεῖον, περιστερεών*), constructed for the purpose. These buildings, placed under the charge of a *columbarius*, were frequently large enough to contain 5000, were vaulted or roofed in with tiles, and furnished with one small entrance, but well lighted by means of large barred or latticed windows (*fenestrae Punicanae*, s. *reticulatae*). The walls, carefully stuccoed, were lined from top to bottom with rows of round-shaped nests with a single small aperture (*columbaria*), often formed of earthenware (*fictilia*), one being assigned to every pair, while in front of each row a plank was placed upon which the birds alighted. A copious supply of fresh water was introduced for drinking and washing; their food, consisting of the refuse of wheat (*excreta tritici*), millet, vetches, peas, kidney-beans, and other leguminous seeds, was placed in narrow troughs ranged round the walls, and filled by pipes from without. The pigeons kept in the country supported themselves for a great part of the year upon what they picked up in the fields, and were regularly fed (*acceptant conditiva cibaria*) for two or three months only; but those in or near a town were confined in a great measure to the *περιστεροτροφεῖον*, lest they should be snared or destroyed. They were very fruitful, since one pair would rear eight broods of two each in the course of a year, and the young birds (*pulli*) very speedily arrived at maturity, and began forthwith to lay in their turn. Those set aside for the market had their wing feathers plucked out and their legs broken, and were then fattened upon white bread previously chewed. Columella says that some preferred to tie their legs, thinking that the pain arising from breaking them could hinder this fattening; but he denies that this is the case.

A handsome pair of breeding pigeons of a good stock would fetch at Rome, towards the close of the republic, two hundred sesterces (upwards of a guinea and a half); if remarkably fine, as high as a thousand (nearly eight guineas); and as much as sixteen hundred (more than thirteen pounds) was a price sometimes asked, while Columella speaks of four thousand (upwards of thirty pounds) having been given in his time; and some persons were said to have a hundred thousand (nearly a thousand pounds sterling) invested in this kind of property. The instinct which teaches pigeons to return to the place where they have been fed was remarked by the ancients, who were wont, for the sake of amusement, to bring them to the theatres and there let them loose. (Varr. iii. 7; Colum. viii. 8; Plin. *H. N.* x. § 147; Pallad. i. 24.)

c. *Ornithon, Aviarium* (*ὀρνιθοτροφεῖον*).

Ornithones, in the restricted sense, were divided into two classes: 1. Those constructed for pleasure merely, being designed for the reception of nightingales and other singing birds. 2. Those for profit, in which thousands of wild birds were confined and fattened. Varro gives a very curious and minute description of an ornithon belonging to the first class, which he himself possessed, and Lucullus endeavoured to combine the enjoyment of both, for he had a triclinium constructed in his Tusculan villa inside of an ornithon, delighting to behold one set of birds placed upon the table ready for his repast, while others were fluttering at the windows by which the room was lighted. Ornithones of the second class, with which alone we are at present concerned, were kept by poulterers (*macellarii*), and others in the city, but the greater number were situated in Sabinum, because thrushes were most abundant in that region. These huge cages were formed by enclosing a space of ground with high walls and covering it in with an arched roof. Water was introduced by pipes, and conducted in numerous narrow channels; the windows were few and small, that light might be excluded as much as possible, and that the prisoners might not pine from looking out upon the open country, where their mates were enjoying freedom. Indeed, so sensitive were thrushes, and so apt to despond when first caught, that it was the practice to shut them for some time with other tame individuals of their own kind (*veterani*), who acted as decoys (*allectores*) in reconciling them to captivity. In the interior of this building numerous stakes (*pali*) were fixed upright, upon which the birds might alight; long poles also (*perticae*) were arranged in an inclined position resting against the walls with spars nailed in rows across, and lofts were constructed, all for the same purpose. Two smaller apartments were attached, one in which the superintendent (*curator*) deposited the birds which died a natural death, in order that he might be able to square accounts with his master; the other, called the *seclusorium*, communicating with the great hall by a door, into which those birds wanted for the market were driven from time to time, and killed out of sight, lest the others might droop on witnessing the fate of their companions.

Millet and wild berries were given freely, but their chief food consisted of dry figs carefully peeled (*diligenter pinsita*) and kneaded with far or pollen into small lumps, which were chewed by persons hired to perform this operation. The birds usually kept in an ornithon have been mentioned above, but of these by far the most important were thrushes, which made their appearance in vast flocks about the vernal equinox, and seem to have been in great request; for out of a single establishment in Sabinum, in the time of Varro, five thousand were sometimes sold in a single year at the rate of three denarii a head, thus yielding a sum of 60,000 sesterces, about £500 sterling.

The manure from ornithones containing thrushes and blackbirds was not only a powerful stimulant to the soil, but was given as food to oxen and pigs, who fattened on it rapidly.

Turtle-doves (*turtures*, dim. *turturillae*) belonged to the class which did not lay eggs in captivity (*nec parit nec excludit*), and consequently, as soon as caught, were put up to fatten (*volatura ita ut capitur farturae destinatur*, Col.). They were not however confined in an ordinary ornithon, but in a building similar to a dove-cote, with this difference, that the interior, instead of being fitted up with columbaria, contained rows of brackets (*mutulos*), or short stakes projecting horizontally from the wall and rising tier above tier. Over each row, the lowest of which was three feet from the ground, hempen mats (*tegeticulae cannabinae*) were stretched, on which the birds reposed day and night, while nets were drawn tight in front to prevent them from flying about, which would have rendered them lean. They fattened readily in harvest time, delighting most in dry wheat, of which one-half modius per day was sufficient for 120 turtles, or in millet moistened with sweet wine. (Varr. iii. 8; Colum. viii. 9; Plin. *H. N.* x. § 104 ff.; comp. Plaut. *Mostell.* i. 1, 44; Juv. vi. 36.)

II. VIVARIA.

a. *Leporaria.*

Leporaria anciently were small walled paddocks, planted thickly with shrubs to give shelter; and intended, as the name implies, for the reception of animals of the hare kind: viz. 1. The common grey hare (*Italicum hoc nostrum*, sc. *genus*). 2. The mountain or white hare from the Alps, seldom brought to Rome (*toti candidi sunt*). 3. Rabbits (*cuniculi*), believed to be natives of Spain. These, at least the first and third, bred rapidly, were caught occasionally, shut up in boxes, fattened and sold. In process of time, the name *leporarium* was changed for the more appropriate term *θηριοτροφεῖον*, since a variety of wild animals, such as boars (*apri*), stags (*cervi*), and roe deer (*capreae*), were procured from the hunter (*venator*), and shut up in these parks, which now embraced several acres even in Italy, while in the provinces, especially Transalpine Gaul, they frequently comprehended a circuit of many miles of hill and swamp, glade and forest. This space was, if possible, fenced by a wall of stone and lime, or of unburnt brick and clay, or, where the extent rendered even the latter too costly, by a strong paling (*vacerra*) formed of upright stakes (*stipites*) drilled with holes (*per latus efforantur*) through which poles (*amites*) were passed horizontally, the whole of oak or cork-tree timber, braced and, as it were, latticed by planks nailed diagonally (*seris transversis clatrare*), much in the fashion of wooden hurdles. Even in the largest enclosures it was necessary to support the animals in winter, and in those of moderate size they were frequently tamed to such an extent that they would assemble at the sound of a horn to receive their food. (Varr. iii. 12; Colum. ix. 1; Plin. *H. N.* viii. § 217 ff.)

Bees (*apes*). The delight experienced in the management of these creatures is sufficiently proved by the space and care devoted to the subject in Virgil, and by the singularly minute instructions contained in the agricultural writers, especially in Columella, who derived his materials from the still more elaborate compilations of Hyginus and Celsus, the former being the author of a regular bee calendar, in which the various precepts for the guidance of the bee fancier (*mellarius, apiarius; μελιτουργὸς, meliturgus*) were arranged in regular order according to the seasons and days of the year. The methods which the ancients describe differ little, even in trifling details, from those followed by ourselves, although in some respects our practice is inferior, since they never destroyed a hive for the sake of its contents, but abstracted a portion of the honey only, always leaving a sufficient supply for the support of the insects in winter; and the same swarm, occasionally reinforced by young recruits, might thus continue for ten years, which was regarded as the limit. Our superior knowledge of natural history has however enabled us to determine that the chief of the hive is always a female, not a male (*rex*), as was the general belief; to ascertain the respective duties performed by the queen, the working bees, and drones (*fuci* s. *fures*), which were unknown or confounded; and to reject the absurd fancy, to which however we are indebted for the most charming episode in the Georgics, which originated with the Greeks, and is repeated with unhesitating faith by almost every authority, that swarms might be produced by spontaneous generation from the putrescent carcase of an ox (*ex bubulo corpore putrefacto*; and hence they were commonly termed *βοηγενέες* by the poets, and by Archelaus *βοὸς φθιμένης πεποτημένα τέκνα*).

The early Romans placed the hives in niches hollowed out of the walls of the farm-house itself, under the shelter of the eaves (*subter subgrundas*), but in later times it became more common to form a regular apiary (*apiarium, alvearium, mellarium; μελιττοτροφεῖον, μελιττώνη*), sometimes so extensive as to yield 5000 pounds of honey in a season. This was a small enclosure in the immediate vicinity of the villa, in a warm and sheltered spot, as little subject as possible to great variations of temperature, or to disturbances of any description from the elements or from animals; and carefully removed from the influence of fetid exhalations, such as might proceed from baths, kitchens, stables, dunghills, or the like. A supply of pure water was provided, and plantations were formed of those plants and flowers to which they were the most attached, especially the cytisus and thyme, the former as being conducive to the health of bees, the latter as affording the greatest quantity of honey (*aptissimum ad mellificium*, Varr.). The yew was carefully avoided, not because in itself noxious to the swarm, but because the honey made from it was poisonous. (*Sic mea Cyrneas fugiant examina taxos*, Verg. *Ecl.* ix. 30.) The hives (*alvi, alvei, alvearia, κυψέλαι*), if stationary, were built of brick (*domicilia lateribus facta*) or baked dung (*ex fimo*); if moveable, and these were considered the most convenient, were hollowed out of a solid block, or formed of boards, or of wicker-work, or of bark, or of earthenware, the last being accounted the worst, because more easily affected by heat or cold, while those of cork were accounted best. They were perforated with two small holes for the insects to pass in and out, were covered with moveable tops to enable the mellarius to inspect the interior, which was done three times a month, in spring and summer, for the purpose of removing any filth which might have accumulated, or any worms that might have found entrance; and were arranged, but not in contact, in rows one above another, care being taken that there should not be more than three rows in all, and that the lowest row should rest upon a stone parapet, elevated three feet from the ground, and coated with smooth stucco to prevent lizards, snakes, or other noxious animals from climbing up.

When the season for swarming arrived, the movements which indicated the approaching departure of a colony (*examen*) were watched unremittingly; and when it was actually thrown off, they were deterred from a long flight by casting dust upon them, and by tinkling sounds, being at the same time tempted to alight upon some neighbouring branch by rubbing it with balm (*apiastrum, μελισσόφυλλον*, s. *μέλινον*, s. *μελίφυλλον*), or any sweet substance. When they had all collected, they were quietly transferred to a hive similarly prepared, and, if they showed any disinclination to enter, were urged on by surrounding them with a little smoke.

If quarrelsome, their pugnacity was repressed by sprinkling them with honey water (*mella*) or dust; if lazy, they were tempted out by placing the sweet-smelling plants they most loved, chiefly apiastrum or thyme, in the immediate vicinity of the hive, recourse being had at the same time to a slight fumigation. If distracted by sedition in consequence of the presence of two pretenders to the throne, the rivals were caught, examined, and the least promising put to death. In bad weather, those stricken down and disabled by cold or sudden rain were tenderly collected, placed in a spot warmed by artificial heat, and as they revived laid down before their hives. When the weather for any length of time prevented them from going abroad, they were fed upon honey and water, or upon figs boiled in must and pounded into a paste.

The honey harvest (*mellatio, mellis vindemia, castratio alvorum, dies castrandi, μελίτωσις*), according to Varro, took place three times a year, but more usually twice only, in June and October; on the first visitation four-fifths, at the second two-thirds of the honey was abstracted; but these proportions varied much according to the season and the strength of the particular hive. The system pursued was very simple; the moveable top was taken off, or a door contrived in the side opened, the bees were driven away by a smoking apparatus, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.

The comb (*favus*, κηρίον), which was the product of their industry, was composed of wax (*cera*, κηρὸς), formed into hexagonal cells (*sexangulis cella*), the geometrical advantages of which were soon discovered by mathematicians, containing for the most part honey (*mel*, μέλι), but also the more solid sweet substance commonly called bee-bread (*propolis*, πρόπολις), the classical name being derived, it is said, from the circumstance that it is found in greatest abundance near the entrance. The combs were cemented together, and the crevices in the hive daubed over with a glutinous gum, or bee-glue, the erithace (ἐριθάκη) of Varro and his Greek authorities, which seems to be the same with what is elsewhere termed *melligo* (μελίτωμα). But cf. Conington and Keightley on Verg. *Georg.* iv. 39.

Columella and Palladius describe ingenious plans for getting possession of wild swarms (*apes silvestres, ferae, rusticae*, as opposed to *urbanae, cicures*); and Pliny notices the humble-bees, which constructed their nests in the ground, but seems to suppose that they were peculiar to a district in Asia Minor. The marks which distinguish the varieties of the domestic species will be found detailed by the different authorities quoted below. (Aristot. *Hist. Anim.* ix. 40 ff.; Aelian. *de Anim.* i. 59, 60, v. 10, 11; Varr. ii. 5, iii. 3, 16; Verg. *Georg.* iv.; Colum. ix. 3, &c., xi. 2; Plin. *H. N.* xi. § 11 ff.; Pallad. i. 37–39, iv. 15, v. 8, vi. 10, vii. 7, ix. 7, xi. 13, xii. 8.)

Snails (*cocleae*). Certain species of snails were favourite articles of food among the Romans, and were used also medicinally in diseases of the lungs and intestines. The kinds most prized were those from Reate, which were small and white; those from Africa, of middling size, and very fruitful; those called *solitana*, also from Africa, larger than the former; and those from Illyria, which were largest of all. The place where they were preserved (*coclearium*) was sheltered from the sun, kept moist, and not covered over nor walled in, but surrounded by water, which prevented the escape of the inmates, who were very prolific, and required nothing except a few bay leaves and a little bran. They were fattened by shutting them up in a jar smeared with boiled must and flour, and perforated with holes to admit air. It has been recorded that an individual named Fulvius Hirpinus constructed, near Tarquinii, the first coclearium ever formed in Italy, a short time before the civil war between Caesar and Pompey. (Varr. iii. 14; Plin. *H. N.* ix. § 173, xxx. § 44; comp. Sallust. *Jug.* 93.)

Dormice (*glires*) were regarded as articles of such luxury that their use as food was forbidden in the sumptuary laws of the more rigid censors; but, notwithstanding, a *glirarium* became a common appendage to a villa. It was a small space of ground surrounded with a smooth wall of polished or stuccoed stone, planted with acorn-bearing trees to yield food, and containing holes (*cavi*) for rearing the young. They were fattened up in earthen jars (*dolia*) of a peculiar construction, upon chestnuts, walnuts, and acorns. (Varr. iii. 15; Plin. *H. N.* viii. § 223 f.: cf. Martial, iii. 58, xiii. 59; Petron. 31; Amm. Marc. xxviii. 4.)

b. Piscinae.

Lastly, we may say a few words upon artificial fish-ponds, which were of two kinds—fresh-water ponds (*piscinae dulces*), and salt-water ponds (*piscinae salsae s. maritimae*).

The former, from an early period, had frequently been attached to ordinary farms, and proved a source of gain; the latter were unknown until the last half century of the republic, were mere objects of luxury, and were confined for the most part to the richest members of the community, to many of whom, such as Hirrius, Philippus, Lucullus, and Hortensius, who are sneeringly termed *piscinarii* by Cicero, they became objects of intense interest. These receptacles were constructed at a vast cost on the sea-coast, a succession being frequently formed for different kinds of fish, and the most ingenious and elaborate contrivances provided for the admission of the tide at particular periods, and for regulating the temperature of the water; large sums were paid for the stock with which they were filled, consisting chiefly of mullets and muraenae; and a heavy expense was incurred in maintaining them, for fishermen were regularly employed to catch small fry for their food, and when the weather did not permit such supplies to be procured, salt anchovies and the like were purchased in the market. For the most part they yielded no return whatever, during the lifetime at least of the proprietors, for the inmates were regarded as pets, and frequently became so tame as to answer to the voice and eat from the hand. When sales did take place, the prices were very high. Thus Hirrius, who on one occasion *lent* Caesar 6,000 muraenae, at a subsequent period obtained 4,000,000 sesterces (upwards of 30,000*l.*) for an ordinary villa, chiefly in consequence of the ponds and the quantity of fish they contained.

A certain Sergius Orata, a short time before the Marsic War, formed artificial oyster-beds (*vivaria ostrearum*) from which he obtained a large revenue. He first asserted and established the superiority of the shell-fish from the Lucrine Lake, which have always maintained their celebrity, although under the empire less esteemed than those from Britain. (Varr. *R. R.* iii. 17; Colum. viii. 16, 17; Plin. *H. N.* ix. § 168; Cic. *ad Att.* i. 19.)

Of modern treatises connected with the subject of this article the most important is Dickson's *Husbandry of the Ancients*, 2 vols. 8vo. 1788, the work of a Scotch clergyman, who was well acquainted with the practical details of agriculture, and who had studied the Latin writers with great care, but whose scholarship was unfortunately so imperfect that he was in many instances unable to interpret correctly their expressions. Many useful and acute observations will be found in the *Économie Politique des Romains*, by Dureau de la Malle, 2 tomes, 8vo. Paris, 1840, but he also is far from being accurate, and he is embarrassed throughout by very erroneous views with regard to the rate of interest among the Romans, and by the singular misconception that from the expulsion of the kings until the end of the Second Punic War the law forbade any Roman citizen to possess more than 7 jugers of land (vol. ii. p. 2).* Those who desire to compare the agriculture of modern Italy with ancient usages will do well to consult Arthur Young's *Travels in Italy*, and the Appendix of Symonds; the *Agriculture Toscane* of J. C. L. Simonde de Sismondi, the historian, 8vo. Génève, 1801; and *Lettres écrites d'Italie à Charles Pictet par M. Lullin de Châteauvieux*, 8vo., Paris, 2nd ed. 1820. [W. R.] [A. S. W.]

AGRIMENSORES. The business or profession of a land-surveyor appears not to have had any special organization or state recognition, at any rate until late in the history of Rome. At first the augurs directed the laying out of a town or colony, but no doubt they had assistants for the mechanical duties. The older term specially for a surveyor was *finitor*, and is used by Plautus (*Poen.* 48), and Cicero (*Agr.* ii. 13, 34; ii. 20, 53). The latter also uses *decempedator* (*Phil.* xiii. 18, 37). The ordinary term in imperial times was *mensor* (Colum. v. 1, 33; Dig. 10, 1, 4; 11, 6; Non. p. 63). *Metator* appears to have been applied only to military surveyors (Cic. *Phil.* xi. 5, 12; xiv. 4; Front. *Strat.* ii. 7, § 12). Vegetius (*de Re Mil.* ii. 7) describes *metator* as one who selected the ground for the camp, *mensor* as one who measured out the ground. The real distinction meant was perhaps that between the skilled officer and the subordinate. But *mensor*, in general use, is certainly not confined to the lower ranks. Under the empire a body of official *mensores* existed to arrange quarters for the army on march. The Justinian Code has, in one place (Just. *Cod.* xii. 40, 5), *metator*, where the Theodosian has *mensor*. The professors of the art were also called *Gromatici* (Hygin. *Munit. Castr.* 11), and the teachers *geometrae* (cf. Colum. v. 1, § 4).

The state required surveyors chiefly for three purposes: laying out land for a colony, or other distributions of land among citizens or soldiers, measuring and registering the land for the census, and military operations, such as laying out a camp, or measuring the breadth of rivers and height of mountains. But their services were also required both by the state and by individuals to survey and mark the boundaries of estates, to re-discover lost boundaries, or give a decision or advice (*judicare aut advocationem praestare*, *Grom.* p. 35) in many questions of dispute. Soldiers were of course employed for camp purposes, and also frequently for other state-surveys (*Grom.* pp. 91 sq., 121, 244, 251). Rullus proposed to take with him for executing his agrarian law two hundred *finitores* from the equestrian order (Cic. *Agr.* ii. 13, 34).

Mensores, along with many other artificers and professional persons, were freed from the more burdensome civil duties (Dig. 50, 6, 7). And, as their work was regarded as of an honourable character, their payment was a *honorarium*, and the relation of hiring was not properly applicable to their services, so that the civil law gave no remedy for a false report, even though maliciously false, and the praetor had to give an action on the case (*in factum*). Neither want of skill nor negligence (unless gross negligence) was a ground of action (D. 11, 6, 1). Teachers of the art (*geometrae*) were freed by Constantius from civil duties generally (*Cod.* x. 66, 2), but not from acting as guardians, any more than were teachers of the civil law (*Vat Fr.* 150; Dig. 27, 1, 22; *Cod. Theod.* xiii. 4, 3). The position was evidently regarded as of a lower rank. Some Constitutions of Theodosius contained in the Gromatical collection, assigning the surveyors large fees, and, if students, the rank of *clarissimi*, if professors that of *spectabiles*, are regarded by Rudorff, Mommsen, and others as forgeries. The surveyors do however appear to have had the rank of *perfectissimi* (Rudorff, *Grom. Inst.* p. 322).

The services of the land-surveyors were resorted to in disputes (*jurgia* in older language, *controversiae* in the *Gromatici*) about land, when the question turned primarily or incidentally on the boundary between neighbours, or on the position or size of pieces of land, which had been marked out by bounds and were the subject of a claim or liable to tax or duties. They had nothing to do with any questions of law which might be involved, but solely with the ascertainment by their technical knowledge of the true boundary, and with the interpretation of the official or private charts or records, or of the inscriptions, or of the symbolical meaning of the stones, posts, or other marks of boundaries (*Grom.* p. 281). The disputes which arose touching land, so far as the land-surveyors were concerned, belonged to one of two classes—*de fine* or *de loco*, i.e. they related to the boundary of the land only, or to a piece of the land itself. Under the former head came disputes whether boundary stones had been removed (*de positione terminorum*), or where ran the straight line indicated by certain posts (*de rigore*), or what trustworthy indication of the true boundary were to be found. Under the latter head (*de loco*, cf. Dig. 50, 16, 60) came questions as to ownership or possession, or the correspondence in acreage of the land occupied by a person with that registered or assigned to him or his predecessor (*de modo*); or whether the land belonged wholly

---

* Useful remarks will also be found in the notes to the Eclogues and Georgics of Virgil by Keightley, a sound scholar, and familiar with modern Italian husbandry, and in Dr. Daubeny's *Lectures on Roman Husbandry* (Oxford, 1857).

to the public, or was subject to a public right of road, or was an oddment, or was abandoned and shut out from the assignment, or belonged to some religious body or purpose, or to a tomb, or was within the jurisdiction of the contiguous community, or that of a more distant colony. To the same head belong also questions of accretion by the action of water (*alluvio*), and of damage caused by a neighbour's action in increasing the flow of rain-water on to the adjoiuing land (pp. 9–24, 37–58, 123–134). The two classes had this distinction in law, that questions of a boundary (*de fine*), if within five feet, were according to the Twelve Tables to be decided by three experts as arbiters, and any claim of usucapion was to be disregarded. Questions of a piece of land (*de loco*) were settled by the ordinary tribunals, with or without the aid of experts, as particular circumstances might require. A *lex Mamilia*, perhaps passed in Cicero's time (Cic. *Leg.* i. 21, 55), substituted a single arbiter for the three. A Constitution of A.D. 385 removed the restriction of five feet, and committed all disputes of this class to the decision of an expert, provided they were capable of settlement by skilful ascertainment of the old boundary line (*Cod. Th.* ii. 26, 4). A later Constitution of A.D. 392 restored the old distinction (*ib.* s. 5). Justinian again removed the distinction, and allowed, in all such cases, a prescription of thirty years (*Cod. Just.* iii. 39, 5, 6). The collection of the *Gromatici* does not contain this change of Justinian's. Karlowa (*Beitr.* p. 141, § 1) takes a different view of these Constitutions from the above, which is the view generally taken.

The writings of the *Gromatici* which are extant contain short treatises of about the 2nd century after Christ, by Frontinus (embedded in a commentary of a later writer called Agennius Urbicus), by Siculus Flaccus, and by apparently two writers bearing the name of Hyginus; several short mathematical treatises of uncertain date by Balbus, Nipsus, a so-called Boethius, and others; extracts from official registers, probably of the 5th century, of the colonial and other surveys of lands, chiefly in Italy; lists and descriptions of different kinds of boundary stones; extracts from the Theodosian code, and one title (x. 1) of Justinian's *Digest;* an obscure and barbarous tract (*casae litterarum*) by one Innocentius, supposed to be school exercises in land-surveying, and some other short pieces. The origin and date of the collection is unknown. The principal treatises are in two Wolfenbüttel MSS., viz. *Codex Arcerianus* of the 6th or 7th century, which, however, does not contain Siculus Flaccus, and *Codex Gudianus* of the 9th or 10th century. Niebuhr awakened modern interest in these writers (see the Appendix to his *Rom. Hist.* vol. ii. Eng. Tr.), and in 1848 Lachmann's critical edition (based partly on Blume's researches published in the *Rhein. Mus.* vols. v. vii.) appeared and superseded all earlier editions. In 1852 a second volume was published, containing essays on the MSS. by Blume, on the text by Lachmann, and on the list of colonies by Mommsen, as well as a careful and learned, though somewhat fanciful, treatise on the whole subject by Rudorff, who had previously published an essay on the action for regulating boundaries in the *Zeits. Gesch. Rechtsw.* vol. x. [H. J. R.]

AGRIMETA'TIO. In the origin of a community land has been acquired either by occupying what is vacant, or by conquest from a previous occupier. The community from time to time regulates how it shall be held by its members, whether in common or by separate families or by individuals, and what transfers from one to another shall be allowed or protected or enforced (cf. Cic. *Off.* i. 7, 21). For such purposes land has to be defined, definition requires boundaries to be declared, and naturally brings with it measurement and land surveying in general.

1. The Roman land-surveyors (whose writings will be here referred to by the pages of Lachmann's edit.) make three great classes (*qualitates*) of land: one *divisus et adsignatus*, another *mensura per extremitatem comprehensus*, a third *arcifinius qui nulla mensura continetur* (p. 1), *i.e.* land divided and marked out, land surrounded by a measured boundary, and land not measured at all.

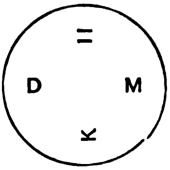
The word *arcifinius* was derived by Varro from *arcere*, and he has been followed by the Roman surveyors and by (apparently) all modern writers, Varro understanding *hostes*, others *vicinum*, others *fines* (pp. 6, 137, 284, 369; and Rudorff, *Grom. Inst.* p. 251). This derivation is certainly wrong, for it is not conformable to the laws of Latin composition, and another derivation is almost demonstrably right. Proper components of such a word are *arcus* and *finis*. A bow as seen in ancient figures was composed of two horns joined by a straight piece, each horn having a double curve, and the bow was thus a type of an irregularly curved or wavy line. Now see Balbus's words (98): *Extremitatium genera sunt duo, unum quod per rigorem observatur, alterum quod per flexus: rigor est quidquid inter duo signa veluti in modum lineae rectum perspicitur: per flexus, quidquid secundum locorum naturam curvatur, ut in agris arcifiniis solet . . . Quidquid in agro mensorii operis causa ad finem rectum fuerit, rigor appellatur . . . Flexuosa linea* (distinguished from straight and curved lines) *est multiformis, velut arcuorum aut jugorum aut fluminum; in quorum similitudinem et arcifiniorum agrorum extremitas finitur.* See also pp. 12, 31, and the figure in 312 referring to p. 342. *Ager arcifinius* is therefore land "bow-bounded," *i.e.* bounded with a natural wavy line, as opposed to land bounded by the artificial straight lines of the surveyor.

2. If a conquered territory or part of it was to be assigned to Roman citizens, as, for instance, in founding a colony, the land was divided and marked off in plots according to a regular plan. The surveyor placed himself facing due west, and drew one line due east and west, and another crossing at right angles, *i.e.* due north and south. Along these lines were set out two wide balks (*limites*). The east and west balk was called *decumanus;* the north and south balk was called *kardo.* All balks parallel to the *decumanus* were *prorsi limites*, all parallel to the *kardo* were *transversi*, but were often all called *decumani* and *kardines* respectively, the two principals being distinguished as *decumanus maximus* and *kardo maximus.* The others were numbered from the centre crossing-point, all the north and south balks in front of the *kardo maximus* being *ultra kardinem max.*, all behind

it being *citra kardinem max.*; and all the east and west balks being *dextrā decumanum max.* if on the surveyor's right of the *decumanus maximus*, and those being *sinistrā decumanum max.* which were on the surveyor's left of the same. The combination of these terms gave a ready description of any balk or block of land. The half in front of the surveyor, *i.e.* the western, was called also *pars antica*; the half behind, *i.e.* the eastern, *pars postica* (pp. 27, 303). The halves are also spoken of as *ager dextratus*, *sinistratus*, *citratus*, *ultratus* (or *pars dextrata*, &c.), being respectively, according to the normal arrangement of the balks, the northern and southern, the eastern and western halves; and the quarters being denoted by a combination, *e.g.* *ager ultratus et dextratus* for the north-western quarter, &c. (pp. 247, 290 *sqq.*).

The measurement was by a ten-foot rod, *pertica decempeda*, either substantive (*pertica*) or adjective (*decempeda*) being often used alone to denote it (*e.g.* Prop. iv. 1, 130; Hor. *Od.* ii. 15, 14). Twelve rods or 120 feet was an *actus* (*i.e.* one ploughing length, Plin. *H. N.* xviii. § 9; Colum. ii. 2, 27). A square *actus* contained 14,400 square feet, and a *jugerum* was an oblong rectangle, composed of two square *actus*, containing 28,800 square feet, being 24 rods long by 12 rods broad. The amount originally assigned to each citizen was 2 *jugera* (about equal to 1¼ acres), together forming a square plot called *heredium* ("*quod heredem sequeretur*;" comp. "hereditament"). A hundred of these plots, forming a square of 20 *actus* or 240 rods each way, was a *centuria* (Varr. *R. R.* i. 10; *Grom.* pp. 95, 153). The century was the normal unit of division of the colony, as the *jugerum* was the normal unit of the *centuria*. Between the centuries ran the *limites*, those forming the principal divisions being broader than the others. The balk along the line of the meridian was called *kardo*, from being as it were the hinge or axis on which the heavens revolved; that crossing it was called *decumanus*, dividing the realm of light (south) from the realm of darkness (north). The word has been the subject of many bad etymologies (Rudorff, *Grom. Inst.* p. 343). But it is certainly the ordinary adjective, meaning the balk "of the tenth." Each side of the century contained 10 *heredia*, and the balk bounding the century was therefore a balk "of (*i.e.* adjoining) the tenth" *heredium*. When kardo was taken for the name of the north and south lines, *decumanus* was confined to the east and west balks, which would come at every tenth *heredium*, measuring along a *kardo* (Nissen, *Templum*, p. 12, gives a more artificial explanation). Every fifth balk, counting from but not inclusive of the *decumanus* or *kardo*, was called *limes quintarius*: the others were called in Italy *subruncivi* ("slightly cleared"), and were used as occupation roads for the farmers to carry off their produce. The principal balks were also called *actuarii*, "carriage roads" (Dig. 8, 3, 1), and were usually public roads of considerable breadth (*Grom.* pp. 120, 175: compare the metaphor in Verg. *Aen.* ix. 323). Thus in the colonies founded by the Gracchi, by Sulla and by Augustus, the *decumanus max.* was to be 40 feet broad, the *kardo max.* 20 feet, the other *actuarii* (*i.e.* the *quintarii*) to be 12 feet, whilst the *subruncivi* were to be 8 feet. This last breadth was that required by the XII. Tables for a private road (Fest. *s. v. viae*: cp. Bruns, p. 299; Dig. 8, 3, 18). What in Italy were called *subruncivi* were in some parts of the world mere lines of division, and hence called *linearii* (*Grom.* pp. 168, 169; cf. p. 212).

3. The centuries were marked by a stone at each corner. The law of the Augustan colonies, which seems to have been regarded as a kind of model for others, also prescribed that these corner stones should be of flint or millstone or the like, polished, round, a foot in diameter and four feet in length, of which 2½ feet should be sunk in the ground (p. 194). Hyginus recommends the following system of inscriptions. The stones on the chief decuman and *kardo* to be inscribed on the front; the rest on the sides. Beginning with these two principal balks, each stone along them was to be marked with the notes of the decuman and *kardo* adjacent. Thus, at the corner where the *decumanus maximus* was crossed by the second *kardo*, the stone would be marked on the top with D M or D I for *decumanus maximus*, otherwise called *primus*, and K II for *kardo secundus*, i.e. the next *kardo* to the *kardo maximus*. The inscriptions were generally so put as to occupy only three-quarters of the surface. The first four centuries to be marked were those immediately adjacent at each angle of the central crossing point. Each of these centuries would have the *decumanus maximus* on one side and the *kardo maximus* on an adjoining side, and three corners would thus be on these principal balks. The fourth corner was called the *angulus clusaris*, "closing corner;" it was diagonally opposite to the centre crossing; and on this was inscribed the full technical description of the century. Thus, the north-west corner of the north-west century was marked with a stone inscribed DDIVKI, i.e. *dextra decumanum primum, ultra kardinem primum*, being the century on the surveyor's right hand and in front. The south-west corner of the south-west century was marked SDIVKI, i.e. *sinistra dec.*, &c.; the south-east corner was marked SDIKKI, *i.e.* *sinistra dec. primum, kitra kardinem primum*, being the century behind the surveyor on his left. The north-east century was marked DDIKKI. The next century east, and on the right of the *decumanus maximus*, would be beyond the *kardo secundus*; and its name would be on the stone at the north-east corner, *i.e.* the corner furthest from the principal crossing. These names of the centuries were put not on the tops but on the sides of the stones, because they would often be of considerable length, *e.g.* DD LXXXXVIII VK LXXV (p. 173), *i.e.* a remote century in the north-west region on the right of the 98th decuman and beyond the 75th *kardo*. The inscriptions had to be written on the stone downwards (p. 195; see however p. 111). This systematic marking of the centuries by the number of the adjacent decuman and *kardo*, the numbers all starting from the centre crossing, enabled a surveyor on examining a series of these stones to say in what region of the district he was, and by comparison with the heavens,



whether the *decumanus* and the *kardo* had their normal directions respectively of east and west and of north and south (p. 290). Sometimes stones were put only on the main balks and oaken posts on the minor ones (p. 112). Augustus directed all the century marks to be of stone, and the marks put to distinguish one man's allotment from another's to be oak (p. 172).

4. The earliest allotments were two *jugera* (Liv. iv. 47; *Grom.* p. 153); later we read of 2½ *jugera* (Liv. vi. 161), 2¾ and 3 (*ib.* viii. 11); of $3\frac{7}{12}$ (*ib.* v. 24), of 5 (*ib.* xxxix. 55), of 6 (*ib.* 44), of 7 (*ib.* v. 30), which last was often regarded as a standard amount (Val. M. iv. 4, 11; Plin. *H. N.* xviii. § 18), though larger amounts are also mentioned, *e.g.* 8 and 10 (Liv. xxix. 55), even in one case of 51½ *jugera* (*ib.* xli. 13); and Hyginus (p. 199) speaks of one-third of a century (=66⅔ *jugera*) as if it were not unusual. The quantity assigned as one lot was not necessarily continuous: *e.g.* of the 66⅔ *jugera*, 6⅔ might be in one century, 15 in another, and 45 in another (p. 204). The quantity depended primarily on the extent of the divisible land, and the number of the recipients; but the rule of equal distribution was not always followed. In the assignments to soldiers army rank was regarded, a common soldier receiving one lot, and higher ranks 1½ or 2 lots, and even in republican times at Frentinum 20 *jugera* were given to each foot-soldier, 40 to each horse-soldier. In the Latin colony of Bononia the amounts were respectively 50 and 70 *jugera* (Liv. xxxv. 9; xxxvii. 57). At Aquileia the foot-soldiers had 50 *jugera*, the centurions 100, the cavalry 140 each (Liv. xl. 34). The quality of the land was also regarded, its goodness being sometimes compensated by a reduction of the quantity (pp. 156, 159; cf. Suet. *Aug.* 49).* In the Augustan rules (no doubt following older precedents) the measurement and assignment of the land was to be carried "where the bill-hook and plough had gone" (*qua falx et arator ierit*, pp. 112, 201), *i.e.* so far as it had been cleared and ploughed (see Cicero's remarks, *Rull.* ii. 25, § 67). Hyginus held that this did not necessarily confine it to land actually cultivated, but that some woodland or pasture might usefully form part though not the whole of an allotment (p. 203).

The straight lines of the Roman limitation were carried out regardless, so far as possible, of natural obstructions. Hence a century would often include part of a river, and thus water as well as land fall into an allotment. This was indeed necessary where the total territory was small, and convenience often compensated the person to whom it was assigned. But with large rivers like the Po, spreading from winter torrents far beyond their banks, it was found better to except from this distribution not only the bed of the river, but a considerable margin along it also (pp. 51, 120, 157). In the same way the balks were sometimes included in the centuries, *i.e.* half the balk in each adjacent century. Sometimes where the balks were broad, these (and often public highways also) were excepted from the distribution (pp. 120, 158). But, whether excepted or not, there was a right of road along them either for the public, or at least for the neighbours. In some cases, as the land distributed had been previously occupied by the conquered people, the rigorous line of the balks would pass through a farmhouse (*villa*), and the owner then put gates and a porter to let the people through. But if he did not mind giving up more land, he might apparently deflect the public right of way, provided the circuitous road was not inconvenient (pp. 121, 158, 159).

Considerable respect in some ways was shown to the former proprietors and their arrangements. Any sacred places, groves, temples, tombs, public waterworks, public drains (*fossae*), or drains between neighbours, roads, &c., were allowed to remain subject to the same rights and use as before (pp. 120, 157). The existing proprietors sometimes, from their rank or influence or friendship (the case of Virgil is known), were allowed to retain their own lands, or else, if a man's lands were scattered, a larger continuous area was given him in one place to make up for the separated parts which were taken for distribution (pp. 155, 117, 130). A whole town indeed might be locally within the boundaries of the limitation, but be exempted and left in its former condition (p. 118; cf. Cic. *Fam.* xiii. 4). Barren parts, woods, &c., were often not assigned, but either reserved for subsequent disposal or granted (*concessa*) to the colony as a whole or to individuals, frequently to the neighbouring proprietors, to be held as common land for pasture (*ager compascuus*, pp. 196, 201). Such places would rarely or never coincide exactly with the area of a century, and the remainder of that century was an oddment (*subsecivum*). Other oddments were made at the extremity of the limitation, the ground not allowing of complete rectangular centuries (pp. 7, 155). In the colony of Emerita, in Lusitania, a very large district was surveyed and marked out, but not fully assigned. A number of veterans were settled at the extreme border, and others at the colony itself and near the river Anas. The intervening district received two additions of colonists subsequently, but there was land yet left, which was utilised apparently by such of the colonists as chose. This land also came under the class of *subseciva* (pp. 51, 201). But if land within the extreme bounds (*fines*) of the district was not wholly divided by *limites*—as, for instance, if it had not been cultivated and was therefore unfit for assignment—it was called abandoned and shut out (*relictus et extra clusus*, p. 55) from the regularly assigned district. In such a case Hyginus recommended that the bounds should be surveyed and fixed by a system of right angles, and boundary stones be erected. In certain places stone altars should bear on one side the name of the colony, on the other the name of the neighbours abutting (*adfines*); where the bounds made an angle, the altars should be triangular. If the boundary was rock, marks and (if possible) inscriptions should be put upon the rocks themselves in lieu of stones (p. 198).

5. As a general principle, land was divided by balks in order to be marked out to persons (*adsignatus*) as their property; but division

---

* A problem in modern books of land-surveying is to set out a quality line so as to give the right quantity in a field of variable value.

was one thing and assignment was another (p. 54). After the survey was completed, sometimes it was found that there was more land than was wanted for assignment, and that some of it, being barren, was not suitable for assignment. On the other hand, the land might prove not enough for all the intended assignees, and then occasionally other land described, but not divided by balks, was assigned to additional citizens outside of the regular limits (p. 160). And sometimes part of a century, or even two or more complete centuries (*lati fundi*), were restored to their old proprietors on their declaring the quantity of their former holdings (pp. 156, 160). Neither the land assigned nor the land restored was subject to a ground rent (*vectigal*). But such a rent was imposed on land which was not assigned in private ownership, and was evidence of its remaining public. Thus the oddments and the land, in excess of that required for the number of colonists, were (if not left to chance) subjected to a rent payable by the occupiers to the owner, *i.e.* either to the Roman State, or, if the oddments had been granted out to the colony (*concessa*), or restored to the borough, then to the colony or borough chest (p. 117). The lands of the Vestal Virgins or of priests were also subject to a ground-rent (p. 117). In other words, the lands not assigned were usually let for a year, or five years (*lustrum*), or a hundred years. The actual occupiers were often the adjoining landowners, but they did not always hold directly from the lord, but only as sub-lessees of a *manceps*, the state generally in this, as in other matters, availing itself of the agency of a large contractor (*manceps*), who would give proper security both in person and specified estates (*praedes et praedia*) for the due payment of the ground-rent. When the lease was for 100 years, the words buy and sell (*emptio*, *venditio*) seem to have been thought by the surveyors more appropriate than take and let (*conductio*, *locatio*), though Gaius gives the other as the better legal view (iii. 145). See under AGRARIAE LEGES.

6. The colonies in the early days of Rome were Roman garrisons and outposts in a foreign, and, it might be, still hostile country (Cic. *Font.* 3, § 5; *Agr.* ii. 27, § 73), garrisons to watch the boroughs, outposts to repel the enemy on the border (*Grom.* p. 135). In the days of Augustus and his successors they were settlements of veterans in strangers' territories. Alike in both cases they were isolated intrusions, and while they had jurisdiction within their own bounds they had none outside of them. Nor was their jurisdiction co-extensive with their bounds. Only that which was given and marked out (*datum adsignatum*) was subject to their control. Such of the former owners as were allowed to retain their own lands within the bounds of the colony retained as a rule their allegiance to the neighbouring borough or other community to which they belonged before; and the same was sometimes the case with any oddments (*subseciva*) or vacant centuries (pp. 117, 163). Occasionally the former boroughs were deprived of all jurisdiction over land outside of the borough walls (p. 164). In the Augustan colonies some specially deserving veterans had their estates (*fundi*) exempted (*excepti*) from all duty to the colony, and deemed to be part of Roman soil. Other veterans had larger estates granted than the terms of the foundation allowed. These estates were therefore specially marked as *concessi* (p. 197).

The whole ground assigned to a colony was called a rod (*pertica*, p. 26), and was divided on one system and from one central crossing. If the land originally given up to the colony proved insufficient for the number of colonists, some adjoining territory was taken and surveyed, but on a separate plan, and with its own *decumanus maximus* and *kardo*. Such an adjunct to the colony was called a *praefectura*, probably as being under a praefect sent from the colony (p. 160). Sometimes the land of one borough was seen from the first not to be enough for the intended colonists, and the lands of several boroughs were taken and thrown together to form one *pertica* (p. 164). The case of Mantuan lands being taken to make up what was wanted for the veterans established at Cremona is well known from Virgil and his commentators (*ad Ecl.* ix. 27; *Georg.* ii. 198).

7. The distribution of the plots among the individuals was determined by lot. The individuals were grouped according to the number of allotments contained in a century. If 20 *jugera* were allotted to each veteran, groups of ten (*decuria*) were made; if the allotment (*sors* or *accepta*, i.e. *sors*: cf. Ov. *Am.* ii. 9, 19; Cic. *Fam.* xi. 20) was a third of a century, the groups would contain three (*conternationes*). Slips bearing the names of all the sharers were put into the urn, and the first ten (or three) that came out of the urn formed the first group, and that group took according as their respective names came out. Then lots, inscribed with the exact description of ten (or three) plots, were put into the urn, and the first that came out was for group 1, the next for group 2, and so on. The description was thus—"*Sors prima: D D I et secundum et III. et IV. citra kardinem illum*," *i.e.* "First lot: on the right of the 1st decuman and 2nd, and 3rd, &c., on the hither side of such and such a kardo." Sometimes the composition of a group was settled by private agreement, those in the same group having presumably neighbouring plots (pp. 113, 200).

8. A chart (*pertica*, *typus*, *forma*, *centuriatio*, &c., p. 154) was made of the whole *pertica*, showing its bounds and abuttals, all the balks, the position and limits of the oddments, common pastures and woods; plots assigned to individuals in fee (*data adsignata*); plots granted (*concessa*), e.g. as corporate property or under special circumstances; plots specially exempted from the colonial jurisdiction (*excepta*); plots given back to the ancient occupier (*reddita veteri possessori*), which sometimes were of large extent, and filled several centuries (hence specially registered *redditum suum lati fundi*, p. 157); plots given to an ancient occupier in exchange for his own (*reddita commutata pro suo*); the district assigned to a river, sometimes quaintly described as a veteran or ancient occupier (*datum adsignatum ut veterano*, or *redditum suum veteri possessori flumini Pisauro, tantum in quo alveus*, p. 157). Initials were often used to denote these frequently occurring categories: for instance, C V P for *concessa veteri possessori* (p. 203). When part of an allotment consisted of woodland adjoining, or mountain pasture at a

distance (*ultra quartum forte vicinum*, pp. 204, 226, 15), this was joined to it on the chart by a wavy line (*commalleolari* * *debet*, p. 204; and see figs. 196, 197). Besides the chart, there was a register of the allotments, grants, declarations (*professiones*) of the ancient owners, &c., setting forth the local description of each century, the names of the persons to whom it was assigned or restored, and the quantity of acres to be held by each. The precise appropriation of the century among those who drew it in common (*consortes*) was not entered in the register, but left to be commemorated by the sharers by erecting suitable boundary marks (pp. 211, 271, and cf. p. 162). The chart and register ought to be made on bronze and in duplicate, and one chart erected in the centre of the colony, the other kept in the imperial record office (*Caesaris tabularium*). These were the most authentic evidence in all disputes about the boundaries, the quantity and title of the lands of the colony or other assignment (pp. 154, 202). They were not always made with the same particularity. One surveyor (Balbus?), in forming the plan and register for assignments by Trajan in Pannonia, not only noted the quantity of each allotment, but drew a line round it, and inscribed the length and breadth, thus defining the extent and situation of the individual properties, and of the oddments; others contented themselves with stating the quantity assigned, only when the centuries were not full (p. 121). The chart and register contained, besides the original assignment, any subsequent assignments which might be made of the same measured district. Thus some of Julius Caesar's colonists returned to military service; and when they went back to their own lands, the plots of those who had died were assigned to others. Hence, the register often contained, under the same century, the names of the original holders, and of their successors, no note apparently being made of the cause (p. 162). Subsequent assignments of unallotted plots and grants of reserved oddments, &c., would appear in the register; but changes in their holdings, made by the settlers themselves, by purchase, or lease, or exchange, or occupation of vacant parts, were not entered. New acquisitions being often made according to mutual convenience, and without regard to the bounds set out in the survey, the register ceased to be decisive of disputes between them or their successors, and recourse had to be made to the private deeds (*cautiones*) which might describe the quantities and the marks (p. 131). In the case of a veteran dividing his allotment among his sons, there appears to have been a practice of erecting boundary stones in lines, having a common and definite relation to the boundary stone on the principal balk. Such stones were called *comportionales*.

9. The account given above relates to what was considered the normal survey and arrangements. The *decumanus maximus* running east and west; the *kardo maximus* running north and south; the surveyor facing to the west, so that the west was *ultra kardinem* and the north *dextra decumanum*; the centuries rectangular and equilateral, containing each 200 *jugera*, and each side being 20 *actus* long; the balks duly proportioned in width to their importance as the main, secondary or smaller patent lines of division, strictly parallel to the chief decuman or kardo, and marked by significant boundary posts of proper character, height, and thickness, and duly inscribed with their number and description—such was the standard of a Roman surveyor for the distribution of land among Roman colonists. But in almost all these points differences were found. Sometimes the decuman was drawn, not due east and west, but in accordance with the visible quarter of the rising of the sun on the foundation of the colony (p. 170); sometimes it was made to run along a great road, as the *Via Appia* (p. 179); or in the direction of the greatest length of the territory; or even, as in the neighbourhood of Capua, north and south, with the kardo east and west (pp. 29, 168). Where a colony was close to the sea, the balks were made parallel to the shore, and called *maritimi*, and the cross balks parallel to the mountains, and called *montani* (p. 168).

The most perfect arrangement was for the centre of the limitation to be at the centre of the town, and the decuman and kardo to pass out by gates at each end of the four sides; but often this was not possible or convenient, mountains or the municipium whose territory was now taken for distribution being in the close neighbourhood, and then the centre crossing was put in some suitable place outside (pp. 178 *sq.*, 194). A praefecture was usually divided on a system independent of that of the *pertica* to which it belonged (pp. 160, 171). The Nolan district was, from the first, surveyed with two different sets of balks, the one set adjoining the other, but meeting them somewhat obliquely. The two sets of decumans were distinguished as *dextra* and *dexterior*, *sinistra* and *sinisterior* (p. 162). If a second colony was established, with land adjoining a former one, it was (at least sometimes) so arranged as to have its balks placed (without regard to the points of the compass), not parallel, but at an angle to the old one (pp. 31, 170).

The century of 200 *jugera* was, at Beneventum, arranged so as to have 25 *actus* along the decumans, and 16 along the *kardines* (p. 59); in other parts the so-called century had only 50 *jugera*; at Cremona, 210 (p. 30); in other parts 240 *jugera*, viz. 24 *actus* by 20; at Emerita, 400 *jugera*, the decumans having 40 *actus* and the *kardines* 20; in a praefecture at Turgalium, the figures were just reversed (p. 171). The distances of the boundary stones or posts often varied in different parts of the same district. If land which had once been divided and assigned was a second time made the seat of a colony, or of a new distribution of land, the old set of balks would be cut across by the new set (p. 178), and the old boundary stones remaining were liable to be confounded by a careless observer with the new ones. Some of the distributions of the Gracchi and Sulla were thus superseded by later arrangements (p. 165).

10. Another mode of dividing and assigning colonial land is expressly contrasted with the above. *Ager divisus adsignatus coloniarum habet condiciones duas, unam qua plerumque limitibus continetur, alteram qua per proximos possessionum*

---

* Perhaps from *malleolus*, a hammer-shaped vine-cutting, in Colum. iii. 63. Rudorff quite mistakes the phrase.

rigores adsignatum est, sicut in Campania Suessae Auruncae. If divided into plots of greater length than breadth, the division was *per strigas*; if of greater breadth than length, *per scamna*: length was reckoned in the direction of north and south, breadth in that of east and west. The terms are used also, in camp measurement, for oblong plots [see CASTRA]. The origin of the terms is obscure: *striga* is probably a strip (from *stringere*); *scamnum* was a farmer's word for unbroken ground (Col. ii. 2, § 25, iii. 13, § 2). *Ager strigatus* or *scamnatus* seems then to be land divided into oblong plots, the sides of which were not parallel to decumans and *kardines*, but to the boundaries of the neighbouring occupiers (Front. *l. c.* is strangely mistranslated by Rudorff, p. 290). According as the length of plot was north and south or east and west, it was called *strigatus* or *scamnatus*. (Nipsus describes land divided into centuries of 24 *actus* in length and 20 in breadth as *ager scamnatus*, p. 293, and possibly all the oblong centuries named above should be called *scamna* or *strigae*.) This method of division is expressly recommended by Hyginus (205 *sqq.*) for land in the provinces, subject to a tax, as distinguished from the tax-free land of a colony. A difference of legal condition of the land ought to be indicated by a difference of measurement; and the art of the land-surveyor is capable of dealing with the varieties of the several provinces. Hence he blames those who divided Pannonia *per centurias*; but, recognising the importance of an accurate survey with measured plots, referable to definite lines made visible by balks and marked by boundary stones, he recommends decumans and *kardines* of the usual width, but dividing the land into *strigae* and *scamna*, the *strigae* to be twice as long as broad, the *scamna* to be twice as broad as long (*dimidio longior sive latior*).

11. In an account of the different districts of Italy from a surveyor's point of view, which is found among the *Gromatici*, and was probably taken from official records (*libri coloniarum*), other modes of distribution of land are spoken of. Thus in the account of Atina: *Ager pro parte in laciniis et per strigas est adsignatus*; of Aricia, *Ager ejus in praecisuris est adsignatus* (230); of Spoletum, *Ager in jugeribus et limitibus intercisivis est adsignatus ubi cultura est; ceterum in soluto est relictum in montibus vel subsecivis, quae reipublicae alii cesserunt, nam et multa loca hereditaria accepit ejus populus* (225). *Laciniae* were probably irregular patches of land; *praecisurae* pieces bounded by straight lines but not rectangular, and cut larger or smaller according to the goodness of the land (cf. p. 211). The land of Spoletum had, in its cultivated parts, been regularly mapped out in centuries, but was allotted in portions of a certain number of acres divided from each other, not by the regular balks, but by cross or intersecting balks. The rest of the land had been left undivided (*in soluto* or *absoluto*). In some parts of Italy the land was registered as having been assigned *in nominibus*, or more fully *in nominibus villarum et possessorum* (so at Volturnum, pp. 238, 239), *i.e.* the register did not contain a list of centuries with a technical allotment of them to individuals, but a list of assigned estates described by their natural boundaries, or the names of their former possessors.

12. In this official account, the idea (though imperfectly carried out, at least in the documents extant) was to give the origin and plan of the first survey and subsequent changes, the persons to whom the assignments were made (e.g. *militibus, veteranis, familiae Augusteae, militi metyco*), the direction of the decumans and *kardines*, the character of the balks (*limitibus Graccanis*, or *triumviralibus*, or *Augusteis*, or *Gallicis*, or *montanis*, or *maritimis*, or *intercisivis*), the existence or not, and sometimes the width, of a public right of way (e.g. *iter populo debetur ped. x.* or *ped. cxx.*, or *iter populo non debetur*), the mode of marking the boundaries, whether by artificial stones or posts (*termini lapidei, silicei, molares, lignei, roborei, oleaginei*; or again, *Tiburtini*, of stone from Tibur, or *enchorii* from the spot, or *Graccani* (like those of Gracchus), *Augustei, Tiberiani, Neroniani*, &c.), erected at various intervals (*e.g.* 60 feet, 80, 100, 120, 150, 160, &c., 600, 720, 840, 1020, 1200, 1440, 1500—all divisible either by 20 or 50, *i.e.* 2 or 5 rods), or by natural or at least ruder marks.

13. This latter class of marks is found indeed in regularly divided and assigned land, especially in marking the boundaries of private properties, after sales and inheritances have disturbed the original allocation, and the technical limits have not been duly observed. But their principal use is (with or without artificial boundary stones) to distinguish the territory of one colony or borough from another, and the lands occupied by one man from those occupied by another in a district which has not been divided and assigned. Such lands were called *occupatorii* ("squatters' lands") as regards their legal character, but, not having official surveyors' straight boundaries (cf. Liv. v. 55 *fin.*), come under the general class of *ager arcifinius*. *Non mensuris actis quisque modum accepit, sed quod aut excoluit aut in spem colendi occupavit* (p. 138). These occupiers sometimes made plans of their holdings (*possessionum suarum formas*), but the plans were private, not public, documents, and consequently did not bind their neighbours or others. The bounds adopted by the occupiers, whether of their own motive or by agreement with their neighbours, were of very various kinds (pp. 138, 361), and different kinds were usual, some in one district, some in others. *Unaquaeque regio suam habet consuetudinem* is a common maxim of the surveyors (p. 349, cf. 139, 140, &c.).

The boundaries between the territories of adjoining colonies or towns were usually taken from the natural features of the country. The ridges of the mountains (*juga montium*), watersheds (*divergia aquarum*), and rivers (*flumina*) or streams (*rivi*) were the principal; but the line of division was often marked in their absence, or accentuated even when they were present, by boundary stones (*termini*). But trenches (*fossae*), springs (*fontes*), public roads (*viae*), chapels (*sacella*), and tombs (*sepulcra, monumenta*) were also not uncommonly made use of for this purpose (p. 114). All these were also found as boundaries between occupiers. Roads were not a sure indication of a boundary, for they often crossed an estate instead of bordering it; and this was so whether they were properly public highways made and kept up at the expense of the state, and under a special commissioner (*curator*), or only country roads maintained by the neighbouring occupiers under the charge of the village wardens (*magistri pagorum*, p. 146). Chapels were often erected where three or more estates adjoined (*in trifinio, in quadrifinio*). They had an altar for each estate, and an entrance on the side facing it. The altars were at 15 feet from the temple (p. 303). The areas thus enclosed were the sacred precincts, and were surrendered by the adjoining occupiers, who, by this devotion of a definite area, were able to keep their crops from being trampled by the people on the days of celebration of the *compitalia* (p. 57).

Tombs, monuments, gravestones (*cippi*) were found in the interior of estates, especially where the land was not well adapted for cultivation (p. 140), but the boundary or a road was the usual place for burial (pp. 27, 140, 349).

14. But many other marks of boundaries were used between estates. Such are smaller heights than mountains or hills. These, if not more than 30 feet high, were called brows (*supercilia*), and with these it was the rule, in the absence of any special agreement, that the whole of the slope belonged to the occupier of the higher ground as a natural support to his land (pp. 42, 109, 128, 143). Or there might be for some considerable distance a continuous bank (*ripa decisa*, p. 361), which would then be a physical embodiment of the ideal straight boundary-line (pp. 108, 109, 151, 241), or a continuous hollow (*cava*, p. 281), or, by agreement, sometimes an unploughed edge of land (*solidus margo*, pp. 129, 152). Trenches were sometimes of a military character, and accompanied by mounds (*aggeres*, p. 370; Varr. *R. R.* i. 14). Such mounds were sometimes without trenches, and then in the Reatine district called *muri* (Varr. *l. c.*), or there might be walls (*macheriae*) of stone as near Tusculum, or of brick as in Gaul, or of unbaked bricks as in the Sabine district, or of earth and pebbles as near Tarentum and in Spain (Varr. *l. c.*); or merely pebbles thrown up into a ridge (*congeriae*, pp. 221, 150; *attinea*, p. 139), or a series of pebble heaps called scorpions (*scorofiones*, p. 142), or earth heaps (*grumi*, p. 241). Varro speaks of the bounds of estates being marked by wooden fences made of posts near each other, and either intertwined with branches, or pierced so as to admit of two or three horizontal poles, or by close-set trunks of trees; but these are not mentioned by the surveyors, though posts of holm-oak, or olive, or juniper, are mentioned as used for boundary stones (p. 138). Another class of boundary marks consisted of quickset thorns (*vepres*, p. 147: *viva saepes*, Varr. *l. c.*; Col. xi. 3, § 3), often with trees standing in them, like our own hedgerows. Trees are indeed one of the most frequently mentioned boundaries, and in this case, probably from their standing ranged at considerable intervals on the outskirts, like advanced guards or pickets, were called *arbores antemissae*. These were distinguished from other trees on the estate either by being left to grow untouched, or by being of a different kind, either planted for the purpose, or left when others were cut down (pp. 41, 143). Pines, cypresses, ashes, elms, poplars (cf. Hor. *Ep.* ii. 2, 173), elders, oleasters, quinces, almonds, figs, date-palms, are all mentioned (pp. 143, 354, &c.). Foreign trees were often chosen for this purpose. If trees were planted by common consent, they were clipped or felled by each neighbour in common or in turn. It was very usual, if they belonged to one neighbour only, to mark them by scoring the bark on the side looking to the non-owner. If they were within the five feet which was regarded according to law (i.e. *Lex Mamilia*) as common to both neighbours, they were marked on each side. A tree at a corner of the boundary was marked with a gamma, Γ, to point to the new line; if at the meeting of several estates, with a cross (*decus* or *decussis*, pp. 127, 140, 144). Sometimes the boundary could be sufficiently inferred from the rows of vines or olives (cf. Cic. *Caecin.* 8, § 22) of one neighbour meeting those of the others at an angle, or from some other plain difference in the mode of cultivation (pp. 129, 282).

Boundary stones of every kind were used, both by themselves and as assistants to other marks. They were sometimes of the live rock shaped or marked for the purpose (p. 302), sometimes of separate stones, sometimes of foreign material, triangular, square, rounded, bevelled, polished, notched, hollowed, numbered, worked in a variety of suggestive or symbolical patterns, and placed either along the boundary itself or in the neighbourhood, with indications where the boundary ran. Earthenware jars, wells, and other enclosures* are frequently mentioned; and the better to preserve proof that a stone was intended to mark a boundary, it was very usual to bury under the stone things which were different from the components of the soil at the place, and not easily perishable. Such were ashes, coal (cf. Aug. *Civ. D.* xxi. 4), potsherds, broken glass, chalk, gypsum, or coins (pp. 401 *sqq.*). Mounds of earth with such enclosures were called *botontini* (p. 308). The practice seems to have originated in the rites of consecration. The neighbours whose estates met at the place each put their stone on the ground, anointed it, and crowned it with fillets and garlands; then in the pit, dug to receive the foot of the stone, they made a sacrifice, and, having set fire to the victim, dropped the blood into the pit and threw in frankincense and corn (*fruges*), honeycombs and wine, and, having consumed them all, placed the stone on the glowing embers, and rammed it tight with fragments of rock (p. 140). Wooden posts so used were often from this called *pali sacrificales* (pp. 43, 208).

15. Both religion and law combined to give sanctity to boundary stones. The rites of the annual festival of Terminus on the 23rd of February, are described in Ov. *Fast.* ii. 639–684, and closely resemble those just described from Siculus Flaccus. The sacrifice of an animal was not part of the rite according to Dionysius (ii. 74) and Plutarch (*Qu. Rom.* 15), so that the custom probably varied in different parts (cf. Hor. *Epod.* ii. 59; Juv. xvi. 39). The first institution of bounds is referred to Numa: the stones were to be sacred to Juppiter Terminalis

---

* In the enumeration of boundary marks there frequently occurs this, "*vel canabula et noverca*," often with the addition "*quod tegulis construitur*" (*sic*). What is meant is quite obscure. See pp. 227, 240, 349, 401, &c.

(Ζεὺς ὅριος), and any one destroying or moving them was to be held accursed, with full allowance before God and man to any one to slay them (Dion. Hal. *l. c.*). The Gromatic collection contains (p. 250) an old prophetic utterance evidently of some Etruscan priest. "Juppiter had claimed Etruria for himself, and bade them measure the plains and mark the fields (*signari agros*). Knowing man's avarice and land-hunger, he willed that all should be fixed by bounds. Now in that eighth, all but the last age" (the eighth age would begin after 761 years from the beginning of Etruria, Censorin. xvii. 6), "men would in guile violate the rules. Whosoever shall move a bound to the increase of his own and decrease of another's possession would be condemned by the gods. If a slave, he would suffer from his master. If his master was a party to the wickedness, his house would be rooted up, and his clan (*gens*) perish. They who moved the stones would get sickness, wounds, and weakness of limb. The land would be stirred with tempest, whirlwind, and earthquake (*labes*). The fruits would be hurt and dashed down with rain and hail, would perish from the dog-days, would be killed by blight. And many dissensions would arise among the people."

The earliest law which we know of in which penalties are directed in matters of this kind is the **Lex Mamilia** (which see), the substance of which was passed by Julius Caesar before the year 703 U.C. It imposed the duty upon the occupier of restoring a boundary stone placed in any colony, borough, or other district, which had fallen; prohibited any one from building on or ploughing up the balks or decumans, or obstructing the trenches under a penalty of 4000 sesterces for each transgression (*in res singulas*), to be recovered by any of the colonists or burghers who prosecuted. Moving or removing boundary stones (*terminos*) maliciously was subjected to a penalty of 5000 sesterces for each stone, half to be given to the principal agent in procuring his conviction, and half to the public chest (p. 263; *Dig.* 47, 21, 3; cf. *Lex Urson.* 104 in Bruns, p. 121). Nerva directed any slave who moved a stone to be capitally punished, unless his master would pay the fine. And Hadrian (A.D. 119) directed persons moving boundary stones, with the object of taking others' land, if of a superior class (*splendidiores*), to be banished for a longer or shorter time, according as they were young or old; their agents to be chastised and put to public works for two or three years. Stealing such a stone ignorantly to be punished with flogging (Coll. xiv. 12; *Dig.* 47, 21). Paulus adds that the banishment was accompanied by a confiscation of one-third of the offender's property; and that slaves offending in this respect of their own will were condemned to the mines. Trees (*arbores terminales* or *finales*) were protected as well as the regular *termini* (Paul. *Sent.* v. 22, § 2). Stealing boundary stones and felling boundary trees were also subjects for condemnation in a suit *finium regundorum* (*Inst.* iv. 17, § 6).

16. It will be seen that a great deal of the matter with which the land-surveyors were concerned was conventional, and required only aptitude in devising and describing suitable modes of demarcation of land, and knowledge of what was in fact usually meant by certain marks. But scientific knowledge was also a part of the craft, and the writings of the *Gromatici* contain a variety of mathematical problems. Two instruments are mentioned as in use by them: the *gnomon* and the *groma*. The problems to be solved required two things: a determination of what we now call the points of the compass, and a method of setting out on land a right line and a right angle. The *gnomon* was employed for the first purpose, and was derived by the Greeks from the Babylonians, according to Herodotus (ii. 109), and something of the kind, *i.e.* some kind of sundial, was known to the Hebrews in the days of Isaiah (xxxviii. 8). The *groma* was employed for the second purpose, and was probably got by the Romans from the Etruscans along with the augurial discipline. Its precise shape is unknown: it was not so elaborate as the *dioptra*, nor identical probably with the *chorobates* of Vitruvius (viii. 5), else he would have used the name *groma* or said so, but consisted of a moveable instrument capable of standing steadily on the ground, and carrying either two straight bars crossing one another at right angles, or a plate, square or round, with marks in the periphery for the extremities of two straight lines crossing one another at right angles, and for their intersection. The verticality of the staff or stand was probably secured by a plumb-line corresponding to a groove in the staff or otherwise applicable to the stand. The horizontality of the cross-bars or plate was secured by observations of plumb-lines hanging from the extremities, and trying whether one covered the other in the line of sight (p. 32). The cross-bars or plate were fixed on a pivot, so that they could be moved round on the staff. The adjustment of the instrument was procured by shifting it about (*percutere gromam*, p. 285) until it was balanced (*perpensus*). The direction of the straight lines to be marked out on the land was given by bringing the end of one arm in a line with a distant object, and by erecting marks along the line so determined. This was *dictare rigorem*, "right line," or *metas*, "poles." A line at right angles was given by the direction of the arm which crossed the first arm. The point on the ground where the lines crossed was *interversura*. Sighting the marks was *comprehendere signa* or *metas*; verifying this by sighting in the opposite direction was *reprehendere metas*, &c. Two bars meeting or crossing one another at right angles, probably mounted on a pole, formed an instrument called *tetrans* (p. 186). Comp. Cantor, pp. 20–22, 72. The instrument above described (analogous to a modern surveyor's cross) is often in the *Gromatici* called *ferramentum* (*Grom.* pp. 32, 191, 285), possibly only in strictness applicable to the iron stand; by others *stella* (ἀστερίσκος, Heron. ap. Cantor, not. 45; comp. Colum. iii. 13, § 13), which perhaps was strictly applicable only to the upper part. But the old name *groma* is found in the *Grom.* pp. 170, 180, and written *croma*, p. 284; and in Hygin. *de munit. Castr.* § 12; Paul. Fest. p. 96; Non. p. 63. (There seems to be no sufficient reasons for thinking that *groma* had, as is often stated, any etymológical connexion with γνώμων.)

Where the ground sloped, the rod held horizontally, as tested by a plumb-line fastened to its end, served to give the measurement of the base level. To do this was *cultellare* (pp. 27, 33).

17. Two methods of finding the proper direction for the *decumanus maximus* and *kardo maximus* are given by Hyginus (pp. 188 foll.). The first is also given by Vitruvius (i. 6, § 6). A *gnomon* or *sciotherum*, probably an upright pole, was erected on a plain, and a circle was described from that as a centre, and with a radius not so great as the longest shadow thrown by the pole. As the sun rose, the shadow gradually shortened, and, when its extremity touched the circle, the place was marked. After noon the shadow lengthened and again touched the circle. This point being marked also, a straight line joining these points was in a due east and west direction, and was taken as the principal decuman. A straight line drawn from the centre of the circle to the middle of the first line was the *kardo maximus*, and at right angles to the decuman.

The other method proceeded by observing any three lengths of the shadow quickly following one another, and thus could be practised in the morning, without the necessity of waiting for the afternoon shadows. But it required more geometrical knowledge. Both methods, as they presume the use of the gnomon, are probably of Greek origin, though they are not to be found in any Greek writer now extant (Cantor, pp. 69–72). As the gnomon was not publicly set up at Rome till more than four centuries and a half after the foundation of the city (Plin. *H. N.* vii. § 212 *sq.*), it is probable that it was not known to the Romans long before. The augurs following the Etruscan discipline (*Grom.* pp. 27, 166) divided the heavens and earth by the indication given by the sunrise; and as they faced the west, so as to look as the sun seemed to them to be looking, the first shadow cast by their own body or rod would give the direction for the east and west line. By the aid of the groma, *posita auspicaliter*, they drew the decuman, and then the kardo, at right angles (p. 170). But sunrise varied at different times of the year and in different places; in Italy, indeed, within a range of 65° (Nissen, *Templum*, p. 164); and the proximity of mountains, concealing the real horizon, made a further difference; so that as the latitude of the place and the time of year, when the survey was inaugurated, varied, the balks set out in one place differed considerably in their direction from the balks in another—a fact which, whether theoretically defensible or not, was looked at with dissatisfaction by the later surveyors, armed with Greek astronomy and trigonometrical methods (pp. 31, 183).

18. The art of land-surveying, as we find it in the collection of gromatical tracts and fragments, comprised, amongst other things, the elements of geometry and practical instruction in the calculation of the contents of a variety of superficial figures, and in the use of the groma. Like their successors in modern times, they had to deal with such problems as how to set out a straight line across a deep valley or a high mountain, to calculate the breadth of a river which you could not readily cross, and to make complete and accurate surveys of plots of land, however irregular their boundaries (pp. 31–34; 192, 193; 285 *sqq.*; 354 *sqq.*). The methods appear to have been much the same as are now practised by surveyors with the cross; and the ten-link offset-staff is perhaps a fair representation of the ten-foot rod of the Romans.

According to Cantor (p. 85), who has set forth the result of his own and others' inquiries, there is no reason to doubt the truth of the assertions of Varro and Hyginus (*Grom.* pp. 27, 166), that the Romans owed their system of dividing and marking out land to the Etruscans. So long as the only process required was to set out balks at right angles to one another, no need was felt of trigonometrical science. But when the contents of areas of any given shape had to be calculated, and other like problems to be solved, the Roman or Etruscan discipline was insufficient. This knowledge, first developed in Egypt from the necessities induced by the Nile's annual overflow, is found in an early form in a papyrus as old as 1700 B.C. The Greek school at Alexandria developed it, and in the extant writings of Heron, who lived there about 100 B.C., we actually find most, though not quite all, of the methods for solving mathematical problems taught by the Roman Gromatici (Cantor, pp. 78, 86). The first Roman writer on geometry was Varro (cf. Ritschl, *Opusc.* iii. 359, 474), and it was in his lifetime that Julius Caesar is said to have directed a survey of the whole Roman empire, which was carried out by Augustus, who employed four Greeks and Balbus (cf. *Grom.* 239, 402) to superintend it. But the story is from a writer of the 5th or 6th century after Christ, and was unknown to the best ancient authorities, and Balbus lived in Trajan's time. That something of the kind was done or attempted is likely enough. Agrippa had a map of the empire engraved on marble and put up in his sister's house; some survey was needed for systematic revenue purposes; and it was Alexandria that furnished Julius Caesar with the astronomical science necessary for his reform of the calendar. About this time, and perhaps in this way, the methods of Alexandrian trigonometry were brought fully into the course of Roman gromatic (Cantor, pp. 83, 84; Ritschl, *Opusc.* iii. 743 ff.; Riese, *Geogr. Lat. Min.* pp. xi. xxiv.; Marquardt, *Staatsverf.* ii. p. 200 ff.). The history of land-surveying in the Middle Ages may be further followed in Cantor's work (*Die römischen Agrimensoren*, 1875). [H. J. R.]

AGRIO'NIA (ἀγριώνια), a festival which was celebrated chiefly at Orchomenus, in Boeotia, in honour of Dionysus, surnamed Ἀγριώνιος, *i.e.* the wild or boisterous. It appears from Plutarch (*Quaest. Rom.* 102), that this festival was solemnised during the night only by women and the priests of Dionysus. It consisted of a kind of game, in which the women for a long time acted as if seeking Dionysus, and at last called out to one another that he had escaped to the Muses, and had concealed himself with them. After this they prepared a repast; and having enjoyed it, amused themselves with proposing riddles to one another. This festival was remarkable for a feature which proves its great antiquity. Some virgins, who were descended from Minyas, and who probably used to assemble around the temple on the occasion, fled and were followed by the priest armed with a sword, who was allowed to kill the one whom he first caught. The sacrifice of a human being, though originally it must have formed a regular part of the festival, seems to have been avoided in later times. One instance, however, occurred in the days of Plutarch (*Quaest. Graec.* 38). But as the priest, Zoilos, who had killed the woman was afterwards attacked by disease, and several extraordinary accidents occurred to the Minyans, the priest and his family were deprived of their official functions. The festival, as well as its name, is said to have been derived from the daughters of Minyas, who, after having for a long time resisted the Bacchanalian fury, were at length seized by an invincible desire of eating human flesh. They therefore cast lots on their own children; and as Hippasos, son of Leukippe, became the destined victim, they killed and ate him, whence the women belonging to that race were at the time of Plutarch still called the destroyers (*ὀλεῖαι* or *αἰολαῖαι*) and the men mourners (*ψολοεῖς*). Agrionia of a similar kind were celebrated also at Thebes and at Argos (Hesych. *s. v.* *Ἀγριάνια*, which seems to be only another form for *Ἀγριώνια*). At Thebes the festival was celebrated with games and contests, while at Argos it was a festival of the dead (*νεκύσια*). (Müller, *Die Minyer*, p. 166, &c.; K. F. Hermann, *Gottesd. Alterth.* § 63, n. 13; Schömann, *Griech. Myth.* vol. i. p. 429.) [L. S.]

AGRON'OMI (*ἀγρονόμοι*), magistrates (*ἄρχοντες*), described by Aristotle in two passages of the *Politics* (vi. 8, 6; vii. 12, 8) as identical with the *ὑλωροί* or foresters [HYLORI]. Aristotle does not tell us in what Greek states these officers existed; and to this question no certain answer can be given. It is commonly assumed, from the frequent mention of them by Plato in his *Laws*, that they belonged to Attica, and formed one of the police magistracies. (Böckh, *P. E.* p. 303; Schömann, *Antiq.*, p. 138, E. T.; Caillemer, *ap.* D. and S.) But the correspondence of Plato's ideal laws with actual Athenian legislation has been much exaggerated; and on several grounds it is unlikely that in the large and varied powers he assigns to his *ἀγρονόμοι* he is describing an Athenian institution. In one passage (vi. 760 B.) he assigns to them the defence of the frontiers, which we know to have been the duty of the Strategi; in another (viii. 844 B.) they have to provide for the control of unruly torrents and the escape of flood waters. They are not mentioned in a single passage of the orators or of the grammarians who are our chief sources for Attic law; yet the speech of Demosthenes against Callicles, in an action arising out of a water-course, is precisely a case where, if the office described by Plato had existed at Athens, we must have found it. Lastly, the scarcity of wood in Attica makes it improbable that any "foresters" or "verderers," whether under the name of *ἀγρονόμοι* or *ὑλωροί*, can have been required. [W. S.] [W. W.]

AGRO'TERAS THY'SIA (*ἀγροτέρας θυσία*), a festival celebrated at Athens in honour of Artemis, surnamed Agrotera (from *ἄγρα*, chase), in consequence of a vow made before the battle of Marathon. It was solemnised, according to Plutarch (*De Malign. Herod.* 26), on the sixth of the mouth of Boedromion, and consisted in a sacrifice of 500 goats, which continued to be offered in the time of Xenophon. (Xenoph. *Anab.* iii. 2, § 12.) Aelian (*V. H.* ii. 25) places the festival on the sixth day of Thargelion, and says that 300 goats were sacrificed; but as the battle of Marathon, which gave rise to this solemn sacrifice, occurred on the sixth of Boedromion, Aelian's statement appears to be wrong. (Plut. *de Glor. Athen.* 7.)

This festival is said to have originated in the following manner:—When the Persians invaded Attica, Callimachus, the polemarch, or, according to others, Miltiades, made a vow to sacrifice to Artemis Agrotera as many goats as there should be enemies slain at Marathon. But when the number of enemies slain was so great that an equal number of goats could not be found at once, the Athenians decreed that 500 should be sacrificed every year. This is the statement made by Xenophon; but other ancient authors give different accounts. The Scholiast on Aristoph. (*Equit.* 666) relates that the Athenians, before the battle, promised to sacrifice to Artemis one ox for every enemy slain; but when the number of oxen could not be procured, they substituted an equal number of goats. It is not improbable that annual processions from Athens to the temple of Hecate at Agrae, in remembrance of the victory of Marathon, may have been connected with the sacrifice to Artemis Agrotera. (Plut. *de Malign. Herod.* 26.) [L. S.]

AGYRTAE (*ἀγύρται*), wandering beggars or collectors of alms (from *ἀγείρειν*), mostly but not always claiming a religious character. They were of various kinds. Some told fortunes by drawing lots, which might be either shaken out of an urn (Hor. *Sat.* i. 9, 30) or drawn out of it by a boy (Tibull. *Eleg.* i. 3, 11); the lots themselves being small plates of metal inscribed with ambiguous phrases to which any interpretation might be given (Orell. on Hor. *l.c.*). Others carried about wooden tablets called *ἀγυρτικοὶ πίνακες* (Plut. *Comp. Aristid. et Cat.* 3) or *σανίδες*, with verses inscribed upon them from which oracles could be derived. Others again, who may be called the mendicant friars of antiquity, carried, either on their shoulders or on beasts of burden, images of their respective deities, and collected alms in their name. They were connected with the worship of Isis (Suid. *s. v.* *ἀγείρει*), the Delian divinities, Opis and Arge (Herod. iv. 35), and especially Cybele, the great mother of the gods; whence they were called *μητραγύρται* (Aristot. *Rhet.* iii. 2, § 10, with Cope's notes; Clearchus, *ap.* Ath. xii. p. 541 e; Antiphanes, *fr.* 153, 154, 158, Meineke. The form *μηναγύρτης* is doubtful; in Antiph. 154 it may be a mistake for *μητραγύρτης*, and cf. Liddell and Scott, *s. v.*). They were, generally speaking, persons of the most abandoned character, *γένος μιαρώτατον* (Antiph. 158). They undertook to inflict some grievous bodily injury on the enemy of any one who paid them for such services; and also promised, for a small sum of money, to obtain forgiveness from the gods whom they served for any sins either of the man himself or his fathers (Plat. *Rep.* ii. p. 364 b). For other references to Plato, see Ruhnken on Timaeus, *s. vv.* *ἀγείρουσαν* and *ἐπαγωγαί*: and for the passages from post-classical authors, K. F. Hermann, *Gottesd. Alterth.* § 42, n. 13.

These mendicant priests came into Italy, but at what time is uncertain, together with the worship of Isis, Cybele, and other strange deities. Their begging was under strict supervision, and limited to a few days (Cic. *de Leg.* ii. 16, 40); nor would any Roman have anything to do with them (Dionys. Halic. *Ant.* ii. 19). [W. S.] [W. W.]

AHE'NUM. [AENUM.]

AIANTEIA (*Αἰάντεια*), a festival celebrated in honour of Ajax at Salamis, where he was worshipped as the tutelary divinity, and where he had a temple containing his statue of ebony (Paus. i. 35, § 2; Hesych. *s. v.*). A festival of the same name appears to have been celebrated in the Locrian Opus (Schol. *ad* Pind. *Olymp.* ix. 166; Böckh, *C. I.* i. No. 1431). In Attica the festival was celebrated in commemoration of the victory at Salamis, by a boat-race of Athenian youths to Salamis and back, and sacrifices were offered to Ajax and Asclepios. (Comp. Herod. viii. 64, 83; Plut. Themist. 15; and A. Mommsen, *Heortologie*, p. 411.) [L. S.]

AIKIAS DIKE (*αἰκίας δίκη*), a private action for assault, thus distinguished from the more serious *ὕβρεως γραφὴ* or public prosecution for the same class of offences. The Athenian law, in case of offences against the person, as in these against property [cf. KLOPES DIKE] gave the injured party alternative modes of obtaining redress by action for damages or by criminal information. If the plaintiff selected the former, the defendant would only be condemned to pay a fine, which the plaintiff received; but if he chose the latter, the accused might be punished even with death, and the pecuniary penalty, if any, went to the state.

In bringing this action it was necessary to prove two facts. First, that the defendant had struck the plaintiff, who must have been a free man, with the intention of insulting him (*ἐφ' ὕβρει*); but this intention was presumed, unless the defendant could prove that he only struck the plaintiff in jest. Thus Ariston, after proving that he had been struck by Conon and his sons, tells the dicasts that the defence will try to pass it off as mere practical joking and young men's horse-play (Dem. *c. Conon.* p. 1261, §§ 13, 14).

Secondly, it was necessary to prove that the defendant struck the plaintiff first, and did not merely return the blows which had been given by the plaintiff (*ἡ δὲ αἰκία τοῦτ' ἔστιν, ὃς ἂν ἄρξῃ χειρῶν ἀδίκων πρότερος*, Dem. *c. Everg.* p. 1151, § 40; sometimes *ἀδίκων ἄρχειν* only).

This action, it is stated, was brought before the Forty (*οἱ τετταράκοντα*, Dem. *adv. Pantaen.* p. 976, § 33). But the summary jurisdiction of the Forty we know to have been extremely limited; and when we read that they only decided money claims up to the amount of ten drachmas, it is evident that the assaults upon which they pronounced judgment could only have been of minor importance (so Schömann, *Antiq.* p. 473; cf. TETTARACONTA, HOI). They had, however, the *ἡγεμονία δικαστηρίου*, and could bring graver matters before a jury; and it is evident that the case of Conon, in which exemplary damages are demanded, was of this sort: we find the usual *ὦ ἄνδρες δικασταὶ* in the opening words.

The sum of money to be paid by the defendant as damages was not fixed by the law, but settled in court. It was thus an assessed action (*ἀγὼν τιμητὸς*), and resembled the procedure in public causes. The speech of Isocrates against Lochites, as well as that of Demosthenes against Conon, was spoken in an action of this kind; and we learn from it that for the further protection of the citizens against assaults, both private and public prosecutions for this class of offences were *ἄνευ παρακαταβολῆς*, or excused from the payment of *πρυτανεῖα* or caution-money (Isocr. *Or.* 20, § 3). It would seem however that the party who lost his suit, whether plaintiff or defendant, was liable to pay *πρυτανεῖα* in addition to damages and *ἐπωβελία* (Dem. *c. Everg.* p. 1158, § 64). In the speech against Lochites, as in that against Conon, there is perhaps intentional confusion of *αἰκία* and *ὕβρις* (Jebb, *Att. Or.* ii. 214, n.). In the case of slaves there was no action for *αἰκία*, but the owner of an injured slave might proceed either by *ὕβρεως γραφὴ* or *βλαβῆς δίκη*. (Lysias, fr. 44; Photius, p. 614, 10; Harpocrat. *s. v. αἰκίας*: Suid. *s. v. ὕβρις*: Meier, *Att. Process*, pp. 81, 547 ff.; Böckh, *P. E.* pp. 364, 372, 374; Platner, *Process und Klagen*, ii. 193 ff.; Schömann, *Antiq.* 473.) [W. S.] [W. W.]

AITHOUSA (*αἴθουσα*), the open portico, or verandah, of the Homeric house, so called *ἀπὸ τοῦ ἡλίῳ αἴθεσθαι*, the bright sun-lit verandah being opposed to the semi-twilight of the interior. The Homeric house contained two such verandahs—one, the *αἴθουσα αὐλῆς*, on each side of the courtyard gate (cf. *Il.* ix. 472, *Od.* xxi. 389, 390); the other, which may be called the *αἴθουσα δώματος*, on the opposite side of the courtyard, stretching along the front of the house. The latter is often considered as forming part of the *πρόδομος*, *ὑπ' αἰθούσῃ* and *ἐν προδόμῳ* being used as identical expressions (cf. *Od.* iv. 279, 302; *Il.* xxiv. 644, 673). The *αἴθουσα αὐλῆς* seems to have served as a convenient place to put things in, to be out of the way; goats are tied up there before they are killed (*Od.* xx. 176, 189), and the corpses of the suitors are laid *ὑπ' αἰθούσῃ εὐέρκεος αὐλῆς* (*Od.* xxii. 449). The *αἴθουσα δώματος* was used especially as a sleeping room for strangers, sometimes too as a place of meeting, as in *Il.* xx. 10, where the gods gather in the palace of Zeus, and take their seats *ξεστῇς αἰθούσῃσιν*. (See DOMUS; A. Winckler, *Die Wohnhäuser der Hellenen*, Berlin, 1868; Schliemann's *Tiryns*, p. 208.) [J. H. O.]

AKOÊN MARTYREIN (*ἀκοὴν μαρτυρεῖν*). The general rule of Athenian, as of English jurisprudence, was against the admission of hearsay evidence. The one exception was the attested declaration of a deceased person, which was carefully distinguished from the *ἐκμαρτυρία* or written deposition of an absent witness [EKMARTYRIA]. The law is expressed in Demosth. ii. *Steph.* p. 1130, § 8, *ἀκοὴν δ' οὐκ ἐῶσι ζῶντος μαρτυρεῖν, ἀλλὰ τεθνεῶτος, τῶν δὲ ἀδυνάτων καὶ ὑπερορίων, ἐκμαρτυρίαν γεγραμμένην ἐν γραμματείῳ.* As regards the living, *οὐδὲ μαρτυρεῖν ἀκοὴν ἐῶσιν οἱ νόμοι, οὐδ' ἐπὶ τοῖς πάνυ φαύλοις ἐγκλήμασιν, εἰκότως* (id. *c. Eubul.* p. 1300, §§ 6, 7, where the reasons for the prohibition are given at length; comp. *c. Leochar.* p. 1097, § 55). Will cases would naturally often turn on the evidence of the dead; hence the phrase *ἀκοὴν μαρτυρεῖν* is of frequent occurrence in the extant speeches of Isaeus (e.g. *Philoct.* § 64; *Ciron*, §§ 8, 18, 38). [W. W.]

ALA, part of a Roman house. [Domus.]

ALA, ALA'RES, ALA'RII. These military terms had different meanings at different periods.

1. In the original constitution of the Roman army, each legion of citizens was accompanied by a body of 300 *equites* (Polyb. i. 16, 2; ii. 24, 3; vi. 20, 9). These were drawn up on the flanks of the infantry, and hence were termed *alae* (cf. Cincius in Gell. xvi. 4, § 6, *alae dictae exercitus equitum ordines, quod circum legiones dextra sinistraque, tanquam alae in avium corporibus, locabantur*).

2. When, at a later date, the *socii* were required to contribute a contingent to the Roman army, the Roman legions were placed in the centre of the line of battle, and the allies formed the wings. Hence the allied troops, both cavalry and infantry, were sometimes termed *alae* or *alarii*; and we find mention, not only of *equites*, but also of *cohortes alares* or *alarii* (Liv. x. 40, 8; 41, 5; 43, 3). These were commonly grouped together as the *dextera ala* and the *sinistra ala* (id. xxxi. 21), although these terms did not always correspond to their position in the line of battle (id. xxvii. 2).

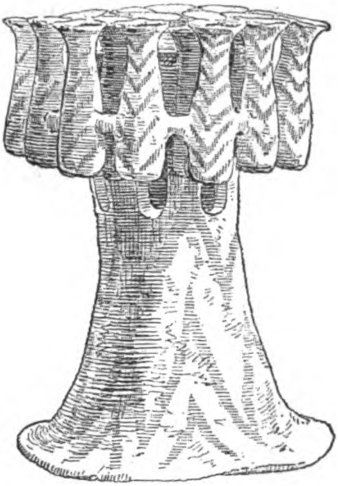
3. After the franchise had been extended to the whole of Italy, and thus all Italian troops were included in the legions, the term *alarii* was transferred to the foreign troops (*auxilia*) serving along with the Roman armies. Thus Caesar (*B. C.* i. 73) distinguishes the *cohortes alariae* from the *legionariae cohortes* (cf. *B. G.* i. 51).

4. Under the Empire, the word *ala* usually denotes "auxiliary cavalry," the term *cohortes* being used without any epithet to denote "auxiliary infantry," as contrasted with the *legiones*. Thus Tacitus (*Hist.* iv. 18) mentions the *ala Batavorum*, &c., and many others are known to us from inscriptions (cf. Henzen, *Index inscript.* c. viii. p. 131). Sometimes a body of horse was named from the officer who had first raised it, or who commanded it at the time: cf. *ala Liliana* (Tac. *Hist.* i. 75), *ala Auriana* (ib. iii. 5). The *ala* was originally divided into the *turmae*, each containing three *decuriae*. But at a later time the *ala* was either *miliaria* or *quingenaria*: in the former case there were 24 *turmae*, in the latter 16, besides various officers (Hygin. *Castrum*, 16, 23, 30; cf. Henzen, *Annal. dell' Inst.* 1860, p. 71). [A. S. W.]

ALABARCHES, a Roman official stationed at Alexandria under the Empire. Josephus applies the title (*Ant.* xviii. 6, 3; xix. 5, 1; xx. 5, 2) to Alexander Lysimachus, the brother of the famous Philo. It has been conjectured that he was a subordinate of the Jewish ethnarch (Franz, *Corp. Inscr. Gr.* iii. 2, 291 a); and others have suggested that he collected certain taxes, deriving the name from ἀλάβη, "ink," and translating it *scripturae magister*. This suggestion receives some support from the mention of *vectigal Alabarchiae per Aegyptum atque Augustamnicam constitutum* in *Cod. Just.* iv. 61, 9; but the reading there is doubtful. An epigram of Palladas of Alexandria (*Anth. Pal.* ii. p. 430) commiserates an ass, because ἐξ ἀλαβαρχείης γραμματικοῦ γέγονεν—*i.e.* because he has come from a rich house into a poor one. Some scholars regard the word as a corruption of Arabarches, but this word denotes an entirely different office (cf. Marquardt, *Röm. Staatsverw.* i. 289, note 1). [Arabarches.] The title is also found in Lycia (*C. I. G.* 4867). [A. S. W.]

ALABASTRI'TES. [Alabastrum.]

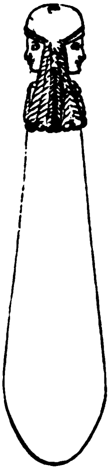
ALABASTROTHE'CA (ἀλαβαστροθήκη or ἀλαβαστοθήκη), according to some a casket for unguent-bottles [Alabastrum], according to others a holder into which they were put when not in actual use, since, being round at the bottom, they could not stand unsupported. A representation of an alabastrotheca found on an ancient vase is shown in the accompanying figure. (Aristoph. *Fragm.* 463; Demosth. *de F. L.* p. 415, § 237; Pollux, x. 121; Suid. *s. v.*) [J. H. O.]



Alabastrotheca. (British Museum.)

ALABASTRUM and **ALABASTER** (ἀλάβαστρον, or rather ἀλάβαστος, as it is written in classical Greek: in pl. ἀλάβαστρα or -στα. Lat. pl. *Alabastra*, sometimes *-tri*; see inscription below), a small tapering or pear-shaped vessel, having no feet, used for holding perfumes and ointments. Such vessels were originally made of alabaster, of which the variety called onyx-alabaster was usually employed for this purpose ("nardi parvus onyx," Hor. *Carm.* iv. 12, 17; Plin. *H. N.* xiii. § 19: "lapidem alabastriten . . . quem cavant ad vasa unguentaria, quoniam optume servare incorrupta dicatur," *ib.* xxxvi. § 60). It is doubtful, however, whether the vessels were named from the material or *vice versâ.* They are also found of stone and terra-cotta, with a white or cream-coloured ground and black figures. The right-hand woodcut on the next page shows an alabastrum from Chiusi, carved into female faces above, and having a hole in the crown for pouring out the ointment or perfume. (Dennis, *Etruria*, i. p. cxxv.) Other materials were in use, as glass, and even gold (χρύσεια ἀλάβαστρα, Theocr. xv. 114). The alabastra usually had no handles, though we sometimes find specimens with them. (See left-hand figure.) The Scholiast on Aristoph. *Acharn.* 1053 defines the ἀλάβαστος as λήκυθος ὦτα μὴ ἔχουσα; cf. Hesych. and Suidas *s. v.*; Pollux, x. 120, 121; and Pliny indicates the shape (*H. N.* ix. § 113): "elenchos appellant fastigata longitudine alabastrorum figura in pleniore orbe desinentes." In an inscription they are called "graciles alabastri" (Orelli, 4832). Such scent bottles are first mentioned by Herodotus (iii. 20, where see Stein), who speaks of a *μύρου ἀλάβαστρον* as one of the presents sent by Cambyses to the Ethiopian king; and after his time they occur both in Greek and Roman writers (Aristoph. *Acharn. l. c.*; Aelian, *V. H.* xii. 18; "alabaster plenus unguenti," Cic. *ap.* Non. xv. 17; "Cosmi redolent alabastra," Martial, xi. 8; Matt. xxvi. 7; Mark xiv. 3; Luke vii. 37). Some of these vessels had a long narrow neck, which was sealed; so that when the woman in the Gospels is said to break the alabaster box of ointment, it appears probable that she only broke the extremity of the neck, which was thus closed. (Cf. Becker-Göll, *Gallus*, ii. p. 378). [W. S.]

Alabastrum. (British Museum.)



Alabastrum. (Dennis, *Etruria*, i. p. cxxv.)

ALAEA. [Aleaea.]

ALA'RII. [Ala.]

ALAUDA, a Gaulish word, the prototype of the modern French *Alouette*, denoting a small crested bird of the lark kind, which the Latins in allusion to its tuft denominated *Galerita*. The name *alauda* was bestowed by Julius Caesar on a legion of picked men, which he raised at his own expense among the inhabitants of Transalpine Gaul, about the year B.C. 55, not, as erroneously asserted by Gibbon, during the civil war; which he equipped and disciplined after the Roman fashion; and on which, in a body, he at a subsequent period bestowed the freedom of the state. This seems to have been the first example of a regular Roman legion levied in a foreign country and composed of barbarians. The designation was, in all probability, applied from a plume upon the helmet resembling the "apex" of the bird in question, or from the general shape and appearance of the head-piece. Cicero in a letter to Atticus, written in B.C. 44, states that he had received intelligence that Antonius was marching upon the city "cum legione alaudarum" (*ad Att.* xvi. 8); and from the Philippics we learn that by the Lex Judiciaria of Antonius even the common soldiers of this corps (*Alaudae—manipulares ex legione Alaudarum*) were privileged to act as judices upon criminal trials, and enrolled along with the veterans in the third decuria of judices, avowedly, if we can trust the orator, that t framer of the law and his friends might ha functionaries in the courts of justice upon who support they could depend (*Phil.* i. 8, § 20).

That the legion Alauda was numbered V. proved by several inscriptions, one of them b longing to the age of Domitian in honour of certain Cn. Domitius, who among many othe titles is styled TRIB. MIL. LEG. V. ALAUDAE. had however disappeared from the army list i the time of Dio Cassius,—that is, in the earl part of the third century; for the historian, whe giving a catalogue of such of the twenty-thre or twenty-five legions which formed the estab lishment of Augustus, as existed when he wrote makes no mention of any fifth legion except the *Quinta Macedonica.* (Sueton. *Jul.* 24; Caesar *B. C.* i. 39; Plin. *H. N.* xi. § 121; Cic. *Phil.* v. 5 § 12, xiii. 2 § 3, 18 § 37; Gruter, *Corp. Inscrip. Lat.* CCCCIII. 1, DXLIV. 2, DXLIX. 4, DLIX. 7; Orelli, *Inscr. Lat.* n. 773.) [W. R.]

ALBOGALE'RUS. [Apex.]

ALBUM, a notice board or tablet on which the annual edict of the praetor was inscribed. It contained the formulae and other legal remedies which the Praetor was prepared to grant [Edictum]. The album was put up in a public place in Rome, so that all persons might have notice of its contents. Its actual appearance is a subject of doubt. Some think that it was a piece of white painted wood, and that the letters on it were black, except the headings (*rubricae*), which were red. According to others, the letters were white, inscribed on a dark ground. Any one who took away, defaced, or destroyed the album was liable to an *actio albi corrupti* and to a heavy penalty (Paulus, 1, 13, 3; id. 7, 9; Dig. 2, tit. 1, s. 7, 9).

Probably the word album was used for any tablet containing a public announcement. Thus Cicero informs us that the *annales maximi* were written on the album by the *pontifex maximus* (*de Orat.* ii. 12, 52).

2. But, however this may be, it was in course of time used to signify a list of any public body; thus we find the expression *album senatorium* used by Tacitus (*Ann.* iv. 42) to express the list of senators, and corresponding to the word *leucoma*, used by Dio Cassius (lv. 3). The phrase *album decurionum* signifies the list of *decuriones* whose names were entered on the album of a *municipium*, in the order prescribed by the *lex municipalis* (Dig. 50, tit. 3). *Album judicum* is the list or panel of *judices* drawn up by the magistrates, from which he was bound to make his selection (Suet. *Claud.* 16). [Judex.]

[G. L.] [E. A. W.]

ALCATHOEA (*ἀλκαθοῖα*), games celebrated at Megara, in commemoration of the Eleian hero Alcathoos, son of Pelops, who had killed a lion which had destroyed Euippus, son of king Megareus. (Pind. *Isthm.* viii. 148; Paus. i. 42, § 1.) [L. S.]

ALEA, gaming, or playing at a game of chance of any kind. [Tali, Tesserae, Par Impar.]

Gaming was looked down upon at Rome; and hence *aleator* was used as a term of reproach (Cic. *in Cat.* ii. 10, 23; *ad Att.* xiv. 5; "alea turpis," Juv. xi. 176; "damnosa alea," *id.* xiv. 4). It was also forbidden by special laws during the times of the republic and under the emperors ("vetita legibus alea," Hor. *Carm.* iii. 24, 58; Cic. *Phil.* ii. 23, 56; Ov. *Trist.* ii. 470 ff.; Dig. 11, tit. 5.) Three such laws occur in the Digest (*l. c.*)—the Leges Titia, Publicia, and Cornelia—and likewise a *senatus consultum*, and the praetor's edict; the latter enacting severe penalties on persons compelling others to gamble, and disabling the keepers of gambling-houses from bringing any action for damage or loss against their customers (cf. Ulpian, fr. 1). At what time the two former laws were passed is quite uncertain; but the Lex Cornelia was probably one of the laws of the dictator Sulla, who, we know, made several enactments to check the extravagance and expense of private persons. [SUMPTUS.] It has been inferred from the *Miles Gloriosus* (ii. 2, 9) that gaming must have been forbidden by law in Plautus' time; but the *lex talaria* (*alearia*, Ritschl) in this passage seems rather to refer to the laws of the game than to any public enactment. Those who were convicted of gaming were condemned to pay four times the sum they had staked (Pseudo-Ascon. *in* Cic. *Div.* § 24, p. 110, ed. Orelli), and became *infames* in consequence. We know that *infamia* was frequently a consequence of a judicial decision [INFAMIA]; and we may infer that it was so in this case from the expression of Cicero. ("Hominem lege, quae est de alea, condemnatum, *in integrum restituit*," Cic. *Phil. l. c.*). Games of chance were, however, tolerated in the month of December at the Saturnalia, a period of general relaxation (Mart. iv. 14, v. 84; Gell. xviii. 13; Suet. *Aug.* 71); and public opinion allowed old men to amuse themselves in this manner (Plaut. *Curc.* ii. 3, 75; Cic. *de Sen.* 16, 58). Under the empire gambling was carried to a great height (cf. Juv. i. 88–90); and the laws were probably little more than nominal. Many of the early emperors—Augustus, Caligula, Claudius, Vitellius, and Domitian—were very fond of gaming, and set but an evil example to their subjects in this matter (Suet. *Aug.* 70, 71; Dio Cass. lix. 22; Suet. *Cal.* 41, *Claud.* 33; Dio Cass. lx. 2; Suet. *Dom.* 21). Professed gamesters made a regular study of their art, and there were treatises on the subject, among which was a book written by the Emperor Claudius (Ov. *Trist.* ii. 471; Suet. *Claud. l. c.*). All gaming was forbidden finally by Justinian (Cod. 3, tit. 43). (Walter, *Geschichte d. röm. Rechts*, § 763; Rein, *Criminalrecht der Römer*, p. 833.) [W. S.] [A. G.]

ALEAEA or **ALAEA** (Ἀλέαια), a festival celebrated to the honour of Athena Alea, near Tegea, with games and contests, of which we find mention in inscriptions. (Paus. viii. 47, § 3; Krause, *Die Gymnastik u. Agonistik d. Hellenen*, pp. 734–736; K. F. Hermann, *Lehrbuch d. gottesdienstlichen Alterthümer d. Griechen*, § 51, n. 11; comp. HALOTIA.) [L. S.]

ALIC'ULA, a short cloak coming down to the elbows, mentioned by Ulpian (Dig. 34, 2, 23) as proper to boys, by Petronius (*Sat.* 40) as worn by a hunter, and by Martial (xii. 82) as an inexpensive present. It was so called, according to Velius Longus (Putsch, p. 2230), *quod alas nobis iniecta contineat*; according to Ferrarius, from its collar or cape. Rich, however, derives the name from its resemblance to wings when fastened by a brooch and floating behind the back. There seems to be no reason for connecting the word with the chlamys ἄλληξ or ἄλλιξ. Saglio identifies the *alicula* with a garment worn by shepherds and countrymen in works of art, and by the Good Shepherd on sarcophagi and paintings in the catacombs, sometimes opening in front, and sometimes furnished with a small cape. [J. H. F.]

ALIMENTA'RII PUERI ET PUELLAE. In the Roman republic the poorer citizens were assisted by public distributions of corn, oil, and money, which were called *congiaria* [CONGIARIUM]. These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The Emperor Nero first conceived the notion of extending them, not only to other Italian towns, but also to children (Aurel. Vict. *Epit.* xii. 4); and Trajan appointed them to be made every month, both to orphans and to the children of poor parents. The children who received them were called *pueri et puellae alimentarii*, and also (from the emperor) *pueri puellaeque Ulpiani;* and the officers who administered the institution were called *quaestores pecuniae alimentariae*, *quaestores alimentorum*, *procuratores alimentorum*, or *praefecti alimentorum*.

The fragments of an interesting record of an institution of this kind by Trajan were found at Veleia, near Placentia, in 1747; and much light has been thrown upon their interpretation by the discovery of a similar table in 1832 at Campolattaro, near Beneventum (Mommsen, *Inscr. Lat. Regn. N.* 1354; Desjardins, *Disputatio hist. de tabulis alimentariis*, Paris, 1854). We learn thus the sums which were thus distributed, and the means by which the money was raised. The emperor lent considerable sums at low interest on the security of landed estates belonging to members of the municipality, and the interest was paid to the municipal chest for the support of orphans. The idea appears to have been borrowed from the institutions due to private benevolence, such as that founded by the younger Pliny at Comum (Plin. *Epist.* vii. 18, i. 8; and the inscription in *Annali dell' Inst. Arch.* 1854), and by Helvius Basila at Atina (Orelli, 4365, *C. I. L.*, vol. x. 5056). The records of similar foundations have been discovered at Tarracina, at Sicca, and at Hispalis (Wilmanns, 2846–8). Trajan's benevolent plans were carried on upon a larger scale by Hadrian and the Antonines, who established additional foundations in honour of the two Faustinas. Under Commodus and Pertinax the distribution ceased. In the reign of Alexander Severus we again meet with *alimentarii pueri et puellae*, who were called *Mammaeani*, in honour of the emperor's mother. We learn from a decree of Hadrian (Ulp. in Dig. 34, tit. 1, s. 14) that boys enjoyed the benefits of this institution up to their eighteenth, and girls up to their fourteenth year; and from an inscription (Fabretti, 235, 619), that a boy four years and seven months old had received nine times the ordinary monthly distribution of corn. At Sicca 300 boys, between three and fifteen, and 200 girls between three and thirteen, received the benefits of the foundation. (Capitolin. *Ant. Pi.* 8, *M. Aur.* 26, *Pert.* 9; Spart. *Hadr.* 7; Lamprid. *Sev. Alex.* 57; Orelli, *Inscr.* 3364, 3365; Rasche, *Lex. Univ. Rei Num.* s. v. *Tutela Italiae;* Eckhel, *Doctr. Num. Vet.* vol. vi., p.

408; F. A. Wolf, *Von einer milden Stiftung Trajans;* Henzen, *Tabula alim. Baebiorum*, Romae, 1845; Desjardins, *op. cit.*) [P. S.] [A. S. W.]

ALIPILUS, a slave who attended on bathers, to remove the superfluous hair from their bodies (Sen. *Ep.* 56, § 2; Pignorius, *de Serv.* 42; *C. I. L.* 4302; Juv. *Sat.* xi. 157, with Mayor's note). The practice extended to ladies, who had female slaves for the purpose, called παρατίλτριαι (Cratin. fr. 251, Meineke; cf. Ovid, *Ars Amat.* iii. 194). Tweezers were used (*volsellae*, Mart. ix. 28, 5) or depilatory ointment. [PSILOTHRUM.] [W. W.]

ALIPTAE (ἀλεῖπται), among the Greeks, were persons who anointed the bodies of the *athletae* before and after the exercises of the palaestra. The chief object of the preliminary anointing was to close the pores of the body, in order to prevent excessive perspiration and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin (Lucian, *Anach.* 28; Plut. *de Tuend. San.* 15, p. 130 b). The oil was mixed with fine sand, of which various sorts are enumerated, but the African was the favourite. Several jars of this sand were found in the baths of Titus, and one of these is now in the British Museum. This preparatory anointing was called ἡ παρασκευαστικὴ τρῖψις. The athlete was again anointed after the contests, in order to restore the tone of the skin and muscles; this treatment was called ἡ ἀποθεραπεία. He then bathed, and had the dust, sweat, and oil scraped off his body by means of an instrument similar to the strigil of the Romans, and called στλεγγίς, and afterwards ξύστρα. [BALNEAE.] The part of the palaestra in which the athletes were anointed was called ἀλειπτήριον (Alexis, fr. 99, Meineke; Schneider on Vitruv. v. 10, 5).

The function of the ἀλείπτης was thus a subordinate branch of that of the παιδοτρίβης, or gymnast; but the latter himself is sometimes called ἀλείπτης, as by Plutarch (*Dion.* 1: cf. Pind. *Olymp.* viii. 54–71, with Boeckh's note).

The relation of gymnastics to the medical art was early perceived, as by Iccus of Tarentum, and Herodicus, the physician of Selymbria, both in the fifth century B.C. (Plat. *Protag.* 316 D; *Rep.* iii. 406 A). The aliptae took advantage of the knowledge they necessarily acquired of the state of the muscles of the athletes, and their general strength or weakness of body, to advise them as to their exercises and mode of life. (Arist. *Eth. N.* ii. 6, 7; Plut. *de Adul. et Am.* 17, p. 59 f.) Hence the term ἰατραλείπτης, or medical trainer, which however does not occur before Roman times (Cels. i. 1; Plin. *H. N.* xxix. § 4; Plin. *Ep.* x. 4). The last passage throws some light on their social status; Pliny asks Trajan to grant the citizenship to his *iatraliptes*, a freedman. The aliptae of Cicero (*ad Fam.* i. 9, § 35), contrasted with *medici*, must have been of this class, not, as sometimes supposed, of a lower.

Among the Romans there were also slaves called aliptae who scrubbed and anointed their masters in the baths; these are to be carefully distinguished from the trainers in the gymnasium. (Compare the scene described in the beginning of Seneca's 56th Epistle, where however the word aliptes does not occur; and for the two kinds of aliptae, Juv. *Sat.* iii. 76, with *ib.* vi. 422; also Pignorius, *de Serv.* p. 81.) These slaves were also called *unctores* (Martial, iii. 32, 6), and the anointing-room *unctorium* or *unctuarium* (Plin. *Ep.* ii. 17). They used in their operations a kind of scraper called a strigil, towels (*lintea*), a cruet of oil [GUTTUS], a bottle [AMPULLA], and a small vessel called *lenticula* [BALNEAE]. [P. S.] [W. W.]

ALLEX or **ALLIX** (ἄλλιξ, ἄλληξ), a Thessalian name for a garment corresponding apparently to the Greek χλάμυς (cf. Zonaras, Suidas, and *Etym. M.* s. v.). Hesychius too, *s. v.* ἄλλικα, gives this explanation, though, *s. v.* ἄλλιξ, he translates the word by χιτὼν χειριδωτός, i.e. a tunic with sleeves. The connexion of this word with ALICULA is doubtful. [J. H. O.]

ALLU'VIO is thus defined by Gaius (*Inst.* ii. 701): "Alluvium is an addition of soil to land by a river, so gradual that it is impossible to estimate how much is added in a short period, or, as it is commonly expressed, the charge is so gradual as to be imperceptible. But a piece of your land swept away by a river and carried down to mine continues your property." There is the same definition by Gaius in his *res cottidianae* (Dig. 41, 1, 7), with this addition: "If the piece of land thus suddenly swept away should adhere for a considerable time to my land, and the trees on it should fix their roots in my soil, it thereupon becomes my property." Alluvio was considered by the Roman jurists as a mode of acquiring property in a thing, which belongs to the *jus gentium* or *naturale;* it was a particular kind of title by *accessio*. A man might protect his land against loss from the action of a river by securing the banks of his land (Dig. 43, 15, *de ripa munienda*), provided he did not injure the navigation.

An island that was formed in the middle of a river was the common property of the owners on both banks of the river; if it was not in the middle of the stream, it belonged to the proprietors of the nearer bank (Gaius, ii. 72; Dig. 41, 1, 7). By a river is meant a public river (*flumen publicum*). According to a constitution of the Emperor Antoninus Pius, there was no *jus alluvionis* in the case of *agri limitati*, the reason being that a certain quantity (*certus cuique modus*) was assigned by the form of the *centuriae* (Dig. 41, 1, 16; comp. *Aggenus urbicus* in Frontin. *Comment. de Alluvione*, pars prior, ed. Goes; and *Ager*). Cicero (*de Orat.* i. 38) enumerates the *jura alluvionum* and *circumluvionum* as matters included under the head of *causae centumvirales* (Hermannseder, *die Alluvien*, München, 1856). [G. L.] [E. A. W.]

ALO'A or **HALO'A** (Ἀλῶα, Ἁλῶα), an Attic harvest festival, but celebrated principally at Eleusis and Athens, in honour of Demeter and Dionysus, the inventors of the plough and protectors of the fruits of the earth. It took place every year after the harvest was over, and only fruits were offered on this occasion, partly as a grateful acknowledgment for the benefits the husbandman had received, and partly that the next harvest might be plentiful. We learn from Demosthenes (*c. Neaer.* p. 1385, § 116), that it was unlawful to offer any bloody sacrifice on the day of this festival, and that the priestess alone had the privilege to offer the fruits. The festival was also called θαλύσια (Hesych. *s. v.*), or συγκομιστήρια. The exact time of its celebration, as well as its duration, cannot be determined with certainty. (See A. Mommsen, *Heortologie*, p. 320 foll.) [L. S.]

ALOGIOU DIKE' (ἀλογίου δίκη), an action which might be brought before the *Logistae* (λογισταί) at Athens, against all persons who neglected to pass their accounts when their term of office expired. The punishment was *atimia*. Though the action was a public one, the grammarians agree in calling it δίκη, not γραφή: and this is preferred by Westermann *ap.* Pauly, ed. 2. (Suidas; Hesych.; *Etym. M.* s. v.; Pollux, viii. 54; *Lex. Rhet.* p. 664, ed. Pors.) [W. S.] [W. W.]

AMANUENSIS, or A MANU SERVUS, a slave, or freedman, whose office it was to write letters and other things under his master's direction. The amanuensis must not be confounded with another sort of slaves, called *ad manum servi*, who were always kept ready to be employed in any business. (Suet. *Caes.* 74, *Aug.* 67, *Ner.* 44, *Tit.* 3, *Vesp.* 3; Cic. *de Orat.* iii. 60, 225; Pignor. *de Servis*, 109.) [P. S.]

AMARY'NTHIA or AMARY'SIA ('Αμαρύνθια or 'Αμαρύσια), a festival of Artemis Amarynthia or Amarysia, celebrated, as it seems, originally at Amarynthus in Euboea, with extraordinary splendour; but it was also solemnised in several places in Attica, such as Athmone (Paus. i. 31, § 3); and the Athenians held a festival, as Pausanias says, in honour of the same goddess, in no way less brilliant than that in Euboea. (Hesych. *s. v.* 'Αμαρύσια; comp. Schol. *ad* Pind. *Olymp.* xiii. 159.) The festival in Euboea was distinguished for its splendid processions; and Strabo himself (x. p. 448) seems to have seen, in the temple of Artemis Amrynthia, a column on which was recorded the splendour with which the Eretrians at one time celebrated this festival. The inscription stated that the procession was formed of three thousand heavy-armed men, six hundred horsemen, and sixty chariots. [L. S.]

AMBACTI, according to Festus, *s. v.*, the name for slaves in the Gallic language. Caesar (*B. G.* vi. 15) mentions them along with the *clientes*. The most probable opinion is that they were of free origin, but had become practically the unfree retainers of their chief. (Mommsen, *Rom. Hist.* iv. pp. 223–4.) [A. S. W.]

AMBARVA'LIA, a rural festival among the Romans for the purification (*lustratio*) of the country, and for invoking the blessing of Ceres upon the fruits of the earth. The name is explained by Servius (*ad* Verg. *Ecl.* iii. 77), *Dicitur autem hoc sacrificium Ambarvale, quod arva ambiat victima*; and by Macrobius (*Sat.* iii. 5, 7) after Festus: *Ambarvalis hostia est, ut ait Pomponius Festus, quae rei divinae causa circum arva ducitur ab his, qui pro frugibus faciunt.*

There were two kinds of Ambarvalia, private and public, though some writers, as Hunziker (ap. D. and S.) reckon only the former. The private Ambarvalia are those alluded to in Verg. *Ecl.* iii. 77, v. 75, and described more in detail, and with singular beauty, *Georg.* i. 338 ff.; Tibull. *Eleg.* ii. 1, *passim.* The victim (*Georg.* i. 345) or rather victims (Cato, *R. R.* 141, *Impera suovetaurilia circumagi* [SUOVETAURILIA]) were led three times round the cornfields, before the sickle was put in, accompanied by a crowd of merry-makers (*chorus et socii*, v. 346), the reapers and servants dancing and singing the praises of Ceres, while they offered her libations of milk, honey, and wine. The public Ambarvalia are certainly to be distinguished from the Amburbium [AMBURBIUM], but have been identified by several writers (Mommsen, Henzen, Jordan) with the sacrifice of the Fratres Arvales to Dea Dia. Marquardt, who on the whole decides (with Marini, Huschke, Preller, and De' Rossi) against the identity of the two festivals, observes that the correspondence of time and place is in favour of it, as well as the fact that the *suovetaurilia* were offered at both; but, as he also points out, there is no mention of the Fratres Arvales beating the bounds (*circumire* or *lustrare*). The time and place of the two solemnities do not, however, correspond with so much exactness as is here implied. For, first, the Ambarvalia at Rome were fixed for May 29; in other parts of Italy the day varied in different districts, but was an immovable feast (*feriae stativae*) in each district. The feast of Dea Dia, on the other hand, was proclaimed every year; and May 29 might, or might not, coincide with one of the days on which it was held [ARVALES]. Next, as regards the locality, the Roman Ambarvalia were performed, according to Strabo, at a spot called Festi, between five and six miles from the city on the way to Alba (Strab. v. p. 230): this spot is identified beyond doubt with the Fossa Cluilia of Livy (i. 23), Dionysius, and Plutarch; the Campus Sacer Horatiorum, where the legendary encounter took place; and the ruins now called Roma Vecchia, on the left-hand side of the Appian Way at the fifth milestone (Burn, *Rome and the Campagna*, p. 416). The Lucus Deae Diae was at about the same distance from Rome, but on a different road, the Via Portuensis, in a southerly not an easterly direction. Both were doubtless on the boundary of the ager Romanus, or original Roman territory; and in this last circumstance we may trace a connexion between the festival of the Arvales and the Ambarvalia without assuming that they were identical. What this connexion was may perhaps be inferred from the statement of Strabo, that the pontiffs, whom he calls ἱερομνήμονες, offered sacrifices at Festi and several other places regarded as frontiers (θυσίαν ἐπιτελοῦσιν ἐνταῦθά τε καὶ ἐν ἄλλοις τόποις ὡς ὁρίοις αὐθημερὸν, ἣν καλοῦσιν 'Αμβαρουίαν). We may suppose that the Lucus Deae Diae was one of several ancient seats of the Ambarvalia, but that, in this particular instance, the greater solemnity of the Fratres Arvales, one of the most dignified priestly colleges, overshadowed the primitive simplicity of the rustic festival.

The Ambarvalia furnish one of several instances—the Saturnalia at Christmas being another—of heathen festivals taken up by the Church and adapted to Christian uses. There is a close resemblance to these rites in the ceremonies of the three Rogation Days which precede Ascension Day, occurring nearly at the same time of year. "They were anciently called 'Gang-days,' because processions went out on those days; hymns and canticles being sung, and prayers offered at various halting-spots or stations for a blessing on the fruits of the earth" (Lee, *Glossary*, s.v. Rogation Days). The English custom, still observed in many places, of beating the parish bounds at Whitsuntide, is another survival from the rites we have been describing. (Marini, *Atti de' Fratelli Arvali*, p. 138; Henzen, *Acta Fr. Arv.* p. 46 ff.; Jordan, *Topogr.* i. 1, 289, ii. 236; Preller, *Röm. Myth.* p. 371 f.; Marquardt, vi. p. 194 ff.) [W. W.]

AMBILUS'TRIUM. [Lustratio.]

AM'BITUS, which literally signifies "a going about," cannot be more nearly expressed than by our word "canvassing." After the *plebs* had formed a distinct estate at Rome, and when the whole body of citizens had been very greatly increased, we frequently read, in the Roman writers, of the great efforts which it was necessary for candidates to make in order to secure the votes of the citizens. At Rome, as in every community into which the element of popular election enters, solicitation of votes, and open or secret influence and bribery, were among the means by which a candidate secured his election to the offices of state. As the elections recurred annually, there was frequent opportunity for practising the various modes of corruption. The piece entitled "L. Ciceronis de Petitione Consulatus ad M. Tullium Fratrem," seems to present a pretty fair picture of those arts and means by which a candidate might lawfully endeavour to secure the votes of the electors, and also some intimation of those means which were not lawful, and which it was the object of various enactments to repress.

A candidate was called *petitor*; and his opponent, with reference to him, *competitor*. A candidate (*candidatus*) was so called from his appearing in public places, such as the Fora and Campus Martius, before his fellow-citizens in a whitened toga.

On such occasions the candidate was attended by his friends (*deductores*), or followed by the poorer citizens (*sectatores*), who could in no other manner show their good will or give their assistance. (Cic. *pro Mur.* c. 34.)

The word *assiduitas* expressed both the continual presence of the candidate at Rome and his continual solicitations. The candidate, in going his rounds or taking his walk, was accompanied by a *nomenclator*, who gave him the names of such persons as he might meet; the candidate was thus enabled to address them by their name, an indirect compliment to the electors. The candidate accompanied his address with a shake of the hand (*prensatio*). The term *benignitas* comprehended generally any kind of treating, as shows, feasts, &c. Candidates sometimes left Rome and visited the *coloniae* and *municipia*, in which the citizens had the suffrage; thus Cicero proposed to visit the Cisalpine towns, when he was a candidate for the consulship. (Cic. *ad Att.* i. 1.)

Ambitus as a criminal offence signifies interference with the free choice of electors to an office by means of corrupt practices. The word for ambitus in the Greek writers is δεκασμός. Money was paid for votes; and in order to insure secrecy and to secure the elector, persons called *interpretes* were employed to make the bargain, *sequestres* to hold the money till it was paid (Cic. *pro Cluent.* 26, 72), and *divisores* to distribute it (Cic. *ad Att.* i. 16). The offence of ambitus belonged to the *judicia publica*, and the enactments against it were numerous.

The earliest enactment that is mentioned is the Lex Pinaria tribunicia (B.C. 432; Livy, iv. 25), which prohibited candidates from "adding white to their dress." A white dress was a sign that a person was a candidate. Thus the object of the law was to put some restriction on canvassing, i.e. on ambitio or ambitus. Still the practice of using a white dress on occasion of canvassing was usual, and appears to have been the origin of the term *candidatus* being applied to a *petitor* ("cretata ambitio," Pers. *Sat.* v. 177; Polyb. x. 4). A Lex Poetelia (B.C. 358; Livy, vii. 15) forbad candidates canvassing on market days, and going about to the places in the country where people were collected. The law was specially directed against *novi homines*, of whom the *nobiles* were jealous.

By the Lex Cornelia Baebia (B.C. 181) those who were convicted of ambitus were incapacitated from being candidates for ten years (Liv. xl. 19; Schol. Bob. p. 361). The purport of the Cornelia Fulvia de ambitu is not known, but it apparently made no change in the penalties for the offence.

The Lex Calpurnia (B.C. 67) was intended to suppress treating of the electors and other like matters; the penalties were fine, exclusion from the senate, and perpetual incapacity to hold office (Dio Cass. xxxvi. 21). The Lex Tullia was passed in the consulship of Cicero (B.C. 63). It imposed a new punishment of ten years' exile, in addition to the penalties under the Lex Calpurnia (Dio Cass. xxxvii. 29; Cic. *pro Mur.* 2, 3; 3, 5; 23, 47; 32, 67; 41, 89).

This law forbad any person to exhibit public shows for two years before he was a candidate. It also forbad candidates hiring persons to attend them and be about their persons. In the second consulship of M. Licinius Crassus and Cn. Pompeius Magnus (B.C. 55) the Lex Licinia de sodaliciis was passed (Cic. *Planc.* 15, 36). It was specially directed against a particular kind of ambitus, which consisted in employing agents (*interpretes, divisores, sequestres*) to mark out the members of the several tribes into smaller portions, and by this division of labour to carry out a complete system of corruption. The distribution of the members of the tribes was called *decuriatio* (Cic. *Planc.* c. 18). This means of securing votes was employed by the clubs and collegia of the aristocracy (Cic. *ad Quint. Fratr.* ii. 3, 5). There were special provisions in the Lex Licinia for the purpose of securing a fair trial of offences under it. The *judices* were called *editicii*, because the accuser or prosecutor nominated four tribes; the accused was allowed to challenge one of the tribes so nominated. The *judices* were taken out of the other three tribes; but the mode in which they were taken is not quite clear. The penalty under the Lex Licinia was exile, as under the Lex Tullia. The Lex Pompeia (B.C. 52), passed when Pompeius was sole consul for part of that year, was brought about by the murder of Clodius. It was an attempt to put down the clubs by more stringent punishments and more rapid process. The law increased the penalties of the Lex Calpurnia and Tullia. It was made retrospective to the date of the first consulship of Pompeius (Appian, *B.C.* ii. 23, 24; Plut. *Cato Min.* 48; Ascon. *in Milon.*, p. 37, Orell.). When C. Julius Caesar obtained the supreme power in Rome, he used to recommend some of the candidates to the people, who, of course, followed his recommendation. As to the consulship, he managed the appointments to that office just as he pleased (Suet. *Caes.* 41). The Lex Julia de ambitu was passed (B.C. 18) in the time of Augustus. It appears to have consolidated earlier laws on the subject, although with some modifications. The penalties under it were expulsion from the senate, incapacity for holding any public office during five years, and a fine of 100,000 sesterces, which candidates were required to deposit before canvassing. The penalties, therefore, were milder than they had been previously. The law only applied to offices for which a popular election was held. If a candidate resorted to any violence by exciting a tumult or otherwise, he was liable to be punished under the Lex Julia de vi by exile (*aquae et ignis interdictio*, subsequently *deportatio*).

The popular forms of election were observed during the time of Augustus. Under Tiberius they ceased. Tacitus (*Ann.* i. 15) observes: "The Comitia were transferred from the Campus to the Patres"—the Senate.

While the choice of candidates was thus partly in the hands of the senate, bribery and corruption still influenced the elections, though the name of ambitus was, strictly speaking, no longer applicable. But in a short time the appointment to public offices was entirely in the power of the emperors; and the magistrates of Rome, as well as the *populus*, were merely the shadow of that which had once been a substantial form. Modestinus, a Roman jurist, who wrote about the middle of the third century after Christ, thus comments on the Lex Julia de ambitu: "This law is now obsolete in the city, because the creation of magistrates is the business of the *princeps*, and does not depend on the pleasure of the *populus*; but if any one in a *municipium* should offend against this law in canvassing for a *sacerdotium* or *magistratus*, he is punished, according to a *senatus consultum*, with infamy, and subjected to a penalty of 100 aurei." (Dig. 48, tit. 14.)

The laws that have been enumerated are probably all that were enacted, at least all of which any notice has been preserved. Laws to repress bribery were made while the voting was open; and they continued to be made after the vote by ballot was introduced at the popular elections by the Lex Gabinia (B.C. 139). It is worth remark that there is no indication of any penalty being attached to the receiving of a bribe for a vote. The utmost that can be shown is that the *divisores*, or one of the class of persons who assisted in bribery, were punished (Cic. *pro Planc.* 23, § 55; *pro Muren.* 23, §§ 46, 47). Thus the penalties were inflicted on the briber and his agents, not on the bribed.

The proposed Lex Aufidia (Cic. *ad Att.* i. 16) declared that if a candidate promised money to a tribe and did not pay it, he should be unpunished; but if he actually paid the money, he should further pay to each tribe 3000 sesterces as long as he lived. This proposal was not carried; but it shows clearly enough that the principle was to punish the briber only. The trials for ambitus were numerous in the time of the republic. A list of them is given by Rein. The oration of Cicero in defence of L. Murena, who was charged with ambitus, and that in defence of Cn. Plancius, who was tried under the Lex Licinia, are both extant. (Rein, *Criminalrecht der Römer*; Rinkes, *Disp. de crim. amb. et de sod.*) [G. L.] [E. A. W.]

AMBLO'SEOS GRAPHE' (**ἀμβλώσεως γραφή**). [ABORTIO.]

AMBROS'IA (**ἀμβρόσια**), festivals observed in Greece, in honour of Dionysus, which seem to have derived their name from the luxuries of the table, or from the indulgence of drinking. According to Tzetzes on Hesiod (*Op. et D.* v. 504) these festivals were solemnised in the month of Lenaeon, during the vintage. (*Etym. M. s. v.* Ληναιών, p. 564. 7; G. E. W. Schneider, *Ueber das Attische Theaterwesen*, p. 43; K. F. Hermann, *Lehrb. d. gottesdienstl. Alterth. d. Griechen*, § 58, n. 7.) [L. S.]

AMBUBAIAE, female musicians from Syria, who gained their living by performing in public, at Rome, especially in the circus. Their name is derived from the Syrian word *abub* or *anbub*, a flute. Their moral condition was that which females of their class generally fall into. The bayadères of India will perhaps give the best idea of what they were. (Hor. *Sat.* i. 2. 1, with Heindorf's note; Mayor on *Juvenal*, iii. 62; Suet. *Ner.* 27; *Priapeia*, 26; Petron. lxxiv. 13.) [P. S.]

AMBU'RBIUM or **AMBURBIA'LE**, a sacrifice which was performed at Rome for the purification of the city, in the same manner as the ambarvalia was intended for the purification of the country. The victims were carried through the whole town, and the sacrifice was usually performed when any danger was apprehended in consequence of the appearance of prodigies, or other circumstances. (Obseq. *de Prodig.* c. 43; Apul. *Met.* iii. *ab init.*; Lucan. i. 592 *seq.*, where it is described). Scaliger supposed that the amburbium and ambarvalia were the same; but their difference is expressly asserted by Servius (*ad* Verg. *Ecl.* iii. 77) and Vopiscus (*amburbium celebratum, ambarvalia promissa, Aurel.* c. 20; cf. Preller, *Röm. Myth.* p. 372; Marquardt, vi. p. 195). [AMBARVALIA.] [W. S.]

AMENTUM. [HASTA.]

AMICTO'RIUM, a linen covering for the breasts of women, probably the same as the strophium. [STROPHIUM.] (Mart. xiv. 149.) In later times it seems to have been used in the same sense as Amictus. (Cod. Theod. 8, tit. 5, s. 48.) [AMICTUS.] [W. S.]

AMICTUS, AMIC'ULUM. The Greek words corresponding to *amicire* and *amictus* are *ἐπιβάλλεσθαι* and *ἐπίβλημα*, to *inducre* and *indutus* *ἐνδύεσθαι* and *ἔνδυμα*. So Pollux, vii. 50, speaks of the *πέπλος* as *ἔσθημα διπλοῦν τὴν χρείαν, ὡς ἐνδῦναι τε καὶ ἐπιβαλέσθαι*; meaning, that it was used sometimes as an inner garment or *χιτών*, sometimes as an outer garment or *ἱμάτιον*. [TUNICA; PALLIUM.] Hence the verbal nouns *amictus* and *indutus*, even without any further specification, denote respectively the outer and inner clothing. (See Verg. *Aen.* iii. 545, v. 521, with Conington's notes; Tibull. i. 8, 13; Corn. Nep. *Cim.* 4, *Dat.* 3, § 2; Tac. *Ann.* xvi. 4.) [J. H. O.]

AMMA (**ἅμμα**), a measure of length, equal to forty *πήχεις* (cubits) or sixty *πόδες* (feet). It was used in measuring land. (Hero, *de Mensuris*; Hultsch, *Metrol.* p. 36.) [P. S.]

AMNE'STIA (ἀμνηστία) is a word used by the later Greek writers, and from them borrowed by the Romans, to describe the act or arrangement by which offences were *forgotten*, or regarded as if they had not been committed, so that the offender could not be called to account for them. The word is chiefly used with reference to the offences committed, or alleged to have been committed, against the laws, during those conflicts of opposing factions which so often occurred in the Greek republics, and in which the victorious party usually took a sanguinary vengeance upon its opponents. So rare indeed were the exceptions to this course of vengeance, that there is only one case of amnesty in Greek history which requires any particular notice. This was the amnesty which terminated the struggle between the democratical and oligarchical parties at Athens, and completed the revolution by which the power of the Thirty was overthrown, B.C. 403. It was arranged by the mediation of the Spartan king Pausanias, and extended to all the citizens who had committed illegal acts during the recent troubles, with the exception of the Thirty and the Eleven, and the Ten who had ruled in Peiraeus; and even they were only to be excepted in case of their refusal to give an account of their government. Their children were included in the amnesty, and were permitted to reside at Athens. An addition was made to the oath of the senators, binding them not to receive any *endeixis* or *apagoge* on account of anything done before the amnesty, the strict observance of which was also imposed by an oath upon the *dicastae*. (Xen. *Hellen.* ii. 4, §§ 38–43; Andoc. *de Myst.* § 90 ff.; Demosth. *Boeot. de Dot.* p. 1018, § 32; Nepos, *Thrasybul.* 3, who makes a confusion between the Ten Tyrants of Peiraeus and the Ten who succeeded the Thirty in the city; Wachsmuth, *Hellen. Alterth.* i. pp. 473, 646-7, new edit.; K. F. Hermann, *Staatsalterth.* §§ 71, 76, 168, 169; Grote, ch. lxvi. *init.*)

The form of the word is incorrectly given in some modern works as ἀμνηστεία. But even the genuine form only belongs to later Greek; being used only by Plutarch (*Cic.* 42, *Anton.* 14), Herodian (iii. 4, § 17; v. 4, § 18; viii. 12, § 6), and still later writers.

The better authors use only the phrase μὴ μνησικακεῖν (Xen. Andoc. *ll. cc.*): ἄδεια is sometimes said to be equivalent, but wrongly. [ADEIA.] Respecting the supposed allusion to the word in Cicero (*Phil.* i. 1), see Long's note: it is however at least as likely that he was thinking of μὴ μνησικακεῖν, as Westermann supposes (*ap.* Pauly, i.^{2} 870). [P. S.] [W. W.]

AMORGINA (τὰ ἀμόργινα), fine muslin-like textures made of ἀμοργὶς, a peculiar flax named from the island of Amorgos, but grown also elsewhere. They were finer than βύσσος and κάρπασος (Schol. Aristoph. *Lysistr.* 150), almost transparent (Aristoph. *l. c.* 48), and very costly (Pseudo-Plato, *Ep.* vii. 363 A). In the use of the adjective ἀμοργινὸς it is not always clear whether the island or the plant is intended. (Aristoph. *Lysistr.* 150, 736; Aeschin. *Timarch.* § 97; Antiphanes, fr. 152, Meineke; Clearchus, *ap.* Ath. vi. p. 255 e; Böckh, *Publ. Econ.* p. 104.) [W. W.]

AMPECH'ONE (ἀμπεχόνη, ἀμπέχονον, ἀμπεχόνιον), a shawl or scarf, worn by women over the χιτὼν or inner garment. [See TUNICA and PALLIUM.] [J. H. O.]

AMPHIARA'IA (ἀμφιαράϊα), games celebrated in honour of the ancient hero Amphiaraus, in the neighbourhood of Oropus, where he had a temple with a celebrated oracle (Schol. *ad* Pind. *Ol.* vii. 154); the rites observed in his temple are described by Pausanias (i. 34, § 3; K. F. Hermann, *Gottesd. Alterth.* § 63, n. 1). [L. S.]

AMPHICTYONES (Ἀμφικτύονες), members of an *Amphictyonia* (Ἀμφικτυονία or Ἀμφικτιονία). Institutions called Amphictyonic appear to have existed in Greece from time immemorial. Of their nature and object history gives us only a general idea; but we may safely believe them to have been associations of originally neighbouring tribes, formed for the regulation of mutual intercourse, and the protection of a common temple or sanctuary, at which the representatives of the different members met, to transact business and celebrate religious rites and games. This identity of religion, coupled with near neighbourhood, and that too in ages of remote antiquity, implies in all probability a certain degree of affinity, which might of itself produce unions and confederacies amongst tribes so situated, regarding each other as members of the same great family. They would thus preserve among themselves, and transmit to their children, a spirit of nationality and brotherhood; nor could any better means be devised than the bond of a common religious worship, to counteract the hostile interests which, sooner or later, spring up in all large societies. The true derivation of the word from κτίω, with the same meaning as περικτιόνες, is given by several ancient writers (Hesychius; Anaximenes *ap.* Harpocrat. *s. v.*; Androtion's Ἀτθὶς, *ap.* Pausan. x. 8, § 1). The mythic founder Amphictyon, son or grandson of Deucalion, belongs to the same region of eponymous heroes as Hellen and his sons, and need not be seriously considered.

The causes and motives from which we might expect such institutions to arise existed in every neighbourhood; and accordingly we find many Amphictyoniae of various degrees of importance, though our information respecting them is very deficient. Thus we learn from Strabo, that there was one of some celebrity whose place of meeting was a sanctuary of Poseidon (Müller, *Dorians*, ii. 10, § 5; Strab. viii. 6, 14) at Calauria, an ancient settlement of the Ionians in the Saronic Gulf. The original members were Epidaurus, Hermione, Nauplia, Prasiae in Laconia, Aegina, Athens, and the Boeotian Orchomenus (Thirlwall, *Hist. of Greece*, vol. i. p. 375); whose remoteness from each other makes it difficult to conceive what could have been the motives for forming the confederation, more especially as religious causes seem precluded by the fact, that Troezen, though so near to Calauria, and though Poseidon was its tutelary god, was not a member. In after-times, Argos and Sparta took the place of Nauplia and Prasiae, and religious ceremonies were the sole object of the meetings of the association. The unnamed Amphictyony to which the Messenians were ready to refer their differences with the Spartans

(Paus. iv. 5, § 1) may have been that of Calauria; though the existence of another at Argos, including all the Peloponnesian Dorians, and having either the Argive Hera or the Pythian Apollo for its tutelary divinity, has been conjectured by some modern scholars (Schömann, *Alterth.* ii. 25; De Sainte-Croix, *Des Anciens Gouvernemens Fédératifs*, Paris, 1804, p. 129; K. O. Müller, *Dorians*, i. 154). Better attested is that of Onchestus in Boeotia, where the gathering was round a famous temple of Poseidon (Strab. ix. 2, 33; Pausan. ix. 26, § 3). Near Samicum in Elis was also a temple of Poseidon, the centre of worship to the six Triphylian cities; and this is sometimes described as an Amphictyony (Strab. viii. 3, 13); as is also the Euboean festival of the Amarynthia. [AMARYNTHIA.]

One of the most important was that of Delos, the religious metropolis or *ἱστίη νήσων* (Callim. *Hymn. in Del.* 325) of the neighbouring Cyclades, where musical and gymnastic contests were celebrated every fourth year (a *πεντετηρίς*) in honour of the Delian Apollo. Thucydides, describing the purification of Delos by the Athenians in 426 B.C., attests the great antiquity of this festival, quoting two passages from the Homeric Hymn to Apollo (Thuc. iii. 104; Hom. *Hymn. in Apoll.* 146 ff. and 165 ff.). Plutarch (*Thes.* 21) ascribes the foundation of it to Theseus. The names of the states composing this Amphictyony are preserved in the inscription known as the *Marmor Sandwicense*, which contains the accounts of the four years 377–374 B.C., and is given by Böckh in *C. I. G.* i. 252 and in the appendix to his *Political Economy* (vol. ii., p. 78 ff.; 2nd Germ. edit.). They include the islands of Myconos, Syros, Tenos, Ceos, Siphnos, Seriphos, Ios, Paros, Icaria, Naxos, Andros, and the town of Carystus in Euboea. The *θεωροί* sent by the Athenians to Delos are well known [THEORI; DELIA]; they were also called Δηλιασταί. (Ath. vi. p. 234 e; Harpocrat., Hesych. *s. v.*)

The system indeed was by no means confined to the mother country; for the federal unions of the Dorians, Ionians, and Aeolians, living on the west coast of Asia Minor, seem to have been Amphictyonic in spirit, although modified by exigencies of situation. Their main essence consisted in keeping periodical festivals in honour of the acknowledged gods of their respective nations. Thus the Dorians held a federal festival, and celebrated religious games at Triopium, uniting with the worship of their national god Apollo that of the more ancient and Pelasgic Demeter. The Ionians met for similar purposes in honour of the Heliconian Poseidon* at Mycale,—their place of assembly being called the Panionium, and their festival Panionia. The twelve towns of the Aeolians assembled at Grynea, in honour of Apollo. (Herod. i. 144, 148, 149; Dionys. iv. 25.) That these confederacies were not merely for offensive and defensive purposes, may be inferred from their existence after the subjugation of these colonies by Croesus; and we know that Halicarnassus was excluded from the Dorian union, merely because one of its citizens had not made the usual offering to Apollo of the prize he had won in the Triopic contests. A confederation somewhat similar, but more political than religious, existed in Lycia (Strab. xiv. 3, 2): it was called the "Lycian system," and was composed of twenty-three cities.

But besides these and others, there was one Amphictyony of greater celebrity than the rest, and much more lasting in its duration. This was by way of eminence called the Amphictyonic league; and differed from the other associations in having two places of meeting, the sanctuaries of two divinities. These were the temple of Demeter, in the village of Anthela, near Thermopylae (Herod. vii. 200), where the deputies or representatives met in autumn; and that of Apollo at Delphi, where they assembled in spring. The connexion of this Amphictyony with the latter not only contributed to its dignity, but also to its permanence. With respect to its early history, Strabo (ix. 3, 7) says, that even in his days it was impossible to learn its origin. We know, however, that it was originally composed of twelve *tribes* (not cities or states, it must be observed), each of which tribes contained various independent cities or states. As to the names of the twelve tribes, however, our accounts are very various. The lists in Pausanias (x. 8, § 2) and Harpocration, *s. v.*, differ in some particulars from that of Aeschines (*F. L.* § 116). The latter, who may be taken as an authoritative witness for his own time, after mentioning that there were twelve *ἔθνη* in the league, gives only eleven names—the Thessalians, Boeotians (not Thebans only, he remarks), Dorians, Ionians, Perrhaebians, Magnetes, Locrians, Oetaeans, Phthiots or Achaeans of Phthia, Malians or Melians, and Phocians. Recent editors have supplied the Dolopians as the twelfth name, following a conjecture of Tittmann's in his work on the Amphictyonic League (p. 40); and the list, as thus completed, is adopted by Grote (vol. ii. p. 325). Others join the Dolopians with the Perrhaebians, and reckon as a separate tribe the Aenianes who, on Tittmann's view, are included among the Oetaeans (Foucart, *ap.* D. and S., *s. v.*). It must be admitted that it is impossible fully to harmonise the ancient authorities themselves: but the list may have varied at different times, and Pausanias, who gives only ten names (omitting the Boeotians and Perrhaebians) expressly refers the ten to the mythic Amphictyon. The preponderance of the Thessalian and northern nations of Greece proves the antiquity of the institution; and the fact of the Dorians standing on an equality with such tribes as the Malians, shows that it must have existed before the Dorian conquest of the Peloponnesus which originated several *states* more powerful, and therefore more likely to have sent their respective deputies than the tribes mentioned. That it existed moreover before the Ionian migration, has been inferred from the Ionians of Asia having a share in the vote, and from the statement of Tacitus (*Ann.* iv. 14): "Samii decreto Amphictyonum nitebantur, quis praecipuum fuit rerum omnium judicium, qua tempestate Graeci, conditis per Asiam urbibus, ora maris potiebantur." The passage in Tacitus is, however, with more probability referred to the Delian Amphictyony.

We learn from Aeschines (*l. c.*) that each of the twelve Amphictyonic tribes had two votes in congress, and that deputies from such towns as

---

* Poseidon was the god of the Ionians, as Apollo of the Dorians. (Müller, *Dor.* ii. 10, § 5.)

(Dorium and) * Cytinium had equal power with the Lacedaemonians, and that Eretria and Priene, Ionian colonies, were on a par with Athens (*ἰσόψηφοι τοῖς Ἀθηναίοις*). It seems therefore to follow, either that each Amphictyonic tribe had a cycle (Strab. ix. 3, 7; Pausan. x. 8, § 2), according to which its component states returned deputies, or that the vote of the tribe was determined by a majority of votes of the different states of that tribe. The latter supposition might explain the fact of there being a larger and smaller assembly —a *βουλή* and *ἐκκλησία*—at some of the congresses, and it is confirmed by the circumstance that there was an annual election of deputies at Athens, unless this city usurped functions not properly its own.

The council itself was called *Pylaea* (Πυλαία) from its meeting in the neighbourhood of Pylae (Thermopylae), but the same name was given to the session at Delphi as well as to that at Thermopylae. It was composed of two classes of representatives, one called *Pylagorae* (Πυλαγόραι), the other *Hieromnemones* (Ἱερομνήμονες). Of the former, three were annually elected at Athens to act with one Hieromnemon appointed by lot. (Aristoph. *Nubes*, v. 623.) That his office was highly honourable we may infer from the oath of the Heliasts (Dem. *c. Timocr.* p. 747, § 150). in which he is mentioned with the nine archons. On one occasion we find that the president of the council was a Hieromnemon, and that he was chosen general of the Amphictyonic forces, to act against the Amphissians. (Tittmann, p. 87.) Hence it has been conjectured that the Hieromnemones, also called *ἱερογραμματεῖς*, were superior in rank to the pylagorae. (Tittmann, pp. 84, 86.) Aeschines also contrasts the two in such a way as to warrant the inference that the former office was the more permanent of the two. Thus he says (*c. Ctes.* § 115), "When Diognetus was Hieromnemon, ye chose me and two others Pylagorae." He then contrasts "the Hieromnemon of the Athenians with the Pylagorae for the time being." There is even good reason for supposing that the Hieromnemon was elected for life (Clinton, *F. H.*, vol. iii. p. 621; Tittmann, *l. c.*), although some writers are of a different opinion (Schömann, *de Comit.* p. 283). Again, we find inscriptions (Böckh, *Inscr.* 1171), containing surveys by the Hieromnemones, as if they formed an executive; and that the council concluded their proceedings on one occasion (Aesch. *c. Ctes.* § 124), by resolving that there should be an extraordinary meeting previously to the next regular assembly, to which the Hieromnemones should come with a decree to suit the emergency just as if they had been a standing committee. Their name implies a more immediate connexion with the temple; but whether they voted or not upon matters in general is doubtful: from the two Amphictyonic decrees quoted below, we might infer that they did not, while the inscriptions (1688 and 1699), quoted by Schömann (p. 392), and the statement of Demosthenes (*pro Coron.* p. 277, § 149 f.), lead to a contrary conclusion. The narrative of Aeschines (*c. Ctes.* § 116) implies that they were more peculiarly the representatives of their constituent states. Probably the respective functions of the two classes of representatives were not strictly defined, and varied at different times, if indeed they are always correctly distinguished by the authors who allude to them. The *ἐκκλησία*, or general assembly, included not only the classes mentioned, but also those who had joined in the sacrifices and were consulting the god; and as there was a large multitude annually collected at the Amphictyonic session at Thermopylae, it was probably numerously attended. (Hesychius, *s. v.*; cf. Soph. *Trach.* 639.) It was convened on extraordinary occasions by the chairman of the council (Ὁ *τὰς γνώμας ἐπιψηφίζων*, Aesch. *l. c.* 124).

Of the duties of this latter body nothing will give us a clearer view than the oaths taken and the decrees made by it. The oath was as follows (Aesch. *de F. L.* § 115): "They would destroy no city of the Amphictyons, nor cut off their streams in war or peace; and if any should do so, they would march against him and destroy his cities; and should any pillage the property of the god, or be privy to or plan anything against what was in his temple at Delphi, they would take vengeance on him with hand and foot, and voice, and all their might." There are two decrees given by Demosthenes, both commencing thus (Dem. *de Cor.* p. 278, § 154): "When Cleinagoras was priest (*ἱερεύς*), at the spring meeting, it was resolved by the pylagorae and the assessors of the Amphictyons, and the general body of them," &c. The resolution in the second case was, that as the Amphissians continued to cultivate "*the sacred district*," Philip of Macedon should be requested to help Apollo and the Amphictyons, and that he was thereby constituted absolute general of the Amphictyons. He accepted the office, and soon reduced the offending city to subjection. From the oath and the decrees, we see that the main duty of the deputies was the preservation of the rights and dignity of the temple at Delphi. We know, too, that after it was burnt down (B.C. 548), they contracted with the Alcmaeonidae for the rebuilding (Herod. ii. 180, v. 62); and Athenaeus (A.D. 228) informs us (iv. p. 173 b) that in other matters connected with the worship of the Delphian god they condescended to the regulation of the minutest trifles. History, moreover, teaches that if the council produced any palpable effects, it was from their interest in Delphi; and though it kept up a standing record of what ought to have been the international law of Greece, it sometimes acquiesced in, and at other times was a party to, the most iniquitous and cruel acts. Of this the case of Crissa is an instance. This town lay on the Gulf of Corinth, near Delphi, and was much frequented by pilgrims from the West. The Crissaeans were charged by the Delphians with undue exactions from these strangers, and with other crimes. The council declared war against them, as guilty of a wrong against the god. The war lasted ten years, till, at the suggestion of Solon, the waters of the Pleistus were turned off, then poisoned, and turned again into the city. The besieged drank their fill, and Crissa was soon razed to the ground; and thus, if it were an Amphictyonic city, was a solemn oath doubly violated. Its territory—the rich Crissaean or

---

* There is a doubt about the reading. (See Thuc. iii. 95; Tittmann, p. 52.)

Cirrhaean plain—was consecrated to the god, and curses imprecated upon any one who should till or dwell in it. Thus ended the First Sacred War (B.C. 586), in which the Athenians and Amphictyons were the instruments of Delphian vengeance. (Paus. x. 37, § 4; Clinton, *F. H.*, vol. ii. p. 196; Aeschin. *c. Ctes.* § 107 ff.) The Second or Phocian War (B.C. 356) was the most important in which the Amphictyons were concerned (Thirlwall, *Hist. of Greece*, vol. v. pp. 263–372; Grote, ch. 87); and in this the Thebans availed themselves of the sanction of the council to take vengeance on their enemies, the Phocians. To do this, however, it was necessary to call in Philip of Macedon, who readily proclaimed himself the champion of Apollo, as it opened a pathway to his own ambition. The Phocians were subdued (B.C. 346), and the council decreed that all their cities, except Abae, should be razed, and the inhabitants dispersed in villages not containing more than fifty inhabitants. Their two votes were given to Philip, who thereby gained a pretext for interfering with the affairs of Greece; and also obtained the recognition of his subjects as Hellenes. To the causes of the Third Sacred War allusion has been made in the decrees quoted by Demosthenes. The Amphissians tilled the devoted Cirrhaean plain, and behaved, as Strabo (ix. 3, 4) says, worse than the Crissaeans of old (*χείρους ἦσαν περὶ τοὺς ξένους*). Their submission to Philip was immediately followed by the battle of Chaeroneia (B.C. 338), and the extinction of the independence of Greece. In the following year, a congress of the Amphictyonic states was held; in which war was declared as if by united Greece against Persia, and Philip elected commander-in-chief. On this occasion the Amphictyons assumed the character of national representatives as of old, when they set a price upon the head of Ephialtes, for his treason to Greece at Thermopylae, and erected monuments in honour of the Greeks who fell there. Herodotus indeed (vii. 214, 228), speaking of them in reference to Ephialtes, calls them *οἱ τῶν Ἑλλήνων Πυλαγόροι*.

We have sufficiently shown that the Amphictyons themselves did not observe the oaths they took; and that they did not much alleviate the horrors of war, or enforce what they had sworn to do, is proved by many instances. Thus, for instance, Mycenae was destroyed by Argos (B.C. 468), Thespiae and Plataeae by Thebes, and Thebes herself swept from the face of the earth by Alexander (*ἐκ μέσης τῆς Ἑλλάδος ἀνήρπασται*, Aeschin. *c. Ctes.* § 133). Indeed, we may infer from Thucydides (i. 112), that a few years before the Peloponnesian war the council was a passive spectator of what he calls *ὁ ἱερὸς πόλεμος*, when the Lacedaemonians made an expedition to Delphi, and put the temple into the hands of the Delphians; the Athenians, after their departure, restoring it to the Phocians: and yet the council is not mentioned as interfering. It will not be profitable to pursue its history further; it need only be remarked, that Augustus wished his new city, Nicopolis (B.C. 31), to be enrolled among its members; and that Pausanias, in the second century of our era, mentions it as still existing, but deprived of all power and influence. In fact, even Demosthenes (*de Pace*, extr.) spoke of it as the shadow at Delphi (*ἡ ἐν Δελφοῖς σκιά*). In the time of Pausanias, the number of Amphictyonic deputies was thirty.

A question of some interest arises with regard to the two places of meeting. Where did the association originate?—were its meetings first held at Delphi, or at Thermopylae? There seems a greater amount of evidence in favour of the latter. In proof of this may be alleged the number of Thessalian tribes from the neighbourhood of the Maliac bay, and the comparative insignificance of many of them; the assigned birthplace and residence of the mythic Amphictyon, the names Pylagorae and Pylaea. Besides, we know that Thessaly was the theatre and origin of many of the most important events of early Greek history; whereas, it was only in later times, and after the Dorian conquest of Peloponnesus, that Delphi became important enough for the meetings of such a body as the Amphictyonic; nor, if Delphi had been of old the only place of meeting, is it easy to account for what must have been a loss of its ancient dignity. But whatever was the cause, we have still the fact, that there were two places of congress; to account for which, it has been supposed that there were originally two confederations, afterwards united by the growing power of Delphi, as connected with the Dorians, but still retaining the old places of meeting. We must, however, admit that it is a matter of mere conjecture whether this were the case or not, there being strong reasons in support of the opinion that the Dorians, on migrating southwards, combined the worship of the Hellenic Apollo with that of the Pelasgian Demeter, as celebrated by the Amphictyons of Thessaly. (Thirlwall, *Hist. of Greece*, cc. x. xliii.; Grote, vol. ii. ch. 2; Heeren, *Ancient Greece*, c. 7; De Sainte-Croix, *Des Anciens Gouvernemens Fédératifs*; Tittmann, *Ueber den Bund der Amphictyonen*; Müller, *Dorians*, book ii. 3, § 5: Hermann, *Staatsalterth.* §§ 11–14; Freeman, *Hist. of Federal Government*, ch. iii.) [R. W.] [W. W.]

AMPHIDROM'IA (ἀμφιδρόμια), a family festival of the Athenians at which the newly born child was introduced into the family, and received its name. No particular day was fixed for this solemnity; but it did not take place very soon after the birth of the child, for it was believed that most children died before the seventh day, and the solemnity was therefore generally deferred till after that period, that there might be at least some probability of the child remaining alive. According to Suidas, the festival was held on the fifth day, when the women who had lent their assistance at the birth washed their hands, but this purification preceded the real solemnity. The friends and relations of the parents were invited to the festival of the amphidromia, which was held in the evening, and they generally appeared with presents, among which are mentioned the cuttle-fish and the marine polyp. (Hesych. and Harpocr. *s. v.*) The house was decorated on the outside with olive branches when the child was a boy, or with garlands of wool when the child was a girl; and a repast was prepared, at which, if we may judge from a fragment of Ephippus in Athenaeus (ix. p. 370; comp. ii. p. 65), the guests must have been rather merry. The child was then carried round the fire by the nurse, and thus, as it were, presented to the gods of the house and to the family, and at the same time received its name, to which the guests were witnesses. (Isaeus, *de Pyrrhi Hered.* § 30.) The carrying of the child round the hearth was the principal part of the solemnity, from which its name was derived. But the Scholiast on Aristophanes (*Lysistr.* 758) derives its name from the fact that the guests, whilst the name was given to the child, walked or danced around it. This festival is sometimes called from the day on which it took place: if on the seventh day, it is called ἑβδόμαι or ἑβδομάς; if on the tenth day, δεκάτη, &c. (Hesych.; Schol. Aristoph. *Av.* 923; K. F. Hermann, *Gottesd. Alterth.* § 48, n. 6.) [L. S.]

AMPHIMALLUM. [Tapes.]

AMPHIOR'KIA or **AMPHOMOS'IA** (ἀμφιορκία or ἀμφωμοσία), the oath which was taken, both by the plaintiff and defendant, before the trial of a cause in the Athenian courts, that they would speak the truth (Hesych., Suid.). In the ἀνάκρισις or preliminary investigation it was called διωμοσία. The notion of some grammarians (Pollux, viii. 122; Bekker, *Anecd.* pp. 184, 9; 311, 23), that it was also applied to the judges' oath is a mistake. [W. W.]

AMPHIPROSTYLOS. [Templum.]

AMPHISBETE'SIS (ἀμφισβήτησις), the act of claiming an inheritance (L. & S.) or, more properly, of disputing the title of the first claimant. None but direct heirs might enter and take possession of the estate immediately after the owner's death; more distant relatives, or claimants by adoption or devise (κατὰ δόσιν), were not at liberty to enter until the estate was formally adjudged to them. The proper course was to make application to the *archon eponymus*, who attended at his office for that purpose every month in the year except the last (Scirophorion). The party who applied was regarded as a suitor, and (on obtaining a hearing) was said λαγχάνειν τοῦ κλήρου (Isaeus, *Or.* 11 [*Hagn.*], §§ 15, 26-7; *Or.* 3 [*Pyrrh.*], § 60; *Or.* 9 [*Astyph.*], § 3; Demosth. *Steph.* ii. p. 1136, § 23). As the first regular assembly (κυρία ἐκκλησία) held after he had received notice, the archon caused proclamation to be made, that such a person had died without issue, and that such and such persons claimed to be his heirs. The herald then asked εἴ τις ἀμφισβητεῖν ἢ παρακαταβάλλειν βούλεται τοῦ κλήρου. There is no doubt about the meaning of παρακαταβάλλειν, "to make a deposit by way of security for costs;" the amount in this case being a tenth part of the value of the property in dispute, which was returned to the party if successful. (Pollux, viii. 32, 95; Bekk. *Anecd.* p. 197, 11; Isaeus, *Or.* 4 [*Nicostr.*], § 10; *Or.* 11 [*Hagn.*], § 13; Demosth. *c. Macart.* p. 1051, § 5; *c. Leoch.* p. 1090, § 34, &c.)

The general question of procedure in cases of disputed inheritance is treated under Heres; the only point now to be considered is whether ἀμφισβήτησις and παρακαταβολή were employed under different conditions or were alternatives open to all suitors in every case. It has been argued, indeed, as by Hefter and De Boor (quoted by Westermann *ap.* Pauly, and Caillemer *ap.* Daremberg and Saglio *s. v.*), that all who put in a claim were compelled to give security, but to this it seems sufficient to answer, that in that case the formula would have been ἀμφισβητεῖν καὶ παρακαταβάλλειν. It is clear, therefore, that two distinct processes are intended. There is little probability in the notion that the παρακαταβολή was required of those who claimed the whole inheritance, not of those who only claimed a part (C. R. Kennedy, in the former editions of this work); or that it was required only of those who sought to disturb possession already decreed (Bunsen, *de jure hered. Athen.* p. 92); or only of more distant relatives, claiming against nearer (Meier and Schömann, *Att. Process*, pp. 464, 618 f.). The best explanation is that the claimant in all cases had his choice of the two modes of procedure; but if he failed to back his claim with a substantial deposit, he would not be likely to obtain a favourable hearing. This is the view of Platner (*Process und Klagen*, ii. 310 ff.) and others, including Caillemer *ap.* D. and S. We may perhaps say that this variety of remedies ostensibly gratified the Athenian taste for cheap law, involving no risks for poor men, while it provided a real security against frivolous litigation. If the subsequent claimant or claimants elected to proceed by way of παρακαταβολή, the first suitor was practically, though perhaps not legally, compelled to do the same, on pain of having it thought that his own claim would not bear investigation. [W. W.]

AMPHITAPAE. [Tapes.]

AMPHITHAL'AMUS (ἀμφιθάλαμος), a room in the *gynaeconitis*, or women's quarters, in a Greek house, opposite the θάλαμος, from which it was separated by the παστάς. It served probably as a sleeping apartment for the grown-up daughters. (Vitruv. vi. 7, § 2.) [Domus.] [J. H. O.]

AMPHITHEA'TRUM (ἀμφιθέατρον) was a description of building arranged for the exhibition of combats of gladiators, and wild beasts, and ships, which constituted the *ludi amphitheatrales*. [Gladiatores; Venatio; Naumachia.]

I. *Its History.*—Such exhibitions—which were peculiar to the Romans, and which were unknown to the Greeks till the Romans introduced them—originally took place in the Forum and the Circus, the shows of gladiators being given in the former, and those of wild beasts in the latter; indeed the amphitheatre itself is sometimes called *circus*. The shape of the circus, however, was much better fitted for the chariot races, for which it was at first designed, than for the gladiatorial combats, and the mere wholesale slaughter of animals, which, in process of time, came to be the favourite amusements of the Romans. For these purposes, the circus was too long and too narrow, and the spina was a great impediment, so that a new form of building was required, which should accommodate a multitude of spectators in such a manner as that all might have a good view of the space occupied by the combatants, which space too required to be of quite a different shape from the circus, as the combatants were to be kept as much as possible in the same place. The idea of such a building was suggested, as the name seems to imply, by the already existing theatre: indeed, the first amphitheatre of which we have any account—that of C. Scribonius Curio—was, literally, a *double theatre*,[*] being composed of two theatres, placed on pivots, so that they could be turned round, spectators and all, and placed either back to back, forming two separate theatres for dramatic exhibitions, or face to face, forming an amphitheatre, for the shows of gladiators and wild beasts. This edifice, which was erected by Curio, the celebrated partisan of Caesar, in B.C. 50, for the celebration of his father's funeral games, is described by Pliny (*H. N.* xxxvi. § 116 f.). The next amphitheatre, and apparently the first to which the name was applied, was built by Julius Caesar himself, during his perpetual dictatorship, in B.C. 46 (Dio Cass. xliii. 22, who thus describes the building: *Θέατρόν τι κυνηγετικὸν, ὃ καὶ ἀμφιθέατρον ἐκ τοῦ πέριξ πανταχόθεν ἕδρας ἄνευ σκηνῆς ἔχειν προσερρήθη*). This, however, was still only of wood, —a material which was frequently used for theatres, and which was, therefore, naturally adopted for amphitheatres, but which sometimes proved inadequate to support the weight of the immense body of spectators, and thus occasioned serious accidents. For example, we are told that a wooden amphitheatre, which was built at Fidenae in the reign of Tiberius A.D. 27 by Atilius, a freedman, fell in, and buried either 20,000 or 50,000 spectators in its ruins. (Suet. *Tib.* 40; Tac. *Ann.* iv. 63.) Tacitus, who gives the higher and almost incredible number, expressly states that the loss of life was equal to that of a great war. These wooden buildings were, of course, also exposed to great danger from fire; thus a wooden amphitheatre at Placentia was burned in the civil war between Otho and Vitellius. (Tac. *Hist.* ii. 20.)

It was not, however, till the fourth consulship of Augustus, B.C. 30, that a more durable amphitheatre, of stone, was erected by Statilius Taurus, in the Campus Martius. (Dio Cass. li. 23; Suet. *Octav.* 29; Tac. *Ann.* iii. 72; Strab. vi. p. 236.) But, since this building was destroyed by fire, it must be supposed that only the shell was of stone, and the seats and staircases of wood. This edifice was the only one of the kind until the building of the Flavian amphitheatre. It did not satisfy Caligula, who commenced an amphitheatre near the Septa; but the work was not continued by Claudius. (Dio Cass. lix. 10; Suet. *Cal.* 18, 21.) Nero too, in his second consulship, A.D. 57, erected a vast amphitheatre of wood, but this was only a temporary building. (Suet. *Ner.* 12; Tac. *Ann.* xiii. 31.) The amphitheatre of Taurus was destroyed in the burning of Rome, A.D. 64 (Dio Cass. lxii. 18), and was probably never restored, as it is not again mentioned. It has been a question with the topographers whether any traces of it are now visible. (Becker, *Röm. Alterth.* i. pp. 642, 643; and Urlichs, *Beschreibung Roms*, pp. 53, 54.[†]) The slight elevation called *Monte Giordano* has been supposed, not improbably, to be caused by its ruins; the same has been said of the *Monte Citorio*, but it is known now that this is over the remains of the temple of M. Aurelius. (Middleton, p. 300.)

The erection of an amphitheatre in the midst of Rome, proportioned to the magnitude of the city, was among the designs of Augustus, who delighted in the spectacles of the *venatio*, and especially in the uncommon species and immense number of the animals exhibited in them; so that, as he himself informs us, in one of his *venationes* there were no less than 3500 animals slaughtered. (Suet. *Vesp.* 9; Aur. Vict. *Epit.* 1; *Monum. Ancyr.*) It was not, however, till the reigns of Vespasian and Titus that the design of Augustus was carried into effect by the erection of the *Amphitheatrum Flavium*, or, as it has been called since the time of Bede, the *Colosseum* or *Coliseum*, probably on account of its gigantic size. According to some, this name was derived from the colossal statue of Nero, which stood close by, but this is not probable, as the bronze Colossus had been overthrown and melted long before the name Colosseum had been applied to the Flavian amphitheatre (Middleton, p. 302).

This wonderful building, which for magnitude can only be compared to the pyramids of Egypt, and which is perhaps the most striking monument at once of the material greatness and the moral degradation of Rome under the empire, was commenced by Vespasian (Suet. *Vesp.* 9), probably at an early period of his reign; for the genuineness of the medal, which is quoted by Lipsius as placing its commencement in his eighth consulship, A.D. 77, is more than doubtful (Eckhel, *Doctr. Num. Vet.* vol. vi. p. 840), and the time too short. It was completed by Titus, who dedicated it in A.D. 80, when 5000 animals of different kinds were slaughtered. (Suet. *Tit.* 7; Dio Cass. lxvi. 25.) He seems, however, only to have completed the main framework of the building so far as was necessary to make it possible to hold games in it, and Domitian afterwards added the last story and the ornamental work (*usque ad clypea: Catal. Viennensis* ap. Roncalli, p. 243). As built by the Flavian emperors, the highest tiers of seats inside, and probably the fourth story as a whole, were of wood. An examination of the existing structure shows that it is of two distinct dates, with a considerable interval; and these portions of it are now proved to be not earlier than the time of Alexander Severus and Gordian III. The junction of the work of the two periods can be clearly seen in the interior. (Burn, p. 235; Parker, pt. vii. pp. 6, 25; Middleton, p. 303 f.)

There is an ecclesiastical tradition, but not entitled to much credit, that the architect of the *Coliseum* was a Christian, and afterwards a martyr, named Gaudentius, and that thousands of the captive Jews were employed in its erection. Venuti gives, as the authority for this statement, an inscription now in the church of *S. Martino* on the Esquiline. The inscription,

---

[*] Mr. Parker unsuccessfully attempts to prove that the name *theatrum* was applied to an amphitheatre like the Flavian. (*Archaeol. of Rome*, pt. vii. p. 9 f.)

[†] In the south-eastern angle of the walls of Aurelian, near the church of S. Croce, are the remains of an amphitheatre of brick, called *Amphitheatrum Castrense* in the *Notitia* of the fourth century A.D. Its date is not exactly determined, but it was probably coeval with the *Castra Praetoriana*, a work of the early emperors. The doubts of Becker (*Röm. Alterth.* i. 549 ff.) as to the identity of the existing structure with that described in the *Notitia*, are not supported by the judgment of more recent scholars; and the brick-work is now stated to be of the reign of Trajan or even earlier. (Middleton, p. 328.)

however, probably relates only to the martyrdom of Gaudentius in the amphitheatre, and does not even say that he was an architect. (Burn, *l. c.*; Middleton, *l. c.*)

The Flavian amphitheatre, from its enormous size, rendered the subsequent erection of any other such building in Rome perfectly unnecessary. It became the spot where prince and people met together to witness those sanguinary exhibitions, the degrading effects of which on the Roman character can hardly be over-estimated. It was partially repaired by Antoninus Pius (Capit. *Ant. Pi.* 8). In the reign of Macrinus, on the day of the Vulcanalia, it was struck by lightning, by which the upper rows of benches were consumed, and so much damage was done to other parts of the structure, that the games were for some years celebrated in the Stadium. (Dio Cass. lxxviii. 25.) Its restoration was commenced by Elagabalus and completed by Alexander Severus. (Lamprid. *Heliog.* 17; *Alex. Sev.* 24.) A medal of Gordian III. represents the Coliseum with the legend *munificentia Gordiani Aug.*, showing that fresh works were undertaken within a few years. It was again struck by lightning in the reign of Decius (Hieron. p. 475). but was soon restored, and the games continued to be celebrated in it down to the sixth century. It is usually stated that, in consequence of the self-devotion of Telemachus, an Asiatic monk, who rushed into the arena to separate the gladiators, and was overwhelmed under a shower of stones, Honorius abolished for ever the sacrifices of the gladiators (Theodoret. v. 26); but there is evidence that they were continued even at a later period. (Augustin. *Confess.* vi. 8; Salvian. *de Gubern. Dei*, vi. 2, written after 455: see Dr. Smith's Note to Gibbon, iv. p. 41.) In later times the amphitheatre has been used sometimes in war as a fortress, and in peace as a quarry; whole palaces, such as the Cancelleria and the Palazzo Farnese, having been built out of its spoils. At length the popes made efforts to preserve it: Sixtus V. attempted to use it as a woollen factory, and to convert the arcades into shops; Clement XI. enclosed the lower arcades, and in 1750 Benedict XIV. consecrated it to Christians who had been martyred in it. The best accounts of the building are contained in the following works: Lipsius, *de Amphitheatro*; Nibby, *dell' Anfiteatro Flavio*, a supplement to Nardini, vol. i. p. 233, in which we have the most complete historical account; Fea, *Notizie degli scavi nell' Anfiteatro Flavio*; Bunsen, *Beschreibung d. Stadt Rom*, vol. iii. p. 319, &c.; Cressy and Taylor, *The Architectural Antiquities of Rome*; Maffei, *Verona Illustrata*; Stieglitz, *Archäol. d. Baukunst*; Hirt, *Geschichte d. Baukunst bei den Alten*; Burn, *Rome and the Campagna*, p. 234 ff.; J. H. Parker, *Archaeol. of Rome*, pt. vii.; J. H. Middleton, *Ancient Rome in* 1885, p. 300 foll.

II. *Description of the Flavian Amphitheatre.*—Notwithstanding the damages of time, war, and spoliation, the Flavian amphitheatre still remains complete enough to give us a fair idea, excepting in some minor details, of the structure and arrangements of this description of building. The notices of the ancient authors are extremely scanty; and Vitruvius of course fails us here altogether; indeed, this description of building was so completely new in his time, that only once does the bare word *amphitheatrum* occur in his book (i. 7). We derive important aid from the remains of amphitheatres in the provinces of the ancient Roman empire. We shall first describe the Coliseum, and then mention the chief points of difference between it and these other amphitheatres.

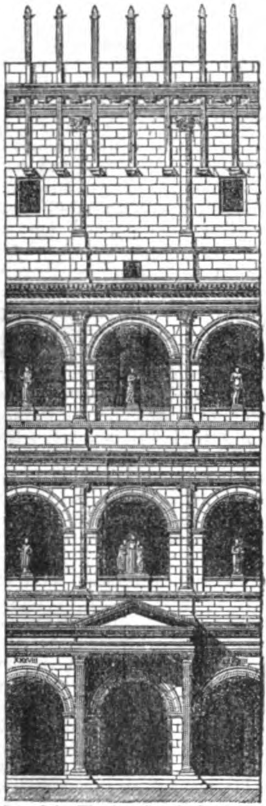
The very site of the Flavian amphitheatre, as of most others, furnishes an example of the prodigal contempt of labour and expense which the Roman emperors displayed in their great works of architecture. The Greeks, in choosing the sites of their theatres, almost always availed themselves of some natural hollow on the side of a hill; but the Roman amphitheatres, with few exceptions, stand upon a plain. The site of the Coliseum was in the middle of the city, in the valley between the Caelian, the Esquiline, and the Velia, on the marshy ground which was previously the lake of Nero's palace, *stagnum Neronis*.

> "Hic ubi conspicui venerabilis amphitheatri
> Erigitur moles, stagna Neronis erant."
> (Mart. *de Spect.* ii. 5.)

No mere measures can give an adequate conception of this vast structure, the dimensions and arrangements of which were such as to furnish seats for 87,000 spectators, round an arena large enough to afford space for the combats of several hundred animals at once, for the evolutions of mimic sea-fights, and for the exhibition of artificial forests; with passages and staircases to give ingress and egress, without confusion, to the immense mass of spectators, and others for the attendants on the arena; dens for the thousands of victims devoted to destruction; channels for the rapid influx and outlet of water when the arena was used for a *naumachia*; and the means for the removal of the carcases, and the other abominations of the arena. Admirable pictures of the magnitude and magnificence of the amphitheatre and its spectacles are drawn in the *Essays* of Montaigne (iii. 6), and in the latter part of Gibbon's twelfth chapter. As a general description of the building, the following passage of Gibbon is perfect:—"It was a building of an elliptic figure, founded on fourscore arches, and rising, with four successive orders of architecture, to the height of 140 [157] feet. The outside of the edifice was incrusted with marble, and decorated with statues. The slopes of the vast concave which formed the inside were filled and surrounded with sixty or eighty rows of seats, of marble likewise, covered with cushions, and capable of receiving with ease about 80,000 spectators. Sixty-four *vomitories* (for by that name the doors were very aptly distinguished) poured forth the immense multitude; and the entrances, passages, and staircases were contrived with such exquisite skill, that each person, whether of the senatorial, the equestrian, or the plebeian order, arrived at his destined place without trouble or confusion. Nothing was omitted which, in any respect, could be subservient to the convenience and pleasure of the spectators. They were protected from the sun and rain by an ample canopy, occasionally drawn over their heads. The air was continually refreshed by the playing of fountains, and profusely impregnated by the grateful scent of aromatics. In the centre of the edifice, the *arena*, or stage, was strewed with the finest sand, and successively assumed the most different forms. At one moment it seemed to rise out of the earth, like the garden of the Hesperides, and was afterwards broken into the rocks and caverns of Thrace. The subterraneous pipes conveyed an inexhaustible supply of water; and what had just before appeared a level plain might be suddenly converted into a wide lake, covered with armed vessels, and replenished with the monsters of the deep. In the decoration of these scenes, the Roman emperors displayed their wealth and liberality; and we read on various occasions that the whole furniture of the amphitheatre consisted either of silver, or of gold, or of amber. The poet who describes the games of Carinus,[*] in the character of a shepherd, attracted to the capital by the fame of their magnificence, affirms that the nets designed as a defence against the wild beasts were of gold wire; that the porticoes were gilded; and that the *belt* or circle which divided the several ranks of spectators from each other, was studded with a precious mosaic of beautiful stones" [really, of glass tesserae in imitation of jewels; cf. ABACULUS].

The ground-plan, external elevation, and section given on p. 111 are from Hirt, and contain of course some conjectural details. The ground-plan is so arranged as to exhibit in each of its quarters the plan of each of the stories: thus, the lower right-hand quarter shows the true *ground-plan*, or that of the lowest story; the next on the left shows a plan of the erections on the level of the second row of exterior columns, as well as the seats which sloped down from that level to the lower one; the next quarter shows a similar plan of the third order, and the upper right-hand quarter exhibits a view of the interior as it would appear to an eye looking vertically down upon it. The dotted lines on the arena are the radii, and their points of intersection the centres, of the several arcs which make up the ellipses.

