Roman houses in Britain and Gaul.—A very large number of important Roman houses has been discovered in England and France, but most of these have been country villas, not town houses like those at Pompeii. At Silchester, however, one of the chief Roman towns in Britain, some remains of street houses have been exposed, of various dates from the first to the third century, showing a succession of alterations and rebuildings. In its original form one of these houses was very similar to some of the Pompeian dwellings: see *Archaeologia*, xlvi. p. 332. But in most cases the existing remains in England, being those of country houses and of later date than the buildings of Pompeii, have no resemblance to them in plan.

More ample space, and a much colder and wetter climate, led the Romans to adopt here a very different system of house-building from that which suited them in their earlier and hardier days in a mild climate like that of Italy. Thus we find that the later Romano-British or Gaulish houses had no group of rooms with wide arches opening on to a roofless *atrium*, but instead of this the rooms are commonly ranged in a long straggling line, with a passage along one side. In many cases a *peristylium* is used, but the rooms only open on to it by small carefully closed doors or well-glazed windows. The large villas at Lydney, Woodchester, Chedworth, and many other places have an extensive cloister or *peristylium*, round all four sides of which the rooms are arranged very like the plan of a mediaeval monastery: in none of these is there any *atrium*. In other cases, as at Cromhall in Gloucestershire, the rooms are ranged in L form, with one long passage running the whole length of the building: in other cases the rooms are all set in one line I, and have a similar passage from end to end. This seemingly inconvenient system of house-plan was largely used in England down to quite recent times; as, for example, in Hampton Court Palace. The villa at Witcomb in Gloucestershire was a very large and handsome building, arranged in the form of an H, with an octagonal hall projecting from the centre of the middle block.

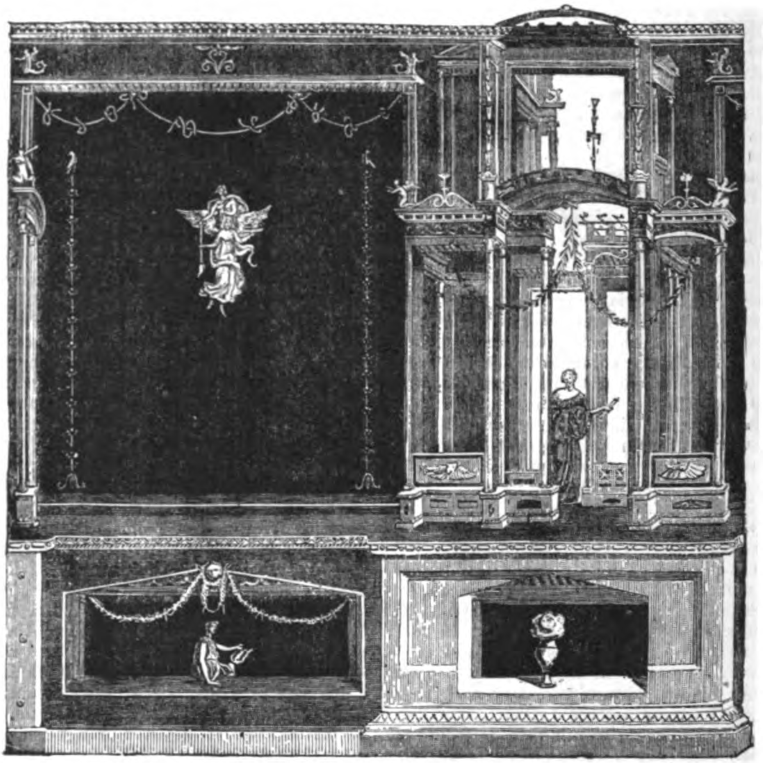
One peculiarity of the British houses is the extreme frequency of rooms with semicircular apses at one end, especially in cases where there is a hypocaust floor. The warming of Romano-British houses was very completely provided for; a very large proportion of the rooms have hypocausts, and many also have wall-linings of flue-tiles. Moreover the use of glazed windows seems to have been universal in Roman Britain; fragments of windows are nearly always found during excavations in the site of a house. Glass of several kinds occurs: rough-cast plate, ground plate, and crown glass are all common. Even in Pompeii remains of glass windows have been found, though they were apparently much less common there. (See below, *Windows*, p. 686 *a*.)

Construction of Roman houses.

1. *Walls.*—The wall of a house was called *paries* in contradistinction to *murus*, the wall of a city. The manner in which the walls were built varied according to the date and the locality. In Italy, during the Republican period in Rome, Pompeii, and other places, some easily-worked stone, such as tufa or peperino (*lapis Albanus*), was used, in large squared blocks (*opus quadratum*) for the best houses, unburnt brick

being the usual material for ordinary dwellings. In the time of Augustus concrete began to be the chief building material, faced at first with small squares of stone, about four inches by four inches on the face (*opus reticulatum*); then triangular kiln-baked bricks came into use, first employed together with the *opus reticulatum*, and then alone. In all cases, however, in Central and Southern Italy the main bulk of the wall was of concrete, and the brick only formed a thin facing. In other countries, however, where a fine natural cement like the pozzolana (*pulvis puteolanus*) of Italy was not to be found, a different method of construction was used. In Gaul and Britain houses were mostly built of rubble stonework, thickly bedded in hard mortar, with "lacing courses" of large square tiles (*tegulae bipedales*) built in at intervals of three or four feet; a method of building which still survives in some flint districts, like parts of Sussex.

The inner walls of the rooms were originally simply whitewashed (*dealbati*) [DEALBATORES], and subsequently covered with a white cement or stucco (*opus albarium*), the workers of which were called *tectores albarii*, or *albarii* simply. (Vitruv. v. 10, 3, vi. 10, 3; Pallad. i. 14; Plin. *H. N.* xxxv. § 194, xxxvi. § 183; Cod. Theod. xiii. 4, 2; Orelli, *Inscr.* 4142.) The plain surface of the walls was broken by quadrangular panels, called *abaci* (Plin. *H. N.* xxxiii. § 159; xxxv. §§ 3, 32; Vitruv. vii. 3, 10). [ABACUS.] In the second century B.C., the practice was introduced from Greece of painting these panels with an endless variety of figures, landscapes, buildings, gardens, &c., of which we have numerous examples in the existing remains of houses in Rome and Pompeii. So general was the practice that even the smallest houses in Pompeii have paintings on their walls, of which a general idea may be formed from the annexed cut. The way in which these paintings were executed is described under PICTURA.



Wall-painting at Pompeii. (Fergusson.)

In addition to painting, other methods of decoration were used: in Rome especially the chief way of ornamenting the rooms of the best houses was by lining the walls with slabs of sawn marble, moulded into a skirting below and a cornice above. Mamurra, one of Caesar's prefects in Gaul, was the first, as we have already said (p. 667 *a*), who lined the walls of his rooms with marble slabs (Plin. *H. N.* xxxvi. § 48). Great magnificence of effect was produced by the skilful admixture of marbles of different rich colours, the moulded part being usually of a deeper tint than the flat surfaces. In the most careful work these marble linings were fastened to the walls by bronze clamps, but more often the slabs were simply attached by a thick bedding of cement behind them. (Sen. *Ep.* 86, § 4; Dig. 19, 1, 17. § 3; Isidor. xix. 13.)

Another very rich method of decoration was the application of stucco reliefs enriched with gold and colours. The discovery of fine examples of these in a house near the Tiber has been mentioned above.

A third system, applied also to vaults, was to encrust the walls with mosaics, chiefly made of glass *tesserae* of the most brilliant jewel-like colours. [MUSIVUM OPUS.]

The *crypto-porticus*, which leads from the Palace of Caligula to the Flavian Palace (see above, p. 673 *b*), had the lower part of its walls lined with Oriental marbles, the upper part and vault was covered with sparkling glass mosaics, and the branch passage which leads to the supposed house of Livia was covered with very beautiful and delicately modelled stucco reliefs, gilt and coloured. The splendour of the state rooms may perhaps be guessed from the costly decorations of this long and half-subterranean passage. On the whole, splendour of effect, rather than refinement of design, was the chief characteristic of Roman house-decoration, and after the first century A.D. beauty of design and delicacy of workmanship were less valued than costly richness of material.

2. *Roofs.*—The roofs (*tecta*) of Roman houses were in the oldest times covered with straw, of which a memorial was preserved in the *casa Romuli* even in imperial times (Vitruv. ii. 1; and see p. 645 *b*). Next came the use of shingles for the roofing of houses, which continued down to the time of the war with Pyrrhus (Plin. *H. N.* xvi. § 36). Subsequently clay tiles, called *tegulae* and *imbrices*, superseded the shingles (Plaut. *Mil. Glor.* ii. 6, 24; *Most.* i. 2, 28; Isidor. xix. 10, 15; Plin. *H. N.* xxxv. § 152: see below). The construction of the roofs of the *atria* has already been explained (p. 669 *a*). The roofs of houses were sometimes flat (see *solarium*, p. 672 *b*), but they were also gabled (*pectenata*) like modern houses. These were of two kinds, the *tecta pectenata*, sloping two ways, and the *tecta testudinata*, sloping four ways (Fest. p. 213, M.) Both kinds of roofs were *displuviata*, that is, sloping towards the street, and the houses had around them, according to a law of the XII. Tables, an *ambitus*, or vacant space of 2½ feet, to receive the rain water running off the roofs (see p. 665 *a*). The projecting eaves of roofs were called *suggrundae* (Varr. *R. R.* iii. 3, 5; Vitruv. x. 21; Dig. 9, 3, 5, § 6). The gabled roofs rose to a point called *fastigium* (Cic. *ad Qu. Fr.* iii. 1, 4, § 14), though this word was strictly applied to the triangular pediment, which was only allowed in the temples of the gods and other public buildings. [FASTIGIUM.]

The roofs were usually of simple construction, with principal-rafters framed with tie-beam and king post. The roof-covering was often very carefully fitted so as to exclude wet. The *tegulae*, with a flange on each side, were nailed with bronze or large iron nails, and the joints were covered by specially moulded joint-tiles (*imbrices*), the ends of which at the eaves were hidden by ornamental terra-cotta *antefixa*, which formed a sort of cresting all along the eaves. The eaves-course of tiles was often worked into the form of the *cymatium* or top wave-moulding of the cornice, and all along it pierced lions' heads were moulded to form escapes for the rain-water. In other cases less ornamental roofs were covered with doubly-curved pantiles, exactly like those still used in Rome and some parts of England. For the most magnificent buildings, such as some of the imperial palaces, the roofs were covered with tiles made of white marble, or even with bronze tiles plated with gold. For further details, see TEGULA.

In places where brick-earth was scarce or bad, and laminated stone plentiful, as in Oxfordshire and Gloucestershire, the Romans roofed their buildings with roughly-dressed tiles made of such stone as the so-called "Stonesfield slate." Traces of Roman workings of the quarries of this stone at Kineton Thorns in Gloucestershire have been recently found, and extensive remains of the long barracks where the quarrymen were housed, forming a sort of quadrangle about 300 feet square. These "slates" were dressed in a lozenge form, and fixed by one large iron nail at the top corner, which of course was hidden by the lap of the next row of slates above. Clay tiles of many other forms were used; and local materials were nearly always utilized for roofing, as for all other purposes, by the practical and ingenious Roman builders.

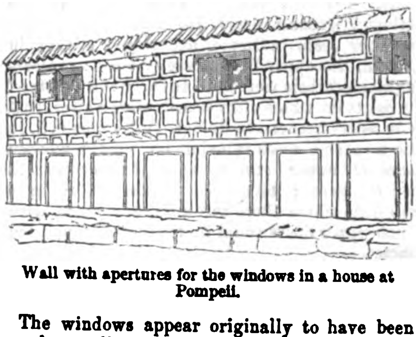
3. *Floors.*—The floor (*solum*) of a room was seldom boarded ("strata solo tabulata," Stat. *Silv.* i. 5, 57), except in the upper stories. The floor on the ground-floor was usually of stone, and, in the case of common houses, consisted of small pieces of stone, brick, tiles, &c. (*ruderatio*, *opus ruderatum*), beaten down (*pavita*) with a rammer (*fistuca*), whence the word *pavimentum* became the general name for a floor (Plin. *H. N.* xxxvi. § 185 *seq.*; Vitruv. vii. 1). Sometimes the floors were paved with thin slabs of richly-coloured marbles, brought from Northern Africa, Arabia, or Greece (Fest. p. 242, M.; Tibull. iii. 3, 16; Sen. *Ep.* 86, 6; Pallad. i. 9), and still more frequently with mosaics (*opus musivum*). For a fuller account of the different kinds of floors, see PAVIMENTUM and MUSIVUM OPUS.

In Rome and other parts of Italy, owing to the wonderful strength of the *pozzolana*, the upper floors of houses were very frequently made of concrete cast in one great slab on temporary boarding, fixed at the required level. This set into one compact mass, like a piece of solid stone. Examples in Rome are to be seen where the upper floor had a span of twenty feet, and simply consisted of one slab of concrete about fourteen inches thick. On this, mosaic and other paving was laid, as on the ground-floors. For the peculiar construction of the hollow *hypocaust* floors, see BALNEAE, p. 278. In other cases in Rome, and nearly always in Britain, the upper floors were of wood: projecting stone corbels were built to carry the "plates" for joists on which floor boards were nailed, just as in many modern buildings. Vitruvius (vii. 1) also mentions mosaics being laid on the wooden doors of upper stories, as is the custom in modern Rome; but this appears not to have been done where there was a strong cement with which upper floors could be made of unsupported concrete.

4. *Ceilings.*—Ceilings were very commonly semicircular or "barrel" vaults (*camarae*), decorated with stucco reliefs, mosaics, or painting [CAMARA]. The *extrados* of the vault was filled in level with concrete to form the floor above. Wooden ceilings and flat concrete ceilings were decorated in the same way. One common method of ceiling decoration, applied both to brick and concrete or to wooden ceilings, was to divide

the whole area into a number of deeply-sunk panels, like pits or lakes (*lacus*, *lacunae*), whence they were called *lacunaria* or *laquearia* (Vitruv. vii. 2; Cic. *Tusc.* v. 21, 62; Hor. *Carm.* ii. 18, 2). These were richly ornamented, either by stucco reliefs gilt and coloured, or, in the case of wooden ceilings, by inlaid work of ivory, ebony, or other precious materials, as well as by paintings. In a few cases the "coffers" were covered with enriched bronze plates, thickly gilt. (Plin. *H. N.* xxxiii. § 57, xxxv. § 124; Hor. *Carm.* l. c.; Verg. *Aen.* i. 726; Sen. *Ep.* 90, 42.) The artists who executed this work were called *laquearii* (Cod. Theod. xiii. 4, 2). The design of these coffered ceilings was derived from the marble ceilings of the peristyles of Greek temples, such as the Parthenon.

5. *Windows.*—The Roman houses had few windows (*fenestrae*). The *atrium* and *peristylium* were lighted, as we have seen, from above, and the smaller rooms leading out of them generally derived their light from them, and not from windows looking into the street. The rooms only on the upper stories (*cenacula*) seem to have been usually lighted by windows, and looked out upon the street, as well as the inner courts. Hence they are frequently mentioned by the ancient writers (Liv. i. 41, xxiv. 21; Hor. *Carm.* i. 25; Prop. iv. (v.), 7, 16; Juv. iii. 270; Mart. i. 86, xi. 19; Plin. *H. N.* xix. § 59). In Pompeii, in like manner, the ground-floor rooms were mostly lighted from the inner courts, so that few lower windows opened on the street. There is an exception to this in "the House of the Tragic Poet," which has six windows on the ground-floor. Even in this case, however, the windows are not near the ground as in a modern house, but are six feet six inches above the foot-pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two; and at the side there is a wooden frame, in which the window or shutter might be moved backwards or forwards. The lower part of the wall is occupied by a row of red panels four feet and a half high. The following woodcut represents part of the wall, with the apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.



Wall with apertures for the windows in a house at Pompeii.

The windows appear originally to have been merely small openings in the wall, closed by means of shutters, which frequently had two leaves (*bifores fenestrae*, Ov. *Pont.* iii. 3, 5), whence Ovid (*Amor.* i. 5, 3) says,

> "Pars adaperta fuit, pars altera clausa fenestrae."

They are for this reason said to be joined (*junctae fenestrae*), when they are shut. (Hor. *Carm.* i. 25.) Windows were also sometimes covered by a kind of lattice or trellis work (*clathri*), and sometimes by network, to prevent serpents and other noxious reptiles from getting in (Plaut. *Mil. Glor.* ii. 4, 25; Varr. *R. R.* iii. 7). The *transennae* were a kind of lattice-work of the same kind (Cic. *de Or.* i. 35, 162).

There has been much discussion whether glass windows were known to the ancients; but in the excavations at Pompeii many fragments of flat glass have been discovered, and in the *tepidarium* of the public baths a bronze lattice was found with some of the panes still inserted in the frame. (Gell, *Pompeiana*, i. p. 99.) [VITRUM.] Besides glass, other transparent substances were also used, such as talc, the *lapis specularis* of Pliny (*H. N.* xxxvi. § 163), and windows made of it were called *specularia* (Sen. *Ep.* 90, 25; Plin. *H. N.* xix. § 64, *Ep.* ii. 17; Mart. viii. 14; Juv. iv. 21), though some modern writers think that *specularia* also denoted glass windows. The best pieces of this transparent highly laminated substance came from Spain and Cappadocia, but it was also brought from North Africa, Cyprus, and Sicily. Pliny mentions pieces as large as five feet long (Plin. *H. N.* xxxvi. § 160 *seq.*). From an expression in Philo (*Leg. ad Caium*, § 45) it appears that the palace of Caligula had glass windows; and glass windows are expressly mentioned by Lactantius (*de Opif. dei*, 8).

6. *Doors.*—The subject of doors, with their locks and keys, is discussed under JANUA and CLAVIS. It is only necessary to mention here that many of the rooms in Roman houses had no doors, but only curtains, *vela*, *aulaea*, *centones* (Sen. *Ep.* 80; Plin. *Ep.* ii. 17; Petron. 7; Lamprid. *Alex. Sev.* 4, *Heliog.* 14). Hence among the slaves in the imperial household we find mention of *velarii* (Orelli, *Inscr.* 2967). Sometimes, when there were doors, curtains were also drawn across them (Suet. *Claud.* 10; Tac. *Ann.* xiii. 5; Sidon. Apoll. *Ep.* iv. 24; Mart. xi. 45). [VELUM.]

7. *The heating of Houses.*—The rooms were heated in winter in different ways. The *cubicula*, *triclinia*, and other rooms, which were intended for winter use, were built in that part of the house upon which the sun shone most; and in the mild climate of Italy this frequently enabled them to dispense with any artificial mode of warming the rooms. Rooms exposed to the sun in this way were sometimes called *heliocamini*. (Plin. *Ep.* ii. 17, 20; Dig. 8, 2, 17.) The rooms were sometimes heated by hot air, which was introduced by means of pipes from a furnace below (Plin. *Ep.* ii. 17, v. 6, 24; Sen. *Ep.* 90), but more frequently in earlier times by portable furnaces or braziers (*foculi*), in which charcoal was burnt. (See woodcut, p. 276 *b*, and under FOCUS.) The *caminus*, however, was a fixed stove, in which wood appears to have been usually burnt. (Suet. *Vitell.* 8; Hor. *Sat.* i. 5, 81; *Ep.* i. 11, 19; Cic. *ad Fam.* vii. 10; Sid. Apoll. *Ep.* ii. 2.) It has been a subject of much dispute among modern writers, whether the Romans had chimneys for carrying off the smoke, except in the baths and kitchens. From many passages in ancient writers, it certainly appears that rooms usually had no chim-

neys, but that the smoke escaped through the windows, doors, and openings in the roof (Vitruv. vii. 3, 4; vii. 4, 4); but chimneys do not appear to have been entirely unknown to the ancients, as some have been found in the ruins of ancient buildings, and it is impossible to believe that, among a luxurious people like the Romans in imperial times, they were unacquainted with the use of chimneys. The passage of Horace ("lacrimoso non sine fumo," *Sat.* i. 5, 80), which has been quoted in proof that there were no chimneys, proves nothing, as damp wood would cause smoke, even if there had been chimneys. On the heating of houses, see also above, p. 674 *a*.

8. *The water supply* of a good Roman house was very complete; in towns the main usually ran under the pavement in the middle of the street, and from it "rising mains" branched off to the houses right and left, and often were carried to the upper stories, where a cistern supplied the fountain-jets (*salientes*) and other purposes below. For further details on the water-supply, see AQUAEDUCTUS, p. 155 *b*.

(Becker-Göll, *Gallus*, ii. p. 213 ff.; Marquardt, *Privatl.* p. 208 ff.; Guhl and Koner, p. 462 ff., 5th ed.; Hirt, *Gesch. d. Baukunst*, iii. p. 267 ff.; Fergusson, *Hist. of Arch.* i. p. 363 ff.; Burn, *Rome*, p. lxvii. ff.; Friedländer, *Sittengesch.* i. p. i. ff., p. 26 ff.; Ménard, *La vie privée des Anciens*, Paris, 1880–3; Zumpt, *Ueber die bauliche Einrichtung des Röm. Wohnhauses*, Berlin, 1844; Krause, *Deinokrates*, Jena, 1863. Although a large number of well illustrated works on Pompeii have been recently published, they have by no means superseded the earlier ones, which describe a great deal that is now lost: this is specially the case with Sir William Gell's valuable *Pompeiana*, London, 1824; and second part, London, 1832. The objects discovered are well illustrated by Pistolesi, *Real Museo Borbonico*, 1824–67. Dyer's *Ruins of Pompeii*, London, 1867, is a convenient handbook. Niccolini and others, *Le Case di Pompeii*, Naples, 1854–84, is a valuable work, which gives the more recent discoveries. A very splendidly illustrated work is the *Recueil des Peintures, &c. de Pompéi*, Paris, 1870–77. See also Zahn, *Die schönsten Ornamente aus Pompeji*, Berlin, 1827–59; Mazois et Gau, *Les Ruines de Pompéi*, Paris, 1824–38; Ternite, *Wandgemälde aus Pompeji*, Berlin, n.d.; Presuhn, *Les décorations de Pompéi*, Leipzig, 1878; Mau's edition of Overbeck's *Pompeji*, Leipzig, 1884; and Nissen, *Pompejanische Studien*, Leipzig, 1877. Middleton, *Ancient Rome in* 1885, gives some account of existing houses in Rome. Information about the Roman houses of Britain is mostly scattered through the publications of various societies, such as *Archaeologia*, the *Archaeological Journal*, the *Journal of the Archaeological Association*, and the Proceedings of a large number of local societies. See also a well-illustrated work by Thomas Morgan, *Romano-British Mosaic Pavements*, London, 1886. Wright's *The Celt, the Roman, and the Saxon*, London, 1875, has much information in a small space, and there are many separate monographs on single houses.) [J. H. M.] [W. S.]

DONARIA (ἀναθήματα or ἀνακείμενα) are names by which the ancients designated presents made to the gods, either by individuals or communities. Sometimes they are also called *dona* or δῶρα. The belief that the gods were pleased with costly presents was as natural to the ancients as the belief that they could be influenced in their conduct towards men by the offering of sacrifices; and, indeed, both sprang from the same feeling. Presents were mostly given as tokens of gratitude for some favour which a god had bestowed on man; but in many cases they were intended to induce the deity to grant some special favour. At Athens, every one of the six thesmothetae, or, according to Plato (*Phaedr.* p. 235 D), all the nine archons, on entering upon their office, had to take an oath, that if they violated any of the laws, they would dedicate in the temple of Delphi a golden statue of the size of the man who dedicated it (ἀνδριάντα χρυσοῦν ἰσομέτρητον, see Plut. *Sol.* 25; Pollux, viii. 85; Suidas, *s. v.* Χρυσῆ Εἰκών: Heraclid. Pont. c. 1). In this last case the anathema was a kind of punishment, in which the statue was regarded as a substitute for the person forfeited to the gods. Almost all presents of this kind were dedicated in temples, to which in some places an especial building was added, in which these treasures were preserved. Such buildings were called θησαυροί (treasuries); and in the most frequented temples of Greece many states had their separate treasuries. (Boeckh, *P. E.* p. 441 ff.) The act of dedication was called ἀνατιθέναι, *donare*, *dedicare*, or *sacrare*.

The custom of making donations to the gods is found among the ancients from the earliest times of which we have any record down to the introduction of Christianity; and even after that period it was, with some modifications, observed by the Christians during the Middle Ages. In the heroic ages of Grecian history the anathemata were of a simple description, and consisted of chaplets and garlands of flowers. A very common donation to the gods seems to have been that of locks of hair (κόμης ἀπαρχαί), which youths and maidens, especially young brides, cut off from their heads and consecrated to some deity. (Hom. *Il.* xxiii. 141; Aeschyl. *Choeph.* 6; Eurip. *Orest.* 96 and 1427, *Bacch.* 493, *Helen.* 1093; Plut. *Thes.* 5; Paus. i. 37, § 2.) This custom in some places lasted till a very late period: the maidens of Delos dedicated their hair before their wedding to Hecaerge (Paus. i. 43, § 4), and those of Megara to Iphinoe. Pausanias (ii. 11, § 6) saw the statue of Hygieia at Titane covered all over with locks of hair which had been dedicated by women. Costly garments (πέπλοι) are likewise mentioned among the earliest presents made to the gods, especially to Athena and Hera. (Hom. *Il.* vi. 293, 303.) At Athens the sacred πέπλος of Athena, in which the great adventures of ancient heroes were worked, was woven by maidens every fifth year, at the festival of the great Panathenaea. [ARRHEPHORIA.] (Compare Aristoph. *Av.* 792; Pollux, vii. 50; Wesseling, *ad* Diod. Sic. ii. p. 440.) A similar peplus was woven every five years at Olympia, by sixteen women, and dedicated to Hera. (Paus. v. 16, § 2.)

At the time when the fine arts flourished in Greece the anathemata were generally works of art of exquisite workmanship, such as high tripods bearing vases, craters, cups, candelabras, pictures, statues, and various other things. The materials of which they were made differed according to circumstances; some were of bronze, others of silver or gold (Athen. vi. p. 231, &c.), and their number is to us almost inconceivable (Demosth. *Olynth.* iii. p. 35). The treasures of the temples of Delphi and Olympia, in particular, surpass all conception. Even Pausanias, at a period when numberless works of art must have perished in the various ravages and plunders to which Greece had been exposed, saw and described an astonishing number of anathemata. Many works of art are still extant, bearing evidence by their inscriptions that they were dedicated to the gods as tokens of gratitude. Every one knows of the magnificent presents which Croesus made to the god of Delphi. (Herod. i. 50, &c.) It was an almost invariable custom, after the happy issue of a war, to dedicate the tenth part of the spoil (*ἀκροθίνιον*, *ἀκρόλειον*, or *πρωτόλειον*) to the gods, generally in the form of some work of art. (Herod. viii. 82, 121; Thucyd. i. 132; Paus. iii. 18, § 5; Athen. vi. p. 231, &c.) Sometimes magnificent specimens of armour, such as a fine sword, helmet, or shield, were set apart as anathemata for the gods. (Aristoph. *Equit.* 792, and Schol.) The Athenians always dedicated to Athena the tenth part of the spoil and of confiscated goods; and to all the other gods collectively, the fiftieth part. (Demosth. *c. Timocr.* p. 738, &c.) After a seafight, a ship, placed upon some eminence, was sometimes dedicated to Neptune. (Thucyd. ii. 84; Herod. viii. 121.) It is not improbable that trophies which were always erected on the field of battle, as well as the statues of the victors in Olympia and other places, were originally intended as tokens of gratitude to the god who was supposed to be the cause of the success which the victorious party had gained. We also find that on some occasions the tenth part of the profit of some commercial undertaking was dedicated to a god in the shape of a work of art. Respecting the large and beautiful craters dedicated to the temples, see the article CRATER.

Individuals who had escaped from some danger were no less anxious to show their gratitude to the gods by anathemata than communities. The instances which occur most frequently are those of persons who had recovered from an illness, especially by spending one or more nights in a temple of Asclepius (*incubatio*). The most celebrated temples of this divinity were those of Epidaurus, Cos, Tricca, and, at a later period, that of Rome. (Plin. *H. N.* xxix. § 4; compare F. A. Wolf, *Vermischte Schriften und Aufsätze*, p. 411, &c.) Cures were also effected in the grotto of Pluto and Proserpina, in the neighbourhood of Nisa. (Strab. ix. p. 437, xiv. p. 649.) In all cases in which a cure was effected presents were made to the temple, and little tablets (*tabulae votivae*) were suspended on its walls, containing an account of the danger from which the patient had escaped, and of the manner in which he had been restored to health. Some tablets of this kind, with their inscriptions, are still extant. (Wolf, *l. c.* p. 424, &c.) From some relics of ancient art we must infer that in some cases, when a particular part of the body was attacked by disease, the person, after his recovery, dedicated an imitation of that part in gold or silver to the god to whom he owed his recovery. Persons who had escaped from shipwreck usually dedicated to Neptune the dress which they wore at the time of their danger (Hor. *Carm.* i. 5, 13; Verg. *Aen.* xii. 768); but if they had escaped naked, they dedicated some locks of their hair. (Lucian, *de Merc. Cond.* c. 1, vol. i. p. 652, ed. Reiz.) Shipwrecked persons also suspended votive tablets in the temple of Neptune, on which their accident was described or painted. Individuals who gave up the profession or occupation, by which they had gained their livelihood, frequently dedicated in a temple the instruments which they had used, as a grateful acknowledgment of the favour of the gods. The soldier thus dedicated his arms, the fisherman his net, the shepherd his flute, the poet his lyre, cithara, or harp, &c.

It would be impossible to attempt to enumerate all the occasions on which individuals, as well as communities, showed their gratefulness towards the gods by anathemata. Descriptions of the most remarkable presents in the various temples of Greece may be read in the works of Herodotus, Strabo, Pausanias, Athenaeus, and others.

The custom of making presents to the gods was common to Greeks and Romans, but among the latter the donaria were neither as numerous nor as magnificent as in Greece; and it was more frequent among the Romans to show their gratitude towards a god, by building him a temple, by public prayers and thanksgivings (*supplicatio*), or by celebrating festive games in honour of him, than to adorn his sanctuary with beautiful and costly works of art. Hence the word *donaria* was used by the Romans to designate a temple or an altar, as well as statues and other things dedicated in a temple. (Verg. *Georg.* iii. 533; Ovid, *Fast.* iii. 335.) The occasions on which the Romans made donaria to their gods are, on the whole, the same as those we have described among the Greeks, as will be seen from a comparison of the following passages:—Liv. x. 36, xxix. 36, xxxii. 30, xl. 40, 37; Suet. *Claud.* 25; Tacit. *Ann.* iii. 71; Plaut. *Amphitr.* iii. 2, 65; *Curcul.* i. 1, 61, ii. 2, 10; Aurel. Vict. *Caes.* 35; Gellius, ii. 10; Lucan. ix. 515; Cic. *de Nat. Deor.* iii. 37; Tibull. ii. 5, 29; Hor. *Epist.* i. 1, 4; Stat. *Silv.* iv. 92. [L. S.]

DONA'TIO or gift is an agreement between two persons, by which one gives without remuneration and without being under any legal obligation (*nullo jure cogente*), and the other accepts something that has a pecuniary value.

It is properly called an agreement, because it is not sufficient that there be a person to give; there must also be a person who consents to accept the gift. It is essential to the notion of gift that the giver gives in order that the property of the receiver may be increased by the gift: there must be the *animus donandi*. Further *donatio* in its strictly technical sense implies that the increase made by the gift to the property of the donee is caused by an equivalent diminution in the property of the donor. The object of gift may be anything which increases the property of the donee, as transfer of ownership or possession to him, entitling him to sue as creditor, releasing him from a debt. A gift of the whole of a person's property is not a case of universal succession; and consequently the several parts of the donor's property must be separately conveyed to the donee: hence, also, the donee does not incur any obligation to the creditors of the donor on account of the debts of the latter. The donor himself can, however, compel the donee to satisfy his debts from the property which the donee has received; for a *donatio* is regarded as comprising no more than the property after the debts are deducted. A gift of property made by an insolvent debtor was invalid as against his creditors.

According to Roman law, as it was in the time of the classical jurists, a mere agreement to give or *pactum donationis* was not legally valid; it was necessary either that the agreement should be in the form of a stipulation or carried out at once by delivery to the donee: but under the legislation of Justinian the donee could sue the donor on a mere *pactum donationis.* (Cod. viii. 34, 35, § 5; *Inst.* ii. 7, 2.) The Lex Cincia de donis ac muneribus—a plebiscitum proposed by the tribune M. Cincius Alimentus, B.C. 204—placed restrictions on the amount which might be given by way of *donatio;* what the prescribed limit was is uncertain. (Savigny, *Verm. Schr.* i. 12; Huschke, *Gaius*, § 3.)

The limitations of the *lex* as to the amount which might be given did not apply if the gift was conveyed to the donee by *in jure cessio* or *mancipatio*, and if the donee acquired interdict possession of the property so conveyed. Certain classes of persons (*exceptae personae*) were excepted from the operation of the law. The Lex Cincia is a *lex imperfecta;* i.e., gifts made in violation of it were not void, nor were the parties who made such a gift subject to any penalty; but no action could be successfully maintained for enforcing a gift contrary to the law, since it could be met by the *exceptio legis Cinciae.* In the later period of Roman law the forms of *in jure cessio* and *mancipatio* became obsolete: hence a new form called *insinuatio* was used for perfecting gifts, which consisted in a declaration of gift made before a public functionary. Justinian only required *insinuatio* for gifts above 500 solidi in amount. If the formality of *insinuatio* was not observed, the gift was invalid as to all the amount that exceeded 500 solidi. Certain near relations of a man might after his death impugn the validity of a *donatio inofficiosa*, which he had made, by the *querela inofficiosae donationis*, and the donor could revoke his gift if the donee was guilty of such gross ingratitude towards him as was defined by statute. (*Inst.* ii. 7; Dig. 39, 5; Cod. viii. 54; Paulus, v. 11; *Fragm. Vat.* 260–316; Savigny, *System*, iv. §§ 142–176; Schilling, *Institutionen*, iii. 741–797.) [G. L.] [E. A. W.]

DONATIO INTER VIRUM ET UXOREM. It was a rule of Roman law, which had its origin in custom, that neither husband nor wife could during marriage make a gift of anything to one another. The object of this rule is said to be the preservation of the marriage relation in its purity, as an agreement subsisting by affection and not one which should be maintained in a discreditable manner by means of gifts from one party to the other. Thus one married person was prevented from taking advantage of the weakness of the other. The wife required this protection as well as the husband, because, when there was no *conventio in manum*, the wife retained all rights of property not surrendered on her marriage [DOS], and she might during the marriage acquire separate property. Only a *donatio* by which the donor's property is lessened is within the prohibition. A *donatio* is not invalid under this law unless made between persons actually married, so as to take effect during the continuance of the marriage: thus a valid gift might be made between a man and a woman before or after marriage, or even during marriage, if it was not to take effect till after the marriage. In accordance with the above rule contracts and conveyances between husband and wife had no effect; thus stipulations were not binding: *mancipatio, in jure cessio,* and *traditio* conveyed no ownership; property which had been made over could be recovered by action. The rule could not be defeated in an indirect manner by means of a transaction between one of the parties to a marriage and a third person (*per interpositam personam*), as by an agreement of the husband with his wife's creditor, to be substituted as debtor in her place. The question whether one of the parties to a marriage, who has obtained possession from a third person of property belonging to the other, can acquire a title to it by usucapion, is determined by the following rules:—

A party to a marriage, who knows at the time of obtaining possession of property that the other party to the marriage is owner of it, cannot acquire because *bona fides* at the commencement of possession is essential to usucapion; but if such party has no knowledge of the ownership of the other, a title by usucapion is possible. If, however, before the time of possession is complete, both parties become aware that the ownership belongs to one of them, usucapion is prevented, since an acquisition under these circumstances would arise from a *donatio inter virum et uxorem.* If, before the ownership is acquired by usucapion, either the husband alone or the wife alone discovered that it was the property of the other, this would not destroy the right to acquire the property by usucapion, because in this case there would be no agreement and consequently no *donatio.* (Dig. 24, 1, 44.) The general rule as to donations between husband and wife is subject to some exceptions. Thus gifts of a trivial kind, as birthday presents, were allowed; if a house belonging to one of the parties to a marriage were destroyed by fire, it might be rebuilt at the expense of the other; a woman might make gifts to her husband to qualify him for certain honours and other distinctions (Dig. 24, 1, 40, § 42); but the most important relaxation in the law as to these donations was that in the time of Septimius Severus they were declared valid if the donor died first without having revoked his gift. (Dig. 24, 1; Cod. v. 16; Glück, xxv. p. 422, &c.; Savigny, *System*, iv. §§ 162–164.) [G. L.] [E. A. W.]

DONATIO MORTIS CAUSA. A *donatio mortis causa* has been defined to be "a gift which a man makes with reference to the event of his death, and so makes that the right of the donee either commences with the death of the donor, or is in some suspense until the death." (Cf. Festus, *s. v.*: "mortis causa donatio cujus mors fuit causa.") It resembles, in some respects, a *donatio* proper or gift; in others, it resembles a legacy. It was necessary that the *donatio* should be accepted by the donee, and consequently there must be a conveyance by *traditio* or delivery, or at least a contract by an offer which is assented to; whereas a *legatum* only requires a unilateral act of a testator. A *donatio mortis causa* differed from a testamentary bequest in that it was regarded as a disposition of property made in the donor's lifetime, and not a charge on his inheritance (Dig. 39, 6, 28, "praesens praesenti dat;" Theoph. *ad* Inst. ii. 7, 1, ἀπὸ ζῶντος εἰς ζῶντα γίνεται). On the other hand, it was not intended to have the effect of depriving the donor of his right to his property in his lifetime, but only to act in the event of his death to the detriment of his heir (Inst. ii. 7, 1: "Et in summa, mortis causa donatio est, cum magis se quis velit habere quam eum, cui donatur, magisque eum, cui donat, quam heredem suum"). As the gift was not complete until the death of the donor, and as it had the benefit of a particular person for its object, it became void in the event of the donor surviving the donee. The donor always had it in his power to revoke his gift, unless he had expressly agreed not to do so. There were, according to Julianus (Dig. 39, 6, 2), three kinds of *donatio mortis causa*:—1. When a man under no apprehension of present danger, but moved solely by a general consideration of mortality, makes a gift to another. 2. When a man, being in immediate danger, makes a gift to another in such manner that the thing immediately becomes the property of the donee. 3. When a man, moved by the consideration of danger, gives a thing in such manner that it shall become the property of the donee only in case the giver dies. It is to be noticed that the gift was equally subject to revocation, whether the property passed immediately to the donee, or was only to do so on the death of the donor. When a gift was made on account of some imminent danger, it was *ipso jure* revoked by the donor's escape from the danger. In course of time most of the rules relating to legacies were made applicable to donations. No person could make or take under a *donatio mortis causa* who was not capable of making or acquiring a testamentary bequest. Property subject to such a gift was liable for the debts of a deceased person as if it were part of his inheritance. The heir could deduct his Falcidian fourth from it. A *donatio mortis causa* could not be used as a means of defeating the claims of those who could not have been disinherited by the deceased. In these and other respects we find donations assimilated to legacies in the legislation of Justinian. Still, they differed in some respects from legacies: for instance, such a donation could take effect, though there was no person to take the inheritance; and if it did not exceed five hundred solidi, it could be made in an informal way, though otherwise the forms of a codicil were required. It could only be constituted by agreement. The English law of *donationes mortis causa* is first stated by Bracton (ii. c. 26) in the very words of the Digest (39, 6, 2, &c.); and the present law is expounded by Lord Hardwicke (Ward *v.* Turner, 2 Ves. 431); but what he there states to be the English law is not exactly the law as stated by Bracton. Tradition or delivery is considered one essential of such a gift, and the death of the donor in the life of the donee is another essential. The gift is not an absolute gift, but a gift made in contemplation of death, and it is revocable. It does not prevail against the creditors of the deceased, and by statute it has been made subject to legacy duty. (Dig. 39, 6; Cod. viii. 57; Inst. Just. ii. 7, § 1; W. Müller, *Ueber die Natur der Schenkung auf Todesfall* (1827); Hasse, *Rhein. Mus.* ii. 300, iii. 1 (1828); V. Schröter, *Zeitschr. für Civilrecht und Process*, ii. 4 (1829); Wiederhold, *ib.* xv. 4 (1841); Savigny, *System*, iv. §§ 170–174; Vangerow, *Pandekten*, ii. §§ 561–563; Windscheid, *Pandekten*, ii. § 369, iii. §§ 675, 676.) [G. L.] [E. A. W.]

DONA'TIO PROPTER NU'PTIAS. Subsequent to the time of the classical jurists under the early Christian emperors, it became customary for a man, when about to marry, to make a *donatio* to his future wife as an equivalent to the *dos* which was brought into settlement on her part. On account of the correspondence between this kind of *donatio* and *dos*, it is called in Greek ἀντίφερνα, and in Latin *contrados*, *antidos*. The meaning of the term *donatio propter nuptias* is explained in the Institutes of Justinian. It was originally called *donatio ante nuptias* because, as there could be no *donatio* between husband and wife, it was necessary that the *donatio* should be ante-nuptial; but when, by an enactment of Justin I., it became legal to increase the *donatio* after marriage, and by a further enactment of Justinian even to constitute it after marriage, the old term was no longer suitable, and so *donatio propter nuptias* was substituted for it by Justinian. The object of the *donatio propter nuptias* seems to have been to secure a provision for the wife. If a *dos* had been given by the wife, or on behalf of the wife, and the husband by the terms of the settlement was entitled to it, or to a part of it in the case of the wife's death, it was usual for the husband, or some one on the part of the husband, to secure something to the wife in the event of her surviving him. The father of the husband was under the same obligation to make a *donatio ante* or *propter nuptias* as the father of the wife to provide a *dos*. (Cod. v. 11, 7.)

By a constitution of the Emperor Leo it was absolutely required that the amount secured in this way to the wife should be equal to the amount of *dos* the husband might be entitled to. (Cod. v. 14, 9, 10.) According to the legislation of Justinian, the *donatio* and the *dos* must be equivalent: if the *dos* was increased during marriage, a similar increase of the *donatio* was also necessary. (Nov. 97, c. 1, 2.) The husband had, during the marriage, the legal and actual control of the property given as *donatio*, but such part of it as consisted in things immovable he could not alienate or pledge even with the consent of the wife, unless she ratified her previous consent after two years from the time of giving it, and the husband had other property to satisfy her claim. The wife was given by law a hypothec over the husband's entire property as security for the *donatio*. If the husband became impoverished during the marriage, the wife was entitled to the profits of the *donatio* for her support; and the property was not liable to the demands of his creditors.

If the marriage was dissolved by the death of the wife or by divorce not caused by the husband's fault, the *donatio* became the absolute property of the husband, unless some person who made the *donatio* was entitled to the reversion of it by the agreement. If the husband died, the wife had a usufruct in the entire *donatio:* she was also entitled to share with her children in the ownership of it. (Nov. 127, c. 3.)

The special provisions, such as the necessity of *insinuatio*, which applied to the ordinary *donatio*, were dispensed with in this case. The opinions of modern jurists are much divided as to the notion, purpose, and law of the *donatio propter nuptias*. (Cod. v. 3; Cod. Theod. iii. 5; *Inst.* ii. 7, 3; Glück, xxv. pp. 274–329.) [E. A. DOS (*προίξ, φερνή*), dowry. I. GREEK. In proof of the barbaric simplicity of ancient Greek custom, Aristotle instances the facts that they went armed and bought their wives (*Pol.* ii. 8, § 19 = p. 1268 b, 39). The presents made to the bride's father, or, to speak plainly, the price paid for her, was called *ἕδνα* or *ἔεδνα*: according to the generally accepted etymology of Curtius, who refers it to the root *ἁδ* (*σFαδ*) found in *ἁνδάνω, ἡδύς, suavis*, this would mean literally a *douceur* or "sweetener." This was, no doubt, originally a compensation for the loss of the daughter as a domestic servant; and the English law still recognises, in cases of seduction, an action by the father for "loss of service." As Grote has pointed out, the customs of the early Jews were in this respect completely Homeric (Gen. xxxiv. 12; Ex. xxii. 16, &c.); but among the ancient Germans they were modified; the husband gave presents, not to his wife's father, but to herself (Tac. *Germ.* 18). Grote further shows, in an excellent note, the exact correspondence between the old Greek *ἕδνα* and the *mundium* of the Lombard and Alemannic laws; a term found also in the laws of England under Ethelbert, of Denmark, and of Sweden (pt. i., ch. 20, i. 475 n.). This custom of the heroic times is illustrated by many passages in Homer: the bridegroom gives *ἀπερείσια ἕδνα* (*Il.* xvi. 178; *Od.* xix. 529); *μυρία ἕδνα* (*Il.* xvi. 190, xxii. 472; *Od.* xi. 282). The amount is reckoned in oxen and other cattle (*Il.* xi. 243), whence *παρθένοι ἀλφεσίβοιαι* of girls whose attractions command a high price in the matrimonial market (*Il.* xviii. 593; *H. Ven.* 119). On the other hand, to grant a daughter without *ἕδνα* was a high compliment to the intended son-in-law; Agamemnon offers it to Achilles (*Il.* ix. 141 ff.), Alcinous to Ulysses (*Od.* vii. 311 ff.). Sometimes the *ἕδνα* appear to come from the bride's family (*Od.* i. 277; repeated ii. 196); these must be either really a marriage portion, the Homeric *δῶρα*, later *φερνή* (Nitzsch, *ad loc.*; L. and S. *s. v.*; Schömann, *Antiq.* i. 49, E. T.), or more probably "the *ἕδνα* were applied by the bride's friends, wholly or in part, to furnish her outfit and provide the wedding feast; and thus they were, so far at least, indirectly returned to the bridegroom's side" (Merry and Riddell, *ad loc.*). In two other passages, however, referred to by the same editors and by Schömann (*l. c.*), *ἕδνα* may very well bear the usual sense: *ὡς κ' αὐτὸς ἐεδνώσαιτο θύγατρα* (*Od.* ii. 53) may mean simply "that he may give his daughter in marriage" (in exchange for *ἕδνα*); and *ἐεδνωταὶ κακοὶ* (*Il.* xiii. 382) may be "drivers of hard bargains" (cf. *συνώμεθα*, "agree," in the preceding line), not "niggardly in giving back the *ἕδνα*."

We must hold with Aristotle that in the heroic age the purchase of wives was a reality, not, as Schömann thinks, a mere ceremonial survival. It does not follow that it was not usual for the family to give a woman a portion when she married; especially in the richer, *i.e.* mostly the royal and noble, classes. Andromache and Penelope are spoken of as *ἄλοχοι πολύδωροι* (*Il.* vi. 394; *Od.* xxiv. 294), or wives who brought many gifts to their husbands; other relatives and friends no doubt contributing presents in addition to the bride's portion from her father. These are called by the general name of *δῶρα* or gifts: there is no sufficient proof that the dowry so bestowed was also described by the same name of *ἕδνα*, as Schömann maintains; and the terms *φερνή* and *προίξ* are undoubtedly post-Homeric. The *μείλια* offered by Agamemnon to Achilles are not specially "wedding presents," as often incorrectly explained (Hesych. *s. v.* *ἕδνα*, and many moderns); but, as the etymology implies, "soothing gifts," designed to propitiate the wrathful hero. If, on the death of the husband, the widow was not permitted by the heirs to remain in the house, the money she brought with her had to be refunded (*Od.* ii. 132). On the other hand, it is reasonable to suppose that proved adultery on the part of the wife involved the return of the *ἕδνα* or purchase-money to her husband, though curiously enough the only authority for this is the mythical case of Hephaestos and Aphrodite (*Od.* viii. 318). As was observed in ancient times, there is no direct mention of divorce in the Homeric poems.