This structure, like nearly all the other existing amphitheatres, is of an elliptical form. It covers nearly six acres of ground. The plan divides itself naturally into two concentric ellipses, of which the inner constituted the *arena* or space for the combats, while the ring between this and the outer circumference was occupied by the seats for the spectators. The lengths of the major and minor axes of these ellipses are, respectively, 287 feet by 180, and 620 feet by 513. The width of the space appropriated to spectators is, therefore, 166½ feet all round the building. The ratio of the diameters of the external ellipse is nearly that of 6 to 5, which becomes exactly the proportion, if we take in the substructions of the foundation. Of course, the ratio of the diameters of the arena is different, on account of the diminished size: it is, in fact, nearly as 8 to 5. The minor axis of the arena is here, and generally, about one-third of that of the outer ellipse. The material used was stone, in large blocks, fastened together, where necessary, by metal clamps. The exterior was faced with marble and adorned with statues. The external elevation requires little description. It is divided into four stories, corresponding to the tiers of corridors by which access was gained to the seats at different levels. These corridors are connected with the external air by eighty arched openings in each of the three lower stories. To the piers which divide these arches are attached columns which, in the first and second stories, stand out from the wall by nearly three-quarters of their circumference; in the third story, owing to the diminished thickness of the walls, only by a half. Thus, each of the three lower stories presents a continuous façade of eighty columns backed by piers, with eighty open arches between them, and with an entablature continued unbroken round the whole building. The width of the arches is as nearly as possible the same throughout the building, namely, 14 feet 6 inches, except at the extremities of the diameters of the ellipse, where they are two feet wider. Each tier is of a different order of architecture, the lowest being a plain Roman Doric, the next Ionic, and the third Corinthian. The columns of the second and third stories are placed on pedestals; those of the lowest story are raised from the ground by a substructure of two steps.



Elevation of the Flavian Amphitheatre restored.
(Daremberg and Saglio.)

---

[*] The seventh Eclogue of Calpurnius, here referred to by Gibbon, was written in the time of Nero, and is therefore older than the Coliseum; it is the wooden amphitheatre of Nero that is really depicted. The "gold wire" is expressly ascribed to Nero's amphitheatre by Pliny, *H. N.* xxxvii. § 45. In the last quarter of the third century such profusion would have been impossible.

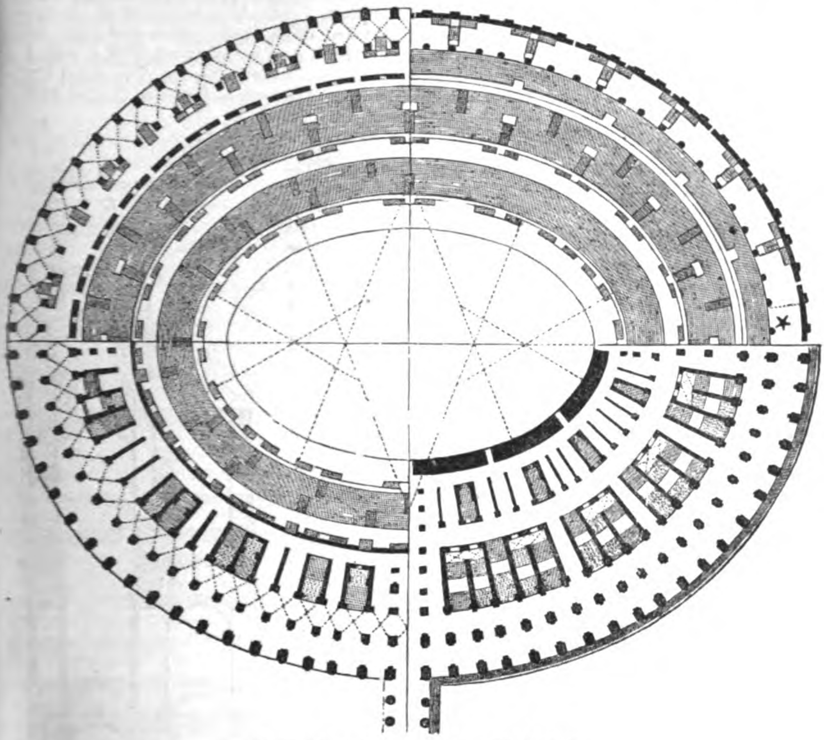
The fourth story has no arches, but consists of a wall pierced with larger and smaller square windows, placed alternately, and is decorated with pilasters of the Composite order. Between each pair of pilasters three consoles or brackets project from the wall, and above these are small vertical shafts in the entablature. The masts, upon which the *velaria* or awnings were stretched, rested on these brackets and passed through the shafts in the manner represented in the above engraving. The total height of that part of the building which remains entire, namely, about three-eighths of the whole circumference, is 157 feet: the stories are respectively about 30, 38, 38, and 44 feet high. The massiveness of the crowning entablature, the height of the upper story, and the great surface of blank wall in its intercolumniations, combine to give the elevation a somewhat heavy appearance; while the projecting cornices of each story, intercepting the view from below, take off very much from the apparent height of the building. Indeed, it would be a waste of words to attempt to specify all the architectural defects of the composition.

The stone used in the exterior is tufa and travertine, and very massive: some of the blocks are as much as five feet high, and eight or ten feet long: and it is remarkable that all these have inscribed upon them small numbers or signs, which evidently indicate the place of each in the building, and which prove how great was the care taken to adapt every single stone to the form of the whole edifice. In some parts of the interior large masses of concrete, brickwork, and tufa are seen; and in the upper part there are fragments of other buildings worked in; but this, no doubt, happened in some of the various repairs.

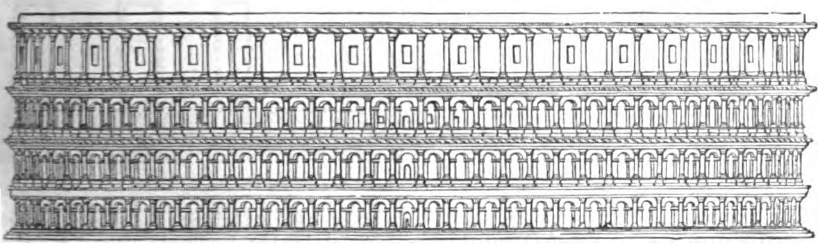
There are coins extant, bearing on the reverse a view of the amphitheatre, so arranged as to show not only the outside, but a portion of the interior also. It is from them that we learn the fact that the outer arches of the second and third stories were decorated with statues in their openings, unless, indeed, the figures shown in the arches are meant for rude representations of the people passing through the outer colonnade. These coins also show, on the highest story, in the alternate spaces between the pilasters, circles against the wall, corresponding to the windows in the other alternate spaces; they are, perhaps, the *clypea* mentioned by the old author cited above,—that is, ornamental metal shields, hung there to decorate the building. There are several coins of Titus and Domitian of this type (Eckhel, *Doctr. Num. Vet.* vol. vi. pp. 357–359, 375). There are similar coins of Gordian, which are, however, very inferior in execution to those of Titus and Domitian. (Eckhel, vol. vii. p. 271.) The coins of Titus and Domitian also show a range of three stories of columns by the side of the amphitheatre, which (though the matter is doubtful) is supposed to represent a colonnade which ran from the palace of Titus on the Esquiline to the amphitheatre, to which it gave access at the northern extremity of its minor axis, as shown on the plan. At the other extremity of this axis was the entrance from the Palatine.

The seventy-six arches of the lower story (omitting the four at the extremities of the axes) formed the numbered entrances for the spectators, and gave admission to a corridor, running uninterruptedly round the building, behind which again is another precisely similar corridor. (See the plan and section.) The space behind the second corridor is divided by eighty walls, radiating inwards from the inner piers of the second corridor; which support the structure, and between which are partly staircases leading to the upper stories, and partly passages leading into a third corridor, which, like the first and second, runs round the whole building. Beyond this corridor the radiating walls are again continued, the spaces between them being occupied, as before, partly by staircases leading on the one side to the *podium*, and on the other to the lower range of seats (*maenianum*), and partly by passages leading to a fourth continuous corridor much lower and smaller than the others, which was divided from the *arena* by a massive wall (called *podium*), the top of which formed the place assigned to the spectators of the highest rank. From this fourth corridor there are several entrances to the *arena;* and it is most probable that the whole of the corridor was subservient to the arrangements of the *arena.* (See the lower right-hand quarter of the plan, and the section.) On the second story we have the two outer colonnades repeated, and the radiating walls of the first block are continued up through this story; and between them are staircases leading out on to the second range of seats, and passages leading into a small inner corridor, from which access is obtained to a sort of terrace (*praecinctio*) which runs round the building between the first and second ranges of seats, and increases the facilities for the spectators getting to their proper places. Sloping down from this *praecinctio* to the level of the top of the *podium*, and supported by the inner series of radiating walls, are the lower series of seats. On the third story (above the floor of which the details are almost entirely conjectural), we have again the double colonnade, the inner wall of which rises immediately behind the top of the second range of seats, with only the interval of a narrow *praecinctio*, to which access was given by numerous doors in the wall just mentioned, which was also pierced with windows. Above the outer corridor of this story is an entresol, or small middle story, in front of which and above the inner colonnade were a few tiers of wooden benches for the lowest class of spectators. Above this entresol was a gallery, which ran right round the building, and the front of which is supposed to have been formed by a range of columns. It seems that the terrace formed by the top of this gallery would be also available for spectators. And, lastly, the very summit of the wall was formed into a sort of terrace, which was, no doubt, occupied by the men who worked the ropes of the *velarium*. The doors which opened from the staircases and corridors on to the interior of the amphitheatre were designated by the very appropriate name of *vomitoria.* The whole of the interior was called *cavea.* The following section (from Hirt) exhibits these arrangements as clearly as they can be shown without the aid of perspective.

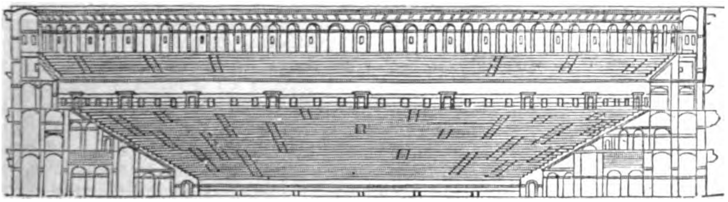
The arena was surrounded by a wall of sufficient height to guard the spectators against any danger from the wild beasts; namely, about fifteen feet. A further protection was afforded, at least sometimes, by a network or trellis of metal; and it is mentioned, as an instance of the profuse ostentation which the emperors were so fond of displaying, that Nero, in his amphitheatre, had this trellis gilt, and its intersections ornamented with bosses of amber.



Ground-plan of the Flavian Amphitheatre.



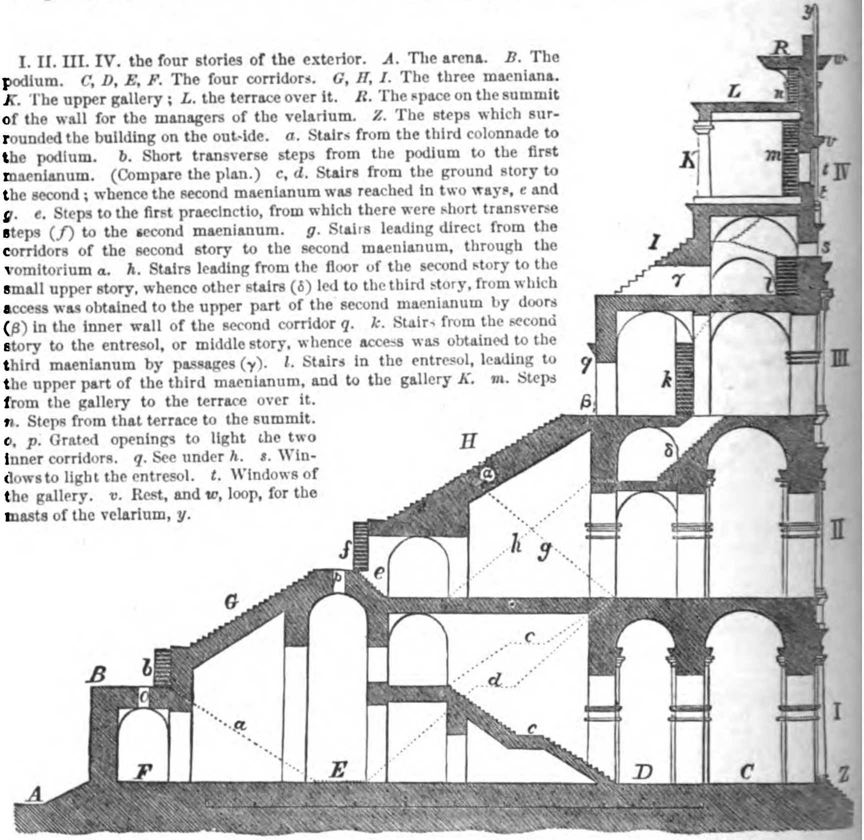
Longitudinal Elevation of the Flavian Amphitheatre.



Longitudinal Section of the Flavian Amphitheatre.

(Plin. *H. N.* xxxvii. § 45; Calpurn. *Ecl.* vii. 47.) The wall just mentioned appears to have been faced with marble, and to have had rollers suspended against it as an additional protection against the possibility of the wild beasts climbing it. (Lips. *de Amph.* 12.) The terrace on the top of this wall, which was called *podium* (a name sometimes also applied to the wall

itself), was about 12 feet high, and no wider than to be capable of containing two, or at the most three ranges of separate marble thrones. This, as being by far the best situation for distinctly viewing the sports in the arena, and also more commodiously accessible than the seats higher up, was the place set apart for senators and other persons of distinction, such as the ambassadors of foreign states (Suet. *Octav.* 44; Juv. ii. 143, &c.); the magistrates seem to have sat here in their curule chairs (Lipsius, *de Amph.* 11); and it was here, also, that the emperor himself used to sit, in an elevated place called *suggestus* (Suet. *Caes.* 76; Plin. *Paneg.* 51), or *cubiculum* (Suet. *Ner.* 12); and likewise the person who exhibited the games, on a place elevated like a pulpit or tribunal (*editoris tribunal*). The vestal virgins also appear to have had a place allotted to them on the podium. (Suet. *Octav.* 44.) Some of these marble seats were taken in the Middle Ages, and used as episcopal thrones in the centre of church apses. (Middleton, p. 315.)

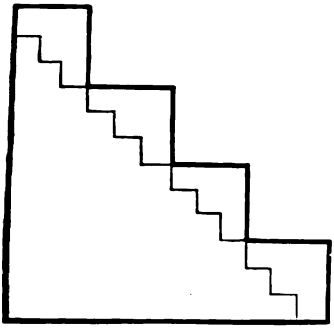


I. II. III. IV. the four stories of the exterior. *A.* The arena. *B.* The podium. *C, D, E, F.* The four corridors. *G, H, I.* The three maeniana. *K.* The upper gallery; *L.* the terrace over it. *R.* The space on the summit of the wall for the managers of the velarium. *Z.* The steps which surrounded the building on the outside. *a.* Stairs from the third colonnade to the podium. *b.* Short transverse steps from the podium to the first maenianum. (Compare the plan.) *c, d.* Stairs from the ground story to the second; whence the second maenianum was reached in two ways, *e* and *g*. *e.* Steps to the first praecinctio, from which there were short transverse steps (*f*) to the second maenianum. *g.* Stairs leading direct from the corridors of the second story to the second maenianum, through the vomitorium *α*. *h.* Stairs leading from the floor of the second story to the small upper story, whence other stairs (δ) led to the third story, from which access was obtained to the upper part of the second maenianum by doors (β) in the inner wall of the second corridor *q*. *k.* Stairs from the second story to the entresol, or middle story, whence access was obtained to the third maenianum by passages (γ). *l.* Stairs in the entresol, leading to the upper part of the third maenianum, and to the gallery *K.* *m.* Steps from the gallery to the terrace over it. *n.* Steps from that terrace to the summit. *o, p.* Grated openings to light the two inner corridors. *q.* See under *h.* *s.* Windows to light the entresol. *t.* Windows of the gallery. *v.* Rest, and *w*, loop, for the masts of the velarium, *y*.

Section of the Corridors, Stairs, and Seats.

Above the podium were the *gradus*, or seats of the other spectators, which were divided into stories called *maeniana*. The whole number of seats is supposed to have been about eighty. The first *maenianum*, consisting of fourteen rows of stone or marble seats, was appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (*pulvini*), which were first used in the time of Caligula. (Juv. iii. 154; Dio Cass. lix. 7.) Then, after a horizontal space, termed a *praecinctio*, and forming a continuous landing-place from the several staircases which opened on to it, succeeded the second *maenianum*, where were the seats called *popularia* (Suet. *Dom.* 4), for the third class of spectators, or the *populus*. Behind this was the second *praecinctio*, bounded by the high wall already mentioned; above which was the third *maenianum*, where there were only wooden benches for the *pullati*, or common people. (Suet. *Octav.* 44.) The open gallery at the top was the only part of the amphitheatre in which women were permitted to witness the games, except the vestal virgins, and perhaps a few ladies of distinction and influence who were suffered to share the space appropriated to the vestals (Suet. *Octav.* 44). The seats of the *maeniana* did not run in unbroken lines round the whole building, but were divided into portions called *cunei* (from their shape), by short flights of stairs which facilitated the access to the seats. (Suet. *Oct.* 44; Juv. *Sat.* vi. 61.) See the plan, and the annexed section of a small portion of the seats.

Not only were the different ranges of seats appropriated to different classes of spectators, but the tickets of admission marked the exact seat the holder was to occupy, with the number of the *maenianum* and the *cuneus*, who was at once guided to his place by numbers placed over the external arches by which the building was entered: these numbers still exist. "An existing ivory ticket for the amphitheatre of Frusinone has similar indications (see Mommsen in *Berl. Sachs Gesell.* 1849, p. 286), namely, CVN.VI.IN.XVIII.; that is, *the sixth cuneus, lowest row, seat No.* 18." (Middleton, p. 306.) An important inscription, now in the Capitoline Museum, bearing the names of the consuls A.D. 80, shows the manner in which seats in the amphitheatre were distributed and numbered. The office of preserving order in the distribution of the places was assigned to attendants, and the whole management was under the superintendence of the *vilicus amphitheatri*.



It only remains to describe the *arena*, or central open space for the combatants, which derived its name from the sand with which it was covered, chiefly for the purpose of absorbing the blood. Such emperors as Caligula, Nero, and Carinus, showed their prodigality by using cinnabar and borax instead of the common sand. It was bounded, as already stated, by the wall of the *podium*, but in the earlier amphitheatres, in which the *podium* was probably not so lofty, there were ditches (*euripi*) between it and the arena, which were chiefly meant as a defence against the elephants. The *euripi* were first made by Julius Caesar, and were dispensed with by Nero, in order to gain space for the spectators. (Suet. *Caes.* 39; Plin. *H. N.* viii. § 21; Lipsius, *de Amph.* 12.)

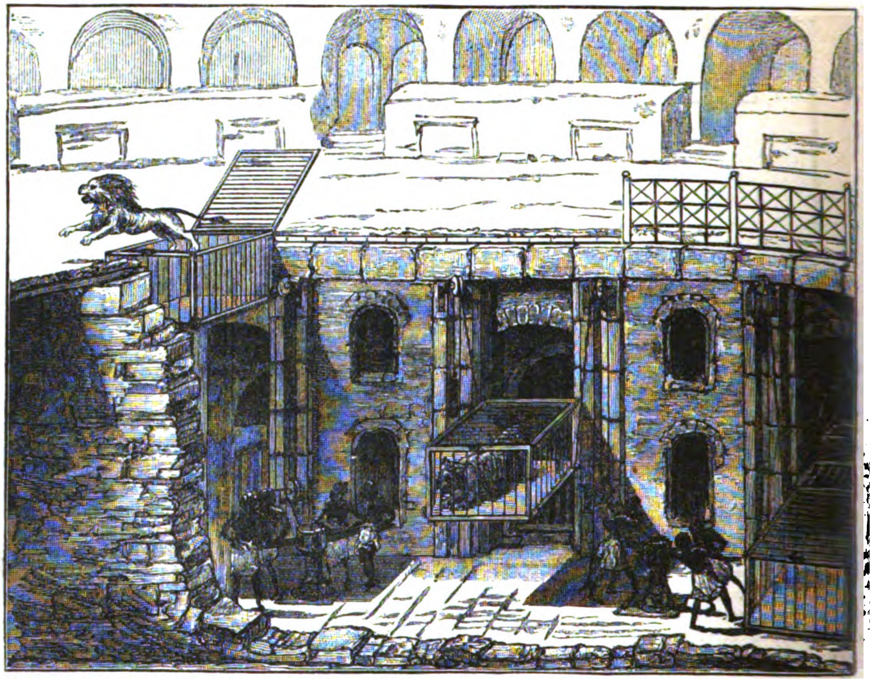
The space of the arena was entirely open. If, as Lipsius thinks (*de Amph.* 4), there was an altar on which sacrifices were offered at the opening of the games, it must have been a moveable one, as a permanent structure would have interfered with the exhibitions. There were four principal entrances to it, at the extremities of the axes of the ellipse, by passages which led directly from the four corresponding arches of the exterior; there were also minor entrances through the wall of the *podium*. This wall has now been removed, and the arena is consequently much larger than its original size, which was about 250 ft. by 150. In the year 1813, the arena was partially excavated, and extensive substructions were discovered, which were at once supposed to be the dens from which the animals were let loose upon the arena through trap-doors. The chief difficulty was to reconcile such an arrangement with the fact that the arena was frequently flooded and used for a naval combat, and that too in the intervals between the fights of wild beasts. (Calpurn. *Eclog.* vii. 64, 73: the whole poem is a very interesting description of the games of the amphitheatre.) [NAUMACHIA.] Further excavations in 1874–5 laid bare the whole substructure of the arena, and cleared up several points which were before uncertain, or only inferred from the well-preserved lower portions of the amphitheatre at Pozzuoli. The sockets were discovered in which the *pegmata* or lifts worked by which the cages were raised to the level of the arena. These are figured by Parker in plate xvi. of his work on the Coliseum, whence the illustration on the next page is partly derived. We must not suppose that the animals were kept for any length of time in the dens below the podium. Immense numbers of slaves were employed, and animals must have been brought up in moveable cages as they were wanted. When a *naumachia* took place *between* the *venationes*, we must assume that the animals intended for the second *venationes* were kept in the innermost colonnade, or in its immediate vicinity, during the *naumachia*, and afterwards transferred to the lifts, as the spaces under the seats seem to have been entirely devoted to the passage of the spectators, with only the exception of the innermost corridor. The vast brick walls which fill the entire space below the arena show that there could have been no great depth of water when it was let in for the *naumachia*. There are, however, canals along which the vessels may have moved, but could not manœuvre; the fighting of the crews, and not their evolutions, being the principal amusement. Over the shallower portions flat rafts (*rates*) may have moved more freely. The floor of the arena above these substructures was of boards covered with sand, and moveable; and it was probably not more than a few feet below the present surface of the ground. Had it been below the substructures, as some have thought (referring them to a later date), none but the foremost spectators could have seen anything. Inscriptions dug up at the time of the first excavations in 1813–14 show that the arena and podium were repaired by two prefects of the city, Lampadius and Basilius, in the years 445 and 508 respectively; the second time in consequence of damage by an earthquake; but much of the brick-work lately disclosed is coeval with the building itself, and confirms the conclusions of common sense as to the original level of the arena. Middleton describes (p. 326) the four long subterraneous passages, which led from the space under the *arena* in different directions. One led towards the baths of Titus on the Esquiline; a second to the palace of Commodus on the Caelian hill; a third branched from the second in a southward direction; a fourth towards the Lateran hill. The first three are not now accessible; and of the fourth about a hundred yards are now cleared out.*

It is unnecessary to attempt a detailed de-

---

* The reviser of this article has had the advantage of seeing the Coliseum both before and since the excavations of 1874–5. Mr. Middleton's work (1885) has supplied some further details.

scription of the statues and other ornaments with which the amphitheatre was adorned; but the *velarium*, or awning, by which the spectators were sheltered from the sun, requires some explanation, which will be found under Velum. The space required for the working of the *velarium*, and the height necessary for keeping it from bending down by its own weight so low as to obstruct the view from the upper benches, are probably the reasons for the great disproportion between the height of the upper part of the amphitheatre, and the small number of spectators accommodated in that part.



Method of raising wild beasts in the Amphitheatre.

The luxurious appliances of fountains of scented water to refresh the spectators, and so forth, are sufficiently described in the passage already quoted from Gibbon. (Comp. Lucan, ix. 808.)

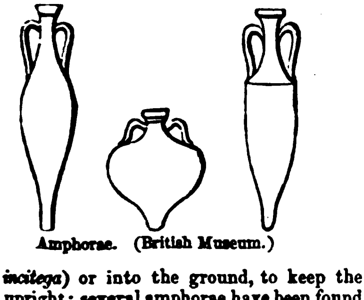
III. *Other Amphitheatres.*—The Flavian amphitheatre, as has been already stated, was, from the time of its erection, the only one in Rome; for the obvious reason that it was sufficient for the whole population. The little *Amphitheatrum Castrense* (see p. 107, note) was probably only intended for the soldiers of the guard, who amused themselves there with fights of gladiators. But in the provincial cities, and especially the colonies, there were many amphitheatres. Indeed, it is not a little interesting to observe the contrast between the national tastes of the Greeks and Romans, which is indicated by the remains of theatres in the colonies of the former, and of amphitheatres in those of the latter. The immense expense of their construction would, however, naturally prevent the erection of many such buildings as the Coliseum. (Cassiod. *Ep.* v. 42.) The provincial amphitheatres were, probably, like the earlier ones at Rome itself, generally built of wood, such as those at Placentia and Fidenae, already mentioned. Of these wooden amphitheatres there are of course no remains; but in several of the larger cities of the Roman empire there are important ruins of large amphitheatres of stone. The principal are those at Verona, Paestum, Pompeii, and Capua, in Italy; at Nîmes, Arles, and Fréjus, in France; at Pola, in Istria; at Syracuse, Catania, and some other cities in Sicily. They are all constructed on the same general principles as the Coliseum, from which, again, they all differ by the absence of the outermost corridor; and, consequently, their height could not have exceeded three stories; while some of them only had two. Of the Veronese amphitheatre, the outer wall and colonnade are entirely gone, excepting four arches; but the rest of the building is almost perfect. It was built of marble from some quarries in the neighbourhood. When complete, it had seventy-two arches in the outer circle, and, of course, the same number of radiating walls, with their passages and staircases. The lengths of the axes of the outer ellipse were 500 and 404 feet; those of the arena, 242 and 146. It was probably built under Domitian and Nerva. (Maffei, *Verona Illustrata.*) The next in importance is that at Nîmes, the outer diameter of which is 437 feet which includes the thickness of the walls. The exterior wall, which is nearly perfect, consists of a ground story and upper story, each pierced with sixty arches, and is surmounted by an attic. Its height, from the level of the ground, is above

70 English feet. The lower or ground story is adorned with pilasters, and the upper with Tuscan or Doric columns. The attic shows the holes destined to receive the posts on which was stretched the awning that covered the amphitheatre. The rows of seats are computed to have been originally 32 in number. There were four principal entrances. The amphitheatre has been computed to hold 17,000 persons. That at Arles was three stories high, and has the peculiarity of being built on uneven ground; so that the lowest story is, for the most part, below the level of the surface, and the principal entrances are on the second story. (For a detailed description, see Guis, *Description de l'Amphithéâtre d'Arles*, 1665.) Both these amphitheatres belong probably to the time of the Antonines. (Maffei, *de Amph. Gall.*) The [illegible] at Pola stands on the side of a hill, [illegible] higher on one side than on the other. [illegible] little to remark respecting the other [illegible], except that a fragment of an in[illegible] found in that at Capua, informs us [illegible] built under Hadrian, at the cost of [illegible] of the city, and was dedicated [illegible] Pius; and, concerning that of [illegible] the earthquake which preceded the [illegible] which the city was buried injured [illegible] so much, that antiquarians [illegible] disappointed in looking for any new [illegible] from it. There are traces of amphi[illegible] of a ruder kind, chiefly of earth, in [illegible] parts of our own country, as at Dor[illegible], Silchester, Caerleon, and Redruth.

II. *Use of the Amphitheatre.*—This part of the subject is treated of under GLADIATORES, NAUMACHIA, and VENATIONES. This is not the place to discuss the influence of the spectacles of the amphitheatre on the character and destinies of the Roman people. [P. S.] [W. W.]

AMPHOMOSIA. [AMPHIORKIA.]

AMPHORA (ἀμφορεύς, old form ἀμφιφορεύς, Hom. *Il.* xxiii. 107; *Od.* ii. 290, &c.; Schol. in Apoll. Rhod. iv. 1187; Simon. in *Anth. Pal.* xiii. 19). 1. A large vessel, which derived its name from its being made with a handle on each side of the neck (from ἀμφί, *on both sides*, and φέρω, *to carry*), whence also it was called *diota*, that is, *a vessel with two ears* (δίωτος, δίωτος στάμνος or κάδισκος, Plat. *Hipp. Maj.* p. 288 D; Ath. xi. p. 473 c; Moeris, *s. v.* ἀμφορέα; Hor. *Carm.* i. 9, 8). The form and size varied, but it was generally made tall and narrow, and terminating in a point, which could be let into a stand (ἐγγυθήκη, *incitega*) or into the ground, to keep the vessel upright; several amphorae have been found in this position in the cellars at Pompeii. The above cut represents amphorae in the British Museum.



Amphorae. (British Museum.)

The usual material of the amphora was earthenware (Hor. *de Arte Poët.* 21), whence it was also called *testa* (*Carm.* i. 20, 2): but Homer mentions them of gold and of stone (*Il.* xxiii. 92; *Od.* xxiv. 74, xiii. 105); and in later times glass amphorae were not uncommon (Petron. 34); several have been found at Pompeii. Nepos mentions, as a great rarity, amphorae of onyx, as large as Chian *cadi* (*ap.* Plin. *H. N.* xxxvi. § 59). The name of the maker, or of the place of manufacture, was sometimes stamped upon them: this is the case with two in the Elgin collection. [FICTILE.]

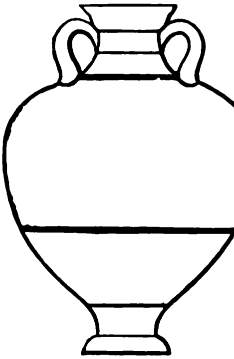
Amphorae were used for the preservation of various things which required careful keeping, such as wine, oil, honey, grapes, olives, and other fruits (Hom. *Il.* xxiii. 170; Cato, *R. R.* x. 2; Colum. *R. R.* xii. 16, 47; Hor. *Epod.* ii. 15; Cic. *Verr.* iv. 74); for pickled meats (Xen. *Anab.* v. 4, § 28); and for molten gold and lead (Herod. iii. 96; Nepos, *Hann.* 9). There is in the British Museum a vessel resembling an amphora, which contains the fine African sand used by the athletae. It was found, with seventy others, in the baths of Titus, in 1772. Respecting the use of the amphora in the streets of Rome, see Petron. 70, 79; Propert. iv. 5, 73; Macrob. *Sat.* ii. 12; and the commentators on Lucretius, iv. 1023. Homer and Sophocles mention amphorae as used for cinerary urns (*Il.* xxiii. 91, 92; Soph. *Fr.* 303, Dind.); and a discovery was made at Salona, in 1825, which proves that they were used as coffins: the amphora was divided in half in the direction of its length to receive the corpse, and the two halves were put together again and buried in the earth: the skeletons were found still entire. (Steinbüchel, *Alterthüm.* p. 67.) Amphorae of particular kinds were used for various other purposes, such as the *amphora nasiterna* for irrigation (Cato, *R. R.* 11, § 3), and the *amphora spartea*, which was perhaps a wicker amphora for gathering grapes in (*ibid.* § 2. Cf. Becker-Göll, *Gallus*, iii. p. 399 foll.).

The most important employment of the amphora was for the preservation of wine: its use for this purpose is fully described under VINUM. The following woodcut, taken from a painting on the wall of a house at Pompeii, represents the mode of filling the amphora from a wine-cart.

Amphorae and wine-cart.

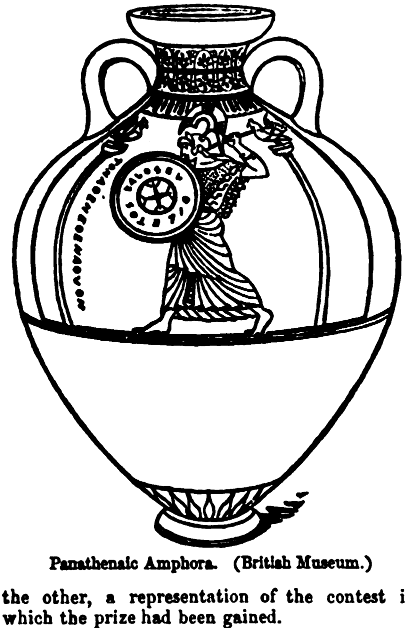
There is an interesting account of the use of the amphora among the Egyptians, in Sir G. Wilkinson's *Ancient Egyptians*, vol. ii. pp. 157–160.

The amphorae intended for purposes of decoration were furnished with a base, and were generally adorned with figures representing some scene from mythology or from ordinary life. They differed chiefly in the shape of the body and in the form of the handles, which were sometimes plain, sometimes ridged or grooved. The most ancient form is styled "Egyptian;" it has plain handles, and the shoulders of the vase are rounded, so as to meet the neck at almost right angles. The second, or archaic Greek style, is called "Tyrrhene." It has a fuller body and a thicker neck, and the greatest diameter of the vase is about half its height.



Tyrrhene Amphora. (Dennis, *Etruria*.)

To the class of decorated amphorae belong the Panathenaic amphorae, or amphorae given as prizes in the games at the Panathenaic festival and containing the holy oil. These had on one side a figure of Athene Promachos, with helmet, shield and spear, in the attitude of attack, with the inscription *τῶν Ἀθήνηθεν ἄθλων εἰμί*; on the other, a representation of the contest in which the prize had been gained.



Panathenaic Amphora. (British Museum.)

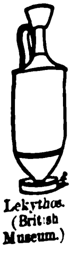
The "Nolan" amphora excels in simplicity and purity of design, as well as beauty of execution. It has red figures, on the black ground of the vase. It is slighter and more elegant than the forms already described. It is found not only at Nola, but in Sicily and Etruria. (For details, see Dennis, *Etruria*, vol. i. p. cix.)

Nolan Amphora. (Dennis, *Etruria*.)

2. The name *amphora* was also applied both by the Greeks and the Romans to a definite measure of capacity, which, however, was different among the two peoples, the Roman amphora being only two-thirds of the Greek *ἀμφορεύς*. In both cases the word appears to be an abbreviation, the full phrase being in Greek *ἀμφορεὺς μετρητής* (*the standard amphora*), and in Latin *amphora quadrantal* (*the cubic amphora*). ("Quadrantal vocabant antiqui amphoram," *Fest.* p. 258.) Respecting the measures themselves, see METRETES, QUADRANTAL. At Rome a standard amphora, called *amphora Capitolina*, was kept in the temple of Jupiter on the Capitol (Rhemn. Fann. *de Pond.* 61; Capitol. *Maxim.* 4). The size of ships was estimated by amphorae (Cic. *Fam.* xii. 15; Liv. xxi. 63); and the produce of a vineyard was reckoned by the number of *amphorae*, or of *culei* (of twenty amphorae each), which it yielded. [P. S.] [W. S.]

AMPLIATIO. [JUDICIUM.]

AMPULLA (*λήκυθος, βομβύλιος*), a tall, slender, narrow-necked vessel, furnished with a handle. The narrow neck is described by Pliny (*Ep.* iv. 30, 6). It was used for holding perfumes and unguents, and was generally made of earthenware, sometimes however of leather, or of the precious metals (Ath. xiii. 584 f.; x. 451 d; Plut. *Sull.* 13; Mart. xiv. 110). The lekythos is found in large numbers in ancient tombs. [For details, see FUNUS.] Its usual form is represented in the annexed figure. Lekythoi were in constant use at the toilette of Greek ladies, as may be seen from their frequent

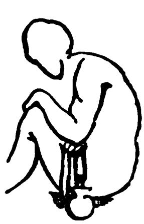


Lekythos. (British Museum.)

Lekythos. (British Museum.)

representation on Greek vases. The largest lekythos in the British Museum was found by Mr. Dennis in the necropolis of Gela, and is here figured. The lekythos of a later period had a broad base (Dennis, *Etruria*, vol. i. p. cxxiii.). The lekythos or ampulla was also used to hold the oil with which the body was anointed after bathing or athletic exercises. For this purpose they were regularly carried by a slave, together with the strigil, to the baths and gymnasia, and were often suspended by a strap from the wrist (Ath. x. 451 d; Poll. iii. 154, x. 62; "ampulla olearia, lenticulari forma, tereti ambitu, pressula rotunditate," Apul. *Flor.* i. 9). As such bottles frequently contained perfumed oils, we read of *ampullae cosmianae* (Mart. iii. 82, 26). Bottles of this kind are figured below (cf. Hermann, *Griech. Antiq.* iv.^{3} p. 164). Such bottles were also used for holding vinegar (Plin. *H. N.* xx. § 152), and wine ("ampulla potoria," Mart. xiv. 110), especially on a journey, when the wine or water was drunk from the bottle (Mart. vi. 35; Plaut. *Merc.* v. 2, 86; Suet. *Dom.* 21).

Late Lekythos. (Dennis, *Etruria.*)



Lekythos. (From a relief at Athens.)

Lekythos. (From a tomb at Myra in Lycia.)

Another common use of the lekythos was to anoint the bodies of the dead. After the anointing had been performed, the vessels used were placed near the body during the laying out (πρόθεσις), and were then buried or burned with the corpse. Large numbers of lekythoi have been found in tombs or in a charred condition, in places where funeral-piles had been erected. (Aristoph. *Eccl.* 538, 996, 1032; Hermann, *Griech. Ant.* iv.^{3} p. 364.)

The word λήκυθος was also used, like the Latin *ampulla*, as a synonym for exaggerated high-flown language, probably from the gurgling sound made by the oil as it issued from the flask (cf. Aristoph. *Ran.* 1200 ff.; Poll. iv. 114; Hor. *Ep.* i. 3, 14; *Ars Poët.* 97). The dealer in bottles was called *ampullarius*, and part of his business was to cover them with leather (*corium*). A bottle so covered was called *ampulla rubida.* (Plaut. *Rud.* iii. 4, 51, *Stich.* ii. 1, 77, compared with Festus, s. v. *Rubida.*) (See Becker-Göll, *Gallus*, ii. p. 377, iii. p. 149; Marquardt, *Röm. Alterth.* vii. p. 630.) On the use of the ampulla in the Christian church for containing the wine and water used at the altar, and also for holding consecrated oil or chrism, see *Dict. of Christian Antiq.*, s. v. [J. H. O.] [W. S.]

AMPYX (ἄμπυξ), a frontlet, or band, worn by Greek ladies to confine the hair, passing round the front of the head and fastening behind. It appears generally to have consisted of a plate of gold or silver, often richly worked and adorned with precious stones. Artemis (Eur. *Hec.* 465) wears a χρυσέα ἄμπυξ, and the epithet χρυσάμπυκες is applied by the poets to the Muses, Hours, and Fates, while the Scholiast (Eur. *l. c.*) explains it as κόσμος τις χρυσῷ καὶ λίθοις πεποικιλμένος. (*Il.* xxii. 468–470; Theocr. i. 33.) It appears in the festive scenes represented on Etruscan tombs as worn by females (Dennis, *Etruria*, i. pp. 307, 368, 371).

The word ἄμπυξ was also applied to the frontal of a horse's bridle, Lat. *frontale*, or more usually plur. *frontalia* (Plin. *H. N.* xxxvii. § 194; Liv. xxxvii. 40). In this sense the form ἀμπυκτὴρ also occurs (Aesch. *Theb.* 461). The *frontalia* might likewise be adorned with precious stones (Plin. *l. c.*), and were worn also by elephants (Liv. *l. c.*). In Aesch. *Suppl.* 431, there is a play on the two senses; a woman torn from sanctuary (βρετέων) is compared to a horse dragged by its bridle (ἱππηδὸν ἀμπύκων).

Hesychius (*s. v.* Λυδίῳ νόμῳ) supposes the men to have worn frontlets in Lydia; they were also worn by the Jews (Deut. vi. 8, xi. 18).

Ampyx or head-band.

The above woodcut exhibits the frontal on the head of Pegasus, taken from one of Sir William Hamilton's vases, in contrast with the corresponding ornament as shown on the heads of two females in the same collection. [J. Y.] [J. H. O.]

AMULETUM (**περίαπτον, περίαμμα, φυλακτήριον**), a charm attached to the body of a human being or animal to avert calamities or secure good fortune, from the Arabic *Hamâlet* ("that which is suspended"). Comp. for the derivation **περίαμμα, περίαπτον**, and the *ligatura* and *alligatura* of the Christian writers. Amulets are as old as Homer's *μῶλυ* (*Od.* x. 292), but the word first occurs in Pliny (*H. N.* xxix. § 66, xxx. § 168) and was probably introduced with the lore of the Magi under the early empire, which certainly developed the superstition very largely, as may be judged from the frequent use of Eastern symbols, and even inscriptions on amulets. Earlier we have only names of particular kinds of amulets, such as *praebia*, and no generic title. Of the use of amulets among the Egyptians, Jews, and other Oriental nations, see *Dict. of Bible*, s. v.

Large numbers of the more durable amulets are still in existence. The shapes of ancient jewellery and ornaments were in great measure decided by a belief in their magical efficacy, although the notion of the Magi, ridiculed by Pliny (*H. N.* xxxvii. § 124), that each stone had a sympathy for a special device, which, if engraved on it, drew forth its powers, was only expanded in the Middle Ages, and directions for the choice and application of amulets form no small part of many ancient treatises on medicine; indeed it is often difficult to draw the distinction (which did not exist in the minds of many ancient physicians) between a medicine and an amulet. Perhaps those remedies which are to be attached (*adalligare*) to the person may be regarded as amulets. The belief in the virtues of precious stones especially was widespread, even among the intelligent. Pliny, who himself ridicules the arts of the Magi, explains their influence by saying that *sola artium tres alias imperiosissimas humanae mentis complexa in unam se redegit*, — medicine, religion, and divination. The chief ancient authorities on the subject are Pliny's *Natural History*, and on the use of jewels the Pseudo-Orpheus *περὶ λίθων* (ascribed by Tyrwhitt to an Asiatic Greek of the 4th century A.D., by C. W. King to the author of the *Argonautica*); Plutarch (or Parthenius), *περὶ ποταμῶν*; Solinus, *de Rebus Mirabilibus*; Epiphanius of Constantia, *de xii. Gemmis*; and Isidore's *Origines*: and, among later writers, Psellus (a Byzantine of the 11th century) and Marbodus, Bishop of Rennes 1067–81, who usually borrows from Isidore and Orpheus.

In many cases the choice of these ornaments was determined by a desire to draw off the attention of the evil power by a congenial object. Sometimes, again, a fanciful connexion can be traced between the amulet and its object, as when the teeth of animals are used as a charm against dental diseases. But generally the selection seems so entirely arbitrary that, in the following list of the chief materials used as amulets and for other magical purposes, it has not been thought necessary to specify the objects sought by their use.

1. *Stones.*

Adamas (ἀδάμας), the diamond. Plin. xx. § 2; xxxvii. § 61. The *ἀδάμας* of Orph. 192 is not a diamond.

Aëtites, the eagle-stone. Plin. xxxvi. § 149.

Achates (ἀχάτης), the agate. Orph. 230, 604; Plin. xxxvii. § 139; Solin. v. p. 21; Isid. xvi. 11; Ctesias, fr. 92, Müller. The term is very comprehensive in Latin. These stones had gone out of fashion before Pliny's time for signets, but were still highly valued for their magical properties, which varied according to the markings.

Amethystus (ἀμέθυστος, ἀμέθυσον), the amethyst. *Anth. P.* ix. 748, 752. The name is perhaps of Eastern origin, in which case the belief that it counteracted the effects of wine would be due to a popular etymology. Often found with heads, &c., engraved on the centre. These gave it further virtues. Plin. xxxvii. § 124.

Batrachites. Plin. xxxvii. § 149; Isid. xvi. 4, 20. Identified by King with a green and yellow jasper, sometimes found cut into a toad-shaped amulet. Hence the mediaeval superstition of the jewel found in the toad's head.

Brontea, which entered into tortoises' heads during thunderstorms. Plin. xxxvii. § 150; Isid. xvi. 15, 24.

Carbunculus (ἄνθραξ, λυχνίτης), our ruby and garnet. Aelian, *H. A.* viii.; Philostr. *Vit. Apoll.* ii. 14; Psellus, *de Lapid.* xii.

Chelidonia. Plin. xxxvii. § 155; Isid. xvi. 9. 5.

Chelonia. Supposed to be the eye of the Indian tortoise. Plin. xxxvii. § 155.

Chelonitis. *Ibid.*

Chloritis, produced in the gizzard of the *motacilla* (water-wagtail). *Ibid.* § 156.

Corallium (κουράλιον). Orph. 570; Plin. xxx. § 22; Solin. 2, 41.

Crystallum (κρύσταλλος), rock crystal. Orph. 170; Spartianus, *Did. Jul.*

Draconitis or *dracontia.* Plin. xxxvii. § 158.

Eumitres, used in the worship of Belus. *Ibid.* § 160.

Gagates (γαγάτης), jet. Orph. 468; Plin. xxxvi. § 142.

Haematites (αἱματίτης). Orph. 658; Plin. xxxvii. § 169.

Heliotropium, bloodstone. Plin. xxxvii. § 165. Used with the plant of the same name. Isid. xvi. 7; Solin. 27.

Hyaenia, found in hyaena's eye. Plin. xxxvii. § 169.

Iaspis (ἴασπις), the chalcedony, a very common Eastern amulet. *Ibid.* § 115; Orph. 264.

Magnes (μάγνης), loadstone. Orph. 302.

Molochites (μολοχάς), green jasper. Plin. xxxvii. § 114.

Opsianum (λίθος Ὀψιανός), obsidian. Orph. 282.

Opalus (ὀπάλλιον), opal. *Ibid.* 279. The belief that it was beneficial to the eyes probably arose from a fanciful derivation: hence Marbodus calls it *ophthalmius*.

Ovum anguinum (σιδηρίτης or ὀφίτης), serpentine marble. Supposed to be formed from serpents' froth.

Παντάρβης, ruby. *Anth. P.* ix. 490; Philostr. 3, 46; Heliod. viii. 11; Ctesias, p. 265.

Prasius (πράσιος), plasma. Orph. 749.

Sarda, sardius (σάρδιος, σάρδιον), the Oriental carnelian, which became the favourite stone for engraving. Epiphan. *de xii. gemmis*, 1.

Sucinum, amber. Plin. xxxvii. § 51.

Topazus (τοπάζιος). Orph. 277; Epiphan. 2.

2. *Metals.*

Copper. Plin. xxxiv. § 134.
Iron. *Ibid.* § 151.
Gold. *Ibid.* xxxiii. § 85.

3. *Plants.*

Laurus (δάφνη), the bay-tree, especially efficacious because sacred to Apollo. Used in lustrations: Eur. *Ion.* 80–121; Juv. ii. 158; Plin. xv. § 138. Chewed to give prophetic inspiration: Hes. *Theogon.* 30 schol.; Soph. *Fragm.* 777, Dind.; Boisson, *Anecd.* iii. 385; Lucian, *Bis. Acc.* 1; Tibull. ii. 5, 63; Juv. vii. 19. Used strictly as an amulet: Theophr. *Char.* xvi.; Plin. xv. §§ 133–7; *Geopon.* xi. 2. Hence the proverb δαφνίνην φορεῖ βακτηρίαν, of a man who has a charmed life: Zenob. iii. 12. Cp. Ov. *Fasti*, iii. 137; *Etym. M.*, s. v. ἀντήνους.

Cynocephalia or *osiritis.* Plin. xxx. § 18.

Elleborus, *veratrum* (ἐλλέβορος), a charm as well as a medicine. Plin. xxv. §§ 49, 50.

Ficus (συκῆ). *Geopon.* xi. 2; Plut. *Symp.* 4, 2.

Σκίλλα, the squill. Diphil. *Mart.* 3; Theophr. *Char.* xvi.; Diosc. ii. 202; Plin. xx. § 101. Mentioned in *Geopon.* xv. 1 with *ἰβένος*, *ἀσπάλαθος*, and the scented ἀναγαλλίς.

Spina alba, hawthorn. Ov. *Fast.* vi. 130; and the closely allied *ῥαμνός*, Diosc. i. 110.

4. *Animals.*

The *ant*, the *wasp*, the *caterpillar*, the *snail*, the *louse*, the *spider*, used as amulets against fevers and mental disorders. Plin. xxviii. c. 7; xxx. c. 10, 11.

The *ass's* testicles: Plin. xxviii. 261. The horned *wild ass*: Philostr. *Vit. Apoll.* iv. 2.

The *bat.* Plin. xxix. § 83.

The *chameleon's* tongue, paws, shoulders, and tail. *Ibid.* xxviii. §§ 112–18; Marc. Emp. viii.; Scrib. Larg. *Comp.* 38; Cael. Aurel. i. 6; Gell. x. 12.

The *dog's* gall. Plin. xxx. § 32.

The *fox's* tongue and genitals. Marc. Emp. viii. p. 66; Plin. xxviii. §§ 166, 172.

The *goat's* brain, milk, and excrement. Plin. xxviii. § 259; Sext. Plat. v. 2.

The *hen's* bones. Plin. xxx. § 26.

The *horse's* teeth. *Ibid.* xxviii. § 258.

The *hyaena's* teeth, eye, spinal marrow, excrements, &c. *Ibid.* §§ 92–106; Galen, *Ther.* ix. p. 942; Marc. Empir. viii. p. 57, xxxvi. p. 240; Ael. *H. A.* vi. 22; Plut. *Symp.* 4, 2.

The *mole's* teeth. Plin. xxx. §§ 19, 20.

The *owl's* gizzard. *Ibid.* xxix. § 81.

The *rat's* ears and liver. *Ibid.* xxix. § 60, xxx. § 93; Plin. Valer. iii. 6.

The *raven's* and the *sparrow's* excrements. Plin. xxx. § 26; Marc. Emp. xii. p. 85; Sext. Plat. ii. 6, 3.

The *serpent's* tooth and heart. Plin. xxx. §§ 22, 25.

The *wolf's* flesh, fat, and head, &c. *Ibid.* xxviii. §§ 157, 247, 257; Sext. Plat. *de lup.* viii. 1.

And many species of *fishes* and other *aquatic animals*, especially the *frog*, mentioned in Plin. xxxii. §§ 6–9, 74, 81–2, 113–16, 119, 139.

Certain parts and secretions of the *human body* were also used.

One class of amulets especially reminds us of mediaeval superstitions, perhaps not yet extinct. The *blood* of gladiators (Plin. xxviii. 4; Diosc. ii. 97; Cels. iii. 23; Tert. *Apol.* 9; Scrib. Larg. ii. 13, 17; Al. Trall. i. 15); the *hair* of a man who has been crucified (Plin. xxviii. § 41); the rope or a nail (*Ibid.* 46); the hand or eye-tooth from a corpse (*Ibid.* 45); the marrow from the legs and the brain of infants (*Ibid.* 4); the human teeth (*Ibid.* 41, 45); hair (*Ibid.* 41),—were also efficacious: and a calculus was an amulet for the *calculosus*, and in other cases (*Ibid.* 42).

Artificial shapes of amulets.

Besides assuming the various forms of personal ornaments with which we are familiar—of necklaces or pendants [CREPUNDIA; LUNULAE; PHALERAE], rings, bracelets, earrings, hairpins, &c. —amulets were attached to a sort of belt which was passed over one shoulder and under the

Amulets. (Daremberg and Saglio.)

Amulet, suspended by chain. (*Bullet. dell' Inst. Arch.*, Rome, 1836, p. 149.)

opposite arm, as in the first figure, or in the shape of thin plates (*bracteae*) were sewn on garments. If the amulet could not be easily introduced into an ornament, it was often enclosed in a bag or in a bulla of gold or leather. (See the figure above.) [BULLA.] The second cut represents an amulet with chain to be worn across the shoulder. It was found at Petillia in Southern Italy, and is a thin gold plate with a metrical inscription in Greek.

The formulas of incantations called *Ephesiae litterae* (Ἐφέσια γράμματα) belonged for the most part to the later empire, although one preserved in the Museum of Syracuse is attributed by M. Labatut to the 2nd cent. B.C. It is a plate of terra-cotta, covered with an inscription for the most part unintelligible. It was probably hung up in a house. (Athen. xii. p. 548 c; Phot. *Lex.* p. 40; Eustath. *ad Od* xix. 247.)

Amulet. (D. & S.)

To gain good fortune and protection, small images of the deities were carried, especially of the *averrunci*, and in later times still more commonly those of the deities whose worship was introduced from the East. Thus Sulla carried in his breast and worshipped an image of Apollo (Plut. *Sulla*, 29), and we find many figures of Diana of Ephesus, Mithras, Isis, Anubis, and especially Serapis and Harpocrates, who as god of silence restrained ill-omened utterances. We find in the museums figures, usually female, sometimes naked, sometimes clothed, which guard silence by having one hand applied to the lips, the other behind their back. In the instance figured here, the hook by which it was suspended is visible. Sometimes again a representation is made in a precious material of an animal, &c., which was regarded as an efficacious amulet; for instance, a hellebore flower in gold.

Collection of Amulets. (D. & S.)

On the contrary, it was a very common practice to avert ill luck by wearing some ill-omened, grotesque, or obscene shape which might instantly catch the "evil eye" of the malign power and divert its malice. [FASCINUM.]

It was sought to increase the effect by combining several magical symbols in one amulet, or by grouping many together on the statue of a deity (*panthea signa*, Auson. *Epigr.* 30), or as in the last figure in the preceding column, which represents a terra-cotta plate; or a number of amulets were strung together in a necklace.

Closely connected with the subject are the statues of gods placed in front of houses and temples (*e.g.* the Athenian *Hermae*) and the magical symbols on lamps, furniture, and buildings.

Christian legislation and teaching had to carry on a perpetual warfare against the use of amulets and the abuses connected with them.

(The most available accounts of the subject are O. Jahn, *Ueber den bösen Blick* in *Berichte der sächsischen Gesellschaft*, 1855; C. W. King, *Precious Stones and Metals*, and *Gems and Decorative Stones;* Marquardt, *Röm. Alterth.* vi. p. 104 ff.; M. Labatut, in Daremberg and Saglio, *s. v.*, from which the latter part of the article is drawn; *Dict. of Christ. Antiq.*, s. v.) [J. H. F.]

AMUSSIS, a level used by masons to test the evenness of a surface (Varr. *ap. Non.* i. 28; Festus, *s. v.*). But Sisenna (*ap. Charis.* 2, p. 178, Putsch.) defines it as a raddled surface used to prove whether work was perpendicular—*tabula rubricata quae demittitur examinandi operis gratia, an rectum opus surgat.* And Auson. (*Idyll.* xvi. 10) appears to denote by *amussis* a sort of *norma*, testing whether an angle made by two surfaces was a right angle. It appears from Vitruvius (i. 6, § 6) that it was different from the *regula* (straight rule) and from the *libella* (plumb-line or square), and that it was used for obtaining a truer surface, whether horizontal or perpendicular, than those two instruments together would give. The amussis gives rise to the adverbs *amussim*, *adamussim*, *examussim*, also to *amussitatus*, in a metaphorical sense, meaning with perfect regularity and exactness (Varr. *R. R.* ii. 1, § 26; Gell. xx. 1, § 34; Plaut. *Amph.* ii. 2, 213, *Mil.* iii. 1, 38). [J. H. F.]

AMYSTIS (ἀμυστὶ πίνειν, ἄμυστιν πίνειν, ἀμυστίζειν), from ἀ and *μύω*, a draught taken without drawing breath (Athen. xi. 25, 783 d). It was a favourite amusement with the Greeks to try how much they could swallow in this way, and very large quantities are said to have been drunk. Plato (*Symp.* 214 A) represents Socrates and Alcibiades as draining off the contents of a wine-cooler holding eight κοτύλαι, or nearly two quarts, while Alexander the Great is said to have greatly exceeded this amount. Ephippus (*ap.* Athen. x. 434 a) relates that he succeeded in emptying a vessel containing two χόες, or more than two gallons and a half, and afterwards attempted to drink a second in the same way. This, however, affected him so much as to bring on the illness which resulted in his death. The name was also applied to a kind of vessel adopted for this kind of drinking. (Athen. x. 60, p. 442 f; 67, p. 447.) [J. H. O.]

ANABOL'ICAE SPE'CIES, ANABOLICA'RII. [NAVICULARII.]

ANADE'MA. [MITRA.]

ANADESME (ἀναδέσμη), part of the head-dress usually worn by Greek women (*Il.* xxii. 469; Eurip. *Med.* 978). It seems to have been a band of cloth used to fasten up the back hair, and is apparently to be identified with the μίτρα. [MITRA.] [J. H. O.]

ANADIK'IA. [APPELLATIO.]

ANAGLYPHA or **ANAGLYPTA** (ἀνάγλυφα, ἀνάγλυπτα), chased or embossed vessels made of bronze or of the precious metals, which derived their name from the work on them being in relief, and not engraved. (Plin. *H. N.* xxxiii. § 139; Verg. *Aen.* v. 267; Mart. iv. 39; cf. Strab. p. 806; CAELATURA; TOREUTICE.) The name was also applied to sculptured gems. [P. S.]

ANAGLYPTA. [ANAGLYPHA.]

ANAGNOSTAE, also called *Lectores*, were slaves, who were employed by the educated Romans in reading to them during meals, the bath, and at other times. (Cic. *Att.* i. 12, *Fam.* v. 9, 2; Nep. *Att.* 14; Suet. *Aug.* 78; Mart. iii. 50; Plin. *Ep.* i. 15, iii. 5, 14, ix. 36; Gell. iii. 19.) [W. S.]

ANAGO'GES DIKE' (ἀναγωγῆς δίκη). If an individual sold a slave who had some secret disease—such, for instance, as epilepsy—without informing the purchaser of the circumstance, it was in the power of the latter to bring an action against the vendor within a certain time, which was fixed by the laws. In order to do this, he had to report (ἀνάγειν) to the proper authorities the nature of the disease; whence the action was called ἀναγωγῆς δίκη. The details in Plato (*Leg.* xi. p. 916, A–C) appear to be partly taken from the Athenian Law, but with additional minute regulations of his own. The ἀναγωγῆς δίκη was probably confined to actions against the seller of a slave, though Meier thinks otherwise (*Att. Process*, p. 525); other cases were provided for by the βλαβῆς δίκη. (Hesych. *s. v.* ἀναγωγή; Suid. *s. v.* ἐναγωγή, ἐνάγεσθαι.) [W. S.] [W. W.]

ANAGO'GIA (ἀναγώγια), a festival celebrated at Eryx, in Sicily, in honour of Aphrodite. The inhabitants of the place believed that, at a certain period of the year, the goddess went over into Africa, and that all the pigeons of the town and its neighbourhood likewise departed to accompany her. (Aelian, *Hist. An.* iv. 2, *V. H.* i. 14; Athen. ix. p. 394.) Nine days afterwards, at the so-called καταγώγια (return), one pigeon having returned and entered the temple, the rest followed. This was the signal for general rejoicing and feasting. The whole district was said at this time to smell of butter, which the inhabitants believed to be a sign that Aphrodite had returned. (Athen. ix. p. 395; comp. K. F. Hermann, *Gottesd. Alterth.* § 68, n. 29.) [L. S.]

ANAKEIA (ἀνάκεια) or **ANAKEION** (ἀνάκειον), a festival of the Dioscuri, or Ἄνακτες, as they were called, at Athens. (Hesych. *s. v.*; Pollux, i. 37.) Athenaeus (vi. p. 235) mentions a temple of the Dioscuri called Ἀνάκειον, at Athens, on the northern slope of the Acropolis; he also informs us (iv. p. 137) that the Athenians, probably on the occasion of this festival, used to prepare for these heroes in the Prytaneium a meal consisting of cheese, a barley-cake, ripe figs, olives, and garlic, in remembrance of the ancient mode of living. These heroes, however, received the most distinguished honours in the Dorian and Achaean states, where it may be supposed that every town celebrated a festival in their honour, though it may not have been under the name of ἀνάκεια. Pausanias (x. 38, 3) mentions a festival held at Amphissa, called that of the ἀνάκτων παίδων: but adds that it was disputed whether they were the Dioscuri, the Curetes, or the Cabeiri. That the Dioscuri worshipped in the Doric and Achaean cities were not the same as the Athenian ἄνακτες, seems clear from Cicero, *de Nat. Deor.* iii. 21. (K. F. Hermann, *Gottesd. Alterth.* § 62, n. 27.) [L. S.]

ANAKLETE'RIA (ἀνακλητήρια), the name of a solemnity at which the minority of a young prince was declared at an end, and he assumed the reins of government. The name was chiefly applied to the coming of age of the Ptolemaic kings of Egypt. (Polyb. xviii. 38, xxviii. 10.) The prince went to Memphis, and was there adorned by the priests with the sacred diadem, and led into the temple of Phtha, where he vowed not to make any innovations either in the order of the year or of the festivals. He then carried to some distance the yoke of Apis, in order to be reminded of the sufferings of man. Rejoicings and sacrifices concluded the solemnity. (Diod. xxx. 16.) [L. S.]

ANAKLYPTE'RIA. [MATRIMONIUM.]

ANAK'RISIS (ἀνάκρισις), the preliminary investigation of a case by an archon or other magistrate before it was brought before the courts of justice at Athens. For the purpose of ascertaining whether the action would lie, both parties, the complainant and defendant, were summoned separately; and if either of them failed to appear without putting in a formal application for delay (ὑπωμοσία), judgment went against him by default (Demosth. *c. Theocrin.* p. 1324, § 8). The anakrisis began by both the plaintiff and defendant taking an oath, the former thereby attesting that he had brought the charge honestly and conscientiously; the latter, that to the best of his knowledge he was innocent. According to the grammarians, the oath of the former was called προωμοσία, that of the latter ἀντωμοσία, the two together διωμοσία or ἀμφιορκία [AMPHIORKIA]. (Pollux, viii. 55; Hesych. *s. v.* ἀντωμοσία; Timaeus, *s. v.* ἀντωμοσία, with Ruhnken's note.) But the word προωμοσία does not occur in the classical authors, and the other two are not used consistently. Thus we have ἀντωμοσία on the part of a plaintiff (Isae. *Dicaeog.* § 1), or of the affidavits of the different claimants to an inheritance (*ib.* § 16; *Astyph.* § 34; Demosth. *c. Macart.* p. 1051, § 3): the διωμοσία of a prosecutor in criminal cases (Antiphon. *de caed. Her.* § 11; *de Choreut.* §§ 49, 51), and that of the accused (Demosth. *c. Aristocr.* p. 643, § 69). It was further promised by both, that the subsequent prosecution and defence should be conducted with fairness and justice. (Harpocrat., Suid., Hesych. *s. v.* ἀντωμοσία: Pollux, viii. 122.) If the defendant did not bring forward any objection to the matter being brought before a court of justice, the proceeding was termed εὐθυδικία. (Demosth. *c. Phorm.* p. 908, § 4; *c. Steph.* i. p. 1103, § 6.) Such objections might be raised in regard to the competency of the court to which the matter was to be referred, or in regard to the form in which the accusation was brought forward, and the like (Lys. *c. Pancl.* § 5; Pollux, viii. 57);

they were always looked upon with suspicion (Demosth. *c. Leoch.* p. 1097, § 57 f; *c. Phorm.* p. 944, § 2); but, nevertheless, they were not unfrequently resorted to by defendants, either in the form of a *διαμαρτυρία*, or that of a *παραγραφή*. In the case of a *διαμαρτυρία*, the plaintiff had to bring forward witnesses to show that the objections raised by the defendant were unfounded; and if this could not be done, the defendant had a right to bring witnesses to show that his objections were founded on justice, and in accordance with the laws. But each of the litigant parties might denounce the witnesses of his opponent as false witnesses, and thus a secondary lawsuit might be interwoven with the principal one. If the *διαμαρτυρία* was resorted to in a civil case, the party who made use of it had to deposit a sum of money (*παρακαταβολή*); and when the plaintiff lost his suit, he had to pay to the defendant a fine for having raised an accusation without foundation. In lawsuits about the succession to the property of a person, the *διαμαρτυρία* was the only form in which objections could be raised. (Bekker, *Anecd.* p. 236.) The *παραγραφή* was a special plea in bar of a suit, which was made by the defendant and argued without calling any witnesses, and in this also the loser had to pay a fine to the opposite party (Pollux, viii. 58). See PARAGRAPHÉ; and for other forms of resistance at this stage, ANTIGRAPHÉ. When these had been set aside, the prosecution proceeded in regular course.

These are, in general, the proceedings in the *ἀνάκρισις*: and from what thus took place, it is clear that the main part of the evidence on both sides was brought out in the *ἀνάκρισις*, and at the regular trial in court the main object was to work upon the minds of the judges through the influence of the orators, with reference to the evidence brought out in the *ἀνάκρισις*. The latter, therefore, consisted of the simple evidence which required no oratorical discussion, and which was contained,—1, in laws; 2, in documents; 3, in the statement of free witnesses; 4, in the statement of slaves; and 5, in oaths. In all these kinds of evidence, one party might have recourse to the *πρόκλησις*,—that is, call upon the other party to bring forward such other evidence as was not already given. (Demosth. *c. Steph.* i. p. 1106; *c. Pantaen.* p. 978, §§ 40, 41.) There was, however, no strict obligation to comply with such a demand (Demosth. *c. Olymp.* p. 1181, § 50), and in certain cases the party called upon might, in accordance with established laws, refuse to comply with the demand: for instance, persons belonging to the same family could not be compelled to appear as witnesses against one another. (Demosth. *c. Timoth.* p. 1195, § 30.) But if the reading of a document, throwing light upon the point at issue, was refused, the other party might bring in a *δίκη εἰς ἐμφανῶν κατάστασιν*.

In regard to the laws which either party might adduce in its support, it must be observed, that copies of them had to be read in the anakrisis, since it would have been difficult for any magistrate or judge to fix, at once, upon the law or laws bearing upon the question at issue. In what manner the authorities were enabled to insure faithful and correct copies being taken of the laws, is not known; but it is highly probable that any one who took a copy in the archives had to get the signature of some public officer or scribe to attest the correctness of the copy.

Other legal documents, such as contracts (*συνθῆκαι*, *συγγραφαί*), wills, book of accounts, and other records (Demosth. *pro Phorm.* p. 950, § 18 ff.), not only required the signature and seal of the party concerned, but their authenticity had to be attested by witnesses (Demosth. *c. Onet.* p. 869, § 21).

Evidence (*μαρτυρία*) was given not only by free-born and grown-up citizens, but also by strangers or aliens; and even from absent persons evidence might be procured [EKMARTYRIA], or a statement of a deceased person might be referred to [AKOËN MARTYREIN]. If any one was called upon to bear witness (*κλητεύειν*), he could not refuse it; and if he refused, he might be compelled to pay a fine of 1000 drachmas (Demosth. *de Fals. Leg.* p. 396, § 176, p. 403, § 198; Aeschin. *c. Timarch.*, § 46), unless he could establish by an oath (*ἐξωμοσία*), that he was unable to give his evidence in the case. Any one who had promised to bear witness, and afterwards failed to do so, became liable to the action of *δίκη λιπομαρτυρίου* or *βλάβης*. The evidence of an avowed friend or enemy of either party might be rejected (Aeschin. *c. Timarch.* § 47). All evidence was either taken down in writing as it was given by the witnesses, or, in case of its having been sent in previously in writing, it was read aloud to the witness for his recognition, and he had generally to confirm his statement by an oath. (Demosth. *c. Steph.* i. p. 1115, § 45, p. 1119, § 58, ii. p. 1130, § 5; *c. Con.* p. 1269, § 41; Aeschin. *de Fals. Leg.* § 126; Diog. Laert. iv. 7.) The testimony of slaves was valid only when extorted by instruments of torture, to which either one party might offer to expose a slave, or the other might demand the torture of a slave. (Demosth. *c. Nicostr.* p. 1253, § 22; *c. Aphob.* p. 855, § 38; *c. Onet.* p. 874, § 37; *c. Steph.* ii. p. 1135, § 21.)

A distinct oath was required in cases where there were no witnesses or documents, but it has been remarked above that oaths were also taken to confirm the authenticity of a document, or the truth of a statement of a witness. [JUSJURANDUM.]

If the evidence produced was so clear and satisfactory that there was no doubt as to who was right, the magistrate could decide the case at once, without sending it to be tried in a court. During the anakrisis as well as afterwards in the regular court, the litigant parties might settle their dispute by an amicable arrangement (Pollux, viii. 143). But if the plaintiff, in a public manner, dropped his accusation, he became liable to a fine of 1000 drachmas, and incurred partial atimia (Demosth. *c. Theocrin.* p. 1323, § 6); in later times, however, this punishment was not always inflicted, and in civil cases the plaintiff only lost the sum of money which he had deposited. When the parties did not come to an understanding during the anakrisis, all the various kinds of evidence brought forward were put into a vessel called *ἐχῖνος*, which was sealed and entrusted to some officer to be kept until it was wanted on the day of trial. (Demosth. *c. Conon.* p. 1265, § 27; Schol. *ad* Aristoph. *Vesp.* 1427.) The period between the conclusion of the preliminary investigation and until the matter was brought before a court, was considered to belong to the anakrisis; and that period was differently fixed by law, according to the nature of the charge. In cases of murder, the period was never less than three months, and in others the trial in court commenced on the thirtieth day after the beginning of the anakrisis: as *e.g.* in the *δίκαι ἐρανικαί, ἐμπορικαί, μεταλλικαί*, and *προικός* (Harpocrat. s. v. *ἔμμηνοι δίκαι*: Pollux, viii. 63, 101), and the day fixed for the trial was called *κυρία τοῦ νόμου* (Demosth. *c. Mid.* p. 541, § 84; p. 544, § 93). In other cases, the day was fixed by the magistrate who conducted the anakrisis. But either party might petition for a postponement of the trial, and the opposite party might oppose the petition by an oath that the ground on which the delay was sought for was not valid, or unsatisfactory. (Harpocrat. *s. v. ἀνθυπωμοσία*; Pollux, viii. 60.) Through such machinations, the decision of a case might be delayed to the detriment of justice; and the annals of the Athenian courts are not wanting in numerous instances in which the ends of justice were thwarted in this manner for a number of years. (Demosth. *c. Mid.* p. 541, § 82; comp. Meier and Schömann, *Att. Process*, p. 622; Platner, *Process u. Klagen*, i. p. 135 ff.; C. F. Hermann, *Staatsalterth.* § 141; Schömann, *Antiquit. Jur. publ. Graec.* p. 279; Wachsmuth, *Hellen. Alterthumskunde*, ii. p. 262, &c. 2nd edit.) The examination which an archon underwent before he entered on his office, was likewise called *ἀνάκρισις* (Demosth. *c. Eubul.* p. 1319, § 66; p. 1320, § 70). [L. S.] [W. W.]

ANALEMMA (*ἀνάλημμα*), in its original meaning, is any thing raised or supported; it is applied in the plural to walls built on strong foundations. (Hesych., Suid. *s. v.*) Vitruvius uses the word to describe an instrument which, by making the lengths of the shadows of a fixed gnomon, showed the different altitudes of the sun at the different periods of the year. (Vitruv. ix. 7, 8, s. 6, 7: Schneider.) It must not be confounded with the modern analemma, which is more complicated and precise than the instrument described by Vitruvius. [P. S.]

ANANCAEUM, a large drinking vessel (Plaut. *Rud.* ii. 3. 33), mentioned by Varro in a corrupt passage *ap. Non.* p. 547, among articles of *caelatura*. Its etymology (*ἀναγκαῖον*) has suggested that the drinker was compelled to empty it at a draught. [Amystis.] [J. H. F.]

ANAPIE'SMATA. [Theatrum.]

ANASKEUAZEIN (*ἀνασκευάζειν τὴν τράπεζαν*). [Argentarii (Greek).]

ANATHE'MATA (*ἀναθήματα*). [Donaria.]

ANATOKISMOS (*ἀνατοκισμός*), compound interest, and the correlative *εὐθυτοκία*, simple interest, do not occur in the classical authors, but are often found in inscriptions; the former as a Latin word in Cic. *Att.* v. 21, 11, "centesimae cum anatocismo anniversario." The equivalent phrase *τόκοι τόκων* occurs Aristoph. *Nub.* 1156. As to the Athenian law on this subject, the researches of Büchsenschütz (*Besitz und Erwerb*, p. 499) and Caillemer (*Étude* ix. p. 26, also in Daremberg and Saglio *s. v.*) cannot be said to lead to any definite conclusions. It appears probable that the utmost freedom of contract was allowed. For the Greek feeling against usurers, and the subject generally, see Fenus (Greek). [W. W.]

ANAUMACHIOU GRAPHE' (*ἀναυμαχίου γραφή*) was an impeachment of the trierarch who had kept aloof from action while the rest of the fleet was engaged. In a cause of this kind, as in the kindred actions *ἀστρατείας, δειλίας, λιποναυτίου, λιποταξίου*, the strategi were naturally the presiding judges. The penalty was atimia without confiscation of goods, if we may trust Andocides (*de Myst.* § 74); whereas on conviction *δειλίας* or *λιποταξίου*, the property of the offender was confiscated (Lys. *c. Alcib.* i. § 9). Caillemer (in Daremberg and Saglio *s. v.*) argues from analogy that the punishment of the offender must have been the same in both cases. [W. W.]

ANAXAGOREIA (*ἀναξαγόρεια*), a day of recreation for the youths at Lampsacus, which took place once every year, in compliance with a wish expressed by Anaxagoras, who, after being expelled from Athens, spent the remainder of his life there. This continued to be observed even in the time of Diogenes Laërtius (*Anaxag.* c. 10). [L. S.]

ANAXYR'IDES (*ἀναξυρίδες*). [Braccae.]

ANCHISTEIA (*ἀγχιστεία*). [Heres.]

ANCI'LE. [Salii.]

ANCILLA. [Servus.]

AN'CORA. [Navis.]

ANDA'BATAE. [Gladiator.]

ANDRAPODISMOU GRAPHE' (*ἀνδραποδισμοῦ γραφή*), a public prosecution against two distinct offences. 1. Kidnapping or enslaving a free person (for which also an *ἐλευθεροπρασίου δίκη* is mentioned by Pollux, but not elsewhere). 2. Stealing slaves from their lawful owners. The crime of the *ἀνδραποδιστὴς* was capital both at Athens and in Greece generally (Xen. *Memor.* i. 2, § 62; *Apol. Socr.* § 25; Demosth. *Phil.* i. p. 53, § 47); and he might be summarily brought before the Eleven by *ἀπαγωγή* (Isocr. *Antid.* § 96; Meier, *Att. Process*, p. 229, note). For the feeling of the Greeks on this class of offences, compare Plato, *Leg.* ix. 869 A, xii. 955 A; Lys. *c. Theomn.* i. § 10. [W. W.]

ANDREIA (*ἀνδρεῖα*). [Syssitia.]

AN'DRIAS (*ἀνδρίας*). [Statuaria.]

ANDROGEO'NIA (*Ἀνδρογεώνια*), a festival with games, held every year in the Kerameicos at Athens, in honour of the hero Androgeos, son of Minos, who had overcome all his adversaries in the festive games of the Panathenaea, and was afterwards killed by his jealous rivals. (Paus. i. 27, § 9; Apollod. iii. 15, § 7; Hygin. *Fab.* 41; Diod. iv. 60, 61.) According to Hesychius, the hero also bore the name of Eurygyes (the possessor of extensive lands), and under this title games were celebrated in his honour, *ὁ ἐπ' Εὐρυγύῃ ἀγών*. (Hesych. vol. i. p. 1332; K. F. Hermann, *Gottesd. Alterth.* § 62, n. 22.) [L. S.]

ANDROLE'PSIA (*ἀνδροληψία* or *ἀνδρολήψιον*), a process of Greek international law which rested upon the ancient religious ideas of the duty of the "avenger of blood" in cases of homicide: for when the state or city in whose territory a murder had been committed refused to bring the murderer to trial, the law allowed the relatives of the deceased to arrest three citizens of the offending state and to hold them as hostages until satisfaction was given, or the murderer delivered up; and the property found upon the persons thus seized was confiscated. It is not to be regarded as a peculiarly Athenian institution; we learn from Demosthenes (*de Cor. Trierarch.* p. 1232, § 13) that the piratical acts of Athenian commanders abroad brought down reprisals on the persons and property (*ἀνδροληψίας καὶ σύλας*) of peaceable Athenian merchants and travellers. It is clearly, therefore, a part of the public law of Greece; and Pollux is quite wrong in treating it as a form of prosecution (*εἶδος ἐγκλήματος*, viii. 50). The guilt of blood attached to the soil of the country where a murder had been committed, only so long as the murderer remained upon its territory unpunished: the curse (*ἀρὰ*) ceased when he either went into exile or was brought to justice. Hence *ἀνδροληψία* cannot have been employed, as Pollux thought (*l. c.*), to enforce the extradition of an escaped criminal: if a murder were committed on Attic soil, and the murderer escaped into Boeotia, all legal and ceremonial requirements were satisfied by his change of abode [Exsilium]; but if an Athenian were murdered in the territory of a Boeotian city, this right would prevent that city from harbouring the murderer.

The duty of relations in such cases was commensurate with the right of inheritance; and the latter was *ἐντὸς ἀνεψιότητος* (Demosth. *c. Macart.* p. 1068, § 57),—a phrase which is elsewhere more precisely defined as *μέχρι ἀνεψιαδῶν*, "as far as second cousins." [Heres.]

For the application of this principle to the local law of Athens, our chief authority is a passage of Demosthenes (*c. Aristocr.* p. 648, § 83: the so-called "law" of § 82 is obviously compiled from the orator's own words in the next section). It is there mentioned in the most general terms, with no limitations as to the states or persons to whom it applied. It is not likely, therefore, as Weber supposes in commenting on the passage, that the right rested on a special convention, like our modern "extradition treaties;" it is much more probable, as Meier argues in one of his later writings, that as a part of the ancient *jus gentium* it was antecedent to all such treaties and liable to be modified by them (Meier, *de Dem. Aristocr.* p. 8, also in his *Opusc. Acad.* ii. 189). In the absence of precise information we cannot positively say what was done to the hostages thus seized, or whether at Athens the right of seizing them extended to foreigners, whether *ἰσοτελεῖς*, *μέτοικοι*, or *ξένοι*. So far as the early religious views prevailed, the latter, we may be pretty sure, would be included; but it would be quite in keeping with the spirit of the later democracy to curtail those privileges if they proved inconvenient to the full citizens. In the case of slaves, the injury according to Athenian notions would be to their master, not themselves; and he would have his remedy in an action for damages.

The forms *ἀνδροληψία* and *ἀνδρολήψιον* are treated as equivalent in the lexicons, but are rightly distinguished by Weber (*ad* Demosth. *l. c.* § 82) on a comparison of the passages where they severally occur. The right of reprisals is *ἀνδρολήψιον* (*c. Aristocr.* p. 648, §§ 83, 84; p. 692, § 217); the act or process by which the right is enforced is *ἀνδροληψία*, usually in the plural (*l. c.* §§ 82, 83; *de Cor. Trierarch.* § 13).

(Pollux, viii. 41, 50; Harpocrat., Suid., and *Etym. M.* s. v.; Bekk. *Anecd.* p. 213, 30; *Att. Process*, pp. 278–281, with the corrections in Lipsius' new edition: D. and S. *s. v.*) [L. S.] [W. W.]

ANDRON (*ἀνδρών*), a word which may be applied to any room in the *ἀνδρωνῖτις*, or men's quarters, in the Greek house, but is often used specially to denote the dining-room, where the Symposia took place (Xen. *Symp.* i. 13; Suid. *s. v.*). [Domus (Greek).] [J. H. O.]

ANDRONI'TIS. [Andron.]

ANGARI'A (*ἀγγαρεία*, Hdt. *ἀγγαρήϊον*) is a word borrowed from the Persians, signifying a system of posting, which was used among that people, and which, according to Xenophon, was established by Cyrus. Horses were provided, at certain distances, along the principal roads of the empire; so that couriers (*ἄγγαροι*), who also of course relieved one another at certain distances, could proceed without interruption, both night and day, and in all weathers. (Herod. viii. 98, iii. 126; Xen. *Cyrop.* viii. 6. § 17; Suid. *s. v.*) It may easily be supposed that, if the government arrangements failed in any point, the service of providing horses was made compulsory on individuals; and hence the word came to mean compulsory service in forwarding royal messages: and in this sense it was adopted by the Romans under the Empire, and is frequently found in the Roman laws. The Roman *angaria*, also called *angariarum exhibitio* or *praestatio*, included the maintenance and supply, not only of horses, but of ships and messengers, in forwarding both letters and burdens; it is defined as a *personale munus*: and there was no ground of exemption from it allowed, except by the favour of the Emperor. (Dig. 50, tit. 4, s. 18, §§ 4, 29; tit. 5, s. 10, 11; 49, tit. 18, s. 4, § 1; Cod. Theod. 8, tit. 5; Cod. Justin. 12, tit. 51.) According to Suidas, the Persian word was originally applied to any bearers of burdens; and next, to compulsory service of any kind. [P. S.]

ANGIPORTUS, or **ANGIPORTUM**, a narrow lane between two rows of houses, sometimes ending in a *cul de sac* (*id quidem angiportum non est pervium*, Ter. *Ad.* iv. 2, 39), sometimes not (id. *Eun.* v. 2, 6, 7). Thus a MS. glossary quoted by Ellis on Catull. 58, 4, says: *Angiportus viae angustae inter minores vicos quae exitum ad muros aut nullum aut angustum habent.* The ancients derived the word *ab angendo et portu*, the original meaning of *portus* being no doubt "an entrance" of any sort (Varr. *L. L.* v. 145, cf. vi. 41; Fest. p. 17, ed. Müller; Ulpian, in Dig. 50, tit. 16, s. 59). The number of such places seems to have been considerable in ancient Rome: and they were apt to be disreputable (Catull. 58, 4; Hor. *Od.* i. 25, 10). The form *angiportum* is archaic (Ter. Catull. *ll. cc.*; Plaut. *Pseud.* iv. 2, 6, 15; iv. 7, 136; Auct. *ad Herenn.* iv. 51, § 64). [L. S.] [W. W.]

ANGUILLA. [Flagrum, Flagellum.]

ANGUIS. [Draco, Genius.]

ANGUSTUS CLAVUS. [Clavus.]

AN'KYLE (*ἀγκύλη*). [Hasta.]

ANNA'LES LEGES. [Leges Annales.]

ANNA'LES MAX'IMI. [Pontifex.]

ANNO'NA is used to signify, 1, the produce of the year in corn, fruit, wine, &c.: hence, provisions in general, especially the corn which, in the latter years of the republic, was collected in the storehouses of the state or in private granaries for the provisioning of Rome; 3, the price at which such corn was sold (*e.g.* Liv. ii. 34, iv. 12); 4, a tax in kind, usually one-tenth, levied in the provinces, even under the epublic (Cic. *in Rull.* ii. 29; *Leg. Manil.* 6; *pro Flacco* 8; *in Verr.* iii. 6, 7), and under the mpire applied for provisioning the army; 5, the orn so distributed among the soldiers. [CON-ARIUM; FRUMENTATIO; PRAEFECTUS ANNO-AE.] [A. S. W.]

ANNULUS. [ANULUS.]

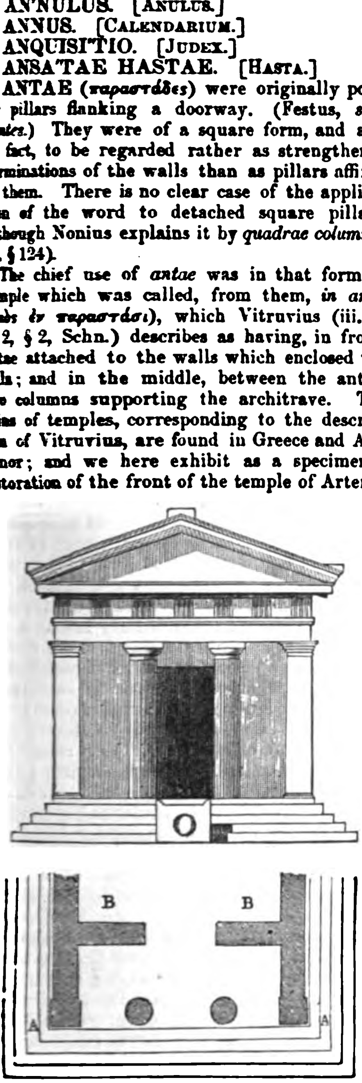
ANNUS. [CALENDARIUM.]

ANQUISI'TIO. [JUDEX.]

ANSA'TAE HASTAE. [HASTA.]

ANTAE (*παραστάδες*) were originally posts r pillars flanking a doorway. (Festus, *s. v.* *ntes.*) They were of a square form, and are, fact, to be regarded rather as strengthened rminations of the walls than as pillars affixed o them. There is no clear case of the application of the word to detached square pillars, lthough Nonius explains it by *quadrae columnae* i. § 124).

The chief use of *antae* was in that form of mple which was called, from them, *in antis* (*οὶ ἐν παραστάσι*), which Vitruvius (iii. 1, 2, § 2, Schn.) describes as having, in front, ntae attached to the walls which enclosed the lla; and in the middle, between the antae, o columns supporting the architrave. The ins of temples, corresponding to the description of Vitruvius, are found in Greece and Asia inor; and we here exhibit as a specimen a restoration of the front of the temple of Artemis Propylaea, at Eleusis, together with a plan of the pronaos.



Antae, temple at Eleusis.
A, A, the antae; B, B, the cella, or *ναός*.

Vitruvius gives the following rules for a temple *in antis* of the Doric order:—The breadth should be half the length; five-eighths of the length should be occupied by the *cella*, including its front walls, the remaining three-eighths by the *pronaos* or portico; the *antae* should be of the same thickness as the columns; in the intercolumniations there should be a marble balustrade, or some other kind of railing, with gates to it; if the breadth of the portico exceeds forty feet, there should be another pair of columns behind those between the *antae*, and a little thinner than they; besides other and minor details. (Vitruv. iv. 4.)

In the pure Greek architecture, the *antae* have no other capitals than a succession of simple mouldings, sometimes ornamented with leaves and arabesques, and no bases, or very simple ones; it is only in the later (Roman) style, that they have capitals and bases resembling those of the columns between them. The antae were generally of the same thickness throughout; among the rare instances of their tapering are one of the temples of Paestum, that of Diana at Eleusis, and the choragic monument of Thrasyllus at Athens.

In a Greek private house the entrance was flanked by a pair of antae with no columns between them; and the space thus enclosed was itself called *παραστάς*. (Vitruv. vi. 10, s. 7, § 1, Schn.) So also Euripides uses the term to denote either the pronaos of a temple (*Iph. in Taur.* 1126), or the vestibule of a palace (*Phoen.* 415).

The following are the chief of the other passages in which *antae* or *παραστάδες* are mentioned:—Euripid. *Androm.* 1121, where *παραστάδος κρεμαστὰ* signifies the arms suspended from one of the *antae* of the temple; Cratin. fr. 45, Meineke; Xen. *Hier.* xi. 2; Hero, *Autom.* p. 269; *Inscript. ap.* Gruter, p. 207. See also Stieglitz, *Archäologie der Baukunst*, vol. i. pp. 236–242; Penrose, *Invest. of the Princ. of Ath. Archit.*; Stuart, *Antiq. of Athens.* [TEMPLUM.] [P. S.] [W. W.]

ANTEAMBULO'NES were slaves who were accustomed to go before their masters, in order to make way for them through the crowd. (Suet. *Vesp.* 2.) They usually called out *date locum domino meo*; and if this were not sufficient to clear the way, they used their hands and elbows for that purpose. Pliny tells an amusing story of a man who was roughly handled by a Roman knight, because his slave had presumed to touch the latter, in order to make way for his master. (*Ep.* iii. 14, 7.) The term *anteambulones* was also given to the clients, who were accustomed to walk before their patroni in white togas when the latter appeared in public. (Mart. ii. 18, iii. 7, x. 74; Juv. i. 96, viii. 49, x. 44.) [W. S.] [A. S. W.]

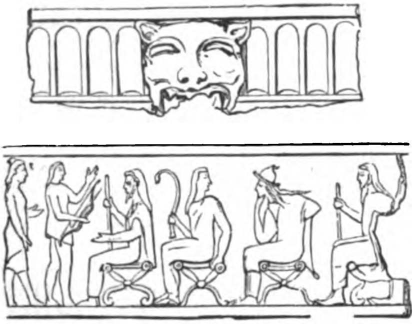
ANTECE'NA. [CENA.]

ANTECESSO'RES, called also **ANTECURSO'RES.** 1. Horse-soldiers, who were accustomed to precede an army on the march, in order to choose a suitable place for the camp, and to make the necessary provisions for the army. They were not merely scouts, like the *speculatores*. (Hirt, *Bell. Afr.* 12, who speaks of *speculatores et antecessores equites*; Suet. *Vitell.* 17; Caes. *B. G.* v. 47.) 2. Teachers of the Roman law. (Cod. 1, tit. 17, s. 2, §§ 9, 11.) [W. S.]

ANTEFIXA, terra-cottas, which exhibited various ornamental designs, and were used in architecture to cover the frieze (*zophorus*) or the cornice of a roof. Their proper place was thus under the eaves (*sub stilicidio*, Fest. *s. v.*) and on the sheltered entablature; and there is no occasion for Müller's conjecture *super stilicidio*. But they must also have sometimes stood clear of the roof, as in the case mentioned by Livy (xxvi. 23, 4), when a statue of Victory, falling *de culmine*, i.e. apparently from the *acroteria*, was caught by other Victories which were *in antefixis*. [Acroteria.] Etymologically the name might have been applied to any ornaments attached to the fronts of buildings; but in practice it seems to have been limited to those of baked clay (*figulinum opus*, Fest.; *fictilia*, Liv. xxxiv. 4, 4). These terra-cottas do not appear to have been used among the Greeks, but were probably Etrurian in their origin, and were thence taken for the decoration of Roman buildings.

Of the great variety and exquisite beauty of the workmanship, the reader may best form an idea by inspecting the collection of them in the British Museum.

The two imperfect antefixa, here represented, are among those found at Velletri, and described by Carloni. (*Roma*, 1785.)



Antefixa.

The first of them must have formed part of the upper border of the frieze, or rather of the cornice. It contains a panther's head, designed to serve as a spout for the rain-water to pass through in descending from the roof. Similar antefixa, but with comic masks instead of animals' heads, adorned the temple of Isis at Pompeii. For additional examples of ornamental water-spouts or gargoyles, see Tegula. The second of the above specimens represents two men who have a dispute, and who come before the sceptre-bearing kings, or judges, to have their cause decided. The style of this bas-relief indicates its high antiquity, and, at the same time, proves that the Volsci had attained to considerable taste in their architecture. Their antefixa are remarkable for being painted: the ground of that here represented is blue; the hair of the six men is black, or brown; their flesh red; their garments white, yellow, and red: the chairs are white. The two holes may be observed, by which this slab was fixed upon the building.

Cato the Censor complained that the Romans of his time began to despise ornaments of this description, and to prefer the marble friezes of Athens and Corinth. (Liv. xxxiv. 4.) The rising taste which Cato deplored may accou for the superior beauty of the antefixa preserv in the British Museum, which were discover at Rome. A specimen of them is given in t third illustration. It represents Athena sup intending the construction of the ship Ar The man with the hammer and chisel is Arg who built the vessel under her direction. T pilot Tiphys is assisted by her in attaching the sail to the yard. Another specimen of the antefixa is given under the article Antyx. (Müller, *Etrusker*, ii. p. 247; *Archaeol. der Kunst*, § 284.) [J. Y.] [W. W.]

Antefixa.

ANTENNA. [Navis.]

ANTEPAGMENTA, the jambs of a door-case, often made with an ornamental moulding which projected before the upright pillar (*scapus cardinalis*) on which the door turned, so as to conceal it entirely from view on the outside. (Vitruv. iv. 6; Festus, *s. v.*; Cato, *R. R.* 14, § 4.) The *antepagmentum superius* of Vitruvius (*l. c.*) is a lintel of a door-case similarly made. A door fitted with such jambs and lintel (as many houses at Pompeii are) would be entirely inside its door-case, and could only open inwards; on the other hand, it would not admit draughts (Rich). Vitruvius also uses the word to denote other mouldings, *e.g.* of *mutuli* (iv. 7) or *stilicidia*, in this sense probably the same as *antefixa*. [Antefixa.] [J. H. F.]

ANTEPILA'NI. [Exercitus.]

ANTESIGNA'NI. [Exercitus.]

ANTESTA'RI. [Actio.]

ANTHESPHO'RIA (ἀνθεσφόρια), a flower or spring festival, principally celebrated in Sicily in honour of Demeter and Persephone, in commemoration of the return of Persephone to her mother in the beginning of spring. It consisted in gathering flowers and twining garlands, because Persephone had been carried off by Pluto while engaged in this occupation. (Pollux, i. 37.) Strabo (vi. p. 256) relates that at Hipponium the women celebrated a similar festival in honour of Demeter, which was probably called anthesphoria, since it was derived from Sicily. The women themselves gathered the flowers for the garlands which they wore on the occasion, and it would have been a disgrace to buy the flowers for that purpose. Anthesphoria were also solemnized in honour of other deities, especially in honour of Hera, surnamed Ἀνθεία, at Argos (Paus. ii. 22, § 1), where maidens, carrying baskets filled with flowers, went in procession, whilst a tune called ἱεράκιον was played on the flute. (Comp. *Etym. Gud.* p. 57.) Aphrodite, too, was worshipped at Cnossus, under the name Ἀνθεία (Hesych. *s. v.*), and has therefore been compared with Flora, the Roman deity, as the anthesphoria have been with the Roman festival of the *Florifertum* or *Floralia.* [DIONYSIA.] [L. S.]

ANTHESTE'RIA. [DIONYSIA.]

ANTHRACION (*ἀνθράκιον, ἐσχάρα, ἐσχαρίς, ἐσχάριον*), a small portable stove or brazier, filled with hot coals, and carried from room to room as required, as in Italy in the present day. (Cf. Poll. x. 100, 101.) [J. H. O.]

ANTID'OSIS (*ἀντίδοσις*), in its literal and general meaning, "an exchange," was, in the language of the Attic courts, peculiarly applied to proceedings under a law which is said to have originated with Solon (Dem. *c. Phaenipp.* init.). It is natural, however, to refer the law to more democratic times; and the orators were in the habit of ascribing to Solon all laws, especially those which they happened to be quoting in a favourable sense. By this law, a citizen nominated to perform a leiturgia, such as a trierarchy or choregia, or to rank among the property-tax payers in a class disproportioned to his means, was empowered to call upon any qualified person not so charged to take the office in his stead, or submit to a complete exchange of property—the charge in question, of course, attaching to the first party, if the exchange were finally effected. For these proceedings the courts were opened at a stated time every year by the magistrates that had official cognisance of the particular subject; such as the strategi in cases of trierarchy and rating to the property-taxes, and the archon in those of choregia. (Dem. *c. Phaenipp.* p. 1040; Meier, *Att. Process*, p. 471; *προσκαλεῖσθαί τινα εἰς ἀντίδοσιν*, Lysias, *Or.* 24, *pro Inval.* § 10.) If the person challenged could prove that he had already discharged the leiturgia, or was otherwise lawfully exempted, the magistrates might dismiss the case:—otherwise the parties proceeded to a *διαδικασία* or legal award of their respective claims. Each litigant could now repair to the houses and lands of his antagonist, and secure himself, as all the claims and liabilities of the estate were to be transferred, from fraudulent encumbrances of the real property, by observing what mortgage placards (ὅροι), if any, were fixed upon it, and against clandestine removal of the other effects, by sealing up the chambers that contained them, and, if he pleased, by putting bailiffs in the house. (Dem. *c. Phaenipp.* pp. 1040, 1041.) An oath was taken by both parties that each would deliver to the other, within three days, a correct inventory (*ἀπόφασις*) of their respective properties (Dem. *c. Phaenipp.* p. 1042, § 11): but in practice the time might be extended by consent of the challenger. All immovable and movable property was transferred in the exchange, with the exception of mines, which were exempted from the extraordinary taxes and leiturgiae, as being already taxed: and all claims and obligations attached to it, and particularly all debts, were included in the transfer, as may be seen from the speech against Phaenippus. The notion of some of the older scholars, that actions not referring to property were also transferred from the one to the other, is justly pronounced by Böckh "too absurd to be imputed to the Athenian law" (*Publ. Econ.* p. 582, E. T.). The case of Demosthenes, who was challenged to an antidosis by Thrasylochus, in collusion with his guardians, at the moment when he was bringing his action against the latter to recover his property, and who performed the trierarchy rather than surrender his claims, is an instructive example of the operation of this law in real life. (Dem. *c. Aphob.* ii. pp. 840–1; *c. Meid.* pp. 539–40.) The speech of Isocrates on the Antidosis is a fiction based on a fact (Jebb, *Att. Or.* ii. 135).

Prof. Mahaffy's remarks on the absurdity of this law are by no means too strong: "It seems simply the legislation of the Athenian mob about property which they had never possessed, and did not understand; for the other alternative — that Athenian properties were small or of a simple nature, like our rentals of estates—is refuted by the many descriptions of property in the orators. It is in fact inexplicable that any intelligent people should have tolerated such a law, and it is conclusive against the business capacity of the men who tolerated it" (Mahaffy, *Social Life in Greece*, p. 409, ed. 3). [J. S. M.] [W. W.]

ANTIGONEIA (*ἀντιγόνεια*), sacrifices instituted by Aratus and celebrated at Sicyon with paeans, processions, and contests, in honour of Antigonus Doson, with whom Aratus formed an alliance for the purpose of thwarting the plans of Cleomenes. (Plut. *Cleom.* 16, *Arat.* 45; Polyb. xxviii. 16, xxx. 20.) [L. S.]

ANTIGRAPHE' (*ἀντιγραφή*) originally signified the writing put in by the defendant in all causes, whether public or private, in answer to the indictment or bill of the prosecutor. But we find the term employed not only for the answer of the defendant, but also for the statement of the plaint (Harpocrat. *s. v.* *ἀντιγραφή*: Plato, *Apol. Socr.* p. 27 C; Schömann, *Antiquities*, p. 484, E. T., in correction of his former views in *Att. Process*). Thus the word "plea," though by no means a coincident term, may be allowed to be a tolerably proximate rendering of antigraphé.

In Attic law, the defendant's answer might consist in a direct denial of the facts alleged, or a justification, leading to a trial on the merits of the case (*εὐθυδικία*). Thus, the *ἀντιγραφὴ* preserved or inserted in Dem. *in Steph.* i. p. 1115, is an instance of the simplest form of indictment and plea: "Apollodorus, the son of Pasion of Acharnae, against Stephanus, son of Menecles of Acharnae, for perjury. The penalty rated, a talent. Stephanus bore false witness against me, when he gave in evidence the matters written in the record. I Stephanus, son of Menecles of Acharnae, witnessed truly when I gave in evidence the matters written in the record." On this passage C. R. Kennedy notes: "The two pleadings together, the plaint on the left side, the plea on the right, form (as we should say) the issue on the record. The deposition complained of was annexed."

The defendant might also, by pleas asserting the incompetency of the court, the disability of the plaintiff, his own privilege, and the like, try to show that the cause in its present state could not be brought into court (*μὴ εἰσαγώγιμον εἶναι τὴν δίκην*). This form of the *ἀντιγραφὴ* was called *παραγραφή*, dilatory plea or "demurrer," and is treated in a separate article [PARAGRAPHÉ].

A third case is that in which the defendant neither meets the allegations of the plaintiff with a direct negative, nor with a demurrer, but resorts to a "cross-action." This, according to Caillemer, is the most exact sense of *ἀντιγραφή*. The subject-matter of this cross-action might or might not be connected with that of the suit upon which it retaliated. For instance, the Demosthenic speech against Evergus and Mnesibulus is a cross-action for assault (*αἰκίας*) upon a primary action for the same: Boeotus meets the claim of his half-brother Mantitheus to a talent as his mother's dowry, with a counterclaim for the same sum (*τὴν ἴσην προῖκα*) as the dower of his own mother Plango, and the speech *περὶ προικὸς μητρῴας* is the reply of Mantitheus to this cross-action. As an example of the opposite sort, Aeschines, impeached by Timarchus for misconduct on an embassy (*παραπρεσβεία*), arraigns the life and morals of his accuser on a charge which, if proved, involved the penalty of *ἀτιμία*, and so disqualified Timarchus from appearing as a prosecutor in a court of law.

As a check upon vexatious defence as well as frivolous litigation, the loser in a paragraphé (and of course in a cross-action as well) was condemned to pay the *ἐπωβελία* or penalty attaching to plaintiffs who failed to obtain one-fifth of the votes. As regarded public causes, the statutable penalty of 1000 drachmas was doubtless enforced in cross as in primary actions. [EPOBELIA.]

There is yet another sense of the word *ἀντιγραφή*, in the case of persons who laid claim to an unassigned inheritance. Here, none of the claimants was, properly speaking, either plaintiff or defendant; that is, no *δίκη* or *ἔγκλημα* could be strictly said to be directed by one competitor against another, when all came forward voluntarily into court to defend their several titles. This circumstance has been suggested by Schömann as a reason why the documents of each claimant were denoted by the term *ἀντιγραφή* (*Att. Process*, p. 465). [J. S. M.] [W. W.]

ANTIGRAPHEIS (*ἀντιγραφεῖς*), checking-clerks, *contrarotulatores*, *contrôleurs*. Efficient checks on the handling of public funds, whether municipal or national, were even more necessary among the Greeks than in modern civilised countries; and the Athenians, with their deep distrust of official honesty, sought refuge in multiplying such checks. Hence it was the rule in Athenian finance, that wherever there was a public officer entrusted with the payment of money, there was by his side an *ἀντιγραφεὺς* who watched over him and kept duplicate accounts. Thus it is proved by inscriptions that there was an *ἀντιγραφεὺς* to each deme (*C. I. G.* 100); and a general in the field disposed of his military chest subject to a like control. (Dem. *de Chers.* p. 101, § 47.) The administrators of sacred funds, such as the *ταμίαι τῆς θεοῦ* and the *ἑλληνοταμίαι* or treasurers of Delos, were similarly controlled (Inscr. 139, 141, 150, 158).

Two of these *ἀντιγραφεῖς* stand out from the rest as important public officers; the *ἀντιγραφεὺς τῆς διοικήσεως* and the *ἀντιγραφεὺς τῆς βουλῆς* (Harpocrat., Suid. *s. v.*). The office of the former was to control the expenditure of the public treasury (*διοίκησις*), and to lay the revenue accounts before the people in every prytany, so that he was a check upon the *ἀποδέκται* [APODECTAE]. This must be the officer described by Aeschines (*in Ctes.* § 25) as "formerly" elected by *χειροτονία*: his further statement, that at one time the Athenians had carried their confidence in Eubulus so far as to unite the offices of the *ἀντιγραφεῖς* and *ἀποδέκται* in the same persons, is either a rhetorical exaggeration, or, if true, an instance of their infatuation where the Theoric fund was concerned [THEORICA]. Androtion's auditing of his own accounts is represented by Demosthenes as an act of equal dishonesty and impudence.

The *ἀντιγραφεὺς τῆς βουλῆς* was originally elected by the people, but afterwards appointed by lot from the senate itself; always, it would seem, from the non-presiding tribes, the prytanes being excluded (*C. I. G.* 190). He was always present at the meeting of the senate, and checked the accounts of moneys paid into its keeping (Pollux, viii. 98); but he is to be distinguished from the *γραμματεὺς* who prefixed his name to its decrees. He controlled financial matters only, not business generally.

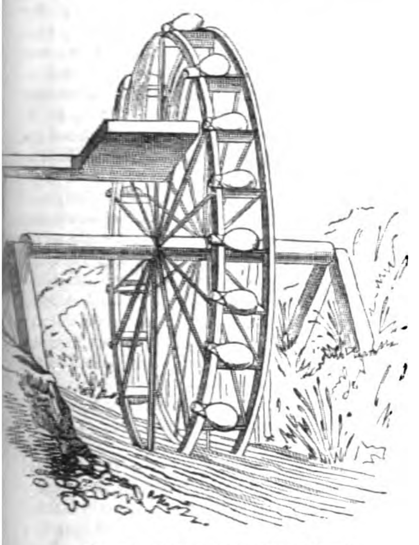
The account of the checking-clerks in Böckh (*P. E.* bk. ii. ch. 8) contains many inaccuracies in the first edition, from which the English translation most in use is taken; and these are not entirely corrected in the second edition. (Compare Schömann, *Assemblies*, pp. 287, 318–19; *Antiq.* p. 378; Hermann, *Staatsalterth.* § 127, n. 17 and 18; Wayte on Demosth. *Androt.* p. 605, § 38, p. 615, § 70.) [W. W.]

ANTINOEIA (*ἀντινόεια*), annual festivals and quinquennial games, which the Roman emperor Hadrian instituted in honour of his favourite, Antinous, after he was drowned in the Nile, or, according to others, had sacrificed himself for his sovereign, in a fit of religious fanaticism. The festivals were celebrated at Athens, Eleusis, in Bithynia, at Argos, and Mantineia, in which places he was worshipped as a god. Afterwards this festival appears to have been discontinued. (Spart. *Hadr.*, c. 14; Dio Cass. lxix. 10; Paus. viii. 9, § 4; Boeckh, *C. I. G.* 1124.) [L. S.]

AN'TLIA (*ἀντλία, ἀντλίον*), any machine for raising water. [COCHLEA; GIRGILLUS; ROTA AQUARIA; SIPHO; TOLLENO; TYMPANUM.] The figure on the next column shows a machine which is still used in Tyrol and other Alpine countries. As the current puts the wheel in motion, the jars on its margin are successively immersed and filled with water. When they reach the top, the water is sent into a trough, from which it is conveyed to a distance, and chiefly used for irrigation. Lucretius (v. 516) mentions a machine constructed on this principle: "Ut fluvios versare rotas atque haustra videmus."

In situations where the water was at rest, as in a pond or a well, or where the current was too slow and feeble to put the machine in motion, it was constructed so as to be wrought by animal force, and slaves or criminals were commonly employed for the purpose (*in antliam con-*

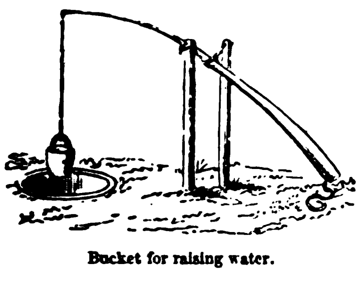
demnare, Suet. *Tib.* 51). Five such machines are described by Vitruvius, in addition to that



Machine for raising water in Tyrol.

which has been already explained, and which, as he observes, was turned *sine operarum calcatura, ipsius fluminis impulsu.* These five (on which details will be found *sub vocc.*) were, 1, the tympanum,—a tread-wheel, wrought *hominibus calcantibus*: 2, a wheel (*rota*) resembling that in the preceding figure, but having, instead of pots, wooden boxes or buckets (*modioli quadrati*), so arranged as to form steps for those who trod the wheel: 3, the chain-pump (*tolleno*): 4, the *cochlea*, or Archimedes' screw: and 5, the *ctesibica machina*, or forcing-pump. (Vitruv. x. 4–7; Drieberg, *Pneum. Erfindungen der Griechen*, pp. 44–50.)

On the other hand, the antlia with which Martial (ix. 18, 4) watered his garden was probably the pole and bucket universally employed in Italy, Greece, and Egypt. The pole is curved, as shown in the annexed figure; because it is the

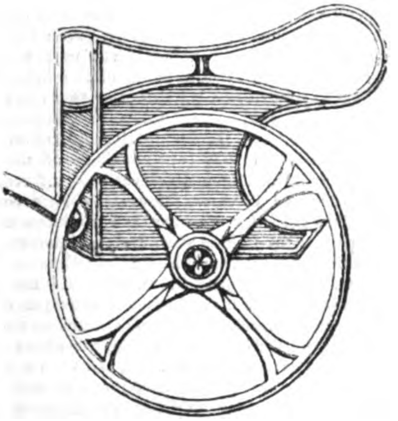


Bucket for raising water.

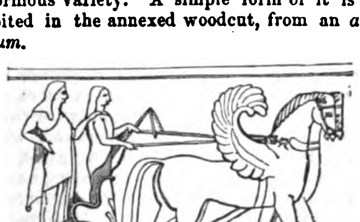
stem of a fir, or some other tapering tree. The bucket, being attached to the top of the tree, bends it by its weight; and the thickness of the other extremity serves as a counterpoise. The great antiquity of this method of raising water is proved by representations of it in Egyptian paintings. (Wilkinson, *Manners and Cust. of Anc. Egypt.* ii. 1–4; see also *Pitt. d'Ercolano*, vol. i. p. 257.) [J. Y.] [A. G.]

ANTOMOS'IA (*ἀντωμοσία*). [Anakrisis; Paragraphé.]

ANTYX (*ἄντυξ*), the edge or border of any circular object. 1. The rim of the round shield (*Il.* vi. 118, xiv. 412, xviii. 479). See examples of the *antyx* of a shield in drawings to Antefixa, Arma, Clipeus. 2. Specially the outside rim or rail, that formed the edge of the car in the Homeric chariot (*Etym. M.* and Zonar. *s. v.*). It seems to have been usually made of some kind of pliant wood, as for instance of the shoots of the wild fig (*Il.* xxi. 38), and was used to give stability to the car, which was often made of wicker-work. It rose to some height in front, so that the reins could be fastened to it when the driver left the chariot (*Il.* v. 262; cf. Eurip. *Hipp.* 1188), and projected on each side in a loop behind, to assist him in mounting. A second rail seems often to have been added, as for instance in the chariot of Hera, of which Homer says *δοιαὶ δὲ περίδρομοι ἄντυγές εἰσιν* (*Il.* v. 728). The accompanying engraving shows the *ἄντυξ*, and the Greek vases represent an enormous variety. A simple form of it is exhibited in the annexed woodcut, from an *antefixum*.



Antyx. (Ginzrot, *Wagen und Fuhrwerke*, Pl. xxix. fig. 5.)



Antyx. (From an Etruscan tomb.)

After the Homeric time, *ἄντυξ*, or the plural *ἄντυγες*, is used for the chariot itself. (Soph. *Electr.* 746; Eur. *Phoen.* 1193; Theocr. ii. 166.) [Currus.] [J. Y.] [J. H. O.]

A'NULUS or **ANN'ULUS** (*δακτύλιος*), derived from the same root as *ἀμφὶ*, meaning something which goes round (cf. *annus*; Corssen, *Beitr.* p. 316), was used for a ring of any kind, especially a finger-ring. This was originally called in Latin *ungulus* (Fest., p. 375; Plin. *H. N.* xxxiii. § 10).

In the earliest times the ring was used, not as an ornament, but as a seal (Macrob. *Sat.* vii. 13, § 12). How ancient the custom of wearing rings among the Greeks was, cannot be ascertained; though it is certain, as even Pliny (*H. N.* xxxiii. § 12) observes, that in the Homeric poems there are no traces of it. In works of fiction, however, and in those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings. (Paus. i. 17, § 3, x. 30, § 2; Eurip. *Iphig. Aul.* 154, *Hippol.* 862.) But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal. (Herod. i. 195; Plat. *Rep.* ii. 359 E.) From Asia Minor to Greece proper the transition of fashion was expeditious, and the signet, now for the first time worn mounted as a *finger-ring*, came into universal favour among all the Hellenic population. This was a new method for securing the engraved stone: for the original inventors of seal-engraving had worn and continued to wear down to the very close of their history (even to the date of the Arabian conquest), the cylinder or the conical seal as the ornament of the bracelet or the necklace, &c. That this invention (sc. the finger-ring) should be ascribed to Prometheus, a Grecian hero, and its designation *δακτύλιος* a word of native origin (unlike those of many other personal ornaments, evidently of a foreign root: *μανιάκης ψέλλιον*, for example), are considerations going far to prove that this latest and most permanent fashion was purely an innovation of the Greeks. Besides this, we have the express statement of Pliny (xxxiii. 4), that the use of the finger-ring was introduced amongst the Romans from Greece: "E Graecia fuit origo unde hic anulorum usus venit." (King, *Handbook of Engraved Gems*, 1885, pp. 12, 13.) In the time of Solon seal-rings (*σφραγῖδες*), as well as the practice of counterfeiting them, seem to have been rather common, for Diogenes Laërtius (i. 57) speaks of a law of Solon which forbade the artist to keep the form of a seal (*σφραγίς*) which he had sold. (Allusion to counterfeit seals in Aristoph. *Thesm.* 432; Thuc. i. 132.) Whether, however, it was customary as early as the time of Solon to wear rings with precious stones on which figures were engraved, may justly be doubted; and it is much more probable that at that time the figures were cut in the metal of the ring itself, a custom which was never abandoned altogether. King (*l. c.* p. 3) agrees with Lessing, that the signet-ring was not worn by the Greeks till about the beginning of the Peloponnesian War; otherwise Herodotus (*l. c.*) would have mentioned the Babylonians wearing the signet suspended from their *wrist* or *neck* as a striking peculiarity, which he does not. Rings without precious stones were called *ἀπείρονες, ἄπειροι, ἄλιθοι, ἄψηφοι*, the name of the gem being *ψῆφος* or *σφραγίς*, which was set in a bezel (*σφενδόνη, πυελίς, μάνδρα, funda, pala*). In later times rings were worn more as ornaments than as articles for use, and persons now were no longer satisfied with one, but wore two (Plat. *Hipp. Min.* p. 368 C), three, or even more rings (Dinarch. *in Demosth.* § 36; Diog. Laërt. v. 1); and Suidas says (*s. v. σφραγίς*) that some regularly loaded their hands with rings. Greek women likewise used to wear rings (Aristoph. *Thesm.* frag. 320, 12, Kock; Ter. *Heaut.* iv. 1, 37; *Hecyr.* iv. 1, 59; Poll. ii. 155), but not so frequently as men; the rings of women appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, &c. (Artemid. *Oneir.* ii. 5.) Rings were mostly worn on the left hand and third finger (*παράμεσος*, Plut. *Sympos. Frag.* iv. 8; Gell. x. 10), but also on the little finger (Lucian, *Dial. Merer.* 9, 2). Indeed, Pliny says (*H. N.* xxxiii. § 24) that they were worn first on the third, then on the first, and finally on the little finger; and Macrobius (*Sat.* vii. 13, § 15), quoting Ateius Capito, says that originally they were worn on any finger of either hand. But they do not seem to have been ever worn on the second finger (*digitus infamis*). An Etruscan tomb exhibits rings on the upper joints of the fingers. (See cut on p. 132.)

The Lacedaemonians are said to have used iron rings at all times. (Plin. *H. N.* xxxiii. § 9.) With the exception perhaps of Sparta, the law does not appear to have ever attempted in any Greek state to counteract the great partiality for this luxury; and nowhere in Greece does the right of wearing a gold ring appear to have been confined to a particular order or class of citizens.

The custom of wearing rings was believed to have been introduced into Rome by the Sabines, who are described in the early legends as wearing gold rings with precious stones (*gemmati anuli*) of great beauty (Liv. i. 11; Dionys. ii. 38). Florus (i. 5) states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny (*l. c.*) derives it from Greece. The fact that among the statues of the Roman kings in the Capitol, two, Numa and Servius Tullius, were represented with rings, can scarcely be adduced as an argument for their early use, as later artists would naturally represent the kings with such insignia as characterised the highest magistrates in later times. But at whatever time rings may have become customary at Rome, thus much is certain, that at first they were generally of iron, but often of stone (King, *Antique Gems*, p. 176, ed. 1860), that they were destined for the same purpose as in Greece—namely, to be used as seals — and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the republic by such men as loved the simplicity of the good old times, and retained its place in the ceremony of betrothal. Marius wore an iron ring in his triumph over Jugurtha, and several noble families adhered to the ancient custom, and never wore gold ones. (Plin. *H. N.* xxxiii. §§ 12, 21.)

When senators in the early times of the republic were sent as ambassadors to a foreign state, they wore during the time of their mission, and on public occasions afterwards, perhaps, gold rings, which they received from the state; in private they wore their iron ones. (Plin. *H. N.* xxxiii. § 11; Isidor. *Orig.* xix. 32, 3.)

Rings with us are mainly associated with marriage, an association borrowed from the Romans. As already mentioned, the *anulus pronubus* was originally of iron, without a stone, and continued to be so even to a late period (Plin. *H. N.* xxxiii. § 12); though Tertullian (*Apol.* 6) says the marriage ring was just the one gold ornament women wore in the good old times. Marriage rings with precious stones must also have been used, as such are found on ancient figures (Rossbach, *Hochzeitsdenkm.* p. 27). The ring was an earnest given by the bridegroom for the fulfilment of the contract of marriage (cf. *pignus*, Juv. vi. 27; Dig. 24, 1, 36, § 1), as we may see from the fact that in mere mercantile contracts a ring was often given as a pledge (Dig. 14. 3, 5, § 15; cf. Ter. *Eun.* iii. 4, 3).

Ring with Key attached. (British Museum.)

The practical purposes for which rings, or rather the figures engraved upon them, were used by the Greeks and Romans, were the same as those for which we use our seals. Besides this, however, persons, when they left their houses, used to seal up such parts as contained stores or valuable things, in order to secure them from thieves or slaves (Arist. *Thesm.* 415 *sqq.*; Plat. *Legg.* 954; Athen. p. 34 a; Plaut. *Cas.* ii. 1, 1; Cic. *ad Fam.* xvi. 26, *de Orat.* ii. 61, 248; Martial, ix. 88; Mayor on Juv. xiv. 132). The housekeeper used to carry a seal for this purpose (Arist. *Eq.* 948; Plut. *Alex.* 9); and we have still remaining rings with a key attached. The ring of a Roman emperor was a kind of state-seal, and the emperor sometimes allowed the use of it to such persons as he wished to be regarded as his representatives (Dio Cass. lxvi. 2). The keeping of the imperial seal-ring was entrusted to an especial officer (*cura anuli*, Just. *Hist.* xliii. 5). The signs engraved upon rings were very various, as we may judge from the specimens still extant: they were portraits of ancestors, or friends, subjects connected with mythology or the worship of the gods; and in many cases a person had engraved upon his seal symbolical allusions to the real or mythical history of his family. (Cic. *in Catil.* iii. 5; *de Finib.* v. 1; Val. Max. iii. 5, 1; Suet. *Tib.* 58.) Like our crests, different families seem to have had distinct seals: *e.g.* the seal of Galba's family was a dog leaping from a ship's prow (Dio Cass. li. 3). Sulla thus wore a ring with a gem, on which Jugurtha was represented at the moment he was made prisoner (Plin. *H. N.* xxxvii. § 8; Plut. *Mar.* 14). Pompey used a ring on which three trophies were represented (Dio Cass. xliii. 18), and Augustus at first sealed with a sphinx, afterwards with a portrait of Alexander the Great, and at last with his own portrait, which was subsequently done by several emperors. (Plin. *H. N.* xxxvii. § 10; Suet. *Aug.* 50; Dio Cass. li. 3.) Hadrian's seal had his own image on it (Spart. *Hadr.* 26). The Empire is the grand era of portraits on gems. See the interesting discussion in King, *Handbook*, pp. 53 ff., who quotes Ovid, *Trist.* i. 7, 5, and many other instances.

Reversible Ring. (D. and S.)

The principal value of a ring consisted in the gem framed in it, or rather in the workmanship of the engraver. The stone most frequently used was the onyx, on account of its various colours, of which the artists made the most skilful use. The elder Scipio was the first Roman who wore a ring with a sardonyx (Pliny, *H. N.* xxxvii. § 85). The Greek engravers of the best times had contented themselves with the sard, banded agate, and amethyst as the materials for their art. The Romans attacked the more precious stones in spite of their hardness—the ruby, the sapphire, and the amethyst (King, *l. c.* p. 40). Besides rings having a seal-stamp on them, we find camei also. (Senec. *Benef.* iii. 26; Plin. xxxvii. § 173.) We have many rings with inscriptions on them—χαρά, χαρὰ τῇ φορούσῃ, ἔτη χίλια ζήσῃς (Becker-Göll, iii. p. 280)—presents given to girls (Mart. viii. 5); and these "motto-camei" are very common from Diocletian's time (King, *Handbook*, p. 77). Indeed in the wearing of rings the Roman ladies do not seem to have been wanting (Tert. *Apol.* 6); and in one of the graves at Kertsch a woman was found with eight rings. We know that the ring followed the wearer in death (Propert. v. 7, 9). In the art of engraving figures upon gems, the ancients in point of beauty and execution far surpass everything in this department that modern times can boast of. The ring itself, in which the gem was set, was likewise in many cases of beautiful workmanship.

Snake-ring. (British Museum.)

The stone and its setting sometimes revolved on an axis, having on one side a figure in relief, on the other an intaglio. Sometimes the rings were spirals, resembling serpents, like many of our bracelets; and we find rings of chased gold with each side ending in a serpent's head. Originally among the Romans men wore only one ring and women none, except the one which a bride received from the bridegroom (Isidor. *l. c.*); but with the increasing love of luxury and show the Romans covered their fingers with rings (Quintil. xi. 3, § 142; Petron. 32). Lucian (*Gall.* c. 12), ridiculing the rich, speaks of sixteen rings. Martial (xi. 59) tells of a man who wore six on every finger; and of another (xi. 37) who had a ring of such a monstrous size that he recommends him to wear it on his leg instead of his finger. Some even used different rings for summer and winter, those for the latter season being too heavy for hot weather. (Juv. i. 28, with Schol.; cf. Dennis, *Etruria*, i. p. 476.) Clement of Alexandria (*Paedagog.* iii. 11, pp. 288–9, ed. Potter) says men are not to wear the ring on the joint (ἐπ' ἄρθρῳ), for this is feminine, but to place it on the little finger at the root: for so the hand will be freest to work, and the signet will not easily fall off. And our seals (he goes on) should be a dove or a fish or a ship scudding before the wind, or a musical lyre which Polycrates used, or a ship's anchor. We are not to delineate the faces of idols; nor a sword, nor a bow, following as we do peace; nor drinking cups, being temperate. Many of the licentious (he tells us also) have their lovers or their mistresses engraved on their seals. Thus, contrary to our modern custom, rings appear to have been worn on the *joints* of the fingers; and if more than one was worn on one finger, the rings were placed on different joints, not worn together and touching each other, as with us. This is exemplified in the accompanying cut from an Etruscan tomb. The materials used for rings, as exemplified in European collections, were iron, bronze, gold, silver, lead, zinc, amber, and ivory. Rings, especially among the Greeks, were often regarded as talismans (Aristoph. *Plut.* 884). For famous rings with magic powers, compare that of Gyges (Plat. *Rep.* 359), Chariclea (Heliod. *Aeth.* iv. 8), Eucrates (Lucian, *Philopseud.* 17), and more in King, *Handbook*, p. 134 foll. Rings were kept in a box called *dactyliotheca*, a name also applied to a collection of rings. (Mart. xi. 59, xiv. 123; Plin. *H. N.* xxxvii. § 11.) On ear-rings, see INAURES.

Hand from an Etruscan tomb, wearing Rings.

JUS ANULI AUREI. The Roman gold ring appears to have been originally a military distinction given for success in dealing with the enemy. This may be seen from the formula for the most part preserved in Cicero, and which has been restored as follows (*Verr.* iii. 80, 187): "Quando tu quidem in praelio in bello iure militari nunquam mihi defuisti, omnibusque in iisdem periculis et in legatione et in praetura et hac in provincia versatus es; ob eas causas hoc anulo aureo te dono:"—and also from the fact that it was the praetor or provincial governor (Cic. *Verr. l. c.*) who bestowed it (cf. Acron on Hor. *Sat.* ii. 7, 53; Suet. *Jul.* 33, 39). As is natural with such distinctions in a militant state, it came to be bestowed on the chief civil magistrates, and we find it in rather early times belonging to the *nobiles*, and like many other distinctions transmissible to their descendants. (Liv. ix. 46, 12; Plin. *H. N.* xxxiii. § 18.) It did not belong to the senators as such (Plin. *H. N.* xxxiii. §§ 12 and 21); but, military distinction as it was originally, the most distinguished military class naturally obtained it, and thus we find that the flower of the knights, the *equites equo publico*—those whom Livy (xxiii. 12, 2) styles *eorum ipsorum primores*, and Pliny (*H. N.* xxxiii. § 36) *trossuli*—must have had this badge, else the story of the bushels of rings taken from the Romans who fell at Cannae, which Mago emptied in the senate at Carthage, would be extravagant exaggeration. The *tribuni militum* also wore gold rings, according to Appian (*Pun.* 104). Such a distinction showed that these knights were regarded as attached to the *nobiles*, and forming with them the aristocracy. The rest of the knights, those *equo privato*, at all events as early as B.C. 171, must be considered as not having this distinction, and being in class-antagonism to the rest of the knights; for these latter, the *primores civitatis*, when Claudius was condemned by eight centuries of knights out of twelve, in sign of supplication, as we are told (Liv. xliii. 16, 14), laid aside their rings. But history shows us that the lower classes encroach upon the class distinctions of the higher, and these latter do not resist when there is need to conciliate or to fear the former. So that we may admit that during the following century this encroachment was going on, and that *publicani* and their sons began to appropriate this distinction of the ring (Lange, *Röm. Alt.* ii. 163); and that by the time of Caius Gracchus the ring was virtually, though not formally, a class-distinction of the knights, though the senators also who were *nobiles*, or who had served as *legati*, had the privilege of wearing the *anulus aureus*. We say "virtually, not formally," because all the knights even did not wear it as late as 90 B.C. (Plin. *H. N.* xxxiii. § 21.) Etiquette no doubt did not prescribe it as necessary, and so there must have been many who objected to it as an exhibition of new-fangled ostentation. (Cf. Plin. *l. c.* about the Quintii.)

In the later times of the Republic, we hear of several instances of the *anulus aureus* being given by grant of the military commander or provincial governor. The grantee was always supposed to have the requisite census, or else it was given him by the grantor. (Cic. *Verr.* iii. 80, 187.) The gift of the ring was equivalent to elevation to knighthood, and brought with it all the privileges granted to the knights by the Aurelian and Roscian laws. Sulla gave it to the actor Roscius (Macrob. *Sat.* ii. 10); Balbus, the quaestor at Gades, to another actor, Herennius Gallus (Cic. *ad Fam.* x. 32, 2); Verres to his scribe, Maevius (Cic. *Verr.* iii. 80, 184). But, by the way Cicero speaks of this latter case, we cannot suppose that the bestowal of knighthood was very common or much abused under the Republic.

More extensive and worse-bestowed no doubt were the special grants during the Empire, when the emperor, as holding the imperium, had the right of bestowing the ring at will. Many who were unworthy, both by birth and character, obtained it—Icelus (Suet. *Galb.* 14), Asiaticus (Tac. *Hist.* ii. 57), Hormus (Tac. *Hist.* iv. 39), &c. But really it was by encroachment, only half-heartedly opposed, that the abuse spread. The equestrian census had been fixed at 400,000 sesterces, and this qualification was requisite for one to serve in any of the first three decuriae of judges under Augustus. (See JUDEX, and Walter, *Gesch. des röm. Rechts*, § 353.) Free birth was always presupposed, and the money was the requirement principally insisted upon. But the increasing influence and wealth of freedmen under the early empire enabled many of them to attain the dignity of the *anulus aureus*. Augustus had given it to Vinius Philopoemen, to Menas (Suet. *Aug.* 27, 74), to Antonius Musa, to Vedius Pollio (Dio Cass. liii. 30, liv. 23); but so many more had assumed it without warrant that a decree of the senate was passed in the reign of Tiberius (A.D. 23) enacting that no one who had not the qualifications of (1) the census, (2) birth of free father and grandfather, could be a knight or could wear the ring; and Pliny (*H. N.* xxxiii. § 32) justly regards this as the final establishment of the equestrian order. The ring was lost by loss of the census (Mart. ii. 57) or by conviction for some crime (*e.g.* Arellius Fuscus for false accusation, Plin. *H. N.* xxxiii. § 151). Again the Lex Visellia (A.D. 24) punished those freedmen who usurped the privileges of *ingenuitas* (Cod. Just. 9, 21; 11, 31; 10, 32. 1). [On the question of the date of this law, see Walter, *l. c.*, note 25.] Yet none the less did the encroachments continue. Four hundred men who had usurped the ring and the privileges of knighthood were deprived of their goods by Claudius (Plin. *H. N.* xxxiii. § 8). Even those who had not the requisite census encroached; and this is the burden of complaint in the Flavian writers that not only any "son of a peak-snatcher," if he have the census (Juv. iii. 157 ff.), but even those who have not the census, assume the equestrian privilege of sitting in the first fourteen rows in the theatre; and hard and ineffectual work Leitus and Oceanus, the box-keepers, had in endeavouring to turn the intruders out (Mart. iii. 95, 10; v. 8, 12; 25, 1; 27, 4). So the ring practically ceased to be the symbol of either wealth or birth; and finally positive law, which follows in the wake of usage, under Hadrian enacted that the *ius anuli aurei* attested merely that the wearer was to be considered freeborn, and in the case of a freedman did not impair the rights of his patron. The patron had to give his consent to the freedman getting the *ius anuli*. Women too got the right (Dig. 40, 10, 6, 3, 4). The sole privilege the *ius anuli* now brought was that of obtaining office (Capit. *Macr.* 4). In fact, as the Vatican Fragment (226) says: "Jus anulorum ingenuitatis imaginem praestat salvo iure patroni patronique liberorum." And when this was established by law as all that the privilege of the ring really meant, the competition for it died out, and in Justinian's time all free men could legally wear the gold ring (Isid. *Orig.* xix. 32).

During the early empire it had been brought about that certain positions in the army should lead to the equestrian dignity, and enable the holder to proceed on the equestrian career, which might result in his obtaining one of the higher procuratorships. One of these was the *tribunatus legionis*. Thus Juvenal says (vii. 88) of Paris: "Semestri digitos vatum circumligat auro," which means "the ring (*i.e.* equestrian rank) won by six months' service." (See Mayor's note.) [Full details on this point will be found in the chapter of Hirschfeld's *Verwaltungsgeschichte*, entitled, "Die procuratorische Carrière."] But by Hadrian's time, as we saw, the gold ring did not carry with it equestrian dignity. It was only a sign of quasi-ingenuitas, and as such was given to all the soldiers by Septimius Severus, A.D. 197 (Herodian, iii. 8, 5). The soldiers at all times appear to have worn the iron ring (App. *Pun.* 104).

For innumerable examples of class-ornaments (such as swords, spurs, &c.) gradually coming to be used by all classes promiscuously, by encroachment, in spite of interdicts, see Herbert Spencer, *Ceremonial Institutions*, chapter ix., who alludes there to the *ius anuli aurei*. (Fortunius Licetus, *De Annulis Antiquis*, Utini, 1614, 1645; Kirch, *De Annulorum origine*. Lips. 1614; Kirchmann, *De Annulis*, Slevici, 1657; Curtius, *De Annulis Syntagma*, Antverp. 1706; Hermann, *Griech. Antiqu.* iv.^{3} p. 197; Böttiger, *Sabina*, ii. p. 157 *seq.*; Becker-Göll, *Charikles*, i. 306 ff.; *Gallus*, ii. 21, iii. 243 ff.; King, *Handbook of Engraved Gems*, 1885; Burmann, *De Jure Annulorum*, Traj. ad Rhen., 1734; Lange, *Röm. Alterth.* ii. 8, 163; Marquardt, *Privatleben*, 680 ff.; Daremberg and Saglio, *s. v.*) [L. C. P.]

APAG'ELI (ἀπάγελοι). [AGELA.]

APAGO'GE (ἀπαγωγή) was the act of arresting a person and carrying him off to prison. It was usually carried out by the magistrate or his officer, whether after ἔνδειξις, or the laying of a written information, or by ἐφήγησις, when the prosecutor applied first to the magistrate and conducted him to the spot where the capture was to be effected [ENDEIXIS]. As a law term, ἀπαγωγή had also a more technical meaning as distinguished from ἔνδειξις and ἐφήγησις. In certain specified cases the complainant was allowed to apprehend at his own risk a culprit caught *flagrante delicto* (ἐπ' αὐτοφώρῳ), and carry him off to prison or bring him before a magistrate, afterwards giving the particulars of the charge in writing. If the prosecutor failed to obtain a fifth of the votes on the trial which followed, he forfeited, as usual, 1000 drachmas; but in this instance he ran the further risk of resistance from a powerful criminal. Hence it was the remedy only of the strong and self-reliant. (Dem. *c. Androt.* p. 601, § 26: compare *c. Aristocr.* p. 647, § 80; *c. Timocr.* pp. 735–6, §§ 113, 114; *Boeot. de Nom.* p. 998, § 14.) To check the cruelties of private vengeance, no man might imprison another in his own house. (Dem. *c. Aristocr.* p. 630, § 32; p. 647, § 80.)

This summary ἀπαγωγή was allowed only in the case of the most atrocious and usually capital crimes: κακοῦργοι, οἱ τὰ μέγιστα ἀδικοῦντες are the phrases of the grammarians. Such were murder or attempted murder, man-stealing, house-breaking (ἀνδροφόνοι. ἀνδραποδισταί, τοιχώρυχοι), aggravated assault, such as that described in the *Conon* of Demosthenes (αἰκία), and robbery with violence or at night. Simple theft in the day-time was only liable to ἀπαγωγή when the value of the stolen goods exceeded 50 drachmas, except in cases where property in exposed situations was protected by special laws making 10 drachmas the limit; among these, stealing clothes or utensils from the public baths or gymnasia, and stores from the harbours, are specified. (Dem. *c. Timocr.* *l. c.*; ἡ τῶν λωποδυτῶν ἀπαγωγή, *c. Conon*, *init.*) To these may be added homicides returning from banishment without a legal pardon (Dem. *c. Aristocr.* p. 630, § 31), the grosser forms of impiety and sacrilege (ἀσεβεῖς, ἱερόσυλοι, id. *c. Androt.* p. 601, § 27), and συκοφάνται in certain cases (τὸν συκοφαντοῦντα τοὺς ἐμπόρους, id. *c. Theocrin.* p. 1324, § 10). Some other alleged instances rest upon doubtful or misinterpreted passages. Thus, it has been wrongly inferred from a so-called "law" (*ap.* Dem. *c. Timocr.* p. 733, § 105) that ἀστράτεια and κάκωσις γονέων came under this rule. We know from the text of Demosthenes (*l. c.* § 103) that the punishment for these offences was ἀτιμία, involving exclusion from the Ecclesia and from certain sacred rights; and it is the trespassing upon forbidden precincts, not the original offences, to which this penalty is assigned by the orator. Aeschines mentions the ἀπαγωγὴ of the corruptors of youth (*c. Timarch.* § 43), and of adulterers (*ib.* § 91): the former of these is likely enough, but the injured husband, as is known, might carry his vengeance much beyond simple imprisonment [ADULTERIUM]. It is difficult to believe, on the strength of a passage of uncertain authorship, that a μέτοικος might be summarily arrested on the bare suspicion of not having paid his μετοίκιον: the act, if it really took place, seems to have been one of mere lawless violence ([Dem.] *c. Aristog.* i. p. 787, § 57). And when we read the half-playful remark, that Socrates in any other state of Greece would have been imprisoned as a magician (τάχ' ἂν ὡς γόης ἀπαχθείης, Plat. *Meno*, 80 B), we must not take this as a serious contribution to the Attic law of ἀπαγωγή.

The magistrates before whom such cases were brought were generally the Eleven (Lex *ap.* Dem. *c. Timocrat. l. c.*; Lys. *c. Agorat.* § 85 f), or the Thesmothetae (Dem. *c. Aristocr. l. c.*). Charges of ἀσέβεια, whether by ἀπαγωγὴ or otherwise, came regularly before the king-archon (Dem. *c. Androt. l. c.*). The complainant was said ἀπάγειν τὴν ἀπαγωγήν: the magistrates, when they allowed it, παραδέξασθαι (Lys. *l. c.*). The ἀπαγωγὴ before the Senate, mentioned by Andocides (*de Myst.* § 91), must be pronounced, with Westermann, not to be clearly explained. The punishment of κακοῦργοι was almost always death, but we sometimes find a minor penalty adjudged by τίμησις or assessment. (Dem. *c. Timocr.* p. 732, § 103; Antiph. *de caede Herod.* § 10.)

We are not required to assign this technical sense of ἀπαγωγὴ to every passage where the word ἀπάγειν occurs. Professor Jebb indeed appears to doubt the existence of the right of arrest without previous ἔνδειξις or written plaint. But the passage of the Androtionea seems explicit on this point; and we have, besides, the express testimony of the grammarians and the general consensus of modern scholars (Harpocrat., Hesych., Suid., Bekk. *Anecd.* i. 200, 414; Schömann, *Antiq.* i. 479; Westermann in Pauly, iii. 137; Caillemer in D. and S.; Jebb, *Att. Or.* i. 57, n.). The passage in Lysias (*c. Agorat. l. c.*) deals with a case in which ἀπαγωγὴ followed ἔνδειξις, but by no means proves that this was always the rule.* [W. W.]

APATESEOS TOU DEMOU GRAPHÉ (ἀπατήσεως τοῦ δήμου γραφή), a public prosecution at Athens against any one who had misled the people by false statements of fact, quoting imaginary laws, &c. The senate and the law-courts, as well as the sovereign Demos, were included in its operation (Dem. *c. Aristocr.* p. 653, § 97). It would seem that it might also be directed against generals who, like Miltiades at Paros, failed in an expedition which they had themselves suggested (ἐάν τις τὸν δῆμον ὑποσχόμενος ἐξαπατήσῃ, Dem. *c. Timoth.* p. 1204, § 67). With the usual elasticity of Athenian procedure, it might be made to include anything, from procuring a capital conviction, as of the six generals after Arginusae (Xen. *Hellen.* i. 7, § 35), to inserting a false name on the register (Dem. *c. Boeot. de Nom.* p. 998, § 12). It belonged to the juri diction of the Thesmothetae, and the penalt was death (Dem. *c. Lept.* p. 487, § 100; p. 49 § 135). The usual mode of proceeding was b Probolé (Xen. *l. c.*) or Eisangelia (Dem. *Timoth. l. c.*). [W. W.]

APATU'RIA (ἀπατούρια) was a politica festival, which the Athenians had in commo with all the Greeks of the Ionian name (Hero i. 147), with the exception of those of Colopho and Ephesus. It was celebrated in the mont of Pyanepsion, and lasted for three days. Th origin of this festival is related in the followin manner:—About the year 1100 B.C., the Athe nians were carrying on a war against the Boeo tians, concerning the district of Cilaenae, o according to others, respecting the little tow of Oenoe. The Boeotian Xanthios, or Xanthos challenged Thymoetes, king of Attica, to singl combat; and when he refused, Melanthos, Messenian exile of the house of the Nelids, offere himself to fight for Thymoetes, on conditio that, if victorious, he should be the successor t Thymoetes. The offer was accepted; and whe Xanthios and Melanthos began the engagement, there appeared behind Xanthios a man in the τραγῇ, the skin of a black goat. Melanthos reminded his adversary that he was violating the laws of single combat by having a companion; and while Xanthios looked around, Melanthos slew the *deceived* Xanthios. From that time, the Athenians celebrated two festivals,—the Apaturia, and that of Dionysos Melanaegis, who was believed to have been the man who appeared behind Xanthios. This is the story related by the Scholiast on Aristophanes (*Acharn.* 146). This tradition has given rise to a false etymology of the name ἀπατούρια, which was formerly considered to be derived from ἀπατᾶν, to deceive. All modern critics, however (Müller, *Dorians*, i. 5, 4; Welcker, *Aeschyl. Tril.* p. 288), agree that the name is composed of α = ἅμα, and πατόρια, which is perfectly consistent with what Xenophon (*Hellen.* i. 7, § 8) says of the festival: Ἐν οἷς (ἀπατουρίοις) οἵ τε πατέρες καὶ οἱ συγγενεῖς ξύνεισι σφίσιν αὐτοῖς. According to this derivation, it is the festival at which the phratriae met, to discuss and settle their own affairs. But, as every citizen was a member of a phratria, the festival extended over the whole nation, who assembled *according to phratriae.* Welcker (*Anhang z. Trilog.* p. 200), on account of the prominent part which Dionysos takes in the legend respecting the origin of the Attic Apaturia, conceives that it arose from the circumstance that families belonging to the Dionysian tribe of the Aegicores had been registered among the citizens.

The first day of the festival, which probably fell on the eleventh of the month of Pyanepsion, was called δορπία or δόρπεια (Athen. iv. p. 171; Hesych. and Suid. *s. v.*); on which every citizen went in the evening to the phratrium, or to the house of some wealthy member of his own phratria, and there enjoyed the supper prepared for him. (Aristoph. *Acharn.* 146.) That the cup-bearers (οἰνόπται) were not idle on this occasion, may be seen from Photius (Lexic. *s. v.* Δορπία).

The second day was called ἀνάρρυσις (ἀναρρεῖν), from the sacrifice offered on this day to Zeus, surnamed Φράτριος, and to Athena, and

---

* Much of the above article has already appeared in the writer's notes to the *Androtion* and *Timocrates.*

sometimes to Dionysos Melanaegis. This was a state sacrifice, in which all citizens took part. The day was chiefly devoted to the gods, and to it must, perhaps, be confined what Harpocration (*s. v.* Λαμπάς) mentions, from the Atthis of Istrus, that the Athenians at the apaturia used to dress splendidly, kindle torches on the altar of Hephaestos, and sacrifice and sing in honour of him. Proclus on Plato (*Tim.* p. 21 B), in opposition to all other authorities, calls the first day of the Apaturia ἀνάρρυσις, and the second δορπία, which is, perhaps, nothing more than a slip of his pen.

On the third day, called κουρεῶτις (κοῦρος), children born in that year, in the families of the phratriae, or such as were not yet registered, were taken by their fathers, or in their absence by their representatives (κύριοι), before the assembled members of the phratria. For every child a sheep or goat was sacrificed. The victim was called μεῖον, and he who sacrificed it μειαγωγός (μειαγωγεῖν). It is said that the victim was not allowed to be below (Harpocrat., Suid., Phot. *s. v.* Μεῖον), or, according to Pollux (iii. 52), above, a certain weight. Whenever any one thought he had reason to oppose the reception of the child into the phratria, he stated the case, and, at the same time, led away the victim from the altar. (Dem. *c. Macart.* p. 1054, § 14.) If the members of the phratria found the objections to the reception of the child to be sufficient, the victim was removed; when no objections were raised, the father, or he who supplied his place, was obliged to establish by oath that the child was the offspring of free-born parents and citizens of Athens. (Isaeus, *De Haered. Ciron.* p. 100, § 19; Dem. *c. Eubul.* p. 1315, § 54.) After the victim was sacrificed, the phratores gave their votes, which they took from the altar of Jupiter Phratrios. When the majority voted against the reception, the cause might be tried before one of the courts of Athens; and if the claims of the child were found unobjectionable, its name, as well as that of the father, was entered in the register of the phratria, and those who had wished to effect the exclusion of the child were liable to be punished. (Dem. *c. Macart.* p. 1078, § 82.) Then followed the distribution of wine, and of the victim, of which every phrator received his share; and poems were recited by the elder boys, and a prize was given to him who acquitted himself the best on the occasion. (Plat. *Tim.* p. 21 B.) On this day, also, illegitimate children on whom the privileges of Athenian citizens were to be bestowed, as well as children adopted by citizens, and newly created citizens, were introduced; but the last, it appears, could only be received into a phratria when they had previously been adopted by a citizen; and their children, when born by a mother who was a citizen, had a legitimate claim to be inscribed in the phratria of their grandfather, on their mother's side. (Platner, *Beiträge*, p. 168.) In later times, however, the difficulties of being admitted into a phratria seem to have been greatly diminished.

Some writers have added a fourth day to this festival, under the name of ἐπίβδα (Hesych. *s. v.* Ἀπατούρια; and Simplicius on *Aristot. Phys.* iv. p. 167, *a*); but this is no particular day of the festival, for ἐπίβδα signifies nothing else but a day subsequent to any festival. (See Ruhnken, *Ad Tim. Lex. Plat.* p. 119: comp. Schömann, *Griech. Alt.* vol. ii. p. 485; A. Mommsen, *Heortologie*, p. 302 ff.) [L. S.]

APAU'LIA. [MATRIMONIUM.]

APELEUTHEROS (ἀπελεύθερος). [LIBERTUS.]

APE'NE (ἀπήνη), a carriage with four wheels (τετράκυκλος ἀπήνη, Hom. *Il.* xxiv. 324), generally drawn by mules (Hom. *Il. l. c.*; *Od.* vi. 72; Paus. v. 9, § 2; Schol. *ad* Pind. *Ol.* v. 6), though Sophocles (*O. T.* 802) speaks of an ἀπήνη πωλική. (Hermann, *Griech. Ant.* iv.^{3} p. 483.) [CURRUS.] [J. H. O.]

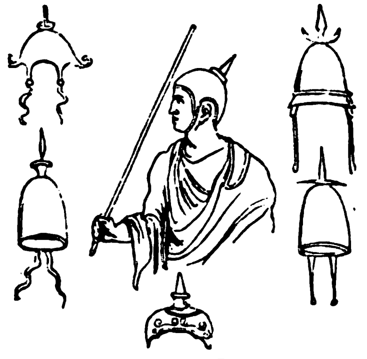
APENIAUTISMOS (ἀπενιαυτισμός). [PHONOU DIKÉ.]

APERTA NAVIS. [NAVIS.]

APEX. 1. A cap worn by the flamines and salii at Rome. The essential part of the apex, to which alone the name properly belonged, was a pointed piece of olive-wood, the base of which was surrounded with a lock of wool. This was worn on the top of the head, and was held there either by fillets only, or, as was more commonly the case, by the aid of a cap which fitted the head, and was also fastened by means of two strings or bands, which were called *apicula* or *offendices* (Festus, *s. vv.*), though the latter word is also interpreted to mean a kind of button, by which the strings were fastened under the chin. (Comp. Serv. *ad Aen.* ii. 683; viii. 664; x. 270.)

The flamines were forbidden by law to go into public, or even into the open air, without the apex (Gell. x. 15), and hence we find the expression of *alicui apicem dialem imponere* used as equivalent to the appointment of a flamen dialis. (Liv. vi. 41.) Sulpicius was deprived of the priesthood, only because the apex fell from his head whilst he was sacrificing. (Val. Max. i. 1, § 4.)

Dionysius (ii. 70) describes the cap as being of a conical form. On ancient monuments we see it round as well as conical. From its various forms, as shown on bas-reliefs and on coins of the Roman emperors, who as priests were entitled to wear it, we have selected six for the annexed woodcut. The middle figure is from a bas-relief, showing one of the salii with a rod in his right hand. The Albogalerus, or albus galerus, was a white cap worn by the flamen dialis, made of the skin of a white



Apices, or caps worn by the Flamines and Salii.

victim sacrificed to Jupiter, and had the apex fastened to it by means of a olive-twig. (Festus, s. v. *Albogalerus;* Gell. x. 15.)

2. Hence used in wider senses as (*a*) the ridge on the helmet to which the crest was attached (Verg. *Aen.* x. 270, xii. 492; Isidor. *Orig.* xviii. 14, 2). (*b*) The τιάρα ὀρθὴ of the Persian king (Hor. *Od.* i. 34, 14; iii. 21, 20). (*c*) A hat (Cic. *Leg.* i. 1).

Apex is derived from the old verb *apere*, "to join" (Serv. *ad Aen.* x. 270, and Festus), and from it was formed the epithet *apicatus*, applied to the flamen dialis by Ovid (*Fast.* iii. 197). [J. Y.] [J. H. F.]

APHAI'RESIS EIS ELEUTHERIAN (ἀφαίρεσις εἰς ἐλευθερίαν). [EXAIRESEOS DIKÉ.]

APHAMIO'TAE. [COSMI.]

APH'ANES OUSIA (ἀφανὴς οὐσία) and the correlative term φανερὰ οὐσία have been variously explained. First, that ἀφανὴς οὐσία answered to the Roman *res incorporales* or intangible property, *i.e.* rights. [DOMINIUM.] But this distinction did not exist in the older Roman law, and it is still less likely to have occurred to the simpler legal conceptions of the Greeks. Secondly, that φανερὰ οὐσία denoted immovable (in English law, real) property, ἀφανὴς οὐσία movable property or personalty. This is the opinion of Böckh, K. F. Hermann, and Schömann, founded on the express testimony of the grammarians (Harpocrat., Suid., Bekk. *Anecd.* i. 468); and it is by much the most probable. A third explanation, originating with M. de Koutorga (*Essai sur les trapézites ou banquiers d'Athènes*), is supported by Caillemer in Daremberg and Saglio: that φανερὰ οὐσία meant unconcealed property, *en évidence* before the tax-gatherer; ἀφανὴς of course the reverse. It would seem that this view rests upon a confusion between the technical legal phrase φανερὰ οὐσία and the ordinary expressions φανερὸν ἀργύριον, φανερὰ χρήματα for "ready money" or "balance at the banker's." The following passages, not cited by M. Caillemer, are, we think, decisive against his view, all referring to the conversion of real property into money:—Isaeus, *Philoctem.* § 38; Dem. *de Pace*, p. 59, § 8, and *c. Nausim.* p. 986, § 9. The words of Harpocration are worth quoting for their brevity and clearness: Ἀφανὴς οὐσία καὶ φανερά· ἀφανὴς μὲν ἡ ἐν χρήμασι καὶ σώμασι καὶ σκεύεσι, φανερὰ δὲ ἡ ἔγγειος. Schömann in his latest work (*Antiq.* i. 180 n., E. T.) remarks on φανερὰ οὐσία or immovable property: "This is at least the predominant signification of the expression, although it is sometimes used in a more general sense of all property of every kind which was not concealed." He refers, as does M. Caillemer, to Isocr. *Trapezit.* § 7, where however the expression is τὰ φανερὰ τῶν χρημάτων. [W. W.]

APH'ETAE. [HELOTES.]

APHLASTON (ἄφλαστον). [NAVIS.]

APHORMES DIKE' (ἀφορμῆς δίκη) was the action brought against a banker or money-lender (τραπεζίτης) to recover funds advanced for the purpose of being employed as banking capital. Though such moneys were also styled παρακαταθῆκαι, or deposits, to distinguish them from the private capital of the banker (ἰδία ἀφορμή), there is an essential difference between the actions ἀφορμῆς and παρακαταθήκης, as the latter implied that the defendant had refused to return a deposit entrusted to him, not upon the condition of his paying a stated interest for its use, as in the former case, but merely that it might be safe in his keeping till the affairs of the plaintiff should enable him to resume its possession in security. [PARAKATATHEKE.] The former action was of the class πρός τινα, and came under the jurisdiction of the Thesmothetae. The speech of Demosthenes in behalf of Phormio (*Or.* 36) was made in a παραγραφὴ against an action of this kind. See the Argument, and especially §§ 11, 12, 44. Caillemer would include under the name ἀφορμὴ money lent by sleeping partners (*en commandite*) to merchants as well as bankers (9^{me} *Étude*, p. 29). [J. S. M.] [W. W.]

APHRACTUS. [NAVIS.]

APHRODIS'IA (Ἀφροδίσια), festivals celebrated in honour of Aphrodite, in a great number of towns in Greece, but particularly in the island of Cyprus. Her most ancient temple was at Paphos, which was built by Aërias or Cinyras, in whose family the priestly dignity was hereditary. (Tac. *Hist.* ii. 3, *Annal.* iii. 62; Maxim. Tyr. *Serm.* 83.) No bloody sacrifices were allowed to be offered to her, but only pure fire, flowers, and incense (Verg. *Aen.* i. 116); and therefore, when Tacitus (*Hist.* ii. 3) speaks of victims, we must either suppose, with Ernesti, that they were killed merely that the priest might inspect their intestines, or for the purpose of affording a feast to the persons present at the festival. At all events, however, the altar of the goddess was not allowed to be polluted with the blood of the victims, which were mostly he-goats. Mysteries also were celebrated at Paphos in honour of Aphrodite; and those who were initiated offered to the goddess a piece of money, and received in return a measure of salt and a phallus. In the mysteries themselves, they received instructions ἐν τῇ τέχνῃ μοιχικῇ. A second or new Paphos had been built, according to tradition, after the Trojan war, by the Arcadian Agapenor; and, according to Strabo (xiv. p. 683), men and women from other towns of the island assembled at New Paphos, and went in solemn procession to Old Paphos, a distance of sixty stadia; and the name of the priest of Aphrodite, ἀγήτωρ (Hesych. *s. v.*), seems to have originated in his heading this procession. Aphrodite was worshipped in most towns of Cyprus, and in other parts of Greece, such as Cythera, Sparta, Thebes, Elis, &c.; and though no Aphrodisia are mentioned in these places, we have no reason to doubt their existence: we find them expressly mentioned at Corinth and Athens, where they were chiefly celebrated by the numerous prostitutes. (Athen. xiii. pp. 574, 579; xiv. p. 639.) Another great festival of Aphrodite and Adonis in Sestus is mentioned by Musaeus (*Hero and Leand.* 42; comp. Hermann, *Gottesd. Alterth.* § 52, 24). [L. S.]

APLUSTRE. [NAVIS.]

APOB'ATES. [DESULTOR.]

APOCLE'TI (ἀπόκλητοι). [AETOLICUM FOEDUS, p. 42, a.]

APODECTAE (ἀποδέκται), the Receivers, were public officers at Athens, who were introduced by Cleisthenes in the place of the ancient Colacretae (κωλακρέται). They were ten in number, one for each tribe, appointed by lot; and they exercised a general control over the other officers of the revenue. Their duty was to receive all the ordinary taxes and distribute them to the separate branches of the administration, which were entitled to them. They accordingly kept lists of persons indebted to the state, made entries of all moneys that were paid in, and erased in the register the items which had been paid. They had the power to decide causes connected with the subjects under their management; though, if the matters in dispute were of importance, they were obliged to bring them for decision into the ordinary courts. (Pollux, viii. 97; *Etym. M.*, Harpocrat., Suid., Hesych. *s. v.*; Demosth. *c. Timocr.* p. 750, § 162, p. 762, § 197; Aeschin. *c. Ctes.* § 25; Aristot. *Pol.* vi. 8, § 6; Böckh, *P. E.* p. 159; Schömann, *Antiq.* p. 417; Grote, ch. 31 (iii. p. 117).) [W. S.] [W. W.]

APODIDRASKINDA (ἀποδιδρασκίνδα), the game of hide and seek, played by the children in Greece, exactly as in our days. It is represented in a painting found at Herculaneum. (Pollux, ix. 17; cf. φυγίνδα or φευγίνδα, Theogn. in Bekk. *Anecd.* p. 1353; *Ant. d'Arcol.* i. tav. xxxiii.; Daremberg and Saglio, *s. v.*; Hermann, *Griech. Antiqu.* iv.³ p. 298). [W. S.]

APODYTE'RIUM. [Balneae, p. 274.]

APOGRAPHE' (ἀπογραφή) is literally "a list, or register;" but in the language of the Attic courts, the terms ἀπογράφειν and ἀπογράφεσθαι had three separate applications:—1. Ἀπογραφή was used in reference to an accusation in public matters, more particularly when there were several defendants; the denunciation, the bill of indictment, and enumeration of the accused would in this case be termed *apographé*, and differ but little, if at all, from the ordinary *graphé*. (Andoc. *de Myst.* 13, 15, 17, &c.; Antiph. *de Choreut.* § 35 ff.; Hesych. *s. v.* ἀπογραφή.) 2. It implied the making of a solemn protest or assertion before a magistrate, to the intent that it might be preserved by him, till it was required to be given in evidence. (Isae. *Philoctem.* § 44; Dem. *c. Phaenipp.* pp. 1043, § 16, 1046, § 24, &c.; *c. Macart.* p. 1068, § 54.) 3. It was a specification of property, said to belong to the state, but actually in the possession of a private person; which specification was made with a view to the confiscation of such property to the state. (Lys. *pro Milite; de bonis Aristoph.*; *c. Philocr.*)

The last case only requires a more extended illustration. There would be two occasions upon which it would occur: first, when a person held public property without purchase, as an intruder; and secondly, when the substance of an individual was liable to confiscation in consequence of a judicial award, as in the case of a declared state debtor. If no opposition were offered, the *apographé* would attain its object, under the care of the magistrate to whose office it was brought; otherwise, a public action arose, which is also designated by the same title.

In a cause of the first kind, which is said in some cases to have also borne the name πόθεν ἔχει τὰ χρήματα καὶ πόσα ταῦτα εἴη, the claimant against the state had merely to prove his title to the property, as in the case *de bonis Aristophanis*; and with this we must class the case of a person who impugned the *apographé*, whereby the substance of another was, or was proposed to be, confiscated, on the ground that he had a loan by way of mortgage or other recognised security upon a portion of it; or that the part in question did not in any way belong to the state debtor, or person so mulcted. This kind of opposition to the *apographé* is illustrated in the speech of Demosthenes against Nicostratus, in which we learn that Apollodorus had instituted an *apographé* against Arethusius, for nonpayment of a penalty incurred in a former action. Upon this, Nicostratus attacks the description of the property, and maintains that three slaves were wrongly set down in it as belonging to Arethusius, for they were in fact his own.

In the second case, the defence could of course only proceed upon the alleged illegality of the former penalty; and of this we have an instance in the speech of Lysias, for the soldier. There Polyaenus had been condemned by the generals to pay a fine for a breach of discipline; and, as he did not pay it within the appointed time, an *apographé* to the amount of the fine was directed against him, which he opposes, on the ground that the fine was illegal. The *apographé* might be instituted by an Athenian citizen; but if there were no private prosecutor, it became the duty of the demarchi to proceed with it officially. Sometimes, however, extraordinary commissioners, as the συλλογεῖς and ζητηταί, were appointed for the purpose. The suits instituted against the *apographé* belonged to the jurisdiction of the Eleven, and for a while, after the expulsion of the Thirty, to that of the Syndici. (Πρὸς τοῖς συνδίκοις ἀπογραφὰς ἀπογράφων, Lycurg. quoted by Harpocration.) The further conduct of these causes would, of course, in a great measure depend upon the claimant being, or not being, in possession of the proscribed property. In the first case the ἀπογράφων, in the second the claimant, would appear in the character of a plaintiff. In a case like that of Nicostratus above cited, the claimant would be obliged to deposit a certain sum, which he forfeited if he lost his cause (παρακαταβολή); in all, he would probably be obliged to pay the costs or court fees (πρυτανεῖα) upon the same contingency.

A private citizen, who prosecuted an individual by means of ἀπογραφή, forfeited a thousand drachmas, if he failed to obtain the votes of one-fifth of the dicasts, and reimbursed the defendant his prytaneia upon acquittal. In the former case, too, he would probably incur a modified atimia, *i.e.* a restriction from bringing such actions for the future. [J. S. M.] [W. W.]

APOI'KIA. [Colonia.]

APOKERYXIS (ἀποκήρυξις) implies the method by which an Athenian father could dissolve the legal tie between himself and his son, and disown or disinherit him. It is little mentioned by the older writers; but the language of Demosthenes (*c. Boeot. de Nom.* p. 1006, § 39) is explicit as to the absolute power of the father over the status of the son, the Attic law in this respect resembling the Roman. Plato proposes to restrict the exercise of the right by requiring the previous vote of a family council (*Leg.* xi. 928 E, 929 C). According to the author of the declamation on the subject (Ἀποκηρυττόμενος), which has generally been attributed to Lucian, substantial reasons were required to insure the ratification of such extraordinary severity. Those suggested in the treatise referred to are, deficiency in filial attention, riotous living, and profligacy generally. A subsequent act of pardon might annul this solemn rejection; but if it were not so avoided, the son was denied by his father while alive, and disinherited afterwards. It does not, however, appear that his privileges as to his tribe or the state underwent any alteration. The court of the archon must have been that in which causes of this kind were brought forward, and the rejection would be completed and declared by the voice of the herald (ἀποκηρῦξαι). It is probable that an adoptive father also might resort to this remedy against the ingratitude of a son. (Meier, *Att. Process*, p. 432, &c.) [J. S. M.] [W. W.]

APOLEIPSIS, APOLEIPSEOS DIKE (ἀπόλειψις, ἀπολείψεως δίκη). [Divortium (Greek).]

APOLLINA'RES LUDI. [Ludi.]

APOLLO'NIA (Ἀπολλώνια) is the name of a propitiatory festival solemnized at Sicyon, in honour of Apollo and Artemis, of which Pausanias (ii. 7, § 7) gives the following account:—Apollo and Artemis, after the destruction of the Python, had wished to be purified at Sicyon (*Aegialea*); but being driven away by a phantom (whence in after-times a certain spot in the town was called Φόβος), they proceeded to Carmanos in Crete. Upon this the inhabitants of Sicyon were attacked by a pestilence, and the seers ordered them to appease the deities. Seven boys and the same number of girls were ordered to go to the river Sythas, and bathe in its waters; then to carry the statues of the two deities into the temple of Peitho, and from thence back to that of Apollo. Similar rites, says Pausanias, still continue to be observed; for at the festival of Apollo the boys go to the river Sythas, and carry the two deities into the temple of Peitho, and thence back to that of Apollo.

Although festivals under the name of Apollonia, in honour of Apollo, are mentioned in no other place, still it is not improbable that they existed under the same name in other towns of Greece. [L. S.]

APOPEMPSIS (ἀπόπεμψις). [Divortium.]

APOPH'ASIS (ἀπόφασις, with the by-form ἀπόφανσις), a declaration, was—(1) The proclamation of the decision which the majority of the judges came to at the end of a trial, and was apparently made by a herald under the direction of the presiding magistrate (Lucian, *pro Imagin.* § 29). The decisions of arbitrators (διαιτηταί) were called by the same name (Dem. *c. Apatur.* p. 899, §§ 20, 21). (2) Such proclamations being generally made on court days, ἀπόφασις came to mean the day on which the trial took place. (Dem. *c. Everg.* p. 1153, § 45.) (3) The word was also employed to indicate the account of a person's property, which was obliged to be given when an *antidosis* was demanded. [Antidosis.] [W. W.]

APOPH'ORA (ἀποφορά), which properly means "produce or profit" of any kind, was used at Athens to signify the profit which accrued to masters from their slaves. It thus signified the sum which slaves paid to their masters when they laboured on their own account, and the sum which masters received when they let out their slaves on hire either for the mines or any other kind of labour, and also the money which was paid by the state for the use of the slaves who served in the fleet. (Andoc. *de Myst.* § 38; Aeschin. *c. Timarch.* § 97; Xen. *Rep. Ath.* i. 11.) Further details are given in Dem. *c. Aphob.* i. pp. 816–819; *c. Nicostr.* p. 1253; Xen. *de Vect.* iv. 14, in which passages, however, the name ἀποφορὰ does not occur. (Comp. Böckh, *P. E.* p. 72.) The term *apophora* was also applied to the money which was paid by the allied states to Sparta, for the purpose of carrying on the war against the Persians. When Athens acquired the supremacy, these moneys were called φόροι. (Böckh, *Ibid.* p. 396.) [W. S.] [W. W.]

APOPHORE'TA. 1. (ἀποφόρητα), presents which were given to friends at the end of an entertainment, to take home with them. (Petron. 56; Ambros. *Exhort. Virg.* 1.) Although the name is Greek, the custom is Roman, for Athenaeus expressly tells us that when Cleopatra presented to Antony and his staff the gold and silver dinner service which they had been using at a banquet in Cilicia, she was imitating a Roman usage (Athen. iv. p. 148 a; vi. p. 229 c); and the other instances on record of *apophoreta* belong to Roman society, and to the times of the Empire. The 14th Book of Martial consists of an introductory epigram and 222 distichs, each describing and designed to accompany one of these presents, which range from nuts to works of art and slaves. The first epigram speaks of the Saturnalia as the special time for their distribution. So Vespasian used to present them to men on the Saturnalia, to women on the Matronalia. (Suet. *Vesp.* 19; *Aug.* 75.) They were also given at weddings (Juv. vi. 203, Schol.). Caligula gave 2,000,000 sesterces to the circus charioteer Eutychus *in apophoretis* (Suet. *Calig.* 55). Symmachus (*Ep.* ii. 81, v. 56, ix. 119, Migne) uses *apophoreta* and *apophoreticum* for presents made on other occasions.

2. (ἀποφορήτη), mentioned by Isidore (*Orig.* xx. 4) as a kind of plate *a Graccis a ferendo poma vel aliquid nominata, est enim plana.* [J. H. F.]

APOPHRADES HEMERAI (ἀποφράδες ἡμέραι), unlucky or unfortunate days (*dies nefasti*), on which no public business, nor any important affairs of any kind, were transacted at Athens. Such were the last three days but one of every month, and the twenty-fifth day of the month Thargelion, on which the Plynteria were celebrated. (Lys. *Fr.* 31; Plat. *Leg.* vii. p. 800 D; Xen. *Hellen.* i. 4, § 12; *Etym. M.* p. 131, 13; Plut. *Alcib.* 34; Lucian, *Pseudolog.* 13; Schömann, *Assemblies*, p. 50.) [W. S.] [W. W.]

APORRHESEOS DIKE' (ἀπορρήσεως δίκη). The term ἀπόρρησις, "prohibition," has a technical meaning in Attic law in connexion with the sale of landed property. Public notice was required to be given of every such sale, for the protection of mortgagees and other creditors; and any one having a claim upon the estate might interdict the sale by an ἀπόρρησις. The vendor, on the other hand, had his remedy against fraudulent or malicious obstruction in an action for damages, called ἀπορρήσεως δίκη. (Pollux, viii. 59; Isae. *Or.* 2 (Menecl.), §§ 28, 29; Dem. *c. Nicostr.* p. 1249, § 10; Caillemer in *Révue de Législation*, 1871, p. 657, and *cp.* D. and S.) [W. W.]

APORRHE'TA (*ἀπόρρητα*), literally "things forbidden," has two peculiar, but widely different, acceptations in the Attic dialect. In one of these it implies contraband goods, *i.e.* those of which the export (not the import) was prohibited. The chief of these were corn (of which there was a steady importation) and articles used in the building and equipment of the fleet. An enumeration of these at different periods of Athenian history is given by Böckh (*P. E.* pp. 53-4; compare Aristoph. *Eq.* 282, *Ran.* 362 ff.).

In the other sense, it denotes certain contumelious epithets, from the application of which both the living and the dead were protected by special laws (Meier, *Att. Process*, p. 482). Among these, *ἀνδροφόνος*, *πατραλοίας*, and *μητραλοίας* are certainly to be reckoned; and other words, as *ῥίψασπις*, *λωποδύτης*, and *ἀνδραποδιστής*, though not expressly named in the law, seem to have been equally actionable. (Lys. *c. Theomn.* i. §§ 1, 2, 6 ff.; ii. §§ 3 ff.) The penalty for using these words was a fine of 500 drachmas (Isocr. *in Lochit.* § 5; Lys. *c. Theomn.* 2, § 12), recoverable in an action for abusive language (*κακηγορίας*). It is surmised that this fine was incurred by Meidias in two actions on the occasion mentioned by Demosthenes (*in Mid.* p. 540, § 104, p. 543, § 114; see also Hudtwalcker, *De Diaetet.* p. 150). [J. S. M.] [W. W.]

APOSTA'SIOU DIKE' (*ἀποστασίου δίκη*). This is the only private suit which came, as far as we know, under the exclusive jurisdiction of the polemarch. (Aristot. *de Ath. Rep.* quoted by Harpocrat.) It could be brought against none but a freedman (*ἀπελεύθερος*), and the only prosecutor permitted to appear was the citizen to whom he had been indebted for his liberty, unless this privilege was transmitted to the sons of such former master. The tenor of the accusation was, that there had been a default in duty to the prosecutor; but what attentions might be claimed from the freedman, we are not informed. It is said, however, that the greatest delict of this kind was the selection of a patron (*προστάτης*) other than the former master. If convicted, the defendant was publicly sold (Dem. *c. Aristog.* i. p. 790, § 77); but if he was acquitted, the unprosperous connexion ceased for ever, and the freedman was entitled to the full privileges of a *μέτοικος*. The patron could also summarily punish the above-mentioned delinquencies of his freedman by private incarceration without any legal award (Pollux, viii. 35; Harpocrat., Suid. *s. v.* *ἀποστασίου*).

The *ἀποστασίου δίκη*, against an *ἀπελεύθερος*, should be carefully distinguished from the *γραφὴ ἀπροστασίου*, a public action brought against a *μέτοικος*. Both are mentioned in Demosth. *c. Lacrit.* p. 940, § 48. [J. S. M.] [W. W.]

APOSTOLEIS (*ἀποστολεῖς*), ten commissioners, chosen out of the body of Athenian citizens without distinction of tribes, in order to secure the efficiency and promptitude of a naval expedition (*ἀπόστολος*) which had been voted. They were thus an extraordinary authority, appointed by decree of the people. (Böckh, *Urkunden über das Seewesen*, p. 466; Hudtwalcker, *de Diaetet.* p. 71; Meier and Schömann, *Att. Process*, p. 112, with Lipsius' note in the new ed.) They had the power, in certain cases, of imprisoning a trierarch who neglected to furnish his ship properly (Dem. *de Cor.* p. 262, § 107, with the scholia); they controlled the giving out of stores from the dockyards for this purpose, and, subject to an appeal to the senate, they decided any disputes which arose when a ship was handed on from one trierarch to another. In time of peace these duties were probably discharged by the *ἐπιμεληταὶ τῶν νεωρίων*, an inferior body chosen by lot. (Dem. *c. Everg. et Mnes.* pp. 1147, § 26, 1149, § 33, 1150, § 37; *de Cor. Trierarch.* p. 1229, § 4; Böckh, *P. E.* p. 543; Schömann, *Antiq.* i. 426, n.) [W. S.] [W. W.]

APOTHE'CA (*ἀποθήκη*), a storehouse or magazine (Thuc. vi. 97; Cic. *Phil.* ii. 27, *Vatin.* 5; Dig. 33, 7, 12; *Vulg. Par.* 1, 27, 28, &c.) for books (Luc. *Indoct.* 5); a burial-place (id. *Contempl.* 22); especially a place in the upper part of the house in which the Romans kept their wine in *amphorae*. It was usually above the *fumarium*, since it was thought that the passage of the smoke through the room tended greatly to increase the flavour of the wine. (Colum. i. 6, § 20; Hor. *Carm.* iii. 8, 11, *Sat.* ii. 5, 7). Hence Horace's expression (*Carm.* iii. 21, 7) *Descende, testa.* The *apotheca* was thus quite distinct from the *cella vinaria*, in which wine was kept in *dolia* and *cupae* until it was fit to be bottled (*diffundere*), as we should say, into the *amphorae*, or, if it was not considered good enough to mature (*aetatem ferre*), was drunk straight from the larger vessels. (Becker-Göll, *Gallus*, iii. pp. 50, 427.) [W. S.] [J. H. F.]

APOTHEO'SIS (*ἀποθέωσις*, *consecratio*), the enrolment of a man amongst the gods.

While among the free Greeks and Romans all the dead were regarded as becoming in a sense gods (*χθόνιοι*, *dii manes*) and dwelling in a subterranean abode, and received duteous worship from the family at the family hearth, and in the case of the founders of cities and great benefactors of cities were honoured by the city with sacrifices and festivals (*e.g.* Brasidas at Amphipolis, Thuc. v. 11), the privilege of a celestial abode was regarded as belonging only to those who had performed great exploits in the service of humanity. This privilege attached to very few: Hercules is an example. But under despotisms, such as that of the East and Egypt, the case is different. For there the king, who was generally also priest, living in isolation, regarded with awe and terror, slave-master of his subjects, was naturally looked on as a being vastly if not radically different from the rest, and so was considered to become a god when dead. To the polytheistic ancients, who did not believe in any impassable gulf between divinity and humanity, this did not mean much more than that the great social distinctions in this life were kept up in the next. The kings even came to be regarded as gods while alive. Here then are the conditions under which deification prevails, viz. a people who are inclined to submission, and among whom accordingly great social distinctions arise.

So in historical times among the Greeks, who worshipped Adrasteia and were wise, deification was slow in appearing. Lysander is the first we hear of: he got divine honours from the people of Asia Minor (Plut. *Lys.* 18). A temple was raised to Philip of Macedon in the Altis at

Olympia (Paus. v. 20, § 5). Demetrius Poliorcetes was deified at Athens (see the hymn in Athen. p. 253 a; and Grote, xii. 205 *seq.*) and Sicyon (Diod. xx. 102). But it is among that portion of the Greek race which conquered and amalgamated with the Eastern peoples that we find deification quite common, a sign of the Greeks becoming Asianized. Alexander the Great required divine honours to be paid to him even while alive: witness the striking scene at Bactra and the noble Hellenic protest of Callisthenes (Arr. *Anab.* iv. 10, §§ 7–9; Grote, xii. 37): and the laconic decree of the Spartans—"Whereas Alexander desires to be a god, let him be a god" (Ael. *V. H.* ii. 19). His successors in various countries continued the practice. In Egypt the Ptolemies gradually assume the rank of divinities; they could not have done otherwise without incurring the contempt of their subjects, for deification was in accordance with the national ideas and practice of Egypt. Ptolemy I. (Soter) was deified after his death (Theocr. xvii. 16), and even styled *θεὸς* while alive (Eckhel, *D. N.* iv. 9). So too we find Philadelphus and Philometor styled gods (Eckhel, *l. c.* pp. 8, 16), also Euergetes II. and his wife (*C. I. G.* 2620); and the titles of the chief priest of Egypt, the *ἱερεὺς Ἀλεξάνδρου*, ran thus—*ἐφ' ἱερέως τοῦ ὄντος ἐν Ἀλεξανδρείᾳ Ἀλεξάνδρου καὶ θεῶν Σωτήρων καὶ θεῶν Ἀδελφῶν καὶ θεῶν Εὐεργετῶν καὶ θεῶν Φιλοπατόρων καὶ θεῶν Ἐπιφανῶν καὶ θεοῦ Φιλομήτορος καὶ θεοῦ Εὐπάτορος*, &c.; the plural forms signifying that the close relations of Soter, Philadelphus, &c., were also deified (Welcker, *Gr. Götterlehre*, iii. 309). Among the Syrians Antiochus I. is called a god; in the treaty between the Smyrnaeans and the Milesians Antiochus II. was surnamed *θεός*: Antiochus IV. has *θεὸς ἐμφανὴς* on his coins (Eckhel, *D. N.* vi. 270); Antiochus VI. was called Dionysus, &c. For all this see especially Eckhel, *D. N.* iii. 209 *seqq.*, and Welcker, *Gr. Götterl.* iii. 310 *seq.*, to which the reader is referred for similar examples from Pergamus and Pontus.

The rising ascendency of Rome could not fail to obtain its meed of deification from the Greeks. They bestowed divine honours on Flamininus, and associated him with Hercules and Apollo (Plut. *Flam.* 16). Smyrna raised altars to the goddess Roma, 195 B.C. (Tac. *Ann.* iv. 56); and Alabanda built a temple and instituted games in her honour (Liv. xliii. 6). It appears to have been quite usual for the provincials to worship and enrol among the gods the *virtues* of their governors (Cic. *Q. Fr.* i. 1, 10, 31). And indeed it became so common for the provincial governors to have temples raised to them and games celebrated in their honour (*e.g.* Marcellea and Verrea in Sicily; Mucia in Asia, Cic. *Verr.* ii. 21, 51), that the Roman law made a special provision on the subject; and while it forbade the governor to levy any extraordinary impost, made this special exception, "ut ad templum et monumentum capere liceret" (Cic. *Q. Fr.* i. 1, 9, 26), thus encouraging the practice of deification. Theophanes, the friend of Pompeius, was deified by the Mitylenaeans (Tac. *Ann.* vi. 18); and before this a boxer actually had been consecrated as a god while alive (Plin. *H. N.* vii. § 152).

But the Romans were on the whole slow to adopt this un-Roman custom. Since Romulus had disappeared from the earth and had become the god Quirinus (Liv. i. 16)—and this is probably a Greek fable (Mommsen, *R. H.* i. 174, 481)—no example of apotheosis is recorded till the latest period of the republic. The Romans had not been under a despotism and had had no really great men, and besides were inclined to worship abstractions rather than individuals. But in the later times of the republic, under the influence of Asianized Greek ideas, many even of the cultivated classes of Rome held that while the souls of all were immortal, those of the great and good were divine (Cic. *Legg.* ii. 11, 27), and that they ascended to the heavens and the stars (cf. Hor. *Od.* iii. 2, 21; Verg. *Aen.* ix. 641). Cicero, absurd as he declares the idea of a man becoming a god is (Cic. *N. D.* i. 15, 38; *Phil.* i. 6, 13), yet when he had lost Tullia longed to deify her (Cic. *Att.* xii. 36); it would not be contrary, he says, to the tenets of certain philosophers, alluding to the Stoics (cf. Zeller, *Phil. der Gr.* iii. 1, 294 *seq.*, ed. 1865). Roman theology about this time produced a book on the gods who had been men (Labeo, *de diis animalibus*; see Serv. *ad Aen.* iii. 168). If such opinions on the possibility of transition from humanity to divinity were maintained by the enlightened, they were held by the people too; —in the time of Sulla they had erected statues and made offerings to M. Marius Gratidianus: Senec. *de Ira*, iii. 18—a motley crowd, gathered from all nations, who had none of the solid Roman virtues and were engrained with cosmopolitan, *i.e.* Graeco-Asiatic ideas. The time was fully ripe for deification to be practised at Rome.

And the man came. Julius Caesar's brilliant military exploits abroad, and his overthrowing the tyrannical aristocracy at home, and thus becoming the saviour of society, made him the adored of the people. He knew it, and he meant to rule, and rule as the king-god (Mommsen, *Staatsr.* ii. 732). An image of him standing on the globe of the world was set up in the Capitol, with an inscription that he was a demi-god (Dio Cass. xliii. 14). His statue was placed in all the temples of Rome and of the empire (id. xliv. 4). It was enacted later that public prayers should be offered for him every year, that oath should be taken by his genius, that there should be a festival to him every four years as to a hero (*ἥρωι*), that *Luperci Julii* should be appointed and an additional day should be added to the circensian games in his honour; that his golden chair and jewelled crown should appear in the theatre like those of the gods, and his car be borne in processions; and finally they called him plainly *Jupiter Julius*, and enacted that an altar should be set up to his Clemency and Antonius should be appointed his priest, a sort of Dialis (Dio Cass. xliv. 6); in fact, as Suetonius (*Jul.* 76) says, "nullos non honores ad libidinem cepit." All this, chiming in with the enthusiasm and affection of the mass of the people, had the effect of strengthening the idea that he was superhuman. The wild fanaticism of the people, especially the foreigners, towards his remains when he was murdered, was apparent by their raising an altar and organizing a worship to him where he was burned (Suet. *Jul.* 85). The upper classes indeed wanted this ardour wholly; and Antonius (Val. Max. ix. 15, § 1) and later Dolabella put a summary stop to this worship at his altar (Cic. *Att.* xiv. 15).

But the ardour continued and was heightened a little later (Sept. 24 or 25) when Octavian celebrated the games of Victoria Caesaris (or of Venus genetrix or victrix—they are all the same—see Mommsen on *C. I. L.* i. p. 397) and the comet appeared (Dio Cass. xlv. 7), which seemed to confirm the opinion that Caesar had become a god. Next year (43 B.C.) Caesar was solemnly enrolled among the gods as Divus Julius (lege Rufrena, *C. I. L.* i. 626, and Mommsen *ad loc.*; also ix. 2628). He was deified, says Suetonius (*Jul.* 88), not merely with the lip-service of those who decreed it, but by the sincere belief of the people. This shows the different feelings of the upper and lower orders towards Julius. The enthusiasm of the people was mainly due to their regarding him as their saviour: indeed we find Caesar and Augustus very widely worshipped as "saviours" (Dio Cass. xliv. 4, § 5; *C. I. G.* 2368, 2957; Letronne, *Recueil*, i. 81; Eckhel, *D. N.* iv. 45, &c.). From the time of this deification of Caesar, *divus* acquired the specific meaning of a god who had been a man, while *deus* was a god from the beginning (Mommsen, *Staatsr.* ii. 733, note 2). It is maintained in the Christian Church, which applies the title *divus* to its saints; and deification among the ancients corresponds in many respects with Christian canonization (see Boissier, *La Religion Romaine*, i. 180).

Aspiring to divinity was in the fashion of the time. Sextus Pompeius declared himself son of Neptune (Plin. *H. N.* ix. § 55); and Antonius and Cleopatra were Bacchus and Aphrodite, or Osiris and Isis, according to the country they were in (Plut. *Ant.* 26 and 54; Dio Cass. l. 5). Octavian was more moderate. He would not allow himself to be worshipped except along with the goddess Roma. In 29 B.C. he allowed the Romans in Ephesus and Nicaea to erect a temple to Rome and Divus Julius, and the Greeks in Pergamum and Nicomedia to erect a temple to himself (Dio Cass. li. 20, an important passage). Temples were also erected to him in Nysa (*C. I. G.* 2943), Mylasa (*ib.* 2696), Cyzicus (Tac. *Ann.* iv. 36), Athens (*C. I. G.* 478). And not only in the East, but in the West—at Tarraco (Tac. *Ann.* i. 78: "templum ut in colonia Tarraconensi strueretur Augusto petentibus Hispanis permissum *datumque in omnes provincias exemplum*;" and more in Hübner's note, *C. I. L.* ii. p. 540), at Lugdunum in 12 B.C. (Suet. *Claud.* 2), at what was afterwards Cologne (Tac. *Ann.* i. 57), at Narbo Martius in 10 A.D. (Orelli, 2489; and cf. Desjardins, *Géographie de la Gaule romaine*, iii. 186 *seq.*, 224 *seq.*)—rose altars to Rome and Augustus. [For this provincial worship of Augustus, and the important council of the province that grew up around it, see AUGUSTALES and CONCILIUM.] The men of the world at Rome naturally despised all this. No one, says Maecenas contemptuously (Dio Cass. lii. 35), has ever become a god by a show of hands (*χειροτονητός*). No one of any repute whatsoever paid worship to him in Rome or Italy, says Dio Cassius (li. 20). Perhaps not officially, but spontaneously they did, by the infection of the general enthusiasm; for we find sacerdotes or flamines Augusti, while he was alive, in Pisa (Orelli, 643, last §), in Praeneste (id. 3874), in Pompeii (*C. I. L.* x. 837), in Beneventum a Caesareum to Augustus and the colony of Beneventum (*C. I. L.* ix. 1556), &c. Later the practice spread everywhere. The temples were called Καισαρεῖα or Σεβαστεῖα (*C. I. G.* 2126, 2839, &c.): the most celebrated of these are the one at Ancyra in Galatia, on the wall of which his exploits have been found engraven, and the one at Alexandria (Philo, *Leg. ad Caium*, p. 567). Probably during the lifetime of Augustus he was not publicly worshipped at Rome. Suetonius (*Aug.* 52) is very explicit: "in urbe quidem pertinacissime abstinuit hoc honore." But we cannot deny that the eagerness of the grateful people to give divine honours to the giver of the Pax Romana, and desire to flatter on the part of the upper classes, exhibited itself in worshipping him in private (Ov. *Pont.* iv. 9, 111; Hor. *Ep.* ii. 1, 15). Besides adopting the name AUGUSTUS, the emperor allowed the senate to worship his virtues (Boissier, *l. c.* p. 137); and to gratify the enthusiasm of the lower orders he allowed his Genius (*τύχη*) to be worshipped among the Lares (Hor. *Od.* iv. 5, 30), the guardians of the state (*praestites*, Ov. *Fast.* v. 129), and these Lares were henceforth called Lares Augusti (*C. I. L.* x. 1582). This worship was placed under the charge of the MAGISTRI VICORUM and their subordinate *ministri*, people in humble walks in life; and by thus enlisting the lower orders, who had no part in the state hitherto, in the service of the empire, Augustus established in them a strong conservative element for his constitution. [For an admirable account of the worship of the Lares and Augustus, see Desjardins, *Géographie de la Gaule romaine*, iii. 212 *seq.*, a valuable discussion.] Thus we see that Augustus was worshipped as a god in the provinces, but at Rome, during his lifetime, permitted only partial divine honours to be paid him—in this less bold than Julius—just as in the sphere of politics he would not be monarch but only princeps (Mommsen, *Staatsr.* ii. 734).

Augustus died in 14 A.D., and by solemn decree of the senate was made a god ("caelum decretum," Tac. *Ann.* i. 73). Other expressions for deification are *inter divos referre* (Suet. *Aug.* 97), *in numerum deorum referre* (Suet. *Claud.* 45), *caelestes honores decernere* (Tac. *Ann.* xii. 69; *ἀθανατίζειν*, Dio Cass. lix. 11). After this, to preserve the cult, a college of priests was appointed, the *sodales* AUGUSTALES; and besides these public ministers there sprung up a number of private associations for the worship of Augustus in Rome and throughout the empire, Livia setting the example by establishing between the Palatine and the Basilica Julia a domestic sanctuary to her deified husband, of which she was the priestess; and further, she celebrated games in his honour (Tac. *Ann.* i. 73). All this worship, public and private, was an expression of strong devotion and loyalty to the empire, and as such was encouraged by those in authority. Oath by the emperor's genius had already begun under Julius (Dio Cass. xliv. 6). Subsequently it was the practice in formal oaths to swear by Jupiter, the deified emperors, the genius of the reigning emperor, and the Penates (Lex Salpensa, c. 25; and Mommsen *ad loc.* p. 460). For more see JUSJURANDUM.

Tiberius, while rigorously enforcing the divinity of Augustus (Tac. *Ann.* i. 73, 74; ii. 50; iii. 66), rejected all divine honours for himself, and would hardly allow them even in Asia (Tac. *Ann.* iv. 15). He was not made a god on his death. Not all emperors were deified, but only those whom for good or bad reasons (Plin. *Pan.* 11) the reigning emperor proposed to the senate; for it was the senate who formally decreed divine honours, "iudicavit de principibus," as Vopiscus (*Tac.* 4) says. And sometimes it was with great difficulty that deification of the preceding emperor was obtained from the senators. They refused it even under pressure from the soldiers to Domitian (Suet. *Dom.* 23), who had been styled "dominus deusque" during his lifetime (Mart. v. 8. 1, and *passim*). So Trajan was addressed by Pliny as *aeternitas vestra* (*Ep.* x. 87). It was from the earnestness with which Antoninus urged Hadrian's case that he got the title of Pius. Under pressure from Severus, who wished to make himself son of M. Aurelius and so brother of Commodus, divinity was decreed to the latter (Spart. *Sev.* 11); and the violence of the soldiers extorted it for Caracalla (Spart. *Carac.* 11). It had accordingly become a mockery. All the succeeding military emperors were deified, and the title (*divus*) continued to be given to deceased Christian emperors down at least as far as Valentinian (Eckhel, *D. N.* viii. 473), though we cannot suppose that "consecratio" (*vid. inf.*) was performed in their case.

But besides emperors many other members of the imperial family were deified, amongst whom we find many women. On their coins these often take the title of some goddess, *e.g.* Livia takes that of Herê, Julia that of Aphrodite (Eckhel, *D. N.* viii. 469). Women used to swear by the *divae*, just as men by the genius of the emperor (Dio Cass. lix. 11; lx. 5). And here it may be useful to give a list (taken from Marquardt, *Staatsverw.* iii. 446, with evidence added) of all members of the imperial family who received divine honours down to Alexander Severus:—1. Julius. 2. Augustus. 3. Livia (Suet. *Claud.* 11). 4. Drusilla, daughter of Germanicus (Dio Cass. lix. 11). 5. Claudius (Suet. *Claud.* 45). 6. Claudia Augusta, daughter of Nero and Poppaea (Tac. *An.* xv. 23). 7. Poppaea (*ib.* xvi. 21). 8. Vespasian (Plin. *Pan.* 11). 9. Titus (Henzen, 7421). 10. Domitilla, daughter of Vespasian (Orelli, 2231). 11. Julia Augusta, daughter of Titus (Eckhel, *D. N.* vi. 366). 12. Domitian's infant son (Eckhel, *D. N.* vi. 400). 13. Nerva (Orelli, 783). 14. Trajan's father (Orelli, 804). 15. Marciana, Trajan's sister (Orelli, 792). 16. Trajan (Spart. *Hadr.* 6). 17. Plotina, Trajan's wife (Orelli, 3744). 18. Hadrian (Spart. *Hadr.* 27). 19. Sabina, Hadrian's wife (Orelli, 836). 20. Matidia, Sabina's mother (*ib.* 2196). 21. Antoninus Pius (Capit. *Pius*, 13). 22. Faustina, his wife (*ib.* 6). 23. L. Verus (Capit. *M. Ant.* 15). 24. M. Aurelius (*ib.* 18). 25. Faustina, his wife (*ib.* 26). 26. Commodus (Spart. *Sev.* 11). 27. Pertinax (Capit. *Pert.* 15). 28. Sept. Severus (Herodian, iv. 2). 29. Caracalla (Spart. *Carac.* 11).

Sometimes consecration did not follow till after burial; *e.g.* Livia died in 29 A.D., but was not consecrated till 42: sometimes the two acts were simultaneous. But in any case consecration, after being decreed by the senate, involved a funeral ceremony. We have three detailed accounts of such consecration: (1) that of Augustus (Dio Cass. lvi. 34 and 42); (2) of Pertinax (id. lxxiv. 4 and 5); (3) of Severus (Herodian, iv. 2). The first differed from an ordinary Roman burial generally in its greater splendour, and specially in three waxen images taking the place of the corpse which had been previously buried (Xiphilin's supplement to Dio Cass. lvi. 34), and an eagle, the bird of Jupiter, being let loose from the pyre, which was regarded as carrying the soul of the dead man to the gods. Far more Oriental in its extravagance was the consecration of Pertinax, of which Dio Cassius was himself an eye-witness. In the Forum Romanum near the stone tribunal a wooden platform was erected, and on it an open pillared structure was raised, adorned with ivory and gold, and in it a bier was placed with heads of land and sea creatures carved thereon. The bier had coverlets of purple and gold, and on it was placed a waxen image of Pertinax, laid out in triumphal costume; and a fair youth brushed away the flies with a peacock's feather, for Pertinax, they feigned, was asleep. The emperor, the senators, and the senators' wives approached in mourning garments and sat down, the women in the porticoes, the men in the open. Then followed statues of all the illustrious Romans of old, choruses of men and boys chanting a hymn to the dead man, brazen images of all the subject nations in their national costume, representatives of the different guilds (γένη) in the city, the lictors, the scribes, the heralds, &c.; images of the great and illustrious in deed or discovery or walk in life; then the cavalry and infantry in full armour, the chief racehorses, the gifts for the pyre (mostly aromatics; see Henzen, *Arv.* 88) presented by the emperor or the senators or senators' wives or *equites illustres*, or by the divisions and collegia throughout the city. Thereafter followed a gilt altar, adorned with ivory and Indian jewels. When all these had passed, Severus mounted the Rostra and delivered the funeral oration. Tears and lamentations accompanied the speech, and burst forth louder when the speech was ended and the bier was moved. The chief priests and the magistrates, actual and designate, took it from the platform and gave it to some of the knights to bear. The procession marched before the bier, which was borne amidst droning flutes and beatings of the breast to the Campus Martius, the emperor following last. There the pyre was erected, a tower-like structure with three stories (four in Herodian's description, built like a lighthouse), adorned with gold and ivory and statues, and on the top of this was the gilded chariot which Pertinax used to drive. Into this pyre the bier was placed and the funeral offerings. Then, Severus and the relations of Pertinax having kissed the image, the emperor mounted a platform, and the senators from raised seats viewed what followed. When everything was prepared, the praefects and the knights, and the cavalry and infantry, went through their customary and their elaborate (πολιτικὰς καὶ ποιητικὰς) evolutions round the pyre (cf. Verg. *Aen.* xi. 188); the consuls applied the torch, and when the fire had caught an eagle soared up aloft. Herodian's account of the apotheosis of Severus is not materially different, except that for seven days previously the gradual death of Severus is acted, a waxen image taking the place of the emperor, physicians visiting it, and so forth. The orientalized character of the whole proceeding is obvious: and for this Preller (*Röm. Myth.* p. 787) refers to the description of the pyre of the Assyrian Hercules in K. O. Müller, *Kleine Schriften*, ii. 102 *seq.*, to the obsequies of Hephaestion (Diod. xvii. 115), and the elder Dionysius (Athen. 206).

Medal of Antoninus Pius, representing the funeral pyre at his Consecratio. (Brit. Museum.)

The oldest custom carried the dead to heaven on an eagle (Artem. *Oneir.* ii. 20), and this is the most common figure on the representations of apotheoses. But we find Augustus represented on a Paris cameo as borne on a winged horse; and in the apotheosis of Antoninus and Faustina the winged genius of Eternity with two eagles carries them to the skies. On the triumphal arch of M. Aurelius the younger, Faustina is borne aloft by a winged genius holding a torch. On a medal we see Julia Domna soaring up on the back of a peacock, Juno's bird.

Consecratio of Antoninus and Faustina, from pedestal of Column of Antoninus Pius.

The new god is represented with the *caput radiatum* (cf. Verg. *Aen.* xii. 162), first adopted by an emperor while alive by Nero (Eckhel, *D. N.* viii. 467);—the *nimbus* first on the coins of Antoninus Pius, regular after Constantine (Preller, p. 784):—the image of the deified emperor no more appears in the funerals of his family (Dio Cass. lvi. 46), but his statue appears among the statues of the gods at the games, on a tensa drawn by four elephants, symbols of eternity (Dio Cass. lxxiv. 4; Eckhel, vii. 144, 328). This is not exclusively confined to the gods, for in the 3rd century it was also used in the case of triumphs over the Parthians (Capit. *Gord.* 27). All these accompaniments of divinity appear on the coins representing consecration,—the *caput radiatum*, eagle, peacock, pyre, altar, tensa drawn by elephants: further, the star on the coins of Julius; the phœnix, another symbol of eternity, on Trajan's coins, &c. For a full account see Eckhel, *D. N.* viii. 456–473.

Medal of Julia Domna, on the back of a peacock. (Brit. Museum.)

Outside the imperial family we sometimes find examples of deification. Antinous, the favourite of Hadrian, is the best known example (Orig. *in Celsum*, iii. 36): it reminds us of Cicero and Tullia. Survivors are prone to imagine blessedness for the loved and lost: *e.g.* the Carpocratians, a Gnostic sect, built a temple to the son of their founder, who died young (Friedländer, iii. 456), and the same impulse may be seen in inscriptions (Orelli, 4647, 4530; Henzen, 7418). Men, too, paid worship to their human ideal: thus Plato, after his death, was regarded by some of his followers as son of Apollo (Zeller, ii. 1, 378, note 3, ed. 1875). Much of the sincere and lasting adoration paid to M. Aurelius (Capit. *M. Ant.* 18) was probably due to this impulse. Alexander Severus used to offer religious rites to many holy souls,—to Apollonius of Tyana, Christ, Abraham, Orpheus, "et huiuscemodi ceteros" (Lampr. *Alex.* 29).

(For apotheosis the chief works are F. G. Welcker, *Griechische Götterlehre*, ii. 294–316, 1863; L. Preller, *Römische Mythologie*, 770–796, 1858; Gaston Boissier, *La Religion Romaine*, i. 109–186, 1878; and Eckhel and the inscriptions *passim*. Besides this, additional information may be obtained in Mommsen-Marquardt, ii. 731–740, 783 *seq.*, 1078; vi. 89, 264–5, 443–455; Baumeister in his *Denkmäler*, pp. 109–111, and Mayor on Juv. iv. 71, and Index.) [L. C. P.]

APOTIMEMA. [Dos.]

APOTYMPANISMOS (*ἀποτυμπανισμὸς*), beating to death with sticks, cudgels, or clubs (*τὸ τυμπάνῳ ἀποκτεῖναι, ὅπερ ἐστὶ ξύλον ὥσπερ ῥόπαλον*, *Lex. Rhet.* p. 198), is mentioned as a mode of execution at Athens and elsewhere. It resembled, but was probably not identical with, the Roman *fustuarium*, an exclusively military punishment [FUSTUARIUM].

It is a question of some importance, as bearing on the Greek and especially the Athenian character, whether this and other cruel punishments were confined to slaves and aliens, or inflicted also upon free citizens. By far the most probable opinion is, that they were absolutely prohibited by Attic law in the case of the fully enfranchised; but, as in other things, the practice in bad times may not have been quite on a level with the theory. One Menestratus, who had been an informer under the Thirty, and was apparently a citizen, suffered this punishment as a murderer (*ἀνδροφόνος*) under the restored democracy (Lys. *c. Agorat.* §§ 55, 56); but whether as an act of popular vengeance, or in consequence of a fresh crime, is not stated. In the same speech, two brothers of the defendant are said to have been thus put to death: one by Lamachus in the Sicilian expedition for sending the enemy secret intelligence by fire-signals (this would have been under martial law); the other as a λωποδύτης: but we are expressly told that Agoratus was the son of a slave (Lys. *l. c.* §§ 67, 68). It is curious that Demosthenes in three passages somewhat brutally expresses a wish that this punishment had been inflicted on traitors, but nowhere mentions as a fact that it was so (*de Chers.* p. 104, § 61; *Phil.* iii. p. 126, § 61; *de Fals. Leg.* p. 388, § 137). The practice among barbarians or under tyrannies such as that of Aristion (or Athenion) is clearly irrelevant to this question (Athen. iv. 154 c, v. 214 d); and it would not be safe to infer from the one doubtful instance in Lysias, that Athenian citizens were liable to be thus punished. Perrot (*L'Éloquence politique à Athènes*, p. 130) holds that they were not; Caillemer the reverse (*ap.* D. and S.). The kindred question, whether torture to extract evidence was permissible in the case of citizens, is discussed under Tormentum. [W. W.]

APPARITO'RES, the general name for the free attendants of the magistrates at Rome, as distinguished from the *servi publici*. They received wages (*merces*) from the public treasury, and had places of their own in the theatre and circus (Tac. *Ann.* xvi. 12), doubtless near the magistrates on whom they waited. They were divided into five classes—the Accensi, Lictores, Viatores, Scribae, and Praecones, treated in separate articles. Sometimes the term *apparitores* is used to exclude *scribae* and *lictores*; but this is less exact, for the last two classes also *apparebant magistratibus*. (Cf. Serv. on Verg. *Aen.* xii. 850; Cic. *Cluent.* 53, 147; Liv. i. 8.) Each class constituted a corporation (*corpus*), subdivided into *decuriae*, which had the right of holding property and slaves. The number of members of a *decuria* varied with the number of attendants to which each magistrate was entitled. The term *decuria* was afterwards applied, not merely to a subdivision of a corporation, but to the whole of one not so divided. The post of *apparitor*, though nominally conferred by the magistrates of each year, became practically a permanent one, and was even transferred by sale. (Cf. Mommsen, *Staatsr.* i. 259–272; Becker, *Röm. Alt.* ii. 2, 370–384.) [A. S. W.]

APPELLA'TIO. 1. Greek (ἔφεσις or ἀναδικία). Owing to the constitution of the Athenian tribunals, each of which was generally appropriated to its particular subjects of cognizance, and therefore could not be considered as homogeneous with or subordinate to any other, there was little opportunity for bringing appeals properly so called. It is to be observed also, that in general a cause was finally and irrevocably decided by the verdict of the dicasts (δίκη αὐτοτελής). There were, however, some exceptions, in which appeals and new trials might be resorted to.

A new trial to annul the previous award might be obtained, if the loser could prove that it was not owing to his negligence that judgment had gone by default, in which case he was said ἐρήμην ἀντιλαχεῖν (Dem. *c. Zenoth.* p. 889, § 27), or that the dicasts had been deceived by false witnesses (δίκη ψευδομαρτυριῶν). And upon the expulsion of the Thirty, a special law annulled all the judgments that had been given during the usurpation (Dem. *c. Timocr.* p. 718, § 56). To this class of causes we find the phrases δίκη ἀνάδικος, ἀναδικία, ἀναδικάζεσθαι, παλινδικία, παλινδικεῖν applied; and they may be compared, *mutatis mutandis*, with the "motions for a new trial" of the English law.

An appeal properly so called (ἔφεσις) was allowed only in the following cases:—1. From a decision of the public arbitrators (διαιτηταὶ κληρωτοὶ). 2. From a διαψήφισις or decision of a man's δημόται adverse to his rights of citizenship. 3. From an ἐπιβολὴ or fine summarily imposed by a magistrate, but not from the τίμημα or fine assessed by a jury. 4. In the δίκαι ἀπὸ συμβόλων, when one of the parties was a citizen of a foreign state, between which and Athens the agreement called σύμβολα existed. The technical words employed in this last case are ἐκκαλεῖν, ἐκκαλεῖσθαι, ἔκκλητος (δίκη or πόλις). See further details under the respective headings [Diaetetae, Diapsephisis, Epibole, Symbolon, Dikai Apo]. These and other obscurer cases of appeal are noticed by Pollux (viii. 62, 63) in the following words:—"Ἔφεσις is when one transfers a cause from the arbitrators (διαιτηταί), or archons, or men of the township (δημόται) to the dicasts, or from the senate to the assembly of the people, or from the assembly to a court (δικαστήριον), or from the dicasts to a foreign tribunal; and the cause was then termed ἐφέσιμος. Those suits were also called ἔκκληται δίκαι. The deposit staked in appeals, which we now call παραβόλιον, is by Aristotle styled παράβολον."

It is not easy to determine upon what occasions an appeal from the archons could be preferred; for after the time of Solon their power of deciding causes had degenerated into the mere presidency of a court (ἡγεμονία δικαστηρίου), and the conduct of the previous examination of causes (ἀνάκρισις). Upon the rejection of the plaintiff's suit in this previous examination as unfit to be brought before a court, he would most probably proceed against the archon in the assembly of the people for denial of justice, or would wait till the expiration of his year of office, and attack him when he came to render the account of his conduct in the magistracy (εὔθυναι). (Antiph. *de Choreut.* §§ 42, 43.) An appeal, however, from the archons, as well as from all other officers, was very possible when they imposed a fine of their own authority and without the sanction of a court; and it might also take place when the king archon had by his sole voice made an award of dues and privileges (γέρα) contested by two priesthoods or sacerdotal races. (*Lex. Rhetoricum*, p. 219, 19.) [J. S. M.] [W. W.]

2. Roman. Under the republican constitution the word *appellatio* and the corresponding verb *appellare* are used to express the application of an individual to a magistrate, and particularly to a tribune of the people, for their intercession in order to prevent a wrong being inflicted on the applicant by the order of some other magistrate. The magistrate or tribune to whom such application was made, had the power of nullifying the order of the magistrate appealed against. The application had to be made within a prescribed time. There are many instances recorded of criminal, civil, and

administrative decrees of magistrates being set aside on such applications.

Appellatio, in the above sense, is to be distinguished from *provocatio*.

Provocatio is the term used for the right of appeal, in criminal cases, from a magistrate to the populus. It would seem that the *provocatio* was an ancient right of Roman citizens. The surviving Horatius, who murdered his sister, appealed from the duumviri to the populus (Liv. i. 26). The *provocatio*, though it existed in the regal period, could not be brought against the king's decisions without his permission.

There was subsequently a right of appeal from the Consuls, subject to the same restriction, but by the Valerian law (B.C. 508) the Consuls were obliged to give leave to appeal where they had passed sentence inflicting capital or corporal punishment. By a subsequent law the same principle was applied to sentences under which heavy fines were imposed. The decemviri took away the *provocatio*, but it was restored by a *lex consularis de provocatione*, and it was at the same time enacted that in future no magistrate should be made without being subject to the right of appeal. On this Livy (iii. 55) remarks that the plebeians were now protected by the *provocatio* and the *tribunicium auxilium:* this latter term has reference to the *appellatio* properly so called (iii. 13, 56). Appius (Liv. iii. 56) applied (*appellavit*) to the tribunes; and when this produced no effect, and he was arrested by a viator, he appealed (*provocavit*). Cicero (*de Orat.* ii. 48) appears to allude to the re-establishment of the *provocatio* which is mentioned by Livy (iii. 55). The complete phrase to express the *provocatio* is *provocatio ad populum:* and the phrase which expresses the *appellatio* is *appellare*, and in the later writers *appellare ad.*

The *provocatio* was an appeal in the strict sense of the term, *i.e.* it consisted of a rehearing of a case previously tried, and a new judgment upon it. The *provocatio* was, however, limited to criminal matters. In civil suits there was not, and could not be, any appeal under the republic, for the purpose of revising and altering a decision, for each magistrate had power to decide finally within the limits of his jurisdiction: and, as a general rule, the sentence of a judex could not be reversed by the magistrate who appointed him, and was not even subject to *intercessio;* but in the provinces judices were subject to the control of the governor (Cic. *Verr.* ii. 13, 27). The *appellatio* was to some extent a remedy against an illegal decree, but it was not a rehearing and revision of the previous decision, and so not an appeal in the strict sense: it was rather in the nature of a stay of execution. Where, however, an official had delegated his jurisdiction to another, there was a regular appeal to the delegating authority. Also in exceptional circumstances, a magistrate who had appointed a judex might grant a new trial by means of his extraordinary equitable remedy, the *in integrum restitutio*, in case he were dissatisfied with the decision of the judex (Cic. *pro Flacco*, 21, 49; Val. Max. v. 4, 7; cf. Mommsen, *Staatsrecht*, i. 25, note 3). Appellate jurisdiction in civil causes can hardly be said to have existed under the republic, but it became an institution on the establishment of the empire. Mommsen has connected this judicial reform with the attempt of Julius Caesar to revive the regal authority (*Röm. Gesch.* iii. 475), but there is no proof of such appellate jurisdiction being exercised before the time of Augustus, when a regular gradation of appeals from inferior to superior jurisdictions was constituted, probably under the authority of the Lex Julia Judiciaria. The origin of the new institution is left in much uncertainty. The emperor centred in himself both the power of the populus and the veto of the tribunes; hence he could rescind the decrees of all magistrates, but these powers were not a sufficient foundation for the new appellate jurisdiction by which the civil decrees of magistrates were subject to a regular revision. The jurisdiction was not limited, as under the republican constitution, to appeals brought to a delegating magistrate against the decisions of his delegate.

Under the empire the terms *provocatio* and *appellatio* lost their original signification. Thus Gellius (iv. 14) has used *provocatio* for *appellatio.* In the Digest (49, tit. 1, de appellationibus) *provocatio* and *appellatio* are used indiscriminately for a civil appeal, which is to be explained by the fact that the idea of the civil appeal was partly taken from the *appellatio* in its earlier sense, and partly from the *provocatio*. *Provocatio* seems so far to have retained its original meaning as to be the only term used for an appeal in criminal matters.

Civil appeals came, in the last resort, either to the emperor or to the senate. This division of the supreme appellate jurisdiction between the emperor and the senate was in accordance with the dual system of government which Augustus contrived. Appeals from Rome, Italy, and the provinces under its government would have been confined to the senate, if the division had been strictly carried out, while appeals from imperial provinces would have come to the emperor; but while the emperors reserved to themselves the sole right of hearing appeals from their *legati*, they also took cognisance of all appeals from Rome, Italy, and the senatorial provinces, except during the short periods when the strict principle of division was adhered to (Suet. *Calig.* 16, *Ner.* 17; Tac. *Ann.* xiv. 28).

The senate sitting as a court of appeal was perhaps regarded as the consilium of the consuls. There was no appeal from the senate to the emperor (Dig. 49, 2. 1, § 2). In course of time the emperor exercised the appellate jurisdiction of the senate by virtue of the consular power which he assumed.

There was a right of appeal from the decrees of magistrates and from the decisions of all judges who had acted under an authority delegated to them by a magistrate; but it is a question whether there was any right of appeal from the judex proper, though the emperor exercised in exceptional cases the power of granting a new trial, as magistrates had previously done by means of the *in integrum restitutio* (Suet. *Dom.* 8).

The *datus judex* of the Corpus Juris is not the judex of the republican constitution, but a judge acting under a delegated power, from whose decision there would be an appeal as a matter of course (Mommsen, *Staatsrecht*, ii. 2, 940; cf. Hollweg, *Civil-Prozess*, ii. 46).

If the sentences of judices could not be appealed against, the extent of appellate jurisdiction must have increased, as the magistrate came to decide a greater number of cases himself without the help of a judex, since the decision of the magistrate would be subject to appeal. At length, when in the time of Diocletian all judicia became *extraordinaria*, the right of appeal was necessarily applicable to all judgments.

The emperor either heard civil appeals in person, or delegated the hearing of them to others. Augustus every year assigned civil appeals from the city to the Praetor urbanus; provincial appeals to consulares appointed for each province (Suet. *Aug.* 33). The senate likewise delegated civil appeals to the consuls, who frequently transmitted the hearing of them to special delegates. Appeals tried by delegates were generally subject to a further appeal to the delegating authority; but if a special delegate was appointed by the emperor, it was not uncommon to exclude any further appeal. In the 3rd century we find civil appeals from the provinces frequently entrusted to the Praefecti praetorio; those from the city came regularly before the Praefectus urbi. From these the only appeal was to the emperor himself, whose decision was in all cases final; but he had always the right of refusing to exercise his jurisdiction.

The process by which an appeal was brought in civil cases might be either oral or written. The written appeal or *libelli appellatorii* showed who were the appellant and defendant, and the nature of the judgment appealed from. The court below transferred the case to the superior court by *litterae dimissoriae* or *apostoli*. The time within which appeals could be brought was limited. If the appellant was unsuccessful in his appeal, he was subject to a pecuniary penalty.

From the time of Augustus, the populus did not exercise sovereign criminal jurisdiction. The emperor himself took cognisance of criminal cases as a court of first instance, having coordinate jurisdiction with the senate. The *quaestio* procedure continued to be the ordinary mode of trial [Quaestio]. Appellate criminal jurisdiction was confined within narrow limits. No appeal lay to the emperor from the decisions of judices or from the senate, although he might annul a decree of the latter body by *intercessio*. The emperor delegated criminal jurisdiction to governors of provinces in capital cases, to the Praefecti urbi, and to others: appeals might be heard by him against the decisions of his delegates. The extension of imperial delegation in criminal cases and the decline of republican institutions, especially the abolition in the 3rd century of the *quaestiones*, led to the emperor's complete supremacy over criminal courts, which he also acquired over civil.

The system of *appellationes* under the empire was not limited to matters of criminal and civil procedure. A person might appeal in matters that related to the fiscus, to civil offices and burdens, and other administrative subjects. (Paul. v. 32–37; Dig. 49, 1; Cod. Just. 7, 62; Puchta, §§ 180, 181; Mommsen, *Staatsrecht*, ii. 2, pp. 930–948; Bethmann-Hollweg, *Civil-Prozess*, i. 62, ii. 42, 49; Rudorff, *Rechtsg.* ii. § 85.) [G. L.] [E. A. W.]

APPLICATIO'NIS JUS. [Exsilium.]

APROSKLE'TOS DIKE' (ἀπρόσκλητος δίκη). If there were insufficient or fraudulent service of the summons (πρόσκλησις), the suit was called ἀπρόσκλητος, and dismissed by the magistrate (Dem. *c. Nicostr.* p. 1251, § 15). [Diké, Prosklesis.] [W. W.]

APROSTAS'IOU GRAPHE' (ἀπροστασίου γραφή), an action falling under the jurisdiction of the polemarch, which was brought against those metoeki, or resident aliens, who had neglected to provide themselves with a patron (προστάτης). This action is stated to have been also brought against those metoeki who exercised the rights of full citizens, or did not pay the μετοίκιον, a tax of twelve drachmas exacted from resident aliens; but Meier has remarked that this action was only applicable in such cases, provided that the metoeki had no patron. It is probable that the μετοίκιον was regularly paid through the προστάτης, and that he was responsible for it; and in that case the default of payment would of itself prove neglect to comply with the provisions of the law. (Harpocrat., Zonar., Suid. *s. v.*; Meier, *Att. Process*, p. 315; Perrot, *Essai*, p. 264.) [W. S.] [W. W.]

APSIS. [Absis.]

APSY'CHON DIKE' (ἀψύχων δίκη), an action against inanimate objects (ἄψυχα) which had caused the death of a human being. It thus somewhat resembled the English law of deodand, lately abolished. It was tried in the court of the Prytaneum, and, according to Schömann, partook more of the nature of a religious ceremony than a judicial proceeding. If the instruments with which a murder had been committed were captured, and not the murderer himself, these, after the Ephetae had pronounced their sentence, were conveyed out of the country by the Phylobasileis, or presidents of the four old-Ionic tribes. In the same way were treated such things as had accidentally caused the death of any one. Animals likewise, by which any one had been killed, were here condemned to death, and then conveyed out of the country. (Pollux, viii. 111, 120; Dem. *c. Aristocr.* p. 645, § 89; Schömann, *Antiq.* i. 470, E. T.; comp. Plat. *Leg.* ix. 873 E.) [W. W.]

AQUAEDUCTUS (ὑδραγωγία, ὑπόνομος)—literally, a water-conduit—would, of course, properly describe any channel for the passage of water; but the word is used especially for the magnificent structures by means of which Rome and other cities of the Roman empire were supplied with water, and which may be described in general terms as channels, constructed as nearly as possible with a regular declivity from the source whence the water was derived to the place where it was delivered, carried through hills by means of tunnels, and over valleys upon a substruction of solid masonry or arches.

1. Greek.—Among the Greeks in many cases springs (κρῆναι, κρουνοί) were sufficiently abundant to supply a considerable part of the great cities with water; and great attention was paid to the preservation and adornment of them: they were converted into public fountains by the formation of a head for their waters, and the erection of an ornamental superstructure: and were dedicated to some god or hero. Pausanias (x. 4, § 1) considers no place to deserve the name of *city* which has not such a fountain. We are indebted to the same author and other Greek writers for accounts of some of the most celebrated fountains: such as that of Theagenes, at

Megara (Paus. i. 40, § 1); those of Peirene and Lerna at Corinth, where there were many other fountains, as well as a Roman aqueduct erected by Hadrian (ii. 3, §§ 2, 3, 5; 4, § 5); that in the grove of Aesculapius at Epidaurus (ii. 17, § 5); and several others (iv. 31, 32, 34; vii. 5, 21; viii. 13), of which we need only mention the *Enneakrounos* at Athens, which was constructed by Peisistratus and his sons, and of which Thucydides records the interesting fact, marking the transition from the natural springs to the artificial fountain, and showing the importance attached even to the former, that "it was called Callirhoë formerly, *when the springs were visible*" (*φανερῶν τῶν πηγῶν οὐσῶν*, Thuc. ii. 15; Paus. i. 14, § 1): to this enumeration might be added the springs of salt water in certain temples; as in those of Erechtheus at Athens, and of Poseidon Hippius at Mantineia. (Paus. i. 26, § 5; viii. 10, § 4.)

In these cases we have no reason to suppose that there was anything more than a fountain over or close to the springs, forming a head for the water derived, either immediately, or by very short channels, from them. But we are not without examples of constructions more nearly approaching the Roman aqueducts in kind, though not in degree. That the Greeks, at a very early period, had some powers of hydraulic engineering, is shown by the drainage tunnels of the lake Copaïs, and the similar works of Phaeax at Agrigentum [EMISSARIUM]; and we have an instance of a channel for water being carried through a mountain, to supply the city of Samos. The height of the mountain was 150 orguiae (900 Greek feet); the length of the tunnel was 7 stadia (7–8ths of a Roman mile, or about 1420 yards); its section was a square of 8 Greek feet. The actual channel for the water was cut below this, and was, if the text is right, 30 Greek feet deep, and 3 wide; the water passed through pipes (*διὰ σωλήνων*) from a copious spring, and was thus brought to the city. (Herod. iii. 60.) There are still remains of this tunnel. Müller conjectures that the work was one of those executed by Polycrates (*Archäol. d. Kunst*, § 81). Indeed many of the Greek waterworks appear to date from the age of the Tyrants.

But from early times, the Greeks, where the needs of a city called for it, constructed underground conduits following the undulations of the surface or carried through the hills by tunnels, and closely resembling the earlier Oriental aqueducts, of which they were probably imitations. Thus the conduit which supplied the Acropolis of Thebes was attributed to Cadmus (Dicaearch. p. 143, Fuhr), and the canalisation of the mountain torrents round Argos to Danaus (Strabo, viii. pp. 370, 388). The Greek aqueducts were usually rectangular channels cut in the rock or constructed of solid masonry, but in the Troad we have an instance of one composed of earthenware pipes (Hahn, *Ausgrab. auf der Homer. Pergamus*).

At Athens the rocky part of the city was dependent on cisterns. Two conduits entered the city on the east from the upper course of the Ilissus, which lower down was canalised, and part of its water went to supplement the *Enneakrounos*, below which an underground conduit ran from the river, repeatedly crossing under its bed, and accessible to use by shafts, and finally carried to the Peiraeus. Below the *Enneakrounos* a stream from Hymettus was carried over the Ilissus into the city. Later, two large conduits were constructed from Lycabettus on the east and west of that mountain. A system of canals from the Cephissus served to irrigate the olive-woods. (E. Curtius, *VII. Karten von Athen.*) Finally, Hadrian, at the end of his reign, built an aqueduct of the Roman type, drawing its water from the Cephissus. Among the finest and best preserved of Greek aqueducts are those of Syracuse, which Thucydides (vi. 100) tells us were laid under ground to bring drinking-water into the city. They are still in use—one from the Anapus, on the north, twelve miles long, which finally crosses under the Small Harbour and feeds the fountain of Arethusa, and one from the springs of Mount Crimiti on the south. (Schubring, *Philologus*, 1865, pp. 577–638.)

Solon, according to Plutarch (*Sol.* 23), ordained that water might be fetched from the public fountains or wells to a distance of four stadia; beyond this, persons must dig their own wells; but if any one dug to a depth of ten *orguiae* without finding water, he was permitted to take from his neighbour's well a pitcher of six *choës* twice a day. Plato (*Leg.* viii. p. 844, A, B) mentions this law, which obviously refers to country life, in vaguer terms, and also the conditions under which the waters of streams might be diverted for irrigation. The public conduits were superintended by *ἐπιστάται τῶν ὑδάτων*. Their office was apparently of some importance, as it was held by Themistocles, who inflicted fines on fraudulent consumers (Plut. *Themist.* 31). The *κρηνόφυλακες* and *κρήναρχοι* were probably subordinate officers (Phot. and Hesych. *s. vv.*; Schömann, *Antiq.* i. p. 416, E. T.). On Greek aqueducts see E. Curtius, *Ueber städtische Wasserbauten der Hellenen*, in *Archäol. Zeitung*, 1847.

2. ROMAN.—The Romans were in a very different position, with respect to the supply of water, from most of the Greek cities. They at first had recourse to the Tiber and to wells sunk in the city; but the water obtained from those sources was very unwholesome, and must soon have proved insufficient. Consequently, to supply the demands of the public baths and the fullers, and later of the growing population, and later still of the *naumachiae*, they had recourse to public works in order to bring pure water from a considerable distance—from the hills, in fact, which surround the Campagna. The date of the first aqueduct is assigned by Frontinus to the year A.U.C. 441, or B.C. 312 (*de Aquaed. Urb. Rom.* 4); and the number of aqueducts was gradually increased, partly at the public expense and partly by the munificence of individuals, till, in the time of Procopius, they amounted to fourteen (see p. 151 a); and, even before they were all erected, they might well excite the admiration which Pliny expresses with respect to the Claudian aqueduct (*H. N.* xxxvi. § 123):—"But if any one will carefully calculate the quantity of the public supply of water, for baths, reservoirs, houses, trenches (*euripi*), gardens, and surburban villas, and, along the distance which it traverses, the arches built, the mountains perforated, the valleys levelled, he will confess that there never was anything more wonderful in the whole world."

The detailed description of the arrangements of the aqueduct will be better understood, after an enumeration of the principal aqueducts by which water was conveyed to Rome across the Campagna. Our knowledge of the subject is derived almost entirely from the treatise *De Aquaeductibus Urbis Romae*, by S. Julius Frontinus, who was *curator aquarum* (keeper of the aqueducts) under Nerva and Trajan. It should be observed that the *Aquaeductus* is often called simply *Aqua*. There were nine aqueducts in the time of Frontinus, of which four belong to the time of the republic, while five were built in the reigns of Augustus and Claudius.

1. The *Aqua Appia* was begun by the censor Appius Claudius Caecus (to whom also Rome was indebted for her first great road), in B.C. 312. Its sources are mentioned by Frontinus as near the *Via Praenestina*, between the seventh and eighth milestones. But this appears to be a mistake, as its real source has been discovered in the reservoirs formed in the ancient quarries, now called *latomie della Rustica*, about 50 feet below the level of the ground. Perhaps we ought to read *Via Collatina* instead of *Praenestina* (Middleton, *Ancient Rome*, p. 466). Its termination was at the *salinae*, by the *Porta Trigemina*. Its length was 11,190 *passus*, for 11,130 of which it was carried under the earth, generally at a considerable depth; and for the remaining 60 *passus*, within the city, from the *Porta Capena* to the *Porta Trigemina*, it was on arches. The distribution of its water began from the *Clivus Publicius*. (Frontin. 5; Liv. ix. 29; Diod. xx. 36; Aur. Vict. *Vir. Illust.* 34, who confounds it with the *Anio*.) Its subterranean *specus* has been discovered in several places in Rome, especially at one point where it passes through the old tufa quarries in the Aventine near the church of S. Saba; its line near this point is now traversed by the modern Via di Porta (Middleton, *l. c.*).

2. The *Anio Vetus* was commenced forty years later, B.C. 272, by the censor M'. Curius Dentatus; but as the time of the censorship expired before the work was completed, *duumviri aquae perducendae* were appointed, and the aqueduct was finished by M. Fulvius Flaccus, one of the duumvirs, the other having died shortly after his appointment. The expense was defrayed out of the spoils taken from Pyrrhus. The water was derived from the river Anio, above Tibur, at a distance of ten Roman miles from the city; but, on account of its windings, its actual length was forty-three miles (*ita exigente libramento*, Front.), of which length less than a quarter of a mile only (namely, 221 *passus*) was above the ground. There are considerable remains of this aqueduct below the Claudian aqueduct, near the *Porta Maggiore*, and other pieces of the specus and remains of large cisterns were discovered while laying out the new streets Principe Amadeo, Carlo Alberto, and Napoleone III. (Middleton, p. 467), and also in the neighbourhood of Tivoli, which was supplied with its water. It was built of blocks of peperino stone, and the water-course was lined with a thick coating of cement. (Front. 6; Aur. Vict. *Vir. Ill.* 43.)

3. The *Aqua Marcia*, one of the most important of the whole, was built by the praetor Q. Marcius Rex, by command of the senate, in B.C. 144. The want of a more plentiful supply of water had been long felt, especially as that furnished by the *Anio Vetus* was of such bad quality as to be almost unfit for drinking; and in B.C. 179, the censors M. Aemilius Lepidus and M. Flaccus Nobilior had proposed the erection of a new aqueduct; but the scheme had been defeated, in consequence of Licinius Crassus refusing to let it be carried through his lands. (Liv. xl. 51, 7.) The two existing aqueducts had also fallen into decay by neglect, and had been much injured by private persons drawing off the water at different parts of their course. The senate therefore commissioned the praetor Marcius to repair the old aqueducts, and to build a third, which was named after him. According to Fenestella (*ap.* Front.), 180 million sesterces were voted for the purpose. Some writers have pretended that the original construction of this aqueduct is to be ascribed to Ancus Marcius, alleging a passage of Pliny (*H. N.* xxxi. §41), and a medal of the Marcian gens, family Philippus, which bears on the obverse a head with the legend ANCVS, and on the reverse a representation of an aqueduct, with the letters AQVAMR (*Aqua Marcia*) between the arches, supporting an equestrian statue with the legend PHILIPPVS: but those who know anything of the history of Roman family records will understand that this medal bears no evidence to the point in question, and is simply a perpetuation of two of the greatest distinctions of the *Marcian gens*, their alleged descent from Ancus, and the aqueduct which bore their name; and Pliny's opinion is simply one of his ludicrous blunders, arising probably from his confounding Marcius Rex with the king Ancus Marcius. (Eckhel, *Doctr. Num. Vet.* vol. v. p. 248.)

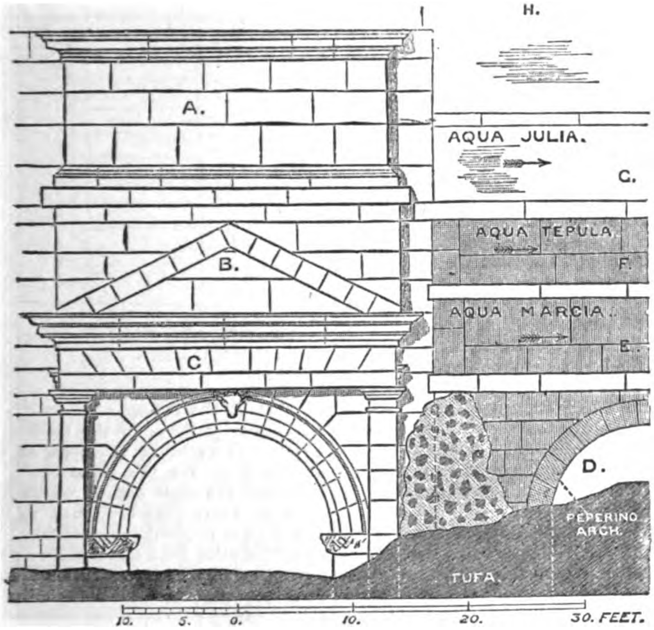
Medal of the Marcia gens, recording the Aqua Marcia.

This aqueduct commenced three miles south of the *Via Valeria*, thirty-six miles from Rome; its length was 61,710½ *passus*, of which only 7463 were above ground; namely, 528 on solid substructions and 6935 on arches. It was high enough to supply water to the summit of the Capitoline Mount. It was repaired by Agrippa in his aedileship, B.C. 33 (see below, No. 5), and the volume of its water was increased by Augustus, by means of the water of a spring 800 *passus* from it: the short aqueduct which conveyed this water was called the *Aqua Augusta*, but is never enumerated as a distinct aqueduct. Pliny states that the water of the *Aqua Marcia* was the coldest and most wholesome of all which was brought to Rome; and Vitruvius and other writers refer to the excellence of the water as being proverbial. Considerable remains of it are still standing both above and below Tivoli. (Frontin. 7, 12; Plin. *H. N.* xxxi. § 41, who differs from Frontinus in some of the details; Strab. v. p. 240; Vitruv. viii. 3, § 1; Dion Cass. xlix. 42; Plut. *Coriol.* 1; Prop. iii. 22, 24

Mart. vi. 42, 18; Stat. *Silv.* i. 5, 25.) Its *specus* can be seen, where it passes over the arch built by Augustus below the *specus* of the *Aqua Julia* and *Tepula* (see No. 5).

4. The *Aqua Tepula*, which was built by the censors Cn. Servilius Caepio and L. Cassius Longinus in B.C. 127, began at a spot in the Lucullan or Tusculan land, two miles to the right of the tenth milestone on the *Via Latina*. Its water was slightly warm, whence its name, *tepula*, a form of *tepida*. It was afterwards connected with

5. The *Aqua Julia*. Among the splendid public works executed by Agrippa in his aedileship, B.C. 33, was the formation of a new aqueduct, and the restoration of all the old ones. From a source two miles to the right of the twelfth milestone of the *Via Latina*, he constructed his aqueduct (the *Aqua Julia*) first to the *Aqua Tepula*, in which it was merged as far as the reservoir (*piscina*) on the *Via Latina*, seven miles from Rome. From this reservoir the water was carried along two distinct channels, on the same substructions (which were probably the original substructions of the *Aqua Tepula*, newly restored), the lower channel being called the *Aqua Tepula*, and the upper the *Aqua Julia;* and this double aqueduct again was united with the *Aqua Marcia*, over the water-course of which the other two were carried. The arch bearing the three aqueducts, where it entered the city, is now the *Porta S. Lorenzo;* and the rebuilding of this part of the aqueduct by Augustus in B.C. 5 is recorded by an inscription on the side of the *specus* of the *Aqua Julia* (A in cut). Other restorations were made by Titus in A.D. 79, recorded in an inscription on the frieze below (B in cut); by Severus in 196; and by Caracalla in 212. The restoration by Caracalla is recorded in an inscription, to make room for which the moulded pediment has been cut away (C in cut).



Arch built by Augustus where the three Aqueducts, *Julia*, *Tepula*, and *Marcia*, pass over a road, now the Porta S. Lorenzo. (From Middleton.)

A. Original inscription by Augustus.
B. Inscription recording restoration by Titus.
C. Inscription added by Caracalla.
D. Peperino arch of the Aqueduct.
E, F, G. *Specus* of the *Marcia*, *Tepula*, and *Julia*.
H. Part of one of the towers of Aurelian's Wall.

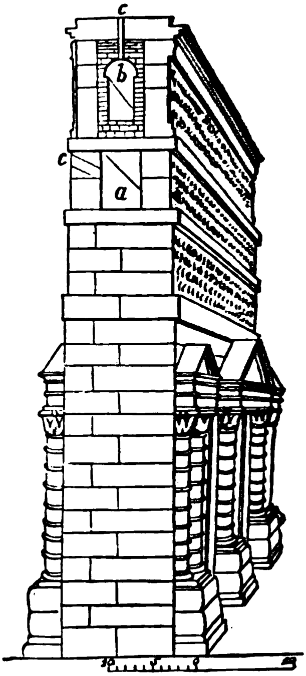
In Rome itself the three *specus* were separated and carried in different directions. A section of the three *specus* is given below (see p. 153). The whole course of the *Aqua Julia*, from its source, amounted to 15,426 *passus*, for 7000 of which its course was above ground, partly on massive substructions and partly on arches. (Frontin. 8, 9, 19.)

6. The *Aqua Virgo* was also built by Agrippa in his aedileship. In the same year, Agrippa, according to Pliny (*H. N.* xxxvi. § 121), erected for public use 700 basins or pools (*lacus*), 500 fountains (*salientes*), 130 *castella*, adorned with 300 statues and 400 marble columns. The main object of the *Aqua Virgo* was to supply the baths of Agrippa. From a source in a marshy spot by the eighth milestone on the *Via Collatina*, it was conducted by a very circuitous route, chiefly under the ground, to the *M. Pincius*, whence it was carried on arches to a spot opposite the east side of the Pantheon. Its length was 14,105 *passus*, of which 12,865 were underground; in its subterranean course it received the water of numerous springs; and its water was as highly esteemed for bathing as that of the *Aqua Marcia* was for drinking. It is one of the aqueducts on the left bank of the Tiber which are still in use, though on a

much diminished scale. (See p. 151, b.) The origin of its name is variously explained. (Frontin. 10; Dio Cass. liv. 11; Plin. *H. N.* xxxi. § 42; Cassiod. *Var.* vii. 6; Ov. *Trist.* iii. 12, 22; Mart. v. 20, 9, vi. 42, 18, xi. 47, 6.) "A well-preserved piece of the ancient *specus* can be seen below the level of the street, in the court of No. 12, Via del Nazzareno, behind the Trevi fountain. The arches themselves, which are of peperino, are buried, but the *specus* of massive travertine, decorated with an entablature, is visible, and is perfectly preserved. On both sides of the frieze is an inscription recording that this part was rebuilt by Claudius in A.D. 52." (Middleton, p. 471.)

7. The *Aqua Alsietina* (sometimes called also *Aqua Augusta*), on the other side of the Tiber, was constructed by Augustus from the *Lacus Alsietinus* (*Lago di Martignano*), which lay 6500 *passus* to the right of the fourteenth milestone on the *Via Claudia*, to the part of the *Regio Transtiberina* below the *Janiculus*. Its length was 22,172 *passus*, of which only 358 were on arches, its level being lower than that of any other aqueduct; and its water was so bad that it could only have been intended for the supply of Augustus's *Naumachia*, and for watering gardens. Its reservoir was 1800 feet long by 1200 wide. (Frontin. 11.)

8, 9. The two most magnificent aqueducts were the *Aqua Claudia* and the *Anio Novus* (or *Aqua Aniena Nova*), both commenced by Caligula in A.D. 38, and finished by Claudius in A.D. 52. The water of the *Aqua Claudia* was derived from two copious and excellent springs, called *Caerulus* and *Curtius*, near the thirty-eighth milestone on the *Via Sublacensis*, and it was afterwards increased by a third spring, *Albudinus*, and by the waters of the *Augusta*. Its water was reckoned the best after the *Marcia*. (Frontin. 13, 14: cf. Suet. *Cal.* 21, *Claud.* 20; Lamprid. *Alex.* 30.) Its length was 46,406 *passus* (nearly 46½ miles), of which 9567 were on arches and 609 on substructions. Of a still greater length was the *Anio Novus*, which began at the forty-second milestone, on the *Via Sublacensis*, being taken from a dam constructed in the bed of the river, and which received in addition, at the thirty-eighth milestone, opposite the sources of the *Aqua Claudia*, a stream called the *Rivus Herculaneus*. It was the longest and the highest of all the aqueducts, its length being nearly 59 miles (58,700 *passus*, of which 9400 were above ground), and some of its arches 109 feet high (Frontin. 15). In the neighbourhood of the city these two aqueducts were united, forming two channels on the same arches, the *Claudia* below and the *Anio Novus* above. An interesting monument connected with these aqueducts is the gate now called *Porta Maggiore*, which was originally a magnificent double arch, by means of which the aqueduct was carried over the *Via Labicana* and the *Via Praenestina*. The *Porta Labicana* was blocked up by Honorius; but the arch has been lately cleared of his barbarous constructions. Over the double arch are three inscriptions, which record the names of Claudius as the builder, and of Vespasian and Titus as the restorers of the aqueduct. The annexed cut (after Hirt) represents a restored section. By the side of this arch the aqueduct passes along the wall of Aurelian for some distance and then it is continued upon the *Arcus Neroniani* or *Caelimontani*, which were added by Nero to the original structure, and which terminated at the temple of Claudius, which was also built by Nero, on the *Caelius*, where the water was probably conveyed to a *castellum* already built for the *Aqua Julia*, and for a branch of the *Aqua Marcia*, which had been at some previous time continued to the *Caelius*. The Arch of Dolabella, erected B.C. 10, was used as a foundation for a large reservoir constructed at that point. The ruined arches of the Claudian aqueduct still extend for many miles across the Campagna.



Section of the *Porta Maggiore* at Rome: *a.* the *Aqua Claudia*; *b.* the *Anio Novus*; *c.* openings to give vent to the air.

These nine aqueducts were all that existed in the time of Frontinus, who thus speaks of them collectively, in terms which can hardly be thought exaggerated: "Tot aquarum tam multis necessariis molibus pyramidas videlicet otiosas compares, aut inertia sed fama celebrata opera Graecorum." It has been calculated that these nine aqueducts furnished Rome with a supply of water equal to that carried down by a river thirty feet broad by six deep, flowing at the rate of thirty inches a second. The total water supply of Rome has been estimated at 332,306,624 gallons a day, or, taking the population at a million, 332 gallons a head. 40 gallons a head is now considered sufficient. But the demands for public purposes and for irrigation were large. There was also another aqueduct, not reckoned with the nine, because its waters were no longer brought all the way to Rome. This was the *Aqua Crabra*, which had its source near that of the *Julia*, and which was originally carried right through the Circus Maximus; but the water was so bad that Agrippa would not bring it into the *Julia*, but abandoned it to the people of the Tusculan land; hence it was called *Aqua Damnata*. Cicero had to pay to the city of Tusculum an acknowledgment for its use. At a later period, part of its water was brought into the *Aqua Julia*, but it was again cut off from the Julia by Frontinus, and restored to the people of Tusculum (Cic. *Agr.* iii. 2, 9; *Balb.* 20, 45; *Fam.* xvi. 18, 3; Frontin. 9). It is now made use of in its course through the Campagna for watering cattle and sheep (Burn, *Rome*, p. 359).

There are still two aqueducts of later construction to be added to the list.

10. The *Aqua Trajana* was brought by Trajan from the *Lacus Sabatinus* (now *Bracciano*), to supply the *Janiculus* and the *Regio Transtiberina*. Its construction is recorded on coins of gold, silver, and bronze, of the years 110 and 111 A.D. (Eckhel, *Doctr. Num. Vet.* vi. pp. 425, 428). Trajan also restored and improved the other aqueducts, especially the *Anio Novus* (Frontin. 92, 93). The castellum of this aqueduct on the Janiculan hill is shown on the coins of Trajan. The aqueduct was restored by Belisarius, after it had been injured by the Gothic king Vitiges in A.D. 537.

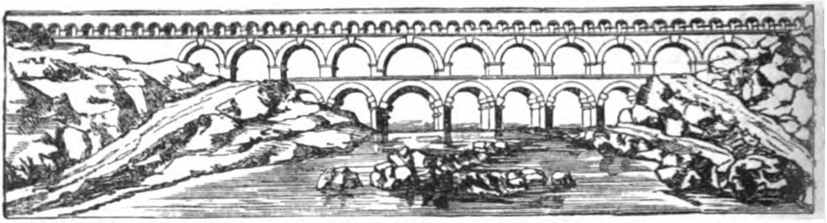
11. The *Aqua Alexandrina* was constructed by Alexander Severus, A.D. 226; its source was in the lands of Tusculum, about fourteen miles from Rome, between Gabii and the Lake Regillus. Its small height shows that it was intended for the baths of Severus, which were in one of the valleys of Rome. (Lamprid. *Alex. Sev.* 25; Fabretti, *Diss.* i. § 23.) Parker, from an inscription of Hadrian found on its collecting reservoir, attributes Fabretti's *Alexandrina* to Trajan or Hadrian, holding the real *Alexandrina* to have been a branch from the *Anio Novus*.

There may have been some other aqueducts constructed at a later time, since Procopius (*B. G.* i. 19) mentions fourteen as still preserved in Rome in his time; but there is difficulty in making up this number. He seems to have included as separate aqueducts some which were only branches of those already mentioned. Thus we read of the *Aqua Septimiana*, built by Septimius Severus, which was, perhaps, only a branch of the *Aqua Julia*, formed by the emperor to bring water to his baths (Fabretti, *Diss.* iii. § 285). The *Aqua Algentia* seems to have been a name invented from a corrupt reading of *Alsietina* (Middleton, p. 475). Other authorities give a still larger number of aqueducts. Thus the *Epilogus* to the *Notitia* mentions the *Ciminia*, the *Severiana*, and the *Antonia* (*Antoniniana*), and makes the whole number nineteen.

Great pains were taken by successive emperors to preserve and repair the aqueducts. From the Gothic wars downwards, they have for the most part shared the fate of the other great Roman works of architecture, their situation and purpose rendering them peculiarly exposed to injury in war; but still their remains form the most striking features of the Campagna, over which their lines of ruined arches, clothed with ivy and the wild fig-tree, radiate in various directions. Three of them still serve for their ancient use; and these three alone, according to Tournon, supply the modern city with a quantity of water much greater than that which is furnished to Paris by the Canal de l'Ourcq, for a population six times as large. They are: (1.) The *Acqua Vergine*, the ancient *Aqua Virgo*, which was restored by Pope Pius IV. and further embellished by Benedict XIV. and Clement XIII. The chief portion of its waters gush out through the beautiful *Fontana di Trevi*, but it also supplies the fountains in the Piazza di Spagna and the Piazza Navona, together with ten smaller ones, and the greater part of the lower city. (2.) The *Acqua Felice* (A.D. 1587), named after the conventual name of its restorer, Sixtus V. (Fra Felice), probably brings the waters from the spring of the *Alexandrina*, partly on the piers of the *Claudia*. It supplies twenty-seven public fountains, and the eastern part of the city. (3.) The *Acqua Paola*, the ancient *Trajana* and *Alsietina*, now united and restored by Paul V. (1611), supplies the *Trastevere* and the Vatican, and feeds, among others, the splendid fountains before St. Peter's. Besides these, the *Acqua Marcia-Pia* (1870) brings to Rome in pipes the old *Aqua Marcia*, which has now regained its ancient repute. Of the ruins of the other aqueducts the most extensive, within Rome, are those of the *Arcus Neroniani* and of the *Aqua Crabra*; the most interesting are the *Porta Maggiore*, with the two channels of the *Aqua Claudia* and *Anio Novus* (see p. 150), and the remains of the triple aqueduct of Agrippa, passing over a road, and resting upon an arch, now the *Porta S. Lorenzo*, already described (see p. 149).

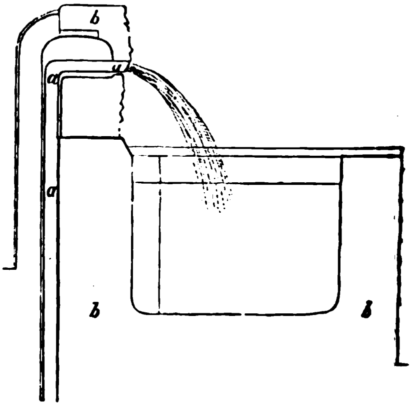
The magnificence displayed by the Romans in their public works of this class was by no means confined to the capital; for aqueducts more or less stupendous were constructed by them in various and even very remote parts of the empire,—at Athens, Corinth, Catana, Salona, Nicomedia, Ephesus, Smyrna, Alexandria in the Troad, Syracuse, Metz, Clermont in Auvergne, Nîmes (the Pont du Gard; see below), Lyon, Evora, Merida, and Segovia. Those at Ephesus and Alexandria were built by Hadrian and Herodes Atticus, and that at Athens was commenced by Hadrian and finished by Antoninus Pius, who also built those at Corinth and Nicomedia. That at Evora, which was built by Quintus Sertorius, is still in good preservation; and at its termination in the city has a very elegant *castellum* in two storeys, the lower one of which has Ionic columns. Merida in Spain, the Augusta Emerita of the Romans, who established a colony there in the time of Augustus, has among its other antiquities the remains of two aqueducts, of one of which thirty-seven piers are standing, with three tiers of arches; while of the other there are only two which form part of the original constructions, the rest being modern. But that of Segovia, for which some Spanish writers have claimed an antiquity anterior to the sway of the Romans in Spain, is one of the most perfect and magnificent works of the kind anywhere remaining. It is entirely of stone, and of great solidity, the piers being eight feet wide and eleven in depth; and, where it traverses a part of the city, the height is upwards of a hundred feet, and it has two tiers of arches, the lowermost of which are exceedingly lofty. The *Pont du Gard*, carrying an aqueduct across the valley and stream of the Gardon into Nemausus (Nîmes), consists of two tiers of noble arches, surmounted by a tier of small arches which bear the *specus*, the whole height of the three tiers being about 155 feet.

It will be observed that when the pacification of the Campagna permitted Rome to loo afield for a supply of water, the first great wor constructed was entirely underground, excep for a short distance inside the walls. Moreove we may divide the aqueducts described by Frontinus into those at a low level, intended to supply the low-lying districts and for the most part carried underground, and those at a high level, designed to reach the higher parts of the city; and in the latter alone were arcades and substructions largely employed. Frontinus (18) says that five reached the highest parts of the city, and he gives them in the following order: 1. *Anio Novus*, the highest of all. 2. *Claudia.* 3. *Julia.* 4. *Tepula.* 5. *Marcia.* Then follow the lower, constructed to a great extent underground. 6. *Anio Vetus.* 7. *Virgo.* 8. *Appia.* 9. *Alsietina*, the lowest of all, supplying the district beyond the Tiber and the lowest spots. The *aquae* from the upper waters of the Anio (*Anio Vetus*, *Marcia*, *Anio Novus*, *Claudia*) made a considerable détour southwards to follow the high ground by Pedum, Labicum, and Frascati, and then cross the Campagna more directly for Rome, following more or less closely the course of the *Via Latina*.



Aqueduct near Nemausus, now called the Pont du Gard.

Why did the Romans waste so much labour and money on works the purpose of which might have been effected much more economically by the simple plan of laying pipes along the ground, with which they were certainly well acquainted? (Vitruv. viii. 7.) Aqueducts, it is true, are often constructed in modern times in a suitable country; as, for instance, the New River for the supply of London, and the aqueduct of the Croton River for New York: but surely a modern engineer, if asked to convey water from the upper course of the Anio across the low-lying parts of the Campagna to the tops of the Seven Hills, would, like the engineer of the new *Acqua Marcia-Pia*, propose to carry out the undertaking by laying down pipes. This question was formerly answered by saying that the Romans did not know that "water finds its own level." But this is contradicted by the express statement of Latin authors (Plin. *H. N.* xxxi. § 57, "subit altitudinem exortus sui;" Vitruv. viii. 6. § 5, and 7. § 6, where he describes the application of the principle to an aqueduct), by the whole arrangements for the distribution of the waters of the aqueducts to the upper rooms of their houses, and from the very existence of their numerous fountains. As a decisive ocular demonstration we give a section of one of the many fountains still existing at Pompeii. Possibly, however, they did not recognise that the law would hold over so extended an area. Frontinus at any rate, an excellen authority on Roman engineering, theoretical an practical, does not contemplate its applicability



Section of a fountain at Pompeii.

a, *a*. The ascending pipe.
b, *b*. The basin, made of blocks of travertine.

Indeed it is very doubtful whether Roman engineers would have been found equal to the task of conveying by an underground channel a large stream of water subject, like that from the upper Anio, to a high pressure. Their conduits were always pierced by shafts at intervals of one or two *actus*, designed to avoid the supposed danger of the walls being burst by the compressed air inside. Now these shafts, sunk in the low-lying parts of the Campagna, would of course make it impossible to force the water to the tops of the hills; they were confessedly designed to relieve the pressure: and engineers were probably led to use them, and thus explain their use by the bursting of unpierced conduits conveying water at high pressure. If they had recourse to pipes, the joints would present great difficulties, and probably for such large volumes of water iron pipes would alone be sufficiently strong, and the casting of pipes of such dimensions would have been beyond their power. Moreover, as Mr. Middleton observes (p. 453), "the calcareous deposit with which water from the neighbourhood of Rome so rapidly encrusts pipes and water-channels made it doubly convenient to employ channels which were always readily accessible, and could be cleared out without any difficulty."

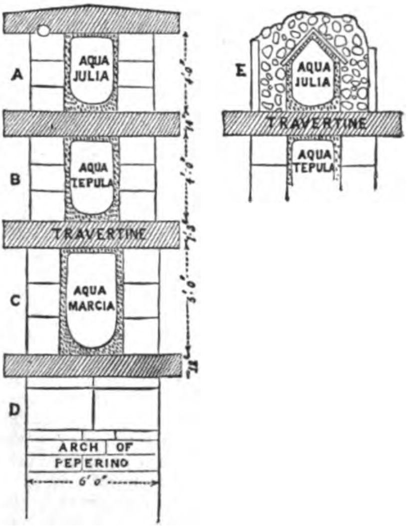
A strip of land 15 feet wide, marked at intervals by *cippi* or boundary-stones, was left on either side of the aqueduct, upon which no encroachments were allowed under penalty of a heavy fine. All trees were in particular forbidden to be planted, lest their roots should injure the substructions or arches of the aqueduct (Frontin. 127). The *cippi* or boundary-stones seem to have been first placed by Augustus, but were discontinued by the later emperors, since of the 31 *cippi* still extant, 22 bear the name of Augustus, three of Tiberius, two of Claudius, and the other five are restorations (Lanciani, *I Comentarii di Frontino*, p. 345).

We proceed to describe in detail the construction and arrangements of Roman aqueducts. There are three matters to be considered: the source from which the water was derived; the aqueduct itself, by which it was conveyed; and the reservoir in which it was received, and from which it was distributed for use.

(1.) The Sources.—It is unnecessary to follow Vitruvius into the minute rules which he lays down for the discovery of springs, where they were not naturally visible, and for testing the quality of the water: it is enough to refer to his statements as showing the importance attached to these points. (Vitruv. viii. 1.) It was also necessary that the springs should have such an elevation, as that, after allowing for the fall necessary to give the channel its proper inclination, the water should enter the final reservoir at a sufficient height to permit of its distribution for public and private use; for there were no engines used, as in modern waterworks, to raise the water to a higher elevation than that to which it rose of itself. When the source had been fixed upon, whether it was an open spring (*fons*), or one got at by sinking a well (*puteus*), a head was dug for the water, and enclosed with a wall; and, if necessary, the supply was increased by digging channels from neighbouring springs: the rules for these operations also are minutely laid down by Vitruvius (viii. 7, s. 6, §§ 12–15). Such a reservoir was called *piscina*, sometimes *piscina limaria* (Frontin. 15), in which the water might deposit any sediment it contained.

(2.) *The Channel* (*specus*, sometimes *canalis*), *or Aqueduct itself.**—In order to convey the water from its source to its destination, a channel was constructed, having a slight and, as nearly as possible, a uniform declivity. An elaborate description of the means adopted to secure this object is quite needless for readers of the present day, as they were almost precisely similar to those with which we are familiar in our railways: hills were pierced through by tunnels, and valleys crossed either by solid substructions or arches of masonry, according to the height required; and of these arches there were often two tiers, and sometimes even three. The material employed was generally stone (usually travertine or peperino), but sometimes rubble faced with brickwork (as in the *Arcus Neroniani*, the *Anio Novus*, the *Alexandrina*) or with *opus reticulatum* (as in the *Anio Novus*). The channel itself (*specus, canalis*) was a trough of brick or stone, lined with very hard cement (*opus signinum*), made of lime, pozzolana, and pounded pottery or brick, and covered with a coping, which was almost always arched, and the bottom of the channel was also curved. The water either ran directly through this trough, or it was carried through pipes laid along the trough. When the channel was carried beneath the surface, if the hill through which it passed was of rock, it was merely cut in the rock; but if of earth or sand, it was constructed of blocks of stone.

The construction of the *specus* will be seen from the annexed drawing, which represents a section of the triple aqueduct of Agrippa. (See above, p. 149.)



Section of the *specus* of the triple Aqueduct of Agrippa. (From Middleton.)

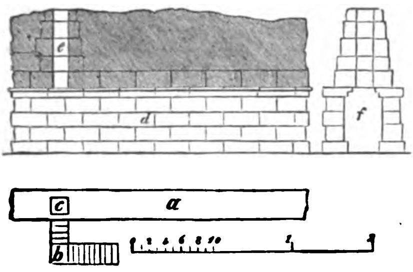
A, B, C. *Specus* of the *Aquae Julia, Tepula*, and *Marcia*. The top and bottom of each is of travertine, the sides of tufa or peperino: they are lined with *opus signatum*.
D. Peperino arch.
E. *Specus* of the *Aqua Julia* at another point, where it has been restored in concrete and brick.

The object of covering the *specus* was to exclude the sun and rain, and other obstructions; but it was necessary to provide a vent for the air, which otherwise, they thought, would have been compressed to such a degree as to burst the walls or roof of the *specus*. The vent-holes (*spiramina*) were made at regular intervals in the roof of the *specus*, or, when another channel passed over it, in the side. They are represented in the sections, given above, of the *Aqua Claudia* and *Anio Novus* (p. 150). To ventilate the subterranean channel of an aqueduct, a shaft (*puteus*) of masonry was carried to the surface of the ground at intervals of an *actus*, or 120 Roman feet (or two *actus*,

---

* Though the word *aquaeductus* is applied generally to the whole structure, yet in its special and proper meaning it seems only to have signified that part of the work in which the water-channel was carried over a valley, on arches or on solid substructions: a channel on the surface of the ground was properly called *rivus*; and one beneath the surface, *rivus subterraneus*, or *cuniculus*.

according to Pliny, who calls them *lumina*), as shown in the following woodcut (after Hirt),



Shaft for ventilation of an Aqueduct.

a, the water-course; *b*, steps giving access to it; *c*, the shaft; *d*, *e*, section of the *specus* and shaft; *f*, transverse section of them.

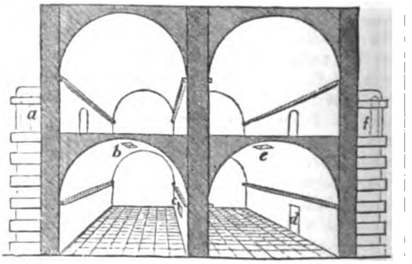
which represents the plan, longitudinal section, and transverse section of part of a *rivus subterraneus*, the ruins of which still exist at Palmyra.

The *rivus subterraneus* possessed the advantage over the *aquaeductus* of being less exposed to variations of temperature, and more secure from injury; on the other hand, it was of course more difficult to get at when it required repairs. A reference to the account of the Roman aqueducts given above will show how large a portion of them were subterranean.

Instead of, or within, the *specus*, pipes (*fistulae*, *tubuli*) were often used for the passage of the water. They were of lead, or terra-cotta (*fictiles*), and sometimes, for the sake of economy, of leather. The rules which Vitruvius lays down apply particularly to leaden pipes, although he gives the preference to the earthen ones, chiefly on the ground that the water which passed through them was more wholesome. The pipes were made in lengths of not less than ten feet, and of various widths, which were denominated in the manner explained under FISTULA. They were cemented together at the joints, which in earthen pipes were made to overlap; and when the water was first let in, ashes were mixed with it, in order that they might settle in the joints and stop them more completely. The use of pipes permitted variations to be made in the construction of the aqueduct: namely, the water could be carried round instead of through a hill, if the circuit was not too great; and in very wide valleys the costly structure of arches could be dispensed with. In this case, a low horizontal substruction was made across the bottom of the valley, and the pipe was brought down the one slope, along this substruction, and up the opposite slope, to a height of course somewhat less than that of the opposite side. The horizontal part of the pipe across the bottom of the valley (*venter*) had ventilating openings for the escape of the air. At the bendings, instead of the pipe, an elbow was bored in a solid piece of stone, into which the ends of the adjacent pieces of pipe were securely cemented. (For further details, see Vitruvius.) In those places where the pipes were laid on the surface, reservoirs were sometimes made, at intervals of 200 *actus* (24,000 feet), in order that, if a part of the pipe needed repair, the supply of water might not be entirely cut off. The advantage in the use pipes, according to Vitruvius, was the facilit of repairing them.

The slope (*fastigium*) on which the aqueduc was built, in order to give the water a prope fall (*libramentum*), ought not, says Vitruviu (viii. 6), to be less than half a foot in every 10 feet (1 in 200); but Pliny only allows *sicilicus* (a quarter of an inch) in 100 feet The great circuit which most of the aqueduct of Rome made, was taken chiefly (as is th case with the New River) to prevent the to rapid descent of the water. There is, however a considerable variation in their declivities for example, the *Aqua Marcia* and the *Aqu* *Claudia*, though of such different heights a Rome, have their sources at the same elevation.

Besides the reservoir or *piscina* at the source of the aqueduct, there were similar reservoir at convenient points in its course, especially a the middle and end. The construction of these reservoirs will be understood from the following woodcut, which represents a restored section o one which still exists.



Piscina, or reservoir of an Aqueduct.

The water flowed from the aqueduct *a* into the first upper chamber, thence down and up again through the openings *b*, *c*, *e*, into the second upper chamber, out of which it passed into the continuation of the aqueduct *f*, having deposited its sediment in the two lower chambers, which could be cleaned out by the door *d*. The *piscina* was not always vaulted: Hirt, from whose work the above cut is taken, gives also an engraving of an open *piscina*. These reservoirs were not always used: for example, the *Aqua Virgo* and the *Alsietina* were without them. They were especially necessary when the water was conveyed through pipes. They were also used as reservoirs for the supply of the neighbouring country, chiefly for the purposes of irrigation.

The details which we have now been noticing are minutely described by Frontinus, and by Vitruvius (viii. 7, s. 6), and briefly by Pliny (*H. N.* xxxi. § 57).

(3.) *The Termination of the Aqueduct, and the Arrangements for the Distribution of its Water.*—The water, when it reached the walls of the city, was received in a vast reservoir called *castellum aquarum*, which formed the *head of water*. (Vitr. viii. 6; Plin. xxxvi. § 121; Frontin. 35; Dig. 43, tit. 20.) The more ancient name in use, when the aqueducts were first constructed, was *dividiculum*. (Festus, *s. v.*) From this principal *castellum* the water flowed into other *castella*, whence it was distributed for public and private use. The term *castellum* is sometimes also applied to the intermediate reservoirs already mentioned.

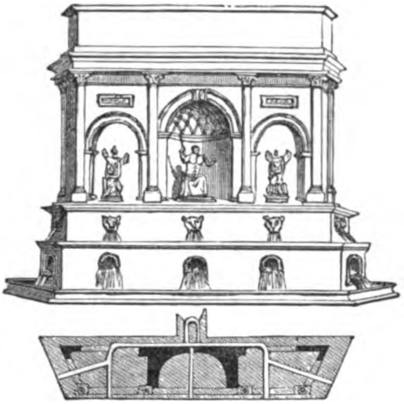
The chief *castellum* was, externally, a highly decorated building: for example, that of Hadrian, at Athens, was adorned with Ionic pillars, and that at Evora, in Portugal, had the form of a circular temple. Internally, there was generally one vast chamber, lined with hard cement (*opus signinum*), with a vaulted roof supported by massive pillars, into which the water flowed from the aqueduct, and from which it was conducted through pipes of fixed dimensions into three smaller reservoirs, which were, however, so arranged, that the middle one was only supplied from the overflow of the other two. Of these three reservoirs, the two outer supplied respectively the public baths and the private houses, and the middle one the public ponds and fountains (*lacus et salientes*); so that, in case of a deficient supply for useful purposes, none would be wasted on the fountains: the arrangement also enabled a proper account to be kept of the quantity supplied for private use, for the protection of the revenue derived from this source. (Vitruv. viii. 7, s. 6, §§ 1, 2.)

The minor *castello*, which received the water from this chief head, were distributed over the city, in such a manner that the *Aqua Appia* supplied seven *regiones* by means of twenty *castella*; the *Anio Vetus*, ten *regiones* through thirty-five *castella*; the *Marcia*, ten *regiones* through fifty-one *castella*; the *Tepula*, four *regiones* through fourteen *castella*; the *Julia*, seven *regiones* through seventeen *castella*; the *Virgo*, three *regiones* through eighteen *castella*; the *Claudia* and the *Anio Vetus*, ninety-two *castella*. (Frontin. 79–86.) For an account of the parts of the city supplied by the different aqueducts, see Becker, *Handb. d. Röm. Alterth.* vol. i. pp. 707, 708.

The ruins of the magnificent *castellum* of the *Aqua Julia*, built by Alexander Severus on the Esquiline, may be seen in the Piazza Vittorio Emmanuele. "It is shown with some minuteness on medallions of Alexander Severus. (See Froehner, *Med. Rom.* p. 169.) It was excavated, and careful drawings of it were made by some Prix de Rome students in 1822. It was again and more completely exposed in 1877, and no lead pipes were found leading from it, as would have been the case if it had been an ordinary castellum for the *erogatio*. The so-called *Trophies of Marius*, made in the reign of Domitian, were set on the exterior of this building, whence they were moved in the 16th century to the top of the Capitoline stairs." (Middleton, p. 458.) It is now much dilapidated, but was tolerably entire about the middle of the 16th century, as may be seen by the drawing published by Gamucci (*Antichità di Roma*, iii. p. 133) from which this restoration is made. The ground-plan explains part of the internal construction, and shows the arrangement adopted for disposing of the superfluous water of an aqueduct. The general stream of water is first divided by the round projecting buttress into two courses, which subdivide themselves into five minor streams, and finally fall into a reservoir.

The *castella* were divided into two classes, the *publica* and *privata*.

The *castella publica* were again subdivided into six classes, which furnished water for the following uses:—(1) The Praetorian camp (*castra*); (2) the ponds and fountains (*lacus et salientes*); (3) the circus, naumachiae, and amphitheatres (*munera*); (4) the baths, and the service of certain important handicrafts, such as the fullers, dyers, and tanners (*opera publica*); (5) irregular distributions made by the special order of the emperor (*nomine Caesaris*); (6) extraordinary grants to private individuals by the favour of the prince (*beneficia Caesaris*). The distribution under each of these heads is described by Frontinus, who enumerates the various laws relating to water supply, *Jus ducendae tuendaeque Aquae* (Frontin. 3, 78).



Castellum of an Aqueduct, called the "Trophies of Marius."

The *castella privata* were, as the name implies, for the supply of private houses. When a supply of water from the aqueducts was first granted for private uses, each person obtained his quantum by inserting a branch pipe, as we do, into the main; which was probably the custom in the age of Vitruvius, as he makes no mention of private reservoirs, for which at first there was no occasion, as there was a constant supply of water. Indeed, in early times, all the water brought to Rome by the aqueducts was applied to public purposes exclusively, it being forbidden to the citizens to divert any portion of it to their own use, except such as escaped by flaws in the ducts or pipes, which was termed *aqua caduca* (Frontin. 94). But as even this permission opened a door for great abuses from the fraudulent conduct of the *aquarii*, who damaged the ducts for the purpose of selling the *aqua caduca*; and as the subsequent method of supply required the main-pipe to be punctured in too many places (Frontin. 27), a remedy was sought by the institution of *castella privata*, and the public were thenceforward forbidden to collect the *aqua caduca*, unless permission was given by special favour (*beneficium*) of the emperor (Frontin. 111). The *castella privata* were built at the joint expense of the families supplied by them; but they were considered as public property, and were under the control of the *curatores aquarum* (Frontin. 106). The right of water (*jus aquae impetratae*) did not follow the heir or purchaser of the property, but was renewed by grant upon every change in the possession (Frontin. 107).

The leaden cisterns, which each person had in his own house to receive the water laid on from the *castellum privatum*, were called *castella domestica*.

All the water which entered the *castellum* was measured, at its ingress and egress, by the size of the tube through which it passed. The former was called *modulus acceptorius*, the latter *erogatorius*. To distribute the water was termed *erogare;* the distribution, *erogatio;* the size of the tube, *fistularum* or *modulorum capacitas*, or *lumen*. The smaller pipes which led from the main to the houses of private persons, were called *punctae;* those inserted by fraud into the duct itself, or into the main after it had left the castellum, *fistulae illicitae*.

The *erogatio* was regulated by a tube called *calix*, of the diameter required (*lumen*), and not less than 12 *digiti* long (9 inches), attached to the extremity of each pipe, where it entered the castellum; it was probably of lead in the time of Vitruvius, such only being mentioned by him; but was made of bronze (*aeneus*) when Frontinus wrote, in order to check the roguery of the *aquarii*, who were able to increase or diminish the flow of water from the reservoir by compressing or extending the lead. As a further security, the *calix* was stamped with the owner's name as well as the capacity. There are two specimens of such *calices* in the Roman Museums; one in the Vatican, another in the Museo Kircheriano (Middleton, p. 455). Pipes which had no *calix* were termed *solutae*. Frontinus also observes that the velocity of the water passing through the *calix*, and consequently the quantity given out, could be varied according to the angle which the *calix* made with the side of the reservoir: its proper position was, of course, horizontal. (Frontin. 112, 113.)

It is evident how watchful an oversight must have been required to keep the aqueducts in repair, to regulate their use, and to prevent the fraudulent abstraction of their water. Under the republic, this office was discharged by the censors (Liv. xxxix. 44), and when there were no censors by the aediles (Cic. *Fam.* viii. 6); sometimes also by the quaestors (Frontin. 95, 96). Augustus first established the office of *curator* (or *praefectus*) *aquarum* (Suet. *Octav.* 37), to which he appointed M. Agrippa, who held the office till his death in B.C. 12. A list of the *curatores aquarum* from Agrippa to Frontinus is given by the latter. They were all of consular rank, and hence we find them called subsequently *consulares aquarum* in place of their ancient name. They were under the *Praefectus urbi.* The duties of the office are minutely described by Frontinus (99), who seems, while he held the office, to have performed it with the utmost zeal: among other cares, he had plans and models made of the whole course of all the aqueducts (17, 64). The *curatores aquarum* had under them a large number of officials. They were attended outside the city by two lictors, three public slaves, a secretary, and other attendants.

In the time of Nerva and Trajan, a body of four hundred and sixty slaves were constantly employed under the orders of the *curatores aquarum* in attending to the aqueducts. They were divided into two families—the *familia aquaria publica*, established by Agrippa, and the *familia aquaria Caesaris*, added by Claudius; and they were subdivided into the following classes:—1. The *vilici*, whose duty it was to attend to the pipes and *calices*. 2. The *castellarii*, who had the superintendence of all the *castella*, both within and without the city. 3. The *circuitores*, so called because they had to go from post to post, to examine into the state of the works, and also to keep watch over the labourers employed upon them. 4. The *silicarii*, or paviours, who had to remove and relay the pavement when the pipes beneath it required attention. 5. The *tectores*, who had charge of the masonry of the aqueducts. These and other workmen appear to have been included under the general term of AQUARII. (Cod. 11, tit. 42 or 43, s. 10; Frontin. 116, 117.)

The following are the most important works on the Roman aqueducts:—Frontinus, *de Aquaeductibus Urbis Romae*, with the notes and plates of Polenus, Patav. 1722; Fabretti, *de Aquis et Aquaeductibus Veteris Romae;* Stieglitz, *Archäologie der Baukunst;* Hirt, *Geschichte d. Baukunst;* Platner and Bunsen, *Beschreibung d. Stadt Rom;* Becker, *Handbuch d. Römischen Alterthümer*, vol. i.; Canina, *Storia dell' architettura Romana;* Jordan, *de urbium Romae et Const. aquaed.*, Bonn, 1844; Parker, *Archaeology of Rome;* Burn, *Rome and the Campagna.* The most recent authorities are, Lanciani, *Topographia di Roma Antica, I Comentarii di Frontino*, Rome, 1880; Middleton, *Ancient Rome in* 1885, pp. 451–476. [J. H. F.] [W. S.]

AQUAE DUCTUS. [SERVITUTES.]

AQUAE ET IGNIS INTERDICTIO. [EXSILIUM.]

AQUAE HAUSTUS. [SERVITUTES.]

AQUAELICIUM (*aquilicium*), a sacrifice for rain (Paul. ex Festo, *s. v.* p. 2): "aquilicio Jovi immolatis, nudipedalia denuntiatis" (Tert. *Apol.* 40). In times of drought, the matrons clad in the stola, with bare feet and loosened hair (Petron. 44), and the magistrates without their purple robes and with reversed fasces (Tert. *de Jejunio*, 16), used to carry in procession a stone which lay outside the Porta Capena near the temple of Mars, through the city to the Capitol. The name of the stone was *lapis* or *petra manalis* (Paul. ex Fest. p. 128), *i.e.* the stone from which water flows: cf. AQUAEMANALIS, *Manalis Fons.* The technical term for moving the stone was *vertere* (Fulgentius, *de abstr. serm.* § 4, s. v. *manales lapides*), a word also used for turning up a vessel to empty it (Verg. *Aen.* ix. 165), so that possibly the *lapis manalis* symbolised the vessel of the rain-god. (Cf. Grimm, *Deutsche Myth.* p. 560; see generally Hartung, *Rel. der Römer*, ii. p. 11; Preller, *Röm. Myth.* pp. 173, 313; Marquardt, vi. p. 252.)

The practice of instituting ceremonies for rain is found in all ages. In 1240, at Liège, we read of a procession of the kind, three times round the town by the clergy and people with bare feet and in woollen garments (Grimm, *Deutsche Myth.* p. 159; cf. p. 562); and in our own day at Skopia, in Turkey, there is an altar which had in Roman times been erected to Jupiter, and in seasons of drought the corporation solemnly set it upright, and pour on it libations of wine (A. J. Evans, at the Society of Antiquaries, March 20, 1884). [L. C. P.]

AQUAEMANA'LIS (*aquamanale*, *aquaminale*, *aquaminarium:* for difference of form, compare *escale* and *escarium*), a jug or ewer (Varro, *ap.* Non. 547), "that from which water flows;" cf. *lapis manalis*, the basin being called *pollubrum* or *pelvis*. It was used for washing the hands at meals. In the establishments of the rich, it was generally of silver, and considered part of the plate specially belonging to eating (*escarium argentum*): see Dig. 33, 10, 3, § 3; 34, 2, 19, § 2; 34, 2, 21, § 2. It appears to have been also called *gutturnium* (Paul. ex Festo, p. 98). In Low Latin, *aquamanale* is the basin. (See Lanfranc in Ducange, *s. v.*) [L. C. P.]

AQUAE PLUVIAE ARCENDAE ACTIO. An owner who altered the natural course of rain-water, and by so doing (*opere manu facto*) injured the land of an adjoining owner, was liable to the above action. Rain-water was still treated as rain-water, although it had become mixed with other water. It was necessary that the injury caused by the water should be of a positive kind; the action could not be maintained on account of an act which deprived a neighbour of some advantage from the rain-water. The action could only be brought on account of injury done to land (*ager*); injury to a town or building was not covered by it.

The action might be brought by the owner of the higher land against the owner of the lower, if the latter prevented the water from flowing naturally from the higher to the lower ground, or by the owner of the lower land against the owner of the higher, in case the latter caused the water to flow into the lower land otherwise than in its natural course. An owner was not liable to this action on account of any work necessary for agricultural purposes. The action might also be successfully defended on the following grounds:—1. That the act had been done with the permission of the adjoining owner, or of a public authority. 2. That the land of the adjoining owner was subject to a servitude, which allowed the act in question. 3. That the alteration had been made since time immemorial. (Dig. 39, tit. 3, de aqua et aquae pluviae arcendae; Cic. *Mur.* 10, *Topic.* 9; Boëthius, *Comment. in Cic. Top.* iv. 9; Windscheid, *Pandekten*, § 473.) [G. L.] [E. A. W.]

AQUA'RII were slaves who carried water for bathing, &c. into the female apartments: they were also called *aquarioli*, and were held in great contempt. (Juv. vi. 332; Paul. Diac. *s. v.* and Müller's Note; Hieron. *Ep.* 27; Jul. Paul. iii. 6, 58.) The name was also applied to slaves who had the care of the fountains and ponds in gardens. (Becker-Göll, *Gallus*, iii. p. 74; Marquardt, *Röm. Alterth.* vii. p. 139.) The aquarii were also public officers who attended to the aqueducts under the aediles, and afterwards under the *curatores aquarum*. (Cic. *ad Fam.* vii. 6; Cod. 11, tit. 42; AQUAEDUCTUS.) [P. S.] [W. S.]

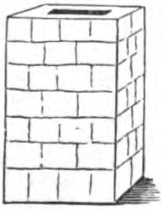
AQU'ILA. [SIGNA MILITARIA.]

ARA (*βωμός*, *ἐσχάρα*, *θυτήριον*), an altar. Altars were in antiquity so indispensable a part of the worship of the gods, that it seemed impossible to conceive of the worship of the gods without altars. Thus we have the amusing syllogism in Lucian, *εἰ γὰρ εἰσὶ βωμοί, εἰσὶ καὶ θεοί· ἀλλὰ μὴν εἰσὶ βωμοί, εἰσὶν ἄρα καὶ θεοί* (*Jupiter Trag.* c. 51). In reference to the terms, *βωμός* properly signifies any elevation, and hence we find in Homer *ἱερὸς βωμὸς*, but it afterwards came to be applied to an elevation used for the worship of the gods, and hence an altar. Ἐσχάρα, *focus*, were used in the limited sense of an altar for burnt-offerings. In Latin *ara* and *altare* are often used without any distinction, but properly *ara* was lower than *altare:* the latter was erected in honour of the superior gods, the former in honour of the inferior, heroes and demigods. Thus we read in Virgil (*Ecl.* v. 65):—

> "En quattuor aras:
> Ecce duas tibi, Daphni; duas altaria Phoebo."

On the other hand, sacrifices were offered to the infernal gods, not upon altars, but in cavities (*scrobes*, *scrobiculi*, *βόθροι*, *λάκκοι*) dug in the ground. (Hom. *Od.* x. 25, 36; Festus, *s. v.* *Altaria.*)

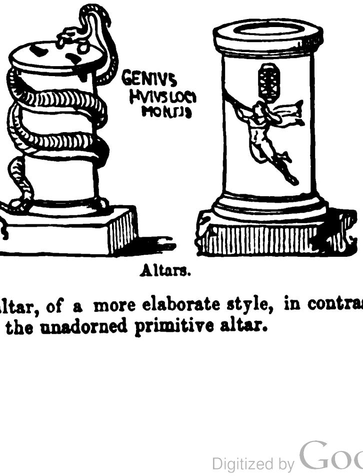
As among the ancients almost every religious act was accompanied by sacrifice, it was often necessary to provide altars on the spur of the occasion, and they were then constructed of earth, turf, or stones, collected on the spot. (Verg. *Aen.* xii. 118; Hor. *Carm.* i. 19, 13, iii. 8, 4; Ov. *Met.* iv. 753.) When the occasion was not sudden, they were built with regular courses of masonry or brickwork, as is clearly shown in several examples on the Column of Trajan at Rome. See the left-hand figure in the woodcut annexed. The first deviation from this absolute simplicity of form consisted in the addition of a base, and of a corresponding projection at the top, the latter being intended to hold the fire and the objects offered in sacrifice.



Altar (Column of Trajan).

Etruscan Altar.

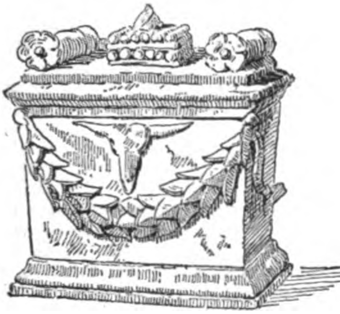
These two parts are so common as to be almost uniform types of the form of an altar, and will be found in all the figures inserted underneath. The cut above shows the outline of an Etruscan altar, of a more elaborate style, in contrast with the unadorned primitive altar.



Altars.

Altars were either square or round. The latter form, which was the less common of the two, is exemplified in the above figures.

In later times altars were ornamented with festoons and garlands of flowers; and that represented in the next cut shows the manner in which these festoons were suspended. They were also adorned with sculpture; and some were covered with the works of the most celebrated artists of antiquity. If an altar was erected before a statue of a god, it was always to be lower than the statue before which it was placed (Vitruv. iv. 9). Of this we have an example in a medallion on the Arch of Constantine at Rome, representing an altar erected before a statue of Apollo.



Bronze Altar. (British Museum.)

Altar, before a statue of Apollo. (Arch of Constantine.)

It was necessary that an altar should be built in the open air, in order that the steam of the sacrifice might be wafted up to heaven, and it might be built in any place, as on the side of a mountain, on the shore of the sea, or in a sacred grove. But as the worship of the gods was in later times chiefly connected with temples, altars became an indispensable part of the latter; and though there could be altars without temples, there could hardly be temples without altars. The altars of burnt-offerings at which animal sacrifices were presented, were erected before the temples (*βωμοὶ πρόναοι* Aesch. *Suppl.* 494), as shown in the woodcut in the article Antae; but there were also altars on which incense was burnt and bloodless sacrifices offered, within the temple, and principally before the statue of the divinity to whom they were dedicated. They were also erected against the walls of a house, as shown under Aedicula; and within the house itself, for the purpose of family sacrifices to the Lares and Penates, in which case they were placed as near as possible to the impluvium.

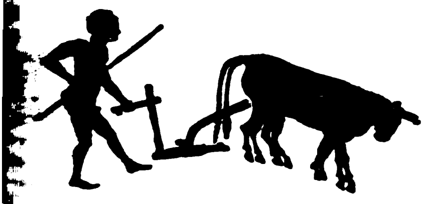
All altars were places of refuge. The supplicants were considered as placing themselves under the protection of the deities to whom the altars were consecrated; and violence to the unfortunate, even to slaves and criminals, in such circumstances, was regarded as violence towards the deities themselves. It was also the practice among the Greeks to take solemn oaths at altars, either taking hold of the altar or of the statue of the god. Cicero (*pro Balb.* 5, § 12) expressly mentions this as a Greek practice. (Comp. K. F. Hermann, *Gottesdienst. Alterth.* § 17, and § 22, n. 9.) [J. Y.] [W. W.]

ARABARCHES. Under the Roman empire Egypt was divided into three governments (*ἐπιστρατηγίαι*), Upper, Middle, and Lower Egypt. The governor (*ἐπιστράτηγος*) of Upper Egypt, or the Thebais, was called also *ἀραβάρχης*, the district between the Nile and the Red Sea being known often as Arabia (*C. I. G.* 4751). An *ἐπιστράτηγος Θηβαΐδος* is mentioned first in the fourteenth year of the reign of Augustus, when the post was held by a certain *Πτολεμαῖος Ἡρακλείδου*, but after him the governors seem always to have been Romans. Cicero, however (*Att.* ii. 17, 3), uses the word as a nickname for Pompeius, as we might say "Nabob," or "Great Mogul." We cannot take it here in its later technical sense, and must therefore suppose that Cicero derived his use of the word from some application of it no longer known to us. Orelli reads Alabarches, but there is no MS. authority for this form (Tyrrell, *ad Cic. l. c.*). [Alabarches.] Juvenal (i. 130) also uses the word in a connexion which almost excludes the notion of referring it to an important Roman official (*inter quas ausus habere nescio quis titulos Aegyptius atque Arabarches*). [A. S. W.]

ARAEOSTYLOS. [Templum.]

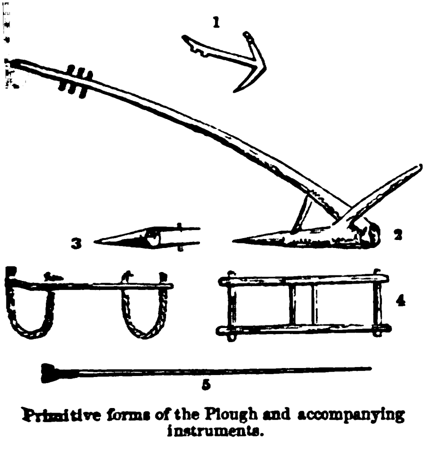
ARATEIA (*ἀράτεια*), two sacrifices offered every year at Sicyon in honour of Aratus, the general of the Achaeans, who after his death was honoured by his countrymen as a hero, in consequence of the command of an oracle. (Paus. ii. 9, § 4.) The full account of the two festive days is preserved in Plutarch's Life of Aratus (c. 53). The Sicyonians, says he, offer to Aratus two sacrifices every year: the one on the day on which he delivered his native town from tyranny, which is the fifth of the month of Daisius, the same which the Athenians call Anthesterion; and this sacrifice they call *σωτήρια*. The other they celebrate in the month in which they believe that he was born. On the first, the priest of Zeus offered the sacrifices; on the second, the priest of Aratus, wearing a white ribbon with purple spots in the centre, songs being sung to the lyre by the actors of the stage. The public teacher (γυμνασίαρχος) led his boys and youths in procession, probably to the heroum of Aratus, followed by the senators adorned with garlands, after whom came those citizens who wished to join the procession. The Sicyonians still observe, he adds, some parts of the solemnity, but the principal honours have been abolished by time and other circumstances. (Wachsmuth, *Hellen. Alterth.* vol. ii. p. 528.) [L. S.]

ARA'TRUM (ἄροτρον), a plough. The antiquity of its use in Greece may be inferred from the fact that its invention is a subject of legend, being variously attributed to Zeus (Diod. Sic. iii. 63), Dionysus (Arrian, *Ind.* 7), Triptolemus (Plin. *H. N.* vii. § 199), or the Athenian hero Buzyges (Hesych. *s. v.*; Plin. *l. c.*). The plough appears again in Athenian legend in the story of the ἥρως Ἐχετλαῖος or Ἔχετλος, who fought against the Persians at Marathon.



Ancient Greek Plough.
(Gerhard, *Trinkschalen und Gefässe*, pl. 1.)

The simplest and earliest form of the plough was that called αὐτόγυον, so called because the γύης or plough-tail and the other parts were of one piece. It was made by taking a young tree with two branches proceeding from its trunk in opposite directions, so that, while the trunk served for the pole, one of the branches stood upwards and became the tail, and the other penetrated the ground, and, being covered sometimes with bronze or iron, fulfilled the purpose of a share. This form is exhibited in fig. 1 of the annexed woodcut, taken from a medal.

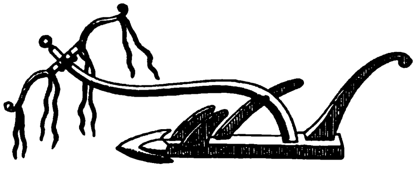


Primitive forms of the Plough and accompanying instruments.

But even in Homer (*Il.* x. 353) we hear of the πηκτὸν ἄροτρον, composed of separate pieces of wood; and Hesiod (*O. et D.* 427–36), who advises the farmer to have a plough of each sort, describes the πηκτὸν ἄροτρον as consisting of the γύης (*buris*, *bura*, plough-tail), to be made of a bent piece of ilex; the ἔλυμα (*dentale*, share-beam), to be made of oak; and the ἱστοβοεύς (*temo*, pole), to be made of bay or elm, the parts being joined by nails. Fig. 2 of the above woodcut shows a plough which differs somewhat from Hesiod's in having no distinct γύης, but consisting of ἱστοβοεύς, ἔλυμα and ἐχέτλη (*stiva*, handle). It is the plough still used in Mysia, according to Sir C. Fellows, who observes (*Excurs. in Asia Minor*, 1838, p. 71) that each portion of this instrument is still called by its ancient Greek name, and adds that it seems suited only to the light soil where he observed it, that it is held by one hand only, that the form of the share (ὕννις: see fig. 3) varies, and that the plough is frequently used without any share. "It is drawn by two oxen, yoked from the pole, and guided by a long reed or thin stick (κάτρινος), which has a spud or scraper at the end for cleaning the share." For the yoke see fig. 4; for the κάτρινος, fig. 5.

The plough was no doubt usually drawn by oxen, but mules were esteemed for this work (Hom. *Il.* x. 351; *Od.* viii. 124).

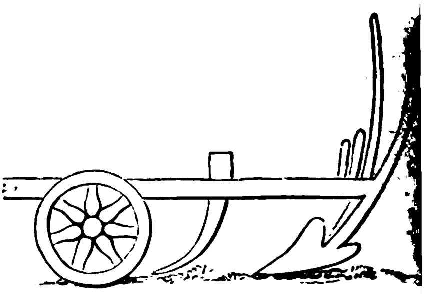
The later and more developed πηκτὸν ἄροτρον may be regarded as consisting of a share (ὕννις, ὕνις, ὕννη, ὕννης) fitted into a share-beam (ἔλυμα), from which rose the handle (ἐχέτλη), and, curving in the opposite direction, the ῥυμός, the lower and curved part of which was the γύης, the upper the ἱστοβοεύς or pole, across which was fastened the ζυγόν or yoke. The accompanying woodcut, given by Ginzrot from a bas-relief on the base of a statue of Demeter in Magnesia, shows the γύης strengthened by a piece of wood rising from the ἔλυμα, and also two earth-boards (πτερά, *aures*) behind the share. The part of the handle which the ploughman grasped was called χειρολαβής; the part where the handle entered the ἔλυμα, ἀλύη; the tip of the share, νύμφη. (Apoll. Rhod. iii. 232, *Schol.*; *Etym. Mag.* p. 173; Pollux, i. 252; Hesych.) The arrangements of the yoke are treated of under Jugum. In ancient works of art the parts of the plough are often represented as not nailed together, but lashed with thongs.



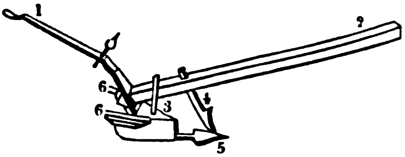
Ancient Greek Plough. (Ginzrot, *Wagen und Fahrwerke*, p. 34.)

The Italian plough, the invention of which the Romans referred to Greek (Verg. *Georg.* i. 19) or even Egyptian (Tibull. i. 7, 29) legends, had the same simple origin as the Greek (as may be inferred from Etruscan art), and a similar development. Its share was originally of bronze (Macr. *Sat.* v. 19, 13). Virgil, in a passage (*Georg.* i. 169–75) probably suggested by Hesiod, recommends that the plough-tail (*buris*, *bura*) should be made of elm, bent to the proper shape while growing, the yoke and handle (*stiva*) of smoke-dried linden or beech. The pole (*temo*) is to be eight feet long, and the plough is furnished with earth-boards or mould-boards (*aures*), rising on each side and bending outwardly in such a manner as to throw on either hand the soil which had been previously loosened and raised by the share, and adjusted to the share-beam, which was made double for the purpose of receiving them: "Binae aures, duplici aptantur *dentalia* dorso." Keightley, however, holds that this is merely a poetical use of the plural, and that the *dentale* was single. According to Palladius (i. 43), it was desirable to have ploughs both with earth-boards (*aurita*) and without them (*simplicia*). The handle (*stiva*), according to Virgil, is used to turn the plough at the end of the furrow: "Stivaque, quae currus a tergo torqueat imos." Servius, however, in his note on this line, explains *stiva* to mean "the handle by which the plough is directed." It is probable that, as the *dentalia*,—i.e. the two share-beams, which Virgil supposes were in the form of the Greek letter Δ, which he describes by *duplici dorso*,—the *buris* was fastened to the left share-beam, and the *stiva* to the right; so that, instead of the simple plough of the Greeks, that described by Virgil, and used no doubt in his country (see the following woodcut), was more like the modern Lancashire plough, which is commonly held behind with both hands. Sometimes, however, the *stiva* (ἐχέτλη, Hes. *Op. et Dies*, 467) was used alone and instead of the tail, as in the Mysian plough above represented. To a plough so constructed the language of Columella was especially applicable, "Arator stivae paene rectus innititur" (i. 9); and the expressions of Ovid, "Stivaeque innixus arator" (*Met.* viii. 218), and "Inde premens stivam designat moenia sulco" (*Fast.* iv. 825). In place of "stiva," Ovid also uses the less appropriate term "capulus" (*Ep. de Ponto*, i. 8, 61): "Ipse manu capulum prensi moderatus aratri." When the plough was held either by the *stiva* alone, or by the *buris* alone, a piece of wood (*manicula*) was fixed across the summit, and on this the labourer pressed with both hands. Besides guiding the plough in a straight line, his duty was to force the share to a sufficient depth into the soil. Virgil alludes to this in the phrase "Depresso aratro" (*Georg.* i. 45). The cross-bar, which is seen in Sir C. Fellows's drawing, and which passes from the pole to the share for the purpose of giving additional strength, was called σπάθη, in Latin *fulcrum*. The coulter (*culter*, Plin. *H. N.* xviii. § 171 ff.) was used by the Romans as it is with us. It was inserted into the pole so as to depend vertically before the share, cutting through the roots which came in its way, and thus preparing for the more complete loosening and overturning of the soil by the share. The share (*vomer*, *vomis*) was sometimes lashed under the *dentale*, sometimes imbedded in it (*indutilis:* Cato, *R. R.* 135, considers this arrangement preferable). Pliny (*l. c.*) describes the ordinary form of *vomer* as pointed like a crowbar; another, for use in light lands, did not extend over the whole of the *dentale*, but formed a slender point to its end; another shape, broader, sharper and sword-like, pierced the ground with its point, and with its edge did the work of a *culter*.

Pliny also describes (*l. c.*) a Rhaetian plough called *plaustraratrum* or *plaumoratum* (Sillig), furnished with two small wheels (*rotae, rotulae*) invented not long before his time; and Servi (*l. c.*) mentions the use of them in the countr of Virgil. The annexed woodcut shows th form of a wheel-plough, as represented on a piece of engraved jasper, of Roman workmanship. It also shows distinctly the *temo* or pole, the coulter or *culter*, the *dentale* or share-beam, the *buris* or plough-tail, and the handle or *stiva* (Caylus, *Rec. d'Ant.* v. pl. 83, No. 6). It corresponds, in all essential particulars, with the plough now used about Mantua and Venice, of which an engraving is given below.



Ancient Roman Plough.



Modern Italian Plough.

1. Buris.
2. Temo.
3. Dentale.
4. Culter.
5. Vomer.
6. Aures.

In Varro (*L. L.* v. 135) and Columella (*R. R.* ii. 4), the word *dens* includes *vomer* and the later *dentale*, which were originally not distinct parts of the plough. *Urvum* is used by Servius (*ad Verg. l. c.*) in the sense generally given to *buris*, which term he applies to the upper part of the pole, while Festus explains *urvum* as *forma simillima uncini, curvatione buris et dentis, cui praefigitur vomer*.

The operations of ploughing are described under Agricultura, p. 60, b. [J. Y.] [J. H. F.]

ARBITER. [Judex.]

ARBITRA'RIA AC'TIO. [Actio.]

ARBOR INFE'LIX. As applied to trees, *felix* and *infelix* imply "fruit-producing" or the reverse (Paul. ex Festo, p. 92; Verg. *Georg.* ii. 81; Plin. *H. N.* xxiv. § 68). "Infelices (sc. arbores) autem existimantur damnataeque religione quae neque seruntur unquam neque fructum ferunt" (Plin. *H. N.* xvi. § 108). Those trees also which bore black berries and black fruit, and were accordingly sacred to the gods of the lower world, were called *infelices* (Macrob. *Sat.* ii. 16, § 2). Such trees appear to have been used for the *patibulum* and *crux* (Cic. *Rab. Perd.* 4, 13; Liv. i. 26. See generally Rein in Pauly, *s. v.*). [L. C. P.]

ARBYLA (ἀρβύλη). [Pero.]

ARCA (λάρναξ, κιβωτός, κυψέλη, in Homer χηλός), a chest or coffer. I. Greek.—*In the*

Homeric poems, and probably far on into historic times, the *armarium*, press or cupboard, was unknown to the Greeks; a box was the only depository for valuables. The λάρναξ of Homer was of no great size: the golden λάρναξ in which the ashes of Hector are laid after his funeral is evidently a quite small casket (*Il.* xxiv. 795); and Hephaestus keeps his blacksmith's tools in a silver one (*ib.* xviii. 413). But the Homeric word for the ordinary clothes-chest is χηλός: the outfit of Achilles is a χηλὸς filled by Thetis with costly tunics and rich carpets, and in it he keeps his most precious cup (*Il.* xvi. 221): the presents of Alcinous and his courtiers to Ulysses are similarly packed by Queen Arete and her handmaids, and likewise consist of raiment, gold and silver (*Od.* ix. 424, 438; xiii. 10, 68).

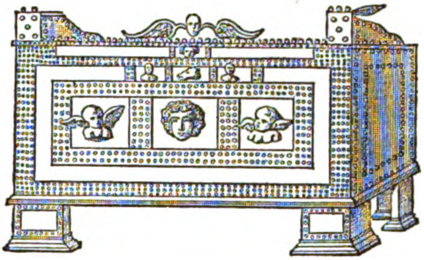
In the early historic period the chest (κυψέλη) from which Cypselus the tyrant of Corinth (cir. 660 B.C.) derived his name was of cedar inlaid with gold and ivory, and was shown at Olympia more than 800 years later. Pausanias, who describes it minutely (v. 17, § 5 ff.), tells us that it was covered not only with figures but with inscriptions, some written the ordinary way, others βουστροφηδόν, a term he explains. This would seem to show that the inscriptions were of different dates; Pausanias even hints (v. 19, § 10) that they may all have been later than the chest itself.

At Athens, in the time of the Thirty (B.C. 404), money and valuables are kept in a κιβωτὸς in an inner chamber (δωμάτιον, Lys. c. *Eratosth.* [Or. 12], § 10). Treasure-chests are λάρνακες in Herodotus (iii. 123).

On Greek vase paintings the λάρναξ or κιβωτὸς is frequently introduced in mythological subjects. In the illustration (from Overbeck, *Kunst-Mythologie*, Tafel vi. 3) a workman is seen in the act of shutting up Danae and the infant Perseus in the λάρναξ: Acrisius stands by. The epithet δαιδαλέα, in Simonides' famous poem (44, Bergk), is here sufficiently explained. [W. W.]

Greek Chest. (Overbeck, *Kunst-Mythologie.*)

II. ROMAN.—1. The *arca* was a chest or coffer in which the Romans were accustomed to place valuables (*arca vestiaria*, Cato, *R. R.* 11, 3; cf. Suet. *Cal.* 59, *Tib.* 63), but was more particularly the chest in which money was kept (Varr. *L. L.* v. § 182; Hor. *Sat.* i. 1, 67; Catull. xxiii. 1). It stood in the *atrium* of the house (Serv. *ad* Verg. *Aen.* i. 730, ix. 648), and was made either of iron (Appian, *B. C.* iv. 44), or of wood bound with iron or bronze (*ferrata*, Juv. xi. 26; *aerata*, id. xiv. 259). Its size may be inferred from the story of the proscript who remained concealed for several days in the iron *arca* of his *libertus* (Appian, *l. c.*; Dio Cass. xlvii. 7; Suet. *Oct.* 27). It is opposed to the smaller *loculi* (Juv. i. 89, 90) and *sacculus* of the poor (Juv. xi. 26). These *arcae* were so common that the word is used as equivalent to money (Cic. *Att.* i. 9; Plin. *Ep.* iii. 19. 8); and *ex arca solvere* or *persolvere* means to pay in ready money (Donat. *ad* Ter. *And.* ii. 4, 13; *Phorm.* v. 8, 29). The *arca* was under the care of the porter (*atriensis*), and in great houses an *arcarius* had the charge of it, and made the disbursements (Dig. 40, tit. 5, s. 41, § 17). In inscriptions (Orelli, 2890) we find a *servus arcarius* in the imperial palace. Two *arcae* have been found in a house at Pompeii (one of which is figured below), backed into a pillar of the *atrium*; they were slightly raised from the floor by a ledge of brickwork, but kept firm by a strong nail passing through the bottom of each into the floor. (Niccolini, *Case di Pomp.* pl. xxxiii. *apud* Daremberg and Saglio, *s. v.*) Bronze plates (*crustae*) belonging to an *arca* were also found in the quaestor's house in Pompeii (Becker-Göll, *Gallus*, ii. p. 360 *seq.*).



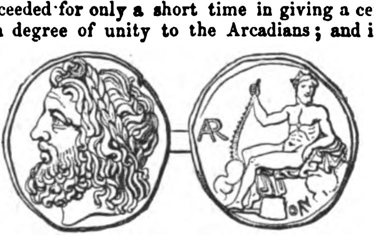
Roman Arca or Treasure-chest. (From Pompeii.)

2. ARCA PUBLICA, or simply ARCA, was the treasury of the municipal towns, whether coloniae, municipia, or praefecturae: the name frequently occurs in inscriptions (Orelli, *Inscr.* 1760). The name was also applied to the treasury of a collegium, such as that of the Pontifices (Orelli, 2145, 4549), of the Vestals (1175), of the Seviri Augustales (2258), &c. In Rome, under the empire, the *arca publica* signified the city-funds, which were distinct from the *aerarium* and the *fiscus*, and the administration of which belonged to the Senate (Vopisc. *Aurel.* 20). Subsequently it formed a department of the *fiscus*, and was divided into several departments, whence we read of an *arca frumentaria*, *arca olearia*, *arca vinaria*, &c. (Symm. *Ep.* x. 33, 42; Cassiod. ii. 42; Dig. 50, tit. 4, s. 1). The *arcarius* was a financial officer in the municipal towns and the provinces, whose name constantly occurs in inscriptions. (See Index to Orelli, *Inscr.*) Thus we find mention of the *arca Galliarum*, the provincial chest. (Marquardt, *Röm. Staatsv.* i. pp. 119, 370.)

3. ARCA, the coffin, usually of stone, more commonly called *sarcophagus*, but sometimes of common material (*vili in arca*, Hor. *Sat.* i. 1, 9), in which the body was buried. (Liv. xl. 29, 3; Lucan. viii. 736; Plin. *H. N.* xiii. § 84; Val. Max. i. 1, n. 12; Aur. Vict. 42; Dig. 11, tit. 7, s. 7; Orelli, *Inscr.* 3560, 4396.)

4. ARCA, a strong cell, made of oak, in which criminals and slaves were confined (Cic. *Mil.* 22, 60: Fest. *s. v.* *Robum*). [W. S.]

ARCA'DICUM FOEDUS (*κοινόν, τὸ Ἀρκαδικόν· συνέδριον κοινὸν Ἀρκάδων ἁπάντων*), the Arcadian League, was established soon after the battle of Leuctra, in B.C. 371, when the victory of Epaminondas had destroyed the Spartan supremacy in the Peloponnesus, and restored the independence of the Arcadian towns. The person who took the most active part in forming this league was a native of Mantineia, named Lycomedes, and the project was supported by Epaminondas. A new city was founded, named Megalopolis or the Great City, which was the seat of the league, and of which Epaminondas was regarded as the *οἰκιστὴς* or founder (Paus. viii. 27, § 2). Its population was drawn from about forty petty Arcadian townships. Of the constitution of the new confederation we have very little information.[*] We only know that the great council of the nation, which used to meet at Megalopolis, was called *οἱ Μύριοι*, or the "Ten Thousand." As representative of all Arcadia, the Ten Thousand concluded war and peace, and tried all officers or other Arcadians brought before them on accusations of public misconduct. The Athenian orators Demosthenes and Aeschines pleaded before it on various occasions. (Xen. *Hell.* vi. 5, § 3 *seq.*, vii. 1, § 38; Diod. xv. 59, 72; Paus. viii. 27, § 1 *seq.*; Dem. *Fals. Leg.* p. 344, § 11; Aeschin. *Fals. Leg.* p. 257, § 79; Harpocr., Suid., Phot., *s. v.*) Whether this council represented the numbers, more or less exact, which might be brought together for the purpose of consultation, or whether the name was used in a vague sense for a great multitude, cannot be determined. Thirlwall points out that it is strange that there should be no mention of a select council, which, according to the uniform custom of the Greek states, should have prepared the business to be transacted by the assembly of the Ten Thousand; but he conjectures that the council-house, called Thersilium, which Pausanias (viii. 32, § 1) describes as the place of meeting of the Ten Thousand, may really have been the smaller council or senate of the larger assembly of the Ten Thousand. We read of a standing army called *Epariti* (Ἐπάριτοι)—probably a word belonging to the Arcadian dialect—consisting of 5000 men, to defend the common interests of the confederation. (Xen. *Hell.* vii. 4, § 34, vii. 5, § 3; Diod. xv. 62, 67; Hesych. *s. v.* ἐπορόηττοι.) The new confederation succeeded for only a short time in giving a certain degree of unity to the Arcadians; and its influence soon declined. For its subsequent history, see *Dict. of Gr. and Rom. Geogr.*, s. vv. *Arcadia* and *Megalopolis*. Coins were struck by the league. The one figured above represents the head of Zeus on the obverse, and Pan, the national god of the Arcadians, on the reverse. (Thirlwall, *Hist. of Greece*, v. p. 85 *seq.*; Grote, *Hist. of Greece*, x. pp. 306, 317 *seq.*; Wachsmuth, *Hell. Alterth.* i.² p. 282 *seq.*) [W. S.]



Coin of the Arcadian League. (Brit. Museum.)

ARCA'RIUS. [ARCA.]

AR'CERA, a covered carriage or litter, spread with cloths, which was used in ancient times in Rome, to carry the aged and infirm. It is mentioned in the Twelve Tables [ACTIO, p. 14 a]. It is said to have obtained the name of *arcera* on account of its resemblance to an *arca*. (Varr. *L. L.* v. § 140; Nonius, p. 55; Gell. xx. 1, §§ 25, 29.) [W. S.]

Arcera. (Ginzrot, *Wagen*, Taf. 19, fig. 2.)

ARCHEION (ἀρχεῖον) properly means any public place belonging to the magistrates, whether among barbarians (Herod. iv. 62) or Greeks (Xen. *Hellen.* v. 4, § 58; [Dem.] *iv. Phil.* p. 145, § 53). At Athens the name was more particularly applied to the archive office, where the decrees of the people and other state documents were preserved. This office is sometimes called merely *τὸ δημόσιον* (Dem. *de Cor.* p. 275, § 142). The archives were kept in the temple of the mother of the gods (*μητρῷον*), and the charge of it was entrusted to the president (*ἐπιστάτης*) of the senate of the Five Hundred. (Dem. *de Fals. Leg.* p. 381, § 129; Lycurg. *c. Leocr.* § 66; Paus. i. 3, § 4; Athen. v. p. 214 e; Plut. *Vit. x. Oratt.* p. 842 e; Harpocrat., Phot., Suid. *s. v.* *μητρῷον*; Suid. *s. v.* *ἀρχεῖα.* For the building itself, C. Curtius, *Das Metroon in Athen*, 1868.) [W. S.] [W. W.]

ARCHIA'TER (*ἀρχίατρος*, compounded of *ἀρχὸς*, a chief, and *ἰατρός*, a physician), a medical title under the Roman emperors, the exact signification of which has been the subject of much discussion; for while some persons interpret it "the chief of the physicians" (*quasi ἀρχὸς τῶν ἰατρῶν*), others explain it to mean "the physician to the prince" (*quasi τοῦ ἀρχοῦ ἰατρός*). Upon the whole it seems tolerably certain that the former is the true meaning of the word, and for these reasons:—1. From its etymology it can hardly have any other sense, and of all the words similarly formed (*ἀρχιτέκτων, ἀρχιτρίκλινος, ἀρχιεπίσκοπος*, &c.) there is not one that has any reference to "*the prince.*" 2. We find the title applied to physicians who lived at Edessa, Alexandria, &c., where no king was at that time reigning. 3. Galen (*de Ther. ad Pis.* c. 1, vol. xiv. p. 211, ed. Kühn) speaks of Andromachus being appointed "*to rule over*" the physicians (*ἄρχειν*); *i.e.*, in fact, to be "archiater." 4. Augustine (*de Civit. Dei*, iii. 17) applies the word to Aesculapius, and St. Jerome to our Saviour (*xiii. Homil. in S. Luc.*), in both which cases it evidently means "the chief physician." 5. It is apparently synonymous with *protomedicus*, *supra medicos*, *dominus medicorum*, and *superpositus medicorum*, all which expressions occur

---

[*] Aristotle wrote a treatise entitled *ἡ κοινὴ Ἀρκάδων πολιτεία*, which is lost (Harpocr. *s. v.* Μύριοι; *Fragm. Hist. Graec.* ii. p. 134, ed. Müller).

in inscriptions, &c., and also with the title *Rais 'ala 'l-atebbá*, among the Arabians. 6. We find the names of several persons who were physicians to the emperor, mentioned without the addition of the title *archiater*. 7. The archiatri were divided into *Archiatri sancti palatii*, who attended on the emperor, and *Archiatri populares*, who attended on the people; so that it is certain that *all* those who bore this title were not "physicians to the *prince*." The chief argument in favour of the contrary opinion seems to arise from the fact, that of all those who are known to have held the office of *Archiatri* the greater part certainly were also physicians to the emperor; but this is only what might *à priori* be expected, viz. that those who had attained the highest rank in their profession would be chosen to attend upon the prince.*

The first person whom we find bearing this title is Andromachus, physician to Nero, and inventor of the Theriaca (Galen. *l. c.*; Erotian. *Lex. Voc. Hippocr.* Praef.): but it is not known whether he had at the same time any sort of authority over the rest of the profession. The name does not appear in Pliny's Natural History, though he quotes many distinguished physicians: nor does it seem to have been commonly used in Latin till the time of Constantine. From about that date the order appears to have been divided, and we find two distinct classes of *archiatri*, viz. those of the palace and those of the people. (Cod. Theodos. xiii. tit. 3; *De Medicis et Professoribus.*) The *Archiatri sancti palatii* were persons of high rank, who not only exercised their profession, but were judges on occasion of any disputes that might occur among the physicians of the place. They had certain privileges granted to them, *e.g.* they were exempted from all taxes, as were also their wives and children; they were not obliged to lodge soldiers or others in the provinces; they could not be put in prison, &c.: for though these privileges seem at first to have been common to all physicians (Cod. Just. x. tit. 52, s. 6: *Medicos et maxime Archiatros*), yet afterwards they were confined to the *archiatri* of the palace, and to those of Rome. When they obtained their dismissal from attendance on the emperor, either from old age or any other cause, they retained the title *ex-archiatri*, or *ex-archiatris*. (Cod. x. tit. 52, s. 6.) The *Archiatri populares* were established for the relief of the poor, and each city was to be provided with five, seven, or ten, according to its size. (Dig. 27, tit. 1, s. 6.) Rome had fourteen, besides one for the vestal virgins and one for the gymnasia. (Cod. Theodos. *l. c.*) They were paid by the government, and were therefore obliged to attend their poor patients gratis; but were allowed to receive fees from the rich. (Cod. Theodos. *l. c.*) The *Archiatri populares* were not appointed by the governors of the provinces, but were elected by the people themselves. (Dig. 50, tit. 9, s. 1.) The office appears to have been more lucrative than that of *Archiatri sancti palatii*, though less honourable. In later times, we find in Cassiodorus (see Meibom. *Comment. in Cass. Formul. Archiatr.* Helmst. 1668) the title *Comes archiatrorum*, "count of the archiatri," together with an account of his duties, by which it appears that he was the arbiter and judge of all disputes and difficulties, and ranked among the officers of the empire as a *vicarius* or *dux*. (See Le Clerc, and Sprengel, *Hist. de la Méd.* Further information on the subject may be found in several works referred to in the Oxford edition of Theophilus, *de Corp. Hum. Fabr.* p. 275; and in Goldhorn, *de Archiatris Romanis et eorum Origine usque ad finem imperii Romani Occidentalis*, Lips. 1841.) [W. A. G.]

ARCHIMIMUS. [Mimus.]

ARCHITECTURA (ἀρχιτεκτονία, ἀρχιτεκτονική), in its widest sense, signifies all that we understand by *architecture*, and by *civil* and *military engineering*: in its more restricted meaning, it is the science of building according to the laws of proportion and the principles of beauty. In the former sense, it has its foundation in *necessity*: in the latter, upon *art* taking occasion from necessity. The hut of a savage is not, properly speaking, a work of architecture; neither, on the other hand, is a building in which different and incongruous styles are exhibited side by side. An architectural construction, in the artistic sense, must possess not only *utility*, but *beauty*, and also *unity*: it must be suggestive of some *idea*, and referable to some *model*.

The architecture of every people is not only a most interesting branch of its antiquities, but also a most important feature in its history, as it forms one of the most durable and most intelligible evidences of advancement in civilization. If the Greek and Roman literature and history had been a blank, what ideas of their knowledge, and power, and social condition would their monuments have still suggested to us! What a store of such ideas is even now being developed from the monuments of Asia, Egypt, and America!

The object of the present article is to give a very compendious account of the history and principles of the art, as practised by the Greeks and Romans. The details of the subject will be, for the most part, referred to their separate and proper heads. The lives of the architects will be found in the *Dictionary of Greek and Roman Biography and Mythology*.

It is well observed by Stieglitz that architecture has its origin in nature and religion. The necessity for a habitation, and the attempt to adorn those habitations which were intended for the gods, are the two causes from which the art derives its existence. In early times we have no reason to suppose that much attention was paid to domestic architecture, but we have much evidence to the contrary. The resources of the art were lavished upon the temples of the gods; and hence the greater part of the history of Grecian architecture is inseparably connected with that of the temple, and has its proper place under Templum, and the subordinate headings, such as Columna, under which heads also the different orders are described.

But, though the first rise of architecture, as a fine art, is connected with the temple, yet, viewed as the science of construction, it must have been employed, even earlier, for other purposes, such as the erection of fortifications, palaces, treasuries, and other works of utility. Accordingly, it is the general opinion of antiquaries, that the very earliest edifices, of which we have any remains, are the so-called Cyclopean works, in which we

---

* Just as in England the President of the College of Physicians is (or used to be) *ex-officio* physician to the sovereign.

see huge unsquared blocks of stone built together in the best way that their shapes would allow; although it can be proved, in some instances, that the rudeness of this sort of work is no sufficient proof of its very early date, for that it was adopted, not from want of skill, but on account of the object of the work and the nature of the materials employed. (Bunbury, *On Cyclopean Remains in Central Italy*, in the *Classical Museum*, vol. ii.) [MURUS.] The account of the early palaces cannot well be separated from that of domestic architecture in general, and is therefore given under DOMUS; that of erections intended, or supposed to be intended, for treasuries, will be found under THESAURUS.

In addition to these, however, there are other purposes for which architecture, still using the term in its lower sense, would be required in a very early stage of political society; such as the general arrangement of cities, the provision of a place for the transaction of public business, with the necessary edifices appertaining to it [AGORA, FORUM], and the whole class of works which we embrace under the head of civil engineering, such as those for drainage [CLOACA, EMISSARIUS], for communication [VIA, PONS], and for the supply of water [AQUAEDUCTUS]. The nature of these several works among the Greeks and Romans, and the periods of their development, are described under the several articles. Almost equally necessary are places devoted to public exercise, health, and amusement [GYMNASIUM, STADIUM, HIPPODROMUS, CIRCUS, BALNEUM, THEATRUM, AMPHITHEATRUM]. Lastly, the skill of the architect has been from the earliest times employed to preserve the memory of departed men and past events; and hence we have the various works of monumental and triumphal architecture, which are described under the heads FUNUS, ARCUS, COLUMNA.

The *materials* employed by the architect were marble or stone, wood, and various kinds of earth, possessing the property of being plastic while moist and hardening in drying, with cement and metal clamps for fastenings: the various metals were also extensively used in the way of ornament. The details of this branch of the subject are given in the descriptions of the several kinds of building.

The *principles* of architectural science are *utility*, *proportion*, and *the imitation of nature*. The first requisite is that every detail of a building should be subordinate to its general purpose. Next, the form of the whole and of its parts must be derived from simple geometrical figures; namely, the straight line, the plane surface, and regular or symmetrical rectilinear figures, as the equilateral or isosceles triangle, the square or rectangle, and the regular polygons; symmetrical curves, as the circle and ellipse; and the solids arising out of these various figures, such as the cube, the pyramid, the cylinder, the cone, the hemisphere, &c. Lastly, the ornaments, by which these forms are relieved and beautified, must all be founded either on geometrical forms or on the imitation of nature.

To this outline of the purposes and principles of the art, it only remains to subjoin a brief sketch of its history, which Hirt and Müller divide into five periods: the first, which is chiefly mythical, comes down to the time of Cypselus, Ol. 30, B.C. 660 (Müller brings this period down to the 50th Olympiad, B.C. 580): the second period comes down to the termination of the Persian war, Ol. 75. 2, B.C. 478 (Müller brings it down to Ol. 80, B.C. 460): the third is the brilliant period from the end of the Persian war to the death of Alexander the Great, Ol. 114, B.C. 323 (Müller closes this period with the death of Philip, Ol. 111, B.C. 336): the fourth period is brought down by Hirt to the battle of Actium, B.C. 31, but by Müller only to the Roman conquest of Greece, B.C. 146; the latter division has the convenience of marking the transition from Greek to Roman architecture: Hirt's fifth period is that of the Roman empire, down to the dedication of Constantinople, A.D. 330; while Müller's fifth period embraces the whole history of Roman architecture, from the time when it began to imitate the Greek, down to the Middle Ages, when it became mingled with the Gothic: Hirt's division requires us to draw a more definite line of demarcation than is possible, between the Roman and Byzantine styles, and also places that line too early.

The characteristics of these several periods are developed under the articles which describe the several classes of buildings: they are therefore noticed in this place with the utmost possible brevity. Our information respecting the first period is derived from the Homeric poems, the traditions preserved by other writers, and the most ancient monuments of Greece, Central Italy, and the coast of Asia Minor. Strongly fortified cities, palaces, and treasuries are the chief works of the earlier part of this period; and to it may be referred most of the so-called Cyclopean remains; while the era of the Dorian invasion marks, in all probability, the commencement of the Dorian style of temple architecture. The principal names of artists belonging to this period are Daedalus, Euryalus, Hyperbius, Docius, and some others. In the second period the art made rapid advances under the powerful patronage of the aristocracies in some cities, as at Sparta, and of the tyrants in others, as Cypselus at Corinth, Theagenes at Megara, Cleisthenes at Sicyon, the Peisistratids at Athens, and Polycrates at Samos. Architecture now assumed decidedly the character of a fine art, and became associated with the sister arts of sculpture and painting, which are essential to its development. The temples of particular deities were enriched and adorned by presents, such as those which Croesus sent to the Pythian Apollo. Magnificent temples sprung up in all the principal Greek cities; and while the Doric order was brought almost, if not quite, to perfection, in Greece Proper, in the Doric colonies of Asia Minor, and in Central Italy and Sicily, the Ionic order appeared, already perfect at its first invention, in the great temple of Artemis at Ephesus. The ruins still existing at Paestum, Syracuse, Agrigentum, Selinus, Aegina, and other places, are imperishable monuments of this period. Nor were works of utility neglected, as we see in the fountain of the Peisistratids at Athens, the aqueduct at Samos [AQUAEDUCTUS], the sewers (ὑπόνομοι) and baths (κολυμβῆθρα) at Agrigentum. To this period also belong the great works of the Roman kings. The commencement of the third and most brilliant period of the art was signalized by the rebuilding of Athens, the establishment of regular principles for the laying out of cities by Hippodamus of Miletus, and the great works of the age of Pericles, by the contemporaries of Pheidias, at Athens, Eleusis, and Olympia; during its course every city of Greece and her colonies was adorned with splendid edifices of every description; and its termination is marked by the magnificent works of Deinocrates and his contemporaries at Alexandria, Antioch, and other cities. The first part of the fourth period saw the extension of the Greek architecture over the countries conquered by Alexander, and, in the West, the commencement of the new style, which arose from the imitation, with some alterations, of the Greek forms by Roman architects, to which the conquest of Greece gave, of course, a new impulse. By the time of Augustus, Rome was adorned with every kind of public and private edifice, surrounded by villas, and furnished with roads and aqueducts; and these various erections were adorned by the forms of Grecian art; but already Vitruvius begins to complain that the purity of that art is corrupted by the intermixture of heterogeneous forms. This process of deterioration went on rapidly during the fifth period, though combined at first with increasing magnificence in the scale and number of the buildings erected. The early part of this period is made illustrious by the numerous works of Augustus, and his successors, especially the Flavii. Nerva, Trajan, Hadrian, and the Antonines, at Rome and in the provinces; but from the time of the Antonines the decline of the art was rapid and decided. In one department, a new impulse was given to architecture by the rise of Christian churches, which were generally built on the model of the Roman Basilica. One of the most splendid specimens of Christian architecture is the church of St. Sophia at Constantinople, built in the reign of Justinian, A.D. 537, and restored, after its partial destruction by an earthquake, in 554. But, long before this time, the Greco-Roman style had become thoroughly corrupted, and that new style, which is called the Byzantine, had arisen out of the mixture of Roman architecture with ideas derived from the Northern nations. It is beyond our limits to pursue the history of this and later styles of the art.

Of the ancient writers from whom our knowledge of the subject is derived, the most important is, of course, Vitruvius. The following are the principal modern works on the general subject: — Winckelmann, *Anmerkungen über die Baukunst der Alten*, 1762; Stieglitz, *Archäologie der Baukunst*, 1801, and *Geschichte der Baukunst*, 1827; Hirt, *Baukunst nach den Grundsätzen der Alten*, 1809, and *Geschichte der Baukunst bei den Alten*, 1821; Müller, *Handbuch der Archäologie der Kunst*, 1825; the various works of travels, topography, and antiquities, such as those of Stuart, Chandler, Clarke, Dodwell, &c., all the most important of which will be found cited by the authorities referred to; and, for Central Italy, Müller's *Etrusker*, and Abeken's *Mittelitalien vor der Römischen Herrschaft*. [P. S.]

ARCHITHEO'RUS. [Delia.]

ARCHON (ἄρχων) was the title of the chief magistrates in many Greek states. The wide diffusion of the name is attested by a multitude of inscriptions. We find it in Boeotia applied both to federal and city magistrates; at Delphi, where a long list of archons is preserved, and other towns of Phocis; towns in Thessaly, with three archons to each; in Locris, in many islands of the Aegaean, and in outlying cities like Cyzicus and Olbia. At Athens, according to tradition, royalty was abolished on the death of Codrus, B.C. 1068, and his son Medon became the first archon for life. The archonship remained hereditary in the line of Medon and twelve successors, and must have been a slightly modified royalty under another name; but there is no sufficient ground for the conjecture (presently to be noticed) that neither the name nor the attributes of royalty underwent any change at all. The next step, dated Ol. vii. 1, B.C. 752, was to limit the continuance of the office to ten years, still confining it to the Medontidae, or house of Codrus, in whose family it was hereditary. Seven decennial archons are reckoned,— Charops, Aesimides, Cleidicus, Hippomenes, Leocrates, Apsandrus, Eryxias; but only the four first of these were of the ancient royal race. In 713 a further revolution threw open the chief magistracy to all the Eupatridae (Heracl. Pont. fr. 1, 4, ed. Müller; Herm. *Staatsalterth.* § 103, 4; *Dict. Biogr.* s. v. *Hippomenes*). With Kreon, who succeeded Eryxias, the archonship was not only made annual, but put into commission and distributed among nine persons. It is from this date, B.C. 683, that trustworthy Athenian chronology begins; and these nine archons annually changed continue throughout the historical period, interrupted only by the few intervals of political disturbance and foreign domination (Grote, ch. x., *init.*).

The essentially legendary character of these accounts of early times would seem to render any criticism of their details, from the historical point of view, more or less unprofitable. The broad fact remains that at Athens, as elsewhere in Greece, hereditary monarchy passed into a commonwealth which at the dawn of authentic history was still in its oligarchic stage. But when we find, in works of high authority, attempts to reconstruct the Athenian constitution for the four centuries assumed between Codrus and the annual archons, some notice of them seems demanded. It has been maintained, as the result of a critical inquiry, that "the monarchy existed at Athens, without essential modifications, until B.C. 752; the hereditary successors of Codrus had therefore, during three centuries, the same powers as their illustrious ancestor" (Caillemer, *ap.* D. and S., following Lugebil, *Zur Geschichte der Staatsverfassung von Athen*, Leipzig, 1871). We must therefore briefly touch upon the questions how far (1) the powers and (2) the name of royalty were really affected by the change traditionally associated with the death of Codrus.

The received view is thus stated in an often-quoted passage of Pausanias (iv. 5, § 10): "The people first deprived the successors of Melanthus [the father of Codrus], who were called Medontidae, of the greater part of their authority, and changed the monarchy into a responsible government (ἀρχὴν ὑπεύθυνον); they afterwards further limited their government to ten years." On this M. Caillemer raises the objection, that we know of no political body to whom the archons can have been responsible. The answer is obvious, to the general body of the Eupatridae, who were at this time and long afterwards the δῆμος at Athens, the only fully enfranchised citizens. Even in the Heroic age the royal power had its limits (ἐπὶ ῥητοῖς γέρασι, Thucyd. i. 13); and when the halo of divinity which attached to the name of βασιλεὺς had disappeared with the change of title, the controlling influence of the nobles was doubtless augmented. Probably, like the barons in feudal monarchies and the Venetian nobles under the early doges, they at least exercised the right of deposition. We can hardly, therefore, accept the assertion that "the powers of royalty were not limited;" the prestige of royalty had vanished, though Athens, like other ancient republics, granted a large amount of arbitrary authority, even in matters of life and death, to her chief magistrates. And as regards the mere name, too much has been made of Plato's essentially rhetorical and dramatic language (*Menex.* 238 D; *Sympos.* 208 D), and of the casual expressions of a writer so late as Pausanias, who couples the phrase τοὺς ἀπὸ Μελάνθου βασιλεύσαντας with the statement that Theseus introduced the democracy! (i. 3, § 3; cf. vii. 2, § 1;) or the still later and more uncritical Aelian (*V. H.* v. 13, viii. 10). It is enough to say with Westermann (*ap.* Pauly, *s. v.*) that the archons are sometimes called by the *Beiname*, familiar or nickname, of βασιλεύοντες. The single archon, whether perpetual or decennial, of course discharged those priestly duties of the old kings which were afterwards assigned to a subordinate member of the Nine, the second or king-archon; and this circumstance is quite sufficient to account for the occasional use of the name.

The nine annual archons during nearly the first century of their existence were still chosen from the Eupatridae exclusively, and by show of hands (ἀρχὴ αἱρετὴ or χειροτονητή). They still in reality stood at the head of the state as the supreme magistracy, combining the chief administrative and judicial functions. It is probable that a law of Draco (621) transferred the jurisdiction in cases of homicide from the archons and court of Areiopagus to the Ephetae; but, with this exception, the entire judicial system seems to have been in their hands. At the time of Cylon's revolt (about 612) they still managed the greater part of the public affairs (Thucyd. i. 126). This arrangement continued till the timocracy established by Solon, who made the qualification for office depend not on birth, but property, still retaining the election by suffrage. Two important changes remained to be made, before we arrive at the developed democracy as it stood from the age of Pericles to that of Demosthenes: the abolition of the property qualification, and the election by lot. The date and authorship of the former of these changes are matters of little doubt. Aristides, who had himself been archon in 489, the year after Marathon, under the old rule as a πεντακοσιομέδιμνος (Plut. *Arist.* 1), ten years later, when all classes of citizens had been drawn together in enthusiastic resistance to the Persian invader, proposed and carried a law that the archonship and other offices should be open to all Athenians without distinction (*ib.* 22). The effect of this change was less sweeping than at first sight appears. We must remember that the Solonian constitution had reckoned only income from land, not personal property, in classifying the citizens; and the actual effect of Aristides' law was solely to get rid of the monopoly of these offices by the larger landed proprietors, in favour of the trading classes and of capitalists in general. Besides, the devastation of Attica by the Persian invader had compelled many who had hitherto been rich to part with their lands, and had created a dangerous class of discontented Eupatrids who were not only impoverished but saw their political rights diminished, and were ready to conspire against the constitution (Plut. *Arist.* 13; Schömann, *Antiq.* p. 339, E. T.).

The question at what time the election by lot was introduced is both difficult and obscure, owing to the conflict of ancient authorities; and recent scholars have arrived at very different conclusions. The notion that this change was due to Solon may be at once dismissed; it rests only on the loose statements of orators, who flattered their hearers by ascribing all democratic legislation to the great lawgiver (Demosth. *c. Lept.* p. 484, § 90; *c. Androt.* p. 602, § 30; Grote, ch. xi., where examples are collected in an excellent note, ii. 324, ed. 1862; *Dict. Biogr.* s. v. *Solon*). And Aristotle expressly states that Solon made no change in the αἵρεσις or mode of election, but only in the qualification for office (*Pol.* ii. 12, § 3). The introduction of the lot is ascribed to Cleisthenes by Westermann, Curtius (i. 478, E. T.), H. Sauppe, and with special reference to the arguments of Grote by Schömann in his latest writings (*Const. Hist. of Athens*, p. 73, E. T.; *Antiq.* p. 337, E. T.). Among those who have upheld a later date are Niebuhr (*Lect. on Anc. Hist.* ii. 24, E. T.) and Grote (ch. xxxi. iii. 122, n.); some regarding it as anterior to the battle of Marathon, others as connected with Aristides' admission of all classes to the office, and therefore later than the battle of Plataea. In favour of the earlier date are the statements of Herodotus that Callimachus, the polemarch at Marathon, was ὁ τῷ κυάμῳ λαχών (vi. 109); and of Plutarch, who uses the same words of Aristides' archonship in 489 (Plut. *Arist.* 1). But the dates of political changes were, as has been seen, so speedily forgotten by the Athenians themselves that we cannot be surprised if Herodotus, a foreigner, made a mistake on this point though writing in the next generation; while Plutarch mentions that the historian Idomeneus (*circ.* 310–270) had stated that Aristides was elected by suffrage. We may grant to Schömann that "Plutarch had no doubt that the lot was the rule," and yet argue that Idomeneus may have preserved a genuine tradition which Plutarch, who records it, did not know how to explain. There is, we think, a strong case to be made out in favour of the view of Lugebil and Caillemer (*ubi supra*), that this was one of the reforms of Ephialtes, the friend of Pericles, about 461–458. We may be allowed to see, though Herodotus did not, the absurdity of supposing that Callimachus, as an archon appointed by lot, could have had equal authority with the ten generals; and the fact that, in the early part of the century, the ablest Athenian statesmen—Themistocles, Aristides, Xanthippus the father of Pericles—were all eponymous archons, while afterwards neither Pericles himself nor any Athenian known to history enjoyed that honour, may fairly be balanced against the testimony of uncritical writers, however numerous. On the whole, this late date for the change may be accepted, not as certain, but as by far the most probable.

The frequent occurrence at Athens of boards of ten men, one from each tribe, and the tribal constitution of the senate of 500 and its prytanies, have led to the suggestion that the nine archons also belonged each to a different tribe. This conjecture of H. Sauppe's is approved by Schömann (*Antiq.* p. 410, E. T.). The tenth tribe may have been represented by the *γραμματεὺς* or secretary, as suggested by Télfy (*Corp. Juris Attici*, p. 471), rather than by the hieromnemon, as Sauppe thought. There is evidence that the *γραμματεὺς* was on some occasions associated with the archons as a tenth man, *e.g.* in drawing lots for the dicasts among the tribes (Schol. Aristoph. *Plut.* 277; *Vesp.* 772).

Still, after the removal of the old restrictions, some security was left to insure respectability; for, previously to an archon entering on office, he underwent a double dokimasia (not, like other magistrates, a single one [DOKIMASIA]) before the senate and before a dicastery. Pollux calls this inquiry *ἀνάκρισις*: but that word has another technical sense, and in the Orators we only find the verb *ἀνακρίνειν* (Dem. *c. Eubul.* p. 1319, § 66, p. 1320, § 70; Deinarch. *in Aristog.* § 17; Pollux, viii. 85). The archon was examined as to his being a legitimate and a good citizen, a good son, and his having served in the army, and, it is added, being qualified in point of property (*εἰ τὸ τίμημά ἐστιν αὐτῷ*, Poll.); but this latter condition, if it existed at all after the time of Aristides, soon became obsolete. We read in Lysias (Or. 24, *pro Inval.* § 13) that a needy old man, so poor as to receive a state allowance, was not disqualified from being archon by his indigence, but only by bodily infirmity; freedom from all such defects being required for the office, as it was in some respects of a sacred character. Yet, even after passing a satisfactory *δοκιμασία*, each of the archons, in common with other magistrates, was liable to be deposed, on complaint of misconduct made before the people, at the first regular assembly in each prytany. On such an occasion, the *ἐπιχειροτονία*, as it was called, took place; and we read (Dem. *c. Theocrin.* p. 1330, § 28; Pollux, viii. 95; Harpocrat. *s.v. κυρία ἐκκλησία*) that in one case the whole body of *θεσμοθέται* was deprived of office for the misbehaviour of one of their body: they were, however, reinstated, on promise of better conduct for the future.

We are enabled, by means of inscriptions, to trace the archonship through the greater part of the Roman period. Athens as a *libera civitas* (*ἐλευθέρα καὶ αὐτόνομος*) was freed from the duty of receiving a Roman garrison, and had the administration of justice (*jurisdictio*) according to its own laws. But, as with the consulate at Rome, the archonship now became merely honorary, and the dignity of *ἐπώνυμος* was given by way of compliment to distinguished foreigners, like king Rhoemetalkes of Thrace and the emperor Hadrian. In these instances, at least, it would seem that election by lot was no longer the rule.

With the growth of democracy, the archons gradually lost the great political power which they had possessed as late as the time of Solon, perhaps even of Cleisthenes. They became, in fact, not as of old, directors of the government, but merely municipal magistrates, exercising functions and bearing titles which we will proceed to describe.

It has been already stated that the duties of the single archon were shared by a college of nine. The first or president of this body was called *ὁ ἄρχων*, by way of pre-eminence; and in later times *ἐπώνυμος*, from the year being distinguished by and registered in his name. But this phrase, contrary to the general opinion, did not come into use until after the Roman conquest. The second was styled *βασιλεύς*, or the king-archon; the third, *πολέμαρχος*, or commander-in-chief; the remaining six, *θεσμοθέται*, or legislators. As regards the duties of the archons, it is sometimes difficult to distinguish what belonged to them individually and what collectively. It seems, however, that a considerable portion of the judicial functions of the ancient kings devolved upon the *Archon Eponymus*, who was also constituted a sort of state protector of those who were unable to defend themselves. (Lex ap. Dem. *c. Macart.* p. 1076, § 75; Pollux, viii. 89.) Thus he had to superintend orphans and their estates, heiresses, families losing their representatives (*οἶκοι οἱ ἐξερημούμενοι*), widows left pregnant, and to see that they were not wronged in any way. Should any one do so, he was empowered to inflict a fine of a certain amount, or to bring the parties to trial. Heiresses, indeed, seem to have been under his peculiar care; for we read (Lex *ibid.* p. 1069, § 54) that he could compel the next of kin either to marry a poor heiress himself, even though she were of a lower class, or to portion her in marriage to another. Again we find (Lex *ibid.* p. 1055, § 16; Pollux, viii. 62) that, when a person claimed an inheritance or heiress adjudged to others, he summoned the party in possession before the archon-eponymus (*ἐπιδικασία*: cf. HERES), who brought the case into court, and made arrangements for trying the suit. We must, however, bear in mind that this authority was only exercised in cases where the parties were citizens, the polemarch having corresponding duties when the heiress was an alien. It must also be understood that, except in very few cases, the archons did not decide themselves, but merely brought the causes into court, and cast lots for the dicasts who were to try the issue. (Dem. *c. Steph.* ii. p. 1136, §§ 22, 23.) Another duty of the archons was to receive informations against individuals who had wronged heiresses, children who had maltreated their parents, and guardians who had neglected or defrauded their wards. [KAKOSIS.] The various modes of prosecution, by *ἀπαγωγή*, *ἐφήγησις*, *ἔνδειξις*, *εἰσαγγελία*, or *φάσις*, came as a rule before all the archons indiscriminately; but we find the *ἔνδειξις* especially connected with the office of the thesmothetae (Dem. *c. Timocr.* p. 707, § 23). The last office of the archon which we shall mention was of a sacred character; we allude to his superintendence of the greater Dionysia and the Thargelia, the latter celebrated in honour of Apollo and Artemis. (Pollux, viii. 89; cf. Meier, *Att. Process*, p. 41 ff.; Hermann, *Staatsalterth.* § 138, 6.)

The functions of the βασιλεύς, or *King Archon*, were almost all connected with religion: his distinguishing title shows that he was considered a representative of the old kings in their capacity of high priest, as the Rex Sacrificulus was at Rome. Thus he presided at the Lenaean or older Dionysia; superintended the mysteries and the games called λαμπαδηφορίαι, and had to offer up sacrifices and prayers in the Eleusinium, both at Athens and Eleusis. Moreover, indictments for impiety, and controversies about the priesthood, were laid before him; and, in cases of murder, he brought the trial into the court of the Areiopagus, and voted with its members. His wife, also, who was called βασίλισσα or βασίλιννα, had to offer certain sacrifices, and therefore it was required that she should be a citizen of pure blood, and not previously married. His court was held in what was called ἡ τοῦ βασιλέως στοά. (Dem. *c. Neaer.* p. 1370, §§ 74, 75; *c. Androt.* p. 601, § 27: Lysias, *c. Andoc.* § 4, where the duties are enumerated; Elmsley, *Ad Aristoph. Acharn.* 1143, et Scholia; Harpocr. *s. v.* Ἐπιμελητὴς τῶν μυστηρίων: Plato, *Euthyphr.* ad init. et *Theaet.* ad fin.; Pollux, viii. 90.)

The *Polemarch* was originally, as his name denotes, the commander-in-chief (Herod. vi. 109, 111; Pollux, viii. 91); and we find him discharging military duties as late as the battle of Marathon, in conjunction with the ten στρατηγοί: he there took, like the kings of old, the command of the right wing of the army. This, however, seems to be the last occasion on record of this magistrate being invested with such important functions; and in after ages we find that his duties ceased to be military, having been in a great measure transferred to the protection and superintendence of the resident aliens, so that he resembled in many respects the praetor peregrinus at Rome. In fact, we learn from Aristotle, in his "Constitution of Athens," that the polemarch stood in the same relation to foreigners as the archon to citizens. (Arist. *ap.* Harpocr. *s. v.*; Pollux, viii. 91, 92.) Thus, all actions affecting aliens, the isoteles and proxeni, were brought before him previously to trial; as, for instance, the δίκη ἀπροστασίου against a μέτοικος, for living in Athens without a patron; so was also the δίκη ἀποστασίου against a slave who failed in his duty to the master who had freed him. Moreover, it was the polemarch's duty to offer the yearly sacrifice to Artemis, in commemoration of the vow made by Callimachus at Marathon, and to arrange the funeral games in honour of those who fell in war. The functions of the three first archons are very clearly distinguished in a passage of Demosthenes, *c. Lacr.* p. 940, § 48. These three archons—the ἐπώνυμος, βασιλεὺς, and πολέμαρχος—were each allowed two assessors (πάρεδροι) to assist them in the discharge of their duties.

The Thesmothetae did not act singly, but formed a *collegium* (συνέδριον, Hyperid. *pro Eux.* col. 22). They appear to have been called "legislators" (Thirlwall, ii. 17), because in the absence of a written code they might be said to make laws (θεσμοί, an older word for νόμοι), though in reality they only declared and explained them. They were required to review, every year, the whole body of laws, that they might detect any inconsistencies or superfluities, and discover whether any laws which had been repealed were wrongly retained in the public records (Aeschin. *c. Ctes.* §§ 38, 39). Their report was submitted to the people, who referred the necessary alterations to a jury of sworn dicasts impanelled for the purpose, and called νομοθέται. [NOMOTHETAE.]

In the Athenian legal system the thesmothetae had a more extensive jurisdiction than the three archons who, in point of dignity, enjoyed precedence over them. It may be said, indeed, that all cases not specially reserved to other magistrates came naturally before them. Their duties included the receiving of informations, getting up cases as *juges d'instruction*, and presiding at the trial before a jury (ἡγεμονία δικαστηρίου). The following are instanced as being under their jurisdiction: ἔνδειξις, εἰσαγγελία other than κακώσεως (see above), προβολαί, the Dokimasia of magistrates generally and the Euthynae of the Strategi; among public causes, γραφαὶ ἀγραφίου, ἀγράφου μετάλλου, ἀδικίου, ἀπατήσεως τοῦ δήμου, βουλεύσεως, δεκασμοῦ, δωροξενίας, δώρων, ἐξαγωγῆς, ἑταιρήσεως, καταλύσεως τοῦ δήμου, μοιχείας, νομίσματος διαφθορᾶς, ξενίας, προαγωγείας, προδοσίας, συκοφαντίας, τυραννίδος, ὕβρεως, ψευδεγγραφῆς, ψευδοκλητείας: among private ones, δίκαι ἀγεωργίου, ἀμελίου (an obscure case hardly to be distinguished from ἀγεωργίου) ἀναγωγῆς, ἀργυρίου, βεβαιώσεως, βλάβης, ἐγγύης, ἐνοικίου, ἐξούλης, κακηγορίας, κλοπῆς, παρακαταθήκης, συμβολαίων παραβάσεως, χρέους: and finally, all δίκαι ἐμπορικαί, μεταλλικαί, ἐρανικαί, and δίκαι ἀπὸ συμβόλων (Westerm. *ap.* Pauly; Meier, *Att. Process*, p. 59 ff.; Pollux, viii. 88). We also find, in the Orators, informations laid before the thesmothetae in the following cases:—For breach of the law against cutting down olive-trees (Dem. *c. Macart.* p. 1075, § 71); conspiracy to defeat the ends of justice (Dem. *c. Steph.* ii. p. 1136, § 25 f.); if a foreigner married a citizen, or a man gave in marriage as his own daughter the child of another, or confined as an adulterer one who was not so (Dem. *c. Neaer.* p. 1350, § 17; p. 1362, § 52; p. 1367, § 66). If a man banished for homicide returned without a legal pardon, the thesmothetae might order him to summary execution (Dem. *c. Aristocr.* p. 630, § 31). The name thesmothetae is sometimes applied to all the nine, and not merely to the six minor archons: mostly, no doubt, in late inscriptions (*C. I. G.* 380) and grammarians (*Arg.* to Dem. *c. Androt.* p. 589, 1), but occasionally even in classical writers. For instance, in Dem. *c. Eubul.* p. 1319 § 66, the phrase τοὺς θεσμοθέτας ἀνακρίνετε must be equivalent to τοὺς ἐννέα ἄρχοντας ἀνακρίνετε in the concluding section of the speech. On the other hand, the words ἀρχαί and ἄρχοντες are used in reference to magistrates in general, not to the nine exclusively. Thus in Isaeus, *Or.* 1 (Cleonymus), § 14, certain ἄρχοντες are spoken of who in § 15 are shown to be the ἀστυνόμοι.

In their collective capacity the archons also superintended the ἐπιχειροτονία of the magistrates, held every prytany (ἐπερωτῶσιν εἰ δοκεῖ καλῶς ἄρχειν), and brought to trial those whom the people deposed, if an action or indictment were the consequence of it. Moreover, they attended jointly to the annual ballot for the dicasts or jurymen, and presided in the assemblies for the election of strategi, taxiarchs, hipparchs, and phylarchs (Pollux, viii. 87, 88; Harpocrat. *s. v.* *καταχειροτονία*: Schömann, *Assemblies*, p. 231).

The places in which the archons exercised their judicial power were, with the exception of that assigned to the Polemarch, without doubt all situated in the market. That of the first archon was by the statues of the ten Eponymi; that of the archon Basileus beside the so-called Bucolium, a building not otherwise known, in the neighbourhood of the Prytaneum, or else in the so-called Hall of the King; that of the Thesmothetae in the building called after them Thesmothesium, in which they, and perhaps the whole nine, are said to have dined at the public expense. The Polemarch had his office outside the walls, but quite close to the city, adjoining the Lyceum (Schömann, *Antiq.* p. 411 f., E. T.). In their oath of office the archons promised faithfully to observe the laws and to be incorruptible, and in the case of transgression to consecrate at Delphi a golden statue of the same size as themselves (*ἰσομέτρητον*, Plat. *Phaedr.* 235 D). Suidas improves upon this, making them three statues instead of one, at Athens, Delphi, and Olympia (*s. v.* *χρυσῆ εἰκών*). The simplest explanation of this absurdity is Schömann's, that it is an ancient formula used to denote an impossible penalty, the non-payment of which of necessity entailed Atimia (*Antiq.* p. 414, E. T. For another explanation, see Bergk in *N. Rhein. Museum*, xiii. 447; or Dr. Thompson on Plato, *l. c.*).

A few words will suffice for the privileges and honours of the archons. The greatest of the former was the exemption from the trierarchies—a boon not allowed even to the successors of Harmodius and Aristogeiton. As a mark of their office, they wore a chaplet or crown of myrtle; and if any one struck or abused one of the thesmothetae or the archon, when wearing this badge of office, he became *ἄτιμος*, or infamous in the fullest extent, thereby losing his civic rights (Dem. *c. Lept.* p. 465, § 28, *c. Meid.* p. 524, § 33; Pollux, viii. 86). The archons, at the close of their year of service, when they had delivered their account and proved themselves free from blame, were admitted among the members of the Areiopagus. [AREIOPAGUS.]

The Archon Eponymus being an annual magistrate at Athens, like the consul at Rome, it is manifest that a correct list of the archons is an important element in the determination of Athenian chronology. Now from *Creon* (B.C. 683), the first annual archon, to *Myrus* (B.C. 499), we have the names of about thirty-four. From B.C. 495 to 292, Diodorus and Dionysius of Halicarnassus furnish an almost unbroken succession for a period of nearly 200 years. After B.C. 292, about 166 names have been recovered, mostly from inscriptions, and many of them undated, down to the latest Roman period; the latest with a date being A.D. 485 (Meier, *Index Archontum eponymorum qui post Ol.* cxxi. 2 *eum magistratum obtinuerunt*; Marin. *Vit. Procl.* 36). [R. W.] [W. W.]

ARCHO'NES (*ἀρχώνης*). [TELONES.]

ARCIFI'NIUS AGER. [AGRIMETATIO.]

ARCUBALLISTA, a crossbow, occurs first in Vegetius (*de Re Mil.* ii. 15), but is probably identical with the *scorpiones minores* of Livy (xxvi. 47, 49), and the *σκορπιδία* of Polybius (viii. 7). The crossbowman is *arcuballistarius* (Veget. *op. cit.* iv. 21). The same writer speaks of a *manuballista* as nearly the same weapon (ii. 15), the Greek equivalent of which, *χειροβαλλίστρα*, is described by the elder Heron in the first of his existing fragments. Saglio, who gives two illustrations from sculpture in the museum at Le Puy, well remarks that the name and the thing have both come down substantially unaltered (Fr. *arbalète*) from ancient times to modern. [W. W.]

AR'CULUM, a kind of porter's knot or pad for carrying burdens, for which the usual Latin word is CESTICILLUS. The latter word seems to have been appropriated to secular, *arculum* to sacred uses (P. Diac. *s. vv.* pp. 14, 35, Müll.).

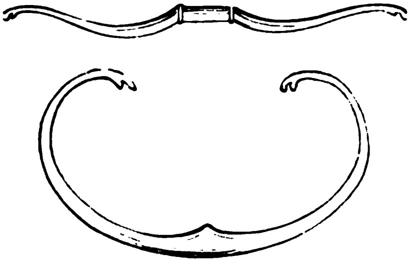
Arculum. (From Terra-cotta in the British Museum.)

The illustration is from a terra-cotta figure discovered by Mr. Newton at Halicarnassus, and now in the British Museum. It represents a Canephoros carrying a sacred vessel on her head by the aid of a pad, which must have corresponded to the Roman arculum. [W. W.]

AR'CUMA or **ARCIR'MA**, the latter according to Müller the best-attested reading, a carriole or small carriage to hold one person only (P. Diac. p. 14). It has been attempted to identify it from sepulchral monuments (Rich *s. v.*); but in reality there is no evidence to warrant us in so doing. [W. W.]

ARCUS (*βιός*, *τόξον*), the bow used for shooting arrows, is one of the most ancient weapons, but its use in warfare was early abandoned by the Greeks in general, and it became a characteristic of Asia rather than of Europe. Thus, in the description given by Herodotus (vii. 61–80) of the various nations composing the army of Xerxes, we observe that nearly all the troops used the bow, and in Greek art also the bow generally serves to distinguish barbarian races, although of course it still was retained as in ancient times in representations of certain deities, such as Apollo, Artemis, and Heracles. The Scythians and Parthians were the most celebrated archers in the East, and among the Greeks the Cretans, who frequently served as a separate corps in the Greek armies, and subsequently also among the auxiliary troops of the Romans. (Comp. Xen. *Anab.* i. 2, § 9; Liv. xlii. 35.) The use of the bow in the chase continued, nor was archery as an exercise abandoned (Plat. *Legg.* i. p. 625; vi. 794, 795; vii. 813, 814; viii. 384, 434), although it failed to gain the same encouragement in the games as other exercises testing the strength and skill of the upper part of the body, such as throwing the quoit and the spear. A contest of archers, however, is described in Hom. *Il.* xxiii. 850–84. In later times an *ἀγὼν τοξικός* was held at Ceos and at Sestos.

Pandarus' bow (Hom. *Il.* iv. 105–26) may be taken as an ordinary Greek bow of heroic proportions. It was composed of the horns of a wild goat, sixteen palms in length, joined by a straight stock (*πῆχυς*) in the centre, with a golden tip (*κορώνη*) at the end of one horn, on which, when the bow was strung, was fastened that end of the string (*νευρή, νεῦρα βόεια, Il.* iv. 122, *nervus*) which was not permanently attached. In order to make the bow more flexible, it was sometimes rubbed with oil before a fire (*Od.* xxi. 175–80). Such a bow is represented in the upper figure in the accompanying woodcut, from a fictile vase. In Hom. *Il.* iv. 115–126, the action of shooting is described, and this account is illustrated by the following outline of a statue belonging to the group of the Aeginetan Marbles. The bow placed in the hands of this statue was probably of bronze, but it has been lost. In *Od.* xxi. 405–23 we have a similar description, but there Odysseus shoots sitting. In later times flexible wood was sometimes used in place of horn, and in that case the bow, when unbent, had a circular form, whence it is described with the epithets *sinuatus* (Ov. *Met.* viii. 381) and *sinuosus* (id. *Am.* i. 1, 23); it was sometimes straight with curved ends. For a string a strip of leather was sometimes used in place of the sinew of the ox, or even horsehair (Verg. *Aen.* x. 622; Ov. *ex Ponto*, i. 2, 21), which no doubt was braided, as in a representation figured in *Mon. ined. dell' Inst. Arch.* 1851, pl. xxviii.



Greek Bows.

Figure in the Aeginetan Marbles, drawing the Bow.

The lower figure in the cut above, also from a fictile vase, is probably Homer's *τόξον παλίντονον* (*Il.* viii. 266, x. 459, xv. 433; *Od.* xxi. 11 and 59; Herod. vii. 69: the last passage shows that *παλίντονος* cannot be taken as a mere literary epithet, but describes a distinct variety of bow). When strung, it was bent backwards against the curve, which must have given it unusual force.

The Scythian bow was distinct from the ordinary Greek forms of the bow, and was curved into two unequal *sinus*. The accompanying cut is taken from a golden ornament on a sword sheath found in the Crimea, now in St. Petersburg (see Plate 5 in *Commission Archéologique pour l'année* 1865). Strabo (ii. 22) compares the outline of the Black Sea to a Scythian bow, the southern coast resembling the string, and the other coasts recalling the two curves of the bow, one of which projects further than the other. Again, the Scythian bow is compared to a serpent (Lycophr. 917), and to the letter Σ, which in many of its ancient forms consists of two unequal curves.

Scythian Bow.

In the Roman army archers (*sagittarii*) do not appear to have been employed before the Punic Wars, and afterwards only as auxiliaries, being especially drawn from Crete and the Balearic Islands. [SAGITTA.] The Asiatic *cataphracti* [CATAPHRACTI] were often armed with the bow.

When not used, the bow was put into a case (*τοξοθήκη, γωρυτός, corytus*), which was made of leather, and sometimes ornamented (*φαεινός*, Hom. *Od.* xxi. 54). The bow-case is very conpicuous in the sculptured bas-reliefs of Persepolis. It frequently held the arrows as well as the bow, and on this account is often used by the Roman poets as equivalent to the *pharetra* or quiver. (Verg. *Aen.* x. 169; Ov. *Tr.* v. 7, 15; Sil. vii. 443.) Though its use was comparatively rare among the Greeks and Romans, we find it exhibited in a bas-relief in the Museo Pio-Clementino (vol. iv. tav. 43), which is copied in the annexed cut.

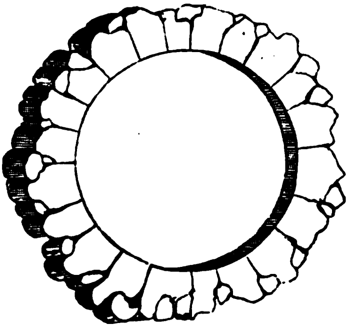
Corytus, Bow-case. rom a relief in the Vatican.)

[J. Y.] [J. H. F.]

ARCUS (also *fornix*, Verg. *Aen.* vi. 631; Cic. *Verr.* i. 7, 19, *et alibi*; ψίδα), an arch. It is possible to give an rched form to the covering of any opening by lacing horizontal courses of stones projecting ver one another, from both sides of the opening, ill they meet at top, and then cutting the ends f the projecting stones to a regular curve, as hown below. This form is found in the most ncient architecture of nearly all nations, but t does not constitute a true arch. A true arch formed of a series of wedge-like stones, or of ricks, supporting each other, and all bound rmly together by their mutual pressure.

It would seem that the arch, as thus defined, nd as used by the Romans, was not known to he Greeks in the early periods of their history, therwise a language so copious as theirs, and of uch ready application, would not have wanted name properly Greek by which to distinguish t. But the constructive principle by which n arch is made to hold together, and to afford solid resistance against the pressure upon its ircumference, was known to them even previously to the Trojan war, and its use is exemlified in two of the earliest buildings now emaining—the chamber built at Orchomenus, y Minyas, king of Boeotia, described by Pausaias (ix. 38), and the treasury of Atreus at ycenae (Paus. ii. 16). Both these works are onstructed under ground, and each of them onsists of a circular chamber formed by regular ourses of stones laid horizontally over each ther, each course projecting towards the interior, and beyond the one below it, till they eet in an apex over the centre, which was pped by a large stone, and thus resembled the side of a dome. Each of the horizontal ourses of stones formed a perfect circle, or wo semicircular arches joined together, as the bjoined plan of one of these courses will nder evident.

It will be observed that the innermost end of ch stone is bevelled off into the shape of a edge, the apex of which, if continued, would eet in the centre of the circle, as is done in rming an arch; while the outer ends against he earth are left rough, and their interstices lled up with small irregular-shaped stones, he immense size of the principal stones rendering it unnecessary to continue the sectional utting throughout their whole length. Schlieann points out that the stones, contrary to the general belief, are not immediately covered with earth, but with enormous masses of stone, which, by their ponderous weight, keep all the stones of the circular layers of masonry in their position. Thus the principle of this construction is, as Colonel Leake justly remarks, that of an arch-shaped wall resisting a great superincumbent weight, and deriving its strength and coherence, from the weight itself (Schliemann, *Mycenae*, p. 43; Leake, *Morea*, ii. p. 377). Thus it seems that the Greeks did understand the constructive principle upon which arches are formed, even in the earliest times; although it did not occur to them to divide the circle by a diameter, and set the half of it upright to bear a superincumbent weight. But they made use of a contrivance, even before the Trojan war, by which they were enabled to gain all the advantages of our archway in making corridors, or hollow galleries, and which in appearance resembled the pointed arch, such as is now termed Gothic. This was effected by cutting away the superincumbent stones in the manner already described, at an angle of 45° with the horizon. The mode of construction and appearance of such arches are represented in the annexed drawing of the walls of Tiryns, copied from Sir William Gell's Argolis. The



Circular masonry at Mycenae.

Pointed Arch in the walls of Tiryns.

gate of Signia (*Segni*) in Latium exhibits a similar example.

The principle of the true arch was known to the Egyptians, but it is remarkable that they did not make use of it in their most massive works (Wilkinson, ii. p. 299, ed. of 1878). The Assyrians also used it in subterranean buildings (Layard, *Nineveh*, i. p. 167; ii. p. 260). There are also a few specimens of the true arch in ancient Greece. At Oeniadae, in Acarnania, is a postern of a perfect arch in the polygonal walls of the city (Leake, *Northern Greece*, iii. p. 560 *seq.*); and at Xerokampo, in the neighbourhood of Sparta, is a bridge on the true arch-principle (Mure, *Tour in Greece*, ii. p. 248), though the latter, in the opinion of many archaeologists, is of Roman construction (Dennis, *Etruria*, ii. p. 250 *seq.*). But these are rare instances; and the Etruscans are the first people who used the true arch extensively. Two circumstances may have favoured this—the ease with which tufa is split into wedges, and the necessity of constructing extensive tunnels to drain the valleys of the Tiber and the Arno, and the marshes of the coast. Hence the use of the arch passed into the architecture of buildings. The Romans probably borrowed it from the Etruscans. Thus the *Cloaca Maxima*, long held to be the oldest instance of the arch at Rome, and attributed to the Tarquinii [CLOACA], closely resembles the canal of the Marta (Dennis, *Etruria*, i. p. 430 *seq.*). But whatever date be assigned to the *Cloaca Maxima* in its arched form, the general use of the arch even in subterranean buildings is far later. Thus the *specus* of the *Aqua Appia* (B.C. 313) is gabled, not arched (Burn, *Rome and the Campagna*, p. xxv.). The key-stone of the arch is mentioned by Seneca. (" Democritus invenisse dicitur fornicem, ut lapidum curvatura paulatim inclinatorum medio saxo alligaretur," *Ep.* 90, *med.*) The use of the arch constitutes one leading distinction between Greek and Roman architecture, for by its application the Romans were enabled to execute works of far bolder construction than those of the Greeks,—to erect aqueducts and permanent bridges, spanning broad and rapid rivers, and "to make a comparatively fragile material, such as brick, more extensively useful than the finest marbles in the hands of the Greeks."