At some time which cannot be determined, but which was undoubtedly earlier than the age of Solon, the dower in the modern sense arose, and the bride was portioned by her father or guardian (*κύριος*). In its origin this custom must have implied a return of the price paid; and conversely, during the period of transition from one system to the other, the father would doubtless regulate his demands with the view of indemnifying himself for the dowry to be expected when the marriage came off. Hence in lyric and tragic poetry we find *ἕδνα* used in the latter sense (Pind. *Ol.* ix. 16; Eurip. *Androm.* 2, 153, 942). When Euripides (*Med.* 236) makes Medea complain, among the disadvantages of her sex, that they had to purchase husbands with great sums of money (*χρημάτων ὑπερβολῇ*), the Scholiast points out the anachronism; the poet is transferring to the heroic age the practice of his own time.

The Doric term for a portion was δωτίνη, and Müller (*Dor.* iii. 10) observes that we know for certain that daughters in Sparta had originally no dower, but were married with a gift of clothes only; afterwards they were at least provided with money and other personal property (Plut. *Lysand.* 30). But in the time of Aristotle (*Pol.* ii. 9, § 15 = p. 1270, 23), so great were the dowers given and so large the number of ἐπίκληροι, or female representatives of families (οἶκοι), that nearly two-fifths of the whole territory of Sparta had come into the possession of females. At Athens the terms φερνή and προίξ were probably (according to K. F. Hermann and his editor Blümner) at first distinguished; φερνή being the outfit or *trousseau* and the wedding presents which the bride brought to her husband; προίξ the sum in money or realty which her father "settled" upon her (to use the modern expression), of which the husband had the usufruct, but for which, as we shall see, he had to give security. In aftertimes the words φερνή and προίξ were used indiscriminately; the Roman *dos* is usually rendered in Greek by φερνή, whence *parapherna*, *paraphernalia* [Dos, Roman]. The statement in Plutarch (*Sol.* 20) that the Athenian legislator did not allow a woman, unless she were an ἐπίκληρος, to have any φερνή or dower except a few clothes and articles of furniture, must therefore be understood in the earlier sense of φερνή, not as excluding any settlement of money upon her; though Plutarch no doubt took it in the later sense, and attributed to Athenian institutions a more Spartan simplicity than really belonged to them. In the orators we find that the dowers of women formed a considerable part of the taxable capital of the state (Boeckh, *P. E.* p. 514 = *Sthh.*^{3} i. 598); even with poor people they varied from ten to a hundred and twenty minae, and Isaeus says that no decent man would give his legitimate daughter less than a tenth of his property (*Or.* 3 [*Pyrrh.*], § 51). Hipparete, as the daughter of Hipponicus the richest man in Athens, brought Alcibiades ten talents on her marriage, with the promise of ten more on the birth of a child. Yet, according to Demosthenes, even five talents were more than was usually given even by wealthy men (*c. Steph.* i. p. 1112, § 35; p. 1124, § 74). Dowries of five or ten talents in Lucian (*Dial. Meretr.* 7, p. 298, Reitz) and the comic poets must be ascribed, as Boeckh puts it, to the liberal donations of comedy. The daughters of Aristides received from the state, as a portion, only thirty minae each (Plut. *Arist.* 27; Aeschin. *c. Ctes.* § 258). We may observe, too, that a dowry was thought necessary to mark the distinction between a wife and a παλλακή: hence, persons who took portionless girls appear to have given their guardians a ὁμολογία προικός (Isae. *l. c.* § 35), or acknowledgment in writing by which the receipt of a portion was admitted, in proof of the legitimacy of the marriage. Compare the proverb νύμφη δ' ἄπροικος οὐκ ἔχει παρρησίαν (Menand. *Monost.* 371, Meineke). On gifts to παλλακαί themselves, see CONCUBINA (Greek). Moreover, poor heiresses (τῶν ἐπικλήρων ὅσαι θητικὸν τελοῦσιν) were either married or portioned by their next of kin, according to a law which fixed the amount of portion to be given at five minae by a Pentacosiomedimnus, three by a Horseman, and one and a half by a Zeugites (Dem. *c. Macart.* p. 1068, § 54: cf. Ter. *Phorm.* ii. 1, 75, ii. 2, 62; EPICLEROS).

Some interesting light is afforded by inscriptions as to the practice in other less-known states. A long inscription of the Macedonian period recently discovered in Myconos gives a sort of marriage register of the island (Ἀθήναιον ii. 235 ff. (1873); *Hermes*, viii. 191 ff.; *Bull. de Corr. hellén.* vi. 590). In one case we find that out of a dowry of 1300 drachmas 200 are to be in clothes (l. 4–7); in another, 300 εἰς ἐσθῆτα (*sic*) out of 700 (l. 17); in a third, 1000 drachmas equally divided between outfit and money; the highest figure given is 3500 and two female slaves (l. 32). Another, from Tenos, is in the British Museum (printed in *C. I. G.* 2338). Land and houses form part of a dowry in *C. I. G.* (add.) 2347 c; Ross, *Inscr. Ined.* p. 126; cf. Dittenberger in *Hermes*, xvi. [illegible] (1881). At Massilia in Strabo's time (iv. p. 181) no higher dowry was allowed than 100 *aurei* in money, 5 in clothes and 5 in gold trinkets (Hermann-Blümner, *Privatalterth.* p. 262 ff.; Fränkel on Boeckh, n. 187).

The security exacted from the husband consisted generally of a piece of real property (ἔγγειος οὐσία), and was called ἀποτίμημα, the usual word for a mortgage (cf. L. and S. s. v. ἀποτιμᾶν, ἀποτίμημα). Demosthenes, proceeding to levy execution on the house and lands of Aphobus, finds them mortgaged to Onetor, whose sister Aphobus had married and divorced, and who now, as her κύριος, holds them as security for her dowry: the young orator's case is, that mortgage and divorce are both fictitious, and that Aphobus and Onetor are really in collusion to keep him out of his estate (*c. Onet.* i. *passim*). The dowry would have to be accounted for in other cases besides those noticed under DIVORTIUM. Thus, if a husband died, and the wife left the family (ἀπέλιπε τὸν οἶκον), she might claim her portion even though children had been born (Dem. *c. Boeot. de Dot.* p. 1013, § 6); and in the event of the wife dying without issue, her portion reverted to her κύριοι (Isae. *Or.* 8 [*Ciron.*], § 8; *Or.* 3 [*Pyrrh.*], § 36). After the death of the wife, her portion belonged to her children, if she had left any; and if they were minors, the interest was set apart for their education and maintenance (Dem. *op. cit.* p. [illegible], § 50; p. 1026, § 59). When the husband died before the wife, and she remained in the family (μενούσης ἐν τῷ οἴκῳ), the law appears to have given her portion to her sons, if of age; subject, however, to an allowance for her support (Id. *c. Phaenipp.* p. 1047, § 27). The actions for dowry and alimony (προικὸς καὶ σίτου), discussed elsewhere as they affected the husband [DIVORTIUM], lay also against the heirs (οἱ τὸν κλῆρον ἔχοντες) who wrongfully withheld her rights from the widow; and such actions would be brought by her guardians (Isae. *Or.* 3 [*Pyrrh.*], § 78; Hudtwalcker, *Ueber die Diäteten*, n. 84). We may add that a δίκη προικὸς was one of the ἔμμηνοι δίκαι or suits that might be tried every month (Pollux, viii. 63, 101). Compare Schömann, *Antiq.* i. 516, E. T., and especially *Att. Process*, pp. 416–427 (= 513–527 Lips.). [R. W.] [W. W.]

II. ROMAN. *Dos* (*res uxoria*) is everything brought to the husband, or to the husband's father (if the husband was in his father's power), on the part of the wife, as her contribution towards supporting the expenses of the marriage state (*onera matrimonii*).

The whole property of a married woman might be made *dos*, or only a part of it: that which was not made *dos* continued to be her own separate property, and was termed *parapherna;* over this the husband had no control.

The *dos* belonged during the marriage solely to the husband, although the wife had an interest in it. It might consist of property of any kind, *i.e.* of anything by which the substance of the husband could be increased; so rights *in personam* as well as rights *in rem* might belong to the dotal estate. The husband did not succeed to *dos* by way of universal succession, and consequently the transfer of *dos* had no effect on the relations of the wife to her creditors. It is a disputed point whether there could be *dos* properly so called, under the early system of marriage, by which the husband acquired *manus* over the wife; but the institution of *dos* in a distinct legal form belongs to the later marriage, in which the wife is capable of holding separate property.

It was the duty of the wife to provide her husband with *dos*, but this duty was only a natural one, *i.e.* she could not be legally compelled to fulfil it. A woman herself had a legal claim against certain persons, that they should provide her with a *dos*, viz. against her father and other paternal ascendants, and under exceptional circumstances against her mother.

Dos was divided into two kinds, *dos profectitia* and *adventicia*, a division which had reference to the source from which the *dos* was derived, and to the demand for its restitution after the purposes were satisfied for which it was given. That *dos* is *profectitia* which was given by the father or other paternal ascendant of the wife, whether she was in the power of such ascendant or not. All other *dos* is *adventicia*. The *dos recepticia* was a species of *dos adventicia*, and was given by some one other than a paternal ascendant, on condition that it should be restored to him on the death of the wife.

Dos is created (*constituta*) when the agreement to give it is entered into: the actual performance of the dotal agreement may take place immediately on the agreement being made (*dotis datio*), or after an interval.

Dotis dictio was an old form by which certain persons bound themselves to be answerable for *dos* (Ulp. vi. 1); it became obsolete.

The ordinary mode of promising *dos* was by means of a stipulation (*dotis promissio*), but from the time of the Emperor Theodosius II. an informal promise of *dos* was legally binding, even though it were a mere *pollicitatio* or promise without an acceptance. (Cod. Theod. iii. 13, 4; Cod. iii. 11, 6.)

The husband was owner of the *dos*, and so had a right to the sole management of it, and to the *fructus* derived from it; but his power of alienation was to some extent limited. He could dispose freely of such parts of the *dos* as consisted of things movable; but the Lex Julia (de adulteriis) prevented him from alienating dotal land (*fundus dotalis, dotalia praedia*, Cic. *ad Att.* xv. 20; *dotales agri*, Hor. *Ep.* i. 6-21) without the wife's consent, or mortgaging it even with her consent (Gaius, ii. 63; *Inst.* ii. 8, pr.). The legislation of Justinian prevented alienation with the wife's consent, and it declared the law on the subject applicable to provincial land. A further legal protection of *fundus dotalis* consisted in the fact that it was incapable of being acquired by usucapion.

Dos is put an end to by the termination of the marriage for which it was created: whereupon the question arises as to the devolution of the property. If the marriage was dissolved by the death of the wife, her father or other paternal ascendant was entitled, before Justinian's change in the law, to recover the *dos profectitia*, unless it had been agreed in such case that the *dos* should belong to the husband; but if there were children of the marriage, the husband might deduct a portion on account of each child. (Ulp. *Frag.* vi. 4; *Frag. Vat.* 108.) The *dos adventicia*, in case of the wife's death, became the absolute property of the husband, unless the person who gave it had stipulated that it should be returned to him (*dos recepticia*), but Justinian also changed the law on this point. According to his legislation the wife was as a rule entitled both to *dos profectitia* and *adventicia* in case the marriage was dissolved by the death of the husband; and if the marriage terminated by her own death, her claim to the *dos* devolved on her *heredes*. A paterfamilias who had endowed a filiafamilias was, however, allowed to recover what he had given, and the claim of the wife to the *dos* might be excluded by the express terms of the dotal agreement (Cod. v. 13, 1). In case of divorce the wife forfeited her claim to *dos* if the divorce was due to her misconduct; otherwise her rights were the same as when the marriage was terminated by death.

The *dos* could not as a rule be claimed during the marriage; but if the husband were insolvent or if he wasted the *dos*, it could be recovered by the wife. The husband could not restore the *dos* of his own accord during the marriage, since the wife was incapable of giving him a good discharge; but there were some exceptions to this rule, *e.g.* the *dos* might be given up for the purpose of paying the wife's debts, or in order to maintain or ransom from captivity near kinsfolk. The husband was bound to restore immovable things belonging to the *dos*, immediately on the dissolution of the marriage; movable and incorporeal things within a year. (Cod. v. 13, 1, § 7.)

What should be returned as *dos* depended on the fact of what was given as *dos*. If the things given were ready money (*dos numerata*, Cic. *pro Caecina*, c. 4), or other things of an exchangeable kind, the husband was bound to restore the like sum or quantity. If they were not of an exchangeable kind, he was bound to restore the same specific things. If the things cannot be restored, or cannot be restored uninjured, he must make good all loss or deterioration which has happened on account of his wilful acts or on account of such negligence as he is not in the habit of showing in his own affairs. The husband was entitled to be reimbursed for all necessary expenses (*impensae necessariae*): as, for instance, for necessary repairs of houses incurred by him in respect of the dotal property, and also for outlays which had improved the value of the property (*impensae utiles*). If things, whether immovable or movable, were valued when they were given to the husband, this was a species of sale, and the husband was looked on as holding the price of the things, and not the things themselves, as *dos* (*dos aestimata*).

The husband, or his heirs if he were dead, were liable to an *actio ex stipulatu de dote reddenda*, which was an action *stricti juris*, if there was an express agreement to restore, and by an *actio rei uxoriae* or *dotis*, which was an action *bonae fidei*, if there was no agreement. Justinian made the *actio ex stipulatu* applicable in all cases, and did away with the *actio rei uxoriae;* at the same time he converted the *actio ex stipulatu* when brought on account of *dos* into a *bonae fidei actio*.

The wife might by agreement have a special security for *dos*, and in case of necessity she might compel the husband to give such security (Dig. 24, 3, 22, § 8), otherwise, previous to Justinian's change in the law, she was unsecured except in respect of *fundus dotalis;* but she had some privileges over her husband's other unsecured creditors. Justinian provided that on the dissolution of the marriage the ownership of dotal property should pass to the wife, with all the legal remedies for securing such parts of the *dos* as still existed; that all the husband's property should be under an implied pledge (*tacita hypotheca*) as a security for the *dos;* and that the wife, but she alone, should have a priority of claim on such property over all other creditors to whom the same might be pledged (Cod. v. 12, 30; Nov. 91, 1).

The allusions to *dos* and its restitution are numerous in Roman classical literature. The name by which the Greek writers designate the Roman *dos* is φερνή. (Ulp. *Frag.* vi. *De Dotibus; Frag. Jur. Rom. Vatic.* 94–122; Dig. 23, 3; Cod. v. 12; Hasse, *Das Güterrecht*, &c. 1824; Tigerström, *Das römische Dotalrecht*, 1831, 1832; Bechmann, *Das römische Dotalrecht*, 1863; Czyhlarz, *Das römische Dotalrecht*, 1870.) [G. L.] [E. A. W.]

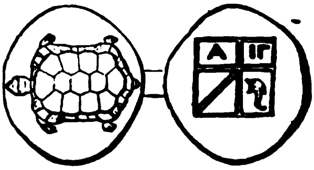
DOSSUA'RIUS or **DORSUA'RIUS**, any animal carrying burthens on its back (Varr. *R. R.* ii. 6 and 10). It carried its load either by means of panniers [CLITELLAE] or the pack-saddles (*sagma*), whence we read of *equus sagmarius* (Lamprid. *Heliog.* 4; Vopisc. *Aur.* 7). Hence came the German *Saum*-pferd and the English *sumpter*-horse. The annexed cut, representing a mule and a camel, carrying burthens, accompanied by two conductors, is taken from the Theodosian Column at Constantinople. [W. S.]

Dossuarii. (From Theodosian Column.)

DOULOS (δοῦλος). [SERVUS.]

DRACHMA (δραχμή), the name of a weight and of a denomination of coin among the Greeks. As weight and as coin it was the hundredth part of the mina, and was divided into six lesser units called ὀβολοί. [See PONDERA, *ad init.*] The ancients (*Etym. Mag.* s. v. ὀβελίσκος: Pollux, ix. 77) connected the word with δράσσομαι, "I grasp," and δράγμα, "a handful," and supposed that a drachm was originally the value in silver of a handful of six ὀβολοί, or wedge-shaped pieces of metal, which circulated as money. It is, however, very doubtful if this derivation is not a mere fancy: it is far more probable that δραχμή, like δαρεικός, is connected with the Persian word *darag*, "a part," since the weight of the drachm seems to be derived by division of the mina, rather than the weight of the mina to be produced by multiplication of the drachm.

The ordinary denominations of Greek coins were: for gold, the didrachm (double drachm), drachm, hemi-drachm, and smaller divisions; for silver, the same, with the addition of the tetradrachm, and occasionally of the decadrachm. The weight of the drachm varied according to the standard to which it belonged [see tables under PONDERA]; the heaviest drachm was the Aeginetan of 96 grains, worth in silver rather more than a shilling of our money: it was called at Athens παχεῖα δραχμή (Pollux, ix. 76). The Athenian drachm weighed but 67·5 grains, and the Corinthian only 45 grains, value about sixpence. The sign for drachm in Attic inscriptions is ⊢. As the Romans reckoned in sesterces, so the Greeks generally reckoned by drachmae; and when a sum is mentioned in the Attic writers, without any specification of the unit, drachmae are usually meant. [P. G.]



Aeginetan Drachm. (British Museum. Actual size.)

Attic Drachm: late. (British Museum. Actual size.)

DRACO. [CALDARIUM; SIGNA MILITARIA.]

DUCENA'RII, the name of various officers and magistrates, in the imperial period, of whom the principal were as follows:—

1. The imperial procuratores, who received a salary of 200 sestertia. Dio Cassius (liii. 15) says that the procuratores first received a salary in the time of Augustus, and that they derived their title from the amount of their salary. We thus read of centenarii, &c., as well as of ducenarii. (See Capitolin. *Pertin.* 2; Orelli, *Inscript.* No. 946.) Claudius granted to the procuratores ducenarii the consular ornaments (Suet. *Claud.* 24).

2. A class or decuria of judices, first established by Augustus. They were so called because their property, as valued in the census, only amounted to 200 sestertia, and they tried causes of small importance. (Suet. *Aug.* 32.)

3. Officers who commanded two centuries, and who held the same rank as the primi hastati in the ancient legion. (Veget. ii. 8; Orelli, *Inscrip.* No. 3444.)

4. The imperial household troops, who were under the authority of the *magister officiorum.* They are frequently mentioned among the *agentes in rebus,* or ushers. (Cod. 1, tit. 31; 12, tit. 20.)

In the third century A.D. and later the title is often applied in inscriptions to *protectores Augusti* and to many officials of equestrian rank, as *praefecti legionum, praefecti vehiculorum, imperatori a consiliis.* In these cases it appears to denote the rank as well as the salary of the official, and is seldom used without the addition of another title. (Th. Mommsen in *Ephem. Epigraphica,* v. 121–7.) The office of a ducenarius is *ducenaria* or *ducena* (Cod. Th. i. 9, 1; xii. 1, 5). [W. S.] [J. H. F.]

DUCENTE'SIMA. [CENTESIMA.]

DUELLA. [UNCIA.]

DULCIA'RII. [PISTOR.]

DUO'DECIM SCRIPTA (*κύβοι, διαγραμμισμὸς* [Pollux, ix. 99], in late Greek *τάβλα*), a game of mixed chance and skill, which must have been substantially the same as our backgammon. The following points of identity may be regarded as established. The game was played on a board of 12 double lines, with 15 white and 15 black men; the throws were counted as we count them; "blots" (*ἄζυγες*) might be captured; the pieces (whether they started from home or not) had to be brought home; and the winner was he who first cleared off his men. On the other hand, there were three dice instead of two [TESSERA]; and it is impossible to say where the men started, or how blots taken up re-entered. In the initial position the pieces may have stood in three rows of five or five rows of three; and either in the player's own table with a view to the double journey, or in the opponent's table with a view to the journey home. With the three dice the pieces would soon be scattered, and thus a less artificial arrangement than our own may be thought probable. The phrase *ὀπισθιδίη ὁδὸς* in Agathias may seem to favour the notion that they were played out and home. The board was *ἄβαξ,* ABACUS, more generally *tabula,* or from its raised rim *alveus, alveolus;* the men *ψῆφοι, calculi;* the situation at any point of the game, *θέσις* (Agathias); to move, *τιθέναι, dare;* to retract a move, *ἀνατιθέναι, reducere.* In a fragment of Cicero (*ap.* Non. p. 170, s. v. *Scripta*) we find: "Itaque tibi concedo, quod in duodecim scriptis solemus, ut calculum reducas, si te alicuius dati poenitet." This privilege is more likely to have been of the nature of odds granted by a superior player, than a regular rule of the game.

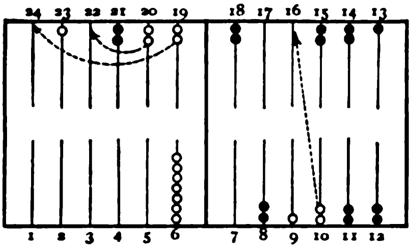
The classical Greek writers mostly use *κύβοι, κυβεύειν,* of games into which skill entered as well as of mere dicing; though Philemon marks the distinction (*μεθύειν, διαγραμμίζειν, κυβεύειν, fr.* 216 M.). That *κυβεία* was a game of skill as well as chance is clear from Plato (*Rep.* x. 604 C, *Phaedr.* 274 D, and *ap.* Plut. *de Tranq. An.* p. 467 A), and from a story told by Plutarch (*Artax.* 17); cf. Ter. *Adelph.* iv. 7, 21. Ovid alludes to the Duodecim Scripta (*A. Am.* iii. 363–4) among games which lovers are to play together; others are *latrunculi* (357–8), "spillikins" (361–2), and "go-bang" (365–6, this last couplet has often been misunderstood as though it referred to the placing of the backgammon-men). The lover is, of course, to lose on purpose to his mistress ("Tu male iactato, tu male iacta dato," *ib.* ii. 204), either by unlucky throws (perhaps he is to cheat in her favour, cf. 206) or by making bad moves. Martial includes among his modest wants *tabulamque calculosque* (ii. 48). The celebrated jurisconsult P. Mucius Scaevola was famed for his skill at Duodecim Scripta (Cic. *de Or.* i. 50, § 217; Val. Max. viii. 8, § 2; Quintil. *Inst.* xi. 2, § 38). Quintilian further tells the story that Scaevola, after losing a game, recalled the whole of the throws and the way each had been played; pointing out the move where he had made a mistake, and verifying his own recollections by those of his opponent. This is cited as an example of memory and logical sequence (*ordo*).

None of the above passages shed much light on the details of the game. Our knowledge of them is mostly gained from an epigram of Agathias (*Anth. Pal.* ix. 482; also in Brunck, *Anal.* iii. 60) on a case of special ill-luck which befel the Emperor Zeno (A.D. 474–491). This epigram has been discussed by many scholars (*e.g.* Salmasius in a long and learned note to the *Historia Augusta,* ii. pp. 736–761, ed. var. 1671; T. Hyde, the historian of chess; De Pauw, in a special dissertation; Jacobs, in his notes to the *Anthology*), but until lately was never rendered intelligible. The problem has been solved independently by M. Becq de Fouquières in his *Jeux des Anciens,* and Dr. H. Jackson in the *Journal of Philology:* on the few points where they differed, Dr. Jackson has since given in his adherence to M. Becq de Fouquières' conclusions. We reproduce this epigram with a few comments from the sources just named:

Εἰς τάβλαν Ζήνωνος τοῦ βασιλέως.

οὐτιδανοὶ μερόπων, εἰ καὶ μέγα ῥέξομεν ἔργον,
  οὔτινος εἰς μνήμην δηρὸν ἐπερχόμεθα·
οἱ δ' ἀγαθοί, κῆν μηδέν, ἀναπνεύσωσι δὲ μοῦνον,
  ὡς Λίβυς εἶπεν ἀνήρ, τοῦτ' ἀδάμαντι μένει.
δήποτε γὰρ Ζήνωνα πολισσοῦχον βασιλῆα,
  παίγνιον ἀφράστων ἐκτελέοντα κύβων,
τοίη ποικιλότευκτος ἕλεν θέσις, εὖτ' ἀπὸ λευκοῦ,
  τοῦ καὶ ὀπισθιδίην εἰς ὁδὸν ἐρχομένου,
ἑπτὰ μὲν ἕκτος ἔχεν, μίαν εἴνατος· αὐτὰρ ὁ σοῦμμος
  δισσὰς ἀμφιέπων ἶσος ἔην δεκάτῳ·
ὅς τε πέλει μετὰ σοῦμμον ἔχεν δύο, μουνάδα δ' ἄλλην
  ψῆφον τὴν πυμάτην ἀμφιέπεσκε δίβος.
ἀλλὰ μέλας δισσὰς μὲν ἐν ὀγδοάτῳ λίπε χώρῳ
  καὶ τόσσας ἑτέρας ἐς θέσιν ἑνδεκάτην·
ἀμφὶ δυωδέκατον δὲ διέπρεπον εἴκελοι ἄλλαι,
  καὶ τρισκαιδεκάτῳ ψῆφος ἔκειτο μία·
δίζυγες Ἀντίγονον διεκόσμεον· ἀλλὰ καὶ αὐτῷ
  ἶσος ἔμιμνε τύπος πεντεκαιδεκάτῳ,
ὀκτωκαιδεκάτῳ πανομοίιος· εἰσέτι δ' ἄλλας
  εἶχεν διχθαδίας τέτρατος ἐκ πυμάτου.
αὐτὰρ ἄναξ λευκοῖο λαχὼν σημήϊα πεσσοῦ
  καὶ τὴν ἐσσομένην οὐ νοέων παγίδα,
τριχθαδίας ἀδόκητα βαλὼν ψηφῖδας ἀπ' ἠθμοῦ
  πύργου δουρατέου κλίμακι κευθομένῃ

δοιὰ καὶ ἓξ καὶ πέντε κατήγαγεν· αὐτίκα δ' ὀκτὼ 25
ἄζυγας εἶχεν ὅλας πρόσθε μεριζομένας.
τάβλην φεύγετε πάντες, ἐπεὶ καὶ κοίρανος αὐτὸς
κείνης τὰς ἀλόγους οὐκ ὑπάλυξε τύχας.



The diagram (from Becq de Fouquières, p. 375) shows the "complicated position" (l. 7) before the emperor makes his throw. Zeno plays the white men, and moves from 1 towards 24. The situation of the numbered points presents no difficulty: thus, White has 7 pieces at 6, 1 at 9, 2 at 10; Black 1 at 13, and 2 each at 8, 11, 12, 15, 18 and 21 (*τέτρατος ἐκ πυμάτου*). The named points *σοῦμμος* (*summus*), *δίβος* (apparently *divus*, in spite of the difference of quantity; so Salmas. p. 753 b), and *'Αντίγονος* (doubtless a Greek king chosen to balance the Roman emperor) have been ingeniously worked out in accordance with the conditions of the problem. It was natural to assign the *σοῦμμος* to one of the corner places 1, 12, 13, or 24; but it is now proved to have been at 19, the limit of the highest throw (three sixes) starting from 1. Hence two white men are placed on 19 and two more on 20, "the point next to the *σοῦμμος*" (l. 11). Similar calculations prove that the Antigonus, where the two remaining black men are situated, was at 14, and the *δίβος*, occupied by a solitary white man, at 23. In this position the emperor threw 2, 6, and 5; whereupon it appeared that he could not avoid leaving 8 *ἄζυγες* or "blots," an extraordinary piece of bad luck. It must be assumed that, if there was any way of playing all the numbers thrown, the player (contrary to the modern rule of backgammon) was bound to adopt it; and Zeno had consequently, as shown on the diagram, to play from 10 to 16, from 19 to 24, and from 20 to 22. Becq de Fouquières imagines that at this point his game was at once lost in some unexplained way: it is only necessary to assume that it was practically ruined by the 8 blots, 5 of which lie just in Black's course and can hardly fail to be hit by him, whatever he throws next. The special hardship of the emperor's case is that, out of 56 possible combinations of the dice, he threw the only one which raised the number of his blots from 2 to 8: this suffices to point the epigrammatist's warning, *τάβλην φεύγετε πάντες*: the master of the world is as much exposed to the caprices of fortune as any other gamester.

The Latin forms of the technical terms *τάβλα*, *σοῦμμος*, &c. in the above epigram, and the absence of any direct mention of the "twelve lines" in Greek authors, point to the conclusion that this precise form of the game was Roman rather than Greek. The twelve lines were doubtless an extension of the original five, so often mentioned in connexion with games of this class [LATRUNCULI; TABULA LUSORIA]; and may have been suggested by the die with its six faces and points from one to six (Becq de Fouquières, pp. 362, 367). It will be seen that the word *τάβλα* applies to the game itself, not merely to the board on which it is played: this may be paralleled from Old English, where "tables" is a synonym for draughts or, more probably, backgammon; and from Old German, in which *Zabel* is used for a game in glossaries of the 11th and 12th centuries, and chess is called *Schachzabel* in some early printed books (Van der Linde, *Gesch. des Schachspiels*, vol. i. App. pp. 126, 134 ff.). For *τάβλα*, *ταβλίζειν* we find in late Byzantine Greek *ταῦλα*, *ταυλίζειν*: long before those times *αβ* and *αυ* were undistinguishable, both being pronounced as *av*.

More than a hundred ancient boards, serving for six different games, had been found in Rome alone down to 1877 (Marquardt, *Privatl.* 838); but only a single example shows the twelve lines. This is of marble, bears a Christian inscription, and is of very rude workmanship and illiterate spelling. It has been engraved by Salmasius (*l. c.* p. 751), Gruter (*Mon. Chr.* p. 1091), Becq de Fouquières (p. 364), and in a simplified form, omitting the inscription, by Rich (*s. v. Abacus*). This is to all intents and purposes a backgammon board, exhibiting the four half tables of six lines each. Mention is made of boards and men of costly materials, or of peculiar construction. In Petronius (c. 33) Trimalchio plays on a board of terebinth-wood, with dice of crystal, and with gold and silver denarii for black and white men. Pliny (*H. N.* xxxvii. § 13) has an absurdly rhetorical account of the splendours of an *alveus lusorius*, in gold and jewels, borne in Pompey's third triumph B.C. 61; in the centre of it was a golden moon of thirty pounds' weight. Becq de Fouquières (pp. 382–3) here amuses himself with the "solar myth," Suidas (*s. v. τάβλα*) having recorded a theory that the twelve lines represent the signs of the zodiac, &c. He has already given a common-sense explanation (see above), and, no doubt, is not to be taken seriously here. The Emperor Claudius had his carriage fitted with a board which would not upset, in order to play when travelling (*ita essedo alveoque adaptatis, ne lusus confunderetur*, Suet. *Claud.* 33). The *tabula lusoria* described by Martial was also specially adapted for two different games, probably on opposite sides:

> "Hic mihi bis seno numeratur tessera puncto:
> Calculus hic gemino discolor hoste perit" (xiv. 17).

The first line refers to the Duodecim Scripta; the second, modelled on a couplet of Ovid (*Trist.* ii. 477–8), to the game of draughts (*latrunculi*), in which the player left with but one man is bound to lose to his opponent who has two. (Becq de Fouquières, *Jeux des Anciens*, ed. 2, 1873, pp. 357–383; H. Jackson, in *Journ. of Philol.* vii. 236–243; Marquardt, *Privatl.* 834–838.) [W. W.]

DUO'DECIM TABULA'RUM LEX. [LEX.]

DUO VIRI, "the two men," a name applied to various magistrates and commissioners at Rome, and in the *coloniae* and *municipii*. The form *duumvir*, "one of the two men," is used in the singular (Liv. ii. 42, 5, &c.): it is doubtful whether *duumviri* should ever be used in the plural. Some editors print it so, but in the MSS. and inscriptions we generally find only *iiviri;* in *C. I. L.* i. 1196 we have *duo viri*, and also *duo vir* (cp. *C. I. L.* vi. 3732); but there seems to be no epigraphic authority for *duumviri.* That Cicero knew only *tres viri*, not *triumviri*, is shown by *Ep. Fam.* viii. 13, 2. (Cf. Zumpt's *Grammar*, § 124.) The most important of these "commissions of two" were the following:—

1. Duo viri Iuri Dicundo, the highest magistrates in the municipal towns. [Colonia, p. 482 *b*.]

2. Duo viri Sacrorum, to whom was at first entrusted the charge of the Sibylline Books (cf. Liv. iii. 10, 7; v. 13, 6: Mommsen, *Hist.* i. 240). The commission was afterwards made to consist of ten (Liv. vi. 37, 12; 42, 2), and afterwards, probably by Sulla, of fifteen. [Decemviri.]

3. Duo viri Navales, an extraordinary commission appointed for the purpose of equipping or repairing a fleet. Originally a *praefectus* had been nominated for this purpose by the consuls, but in B.C. 311 the appointment was transferred to the people; and as the name was no longer suitable, the title of *duo viri* took its place (Mommsen, *Röm. Staatsr.* ii. 565). The election was made as occasion arose, and the tenure of office was not limited to one year. There is no instance of its occurrence on record later than that of B.C. 180–178 (Liv. xli. 1).

4. Duo viri aedi dedicandae, elected by the people for the purpose of dedicating a temple. The duty was always performed by one of the two only, and the election of a second seems to have been due only to the desire of the Romans to have two colleagues in each magistracy (Liv. vii. 28; xxii. 33; xxxv. 41). The *duo viri aedi locandae*, who gave out the contract for the erection of a temple at the public cost and on public ground, were not necessarily the same as those who dedicated it (cf. Liv. xxii. 33 with xxiii. 21, 7), although they frequently were.

5. Duo viri Viis extra Urbem purgandis were officers under the aediles, first mentioned in the Lex Julia Municipalis (l. 50; cf. *C. I. L.* i. p. 119), and possibly therefore instituted by Caesar. They were abolished by Augustus, when the *curatores viarum* were instituted (Dio, liv. 26).

6. Duo viri Perduellionis. [Perduellio.]

7. Duo viri Quinquennales, the censors in the municipia. [Colonia, p. 483 *a*.] [A. S. W.]

DUPLA'RII or **DUPLICA'RII** were soldiers who received on account of their good conduct double allowance (*duplicia cibaria*), and perhaps in some cases double pay likewise. (Varr. *L. L.* v. 90; Liv. ii. 59, xxiv. 47; Orelli, *Inscrip.* No. 3535.) The forms occurring are *duplicarius* (Or. 3533, 4994), *dupliciarius* (*ib.* 3534), *duplaris* (Veget. ii. 7), *duplarius* (Or. 3531, 3535, &c.). The title appears so often in inscriptions together with that of Augustalis, that Henzen holds that the *duplarii* were a division of the Augustales (*Bull. dell' Inst. Rom.* 1848, 57); but Sellitto points out that in some inscriptions words intervening between the two titles betoken a distinction between them, e.g. *Aug(ustali) gratis creato Dupliciario.* (*Bull. Arch. Napol.* 1857, p. 24.) [W. S.] [J. H. F.]

DUPLICA'TIO. [Actio.]

DUPO'NDIUS or **DUPO'NDIUM**, a coin of two asses, struck after the reduction of the weight of the as. [As.] It was in use under the empire, when it was the weight of half an ounce. (Varr. *L. L.* v. 169, ix. 81; Cic. *Quint.* 16, 53; Plin. *H. N.* xxxiii. § 42; Gaius, i. 122; Schol. *ad* Pers. ii. 59; Marquardt, *Röm. Staatsverw.* ii. pp. 8, 11.) As the Romans applied the uncial division of the as to the foot, *dupondium* also signified two feet (Colum. iii. 15, § 2). [W. S.]

DUSSIS. [As.]

EBUR. [Elephas.]

ECCLE'SIA (*ἐκκλησία*), the general assembly of the citizens at Athens, in which they met for the direct exercise of their sovereign power. Whether certain periodical meetings of the people, regularly recurring at appointed times, were ordained by the legislation of Solon, is unknown. It is however probable that the only assemblies thus fixed in early times were for the election of magistrates (*ἀρχαιρεσίαι*) and the confirmation (*ἐπιχειροτονία*) whether of magistrates or of laws; while questions of public policy were discussed at meetings summoned for the purpose. In the times about which we have fuller information there was at first a regular assembly in each prytany, and therefore ten in the year; these were called *κύριαι ἐκκλησίαι.* By degrees the number of these rose to four in each prytany, which, as being *νόμιμοι ἐκκλησίαι*, were probably held on days fixed beforehand, though we are not in a position to discover with any certainty which days these were in the individual prytanies. The name *κυρία ἐκκλησία*, however, remained for a long time confined to the first regular assembly in each prytany, until later on it was transferred to the three others as well (Schömann, *Antiq.* i. 379 f., E. T.). Some discrepancies in the accounts are probably to be explained as referring to different times. Thus Aristotle expressly states that there were four regular assemblies in each *prytany*, only one of which was called *κυρία* (*ap.* Harpocrat. *s. v. κυρία ἐκκλησία*: and so Pollux, viii. 95, 96); while several grammarians declare, not less explicitly, that there were three in each *month*, all called *κύριαι* (Photius, *s. v. κυρία ἐκκλησία*: Schol. Aristoph. *Ach.* 19; Ulpian on Dem. *c. Timocr.* p. 706, § 20). These last-named authorities no doubt had in view the times after B.C. 306, when the number of tribes was raised from ten to twelve, and a prytany and a month became the same thing (Boulé, p. 313 *b;* Schömann, *Assemblies*, p. 44); and the extension of the name *κυρία* to all the ordinary assemblies is probably to be referred to the same period ("not many years after Aristotle's time," Schömann, *op. cit.* p. xxxii.). These assemblies would thus be held on an average about once in ten days, whether under the earlier or later system; but the scholiast Ulpian (*ad* Dem. *Timocr.* l. c.), in fixing them to the eleventh, twentieth, and thirtieth of each month, goes decidedly too far, as Schömann has proved (*Assemblies*, pp. 47–49; cf. Perrot, *Essai*, p. 37). Extraordinary meetings were specially convened upon any sudden emergency, and were called *σύγκλητοι* or *κατάκλητοι ἐκκλησίαι* (*κατακλησίαι*, Poll. viii. 116, Hesych.), because messengers had to be sent round to give notice to the country people; *κατακαλεῖν* being a technical word for summoning non-residents or out-voters. Besides these messengers (*συνεκάλουν τινὲς περιιόντες*, Schol. Dem. *F. L.* p. 100 a) we find a trumpeter (*σαλπικτής*, Dem. *de Cor.* p. 284, § 169) summoning to a *σύγκλητος ἐκκλησία*, doubtless the city voters only.

The place in which the assemblies were originally held was the Old Agora (*ἀρχαία ἀγορά*, Apollod. *ap.* Harpocrat. *s. v.* Πάνδημος Ἀφροδίτη). This is identified by C. Wachsmuth (*Stadt Athen*, i. 484 ff.) and Gilbert (i. 270) as the spot afterwards occupied by the Odeum of Herodes Atticus, a smaller site than the Agora of later times, lying to the east of it and more under the shelter of the Acropolis. Afterwards they were transferred to the Pnyx, which throughout the great period of Athens in the fifth and fourth centuries B.C. was certainly the usual place of meeting (Thucyd. viii. 97; Aristoph. *Ach.* 20; *Eq.* 42, *Δῆμος πυκνίτης*: *ib.* 750–1; *Vesp.* 31; *Eccles.* 283; Dem. *de Cor.* p. 244, § 55, p. 285, § 169). For more than a century past the site of the Pnyx has been placed on the escarped eastern portion of a low hill to the west of the Areiopagus (*Dict. Geogr.* i. 282, 283, with plan of the hill and view of the Bema; Wordsworth, *Athens and Attica*, ch. x.): but quite recently the traditional view has been called in question, chiefly on the evidence of inscriptions, and the latest authorities declare that no exact determination is at present possible (E. Curtius, *Att. Studien*, i. 23–46; C. Wachsmuth, *Stadt Athen*, i. 368 ff.; Schömann, *Antiq.* i. 380, E. T.; Gilbert, *l. c.*). It was at any rate not far from the Agora (Aristoph. *Ach.* 21), on a height (*ἀναβαίνειν εἰς τὴν ἐκκλησίαν*, [Dem.] *c. Aristog.* i. p. 772, § 9; 775, § 20; *πᾶς ὁ δῆμος ἄνω καθῆτο*, Dem. *de Cor.* p. 285, § 169; cf. Aristoph. *Eq.* 149) commanding an extensive view of the Acropolis, city, and port (*προπύλαια ταῦτα, ὁ Παρθενών, στοαί, νεώσοικοι*, Dem. *c. Androt.* p. 617, § 76, copied by the author of the speech *περὶ Συντάξεων*, p. 174, § 28). The Bema, whether rightly identified or not, was a stone platform with an ascent of steps, cut out of the solid rock, whence it is sometimes called *ὁ λίθος* (Aristoph. *Pax*, 680, *ὅστις κρατεῖ νῦν τοῦ λίθου τοῦ ʼν τῇ Πυκνί*): and the name Pnyx was explained by the ancients *παρὰ τὴν τῶν λίθων πυκνότητα*, which, as Schömann remarks, they would certainly not have done had not the substructions which make the place level led them to the derivation (cf. L. and S. *s. v.* Πνύξ). After the great theatre of Dionysus was built the assemblies began to be held in it; and this was the rule for the first meeting after the Dionysia and some other festivals (Dem. *c. Mid.* p. 517, § 9; Aeschin. *F. L.* § 61). For the discussion of naval matters they also met in the Peiraeus, or in the Dionysiac theatre at Munychia (Dem. *F. L.* p. 359, § 60=67; Lys. *c. Agorat.* § 55; Thucyd. viii. 93). They were held in the Agora, *i.e.* the larger Agora of later times, in cases of ostracism and, as Curtius and Gilbert think, all *νόμοι ἐπ' ἀνδρί*, i.e. *privilegia* or laws affecting an individual, such as *ἄδεια*, voting citizenship to foreigners or restoring it to *ἄτιμοι*: all these requiring the votes of 6000 citizens given by ballot (cf. ADEIA; ATIMIA, p. 243 *b*; CIVITAS, p. 443 *b*; and for the phrase *νόμος ἐπ' ἀνδρί*, for which Demosthenes has also *κατ' ἀνδρός*, Dem. *c. Timocr.* p. 719, § 59). In the Macedonian period the theatre superseded the Pnyx, which was retained only for the elections (*ἀρχαιρεσίαι*. Hesych. *s. v.* Πνύξ: Poll. viii. 132, 133): in late inscriptions we find traces of alternate meetings in the city and the Peiraeus (*C. I. A.* ii. 401, 417, 459, 466).

The right of convening the people generally vested in the Prytanes [BOULÉ]; but in cases of sudden emergency, and especially during wars, the strategi also had the power of calling extraordinary meetings; that is to say, they had the power of directing the prytanes to do so. That the consent of the senate also was required, rests only on "inserted documents" of little authority (Dem. *de Cor.* p. 238, § 37; p. 250, § 75). The four ordinary meetings of every prytany were always convened by the prytanes, who not only gave a previous notice (*προγράφειν τὴν ἐκκλησίαν*) of the day of assembly, and published a programme of the subjects to be discussed, but also, as it appears, sent a crier round to collect the citizens (*συνάγειν τὸν δῆμον*, Pollux, viii. 95; Harpocrat. *s. v.* Κυρία Ἐκκλησία: the *πρόγραμμα*, [Dem.] *c. Aristog.* i. p. 772, § 9). The mode of summons to the *σύγκλητος ἐκκλησία* has been already noticed in explaining its name. The case of Pericles on the first invasion of Attica by Archidamus is peculiar: Thucydides says, *ἐκκλησίαν οὐκ ἐποίει αὐτῶν οὐδὲ ξύλλογον οὐδένα* (ii. 22), *i.e.* he convened no assembly in his capacity of strategus (cf. ii. 59). But to effect his object of stifling discussion he must further have stopped the ordinary assemblies; and it is conjectured that a majority of the strategi, which Pericles doubtless commanded, could restrain the action of the prytanes (Schömann, *Assemblies*, p. 62; Grote, ch. 48, iv. 258). No other instance of the kind is on record; and it may have been merely a piece of unconstitutional dictation on Pericles' part. On the actual day of assembly a flag was probably hoisted as a signal, and struck when business began, as in the case of the senate (BOULÉ, p. 313 *a*; Suid. *s. v.* *σημεῖον*). Six magistrates called *ληξίαρχοι*, with thirty assistants, checked the attendance at the assembly: the words of Pollux, *τοὺς μὴ ἐκκλησιάζοντας ἐζημίουν καὶ τοὺς ἐκκλησιάζοντας ἐξήταζον* (viii. 104), are explained by Schömann (p. 381) and Gilbert (p. 272) to mean that they punished by a fine those who tried to get the pay and shirk the work, while they excluded unqualified persons. The Athenians were apt to linger too long over their marketing in the Agora, and the following measures were resorted to in the time of Aristophanes (*Ach.* 22, *τὸ σχοίνιον φεύγουσι τὸ μεμιλτωμένον*: cf. *Eccles.* 378). While some of the Lexiarchi stood at the entrance of the place of assembly with lists in their hands (the so-called *ἐκκλησιαστικοὶ πίνακες* or *ληξιαρχικὸν γραμματεῖον*, whence probably the name), others directed the police (*Σκύθαι* or *τοξόται*, cf. Demosii) to surround the Agora with a rope coloured with red chalk, so that only the road leading to the Pnyx remained open, and into this road they drove the citizens. As a further inducement to attend to business the *τοξόται* were sometimes ordered to shut up the market-stalls (*πρατήρια*, Phot. *s. v. σχοίνιον μεμιλτωμένον*). Those who were "tarred" with the rope counted as late comers, and no doubt forfeited their *σύμβολον*, even if they actually remained in the assembly; hence there was a rush to avoid it. On the view favoured by Gilbert, that the sum paid away each day was limited, the use of the coloured rope becomes unmeaning. Any person who, having been let through and having received the *σύμβολον*, tried to break away, was doubtless liable to a fine several times the amount of the day's pay. This passage of Aristophanes clearly implies that, as already stated, the Pnyx must have been close to the Agora. The Lexiarchi did not themselves draw up the *ληξιαρχικὸν γραμματεῖον*, as stated in L. and S. (ed. 7); this was the duty of the demarchs (Demus, p. 616 *b*). The place of assembly was further enclosed with hurdles (*γέρρα*) until the termination of the business to which it was thought advisable not to admit strangers (Dem. *c. Neaer.* p. 1375, § 90). The burning of these *γέρρα* as a fire-beacon rests on a false reading (*ἐνεπίμπρασαν*, Dem. *de Cor.* p. 284, § 169); the Agora being in a hollow, the act would have been both useless and dangerous; and *ἀνεπετάννυσαν* is the most probable correction (*Class. Rev.* ii. 95 b). Here the use of the *γέρρα* seems to have been to exclude the people from the Agora and drive them to the Pnyx. Even when not admitted within the precincts, we (sometimes at least) find foreigners listening and expressing their sentiments (*ἀνεβόησεν ὁ δῆμος καὶ ὅσοι ξένοι περιέστασαν τὴν ἐκκλησίαν*, Aeschin. *c. Ctes.* § 224).