But in many Roman edifices we find the use of "the arched form without the principle of the arch" (Middleton, *Ancient Rome in* 1885, p. 366), as the facing of brick or stone covers a concrete arch cast in one solid mass, and therefore without lateral thrust. [CAEMENTUM.] This is especially apparent in the thermae of Caracalla, and in the relieving arches in the walls of the Pantheon and other buildings, which are of no structural importance, but simply shallow indentations in a wall which was really one solid slab of concrete (Middleton, *ib.* p. 33). [A. R.] [J. H. F.] [W. S.]

ARCUS TRIUMPHA'LIS (a triumphal arch) was a structure peculiar to the Romans, among whom it seems to have taken its origin from the *Porta Triumphalis*, the gate by which a general celebrating a triumph led his army into the city, on which occasions the gate was adorned with trophies and other memorials of the particular victory celebrated. In process of time other arches were erected, both at Rome and in the provinces, to celebrate single victo the memorials of which were carved upon or fixed to them, and these remained as pe nent monuments. They were even erected memory of a victory for which there had bee triumph, as in the arch of L. Stertinius—the recorded instance. And it is convenient t clude under the same head many arches w were not monuments of victory, and yet an architectural point of view cannot be d guished from triumphal arches—arches memorating a great imperial achievemen that in honour of Augustus' completion of *via Flaminia* at Rimini, that in honou Trajan's improvement of the harbour at A that in honour of his restoration of the *Appia* at Beneventum, that in honour Hadrian's buildings at Athens; arches er to an emperor with a less special moti that of Gallienus at Rome, or in honour family, as that of the Sergii at Pola. Mo structures like the Porta S. Lorenzo (*Tiburtina*) and Porta Maggiore (*Porta Pr tina*) [AQUAEDUCTUS], built to carry aqu over roads, and the *Janus Quadrifrons* i *Forum Boarium*, resemble triumphal arch their architectural treatment.

Triumphal arches were usually in structures built across the principal stree the city, and, according to the space of respective localities, consisted of either a archway, or of a central one for carriage two smaller ones on each side for foot-pas which sometimes have side communi with the centre arch. Sometimes there two arches of equal height, side by side. front was ornamented with trophies an reliefs, which were also placed on the the passages. Both façades had usually against the piers, supporting an ent surmounted by a lofty attica, on the which was the inscription, and on the to bronze chariots, war-horses, statues and The triumphal arch recalls its origi city gate, in the concentration of orn the façades; while the sides, which in t gate are buried in the wall, are compar plain.

"Though these arches are upon the some of the most successful efforts of Roman architecture, because the real and constructive parts occupy the most pro place, yet Greek decorations are dragged in here. The Romans placed an unmeaning of pedestal, column and capital, with a frieze, and entablature, upon the surfa their massive piers of masonry, 'thus tyi the tyrant Mezentius did, the dead to living.' The three great triumphal ways of Titus, Septimius Severus, and C tine at Rome, and also the Arch of Drusu decorated with this foreign dress. In the of Constantine alone, the columns which in front are in some measure justified b statues they support. The Arch of Dola on the Caelian, which has a single line as nice, and the Porta S. Lorenzo are exampl the impressive effect of a plain arch wi Greek ornament." (Burn, *Rome and the pagna*, p. xxxix.)

Stertinius is the first upon record who er anything of the kind. He built, out of the gained in Spain, an arch (*fornix*) in the Forum Boarium about B.C. 196, and another in the Circus Maximus, each of which was surmounted by gilt statues (Liv. xxxiii. 27). Six years afterwards, Scipio Africanus built another on the Clivus Capitolinus, on which he placed seven gilt statues and two figures of horses (Liv. xxxvii. 3); and in B.C. 121, Fabius Maximus built a fourth at the top of the Via Sacra, which is called by Cicero (*in Verr. Act.* i. 7, § 19; *Planc.* 7, § 17) the *Fornix Fabianus.* None of these remain, though ruins of the *Fornix Fabianus* were found in the sixteenth century, and again in 1882, near the temple of Faustina. That these erections were either temporary or very insignificant, may be inferred from the silence of Vitruvius, who says nothing of triumphal arches. We might be sure, from the nature of the case, that such structures would especially mark the period of the empire.

There are about thirty-eight triumphal arches recorded by different writers as having been erected in the city of Rome, five of which now remain: namely, the *Arches of Drusus*, of *Titus*, of *Septimius Severus*, of *Gallienus*, and of *Constantine*. A brief account of these, and of some of the most important Italian and provincial ones still in existence, follows. For restorations and descriptions of them, see Canina, *L'Architettura Romana*, vol. ii. p. 676, iii. p. 473, and volume of plates, from which this article is illustrated. The Arch of Augustus at *Rimini*, represented in the accompanying woodcut after Canina, is important on account of its early date, its fine style, and its peculiarity of not being an insulated structure, but merely an archway pierced in a wall, and decorated with unusual simplicity. Hence Hope (*Essays on Architecture*, i. p. 69) criticises its detail as jejune. The Arch of Augustus at *Susa*, though insulated, is still simple in its design, the entablature being supported by attached columns at the corners. The Arch of Augustus at *Aosta*, although its Doric entablature does not harmonise with its Corinthian columns, and although it has possibly suffered restoration, is here given as an instance of a single arch of noble span. Returning to Rome, we have first to remember the *Arch of Augustus* in the Forum, erected in honour of the battle of Actium, B.C. 30 (Dio Cass. li. 19), but its exact site is unknown. The *Arch of Drusus* on the Appian Way, erected in honour of Nero Claudius Drusus (Suet. *Claud.* 1), is identified with the existing arch, which pierces a wall, while its attica carries the aqueduct over the *via* to the *thermae* of Caracalla. But this is an error, as the existing arch is in all probability only one of the arches built by Caracalla to carry his aqueduct over the road, like the *Porta Maggiore* and *Porta San Lorenzo* [AQUAEDUCTUS, pp. 149, 150]. The details are much later than the time of Drusus (Middleton, p. 365).

Arch of Augustus at Rimini.

Arch of Augustus at Aosta.

The so-called Arch of Drusus.

The *Arch of Tiberius* in the Sacra Via in the Forum, near the temple of Saturn, was erected in A.D. 17, in honour of Tiberius, on account of the recapture by Germanicus of the standards lost by Varus in Germany (Tac. *Ann.* ii. 41). Some fragments of it have been found near its supposed site (Middleton, p. 169). The *Arch of Claudius*, erected in A.D. 43 to commemorate his supposed victories over the Britons, stood across the Via Lata, near the Palazzo Sciarra, where fragments belonging to this arch were found, with an inscription recording its erection by Claudius.

This arch is represented on coins of Claudius, with the legend DE BRITANNIS. It existed in an almost perfect state till the seventeenth century, when it was destroyed by Alexander VII. (Middleton, p. 442; Burn, p. 323). In the same locality stood the *Arch of M. Aurelius*, in the Via Flaminia, a continuation of the Via Lata. It was also destroyed in 1563, and six of its sculptured panels are now on the staircase of the Palazzo de' Conservatori. These reliefs are of great historical interest (Middleton, p. 443).

The *Arch of Titus*, of Pentelic marble, spanning the Sacra Via at the very summit of the Velian ridge, was erected to the honour of Titus, after his conquest of Judaea, but was not finished till after his death; since in the inscription upon it he is called *Divus*, and he is also represented as being carried up to heaven upon an eagle. The bas-reliefs of this arch represent the spoils from the Temple of Jerusalem carried in triumphal procession, and are among the best specimens of Roman sculpture. This arch has only a single opening, with two columns of the Roman or composite order on each side of it. This structure, which is here represented, is generally regarded as the finest extant specimen of a triumphal arch. The *Arch of Trajan* was a magnificent structure leading to his Forum. It is represented on coins of Trajan, on the top of which stands a triumphal chariot of Trajan with six horses, and six generals. (Dio Cass. lxviii. 29; cf. Gell. xiii. 25.) From this arch some of the bas-reliefs now on the Arch of Constantine were taken, as is mentioned below. The Arch of Trajan at *Ancona*, attributed to Apollodorus of Damascus, is condemned by Hope (*l. c.*) on account of its disproportionate height and "confused reduplication of unmeaning mouldings;" that at *Beneventum* exhibits an increasing amount of sculpture.

Arch of Titus, restored.

The *Arch of Septimius Severus* was erected by the senate (A.D. 204) at the end of the Via Sacra, in honour of that emperor and his two sons,
Caracalla and Geta, on account of h
over the Parthians and Arabians.

ARDA'NION (ἀρδάνιον or ἀρ
vessel full of water, which was pla
door of a house in which a dead body
in order that persons on leaving
might purify themselves by sprinkl

res with the water. Since the house in ich the body lay was considered to be pol- ed, the water was fetched from some other use (Poll. viii. 66; Eur. *Alc.* 100; Aristoph. des. 1033; Hesych., Suid., *s. v.*). [J. H. O.]

AREA, any open space (*loca pura*, Varr. *L.* v. 38; *locus vacuus*, Paul. Diac. p. 11, ll.; *locus sine aedificio in urbe area, rure* [illegible] *ager appellatur*, Dig. 50, 16, 211). Many [illegible] usages of the word belong properly to Latin dictionary. The following may here noted:—(1) A site for building (Hor. *Ep.* i. , 13). (2) The site of a house pulled down in sequence of the owner's treason, and devoted religious uses (*consecrata*): such were the ses of Sp. Cassius (*Ea est area ante Telluris* [illegible], Liv. ii. 41) and Sp. Maelius, called after- rds Aequimaelium (id. iv. 16). Cicero's se, when pulled down by Clodius, became an a in both these senses (Cic. *ad Att.* iv. 1, 2; *Fam.* xiv. 2). (3) An open space in front a temple, house, or public building, always ar of the edifice itself and abutting upon the reet or upon other buildings, and thus to be stinguished from the *vestibulum*, which was tween the projecting wings of the building self [DOMUS]. The *areas* before cemeteries ten contained the *ustrinum* or place where dies were burnt (*area ante sepulcrum est* [illegible] *cincta*, Orelli-Henzen, *Inscr.* 4400); and rtullian applies the word to the graveyards the Christians, who did not burn their dead *Scap.* 3; cf. *Dict. of Chr. Ant.* i. 252 a). se in front of temples were often named ter the god, and consecrated to prevent appro- iation or encroachment: thus we have *area* [illegible], *Saturni*, *Apollinis*, *Concordiae*, and [illegible], called also *Vulcanal* or *-ale*. The *area* [illegible] adjoined the temple of the Palatine [illegible] and the celebrated library; it may be [illegible] on the marble plan of Rome, of the age Severus, now known as the "Pianta Capito- [illegible]" where the letters REA APO may be read [illegible] of the fragments, and an altar is seen, [illegible]ed by a double flight of steps. The *Vul-* [illegible] was originally a considerable space on the [illegible] slope of the Capitol, but was gradually [illegible]ched upon by other structures, notably [illegible] Temple of Concord (Liv. ix. 46); so that we [illegible] find the phrase *area Vulcani et Concordiae* [illegible] 16), as if the two *areae* had become in- [illegible]ishable. (Compare Burn, *Rome*, pp. 85, [illegible]; Pauly, s. v. *Volcanale*; Marquardt, *Privat-* [illegible], p. 220.) (4) *Areae* were sometimes used market-places; there was an *area pannaria* d a *radicaria*. (5) A threshing-floor (ἅλως), cribed under AGRICULTURA. [W. W.]

AREIO'PAGUS. The Areiopagus (Ἄρειος γος, in native authors and inscriptions always thout the article), or hill of Ares, at Athens, s a rocky eminence, lying to the west of and t far from the Acropolis. To account for the me, various stories were told. Thus, some d that it was so called from the Amazons, the ghters of Ares, having encamped there when y attacked Athens; others again, as Aeschy- s, from the sacrifices there offered by them to at god; while the more received opinion con- cted the name with the legend of Ares having en brought to trial there by Poseidon, for the urder of his son Halirrhothius. (Dem. c. *ristocr.* p. 641, § 66; Aeschyl. *Eum.* 688.) To none, however, of these legends did the place owe its fame, but rather to the council (ἡ ἐν Ἀρείῳ πάγῳ βουλή) which held its sittings there, and was sometimes called ἡ ἄνω βουλή, to distinguish it from the Solonian senate of Four Hundred, or the later Cleisthenean senate of Five Hundred (Plut. *Sol.* 19). That it was a body of very remote antiquity, acting as a criminal tribunal, was evidently believed by the Athenians themselves. In proof of this, we may refer to the express assertions of the orators, and the legend of Orestes having been tried before the council for the murder of his mother—a trial which took place before Athena, and which Aeschylus represents as the origin of the court itself. Again, we find that even before the first Messenian war (B.C. 743) began, the Messenians offered to refer the points in dispute to the Argive Amphictyony, or the Athenian Areiopagus (Paus. iv. 5, § 1; Thirlwall, *H. G.*, i. 345), because this body was believed to have had jurisdiction in cases of manslaughter (δίκας φονικάς), "from of old."

There is sufficient proof, then, that the Areiopagus existed before the time of Solon; though Plutarch tells us that most of his authorities believed Solon to have been the founder, arguing from the silence of Draco, in whose laws the name Areiopagus did not occur. To this he replies that, in the ἄξονες on which the Solonian laws were recorded, the Areiopagus is expressly coupled with the phrase πρὶν ἢ Σόλωνα ἄρξαι (Plut. *Sol. l. c.*); and Grote further points out that as before Solon's time there was no other βουλή, Draco had no occasion to mention it. He concludes, therefore, "that the senate of Areiopagus is a primordial institution, of immemorial antiquity, though its constitution as well as its functions underwent many changes;" and for the earliest period accepts the suggestion, first thrown out by Meier and Schömann, that it seems to represent the Homeric council of old men (Grote, ch. x. ii. 281; *Att. Process*, Introd. p. 10). We hear of the Areiopagus chiefly as a judicial tribunal, because it acted in this character constantly throughout Athenian history, and it is in this capacity that the orators have most frequent occasion to allude to it. But in its original form it existed permanently as the highest deliberative authority, usually combined, in primitive institutions, with the functions of a supreme court of justice. Thus, to borrow an illustration from English history, a single *curia regis* was the germ from which the House of Lords, the Privy Council, and the High Courts of Justice were all developed. In pre-Solonian Athens, the functions of this ancient council had been so far specialised that it had become only a criminal court, trying cases "of wilful murder and wounding, of arson and poisoning" (Lex ap. Dem. *c. Aristocr.* p. 627, § 22; Pollux, viii. 117). These powers were abridged by Draco, who transferred to the Ephetae the cognisance of all cases of homicide. (The details of this change, and the question whether the name Ephetae existed before Draco, are discussed under EPHETAE.) This arrangement did not last long. The legislation of Solon restored to the Areiopagus all the more important powers connected with the δίκαι φονικαί, leaving to the Ephetae little more than a ceremonial purification of blood-guiltiness;

and, thus limited, the latter body soon withered and became a mere survival. The Areiopagus, on the contrary, acquired fresh powers in addition to those now restored, and entered upon its most brilliant period. It was invested by Solon with the general supervision of the state; in particular, it watched over the conduct of the magistrates in office; it controlled the proceedings of the popular assembly, with the right of stopping unconstitutional legislation; and it possessed a censorial power of maintaining public discipline, and of bringing private persons to account for their behaviour (Schömann, *Antiq.* pp. 326, 332, E. T.). Under his new scheme, the nine archons, if they had discharged their duties without blame, "went up" to the Areiopagus, and became members of it for life, unless expelled for misconduct (*Argum.* Dem. *c. Androt.* p. 589; Lex ap. Dem. *c. Timocr.* p. 707, § 22; Deinarch. *c. Demosth.* § 56; Plut. *Sol.* c. 18).

The council, then, after Solon's time, while it became timocratic in constitution, remained aristocratic in spirit. In fact, he is said to have formed the two councils, the senate and the Areiopagus, to be a check on the democracy; that, as he himself expressed it, "the state, riding upon them as anchors, might be less tossed by storms." Nay, even after the archons were no longer elected by suffrage but by lot, and the office was thrown open by Aristides to all the Athenian citizens, the "upper council" still retained its former tone of feeling.

Various details are given of the censorial and political powers entrusted by Solon to the body thus re-organised. Thus we learn that he made the council an "overseer of everything, and the guardian of the laws," empowering it to inquire how anyone got his living, and to punish the idle (Plut. *Sol.* c. 22; Isocr. *Areiop.* §§ 42, 43). We learn from other authorities that the Areiopagites were "superintendents of good order and decency,"—terms rather unlimited and undefined, as it is not improbable Solon wished to leave their authority. There are, however, recorded some particular instances of its exercise, even in the later days of Athenian history. Thus we find that they called persons to account for extravagant and dissolute living, and, on the other hand, occasionally rewarded remarkable cases of industry. In company with certain officers called γυναικονόμοι, they made domiciliary visits at private entertainments, to see that the number of guests was not too large, and for other purposes (Athen. iv. pp. 167 c—168 b, vi. p. 245 c; Pollux, viii. 112). It is stated on the authority of Aristotle (Plut. *Themist.* c. 10; cf. Boeckh, *P. E.* p. 154) that at the time of the advance of Xerxes on Athens, when there was no money in the public treasury, the Areiopagus succeeded in raising the sum of eight drachmas for every man on board the fleet. This does not prove that they had a treasury of their own, or any control of the public finances, as some have inferred; there is no evidence of either in ancient writers, and it is enough to suppose with Grote (iii. 455) that the council, then composed in large proportion of men from the wealthier classes, put forth all its public authority as well as its private contributions as an example to others. Again, we are told (Lycurg. *c. Leocr.* § 52), that at the time of the battle of Chaeroneia th seized and p to death those who deserted t eir country, that they were thought by so ie to have b the chief preservers of the city

It is probable that public inion support them in acts of this kind, w hout the ai which they must have been owerless for such objects. In connexion w h this point, may add that when heinous rimes had riously been committed, but t e guilty par were not known, or no accus r appeared, Areiopagus inquired into the subject, and ported (ἀποφαίνειν) to the De ios. The re or information was called ἀπο φασις. This a duty which they sometimes u dertook on t own responsibility and in the e ercise of an established right, and sometin es on the of the Demos. (Deinarch. *c. Dem.* §§ 54 Schömann, *Assemblies*, p. 224.) Nay, to an extent did they carry this power, that one occasion they arrested a man (A phon) who had been acquitted by the ge assembly, and again brought him to a t which ended in his condemnation and d (Dem. *de Cor.* p. 271, § 133; Deinarch. *c.* § 63.) Again, we find them revoking an app ment of the people whereby Aeschines was the advocate of Athens before the Amphicty council, and substituting Hyperides in his re In these two cases also, they were most prob supported by public opinion, or by a str party in the state. (Dem. *l. c.* § 134.)

They also had duties connected with relig one of which was to superintend the sacred oli growing about Athens, and try those who charged with destroying them. (Lysias, *τοῦ Σηκοῦ*, § 22.) We read, too, that in discharge of their duty as religious censors, they on one occasion examined whether the wife of the king archon was, as required by law, an Athenian; and, finding she was not, imposed a fine upon her husband. (Dem. *c. Neaer.* p. 137 § 80 ff.) We learn from the same passage, that it was their office generally to punish the impious and irreligious. Again we are told, though rather in a rhetorical way, that they relieved the needy from the resources of the rich, controlled the studies and education of the young, and interfered with and punished public characters as such. (Isocr. *Areiop.* § 55.) In another passage (§ 38) Isocrates tells us that the worst men, on becoming Areiopagites, restrained their vicious propensities under the influence o the dignified and decorous atmosphere of th court. His pamphlet, written to urge the restoration of the censorial powers of the Areiopagus after they had long been lost (probably about B.C. 355–353), must of course be received with caution; but it is at least evidence that th tribunal, though shorn of its glories by the reforms of Ephialtes, had not forfeited the publ respect.

Independently, then, of its jurisdiction as criminal court in cases of wilful murder, whi Solon continued to the Areiopagus, its influen must have been sufficiently great to have be a considerable obstacle to the aggrandisement the democracy at the expense of the other parti in the state. In fact, Plutarch (*Solon*, c. 1 expressly states that Solon had this object view in its reconstruction; and accordingly find that Pericles, who never was an archon

Areiopagite, and who was opposed to the aristocracy for many reasons, resolved to diminish its power and circumscribe its sphere of action. His coadjutor in this work was Ephialtes, a statesman of inflexible integrity, and also a military commander. (Plut. *Cim.* 10; *Pericl.* 7, 9.) They experienced much opposition in their attempts, not only in the assembly, but also on the stage, where Aeschylus produced his tragedy of the Eumenides, the object of which was to impress upon the Athenians the dignity, the sacredness, and constitutional worth of the institution which Pericles and Ephialtes wished to reform. He reminds the Athenians that it was a tribunal instituted by their patron goddess Athena, and puts into her mouth a popular harangue full of warnings against innovations, and admonishing them to leave the Areiopagus in possession of its old and well-grounded rights, that under its watchful guardianship they might sleep in security. (Müller, *Eum.* § 35.) Still the opposition failed: a decree was carried, about B.C. 458, by which, as Aristotle says, the Areiopagus was "mutilated," and many of its hereditary rights abolished. (Arist. *Pol.* ii. 12, § 4; Cic. *de Rep.* i. 27, § 43.) Plutarch (*Cimon*, 15) tells us that the people deprived the Areiopagus of nearly all its judicial authority (τὰς κρίσεις πλὴν ὀλίγων ἁπάσας), establishing an unmixed democracy, and making themselves supreme in the courts of justice, as if there had formerly been a superior tribunal. But we infer from another passage, that the council lost considerable authority in matters of state; for we learn that Athens then entered upon a career of conquest and aggrandisement to which she had previously been a stranger; that, "like a rampant horse, she would not obey the reins, but snapped at Euboea, and leaped upon the neighbouring islands." (Comicus, *ap.* Plut. *Cim.* 10.) These accounts in themselves, and as compared with others, are sufficiently vague and inconsistent to perplex and embarrass; accordingly, there has been much discussion as to the precise nature of the alterations which Pericles effected. In particular K. O. Müller (*Eum.* § 37) argued that he deprived the Areiopagus of their old jurisdiction in cases of wilful murder; and one of his chief arguments is that it was evidently the design of Aeschylus to support them in this prerogative, which therefore must have been assailed. This was also the view of Boeckh in a dissertation *de Areopago*, and of Meier and Schömann in *Att. Process.* But on the appearance of Forchhammer's *Disputatio de Areopago non privato per Ephialtem homicidii judiciis*, Kiel, 1828, Schömann at once modified his view and subsequently abandoned it altogether (*Att. Process*, p. 143, with Lipsius's notes in the new edition; *Antiq.* p. 342, E. T.); and since then it has been generally agreed by scholars and historians that the Areiopagus did not lose the δίκαι φονικαί (Godfrey Hermann, *Opusc.* iv. 299 ff.; K. F. Hermann, *Staatsalterth.* § 109, 6; Thirlwall, iii. 24; Grote, ch. xlvi., iv. 104–112; Curtius, ii. 382, E. T.; Westermann, in Pauly; Caillemer, in Daremberg and Saglio). The main argument on the other side rests on an expression of Lysias (*de Caede Eratosth.* § 30): τῷ δικαστηρίῳ τῷ ἐξ Ἀρείου πάγου ᾧ καὶ πάτριόν ἐστι καὶ ἐφ' ἡμῶν ἀποδέδοται τοῦ φόνου τὰς δίκας δικάζειν. This was held to mean that the δίκαι φονικαί, lost in the time of Ephialtes, were only restored in the archonship of Eucleides, B.C. 403. But the language of Demosthenes is equally explicit, that neither tyrant nor democracy had dared to take away this jurisdiction from the Areiopagus (*c. Aristocr.* p. 641, § 66). As G. Hermann pointed out (*Opusc. l. c.*), ἀποδέδοται in Lysias may easily mean *competit*, "is within its competence," not "has been restored:" and even if the latter sense be retained, it is enough to say that under the Thirty all laws had been trampled upon, and with the restoration of democracy things resumed their natural course (Grote, *l. c.* p. 112 n.). It may be further remarked that the consequences ascribed to the innovation do not indicate that the Areiopagus lost its authority as a criminal tribunal, but rather that it was shorn of its power as superintending the morals and conduct of the citizens, both in civil and religious matters, and as exercising some control over their decisions. This supervision had extended to the proceedings of the Ecclesia, taking care that the latter did not infringe the established laws or the existing balance of the constitution. These powers were vast and undefined, not derived from any formal grant of the people, but having their source in immemorial antiquity, and sustained by general awe and reverence. Such powers, as Grote remarks, were pretty certain to be abused; and if we grant that personal corruption was rare in an assembly spoken of with so much respect even by its political opponents, we must admit that such powers would be habitually exercised in a conservative sense, and one suitable only to a passive and stationary people. The expansion of Athens, during the twenty years which followed the battle of Plataea, would be cramped and hindered by them; and in this we must see (with Grote) the justification of the measures of Pericles and Ephialtes. The separation of judicial from executive functions was not, as Aristotle called it, a dissolution of all governmental authority (ὥστε καταλύονται πᾶσαι αἱ ἀρχαί, *Pol.* iv. 5, § 6), but conformable to the best modern notions; and Pericles cannot be censured for having effected this separation, whatever we may think of the dicasteries and the irresponsible assembly between whom the powers taken from the Areiopagus were now divided. It was at this time, probably, that the Areiopagus, like the Senate of Five Hundred, became accountable to the Demos, as, indeed, we know they afterwards were. (Aeschin. *c. Ctes.* § 20; Boeckh, *P. E.* p. 189.)

The general power of supervision, now taken from the Areiopagus, became vested in seven new magistrates called νομοφύλακες [NOMOPHYLAKES], who were in their turn abolished when, in the archonship of Eucleides, the Areiopagus received back a part of its former controlling authority. The decree of Tisamenus on this occasion is preserved by Andocides: the laws were first to be revised by special νομοθέται, called also ἀναγραφεῖς, and then the Areiopagus was to watch over their enforcement (ἐπειδὰν δὲ τεθῶσιν οἱ νόμοι, ἐπιμελείσθω ἡ βουλὴ ἡ ἐξ Ἀρείου πάγου τῶν νόμων, ὅπως ἂν αἱ ἀρχαὶ τοῖς κειμένοις νόμοις χρῶνται, *ap.* Andoc. *de Myst.* § 84). It must be admitted, with Grote and Schömann, that neither the Nomophylakes, while they lasted, nor the Areiopagus in its renewed vitality, were able to exercise any real check upon the irresponsible Demos. In the last century of Athenian liberty, the γραφὴ παρανόμων gradually superseded every other form of control over constitutional changes. (Grote, ch. xlvi., iv. 115; Schömann, *Antiq.* p. 346, E. T.)

But, though thus brought under the democratic rule of accountability in all the officers of the state, no subserviency in judicial matters is imputed to the Areiopagus. Their tribunal, on the contrary, is always spoken of as most just and holy; Demosthenes goes so far as to say that not even the condemned criminal or baffled prosecutor whispered an insinuation against the righteousness of their verdicts (*c. Aristocr.* p. 642, § 66 f.). Indeed, the proceedings before them in cases of murder were by their solemnity and fairness well calculated to insure just decisions. The process was as follows:—The king archon (Pollux, viii. 90) brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal. (Antiphon, *de Caede Herod.* § 11; Pollux, viii. 33.) The accuser, who was said εἰς Ἄρειον πάγον ἐπισκήπτειν, first came forward to make a solemn oath (διωμοσία) that his accusation was true, standing over the slaughtered victims, and imprecating extirpation upon himself and his whole family, were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges (προοιμιάζεσθαι οὐκ ἐξῆν οὐδὲ οἰκτίζεσθαι, Aristot. *Rhet.* i. 1; Pollux, viii. 117). The speakers were mounted upon two unhewn stones (ἀργοὶ λίθοι), still visible on the spot; that of the accused was called λίθος ὕβρεως, that of the prosecutor λίθος ἀναιδείας (Pausan. i. 28, § 5). The latter is wrongly rendered *impudentiae* by Cicero (*de Leg.* ii. 11, § 28); it is really unforgivingness or implacability. After the first speech (μετὰ τὸν πρότερον λόγον), a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's θεσμοί, which on this point were still in force. Except in cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home (φεύγει ἀειφυγίαν); and when any decree was passed at Athens to legalise the return of exiles, an exception was always made against those who had thus left their country (οἱ ἐξ Ἀρείου πάγου φεύγοντες). See Plat. *Leges*, ix. 871 D.

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us (xii. 7) that C. Dolabella, proconsul of the Roman province of Asia, referred a case which perplexed himself and his council to the Areiopagus (*ut ad judices graviores exercitatioresque*); they ingeniously settled the matter by ordering the parties to appear that day 100 years (*centesimo anno adesse*). They existed in name, indeed, till a very late period. Thus we find Cicero mentions the council in his letters (*ad Fam.* xiii. 1; *ad Att.* i. 14, v. 11); and under the emperors Gratian and Theodosius (A.D. 380), Ῥούφιος Φῆστος is called proconsul of Greece, and an Areiopagite. (Meursius, *Areiop.*)

Of the respectability and moral worth of the council, and the respect that was paid to it, we have abundant proof in the writings of the Athenian orators, where, indeed, it would be difficult to find it mentioned except in terms of praise. Thus Lysias speaks of it as most righteous and venerable (*c. Andoc.* § 14); and so great was the respect paid to its members, that it was considered rude in the people laughing in their presence, while one of them was making an address to the assembly on a subject they had been deputed to investigate (Aeschin. *c. Timarch.* § 84). This respect might, of course, facilitate the resumption of some of their lost power, more especially as they were sometimes intrusted with inquiries on behalf of the state, as on the occasion to which we have just alluded, when they were made a sort of commissioners, to inquire into the state of the buildings about the Pnyx, and decide upon the adoption or rejection of some proposed alterations. Isocrates, indeed, even in his time, when the previous inquiry or δοκιμασία had fallen into disuse, speaks well of their moral influence; but shortly after the age of Demetrius Phalereus, a change had taken place; they had lost much of their respectability, and were but ill fitted to enforce a conduct in others which they did not observe themselves. (Athen. iv. 167, e, f.)

The case of St. Paul (Acts xvii. 22) is generally quoted as an instance of their authority i religious matters; but the words of the sacr historian do not necessarily imply that he w brought before the council. It may, howev be remarked, that they certainly took cognisa of the introduction of new and unauthoris forms of religious worship, called ἐπίθετα ἱερ in contradistinction to the πάτρια or older rites of the state. (Harpocrat. *s. vv.* Ἐπίθετα Ἑορταί; Schömann, *de Comitiis*, p. 286, transl.)

With respect to the number of the Areiopag in its original form, a point of no great mome we are altogether in the dark; but it is pl that there could have been no fixed numb when the archons became members of this b at the expiration of their year of office. Ly indeed, speaks of them (Περὶ τοῦ Σηκοῦ, § but see *Argum.* Dem. *c. Androt.* p. 589) as fo ing a part of the Areiopagus even during t time; a statement which can only be reco ciled with the general opinion on the subj by supposing that they formed a part of council during their year of office, but w not permanent members till the end of t time, and after passing a satisfactory exam tion. [R. W.] [W.

ARE'NA. 1. Sand. The composition of R mortar and cement is described under St TURA: we here notice the different kinds sand employed,—a subject to which Vitru has devoted a chapter (ii. 4). He reckons kinds of pit sand (*fossilis*), besides sea river sand; the black (*nigra*), the white (c the red (*rubra*), and the volcanic (*carbun* cf. Varr. *L. L.* i. 9, 2). Pliny recognises the distinctions of sea, river, and pit not those of colours (*H. N.* xxxvi. §§ 54, In another chapter (ii. 6) Vitruvius descri the *pulvis Puteolanus*, or volcanic sand of neighbourhood of Vesuvius, as a different material, unaware that it is substantially identical with that of the Roman Campagna. The modern name *pozzolana* is applied indifferently to both.

2. [Amphitheatrum.] [W. W.]

ARENA'RII are mentioned in inscriptions as formed into *collegia* (Orelli-Henzen, Nos. 2773, 4063). The meaning of the name is variously explained as gladiators fighting in the *arena*, persons who swept it and looked after it (Orelli), or diggers in an *arenaria* or sand-pit (Muratori). The first of these three senses is the most probable; they are named in connexion with *lanistae*, *scenici*, *venatores*, &c., and Tertullian calls them *amentissimi* and *infames* (*de Spect.* 22, cf. Petron. *Sat.* 126; Capitol. *Aurel. Philosoph.*, c. 19; Rein, *ap.* Pauly, i.² *s. v.*). [W. W.]

ARETA'LOGI, a class of persons whose conversation formed one of the entertainments of the Roman dinner-tables (Suet. *Octav.* 74). The word literally signifies *persons who discourse about virtue*; and the class of persons intended seem to have been poor philosophers, chiefly of the Cynic and Stoic sects, who, unable to gain a living by their public lectures, obtained a maintenance at the tables of the rich by their philosophical conversation. Such a life would naturally degenerate into that of the parasite and buffoon; and accordingly we find these persons spoken of contemptuously by Juvenal, who uses the phrase *mendax aretalogus*: they became a sort of *scurrae*. (Juv. *Sat.* xv. 16; cf. Casaubon. *ad Suet. l. c.*; Mayor, *ad Juv. l. c.*) [P. S.] [A. S. W.]

ARGE'I. We learn from Livy (i. 21) that Numa consecrated places for the celebration of religious services which were called by the pontifices *Argei*. Varro calls them the chapels (*sacella*) of the Argei, and says they were twenty-seven in number, distributed in the different districts of the city (*L. L.* v. 45). The number 27 appears to be a copyist's mistake for 24, the number implied by Varro himself in another passage (vii. 44), *i.e.* six for each of the four ancient regions of Rome. They seem also to have been the depositories of topographical records. Thus we read in Varro,—*In sacreis Argeorum scriptum est sic: Oppius mons princeps, &c.*, which is followed by a description of the neighbourhood. They were said to be named from the chieftains who came with Hercules, the Argive, to Rome, and occupied the Capitoline or, as it was anciently called, Saturnian hill. These Argives, according to the legend, either cast themselves, or directed that their dead bodies should be cast, into the Tiber, in the hope of being carried down to Argolis. In this latter part of the story we may probably recognise an attempt to explain the ceremony of the Ides (15th) of May, when certain osier figures of men called *argei* were thrown into the Tiber from the pons Sublicius by the Vestals, as a reminiscence (not, as is most likely the truth, of human sacrifices to indigenous ancient divinities, but) of that early connexion of the Greek Heracles with the fortunes of Rome which Roman writers so generally sought to establish. Dionysius of Halicarnassus seems to mix up both explanations in his statement that the custom, continuing to his times, was instituted by Hercules to satisfy the scruples of the natives when he abolished the human sacrifices formerly made to Saturn. He gives the number of images as 30: Varro speaks of 24, which, if we read xxiiii for xxvii, as suggested above, in v. 45, makes one victim for each of the Argei. Whether, finally, the name Argei originally belonged to deities themselves, and passed from them to their shrines and their victims, must remain undecided: that the cultus associated with the name was archaic, analogous to that of the Lares, and involving human sacrifices, seems clearly deducible from our documents. The subject has been specially treated by Liebrecht in *Philologus*, xxiii. pp. 679 ff., and Bouché-Leclercq, *Les Pontifes de l'ancienne Rome*, pp. 268 ff.: cf. Jordan, *Topogr. d. Stadt Rom*, ii. p. 236; Burn, *Rome*, p. 39; *Dict. of Gr. and Rom. Geogr.* ii. p. 733 foll. The chief classical sources are Varro, *L. L.* v. 45, vii. 44; Ov. *Fast.* v. 621 ff.; Gellius, x. 15; Dionys. Halic. i. 38; Macrob. i. 2, § 47. [R. W.] [W. W.]

ARGENTA'RII (τραπεζῖται), dealers in money, included money-changers, usurers or money-lenders, and bankers properly so called, or intermediaries between business men.

1. Greek. The primitive "tables of the money changers," set up throughout Greece in the market-place and other public resorts (Plat. *Apol.* p. 17 C; *Hipp. Min.* p. 368 B), like the *mensa argentaria* of the Romans and the "bench" of the mediaeval Italians, acquired an enlarged meaning with the development of commerce; and the name τραπεζίτης was applied indifferently to men who carried on several distinct branches of business which might, or might not, be combined in the same hands. The κερματιστής (the noun is post-classical, but κερματίζω and κατακερματίζω are both found) gave small change for the larger coins, as obols for drachmas: the κολλυβιστής changed foreign money at an agio (καταλλαγή), or provided gold to be remitted abroad (Isocr. *Trapez.* § 40; Dem. *de Fals. Leg.* p. 376, § 114=124, with Shilleto's note; *c. Polycl.* p. 1216, § 30; Pollux, iii. 84, vii. 170). The δανεισταί advanced money at high interest to the necessitous, or lent it on the security of ships and their cargoes—a hazardous speculation when marine insurance was unknown; hence at Athens their headquarters were in the Peiraeus, and it was even said, doubtless with some exaggeration, that no ship could leave the port without this accommodation to traders (Dem. *c. Phorm.* p. 922, § 51). This class of business, and even the more legitimate banking, was mostly carried on by μέτοικοι or resident aliens and freedmen, who, like the Jews in the Middle Ages, bore themselves submissively towards the citizens, and had to console themselves with large profits for much social inferiority and disrepute and occasional ill-treatment. Thus Cephisiades, a man of this type, is called μέτοικος καὶ οὐδὲν δυνάμενος (Dem. *c. Callipp.* p. 1243, § 25). There were, however, bankers who enjoyed a wide connexion and had the management of large sums of money, and whose position as men of business had won them general confidence. The most conspicuous example of this class is the well-known Pasion, who, through his litigious son Apollodorus, occupies a large space in the Demosthenic orations. (For a sketch of his career, see Mahaffy, *Social Life in Greece*, ed. 3, pp. 414–418; Sandys, Introductions to Dem. *pro Phorm.* and *c. Steph.*) As in modern times, such bankers received money

on deposit at a low interest (or what passed for such) and lent it out at a higher. A banking account without interest, for the mere convenience of receiving dividends and paying cheques, was a conception as unknown to the Greeks as a joint stock or a State bank. The interest allowed to depositors may perhaps be inferred from a passage in Demosthenes: the father of the orator had, besides the capital invested in his two businesses as a cabinet-maker and sword-cutler, a talent out on loan, seemingly with the *τραπεζῖται*, at the rate of a drachma per mina per month, or 12 per cent. a year (*ἐπὶ δραχμῇ δεδανεισμένον*, *c. Aphob.* i. p. 816, § 9); he had also some money in Pasion's and two other banks (*ib.* § 11). Half as much again, or 18 per cent. (*ἐπ' ἐννέα ὀβολοῖς*), was a common rate of interest at Athens, as we see in the case of divorced couples: if the husband neglected or delayed to refund the dowry he had received with his wife, her guardians (*κύριοι*) could proceed against him for the principal and interest calculated at that rate. Sixteen per cent. (*ἐπ' ὀκτὼ ὀβολοῖς*) is mentioned as charged for a mortgage upon a house (Dem. *c. Nicostr.* p. 1250, § 13, with Sandys' note). But where the security was bad, the bankers clearly made much higher profits, and even the leading men among them were not ashamed to act the usurer's part, and to trade upon the necessities of the spendthrift and of men beginning business without capital. Thus in an important fragment of Lysias (i. ed. Teubner, B. ed. Oxon.), Aeschines, the disciple of Socrates, is described as, after having tried tavern-keeping and apparently failed in it, setting up a perfumery business with money borrowed at 36 per cent. In the case of bottomry loans or advances on ships' voyages, as the principal was lost if the ship foundered, 25 or 30 per cent. in proportion to the risks was regarded as legitimate business (Dem. *c. Lacr.* p. 926, § 10. This *συγγραφή*, as an "inserted document," is liable to some suspicion, but it is accepted not merely by Boeckh, *P. E.* p. 137, but by recent scholars, such as Büchsenschütz, *Besitz und Erwerb*, p. 498). For fuller details on the subject of the interest of money, see Fenus.

Among the securities on which money could be raised we find plate and valuables (Dem. *c. Nicostr.* p. 1249, § 9), land and houses (*c. Phorm.* p. 946, § 6). We have here, perhaps, the explanation of the fact that citizenship was somewhat freely conferred on leading bankers, even if, like Pasion and his manager and successor Phormio, they were of servile origin. The right of holding real property (*ἔγγειος οὐσία*) was confined to citizens, to the exclusion of *ξένοι* and *μέτοικοι*: and had all the lenders belonged to the latter class, no Athenian would have been able to take up money on mortgage, as no one would have lent if debarred from taking possession of the security in default of payment.

The notion of many Greeks (which a few years ago might have been pronounced exploded, but has lately been revived in unexpected quarters) that all taking of interest partook of the nature of usury, was shared even by Aristotle (*εὐλογώτατα μισεῖται ἡ ὀβολοστατική*, *Pol.* i. 10, 4). While not altogether escaping the reproach which attached to their calling as such, the higher class of bankers in many instances acquired much personal respect, and a high reputation for ability combined with honesty (Dem. *pro Phorm.* p. 957, § 44); their credit enabled them to raise money at a moment's notice in distant cities (id. *c. Polycl.* p. 1224, § 56). Such confidence was placed in them, that sometimes business was transacted with them without witnesses (Isocr. *Trapez.* §§ 2, 53); money and contracts of debt were deposited with them, and agreements were concluded or cancelled in their presence (Dem. *c. Callipp.* p. 1242, § 24; *c. Dionysod.* p. 1287, § 15). They had thus become, as Hermann remarks, a sort of unofficial notaries public. On the other hand there are instances of bankers losing everyth they possessed, and becoming utterly bankru (*ἐκστῆναι τῶν ὄντων*, Dem. *pro Phorm.* p. 95 § 50; *c. Steph.* i. p. 1120, § 64; *ἀνασκευάζε* *c. Apatur.* p. 895, § 9; *c. Timoth.* p. 1204, § 6 The high rates of interest that ruled are themselves enough to prove that the securi was often bad; and there is other evidence the unsatisfactory condition of banks and ban ing. The law of debt was severe, but ba administered; and in the ill-regulated and i pulsive Athenian dicasteries, the fraudul debtor had at his command every species subterfuge and dishonest contrivance against t creditor. In the *Apaturius*, we see the shifts borrowers to escape or transfer liability; the *Trapeziticus*, no less a person than P himself is openly accused of repudiation, bac by forgery (cf. Jebb, *Att. Or.* ii. 222-226). have, it is true, only one side of each case, are unable to judge of their merits; but fact remains that such charges were made open court, and fought out with a good deal hard swearing. Prof. Mahaffy observes: "P haps the safest and clearest evidence as to th insecurity is the fact stated on the bankers' that when Pasion's son had his choice of business worth 60 minae, or a bank worth 1 in respective yearly income, he justly, says orator, preferred the ownership of the bu establishment, on account of the insecurity an income made from other people's mo This speaks volumes on the point, and is sufficient evidence of the bad conditio banking" (Mahaffy, p. 413; Dem. *pro Ph* p. 948, § 11).

Before the rise of this system, the plac banks was to some extent supplied by the t ples, which played no unimportant part in Greek commerce. They were used as safe p for the deposit of treasure; and having l funds of their own, derived from the re their estates and from votive offerings, employed productively both these and the confided to their care. Thus Cleisthenes the Alcmaeonidae borrowed from the Del sanctuary, with the consent of the Amphicty the funds with which the Pisistratids were thrown (Isocr. *Antid.* § 232; Dem. *c. M* 561, § 144): and at the outbreak of the P ponnesian war the Corinthians proposed to a fleet with loans effected at Delphi and Oly (Thucyd. i. 121). It has been thought that temples confined themselves to State loans, did not lend money to individuals: Büch schütz, however, has shown from the D *Marmor Sandvicense* (cf. Amphictyons) other inscriptions, that private persons enj this accommodation. To the undoubted general rule, that no banks were either worked or guaranteed by the State, an exception was imagined to exist at Byzantium on the strength of a passage in Aristotle (*Oecon.* ii. 4, § 4): all that is really stated is that an impoverished government, among other expedients, sold a monopoly of money-changing to a particular bank. (Boeckh, *P. E.* bk. i., ch. xxii.; K. F. Hermann, *Privatalterth.* § 48; Büchsenschütz, *Besitz und Erwerb*, pp. 500–510; Becker-Göll, *Charikles*, sc. iv.; Mahaffy, *Social Life in Greece*, ed. 3, ch. xiii.) [W. W.]

2. ROMAN. The existence of bankers (*argentarii*) at Rome can be proved as early as 309 B.C. (See Liv. ix. 40, 16.) There does not seem any sufficient evidence to show that these were silversmiths; and it would be contrary to the simplicity of the times that the establishments of the silversmiths should have been so numerous as to form a prominent feature in the town. Silver was not coined at Rome till 268 B.C.; but the term *argentarii* can be very well explained if we regard them as the exchangers of foreign, especially South Italian and Etruscan, silver coin into Roman bronze currency. (See Weissenborn on Livy, *l. c.*) Of course, in imperial times, *argentarius* meant a silversmith. (Lamprid. *Alex. Sev.* 24; Cod. Theod. xii. 1, 37; xiii. 4, 2: cf. Marquardt, *Privatl.* 675, note 10; Wilmann's Index, 645.)

As a distinct class the bankers were called *argenteae mensae exercitores* (Dig. 2. 13, 4, pr.), *negotiatores stipis argentariae* (Orelli, 4060); and, indeed, *negotiatores* simply was the title of the dealers in money as they appear in the Roman provinces (Marquardt, *Staatsverw.* i.^{2} 539 *sq.*). But we find allusion often made to NVMMVLARII and MENSARII or MENSVLARII, terms which seem synonymous; for Festus explains *mensarius* by *nummularius* (cf. Suet. *Aug.* 4). That these are in some respects different from, though as regards pure banking business very similar to, the *argentarii*, is certain from Dig. 2. 13, 9, 2: "Nummularios quoque non esse iniquum cogi rationes edere Pomponius scribit; quia et hi nummularii sicut argentarii rationes conficiunt, quia et accipiunt pecuniam et erogant per partes quarum probatio scriptura codicibusque eorum maxime continetur; et frequentissime ad fidem eorum decurritur." How did they differ?

Some writers say the *argentarii* were private ankers, the *mensarii* and *nummularii* public. Heimbach (*Die Lehre von dem Creditum*, p. 619) holds just the reverse view. The *argentarii* were public state-licensed bankers, the *nummularii* an inferior sort of money-changers, says Neumann (*Handlexikon zu den Quellen des röm. Rechts*, 1884, *s. vv.*). All these authors, when fully understood, state what seems to be the true view, which appears to be as follows:—The *argentarii*, we saw above, were money-changers (though later their functions in this department passed to the *nummularii*), and as such had necessarily always considerable sums of ready money on hand. Now such holders and dealers in money are the natural bankers. But they were private individuals. Whenever in early times we hear of public or state bankers, they are appointed for a special emergency (*quinqueviri* or *tresviri mensarii*, Liv. vii. 21, 5; xxiii. 21, 6), chiefly to lend money to private individuals during a financial crisis (Liv. xxii. 60, 4; xxiii. 21, 6: cf. Lange, *Röm. Alt.* ii. 173), though when appointed they fulfilled other state-banking business (Liv. xxiv. 18, 12; xxvi. 36, 8). Appointments of this kind occur twice during the Republic, in 351 B.C. and 216 B.C. When the Aerarium lent aid in a similar crisis in 33 A.D., Tiberius seems to have done it through the ordinary bankers (Tac. *Ann.* vi. 17), though Mommsen (*Staatsrecht*, ii.^{2} 692) thinks that here too a special commission was appointed.

Somewhat different are the *nummularii*. At the outset this title appears to have been confined to state-officers, but officers of the mint and not bankers. It was they who assayed the coins (Dig. 46. 3, 39; cf. Otto Hirschfeld, *Verwaltungsgeschichte*, i. 95, note 5, and *C. I. L.* vi. 298), and who distributed the newly-coined money among the people. These latter were also called *collectarii* (Symmachus, *Epist.* v. 49, who applies both terms to them), and in Greek ἀργυραμοιβοί (Procop. *Anecd.* 25). But here again is a class who deals in and possesses considerable quantities of ready money, and so are natural bankers; and, as time went on, they came to be allowed to transact, besides their official functions, pure banking business, *i.e.* receiving deposits, opening current accounts, making loans, &c. (Dig. 16. 3, 7, 2, *nummularii*; 42. 5, 24, 2, *mensularii*): and thus, in point of law, so far as banking was concerned, were assimilated to the *argentarii* (Dig. 2. 13, 9, 2, quoted above). So all three terms came to be used indiscriminately for bankers; and a good example is the fact that all three are applied to the grandfather of Augustus. (Suet. *Aug.* 2 and 4.)

But though the bankers were private business men, they were regarded as exercising a public function. (Dig. 2. 13, 10, 1, "quia officium eorum atque ministerium publicam habet causam et haec principalis eorum opera est ut actus sui rationes diligenter conficiant;" 42. 5, 24, 2, "fidem publicam secuti"); and this is further shown by the special provisions the law made as regards *argentarii* in reference to COMPENSATIO (Gaius, iv. 66, 68; and Poste *ad loc.*), and the Actio RECEPTITIA (Sandars on Just. *Inst.* iv. 6. 8, 9; Salkowski, § 128). Just as stockbrokers in London are licensed by the Lord Mayor, and in Dublin by the Lord Lieutenant, so in imperial times at Rome the bankers were under the supervision of the *praefectus urbi* (Dig. 1. 12, 1, 9), and in the provinces under that of the governor (Suet. *Galb.* 9); and Pagenstecher (*De litterarum obligatione*, &c., p. 28) has supposed that they were licensed by the state. We can thus see how and in what sense the opinion has arisen that one or other class were public bankers. Both, as far as they were bankers, were just as much private and just as much public as (say) our stockbrokers.

The *argentarii* then were strictly bankers; and their various functions may be classified as follows: — 1. *Permutatio*, or the exchange of foreign coin for Roman coin, in which case a small agio (collybus) was paid to them. (Cic. *in Verr.* iii. 78, 180.) In later times, when the Romans became acquainted with the Greek custom of using bills of exchange, the Roman *argentarii*, e.g., received sums of money which had to be paid at Athens, and then drew a bill payable at Athens by some banker in that city (*permutare Athenas*, Cic. *ad Att.* xv. 15, 4). This mode of transacting business is likewise called *permutatio* (Cic. *ad Att.* xii. 24, 1, 27, 2, xv. 15, 4; comp. v. 15, 2, xi. 1, 2, 24, 3; *ad Fam.* ii. 17, 7, iii. 5, 4; *ad Quint. Frat.* i. 3, 7; *pro Rabir. Post.* 14, 40), and rendered it necessary for the *argentarii* to be acquainted with the current value of the same coin in different places and at different times. (See the comment. on Cic. *pro Quinct.* 4, 17.) 2. The keeping of sums of money for other persons. Such money might be deposited by the owner merely to save himself the trouble of keeping it and making payments, and in this case it was called *depositum;* the *argentarius* then paid no interest, and the money was called *vacua pecunia*. When a payment was to be made, the owner drew a cheque. (Plaut. *Curcul.* ii. 3, 66, &c.; iii. 66, &c.) Or the money was deposited on condition of the *argentarius* paying interest: in this case the money was called *creditum*, and the *argentarius* might of course employ the money himself in any lucrative manner (Suet. *Aug.* 39). In case of failure the law enacted that the claims of *depositarii* should be satisfied before those of creditors who had money at interest in the bank (Dig. 16. 3, 7, 2). The *argentarius* thus did almost the same sort of business as a modern banker. Many persons entrusted all their capital to them (Cic. *pro Caec.* 6, 16); and instances in which the *argentarii* made payments in the name of those whose money they had in hand, are mentioned very frequently. A payment made through a banker was called *per mensam*, *de mensa*, or *per mensae scripturam*, while a payment made by the debtor in person was a payment *ex arca* or *de domo*. (Plaut. *Curcul.* v. 3, 7, &c., *Capt.* ii. 3, 89; Cic. *ad Att.* i. 9, *Top.* 3; Schol. *ad* Hor. *Sat.* ii. 3, 69; Senec. *Epist.* 26, 8; Gaius, iii. 131; Donat. *ad* Ter. *Phorm.* ii. 413.) An *argentarius* never paid away any person's money without receiving a cheque which was called *perscriptio*, and the payment was then made either in cash, or, if the person who was to receive it kept an account with the same banker, he had it added in the banker's book to his own deposit. This was likewise called *perscribere* or simply *scribere*. (Plaut. *Asin.* ii. 4, 34, &c., *Curc.* v. 2, 20; Donat. *ad* Ter. *Phorm.* v. 7, 28, &c., *ad Adelph.* ii. 4, 13; Cic. *ad Att.* iv. 18, § 2, ix. 12, 3, xii. 51, 3, *Phil.* v. 4, *in Verr.* v. 19; Hor. *Sat.* ii. 3, 76.) We also find that *argentarii* made payments for persons who had not deposited any money with them: this was equivalent to lending money, which in fact they often did for a certain percentage of interest. (Plaut. *Curc.* iv. 1, 19; 2, 22, &c., *Epid.* i. 2, 40; Tac. *Ann.* vi. 17.) Of all this business, of the receipts as well as of the expenditure, the *argentarii* kept accurate accounts in books called *codices*, *tabulae* or *rationes* (Dig. 2. 13, 1, 1), and there is every reason for believing that they were acquainted with what is called in book-keeping double entry [LITTERARUM OBLIGATIO]. When an *argentarius* settled his accounts with persons with whom he did business, it was done either in writing or orally, both parties meeting for the purpose (Dig. 2, tit. 14, s. 47, § 1; 14, tit. 3, s. 20; Plaut. *Aulul.* iii. 5, 53, &c.), and the party found to be in debt paid what he owed, and then had his name effaced (*nomen expedire, exsolvere* or *expungere*) from the banker's books. (Plaut. *Cist.* i. 3, 41; Cic. *ad Att.* xvi. 6.) As the books of the *argentarii* were generally kept with great accuracy, and particularly in regard to dates (Dig. 2. 13, 6, 6), they were looked upon as documents of high authority, and were appealed to in the courts of justice as unexceptionable evidence. (Cic. *pro Caec.* 6, 16; Gellius, xiv. 2.) Hence the *argentarii* were often concerned in civil cases, as money transactions were rarely concluded without their influence or co-operation. Their codices or tabulae could not be withheld from a person who in court referred to them for the purpose of maintaining his cause, and to produce them was called *edere* (Dig. 2, tit. 13, s. 1, § 1), or *proferre codicem* (2, tit. 13, s. 6, §§ 7, 8). 3. Their connexion with commerce and public auctions. This branch of their business seems to have been one of the most ancient. In private sales and purchases, they sometimes acted as agents for either party (*interpretes*, Plaut. *Curc.* iii. 1, 64), and sometimes they undertook to sell the whole estate of a person, as an inheritance. (Dig. 5, tit. 3, s. 18; 46, tit. 3, s. 88.) At public auctions they were almost invariably present, registering the articles sold, their prices and purchasers, and receiving the payment from the purchasers. (Cic. *pro Caec.* 6, 16; Quintil. xi. 2, 24; Suet. *Ner.* 5; Gaius, iv. 126; Capitolin. *M. Anton. Phil.* 9.) At auctions, however, the *argentarii* might transact business through their clerks or servants, who were called *coactores* from their collecting the money. Horace's father (Hor. *Sat.* i. 6, 86) and Vespasian's grandfather (Suet. *Vesp.* 1) were *coactores*. This business, connected with auctions, seems to have belonged exclusively to *argentarii*.

Banking establishments were often owned by several partners (*socii*), and we find some special peculiarities about such partnerships: *e.g.* each partner was liable by custom for the debts of the firm (*ad Herenn.* ii. 13); again, each partner had an action against a debtor to the firm (Dig. 2. 14, 27). For other peculiarities see Dig. 2. 4, 9 and 25; and Humbert in Saglio's *Dict.* p. 408. Slaves were allowed to act as bankers on their own account with their *peculium*, and the master was liable for the amount of the *peculium* sunk in the business (Dig. 2. 13, 4, 3); but generally the slave was only the manager of the bank (*institor*) for his master (Dig. 14. 3, 19, 3). During imperial times the *argentarii*, like so many other branches of the community, organised themselves into a collegium, and we find in the 3rd century two Roman inscriptions originating from them (Orelli, 913, 995); and Justinian, *Nov.* 136 pr., mentions the ἀργυροπρᾶται as a corporation at Constantinople.

As regards the respectability of the *argentarii*, the passages of the ancients seem to contradict one another, for some writers speak of their occupation as respectable and honourable (Cic. *pro Caec.* 4, 10; Aurel. Vict. 72; Suet. *Vesp.* 1; Acron. *ad* Hor. *Sat.* i. 6, 86), while others speak of them with contempt (Plaut. *Curc.* iv. 2, 20, *Casin.* Prol. 25, &c.); but this contradiction may be easily reconciled by distinguishing between a lower and a higher class of *argentarii*. A wealthy *argentarius* who carried on business on a large scale was undoubtedly as much a person of respectability as a banker in modern times; but others who did business only on a small scale, or degraded their calling by acting as usurers, cannot have been held in any esteem. It has already been observed that the *argentarii* had their shops round the forum (Liv. ix. 40, xxvi. 11, 27; Plaut. *Truc.* i. 1, 51; Terent. *Phorm.* v. 8, 28, *Adelph.* ii. 4, 13); hence to become bankrupt was expressed by *foro cedere*, or *abire*, or *foro mergi*. (Plaut. *Epid.* i. 2, 16; Dig. 16, tit. 3, s. 7, § 2.) The shops or booths were public property, and built by the censors, who sold the use of them to the *argentarii* (Liv. xxxix. 44, xl. 51, xli. 27, xliv. 16). Comp. J. G. Sieber, *Dissertat. de Argentariis*, Lipsiae, 1737; H. Hubert, *Disput. juridicae III. de Argentaria veterum*, Traject. 1739; W. T. Kraut, *de Argentariis et Nummulariis*, Göttingen, 1826; G. E. Walter, *Geschichte des römischen Rechts*, Bonn, 1860, § 202; Marquardt, *Römische Staatsverwaltung*, Leipzig, 1876, vol. ii. pp. 63–66; Saglio and G. Humbert *ap.* D. and S. [L. C. P.]

ARGENTUM. The use of silver among the Greeks, although no doubt later introduced than that of gold, dates from pre-historic times. In the archaic tombs opened by Dr. Schliemann at Mycenae were several vessels and ornaments of silver. Homer mentions on several occasions vessels of silver, sometimes as coming from Sidon (*Il.* xxiii. 743), sometimes as imported from Egypt (*Od.* iv. 125), sometimes as of home manufacture (*Od.* xix. 57). Our museums exhibit numerous specimens of all these kinds of ware. The method of manufacture in early times was the same for silver as for gold and copper: the material was beaten out with a hammer and fastened either with nails or solder, or else cast in moulds.

In Asia, in the time of the Persian Empire, silver must have been common, for we know that it was thirteen times less valuable than gold (Herod. iii. 95); and the stores of gold accumulated by kings, such as Croesus, and even by private individuals, such as Pythius (Herod. vii. 27), were enormous. From Asia it came to Greece in the way of commerce. But there were also silver mines in Hellas of great importance. Among these the most prolific were the mines of Laurium, the property of the Athenian people and the chief source of their wealth. With regard to the working of these mines we possess many details; as to which see Boeckh *On the Silver Mines of Laurium*, and Rhangabé in the *Mémoires de l'Acad. des Inscr.* viii. 297. There were also extensive silver mines in the Pangaean range in Thrace and in Epirus. From these sources came the supplies of Greece before the age of Alexander. Silver was at that time in great demand in Greece. It was used by the rich for drinking vessels, by ladies for mirrors and toilet-boxes, by the pious for statues and ornaments to be dedicated in the temples. Among Greek silversmiths the most celebrated was Mentor (Plin. xxxiii. § 154), whose name is mentioned by the Romans in conjunction with those of Polycleitus and Scopas, and whose works were eagerly sought out by the connoisseurs of later times. Mys and Acragas and other silversmiths had wide reputation. But the chief use to which in earlier and less luxurious times silver was put was in coinage. The usual issues of Asia Minor were in silver, and that metal was almost the only currency in Hellas proper, and used conjointly with copper in Sicily and S. Italy. As early as the 6th century Aegina, Corinth, Euboea, Athens, Samos, and many other cities issued an abundance of silver coin, and during the next century the example was followed by nearly every Greek independent city of any pretensions. It may be remarked here that all the Greek words connected with money are derived from *ἄργυρος*, and not from *χρυσός*, as *καταργυρόω*, "to bribe with money;" *ἀργυραμοιβός*, "a money-changer," &c.; and *ἄργυρος* is itself not unfrequently used to signify money in general (Soph. *Antig.* 295), as *aes* is in Latin.

In the time of Alexander the mines of Laurium were of diminished richness, and their produce decreased until in the time of Pausanias and Strabo they were looked on as exhausted (Paus. *ad init.*). But their place was far more than supplied by the enormous treasures of silver which the Persian kings had laboriously hoarded, and which Alexander and his captains spent with lavish profusion. A whole corps of Alexander's soldiers bore silver shields (the ARGYRASPIDES), Mithradates Eupator had numerous chariots of silver, and we read in Athenaeus' description of the pomp of Ptolemy Philadelphus (v. p. 196 *sqq.*) of such things as a silver bowl holding 600 metretae and embossed with figures of animals.

Italy is less richly furnished by nature with silver than Greece. In early times, indeed, the Etruscans were celebrated for working in silver, many of their productions still surviving; and they issued silver coins as early as the 5th century. But we may suppose the metal imported either from the Gauls to the north or the seafaring Phoenicians. Certainly at the same period silver was rare at Rome, as is shown by the fact that Rome long contented herself with copper money, and only followed the example of her richer neighbours in striking silver in B.C. 269. Before that period Greek silver was in circulation at Rome; and the principal silver coin of the Romans, the *denarius*, was borrowed from the Greek *drachma*. This dearth of silver disappeared when the Romans acquired the rich mines of Spain, which the Carthaginians had worked before them. These were situate at Osca and elsewhere, but those near Carthago Nova were so rich (Polyb. xxxiv. 9) as to employ forty thousand miners, to the great profit of the Roman state. This makes more surprising the statement of Pliny (xxxiii. § 141) that at the capture of Carthage the booty in silver only amounted to 4370 pounds. It was really the victories of Scipio Asiaticus which flooded Rome with silver as with other luxuries, until silver tables of 100 pounds' weight became common at Rome, and even the cooking utensils of the wealthy were sometimes made of the same material (Plin. xxxiii. § 140). Statuettes and parts of statues of silver of the Roman period have been found, together with many silver cups and vessels. Some of these latter were found at Pompeii, some at Caere, but the largest hoard, weighing upwards of 100 pounds, at Hildesheim in Germany. This treasure, consisting of upwards of seventy vessels, must have been part of the baggage of a Roman officer on the frontiers, and forcibly illustrates the luxury of wealthy officers in late times. It also shows what immense strides the practical art of the silversmith had made since early Greek times. The Hildesheim vases, which are now in the Museum of Berlin, are composed of a body of silver, over which is fastened a second layer covered with alto-rilievos of beaten work, admirably designed and excellently adapted to the forms and purposes of the vessels. On the subject of working in silver, Pliny has a dissertation (xxxiii. § 127 ff.).

Silver as Coin.—We have already stated when and where silver was principally used for currency; and for further details, see Nummus, Denarius, As, Drachma. But we must add here a few words as to the alloy of silver. In the 6th and 5th centuries B.C. the silver issued in the Greek world is usually of almost perfect purity. Of a number of pieces of S. Italy tested, many offer a proportion of 94 to 96 per cent. of pure silver, none less than 91 per cent. The coins of Aegina are about ·96 fine. Those of Athens, which were noted in antiquity for their purity, give a percentage of ·986 to ·983. Even after Alexander the coins of Athens retain their purity, the analysis of some specimens yielding ·966 of silver, ·032 of copper, and ·002 of gold. But in some places the standard of fineness rapidly falls in late times. A tetradrachm of Philip, one of the last kings of Syria, yielded only ·678 of silver, and the contemporary coins of Egypt are still more debased. When the Romans occupied that country, they found the money so debased in quality, though it still retained its weight, that a Roman denarius was equivalent in value to the Ptolemaic tetradrachm of nearly four times its weight. Among the Romans silver retained its standard, excepting in the case of some denarii of M. Antony [Nummus Legionaris], until the time of Augustus, who fixed the purity at 98–9 per cent. But after Vespasian we find a continual decrease in the standard of silver currency, with occasional slight reactions, until the so-called silver money is but copper plated. The substances used for adulteration of silver were copper, tin, zinc, and lead, all of which are found in the later Egyptian money. For fuller details see Lenormant, *La Monnaie dans l'Antiquité*, vol. i.

Proportionate Value of Silver as compared with Gold and Copper.—A few words must be said under this head as to the relations held, in value one with another, of the three precious metals,—gold, silver, and copper. According to Herodotus (iii. 95), in reckoning the revenues of the Persian Empire gold was esteemed at thirteen times the value of silver. And Brandis tries to show by induction that this relation, or more exactly that of 13⅓ to 1, held between gold and silver in the Levant during many centuries. But in the 4th century the value of gold began to fall in Greece. The pseudo-Plato (*Hipparch.* 231 D) speaks of the comparative value of the two metals as 12 to 1; and after Philip of Macedon had possessed himself of the rich gold mines of Thrace, and his son of the treasures of the Persian kings, it fell to 10 to 1 (Menander, *ap.* Pollux, ix. 76). Mr. Head (*Coinage of Syracuse*, p. 26) shows reasons for supposing the relation in value of gold to silver in Sicily to have been 15 to 1 until about B.C. 344, and afterwards 12 to 1. Roman laws of the middle of the 2nd century show that the relation of 12 to 1 was then current in Italy; but Roman gold coins bearing marks of value show considerable variations in the relation, from 9 to 17 to 1. Under the empire it was about 10 or 12 to 1. (See Sabatier, *Production de l'or, de l'argent et du cuivre*, p. 50.) The relation between silver and copper was in Sicily 250 to 1, and nearly the same result is given for Rome (if we accept the theories of Mommsen as to the reductions of the as), by a comparison of the weights of silver and copper coins of the 3rd century which bear marks of value. At a later time copper would seem to have become far more valuable in proportion. It is, however, difficult to prove this, because copper coins of later time are mere money of account, and not struck up to the full value. [P. G.]

AR'GIAS GRAPHE' (ἀργίας γραφή), that is, an action for idleness. Vagrants and idlers were not tolerated at Athens from very early times, and every person was obliged to be able to state by what means he supported himself. (Herod. ii. 177; Diod. i. 77.) According to some (Plut. *Sol.* 37; Pollux, viii. 42), even Draco had enacted laws against idleness, while, according to others, Solon, in his legislation, borrowed these laws from the Egyptians, and others again state that Peisistratus was the first who introduced them at Athens (Plut. *Sol.* 31). In accordance with this law, which is called ἀργίας νόμος, all poor people were obliged to signify that they were carrying on some honourable business by which they gained their livelihood (Dem. *c. Eubul.* p. 1308, § 32; Isocrat. *Areopag.* § 44; Dionys. xx. 2); and if a person by his idleness injured his family, an action might be brought against him before the archon eponymus, not only by a member of his family, but by any one who chose to do so (*Lexic. Seguer.* p. 310). At the time when the Areiopagus was still in the full possession of its powers, the archon seems to have laid the charge before the court of the Areiopagus. If the action was brought against a person for the first time, a fine might be inflicted on him; and if he was found guilty a second or third time, he might be punished with ἀτιμία (Pollux, viii. 42). Draco had ordained atimia as the penalty even for the first conviction of idleness (Plut., Poll., *ll. cc.*). This law was modified by Solon, who inflicted atimia only when a person was convicted a third time, and it is doubtful as to whether in later times the atimia was inflicted at all for idleness. As the Areiopagus was entrusted with the general superintendence of the moral conduct of citizens, it is probable that it might interfere in cases of ἀργία, even when no one came forward to bring an action against a person guilty of it. It seems probable, however, that the ἀργίας γραφή was not under the exclusive jurisdiction of the Areiopagus, but came also before the dicastae in the ordinary courts. (Plut. *Lycurg.* 24; Val. Max. ii. 6, 4; Platner, *Process*, ii. p. 150, &c.; Meier and Schömann, *Att. Proc.* pp. 193, 298, &c.; Boeckh, *P. E.* p. 475.) Similar laws are said to have existed at Corinth (Athen. vi. p. 227), in Sardinia (Aelian, *V. H.* iv. 1), and in Lucania (Stob. *Flor.* xliv. 41). [L. S.] [W. W.]

υροταμίαι), magistrates found only in Greek inscriptions of the Roman period. They appear to have been native financial officers in the provinces ; and their title distinguishes them from the *ταμίαι*, the Roman quaestors. We find them belonging to the people (*δήμου*, *C. I. G.* 2787), to the *φύλαρχοι* (3773), to the *πόλις* (3958), to the general assembly (*κοινὸν*) of Asia (2782). The *ἀργυροταμίας* referred to in this inscription is in every way connected with the high priest of Asia. We learn that at Athens the *ἀργυροταμίας* had the duty of selling up mortgages (*ὑποθῆκαι*), and received from the olive-growers the statement of the amount of their crop (354, 355). It appears to have been an extraordinary office at Aphrodisias, as it is more than once mentioned after *ἀρχαὶ καὶ λειτουργίαι* (2787, 2817). A man at Tralles (2930) held the post after being *δεκάπρωτος*, and before being *curator Romanorum* (cf. Mommsen-Marquardt, iv. 213 and 20). In Apamea Cibotus they carry out the consecration of the empresses decreed by the senate and people of the municipality (3958, 3959). In an inscription found near Damascus (4500), they appear to have given their name to the year. [L. C. P.]

ARIADNEIA (*ἀριάδνεια*), festivals solemnised in the island of Naxos in honour of Ariadne, who, according to one tradition, had died here a natural death, and was honoured with sacrifices, accompanied by rejoicing and merriment (Plut. *Thes.* 20). Another festival of the same name was celebrated in honour of Ariadne in Cyprus, which was said to have been instituted by Theseus in commemoration of her death in the month of Gorpiaeos. The Amathusians called the grove in which the grave of Ariadne was shown, that of Aphrodite-Ariadne. This is the account given by Plutarch (*Thes.* 20) from Paeon, an Amathusian writer. (Comp. C. F. Hermann, *Gottesd. Alterth.*, § 65, n. 12.) [L. S.]

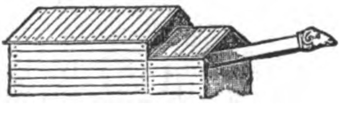
ARIES (*κριός*), the battering-ram, was used to shake, perforate, and batter down the walls of

Aries, Battering Ram. (From Column of Trajan.)

Aries, Battering Ram.

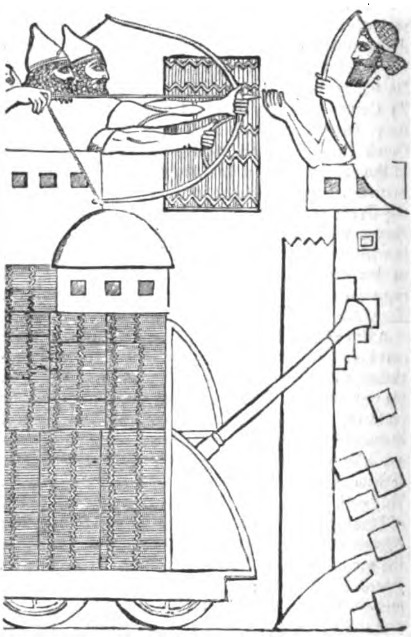
besieged cities. (Cic. *Off.* i. 11, 35; Caes. *B. G.* vii. 23; Verg. *Aen.* ii. 492, xii. 706; Liv. xxi. 12, xxxii. 23; Isid. *Orig.* viii. 11.) It consisted of a large beam, made of the trunk of a tree, especially of a fir or an ash. To one end was fastened a mass of bronze or iron (κεφαλή, ἐμβολή, προτομή), which resembled in its form the head of a ram. The upper figure in the preceding woodcut is taken from the bas-reliefs on the Column of Trajan at Rome. It shows the *aries* in its simplest state, and as it was borne and impelled by human hands, without other assistance. ("Aries actus lacertis," Lucan. i. 384.) In an improved form, the ram was surrounded with iron bands, to which rings were attached for the purpose of suspending it by ropes or chains from a beam fixed transversely over it. (See the lower figure in the woodcut.) By this contrivance the soldiers were relieved from the necessity of supporting the weight of the ram, and they could with ease give it a rapid and forcible motion backwards and forwards. (Amm. Marc. xxiii. 4, § 8; "suspenso fortior ictu," Lucan. iii. 490.)

The use of this machine was further aided by placing the frame (κριοδόχη) in which it was suspended upon wheels, and also by constructing over it a wooden roof, so as to form a *testudo* (χελώνη κριοφόρος, Appian, *Bell. Mithr.* 73; *testudo arietaria*, Vitruv. x. 19), which protected the besieging party from the defensive assaults of the besieged, while by an arrangement of stories the *aries* could be made to play on the walls of the besieged place or different heights. Josephus, who gives a description of the machine (*B. J.* iii. 7, § 19), adds, that there was no tower so strong, no wall so thick, as to resist the force of this machine, if its blows were continued long enough. The beam of the *aries* was often of great length, *e.g.* 80, 100, or even 120 feet. The design of this was both to act across an intervening ditch, and to enable those who worked the machine to remain in a position of comparative security. A hundred men, or even a greater number, were sometimes employed to strike with the beam. The besieged party endeavoured to set the *testudo* on fire, or to break in its roof with stones. To protect it against these dangers, it was lined with ox-hides or with a thick coating of clay. In order to break the *aries*, stones and other heavy substances were dropped from a height, and also nooses and the *lupus* [LUPUS] employed to sever it. Procopius (*Bell. Goth.* i. 21) describes the machine in which the *aries* was placed, as a small house resting on four pillars, the sides covered with leather, and propelled on four wheels, containing inside not less than 50 men.



Aries with Testudo. (From the Arch of Septimius Severus.)

Both the *aries* and the *testudo* are represented on Assyrian monuments. There is, however, no reference even to the *aries* in Greek literature before the siege of Plataea (Thuc. ii. 76), where, however, *it has not gained its* characteristic *name, but is called* ἐμβολή). We may dismiss the statement of Pliny (*H. N.* vii. 202) that the wooden horse at the siege of Troy was an *aries.* Vitruvius (x. 19) attributes the invention of the simple ram to the Carthaginians at the siege of Gades; of the suspended ram to a Tyrian, Pephrasmenos, on the same occasion; of the *testudo* to Ceras of Chalcedon, but he too appears in Athenaeus as Geras the Carthaginian.



Assyrian Aries and Testudo. (Layard's *Nineveh.*)

The *aries* first became an important military engine in the hands of the Macedonians, at the time of Philip and Alexander the Great. Vitruvius (*l. c.*), who gives copious extracts from the treatise of Diades on the subject, speaks of Polydus, a Thessalian, in the time of Philip, who greatly improved the machine, and his improvements were carried out still further by Diades and Chaereas, who served in the campaigns of Alexander the Great. The Romans learnt from the Greeks the art of building these machines, and appear to have employed them for the first time to any considerable extent in the siege of Syracuse in the second Punic war; on which occasion Censorinus employed two, one of which required 6000 legionaries to bring it up to the walls (App. *de reb. Pun.* 98). [HELEPOLIS.]

The *aries* is so called, according to Vegetius (iv. 14), not because its head resembled a ram's head, but because it butted the wall like a ram fighting: so he derives the name of the *testudo* from the appearances and disappearances of the *aries*, which recalled the action of a tortoise in putting out and drawing back its head under its shell: the name, however, may be taken from the resemblance of the protection given by the *testudo* to that given to the tortoise by its shell. Vitruvius thinks that the point of resemblance was its slowness of motion when being moved up to the walls of a city.

nobles, whose descendants would of course for the most part inherit those natural and be also alone in a position to secure those acquired advantages, especially warlike skill, which would form their title to political superiority. Some aristocracies thus arose from the natural progress of society: others arose from conquest. The changes consequent on the rise of the Hellenes, and the Thessalian, Boeotian and Dorian conquests in Greece, established pretty generally a state of things in which we find the political power in the hands of a body of nobles consisting chiefly or entirely of the conquerors, beneath whom is a free population not possessed of political rights, consisting of the older inhabitants of the land, together with, in most instances, a body of serfs attached to the domains of the nobles. These last are described under various names, as **Εὐπατρίδαι** in Attica, or **Γαμόροι**, as in Syracuse and several of the Doric states. From the superior efficiency of the cavalry in early times, we also find the nobles as a class bearing the name **Ἱππόται, Ἱππεῖς**, or **Ἱπποβόται** (as in Chalcis, Herod. v. 77), since, generally speaking, they alone had wealth sufficient to enable them to equip themselves for that kind of service; and in most states the first great advance of the commonalty in power arose from their gaining greater efficiency as heavy-armed foot-soldiers; that force, when properly organized and armed, being found more than a match for cavalry. ARISTON. [PRANDIUM.]

ARITHMET'ICA (ἀριθμητική, *sc.* τέχνη or ἐπιστήμη, Plat. *Gorg.* 450 D, &c.: in Latin, Vitruv. i. 1, Plin. xxxv. 10, 36, § 76: *arithmetica* as n. pl. in Cic. *Att.* xiv. 12, fin.: *numeri* is used, more idiomatically, with the same meaning, Cic. *Fin.* v. 29, 87) means generally the *theory of numbers* as opposed to the practical *art of calculation*. The distinction is especially insisted on by Plato (*Gorg.* 451 B, C; *Euthyd.* 290 B, C; cf. *Charm.* 174 B), who refers λογιστική to an inferior order of thought. But the line of division cannot be sharply drawn, for the discoveries of ἀριθμητική (*e.g.* the method of finding a least common multiple) are often appropriated by λογιστική, and the processes of the latter are indispensable to many of the inquiries of the former. Hence Plato at a later time distinguishes popular ἀρ. and λογ. together from the philosophical species of both (*Phileb.* 56 D *sqq.*), and the same distinction seems to underlie *Rep.* 525 A *sqq.*, where again ἀρ. and λογ. are named together as ἀγωγὰ πρὸς ἀλήθειαν, and the study of λογ. is further commended as leading the soul finally περὶ αὐτῶν τῶν ἀριθμῶν διαλέγεσθαι. From the same passage it appears that Plato's main objection to popular λογ. was that it had no logical unit, but dealt indifferently with all manner of tangible objects — apples, cows, &c. — at the bidding of any huckster or merchant. From this it would seem that any arithmetical operation in which numbers alone were considered would fall under ἀρ., while such propositions as that 600 obols make a mina would belong to λογ. (cf. Geminus in Procl. *Comm. Eucl.* ed.

Friedlein, p. 38). But the opposition between the two terms came soon to cover an opposition, not of matter only, but of method. For philosophical purposes, numbers were generally represented by dots or lines arranged in geometrical figures (cf. Plat. *Theaet*. 147, 148; and Euclid, bks. vii. viii. ix.), and operations with the customary symbols *ά*, *β΄*, &c., were referred to *λογ*., and were seldom used, as indeed they were seldom required, in pure mathematics. Hence it was that no Greek mathematician ever seriously attempted to improve the ordinary Greek numerical symbolism, and thereby to simplify the cumbrous processes of elementary calculation (cf. Cantor, *Vorles. über Gesch. der Mathem*. p. 133).

The introduction of the study of numbers into Greece is universally attributed to Pythagoras, of whom Aristoxenus (*ap*. Stob. *Ecl. Phys*. i. 16, c. 2, *ad init.*) says, in words which illustrate the passages of Plato above cited, that he first raised arithmetic above *τῆς τῶν ἐμπόρων χρείας, πάντα τὰ πράγματα ἀπεικάζων τοῖς ἀριθμοῖς*. (On Egyptian and Chaldean arithmetic, and the possible indebtedness of Pythagoras to these foreign sources, comp. Cantor, *op. cit.* pp. 1–93.) The studious secrecy of the earliest Pythagorean school, and the almost complete loss of later Pythagorean writings, must always cause great doubt as to the development of *ἀριθμητική*: but the frequent references of Plato and Aristotle, when compared with Euclid vii.–ix., and with such late writers as Nicomachus of Gerasa, Theon Smyrnaeus, and Iamblichus, show that very little addition was from time to time made in the subject-matter of the science, although the original nomenclature received, in some cases, new applications. The chief subjects of *ἀρ*. were from the first, and remained always, the classification of numbers, the theory of proportion, and the summation of series. Some attempt at a theory of permutations and combinations may possibly have been made (cf. Plut. *Quaest. Conv*. viii. 9, 13), but the few problems and answers recorded by historians do not suggest an accurate knowledge of this branch of mathematics. The solution of equations will be mentioned later.

The unpractical nature of *ἀρ*. may be well seen from the books of Euclid above cited, in which only five propositions are of real importance in calculation. The mode of finding a G. C. M. is exhibited in vii. 2, 3, and of an L. C. M. in vii. 36, 38. In ix. 35, a proposition is stated from which the sum of a geometrical series may easily be found. But the great bulk of the books is devoted to the investigation of prime and other numbers, or to propositions in proportion, such as viii. 22: "If three numbers are proportional, and the first is a square, the third is also a square." (Cf. Nesselmann, *Algebra der Griechen*, pp. 158–183.)

It is not proposed in this article to give more than a brief statement of those arithmetical terms which occur most frequently in Greek philosophical literature, and a few references to passages where some problems are worked out. The first classification of numbers is that into *ἄρτιοι* and *περισσοί*, "odd" and "even." This division no doubt was older than Pythagoras, for a game, common in Plato's time, was founded on it (*Lysis*, 206 E). Of *περισσοί*, some are "prime," *πρῶτοι, μονάδι μόνῃ μετρούμενοι* (Eucl. vii. def. 11). Further classifications are then founded on the geometrical representation mentioned above. Plane numbers (*ἐπίπεδοι*) are the products of two factors (*πλευραί*), and solid numbers (*στερεοί*) of three (Eucl. vii. deff. 16 and 18). Of plane numbers some are triangular (*τρίγωνοι*), falling under the formula $\frac{n(n+1)}{2}$ (Theon Smyrn. *Math. Plat*. ed. Hiller, pp. 27–31; Cantor, *op. cit*. p. 135); some square, *τετράγωνοι, ἰσάκις ἴσοι* (Eucl. vii. def. 18); some *ἑτερομήκεις*, falling under the formula $n(n+1)$. All these, according to Theon (*loc. cit.*), are founded on summations of arithmetical series: viz. the sum of the first n numbers is triangular; that of the first n odd numbers is square; that of the first n even numbers is *ἑτερομήκης* (Cantor, p. 135). In Plato, a number which is the product of two unequal factors is *προμήκης* (*Theaet*. 148 A) or "oblong." The word *δύναμις*, which occurs first with mathematical application in the extracts from Hippocrates of Chios preserved by Eudemus (*Fragm*. ed. Spengel, p. 128), seems generally to mean a square number, not geometrically conceived—"a number raised to the power of 2," so to say; but in the *Theaetetus* (*loc. cit.*) it is applied to a line which is the geometrical representative of a surd. Any odd number was also called "gnomonic" ($2n + 1$), because this added to n^2 produces the next highest square (cf. Ar. *Phys*. iii. 4, 203 a, which is explained to mean that square numbers are found by adding gnomons to unity, *sc*. in the series $1 + 3 + 5 +$ &c., according to the statement of Theon mentioned above. For the *gnomon*, see Eucl. ii. def. 2). A few terms, not derived from geometry, may be added. "Perfect" numbers (*τέλειοι*, Eucl. vii. def. 22 and prop. 36) are those which are equal to the sum of their aliquot parts, as 6, 28, 496 (*e.g*. $6 = 1 + 2 + 3$: $28 = 1 + 2 + 4 + 7 + 14$). "Excessive" (*ὑπερτέλειοι*) and "defective" (*ἐλλιπεῖς*) are those of which the aliquot parts are respectively greater or less than the numbers. Aristotle, however (*Metaph*. i. 5), calls 10 a perfect number. It is unknown what definition he attached to *τέλειος*. "Friendly" numbers (*φίλιοι*) are pairs, of which one number is the sum of the aliquot parts of the other, as 220 and 284 (Iamblich. *in Nicom*. ed. Tennulius, pp. 47, 48; Cantor, p. 141). By the time of Hypsicles, probably *circa* 180 B.C., "polygonal" numbers were also distinguished, on which Diophantus afterwards wrote a short treatise (Nesselmann, pp. 463–469). These are the sums of arithmetical series, of which the common difference is 3 or more. The same nomenclature is used in the second book (on *ἀριθμοὶ σχηματογραφηθέντες*) of Nicomachus (*Introd. Arithm*. ed. Hoche, 1866), but with different applications (*e.g*. a "polygonal" number is one which, when represented by dots, can be arranged in the form of a polygon, and a "solid" number is the sum of several polygonal); but the distinctions of later *ἀριθμητική* have no literary interest, and the reader who desires more information must be referred to Nicomachus himself, and the commentary on him written by Iamblichus (ed. Tennulius, Arnheim, 1668; cf. Cantor, pp. 362–370).

Similar ratios (*ἡ τῶν λόγων ὁμοιότης*) produce a proportion (ἀναλογία, Eucl. v. def. 8). The terms of a proportion are in general called ὅροι, but the middle terms are specially called μεσότητες. The latter name was originally applied to proportions in general, ἀναλογία meaning specially *geometrical* proportion (Nesselmann, p. 210, n. 49; and Cantor, p. 206). By the time of Nicomachus, ten kinds of proportion were distinguished, three of which are ascribed to Eudoxus by the Eudemian fragment preserved in Proclus (ed. Friedlein, p. 67; Bretschneider, *Geom. vor Eukl.* p. 30), and four are of later origin (Iambl. *in Nicom.* pp. 141 *sqq.*, 159, 163, 168). The first four, according to Iamblichus (*loc. cit.*), were invented or introduced from Babylon, by Pythagoras. These are the *arithmetical* (when $a - b = c - d$), the *geometrical* (when $a : b :: c : d$), the *harmonical* or ὑπεναντία (when $a - b : b - c :: a : c$), and the *musical* or τελειοτάτη, which is created between two numbers and their arithmetical and harmonical means ($a \quad \frac{a+b}{2} :: \frac{2\,a\,b}{a+b} : b$, as $6 : 9 :: 8 : 12$). *Harmonical* proportion is said to have been so called, because a string, if stopped at $\frac{2}{3}$ of its length, gives the fifth, and, if stopped in the middle, the octave of the note which is produced by the whole string, and $1-\frac{2}{3} : \frac{2}{3}-\frac{1}{2} :: 1 : \frac{1}{2}$. (Hankel, *Zur Gesch. der Math.* p. 105. Dr. Allman in *Hermathena*, vii. p. 204, says that these proportions were never applied to number; but cf. Hankel, p. 114, and Arist. *An. Post.* i. 5, 74.)

The terms of a progression, like those of a proportion, were called ὅροι, and the progression itself was perhaps called ἔκθεσις (Cantor, p. 135, and Bienaymé in *Comptes Rendus de l'Acad. des Sci.* Oct. 3rd, 1870). The ratio or common difference seems to be called ἀπόστασις in Plat. *Tim.* 43 B. The summation of a geometrical progression is effected by implication in Eucl. ix. 35. The summation of an arithmetical series is exhibited in the first three propositions of the ἀναφορικός of Hypsicles (Paris, 1867), but a quite distinct formula is used incidentally by Archimedes (περὶ ἑλίκων, Torelli's ed. pp. 226–228) in a proposition which, in effect, amounts to the summation of a series of the first *n* square numbers. The theory of the extraction of square roots is well enough given by Theon of Alexandria, in his commentary on the Almagest (Nesselmann, pp. 111, 112), but the practice seems to have been rough and empirical, λογιστικῶς. Thus Eutocius (Torelli's *Archim.* p. 208) refers to Heron and other writers for rules ὅπως δεῖ σύνεγγυς τὴν δυναμένην πλευρὰν εὑρεῖν.

In Latin literature, *arithmetica* appears only in technical writers. The fragment in the *Arcerian* MS. of *gromatici*, attributed to Epaphroditus and Vitruvius Rufus (Cantor, *Agrimensoren*, p. 214 *sqq.*), contains one or two propositions not found in Greek writers (*e.g.* the summation of the first *n* cubic numbers. Cantor, *Vorles.* p. 473). The Arithmetica of Boethius is expressly said to be founded on that of Nicomachus (Friedlein's ed., pp. 4 and 5).

It should be added that the great work of Diophantus is also entitled ἀριθμητικά. It treats of the solution of algebraic equations, determinate and indeterminate, simple, quadratic or cubic, with one unknown. This sort of mathematical problem appears for the first time, though without any algebraic symbolism, in Heron of Alexandria (e.g. *Geometria*, 101, 7–9, p. 133 in Hultsch's ed.), who was above all things practical. The arithmetical puzzles of the Greek anthology, attributed chiefly to Metrodorus of the time of Constantine, show the popularity of the study, but its first philosophical application appears in the ἐπάνθημα of Thymaridas, obscurely described by Iamblichus (*in Nicom. Ar.* ed. Tennulius, p. 36), and admirably expounded by Nesselmann (*Alg. der Griechen*, pp. 232 *sqq.*; also Cantor, *Vorles. über Gesch. der Mathem.* p. 371). Diophantus himself does not pretend to be the inventor of a new method of inquiry, but only a systematiser, a στοιχειώτης. Thus in his definitions he uses καλεῖται, ἐστίν, where an inventor would have said καλείσθω, ἔστω, and he entirely omits to mention the rule, which he frequently uses, that the product of two *minus* quantities is *plus*. His problems are of the following kind, *e.g.* to find three numbers such that the sums of any two of them and of the three shall be a square (iii. 7). It is observable that he reasons entirely with algebraic and arithmetical symbols, only one proposition (v. 13) being treated geometrically. His symbolism does not occur in any other author, and does not therefore fall within the scope of this article. His works are most fully summarised and criticised by Hankel and Nesselmann (*opp. citt.*). The references given above indicate all the best modern authorities on every branch of the subject. [J. G.]

ARMA, ARMATU'RA (ὅπλα, Hom. ἔντεα, τεύχεα), arms, armour. Homer describes in various passages the entire suit of armour of some of his greatest warriors, viz. of Achilles, Patroclus, Agamemnon, Menelaus, and Paris (*Il.* iii. 328–339, iv. 132–138, xi. 15–45, xvi.

A Greek Soldier. (Hope's *Costume of the Ancients*.)

130–142, xix. 364–391); and we observe that it consisted of the same portions which were used by the Greek soldiers ever after. Moreover, the order of putting them on is always the same. The heavy-armed warrior, having already a tunic around his body, and preparing for combat, puts on,—first, his greaves (κνημῖδες, *ocreae*); secondly, his cuirass (θώραξ, *lorica*), to which belonged the μίτρη underneath, and the zone (ζώνη, ζωστῆρ, *cingulum*) above; thirdly, his sword (ξίφος, *ensis*, *gladius*) hung on the left side of his body by means of a belt which passed over the right shoulder; fourthly, the large round shield (σάκος, ἀσπίς, *clipeus*, *scutum*), supported in the same manner; fifthly, his helmet (κόρυς, κυνέη, *cassis*, *galea*); sixthly and lastly, he took his spear (ἔγχος, δόρυ, *hasta*), or, in many cases, two spears (δοῦρε δύω). The form and use of these portions are described in separate articles under their Latin names. The foregoing woodcut exhibits them all in the form of a Greek warrior attired for battle, as shown in Hope's *Costume of the Ancients* (i. 70).

Those who were defended in the manner which has now been represented, are called by Homer ἀσπισταί, from their great shield (ἀσπίς); also ἀγχέμαχοι, because they fought hand to hand with their adversaries; but much more commonly πρόμαχοι, because they occupied the front of the army: and it is to be observed that these terms, especially the last, were honourable titles, the expense of a complete suit of armour (πανοπλίη, Herod. i. 60) being of itself sufficient to prove the wealth and rank of the wearer, while his place on the field was no less indicative of strength and bravery.

In later times, the heavy-armed soldiers were called ὁπλῖται, because the term ὅπλα more especially denoted the defensive armour, the shield and thorax. By wearing these they were distinguished from the light-armed, whom Herodotus (ix. 62, 63), for the reason just mentioned, calls ἄνοπλοι, and who are also denominated ψιλοί, and γυμνοί, γυμνῆται, or γυμνῆτες. Instead of being defended by the shield and thorax, their bodies had a much slighter covering, sometimes consisting of skins, and sometimes of leather or cloth; and instead of the sword and lance, they commonly fought with darts, stones, bows and arrows, or slings.

Besides the heavy- and light-armed soldiers, the ὁπλῖται and ψιλοί, who in general bore towards one another the intimate relation now explained, another description of men, the πελτασταί, sometimes formed a part of the Greek army after the Persian wars, and regularly after the expedition of the Ten Thousand. Instead of the large round shield, they carried a smaller one called the πέλτη, and in other respects their armour was much lighter than that of the hoplites. The weapon on which they principally depended was the spear.

The Roman soldiers had different kinds of arms and armour; but an account of the arms of the different kinds of troops cannot be separated from a description of the troops of a Roman army, and the reader is therefore referred to Exercitus. The following cut represents two heavy-armed Roman soldiers, and is taken from the reliefs on Trajan's Column. On comparing it with that of the Greek hoplite in the other cut, we perceive that the several parts of the armour correspond, excepting only that the Roman soldier wears a dagger (μάχαιρα, *pugio*) on his right side instead of a sword on his left, and, instead of greaves (which were abandoned in imperial times) upon his legs, has *femoralia* and *caligae*. All the essential parts of the Roman heavy armour (*lorica*, *ensis*, *clipeus*, *galea*, *hasta*) are mentioned together in an epigram of Martial (ix. 57); and all except the spear in a well-known passage (Eph. vi. 14–17) of St. Paul, whose enumeration exactly coincides with the figures on the Arch of Severus, and who makes mention not only of greaves, but of shoes or sandals for the feet.

Roman Soldiers. (From Column of Trajan)

The soft or flexible parts of the heavy armour were made of cloth or leather. The metal principally used in their formation was that compound of copper and tin which we call bronze, or more properly bell-metal. [Aes.] Hence the names for this metal (χαλκός, *aes*) are often used to mean *armour*, and the light reflected from the arms of a warrior is called αὐγὴ χαλκείη by Homer, and *lux aëna* by Virgil (*Aen.* ii. 470). Instead of copper, iron afterwards came to be very extensively used in the manufacture of arms, although articles made of it are much more rarely discovered, because iron is by exposure to air and moisture exceedingly liable to corrosion and decay. Gold and silver, and tin unmixed with copper, were also used, more especially to enrich and adorn the armour. [J. Y.]

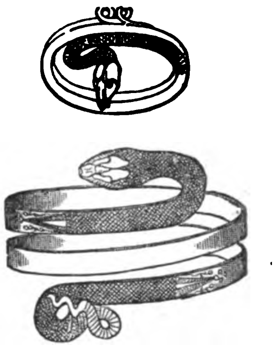
ARMAMENTA, in a general sense, signified any kind of implements or utensils (Plin. *H. N.* xvii. § 152, xviii. § 112), but was more particularly applied to the tackle of a ship, sails, ropes, cables, anchor, &c. (Plaut. *Merc.* i. 2, 64; Liv. xxi. 49, 9, xxxiii. 48, 8; Caes. *B. G.* iv. 29; Quint. x. 7, § 23.) Sometimes the sails (*vela*) are mentioned as distinct from the *armamenta*. (Caes. *B. G.* iii. 14; Liv. xxxvi. 44; Sen. *Ben.* vi. 15.) [Navis.] [W. S.]

ARMAMENTA'RIUM (σκευοθήκη, ὁπλοθήκη), a place where *armamenta* were kept; an armoury or, more frequently, a naval arsenal where tackling, &c., as well as munitions of war, were housed. In primitive times the acropolis of a city was the usual place for the storage of arms; but the fortifying of larger areas, and especially of ports like the Piraeus, gave rise to a special class of buildings designed for their safe custody. In Aeschylus (*fragm.* 273) and Aeschines (*c. Ctes.* § 25) *σκευοθῆκαι* are mentioned in connexion with naval matters. They must, however, be distinguished from *νεώρια*, dockyards, and *νεώσοικοι*, slips or docks. There was a celebrated *armamentarium* in the Piraeus, built by the architect Philo under the financial administration of the orator Lycurgus, about B.C. 342–330 (Cic. *de Or.* i. 14, § 62; Plin. *H. N.* vii. § 125; Strab. ix. p. 395; Plut. *Sull.* 14). The expression of Pliny, *armamentarium CD* (another reading is *mille*) *navium*, has been wrongly explained as a basin in which 1000 ships could lie. The corrected number comes from the passage in Strabo, where *ναύσταθμον ταῖς τετρακοσίαις ναυσὶν* is distinguished from *ὁπλοθήκη Φίλωνος ἔργον*. This was destroyed at the capture of Athens by Sulla (Plut. *l. c.*). A *ὁπλοθήκη* of the elder Dionysius at Syracuse is described by Aelian (*V. H.* vi. 12) as well filled with arms, armour, and engines; the *ναύσταθμον* at Rhodes included *θησαυροὶ ὅπλων*, as did those of Massalia and Cyzicus; and, as in modern times, strangers were wholly or partially excluded (Strab. xiv. p. 653).

Among the Romans the *armamentaria* were places for the manufacture as well as the storage of arms (Liv. xxvi. 51; xxix. 22 and 35); and arms might be served out from them in times of public danger (Cic. *Rab. Perd.* 7, § 20). We also find them under the empire, organised with the usual thoroughness of the Romans in military matters (Tac. *Hist.* i. 80; Sen. *de Tranq. An.* 3, § 5; Orelli-Henzen, *Inscrr.* 975, 3586; cf. Juv. *Sat.* xiii. 83). [W. W.]

ARMARIUM (*locus, ubi quarumcunque artium instrumenta ponuntur*, Isidor. xv. 5), a cupboard, set upright in the wall of a room, for food, clothes, books, money, and household utensils in general. Tradesmen appear to have kept their stock in armaria; Jahn gives a representation of one in a cutler's shop, and there is another, from a shoemaker's shop, figured in the *Pitture d'Ercolano*, i. p. 187. The armarium was generally placed in the atrium of the house. (Dig. 33, tit. 10, s. 3; Cato, *R. R.* 11, 3; Plaut. *Capt.* iv. 4, 10, *Ep.* ii. 3, 3, *Men.* iii. 3, 8; Cic. *Cluent.* 64, 169, *Cael.* 21, 52; Petron. *Sat.* 29; Plin. *H. N.* xxix. § 101; Hieron. *Ep.* 22.) The same name was given to a cupboard for holding books (Plin. *Ep.* ii. 17, 8), and to the divisions of a library. (Vitruv. vii. *Praef.* § 10; Vopisc. *Tac.* 8; Dig. 32, tit. 1, s. 52, §§ 3, 7.) We find *armarium distegum* mentioned as a kind of sepulchre in an inscription (Orelli, *Inscript.* No. 4549). [W. S.]

ARMILAUSA (*armelausa, armilausium*), a kind of military tunic worn by foot-soldiers, reaching down to the knees; cf. Mauritius, *Strateg.* xii. p. 303: *ποῖα δεῖ φορεῖν ἱμάτια τοὺς πεζοὺς εἴτε ζωστήρια Γοτθικὰ εἴτε ἀρμελαύσια ἔχουσι κονδὰ* ("cut away") *μέχρι τῶν γονάτων*. It was red (Paulin. Nol. *Epist.* 17 (13), c. 1, in Migne, *Patrol.* lxi.). The Scholiast on Juv. v. 143 explains "viridem thoraca" by "armilausam prasinam," both words curiously illustrating the change from classical to low Latin. Mayor (on Juv. *l. c.*) says it was a kind of waistcoat. Zeuss (*Die Deutschen und die Nachbarstämme*, ed. 1837, pp. 308–9) supposes it to be a Celtic word, and that the name of Armilausi was given from their dress to the mass of small Celtic peoples which Ptolemy places between the *Μαρούιγγοι* and the Danube. For other derivations, see Ducange *s. v.*, ed. Favre, 1883. Isidore (*Orig.* xix. 22, 28) is quite misleading when he says the armilausa was open before and behind, but closed on the shoulders, "quasi *armiclausa* littera *c* ablata." [L. C. P.]



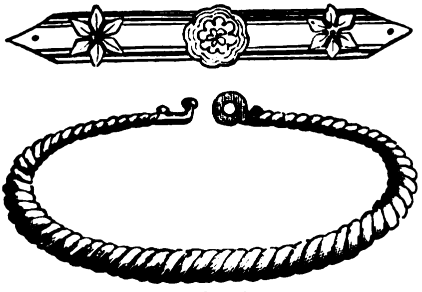
Bracelets. (*Museo Borbonico*, vol. ii. tav. 14; vol. vii. tav. 46.)

Bracelet. (On statue of Sleeping Ariadne in the Vatican.)

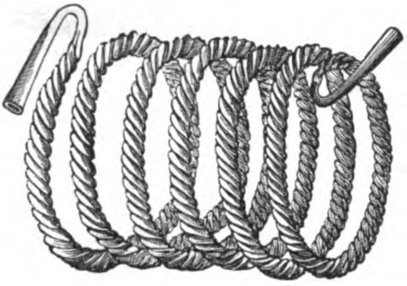
ARMILLA (*ψέλιον, ὄφις*), a bracelet or armlet. Ornaments of this kind were worn by men among the Persians and Medians, probably as a mark of distinction (cf. Herod. viii. 113; Xen. *Anab.* i. 2, § 27): in Greece, however, they seem to have been confined to the female sex, or to men of an effeminate character. With Greek ladies bracelets were a favourite ornament, and the female figures on the Greek vases are represented with bracelets of every kind. They were worn on one or both arms, sometimes on the wrist (*περικάρπια*), sometimes on the upper arm (*περιβραχιόνια*), sometimes even on both at once. One favourite kind of bracelet went several times round the arm, and seems to have had no clasp, being slipped on over the wrist, and retained in its place by compressing the arm. These bracelets, from their resemblance to serpents, were known to the Greeks as *δράκοντες* or *ὄφεις* (cf. Hesych. *s. v.* *ὄφεις*). The above bracelets are of this description.

Bracelets were likewise worn at Rome by ladies of rank, but it was considered a mark of effeminacy for men in an ordinary way to use such female ornaments. (Suet. *Cal.* 52; *Ner.* 30.) They were, however, publicly conferred by a Roman general upon soldiers for deeds of extraordinary merit (Liv. x. 44; Plin. *H. N.* xxxiii. § 37; Festus, *s. v.*); in which case they were worn as a mark of honour, and probably differed in form from the ordinary ornaments of the kind. See the cut below.

The following cuts exhibit Roman bracelets. The first figure represents a gold bracelet discovered at Rome on the Palatine Mount (Caylus, *Rec. d'Ant.* vol. v. pl. 93). The rosette in the middle is composed of distinct and very delicate leaves. The two starlike flowers on each side of it have been repeated where the holes for securing them are still visible. The second figure represents a gold bracelet found in Britain, and preserved in the British Museum. It appears to be made of two gold wires twisted together, and the mode of fastening it upon the arm, by a clasp, is worthy of observation. It has evidently been a lady's ornament. The third figure represents an armilla, which must have been intended as a reward for soldiers, for it would be ridiculous to suppose such a massive ornament to have been designed for women. The original, of pure gold, is more than twice the length of the figure, and was found in Cheshire. (*Archaeologia*, xxvii. 400.) The last example is from the Belotti Collection. [J. Y.] [J. H. O.]



Roman Bracelets.



Roman military Bracelet.

Armilla, bronze and gold. (From the Belotti Collection.)

ARMILLUM, a sort of wine-jug (*urceolus*, Varro, *ap.* Non. *s. v.* p. 547). Festus mentions it as used in sacrifices, and derives it from *armus*, as carried on the shoulder (Paul. Diac. p. 2, Müller). The word must, however, have been a familiar one, as it gave rise to a proverb, *anus ad armillum*, or *ad armillum redire, revertere*, to return to one's old tricks (Lucil. *ap.* Non. p. 74, 13; Apul. *Met.* ix. p. 197; in vi. p. 123, *armile* is variously explained by *armillum* and *armarium*).

The three last words, *armilausa, armilla*, and *armillum*, all illustrate the use, rare in classical Latin, but no doubt common enough at an earlier period, of *armus* for the human shoulder (*humerus*). This sense of the word is well discussed by Conington on Verg. *Aen.* iv. 11, xi. 641. [W. W.]

ARMILUS'TRIUM, a Roman festival for the purification of arms. It was celebrated every year on the 14th before the kalends of November (Oct. 19; Mommsen, *Inscr. Lat. Ant.* p. 404), when the citizens assembled in arms and offered sacrifices, to the sound of the trumpet, in the place called Armilustrum or Armilustrium, on the Aventine near the Lauretum. The Armilustrium appears to mark the close of the campaigning season, when the arms were laid up for the winter; as the Quinquatrus marked the beginning of it. On both occasions the Ancilia were brought out. (Paul. Diac. p. 19, Müll.; Varro, *de L. L.* v. 153, vi. 22; Liv. xxvii. 37; Plut. *Rom.* 23; P. Vict. *de Regionibus U. R.*; Inscr. in Gruter, p. 250; Marquardt, vi. 417, 419.) [P. S.] [W. W.]

ARNIS (Ἀρνίς), a festival held by the Argives during the month of August, at which they used to kill any dog which came into the agora (Conon, *Narrat.* 19; Ael. *H. A.* xii. 34). The name of Κυνοφόντις was also given to the festival (Athen. iii. p. 99 e). It may have got its name of Ἀρνίς or the "lamb festival" because Apollo, the sun-god, was also god of flocks (Νόμιος, ὀπάων μήλων, Pind. *Pyth.* ix. 64); and in that burning season he is implored to spare the lambs. That the massacre of the dogs was due to fear of their madness is probable; as was the similar killing of the dogs at Rome in the month of August (Lyd. *de Mensibus*, iii. 40), which is, however, usually assigned to punishment for having failed to give notice of the attack by the Gauls on the Capitol (Plin. *H. N.* xxix. § 57). But the Argives tell a pretty story how that Linus, son of Apollo and Psamathe, when exposed by his mother among the lambs, was eaten by the dogs of the sheepfold; and how that the mother in her distraction betrayed her fault, and was put to death by her angry father Crotopus; and in aftertimes the matrons each year bewailed Psamathe and Linus, and added lamentations for their own dead children and prayers for the living. For the full story, see Conon, *l. c.*; Paus. i. 43, §§ 7 foll.; Stat. *Theb.* i. 568 foll. The dogs represented the dog-star, the lambs the tender youth of Linus and the children for whom the mothers feared sun-stroke (Hesych. *s. v.* ἀστροβολήτους). (See Hartung, *Relig. der Griech.* iv. p. 157; Preller, *Griech. Myth.* i. pp. 205, 379–80; Saglio, *s. v.*) [L. C. P.]

AROTOI HIEROI (*ἄροτοι ἱεροί*). These were three "sacred ploughings" in Attica to commemorate the institution of agriculture. They were held in Maimacterion (Nov.–Dec.): see Bötticher in *Philologus*, xxii. 394–7, concerning the frieze with the calendar sculptured upon it, from which we learn the date of this festival. The first ploughing was held at Sciros, the second on the Rarion ('Ράριον) plain near Eleusis, and the third under the acropolis, which was specially called Βουζύγιον (Plut. *Conj. Praec.* 42 = ii. p. 144). These ploughings were probably for the purpose of sowing the corn used in the rites of the temples of Athena Sciras, of the Eleusinian goddesses and Athena Polias. The family of priests who took care of the sacred plough and of the oxen who drew it were called Buzygii, a sort of Arval Brotherhood; and the family derived their descent from an eponymous Buzyges, who was in later times assimilated with Triptolemos or Epimenides (Auson. *Epist.* 22, 46. Cf. Paus. i. 38, § 7; and especially Stoll in W. H. Roscher's *Lexikon der griech. und röm. Myth.* 1884, *s. v.* Buzyges). Great difficulty hangs round the question as to whether Buzyges belonged originally to the Cecropian worship of Athena Polias—as is held by Preller, *Griech. Myth.* i. pp. 169, 181, n. 4; Maury, *Relig. de la Grèce*, ii. 209; Stoll, *l. c.*—on the basis of a passage in Aristides (*Ath.* p. 20, Dindorf); or to the worship of Zeus, as is maintained by Schömann (*Gr. Alt.* ii. 266) and Bötticher (*l. c.* pp. 262–271—a good discussion), on the basis of *C. I. G.* 491 and an inscription Ἱερέως Διὸς Τελείου Βουζυγίου (*Philologus*, xix. 360), a worship united with that of Demeter Thesmophoros. There is no doubt that he did not originally belong to the worship of Demeter of Eleusis. The ἀραὶ Βουζύγειοι are well known (Valcken. on Herod. vii. 231), falling on him who did not show the road to one who had missed it, who did not give a light or water to one in need thereof (Athen. vi. 239 a; Cic. *Off.* iii. 13, 55; Holden *ad loc.*), who killed the oxen that ploughed (Aelian, *V. H.* v. 14), who left a corpse unburied (Schol. on Soph. *Antig.* 262), who did not practise what he recommended to others (Clem. Alex. p. 503, 17), &c. A large mass of literature on the whole subject is in Stoll, *l. c.* [L. C. P.]

ARQUITES. [SAGITTARII.]

ARRA, ARRABO, an earnest. The word *arrabo* is Hebrew, and occurs (ἀρραβὼν, LXX.) in Gen. xxxviii. 17–20, of a ring, bracelets, and staff given as a pledge for the price, and the corresponding verb in Hebrew several times. Ἀρραβὼν is also in Paul (2 Cor. i. 22, v. 5; Eph. i. 14). The Phoenician traders probably brought word and custom to Greece, and Plautus probably followed in this his Greek original (cf. Menand. *Fr. inc.* 223, Meineke). He uses the word for anything given as sign of a bargain being made and as pledge of its fulfilment. In *Most.* 648, part (one-third) of the price is called *arrabo*, and in 978 *pignus*. In *Mil.* 957, the arrabo is a ring. In *Rud.* 46, 555, *Truc.* 689. *Poen.* 1342, the thing is not specified. In Ter. *Haut.* 603, and Claud. Quadr. *ap.* Gell. xvii. 2, § 21, persons form the arrabo. Varro (*L. L.* v. § 175) speaks of the arrabo as part payment. Excepting in the Plautus-loving Apuleius (*Met.* i. 20), the word is only found in early Latin.

Pliny and the lawyers use only the form *arra*, which according to Gellius, *l. c.*, was used by the old Romans and Laberius. He calls both words vulgar. In the Code, the plural *arrae* is used always, except iv. 45, l. 2.

In D. 14. 3, 5, § 15, and 19. 1, 11, § 6, a ring is mentioned as given *arrae nomine* by a purchaser to bind the bargain; Ulpian (D. 19. 5, 17, § 5) speaks of rings deposited in a wager (*sponsionis causa*) and deliverable to the winner. Hence Pliny (*H. N.* xxxiii. § 28), in speaking of a custom among common people of producing a ring *ad sponsiones*, is referring probably to wagers, not to betrothals. But, no doubt, the ring used in a betrothal was only the ordinary mark and pledge of a bargain. The original idea seems to have been a temporary deposit reclaimable on the bargain being fulfilled. The thing thus serving as *arra* ("earnest;" "erles penny," North Country English), given on hiring a servant—"Queen's shilling" in enlisting recruits (*Handgeld*, *Gottesheller*, *Weinkauf*, Germany)—might be a mere token or a pledge of some value, as a ring or a piece of money, or might pass into part payment of the price or part delivery of the thing purchased, and, according to any special agreement or custom, might be forfeitable by the party not carrying out his bargain, such forfeit being in lieu of or in addition to other remedies for breach of contract. According to Roman law, an arra was only a proof of a bargain having been made, and not a necessary condition (Gai. iii. 139; D. 18. 1, 35, pr.). On the bargain being fulfilled, its return could be enforced either by an action on its purchase, or by a *condictio sine causa* (D. 19. 1, 11, § 6; Cod. iv. 45, 2). In sales with a forfeiture clause (see COMMISSUM), default on the part of the purchaser gave the seller the right of retaining the arra, if he declared the sale null (D. 18. 3, 6; cf. ib. 8; Cod. iv. 54, 1). Justinian ordained that when an earnest was given to secure the making of a purchase (*super facienda emptione*), the purchaser, if he declined to complete, should forfeit the earnest; the seller, if he declined, should repay the earnest and as much again: and this, whether the contract was intended to be in writing or not, and though no special agreement had been made as to what was to be done with the earnest money (Cod. iv. 21, 17, § 2; Inst. iii. 23, pr. See Savigny, *Oblig.* § 79; Maynz, *Cours*, § 259).

Arrae, sometimes *arrae sponsaliciae*, is used of gifts by the man to the intended wife before marriage as evidence of betrothal (D. 23. 2, 38; Cod. v. 1, 3; 2, 5; 1; 8, 1, § 1). And a ring is mentioned in a similar connexion (D. 24. 1, 36, § 1). A previous constitution, that women declining to fulfil their engagement should repay the amount fourfold (cf. Cod. Th. iii. 5, 11), was altered by a constitution of A.D. 472, and only simple or twofold restitution, according to circumstances, was required (Cod. v. 1, 5). If either party died without having made default in the agreement to marry, the *arrae* were returned (Cod. v. 1, 3). [H. J. R.]

ARRHEPHO'RIA (*τὰ ἀρρηφόρια, ἡ ἀρρηφορία*, *v.* L. and S.), a festival which, according to the various ways in which it is written (for we find *ἐρσηφόρια* or *ἐρρηφόρια*), is attributed to different deities. The first form is derived from ἄρρητα, and thus would indicate a festival at which mysterious things were carried. The other name would point to Erse or Herse, a daughter of Cecrops, whose worship was intimately connected with that of Athena. And there is, indeed, sufficient ground for believing that the festival was solemnised, in a higher sense, in honour of Athena. (*Etym. M.* s. v. Ἀρρηφόροι.) It was held at Athens, in the month of Skirophorion. Four girls, of between seven and eleven years (ἀρρηφόροι, ἐρσηφόροι, ἐρρηφόροι: Aristoph. *Lysist.* 642), were selected every year by the king archon from the most distinguished families, two of whom superintended the weaving of the sacred peplos of Athena, which was begun on the last day of Pyanepsion (Suid. *s. v.* Χαλκεῖα); the two others had to carry the mysterious and sacred vessels of the goddess to the Acropolis. These latter remained there a whole year, either in the Parthenon or some adjoining building (Harpocrat. *s. v.* Δειπνοφόρος: Paus. i. 27, § 4); and when the festival commenced, the priestess of the goddess placed vessels upon their heads, the contents of which were neither known to them nor to the priestess. With these they descended to a natural grotto within the district of Aphrodite in the gardens. Here they deposited the sacred vessels, and carried back something else, which was covered and likewise unknown to them. After this the girls were dismissed, and others were chosen to supply their place in the acropolis. The girls wore white robes adorned with gold, which were left for the goddess; and a peculiar kind of cakes was baked for them. To cover the expenses of the festival, a peculiar liturgy was established, called ἀρρηφορία. All other details concerning this festival are unknown. (Comp. C. F. Hermann, *Gottesd. Alterth.* § 61, n. 9; A. Mommsen, *Heortologie*, p. 443 ff.) [L. S.]

ARROGA'TIO. [ADOPTIO.]

A'RTABA (ἀρτάβη), a Persian measure of capacity, principally used as a corn-measure, which contained, according to Herodotus (i. 192), 1 medimnus and 3 choenices (Attic), *i.e.* 51 choenices = 102 Roman sextarii = 12¾ gallons nearly; but, according to Suidas, Hesychius, Polyaenus (*Strat.* iv. 3, 32), and Epiphanius (*Pond.* 24), only 1 Attic medimnus = 96 sextarii = 12 gallons nearly: the latter is, however, only an approximate value. There was an Egyptian measure of the same name, of which there were two sorts, the old and the new artaba (Didymus, c. 19; cf. c. 21). The old artaba contained 4½ Roman modii = 72 sextarii = 9 gallons nearly, according to most writers; but Galen (c. 5) makes it exactly 5 modii. It was about equal to the Attic metretes; and it was half of the Ptolemaic medimnus, which was to the Attic medimnus as 3 : 2. The later and more common Egyptian artaba contained 3⅓ modii = 53⅓ sextarii = about 6⅔ gallons, which is so nearly the half of the Persian, that we may fairly suppose that in reality it was the half. It was equal to the Olympic cubic foot. (Rhemn. Fann. *Carmen de Pond. et Mens.* v. 89, 90; Hieron. *ad Ezech.* 5; Böckh, *Metrolog. Untersuch.* pp. 242, &c., 285; *Publ. Econ. of Ath.* p. 93, 2nd ed.; Wurm, *de Pond.*, &c. p. 133; Hultsch, *Metrol.* pp. 275, 284 f.) [P. S.]

ARTEMI'SIA (ἀρτεμίσια), great festivals celebrated in honour of Artemis in various parts of Greece, in the spring of the year. We find one mentioned at Syracuse in honour of Artemis Potamia and Soteria (Pind. *Pyth.* ii. 12). It lasted three days, which were principally spent in feasting and amusements (Liv. xxv. 23; Plut. *Marcell.* 18). Bread was offered to her under the name of Λοχία (Hesych. *s. v.*). But similar festivals occur in many other places in Greece, as at Delphi, where, according to Hegesander (Athen. vii. p. 325), they offered to the goddess a mullet on this occasion; because it appeared to hunt and kill the sea-hare, and thus bore some resemblance to Artemis, the huntress. The same name was given to the festivals of Artemis in Cyrene and Ephesus, though in the latter place the goddess was not the Grecian Artemis, but a deity of Eastern origin. (Dionys. iv. 25; Achill. Tat. vi. 4, vii. 12, viii. 17; Xenoph. Ephes. i. 2.) [L. S.]

ARTIAZEIN. [PAR IMPAR.]

ARTIF'ICES. It is proposed in this article to touch on the general condition of the artisans in Greece and Rome, and the estimation in which they were held, without treating of the agricultural labourers, or going into the special technical details of the different manufactures. For the latter, the reader is referred to the articles treating of the separate trades.

I. GREEK.—Among the Homeric Greeks we find gods and heroes engaged on the works of artisans. Thus Hephaestus himself works at the forge (*Il.* xviii. 371), and Athena at the loom (*Il.* viii. 386). Odysseus makes his own bed (*Od.* xxiii. 189), Arete spins (*Od.* vi. 306), and Nausicaa washes her own clothes (*Od.* vi. 31). This shows that much was done in the family which in later times would have been the work of slaves or hired workmen. But in Homeric times there were professional artisans who worked for the people, δημιοεργοί,—a term which probably comprised all kinds of artisans, and not merely the few mentioned as examples in *Od.* xvii. 384; viz. physicians, soothsayers, shipwrights, and singers. Some acquired such reputation that they used to be "called in" (καλεῖν, *Od.* i. 416, xvii. 382—the regular term) from their town (ἄλλοθεν) to another. They were free Greeks, not barbarians (cf. e.g. *Il.* vii. 221), not forming anything like a caste, of which there is not the slightest trace in Homer. They appear to have been remunerated generally by a feast (*Od.* xv. 506; cf. *Il.* xviii. 558), though the "called-in" artisans may have also received presents as ξένοι. They almost always belonged to the lower classes (χέρηες). Work was no shame at that period; idleness was shame (Hes. *Op.* 301). (On the Homeric workmen generally, see Riedenauer, *Handwerk und Handwerker in den homerischen Zeiten*, 1873; Buchholz, *Die homerischen Realien*, ii. 1, 27 ff., 1881).

The patriarchal times gave place to a period of unrest while Greece "was moving about and settling itself" (Thuc. i. 12). During this period the warriors were everything; the artisans were of small account. These latter came to be looked down on, as they are in every military society. Accordingly, when the aristocratically governed Dorians took possession of Laconia, they made the perioeci and the slaves either actually slaves or strangers (Aristot. *Pol.* iii. 3, § 2), all came to be regarded together as forming one class, viz. *βάναυσοι* (also called *τεχνῖται, χερνῆτες, χειροτέχναι, χειρώνακτες, χρηματισταί*). For it must be carefully borne in mind that the greater mass of the artisans were foreigners (*μέτοικοι*) or slaves; in the list of workmen at the Erechtheum (*C. I. A.* i. 324) the foreigners are twice as numerous as the citizens.

What is most remarkable to us in the low opinion of the ancients with regard to manual labour is that they made no radical distinction between the *artist* and the *artisan*, as long as both took pay for their services. No doubt Phidias was thought more of than a fuller; but still even the greatest statuary or painter, if he took pay, was regarded even till the latest times as a *βάναυσος καὶ χειρῶναξ καὶ ἀποχειροβίωτος.* See the striking speeches of Statuary (Ἑρμογλυφική) and Culture (Παιδεία) in Lucian's *Somnium*, 6–9, the whole tone of which dialogue is most instructive. (Cf. Plut. *Praecept. reip. ger.* 5, 7 = ii. 802.) Aristotle, too, deprecates professional skill being displayed in music (*Pol.* v. (viii.) 6, § 2, 3). If, however, the artist took no pay, this raised him in public estimation: *e.g.* Polygnotus, who painted the Stoa Poecile gratis (Plut. *Cim.* 4). How one who took money for services was in a manner lowered in social estimation may be felt from the way professional athletes are still regarded.

Such states as Phocis and Locris deserve a passing notice. They were poor and had for a long time no slaves, so that all the artisans were citizens. We hear that they strenuously resisted, as depriving them of their daily bread, a capitalist Mnason, who wanted to compete against them with slave labour on an extensive scale (Athen. vi. p. 264 d); for, says Athenaeus, it was customary for the younger to help the elder in their different houses.

This leads us on to the consideration of the question whether there were any castes of artisans among the Greeks as there were among the Egyptians. We may say generally that there were not (cf. Grote, iii. p. 51), though we occasionally meet with something like them: thus the functions of the heralds, flute-players, and cooks were hereditary in certain families at Sparta (Herod. vi. 60). The sculptors at Athens called themselves Daedalidae (Plat. *Euthyphr.* 11 C); and some priesthoods appear to have been confined to certain families, the Eteobutadae at Athens (Aeschin. *de Fals. Leg.* 47, § 155), the Telliadae and Iamidae in Elis (Herod. ix. 37, 33). But by an individual member of a family holding a priesthood that family was not rendered holy or separated from the rest. (On the absence of castes in Greece, see especially Drumann, *Arbeiter*, § 6.) Neither did the trades form corporations till late in Roman times and under Roman influence. The artisans appear to have had partners, *συνεργοί* (*C. I. A.* i. 324, p. 173), and apprentices (*μαθηταί*, Plat. *Meno*, 90 D). But, besides these small artisans, we find large workshops (*ἐργαστήρια*), the owners of which managed them by foremen (*ἔργων ἐπιστάται, ἐπίτροποι, ἡγεμόνες τοῦ ἐργαστηρίου*) taken from among their slaves or freedmen (Dem. *c. Aphob.* 819, § 24; Aeschin. *Tim.* 14, § 97). In the two factories of the father of Demosthenes there were fifty-two slaves (Dem. *c. Aphob.* 816,

§§ 11, 12); and Lysias and his brother Polemarchus had a shield-factory with 120 slaves (Lys. *contra Eratosth.* §§ 8, 19). Thus the establishments do not appear to have been large. The work of the slaves in them was probably severe. Most of the 20,000 slaves who deserted in the Decelean war to the Spartans were *χειροτέχναι* (Thuc. vii. 27). The owners of these workshops were generally considered highly respectable members of society; the father of Demosthenes was something more than one of the middle-class citizens (*μετρίων*, Dem. *de Cor.* p. 228, § 10), yet was called "a cutler" (Mayor on Juv. x. 130); and we may well suppose that some of the tanners, cobblers, lampmakers, &c. satirized by Aristophanes, were owners of such factories (cf. Hermann-Blümner, *Privatalterthümer*, 399, notes 2, 3). The workers in these factories were mostly slaves, though sometimes no doubt day-labourers were hired (*θῆτες, μισθωτοί*). Indeed, there was not much difference between the condition of slaves and such artisans: Aristotle (*Pol.* iii. 3, § 3) says, *οἱ μὲν ἑνὶ λειτουργοῦντες τὰ τοιαῦτα δοῦλοι, οἱ δὲ κοινῇ βάναυσοι καὶ θῆτες.* Masters, too, often allowed their slaves to be hired. These day-labourers were sometimes called at Athens **Κολωνῖται**, as the place where they congregated for hire was the *κολωνὸς ἐν τῇ ἀγορᾷ παρὰ τὸ* **Εὐρυσακεῖον** (Poil. vii. 133). The united artisans celebrated the festival of the Chalkea in honour of Athena and Hephaestus (A. Mommsen, *Heortologie*, 313 foll.). On manufactories in Greece, see Drumann, *op. cit.* § 11.

The state interfered very little with the artisans. They appear to have sometimes removed unsanitary factories, *e.g.* tanneries, outside the walls (Artem. *Oneirocr.* i. 53); and at Sybaris, noisy ones (Athen. xii. 518 c). We find at Paros the agoranomi seeing that fair contracts were enforced between employer and employed (see the important inscription in honour of Cillus at Paros in Rangabé, *Antiq. hellén.* ii. 366 ff.). There are stray allusions to a *χειρωνάξιον* or tax on trades generally (Aristot. *Oec.* ii. 1, 4, and *C. I. G.* 4863 b). Each man was allowed to exercise as many trades as he liked, though Plato (*Legg.* 846 E) would not have tolerated it; yet, as a matter of fact, the extension of the principle of division of labour (cf. Xen. *Mem.* ii. 7, 6) must have practically limited the exercise of more businesses than one. We have allusions to patents for discoveries (Athen. xii. 521 d); and to the selling of good-will (Lys. *pro Inval.* § 6). The rates of wages may be seen from the following:—Farm-labourer, 4 obols a day (Lucian, *Tim* 6); hodman, 3 obols (Aristoph. *Eccl.* 312); stonecutter and such as worked at the Erechtheum, 1 drachma (*C. I. A.* i. p. 173); night-work at the mill, 2 drachmas (Athen. iv. p. 168).

The principal works on the subject are Drumann, *Die Arbeiter und Communisten in Griechenland und Rom*, 1860; Frohberger, *De opificum apud veteres Graecos conditione*, 1866; Büchsenschütz, *Besitz und Erwerb im Griechischen Alterthume*, 1869, esp. 249–292, 316–355; Caillemer in D. and S., 1874; Becker-Göll, *Charikles*, iii. 93–97; Hermann-Blümner, *Privatalterthümer*, §§ 41, 42.

II. ROMAN.—It has been epigrammatically remarked that whereas with the Greeks every handicraft was an art, with the Romans every art was a handicraft. But both agreed in looking down on all manual labour for hire, whether art or handicraft. Seneca (*Epist.* 88, 18) hesitates about classing a painter among the practisers of liberal arts (see Marquardt, *Privatleben*, p. 589 *seq.*). For the distinction of "liberal" and "sordid" or "common" (*volgares*) arts was that adopted by the Romans, the former being those which involved greater skill and produced greater advantage, the latter those which required mere labour (*opera*), not skill, the wages for which constituted an obligation of slavery (*auctoramentum servitutis*, Cic. *Off.* i. 42, 150). Now it is to be noticed, firstly, that the practical Roman valued in any art the greater advantage, not the aesthetic excellence, of what was produced, always making profession before the people of being quite unskilled in aesthetic judgment (*e.g.* Cic. *Verr.* ii. 35, 87); and, secondly, that the professors of the liberal arts were in strictness called *artifices*, while *opifices* or *sellularii* was the name given to those who exercised the *artes operosae* or *sordidae* (Cic. *Off.* l. c.). The *artifices* were painters, sculptors, engineers, architects, musicians, actors, &c. These latter appear to have been specially called *artifices* (Weissenborn on Livy, v. 1, § 5). However, it will be convenient here to treat of the whole class of what we call artisans.

The earliest notice we have of such artisans is that king Numa (Plut. *Numa*, 17) instituted nine guilds: viz. *αὐληταί, tibicines; χρυσοχόοι, aurifices; τέκτονες, fabri; βαφεῖς, tinctores*, or, according to Marquardt, *fullones; σκυτοτόμοι, sutores; σκυτοδέψαι, coriarii; χαλκεῖς, aerarii; κεραμεῖς, figuli;* and all the rest of the mechanics formed the ninth collegium. Mommsen remarks (*R. H.* i. 202, Eng. trans.) that there are no workers in iron, so that we may infer that iron was a late introduction. The skilled artisans no doubt united in order to preserve the traditions of their art. There are no signs of monopoly by these guilds, or protection in their interest (Mommsen, *l. c.*). These collegia remained in existence all through the republic.

The simplicity of the early times and the paucity of skilled slaves must have caused the artisans to be held at first in high esteem. But of this they were deprived by the Servian timocratic organisation, which excluded artisans (except the carpenters, coppersmiths, and musicians) from serving in the army, not formally but practically, because service was connected with a freehold, which the artisans did not possess (Mommsen, *l. c.*). Later the increase of capital in a few hands led to the employment by these capitalists of slaves or freedmen as artisans, and this prevented any middle class growing up in Rome. Most of the requirements of life were produced in this way. Manufacture was spread throughout Italy. The Ficoroni casket was made by a Praenestine. Cato advises the Campanian farmer to buy the different necessaries of his calling at the most various places (*de Re Rustica*, 135 [136]),—a highly important passage given by Wordsworth, *Fragm. and Specimens*, p. 334. It shows that Mommsen, *R. H.* ii. 379, is misleading. That cloth-working must have been fairly extensive is to be inferred from the frequent mention of the fullers in Roman comedy. A considerable list of manufacturers may be seen in Plaut. *Aulul.*

state" (Dio Chrys. vol. ii. 43 and 45, Reiske). This contempt did not merely attach to trade, but also to what we call art: see Sen. *Ep.* 88, 18, and also *ap.* Lactant. *Inst.* ii. 2, 14, "simulacra deorum venerantur . . . fabros qui illa fecere contemnunt." The technical skill and inventiveness of several of the artisans was of the highest order, details of which will be found in the articles treating of the different handicrafts.

The trades were sometimes taxed. Caligula exacted one-eighth of their gains from the porters (Suet. *Calig.* 40). Alexander Severus, and apparently before him Antoninus Pius (Justin Martyr, *Apol.* i. 27), laid a tax on several classes of artisans,—*braccarii, linteones, vitrarii, pelliones, claustrarii, argentarii, aurifices*—mostly makers of articles of luxury. (Lampr. *Alex. Sev.* 24.)

In post-Diocletian times all artisans were scheduled and formed in each community a corporation. Each corporation paid a fixed tax, called *lustralis collatio* (Cod. Theod. xiii. 1; and especially Marquardt, v. 230). During the same period the lower class of artisans and traders was organised into the COLLEGIATI, while a number of *artifices* by a law of Constantine obtained special exemption from all state burdens, in order that they might have more time to apply themselves each to his special art and to teach it to their sons (Cod. Theod. xiii. 4, 2; Cod. Just. x. 66). In the schedule to this law, which enumerates thirty-five different kinds of artisans concerned, architects, physicians, painters, sculptors, goldsmiths, fullers, potters, &c., all appear to be on an equality. Special immunities, too, are granted to architects, engineers, builders and painters (see the whole title Cod. Theod. xiii. 4, "De excusationibus artificum"). Compare, for similar immunities granted to military artisans, Dig. 50, 6, 7 (6). The idea was that the artisans were not rich enough to undertake *munera patrimonii*; but if the artisan or manufacturer grew rich, he became liable (Dig. 27, 1, 17, 2).

Besides Drumann, *op. cit.*, see Mommsen's *Roman History*; Friedländer's *Sittengeschichte Roms*, especially i.⁴ 284 ff.; Marquardt's *Privatleben*; Lange, *Römische Alterthümer*, i.³ 247, 470, 506, ii.³ 28, &c.; Humbert in D. and S., s. v. *Artifices*; and E. Wezel, *De opificio opificibusque apud veteres Romanos*, Berlin, 1881. [L. C. P.]

ARTYNOI or **ARTYNAI** (ἄρτυνοι or ἀρτῦναι), a sort of council at Argos and Epidaurus inside the governing aristocracy. This latter consisted of 180 at Epidaurus (Plut. *Quaest. Graec.* init. = ii. 291) and 80 for Argos (Thuc. v. 47). The artynoi were a deliberative (βουλευταί, Plut. *l. c.*) and, as their name indicates, an executive body. They swear to the peace between Athens, Argos, Mantinea, and Elis in 420 B.C. (Thuc. *l. c.*). Arnold on this passage quotes Müller, *Dorier*, ii. 140, who supposes that the ἀρτῦναι succeeded to the civil powers of the kings as the στρατηγοὶ succeeded to their military authority. The ἀρτυτὴρ at Thera (*C. I. G.* 2448, iv. *fin.*) seems to have been a financial magistrate—πράκτωρ καὶ ταμίας, says Boeckh. (See on the ἄρτυνοι, Schömann, *Ant.* i. p. 136, E. T.) [L. C. P.]

ARU'RA (ἄρουρα), a Greek measure of surface, which would appear, from its name, to have been originally the chief land-measure.

Herodotus (ii. 163) mentions a measure of the same name, which is almost certainly identical. He says that it is a hundred Egyptian cubits in every direction. Now the Egyptian cubit contained nearly 17¾ inches (Hussey, *Ancient Weights*, &c. p. 237); therefore the square of 100 × 17¾ inches, *i.e.* nearly 148 feet, gives approximately the number of square feet (English) in the arura, viz. 21,904. (Wurm, *de Pond.* &c. p. 94.) The different estimate of Suidas, making it the fourth part of the *πλέθρον* or 2500 square Greek feet, is erroneous (Hultsch, *Metrol.* p. 38, n. 4; p. 284). [P. S.] [W. W.]

ARUSPEX. [HARUSPEX.]

ARVA'LES FRATRES. The Fratres Arvales formed a college or company of priests, twelve in number, and were so called, according to Varro (*de Ling. Lat.* v. 85, Müller), from offering public sacrifices for the fertility of the fields. That they were of extreme antiquity is proved by the legend which refers their institution to Romulus, of whom it is said that when his nurse Acca Larentia lost one of her twelve sons, he allowed himself to be adopted by her in his place, and called himself and the remaining eleven "Fratres Arvales." (Gell. vi. 7, quoting Masurius Sabinus, a writer of the age of Tiberius.) We also find a college called the *Sodales Titii;* and as the latter were confessedly of Sabine origin, and instituted for the purpose of keeping up the Sabine religious rites (Tac. *Ann.* i. 53), there is some plausibility in the supposition of Niebuhr (*Rom. Hist.* i. 303), that these colleges corresponded one to the other; the Fratres Arvales being connected with the Latin, and the Sodales Titii with the Sabine element of the Roman state, just as there were two colleges of the *Luperci*,—namely, the *Fabii* and the *Quinctilii*, the former of whom seem to have belonged to the Sabines. But too little is really known of the Sodales Titii to warrant us in assuming this parallelism; and against it are the title Fratres borne by the Arvales alone among Roman priesthoods, the obvious connexion of their name with the tillage of the soil, and the absence of any gentile or tribal associations. Accordingly, Niebuhr's conjecture has been silently dropped by the latest authorities on the subject (Rein, *ap.* Pauly, i.^{2} *s. v.*; De la Berge, *ap.* D. and S.; Marquardt, vi. 427).

The office of the Fratres Arvales was for life, and was not taken away even from an exile or captive. They wore, as a badge of office, a chaplet of ears of corn (*spicea corona*) fastened on their heads with a white band (*infula*). (Plin. *H. N.* xviii. § 6.) These passages, with a single reference in Minucius Felix (*Oct.* c. 25), comprise all the extant notices of the Fratres Arvales in the ancient writers; and the name of the Dea Dia whom they worshipped is not even mentioned. But the fortunate discovery of a large number of inscriptions has placed the locality of their sanctuary beyond a doubt, and has thrown a flood of light on their constitution and ceremonial as well as on that of other Roman priesthoods. In the Vigna Ceccarelli, at a place quaintly called Affoga l'Asino, a little beyond the fifth milestone on the Via Portuensis, inscriptions upon stone tablets have been found at intervals from 1570 to the present time, which sufficiently identify that spot as the grove of the Dea Dia where the chief festival of the Arvales was held. By the end of the last century, sixty-seven documents had been recovered, and these were published with a valuable commentary, not yet superseded as a storehouse of knowledge on Roman antiquities, by Gaetano Marini, Rome, 1795, 2 vols. 4to. In 1867 more systematic excavations were undertaken with the aid of funds supplied by the King and Queen of Prussia, and the results were given to the world by Henzen, the continuator of Orelli's Inscriptions, in the works mentioned at the end of this article. We have now the *acta* or protocols of ninety-six annual meetings of the college, ranging in date from A.D. 14, the last year of Augustus, to 241, in the reign of Gordian; besides a number of fragments found at various times in Rome itself. From these we are able to form a clear idea of the officers of the college, the ceremonies they performed, and the mode of filling up vacancies in their body. Some of these minutes of proceedings, as they may be called, are much fuller than others, the most important being that of 218, the first year of Elagabalus, which includes the celebrated Hymn. The passage in Varro being the only mention of the Arvales that dates from republican times, it is a highly probable conjecture that this may have been one of the obsolete or half-forgotten cults, several of which, we know, were revived by Augustus. It has further been suggested that the absence of all records, either in literature or inscriptions, later than the age of Gordian, points to a sudden suppression of the college about the middle of the third century. This was the opinion of Marini, favoured by Sig. de' Rossi and M. de la Berge (*ap.* D. and S.): Marquardt, on the contrary, thinks that it shared in the gradual extinction of the pagan rites and died out about the end of the fourth century. The *sacrificium Deae Diae in luco* is named in the law of Constantius and Constans, about 346, which, in the interest of the public amusements, provided for the maintenance of such temples as had games connected with them. In 382, by a decree of Gratian, the disestablishment of all pagan worships was completed, and their remaining endowments confiscated.

The regular number of brethren was twelve, as the legend indicates; the attendance at the annual meetings, as shown by the inscriptions, varies between three and nine. An exception occurs early in the reign of Nero; in the year 57 twelve fratres met, exclusive of the emperor, who was also a member according to the invariable practice, and in this instance, it would appear, a supernumerary. From the time of Augustus it had become usual to appoint princes of the imperial family as extra members of the most dignified priestly colleges (Dio Cass. li. 20). Vacancies as they occurred were filled up by cooptation, originally free, but under the empire usually controlled by an imperial rescript indicating the person to be elected, like the *congé d'élire* of modern times. Thus under Hadrian we find the formula, in the *acta* of the years 118 and 120, *ex litteris imperatoris fratrem Arvalem cooptarunt*. For the purpose of an election the brethren met on the summons of the *magister* in the Regia, the temple of Jupiter Stator, that of Divus Julius, or latterly in the temple of Concord; and the votes were given in writing (*per tabellas*). The newly elected member was solemnly "admitted" by the *magister*, for which the phrase used is *ad sacra vocat*.

Like most Roman *collegia*, the Arvales had their presiding officer called *magister*, elected annually in the grove of the Dea Dia on the second or great day of the May festival, but not coming into office until the 17th of December following: *a Saturnalibus primis ad Saturnalia secunda* is the oft-recurring formula. The *promagister*, who acted in the absence of the *magister* (*vice fungens magistri*), appears to have been nominated by him for an indefinite period, and was not a regularly elected officer of the college. Next in importance to the *magister* was the *flamen*, elected annually upon the same occasion to assist in the sacrifices; he could also be represented by a *proflamen*, or by a member without that title *qui vice flaminis fungebatur*. Either of these dignities was often conferred by way of compliment on the emperor, who usually discharged its duties by deputy; and either might be re-elected, in consecutive years or after an interval. There were, besides, four *pueri ingenui patrimi et matrimi, senatorum filii* (called also CAMILLI), who waited on the brethren during the sacrificial feast, and shared it themselves sitting on *cathedrae*, while their elders of course reclined. The names of these also are found to be the same in successive lists; and it seems that, when once appointed, they retained the post until they assumed the *toga virilis* or lost one of their parents. The college had also its staff of servants; some *servi publici*, assigned to its use by the emperor and reckoned as belonging to his *familia*, an *aedituus* in charge of the sacred precinct, and lastly the *calatores*. To this last office each member of the college appointed one of his own freedmen, and they paid, or their patrons paid for them, an entrance fee or fine on admission; but it was ruled that this payment was not to be exacted more than once from any member, if he had occasion to appoint a fresh attendant (*placuit, ut cum calator accessio sit sacerdotis, semel ob introitum inferri debere, licet alius calator ab eodem sacerdote substitueretur*, year 120). These details, proved by the extant inscriptions, afford some curious points of resemblance to mediaeval and modern collegiate organisations.

The principal duty of the Arvales was to celebrate a three days' festival in honour of the Dea Dia, formerly supposed to be Ceres (Marini), but now more correctly identified with Ops; the divinity of Ceres, as Marquardt observes, not forming a part of the old Roman worship. This festival was sometimes held on the XVI., XIV. and XIII., sometimes on the VI., IV. and III. Kal. Jun., *i.e.* on the 17th, 19th, and 20th, or the 27th, 29th, and 30th of May; in either instance, it will be seen, with a bye-day between the first and second feast days, while the third immediately followed the second. The precise time was fixed in the January of each year, and solemnly proclaimed by the *magister* or his deputy from the temple of Concord on the Clivus Capitolinus. A rule of choosing the two dates alternately has been inferred from the extant *acta*, but there are many exceptions, and the festival undoubtedly belonged to the order of *feriae conceptivae*, or those fixed by proclamation. On the first and last of the three days the college met in Rome, usually at the house of the *magister*, but sometimes also *in Palatio in templo Divorum*; offered fruits, incense, and wine at sunrise to the Dea Dia; anointed her statue; bathed, and changed the *praetexta* in which they had sacrificed for a white dinner-dress (*album cenatorium*; cf. SYNTHESIS). Between dinner and dessert (*mensa prima* and *mensa secunda bellariorum*) they rose from table, reclined on more magnificent couches than those of the *triclinium* (*toralibus segmentatis*), repeated the offerings of wine, incense, and first-fruits (*fruges libatae*); then divided the *bellaria*, and received each man a *sportula* or perquisite for attendance. This in the period from Trajan to the Antonines amounted to 100 denarii, the boys receiving 25; in the impoverished times of the third century it was reduced to 25 denarii for members of the college. The *acta* of the year 218 describe each change of seats and vestments, each washing of the hands, with extraordinary minuteness; and, as has been seen, give the clearest insight, of all ancient documents, into the peculiarly ceremonial character of the Roman religion: the details are here necessarily abridged. Whether the *panes laureati* "touched" (*i.e.* consecrated) by the fratres were common loaves entwined with laurel or a special kind of fancy bread, is uncertain.

On the second day of the feast, which was the most important of the three, the Arvales assembled in the grove of Dea Dia already described. The *acta* of the year 224 contain the curious expression *in luco Deae Diae via Campana apud lapidem V.*: whereas there is no road known as the via Campana, and the road on which the spot is actually situated leads to the mouth of the Tiber, and not into Campania. The phrase, which is doubtless of great antiquity, probably means "country road" (*Feldstrasse:* Preller, *Röm. Myth.* p. 425); and may contain a trace of the process by which the district round Rome has come to be known as the *Campagna*. The grove included a circus for games and several temples, among which the Caesareum or *aedicula* of deified emperors and the Tetrastylum are mentioned; we find also the pavilion or tent (*papilio*) of the master, probably erected for the occasion. The sacrifices were begun early in the day by the *magister* or his deputy, acting alone; he first offered two young pigs in order to expiate the unavoidable desecration of the sacred grove by the use of the axe in pruning and felling it* (*porcilias piaculares ii. luci coinquiendi et operis faciundi*), then a white heifer (*vacca honoraria*) as a victim to the Dea Dia herself. In the forenoon he was joined by his colleagues, who breakfasted on the offerings already made, and then proceeded to fresh ceremonies. They sacrificed a fat lamb; made an offering, not further described, with earthenware pots placed on a table (*in mensa sacrum fecerunt ollis*); sent out two of their number to collect grains of corn, probably from the crowd collected at the temple doors, passed them on to one another, receiving them in the left hand and giving with the right, and finally handed them to the attendants (*publici*, sc. *servi*); placed the *ollae* on the altar, and then threw them away that they might not be used again (this is the probable

---

* *Coinquire*, to lop trees, seems connected with *inquinare*.

explanation of the obscure phrase *ollas precati sunt et ostiis apertis per clivum jactaverunt*); and shared *panes laureati*, followed by turnips and another vegetable mysteriously described (*lumemulia cum rapinis*). The images were now anointed (the plural *deas* is used here only, and seems to refer to Acca Larentia and the Dea Dia as separate divinities); the temple was cleared of all but the priests, and the doors shut; and with their tunics tucked up for the dance, taking written copies of the formula from their attendants, and dividing right and left into two bodies, they proceeded to recite the hymn which has made the name of Fratres Arvales so interesting to philologers (*ibi sacerdotes clusi succincti, libellis acceptis, carmen descindentes tripodaverunt in verba haec*).

The text here given is that of Mommsen (*Hist.* i. 231, E. T.), with which those of Preller (*Röm. Myth.* p. 428) and Marquardt, after Bücheler (*Index schol. Bonnens. aest.* 1876), agree in the main. Another interpretation, embodying some rather fanciful notions of previous scholars, will be found in Donaldson's *Varronianus*, ch. vi. § 2. A rude Saturnian metre is traceable in the hymn:

Enos, Lases, iuvate,
Neve lue rue, Marmar, sins incurrere in pleores.
Satur fu, fere Mars! limen sali! sta! berber!
Semunis alternei advocapit conctos.
Enos Marmar iuvato.
Triumpe.

In Mommsen's rendering:

To the gods—
  Nos, Lares, iuvate,
  Neve luem ruem (= ruinam) sinas incurrere in plures.
  Satur esto, fere Mars.
To the individual brethren—
  In limen insili! sta! verbera (limen?)!
To all the brethren—
  Semones alterni advocáte cunctos.
To the god—
  Nos, Mamers, iuvato!
To the individual brethren—
  Tripudia.

Each of the first five lines was repeated thrice, *triumpe* five times in the inscription, but probably six were intended. There are, as will be seen, other indications of mistakes on the part of the stonecutter.

Very few points in Mommsen's explanation need be regarded as doubtful. Preller writes *E nos* as two words, taking *e* as equivalent to *aje* or *eia*: the rest with more probability make *enos* a form of *nos*, comparing German *uns*. The most difficult words are those which appear in the inscription as NEVELVAERVE: Mommsen's view is simple and probable, and it is easy to suppose the *a* in *luae* a stonecutter's blunder; while Bücheler's *nevel*=*ne* and *vaerve*=*verber* is far-fetched, especially as *berber* in the next line undoubtedly represents *verber*. In the following line the expressions *limen sali! sta! berber!* are much better taken as addressed to the brethren (Mommsen) than as by the others to Mars, "retire into thy temple, stop thy scourge;" Bücheler and Marquardt making *sta* transitive =*siste*, Preller rendering *sta verber(e)*, "desist from." In this line the lapidary has, doubtless by mistake, given once FVRERE, twice FVFERE; and Preller adopts this reading as *satur furere*, the rest much better *satur fu, fere Mars*, making *fu* an imperative. The phrase may have suggested Horace's *heu nimis longo satiate ludo* (I. *Od.* ii. 37), which, however, will suit either reading. For *semones*=*semihomines*, anciently *homōnes*, compare Priscian, p. 683 Putsch; Paul. Diac. s. v. *Hemona*. The connexion of *triumphus* with *tripudium*, rather than with *θρίαμβος*, is now generally accepted.

After the recitation the doors were thrown open and the service-books handed back to the attendants (*publici introierunt et libellos receperunt*); and the brethren now proceeded to the election of a Magister and a Flamen for the ensuing year, followed by the distribution of the *sportula* and of roses. Next came races in the circus of the grove, in which *bigae*, *quadrigae*, and *desultores* are mentioned: the Magister or his deputy presided at the games, habited in the *ricinium* [RICINIUM], and gave away the prizes. The brethren then returned to Rome and dined together in the house of the Magister: this seems to have been the usual practice, but we also find in some of the *acta* a dinner on the spot, in the Tetrastylum (year 219).

Of the other functions of the Fratres Arvales a short account will be sufficient. Whenever iron was brought into the grove, as for cutting the inscriptions for the *acta*, or the lopping and felling of the trees (already mentioned), there were sacrifices *ob ferrum illatum*, and, when the work was done, *ob ferrum elatum*. When the trees fell from decay or, worse still, were struck by lightning, and when replanting was undertaken, still more solemn sacrifices (*suovetaurilia majora*) were offered on the spot. The Arvales met at Rome, in the Capitol and elsewhere, for elections and the *indictio* of the annual festival, as has been seen. They also met for the *nuncupatio* or solemn pronouncing of vows for important events in the imperial family,—the birthday, marriage, illness or recovery of the emperor, his setting out for or returning from serious undertakings, the accouchement of an empress, &c. The Ambarvalia, according to the most probable opinion, were entirely separate from the functions of the Fratres Arvales [AMBARVALIA]. (Marini, *Atti e Monumenti dei Fratelli Arvali*, Rome, 1795; Henzen, *Scavi nel Bosco Sacro dei Fratelli Arvali*, Rome, 1868, and *Acta Fratrum Arvalium*, Berlin, 1874; *C. I. L.* vi. No. 2023–2119; Burn, *Rome and the Campagna*, p. 440; Mommsen, *R. H.* i. 175 ff., 231; Preller, *Röm. Myth.* pp. 422–430; and especially Marquardt, vi. 428–443.) [R. W.] [W. W.]

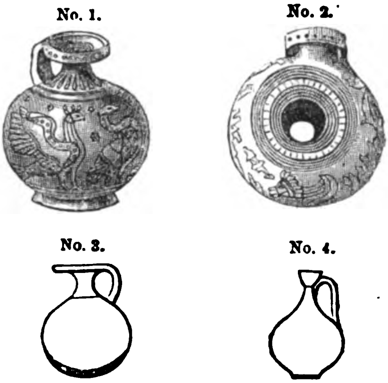
ARX (ἄκρα) signified a height within the walls of a city, but which was never closed by a wall against the city in earlier times, and very seldom in later times. The same city may have had several *arces*, as was the case at Rome; and hence Virgil says with great propriety (*Georg.* ii. 535):—

"Septemque una sibi muro circumdedit arces."

As, however, there was generally one principal height in the city, the word *arx* came to be used as equivalent to *acropolis* [ACROPOLIS]. (Niebuhr, *Hist. of Rome*, vol. iii. note 411.) Where the position of a city was not mainly fixed by commercial considerations (as in the case of Rome itself), a settlement naturally grew around a rock well adapted to become an *arx.* This is especially observable in the ancient cities of Central Italy,—for instance of the Sabines, Volscians, and Hernicans,—which often grew up round an almost inaccessible fastness. At Rome one of the summits of the Capitoline Hill was especially called *Arx*, but which of them was so called was formerly a subject of great dispute among Roman topographers, the German school for the most part placing the *Arx* on the north-eastern summit (*Ara Caeli*), and the *Capitolium* on the south-western (Palazzo Caffarelli), while the Italians generally transposed their positions. Of late, however, the German view is conclusively established, even in the judgment of the Italians themselves. (See the arguments in Burn, *Rome and the Campagna*, p. 185 ff.: and compare Middleton, *Anc. Rome in* 1885, p. 226; Lanciani, in *Bull. Comm. Arch. Rom.* 1875, iii. p. 165.) Within Rome the Arx was the regular place for taking the auspices (Liv. i. 18, x. 7); outside the walls the auspex turned towards it, if in sight (id. iv. 18). The spot in the Arx whence they were taken, probably an elevated platform at the very summit of it, was called *auguraculum*; it commanded a wide prospect to the east, which was not allowed to be obstructed (Cic. *de Off.* iii. 16, § 66). The gloss of Paulus Diaconus that *auguraculum* was an ancient name for the Arx itself is almost certainly a mistake (Fest. p. 18 M.; cf. Burn, *l. c.* p. 195). The *auguraculum* appears to have been transferred by Augustus to the Palatine; the *Notitia* (of the 4th century) mentions it in the Regio Palatina under the name *auguratorium* (Middleton, pp. 86, 235). [W. S.] [J. H. F.]

ARYBALLOS (*ἀρύβαλλος*), a vessel somewhat resembling the *λήκυθος* and ampulla, and, like them, used for carrying oil to the bath or palaestra. Pollux mentions it among the utensils of the bath (vii. 166; x. 63); but it is a mistake to identify it with the *ὑδρία* or large jug for pouring water over the bathers: it was, indeed, larger than the *ἀρύταινα* (Aristoph. *Eq.* 1091, 1094), but the latter was a mere ladle, and the *ἀρύβαλλος* itself of no great size. Athenaeus describes it as a cup (*ποτήριον*) shaped like a purse with strings (*ὡς τὰ συσπαστὰ βαλάντια*), *i.e.* with a globular body and a short and narrow neck; and adds that such purses were sometimes called *ἀρύβαλλοι* from this resemblance (Ath. xi. p. 783 f, following p. 466). It had a small ring or handle, just sufficient for a thong to carry it with, like the ink-bottles (otherwise different in shape) figured under ATRAMENTUM. Hence the name is assigned, with great probability, to the specimens of ancient pottery frequent in museums, called by the Italians *vasi a palla*, i.e. ball-shaped. They are chiefly found among vases of the earliest style, and were carried with the strigil to the bath. The earliest form is that in the cut No. 1, but often without a base, as in cuts 2 and 3. No. 4 represents a later form. These vessels are often richly painted with mythological subjects (Birch, *Anc. Pottery*, ed. 1873, p. 374).

Aryballos. (British Museum. Terra-cotta from Camirus, in Rhodes.)



Aryballoi. (Dennis, *Etruria*, i. p. cxxiv.)

Other derivatives from the same root *ἀρύω*, *ἀρύτω*, to draw water, *ἀρυστήρ*, *ἀρύστιχος*, *ἀρύταινα*, *ἀρυτήρ*, are sufficiently described in the lexicons. [W. W.]

AS. We defer to the article PONDERA an account of the Roman *libra* or pound as a weight, and will deal in the present article only with the pound of copper, the pound as applied to money, the *as*. In the earliest times in Italy, as elsewhere, cattle were the medium of exchange, one ox reckoning as ten sheep (Mommsen, *Röm. Münzwesen*, p. 169). To cattle in Rome and N. Italy succeeded the pound of copper, which in these regions occupied the place held by the silver drachm in Greece and the shekel of gold in the East. There was a period of transition, during which the as was not coined, but measured by weight. Small formless pieces of copper or bronze passed from hand to hand, and were accepted in payments. Such are found in considerable numbers in votive wells, such as that at Vicarello, whither they were thrown as offerings. It would even appear that in later times when money was in use this *aes rude* was still fashioned for religious purposes and cast into the treasuries of deities.

Gradually these lumps of metal acquired fixed shape and design. At Vicarello were found among them cubes marked with rude types—an ox, a trident, and so forth, and weighing from an ounce to a pound; also certain elliptical pieces without types, but of the uniform weight of a sextans.

At what period the regular Roman as, with its divisions, superseded this rude coinage, it is impossible to determine with certainty. *A priori* probability would indicate that the Decemviri (B.C. 451) would, among their other innovations, have introduced the use of coined money, which was in their day well known in Greece, Southern Italy, and Sicily. And it is noteworthy that in the Lex Menenia Sestia of the year of Rome 302 (B.C. 452) fines are reckoned in oxen, while in the Lex Julia Papiria of 324 (B.C. 430) they are expressed in asses,—a substitution explained by Festus as arising from the introduction between those dates of copper money (Mommsen, p. 175). It seems therefore safe to assert that copper took the place of oxen as the standard of value at Rome between the years 450 and 430 before our era.

Mommsen considers these grounds sufficient to justify his assertion that it was the Decemviri who introduced a regular copper coinage at Rome. Nevertheless it is by no means certain that the currency introduced by them was not *aes rude*, which passed current by weight. It is not likely that in any country a currency of coin would immediately supersede a currency of cattle. Another stage would be sure to intervene, during which metal would be accepted by weight, not tale. If cattle were the measure of value in B.C. 450, it is not likely that twenty years later would see the Romans in possession of a complete system of money. Further, it seems impossible to allow that any of the Roman coins, which have come down to us in such quantities, can possibly date from the 5th century B.C. In style, in relief, in type they seem to bear evidence of first appearing towards the middle of the 4th century. The prototypes from which they are copied are Greek coins of fully-developed art. Once more: if we assume that Rome began to issue money in the middle of the 5th century, we must assume that she was quite alone in doing so among all the states of Central Italy for at least a century. There is extant no *aes grave* of Southern Etruria, which was absorbed by the Roman state about B.C. 350. The *aes grave* of Luceria, Venusia, Hatria, and other cities certainly belongs to the period after 320, when those cities were Roman colonies. Even the silver coins of Etruria are now only in very rare instances attributed to a period earlier than that of Dionysius of Syracuse. For all these reasons, and others which space forbids us to mention, it seems probable that the copper which was the standard of value at Rome after the time of the Decemviri passed for quite a century by weight; and that the coinage of Rome properly so called does not begin until the middle of the 4th century. The pieces of silver with the name Valentia and the type of a sow which were formerly ascribed to the Rome of Servius Tullius, and other coins of the same style once accepted as ancient, are beyond question mere modern forgeries.

The early Roman coinage consists of large round heavy lumps of cast metal. The type of reverse alike of the as and of all its divisions is the prow of a galley, but each denomination has a different type on the obverse, together with an appropriate mark of value.

The normal weight of the Roman pound was 327·5 grammes, or 5050 English grains. The as would therefore originally have been of this weight, and a few specimens exist of nearly full weight. But it is noteworthy that extant specimens rarely weigh more than 285 grammes, which is the weight of ten Roman ounces, and the lower denominations are commo in the same proportion. This fact indi the standard of weight for money unc somewhat rapid reduction in the latte the 4th century.

Subjoined is an engraving of a Roma of the earliest period: the diameter o is half that of the coin itself.

As of the earliest
(British Muse

The types of these coins merit a passing notice. The prow which is the leading type belongs to a sea-going vessel of war. It must have been first placed on the coin at a time when the Romans were beginning to pay great attention to naval affairs, probably the time when Rome had acquired the Latin sea-board, and the second treaty was concluded with Carthage. "On the other side" (Mommsen, *Röm. Münzw.*, p. 184) "are the heads of various deities: Janus on the as—*penes Jan* Jupiter on the semis—*penes Jove* Minerva as discoverer of numbers triens and uncia, unless indeed one o meted female heads belongs to Roma on the quadrans as preserver and au wealth; Mercurius on the sextans a commerce and voyages." In the ch these types, however, save the head Greek influence is very manifest. T the various deities are like those to b the Greek coins of South Italy in century.

It was scarcely earlier than B.C. 30 other cities of Latium followed the Rome and issued copper money of lib Many series have come down to us: so of Hatria (Adria) and that of Tuder name of the mint-city at length; o merely an initial, or even no in show us where they were issued. them will be found in Mommsen. worthy that whereas the asses of Ro exceed the weight of 300 gram of the pieces issued by Latin cities and Roman colonies are of considerably higher standard. One reason of this may be that, whereas the money bearing the legal type of the Roman people went by tale and was legal tender, all other money, at all events in government payments and receipts, went by weight only (Lex Rubria, c. 21-2). Pieces of two asses (*dupondius*) and of five asses (*quincussis*) were also issued by Roman authority, although not probably in Rome itself.

We add engravings of a triens and a sextans of some state in Central Italy: in both cases the diameter is half that of the coins.

Triens and Sextans. (British Museum.)

Before arriving at the vexed question of the reductions of the Roman as, we must briefly indicate the relations which existed between the earlier coinage of Rome and those of other parts of Italy during the period B.C. 350–270.

To the north of Rome the Etruscans had adopted the art of coinage, as might have been expected, at a far earlier period than the Latin race. Deecke (*Etruskische Forschungen*, part ii.) has devoted a careful investigation to the systems of coinage in use in Etruria before the Roman conquest. He shows that there are among the Etruscan coins some in silver of an early date, the relation of which to the monetary standards of the ancient world is somewhat doubtful. But at some period not later than about B.C. 360 this system of coinage was replaced and supplanted by that in use in Sicily. The unit of this coinage is the *litra* or pound of copper (which was in weight just two-thirds of the Roman as), or its equivalent in silver of 13·5 English grains. In Etruria, gold, silver, and copper were all minted on this standard, and all bear marks of value. In Sicily copper was but a money of account, but in Etruria pounds or librae of copper of full weight were issued. The chief mint cities were—for silver Populonia, and for copper Volaterrae.

ETRUSCAN MONEY.

No. of Librae.	Mark of Value.	Weight in Grains.

Quadrans . ¼	...	..	..	844
Sextans . ⅙	..	..	..	562
Uncia . 1/12	.	..	..	281

Hence it will appear that the proportionate value of gold to silver was 15 to 1, and that of silver to copper 250 to 1. These proportions we shall find to be the usual ones in all parts of Italy, at this early period.

But the coinage of Etruria was not brought so constantly into contact with that of Rome as was the coinage of the Greek cities of Southern Italy. The mediator between the Greek silver and the Roman copper was the nummus. The equivalent in silver at Rome of the as, which was as above mentioned practically issued of the weight of 10 ounces, was the scruple of silver weighing 17·5 grains. This was at first a money of account merely, and not actually minted until it appeared in the shape of the sestertius. But its place had been previously taken, to some extent at least, by the diobol of Tarentum, Nola, and the cities of Campania, which was in value one-sixth of the local didrachm, and very nearly equal in weight to the Roman scrupulus. Thus the Campanian didrachm was reckoned as equivalent to 6 asses of 10 ounces, or one of the quincusses of full weight (60 ounces). The diobol was both in Rome and South Italy called the *nummus* (from the Greek νόμος); and in both places it was divided decimally, being considered as containing 10 libellae. The silver libella, which was a money of account, was reckoned as equivalent to the ounce in copper, being in fact equal to 1¼ ounces.

At Rome the phrase *heres ex libella*, applied to an heir who inherited the tenth of a property, survived to a late time to testify to the early Roman acceptance of the libella as one-tenth of the scruple or the sestertius. In Southern and Eastern Italy the whole coinage was based upon nummi and libellae. N for nummus occurs as mark of value on copper coins of Capua, and in all the region the quincunx takes the place of the semis, which is entirely wanting, thus giving proof of a decimal system of reckoning. It is further to be observed that if we take the copper equivalent of the libella, 437·5 grains, as an uncia and multiply by 12, we shall reach 5250 grains, nearly amounting to an as of 14 Roman ounces; and it is remarkable that an as of this very weight was issued at Hatria and other cities of Eastern Italy.

Soon after the Roman conquest of Capua (B.C. 338), there began to issue from the mint of that city the earliest gold and silver coins struck by authority of Rome, and marked with the name of that city; at first in the form ROMANO, and afterwards in that of ROMA. These gold and silver pieces, which circulated in all the southern parts of the Roman dominion, were suggested by the coins of Campania. But their weight is regulated by that of the Roman scrupulus. The gold coins are of the weight of

6, 4, and 3 scrupuli; the silver coins of 4 and 2 scrupuli. There are also copper pieces of small weight—struck, and not cast—which belong to this series, and which prove that even after the Roman conquest the circulation of Campania continued to consist of the precious metals, and copper was used only for money of account. One of the gold pieces of this series, weighing 6 scrupuli, offers us the mark of value XXX, which shows that it passed as the equivalent of 30 Roman asses, which was in fact a good deal below its market-value, as it reckons the value of gold as only ten times that of silver.

First Reduction of the As.—One of the most difficult problems in ancient numismatics is the determination of the course of depreciation followed by the Roman *as*. To determine what successive reductions it underwent in weight, the date of those reductions and their object, is almost impossible in the midst of the defective and inconclusive testimony with which we are surrounded. We may borrow our arguments from three sources: (1) ancient writers; (2) the coins themselves; (3) the Roman laws on money matters.

(1) *The writers.* — Verrius Flaccus (Festus, p. 347, ed. Müller) asserts that in the Second Punic War, when Hannibal was in the field, the Senate decreed that the weight of the as, which had hitherto been a pound, should be reduced to ⅙ of a pound. Thus new asses were issued of the same weight as the sextantes of the earlier issue. This was done, says Flaccus, with a view to relieve debtors, both private persons and the state. Pliny, however (xxxiii. § 44), states that in the First Punic War, the Roman exchequer being bankrupt, the weight of an as was reduced to ⅙ of what it had been, having previously been of full weight. Afterwards, in the Hannibalic war, during the dictatorship of Fabius Maximus, the value was again reduced by a half, and asses issued of only an ounce weight. It will be observed that Pliny and Flaccus (who was one of Pliny's authorities) are inconsistent one with the other; the one assigning the first reduction to the time of the First, the other to that of the Second Punic War.

(2) *The coins.*—As already stated, the as seldom much exceeds in weight 10 Roman ounces (285 grammes). Asses of 290-250 grammes are extremely common (cf. D'Ailly, *Monnaie Romaine*, vol. i.). They are seldom found between 240 and 150 grammes. From 150 to 55 grammes the descent seems quite gradual; asses of all intermediate weights occurring, but not being common. Thus in the list of D'Ailly there are 216 asses weighing from 270 to 260 grammes, and only 3 between 150 and 140, and 8 between 120 and 110 grs. But the semis is occasionally found between $\frac{170}{2}$ and $\frac{150}{2}$ grammes; 5 such occurring in D'Ailly's Lists. In the more recent list of weights drawn up by Dr. Samwer, there are 17 asses exceeding 11 Roman ounces in weight, 826 between 8 and 11 ounces, 15 between 5 and 8 ounces, 140 between 2 and 4 ounces, and 18 under 2 ounces.

(3) *The laws.*—Mommsen (p. 302) maintains that in the wording of several laws, for instance the Lex Voconia of B.C. 169 and the Lex Fannia of B.C. 161, the terms *as* and *sestertius* are used interchangeably. This proves that an as of one, no doubt an earlier, issue was equal in value to a sestertius (2½ asses) of a later issue.

Accepting this testimony of the Laws, Mommsen maintains that the first reduction of the Roman standard was in the ratio of 10:4. As the earlier asses were practically minted on the standard of 10 ounces, the asses of this reduction would be on the triental scale, *i.e.* weigh 4 ounces. Other considerations point in the same direction. Thus, the silver denarii issued in B.C. 269 or 268 were equivalent to 10 of the copper asses then in circulation. These denarii weigh about 70 grains. Multiplying this by 250, according to the proportion which seems to have held at this time between silver and copper, we find the value of the denarius, in copper, to be 17,500 grains, which gives 10 asses of 1750 grains or 113·4 grammes. These asses would be very nearly on the triental scale. It will be seen that the evidence we have collected under head (2) seems also to indicate a sudden change from a 10-ounce to a 4-ounce scale.

A remarkable piece of evidence as to the date and extent of the first reduction of the as is offered by the fact that, in the Roman colonies established at Hatria in B.C. 289 and in Ariminum in B.C. 268, a coinage was at first started on the libral scale. But in the colony of Brundisium, founded in 244, we find coins of the 4-ounce standard from the first. This fact seems to prove to demonstration that a reduction of the as to the extent described took place between 268 and 244 B.C.

Taking the theory of Mommsen, thus based, we may compare it with our other data. With the statements of Verrius and Pliny it cannot be reconciled, but then neither can their testimony be reconciled with that offered by existing coins. We must suppose that these writers omitted mention of the first reduction of the coin, and have the less hesitation in doing so because Verrius and Pliny, as we have seen, contradict one another.

But the evidence of existing coins must not be cavalierly treated; and it seems to prove unequivocally that the fall in weight of Roman asses, when it once began, proceeded gradually, and that afterwards every few years witnessed a lowering of standard. The regulations of the Senate in fixing the weight of successive issues, whatever those regulations may have been, must be regarded rather as attempts to put a stop to the gradual decline than as deliberate debasement of the standard. The coins prove that an effort was made to stay the decline of weight when the as had fallen to 5 ounces, about half its original bulk. At the time of the first issue of denarii the as must, as we have seen, have been of ⅓ of full weight. But it very soon sank much lower: the asses issued on the triental scale are so rare as to show that they were not issued for a long period together.

We find traces of the triental scale elsewhere than at Rome. Apulia, with the great mint cities of Venusia and Luceria, adopted, no doubt contemporaneously, the same scale. So did Tuder in Umbria. It would appear that Latium and Picenum did not, but continued issuing money of full weight.

In the case of Etruria we have very full evidence that a scale was adopted very closely of Rome. But, as bra of Etruria was he Roman libra or hat district there- and not to 60 per n extensive series ited on this foot, which the marks ontemporary with ive value of silver nged. ing the Hannibalic ccording to Pliny he coinage during ds are, "Hannibale atore asses unciales facti, placuitque denarium sedecim assibus permutari." We have reason to believe that, besides the changes mentioned by Pliny, others took place, which we must mention in order. The changes were in all four.

(1) *Reduction in the Weight of the As.*—This had doubtless not remained at the standard of 4 ounces, as it was probably fixed at the time of the first issue of denarii, but had continually fallen. What point it had reached at the outbreak of the Second Punic War we cannot say, but it is probable that the law which fixed it at 1 ounce (gr. 421) involved a considerable reduction, because the measure was one which was adopted at a period of great pressure, and which had for its professed object the easing of state obligations. As to the exact date of the measure we are in some uncertainty, as Verrius (Festus, p. 347 b) says that it was ordained by a Lex Flaminia, and so must have been ordered before the death of Flaminius in the battle at the Trasimene Lake, while Pliny ascribes the law to the dictatorship of Fabius Maximus, which followed that battle.

(2) *Reduction in the Weight of the Denarius.*—For this we have no ancient authority. But we find by induction that the weight of Roman denarii, except the very early specimens, does not exceed about 60 grains, and a denarius of that weight contains just $\frac{1}{84}$ of a Roman libra of silver, which Pliny mentions as the normal weight of a denarius (xxxiii. § 132). The denarius as reduced would correspond nearly in weight with the Attic drachm, then the standard of currency in Macedon, Syria, and Sicily. That this reduction took place exactly at the same time as the reduction of the as cannot be proved, but is intrinsically probable. It could at all events scarcely have taken place later. Samwer produces some arguments to prove that it may be fixed to about the year 241.

(3) *Alteration in the relation of Silver and Copper.*—The same measure which decreed the reduction of the weight of the as ordained that in future 16 asses should go to the denarius in the place of 10. And so it continued to be reckoned ever after, except, we are told, in the case of military pay. The pay of the soldier had been hitherto reckoned in asses, and he was allowed still to receive a denarius for every 10 asses due to him. He therefore suffered in a less degree by the depreciation of the currency than all other creditors or people in receipt of a fixed pay. And thus the mark of value X was retained on the denarius, though for nearly all the people it had become incorrect. These disproportioned changes in the weights of as and denarius necessarily produced a change in the relations of the silver and copper in circulation. Hitherto a denarius had really been equal in value to 10 current asses, but in future the denarius was reckoned as equal only to 16 asses of 1 ounce, or 6736 grains of copper, which gives as the new proportion of value of silver and copper 1 : 112; that is to say, in future asses circulated at twice their real value. And serious results might have followed from this, but that it henceforth became more and more the custom to reckon in silver, and to consider copper asses as mere money of account. After the Macedonian wars this method of reckoning indeed became universal.

(4.) *Issue of Gold Coin.*—Until the invasion of Hannibal, gold had passed among the Romans either in the form of bars, or in that of the Campanian coins, of which mention has already been made. But Hannibal cut the Romans off from Campania, the source of their wealth, and more especially of their supplies of the precious metals. It was probably the dearth of silver which caused the issue at Rome at this time of gold pieces of a new type. These bear national designs: on the obverse the head of Mars; on the reverse the Roman eagle bearing a thunderbolt, and the name ROMA. They are of the weight of 3, 2, and 1 Roman scruples, and bear respectively the marks of value ↓X, XXXX, XX. They were thus equivalent to 60, 40, and 20 asses of the early standard or sestertii of silver. The ratio of value between gold and silver exhibited by them is about 1 : 17, which shows that they circulated at a higher than intrinsic value. Mommsen maintains that they were really coins of necessity, issued at a severe crisis to ease circulation. The issue of them was not long continued.

Gold coin of 60 asses. (British Museum.)

Roman Money from Hannibal to Caesar:—

(1.) *Copper.*—The weight of the as was still further reduced by the Lex Papiria, passed 89 B.C. (Plin. xxxiii. § 46), to half an ounce. But as at this period copper had ceased to be the important medium of exchange, and all reckonings were made in silver, this regulation can have had but little effect. Far more importance in reality attaches to the Lex Valeria minus solvendi, passed in B.C. 86, which was a real measure of bankruptcy (Mommsen, *Röm. Münzw.* p. 383). Hitherto there had been two methods of reckoning: (1) in large transactions by the sestertius or old libral as; (2) in small traffic by the reduced as of $\frac{1}{16}$ denarius. The Lex Valeria suddenly abolished the former of these modes of reckoning; so that debtors could discharge obligations contracted under it with ¼ of the sum really due.

(2.) *Silver.*—The sestertius was issued for but a short period, and the quinarius was not used for very long. But beside the denarius there came into circulation the frequently discussed pieces called Victoriati. These exist in three denominations—the double, the unit, and the half. The type of all is the same: on the obverse, a head of Jupiter; on the reverse, Victory crowning a trophy, and the inscription ROMA. The Victoriatus was originally of the weight of 3 scrupuli or ¾ of a denarius; in certain parts of the Roman dominions it was so plentiful that reckonings were commonly made in it; and even Cato (*de R. R.* c. 15) sometimes uses it as the standard of value. With regard to the origin of the Victoriatus, there is some doubt. Mommsen accepted Pliny's statement (xxxiii. § 46) that the coin came originally from Illyria, but M. Zobel has since shown that the converse is the truth: the people of the cities of Illyria copied in their issues the weight of the Victoriatus, which had long been in circulation, more especially in Spain and Gaul, in which countries we should rather seek for its origin. At a later period the weight of the Victoriatus sank, and towards the end of the 2nd century pieces were issued of the type of the Victoriatus, but with the mark Q, which shows clearly that they were intended to pass as Quinarii. There is little doubt that the Victoriati owed their temporary popularity and abundance to reasons of commercial convenience; their weight being nearly that of contemporary drachms of Rhodes, Corinth, and Massilia.