A quite sufficient inducement to attend the assembly, with the poorer classes, was the *μισθὸς ἐκκλησιαστικὸς* or pay which they received for it (Boeckh, *P. E.* p. 228 ff. = *Sthh.*^{3} i. 290 ff.). The originator of this practice was one Callistratus, whom Boeckh proposes to identify with the son of Empedus, who perished in Sicily B.C. 413. It probably dated from the successful early years of the Peloponnesian war, and Pericles, to whom the *δικαστικὸν* is ascribed, had most likely nothing to do with this latest fruit of democracy. Gilbert (p. 273) places it "some years before the archonship of Eucleides" (B.C. 403); but the "some years" can hardly have been fewer than ten or twelve, considering the turn which the war had then taken. The payment itself, at first an obolus, was afterwards raised to three by a popular favourite, Agyrrhius of Collytus (Harpocrat. *s. v.* *Ἀγύρριος*: cf. Dem. *c. Timocr.* p. 742, § 134). The increase took place but a short time before the *Ecclesiazusae* of Aristophanes (see *vv.* 300 ff.), the representation of which is fixed, within a year either way, at 392 B.C. The money was paid by the Thesmothetae (*Eccles.* 290) at the close of the proceedings, and in exchange for a *σύμβολον* or ticket given to those who arrived in time; the latter may have been of more perishable materials than the dicastic or bouleutic *σύμβολα*, which were of metal, and had to last a year [Boulé, p. 313 *a*; Dicastes, p. 627 *b*). This payment, however, was not made to the richer classes, who attended the assemblies gratis, and are therefore called *οἰκόσιτοι ἐκκλησιασταὶ* by Antiphanes (*fr.* 200 Meineke *ap.* Ath. vi. 247 f). The same word *οἰκόσιτος* is applied generally to a person who receives no pay for his services.

The right of attending and voting was enjoyed by all citizens of full age (generally supposed to be twenty, certainly not less than eighteen: Xen. *Mem.* iii. 6, § 1; Dokimasia) and not labouring under any atimia or loss of civil rights. They were either (1) natural-born (*φύσει καὶ γένει*) citizens, born in lawful wedlock of parents both Athenians (*ἐξ ἀστῆς καὶ ἐγγυητῆς* is the formula, *c. Neaer.* p. 1365, § 60; 1376, § 92; 1381, § 106: for the question of *νοθεία*, cf. Civitas, p. 444 *b*); or (2) *δημοποίητοι*, presented with the freedom of the state, and enrolled in a deme, phratry, and tribe. The latter, however, were not qualified to hold the office of archon or any priesthood until the second generation (*ib.* 1376, § 92; 1380, § 104). Men above sixty may have been excused (*ἀφειμένοι*, Aristot. *Pol.* iii. 1 = p. 1275, 15), but were certainly not excluded. The orator Aristophon of Azenia, who lived 100 years all but a month (Schol. *ad* Aeschin. *c. Timarch.* § 64), was in the thick of the political fight, impeaching and impeached, till long past eighty (Dem. *c. Timocr.* p. 703, § 11; Aeschin. *c. Ctes.* § 194; A. Schaefer, *Demosth. u. seine Zeit*, i. 162).

The commencement of the proceedings was marked by a lustration or purification of the place where the assembly was held. Sucking-pigs (*χοιρίδια*) were sacrificed and carried round, and the limits thus marked were called *κάθαρμα*, "the purified space" (Aristoph. *Ach.* 44). These victims were called *περίστια*, probably from *περὶ τὴν ἑστίαν*: they were preceded by a religious functionary called *περιστίαρχος* (id. *Eccles.* 128), and their blood was sprinkled about the place. We are not required to believe, with the Scholiast on the former passage, that it was sprinkled on the seats as well. Then followed an offering of incense, and a solemn prayer, repeated by a herald at the dictation of an under-secretary (*ὑπογραμματεύς*), and including a curse (*ἀρά*) on the enemies of the state, especially on evil counsellors or those who were bribed to deceive the people (Dem. *F. L.* p. 363, § 70 = 79; cf. *de Cor.* p. 319, § 282; *c. Aristocr.* p. 653, § 97; Aeschin. *c. Timarch.* § 23; a comic parody of the prayer Aristoph. *Thesm.* 331 ff.). To these ceremonies was added, in later times, an announcement by the prytanes that the sacrifices had been duly offered, that the omens were favourable, and that there was no sign of the displeasure of the gods (Theophr. *Char.* 21; *C. I. A.* ii. 417, 459). Business then began; and the first matter taken in hand was said to be *πρῶτον μετὰ τὰ ἱερά* (Decret. *ap.* Dem. *c. Timocr.* p. 706, § 21). So of persons to whom audience was given, *πρώτοις μετὰ τὰ ἱερά* (*C. I. A.* i. 36; ii. 52 c; 164). The presiding officer was, in the earlier times, the Epistates of the Prytanes, afterwards the Epistates of the nine Proedri; but the function called *χρηματίζειν*, "bring a matter forward" (including therefore the order of the different agenda), is expressly attributed to the proedri and perhaps also to the prytanes (Dem. *c. Mid.* p. 517, § 9 [cf. the "law" in § 8]; Aeschin. *c. Timarch.* l. c.). For the Prytanes, the Proedri, and the Epistatae, see BOULÉ, p. 310 *b; for the progress* of a bill through the senate, until it reached the people in the form of a Probouleuma, pp. 311 *b*, 312 *a*. The date of the innovation by which the Second Epistates was appointed, the powers of the prytanes (*i.e.* of a single tribe) curtailed and those of the proedri (representing the other tribes) enlarged, was placed by Meier between 378 and 369 B.C. (p. 310 *b*). The latest evidence from inscriptions tends to throw it back to the beginning of the period named: the archonship of Nausinicus, B.C. 378–7, already memorable for other important reforms, was not improbably the actual year of this constitutional change (Gilbert, *Staatsalterth.* i. 257 n.). Under this new system the choosing by lot of the proedri, and of the epistates from among them, was also a part of the preliminary business of each sitting.

There was a law of Solon, *μηδὲν ἐὰν ἀπροβούλευτον εἰς ἐκκλησίαν εἰσφέρεσθαι* (Plut. *Sol.* 12): as regards other matters, the motion could consist only in a demand to the senate to draw up a probouleuma and then refer it to the assembly. Hence the first step in the discussion was the reading of the probouleuma by a herald. It might so happen that the senate had come to no conclusion of its own, but had merely referred the question to the people; and in these cases an explanatory statement might also be made by the prytanes (Dem. *de Cor.* p. 285, § 170). The reading of the probouleuma was immediately followed by the *προχειροτονία*, a show of hands on the previous question, whether the sovereign people desired the proposed measure to be further discussed, or were prepared to accept it at once (BOULÉ, p. 312 *a*).

The privilege of addressing the assembly was not confined to any class or age among those who had the right to be present; all, without any distinction, were invited to do so by the proclamation (*τίς ἀγορεύειν βούλεται;*) which was made by the herald as soon as the *προχειροτονία* had shown that there was to be a debate. According to a law of Solon those persons who were above fifty years of age were called upon to speak first (Aeschin. *c. Ctes.* §§ 2, 4; *c. Timarch.* § 23); but in more democratic times this regulation had become obsolete (Dem. *de Cor.* p. 285, § 170; Aristoph. *Ach.* 45, *Thesm.* 379, *Eccles.* 130). The person "in possession of the House" mounted the bema and put on a wreath of myrtle, as a sign that he was for the moment a representative of the people, like the bouleutae and the archons (Aristoph. *Eccles.* 131, 148). The law of Solon likewise required all speakers to keep to the "question," to discuss one thing at a time, to refrain from abuse and scurrility. Aeschines twice refers to this as the law *περὶ τῆς τῶν ῥητόρων εὐκοσμίας* (*c. Ctes.* § 2; *c. Timarch.* § 34); and what purports to be the text of it is given in § 35 of the latter speech; but he complains (*c. Ctes.* § 4) that nothing could check the *ἀκοσμία* of the orators of his time, and in the companion passage alludes to a recent law of increased stringency on this subject, which had been impeached by Timarchus and others in the interests of order. The behaviour of the people does not appear to have been any better than that of the orators, if we may trust the opening speech of the *Acharnians*. The duty of maintaining order devolved on the prytanes (Aeschines adds the proedri, see below), assisted by the *τοξόται* or policemen (Aristoph. *Eq.* 665); in later times by the members of a tribe chosen by lot for this purpose; later still, in the Macedonian period, by the *ἔφηβοι*.

Each of these last two regulations suggests a few further remarks. The selection of a tribe to assist in keeping order is fixed to a date just before the speech against Timarchus, B.C. 345; it was in consequence of a "free fight" in which Timarchus himself had been particularly conspicuous (*προσέθεσθε καινὸν νόμον μετὰ τὸ καλὸν παγκράτιον, ὃ οὗτος ἐπαγκρατίασεν ἐν τῇ ἐκκλησίᾳ*, § 33). The new law was *καθ' ἑκάστην ἐκκλησίαν ἀποκληροῦν φυλὴν ἐπὶ τὸ βῆμα, ἥ τις προεδρεύσει*: impeached by Timarchus as *μὴ ἐπιτήδειον*, § 35; but though not reversed, it failed of its object; *τῆς δὲ τῶν ῥητόρων ἀκοσμίας οὐκέτι κρατεῖν δύνανται οὔθ' οἱ νόμοι οὔθ' οἱ πρυτάνεις οὔθ' οἱ πρόεδροι οὔθ' ἡ προεδρεύουσα φυλή, τὸ δέκατον μέρος τῆς πόλεως* (*c. Ctes.* § 4, fifteen years later). A. Schaefer thought that the tribe thus designated was a tribe of the senate, *i.e.* fifty other senators to assist the prytanes (*Demosth.* ii. 291); but the phrase *τὸ δέκατον μέρος τῆς πόλεως*, and in the Timarchus (*l. c.*) *καθῆσθαι κελεύει τοὺς φυλέτας* (not *βουλευτάς*), makes it tolerably clear that a tribe of the Ecclesia is intended. The correctness of the word *προεδρεύειν* in the two passages of Aeschines has been justly doubted (Gilbert, p. 273 n.); the Ephebi, when they lent their aid, are said *παρεδρεύειν* (*C. I. A.* ii. 466) or *προσεδρεύειν* (*ib.* 470). Either of these words would be more appropriate: for *προσεδρεύειν*, "to be in regular attendance," cf. Dem. *de Cor.* p. 313, § 258, a well-known passage; and there is a further objection not hitherto pointed out. It seems to us very improbable that, at a time when the relative positions of the prytanes and the proedri had lately been altered in favour of the latter by the institution of the Second Epistates, a tribe discharging such humble functions should have been called by the dignified name *ἡ προεδρεύουσα*: whereas if *προσεδρεύουσα* was the word, it was sure to be altered by the copyists. The employment of the *ἔφηβοι* for the same purpose is proved by the inscriptions already referred to, but belongs to a later period. The ephebi, youths between eighteen and twenty, were now perhaps for the first time formally admitted to the assembly, and thus initiated into public business while charged with police duties; and their presence in earlier times, mentioned as exceptional, may really have been intrusive or on sufferance only. Among the "humours" of these turbulent meetings we find the bawling down of obnoxious speakers—against which some, however, were proof (Aeschin. *c. Timarch.* § 33); in extreme cases, they might be dragged down from the bema by authority (Aristoph. *Eq.* 665); on the other hand, the storming of the presidential chair itself is hinted at (Lex *ap.* Aeschin. *l. c.* § 35).

After the speakers had concluded, any one was at liberty to propose a decree (*ψήφισμα*);

though usually the same speaker who had carried the probouleuma through the senate moved the psephisma before the people (expressed by ὁ δεῖνα εἶπε). There was, however, no restriction on the moving of amendments or riders; they might be drawn up in the assembly itself with the aid of the secretary (γραμματεύς); and were introduced with the formula ὁ δεῖνα εἶπε· τὰ μὲν ἄλλα καθάπερ τῇ βουλῇ, or καθάπερ ὁ δεῖνα, followed by the words of the amendment (cf. Plat. *Gorg.* 451 B, with Thompson's note; *C. I. A.* i. 38, &c.). As between the original motion and any amendment the order of proceeding does not appear; probably there was a discretionary power in the presiding officers. Before, however, the question could be put, it had to be submitted to the proper authority to determine whether it contained anything unconstitutional. This authority was, in early times, the Areiopagus, which thus exercised a very real check upon the progress of democracy; after Pericles, the νομοφύλακες till the time of the Thirty; from the archonship of Eucleides onward, the Areiopagus again, but with its powers greatly curtailed [AREIOPAGUS, pp. 177 *b*, 178 *a*]. If there appeared to be no legal obstacle, the psephisma was next read to the people in order to allow a vote to be taken. Even at this stage the Epistates had the legal right of stopping the voting on his own unsupported authority, a right which, however, might be overborne by threats and clamours (Aeschin. *de F. L.* § 84). But he was of course responsible for his use of this privilege, and might be proceeded against by ἔνδειξις, or even the more summary ἀπαγωγή (Plat. *Apol.* 32 B). There was one case, on the other hand, in which he was absolutely forbidden to put the question to the vote under penalty of atimia: this was when a debtor asked for the remission of a public debt (Lex *ap.* Dem. *c. Timocr.* p. 716, § 50). Any duly qualified citizen might also object to the question being put, by engaging on oath to bring the motion, as illegal, under the cognisance of a court of law, by means of the so-called γραφὴ παρανόμων. Such a declaration, when made, necessitated a postponement of the voting; and, like every other oath involving postponement, was called ὑπωμοσία. The like declaration might, however, still be made if the vote on the matter had already been taken, and the people had approved it. It had then the effect of suspending the operation of the decree until the court had given its decision. Finally, the mover himself might withdraw his motion before it was put to the vote, if he had in any way become convinced of its unsuitability during the debate (Plut. *Arist.* 3). The form in which the votes were taken was in general χειροτονία, or show of hands [CHEIROTONIA]; the ballot (κρύβδην ψηφίζεσθαι) was only used where the personal interests of individuals were concerned, *i.e.* in cases ἐπ' ἀνδρί, mentioned above as occasions on which the assembly met in the Agora instead of the Pnyx. With respect to the actual mode of voting by ballot in the ecclesia we have no certain information; but it was probably the same as in the courts of law, by means of black and white pebbles put into urns called καδίσκοι (Schol. *ad* Aristoph. *Vesp.* 981; PSEPHOS). To "put the question," it should be added, is nearly always ἐπιψηφίζειν, even when the χειροτονία and not the ψῆφος is the mode of voting; but ἐπιχειροτονεῖν occurs, though rarely, in this sense (Dem. *c. Timocr.* p. 712, § 39; 727, § 84). In one passage we find the chairman called simply πρόεδρος, instead of his proper title ἐπιστάτης τῶν προέδρων (τίς ὁ ταῦτα ἐπιψηφίσας πρόεδρος, Aeschin. *c. Ctes.* § 75).

The determination or decree of the people was called a Psephisma (ψήφισμα), and only remained in force a year, like the resolution of the senate which bore the same name; to become a νόμος, it had to pass the ordeal of the νομοθέται [NOMOTHETAE]. The form for drawing up the Psephisma varied in different ages; but, apart from unessential differences, two constant normal types may be distinguished. The more ancient dates from the time when the Epistates of the Prytanes (then the sole Epistates) put the question to the people; the latter belongs to the period when this function had passed to the Epistates of the Proedri. An example of the earlier form is as follows: Ἔδοξεν τῇ βουλῇ καὶ τῷ δήμῳ, Κεκροπὶς ἐπρυτάνευε, Μνησίθεος ἐγραμμάτευε, Εὐπείθης ἐπεστάτει, Καλλίας εἶπεν: then follows the resolution, in the infinitive dependent on εἶπεν: ἀποδοῦναι τοῖς θεοῖς τὰ χρήματα τὰ ὀφειλόμενα (*C. I. A.* i. 32 = Boeckh, *Sthh.*^{3} ii. 42 ff.). Another, dating from the Peloponnesian war, is *C. I. A.* i. 40 = Boeckh, *Sthh.*^{3} ii. 499. Sometimes the date is given more precisely: ἐπὶ τοῦ δεῖνα ἄρχοντος καὶ ἐπὶ τῆς βουλῆς ᾗ πρῶτος ὁ δεῖνα ἐγραμμάτευε (on this secretary κατὰ πρυτανείαν, cf. BOULÉ, p. 311 *b*). The later form is this: ἐπὶ Νικοδώρου ἄρχοντος, ἐπὶ τῆς Κεκροπίδος ἕκτης πρυτανείας, Γαμηλιῶνος ἐνδεκάτῃ, ἕκτῃ καὶ εἰκοστῇ τῆς πρυτανείας, ἐκκλησία· τῶν προέδρων ἐπεψήφισεν Ἀριστοκράτης Ἀριστοδήμου Οἰναῖος καὶ συμπρόεδροι, Θρασυκλῆς Ναυσιστράτου Θριάσιος εἶπεν (Schömann, *Antiq.* i. 386, E. T.).

We now come to the dismissal of the assembly, the order for which was given by the prytanes through a herald (οἱ γὰρ πρυτάνεις λύουσι τὴν ἐκκλησίαν, Aristoph. *Ach.* 173). Meetings usually began early in the morning (*ib.* 20), and were not continued after sunset; if the business were then unfinished, there was an adjournment to the next day. But an assembly was broken up by a so-called διοσημία or sign from heaven, such as thunder, lightning, rain, storm, eclipse of the sun, or earthquake (Aristoph. *Ach.* 170–1; *Nub.* 579 ff.; Thucyd. v. 45 *extr.*; Suid. *s. v.* διοσημία). Of course it was only in comedy that public business could be interrupted at the caprice of any individual who chose to say that he had felt a drop of rain: in Greece, as at Rome, these signs had their authorised interpreters, who at Athens were the EXEGETAE (*q. v.*).

The four ordinary assemblies of every prytany had each their specially appropriated subjects for discussion, or "order of the day." In the first assembly, the κυρία ἐκκλησία properly so called, the ἐπιχειροτονία τῶν ἀρχῶν or confirmation of all government officials was held; *i.e.* an inquiry into their conduct, according to the result of which they were either confirmed in office or deposed. On the same occasion the εἰσαγγελίαι or extraordinary informations for offences against the state were laid before the people, as well as matters relating to the corn supply (περὶ σίτου) and the defence of the country (περὶ φυλακῆς τῆς χώρας, *Lex. Rhet.* s. v. κυρία ἐκκλησία); the lists of confiscated property, and of the claims to succession that had been announced before the courts, were also read out: the former, that the people might see how their balance stood with regard to this branch of the revenue [DEMIOPRATA]; the latter, that state claims might not be overlooked. The second assembly was appointed for the hearing of those who came before the people as suppliants for some favour, such as the rehabilitation of ἄτιμοι, the repayment of monies due from the state ("petitions of right" in English law), or the remission of sentences; or in general, for the class of cases involving ἄδεια, or exemption from legal penalties [ADEIA]. The third was devoted to foreign affairs, and in it ambassadors and heralds were received: we need not make a difficulty over the κυρία ἐκκλησία of the *Acharnians* (*v.* 19), and the reception of the Persian ambassadors (*v.* 61). In the fourth, the people decided περὶ ἱερῶν καὶ δημοσίων, on public matters whether religious or secular. These determinations rest mostly upon the authority of Pollux (viii. 95, 96); but when these "standing orders" had been disposed of, other business no doubt might be taken, if previously entered on the programme. (Schömann, p. 385; Gilbert, p. 282 f.)

In judicial matters the people acted only in exceptional cases, chiefly those discussed under EISANGELIA, EPANGELIA, and PROBOLÉ. Closely akin to the εἰσαγγελία, or information by a person who thereupon became himself the prosecutor of the accused, yet distinct from it, was the μήνυσις, an information by any one either disqualified (as a foreigner, a slave, or an accessory) or disinclined to make a regular impeachment. In both cases the people either itself undertook the inquiry in such a manner that the prosecution and the defence were carried on in the ecclesia, and this body pronounced the final judgment, or (more usually) the assembly, after having satisfied itself by a preliminary inquiry that there was at least a case for a jury, referred it to a court of law. The people might then specify according to what laws it should be decided, and what punishment should be awarded if a conviction ensued; and might appoint συνήγοροι, a sort of "advocates holding a government brief," to watch the case on their behalf. Such complaints and indictments were in the first instance brought regularly before the senate, and came before the people only when the case was too serious for the former to deal with; a fine of 500 drachmas being the maximum penalty that the senate was empowered to inflict. Among the judicial acts of the people, we may also reckon the special commissions of inquiry which were sometimes issued; for instance, the periodical overhauling of the finances by the appointment of ζητηταί [ZETETAE]. Inquiries into conspiracies or secret crimes might be thus relegated to the Areiopagus or the senate, and the guilty parties, when discovered, indicted before the people: on some occasions, as in that of the mutilation of the Hermae, the senate received full powers to try and sentence the offenders (ἦν γὰρ αὐτοκράτωρ, Andoc. *de Myst.* § 15). The proceedings of a revolutionary mob, like that which condemned Phocion, lie outside the ordinary methods of the Athenian constitution.

As regards the elections of magistrates (ἀρχαιρεσίαι), from the time that the majority of posts were filled by lot, only a few took place in the popular assembly. These were, naturally, for the offices in which personal or property qualifications were required; such as the Strategi, the chief financial minister (ταμίας ὁ ἐπὶ τῇ διοικήσει) and his contoller (ἀντιγραφεύς), and others who had the handling of large sums of public money. The election was invariably conducted by show of hands (χειροτονία), and not by voting tablets or by ballot. Ἀρχαὶ κληρωταὶ might be filled up only a day or two before the end of the outgoing year (Lys. *c. Evand.* § 6); but the assemblies for the choice of ἀρχαὶ χειροτονηταὶ must have been held earlier, and they are placed, with great probability, in the first ecclesia of the ninth prytany (Schömann, p. 390 n.). The presidency of these assemblies is stated to have belonged, in the case of the election of generals, to the archons; in other elections it was probably held by the prytanes or proedri; but little is really known as to the details. Besides those who declared themselves candidates, persons might be nominated for office without their own consent; but in this case might refuse it on taking the oath called EXOMOSIA. Ambassadors, who of course were appointed for their fitness, were (though not technically an ἀρχή) elected in the same way when occasion arose: Demosthenes, when first chosen to go on the embassy to Philip, renounced by ἐξωμοσία (Dem. *F. L.* p. 378, § 122 = 133).

The legislative powers of the people in assembly, so far as they were defined by the laws of Solon still in force in the time of Demosthenes, were very limited. The procedure by which new laws (in the strict sense) were made, is described under NOMOTHETAE; but the practice in later times differed widely from the theory. As democracy developed, the sovereign people became less and less inclined to bind itself strictly to these regulations. The abuse crept in of bringing forward legislative motions in the assembly no less than any other kind of proposals at any time that was found convenient, and without the regular practice of causing a jury of nomothetae, chosen from those who had taken the heliastic oath, to pass a decision upon them. Accordingly, there arose a vast mass of new laws of all kinds, in correspondence with the interest of the popular leaders (ῥήτορες) of the period. As early as 406 B.C., at the trial of the six generals, the appeal of the friends of the accused for strict legal procedure was met by the cry that "it was monstrous that the people should not be allowed to do as it pleased" (Xen. *Hell.* i. 7, § 12). Demosthenes complains that the orators were passing new laws almost every month in their own interest (*c. Timocr.* p. 744, § 142). The author of the speech *against Neaera* uses almost the same words as Xenophon in describing the "omnipotence" of the people (p. 1375, § 88). And Aristotle, the shrewd foreign observer, in a passage on the corruptions of democracy, without naming the Athenians mentions "government by ψηφίσματα" as a characteristic of the final stage (*Pol.* iv.

4 = p. 1292, 5). It is superfluous to attempt to define the matters of which the Ecclesia took cognisance: it was king and parliament in one, sitting upon its *lit de justice* and registering its own decrees. While clinging tenaciously to these sovereign rights, it was, however, aware of its own fallibility, ready to repent of its hasty impulses, and to punish those by whom it had been led astray; and as has been remarked under AREIOPAGUS, the only real restraint upon its actions during the last century of free Athens was the PARANOMON GRAPHÉ.

(Authorities under BOULÉ; Schömann, *Antiq.* i. 379–400, E. T.; Gilbert, *Staatsalterth.* i. 268–295; Perrot, *Essai sur le Droit Public d'Athènes*, pp. 37 ff., 220 ff.) [R. W.] [W. W.]

ECCLE'TI (ἔκκλητοι) was the name of an assembly at Sparta (only in Xen. *Hell.* ii. 4, § 38; v. 2, § 33; vi. 3, § 3). The same writer mentions, once only, a "Small Ecclesia" (ἡ μικρὰ καλουμένη ἐκκλησία, *Hell.* iii. 3, § 8). That the constitution of these bodies should be involved in much doubt is not surprising, considering how little is known of the popular assembly, whose very name is uncertain. It is usual to call it ἁλία, which was elsewhere the name for assemblies of the governing class in the Dorian states, but is only applied to that of the Spartans in a single passage of Herodotus (vii. 134). The Attic writers do not trouble themselves to give the technical term (ξύλλογον σφῶν αὐτῶν ποιήσαντες τὸν εἰωθότα, Thucyd. i. 67; but in ch. 87 and in Xen. *Hell.* v. 2, § 11, it is ἐκκλησία, as at Athens). There is reason to think that the native name was ἀπέλλα. In the so-called ῥήτρα of Lycurgus (Plut. *Lyc.* 6) we find ὥρας ἐξ ὥρας ἀπελλάζειν μεταξὺ Βαβύκας τε καὶ Κνακιῶνος: this is explained to mean that the assembly was to be held every month at the time of full moon (so the Schol. on Thucyd. i. 67), between two points on the course of the Eurotas which marked the northern and southern limits of the capital. We have, besides, the glosses in Hesychius: Ἀπελλάζειν· ἐκκλησιάζειν· Λάκωνες. Ἀπέλλαι· σηκοί, ἐκκλησίαι, ἀρχαιρεσίαι: and μεγάλαι ἀπέλλαι in two late inscriptions found at Gythium (Le Bas, *Voyage Archéologique*, inscrr. 242, 243). Schömann remarks that ἀπέλλα, like ἁλία, is probably connected with ἀολλής (root *Fείλω*); the *F* being hardened into π. But Gilbert is hitherto the only writer who has gone so far as to put "The Apella" at the head of a chapter on this branch of the Spartan constitution.

The Small Ecclesia is mentioned only on the occasion of the conspiracy of Cinadon: the ephors, in the alarm of the discovery, "did not even summon the so-called μικρὰ ἐκκλησία, but only such stray members of the Gerusia as could be collected" (τῶν γερόντων ἄλλος ἄλλοθι). Gilbert holds that it was composed of the kings, ephors, and senators (cf. Grote, ch. 73, vi. 407): but ἐκκλησία is hardly the word for a body of official persons only; the distinction between βουλή, *consilium*, and ἐκκλησία, *concilium*, runs all through Greek life. We prefer to regard it, with Schömann, as an assembly either of the ὅμοιοι then present in Sparta, or possibly of only some portion of them, as, *e. g.* those most advanced in years. It must clearly have represented the exclusive and conservative elements in the Spartan constitution, not the ὑπομείονες or inferior citizens, in whose interest Cinadon was conspiring.

The ἔκκλητοι themselves are involved in no less obscurity; we may notice the following opinions. 1. That they were identical with the ἐκκλησία, ἁλία or ἀπέλλα (Müller, *Dorians*, iii. 5, § 10; and so Gilbert, who thinks that the word in Xenophon has no technical meaning at all). This seems to us by far the most probable. 2. That they were identical with the Small Ecclesia in the sense here adopted, *i.e.* an assembly of the ὅμοιοι only (L. Schmitz, in the former editions of this work). This also is not without plausibility: neither body is mentioned until the period after the Peloponnesian war, when the distinction between the citizens *optimo jure* and the other enfranchised classes had widened into a breach (cf. Thirlwall, iv. 372 ff.). 3. That they were exactly the converse of what the last theory makes them, *i.e.* Spartans *not* belonging to the ὅμοιοι, and only entitled to attend the assembly when "specially invited." Schömann advances this view somewhat doubtfully, adding that the word "may also be explained in a different way" (apparently no. 1). But in all the three passages where the name ἔκκλητοι occurs the circumstances are such that it is very unlikely that the ὅμοιοι would have been passed over and their inferiors consulted; and we must reject this explanation. 4. The rendering in Liddell and Scott's Lexicon, "a committee of citizens chosen to report on certain questions," is quite compatible with Gilbert's view that the word is not really used in a technical sense. (Schömann, *Antiq.* i. 234–236, E. T.; Gilbert, *Staatsalterth.* i. 53–56.) [W. W.]

E'CDICUS (ἔκδικος), the name of an officer in many of the towns of Asia Minor under the Roman dominion. The word is translated in the ancient glossaries by *cognitor*, "agent" or "attorney." The ecdicus was the agent of a city in its foreign business and its relations with the central government, and especially in prosecuting its claims against debtors. In Cicero's time the office seems to have been occasional, and something like that of an ambassador; but Cicero says that if ecdici are sent from Mylasa to Rome instead of legati, more business will be done (*ad Fam.* xiii. 56). Under the empire the office was placed on a permanent footing (Plin. *Ep.* x. 111). An inscription at Cibyra is in honour of a man who had gone four times as ambassador to Rome at his own expense, and brought many important public suits to a successful issue (ἐγδικήσαντα δημοσίας ὑποθέσεις πολλὰς καὶ μεγάλας, Waddington, No. 1212). The DEFENSOR CIVITATIS of the later empire was also called ἔκδικος in Greek. (Marquardt, *Staatsverw.* i. 214.) [W. S.] [W. W.]

E'CDOSIS. [FENUS.]

EKECHEI'RIA (ἐκεχειρία). [HIEROMENIA.]

ECHI'NUS (ἐχῖνος), the hedgehog or sea-urchin, the name of things having a similar shape. 1. A pot or pitcher (Hesych. *s. v.*; Pollux, vi. 91; Hor. *Sat.* i. 6, 117, ii. 8, 52).

2. The casket, probably of a cylindrical shape, in which documents were sealed up between the ἀνάκρισις and the trial [DIKÉ, p. 630 *a*].

3. In Doric architecture, the ovolo or convex part of the capital immediately beneath the abacus (Vitruv. iv. 3 and 7). See illustrations, pp. 3 *a*, 490. [W. W.]

E'CLOGEIS (*ἐκλογεῖς*), Athenian collectors of taxes, were of two kinds. 1. Ordinary, who collected the *εἰσφορὰ* under the *ἡγεμόνες τῶν συμμοριῶν* (Westermann, *ap.* Pauly, *s. v.* *ἐκλογεῖς*, Harpocrat., Suid.): called also *ἐκλέγοντες*, Dem. *c. Timocr.* p. 713, § 40; 745, § 144. This was an *ἀρχὴ κληρωτή*, for which no property qualification was required (Dem. *c. Androt.* p. 608, § 48) [EISPHORA]. 2. Extraordinary, appointed when the tribute (*φόρος*) of the allies fell into arrears, to supplement the action of the Hellenotamiae, its regular administrators: these were chosen (*ᾑρέθησαν*) from the richer classes only, as an *ἀρχὴ χειροτονητή* (Antiph. *fr.* 52, Blass; Lys. *fr.* 5 Bekk.=9 Scheibe [both these in Harpocration]; Bekk. *Anecd.* 245, 33; *C. I. A.* i. 38). This inscription dates from B.C. 446, and is thought to allude to their first appointment; before that year only slight traces of the enforcement of arrears occur. The Athenian power on land had just been curtailed by the loss of Boeotia (447); and they made up for it by a harsher exercise of their maritime empire. (Boeckh, *P. E.* p. 156=*Sthh.*^{3} i. 190; U. Köhler, *Urkunden und Untersuchungen zur Geschichte des delisch-attischen Bundes*, pp. 132–3; Gilbert, *Staatsalterth.* i. 398.) [W. W.]

ECMARTY'RIA (*ἐκμαρτυρία*) signifies the deposition of a witness, who, by reason of absence abroad, or illness (*ὑπερορίου καὶ ἀδυνάτου*, Lex *ap.* Dem. *c. Steph.* i. p. 1131, § 9), was unable to attend in court. His statement was taken down in writing, in the presence of persons expressly appointed to receive it, and afterwards, upon their swearing to its identity, was read as evidence in the cause. They were said *μαρτυρεῖν τὴν ἐκμαρτυρίαν*: the absent witness, *ἐκμαρτυρεῖν*: the party who procured the evidence, *ἐκμαρτυρίαν ποιεῖσθαι*. It was considered as the testimony of the deponent himself, not that of the certifying witnesses, and therefore did not come within the description of hearsay evidence, which (except the declaration of a deceased person) was not admissible at Athens [AKOÈN MARTYREIN, p. 94]. The deponent (like any other witness) was liable to an action for false testimony if the contents of the deposition were untrue, unless he could show that it was incorrectly taken down or forged, in which case the certifying witnesses would be liable. Therefore (Isaeus tells us) it was usual to select persons of good character to receive such evidence, and to have as many of them as possible. An *ἐκμαρτυρία* was allowed to a witness about to start on a journey, if he could not conveniently wait (Isae. *Or.* 3 [*Pyrrhus*], § 20). The form of *ἐκμαρτυρία*, or what purports to be such, occurs Dem. *c. Lacrit.* p. 929, § 20; 934, § 34. (Isae. *Or.* 3 [*Pyrrhus*], §§ 20–27; Dem. *c. Steph.* i. pp. 1130, 1131, §§ 7, 8; Aeschin. *de F. L.* § 19; Harpocrat. *s. v.*; *Att. Process*, p. 670=879 Lips.) [C. R. K.] [W. W.]

E'CPHORA. [FUNUS.]

ECPHYLLOPHO'RIA. [BOULÉ, p. 310 *a*.]

E'CTYPUS (*ἔκτυπος*), properly an adjective, "formed in a mould" (*τύπος*, *forma*), or "wrought in high relief," thus distinguished from *ἀνάγλυφος*, "in low relief" [ANAGLYPHA]. Hence (1) the subst. *ectypum*, a cast in plaster or terra-cotta, which presents the objects in relief (Plin. *H. N.* xxxv. § 152). The accompanying examples are from a terra-cotta and mould in the British Museum. (2) *Ectypa gemma* (Senec. *de Benef.* iii. 26) or *scalptura* (Plin. *H. N.* xxxvii. § 173), an engraved stone cut in relief, now called a *cameo* (Rich, *s. v.*; Guhl and Koner, ed. 5, p. 233). [W. W.]

Ectypum. (British Museum.)

ECU'LEUS, less correctly EQUULEUS, an instrument of torture commonly used at Rome in extracting evidence from slaves. It was a wooden horse, as the name implies, on which the sufferer was mounted and then stretched or racked with weights or pulleys (*eculeo longior factus*, Sen. *Ep.* 67, § 3, almost the only phrase that tells us anything of its nature). Rich (*s. v.*) thinks that the infliction consisted in being seated on a sharp point, as in impalement; a form of cruelty not unknown in recent times, of which he gives a specimen. Very little is really known about this and all other engines of torture among the Greeks and Romans. It is well remarked by Rich that "their artists never depicted scenes calculated to awaken painful emotions"; and it may be added that their writers allude to this dark side of life only in the most general terms; a striking contrast to the realistic descriptions and ghastly illustrations of many modern works. Cicero says that slaves accused of murder might expect the eculeus at the trial, the *crux* on conviction (*pro Mil.* 21, § 57; 22, § 60). Seneca mentions as the usual modes of torture, *fidiculae*, *talaria* (sc. *flagella*, the *μάστιγες ἀστραγαλωταὶ* of the Greeks), *eculeus* and *ignis* (*de Ira*, iii. 19, § 1). (Marquardt, *Privatleben*, 180. Compare FIDICULA, FLAGELLUM; the legal aspect under TORMENTUM.) [W. W.]

E'DERE ACTIO'NEM. [ACTIO.]

EDICTUM. The *jus edicendi*, or power of issuing edicts—public and authoritative notices on matters which fell within their jurisdiction, or formed part of their official business—belonged to all the higher magistrates at Rome. The censors published edicts relative to a coming census (Liv. xxxix. 44; cf. Plin. *H. N.* xiv. § 95, xxxvi. § 4): the consuls thus summoned the senate and the comitia. Cicero (*in Verr.* ii. 41) mentions an edict of the tribunes connected with their right of "intercession;" and the edicts of the aediles, which are alluded to by Plautus (*Capt.* iv. 2, v. 43) and Cicero (*de Off.* iii. 17), had an important influence on the law of sale. Gaius tells us (i. 6) that the aedilician jurisdiction was exercised in provinces of the Roman people by quaestors, but that there were no such quaestors in the provinces of the emperor. Such magisterial edicts, so long as they remained in force, were reckoned an integral part of the law of Rome, among the sources of which they are enumerated (*e.g.* Cic. *Top.* 5; Gaius, i. 2): they are said (Dig. 44, 7, 2) to constitute the *jus honorarium* as distinct from the *jus civile*, because their authors were invested with the *honores* or higher magistracies. But the edicts of which we hear most are those of the praetors ("amplissimum jus est in edictis duorum praetorum," Gaius, i. 6): hence *jus praetorium* and *jus honorarium* are sometimes used as equivalent and interchangeable expressions.

The term *edictum* signifies generally any public notice made by a competent authority (Cic. *in Pison.* 8; Liv. ii. 30, xxviii. 25, xxxi. 6; Tac. *Ann.* i. 7; Gell. xiii. 15; Dig. 1, 16, 4, 3; 49, 16, 4, 13), and in particular, under the republic, rules promulgated by a magistrate by writing them *in albo* and placing them, like the *leges* (Dion. Hal. iii. 36), in a conspicuous place, "unde de plano recte legi potest:" hence the edicts of the magistrates are described by Justinian (*Inst.* i. 2, 3) after Ulpian (Dig. 1, 1, 5, pr.) as part of the *jus scriptum* of Rome. It became usual for the praetor, at the commencement of his year of office, to proclaim by an edict the principles which, apart from the established rules of the *jus civile*, he intended to observe in the administration of justice; and eventually this usage developed into a constitutional obligation. Such edict was called *edictum perpetuum*, because the practice was constant and unbroken, and was contrasted with *edicta repentina* (Cic. *in Verr.* iii. 14), isolated orders which the praetor made during, and not at the commencement of, his year of office, and generally, though not always, relating to some specific case. Not unfrequently, however, a praetor acted contrary to his *edictum perpetuum* (*e.g.* Verres, Cic. *in Verr.* i. 46), or varied the rules therein stated by subsequent *edicta repentina:* but this was made illegal by a Lex Cornelia, B.C. 67 (Asconius *ad* Cic. *pro Cornelio;* Dio Cass. xxxvi. 23).

Technically speaking, no *edictum perpetuum* had validity for a longer period than its author's tenure of the praetorship, for it was upheld only by his *imperium:* hence Cicero (*in Verr.* ii. 1, 42) calls the edict *annua lex.* But it became the rule, at least as early as the time of Cicero (*de Invent.* ii. 22), for each successive praetor to adopt, in substance, the edict of his predecessor, with such additions, abrogations, and changes as he deemed expedient (Cic. *in Verr.* ii. 1, 44), such part as he adopted being called *edictum tralaticium.* In this way the edict gradually grew into a considerable and permanent body of law, the excellence of which was guaranteed by the ease with which obnoxious innovations made by one praetor could be repealed by his next successor. Edicts, formulae, and actions which were of special importance, though remaining part of the permanent edict, were commonly named after their original authors: *e.g.* Edictum Carbonianum; formula Rutiliana, Aquiliana; judicium Cascellianum; interdictum Salvianum; actio Publiciana, Pauliana, Serviana, &c.

Originally there had been but one praetor; but in 247 B.C. a second one, called *praetor peregrinus*, to distinguish him from the *praetor urbanus*, was established for the administration of justice at Rome between aliens or between aliens and Roman citizens. When the state extended her territories beyond the limits of Italy, new praetors were created to act as governors of the new provinces for short terms of years: in the time of Julius Caesar they numbered altogether sixteen. All of these praetors issued annual edicts, and those of the praetors urbanus and peregrinus at any rate were handed on from year to year, and thus were in point of fact permanent and constantly growing bodies of law. The edict of the praetor peregrinus is commonly represented as consisting of rules which he found were practically acknowledged as binding by all the Italian peoples with whom Rome had any dealings, whence the Romans are supposed to have first got the conception of a *jus gentium:* but other writers hold that even at this time the Roman law consisted of two portions—one purely indigenous and peculiar to the race, the other common to the other Italian tribes, and that the latter part was applied by the praetor peregrinus in adjudicating on suits in which at least one party was an alien. The edicts issued by the praetors who governed provinces, and who under the empire got the name of *praesides*, were termed *edicta provincialia:* some parts of them appear to have been handed on from governor to governor (Cic. *ad Fam.* iii. 8; *ad Att.* v. 21), others to have been taken from the *edictum urbanum* (Cic. *in Verr.* ii. 1, 46; 3, 65): in cases not otherwise provided for Cicero proclaimed, when a provincial governor, that he would follow the perpetual edict of Rome (*ad Att.* vi. 1).

It is, however, the urban edict which is of the greatest importance and interest, because it was binding on Roman citizens *inter se*, and therefore alone formed part of the Roman law in the strictest sense of the term. Many of the most considerable rules and legal doctrines which it established had been developed before the time of Cicero (*in Verr.* i. 44): for instance, the doctrine of *bonorum possessio* or praetorian inheritance; the system of bankruptcy execution, known as *venditio* or *emptio bonorum:* and the theory of possession as distinct from ownership (*dominium*) protected by special praetorian remedies of its own [INTERDICTUM]. Indeed, in Cicero's time (*de Legg.* i. 5; ii. 23) the edict was regularly read in the course of legal study, and the jurists who were his contemporaries had begun to comment on it in lieu of the Twelve Tables and other early statutes of the republican period. Under the early empire it continued to receive, year by year, fresh development from the hands of successive praetors, though owing to the practical curtailment of their authority by the imperial power their activity in this direction seems to have diminished; the necessary additions and alterations in the law being made rather by direct legislation, and changes being effected in the edict principally in order to accommodate the system of procedure to the new rights and duties which that legislation created. It may easily be believed that, when neither comitia nor senate ventured to enact a statute unless it was initiated by the emperor personally or with his assent, a magistrate would have hesitated to repeal, alter, or extend the law with the boldness and independence which had been usual under the free republic.

The year 131 A.D. was a notable one in the history of the *jus praetorium*. The Emperor Hadrian then issued, through Salvius Julianus, praetor designate (Eutrop. viii. 17), a revised edition of the *edictum urbanum*, combining with it the edict of the aedile (Theoph. i. 2, 7: "Const. omnem reipub." § 4), and probably also that of the praetor peregrinus and parts of the *edicta provincialia*. This, which was arranged according to subjects in Titles, was called the "edictum perpetuum" *par excellence*, and was published with the force of law for the whole empire, so that the *jus honorarium* from this time onward had statutory validity, instead of depending on an annual re-enactment. Henceforward, too, though the magistrates in constitutional theory retained their *jus edicendi*, the old practice, according to which each praetor issued an *edictum perpetuum* at the commencement of his year of office, was abandoned. The jurists after Hadrian regard the edict of their own time as something permanent and unalterable except by the action of the emperor: and Hadrian himself evidently directed that any defect which might subsequently be discovered in the law should be supplied by imperial legislation (Justinian in Const. "tanta" de confirm. Digest. § 18). This codification of the edicts seems to have been in some way connected with another reform of Hadrian's, by which he divided the whole of Italy into Rome, with its immediately surrounding territory, and four other districts: Rome and its suburbs remained under the authority of the old magistrates, and among them of the praetor, while the other districts were placed under the administration of a new class of officials, called at first *consulares*, and after M. Aurelius (A.D. 161–180) *juridici*.

The scope of the edict is described by the jurist Papinian as "adjuvandi vel supplendi vel corrigendi juris civilis gratia propter utilitatem publicam" (Dig. 1, 1, 7); its purpose was ancillary to that of the civil law, the voids in which it supplied, and in some cases mitigated its hardships even by the enforcement of a contrary rule. An example of its auxiliary operation may be seen in the cases in which it sanctioned a *lex imperfecta* (*e.g.* by the *exceptio legis Cinciae*), and in the great use made by civil-law heirs of the interdict *Quorum bonorum*, a remedy designed in origin for praetorian successors only. Of its supplementary character no better illustration can be cited than many of the classes of *bonorum possessio*, especially that given to cognates, who under the civil law had no right of intestate inheritance whatever: and in *in integrum restitutio* it is found correcting and even subverting the operation of the *jus civile*.

The precise mode in which the praetor worked through the edict is deserving of notice. Technically speaking, he had no legislative authority: but from the enactment of the Lex Aebutia (of unknown date; see LEX) he had the complete control of the courts and of the system of procedure, and this enabled him to practically alter and extend the substantive law almost as absolutely as any legislator. "If so and so happens," he proclaimed, "*judicium dabo*": and by giving an action he practically gave a substantive legal right which before had not existed. In other cases he assisted a defendant by new forms of defence (*exceptiones*), awarded possession of property under an equitable title, and protected it with interdicts, and cancelled legal rights and duties by restoring parties *in statum quo;* and in fact, by allowing or disallowing actions or other forms of legal process, he was enabled to introduce a large number of new and important legal principles. The characteristic features of the law which he thus created were its liberality and common sense. It has none of the peculiarities of the *jus civile*—formality, exclusiveness, rigidity; the vast majority of its rules are what we should call rules of equity, fitted by their very equitableness and simplicity to endure through all time. It is in fact based on the *jus gentium*, or rather on the natural sense of right, the *naturalis aequitas*, in which the Romans recognised that law's internal and generative principle, and which gave the edict such an honourable prominence among the sources of their positive law.

The juristic commentaries on the edict have been already referred to. The first of them was by Aulus Ofilius, a contemporary of Cicero. Labeo, the founder of the Proculian school of jurists, composed four books on the *edictum urbanum;* and another work of his, in thirty books, on the edict of the praetor peregrinus, is cited by Ulpian in Dig. 4, 3, 9. Gaius wrote commentaries on the edicts of both praetors and of the aedile, and there were numerous treatises on the same subject by other eminent lawyers (*e.g.* Ulpian and Paulus), besides other juristic writings not expressly on the edict, but which followed its arrangement: *e.g.* the epitome of Hermogenianus (Dig. 1, 5, 2). The result of this continuous annotation was that the commentaries obtained more authority than the edict itself, and became the basis of instruction for law students, especially those of Ulpian and Paulus. Some few fragments of the older edicts are found in the Roman writers, but it is chiefly from the works of the great jurists, as preserved in the Digest, that we know anything of the *edictum perpetuum* of Salvius Julianus, and in these the actual words of the praetor are frequently preserved. The arrangement of this great edict was to a considerable extent the basis of that of Justinian's Digest, and it was followed still more closely in the Code.

The *edicta* or *edictales constitutiones* of the emperors are mentioned under CONSTITUTIO.