One peculiarity marks all the silver coin of this period,—the frequent occurrence in it of plated pieces. These plated pieces are not in most cases to be set down as forgeries, but are due to the dishonesty of the Roman mint, which regularly, in many of its issues, mixed plated with solid pieces in a fixed proportion, which was sometimes even regulated by authority. It is to Caesar's credit that he called in most of this worthless currency, which must have caused continual losses to innocent persons.

(3.) *Gold.*—The issue of gold coin during the Second Punic War was a temporary expedient. Both before and after that period treasure was laid up at Rome in the form of gold bars, probably of fixed weight, but not issued as coin. Laws of the middle of the 2nd century show that then a pound of gold was reckoned as equivalent to 1000 denarii, which gives the proportionate value of gold to silver as 12 to 1. This treatment of the pound of gold as the unit governs the issue of gold coins, which took place at intervals during the last century B.C. Thus Sulla, for his own purposes, struck gold coins of 30 and 36 to the pound, and Pompey coins of 36 to the pound, while Caesar chose the weight of 40 to the pound for his aurei. Reckoning according to the above-mentioned proportion of 12 to 1, we get the following equations:—

$$\begin{array}{llll} \frac{1}{30} & \text{lb. of gold} = & \frac{400}{3} & \text{sesterces.} \\ \frac{1}{36} & \quad ,, \quad = & \frac{1000}{9} & \quad ,, \\ \frac{1}{40} & \quad ,, \quad = & 100 & \quad ,, \end{array}$$

All these coins were of a military character, struck not for the use of commerce, but to facilitate the distribution of booty.

Authority to issue Money.—According to the early Roman constitution, supreme power rested with the people with regard to money as with regard to other things. We have already mentioned several laws passed by them in regard to the weight of the as and similar matters. The regular issue of coin of course went on without continual interference of the Legislature, under the general control of the magistrates entrusted with the Imperium, such as Consuls and Praetors, who did not however put on it any mark or symbol of their own. With Mommsen (pp. 363–378) we would divide all coins issued within Roman dominions into three classes:—

(1.) *The normal State Coinage.*—It appears that before the Social War special magistrates were appointed to strike coin, or, as it was expressed in Roman phrase, *auro argento aeri flando feriundo.* In B.C. 100 we find the two quaestors Piso and Caepio issuing denarii. The coin issued in the name of Sulla shows great irregularities, and gives us no indication of a settled magistracy. In the censorship of Crassus and Domitius, 92 B.C., there seems to have been a board of five moneyers working under control of the Censors. But at a comparatively early period the board of moneyers consisted of three members as the rule. We first find the IIIVIRI Monetales mentioned as regular magistrates after B.C. 92. After the Social War these officers were regularly and continuously appointed. For a time Caesar raised their number to four, but Augustus restored the triumvirate. The office disappears in the first century of our era. If any one beside the Monetales had occasion to issue money, he did it by special commission of the Senate, and usually placed on each piece the letters S C (Senatus Consulto).

(2.) *Money issued by Roman authority in subject States.*—Under this head will come the coins of Capua already spoken of, the Victoriati issued with the mint-mark of Corcyra and Croton, and other series. All these bear the name of Rome; nevertheless the coins were probably issued by inferior magistrates appointed by the mint city, the resident Roman magistrate exercising only a general oversight and control.

(3.) *Money issued by Generals in the Field.*—The military Imperium carried with it in the eyes of the Romans all such inferior privileges as the minting of money and the like. The gold coins issued by Sulla and Caesar are good instances in the Roman series of military money; there is also a great deal of silver minted by Caesar, Lentulus, Pompey, and others.

Roman Money from Augustus to Caracalla.—During the civil wars there was considerable irregularity in the issue of coin. Each of the contending generals issued money as suited himself, and meantime the Senate was also coining in the precious metals. When Augustus was settled in supreme power, he made an arrangement with the Senate whereby the right of minting gold and silver was reserved to himself, but the issue of copper was conceded to them. Henceforth all copper coin bears the letters S C to show that it appeared by authority of the Senate. We will mention in order the denominations issued in all three metals.

(1.) *Gold.*—Like the early kings of Persia, the Caesar of Rome claimed the sole right in all the world to issue gold coin; and it is a remarkable fact that no gold money of the Parthians is known, and that Roman aurei are frequently found in regions so remote from Italy as India. Augustus issued gold of three denominations:—

Aureus,	**weight**	$\frac{1}{40}$	**libra or**	**Eng. gr. 126.**
Quaternio,	„	$\frac{1}{10}$	„	„ **505.**
Half aureus,	„	$\frac{1}{80}$	„	„ **53.**

The aureus was also termed the gold sestertius, and its half the gold Victoriatus. The

Aureus of Augustus. (British Museum.)

aureus was evidently modelled as to weight on the gold staters of Philip and Alexander of Macedon, which weigh about 130 to 133 grains, and had long been the standard of value in all civilized countries. It was reckoned as equivalent in value to 25 silver denarii or 100 sesterces, which gives the ratio of value of gold to silver as about 12 to 1. But as the silver issued by the successors of Augustus became rapidly alloyed, the gold coin became the real standard of value, and the silver sank into the position of a mere money of account, so that when people incurred a debt of 100 denarii, what was really meant was 4 aurei. In fact the denarii assumed exactly the same position as is occupied in England by shillings and other silver money. With a few exceptions, all gold and silver coin of the Romans from Augustus onwards bears the image and superscription of an emperor. In the reign of Nero (Pliny, *H. N.* xxxiii. § 47), the weight of the aureus had sunk to $\frac{1}{45}$ of a libra, and in that of Caracalla still further to $\frac{1}{50}$ of a libra.

(2.) *Silver.*—Under the Empire the issue of quinarii and sestertii was for a time renewed, though for the latter a copper coin was soon substituted. The weight of the denarius was at first maintained at its old standard of $\frac{1}{84}$ libra, and its fineness was likewise for a time preserved almost perfect. But Nero lowered the weight of the denarius to $\frac{1}{96}$ libra or 52 English grains, at the same time mixing $\frac{1}{10}$ of alloy with the pure metal. After this the quality of the coin went on deteriorating, and we cannot be surprised that as Tacitus tells us (*Germ.* v.) the old Serrati and Bigati [*q. v.*] of the Republic passed more easily in Germany than the Imperial denarii. Indeed the discovery of hoards has furnished us with evidence that much of the currency of Rome during the 1st and 2nd centuries consisted of consular denarii: of these most of the heavier specimens disappeared during the reign of Trajan; the lighter were not melted down until the time of the Antonines. Caracalla introduced beside the denarius, a new coin weighing about $\frac{1}{60}$ libra, bearing on the obverse his head radiate. These were called *argentei* or *denarii Antoniniani*, and became common under following emperors. Their distinguishing mark is always that the emperor's head on them wears a radiate crown.

(3.) *Copper.*—The Senate, in virtue of the privilege allowed them by Augustus to issue copper coin, struck in several denominations. The largest coin they issued was the sestertius or piece of four asses. This was made of a fine yellow metal composed $\frac{3}{4}$ of copper and $\frac{1}{4}$ of zinc, and was a Roman ounce in weight. The dupondius was in the same metal, but of smaller size, weighing about half an ounce. From the time of Nero onward it was the custom to place on dupondii the head of the emperor with radiate crown, in order to distinguish these pieces from the asses on which the head was laureate. For in size the as and dupondius were closely alike, only the former was made of inferior metal,—copper alloyed with about 30 per cent. of tin and lead. Of this metal were also made semisses and occasionally quadrantes. What are now called by collectors *large brass* coins are sestertii, the middle brass are dupondii and asses, the small brass are semisses and quadrantes. What are now called "medallions" are not coins at all, but medals issued by imperial authority to commemorate historical events.

Roman Money from Caracalla to Constantine.—This period presents us with a continually increasing adulteration of coin in all metals, ending in utter bankruptcy, and a collapse for which Diocletian and Constantine endeavoured to find a remedy.

Gold.—After the time of Caracalla various multiples of the aureus were struck. The metal whereof these and the aureus itself were formed was not at any time much adulterated, but the weight of the pieces sinks and varies in a remarkable degree. The result of this want of commercial honesty soon became apparent. Gold money, as we have seen, had become the measure of value. But when this became no longer trustworthy, people fell back on the only measure which underwent no change, the Roman pound. The pound or libra of gold remained the base of the system of credit, and gold coins circulated by weight only, just as if they had been small unstamped ingots of metal. It was reserved for Constantine to put an end to this state of things. He introduced a solidus of gold weighing $\frac{1}{72}$ of a libra, as its marks of value LXXII and O B sufficiently signify; as well as a semis and a triens of the same piece. This latter held its ground for a long time, and its lineal descendant the Bezant became the prototype of all later systems of gold coinage in East and West.

Silver.—The deterioration in the metal of the Antoniniani was very rapid, until in the time of Gallienus and Claudius II. they were little better than plated money of copper. The denarius meantime had declined both in weight and purity, and was in a shameful condition when Diocletian and his colleagues re-introduced the Neronian denarius and quinarius. Some of the former when first minted bore the mark of value XCVI, to indicate that their weight should be $\frac{1}{96}$ of a libra, though as a matter of fact they are sometimes heavier. Diocletian also struck pieces of much heavier denomination. Constantine added new denominations, striking silver pieces of the same weight as his gold solidus, and of half that weight.

Copper.—Not even the money of bronze escaped the tendency to deterioration during this age. The sestertii of fine brass fall to a half and even a third of their original weight of an ounce, and the metal becomes poorer. Finally with Florianus they become extinct. The coins of Decius, which weigh an ounce, are supposed to be quinarii in bronze. Diocletian issued copper money in two denominations, of which the heavier weighed about 150, the lighter some 35 grains; but as these pieces are washed with silver, they can scarcely have been intended to pass as mere copper. If we overlook a few temporary irregularities, these pieces continued to be part of Roman currency until the death of Theodosius I. The larger of them is mentioned by ancient writers under the name *follis* or *pecunia major*, and seems intended to succeed the degenerate Antoninianus. The smaller is called *nummus centenionalis*. By this time the denarius of account had sunk into a value too small to be coined, and was worth but a small proportion of the follis.

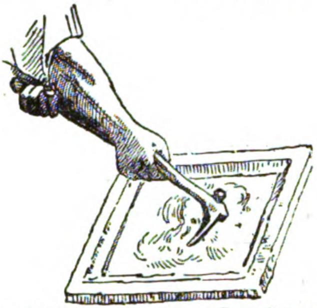
The values of these coins in modern money varies of course with the weight. The *aureus* of Augustus was a little heavier than the English sovereign, and three *denarii* nearly of the same weight as a florin. The *as* was at first rather more valuable than an English pound of copper.

[P. G.]

ASAMINTHUS (*ἀσάμινθος, σκαφή, πύελος, ἔμβασις, μάκτρα*), a bath-tub, in which the bather sat, while hot water was poured over his head and shoulders (cf. *Od.* x. 361). This was the usual mode of bathing in Homeric times; in later times, however, when regular baths were introduced, other methods seem to have been preferred. So Suidas says, speaking of the *ἀσάμινθος*: *σκαφὴ ἐν ᾗ οἱ ἀρχαῖοι ἐλούοντο, οὐκ ᾔδεσαν γὰρ βαλανεῖα* (cf. Suid. *s. v.*); and no representation of a tub, in which bathers could sit, appears on any of the vases, which depict scenes from the baths. There is, however, no doubt that baths of this kind still remained in use, as occasional references to them occur in later writers (cf. Aristoph. *Eq.* 1060; Poll. vii. 166), and Eupolis (*ap.* Poll. vii. 168) speaks of several people bathing together in a bath of this kind. [BALNEAE.] [J. H. O.]

ASCAULES. [TIBIA.]

AS'CIA, a tool employed in somewhat different forms for different purposes. 1. The *σκέπαρνον* of Homer (*Od.* v. 235, ix. 391), used in working wood, and resembling our adze. It was with representations of a tool, resembling an *ascia* (see first cut No. 3), but varying in shape on the different coins. [J. Y.] [J. H. F.]



Ascia used by Bricklayers. (From Trajan's Column.)

ASCLEPIEIA (ἀσκληπίεια), the name of festivals which were probably celebrated in all places where temples of Asklepios (Aesculapius) existed. The most celebrated, however, was that of Epidaurus, which took place in the grove of Asklepios every fifth year, and was solemnised with contests of rhapsodists and musicians, and with solemn processions and games. The solemnity took place nine days after the Isthmian games. (Schol. *ad* Pind. *Nem.* iii. 145; Paus. ii. 26, § 7.) Ἀσκληπίεια are also mentioned at Lampsacus (Böckh, *Corp. Inscr.* vol. ii. p. 1131), and at Athens (Aeschin. c. *Ctesiph.* § 67), which were probably, like those of Epidauros, solemnised with musical contests. They took place on the eighth day of the month of Elaphebolion. [L. S.]

ASCOLIASMUS (ἀσκωλιασμός, ἀσκωλιάζειν, the leaping upon the leathern bag, ἀσκός) was one of the many kinds of amusement in which the Athenians indulged during the Anthesteria and other festivals in honour of Dionysus. The Athenians sacrificed a he-goat to the god, made a bag out of the skin, smeared it with oil, and then tried to dance upon it. The various accidents accompanying this attempt afforded great amusement to the spectators. The competitor who kept his balance longest was proclaimed the winner, and received the skin as a reward. The game is alluded to by Virgil (*Georg.* ii. 384), "mollibus in pratis unctos saluere per utres." This term seems also to have included a variety of other games, the peculiarity of which consisted in hopping or standing on one leg. (Schol. *ad* Aristoph. *Plut.* 1129; Plat. *Symp.* p. 190, D, E;

Ascoliasmus, dancing on a wine-skin.
(From an ancient gem in Krause.)

Pollux, ix. 121; Suid. *s. v.*; Hesych. *s. v.* Ἀσκωλιάζοντες; Aristot. *Incess. Anim.* 4, 8; Ael. *H. N.* iii. 13; Varr. *ap.* Non. p. 21; Krause, *Gymnastik und Agonistik d. Hellenen*, p. 399; Dennis, *Etruria*, ii. p. 342.) [W. S.]

ASCOS (ἀσκός), a leathern bag, chiefly of goat-skin, mostly used for the transport of wine (Hom. *Il.* iii. 247; *Od.* v. 265, vi. 78), as in the south of Europe in the present day, is also the name to vessels resembling goat-skins. (Hermann, *Griech. Ant.* iv.^{3} p. 232; Dennis, *Etruria*, i. p. cxxv.) [W. S.]

Ascoi. (Dennis's *Etruria*.)

ASEBEIAS GRAPHE' (ἀσεβείας γραφή) was one of the many forms prescribed by the Attic laws for the impeachment of impiety. From the various tenor of the accusations still extant, it may be gathered that this crime was as ill-defined at Athens, and therefore as liable to be made the pretext for persecution, as it has been in all other countries in which the civil power has attempted to reach offences so much beyond the natural limits of its jurisdiction. The occasions, however, upon which the Athenian accuser professed to come forward may be classed as, first, breaches of the ceremonial law of public worship; and, secondly, indications of that which in analogous cases of modern times would be called heterodoxy, or heresy. The former comprehended encroachment upon consecrated grounds, the plunder or other injury of temples, the violation of asylums, the interruption of sacrifices and festivals, the mutilation of statues of the gods, the introduction of deities not acknowledged by the state, and various other transgressions peculiarly defined by the laws of the Attic sacra, such as a private celebration of the Eleusinian mysteries and their divulgation to the uninitiated, injury to the sacred olive-trees, or placing a suppliant bough (ἱκετηρία) on a particular altar at an improper time (Andoc. *de Myst.* § 110), or offering a sacrifice with any deviation from the prescribed rites (Demosth. *c. Neaer.* p. 1385, § 116). The heretical delinquencies may be exemplified by the expulsion of Protagoras (Diog. Laërt. ix. 51, 52), for writing "that he could not learn whether the gods existed or not;" in the persecution of Anaxagoras (Diog. Laërt. ii. 12), like that of Galileo in after-times, for impugning the received opinions about the sun; and the condemnation of Socrates for not holding the objects of the public worship to be gods. (Xen. *Apol. Socr.* 10; *Memorab.* i. 1, § 1.) The variety of these examples will have shown that it is impossible to enumerate all the cases to which this sweeping accusation might be extended; and, as it is not upon record that religious Athens (Xen. *Rep. Ath.* iii. 8) was scandalised at the profane jests of Aristophanes, or that it forced Epicurus to deny that the gods were indifferent to human actions, it is difficult to ascertain the limit at which jests and scepticism ended, and penal impiety began.

With respect to the trial, any citizen that pleased (ὁ βουλόμενος)—which, however, in this as in all other public actions, must be understood of those only who did not labour under an incapacitating disfranchisement (ἀτιμία)—seems to have been a competent accuser; but as the nine archons, and the Areiopagites, were the proper guardians of the sacred olives (μορίαι, σηκοί, Lysias, Περὶ τοῦ Σηκοῦ, § 29), it is not impossible that they had also a power of official prosecution upon casually discovering any injury done to their charge.

The magistrate who conducted the previous examination (ἀνάκρισις) was, according to Meier (*Att. Proc.* pp. 300, 304, n. 34), invariably the king archon; but whether the court into which he brought the causes were the Areiopagus, or the common heliastic court, of both of which there are several instances, is supposed (Meier, *Att. Proc.* p. 305) to have been determined by the form of action adopted by the prosecutor, or the degree of competency to which the Areiopagus rose or fell at the different periods of Athenian history. Westermann (*ap.* Pauly) holds the notion that indictments for ἀσέβεια could be brought before the Areiopagus to be a mistake, while admitting that it is the common opinion: the latter is re-asserted by Schömann in his latest work (*Antiq.* i. 498, E. T.). The penalty, which might be fine, banishment, or death, was usually (as in the case of Socrates) a separate question for the dicasts after conviction. For some kinds of impiety, however, the punishment was fixed by special laws, as in the case of persons injuring the sacred olive-trees: and it would seem that the sanctity of Demeter and the divinities associated with her (Cora, Dionysus) was hedged in by denouncing the penalty of death against the breach of merely ceremonial regulations in connexion with the Eleusinian worship (Andoc. *de Myst.* §§ 33, 110; Demosth. *c. Neaer.* l. c.).

If the accuser failed to obtain a fifth of the votes of the dicasts, he forfeited a thousand drachmas, and incurred probably a modified ἀτιμία, though not to the extent of exclusion from office (Demosth. *c. Eubul.* p. 1301, § 28). Other forms of prosecution for this offence were the ἀπαγωγή (Dem. *c. Androt.* p. 601, § 35), ἐφήγησις (Meier, *Att. Proc.* p. 246), ἔνδειξις (Andoc. *de Myst.* § 8), προβολή (Libanius, *Argum. ad* Dem. *in Mid.* init.), and in extraordinary cases εἰσαγγελία (Andoc. *de Myst.* § 43); besides these, Demosthenes mentions two other courses that an accuser might adopt, δικάζεσθαι πρὸς Εὐμολπίδας, and φράζειν πρὸς τὸν βασιλέα (Wayte, on Demosth. *Androt.* l. c.). [J. S. M.] [W. W.]

ASIARCHAE (ἀσιάρχαι) were, in the Roman province of Asia, the chief presidents of the religious rites, whose office it was to exhibit games and theatrical amusements every year, in honour of the gods and the Roman emperor, at their own expense, like the Roman aediles. As the exhibition of these games was attended with great expense, wealthy persons were always chosen to fill this office; for which reason, Strabo says, some of the inhabitants of Tralles, which was one of the most wealthy cities in Asia, were always chosen asiarchs. A list of ten names was drawn up annually by delegates (σύνεδροι) of the different towns of Asia, at the general assembly (κοινὸν Ἀσίας), and the selection of

(1) *falcati asseres* (Liv. xxxviii. 5, 3), also called *harpagones* (Liv. xxx. 10, 16); δορυδρέπανα (Polyb. xxi. 27, § 4), poles with hooks at the ends, used for tearing down battlements. (2) At sea, similar poles (called *longurii*) were used for destroying the rigging of the enemy's ships (Caes. *B. G.* iii. 14, 5). (3) Poles, twelve feet long, with sharp points (*cuspidibus praefixi*), hurled from engines against the works of the besiegers (Caes. *B. C.* ii. 2). (4) Strong beams with grappling hooks (*corvi et ferreae manus*) attached, which were let drop on the enemy's ships (Q. Curt. iv. 3, § 24). [L. C. P.]

ASSERTOR or **ADSERTOR** is the name given to the party who asserts or vindicates in an action (*liberale judicium*) the freedom of another (Gaius, iv. 14); for a person who claimed to be free could not sue on his own behalf. By the law of the Twelve Tables it was enacted in favour of liberty, that an adsertor should not be called on to give security in the *sacramenti actio* to more than the amount of 50 asses. In the course of the action the adsertor laid his hand on the person whose liberty he claimed (*adsertus*), and formally asserted the right of the latter to his freedom. Hence *adserere in libertatem, liberali adserere manu.* (Ter. *And.* ii. 1, 40; Plaut. *Poen.* iv. 2, 83.)

The expression *adserere in servitutem*, "to claim a person as a slave," occurs in Livy (iii. 44; xxxiv. 18). The *vindicatio in libertatem* was employed as a collusive action for the purpose of manumitting slaves (*manumissio per vindictam*). In later times the part of assertor was represented by the Praetor's lictor. (Dig. 40. 12, *de Liberali Causa;* Cod. vii. 16.) [G. L.] [E. A. W.]

ASSESSOR or **ADSESSOR.** The consuls, praetors, governors of provinces, and the judices were often imperfectly acquainted with the law and the forms of procedure, and it was necessary that they should have the aid of those who had made the law their study (Cic. *de Orat.* i. 37; *in Verrem*, ii. 19). Such advisers, who sat in court near or by the side of the functionary who was administering justice, were called *assessores.* This custom continued under the Empire (Plin. *Epist.* 20, vi. 11, x. 19; Gellius, i. 22). The *praefectus praetorio, praefectus urbi*, and other civil and military functionaries had their assessors. An instance is mentioned by Tac. (*Ann.* i. 75) of the Emperor Tiberius assisting at the judicia (*judiciis assidebat*), and taking his seat at the corner of the tribunal, nominally in the capacity of assessor.

No magistrate was allowed to sit without one or more assessors, learned in the law (*juris studiosi*). The Emperor Alexander Severus gave *assessores* a regular salary (Lampr. *Alex. Sev.* 46). The assessor was chosen by the magistrate whom he was called in to advise, and persons could not act as assessors in the province to which they belonged. *Infames* were incapable of serving the office. The jurist Paulus, who wrote a special work, *de Officio Adsessoris*, thus sums up the duties of the office: "Omne judicium adsessoris, quo juris studiosi partibus suis funguntur, in his fere causis constat: in cognitionibus, postulationibus, libellis, edictis, decretis, epistulis" (Dig. 1, tit. 22, s. 1). The magistrate was often the mere mouthpiece of his assessor. If the latter gave improper advice, he, and not the magistrate, was responsible.

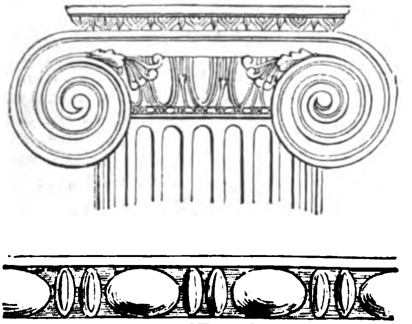
Under the later empire assessors seem to have heard causes on behalf of the magistrate in his absence. According to the conjecture of Savigny (*Geschichte des Röm. Rechts im Mittelalter*, vol. i. p. 79), as the formulary system gradually declined the *assessores* took the place of the *judices*.

The work of assessor was regarded as good preparation for high independent office (Spart. *Pesc. Nig.* 7). In the later writers assessors are mentioned under the various names of *adsessores*, *πάρεδροι*, *Consiliarii*, *juris studiosi*, *comites*. The *juris studiosi* mentioned by Gellius, xii. 13, as assistants to the judices (*quos adhibere in consilium judicaturi solent*) were *assessores*. (Bethmann-Hollweg, *Der römische Civil-Prozess*, § 141, vol. iii. 129.) [E. A. W.]

ASSID'UI. [Locupletes.]

ASTRAG'ALUS (ἀστράγαλος) literally signifies that particular bone in the ankles of certain quadrupeds which the Greeks, as well as the Romans, used for dice and other purposes, as described under the corresponding Latin word Talus.

As a Latin word, *astragalus* is used by Vitruvius, who of course borrowed it from the Greek writers on architecture, for a certain moulding (the astragal), which seems to have derived its name from its resemblance to a string or chain of *tali*; and it is in fact always used in positions where it seems intended to bind together the parts to which it is applied. It belongs properly to the more highly decorated forms of the Ionic order, in which it appears as a lower edging to the larger mouldings, especially the *echinus* (ovolo), particularly in the capital, as shown in the following woodcut, which represents an Ionic capital found in the ruins of the temple of Dionysus at Teos. Still finer examples occur in the capitals of the temple of Erechtheus or Athene Polias, at Athens, where it is seen, too, on the sides of the volutes. It is also often used in the entablature as an edging to the divisions of the cornice, frieze, and architrave. The lower figure in the woodcut represents a portion of the astragal which runs beneath the crowning moulding of the architrave of the temple of Erechtheus. It is taken from a fragment in the British Museum, and is drawn of the same size as the original.



Astragalus, from Ionic capital.

The term is also applied to a plain convex moulding of the same sectional outline as the former, but without the division into links, just like a *torus* on a small scale: in this form it is used in the Ionic base [Spira]. In the orders subsequent to the Ionic,—the Corinthian, Roman Doric, and Composite,—the astragal was very freely used. The rules for the use of the moulding are given by Vitruvius (iii. 5, § 3; iv. 6, §§ 2, 3: Schneid.). Numerous fine examples of it will be found in the plates of Mauch (*Die Griechischen und Römischen Bau-Ordnungen*, Potsdam, 1845). [P. S.]

ASTRATEIAS GRAPHE' (ἀστρατείας γραφή). Under this head we may conveniently group the principal military offences, which at Athens were dealt with by one law. A citizen was liable to indictment, and, if convicted, to disfranchisement for— 1. Failure to join the army—*ἀστρατείας*: 2. Cowardice in battle—*δειλίας*: 3. Desertion of his post—*λιποταξίου*: 4. Desertion from the army—*λιποστρατίου*. Of these terms, *λιποταξίου* was that used in the widest sense, and might include any of the others. Prof. Jebb observes that it does not appear quite certain whether there was a *γραφὴ δειλίας* distinct from a *γραφὴ λιποταξίου*. In Lysias (*c. Alcib.* i. § 6) they appear to be identified; but in the following passages (among others) they are distinguished:—Andoc. *de Myst.* § 73; Aeschin. *in Ctes.*, § 175; Plato, *Legg.* xii. 943 D, *ῥιφθέντων* in the last passage being obviously equivalent to *δειλίας* (Jebb, *Att. Or.* i. 256 n.). The two speeches of Lysias against the younger Alcibiades—one *λιποταξίου*, the other *ἀστρατείας*—are two separate indictments for the same offence, that of serving in the cavalry when he was drawn as a hoplite; an incident highly characteristic of Athenian procedure.

All these actions belonged to the jurisdiction of the strategi: the accuser was any qualified citizen that chose to come forward (*ὁ βουλόμενος, οἷς ἔξεστι*), and the court was composed of soldiers who had served in the campaign. It has been objected that a soldier could not also be a dicast: but the trial would naturally come on after the campaign was over, and the language of Lysias is explicit (*τοὺς στρατιώτας δικάζειν*, *c. Alcib.* i. § 6; *οὐκ ἐπεξῆλθε μεθ' ὑμῶν*, § 7; cf. § 15, and the concluding words of the Second Speech). The taxiarchs and hipparchs, having the duty of drawing up the military list, would be associated with the strategi in getting up the case (Demosth. *c. Boeot. de Nom.* p. 999, § 17).

The punishment of *ἀτιμία* is regularly attached to this class of offences (see, besides the passages already referred to, Aeschin. *Timarch.* § 29; Demosth. *Mid.* p. 533, § 58, *Neaer.* p. 1353, § 27), with, of course, further penalties for usurping the forfeited rights (Demosth. *c. Timocr.* p. 732, § 103). The question whether confiscation was not added in some cases, has been noticed under Anaumachiou Graphé. The *λιποστρατίου γραφὴ* must be distinguished from the much more serious *αὐτομολία*, or going over to the enemy. The latter was not a purely military offence, and so apparently not tried before the strategi, and was a capital crime [Automolias Graphé]. [W. W.]

ASTROLO'GIA. This word is employed by the best Latin writers (*e.g.* Cic. *de Divin.* ii. 42, 87; *de Orat.* i. 16, 69) to denote *astronomy* in general, for which *astronomia* does not occur earlier than Seneca. In Greek, *ἀστρολογία* is the (*ortus, occasus, motus, viae, discessiones, coetus, conventus, concursiones, circuitus, transitus, habitus, forma, positura, positus siderum et spatia*) were carefully registered in tables (**πίνακες, ἐφημερίδες**). In so far as the planets were concerned, it was of especial importance to note through what sign of the zodiac they happened to be passing, since each planet had a peculiar sign, called the *domus* or house of the planet, during its sojourn in which it possessed superior power. Thus Libra, Capricornus, and Scorpio were respectively the *houses* of Venus, Saturn, and Mars.

The exact period of birth (*hora genitalis*) being the critical moment, the computations founded upon it were styled **γένεσις** (*genesis* or *genitura*), **ὡροσκόπος** (*horoscopus*), or simply **θέμα**, and the star or stars in the ascendant *sidus natalicium, sidera natalicia*, or sometimes **ὡροσκόπος**.

The Chaldaean astrology was unknown in Greece until after the conquests of Alexander, although Eudoxus, a younger contemporary of Plato, is said to have warned his countrymen not to place faith in it (Cic. *de Div.* ii. 42, 87). Euripides (*Frag.* 485 Dind.) describes Hippo, the daughter of Chiron, as predicting the future from the risings of stars: but Archdeacon Hare (*Philol. Mus.* i. 25) thinks that this referred only to predictions of the weather. This limitation will not apply to the language of Plato (*Timaeus*, p. 40 D) about divination from the movements of the planets (Lewis, *Astr. of the Anc.* p. 295). The first Chaldaean who practised astrology in Greece is said to have been Berosus (Vitruv. ix. 7), who lived about B.C. 340–270. After this time it passed into general acceptance, especially among the Stoic philosophers: and Panaetius, in the second century, who rejected it, mentioned Anchialus and Cassander, two contemporary astronomers, as standing alone in sharing his views (Cic. *de Div.* ii. 42, 88). Astrologers by this time had found their way to Rome. The words *de circo astrologos* in Cic. *de Div.* i. 58, 132, evidently belong, not to Ennius, as has sometimes been supposed, but to Cicero himself (cf. Ribbeck, *Frag. Trag.*^{2} p. 55): but Cato (*de R. R.* 5, 4) forbids his steward to consult "haruspicem, augurem, hariolum, Chaldaeum."

In B.C. 139 C. Cornelius Hispallus, the *praetor peregrinus*, banished the Chaldaeans from the city, and ordered them to quit Italy within ten days (Val. Max. i. 3, § 2). We read, however, of prophecies of the Chaldaeans given to Sulla, Pompeius, Crassus, and Caesar; and Cicero speaks of L. Tarutius Firmanus, the friend of Varro, as "in primis Chaldaicis rationibus eruditus" (*de Div.* ii. 47, 98). In B.C. 33 they were again banished from the city by M. Agrippa, who was then aedile (Dio Cass. xlix. 1). Another severe ordinance was levelled by Augustus against this class (Dio Cass. lxv. 1, lxvi. 25), but the frequent occurrence of such phrases as "expulit et mathematicos" (Suet. *Tib.* 36), "pulsis Italia mathematicis" (Tac. *Hist.* ii. 62), in the historians of the empire, prove how firm a hold these pretenders must have obtained over the public mind, and how profitable the occupation must have been which could induce them to brave disgrace, and sometimes a cruel death (Tac. *Ann.* ii. 32). Notwithstanding the number and stringent character of the penal enactments by which they were denounced, they appear to have kept their ground, and, although from time to time crushed or terrified into silence, to have revived with fresh vigour in seasons of confusion and anarchy, when all classes of the community, hanging in suspense between hope and fear, were predisposed to yield to every superstitious impulse. It must be remembered also, that the most austere princes did not disdain, when agitated by doubts or excited by ambitious longings, to acquire the principles of the art and to consult its professors, as we may perceive, not to multiply examples, from the well-known story of Tiberius and Thrasyllus (Tac. *Ann.* vi. 20, 21). Hence Tacitus, after recounting the high promises by which the "mathematici" stimulated Otho to assume the purple, adds in a tone of sorrowful resignation, "genus hominum potentibus infidum, sperantibus fallax, quod in civitate nostra et vetabitur semper et retinebitur." (See Cic. *de Div.* ii. 42 ff.; Gell. xiv. 1; Hor. *Carm.* i. 11, 2, ii. 17, 17; Pers. v. 46; Juv. iii. 43, vii. 194, x. 94 (with Mayor's note), xiv. 248, vi. 553–581; Tac. *Ann.* ii. 27, 32, iii. 22, iv. 58, vi. 20, xii. 22, 52, 68, xvi. 14; *Hist.* i. 22, ii. 62; Suet. *Tib.* 14, 36, *Vitell.* 14, *Nero* 40, *Galb.* 4; Gell. i. 9; Dio Cass. xlix. 43, lvi. 25, lvii. 15, lxv. 1; Zonar. ii. p. 142; Lips. *Excurs.* vii. *ad* Tac. *Ann.* ii.; Jani, *Excurs. ad* Hor. *Carm.* ii. 17, 17; Ruperti, *Not. ad* Tac. *Ann.* ii. 27. For the penal enactments, see Rein, *Das Criminalrecht der Römer*, p. 901, &c. Leipzig, 1844; Becker, *Handbuch der röm. Alterth.* iv. 100–102; and on the general question, Lewis, *Astron. of the Ancients*, pp. 292–303. Those who would acquire a knowledge of the technical details of astrology, as practised by the ancients, must peruse the Latin poem of Manilius, the treatise of Julius Firmicus, and the Greek works of Manetho, Paulus, and Ptolemy.) [W. R.]

ASTRONO'MIA, astronomy. It is not proposed in the present article to give a technical history of the rise and progress of astronomy among the ancients, but to confine ourselves to what may be regarded as the popular portion of the science,—the observations, namely, upon the relative position and apparent movements of the celestial bodies, especially the fixed stars, which from the earliest epoch engaged the attention of those classes of men who, as shepherds or mariners, were wont to pass their nights in the open air. We shall consider:—

1. The different names by which the constellations were distinguished among the Greeks and Romans, and the legends attached to each; but we shall not attempt to investigate at length the origin of these names, nor the times and places when and where they were first bestowed. The materials for this first section have been carefully collected by Ideler in his essay entitled *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen* (Berlin, 1809), a work which we now mention specially once for all to avoid the necessity of constant references; in the *Historische Untersuchungen über die astronomischen Beobachtungen der Alten*, by the same author (Berlin, 1806); in a paper by Buttmann, *Ueber die Entstehung der Sternbilder auf der griechischen Sfäre*, contained in the Transactions of the Berlin Academy for 1826; in Delambre, *Hist. de l'Astr. Ancienne*; and in the *Geschichte der Astronomie* of Schaubach.

2. The risings and settings of the fixed stars considered with reference to the position of the sun in the ecliptic,—a series of phenomena which, recurring regularly every tropical year, served in the most remote ages as the sole guides for the operations of the husbandman, and which, being in later times frequently appealed to by the poets, are sometimes designated the "Poetical Risings and Settings of the Stars." Here we chiefly depend upon the compilations and dissertations, ancient and modern, brought together in the *Uranologion* of Petavius; upon the disquisition by J. F. Pfaff entitled *Commentatio de Ortibus et Occasibus Siderum apud auctores classicos commemoratis* (Gotting. 1786); upon a paper by Ideler, *Ueber den astronomischen Theil der Fasti des Ovid*, in the Transactions of the Berlin Academy for 1822–1823, and on the *Handbuch der Chronologie* by the same author.

3. The division of the year into two, three, or more seasons, according to the risings and settings of particular stars or clusters of stars. The *Handbuch der Chronologie* contains a full examination of all the most important passages from the Greek and Roman authors which bear upon these points.

The determination of the length of the year, and the distribution of time into months, days, hours, and other periods, which in some degree belong to the same subject, are treated of separately under the heads of CALENDARIUM and DIES; and confining our attention for the present to the fixed stars, we shall make a few remarks on the bodies of the solar system under PLANETAE.

I. THE HISTORY AND NAMES OF THE CONSTELLATIONS.

The only constellations known to Homer (*Il.* xviii. 485–489; *Od.* v. 272–275) appear to have been the *Great Bear* or *Waggon*, *Boötes*, and *Orion*, with the two clusters of the *Hyades* and *Pleiades*. Hesiod mentions the Pleiades (*Op. et Di.* 383), *Arcturus* (possibly for *Boötes*; see below: *ib.* 566), *Sirius* (repeatedly), the *Hyades* (*Op.* 615), and *Orion* (*Op.* 598, &c.).

Pliny (*H. N.* ii. § 31) attributes the invention of the signs of the zodiac to Cleostratus of Tenedos (fl. B.C. 500), and asserts that *Aries* and *Sagittarius* were marked out before the rest. Aristotle more than once mentions *ὁ κύκλος τῶν ζῳδίων*. The first distinct information with regard to the Grecian heavens was contained in the Ἔνοπτρον and the Φαινόμενα of Eudoxus of Cnidus, who died B.C. 352. Both of these works are, it is true, lost with the exception of a few fragments (cf. *Papyrus Grecs du Musée du Louvre*, pp. 7–76; Paris, 1860), but their contents are known to us from the poem of Aratus (fl. B.C. 260), which, as we are assured in the commentary which bears the name of Hipparchus, does little more than represent in verse, with very few variations, the matter contained in the two treatises named above, especially in the latter. The great popularity enjoyed by the production of Aratus ("Cum sole et luna semper Aratus erit," Ov. *Am.* i. 15, 16) must have depended upon the attractions presented by his theme, and certainly not upon the spirit or grace with which that theme was handled. We know the names of thirty-five Greeks who composed commentaries upon it, and we are acquainted with no less than three translations into Latin verse—one by Cicero, of which fragments only remain; another by Caesar Germanicus, of which a considerable portion has been preserved; and a third by Rufus Festus Avienus, which is entire. Virgil borrowed largely from this source in those portions of his Georgics which contain references to the heavenly bodies, and particularly in that section which is devoted to prognostics of the weather. There are also valuable Greek scholia ascribed to the younger Theon, but manifestly compounded of materials derived from many different quarters. The work itself is divided into three parts:

1. A description of the constellations, extending to line 452.
2. A short account of the Planets, of the Milky Way, of the Tropical Circles, and of the Equator, followed from v. 559 by a full detail of the stars which rise and set as each sign of the zodiac appears in succession (συνανατολαί).
3. At line 733 commences what is frequently regarded as a separate poem, and placed apart under the title Διοσημεῖα, consisting of a collection of the various appearances which enable an observer of nature to predict the weather. It will be seen below that the constellations described by Aratus still retain, with a few variations, the names by which he distinguishes them.

In a little tract ascribed to Eratosthenes (fl. B.C. 230), entitled Καταστερισμοί, probably an abridgment of a more complete treatise, in which he details the mythological origin of the constellations, together with the number and place of the stars in each, we find the same forms arranged in the same order as in Aratus, who is followed step by step. The *Bird*, however, is here termed the *Swan;* the *Centaur* is individualised into *Chiron;* and the *Hair of Berenice* appears for the first time, having been introduced by Conon in honour of the sister-wife of Ptolemy Euergetes.

Scientific astronomy commenced at Alexandria in the early part of the third century before our era; and the first steps were made by Timocharis and Aristyllus, who flourished about B.C. 290. They invented the method of determining the places of the fixed stars, by referring them to one of the great circles of the heavens, and for this purpose selected the equator. By them, as we learn from Ptolemy, the right ascension and declination of many stars were observed, among others of *Spica* in the Virgin, which they found to be 8° from the equinox of autumn.

Hipparchus, about 150 years later, followed up the track which they had indicated: his observations extended from B.C. 162 to B.C. 127; and, whether we regard the originality, the magnitude, or the importance of his labours, he is well entitled to be regarded as the father of the science. (See Plin. *H. N.* ii. § 95.) In addition to many other services, he first drew up a regular catalogue of the fixed stars, pointing out their position and magnitude; he first delineated accurately the shape of the constellations; and he first discovered the precession of the equinoxes by comparing his own observations with those of Timocharis and Aristyllus. It is much to be lamented that all the works of so great a man should have perished, with the exception of a commentary in three books upon the description of the fixed stars by Eudoxus and Aratus (Ἐξήγησις τῶν Ἀράτου καὶ Εὐδόξου φαινομένων), the least valuable perhaps of all his productions. We have, however, every reason to believe that the substance of his most valuable observations has been preserved in the Almagest of Ptolemy, which long enjoyed such high fame that all former authors were allowed to sink into oblivion.

The catalogue of the fixed stars by Ptolemy (fl. A.D. 150), contained in the seventh and eighth books of the Almagest, and derived in all probability in a great measure from that compiled by Hipparchus, long served as the model for all subsequent labours in the same field, and little more than two centuries have elapsed since any attempt was made to supersede it by something more perfect. It embraces 48 constellations (21 northern, 15 southern, and the 12 signs of the zodiac), comprising 15 stars of the first magnitude, 45 of the second, 208 of the third, 474 of the fourth, 217 of the fifth, 49 of the sixth, 9 obscure, and 5 nebulous, in all 1022. These are the constellations, usually denominated the *Old Constellations*, to distinguish them from the additions made in modern times, and these we shall consider in regular order. The stars are enumerated according to the place which they occupy in the figures; the latitude, longitude, and magnitude of each being specified. In connexion with many constellations, several stars are mentioned as ἀμόρφωτοι,—that is, not included within the limits of any one of the figures; among those near the Lion he notices the *Hair of Berenice*, among those near the Eagle the *Antinous*. The single stars and small groups to which particular names are assigned are, *Arcturus*, the *Lyre*, *Capella*, the *Kids*, the *Eagle*, the *Hyades*, the *Pleiades*, the *Manger*, the *Asses*, *Regulus* (βασιλίσκος), *Vindemiatrix*, *Spica*, *Antares*, the *Hound* (he does not give the name *Sirius*), *Canopus*, and *Procyon*.

Among our Greek authorities we must not pass over Geminus, whose work Εἰσαγωγὴ εἰς τὰ Φαινόμενα contains in sixteen chapters an exposition of the most striking facts in astronomy and mathematical geography. We know nothing of him personally; but it has been inferred from his book that he was a native of Rhodes, and that he flourished about B.C. 70 at Rome, or at some place under the same parallel. The second chapter treats of the constellations and of those stars and small clusters distinguished by particular names. The *Coma Berenices*, which is not included in the 21 northern constellations of Ptolemy, has here an independent place assigned to it; the *Foal*, or *Little Horse*, is termed προτομὴ Ἵππου καθ' Ἵππαρχον, which seems to indicate that it was introduced by Hipparchus; in addition to the 15 southern constellations of Ptolemy, we find the *Stream* (χύσις ὕδατος) issuing from the urn of Aquarius, and the *Thyrsus* of the Centaur. The sixteenth chapter is particularly interesting and valuable, since it contains a parapegma or calendar of the risings and settings of the fixed stars, with prognostics of the weather, according to Meton, Euctemon, Eudoxus, Callippus, and others, the observations of each being quoted separately.

The Romans adopted the knowledge of the stars communicated by the Greeks without in the slightest degree extending it. Only two

Latin writers discourse specially on the subject, Manilius and Julius Firmicus, and their treatises belong rather to Judicial Astrology. The poets, however, especially Ovid and Virgil, make frequent allusions to the risings and settings of the fixed stars, to the most remarkable constellations and to the legends attached to them. Cicero, Germanicus, and Avienus, as we have stated above, executed translations of Aratus; while in Vitruvius, Pliny, Columella, Martianus Capella, the Scholiast on Germanicus, and Hyginus, we find a multitude of details. Manilius, it is clear, took Aratus for his guide in so far as the constellations were concerned; for he does not notice the *Hair of Berenice*, the *Foal*, nor the *Southern Crown*.

Pliny speaks of the constellations as seventy-two in number; but he seems to have eked out the sum by counting separately portions of figures, such as the *Pleiades*, the *Hyades*, the *Urn* and the *Stream of Aquarius*, the *Thyrsus of the Centaur*, the *Head of Medusa*, the *Scimetar of Perseus*, the *Manger*, the *Two Asses*, *Capella*, the *Kids*, the *Hair of Berenice*, the *Throne of Caesar*, and probably the more conspicuous among the individual stars, such as *Arcturus* and *Sirius*. He sets down the number of observed stars at 1600, which far exceeds the catalogue of Ptolemy.

The Scholia on Germanicus do not constitute a regular commentary like the Scholia on Aratus, but are translations from Eratosthenes, with some excerpts, added subsequently perhaps, from the *Sphaera Graeca et Barbara* of Nigidius Figulus and other works on astronomical myths.

The *Poëticon Astronomicon*, which bears the name of Hyginus, is written in the style of Eratosthenes, and is in a great measure borrowed from him. No notice is here taken of the *Foal* nor of the *Southern Crown*, which proves that at the time when it was composed, whenever that may have been, more attention was paid to Aratus than to Hipparchus and Ptolemy.

Names of the Constellations.

In what follows we arrange the constellations, with one or two trifling exceptions, in the order adopted by Ptolemy, enumerating first the twenty-one northern signs; secondly, the twelve zodiacal signs; and lastly, the fifteen southern signs. In each case we give, first, the name by which the constellation is known among ourselves; secondly, the name ascribed to it by Aratus; and lastly, the other Greek and Latin names which most frequently occur or which deserve particular notice.

Northern Signs.

THE GREAT BEAR, THE PLOUGH, CHARLES' WAIN, Ἄρκτος (μεγάλη), Ἑλίκη (Arat. 27, &c.), *Major Arctus*, *Major Ursa* (German.), *Helice* (Cic., Manil. i. 303). The most remarkable cluster in the northern hemisphere, both on account of its brilliancy and from the circumstance that it never sinks below the horizon in Europe and those parts of Asia known to the ancients, is that which as early as the time of Homer was known by the names of Ἄρκτος, *The She Bear*, or Ἅμαξα, *The Waggon* (*Il.* xviii. 487; *Od.* v. 275), which the Romans translated by the equivalent terms *Ursa* and *Plaustrum* or *Currus*. At a later period when the Lesser Bear had been added to the number of the celestial signs, the epithets μεγάλη and μικρά were applied to them respectively by way of distinction, and in like manner Ovid (*Trist.* iv. 3) speaks of them as *magna minorque ferae*. The ancient Italian name for the seven bright stars which form the most conspicuous portion of the group was *Septem Triones* (Cic.), that is, according to the interpretation of Varro (*L. L.* vi. 4; Gell. ii. 21; Festus, *s. v. Triones*), *The Seven Ploughing Oxen*, an appellation which as well as that of ἅμαξα was extended to the Lesser Bear. Thus Aratus commences his description

> δύω δέ μιν ἀμφὶς ἔχουσαι
> Ἄρκτοι ἅμα τροχόωσι, τὸ δὴ καλέονται ἅμαξαι,

deriving ἅμαξαι, absurdly enough, from ἅμα. Virgil celebrates

> Arcturum, pluviasque Hyadas, *geminosque Triones*;

and Vitruvius (ix. 3) not only employs *Septemtrio* simply for the Greater Bear, but distinguishes between *Septemtrio major* and *Septemtrio minor*, and again speaks of the *Arctos*, *qui Septemtriones dicuntur*.

In addition to the above designations we find Ἑλίκη, applied to the Greater Bear alone, derived from its sweeping round in a curve (ἀπὸ τοῦ ἑλίσσεσθαι, Schol. *ad* Arat. 37), while from the mythical connexion established between this constellation and Callisto, daughter of the Arcadian monarch Lycaon, the Latin poets constantly refer to it as *Lycaonis Arctos*; *Parrhasis Arctos*; *Parrhasides stellae*; *Maenalis Ursa*, &c. The term *Boves Icarii* employed by Propertius (ii. 24, 24) is explained below (No. 5) under *Arctophylax*. For the story of Callisto and her transformation see Ovid. *Met.* ii. 409, *Fast.* ii. 155; Serv. *ad* Verg. *Georg.* i. 246; Hygin. *Poët. Astron.* ii. 1, 2.

2. THE LESSER *or* LITTLE BEAR, Ἄρκτος (μικρά), Κυνόσουρα, Κυνόσουρις (Arat. 27, 308), *Arctus minor* (Cic.), *Cynosura* (Cic., Manil. i. 306). This constellation, we are assured by many authorities (Schol. *ad* Hom. *Il.* xviii. 187; Achill. Tat. *Isagog. in* Arat. *Phaen.* c. 1; Diog. Laërt. i. 23; Hygin. *Poët. Astron.* ii. 2), was first added to the Grecian catalogues by Thales, by whom it may possibly have been imported from the East; and while, from its close resemblance in form, it shared the names of Ἄρκτος and ἅμαξα with its more ancient and majestic companion, it enjoyed exclusively the appellations of Φοινίκη and Κυνόσουρα. The former was derived from the circumstance that it was selected by the Phoenicians as the guide by which they shaped their course at sea, the Grecian mariners with less judgment employing Helice for the same purpose (Arat. 37; Erat. *Cat.* 2; Schol. *ad* German. p. 89; Hygin. *P. A.* ii. 2). The latter, signifying *canis cauda*, applied by the ancients to the whole figure, and not as in modern times merely to the pole star, seems to have been suggested by the appearance presented by three of the stars which form a circular sweep, bearing some resemblance to the upturned curl of a dog's tail, and will thus be an expression analogous to that of *Helice*. The early astronomers seem to have generally considered that one of the stars in the Little Bear marked the position of the pole, but it is difficult to determine from their words to which they

severally refer. According to Hyginus, who however seems not to have clearly understood Eratosthenes whom he quotes, one of the three stars forming the tail was called *Polus*, and the two others, from circling round it, *Χορευταί*, *The Dancers*, the same apparently with the *Ludentes* of the Scholiast on Germanicus.

Those poets who regarded the Great Bear as Callisto represented the Little Bear as her dog; but according to another legend commonly received, the two bears were the two nymphs who acted as nurses in Crete to infant Jove (Arat. 31), and hence the phrase *Cretaeae Arcti* (German.).

3. THE DRAGON, **Δράκων** (Arat. 45), translated by the Latins *Draco* (Cic., German., Vitruv.), *Serpens* (German., Vitruv., Manil., Ovid), and *Anguis* (Virgil, Ovid, Manil.). Servius (*ad* Verg. *Georg.* i. 205) remarks that there are three *Angues* in the sky, one lying between the Bears:

> Maximus hic flexu sinuoso elabitur Anguis
> Circum perque duas in morem fluminis Arctos:

(comp. Vitruv. ix. 3:) the second grasped by *Ophiuchus*: the third, to the south, around the *Crater* and *Corvus*. The superior richness of the Greek language distinguished these as **Δράκων**, **Ὄφις**, and **Ὕδρη**. The description of Aratus has been rendered almost verbatim and with great spirit by Virgil in the lines quoted above. Mythologically, the dragon was regarded as the snake which once guarded the apples of the Hesperides, or as a snake snatched by Minerva from the giants and whirled by her aloft to the pole. (Hygin. *P. A.* ii. 3, iii. 2; Serv. *ad* Verg. *Georg.* i. 244.)

4. CEPHEUS, **Κηφεύς** (Arat. 183), *Cepheus* (Cic., Vitruv., Manil.), *Iasides Cepheus* (German.). The legends respecting this ill-fated monarch and the other members of his family who beamed in the heavens, *Cassiopeia*, *Perseus*, and *Andromeda*, are detailed at length in the Catasterisms of Eratosthenes and in Hyginus.

5. THE BEAR WARDEN, BOÖTES, THE WAGGONER, **Ἀρκτοφύλαξ** (Arat. 91), *Arctophylax* (Cic., German., Manil. i. 323), translated by Ovid (*Trist.* i. 10, 15) *Custos Ursae*, and by Vitruvius (ix. 3) *Custos Arcti*, or simply *Custos* (*l. c.*), was denominated also **Βοώτης** (Arat. *l. c.*), *Boötes* (Cic., German., Manil.), i.e. *Bubulcus*, the ox-driver, and according to the Scholiast on Aratus (*l. c.*) *Τρυγητής*, the vintager. The first name, which supposes the constellations to represent a man upon the watch, denotes simply the position of the figure with regard to the Great Bear, or when the latter was regarded as Callisto, then Arctophylax became her son Arcas, by whom she was hunted and slain; the second name, which is found in Homer (*Od.* v. 272), refers to the ἅμαξα, the imaginary form of **Βοώτης** being fancied to occupy the place of the driver of the team; the third name is connected with the period of the heliacal rising of the group which indicated the season of the vintage.

The chief star in the constellation is ARCTURUS, **Ἀρκτοῦρος** (Arat. 95), *Arcturus* (Cic., German., Vitruv., Manil.), a word of similar import with Arctophylax. It is twice mentioned by Hesiod (*Op.* 566, 610), and, as we shall see hereafter, occupied a prominent place in the calendars of Greece and Rome. Some late writers, such as the Scholiast on Germanicus, Hyginus and Martianus Capella, use the name Arcturus for the whole constellation; but Aratus, Geminus, and Ptolemy consider it as a single star.

The legends with regard to Boötes present many different aspects: by the Greeks he was usually represented as Arcas, the son of Callisto; Ovid in one passage (*Fast.* vi. 235) calls him Lycaon, the father of the hapless damsel; by others he was pronounced to be Icarius (or Icarus), to whom Bacchus taught the use of the vine, and then the constellation Virgo was his daughter Erigone, and either the greater or the lesser hound was her dog Maera (*Canis Icarius*, Ov. *Fast.* iv. 939). Hence, too, the Septemtriones are styled *Boves Icarii* by Propertius (ii. 24, 24).

Homer (*Od.* v. 272) calls Boötes **ὀψὲ δύων**, from his descending below the horizon in an upright position, and therefore very gradually. Compare Ov. *Fast.* iii. 405; Claud. *Rapt. Proserp.* ii. 190, and the "pigri sarraca Bootae" of Juvenal, v. 23.

6. THE NORTHERN CROWN, **Στέφανος** (Arat. 71), *Corona* (Cic., Vitruv., Manil.), *Ariadnes corona* (*Minoa corona*, German.). Ptolemy distinguishes between the Northern and the Southern Crown (**Στέφανος βόρειος, νότιος**), and hence the modern name. According to the legend commonly adopted, this was the chaplet of Ariadne placed by Bacchus in the firmament to do honour to his mistress, and hence the epithets applied by Germanicus as quoted above. (Comp. Verg. *Georg.* i. 122; Ov. *Fast.* iii. 460; Manil. i. 330.)

The name *Gemma*, now given to the most resplendent star in the circle, was not known to the Romans.

7. HERCULES. The constellation now known by this name is described by Aratus (v. 63) as an unknown or nameless form (**εἴδωλον ἄϊστον; ἀπευθέος εἰδώλοιο**), which, from its resemblance to a man toiling (**μογέοντι ἀνδρὶ ἐοικὸς εἴδωλον**) on his knees, was usually called **Ἐνγόνασιν**, which the Romans either expressed in the same letters, *Engonasi* (Manil. v. 645), *Engonasin* (Cic.), or by the translations *Geniculatus*, *Ingeniculatus* (Vitruv. ix. 3), *Ingeniculus* (Jul. Firm. viii. 17), *Nixus in genibus* (Vitruv. ibid.), *Nixa genu species* (German.; Manil. i. 322, v. 645), *Dextro genu nixus* (German.), or simply *Nisus* s. *Nixus* (Cic., German.), *Innixus* (Avien. 205), or with reference to the labouring attitude *Defectum sidus*, *Effigies defecta labore* (German.).

According to Avienus (v. 175), the appellation of Hercules was bestowed by Panyasis, by others it was regarded as Theseus, by others as Ceteus son of Lycaon, by others as Prometheus chained to Caucasus. (Hygin. *P. A.* ii. 6, iii. 5.)

8. THE LYRE, **Χέλυς, Λύρα** (Arat. 268), *Lyra* (German., Vitruv., Manil. i. 331), *Fides* (Cic.), *Fidis* (Col. xi. 2, § 43, &c.), *Fidicula* (Plin. *H. N.* xviii. § 222, &c.). Ptolemy (**Φ. Α.**) designates as **ὁ λαμπρὸς τῆς λύρας**, the peculiarly bright star (α Lyrae), which renders this constellation so conspicuous; but it appears probable that the simple **Λύρα** among the Greek astronomers, as well as *Fidis* and *Fidicula* among the Latins, was frequently employed to denote this single star, as well as the whole sign. Manilius seems to speak of *Fides* as a constellation distinct from

Lyra, but the passages are very confused (i. 409; comp. 324, 337). The invention of the Lyre being ascribed to Mercury, we naturally find the epithets Ἑρμαίη (Arat. 674), Κυλληναίη (597), *Mercurialis* (German.), *Cyllenia* (Cic.) attached to it.

9. THE SWAN, Ὄρνις, αἴολος ὄρνις (Arat. 273, 275), *Ales* (Cic.), *Volucris*, *Avis* (Vitruv. ix. 4). The Bird is the name given by Aratus and Geminus to the constellation termed by Eratosthenes (c. 25) Κύκνος, rendered *Cycnus* by Germanicus and Manilius, for which the synonym *Olor* is frequently substituted. By mythologists it was regarded as the swan of Leda.

10. CASSIOPEIA, Κασσιέπεια (Arat. 189), *Cassiepeia* (Cic., German., Manil. i. 361), *Cassiopea* (Vitruv.). For the myth regarding her, see Hygin. *P. A.* ii. 10; comp. Arat. 654; Manil. v. 504; Propert. i. 17, 3; Columell. xi. 2, § 78.

11. PERSEUS, Περσεύς (Arat. 248), *Perseus* (Cic., German., Vitruv., Manil. i. 357, 365), was pictured as bearing in one hand a crooked sword (ἅρπη, falx), and in the other the head of the Gorgon Medusa, Γοργόνιον (Gemin., Ptolem.), *Gorgoneum caput* (Vitruv. ix. 3), *Gorgonis ora* (Manil. i. 366), *Caput Gorgonis* (Hygin. *P. A.* iii. 11).

12. THE CHARIOTEER, Ἡνίοχος (Arat. 156), *Heniochus* (Manil. i. 369), *Auriga* (Cic., German., Vitruv.), *Aurigator* (Avien.), was, according to one legend (German.), *Erichthonius*,

> Quem primum cursu volitantem Jupiter alto
> Quadrijugis conspexit equis.—MANIL. i. 370.

According to another (German. *ibid.*), Myrtilus, the charioteer of Oenomaus, who betrayed his master to Pelops. (Hygin. *Fab.* 84.)

The brightest star in this constellation (α′) was termed Αἴξ (Arat. 157) by the Greeks, who pictured a goat supported upon the upper part of the left arm of the figure, and by the Romans *Capella* (Ovid, Manil., Plin.) or *Capra* (Cic., Vitruv., Hor., German., Columel.). The epithet Ὠλενίη in Aratus (164), according to the explanation of his Scholiast, was applied because the αἴξ rested ἐπὶ τῆς ὠλένης τοῦ Ἡνιόχου, and hence *Olenie*, *Olenium pecus*, *Olenium astrum*. Its heliacal rising took place soon before the winter solstice, and thus it was termed *signum pluviale*, while the legends declared that this was the very goat Amaltheia who nursed Jupiter upon Mount Ida. Both of these points are touched upon in the couplet of Ovid:

> Nascitur Oleniae signum pluviale Capellae,
> Illa dati caelum praemia lactis habet.

The two stars (ζ′, η′) placed by Aratus (166) and Ptolemy on the wrist of Auriga were

THE KIDS, Ἔριφοι (Arat. 158), *Haedi* (Cic., Vitruv., Manil. i. 372), and are said to have been first named by Cleostratus of Tenedos about B.C. 500 (Hygin. *P. A.* ii. 13). They, as well as Capella, are spoken of as heralds of the storm. (Manil. i. 372; Verg. *Georg.* i. 205, *Aen.* ix. 663; Hor. *Carm.* iii. 1, 28.) The star which marks the northern horn-tip of the Bull was, according to Vitruvius (ix. 3), called *Aurigae Manus*, since he was supposed to hold it in his hand.

13. THE SERPENT HOLDER, Ὀφιοῦχος (Arat. 75), *Ophiuchus* (German., Vitruv.), *Anguitenens* (Cic., Manil. v. 384), *Anguifer* (Columel. xi. 2, § 49), *Serpentarius* (Schol. German.), was commonly regarded by mythical writers and poets as Aesculapius (Eratosth. c. 6; Ov. *Fast.* vi. 735), and by some as Hercules, not to mention other more obscure legends. (Hygin. *P. A.* ii. 14, iii. 13.)

14. THE SNAKE, grasped by and surrounding the figure, was termed ὄφις (Arat. 86), *Anguis* (Cic., German.), or *Serpens* (Cic., Vitruv.),

> *Serpentem* Graiis *Ophiuchus* nomine dictus
> Dividit, &c.—(MANIL. i. 338,)

and is reckoned as a separate constellation.

15. THE ARROW, Ὀϊστός (Arat. 311), Τόξον (Eratosth.), *Sagitta* (German., Vitruv.), *Clara sagitta*, *Fulgens sagitta* (Cic.), is distinct from the arrow fitted to the bow of Sagittarius, the archer, in the zodiac. Hence Aratus, after describing the latter, adds:

> Ἔστι δέ τις προτέρω βεβλημένος ἄλλος ὀϊστός
> Αὐτὸς ἄτερ τόξου.

(Comp. Cic. 325; German. 683; Manil. i. 349.)

16. THE EAGLE, Ἀετός (ἀητός, Arat. 315), *Aquila* (Cic., Vitruv.), or, in poetical circumlocution, *Jovis armiger* (German., Avien.), *Jovis ales* (German., Manil. i. 350), *Armiger uncis unguibus ales* (German.), *Praepes adunca Jovis* (Ov. *Fast.* vi. 196). The principal star is named specially ἀετὸς by Ptolemy; but from the circumstance of his placing it among those of the second magnitude, it has been conjectured that it was less bright in his day than at present.

ANTINOUS. Ptolemy, when noticing the stars around the Eagle not properly included within the limits of the constellation, remarks, ἐφ' ὧν ὁ Ἀντίνοος, which corroborates the statement of Dio Cassius, that Hadrian assigned a star to his favourite. Antinous, as a separate constellation, was first introduced by Tycho Brahe.

17. THE DOLPHIN, Δελφίς (Arat. 313) s. Δελφίν, *Delphinus* (Cic., German., Vitruv., Manil. i. 353), *Delphin* (German.), was regarded by mythologists as the dolphin which bore Arion.

18. THE LITTLE HORSE, Ἵππου προτομή, literally, *the fore quarters of a horse*, was unknown to Aratus and Eratosthenes; but appears from the words of Geminus to have been introduced by Hipparchus. It is not noticed by Vitruvius nor by Manilius.

19. PEGASUS, Ἵππος (Arat. 205), *Equus* (Cic., Vitruv., Manil. i. 355), *Sonipes*, *Sonipes ales* (German.). The legends having declared that this was the steed of Bellerophon, the name Pegasus (German. 505) was employed as early as Eratosthenes to distinguish the constellations, but Aratus speaks of it simply as *the horse*. (Ov. *Fast.* iii. 450.) The figure was supposed to represent the fore quarters only.

20. ANDROMEDA, Ἀνδρομέδη (Arat. 197), *Andromeda* s. *Andromede* (Cic., German., Vitruv., Manil. i. 357, 363). Andromeda was the daughter of Cepheus and Cassiopeia, and hence the constellation is termed *Cepheis* by Manilius and Germanicus (i. 443), while in consequence of her deliverance from the sea-monster by Perseus we find *Persea* in the Scholiast on Germanicus.

21. THE TRIANGLE, Δελτωτόν (Arat. 235; Cic.), *Deltotum* (German., Manil. i. 360), the τρίγωνον of Ptolemy, and hence Vitruv. ix. 3, "Insuper Arietis signum facientes stellae sunt *trigonum* paribus lateribus."

Signs of the Zodiac.

1. THE RAM, **Κριός** (Arat. 225), *Aries* (Cic., German., Vitruv., Manil. i. 263), *Laniger* (German. 699; Manil. ii. 546). This was the very golden-fleeced ram which bore away Phrixus and Helle from the wrath of Ino, and hence the designations in Ovid of *Phrixea Ovis*, *Pecus Athamantidos Helles*.

2. THE BULL, **Ταῦρος** (Arat. 167), *Taurus* (Cic., German., Vitruv., Manil. i. 264), *Bos* (German. 181), was by some mythologers regarded as the bull into which Jupiter transformed himself to gain Europa; according to others, as the cow into which Io was metamorphosed; in either case an object of jealousy to Juno. In reference to the former idea Ovid (*Fast.* vi. 712) speaks of him as *Agenoreus*, while Martial (x. 51) applies the epithet *Tyrius*.

This constellation is chiefly remarkable from including within its limits two small but closely packed clusters of stars, which attracted attention at a very early period, and are distinguished by Homer (*Il.* xviii. 436) and Hesiod (*Erg.* 615) as the HYADES and PLEIADES, names which they still retain unchanged.

The HYADES, Ὑάδες (Arat. 173), *Hyades* (German., &c.), situated in the forehead of the figure (*ἐπὶ παντὶ μετώπῳ*, Arat.; *ἐπὶ τοῦ βουκράνου*, Gemin.), derived their name *ἀπὸ τοῦ ὕειν*, because the period of their setting in the morning twilight (the end of November) marked the most wet and stormy period of the year. By the Italian peasants they were denominated the *suculae*, i.e. the little swine, and hence it has been imagined, but probably erroneously, that Ὑάδες is etymologically connected with Ὗς (Plin. *H. N.* xviii. § 247; Gell. xiii. 9). They set in the evening twilight at Rome, towards the close of the republic, about the 20th of April, and hence were known as the *sidus Parilicium* (or *Palilicium*), the *Parilia* (or *Palilia*), the festival which marked the birthday of the city, being kept upon the 21st. Ancient astronomers were not agreed as to the number of stars included in the Hyades (see Schol. *ad* Arat.). Thales reckoned two only (viz. *α* and *ε*), the two eyes of the bull; Euripides, three; Achaeus, four; Hesiod, five; Pherecydes, seven. The latter made nymphs of them, and the names have been preserved by Hyginus. One of these, *Thyene*, is put by Ovid (*Fast.* vi. 711) for the whole group, which elsewhere (v. 734) he terms the *Sidus Hyantis*, in allusion to a legend which he had previously (v. 169) recounted.

Still more important were the PLEIADES, Πλειάδες, Πληϊάδες (Hom. *l. c.* Arat. 255 regards them as a distinct constellation), *Pleiades* (German., &c. &c.), a word for which various etymologies have been proposed, the most reasonable being the verb *πλεῖν*, their heliacal rising and setting in the first half of May and the beginning of November having been the signal in the early ages of Greece for the mariner to commence and to discontinue his voyages. The form *πελειάδες*, i.e. *the flock of pigeons*, probably originated in a corruption. The Italian name was *Vergiliae* (Cic.), *Sidus Vergiliarum* (Vitruv. ix. 2), derived manifestly from their heliacal rising in spring. Aratus notices the circumstance that they are commonly spoken of as the *seven* stars, although six only are visible, and thus Ovid also:

> Quae septem dici sex tamen esse solent.

The fact is that the cluster consists of six stars, which can be distinctly seen by the naked eye, and of several very small ones, which are telescopic. Under very favourable circumstances, however, one of these may have occasionally been discerned, as Hipparchus states, or, possibly, as we know to have been the case with other fixed stars, one of them may have lost a portion of the lustre which it at one period possessed, and have become nearly or totally invisible. Be this as it may, the disappearance of the seventh Pleiad gave rise to a multitude of legends. By Hesiod they are styled Ἀτλαγενεῖς, *Children of Atlas*, from whom the Roman poets adopted the expression *Atlantides*, the name of the damsels (Arat. 262) being *Alcyone*, *Merope*, *Celaeno*, *Electra*, *Sterope* (or *Asterope*, German.), *Taygete* and *Maia*. Of these six wedded divinities, the seventh a mortal man, and thus her brilliancy became dimmed by the influence of the debasing alliance. One or other of the above names is frequently employed to denote the whole, as *Taygete* (Verg. *Georg.* iv. 232; Ov. *Met.* iii. 594), *Maia* (Verg. *Georg.* i. 225), *Sterope* (Ov. *Trist.* x. 14), and in like manner Πλειὰς or *Pleias* is often used in the singular.

3. THE TWINS, *Δίδυμοι* (Arat. 147), *Gemini* (Cic., German., Vitruv., Manil. i. 265). The two brightest stars, being supposed to represent Castor and Pollux.

4. THE CRAB, Καρκίνος (Arat. 147), *Cancer* (Cic., Vitruv., German., Manil. i. 265), called *Lernaeus* by Columella (x. 313), because, according to the legend, it crawled out of the Lernaean swamp to attack Hercules while he was doing battle with the Hydra. The epithet *Littoreus* in Ovid (*Met.* x. 127) and Manilius (iii. 316) probably refers merely to the ordinary habits of the animal, and not, as Ideler supposes, to the same contest.

Two small stars in this constellation (*γ*, *δ*) were called Ὄνοι, *Asini* s. *Aselli*, the Donkeys, one being distinguished as the northern (*βόρειος*), the other as the southern (*νότιος*), and a nebular brightness between them, Φάτνη, *Praesepe*, the Stall or Manger. (Arat. 894, &c.; Plin. *H. N.* xviii. § 353; Ptolem.) These seem to form what Manilius calls *Jugulae* (v. 174, and note of Scalig.), although *Jugula* is a name sometimes applied to Orion.

5. THE LION, *Λέων* (Arat. 149), *Leo* (Cic., German., Vitruv., Manil. i. 266), regarded as the Nemean lion slain by Hercules, and hence constantly termed simply *Nemeaeus* (*e.g.* Manil. iii. 409). The bright star now known as *Regulus*, a name introduced by Copernicus, was anciently, as we learn from the Scholiast on Aratus, called *βασιλίσκος*, and marked the heart of the animal (*ἐπὶ τῆς καρδίας*). In Pliny it is *Regia* (*H. N.* xviii. § 271); in the Scholiast on Germanicus, *Tyberone*, which is either a corruption, or arose from his mistaking the meaning of the word in Pliny, who says, "Stella *Regia* appellata Tuberoni in pectore Leonis," *i.e.* The star on the Lion's heart called *Regia* by Tubero.

6. THE VIRGIN, Παρθένος (Arat. 96, &c.), *Virgo* (Cic., German., Vitruv., Manil. i. 266), *Erigone* (Manil. ii. 552, *et pass.*), was mythically

regarded as Δίκη, *Justitia*, or *Astraea*, or as *Erigone*, or as *Ceres*, or as *Isis*, or as *Fortuna*, the last name being given to her, according to the Scholiast on Germanicus, "because she is a headless constellation."

The brightest star in the constellation is called by Aratus Στάχυς, *Spica* (German., Vitruv.), *Spicum* (Cic.), THE CORN EAR, and this the figure is supposed to grasp in her left hand.

The star which marks the right wing (ε) was προτρυγητὴρ (Arat. 138) s. προτρυγητὴς s. τρυγητήρ, translated *Provindemiator*, *Vindemiator* s. *Vindemitor*, and is now known as *Vindemiatrix*,—names which it received in consequence of rising shortly before the period of the vintage. (Arat. 138 and Schol.; Columell. xi. 2, § 24; Ov. *Fast.* iii. 407; Plin. *H. N.* xviii. §§ 237, 309. Vitruv. ix. 3 says that the Greek name was προτρύγετος, and the Roman, *Provindemia Major.*)

7. THE BALANCE was by the earlier Greek astronomers invariably denominated Χηλαί (Arat. 89), *Chelae* (Cic., German., Manil. ii. 544, *et pass.*), THE CLAWS, *i.e.* of the Scorpion, which stands next in the Zodiac. Geminus, who flourished, it is believed, about B.C. 80, is, as far as we know, the first Greek writer who distinguishes the seventh sign as Ζυγός, which is used by Ptolemy indifferently with Χηλαί. The term *Libra*, for which Cicero in one passage employs *Jugum*, was first formally adopted by the Romans in the Calendar of Julius Caesar, to whom it was very probably suggested by Sosigenes. The figure, it would seem, was derived from the East, and must be regarded as a symbol of equality introduced into the heavens at the period when the entrance of the sun into that constellation marked the Autumnal Equinox. The scientific Latin writers, such as Vitruvius, Columella, and Pliny, uniformly distinguish this sign by the name *Libra* alone; the poets use either *Libra* or *Chelae*, as may suit their purpose. Manilius combines both into one phrase (*Juga Chelarum*, i. 609); while the ingenious conceit by which Virgil represents the Scorpion as drawing in his claws in order to make room for Augustus, is known to every reader of the first Georgic. (Comp. Ov. *Met.* ii. 195.)

In the commentary of Theon on the Almagest, *Libra* is frequently represented by Λίτρα or Λίτραι, a word originally borrowed by the Romans from the Sicilians, transformed into *Libra*, and then restored to the later Greeks in the new sense of a Balance.

8. THE SCORPION, Σκορπίος (Arat. 85, 304), *Scorpius* (Cic., German.), *Scorpios* (Manil. i. 268, *et pass.*), *Scorpio* (Vitruv.). Cicero, in his translation of Aratus, and Manilius, both make use also of the term *Nepa*,—a word, according to Festus, of African origin, sometimes employed to denote a *Scorpion* and sometimes a *Crab* (Plaut. *Cas.* ii. 8, 7; Cic. *de Fin.* v. 15); and thus Cicero, in line 460 of his Aratus, distinctly indicates the fourth sign by the word *Nepa*, which elsewhere is put for the Scorpion. Aratus names this constellation μέγα θηρίον and τέρας μέγα (84, 402), because, according to the Grecian arrangement, as explained in the last paragraph, it occupied, together with its claws, the space of two signs. (Ov. *Met.* ii. 195.)

Ἀντάρης, now Antares, the name given to the brightest star, is first found in the works of Ptolemy, and probably refers to its colour and brilliancy, *rivalling that of* (the planet) *Mars*.

9. THE ARCHER, τοξευτής, τοξευτήρ, and simply τόξον (Arat. 306, 400, 664, 665), *Sagittarius* (Vitruv.), *Sagittipotens* (Cic.), *Sagittifer* (German.), *Arcitenens* (Cic.), and simply *Arcus* (Cic., German.). This bowman was supposed to be in the shape of a centaur (*Mixtus equo*, Manil. i. 270); hence is frequently termed *Centaurus*, and sometimes individualised into *Chiron* (*Haemonii arcus*, Ov. *Met.* ii. 81), thus giving rise to a confusion between this sign and the Centaur among the southern constellations. (Comp. Columell. x. 56; Hygin. *P. A.* ii. 27.)

10. THE GOAT (*i.e.* the Chamois), Αἰγόκερως (Arat. 284), *Aegoceros* (German.), *Capricornus* (Cic., German., Vitruv., Manil. i. 271), *Caper* (Manil. ii. 659), called also Πὰν by Eratosthenes. Hyginus, the Scholiast on Germanicus, and Isidorus inform us that some of the ancients represented this creature with the tail of a fish, and in this form it is actually figured on several coins of Augustus, who was born under the sign. No notice of such a peculiarity in shape is taken by Aratus, Eratosthenes, or Ptolemy.

11. THE WATERMAN, Ὑδροχόος (Arat. 283), *Hydrochoos* (German.), *Aquarius* (Cic., Vitruv., German., Manil. i. 472), *Aquitenens* (German. 560), *Fundens latices* (German. 388), *Aequoreus juvenis* (Manil. ii. 558), *Juvenis gerens aquam* (Ov. *Fast.* i. 652), and simply *Juvenis* (Manil. iv. 709), was regarded by those who connected the figure with mythical legends sometimes as *Deucalion* (German. 568), sometimes as *Ganymedes*. (Manil. v. 487; comp. Schol. *ad* Arat. 283.)

The four stars (γ, ζ, η, π) on the right hand were, according to Geminus, named κάλπις, which is equivalent to the Latin *Situla*, an Urn.

The WATER STREAM, Ὕδωρ (Arat.), χύσις ὕδατος, *Aqua* (Cic.), *Effusio Aquae* (Schol. Germ. 119), which ends with the bright star, now known by the Arabic name *Fomalhaut*, in the mouth of the Piscis Australis (see Manil. i. 446, and comp. Vitruv. ix. 4, *quae vero ab Aquario fundi memoratur Aqua profluit inter Piscis Austrini caput et caudam Ceti*), is regarded as a separate constellation under the name of Ὕδωρ by Aratus (389–399), and also by Geminus, who distinguishes it as the Ὕδωρ τὸ ἀπὸ τοῦ Ὑδροχόου, "the Water flowing from the Waterman," in order that it may not be confounded with the constellation Eridanus, the Ποταμὸς ὁ ἀπὸ τοῦ Ὠρίωνος, "the River flowing from Orion."

12. THE FISHES, Ἰχθύες (Arat. 240), or in the dual Ἰχθύε, *Pisces* (Cic., Vitruv.), *Gemini Pisces*, *Imbriferi duo Pisces* (German.). One of these was entitled the Northern (*Aquilonaris Piscis*, Vitruv. ix. 3), the other the Southern Fish (Schol. *ad* Arat. 240; Ov. *Fast.* iii. 401; Schol. German., Hygin. *P. A.* iii. 29); but in order to prevent the embarrassment which might arise from identifying the latter with the Ἰχθὺς νότιος, or *Piscis Australis*, a constellation of the southern hemisphere, Ptolemy names the northern of the two ἑπόμενος, and the other ἡγουμένος,—a precaution by no means unnecessary, since Manilius actually confounds (i. 272) the fishes of the zodiac with the Piscis Australis. The Scholiast on Aratus remarks that the

Northern Fish was represented with a swallow's head, and on that account styled χελιδονίας (i.e. *hirundininus*) by the Chaldaeans, a circumstance for which Scaliger accounts by supposing that the name was given in consequence of the entrance of the sun into this constellation, when the swallow appeared in Greece as the herald of Spring.

The legends connected with this constellation (Eratosth. 58; Hygin. *P. A.* ii. 30, 41) bear reference to a Syrian divinity, termed by the Greeks sometimes *Atargatis* (a Semitic word signifying *The Great Fish*), sometimes *Derceto*, sometimes *Derce*. This power they confounded with another Syrian goddess, *Astarte*, whom again they identified with their own Aphrodite. The story ran that, when fleeing in terror from the violence of Typhon, she plunged into the Euphrates, and was transformed into a fish. (Manil. ii. 33; iv. 580.) Avienus terms these fishes *Bombycii*, for which Grotius has rightly proposed to substitute *Bambycii*, for Atargatis was specially worshipped at *Bambyce* or *Hierapolis* in Cyrrhestica. (Strab. xvi. p. 517; Plin. *H. N.* v. § 81; Selden, *de Diis Syriis*, ii. 3.)

The bright star (*α*) which is supposed to form the knot of the two bands which connects the fishes by their tails, is by Aratus (245) named Σύνδεσμος ὑπουραῖος, by his Scholiast δεσμὸς οὐραῖος, by Geminus and Germanicus simply Σύνδεσμος,—terms variously translated *Nodus* (Cic.), *Nodus Piscium* (Vitruv.), *Nodus coelestis* (Avien.), *Commissura piscium* (Plin. xviii. § 311). The bands themselves are called in one passage of Aratus (362) Δεσμοὶ οὐραῖοι, more commonly Λίνοι or Λίνα, the *Vincla* of Cicero and Germanicus, the *Alligamentum linteum* of the Scholiast on the latter.

From Vitruvius (ix. 4) it appears that the sprinkling of indistinct stars between the Fishes and the Whale was called by the Greeks Ἑρμηδόνη, a word explained by Hesychius to mean τῶν ἀμυδρῶν ἀστέρων χύσις.

Southern Signs.

1. The **Whale**, Κῆτος (Arat. 353), Ὀρφός (Jul. Firm. *Astron.* viii. 17), *Cetus* (Vitruv. ix. 4; Manil. i. 440), *Pristis* (German. 644; Manil. i. 363), *Nereia Pistris* (German. 714), *Neptunia Pistrix* (Cic., comp. German. 709). The last three designations are different forms of the Greek Πρῆστις, which Suidas interprets to signify εἶδος κήτους θαλασσίου. This was the sea-monster, according to Aratus, sent to devour Andromeda.

2. **Orion**, Ὠρίων (Arat. 322), Ὠαρίων (Pind. Callim.), *Orion* (Cic., German., Vitruv., Manil. i. 399), *Oarion* (Catull. lxv. *sub fin.*), *Proles Hyriea* (Ov. *Fast.* vi. 719; comp. v. 495). *Argion* in Julius Firmicus (viii. 9) is probably a corrupt form of Oarion.

This is one of the oldest constellations, being noticed in Homer (xviii. 486) and Hesiod (*Erg.* 598, 615, 619), both of whom employ the expression σθένος Ὠρίωνος. The figure was supposed to represent an armed warrior (ξίφεος ἶφι πεποιθώς, Arat.), grasping a shield in his left hand and a club in his right (*manu laeva tenens clipeum, clavam altera*, Vitruv. ix. 4), with a glittering belt, from which a sword depended (*Balteus Orionis*, *Vagina*, German.; *Ensis*, Cic.). The origin of the name is quite unknown, the ordinary derivation from οὖρον, to which a mythical legend was adapted, being altogether unworthy of attention. The morning setting of this remarkable cluster, about the beginning of November, pointed out in ancient times to the husbandman and the mariner the approach of the most stormy period of the year. (Hor. *Carm.* i. 28, 21, iii. 27, 18, *Epod.* x. 9, xv. 7; Verg. *Aen.* i. 535, iv. 52.)

An anonymous Greek writer quoted by Scaliger declares that the popular name for Orion was Ἀλετροπόδιον, which seems a corruption of Ἀλεκτροπόδιον, i.e. *Cocks-foot*; and Ideler thinks that we can, without any great stretch of fancy, trace a resemblance to a fowl strutting along.

Among the Romans *Jugula* or *Jugulae* seems to have been the indigenous appellation; the former is noticed by Varro and Festus, the latter occurs in Plautus (*Amph.* i. 1, 119)—

> Nec Jugulae, neque Vesperugo, neque Vergiliae occidunt:

but no satisfactory explanation has been proposed. The two bright stars (*α*, *γ*) under the head were called *Humeri*. (Varr. *L. L.* vi. 3.)

3. **The Eridanus**, Ποταμός (Arat. 358), *Amnis* (Cic., German.). Aratus remarks that it was considered as a remnant of the Eridanus:

> Λείψανον Ἠριδανοῖο πολυκλαύστου ποταμοῖο,

that mythical non-existent (τὸν μηδαμοῦ γῆς ὄντα, Strab.) stream which proved a fruitful source of speculation in ancient as it has done in modern times. The Romans identified the Eridanus with the Po; and hence while Cicero employs the former, Germanicus uses Eridanus and Padus indifferently. (Comp. Vitruv. ix. 4.) From Eratosthenes, the Scholiast on Germanicus and Hyginus (*P. A.* ii. 32), we learn that this constellation was by others called the Nile, that being the only earthly river which flowed from the south towards the north, as this stream of stars appears to do when rising above the horizon.

4. **The Hare**, Λαγωός (Arat. 338), Λαγώς, *Lepus* (Vitruv. ix. 4), *Levipes Lepus* (Cic.), *Auritus Lepus* (German.), *Velox Lepus* (Manil.).

5. **The Great Dog**, Κύων, Σείριος (Arat. 326), *Canis* (Cic.), *Canis Sirius* (German.). Aratus (342) employs the phrase μεγάλοιο Κυνός, but the epithet must be here understood to refer to the magnitude of the principal star and not to the constellation *Procyon*, which the Greeks never call the *Little* or *Lesser Dog*.

The most important star in the Great Dog, perhaps the brightest in the heavens, was frequently specially named Κύων, sometimes emphatically τὸ ἄστρον, and by the Romans *Canis* or *Canicula*, but is more frequently designated by the appellation Σείριος, *Sirius*, which occurs four times in Hesiod (*Op.* 417, 587, 619; *Scut.* 397), although, in the first of these passages, the sun, and not a fixed star, is probably indicated. Indeed the word seems to be properly an adjective, signifying *glittering* or *bright*; and Eratosthenes remarks (c. 33), that astronomers were in the habit of denominating other stars Σειρίους διὰ τὴν τῆς φλογὸς κίνησιν. Homer twice (*Il.* v. 5; xxii. 25) alludes to this star without naming it, in one passage with the epithet ὀπωρινός, which will be discussed hereafter.

About four hundred years before our era, the heliacal rising of Sirius at Athens, corresponding with the entrance of the sun into the sign Leo, marked the hottest season of the year; and this observation being taken on trust by the Romans of a later epoch without considering whether it suited their age and country, the *Dies Caniculares* became proverbial among them, as the *Dog Days* are among ourselves, and the poets constantly refer to the Lion and the Dog in connexion with the heats of midsummer.

6. THE LITTLE DOG, **Προκύων** (Arat. 450), *Procyon* (German.), or, literally translated, *Antecanem* (Cic.), *Antecanis* (Schol. German.), so called because in Greece the constellation in question rises heliacally before the (Great) Dog. The names *Antecanis* and *Antecanem*, however, do not appear to have been generally adopted, for Pliny (*H. N.* xviii. § 268), when speaking of Procyon, remarks, "quod sidus apud Romanos non habet nomen, nisi *Caniculam* hanc velimus intelligi, hoc est, minorem canem ut in astris pingitur"—words which do not necessarily imply that Procyon ever was actually termed *Canicula* by the Roman writers, although this was certainly sometimes the case if we can trust the express assertion of Hyginus, "Canem (sc. Icarii) autem sua adpellatione et specie *Caniculam* dixerunt, quae a Graecis, quod ante majorem canem exoritur, προκύων adpellatur" (*P. A.* ii. 4). A passage in Pliny (*H. N.* xviii. § 285) would at first sight appear to be decisive: "IV. Kalendas Maii, Canis occidit, sidus et per se vehemens, *et cui praeoccidere Caniculam necesse sit.*" But since we know that in Northern latitudes the Great Dog not only rises after, but also sets before the Little Dog, it is evident that, unless we suppose Pliny to be involved in inextricable confusion, *Canicula* cannot here signify the sign Procyon. The explanation generally adopted, although somewhat forced, is that a reference is made to the practice of offering a dog in sacrifice on the Robigalia. (See Ov. *Fast.* iv. 936, &c.; Columell. x. 342, and the commentators on Pliny.)

While, as on the whole seems probable, Procyon was sometimes termed Canicula by the Romans, so, on the other hand, the star Sirius seems to have been occasionally called **Προκύων** by the Greeks, because he rose before the rest of the constellation to which he belonged. (See Galen. *Comment. in Hippocrat. Epidem.* i.) We cannot, however, attach this meaning to the words of Horace (*Carm.* iii. 29, 18)—

> Jam Procyon furit
> Et stella vesani Leonis—

for the appearance of Procyon would to his countrymen be in reality a more sure indication of the hottest season than the rising of the Greater Dog.

We have already intimated that the Greeks designate the two constellations simply as **Κύων** and **Προκύων**, not as the Greater and Lesser Dog,—a distinction which prevailed among the Romans, as we perceive clearly from Vitruvius (ix. 4): "Geminos autem minusculus Canis sequitur contra Anguis caput: Major item sequitur Minorem."

When Boötes was regarded as Icarius, and Virgo as his daughter Erigone, Procyon became Maera, the dog of Icarius. (Hygin. *P. A.* ii. 4; comp. Ov. *Fast.* iv. 940.)

7. THE SHIP ARGO, Ἀργώ (Arat. 342), *Argo* (Cic., Manil. i. 420), *Navis* (Cic.), *Argo Navis* (Cic.), *Navis quae nominatur Argo* (Vitruv.), *Argoa puppis* (German.), *Ratis Heroum* (Manil. v. 13). Like Pegasus and the Bull, it was supposed to represent only one-half of the object (ἡμίτομος), the portion namely of the vessel behind the mast (ἱστὸν διχόωσα κατ᾽ αὐτὸν, Arat. 605. *Puppe trahitur*, German.). The brightest star was by Eudoxus and Aratus (351, 368) distinguished as πηδάλιον (*gubernaculum*, Cic.), the rudder, instead of which **Κάνωβος** (*stella Canopi quae his regionibus est ignota*, Vitruv. ix. 4), a name which appears first in Eratosthenes (c. 37) and Hipparchus, became general. According to the Scholiast on Germanicus, it was called also *Ptolemaeon*, or, as Martianus Capella has it, *Ptolemaeus*, in honour, evidently, of some Egyptian monarch. This star, as the words of Vitruvius indicate, was not visible in Italian latitudes.

Cicero, in addition to the rudder, distinguishes the mast (*malum*) also, "radiato stipite malum."

8. THE WATER SNAKE, Ὕδρη (Arat. 444), Ὕδρος (Eratosth., Gemin., Ptolem.), *Hydra* (Cic., Germ., Hygin., Avien.), *Hydros* (Germ.), *Anguis* (Vitruv. ix. 4; Ov. *Fast.* ii. 243; Manil. i. 422. See also Serv. *ad* Verg. *Georg.* i. 205; Hygin. *P. A.* ii. 40, iii. 39).

9. THE CUP, Κρατήρ (Arat. 448), *Crater* (German., Vitruv., Manil. i. 424), *Fulgens Cratera* (Cic.), *Urna* (Schol. German.).

10. THE RAVEN or CROW, Εἴδωλον κόρακος (Arat. 449), *Corvus* (Cic., German., Vitruv.), *Phoebo sacer ales* (Manil. i. 424).

The Cup and the Raven were represented as standing upon the back of the Water Snake, and the whole three are grouped together by Ovid (*Fast.* ii. 243) in the couplet:—

> Continuata loco tria sidera, *Corvus* et *Anguis*,
> Et medius *Crater* inter utrumque jacet.

11. THE CENTAUR, Κένταυρος (Arat. 431, 436), Ἱππότα φήρ (Arat. 664), Χείρων (Eratosth.), *Centaurus* (Cic., Vitruv., German.), *Geminus Biformis* (German.), *Sonipes* (German.), *Duplici Centaurus imagine* (Manil. i. 425), *Chiron* (German. 418, 624). By Ptolemy he is represented with a thyrsus in his hand, and these stars were, as we are told by Geminus, formed by Hipparchus into a distinct constellation under the name Θυρσόλογχος.

12. THE WOLF, Θηρίον (Arat. 442), *Bestia* (Vitruv. ix. 4), *Hostia* (Hygin. *P. A.* ii. 38). This, according to Aratus (*l. c.*), was a wild beast grasped in the hand of the Centaur, but it received no name from the Greeks or Romans.

13. THE ALTAR, Θυτήριον (Arat. 403), *Ara* (Cic., German., Manil. i. 428), *Apta Altaria sacris* (685), according to Geminus and Ptolemy Θυμιατήριον, translated *Turibulum* by Germanicus and Vitruvius (ix. 4). The Scholiast on Germanicus furnishes two other names, *Sacrarium* and *Pharus*. In the legend preserved by Manilius (i. 428), it was the altar erected by Jove when heaven was invaded by the giants.

13. THE SOUTHERN CROWN. Not named by Aratus, who merely remarks (401) that under the fore-feet of Sagittarius are some stars sweeping round in a circle (δινωτοὶ κύκλῳ), but to these Geminus and Ptolemy give the specific name of **Στέφανος νότιος**. In consequence of

no legend being attached to the group, Germanicus (388) describes it as

sine honore Corona
Ante Sagittiferi multum pernicia crura.

(Comp. Hygin. *P. A.* ii. 28. Manilius takes no notice of it.) Geminus has preserved two other names, Οὐρανίσκος and Κηρυκεῖον: the former Martianus Capella renders by *Caelulum;* the latter, used by Hipparchus, denotes a herald's wand of peace. Others, according to the Scholiast on Aratus, regarded it as Ixion's wheel (Ἰξιόνος τροχός).

15. THE SOUTHERN FISH, Ἰχθὺς νότιος (Arat. 387), *Piscis Notius* (Manil. i. 445; Hygin. *P. A.* iii. 40), *Piscis Australis* (Cic.), *Piscis Austrinus* (Vitruv. ix. 4; Columell. xi. 2).

It appears from Eratosthenes (38), and the Scholiast on Germanicus, that it was styled also Ἰχθὺς μέγας, *Piscis magnus.*

Before quitting this part of our subject, we must add a few words on

Coma Berenices; Berenices Crinis. Milvus.

1. THE HAIR OF BERENICE, Πλόκαμος s. Βόστρυχος Βερονίκης (Callim., Schol. *ad* Arat. 146), *Coma Berenices* (see Catull. lxv.), was, as we have seen above, formed by Conon out of certain unappropriated (ἀμόρφωτοι) stars behind the Lion's Tail, in honour of Berenice, the wife of Ptolemy Euergetes, and afforded a theme for a complimentary elegy by Callimachus, of which we possess a translation by Catullus. The constellation being unknown to Aratus, is not alluded to by his translators, Cicero and Germanicus, nor is it noticed by Manilius. When Pliny (*H. N.* ii. § 178) observes, "Septemtriones non cernit Troglodytice, et confinis Aegyptus: nec Canopum Italia, et quem vocant Berenices Crinem; item quem sub Divo Augusto cognominavere Caesaris Thronon, insignes ibi stellas," it is much more probable that he committed a positive blunder, than that, as some have supposed, he intended to indicate under the name of *Berenices Crinem* some southern sign to which no one else makes any allusion.

2. We find in Ovid (*Fast.* iii. 793) the following couplet in reference to the night of the 17th of March:—

Stella Lycaoniam vergit declivis ad Arcton
Milvus. Haec illa nocte videnda venit,

and in Pliny (*H. N.* xviii. § 237), "Caesar et Idibus Martiis ferales sibi annotavit Scorpionis occasu: XV. Kalendas vero Aprilis Italiae Milvum ostendit: XII. Kalendas April. Equum occidere matutino." In the first of these passages we find a constellation named *Milvus* or the Kite described as one of the northern signs, or at least as a sign visible in Italy, and the period of its rising fixed to the 17th of March. The words of Pliny, although more ambiguous than those of Ovid, would lead us to suppose that he was quoting this, as well as the preceding observation, from the Calendar of Caesar; but the abruptness of his ordinary style is such as to prevent us from affirming this with certainty.

Now no Greek and no other Roman writers mention any constellation bearing the above name, nor can we adopt the explanation of Grotius, who supposes that the Swan or the Eagle is indicated, for the rising of these signs is removed by three months from the period here fixed. Ideler (*Sternn.* p. 7 f.) has, in all probability, discovered the solution of the enigma. In the Parapegma of Geminus, a phenomenon described by the words Ἰκτῖνος φαίνεται, i.e. *Milvus apparet,* is placed by Eudoxus thirteen days before the vernal equinox, and by Euctemon and Callippus respectively, eight days and one day before the same epoch; while Ptolemy, in his Φάσεις ἀπλανῶν, marks under the 21st of Phamenoth (*i.e.* according to Ideler, 8th March), Εὐδόξῳ χελιδὼν καὶ ἰκτῖνος φαίνεται. But the ἰκτῖνος, rendered *milvus* by the Latins, was, as we are told by Aristotle (*H. A.* viii. 16), a bird of passage, and hence the arrival of the ἰκτῖνος, like that of the swallow, took place at and served to mark a particular season of the year. Ovid and Pliny, being ignorant of this fact, and finding in the calendars which they consulted the words *Milvus apparet,* took it for granted, without further inquiry, that *Milvus* was the name of a constellation; for when we consider the context of the naturalist, as well as the date, but one day later than that fixed by Ovid, we can scarcely doubt that he, as well as the poet, believed *Milvus* to be a "Stella." Merkel (Ov. *Fast.* p. lxvii.) has shown that in this place Ovid is simply following his guide, Clodius Fuscus.

II. RISINGS AND SETTINGS OF THE FIXED STARS.

A nation like the Greeks, whose climate permitted them to watch their flocks by night during a considerable part of the year, could not fail to remark that certain fixed stars appeared and disappeared in regular succession, as the sun passed through the different stages of his annual career. Accordingly, we find that, as early as the time of Hesiod, the changes of the seasons, and the more important operations of agriculture, were fixed with reference to the risings and settings of Orion, the Pleiades, the Hyades, Arcturus, and Sirius. Such observations were in the first instance extremely rude; but after Thales had turned the attention of his countrymen to scientific astronomy, these celestial phenomena were determined with great care and accuracy: tables were drawn up in which the risings and settings of the more brilliant stars, with reference to the sun, were fully detailed, together with such notices, touching the winds and weather to be expected at the different epochs, as experience suggested. Copies were engraved on stone or brass, and, being nailed or hung up in the market-places of large towns and other places of public resort, received the name of παραπήγματα. Two catalogues of this description have been preserved which are valuable, inasmuch as they frequently quote the authority of the early Greek astronomers, Meton, Euctemon, Eudoxus, Callippus, &c. for their statements. The one was drawn up by Geminus (fl. B.C. 80), the other by the famous Ptolemy (A.D. 140). In the former the risings and settings of the stars are fixed according to the passage of the sun through the signs of the zodiac; in the latter they are ranged under the months and years of the Julian Calendar.

The practice commenced by Hesiod was followed by subsequent writers upon rural economy, and we accordingly find numerous precepts in Virgil, Columella, and Pliny delivered with reference to the risings and settings of the stars, forming a complete Calendarium Rusticum. Ovid has combined the Fasti of the city with these Rural Almanacs, and has thus gained an opportunity of enlivening his poem by recounting the various myths attached to the constellations. Indeed it would appear that Caesar, when he reconstructed the Fasti of Rome, included the risings and settings of the stars, since Pliny frequently quotes the authority of Caesar for his statements on these points. Thus the *Fasti* of Ovid may be considered as a commentary upon the almanac in common use.

The early Grecian *parapegmata* were undoubtedly constructed from actual observation in the countries where they were first exhibited, and must therefore have completely answered the purpose for which they were intended. But this does not by any means hold good of the corresponding compilations of the Romans, who, being little versed in astronomy themselves, copied blindly from others without knowledge or discrimination.

It is necessary to attend to two facts:—

1. The time of the risings and settings of the fixed stars varies for the same place at different epochs. Thus the Pleiades which at Rome rose along with the sun on the 16th of April, B.C. 44, rose with the sun at Rome several days earlier in the age of Meton, and do not now rise with the sun at Rome until several days later. This is caused by the precession of the equinoxes.

2. The time of the risings and settings of the fixed stars is different on the same day in places whose latitude is different. Thus, in the year when the Pleiades rose along with the sun at Rome on the 16th of April, they did not rise along with the sun at Athens until the 22nd of April.

Too little attention was paid to these considerations by the Roman writers; and consequently we not unfrequently discover that they combined the observations of astronomers who lived at times and places remote from them and from each other—that calculations made for the latitude of Athens, or of Rhodes, or of Alexandria, 300 years before, were adopted at once and transferred to their calendars without change or modification.

Another source of confusion is a want of precision in specifying the different kinds of risings and settings, which ought always to be most carefully distinguished from each other by appropriate scientific terms.

The risings and settings of the fixed stars, when considered with reference to the sun's place in his orbit, may be arranged under eight heads:—

(*a*) When a star rises at sunrise.

(*b*) When a star rises at sunset.

(*c*) When a star sets at sunrise.

(*d*) When a star sets at sunset.

(α) When a star rises shortly before the sun so as to be just visible in the morning twilight as it ascends above the horizon before its rays are overpowered by the light of the more brilliant luminary.

(β) When a star rises shortly after sunset so as to be just visible in the evening twilight as it ascends above the horizon.

(γ) When a star sets shortly before sunrise so as to be just visible in the morning twilight as it sinks below the horizon.

(δ) When a star sets shortly after sunset so as to be just visible in the evening twilight as it sinks below the horizon.

The names by which these, taken in order, are discriminated by the Greek astronomers Geminus (*Isagog.* cap. xi.) and Ptolemy (*Math. Syntax.* viii. 4) are the following:—

(*a*) 'Επιτολὴ ἑῴα ἀληθινή, G.—'Εῴα συνανατολὴ ἀληθινή, P.—*Ortus Matutinus Verus.* True morning rising.

(*b*) 'Επιτολὴ ἑσπερία ἀληθινή, G.—'Εσπερία συνανατολὴ ἀληθινή, P.—*Ortus Vespertinus Verus.* True evening rising.

(*c*) Δύσις ἑῴα ἀληθινή, G.—'Εῴα συγκατάδυσις ἀληθινή, P.—*Occasus Matutinus Verus.* True morning setting.

(*d*) Δύσις ἑσπερία ἀληθινή, G.—'Εσπερία συγκατάδυσις ἀληθινή, P.—*Occasus Vespertinus Verus.* True evening setting.

(α) 'Επιτολὴ ἑῴα φαινομένη, G.—'Εῴα προανατολὴ φαινομένη, P.—*Ortus Matutinus Apparens* s. *Ortus Heliacus.* Heliacal rising, *i.e.* First visible rising of a star in the morning twilight.

(β) 'Επιτολὴ ἑσπερία φαινομένη, G.—'Εσπερία ἐπανατολὴ φαινομένη, P.—*Ortus Vespertinus Apparens.* Last visible rising of a star after sunset.

(γ) Δύσις ἑῴα φαινομένη, G.—'Εῴα πρόδυσις φαινομένη, P.—*Occasus Matutinus Apparens.* First visible setting of a star before sunrise.

(δ) Δύσις ἑσπερία φαινομένη, G.—'Εσπερία ἐπικατάδυσις φαινομένη, P.—*Occasus Vespertinus Apparens* s. *Occasus Heliacus.* Heliacal setting, *i.e.* Last visible setting of a star in the evening twilight.

With regard to the above technicalitics we must observe:—

1. That Geminus (*l. c.*) draws a distinction between the words ἀνατολὴ and ἐπιτολή. By ἀνατολὴ he understands the rising of a star considered simply with reference to its elevation above the horizon, which takes place once in twenty-four hours in consequence of the diurnal motion; by ἐπιτολή, the rising of the star considered with reference to its distance from the sun, which depends upon the sun's place in the ecliptic. As to the settings of the stars, he would make δύσις the correlative of ἀνατολὴ and κρύψις of ἐπιτολή; but to this last definition he does not himself adhere, since he constantly employs δύσις to denote the setting of a star, when considered with reference to its distance from the sun. Ptolemy, while he includes all the risings and settings under the general designation of Φάσεις ἀπλανῶν, endeavours to introduce an improved nomenclature, by varying the preposition according as the star rises or sets along with (σύν), or before (πρό) or after (ἐπί) the sun, but pays no regard to the rule of Gemiaus with respect to ἀνατολὴ and ἐπιτολή.

2. Two terms, in addition to those set down above, are commonly employed by writers on these topics, the COSMICAL rising and setting (*Ortus Cosmicus, Occasus C.*), and the ACRONYCHAL rising and setting (*Ortus Acronychus, Occasus A.*).

The epithet *Cosmicus*, as applied to this subject, first occurs in a note of Servius on Verg. *Georg.* i. 218, "Ortus et occasus duo sunt: unus ἡλιακός, id est, *solaris*; et alter κοσμικός, id est, mundanus: unde fit ut ea signa quae cum sole oriuntur a nobis non possint videri; et ea, quae videmus, quantum ad solis rationem pertinet, videantur occidere." Modern astronomers have for the most part (see Petavius, Varr. *Diss.* p. 3, ed. 1630) adopted the phrase *Ortus Cosmicus* to indicate the rising marked (*a*), that is, the *Ortus Matutinus Verus*, and *Occasus Cosmicus* to indicate the setting marked (*c*), that is, the *Occasus Matutinus Verus;* but Ideler (*Historische Untersuchungen*, &c. p. 311), while he interprets *Ortus Cosmicus* in the sense usually received, applies *Occasus Cosmicus* to the setting marked (γ), that is, to the *Occasus Matutinus Apparens.*

Again, the epithet ἀκρόνυχος appears to be first used by Theophrastus (*de Signis Pluv. et Vent.* cap. i. § 2), where ἀνατολαὶ ἀκρόνυχοι are alone mentioned, and are distinctly explained to mean the rising of a star at sunset, that is, the *Ortus Vespertinus Verus* marked (*b*); and in this sense the phrase *Ortus Acronychus* is found in the treatises of Petavius and others, who employ also the expression *Occasus Acronychus* to indicate the setting marked (*d*), that is, the *Occasus Vespertinus Verus.* Ideler concurs in the latter, but interprets *Ortus Acronychus* to mean the rising marked (β), that is, the *Ortus Vespertinus Apparens.* This view is certainly at variance with the words of Theophrastus, which are quite explicit and are corroborated by Julius Firmicus (ii. 8); but on the other hand, in the Parapegma of Geminus, in the observations ascribed to Eudoxus, ἀκρονυχος is the general term applied to all evening settings, and most of these unquestionably refer to the apparent phenomena. Euctemon again makes use of ἑσπέριος to express the same meaning. The words Ἀρκτοῦρος ἀκρόνυχος πρωιας δύνει under Scorpius d. 8. are probably corrupt.

Under these circumstances, to prevent all confusion or ambiguity, we have altogether passed over the terms *Cosmicus* and *Acronychus* in our table, but have retained *Heliacus*, which, like *Cosmicus*, first occurs in the passage quoted from Servius, but is applied uniformly by subsequent writers to the phenomenon marked (α) and (δ), and to no others.

3. Pliny (*H. N.* xviii. § 218) proposes to designate by *Emersus*, what we have called the Heliacal Rising (α), because the star then for the first time emerges from the sun's rays, and by *Occultatio*, what we have called the Heliacal Setting (δ), because this is the last appearance of the star, which is forthwith obscured by the sun's rays, but these terms do not appear to have been ever generally received.

4. It is manifest that of the eight phenomena named above, the first four are purely matters of calculation, since the true risings and settings never can be visible to the naked eye. These then ought always to have been, and for some time always were, excluded from rural calendars intended for the use of practical men. We find, however, from the fragments of Callippus, preserved in the Parapegma of Geminus, when verified by computation, that this astronomer had substituted the true risings and settings for the apparent risings and settings, which were there marked in the tables of Euctemon, Meton, and Eudoxus. Hence great caution would become indispensable in quoting from different authorities, or in advancing an original statement. If the rising of a star was named, it would be necessary not only to specify whether it was the morning or the evening rising, but also whether the true or the apparent rising was indicated, and to proceed in like manner for the setting of a star. Now and then we find in Columella and Pliny some attempt to preserve accuracy in one or other of these essential points, as when the latter observes (xviii. § 74): "Pridie Kalendas (Nov.) Caesari Arcturus occidit et Suculae *exoriuntur cum sole;*" "XVI. Kal. Octob. Ægypto Spica, quam tenet Virgo, exoritur matutino, Etesiaeque desinunt. Hoc idem Caesari XIV. Kalendas XIII. Assyriae significant;" and even in Virgil, as when he defines the *morning setting* of the Pleiads: "Ante tibi *Eoae* Atlantides abscondantur;" but for the most part, both in prose writers and in poets, everything is vague and unsatisfactory: risings and settings of all descriptions, calculated for different epochs and for different latitudes, are thrown together at random. In order to substantiate these charges, we may examine the statements contained in Columella, Ovid, and Pliny with regard to *Lyra*, a constellation to which considerable importance was attached by the Romans, since the beginning of Autumn in the calendar of Caesar was marked by its (true) morning setting. It will suit our purpose particularly well, because from its limited extent every portion of the constellation became visible within two or three days after the appearance of the first star; and hence no ambiguity could arise from the heliacal risings of the extreme portions being separated by an interval of some weeks, as was the case with Orion and others stretching over a large space in the heavens, in treating of which it became necessary to specify particular portions of the figure, as when we read "Orionis humerus oritur;" "Gladius Orionis occidere incipit;" "Orion totus oritur," and so forth. In the following quotations, the words *Fidis* and *Fidicula* seem to be absolutely synonymous, there being no reason to believe that the latter was applied exclusively to the peculiarly bright star which in the catalogues of modern astronomers is *α Lyrae*, the ὁ λαμπρὸς τῆς λύρας of Ptolemy, although to this in all probability most of the observations were directed. We shall set down in regular order, first the settings and then the risings.

Settings of Lyra.

(1.) Pridie Id. Aug. (12th August) Fidis occidit mane et Auctumnus incipit. *Col.* xi. 2, § 57.

According to Pliny (xviii. § 222), the setting of Fidicula (*Fidiculae occasus*) marked the commencement of autumn, and took place on the forty-sixth day after the solstice; that is, on the 8th of August, if we include, according to the Roman method of computation, the 24th of June, the day from which he reckoned. In a subsequent section (§ 271) he states that the phenomenon in question took place, according to the Calendar of Caesar, on the 11th of August, but that more accurate observations had fixed it to the 8th, and this he soon after repeats (§ 289).

(2.) XIII. Kal. Sept. (*i.e.* 20th August) Sol in Virginem transitum facit... hoc eodem die Fidis occidit.—X. Kal. Sept. (23rd August) ex eodem sidere tempestas plerumque oritur et pluvia. *Columell.* xi. 2, § 58.

(3.) XI. Kal. Feb. (22nd January) Fidicula Vespere occidit, dies pluvius. *Columell.* x. 2, § 5.

Ovid places the setting on 23rd of January.

> Fulgebit toto jam Lyra nulla polo.—*Fast.* i. 653.

(4.) III. Kal. Feb. (30th January) Fidicula occidit. *Columell.* xi. 2, § 6.

(5.) Kal. Feb. (1st February) Fidis incipit occidere. Ventus Eurinus et interdum Auster cum grandine est. *Columell.* xi. 2, § 14.

III. Non. Febr. (3rd February) Fidis tota occidit. *Columell.* ibid.

Ovid, without alluding to what he had said before, remarks on the 2nd of February (*Fast.* ii. 73):

> Illa nocte aliquis tollens ad sidera vultum,
> Dicet, ubi est hodie, quae Lyra fulsit heri?

Pliny has (xviii. § 235) "et pridie Nonas Februarias (4th February) Fidicula vesperi (sc. occidit)."

Risings of Lyra.

(6.) IX. Kal. Mai. (23rd April) prima nocte Fidicula apparet, tempestatem significat. *Columell.* xi. 2, § 37.

VI. Kal. Mai. (26th April) Boeotiae et Atticae Canis Vesperi occultatur, Fidicula mane oritur. *Plin.* xviii. § 248.

(7.) Ovid (*Fast.* v. 415) names the 5th of May as the day on which Lyra rises.

(8.) III. Id. Mai. (13th May) Fidis mane exoritur, significat tempestatem. *Columell.* xi. 2, § 40.

III. Id. Mai. Fidiculae exortus. *Plin.* xviii. § 255.

Id. Mai. (15th May) Fidis mane exoritur. *Columell.* xi. 2, § 43.

(9.) III. Non. Novemb. (3rd November) Fidicula mane exoritur, hiemat et pluit. *Columell.* xi. 2, § 84.

(10.) VIII. Id. Novemb. (6th November) idem sidus totum exoritur, Auster vel Favonius, hiemat. *Columell.* ibid.

(11.) XVI. Kal. Dec. (16th November) Fidis exoritur mane, Auster, interdum Aquilo magnus. *Columell.* xi. 2, § 88.

(12.) Non. Januar. (5th January) Fidis exoritur mane: tempestas varia. *Columell.* xi. 2, § 97.

> Institerint Nonae, missi tibi nubibus atris
> Signa dabunt imbres exoriente Lyra.
> Ovid, *Fast.* i. 315.

Pridie Nonas Januarias (4th January) Caesari Delphinus matutino exoritur et postero die Fidicula. *Plin.* xviii. § 234.

The total disregard of precision in the phraseology employed in describing the above appearances is evident in almost every assertion, but the confusion may be considered to have reached a climax when we read the words "Fidis (or Fidicula) exoritur mane," used without variation or explanation to denote a phenomenon assigned to the 26th of April, the 3rd and 15th of May, the 3rd and 16th of November. By examining each paragraph separately, we shall be still more fully convinced of the carelessness and ignorance displayed.

(1.) The *true morning setting* of *Lucida Lyrae* took place at Rome in the age of Caesar, on the 12th or 13th of August, and therefore the Calendar of Caesar here followed by Columella was more accurate than the authorities quoted by Pliny, unless these referred to a different latitude. Remark, however, that no hint is dropped by either to indicate that the *true* and not the *apparent morning setting* is meant; and it ought to be borne in mind that the latter happened, at the epoch in question, on that very day at Alexandria. In the Parapegma of Geminus also, we find, under 11th of August (17 Leo), *Εὐκτήμονι λύρα δύεται.*

(2.) This must be the *apparent morning setting* which took place at Rome on 24th of August for the Julian epoch.

(3.) The *true evening setting*, calculated for Alexandria at the same epoch, took place on 23rd of January, the very day named by Ovid.

(4.) This is the *heliacal setting*, which, for Lucida Lyrae, took place at Rome on 28th of January.

(5.) These notices seem to be borrowed from old Greek calendars. Eudoxus, as quoted by Geminus, assigns the *evening* (*ἀκρόνυχος*) *setting* of Lyra to the 11th degree of Aquarius; that is, the 4th of February, according to the Julian Calendar.

It will be seen that the last three paragraphs, (3), (4), (5), without any change of expression, spread the setting of Lyra over a space extending from 23rd of January to 4th February, the apparent and true settings for Rome being on the 28th January and 9th February respectively.

(6.) The *apparent evening rising*, which seems clearly pointed out by the words of Columella, took place at Rome for the Julian era on 14th of April, at Alexandria on 26th of April: the *true evening rising* at Rome on 22nd April; and to this, therefore, the statement of Columella, from whatever source derived, must, if accurate, apply. Pliny has here fallen into a palpable blunder, and has written *mane* for *vesperi*. In fact he has copied, perhaps at second hand, the observation of Eudoxus with regard to the Lyre and Dog (see Parapegma of Gem.), except that he has inserted the word *mane* where the Greek astronomer simply says *λύρα ἐπιτέλλει.*

(7.) This will agree tolerably well with the *true evening rising* at Alexandria for the Julian era, but is twenty-one days too late for the *apparent evening setting* at Rome, and thirteen days too late for the *true evening setting.*

(8.) Here all is error. We must manifestly substitute *vespere* for *mane* in both passages of Columella; but even thus the observation will not give anything like a close approximation to any rising of Lyra either at Rome or Alexandria in the Julian age.

(9.) Copied verbatim along with the accompanying prognostic of the weather, from the Parapegma of Geminus, where it is ascribed to Euctemon. The day, however, corresponds closely with the *heliacal rising*, which took place at Rome on 5th of November.

(10.) Copied along with the prognostic "hiemat" (*καὶ ὁ ἀὴρ χειμέριος γίνεται ὡς ἐπὶ τὰ πολλὰ*) from the same compilation, where it is ascribed to Democritus, who fixed upon this day for the *true morning rising* (*λύρα ἐπιβάλλει ἅμα ἡλίῳ ἀνίσχοντι*). At Rome this *rising* fell upon 23rd of October.

(11.) Copied again from the same *source*, where it is ascribed to Eudoxus. Here the observation can in no way be stretched so as to apply to Rome.

(12.) This, like the last, can in no way be made applicable to Rome; but the *heliacal setting* at Alexandria took place, for that epoch, about four days later, on the 9th or 10th of January.

Having now pointed out the difficulties which the student must expect to encounter in prosecuting his inquiries in this department, we proceed briefly to examine the most remarkable passages in the classical writers, where particular periods of the year are defined by referring to the risings and settings of the stars. We begin with the most important,—the Pleiades, Arcturus, and Sirius, which we shall discuss fully, and then add a few words upon others of less note.

The Pleiades.

Hesiod.—Hesiod indicates the period of harvest by the rising of the Atlas-born Pleiads (*Op.* 384) after they had remained concealed for forty days and forty nights. Now, in the age of Hesiod (B.C. 800) the heliacal rising of the Pleiads took place at Athens, according to the computation of Ideler, on the 19th of May of the Julian Calendar, which is just the season when the wheat crop comes to maturity in that climate. Again (*l. c.*), he indicates the commencement of the ploughing-season, and the close of the season for navigating, by the morning setting of the Pleiads, which in that age and latitude fell about the third of the Julian November. In these and all other passages where Hesiod speaks of the risings and settings of the stars, we must unquestionably assume that he refers to the apparent phenomena. Indeed it is by no means improbable that the precepts which he inculcates may be the result of the personal observations of himself and his contemporaries.

Varro, Columella, Pliny. — *Morning Rising.*—(1.) Varro, where he describes the distribution of the year into eight divisions, according to the calendar of Caesar, states that there was a space of forty-six days from the vernal equinox (25th March) to the rising of the Pleiades (*Vergiliarum exortum*), which is thus fixed to the 8th or 9th of May (*R. R.* i. 28).

(2.) Pliny (xviii. 66, § 1) names the 10th of May.

Columella has three distinct notices (*R. R.* xi. 2, §§ 36, 39).

(3.) *X. Kal. Mai.* (22nd April) *Vergiliae cum sole oriuntur.*

(4.) *Nonis Maiis* (7th May) *Vergiliae exoriuntur mane.*

(5.) *VI. Idus sc. Mai* (10th May) *Vergiliae totae apparent;* and this last corresponds with his assertion elsewhere, that the phenomenon takes place forty-eight days after the vernal equinox (ix. 14, § 4).

Now the true morning rising of the Pleiads took place at Rome in the age of the above writers, who are all embraced within the limits of a century, about the 16th of April, the apparent or heliacal rising about the 28th of May. Hence not one of the above statements is accurate. But (1), (2), (4), (5) approach closely to the observation of Euctemon (B.C. 430), according to whom the Pleiad rises on the 13th of Taurus (8th of May); and (3), which expressly refers to the true rising, although inapplicable to Rome, will suit the latitude of Athens for the epoch in question.

Morning Setting.—(1.) Varro places the setting of the Pleiades (*Vergiliarum occasum*) forty-five days after the autumnal equinox (24th Sept.); that is, on the 6th or 7th of November (*R. R.* i. 28).

(2.) Pliny names the 11th of November (xviii. 60, 74; the text in c. 59 is corrupt).

Columella, as before, has a succession of notices.

(3.) *XIII. et XII. Kal. Nov.* (20th and 21st Oct.) *Solis exortu Vergiliae incipiunt occidere.*

(4.) *V. Kal. Nov.* (28th Oct.) *Vergiliae occidunt.*

(5.) *VI. Id. Nov.* (8th Nov.) *Vergiliae mane occidunt.*

(6.) *IV. Id. Nov.* (10th Nov.) *hiemis initium.*

These are all taken from his calendar in xi. 2; but in ix. 14, § 11, "*Ab aequinoctio....ad Vergiliarum occasum diebus XL.*" i.e. 2nd or 3rd of November. Compare ii. 8, § 1.

Now the true morning setting of the Pleiads took place for Rome at that epoch on the 29th of October, the apparent morning setting on the 9th of November. Hence it appears that (5) may be regarded as an accurate determination of the apparent morning setting, and that (1) and (2) approach nearly to the truth, especially when we bear in mind that variations to the extent of two or even three days must be allowed in regard to a phenomenon which depends in some degree on the state of the atmosphere. We perceive also that (4) is correct for the true morning setting, while (3), which is inapplicable to Rome, corresponds to the horizon of Athens in the time of Meton. In the passage from Colum. ix. 14, we ought probably to adopt the conjecture of Pontedera, and read xliv. for xl.

Evening Setting and Evening Rising.—The evening setting of the Pleiades took place, according to Columella, on the 6th of April (*VIII. Idus Aprilis Vergiliae Vespere celantur*); according to the calendar of Caesar, on the 5th. (Colum. ix. 2, § 34; Plin. *H. N.* xviii. § 246.) These statements are not far from the truth, since the apparent evening setting took place at Rome for the Julian epoch on the 8th of April. The apparent evening rising belonged to the 25th of September.

Virgil.—Virgil (*Georg.* i. 221) enjoins the husbandman not to sow his wheat until after the morning setting of the Pleiades:—

> Ante tibi Eoae Atlantides abscondantur
> Gnosiaque ardentis decedat stella Coronae
> Debita quam sulcis committas semina.

Hesiod, as we have seen above, fixes the commencement of the ploughing season, without making any distinction as to the particular crop desired by the (apparent) morning setting of the Pleiades; that is, for his age, the beginning of November. But it is impossible to tell whether Virgil intended merely to repeat this precept or had in his eye the calendar of Caesar or some similar compilation. Columella (ii. 8, § 1), in commenting upon these lines, understands him to mean the true morning setting, which, he says, takes place thirty-two days after the equinox; that is, on the 25th or 26th of October, —a calculation not far from the truth, since we have pointed out above that the 28th was the real day.

There is another passage where both the rising and the setting of the Pleiades are mentioned in connexion with the two periods of the honey harvest (*Georg.* iv. 231):—

> Bis gravidos cogunt fetus, duo tempora messis,
> Taygete simul os terris ostendit honestum
> Pleias et oceani spretos pede reppulit amnes,
> Aut eadem sidus fugiens ubi Piscis aquosi
> Tristior hibernas caelo descendit in undas.

Here, again, there is nothing in the context by which we can ascertain the precise periods which the poet desired to define; we can only make a guess by comparing his injunction with those of others. Columella (xi. 2) recommends that the combs should be cut, *if full*, about the 22nd of April; but, since he adds that if they are not full the operation ought to be deferred, the matter is left quite indefinite. Now, the words of Virgil seem clearly to point to the heliacal rising which took place in his time at Rome about the 28th of May, more than five weeks after the day given by Columella. In like manner the last-named writer advises (xi. 2, § 57) that the autumnal collection of honey should be put off until the month of October, although others were in the habit of beginning earlier. The true morning setting was, as already stated, on the 28th of October, the apparent on the 9th of November.

As to the expression "sidus fugiens ubi Piscis aquosi," it will be sufficient to observe that although the "Piscis" in question has been variously supposed to be—one of the fishes in the zodiac—the Southern Fish—the Hydra—the Dolphin—or even the Scorpion, no one has yet succeeded in proposing a reasonable or intelligible interpretation, which can be reconciled with any delineation of the heavens with which we are acquainted.

Ovid.—We are told in the *Fasti* (iv. 165) that at daybreak on the morning which follows the 1st of April:—

> Pleiades incipiunt humeros relevare paternos
> Quae septem dici, sex tamen esse solent.

According to the legend, the Pleiades were the daughters of Atlas, who supported the heavens on his shoulders, and hence, when they disappeared from the sky, they might be said to remove a portion of their father's burden "humeros relevare paternos." The apparent morning setting is therefore clearly denoted. But this took place at Rome on the 9th of November, while, on the other hand, the apparent evening (or heliacal) setting fell upon the 8th of April, only six days after the date mentioned. Hence the poet blundered between the morning setting and the evening setting, which are many months apart.

Again (v. 599), the Pleiades are said to rise visibly in the morning on May 14th, marking the end of spring and the beginning of summer. Now the heliacal rising of the Pleiades did not take place at Rome when Ovid wrote until May 28th; but the phenomenon in question took place at Athens on May 16th in the age of Meton. Hence this observation was evidently copied from a Greek calendar computed for the fifth century B.C.

Arcturus.

Considerable difficulty arises in the discussion of the passages which refer to Arcturus, from the circumstance that this name is sometimes applied generally to the whole of the wide-spreading constellation of Boötes, and sometimes confined to the bright star in the knee of the figure.

Homer.—Homer (*Od.* v. 29) speaks of Arcturus as ὀψὲ δύοντα, because the apparent evening or heliacal setting took place late in the year when winter was nigh at hand, and hence the phrase νύκτες ἐπ' Ἀρκτούρῳ for *long nights*. (See Arat. 585.) Another explanation of the phrase has been given above when discussing the constellation Boötes.

Hesiod.—Hesiod (*Op.* 564) dates the commencement of Spring from the evening rising of Arcturus (ἐπιτέλλεται ἀκροκνέφαιος) sixty days after the solstice. Now the apparent evening rising for the age and country of Hesiod fell upon the 24th of February; therefore his statement is correct in round numbers.

Again, in the same poem (659) he marks the period of the vintage by the morning (heliacal) rising of Arcturus, which, according to Ideler, fell in that age on the 18th of September.

Columella, Pliny.—*Morning Rising.* Columella (ix. 14, § 10) places the rising of Arcturus about fifty days after the rising of Canicula; and since the heliacal rising of the latter fell on the 2nd of August at Rome in the Julian era, and of the former on the 21st of September, the computation is exact.

Pliny (xviii. § 310), *Arcturus vero medius pridie Idus* (sc. Septembres oritur), *i.e.* 12th of September, where the middle portion of the whole constellation is indicated, and the observation is very accurate.

Morning Setting.—(1.) *XI. et X. Kal. Jun.* (22nd and 23rd May) *Arcturus mane occidit.* Col. xi. 2, § 43.

(2.) *VII. Id. Jun.* (9th June) *Arcturus occidit.* Id. § 45.

(3.) Pliny (xviii. § 255) ascribes the *Arcturi occasus matutinus* to *V. Id. Maias*, i.e. 11th May.

(4.) Again, in the same section we find that *Arcturus matutino occidit* on the 8th of June.

Now, the true morning setting of Arcturus for Rome at this epoch belongs to 28th of May, the apparent morning setting to 10th of June.

But (1) seems to be copied from the observation of Euctemon in the Parapegma of Geminus; (2) is a close approximation to the apparent morning setting for Rome; (3) is altogether erroneous, and must be a true morning setting extracted from some old Greek calendar; (4) corresponds with (2), and is nearly correct.

Evening Rising.—(1.) *IX. Kal. Mart.* (21st Feb.) *Arcturus prima nocte oritur.* Col. xi. 2, § 21.

(2.) *Ortus Arcturi qui est ab Idibus Februariis* (13th Feb.). Col. ix. 14.

(3.) *VIII. Kal. Mart.* (22nd Feb.) *hirundinis visu et postero die* (23rd Feb.) *Arcturi exortu vespertino.* Plin. *H. N.* xviii. 65.

Now the apparent evening rising of Arcturus took place for Rome at the Julian epoch on the 27th of February, the true evening rising on the 6th of March. But since it is evident from (2) that Columella here employed *Arcturus* to denote not merely the star properly so called, but the whole figure of Boötes, a latitude of several days must be allowed in the case of this as of all the larger constellations. See below the remarks on Ov. *Fast.* ii. 153. We may remark, however, that 21st–23rd of February will answer for the apparent evening rising of the star Arcturus at Athens in the age of Meton.

Evening Setting.—*IV. Kal. Nov.* (29th Oct.) *Arcturus vespere occidit, ventosus dies.* Col. xi. 2, § 78.

This is taken verbatim from an observation of Euctemon quoted in the Parapegma of Geminus. The heliacal setting for Rome was a few days later, about the 4th of November. But the observation of Euctemon is not accurate for the latitude of Athens in his own age, for the phenomenon ought to have been placed about five days earlier, which proves, as Pfaff remarks, that the Greek astronomers are not always to be depended upon in these matters.

We find in Pliny (xviii. § 271), *VIII. Id. Aug.* (6th August) *Arcturus medius occidit.* This is so far removed from any setting of the star in question that Harduin pronounces the text corrupt, and substitutes *VII. Id. Aug. Aquarius occidit medius,* while Pfaff endeavours to refer the expression to the culmination,—an explanation which is both in itself forced and completely at variance with the ordinary usage of Pliny.

Again, Pliny (xviii. § 313), *Pridie Kalendas* (Nov.) *Caesari Arcturus occidit,* i.e. 31st of October, and a few lines farther on *IV. Nonas Arcturus occidit vesperi.* The latter is not far from the truth; the former, unless it refers to the constellation in general, must have been borrowed from a foreign source.

VIRGIL.—Virgil (*Georg.* i. 229) instructs the husbandman to sow vetches, kidney beans, and lentiles, when Boötes sets, by which he probably intends to indicate the heliacal setting of Arcturus on the 4th of November. In like manner Pliny (xviii. § 120) orders the vetch to be sown about the setting of Arcturus, the kidney bean at the setting of Boötes (xviii. § 202), the lentile in the month of November (xviii. § 125). Columella assigns the sowing of vetches and kidney beans, and Palladius of kidney beans, to the month of October; if the end of the month is meant, then the precept may be considered as identical with those of Virgil and Pliny; if the middle of the month is intended, this will correspond with the heliacal setting of Arcturus for the latitude of Alexandria.

Again, in *Georg.* i. 67, when treating of ploughing, the words

> At si non fuerit tellus fecunda, sub ipsum
> Arcturum tenui sat erit suspendere sulco,

refer to the morning rising. The true morning rising was on the 8th of September, the apparent on the 21st. The former agrees best with the directions given by Columella (ii. 4, § 11) for ploughing of very light land, "graciles clivi non sunt aestate arandi, sed circa Septembres Kalendas;" and a little lower down, when treating of the same kind of soil, "itaque optime inter Kalendas et Idus Septembres aratur et subinde iteratur."

OVID.—In the second book of the *Fasti* (153) we read:

> Tertia nox veniat: custodem protinus Ursae
> Adspicies geminos exseruisse pedes;

that is, the *constellation* Arcturus displays both his feet on the 11th of February, where it ought to be observed that from the posture in which Boötes rises his two legs appear above the horizon nearly at the same time. The apparent evening rising of the star Arcturus took place at Rome, on the 27th of February, the true evening rising on the 6th of March; but the calendar to which Ovid was indebted probably recorded the appearance of the first star in the figure which became visible.

In three passages, the morning setting is clearly described (*Fast.* iii. 403; v. 733; vi. 235). In the first, it is placed on 4th or 5th of March, according as we adopt the reading *quartae* or *quintae;* in the second, on the 26th of May; in the third, on the 7th of June. Now there is no doubt that the setting of Boötes is spread over a considerable period,—and hence the epithet *piger*, applied to him here and elsewhere,—but in no way could it be made to occupy three months. The star Arcturus is one of the first which sets in this constellation: its true morning setting took place on 28th of May, its apparent morning setting on 10th of June; thus the second and third of the above passages will apply to these two. In the first passage he has erroneously substituted the *apparent morning setting* for the *true evening rising*, which really took place, as we have seen, on the 6th of March.

SIRIUS. CANIS. CANICULA.

HOMER, HESIOD.—Homer (*Il.* v. 5; xxii. 25) alludes to Sirius as the star of ὀπώρα; that is, of the hottest portion of summer, as will be explained more fully below in treating of the ancient division of the year into seasons. The heliacal rising of Sirius in Southern Greece would take place in the age of Homer about the middle of July.

The culmination of Sirius spoken of by Hesiod (*Op.* 609), as marking along with the morning rising of Arcturus the period of the vintage, would take place in that age about the 20th of September. The passage (*Op.* 417), where Σείριος ἀστὴρ is supposed to denote the sun, has been already noticed. See above, p. 221 b.

VARRO, COLUMELLA, PLINY.—*Morning Rising* —(1.) Varro, following the calendar of Caesar, reckons an interval of twenty-four days from the summer solstice to the rising of Sirius (*ad Caniculae signum*), which, according to this calculation, would fall on the 17th or 18th of July (*R. R.* i. 28).

(2.) Columella (xi. 2, § 53) fixes upon the 26th of July (*VII. Kal. Aug. Canicula apparet*), and in another passage (ix. 15, § 5) makes the interval between the solstice and the rising of Sirius about thirty days (*peracto solstitio usque ad ortum Caniculae, qui fere dies triginta sunt*); that is, on the 24th of July.

(3.) Pliny (xviii. § 269) says, that the epoch "*quod canis ortum vocamus*" corresponded with the entrance of the sun into Leo; that is, according to the Julian Calendar, which he professes to follow, the 24th of July.

(4.) In the very next clause he says, that it fell twenty-three days after the solstice; that is, on the 17th of July.

(5.) And a little farther on (§ 288), he refers the same event specifically to the 17th of July (*XVI. Kal. Aug.*).

(6.) Finally, in a different part of his work (xi. § 36), he places the rising of Sirius thirty days after the solstice: *ipso Sirio exsplendescente post solstitium diebus tricenis fere*, a passage in which it will be seen, upon referring to the original, that he must have been consulting Greek authorities, and in which the words necessarily imply a *visible* rising of the star.

The whole of the above statements may be reduced to two. In (1), (4), (5), the rising of Sirius is placed on the 17th or 18th of July, twenty-three days after the solstice; in (2), (3), (6), *about* thirty days after the solstice,—that is, 24th–26th of July.

Now the true morning rising of Sirius for Rome at the Julian era fell upon the 19th of July, the apparent morning or heliacal rising on the 2nd of August, thirty-eight or thirty-nine days after the solstice.

Hence (1), (4), (5) are close approximations to the truth, while (2), (3), (6) are inapplicable to Rome, and borrowed from computations adapted to the horizon of Southern Greece.

Some words in Pliny deserve particular notice: "XVI. Kal. Aug. Assyriae Procyon exoritur; dein postridie fere ubique, confessum inter omnes sidus indicans, quod canis ortum vocamus, sole partem primam Leonis ingresso. Hoc fit post solstitium XXIII. die. Sentiunt id maria, et terrae, multae vero et ferae, ut suis locis diximus. Neque est minor ei veneratio quam descriptis in deos stellis." Although the expressions employed here are far from being distinct, they lead us to infer that certain remarkable periods in the year were from habit and superstition so indissolubly connected in the public mind with certain astronomical phenomena, that even after the periods in question had ceased to correspond with the phenomena, no change was introduced into the established phraseology. Thus the period of most intense heat, which at one time coincided with the heliacal rising of Sirius, would continue to be distinguished in the language of the people, and in almanacs intended for general use, as the *Canis Exortus*, long after the two epochs were removed to a distance from each other, just as among ourselves the term dog-days, having once obtained a firm footing, is used and probably will continue to be used for centuries without the slightest regard to the actual position of the constellation at the time in question. An example still more striking, because it involves an anomaly universally recognised by scientific men, is the practice of denominating the position of the sun at the vernal equinox, as the *first point of Aries*, although two thousand years have elapsed since the intersection of the ecliptic with the equator corresponded with the commencement of the constellation Aries. A necessity has thus arisen of drawing a distinction, which proves most embarrassing to the unlearned, between the signs of the zodiac and the constellations of the zodiac, and thus the sun is said to be in the sign Aries while he is actually traversing the constellation of Pisces, and enters the sign Taurus long before he quits the constellation Aries. Now something of this sort may to a certain extent explain some of the anomalies which recur so perpetually in the calendar of Columella or Pliny. Certain remarkable appearances fixed upon at a very early period to mark the approach of summer and winter, such as the rising and setting of the Pleiades, may have by custom or tradition become so completely identified in the minds of the people with particular days, that the compilers of calendars intended for general use, while they desired to register accurate observations, were compelled at the same time to include those which, belonging to remote ages and foreign lands, had nevertheless acquired a prescriptive claim to attention. We may thus account for inconsistencies so numerous and glaring, that they could scarcely have been altogether overlooked by the writers in whose works they occur, although it is impossible to forgive their carelessness in withholding the necesssary explanations, or the gross ignorance which they so often manifest.

Evening Setting.—Columella places the evening setting of the Dog on the 30th of April (*Prid. Kal. Mai. Canis se Vespere celat*), xi. 2, § 37. Pliny on the 28th (*IV. Kal. Mai. Canis occidit, sidus et per se vehemens et cui praeoccidere Caniculam necesse sit*), xviii. § 285.

The heliacal setting at Rome for the Julian era was on the 1st of May, which proves the above statements to be nearly correct. The expression *cui praeoccidere Caniculam necesse sit* has been already commented on. See above, p. 222 a.

Morning Setting. Evening Rising.—(1.) *VII. Kal. Dec.* (25th Nov.) *Canicula occidit solis ortu.* Col. xi. 2, § 89.

(2.) *III. Kal. Jan.* (30th Dec.) *Canicula vespere occidit.* Ibid. § 94.

(3.) *III. Kal. Jan.* (30th Dec.) *Matutino canis occidens.* Plin. xviii. § 234.

(1) is accurate for the apparent morning setting at Rome, B.C. 44.

(2) and (3) are directly at variance with each other, and are both blunders. The apparent evening rising took place at Rome on the 30th of December, not the evening setting as Columella would have it, nor the morning setting as Pliny has recorded.

VIRGIL.—Virgil instructs the farmer to sow beans, lucerne, and millet:—

> Candidus auratis aperit cum cornibus annum
> Taurus et adverso cedens Canis occidit astro.
> *Georg.* i. 217.

The sun entered Taurus, according to the Julian Calendar, on the 24th of April: the heliacal setting of Sirius was on the 1st of May, six days afterwards. Many interpretations have been proposed for the words "adverso cedens Canis occidit astro;" of these the most plausible is that which explains them with reference to the form and attitude under which the constellation of the Dog was depicted, which made him set backwards facing the signs which follow.

Again, in *Georg.* iv. 425, we find

> Jam rapidus torrens sitientes Sirius Indos
> Ardebat caelo et medium sol igneus orbem
> Hauserat,

words which are intended to indicate the hottest portion of the day in the hottest season of the year. Here the separate mention of "Sol" is quite sufficient to confute those who would consider Sirius as equivalent in this passage to the sun. See above, p. 221 b. Comp. Lucan. *Phars.* x. 209.

Ovid.—In the fourth book of the *Fasti* (ver. 901) the rising of Sirius is assigned to the 25th of April, is made coincident with the disappearance of Aries, and marks the epoch of mid-spring:—

> Sex ubi quae restant luces Aprilis habebit
> In medio cursu tempora Veris erunt;
> Et frustra pecudem quaeres Athamantidos Helles
> Signaque dant imbres exoriturque Canis.

A notorious blunder has been here committed by the poet. No rising of Sirius, either real or apparent, in the morning or in the evening, corresponds to this season. But this is the very day fixed by Euctemon (*ap.* Gemin. *Parapeg.*) for the heliacal setting (*κύων κρύπτεται*) of the Dog, which fell at Rome for the Julian era on the 1st of May.

Again, in *Fast.* v. 723, we read—

> Nocte sequente diem Canis Erigoneius exit;

that is, on the 22nd of May. Now, it is clear from a former passage (iv. 939) that by *Canis Erigoneius* he means the Great Dog; but the true rising of Sirius took place for Rome at this period on the 19th of July, the apparent on the 2nd of August.

Not much will be gained by supposing that Procyon is here alluded to; for the risings of that star precede those of Sirius by about eight days only. Here, again, therefore, we have a gross mistake.

Palladius. — Palladius (vii. 9): "In ortu Caniculae, qui apud Romanos XIV. Kal. Aug. (19th July) die tenetur, explorant (sc. Aegypti) quae semina exortum sidus exurat, quae illaesa custodiat." Now this is the exact period of the heliacal rising in Egypt for the Julian epoch; hence the words "apud Romanos" must refer to a notice in some Roman Calendar, and not to the real period of the phenomenon.

Orion.

It must be borne in mind that, from the great size of this constellation, its risings and settings are spread over a considerable space; while the brilliant stars which it contains are so numerous that no one can be fixed upon as a representative of the whole, as in the case of Boötes, where the different appearances are usually referred to Arcturus alone. Hence those writers who aim at precision use such phrases as "Orion incipit oriri," "Orion totus oritur," "Orion incipit occidere;" and wherever such qualifications are omitted the statements are necessarily vague.

Hesiod.—Hesiod (*Op.* 598) orders the corn to be threshed *εὖτ' ἂν πρῶτα φανῇ σθένος Ὠρίωνος*. For that age and country the apparent morning or heliacal rising of Orion would be completed about the 9th of July.

The setting of Orion was one of the tokens which gave notice to the farmer that the season for ploughing had arrived, and to the mariner that he must no longer brave the perils of the deep (*Op.* 615). The apparent morning setting extended over the whole month of November.

The culmination of Orion, which coincided with the vintage (*Op.* 609), took place about the 14th of September.

Aristotle. — Aristotle (*Meteorolog.* ii. 5, *Problem.* xiv. 26) places the rising of Orion at the commencement of Opora, and the setting at the beginning of winter, or rather in the transition from summer to winter (*ἐν μεταβολῇ τοῦ θέρους καὶ χειμῶνος*).

Now the two limits which included the beginning and end of the apparent morning or heliacal rising, which alone can be here indicated, were, for the age and country of the writer, 17th of June—14th of July; those which embraced the apparent morning setting were, 8th of November—8th of December; while the true morning setting continued from 27th of October—20th of November.

Upon examining the passages in question, a very curious contradiction will be perceived, which has long exercised the ingenuity of the commentators. Aristotle distinctly asserts in one place that the rising of Orion is characterised by unsteady stormy weather, and offers an explanation of the fact: in another place he as distinctly avers that the rising of Orion is characterised by the absence of wind (*περὶ Ὠρίωνος ἀνατολὴν μάλιστα γίνεται νηνεμία*).

Pliny. — (1.) *VIII. Idus* (Mart.) *Aquilonii piscis exortu, et postero die Orionis.* xviii. 65, § 1.

(2.) *Nonis* (Apr.) *Aegypto Orion et gladius ejus incipiunt abscondi.* xviii. 66, § 1.

(1.) The first date, 8th of March, is so far removed from the rising of Orion, whether in the morning or the evening, that Ideler is probably correct when he supposes that either the text is corrupt or that Pliny himself inserted Orion by mistake instead of the name of some other constellation.

(2.) Here also the date, 5th of April, is wide of the truth. The apparent evening setting of the middle star in the belt fell at Alexandria on the 26th of April, seven days later than at Rome, the true evening setting about the 9th or 10th of May.

Virgil, Horace. — Both Virgil and Horace frequently allude to the tempests which accompanied the winter setting of Orion (*Saevus ubi Orion hibernis conditur undis*, Verg. *Aen.* vii. 719; see also iv. 52: Hor. *Carm.* i. 28. 21, iii. 27. 17; *Epod.* x. 9, xv. 7), just as Hesiod (*Op.* 617) eight hundred years before had warned the mariner that when the Pleiades, fleeing from the might of Orion, plunge into the dark main:

> *Δὴ τότε παντοίων ἀνέμων θύουσιν ἀῆται.*

The apparent morning setting of Orion, which in the time of Hesiod commenced early in November, soon after the morning setting of the Pleiades, thus became connected in traditional lore with the first gales of the rainy season, and the association continued for centuries, although the phenomenon itself became gradually further and further removed from the beginning of the stormy period. In the *Parapegma* of Geminus we find notices by three different astronomers, in which the setting of the Pleiades and of Orion are mentioned as attended by tempests, although each of the three fixes upon a different day. For Rome, at the Julian era, the apparent morning setting commenced about the 12th or 13th of November. In Pliny (xviii. § 313) we find, "V. Idus Novembr. (8 Novemb.) gladius Orionis occidere incipit," which is the true morning setting for Alexandria at that epoch.

Ovid.—Ovid refers twice in his *Fasti* to the setting of Orion. In one passage (iv. 387) he places it on the day before the termination of the Megalesia, that is, on the 10th of April; in another (v. 493), where the complete disappearance of the figure is expressly noted, on the 11th of May.

Now the apparent evening setting of Rigel, the bright star which marks the left foot, took place for Rome in the age of the poet on 11th of April; while the smaller star, now known as κ, set on the previous day, the true evening setting of Betelgeuse, which marks the right shoulder, fell on the 11th of May. Hence it is clear that Ovid derived his information from two very accurate calendars, one of which gave the date of the commencement of the apparent evening setting; the other, the date of the termination of the true evening setting.

He refers twice to the rising of Orion also—in the sixth book of the *Fasti* (717), on the 16th of June:

> At pater Heliadum radios ubi tinxerit undis,
> Et cinget geminos stella serena polos,
> Tollet humo validos proles Hyriea lacertos,

and on the festival of Fortuna Fortis, on the 24th of June:

> Zona latet tua nunc, et cras fortasse latebit,
> Dehinc erit, Orion, adspicienda mihi,

that is, on the 26th of June.

With regard to the first, the date is nearly correct for the true MORNING (*not* EVENING, as the words denote) rising of the two stars (o o) at the extremity of the left hand; with regard to the second, the true morning rising of the middle star in the belt fell on the 21st of June, the apparent on the 13th of July. There is a mistake, therefore, here of five days, as far as Rome is concerned.

HYADES.

In Hesiod (*Op.* 615), the setting of the Pleiades, of the Hyades, and of mighty Orion warns the husbandman that the season has arrived for ploughing the earth, and the mariner, that navigation must cease. The apparent morning setting of the Hyades took place, according to the calculation of Ideler, for the age and country of Hesiod, on the 7th of the Julian November, four days after that of the Pleiades, and eight before that of Orion.

Virgil (*Aen.* i. 744, iii. 516) terms this cluster "pluvias Hyadas," and Horace (*Carm.* i. 3, 14) "tristes Hyadas," in reference to their morning setting at the most rainy and stormy season of the year. The true morning setting for Rome at the Julian era happened on the 3rd of November, the apparent on the 14th of November. The apparent evening rising, which fell upon the 25th of October, would likewise suit these epithets.

Ovid, in his *Fasti* (iv. 677), places the evening setting of the Hyades on the 17th of April, the day fixed in the Calendar of Caesar (Plin. xviii. 66, § 1), while Columella names the 18th (*R. R.* xi. 2, § 36). These statements are nearly accurate, since the apparent evening or heliacal setting took place for Rome at that epoch on the 20th of April.

In the same poem, the morning rising is alluded to five times.

(1.) It is said (v. 163) to take place on the 2nd of May, which was the day fixed in the Calendar of Caesar (Plin. xviii. § 248), and adopted by Columella (xi. 2, § 39), whose words, *Sucula cum sole oritur*, indicate the true morning rising.

(2.) On the 14th of May (v. 603), while Columella (*Ibid.* § 43) has, *XII. Kal. Jun.* (21st May) *Suculae exoriuntur.*

(3.) On the 27th of May (v. 734).

(4.) On the 2nd of June (vi. 197).

(5.) On the 15th of June (vi. 711).

Now the true morning rising of the Hyades for Rome at that epoch was on the 16th of May, the apparent or heliacal rising on the 9th of June, the true evening setting on the 3rd of May.

Hence it is clear that Ovid, Columella, and Pliny, copying in (1) a blunder which had found its way into the Calendar of Caesar, assigned the morning rising to the 2nd of May instead of the true evening setting. The true evening rising lay between the days named in (2). The heliacal rising was thirteen days after (3), seven days after (4), six days before (5).

THE CRETAN CROWN.

We have seen above that Virgil (*Georg.* i. 222) instructs the farmer not to commence sowing wheat until after the Pleiades have set in the morning:

> Gnosiaque ardentis decedat stella Coronae,

words which must signify the *setting of the Cretan Crown.* The apparent evening (or heliacal) setting of this constellation fell at Rome for this epoch upon the 9th of November, the very day after the apparent morning setting of the Pleiades.

Ovid (*Fast.* iii. 459), after having spoken of the rising of Pegasus on the night of March 7th, adds,

> Protenus adspicies venienti nocte Coronam = Gnosida,

words which denote the evening rising; and, in reality, the apparent evening rising took place on the 10th of March, only two days later than the date here fixed.

THE KIDS.

Virgil (*Georg.* i. 205), when inculcating the utility of observing the stars, declares that it is no less necessary for the husbandman than for the mariner to watch Arcturus and the glistening Snake, and *the days of the Kids* (*haedorumque dies servandi*). Elsewhere (*Aen.* ix. 658) he compares a dense flight of arrows and javelins rattling against shields and helmets to the torrents of rain proceeding from the west under the influence of *the watery Kids* (*pluvialibus haedis*). Horace (*Carm.* iii. 1, 27) dwells on the terrors of setting Arcturus and the *rising Kid*, while Ovid (*Trist.* i. 1, 13) and Theocritus (vii. 53; see Schol.) speak in the same strain. In Columella's Calendar (xi. 2, § 66) we find *V. Kal. Octob.* (27th Sept.) *Haedi exoriuntur*, and a little farther on (§ 73) *Pridie Non. Octob.* (4th Nov.) *Haedi oriuntur vespere.* The former date marks the precise day of the *true evening rising* of the

the Julian era; and
rising, which would

fill by a fourth season, which he nowhere specifically names. As late, however, as Aeschylus (*Prom.* 453) and Aristophanes (*Av.* 710), the seasons are spoken of as three—*χειμών, ἔαρ, θέρος*, by the former; *χειμών, ἔαρ, ὀπώρα*, by the latter. Nor can we avoid attaching some weight to the fact that the most ancient poets and artists recognised the Ὧραι as three only, bearing, according to the Theogony (901), the symbolical appellation of Order (**Εὐνομία**), Justice (**Δίκη**), and blooming Peace (**Εἰρήνη**). Indeed Pausanias has preserved a record of a time when the Ὧραι were known as two goddesses only—**Καρπώ**, the patroness of fruits, and **Θαλλώ**, the guardian of blossoms (ix. 35, § 2). We may hence safely conclude that the Greeks for many ages discriminated three seasons only—Winter, Spring, and Summer; that the general name for the whole of summer being *θέρος*, the hottest portion was distinguished as *ὀπώρα*, and that the latter term was gradually separated from the former, so that *θέρος* was commonly employed for early summer, and *ὀπώρα* for late summer.

The first direct mention of autumn is contained in the treatise *de Diaeta* (lib. iii. &c.), commonly ascribed to Hippocrates (B.C. 420). where we are told that the year is usually divided into four parts,—Winter (*χειμὼν*), Spring (*ἔαρ*), Summer (*θέρος*), Autumn (*φθινόπωρον*); and this word with its synonym *μετόπωρον* occurs regularly from this time forward, proving that those by whom they were framed considered *ὀπώρα*, not as autumn, but as the period which immediately preceded autumn and merged in it.

We discover also in the Greek medical writers traces of a sevenfold division, although there is no evidence to prove that it was ever generally adopted. According to this distribution, summer is divided into two parts, and winter into three, and we have, 1. Spring (*ἔαρ*). 2. Early summer (*θέρος*). 3. Late summer (*ὀπώρα*). 4. Autumn (*φθινόπωρον* s. *μετόπωρον*). 5. The ploughing or sowing season (*ἄροτος* s. *σπορητός*). 6. Winter proper (*χειμών*). 7. The planting season (*φυταλία*).

From Varro (*R. R.* i. 28), Columella (ix. 14, xi. 2), and Pliny (xviii. § 220 ff.) we infer that Julius Caesar, in his Calendar, selected an eightfold division, each of the four seasons being subdivided into two, after this manner: 1. *Veris Initium.* 2. *Aequinoctium Vernum.* 3. *Aestatis Initium.* 4. *Solstitium.* 5. *Autumni Initium.* 6. *Aequinoctium Autumni.* 7. *Hiemis Initium.* 8. *Bruma.*

We find no trace in Homer of any connexion having been established between the recurrence of particular astronomical phenomena, and the return of the seasons. But in Hesiod, as remarked above, and in subsequent writers, the limits of the divisions which they adopt are carefully defined by the risings and settings of particular stars or constellations. The following tabular arrangement will afford a view of the most important systems:—

Division of the Seasons according to Hesiod.

	The evening (ἀκροκνέφαιος) rising of Arcturus 60 days after the winter solstice (*Op.* 564).
ros) or reaping time	(Heliacal) rising of the Pleiades after they have remained concealed for 40 days and 40 nights (383).
	(Heliacal) rising of the first star in Orion (595).
	(Heliacal) rising of Sirius (582, &c.).

End of summer (*θέρος*)	Fifty days after the solstice (663).
Period of the vintage	(Heliacal) rising of Arcturus. Culmination of Sirius and Orion (609).
Commencement of winter, which coincides with ploughing time (*ἄροτος*), and the close of navigation.	The (morning) setting of the Pleiades (383), of the Hyades, and of Orion (615).

According to the Author of the Treatise "De Diaeta."

Commencement of spring	The vernal equinox.
„ summer	Heliacal rising of the Pleiades.
„ autumn	Heliacal rising of Arcturus.
„ winter	Morning setting of Pleiades.

Sevenfold Division, according to Hippocrates and other Medical Writers.

Commencement of spring	The vernal equinox.
„ early summer (*θέρος*)	Heliacal rising of the Pleiades.
„ late summer (*ὀπώρα*)	Heliacal rising of Sirius.
„ autumn	Heliacal rising of Arcturus.
„ ploughing and sowing season (*ἄροτος σπορητὸς*)	Morning setting of Pleiades.
Commencement of winter proper (*χειμὼν*)	Winter solstice.
„ planting season (*φυταλία*)	Evening rising of Arcturus.

Seasons according to Euctemon, Eudoxus, and other Authors quoted in the Parapegma of Geminus.

First breezes of Zephyrus	16° or 17° of Aquarius.
Appearance of the swallow	2° of Pisces.
Appearance of kite (*ἰκτῖνος φαινέται*)	17° of Pisces (Eud.)—22° of Pisces (Euctem.).
Commencement of summer	13° of Taurus.
Midwinter	14° of Capricornus.

According to the Calendar of Julius Caesar.

Commencement of spring	The breezes of Favonius begin to blow	VII. Id. Feb. (7 February).
Vernal equinox		VIII. Kal. Apr. (25 March).
Commencement of summer	Heliacal rising of the Pleiades (Vergiliae)	VII. Kal. Mai. (9 May).
Summer solstice (*solstitium*)		VIII. Kal. Jun. (24 June).
Commencement of autumn	Morning setting of Fidicula	III. Id. Aug. (11 August).
Autumnal equinox		VIII. Kal. Oct. (24 September).
Commencement of winter	Morning setting of the Pleiades.	III. Id. Nov. (11 November).
Winter solstice (*bruma*)		VIII. Kal. Jan. (25 December).

Thus assigning to spring, ninety-one days; to summer, ninety-four days; to autumn, ninety-one days; to winter, eighty-four days.

[W. R.] [A. S. W.]

ASTY'NOMI (*ἀστυνόμοι*), public officers in most of the Greek states, who had to preserve order in the streets, to keep them clean, and to see that all buildings, both public and private, were in a safe state, and not likely to cause injury by falling down (Arist. *Pol.* vi. 5, § 3 = p. 1321 b, 19; Plato, *Legg.* vi. 759 A, 763 C; Dig. 43. tit. 10, s. 1). Among the cities where inscriptions bearing the name *ἀστυνόμοι* have been found are Athens, Ancyra, Cnidus, Eumeneia in Phrygia, Heraclea in Bithynia, Olbia, Rhodes, Sinope, and Teuthrania. In Plato's ideal *Laws* the functions of the astynomi are enlarged beyond what was actually the case at Athens; he assigns them the control of paving and of the public water supply, which we know to have been under the care of the *ὁδοποιοί* and the *ἐπιστάται τῶν ὑδάτων* (Boeckh, *P. E.* p. 203 ff.). The astynomi at Athens formed a street police, and were ten in number, corresponding with the number of the tribes, and appointed by lot, five for the city and five for the Peiraeus (Harpocrat., Suid. *s. v.*; Bekk. *Anecd.* p. 455, 24; *C. I. G.* i. 337). Aristotle states (*ap.* Harpocrat. *l. c.*) that they had the superintendence of the scavengers (*κοπρολόγοι*), which would naturally belong to them as charged with the cleansing of the streets; as also of musicians of both sexes, mountebanks, and the like. It is probable, however, that they had only to do with the latter in virtue of their duty of preserving order in the streets, since the regulation of public prostitutes belonged to the agoranomi [AGORANOMI]. We must regard the supervision of buildings as a part of their functions; the opinion that the Areiopagus was empowered to deal with such matters, and prevent the streets being made too narrow, or encroached upon by balconies (*δρύφακτοι*), has been proved to be erroneous (Schömann, *Antiq.* p. 415, E. T.; J. H. Lipsius in *Att. Process*, note 198*). It would likewise appear from a story told of the philosopher Crates by Diogenes Laërtius (vi. 90), that they could prevent a person from appearing in public in luxurious or indecent apparel. The office was regarded as burdensome, and no one could be compelled to serve in it a second time (Dem. *Prooem.* 55, p. 1461). It is mentioned on one occasion that a will was deposited with one of the astynomi (Isaeus, *Or.* 1 [*Cleon.*], § 15); but this was clearly no part of their official duties, and must be regarded simply as an instance of private confidence. There was, in fact, no regular place for the custody of wills at Athens. The notion of an *ἀστυνόμιον* or public building for the astynomi rests only on the fancy sketch of Plato, *Legg.* xi. 918 A, and is not supported by definite statements (Meier and Schömann, *Att. Process*, pp. 93–96, with Lipsius' notes; K. F. Hermann, *Staatsalterth.*, § 150, n. 8, 9; Boeckh, *Public Economy*, and Schömann, *Antiq.* as above). [W. S.] [W. W.]

ASY'LIA (*ἀσυλία*), inviolability. 1. The security of person and property everywhere granted to ambassadors and heralds, and often to others as well. It was regularly enjoyed by athletes on their journeys to and from the games, and by actors and others engaged in the Dionysiac festivals (Plut. *Arat.* 28). As granted to individuals by special favour, it is often mentioned in the inscriptions in connexion with ἀτέλεια and προξενία (*C. I. G.* n. 1052, 1542, and many more; Curtius, *Anecd. Delph.* n. 41 ff.). This privilege was also granted by one state to another, and claimed in the fullest measure by the presiding states at the four great games (Pind. *Isthm.* ii. 23; Thucyd. v. 49; Strabo, viii. p. 358; cf. OLYMPIA). The period during which the sacred truce lasted was called ἱερομηνία or ἐκεχειρία. In rare instances, the possessors of a sanctuary enjoyed by treaties a perpetual inviolability of their territory: this was especially the case with the city of Teos, as is proved by inscriptions built into the walls of the modern town which has risen out of its ruins (cf. *Dict. Geogr.* s. v. *Teos*). As the derivation of the word implies, ἀσυλία included exemption from reprisals (σῦλαι) in time of war [SYLAE]. 2. The right of sanctuary [ASYLUM]. [W. W.]

ASYLUM (ἄσυλον). 1. GREEK.—In the Greek states the temples, altars, sacred groves, and statues of the gods generally possessed the privilege of protecting slaves, debtors, and even criminals, who fled to them for refuge. The laws, however, do not appear to have recognised the right of all such sacred places to afford the protection which was claimed. There was, in fact, a clear distinction between the right of the suppliant (ἱκέτης), which was everywhere acknowledged, and the ἀσυλία, or *jus asyli*, limited to certain specially privileged places. All sacred localities were held to protect the suppliant to a certain extent, even if their right to do so was not legally recognised. How purely formal the scruples of the Greeks were on this point, is shown by the additional touch in Plutarch's narrative of the massacre of the Cylonians, as compared with the accounts in Herodotus and Thucydides. In the later version, the Cylonians, on surrendering, attached a cord to the statue of the goddess, and as long as they held it were safe; when the cord broke accidentally, their enemies looked upon them as providentially delivered into their hands (Plut. *Sol.* 12: cf. Herod. v. 71; Thucyd. i. 126). Bp. Thirlwall calls this "too characteristic of the age to have been a later invention" (*H. G.* ii. 22). When the law gave no protection, it seems to have been thought lawful to use any means in order to compel those who had taken refuge to leave the sanctuary, except dragging them out by personal violence. Thus it was not uncommon to force a person from an altar or statue of a god, by the application of fire (Eurip. *Androm.* 257, with Schol.; *Herc. Fur.* 240 ff.; Plaut. *Mostell.* v. 1, 45, 65). He might also be starved out, as in the well-known instance of Pausanias (Thucyd. i. 134; cf. Herod. iii. 48).

Among the Greek sanctuaries which were really privileged and where the right of asylum was confirmed by law, we must distinguish between those of merely local sanctity and those to which fugitives might have recourse from a distance. To the latter, more famous, class belonged the temple of Athena Alea at Tegea (Plut. *Lys.*, 30; Pausan. ii. 17, 7; iii. 5, 6; 7, 10); that of Poseidon, in Calauria (Strabo, viii. p. 373; Plut. *Demosth.* 29; Pausan. ii. 33, 3); of Poseidon, at Taenarum, the favourite refuge of Spartan slaves, Helots, and Perioeci under oppression (Thucyd. i. 128, 133; Corn. Nep. *Paus.* c. 4; Pausan. vii. 25, 3; Aelian, *V. H.* vi. 7; Plut. *Pomp.* 24); and of Athena Chalcioecos at Sparta (Thucyd. i. 128, 134; Polyb. iv. 35; Pausan. iii. 17, 7). The treatment of Pausanias by the Spartans, which was thought to have brought on the calamities that soon afterwards afflicted their state, would have passed without remark, but for the exceptional sanctity of the Brazen House. The temples of Apollo at Delos, Actium, and Leucas; of Hera at Argos and Samos, and on the Lacinian promontory; of the Lycaean Zeus; of Poseidon at the Isthmus; of Aesculapius, both at Cos, the home of the Asclepiadae, and Epidaurus; of the Chthonian Demeter at Hermione, and of the hero Amphiaraus at Oropus,—all apparently belonged to this higher class. The entire island of Samothrace claimed inviolability (Liv. xlv. 5; Plut. *Aemil. Paul.* 23, 26). On a somewhat lower footing were those sanctuaries which possessed merely local privileges, and were only occasionally used for places of refuge. Such were the temples of Athena Itonia in Boeotia, of Artemis Hegemone at Ambracia, of Artemis in Samos, of Hera at Corcyra, of Athena at Siris in Italy. There were several places in Athens which possessed this privilege; of which the best known was the Theseum, or temple of Theseus, in the city, which was chiefly intended for the protection of ill-treated slaves, who could take refuge in this place, and compel their masters to sell them to some other person (Plut. *Thes.* 36; Pollux, vii. 13; Schol. *ad* Aristoph. *Eq.* 1312; Hesych. and Suidas, *s. v.* Θησεῖον). The other places in Athens which possessed the right of asylum were: the altar of Pity (Ἔλεος) in the agora, the altar of Zeus Ἀγοραῖος, the altars of the twelve gods, the altar of the Eumenides on the Areiopagus, the Theseum in the Peiraeus, and the altar of Artemis at Munychia (Meier and Schömann, *Att. Proc.* p. 404, original edition).

In the time of Tiberius, the number of places possessing the *jus asyli* in Greece and Asia Minor became so numerous, as seriously to impede the administration of justice. In consequence of this, the senate, by the command of the emperor, limited the *jus asyli* to a few cities, but did not entirely abolish it, as Suetonius (*Tib.* 37) has erroneously stated. (See Tac. *Ann.* iii. 60–63, iv. 14; and Ernesti's *Excursus* to Suet. *l. c.*)

It is perhaps impossible to decide whether the right of sanctuary, as we find it among the Greeks of the classical period, was a survival from the primitive sanctity of temples in general, limited to a few of the most important in consequence of the abuses to which it gave rise; or, as some writers maintain, itself the growth of a later period. The latter is the opinion of Wachsmuth (*Hellen. Alterth.* i. p. 335) and Förster (*de Asylis Graecorum*, p. 39): the former is upheld by Caillemer (*ap.* D. and S.), and seems to us intrinsically the more probable. (Compare K. F. Hermann, *Staatsalterth.*, § 10, n. 6; *Gottesd. Alterth.* § 10, n. 15, 16; § 49, n. 10; Förster, *de Asylis Graecorum*, Berlin, 1847).

2. ROMAN.—The asylum which Romulus is said to have opened at Rome on the Capitoline hill, between its two summits, in order to increase the population of the city (Liv. i. 8; Vell. Pat. i. 9; Dionys. ii. 15), was, according to the legend, a place of refuge for the inhabitants of

other states, rather than a sanctuary for those who had violated the laws of the city. In the republican and early imperial times, a right of asylum, such as existed in the Greek states, does not appear to have been recognised by the Roman law. Livy seems to speak of the right (xxxv. 51) as peculiar to the Greeks:—*Templum est Apollinis Delium—eo jure sancto quo sunt templa quae asyla Graeci appellant.* The temple of Divus Julius was constituted an asylum by decree of the people; but this, the historian himself remarks, was quite exceptional (Dio Cass. xlvii. 19). By a *constitutio* of Antoninus Pius, it was decreed that, if a slave in a province fled to the temples of the gods or the statues of the emperors, to avoid the ill-usage of his master, the praeses could compel the master to sell the slave (Gaius, i. 53); and the slave was not regarded by the law as a runaway—*fugitivus* (Dig. 21, tit. 1, s. 17, § 12). This *constitutio* of Antoninus is quoted in Justinian's Institutes (1, tit. 8, s. 2), with a slight alteration; the words *ad aedem sacram* are substituted for *ad fana deorum*, since the *jus asyli* was in his time extended to churches. Those slaves who took refuge at the statue of an emperor were considered to inflict disgrace on their master, as it was reasonably supposed that no slave would take such a step, unless he had received very bad usage from his master. If it could be proved that any individual had instigated the slave of another to flee to the statue of an emperor, he was liable to an action *corrupti servi.* (Dig. 47, tit. 11, s. 5.) The right of asylum seems to have been generally, but not entirely, confined to slaves. (Dig. 48, tit. 19, s. 28, § 7. Comp. Osiander, *de Asylis Gentilium*, in Gronov. *Thesaur.* vol. vi.; Simon, *Sur les Asyles*, in *Mém. de l'Acad. des Inscript.* vol. iii.; Bringer, *de Asylorum Origine, Usu, et Abusu*, Lugd. Bat. 1828; C. Neu, *de Asylis*, Gott. 1837. Respecting the right of asylum in the churches under the Christian emperors, see Rein, *Das Criminalrecht der Römer*, p. 896.) [W. S.] [W. W.]

ATELEIA (ἀτέλεια) is generally immunity or exemption from some or all of the duties which a person has to perform towards the state. Immunities may be granted either as a privilege to the citizens of a state, exempting them from certain duties which would otherwise be incumbent on them, or they are given as honorary distinctions to foreign kings, states, communities, or even private individuals. With regard to the latter the ateleia was usually an exemption from custom duties on the importation or exportation of goods, and was given as a reward for certain good services. Thus Croesus received the ateleia at Delphi (Herod. i. 54), the Deceleans at Sparta (Herod. ix. 73), and Leucon, the ruler of Bosporus, at Athens. (Dem. *c. Lept.* p. 466 ff.) At Athens the immunity might be either general (ἀτέλεια ἁπάντων, Demosth. *l. c.* p. 475, § 60) or partial. The former included exemption from customs duties; from liturgies, other than the trierarchy; in some rare exceptions, from the εἰσφορὰ or property tax, which, as a rule, no Athenian citizen could escape; from providing victims for sacrifice (ἀτέλεια ἱερῶν, Demosth. *l. c.* p. 495, § 126), in which case the victims were provided at the cost of the state (Boeckh, *P. E.* p. 86, note); and in the case of resident aliens, from the μετοίκιον (ἀτέλεια μετοικίου, Demosth. *c. Aristocr.* p. 691, § 211). The ἀτέλεια ἁπάντων was only granted to foreigners who had been distinguished as εὐεργέται or public benefactors; and Demosthenes argues (*c. Lept.* p. 470, § 44) that practically no use was ever made of it by the small number of persons who enjoyed it. Partial ἀτέλεια consisted in exemption from any one or more of the above burdens. The descendants of Harmodius and Aristogeiton probably enjoyed all these exemptions, except that from the εἰσφορά. The most common case was that of immunity from customs duties, which was somewhat freely granted for the purpose of encouraging commerce. The trierarchy stood upon a different footing from other liturgies: none could be exempt but the nine archons (Demosth. *Lept.* p. 465, § 28). Exemption from military service, again, requires to be considered by itself: it does not seem to have formed a part of the general conception of ἀτέλεια, but was legally enjoyed by all members of the βουλὴ or senate (Lycurg. *c. Leocr.* § 37), by the archons for the time being, by the τελῶναι or farmers of taxes (Demosth. *c. Neaer.* p. 1353, § 27), and by those who traded by sea, although with them the privilege must have been under regulation to prevent fraud (Schol. *ad* Arist. *Plut.* 905, *Acharn.* 399; Suid. *s. v.* ἔμπορός εἰμι). Actors appear to have been altogether excused from military service by sea or land, and choreutae under certain restrictions; but agreeably to the general Athenian practice, such excuses were liable to be disputed by a γραφὴ ἀστρατείας (Demosth. *Olynth.* iii. p. 31, § 11; *c. Mid.* p. 577, § 193; *c. Boeot. de Nom.* p. 999, § 16). In or about B.C. 356, Leptines carried a law by which all ἀτέλειαι were abolished; Demosthenes procured the repeal of it in 355, and his speech against the law of Leptines is the chief source of our information. The loss to the state, he argues, was quite inappreciable: since the ἀτέλεια was enjoyed by not more than ten foreigners and five or six citizens. The notion of a reciprocal ἀτέλεια and full citizenship between Athens and Byzantium rests on the doubtful authority of a document in Demosth. *de Cor.* p. 256, §§ 90, 91, and is not supported by anything in the text of the speech. On the whole subject, compare Wolf, *Prolegom. ad Lept.* p. lxxi. ff.; Boeckh, *P. E.* p. 85 ff. [W. W.]

ATELLA'NAE FA'BULAE. [COMOEDIA.]

ATHENAEA (ἀθήναια). See CHALKEIA and PANATHENAEA.

ATHENAEUM (ἀθήναιον), a school (*ludus*) founded by the Emperor Hadrian at Rome, for the promotion of literary and scientific studies (*ingenuarum artium*), and called Athenaeum from the town of Athens, which was still regarded as the seat of intellectual refinement. The Athenaeum was situated on the Capitoline hill. It was a kind of university; and a staff of professors, for the various branches of study, was regularly engaged. Under Theodosius II., for example, there were three orators, ten grammarians, five sophists, one philosopher, two lawyers or jurisconsults. Besides the instruction given by these magistri, poets, orators, and critics were accustomed to recite their compositions there, and these prelections were sometimes honoured with the presence of the emperors themselves. There were other places where such recitations were made, as the Library of Trajan [BIBLIOTHECA]; sometimes also a room was hired, and made into an auditorium, seats erected, &c. The Athenaeum seems to have continued in high repute till the fifth century. Little is known of the details of study or discipline in the Athenaeum, but in the constitution of the year 370 there are some regulations respecting students in Rome, from which it would appear that it must have been a very extensive and important institution. And this is confirmed by other statements contained in some of the Fathers and other ancient authors, from which we learn that young men from all parts, after finishing their usual school and college studies in their own town or province, used to resort to Rome as a sort of higher university, for the purpose of completing their education. (Aur. Vict. *Caes.* 14; Dio Cass. lxxiii. 17; Capitolin. *Pertin.* 11, *Gordian. Sen.* 3; Lamprid. *Alex. Sever.* 35; Cod. Theod. 14, tit. 9, s. 1.) [A. A.]

ATHLETAE (*ἀθληταί, ἀθλητῆρες*). The term is in strictness applied to those who contended for prizes (*ἆθλα*) in the games which required strength, skill, and agility of body, in contradistinction to those who engaged in equestrian and musical contests; though in a general sense it is found extended even to these (Poll. iii. 143–4) and to horses (Lysias, *de bonis Aristoph.* 63), and is metaphorically used for one who is master in any laborious pursuit (*e.g.* Plat. *Rep.* 543 B). We never find *ἀθλητική* sc. *τέχνη*, though the Latins spoke of *ars athletica* (Gell. xv. 16), but either *γυμναστική* or *ἀγωνιστική* (Plat. *Legg.* vi. 764), or *ἄθλησις* (Dion Chrys. i. 540, Reiske), or *ἀθλητικὴ ἄσκησις* (Galen, i. 21, Kühn).

The contests of the *athletae* were in running, wrestling, boxing, the pentathlon, and the pancratium. Details of these will be found in the separate articles [Stadium; Lucta; Pugilatus; Pentathlon; Pancratium]. Here we must confine ourselves to a general sketch of the class of athletes.

In the early times in Greece athletic games were held occasionally at festivals in honour of the gods and heroes, but especially at the funerals of distinguished men: thus in the Iliad (xxiii.) games are held at the funeral of Patroclus. But the warriors as a rule do not appear to have trained specially for the games: as part of their general education, they had been instructed in gymnastics. In this department Grecian legend told how Hercules, Peleus, and Theseus had been celebrated (Philostratus, *Gymn.* 1), as were also Castor and Pollux (Paus. v. 8, 4); but in the Homeric age there were few who made athletics as such their special business, though we must not forget the passage (*Od.* viii. 164) where Euryalus reproaches Ulysses as not being "like an athlete," nor that even in the Iliad (xxiii. 670). Epeius the boxer says, "Is it not enough that I am not skilled in battle? A man, I ween, cannot be skilled in all pursuits." Games were becoming fairly frequent, and the special skill required in the contests was gradually demanding increased application to the different branches of athletics.

But in the next age athletics became the national Hellenic sport, and never ceased to be so till the latest times of the ancient world: for, in the first instance, they satisfied the artistic instinct of the Greeks, as they developed the human frame in strength and beauty. But as it was the national sport, just as horse-racing with us, every department tended to become more and more professionalised. The great festivals collected together the greatest concourses of the members of the Hellenic race; and the emulation to succeed before the immense gatherings of their countrymen, and the extravagant honours and rewards bestowed by the cities on their citizens when victorious, rendered victory in the games the most coveted distinction a Greek could acquire, and so every means was resorted to in order to attain the strength and skill necessary for success. But still those who contended, though often of low extraction (Aristot. *Rhet.* i. 7, 9; Athen. ix. 382 b), were also often cultured men, members of the noblest families, and men famous at home in war and politics, like Phayllus of Croton (Herod. viii. 47) and Dorieus of Rhodes (Paus. vi. 7, 4). A professional class of athletes, however, who devoted their entire exertions in that direction and who made their art a trade, had already arisen. These, by increased training, greater development of the technical side of gymnastics, and special application to details, acquired such proficiency that it became all but hopeless for any but such a specially trained athlete to contend in the games with any chance of success. The cultivated and upper classes began to stand aloof, and to take part in the games chiefly by running their chariots; while the professional athletes came to form a class of low-born, uneducated, and vulgar men (Isocr. *de Big.* 33, 34). Now, it is to these professional athletes that the term *ἀθληταὶ* was most strictly applied in the historical times; for they were those who contended for the prizes in the games then: those who practised athletics in the old liberal but unprofessional manner are said to have retained the generic term *ἀγωνισταί*. (Pauly, i. p. 1992; yet cf. Lucian, *Anach.* 10.)

Euripides (*Autol.* Frag. 1) speaks with bitter contempt of the athletes, who, he says, are the greatest evil of the countless evils of Hellas, who are slaves to their belly, a degenerating lot, useless in war, unable to bear old age or misfortune—for their training is not an ennobling training (*ἔθη γὰρ οὐκ ἐθισθέντες καλά*). On similar grounds Xenophanes (Frag. 2: Bergk, ii. p. 112), who flourished about 540 B.C., had before strongly censured as reckless and unreasonable the extravagant value the Greeks set on mere strength for the games (strength which is otherwise perfectly useless) as compared with intellectual cultivation. And he was quite right. That pursuit which lacks the exercise of a cultivated mind, no matter how much the majority passionately follows it, must become more and more mechanical and vulgar, and so sink more and more in the estimation of the cultivated classes. We see it ourselves in the case of those professionally connected with the turf, who in many ways afford a good parallel to the Greek professional athletes. In the excessive training the latter had to submit to, the body was developed at the cost of the mind; and this was one of the few cases in which the Greeks forgot their wonted moderation.

The athletic contests, just as were the "weights" in the Ring in England, were divided into "light" (*κοῦφα*) and "heavy" (*βαρέα*) or "violent" (*βίαια*): see Aristot. *Pol.* v. 4, 7 fol.; Galen, vi. 487, K.; Philostr. *Gymn.* 3. Saglio

(*Dict. des Antiq.* i. 519) remarks that the statues of the competitors in these two classes of contests correspond to the types of Hercules and of Mercury, the two gods who presided over athletics. Mercury exhibits the slight but muscular and wiry figure of the "light" athletes, and Hercules the massive body of the "heavy" ones. Philostratus (*Gymn.* 37 foll.) mentions other strange names of different classes of athletes: the "lion-like," "eagle-like," the "lathy" (σχιζίαι), the "bears," &c. The training in each of the two main classes became severer and severer as time went on; for more and more striking performances were expected. We hear of a rule that the competitors at Olympia had to swear that they had diligently devoted ten months to the recognised special training in athletics (Paus. v. 24, 9). This was to maintain that common system of athletic training which prevailed in all Hellenic wrestling-schools (see Curtius, *Hist. of Greece*, ii. 33, Eng. trans.). The ordinary gymnastic master who taught the youths bodily exercises as a branch of general education was called παιδοτρίβης, and he who trained those who were intending to compete in the games was the γυμναστής: but this distinction disappeared in later times (Hermann-Blümner, *Privatalt.* 335). The γυμναστής was in constant supervision of his pupils, followed them to the games (Paus. v. 6, 8), where he made all necessary preparations for their contest, and during the struggle stood by with words of encouragement or reproach (Philostr. *Gymn.* 20). Just as a physician, a trainer required implicit obedience in those for whom he prescribed (Epictet. *Enchir.* 29). Subordinate to him was the ἀλείπτης, who originally, as his name indicates, looked to the anointing of the body, but often, especially in later times, took much more upon himself, became confused with the παιδοτρίβης (Schol. on Ar. *Eq.* 492), and used to prescribe the course of diet to be eaten (Aristot. *Eth. Nic.* ii. 6, 7), and even how it was to be eaten: thus he disapproved of too intellectual conversation (φιλολογεῖν) during meals! (Plut. *de san. tuend.* 133, 19.) The diet of athletes is said to have been (Diog. Laërt. viii. 1, 13) fresh cheese, dried figs, and wheat; but Dromeus of Stymphalus (Paus. vi. 7, 10), or according to others a trainer called Pythagoras (Plin. *H. N.* xxiii. 63; cf. Diog. Laërt. *l. c.*), introduced a meat diet. However, it is very unlikely that the athletes were ever trained on anything but meat (see Philostr. *Gymn.* 43). Pork was the principal meat used (Galen, vi. 661), though we find also beef (Plat. *Rep.* i. 338 C) and goat's flesh (Athen. ix. 402 a). Fish was considered bad (Philostr. *Gymn.* 44). They probably drank water and not wine after their exercises, as the latter was dangerous (Galen, xv. 194); they had to abstain from all cakes (Epictet. *l. c.*). The bread they ate was of a special kind (Galen, vi. 180, K.), slightly leavened and hardly baked at all (Philostr. *Gymn.* 43): this was perhaps the *coliphia* mentioned by Plautus (*Pers.* i. 3, 12) and Juvenal (ii. 53). The usual course was to eat bread for the morning meal and meat for the evening. After the morning meal their exercises continued till the evening, interrupted only by a few intervals (Galen, vi. 168–9). Those who submitted to the severest training (βίαιος τροφή, ἀναγκαιοφαγία, ἀδηφαγία) had to eat enormous masses of meat after the day's exercise: two minae (= 2¾ lbs.) was a very small amount for an athlete (Galen, viii. 843, K.), who generally slept it off late into the next day (Galen, i. 28, K.), though we sometimes hear of athletes promoting digestion by walking (Plin. *H. N.* xi. § 283). The quantum of food was gradually increased (Arist. *Eth. Nic.* ii. 6, 7); and the most ridiculous stories of the amount some of the athletes—such as Milo, Theagenes, and others—used to eat, obtained currency (Athen. x. 412; cf. Theocr. iv. 34). But many athletes did really eat vast quantities of food; so much that their appetite became proverbial (Aristoph. *Pax*, 34), and, says Pliny (*H. N.* xviii. § 63), was like a horse's; and further they got to be unable to do without the abnormal amount even for a day (Cic. *Tusc.* ii. 17, 40). The aim of this excessive eating appears to have been to acquire not so much that plump yet muscular frame which is expressed by the verb σφριγᾶν, and that harmonious inner development of the whole constitution which Philostratus calls κρᾶσις, and which he emphasises as the distinctive difference between the former gymnastic training and the more scientific one of his own day (42, 43, cf. 28); but to get mere mass and weight (ὄγκος καὶ βάρος) of body, which was such an important element in "heavy" contests like boxing and the pancratium. Different trainers had, however, different regimens: thus Theon ordered warm baths and diminution of food after completed exercises (Galen, vi. 208); and of course the training for runners was directed towards diminishing the flesh (Galen, v. 905). Besides the ordinary training (κατασκευή), there were also other treatments, consisting of long-continued and violent movements, accompanied with shampooings by many hands and with much oil (Galen, vi. 117, 123, 222). For the obscure *tetras* see Philostr. *Gymn.* 47; Galen, v. 898; and Saglio, p. 518. It was a fourfold course of treatment, lasting four days, which is not clearly enough defined, but which Philostratus strongly disapproves of. The strictest continence was enjoined in all athletic discipline (cf. Hor. *A. P.* 414), and by some rigorously practised during the whole period of their training (Plat. *Legg.* viii. 840).

The exercises which athletes went through were the ordinary ones of the palaestra and those required for the games; though we sometimes find athletes going through exercises which were not departments of competition, merely in order to increase their strength, such as putting heavy weights, bending bars of iron, wrenching back the necks of bulls, knocking suspended bags of sand backwards and forwards by blows of their fists (κωρυκοβολία, &c.: cf. Lucian, *Lexiph.* 5; Philostr. *Gymn.* 43), also working with a mattock (Theocr. iv. 10). The athletes practised as a rule each for a separate event (Philostr. *Gymn.* 43). Hence the one-sidedness even of their physical training; and the fact that those who trained for that event, which comprised the most varied exertions (such as the pentathlon), were justly considered to have the best-proportioned frames (Aristot. *Rhet.* i. 5). But sometimes the athletes attempted more than one: for it was considered a great honour to be victorious at Olympia in both wrestling and in the pancratium on the same day. There were only seven such victors besides their mythic predecessor, Hercules (Paus. v. 21, 10; 8, 4). A certain Polites conquered on the same day in the three different kinds of races,—the stadion, the diaulos, and the dolichos (Paus. vi. 13, 3): and for other victories in more than a single event, see Pind. *Ol.* xiii. 30; Paus. vi. 15, 8; 11, 5.

Victors in the principal games were called ἱερονῖκαι; those in the separate games, ὀλυμπιονῖκαι, &c.; and those who were successful in all four games were the περιοδονῖκαι. In Roman times, however, we find this latter term applied to celebrated athletes who had been victors in a great number of games, even though they were not the four great ones (cf. Dio Cass. lxiii. 8). Another strange title of distinguished athletes at Rome was παραδοξονίκης, which was strictly applied to those who conquered in both wrestling and the pancratium (Plut. *Comp. Cim. et Lucull.* 2).

In early times the athletes used to practise in the *gymnasium*, where the young men, who had made some progress in gymnastics and were advanced from the *palaestra*, went through their ordinary unprofessional exercises. In Roman times we find the athletes frequenting the palaestrae, the gymnasia, xysti (covered places for use in bad weather, Vitruv. v. 11, 4: hence athletes were sometimes called *xystici*), and the stadia. There were exercising places in the great Roman thermae [BALNEAE]. Athletes who had won signal distinction in the sacred games were occasionally in Grecian cities honoured by having special porticoes built for them to exercise in (Paus. vii. 23, 5).

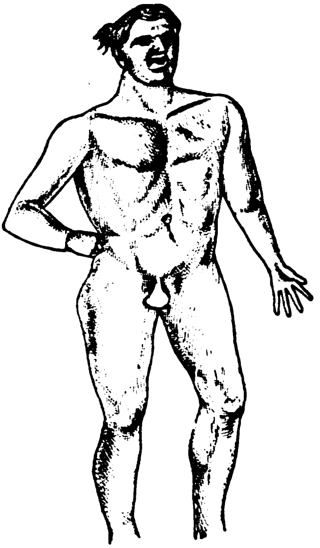
Originally the athletes used to contend with a girdle round their loins (διάζωμα, περίζωμα, or simple ζῶμα), according to the custom of the Spartans (Thuc. i. 6, 4). But very soon it became the custom to contend naked,—a custom introduced by Orsippus (Paus. i. 44, 1). It was professional for Roman athletes to wear their hair tied up in a knot called *cirrus* (see figure of a Roman athlete below), which explains a story in Suet. *Nero*, 45. The Greek as well as the Roman athletes used sometimes to shave off their hair, in that tonsure which Aristophanes would have called "the bowl crop" (σκαφίον, *Thesm.* 838). Further, they occasionally wore, according to Martial (xiv. 50), a cap (*galericulum*); and as their wonderful style of boxing consisted in swinging round their arms and not striking out straight from the shoulder, they used to wear guards for the ears (ἀμφωτίδες or ἐπωτίδες, Poll. ii. 83). For the battered ears of ancient boxers, see Plat. *Protag.* 342 B; Mart. vii. 32, 5.

He who took to the profession of an athlete seldom abandoned it before his thirty-fifth year, which was considered the age at which he was in the prime of manhood (Macrob. *Somn. Scip.* i. 4); but if he had never won a victory by that time, he generally gave up the business. A successful athlete continued to contend in the games till his strength failed (Plut. *Cat. Maj.* 4); and, as might be expected, in many cases, as he advanced in years, became a trainer of younger men: *e.g.* Iccus (Paus. vi. 10, 5).

The same causes which produced the excessive and one-sided training of men produced a similar excessive training of boys. For there arose contests of boys at the great festivals. The only distinction originally was between men and boys (Dissen on Pind. *Ol.* viii. 54); but later those below man's estate were divided into παῖδες from about 13 to 16, and ἀγένειοι from about 16 to 19 (Plat. *Legg.* viii. 833 C). In Olympiad 37 (= 632 B.C.) there was the first contest of running and wrestling for boys (Paus. v. 8, 9); in Ol. 38 (= 628 B.C.), the first and only pentathlon (Paus. v. 9, 1); in Ol. 41 (= 616 B.C.), the first boxing match (Philostr. *Gymn.* 13): but happily not till the 145th Olympiad (= 200 B.C.) the horrid pancratium (Paus. v. 8, 11), though we find this latter in the 61st Pythian celebration (Paus. x. 7, 8); and in the Pythian games we find what we do not find at Olympia, long races for boys (Paus. x. 7, 5). The training for these events was too severe for the growing frame, and Aristotle (*Pol.* v. 4, 8) raised his voice earnestly against it, as detrimental to the development of the man, pointing out how there were only two or three victors at the Olympic games both as boys and as men.

But what can sober science avail against a national passion and the extravagant praise and rewards which are bestowed on those who excel in what the people delight to honour? To be an Olympic victor, said Cicero (*Flacc.* 13, 31), was esteemed by the Greeks as a greater glory than a triumph at Rome. And indeed the victorious Greek athlete used to have a kind of triumphal entry into the town his victory had ennobled (Vitruv. ix. Pref.). Surrounded by a large crowd, sometimes with a grand procession of chariots (Diod. xiii. 82), clad in a purple mantle like a king (Schol. on Ar. *Nub.* 70), he drove into the city through a breach made in the wall for his chariot to pass through—a symbol that cities which possessed such citizens had no need of walls (Plut. *Symp.* ii. 5). Then followed the banquet, during which the victor heard his praises sung by a lyrical chorus and in verse of the greatest poets of the day. Contests which involved the honour of such a triumphal entry were technically called ἀγῶνες εἰσελαστικοί, which in early times were the four great festivals only; but in Imperial Rome this privilege was extended to other games (Plin. *Epist.* x. 119, 120). Solid material rewards, too, were given. Even as reduced by Solon, the money reward the Athenians gave the victor in the Olympic games was 500 drachmae, and 100 to the victor in any of the other games (Diog. Laërt. i. 2, 55; Plut. *Sol.* 23): sometimes he got maintenance in the Prytaneum and the honour of first seat in the assemblies and theatre (προεδρία, Xenophan. Frag. 2, 7, ed. Bergk). Statues were often erected to him in his native city and at Olympia (Paus. vi. 13, 1). In fact, Plato goes so far as to say (*Rep.* v. 465 D) that the victor at the Olympic games enjoyed a blessed life (βίος μακαριστός). Lucian (*Anach.* 10: cf. Pind. *Pyth.* x. 27; Cic. *Tusc.* i. 46, 111) declared the honours of such a victor were as those of the gods, and we do actually hear of a boxer being deified while alive (Plin. *H. N.* vii. § 152). As a contrast, the picture of the defeated competitor shows "a hateful return and contemptuous greeting and a skulking path" (Pind. *Ol.* viii. 69). Can we wonder, then, when such honourable rewards followed success and such humiliation followed defeat, that there was occasionally unfair dealing and trafficking amongst the combatants, a rich competitor buying the victory from a stronger but poorer one? An oath was required of the combatants that they would not act in violation of the rules of the contest (Paus. v. 24, 9); and so bribery was comparatively rare in early times, though it became frequent later (Philostr. *Gymn.* 45). It was punished by severe fines, according to the rules of the Olympic games (Paus. *l. c.*). We regard with wonder that species of bribery which is recorded whereby a strange city paid a victorious athlete to declare that he was their citizen, so that the city might be proclaimed as victor; and we are not surprised that, after such falsehood, the native city of the victor inflicted on him exile or some other mark of their indignation (Paus. vi. 18, 6; 13, 5).

Yet amongst the many judgments passed by the ancients on the athletes, we can hardly find any that are favourable. Allusion has been made to the strictures of Xenophanes and Euripides, who attack them for their uselessness to the state and want of cultivation. And even from the physical point of view their training appeared to thoughtful men of science utterly bad. Plato sees in the athletes a habit of body which is sleepy and very subject to disease (*Rep.* iii. 404 A), which is too highly and extravagantly trained, and unfits them for social or political duties (*ib.* 407 B). They are without information, cultivation, or grace of manner; hard and brutal, all violence and fierceness (*ib.* 410, 411). Aristotle declares that the habit of body of athletes is not suitable for that vigorous physical condition a citizen should have, nor for health and the procreation of children. It is too one-sided, and the discipline which developed it is too severe (*Pol.* iv. 16, 3). Plutarch (*de sanit. tuenda*, 16, 20) disapproves of the ἰσχὺς παλαιστικὴ and athletic training generally. Galen devotes six long chapters (9–14) of his Προτρεπτικὸς Λόγος to solemnly warning the young men against devoting themselves to athletics, by showing what athletes are in his opinion (i. 20–39, Kühn). Man has a link, he says, with God, and a link with the lower animals; athletics develops the latter only. Athletes are like swine. Their flesh-sunk soul is without intellect, and no better than the brutes (ἄλογα ζῶα). His strictures on the physical side are, however, the most interesting. Owing to their immoderate eating, sleeping, and exertion, athletes are, he says, unhealthy. Their training is a training in disease. No class of men are more liable to break down in health, or to sudden death (xvii. 2, 363, Kühn). Beauty is quite wanting in their lumpish, battered bodies. Nor is their knock-down strength (ἰσχὺς καταβλητική), though serviceable in just a few special events in the games, of any use in agriculture or in war nor does it bring with it a capability of enduring heat, cold, or fatigue. Nor are they ever rich: they are wretched (ἄθλιοι) in their lives, and are so rightly called "athletes." In fact, their whole existence is one round of "eating, or drinking, or sleeping, or evacuating, or rolling about in the mud and dust" (v. 879, K.). With such strictures, if we compare the view of Dio Chrysostom, who sees in athletes generally, and Melancomas in particular, large beautiful bodies, and the practice of athletes as generating courage and nobleness, strength and temperance (*Or.* xxix. 538, 540, ed. Reiske), we must suppose that the description, though perhaps true of Melancomas, yet was at best only an affectionate tribute to the glory that was thought to have belonged to the great Hellenic past, and in reality was a thoroughly ideal and false view of the athletes of the Graeco-Roman civilization, and one which is certainly not borne out by the repulsive portraits on the mosaic of the Thermae of Caracalla; of which is subjoined as a specimen a single example. The reader is referred for more hideous ones to Baumeister's *Denkmäler*, p. 223.



Roman Athlete. (From Baumeister.)

With Plutarch and Galen, however, we are in Roman times; and we must now hastily review the rise of athletic games at Rome. Exhibitions of gladiators, not of athletes, were the national sport. Cicero says to M. Marius (*Fam.* vii. 1, 3) of the athletic contests exhibited by Pompeius in 55 B.C., "Why should I think you regretted not having seen the athletes when you have despised the gladiators?" A certain kind of athletics had indeed been indigenous in Italy from the earliest times (Liv. i. 35), and we hear of contests in wrestling and boxing at the Roman games (Ter. *Hecyra*, Prol. 25; Cic. *Legg.* ii. 15, 38); but the whole practice was utterly unsystematic (cf. Suet. *Aug.* 45), and so quite unlike the elaborate manner in which it was cultivated in Greece (cf. Hor. *Ep.* i. 1, 49). It was from Greece that the scientific practice of athletics came. In 186 B.C. M. Fulvius Nobilior gave the first exhibition of professional Greek athletes at Rome (Liv. xxxix. 22). We do not, however, hear of a similar exhibition again till Sulla's time (App. *B. C.* i. 99), but there were a few others during the last century of the republic (Val. Max. ii. 4, 7; Dio Cass. xxxix. 38, 1; Suet. *Caes.* 39). Varro complains indeed of there being a gymnasium at every villa (*R. R.* ii. 1, 1), but this was probably for medicinally-prescribed exercises (*iatraliptice*), not regular athletics. But it was not till the Actian games were established by Augustus and other periodic games (Dio Cass. li. 1), which comprised gymnastic contests in their programme, that athletics got a steady footing among the Romans. From that time these *certamina graeca*, as they were called (Tac. *Ann.* xiv. 21), became more and more popular. Nero in 60 A.D. built a gymnasium (Suet. *Nero*, 12), and instituted a new set of games called Neronia, of which athletics formed a part, as they did also of the important Agon Capitolinus established by Domitian in 86 A.D., who further built a magnificent stadium for athletics in the Campus Martius, large enough to hold 30,000 spectators (Suet. *Dom.* 4, 5; Friedländer, p. 466). After this athletics gradually attained increased prominence in the Roman games (cf. Vopisc. *Carin.* 19, 3), till finally in the fifth century they supplanted the gladiatorial shows. Thus at the consular games of Flavius Mallius Theodorus there were athletes, but no gladiators (Claudian, *de cons. Fl. M. Th.* 288). For a full account of the Roman athletic games, see Friedländer, *op. cit.* 460–468.

It is highly noticeable, however, that the names of the athletes which are preserved in inscriptions are almost all Greek; not more than four or five are Roman (Friedländer, p. 472). Everything connected with athletics, technical terms and all, are Greek (cf. Juv. iii. 68). The reason is that for a long time it was considered quite unbecoming of Roman dignity to be an athlete. The nakedness of the Greeks offended the Roman sense of propriety (Cic. *Tusc.* iv. 33, 70). The Romans saw the uselessness for war of the athletic training, for they themselves had been, as Polybius says (i. 6, 6), "the true athletes in the feats of war, trained in contests with the Samnites and Gauls." They saw further that it was a training too in laziness and vice, one more example of the invasion of the pernicious practices of the Greeks (Plin. *H. N.* xxxv. § 163). (There is a large mass of evidence on Roman adverse opinion of gymnasia in Mayor on Juv. iii. 68.) But, like all things Greek, athletics continued to grow in popularity, especially from the time of Nero. Professional athletes used to give lessons for high pay (Mart. vii. 32, 5, 6), even to women (Juv. vi. 246, 355); were often found among the attendants of great houses (Mart. iii. 58, 25); statues were erected to them (Plin. *H. N.* xxxv. § 5), &c. M. Aurelius was a regular frequenter of the palaestrae (Galen, vi. 406), and so was Alexander Severus (Lampr. *Alex. Sev.* 27). The athletes, as free men (*ingenui*, Dig. 9, 2, 7, 4), always stood higher in social estimation (Dig. 3, 2, 4) than did the gladiators and actors. Later indeed the stringency of this rule, which admitted only free men to the athletic competitions, seems to have been somewhat relaxed, as Alexander Severus had to re-enact the law on the subject (Lampr. *Alex. Sev.* 42). And the position of an actor must have been far higher in the Grecian provinces than in Italy or the west (Friedländer, p. 480). The Olympic games continued to maintain their glory: even Epictetus (*Enchir.* 29) would not disdain to be a victor thereat, "for it was a fine thing" (*κομψόν*). We hear of Olympic victors being hired by the givers of spectacles for immense sums, even as much as five talents (Dio Chrys. *Or.* lxvi. = ii. 351, ed. Reiske).

Like all the classes in the community under the Roman empire, the athletes crystallized into societies or guilds (*σύνοδοι*). They were well organized, had presidents called *Xystarchi* (Am. Marc. xxi. 1, 4), and used to make provincial tours and give exhibitions (Friedländer, p. 475). The chief of these societies in the second century was that of the Herculanei (cf. *C. I. G.* 5906 foll.), who had their own special gymnasium, with its council-chamber (*curia*, Orelli, 2588), its records, its temple, and its president, who bore the title of *ἀρχιερεύς*, and who was also overseer of the imperial baths. To this company a Christian called Johannes appears to have belonged at the end of the fourth century (Friedländer, pp. 475–6).

Augustus increased whatever privileges athletes already had in his day (Suet. *Aug.* 45). Trajan fixed the remuneration (called *opsonia*) to be given to victors at the iselastic games (Plin. *Epist.* x. 119, 120); and a rescript of the emperors Diocletian and Maximian (Cod. Just. x. 54 (53)) gave professional athletes who without bribery had been victorious in the sacred games freedom from all taxes. We are told that there was not by any means the same strictness of training among the athletes of the Roman empire as there was in earlier times among the Greeks (cf. Philostr. *Gymn.* 44). They are especially accused of being addicted to wine (Sen. *Ep.* xv. 1; Quintil. i. 11, 15). But we must not lay too much stress on such charges: for St. Paul tells us (1 Cor. ix. 25) that "every man who striveth in the games is temperate in all things." (Cf. Epictet. *Enchir.* 29.) But undoubtedly by the time of Philostratus (240 A.D.) there was a marked decline (*Gymn.* 1, 2; cf. 43), which he attributes to unhealthy rules of training, and to the fact that the medical art unduly intermeddled by prescribing too mild a course of diet and discipline for professional athletes.

On athletics generally, the chief ancient work is Philostratus's Γυμναστικός (see Kayser's Teubner text, ii. 261–293). Modern writers are Krause, *Gymnastik und Agonistik der Hellenen*, passim; Hermann-Blümner, *Privatalterthümer der Griechen*, §§ 36, 50; Becker-Göll, *Charikles*, ii. 213 foll.; Grasberger, *Erziehung und Unterricht im klassischen Alterthum*, vols. i. iii. passim; Guhl and Koner, *Das Leben der Griechen und Römer*, § 52; and especially Friedländer, *Darstellungen aus der Sittengeschichte Roms*, ii.^{5} 459–491; M. Planck, in Pauly's *Real-Encyclopädie*; Bussemaker and Saglio, in *Dict. des Antiquités*; and Blümner, in Baumeister's *Denkmäler der klassischen Alterthümer*, s. v. *Athletae*. [L. C. P.]

ATHLO'THETAE. [AGONOTHETAE.]

ATI'MIA (*ἀτιμία*). The undiminished possession of the rights of an Athenian citizen was expressed by the word *ἐπιτιμία*: its opposite, *ἀτιμία*, denotes with various shades of meaning every limitation to the exercise of those rights, outlawry, total or partial disfranchisement, disability, all in short that came under the Roman *capitis deminutio*. The atimia occurs in Attica as early as the laws (*θεσμοί*) of Draco, without the term itself being in any way defined (Demosth. c. *Aristocr.* p. 640, § 62), which shows that the idea connected with it must even at that time have been familiar to the Athenians. The most important passage relating to atimia, in any ancient writer, is that of Andocides (*de Myst.*, §§ 73-76), with the psephisma of Patrocleides following (§§ 77-79); but it is too obscure, perhaps too corrupt, to yield any clear and consistent view of the subject. The best classification appears to us to be that of Caillemer (*ap.* Daremberg and Saglio). Atimia might be either (i.) temporary or (ii.) perpetual, and the latter again might be either total or partial.

I. The first kind of atimia—which, though in its extent a total one, lasted only until the person subjected to it fulfilled those duties for the neglect of which it had been inflicted—was not so much a punishment for any particular crime as a means of compelling a man to submit to the laws. This was the atimia of public debtors. Any citizen of Athens who owed money to the public treasury, whether his debt arose from a fine to which he had been condemned, or from a part he had taken in any branch of the administration, or from his having pledged himself to the republic for another person, was in a state of total atimia if he refused to pay or could not pay the sum which was due. If it remained unpaid at the time of the ninth prytany, the last but one of the year, the debt was doubled, and the debtor's property taken and sold (Andoc. *de Myst.* § 73; Demosth. *c. Nicostrat.* p. 1255, § 27; *c. Neaer.* p. 1347, § 7). If the sum obtained by the sale was sufficient to pay the debt, the atimia appears to have ceased; but if not, the atimia not only continued to the death of the public debtor, but was inherited by his heirs, and lasted until the debt was paid off. During his lifetime, however, his children were not included in his atimia; they remained ἐπίτιμοι (Demosth. *c. Androt.* p. 603, § 34; *c. Timocr.* p. 762, §§ 200, 201; *c. Theocrin.* p. 1322, § 2; cf. Boeckh, *P. E.* p. 391, and Heres). This atimia for public debt was sometimes accompanied by imprisonment, as in the cases of Alcibiades and Cimon; but whether in such a case, on the death of the prisoner, his children were likewise imprisoned, is uncertain. If a person living in atimia for public debt petitioned to be released from his debt or his atimia, he became subject to ἔνδειξις: and if another person made the attempt for him, he thereby forfeited his own property: if the proedros even ventured to put the question to the vote, he himself became atimos.

II. Perpetual atimia, sometimes also hereditary, is denoted by the phrase καθάπαξ ἄτιμος (Demosth. *c. Mid.* p. 524, § 32, p. 542, § 87; *c. Aristog.* i. p. 779, § 30). A detailed enumeration of the rights of which an atimos was deprived is given by Aeschines (*c. Timarch.* § 18 ff.). He was not allowed to hold any civil or priestly office whatever, either in the city of Athens itself, or in any town within the dominion of Athens; he could not be employed as herald or as ambassador; he could not give his opinion or speak either in the public assembly or the senate; he was not even allowed to appear within the extent of the agora, he was excluded from visiting the public sanctuaries as well as from taking part in any public sacrifice; he could neither bring an action nor appear as a witness in any court of justice; nor could, on the other hand, any one bring an action against him. (Compare Demosth. *c. Neaer.* p. 1353, § 27; *c. Timocrat.* p. 739, § 123; *de Rhod. Lib.* p. 200, § 32; *c. Mid.* p. 542, § 87; Lys. *c. Andoc.* § 24.) In some cases he might not even be buried within the limits of Attica (Hyperid. *pro Euxen.* col. 31; *pro Lycophr.* col. 16). The right which, in point of fact, included most of those which we have here enumerated, was that of taking part in the popular assembly (λέγειν and γράφειν). Hence this one right is most frequently the only one mentioned as being forfeited by atimia (Demosth. *c. Androt.* p. 602, § 30; Aeschin. *c. Timarch.* § 27; Andoc. *l. c.*). In two laws mentioned by Demosthenes (*c. Mid.* p. 551, § 113; *c. Aristocr.* p. 640, § 62), the children and the property of an atimos are included in the atimia. As regards the children or heirs, the disabilities came to them as an inheritance which they could not avoid [Heres]. But when we read of the property of a man being included in his atimia, this can only mean that it shared the outlawry of its owner—that is, it did not enjoy the protection of the law, and could not be mortgaged. It does not follow that it was also confiscated. The question whether atimia, as such, ever involved the confiscation of a man's property (as distinguished from its legal disabilities just mentioned), is not without difficulty. Some discrepancies in the evidence have been noticed under Anaumachiou Graphé. Demosthenes argues (*c. Lept.* p. 504, § 156) that it is contrary to justice to attach two penalties to the same offence. It is a probable conjecture of Naber's, approved by Westermann, that the words of Andocides (*l. c.* § 74, τούτους δ' ἔδει καὶ τοὺς ἀπὸ τούτων ἀτίμους εἶναι) should be transposed to the end of § 73, referring to public debtors; and we are justified, on the whole, in concluding that it was only as public debtors that the atimoi were subject to confiscation.

The crimes for which total and perpetual atimia was inflicted on a person were as follow:—The giving and accepting of bribes, the embezzlement of public money, the various military offences enumerated under Astrateias Graphé, false witness (ψευδομαρτυρία, ψευδοκλητεία), false accusation, and bad conduct towards parents (Andoc. *l. c.*): moreover, if a person either by deed or by word injured or insulted a magistrate while he was performing the duties of his office (Demosth. *c. Mid.* p. 524, § 32); if he squandered his patrimony, or was guilty of ἑταίρησις (Aeschin. *c. Timarch.* §§ 19, 21); if he proposed any alteration in the laws of homicide (Lex ap. Demosth. *c. Aristocr.* p. 640, § 62); if he passed off a foreign woman as a citizen and gave her in marriage to an Athenian (Lex ap. Demosth. *c. Neaer.* p. 1363, § 52; in this passage confiscation appears as an additional penalty, but the authority of these "laws" and other documents inserted in the text of the orators is very slight compared with the express statements of the orators themselves); if he condoned his wife's adultery (*Lex l. c.* p. 1374, § 87); and in the following cases of breach of duty by a public officer:—If a debtor, in person or by his friend, asked for the remission of a public debt, and if the proedros put this illegal motion to the vote (Lex ap. Demosth. *c. Timocr.* p. 716, § 50); if a herald made an unlawful proclamation in a theatre (Aeschin. *c. Ctes.* § 44); if a diaetetes had been guilty of partiality (Demosth. *c. Mid.* p. 542, § 87). The cases of treason (*προδοσία, δήμου κατάλυσις*), murder (*φόνος*), and robbery (*κλοπή, λωποδυσία*), sometimes referred to this head, scarcely come under the general conception of atimia: they were capital crimes, involving (like felonies under the old English law) forfeiture of goods, and as such the perpetrators were infamous. A species of atimia is said to have attached to the children of a man who had been put to death by the law, on the doubtful authority of the speech *c. Aristog.* i. p. 779, § 30; but the nature and duration of it are unknown.

III. A third and only partial kind of atimia deprived a man of a portion only of his rights as a citizen. It was called *ἀτιμία κατὰ προστάξεις* (Andoc. *l. c.* § 75), because it was specified in each case what particular right was forfeited by the atimos. The following cases are expressly mentioned:—If a man came forward as a public accuser, and afterwards either dropped the charge or did not obtain a fifth of the votes in favour of his accusation, he was not only liable to a fine of 1000 drachmas, but was deprived of the right to appear as a prosecutor in like cases in future (Demosth. *c. Aristog.* ii. p. 803, § 9; Harpocrat. *s. v.* *Δώρων γραφή*). If his accusation had been a *γραφὴ ἀσεβείας*, he also lost the right of visiting particular temples (Andoc. *de Myst.* § 33). The *εἰσαγγελία κακώσεως*, a charge brought before the chief archon respecting the ill-treatment of parents, orphans, or heiresses, was the single case in which an accuser, though he did not obtain a fifth of the votes, was not subjected to any punishment whatever (Isae. *Pyrrh.* § 46; *Hagn.* § 31; Demosth. *c. Pantaen.* p. 980, § 46). In other cases the accuser was merely subject to a fine of 1000 drachmas, without incurring any degree of atimia (Pollux, viii. 52, 53). But as Boeckh remarks (*P. E.* p. 381 n.), the law does not appear to have always been strictly observed. Andocides mentions some other kinds of partial atimia, but they seem to have had only a temporary application at the end of the Peloponnesian war (*l. c.* § 75, where Dobree's conjecture, *τετρακοσίων* for *τυράννων*, is approved by Westermann: the Thirty are always *οἱ τριάκοντα* in classical Greek, never *τύραννοι*). Partial atimia, when once inflicted, lasted during the whole of a man's life.

IV. Enforcement of the penalties. If a person, under whatever kind of atimia he was labouring, continued to exercise any of the rights which he had forfeited, he might immediately be subjected to *ἀπαγωγή* or *ἔνδειξις*: and if his transgression was proved, he might, without any further proceedings, be punished immediately, and even with death (Andoc. *l. c.* § 33; Aeschin. *Timarch.* § 21), or imprisonment (Demosth. *c. Timocr.* p. 732, § 103).

V. Rehabilitation, or release from atimia, was not impossible, but was rendered extremely difficult. A law mentioned by Demosthenes (*c. Timocr.* p. 715, § 45) ordained that the releasing of any kind of atimoi should never be proposed in the public assembly unless permission had first been granted by not less than 6000 citizens, voting by ballot. And even then the matter could only be discussed in so far as the senate and people thought proper. It was only in times when the republic was threatened by great danger that an atimos might hope to recover his lost rights, and in such circumstances the atimoi were sometimes restored *en masse* to the full citizenship. (Xen. *Hellen.* ii. 2, § 11; Andoc. *l. c.* §§ 70, 77, 107; Lycurg. *c. Leocrat.* § 41.)

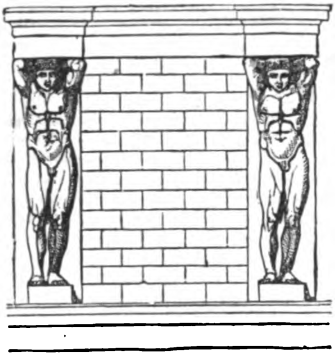
The offences which were punished at Sparta with atimia are not so well known; and in many cases it does not seem to have been expressly mentioned by the law, but to have depended entirely upon public opinion, whether a person was to be considered and treated as an atimos or not. In general, it appears that everyone who refused to live according to the national institutions lost the rights of a full citizen (*ὅμοιος*, Xenoph. *de Rep. Laced.* x. 7; iii. 3). It was, however, a positive law, that whoever did not give or could not give his contribution towards the syssitia, lost his rights as a citizen. (Aristot. *Polit.* ii. 6, p. 59, ed. Göttling.) The highest degree of infamy fell upon the coward (*τρέσας*) who either ran away from the field of battle, or returned home without the rest of the army, as Aristodemus did after the battle of Thermopylae (Herod. vii. 231), though in this case the infamy itself, as well as its humiliating consequences, were manifestly the mere effect of public opinion, and lasted until the person labouring under it distinguished himself by some signal exploit, and thus wiped off the stain from his name. The Spartans who in Sphacteria had surrendered to the Athenians were punished with a kind of atimia which deprived them of their claims to public offices (a punishment common to all kinds of atimia), and rendered them incapable of making any lawful purchase or sale. Afterwards, however, they recovered their rights (Thuc. v. 34). Unmarried men were also subject to a certain degree of infamy, in so far as they were deprived of the customary honours of old age, were excluded from taking part in the celebration of certain festivals, and occasionally compelled to sing defamatory songs against themselves. No atimos was allowed to marry the daughter of a Spartan citizen, and was thus compelled to endure the ignominies of an old bachelor (Plut. *Agesil.* 30; Müller, *Dor.* iv. 4, § 3). Although an atimos at Sparta was subject to a great many painful restrictions, yet his condition cannot be called outlawry; it was rather a state of infamy properly so called. Even the atimia of a coward cannot be considered equivalent to the civil death of an Athenian atimos, for we find him still acting to some extent as a citizen, though always in a manner which made his infamy manifest to every one who saw him.

(Lelyveld, *De Infamia ex Jure Attico*, Amstelod. 1835; Wachsmuth, *Hellen. Alterth.* vol. ii. p. 195, &c., 2nd edit.; Meier, *de Bonis Damnat.* p. 101, &c.; Schömann, *Assemblies*, p. 73 ff.; Hermann, *Polit. Ant. of Greece*, § 124; Meier and Schömann, *Att. Proc.* p. 563. On the Spartan atimia in particular, see Wachsmuth, &c., vol. ii. p. 155, &c. 2nd ed.; Müller, *Dor.* iii. 10, § 3.) [L. S.] [W. W.]

ATLANTES (*ἄτλαντες*) and **TELAMONES** (*τελαμῶνες*) are terms used in architecture, the former by the Greeks, the latter by the Romans, to designate those male figures which are sometimes fancifully used, like the female *Caryatides*, in place of columns (Vitruv. v. 7, § 6, Schneid.). Both words are derived from τλῆναι, and the former evidently refers to the fable of Atlas, who supported the vault of heaven, the latter *perhaps* to the strength of the Telamonian Ajax.

The Greek architects used such figures sparingly, and generally with some adaptation to the character of the building. They were much more freely used in tripods, thrones, and so forth.

They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the upper works; as in the ship of Hiero, described by Athenaeus (v. p. 208 b).



Atlantes. (From Temple at Agrigentum: Professor Cockerell.)

A representation of such figures is given in the preceding woodcut, from the temple of Jupiter Olympius at Agrigentum. (Müller, *Archäol. d. Kunst*, § 279; Mauch, *Die Griech. u. Röm. Bau-Ordnungen*, p. 88.) [P. S.]

ATRAMENTUM (μέλαν), a term applicable to any black liquid (for instance, that emitted by the cuttle-fish, Cic. *N. D.* ii. 50, 127), but specially to three different kinds of black colouring substances:—1. *Atramentum sutorium* (χάλκανθον), used by shoemakers as a sort of blacking to dye leather with (Plin. *H. N.* xxxiv. § 123). It contained a poisonous ingredient, probably sulphate of copper (Cic. *ad Fam.* ix. 21). 2. *Atramentum tectorium* or *pictorium*, a black pigment used by painters Pliny describes many varieties, the best of which was made by collecting the soot arising from the combustion of the pitch-pine on the marble walls of a specially constructed furnace, mixing it with glue, and then drying the mixture in the sun (Pliny, *H. N.* xxxv. § 41; Vitruv. vii. 10). A kind made with vinegar instead of glue was especially permanent. Another kind, which was imported from India, was probably the same as our Indian ink. Apelles (Plin. *H. N.* xxxv. § 97) coated his pictures with a thin *atramentum* or varnish, which both protected them and toned down the colours. 3. *Atramentum librarium* (μέλαν γραφικόν, in Byzantine Greek μελάνιον, ἀτέραμνον, ἔγκαυστον, whence our English word *ink*) was usually prepared in the same way as *atramentum tectorium*, gum being substituted for glue (Pliny and Vitruv. *l. c.*) The proportions, according to Dioscorides (v. 182). were three parts of soot to one of gum. An infusion of wormwood protected manuscripts from mice (Plin. xxvii. § 52). This ink was more unctuous than ours, and perhaps more durable, resembling our printer's ink. It could, however, be easily wiped out soon after writing (Athen. ix. p. 407 c). Hence the sponge was one of the regular implements of the *scriba librarius* (Suet. *Aug.* 85; *Calig.* 20; Auson. *Ep.* 7; *Anthol. Pal.* vi. 295, 2; 65, 7; 66, 7). An inkstand containing some ink, thick but still fluid, was found at Pompeii. Its viscous character was sometimes a ground of complaint (Pers. *l. c.*), yet it was well adapted for writing on papyrus.

The invention of our modern ink, composed of oxide of iron and galls, has been placed as late as the 12th century, but it is almost impossible to write on parchment with the ink described above, and the use of galls is mentioned not only by Martianus Capella (iii. 225) in the 5th century, but by Philo of Byzantium (p. 102, *Vet. Mathem.*) in the 2nd, in a description of a sympathetic ink, and has, moreover, been established by Sir H. Davy's experiments on the Herculanean manuscripts (*Phil. Trans.* 1821, ii. 205).

The black fluid of the cuttle-fish (sepia) was also used as an ink, especially in Africa (Pers. *Sat.* iii. 12 and Schol.; Auson. iv. 76).

Coloured inks were also in use among the Romans [CINNABARIS, MINIUM, RUBRICA], and even a species of illumination in gold (Suet. *Ner.* 10).

Something like what we call sympathetic ink, which is invisible till heat or some preparation be applied, appears not to have been uncommon. So Ovid (*A. A.* iii. 627) advises writing love letters with fresh milk, which would be unreadable until the letters were sprinkled with coal-dust. Ausonius (*Ep.* xxiii. 21) gives the same direction. Pliny (xxvi. § 62) suggests that the milky sap contained in some plants might be used in the same way. Philo of Byzantium (*l. c.*) says that a letter written with an infusion of galls becomes invisible until a sponge dipped in a solution of sulphate of copper is passed over it, when it again becomes visible.

An inkstand (πυξίον, μελάνδοκον, μελανδοχεῖον, βροχίς; late Lat. *atramentarium*, *atramentale*) was either single or double. The double was probably intended to contain both black and red ink, much in the modern fashion. They were also of various shapes, as, for example, round or hexagonal, and of various materials, as terra-cotta, bronze or bronze inlaid with silver and gold, and sometimes highly decorated. above and below, and beneath all a *plinth*; but in several of the best examples the plinth is wanting. (For the exact proportions, see Vitruvius.) This form of base seems to have been originally an Athenian simplification of the Ionic base; but it was afterwards used in the other orders, especially the Corinthian and the Roman Doric; and it is usually regarded as being, from its simple elegance, the most generally applicable of all the bases [SPIRA].

In the second of the passages above referred to, Vitruvius applies the term *Atticurges* to a particular form of doorway, but it differed very little from that which he designates as the Doric: in fact, though Vitruvius enumerates three kinds of doorways to temples—the Doric, Ionic, and Attic—we only find in the existing building two really distinct forms (Mauch, *Die Griech. u. Röm. Bau-Ordnungen*, p. 97). According to Pliny (*H. N.* xxxvi. § 179), square pillars were called *Atticae columnae*. [P. S.]

AUCEPS, a bird-catcher, fowler (Ov. *A. A.* iii. 669; Varr. *L. L.* viii. 61, and *ap.* Non. 1, 97), the occupation called *aucupium* (Pallad. xiii. 6). The Romans, like the modern Italians, were fond of the flesh of small birds, and caught them in large quantities. In great families slaves were employed for this purpose, forming a part of the *familia rustica*, but freedmen and poor people also caught small birds, which they sold at Rome in the vicus Tuscus, near the Forum (Hor. *Sat.* ii. 3, 227; cf. Plaut. *Trin.* ii. 4, 7). The fowlers used for catching birds gins and snares (*laquei*, Pallad. xiii. 6; *pedicae*, Verg. *Georg.* i. 307), rods tipped with bird-lime (*arundines*, *calami*, Mart. ix. 54, 3; Petron. 40; Sil. Ital. vii. 674; Val. Flacc. vi. 260 *seq.*; Plaut. *Bacch.* i. 1, 17; *calami aucupatorii*, Mart. xiv. 218) [CALAMUS, 6]; clap-nets, held by two parallel rods or poles (*amites*, Pallad. x. 12; Hor. *Epod.* ii. 33; *amites*, *perticae aucupales*, Fest. p. 21, Müller), in connexion with which decoy- (*illex*) or call-birds, especially the owl (*noctua*), were used (Pallad. *l. c.*; Plaut. *As.* i. 3, 67); traps (*transennae*, Plaut. *Bacch.* iv. 5, 22; id. *Rud.* iv. 7, 10; id. *Pers.* iv. 3, 10), &c. The time for catching birds was from December to March (Pallad. xiii. 6); and the birds most frequently mentioned as caught were thrushes (*turdi*, Pallad. *l. c.*; Hor. *Epod.* ii. 33; Plaut. *Bacch.* iv. 5, 22). (See Rein, in Pauly, *Encyclop.* ii.^{2} *s. v.*) [W. S.]

AU'CTIO signifies generally "an increasing, an enhancement," and hence the name is applied to a public sale of goods, at which persons bid against one another. The term *auctio* is general, and comprehends the species *auctio*, *bonorum emptio*, and *sectio*. As a species, *auctio* signifies a public sale of goods by the owner or his agent, or a sale of goods of a deceased person for the purpose of dividing the money among those entitled to it, which was called *auctio hereditaria* (Cic. *pro Caecin.* 5, 13). The sale was sometimes conducted by an *argentarius*, or by a *magister auctionis*; and the time, place, and conditions of sale were announced either by a public notice (*tabula*, *album*), or by a crier (*praeco*).

The usual phrases to express the giving notice of a sale are *auctionem proscribere*, *praedicare*; and to determine on a sale, *auctionem constituere*. The purchasers (*emptores*), when assembled, were sometimes said *ad tabulam adesse*. The phrases signifying "to bid" are *liceri*, *licitari*, which was done either by word of mouth, or by such significant hints as are known to all people who have attended an auction. The property was said to be knocked down (*addici*) to the purchaser, who either entered into an engagement to pay the money to the *argentarius* or *magister*, or it was sometimes a condition of sale that there should be no delivery of the thing before payment (Gaius, iv. 126 : *actio*). An entry was made in the books of the *argentarius* of the sale and the money due, and credit was given in the same books to the purchaser when he paid the money (*expensa pecunia lata*, *accepta relata*). Thus the book of the *argentarius* might be used as evidence for the purchaser, both of his having made a purchase, and having paid for the thing purchased. If the money was not paid according to the conditions of sale, the *argentarius* could sue for it.

The *praeco* or crier seems to have acted the part of the modern auctioneer, so far as calling out the biddings (Cic. *de Off.* ii. 23, 83) and amusing the company. Slaves, when sold by auction, were placed on a stone or other elevated thing, as used sometimes to be the case when slaves were sold in the United States; and hence the phrase *homo de lapide emptus*. It was usual to put up a spear (*hasta*) in auctions; a symbol derived, it is said, from the ancient practice of selling under a spear the booty acquired in war. Hence the phrase *sub hasta vendere* (Cic. *de Off.* ii. 8, 27) signified "an auction." The expression *asta pubblica* is now used in Italy to signify an auction: the expression is *vendere all' asta pubblica* or *vendere per subasta*. [BONORUM EMPTIO; SECTIO.] [G. L.] [E. A. W.]

AUCTOR. A word which contains the same element as *augeo*, and signifies generally one who enlarges, confirms, or gives to a thing its completeness and efficient form. The numerous technical meanings of the word, some of which we proceed to explain, are more or less closely derived from this general notion. As he who gives to a thing that which is necessary for its completeness may, in this sense, be viewed as the chief actor or doer, the word *auctor* is also used in the sense of one who originates or proposes a thing; but this cannot be regarded as its primary meaning.

I. *Political.*—The word *auctor*, when used in connexion with *lex* or *senatus consultum*, often means him who originates and proposes, as appears from numerous passages (Liv. vi. 36; Cic. *pro Dom.* 30, 80). When the word is applied to him who recommends but does not originate a legislative measure, it is equivalent to *suasor* (Cic. *ad Att.* i. 19; *Brut.* 25, 97; 27, 106). Sometimes both *auctor* and *suasor* are used in the same sentence, and the meaning of each is kept distinct (Cic. *de Off.* iii. 30, 109). When a measure was approved by the senate before it was confirmed by the votes of the people, the senate were said *auctores fieri*, and this preliminary approval was called *senatus auctoritas* (Cic. *Brut.* 14, 55). The expressions *patres auctores fiunt*, *patres auctores facti*, have been the subject of much discussion, and are explained in a separate article. [AUCTORITAS PATRUM.]

In the imperial time, auctor is often said of the emperor (*princeps*) who recommended anything to the senate, and on which recommendation that body passed a senatus consultum (Gaius, i. 30, 80; Sueton. *Vesp.* 11).

II. *Legal.*—1. With reference to dealings between individuals, auctor has the sense of owner (Cic. *pro Caecin.* 10, 27), and is defined thus (Dig. 50, tit. 17, s. 175): *Auctor meus a quo jus in me transit.* In this sense auctor is the seller (*venditor*), as opposed to the buyer (*emptor*). (Dig. 19, tit. 1, s. 4; s. 52, § 3.) The person who joined the seller in a warranty, or as security, was called *auctor secundus*, as opposed to the seller or *auctor primus* (Dig. 21, tit. 2, s. 4). The phrase *a malo auctore emere* (Cic. *Verr.* v. 22, 56), *auctorum laudare* (Gell. ii. 10), will thus be intelligible. The testator, with respect to his heir, might be called *auctor*. (Ex Corp. Hermogen. Cod. tit. 11.)

2. A person whose concurrence is a necessary condition for giving effect to certain legal transactions, is called *auctor*. Thus as a person could not be arrogated without his own consent, he is said to be the auctor of the arrogation (Cic. *pro Dom.* 29).

3. Auctor is also used generally to express any person under whose authority any legal act is done. In this sense, it means a tutor who is appointed to aid or advise a woman on account of the infirmity of her sex (Liv. xxxiv. 2; Cic. *pro Caecin.* c. 25; Gaius, i. 190, 195): it is also applied to a tutor whose business it is to approve of certain acts on behalf of a ward (*pupillus*). (Paulus, *Dig.* 26, tit. 8, s. 3.)

4. In the criminal law auctor signifies the instigator of a crime, the person who induced another either alone, or in the company of the auctor, or in combination with others, to commit a crime (Suet. *Tit.* 9, *Dom.* 23, *Oth.* 1, *Ner.* 33; *auctor et socius*, Sall. *Jug.* 30). The passages in the Digest on this subject are given by Rein, *Criminalrecht der Römer*, p. 190.

III. The term *auctores juris* is sometimes equivalent to *jurisperiti* (Dig. 1, tit. 2, s. 2, § 13; Gell. ii. 10); but the term is specially used for those jurists to whom the *jus respondendi* had been given by the emperor. The law writers or leaders of particular schools of law were called *scholae auctores*. It is unnecessary to trace the other significations of this word. [G. L.] [E. A. W.]

AUCTORAMENTUM. [GLADIATORES.]

AUCTORTTAS. The technical meanings of this word correlate with those of auctor. The *auctoritas senatus* was not a *senatus consultum*; it was a measure, incomplete in itself, which received its completion by some other authority. Similarly in private law the *tutor* was said *auctoritatem interponere*, when he gave his sanction to such acts of his ward as would otherwise have been ineffectual (Gaius, i. 190).

An act which required the order or approval of a magistrate was said to be done by the authority of such magistrate (*auctoritas praetoris*, *auctoritate principis adoptare*, Dig. 1, tit. 7, s. 2, pr.).

The word *auctoritas* is used to express the force and validity of statute law, of legal opinion, and of decided cases (*auctoritas legis*, *sententiae*, *rerum perpetuo similiter judicatarum*).

Auctoritas sometimes signifies the obligation of the *auctor* in case the purchaser is evicted (Paul. ii. 17, § 1, 3), as also the action by which the *auctor* may be made liable (Dig. 21, tit. 2, s. 76.) It thus comes to mean the title by which property is held (Cic. *Top.* 4, 23; *pro Caecin.* 26, 74). It was a provision of the XII. Tables that no title by usucapion could be acquired in respect to a stolen thing (*res furtiva*, Gaius, ii. 45), which is thus expressed in the Atinian law as given in Gellius, xvii. 7: "Quod subreptum erit, ejus rei aeterna auctoritas esto;" *i.e.* the owner from whom the thing had been stolen retained his title, however long he might be out of possession (Cic. *de Off.* i. 12; Dirksen, *Zwölf-Tafel-Fragm.* p. 447). (As to the expression *usus auctoritas*, see USUCAPIO.)

In the imperial constitutions auctoritas is used as a title of honour (Cod. Theod. v. 13, 15, 17: "Illustris et magnifica auctoritas tua"). The other meanings of auctoritas may be easily derived from the primary meaning of the word, and from the explanations here given. [G. L.] [E. A. W.]

AUCTO'RITAS PATRUM. Few points in the constitution of Rome have been more discussed, and still divide opinion more, than the nature of the *patrum auctoritas*. Livy (i. 17) tells us that on the occasion of the election of Numa Pompilius, the senate, with the intention of securing the favour of the people, enacted that when the people had chosen (*iussisset*) a king, it should be valid *si patres auctores fierent*. The same phrase occurs in describing the elections of Tullus (c. 22) and of Ancus (c. 32). The first question that arises is whether by *patres* is meant senators or patricians. Cicero (*de Rep.* ii. 13, 17, 18, 20) does not mention expressly the *patrum auctoritas* (though in c. 13 he has the phrase *patribus auctoribus*), but in each case speaks of a Lex Curiata de imperio proposed by the king to the Comitia after his election. Niebuhr, whose opinion was long generally accepted, identified the two (cf. Becker, *Handbuch*, ii. 1, 316–331; Marquardt, ii. 3, 184) as the same thing under different phrases. But this is based upon two theories, both of them now shown to be erroneous. In the first place it identifies the *populus* with the *patres* (patricians); for Cicero says expressly of Hostilius, "de imperio suo exemplo Pompilii *populum* consuluit curiatim;" but there is not the slightest warrant for this assumption (cf. Seeley on Livy, i. 17). Secondly, it supposes the Comitia Curiata to have been a purely patrician body, which it certainly was not [COMITIA]; and, besides, the *patrum auctoritas* was given to laws as well as to elections. Hence Niebuhr's view now finds few defenders. The most important of these is Lange (*Röm. Alterth.* i. 265 ff.); the strongest argument he adduces is drawn from Livy, vi. 42, where we are told in reference to the election of the first plebeian consul, "patricii se auctores futuros negabant:" and then a decree was made by the senate, "ut patres auctores omnibus eius anni comitiis fierent." This is certainly fatal to the view commonly held before Niebuhr, which Livy's language in i. 17 seems to show that he held himself, that the *patres* were *identical* with the senate. It is not inconsistent with the second explanation, put forward by Huschke and Rubino, and now supported by Mommsen (*Röm. Forsch.* i. 233 ff.) and Madvig (*Verf.* i. 233 ff.). These scholars hold that in this case, as in that of an interregnum, *patres* denotes *the patrician portion* of the senate, and that the Lex Curiata de imperio was totally different from the *patrum auctoritas*. This is certainly the most natural interpretation of the language of Cicero (*de Rep.* ii. 13). And it appears to be proved to demonstration by a comparison of Livy, vi. 41, "nec centuriatis nec curiatis comitiis patres auctores fiant," which makes it impossible to identify *patres* with Curiata Comitia, with the passage above quoted from vi. 42, which is as great an obstacle to identifying them with the senate. It is further to be noticed that the term *auctoritas*, "sanction," is well suited to the act of a portion of the people, but quite inapplicable to the resolve of the whole body. It is no serious objection to this view that the term *patricii auctores fiunt* is sometimes used (Liv. vi. 42, xxvii. 8, 1; Sall. *Frag. Hist.* iii. 82, 15, Kr.; Dion. H. ii. 60, vi. 90; Gaius, i. 3), for the term *patricii* would be a natural one to use of the patrician section of the senate.

We have five instances on record of the attempted refusal of this *patrum auctoritas*, all instances in which some constitutional change was contemplated. Hence it seems to have held in earlier times something like the place of the action of the augurs at a later day (Mommsen, *R. F.* i. 240 ff.). The significance of the Publilian Law of 339 (Liv. viii. 12) was therefore that no merely formal objection should be allowed to interfere with the deliberate choice of the Comitia Centuriata, but "ut legum, quae comitiis centuriatis ferrentur, ante initum suffragium patres auctores fierent." A Lex Maenia early in the 3rd century B.C. (Cic. *Brut.* 14, 55) extended the same rule to elections.

A third view, which has found some support of late, is that put forward by Peter (*Epochen der Verfassungs*, Leipzig, 1841), adopted with some modifications by Schwegler (*Röm. Gesch.* ii. 155–173) and Walter (*Röm. Rechtsgesch.* i. § 23, n. 55, 56; § 41, n. 16; § 66). This ascribes a double meaning to the term, assuming both in elections and in laws passed by the centuries, first a permissive resolution on the part of the senate, and then, after the voting, a confirmatory decree on the part of the curies, both described by the same term *patrum auctoritas*. This procedure was then followed in the case of a consul's election by the Lex Curiata de imperio, proposed by the consul himself. There does not appear to be any evidence requiring such a complicated hypothesis. The recorded facts are well explained by Mommsen's simpler view.

The *patrum auctoritas* must be carefully distinguished from the *Senatus auctoritas* [SENATUS]. [A. S. W.]

AUDITO'RIUM, as the name implies, is any place for hearing. It was the practice among the Romans for poets and orators to read their compositions to their friends, who were sometimes called the *auditorium* (Plin. *Ep.* iv. 7); but under the empire the word was applied to a court of justice. Under the republic the place for all judicial proceedings was the Comitium and the Forum ("ni pagunt in comitio aut in foro ante meridiem causam conjicito quum perorant ambo praesentes," Dirksen, *Uebersicht*, &c., p. 725). Under the empire, the Forum continued to be the place where magistrates and judices heard civil causes. But for the sake of shelter and convenience, it became a practice to hold courts in the Basilicae, halls of temples, and other suitable places about the Forum. Such enclosed courts were called *auditoria*, or places in which the plaints of litigants were heard. The effect of this change was that courts of justice were less frequented by the public than when they were held in an open space. So in the dialogue *de Oratoribus* (c. 39) the writer observes that oratory had lost much by cases being generally heard in *auditoria* and *tabularia*. The courts of the provincial governors were not always open to the public in the time of Cicero (Cic. *Verr.* v. 11, 27). Their courts appear to have been held at a later period, either in the hall of their Praetorium or in the open Forum (St. John xviii. 33, xix. 9–13; Acts of the Apost. xv. 23, ἀκροατήριον).

The emperors at first sometimes sat in the Forum, but they soon gave up the practice, and only exercised justice within their own palace. The place where the court sat was called the *auditorium principis* or *sacrum auditorium*. The *auditorium principis* is first mentioned in reference to M. Aurelius, and afterwards becomes a common term (Dig. 36, tit. 1, s. 22; 49, tit. 9, s. 1; Dio Cass. lxxvi. 11; Dig. 4, tit. 4, s. 18). The *praefectus praetorio* and *praefectus urbi*, who exercised the imperial jurisdiction, also sat in *auditoria* (Dig. 12, tit. 1, s. 40; 23, tit. 3, s. 78, § 4). The imperial court of justice (*auditorium principis*) is sometimes distinguished from the imperial administrative council (*consistorium principis*), but in later Roman law the distinction is not always maintained.

Under the later empire, judicial proceedings were carried on with less publicity.

In the time of Diocletian, the auditorium was also called *secretarium*. In a constitution of Constantine the two words were used as equivalent (Cod. Th. i. tit. 16, s. 6), when he enacts that both criminal and civil cases should be heard openly from the tribunal, and not in *auditoria* or *secretaria*.

Valentinianus and Valens allowed causes to be heard either before the tribunal or in the *secretarium*; but in the latter the doors were to be left open.

From the 5th cent. causes were exclusively heard in the *secretarium* or *secretum*. The public was shut off by *cancelli* and curtains (*vela*), which in exceptional cases were drawn aside (*levato velo cognoscere*, Cod. Theod. vi. tit. 13, s. 9). Under the despotic system of the late empire the public was excluded from the inner *secretarium*, but persons of a certain rank (*honorati*) and those invited by the magistrate were admitted to it. (Bethmann-Hollweg, *Civil-Prozess*, § 147.) [G. L.] [E. A. W.]

AUGUR, AUGUR'IUM; AUSPEX, AUSPIC'IUM. *Augur* or *auspex* meant a diviner by birds, but came in course of time, like the Greek οἰωνός, to be applied in a more extended sense: his art was called *augurium* or *auspicium*. Plutarch relates that the *augures* were originally termed *auspices* (*Quaest. Rom.* c. 72), and there seems no reason to doubt this statement as Hartung does (*Die Religion der Römer*, vol. i. p. 99), on the authority of Servius (*ad* Verg. *Aen.* i. 402, iii. 20). The authority of Plutarch is further supported by the fact, that in Roman marriages the person who represented the diviner of ancient times was called *auspex*, and not *augur*. (Cic. *de Div.* i. 16, 28.) Rubino (*Römisch. Verfassung*, p. 45), followed by Mommsen (*Röm. Staatsr.* i.^{2} 101, note 2), draws a distinction between the meaning of the words *auspex* and *augur*, though believing that they were used to indicate the same person, the former referring simply to the observation of the signs, and the latter to the interpretation of them. This view is certainly supported by the meaning of the verbs *auspicari* and *augurari*, and the same distinction seems to prevail between the words *auspicium* and *augurium*, when they are used together (Cic. *de Nat. Deor.* ii. 3, 9), though they are often applied to the same signs. The word *auspex* was supplanted by *augur*, but the scientific term for the observation continued on the contrary to be *auspicium*, and not *augurium*. The etymology of *auspex* is clear enough (from *avis*, and the root *spec*), but that of *augur* is not so certain. Some ancient grammarians derived it from *avis* and *gero* (Festus, s. v. *augur*; Serv. *ad* Verg. *Aen.* v. 523), in support of which we may mention the analogy of *au-spex* and *au-ceps*, and the ancient forms *auger* and *augeratus* quoted by Priscian, i. 6, § 36; and this derivation is now accepted by Mommsen, Marquardt, Bouché-Leclercq, and others. Of modern suggestions may be mentioned that of Aufrecht and Kirchhoff, connecting the word with the Umbrian *uhtur* = *auctor* (cf. *ius est augurum cum auctoritate conjunctum*, Cic. *de Leg.* ii. 12, 31; and Nissen, *Das Templum*, p. 5), and that of Vaniček, from *avis* and the root *gar* (found in Sanscrit and in γηρύειν, *garrire*). Fick, and apparently Kuntze, connect it with *augeo augustus* (cf. *augustum augurium* in Ennius), and take it to mean "assistant;" while Lange and Bréal see in the word the root *gush* (as in γεύω) and understand by it "an appreciator." By Greek writers on Roman affairs, the augurs are called αὔγουρες, οἰωνοπόλοι, οἰωνοσκόποι, οἰωνισταί, οἰωνομάντεις, οἱ ἐπ' οἰωνοῖς ἱερεῖς.

In the most ancient times, no transaction took place, either of a private or a public nature, without consulting the auspices, and hence we find the question asked in a well-known passage of Livy (vi. 41, 4), "Auspiciis hanc urbem conditam esse, auspiciis bello ac pace, domi militiaeque omnia geri, quis est, qui ignoret?" But the private augur seems to have fallen into contempt. Thus Cicero, while arguing in favour of divination in general, follows Ennius in classing the *Marsus augur* with other impostors (*de Div.* i. 58, 132); and of the *auspices* at weddings he says that they had ceased to be such in anything but name (i. 16, 28).

The public augurs, on the contrary (in full, *augures publici populi Romani Quiritium*, Orelli, *Inscr.* 2130, &c.), are of great importance in Roman political history, and formed a collegium. But before tracing their history we will inquire what the auspices were.

All the nations of antiquity were impressed with the firm belief, that the will of the gods and future events were revealed to men by certain signs, which were sent by the gods as marks of their favour to their sincere worshippers. Hence the arguments of the Stoics, that if there are gods they care for men, and that if they care for men they must send them signs of their will (Cic. *de Leg.* ii. 13, 32), expressed so completely the popular belief, that whoever questioned it would have been looked upon in no other light than an atheist. But while all nations sought to become acquainted with the will of the gods by various modes, which gave rise to innumerable kinds of divination, there arose in each separate nation a sort of national belief, that the particular gods, who watched over them, revealed the future to them in a distinct and peculiar manner. Hence each people possessed a national *μαντική* or *divinatio*, which was supported by the laws and institutions of the state, and was guarded from mixture with foreign elements by stringent enactments. Thus the Romans looked upon astrology and the whole prophetic art of the Chaldaeans as a dangerous innovation; they paid little attention to dreams, and hardly any to inspired prophets and seers. On the contrary, in common with their kindred races in Central Italy and with the Etruscans, they attached much importance to extraordinary appearances in nature—*prodigia*. They endeavoured to learn the future, especially in war, by consulting the entrails of victims; they laid great stress upon favourable or unfavourable *omina*, and in times of danger and difficulty were accustomed to consult the Sibylline books, which they had received from the Greeks: but the mode of divination, which was peculiar to them and essentially national, consisted in those signs included under the name of *auspicia*. The observation of the auspices was, according to the unanimous testimony of the ancient writers, more ancient even than Rome itself, which is constantly represented as founded under the sanction of the auspices, and the use of them is therefore associated with the Latins, or the earliest inhabitants of the city. There seems therefore no reason to assign to them an Etruscan origin, as many modern writers are inclined to do, while there are several facts pointing to an opposite conclusion. Cicero, who was himself an augur, in his work *de Divinatione*, constantly appeals to the striking difference between the auspicia and the Etruscan system of divination; and, while he frequently mentions other nations, which paid attention to the flight of birds as intimations of the divine will, he never once mentions this practice as in existence among the Etruscans (Cic. *de Div.* i. 41, 92. 93, ii. 35, 75; *de Nat. Deor.* ii. 4, 11). The belief, that the flight of birds gave some intimation of the will of the gods, seems to have been prevalent among many nations of antiquity, and was common to the Greeks, as well as the Romans; but it was only among the latter people that it was reduced to a complete system, governed by fixed rules, and handed down from generation to generation. In Greece, the oracles supplanted the birds, and the future was learnt from Apollo and other gods, rarely from Zeus, who possessed very few oracles in Greece. The contrary was the case at Rome: it was from Jupiter mainly that the future was learnt, and the birds were regarded as his messengers. (*Aves internuntiae Jovis*, Cic. *de Div.* ii. 34, 72; *Interpretes Jovis optimi maximi publici augures*, Cic. *de Leg.* ii. 8, 20); though other divinities, such as Tiberinus and some river-gods (Cic. *de Nat. Deor.* iii. 20, 52), and even the Manes (Festus, s. v. *Manes*), were invoked by the observer. When a whole series of gods was invoked, it was called *precatio maxima*. It must be remarked in general that the Roman auspices were essentially of a practical nature; they gave no information respecting the course of future events, they did not inform men *what was to happen* (Cic. *de Div.* ii. 33, 70), but simply taught them *whether they were to do or not to do the matter purposed*; they assigned no reason for the decision of Jupiter,—they simply announced, yes or no.

The science or system of the augurs (*disciplina* or *ius augurum*), of which they were the skilled interpreters (*periti prudentes*), bound to observe its rules (Cic. *de Legg.* ii. 8, 20), was in early times reduced to a documentary form (*libri augurum*), comprising, besides the minute formalities of the ceremonial to be observed, and no doubt the whole theoretical part of augural science, which appear to have been contained in what were called the *libri reconditi* (Cic. *de Dom.* 15, 39), also records (*commentarii*, Cic. *de Div.* ii. 18, 42; cf. Marquardt, *Röm. Staatsv.* iii. 288), which consisted of judgments (*responsa* or *decreta*, Cic. *de Dom.* 15, 40; *de Div.* ii. 35, 73), when any matter was referred by the senate to the college of augurs. Much interesting historical information was contained in these records. Further, the college of augurs, like other colleges, had lists (*fasti*) of its members (a specimen is given in *C. I. L.* vi. 1976). The secrecy of these documents was guarded by an oath tendered to the members of the college (Plut. *Quaest. Rom.* 99). But augural law, just as civil law, could not always remain a mystery; and the manuals, which it became necessary to draw up, were in course of time divulged, until the subject became a favourite one with the antiquarian writers of the last century of the republic. Thus Cicero, in his philosophical treatise on *Divinatio* in general, repeatedly draws his instances from the *disciplina* of the augurs.

The words *augurium* and *auspicium* came to be used in course of time to signify the observation of various kinds of signs. They were divided into five sorts: *ex caelo*, *ex avibus*, *ex tripudiis*, *ex quadrupedibus*, *ex diris* (Festus, s. v. *quinque genera*). Strictly speaking, the last three of these formed no part of the auspices.

These signs were either *impetrita* or *impetrativa*—that is, specified by the person who consulted the will of Jupiter when he began to take observations; or *oblativa*,—that is, not specified nor expected by him beforehand, and therefore so far unfavourable. The *auspicia ex diris* always belonged to the class of *oblativa*. The specification of the *impetrita* was called *legum dictio*. (Serv. *ad Aen.* ii. 702, iii. 89, vi. 190, xii. 246, 259; Plaut. *Asin.* ii. 1, 11.) A few words must be said on each of these five kinds of augury.

1. *Ex caelo.* This included the observation of the various kinds of thunder and lightning, and was regarded as the most important, *maximum auspicium*, especially in a clear sky. (Verg. *Aen.* ix. 630; Serv. *ad* Verg. *Aen.* ii. 693; Cic. *de Div.* ii. 18, 43, &c.; Festus, s. v. *Caelestia*.) In interpreting this, as well as other signs, the Italian, unlike the Greek, regarded those from the left as lucky, those from the right as unlucky; for while both regarded the east as the lucky side, the Italian faced south and the

Greek faced north. Lightning or thunder suspended the *comitia* for the day (Cic. *l. c.*; Dio Cass. xxxviii. 13); and as it remained a fixed principle with the Romans to repose trust in announcements touching the auspices made by those who had the right of taking them (cf. Liv. x. 40, 11; xxxviii. 48, 14; Plin. *H. N.* xxviii. § 17), when the belief in the auspices decayed, this mode of augury became a political engine for causing delay; further, as being the most important species of augury, it was retained as the one formally used on the occasion of a magistrate entering upon office (Cic. *de Div.* ii. 35, 73); and in Cicero's time and later the *caelestia* were the only *auspicia impetrativa* used in the city (Mommsen, *Röm. Staatsr.* i.^{2} 78). The transition from the old system of augury to the new system, wherein only *caelestia* and *pullaria* were used, Kuntze (*Prol. zur Geschichte Roms*, p. 92) places in the Punic Wars, and supposes M. Marcellus, who was *optimus augur* (Cic. *de Div.* ii. 36, 77), to have been in a great measure instrumental in bringing this about.

2. *Ex avibus.* It was only a few birds which could give auguries among the Romans (Cic. *de Div.* ii. 36, 76). They were divided into two classes: *Oscines*, those which gave auguries by singing or their voice, and *Alites*, those which gave auguries by their flight (Festus, s. v. *Oscines*). To the former class belonged the raven (*corvus*) and the crow (*cornix*), the first of these giving a favourable omen (*auspicium ratum*) when it appeared on the right, the latter on the contrary, when it was seen on the left (Plaut. *Asin.* ii. 1, 12; Cic. *de Div.* i. 39, 85); likewise the owl (*noctua*, Festus, s. v. *Oscines*). To the *aves alites* belonged first of all the eagle (*aquila*), who is called pre-eminently the bird of Jupiter (*Jovis ales*), and next the vulture (*vultur*); and with these two the *avis sanqualis* (also called *ossifraga*, which was sacred to Sancus), the *immusulus*, and *buteo* are probably also to be classed. (Comp. Verg. *Aen.* i. 394; Liv. i. 7, 34, xli. 13; Festus, s. v. *sanqualis;* Plin. *H. N.* x. § 20.) Some birds were included both among the *oscines* and the *alites:* such were the *picus Martius* and *Feronius*, and the *parra* (Plin. *H. N.* x. § 40; Hor. *Carm.* iii. 27, 1, 15; Festus, s. v. *Oscinum tripudium*), which belonged to Vesta (Nonius, 518, 27). Some birds by their mere appearance foreboded ill, as the *bubo*, *spinturnix* (Plin. *H. N.* x. 34–37), and some again were birds of omen only to particular classes of events or people: *e.g.* the *aegithus* for weddings and agriculture (*ib.* x. 21), the swan for mariners, and the dove for kings (Serv. *ad Aen.* i. 393). These were the principal birds consulted in the auspices. There were considerable varieties of omen according to the note of the *oscines* or the place from which they uttered the note; and similarly among the *alites*, according to the nature of their flight, especially the height: hence the division of *praepetes* and *inferae* (Gell. vi. 6). Other peculiarities also of their appearance were ominous, such as tearing themselves (Festus, s. v. *Voisgram;* Stat. *Theb.* iii. 513). There were very great minutiae, such as the nine different notes of the owl (Plin. *H. N.* x. § 39), but they need not be touched upon. When the birds favoured an undertaking, they were said *addicere* or *admittere*, and were called *admissivae*. When unfavourable, they were said *abdicere*, and were called *alterae*, *arculae*, *cliviae*, *inebrae*, *remores* (see Festus, *s. vv.*), *clamatoriae*, *prohibitoriae* (Plin. *H. N.* x. § 37). The technical term for all the observations agreeing was *consensio* (Serv. *ad Aen.* iii. 60). It has been noticed that the Romans in their augury, unlike the Etruscans, did not let birds loose, but always waited for them to appear (Bouché-Leclercq, *ap.* D. and S. i. 555). This form of divination, to which the ancient Romans, like the other inhabitants of Central Italy, constantly had recourse, was cast into the shade by *haruspicina*, which was itself falling out of use in Cicero's days (*de Div.* i. 16, 28).

3. *Ex tripudiis.* These auspices were taken from the feeding of chickens, and were especially employed on military expeditions. It was the doctrine of the augurs that any bird could give a tripudium (Cic. *de Div.* ii. 35, 73); but it became the practice in later times to employ only chickens (*pulli*) for the purpose, owing to the simplicity of the signs afforded by them, and the greater rapidity and convenience by which such signs could be obtained. They are also called *auspicia pullaria* (Serv. *ad Aen.* vi. 198). It is not quite certain whether this kind of augury was used in civil concerns. There is no really clear instance to support the view that they were (Mommsen, *op. cit.* i.^{2} 82, note 2), though Servius (*l. c.*) says, *Romani moris erat in comitiis agendis et in bellis gerendis pullaria captare auguria.* The chickens were kept in a cage, under care of a person called *pullarius;* and when the auspices were to be taken, the pullarius opened the cage and threw to the chickens pulse or a kind of soft cake. If they refused to come out or to eat, or uttered a cry (*occinerent*), or beat their wings, or flew away, the signs were considered unfavourable (Liv. x. 40, 4; Val. Max. i. 4, § 3). On the contrary, if they ate greedily, so that something fell from their mouth and struck the earth, it was called *tripudium solistimum* (*tripudium*, originally the triple beat of the foot in religious dances; *solistimum* = perfect. Fest. *s. v.* For ancient derivation, see Cic. *de Div.* ii. 34, 72), and was held to be a favourable sign. Two other kinds of *tripudia* are mentioned by Festus,—the *tripudium oscinum*, from the cry of birds, and *sonivium*, from the sound of the pulse falling to the ground: in what respects the latter differed from the *tripudium solistimum*, we are not informed. (Cic. *ad Fam.* vi. 6, 3; see also Festus, s. vv. *puls*, *tripudium*, *oscinum tripudium.*) The *pullarii* appear to have trenched on the functions of the augurs, being even employed *servare de caelo* for magistrates (Cic. *de Div.* ii. 35, 74; *ad Fam.* x. 12, 3). They could secure a favourable omen by starving the chickens or giving them crumbling food (Cic. *de Div.* ii. 35, 73; Festus, s. v. *puls*).

4. *Ex quadrupedibus.* Auguries could also be taken from four-footed animals and reptiles, and were called *pedestria auspicia;* but these formed no part of the original science of the augurs, and were never employed by them in taking auspices on behalf of the state, or in the exercise of their art properly so called. They must be looked upon simply as a mode of private divination, which was naturally brought under the notice of the augurs, and seems by them to have been reduced to a kind of system. Thus we are

minus; for *templum*, as Servius tells us (*ad Aen.* iv. 200), is applied not merely to a space which could be enclosed, but also to one actually enclosed. If for any reason the first tabernaculum was unfavourable, a second one was chosen: but if it likewise was unfavourable, the first was returned to (Serv. on *Aen.* ii. 178). There was one opening in the front part (*antica pars*) of the tent. This opening usually faced the south (Varr. *L. L.* vii. 7); though in the inauguration of persons and places it appears that the augur looked towards the east (Liv. i. 18, 6): cf. Nissen, *Das Templum*, p. 172, who considers the easterly aspect the more usual one. The buildings in which the senate met, such as the Curia Hostilia Pompeia or Julia, had likewise to be consecrated by the augurs and made into *templa;* for this term does not by any means apply to all the sacred buildings of the gods (Varr. *ap.* Gell. xiv. 7, 7): cf. Mommsen, *op. cit.* i.^{2} 100, note 4. Within the walls of Rome, or, more properly speaking, within the pomoerium, there was no occasion to select a spot and pitch a tent on it, as there was a place on the Arx on the summit of the Capitoline hill, called *Auguraculum*, which had been consecrated once for all for this purpose (Festus, s. v. *Auguraculum;* comp. Liv. i. 18, 6; Cic. *de Off.* iii. 16, 66). In like manner there was in every Roman camp a place called *augurale* (Tac. *Ann.* ii. 13, xv. 30), which answered the same purpose; but on all other occasions a place had to be consecrated and a tent to be pitched, as, for instance, in the Campus Martius, when the Comitia Centuriata were to be held. The spot where the auspices were taken had always to be Roman land. From the point of view of the auspices there were five sorts of land—Roman, Gabine, foreign, hostile, and doubtful (Varr. *L. L.* v. 33). Accordingly, when it was necessary to take the auspices in any of the four latter kinds of land, a tract had to be considered as Roman and inaugurated as such (Serv. *ad Aen.* ii. 178; Dio Cass. xli. 43; Liv. xxvii. 29, 5). The person who was then taking the auspices proceeded to specify the signs for which he was watching (*legum dictio*, Serv. *ad Aen.* iii. 89), and the period of time during which he would watch, the most important moment at the end being called *tempestus* (= *supremum augurii tempus*, Varr. *L. L.* 7, § 51), and, seated (Serv. *ad Aen.* ix. 4; Plut. *Marc.* 5) in a chair, waited for the favourable signs to appear; but it was necessary during this time that there should be no interruption of any kind whatsoever (*silentium*), and hence the word *silentium* was used in a more extended sense to signify the absence of everything that was faulty. Though the watcher especially took note of what he perceived himself, yet he at times asked bystanders or others to assist him in watching for signs; and in later times it was usual to be satisfied with the assertion of the assistant that the required sign had been seen (Cic. *de Div.* ii. 34, 72; 35, 75). Those who were asked to assist in the augury (*in auspicio esse*) were sometimes augurs, but not necessarily so. The formula by which the request was made and the assent given is recorded by Cicero (*de Div.* ii. 34, 71. 72). But the magistrate was no more bound to pay attention to what these assistants reported, than he was to obey the advice of his *consilium* (Mommsen, *op. cit.* i.^{2} 102); still, according to ancient law, anyone who disobeyed a decree of the augurs was guilty of a capital offence (Cic. *de Leg.* ii. 8, 21; 12, 31). Everything which rendered the auspices invalid was called *vitium* (see Festus, s. v. *silentio surgere*), and hence we constantly read in Livy and other writers of *vitio* magistratus creati, *vitio* lex lata, &c. A euphemistic phrase was *causa est* (Serv. *ad Aen.* vii. 141; ix. 630). The watching for the auspices was called *spectio* or *servare de coelo*, the declaration of what was observed *nuntiatio* or *obnuntiatio* (*vide infra*). If the signs were unfavourable, the *nuntiatio* of the augur was expressed in the form *alio die*, by which the business in hand, whether the holding of the *comitia* or anything else, was entirely stopped (Cic. *de Leg.* ii. 12, 30). For ancient descriptions of the process, see Liv. i. 18; Stat. *Theb.* iii. 459 ff.; and Sabidius, *ap.* Mommsen, *op. cit.* i.^{2} 81, note 5.

Having explained what the auspices were and how they were taken, we have now to determine who had the power of taking them. In the first place it is certain that in ancient times no one but a patrician could take the auspices, and that a plebeian had no power of doing so. The gods of the Roman state were the gods of the patricians alone, and it was consequently regarded as an act of profanation for any plebeian to attempt to interpret the will of these gods. Hence the possession of the auspices (*habere auspicia*) is one of the most distinguished prerogatives of the patricians; they are said to be *penes patres*, and are called *auspicia patrum*. It is closely connected with the possession of a *gens*; and accordingly there can be no doubt that *patres* means the whole body of patricians (see Liv. iv. 2, 5; 6, 2; vi. 41, 6; x. 8, 9; and Weissenborn, *ad loc.*). It would further appear that every patrician might take the auspices; but here a distinction is to be observed. It has already been remarked that in the most ancient times no transaction, whether private or public, was performed without consulting the auspices (*nisi auspicato, ne privatim quidem*, Cic. *de Div.* i. 16, 28; Val. Max. ii. 1, § 1); and hence arose the distinction of *auspicia privata* and *auspicia publica*. Of the *privata auspicia* we know little, but probably they were similar to the *publica*, as may be seen from the story about Attus Navius in Cicero (*de Div.* i. 17); cf. Mommsen, *op. cit.* i.^{2} 85, note 4. One of the most frequent occasions on which the *auspicia privata* were taken, was in case of a marriage (Cic., Val. Max., *ll. cc.*); and hence after private auspices had become entirely disused, the Romans, in accordance with their usual love of preserving ancient forms, were accustomed in later times to employ *auspices* in marriage, who, however, acted only as friends of the bridegroom, to witness the payment of the dowry and to superintend the various rites of the marriage (Plaut. *Cas.* prol. 85; Suet. *Claud.* 26; Tac. *Ann.* xi. 27). The employment of the auspices at marriages was one great argument used by the patricians against *connubium* between themselves and the plebeians, as it would occasion, they urged, *perturbationem auspiciorum publicorum privatorumque* (Liv. iv. 2, 5). The possession of these private auspicia is expressed in another passage of Livy by *privatim auspicia habere* (Liv. vi. 41, 6). In taking these private auspices, it would appear that any patrician was employed who knew how to form *templa* and was acquainted with the art of augury, and was therefore called *auspex* or *augur*: it does not appear to have been necessary nor usual in such cases to have recourse to the public augurs, the members of the collegium, who are therefore frequently called *augures publici*, to distinguish them from the private augurs. (Cic. *de Leg.* ii. 8, 20; *ad Fam.* vi. 6, 6; Festus, s. v. *quinque genera.*) The case, however, was very different with respect to the *auspicia publica*, generally called *auspicia* simply, or those which concerned the state. The latter could only be taken by the persons who represented the state, and who acted as mediators between the gods and the state; for though all the patricians were eligible for taking the auspices, yet it was only the magistrates who were in actual possession of them. The magistrates were the mediators between the people and both god and man; hence their authority was represented in the fullest terms by *auspicium imperiumque* (Liv. xl. 52, 5); cf. Mommsen, *op. cit.* i.^{2} 73. As long as there were any patrician magistrates, the auspices were exclusively in their hands (Cic. *Ep. ad Brut.* i. 5, 4); on their entrance upon office, they received the auspices (*accipiebant auspicia*, Cic. *de Div.* ii. 36, 76); while their office lasted, they were in possession of them (*habebant* or *erant eorum auspicia*, Gell. xiii. 15); and at the expiration of their office, they laid them down (*ponebant auspicia*, Cic. *de Nat. Deor.* ii. 3, 9). In case, however, there was no patrician magistrate, the auspices became vested in the whole body of the patricians, which was expressed by the words *auspicia ad patres redeunt* (Cic. *Ep. ad Brut.* i. 5, 4). This happened in the kingly period on the demise of a king, and the patricians then chose an interrex, who was therefore invested by them with the right of taking the auspices, and was thus enabled to mediate between the gods and the state in the election of a new king. In like manner in the republican period, when it was believed that there had been something faulty (*vitium*) in the auspices in the election of the consuls, and they were obliged in consequence to resign their office, the auspices returned to the whole body of the patricians, who had recourse to an *interregnum* for the renewal of the auspices, and for handing them over in a perfect state to the new magistrates. For this the technical expression is *renovare auspicia* (Liv. v. 31, 7; vi. 5, 6). This is to be distinguished from *repetere auspicia*, said of a general who had taken faulty omens before setting out, and had to return to Rome to renew them (Liv. viii. 30, 2, and Weissenborn), though this term is once applied (Liv. v. 17, 3) to what is more strictly *renovatio* (see Mommsen, *op. cit.* i.^{2} 88, 96). If a magistrate was declared faultily elected owing to the auspices, he had to submit to the decree and resign (*vitio facti abdicarunt* is the regular formula), and they could not conduct the new elections, nor were they eligible themselves for re-election. There are numerous examples in Livy: *e.g.* vi. 38, 9; viii. 15, 6. In the case of the resignation of the tribunes in Liv. x. 47, 1, it is hard to know who could have elected the new tribunes, as the plebeians had nothing corresponding to the patrician interregnum (see Weiss. *ad loc.*). If the magistrate refused to resign, he could not be forced to do so by the people, *e.g.* Flaminius in 223 B.C. (Plut. *Marc.* 4; Liv. xxi. 63, 7). But if a magistrate did refuse, he was liable to prosecution at the expiration of his office: "quique non paruerit capital esto," ran the old law (Cic. *de Leg.* ii. 8, 21). If a decree of the people had been vitiated by the auspices, it had to be abrogated by another decree of the people, introduced by a resolution of the senate in accordance with the judgment of the augurs; but the latter for the most part were deemed sufficient without the matter being brought before the people (see Cic. *de Leg.* ii. 12, 31; Mommsen, *op. cit.* i.^{2} 113, 114).

The distinction between the duties of the magistrates and the augurs in taking the auspices is one of the most difficult points connected with this subject, but perhaps a satisfactory solution of these difficulties may be found by taking an historical view of the question. We are told not only that the kings were in possession of the auspices, but that they themselves were acquainted with the art and practised it. Romulus is represented to have been the best of augurs, and from him all succeeding augurs received the chief mark of their office, the *lituus*, with which that king exercised his calling. (Cic. *de Div.* i. 2, 3; Liv. i. 10, 6.) He is further stated to have appointed three augurs, but only as his assistants in taking the auspices, a fact which is important to bear in mind. (Cic. *de Rep.* ii. 9, 16.) Their dignity gradually increased in consequence of their being employed at the inauguration of the kings, and also in consequence of their becoming the preservers and depositaries of the science of augury. Formed into a collegium, they handed down to their successors the various rules of the science, while the kings, and subsequently the magistrates of the republic, were liable to change. Their duties thus became twofold,—to assist the magistrates in taking the auspices, and to preserve a scientific knowledge of the art. They did not possess the right of consulting the auspices (*habere auspicia*) themselves, though they understood them better than the magistrates; the lightning and the birds were not sent to them, but to the magistrates; they discharged no independent functions either political or ecclesiastical, and are therefore described by Cicero as *privati* (*de Div.* i. 40, 89). As the augurs were therefore merely the assistants of the magistrates, they could not take the auspices without the latter, though the magistrates on the contrary could dispense with their assistance (cf. Mommsen, *Staatsr.* i.^{2} 102), as must frequently have happened in the appointment of a dictator by the consul on military expeditions at a distance from the city. At the same time it must be borne in mind that, as the augurs were the interpreters of the science, they possessed the right of declaring whether the auspices were valid or invalid, and that too whether they were present or not at the time of taking them; and whoever questioned their decision was liable to severe punishment (Cic. *de Leg.* ii. 8, 21). They thus possessed in reality a veto upon every important public transaction. It was this power which made the office an object of ambition to the most distinguished men at Rome, and which led Cicero, himself an augur, to describe it as the highest dignity in the state (*de Leg.* ii. 12, 31). The augurs frequently employed this power as a political engine to vitiate the election of persons unfavourable to the exclusive privileges of the patricians. (Liv. vi. 27; viii. 23.)

But although the augurs could declare that there was some fault in the auspices, yet, on the other hand, they could not, by virtue of their office, declare that any unfavourable sign had appeared to them, since it was not to them that the auspices were sent. Thus we are told that the augurs did not possess the *spectio;* that is, the right of taking the state-auspices. The difference between *habere auspicia* and *spectionem* appears to have been that the former was the right of observing the auspices in general, the latter the right as applied to a special case (Mommsen, *op. cit.* i.^{2} 86, note 2). When they were employed by the magistrates in taking the auspices, they possessed the right of the *nuntiatio*, and thus had the power, by the declaration of unfavourable signs (*obnuntiatio*, Donat. *ad* Ter. *Ad.* iv. 2, 9), to put a stop to all important public transactions (Cic. *de Leg.* ii. 12, 31). In this way we are able to understand the assertion of Cicero (*Phil.* ii. 32, 81), that the augurs possessed the *nuntiatio*, the consuls and the other *magistratus* both the *spectio* and *nuntiatio;* though it must at the same time, be borne in mind that this right of *nuntiatio* only belonged to them in consequence of their being employed by the magistrates.

In course of time it was found desirable to limit and define the political incidents on which it was necessary to consult the auspices, as follows:—1. On the appointment of a magistrate, on the principle that the auspices must be consulted at the transmission of the auspices. This appears most clearly in the appointment of a dictator (*ave sinistra dictus populi magister esto*, Cic. *de Leg.* iii. 3, 9). The consul, *oriens nocte silentio*, as the full phrase ran (Liv. viii. 23, 5, and Weissenborn), nominated the dictator. The first-appointed interrex was not created *auspicato*, because there was no definite *individual* to inaugurate him; hence it was not customary for the first interrex to hold the comitia (Asconius in *Mil.* p. 43, Orelli). 2. At all *comitia* (Liv. v. 52, 15). Hence convenient *templa* were to be found at all the meeting-places,—the Vulcanal in the *Comitium*, the *Calabra Curia* and the *auguraculum* on the Capitol, for the *curiata* and *calata;* the *rostra* for the *tributa*, the *horti Scipionis* (if we are not to read *spicionis*, with O. Müller and Kuntze, p. 65, note 5) in the Campus Martius for the *centuriata*. It is probable, but not certain, that the auspices were consulted of necessity at *contiones*, and apparently an attempt was made after 339 B.C. to submit the *concilia plebis* to patrician control by this obligation (cf. Mommsen, *Röm. Staatsrecht*, i.^{2} p. 110). Meetings of the senate, at any rate when a *senatus consultum* was to be passed, were always held in a *templum*, but the obligation to take the auspices does not seem to have been maintained. 3. By a magistrate on assuming office (see below). 4. By an *imperator* on the morning of his departure with an army (Liv. xxi. 63, 9). By thus taking the auspices on the Capitol, he acquired a right to the *auspicia bellica* after crossing the *pomoerium*. The necessity of a military commander taking the auspices on the

Capitol rendered every military command a regular state-magistracy, and was thus, as Mommsen (*op. cit.* i.^{2} 96) shows, a powerful barrier in preventing any new extraordinary military commands being appointed by the people.

There were also auspices at times taken before sittings of the senate (Varr. *ap.* Gell. xiv. 7, 9), before drawings of lots (Liv. xli. 18, 8), before founding colonies (Cic. *Rull.* ii. 12, 31), before a battle (Liv. xxxiv. 14, 1). A remarkable kind of military (Cic. *de Nat. Deor.* ii. 3, 9; *de Div.* ii. 36, 76) auspices were those used on crossing any running water (*auspicia perennia*); and generally if birds flew across running water a special act was required *ut perseveret augurium* (Serv. *ad Aen.* ix. 24). The auspices which had to be taken by magistrates after passing the pomoerium on their way to the Campus Martius were the *auspicia perennia*, caused by the little stream Petronia (see Festus, s. v. *Petronia amnis*). Mommsen (*op. cit.* i.^{2} 93) sees the origin of the custom in Rome's position on the Tiber, so that the first step of war against the Etruscans would be the passing of the river. Kuntze (*op. cit.* p. 96) thinks that it was owing to the frequency of the *auspicia perennia* that the convenient and simple *auspicia pullaria* came to be the auspices used especially in military affairs. They are mentioned together in Cic. *de Div.* ii. 36, 77.

During the regal period the king was the depositary and fountain of the *auspicia*, and no conflict of authority could arise. But when the *auspicia*, together with the *imperium*, were committed to the two consuls, and later to the other magistrates, precautions against such a conflict became indispensable. For this purpose the auspices were graduated according to the *potestas;* and this graduation was effected, Mispoulet thinks (*Institutions politiques*, i. 73), by the Aelian and Fufian laws (see below), and a distinction was drawn between the *auspicia majora*, possessed by the magistrates with the imperium—consuls, consular tribunes, praetors, dictators, proconsuls, propraetors, and probably the *magister equitum*—as well as by censors, though the auspices of the latter apparently differed in some degree from those of the others (see Mommsen, *op. cit.* i.^{2} 89), and the *auspicia minora*, possessed by quaestors and curule aediles. (Gell. xiii. 15.) According to Lange (*Röm. Alterth.* i. 295, 696; ii. 52, 444) the auspices were granted to the plebeian tribunes and aediles by the *lex Publilia Philonis* (B.C. 339), by which the plebeian concilia were brought under the influence of the auspicia—to the aediles the *minora*, while the tribunes claimed the powers of the *majora*. Sometimes priests, and especially the pontifex maximus, who held the *comitia calata*, had the right of taking the auspices (Mommsen, *op. cit.* i.^{2} 89). Mommsen notices (p. 108) that the reason, why the auspices were so little heard of as a political weapon (the first positive example is in the consulship of Bibulus, B.C. 59, though they were used frequently before, Cic. *Vat.* 9, 23), is that in early party warfare the weapon used was *intercessio* (cf. Mommsen, *op. cit.* i.^{2} 92). In case of collision the auspices of the higher magistrate prevailed over those of the lower: see the evidence given by Valerius Maximus (ii. 8, 2) in the controversy concerning the praetor Falto's claim to a triumph.

Again, the auspices, if derived from a superior magistrate for a special purpose, were called *auspicia aliena*. Thus the quaestors, until their office became a *magistratus* in 447, could only possess *auspicia aliena*, and after that date they still had to obtain the *auspicia maxima* in the same way from the consuls or praetors in order to summon the centuries to inquire into a capital charge (cf. Varr. *L. L.* vi. 91). A triumph could not be given to the possessor of *auspicia aliena*, but belonged to the magistrate from whom he derived them; in this point the triumph of Pompey as an *eques* in 81 B.C. was irregular.

On a campaign two commanders of equal rank possessed the *auspicia* on alternate days (Liv. xxii. 42, 8; xxviii. 9, 10), and it has been surmised that at Rome the consuls had the auspicia like the fasces, every alternate month. In case of collision of two consuls, both of whom had the auspices at the same time, the matter in question remained suspended, as was also the result of conflicting *intercessio* (Mommsen, *op. cit.* i.^{2} 92).

But these precautions were not wholly successful, for they did not prevent two magistrates, although not equal in rank, from taking the auspices on the same day for different purposes, and it might happen that one of them observed a sign which was held *diem vitiare* (Cic. *Att.* iv. 9): as, for instance, the lightning or thunder which suspended the *comitia*. The announcement of such a sign by a *privatus* (*nuntiatio*) was sometimes attended to, especially if he were an augur, but the announcement by a magistratus (*obnuntiatio*) could not be neglected. To avoid this danger, the magistratus presiding over the *comitia* ordered *ne quis magistratus minor de caelo servare velit.* But it appears to have been impossible to enforce this command, which did not destroy the validity of an observation taken in disregard of it. Hence it was sought about 154 B.C. to limit the right of *obnuntiatio* by the *lex Aelia* and *lex Fufia*, which apparently only permitted a consul to suspend the *comitia curiata* presided over by his colleague or the pontifex maximus, and a tribune to exercise the right against consuls and censors, and *vice versâ.* (Suet. *Jul.* 20; Cic. *pro Domo*, 15, 39; *Har. Resp.* 23, 48; *Prov. Cons.* 19, 45; *Att.* ii. 12, 2; *pro Sest.* 37, 79; *Att.* iv. 3, 3, 4; *ad Q. Fr.* iii. 3, 2; *Phil.* ii. 38, 99; *Att.* iv. 9, 1; Dio Cass. xxxvii. 9.) Whether the consul and the praetor had the right of *obnuntiatio* against the tribune is a much disputed point, resting as it does on a single passage (Cic. *Sest.* 36, 78). Mommsen (*op. cit.* i.^{2} 110) says Yes; but Mr. Reid (*ap.* Holden, *ad loc.*) cannot assent till a clearer example is adduced. The notice had to be given before the voting commenced (Cic. *Phil.* ii. 32, 82). The *obnuntiatio* was abolished by the *lex Clodia* (58 B.C.), but the legality of this law was called in question, and it was often violated.

As there was a distinction between the civil and the military *imperium*, so there was a distinction between *auspicia urbana* and *bellica*, although the augural science employed in each case was the same. *Auspicia urbana* were those auspices taken within the city for acts performed within the city; *auspicia bellica* (or *militaria*) were those employed by generals on a campaign anywhere a mile outside the pomoerium. We have seen that magistrates had to perform *auspicia perennia* on crossing the pomoerium to transact business in the Campus Martius, which stood within the mile-radius. The whole collection of decrees bearing on the auspices required on crossing the pomoerium was called the *jus pomoerii*, and is cited by Cicero (*de Div.* ii. 35, 75) as a department of augural law. [POMOERIUM.]

As to the manner in which the magistrates received the auspices, there is no reason to suppose, as many modern writers have done, that they were conferred upon them in any special manner. It was the act of their election which made them the recipients of the auspices, since the comitia, in which they were appointed to their office, were held *auspicato*, and consequently their appointment was regarded as ratified by the gods. The auspices, therefore, passed immediately into their hands upon the abdication of their predecessors in office. There are two circumstances which have given rise to the opinion, that the magistrates received the auspices by some special act. The first is, that the new magistrate, immediately after the midnight on which his office began, was accustomed to observe the heavens in order to obtain a happy sign for the commencement of his duties (Dionys. ii. 6). But he did not do this in order to obtain the auspices; he already possessed them, and it was in virtue of his possession of them that he was able to observe the heavens. The second circumstance, to which we have been alluding, was the *inauguratio* of the kings on the Arx after their election in the *comitia* (Liv. i. 18). But this inauguration had reference simply to the priestly office of the king, and, therefore, did not take place in the case of the republican magistrates, though it continued in use in the appointment of the rex sacrorum and the other priests. The ceremony was performed on the Capitol at the *comitia calata* before the college of *pontifices*, with the assistance of an augur. (Varr. *L. L.* v. 47; Gell. xv. 27; Cic. *Phil.* ii. 43, 110.) There was a corresponding ceremony, *exauguratio*, performed when a priest laid down his office; otherwise he would have continued to possess the auspices. (Gell. vi. 7; Capitol. *M. Aurel.* 4.) For the inauguration and exauguration of places, see TEMPLUM. The augurs were also employed, probably on the summons of the *pontifex maximus*, to discover a favourable day for certain movable feasts, such as the *augurium Salutis*—viz. the annual sacrifice to the goddess Salus; the *augurium canarium* (i.e. the sacrifice of yellow dogs to the goddess Robigo); and in the case of lustration of the land (*sacerdotesque urbemque et agros vincta virgetaque et salutem populi auguranto*, Cic. *de Leg.* ii. 8, 21).

It remains to trace the history of the college of augurs. We have already seen that it was a common opinion in antiquity, that the augurship owed its origin to the first king of Rome, and it is accordingly stated, that a college of three augurs was appointed by Romulus (*ex singulis tribubus singulos cooptavit augures*), answering to the number of the early tribes,—the Ramnes, Tities, and Lucerenses. This is the account of Cicero (*de Rep.* ii. 9, 16), who supposed Numa to have added two more (ii. 14, 26), without, however, stating in what way these latter corresponded to the tribes. Moreover, we are told that the Luceres were not incorporated in the city before the reign of Tarquin. On the other side stand two statements of Livy, the first (iv. 4, 2) that the first institution of augurs is to be attributed to Numa, seemingly on the theory that all the Roman religion was derived from the second king; the second (x. 6, 6, 7) that at the passing of the Ogulnian law the augurs were but four in number, which Livy himself, who recognised the principle of the number of augurs corresponding to that of the tribes, and so being three or a multiple of three, supposes to have been accidental. While it is admitted that augurs and augural science were in existence before the foundation of Rome, the view of Livy is now generally adopted (Lange, *Röm. Alterth.* i.^{3} 334), that the foundation of the college is to be assigned to the period marked by the name of Numa. The question of the numbers of the college presents still greater difficulties. Mercklin (*Die Cooptation der Römer*, p. 96), following the view of Niebuhr and Ambrosch on the comparative insignificance of the Luceres, supposes that the latter were not represented, that the king himself was the third member of the original college, that Numa doubled the representation of the other two tribes, and that on the expulsion of the kings the number sank to four. Marquardt (*Röm. Staatsver.* iii. 383, cf. 232) and Willems (*Droit public romain*, 325) say, that the original number of the college was three, of whom the king was one, and that subsequently this number was doubled, as was the case with the Vestals. But Cicero says (*Rep.* ii. 9, 16) that Romulus chose as his fellows (*cooptavit*) one from each of the three (ii. 8, 14) tribes,—therefore there were four augurs; that Numa added two (ii. 14, 26), thus making six, which agrees with the number given by Livy (x. 6, 7) as the normal one at the time of the Ogulnian law (cf. Mommsen, *Roman Hist.* i. 178, Eng. Tr.; Lange, *Röm. Alt.* i. 290); and most probably after the expulsion of the kings the number of augurs found in existence was maintained, and it became the practice, as it had been the original theory (cf. Cic. *Rep.* ii. 9, 16, with Liv. *l. c.*), that an equal number should be chosen from each tribe. Lange (*op. cit.* p. 291) is of opinion that the increase to the original number cannot have been due to Numa, the founder of the college, but should be attributed to the time of Tarquinius Priscus, who chose Attus Navius to the augurate, from whose election the increased importance of the augurs is dated by Livy, i. 36, 6. Cicero (*Rep.* ii. 14, 26), in mentioning the addition to the college by Numa, says he made the increase *majoribus auspiciis inventis.*

The Ogulnian law (B.C. 300), which increased the number of pontiffs to eight, by the addition of four plebeians, and that of the augurs to nine by the addition of five plebeians, may be considered an era in Roman history. The religious distinction between the two orders, which had been so often insisted upon, was now at an end, and it was no longer possible to use the auspices as a political instrument against the plebeians. The number of nine augurs which this law fixed, lasted down to the dictatorship of Sulla, who increased them to fifteen, a multiple of the original three, probably with a reference to the early tribes. (Liv. *Epit.* 89.) A sixteenth member was added by Julius Caesar after his return from Egypt. (Dio Cass. xlii. 51.)

During the regal period the kings doubtless chose the augurs. After the expulsion of the kings they were chosen by co-optation, the first recorded instance being in B.C. 453 (Liv. iii. 32). They retained the right of co-optation until B.C. 103, the year of the Domitian law. By this law it was enacted that vacancies in the priestly colleges should be filled up from the nominees of the colleges by the *comitia sacerdotum*, i.e. seventeen out of the thirty-five tribes chosen by lot. (Cic. *de Leg. Agr.* ii. 7, 18; Vell. Pat. ii. 12; Suet. *Ner.* 2.) The Domitian law was repealed by Sulla B.C. 81 (Pseudo-Ascon. *in* Cic. *Div.* p. 102, ed. Orelli), but again restored B.C. 63, during the consulship of Cicero, by the tribune T. Atius Labienus, with the support of Caesar (Dio Cass. xxxvii. 37). The *lex Atia* provided that these *comitia* were to be held annually, between the consular and the praetorian elections, under the presidency of the consuls. It was a second time abrogated by Antony B.C. 44 (Dio Cass. xliv. 53); whether again restored by Hirtius and Pansa in their general annulment of the acts of Antony, seems uncertain. The emperor received from the people (A.D. 29) the right of appointing members of the sacerdotal colleges even in excess of the prescribed numbers, and the places were filled sometimes by the emperor, sometimes by *senatus consultum*, and sometimes by the co-optation of the college. After Tiberius ceased to summon the *comitia*, the importance of the augurs rapidly declined, and their liberty increased. Alexander Severus ordered that the imperial nominations should be scrutinised by the senate (Lampr. *Al. Sev.* 49, 2). After the reign of Diocletian the history of the college is difficult to trace. The last mention we have of augurs is in 390 A.D. (*C. I. L.* vi. 503).

The augurs were elected for life, and, even if capitally convicted, never lost their sacred character. (Plin. *Ep.* iv. 8, 1.) When a vacancy occurred, the candidate was nominated by two of the elder members of the college (Cic. *Phil.* ii. 2, 4), the electors were sworn, and the new member was then solemnly inaugurated (Cic. *Brut.* 1, 1). On such occasion there was always a splendid banquet given, at which all the augurs were expected to be present (Cic. *ad Fam.* vii. 26, 2; *ad Att.* xii. 13, 14, 15). The only distinction in the college was one of age; an elder augur always voted before a younger, even if the latter filled one of the higher offices in the state (Cic. *de Sen.* 18, 64). The head of the college was called *magister collegii.* It was expected that all the augurs should live on friendly terms with one another, and it was a rule that no one was to be elected to the office who was known to be an enemy to any of the college (Cic. *ad Fam.* iii. 10, 9). The augur who had inaugurated a younger member, was always to be regarded by the latter in the light of a parent (*in parentis eum loco colere*, Cic. *Brut.* 1, 1).

The procedure adopted to decide whether there was a *vitium* or not in any proceeding was as follows: The senate or one of the magistrates laid the matter before the college (*referre, deferre rem ad collegium*, Liv. xlv. 12, 10; Cic. *Phil.* ii. 34, 84). The college does not seem to have had the right of taking the initiative: the passages adduced by Mommsen (*Röm. Staatsr.* i. 112, note 2)—viz. Cic. *de Div.* ii. 35, 74; *de Nat. Deor.* ii. 4, 11; *Fam.* x. 12, 2—do not at all prove it. When the matter was laid before the college, the inquiry into it, a matter of ecclesiastical law, was conducted just as would have been a question of civil or criminal law: evidence was heard (Liv. viii. 23, 15), and judgment (*decretum*) delivered (*pronuntiaverunt*); cf. Liv. iv. 7, 3; xxiii. 31, 13. As partaking of the nature of a court, the college had attendants, *servi publici* (Orelli, 2649). We also find *monitor augurum* (Henzen, 5670), *viator augurum* (*C. I. L.* vi. 1847), *pullarii* (Orelli, 3509), and *calatores* (Suet. *de Gramm.* 12). The necessary expenses incurred by the college of augurs, as those incurred by the other colleges, were defrayed out of landed property which the augurs possessed on the Capitol (Oros. v. 18) and near Veii (Festus, s. v. *Obscum*); cf. *Grom. Vet.* 162, 28. The augurs, who were honorary officers, were not paid any salary by the state, but the *pullarii* were (Dionys. ii. 6); cf. Marq. *Röm. Staatsv.* ii. 78, 79. The privileges of the augurs were mainly those of the other priests, viz. special places at the games and festivals (Mommsen, *Röm. Staatsr.* i.^{2} 390, note 5), freedom from military service and from certain civil duties (*Lex Colon. Genet.* lxii. and lxvii.); cf. Cic. *Ac. Pr.* ii. 38, 121. The duties they appear to have been exempted from were what were afterwards known as *munera personalia*, though they were not exempt from serving on juries (Cic. *Brut.* 31, 117). But they appear not to have been free from *munera patrimonii*, such as the payment of the *tributum* (Liv. xxxiii. 42, 4; cf. Mommsen, *Eph. Epigr.* iii. 100, 101). The daughters of augurs were exempted from liability to be chosen as Vestal Virgins (Gell. i. 12, 7). It appears that each place in the college of augurs bore the name of *decuria* (Henzen, 6021; Marq. *op. cit.* 225).

Augur, wearing the trabea. (Brit. Museum.)

The dress of the augurs, as of the other priests, was the *praetexta* (Cic. *Sest.* 69, 144, and Holden, *ad loc.*; *Att.* ii. 9, 2; *Fam.* ii. 16, 7; cf. Mommsen, *Röm. Staatsr.* i.^{2} 406, note 3). Servius (*ad Aen.* vii. 612) indeed tells us that the augurs wore the *trabea;* but perhaps this military costume was only worn by augurs when in attendance on the military commander (cf. Mommsen, *op. cit.* i.^{2} 414, note 6). They also carried in their hand the *lituus* or curved wand. [LITUUS.] On the coins of the Romans who filled the office of augur, we constantly find the *lituus*, and along with it, not unfrequently, the *capis*, an earthen vessel which was used by them in sacrifices (Liv. x. 7, 10; Varr. *L. L.* v. 121). The first cut on the next page, representing a coin of Q. Cornificius, who fought against the triumvirs in

Africa, bears on the obverse the head of Ammon, and on the reverse an augur, holding a lituus, and crowned by Juno. Both the lituus and the capis are seen in the second cut, representing a coin of Lentulus.

Coin of Cornificius, representing on the reverse an Augur, holding the lituus.

Coin of Lentulus, representing on the reverse the lituus and capis.

The science of augury had greatly declined in the time of Cicero; and although he frequently deplores its neglect in his *de Divinatione*, yet neither he nor any of the educated classes appears to have had any faith in it. What a farce it had become a few years later is evident from the statement of Dionysius (ii. 6), who informs us, that a new magistrate, who took the auspices upon the first day of his office, was accustomed to have an augur at his side, who told him that lightning had appeared on his left, which was regarded as a good omen; and although nothing of the kind had happened, this declaration was considered sufficient. (See also Cic. *Phil.* ii. 32.) Kuntze (p. 91) sums up the development of augury by showing that the taker of the auspices at first watched (the *oblativa*), then prayed (the *impetrativa*), then demanded and compelled the augury (as in the *pullaria auspicia*), and finally invented.

Our knowledge of augury as practised by the other Italian peoples is fragmentary, but in the Eugubine tables (still preserved at Gubbio) we have some most interesting remnants of the ritual of the Umbrian augurs, probably between the fourth and the second century B.C., showing striking resemblances to the Roman. The fame of the Marsi as augurs was widespread, but unenviable (Enn. *ap.* Cic. *de Div.* i. 58, 132). The augural science of the Sabines was preserved at Rome by the *Sodales Titii* (Varr. *L. L.* v. 85). Among the Latins Gabii had the honour of being the traditional source of the augury of Romulus and Rome. (Dionys. i. 84; Plut. *Rom.* 6; Preller, *Röm. Myth.* p. 106.) The Sorani on Mount Soracte are mentioned as augurs by Cic. (*de Div.* i. 47). When Rome became mistress of Italy, collegiate bodies of augurs, in imitation of the Roman, were established in many Italian cities (Plut. *Caes.* 47; Lucan. vii. 192; Orelli, 2287–8; Orelli-Henzen, 5777); also in the provinces. In the colony of Urso in Spain (*Lex Col. Genet.* lxvii. lxviii.) they were elected by the comitia, yet the phrase is still *lectus cooptatusve*; and it is to be noticed that conviction for a criminal offence deprived the augur of his office. Augurs also are found in the Album of Thamugas (Marq. *op. cit.* i. 192). For numerous other examples, see Henzen, Index, p. 49.

On the whole subject of augury amongst the Romans see Mascov, *de Jure Auspicii apud Romanos*, Lips. 1721; Werther, *de Auguriis Romanis*, Lemgo, 1835; Creuzer, *Symbolik*, vol. ii. p. 935, &c.; Müller, *Etrusker*, vol. ii. p. 110, &c.; Hartung, *Die Religion der Römer*, vol. i. p. 98, &c.; Göttling, *Geschichte der Röm. Staatsverf.* p. 198, &c.; Rubino, *Röm. AUGURA'CULUM. [AUGUR, p. 251 b; ARX.]

AUGURA'LE. [AUGUR, p. 251 b.]

AUGUSTA'LES (sc. *ludi*, also called *Augustalia*, sc. *certamina*, *ludicra*; and by the Greek writers and in Greek inscriptions, Σεβαστά, Σεβάσμια, Αὐγουστάλια) were games celebrated in honour of Augustus, at Rome and in other parts of the Roman empire. At Rome two festivals were known under this name.

I. On Sept. 23, the birthday of Augustus, which after the battle of Actium was kept as a holiday, it was customary from B.C. 13 onwards for games to be held in the circus (Dio Cass. liv. 26, 34). These were at first voluntarily given by the praetor, but from B.C. 8 they were regularly established (*id.* lv. 6). In A.D. 14 the charge was transferred to the consuls, and by these they continued to be celebrated under the empire. (Henzen, *Act. Fr. Arval.* p. 51.)

During the lifetime of Augustus the *equites* had been accustomed of their own accord to celebrate his birthday with a festival of two days (*biduo*, Suet. *Aug.* 57); and in most of the provinces (the exceptions were apparently in the West) games were held in almost every town at intervals of four years in his honour (*quinquennales ludi*, ib.). In one passage Dio, or perhaps his epitomator Xiphilinus, has confused the two festivals of the birthday of Augustus and the Augustalia proper (lvi. 29); but elsewhere (liv. 34, lvi. 46) he clearly distinguishes them, as do also the calendars (cf. *C. I. L.*, pp. 402, 404, with Mommsen's notes).

II. The *Augustalia* proper were held for ten days (Oct. 3–12). These were instituted in B.C. 19 when Augustus returned to Rome after settling the provinces (cf. Kal. Amit., Oct. 12, *Ara Fort*(*unae*) *reduci constit*(*uta*)), but the duration and character of the festival were settled only in B.C. 11 by a *senatus consultum* (Dio Cass. liv. 34). In A.D. 14 the festival was assigned at their own request to the tribunes of the commons, but shortly afterwards transferred to the *praetor peregrinus* (Tac. *Ann.* i. 15, 54). In Italy many towns observed as a holiday the anniversary of the day on which he had first visited them (Suet. *Aug.* 59).

The augustales or augustalia at Neapolis (Naples) were celebrated with great splendour. They were instituted in the lifetime of Augustus (Suet. *Aug.* 98), and were celebrated every four years. According to Strabo (v. p. 246), who speaks of these games without mentioning their name, they rivalled the most magnificent of the Grecian festivals. They consisted of gymnastic and musical contests, and lasted for several days. At these games the Emperor Claudius brought forward a Greek comedy, and received the prize. (Suet. *Claud.* 11; compare Dio Cass. lx. 6.)

Augustalia (**Σεβαστὰ**) were also celebrated at Alexandria, as appears from an inscription in Gruter (316, 2); and in this city there was a magnificent temple to Augustus (**Σεβαστεῖον**, *Augustale*). We find mention of augustalia in numerous other places, as Pergamus, Nicomedia, &c. [W. S.] [A. S. W.]

AUGUSTA'LES, the name of two classes of priests, one at Rome and the other in the municipia, frequently mentioned in inscriptions.

I. The *Augustales* at Rome, properly called *sodales Augustales*, which is the name they always bear in inscriptions, were an order of priests (*Augustalium sacerdotium*) instituted by Tiberius to attend to the worship of Augustus and the Julia gens. On this occasion they were chosen by lot from among the principal persons in Rome, and were twenty-one in number; Tiberius, Drusus, Claudius, and Germanicus, as members of the imperial family, were added as supernumeraries (Tac. *Ann.* i. 54). They were also called *sacerdotes Augustales* (id. *Ann.* ii. 83); and sometimes simply *Augustales* (id. *Hist.* ii. 95). The number was subsequently increased, but never exceeded twenty-eight. The form of election seems also to have been modified, as inscriptions show that in later times extraordinary, and probably also ordinary members were created by a senatus consultum following an imperial rescript (*C. I. L.* vi. 1985–2000; Dessau, in *Ephem. Epigraph.* iii. 208; cf. Mommsen, *Staatsr.* ii. 1055, n. 1). That there were priestesses of Augustus as well as priests appears from an inscription in Gruter (320, 10): this practice probably took its origin from the appointment of Livia, by a decree of the senate, to be priestess to her deceased husband. Even before the emperor's death we find that *flamines* and *sacerdotes* had been appointed to attend to his worship; but we have the express statements of Suetonius and Dio Cassius that this worship was confined to the provinces, and was not practised in Rome, or in any part of Italy, during the lifetime of Augustus (Tac. *Ann.* i. 10; Suet. *Aug.* 52; Dio Cass. li. 20). In this respect Augustus showed himself more moderate than the dictator Julius, who among other divine honours accepted M. Antonius as his *flamen* and *lupercus* (Cic. *Phil.* ii. 43, 110; xiii. 19, 41; Suet. *Jul.* 76). Similar priests were appointed in honour of other deified emperors: thus we find in inscriptions sodales Augustales Claudiales, Flaviales (after Vespasian), Flaviales Titiales or simply Titiales (Titus; in this case the most admired emperor of the gens gave his name to the gentile priesthood, rather than the gentile name itself, Dessau, *l. c.*); Hadrianales, Antoniniani (Ant. Pius), Aureliani, perhaps also called Marciani (M. Aurelius). The last instance is that of the sodales Alexandriani after Alexander Severus (Lampr. *Al. Sev.* 63). A man's place in these priestly colleges was called his *decuria* (Mommsen, *Ephem. Epigr.* iii. 75, note 1, who however adds a caution against extending this analogy to other cases where it cannot be proved). The imperial *sodales* were under three *magistri* changed annually (Orelli-Henzen, 6046, with Henzen's note); and were taken indiscriminately from patricians and plebeians (Dessau, *l. c.* p. 218 n.). Each of these *sodalitates* had likewise a *flamen* or sacrificing priest; we find frequent mention in inscriptions of flamines Augustales and flamines Divorum; but the precise degree of connexion between the *flamines* and the *sodales* has been disputed. The most probable opinion is that of Dessau, in accordance with which Marquardt has now corrected his former views. A member of the sodales Augustales was sometimes a flamen also (Orelli, *Inscr.* 2366, 2368); but the *flamines* were not, as such, members of the *collegium* or *sodalitas*. The flamines Augustales were necessarily patricians, and were most likely nominated, like the three great *flamines*, by the emperor as Pontifex Maximus; the *sodales*, as already stated, were under no such restriction. For further details on the imperial *flamines*, see FLAMEN. (H. Dessau, *de sodalibus et flaminibus Augustalibus*, Berlin, 1877, and in *Ephem. Epigr.* iii. 205 ff.; Mommsen-Marquardt, vi. (iii.), pp. 449–455.)

II. The *Augustales* in the municipiis are scarcely mentioned in ancient literature, but the constant growth of epigraphic material throws increasing light upon their organisation. There is no doubt that (1) they were, as a rule, *libertini*, though *ingenui Augustales* are sometimes mentioned in inscriptions; that (2) they formed, in conjunction with the *seviri*, whose precise relation to them remains to be discussed, an intermediate class (*ordo*) between the municipal senators (*decuriones*) and plebs (*municipes*); and that (3) they and the *seviri* alike had for their object the worship of Augustus, with which succeeding emperors came to be associated. They cannot have been, as was formerly supposed, instituted in the municipia in imitation of the Augustales of Tiberius at Rome, just described; they appear in the lifetime of Augustus, the others only after his death: the social status of their members is in striking contrast with that of the sodales (Tac. *Ann.* i. 54; see above); and while the more dignified priesthood honoured only consecrated emperors, those we are now considering descended to the cultus of the living, who perhaps in the end were never deified at all (e.g. Nero, *C. I. L.* 3429). Another view, based on the scholiasts of Horace (Porphyr. and Acron, ad Hor. *Sat.* ii. 3, 281), was that they were a class of priests selected by Augustus from the *libertini* to attend to the worship of the Lares, which that emperor set up in places where two or more ways met [COMPITALIA]. This was held by Orelli (*Inscr.* ii. p. 197) and Egger (*Append.* i. p. 384 ff.), but Henzen showed (*Zeitschr. für Alterthumsw.*, 1848, p. 193) from the fuller evidence of inscriptions that the *magistri Augustales* and *magistri Larum Augustorum* were distinct from the *Augustales* properly so called and the *seviri Augustales* (see especially Orelli-Henzen, 6062, 6093, 7115). The same evidence allows us to trace the worship of Augustus in his lifetime to private persons, provincial towns, and existing priestly colleges, especially those of Mercury: hence the allusion in Horace (*Od.* i. 2, 41–4). The six principal members of the college were called *seviri*, but the distinction between these and other Augustales is not always clear. The evidence of the inscriptions leads us to the following conclusions. In the municipia of Southern Italy, including parts of Samnium and Campania, the intermediate class are called Augustales, but no *seviri* are mentioned, except at Rhegium and Puteoli. They have officers of their own,—a *curator*, *quinquennales*, and *quaestores*. In the provinces of Gallia Narbonensis and Lugdunensis, we find *seviri* only, without Augustales; the *seviri* as annual officers, three equites and three freedmen, in an important inscription at Narbonne (Orelli, 2489). In most cities of Central Italy both *seviri* and Augustales occur; and this is pronounced by Henzen and Marquardt the most regular type of the institution. In this case the *seviri* appear to have served for a year, providing sacrifices at their own expense, and afterwards to have become life-members of the *ordo* under the name of Augustales. In particular places we read of *sexviri seniores* and *juniores*. Nor was the number six invariable, as in some rare cases there are *triumviri Augustales* and *octoviri Augustales*. Under later emperors the institution spread throughout the empire, and one object of it was probably to open a career of honour elsewhere to the *libertini*, who were purposely kept down at Rome (Marquardt, pp. 204–5). There was a property qualification required, which is not stated, but must have been considerable: besides the sacrifices, they had to pay a fine on admission (*summa honoraria*) and give games and other treats to the people. These admission fees went into the chest of the municipality, not into a corporate fund of their own; they were thus an *ordo*, not a *collegium*. In return they had the distinction of the *praetexta* while in office, and might also be buried in it; that of the *bisellium*, with a place of honour in the theatre; and were accompanied on state occasions by two lictors bearing fasces (ib. 206–7). We are reminded of some of the incidents of municipal dignity in modern times. (Egger, *Examen critique des Historiens anciens de la Vie et du Règne d'Auguste*, Paris, 1844, Appendix II. p. 357 ff.; Zumpt, *de Augustalibus et Seviris Augustalibus Commentatio Epigraphica*, Berol. 1846; Henzen, in *Zeitschr. für Alterthumsw.*, 1848, Nos. 25–27 and 37–40; J. Schmidt, *de Seviris Augustalibus*, Halle, 1878; O. Hirschfeld, in *Zeitschr. für die österreichischen Gymnasien*, 1878, p. 292 ff.; and especially Marquardt, iv. (i.) pp. 197–208, ed. 2 (1881). [W. W.]

AUGUSTUS, a name bestowed upon Octavianus by the senate and the Roman people, Jan. 16, B.C. 27. This date is established by the Fasti Praenestini (in *C. I. L.* i. 384) and Censorinus (*de Die Natali*, 21, § 8; cf. Mommsen, *Res gestae d. Aug.* p. 149). Octavian took the name in accordance with a senatus consultum moved by Munatius Plancus (Vell. Pat. ii. 91; Censorin. *l. c.*). It was a word used in connexion with religion, and designated a person as sacred and worthy of worship: hence the Greek writers translate it by Σεβαστός (Ov. *Fast.* i. 607; Dio Cass. liii. 16, 18; Suet. *Aug.* 7; Vell. Pat. ii. 91; Flor. iv. 12; Censorin. 22; Veget. *de Re Mil.* ii. 5). It was not an official title, but a complimentary surname, like Africanus or Pius; and is hence called by Suetonius *nomen hereditarium* (*Tib.* 26); *i.e.* practically inheritable, not legally inherited (Mommsen, *Staatsr.* ii. 749 n.). It was, however, borne not only by Tiberius and the other emperors connected with the family of Augustus, but was likewise adopted by all succeeding emperors, as if descended, either by birth or adoption, from the founder of the empire ("in ejus nomen velut quadam adoptione aut jure hereditario succedere," Lampr. *Al. Sev.* 10). It was not usually assumed until it had been formally decreed by the senate (Tac. *Hist.* i. 47; Lampr. *Al. Sev.* 1; Vopisc. *Prob.* 12); and Vitellius at first refused it (Tac. *Hist.* ii. 62). From the time of Domitian, the imperial style and title began regularly with *Imperator Caesar* as *praenomina*, and ended with Augustus, thus: Imp. Caes. T. Flavius Domitianus Aug.; though sometimes another name comes after Augustus, as in T. Aelius Hadrianus Antoninus Aug. *Pius*. The name of Augusta was frequently bestowed upon females of the imperial family, the first instance of which occurs in the case of Livia, who, upon her adoption into the Julia gens on the death of Augustus, and by the provisions of his will, became Julia Augusta (Tac. *Ann.* i. 8). But *Augustus* belonged exclusively to the reigning emperor till the middle of the second century, when Marcus Aurelius and L. Verus both received this surname (Spartian. *Ael. Verus*, 5; *M. Ant. Phil.* 7). From this time we frequently find princes of the imperial family, adoptive sons, &c. honoured with this title (Amm. Marc. xxvii. 7). All such were regarded as participators in the imperial power, though of course the one who received the title first was looked upon as the head of the empire. When there were two Augusti, we find on coins and inscriptions AVGG; and when three, AVGGG. In the fourfold division of the empire under Diocletian, the two senior emperors were styled *Augusti*, the two junior *Caesares*. From the time of Probus the title became *perpetuus Augustus*, and from Philippus or Claudius Gothicus *semper Augustus*, the latter of which titles was borne by the so-called Roman emperors in Germany. (Eckhel, vi. 88, viii. 354 ff.; Mommsen-Marquardt, ii. 731; Preller, *Mythol.* 773 ff.) [W. S.] [W. W.]

AULA (*αὐλή*), an open yard, or court. In the Homeric house the *αὐλή* served the purpose of a farm-yard, and was surrounded with farm-buildings and rooms for the men-servants of the house. In the later Greek house it was a kind of quadrangle surrounded with a colonnade, into which the rooms of the house opened, and was used as a place for exercise and recreation. (Rumpf, *De aedibus Homericis*; A. Winckler, *Die Wohnhäuser der Hellenen.*) For further particulars, see DOMUS. [J. H. O.]

AULAEUM, usually in the plural AULAEA (*ἡ αὐλαία*), a curtain, carpet, or hanging, mostly of the heavier and richer sort (*τὸ μέγα καὶ ποικίλον παραπέτασμα*, Cosmas Indicopl. *Topog. Chr.*

p. 197). The name was especially applied to the tapestry worked with human and animal figures, which was early introduced from the East (Theophr. *Char.* 21, *αὐλαίαν ἔχουσαν Πέρσας ἐνυφασμένους*: Verg. *Georg.* iii. 25; Ovid. *Met.* iii. 111 ff.). The word *αὐλαία* is good Greek, as is shown by Theophr. *l. c.*; Hyperid. *fr.* 165 ed. Turic. = 142 Blass, *οἱ ἐννέα ἄρχοντες εἱστιῶντο ἐν τῇ στοᾷ, περιφραξάμενοι τι μέρος αὐτῆς αὐλαίᾳ*: Menand. *fr.* 720 Meineke, *στυππεῖον, ἐλέφαντ', οἶνον, αὐλαίαν, μύρον*: and the notion of Servius, that *aulaeum* was *ab aula Attali regis*, betrays the ignorance of a late grammarian (*ad Georg. l. c.*). He was perhaps misled by the line of Propertius, *Porticus aulaeis nobilis Attalicis* (ii. 32, 12 = iii. 24, 12); where, of course, the meaning is simply "rich enough for Attalus" (cf. Hor. *Od.* i. 1, 12).

Such hangings were extensively used (*a*) in temples, to veil the statue of the divinity (Pausan. v. 12, § 4); (*b*) in houses, either as coverings over doors, or as substitutes for doors, as window curtains, or again to decorate the walls of rooms, especially the *triclinium* or dining-room (Hor. *Sat.* ii. 8, 54); (*c*) on the outside of houses, to close in the verandahs, balconies, or open galleries [DOMUS]; (*d*) to stretch over colonnades, and thus form a tent (Hyperid. *l. c.*; Propert. *l. c.*). See further references under VELUM; and for the use of the curtain in theatres, SIPARIUM and THEATRUM. One or two disputed points may here be noticed.

As is well known, the curtain in the Roman theatre was not drawn up as in our own, but disappeared underneath the stage: the slit which contained the roller for this purpose, between the stage (*proscenium*) and the *scena*, is plainly seen in the smaller of the two theatres at Pompeii. Hence *aulaea premuntur*, "the curtain is let down," when the acting begins (Hor. *Ep.* ii. 1, 189); *aulaeum tollitur*, "the play is ended" (Cic. *pro Cael.* 27, § 65, and Ov. *Met. l. c.*). It has commonly been assumed, as by Donaldson (*Theatre of the Greeks*, ed. 7, p. 240), that the Greek custom was the same; but, according to Godfrey Hermann (*Leipz. Lit. Zeit.* 1818, p. 1906) and Böttiger (*Kl. Schr.* i. 402), it is doubtful whether the curtain was used in Greek theatres at all. The classical passages, cited in full above, in no way connect *αὐλαία* with the theatre; the grammarians who do so (Pollux, iv. 122; Bekk. *Anecd.* 83, 7: 463, 14; *αὐλαία τὸ τῆς σκηνῆς παραπέτασμα*: Hesych., Suid.) of course prove nothing as to the earlier period. The remains of genuine Greek theatres are in general too scanty to throw any light on this question; the best preserved, that of Aspendus, has certainly been modernised in the time of the Roman Caesars. Becker, who shares these doubts, observes further that the Roman usage may perhaps not be as old as the time of Plautus, judging from the concluding lines of his *Casina* and *Cistellaria*, spoken by the entire company (*grex*, *caterva*). (W. A. Becker, *ap.* Pauly, i.^{2} s. v. *Aulaeum*; cf. Wieseler, *Theatergebäude* u. s. w., Göttingen, 1851.)

Another common but probably erroneous opinion is that the word *aulaea* is applied in Latin poetry to the coverlets and draperies of couches in the *triclinium* or elsewhere (*περιστρώματα*, *stragulum*, *stragula vestis*, *toralia*). Of the passages relied on to prove this point, *cenae sine aulaeis et ostro* (Hor. *Od.* iii. 29, 15) is explained by Orellius with reference to *Sat.* ii. 8, 54, where there is no question as to the meaning of *aulaea* (for the distinction between *aulaea* and *ostrum*, cf. Böttiger, *Kl. Schrift.* i. 424, *ap.* Orell.); and in Verg. *Aen.* i. 697 Conington has rightly reverted to the explanation of Servius and the older commentators, rejecting that of Heyne and most moderns as "without authority." (See two illustrations of wall-hangings under CENA.) [W. W.]

AURES. [ARATRUM.]

AU'REUS. Of the use of gold for coins among the Greeks, an account is given under PONDERA and AURUM, *infra*. But the term aureus was applied particularly to the Roman gold coins. Concerning the issue of these pieces at various periods of Roman history, sufficient details are given under AS, pp. 207, 208. [P. G.]

AURI'GA. [CIRCUS.]

AURUM. Gold, from its malleability and the circumstance that it is found lying in lumps, was one of the earliest of metals used by man, and among the most primitive resources of civilization. This was suspected by the ancients, who make the earliest age of the world's history an age of gold. In the Heroic age, we find that gold was put to a great variety of uses. Homer speaks of the houses of Menelaus and Alcinous as full of silver and gold; the armour of Glaucus was of gold (*Il.* vi. 236), so were the handmaids of Hephaestus (*Il.* xviii. 417), and the doves on Nestor's cup (*Il.* xi. 632). So in the decoration of the shield of Achilles, the chest of Cypselus, and other works of art, much gold was employed. And that this plenty of gold was not a mere figment of the poet, we know from the best testimony, that of graves. At Mycenae, which is in Homer called *πολύχρυσος*, Dr. Schliemann has dug up a prodigious quantity of gold, cups and jugs and masks and ornaments of all sorts. The graves of the Crimea (though these are of later date) also yield abundance of gold; the corpses which are discovered in them being covered from head to foot with gold, beaten into the shape of animals, rosettes, and designs of all kinds. The use of gold as a concomitant of luxury for personal decoration was associated specially by the Greeks with the wealthy nations of Asia Minor, such as the Lydians and Phrygians, from which notion arose the story of Midas the Phrygian, who turned everything he touched into gold, and the belief that the wealth of the Pelopid princes of Southern Greece was brought by them from their native Phrygia. In the use of gold, the wealthy Ionians of Asia Minor copied these neighbours, even binding their hair with it, in which custom the Athenians are said to have followed them (Thuc. i. 6).

There can be no question that to the smiths of early time gold must have been the metal which gave most scope for the artistic faculty. Its extreme softness and malleability enabled even workmen who had no more elaborate tools than a hammer and nails, to work it into any given shape. All the vessels of Mycenae are thus hammered out and joined into shape by nails, and the earliest statues of the gods were produced by the same method, which was called by the ancients *σφυρηλατεῖν*. They did indeed sometimes, instead of

the mountains of Thrace. These last, however, seem not to have yielded their full supply until they fell into the hands of Philip of Macedon, who procured from them, it is said, 1000 talents a year (Diod. xvi. 8),—in fact such large stocks of gold as to alter completely the degree of its rarity in Greece. In earlier days the metal had been decidedly rare in Hellas and Sicily. When the Laconians wished to procure gold to gild a votive statue of Apollo, they had to apply to Croesus for it (Herod. i. 69), and Hiero I. of Syracuse had much difficulty in procuring gold for a votive offering to Delphi of a gold Victory and tripod (Athen. vi. p. 232). But in course of commerce this poverty disappeared, and gold was poured into Greece in still increasing quantities, until the overflowings of Macedonian wealth made it comparatively common. It was then again used as in pre-historic days for the vessels and ornaments of the rich. It also became a custom for cities to bestow crowns of gold of great weight and value upon their benefactors, and even sometimes to set up their statues in gold. The horns of oxen offered in sacrifice were gilt, both in Greece and Rome.

Diodorus informs us (iii. 12) that in Upper Egypt, on the confines of Aethiopia, were gold mines which were worked from the time of the early kings of Egypt onwards for the benefit of the state. But here the gold was not found as elsewhere on the surface of the ground, but extracted from the heart of the mountains by a number of miserable slaves. Diodorus describes the process, which appears to be that of extracting gold from quartz. The stone, he says, which contained the metal was softened by fire, and then detached in masses by wedges of iron. These masses were brayed in stone mortars and ground to the fineness of sand. Finally, the gold was detached by washing, the workmen aiding the process with their hands and with fine sponges. The metal was purified by being placed, together with a certain quantity of lead, salt, tin and bran, in jars hermetically sealed, and exposed for five days to the heat of a fire, after which time the foreign substances were found to have evaporated.

In his 33rd book, Pliny traces the history of the use of gold in Rome from earliest times. He says (c. 5) that when the Gauls sacked the city, no more than 1000 pounds' weight of gold could be found in it for ransom. The stock of gold in the treasury had increased seven years before the Third Punic War to 17,410 pounds; and after the successful termination of that war, the metal came into commoner use for decoration, as for covering ceilings and walls, as well as for vessels. The custom of wearing gold rings was so late in Rome, that even Marius wore one of iron. The great influx of the metal and its use for all purposes of luxury dated in Rome as in Greece from the time of Oriental conquest. For ancient testimonies as to gold mines see Sabatier, *Production de l'or, de l'argent et du cuivre chez les anciens.*

Gold as coin.—In many parts of the East and in Egypt, gold wedges and rings of fixed weight passed as currency before the invention of coins properly so called. The earliest gold coins, which however belong to a later date than the Lydian and Milesian electrum, were issued by Phocaea [PONDERA]. For a long period, beginning with the reign of Darius Hystaspis, the gold coinage of the world consisted almost exclusively of the Persian Darics (*q. v.*), which not only circulated throughout Asia, but came over to Europe in large quantities, and were laid up in the treasuries of Greek cities. About B.C. 400, Syracuse and other Sicilian cities began to issue small coins of gold, but the earliest Greek coinage of any importance in this metal was that of Philip of Macedon. The gold pieces of Philip and Alexander were issued in enormous quantities, both during the lives and after the deaths of those monarchs. The Philippi circulated in Hellas, Italy, and the West, where they became the prototypes of the abundant gold coinages of Gaul and Britain (Evans, *Coinage of the ancient Britons*). The Alexandri, on the other hand, succeeded the Darics in Asia, and continued for many years to furnish the bulk of the gold circulation of the Seleucid and Ptolemaic kingdoms. Contemporary, however, with them, during the life of Alexander, were issues of gold by Athens, Rhodes, Cius, Panticapaeum, and other wealthy cities, which minted in their own names; and after the death of Alexander these coins gradually gave way to the gold money issued by the Macedonian kings of the East, especially the very wealthy Ptolemaic princes.

Aristophanes appears to speak of an issue of gold money at Athens, about the year B.C. 407 (*Ran.* 719). We say "appears," because it is not impossible that the poet may be using the term χρυσίον generally for "money," and here may even apply it to copper coin. But it is probable that the gold coins of Athens which have come down to us, which are numerous and of all denominations, belong to a later period, not earlier than the middle of the 4th century. At Rome gold was used in making payments as early as the 4th century B.C., but it was kept only in bars, the adulteration of which was punished by a law of Sulla. Gold coin proper was first issued at Rome in B.C. 217, but never in Republican times, except on the occasion of military expeditions. (Mommsen, *Gesch. des Röm. Münzw.* pp. 400–408.)

The Greeks, when they speak of χρυσίον, quite as often mean coin of electrum (*q. v.*) as of pure gold: which is intended, must in each case be judged by the context. Gold coin among the ancients, unless intended to pass as electrum, was usually very pure. The gold pieces of Alexander and Philip are almost without alloy; and Augustus, in his monetary reforms, fixed the margin of alloy, under severe penalties, at ·002. It is only among barbarous peoples that we find gold, the true measure of value in nearly all countries, debased. Thus in Gaul gold rapidly deteriorated, as it was copied from tribe to tribe, and the kings of Bosphorus, who continued in Roman times to issue their own gold, continually debased it until it was finally no better than copper gilt. (Lenormant, *La Monnaie dans l'Antiquité*, i. pp. 187–205.) [P. G.]

AURUM CORONA'RIUM. When a general in a Roman province had obtained a victory, it was the custom for the cities in his own provinces, and for those from the neighbouring states, to send golden crowns to him, which were carried before him in his triumph at Rome. (Liv. xxxviii. 37, xxxix. 7; Festus, s. v. *Triumphales Coronae.*) This practice appears to have been borrowed from the Greeks; for Chares related, in his history of Alexander (*ap.* Athen. ii. p. 539 a), that after the conquest of Persia, crowns were sent to Alexander, which amounted to the weight of 10,500 talents. The number of crowns which were sent to a Roman general was sometimes very great. Cn. Manlius had 200 crowns carried before him in the triumph which he obtained on account of his conquest of the Gauls in Asia (Liv. xxxix. 7). In the time of Cicero, it appears to have been usual for the cities of the provinces, instead of sending crowns on occasion of a victory, to pay money, which was called *aurum coronarium* (Cic. *Leg. Agr.* ii. 22, § 59; Gell. v. 6; Monum. Ancyr.). This offering, which was at first voluntary, came to be regarded as a regular tribute, and seems to have been sometimes exacted by the governors of the provinces, even when no victory had been gained. By a law of Julius Caesar (Cic. *in Pis.* 37, § 90), it was provided that the aurum coronarium should not be given unless a triumph was decreed; but under the emperors it was presented on many other occasions, as, for instance, on the adoption of Antoninus Pius (Capitolin. *Anton. Pius*, c. 4).

Later, the aurum coronarium became a complimentary present to the emperor on stated occasions, such as his accession, happy events in the imperial family, *rebus prospere gestis, indulgentiarum laetitia*, or, lastly, *amore proprio* (*Cod. Theod.* xii. 13, 4). The "feudal incidents" and "benevolences" of more modern times may have been connected with, and are certainly not without analogy to, these Roman customs. In the impoverishment of the empire this burden, among others, fell exclusively upon the *decuriones, curiales*, or municipal senators, whose onerous dignity was made the pretext of many exactions (*id.* xii. 13, 1–3; xii. 12, 15). The payment was excused by Alexander Severus (Lampr. *Al. Sev.* 32), and by Julian (Amm. Marc. xxv. 4; Cod. Theod. xii. 13, 1), but levied more stringently than ever by Valentinian and Theodosius (Cod. x. 74). [W. S.] [W. W.]

AURUM LUSTRA'LE was a tax imposed by Constantine, according to Zosimus (ii. 38), upon all merchants and traders, which was payable at every lustrum, or every four years, and not at every five, as might have been expected from the original length of the lustrum. This tax was also called *auri et argenti collatio* or *praestatio*, and thus in Greek ἡ συντέλεια ἡ τοῦ χρυσαργύρου. (*Cod.* 11, tit. 1; *Cod. Theod.* 13, tit. 1; Orelli-Henzen, *Inscr.* 6507.) A somewhat similar tax was the *aurum negotiatorium*, first mentioned under Caligula, which, however, went to the support of the *aerarium*, or public treasury, not the imperial *fiscus* (Suet. *Cal.* 40, 41). It does not appear to have been permanent, and is perhaps the same as the duty repealed by Nero on the petition of the trading classes (Tac. *Ann.* xiii. 51). In the confused narrative of the Augustan historian, it is mentioned first as imposed under Alexander Severus, then excused together with the aurum coronarium (Lampr. *Al. Sev.* cc. 24, 32). [W. S.] [W. W.]

be identified with a llection (*Mus. Borbon.* cut above. This vessel is in bronze, and of very tasteful workmanship: the cylinder in the centre was filled with charcoal, and has a grating which allowed the air to enter and the ashes to escape. The second cut, from *Mus. Borbon.* vol. v. pl. 44, shows another of more elaborate construction. The Russian samovar is likewise explained to mean "self-boiler," and appears to be little different from the authepsa. [W. S.] [W. W.]

AUTOMACHEIN. [Bebaioseos Diké.]

AUTOMOL'IAS GRAPHE' (**αὐτομολίας γραφή**), the accusation of persons charged with having deserted and gone over to the enemy (Pollux, vi. 151). There are no speeches extant upon this subject; it seems clear, however, that the punishment was death (Ulpian, on Demosth. *de F. L.* p. 380, § 126; Petitus, *Leg. Att.* p. 674). Meier makes it a military offence tried by a jury of soldiers under the presidency of the generals (*Att. Proc.* p. 365), like those enumerated under Astrateias Graphé; but this is probably true only of those inscribed on the **κατάλογος**, or list for service. Persons who left the city in times of danger without any intention of going over to the enemy were tried by the Areiopagus as traitors (Lycurg. *c. Leocr.*, § 52); and that civilians guilty of actual **αὐτομολία** were brought before the same court is more likely than that they could be indicted before a military tribunal.

Actors, whose exemption from military service has been noticed under Ateleia, habitually enjoyed a free pass in time of war, and thus were found useful when it was desired to open indirect negotiations; *e.g.*, Aristodemus was so employed between Philip and the Athenians, B.C. 347 (*Argum.* ad Dem. *F. L.* p. 335 *init.*; Grote, ch. lxxxix.). To check the desertion of slaves in war-time, their master's power of punishing them was restricted (Aristoph. *Nub.* 6, 7). [J. S. M.] [W. W.]

AUTON'OMI (**αὐτόνομοι**), the name given by the Greeks to those states which were governed by their own laws, and were not subject to any foreign power (Thuc. v. 18, 27; Xen. *Hell.* v. 1, § 31). This was the proper meaning of the word; but, in the days of the Athenian maritime empire, it was applied to those of the subject-allies who were merely controlled in their foreign policy, and required to furnish a contingent of ships, but not otherwise interfered with. At the time of the Sicilian expedition, the Chians and Methymnaeans seem to have been the only members of the confederacy who retained this amount of freedom; as **νεῶν παροκωχῇ αὐτόνομοι** they are distinguished from the payers of tribute (**φορά**), the badge of the **ὑπήκοοι**, and from the really independent allies (**πάνυ ἐλευθέρως ξυμμαχοῦντας**, Thuc. vi. 85, § 2). Before the revolt of 428 B.C. the Mitylenaeans had enjoyed the same privileges; and the language of Grote in describing their political state may be taken as a sufficient account of this form of autonomy: "Lesbos, like Chios, was their ally upon an equal footing, still remaining under those conditions which had been at first common to all the members of the confederacy of Delos. Mitylene paid no tribute to Athens: it retained its walls, its large naval force, and its extensive landed possessions on the opposite Asiatic continent: its government was oligarchical, administering all internal affairs without reference to Athens. Its obligations as an ally were, that in case of war it was held bound to furnish armed ships; whether in determinate number or not, we do not know. It would undoubtedly be restrained from making war upon Tenedos, or any other subject-ally of Athens; and its government or its citizens would probably be held liable to answer before the Athenian dicasteries, in case of any complaint of injury from the government or citizens of Tenedos or of any other ally of Athens; these latter being themselves also accountable before the same tribunals under like complaints from Mitylene. That city was thus in practice all but independent . . ." (*Hist. Gr.* ch. l. *init.*) It should be added that, while the tributary allies were compelled to bring their criminal causes to Athens, the autonomous allies were not. The changed condition of the Mitylenaeans after the suppression of the revolt is illustrated by the speech of Antiphon *On the Murder of Herodes*, which belongs to the subsequent period; the prisoner and the prosecutors are alike residents in Mitylene, but the trial takes place at Athens.

The same two characteristics—the retention of their own *leges* and *judicia*—mark the *liberae civitates* under the Roman dominion, of whose designation *αὐτόνομοι* was the Greek rendering. Thus Cicero writes of the beneficial effects of his own humane provincial government: *Omnes, suis legibus et judiciis usae, αὐτονομίαν adeptae, revixerunt* (*ad Att.* vi. 2). In another letter, however, he mildly ridicules the fancied independence of this class of subjects: *Graeci vero exultant quod peregrinis* (i.e. *suis, non Romanis*, Ern.) *judicibus utuntur. Nugatoribus quidem, inquies. Quid refert? tamen se αὐτονομίαν adeptos putant* (*ad Att.* vi. 1, § 15). This self-government was regarded as a great privilege and mark of honour; and the cities which enjoyed it recorded the fact upon their coins, medals, and inscriptions. We find, for instance, on coins of Antioch ΑΝΤΙΟΧΕΩΝ ΜΗΤΡΟΠΟΛ. ΑΥΤΟΝΟΜΟΥ, on those of Halicarnassus ΑΛΙΚΑΡΝΑϹϹΕΩΝ ΑΥΤΟΝΟΜΩΝ, and so of many other cities. In numismatics, "autonomous" medals are those which bear no sign of subjection in the head of an emperor or provincial governor. There are many such belonging to cities which never were really autonomous, and to Roman colonies. (On this branch of the subject, see *Essai sur les médailles autonomes romaines de l'époque impériale*, by the Duc de Blacas, in the *Revue numism.*, 1862, pp. 197–234, 387–390; on Greek autonomy in general, Hermann, *Staatsalterth.* § 41, 1; Schiffer, *Die Autonomie bei den alten Griechen*, a gymnasial programme, Münster, 1862.) AXAMENTA. [Salii.]

AXI'NE. [Securis.]

AXIS. [Currus.]

AX'ONES (*ἄξονες*), also called *κύρβεις*, wooden tablets painted white, and made to turn on an upright axis, on which were written the laws of Solon. According to some writers, the *κύρβεις* contained the public and religious, the *ἄξονες* the private laws; according to others, the *κύρβεις* had three sides, and the *ἄξονες* four. But at Athens, at all events, they were almost certainly identical, according to the statement of Aristotle (*ap.* Plut. *Sol.* 25). The grammarians, indeed, insist on the difference; but the opinion of most modern scholars is in agreement with that already expressed in the former editions of this work. The phrase *ἐκ τῶν κύρβεων θύειν* in Lysias (Or. 30, *c. Nicom.* § 17) has been relied upon by the advocates of the distinction. But the law of murder must have been a public and religious law: and this we find was *ἐν τῷ ἄξονι* (Lex ap. Dem. *c. Aristocr.* p. 629, § 28: read *ἐν τῷ ά ἄξονι*, *i.e.* *πρώτῳ ἄξονι*, with Cobet, *Var. Lect.* p. 123; the *ἄξονες* being always mentioned in the plural).

The words *τρίγωνοι* and *τετράγωνοι*, used of the *ἄξονες* and *κύρβεις*, have been wrongly explained by some authorities, both ancient and modern, as applying to the separate tablets, and not to the whole contrivance (*κατασκεύασμα*). The gloss in Timaeus has *Κύρβεις· στηλὴ τρίγωνος πυραμοειδὴς νόμους ἔχουσα περὶ θεῶν* (so also Bekk. *Anecd.* p. 274, *τρίγωνοι, πυραμίδι ὅμοιοι*). This pyramidal shape is accepted by Planck (*ap.* Pauly i.^{2} *s. v.* *ἄξονες*), and Liddell and Scott (ed. 7, *s. v.* *κύρβεις*). But apart from its unsuitableness for exhibiting writings, the clear account of Aristophanes of Byzantium (in *Etym. M.* p. 547; cf. Ruhnken on Timaeus, *s. v.* *κύρβεις*) leaves no doubt that the boards were rectangular, and formed, as Caillemer puts it, a prism (not pyramid) of three or four sides.

The *ἄξονες* were at first kept in the Acropolis, but were afterwards placed, at the suggestion of Ephialtes, in the agora for all to read. Some fragments of them were preserved in the prytaneium in the time of Plutarch (*l. c.*; cf. Paus. i. 18, 3). (Schol. *ad* Aristoph. *Av.* 1354; Schol. *ad* Apoll. Rhod. iv. 280; Anaximenes *ap.* Harpocrat. *s. v.* *ὁ κάτωθεν νόμος*: *Etym. M.* p. 547; Suid. *s. v.*; Hermann, *Staatsalterth.* § 107, 1; Schömann, *Antiq.* i. 329, n., E. T.; Preller, on *Polemonis Periegetae fragm.* pp. 87–91 [the fragment itself in Müller, *Fr. Hist.* iii. 138 a].) [W. S.] [W. W.]

B.

BABYLO'NICUM (usually in plural), a Babylonian coverlet, placed upon couches (Lucr. iv. 1029; Fest. p. 298, Müller) and horses (Dig. 34, tit. 2, s. 25, § 3), sometimes used as a garment (*amictus aureo Babylonico*, Publ. Syr. *ap.* Petron. 55), though Ulpian (Dig. *l. c.*) denies that it should be classed as a dress (*non puto vestis esse*), was much prized by the Romans for its brilliant colour (Lucr. *l. c.*) and embroidery (Mart. viii. 28, 17). [W. S.]

BACCHANA'LIA, the name under which the festivals of Dionysus or Bacchus were known at Rome. The circumstances of the introduction of these rites at Rome are given in detail by Livy, xxxix. 8–19 (cf. Val. Max. i. 3, 3, and vi. 3, 7). According to his account, a Greek priest of no education or position brought into Etruria the secret nightly celebration of this worship. It was not only accompanied by all manner of licentious excesses, but was also made the occasion for planning the most revolting crimes, perjury, forgery, false accusations, poisoning, and assassination. From Etruria the contagion spread to Rome. If Livy's narrative is to be trusted, at first the rites were comparatively innocent. Women only were initiated, and that by day, three times in the year, and the priesthood was held by matrons in turn. It is quite possible that in this statement Livy has in view the worship of Stimula or Simila, an early Italian deity, afterwards identified with Semele, whence Ovid (*Fast.* vi. 503–515) regards her rites as of a Bacchanalian character. Possibly Virgil is thinking of the same, when (*Aen.* vii. 385) he speaks of the Bacchic rites as existing in Italy in the time of Aeneas. In any case it is hardly conceivable that the corrupt Etruscan cult should have so much changed its character in passing into Rome, as Livy's account would require us to believe. He goes on to say (c. 13) how a certain Pacullia Annia, a Campanian priestess, claiming to be acting under the inspiration of the gods, changed the whole character of the worship. She was the first to admit men, by initiating her own sons; she altered the time of celebration from the day to the night; and held initiations five times every month instead of three times a year. The promiscuous admission of men and women and the licence of night opened the way to all manner of debauchery and crime. The most horrible immoralities were practised; the wildest frenzy indulged in. Men flung themselves about as if possessed, and uttered frantic prophecies; women dressed as Bacchanals, with dishevelled locks, ran down to the Tiber, and plunged into the water torches, which, composed of a mixture of sulphur and lime, were not extinguished in the waves. The initiated were a vast number, —"alter jam prope populus," as Livy puts it,— including many of high birth, both men and women. To secure the complete subjugation of the votaries, a rule was made that none should be admitted who were not under twenty years of age, a time at which the judgment is weak and the passions strong. For some time, although the existence of these rites was generally known, not only by report, but also by the clanging of cymbals and the howlings of the devotees by night (*ib.* c. 15), their real nature was not suspected. But in B.C. 186 the lewd and criminal character of the meetings was brought to the knowledge of the consuls. P. Aebutius, the orphan of a Roman knight, had been left by the death of his guardians to the charge of his mother Duronia and his stepfather Sempronius Rutilus. The latter had embezzled his property, and in order to escape punishment desired either to make away with the youth, or to get him entirely into his power. Duronia, who was entirely devoted to her husband, determined to avail herself of the Bacchanalia for the corruption or destruction of her son. She informed him that at a time when he was sick she had vowed that he should be initiated into the Bacchic rites, if he recovered, and that now was the time to discharge the vow. Aebutius, taking the matter lightly, mentioned it to a freedwoman, Hispala Fecenia, with whom he had a *liaison;* but she, in the utmost terror and distress, warned him of the dangers that he was incurring: she, when still a slave, had accompanied her mistress to the orgies, and had seen the vile practices of the votaries. Aebutius, returning to his mother, refused to be initiated, without disclosing his reasons. She in a fury drove him from the house. He took refuge with his father's sister, and at her advice laid the whole facts of the case before the consuls. Hispala was induced by them to confess all that she knew; the senate was consulted; and full powers given to the consuls to investigate the matter. Prompt measures were taken to secure evidence, and to prevent the escape of the guilty. The inquiry led to the belief that more than 7000 men and women were implicated in the affair. Those who were merely initiated, and had taken the oath binding them to every kind of crime and lewdness, were punished with imprisonment; those against whom actual guilt was found—and these, we are told, were the majority—received capital punishment. The women for the most part were handed over to their relations, or to those who were responsible for them, for private execution; the rest were put to death in public. One of the most ancient and precious records of the old Latin language preserved to us is the bronze tablet containing the letter in which the consuls communicated to the magistrates *in agro Teurano* (Tirioli, in the country of the Bruttii) part (as Mommsen thinks) of the decree of the senate passed on this occasion (cp. Mommsen, *C. I. L.* i. 196; Ritschl, *P. L. M. E.* tab. xviii.); doubtless it is only a specimen of many which *mutatis mutandis* were sent throughout Italy. The Bacchanalia are rigidly prohibited: if any one, Roman, Latin or ally, considers himself under a religious obligation *bacanal habere,* he can only do so by obtaining permission from the *praetor urbanus,* confirmed by a vote of the senate in which not less than 100 have taken part. No priest, president, or common purse is allowed, nor any kind of common vow. Not more than two men or three women (five in all) should celebrate the rites, except by special permission. These regulations were carried out with unflinching rigour, apparently not without the use of military force (Cic. *de Leg.* ii. 15, 37); but it was some years before the Bacchanalian rites were completely extinguished in Southern Italy (Liv. xxxix. 41, xl. 19). It has been supposed, but probably not with justice (cf. Preller, *Röm. Myth.* p. 718), that a fragment of Varro's satires preserved by Nonius, p. 112, points to a subsequent revival of these rites at Rome. Otherwise we have no further trace of them in literature or history. The LIBERALIA were of an entirely different character. [A. S. W.]

BACCHOS (Βάκχος), a kind of Thyrsus. [THYRSUS.] [W. S.]

BAC'ULUM (*βακτηρία, ῥάβδος, σκῆπτρον, σκυτάλη*: in the poets, *βάκτρον* and *σκίπων*. The Homeric word is *σκῆπτρον*).

Carrying a stick was as common a practice in Greece as it is with us (Lysias, *pro Inval.* 12; Plat. *Protag.* p. 310 A; Aristoph. *Plut.* 272, *Eccl.* 150, 509; *Nub.* 541); and on Greek vases and sculptures we see sticks of all forms and patterns. The straight form with an ornament at the head, called the Περσικὴ βακτηρία (Hesych. *s. v.*; *Etym. M.* 185, 56; cf. Herod. i. 195), was the form affected by dandies at Athens in the time of Aristophanes (Aristoph. *ap.* Poll. x. 173, *βακτηρία δὲ περσὶς ἀντὶ καμπύλης*); while the large crook form (*καμπύλη*) was on the stage carried by old men and rustics (Poll. iv. 119), as in the illustration given next page.

The club form (*σκυτάλη*, Moeris, Suidas, Phot. *s. v.* *σκυτάλη· βακτηρία ἀκροπαχὴς*) was in vogue in the ruder states of Greece, such as Sicyon, where the lowest class of the community was called "the Club carriers" (*κορυνηφόροι*), but especially at Sparta, and became the rage at Athens among the *Λακωνισταί* (Aristoph. *Av.* 1283), while in later times it was affected by Cynic philosophers (Lucian, *Vit. Auct.* 8). The crutch, too, is often seen on ancient monuments (cf. Paus. x. 30, 1, *σκήπτρῳ τε ὑπὸ τὴν ἀριστέραν μασχάλην ἐρειδόμενος*). (For the sticks or batons carried as insignia of office by the Athenian jurymen, see Dikastes; for the shepherd's staff, Pedum; for the Spartan use of the stick in secret correspondence, Skytale; for the herald's staff, Caduceus.)

Baculum. (*Museo Borbonico*, vol. i. pl. xx.)

In Rome, on the other hand, the use of walking sticks was unknown. On the monuments we only see sticks in the hands of aged or infirm persons, or held as symbols of office. (See Sceptrum, Centurio.) [W. M. L.]

BAE'TYLUS (Βαίτυλος). [See *Dict. of Gr. and Rom. Biogr. and Myth.*; s. v.]

BA'JULUS (ἀχθοφόρος), a porter, anyone employed to carry burdens, whether a freeman or a slave. (Gell. v. 3, § 1; Fest. p. 35; Plaut. *Poen.* v. 6, 17; Cic. *de Or.* ii. 10, 40, *Par.* iii. 2; cf. Dig. 50, 16, 235.) The name was also given to a letter-carrier. (Symmach. *Ep.* iii. 34, v. 7; Sidon. *Ep.* iv. 7; Hieron. *Ep.* 6 *ad Julian.* 1; Cod. Theod. 2, 27, 1, § 2.) The bearers at funerals, properly called *vespillones*, sometimes had the name of bajuli. ("Vespillones dicti sunt bajuli," Fulg. *Expos. Serm.* p. 558; Amm. xiv. 7, § 17; Sidon. *Ep.* iii. 12.) [W. S.]

BAKTE'RIA (*βακτηρία*). [Baculum.]

BALAN'TION. [Crumena.]

BA'LATRO, a professional jester, buffoon, or parasite (Hor. *Sat.* i. 2, 2); in *Sat.* ii. 8, 21 the word is used as a proper name—Servilius Bălatro). In spite of the difference of quantity, *bălătro* is probably connected with *bala-re* (to bleat like a sheep, and hence) to speak sillily. It is doubtless akin to *blatero*, a chatterer (Gell. i. 15). Balatrones were paid for their jests, and the tables of the wealthy were generally open to them for the sake of the amusement they afforded. [A. S. W.]

BALLE'TYS (Βαλλητύς). [Eleusinia.]

BALLISTA. [Tormentum.]

BA'LNEAE, *Balineae, Balneum, Balineum, Thermae* (ἀσάμινθος, βαλανεῖον, λοετρόν, λουτρόν).

Greek Baths.—Bathing was a practice familiar to the Greeks of both sexes from the earliest times, both in fresh water and salt, and in the natural warm springs, as well as vessels artificially heated. Thus Nausicaa, daughter of Alcinous, king of Phaeacia, goes out with her attendants to wash her clothes; and after the task is done, she bathes herself in the river. (*Od.* vi. 58, 65.) Ulysses, who is conducted to the same spot, strips and takes a bath, whilst Nausicaa and her servants stand aside. (*Od.* vi. 210–224.) Europa also bathes in the river Anaurus (Mosch. *Id.* ii. 31), and Helen and her companions in the Eurotas (Theocr. *Id.* vii. 22). Warm springs were also resorted to for the purpose of bathing. The Ἡράκλεια λουτρὰ shown by Hephaestus or Athena to Hercules are celebrated by the poets. Pindar speaks of the hot baths of the nymphs—*θερμὰ Νυμφᾶν λουτρὰ* (*Olymp.* xii. 27), and Homer (*Il.* xxii. 149) celebrates one of the streams of the Scamander for its warm temperature. Bathing in rivers or the sea (*ψυχρολουτεῖν*) was always common for the young (cf. Caryst. Perg. *ap.* Athen. i. 24 c). Not to know how to read and to swim were proverbial marks of the ignoramus (*Paroem.* ed. Gaisf., D. vi. 56). A plunge in the Eurotas always sufficed for the Lacedaemonians (Schol. on Thuc. ii. 36). There appears to have been a swimming bath (*κολυμβήθρα*) at Athens in the time of Plato (*Rep.* 453 D).

The artificial warm bath was taken in a vessel called *ἀσάμινθος* by Homer, and *ἔμβασις* by Athenaeus (i. 25 c, e). It was no doubt of wood or marble, as the epithet *εὔξεστος* is applied to it (*Od.* iv. 48), and in the case of Menelaus' Egyptian presents (*Od.* iv. 128) it was of silver. It would appear from the description of the bath administered to Ulysses in the palace of Circe, that this vessel did not contain water itself, but was only used for the bather to sit in while the warm water was poured over him, which was heated in a large caldron or tripod, under which the fire was placed, and when sufficiently warmed was taken out in other vessels and poured over the head and shoulders of the person who sat in the *ἀσάμινθος*. (*Od.* x. 359–365.) The bath was usually thus administered by a handmaiden (*Il.* xiv. 6; *Od.* iv. 49, vi. 210), or even a daughter (*Od.* iii. 464), or the mistress of the house (*Od.* iv. 252; v. 263; x. 450): unless we hold with Mr. Gladstone (*Studies on Homer*, iii. 513–516) that the maidens gave the men in each case the means of washing themselves; for which he compares such expressions as "feeding the poor," and refers especially to *Od.* vi. 210, 218–220, compared with vii. 296. Where cleanliness merely was the object sought, cold bathing was adopted, which was considered as most bracing to the nerves (Athen. *l. c.*); but after violent bodily exertion or fatigue warm water was made use of, in order to refresh the

sion of the muscles.

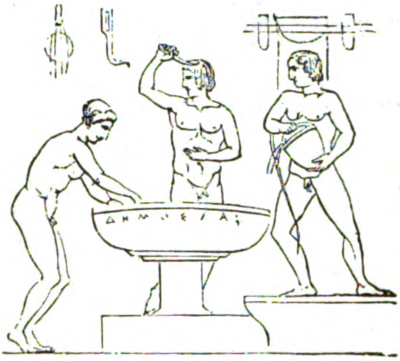
all, almost nominal,

charge for the use of the public baths (cf. Aristoph. *Nub.* 853). Thus in the inscription of Andania (i. 107) the price is fixed at 2 chalki = ¼ obol. At Phaselis it was probably not much higher; though something more seems to have been demanded from strangers (Ath. viii. 351 f). In the time of Lucian, who calls the fee *ἐπίλουτρον* (*Lexiph.* 2), it was two obols.

We know very little of the baths of the Athenians during the republican period; for the account of Lucian in his Hippias relates to baths constructed after the Roman model. On ancient vases, on which persons are represented bathing, we seldom find anything corresponding to a modern bath in which persons can stand or sit; but there is always a round or oval basin (*λουτήρ* or *λουτήριον*), resting on a stand (*ὑπόστατον*), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following woodcut taken from Sir W. Hamilton's vases. (Tischbein, i. pl. 58.) The word ΔΗΜΟΣΙΑ upon it shows that it belonged to a public bath.



Public Basin for Men. (From a Greek Vase.)

The next woodcut is also taken from the same work (i. pl. 59), and represents two women bathing. The one on the right hand is entirely naked, and holds a looking-glass in her right

hand; the one on the left wears only a short kind of ἐχέσαρκον χιτώνιον, of which we have no other instance. Eros is represented hovering over the bathing vessel.

But besides the λουτῆρες and λουτήρια there were also vessels for bathing, large enough for persons to sit in, which, as stated above, are called ἀσάμινθοι by Homer and πύελοι or μάκτραι by the later Greeks (Schol. *ad* Aristoph. *Equit.* 1055; Hesych. *s. v.* Πύελος: Pollux, vii. 166, 168). The λουτὴρ thus, as we shall see, corresponded to the Roman *labrum;* the πύελος to the *solium* or *alveus.*

In the baths there was also a kind of sudorific or vapour bath called πυρία or πυριατήριον, which is mentioned as early as the time of Herodotus (iv. 75). (Compare Pollux, vii. 168; Athen. v. p. 207 f, xii. p. 519 e; Plut. *Cim.* 1.) Becker (*Charikles,* Scene viii. note 23) holds that in Greece generally, as at Sybaris (Athen. xii. p. 519), the bathers sat in separate tub-like compartments; but Marquardt (*Privatleben,* p. 282) and Göll (*Charikles,* iii. 105) show, by a comparison of Timarchus (*ap.* Athen. xi. p. 501 e) and Alciphr. *Ep.* i. 23, with Vitruvius, v. 11. 5, that this ξηρὸς θόλος (Alexand. Aphrod. *Probl.* i. 41) was the same as the *concamerata sudatio* or *laconicum* of the Romans, for which see below, p. 277. This seems to have been not simply or even principally a Spartan usage (for warm baths were very rarely allowed at Sparta; see Plut. *Lycurg.* 16), but common to the Greek race (Ἑλληνικὴ πυρίη, Herod. iv. 75), and not, as in early Rome, a luxury or form of medical treatment. Among the chambers of the Greek bathing establishment was the ἀλειπτήριον, Lat. *unctorium* (Alexis, *ap.* Poll. vii. 166; Theophr. *de Sudore,* 28). Lucian (*Hipp.* p. 73) speaks of the ἀποδυτήριον with its ἱματιοφυλακοῦντες (*capsarii*); but as they seem to be unknown to Aristotle (*Probl.* xxix. 14), they were probably introduced from Rome. Hence Aristotle tells us that those who stole clothes from the baths (ἱματιοκλέπται or λωποδύται, Diog. Laert. vi. 52; Athen. iii. p. 97 e) were punishable with death. (Cf. Demosth. *c. Conon.* p. 1256, § 1; *c. Timocr.* p. 736, § 114.) As the baths most frequently adjoined the gymnasia and palaestra (cf., for example, the baths at Anticyra, Paus. x. 36, 9), one of the rooms of these latter buildings served the purpose of undressing-room (Xen. *Rep. Ath.* ii. 10). About these rooms the τριβαλλοί used to loaf, looking out for an invitation. We hear of wrestling (Theophr. *Char.* 27) and playing the cottabos (Diog. Laert. vi. 46), besides a great deal of conversation going on in the baths. To sing there was considered the part of a boor (Theophr. *Char.* 4).

Either the bath or simple anointing of the body generally formed part of the business of dressing for dinner (Xen. *Symp.* 1, 7). Hence we find the bath spoken of as ὁδὸς ἐπὶ τροφὴν (or τρυφήν), Artemid. *Oneir.* 61. It was generally taken shortly before the δεῖπνον or principal meal of the day. Epictetus (*Diss.* i. 1, 29) and Alciphr. (*Ep.* iii. 60) mention noon as the hour; while voluptuaries bathed repeatedly (Menander, *ap.* Athen. iv. 166; Simonides, *ap.* Aelian, *H. A.* xvi. 24). It was the practice to take first a warm or vapour, and afterwards a cold bath (Plut. *de primo frig.*

68), signifies, in its
bathing-vessel, such
onsequence amongst
their own houses
hence the chamber which contained the bath (Cic. *ad Fam.* xiv. 20), which is also the proper translation of the word *balnearium*. The diminutive *balneolum* is adopted by Seneca (*Ep.* 86, § 3) to designate the bath-room of Scipio, in the villa at Liternum, and is expressly used to characterise the modesty of republican manners as compared with the luxury of his own times. But when the baths of private individuals became more sumptuous, and comprised many rooms, instead of the one small chamber described by Seneca, the plural *balnea* or *balinea* was adopted, which still, in correct language, had reference only to the baths of private persons. Thus Cicero terms the baths at the villa of his brother Quintus (*ad Q. Frat.* iii. 1, § 1) *balnearia*. *Balneae* and *balineae*, which according to Varro (*L. L.* viii. 25, ix. 41; Charisius, i. 12) have no singular number,[*] were the public baths. Thus Cicero (*pro Cael.* 25, 62) speaks of *balneas Senias*, *balneas publicas*, and *in vestibulo balnearum* (*ib.* 26), and Aulus Gellius (iii. 1; x. 3) of *balneas Sitias*. But this accuracy of diction is neglected by many of the subsequent writers, and even in the time of the republic *balneum* was used for a public bath (*C. I. L.* 1263); but particularly by the poets, amongst whom *balnea* is not uncommonly used in the plural number to signify the public baths, since the word *balneae* could not be introduced in an hexameter verse. Pliny also, in the same sentence, makes use of the neuter plural *balnea* for a public, and of *balneum* for a private bath. (*Ep.* ii. 17, § 26.) *Thermae* (θέρμαι, hot springs) meant properly warm springs, or baths of warm water; but came to be applied to those magnificent edifices which grew up under the empire, in place of the simple *balneae* of the republic, and which comprised within their range of buildings all the appurtenances belonging to the Greek gymnasia, as well as a regular establishment appropriated for bathing. (Juv. *Sat.* vii. 233.) Writers, however, use these terms without distinction. Thus the baths erected by Claudius Etruscus, the freedman of the Emperor Claudius, are styled by Statius (*Silv.* i. 5, 13) *balnea*, and by Martial (vi. 42) *Etrusci thermulae*.

The Romans, in the earlier periods of their history, used the bath but seldom, and only for health and cleanliness, not as a luxury. Thus we learn from Seneca (*Ep.* 86, § 12) that the ancient Romans washed their legs and arms daily, and bathed their whole body once a week. (Cf. Cat. *ap.* Non. 108, s. v. *Ephippium*; Colum. *R. R.* i. 6, § 20.) The room set apart for this purpose was called *lavatrina* or *latrina*, and was placed near the kitchen, so that warm water might be easily procured. (Varr. *L. L.* v. 118; ix. 68.)

It is not recorded at what precise period the use of the warm bath was first introduced amongst the Romans; but we learn from Seneca (*l. c.*) that Scipio had a warm bath in his villa at Liternum; which, however, was of the simplest kind, consisting of a single chamber, just sufficient for the necessary purposes, and without any pretensions to luxury. It was "small

---

[*] *Balnea* is, however, used in the singular to designate a private bath in an inscription quoted by Reinesius. (*Inscr.* xi. 115.)

and dark," he says (§ 3), "after the manner of the ancients." Seneca also describes the public baths of former times as *obscura et gregali tectorio inducta;* and while their arrangements were of the simplest kind, aediles of noble birth did not disdain to look after them personally (§ 9). These were baths of warm *water;* but the practice of heating an apartment with warm air by a hollow underneath the floor, so as to produce a hot-air bath, is stated by Valerius Maximus (ix. 1, § 1) and by Pliny (*H. N.* ix. § 168) to have been invented by Sergius Orata, who lived in the age of L. Crassus, the orator, before the Marsic war. The expression used by Valerius Maximus is *balnea pensilia*, and by Pliny *balineas pensiles*, which is differently explained by different commentators; but a glance at the plan, inserted on p. 278, will be sufficient in order to comprehend the manner in which the flooring of the chambers was *suspended* over the hollow cells of the hypocaust, called by Vitruvius *suspensura caldariorum* (v. 11), so as to leave no doubt as to the precise meaning of the invention, which is more fully exemplified in the following passage of Ausonius (*Mosell.* 337):—

> "Quid (memorem) quae sulfurea substructa crepidine fumant
> Balnea, ferventi cum Mulciber haustus operto
> Volvit anhelatas tectoria per cava flammas,
> Inclusum glomerans aestu exspirante vaporem?"

In the time of Cicero, though young people used in summer to bathe in the Tiber (*Cael.* 15, 36), yet the use of baths, both public and private, of warm water and hot air, had become general (*ad Q. Frat.* iii. 1); and we learn from one of his orations that there were already baths (*balneas Senias*) at Rome which were open to the public upon payment of a small sum (*pro Cael.* 25, 61). Besides public baths, others were built by private speculators, who either worked them themselves or leased them out. Sometimes even the state leased out the public baths under certain conditions (*e.g.* see the Lex Metalli Vipascensis in *Eph. Epigr.* iii. p. 166, which makes stipulations with the *conductor balinei* touching certain people to be admitted free, hours of opening and shutting, height of water, &c.). The lessee or worker of a bath (*balneator*) appears to have stood very low in social estimation (Juv. vii. 4; Dig. 3, 2, 4, 2). Examples of private baths in Cicero's time are the *balneae Pallacinae* (*Rosc. Am.* 7, 18), and the *balneae Seniae* already mentioned. Martial in his time says (ii 14, 11):

> "Nec Fortunati spernit nec balnea Fausti
> Nec Grylli tenebras Aeoliumque Lupi."

"The Baths of Daphne," owned by Phoebus (Schol. on Juv. vii. 233), is a name like "The Aeolium" of Lupus. Jordan has collected a vast number of the names of the baths from the Regionarii, and they appear to be nearly all called after the possessor, though we find one of Mercurius and one of Diana (*Forma Urbis Romae*, p. 43). There were baths, of course, in the country, and they professed to be quite up to city style: *e.g.* an inscription has "In praediis Aureliae Faustinianae balineus. Lavatur more urbico, et omnis humanitas praestatur" (Marini, *Atti de' Fratelli Arvali*, p. 532, where a similar profession of a *balneator* is to be found, "omnia commoda praestantur"). A signboard, in Orelli 4326, of the Thermae of M. Crassus, offers salt and fresh water baths. These baths, which were worked by private individuals, appear to have been called *balnea meritoria* (Plin. *Ep.* ii 17, 26), and money was often invested in them (Dig. 7, 4, 12). Agrippa added 170 baths to those which existed already in Rome. In the time o Constantine there were no less than 856 (Jordan *l. c.*) in the city; and the Regionarii actually reckon 952 (Becker-Göll, *Gallus*, iii. 140).