(The most complete collections of the fragments of the edicts are those of Wieling, *Fragmenta Edicti Perpetui*, Franek. 1733, and of Rudorff: the latest treatise on the subject is by Lenel, *Das Edictum perpetuum*, Leipzig, 1883. Cf. also Walter, *Gesch. des röm. Rechts*, §§ 236, 312, 429, 440; Savigny, *Gesch. des röm. Rechts im Mittelalter*, ch. i. *System*, i. p. 109 ff.; Puchta, *Institutionen*, 8th ed., vol. i. pp. 184–201, 314–322; Böcking, *Institutionen*, § 16.) [J. B. M.]

EDICTUM THEODORI'CI. This is the first collection of law that was made after the downfall of the Roman power in Italy. It was promulgated by Theodoric, king of the Ostrogoths, *probably* on his visit to Rome in A.D. 500, though some authorities fix the date after 506. (Hodgkin, *Italy and her Invaders*, iii. pp. 306, 342.) It consists of 154 chapters (besides a prologue and epilogue), parts of which may be traced to the Code and Novellae of Theodosius II., to the Codices Gregorianus and Hermogenianus, and to the *Sententiae* of Paulus; and though it was doubtless drawn up by Roman writers, the original sources are more disfigured and altered than in any other compilation. Though the Ostrogothic kingdom was in point of fact quite independent of the Eastern Roman Empire, in constitutional theory it was considered part of it, the king representing the Caesar, and his army being reckoned a portion of the emperor's forces; consequently the Roman law was still held binding in Italy, for the barbarian invaders no less than for the old inhabitants. Hence the Edict of Theodoric, so far as it went, was intended as law for both nationalities: but where it had made no change in the Gothic rules, the latter were still applied to the barbarians, while the Roman law was to prevail for the Romans in those cases to which the Edictum was not applicable. Athalaric, Theodoric's grandson, who was a minor, completed his grandfather's edict by a new one: but after Narses had again united Italy to the empire of Justinian, the latter's legislation was established in Italy (A.D. 554), and the Edict of Theodoric had no longer any authority.

(This edict was first printed in the edition of Cassiodorus by Nivellius, Paris, 1579, and there is an edition by G. F. Rhon, Halle, 1816. Cf. also Von Glöden, *Das römische Recht im ostgothischen Reich*, 1843; Hänel, *Lex Rom. Visig.* 1847; Savigny, *Gesch. des röm. Rechts im Mittelalter*, ii., chap. 11; Böcking, *Institutionen*, p. 89; Puchta, *Institutionen*, 8th ed., i. pp. 386, 387. Hodgkin, *Italy and her Invaders*, iii. p. 342, gives the prologue and epilogue and an analysis of the contents of the Edict.) [J. B. M.]

EEDNA. [DOS.]

EFFRACTOR (*τοιχωρύχος*: *effractarius*, Senec. *Ep.* 68, § 4), a burglar.

As the name *τοιχωρύχος* implies, the Greek burglar sought to effect an entrance through the wall of a house rather than through the doors or windows [DOMUS, p. 660 *a*]. In Attic law he reckoned among the *κακοῦργοι* whose crimes were capital (Dem. *c. Lacrit.* p. 940, § 47; Antiph. *de Caed. Herod.* § 9; Plat. *Rep.* i. 344 B, ix. 575 B); the summary processes called *ἀπαγωγή* and *ἐφήγησις* were available against him; he is often coupled with the *λωποδύτης* (*e.g.* Aristoph. *Plut.* 165; Diphil. *fr.* 32, 14 M.), both offences being hedged in with special penalties because they were so easy to commit. The midnight terrors of a rich miser behind his flimsy walls are amusingly depicted by Lucian (*Gall.* p. 748, Reitz.). (*Att. Process*, ed. Lipsius, p. 86, n. 130, and p. 456; Thalheim, *Rechtsalterth.* p. 40; cf. KLOPES DIKÉ.)

The Romans did not shrink from capital punishments, at least under the Empire; and we may be surprised to find that the crime of *effractio* was not visited with death, as among the Greeks, and till quite lately in England. Their houses were better built than those of the Greeks, and thus they did not legislate under the influence of panic. The penalty was hard labour for life (*opus perpetuum*), and, for burglary by night, in the mines (*poena metalli*). The trial was before the Praefectus Vigilum (Sidon. Apoll. *Ep.* ix. 7; Dig. 1, 15, 1; 47, 17, 16, 5; 47, 18; 48, 19; Rein, *Criminalrecht*, p. 319, and *ap.* Pauly, *s. v.*). [W. W.]

EICO'STE (*εἰκοστή*), a custom duty of one-twentieth (five per cent.) upon all commodities exported or imported by sea in the states of the allies subject to Athens. This tax was first imposed Ol. 91, 4, B.C. 413–2, in the place of the direct tribute (*φόρος*) which had up to this time been paid by the subject allies; and the change was made with the hope of raising a greater revenue (Thucyd. vii. 28). The date 415, given by Boeckh in his first edition from which Lewis' translation is taken, was subsequently corrected by him; it was after the occupation of Decelea in the spring of 413. This tax, like so many others, was farmed, and the farmers of it were called *εἰκοστολόγοι*. It must have been more difficult to collect than the *φόρος*, and this at a time when the hold of Athens over the payers was much enfeebled; and there is good reason to think with Grote (ch. 61 *init.*, v. 312) that the change was never fully carried out. It is certain that some states continued to pay *φόρος* after 413 (Xen. *Hell.* i. 3, § 9; *C. I. A.* iv. 51). The text of Thucydides contains the unusual expression *τὴν εἰκοστὴν ἐποίησαν*, for which Badham conjectures *ἐπέθεσαν*, and Classen with more probability *ἐπέταξαν*: and Müller-Strübing regards the passage as an interpolation (*Thukyd. Forschungen*, p. 30 ff., quoted by Gilbert and Fränkel). The *εἰκοστή*, however, does not rest upon the evidence of Thucydides alone (Bekk. *Anecd.* 185, 21: *δεκάτη καὶ εἰκοστή· οἱ Ἀθηναῖοι ἐκ τῶν νησιωτῶν ταῦτα ἐλάμβανον*); and the probable conclusion is that the new arrangement took effect in some of the subject states and not in others. The *εἰκοστολόγος* at Aegina mentioned by Aristophanes (*Ran.* 363) was, in Boeckh's later view, the collector of some special tax and not of the *εἰκοστή* in lieu of *φόρος* (*Sthh.*^{3} i. 396, ii. 351): Fränkel further points out, in confirmation of this, that the island had been occupied by Athenian *cleruchi* from the beginning of the war, and could not therefore have paid *φόρος* at all. With the fall of Athens both forms of taxation of course came to an end; but both were afterwards revived, the *φόρος* under the less invidious name of *σύνταξις* [SYNTAXIS]. Within a few years of the battle of Cnidus Athenian commanders were again levying the *δεκάτη* on the Hellespont (Xen. *Hell.* iv. 8, § 27; Diod. xiii. 64), and, as we know from inscriptions very recently discovered, the *εἰκοστή* among their subject allies (*e.g.* Clazomenae, *Mittheilungen d. archäol. Institutes*, vii. 174 ff.; Thasos, *ib.* 313 ff.). On an *εἰκοστή* attributed to the sons of Pisistratus, see DECUMAE, p. 603 *a*. (Boeckh, *P. E.* pp. 325, 401 = *Sthh.*^{3} i. 395 ff., 475; Fränkel, n. 537; Gilbert, *Staatsalterth.* i. 332.) [W. S.] [W. W.]

EIREN (*εἴρην*, *ἴρην*), the third class of Spartan youth with regard to age; the series being: *παῖδες* (aged 7–18), *μελλίρανες* (18–20), *ἴρανες* (20–30). The last were distinguished again as *πρωτίρανες* or *σφαιρεῖς*, according as they were near the lower or upper limit. (Plut.

Lyc. 17; πρωτ.=οἱ περὶ εἴκοσι ἔτη παρὰ λάκωσι, Phot., Hesych. ed. Schmidt, *s. v.*; σφ.=οἱ ἐκ τῶν ἐφήβων εἰς ἄνδρας ἀρχόμενοι συντελεῖν, Paus. iii. 14, 6, and *C. I. G.* 1386, 1432, &c.) The boys and youths forming a βοῦα or ἴλα chose as their leader (βουαγόρ) the wisest and bravest of the ἴρανες (Plut. *ib.*; Xen. *Rep. Lac.* ii. 11). These leaders excepted, the ἴρανες partook with their elders of the common meal (ἀνδρεῖα). The ἰρένες mentioned as buried in a separate tomb at Plataea (Herod. iv. 85) must have been the officers of all ranks, not young men: Amompharetus, who was one of them, was in command of a λόχος (Stein *ad loc.*). (Müller, *Dorians*, ii. 315; Gilbert, *Staatsalterth.* i. pp. 68, 71; on the form of the word, see Kuhn's *Zeitschr.* viii. 53; *Philol.* x. 431; Curt. *Stud.* iv. 1, 116.) [W. S.] [J. M.]

EIRESIO'NE (εἰρεσιώνη). [Pyanepsia.]

EISAGO'GEIS (εἰσαγωγεῖς), as an Attic law-term, denotes two classes of persons. 1. In a wider sense the name was given to the ordinary magistrates when application was made to them for the purpose of bringing a cause (εἰσάγειν) into the proper court [Diaetetae; Diké]. The cause itself was tried according to its nature before arbitrators or dicasts respectively; but all the preliminary proceedings, such as receiving the accusation, getting up the case (*instruction* in the French sense), bringing into court the ἐχῖνος with the evidence taken at the ἀνάκρισις, and presiding at the actual trial, all included in the so-called ἡγεμονία δικαστηρίου, were conducted by the magistrate regularly assigned to that class of cases. Various public officers, the strategi, the logistae, &c., had the ἡγεμονία δικαστηρίου in cases specially relating to their own department: in general it belonged to one or another of the archons, or in some cases to the Eleven [Hendeka, Hoi]. Of all these magistrates the thesmothetae seem to have had the widest jurisdiction; yet there were cases which they could not take up (περὶ ὧν οὐκ εἰσὶν εἰσαγωγεῖς), and a charge brought in the wrong court might be met by an ἀντίληξις or παραγραφή (Dem. *c. Pantaen.* p. 976, §§ 33, 34; *Att. Process*, p. 30 = 45 Lips.). 2. Οἱ εἰσαγωγεῖς was also the name of particular magistrates, probably ten in number, chosen by lot to try (εἰσάγειν, see above) some sorts of ἔμμηνοι δίκαι: the δίκαι προικός, ἐρανικαὶ and ἐμπορικαὶ are specially mentioned (Pollux, viii. 93 and 101). In the words οὗτοι δὲ τὰς δίκας εἰσήγαγον πρὸς τοὺς διαιτητάς (c. 93) they are confused with the εἰσαγωγεῖς in the more general sense; as also in a gloss of Hesychius: εἰσαγωγή· ἀρχὴ Ἀθήνησιν τῶν τὰ ἐγκλήματα εἰσαγόντων. While no better evidence than this was forthcoming, it was possible, with Meier in the first edition of *Att. Process*, to doubt the existence of these special εἰσαγωγεῖς (not noticed in L. and S., ed. 7); but it is now proved by inscriptions (*C. I. A.* i. 37, 38). The former of these inscriptions is a decree of the senate, by which the εἰσαγωγεῖς are entrusted with the conduct of actions to enforce the payment of the tribute by the allies (B.C. 425–4, Stratocles archon): in the latter, ἐπιμεληταὶ are associated with them for the same purpose. [Emmenoi Dikai.] The name εἰσαγωγεῖς must have been somewhat widely diffused, as it appears at Ephesus in Roman times; see an inscription of the year 83 B.C., published by Wood, *Discoveries at Ephesus*, 1877, App. viii. 1. (Gilbert, *Staatsalterth.* i. 358; Lipsius, *Att. Process*,^{2} p. 94; Thalheim, *Rechtsalterth.* pp. 97, 137.) [W. S.] [W. W.]

EISANGE'LIA (εἰσαγγελία) signifies, in its primary and most general sense, a denunciation of any kind (Schömann, *Assemblies*, p. 181), as in Lys. *c. Agorat.* 50, 56, etc. The word εἰσαγγέλλειν first occurs in the psephisma about the ἀπαρχαί (soon after the year 446), published by Foucart, *Bull. de Corresp. hellén.* 1880, p. 225 ff., and Sauppe, *Attica et Eleusinia.* In the language of the Attic courts, however, it has been peculiarly applied to three classes of causes (Harpocr. *s. v.* εἰσαγγελία), which we shall discuss one after another. Of the first of these (ἐπὶ δημοσίοις ἀδικήμασι μεγίστοις καὶ ἀναβολὴν μὴ ἐπιδεχομένοις), two definitions are given in the *Lex. Rhet. Cantabr.* p. 667, 12 ff., side by side, ascribed to Caecilius and Theophrastus (cf. *Journ. of Philol.* vi. p. 2) respectively, which in Pollux, viii. 51, and Harpocr. *s. v.*, are somewhat mixed up. According to Caecilius, it was directed κατὰ καινῶν καὶ ἀγράφων ἀδικημάτων: according to Theophrastus, against certain specified crimes, practically the same which Hypereides (*pro Eux.* 22) quotes from the νόμος εἰσαγγελτικός. These two definitions refer in Fränkel's opinion (*Att. Geschworenger.* p. 77) to two periods, viz. that of Caecilius to the time before Eucleides and that of Theophrastus to the time following, so that under this archonship the crimes were specified by law which could be proceeded against by eisangelia, and the form of procedure was regulated; but when in the trial of Antiphon etc., he points out (p. 86) as an essential deviation from the later procedure the fact that the senate referred the case at once to a court, without first submitting it to the popular assembly, he must have overlooked [Dem.] *c. Euerg.* p. 1152, § 43, and *c. Frumentar.*, the case against the corn-dealers in Lys. *Or.* xxii.

Hypereides quotes three classes of crimes as specified in the νόμος εἰσαγγελτικός, without giving always the exact wording of the section of the law: 1st, ἐάν τις τὸν δῆμον τὸν Ἀθηναίων καταλύῃ ἢ συνίῃ ποι ἐπὶ καταλύσει τοῦ δήμου ἢ ἑταιρικὸν συναγάγῃ (cf. Isocr. *de Big.* 6; Dinarch. *c. Dem.* 94). 2nd, ἢ ἐάν τις πόλιν τινὰ προδῷ ἢ ναῦς ἢ πεζὴν ἢ ναυτικὴν στρατιάν (cf. Hyper. *pro Eux.* 18; Schol. Aeschin. *c. Tim.* 56). To this add from Theophr. and Pollux: ἢ ἐάν τις εἰς τοὺς πολεμίους ἄνευ τοῦ πεμφθῆναι παρὰ τοῦ δήμου ἀφικνῆται ἢ μετοικῇ παρ' αὐτοῖς ἢ στρατεύηται μετ' αὐτῶν ἢ δῶρα λαμβάνῃ παρ' αὐτῶν (cf. Ps. Plut. *Vitt. X. Orat.* p. 833 E; Lyc. *c. Leocr.* § 59; Hyp. *pro Lyc.* fr. 2 (p. 23 Bl.), ἢ νεωρίων προδοσίαν ἢ ἀρχείων ἐμπυρισμὸν ἢ κατάληψιν ἄκρας (εἰσαγγέλλειν χρή, Meier) and Alciphr. i. 32). 3rd, ἢ ῥήτωρ ὢν μὴ λέγῃ τὰ ἄριστα τῷ δήμῳ τῷ Ἀθηναίων χρήματα λαμβάνων. To this add from Hyp. *pro Eux.* c. 39, καὶ δωρεὰς παρὰ τῶν τἀναντία πραττόντων τῷ δήμῳ τῷ Ἀθηναίων (cf. 18). Lipsius concludes from the wording of Hypereides (23, τὰ μὲν ἄνω τοῦ νόμου—τὸ δὲ τελευταῖον τοῦ νόμου), that none of the sections of the law was altogether omitted by him, although each may not be given in its complete form, whilst others are of opinion that Hypereides only quoted the law as far as the passage applying to the case in hand. Certain it is that other crimes besides those given above could be proceeded against by eisangelia, not only by taking terms like *κατάλυσις* etc. loosely, as when the adulterer Lycophron was proceeded against by an *εἰσαγγελία καταλύσεως*,—bitterly does Hypereides complain of the gross abuse made of eisangelia in this way (*pro Eux.* 19)—but we learn from an inscription (from the year 324–3, Boeckh, *Seeurkunden*, p. 540) that eisangelia could be resorted to *ἐάν τις ἀδικῇ περὶ τὰ ἐν τοῖς νεωρίοις* (this section of the law is applied by a decree of the senate to a particular case; see also [Dem.] *c. Euerg.* p. 1151, § 41); and from Dem. *c. Phorm.* p. 922, § 50, and Lys. *c. Frumentar.*, it is very probable that it was also directed against offences committed against the commercial laws (cf. the eisangelia against Pytheas, *περὶ τῶν κατὰ τὸ ἐμπόριον*, Dinarch. vi.); besides, the law which speaks of eisangelia as applying to *ἐάν τις τὸν δῆμον ὑποσχόμενος ἐξαπατήσῃ* (Dem. *de fals. Leg.* p. 374, § 103, and *c. Timoth.* p. 1204, § 67) is mentioned as *ἀρχαῖος νόμος* (Dem. *c. Lept.* p. 498, § 135); or may this clause, as well as the one directing eisangelia against sycophants (Isocr. *Antid.* § 314; *Lex. Rh. C.* s. v.), be taken as belonging to the third section of the *νόμος* as above quoted? See also Antiph. *de Choreut.* § 35 (*κλοπῆς δημοσίων χρημάτων*); Lys. *c. Nicom.*; Aeschin. *c. Ctes.* § 3; Dem. *de Reb. in Chers.* p. 96, § 28; and *C. I. A.* ii. 65.

Eisangeliae could be laid before the senate or the popular assembly. In the former case the accuser laid his information in writing (also called *εἰσαγγελία*, Lyc. *c. Leocr.* 34, 137; Hyp. *pro Lyc.* 3, 4; *pro Eux.* 39 ff.; cf. Plut. *Alcib.* 22) before the prytanes, who reported to the senate on the case (Lys. c. *Frum.* 2, *ἐπειδὴ οἱ πρυτάνεις ἀπέδοσαν εἰς τὴν βούλην περὶ αὐτῶν*). No summons was issued to the person accused (Lycophron was abroad when information was laid against him, Hyp. *pro Lyc.* 3). The senate had a discretionary power to accept or reject (Lys. *c. Nicom.* 22); if they accepted the information, the accused was arrested if necessary (but see Hyp. *pro Eux.* 19, *ἦν σπάνιον ἰδεῖν ἀπ' εἰσαγγελίας τινὰ κρινόμενον ὑπακούσαντα εἰς τὸ δικαστήριον*, and *Journ. of Philol.* iv. p. 108), and in case of a charge of high treason not released, even if he offered to find sureties (in the oath of the senators was the phrase: *οὐδὲ δήσω Ἀθηναίων οὐδένα, ὃς ἂν ἐγγυητὰς τρεῖς καθιστῇ τὸ αὐτὸ τέλος τελοῦντας, πλὴν ἐάν τις ἐπὶ προδοσίᾳ τῆς πόλεως ἢ ἐπὶ καταλύσει τοῦ δήμου συνιὼν ἁλῷ*, Dem. *c. Timocr.* p. 745, § 144; cf. Schol. Aristoph. *Eccl.* 1089, *κατεχόμενον ἐκατέρωθεν ἀπολογεῖσθαι τὸν κατ' εἰσαγγελίαν κρινόμενον*).

The next step is described in [Dem.] *c. Euerg.* p. 1151, § 41, as *τοὺς πρυτάνεις προγράφειν τὴν κρίσιν ἐπὶ δύο ἡμέρας*: i.e. on the first day, after both parties had been heard, the senate gave their verdict by secret ballot, whether the defendant was guilty or not; and, if he was found guilty, the senate voted on a second day by show of hands (*διαχειροτονεῖν*) on the question whether they should sentence him to a fine of 500 drachmas which it was competent for them to impose, or hand him over to a court. In the latter case the secretary of the prytanes had to deliver the sentence (*ἡ κατάγνωσις*) of the senate to the thesmothetae, who possessed the *ἡγεμονία τοῦ δικαστηρίου* on such occasions (Pollux, viii. 87; Ps. Plut. p. 833 E), and had to bring the case for trial as soon as possible: if that was not done within thirty days after the arrest, it fell to the Eleven to bring the case before the court, according to the *νόμος* in Dem. *c. Timocr.* p. 720, § 63. The number of dicasts was 1000 (*κατὰ Σόλωνα*, Poll. viii. 53), and later on 1500 (*κατὰ τὸν Φαληρέα*: cf. *Lex. Rhet. Cant.* s. v. *εἰσαγγελία*); in the trial of Pistias, 2,500 (Dinarch. *c. Dem.* § 52). Schömann (*Assemblies*, p. 203) concluded from the fact of there being no mention of a *praejudicium* in the decree regarding the trial of Antiphon etc., that when the alleged offence was of such a nature as obviously to be beyond the competency of the senate, a decree was drawn up immediately. Lipsius, on the other hand, suggests that the senate was authorised by the popular assembly to direct this trial, as in *C. I. A.* i. 59, l. 39 ff. In some instances belonging to the time before Eucleides, the senate referred eisangeliae to the popular assembly (Xen. *Hell.* i. 7, 3; Isocr. *de Big.* 6). Eisangeliae might also be laid directly before the people at the first assembly of every prytany, which was called *κυρία* (Pollux, viii. 95, etc.), but not, as he says (viii. 87), through the thesmothetae (cf. Boeckh, *Kl. Schriften*, v. p. 163); and after the accuser and the defendant had spoken, the people voted on the question whether the information should be accepted or rejected. If it was accepted, the senate was commissioned to make a *προβούλευμα* for the trial (Xen. *Hell.* i. 7, 7, *τὴν βουλὴν προβουλεύσασαν εἰσενεγκεῖν. ὅτῳ τρόπῳ οἱ ἄνδρες κρίνοιντο*: *C. I. A.* ii. 65); the popular assembly could either sit in judgment on the case itself (as happened frequently in the time before Eucleides, and only in isolated instances after that year), or refer it to a Heliastic court (as in the case of Lycophron, *Hyp.* 3; cf. Dem. *c. Phorm.* p. 922, § 50, and Aristoph. *Vesp.* 590 ff., *ἔτι δ' ἡ βουλὴ χὠ δῆμος ὅταν κρῖναι μέγα πρᾶγμ' ἀπορήσῃ, ἐψήφισται τοὺς ἀδικοῦντας τοῖσι δικασταῖς παραδοῦναι*). If the popular assembly undertook the trial itself, the proceedings were probably the same as those described by Xenophon (*Hell.* i. 7, 9) on the occasion of the trial of the generals: a psephisma prescribed the form of the trial and the penalty upon conviction (*θανάτῳ ζημιῶσαι καὶ τοῖς ἕνδεκα παραδοῦναι καὶ τὰ χρήματα δημοσιεῦσαι, τὸ δ' ἐπιδέκατον τῆς θεοῦ εἶναι*). On that particular occasion the people gave their verdict by ballot, two urns being assigned to each tribe for that purpose; but from the use of *καταχειροτονεῖν* in other passages (*e.g.* Lys. *c. Philocr.* 2; Dem. *de fals. Leg.* p. 350, § 31, etc.) it seems probable that this was not invariably the rule. What happened when the popular assembly decided to refer the trial to a Heliastic court, may be learnt from the cases of Archeptolemus, Onomacles, and Antiphon. The senate authorised by the people passed a decree which directed that the accused should be arrested, that the thesmothetae should summon them on the day following the issue of the decree, and bring the cases into court on the day fixed in the summons; that the generals, assisted by such *συνήγοροι*, not more than ten in number, as they might choose from the senate, and by any other person that might wish to join them, should prosecute them for treason, and that the court should deal with those found guilty *κατὰ τὸν νόμον ὃς κεῖται περὶ τῶν προδόντων*. Ps. Plut. p. 834 A quotes also the judgment of the court. Since Onomacles is not included in it, nor mentioned by Lys. c. *Eratosth.* 67 (the author of the life (2) of Thucydides deserves no credit in the face of such evidence), he was probably acquitted; if he had fled, as Grote (vii. p. 326) suggests, he would have been condemned to death, etc., along with the others (cf. Dion. Halic. *de Dinarch.* 3, *τῶν δὲ εἰσαγγελθέντων τοὺς μὲν οὐχ ὑπομείναντας τὴν κρίσιν ἀνεθανάτωσαν τῇ ψήφῳ*). No direction as to penalty was needed, when that was fixed by law (probably from the middle of the 4th century: see the trial of Cephisodotus in 359 B.C., *πέντε ταλάντοις δ' ἐζημιώσατε, τρεῖς δὲ μόναι ψῆφοι διήνεγκαν τὸ μὴ θανάτου τιμῆσαι*, Dem. c. *Aristocr.* p. 676, § 167; Schol. Aeschin. c. *Ctes.* 51, 52), viz. death and refusal of burial in Attic territory (*Journ. of Philol.* iv. p. 105, and viii. 1 ff.): nor are *συνήγοροι* as representatives of the people before the court ever mentioned in the 4th century; for those in the speeches of Hypereides are clearly selected by the accusers themselves (*pro Lyc.* 15, and *pro Eux.* 46). As to the penalty in the event of the accuser not obtaining the votes of as many as a fifth of the dicasts, the grammarians disagree: Harpocration speaks of a fine of 1000 drachmas, and adds, *τὸ δὲ παλαιὸν καὶ οὗτοι μειζόνως ἐκολάζοντο*: the *Lex. Cant.* (p. 677, 12) has simply *οἱ δικασταὶ τιμῶσιν*; Pollux quotes Hypereides to show that the accuser was *ἀκίνδυνος*, and adds Theophrastus' statement (*περὶ νόμων*, fr. 8; *Journ. of Philol.* vi. p. 2 and 14 ff.) that a fine of 1000 drachmas was imposed. The facts of the case are that the accuser was at one time *ἀκίνδυνος* (Hyp. *pro Lyc.* 7 and 10), but that this impunity was discontinued (probably *διὰ τοὺς ῥᾳδίως εἰσαγγέλλοντας*, Pollux, *l. l.*); and the prominent mention by Demosthenes (*de Cor.* p. 310, § 250) of the fact of his accusers (in the period following the disaster of Chaeroneia) having not received *τὸ μέρος τῶν ψήφων, i.e. τὸ πέμπτον μέρος*, clearly shows that it had become a matter of importance to obtain the fifth part, that otherwise the accusers subjected themselves to a penalty, viz. 1000 drachmas; cf. Lycurg. c. *Leocr.* 3 (*Att. Process*, ed. Lipsius, pp. 312–329).

Of the two other classes of causes which equally bore the name of eisangelia, the former consists of cases of alleged *κάκωσις*, *i.e.* wrong done to orphans (Isae. *Hagn.* 15), heiresses (Isae. *Pyrrh.* 46; Dem. c. *Pantaen.* p. 980, 46, and fr. 5=Poll. viii. 53), and widows *ὅσαι μένουσιν ἐν τοῖς οἴκοις τῶν ἀνδρῶν τῶν τεθνηκότων φάσκουσαι κυεῖν*, Lex *ap.* [Dem.] c. *Macart.* p. 1076, § 75: not to parents, as Schömann (*Assemblies*, 181) supposed, Harpocration's definition *ἐπὶ ταῖς κακώσεσιν* being too wide (cf. *Att. Proc.* ed. Lipsius, p. 358, n. 443). Upon such occasions the informer (any Athenian citizen might undertake the accusation, Harpocr. *s. v.* *κακώσεως*) laid his indictment before the archon, if the aggrieved persons were of a free Attic family; or before the polemarch, if they were resident aliens. The peculiarities of this kind of cause were, that the informer and the defendant were not limited as to time in their speeches before the court (*ἄνευ ὕδατος*), and that the informer incurred no penalty whatever upon failing to obtain a verdict (*οὔτε γὰρ ἐπιτίμιον ταῖς πρὸς τὸν ἄρχοντα εἰσαγγελίαις ἔπεστιν, οὐδ' ἐὰν μηδεμίαν τῶν ψήφων οἱ εἰσαγγείλαντες μεταλάβωσιν, οὔτε πρυτανεῖα οὔτε παράστασις οὐδεμία τίθεται τῶν εἰσαγγελιῶν ἀλλὰ τοῖς μὲν διώκουσιν ἀκινδύνως εἰσαγγέλλειν ἔξεστι, τῷ βουλομένῳ*, Isae. *de Pyrrh. her.* § 47: cf. Dem. c. *Pantaen.* p. 980, § 46; *Att. Proc.* p. 332 f.). With respect to the accused it is obvious that the cause must have been *τιμητός*, *i.e.* that the court would have the power of fixing the amount of penalty upon conviction; *ἔσχαται τιμωρίαι*, Isae. *de Pyrrh. her.* § 47, *ἐκινδύνευεν ἂν περὶ τοῦ σώματος* (*i.e. περὶ τῆς ἐπιτιμίας*, Meier, *de Bon. Damn.* p. 143, n. 468) *καὶ τῆς οὐσίας ἁπάσης*, 62, cf. *de Hagn. her.* 35, and Dem. c. *Pantaen.* p. 981, § 49. (*Att. Process*, p. 359, n. 449; Schömann on Isaeus, *de Pyrrh. her.* p. 62.)

The third kind of eisangelia was available against *διαιτηταί*. Our information on this subject is very limited: Harp. *εἰ γάρ τις ὑπὸ διαιτητοῦ ἀδικηθείη, ἐξῆν τοῦτον εἰσαγγέλλειν πρὸς τοὺς δικαστὰς καὶ ἁλοὺς ἠτιμοῦτο* (cf. Schol. Plat. *Legg.* xi. p. 926 D; Bekk. *Anecd.* 235; and Pollux, viii. 126, *καὶ ἀτιμία ἀφώριστο τῷ μὴ δικαίως* (Meier, *d. Privatschiedrichter*, etc., p. 15, *διαιτήσαντι*) and Dem. c. *Mid.* p. 542, § 86 ff.). In Hudtwalcker's opinion (*ü. d. Diäteten*, p. 24 ff.) the *διαιτηταὶ* had to meet annually in the last month but one, probably in the market-place in front of the senate-house, to be at hand in case a person wished to complain of a verdict given by any one of them (a kind of *εὔθυναι*, but see *Att. Process*, p. 260, n. 159); such a complaint was called eisangelia. To this class belonged the complaint of Midias, which was laid before the senate (*πρυτανεύοντα* H. explains president of the senate). Against this interpretation Lipsius urges that the words *τὴν τελευταίαν ἡμέραν τῶν διαιτητῶν* and *ἐκβάλλει* point to Straton as still in office. The correct explanation of the passage is given by Bergk (*Zeitschrift. f. Alterth.* 1849, p. 273 ff.); he shows that the *διαιτηταὶ* were a properly constituted body under the presidency of prytanes, and had the power of expelling a member for misconduct (as the senate of 500 and the Areiopagus possessed over their respective members). This happened in Straton's case: Midias laid an information against him before the *διαιτηταὶ* at their last meeting (B. alters rather needlessly in Harp. *πρὸς τοὺς διαιτητὰς* to *πρὸς τοὺς δικαστὰς*, and interprets *ἡμέραν εἰς ἥν*, etc. "meeting"), which was not numerously attended, without having informed Straton of his intention, and induced the chairman (of the *διαιτηταί*), in the absence of Straton, to have the case decided by the vote of those present; the result was that Straton was expelled (*ἐκβάλλει*) and became *ἄτιμος*, and this verdict was confirmed by the dicasts on appeal (p. 543, § 91). (Fränkel, p. 73 n.; *Att. Process*, ed. Lipsius, pp. 333 and 1013.) [H. H.]

EISITE'RIA (*εἰσιτήρια*), sc. *ἱερά*, sacrifices offered upon entrance into office; according to Suidas (*s. v.*) upon the first day of the new year, which accordingly was kept as a holiday. Besides the higher magistrates, the senate offered *εἰσιτήρια* through one of its members chosen for the purpose (Dem. c. *Mid.* p. 552, § 114): the scholiast Ulpian on this passage appears to have confounded the more solemn sacrifice on entering office with the daily prayer and sacrifice at the beginning of each sitting [BOULÉ, p. 313 *a*]. When an embassy set out, at least on the most important occasions, the senate and principal magistrates offered εἰσιτήρια for its success, and dined together (Dem. *F. L.* p. 400, § 190 = 210). The latter passage, which has been quoted in favour of the identity of the εἰσιτήρια and the daily prayers, is in reality decisive against it: it is quite certain that the senate did not dine every day at a common table, though the prytanes did. This argument appears to us conclusive in favour of Schömann's view. The ἐξιτήρια on going out of office (Hesych.) are less well attested. (Schömann, *Assemblies*, p. 306; *Antiq.* i. 379, 409, E. T.) [W. W.]

EI'SPHORA (εἰσφορά), literally a contribution or tribute, was an extraordinary tax on property raised at Athens in war-time only, paid both by citizens and metoeci, and voted by the people on each occasion when it was required. The grammarians do not always clearly distinguish between the Eisphora and the liturgies (λειτουργίαι), and Ulpian on Demosthenes (*Olynth.* ii. p. 33 ε) entirely confounds them. The Eisphora was not a liturgy, though the προεισφορά (see below) was one. The property of orphans during minority was exempt from the liturgies, but not from the Eisphora; and a trierarch, choregus, or any one otherwise discharging a liturgy had to pay the Eisphora as well. It is not certain when this property-tax was introduced, but it seems that it was at least unfrequent in early times when personal service was the rule, whereas with the increasing employment of mercenaries (ξένοι) the necessity for it became continually greater. In the last years of Athenian independence it was the constant complaint of Demosthenes that the citizens would neither fight their own battles nor pay others to fight for them.

The first Eisphora of which we have any information was imposed in B.C. 428. The words of Thucydides (ἐσενεγκόντες τότε πρῶτον ἐσφορὰν διακόσια τάλαντα, iii. 19) have led to the inference that this was the first of all (Boeckh, *P. E.* p. 470 = *Sthh.*^{3} i. 556); but two other explanations have been offered, (1) that this was the first on which so large a sum as 200 talents was voted (rejected by Boeckh, perhaps too summarily); (2) that it was simply the first in the Peloponnesian War (Kirchhoff's view, see Fränkel on Boeckh, n. 780; preferred also by Gilbert, p. 346). Schömann leaves the point undecided (*Antiq.* i. 457, E. T.); but the language of Antiphon (*Tetral.* i. b, § 12) and Aristophanes (*Eq.* 924 ff.) seems to indicate that in the early years of the Peloponnesian War it was no new invention (compare Thucyd. i. 141, § 4; Tittmann, *Darstellung d. Griech. Staatsverfassungen*, p. 41, n. 31, quoted in the English version of Boeckh, p. 471). However this may be, the Athenians, even under the stress of a desperate war, had an instinctive aversion to direct taxes; and at this period no Eisphora could be moved without a preliminary vote of ἄδεια to the proposer (*C. I. A.* i. 32; Gilbert, *l. c.*). The psephisma which decreed the tax also named the amount to be raised: 200 talents, Thucyd. iii. 19; 60 talents, Dem. *Olynth.* iii. p. 29, § 4; 500 talents, a comic exaggeration in Aristoph. *Eccles.* 824, gravely pronounced impossible by Dem. *de Symmor.* p. 185, § 27. Before the institution of the symmoriae, which acted as intermediaries, the people collected the Eisphora directly through their own agents, with confiscation as the penalty for default. At the head of the collection were the generals, who had under their orders the ἐκλογεῖς and other subordinate tax-gatherers; it is evidently as a strategus that Cleon has the power of punishing his enemies by high rating (Aristoph. *Eq.* l. c.); just as later the same officers made out the lists of the symmoriae, and selected the richer men for the προεισφορά (Dem. *c. Boeot.* i. p. 997, § 8; Wolf, *Proleg. in Lept.* p. xciv. = 49 tr. Beatson; Boeckh, *P. E.* p. 472 = *Sthh.*^{3} i. 557). For the rate of this taxation in proportion to the taxable capital, the statement most to be relied on is that of Demosthenes in a passage already cited (*Olynth.* iii. p. 29, § 4). Taking 6000 talents as the amount of taxable capital (τίμημα), he speaks of a hundredth or, if the people were willing to make sacrifices, a fiftieth as a possible rate, a twelfth as a preposterous amount which no one would venture to propose. Figures resting only on comedy, such as the five-hundredth part (πεντακοσιοστή, Aristoph. *Eccles.* 1007), must be received with more caution than Boeckh has shown in admitting this species of evidence. We have, however, proof that quite small sums might be raised by Eisphora; 10 talents annually from 347 to 323 B.C. for the building of the arsenal (*C. I. A.* ii. 270). The tax of a fortieth, proposed by one Euripides, who may have been a son or nephew of the great dramatist, about B.C. 394 (Aristoph. *Eccles.* 824), may be accepted as historical; but the notion that it was "calculated to produce" 500 talents, implying a taxable capital of 20,000 talents, is justly styled by Grote "a comic exaggeration of that which foolish people at first fancied" (ch. 75, vi. 525 n.). This common-sense remark is quoted approvingly against Boeckh by his editor Fränkel (n. 803). A tax of a twentieth has been inferred from Dem. *c. Androt.* p. 617, § 77, where δεκατεύοντες is balanced by διπλᾶς πράττοντες τὰς εἰσφοράς: but δεκατεύειν, as already observed under DECUMAE, is a phrase for high taxation in general, and we should judge from the language of Demosthenes just quoted that an εἰκοστή was more than the Athenians would bear.

There can be no doubt that until the archonship of Nausinicus the standard according to which the Eisphora was levied was based upon the four Solonian classes, the continued existence of which can be traced by inscriptions to within a few years of that date (B.C. 387–6, *C. I. A.* ii. 14). We must assume that this census, which under the law of Solon had reference to landed or real property only, had been extended with the growth of Athenian commerce and empire to include moveable or personal property as well. The threat of Cleon implies that moveables were taxed (Aristoph. *Eq.* 924); slaves were included in the ἀπογραφή or return (Isocr. *Trapez.* § 49); corporate property was taxed as well as individual (*C. I. G.* 93, 103; *C. I. A.* ii. 600).

In the archonship of Nausinicus, B.C. 378–7, a new census was instituted, in which the people, for the purposes of the property-tax, were divided into a number of symmoriae (*συμμορίαι*), or groups similar to those which were some years afterwards (B.C. 364–3) made for the trierarchy (Philoch. *ap.* Harpocrat. *s. v.* *συμμορία*). The question of these symmoriae has lately been cleared of some of the difficulties which surrounded it in consequence of the confused statements of the scholiast Ulpian (*l. c.*). The property-tax was certainly paid by all (Dem. *Olynth.* i. p. 15, § 20; ii. *extr.*); not even the descendants of Harmodius and Aristogeiton were exempt (*c. Mid.* p. 462, § 18); and the 1200 whom Ulpian absurdly supposed to have been the sole payers of it are now proved to have formed the quite different trierarchic symmoriae, and to have had nothing to do with the Eisphora at all (Lipsius, *Jahrb. für class. Philol.* 1878, p. 289 ff.; Gilbert, p. 349 n.; Fränkel, n. 834; SYMMORIAE). The number of the trierarchic symmoriae was twenty (Dem. *de Symm.* p. 182, § 17); that of the others uncertain, perhaps even variable; and it is by far the most probable conclusion that all the citizens were enrolled in them, though Boeckh leaves the point open (*P. E.* p. 527 ff. = *Sthh.*³ i. 614 ff.). The 300 richest men formed the first class of contributors; the richest individual in each symmoria was called *ἡγεμὼν συμμορίας*, an office which at first must have been purely honorary, since it could be filled by a minor, and involved no extra burdens. Demosthenes (aet. 7) probably lost his father in the year of Nausinicus, and the ten years of his minority during which he contributed through his guardians a first-class Eisphora and was a *ἡγεμὼν συμμορίας* were seemingly the ten first years of the new system (Dem. *c. Aphob.* i. p. 815, § 7; ii. p. 836, § 4). Through this period, as has been already mentioned, the state prosecuted its claims against the individual taxpayer, whether rich or poor. About the year 362–1 the *προεισφορὰ* was introduced: the 300 richest men (or those named as such by the strategi) were now called upon to advance the money required from their symmoria to the state, which thus reaped the benefit of dealing only with capitalists, of prompt payment and no arrears secured in the case of other taxes by the system of farming. The *προεισφέροντες*, as they were called, had to recover from the poorer contributors in the courts of law as best they might: the hardships in which they were now involved are described in the speech *against Polycles* (p. 1209, § 9). The *προεισφορὰ* counted as a liturgy; and as no man was compelled to serve two liturgies at the same time, it could not lawfully be imposed on those who were already trierarchs. The speaker complains that, having landed property *en évidence* (*φανερὰ οὐσία*) in three demes, he had been put on the list for each; he did not stand upon his rights as a trierarch, but accepted the burden and made the required advances; on his return from foreign service he found that all the solvent properties (*τὰ εὔπορα*) had been pounced upon by others in his absence, and he was left to recover what he could from those which were "not worth powder and shot" (*τὰ ἄπορα*). The *προεισφορὰ* marks a period when an empty exchequer had increased the tendency of the democracy to prey upon the rich; according to Boeckh, the revenue suffered the greatest falling off in the 105th and 106th Olympiads, B.C. 360–353 (*P. E.* p. 435 = *Sthh.*³ i. 511). It seems to have succeeded in its object of avoiding arrears; in B.C. 355 Demosthenes reckons the outstanding claims of the whole period since Nausinicus at only 14 talents out of 300, a small amount when the extreme slipperiness of the Athenian tax-payer is considered. The explanation of the phrase *τὰς εἰσφορὰς τὰς ἀπὸ Ναυσινίκου* (Dem. *c. Androt.* p. 606, § 44) adopted by the present writer is now confirmed by Fränkel in an elaborate note as the only admissible rendering: but the sum of 300 talents for all the Eisphorae of 23 years is too small, and the word *τριακόσια* is justly suspected (n. 821; cf. *Class. Rev.* i. 78, 150). The resident aliens, whether *μέτοικοι* or *ἰσοτελεῖς*, as they were liable to other liturgies, were doubtless also included in the *προεισφορά* (Boeckh, *P. E.* p. 538 f. = *Sthh.*³ i. 624 f.); and they were grouped in symmoriae of their own apart from the citizens (*αἵ τε τῶν μετοίκων λειτουργίαι καὶ αἱ πολιτικαί*, Dem. *c. Lept.* p. 462, § 18; *μετοικικῆς συμμορίας ταμίας*, Hyperid. *ap.* Poll. viii. 144). For the collection of the Eisphora, besides the ECLOGEIS (*q. v.*), other officers called *διαγραφεῖς* and *ἐπιγραφεῖς* are mentioned, but the duties of each are nowhere clearly defined (Boeckh, *P. E.* p. 533 = *Sthh.*³ i. 619). The list or register of each symmoria, analogous to our rate-books, was called *διάγραμμα* (Dem. *de Symm.* p. 183, § 21), and the *διαγραφεῖς* were probably the keepers of it; the *ἐπιγραφεῖς* seem to have had similar duties among the resident aliens, by whom they were chosen (Isocr. *Trapez.* § 41; Harpocrat. *s. v.*).

The relation of the *τίμημα* to the total wealth of the Athenian people, and the incidence of the Eisphora regarded as an income-tax, have been made out by Boeckh with great probability. In the Solonian classes the principle of graduation was already recognised, though only to a slight extent; thus the first class, the Pentacosiomedimni, were entered on the register with their whole productive landed property, the Knights with five-sixths, the Zeugitae with five-ninths, while the Thetes were altogether exempt (Boeckh, *P. E.* p. 505 = *Sthh.*³ i. 588). In the succeeding period, while personal property was brought into the schedule for taxation, the custom must have arisen of allowing a comparatively small proportion of the whole to rank as *τίμημα* or "taxable capital"; it cannot be thought that the state of things which we find under the law of B.C. 378, when the *τίμημα* of the largest properties was only one-fifth (Dem. *c. Aphob.* i. p. 815, § 7), was the result of a sudden change; or that the taxable capital can have stood in 393 B.C. at 20,000 talents, and fifteen years later have been reduced to 5750 talents. The latter figure rests upon the precise testimony of Polybius (ii. 62, § 7), Demosthenes giving in round numbers 6000 at the same date (*de Symm.* p. 183, § 19); the former is based, as has been seen, upon the facile arithmetic of comedy. To Boeckh, however, is due the discovery of the true sense of *τίμημα*, the "taxable capital," as distinguished either from the yearly revenue or the whole property: for recent criticism see Thumser, *de Civ. Athen. Muneribus*,

p. 32 ff.; Gilbert, pp. 347-8; Fränkel, n. 823. The details, it is admitted, rest partly upon conjecture; that the highest class were rated upon a fifth of their property is the only fact definitely stated (Dem. *c. Aphob.* l. c.); that there were three other classes taxed in a diminishing ratio is the natural conclusion from what we know of the earlier arrangement under Solon. The following table gives Boeckh's latest scheme of the valuation in the archonship of Nausinicus (*Sthh.*^{3} i. 603), differing slightly from his earlier view (*P. E.* p. 519):—

First Class, from twelve talents upwards.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
500 tal.		100 tal.	5 tal.
100 „	20	20 „	1 „
50 „	per	10 „	30 min.
15 „	cent.	3 „	9 „
12 „		2 tal. 24 min.	720 dr.

Second Class, from six talents and upwards, but under twelve.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
11 tal.		1 tal. 45 min. 60 dr.	528 dr.
10 „	16	1 „ 36 „	480 „
8 „	per	1 „ 16 „ 80 „	384 „
7 „	cent.	1 „ 7 „ 20 „	336 „
6 „		57 „ 60 „	288 „

Third Class, from two talents upwards, but under six.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
5 tal.		36 min.	180 dr.
4 „	12	28 „ 80 dr.	144 „
3 „	per	21 „ 60 „	108 „
2½ „	cent.	18 „	90 „
2 „		14 „ 40 „	72 „

Fourth Class, from twenty-five minas upwards, but under two talents.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
1½ tal.		7 min. 20 dr.	36 dr.
1 „	8	4 „ 80 „	24 „
45 min.	per	3 „ 60 „	18 „
30 „	cent.	2 „ 40 „	12 „
25 „		2 „	10 „

Every one had to pay his tax in the deme or demes where his landed property lay (Dem. *c. Polycl.* p. 1209, § 9). It is expressly stated that *κτήματα*, not *σώματα*, were responsible for the Eisphora, *i.e.* a man could be sold up but not imprisoned or punished in person (Dem. *c. Androt.* p. 609, § 54; *c. Timocr.* p. 752, § 166). The practice, however, was not quite on a level with the theory: even citizens were sometimes dragged to prison who had not the means of paying unjust demands; and the metoeci might be oppressed with still greater impunity (*c. Androt.* pp. 609, 610, §§ 54, 56). This, however, was not under the ordinary law, but under an extraordinary commission to inquire into arrears to which Androtion had got himself appointed. Among his acts of oppression is mentioned his disputing the status of citizens in order to make them *τὸ ἕκτον μέρος εἰσφέρειν μετὰ τῶν μετοίκων* (p. 612, § 61); and this is the only passage bearing on the amount of Eisphora paid by the metoeci. Boeckh thinks that they paid uniformly, whatever their means, on a second-class rating of 16 or 16⅔ per cent.: this may have been the minimum rate for the poorer aliens, but it is not likely that any who possessed a first-class property were let off more cheaply than citizens of equal fortune (cf. Gilbert, *Staatsalterth.* i. 172). Another explanation of *τὸ ἕκτον μέρος* seems possible: the metoeci may have paid the same quotas as the citizens, with a *προσκατάβλημα* or additional charge of one-sixth. As they could not hold landed property, the facilities for concealment must have been much greater in their case. After the institution of the *προεισφορὰ* the friction in collecting this particular tax was no doubt greatly diminished. The state had direct dealings only with the 300 selected rich men; and, as we have seen, did not trouble itself with the question how they were to recover from the poorer contributors; but any one who thought himself unjustly included in this class might claim an antidosis with any one who was left out of it [ANTIDOSIS]. Boeckh's language on this subject (bk. iv. ch. 16 *init.*) seems to us rather unguarded, as though any tax-payer might dispute his rating in this way; the speech *against Phaenippus* mentions only the case of the 300 (see the Argument, and especially p. 1046, § 25, *τοὺς λειτουργοῦντας καὶ ἐν τοῖς τριακοσίοις ὄντας ἀναπαύειν*: again *ἄγειν εἰς τοὺς προεισφέροντας*).

The Eisphora was not much like a modern income-tax, though Schömann calls it "a tax on property, or more properly on income" (*Antiq.* i. 455, E. T.). It was much more like the "benevolences" and "fifteenths" levied by English kings in former times, an extraordinary contribution demanded at irregular intervals; and moreover it was based on the capital itself, not on the varying produce of capital. It was not at all oppressive in amount, though the Athenian people required so much persuasion to induce them to vote it. Demosthenes during his minority, out of a first-class fortune of fifteen talents and a *τίμημα* of three, in ten years only paid eighteen minas (*c. Aphob.* i. p. 825, § 37), the tenth part of his taxable capital, or the fiftieth part of his property (about £72 out of £3600). The income must have been at least 10 per cent. of the full capital, or £360 a year (Boeckh, *P. E.* p. 522 = *Sthh.*^{3} i. 607).

The greater part of Boeckh's fourth book (chaps. i.-x., xvi.) is devoted to the Eisphora. Cf. Hermann, *Staatsalterth.* § 162; Schömann, *Antiq.* i. 455-457, E. T.; Gilbert, *Staatsalterth.* i. 345-350. [L. S.] [W. W.]

EKECHEI'RIA (*ἐκεχειρία*). [HIEROMENIA.]

ELAEOTHE'SIUM. [BALNEAE, p. 272.]

ELAPHEBO'LIA (*ἐλαφηβόλια*), the greatest festival in the town of Hyampolis, in Phocis, which was celebrated in honour of Artemis, in commemoration, it is said, of a victory which its inhabitants had gained over the Thessalians, who had ravaged the country and reduced the Phocians in the neighbourhood of the town nearly to the last extremity. (Plut. *de Mul. Virt.* p. 244 B, *Quaest. Symp.* p. 660 D; Paus. x. 35, § 4.) The only particular which we know of its celebration is, that a peculiar kind of cake (*ἔλαφος*) was made on the occasion. (Athen. xv. p. 646 e.) These cakes were, as their name indicates, probably made in the shape of a stag or deer, and offered to the goddess. The festival of the elaphebolia was also celebrated in many other parts of Greece, but no particulars are known. (*Etym. M.*, s. v. Ἐλαφηβολιών.) [L. S.]

ELAPHEBO'LION. [Calendarium.]

ELECTRUM, *ἤλεκτρος* or *ἤλεκτρον*. Lepsius has maintained (*Ueber die Metalle in den Aegypt. Inschriften*, Appendix) that the early Greek usage was to employ the masculine form when the mixture of gold and silver was intended; the neuter form when the mineral which we call amber was meant. It is likely that the Greeks were acquainted in very early times with the use of amber, trade in this mineral having taken place in pre-historic days between North and South Europe. They must also have been early acquainted with the compounded metal, since gold alike in Asia and Europe is commonly found mixed with silver. Which of the two substances therefore was first called electrum is a matter quite open to dispute. We will speak of them in turn.

(1) Amber. Beads of amber were found in the royal tombs at Mycenae; and chemical analysis (Schliemann, *Tiryns*, p. 370) has proved that this amber came from the Baltic, and not from elsewhere. Similar beads have also been found in the very early Greek (?) tombs at Ialysus in Rhodes. At a later period amber is mentioned in the Odyssey (xv. 460; xviii. 295) as a material of necklaces, which are said to be held together *ἠλέκτροισι*, by beads of amber. In one of these passages the necklace is spoken of as an import from Phoenicia. It is also stated (iv. 73) that the walls of the palace of Menelaus were adorned with amber, as well as gold, silver, and ivory. The author of the Shield of Herakles, ascribed to Hesiod, speaks of that shield (141) as adorned with electrum, in which case, however, the metal may be meant. In South Italy amber was in the archaic period used as a material for statuettes and reliefs; many specimens of this kind of work are in the British Museum. But the amber used in Italy seems to differ in many respects from that of the Baltic, and is more like the amber still found in small quantities in Sicily.

Many writers have maintained that there was a regularly used trade-route across Europe from the banks of the Baltic to the shores of the Euxine or Adriatic, by which amber was brought to the south in exchange for other wares, and that this route was used without intermission from prehistoric days onwards. But the only facts on which this view is based are the occasional discovery in Central Europe of the coins and art-products of Greece and Etruria, and the above-mentioned presence of pieces of amber in early Greek tombs. These facts are, as Furtwängler remarks (*Goldfund von Vettersfelde*, p. 49) not conclusive. It is more probable that the amber of early Greece was imported by the Phoenicians who sailed round the coast to the north of Europe, especially in view of the fact that after the Homeric age amber disappears from Greek tombs, and does not again figure until Roman times, when a regular trade with the Baltic coast had sprung up.

(2) Mixed gold and silver. The earliest certain mention of this mixed metal as electrum (rather *ἤλεκτρος*) is in Sophocles' *Antigone*, 1037, where the substance is said to come from Sardes: for Sardes by the Pactolus was noted in antiquity as the place whence came the river-gold, mixed when found with a considerable percentage of silver. Herodotus, however, speaking of this same Sardian metal in connexion with the donaria of Croesus to Delphi (i. 50), calls it white gold, *λευκὸς χρυσός*. Pliny remarks (*H. N.* xxxiii. § 80) that gold is invariably found mixed with silver (which is true), and that when the proportion of silver reaches a fifth, the metal is called electrum. He adds that electrum was made by art as well as found.

This white gold or electrum is used on the sword-blades found at Mycenae for purposes of inlaying. In later times it was used, as being a harder material than gold, for objects in which hardness was desirable. By far the most important use to which it was put was as a material for coins.

In the 7th century B.C., or possibly late in the 8th, the kings of Lydia began to issue stamped money of electrum, using probably the metal in its natural state, and the maritime cities of the Asiatic coast and of Euboea adopted the idea. Information as to the standards of weight used in these issues is given under Pondera. For some time, until silver was first minted at Aegina, all the coinage of the world consisted of stamped pellets of electrum, though no doubt unstamped bars of gold and silver circulated with them. It is observed by Mr. Head (*Numismatic Chronicle*, 1875, p. 254), in his excellent account of early electrum coins, which is mainly based on the researches of Brandis (*Münz-Mass- und Gewichtswesen*), that the mixed metal had two advantages over pure gold in circulation: (1) it was more durable; (2) the proportionate value of gold to silver being 13⅓ to 1 (Herodotus says 13), and electrum being of three-fourths the value of gold, each coin of electrum would pass as the equivalent of ten silver bars of equal weight. It is considered that this proportion is shown to have actually held by the fact that everywhere electrum was minted on the standards of weight in use for silver, and not on the (different) standards in use for gold, which seems to show that the proportionate values of electrum and silver were very simple. It must, however, be cited as an objection to the views of Brandis and Head. that in the cases in which the proportion of gold to silver in electrum coins has been determined by chemical analysis or specific gravity, a far less proportion of gold than three to one has been discovered, a proportion indeed sometimes less than one to one, so that it is difficult to see how electrum can have been considered as of three-fourths of the value of gold. On this subject further investigations are necessary.

Early electrum Stater, probably struck at Miletus before B.C. 623. (British Museum.)

It is believed that Croesus first introduced in Asia, in place of the coinage of electrum, money of gold and of silver. The conquering Persian kings adopted the Lydian currency and imitated it, and coins of electrum went rapidly out of use. But at a somewhat later time, about B.C. 500, electrum was again issued by a few cities, more especially Cyzicus, Phocaea, and Lampsacus.

Electrum Stater of Cyzicus. (British Museum.)

The staters and hectae (sixths) of those cities were current in the Euxine, Asia Minor, and Greece. They are mentioned in Attic inscriptions from B.C. 434 onwards. Cyrus the younger paid his Greek mercenaries a Cyzicene stater a month (Xenoph. *Anab.* vii. 3, 10), and Demosthenes states in his speech against Phormio (B.C. 333) that in Pontus Cyzicene staters passed as equivalent to 28 Attic drachms of silver. [See STATER.]

We possess the text of a curious commercial treaty concluded between Phocaea and Mytilene, for the issue in common by the two states of hectae or sixths of electrum. For the details, see Newton in *Trans. Roy. Soc. Lit.* viii. p. 549. Each of the cities was in turn for the space of a year to mint these coins, which were to be in both a legal tender, and provisions were made for punishing any person who debased the currency below the normal standard. But the paleness of these hectae, which still exist in large numbers, proves that they did not contain a high proportion of gold. In the fourth century, electrum coins were largely used at Carthage, and in the time of Timoleon at Syracuse. [P. G.]

ELENCHUS (ἔλεγχος). [INAURIS.]

E'LEPHAS (*ἐλέφας, ebur; elephantus*, poet., Verg. *Georg.* iii. 26; *Aen.* iii. 464, vi. 896). African ivory was known to the ancients, through Phoenician trade, long before the elephant (from Libya in the time of Pheidias: *Hermipp. fr.* 61 M.; Pausan. i. 12, 4). Accordingly, early writers—Homer, Hesiod, Pindar—speak of the material only. Herodotus, indeed, was aware of its origin (iv. 191; Plin. *H. N.* viii. § 7), but the Greeks generally only became acquainted with the animal from the Macedonian expeditions into Asia, the Romans with the arrival of Pyrrhus in Italy. Both words *ἐλέφας*, *ebur*, probably contain the Egyptian *âb* (ivory, elephant). (O. Schrader, *Linguist. histor. Forsch. zur Handelsgesch.* i. 71.)

The use of ivory in the manufacture of small objects of use or ornament, and for purposes of decoration, is earliest in Egypt and Assyria. There have been found, for instance, castanets, stick-handles, hilts and hefts, combs, flutes, sceptres, caskets, statuettes, made of the tusk, and many different articles of furniture inlaid with it. In Homer, besides its employment when carved in mass, it is referred to in connexion with walls, doors, harness, &c., and was then probably attached in plates by nails to a metal or wooden ground. The chest of Kypselos, which was of cedar embellished with ivory reliefs, was probably an example of the latter method; so also perhaps the bedstead of Hippodameia (Paus. v. 17, 2; v. 20, 1). In later times, true *inlaying* was resorted to, and almost every kind of furniture, as beds, sofas, thrones, carriages even, enriched with the precious material. It is probable that at the time of the Empire the use of ivory in the arts was much more extensive than at the present day, and the supply abundant.

Among objects not enumerated above may be mentioned masks and writing-tablets. The latter (δέλτοι, *libri elephantini*), with two, three, or more leaves (*diptycha*, *triptycha*, *pentaptycha*, &c.), were either entirely, or had their covers only, of ivory. Those extant are chiefly of later Roman age. They are of two classes, *consularia* and *ecclesiastica*, distinguished by the subjects of the carvings on their covers, the former being figures of consuls at the *pompa circensis*, *missiones*, &c., while the latter are of a biblical nature (Müller, *Arch. d. Kunst*, § 312, n. 3). They were presented to officers and dignitaries to commemorate their appointment. [DIPTYCHA.]

For further information, see H. Blümner, *Kunstgew. im Alterth.* i. 113, &c., ii. 64; id. *Technol. u. Terminol. d. Gewerbe*, &c. ii. 361–375, where there is a full bibliography. Compare CHRYSELEPHANTINA. [J. M.]

ELEUSI'NIA ('Ελευσίνια). This title was chiefly applied to a festival held by the Athenians in autumn, in honour of Demeter, Persephone, and Iacchus, consisting of sacrifices, processions, and certain mystical ceremonies. It was one of the most important festivals of Greece, dated from the earliest times, and continued to maintain its high position long after living Greece was no more, and everything else in that country had either perished or become mean and contemptible (cf. Aristides, *Or. Eleusinia*, vol. i. p. 259, ed. Jebb).

1. *The Origin of the Eleusinia.*—The mythical origin is contained in the Homeric hymn to Demeter, which tells how Persephone, while gathering flowers, was, with the connivance of Zeus, carried off by the god of the lower world, Hades or Polydegmon (the great receiver); and how her mother Demeter, daughter of Rhea, searching distractedly for her child, is advised by Hecate to consult Helios, who sees all things; and how Helios in pity tells her that Zeus has granted to Hades to carry off her daughter to be his wife. Forthwith Demeter changes herself into an old woman; and as she wanders forth disconsolate through the world, she comes to Eleusis, and sits down on the cheerless stone by a well. Anon the daughters of Celeus, the king of Eleusis, come to the well to draw water. They bring her to their home, where Metanira, wife of Celeus, gives her the latest born child, Demophoon, to nurse. But Demeter is still bowed down with grief: she sits dignified but silent in her room, till the jests and raillery of Iambe, the servant-maid, at last make her smile. She consents to take food and drink, but will have no wine, only a mixture (κυκεών) of water with barley-meal and mint. Days go on, and the child Demophoon thrives beyond what mortal child was wont, for a goddess was his nurse: she used to anoint him daily with ambrosia, and place him in the fire by night. But a little more time and the child would have been immortal, when one night Metanira saw the nurse

place him in the fire and cried aloud with terror. Then did the anger of Demeter burn forth. Of a sudden the aged nurse transformed herself into the goddess, told who she was, what she had intended to do, and how that the little faith of the mother had robbed the child of immortality, and finally bade the people of Eleusis be told to erect a temple for her on the hill above the fountain, when she herself would prescribe the services they must perform in order to gain her favour. They did so, and Demeter dwelt there, shunning all association with the other gods who had been parties to the carrying off of her daughter. For a year Demeter dwelt there—an awful and desperate year. Nothing grew. The human race would have perished, had not Zeus agreed that Persephone should return. Right joyfully did Persephone obey the summons of Hermes: but Hades persuaded her to eat a pomegranate seed before she left, and that prevented her staying away from him for a whole year. So Persephone returns, and great is the joy of mother and daughter, in which the faithful Hecate sympathises. Rhea is then sent down by Zeus to her daughter, and effects the reconciliation. The corn comes up in abundance in the Rarian plain, and Demeter returns to Olympus to dwell with the gods: but before she goes she prescribes to Celeus, and to his sons Triptolemus, Diocles, and Eumolpus, the solemnities and divine services that were in future time to be paid her: and so the famous Eleusinian mysteries were a direct appointment of the great goddess Demeter herself.

This was the story of the origin of the mysteries: but how the mysteries came to be mysteries of the Athenians depends on another story, which concerns the union of Eleusis with Athens. Erechtheus warred with the Eleusinians (Paus. i. 38, 3; Lobeck, *Aglaoph.* 206 ff.), who are helped by one Eumolpus, a Thracian, son of Poseidon (Apoll. iii. 14, 4), and founder of the mysteries (Lucian, *Demon*, 34). The difficulties connected with the exact birthplace and genealogical position of Eumolpus (see Lobeck, *op. cit.* 212; Roscher, *Lexikon der Mythol.* s.v. *Eumolpus*)—even Pausanias (i. 38, 7) is perplexed with Eleusinian genealogies—we may pass over, remembering that he is, according to this legend, a foreigner (Plut. *de Exsilio*, p. 607, 10). The many beautiful stories which are connected with Erechtheus and his family we may also forget for the present, and proceed at once to the result, which was, that Eleusis was conquered, and to the Athenians fell the political headship, but to the family of Eumolpus and the daughters of the Eleusinian king Celeus was assigned the high-priesthood (*ἱεροφαντία*) of the Eleusinian worship. The other family which held a priesthood in the mysteries, the Kerykes, were said to have been descended from Keryx, the son of Eumolpus; though the family itself considered its ancestors to have been Hermes and Aglauros, daughter of Erechtheus, and so genuine Athenians (Paus. i. 38, 3).

So ran the legends of Eleusis, "grouping together, in the same scene and story, the goddess and the heroic fathers of the town; legends which did not take their start from realities of the past, but from realities of the present, combined with retrospective feeling and fancy, which filled up the blank of the aforetime in a manner at once plausible and impressive" (Grote, i. 42). But yet something perhaps of the realities of the past may be learned from them. We can clearly see that it is in connexion with the lower world that the goddesses are honoured. They are Chthonian divinities (Preller, *Griech. Myth.* i. 643), who presided over the production of the fruits of the earth; and it is reasonable to suppose that this most primitive kind of worship was a relic of the Pelasgian past, which continued on into historical times, in the form of mystical and secret worship (cf. Hermann, *Gottesd. Alterth.* § 32; K. O. Müller in Ersch and Grüber, s.v. *Eleusinia*). The religions of previous inhabitants sometimes continued in this form: *e.g.* the Thesmophoria in the Peloponnesus, after its conquest by the Dorians (Herod. ii. 171). The worship, too, was confined to certain families, which we shall see took an important part in the ceremonies during historical times, when the festival had become a state one. Curtius (*Hist. of Greece*, i. 304) indeed holds the view that the worship of the Great Goddesses was brought into Attica and domesticated there by a number of illustrious Messenian families who had fled from the Dorian invaders,—a view Schömann (*Griech. Alt.* ii. 381) approves of, but suggests a more remote origin by pointing out that the Homeric hymn (*v.* 123) seems to hint at Crete being the original home of the mysteries; and that a worship of Demeter, similar to that of Eleusis except that it was not secret, was held at Cnosus is stated by Diodorus (v. 77). Phrygian and Lydian influences may be seen in the appearance of Rhea and Hecate in the hymn, but the influence of Thrace and Crete (where Bacchus was a great god)—unless we are to suppose, with K. O. Müller, that Demophoon of the hymn is to be taken as a representative of Iacchus—had not yet been felt, though it appears in the second legend. That influence came with the elaborate Orphic theology and mythology [ORPHICA], about the 7th and 6th centuries B.C. One of their tales related (Lobeck, *op. cit.* 547 ff.) that Zagreus was son of Zeus and his own daughter Persephone, a noble child, destined to be Zeus's successor. Hera, in jealousy, urged the Titans to destroy him. They cut him up and boiled him in a caldron, all except his heart, which Athena picked up and carried to Zeus, who, after striking down the Titans, gave the heart to Semele, and Zagreus was born again from her under the name of Dionysus, or Iacchus, as he is called in the Eleusinian worship. This tale is a good specimen of the Orphic mythology; according to which the clear and definite Hellenic gods disappear into vague kinds of half-allegorical or symbolical forms, the divinities blend into one another according to stories which are of a coarse and extravagant as well as tragical and terror-striking nature, but which, from the very first, were in all probability intended for the initiates, and meant to be taken as symbolical representations of cosmogony, rather than as actual dogmatic facts (cf. Euseb. *Praepar. Evang.* iii. 1). Along with the Orphic theology came also the Orphic life (Plat. *Leg.* vi. 782), and the need it inculcated of religious purifications and various kinds of asceticism, *e.g.* abstinence from animal food (Herod. ii. 81; Eur. *Hipp.* 967; *Cretes, fragm.* 20). Lenormant (*Contemporary Review*, xxxvii. 859) thinks that

Orphism, though introduced in a measure at this time, did not get any permanent hold on the Eleusinian worship till 380 B.C., when the family of the Lycomidae, who were specially devoted to Orphic rites, obtained the office of daduchus (see below, § 5), his reason being that there is no allusion to Zagreus in Aristophanes or the other Attic writers, while he appears quite established by the time of Callimachus. And then, again, there was the influence of Egypt, which became fully open to the Greeks about 660 B.C. This influence was most marked. Dionysus and Demeter became identified with Osiris and Isis (Herod. ii. 42, 59, 144); and with this adoption of the Egyptian divinities came the peculiarities of the Egyptian priesthood, with their minute and scrupulous ceremonies, separate mode of life, elaboration of "sacred tales" (*ἱεροὶ λόγοι*), and the secrecy and silence they required. This secrecy is a cardinal feature of the Eastern religions and the Eastern hierarchies; and it was doubtless owing to Eastern influences, superadded to the national privacy of separate family cults, that this secret and mystic character came to be attached so especially to the worship of Demeter at Eleusis, the more so as we find many striking Oriental characteristics in other mystic worships in Greece, such as that of the Cabeiri in Samothrace. [CABEIRIA.] This influx of new and peculiar religious rites is a marked feature in the history of Greek thought in the 6th century B.C., producing as it did not only oracles such as those of Bakis and the Sibyls, purificatory and tranquillising rites such as those of Epimenides, but also the great Pythagorean philosophy and the mystic brotherhood who held it.

It is just at this point that we are to fix the adoption of the Eleusinian mysteries by the Athenians, consequent on the incorporation of Eleusis into the Athenian state. Grote (iii. 71) has proved that this incorporation took place much later than is generally supposed, as it occurred only a short time before Solon (cf. Herod. i. 30, about Tellus the Athenian), and the list of Athenian-Eleusinian priests does not reach higher (A. Mommsen, *Heortologie der Athener*, 63). The fact is, this introduction of the Eleusinian worship, with its foreign teaching concerning the death and re-birth of Iacchus, was brought about by Epimenides, who was called in from Crete to assuage the religious terrors of the Athenians after the murder of Cylon, and the feeling of guilt which took hold of the state in consequence of that crime of the Alcmaeonidae. That was a time which in an eminent degree called for the introduction of new forms of religious service; and to this earnest and holy priest the Athenians were indebted for the development of the gracious worship of Apollo (Curtius, *Hist.* i. 323), and for the introduction of the Eleusinian worship of Demeter and Iacchus, with the religious hope and consolation they brought to the afflicted; and in gratitude a statue of Epimenides was set up before the temple of the goddess in Agrae (Mommsen, *op. cit.* 52 ff., 62 ff.).

2. *Eleusinia elsewhere than in Attica.*—Not to mention the wide-spread worship of Demeter, Persephone, and Dionysus throughout Asia Minor, evinced by such ceremonies as were held at the Carian Nysa (Strabo, xiv. p. 649), the Pherrephattia at Cyzicus (Plut. *Lucull.* 10; Appian, *Bell. Mithr.* 75), and the Dionysiac symbols which so constantly occur on Asiatic coins; nor the Eleusis on Lake Mareotis in Egypt, where there were initiations which were ἀρχὴ τοῦ Κανωβισμοῦ (Strabo, xvii. p. 800), accompanied indeed with much debauchery; nor the worship of these goddesses in Sicily, both at Gela, where Telines used their sacred symbols with such effect as to restore his political faction and to get himself established as their high-priest (Herod. vii. 153; Grote, v. 62), and elsewhere (Diod. v. 77)—we find special evidence that the Eleusinian Demeter was worshipped in Boeotia, at Plataea where she had a temple (Herod. ix. 62, 65, 101), at Celeae near Phlius (Paus. ii. 14, 1), and in many places in Arcadia, Pheneus (*ib.* viii. 15, 1), Thelpusa (25, 2, 3), Basilis (29. 5), Megalopolis (31, 7). The mysteries at Pheneus are interesting not only for the writings on the stone (*πέτρωμα*) read each year to the mystae, but also from its clearly being a worship of the dead, as may be seen from the ceremony of the priest striking the ground with rods and calling on those that are beneath the earth (*τοὺς ὑποχθονίους*, Paus. *l. c.*). For further, see Mr. Andrew Lang (*Nineteenth Century*, April 1887, p. 565). In Messenia there were ancient solemn mysteries to these goddesses and to the Great Gods—*i.e.* the Cabeiri—at Andania in Messenia, which were put down by the Spartans after the Second Messenian War, but restored to their old splendour by Epaminondas (Paus. iv. 1, 5; 2, 6;—Curtius, *Hist.* iv. 433). At this place was found a most important inscription of 91 B.C. relating to the mysteries (see Sauppe, *Die Mysterieninschrift von Andania*). But even this worship was inferior in solemnity and importance to the Attic Eleusinia (Paus. iv. 33, 5), which may be considered to have consisted of two parts, viz. the Lesser Mysteries at Agrae and the Greater Mysteries at Eleusis.

3. *The Mysteries at Agrae* (*τὰ ἐν Ἄγραις*).—These were held in the spring at Agrae, a place on the Ilissus, S.E. of the Acropolis. There is no doubt they were held in Anthesterion, when there were the first signs of returning vegetation just after field-work began (*C. I. G.* 103, l. 20). The exact date cannot be fixed, but Mommsen's suggestion is most probable (*op. cit.* 374), that the chief day was the 20th, the same day of the month as the Greater Mysteries were held on in Boedromion—to which the Lesser Mysteries had many points of similarity, even in matters connected with the calendar, *e.g.* the same length of the mystery truce (*C. I. G.* 71). Mommsen supposes that the 19th was a day of preparation, and the 20th and 21st the special mystery days. These Lesser Mysteries were considered as a prelude to the Greater (Schol. Aristoph. *Plut.* 845, *ἔστι τὰ μικρὰ ὥσπερ προκάθαρσις καὶ προάγνευσις τῶν μεγάλων*), being on a much smaller scale, but initiation in the Lesser was generally required before the candidate could present himself for initiation into the Greater (Plat. *Gorg.* 497 C; Plut. *Dem.* 26). At Eleusis there were temples to Artemis Propylaea, to Triptolemus and to Poseidon, as well as to Demeter; similarly at Agrae there was a temple to Demeter, and altars to Artemis and Poseidon, and a statue of Triptolemus (Mommsen, p. 377). The mysteries at Agrae

consisted probably to a large extent of purifications, for which the water of the Ilissus was much used (Polyaen. v. 17). They were held more especially in honour of Persephone, called Pherrephatta here, than of Demeter (Schol. on Aristoph. *Plut.* 845, yet cf. Bekk. *Anecd.* 326). It appears that the carrying off of Persephone was the most important representation in these mysteries. Again we hear that at Agrae the fate of Dionysus was pourtrayed (*μίμημα τῶν περὶ τὸν Διόνυσον*, Steph. Byz. *s. v.* Ἄγραι). The death of Dionysus-Zagreus took place on the 13th of Anthesterion, the day on which the festival of the Chytrae was held [DIONYSIA]: so perhaps on the ninth day after, the 21st (for funeral rites on the ninth day after death, the *ἔνατα*, see Aeschin. *Ctesiph.* § 225), the funeral ceremony may have been held and his violent death related in a drama (Mommsen, p. 378). A great many, especially strangers, were initiated into these mysteries who did not proceed to initiation into the regular Eleusinia: the legend, too, said it was for the purpose of initiating Heracles, who was a stranger and according to the primitive regulations could not be initiated into the Eleusinia, that these Lesser Mysteries were established (Schol. on Aristoph. *Plut.* 845, 1013). A representation of the initiation of Heracles on a vase found at Panticapaeum is given in Baumeister's *Denkmäler*, p. 475. For the appearance of Aphrodite, cf. Themist. *Or.* xx. p. 288, Dind. There is a very similar one on a Pourtalès vase in the British Museum, which Baumeister also alludes to (cf. Wieseler, ii. 112).

4. *The Course of the Festival at Eleusis.*—Two days are fixed by definite evidence; viz. the 16th Boedromion for the Ἅλαδε *μύσται* (Polyaen. iii. 11, 11; *de Glor. Ath.* 349 *fin.*), and the 20th for the Iacchus day (Plut. *Cam.* 19, *Phoc.* 28). The fixing of other days depends on conjecture, but can be determined with a considerable degree of certainty. A month before the middle of Boedromion, *i.e.* the middle of Metagitnion, the *σπονδοφόροι* (see below) used to announce the mystery truce to the neighbouring states (*C. I. G.* 71; Aeschin. *Fals. Leg.* § 133), so as to give the strangers time to make all arrangements necessary for a visit to Athens. During the latter portion of this month the votary who intended to be initiated used to betake himself to some private man who had gone through all the grades of initiation, was examined by him as to his freedom from sin, received instruction as to what purifications and offerings were necessary to gain the favour of the goddesses, and submit the actual offerings for his inspection and approval. This instructor was the *μυσταγωγός* (see below). He notified to the hierophant the fitness of the applicant and introduced him, this proceeding being apparently called *σύστασις*. A not uncommon form of purification was the *Διὸς κώδιον* (Suidas, *s. v.*), which the daduchus used to cover the sinner's feet with (see Lenormant, *Contemp. Rev.* xxxviii. 137). Sincere devotees appear to have fasted for nine days (cf. [Hom.] *Hymn. Dem.* 47), from the 13th to the 21st, *i.e.* ate nothing during the day, taking whatever food they did take between sunset and sunrise, like the Mahomedans during Ramadan (cf. Ov. *Fast.* iv. 535; Preller in Pauly, iii. 99); and votaries generally appear to have abstained from domestic birds, fish, pomegranates, apples, and beans (Porphyr. *Abst.* iv. 16). Ramsay (*Encycl. Britannica*, s. v. *Mysteries*) notices the effect of the long fasts as tending to enfeeble the body, already weak enough after the heat of summer, and as a consequence the predisposition of the votaries to religious enthusiasm; but perhaps he exaggerates too much these fasts. On the 15th of Boedromion the formal assemblage (*ἀγυρμός*, Hesych. *s. v.*) took place of those citizens and strangers who intended to take part in the mysteries—though this assemblage does not appear to have been absolutely essential, at least in late times (*C. I. G.* 523). At the beginning of the 16th, in the evening (the day is reckoned from sunset to sunset), Chabrias's distribution of wine to the people in honour of his victory at Naxos used to take place (Plut. *Phoc.* 6); and the next morning began the first formal act of the festival, viz. the *πρόρρησις* or Ἅλαδε *μύσται*. These are to be identified in point of time, else Philostratus (*Vit. Apoll.* iv. 18) in an important passage would omit the striking ceremony of Ἅλαδε *μύσται*. The passage is this: *τὰ δὲ* Ἐπιδαύρια *μετὰ πρόρρησίν τε καὶ ἱερεῖα δεῦρο μυεῖν* Ἀθηναίοις *πάτριον ἐπὶ θυσίᾳ δευτέρᾳ* ("as a secondary sacrifice"), *τουτὶ δ' ἐνόμισαν* Ἀσκληπιοῦ *ἕνεκα, ὅτι δὴ ἐμύησαν αὐτὸν ἥκοντα* Ἐπιδαυρόθεν *ὀψὲ μυστηρίων*. A proclamation was made by the Archon Basileus (Poll. viii. 90) and by the Hierophant and Daduchus in the Stoa Poecile (Schol. Aristoph. *Ran.* 369), for the departure of all strangers and all murderers: and then the order for purification given, "Ye mystae to the sea." The "sea" was sometimes the Piraeus (Plut. *Phoc.* 28), though probably only in time of Attica being occupied by enemies; but generally the Ῥειτοί, two salt streams on the Sacred Road, one dedicated to Demeter, the other to Cora, which contained fish that the priests alone were allowed to eat (Paus. i. 38, 1; Hesych. *s. v.*; cf. *Etym. M.* s. v.: *ἱερὰ ὁδός· ἡ εἰς* Ἐλευσῖνα *ἄγουσα ἣν ἀπίασιν οἱ μύσται ἅλαδε*). The next day, the 17th, sacrifices (*ἱερεῖα*) were offered for the safety of the state (Rangabé, *Inscr.* 795) by the Archon Basileus and the *ἐπιμεληταί* (see § 6) in the Eleusinium at Athens ([Lys.] *in Andoc.* § 4; Mommsen, p. 249); and at all these sacrifices the *θεωροί* of foreign states seem to have taken part (Eur. *Suppl.* 173). The night of the 18th may have been spent by the very devout in sleeping (Mommsen, p. 253) in the temple of Aesculapius, S.W. of the Acropolis, or in the Iaccheum (Boeckh on *C. I. G.* 481), also called the temple of Demeter. It was just where the road from Piraeus entered Athens (Paus. i. 2, 4). The early morning of that day till about 9 A.M. was devoted to ordinary business, as we find decrees issued bearing that date (Mommsen, pp. 95, 225, 226). After this hour the Epidauria was celebrated in the temple of Demeter or Iacchus and in the temple of Aesculapius. It was, as we have seen, a supplementary sacrifice for those who came late, and legend said it was instituted for the sake of Aesculapius, who himself came late for the mysteries. Doubtless, however, the thought really lay in this, that Aesculapius was supposed by his wondrous skill to have raised again Iacchus from the dead, and the festival probably was incorporated in the Eleusinia when the worship of Epidaurus got connected with that of Athens (Herod. v. 82). Meanwhile there were

being brought from Eleusis certain religious objects,—playthings, it was said, of the child Iacchus,—bone (*ἀστράγαλος*), top (*στρόβιλος*), ball (*σφαῖρα*), apples (*μῆλα*), tambourine (*ῥόμβος*), looking-glass (*ἔσοπτρον*), woolly fleece (*πόκος*), fan (*λίκνον*), and such like, as we learn from Clement of Alexandria (*Protrept.* p. 15, ed. Potter; cf. Lobeck, *Aglaoph.* 701, 702). Phalli were perhaps also carried among these mystical objects (Lyd. *de Mensibus*, iv. 38, p. 82); but we must remember that the statue of Iacchus, as we shall see, which was carried in procession to Eleusis on the 19th, was not kept at Eleusis during the year, but at Athens, having been brought back some day shortly after the conclusion of the mysteries; for there was no Iaccheum at Eleusis (Mommsen, p. 253). The Athenian Ephebi met this convoy at the temple of Echo (evidence from inscriptions in Mommsen, p. 252), which was probably the same as the *ἱερὰ συκῆ*, where the story ran that Phytalus met the wandering Demeter (Brunck, *Anal.* iii. p. 187, No. 183; Athen. 74 d: Philostr. *Vit. Soph.* ii. 20 *fin.*), and the bridge over the Cephissus, and was so called from the cymbals (*ἠχεῖα*) used in the Eleusinian ceremony (Schol. Theocr. ii. 36), and conveyed them to Athens by nightfall. This is Mommsen's view as to the date: but Lenormant (*Contemp. Rev.* xxxviii. p. 138) thinks this convoy took place on the 16th; for the convocation of the Ephebi is on the 14th, according to the inscription given by Mommsen (p. 227), and it is highly probable that it should have been thus arranged so that additional splendour might be given to the procession by the mystae who went to the 'Ρειτοί joining it on their return home. In the early morning of the 19th, there were occasionally decrees passed (Mommsen, p. 225). In the forenoon (Plut. *Alcib.* 34; cf. Herod. viii. 65) the Iacchus procession started from the Eleusinium and proceeded to the Iaccheum, where they got the statue of Iacchus; perhaps then definitely organised the procession in the building assigned for that purpose (Paus. i. 2, 4); and then passing through the Ceramicus (Schol. Aristoph. *Ran.* 399) left Athens by the Sacred Gate (Plut. *Sull.* 14), priests and people crowned with myrtle and ivy, the rich ladies till the time of the orator Lycurgus (Plut. *Vit. X. Orat.* 842–4) riding in carriages (Schol. Aristoph. *Plut.* 1014). The statue of Iacchus was probably that of a fair child crowned with myrtle and holding a torch, hence called *φωσφόρος ἀστὴρ* in Aristophanes (*Ran.* 342). There were many ceremonies to be performed as the procession passed along the Sacred Way to Eleusis—ceremonies which had to be given up during the Peloponnesian War, while Attica was invaded by the Peloponnesians (Plut. *Alcib.* 34). One section of the procession repaired to the Cephissus and took baths therein, another to the bath by Anemocritus's statue near the tomb of Scirus the soothsayer, who came from Dodona to Eleusis to assist the Eleusinians in the war against Erechtheus and was slain. The Phytalidae sacrificed to Phytalus in Laciadae, where lay a temple to the Mourning (Ἀχέα) Demeter, and to Cora, with whose worship that of Athena and Poseidon was joined (Paus. i. 37, 2). Here according to Preller (*Diss. de via sacra*, p. 125, ed. Köhler) lay the *sacra gentilitia* of the Gephyraei (cf. Herod. v. 61) at the sacred fig-tree (cf. Lenormant, *Voie Sacrée Éleusinienne*, pp. 245, 254 ff.). At the palace of Crocon, the Croconidae perhaps bound small bands of saffron thread round the right wrist and right foot of each mystes (cf. Phot. *s. v.* *κροκοῦν*), which was considered as a protection from the evil eye. The other priestly families had probably particular ceremonies to perform at particular places. For a further account of the Sacred Way, see Fr. Lenormant, *op. cit.* Occasionally during the procession the majority of those who took part in it indulged in flouts and gibes at one another, a proceeding called *γεφυρισμός*, the origin of which title is unknown, but is generally associated with the bridge over the Cephissus (Strabo, ix. 400). It was similar to the *τὰ ἐξ ἁμαξῶν* of the Dionysia, or the *στήνια* of the Thesmophoria. We must remember, however, that Lenormant (*Voie Sacrée*, p. 282; *Contemp. Rev.* xxxviii. 141) supposes this *γεφυρισμὸς* to have occurred during the procession, as it *returned to* Athens after the ceremonial at Eleusis was finished. Chants in honour of Iacchus (*e.g.* Aristoph. *Ran.* 325 ff.) were sung constantly during the procession, which swelled louder as when, near midnight, Iacchus arrived at Eleusis amid the blaze of torches (Soph. *Oed. Col.* 1045). That the procession did not arrive till late at night is plain from the splendid chorus in the *Ion* (1076 ff.), which sings of the torches of the 20th and of the moon and stars dancing in heaven at the sight. The journey from Athens to Eleusis is really only four hours long; but the various ceremonies performed during the course of the procession extended it to three or four times its normal length. On the next morning certain sacrifices were performed (Rangabé, 813, 4), consisting probably in part of swine, to Demeter (Schol. to Aristoph. *Pax*, 374). An inscription in Mommsen, p. 257, orders sacrifices to be made by the *ἱεροποιοί* to Hermes Enagonius, the Graces, Artemis, and certain heroes, Telesidromus and Triptolemus. We do not know what these sacrifices were at Eleusis: at Andania they were (Inscr. l. 70), besides others, a sheep to Proserpina and a sow to Demeter. (For the offering of swine to the Earth Goddess, which offering was of a magical import, and how it was believed that to mix the flesh of swine with the seed-corn added to its fertility, see the Scholion on Lucian, *Dial. Meretr.* ii., quoted by Mr. Andrew Lang, "Demeter and the Pig," in the *Nineteenth Century*, April 1887, p. 562, and his references to analogous practices among the Khonds and Pawnees.) In later times the Ephebi made supplementary sacrifices of oxen. The bulls were brought unbound to the altar, and the Ephebi struggled with them to hold them as they were being sacrificed: compare the rites to Demeter Chthonia at Hermione (Paus. ii. 35, 5); hence perhaps the origin of the bull-fights alluded to by Artemidorus (*Oneirocr.* i. 8) as occurring at the Eleusinia.

The 22nd and 23rd were the *μυστηριώτιδες ἡμέραι* (Rang. 813, 9), and the ceremonies celebrated thereon were *παννυχίδες*. During the evening of the 22nd was probably what was called *λαμπάδων ἡμέρα* (cf. Fulg. i. 10), which consisted in a symbolical search after Cora with torches (Lactant. *Inst.* i. 21: cf. Stat. *Silv.* iv. 8, 50; Juv. xv. 149), performed principally by and for the less highly initiated, who conducted the search crowned with myrtle, wearing a fawn-skin, and holding a wand, the mystagogues of the several initiates taking part in the search—the whole proceeding being perhaps an interlude in the story of Demeter and Cora, which appears to have been represented in the temple on this night. After this came with much ceremonial the partaking of the *κυκεών*, a mixture of mint, barley-meal, and water. This was a cardinal feature in the ceremony, being, if we may so say, a participation in the Eleusinian sacrament. It was in remembrance of Demeter being refreshed after her long wandering and fruitless search. Thereafter followed what was called the *παράδοσις τῶν ἱερῶν* (Suidas, *s. v.*): certain relics and amulets were given to the votary to touch or kiss or even taste (Maury, *Rel. des Grecs*, ii. p. 335), the votary repeating, as the priest tendered him the objects with a regular question ("quae rogati in sacrorum acceptionibus respondeant," Arnob. *Adv. Gentes*, v. 26), this formula (*σύνθημα*), as given by Clement of Alexandria (*Protrept.* p. 18): *ἐνήστευσα, ἔπιον τὸν κυκεῶνα, ἔλαβον ἐκ κίστης ἐγγευσάμενος, ἀπεθέμην εἰς κάλαθον καὶ ἐκ καλάθου εἰς κίστην.* It appears that some kind of memento of this ceremony was given by the priest to the votaries, which a sincere believer used to keep in a linen cloth (Apul. *Apol.* p. 140). The actual *ἱερὰ* themselves were kept in a chest (*τελέτης ἐγκύμονα μυστίδα κίστην*, Nonnus, *Dionys.* ix. 127) bound with purple ribands, and consisted among others of sesame cakes of particular shapes, pomegranates, salt, ferules, ivy, poppy-seeds, quinces, &c. (Clem. Alex. *Protrept.* p. 19): the uninitiated were not allowed to see these "even from the housetop" (Callim. *Hymn to Ceres*, 4): cf. Grote, v. 63, and Lenormant on the *Cista Mystica* in D. and S. Not very different appear to have been the ceremonies of the 23rd. There were many wand-bearers but few bacchants, as the superintendents of the mysteries used to say (Plat. *Phaed.* 69 C), and it was for these latter, the more highly initiated mystae of at least a year's standing, generally called *ἐπόπται*, that the ceremonies of the 23rd were held, and they were the highest and greatest (see below, § 7). Here, too, was probably a *παράδοσις τῶν ἱερῶν*, the sacramental words used in receiving which being *ἐκ τυμπάνου ἔφαγον, ἐκ κυμβάλου ἔπιον, ἐκερνοφόρησα, ὑπὸ τὸν παστὸν ὑπέδυον.* All this undoubtedly points to the Phrygian worship of Sabazius (cf. Jul. Firm. Maternus, *De error. profan. relig.* 18, ed. Halm), which was introduced by the Orphics into the Eleusinian mysteries. On the afternoon of the 23rd was held that portion of the feast which was called *πλημοχόαι* (Ath. x. p. 496) or *πλημοχόη* (Poll. x. 74), a sacrifice to the dead. The *πλημοχόη* was a broad-bottomed earthen jar, and two such were used in the ceremony, one filled with wine and the other with water, the contents of the one thrown to the east and of the other to the west, while mystic words (*ὕε κύε*) were spoken. This sacrifice formed a fitting conclusion to the mysteries in the special sense, the *μυστηριώτιδες ἡμέραι*: for that is the way we are to understand Athenaeus (*l. c.*), not that it was the end of the whole festival. It was like the *ζημία* of the Thesmophoria: and it ended with a *χαίρετε* to the dead, which conclusion was called *προχαιρητήρια* (Harpocr. 161, 9; cf. Mommsen, p. 230). It must be noticed, however, that Lenormant (*Contemp. Rev.* xxxviii. 149) supposes the *πλημοχόη* to have taken place just outside the Dipylon gate of Athens, on the return of the procession from Eleusis; and that this is proved from the mystic words *ὕε κύε ὑπερκύε* found engraved on the kerbstone of a well near that spot. The next morning, 24th, occurred perhaps the *βαλλητύς* (Athen. 406; Hesych. *s. v.*), also called *τύπται* (Hesych. *s. v.*), a sort of sham fight, enjoined, it seems, in the Homeric hymn (*v.* 267 ff.). There was a similar contest, called *λιθοβολία*, at the festival of Damia and Auxesia at Troezen (cf. Paus. ii. 32, 2). Lenormant in D. and S., s. v. *Balletys*, sees a connexion with the herb *balis*, symbol of resurrection and immortality (*Etym. M.* s. v.; Plin. *H. N.* xxv. § 14). On this same morning and afternoon were the *ἀγῶνες σταδιακοί*, alluded to in Rangabé, 813. They were called Eleusinia or Demetria, and the prize was some barley grown on the Rarian plain (Schol. on Pind. *Ol.* ix. 150, 166). Euripides was crowned at these Eleusinian games (Gell. xv. 20, 3). There is no reason to suppose that these games were not annual (see Hermann, *Gottesd. Alterth.* § 55, 39); for the Eleusinian *πεντετηρὶς* referred to by Pollux, viii. 107, is a different and second-rate festival, as may be seen from its being mentioned last in the list (Mommsen, p. 243). In early times these games probably lasted two days; but in later times on the 25th the theatrical representations of the *Διονύσου τεχνῖται* were held, and we have some inscriptions referring to the sacrifices offered by this guild (*ib.* 266–7). As time went on, the 26th and 27th appear to have been devoted to such theatrical exhibitions (Rangabé, 813, 6), held perhaps for the purpose of keeping the visitors in the country. According to a decree in Mommsen, p. 232, dated 28th, the people were assembled at Eleusis and had not yet returned to Athens: but in the time of Andocides (*de Myst.* § 111) the 26th was the day after the mysteries (Mommsen, p. 231); and that there were some business days in Boedromion free after the mysteries is proved by Demosthenes (*Ol.* iii. § 5). The people do not appear to have returned to Athens in a regular procession, though Lenormant, as we have seen, thinks they did, and that the *γεφυρισμὸς* and the *πλημοχόη* were incidents in that return journey. The mystery-truce lasted till the middle of Pyanepsion (*C. I. G.* 71).

5. *The Priests and Priestesses.*—(*a.*) The most important priest was the *Hierophant* (*Ἱεροφάντης*). In lists of the Eleusinian priests he is put first (Dio Chrys. xxxi. p. 386, ed. Dind.; *C. I. G.* 184, 190). He was nominated for life (Paus. ii. 14, 1) from the Eleusinian family of the Eumolpidae, and was generally an elderly man and bound to a life of strict chastity. There was only one hierophant at a time, and his name was never mentioned (Lucian, *Lexiph.* 10), though in late inscriptions we find the Roman gentile name but not the praenomen or the cognomen given (*C. I. G.* 187). His principal duty was, clothed in an Oriental style with a long robe (*στολή*) and a turban (*στρόφιον*), as his name indicates, to show and explain the sacred symbols and figures—perhaps in a kind of chant or recitative, as he was required to have a good voice (cf.