In the earlier ages of Roman history a much greater delicacy was observed with respect to bathing, even amongst the men, than was usual among the Greeks; for, according to Valerius Maximus (ii. 1, § 7), it was deemed indecent for a father to bathe in company with his own son after he had attained the age of puberty, or a son-in-law with his father-in-law. (Comp. Cic. *de Off.* i. 35, § 129; *de Orat.* ii. 55, 224; Plut. *Cat. maj.* 20.) But virtue passed away as wealth increased; and when the thermae came into use, not only did the men bathe together in numbers, but even men and women stripped and bathed promiscuously in the same bath. It is true, however, that the public establishments generally contained separate baths for both sexes adjoining each other (Vitruv. v. 10; Varr. *L. L.* ix. 68), as will be seen to have been the case at the baths of Pompeii. Aulus Gellius (x. 3) relates a story of a consul's wife who took a whim to bathe at Teanum (Teano), a small provincial town of Campania, in the men's baths (*balneis virilibus*); probably, because in a small town, the female department, like that at Pompeii, was more confined and less convenient than that assigned to the men; and an order was consequently given to the Quaestor, M. Marius, to turn the men out. In the Lex Metalli Vipascensis the women have the use of the bath from daybreak till the seventh hour; the men from the eighth hour till the second hour of the night. If at Rome there were separate establishments for the women, men at any rate appear to have been able to get into them, and they were a possible place for assignations ("celent furtivos balnea tuta viros," Ov. *Ars Am.* iii. 639);—a passage which further shows that there were small private chambers with baths in them, such as we find in the Stabian baths at Pompeii (marked *c* in Overbeck's plan, Fig. 123, p. 193; cf. p. 206). But whether the men and women were allowed to use each other's chambers indiscriminately, or some of the public establishments had only one common set of baths for both, the custom prevailed under the empire of men and women bathing indiscriminately together. (Plin. *H. N.* xxxiii. § 153.) This custom was forbidden by Hadrian (Spart. *Hadr.* c. 18), and by M. Aurelius Antoninus (Capitolin. *Anton.* c. 23); and Alexander Severus prohibited any baths, common to both sexes (*balnea mixta*), from being opened in Rome (Lamprid. *Alex. Sev.* c. 24). Although the practice was not adopted by women of respectability ("Signum est adulterae lavari cum viris," Quint. *Inst.* v. 9, § 14), yet this legislation was not permanently effective, and even the censures of the Fathers of the Christian Church and the canons of Councils did not avail to suppress it. (Clem. Alex. *Paed.* iii. 5, p. 272; Cypr. *de Virg. Habitu*, p. 179; *Const. Apost.* i. 6 and 9; Council of Laodicea (A.D. 320), *Can.* 30, renewed by Council of Constantinople (A.D. 692), *ap.* Mansi.) Justinian (*Cod.* v. 15, 11, § 2) recognises it as a ground of divorce, *si forte uxor ita luxuriosa est, ut commune lavacrum cum viris libidinis causa habere audeat.*

When the public baths (*balneae*) were first instituted, they were only for the lower orders, who alone bathed in public; the people of wealth, as well as those who formed the equestrian and senatorian orders, used private baths in their own houses. But as early even as the time of Julius Caesar we find no less a personage than the mother of Augustus making use of the public establishments (Suet. *Aug.* 94); and in process of time even the emperors themselves bathed in public with the meanest of the people. (Spart. *Hadr.* c. 17.)

The baths were opened at sunrise, and closed at sunset (Lampr. *Alex. Sev.* 24). The many lamps found in the baths at Pompeii were used for lighting the rooms and the dark passages, according to Nissen, *Pomp. Stud.* 135, and do not necessarily imply night-bathing. But, in the time of Alexander Severus, it would appear that the baths were kept open after nightfall. (Lampr. *Alex. Sev.* l. c.) The allusion in Juvenal (*balnea nocte subit*, *Sat.* vi. 419) probably refers to private baths.

The price of a bath (*balneaticum*) was a quadrans, the smallest piece of coined money, from the age of Cicero downwards (Cic. *pro Cael.* 26, 62; Hor. *Sat.* i. 3, 137; Juv. *Sat.* vi. 447), which was paid to the keeper of the bath (*balneator*); and hence it is termed by Cicero, in the oration just cited, *quadrantaria permutatio*, and by Seneca (*Ep.* 86, § 9) *res quadrantaria.* Children below a certain age were admitted free. (Juv. *Sat.* ii. 152.)

The passage of Juvenal (vi. 447), which has been quoted to show that women paid no fee, should be taken to imply that they paid a higher price than men. So by the Lex Metalli Vipascensis, which has been already referred to, the men pay half an *as*, the women an *as*. (Cf. Dio Cass. xlix. 43.) Faustus Sulla gave the people the use of the baths and oil on the day of his father's funeral (Dio Cass. xxxvii. 51), and Augustus on his return from Germany gave them baths and barbers for a day (*ib.* liv. 25). Agrippa opened the baths gratuitously to both men and women for a year (*ib.* xlix. 43), and afterwards gave the people his *thermae ὥστε προῖκα αὐτοὺς λοῦσθαι* (*ib.* liv. 29). Such munificence was repeated by emperors and also by private individuals (Dig. 32, 35, 3; Henzen, 3325, 3326, 6962).

Strangers, also, and foreigners were admitted to some of the baths, if not to all, without payment, as we learn from an inscription found at Rome, and quoted by Pitiscus (*Lex Antiq.*):

L. OCTAVIO. L. F. CAM.
RUFO. TRIB. MIL. . . . .
QUI LAVATIONEM GRATUITAM MUNICIPIBUS
INCOLIS
HOSPITIBUS ET ADVENTORIBUS.

Compare the inscription at Naples (*C. I. L.* v. 376). We also find free bathing given to an individual and his family as a reward of merit: thus a soldier gets that privilege at Nemausus (Orelli, 3579).

The baths were closed when any serious public misfortune happened, just as we should close our theatres (Fabr. *Descr. Urb. Rom.* c. 18); and Suetonius says that the Emperor Caligula made it a capital offence to indulge in the luxury of bathing upon any religious holiday (*ib.*). They were originally placed under the superintendence of the aediles, whose business it was to keep them in repair, and to see that they were kept clean and of a proper temperature (*ib.*; Sen. *Ep.* 86). In the provinces the same duty seems to have devolved upon the quaestor, as may be inferred from the passage already quoted from Aulus Gellius (x. 3).

The time usually assigned by the Romans for taking the bath was the eighth hour, or shortly afterwards. (Mart. x. 48, xi. 52.) Before that time none but invalids were allowed to bathe in public. (Lamprid. *Alex. Sev.* 24.) Vitruvius reckons the hours best adapted for bathing to be from mid-day until about sunset (v. 10). Spurinna took his bath at the ninth hour in summer, and at the eighth in winter (Plin. *Ep.* iii. 1, 8); and Martial speaks of taking a bath, when business had been pressing, at the tenth hour, and even later (iii. 36; x. 70).

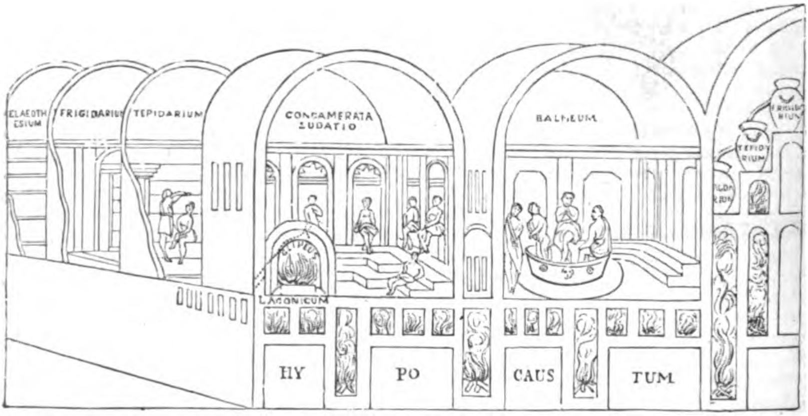
When the water was ready, and the baths prepared, notice was given by the sound of a bell—*aes thermarum.* (Mart. xiv. 163.) One of these bells, with the inscription FIRMI BALNEATORIS, was found in the Thermae Diocletianae, in the year 1548, and came into the possession of the learned Fulvius Ursinus. (*Append. ad* Ciaccon. *de Triclin.*) A sun-dial was found in the new baths at Pompeii, and Lucian (*Hipp.* 8) places in the baths a sun-dial and a water-clock with apparently some method of striking the hours attached.

Whilst the bath was used for health merely or cleanliness, a single one was considered sufficient at a time, and that only when requisite. But the luxuries of the empire knew no such bounds, and the daily bath was sometimes repeated as many as seven and eight times in succession — the number which the Emperor Commodus indulged himself with. (Lamprid. *Comm.* 11.) Gordian bathed four or five times a day in summer, and twice in winter; the Emperor Gallienus six or seven times in summer, and twice or thrice in winter. (Capitolin. *Gord.* 6; Trebell. Poll. *Gall.* c. 17.) Commodus also took his meals in the bath (Lamprid. *l. c.*); a custom which was not confined to a dissolute emperor alone. (Cf. Mart. xii. 19.)

It was the usual and constant habit of the Romans to take the bath after exercise, and previously to their principal meal (*cena*); but the debauchees of the empire bathed after eating as well as before, in order to promote digestion, and so to acquire a new appetite for fresh delicacies. Nero is related to have indulged in this practice. (Suet. *Nero*, 27; comp. Juv. *Sat.* i. 142.) This practice of carrying off the effects of gluttony by artificial means of inducing perspiration, which had taken the place of the hard labour and exercise of sterner times, was severely condemned, and sometimes proved fatal. (Columella, i. praef. § 15; Juv. i. 143; Pers. iii. 93; Sen. *Ep.* 15, 3; 86, 10; and especially Plin. *H. N.* xiv. § 139, and xxix. § 26, where he mentions as one of the causes of the ruined morals of the nation, *balineae ardentes quibus persuasere in corporibus cibos coqui.*)

Here at the outset a word must be said on the notorious illustration of a Roman bath given below. It is said to have been found in and to represent the Thermae of Titus at Rome. Long ago, however, Canina suspected its authenticity. He could not, he said, find it in the baths, nor was there any trustworthy evidence of its having been discovered previously; and further its exceedingly close following of Vitruvius made it look very like an illustration of that author. The fact is that the picture was drawn by Giovanni Antonio Rusconi, an architect, in 1553, to serve as a plan to help the description of Roman baths as given by Johannes Antonius Siccus Cremensis, *De balneis compendium ex Hippocrate et Galeno.* In the preface to this treatise the picture is merely called a "figura antiqui balinei." J. Rhodius in his edition of Scribonius Largus (1655) says (p. 103), "balnearum formam Ioannis Antonii Sicci Cremensis diligentia vulgatam inspicere iuvabit." It first appears as claiming to be a picture of the Baths of Titus in a work called *Raccolta di statue antiche e moderne data in luce da de Rossi illustrata di P. A. Maffei* (1704), who was an officer of the Papal guard and quite different from F. S. Maffei the scholar. From this work it got into Montfaucon, *Ant. expl.* iii. 2, pl. 122, and hence unfortunately obtained general acceptance. Its unauthenticity is now accepted by nearly all scholars, by Marquardt, Saglio, Overbeck, Göll, Guhl and Koner, &c. For a full account of the history of this drawing, the reader is referred to Marquardt, *Privatleben der Römer*, pp. 270–1, from whom its history as given above is taken.

The picture indicates in its way the chief rooms of a Roman bath. There was the *elaeothesium*, where the oil was kept, and where the bathers were frequently anointed. Next the *frigidarium* or cold room, which generally had a cold bath in it, and which frequently served as an undressing room (*apodyterium*), though large establishments had a separate apartment for undressing in. Beside the *frigidarium* was the warm room (*tepidarium*), which led into the hot room (*concamerata sudatio*, though generally called *caldarium*), or sweating room, heated both by the hypocaust below and by an oven called, according to the picture, *laconicum*, which could be closed or opened by a brass cover called *clipeus*. Also, over the hypocaust, in another room appears in the picture the hot bath; and in a third room three coppers (*ahena*) for cold, tepid, and warm water. The errors of this illustration will appear quite plain after we have described in detail the various rooms of the baths according to the actual remains of such buildings.



Roman Baths. (Nominally from the Thermae of Titus, but a modern representation of Roman baths.)

The Romans did not content themselves with a single bath of hot or cold water; but they went through a course of baths in succession, in which the agency of air as well as water was applied. It is difficult to ascertain the precise order in which the course was usually taken, if indeed there was any general practice beyond the whim of the individual. Under medical treatment, the succession would, of course, be regulated by the nature of the disease for which a cure was sought, and would vary also according to the different practice of different physicians. It is certain, however, that it was a general practice to close the pores, and brace the body after the excessive perspiration of the vapour bath, either by anointing or by pouring cold water over the head, or by plunging at once into the *piscina*, or into a river. (Auson. *Mosell.* 341.) Musa, the physician of Augustus, is said to have introduced this practice (Plin. *H. N.* xxv. § 77; cf. Hor. *Epist.* i. 15, 4), which became quite the fashion, in consequence of the benefit which the emperor derived from it, though Dio Cass. (liii. 30) accuses Musa of having artfully caused the death of Marcellus by an improper application of the same treatment. In other cases it was considered conducive to health to pour warm water over the head before the vapour bath, and cold water immediately after it; and at other times, warm, tepid, and cold water baths were taken in succession.

The two physicians Galen and Celsus differ in some respects as to the order in which the baths should be taken; the former recommending *conicum* (ἀέρι θερμῷ), water (ὕδωρ θερμόν), finally to be well *odo Medendi*, x. 10,); whilst the latter first to sweat for a hamber (*tepidarium*), to proceed into the *um*), and after having course of perspiration nto the warm bath antity of warm water id, and finally cold; vith the strigil (*per*- ed dry and anointed. h, in all probability, he Romans when the daily source of plea- ticular medical treat- t resembles in many thing still in practice

amongst the Orientals, who, as Sir W. Gell remarks, "succeeded by conquest to the luxuries of the enervated Greeks and Romans." (Gell's *Pompeii*, vol. i. p. 86, ed. 1832.)

Having thus detailed from classical authorities the general habits of the Romans in connexion with their system of bathing, it now remains to examine and explain the internal arrangements of the structures which contained their baths; which will serve as a practical commentary upon all that has been said. Indeed there are more ample and better materials for acquiring a thorough insight into Roman manners in this one particular, than for any other of the usages connected with their domestic habits. The principal ancient authorities are Vitruvius (v. 10), Lucian (Ἱππίας ἢ βαλανεῖον, a detailed description of a set of baths erected by an architect named Hippias), Pliny the Younger, in the two letters describing his villas (ii. 17, v. 6), Statius (*Balneum Etrusci*, *Silv.* i. 5), Martial

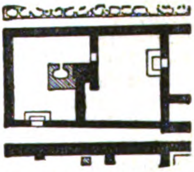
before A.D. 79. They consist of two rooms about 16 ft. square, one of which contains a stove. The cut given above is a ground-plan of the Roman baths at Badenweiler; and though less elaborate than the baths attached to some Pompeian private houses, it is interesting from its compactness and the arrangement of the women's and men's baths. A full account of them is given by Dr. Heinrich Leibnitz, *Die römischen Bäder bei Badenweiler*, Leipzig, 1860.



Bath in house of Livia. (From Daremberg and Saglio.)

The *balneae* adjoining the Forum at Pompeii, generally called the old baths, were found to be a complete set, constructed in all their important parts upon rules very similar to those laid down by Vitruvius, and in such good preservation that many of the chambers were complete, even to the ceilings. The woodcut below represents the ground-plan of these baths, which are nearly surrounded on three sides by houses and shops, thus forming what the Romans termed an *insula*.

The whole building, which comprises a double set of baths, has six different entrances from the street, one of which, A, gives admission to the smaller set only, which are supposed to have been appropriated to the women, and five others to the male department; of which two, B and C, communicate directly with the furnaces, and the other three, D, E, F, with the bathing apartments, of which F, the nearest to the forum, was the principal one; the other two, D and E, being on different sides of the building,

ment, as well as the attendants of the bathers, waited. There are seats for their accommodation placed underneath the portico (*a*, *a*). This *atrium* was the exercise ground for the young men, or perhaps served as a promenade for visitors to the baths. It answers exactly to the first compartment described by Lucian (*l. c.* 5). Within this court the keeper of the baths (*balneator*), who exacted the *quadrans* paid by each visitor, was also stationed; and the box for holding the money was found in it. The room (4), which runs back from the portico, might have been appropriated to him; but most probably it was an *oecus* or *exedra*, for the convenience of the better classes whilst awaiting the return of their acquaintances from the interior, in which case it will correspond with the chambers mentioned by Lucian (*l. c.* 5), adjoining to the servants' waiting-place (ἐν ἀριστερᾷ δὲ τῶν ἐς τρυφὴν παρεσκευασμένων οἰκημάτων). have met before entering into the interior of the baths; and its locality, as well as other characteristic features in its fittings up, leave no room to doubt that it served as an undressing room. It does not appear that any general rule of construction was followed by the architects of antiquity, with regard to the locality and temperature best adapted for an *apodyterium.* The word is not mentioned by Vitruvius, nor expressly by Lucian; but he says enough for us to infer that it belonged to the *frigidarium* in the baths of Hippias (*l. c.* p. 71): "After quitting the last apartment there are a sufficient number of chambers for the bathers to undress, in the centre of which is an *oecus* containing three baths of cold water." Pliny the Younger says that the *apodyterium* at one of his own villas adjoined the *frigidarium* (*Ep.* v. 6, § 25); but it is plain from a passage already quoted, that the *apodyterium* was a warm apartment in the baths belonging to the villa of Cicero's brother, Quintus (*assa in alterum apodyterii angulum promovi*), to which temperature Celsus also assigns it. In the thermae at Rome the hot and cold departments had probably each a separate *apodyterium* attached to it; or if not, the ground-plan was so arranged that one *apodyterium* would be contiguous to and serve for both, or either; but where space and means were circumscribed, as in the little city of Pompeii, it is more reasonable to conclude that the *frigidarium* served as an *apodyterium* for those who confined themselves to cold bathing, and the *tepidarium* for those who commenced their ablutions in the warm apartments. The bathers were expected to take off their garments in the *apodyterium,* it not being permitted to enter into the interior unless naked (Cic. *pro Cael.* 26, 62). They were then delivered to a class of slaves, called *capsarii* (from *capsa*, the small case in which children carried their books to school), whose duty it was to take charge of them, and to whom the room (11) may have been assigned. These men were notorious for dishonesty, and leagued with all the thieves of the city, so that they connived at the robberies they were placed there to prevent. Hence the expression of Catullus—*O furum optume balneariorum!* (*Carm.* xxxiii. 1); and Trachilo in the *Rudens* of Plautus (ii. 33, 51) complains bitterly of their roguery, which, in the capital, was carried to such an excess that very severe laws were enacted against them, as we find in a special title of the Digest (47, 17), *De Furibus Balneariis.*

To return into the chamber itself—it is vaulted and spacious, with stone seats along two sides of the wall (*b*, *b*), and a step for the feet below, slightly raised from the floor (*pulvinus et gradus*, Vitruv. v. 10). Holes can still be seen in the walls, which might have served for pegs on which the garments were hung when taken off. It was lighted by a window closed with glass, and ornamented with stucco mouldings and painted yellow. A sectional drawing of this interior is given in Sir W. Gell's *Pompeii.* There are no less than six doors to this chamber: one led to the entrance E, another to the entrance D, a third to the small room (11), a fourth to the furnaces, a fifth to the tepid apartment, and the sixth opened upon the *frigidarium*, the room which had the cold bath (10), named indifferently by the ancient authors, *natatio, natatorium, piscina,* baptisterium, puteus,* λουτρόν. The bath, which is coated with white marble, is 13 feet 8 inches in diameter, and about 3 feet 9 inches deep, and has two marble steps to facilitate the descent into it, and a seat surrounding it at the depth of 10 inches from the bottom. It is probable that many persons contented themselves with the cold bath only, instead of going through the severe course of perspiration in the warm apartments; and it is said that at one period cold baths were in such request that scarcely any others were used. (Gell's *Pompeii, l. c.*) There is a platform or ambulatory (*schola*, Vitruv. v. 10) round the bath, also of marble, and four niches of the same material disposed at regular intervals round the walls, with seats. The ceiling is vaulted, and the chamber lighted by an opening towards the south-west. A drawing of this room is given on p. 279. The annexed woodcut represents a *frigidarium* with its cold bath (*puteus*, Plin. *Ep.* v. 6, § 25) at one extremity, supposed to have formed a part of the Formian villa of Cicero, to whose age the style of construction, and the use of the simple Doric order, undoubtedly belong. The bath itself, into which the water still continues to flow from a neighbouring spring, is placed under the alcove, and the two doors on each side opened into small chambers, which probably served as *apodyteria.* It is still to be seen in the gardens of the Villa Caposeli, at Mola di Gaeta, the site of the ancient Formiae.

Frigidarium of a Formian villa.

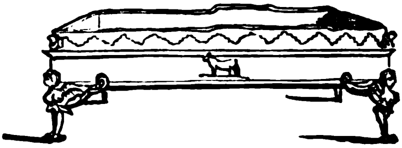
In the cold bath of Pompeii the water ran into the basin through a spout of bronze, and was carried off again through a conduit on the opposite side. It was also furnished with a waste-pipe under the margin to prevent it from running over. No. 11 is a small chamber on the opposite side of the *frigidarium*, which might have served for keeping unguents or *strigiles*, or for the *capsarius;* and from the side of the

---

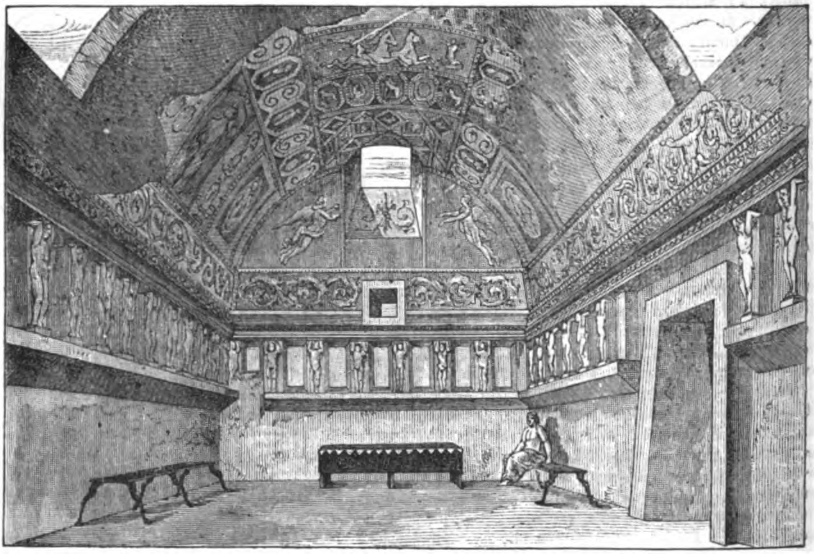
* *Piscina* is a general word for a large basin either of cold or warm (see p. 277 a) water, into which bathers could plunge (Sen. *Ep.* 56, 2) or swim about (Plin. *Ep.* ii. 17, § 11). It is therefore synonymous with the *natatorium*(-*ia*) or *natatio*, and the *baptisterium* of Sidonius Apollinaris. (*Ep.* ii. 2; cf. Plin. *Ep.* l. c. and v. 6, § 25.)

frigidarium, the bather, who intended to go through the process of warm bathing and sudation, entered into (12) the *tepidarium*.

This *tepidarium*, 33 feet long by 18 feet broad, did not contain water either at Pompeii or at the baths of Hippias, but was merely heated with warm air of an agreeable temperature in order to prepare the body for the great heat of the vapour and warm baths, and, upon returning, to obviate the danger of a too sudden transition to the open air. In the baths at Pompeii this chamber served likewise as an *apodyterium* for those who took the warm bath; for which purpose the fittings up are evidently adapted, the walls being divided into a number of separate compartments or recesses for receiving the garments when taken off, by a series of figures of the kind called *Atlantes* or *Telamones*, which project from the walls, and support a rich cornice above them. One of these divisions, with the *Telamones*, is represented in the article ATLANTES. Three bronze benches were also found in the room, which was heated as well by its contiguity to the hypocaust of the adjoining chamber, as by a brazier of bronze (*foculus*), in which the charcoal ashes were still remaining when the excavation was made. Sitting and perspiring beside such a brazier was called *ad flammam sudare* (Suet. *Aug.* 82). A representation of it is given in the above woodcut. Its whole length was 7 feet, and its breadth 2 feet 6 inches. The benches contained the inscription M. NIGIDIVS VACCVLA P.S. (*pecunia sua*). No doubt, from the representation of the cow on the brazier, this latter was also a gift of the same man.



Brazier of the Old Baths at Pompeii.



Tepidarium of Old Baths of Pompeii. (From Gell.)

The *tepidarium* is generally the most highly ornamented room in baths. It was merely a room to sit in and be anointed in. The water-bath which appears in the Stabian baths at Pompeii is quite an exception (see Becker-Göll, *Gallus*, iii. 132–4). In the old baths at Pompeii the floor is mosaic, the arched ceiling adorned with stucco and painting on a coloured ground, the walls red. The light is from a window at the south side, below which is a niche for a lamp. An illustration of the room taken from Gell, plate 29, is given above.

In addition to this service there can be little doubt that this apartment was used as a depository for unguents and a room for anointing (ἀλειπτήριον, *unctorium*, *elaeothesium*), the proper place for which is represented by Lucian (*l. c.*) as adjoining to the *tepidarium*, and by Pliny (*Ep.* ii. 17, § 11) as adjoining to the hypocaust; and for which purpose some of the niches between the *Telamones* seem to be peculiarly adapted. In the larger establishments a separate chamber was allotted to these purposes; but as there is no other spot within the circuit of the Pompeian baths which could be applied in the same manner, we may safely conclude that the inhabitants of this city were anointed in the *tepidarium* (cf. Celsus, i. 4); which service was performed by slaves called *unctores* and *aliptae*. [ALIPTAE.] Anointing sometimes took place before going into the hot bath (Celsus, *l. c.*), sometimes after the cold bath, just before putting on the clothes, in order to stop perspiration (Galen, x. 479). In some baths we find a special room, the *destrictarium* or *unctorium*,

Caldarium of Old Baths at Pompeii. (From Gell.)

Strictly speaking, there was no *laconicum* (*assa*, Cic. *Q. Fr.* iii. 1, 2; *sudatorium*, Senec. *Ep.* li. 6; ξηρὸν βαλανεῖον, Galen, vi. 228) in the old baths at Pompeii. When a *laconicum* did occur, it was quite separate from the *caldarium*, and raised to a higher temperature. It was merely a sweating-room, and had no bath. It was a circular apartment with a dome-shaped ceiling; ξηρὸς θόλος it is called by Alexander of Aphrodisias. The diameter of such a room, Vitruvius says (v. 10), should be equal to the height as far as the beginning of the dome; and in the middle of the dome there should be an opening which could be closed or opened partially or entirely by a brass cover or shield (*clipeus*), worked by chains from below (cf. Timarchus, *ap.* Athen. p. 501 f, who calls the cover ὀμφαλός). The term *laconicum* appears to have arisen in Italy; for the Greeks, as we saw, called such a sweating bath Ἑλληνικὴ πυρίη (Herod. iv. 75). According to Dio Cassius (liii. 27), "Agrippa first introduced the Laconian sweating-bath; for the gymnasium is a Laconian institution, and the Spartans seemed especially in former times to have stripped and anointed themselves with oil" (cf. Thuc. i. 6). The first statement cannot be accurate, as we hear of a *laconicum* as early as 70 B.C. in an inscription from the Stabian baths at Pompeii (*C. I. L.* i. 1251), and at Cicero's villa at Puteoli in 55 B.C. (Cic. *Att.* iv. 10). But it is quite possible that the hot room got the name of *laconicum* from the notoriety of the Laconian practice of anointing, which would of course be most conveniently done in a room of fairly high temperature. When the name originated, the highest temperature used was nothing very considerable; but as the use of baths increased, the heat of the hottest rooms increased also (cf. Senec. *Ep.* 86, 10), and the name *laconicum* appears to have continued to be applied to the hottest rooms, though the anointing was no longer performed there, but in the milder temperature of the *tepidarium.* There is no *laconicum* proper, as has been said, in the old baths at Pompeii; but as the hottest room is the *caldarium*, we may if we like, with Nissen (*op. cit.* 156), apply that term to this latter apartment, but we must apply it to the whole room, and not merely to the niche for the *labrum*. The view that the *laconicum* was a little arched oven in the *caldarium* which was in direct communication with the hypocaust, and which had an aperture with a moveable covering (*clipeus*), through which the heat of the *caldarium* could be regulated—this view, which is derived from the supposed plan of the Baths of Titus, vanishes by the proved unauthenticity of that illustration.

Here a word must be said on the *suspensurae*, or hanging floors above the *hypocaustum.* (Vitruv. v. 10; Plin. *Ep.* ii. 17, § 23; Stat. *Silv.* i. 5, 59; Dig. 17, 1, 16.) On this subject we cannot do better than quote the words of Mr. Middleton (*Ancient Rome*, p. 334), who thus explains the system of heating used in the *Thermae* of Caracalla at Rome: "Vitruvius's description of the hypocausts or hollow floors used for heating the hot rooms (*calidaria*) agrees closely with many existing examples. The lower floor was to be laid with 2 feet tiles (*tegulae bipedales*) over a bed of concrete: on this, all over the area of the room, rows of short pillars (*pilae*) were built to support the upper or 'hanging floor' (*suspensura*). These *pilae* were to be 2 feet high [in the baths of Caracalla they are from 2½ to 2¾ feet high, p. 367], made of *tegulae bessales*, or tiles 8 inches square, set, not in mortar, but with clay in the joints: in existing examples these clay joints have been baked into brick by the action of the fire" (rather "hot air," for there was not a fire in the *hypocaustum*, but in the *hypocausis*). The passages from the furnace to the hypocaust and the flues in the walls appear to have been called *cuniculi* ("per quos vapor trahitur in balneariis," Dig. 43, 21, 3, 6; "fornacis cuniculus," Plin. *H. N.* ix. 134).

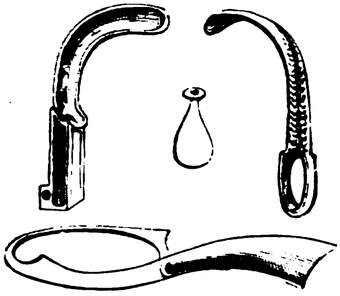
LL. Vaults of crypt, made of pumice-stone concrete.

After having gone through the regular course of perspiration, the Romans made use of instruments called *strigiles* (or *strigles*, Juv. *Sat.* iii. 263), to scrape off the perspiration, much in the same way as we are accustomed to scrape the sweat off a horse with a piece of iron hoop, after he has run a heat, or comes in from violent exercise. The strigil was also used by the Greeks, who called it *stlengis* (στλεγγίς, Plat. *Hipp. Min.* 368 C) or *xystra* (Luc. *Lexiph.* 5); and the Greek instrument is represented in the annexed cut. These instruments, some specimens of which are also represented in the cut on p. 279, and many of which have been discovered amongst the ruins of the various baths of antiquity, were made of bone, bronze, iron, and silver; all corresponding in form with the epithet of Martial, "*curvo distringere ferro*" (*Epig.* xiv. 51). The poorer classes were obliged to scrape themselves, but the more wealthy took their slaves to the baths for the purpose; a fact which is elucidated by a curious story related by Spartianus (*Hadrian.* c. 17).

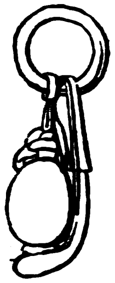
Strigil. (From a Statue in the Vatican.)

The strigil was by no means a blunt instrument, consequently its edge was softened by the application of oil, which was dropped upon it from a small vessel called *guttus*,* which had a narrow neck, so as to discharge its contents drop by drop, from whence the name is taken. A representation of a *guttus* is given in the preceding woodcut; a strigil and guttus together are represented below, and also in the figure on p. 117. Augustus is related to have suffered from an over-violent use of the strigil. (Suet. *Aug.* 80.) Invalids and persons of a delicate habit made use of sponges, which Pliny says answered for towels as well as strigils. They were finally dried with towels (*lintea*), and anointed. (Juv. *Sat.* iii. 262; Apuleius, *Met.* i. 23; Plin. *H. N.* xxxi. § 125 ff.)



Strigils. (Found in Roman baths.)

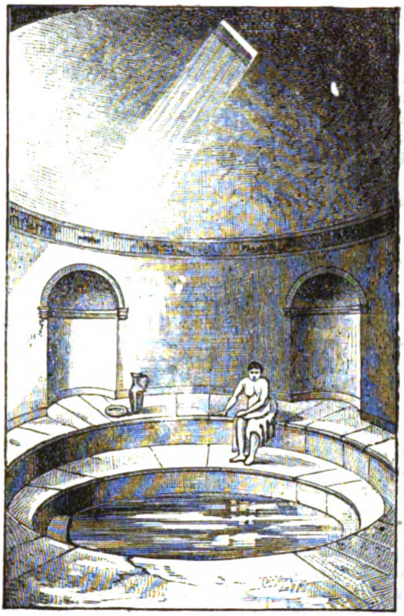
The common people were supplied with these necessaries in the baths,—*omnia commoda praestantur*, as we saw above; but the more wealthy carried their own with them (Pers. *Sat.* v. 126).



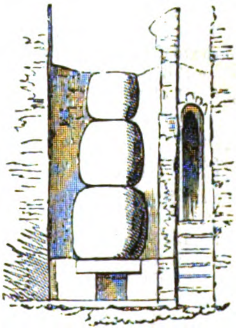
Strigil and Guttus. (From a Relief at Athens.)

After the operation of scraping and rubbing dry, they retired into, or remained in, the *tepidarium* until they thought it prudent to encounter the open air. But it does not appear to have been customary to bathe in the water, when there was any, either of the *tepidarium* or *frigidarium*; the temperature only of the atmosphere in these two chambers being of consequence to break the sudden change from the extreme of heat to cold.

Returning now back into the *frigidarium* (8), which, according to the directions of Vitruvius (v. 11), has a passage (14) communicating with the mouth of the furnace (*e*), which is also seen under the boilers in the cut opposite, called *praefurnium* (Vitruv. v. 10), or *propnigeum* (Plin. *Ep.* ii. 17, § 11); and passing down that passage, we reach the chamber (15) into which the *praefurnium* projects, and which has also an entrance from the street at B. It was appropriated to the use of those who had charge of the fires (*fornacatores*). There are two staircases in it; one of which leads to the roof of the baths, and the other to the coppers which contained the water. Of these there were three: one of which contained the hot water—*caldarium* (sc. *vas*, or *ahenum*); the second the tepid—*tepidarium*; and the last the cold—*frigidarium*. The warm water was introduced into the warm bath by means of a conduit pipe, marked on the plan, and conducted through the wall. Underneath the *caldarium* was placed the circular furnace (*f*) (*furnus*, Hor. *Ep.* i. 11, 12), over 7 feet in diameter, which served to heat the water and give out streams of warm air into the hollow cells of the *hypocaustum*. It passed from the furnace under the first and last of the caldrons by two flues, which are marked upon the plan. The copper containing hot water was placed immediately over the furnace; and, as the water was drawn out from thence, it was supplied from the next, the *tepidarium*, which was raised a little higher and stood a little way off from the furnace. It was already considerably heated from its contiguity to the furnace and the hypocaust below it, so that it supplied the deficiency of the former without materially diminishing its temperature; and the vacuum in this last



Frigidarium of the Old Baths at Pompeii. (From Gell.)



Boiler, *miliarium*. (From Pompeii.)

---

* It was also called *alabastrum*, *ampulla*, λήκυθος, μυροθήκιον, ἐλαιοφόρον. (Ruperti, *ad* Juv. *Sat.* iii. 262.) [AMPULLA.]

was again filled up from the farthest removed, which contained the cold water received directly from the square reservoir seen behind them,—a principle which has at length been introduced into the modern bathing establishments, where its efficacy, both in saving time and expense, is fully acknowledged. The boilers themselves no longer remain, but the impressions which they have left in the mortar in which they were imbedded are clearly visible, and enable us to ascertain their respective positions and dimensions, the first of which, the *caldarium*, is represented in the above cut. Such coppers or boilers appear to have been called *miliaria*, from similarity of shape to a milestone (Pallad. v. 8, i. 40).

Behind the coppers there is another corridor (16), leading into the court or *atrium* (17) appropriated to the servants of the bath, and which has also the convenience of an immediate communication with the street by the door at C.

We now proceed to the adjoining set of baths, which were assigned to the women. The entrance is by the door A, which conducts into a small vestibule (18), and thence into the *apodyterium* (19), which, like the one in the men's bath, has a seat (*pulvinus*, *gradus*) on either side built up against the wall. This opens upon a cold bath (20), answering to the *natatio* of the other set, but of much smaller dimensions, and probably similar to the one denominated by Pliny (*l. c.*) *puteus*. There are four steps on the inside to descend into it. Opposite to the door of entrance into the *apodyterium* is another doorway which leads to the *tepidarium* (21), which also communicates with the thermal chamber (22), on one side of which is a warm bath in a square recess, and at the further extremity the *labrum*. The floor of this chamber is suspended, and its walls perforated for flues, like the corresponding one in the men's baths. It is to be specially noticed that the *tepidarium* in the women's baths had no brazier, but had a hanging or suspended floor. Suspending the floor of a *tepidarium* was a proceeding subsequent apparently to Vitruvius's time; so that this, among many other reasons which are enumerated by Nissen (*op. cit.* chap. v.), proves that the women's baths were a subsequent addition.

True, the comparative smallness and inferiority of the fittings-up in this suite of baths has induced some Italian antiquaries to throw a doubt upon the fact of their being assigned to the women; and amongst these the Abbate Iorio (*Plan de Pompeii*) ingeniously suggests that they were an old set of baths, to which the larger ones were subsequently added when they became too small for the increasing wealth and population of the city. But their greater carelessness of structure is an actual proof of later date in a building at Pompeii (see Nissen, *l. c.*). And the story, already quoted, of the consul's wife who turned the men out of their baths at Teanum for her convenience, seems sufficiently to negative such a supposition; and to prove that the inhabitants of ancient Italy, if not more selfish, were certainly less gallant than their successors. In addition to this, Vitruvius expressly enjoins that the baths of the men and women, though separate, should be contiguous to each other, in order that they might be supplied from the same boilers and hypocaust (v. 10); directions which are here fulfilled to the letter, as a glance at the plan will demonstrate.

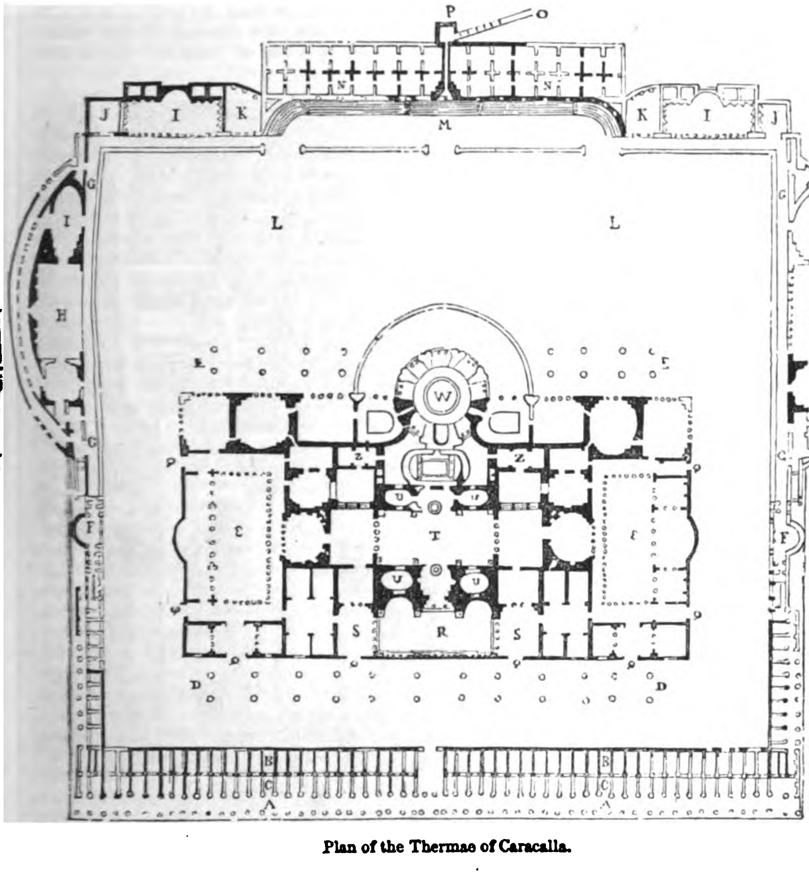
Besides the public baths at Pompeii, there are several very interesting baths of two or three chambers in private houses, which reproduce in a smaller scale many of the peculiarities of the larger baths. Such are to be found in the villa of M. Nonius (Overbeck, *op. cit.* 247–8), Casa del Fauno (310), the three-storied house (323), the Villa Suburbana (326), and especially the Casa del Laberinto (305).

Notwithstanding the ample account which has been given of the plans and usages respecting baths in general, something yet remains to be said about that particular class denominated *Thermae*; of which establishments the baths in fact constituted only a small part. The *thermae*, properly speaking, were a Roman adaptation of the Greek *gymnasium* [GYMNASIUM], or *palaestra*, as described by Vitruvius (v. 11): both of which contained a system of baths in conjunction with conveniences for athletic games and youthful sports; *exedrae* in which the rhetoricians declaimed, poets recited, and philosophers lectured; as well as porticoes and vestibules for the idle, and libraries for the learned. They were decorated with the finest objects of art, both in painting and sculpture, covered with precious marbles, and adorned with fountains and shaded walks and plantations, like the groves of the Academy. It may be said that they began and ended with the empire, for it was not until the time of Augustus that these magnificent structures were commenced. M. Agrippa is the first who afforded these luxuries to his countrymen, by bequeathing to them the *thermae* and gardens which he had erected in the Campus Martius. (Dio Cass. liv. 29; Plin. *H. N.* xxxvi. § 189.) Recent excavations (1882) have brought to light magnificent remains of these baths, but a careful examination goes far to disprove the belief long entertained that the Pantheon was originally designed to be a part of Agrippa's *thermae*, probably a colossal *laconicum*. But it was originally a separate structure; and though the *thermae* extended to it subsequently, yet no passage was ever broken through. Besides, the Pantheon has no trace of a hypocaust. It was consecrated as a temple to Mars, Venus, and other ancestors of the Gens Julia, probably immediately after its completion, in 27 B.C.: see Dio Cass. lxiii. 27. (Middleton, *Rome*, p. 337.) It appears from a passage in Sidonius Apollinaris (*Carm.* xxiii. 495), that the whole of these buildings, together with the adjacent Thermae Neronianae, remained entire in the year 466 A.D. The example set by Agrippa was followed by Nero, and afterwards by Titus; the ruins of whose *thermae* are still visible, covering a vast extent, partly under ground and partly above the Esquiline Hill.* *Thermae* were also erected by Trajan, Caracalla, Diocletian, and Constantine: besides several which were constructed by private individuals, P. Victor enumerates sixteen, and Panvinius (*Urb. Rom. Descript.* p. 106) has added four more. There are still ample remains of the *thermae* of Caracalla and Diocletian.

---

* The celebrated group of Laocoon and his sons, now in the Vatican, were found in the ruins of the *thermae* of Titus.

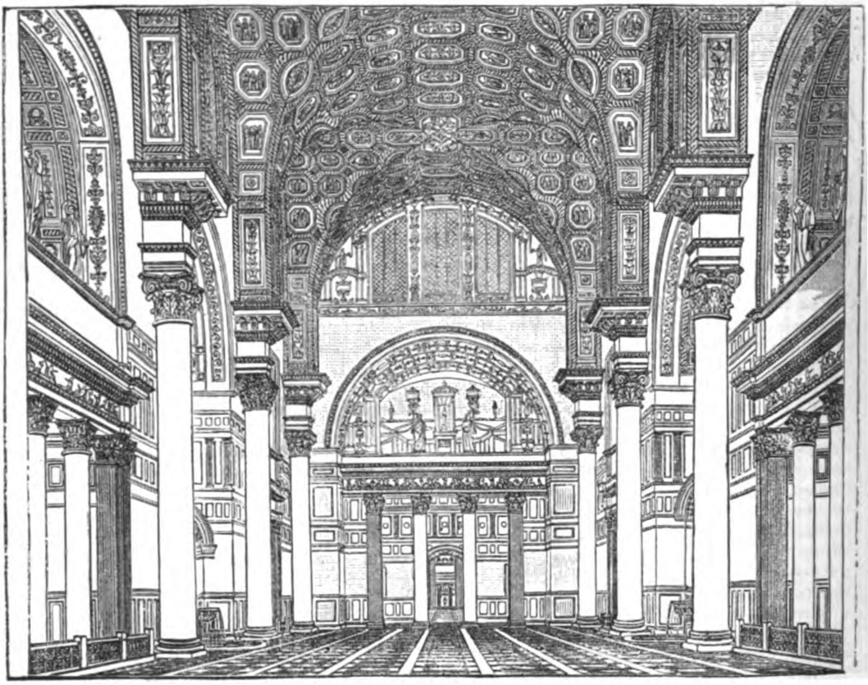
Although the custom of seeking the favour of the people by grants of free bathing might lead to the surmise that no fee was exacted from bathers in the imperial *thermae*, yet it is certain that we find in the literature descriptive of life at Rome constant references to the charge of a *quadrans*, and none to free bathing. Most, if not all, of the other regulations previously detailed as relating to the economy of the baths, apply equally to the *thermae*; but it is to these establishments especially that the dissolute conduct of the emperors, and other luxurious indulgences of the people in general, detailed in the compositions of the satirists and later writers, must be considered to refer.



Plan of the Thermae of Caracalla.

Although considerable remains of the Roman *thermae* are still visible, yet, from the very ruinous state in which they are found, we are far from being able to arrive at the same accurate knowledge of their component parts, and the usages to which they were applied, as has been done with respect to the *balneae*; or indeed to discover a satisfactory mode of reconciling their constructive details with the description which Vitruvius has left of the baths appertaining to a Greek *palaestra*, or to the description given by Lucian of the baths of Hippias. All, indeed, is doubt and guess-work; the learned men who have pretended to give an account of their contents differing in almost all the essential particulars from one another. And yet the great similarity in the ground-plan of the three which still remain—namely, those of Titus, Caracalla, and Diocletian—cannot fail to convince even a superficial observer that they were all constructed upon a similar plan. Not, however, to dismiss the subject without enabling our readers to form something like a general idea of these enormous edifices, which, for their extent and magnificence, have been likened to provinces—(*in modum provinciarum exstructae*, Amm. Marc. xvi. 6)—a ground-plan is given of the *thermae* of Caracalla, which are the best preserved amongst those remaining, and which were perhaps more splendid than all the rest, though those of Diocletian were more extensive. Those apartments of which the use is ascertained, even with the appearance of probability, are alone marked and explained. But for most of these explanations there cannot be claimed more than a bare probability. The dark parts represent the remains still visible; the open lines are restorations.

A, Portico fronting the street made by Caracalla when he constructed his *thermae*.—B and C, small chambers—D, D, and E, E, the porticoes. (Vitruv. v. 11.)—F, F, *Exedrae*, in which there were seats for the philosophers to hold their conversations. (Vitruv. *l. c.*; Cic. *de Orat.* iii. 5, 17.)—G, *Hypaethrae*, passages open to the air: "*Hypaethrae ambulationes* quas Graeci *περιδρόμιδας*, nostri xystos appellant." (Vitruv. *l. c.*)—H, H, Stadia in the palaestra—*quadrata sive oblonga* (Vitruv. *l. c.*), if they were not like I, I, which were possibly academies where public lectures were delivered.—J, J, and K, K, Rooms appropriated to the servants of the baths (*balneatores*). In the latter are staircases for ascending to the principal reservoir. The spaces between J and K, marked I, I, were probably like I, I, below, lecture rooms or libraries.—L, Space occupied by walks and shrubberies—*ambulationes inter platanones.* (Vitruv. *l. c.*)—M, The arena or stadium in which the youth performed their exercises, with seats for the spectators (Vitruv. *l. c.*), called the *theatridium.*—N, N, Reservoirs, with upper stories, sectional elevations of which are given in the two woodcuts on p. 283.—O, Aqueduct which supplied the baths.—P, The cistern or *piscina.* This external range of buildings occupies one mile in circuit.



Tepidarium of the Thermae of Caracalla, restored. (From Middleton.)

We now come to the arrangement of the interior, for which it is very difficult to assign satisfactory destinations. Q represents the principal entrances, of which there were eight.—R, the *natatio*, *piscina*, or cold-water bath, to which the direct entrance from the portico is by a vestibule on either side marked S, and which is surrounded by a set of chambers which served most probably as rooms for undressing (*apodyteria*), anointing (*unctuaria*), and stations for the *capsarii.* Those nearest to the peristyle were perhaps the *conisteria*, where the powder was kept which the wrestlers used in order to obtain a firmer grasp upon their adversaries:—

> "Ille cavis hausto spargit me pulvere palmis,
> Inque vicem fulvae tactu flavescit arenae."
> Ovid, *Met.* ix. 35.

(See also Salmas. *ad* Tertull. *Pall.* p. 217; and Mercurialis, *de Art. Gymn.* i. 8.) The inferior quality of the ornaments which these apartments have had, and the staircases in two of them, afford evidence that they were occupied by menials. T is considered to be the *tepidarium*, with four warm baths (U, U, U, U) taken out of its four angles, and two *labra* on its two flanks. There are steps for descending into the baths, in one of which traces of the conduit are still manifest. Thus it would appear that the centre part of this apartment served as a *tepidarium*, having a *balneum* or *calda lavatio* in four of its corners. The centre part, like that also of the preceding apartment, is supported by eight immense columns. This *tepidarium* was a splendid room, 170 feet long by 82 feet wide. It is restored in the above cut from existing indications. "It had a groined roof springing from immense columns of granite and porphyry, each surmounted by a short piece of entablature, which merely returns round the capital of the column in the debased fashion of the second and third centuries. The smaller columns on each side were set in front of the recesses containing the warm baths." (Middleton, p. 361.)

The apartments beyond this, which are too much dilapidated to be restored with any degree of certainty, contained of course the *laconicum* and sudatories, for which the round chamber W and its appurtenances seem to be adapted, and which are also contiguous to the reservoirs, Z, Z. (Vitruv. v. 11.)

ε, ε probably comprised the *ephebia*, or places where the youth were taught their exercises, with the appurtenances belonging to them, such as the *sphaeristerium* and *corycaeum*. The first of these takes its name from the game at ball, so much in favour with the Romans, at which Martial's friend was playing when the bell sounded to announce that the water was ready (Mart. xiv. 163). The latter is derived from κώρυκος, a sack (Hesych. *s. v.*), which was filled with bran and olive husks for the young, and sand for the more robust, and then suspended at a certain height, and swung backwards and forwards by the players. (Aulis, *de Gymn. Const.* p. 9; Antill. *ap.* Oribas. *Coll. Med.* 6.)

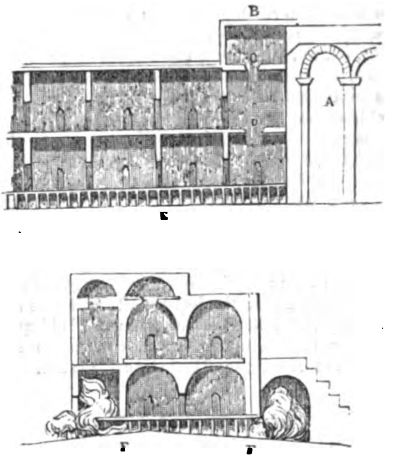
The chambers also on the other side, which are not marked, probably served for the exercises of the palaestra in bad weather. (Vitruv. v. 11.)

These baths contained an upper story, of which nothing remains beyond what is just sufficient to indicate the fact. They have been mentioned and eulogized by several of the Latin authors. (Spartian. *Caracall.* c. 9; Lamprid. *Heliogab.* c. 17, *Alex. Sever.* c. 25; Eutropius, viii. 11; Olymp. *apud* Phot. p. 114, ed. Aug. Vindel. 1601.) For a full account of the noble proportions and elaborate ornamentation of the several rooms, the reader is referred to Middleton, *l. c.*, 356–369.

It will be observed that there is no part of the bathing department separated from the rest which could be assigned for the use of the women exclusively. From this it must be inferred either that both sexes always bathed together promiscuously in the *thermae*, or that the women were excluded altogether from these establishments, and only admitted to the *balneae*.

It remains to explain the manner in which the immense body of water required for the supply of a set of baths in the *thermae* was heated, which has been performed very satisfactorily by Piranesi and Cameron, as may be seen by a reference to the two subjoined sections of the *castellum aquaeductus* and *piscina* belonging to the *thermae* of Caracalla.

A, Arches of the aqueduct which conveyed the water into the *piscina* B, from whence it flowed into the upper range of cells through the aperture at C, and thence again descended into the lower ones by the aperture at D, which were placed immediately over the hypocaust E; the praefurnion of which is seen in the transverse section, at F in the lower cut. There were thirty-two of these cells arranged in two rows over the hypocaust, sixteen on each side, and all communicating with each other; and over these a similar number similarly arranged, which communicated with those below by the aperture at D. The parting walls between these cells were likewise perforated with flues, which served to diffuse the heat all around the whole body of water. When the water was sufficiently warm, it was turned on to the baths through pipes conducted likewise through flues in order to prevent the loss of temperature during the passage, and the vacuum was supplied by tepid water from the range above, which was replenished from the piscina.



Piscina and Castellum of the Aquaeductus of the Thermae of Caracalla.

Of the *thermae* of Diocletian, built on the Quirinal hill, the largest edifice of the imperial period, which accommodated 3200 bathers, twice as many as those of Caracalla, commenced in A.D. 302 by Maximian in honour of his colleague Diocletian, and dedicated in 305 A.D., we have extensive remains, which, like those of the *thermae* of Titus, include the *cavea* of a theatre, while the *tepidarium* was made by Michel Angelo into the church of S. Maria degli Angeli, about 1565. "Even now this *tepidarium* forms one of the most imposing interiors in the world; it is about 300 feet long by 92 wide, vaulted in three bays with simple quadripartite groining, which springs from eight monolithic columns of Egyptian granite about 50 feet high and 5 feet in diameter" (Middleton, *op. cit.* 371). The vestibule of the church was the *laconicum* of the baths: it is a circular domed hall, which originally had a circular opening in the centre of the dome.

Remains of the *thermae* of Constantine, built only a few years after those of Diocletian, existed in the sixteenth century (see Palladio, plate xiv.), but have been mostly cleared away to obtain sites for Italian palaces.

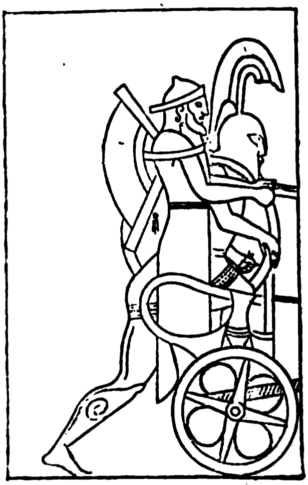
The most important works on the subject are —Baccius, *de thermis veterum* (Graevii *Thes.* xii. pp. 279–379); Ferrarius, *de balneis* (Polnei *Thes.* iii. 297–310); Montfaucon, *Antiq. expl.* iii. pp. 201–12; Palladio, *Le Terme dei Romani*, ed. Scamozzi; Cameron, *The Baths of the Romans*; Stieglitz, *Archaeologie der Baukunst*, iii. pp. 241–76; Hirt, *Geschichte der Baukunst*, iii. pp. 233-36; Canina, *L'architettura Romana*, i. ch. ix.; Bussemaker et Daremberg, *Œuvres d'Oribase*, ii. 865-75; Bechi in *Mus. Borbonico*, ii. 49–52; Gell, *Pompeiana*, chapters vi., vii.; Saglio, *Dict. des Antiquités*, i. 648–664; Guhl and Koner, *Das Leben der Griechen und Römer*, ed. 1876, especially pp. 491–503, 655–660; Overbeck, *Pompeii*, 174–190 for the old baths, 190–207 for the Stabian baths; Nissen, *Pompeianische Studien*, chaps. v., vi., vii.; Becker's *Gallus*, ed. Göll, iii. 104–57; Marquardt, *Privatleben der Römer*, i. 262–88, who gives in the notes to p. 269 references to descriptions of the most interesting remains of ancient baths now extant; J. H. Middleton, *Ancient Rome in* 1885, ch. xi., who gives the results of the latest excavations and valuable information as regards the materials used in the building and other architectural peculiarities of the great Roman *thermae*. [A. R.] [J. H. F.] [L. C. P.]

BAL'TEUS, in the plural *baltea* (*τελαμών*, *ἀορτήρ*), a belt, is sometimes used in poetry to denote a woman's girdle (Ovid, *Met.* ix. 189; Lucan, ii. 362; Mart. xiv. 207), but more properly in the following senses:—

1. A shoulder-belt, and most frequently the sword-belt. Among the Greeks, as the sword commonly hung beside the left hip, its belt was supported by the right shoulder, and passed obliquely over the breast, as is seen in the cameo here introduced from the Florentine Museum. We also read in Homer of broad belts (*Il.* v. 796) used to support the shield; for as Herodotus tells us (i. 171), until the Carians invented the *ὄχανον* or shield-holder, all who made use of shields managed them by means of leather belts, which they passed round the neck and the left shoulder. Thus the sword-belt and the shield-belt crossed over the breast. (*Il.* xiv. 404–6.) The shield-belt is occasionally represented on ancient vases, as in the figure in the next column of a charioteer from Gerhard, *Vasenbilder*, pl. ccviii. Belts were generally made of leather, and the belts of the Homeric heroes are ornamented with silver and gold (*Il.* xi. 31; xviii. 480, 597), which were sometimes wrought with elaborate devices (*Il.* xi. 38) or representations of scenes (*Od.* xi. 609–14). These may have been embossed on a plate of the metal, or embroidered on some fabric [Caelatura]. (Cf. Verg. *Aen.* x. 495–500.) Belts were also employed to support the quiver or the *γωρυτός* [Pharetra]. (Cf. Verg. *Aen.* v. 312–4; Nemes. *Cyneg.* 91.)

Balteus. (Florentine Museum.)

The Romans either attached their swords to the *cingulum*, or suspended them by a *balteus*, which sometimes passed from the right shoulder the left side (Caes. *B. G.* v. 44), but more usual from the left shoulder to the right side [Arm fig. p. 190], as may be regularly observed the military figures on the public monuments imperial times. This arrangement was no do convenient enough for the short Spanish swo but the long sword in use down to the end the Second Punic War must surely have b worn on the left side in order to be easily dra with the right hand. Figures on tombs, ho ever, usually wear the sword attached to *cingulum*. [Cingulum.] The Roman swo belts, like the Greek, were often richly or mented, even with precious metals, in the fo of *bullae* or more elaborate devices: thus we r (Tac. *Hist.* i. 57) of common soldiers hav belts adorned with silver. The belts of emperors were so magnificent that they w entrusted to a distinct officer—the *baltear* —who had charge of them in the impe palace. Hadrian was considered remarka unostentatious because he did not wear golden *balteus*; that of Gallienus was ador with jewels. (Treb. Poll. *Gallien.* 16; Spa *Hadr.* 10.)



Balteus. (From Gerhard's *Vasenbilder*, pl. ccviii.

The *balteus* was of course used for other th military purposes, for instance to support lyre, as may be seen in statues of Apo Citharoedus, or to carry amulets.

2. A belt or collar (*μασχαλιστήρ*, *προστ νίδιον*, *προστηθίδιον*), passing round a hor neck and breast, used partly as a protection partly as an ornament, especially for char horses. It was often adorned with the sa elaborateness and richness as the soldier's swo belt, especially with *phalerae* and *tintinnab* See illustrations under these articles and *Mu Bresciano*, i. pl. liii. (Xen. *Hippica*, xii.; P v. 16, 100.)

Claudian (*Ep.* xx.) uses *balteus* to expr a horse's girth: so *μασχαλιστήρ* (Herod. 215).

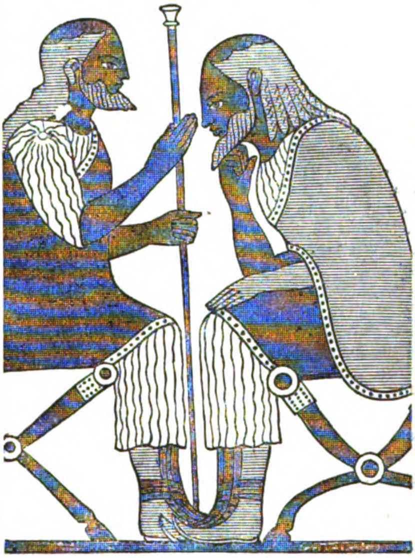
pper and lower lips, that is to
the πάππος combined; γένειον
per, the hair on the chin. (Cf.
20.) There is no special word
.

The beard was regarded by the Greeks, like other ancient nations, as a type of manhood, which it was a disgrace to be without; while in the Homeric times it had even that sanctity which it had among the Jews, a common form of entreaty being to touch the beard of the person addressed. (Hom. *Il.* viii. 371.) The different modes of wearing the beard are seen in the statues of gods, of which the head of the Olympian Zeus is the most striking. It was only shaven in sign of mourning, although in this case it was often not shaven, but left untrimmed; and a smooth face was sneered at as a sign of effeminacy. (Aristoph. *Thesm.* 218; Athen. xiii. p. 565 a.) The Spartans punished cowards (τρέσαντες) by shaving off part of their beards (Plut. *Ages.* 30), just as Hanun treated the ambassadors of David (2 Sam. x. 4). From the earliest times, however, it seems to have been customary to shave the moustache; and on the most ancient vases men are represented with the space round either lip clear, and with a pointed beard, as in the above figures from a painted tile in an Etruscan tomb, representing two grey-headed men in conversation.

Head of Olympian Zeus. (Visconti, *Mus. Pio Clem.*, vol. vi., tav. 1.)



Etruscans, with pointed beards. (Dennis, *Etruria*, i. p. 262.)

There was a curious custom at Sparta, which may have existed from very early times, that the Ephors on assuming office issued an edict to the citizens "to shave the moustache and obey the laws" (*κείρεσθαι τὸν μύστακα καὶ προσέχειν τοῖς νόμοις*, Plut. *Cleom.* 9); although the Spartans were in general derided for their carelessness in the treatment of their hair (Aristoph. *Vesp.* 476; *Lysist.* 1022). For to leave the beard and whiskers untrimmed was with the Greeks as much a sign of boorishness as to shave them entirely was a sign of effeminacy; and we hear of various styles of trimming them, one of which, the "wedge beard" (*σφηνοπώγων*), was used on the stage for masks of attendants and old men (*θεράποντες* and *πρεσβῦται ὑποδύστροποι*, Poll. iv. 137, 145).

In the time of Alexander the Great the custom of smooth shaving was introduced (Chrysippus *ap.* Athen. xiii. p. 565 a, *τὸ ξύρεσθαι τὸν πώγωνα κατ' Ἀλέξανδρον προῆκται, τῶν προτέρων οὐ χρωμένων αὐτῷ*), and spread from the Macedonians (whose kings are represented on coins, &c. with smooth faces) throughout the whole Greek world. Laws were passed against it without effect at Rhodes and Byzantium (Ath. *l. c.*); and even Aristotle, we are told, conformed to the new custom (Diog. Laert. v. 1; cf. the statue of Aristotle in the Palazzo Spada, Visconti, *Iconogr.* i. pl. 20), unlike the other philosophers, who retained the beard as a badge of their profession. A "man with a beard" (*πωγωνοτρόφος*) after the Macedonian period implies a philosopher (cf. Pers. *Sat.* iv. 1, *magister barbatus*, of Socrates), and we have many allusions to this custom of the later philosophers in such proverbs as "the beard does not make the sage" (*πωγωνοτροφία φιλόσοφον οὐ ποιεῖ*, Plut. *de Is. et Osir.* 3: cf. *ἐκ πώγωνος σοφός*, Dio Chrys. lxxii. 2). [W. M. L.]

II. ROMAN. The Romans in early times wore the beard uncut, as we learn from the insult offered by the Gaul to M. Papirius (Liv. v. 41), and from Cicero (*pro Cael.* 14; cf. Sen. *Nat. Q.* i. 17, 7; Hor. *Od.* ii. 15, 11; Tibull. ii. 1, 34; Ov. *Fast.* ii. 30; Verg. *Aen.* vi. 809); and, according to Varro (*de Re Rust.* ii. 11) and Pliny (vii. § 211), the Roman beards were not shaven till B.C. 300, when P. Ticinius Menas brought over a barber from Sicily; and Pliny adds, that the first Roman who was shaved (*rasus*) every day was Scipio Africanus. (Cf. Gell. iii. 4.) His custom, however, was soon followed, and shaving became a regular thing. The lower orders, then as now, were not always able to do the same, and hence the jeers of Martial (vii. 95, xii. 59). In the later times of the republic there were many *juvenes* who shaved the beard only partially, and trimmed it, so as to give it an ornamental form; to them the terms *bene barbati* (Cic. *Catil.* ii. 10) and *barbatuli* (Cic. *ad Att.* i. 14, 16; *pro Cael.* 14) are applied.

In the general way in Rome at this time, a long beard (*barba promissa*, Liv. xxvii. 34) was considered a mark of slovenliness and squalor. The censors, L. Veturius and P. Licinius, compelled M. Livius, who had been banished, on his restoration to the city, to be shaved, and to lay aside his dirty appearance (*tonderi et squalorem deponere*), and then, but not till then, to come into the senate, &c. (Liv. xxvii. 34.) The first time of shaving was regarded as the beginning of manhood, and the day on which this took place was celebrated as a festival. (Juv. *Sat.* iii. 186.) There was no particular time fixed for this to be done. Usually, however, it was when the young Roman assumed the toga virilis (Suet. *Calig.* 10). Augustus did it in his twenty-fourth year; Caligula in his twentieth. The hair cut off on such occasions was consecrated to some god. Thus Nero put his up in a gold box, set with pearls, and dedicated it to Jupiter Capitolinus. (Suet. *Ner.* 12.)

With the Emperor Hadrian the beard began to revive. (Dio Cass. lxviii. 15.) Plutarch says that the emperor wore it to hide some scars on his face. The practice afterwards became common, and till the time of Constantine the Great the emperors appear in busts and coins with beards; but Constantine and his successors to the end of the 6th century, with the exception of Julian, are represented as beardless. The contrast between the custom of the early emperors and those of Hadrian and his successors as to the beard is seen in the annexed coins. The Romans, unlike the Greeks, let their beards grow in time of mourning; so Augustus did (Suet. *Aug.* 23) for the death of Julius Caesar, and the time when he had it shaved off he made a season of festivity. (Dio Cass. xlviii. 34; cf. Cic. *in Verr.* ii. 12.) Other occasions of mourning on which the beard was allowed to grow were, appearance as a *reus*, condemnation, or some public calamity. (Liv. vi. 16, xxvii. 34; Mart. ii. 36, 3; Ulp. in Dig. 47, 10, 15, § 27; Suet. *Jul.* 67, *Oct.* 23; Caes. *B. G.* v. 24; Plut. *Cat. min.* 53, *Anton.* 18.) Tacitus (*Germ.* c. 3) says that the Chatti let their hair and beard grow, and would not have them cut till they had slain an enemy. For an account of barbers, see TONSOR. (Becker-Göll, *Gallus*, iii. p. 237, foll.) [J. H. F.] [W. S.]

Coin of Augustus. Coin of Hadrian.

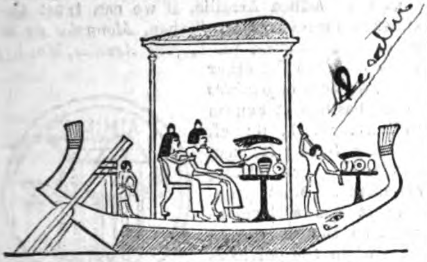
BAR'BITOS. [LYRA.]

BARDOCUCULLUS. [CUCULLUS.]

BARIS (*βᾶρις*), a boat used on the Nile to transport merchandise, and also at funerals to convey the corpse across the river. It was, like the modern Nile boats, made of the *ἀκάνθη* (*Mimosa Nilotica*, modern Arab. *sont*); was flat-bottomed, and of such light draught that it could only sail up stream with a strong breeze, and had usually only one rudder. The *baris* was often of many thousand talents' burden. Herodotus describes (ii. 96) the manner of its construction and navigation, in which, as we learn from Egyptian paintings, both sails and oars were employed. (See Rawlinson's *Herodotus*, *l. c.* and ii. 41, 197; Diodor. i. 96.) The poets use the word to signify an Egyptian (Aesch. *Suppl.* 815, 858; Propert. iv. 11, 44) or generally an Oriental boat or ship. (Aesch. *Pers.* 555; Eur. *Iph. A.* 297.)



Baris. (From Rawlinson's *Herodotus*.)

In the Septuagint the word is used in the sense of a tower or palace. (Ps. xliv. 9; Dan. viii. 1.) [J. H. F.]

BAS'ANOS (**βάσανος**). [TORMENTUM.]

BASCAN'IA (**βασκανία**). [FASCINUM.]

BASCAUDA, a word borrowed, like our English *basket*, from the ancient British language (Welsh *basged*, Cornish *basced*), and mentioned by Martial, xiv. 99, as an acceptable *xenium*, imported from Britain, and by Juvenal, xii. 46, among a number of valuable articles of plate. The Scholiast on the latter passage explains *bascaudae* as "vasa ubi calices lavabantur vel cacabus;" but it seems better to take the word in Martial as a basket, whose neatness made it a suitable present, and in Juvenal also as a silver basket in imitation of the barbarian workmanship. [J. Y.] [J. H. F.]

BASILEIA (**βασίλεια**), a festival with games open to all Greeks, held at Lebadea in Boeotia, in honour of Zeus Basileus. Diodorus (xv. 53) tells us it was instituted at the command of an oracle of Trophonius after the battle of Leuctra, 371 B.C. (See Foucart, *Revue Archéol.* 1875, i. p. 110.) [W. M. L.]

BAS'ILEUS (**βασιλεύς**). [REX; ARCHON.]

BASIL'ICA (also *regia*, Stat. *Silv.* i. 1, 30; Suet. *Aug.* 31; in the Greek writers who speak of the Roman *basilicae*, στοὰ βασιλική or στοά), a building which served as a court of law and an exchange, or place of meeting for merchants and men of business. The two uses are so mixed up together that it is not always easy to say which was the principal. Thus the basilica at Fanum, of which Vitruvius (v. 1, 6–10) himself was the architect, was entirely devoted to business, and the courts were held in a small building attached to it—the temple of Augustus. A basilica then was an adjunct to the market-place, affording shelter and comparative freedom from interruption. Its special architectural peculiarities were division into nave and aisles, and clerestory lighting. Phylander (*Comment. in Vitruv.*) derives the term from βασιλεύς, in reference to early times, when the king was judge; but those who hold that the Roman basilica was of Athenian origin derive the word from the title of the ἄρχων βασιλεύς, whose court was called ἡ βασίλειος στοά, or ἡ τοῦ βασιλέως στοά. (Paus. i. 3, 1; Demosth. i. *Aristog.* p. 776, § 23.) The plan of this building is unknown to us, nor are we acquainted with that of the court of the Hellanodicae in the old *agora* of Elis. (Paus. vi. 24, 3.) The evidence then for tracing the Roman basilica from the Athenian στοὰ βασίλειος lies simply in the resemblance of the names, which is not complete; while the adjective *basilicus* was not unknown to the Latin tongue of the age when the first basilica was built at Rome. (Plaut. *Capt.* iv. 2, 31; *Trin.* iv. 3, 23.) M. Viollet le Duc (*Lectures on Architecture*, i. 147, Eng. trans.) thinks the word came from Asia, that this kind of building originated with the successors of Alexander, and that it was probably their *Divan*, the place where they administered justice. He sees (p. 154) as differences between the Greek basilicas (such as those at Thoricus and Paestum) and the Roman ones, (1) the Greek basilicas were not closed with side walls, the Romans were,—which is, however, a very disputed point (see below); (2) the Greek had not a place for the tribunal which appears in all Roman basilicas.

The first edifice of this description was not erected until B.C. 184 (Liv. xxxix. 44, 7); for it is expressly stated by the historian, that there were no basilicas at the time of the fire which destroyed so many buildings in the Forum, during the consulate of Marcellus and Laevinus, B.C. 210. (Liv. xxvi. 27, 3.) It was situated in the forum adjoining the Curia, and was denominated Basilica Porcia, in commemoration of its founder, M. Porcius Cato. This basilica was destroyed by the fire at Clodius' funeral, 52 B.C. (Ascon. *Arg. ad* Cic. *pro Mil.* § 8.) Besides this, there were twenty others, erected at different periods, within the city of Rome (Pitisc. *Lex. Ant.*, s. v. *Basilica*), of which the following are the most frequently alluded to by the ancient authors:—1. *Basilica Sempronia*, constructed by Titus Sempronius, B.C. 171 (Liv. xliv. 16); and supposed, by Donati and Nardini, to have been between the Vicus Tuscus and the Velabrum. 2. *Basilica Opimia*, which was above the Comitium, built 155 B.C. (Varro, *L. L.* v. 156; Cic. *Sest.* 67, 140.) 3. *Basilica Pauli Aemilii*, or *Basilica Aemilia*, called also *Regia Pauli* by Statius (*l. c.*). Cicero (*ad Att.* iv. 16, 14) mentions two basilicas of this name, of which one was built, and the other only restored, by Paulus Aemilius. The original basilica called *Aemilia et Fulvia* (Varro, *L. L.* vi. 4) had been built in 179 B.C. by the censors M. Fulvius and M. Aemilius Lepidus. It stood behind the bankers' offices on the north-east side of the Forum (Liv. xl. 51, 4). Both these edifices were in the Forum, and one was celebrated for its open peristyle of Phrygian columns. A representation of this one is given below from a coin of the Aemilia gens. (Dio Cass. xlix. 42; Plin. *H. N.* xxxvi. § 102; Appian, *B. C.* ii. 26; Plut. *Caes.* 29.) The position of these two basilicas has given rise to much controversy, a brief account of which is given in the *Dict. of Biog.* vol. ii. p. 766. 4. *Basilica Pompeii*, called also *regia* (Suet. *Aug.* 31), near the theatre of Pompey. 5. *Basilica Julia*, erected by Julius Caesar, in the Forum, and opposite to the Basilica Aemilia. (Suet. *Calig.* 37.) The *Basilica Julia* was begun and almost finished by Julius Caesar, afterwards completed by Augustus; shortly after, however, it was burnt down, was restored by Augustus on a larger scale, and then bore the title of his two sons, Caius and Lucius (*Mon. Ancyr.* iv. 12, and Mommsen, p. 85). "It was a large double *porticus* with two tiers of columns one over the other: open on three sides, and having a range of rooms two or three stories high on the south-west side. . . . The large central space appears to have been without a roof, as the space is too great to admit of one" (J. H. Middleton, *Ancient Rome in* 1885, pp. 171–2, where see particulars as to the materials it was built of). We learn from Quintilian (xii. 5, 6) that all four companies of the *centumviri* sometimes met at once in the Basilica Julia. 6. The *Basilica Flavia* is the best preserved example of that special form of classical basilica which is supposed to have been the model of the Christian churches. It is rectangular, ending in a semicircular apse. It has a nave and two narrow aisles formed by five Corinthian columns decorated with metal ornaments; over these columns an entablature and upper gallery. The gallery was approached by steps starting from the colonnade. The apse was screened off from the nave by *cancelli*, as was the chancel in the Christian churches. The emperor's judgment-seat was in the apse (Middleton, *op. cit.* p. 121). 7. *Basilica Ulpia*, or *Trajani*, in the forum of Trajan. 8. *Basilica Constantini*, also called the Basilica of Maxentius, as it was begun by him, erected by the Emperor Constantine, supposed to be the ruin now remaining on the Via Sacra, near the temple of Rome and Venus, and commonly called the Temple of Peace. Of all these magnificent edifices nothing now remains beyond the ground-plan of the *Basilica Julia*, and the ground-plan, with the bases and some portion of the columns and superstructure, of the others. The basilica at Pompeii is in better preservation; the external walls, ranges of columns, and tribunal of the judges being still tolerably perfect on the ground-floor.

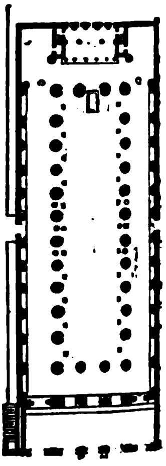
Basilica Ulpia. (From medal in British Museum.)

The forum, or, where there was more than one, the one which was in the most frequented and central part of the city, was always selected for the site of a basilica; and hence it is that the classic writers not unfrequently use the terms *forum* and *basilica* synonymously, as in the passage of Claudian (*de Sexto Cons. Honor.* 645): "Desuetaque cingit Regius auratis fora fascibus Ulpia lictor," where the forum is not meant, but the basilica which was in it, and which was surrounded by the lictors who stood *in* the forum. (Pitisc. *Lex. Ant.* l. c.; Nard. *Rom. Ant.* v. 9.)

Vitruvius (v. 1) directs that the most sheltered part of the forum should be selected for the site of a basilica, in order that during winter the business men may resort thither without suffering from the inclemency of the weather. It is hard to decide whether the basilicas were closed or not. For the latter view it is urged that we hear of people passing through a basilica (Plin. *Ep.* ii. 14, 8), that there is no trace of front walls whatsoever in the Basilica Ulpia, that the passage of Vitruvius quoted above points to an open building, and that the Basilica Aemilia, if we can trust the annexed representation (Cohen, *Monnaies de la République romaine*, pl. 1, *gens Aemilia*, No. 8), was open. On the other hand, we hear of *parietes* in the basilica at Fanum (Vitruv. vi. 1, 6; cf. Quint. x. 5, 18; Henzen, 6591), a very strong argument. Most probably it was a development on the early open form when the porticoes came to be bounded on the open side by a wall, the central space enclosed by the three porticoes being left open; and it thus formed a transition step between the open colonnade and the completely roofed-in building.

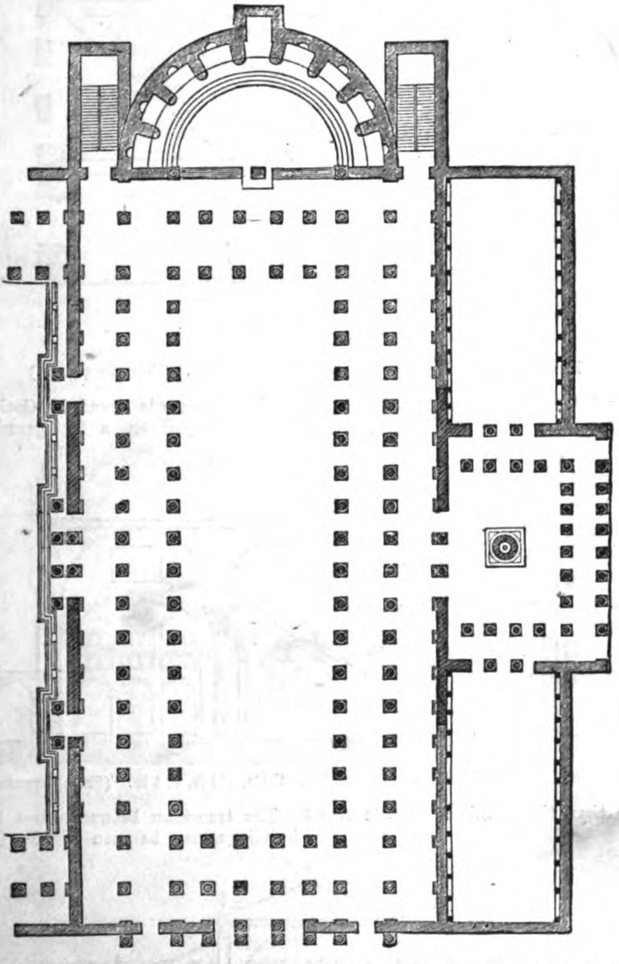
Basilica Aemilia. (From medal in British Museum.)

The ground-plan of all these buildings is rectangular, and their width not more than half nor less than one-third of the length (Vitruv. *l. c.*); but if the area on which the edifice was to be raised was not proportionally long, small chambers (*chalcidica*) were cut off from one of the ends (Vitruv. *l. c.*), which serve as offices for the judges or merchants. This area was divided into three parts, consisting of a central nave (*media porticus*) and two side aisles, each separated from the centre by a single row of columns—a mode of construction particularly adapted to buildings intended for the reception of a large concourse of people. At one end of the centre aisle was the tribunal of the judge, in form either rectangular or circular, and sometimes cut off from the length of the grand nave (as is seen in the annexed plan of the basilica at Pompeii, which also affords an example of the chambers of the judices, or chalcidica, above mentioned), or otherwise thrown out from the hinder wall of the building, like the tribune of some of the most ancient churches in Rome, and then called the hemicycle. But the Basilica Ulpia and that of Constantine deserve a special notice, as the former is the finest specimen of the basilica with wooden roof, and the latter of the vaulted class; besides, they are widely different as to their style of structure, and so are important in the development of Roman architecture.



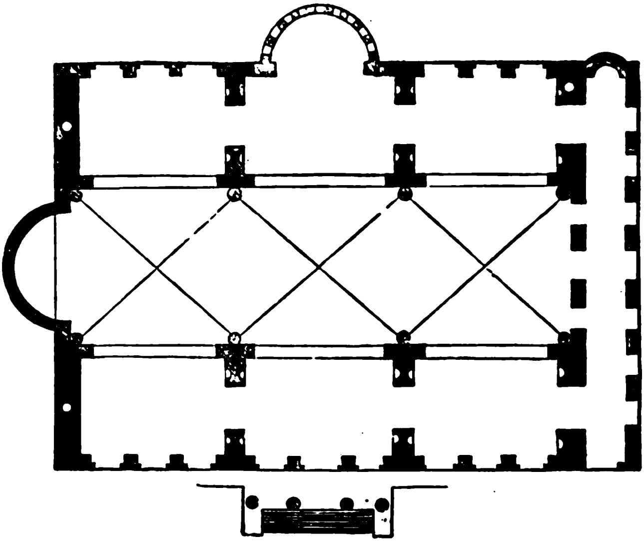
Plan of Basilica at Pompeii. Scale 100 ft. to 1 in. (From Fergusson.)

The *Basilica Ulpia* was a rectangle about 370 feet long by 180 broad. It has a nave 87 feet wide, and four aisles, each 23 feet 4 inches wide, divided by four rows of columns, each column being 35 feet high. Above the side aisles was a gallery, the roof of which was supported by an upper row of columns, and from these columns sprang the arches of the nave. This roof, 120 feet high, was of wood, and was richly adorned with gilt plates. At one end, not at both, was a semicircular apse, the back part raised and approached by steps: in the centre of this platform was the raised seat of the presiding magistrate, and on the steps were places for the judges or others engaged in the special business in hand (cf. Plin. *Ep.* vi. 33). On the north-west side of the basilica were two large libraries, one for Greek and the other for Latin MSS. It must be observed that in the fragment of the Capitoline plan on which a part of the ground-plan of this basilica is represented, the apse is marked LIBERTATIS. So we have seen in the basilica at Fanum a temple of Augustus was attached to the basilica, and was used as a court of justice. For further details see Middleton, *op. cit.* 270–271, and his plan, p. 272; also Viollet le Duc, *op. cit.* i. 154, who finds (p. 155) the key to such buildings in those Persian palaces, all of which exhibit in one of the sides of the courts, surrounded by porticoes, a hemicycle of large relative dimension covered by a vault in the form of a quarter sphere. For a ground-plan of the Basilica Ulpia see the preceding cut, taken from Fergusson (*Hist. of Architecture*, 1874, fig. 198).

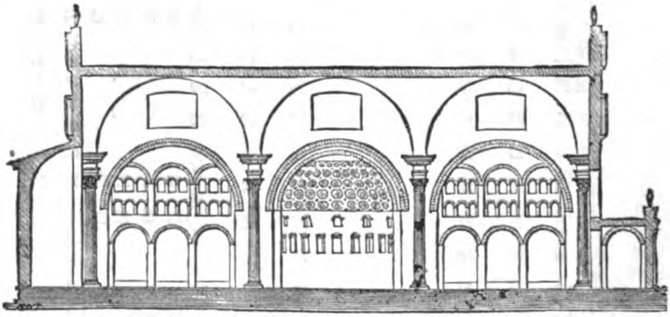


Plan of Trajan's Basilica at Rome. Scale, 100 ft. to 1 in. The part shaded darker is all that is uncovered. (From Fergusson.)

The *Basilica of Constantine* (or of Maxentius, for it was he who commenced it), commonly called the Temple of Peace, was 195 feet broad by 270 feet long. The centre aisle was 83 feet wide, and the height 120 feet. "In this building," says Mr. Fergusson (*op. cit.* i. 318–20), "no pillars were used, with the exception of eight great columns in front of the piers, employed merely as ornaments or as vaulting shafts were in Gothic cathedrals, to support in appearance, though not in construction, the springing of the vaults. The side aisles were roofed with three great arches, each 72 feet in span, and the centre by an immense intersecting vault in three compartments. The form will be understood from the annexed sections, one taken longitudinally, the other across the building. As will be seen from them all, the thrusts are collected to a point, and a buttress placed there to receive them; indeed almost all the peculiarities afterwards found in Gothic vaults are here employed on a far grander and more gigantic scale than the Gothic architects ever attempted."

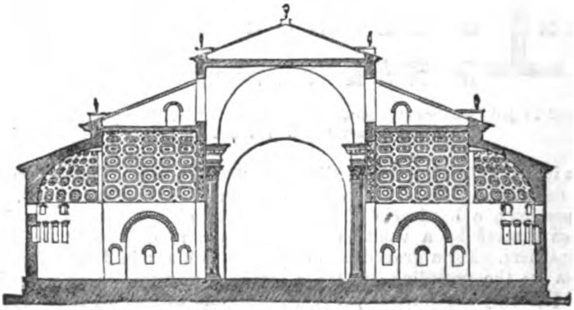


Plan of Basilica of Maxentius. Scale, 100 ft. to 1 in. (From Fergusson.)



Longitudinal Section of Basilica of Maxentius. Scale, 100 ft. to 1 in. (From Fergusson.)

The transition between these two styles of buildings may be seen in the Praetorium at Mousmieh (De Vogüé, *Syrie Centrale*, Pl. 7), built about 165 A.D. The aisles are arched longitudinally, the nave arched transversely. The arches of the nave and aisles are coupled

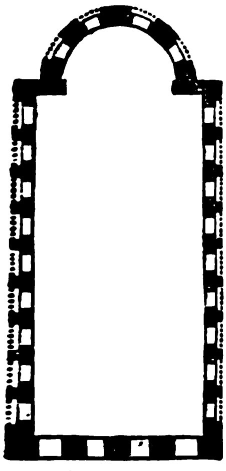


Transverse Section of Basilica of Maxentius. Scale, 100 ft. to 1 in. (From Fergusson.)

and supported by Corinthian columns, four on each side. The basilica at Chaqqa (Pl. 16), which De Vogüé considers the most complete type of the ancient basilica, has the aisles arched longitudinally and transversely, the different thrusts meeting in a buttress, which is very strong. The basilica at Tafkha, which is practically similar to the foregoing, is a Christian building of the 5th cent. at latest, and in it we can trace, says De Vogüé (p. 57), the transition from the Christian basilica to the Christian church. Another good example of the transitional style is the basilica of Soueideh (Pl. 19).

The next important basilica at Rome which was built after that of Constantine (or Maxentius) was Constantine's St. Peter's. But it was a Christian church; and for an account of this and subsequent basilican churches the reader is referred to Smith's *Dictionary of Christian Antiquities*, art. *Church.*

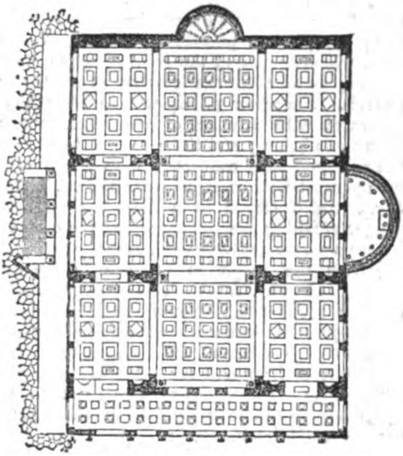
As to the provincial basilicas of the Romans, few remain, as most were converted into churches, and afterwards modified; but that of Trèves survives. As the annexed cut shows, it was a little more than twice as long as broad (85 feet broad). The walls were 100 feet high, with two rows of windows; but whether there was a gallery between them is not certain. The semicircular apse was 60 feet in diameter, and raised above the level of the rest of the floor of the building (Fergusson, *op. cit.* i. 321). The basilica at Pompeii is elaborately discussed by Overbeck (*Pompeii*, pp. 121–127). It was built about 93 B.C. It most probably had a gallery, and was almost certainly not roofed in the centre. It is highly noticeable that the place for the tribunal is rectangular, and not a semicircular apse. The basilica at Fanum, built and described by Vitruvius (v. 1, 6–10), is fully treated of, with beautiful illustrations, by M. Viollet le Duc (*op. cit.* i. 150 foll.); and the basilica of Otricoli is slightly touched on by Guhl and Koner (fig. 426, ed. 4, 1876), who give a plan of it from Hirt (*Geschichte der Baukunst*, Taf. 11, fig. 12).



Plan of the Basilica at Trèves. Scale, 100 ft. to 1 in. (From Fergusson.)

The coin of Lepidus, figured p. 288, gives indications of a sloping external roof. The more magnificent basilicas, at any rate, were decorated both in the interior and the exterior with statues and other works of art, and marbles and precious materials. (Gell. xiii. 24, 1; Plin. *H. N.* xxxv. § 13; Cic. *Att.* iv. 16, 14; Tac. *Ann.* iii. 72; Donaldson, *Archit. Numism.* 66, p. 152.)

Basilicas did not always agree with Vitruvius' ideal; his own structure at Fanum, which he describes (v. 1, 6–10), shows some variations from it. Again, the nave of the *Basilica Julia* was surrounded on all sides by a double arcaded corridor, and the arcades were supported by solid piers of masonry with pilasters; the basilicas of Praeneste and Aquinum show only a single nave. The basilica of Constantine presents great peculiarities, both in its extremely ponderous vaulted roof, of which a considerable portion is still standing, and in its general plan, which, as may be seen from the accompanying woodcut, consists of a nave and two aisles, all three being divided into three bays; besides, the apse at the head of the nave is a lateral one, which has been supposed, like the openings opposite to it, to date from the time when the basilica was applied to Christian uses.



Ground-plan of the Basilica of Constantine.

The name of *basilica* was in course of time applied to other public halls of all sorts, such as those attached to temples, theatres, or baths (Plin. *Ep.* x. 33, 3; Orelli, 3696; Henzen, 1626); also to halls of audience in palaces and villas, like that of which ruins exist on the Palatine and the three in the villa of the Gordiani on the *via Praenestina*, which were each 100 ft. long (Capit. *Gord.* 32, 3); and, lastly, to any large covered building, even to a riding school (*basilica equestris exercitatoria*: *Bulletin de l'Académie des Inscriptions*, 1869, p. 280). There are still existing some remains of the private basilica of Domitian which Plutarch (*Poplic.* 15) mentions as being so splendid; from these remains we can gather that it was a rectangular building with a semicircular apse at one of its extremities, very similar in shape to the basilica at Trèves, but of smaller dimensions.

The internal tribune was probably the original construction, when the basilica was simply used as a court of justice; but when those spacious halls were erected for the convenience of traders as well as loungers, then the semicircular and external tribune was adopted, in order that the noise and confusion in the basilica might not interrupt the proceedings of the magistrates. (Vitruv. *l. c.*) In the centre of this tribune was placed the curule chair of the praetor and seats for the judices, who sometimes amounted to the number of 180 (Plin. *Ep.* vi. 33, 3), and the advocates; and round the sides of the hemicycle, called the wings (*cornua*), were seats for persons of distinction, and for the parties engaged in the proceedings. It was in the wing of the tribune that Tiberius sat to overawe the judgment at the trial of Granius Marcellus. (Tacit. *Ann.* i. 75.) The two side aisles, as has been said, were separated from the centre one by a row of columns, behind each of which was placed a square pier or pilaster (*parastata*, Vitruv. *l. c.*), which supported the flooring of an upper portico, similar to the gallery of a modern church. The upper gallery was in like manner decorated with columns of smaller dimensions than those below; and these served to support the roof, and were connected with one another by a parapet-wall or balustrade (*pluteus*, Vitruv. *l. c.*), which served as a defence against the danger of falling over, and screened the crowd of loiterers above (*subbasilicani*, Plaut. *Capt.* iv. 2, 35) from the people of business in the area below. (Vitruv. *l. c.*) This gallery reached entirely round the inside of the building, and was frequented by women as well as men, the women on one side and the men on the other, who went to hear and see what was going on. (Plin. *l. c.*) The staircase which led to the upper portico can be recognised in the Flavian basilica (Middleton, *op. cit.* p. 121); it is similarly situated in the basilica of Constantine: but what is supposed to be the staircase in the Pompeian basilica is really not so (Overbeck, *op. cit.* 124). The whole area of these magnificent structures was covered in with three separate ceilings, of the kind called *testudinatum*, like a tortoise-shell; in technical language now denominated *coved*, an expression used to distinguish a ceiling which has the general appearance of a vault, the central part of which is, however, flat, while the margins incline by a cylindrical shell from each of the four sides of the central square to the side walls; in which form the ancients imagined a resemblance to the shell of a tortoise.

From the description which has been given, it will be evident how much these edifices were adapted in their general form and construction to the uses of a Christian church; to which purpose many of them were, in fact, converted in the time of Constantine. Hence the later writers of the Empire apply the term *basilica* to all churches built after the model just described; and such were the earliest edifices dedicated to Christian worship, which, with their original designation, continue to this day, being still called at Rome *basiliche*. It is generally supposed that the origin of the Christian church is the Roman basilica. But the earliest type of the Christian church was a courtyard with a house for prayer at the end. Such virtually are some of the earliest Christian basilicas, as San Clemente and Constantine's St. Peter's. In fact it is rather the Roman *house* than the Roman forensic basilica that is the original type of the church. See this view advocated in an interesting article by M. Salomon Reinach in the *Bulletin de Correspondance hellénique*, Avril, 1886, pp. 334–5, and compare also J. P. Richter, *Der Ursprung der abendländischen Kirchengebäude*, 1878, who appears to find the original of the meeting-places in the *oeci* of the private houses. In a highly-important work, *From Schola to Cathedral*, 1886, by Prof. Baldwin Brown, of the University of Edinburgh, it is urged that the early Christian church was a schola enlarged, not a basilica simplified. The true germ, he says (pp. 196–7, cf. p. 129), of the Christian church was an oblong interior terminated by an apse. The Pagan basilica had not essentially the apse (pp. 123 foll.), though it is found in the basilica of Maxentius, and, as we saw, in others also. Prof. Kraus of Freiburg (in the *Realencyklopädie der christlichen Alterthümer*) shows that the forensic basilica had no one determinate shape,—it had sometimes an apse and sometimes not; but the Christian basilica, keeping to the form of the crypt, had always an apse, and was always entered from the side opposite the apse. It has been by some supposed that the basilicas in private houses (cf. Vitruv. vi. 8, 2) which had a semicircular tribunal were the originals of the churches, but they cannot have been sufficiently numerous, as Professor Brown points out (p. 127), to have influenced the form of the churches. See too his discussion in Appendix, Note 1, "The Pagan Basilica and the Christian Church," directed against Dr. Konrad Lange, of Halle (*Haus und Halle*, 1885), who upholds the old theory of the acquisition of Pagan basilicas by the Christians in the age of Constantine.

A Christian basilica consisted of four principal parts:—1. Πρόναος, the vestibule of entrance. 2. Ναῦς, *navis*, and sometimes *gremium*, the nave or centre aisle, which was divided from the two side ones by a row of columns on each of its sides. Here the people assembled for the purposes of worship. 3. Ἄμβων (from ἀναβαίνειν, to ascend), *chorus* (the choir), and *suggestum*, a part of the lower extremity of the nave raised above the general level of the floor by a flight of steps. 4. Ἱερατεῖον, ἱερὸν βῆμα, *sanctuarium*, which answered to the tribune of the ancient basilica. In the centre of this sanctuary was placed the high altar, under a tabernacle or canopy, such as still remains in the basilica of St. John Lateran, at Rome, at which the priest officiated with his face turned towards the people. Around this altar, and in the wings of the sanctuarium, were seats for the assistant clergy, with an elevated chair for the bishop at the bottom of the circle in the centre. (See, besides the books cited in the text, *Theatr. Basil. Pisan.* cura Joseph. Marl. Canon. iii. p. 8; Ciamp. *Vet. Men.* i. ii. *et De Sacr. Ed.*; Stieglitz, *Archäol. d. Baukunst*, vol. iii. pp. 19, &c.; Hirt, *Lehre d. Gebäude*, pp. 180, &c.; Bunsen, *Die Basiliken des christlichen Roms*, Munich, 1844; Zestermann, *Antike und christl. Jordan, *Forma urbis Romae*, iv., Berlin, 1874.) [J. H. F.] [L. C. P.]

BASIL'ICA, the Greek code of *Roman law*. About A.D. 876, the Emperor Basil, the Macedonian, commenced this work, which was completed by his son Leo, the philosopher, who reigned from A.D. 886 to 911. Before the reign of Basil, there had been several Greek translations of the Pandects, the Code, and the Institutes; but there was no authorised Greek version of them. The numerous Constitutions of Justinian's successors, and the contradictory interpretations of the jurists, were a further reason for publishing a revised Greek text under the imperial authority. This great work was called Ἀνακάθαρσις τῶν παλαιῶν νόμων, τὸ ἑξηκοντάβιβλον, ὁ βασιλικὸς (νόμος) and τὰ βασιλικά. It was revised by the order of Constantine Porphyrogennitus, about A.D. 945. The Basilica comprised the Institutes, Pandects, Code, the Novellae, and the imperial Constitutions subsequent to the time of Justinian, in sixty books, which are subdivided into titles. For the Institutes the paraphrase of Theophilus was used; for the Digest the πλάτος of Stephanus, and the commentary of Cyrillus and of an anonymous author; for the Code the κατὰ πόδας of Thalelaeus and the work of Theodorus; and for the Novellae, except the 168, the Summae of Theodorus, Athanasius, and Philoxenus. The publication of this authorised body of law in the Greek language led to the gradual disuse of the original compilations of Justinian in the East. But the Roman law was thus more firmly established in Eastern Europe and Western Asia, where it has maintained itself among the Greek population to the present day.

The arrangement of the matter in the Basilica is as follows:—All the matter relating to a given subject is selected from the Corpus Juris; the extracts from the Pandect are placed first under each title, then the constitutions of the Code, and next in order the provisions contained in the Institutes and the Novellae, which confirm or complete the provisions of the Pandect. The Basilica does not include all that the Corpus Juris contains; but it preserves numerous fragments of the opinions of ancient jurists, and of imperial constitutions, which are not in the Corpus Juris.

The Basilica were published, with a Latin version, by Fabrot, Paris, 1647, seven vols. folio. Fabrot published only thirty-six books complete, and six others incomplete: the other books were made up from an extract from the Basilica and the Scholiasts. Four of the deficient books were afterwards found in MS., and published by Gerhard Meerman, with a translation by M. Otto Reitz, in the fifth volume of his *Thesaurus Juris Civilis et Canonici;* and they were also published separately in London, in 1765, folio, as a supplement to Fabrot's edition. The work, however, is still incomplete, not less than 17 out of the 60 books having been lost, and others mutilated. The best edition is that of C. W. E. Heimbach, Leipzig, 1833–51, 5 vols. 4to, with a *Supplementum editionis Basilicorum Heimbachianae* by C. E. Zachariä von Lingenthal, Leipzig, 1846.

(Heimbach, *de Basilicorum Origine, Fontibus, &c.*, Leipzig, 1825; A. F. Rudorff, *Röm. Rechtsgeschichte*, i. § 127, pp. 355–359.)

[W. S.] [W. W.]

BASILINDA (βασιλίνδα), a children's game, wherein one is appointed by lot king, and has his playmates as soldiers or servants to obey him (Poll. ix. 110; Hesych. *s. v.*). It was by an incident in connexion with this game that the parentage of Cyrus the Elder was discovered (Herod. i. 114; Justin. i. 5). By Suetonius (*Nero*, 35) it is called *ducatus et imperia ludere*. We have evidence that in the game of ball called ἀπόρραξις (*i.e.* trying how often one can keep knocking a ball up against a wall, or against the ground), he who kept it up most times was called βασιλεύς, and he could give what orders he pleased to the defeated player, who was called ὄνος (cf. Plat. *Theaet.* 146 A; Hor. *Epist.* i. 1, 59; Grasberger, *Erziehung und Unterricht*, i. 53–55, 92).

[L. C. P.]

Isis with Basilium. (Wilkinson, *Ancient Egyptians*, iii. p. 233.)

BASILIUM (βασίλειον, βασίλεια), a tall head-dress peculiar to kings of Egypt and to the Egyptian goddess Isis. (Diod. Sic. i. 47; Plut. *de Is. et Osir.* 19 (ii. 358); Schol. in Aristoph. *Plut.* 926; *C. Inscr. Lat.* ii. 3386; Orelli, 2510.)

[W. M. L.]

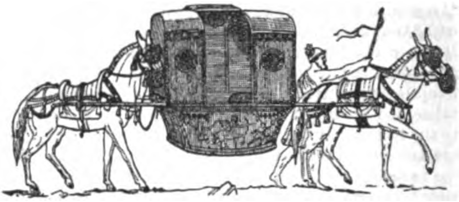
BAS'SARA, BAS'SARIS (βασσάρα, κασσάρα), meant originally a fox (Tzetz. *ad* Lycophr. 771; cf. βασσάριον in Herod. iv. 192). In the Egyptian hieroglyphics, the fox is called *wasar*, Coptic *basor* (Schwartz, *Das alte Aegypten*, 971); and Egyptian priests are found represented in what seem to be fox-skins, when officiating (Rosellini, vol. ii. plate lxiv.; Lepsius, *Denkmäler*, ii. 112, 128). Accordingly, the word probably came from Egypt, was carried by Phoenician

Bassara, dress of a Bacchante. (From a Greek vase in the British Museum.)

merchants to Cyrene (Hesych. *s. v.* *Βάσσαρις*), and hence to Lydia and Thrace (Tzetz. *ad* Lycophr. 771, 1343), where it appears as the dress of the Bacchanals. It is described as variegated, and reaching down to the feet (Bekk. *Anecd.* 222, 26; cf. Aesch. *Frag. Edon.*; Poll. ix. 59): but Lenormant supposes that the term *βασσάρα* was applied to the long robe as fastened in with a fox-skin, wound round the upper part of the body, and that the whole costume got its name from the fox-skin fastening. Bassareus was a name given to the Lydian Dionysus, but there is no genuine Hellenic example of a fox in connexion with Dionysus as it appears on Lydian coins. The name *βασσάρα* was also given to a kind of shoe (*Etym. Magn.* s. v.) worn by the Lydian Bassareus and made of fox-skin, as that of the Greek Dionysus was of fawn-skin. (See Lenormant in D. and S.; S. Reinisch in Pauly, and Schultz in Roscher's *Ausführl. Lexikon der griech. und röm. Mythologie*, s. v.) [L. C. P.]

BASTAGA'RII. The word *bastaga* (connected with *βαστάζειν*) in Low Latin was applied to the duty of transport of goods, belonging either to the state or to the emperor, from one part of the empire to another (Ducange, *s. v.*). The carriers were called bastagarii; they formed a corporation, and, like most functionaries of their time, they could not desert their special branch of duty (Cod. Theod. x. 20, 11). In an emergency in 368 A.D. they are assigned every tenth (or fifth, according to the Justinian Code, xi. 8, 4) draught animal to supply anew their stock of beasts of burden (Cod. Theod. x. 20, 4). From the Notitia Dignitatum (*Occ.* xi. 78–85) we learn that there were four transports a year from the East to Italy and back again (adopting Seeck's admirable addition *Italicianae*). The praepositi of such bastagae, who belonged to the class of cohortales (Cod. Theod. xii. 58, 3), had the duty of seeing to the loading and unloading of the transports (see Böcking *ad loc.* ii. 365 ff.). Of the transports in question, one praepositus superintended the unloading of the first from the East to Italy, and the loading of the fourth from Italy to the East; another the unloading of the second from the East to Italy, and the loading of the third from Italy to the East, and so on. For these praepositi were stationed in Italy, and so under the control of the Comes Sacrarum Largitionum of the West. We also hear (*Occ.* xii. 28, 29) of a bastaga rei privatae Orientalis inferioris (*i.e.* according to Böcking, ii. 391, that which came by the Mare Inferum), and bastaga privatarum Galliarum under the Comes rerum privatarum. (Besides Böcking and Seeck on the Notitia, see also L. Bouchard, *Étude sur l'administration des finances de l'Empire romain dans les derniers temps de son existence*, pp. 296–298, who, however, does not give sufficient evidence for his statements.) [L. C. P.]

BASTERNA, a kind of litter (*lectica*) in which women were carried in the time of the Roman emperors. It appears to have resembled the lectica [LECTICA] very closely; and the only difference apparently was, that the lectica was carried by slaves and the basterna by two mules, one before and one behind (Pallad. vii. 2, 3; *Anth. Lat.* iii. 183, where we learn that it was gilded; see also Joh. Chrys. *Hom. ad Ep. in Rom.* xi.; Lamprid. *Heliog.* 21), and that the sides might be left open or closed (cf. Amm. Marc. xiv. 6, 16). It was driven by a *basternarius* (Symm. *Ep.* vi. 15; Ginzrot, *Die Wägen d. Alt.* ii. p. 208). [W. S.]



Basterna, a Mule Palanquin. (Ginzrot, plate lxvi. fig. 1.)

BATIACA (Ritschl, Plaut. *Stich.* v. 3, 11, for MSS. *Batiola*; *βατιακή*, dim. *βατιάκιον*, Philem. *Cher.* 1), a drinking vessel of silver (Athen. xi. 480 a, cf. 484 c; Isid. *Gloss.* p. 5), brass or gold (Arist. *Mirab.* 49), of a costly nature (Plaut. *l. c.*). [J. H. F.]

BATILLUM (*batillum* or *vatillum*, Hor. *Sat.* i. 5, 36), a shovel with a short handle, made of iron (Plin. *H. N.* xxxiii. § 127, xxxiv. § 112), used for various purposes, such as collecting dung (Varr. *R. R.* iii. 6, § 3), and also as a fire-shovel, or chafing-dish, sometimes used to burn perfumes or incense. (Hor. *l. c.*; Treb. Poll. *Claud.* 14; Salmas. and Casaub. *ad loc.*; Apic. vii. 9.) [W. S.]

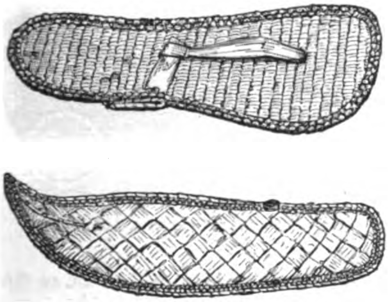
Batillum, bronze shovel found at Torre dell' Annunziata near Pompeii. (British Museum.)

BAU'CALIS (*βαύκαλις*, *βαυκάλη*, also *καύκαλις*), a large vessel for cooling wine in (*Anth. Pal.* xi. 244, 4), made at Alexandria (Athen. xi. 784 c), like the *ψυκτήρ*, except that it was probably larger, and supported, according to Hermann-Blümner (*Privatalt.* 234, note 6), on four wheels (*τετράκυκλος*, Athen. *l. c.*), if we are not to suppose with Krause (*Angeiologie*, 366) that the *κύκλοι* are raised rings which divided the vessel into four compartments. Philostorgius (i. 4) says it was made of earthenware (*ἄγκος ὀστράκινον*). It was perhaps sometimes made of glass; at least Athenaeus, in immediate connexion with his description, speaks of the elaborate glass-working at Alexandria, which imitated every kind of clay. Brass seems to have been an unusual material for the vessel to be made of (*Anth. Pal.* l. c.).

Βαυκάλιον appears to have been a smaller vessel of the kind. [L. C. P.]

BAU'CIDES (*βαυκίδες*), a kind of costly shoe of a saffron colour (Poll. vii. 99), worn exclusively by women. It was also called *βουκίδιον*. Kock on Aristophanes (*Frag.* 342) quotes Aspasius (on Aristot. *Eth.* 58 a) to the effect that it was an Ionian shoe worn especially by the Ionian women. It is mentioned also by Alexis (*Frag.* 98, 7, Kock). [L. C. P.]

BAX'EAE or BAXAE, sandals made of vegetable leaves, twigs, or fibres. According to Isidore (*Orig.* xix. 33), this kind of sandal was worn on the stage by comic, whilst the cothurnus was appropriate to tragic actors. When, therefore, one of the characters in Plautus (*Men.* ii. 3, 40) says, "Qui extergentur baxeae?" we may suppose him to point to the sandals on his feet. Philosophers also wore sandals of this description, at least in the time of Tertullian (*Pall.* 4) and Apuleius (*Met.* ii. 28, xi. 8; *Flor.* 9), and probably for the sake of simplicity and cheapness. Isidore adds, that baxeae were made of willow (*ex salice*), and that they were also called *calones*. From numerous specimens of them discovered in the catacombs, we perceive that the Egyptians made them of palm-leaves and papyrus. (Wilkinson, *Ancient Egyptians*, vol. ii. p. 336.) They are sometimes observable on the feet of Egyptian statues. According to Herodotus, sandals of papyrus (*ὑποδήματα βύβλινα*, ii. 37) were a part of the required and characteristic dress of the Egyptian priests. We may presume that he intended his words to include not only sandals made, strictly speaking, of papyrus, but those also in which the leaves of the date-palm were an ingredient, and of which Apuleius makes distinct mention ("pedes palmeis baxeis indutum," *Met.* ii. 8.) The accompanying woodcut shows two sandals exactly answering to this description, from the collection in the British Museum. The upper one was worn on the right foot. It has a loop on the right side for fastening the band which went across the instep. This band, together with the ligature connected with it, which was inserted between the great and the second toe, is made of the stem of the papyrus, undivided and unwrought. The lower figure shows a sandal in which the portions of the palm-leaf are interlaced with great neatness and regularity, the sewing and binding being effected by fibres of papyrus. The three holes may be observed for the passage of the band and ligature already mentioned. Tertullian speaks of gilded *baxae* (*Idol.* 8), and possibly of purple ones (*Pall.* 4; but the passage is corrupt). [J. Y.] [J. H. F.]



Baxeae or Sandals. (British Museum.)

BEBAIO'SEOS DIKE' (*βεβαιώσεως δίκη*), an action to compel the vendor to make a good title, was had recourse to in the following cases:—

1. To compel specific performance of the contract, when the vendor, after receiving the *ἀρραβὼν* or deposit, gets a more advantageous offer from another quarter, or otherwise repents of his bargain. (Harpocrat. *s. v.* *ἐνίοτε καὶ ἀρραβῶνος μόνου δοθέντος, εἶτα ἀμφισβητήσαντος τοῦ πεπρακότος, ἐλάγχανε τὴν τῆς βεβαιώσεως δίκην ὁ τὸν ἀρραβῶνα δοὺς τῷ λαβόντι.*)

2. When the right or possession of the purchaser was impugned or disturbed by a third person. A claimant under these circumstances, unless the present owner were inclined to fight the battle himself (*αὐτομαχεῖν*), was referred to the vendor as the proper defendant in the cause (*ἀνάγειν ἐπὶ τὸν πρατῆρα*, Poll. viii. 34). The latter was then bound to make good the title (*βεβαιοῦν*); or if he refused, the action in question was the legal remedy against him.

3. If the third party so claiming had established his right, and been by the decision of the dicasts put in legal possession of the property, whether movable or otherwise, the ejected purchaser was entitled to sue for reimbursement (*τὴν τιμὴν καὶ τὴν ζημίαν*, the actual price *plus* compensation for loss and inconvenience) from the vendor by this action (Pollux, viii. 6). The intricate case in the speech of Demosthenes against Pantaenetus has sometimes been referred to this head, but seems hardly to belong to it. The provision in Plato's Laws (xii. 954 A) probably represents the actual law of Athens: "He who sells for another who sells unlawfully, or is not able to make good the loss, shall himself be responsible; the agent and the principal shall be equally liable."

It has been conjectured that there was also a *βεβαιώσεως δίκη* when the purchaser of confiscated property (*δημιόπρατα*) was disturbed in his possession by a claimant; the defendant in that case being the Prytanis of the Poletae who had carried out the decree of sale (*Att. Process*, p. 574). But it was a well-known axiom in Athenian law that sales by the state gave an indefeasible (or, as we should say, a parliamentary) title (Demosth. *c.* *Timocr.* p. 717, § 54, with Wayte's note; Pollux, viii. 99; Hesych. *s. v.* *ἐν λευκώμασι*). The only evidence to the contrary is a doubtful reading (*πέπρακε* for *πέπραχε*) in Demosth. *c.* *Pantaen.* p. 972, § 19; and the notion of Meier and Schömann has not found favour among recent scholars (Müller, *ap.* Pauly; Caillemer, *ap.* D. and S.).

The *βεβαιώσεως δίκη*, like most civil actions, came before the tribunal of the Thesmothetae (K. F. Hermann, *Privatalterth.*, § 65, n. 15–18). [J. S. M.] [W. W.]

BEMA (*βῆμα*), the platform from which the orators spoke in the Athenian *ἐκκλησία*, is described under Ecclesia. [W. S.]

BENDIDEIA (*Βενδίδεια*), a festival celebrated in the port town of Peiraeeus in honour of Bendis, a Thracian divinity, whose worship seems to have been introduced into Attica about the time of Socrates, B.C. 429, for Plato (*de Re Publ.* init.) introduces Socrates giving an opinion on the Bendideia, and saying that it was then celebrated for the first time. It was celebrated on the 20th, or, according to others, on the 19th of Thargelion. (Schol. *ad* Plat. *Repub.* i. p. 354; Proclus, *ad* Plat. *Tim.* pp. 9–27.) The festival resembled, in its character, those celebrated in honour of Dionysus (Strab. x. p. 470), though Plato (*l. c.* p. 354) mentions only feasting; but the principal solemnities seem to have consisted in a procession held by the Thracians settled in Peiraeeus, and another held by the Peiraeans themselves, which, according to Plato (*de Re Publ.* init.), were held with great decorum and propriety, and a torch-race on horseback in the evening. The Athenians identified Bendis with their own Artemis (Hesych. *s. v.* Βένδις), but the temple of Bendis (Βενδίδειον) at Peiraeeus was near that of Artemis, whence it is clear that the two divinities were distinct. (Xenoph. *Hellen.* ii. 4, § 11; comp. Liv. xxxviii. 41; Ruhnken, *ad Tim. Gloss.* p. 62; Clinton, *F. H.* vol. ii. p. 402, 3rd edit.) [L. S.]

BENEFIC'IUM ABSTINENDI. [HERES.]

BENEFIC'IUM, BENEFICIA'RIUS. The word *beneficium* is of frequent occurrence in the Roman law, in the sense of some special privilege or favour granted by the praetor or the emperor to a class of persons on some special ground of equity: e. g. *beneficium abstinendi*, *beneficium divisionis ex epistola Hadriani*, *beneficium competentiae*, *beneficium aetatis*, *beneficium inventarii.* But the word was also used in other senses, and the meaning of the term in feudal law, where it is equivalent to feodum or fief (see below), is clearly derivable from the signification of the term among the Romans of the later republican and earlier imperial times. In the time of Cicero it was usual for a general, or a governor of a province, to report to the treasury the names of those under his command who had done good service to the state: those whose names were entered in such report were said *in beneficiis ad aerarium deferri* (Cic. *pro Arch.* c. 5, *ad Fam.* v. 20, and the note of Manutius). It was required by a Lex Julia that the names should be given in within thirty days after the accounts of the general or governor. *In beneficiis* in these passages may mean that the persons so reported were considered as persons who had deserved well of the state, and so the word *beneficium* may have reference to the services of the individuals; but as the object for which their services were reported was the benefit of the individuals, it seems that the term had reference to the gratuity in the form of money or presents given for such services. The honours and offices of the Roman state, in the republican period, were called the *beneficia* of the populus Romanus.

Beneficium also signified any promotion conferred on or grant made to soldiers, who were thence called *beneficiarii:* this term was a common one, as we see from inscriptions in Gruter (li. 4, cxxx. 5), in some of which the word *beneficiarius* is represented by the two letters B. F. In this sense we must understand the passage of Caesar (*de Bell. Civ.* ii. 18) when he speaks of the *magna beneficia* and the *magnae clientelae* of Pompeius in Citerior Spain. Beneficiarius is also used by Caesar (*de Bell. Civ.* i. 75) to express the person who had received a beneficium. It does not, however, appear from these passages, what the beneficium actually was. It might be any kind of honour, or special exemption from service (*de Bell. Civ.* iii. 88; Sueton. *Tib.* 12; Vegetius, *de Re Militari*, ii. 7).

Beneficiarius is opposed by Festus (*s. v.*) to *munifex*, in the sense of one who is released from military service, as opposed to one who is bound to do military service.

Grants of land and other things made by the Roman emperors were called *beneficia*, and were entered in a book called *Liber Beneficiorum* (Hyginus, *de Limitibus Constit.* p. 193, Goes.). The secretary or clerk who kept this book was called *a commentariis beneficiorum*, as appears from an inscription in Gruter (dlxxviii. 1).

It was the practice of the kings and leaders of the tribes which took possession of the western provinces of the Roman empire to grant lands to their nobles to be held generally for life on condition of special personal service. Lands so granted were called *beneficia.* From about the end of the 9th century, when *beneficia* became hereditary and subject to subinfeudation, they were also called *feoda* or feuds (*Feud.* lib. 2, tit. 1), the two words being used indifferently to denote the same condition of landed property. (Guizot, *Histoire de la Civilisation en France*, vol. iii. p. 247.) The beneficiarius is he who has a beneficium. Grants made for the purpose of endowing churches were called *beneficia:* hence the word benefice came to be applied to an ecclesiastical preferment. (Ducange, *Gloss.*) [G. L.] [E. A. W.]

BENNA, a carriage (Festus, *s. v.:* "Benna lingua Gallica genus vehiculi appellatur, unde vocantur combennones eadem benna sedentes." Cf. Cato, *R. R.* 23, 2). As a waggon of basket-work is still called *benna* in Italian, *benne* in South German, and *banne* in Belgium, it is conjectured that the vehicle from the column of Antoninus figured below is a *benna.* [J. H. F.]

Benna. (From the Column of Antoninus.)

BES. [As.]

BESA or **BESSA** (*βῆσα*, Eustath. on *Od.* i. 1405 b, 16; *βῆσσα*, Athen. xi. 784 b; *βησίον*), an Alexandrine vessel used both for drinking from and also for holding perfumes in, of the

Besa or Bessa, an Alexandrine vessel, having the image of the god Bes. (Birch's *Ancient Pottery.*)

shape of a flask, broad at the bottom and gradually getting narrower towards the top (Ath. *l. c.*); similar to the *ἀλάβαστρον* (Schol. on Aristoph. *Ach.* 1048, compared with 1050) or the *βομβύλιος*, which Suidas defines by *βησίον*. In *Anth. Pal.* Appendix 30, 3, Dindorf and Jacobs understand *βῆσαν* as the name of a dancer, but Ussing does not see any reason to refuse to take it as a goblet *propter salientem inde liquorem*. The vessel is Egyptian, so called from having the features of the god Bes modelled on it, and we may see the shape of it in Birch (*Ancient Pottery*, p. 29). (See also Ussing, *De nominibus vasorum Graecorum*, p. 62; Krause, *Angeiologie*, 379, 380, 407, 408.) [L. C. P.]

BESTIA'RII (*θηριομάχοι*), persons who fought with wild beasts in the games of the circus. They were either persons who fought for the sake of pay (*auctoramentum*), and who were allowed arms, or they were criminals, who were usually permitted to have no means of defence against the wild beasts. (Cic. *pro Sest.* 64; Sen. *de Benef.* ii. 19, *Ep.* 70. 17; Tertull. *Apol.* 9.) The former class, who were more correctly called *venatores*, and of whom there were great numbers in the latter days of the republic and under the empire, are always spoken of as distinct from and inferior to the gladiators, who fought with one another. (Cic. *in Vatin.* 17; *ad Qu. Fr.* ii. 6, § 5.) There were schools in Rome for their training (*scholae bestiarum* or *bestiariorum*, Tertull. *Apol.* 35). Such were called *ludi matutini*, from the fact that in the public games the combats with beasts always preceded the fights of the gladiators. (Cf. Friedländer, *Sittengesch.* vol. ii.^{3}, pp. 366 ff.) [W. S.] [A. S. W.]

BIAION DIKE' (*βιαίων δίκη*). This action might be brought in any case of brutal violence (Harpocrat.; cf. Plato, *Leg.* ix. p. 879 B, *βίαιον τὸ τῆς αἰκίας πᾶν γένος*); and we learn from Demosthenes (*c. Pantaen.* p. 976, § 33) that it came under the jurisdiction of the Forty. It was, however, in practice mainly restricted to two cases: the illegal and forcible seizure of property of any kind, but especially of slaves; and the rape, or abduction with a view to rape, of a free person of either sex. Under the former head came the irregular rescue of slaves from their masters. (Lys. *c. Pancleon.* § 12; EXAIRESEOS DIKÉ.) According to Plutarch (*Solon*, 23), the law prescribed that ravishers should pay a fine of 100 drachmas; but other accounts merely state generally that the convict was mulcted in a sum equal to twice that at which the damages were laid (*διπλῆν τὴν βλάβην ὀφείλειν*, Lys. *de Caede Eratosth.* § 32; Dem. *c. Mid.* p. 528, §§ 44, 45; Harpocrat.): the plaintiff in such case receiving one-half of the fine; and the state, as a party mediately injured, the other. To reconcile these accounts Meier (*Att. Proc.* p. 545) supposes the rape to have been estimated by law at 100 drachmas, and that the plaintiff fixed the damages in reference to other injuries simultaneous with, or consequent upon, the perpetration of the main offence. Demosthenes lays down the rule that all such acts of violence are not merely civil injuries, but crimes against society (*πάνθ' ὅσα τις βιαζόμενος πράττει, κοινὰ τἀδικήματα*, *c. Mid. l. c.*); and it seems clear that the *βιαίων δίκη*, like the kindred actions *αἰκίας* and *ὕβρεως*, might be taken up by a third party as a *γραφὴ* or public prosecution, provided that no private suit had been instituted. With respect to aggressions upon property, the action *βιαίων* is to be distinguished from *ἐξούλης*, in that the former implies the employment of actual violence, the latter merely such detention of property as amounted to violence in the contemplation of law (Meier, *Att. Proc.* p. 546), as for instance the nonpayment of damages, and the like, to the successful litigant after an award in his favour by a court of justice. (Dem. *c. Mid.* p. 540, § 8.) [J. S. M.] [W. W.]

BIB'ASIS (*βίβασις*). [SALTATIO.]

BIBLIOPO'LA. [LIBER.]

BIBLIOTHE'CA (*βιβλιοθήκη*). I. GREEK. The large libraries of the Assyrian and Egyptian monarchs were unknown to the Greeks till the time of the Ptolemies. We do indeed hear of a library formed by Peisistratus (Aul. Gell. vi. 17; Athen. i. p. 3), which Aulus Gellius calls "the first public library;" of another by Polycrates, the tyrant of Samos (Athen. i. p. 3); and of private collectors we hear of Nicocrates of Cyprus (Athen. i. p. 3), Euclid the Archon (Athen. i. p. 3), Euripides (Athen. i. p. 3), Euthydemus (Xen. *Memor.* iv. 2), and Aristotle (Strabo, xiii. 1; Athen. i. p. 3). (See ARISTOTLE in *Dict. of Biog.*) But it was the Macedonian rulers of Alexandria who first created a public library on a large scale. Ptolemy Philadelphus collected books from all parts of Greece and Asia, the larger number of which he deposited in the Mouseion (or Museum), a building in the Bruchium quarter of Alexandria, and the rest in the Serapeion. Zenodotus was the first librarian, after him Callimachus (who made a catalogue called the *Πίνακες*), then Eratosthenes, then Apollonius, then Aristophanes. The number of volumes in the two libraries seems to have been between 500,000 and 600,000 (Tzetzes, *Schol. in Aristoph.*; Aul. Gell. vi. 17; Sen. *de Tranq. An.* 9; Josephus, *Ant. Jud.* xii. 2). Books in foreign languages were brought to Alexandria and translated for the purpose of being put in the library, and the Septuagint version is said to have been made in this way. Galen tells us that the autograph original copies of Aeschylus, Sophocles, and Euripides were procured for the library.

This priceless collection suffered considerably in the siege of Alexandria by Julius Caesar, in the destruction of the Bruchium quarter by Aurelian 273 A.D., and by the edict of Theodosius for the destruction of the Serapeion 389 A.D., until it was finally destroyed by the Arabs, 640 A.D. (See Gibbon, c. 51.)

(On the Alexandrian Library, see Ritschl, *Die Alexandrinischen Bibliotheken*; *Opusc. Phil.* i.; Parthey, *Das Alexandrinische Museum*; Birt, *Das Antike Buchwesen*.)

A rival library to that at Alexandria was started by the kings of Pergamus, but was transported to Egypt by Antony, who made a present of its 200,000 volumes to Cleopatra (Plut. *Anton.* 58. On the library of Pergamus, see Wegener, *De Aula Attalica*). By the 2nd or 1st cent. B.C. there seem to have been libraries in most Greek towns. (Egger, *Callimaque et l'origine de la bibliographie*; cf. Polyb. xii. 27.) [W. M. L.]

II. ROMAN. The first public library in Rome was that founded by Asinius Pollio (Plin. *H. N.* vii. 30; Isid. *Orig.* vi. 5), and was in the atrium Libertatis on Mount Aventine. Julius Caesar had projected a grand Greek and Latin library, and had commissioned Varro to take measures for the establishment of it; but the scheme was prevented by his death. (Suet. *Jul.* 44.) The library of Pollio was followed by that of Augustus, in the temple of Apollo on the Mount Palatine (Suet. *Aug.* 29; Dio Cass. liii. 1), and another, Bibliothecae Octavianae (so called from Augustus's sister Octavia), forming part of the Porticus Octavia. (Dio Cass. xlix. 43; Plut. *Marcell.* 30.) There were also libraries on the Capitol (Suet. *Dom.* 20), in the temple of Peace founded by Vespasian (Gell. v. 21, xvi. 8), in the palace of Tiberius (Gell. xiii. 18), besides the Ulpian library (so called after its founder, Trajan), which was the most famous (Gell. xi. 17; Dio Cass. lxviii. 16). This library was attached by Diocletian, as an ornament, to his *thermae.* (Vopisc. *Prob.* 2.)

Private collections of books were made at Rome soon after the Second Punic War, sometimes from the spoils of Grecian or Eastern conquest. Thus Aemilius Paulus brought to Rome the library of Perseus, king of Macedonia; Sulla, that of Apellicon of Teos; Lucullus, the extensive one of the kings of Pontus, to which he gave the public free access. (Plut. *Aem. Paul.* 28; *Sulla*, 26; *Lucull.* 42; Isid. *Or.* vi. 5, 1.) The zeal of Cicero, Atticus, Varro, and others in increasing their libraries is well known. (Cic. *ad Att.* i. 7, 10, iv. 5; *ad Quint. Fr.* iii. 4; Gell. iii. 10.) Serenus Sammonicus possessed a library of 62,000 books. (Cap. *Gord.* 18.) Towards the end of the republic it became, in fact, the fashion to have a room elegantly furnished as a library, and reserved for that purpose. (Cp. Vitruv. vi. 7.) However ignorant or unstudious a person might be, it was fashionable to appear learned by having a library, though he might never even read the titles of the books. Seneca (*de Tranq. An.* 9) condemns the rage for mere book-collecting, and rallies those who were more pleased with the outside than the inside. Lucian wrote a separate piece to expose this common folly (*πρὸς ἀπαίδευτον καὶ πολλὰ βιβλία ὠνούμενον*).

We read of provincial libraries at Milan and Comum (Plin. *Ep.* i. 8, iv. 13; Orelli, *Inscr.* 1172), Tibur (Gell. ix. 14), and Patrae (Id. xviii. 9).

A library generally had an eastern aspect (Vitruv. vi. 7). In Herculaneum a library fully furnished was discovered. Round the walls it had cases containing the books in rolls [Liber]; a rectangular case occupied the centre of the room: these cases were numbered. It was a very small room,—so small that a person by stretching out his arms could touch both sides of it; yet it contained 1700 rolls. The cases were called either *armaria* [Armarium] (Plin. *Ep.* ii. 17; Vopisc. *Tacit.* 8), or *loculamenta* (Seneca, *de Tranq. An.* 9), or *foruli* (Juv. *Sat.* iii. 219), or *nidi* (Mart. i. 118, 15; 17, 5). Asinius Pollio had set the fashion in his public library of adorning the room with the portraits and busts of celebrated men, as well as statues of Minerva and the Muses. This example was soon followed in the private libraries of the rich. The *librarii a bibliotheca* or *bibliothecarii*, who had charge of the libraries, were usually slaves or freedmen. (Orell. 40, 41; Frontin. and M. Aurel. *Ep.* iv. 5; Isid. *Gloss.*; Juv. iii. 219; Plin. *Ep.* iii. 7, iv. 28; *H. N.* xxxv. 2; Cic. *ad Fam.* vii. 23; Suet. *Tib.* 70; Mart. ix. *Ep. ad Turan.*; Lipsius, *De Bibliothecis Syntagma*, in Opera, vol. iii.; Becker, *Gallus*, ed. Göll, ii. 418–24; Séraud, *Les Livres dans l'Antiquité*, ch. 10; Bernhardy, *Röm. Litter.* p. 65.) [A. A.] [J. H. F.]

BICLIN'IUM. [Triclinium.]

BICOS (*βῖκος*), an earthen vessel in common use among the Greeks. (Pollux, vi. 14, vii. 162, x. 73.) Hesychius (*s. v.*) defines it as a *στάμνος* with handles. It was used for holding wine (Herod. i. 194; Xen. *Anab.* i. 9, § 25), and salted meat and fish. (Athen. iii. p. 116 f.) [W. S.]

BIDENS. [Rastrum.]

BIDENTAL, an erection on a spot where lightning had fallen. The name is derived from the sacrifice of a young sheep (*bidens*) by the *haruspices* at the place. Sometimes, from the resemblance of the structure to the mouth of a well, it was called *puteal*, as in the case of the *puteal Libonis* or *Scribonianum* at the eastern end of the Forum Romanum (Hor. *Ep.* i. 19, 18; *Sat.* ii. 6, 35; Pers. iv. 49), and another in the Comitium (Cic. *de Div.* i. 17; Liv. i. 36, &c.). [Puteal.] When lightning had struck a spot, it was held necessary *condere fulgur*, either *publice* or *privatim*, according to the nature of the place. If a man had been killed by the lightning, it was not lawful to burn the corpse, but he was buried on the spot. (Plin. *N. H.* ii. § 145.) Everything which had been scorched or scattered by the lightning was solemnly collected by the pontiff (who was at a later date assisted by the *haruspices*) and piled up with a low muttered prayer. (Schol. on Juv. vi. 587: cf. Lucan. i. 607; Acron. on Hor. *A. P.* 471.) A *bidens* was offered, and a small enclosure, neither paved nor covered, was built around the heap, and was further surrounded by an exterior wall, bearing the legend *fulgur conditum.* Many inscriptions of this kind are still extant, and at Pompeii a bidental has been discovered, of which the outer protection is formed by eight Doric columns. (Mazois, *Ruines de Pompéi*, t. iv., pl. ii. iii.) It was not allowed to tread this *locus religiosus*, or even to look into it. (Schol. Pers. v. 27; Ammian. xxiii. 5.)

From Horace (*A. P.* 471) it appears to have been believed that a person who was guilty of profaning a bidental would be punished by the gods with frenzy. (Cf. Marquardt, *Röm. Staatsverw.* iii. 252–3.) [A. S. W.]

BIDIAEI (*βιδιαῖοι*), called in inscriptions *βίδεοι* or *βίδυοι*, were magistrates in Sparta whose business was to inspect the gymnastic exercises. Their house of meeting (*ἀρχεῖον*) was in the market-place. (Paus. iii. 11, § 2.) They were either five (Paus. *l. c.*) or six in number (*C. I. G.*, Nos. 1270, 1271, 1364), and had a president who is called in inscriptions *πρέσβυς βιδέων.* (*C. I. G.* i. p. 611.) Böckh conjectures that *βίδεοι* or *βίδυοι* is the Laconian form for *ἴδυοι* or *Fίδυοι*, and signifies witnesses and judges among the youth. (Comp. Müller, *Dorians*, iii. 7, § 8.) Valckenaer (*ad* Herod. vi. 57) supposed that the bidiaei were the same as the *νομοφύλακες*: but the inscriptions given by Boeckh show that the bidiaei and *νομοφύλακες* were two separate classes of officers. The annually elected heads of a priesthood of Helen and the Dioscuri at Sparta were also called *βιδιαῖοι* (Le Bas et Foucart, *Inscr. du Peloponnèse*, No. 163A): they may have been identical with the preceding. [W. S.] [W. W.]

BIGA or **BIGAE.** [Currus.]

BIGAMIA. [Matrimonium.]

BIGATI, sc. nummi, the Roman denarii which had a two-horsed chariot (biga) as type. (Plin. xxxiii. § 46 ; Festus, p. 98.) [As, p. 205.] [P. G.]

BIKOS. [Bicos.]

BILIX. [Tela.]

BIPALIUM. [Pala.]

BIPENNIS. [Securis.]

BIREMIS. [Navis.]

BIRRUS (*βίρρος*), or **BURRUS,** a cloak or cape furnished with a hood; a heavy, coarse garment for use in bad weather. (Burmann, *Anth. Lat.* ii. p. 407 ; Cod. Theod. xiv. 10, 1.) Its material was stiff (*birrum rigentem—fluentem lacernam*, Sulp. Sev. *Dial.* i. 14), with a long nap—usually wool, sometimes beaver (Claud. *Epigr.* 42). The word is used as a synonym of *lacerna* (Schol. *ad* Pers. i. 54), of *cucullus* (Schol. *ad* Juv. viii. 145), of *sagum* (Dioclet. *Edict.* xvi. 11, ed. Waddington ; Vopisc. *Gallien.* 6, *Carin.* 20, with note of Salmasius). Waddington (*l. c.*) prefers to regard it as a word of barbarous origin, rather than to suppose that it is connected with *πυρρός* (*Festus, s. v.*; Marquardt, *Privatleben*, p. 550), on account of the red colour of the wool. The spelling *byrrus* is rare in MSS. In Diocletian's Edict (*l. c.*) we read of *βίρροι* made not of coarse materials, but of the more costly Laodicean and Nervian wools. [W. S.] [J. H. F.]

BISELLIUM. [Sella.]

BISSEXTUM. [Calendarium.]

BLABES DIKE' (*βλάβης δίκη*). This action was available in all cases in which one person had sustained a loss by the conduct of another; and from the instances that are extant, it seems that whether the injury originated in a fault of omission or commission, or impaired the actual fortune of the plaintiff or his prospective advantage, the action would lie, and might be maintained, against the defendant. The two great classes into which *βλάβαι* may be divided are the *ἔνθεσμοι* and the *ἄθεσμοι*,—terms found in the grammarians only, not in classical writers. The first of these will include all causes arising from the non-fulfilment of a contract to which a penal bond was annexed, and those in which the law specified the penalty to be paid by the defendant upon conviction; the second, all injuries of property which the law did not specify *nominatim*, but generally directed to be punished by a fine equal to twice the estimated damage, if the offence was intentional; if otherwise, by a bare compensation. (Meier, *Att. Proc.* p. 186, &c., p. 475, &c. ; Dem. *c. Mid.* p. 528, § 43.) The declaration of the plaintiff seems always to have begun with the words *Ἔβλαψέ με*, then came the name of the defendant, and next a description of the injury, as *οὐκ ἀποδιδοὺς ἐμοὶ τὸ ἀργύριον* in Demosthenes (*pro Phorm.* p. 950, § 20; cf. *in Pantaen.* p. 973, § 22).

It is of course impossible to enumerate all the particular cases upon which this action would arise; but the following may be specified. Callippus brings an action *βλάβης* against the banker Pasion, for breach of contract in paying over the balance of a deceased depositor, Lycon, to one Cephisiades; Lycon having, as the plaintiff alleges, stipulated on making the deposit that it was to be paid to Callippus only. In a later action against the son of Pasion, Apollodorus, he claims as a creditor of Pasion's estate: the latter is a *δίκη ἀργυρίου*, not *βλάβης* (Demosth. *c. Callipp*, p. 1240, § 14). Hence Caillemer argues (9*me Étude*, pp. 30, 31), with good reason, that the *δίκη βλάβης* did not, as such, form a part of the law of debtor and creditor. On the other hand, Nausimachus and Xenopeithes, who had brought an action *ἐπιτροπῆς* against their guardian Aristaechmus, and had compromised it for three talents, re-open the question after his death, and bring a *δίκη βλάβης* against his sons (Demosth. *Or.* 38). This can only mean that a claim against the estate of Aristaechmus, too vague in its character for a *δίκη χρέους*, sheltered itself under the convenient generality of a *δίκη βλάβης*. Supposititious testimony given in the name of another, thereby rendering such person liable to an action *ψευδομαρτυριῶν*, was again a *βλάβη* at Attic law (Demosth. *c. Aphob.* iii. p. 849, §§ 15, 16). In the speech of Demosthenes *πρὸς Βοιωτὸν περὶ τοῦ ὀνόματος*, the plaintiff Mantitheus treats as a *βλάβη* the inconvenience caused by his half-brother, Boeotus, assuming his name. Again, the liability of an owner for the acts of his slave or his domestic animal came under this head; as in the old law of Solon quoted by Lysias *οἰκῆος καὶ δούλης βλάβην ὀφείλειν* (*c. Theomnest.* i. § 19 ; cf. Plato, *Leg.* xi. 936 C, D); and the speech of Lysias *περὶ τοῦ κυνὸς*, quoted by Harpocration (*s. v. καρκίνος*).

The proper court was determined by the subject of litigation. A *βλάβη* in the market, like the damage done by Philocleon to the cake-woman's basket (Aristoph. *Vesp.* 1407), would come before the Agoranomi; dangerous buildings, before the Astynomi; commercial and mining cases, as a rule, before the Thesmothetae; those arising out of the law of inheritance, before the Archon Eponymus. [J. S. M.] [W. W.]

BLATTA. [Purpura.]

BLAUTAE. [Calceus, p. 332 b.]

BOA'GOS (*βοαγός*). The boys (seven to eighteen years) at Sparta after their seventh year were taken by the state and trained for its service. They were divided into sections, called *βοῦαι*. The leader of such a section who was an *εἴρην* (*i. e.* between twenty and thirty years; those between eighteen and twenty were called *μελλείρενες*) was called *βουαγὸς* or *βουαγόρ* (Plut. *Lycurg.* 17; Xen. *Rep. Lac.* ii. 11). Hesychius (*s. v. βοαγόρ*) calls him a *παῖς*; but he uses *παῖς* in a broad sense, comprising all not fully developed men (*i.e.* under thirty years). As not being a fully developed man, the *βοαγὸς* was not recognised as a magistrate. But in the inscriptions which date from the times of the Roman empire the *βοαγοὶ* are full-grown men. This is to be explained by the fact that in those times it was merely a complimentary or honorary title given to distinguished men, and held with the ephoralty and other magistracies (*C. I. G.* 1241, col. 1; 1245, &c.), which of course would have been impossible in the old days when the ephors had plenty to do as such. Sometimes a man is *βουαγὸς* and holds no other magistracy (*C. I. G.* 1250). Cf. Boeckh, *C. I. G.*

i. p. 612; G. Gilbert, *Handbuch der griechischen Staatsalterthümer* (1881), i. 67–8. [L. C. P.]

BOEDROM'IA (*βοηδρόμια*), a festival celebrated at Athens on the seventh day of the month of Boëdromion, in honour of Apollo Boëdromios. (Müller, *Dor.* ii. 8, § 5.) The name Boëdromios, by which Apollo was called in Boeotia and other parts of Greece (Paus. ix. 17, § 1; Callimach. *Hymn. Apoll.* 69), seems to indicate that by this festival he was honoured as a martial god, who either by his actual presence or by his oracles afforded assistance in the dangers of war. The origin of the festival is, however, traced by different authors to different events in Grecian story. Plutarch (*Thes.* 27) says that Theseus, in his war against the Amazons, did not give battle till after he had offered a sacrifice to Phobos; and that, in commemoration of the successful battle which took place in the month of Boëdromion, the Athenians, down to his own time, continued to celebrate the festival of the Boëdromia. According to Suidas, the *Etymol. Magn.* and Euripides (*Ion.* 59), the festival derived its name and origin from the circumstance that when, in the reign of Erechtheus, the Athenians were attacked by Eumolpos, Xuthos or (according to Philochorus in Harpocration, *s. v.*) his son Ion came to their assistance, and procured them the victory. Respecting the particulars of this festival, nothing is known except that sacrifices were offered to Artemis. (Comp. Spanheim, *ad* Callim. *Hymn. in Apoll.* 69.) [L. S.]

BOEOTARCHES (*Βοιωτάρχης*, or *Βοιώταρχος*). It is proposed under this head to give a brief account of the Boeotian constitution as well as of the Boeotarchs.

The Boeotians in ancient times occupied Arne in Thessaly. (Thuc. i. 12.) Sixty years after the taking of Troy they were expelled by the Thessalians, and settled in the country then called Cadmeis, but afterwards Boeotia (the *ἀποδασμὸς* being introduced by Thucydides in order to reconcile the Homeric account, *Il.* ii. 494 foll., with the tradition as to the time of their migration into Boeotia). The leader of the Boeotians was king Opheltas (Plut. *Cim.* 1); a later king Xanthus fell in single combat with Melanthus (Harp. *s. v.* *Ἀπατούρια*). From Thuc. iii. 61 it would seem that these kings ruled the whole country from Thebes. Later on the country was divided into several states, containing each a principal city with its *ξυντελεῖς* (cf. Thuc. iv. 76, *Χαιρώνειαν—ἣ ἐς Ὀρχομενὸν—ξυντελεῖ*) or *ξύμμοροι* (cf. Thuc. iv. 93, *Θηβαῖοι καὶ οἱ ξύμμοροι αὐτοῖς*, i.e. "those who inhabited the same *μοῖρα* or division of Boeotia with the Thebans, as, *e.g.*, the Parasopii, Therapnenses, Peteonii: Strab. ix. 2, 24. 26," Arnold *ad* Thuc. *l. c.*) living around it. The number and names of these independent states are differently given by different writers on the subject; we know, however, for certain that they formed a confederacy called the Boeotian League, with Thebes at its head, and Freeman is of opinion that the political union grew out of an older Amphictyony (Pausan. ix. 34, 1). Common sanctuaries were the temple of the Itonian Athene near Coronea, where the Pamboeotia were celebrated, and the temple of Poseidon in Onchestus (Strab. ix. 2, 23. 33). Thucydides (iv. 93) mentions seven independent states: Thebes, Haliartus, Coronea, Copae, Thespiae, Tanagra, and Orchomenus; and we learn from inscriptions that, at one time or other, the following belonged to the same class: Anthedon, Lebadea, Hyettus, Acraephia, Chorsia (or Korsia, Demosth. *F. L.* § 141, etc.), Thisbe, Chaeronea. O. Müller (*Orchom.* p. 403) supposes there were originally fourteen free states. Probably the number differed at different times; some Boeotian towns seceded from the league, as Eleutherae (Pausan. i. 38, 8), Plataea (Herod. vi. 108, in B.C. 519, according to Clinton, whilst Grote, iv. 94 n., fixes the date after the expulsion of Hippias; it joined the league again a few years previous to B.C. 372), Orchomenus in B.C. 395 (Xen. *Hell.* iii. 5, 6), Oropus (Pausan. i. 34, 1; Xen. *Hellen.* vii. 4, 1; Demades, i. 9, and Hyp. *pro Eux.* c. 16; Diod. Sic. xiii. 56); or non-Boeotian towns joined the league, *e.g.* Larymna (Pausan. ix. 23, 7, *ἑκουσίως μετετάξαντο ἐς Βοιωτούς*), etc.; or we find Boeotian towns changing their status within the league, gaining independence: thus Acraephia belonged at one time to Thebes (Pausan. ix. 23, 5, *εἶναι ἐξ ἀρχῆς μοῖραν τῆς Θηβαΐδος*); as to Chaeronea cf. Thuc. iv. 76, and Pausan. ix. 3, 6; other towns were destroyed by Thebes, as Plataea, Orchomenus, Thespiae, Coronea. The dependent towns, or districts, were not immediately connected with the national confederacy, but with the neighbouring chief city, as Cynoscephalae was with Thebes (Boeckh on Pindar. ii. 2, p. 13). In fact, "they were obliged to furnish troops and money, to make up the contingent furnished by the state to which they belonged, to the general confederacy" (Arnold *ad* Thuc. iv. 76). Freeman, however, is of opinion that *ξυντελεῖν* implies a greater degree of freedom on the part of these dependent places than Arnold allows (cf. also Vischer, *Kl. Schr.* i. p. 341, 4). Freeman divides the history of the league into three periods: the first extends to the dissolution of the league at the peace of Antalcidas, B.C. 387; the second includes the short but brilliant period of Theban greatness down to the conquest of Thebes by Philip (B.C. 338) and its destruction by Alexander, B.C. 387–334 (the league was nominally revived: Diod. xv. 80, *κοινὴ σύνοδος τῶν Βοιωτῶν*: cf. 83, but was practically only another name for bondage to Thebes, Xen. *Hell.* vi. 1, 1, v. 4, 63); the third from the destruction of Thebes by Alexander and its restoration by Cassander, B.C. 316 (Thebes becoming again the head of the league: Liv. xxxi. 1, "Boeotiae caput," but with powers very inferior to those she formerly possessed), down to the final dissolution of the league by Quintus Marcius Philippus, B.C. 171. Mommsen (*Röm. Gesch.* i. p. 740) fixes the legal dissolution of the league in B.C. 146, and infers from Pausanias (vii. 16, 9, 10) that it was revived soon afterwards (*καὶ συνέδριά τε κατὰ ἔθνος ἀποδιδόασιν* [*οἱ Ῥωμαῖοι*] *ἑκάστοις τὰ ἀρχαῖα*, etc.). Certain it is that some kind of confederation lasted down to a late period of the Roman Empire: the Boeotians retained two votes in the Amphictyonic council after the reforms of Augustus (Aeschin. ii. § 116, and Pausan. ix. 8, 3); they sent Epaminondas of Acraephia as ambassador to the emperor Caligula *ὑπὲρ τοῦ ἔθνους Βοιωτῶν* (Keil, *Sylloge Inscr. Boeot.* p. 116; cf. *C. I. G.*, 1625, l. 30, *τὸ κοινὸν Παμβοιωτῶν συνέδριον*); and from an inscription of the reign of Marcus Aurelius (Henzen, *Ann.*

dell' Inst. di Corresp. Archeol., 1866, p. 139 foll.), we learn that a citizen of Chaeronea had been three times Boeotarch (*ὁ Βοιωτάρχης τὸ γ'*).

Each of the principal towns seems to have had its *βουλή* (Xen. *Hell.* v. 2. 29) and *δῆμος*. It is true, as Freeman points out, the passage in question merely speaks of a Theban *βουλή*, and that during the time (B.C. 382) when the confederation was in abeyance, yet he admits that Boeckh was justified by analogy in his supposition; he adds that he is "not clear about the existence of popular assemblies in the Boeotian cities during the first period" (yet there are traces of such: see Herod. v. 79, *ἀλίην ποιησάμενοι*: Xen. *Hell.* iii. 5. 8, *τότε ἅπασα ἡ πόλις ἀπεψηφίσατο μὴ συστρατεύειν αὐτοῖς*, sc. the Lacedaemonians). In his opinion, during nearly the whole of the first period, the government of each particular city was oligarchic, as the federal government was oligarchic; for the supreme power of the league was vested in the four senates (Thuc. v. 38, *αἵπερ ἅπαν τὸ κῦρος ἔχουσιν*), of the constitution of which we know nothing. Tittmann (p. 695), Kortüm (p. 86), and Freeman consider it most probable that they represented four districts; they must, however, have been assembled in one place, since Thucydides uses also *βουλή* for them all. In the second period, after democracy was introduced at Thebes, Thebes practically became sovereign (Isocr. xiv. 8. 35); there was no longer a Boeotian confederacy, but rather a Theban state, in which other cities were compelled to merge themselves against their will. In formal documents constitutional federal language was employed (*κοινὴ σύνοδος τῶν Βοιωτῶν*, Diod. xv. 80; xvi. 85), but in reality the Boeotian assembly simply sat to register Theban edicts in the name of the league (*τὸ πλῆθος* or *ὁ δῆμος*, Diod. xv. 72, 78, 79). In the third period (the date of the reconstitution of the league does not seem certain, but in B.C. 323 the Boeotians are spoken of as a political whole, Hyper. *Or. fun.* 6, 16), Orchomenus was for a time the head of the league (B.C. 294, Polyaen. iv. 7, 11), but Thebes was again "Boeotiae caput" in B.C. 197 (Liv. xxxi. 1): the supreme power was vested in a federal assembly, in which, as we may gather from an expression of Livy (*l. c.* c. 2), each of the confederate cities had a distinct vote (Freeman): *ὁ δῆμος* conferred *προξενία* (*πρόξενον εἶμεν Βοιωτῶν*, Larfeld, *Syll. Inscr. Boeot.* No. 316 = *C. I. G.* 1565, No. 317), elected *στρατηγοί* (Polyb. xx. 6), etc.

Each city had one or several archons (cf. the inscr. quoted above from the 1st century after Christ, and *C. I. G.* 1625, l. 41); their period of office was a year (*C. I. G.* 1569a, iii. 40, *ὁ ἐνιαυτὸς ὁ μετὰ Θύναρχον ἄρχοντα Ἐρχομενίυς*; Rangabé, *Antiq. Hellen.* 1005; hence the archon is called *ἐπώνυμος*). We know nothing of their power and duties. The Theban archon was chosen by lot, and kept a sacred spear of office always by him (Plut. *de gen. Socr.* 31; see Plut. *Arist.* 21, on the Plataean archon). The main powers of the state were in the hands of the polemarchs, the "maximi magistratus" of Corn. Nep. *Pelop.* ii. 2; they did not command forces, but they could imprison (Xen. *Hell.* v. 2, 30); they directed the levies of troops (*C. I. G.* 1573, etc.); they seem also to have been concerned with finances (*C. I. G.* 1569, 1570), and to have been entrusted with the carrying out of decrees of the senate and people (Keil, p. 132, *δεδογμένον εἶναι τοῖς τε συνέδροις καὶ τῷ δήμῳ, τοὺς πολεμάρχους τοὺς ἐπὶ Καφι[σοτίμου ?] ἄρχοντος [ἐπαινέσαι]*, etc.; Meier, *d. Privatschiedrichter*, etc., p. 49, l. 27, *ἀναγράψαι τ[ε τοὺς] ἀστογυολ?* where Lebas, *Voyage archéol. en Grèce*, No. 35, reads *ἀναγραψάντων δὲ τοὶ πολέμα[ρχοι]*). Their period of service was a year; their number was three (not six, as Boeckh thought; cf. E. Curtius in *Rhein. Mus.* 1843, p. 110), see *C. I. G.* 1573, etc.; only two are mentioned for Thebes by Xen. *Hell.* v. 2, 25. The *γραμματεὺς* to the polemarchs under the empire (*C. I. G.* 1573, *γραμματίδδοντος τῦς πολεμάρχυς*) was probably of higher rank than the one mentioned by Xen. *Hell.* v. 4, 2; Plut. *Pelop.* 7, *de gen. Socr.* 4. Of other magistrates we find mentioned *ἵππαρχοι* and *ἰλάρχαι* (*C. I. G.* 1575, 1588; Rang. 1313; *C. I. G.* 1588, 1576), commanding the cavalry; a *ναύαρχος* (Rang. *l. c.*); *κατόπται*, who assisted the polemarchs in financial matters and audited magistrates' accounts (*C. I. G.* 1569, 1570); *συνήγοροι* and *σούνδικοι* (Keil, p. 13); *ταμίαι*, with their president *ὁ ταμίας ὁ προάρχων* (*C. I. G.* 1570, *ὁ τ. ὁ π. προσθέτω τὸ ἐλλεῖπον καὶ ἀπολογισάσθω πρὸς κατόπτας*). The popular assembly at Thebes is called *ἁλία* by Herod. v. 79, *ἐκκλησία* by Demosth. *de Cor.* § 213, and Plut. *Pelop.* 12; see also Pausan. ix. 1. 5, *ἠπίσταντο* (the Plataeans) *τοὺς Θηβαίους ὡς πανδημεὶ καὶ ἅμα ἐπὶ πλεῖστον εἰώθεσαν βουλεύεσθαι, παρεφύλασσον τὰς ἐκκλησίας αὐτῶν*, etc. The murderers of Euphron (B.C. 367) were put upon their trial before the *βουλή* at Thebes (Xen. *Hell.* vii. 3, 5–12); *οἱ δικάζειν λαχόντες* are mentioned by Pausan. ix. 14. 7, in connexion with the trial of Epameinondas. Besides the archons of the separate states, there was an archon of the confederacy. This archon, the nominal chief of the league, was not necessarily a Theban, as Boeckh supposed: cf. Keil, p. 69, *ἄρχοντος Βοιωτοῖς Φιλοκώμω [Ἀντ]ι[γενε]ιίω Θε[ι]σπιε[ῖος]*, and Lolling (*Mittheil. d. d. Arch. Inst. in Athen*, iii. p. 87), *Εὐμείλω ἄρχοντος Ἐπικουδείω Κορωνέως*; he was re-eligible after his year's service, for in some inscriptions of Hyettus we find the same federal archon, but different polemarchs. His name was affixed to all alliances and compacts which concerned the whole confederacy (*C. I. G.* 1565, *τοῦ δεῖνα ἄρχοντος*: 1570, *ἄρχοντος ἐν κοινῷ Βοιωτῶν*, or, as above, with the addition of his father's name and that of the town of which he was a citizen), and also to the lists of conscripts of the individual states, the name of the federal archon preceding that of the local archon: thus *C. I. G.* 1573, *Κτεισίαο ἄρχοντος Βοιώτυς, Ἐρχομενίυς δὲ Καραΐχω*. The real power was in the hands of the Boeotarchs, as representatives of the several Boeotian cities; it is true, their determinations required the ratification of the four senates (Thuc. v. 38). They were the supreme military commanders, but we also find them discharging the functions of an executive in various matters. In fact, they are represented by Thucydides as forming an alliance with foreign states; as receiving ambassadors on their return home; as negotiating with envoys from other countries, and as acting as the representatives of the whole league, although, to their great surprise, the *βουλή* refused to sanction the measures they had resolved on (cf. also Aeschin.

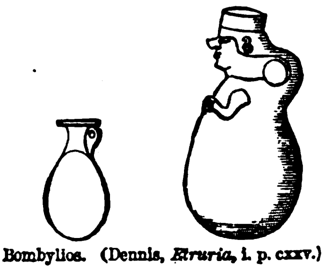
iii. 149, 151; Polyaen. iv. 7–11). Another instance in which the Boeotarchs appear as executive is their interference with Agesilaus on his embarking from Aulis for Asia (B.C. 396), when they prevented him from offering sacrifice as he wished (Plut. *Ages.* 6; Xen. *Hell.* iii. 4, 4). Still the principal duty of the Boeotarchs was of a military nature (hence they are sometimes called *στρατηγοί*, Plut. *Reg. et imp. Apophth.* p. 194 B; *Pelop.* 29, 31, &c.): thus they led into the field the troops of their respective states; and when at home they took whatever measures were requisite to forward the military operations of the league, or of their own state. For example, we read of one of the Theban Boeotarchs ordering the Thebans to come in arms to the ecclesia for the purpose of being ready to attack Plataea (Pausan. ix. 1. 6). The exact number of Boeotarchs is a disputed point; we know that the Thebans elected two (Thuc. ii. 2; iv. 91, etc.), and Boeckh explains the second Theban Boeotarch to have been the representative of some town formerly a member of the league, but afterwards merged in Thebes (on one occasion, *i.e.* after the return of the exiles with Pelopidas, B.C. 379, we read of there being three at Thebes, Plut. *Pelop.* 13); and it is generally supposed that each of the other cities elected one. Boeckh, however, whom Grote (ii. p. 296) follows, is of opinion that in the second period of the league the number of Boeotarchs was fixed, and that two or three of the smaller cities chose one Boeotarch in turn. Mention is made of eleven Boeotarchs in connexion with the battle of Delium (B.C. 424) by Thucydides (iv. 91, cf. Schol. on ii. 2; so Boeckh, Arnold, etc.; others make out thirteen; Von Wilamowitz-Möllendorff in *Hermes*, viii. p. 440, proposes to read *ἑπτά* for *ἕνδεκα*, since in chap. 93 seven independent states are mentioned). At the time of the battle of Leuctra (B.C. 371) we find seven Boeotarchs mentioned (Diod. Sic. xv. 52, 53; Pausan. ix. 13. 6, 7), and the same number in *C. I. G.* 1565, 1593, and in the inscr. quoted above (Lolling, etc.), if *ἀφεδριατεύοντες* is only another name for Boeotarchs (so Boeckh, *C. I. G.* p. 729 a; Schoemann, *Jus publ.* 408, n. 37; whilst C. W. Müller sees in them the members or committees of the four senates, and G. Gilbert, ii. p. 56, a commission specially appointed to procure the tripods in question). Correspondingly there were seven federal officers of the cavalry, as we learn from the account of the hipparch Pompidas (see Von Wilamowitz-Möllendorff, *l.c.* pp. 431–441. Thuc. iv. 72; Polyb. xx. 5, mention the hipparch *τῶν Βοιωτῶν*). No conclusion as to the number of Boeotarchs can be drawn from Liv. xlii. 43 ("ut duodecim, qui *privati* coetum et concilium habuissent"), or from Pausan. x. 20. 3, where we read of four, since on that particular expedition probably only that number were sent. The Boeotarchs, when engaged in military service, formed a council of war, the decisions of which were determined by a majority of votes (Thuc. iv. 91; Diod. Sic. xv. 53, 62; Pausan. ix. 13, 6, 7), and "it may be doubted whether the words *ἡγεμονίας οὔσης αὐτοῦ* in the passage of Thucydides imply that the supreme command was always vested in a Theban Boeotarch, or whether it was merely the turn of Pagondas to command that particular day" (Freeman). Their period of service was a year, beginning about the winter solstice (Plut. *Pelop.* 24, 25), and whoever continued in office longer than his time was punishable with death, both at Thebes and in other cities (Plut. *l. c.*; Pausan. ix. 14. 5; Corn. Nep. *Epam.* 7). Epameinondas, with Pelopidas and the other Boeotarchs, did so on their invasion of Laconia (B.C. 369), but their eminent services saved them; in fact, the judges did not even come to a vote respecting the former. At the expiration of the year a Boeotarch was eligible to office a second time, and Pelopidas was re-elected without interruption from B.C. 378 to his death (Diod. Sic. xv. 81). From the case of Epameinondas and Pelopidas, who were brought before Theban judges for transgression of the law which limited the time of office, we may conclude that each Boeotarch was responsible to his own state alone. From Polyb. xx. 6; xxiii. 2, Freeman (cf. Gilbert, p. 55, n. 3) concludes that in the third period there was a single general at the head of the league, as at the head of other leagues, by whose side the Boeotarchs continued, "their office now answering pretty well to that of the Achaean Demiourgoi or Ministers." Other officials of the league are mentioned in *C. I. G.* 1593: cf. Rangabé, 1217, a *γραμματεύς*, a *θεοπροπέων*, and a *μαντευόμενος*.

(Klütz, *de foedere Boeotico*, 1821; Kortüm, *Zur Gesch. hellen. Staatsverfassungen*, pp. 83–89, 1821; Tittmann, *Darstellung d. griech. Staatsverf.* p. 375 foll., and p. 693 foll., 1822; Boeckh, *C. I. G.* i. p. 726 foll.; Freeman, *Hist. of Federal Governm.* p. 154 foll.; C. W. Müller in Pauly's *Realencykl.* s. v.; C. Fr. Hermann, *Staatsalterth.* § 179 foll.; E. Preuss, *Quaest. Boeot.* 1879; E. Caillemer *ap.* Daremberg and Saglio; G. Gilbert, *Handb. d. griech. Staatsalt.* ii. pp. 45–93.) [R. W.] [H. H.]

BOIAE (*κλοιός*), a collar of wood or iron put on the neck of slaves or criminals as a punishment (Plaut. *As.* iii. 2, 5; *Capt.* iv. 2, 109; Prudent. *Praef. Psych.* 34; Jerome, *v. in Hierem.* 27; Isid. *Orig.* v. 27, 12). The Greek *κλοιός*, usually of wood, sometimes of iron (Babr. 99, 6), was: 1. A collar on the neck of a mischievous dog (Aristoph. *Vesp.* 897; Xen. *Hell.* ii. 4, 41). 2. A form of pillory (Xen. *Hell.* iii. 3, 11; Eur. *Cycl.* 235; Luc. *Tox.* 32). 3. An ornamental collar of gold (Eur. *Cycl.* 184). [J. H. F.]

BOMBYCINUM. [Sericum.]

BOMBYLIOS or **BOMBYLE** (*βομβυλιός* or *βομβυλή*, Hesych. *s. v.*; Schol. *ad* Apoll. Rhod. ii. 569), a narrow-necked vessel, so called, according to the grammarians, from the gurgling sound caused by the flow of the liquid from it, like the buzzing sound made by humble-bees (*βομβυλιοί*). (Bekker, *Anecd.* p. 220; Phavorin., Erotian., Suid. *s. v.*; Athen. xi. p. 784; cf. Besa.) [W. S.]



Bombylios. (Dennis, *Etruria*, i. p. cxxv.)

BOMONIKES (*βωμονίκης*). The Spartan youths, in remembrance of an old religious ceremony, used to be scourged at the altar of Artemis Orthia or Orthosia, a custom maintained even in the days of Pausanias (iii. 16, § 11). He who held out longest under the scourging was *βωμονίκης*. It was esteemed a great honour (*ἐν τοῖς μάλιστα ἐπιδοξός ἐστι*, Plut. *Inst. Lac.* 239, 32), and is mentioned as such in inscriptions (*C. I. G.* 1364). [L. C. P.]

BONA. The word *bona* is sometimes used to express the whole of a man's property (Paulus, *Recept. Sentent.* v. 6, 16; Dig. 37, tit. 1, s. 3; 50, tit. 16, s. 49); and in the phrases *bonorum emptio*, *cessio*, *possessio*, the word *bona* has this meaning. It expresses all that concerns a man's proprietary position, whether as owner, possessor, creditor or debtor. Thus the word *bona* is simply the property as an object; it does not express the nature of the relation between it and the person who has the ownership or enjoyment of it, any more than the words "all that I have," "all that I am worth," "all my property" in English show the legal relation of a man to that which he thus describes.

In some places the word *bona* is used to signify a man's assets, *i.e.* his property after the deduction of that which he owes. It is also used for separate portions of a man's property, as in the phrase *actio vi bonorum raptorum*.

The legal expression *in bonis*, as opposed to *dominium* or Quiritary ownership, means that property is held under a praetorian or equitable, and not under a civil or legal title. The distinction is explained in the following passage of Gaius (ii. 40):—"Among foreigners (*peregrini*) there is only one kind of ownership (*dominium*), so that a man is either the owner of a thing or he is not. And this was formerly the case among the Roman people; for a man was either owner *ex jure Quiritium*, or not owner at all. But afterwards the ownership was divided, so that now one man may be the owner of a thing according to strict law (*dominus ex jure Quiritium*), and at the same time another may be entitled to the beneficial ownership of it (*in bonis habere*). For instance, if I do not convey to you a *res mancipi*, either by the form of *mancipatio* or of *in jure cessio*, but simply deliver it to you, you acquire the praetorian title to the thing, but it will remain mine *ex jure Quiritium*, until possession gives you a civil title by usucapion. For when the usucapion is once complete, from that time it begins to be yours absolutely (*pleno jure*); that is, it is yours both *in bonis* and also yours *ex jure Quiritium*, just as if it had been mancipated to you, or transferred to you by *in jure cessio*."

From this passage it appears that the ownership of certain kinds of things, called *res mancipi* [MANCIPIUM], could only be transferred from one person to another with certain formalities. But if it was clearly the intention of the owner to transfer the ownership, and the necessary forms only were wanting, the purchaser was protected in the beneficial enjoyment of the thing by the praetor, though the transferor remained legally the owner until the usucapion was completed, notwithstanding he had parted with the thing. Only those who were capable of acquiring the legal ownership could thus become beneficial owners; any personal incapacity which prevented Quiritary ownership being acquired also stood in the way of bonitary ownership.

Quiritary ownership originally and properly signified that ownership of a thing which was recognised by the law; it did not express a compound but a simple notion, which was that of absolute ownership. But when it was once established that one man might have the Quiritary ownership, and another the sole right to the enjoyment of the same thing, the complete notion of Quiritary ownership became a notion compounded of the strict legal notion of ownership and that of the right to enjoy, as united in the same person. And as a man might have both the Quiritary ownership and the right to the enjoyment of a thing, so one might have the Quiritary ownership only, and another might have the enjoyment of it only. This bare ownership was sometimes expressed by the same terms (*ex jure Quiritium*) as that ownership which was complete, but sometimes it was appropriately called *nudum jus Quiritium*. (Gaius, iii. 100.)

The praetor protected the owner *in bonis* by allowing the plea that the thing in question had been sold and delivered (*exceptio rei venditae et traditae*), or the plea of fraud (*exceptio doli*), to be a good defence against an action (*vindicatio*) brought on the bare civil title. The owner *in bonis* had also the benefit of the *actio Publiciana*, which was a praetorian action *in rem* based on the feigned assumption that the plaintiff had acquired the thing claimed by usucapion. (Gaius, iv. 36.) The Quiritary owner might meet this action by the plea that he was civil owner (*exceptio dominii*); but if the plaintiff was owner *in bonis*, he could make such plea of Quiritary ownership ineffectual by putting in the counterplea of fraud (*replicatio doli*). Thus, although the praetor could not give Quiritary ownership, he fully protected a man in the beneficial ownership.

The historical origin of this double ownership is unknown; there is no trace of it in the writings of Cicero. It was instituted, as the account of Gaius shows, in order to avoid the necessity of complying with the conveyancing formalities required by the civil law. Theophilus (*in Paraph.* ad § 4, s. 1–5) thus describes this division of ownership: "Ἔστιν φυσικὴ δεσποτεία καὶ ἔννομος δεσποτεία, καὶ ἡ μὲν φυσικὴ λέγεται in bonis, καὶ ὁ δεσπότης βονιτάριος, ἡ δὲ ἔννομος λέγεται jure Quiritium, τουτέστιν ἐκ τοῦ δικαίου τῶν κουϊριτῶν, ὁ δὲ δεσπότης jure Quiritario." Hence have been derived the expressions *dominium Quiritarium* and *bonitarium*, which are commonly used. The rights of the bonitary owner were almost the same as those which belonged to a complete Quiritary owner, but in some respects they were more limited.

Thus the bonitary owner could not leave a legacy under the form *per vindicationem* (Gaius, ii. 196); he could not by manumission make a slave *civis Romanus*, but only *Latinus* (Gaius, i. 167), or by manumitting a female slave acquire the *tutela legitima* over her (Gaius, i. 167): but the bonitary owner alone had the *potestas* over a slave and the right of manumission. If the bonitary owner abandoned his right, the Quiritary ownership became complete. There were other ways in which a person might acquire a mere praetorian title besides the case of double ownership mentioned by Gaius in the passage cited. Thus the successor to an inheritance under the praetor's edict (*bonorum possessor*), and the purchaser of a debtor's estate (*bonorum emptor*) under the praetor's order (*addictio*), were not Quiritary, but only bonitary owners of property assigned to them. Gaius, iii. 80: "Neque bonorum possessorum neque bonorum emtorum res pleno jure fiunt, sed in bonis efficiuntur, ex jure Quiritium autem ita demum acquiruntur si usuceperunt."

Justinian (in c. un. *de nudo jure Quirit.* vii. 25) put an end to the distinction between Quiritary and bonitary ownership: "Antiquae subtilitatis ludibrium per hanc decisionem expellentes, nullam esse differentiam patimur inter dominos, apud quos vel nudum ex jure Quiritium nomen vel tantum in bonis reperitur." The formal conveyances by *mancipium* and *in jure cessio* had previously become obsolete. (Unterholzner, in *Rhein. Mus.* i. 129; Zimmern, in *Rhein. Mus.* 3, § 311; Mayer, in *der Zeitsch. für Gesch. Rechtsw.* viii. 1; Fabricius, *de dupl. ap. Rom. dom.*; Leist, *Bonorum Possessio*; Puchta, *Cursus der Inst.* ii. 235.) [G. L.] [E. A. W.]

BONA CADU'CA. *Caducum* literally signifies "that which falls;" thus *glans caduca*, according to Gaius (Dig. 50, tit. 16, s. 30), is the mast which falls from a tree.

Caducum, in its general sense, might be anything without an owner, or what the person entitled to neglected to take (Cic. *de Or.* iii. 31; *Phil.* x. 5); but the strict legal sense of *caducum* and *bona caduca* is that stated by Ulpian (*Fragm.* tit. xvii. *de caducis*), which is as follows:—

If a thing is left by will to a person, so that he might take it by the *jus civile*, but from some cause does not take it, that thing is called *caducum*, as if it had fallen from him; for instance, if a legacy was left to an unmarried person, or a *Latinus Junianus*, and the unmarried person did not within a hundred days obey the law (*i.e.* by marrying), or if within the same time the *Latinus* did not obtain the *Jus Quiritium*, or if a *heres ex parte* or a legatee died or became a *peregrinus* before the opening of the will, the thing was *caducum*.

Caducum, or lapse of a devise, implies that a valid devise has been made, which the devisee is unable or unwilling to take: thus *caduca* are opposed to devises which are void, *ea quae pro non scriptis habentur*.

Caducum further implies that the will of which the lapsed devise is a part has come into operation. Strictly speaking, a devise which failed in the testator's lifetime was not *caducum*; it was, however, treated like a *caducum*, and so said to be *in causa caduci*. (Cod. vi. 51, 2; cf. *Code Civil*, art. 1039.)

Either a share of an inheritance or a particular *legatum* might become *caducum*. The law alluded to in the passage of Ulpian cited above is the Lex Julia et Papia Poppaea. This law, which was passed in the time of Augustus (A.D. 9), had the double object of encouraging marriages and enriching the treasury—*aerarium* (Tac. *Ann.* iii. 25), and contained with reference to these two objects a great number of provisions. Martial (v. 75) alludes to a person who married in order to comply with the law.

The Lex Papia altered the law relating to the devolution of *caduca*. Under the previous law (*jus antiquum*) a portion of an inheritance which lapsed accrued to the entire inheritance, and so belonged to the *coheredes*; a *legatum* which lapsed accrued to *collegatarii* in certain cases, otherwise the *heres* was freed from the obligation of paying it.

By the Lex Papia, only parents or descendants of the testator to whom he had left his inheritance were allowed to retain their rights to *caduca* under the old law. If no claim was made by a parent or descendant of the testator, the right to *caduca* was given by the Lex Papia in the first place to such *heredes* or *legatarii* mentioned in the will as had children (*jus patrum*), *heredes* being preferred to *legatarii*, except that *collegatarii* with children had certain rights of priority over other devisees. In default of any such claimants, the right of claiming *caduca* was given to the *aerarium*. By a constitution of the Emperor Antoninus Caracalla, *caduca* were appropriated in all cases to the *fiscus*. (Ulpian, xvii. 2.) The Constitution of Caracalla probably abolished the *jus patrum*, but it did not take away the rights of parents and descendants of the testator under the old law.

He who took a *caducum* took it subject to the charges with which it was burthened (Ulpian, xvii. 3, "caduca cum suo onere fiunt"): thus an *hereditas caduca* was subject to the bequests of freedom of legacies, and of *fideicommissa* with which it was charged.

The law of *caducity* was no doubt unpopular; and we are told that many legal devices were employed by lawyers for the purpose of preventing its application. Testators were in the habit of making substitutions in order to provide against lapses (*ne fiant caduca*, Cod. vi. 51, 1). In the time of Constantine, both the *caelebs* or unmarried and the *orbus* or childless person (who was under a limited incapacity) obtained the full legal capacity of taking the inheritance (Cod. viii. 58). The effect of these and other changes in the law was greatly to diminish the importance of *caduca* as a source of imperial revenue. Justinian (Cod. vi. 51, *de caducis tollendis*) entirely abolished the *leges caducariae* and re-established the *jus antiquum*, though with some modifications. (Juv. *Sat.* ix. 88; Gaius, i. 150, ii. 207, iii. 144, 286; Ulp. *Frag.* tit. xvii., Cod. vi. 51; Rudorff, *Zeitsch. für Gesch. Rechtswissenschaft*, vi. 6; Francke, *Beiträge*; Baumeister, *Das Anwachsungsrecht*; Mayer, *Anwachsungsrecht*; Danz, *Lehrbuch*, ii. 71, 81; Puchta, *Inst.* iii. § 326.) As to the *Dos caduca*, see Dos. [G. L.] [E. A. W.]

BONA FIDES. This term frequently occurs in the Latin writers, and particularly in the Roman jurists. It implies such conduct as may be expected from men of fair dealing, and so is constantly opposed to *mala fides*, *fraus*, and *dolus malus*. It is necessary to explain some of the technical phrases in which the term *bona fides* occurs.

Actions containing a clause in their formula by which the *judex* was authorised to decide the case according to *bona fides* were called *bonae fidei judicia* or *actiones*. The addition to the formula of such words as "quantum aequius melius" or "ex fide bona" (Cic. *Top.* 17; *de Off.* iii. 15, 17) showed that the action belonged to this class. The effect of the addition was to give the *judex* the freest latitude in dealing with the case, and so to take equitable considerations into account (Gaius, iv. 62).

In actions arising from strictly unilateral obligations, in which the point at issue was narrowly defined, the powers of the *judex* were strictly limited. Such actions are called *actiones stricti juris*, and are contrasted with *actiones bonae fidei.* (Savigny, *System*, v. §§ 218–220, and *Beilage*, xiii.; Bethmann-Hollweg, ii. 275–286.)

Bonae fidei possessio is the possession of a person who has acquired a thing from another under a title which he believes to be a good one, or which he has no reason for supposing to be defective.