Plut. *Alcib.* 22; Epictet. iii. 21, § 16; *C. I. G.* 401). (*b.*) The *Daduchus* (δᾳδοῦχος) or torch-bearer was inferior to the Hierophant, and of the same rank with the Keryx (*C. I. G.* 185, compared with 188). Originally he was descended from the Eleusinian Triptolemus (Xen. *Hell.* vi. 3, 6); but about 380 B.C. this family died out, and the Lycomidae, the family to which Themistocles belonged, which celebrated a local worship of Demeter at Phlyae full of Orphic doctrines and ceremonies, succeeded to the daduchia (see Boeckh on *C. I. G.* i. p. 441 f.). We have seen above, p. 717 *a*, how important Lenormant thinks the introduction of this family into the Eleusinian priesthood was, in that it brought with it into the Eleusinian ceremonies in a large measure the Orphic rites it was accustomed to practise. It is uncertain whether the name of the daduchus was sacred (Lucian, *l. c.*) or not (*C. I. G.* 403, 423). His head-dress was Oriental, as we may infer from a Persian soldier mistaking a daduchus for a king (Plut. *Arist.* 5). His main duty was to hold the torch at the sacrifices, as his name indicates; but he shared with the hierophant several functions, reciting portions of the ritual (Paus. ix. 31, 6, compared with Philostr. *Vit. Soph.* ii. 20), taking part in certain purifications (Suid. *s. v.* Διὸς κῴδιον), in the πρόρρησις (Schol. Aristoph. *Ran.* 369), and even in the exhibition of the mysteries (Suid. *s. v.* δᾳδουχεῖ). For these two priests, the Hierophant and the Daduchus, who had to be men of tried sanctity (νόμος τὸν μέλλοντα δᾳδουχεῖν δοκιμάζεσθαι, quoted by Mayor on Juv. xv. 140), there was a regular consecration on their entering office. It was the τέλος τῆς ἐποπτείας, and was called ἀνάδεσις καὶ στεμμάτων ἐπίθεσις, because the sign of it consisted in placing on the head of the new priest the diadem of purple and the wreath of myrtle which they wore permanently (Lenormant, *Contemp. Rev.* xxxviii. 414). (*c.*) The *Keryx* or *Hierokeryx* (κῆρυξ, ἱεροκῆρυξ). According to Eleusinian tradition, the Kerykes traced their origin back to Keryx, a younger son of Eumolpus; but they themselves considered their ancestors to be Hermes and one of the daughters of Cecrops, Aglauros according to Pausanias (i. 38, 3), Pandrosos according to Pollux (viii. 103). Mommsen (p. 234) supposes they were an Athenian family which ousted or absorbed an Eleusinian family, perhaps the Eudanemi (Hesych. *s. v.*). His duties were chiefly to proclaim silence at the sacrifices (Poll. iv. 91). (*d.*) The *Epibomios* (ὁ ἐπὶ βωμῷ). In early times he was certainly a priest (τὸν ἐπὶ τῷ βωμῷ ἱερέα, *C. I. G.* 71 a, 39); he is generally mentioned in connexion with the other three priests, but not always (*e.g.* Plut. *Alc.* 22; Epictet. iii. 21, 13; *C. I. G.* 188, 190, 191). No family laid especial claim to this priesthood. His name, as well as that of the Keryx, was probably not sacred. The four Eleusinian priests were among those who were maintained in the prytaneum—were ἀείσιτοι, as they were called (*C. I. G.* 183 ff.). (*e.*) The Hierophantis (ἱερόφαντις). There was originally only one at a time; she belonged to Demeter (*C. I. G.* 434, 2), and her name was sacred: but a new one was added when Hadrian's wife Sabina was deified as the younger Demeter (*ib.* 435, 1073). Perhaps at this time or afterwards the priestesses came to be multiplied; see the Schol. on Soph. *Oed. Col.* 683, καὶ τὸν ἱεροφάντην δὲ καὶ τὰς ἱεροφάντιδας καὶ τὸν δᾳδοῦχον καὶ τὰς ἄλλας ἱερείας μυρρίνης ἔχειν στέφανον. They lived a life of perfect chastity during their tenure of office, though they might have been married previously (Mommsen, p. 237). It is uncertain to what family the original hierophantis of Demeter belonged; that of the younger belonged to a branch of the Lycomidae (*ib.*). The duties of the hierophantis corresponded to those of the hierophant. Pollux (i. 14) appears to call these priestesses προφάντιδες, and perhaps they were also called μέλισσαι (Hesych. *s. v.*). (*f.*) *Female torch-bearer*, δᾳδουχήσασα (*C. I. G.* 1535; cf. Lucian, *Cataplus*, 22). (*g.*) *Priestess* (ἱέρεια). She was not hieronymous, but eponymous (cf. *C. I. G.* 386, ἐπὶ ἱερείας Φλαουΐας Λαοδαμίας). These priestesses belonged to the family of the Phillidae (Suid. and Phot. *s. v.*). Her duties corresponded in all probability with those of the Epibomios. (*h.*) The *Spondophori* (σπονδοφόροι) were sent out to the adjoining country a month before the ceremony to announce the truce for the mysteries (Aeschin. *Fals. Leg.* § 133). They belonged to the families of the Eudanemi and Kerykes (Hesych. *s. v.* Εὐδάνεμος). Mommsen (p. 244) thinks that a Eudanemos went from Eleusis and a Keryx from Athens at the same time. (*i.*) *Minor offices:* (1.) φαιδρύντης τοῖν θεοῖν (Inscr. *ap.* Mommsen, p. 227), perhaps belonging to the Eleusinium of the city. (2.) ὑδρανός, whom Hesych. describes as ἁγνίστης τῶν Ἐλευσινίων. He probably superintended the ἅλαδε μύσται. (3.) ἰακχαγωγὸς and κουροτρόφος, female nurses attending on the child Iacchus (Poll. i. 35; *C. I. G.* 481, 9). (4.) Perhaps the same may be said of the δαειρῖτις; but it is very uncertain. We know that Proserpina was originally called Daeira in the Eleusinian worship. (5.) ἱεραύλης (*ib.* 184, c. 18) was probably the head of the ὑμνῳδοὶ and ὑμνητρίδες (Poll. i. 35), a sort of choir. (6.) Who the παναγεῖς and the πυρφόροι were beyond what can be inferred from their names cannot be determined. Lenormant (p. 867) says the παναγεῖς were intermediate between the ministers and the initiates. Though not strictly a priest, yet as exercising an important function in the mysteries, (*j*) the *mystagogi* (μυσταγωγοί) may be mentioned here. They had to be men who had passed through all the grades of initiation. They were probably under the cognisance of the state, in a manner licensed (Sauppe, *Mysterieninschrift*, p. 37). Prior to presenting himself for initiation, each votary had to place himself under the guidance of one of these mystagogues, and got instruction from him as to the various purifications and ceremonies he was to perform. It was only by the unconscientiousness of mystagogues that unworthy applicants ever got admission to the mysteries. After due examination, if the mystagogue was satisfied, he presented the applicant or returned his name to the Archon Basileus or his assistants. This was called σύστασις (Lenormant, *Cont. Rev.* xxxviii. p. 135). If a mystagogue could not say what purificatory sacrifices were required for a special candidate, recourse was had to (*k*) an *Exegetes* (ἐξηγήτης), who appears to have been elected by the people from the Eumolpidae or Kerykes (cf. *C. I. G.* 392) and whose business it was to decide such difficult cases and generally to give *responsa* on Eleusinian ecclesiastical law. There were many books of the mysteries (cf. Lenormant, *Cont. Rev.* xxxvii. 871) which were intended to have been strictly kept from the uninitiated and which appear to have contained not only what ritual was to be performed in various cases—such perhaps was the Eumolpidarum *πάτρια* which Cicero asks Atticus (i. 9, 2) for—but also perhaps the allegorical and symbolical interpretations of some of the myths: cf. Galen, viii. 181, ed. Kuhn; Lobeck, *Aglaoph.* 194.

The priests of the mysteries, especially the Eumolpidae, appear to have had a special ecclesiastical court (*ἱερὰ γερουσία, C. I. G.* 392, 399) for trying offences of impiety (a very vague and elastic term) in connexion with the festival, which court they conducted according to unwritten laws of immemorial antiquity (Lys. *in Andoc.* § 10). To prosecute before this court was called *δικάζεσθαι πρὸς Εὐμολπίδας*. Their punishments, according to Caillemer (D. and S., s. v. *Asebeia*), were strictly religious, exclusion from the mysteries, deprivation of title of initiate, and such like. The curse and excommunication were most solemn; priests and priestesses, turning to the west, uttered the words of imprecation and shook their garments ([Lys.] *in Andoc.* § 51). It may be that this court was the only tribunal for cases of what we may call heterodoxy, impiety consisting in the performance of rites contrary to the traditional one and to that held by the priests; while other kinds of procedure, superadded to the religious investigation and condemnation, were adopted in accordance with ordinary criminal law (such as *ἀπαγωγή, ἀσεβείαι γραφή, ἔνδειξις, προβολή, εἰσαγγελία*: see Wayte's note on Dem. *Androt.* p. 601, § 27) in cases of impiety, which consisted in disorder and vulgar profanity. These charges were brought before the Senate of Five Hundred sitting in the Eleusinium of the city on the day after the mysteries (Andoc. *de Myst.* § 111). The penalty was death (Thuc. vi. 61 *fin.*) or banishment (Andoc. § 15), with confiscation of goods (*C. I. A.* i. 277), for profanation of the mysteries. The accuser, if he did not get the fifth part of the votes, suffered a kind of *ἀτιμία* (Andoc. § 33), *i.e.* was deprived of the right to enter the temples and fined the usual 1000 drachmas (Caillemer, *l. c.*). Many shrank from themselves bringing the accusation, and used to inform the Archon Basileus of the profanation they had observed, and if he thought it serious he made the accusation officially. This information laid before the archon was called *φράζειν πρὸς τὸν βασιλέα* (Dem. *Androt.* l. c.).

A vase representation from a hydria of Cumae of the Eleusinian goddesses and their priests is given by Baumeister, *Denkmäler*, p. 474, with full explanations. The pictures are instructive as regards the dress of the priests.

6. *The Civil Functionaries connected with the Festival.*—The chief civil superintendence of the festival was entrusted to the Archon Basileus, who was assisted by four *ἐπιμεληταί*, elected by the people, two from the people generally and one each from the families of the Eumolpidae and Kerykes (Aristot. *ap.* Harpocr. p. 118). The Archon generally appears to have appointed an assistant (*πάρεδρος*), who was probably as a rule his relation—at least for the Dionysia in one case the Archon appointed his father-in-law ([Dem.] *c. Neaer.* p. 1372, § 81). The duties of the Archon and his assistant were to sacrifice and pray for the prosperity of the people, both at Athens and Eleusis, and to have general police supervision over the whole solemnity (Lys. *c. Andoc.* § 4). The *ἐπιμεληταὶ* had also such duties as looking after the sacrifices, testing the offerings of the votaries, classifying and marshalling the different grades of initiates, managing certain monies, &c., if we may infer from the similar duties attaching to the officials of this name at Andania. As to the finances of the festival generally, according to *C. I. G.* 71 a, 29, *ἱεροποιοὶ* had the administration of them. Midias was elected one of these. They were three in number (Dem. *Mid.* p. 522, § 115), though *Etym. M.* (s. v.) says they were ten.

7. *The Initiates.*—Originally only Athenians were admitted: legend said that Hercules and the Dioscuri (Plut. *Thes.* 33) had to be adopted prior to initiation; but later (cf. Herod. viii. 65) all Greek-speaking people who were not murderers were admissible to be initiated (Isocr. *Panegyr.* § 42). Barbarians were excluded: so Anacharsis had to be naturalised (Lucian, *Scyth.* 8); but it was not at all necessary to be an Athenian citizen, as the Emperor Julian (*Or.* vii. 238) implies. This Lobeck (*Aglaoph.* 17–20) proves elaborately. Women (Aristid. *Eleus.* vol. i. p. 257, Jebb), and even perhaps slaves (Theophilus, *Fr.* i., vol. ii. p. 473, Kock), were admissible. Children were admitted to the first grade only; but among the children brought to Eleusis one was picked out for special initiation, and "to appease the divinity by a more exact performance" of the ceremonies required (Porphyr. *Abst.* iv. 5). That boy or girl (for boys, see *C. I. G.* 393, 400; for girls, 443–445, 448) was said *μυηθῆναι ἀφ' ἑστίας*, and was called *ὁ* (or *ἡ*) *ἀφ' ἑστίας*. He or she had to be an Athenian of high birth (Bekk. *Anecd.* 204), perhaps of the special family of the Lycomidae, Eumolpidae, or the like; and was probably initiated standing on the steps of the altar, while the rest stood afar off. (Cf. Themist. xiii. p. 165, *ἀλλ' ἐχρῆν ὡς ἔοικε τὸν μυσταγωγόν μοι γενέσθαι τῆς ἐρωτικῆς τελετῆς οὐ πόρρωθεν τῶν παιδικῶν οὐδὲ ὀθνεῖον ἀλλ' ἐγγύθεν καὶ ἀφ' ἑστίας.*) The parents of the child had to make extensive offerings and pay a large fee. For more concerning initiation *ἀφ' ἑστίας*, see Boeckh on *C. I. G.* 393. Originally admission was free for all initiates; but by virtue of a law passed by the orator Aristogiton, each initiate had to pay a fee to the public treasury (Lenormant, *Contemp. Rev.* xxxviii. p. 123).

The ordinary proceeding was for the initiate to receive his first introduction as a child and afterwards the higher grades as a man—*παῖς μύστης καὶ ἐπόπτης ἀνήρ*, as Himerius says (*Or.* xxii. 1; cf. *C. I. G.* i. p. 445). This falls in admirably with what Tertullian says (*contra Valentin.* 1): "Idcirco et aditum prius cruciant, diutius initiant antequam consignant, cum epoptas *ante quinquennium* instituunt,"—a statement not contradicted by the fact that the *shortest possible* interval between the two grades of initiation is stated at one year (Plut. *Demetr.*

26; cf. Schol. on Aristoph. *Ran.* 745). The whole cycle of the mysteries was a *trieteris*, and could be gone through in two years: even the Homeric hymn extends the whole legend beyond a year, and when the Orphic theology blended Iacchus-Zagreus into the story, the regular course of two years came to be adopted. There is a high probability, as we shall see (§ 8), that the first-year votaries at Eleusis were shown a drama representing the usual story of Demeter and Cora, while the second-year votaries were shown the whole legend of Zagreus: and as to the whole course of the actual mysteries, there is a possibility that the following arrangement was that adopted, though it must be remembered that it is little more than conjecture, and given for what it is worth.

(1.) First Spring at Agrae—the votaries mourn for Cora ravished by Hades.

(2.) First Autumn at Eleusis—mourning with Demeter for the loss of her daughter, and exhibition of the ordinary legend.

(3.) Second Spring at Agrae—the murder of Zagreus and his heart being given to Cora (who here seems to take the place of Semele), and conception of Iacchus.

(4.) Second Autumn at Eleusis—rebirth of Iacchus, who is carried in procession to Demeter at Eleusis, and there the votaries sympathise in the joy of the earth-goddess, who once more has about her her child and grandchild.

That there were different grades of initiates hardly needs proof: the *μύσται* were those who had received any degree of initiation, the *ἐπόπται* or *ἔφοροι* the second-year votaries. Suidas (*s. v.* *ἐπόπται*) says so explicitly—cf. Harpocr. *s. v.* *ἐπωπτευκότων*, and Plut. *Demetr.* 26; not to mention such passages as Plut. *de Iside et Osiride*, c. 78, where the different grades of proficiency in philosophy are compared to those of the initiates into the mysteries. There were mystic ceremonies for both these classes of initiates, one on each of the two days, 22nd and 23rd. While anyone introduced by a mystagogue could get admission to the ceremonies of the first year, the *μύησις*, the *ἐπόπτεια* or *ἐποψία* could only be seen by those who got a ticket from the *δᾳδοῦχος*. A ticket of that kind has been discovered marked ΔΑΔ and ΕΠΟΨ, with the symbols of an ear of corn and a poppy (see Lenormant, xxxviii. 145). What those ceremonies were is the most important and interesting point in our subject; but the seal of silence which was laid on the votaries has not been broken. This secrecy was most strenuously enjoined and most rigorously enforced, as we have seen. The prosecution of Alcibiades for holding a travesty of the mysteries in his own house, and Andocides's speech on the subject, are well known. Aeschylus is said to have divulged the mysteries in styling Artemis a daughter of Demeter (Herod. ii. 156; Paus. viii. 37, 6), and in other matters (Arist. *Nic. Eth.* iii. 1, 17; and Lobeck's discussion, *Aglaoph.* pp. 77 ff.), and to have only barely escaped death. Diagoras of Melos (Diod. xiii. 6; [Lys.] *in Andoc.* § 17) was banished from Athens and a price set on his head for having divulged the mysteries. It was the prevailing belief of antiquity that he who was guilty of divulging the mysteries was thought sure to bring down divine vengeance on himself and those associated with him (Hor. *Carm.* iii. 2, 26). We are accordingly left to conjectures more or less probable as to what the chief mystic ceremonies were.

8. *The Mystic Ceremonies in the Temple.*—They were performed in the temple of the two goddesses at Eleusis, a building reckoned one of the greatest masterpieces of the Periclean age. Ictinus superintended the whole. Coroebus built the lower story, with four rows of columns which divided the interior space. On his death Metagenes took up the work and added an upper story, and Xenocles built a cupola roof with an opening (*ὄπαιον*) in the middle for the light (Plut. *Pericl.* 13; Vitruv. vii. Pref. §§ 16, 17). The dimensions of the whole building were 223 feet by 179, the measurement of the cella being 175 feet by 179. The temple had no pillars in the façade till the architect Philon, in the time of Demetrius of Phalerum, built a pronaos with twelve pillars (Vitruv. *l. c.*). The temple stood inside a large enclosure, which was approached by a propylaea, there being yet another propylaea leading to the temple. Inside this enclosure Lenormant has fixed the position of the *ἀγέλαστος πέτρα*, where Demeter was said to have rested in her wanderings, as the rock where the great statue of Demeter Achea, now at Cambridge, stood, *i.e.* on the axis of the first propylaea close to a well, which he also identifies as Callichorum. (See his elaborate description, *Contemp. Rev.* xxxviii. 125 ff.; and Baumeister's *Denkmäler*, art. *Eleusis*, with the plan he gives. For fuller details, compare the *Πρακτικὰ τῆς Ἀρχαιολογικῆς ἑταιρίας* for 1883, and M. Blavette in *Bulletin de Correspondance hellénique*, viii. (1884), pp. 254 ff.) The temple of Ictinus, though built on the site of an older and smaller one, must be distinguished from the most ancient temple which stood more to the north, occupying a platform which overlooked the well Callichorum and the *ἀγέλαστος πέτρα*, exactly on the spot where the Homeric hymn (v. 273) orders it to be built. The great temple of Ictinus was called by the ancients *μυστικὸς σηκός* (Strabo, ix. 395), and the inner portion *τελεστήριον* or *ἀνάκτορον* or *μέγαρον* (cf. Lobeck, *Aglaoph.* 59).

The ceremony was doubtless dramatic. "Deo and Cora," says Clement of Alexandria (*Protrept.* p. 12), "have become a mystic drama. Eleusis illustrates by the light of the torches of the daduchus the carrying off of Cora, the wandering journeys and grief of Deo" (cf. Minuc. Felix, *Octav.* c. 21), a view to which the terms *ἱεροφάντης* and *ἐπόπτης* also lead us, and which is consistent with the whole tenor of the ancient Greek religion, which was materialist and naturalist in its doctrines, and used for its inculcation visible symbols, but did not rise through the hearts and the consciences of its votaries to a conception of the Divinity whom eye hath not seen nor ear heard. "Above these two conditions," says Preller (*Gr. Myth.* i. 653), "Nature as object and the sensible as its formal expression, the religions of the ancients have never arisen." The ceremony, then, was dramatic. Aelius Aristides (*Eleus.* i. 256) asks, "Where else do the recitals of the narratives chant forth greater marvels, or does the ceremonial (*τὰ δρώμενα*) involve a greater affrightment (*ἔκπληξιν*), or does the spectacle match more fully what the ear hears?" The drama consisted of *δρώμενα* and *λεγόμενα*, the former being much the more important, for the ancient religious worship addressed itself, as Grote points out (v. 63), more to the eye than to the ear. There were hymns and chants (Paus. ix. 27, 2: the name Eumolpus pointing to such, *C. I. G.* 401, and the hierophant, as we saw, was required to have a good voice), speeches and exhortations (*ῥήσεις, παραγγέλματα*), recitals of myths (*μύθων φῆμαι*. Aristid. *l. c.*), wailings for the loss of Persephone (Proclus on Plat. *Politic.* p. 384). There were kinds of dancing or rhythmical movements by those performing the ceremony (Lucian, *de Salt.* 15), clashing of cymbals (Schol. on Theocr. ii. 36; Vell. i. 4, 1), sudden changes from light to darkness (*σκότους τε καὶ φωτὸς ἐναλλὰξ γενομένων*, Dio Chrys. xii. 387), "toilsome wanderings and dangerous passages through the gloom, but the end is not yet, and then before the end all kinds of terror, shivering and quaking, sweating and amazement, when suddenly a wondrous light flashes forth to the worshipper, and pure regions and meadows receive him: there are chants, voices, and dances, solemn words and holy images; and amongst these the votary now perfected is freed at last and is released, he wanders to and fro with a crown on his head, joining in the worship and in the company of pure and holy men; and he sees the uninitiated and unpurified crowd of the living in the thick mire and mist, trampling one another down, and huddled together, abiding ever in evils through fear of death and disbelief in the good things yonder" (Themist. in Stob. *Serm.* cxx. 26). For somewhat similar descriptions of the mingled terror and comfort in the spectacle, see Dio Chrys. xii. 202; Plut. *Frag. de Anim.* vi. 2, p. 270; *de Facie lunae*, c. 28; *de Profect. Virt.* p. 81; Proclus on Plut. *Alc.* p. 142. Lucian (*Catapl.* 22) represents a man having entered Hades and got into the dark asking his companion if what was represented at Eleusis was not like this. Claudian's description (*de Rapt. Proserp.* init.) is sufficiently terrible; and amidst that rhetoric Lenormant (*Contemp. Rev.* xxxviii. 421) fancies he can infer that the votaries, waiting anxiously outside the building, saw the glimmer of the lighted interior through the *ὀπαῖον* ("et claram dispergere culmina lucem," v. 8); then was heard the noise of the preparations for the play, the doors were thrown open, and the daduchus appeared with torches in his hands, and the statue of Demeter was seen in gorgeous vestments and brilliantly lit up. It is more probable that the whole performance took place inside the temple. But that figures of the gods were introduced is certain—*εὐδαίμονα φάσματα*, as Plato (*Phaedr.* p. 250 C) calls them, which flitted noiselessly (*ἀψοφητί*, Themist. *Or.* xvi. 224, ed. Dind.) across the stage; but the images were incomplete, not simple but overcharged with strange attributes, they were ever in motion and represented in a dim and murky light—they were neither *ὁλόκληρα, ἁπλᾶ, ἀτρεμῆ*, nor *ἐν αὐγῇ καθαρᾷ*, like the Platonic Ideas—as we may infer with Lenormant (p. 417) from Plato (*l. c.*). Galen, too (see Lobeck, p. 64), says the representations were *αμυδρά*. At Andania, too (*Inscr.* l. 24), provision is made for *ὅσα δεῖ διασκευάζεσθαι εἰς θεῶν διάθεσιν*. To be more precise, the mystic drama of Demeter and Cora was unfolded to the mystae, the first-year initiates; but the epoptae were shown a representation of what Clement calls "the mysteries of the dragon," which is the story of Zeus uniting himself with Persephone (called Brimo: cf. *Philosophumena*, viii. p. 115, ed. Miller) in the form of a serpent, and the whole tale of Iacchus-Zagreus was probably told (Clem. Alex. *Protrept.* pp. 13–15; Tatian, *Or. ad Graecos*, 13 (9 ed. Migne); and Lenormant, p. 426). There was shown to the epoptae a representation, symbolical probably of creation, in which we hear (Euseb. *Praep. Evang.* iii. 12) that the hierophant used to assume the part of the Creator, the daduchus that of the sun, the altar-priest that of the moon, and the hierokeryx that of Hermes. Again, "the last, the most solemn, and the most wonderful act of the *ἐποψία*" was shown, the ear of corn cut in perfect stillness: the blade of corn symbolised, we are told, the great and perfect ray of light issuing from the Inexpressible One (*ὁ παρὰ τοῦ ἀχαρακτηρίστου φωστὴρ τέλειος μέγας*, *Philosophumena*, p. 115), whatever that means, or rather perhaps it was the symbol of life, the cutting down being death. Lenormant (p. 428) points to the Barone vase, which on one side has Zeus striking down the Titans, signifying death, and on the other side the ear of corn springing up and offerings being brought to it, which signifies life. In describing these vase-paintings he points out that it was allowable to represent the scenes from the mystic ceremonies, for they had no meaning without the explanatory words, which were only known to the initiated. The general form under which the initiations are represented on the vases is that of a marriage of the votary with Eudaimonia in the other world—in one of which the votary, a youth cut off by death in his prime, is represented as deserting Ὑγίεια, Health, and passing to the arms of Εὐδαιμονία, Bliss (Lenormant, pp. 431–433).

This picture may lead us to what is to be said in conclusion on the moral and religious import of the mysteries. If we choose to regard them in a cold unimpassioned un-religious way, we can say that they were a somewhat melodramatic performance, splendid no doubt, full of what Lobeck (p. 107) calls fireworks (*pyrotechnia*), but a mere theatrical display. That there were connexions between the mysteries and the theatre (the hierophants are said to have borrowed costume from the dramas of Aeschylus, Athen. i. p. 22, if the reverse is not rather the case) need not surprise us; and that modern archaeologists profess to find in the temple of Eleusis evidences of machinery by which the spectacle was worked (Preller in Pauly, iii. 89; Lenormant, p. 415) is only natural; for there undoubtedly was a spectacle, a religious spectacle. But that man is not to be envied who thinks to evince his superior wisdom by laughing at and depreciating the ceremonies, as Lobeck does throughout his learned work, or talking of them as "the great and illustrious humbug of ancient history," as De Quincey does (*On Secret Societies*, vi. 255). Anything moral or religious may be made ridiculous if one chooses to regard it from the lower plane of the intellect alone, and does not take into account the subjective condition of the moral worker or the religious worshipper. The universal voice of the great names of pagan antiquity, from the Homeric hymn down to the writers of the late Roman Empire, attest to the wonderfully soothing effect the mysteries had on the religious emotions, and what glad hopes they inspired of good fortune in the world to come ([Hom.] *Hymn. Dem.* 483 ff.; Pind. *Fragm.* 137, Bergk; Soph. *Fragm.* 719, Dind.; Isocr. *Panegyr.* § 28; Cic. *Leg.* ii. 14, 36; Crinagoras in Jacobs' *Anthol.* ii. p. 332, No. 42; Paus. v. 10, 1, x. 31, 11); and "as a consequence of this clearer light, this higher faith, the votaries became better men and better citizens" (Mahaffy, *Rambles and Studies in Greece*, p. 184). "Neque solum," says Cicero *l. c.*, "cum laetitia vivendi rationem accepimus, sed etiam cum spe meliore moriendi." For the object aimed at was rather, as Aristotle pointed out (*ap.* Synesius, *Orat.* p. 48), not that the initiate should be taught anything, that would appeal merely to his intellect (cf. Plut. *de Defect. Orac.* 23 *fin.*), but should be moved and have his higher impulses stirred (*οὐ μαθεῖν τι δεῖν ἀλλὰ παθεῖν καὶ διατεθῆναι*). "The light of the sun is bright for the initiated alone," sing the chorus of mystae in the *Ranae* (454). Not but that there were many scenes and symbols of a somewhat coarse nature, *φαλλαγωγίαι, ἱεροὶ γάμοι*, such as those represented by the hierophant and hierophantis, which pourtrayed perhaps the unions of Zeus and Demeter, Zeus and Persephone, and which entered into the higher worship (cf. *ὑπὸ τὸν παστὸν ὑπέδυον*), but which are probably grossly exaggerated by the Christian writers (cf. Hermann, *Gottesd. Alterth.* § 55, 28; Lobeck, 196 ff.; Lenormant, p. 427), who did not take into consideration their symbolical meaning (cf. Lenormant, *Voie Sacrée*, p. 89). The truths, however, which these and other symbolical performances contained was known only to the Hierophant, and explained by him to those whom he thought fit to hear them; cf. Theodoretus (*Therap.* p. 49, Gaisf.): *τὸν ἱεροφαντικὸν λόγον οὐχ ἅπαντες ἴσασιν· ἀλλ' ὁ μὲν πολὺς ὅμιλος τὰ δρώμενα θεωρεῖ, οἱ δέ γε προσαγορευόμενοι ἱερεῖς τὸν τῶν ὀργίων ἐπιτελοῦσι θεσμόν, ὁ δὲ ἱεροφάντης μόνος οἶδε τῶν γιγνομένων τὸν λόγον καὶ οἷς ἂν δοκιμάσῃ μηνύει.* Even the *ἐπόπται* only knew part of the mystic secrets, *γνῶναί τι τῶν ἀπορρήτων* (Sopatros, *Distinct. Quaest.* p. 121, quoted by Lenormant, p. 414). The multitude of worshippers took it all on faith, but, as Mr. Mahaffy (*op. cit.* p. 184) finely remarks, "even the coarsest features were hallowed and ennobled by the spirit of the celebrants, whose reverence blinded their eyes while it lifted up their hearts."

The Eleusinian mysteries lasted for more than five centuries after Greece became a Roman province. As late as the time of the Emperor Julian they still enjoyed a considerable portion of their primeval sanctity (Gibbon, iii. p. 132, ed. Smith), and were held in the highest esteem by the Neo-Platonic philosophers. The edict of Valentinian and Valens against secret worships did not extend to the Eleusinia, the praefect of Achaea, Pretextatus, having represented that the life of the Greeks would be barren and comfortless without the mysteries (*ib.* iii. p. 249). The hierophant who initiated Maximus and Eunapius in the 4th century was the last Eumolpid. Subsequently Mithraic worship got blended with the Eleusinian; but the mysteries did not finally perish till the destruction of Eleusis by Alaric in his invasion of Greece, A.D. 396 (Gibbon, *l. c.* with Dr. Smith's note; Lenormant, *Contemp. Rev.* xxxvii. 862).

For further discussion on the mysteries, see MYSTERIA. The principal books to consult on the Eleusinia are: St. Croix, *Récherches sur les Mystères;* Creuzer, *Symbolik*, iv. 33 ff.; Lobeck, *Aglaophamus*, especially pp. 3–228; K. O. Müller, *Kleine Schriften*, ii. 242–311 (a reprint of his article *Eleusinia* in Ersch and Grüber); Petersen in Ersch and Grüber, xxviii. 219 ff., especially 252–269, in the second volume of the article *Griechenland;* Guigniaut, *Mémoires sur les Mystères de Ceres et de Proserpine* in the *Mémoires de l'Académie des Inscr.* xxi.; Preller in Pauly, art. *Eleusinia*, and *Griechische Mythologie*, i. 643–653; Hermann, *Gottesdienstliche Alterthümer*, §§ 35, 55; Maury, *Religions de la Grèce*, ii. pp. 297–381; Schömann, *Griechische Alterthümer*, ii. 380–402; August Mommsen, *Heortologie der Athener*, 62–75, 222–269; Baumeister, *Denkmäler*, s. vv. *Eleusinia* and *Eleusis;* Lenormant, *Monographie de la Voie Sacrée Éleusinienne*, 1864, and *The Eleusinian Mysteries* in the *Contemporary Review*, xxxvii. and xxxviii. May, July, and September 1880; Ramsay in the *Encyclopaedia Britannica*, s. v. *Mysteries*. [L. C. P.]

ELEUTHE'RIA (*ἐλευθέρια*), the feast of liberty, a festival which the Greeks, after the battle of Plataea (479 B.C.), instituted in honour of Zeus Eleutherios (the deliverer). It was intended not merely to be a token of their gratitude to the god to whom they believed themselves to be indebted for their victory over the barbarians, but also as a bond of union among themselves; for, in an assembly of all the Greeks, Aristides carried a decree that delegates (*πρόβουλοι καὶ θεωροί*) from all the Greek states should assemble every year at Plataea for the celebration of the Eleutheria. The town itself was at the same time declared sacred and inviolable, as long as its citizens offered the annual sacrifices which were then instituted on behalf of Greece. Every fifth year these solemnities were celebrated with contests (*ἀγὼν τῶν Ἐλευθερίων*) in which the victors were rewarded with chaplets (*ἀγὼν γυμνικὸς στεφανίτης*, Strab. ix. p. 412). The annual solemnity at Plataea, which continued to be observed down to the time of Plutarch (*Arist.* 19 and 21; Paus. ix. 2, § 6), was as follows:—On the sixteenth of the month of Maimacterion, a procession, led by a trumpeter, who blew the signal for battle, marched at daybreak through the middle of the town. It was followed by waggons loaded with myrtle boughs and chaplets, by a black bull, and by free youths who carried the vessels containing the libations for the dead. No slave was permitted to minister on this occasion. At the end of this procession followed the archon of Plataea, who was not allowed at any other time during his office to touch a weapon, or to wear any other but white garments, now wearing a purple tunic, and with a sword in his hand, and also bearing an urn, kept for this solemnity in the public archives (*γραμματοφυλά-*

κιον). When the procession came to the place where the Greeks, who had fallen at Plataea, were buried, the archon first washed and anointed the tombstones, and then led the bull to a pyre and sacrificed it, praying to Zeus and Hermes Chthonios, and inviting the brave men who had fallen in the defence of their country to take part in the banquet prepared for them. This account of Plutarch (*Arist.* 19 and 21) agrees with that of Thucydides (iii. 58). The latter, however, expressly states that dresses formed a part of the offerings, which were probably consumed on the pyre with the victim. This part of the ceremony seems to have no longer existed in the days of Plutarch, who does not mention it; and if so, the Plataeans had probably been compelled by poverty to drop it. (See Thirlwall's *Hist. of Greece*, ii. p. 353, &c.; Boeckh, *Expl. Pind.* p. 208, and *ad Corp. Inscript.* i. p. 904.)

Eleutheria was also the name of a festival celebrated in Samos, in honour of Eros. (Athen. xiii. p. 562 a.) [L. S.]

ELLIME'NION (*ἐλλιμένιον*), a harbour-duty collected at the Peiraeus, the nature of which is not exactly determined. Some have identified it with the PENTECOSTÉ or 2 per cent. duty on imports; against this, however, is the mention of *ἐλλιμενισταί* (Dem. *c. Phorm.* p. 917, § 34; Bekk. *Anecd.* 251, 30), as if distinct from the better known *πεντηκοστολόγοι*. Boeckh's conjecture is very generally received, that it may have been the same as the *ἑκατοστὴ* mentioned by Xenophon (*Rep. Ath.* 1, § 17) as levied on foreign ships entering the Peiraeus; a duty paid for the use of the harbour, whether goods were unladen or not. But in an enumeration of the revenues by Aristophanes we find *λιμένας* (*Vesp.* 659), seemingly different from the *ἑκατοστὰς* of *v.* 658. A line of Eupolis, *ἐλλιμένιον δοῦναι πρὶν εἰσβῆναί σε δεῖ* (*fr.* 42 M.), looks as though it were a tax on passengers, not on goods (Boeckh, *P. E.* p. 322 = *Sthh.*^{3} i. 393; Gilbert, *Staatsalterth.* i. 332; Sandys on Dem. *c. Phorm.* p. 909, § 7). [W. W.]

ELLO'TIA or HELLOTIA (*ἐλλώτια* or *ἑλλώτια*), a festival with a torch race celebrated at Corinth in honour of Athena as a goddess of fire. (Schol. *Pind. Ol.* xiii. 56; Athen. xv. p. 678 a, b; *Etym. M.* s. v. Ἑλλωτίς.)

A festival of the same name was celebrated in Crete, in honour of Europa. The word *ἑλλωτίς*, from which the festival derived its name, was, according to Seleucus (*ap.* Athen. *l. c.*), a myrtle garland twenty cubits in circumference, which was carried about in the procession at the festival of the Ellotia. (Compare Hesych. and *Etym. M.* s. v. Ἑλλώτια.) [L. S.]

ELLY'CHNIUM. [LUCERNA.]

EMANCIPA'TIO was an act by which the *potestas* of a paterfamilias over a person in his power was voluntarily dissolved by him, and it was so called because it was effected in the guise of a sale with all the ancient solemnities of the *aes et libra* (*mancipatio*). One of the rights of a paterfamilias under the archaic law of Rome was that of making money out of his children by selling them, and originally he might sell the same child as often as he pleased, and as opportunity occurred through the rights of the last purchaser being extinguished; but soon this came to be thought inhuman, and the Twelve Tables enacted that if a father sold his son three times, the latter should be free from his *potestas* ("si pater filium ter venumdabit, filius a patre liber esto," Gaius, i. 132; cf. Dion. Halic. *Antiq.* iv. 27). This rule was laid hold of as providing a means of voluntarily releasing children from *patria potestas*, which before seems not to have been possible; for the *pater* was never able to barely abdicate his rights (Dion. Halic. ii. 26, § 6; Cod. viii. 47, 6), and a person in *potestas* could not be made free by an ordinary manumission, like a slave, because the *potestas* itself was not a right of property, but in the nature of *imperium*. The process of emancipating a son, which is fully described by Gaius (i. 132), was as follows. The *pater* sold him by *mancipatio* to a third person, who then, in accordance with an agreement to that effect, express or implied, manumitted him by *vindicta* (Lactantius, *Div. Inst.* iv. 3, 17). This simply restored him to the *patria potestas*, owing to the rule of the Twelve Tables. The operation was repeated, with the same result. By being mancipated a third time, however, the son was released from *potestas*, but he did not become free, being *in mancipio* (quasi-slave) to the purchaser; but the latter had usually bound himself by agreement (*fiducia*) to remancipate him to the *pater*, which being done the father simply manumitted him by *vindicta* (being no longer his paterfamilias), whereby the son became free, and the father his quasi-patron and also his *tutor legitimus* if the child was *impubes* (Gaius, *Epit.* i. 6, 3). If the final act of manumission was performed by the purchaser, and not by the father, these rights and functions devolved on the former. For the emancipation of a daughter or any other descendant, only one sale was required, the Twelve Tables having spoken of these only in the case of a *filius* (Ulpian, *Reg.* 10, 1).

The legal effects of emancipation were two. Firstly, the emancipated person became *sui* instead of *alieni juris*; thereby, if a male, he acquired capacity to exercise himself *patria potestas*, and in any case became able to bring actions in his own name, make a will, and own property. As a general rule he was entitled to retain his *peculium* absolutely, unless expressly denied him (*Fragm. Vat.* 255, 261), and the *peculium* known as *adventicium* became his originally in any case: Constantine, however, enacted that the *pater* should have the right of retaining a third of it, for which Justinian substituted a usufruct or life interest in a half, "quasi pro praemio emancipationis" (Cod. 6, 61, 6, 3). Secondly, he underwent *capitis deminutio* (*minima*), the agnatic tie between him and his family being broken; so that neither had he any claim, by the civil law, to succeed those who belonged to it if they died intestate, nor had they any title to inherit from him. In fact, by the old *jus civile*, the only point in which an emancipated child was held to have any connexion with his old family was that, if the final act of manumission had been performed by the paterfamilias and not by the person to whom he had been mancipated, the *pater* became *quasi* patron (and possibly tutor), and succeeded the child if the latter died intestate leaving no *sui heredes*. When, however, the law of intestacy came to be modified by the praetorian *bonorum possessio* introduced through the Edict, emancipated children and those who were in the *pater's* power at his death (*sui heredes*) were placed on the same footing, under the title of *liberi*, in respect of succession to the father's property on his dying intestate; and by enactments of Anastasius and Justinian, an *emancipatus* acquired a similar right of succeeding in his due place to other non-agnatic relatives, among whom might be even brothers, sisters, uncles and aunts. A further recognition (of far earlier origin) of the actual relationship existing between father and child, even after emancipation, is to be found in the rules as to *testamentum inofficiosum* (*Inst.* ii. 18: see Testamentum).

The Emperor Anastasius (A.D. 491–518) introduced a new and alternative mode of emancipation by imperial rescript, in reply to a petition from the paterfamilias, which was chiefly employed where the father and child resided in different places, so that the old form *per aes et libram* was inapplicable (Cod. 8, 49, 5). Justinian, having abolished the old distinction between *res mancipi* and *nec mancipi*, and with it mancipation, the form of conveyance appropriate to the former, introduced a new mode of emancipation in lieu of the old one, viz. a declaration made by the *pater* before a magistrate, of which a record was preserved in the official *acta* of the court (Cod. 8, 49, 5, 6; *Inst.* i. 12, 6); but the child's consent was necessary (unless he was under seven years of age, or had come into *potestas* by adrogation, Cod. 8, 48, 9; *Inst.* i. 11, 3), a rule which was as least as old as Paulus (*Sent. rec.* ii. 25, 5). The *pater* might not bargain for any services to be rendered by the child in consideration of the emancipation (Dig. 37, 12, 4; 37, 15, 10): but he might emancipate grandchildren, retaining their father in his power, or *vice versâ* (*Inst.* i. 12, 7). As a general rule a child in power, whatever his age, could not compel the *pater* to emancipate him against his will (Dig. 1, 7, 31); the only exceptions being where he had been adrogated while *impubes* and found the adrogation prejudicial to him (Dig. 1, 7, 32), and where property had been left to and accepted by the *pater* on the express condition of emancipating him. (Dig. 1, 7; Cod. 8, 49; Gaius, i. 132 *sq.*; Ulpian, *Reg.* x. 1; Paulus, *Sent. rec.* ii. 25, 2 *sq.*) [J. B. M.]

EMANSOR. [Desertor.]

EMBAS (*ἐμβάς*). This is sometimes used as a generic term for a closed boot, so called because one's foot "got into" (*ἐμβαίνειν*) it, and it was not merely fastened to the foot like a sandal. Thus, when Herodotus (i. 195) says that the Persian *ὑποδήματα* were similar to Boeotian *ἐμβάδες*, the latter term is as general as the former. Again, in Lucian (*Rhet. Praec.* § 15, *ἡ ἐμβὰς Σικυωνία*) the word *ἐμβὰς* is quite general; the Latins used *Sicyonia* without any substantive to describe this kind of boot (Lucr. iv. 1125). But at Athens *ἐμβὰς* had a special signification; it was a cheap sort of boot first manufactured in Thrace, and in kind (*ἰδέαν*) like low *κόθορνοι* (Poll. vii. 85). (The latter, as we have seen [Cothurnus], were closed-in boots with rectangular soles, often wooden.) These *ἐμβάδες* were worn by men (Suidas, *s. v.* *ἐμβάς*; Aristoph. *Eccl.* 47, 314, 633, 848, &c.) and by the poorer classes (cf. Aristoph. *Vesp.* 1157): thus, in Isaeus (*de Dicaeog. her.* § 11) a man who has impoverished another reproaches him with wearing *ἐμβάδες καὶ τριβώνια.* The contradictory distinctions already alluded to [Cothurnus] which have been drawn between *ἐμβάδες* and *ἐμβάται*, as applied to the stage boot, are for the most part reconciled by Reimar on Dio Cass. lxiii. 8, who shows that *ἐμβάται* is *universally* applied to the tragic boot, while *ἐμβάδες* is *properly* applied to the boot of comedy; but as it is also sometimes used for boots in general, it can be applied to the tragic buskin, as it is by Lucian (*Gall.* § 26; cf. *Pseudol.* § 19). [L. C. P.]

EMBATEIA (*ἐμβατεία*). In Attic law this word (like the corresponding English one, *entry*) was used to denote a formal taking possession of real property. Thus, when a son entered upon the land left him by his father, he was said *ἐμβατεύειν*, or *βαδίζειν εἰς τὰ πατρῷα, πορεύεσθαι εἰς τὰ κτήματα* (Dem. *c. Leoch.* p. 1090, § 32), and thereupon he became *seised* or possessed of his inheritance. This right of taking formal possession by entry was confined to sons and other male descendants (Isae. *Pyrrh.* § 59; *Ciron.* § 34), and to sons adopted during the testator's lifetime ([Dem.] *c. Leoch.* p. 1086, § 19); hence *οἱ εἰσποίητοι* in Isae. *Pyrrh.* § 61 (*τὰς ἐπιδικασίας οἱ εἰσποίητοι πάντες ποιοῦνται*) must be taken to mean "adopted by will" (cf. § 60). (Schömann on Isae. *Astyph.* § 3.) If anyone prevented him from taking possession [Exagoge], he might maintain an action of ejectment, *ἐξούλης δίκη* [Exoules Dike]; if an heir under age or an *ἐπίκληρος* was ejected from the estate, the law gave a criminal prosecution against the offender, called *κακώσεως εἰσαγγελία* (Isae. *Pyrrh.* §§ 46, 62, etc.). *'Εμβατεύειν* is also used of creditors who took possession of mortgaged property when the time of payment had expired (Dem. *c. Apat.* p. 894, § 6, *ὀφείλων ἐπὶ τῇ νηὶ τῇ ἑαυτοῦ . . . οἱ χρῆσται ἐνεβάτευον εἰς τὴν ναῦν*: cf. Bekk. *Anecd.* 249, and Dittenberger, *S. I. G.* 344, 75 ff.), and of plaintiffs who, having been awarded heavy damages, proceeded to satisfy themselves by seizure of the defendants' property, or who had been awarded a certain piece of land or a house: cf. Dem. *c. Onet.* i., the *ἐξαγωγὴ* in p. 864, § 4, *ὑβριστικῶς ὑπ' αὐτοῦ πάνυ ἐξεβλήθην*, presupposes *ἐμβατεία*: [Dem.] *c. Euerg.* p. 1155, § 52 ff.; Suid. and *Etym. M.*: *οἱ δίκην νικήσαντες, ὥστε λαβεῖν χωρίον ἢ οἰκίαν, ἔπειτα ἐμβατεύειν κωλυόμενοι*, etc. (*Att. Process*, ed. Lipsius, pp. 603, 606, 696, 966 f.)

῞Εμβασις (on the part of a buyer) means the formal entering upon ownership of real property. (Le Bas et Waddington, *Voyages*, etc. iii. 1, 415; inscr. of Mylasa, *ἔσονται κατὰ ταὐτὰ ἐμβεβατευμένοι κυρίως κατὰ τήνδε τὴν ἔμβασιν· ἐνεβίβασεν δὲ αὐτοὺς ἐναντίον μαρτύρων*, etc.: cf. *Bull. de Corr. hell.* v. (1881), p. 112.) [C. R. K.] [H. H.]

E'MBATES. [Calceus; Cothurnus; Embas.]

EMBLE'MA (*ἔμβλημα*), **EMBLE'MATA.** 1. *Emblemata* were metal ornaments, such as masks, busts, medallions, figures of men and animals, wrought in relief and artificially attached (*illigare, includere, injicere, infigere, in-*

serere) by soldering or rivetting to the interior or exterior of metal bowls, vases, cups, &c. (Cic. *in Verr.* iv. 22, "Pocula cum emblematis;" *ib.* iv. 17, "Scaphia cum emblematis;" Juv. i. 76, "Argentum vetus et stantem extra pocula caprum," called by the scholiast "emblematicum opus;" Plin. *H. N.* xxxiii. § 55, "Ulixes et Diomedes erant in phialae emblemate Palladium subripientes," &c.) Such ornaments were sometimes made of gold and silver (Dig. 34, 2, 19, §§ 4, 6; Dig. 34, 2, 32, § 1; Senec. *Ep.* v. 3, "Non habemus argentum in quod solidi auri caelatura descenderit"), and had an artistic and pecuniary value even when detached from the objects to which they belonged. Thus, the plunderer Verres took especial care to wrench off *emblemata* from vases and cups. (Cic. *in Verr.* iv. 22, "Apposuit patellam, in qua sigilla erant egregia. Iste ... sigillis avulsis reliquum argentum sine ulla avaritia reddidit;" *ib.* iv. 24, "Tantam multitudinem collegerat emblematum.") *Emblemata* must be distinguished from metal ornaments in relief (such as those produced in repoussé), which formed an integral part of the vase itself: the essence of the *emblema* was that it could be detached, if necessary, from the vase which it ornamented. Many of the metal masks, figures, dishes, &c. in our museums are doubtless *emblemata* which have been broken off from vases (*e.g.* in *Ant. di Ercol.*, v. 267; *Annali*, 1839, p. 78; *Monum. d. Inst.*, iii. pl. 4; Arneth, *Gold- und Silberornamente*, pl. v. 5; cp. Saglio, *Dict. des Ant.*, s. v. "Caelatura," note 235).

Crustae were metal vase-ornaments similar to *emblemata* (*e.g.* Dig. 34, 2, 32, 1: "Cymbia argentea crustis aureis illigata," &c.). In some authors a distinction is made between the two terms (Cic. *in Verr.* iv. 23, "Iis crustae aut emblemata detrahebantur;" cf. Saglio, *Dict. des Ant.*, p. 801, note 229). Some modern writers have thought that the distinction lay in *emblemata* being ornaments in high relief, and *crustae* ornaments in low relief. So far as the natural signification of the words can help us, *emblemata* (ἔμβλημα, ἐμβάλλω) would mean ornaments *inserted* in a vase or bowl (as a gem is in its setting), while *crustae* (cf. Forcellini, *Lexicon*, s. v. "Crusta") would be thin leaves or plates of metal applied to the surface of a vase. Practically, however, the terms *emblemata* and *crustae* seem to have been generally used as synonymous (Saglio, *Dict. des Ant.*, s. v. "Caelatura," § vii.). The *crustae* were made by artisans called *crustarii*. (Plin. *H. N.* xxxiii. § 55, "habuit et Teucer crustarius famam;" Festus, *s. v.*, "Crustariae tabernae a vasis potoriis crustatio dictae.")

2. The word *emblema* is also used to signify *inlaid work* (Varro, *R. R.* iii. 2, 4; Lucil. *ap.* Cic. *de Or.* iii. 43, 44; Cic. *Brut.* 79). This usage is, however, rare; and as a general rule when the words *emblema, emblemata* occur in the ancient authors and in modern archaeological treatises, the metal ornaments described in § 1 are intended.

[References to other authorities not cited above may be found in Saglio, *Dict. des Ant.* art. "Caelatura," § vii., and in Mommsen-Marquardt, vol. vii. [*Privatl.*] p. 663. Compare also CAELATURA in this dictionary.] [W——K W——H.]

E'MBOLUM. [NAVIS.]

EME'RITI. [EXERCITUS.]

EMISSA'RIUM (ὑπόνομος), an artificial channel by which an outlet is formed to carry off any stagnant body of water. (Plin. *H. N.* xxxiii. § 75; Cic. *ad Fam.* xvi. 18.) Such channels may be either open or underground; but the most remarkable works of the kind are of the latter description, as they carry off the waters of lakes surrounded by hills. The skill of the ancients in tunnelling has been already noticed under CRYPTA; but long before the art was applied to road-making, drainage-works on an immense scale were employed to regulate the overflow of land-locked waters and to prevent inundations. Thus in Greece, in the early times of the Minyae of Orchomenus, we find the natural channels (katavóthra, as they are now called) which carry off the waters of the Boeotian Cephisus through Lake Copais to the sea, supplemented by two artificial emissaria or tunnels (Müller, *Orchomenos*², 49 ff.). These are described, with a map of the surrounding country, in *Dict. Geogr.* i. 411: the longer of the two, connecting the lake with the lower course of the Cephisus, is nearly four miles in length according to Forchhammer (other accounts make it considerably less, cf. Grote, pt. i. ch. 6, i. 114) and with about twenty perpendicular shafts sunk into it, some of which are from 100 to 150 feet in depth. The second tunnel, much shorter, unites the lakes Copais and Hylica, running under the Acraephian plain at no great depth, and is likewise provided with shafts. Both tunnels and shafts are now choked up, but can still be traced. The natural katavóthra being insufficient to carry off the waters of the Cephisus, much of what was once fertile alluvial land is now turned to a swamp, and awaits the efforts of modern enterprise. An abortive attempt to clear out these tunnels was made by an engineer named Crates under the orders of Alexander the Great (Strabo, ix. p. 407): it is announced (1888) that the reclamation of Lake Copais is now to be again attempted.

Herodotus describes with marked interest the tunnel of Eupalinus at Samos, by which a supply of fresh water was introduced into the city; and gives it the first place among the "three greatest works of the Greeks," the others being the mole in the harbour of Samos and the Heraeon or temple of Hera (iii. 60). These works unquestionably date from the tyranny of Polycrates, the most flourishing period of Samos, which ended about B.C. 522; they are mentioned by Herodotus in connexion with his reign, and Aristotle likewise refers to περὶ Σάμον ἔργα Πολυκράτεια (*Pol.* v. 11 = p. 1313 b, 24). The mole still exists, intact or at least restored; the Heraeon is represented by a single column. This tunnel (ὄρυγμα ἀμφίστομον, Herod. *l. c.*) had disappeared for centuries, and good observers like Tournefort and Ross sought for it in vain. Within the last few years it has been re-discovered by the Greek clergy on the spot, and to a great extent cleared out at the expense of the principality; an account of the excavations by G. Dennis appeared in the *Academy* of Nov. 4, 1882, a much fuller one by E. Fabricius in the *Mittheilungen d. deutsch. archäol. Inst.* ix. 165-191 (1884). The length of the tunnel, given by Herodotus at seven stadia, probably does not exceed 1000 metres or scarcely more than five stadia; it is much choked by stalactites, and is not yet practicable throughout, but has been explored for the length of 100 metres from the northern, 500 from the southern extremity. The height and width are correctly estimated by Herodotus at eight feet each; seven would be nearer the mark, though near the ends it is wider. A deep and narrow channel (ἄλλο ὄρυγμα) runs along it, three feet wide according to Herodotus (really a little less), and thirty feet in depth: this applies only to the southern end nearest the town, which was probably all that the historian saw of it; elsewhere the depth is not so great. Along this the water was conveyed; not however in the channel itself, but in earthenware pipes, large numbers of which have been found in it; unless we are to suppose that these are of later date. For the greater part of its course the tunnel is hewn out of a hard limestone rock, on which the marks of the chisel are still visible; towards the extremities the strata are softer, and a lining of masonry was required. Niches occur at intervals, in some of which lamps were found; and it is ventilated by about twenty shafts. An interesting circumstance, as bearing upon the engineering skill of Eupalinus, is that the tunnel was certainly pierced from both ends. The two galleries did not, however, meet with the precision attained in modern times; the floor of the upper one missed the roof of the lower by the space of about a metre, and a cavern some twelve feet high had to be excavated, marking the point of junction. The slope is easy and suitable for an aqueduct, but the deep channel is probably an after-thought in consequence of the right gradient not having been attained at once. This remarkable work must have continued in use for many centuries, as traces of Roman and even, it is said, of Byzantine constructions are found within it: full details on these and other points will be found in the essay of Fabricius. On the other hand, there is a second aqueduct, dating from Roman times, which follows the outer circuit of the mountain; this would seem to show that the work of Eupalinus was at one period abandoned.*

A little later, probably, in date than the Samian aqueduct (about 480) were the subterraneous channels constructed by Phaeax at Agrigentum in Sicily, to drain the city; they were well worth seeing, says Diodorus (xi. 25), for their magnitude, although in general but little noticed. They are still called the *Condotti di Feace*, and adjoin the well-marked site of the huge reservoir (*κολυμβήθρα*, *piscina*; not here, we think, a "swimming-bath"; it was full of fish and swans) mentioned in the same passage by Diodorus, with which they were doubtless connected: they are not yet excavated, but from their massiveness are probably in a good state of preservation.

In Italy the Etruscans were the first great masters in the art of tunnelling, and the Romans learnt it from them. They had an ample field for their operations, as Central Italy abounds with intractable rivers, and crater-lakes with no natural outlet. The Cloaca Maxima itself is quite as much an emissary as a sewer, draining the Forum and Velabrum which previously were swamps; the period to which it belongs, that of the last kings, marks the culminating point of Etruscan civilisation at Rome. (On the disputed question respecting the date, see CLOACA.) The celebrated emissary of the Alban Lake is still in working order; it is probably of Etruscan origin, and older than the Veientine war with which tradition connects it. The length is about 6,000 feet; for further details see *Dict. Geogr.* s. v. *Albanus Lacus*. The neighbouring volcanic lake of Nemi is drained in a similar manner; and remains exist to show that the system was likewise applied to Trasimenus, a lake of quite different geological formation, broad and shallow.

Emissarium of lake Fucino.

The greatest Roman work of this description is the emissary of lake Fucino, rendered further interesting by the mention of it in ancient authors and the complete drainage of the lake in recent years. The *vitrea Fucinus unda* of Virgil (*Aen.* vii. 759) is now altogether a thing of the past. Julius Caesar is said to have first conceived the idea of this stupendous undertaking (Suet. *Jul.* 44), which was carried into effect by the Emperor Claudius (Tac. *Ann.* xii. 57). The length of the emissary, which lies nearly in a direct line from the lake to the river Liris (Garigliano), is 15,600 English feet, or three miles all but 80 yards. The number of workmen employed was 30,000, and the time occupied in the work eleven years. (Suet. *Claud.* 20; compare Plin. *H. N.* xxxvi. § 124.) For more than a mile the tunnel is carried under a mountain, of which the highest part is 1000 feet above the level of the lake, and through a stratum of rocky formation (carnelian), so hard that every inch required to be worked by the chisel. The remaining portion runs through a softer soil, not much below the level of the

---

* Some of Fabricius' statements have been corrected from notes kindly communicated by Mr. J. Theodore Bent, who visited Samos in 1886.

earth, and is vaulted with brick. Perpendicular shafts (*putei*) are sunk at various distances into the tunnel; and a number of lateral openings or adits (*cuniculi*), some of which separate themselves into two branches, one above the other, are likewise directed into it, the lowest at an elevation of five feet from the bottom. Through these the materials excavated were carried out. The immediate mouth of the tunnel was at some distance from the margin of the lake, which space was occupied by two ample reservoirs, intended to break the rush of water before it entered the emissary, connected by a narrow passage, in which were placed the sluices. The upper end of the tunnel itself consists of a splendid archway of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resembling in construction the works of the Claudian aqueduct. The mouth through which the waters discharged themselves into the Liris was more simple, and is represented in the preceding woodcut. The river lies in a ravine between the arch and foreground, at a depth of 60 feet below, and consequently cannot be seen in the cut. The small aperture above the embouchure is one of the *cuniculi* above mentioned. It appears that the actual drainage was relinquished soon after the death of Claudius, either from the perversity of Nero, as the words of Pliny (*l. c.*) seem to imply, or by neglect; for it was re-opened by Hadrian. (Spart. *Hadr.* 22.) For further information see Hirt, who gives a series of plans and sections of the works connected with the Lacus Fucinus (*Gebäude d. Griech. u. Röm.* pp. 371–375, pl. xxxi. figs. 14–21). The modern work of Prince Torlonia (1862–75) is an extension and enlargement of the tunnel of Claudius. [A. R.] [W. W.]

EMMELEIA. [CHORUS, p. 422 *a.*]

EMME'NOI DIKAI (ἔμμηνοι δίκαι), suits in the Athenian courts, which were not allowed to be pending above a month. The first mention of this regulation is made in *C. I. A.* i. No. 38: any attempt made by citizens of the tributary states to evade the decree respecting the tribute (of the year 425–4) is to be brought before the ἐπιμεληταί, ο[ἱ δὲ ἐπιμεληταὶ ἐσαγό]ντων ἔμμηνα ἐς τὸ δ[ικαστήριον], etc. It was confined to those matters which required a speedy decision; and of these the most important were disputes respecting commerce (ἐμπορικαὶ δίκαι, Pollux, viii. 63, 101; Harpocrat and Suid. *s. v.* Ἔμμηνοι Δίκαι), which were heard during the six winter months from Boëdromion to Munychion, so that the merchants might quickly obtain their rights and sail away (Dem. *c. Apat.* p. 900, § 23; cf. Lys. *de Pecun. publ.* § 5); by which we are not to understand, as some have done, that a suit could be protracted through this whole time, but it was necessary that it should be decided within a month. (Boeckh, *P. E.* p. 50 = *Sthh.*^{3} i. 64 f.)

All causes relating to mines (μεταλλικαὶ δίκαι) were also ἔμμηνοι δίκαι (Dem. *c. Pantaen.* p. 966, § 2); the object, as Boeckh remarks (*P. E.* p. 667 = *Kl. Schriften*, v. p. 54), being no doubt that the mine proprietor might not be detained too long from his business. The same was the case with causes relating to ἔρανοι (Pollux, viii. 101; Harpocrat. and Suid. *l. c.*) [ERANI]; and Pollux (*l. c.*) includes in the list suits respecting dowry, which are omitted by Harpocration and Suidas. K. F. Hermann adds the γραφὴ ὕβρεως (*Symb. ad doctrinam juris Att. de injuriarum act.* p. 21). Pollux' statement (viii. 101) as to the existence of distinct magistrates called εἰσαγωγεῖς οἱ τὰς ἐμμήνους δίκας εἰσάγοντες (cf. 93) ἦσαν δὲ προικός, ἐρανικαί, ἐμπορικαί, is confirmed by *C. I. A.* i. No. 37, where they are twice mentioned (see Köhler, *Urkunden u. Untersuchungen z. Gesch. d. delisch-att. Bundes*, p. 68); at a later period they were replaced by the thesmothetae (so with regard to the μεταλλικαὶ δίκαι, Pollux, viii. 88). When the suits relating to trade were made ἔμμηνοι, which happened probably not till after the date of Xenophon's treatise on the Revenue (3, 3; [Dem.] *de Halonn.* p. 79, § 12), the ἡγεμονία was transferred from the ναυτοδίκαι to the thesmothetae (Dem. *c. Apatur.* p. 892, § 1). (*Att. Process*, ed. Lipsius, pp. 94, 97, 525, 907.) [W. S.] [H. H.]

EMPHRU'RI (ἔμφρουροι), from φρουρά, the name given to the Spartan citizens and Perioeci during the period in which they were liable to military service. (Xen. *Rep. Lac.* 5, § 7.) This period lasted to the fortieth year from manhood (ἀφ' ἥβης), that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities. (Isocr. *Busir.* § 18, where μάχιμος, according to Müller, *Dor.* iii. 12, § 1, is evidently put for ἔμφρουρος.)

The only exemption was for the father of three sons, who became ἄφρουρος (Aristot. *Pol.* ii. 9 = p. 1270 b, 3; Aelian, *V. H.* vi. 6). For the rule of superannuation at sixty, cf. Xen. *Hell.* v. 4, § 13; Plut. *Ages.* 24. The word φρουρά, as Schömann observes, is characteristic of Spartan modes of thought; all Laconia was a camp, the Spartiatae a garrison (Schömann, *Antiq.* i. 279, E. T.; Gilbert, *Staatsalterth.* i. 77). [W. S.] [W. W.]

EMPHYTEUSIS (ἐμφύτευσις, lit. "an implanting") is a perpetual and "real" right in (agricultural) land which belongs to another person, entitling the *emphyteuta* to cultivate it practically as though it were its own, on condition of paying a fixed rent (*pensio*, *canon*) to the *dominus* or owner: the nearest analogy to it to be found in England is supplied by those lands which are let at what is called a "fee-farm" rent ("feodifirma," *Magna Carta*, c. 37).

The origin of emphyteusis is traceable to the *agri vectigales*, first distinctly mentioned about the time of Hadrian; large tracts of grazing land in Italy, belonging to the state, religious corporations (*e.g.* the Vestal Virgins), or the smaller civitates and municipia, but held and enjoyed by private persons subject to the payment of a perpetual rent (*vectigal*), or let out upon very long leases. The rights of such occupiers, at first purely contractual, acquired a "real" character, analogous to that of genuine ownership, from the praetor, who protected their possession (Dig. 2, 8, 15, 1) by interdicts and by a *utilis actio in rem* (*actio vectigalis*, Dig. 39, 2, 15, 26), availing even against the lessor when non-payment of rent was not alleged (Dig. 6, 3, 1, 2). An addition had thus been made to the *jura in re aliena* of Roman law: the right was alienable both *inter vivos* and by will, and descended to the tenant's heirs on his intestacy, though apparently it had not yet acquired a specific name, and the rules relating to it were as yet somewhat unsettled. Gaius says (iii. 145) that in his day it was a question whether the tenant's interest did not so closely resemble *dominium* as to make the transaction a sale rather than a contract of hiring and letting, but the better opinion was in the negative. After the third century the practice of letting agricultural lands of all kinds on these terms was very largely adopted, especially in the Eastern Empire, by private persons no less than by the emperor and corporations of all kinds: in the imperial enactments after Constantine the terminology is changed, lands so let being termed *praedia emphyteuticaria*, and the rent called *pensio* or *canon* more often than *vectigal*. The precise nature of these perpetual leases and of the *emphyteuta's* right was determined by the Emperor Zeno (*Inst.* iii. 24, 3), who enacted that the transaction should be governed by the rules neither of sale nor of hire, but be a special contract by itself: and his settlement of the law passed with little or no alteration into the Corpus Juris of Justinian.

The *emphyteuta* is opposed to the *dominus*, or owner, of the land over which his right extends; that is to say, his interest is merely a *jus in re aliena:* he has, however, possession, though whether a "representative" possession of the land itself (as Savigny holds) or merely a *juris quasi-possessio*, the notion of possession being analogically extended from a thing to a mere right (as Arndts and other civilians maintain), is uncertain; but whatever the quality of the possession, it is protected by the ordinary possessory interdicts. He may, moreover, do almost anything with the land that a judicious owner would do, unless there are special restrictive covenants. He may cultivate it in what way he pleases, turning pasture into meadow or plough lands at his discretion (herein being clearly distinguishable from the usufructuary), provided he does not permanently depreciate it: otherwise he is liable to eviction by legal process. Its fruits are his so soon as they are separated from the soil (Dig. 22, 1, 25, 1); his rights are heritable, and alienable both *inter vivos* and by will. If he proposed to transfer his interest, he had (under penalty of eviction) to give notice to the *dominus*, who had during two months a right of pre-emption at the price agreed on: and even if he did not avail himself of this right, the person of the proposed alienee had to be approved by him in writing, though he could refuse such approval only on reasonable grounds; and he was entitled to a commission of 2 per cent. on the purchase-money in consideration of his acceptance of a new tenant: the latter succeeded to all his predecessor's liabilities in respect of the land. The *emphyteuta* also had the right of letting the land on lease to a third person, and he could pledge or mortgage it and create servitudes which bound it so long as his own interest endured: finally, in the form of *utiles actiones* he enjoyed all the remedies of a full *dominus*. His duties were to keep the land in good tenantable condition, though being under no obligation to increase its value he had apparently no claim to compensation for unexhausted improvements; to pay all taxes assessed upon it (*Nov.* 7, 3, 2; 120, 8) and his rent with regularity. So long as this was in arrear he could not enforce his rights over the land against either the *dominus* or his representatives (*e.g.* his mortgagee, Dig. 13, 7, 16, 2); and if it was in arrear three years (or two if the *dominus* was a spiritual person), the owner could evict him by legal process.

Emphyteusis might arise from contract, legacy, judicial decree, and possibly prescription. If the land belonged to the church or a spiritual person, the contract must be in writing, which was also necessary in all cases where the parties desired in any way to vary the ordinary legal rules as to this species of interest in land (Cod. 4, 66, 1; *Nov.* 120, 6, 2): but it does not seem that the contract ever required *traditio* or livery for the perfect constitution of the right. The right of the *emphyteuta* might be extinguished in the same ways as any other *jus in re aliena* (e.g. destruction of the land, *confusio*, &c.); besides these, renunciation or surrender, forfeiture, and prescription seem to have been common. Renunciation had no effect unless accepted by the *dominus:* the chief cases of forfeiture have been noticed above under the head of eviction. (Dig. 6, 3; 39, 4; Cod. 4, 66; A. Vuy, *de originibus et natura juris emphyteutici Romanorum*, 1838; Gesterding, *Eigenthum*, p. 378 ff.; Von Buchholtz, *Jurist. Abhandl.* No. 25, "Über die Unterschiede zwischen der Emphyteusis und Superficies;" Arndts, *Zur Lehre von der Emphyteuse;* Giess, *Zeitschr.* iii. pp. 245 ff., 367 ff.; Holtzendorff, *Rechtslexicon*, s. v. "Emphyteusis.") [J. B. M.]

EMPLECTON (*ἔμπλεκτον*). [MURUS.]

EMPO'RIKAI DIKAI. [EMMENOI DIKAI.]

EMPO'RIUM (*τὸ ἐμπόριον*), a place for wholesale trade in commodities carried by sea. The name is sometimes applied to a seaport town, but it properly signifies only a particular place in such a town. Thus Amphitryo says (Plaut. *Amph.* iv. 1, 4) that he looked for a person.

> "*Apud emporium*, atque in macello, in palaestra atque in foro,
> In medicinis, in tonstrinis, apud omnis aedis sacras."

(Compare Liv. xxxv. 10, xli. 27.) The word is derived from *ἔμπορος*, which signifies in Homer a person who sails as a passenger in a ship belonging to another person (*Od.* ii. 319, xxiv. 300); but in later writers it signifies the merchant who carries on commerce with foreign countries, and differs from *κάπηλος*, the retail dealer, who purchases his goods from the *ἔμπορος* and retails them in the market-place. (Plat. *Rep.* ii. p. 371 D; *Protag.* p. 313 C).

At Athens, it is said (*Lex. Seg.* p. 208) that there were two kinds of emporia, one for foreigners and the other for natives (*ξενικὸν* and *ἀστικόν*); but this appears doubtful. (Boeckh, *P. E.* p. 313 = *Sthh.*^{3} i. 382.) The emporium at Athens was under the inspection of certain officers, who were elected annually (*ἐπιμεληταὶ τοῦ ἐμπορίου*). [EPIMELETAE.] (Hermann-Blümner, *Privatalterth.* p. 425.) [W. S.] [W. W.]

EMPTI ET VE'NDITI A'CTIO. The seller has an *actio venditi*, and the buyer an *actio empti*, to recover damages for breach of the duties imposed by the contract of sale upon the other party. Both are *actiones directae*, and belong to the class of remedies known as *bonae fidei judicia.* (Gaius, iv. 62; *Inst.* iv. 6, 28.) [J. B. M.]

E'MPTIO VENDI'TIO. The contract of

buying and selling is one of those in which the Romans said the obligation was imposed *consensu*, because no form (as in verbal and literal contract) or delivery on one side (as in real contract) was required to give it binding force (Gaius, iii. 135; *Inst.* iii. 22, pr.): as soon as the parties were agreed on the thing to be sold by the one, and the price to be paid by the other, they were bound, and neither could withdraw without paying damages (Gaius, iii. 139). Writing was unnecessary unless it was a term in the contract that its provisions should be expressed in a note or memorandum (*Inst.* iii. 23, pr.; Dig. 44, 7, 2). The vendor was under no obligation to deliver the *res vendita* until he had been paid the price, unless he chose to give credit (*Inst.* ii. 1, 41); and until it was delivered no property in it passed to the purchaser: but it was at the latter's risk from the moment the contract was concluded, so that if, even before delivery, it was lost, stolen, or accidentally destroyed, the loss fell on the purchaser, unless he could show that the vendor had failed in his legal duty of *diligentia* [CULPA] in the charge of it. As a set-off to this the vendor was bound to deliver with the thing itself all its fruits, accessions, increase, &c. from the date of the contract. If the purchase-money was not paid, it carried interest (Dig. 19, 1, 13, 20). As regards the fairness or adequacy of the price, the general rule was, in the absence of fraud, not to interfere with the freedom of contract (Dig. 19, 2, 22, 3); but by two rescripts of Diocletian (Cod. 4, 44, 4 and 8), if a thing were sold for less than half its real value (which was called *laesio enormis*) the vendor might rescind the sale unless the purchaser would pay as much in addition as would make the price a fair one. The vendor was not bound to make the purchaser owner of the thing sold: in other words, the *contract* of sale would be good even though the thing did not belong to the vendor: he was bound, however, to give free and undisturbed possession; and if the property was recovered from the purchaser by process of law by a third person who proved a better title, the vendor was bound to indemnify him [EVICTIO] (Dig. 21, 2). Every sale contained an implied warranty of quality, and the vendor was answerable for substantial defects which were unknown to the purchaser at the date of the contract (except through his own carelessness). Where the vendor had expressly warranted the quality of the thing, or had deliberately concealed defects, he could be sued by *actio empti* at any time within thirty years of the making of the contract: but the *implied* warranty was enforceable only by two special actions of aedilician origin (Dig. 21, 1) [EDICTUM]; *i.e.* by the *actio redhibitoria* (which lay only within six months) the purchaser could rescind the sale and recover his purchase-money with interest: by the *actio aestimatoria seu quanti minoris* (lying within twelve months) he could, without rescinding, recover a part of his purchase-money proportionate to the defects discovered. Horace in his Satires (ii. 3, 286; cf. *Ep.* ii. 2 *ad init.*) alludes to the precautions to be taken by the buyer and seller of a slave. (Gaius, iii. 139–141; *Epit.* ii. 9, 14; Paul. *Sent. rec.* ii. 17; *fragm. Vat.* 1–40; *Inst.* iii. 23; Dig. 18, 1; 19, 1; Cod. 4, 38 and 49; Vangerow, *Lehrbuch der Pandekten*, §§ 604, 611, 632 *sq.*; Bechmann, *Der Kauf nach gemeinem Recht*, vol. i., 1876; Muirhead, *Roman Law*, pp. 279–286.) [J. B. M.]

ENCAU'STICA. [PICTURA.]

ENCLE'MA (*ἔγκλημα*). [DIKÉ.]

ENCOMBO'MA (*ἐγκόμβωμα*), an upper garment tied round the body in a knot (*κόμβος*), and worn like a bib or apron to keep the tunic clean. The regular dress of slaves in comedy was the *ἐξωμὶς* with an *ἐγκόμβωμα* over it (Pollux, iv. 119; Alb. Müller, *Bühnenalterth.* p. 262: cf. Longus, *Past.* ii. 33; Varr. *ap.* Non. p. 542). According to Müller, it was probably a slave's pallium stitched to the chiton behind, so as to leave both hands free and the movements of the body unimpeded. [W. W.]

ENCTE'SIS (*ἔγκτησις*, Doric *ἔμπασις*, Boeot. *ἔππασις*, Boeckh, *C. I. G.* i. p. 725 b), the right of possessing landed property and houses (*ἔγκτησις γῆς καὶ οἰκίας*) in a foreign country, which was frequently granted by one Greek state to another (Dem. *de Cor.* p. 265, § 91; *C. I. G.* ii. No. 2352; Xen. *Hell.* v. 2, 19) or to separate individuals of another state.* In Boeckh's opinion (*P. E.* p. 140 = *Sthh.*^{3} i. 177) *ἰσοτελεία* and probably also *προξενία* included this right. Meier (*de prox.* p. 21) dissents from this, and Schubert (*de prox. Att.* p. 40 ff.) quotes inscriptions from which we learn that *ἔγκτησις* was granted in addition to *προξενία* (*C. I. A.* ii. Nos. 41, 131, 186), whilst in other cases (No. 139) *ἔγκτησις* alone is conferred. This privilege meant the right of possessing either a house, or a house and land (*C. I. A.* ii. Nos. 42, 70, 121, etc.—i. No. 59; ii. No. 41, etc.); in *C. I. A.* ii. No. 380 the right of possessing land to the amount of two talents is granted, and in Nos. 121 and 222 the time is specified *ἕως ἂν κατέλθωσιν*). The privilege was not hereditary, since in some decrees it is specially stated *αὐτῷ καὶ ἐκγόνοις* (*C. I. A.* ii. 186, etc.). *Ἐγκτήματα* were such possessions in a foreign country, and are opposed (by [Dem.] *de Halonn.* p. 87, § 42) to *κτήματα*, possessions in one's own country. (Valcken. *ad* Herod. v. 23.) Since, except in special instances, only citizens enjoyed the right of possessing land and houses at Athens, it was not safe for aliens to advance money on such property (Dem. *pro Phorm.* p. 946, § 6; Xen. *de Vect.* 2, 6). In the psephisma which formed the basis of the second confederacy the Athenians gave up their *ἐγκτήματα* in the territories of the allies, and renounced the right of acquiring such henceforward (Diod. xv. 29, 7; *C. I. A.* ii. No. 17); those who disregarded this arrangement were to be proceeded against by *φάσις πρὸς τοὺς συνέδρους τῶν συμμάχων*. The term *ἐγκτήματα* was also applied to the landed property or houses which an Athenian possessed in a different *δῆμος* from that to which he belonged by birth, and with respect to such property he was called *ἐγκεκτημένος*: whence we find De-

---

* Rangabé, *Antiq. hellén.* ii. No. 678 (Oropus), No. 696 (Megara, *γᾶς καὶ οἰκίας ἐπαρχά*), No. 705 (Thespiae, *γᾶς καὶ Ϝυκίας ἔμπασις*), No. 705*b* (Orchomenus, *γᾶς κὴ Ϝυκίας ἔππασις*), No. 739 (Ambrysa), No. 741 (Lamia, *γᾶς καὶ οἰκίας ἔγκτησις καὶ ἐπινομία*); cf. Boeckh, *C. I. Gr.*, No. 1793 (Arcanania, *γᾶς καὶ οἰκίας ἔγκτησις*), No. 2556 and 2558 (Crete, *γᾶς καὶ οἰκίας ἔνκτησιν*), No. 2267 (Delos), Nos. 1334 and 1335 (Lacedaemon), No. 1771 (Thessaly), No. 2056 (Thrace, *ἐγγείων ἔγκτησις*), etc.

mosthenes (*c. Polycl.* p. 1208, § 8) speaking of *οἱ δημόται καὶ οἱ ἐγκεκτημένοι.* For the right of holding property in a *δῆμος* to which he did not belong, he (as well as a foreigner who enjoyed the privilege of *ἔγκτησις*) had to pay such *δῆμος* a tax, which is mentioned in inscriptions under the name of *ἐγκτητικόν.* The remission of this tax is mentioned in inscriptions (*C. I. A.* ii. Nos. 589, 582, 574); it was sometimes accompanied by other privileges, as *προεδρία* and a limited share in the sacrifices of the deme as in the case of Callidamas (*C. I. A.* ii. No. 589; Boeckh, i. p. 408 a; O. Müller, *de demis Att.* p. 20 ff.; *Att. Process*, ed. Lipsius, p. 671 ff.). It is a special case of *ἔγκτησις* when land is granted to foreigners for the erection of a sanctuary (see *C. I. A.* ii. No. 168 *sub fin.*: *δεδόχθαι τῷ δήμῳ, δοῦναι τοῖς ἐμπόροις τῶν Κιτιέων ἔνκτησιν χωρίου ἐν ᾧ ἱδρύσονται τὸ ἱερὸν τῆς Ἀφροδίτης καθάπερ καὶ οἱ Αἰγύπτιοι τὸ τῆς Ἴσιδος ἱερὸν ἵδρυνται*). [H. H.]

ENDEIXIS (*ἔνδειξις*). Endeixis, apagoge, and ephegesis have a great deal in common, both as regards the cases to which they were applicable and the mode of procedure and punishment, so that they are frequently mentioned side by side (Andoc. *de Myst.* § 91; Dem. *c. Lept.* p. 504, § 156; *c. Timocr.* p. 745, § 146; [Dem.] *c. Theocr.* p. 1325, § 11); and sometimes the same case is now called *ἀπαγωγή*, now *ἔνδειξις.* Thus Antiphon's Or. *de caed. Herod.* is the speech of defence in an *ἀπαγωγὴ φόνου* (§ 9, 85), yet in § 9 we find *ἐνδεδειγμένος.* This, however, should not have misled Jebb (*Att. Orat.* i. p. 57) into saying that "*ἔνδειξις* and *ἀπαγωγὴ* do not denote two different processes, but two parts of the same process. Endeixis was the laying of information against a person not yet apprehended; apagoge was the act of apprehending him." Nor can Lysias's Or. *c. Agor.* be quoted as an instance in which apagoge followed endeixis. Dionysius proceeded against Agoratus by apagoge, and the title which the grammarians give to the speech *κατ' Ἀγοράτου ἐνδείξεως* is wrong (Blass, *d. Att. Bereds.* i. p. 552). The similarity of procedure shows itself in this, that there was no *πρόσκλησις*; and that when the magistrate accepted the charge (called *ἀπαγωγή*, Lys. *c. Agor.* § 85, or *ἔνδειξις*, [Dem.] *c. Theocr.* p. 1322, § 1, respectively), the defendant was kept in prison, unless he could find three sureties (Dem. *c. Timocr.* p. 746, § 146; *c. Nicostr.* p. 1251, § 14; Dinarch. *c. Aristog.* § 9; see, however, Andoc. *de Myst.* § 2, *οὔτ' ἐγγυητὰς καταστήσας, οὔθ' ὑπὸ δεσμῶν ἀναγκασθεὶς*). From Antiph. *de caed. Herod.* § 13 we learn that the defendant in that case, probably because of his not being a citizen, was imprisoned, although he offered to find the three sureties required by law, and that in the majority of cases capital punishment awaited him on conviction.

Apagoge (*ἀπαγωγή*) was a summary process in which the prosecutor led the culprit caught *flagrante delicto* (*ἐπ' αὐτοφώρῳ*, Isae. *Dicaeog.* § 28; Dem. *c. Steph.* i. p. 1126, § 81; Xen. *Mem.* i. 2, 62, *φανερός*: cf. Photius, *s. v.* *ἕνδεκα*) either directly into prison, if the charge belonged to the jurisdiction of the Eleven, who had first to decide whether a *primá facie* case had been made out by the informant (*ἀπαγωγῆς ἄξια ποιεῖ· ἀρχὴ τῶν ἕνδεκα*, Hyperid. *pro Eux.* col. 22; *ἀπάγειν τοῖς ἕνδεκα*, Dem. *c. Timocr.* p. 736, § 113; *εἰς τὸ δεσμωτήριον*, *c. Aristocr.* p. 647, § 80, etc.; *ἀποδέχεσθαι, παραδέχεσθαι* is said of the Eleven, Lys. *c. Theomn.* i. § 10, *c. Agor.* § 86), or before the proper authority, who sent the culprit to prison. It was not in every case when a culprit was caught in the act that apagoge was allowed; and in those cases where it was allowed, the culprit might be apprehended not only when literally caught in the act, but also when his guilt was notorious, *ἐπ' αὐτοφώρῳ* being formally essential for establishing the charge, but meaning practically no more than *ὁμολογουμένως* or *φανερῶς* (Rauchenstein, *Philol.* v. p. 514; cf. Lys. *c. Agor.* § 86 f.). Thus when Ariston had recovered after a protracted illness from the assault committed upon him by Conon and his companions, his friends said that Conon was liable *τῇ τῶν λωποδυτῶν ἀπαγωγῇ* (they had stripped Ariston of his cloak and carried it off, Dem. *c. Con.* p. 1259, § 8; p. 1260, § 10). In spite of the lapse of time, an apagoge was still possible, Ariston being able to establish the guilt of Conon clearly by eye-witnesses, etc. Sandys and Paley (*ad loc.*) say, "The plaintiff's friends meant that Conon might have been captured *flagrante delicto*, and carried off to prison as a *λωποδύτης*;" but bearing in mind the case of Agoratus, it seems not to have been a question of what "might have been," but what "might be still." It is true that in Antiphon's Or. *de caed. Herod.* the absence of *ἐπ' αὐτοφώρῳ* in the charge is not pointed out as a flaw by the defendant; but this does not show, as Sorof suggests (*Jahrb. f. cl. Phil.* 1883, p. 110), that *ἐπ' αὐτοφώρῳ* was not at that time insisted upon and only became essential after Eucleides: the defendant protests against the prosecution by *ἀπαγωγὴ* altogether, on the ground that a murderer does not come under the meaning of the term *κακοῦργος* as defined by the law. The proceeding by apagoge was most frequently adopted against those whom the law designated as *κακοῦργοι* (*ὁ τῶν κακούργων νόμος*, Antiph. *de caed. Herod.* § 9, with two additions, cf. Athen. vi. p. 226 a, and *C. I. A.* ii. No. 476, l. 56), such as thieves (Antiph. *de caed. Herod.* § 9), clothes-stealers (*λωποδύται*, Lys. *c. Theomn.* i. § 10; *c. Agor.* § 68), burglars (*τοιχωρύχοι*, Dem. *c. Lacr.* p. 940, § 47), kidnappers (*ἀνδραποδισταί*, Isocr. *de Permut.* § 90), cutpurses (*βαλαντιοτόμοι*, Xen. *Mem.* i. 2, 62), and persons who contravened the market-regulations (Athen. vi. p. 226 a, and *C. I. A.* ii. 476, l. 56 f.). The term was extended to similar classes of criminals, such as murderers and adulterers (Aeschin. *c. Tim.* § 90), temple-robbers (*argum.* [Dem.] *c. Aristog.* i. p. 767; Xen. *Mem.* l. c., but see Antiph. *de caed. Herod.* § 10), sorcerers (Plat. *Men.* p. 80 B and schol.), pirates (Luc. *Navig.* c. 14). The same proceeding was extended also to those charged with impiety (Dem. *c. Androt.* p. 601, § 27), ill-usage of orphans (Aeschin. *c. Tim.* § 158, cf. 40), and against metoecs who had not paid the *μετοίκιον* (in that case the *πωληταὶ* had jurisdiction, [Dem.] *c. Aristog.* i. p. 788, § 58). As regards the *ἀπαγωγὴ τῶν κλεπτῶν*, it could be adopted only in the aggravated cases of stealing by night, or stealing in day-time property of greater amount than 50 drachmas, or from a gymnasium or the ports or public baths anything worth 10 drachmas (Dem. *c.*

Timocr. p. 735, § 113 f.; Theophr. *Char.* ed. Jebb, p. 230).

From a different point of view the law (Dem. c. *Aristocr.* p. 646, § 80) directs arrest against a murderer *περιιόντα ἐν τοῖς ἱεροῖς καὶ κατὰ τὴν ἀγοράν*, viz. because of his exercising the rights and privileges of an *ἐπίτιμος*, although disfranchised (Plat. *Legg.* ix. p. 871 A: cf. the law in Dem. c. *Timocr.* p. 733, § 105; c. *Lept.* p. 504, § 156; and c. *Theocr.* p. 1324, § 10); the same applies to the arrest of exiles who ventured to return home without having procured a revocation of their sentence (Dem. c. *Aristocr.* p. 629, § 28; p. 630, § 31; Dinarch. c. *Demosth.* § 44; cf. Lycurg. c. *Leocr.* § 121). Pollux (viii. 49) states, that *ἔνδειξις* was adopted *περὶ τῶν οὐ παρόντων*, *ἀπαγωγὴ* however, *ὅταν τις ὃν ἔστιν ἐνδείξασθαι μὴ παρόντα, τοῦτον παρόντα ἐπ' αὐτοφώρῳ λαβὼν ἀπαγάγῃ*, *i.e.* an *ἄτιμος* who exercised the rights of an *ἐπίτιμος* could be arrested only whilst actually exercising such rights; when that moment had passed, he could only be proceeded against by *ἔνδειξις*. Meuss (*de ἀπαγ. act. ap. Athen.*) limits *ἀπαγωγὴ* to the classes of criminals specified in the *νόμος κακούργων* with its additions, and to the *ἄτιμοι* (to which class he reckons the *ἀσεβεῖς*); in all other cases *ἀπάγειν* is, in his opinion, not used in its technical sense to denote a distinct process, but means simply "to throw into prison," as when exiles returned without their sentence having been revoked, or when the culprits were not Athenians (the murderers Euxitheus and Agoratus; metoecs who had not paid the *μετοίκιον*, see Plat. *Men.* p. 80 B, and Aeschin. c. *Tim.* § 69, 158, *ξένοι*); but surely in the case of Euxitheus and Agoratus *ἀπαγωγὴ* means a distinct process.

Generally the Eleven presided; in a trial for *κάκωσις ὀρφανῶν*, the archon; for *ἀσέβεια*, the basileus; when exiles returned without permission, the thesmothetae (Dem. c *Aristocr.* p. 630, § 31). The punishment was generally fixed by law; so in a case of *ἀπαγωγὴ κακούργων* the Eleven, if the accused confessed, could put him to death at once; the same penalty was inflicted on those who returned from exile without permission (Dem. c. *Aristocr.* p. 630, § 31; Lyc. c. *Leocr.* § 121) and on those *ἄτιμοι* who held office (Dem. c. *Lept.* p. 504, § 156), and on murderers who visited places from which they were excluded (Dem. c. *Aristocr.* p. 647, § 80). Metoecs who had not paid the *μετοίκιον*, were sold as slaves ([Dem.] c. *Aristog.* i. p. 787, §§ 57, 58; Harp. *s. v. μετοίκιον*; Pollux, viii. 99; [Plut.] *Vitt. X. Oratt.* p. 842 B).

A person who did not feel himself strong enough to effect an *ἀπαγωγὴ* had recourse to *ἐφήγησις*, *i.e.* he applied to the magistrate and conducted him and his officers to the spot where the capture was to be effected (Dem. c. *Androt.* p. 601, § 26; Pollux, viii. 50). Ephegesis was also resorted to instead of apagoge, when the culprit was hiding in a house (for no private person was allowed to enter a house *ἄνευ ψηφίσματος*, Dem. *de Cor.* p. 271, § 132; c. *Androt.* p. 609, § 52 = c. *Timocr.* p. 751, § 164; see, however, Lys. c. *Eratosth.* § 30, and Xen. *Hellen.* ii. 4, 14). The grammarians particularly mention that it was adopted against persons who harboured those who had returned from exile without permission (*Etym. M.* 403, 23, etc.).

Instead of taking the law into his own hands, as in the *ἀπαγωγή*, the prosecutor might simply put the law in motion by applying to the proper authority, who, upon receiving the charge in writing (*ἔνδειξις*), was bound to arrest or hold to bail the person criminated. This proceeding was instituted against such persons as were alleged to have visited places or exercised rights while labouring under a peculiar disqualification (Harp. *s. v.*). The Attic lawgiver did not define all the cases when endeixis could be adopted; he starts from one particular case, *e.g.* against state debtors (Dem. c. *Androt.* p. 603, § 33; c. *Nicostr.* p. 1251, § 14), and adds analogous instances: hence we find such phrases as *καθάπερ ἐάν τις ἄρχῃ ὀφείλων τῷ δημοσίῳ* (Dem. c. *Timocr.* p. 707, § 22). Thus the proceeding by endeixis was allowable against any one who petitioned for relief from a fine or a judgment-debt, because, being a state-debtor, he was not allowed to appear in the popular assembly (Dem. c. *Timocr.* p. 716, § 50; see also c. *Lept.* p. 504, § 156); in the same way Pyrrhus was prosecuted by endeixis for acting as dicast (Dem. c. *Mid.* p. 573, § 182), and Aristogiton and Theocrines for commencing actions (Dem. *Or.* xxv. and lviii.), before they had paid their debts to the state. Cephisius laid an *ἔνδειξις ἀσεβείας* against Andocides for attending the Mysteries and entering the Eleusinian temple, thereby violating the decree of Isotimides by which he was excluded from all temples (Andoc. *de Myst.* § 111). As regards exiles, the law in Dem. c. *Aristocr.* p. 636, § 51, has: a person shall not be liable to any legal proceedings for homicide who informs against exiles (*ἀνδραφόνους* in § 52; cf. [Lys.] c. *Andoc.* § 15), *ἐάν τις κατίῃ ὅποι μὴ ἔξεστιν*; probably endeixis could be adopted also against those who harboured such (Dem. c. *Polycl.* p. 1222, § 50, *ἐν τοῖς αὐτοῖς ἐνέχεσθαι τὸν ὑποδεχόμενον τοὺς φεύγοντας*). The endeixis, with which Socrates was threatened for refusing as *ἐπιστάτης* to take the votes of the people in the assembly, must be looked upon as quite an unusual proceeding (Plat. *Apol. Socr.* 32 B). In some instances, *φάσις* would have been the more usual form of proceeding, as against persons who sold state property (Schol. Aristoph. *Vesp.* 1103); who furnished supplies to the enemy in war-time (Aristoph. *Eq.* 278; Andoc. *de Red.* § 14); who offended against the laws of export and import (*C. I. A.* ii. No. 546). Sometimes *ἐνδεικνύναι* seems to be used in a general sense, as in Isocr. c. *Callim.* § 22, against ambassadors for *παραπρεσβεία*.

Endeixis was generally laid before the Thesmothetae (Dem. c. *Timocr.* p. 707, § 22), and in some cases probably before the Eleven (*Lex. Seguer.* 250, 11; Schol. Aristoph. *Vesp.* 1102); the endeixis against Andocides was, from the nature of the charge, laid before the basileus, who reported it to the prytanes, and they commissioned him to summon Cephisius and Andocides before the senate (Andoc. *de Myst.* § 111; cf. the passage inserted in the oath of the members of the Boulé after the amnesty of 403: *οὐ δέξομαι ἔνδειξιν οὐδὲ ἀπαγωγὴν ἕνεκα τῶν πρότερον γεγενημένων πλὴν τῶν φευγόντων*, Andoc. *de Myst.* § 91).

As to the result of condemnation in a prosecution of this kind, the law ordained that he who held an office whilst a debtor to the state should be put to death (Dem. c. *Lept.* p. 504, § 156), while it was left to the court to impose the penalty, in case such a person spoke in the popular assembly or acted as dicast (Dem. c. *Mid.* p. 573, § 182; [Dem.] c. *Aristog.* i. p. 797, § 92). The murderer who returned home clandestinely was put to death ([Lys.] c. *Andoc.* § 15; see also § 55 and Andoc. *de Myst.* § 146). The accuser, if he did not receive the fifth part of the votes, had to pay a thousand drachmas and became ἄτιμος (Andoc. *de Myst.* § 33; cf. Dem. c. *Aristocr.* p. 647, § 80; [Andoc.] c. *Alcib.* § 18). (*Att. Process*, ed. Lipsius, pp. 85–88, 138, 270–294, 779.) [J. S. M.] [H. H.]