It was a necessary condition for acquiring a title to property by usucapion that the possession should have begun in good faith. (Gaius, ii. 43; *Inst.* ii. 6, pr.) In certain exceptional cases, however, mentioned by Gaius, title by usucapion was allowed, although this condition was absent (Gaius, ii. §§ 52, 60, 61); but these exceptions subsequently disappeared.

A thing which was *furtiva* or *vi possessa*, or the *res mancipi* of a female who was in the *tutela* of her *agnati*, unless it was conveyed under the *auctoritas* of her tutor, was not subject to usucapion, and therefore in these cases the presence or absence of *bona fides* was immaterial. (Gaius, ii. 45–50; Cic. *ad Att.* i. 5, *pro Flacc.* c. 34.)

The praetor allowed the *bonae fidei possessor* the benefit of the *actio Publiciana in rem.*

A *bonae fidei possessor* was not liable to the owner for *fructus* which were no longer in existence, or which had been alienated by him; whereas the *malae fidei possessor* was liable under all circumstances for *fructus*, which he had derived from the thing in his possession.
[G. L.] [E. A. W.]

BONA RAPTA. [Furtum.]

BONA VACAN'TIA were the property which a person left at his death without having disposed of it by will and without leaving any *heres ab intestato.* Such property was open to occupancy; and so long as the rules of civil law existed by themselves, such occupancy may not have been uncommon, but the *bonorum possessio* of the praetor, by opening the succession to classes of persons excluded at civil law, was a means of preventing such title by occupancy from arising. It does not appear that the state originally claimed the property of a person who died without *heredes.* The claim of the state to such property seems to have been first established by the Lex Julia caducaria (Gaius, ii. 150; Ulp. xxviii. 7). [Bona caduca.] The state—that is, in the earlier periods the *aerarium*, and afterwards the *fiscus*—did not take such property as *heres*, although succeeding *per universitatem.* Being, however, *loco heredis*, it was bound to pay *fideicommissa* charged on the estate by the deceased. The *fiscus* could not make good its claim as against a person who had possessed *bona vacantia* for four years (*praescriptio quadriennii*). Certain persons in a privileged position were allowed to claim *bona vacantia* before the *fiscus.* Thus, in the case of a soldier dying without *heredes*, the legion to which he belonged had priority. Various corporate bodies had a like preference in respect to *bona caduca* of a member of the corporation. (Cod. x. 10; Vangerow, *Pandekten*, ii. § 5[illegible]4.) [G. L.] [E. A. W.]

BONAM CO'PIAM JURA'RE, to take an oath to one's competence or solvency, is a phrase which occurs in a passage of Varro (*de Ling. Lat.* vii. 105) and also in the Lex Julia municipalis. The passage in Varro states that there was a provision of a certain law by which all those *qui bonam copiam jurarent* were released so as to be no longer *nexi.* Owing to the corrupt state of the text in this passage, it cannot be clearly ascertained what law is referred to. According to Bethmann-Hollweg (*Civil-Prozess*, § 113), the Lex Plaetoria is meant, which he supposes to have contained a temporary provision whereby those who were *nexi* at the time of its passing were released if they complied with the condition prescribed. Others think that the Lex Poetelia is the law in question (Liv. viii. 28; Cic. *de Rep.* ii. 33, 34).

In the Lex Julia municipalis or Tabula Heracliensis we find that anyone "queive . . . . in jure abjuraverit, bonamve copiam juravit juraverit," is included in the class of *infames.*

Thus, according to this law, a person *qui bonam copiam juravit* incurred to some extent the penalty of insolvency. This seems to show that such an oath was taken by a debtor when in default. It may have been allowed when a debtor was granted an extension of time for payment, or it may have reference to a composition with creditors. A debtor "qui bonam copiam juravit" would escape imprisonment; a benefit extended by the Lex Julia to all those who made *cessio bonorum.*

The phrase *bonam copiam ejurare* is used by Cicero (*ad Fam.* ix. 16; cf. Festus, *Epit. v. ejuratio*), and is usually interpreted to mean the taking of an oath by a debtor to the fact of his insolvency. Mommsen restores the text in the above passage of the Lex Julia and reads "queive in jure *bonam copiam abjuravit*," &c., thus identifying *bonam copiam abjurare* with *bonam copiam ejurare.* But perhaps *abjurare* in this passage simply means to perjure, and has no connexion with *bonam copiam.* It has been suggested that *ejurare* in the phrase *bonam copiam ejurare* is used in an intensive sense for *jurare* (cf. Cic. *de Or.* ii. 70, § 285; *Verr.* iii. 60, § 137; Nonius, p. 105, *ejurare = valde jurare*), so that *bonam copiam ejurare* is equivalent to *bonam copiam jurare.* (Huschke, *Nexum*; Dirksen, *Civilist. Abhandlung*, p. 107; Marezoll, *Frag. Tabul. Heracl.* 1816, iv. 142; Bethmann-Hollweg, *Civil-Prozess*, ii. § 113.) [E. A. W.]

BONO'RUM CES'SIO, CES'SIO BONO'RUM. As will be seen by reference to the article Bonam copiam jurare, the principle of relieving insolvent debtors, who fulfilled certain conditions, from liability to imprisonment, was recognised to some extent under the republic. Julius Caesar, when consul, B.C. 48, as a temporary measure of relief in time of distress, owing to the Civil war, discharged debtors who made over their property to their creditors from their debts. (Caes. *de Bell. Civ.* iii. 1; cf. Poste's Gaius, p. 347, 2nd ed.)

Cessio bonorum was introduced by a Lex Julia, probably one of the leges Juliae of Augustus. This law allowed an insolvent debtor to make a voluntary assignment of his property to his creditors. By making such assignment, the debtor obtained three advantages. — 1. He escaped imprisonment. 2. He did not become *infamis.* 3. In respect to property acquired subsequently to the assignment, he had the *beneficium competentiae* when sued by his old creditors: *i.e.* he could retain sufficient for his bare maintenance. He had not this right against creditors who had become so subsequent to the act of assignment. The property assigned by the debtor was sold by the process of *bonorum emptio* [BONORUM EMPTIO], the proceeds being distributed among the creditors. It is to be noticed that the assignment did not operate as a discharge, after acquired property being liable, subject to the limitation explained above. The benefit of the Lex Julia was extended by imperial constitutions to the provinces. There is no evidence to show that the benefit of the lex was limited to poor debtors, as has sometimes been supposed. (Bethmann-Hollweg, *Civil-Prozess*, ii. § 114; Gaius, iii. § 78; Rubr. *Cod. Th.* iv. 20; *Cod. Just.* vii. 71; Dig. 42, 3.) [E. A. W.]

BONO'RUM COLLA'TIO, COLLA'TIO BONO'RUM. By the rules of the civil law, emancipated children had no rights to the inheritance of their father, since they had become strangers to his family. But, in course of time, the praetor granted to emancipated children the privilege of equal succession with those who remained in the power of the father at the time of his death. This favour was granted to emancipated children only on condition that they should bring into one common stock, to be distributed with their father's estate, whatever property they had at the time of the father's death, and which would have been acquired for the father in case they had still remained in his power. This was called *collatio bonorum.* Thus emancipated children were not allowed to retain the advantage which their proprietary independence had given them over unemancipated children, and at the same time to share in the paternal succession. Property which would have been *peculium castrense* or *quasi-castrense* in the case of a *filius familias* was not subject to *collatio*, because it would not have belonged to the father if the child had remained under his power. (Dig. 37, tit. 6; Cod. vi. 20; Windscheid, *Pandekten*, iii. § 609.) [E. A. W.]

BONO'RUM EMP'TIO ET EMPTOR. The early form of execution for debt, termed *manus injectio*, was personal, not real; *i.e.* it was directed against a debtor's person, not against his property: if the creditors acquired the property of their debtor under this execution, they only acquired it as accessory to his person. [MANUS INJECTIO; NEXUM.] Subsequently a complete process of real execution was established through the instrumentality of the praetor, which is known as *bonorum emptio* or *bonorum venditio*, the institution of which may have been a consequence of the Lex Poetelia Papiria (B.C. 326). It is not to be supposed that the Lex Poetelia exempted the person of the debtor from arrest, and only made his property liable, as has been inferred by some writers from the words of Livy (viii. 28), "pecuniae creditae bona debitoris non corpus obnoxium esset," since we find the liability to personal arrest continuing as the ordinary form of execution. There was now, however, a direct execution against the property, and the debtor was no longer liable to be sold *trans Tiberim*, or to be put to death.

There is not sufficient evidence to show whether creditors were obliged to make an election between the personal execution of the civil law and the real execution of the praetorian, or whether both remedies could be used concurrently. It is thought that the praetor derived his conception of *bonorum emptio* from the procedure used by the treasury in seizing the property of proscribed persons, criminals, and public debtors, by which the property confiscated was sold and assigned by the state as an entirety, being commonly purchased by speculators called *sectores.* [SECTIO.] Similarly the *bonorum emptor* succeeded, under the order of the praetor, to the debtor's estate *per universitatem*, and this although the debtor suffered no *capitis deminutio.* Gaius, who gives an account of the Bonorum Emptio process (iii. 78–80, iv. 35), states that it *is said* to have been introduced by the Praetor P. Rutilius. It is uncertain who is the praetor referred to, but it is generally supposed that P. Rutilius Rufus, consul B.C. 105, is the person meant. Perhaps the praetor, in the first instance, put creditors into possession of their debtor's property, for the purpose of sale, when the debtor absconded or was absent, and so not amenable to the civil law execution, and that subsequently he made the remedy general. Gaius tells us (iii. 78) that, in the case of a living person, his property was liable to be sold if he concealed himself for the purpose of defrauding his creditors, and was not defended in his absence; or if he made a *bonorum cessio* according to the Julian law; or if he failed to satisfy a judgment debt within the prescribed period. In the case of a dead person, his property was sold when it was ascertained that there was neither *heres* nor *bonorum possessor*, nor any other legal successor.

There were different stages in the proceedings for conducting the execution.

First the praetor, on the application of the creditors, authorised them to take possession of the debtor's property, and to give notice (*proscriptio*) of its sale. This explains the expression in Livy (ii. 24), "ne quis militis, donec in castris esset, bona possideret aut venderet." The creditors were said "in possessionem rerum debitoris mitti:" sometimes a single debtor obtained possession. If the circumstances made it advisable, the praetor appointed a *curator bonorum* to administer the property. It was necessary that thirty days should elapse from the issuing of the first order in the case of a living person, and fifteen days in the case of a deceased person, before further proceedings could be taken. This period gave the debtor or other persons acting on his behalf the opportunity of putting a stop to the sale by satisfying the debt, or proving that the claim was not well founded. It also gave other creditors time for putting in their claims.

At the end of this period the second stage in the proceedings commenced. The creditors now, under a second order of the praetor, met in order to elect a *magister bonorum*, whose duty it was to carry out the sale in the interest of the creditors. (Cic. *ad Att.* i. 9, vi. 1; *pro Quint.* 15, § 50.) The debtor, upon this stage in the proceedings being reached, became *infamis.* The sale itself was the final stage in the proceedings. It took place after an interval of ten days from the meeting of creditors in the case of a living person, and of five days if the debtor was dead, the conditions of sale having been duly advertised. The property was sold by auction under the praetor's order to the highest bidder (*bonorum emptor*). The property was sold in one lot as an entirety (*universitas*). The purchaser obtained by the sale only a praetorian title: the property was his *in bonis*, until he acquired the Quiritarian ownership by usucapion. Consequently the actions which the purchaser could bring and which could be brought against him were praetorian actions (*actiones utiles*), not actions at law (*actiones directae*). In the last period of Roman law the property of a debtor was not sold as an entirety in the way we have described, but in separate lots. This latter form of execution was called *distractio bonorum*. Roman law provided means by which an impecunious debtor could avoid personal arrest. [BONAM COPIAM JURARE; BONORUM CESSIO.] (Gaius, iii. 77; iv. 35, 65, 111; Dig. 42, 4, 5; Huschke, *Nexum*, §§ 160, 181, 234; Keller, *Civil-Prozess*, §§ 83–85; Bethmann-Hollweg, *Civil-Prozess*, ii. 667–685; Dernburg, *Emptio bonorum*; Puchta, *Inst.* § 179.) [E. A. W.]

BONO'RUM POSSES'SIO is the technical term for the succession which the praetor gave to the inheritance of a deceased person. He who received the *bonorum possessio* did not thereby become *heres* or civil successor, for his title depended on the praetor's authority, and the praetor could not make a *heres*. Thus, when the *bonorum possessio* became established, there were two titles under which an inheritance might be claimed,—the one resting on civil law (*hereditas*), the other on the praetor's edict (*bonorum possessio*). The praetor gave *bonorum possessio* to those who had a civil title to the inheritance, and also to those who had no civil title. The reason why persons who could claim the inheritance at civil law sometimes chose to ask for the *bonorum possessio* was that they thereby acquired the benefit of the *interdictum quorum bonorum*, which was limited to cases of *bonorum possessio*. By giving *bonorum possessio* to persons who had no civil title to the inheritance, the praetor instituted a new system of succession which differed from that of the civil law. It is important to understand the relation in which the civil and praetorian titles stood to one another.

The grant of *bonorum possessio* did not necessarily imply that the *bonorum possessor* would be protected against one who had a valid civil title, for the *bonorum possessio* was given either *cum re* or *sine re*. It was given *cum re* when the person to whom it was given could not be deprived of the property by anyone claiming under a superior title. It was given *sine re* when another person could assert his claim to the inheritance by the *jus civile*, and so make the praetorian title ineffectual. As a rule, when the civil and praetorian titles were opposed to one another, the civil title was the stronger, *i.e.* the *bonorum possessio* was *sine re*; but in some cases the *bonorum possessor* was protected, i.e. *cum re*, against one who had a good civil title.

The praetor expressed in his edict the general rules which he followed in giving *bonorum possessio* (*bonorum possessio edictalis*), but *bonorum possessio* was sometimes granted to meet the circumstances of particular cases after a special inquiry (*causae cognitio*) had been held (*bonorum possessio decretalis*).

The *bonorum possessio* was promised by the edict, 1. *Contra tabulas*. 2. *Secundum tabulas*. 3. *Intestati*.

1. *Bonorum possessio contra tabulas*, i.e. in opposition to the will of the deceased, was instituted for the benefit of emancipated children. According to *jus civile*, an emancipated son had no claim to the inheritance of his father; but if he was omitted in his father's will, or not expressly exheredated, the praetor's edict gave him the *bonorum possessio* on condition that he would bring into hotchpot (*bonorum collatio*), with his brethren who continued in the parent's power, whatever property he had at the time of the parent's death. The effect of this *bonorum possessio* was to give *emancipati* the succession in the place of the *heredes* instituted in the will, but the will was not in other respects invalidated. The *sui heredes* who were instituted in the will were also allowed the *bonorum possessio*, and succeeded jointly with the *emancipati* who had been passed over. If a freedman made a will without leaving his patron as much as one-half of his property, the patron obtained the *bonorum possessio* of one-half, unless the freedman appointed his own children as his successors. It is to be noticed that this *bonorum possessio* is *cum re* against a person who had a valid civil title.

2. *Bonorum possessio secundum tabulas*. By this *bonorum possessio* the praetor gave effect to wills which were invalid at civil law. In order to obtain *bonorum possessio secundum tabulas*, it was necessary that the will should be sealed by seven witnesses, that the testator should have had *testamenti factio* at the time of his death, that the persons instituted in the will should be capable of succeeding at civil law, and that no claim should have been made against the will (*contra tabulas*). By this *bonorum possessio* the praetor gave effect to wills which had not been executed in the form requisite for making a civil will: thus he dispensed with the cumbrous form of mancipation. He also supported wills which had become invalid on some technical grounds. The *bonorum possessor secundum tabulas* had not a good title against the *heres* until the Emperor M. Aurelius protected him against the civil action by which the inheritance was claimed. (Gaius, ii. 119, 120.)

3. *Bonorum possessio intestati*. In the case of intestacy there were seven classes of persons who might claim the *bonorum possessio*, each in his order, upon there being no claim of a higher class. The three first classes or orders were: 1. *Unde liberi*. 2. *Unde legitimi*. 3. *Unde proximi cognati*.

1. *Bonorum possessio unde liberi*. The praetor admitted in this first order *sui heredes* and those who would have been *sui heredes* if they had not been emancipated. The *emancipati* were required to make *collatio bonorum*. An *emancipatus* admitted in this order was *bonorum possessor cum re*, as against a person who had the civil title: *e.g.*, A. dies intestate, leaving an emancipated son and a brother his nearest *agnati*; the brother is civil heir, but the emancipated son, as *bonorum possessor*, excludes him.

2. *Bonorum possessio unde legitimi.* All persons who had a civil title to the inheritance were admitted in this order. Thus, the praetor in granting the *bonorum possessio intestati* preferred those who had a civil title to those who had no civil title, except in the case of *emancipati.*

3. *Bonorum possessio unde proximi cognati.* Blood relations were admitted in this order according to proximity of relationship. If the nearest in degree did not claim, the next in proximity was entitled to succeed (*successio graduum*). Cognates further removed than the sixth degree of proximity could not claim, except in the case of *sobrino natus,* who was in the seventh degree.

The terms for the four remaining orders are: *Tum quem ex familia—Patronus patrona, liberi et parentes patroni patronaeve— Unde vir et uxor —Unde cognati manumissoris.*

These orders, with the exception of that *unde vir et uxor*, are exclusively concerned with the succession to the property of freedmen, or of persons manumitted from the state of *mancipium.*

The *bonorum possessio unde vir et uxor* gave reciprocal rights of succession to the husband and wife.

Bonorum possessores acquired possession of property belonging to the inheritance by means of the *interdictum quorum bonorum* (Dig. 43, 2; Cod. viii. 2). The praetor gave *bonorum possessores* the same actions, and allowed the same actions to be brought against them, as they would have been able to maintain or would have been subject to, if they had been *heredes.* Such actions were not *actiones directae,* because not founded on a civil title, but *actiones utiles.* A fictitious clause was inserted in the formulae of such actions by which the *judex* was directed to decide the case on the assumption that the *bonorum possessor* was *heres.* The *bonorum possessor* was said "ficto se herede agere" (Gaius, iv. 34). In the later period of Roman law the civil action by which the *heres* asserted his right to the inheritance was also given to *bonorum possessores* ("possessoria hereditatis petitio," Dig. 5, 5). The *bonorum possessor* only acquired a bonitary, not a civil title to the property which belonged to the inheritance, until by usucapion his property was converted into Quiritarian ownership.

In order to become *bonorum possessor* it was necessary that an application should be made to the magistrate ("agnitio, admissio, petitio bonorum possessionis"). Parents and children might make their claim within a year from the time of their being able to do so; others were only allowed a hundred days. On the failure of a party to make his claim, the right devolved on those next in succession.

The history of the origin and development of the praetorian succession cannot be clearly traced. It is probable that the praetor first gave *bonorum possessio* for the benefit of the civil heir ("juris civilis confirmandi gratia"); that he then used it for the purpose of supplementing the civil law ("juris civilis supplendi gratia"), in case there was no civil heir; and, lastly, in some cases gave it in opposition to the civil law ("juris civilis corrigendi gratia"). Justinian, by his 115th and 118th Novellae, established a uniform system of inheritance, and by so doing almost entirely abolished the *bonorum possessio.* (Gaius, iii. 25-38, iv. 34; Ulp. *Fragm.* tit. 28, 29; Dig. 37, 1-5; 38, 6; Fabricius, *Ursprung und Entwicklung der bonorum possessio,* &c., 1837; Vangerow, *Pandekten*, ii. §§ 398-400; Puchta, *Inst.* 316-320.) [E. A. W.]

BONO'RUM RAPTO'RUM ACTIO. [FURTUM.]

BONO'RUM SEC'TIO. [ACTIO.]

BOO'NAE (*βοῶναι*), persons in Athens who purchased oxen for the public sacrifices and feast. They are spoken of by Demosthenes (*c. Meid.* p. 570, § 171) in conjunction with the *ἱεροποιοὶ* and those who presided over the mysteries, and are ranked by Libanius (*Declam.* 8) with the *σιτῶναι*, generals, and ambassadors (cf. Harpocrat. *s. v.*). They were elected by the Ecclesia (Boeckh, *P. E.*, p. 216). We often find mention of them on inscriptions as paying into the treasury the money received for the hides of sacrificed animals (*δερματικόν.* See Rangabé, *Antiq. Hellén.* No. 842; *C. Inscr. Gr.* 157). [W. S.] [W. M. L.]

BOREASMI or **BOREASMUS** (*βορεασμοί* or *βορεασμός*), a festival celebrated by the Athenians in honour of Boreas (Hesych. *s. v.*), which, as Herodotus (vii. 189) seems to think, was instituted during the Persian war, when the Athenians, being commanded by an oracle to invoke their *γαμβρὸς ἐπίκουρος*, prayed to Boreas. The fleet of Xerxes was soon afterwards destroyed by a north wind, near Cape Sepias, and the grateful Athenians erected to his honour a temple on the banks of the Ilissus. But considering that Boreas was intimately connected with the early history of Attica, since he is said to have carried off and married Oreithyia, daughter of Erechtheus (Herod. *l. c.*; Paus. i. 19, § 6), and that he was familiar to them under the name of *brother-in-law*, we have reason to suppose that even previous to the Persian wars certain honours were paid to him, which were perhaps only revived and increased after the event recorded by Herodotus. The festival, however, does not seem ever to have had any great celebrity; for Plato (*Phaedr.* p. 229) represents Phaedrus as unacquainted even with the site of the temple of Boreas. Particulars of this festival are not known, except that it was celebrated with banquets.

Pausanias (viii. 36, § 4) mentions a festival celebrated with annual sacrifices at Megalopolis in honour of Boreas, who was thought to have been their deliverer from the Lacedaemonians. (Comp. Aelian, *V. H.* xii. 61.)

Aelian (*l. c.*) says that the Thurians also offered an annual sacrifice to Boreas, because he had destroyed the fleet with which Dionysius of Syracuse attacked them; and adds the curious remark, that a decree was made which bestowed upon him the right of citizenship, and assigned to him a house and a piece of land. This, however, is perhaps merely another way of expressing the fact, that the Thurians adopted the worship of Boreas, and dedicated to him a temple, with a piece of land. [L. S.]

BOU'KOLOI (*βούκολοι*), members of a religious college at Pergamum during the Roman empire, engaged in celebrating the mysteries of Dionysus *καθηγήμων.* There appear to have been colleges of a similar name throughout Ionia and Pontus (Lucian, *de Salt.* 79; cf. *C. I. G.* 2052). The chief was called ἀρχιβούκολος (cf. *C. I. L.* vi. 504, 510, *archibuculus dei Liberi*); and a memorial raised by a college to its chief is to be found in *Hermes*, vii. 39, with a commentary by G. Curtius. Certain members of the college appear therein to have been called σειλήνιοι, since the worship of Silenus was closely connected with that of Dionysus, and Silenus had a special grove in Pergamum (Paus. vi. 24, § 8). As might be expected, seeing that the ceremonial largely consisted of religious dancing (Lucian, *l. c.*), there appear among them a χορηγὸς and ὑμνοδιδάσκαλοι, the latter corresponding to the ὑμνῳδὸς we find in an inscription of the mysteries at Smyrna (*C. I. G.* 3160). See P. Foucart, *Les Associations religieuses chez les Grecs*, pp. 114-116. [L. C. P.]

BOULÉ (βουλή), a deliberative assembly or council. In the Heroic age, represented to us by the Homeric poems, the despotism of royalty is tempered by the βουλὴ or council of chiefs and the ἀγορὰ or general assembly of freemen. These two institutions, however, "are exhibited in the monuments of the legendary age as opportunities for advising the king, and media for promulgating his intentions to the people, rather than as restraints upon his authority" (Grote, i. 461, where see the Homeric βουλὴ further described, and cf. AGORA 1).

In the free republics of historic times the βουλὴ assumed more of an executive character; it was the name of an "administrative committee" (*Verwaltungsausschuss*, Westermann *ap.* Pauly; cf. Hermann, *Staatsalterth.* § 125). This was especially the case among the Ionic race; the Dorian states, like Sparta and Crete, preferred the terms γερουσία, γέροντες, retaining, as is well known, the kingship of the Heroic age in a modified form [GEROUSIA, COSMI]. In Athens, at least from the time of Solon, there were two councils, the AREIOPAGUS (*q. v.*) and that called by Grote the "probouleutic or preconsidering senate." It is of the latter council that the following article treats.

The first question that meets us is whether this body was first constituted by Solon or modified from one already existing. The direct authority of the ancients on points like this is of much less weight than their casual admissions; the orators in particular, and the grammarians who followed them, ascribed promiscuously to Solon all Athenian institutions whether earlier or later than his time, from the immemorial sanctity of the Areiopagus to the democratic changes of Cleisthenes or even of Pericles. As has been seen under AREIOPAGUS, the best authorities (Grote, Meier, Schömann) regard that council as the legitimate descendant of the Homeric βουλὴ or council of old men (γέροντες); and, however shorn of its power in later times, it always enjoyed honorary precedence as ἡ ἄνω βουλὴ over that we are now considering, ἡ κάτω βουλή. There are indications, however, of the existence of more than one council in pre-Solonian Athens. Herodotus (v. 71) tells us that in the time of Cylon (B.C. 620) Athens was under the direction of the presidents of the Naucraries (ναυκραρίαι), the number of which was forty-eight, twelve out of each of the four tribes. Moreover, we read of the case of the Alcmaeonidae being referred to an aristocratical tribunal of 300 persons, and that Isagoras, the leader of the aristocratic party at Athens, endeavoured to suppress the council, or βουλή, which Cleisthenes had raised to 500 in number, and to vest the government in the hands of 300 of his own party (Herod. v. 72; Plut. *Sol.* 12). The reappearance of the number 300, as Thirlwall remarks (*H. G.* ii. 41), can hardly have been a merely casual coincidence. It has been ingeniously conjectured by a recent writer that, under the government of the Eupatrids, there was a senate of 300 composed of 75 members from each of the four tribes, 25 from each of the phratries; and that Solon, wishing to give some political power to the unprivileged citizens, while retaining the preponderance of the aristocracy, added a fourth hundred of non-Eupatrid members, 25 from each tribe (Lange, *Die Epheten und der Areopag vor Solon*, 1874, p. 25 ff.). Hence, it is argued, the reactionists under Isagoras proposed to restore, in place of the Cleisthenean 500, not the Solonian 400, but the pre-Solonian 300. On the other hand, both Grote and Schömann tacitly assume that the second council originated with Solon. However this may be, it is admitted that Solon made the number of his βουλὴ 400, taking the members from the first three classes, 100 from each of the four tribes; and that its function with reference to the public assembly (ἐκκλησία) was also his work—to prepare matters for its discussion, to convoke and superintend its meetings, and to ensure the execution of its decrees (Grote, *H. G.* ii. 322; Schömann, *Antiq.* p. 331, E. T.). The question whether the βουλευταὶ or senators were from the first appointed by lot as in after-times, may be regarded as practically decided in the negative by the consensus of scholars from Bishop Thirlwall downwards (Grote, Schömann *l. c.* in correction of his former view in the *Assemblies*, Westermann *ap.* Pauly, Caillemer *ap.* D. and S.). As the moderate and conservative nature of Solon's reforms is better understood, it is acknowledged that the κύαμος or lot formed no part of any of his institutions; and Plutarch expressly states that he designed the second council, no less than the Areiopagus, as an "anchor of the state," using moreover the word ἐπιλεξάμενος to express the mode of appointment (*Sol.* 19). An election by open voting, where the influence of the Eupatrids would be felt, may be assumed as most in accordance with Solon's views. On the tribes being remodelled by Cleisthenes (B.C. 510), and raised to ten in number, the council also was increased to 500, fifty being taken from each of the ten tribes. It is to this period, and not to any earlier one, that the introduction of the lot must be referred; in the appointment of magistrates it is probable that this change dates from the more sweeping reforms of Pericles and Ephialtes. Cleisthenes, himself an Alcmaeonid by birth, was by no means an advanced democrat, and under his constitution the office of βουλευτής, though not technically an ἀρχὴ or magistracy, was confined to the three first Solonian classes; that of archon being further limited to the Pentacosiomedimni or first class. All these restrictions were swept away by the law of Aristides about 477, and every office became open to every citizen (Grote, iv. 32; Schömann, *Antiq.* p. 339; cf. ARCHON). The senators thus appointed were required to submit to a scrutiny or δοκιμασία, in which they gave evidence of being genuine citizens (γνήσιοι ἐξ ἀμφοῖν), of never having lost their civic rights by ἀτιμία, and also of being above 30 years of age. At the casting of lots two persons were selected for each post, the second as a reserve man in case the first should be rejected on the scrutiny: to draw the second lot was ἐπιλαχεῖν (Harpocrat.). After passing the δοκιμασία they took an oath of office (ὅρκος βουλευτικός), of which only a few phrases have been preserved. Among these are τὰ βέλτιστα βουλεύσειν τῷ δήμῳ τῷ Ἀθηναίων ([Demosth.] *c. Neaer.* p. 1346, § 4; cf. Lys. *Or.* 31 (Philon), § 1); and οὐδὲ δήσω Ἀθηναίων οὐδένα (Demosth. *c. Timocr.* p. 745, § 144, cf. § 147). They remained in office for a year, and sat probably every day except on some religious festivals, when they were "discharged from attendance" (ὄντων Κρονίων καὶ διὰ ταῦτ' ἀφειμένης τῆς βουλῆς, Demosth. *op. cit.* p. 708, § 26). A purely secular holiday seems to have been unknown. Boeckh, in estimating the probable cost of the senators' pay (μισθὸς βουλευτικὸς) to the state, assumes about 300 sittings in the year (*P. E.* p. 232). This payment was at the rate of a drachma for each day on which they sat. The date of its introduction has been disputed, but it may safely be referred to the same period as the payment of the popular assembly and the dicasts, *i.e.* the age of Pericles. During their sittings they wore a wreath of myrtle, which, as a religious emblem, would have to be laid aside when blood was to be shed (ἡ βουλὴ . . . περιελομένη τοὺς στεφάνους ἀπέκτεινε, Lycurg. *c. Leocr.* § 122). In the theatre, at festivals, and in the public assembly, they had a place of honour (προεδρία), and for their year of office they were exempt from military service (cf. ATELEIA). If a senator were accused of a crime, he might be suspended by his colleagues during the investigation. The ballot for his removal was called ἐκφυλλοφορία, because the voting in it was taken with leaves of olive instead of with voting tablets or pebbles. If acquitted on the trial, he was reinstated; if convicted, the expulsion was not only made absolute, but the senate was entitled, and in some cases expected, to inflict punishment on its own account in addition to that awarded by the dicastery (Harpocrat. *s. v.* ἐκφυλλοφορῆσαι: Aeschin. *Timarch.* §§ 111, 112; Schömann, *Assemblies*, p. 230, *Antiq.* p. 373). At the end of the year the whole body had to pass the examination called εὔθυναι, at once an audit of accounts and an inquiry into its general conduct in office: and if the result was satisfactory, the people decreed them a golden crown as the equivalent of a modern "vote of thanks;" the crown, which was of no great value, together with the decree, being then preserved in a shrine as a consecrated offering. The laws specified certain cases in which the crown was to be refused; for instance, if the senate had failed to insure the building of a certain number of new triremes. The speech of Demosthenes *against Androtion* is a γραφὴ παρανόμων for the alleged illegal bestowing of this compliment when it had not been earned; Aeschines (*Timarch.* l. c.) mentions an instance in which it was actually refused.

This senate of 500 was divided according to tribes into ten sections of fifty each, and these served in an order of succession, determined by lot at the beginning of the year. The members of the section whose turn it was to serve were called Prytanes (πρυτάνεις), *i.e.* chiefs or presidents, because they presided both in the senate and the assemblies; their period of office was called a Prytany (πρυτανεία), and lasted in ordinary years 35 or 36 days, in intercalated years 38 or 39. These years consisting of 354 or 384 days respectively [CALENDARIUM], the four extra days were given to the tribes which drew the last lots (Schömann, *Assemblies*, pp. xvi., xxxiv.). From among the Prytanes an Epistates was chosen, also by lot, every day to preside as a chairman in the senate and the assembly of the people; during his day of office he had in his custody the keys of the citadel, the public archives, and the state seal, and was thus for twenty-four hours the nominal head of the government.

The attendance of the fifty Prytanes at each meeting of the senate was compulsory, that of other senators voluntary; and it may well have been that young men who aspired to the career of statesmen, when drawn as βουλευταὶ (as happened to Demosthenes more than once in early life), took every opportunity of attending in order to familiarise themselves with public business. It was provided, however, that all the tribes should at least be represented at every meeting of the senate; and this was done by the institution of the Proedri (πρόεδροι), nine senators chosen by lot, one from each of the non-presiding tribes, at the commencement of each sitting, under the direction of the Epistates of the Prytanes. The office of the Proedri seems at first to have been purely ceremonial, in order to give an air of completeness to the working senate as chosen from all the ten tribes (cf. Grote, iii. 118). But the democratic jealousy of men in office, which at Athens showed itself in the multiplication of checks and counterchecks, at length discovered that the powers of a single tribe, prolonged for a period of five weeks or more, might be used (limited as those powers were) for the purposes of a clique; and the authority of the Prytanes and their Epistates was further restricted. From a date not earlier than the archonship of Eucleides (B.C. 403), but placed by Meier with great probability between the years 378 and 369, a second Epistates was chosen by lot from among the Proedri, and called ἐπιστάτης τῶν προέδρων, to whom the presidency both of the senate and the assembly was transferred, leaving to the former Epistates only the chairmanship of the Prytanes and the custody of the keys and seals, with an honorary precedence. At the same time the functions of the other Proedri seem to have been enlarged, so that they were in some way the "assessors" of their chief (Benseler, on Demosth. *c. Timocr.* p. 706, § 21),—his *bureau*, as Perrot calls them (*Essai*, p. 40). Some writers suppose that the nine Proedri were now first instituted; but it is altogether more probable that they were coeval with the division of the senate into Prytanies, and that their attendance had always been "necessary to constitute a valid meeting, and to ensure a constant representation of the collective people" (Grote, *l. c.*). Without pressing too for the comparison of the Roman constitutional forms, we may point to the thirty Curies which continued to be represented, if it were only by lictors, down to the latest times of the republic.

The true explanation of the functions of the Proedri and Epistatae is a comparatively recent discovery, which has only gradually won its way to general acceptance; and the traditional account, still to be found in works of great authority, must here be noticed. According to this, ten Proedri at a time were chosen from the Prytanes for seven days, and from among them the Epistates; so that there were two bodies of Proedri, each with its own Epistates, one of ten from the presiding tribe, another of nine from the non-presiding. This view may be read in most histories of Greece, as well as in the older works on antiquities, and was taught by Meier and Schömann in their earlier writings, and by K. F. Hermann in the early editions of his *Staatsalterthümer*. But in reality, besides being cumbrous to a degree of improbability, it has very slight authority in ancient writers, the principal being the Scholiast on Aeschines (*Ctes.* § 39) and the author of the Second Argument to Demosthenes *against Androtion* (not Libanius, but a later and inferior grammarian); and the three eminent scholars just named all lived to correct their published opinions. The first approach to a juster criticism was made by K. F. Hermann himself, in an anonymous pamphlet entitled *Epicrisis quaestionis de Proedris apud Athenienses*, Göttingen, 1843; he was followed by Westermann *ap.* Pauly, vi. *s. v.* Senatus, 1852, and by Meier, in a tract *de Epistatis Atheniensibus* prefixed to the summer programme of lectures at Halle, 1855. To these may be added, in proof of the unanimity with which the correction has been accepted by recent scholars, Schömann (*Antiq.* p. 377), Perrot (*Essai sur le Droit Public d'Athènes*, 1869), and Caillemer (*ap.* Daremberg and Saglio, *s. v.* Boulé). The clear and concise statement of Pollux (viii. 96) may be cited as very much to the point: *ὅταν οἱ πρυτάνεις τὸν δῆμον ἢ τὴν βουλὴν συνάγωσιν, οὗτος* (*i.e.* *ὁ ἐπιστάτης τῶν πρυτανέων*) *ἐξ ἑκάστης φυλῆς πρόεδρον ἕνα κληροῖ, μόνον τὴν πρυτανεύουσαν ἀφιείς.* Nor do Harpocration, Suidas, or any of the better grammarians know anything of a double set of Proedri, though some, including Pollux himself, recognise only one Epistates. In the confusion between the two officers, each bearing the name of Epistates, we have, as the present writer has pointed out elsewhere, the probable origin of the mistake: "It is easy to see that when the *ἐπιστάτης τῶν προέδρων* (Aeschin. *Ctes.* § 39) had become confused with the *ἐπιστάτης τῶν πρυτανέων* or Epistates properly so called, the result would be (1) the notion of 10 proedri as a subdivision of the 50 prytanes; (2) when it was discovered that the proedri must be distinct from the prytanes, as representing the other nine (non-presiding) tribes, the further notion that there were two distinct sets of proedri" (Note on Demosth. *c. Timocr.* p. 706, § 21).

Other officers of the senate were the secretaries (*γραμματεῖς*), of whom there were several. We find, in the first place, one who was appointed for each prytany by lot from among the Prytanes, and whose duty it was to prepare all the acts passed by the senate: this is the *γραμματεὺς ὁ κατὰ πρυτανείαν*, and the one whose name was prefixed to decrees in the formula *ὁ δεῖνα ἐγραμμάτευε* [Ecclesia]. A second secretary was elected by the senate itself on a show of hands, and apparently not for a single prytany only, but for the whole year: he is called in inscriptions *γραμματεὺς τῶν βουλευτῶν*, and by Pollux *ἕτερος ἐπὶ τοὺς νόμους ὑπὸ τῆς βουλῆς χειροτονούμενος*. Among his functions Schömann reckons the custody of the public archives (*Antiq.* p. 378); but Pollux expressly assigns them to the first secretary, and is followed by Boeckh (*P. E.* p. 186). The third secretary was elected by the people, and called *γραμματεὺς τῆς πόλεως* (Thucyd. vii. 10) or *τῆς βουλῆς καὶ τοῦ δήμου* (Inscrr.); his chief duty was to read out documents both in the senate and in the popular assembly. There were also under-secretaries (*ὑπογραμματεῖς*), concerning whom no trustworthy details have come down to us. Of more importance was the *ἀντιγραφεὺς τῆς βουλῆς*, one of the two controllers of accounts who were great public officers, and described under Antigrapheis (Pollux, viii. 98; Boeckh, *P. E.* p. 186; Schömann, *Antiq.* p. 378).

We now proceed to speak of the duties of the senate as a body. It is observed under Areiopagus that the chief object of Solon in remodelling the senate and the Areiopagus was to control the democratical powers of the state. For this purpose he ordained that the senate should discuss and vote upon all matters before they were submitted to the assembly, so that nothing could be laid before the people on which the senate had not come to a previous decision. This decision, or bill, was called *Probouleuma* (*προβούλευμα*); and if the assembly had been obliged either to acquiesce in any such proposition, or to gain the consent of the senate to their modification of it, the assembly and the senate would then have been almost equal powers in the state. But besides the option of adopting or rejecting a Probouleuma, the people possessed and exercised the power of coming to a decision completely different from the will of the senate. Every one possessing the right to speak (*ὁ βουλόμενος, οἷς ἔξεστι*) had also the right of proposing motions [Ecclesia]. The motion might be an amendment to the Probouleuma, involving an extension or modification of it, and not merely a simple negative. Legally, however, a motion could be made only about such matters as had previously been dealt with in the senate and had formed the subject of a Probouleuma. As regards other matters the motion could consist only in a demand to the senate to discuss these, and draw up a Probouleuma relative to them, which was then to be laid before the assembly. It is clear, however, that this restriction was sometimes dispensed with in practice, and that *ἀπροβούλευτα*, or matters not previously referred to the senate, were not unfrequently put to the vote; especially when, as in the case of a compliment to the senate itself, the obtaining of its consent must have been a mere form (Demosth. *c. Androt.* pp. 594–5, §§ 5, 6).

If a private person had anything to bring before the public, it was first necessary for the party to obtain, by written petition, the privilege of access to the senate (*πρόσοδον γράψασθαι*) and leave to propose his motion; and if the measure met with their approbation, he could then submit it to the assembly (Demosth. *c. Timocr.* p. 715, § 48; Isocr. *Areop.* §§ 16, 84). Proposals of this kind, which had the sanction of the senate, were also called *προβουλεύματα*, and frequently related to the conferring of some particular honour or privilege upon an individual. Thus the proposal of Ctesiphon for crowning Demosthenes is so styled, as also that of Aristocrates for conferring extraordinary privileges on Charidemus, an Athenian commander in Thrace. Any measure of this sort, which was thus approved of by the senate, was then submitted to the people, and by them simply adopted or rejected; and "it is in these and similar cases, that the statement of the grammarians is true, that no law or measure could be presented for ratification by the people without the previous approbation of the senate, by which it assumed the form of a decree passed by that body" (Schömann, *Assemblies*, p. 98).

When a Probouleuma came before the people it was read out by the *γραμματεὺς* (the third of those mentioned above), and the preliminary question was then put, whether the people agreed with it or desired to have the matter subjected to further discussion. The show of hands on this previous question was called *προχειροτονία* (Demosth. *c. Timocr.* p. 703, § 11). The subsequent stages of the discussion, and the forms in which the decrees (*ψηφίσματα*) of the people were drawn up at different times, are described under ECCLESIA. The *προβουλεύματα* could only be brought before the popular assembly by the same senate that had drawn them up; their validity expired with its year of office. Hence when the matters to which they related could not be suffered to drop, a fresh beginning before the next year's senate and a new *προβούλευμα* became requisite. Other resolutions (*ψηφίσματα*) of the senate which did not belong to the class of *προβουλεύματα*, but had reference to public business within the competence of its administrative powers, and mostly requiring to be carried out at once, in like manner became invalid at the end of the year, unless re-enacted by the incoming senate. (Demosth. *c. Aristocr.* p. 651, § 92; Schömann, *Antiq.* p. 375).

The political powers of the senate were strictly limited. In the more important matters, and especially in foreign affairs, it had the right of initiating a policy, but not of finally deciding on the course to be pursued. Since, however, the senators were convened by the Prytanes every day, except on festivals or *ἀφετοι ἡμέραι* (Pollux, viii. 95), it is obvious that they would be fit recipients of any intelligence affecting the interests of the state, and it is admitted that they had the right of proposing any measure to meet the emergency; for example, we find that Demosthenes gives them an account of the conduct of Aeschines and himself, when sent out as ambassadors to Philip, in consequence of which they propose a bill to the people (Demosth. *Fals. Leg.* p. 346, § 17 = 19). Again, when Philip seized on Elateia (B.C. 338), the senate was immediately called together by the Prytanes to determine what was best to be done (Demosth. *de Cor.* p. 284, § 169). But, besides possessing the initiatory power of which we have spoken, the senate was sometimes delegated by the people to determine absolutely about particular matters, without reference to the assembly. Thus we are told (Demosth. *Fals. Leg.* p. 389, § 154 = 170) that the people gave the senate power to decide about sending ambassadors to Philip; and Andocides (*de Myst.* § 15) informs us that the senate was invested with absolute authority (*ἦν γὰρ αὐτοκράτωρ*) to investigate the outrages committed upon the statues of Hermes, previously to the sailing of the Sicilian expedition.

But in some departments of state, especially the financial, naval, and military, the senate was entrusted with large administrative powers. The farming of the public revenues, the receipt of tenders for public works, the sale of confiscated properties and the like were carried out by the *πωληταὶ* [POLETAE] under the superintendence and subject to the ratification of the senate. The farmers of the taxes (*τελῶναι*), the lessees of the leasable revenues, *i.e.* public lands and especially mines (*οἱ μισθούμενοι*, Demosth. *c. Timocr.* §§ 40, 59), the tax-collectors (*ἐκλογεῖς, ἐκλέγοντες*), and the sureties which all these classes of persons were required to furnish (*οἱ ἐγγυώμενοι, οἱ τούτων ἐγγυηταί*, Demosth. *ll. cc.*) might all be imprisoned if their payments were in arrear, or even as a precaution if default was to be feared; and this discretionary power is assigned to the senate by Schömann (*Antiq.* pp. 372, 451) and Boeckh (*P. E.* pp. 338, 340), though some passages of Demosthenes rather imply that it was vested in the law-courts (*c. Timocr.* p. 700, § 2, and elsewhere). In the presence and under the control of the senate, the *ἀποδέκται* [APODECTAE] made their payments into the different treasuries; the treasurers of the Acropolis (*ταμίαι τῆς θεοῦ*) and of other temples received from their predecessors and delivered to their successors, according to an inventory, the money and valuables under their protection. "The senate arranged also the application of the public money, even in trifling matters, such as the salary of the poets; the superintendence of the cavalry paid by the state, and the examination of the infirm (*ἀδύνατοι*) supported by the state, are particularly mentioned among its duties; the public debts were also paid under its direction. From this enumeration we are justified in inferring that all questions of finance were confided to its supreme regulation" (Boeckh, *P. E.* p. 154). Another very important duty of the senators was to take care that a certain number of triremes was built every year (Demosth. *c. Androt.* §§ 8, 17, &c.). To meet special expenses connected with the dignity of the senate, as for instance the sacrifices offered on behalf of its deliberations, it had a special treasury under a treasurer chosen by the Prytanes from their own number. The *ταμίας τῶν τριηροποιῶν* is mentioned by Demosthenes (*op. cit.* § 17) as an officer for whom the senate was responsible; but the exact mode of his appointment is nowhere stated. In general the fleet and all matters relating to the maritime empire of Athens were under the special control of the senate. It was bound to see that there was no want of the necessary stores, and in time of war to lend its aid in rapidly fitting out the ships; while it stimulated the zeal of the trierarchs by the prospect of a reward, the trierarchic crown

(Schömann, *Antiq.* p. 375; Boeckh, *Seeurkunde*, pp. 59, 63; Dem. *de Cor. Trierarch. passim;* cf. EPIMELETAE, No. 5). The cavalry, again, which was kept embodied, and was exercised during peace as well as in war, was under its special supervision. It was bound to inspect these troops from time to time, and to provide for their pay, called *κατάστασις* (Boeckh, *P. E.* p. 250; Lys. *pro Mantith.* [*Or.* 16], §§ 6, 7; Harpocrat., Suid., Phot., *s. v.* *κατάστασις*). Finally, in raising levies of men for war, a process undertaken in each deme independently, the senators might be ordered by decree of the people to assist the demarchs in making out the *κατάλογοι* or lists for service (Demosth. *c. Polycl.* p. 1208, § 6).

The senate had also its judicial functions, the most important of which was to receive *εἰσαγγελίαι*, or informations of extraordinary crimes for which there was no special law provided [EISANGELIA]. The senate in such cases either decided themselves or referred the case to a dicastery, especially if they thought it required a higher penalty than it was competent for them to impose, viz. a fine of 500 drachmas (Dem. *c. Everg. et Mnes.*, p. 1152, § 43). It was also their duty to decide on the qualification of magistrates, and the character of members of their own body; the nine archons, in particular, being subjected to a double *δοκιμασία* and *εὔθυναι*, one from the senate and the other from the law-courts. In all these matters the senate, as the executive body, was itself responsible (*ὑπεύθυνος*) to the Demos or sovereign people.

The meetings of the senate were, as we learn from various passages of the Attic orators, open to strangers; thus Demosthenes (*de Fals. Leg.* p. 346, § 17=19) says that the senate-house was, on a particular occasion, full of strangers (*μεστὸν ἦν ἰδιωτῶν*): in Aeschines (*c. Ctes.* § 125) we read of a motion "that strangers do withdraw" (*μεταστησάμενος τοὺς ἰδιώτας*). To enforce these regulations they had at their disposal the services of the policemen, the so-called *Σκύθαι* or *τοξόται*, who were under the orders of the Prytanes [DEMOSII]. On some occasions private persons were invited by a special decree to come forward and give advice to the senate. The senate-house, situated in the Agora, was called *βουλευτήριον*, and contained two chapels (*ἱερὰ*), one of *Ζεὺς βουλαῖος*, another of *Ἀθηνᾶ βουλαία*, in which it was customary for the senators to offer up certain prayers before proceeding to business (Antiph. *de Choreut.* § 45). We read also of *Ἑστία βουλαία*, whose altar stood in the senate-house (Harpocrat. *s. v.* *βουλαία*), and *Ἄρτεμις βουλαία* (*C. I. G.* 112, 8; 113, 15) as among the gods thus invoked. A signal, probably a flag, was hoisted over the *βουλευτήριον* except on the few holidays; and when the sitting was about to begin, the members were summoned to enter by a herald: the flag was then struck (Andoc. *de Myst.* § 36). The right to receive the drachma for attendance, already mentioned, was checked by a ticket (*σύμβολον*), consisting of a small piece of stamped lead, such as was also used at the theatres, given to each senator on his entrance. Several varieties of these tickets are preserved in museums: the bouleutic are identified by the legend ΒΟΛΗ, *i.e.* *βουλή*, or ΒΦ, *i.e.* *βουλὴ τῶν πεντακοσίων*, and have been described in two recent monographs (Dumont, *de plumbeis apud Graecos tesseris*, 1870; Benndorff, *Beiträge zur Kenntniss des Attischen Theaters*, 1875, p. 62). It is tolerably certain that late comers, after the flag was struck, lost their drachma for the day: Schömann also thinks (*Antiq.* p. 378) that they forfeited their seat; but against this is the curious provision of the oath, quoted by Schömann himself, that they would keep the place assigned them by lot (*καθεδεῖσθαι ἐν τῷ γράμματι ᾧ ἂν λάχωσι*, Philochorus *ap.* Schol. Aristoph. *Plut.* 973; ascribed to the year B.C. 410, the archonship of Glaucippus).

The Prytanes also had a building to hold their meetings in, sometimes called the prytaneum (*πρυτανεῖον*), but more usually *θόλος*, the "Dome" or "Rotunda," from its shape. This must not be confounded with the more ancient prytaneum proper [PRYTANEION]. It was situated near the senate-house, so that the Prytanes could without inconvenience betake themselves from it to the full meetings of the senate. Before and after these meetings, however, they were present in the *θόλος* for the whole day, and also took their meals there, at a common table and at the public expense, with some other public officers, and with the privileged persons called *ἀείσιτοι* (Dem. *de F. L.* p. 419, § 249=279; p. 442, § 314=361). Thucydides tells us (ii. 15) that before the time of Theseus every Attic city had its *βουλευτήριον* and *πρυτανεῖον*: but this is only another way of saying that in pre-historic Attica there were other "cities" besides Athens; in his time the possession of a *βουλευτήριον* and a *πρυτανεῖον* had become essential to the Greek idea of a *πόλις*.

The number of tribes at Athens did not always remain at ten; an alteration took place in B.C. 306, when Demetrius Poliorcetes had liberated the city from the usurpation of Cassander. Two were then added, and called Demetrias and Antigonis, in honour of Demetrius and his father: later sycophancy changed the names to Ptolemais and Attalis, in compliment to kings of Egypt and Pergamus. The senate was now increased to 600 members, and the prytanies shortened accordingly; but when in the time of Hadrian a thirteenth tribe was added, the number of senators was again reduced to 500. The Athenians kept up the show of their former institutions down to the latest times of the Roman empire; cf. ARCHON. (Schömann, *Assemblies*, 1819, *passim; Antiq. Juris Publici Graecorum*, 1838, pp. 210–218; *Antiquities*, Eng. Tr., 1880 (vol. i.), pp. 371–379; Hermann, *Staatsalterth.*, §§ 125–127; Perrot, *Essai sur le Droit Public d'Athènes*, 1869, pp. 10–36; Westermann *ap.* Pauly, s. v. *Senatus;* Caillemer *ap.* D. and S.) [R. W.] [W. W.]

BOULEU'SEOS GRAPHÉ (*βουλεύσεως γραφή*), an impeachment for conspiracy. *Βουλεύσεως*, being in this case the abbreviated form of *ἐπιβουλεύσεως*, is the name of two widely different actions at Attic law. I. The first was the accusation of conspiracy against life, and might be instituted by the person thereby attacked, if competent to bring an action; if otherwise, by his or her legal patron (*κύριος*). In case of the plot having succeeded, the deceased might be represented in the prosecution by near kinsmen (*οἱ ἐντὸς ἀνεψιότητος*), or, if they were incompetent, by the *κύριος*, as above mentioned (*Att. Proc.* p. 164, with Lipsius' note in the new ed.). The criminality of the accused was independent of the result of the conspiracy (Harpocrat.), and the penalty, upon conviction, was the same as that incurred by the actual murderers (Antiph. *Tetral.* iii. 2, § 5; Andoc. *de Myst.* § 94). Capital punishment was, however, not inflicted unless death followed; in the case of attempted murder, the penalty for βούλευσις was the same as that for τραῦμα ἐκ προνοίας, outlawry and confiscation. (See references under TRAUMATOS EK PRONOIAS GRAPHÉ.) The presidency of the court upon a trial of this kind, as in most δίκαι φονικαί, belonged to the king archon (*Att. Proc.* p. 312); and the court itself was composed of the Ephetae, sitting in the Palladium, according to Isaeus and Aristotle, as cited by Harpocration, who, however, also mentions that the Areiopagus is stated by Deinarchus to have been the proper tribunal. Various attempts have been made in recent times to reconcile these statements. Schömann conjectures that, if death ensued, the Areiopagus was the proper authority; in other cases the Palladium (*Antiq.* i. 469 n., E. T.). Sauppe suggests, as the ground of distinction, the presence or absence of premeditation (*Orat. Att.* ii. 235). Whether βούλευσις could exist without πρόνοια is a rather subtle question of Athenian law, which is usually marked by the absence of such refinements. In the speech of Antiphon *On the Choreutes* the prosecution contend that there has been βούλευσις on the part of the defendant (§ 16), while they admit that there has been no πρόνοια (§ 19); but Prof. Jebb has rightly pointed out that this is not the technical βούλευσις (= ἐπιβούλευσις) of Harpocration's βουλεύσεως γραφή (Jebb, *Att. Or.* i.62 n.). There can be little doubt that Caillemer (in Daremberg and Saglio) has justly concluded with Isaeus and Aristotle that all cases of βούλευσις were tried before the Ephetae in the Palladium; and Harpocration, as he suggests, may have mistaken the meaning of Deinarchus. To this it may be added that the *locus classicus* on the jurisdiction of the Areiopagus in cases of homicide, Demosth. *c. Aristocr.* pp. 641–3, §§ 65–70, makes no mention of βούλευσις. The latest writer on the subject, Lipsius (on *Att. Process*, n. 534), does not appear to us to have shaken this conclusion.

II. The other action βουλεύσεως was available when a person found himself wrongfully inscribed as a state debtor, against the person who had so inscribed him (ὅταν ἐγγεγραμμένος ὡς ὀφείλων τῷ δημοσίῳ αὐτὸς δικάσηταί τινι ὡς οὐ δικαίως αὐτὸν ἐγγεγραφότι, Harpocrat.). It was thus closely akin to the ψευδεγγραφῆς γραφή. The two are not clearly distinguished by the grammarians: and Pollux even alleges (viii. 43) that the two γραφαί were applicable to the same offence. On this point the explanation of Boeckh is now generally accepted. Whoever falsely declared that another had been registered was liable to the action for false registration (ψευδεγγραφῆς γραφή, or, in Suidas, ψευδέγγραφος δίκη), whether the plaintiff owed nothing, or less than the sum stated in the register. If, on the other hand, a man who had been a state debtor had paid all that was due, but his name was not erased, or having been erased was re-entered, the action for conspiracy (βουλεύσεως) applied. In both cases, if the plaintiff was successful, his name was erased, and the defendant became indebted to the state for an equal sum (Boeckh, *P. E.* p. 390, quoting for the substitution of the defendant's name the Demosthenic *c. Aristog.* i. p. 792, § 73). The vague language of the grammarian (δικάσηταί τινι) leaves a further question, against what class of persons these two actions would lie. Meier suggests that a magistrate who had so offended would probably be proceeded against at the εὔθυναι or ἐπιχειροτονία, the two occasions on which the public conduct of magistrates was examined; so that generally the defendant in this action would be a private citizen who had directed such an insertion at his own peril (*Att. Process*, p. 339). The conclusion of Müller (in Pauly) and Caillemer (in D. and S.) is more in accordance with the usual practice of the Athenians: that these actions lay only against the public treasurer; that he was responsible for the entries he made on information from others; that if cast in a suit of this description, he would have to seek his remedy by δίκη βλάβης or ψευδομαρτυριῶν against those who had misled him. Another doubtful point is, whether the disfranchisement (ἀτιμία) of the plaintiff as a state debtor was in abeyance while this action was pending. In two passages of the speech just referred to, it is first stated as a fact (*c. Aristog.* i. p. 778, § 28), and then argued as a point of law (*ib.* pp. 791–2, §§ 71–73) that it was not. Boeckh suggests (note in *Att. Process*, p. 340) that there was probably ἄδεια for the complainant, as otherwise the law would sophistically shut a man's mouth while requiring him to prove his innocence. He may, however, if still ἄτιμος, have been allowed to plead his cause through an advocate (συνήγορος). Both γραφαί, βουλεύσεως and ψευδεγγραφῆς, were brought before the Thesmothetae.

BOULEUTE'RION. [BOULÉ.]

BRACAE (ἀναξυρίδες, θύλακοι), trowsers, pantaloons. These, as well as various other articles of armour and of dress [ACINACES, ARCUS, ARMILLA], were common to all the nations which encircled the Greek and Roman population, extending from the Indian to the Atlantic ocean. Hence Aristagoras, king of Miletus, in his interview with Cleomenes, king of Sparta, described the attire of the barbarians in these terms: "They carry bows and a short spear, and go to battle in trowsers and with hats upon their heads." (Herod. v. 49.) Hence also the phrase *Bracati militis arcus*, signifying that those who wore trowsers were in general armed with the bow. (Propert. iii. 3, 17. Cf. Eur. *Cycl.* 182; Cic. *Fam.* ix. 15, 2, *in Pis.* 23, § 53; Verg. *Aen.* xi. 777; Ov. *Trist.* iv. 6, 47, v. 7, 49, 10, 34; Juv. viii. 254.) In particular, we are informed of the use of trowsers or pantaloons among the following nations:—The Medes and Persians; the Parthians; the Phrygians; the Sacae; the Sarmatae; the Dacians and Getae; the Teutones; the Belgae; the Britons; and the Gauls.

The Latin word *bracae* of Celtic origin is connected with the Scottish "breeks" and the English "breeches." Corresponding terms are used in all the Northern languages. Also the Cossack and Persian trowsers of the present day differ in no material respect from those which were anciently worn in the same countries. In ancient monuments we find the above-mentioned people constantly exhibited in trowsers, thus clearly distinguishing them from Greeks and Romans. An example is seen in the annexed group of

Bracae worn by Sarmatians. (Column of Trajan.)

Sarmatians, taken from the Column of Trajan, wearing the loose trowsers (*bracac laxae*) which the Greeks called *θύλακοι*, and another example is given of a Scythian under ARCUS, p. 170 b.

Bracae worn by Persian prince. (Mosaic found at Pompeii.)

The tighter form of *ἀναξυρίδες* is exemplified in the annexed figure of a Persian prince at the battle of Issus, from the mosaic at Pompeii.

The reason for this distinction is to be found in the necessities of climate. Thus Roman soldiers fighting in the north of Europe were obliged to assume this barbarian garment, and we see the Roman soldiers and officers engaged in the wars on the Danube represented on the Column of Trajan as wearing short *bracac*. In the cut given in the next column, they are supported by a sash round the waist. In the reliefs on Constantine's arch which date from that emperor's own times, we see the Roman soldiers wearing trowsers exactly like those of the Sarmatians figured above. At first however, on quitting these northern countries, the Romans gladly abandoned the *bracae*, and Caecina (A.D. 69) gave great offence on his march into Italy by wearing what was regarded as a *tegmen barbarum* (Tac. *Hist.* ii. 20). But in the second century they appear to have been worn at Rome, although the use of them in the city was forbidden by Honorius (A.D. 397; Cod. Theod. xiv. 10, 3; Lamprid. *Alex. Sever.* 40).

Trowsers were principally woollen; but Agathias states (*Hist.* ii. 5) that in Europe they were also made of linen and of leather; probably the Asiatics made them of cotton and of silk. Sometimes they were embroidered (*pictae*, Val. Fl. vi. 227) as in the figure of the Persian prince above, or striped (*virgatae*, Propert. iv. 11, 43) and ornamented with a woof of various colours (*ποικίλαι*, Xen. *Anab.* i. 5, § 8; Eur. *l. c.*). The Greeks seem never to have worn them. In the next century, however, they gradually came into use at Rome; but they would appear never to have been generally worn. It is recorded of Alexander Severus that he wore white *bracae*, and not crimson ones (*coccineae*), as had been the custom with preceding emperors.

Bracae worn by Roman soldier. (Trajan's Column.)

Mela (ii. 1) describes the Satarchae as *bracati totum corpus*, by which phrase he seems to indicate a single garment which served for a jacket to the body as well as trowsers for the legs. The Amazons are often represented as wearing such a dress (Winckelmann, *Mon. Ined.* 149).

Gallia bracata was a name given to what afterwards became *Gallia Narbonensis*, because the inhabitants wore *bracae* (Mel. ii. 59; Plin. *H. N.* iii. § 31); and *bracatus* as opposed to *togatus* often expresses the distinction between *Gallia transalpina* and the countries east of the Alps.

Bracarius, properly a breeches-maker (Lampr. *Alex. Sev.* 24) came to be used for a tailor in general (Diocl. *Edict.* vii. 42). [J. Y.] [J. H. F.]

BRACCHIA'LE (*περιβραχιόνιον*, *περικάρπιον*). The *βραχίων* was the upper arm from the elbow to the shoulder (Poll. ii. 138; Curtius, *Gr. Etym.* p. 292); so the *περιβραχιόνιον* (or *ὄκκαβος*, see Hesych. *s. v.*) was an armlet used on the upper arm, while *περικάρπιον* was used on the wrist as a bracelet. In later Greek we find *βραχιόλιον* (Theophanes, 225, 11), *βραχίολος*, and *βραχιόνιον* used for bracchiale, and Suidas explains *χλιδόνας* as *κοσμοὺς περὶ τοὺς βραχίονας, βραχιόλια.* But *bracchium* was strictly the lower arm from the wrist to the elbow, though more usually used for the whole arm from wrist to shoulder. Hence bracchiale (from which is derived *bracelet*), itself a species of ARMILLA, is used as a generic term for armlet, as is also *spatalium* (Plin. *H. N.* xiii. § 142; Tert. *de cult. fem.* ii. 13), comprising *spinter*, which was applied to an armlet worn on the left arm (Festus, *s. v.*), and *dextrale* or *dextrochirium* (Capit. *Maximin.* 6, 8) an armlet worn on the right arm (Marquardt, *Privatl.* 684). Where a distinction is drawn between bracchiale and dextrochirium, as in Arculfus (*ap.* Ducange, s. v. *Bracchiale*), the latter is a bracelet worn on the wrist, the former an armlet worn on the upper arm (*superbracchia*). The wearing of *bracchialia* was an un-Roman and pagan custom (Ambros. *Ep.* i. 10, 9). For the various shapes of armlets and bracelets (ὄφεις, ἐχῖνοι, &c.), see ARMILLA. They were fastened with a clasp (copula), which was sometimes set with jewels (Capit. *Maximin.* 27, 8). We find bracchialia of gold (Tert. *de cult. fem.* ii. 2) and silver (Plin. *H. N.* xxviii. §§ 82, 83). [L. C. P.]

BRASIDEIA (Βρασίδεια), a festival celebrated at Sparta in honour of their great general Brasidas, who, after his death, in B.C. 422, received the honours of a hero. (Paus. iii. 14, § 1; Aristot. *Eth. Nic.* v. 7.) It was held every year with orations and contests, in which none but Spartans were allowed to partake.

Brasideia were also celebrated at Amphipolis, which, though a colony of Athens, transferred the honour of κτίστης from Hagnon to Brasidas, who was buried there, and paid him heroic honours by an annual festival with sacrifices and contests. (Thucyd. v. 11.) [L. S.]

BRAT'TEA (not Bractea: see Lachmann on Lucr. iv. 727), a finely beaten-out plate of metal, especially gold (Lucr. *l. c.*; Verg. *Aen.* vi. 209). Thicker plates were called *laminae* (Isid. *Orig.* xvi. 8, 2). Martial (viii. 33, 11) also calls brattea, owing to its fineness, *sputum.* Such plates were fastened on objects as ornaments, and this was a proceeding as old as the Phoenicians (Curtius, *Hist. of Greece*, i. 143, 145, Eng. trans.), and is alluded to in Homer (περιχεύας, *Od.* iii. 384). The Latin term for fastening on these plates is *imbratteare* (Amm. Marc. xiv. 6, 8). It was still in practice in the time of Sidonius Apollinaris (*Ep.* viii. 8 *fin.*), where see Savaro's note. The gold-beater is *brattearius* or *bratteator* (Orelli, 4153; Firmic. viii. 16, iv. 15) or *tritor* (Henzen, 7281). The fastener is *inaurator* (Orelli, 4201); or if both functions were performed by the same man, *bratteator inaurator* (Orelli, 4067). In Cod. Just. x. 64, 1, *bratteatores* is explained by πεταλουργοί. Pliny (*H. N.* xxxiii. § 61) tells us that from an ounce of gold 750 plates, each four fingers square, could be beaten. The process of beating was called *bratteam exprimere* (Tert. *de Idol.* 8). The thicker plates were called *bratteae Praenestinae*, the finest *bratteae quaestoriae* (Plin. *l. c.*). These plates were used for adorning statues (Juv. xiii. 152; cf. Pers. ii. 55), sedan-chairs (Sidon. Apoll. *l. c.*), furniture (Mart. viii. 33, 5, 6), walls and ceilings (Senec. *Epist.* 115, § 9; cf. Marquardt, *Privatl.* 700, note 15), and garments (χρυσόπαστοι, Ath. xii. 535–6). On the latter were fastened gold ornaments representing animals (ζωωτὸς χιτών, Ath. v. 197 e), flowers, stars, &c. (Poll. x. 43; cf. Suet. *Nero*, 35). The Romans called such *vestes auratae* (Ov. *Met.* viii. 448) or *sigillatae* (Trebell. *Trig. Tyr.* 16, 1). Compare on the whole Vopiscus, *Aurelian*, 46, 1, and the long notes of Salmasius. *Bratteae* were also used when stamped or embossed as ornaments and amulets, and many such are found in tombs. (See Saglio in *Dict. des Antiquités*, s. v.; Mayor on Juv. xiii. 152.)

For *nummi bratteati*, see Eckhel, *Doctr. Nummorum*, i. p. 115. [L. C. P.]

BRAURO'NIA (βραυρώνια), a festival celebrated in honour of Artemis Brauronia, in the Attic town of Brauron (Herod. vi. 138), where, according to Pausanias (i. 23, § 9; 33, § 1; iii. 16, § 6; viii. 46, § 2), Orestes and Iphigeneia, on their return from Tauris, were supposed by the Athenians to have landed, and left the statue of the Taurian goddess. (See Müller, *Dor.* i. 9, §§ 5 and 6.) It was held every fifth year, under the superintendence of ten ἱεροποιοί (Pollux, viii. 9, 31); and the chief solemnity consisted in the circumstance that the Attic girls between the ages of five and ten years, dressed in crocus-coloured garments, went in solemn procession to the sanctuary (Suidas, *s. v.* Ἄρκτος; Schol. on Aristoph. *Lysistr.* 646), where they were consecrated to the goddess. During this act the ἱεροποιοὶ sacrificed a goat, and the girls performed a propitiatory rite in which they imitated bears. This rite may have arisen simply from the circumstance that the bear was sacred to Artemis, especially in Arcadia (Müller, *Dor.* ii. 9, § 3); but a tradition preserved in Suidas (*s. v.* Ἄρκτος) relates its origin as follows:—In the Attic town of Phanidae a bear was kept, which was so tame that it was allowed to go about quite freely, and received its food from and among men. One day a girl ventured to play with it, and, on treating the animal rather harshly, it turned round and tore her to pieces. Her brothers, enraged at this, went out and killed the bear. The Athenians now were visited by a plague; and when they consulted the oracle, the answer was given that they would get rid of the evil which had befallen them if they would compel some of their citizens to make their daughters propitiate Artemis by a rite called ἀρκτεύειν, for the crime committed against the animal sacred to the goddess. The command was more than obeyed; for the Athenians decreed that from thenceforth all women, before they could marry, should have taken part once in this festival, and have been consecrated to the goddess. Hence the girls themselves were called ἄρκτοι, the consecration ἀρκτεία, the act of consecrating ἀρκτεύειν, and to celebrate the festival ἀρκτεύεσθαι. (Hesych. and Harpocrat. *s. v.*; Schol. on Aristoph. *l. c.*) But as the girls when they celebrated this festival were nearly ten years old, the verb δεκατεύειν was sometimes used instead of ἀρκτεύειν. (Comp. C. F. Hermann, *Gottesd. Alterth.* § 62, note 9.)

There was also a quinquennial festival called Brauronia, which was celebrated by men and dissolute women, at Brauron, in honour of Dionysus. (Aristoph. *Pax*, 870, with the note of the Scholiast; and Suidas, *s. v.* Βραυρών.) Whether its celebration took place at the same time as that of Artemis Brauronia (as has been supposed by Müller, *Dor.* ii. 9, § 5, in a note, which has, however, been omitted in the English translation), must remain uncertain, although the very different characters of the two festivals incline us rather to believe that they were not celebrated at the same time. According to Hesychius, whose statement however is not supported by any ancient authority, the Iliad was recited at the Brauronian festival of Dionysus by rhapsodists. (Comp. Hemsterh. *ad Pollucem*, ix. 74; Welcker, *Der Epische Cyclus*, p. 391; A. Mommsen, *Heortologie*, p. 409 foll.) [L. S.]

BREVIA'RIUM ALARICIA'NUM or **BREVIA'RIUM.** Alaric, the second king of the Visigoths (A.D. 484–507), who reigned over part of Gaul and Spain, commissioned a body of jurists, no doubt Romans, to make a selection from Roman statute law and from the writings of Roman jurists which should form a code for the use of his Roman subjects. The code was completed in the twenty-second year of Alaric's reign (A.D. 506), and was then submitted to a council of bishops and nobles held at Aduris (Aire in Gascony), by which it was approved. The work was promulgated under the direction of Gojarich, the *comes palatii*, by the transmission of a certified copy of it to each *comes*. These copies were accompanied with a *commonitorium* or proclamation which explained the character of the work, and prohibited the use of any other law or legal form (*ut in foro tuo nulla alia lex neque juris formula proferri vel recipi praesumatur*).

The signature of Anianus, the *referendarius* of the king, was attached to each official copy for the purpose of giving it authenticity; a circumstance which has been so far misunderstood that Anianus has been considered by some critics as the compiler of the code, which has been called *Breviarium Aniani*. The name Breviarium Alaricianum or Breviarium does not appear before the 16th century, from which time it becomes common. The title given to the work in the *commonitorium* is *Codex de Theodosiani legibus atque sententiis juris vel diversis libris electus*. In some of the MSS. it is called Lex Theodosii, from the title of the first part of its contents; in others it is named, from its second part, *liber juris, liber legis doctorum, liber juridicus*. It is often described by the general title, Lex Romana. The following are the contents of the Breviarium, with their order in the code:—1. Codex Theodosianus, sixteen books. 2. Novellae of Theodosius II., Valentinian III., Marcian, Majorian, Severus. 3. The Institutes of Gaius, two books. 4. Pauli Receptae Sententiae, five books. 5. Codex Gregorianus, thirteen titles. 6. Codex Hermogenianus, two titles. 7. Papinianus, lib. i. Responsorum.

The code was thus composed of two kinds of materials,—imperial constitutions, which, both in the code itself and in the *commonitorium*, are called *leges*, and the writings of Roman jurists, which are called *jus*. Both the Codex Gregorianus and Hermogenianus being compilations, made without any legislative authority, are included under the head of *jus*. Except in the case of the Institutes of Gaius, the Breviarium is made up of extracts from the authorities enumerated above, and of an interpretation which explains the text and gives an account of amendments in the law relating to it. As a general rule the text of the passages selected was not altered. It is to be noticed that the compilers of the Breviarium made no use of the writings of some of the most eminent jurists. Thus there is no selection from the works of Ulpian, and only one short extract is taken from Papinian. The Institutes of Gaius are abridged or epitomised, and such alterations in the law as had taken place, or were considered necessary for the time, were introduced into the text. This part of the work, on account of its distinct character, has no interpretation attached to it. The epitome gives but a very imperfect account of the parts of Gaius which it was intended to be a summary of. Its value was much diminished by Niebuhr's discovery of the Institutes of Gaius at Verona in 1816.

The Breviarium contains several sources of Roman law which are otherwise almost entirely unknown, especially Paulus and the first five books of the Theodosian Code.

Numerous MSS. of the Breviarium are in existence. There are also MSS. of epitomes of the Breviarium, which were made in the Middle Ages. A complete edition of this code was published by Sichard in his *Codex Theodosianus*, Basileae, 1528. The entire code was not edited again till 1849, when the well-known standard edition by Haenel was published. (Puchta, *Cursus*, 1, § 137; Savigny, *Geschichte des Röm. Rechts im Mittelalter*, ii. c. 8; Rudorff, *Geschichte des Röm. Rechts*, 1, § 104; Danz, *Geschichte des Röm. Rechts*, 1, § 81; Huschke, *Jurisprudentiae Antejustinianae quae supersunt*; Julius Paulus.) [G. L.] [E. A. W.]

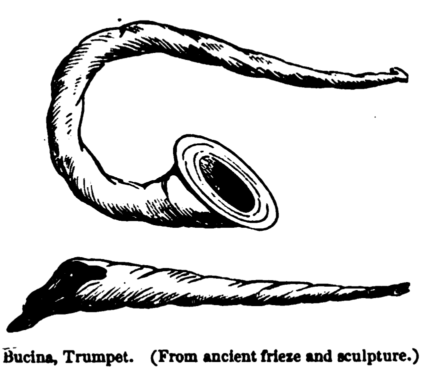
BRUTTIA'NI, slaves whose duty it was to wait on the Roman magistrates. They are said to have been originally taken from among the Bruttians, because this people continued from first to last faithful to Hannibal (P. Diac. *s. v. Bruttiani*; Gell. x. 3, § 19); and Strabo (v. extr.) says the same of the Lucanians and Picentes. But Niebuhr (*Hist. of Rome*, vol. iii. note 944) is disposed to think that these servants bore this name long before, since both Strabo (vi. 2, § 4) and Diodorus (xvi. 15) state that this word signified "revolted slaves" in the Lucanian language. (Mom. *Röm. Staatsr.* i. 260.) [W. S.] [W. W.]

BUC'CULA. [GALEA.]

BU'CINA (*βυκάνη*), a kind of horn-trumpet, originally made out of a shell, in which case it is often, especially in poetry, denoted by *concha*, Gk. *κόχλος* (Eur. *I. T.* 303; Theocr. xxii. 75; Mosch. ii. 120; Verg. *Aen.* vi. 171, x. 209; Ovid. *Metam.* i. 335), and was made not only from the *bucinum*, but from many other kinds of spiral shells. It is thus happily described by Ovid (*l. c.*):—

> "Cava bucina sumitur illi
> Tortilis, in latum quae turbine crescit ab imo,
> Bucina, quae medio concepit ubi aëra ponto,
> Litora voce replet sub utroque jacentia Phoebo."

The *bucina*, as seen in art, agrees closely with this description and also with the shape of the shell *bucinum*, and, like it, might almost be described from the above lines (in the language of conchologists) as spiral and gibbous. The two drawings in the annexed woodcut agree with this account. In the first, taken from a frieze (Burney's *History of Music*, vol. i. pl. 6), the *bucina* is curved for the convenience of the



Bucina, Trumpet. (From ancient frieze and sculpture.)

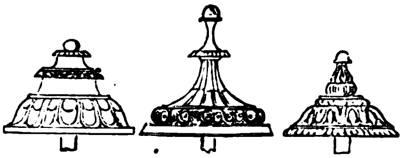
performer, with a very wide mouth, to diffuse and increase the sound. In the next, a copy of an ancient sculpture taken from Blanchini's work (*De Musicis Instrum. Veterum*, p. 15, pl. 2, 18), it still retains the original form of the shell.

Vegetius thus distinguishes the *bucina* and the *cornu*: "Bucina quae in semet aereo circulo flectitur; cornu quod ex uris agrestibus, argento nexum, temperatum arte spiritque canentis flatus emittit auditum." This distinction was not always observed (Verg. *Aen.* vii. 513 and 519), but the words may be taken as a definition of the later perfected musical instrument, carved from horn, or perhaps from wood or metal, to imitate a shell more or less closely. It is often given to Tritons (Macrob. i. 8) and wind-gods, and was employed by sailors, as in the accompanying woodcut from a terra-cotta lamp, representing a ship coming into port: the sailors are furling the sails, while the master announces their arrival by sounding a *bucina*. It was also used by ox-herds and swine-herds to gather their herds together (Varro, *R. R.* iii. 131; Colum. vi. 23, 3) and for many purposes in rural life (Theocr. ix. 27, xxii. 75; Prop. v. 10, 29; Verg. *Aen.* vii. 519; Cic. *Verr.* ii. 4, 96), especially to summon aid on a sudden alarm; to assemble the citizens to the *comitia* in early times (Prop. v. 1, 13; Curt. iii. 3, 8, although Varro, *L. L.* v. 91, says that the *cornu* or *lituus* was used for this purpose). In Greek art the *bucina* sometimes serves to distinguish barbarians from the Greeks, who are furnished with the σάλπιγξ (De Luynes, *Vases peints*, pl. 1; Gerhard, *Apul. Vasen*, pl. ii.). It was also employed in the Roman army, especially to mark the *vigiliae* or night-watches (Liv. vii. 35, xxvi. 15; Prop. v. 4, 63; Tac. *Ann.* xv. 30; Polyb. vi. 36, 5; Front. *Strat.* i. 5, 17), or to summon or give orders to the soldiers (Tac. *l. c.*; Veget. ii. 22, iii. 5; Polyb. xiv. 3). By the *bucina* was given to the soldiers the signal or class of signals peculiarly called *classicum* (Veget. ii. 22; Modest. 16). [CLASSICUM.] The performer on the *bucina* was called *bucinator*. [B. J.] [J. H. F.]

Bucina. (From a terra-cotta lamp.)

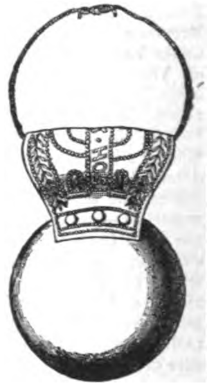
BULGA, a leathern bag or pouch, carried on the arm, and used as a purse (Lucil. and Varro *ap.* Non. p. 78; Festus, *s. v.*, who says that the word is Gallic). For a similar bag hung on the arm of a husbandman and containing seed (πήρα σπερμοφόρος, *Anth. P.* vi. 104), see *Mus. Borbonico*, xii. 47. [J. H. F.]

BULLA, a water bubble, and, from the resemblance in form, a boss, sometimes of ivory, but usually of metal, employed, like the ἧλοι of the Greeks, to adorn the sword-belt (*bullis asper balteus*, Sid. Apoll. *Carm.* 2), the military girdle (*aurea bullis cingula*, Verg. *Aen.* ix. 359), the sword (Hom. *Il.* xi. 29), the sceptre (*ib.* i. 246), a goblet (*ib.* xi. 633), a bronze chest (Niccolini, *Case di Pompei*, pl. xxxiii.), the panels of doors (Plaut. *As.* ii. 4, 20; Cic. *Verr.* ii. 4, 56, where we learn that the ivory doors of the temple of Athene at Syracuse were adorned with golden bosses). The magnificent bronze doors of the Pantheon at Rome are enriched with highly ornamental bosses, some of which are here shown. Petronius (*Sat.* 30) speaks of fortunate and unfortunate days being marked by such bosses.



Bullae, or bosses on doors. (From the Pantheon.)

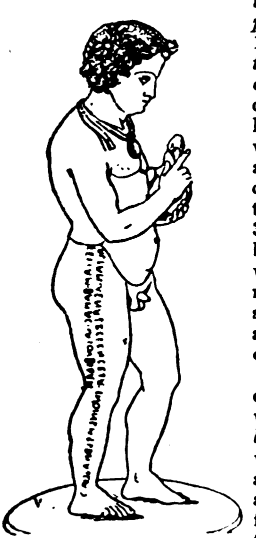
We most frequently read, however, of *bullae* as ornaments suspended from the neck, worn by children, and especially by the sons of the noble and wealthy. Hence the phrase *heres bullatus* in Juvenal (xiv. 4). These *bullae* were made of two concave plates of gold fastened together by a brace of the same material, so as to form a globe, within which an amulet was contained. Hence it is described as *bulla aurea.* (Macrob. *Sat.* i. 6, § 16; Plin. *H. N.* xxxiii. § 10; Fest. p. 36; Prop. v. 1, 131; Plaut. *Rud.* iv. 4, 126.)



Bulla. (From the Collection of Mr. Rogers; the gold cord added from a specimen in the British Museum.)

The use of the *bulla*, like that of the *praetexta*, was derived from the Etruscans, whence it is called by Juvenal (v. 164) *aurum Etruscum.* Both men and women are frequently represented in Etruscan art as wearing necklaces and bracelets formed of *bullae* (Micali, *Mon. di popoli ital.* pl. xliii. foll.), doubtless containing amulets [AMULETUM] and such *bullae* are preserved in museums. Plutarch (*Romul.* 25) says that they were first introduced into Rome by generals triumphing in imitation of Etruscan kings and Lucumones, while Pliny (*l. c.*) says that the custom of boys wearing them was originated by Tarquinius Priscus, who granted one to his son for slaying an enemy while still *praetextatus.* However, they were worn by the general at his triumph and by boys to avert evil influences (Macrob. *Sat.* i. 6, 9; Plin. xxxiii. § 84). [FASCINUM.] The *bulla* was originally worn only by the children of the patricians, but subsequently by all of free birth (Cic. *Verr.* i. 58, 152); while children of the libertini were only permitted to wear an ornament of the same kind made of leather (*nodus tantum et signum de paupere loro*, Juv. v. 165; *libertinis scortea*, Ascon. *ad Cic.* l. c.). [NODUS.] On coming of age it was laid aside, together with the *praetexta*, and was consecrated on this occasion to the Lares. (Pers. v. 31.) Examples of boys represented with the *bulla* are not unfrequent in statues, on tombs, and in other works of art.

The annexed woodcut represents a boy wearing a *bulla* (*bullatus*). The *bulla* was sometimes hung as an ornament and a charm on the forehead or round the neck of pet animals (Ovid. *Met.* x. 114). (Marquardt, *Röm. Alt.* vii. pp. 82, 182.) [J. Y.] [J. H. F.]



Boy wearing a Bulla. (Müller, *Denkmäler.*)

BURIS. [ARATRUM.]

BUSTUA'RII. [FUNUS.]

BUSTUM. [FUNUS.]

BUTY'RUM (*βούτυρον, βούτυρος*), butter, was only used by the Greeks and Romans as an unguent (Plin. *H. N.* xi. § 239) and a medicine (Id. xxviii. § 133; Galen, vi. p. 683 and xii. p. 274, Kuhn; Cels. iv. 15 and 18, v. 26; Marcell. *Empir.* ix. p. 81), while as a food they left it to the barbarians who had invented it. Thus Alexandrides (*ap.* Athen. iv. p. 131) speaks contemptuously of "butter-eating Thracians," and many writers note as something remarkable its use by Paeonians (Hecataeus, *ap.* Athen. iv. p. 447), Lusitanians (Strabo, iii. 3, 7), Aethiopians (Id. xvii. 2, 2), &c., showing by the curious phrase which they employ (*ἔλαιον ἀπὸ γάλακτος*), that the butter of the ancients was a liquid, as Pliny (*l. c.*) expressly tells us. [J. H. F.]

BUXUM (*πύξος*) properly means the wood of the box tree, but was given as a name to many things made of this wood. The tablets used for writing on, and covered with wax (*tabulae ceratae*), were usually made of this wood. Hence we read in Propertius (iii. 22, 8), "Vulgari buxo sordida cera fuit." These *tabellae* were sometimes called *cerata buxa*. In the same way the Greek *πυξίον, πυξίδιον*, formed from *πύξος*, "box-wood," came to be applied to any tablets, whether they were made of this wood or any other substance; in which sense the word occurs in the Septuagint (*τὰ πυξία τὰ λίθινα*, Exod. xxiv. 12; compare Is. xxx. 8; Hab. ii. 2). Tops were made of box-wood (*volubile buxum*, Verg. *Aen.* vii. 382; Pers. iii. 51); also all wind instruments, especially the flute (Ov. *Ex Pont.* i. 1, 45, *Met.* xii. 158, *Fast.* vi. 697; Verg. *Aen.* ix. 619); combs (whence Juv. xiv. 194, speaks of *caput intactum buxo*), and boxes (Luc. *Asin.* 14). [W. S.] [J. H. F.]

BYSSUS (*βύσσος*). It has been a subject of some dispute whether the byssus of the ancients was cotton or linen. Herodotus (ii. 86) says that the mummies were wrapped up in bandages of this material (*σινδόνος βυσσίνης τελαμῶσι*; cf. vii. 181), and an examination of mummy cloth with the microscope has shown it to be linen and not cotton cloth. Byssus in Herodotus therefore signified linen made from flax, and not cotton, which he calls *tree-wool* (*εἴριον* [Att. *ἔριον*] *ἀπὸ ξύλου*, iii. 47, 106, vii. 65). The robes of *byssus* mentioned by Aeschylus (*Sept. c. Theb.* 1039; *Pers.* 125) and Euripides (*Bacch.* 821) we may take to have been linen. In the same way linen is meant when we are told that the limbs of Osiris were wrapped in *byssina* (Diod. i. 85), that the image of Isis was covered with a black linen garment (Plut. *Is. et Osir.* 39), and that the great ship of Ptolemy Philopator had a sail of *byssus* (Athen. v. p. 206 c). But in some writers *byssus* is erroneously used to signify cotton (*τὴν δὲ βύσσον φύεσθαι δένδρον φασι*, Philostr. *Vit. Apoll.* 20), and Strabo even gives the name to silk, which he supposed to be a kind of cotton (*τὰ Σηρικά, ἔκ τινων φλοιῶν ξαινομένης βύσσου*, Strab. xv. p. 693). It seems in later writers to have signified a fine and costly texture, made generally of linen, but perhaps in some cases of very fine cotton. Simaetha in Theocr. ii. 73 goes sightseeing in a dress of *byssus* (*βύσσοιο καλὸν σύροισα χιτῶνα*); it is mentioned by Apuleius as a thin dress ("bysso tenui pertexta," *Met.* xi. c. 3); and it is spoken of in the Gospel of St. Luke (xvi. 19) as part of the dress of a rich man (cf. Rev. xviii. 12). Pliny (xix. § 21) speaks of it as a species of flax (*linum*), which served *mulierum maxime deliciis*, and was very expensive.

The word comes from the Hebrew *bûtz*, and the Greeks probably got it through the Phoenicians. Pausanias (vi. 26, § 4) distinguishes byssus from hemp (*καννάβις*) and flax (*λίνον*), and in another passage (v. 5, § 9) says that it was grown in Elis, being not inferior to that of the Hebrews in fineness, but not so yellow (*ξανθή*); and that the women in Patrae gained their livelihood by making headdresses (*κεκρύφαλοι*) and weaving cloth from it (vii. 21, § 7). Mr. Yates thinks that *λίνον* was the common flax, and that *βύσσος* was a finer variety, but the byssus in Elis may have been a species of cotton. (Yates, *Textrinum Antiq.*, p. 267.) [W. S.]

C, K.

CABEI'RIA (*καβείρια*), the mysteries of the Pelasgic (Herod. ii. 51) Cabeiri, were celebrated in the islands stretching from Euboea to the Hellespont, in the volcanic Lemnos (see the poet, probably Pindar, quoted in Hippol. *Ref. Haeres.* v. 7, p. 96), Imbros (Steph. Byz. *s. v.*), and most of all in Samothrace. We also find them on the adjacent coasts of Europe and Asia Minor (Strabo, x. p. 472), at Thebes and Andania in Greece (Preller, *Gr. Myth.* i. 707); and we even hear of their worship as being solemnised in an island near Britain (Strabo, iv. p. 198). Like the Eleusinia, an almost complete secrecy had been maintained as to the ceremonies and teaching of these mysteries. Yet we know the names of the gods; and from an examination of the various forms under which we find them, Lenormant has been able to discover what he calls a *Cabeiric group*. They are four in number, thus differing essentially from the Phoenician Kabirim, who, as their Semitic name shows, are also "great gods" (Preller, *Gr. Myth.* i. 696, note 1), but are eight in number, representing the planets and the universe formed from their union (Sanchoniathon, ed. Orelli, p. 38; Xenocr. *ap.* Clem. Alex. *Protr.* p. 58). The names of the Samothracian Cabeiri, as revealed by Mnaseas of Patara and Dionysodorus, two historians of the Alexandrine age, are Axieros (= Demeter), Axiokersa (= Persephone), Axiokersos (= Hades), Casmilos (= Hermes). See the Scholiast on Apoll. Rhod. i. 917. Sometimes the two goddesses blend in one, viz. Earth (Varro, *L. L.* v. 58; Orelli, *Inscr.* 1503); sometimes as Aphrodite and Venus (cf. the important triform statue in D. and S. i. 761); but to most of the Romans they represent Juno and Minerva (Varro, *ap.* Augustin. *de Civ. Dei*, vii. 18; Serv. on *Aen.* iii. 12). Axiokersos appears further as Zeus, Uranus, Jupiter, Apollo, Dionysus-Liber; and Casmilos as Mercurius or Eros (see the passages cited above). The group is a primal mother goddess, issue of whom are two divinities, a male and a female, from whom again springs a fourth, Casmilos, the orderer of the universe. For a full discussion of the varied evidence on which this grouping is made, the reader is referred to Lenormant in D. and S. i. 757 foll., and *Dict. of Gr. & Rom. Biogr. & Myth.*, s. v. *Cabeiri*. It is our business here to see what were the ceremonies and teaching of these mysteries.

Herodotus (*l. c.*) is the first historian who mentions them. Though known while Athens was flourishing (Aristoph. *Pax*, 277), yet it was not till Alexandrine times that they really became famous. During this period Samothrace was a sort of sacred island (Preller, *Gr. Myth.* i. 700); and it was so, too, under the Roman dominion, for the idea was prevalent that the Penates (Serv. on *Aen.* ii. 325, iii. 12, viii. 619) were identical with the gods of Samothrace. Legend told how that Dardanus, Eetion or Iasion, and Harmonia, wife of Cadmus, were children of Electra and Zeus; that Iasion was given the mysteries by Zeus, married Cybele, and begat Corybas; and after Iasion was received among the gods, Dardanus, Cybele, and Corybas brought the mysteries to Asia (Diod. v. 47–49). The legends vary in details, but almost all agree in making Dardanus and Iasion sons of Zeus and Electra, and connecting the Samothracian mysteries with them (Schol. on Apoll. Rhod. i. 917; Serv. on *Aen.* iii. 168). It is to be remarked in passing that, while the legends brought the mysteries from Samothrace to Asia, there can be hardly any doubt that the passage was the other way (cf. Strabo, x. p. 472); for the whole tenor of the worship is Asiatic. We have many inscriptions of Romans who were initiated (*C. I. L.* iii. 713–721), and we hear besides of other Romans of high position who were initiated, — Marcellus (Plut. *Marc.* 30), Voconius (Plut. *Lucull.* 13), and probably Cicero (*Nat. Deor.* i. 42, 119). Throughout the Roman period the Cabeiric mysteries were held in high estimation, second only to the Eleusinian (Aristid. *Panath.* 308, ed. Dindorf), and they were still in existence in the time of Libanius (*pro Aristoph.* 225 B, ed. Morell).

From the earliest times the Pelasgi are said to have sacrificed a tenth of their produce to the Cabeiri in order to be preserved from famine (Dion. Hal. i. 23). The chief priest was probably the *ἱεροφάντης* mentioned by Galen (vol. iii. 576, ed. Kühn); and the purifying priest *κόης* or *κοίης* (see Hesych. *s. v.* *κοίης*: cf. *κεῖα*). The *βασιλεὺς* of the inscriptions was the highest eponymous magistrate of Samothrace. As in all mysteries, the votary must be purified in body and mind before initiation: and thus we have some evidence of auricular confession (Plut. *Apophth. Lac.* pp. 217 D, 229 D). But, as far as we know, there was not any special preparatory intellectual training required. Women (Plut. *Alex.* 2) and children (Donat. on Ter. *Phorm.* i. 1, 15) appear to have been admitted as well as men. Of the religious ceremonies themselves we may say we know nothing. They consisted (and we readily believe it) of *δρώμενα καὶ λεγόμενα* (Galen, *l. c.*). We hear of dances by the *pii Samothraces* (Stat. *Achill.* ii. 159), and the priests who executed these dances were called Saoi (according to Lobeck's emendation of *suos* in Serv. on *Aen.* ii. 325: see *Aglaoph.* 1292) by a title belonging to Hermes of the Cabeiric group or his son (Nicand. *Ther.* 472, and Schol.). The Romans who traced their Penates to Samothrace referred their Salii to these Saoi (Serv. *l. c.*). There were two classes of votaries—the *μύσται* and the *μύσται εὐσεβεῖς*, *mystae pii*—the latter being apparently those initiated for the first time. In the Samothracian mysteries *sacra accipere* (*παραλαμβάνειν τὰ μυστήρια*), which is the regular phrase for primary initiation, seems to be applied to the higher grades. But the whole matter is quite obscure and unsettled. See Hirschfeld in Conze, *Untersuchungen auf Samothrake*, pp. 37–39.

The Scholiast on Apollonius Rhodius (*l. c.*) tells us that the initiated wore a purple band (*ταινία*) round their waist (this reminds us of the Brahminical thread); that Agamemnon quelled a mutiny of the Greeks by wearing one; and that Ulysses, who wore a fillet for the band (*τῷ κρηδέμνῳ ἀντὶ ταινίας*), was miraculously saved in shipwreck. Preservation in times of peril, and especially in perils on the sea (Schol. on Aristoph. *Pax*, 277; Diod. Sic. iv. 43), was the chief service that the Cabeiri were supposed to render to those who called on them by name, and none knew their names except the initiated (Serv. on *Aen.* iii. 12; Val. Fl. ii. 431: cf. Paus. ix. 25, 5–7; Diod. Sic. v. 47). It was the electric fires of the Cabeiri that, according to the legend, lighted on the heads of the Dioscuri during the Argonautic voyage. Diodorus further says, in the course of an important discussion on the Cabeiri (v. 47–49), that those who were initiated became more pious, more righteous, and in every respect better than they were before. On the basis of this Lenormant thinks it probable that the doctrine of rewards and punishments in a future life was inculcated, though with Lobeck (*Aglaoph.* 1288) we may well suppose that no more is necessarily implied than the impulse to virtue which is always united with religious emotion excited by impressive and gracious ceremonies (cf. Apoll. Rhod. i. 917: *δαέντες ἀρρήτους ἀγανῇσι τελεσφορίῃσι θέμιστας*).

The initiations at Samothrace took place at any time from May to September (see inscriptions), in this differing from the Eleusinian and more resembling the Orphic mysteries. There appears, however, to have been a specially great ceremony at the commencement of August which Voconius, when proceeding against Mithridates, attended (Plut. *Lucull.* 13).

From the manner in which Cicero speaks of the Samothracian mysteries (*Nat. Deor.* i. 42, 119) it is probable that he was initiated. He says of their ceremonies, "quibus explicatis ad rationemque revocatis, rerum magis natura cognoscitur quam deorum." And the Cabeiri themselves do appear to be symbols of the creation of the world. From the primeval mother emanate or differentiate themselves two elements, matter (earth) and force (especially fire, celestial and terrestrial). Indeed the name Cabeiri appears to mean "the Burners," from *καίειν* (see Welcker, *Die Aeschyl. Trilogie*, pp. 161, 211), and by the action of the former on the latter the ordered world is generated. The etymological identity of the Pelasgian with the Phoenician Cabeiri is doubted by Lenormant; the name of the latter is from a Semitic root which in Arabic appears as *kebir*, "great:" cf. Wad-el-Kebir = Guadalquivir, Tel-el-Kebir. Many hold that all the ceremonies of the Cabeiri, and those of the other mysteries, were pure inventions of the priests, nothing more than mere stories about gods. But here is not the place to discuss this, the great question of the mysteries —were they illusion or symbolism? The reader is referred to MYSTERIA.

For information on the Cabeiric mysteries, see Lobeck, *Aglaoph.* pp. 1202–1295; Schömann, *Griech. Alterth.* ii. 403–407; Preller, *Gr. Mythol.* i. 695–709; Welcker, *Gr. Götterlehre*, i. 328–333, iii. 173–189; and above all the article by Lenormant in Daremberg and Saglio, i. 757–774. [L. C. P.]

CAC'CABUS, less correctly CACABUS, a cooking-pot. The statement of Varro, *L. L.* v. 127, "vas ubi coquebant cibum, ab eo caccabum appellarunt," may be accepted in proof of the meaning of the word, however absurd as an etymology. The Greek forms *κακκάβη* and *κάκκαβος* both occur in the Comic Fragments, and the former is as old as Aristophanes (see Liddell and Scott's *Lexicon*, and compare Phrynichus, p. 427, Lobeck; p. 496, Rutherford).

The different processes of boiling and frying are not always clearly distinguished in the ancient kitchen (cf. SARTAGO; Mayor on Juv. x. 64; Mommsen-Marquardt, vii. 636). It seems certain, however, that the *caccabus* was used for boiling meat, vegetables, &c.; and that it was placed immediately upon the fire, or upon a trivet (*tripus*) standing over it. It is thus distinguished from the AENUM, which was suspended over the fire (Serv. on *Aen.* i. 213; Paul. *Dig.* 33, 7, 18, § 3); and from the AUTHEPSA, which was probably not used for cooking at all. The material varied. Athenaeus, in an enumeration of *σκεύη μαγειρικά*, mentions the *κακκάβη* as equivalent to the *χύτρα*, i.e. earthen cooking-pot or pipkin (iv. 169 c); and so usually in Latin (*fictilis*, Marquardt, *l. c.*; Colum. *R. R.* xii. 41). But *caccabi* were also sometimes of metal; *stanneus*, doubtless, as in modern times, of tinned iron or block tin, Colum. *R. R.* xii. 42, § 1; *aeneus*, ib. xii. 48, § 1; *argenteus*, Ulpian in *Dig.* 34, 2, 19, § 12. [W. W.]

KAKEGOR'IAS DIKE' (*κακηγορίας δίκη*) was an action for abusive language in the Attic courts. This action is likewise called *κακηγορίου δίκη* (Dem. *c. Mid.* p. 544, § 93), *λοιδορίας δίκη* (*διώκων λοιδορίας*, Aristoph. *Vesp.* 1207), and *κακολογίας δίκη*. This action could be brought against an individual who applied to another certain abusive epithets, such as *ἀνδροφόνος*, *πατραλοίας*, &c., which were included under the general name of *ἀπόρρητα*. [APORRHETA.] It was no justification that these words were spoken in anger. (Lys. *c. Theomn.* § 30.) The truth of the charge might be pleaded in justification (Dem. *c. Aristocr.* p. 635, § 50): but to taunt a citizen (*πολίτην ἢ πολιτίδα*) with *ἐργασία ἐν τῇ ἀγορᾷ*, or being a retail dealer, was to insult his or her poverty, and actionable in all cases (Dem. *c. Eubul.* p. 1308, §§ 30, 32). By a law of Solon it was also forbidden to speak evil of the dead; and if a person did so, he was liable to this action, which could be brought against him by the nearest relation of the deceased. (Dem. *c. Leptin.* p. 488, § 104; *c. Boeot.* p. 1022, § 49; Plut. *Sol.* c. 21.) If an individual abused any one who was engaged in any public office, the offender not only suffered the ordinary punishment, but incurred the loss of his rights as a citizen (*ἀτιμία*), since the state was considered to have been insulted. (Dem. *c. Mid.* p. 524, § 32.)

If the defendant was convicted, he had to pay a fine of 500 drachmas to the plaintiff. (Isocr. *c. Loch.* § 3; Lys. *c. Theomn.* § 12.) Plutarch, however, mentions that, according to one of Solon's laws, whoever spoke evil of a person in the temples, courts of justice, public offices, or in public festivals, had to pay five drachmas; but as Platner (*Process bei den Attikern*, vol. ii. p. 192) has observed, the law of Solon was probably changed, and the heavier fine of 500 drachmas substituted in the place of the smaller sum. Demosthenes, in his oration against Meidias (p. 543, § 89), speaks of a fine of 1000 drachmas; but this is probably to be explained by supposing that Demosthenes brought two actions *κακηγορίας*: one on his own account, and the other on account of the insults which Meidias had committed against his mother and sister. This action was probably brought before the thesmothetae (Dem. *c. Mid.* p. 544, § 93), to whom the related *ὕβρεως γραφὴ* belonged. The two speeches of Lysias against Theomnestus were spoken in an action of this kind. [W. S.] [W. W.]

KAKOLOG'IAS DIKE'. [KAKEGORIAS DIKÉ.]

KAKO'SIS (*κάκωσις*), in the language of the Attic law, does not signify every kind of ill-treatment, but

1. The ill-treatment of parents by their children (*κάκωσις γονέων*). 2. Of women by their husbands (*κάκωσις γυναικῶν*). 3. Of heiresses (*κάκωσις τῶν ἐπικλήρων*). 4. Of orphans and widows by their guardians or any other persons (*κάκωσις τῶν ὀρφανῶν καὶ χηρευουσῶν γυναικῶν*).

1. *Κάκωσις γονέων* was committed by those who struck or reviled their parents, or even were disobedient; by those who refused them the means of support when they were able to afford it, or did not bury them after their death and pay them proper honours. (Xen. *Mem.* ii. 2, § 13; Aristoph. *Av.* 757, 1356; Suidas, *s. v.* *Πελαργικὸς νόμος*.) The term *γονεῖς* included grandparents and great-grandparents if surviving (Isae. *Ciron.* § 32). It was no justification for children that their parents had treated them badly. If, however, they were illegitimate, or had not received a proper education from their parents, they could not be prosecuted for *κάκωσις*. (Meier, *Att. Process*, p. 288.)

2. *Κάκωσις γυναικῶν* was committed by husbands who were unfaithful to their wives or otherwise ill-treated them (Diog. Laërt. iv. 17; compare Plut. *Alcib.* 8), or denied their wives the marriage duties; for by a law of Solon the husband was bound to visit his wife three times every month, at least if she was an heiress. (Plut. *Sol.* 30; *Erotic.* 23.) In the comedy of Cratinus, called the "Wine Flask" (*Πυτίνη*), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her and devoted all his attention to the wine-flask. (Schol. *ad* Aristoph. *Equit.* 399.)

3. *Κάκωσις τῶν ἐπικλήρων* was committed by the nearest relatives of poor heiresses, who neither married them themselves, nor gave them a dowry in order to marry them to persons of their own rank in life (Lex *ap.* Dem. *c. Macart.* p. 1076, § 75; Harpocr. *s. vv.* *ἐπίδικος*, *θῆτες*: Suid., Phot. *s. v.* *θητεύς*); or, if they married them themselves, did not perform the marriage duties. (Plut. *Sol.* 20; Télfy, *Corp. Jur. Att.* No. 1420.)

4. *Κάκωσις τῶν ὀρφανῶν καὶ χηρευουσῶν γυναικῶν* was committed by those who injured in any way either orphans or widows, both of whom were considered to be in an especial manner under the protection of the chief archon. (Dem. *c. Macart.* l. c.; *ὁ ἄρχων, ὅστις ἐπεμελεῖτο τῶν χηρῶν καὶ τῶν ὀρφανῶν*, Ulpian. *ad* Dem. *c. Timocr.*) The speech of Isaeus on the Inheritance of Hagnias is a defence against an *εἰσαγγελία κακώσεως* of this kind.

All these cases of *κάκωσις* belonged to the jurisdiction of the chief archon in the case of citizens, or to the polemarch in the case of metoeki. (Meier, *Att. Process*, p. 269; Perrot, *Essai sur le Droit Public*, p. 264.) If a person wronged in any way orphans, heiresses, or widows, the archon could inflict a fine upon them himself; or, if he considered the person deserving of greater punishment, could bring him before the heliaea. (Lex *ap.* Dem. *c. Macart.* l. c.) Any private individual could also accuse parties guilty of *κάκωσις* by means of laying an information (*εἰσαγγελία*) before the chief archon, though sometimes the accuser proceeded by means of a regular indictment (*γραφή*), with an *ἀνάκρισις* before the archon. (Dem. *c. Pantaen.* p. 980, § 46.) Those who accused persons guilty of *κάκωσις* incurred no danger, as was usually the case, if the defendant was acquitted, and they did not obtain the fifth part of the votes of the dicasts. (Harpocr. *s. v.* *Εἰσαγγελία*: Dem. *c. Pantaen.* l. c.; Isae. *Pyrrh.* §§ 46, 47.)

The punishment does not appear to have been fixed for the different cases of *κάκωσις*, but it was generally severe (*αἱ ἔσχαται τιμωρίαι*, Isae. *l. c.*, speaking of the case of *ἐπίκληροι*). Those found guilty of *κάκωσις γονέων* suffered atimia, but were allowed to retain their property (*οὗτοι ἄτιμοι ἦσαν τὰ σώματα, τὰ δὲ χρήματα εἶχον*, Andoc. *de Myst.* § 74; Aeschin. *c. Timarch.* § 28; Xen. *Mem.* l. c.). We reject without hesitation the statement of Meursius (*Them. Att.* i. 2), that if the *κάκωσις* consisted in beating their parents, the hands of the offenders might even be cut off. Mutilations of every kind were an abhorrence to the more civilized Greeks, especially the Athenians. [W. S.] [W. W.]

KAKOTECHNION DIKE' (*κακοτεχνιῶν δίκη*) corresponds in some degree with an action for subornation of perjury. It might be instituted against a party to a previous suit, whose witnesses had already been convicted of falsehood in an action *ψευδομαρτυριῶν*. (Dem. *c. Everg.* p. 1139, § 1; *c. Timoth.* p. 1201, § 56; Harpocrat., Suid., Phot., *s. v.*; Bekk. *Anecd.* p. 268, 24). It has also been surmised that this action lay against the party whose summoners (*κλητῆρες*) had been convicted in a *γραφὴ ψευδοκλητείας* (Meier, *Att. Process*, p. 385); and if Plato's authority with respect to the terms of Attic law can be considered conclusive, other cases of conspiracy and contrivance may have borne this title. (Plat. *Leg.* xi. p. 936 D.) With respect to the court into which these causes were brought, and the advantages obtained by the successful party, we have no information. (Meier, *Att. Proc.* pp. 45, 386.) [J. S. M.] [W. W.]

CADA'VER. [Funus.]

CADISCUS (*καδίσκος*). [Psephus.]

CADUCA'RIAE LEGES, CADU'CUM. [Bona Caduca.]

CADU'CEUS (*κηρύκειον*) was the staff or mace carried by Greek heralds and ambassadors in time of war. [Praeco.] (Pollux, viii. 138; Thuc. i. 53; Herod. ix. 100.) This name is also given to the staff with which Hermes or Mercury is usually represented. The caduceus was originally only an olive branch with garlands (*στέμματα*), which were afterwards formed into snakes. (Müller, *Archäol. der Kunst*, p. 504.) Later mythologists invented tales about these snakes. Hyginus (*Astron.* ii. 7)

Hermes bearing the Caduceus. (*Museo Borbonico*, vol. vi. pl. 2.)

tells us that Mercury once found two snakes fighting, and separated them with his wand; from which circumstance they were used as an emblem of peace. (Macrob. *Sat.* i. 19; Plin. *H. N.* xxix. § 54.)

From caduceus was formed the word *caduceator*, which signified a person sent to treat for peace (Liv. xxxii. 32; Nep. *Hannib.* 11; Amm. Marc. xx. 7; Gell. x. 27). The persons of the *caduceatores* were considered sacred (Cato, *ap.* Fest. *s. v.*; Cic. *de Orat.* i. 46, 202). The caduceus was not used by the Romans. They used instead *verbenae* and *sagmina*, which were carried by the Fetiales (Dig. 1, tit. 8, s. 8). [Fetiales.] [W. S.] [W. M. L.]

CADURCUM, a kind of linen, which took its name from the tribe which produced it, the Cadurci, who inhabited the district now called le Quercy in Guienne (Strabo, iv. p. 191; *nivei cadurci*, Juv. vii. 221). It was especially esteemed for bedding (Plin. *H. N.* xix. § 13; Juv. vi. 537), and also used for garments (Plin. *H. N.* xix. § 8), bandages (Sulpicia *ap. Schol.* Juv. *l. c.*), tents (Plin. *l. c.*; Juv. vii. 221, *Schol.*) [J. H. F.]

CADUS (*κάδος*), a large vessel usually of earthenware; indeed the Ionians used the word to denote any earthenware jar. (Clitarchus *ap.* Athen. xi. 473 b). It was most frequently used, like the *amphora*, to keep wine in (Archilochus *ap.* Athen. xi. 483 d) after it had been drawn from the *dolium*, and especially wine which was conveyed across the sea, such as Chian. (Herod. iii. 20; Athen. xi. 473 b; Hor. *Od.* iii. 19, 5; Verg. *Aen.* i. 195; Plin. *H. N.* xiv. §§ 96, 97, "vini Falerni amphoras, Chii cados distribuit," xxxvi. § 59.) Other kinds of produce stored in *cadi* were honey (Mart. i. 55, 10), oil (*id.* i. 43, 9; Plin. *H. N.* xv. § 33), figs (*ib.* 82), beans (*id.* xviii. § 307), and salt fish (*ib.* 308), and sometimes plants were grown in them (*id.* xxvii. § 14, xxv. § 160).

Its use connects it with the *amphora*, and in early Attic an *ἀμφορεὺς* was called *κάδος* (Pollux, x. 71; cf. Aristoph. *Av.* 1032, Schol.: *κάδους ἀμφορικούς*). It may be concluded then that it resembled the *amphora* in shape: its lower part, however, was ovoid, for in Aristoph. *Pax* 1258 (cf. Schol.) the helmets are to be turned into *κάδοι* by the addition of handles. Plato (*Rep.* x. 616 D) speaks of *οἱ κάδοι οἱ εἰς ἀλλήλους ἁρμόττοντες*: Pliny (*H. N.* xxvii. § 14), of the *turbines cadorum.* Again *κάδος* is used to denote the well bucket (*γαυλός, ὑπαντλεῖον*) in Aristoph. *Eccl.* 1002; Eurip. *Cycl.* 33, Schol.; Hesych. and Suid. *s. v.* *γαυλός*; Athen. iii. 125 a, xi. 590 f: we may therefore identify its shape, when thus used, with that of the *situla* in the accompanying woodcut from Bottari, *Scult. e Pitt. sagre di Roma*, pl. xxiii. (*ap.* D. and S.) But this shape is obviously not adapted to its ordinary use of a vessel for storing wine, for which purpose it was closed by a lid (Archilochus, *l. c.*) or by cork (Plin. *H. N.* xvi. § 34), and must have had a narrower mouth.

Cadus, well-bucket. (Bottari.)

Κάδος is used in Aristoph. *Av.* 1030, 1053, in place of the more usual *καδίσκος*, to denote the urn used in ballots [Psephus].

The word is used (Priscian, *de Pond. et Mens.* 84) as an equivalent of the Attic *amphora* or *μετρητής*, a measure containing twelve *χόες* or about nine gallons English. From this and its various uses we may conclude that it was a vessel of large dimensions; indeed, in a comic writer (*ap.* Athen. xi. 781 f) we read of *κάδοι* larger than a man. Hence it is only in passages of comic exaggeration that it is spoken of as a drinking vessel. (*Id.* x. 431 f; xi. 472, 473, 503, b, c).

Cadi were made not only of earthenware, but also of onyx (Plin. *H. N.* xxxvi. § 59), of ophites (*ib.* 158), and of gold (Athen. xi. 590 f). [J. H. F.]

CAELATU'RA (*τορευτική*). The words *τορευτική* and *caelatura*, derived respectively from *τορεὺς* and *caelum* (lit. "graver's tool"), seem, on the whole, to be synonymous in their import, and signify in a general sense the arts employed in the production of ornamental works in metal, whether in relief or in intaglio. These terms therefore include such processes as repoussé, chasing, engraving, and other operations employed by the ancient artist, whether in jewellers' and goldsmiths' work, or in the application of the non-precious metals (especially bronze) to the purposes of ornamenting different objects, such as armour, mirrors, &c. The terms are strictly and commonly confined to works in *metal*, though we occasionally find the expression *caelatura* used, by analogy, of work in stone and in other non-metallic substances. One important branch of metal-work, that of statuary, is not, however, comprehended under *τορευτική* and *caelatura* [Statuaria Ars], though it may be observed that many of the bronze statuettes which have come down to us from antiquity are really only the detached ornaments of different household utensils, such as mirrors and candelabra. (O. Müller, *Handbuch der Archäol.* (ed. Welcker), §§ 85, 120, 173, 311, 312; Saglio, art. *Caelatura*, note 2, in Daremberg and Saglio, *Dict. des Ant.*; Marquardt, *Römische Privatalterthümer* (Marquardt and Mommsen, 1882, vol. vii., p. 664).)

The ancient literary sources for the history of ornamental metal work are somewhat scanty. The chief passage recording the names of Toreutic artists is Pliny, *H. N.* xxxiii. §§ 154–157, in which reference is made to various toreuticians eminent especially for working in silver. This list includes names which appear to range in date from about B.C. 420 or 400 to the time of Nero; the most famous artist mentioned being Mentor, who lived not later than B.C. 356. Other artists of whom we possess some record in the authors belong to the age of Alexander the Great, to the period of the Diadochi, to the time of Pompey, and to the earlier days of the Roman empire. A complete list of the passages in the ancient writers which refer to toreutic artists will be ound in Overbeck's *Antiken Schriftquellen*, under e head "Toreutik" (pp. 417–425); compare o Brunn, *Gesch. der griech. Künstler*, ii. p. 397–412 ("Die Toreuten"). It is, however, from the metallic objects actually extant in the jewel rooms and bronze rooms of great museums that the history of the toreutic art can best be learnt, and the present article will therefore treat principally of some of the more important classes of these monuments, so far as this is possible within moderate limits.

The earliest specimens of ornamental metalwork discovered on Greek soil are those found by Dr. Schliemann at Hissarlik in the Troad, consisting of a large number of objects in gold, such as bracelets, ear-rings, and diadems. Among the specimens of which a detailed description will be found in Schliemann's *Ilios* (London, 1880) may be mentioned the following:—Nos. 873, 874, *bracelets*, consisting of a thick gold plate piped with wire, and adorned with spiral ornaments of gold wire soldered on the plate (cp. Nos. 690-693); No. 685, *diadem*, composed principally of hexagonal leaves of gold; Nos. 834, 835, *hairpins*; No. 834, consisting of a quadrangular plate ornamented with spirals of gold wires soldered on, like the bracelets just mentioned; gold *disks* (p. 500), of which No. 903 represents a flower of star form, in repoussé work (see also *Ilios*, p. 42, No. 14, and p. 453 ff.). The appellation "Treasure of Priam" given by the discoverer to a large class of these objects is misleading, inasmuch as the art described in the Homeric poems is quite certainly of a more advanced character. The Hissarlik metal work is, in fact, the product of a half-barbarous people, and its simple and unambitious character may be discerned in the preference for such ornamentation as the spiral (a form which is naturally suggested by the curling of gold wire), and in the infrequent representations of animal forms. An early though more advanced style is represented by the objects discovered by Schliemann at Mycenae (Schliemann's *Mycenae*, London, 1878: cf. Newton, *Essays on Art*, p. 246 ff.; Prof. P. Gardner, *Journal of Hellenic Studies*, i. p. 94 ff. (1880); Milchhoefer, *Die Anfänge der Kunst in Griechenland* (1883), pp. 5-38), which may be approximately assigned to a date not later than B.C. 1000. The Mycenaean objects are, on the whole, the work of rude local artists, scarcely touched as yet by Oriental influence: the specimens in gold, which are extremely numerous, consist principally of plaques in repoussé work, bowls, diadems, and sepulchral masks rudely imitating the human countenance. Round bosses and other circular patterns, and especially combinations of spirals, are the basis of most of the patterns, but floral forms and imitations of insects and of marine life are also employed. Among the most instructive objects may be mentioned the following: (1) a *mould of granite*, showing fourteen different types of ear-rings and other ornaments, all of which were probably cast in gold and silver (Schliemann's *Mycenae*, p. 108; cf. Nos. 162, 163). (2) Gold *diadems* found on the heads of corpses, especially the crown, No. 281 (2 ft. 1 in. long), which is covered with shield-like ornaments in repoussé, and has attached to it thirty-six leaves ornamented in a like manner. The diadems are generally piped with copper wire to give them greater solidity (cp. Nos. 282–284). (3) Lozenge-shaped *buttons* of wood plated with gold, ornamented with intaglio and repoussé work (cp. Nos. 377–386): among these, Nos. 414–420 represent stars, flowers or crosses, and No. 421 has a spiral ornamentation. (4) Perforated ornaments of gold with engravings in intaglio: Nos. 253–255 represent a man struggling with a lion, and two warriors contending with a lion. (5) Gold cylinder adorned with rock crystal (No. 451); a dragon of gold with scales of rock crystal (No. 452). (6) Scabbards of swords, representing a lion-hunt, winged monsters, fish and plants. The manes of the lions are of red gold; their bodies of a paler tint in the same metal. A distinction of colour is also observed between the sea and the fish swimming in it, and further variety is obtained by the use of enamel in the background. (See Koumanoudes in the ’Αθήναιον, 1880, p. 162, and 1881, p. 309; Köhler in *Mittheil. d. D. Inst. in Athen*, 1882, p. 241.) For a description of the archaic bronze and gold objects found at Spata in Attica, the reader must be referred to the *Bulletin de Corr. hell.* ii. p. 185, and reff. there.

The next important epoch in the history of our subject has been denominated the Graeco-Phoenician, an epoch when the rude genius of the Greeks set itself to learn in the comparatively advanced artistic school of the Phoenicians. This is the period of art described, though with some poetic embellishment, in the Homeric poems, in which compositions the higher works of metallic art are spoken of as coming from a foreign and especially a Phoenician source (cf. Brunn, *Die Kunst bei Homer*; Milchhoefer, *Die Anfänge d. Kunst in Griechenl.*, pp. 158–156: Riedenauer, *Handwerk in homer. Zeiten*; and especially Helbig, *Das Homerische Epos*, 1884). Thus it is from the king of Cyprus that Agamemnon receives the present of his cuirass (*Il.* xi. 19), and from Egypt that Menelaus brings back tripods and the basket of Helen (*Od.* iv. 126 ff.). The crater destined by Menelaus for Telemachus comes to him from the king of the Sidonians (*Od.* iv. 616; *Il.* xxiii. 741), and it is the Sidonians who made the silver crater given by Achilles as a prize at the Funeral Games. Even the elaborate Homeric description of the Shield of Achilles may be shown to have had a tangible basis in works of Phoenician art (see the restoration in A. S. Murray's *History of Greek Sculpture*, 1880, chap. iii.). This Phoenician art, as revealed to us by the archaeological discoveries of recent years, was not in itself original, but was formed by a curious blending of the art of the Egyptians and the Assyrians. It may best be studied in the numerous metal bowls that have been found in several localities, especially Cyprus and Italy, which were in early days in relations with the Phoenician traders (cp. Clermont-Ganneau, *L'Imagerie Phénicienne*, 1880; Cesnola, *Cyprus*, London, 1877; Calonna-Ceccaldi, *Monuments ant. de Chypre*, 1882; De Longpérier, *Musée Napoléon III.*, &c.). The epoch generally assigned for the execution of these bowls is the 7th or 8th century B.C., though the manufacture of them according to traditional patterns may have continued to a later period. In the artistic designs of these vessels it is especially important to note the arrangement of the subjects in concentric zones, and the frequent mingling of Assyrian and Egyptian elements. Thus, in the silver patera found at Amathus in Cyprus

(Calonna-Ceccaldi, *Rev. Archéol.*, 1876, i. p. 26; Cesnola, *Cyprus*, pl. xix.), the innermost zone of ornament is formed by winged sphinxes wearing the uraeus; in the next zone occurs another Egyptian object, the scarabaeus holding the solar disk, by the side of which we find two figures wearing an Assyrian costume, and having between them the familiar sacred tree of the Assyrian sculptures: the outer zone is filled with scenes of war, in which various costumes and arms may be distinguished. Again, in one zone of a remarkable bowl from Palestrina (Clermont-Ganneau, *L'Imag. Phénic.*, pl. i.) we have a succession of hunting scenes of thoroughly Assyrian style, while as the central ornament of the vessel there appear figures of a distinctly Egyptian type. Another feature characteristic of the art described by Homer is the application of metallic plaques to adorn the surfaces of various objects, such as the scabbards of swords and the wood of chariots (*ἐμπαιστικὴ τέχνη*, Athen. xii. p. 488 b; Eust. ad *Il.* xi. 773: cf. *Od.* viii. 404, xi. 610; Paus. i. 20, 1, iii. 18, 7, ix. 12, 4, &c.). Good extant specimens of plaques employed in this class of work may be found in the archaic bronze plates in the Glyptothek at Munich, which were found near Perugia, and probably served to ornament the wood of a chariot (H. Brunn, *Beschreib. der Glyptothek*, No. 32 f.; Micali, *Monum. di ant. pop. Ital.*, 1833, pl. xxviii., xxxi.): the British Museum also possesses from the same find the fragment of an archaic work in relief, formed of very thin plates of silver hammered out and joined together. The subject represents two men on horseback, riding side by side at full speed, and underneath the horses a third figure, prostrate. The figures are in high relief, and the details of the hair, the borders of the drapery, &c., are of thin plates of gold laid on the silver. (Millingen, *Anc. uned. Mon.* ii., pl. 14; Brit. Mus. *Guide to the Bronze Room.* For various specimens of early metal-work found at Olympia, see Furtwängler, *Die Bronzefunde aus Olympia*, Berlin, 1880.)

As specimens of *early jewellery* we may refer to the objects of gold (now in the Louvre and British Museum) found by Salzmann at Camirus in Rhodes, which may be regarded as products of Phoenician art in the 8th century B.C. (Salzmann, *Nécropole de Camiros; Rev. Archéol.* N. S. t. iv. 1861, p. 466 f.: cf. 1862, t. vi. p. 264, and t. vii. (1863).) As an example of these we may take the pale gold plaques which belonged to a necklace and which are embossed with the alternate designs of a Centaur of primitive type with Egyptian head-dress, seizing a hind, and a winged female figure, the goddess Artemis or Anaitis, holding a lion and a panther. Another plate is ornamented with a recumbent lion of Assyrian style: the mane is formed by massing together minute granules of gold, while the ears are marked out by lines formed of similar granules. On the same plaque is the head of an eagle, adorned, like the lion, with granulated designs. From the plaque itself are suspended pomegranates, chainlets, and heads of Egyptian style. Of early jewellery found in Greece Proper we may notice the gold studs or ear-rings found in 1860 at Megara (Lenormant, *Les premières Civilisations*, ii. p. 384): they are decorated in repoussé, with human heads of Egyptian character, facing. Another interesting specimen of archaic jewellery, stated to have been found at Athens and belonging probably to the first half of the 6th century B.C., is an ear-ring published in the *Journal of Hellenic Studies* (vol. ii. p. 324), on the oblong pendant of which is represented side by side a pair of female figures, beaten out in relief. The arms of both these figures are straightened closely to their sides, and their dress and attitude, though very archaic, present a resemblance to the Canephori of the Erechtheum. Various other archaic gold ornaments from Corinth, Athens, Camirus, Melos, Delos, Etruria, Lydia, &c., will be found described in the *Arch. Zeitung*, Jahrg. xlii. pp. 90-94, 99-114; and in *Bull. de Corr. hell.*, iii. p. 129 f. We may note in these a gradual development from simple geometric ornamentation to groups of men and animals, and mythological subjects.

Our knowledge of the jewellery of the fine period of Greek art is mainly derived from two great sources—the excavations in the tombs of Southern Russia and in those of Etruria. Of the Etruscan jewellery, the Louvre, the Vatican, and the British Museum possess numerous and choice examples. The objects from Southern Russia, which belong to a great extent to the 4th century B.C., are now in the Museum of the Hermitage, and may be studied in the elaborate *Comptes rendus de la Commission archéologique de St. Pétersbourg*, and in the *Antiquités du Bosphore Cimmérien.* The great European jewel-collections contain specimens, unrivalled in workmanship, of all the various objects of personal adornment—necklaces with pendants, ear-rings, bracelets, brooches, &c. The main effect in this jewellery is due to "the combination of small figures and flowers in repoussé work, with fine filigree, granulated patterns and vitreous inlays." Precious stones, such as garnets, are sometimes introduced, but in the best age the jeweller made comparatively little use of them. The ancient jeweller is distinguished by his delicate manipulation of the gold, his mastery of modelling, his extraordinary minuteness of work, and by the technical skill which produced the granulation (*i.e.* the soldering of extremely minute particles of gold on a leaf of gold), which is especially noticeable in the jewellery of Etruria. (Cp. Castellani, *Communication faite à l'Académie des Inscr. et Belles-Lettres*, 20 Décembre, 1860; *Dell' oreficeria italiana*, Roma, 1872; B. Bucher, *Geschichte der technischen Künste*, p. 139 ff.; Newton, *Essays on Art and Archaeology*, p. 373 ff.; Charles de Linas, *Les Origines de l'orfèvrerie cloisonnée* (1879).) The jewellery from Etruria, which in its earlier period betrays an Oriental influence, is in its later and finest stage so thoroughly Greek in character as to be a fair exponent of the capabilities of the Greek jewellers. For details as to the form, &c., of the various objects of personal ornament, the reader is referred to the separate articles in this Dictionary; but as furnishing a sample of the fertile invention and surpassing skill of the Greek workman, we may here refer to two classes of ear-rings of which the Hermitage has a rich collection, and of which there are good specimens in the Gold Ornament Room of the British Museum. The first class, which is the simpler and perhaps somewhat the earlier in date, consists of ear-rings formed of twisted wire and terminating at one end in the head of an animal, especially a lion. The second class consists of the specimens attached to the ear by a hook, which is covered by a round disk. The disk itself is generally adorned with some subject suitable for a medallion, such as a full face in relief, and beneath it are suspended one or more small figures. For these pendants Victories are often chosen, and an especial favourite is a tiny figure of Eros holding various objects, such as a scroll or a musical instrument. As exquisite specimens may be noticed a pair (*Compte rendu de la Comm. arch. St. Pétersb.*, 1870–71, pl. vi., figs. 11, 12; cf. *Compte rendu*, 1868, pl. i., figs. 1–3) composed of a rosette, from which hang three chains, the two outermost terminating in pendants: from the middle chain hangs a goose, inlaid about the feathers with granulated work. In the centre of the rosette is a garnet, from which radiate leaves in blue enamel, forming a star pattern. The minuteness of the work is especially noticeable in another ear-ring of this class (*Antiq. du Bosphore*, pl. xii. *a*, fig. 5 *a*), on which, below the disk, is a chariot with four horses, flanked by Victories. In the chariot are two figures, and below the group is an ornament from which are suspended vases and chains. (Cf. also *Gazette des Beaux-Arts*, 1863, pl. 162; *Bijoux du Musée Nap. III.*, No. 112.) The jewellery actually intended for ordinary wear must be distinguished from that made for sepulchral purposes and for use on some exceptional occasion. The fine ear-rings found in the Koul Oba (*Antiq. du Bosphore*, pl. xix.) and those from the Crimean tomb of the Priestess of Demeter (*Compte rendu*, St. Pétersb., 1865, pl. ii.) could never have been worn in the usual way, but must have been suspended from the head-dress on festal days. The latter consist of large medallions representing Thetis or a Nereid on a dolphin, carrying the armour of Achilles, and from them there hang pendants and chainlets. Most European museums—as the Louvre, Hermitage, Vatican, and British Museum—possess specimens of the remarkable class of jewellery made principally for the adornment of the corpse; namely, the gold crowns composed of extremely thin leaves of gold, imitating the foliage of different trees. (Cf. *Bijoux du Mus. Nap. III.*, p. 9 ff.; *Antiq. du Bosphore*, pl. iii.–v.; *Mus. Gregor.* i., pl. cxxvii. f.) A very fine specimen of jewellery not intended for wear is the votive gold crown found at Armento, and now at Munich. It is composed of branches of oak intertwined with garlands of flowers, while winged figures are placed amidst the foliage. (Arneth, *Monum. des Antik. Cabinets in Wien*, p. 41, pl. xiii.; Avellino, *Memorie dell' Academia Ercolanese*, i. 1872, p. 207 ff.; Gerhard, *Antike Bildwerke*, i. x.)

Another important branch of the toreutic art is constituted by the production of gold and silver vases, elaborately adorned—generally with reliefs in repoussé, or with ornaments separately made and soldered or riveted to the vessel [EMBLEMA, CRUSTA]. (Cf. Plin. *H. N.* xxxiii. § 139, &c.; Ovid, *Metam.* iii., v. 80; Juv. i. 76; Quintil. 11, 47.) With the increase of luxury under the successors of Alexander, this branch of art began to assume especial prominence (cf. Athenaeus, v. 29, 30; Plin. *H. N.* xxxiii. § 154, &c.); unfortunately the vases now extant do not enable us to judge very satisfactorily as to the merit of the Greek toreutae, inasmuch as they mostly belong to the Imperial age when artistic work of this class had either quite declined (Plin. *H. N.* xxxiii. § 157) or had been vitiated by the use of exaggerated relief and the employment of precious stones. (Cf. Marquardt and Mommsen, vol. vii. p. 686; Linas, *Orig. de l'orfév. cloisonnée*, 1877, t. i. c. iii. 3; Thédenat and Villefosse in *Gaz. Arch.* 1884 and 1885, "Les trésors de vaisselle d'argent trouvés en Gaule.") At the same period, vases by the great Greek masters were collected by the Romans (Plin. *H. N.* xxxiii. § 147; *ib.* 157; Juv. i. 76; Mart. viii. 6. 1, iv. 39, xiv. 93, &c.), and were doubtless copied with more or less fidelity by the Roman artists. (Cf. Plin. *H. N.* xxxiv. § 47; Michaelis, *Das Corsinische Silbergefäss*, p. 19.) Among the more important vessels in the precious metals now extant should be mentioned the following:—(1) The magnificent silver vase in the Hermitage Museum which was found in the tomb of a Scythian king at Nicopolis (*Compte rendu*, St. Pétersbourg, 1864, pl. i., ii., p. 11 ff.). It has the form of an amphora, and on its upper part are friezes of Scythians and animals, in high relief; leaves and flowers adorning the body of the vessel. The decoration is partly in repoussé, and partly consists in ornaments, like the lion-masks and the head of a winged horse, separately made and gilded and then soldered on. This vase has been assigned to the 4th century B.C. (2) Silver vase in the Antiquarium of Munich, ornamented externally with a circular frieze, in which are represented Trojan captives, in low relief. (Cf. Thiersch, *Abhandl. d. bair. Academie, Philol. Classe*, v. 1849, p. 111.) (3) The Corsini vase, on which see the Memoir by Michaelis, *Das Corsinische Silbergefäss*. (4) Specimens in the Berlin Museum from the silver Treasure found near Hildesheim in Hanover (Wieseler, *Der Hildesheimer Silberfund*, and reff. in *Gaz. Arch.* 1884, 266, 267), some of which go back to the time of Augustus or earlier. They have much executional merit, but present the Roman characteristics of exuberant ornament and exaggerated relief. (5) Specimens in the Bibliothèque Nationale from the Treasure discovered at Bernay in France: the vases are of varying merit and differ in date; one class being ornamented in very prominent repoussé, the other in lower relief with slight and delicate lines (Chabouillet, *Catal. gén. des Camées, etc., de la Bibliothèque Nationale* (1858), pp. 418–457; *Journal of Hellenic Studies*, vol. iii., p. 96 ff.; *Gaz. Arch.* 1884, 344). (6) The gold patera of Rennes, into which are inserted gold coins ranging from Hadrian to Geta. The bottom of the vase is adorned with a large medallion executed in repoussé, and bordered by a wreath of laurel leaves in low relief. (7) Silver vases found at Pompeii and now in the Museum at Naples (Quaranta, *Di quattordici vasi d' argento disotterrati in Pompei*). Silver goblet in the Museum at Naples, found at Herculaneum, on which is represented the Apotheosis of Homer (Millingen, *Anc. uned. Monum.* ii. pl. 13; Zahn, *Schönste Ornam. in Pompei*, iii. 28). This list may be concluded with a reference to the specimens in the celebrated silver treasure discovered at Rome in 1793, and now in the British

Museum. It consists of caskets, vases, trappings, and ornaments of silver, and was probably executed for the most part about the end of the 5th century A.D. The figures and ornaments on most of the objects are generally embossed and chased, and gilding is applied to the salient parts. The figures, as might be expected at so late a period, are coarsely executed and of clumsy proportions. (Visconti, *Opere Varie*, ed. Labus, Milan, 1827, i. p. 210; British Museum *Guide to the Blacas Collection*, 1867, pp. 24–27.)

To the examples of ornamental metal-work which have now been mentioned in this article, and which are principally in gold and silver, must be added certain specimens in bronze which are adorned (1) with engraved designs, (2) with figures in relief. A remarkable specimen of archaic Greek engraving is found on the bronze cuirass discovered in the bed of the Alpheios, and photographed in the *Bulletin de Corr. hell.*, 1883, p. 1, pll. i.–iii. Besides figures of animals, the design shows a group of six human figures. Engraved designs occur most frequently upon the circular metal disks used as mirrors by the ancients, the largest class of which comes from Etruria. Though on some of the Etruscan mirrors the drawings are of a masterly character, the greater number are executed loosely and without much regard to beauty of composition. (See Gerhard, *Etruskische Spiegel*, Berlin, 1841: cf. also the incised friezes of the Etruscan *Cistae*, Gerhard, *op. cit.* i. pp. 1–73; H. Brunn, *Annali d. Inst. Arch. Rom.* xxxiv. pp. 5-22, *ib.* xxxvi. pp. 356–76; Schöne, *ib.* xxxviii. p. 150 ff., and xl. pp. 413, 421; Brit. Mus. *Guide to the Bronze Room*, "Cistae.") Engravings on mirrors of purely Greek work are rare: amongst the most beautiful examples may be cited the mirror representing the Genius of the Cock Fights (Musée de Lyon), and the specimen with the hero Corinthus crowned by a female who personifies the Corinthian colony of Leucas. (Cf. A. Dumont, *Bulletin de Corresp. hellén.* i. (1877), pp. 108–115; *Monuments grecs de l'Assoc. des Études grecques*, 1873.)

The covers of the mirrors of box-like form —mostly found in Greece proper—offer favourable specimens of reliefs executed in bronze. Several of them belong to a good period of Greek art: their subjects, as a rule, are borrowed from the cycles of Aphrodite and of Dionysos. Fine examples of Greek repoussé work in bronze are also to be seen in the plaques with figures in relief which once served to ornament armour or other objects. Good specimens of these come from the finds at Dodona (Carapanos, *Dodone et ses ruines*, p. 33 ff.; cp. *ib.* p. 187 ff.), and among them may be especially mentioned the plaque in repoussé, which perhaps adorned a cuirass, representing the contest between Apollo and Heracles for the possession of the Delphic Tripod. This work has been assigned to the 4th century B.C.; the treatment of the figures being archaistic rather than genuinely archaic. (Carapanos,. pl. xvi.) Another remarkable plaque from Dodona which may be assigned to the same century adorned the cheek-piece of a helmet, and portrays in relief the combat of Pollux with Lynceus. (Carapanos, pl. xv.) Lastly, there must be mentioned the bronze plaques in the British Museum found near the river Siris, in Lucania. They formerly served as ornaments to mask the buckles of a cuirass, and consist of two groups in very high relief, the subject of each being a combat between a Greek warrior and an Amazon. They were probably executed by some artist of the school of Scopas, and are remarkable for their masterly composition and modelling as well as for the refined execution of their details. (See P. O. Brönsted, *The Bronzes of Siris*, published by the Dilettanti Society, 1836; cf. Brit. Mus. *Guide to the Bronze Room.*)

Authorities.—A comprehensive treatise on the ornamental metal work of the Greeks and Romans, based on a complete examination of the monumental and literary remains, is still a desideratum. At present, the details have to be gathered from a number of archaeological works, of which it would not be practicable to give an exhaustive list here; but references to the most important sources of information will be found in the text of this article. [W—K W—H.]

CAELIBA'TUS. [AES UXORIUM; LEX JULIA ET PAPIA POPPAEA.]

CAELUM. [CAELATURA.]

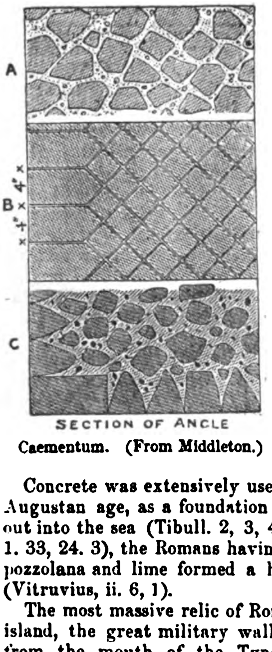
CAEMENTUM (more frequently in the plural, *Caementa;* Gk. λατύπη, σκύρος), rubble, or small undressed stones, used together with mortar to form the *caementiciae structurae* or concrete walls with which the remains of Roman buildings abound. Vitruvius, who tells us that this form of structure was not used by Greek architects, describes (ii. 8) two chief varieties,—the *opus reticulatum*, in general use in his day, the more handsome kind of work, but less durable, because it did not bind well together; and the ancient *opus incertum*, which was less sightly but more lasting, on account of the way in which the stones were bonded together. Schneider in his edition of Vitruvius, Rich, and others have taken this *opus incertum* to be the ancient Cyclopean masonry, which was formed by laying together large irregular masses of stone without mortar and filling up the interstices with small stone-chippings; but Vitruvius expressly says, "utraque (*i.e.* incertum et reticulatum) ex minutissimis sunt instruenda." A third method of wall-building which he mentions was a variation from the Greek ἔμπλεκτον, in which two parallel faces of dressed stone were erected, and the interval between them filled up with rubble. He also speaks of concrete walls lined with marble.

Mr. J. H. Middleton (*Ancient Rome in* 1885, pp. 28–33) has been led by an examination of the existing concrete structures of Rome to distinguish the following varieties:—

1. Unfaced concrete, generally used for foundations, but carried higher; for instance, in the substructures of Caligula's palace. The method of construction was to erect two lines of upright posts from ten to fifteen feet high, and to nail boards against them and pour the concrete in a liquid state into the bed thus constructed, and remove the framework when the concrete had set. The frame was then set on the top of the mass and the process repeated. The stones were usually of the size of a man's fist, and the mortar was composed of lime and the volcanic sand called pozzolana (*pulvis Puteolanus*, Vitruv. ii. 6). Its remarkable pro-

perties are the chief cause of the durability of Roman concrete.

2. Faced concrete walls, in which the core is always composed in the same way as the unfaced concrete; and we are thus led to the conclusion, which would not have been inferred from Vitruvius alone, that the *opus incertum* and *opus reticulatum* were only facings. (*a*) *Opus incertum*, in constructing which "irregularly shaped bits of tufa were cut smooth on one face, and roughly pointed behind; the whole face of the concrete wall was then studded with these stones, the points sticking into the wall, and the smooth surfaces appearing on the face. The pieces, square, triangular or polygonal, range from two to five inches across." This structure is found in Republican buildings, *e.g.* at the foot of the *Scala Caci*. (*b*) The *opus reticulatum* differs from the *incertum* in having the facing stones cut into squares and closely fitted together in a reticulate pattern. It is found in buildings erected from the reign of Augustus to that of Hadrian, as in the Mausoleum of Augustus, and (a later variety with brick-faced angles and bands of brick at intervals of two or three feet) in Hadrian's villa. (*c*) Concrete faced with burnt brick, the earliest dated examples of which are to be found in the *Rostra* and the Pantheon. This structure was largely used in many of the most substantial buildings of Rome, while solid walls of brick are not found. Vitruvius (ii. 8, 17) accounts for this by legal restrictions and a desire to economise space. (*d*) The so-called *opus mixtum*, a wall-facing of alternate courses of brick and small blocks of tufa, found in the circus of Maxentius (*circa* A.D. 310) and until the 6th century.



Caementum. (From Middleton.)

Concrete was extensively used at Baiae in the Augustan age, as a foundation for edifices built out into the sea (Tibull. 2, 3, 45; Hor. *Od.* iii. 1. 33, 24. 3), the Romans having discovered that pozzolana and lime formed a hydraulic cement (Vitruvius, ii. 6, 1).

The most massive relic of Roman times in this island, the great military wall which extended from the mouth of the Tyne to that of the Solway, is a structure of faced concrete, formed by erecting two faces of large stones and filling up the intervening space with alternate courses of rubble, one foot deep, and mortar, four inches deep. (*Archaeologia*, vol. xi. 1794, p. 64.)

Many of the great Roman achievements in building, especially in distant provinces, are to be attributed to this method of construction, which enabled them to raise, with comparatively unskilled hands and from materials which are accessible in most regions or easily imported, structures which were in a short time bonded together into solid homogeneous masses. [J. H. F.]

CAERI'TUM TAB'ULAE. [AERARII.]

CAESAR, a title of the Roman emperors, was originally a family name of the Julia gens; it was assumed by Octavianus as the adopted son of the great dictator, C. Julius Caesar, and was by him handed down to his adopted son Tiberius. It continued to be used by Caligula, Claudius, and Nero, as members either by adoption or female descent of Caesar's family; but though the family became extinct with Nero, succeeding emperors still retained the name as part of their titles, and it was the practice to prefix it to their own names, as, for instance, *Imperator Caesar Domitianus Augustus*. When Hadrian adopted Aelius Verus, he allowed the latter to take the title of Caesar (Spart. *Ael. Ver.* 1; Aur. Vict. *Caes.* 13, § 12); and from this time, though the title of *Augustus* continued to be confined to the reigning emperor, that of *Caesar* was also granted the second person in the state and the heir presumptive to the throne. (Eckhel, vol. viii. p. 367, &c.) [AUGUSTUS.] [W. S.]

CAESTUS (from *caedo*, not to be confounded with *cestus*, from Gr. κεστός), the thongs or bands of leather which were tied round the hands of boxers, in order to render their blows more powerful. These bands of leather were also frequently tied round the arm as high as the elbow, as is shown in the following statue of a boxer, the original of which is in the Louvre at Paris. (See Clarac, *Musée d. Sculpt. Ant. et Mod.* vol. iii. pl. 327, No. 2042.)

Statue of a Boxer with the Caestus. (From the Louvre.)

The caestus was used by boxers from the earliest times. The ordinary boxing-gloves were called in Greek ἱμάντες or ἱμάντες πυκτικοί. When Epeius and Euryalus in the *Iliad* (xxiii. 684) prepare themselves for boxing, they put on their hands thongs made of ox-hide (ἱμάντας ἐϋτμήτους βοὸς ἀγραύλοιο). (Cf. Theocr. xxii. 81; Apoll. Rhod. ii. 53.) But it should be recollected that the caestus in heroic times appears to have consisted merely of thongs of leather, and differed materially from the frightful weapons loaded with lead and iron which were used in later times. The different kinds of caestus were called by the Greeks in later times μειλίχαι, σπεῖραι βόειαι, σφαῖραι, and μύρμηκες: of which the μειλίχαι gave the softest blows, and the μύρμηκες the most severe. The μειλίχαι, which were the most ancient, are described by Pausanias (viii. 40, § 3) as made of raw ox-hide cut into thin pieces, and joined in an ancient manner; they were tied under the hollow or palm of the hand, leaving the fingers uncovered. The athletae in the palaestrae at Olympia used the *μειλίχαι* in practising for the public games (*ἱμάντων τῶν μαλακωτέρων*, Paus. vi. 23, § 3); but in the games themselves, they used those which gave the severest blows.

The caestus, used in later times in the public games, was, as has been already remarked, a most formidable weapon. It was frequently covered with knots and nails, and loaded with lead and iron; whence Virgil (*Aen.* v. 405), in speaking of it, says:

> "Ingentia septem
> Terga boum plumbo insuto ferroque rigebant."

(Cf. *Aen.* v. 69; *Georg.* iii. 20.) Statius (*Theb.* vi. 732) also speaks of *nigrantia plumbo tegmina cruda boum*. Such weapons, in the hands of a trained boxer, must have frequently occasioned death. The *σφαῖραι* were, as the name denotes, circular in form, supposed by some to be an iron ball, worn with padded covers (Liddell and Scott, *s. v.*); and fighting with them was called *σφαιρομαχία* (Pollux, iii. 150). Plato (*Leg.* viii. p. 830 B) recommends the use of them instead of the ordinary boxing-gloves (*ἱμάντες*), in order to train boxers for the coming conflicts. But the most formidable of all these weapons were the *μύρμηκες*, covered with metal studs or nails, and hence called the "limb-breakers" (*γυιοτόροι*). Lucillius, in an epigram (*Anth. Pal.* xi. 78, vol. ii. p. 344, ed. Jac.), speaks of a boxer whose head had been so battered by the *μύρμηκες* as to resemble a sieve. Figures with the caestus frequently occur in ancient monuments. They were of various forms, as appears from the following specimens, taken from ancient monuments, of which drawings are given by Fabretti (*de Column. Traj.* p. 261; see Krause, *Gymnastik und Agonistik der Hellenen*, p. 502 foll.). [W. S.]

Caestus. (Fabretti.)

CALAMISTRUM (pl. *calamistri*: *calamistra*, Varro *ap. Charis.* p. 61), a curling-iron, so called from its resemblance to a reed. Its use among the Greeks may be inferred from the representations of elaborately dressed hair in works of art. Among the Romans, it was in vogue as early as the days of Plautus (*Asin.* iii. 3, 37; *Curc.* iv. 4, 21), and became as common among them as it has been in modern times (Serv. on *Aen.* xii. 100). It was much employed by ladies and boys, and sometimes even by men, although for them the practice was considered effeminate (Cic. *pro Sest.* 8, 18; *post red. in sen.* 5, 12; *in Pis.* 11, 25). Hence the figurative use of the word to express an excess of literary ornament (Cic. *Or.* 23, 78; *Brut.* 75, § 262; Tac. *Dial.* 26). The calamistrum appears to resemble the modern curling-irons, and to have belonged therefore to the department of the *ornatrix*. Muratori (991, 2) gives the epitaph of a *liberta a calamistro*, while *ciniflo* (Hor. *Sat.* i. 2, 98; Tert. *ad Uxor.* ii. 8) or *cinerarius* (Varr. *L. L.* v. 129; Cat. 61, 138; Sen. *Dial.* ii. 14, 1; Acron *ad* Hor. *l. c.*; Tert. *l. c.*) was the title of the slave who heated the irons. [J. Y.] [J. H. F.]

Calamistrum, instrument for dressing hair, on a small relief from Amyclae, with other articles of toilet. (British Museum.)

CAL'AMUS, a reed. Under this head it seems desirable to group an account of the most important objects made of reeds of various kinds. The varieties of the reed are described by Theophrastus (*H. P.* iv. 11, 12) and Pliny (*H. N.* xvi. §§ 159-173), one of the most notable being the *calamus odoratus*, found in Syria and Arabia (Col. xii. 52; Plin. xii. § 104, xiii. § 9; Veget. iv. 13), and used in the manufacture of unguents. *Κάλαμος* denotes a larger sort of reed than *δόναξ*, and *harundo* than *canna*.

Reeds were extensively used for thatching and wall-building; for making mats, crates, and other articles of plaited work (Herod. v. 101, i. 179, ii. 96; Thuc. ii. 76); and for many purposes for which a light stick was needed, —*e.g.* a signal-post (*calamus*, Col. iii. 15), an Egyptian sign-post (Plin. *H. N.* vi. § 166), a rod to brush down cobwebs (*harundo*, Plaut. *Stich.* ii. 2, 23), the bridge of the lyre (*δόναξ*, Aristoph. *Ran.* 232), the cross-piece on which the lyre-strings are fastened (*κάλαμος ὑπολύριος*, Soph. *Fr.* 34). Reeds were also employed in the following uses:—

1. The Pan's pipes (*σῦριγξ*), formed of reeds of graduated length bound together by wax, as shown in the accompanying cut (*calamus*, Lucr. iv. 588, v. 1379–1415; Tib. ii. 5, 29–32; *canna*, Ov. *Met.* ii. 682, xi. 171; *harundo*, ib. i. 684, xi. 154; *κάλαμος*, Eur. *I. T.* 1125, *El.* 702; *δόναξ*, Aesch. *Pr.* 574).

Calamus, Pan's pipe, from terra-cotta relief with Judgment of Paris. (British Museum.)

2. A light flute, formed of a single reed (*harundo*, Ov. *Met.* vi. 384; *κάλαμος*, Pind. *Ol.* x. 100, *Nem.* v. 70; *δόναξ*, id. *Pyth.* xii. 44; Theocr. xx. 29). The reed-flute figured in the following woodcut was found in an Egyptian tomb and is in the British Museum.

Egyptian reed-flute. (British Museum.)

3. The shaft of an arrow, and in poetry an arrow made of a reed which was not hollow, but filled with pith (*κάλαμος ναστός, τοξικός* or *Κρητικός*, Theophr. *l. c.*; *calamus*, Hor. *Od.* i. 15, 17; Plin. *H. N.* xvi. § 161; *harundo*, Ov. *Met.* i. 471; Verg. *Aen.* iv. 73; *δόναξ*, Hom. *Il.* xi. 584).

4. A reed-pen (*calamus scriptorius* or *chartarius*, Cels. v. 28, 12; App. *Flor.* 9), which, like our quill-pens, was sharpened (*καλαμογλυφεῖν*, *Etym. M.* 485. 33, *calamum acuere, temperare*) with a knife (*scalprum librarium*, Tac.

Ann. v. 8; Suet. *Vitell.* 2) and had a cleft point (*calamus fissipes*, Aus. *Epist.* vii. 49). Pens thus made of knotted reeds are represented in the cut under ATRAMENTUM. The case in which they were kept was called καλαμίς, *theca calamaria* or *graphiaria*, or *theca cannarum* (Suet. *Claud.* 35; cp. Mart. xiv. 19, Hieron. *in Ezech.* ix. 2). The earliest mention of quill-pens appears to be in Isidore, *Orig.* vi. 14, 3. The best reeds for pen-making came from Egypt, Cnidus and the *lacus Anaiticus* (Plin. *H. N.* xvi. § 157; Mart. xiv. 38; Aus. *l. c.*, and iv. 77). *Harundo* is used in the same sense in Mart. i. 3, 10; Pers. iii. 11; κάλαμος in Poll. x. 61.

5. A fishing-rod (κάλαμος, Theocr. xxi. 43; Arist. *P. A.* iv. 12, 11; καλαμίς, *Anth. P.* x. 11; *calamus*, Ov. *Met.* iii. 587; *harundo*, Plaut. *Rud.* ii. 1, 5; Tib. ii. 6, 23).

6. The fowler's limed rod, which was sometimes composed of separate joints, so that it could be lengthened to suit the fowler's convenience. It was then called *harundo crescens* or *texta* (Mart. ix. 54, 3, xiv. 218; Sil. vii. 674–7; Petr. *Sat.* 109, 7; Bion, xii. (ii.) 5). In the same sense we have *calamus* (Prop. iii. 13, 46; Mart. xiii. 68; Sen. *Oct.* 411) and δόναξ (*Anth. P.* vii. 702).

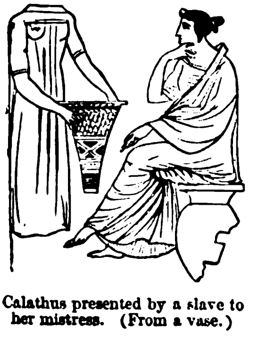
7. A light Egyptian boat made of reeds (*canna*, Juv. v. 89; Plin. *H. N.* vii. § 206).

8. A horizontal rod passed through the warp in weaving (*harundo*, Ov. *Met.* vi. 55). [TELA.]

9. *Harundo* is also the crown of reeds worn by river-gods (Verg. *Aen.* viii. 34, x. 205; Ov. *Met.* ix. 3). [J. H. F.]

CAL'ATHUS (κάλαθος, also τάλαρος), dim. *calathiscus* (καλαθίσκος). Calathus is a Greek word, though used by the Latin writers. The Latin word corresponding to it is *qualus* or *qualum* (Cat. *R. R.* 11, 5; 52, 1; Verg. *Georg.* ii. 241; Hor. *Carm.* iii. 12, 4), dim. *quasillus*, *quasillum* (Cic. *Phil.* iii. 4, 10; Tib. iv. 10, 3; Prop. iv. (v.) 7, 41; "calathos Graeci, nos dicimus quasillos," Fest. p. 47).

1. *Calathus* usually signified the basket in which women placed their work, and especially the materials for spinning. It was generally made of osiers or reeds (πλέκειν ταλάρους καὶ καλαθίσκους, Poll. vii. 173; *virgati calathisci*, Catull. lxiv. 320; *calathos e vimine nexos*, Ov. *Fast.* iv. 435; *rasiles calathi*, "scraped or smooth osiers," id. *Her.* ix. 76); but sometimes of more valuable materials. Homer (*Od.* iv. 125) speaks of a silver τάλαρος. The calathus was narrow at the bottom, gradually rising to a larger size at the top ("ab angustiis in latitudinem paulatim sese laxantis effigie calathi," Plin. *H. N.* xxi. § 23). As spinning was the chief occupation of women, the *calathus* is constantly mentioned in connexion with them (*Anth. Pal.* vi. 39, 147, *et al.*; Verg. *Aen.* vii. 805; Ov. *Met.* xii. 474, *Ars Am.* i. 693, ii. 219; Juv. ii. 54). Pollux (x. 125) speaks of both τάλαρος and κάλαθος as τῆς γυναικωνίτιδος σκεύη: and they frequently occur in paintings on vases, indicating that the scene represented takes place in the gynaeconitis, or women's apartments. In the above woodcut, taken from a painting on a vase (Millin, *Peintures de Vases Antiques*, vol. i. pl. 4), a slave, belonging to the class called *quasillariae*, is presenting her mistress with the calathus, in which the wool was kept.



Calathus presented by a slave to her mistress. (From a vase.)

For the same reason Penelope is constantly represented in ancient works of art with the calathus. (Cf. Blümner, *Gewerb. u. Künst bei Griech. u. Römer*, i. p. 118.)

Penelope, with the Calathus under her seat. (British Museum.)

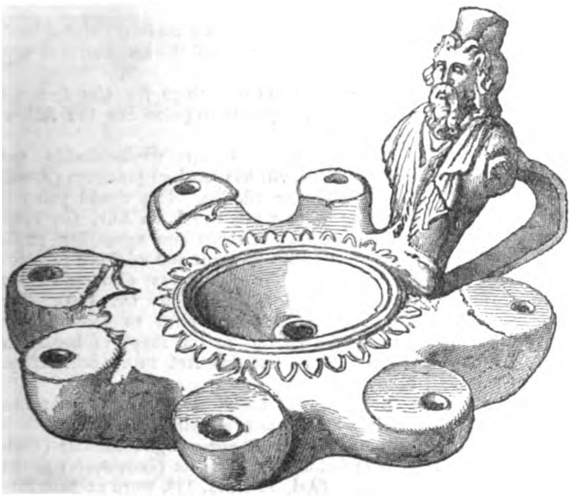
2. The *calathus* or *talarus* was also the name of a similar basket for carrying fruits, corn, flowers, &c. (*Il.* xviii. 568; Hes. *Sc.* 293; Aristot. *Rhet.* iii. 11, § 15; Mosch. ii. 34, 61; Verg. *Ecl.* ii. 46; Ov. *Ars Am.* ii. 264.) It was also used for holding cheeses, the whey running off through the wicker-work. (Hom. *Od.* ix. 247; Theocr. v. 90, viii. 70; Colum. vii. 8, 3; Ov. *Met.* xii. 436.)

3. The name was likewise given to vessels made in the form of a wicker basket for holding milk (Verg. *Georg.* iii. 400; Calp. Sic. ii. 77; Colum. x. 397), and to wine-cups of a similar shape (Verg. *Ecl.* v. 71; Mart. ix. 60, 15, xiv. 107).

4. The *calathus* was used as a religious emblem, and we accordingly find it figured on monuments in connexion with Athena or

Calathus on a chariot in the Eleusinian procession. (British Museum.)

Minerva, who taught women the art of weaving; of Demeter or Ceres, the goddess of harvests; of Tellus and other divinities, as an emblem of abundance. It was carried in honour of Demeter at the Eleusinian festival (Callim. *in Cer.* 1), and is so represented in a bronze medal of Trajan figured above. It was frequently placed on the heads of divinities, especially of Demeter, in ancient statues, and in this use is called *modius* or bushel by archaeologists. It was probably carried on the heads of women or young girls in processions, whence it gave rise to the capital supported by a female figure in place of a column. [CARYATIDES.] Figures of priestesses, from ancient monuments, wearing the calathus, are given by Saglio (*Dict.* s. v.) In particular the god Serapis in the time of the Roman empire is represented with a calathus on his head (*calathum capiti ejus infigunt*, Macrob. *Sat.* i. 20, §§ 13, 15; cf. i. 17, §§ 67, 68), and so appears in works of art, as in a Roman lamp figured by Birch (*Ancient Pottery*, p. 506). [W. S.]



Lamp with head of Serapis surmounted by the Calathus. (Birch.)

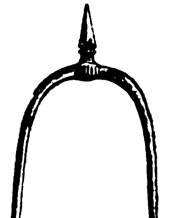
CALA'TOR (KALATOR, Orell. *Inscr.* 2431, 2432; καλήτωρ, Dion. Hal.), originally a slave employed as a caller or crier (Plaut. *Merc.* v. 2, 11; *Pseud.* iv. 2, 52; *Rud.* ii. 3, 5): the *nomenclator* or prompter of names to a candidate was a specimen of this class (Hor. *Epist.* i. 6, 50; *aliena memoria salutamus*, Plin. *H. N.* xxix. § 19; AMBITUS). The derivation from καλεῖν (Lat. *calare;* cf. *kalendae*) is given by Paulus Diaconus (p. 18, Müller); but he ridiculously adds that it was because they had to come when they were called. In this sense the word became obsolete; but it survived as the name of certain attendants on the members of the higher priesthoods, each of whom nominated a calator from among his own freedmen.

Besides the ARVALES (*q. v.*), we find in the four inscriptions preserved by Orellius, *Kalatores Pontificum et Flaminum*, 2431; *Kalatores Titialium Flavialium*, 2432 (here a boy dying at 15 has held the office); *Calator Epulonum Libertus*, 2433; *Dispensator Calatorum Augurum*, 2434, cf. Suet. *de Ill. Gramm.* c. 12: and Orellius remarks that all sacerdotia had their calatores. (Marini, *Atti de' Fratelli Arvali*, p. 210; Henzen, *Acta Fr. Arvalium*, pp. vii. viii. 160; Marquardt, vi. 219; Mommsen, *Staatsr.* i.^{2} 344.) [W. W.]

CALAU'TICA (in some MSS. *calantica* or *calvatica*), a female head-dress, described by Nonius, p. 537, as "tegmen muliebre, quod capiti innectitur." Cf. Cic. *Fragm. in Clod. et Cur.* 5: "quum calautica capiti accommodaretur," where it appears to be used in the same sense as *mitra.* So Serv. *ad Aen.* ix. 616, and Ulp. *Dig.* 34, 2, 25, § 10: "ornamentorum haec: vittae, mitrae, semimitrae, calautica." Gloss. Philox., however, explains it as εἶδος ζώνης.

Ausonius (*Perioch. Od.* v.) used *calautica* as a translation of κρήδεμνον. From this and other considerations Rich is led to identify the two words as signifying a head-dress with lappets hanging down to the shoulders on both sides, so that they might be drawn together to conceal the face (Hom. *Od.* i. 334; *Il.* xiv. 184; and Eustath. *ad loc.*); but its form is quite uncertain. [J. H. F.]

CALCAR (μύωψ, ἐγκεντρίς), a spur, an implement to which we find no reference in the Homeric writings, in which riding is so rarely mentioned, a goad (κέντρον) taking its place. Even in later Greek authors, it is often difficult to determine whether a goad or a spur is signified. But in Theophr. *Char.* xxi., where the μικροφιλότιμος, after taking part in a πομπή, walks about the market-place ἐν τοῖς μύωψι, we have a clear reference to spurs. Cf. *Anth. P.* v. 203; Diod. Sic. xvii. 20; Pollux, i. 210, x. 54, and perhaps Plat. *Apol.* 30 E, where, however, it is not clear whether μύωψ is a spur, or the fly from whose goading bite the spur was named. Similarly in works of art spurs are but seldom represented. A spur, however, is indicated on one foot of an Amazon on a vase of probably the 4th century (*Bulletin de l'Académie de Bruxelles*, xi. p. 76); and the left foot of the statue of an Amazon in the Vatican, which is held to be a copy from Pheidias, shows how the spur was fastened to the foot, although the spur itself has been broken off. Bronze spurs have also been found at Dodona (*Académie des Inscriptions*, June 1877).



Calcaria, Bronze Spurs. (British Museum.)

Among the Romans the name leaves us in no doubt about the use of this appliance ("calcaria dicta, quia in calce hominis ligantur ad stimulandos equos," Isid. *Orig.* xx. 16, 6), and we find the word used as early as Plautus (*As.* iii. 3, 118), and very frequently in later writers. Numerous examples of Roman spurs are in the museums. [J. Y.] [J. H. F.]

CAL'CEUS (**ὑπόδημα**), a boot, shoe, or other covering for the feet.

I. GREEK. The Greeks generally wore some sort of covering for the feet, though it was not quite unusual for even distinguished people to go barefooted. Thus it was a rare occurrence when Socrates wore boots (Plat. *Symp.* 174 A), and we hear also how men of means who lived a simple life, like the orator Lycurgus (*Vit. X. Or.* p. 842) and Phocion (Plut. *Phoc.* 4), went barefooted, as did also those who affected the austerity of certain philosophic schools (Aristoph. *Nub.* 103; Theocr. xiv. 6; Lucian, *Icarom.* 31). The lower orders, too, in a great measure wore no boots (cf. Lucian. *Catapl.* 20). It was part of the training of the Spartan youth to be always barefooted (Xen. *Rep. Lac.* 2, 3), and Agesilaus did not relinquish the practice even when old (Ael. *V. H.* vii. 13). Still, as a general rule, the Greeks wore shoes, and very particular they were about the fit. It was a mark of boorishness and so of ridicule to have too large boots (Theophr. *Char.* iv.; cf. **ἔνεον ἐν ταῖς ἐμβάσιν**, Aristoph. *Eq.* 321). Men's boots, especially those of rustics, had nails in them (Theophr. *l. c.*). The usual colour of Greek boots was either the natural colour of the leather or black, though sometimes we find red and white boots (see below). The black was produced by a substance called **μελαντηρία** (Lucian. *Catapl.* 15), which was the same as the *atramentum sutorium* (Cic. *ad Fam.* ix. 21, 3) of the Romans. They rubbed on this blacking (**περικωνεῖν**) with a sponge, not as we do with a brush (Aristoph. *Vesp.* 600). There is an interesting passage in the *Cyropaedia* (viii. 2, 5) which shows the division of labour in the making of shoes. One man makes them for men, another for women; and in making a single pair one cuts the layers for the soles, another fastens these together, another cuts out the uppers, and a fourth puts the pieces together.

As to the names of boots and shoes they are most numerous (Poll. vii. 84 *sqq.*); but except in a few cases we cannot fix with anything like definiteness what were the shapes corresponding to the names. That there were three main kinds of coverings for the feet—viz. what we call *sandals* (**πέδιλα, ὑποδήματα** in the special sense), *shoes* which partially covered the feet, and *boots* which wholly covered them—is quite certain. (The last two kinds were called **ὑποδήματα κοῖλα**.) All we can do here is to give illustrations of the kinds of boots found represented on Greek vases and statues; and state, as far as our authorities will allow us, the peculiarities of the different kinds of shoes not already treated of in the special articles BAUCIDES, CARBATINA, COTHURNUS, CREPIDA, EMBAS, ENDROMIS, SANDALIUM.

The illustrations are taken from Guhl and Koner (*Das Leben der Griechen und Römern*, fig. 223). Nos. 1 (statue of Elpis in Vatican), 2, and 3 (foot of Belvedere Apollo) show the different sorts of *sandals* and methods of fastening them from the simplest to the most complex kind Nos. 4, 5, and 7 (statue of Demosthenes) exhibit various kinds of *shoes* partially covering the foot, while No. 6 is a completely closed boot, and No. 8 is a specimen of the ENDROMIS or top-boot for hunters.

Greek Shoes and Boots. (From Guhl and Koner.)

Other names of coverings for the feet not treated of in separate articles are the following:—

1. **Ἀρβύλη**, of cheap workmanship and material (Poll. vii. 86), used on journeys (Aesch. *Ag.* 945; Theocr. vii. 26). This would point to its being a *boot* (cf. Schol. on Eur. *Or.* 140), though we find it sometimes appearing to be synonymous with **βλαύτια** and **σάνδαλα** (*Anthol. Planud.* 306–308). It was also worn by women as well as men (Eur. *Or.* 140). The term **ἀρβύλαι** is also applied to holes in the bottom of a chariot in the shape of boots, for the driver to put his feet into (Eur. *Hipp.* 1189).

2. **Βασιλίδες**, boots worn by the Archon Basileus at Athens (Poll. vii. 85).

3. **Βλαύται** or **βλαύτια**, light sandals (Poll. vii. 87) fastened by latchets (**ἀναγωγεῖς**) round the ankle (Ael. *V. H.* ix. 11), worn at banquets (Plat. *Symp.* 174 A; Hermipp. *ap.* Ath. xv. 668 a), and in the gymnasium (Ath. iii. 98 a).

4. **Διάβαθρον**, a kind of Greek slipper worn mostly by women (Eustath. ad *Od.* v. 9), but also sometimes by men (Naev. *ap.* Varr. *L. L.* vii. 53). Cf. Poll. vii. 90.

5. **Ἐμβάται** were top boots, mentioned as being lined with felt even by Hesiod (*Op.* 541). They were made of the same leather as *crepidae* [CREPIDA], and were worn by horsemen **ἅμα ὅπλον τε κνήμαις καὶ ποσὶν ὑποδήματα** (Xen. *Eq.* 12, 10), and are mentioned as being sometimes highly adorned (Ath. xii. 535 f). **Ἐμβάτης** was the strictly Greek name for the tragic buskin which the Romans called *cothurnus* [COTHURNUS]. It had a wooden rectangular sole, and would fit either foot. Pollux (vii. 91) appears to be in error when he says that the **ἐμβάτης** was the shoe of Comedy. (See the full discussion in A. Muller, *Die griechischen Bühnenalterthümer*, pp. 239, 240.)

6. **Εὐμᾶρις** was a Persian slipper (Eur. *Or.* 1370) of yellow colour (**κροκόβαπτος**, Aesch. *Pers.* 660), with thick soles (**βαθύπελμος**, *Anth. Pal.* vii. 413).

7. **Ἰφικρατίδες** (Alciphr. iii. 57), a military boot called after Iphicrates the general, like our Wellingtons or Bluchers. Other kinds of boots called after individuals were **Δεινιάδες, Ἀλκιβιάδες, Σμινδυρίδια, Μυννάκια** (Poll. vii. 89). We

hear that the **'Αλκιβιάδες** were *παρηλλαγμένα*, *i.e.* fitting either foot (Ath. xii. 534 c).

8. **Κονίποδες** or *κονιόποδες*, thin light *sandals* worn by old men (Aristoph. *Eccl.* 848), so called because the foot got covered with dust, says the *Etym. M.* (s. v.).

9. **Λακωνικαί** or *Λακωνικά*, a kind of men's shoes (Aristoph. *Thesm.* 142; *Eccl.* 74). They were different from the *ἐμβάδες* [EMBAS], and were used at banquets (Aristoph. *Vesp.* 1158). There appear to have been a finer and a commoner sort. It is to the former the Scholiast on Aristophanes (*Vesp.* 1158) refers when he says they were *ἀστειοτέραι* than the *ἐμβάδες*, and Photius when he characterises the Laconian shoe as *σεμνόν*. Critias (*ap.* Ath. xi. 483 b) tells us that the Laconian shoes were the best. They were generally *red* (Poll. vii. 88), and it was only as a sign of royalty that the tyrant Lysias of Tarsus wore *white λακωνικαί* (Ath. v. 215 c). This finer sort of Laconian shoes was probably the **'Αμυκλαΐδες** or **'Αμύκλαι** (Theocr. x. 35, and Schol.; Poll. vii. 88; Hesych. *s. v.*). These Laconian shoes appear to have been actually made in and imported from Laconia (Aristoph. *Vesp.* 1160), and not merely to have been so called because that style of shoe was first manufactured in Laconia, as Pollux (*l. c.*) says. But there was perhaps a commoner kind, viz. the **ἁπλαῖ**, mentioned by Demosthenes (*Con.* § 34) as affected by the austere Laconizers. These were a kind of Laconian shoe, so called either on account of its simplicity of manufacture, or because its sole had only a single layer of leather (*Etym. M.*, and Harpocr. *s. v.* ἁπλαῖ).

10. **Περιβαρίδες** or *περίβαρα*, women's shoes worn only by slaves and the lower orders. (Aristoph. *Lys.* 45; Poll. vii. 87, 92.)

11. **Περσικαί** or *περσικά*, cheap (*εὐτελῆ*, Hesych., Steph. Byz. *s. v.*) white (Poll. vii. 92) women's shoes (Aristoph. *Lys.* 229), worn principally by hetaerae (Poll. *l. c.*).

12. **Πηλοπατίδες**, as the name indicates, similar to the *ἀρβύλαι* and CARBATINA; cf. *πηλοπατίδες ἀρβύλαι* (Hippocr. *Art.* 828).

13. **Σικυώνια**, soft light women's shoes (Cic. *de Or.* i. 54, 231; Lucr. iv. 1125). They did not become famous till the latter end of the Roman republic, though we hear of them earlier (Machon in Ath. viii. 349 e). Other kinds of shoes called after the names of places were **'Αργεῖαι, 'Αμβρακίδες, Θετταλίδες, Ροδιακαί, Σκυθικαί** (Poll. vii. 88, 89; cf. Blümner, *Gewerbliche Thätigkeit*, pp. 76, 82, and Index *s. v.* *Schuhe*).

14. **Τυρρηνικά**, costly sandals with high rectangular wooden soles. The latchets were sometimes plated with gold (*ἐπίχρυσοι*). Phidias is said to have represented Athena as wearing this kind of shoe; and Pollux (vii. 93) declares that the *ποίκιλος μάσλης Λύδιον κάλον ἔργον* of Sappho (*Fr.* 19 (83)) refers to the Τυρρηνικά. (See further Hesych. and Phot. *s. v.* Τυρρηνικὰ σανδάλια.) The *Tyrrhena vincula* of Verg. *Aen.* viii. 458 Servius considers were *crepidae* [CREPIDA].

15. **Φαικάδες** or *φαικάσια*, elegant white Attic shoes (Appian, *Bell. Civ.* v. 11), similar to the *κονιπόδες* (Clem. Alex. *Paedag.* ii. 11), often adorned with gold (Petr. 67). As Marquardt (*Privatleben*, p. 576) tells us, they were worn in Athens and Alexandria by priests and gymnasiarchs (Plut. *Ant.* 33; Poll. vii. 90; App. and Clem. Alex. *ll. cc.*), also by philosophers (Senec. *Benef.* vii. 21), peasants (Hesych. *s. v.*), youths (Petr. 82), women (*ib.* 67), with the pallium (Senec. *Ep.* 113, 1); cf. Mayor on Juv. iii. 218.

Besides these, there is a multitude of other names of shoes which Pollux has collected (vii. 84–94); but as they are seldom more than mere names, they need not be touched on here. For Greek shoes generally see Hermann-Blümner, *Privatalterthümer*, pp. 180–183, 195–196: Guhl and Koner, *Das Leben der Griechen und Römern*, § 46, ed. 4; Becker-Göll, *Charikles*, iii. 267–286; Baumeister, *Denkmäler*, art. *Fussbekleidung*, pp. 574–5.

II. ROMAN. *Calceus* (**καλίκιος**, Polyb.; **κάλτιος**, *Ed. Diocl.*), connected etymologically with **λάξ**, *calx* (Curt., *Gr. Et.*, No. 534), is distinguished as a regular closed boot with a sole and upper from SOLEA, a mere sandal (Gell. xiii. 22, 5), and from CALIGA, which appears to be a boot of which the upper consisted of a series of thongs letting the foot appear; and, as being made of tanned hide (*aluta*), it differed from PERO, which was of untanned hide (Verg. *Aen.* vii. 690). In strictness, it is the special Roman city boot. It and the *toga* formed the two peculiarly national features of Roman costume (Polyb. xxx. 19, 2, Hultsch; Cic. *Phil.* ii. 30, 76; Tert. *de Pallio*, 5). But in a more extended sense its cognates *calceatus*, *calceamentum*, *calceamen*, are applied to all *boots* (i.e. consisting of a sole and upper), even to foreign ones: thus *calceare* is used of the *cothurnus* (Suet. *Aug.* 78) and the *soccus* (Plin. *H. N.*, xxxvi. § 41): but these terms are not applied to open shoes consisting of a single sole, like the *soleae* and *crepidae* (Gell. *l. c.*; Isid. *Orig.* xix. 34, 11). It is in the strict sense of the word that *calceus* is treated of here.

Etiquette prescribed that when a Roman went out in the city he should wear the *toga* and the *calcei*; but they were uncomfortable ("calcei... proprium togae tormentum ... Quem enim non expediat in algore et ardore rigere nudipedem quam in calceo vincipedem," says Tertullian *l. c.*), and gladly dispensed with when the Roman was rusticating (Mart. i. 49, 31). They were not worn in the house, and that Augustus did so is noticed as a peculiarity (Suet. *Aug.* 73, 78). Ladies, too, wore them (Varr. *L. L.* ix. 40; Ael. *Var. Hist.* vii. 11), but not slaves, who had, at least in the country, wooden shoes (*sculponeae*, Cato, *R. R.* 59). Women's *calcei* were naturally thinner than men's, and of very various colours (*hederacei*, *cerei*, Vopisc. *Aurelian*, 49), but generally white (Ov. *A. A.* iii. 271; Apul. *Met.* vii. 8 *init.*; Clem. Alex. *Paedag.* ii. 11, p. 240, ed. Potter). Clement advises women, when walking on the roads, to use rustic thick-soled boots (**καττύματα**) with nails. (For such boots, see Hermann-Blümner, *Privatalterth.* p. 182, n. 7.) High soles were sometimes worn, to give the wearer an appearance of being taller than he really was (Suet. *Aug.* 73).