ENDROMIS (ἐνδρομίς). **1.** A kind of top-boot worn by Cretan huntsmen and by Artemis (Nonn. *Dionys.* v. 237: cf. Schol. on Callimach. *Del.* 238, *Dian.* 16; Poll. vii. 93; *Anthol. Planud.* 253); "they would also," says Pollux (iii. 155), "suit athletes, and this is the name they give the boots of runners." From people "running in" them (cf. *οὐδὲ ταχείας ἐνδρομίδας*, Call. *Del.* 238), they got their name, and similarly we find the adjective *ἐνδρομίδες* applied to shields in a Delphic Inscription *ap.* Curtius, 40. Rich says they left the toes exposed, on the basis of the illustrations in *Mus. Borb.* viii. pl. 23 and 25, and he considers this exposure of the toes the chief difference between the *ἐνδρομίς* and the *κόθορνος*. But this does not appear at all certain: for the boot of the Cretan huntsmen described by Galen (xviii. 1, 682, ed. Kuhn), which is doubtless the *ἐνδρομίς*, is constructed, he says, for the rough and uneven nature of that country; and surely exposure of the toes can be no advantage under such circumstances; and further the boot fits, Galen says, all the articulations of the foot (*τῆς κατὰ φύσιν διαρθρώσεως ὅλης*). The *ἐνδρομίδες* reached a considerable way above the ankle, and the top of the leg of the boot turned over and hung down in a flap, as may be seen from the annexed cut of an *ἐνδρομίς* taken from *Museo Borbonico*, x. pl. 20. They were generally open down the front, with eyes on each side leather, for running the fastenings through, like our laced boots. However, there is a vase-painting given by Millin (*Peint. des Vases*, ii. pl. 69) which shows, from the way the man on the right is drawing on his boot, that the apparent lacing was sometimes mere ornament. (See cut in next column.) The Romans translated the *ἐνδρομίς* of Artemis by *cothurnus* (Verg. *Ecl.* vii. 32; *Aen.* i. 337). (For further information, see Spanheim on Call. *Dian.* 16.)

Endromis. (From a Pompeian painting.)

2. In Roman times *endromis* was used for a thick woollen rug (Tert. *Pall.* 4, "endromidis solocem aliqua multicia synthesi extrusit"), sometimes in the palaestra thrown over the body after violent exercise (Juv. vi. 246), but also used by the humbler classes as a protection against cold and rain (Mart. iv. 19, xiv. 126; cf. Juv. iii. 102). We hear that such rugs came from the woollen manufactories of the Sequani in Gaul (Mart. iv. 19, 1) and from Tyre (Juv. vi. 246). [L. C. P.]

Endromis. (From a vase-painting.)

ENECHYRA (ἐνέχυρα) meant properly goods, usually movables, handed over to a creditor as security, *e.g.* bronze ([Dem.] c. *Timoth.* p. 1190, § 21), cups and a golden crown (Dem. c. *Nicostr.* p. 1249, § 9), slaves (c. *Aphob.* i. p. 820, § 24), a horse (Lys. *Obtrect. adv. Fam.* § 10, etc.: it was forbidden to pledge weapons and agricultural implements, Aristoph. *Plut.* 450, and Diod. i. 79; likewise *ἐπὶ σώματι δανείζειν*, Plut. *Sol.* 15); whilst *ὑποθήκη* meant usually real property (also ships, [Dem.] c. *Lacrit.* p. 933, § 32; Dem. c. *Dionys.* p. 1283, § 3: or slaves, c. *Pantaen.* p. 967, § 4) mortgaged to the creditor. If the money advanced was not paid back by the time specified, the security passed into the possession of the creditor (Dem. c. *Aphob.* ii. p. 841, § 18). (Boeckh, *Sthh.*^{3} i. p. 161 ff.; *Att. Process*, ed. Lipsius, pp. 689–696.)

In private suits at Athens, whether tried by a court of law or before an arbitrator (Dem. c. *Callipp.* p. 1240, § 15 f.), whenever judgment was given against a defendant, a certain period was at the same time fixed (*ἡ προθεσμία*: the plaintiff could agree to a prolongation, [Dem.] c. *Euerg. et Mnesib.* p. 1154, § 49 f.), before the expiration of which it was incumbent upon him to comply with the verdict. In default of doing so, he became *ὑπερήμερος* or over the day, as it was called, and the plaintiff was privileged to take steps against him for non-compliance. Several ways were open to the plaintiff. He could seize upon the goods and chattels of the defendant as a security or compensation (*ἐνεχυρασία, ἐνεχυράζειν, ἐνέχυρα λαμβάνειν* or *φέρειν, ἅπτεσθαι τῶν χρημάτων*). This "taking in execution" was probably left to the party who had gained the suit, and it is doubtful whether he had the assistance of a public officer (like the sheriff). On one occasion, indeed, we read of a *ὑπηρέτης παρὰ τῆς ἀρχῆς* (i.e. *ἀποστολεῖς*, [Dem.] c. *Euerg.* p. 1149, § 33, p. 1150, § 37), being taken to assist in, or perhaps to be a witness of, a seizure; but that was in a case where public interests were concerned ([Dem.] c. *Euerg.* p. 1149, § 35; see Hudtwalcker, *Diaet.* p. 132);

from Schol. Aristoph. *Nub.* 37 (cf. Harp. *s. v.* δήμαρχος, etc.), however, it would appear that usually, though not necessarily, the demarch accompanied the plaintiff when levying execution to the defendant's house (cf. Bekker, *Anecd.* 242, 16; see B. W. Leist, *Graeco-Ital. Rechtsgesch.* p. 493). [Dem.] *c. Euerg.* p. 1155, §§ 52 ff., gives an amusing account of what Englishmen would consider a case of "assault and trespass," committed by some plaintiffs in a defendant's house: the amount of damages which had been awarded (ἡ καταδίκη) was lying in the bank; of this Theophemus had been informed, but instead of going there he seized fifty sheep, together with the shepherd and a boy; then, assisted by the defendants (who had no right to touch anything), he broke into the farm, tried to seize the slaves, who managed to escape, entered the dwelling-house, carried off all the furniture in spite of the remonstrance of the plaintiff's wife (λεγούσης ὅτι αὐτῆς εἴη ἐν τῇ προικὶ τετιμημένα), and ill-treated the old nurse to get from her a cup which she was concealing about her person. It seems probable, though we are not aware of its being expressly so stated, that goods thus seized, if not redeemed, were publicly sold or valued (*C. I. A.* ii. No. 814 a), and that the party from whom they were taken could sue his opponent for any surplus which might remain after all legal demands were satisfied. If the damages awarded to the plaintiff were heavy, so that they could not be covered by goods taken in execution, he might proceed to satisfy himself by seizure of the defendant's land. This was what occurred in the case of Demosthenes; having recovered a judgment of ten talents against Aphobus, he made entry upon a farm. Onetor, claiming it as mortgagee, turned him off and thereby subjected himself to an action of ejectment (*Att. Process*, ed. Lipsius, pp. 962–966).

The right of taking property in pledge is stipulated in some inscriptions for breach of contract (*C. I. A.* ii. Nos. 565, 11; 600, 36, ἐνεχυράζειν πρὸ δίκης: *C. I. G.* No. 2448 = Cauer, *Del. Inscr. Gr.*^{2} No. 148 E, l. 20, ἐνεχύραστος: Thalheim, *Rechtsalterth.* p. 116, n. 1). No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenaea, the Thargelia, etc. (Dem. *c. Mid.* p. 517, § 10; *Att. Process*, ed. Lipsius, p. 338, n. 393). [R. W.] [H. H.]

E'NGYE (ἐγγύη), bail or sureties, were in very frequent requisition, both in the private and public affairs of the Athenians. Private agreements, as, for instance, to abide by the decision of arbitrators (Dem. *c. Apatur.* p. 897, § 15), or that the evidence resulting from the application of torture to a slave should be conclusive (Dem. *c. Pantaen.* p. 978, § 40; see also [Dem.] *c. Neaer.* p. 1367, § 65 f.), were corroborated by the parties reciprocally giving each other such sureties; and the same took place generally in all money-lending or mercantile transactions (Dem. *c. Apat.* p. 894, § 7, p. 895, § 10); and was invariably necessary when persons undertook to farm tolls, taxes, or other public property (Dem. *c. Timocr.* p. 713, § 40; p. 745, § 144; Boeckh, *Sthh.*^{3} i. p. 187), or undertook public works (*C. I. A.* i. No. 324; *fr.* a, l. 48; *fr.* c, ii. l. 19). Xenophon (*de Vect.* 4, 20) suggests that sureties should also be required from those who hired the public slaves whose purchase he proposed.

In judicial matters bail or sureties were provided upon two occasions: first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial; and secondly, when security was demanded for the satisfaction of the award of the court. In the first case, bail was very generally required when the accused was other than an Athenian citizen, whether the action were public or private; the alternative was prison (Dem. *c. Zenoth.* p. 890, § 29). Pasion the banker dragged a subject of Satyrus, king of Bosporus, before the polemarch, and compelled him to find sureties for six talents (Isocr. *Trapez.* § 12); although the defendant in Antiph. *de caed. Herod.* § 17 offered the three sureties required by law (ἐγγυητὰς τρεῖς καθιστάναι κατὰ τὸν νόμον), he was imprisoned. Athenians, on the other hand, could not be arrested or forced to find sureties except when proceeded against by way of apagoge, endeixis (yet see Andoc. *de Myst.* § 2, where Andocides, against whom Cephisius had laid an ἔνδειξις ἀσεβείας, insists on the fact of his having remained to stand his trial οὔτ' ἐγγυητὰς καταστήσας οὔθ' ὑπὸ δεσμῶν ἀναγκασθεὶς as a proof of good conscience), ephegesis, and eisangelia, the senators being bound by their oath not to put in prison any Athenian who offers three sureties of the same class (τὸ αὐτὸ τέλος τελοῦντες), unless where a man was charged with προδοσία τῆς πόλεως or κατάλυσις τοῦ δήμου, or where a farmer of taxes or a surety or a collector committed default (Dem. *c. Timocr.* p. 745, § 144; Andoc. *de Myst.* § 93; [Andoc.] *c. Alcib.* § 3; cf. Dem. *c. Timocr.* p. 720, § 63 *lex*, and Schol. Aristoph. *Eccl.* 1089). Instances of bail accepted by the senate we find recorded in Andoc. *de Myst.* §§ 17, 44; Lys. *c. Agor.* §§ 23, 27; cf. Xen. *Hell.* i. 7, 7; from § 35 we learn that sureties were demanded in a Probole, which from the peculiar circumstances of the case must be looked upon as an extraordinary measure. Being at large was considered essential for preparing the defence (Dem. *c. Timocr.* p. 745, § 145); even the murderer was at large and could leave the country after the first day's trial, and it is doubtful whether an exception was made in the case of one who had murdered a parent (Pollux, viii. 117; Schöm. *Antiq.* 292, n. 8), for the existence of such a special law may with good reason be called into question (Diog. L. i. 59; Cic. *pro Rosc. Am.* 23, 70); only a person convicted in a γραφὴ ξενίας, who proceeded against the witnesses by a δίκη ψευδομαρτυριῶν, was compelled to remain in prison until the determination of his suit (Dem. *c. Timocr.* p. 741, § 131). Surety of the other kind was demanded at the beginning of a suit upon two occasions only: first, when a citizen asserted the freedom of a person detained in slavery by another (Lys. *c. Pancl.* § 9 ff.); and secondly, when a litigant, who had suffered judgment to go by default, had recommenced his action within the given time (μὴ οὖσα δίκη); see Pollux, viii. 60. After the judgment, security of this kind was required in all mercantile and some other private causes (Dem. *c. Onet.* i. p. 873; Isae. *Dicaeog.* § 18); Timocrates proposed a law (Dem. *c. Timocr.* p. 712, §§ 39, 40; cf. also Plat. *Apol. Socr.*

p. 38 B) that a debtor of the state, who had been sentenced to imprisonment (*προστιμᾶσθαι*, *i.e.* in addition to making good the debt), should be allowed (either himself or others on his behalf) to put in such bail for the debt as the people should approve, to be security for payment of the sum which he was adjudged to pay within the ninth prytany (cf. Wayte on Dem. *c. Timocr.* p. 704, § 15), this law to apply to all except the farmer of taxes, etc. and their sureties (cf. Boeckh, *Sthh.*^{3} i. p. 409 f.). As to the number of sureties, three were required of the same census in the oath of the senators (cf. Antiph. *de caed. Herod.* § 17); Socrates speaks of four (Plat. *Apol.* p. 38 B); Lysias (*c. Agor.* § 23) has **Νικίας καὶ Νικομένης καὶ ἄλλοι τινές** (cf. Plat. *Legg.* xii. p. 953 E). If the principal in a contract made default, the surety was bound to make it good, or, if he refused to do so, might be attacked by an *ἐγγύης δίκη*, if such action were brought within a twelvemonth after the obligation was undertaken (Dem. *c. Apat.* p. 901, § 27). So in Isae. *Dicaeog.*: Dicaeogenes had stipulated that he was to keep his original one-third of the estate and leave his adversaries the other two-thirds (*ἀναμφισβήτητα*, § 18, i.e. *ἀνέπαφα*, argum.). Leochares and Mnesiptolemus became his sureties for the performance of the engagement. When Dicaeogenes sold these two-thirds to other persons, Leochares was sued by an *ἐγγύης δίκη* to discharge his liability as surety. Such a charge could be brought against the surety without any attempt being first made to recover from the principal in the contract; hence the proverb *ἐγγύα, πάρα δ' ἄτα*, Plat. *Charm.* p. 165 A; cf. Epicharmus in Clem. Alex. *Strom.* vi. p. 626.

As to the punishment of the bail, in case a person accused in a public action failed to appear to take his trial, our information is very scanty. Andoc. (*de Myst.* § 44) says, *τοὺς ἐγγυητὰς τοῖς αὐτοῖς ἐνέχεσθαι ἐν οἷσπερ οὓς ἐγγυήσαντο*: but Caillemer (*Études s. l. antiquit. jurid. d'Ath.*, No. 6) doubts if this held good in case of capital punishment; however, the sureties of Agoratus made preparations to escape from Athens together with him. From a passage in Xenophon (*Hell.* i. 7, 39) it appears that the law allowed the bail to secure the person of the accused by private confinement.

The technical term for becoming surety is *ἐγγυᾶσθαί τινα, ἀναδέχεσθαι ἐγγύην*, or simply *ἀναδέχεσθαι* (hence *ἀνάδοχος* from the 3rd century = *ἐγγυητής, ἔγγυος*); *ἐξεγγυᾶσθαι* (also *διεγγυᾶσθαι*) means to free one by giving bail; and *ἐξεγγυηθῆναι* is said of a person thus set free: *κατεγγυᾶν* means to require bail of an accused person, and *κατεγγυᾶσθαι* to give bail. (*Att. Process*, ed. Lipsius, pp. 703–710.) [J. S. M.] [H. H.]

ENGYE'SIS (*ἐγγύησις*). [MATRIMONIUM.]

E'NNATA (*ἔννατα*). [FUNUS.]

ENOI'KIOU DIKE (*ἐνοικίου δίκη*). According to Hudtwalcker (*Ueber d. öffentl. u. Privat-Schiedsrichter*, p. 141 f.), this was an action brought to recover the rents withheld from the owner during the period of his being kept out of possession. If the property recovered were not a house, but land (in the more confined sense of the word), the action for the rents and profits was called *καρποῦ δίκη*. If the defendant, after a judgment in one of these actions, still refused to give satisfaction, an *οὐσίας δίκη* might be commenced against him, with the result that the defendant obtained a right to indemnify himself out of the whole property of the defendant, and as the ultimate remedy an *ἐξούλης δίκη*, the consequence of which to the defendant, if he failed, was that, besides his liability to the plaintiff, he was condemned to pay to the treasury a sum equal to the damages or to the value of the property recovered in the first action (*προστιμᾶν*, Dem. *c. Mid.* p. 528, § 44). Schömann points out that the *δίκαι ἐνοικίου* and *καρποῦ* could be instituted, not only when an estate had been adjudged, but also when the title to an estate was tried: see especially Lys. *fr.* 72 S. He also explains how a plaintiff came to resort to an *οὐσίας δίκη*, when he might take immediate steps to execution by means of entry and ejectment, by suggesting that the plaintiff was thus given the choice between a milder and a more stringent remedy, or that at one time real property could not in the first instance be taken in execution. In Lipsius' opinion these actions could only be brought to try the title to an estate. Thus the case in [Dem.] *c. Olymp.* p. 1179, § 45, was not an *actio locati* (Hudtwalcker, p. 143, n.), not an action for the rent of the house, but for the house itself, as the parallel action (*δίκη ἀργυρίου*) shows, *ἀργύριον* being the principal, not the interest (Thalheim, *Rechtsalterth.* p. 84, n. 2).[*] Thalheim (*l. c.* p. 114, n.), following Heffter (*Athen. Gerichtsverf.* p. 266, n.), explains the *οὐσίας δίκη* to be an action for ownership, but the only instance which might be quoted for this meaning of *οὐσία* (Harpocr. *s. v. διαμαρτυρία*) is corrupt, and Photius gives a different definition of the action (*ὡς δέον ἀπολαμβάνειν ἐξ ὅλης τῆς οὐσίας ἃ κατεδικάσαντο*). (Meier and Schömann, *Att. Process*, ed. Lipsius, p. 967 ff.) [H. H.]

ENOMO'TIA (*ἐνωμοτία*). [EXERCITUS.]

ENSIS. [GLADIUS.]

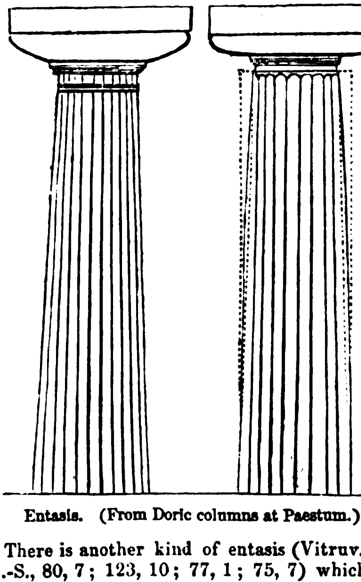
E'NTASIS (*ἔντασις*, *adjectio*, Vitruv. ed. M.-Strübing, 75, 7) in a column is a swelling ("adjectio quae adjicitur in mediis columnis," Vitruv. *l. c.*) from the lower end to a certain point, after which a diminution takes place to the hypotrachelium which forms part of the capital. Overlooked by Stuart and Revett, its discovery was due to Allason (1814), and confirmed by the measurements of Cockerell and Haller (W. Jenkins, *Supplem. vol.* to Stuart). In the Parthenon, the lower diameter of the column being 1·9 metre, the entasis is $\frac{1}{120}$ (or ·016 m.), the diminution $\frac{2}{9}$ (or ·425 m.) of this dimension. In some ancient columns, as at Assos, entasis is very exaggerated; while in others, as at Corinth, it is absent. Vitruvius (iii. 2, iv. 3) would make the width of the fillets of the flutings ("crassitudines striarum") equal to the *adjectio* in the middle of the column; such a deviation is imperceptible. As to the profile, Penrose has shown that in the Parthenon and Propylaea it is an hyperbola,

---

[*] It is, however, very probable that *ἐνοικίου δίκη* was originally intended to recover house-rent, and *καρποῦ δίκη* to recover the rent from land; the latter might also be instituted to recover profits, after the plaintiff had succeeded in an action for ownership (Suid., Phot. *s.v.*), and according to Hesychius (*s.v.*) was also directed against damage to crops (*τῷ βλάψαντι καρπόν*).

with 1 (Attic) foot for principal axis and 30 feet from centre to focus. Several theories have been advanced to account for the entasis of the column. Winckelmann's principle of *Unbezeichnung*, derived from the lines of the human body, has been adopted by some. Adamy (p. 159 *seq.*) holds that it expresses the sense of a living *organic* form due to the plastic tendency of Hellenism, and adduces, in confirmation, the freedom shown in small differences of form and proportion (not to be accounted for by carelessness) visible throughout the Parthenon, as, for example, the want of correspondence of the drops to the triglyphs, the inequality in height of the columns. The most generally accepted view (Gwilt, *Dict. of Arch.* x. 46), that entasis is a *correction* of an optical illusion produced by an extended line, is even accepted by Penrose, who thinks it removes the "attenuated appearance" or concavity of columns with straight sides (*Investig.* p. 39). The exaggeration at Assos, however, seems to indicate that the convexity was intended to be seen, and that apparent straightness was not aimed at. Originally imitated from nature, the effect was afterwards reduced and controlled by the necessities of art.

Examples of the absence and presence of entasis are represented in the woodcut: from the great temple at Paestum (to left), from a later building in the same city (to right).



Entasis. (From Doric columns at Paestum.)

There is another kind of entasis (Vitruv., ed. M.-S., 80, 7; 123, 10; 77, 1; 75, 7) which, as affecting horizontal lines, has been called *horizontal curvature* or *entasis*. Vitruvius says that the capitals were not on a level ("non ad libellam sed ad aequalem modulum conlocatis"), and seems to imply that both stylobate and superior members were curved ("ut quae adjectio in stylobatis facta fuerit, in superioribus membris respondeat"). Further on (*ib.* 123, 10) he refers to the method by which this adjustment was effected ("per scamillos impares"); and, again (*ib.* 77, 1), "stylobatam ita oportet exaequari uti habeat *per medium* adiectionem per scamillos impares." The reason assigned is that a level line looks hollow (*ib.*): "si enim ad libellam dirigetur, alveolatus oculo videbitur." Unfortunately the figure ("in extremo libro forma et demonstratio erit descripta," *ib.* 77, 1) is not extant, and therefore the meaning of Vitruvius remains somewhat obscure. The archaeological evidence of this species of *adjectio* is hardly more explicit. Horizontal entasis was first noticed in the Parthenon, by Pennethorne (1837) and Hoffer (1838), and subsequently investigated with extraordinary care by Penrose (v. *opp. cit.* inf.). He gives (*2nd Letter*) drawings showing the curvature in the pavement (3 ins. in centre of East front) and entablature of the Parthenon, which, he argues, was actual, from the care bestowed on the steps, the accurate levelling instruments employed (*teste* Vitruv.), and the exact levelling of the sub-basement belonging to the older temple. The joints of the steps are normals to the curve, so that the stylobate *forms an arch*. The entablature is not quite so much or so perfectly curved as the steps, so that the angle-columns are higher than the rest—in fact, the line is more polygonal, to fit which the abaci are cut into a nail-headed figure. There is no curve in the ground-line of the Propylaea, but it exists in the upper members. The inclined lines of the pediment of the Theseium are slightly convex. As to the criticism of Penrose's view, it may be stated that Lohde and Thiersch accept it, while Adamy rejects horizontal curvature, arguing from aesthetic requirements and its absence at Aegina and Corinth. Ziller extended the theory to individual stones, and even to the vertical joints! Blümner (*op. cit.* p. 8) holds the question still moot—other buildings must be examined; moreover, departures from horizontality, only detected micrometrically, can scarcely have been intended to correct optical defects. Finally, the whole matter has been excellently summed up by Reber (*op. cit.* pp. 265–270), with the same result.

EO'RA. [Aeora.]

EPANGE'LIA (ἐπαγγελία). If a citizen of Athens had incurred ἀτιμία, the privilege of taking part or speaking in the public assembly was forfeited [Atimia]. But as it sometimes might happen that a person, though not formally declared ἄτιμος, had committed such crimes as would, on accusation, draw upon him this punishment, it was of course desirable that such individuals, like real ἄτιμοι, should be excluded from the exercise of the rights of citizens. Whenever, therefore, such a person ventured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself, and demand of him to establish his right to speak by a trial or examination of his conduct (Aeschin. c. *Tim.* § 32, δοκιμασίαν ἐπαγγειλάτω Ἀθηναίων ὁ βουλόμενος οἷς ἔξεστιν: §§ 64, 81, ἐπαγγελίαν ἐπαγγέλλειν): but it is not probable that the impeached individual was thereby compelled to desist from speaking until his case was decided. The accuser had to lay his charge in writing (Aeschin. *c. Tim.* §§ 119, 154; Dem. *c. Androt.* p. 600, § 23) before the thesmothetae, who brought such cases to trial in the courts of law (Aeschin. *ib.* § 45, etc.); and if the defendant was convicted, a formal declaration of ἀτιμία followed (Dem. *de Fals. Leg.* p. 432, § 284; p. 423, § 257; Aeschin. *ib.* 134, etc.).

Some writers have confounded the ἐπαγγελία with δοκιμασία, and considered the two words as synonyms; but from the above it is evident that the δοκιμασία is the actual trial, while the ἐπαγγελία is only the threat to subject a man to the δοκιμασία (Schömann, *Assemblies*, p. 241, n. 36). Harpocration and Suidas do not sufficiently distinguish between ἐπαγγελία and ἔνδειξις: the latter is an accusation against persons who, though they had been declared ἄτιμοι, or had become ἄτιμοι *ipso jure*, nevertheless ventured to assume the rights of citizens in the public assembly; whereas ἐπαγγελία applied only to those who had not yet been convicted of the crime laid to their charge, which would draw upon them ἀτιμία as punishment: *e.g.* if a man convicted of κάκωσις γονέων, and therefore *ipso jure* ἄτιμος, took part or spoke in the popular assembly, he was proceeded against by way of ἔνδειξις: whilst he who had committed a crime which laid him open to a γραφὴ κακώσεως γονέων, but for which he was not yet convicted, had to be proceeded against by way of ἐπαγγελία δοκιμασίας. Aeschines (*c. Tim.* § 28 ff.) mentions four classes of crimes which justified "denunciation:" κάκωσις γονέων, ἀστρατεία or throwing away the shield, ἑταίρησις, and wasting one's patrimony; Pollux (viii. 45) omits the 2nd class, but adds ἢ ἄλλως κακῶς βεβιωκότες, whilst some of the grammarians confine it to those guilty of ἑταίρησις. (*Att. Process*, ed. Lipsius, pp. 248–253.) Wachsmuth (*Hell. Alterth.* ii. p. 294) seems to be inclined to consider the ῥητορικὴ γραφὴ as connected or identical with the ἐπαγγελία. [L. S.] [H. H.]

EPA'RITI (ἐπάριτοι), the name of a corps of picked troops in Arcadia, which was formed to preserve the independence of the Arcadian towns, when they became united as one state after the defeat of the Spartans at Leuctra. They were 5,000 in number, and were paid by the state. (In Xen. *Hell.* vii. 4, §§ 22, 33, 36; vii. 5, § 3, the name occurs without explanation, but it was probably of Arcadian origin. In Diod. xv. 62, 67 they are οἱ καλούμενοι ἐπίλεκτοι ὄντες πεντακισχίλιοι. Cf. Hesych. *s. v.* ἐπαρόητοι: Thirlwall, v. 90; Grote, ch. 78, vii. 203; Gilbert, *Staatsalterth.* ii. 134, 352.) [W. S.] [W. W.]

EPAU'LIA (ἐπαύλια). [MATRIMONIUM.]

EPEUNACTI or **-AE** (ἐπεύνακτοι, ἐπευνακταί), a class of citizens at Sparta who are said to have been the offspring of slaves and the widows of Spartan citizens. Theopompus tells us (*ap.* Ath. vi. p. 271 c) that in the Messenian war, in consequence of the great losses which the Spartans sustained, they married the widows of those who were slain to helots, and that these helots were admitted to the citizenship under the name of ἐπεύνακτοι. Diodorus (viii. *fr.* 21) also calls the partisans of Phalanthus ἐπευνακταί [PARTHENIAE]. (Thirlwall, i. 353; Grote, ch. 22, ii. 544; Müller, *Dor.* iii. 3, § 5; Gilbert, *Staatsalterth.* i. 18.) [W. S.] [W. W.]

EPHEBE'UM. [GYMNASIUM.]

EPHE'BUS (ἔφηβος), the name applied to Athenian youths between the ages of eighteen and twenty. The word ἥβη, as Blümner points out, is used in two senses, physical ἥβη or puberty at the age of sixteen, and legal or civil ἥβη two years later (Hermann-Blümner, *Privatalterth.* p. 322). The phrase ἐπὶ διετὲς ἡβῆσαι was consequently applied to the age of eighteen, at which the young Athenian attained his majority as regarded private legal relations. (For the margin allowed in cases of bodily immaturity, the nature of the examination (δοκιμασία), and the full discussion of the words ἐπὶ διετὲς ἡβῆσαι, see DOKIMASIA.) He was now entered on the ληξιαρχικὸν γραμματεῖον or register of his deme (Lycurg. *c. Leocr.* § 76): the notion of Pollux (viii. 105) and Harpocration that this was not done till the completion of the twentieth year is sufficiently accounted for by their not knowing the true meaning of ἐπὶ διετὲς ἡβῆσαι, and is now universally rejected. He was likewise admitted, at least on sufferance, to the Ecclesia, where in later times the ἔφηβοι were charged with police duties [ECCLESIA, p. 700 *b*]. The marriage of a youth of eighteen is mentioned as being nothing unusual (Dem. *c. Boeot. de Dot.* p. 1011, § 12); and in the well-known instance of Demosthenes himself, we see the orator at that age claiming his patrimony, bringing an action against his guardians and pleading his own cause: at this time he calls himself an ἔφηβος (*c. Onet.* i. p. 868, § 15).

Military training, likewise, began with the ἐφηβεία, which may be considered as a kind of apprenticeship in arms. The δοκιμασία seems to have taken place at the time of the elections (ἀρχαιρεσίαι, Isae. *Or.* 7 [*Apollod.*], § 28; Dem. *c. Leoch.* p. 1092, § 39), *i.e.* in the early part of the ninth prytany [ECCLESIA, p. 702 *b*]. After this the ephebi were solemnly introduced before the people assembled in the theatre, and received publicly a shield and a lance (Aristot. *ap.* Harpocrat. *s. v.* δοκιμασία); while those whose fathers had fallen in the defence of their country, and who had consequently been brought up at the public expense, received a complete suit of armour (Aeschin. *Ctes.* § 154; Plat. *Menex.* 249 A). Thus equipped, they were led to the temple of Aglauros, and there took an oath by which they pledged themselves never to disgrace their arms or to desert their comrades; to fight to the last in defence of their country, its altars and hearths; to leave their country not in a worse but in a better state than they found it; to obey the magistrates and the laws; to resist all attempts to subvert the institutions of Attica, and finally to respect the religion of their forefathers. This oath is alluded to, Dem. *F. L.* p. 438, § 303 = 346; partly quoted, Lycurg. *l. c.*; more fully, but with slight variations, Stob. *Flor.* xliii. 48, Poll. viii. 105. A curious touch of aggressive patriotism, omitted by these authors, is preserved in Plut. *Alcib.* 15 and Cic. *de Rep.* iii. 9: "that they would regard every country as Attic soil where wheat and barley, vines and olives could grow." Modern criticism, however, doubts the genuineness of this oath so far as it rests only upon the testimony of grammarians (Cobet, *Nov. Lect.* p. 223; Schömann, *Antiq.* i. 359, E. T.; Gilbert, *Staatsalterth.* i. 296, n.).

As commonly stated, the ephebi served as **περίπολοι**, *i.e.* on patrol (Xen. *de Vect.* 4, § 47; Aristoph. *Av.* 1177) and garrison duty (Eupolis, *fr.* 357 M.), in Attica, during the whole two years of their **ἐφηβεία** (Plat. *Legg.* vi. 760 C; Aeschin. *F. L.* § 167; Pollux, viii. 106; Photius, *s. v.* **περίπολος**). Another view is that the first year was spent in military exercises, and only the second in the capacity of **περίπολοι**: a passage of Aristotle (*ap.* Harpocrat. *s. v.* **περίπολος**) refers the appearance in the theatre and the presentation of arms to the second year, after an examination in tactics (Dittenberger, *de Epheb. Att.* p. 12; Gilbert, *l. c.*). The two years of **περιπολία**, however, are supported by a greater weight, both of ancient authorities and modern critics (Schömann, p. 360; Philippi, in *N. Rhein. Mus.* xxxiv. 613). The military training of the ephebi was under the direction of the strategi, one of whom seems to have been specially charged with it (Dinarch. *c. Philocl.* § 15); other instructors were of course employed. The duty of superintending their morals and manners was entrusted to a board of **σωφρονισταί**, whom we find likewise in the gymnasium, and who were themselves controlled and perhaps chosen by the Areiopagus (Phot., *Etym. M.*, s. v.; Bekk. *Anecd.* 301, 7; [Plat.] *Axioch.* 367 A). At the age of twenty they ceased to be ephebi, were under no special restraint, and were liable to foreign service.

The distinguishing costume of the ephebi was the **χλαμύς**, their head-dress the **πέτασος** (**ἐγγραφῆναι καὶ λαβεῖν τὸ χλαμύδιον = εἰς ἐφήβους γίγνεσθαι**, Antidot. *ap.* Ath. vi. 240 b; Pollux, x. 163, 164; Hermann-Blümner, *Privatalterth.* p. 180).

(Besides Schömann, Gilbert, and Hermann-Blümner, the following monographs may be consulted: W. Dittenberger, *de Ephebis Atticis*, Götting. 1863; A. Dumont, *Essai sur l'Ephébie Attique*, Paris, 1876; Portelette, *L'Ephébie en Grèce*, in *L'Instruction Publique* for Dec. 1878; Grasberger, *Erziehung und Unterricht*, iii. 1 ff. Compare also A. Schaefer, *Dem. u. seine Zeit*, iii. pt. 2, 19 ff.) [L. S.] [W. W.]

EPHEGE'SIS. [ENDEIXIS.]

EPHE'MERIS (**ἐφημερίς**). [COMMENTARIUS.]

EPHE'SIA (**ἐφέσια**), a great panegyris of the Ionians at Ephesus, the ancient capital of the Ionians in Asia. It was held every year, and had, like all panegyreis, a twofold character, that of a bond of political union among the Greeks of the Ionian race, and that of a common worship of the Ephesian Artemis. Thucydides compares it (iii. 104) to the ancient panegyris of Delos [DELIA], where a great number of the Ionians assembled with their wives and children. Respecting the particulars of its celebration, we only know that it took place at night and was accompanied with much mirth and feasting, and that mystical sacrifices were offered to the Ephesian goddess. (Thucyd. *l. c.*; Dionys. Hal. *Antiq. Rom.* iv. 25, who closely follows Thucydides; Strabo, xiv. p. 640.) That games and contests formed likewise a chief part of the solemnities is clear from Hesychius (*s. v.*), who calls the Ephesia an **ἀγὼν ἐπιφανής**. The drunken revelry described in the love-tale of Achilles Tatius (books vi.–viii.) is not mentioned by these authors. (Compare Paus. iv. 31, § 6; vii. 2, § 4; Müller, *Dor.* ii. 9, § 8; Boeckh, *Corp. Inscript.* ii. n. 2909.)

From the manner in which Thucydides and Strabo speak of the Ephesia, it seems that it was only a panegyris of a part of the Ionians, perhaps of those who lived in Ephesus itself and its vicinity. Thucydides seems to indicate this by comparing it with the Delian panegyris, which consisted only of the Ionians of the islands near Delos; and Strabo, who calls the great national panegyris of all the Ionians in the Panionium the **κοινὴ πανήγυρις τῶν Ἰώνων** (p. 639), applies to the Ephesia the name **πανήγυρις** (p. 640). It may, however, have existed since the time when Ephesus was the head of the Ionian colonies in Asia. [L. S.] [W. W.]

EPHE'SIAE LI'TTERAE (**Ἐφέσια γράμματα**) were mystic words engraved on the crown, the girdle, and the feet of the Ephesian Artemis (Eustath. *ad* Hom. *Od.* p. 1864). When pronounced, they were regarded as a charm (Menand. *ap.* Suid. *s. v.* **ἀλεξιφάρμακα** = *fr.* 360 M.); written copies, apparently on strips of parchment like the Jewish phylacteries, were worn as amulets (**ἐν σκυταρίοις ῥαπτοῖσι φέρων Ἐφέσια γράμματα καλά**, Anaxilas *ap.* Ath. xii. 548 c = *fr.* 15 M.). They cured diseases, charmed away evil spirits, and gave victory in contests of various kinds (Eustath. *ad* Hom. *Od.* xix. 247; Phot., *Etym. M.*, Hesych., *s. v.*). They are among the **περίεργα** or "curious arts" of Acts xix. 19, where see the commentators, and cf. Conybeare and Howson, *St. Paul*, ii. 13 (original edition). The charms and amulets of Alexander of Tralles, a physician of the sixth century, seem to have been a survival of the **Ἐφέσια γράμματα**, though he was almost certainly a Christian, and employs Hebrew as well as Greek mystical expressions; see specimens in *Dict. Biogr.* i. 127 a. (Becker-Göll, *Charikles*, i. 291; Hermann, *Gottesd. Alterth.* § 42, n.17.) [W. W.]

E'PHESIS (**ἔφεσις**). [APPELLATIO (Greek).]

EPHESTRIS (**ἐφεστρίς**). [AMICTUS.]

E'PHETAE (**ἐφέται**), the name of certain judges at Athens, invested with jurisdiction in cases of homicide. They were fifty-one in number (hence sometimes called simply **οἱ πεντήκοντα καὶ εἷς**, Lex *ap.* Dem. *c. Macart.* p. 1069, § 57), selected from noble families (**ἀριστίνδην αἱρεθέντες**), and more than fifty years of age (Pollux, viii. 125).

Their early history and the origin of their name are involved in much obscurity. The latter is usually derived from **ἐφίημι**, either (1) in the sense "judges of appeal" (**ἔφεσις**), now generally rejected; or (2) as letting slip the avenger of blood upon his victim (**οἱ ἐφιᾶσι τῷ ἀνδροφόνῳ τὸν ἀνδρηλάτην**: O. Müller, *Diss. on Eumenid.* § 65); or (3) as "directors" of the trial (Schömann, *Antiq.* i. 553, E. T.; Lipsius, *Att. Process*, p. 18). This last is the simplest, and decidedly preferable; cf. **ἐφετμή**, "command." Two other conjectures may be noticed: (*a*) from root **ἑδ**, "to sit" (Forchhammer in *Philol.* xxxvi. 465 ff.); the improbability of this is pointed out by Schömann, *l. c.*, and Gilbert, p. 121 n.: (*b*) from **ἔται**, *cives optimo jure*, as if **οἱ ἐπὶ τοῖς ἔταις ὄντες** (Lange, *Die Epheten u. d. Areopag*, p. 13 f.). This is approved by Gilbert; but Lipsius (*l. c.* p. 19 n.) very justly doubts the Attic usage of ἔτης in this sense; and besides, why should judges of homicide be in any special sense ἐπὶ τοῖς ἔταις? The institution of the Ephetae is ascribed to Draco (Poll. *l. c.*); and this view was upheld until quite lately, as by Grote (pt. ii. ch. 10, ii. 286) and Schömann in his latest work (*Antiq.* i. 324, E. T.). According to Schömann, the appointment of a tribunal distinct from the Areiopagus, for the trial of cases of bloodshed, was a concession to the popular discontent; but as the new judges were still chosen from the Eupatrids only, the discontent was not allayed. The best recent criticism (Lange, Philippi, Gilbert) regards the Ephetae, no less than the Areiopagus, as among the primitive institutions of Attica; and Lange suggests that the nine archons and the fifty-one Ephetae may together have formed an aristocratic state-council of sixty members, divisible by four, the number of the old-Ionic tribes; and that this may have been, in fact, the pre-Solonian Areiopagus, charged, among its other duties, with trials for murder. This is highly ingenious, and is the only attempt yet made to explain the number of fifty-one Ephetae. The early existence of a senate or council at Athens, analogous to the Gerusia at Sparta and possessing jurisdiction in cases of homicide, had been already inferred (Müller, *l. c.*; Thirlwall, ii. 41). But there is still a difficulty. It seems to be admitted that Draco enlarged the powers of the Ephetae, and made them, whether pre-existing or not, the sole tribunal in cases of homicide: on the other hand, that legislator is not regarded as the author of sweeping constitutional changes; and if he separated the Ephetae from the Areiopagus, he must have denuded the latter body of more than five-sixths of its members, unless he also re-organised the Areiopagus to an extent which is nowhere attested. We may agree with Plutarch (*Sol.* 19) that both Areiopagus and Ephetae existed before Solon, and probably also before Draco; but the reconstruction of the early constitution of Athens is so purely conjectural, that we must content ourselves with the cautious statement of Grote (*l. c.*), "Whether the Ephetae and the Areiopagites were the same persons, wholly or partially, our information is not sufficient to discover." The number fifty-one may perhaps be accounted for by the preference for odd numbers, in order to prevent an equality of votes, shown in later times by the juries of 201, 501, &c. dicasts [DICASTES, p. 628 *a*]. For a fuller discussion of these questions we refer to Gilbert, *Staatsalterth.* i. 120 ff.; Lange, *Die Epheten und der Areopag vor Solon;* Philippi, *Der Areopag und die Epheten.*

The thirty years between Draco and Solon (about B.C. 624–594) mark the limits of the plenary authority of the Ephetae. To this period must be referred the statement of Pollux (*l. c.*) that they sat in the five courts in which bloodshed was tried, *i.e.* in the Areiopagus and the four courts named below. The φονικοὶ νόμοι, indeed, of Draco were retained by Solon, and still subsisted in the time of Demosthenes (*c. Aristocr.* p. 636, § 51; *c. Everg. et Mnes.* p. 1161, § 71); but the φονικαὶ δίκαι, including trials for crimes allied to murder, such as malicious wounding, arson, and poisoning (Dem. *c. Aristocr.* p. 628, § 24; the "law" in § 22 is compiled from the orator's own words), were restored by Solon's legislation to the Areiopagus, now at all events a distinct body from the Ephetae. Henceforward they sat in four courts only, and these of minor importance,—that by the Palladium (τὸ ἐπὶ Παλλαδίῳ), by the Delphinium (τὸ ἐπὶ Δελφινίῳ), by the Prytaneum (τὸ ἐπὶ Πρυτανείῳ), and the court at Phreatto or Zea (τὸ ἐν Φρεαττοῖ). For the curious regulations of these courts, see DICASTERION, p. 626 *b*; PHONOU DIKÉ, near the beginning. Such ceremonial distinctions can only date from a very early period, and themselves furnish an almost conclusive proof of the high antiquity of the Ephetae. The four courts, it has been seen, dealt with bloodshed mainly from the religious point of view, and not as a crime against society. When, as in the lesser cases of homicide, the punishment was not death or perpetual banishment (ἀειφυγία), the perpetrator had still to undergo a temporary exile (the so-called ἀπενιαυτισμός, not necessarily for one year only; EXSILIUM). Such ceremonial matters as the atonement for blood, the purification of the shedder of it, and his reconciliation (αἰδεῖσθαι) with the relatives of the slain, came under the sacred law of Athens, the knowledge of which was confined to the old nobility, even after they had lost their political power [EUPATRIDAE; EXEGETAE]. The Ephetae accordingly retained the right of decision in actions for manslaughter, in which a temporary flight was followed by expiation, and also in cases of justifiable homicide, whether from the similarity of the latter (as regards the guilt of the perpetrator) to acts of accidental homicide, or as requiring a like expiation. The actual laws of Athens are here closely followed by Plato (*Legg.* ix. 864 E–867 E; cf. 874 E).

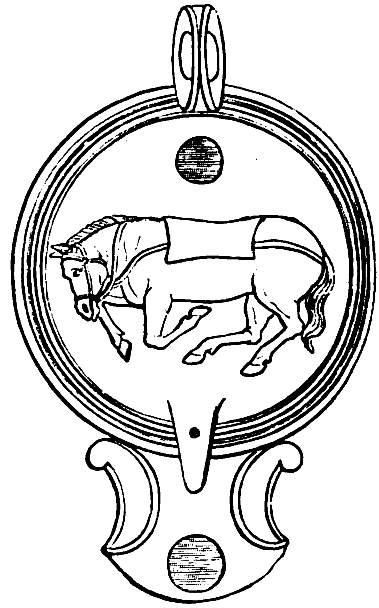
A further case is recorded by Demosthenes (*c. Aristocr.* p. 632, § 38); the banished manslayer, as long as he kept outside the country, was entitled to the same protection as any other Athenian, and any one who slew him out of revenge committed an offence against the sacred law. Here the Ephetae are said διαγιγνώσκειν, to determine the question whether the sacred law had been violated or not; it does not follow that they conducted the actual trial. Again, in the amnesty carried on the motion of Patrocleides, after the government of the Four Hundred had been put down, those are excepted who had been condemned by the Areiopagus, the Ephetae, the Prytaneum, the Delphinium or the king archon (*ap.* Andoc. *de Myst.* § 78). For acts of wilful murder, on the other hand, the punishment was death or ἀειφυγία, and therefore no expiation (κάθαρσις) was connected with the administration of justice in such cases; so that there could be no objection to its being tried by the Areiopagus, or by a heliastic court, though its members did not of necessity belong to the old aristocracy.

A trial for murder in the Palladium is recorded as having come off before an ordinary jury of 700 (*i.e.* 701) dicasts (Isocr. *c. Callim.* §§ 52, 54). We need not infer (with Gilbert, p. 360 n.) that the Ephetae had lost the right to sit in that court; when not wanted by them it was doubtless utilised for other purposes [DICASTERION, p. 627 *a*]. The comparatively unimportant and antiquated duties of the Ephetae in democratic times sufficiently explain the statement in Pollux (*l. c.*) that their court gradually lost all respect, and became at last an object of ridicule. This holds good for the 4th century at least, probably earlier; and the attempt of Forchhammer to explain it away, reading *κατηγελάσθη* for *κατεγελάσθη*, is not deserving of serious consideration (Gilbert, *l. c.*). (Cf. *Att. Process*, ed. Lipsius, pp. 11–13, 17–22.) [R. W.] [W. W.]

EPHI'PPIUM (*ἐφίππιον*, *-ειον στρῶμα*, *strata*, perhaps *ἀστράβη*), a saddle-cloth or pad. The saddle with a "tree" was unknown till the 4th century, although the pack-saddle (figs. in Ginzrot, *Gesch. d. Fahrw.*) seems to be of much earlier occurrence. (Cf. Ed. Diocl. x. 3, "parammas mulares cum flagello;" xi. 4, 5, 6, "sagma burdonis, s. asini, s. camelli.") Among Greeks and Romans alike there were two methods of riding, bare-backed and with a saddle-cloth; or, in the language of Xenophon, *ἐπὶ·ψιλοῦ*, *ἐπὶ τοῦ ἐφιππίου*. But neither the Greek writer nor any other ancient author hints at a true saddle (*de Re Equ.* vii. 5; *Hipparch.* viii. 4: cf. Varro, *R. R.* ii. 7; Caes. *B. G.* iv. 2; Hor. *Epist.* i. 14, 43). The meaning of *ἀστράβη* is difficult to determine: in Demosthenes (*in Mid.* p. 558, § 133; cf. Lys. *pro Inval.* § 11) it probably signifies a *mule* (so Harpocr. *s. v.*, Hellad. in Phot., Suid., &c.), whence *ἀστραβηλάτης*; although the Schol., with a corrupt reading, explains it as *εἶδος καθέδρας*. Becker-Göll (i. p. 200) thinks there was a kind of saddle (*ἀστράβη*) which, like the *φορεῖον*, was used by women and invalids. Another meaning of the word was a piece of wood fastened to the saddle-cloth, grasped in mounting (*τὸ ἐπὶ τῶν ἐφίππων ξύλον, ὃ κρατοῦσιν οἱ καθεζόμενοι*, Suid. *s. v.*), or a step to support the feet (Isidor., "astraba, tabella in qua pedes requiescunt;" and vase from Daphne, in British Museum, representing a person riding sideways on a dromedary with feet resting on a board).

In the absence of stirrups (later *staffae*, *stapides*, &c.), which are not mentioned till the Emperor Maurice (602 A.D.), there were several ways of mounting, as jumping with or without the aid of a lance-shaft, with the assistance of others (*ἀναβολεῖς*), or from steps (*ἀνάβαθρα*). The last were set up, according to Plutarch, along the main roads by C. Gracchus. Or, the horse was taught to kneel at the word of command, as in the illustration below from a lamp found at Herculaneum (cf. Strab. iii. p. 163; Sil. Ital. x. 465).

In the more ancient art the horse is represented ridden bare-backed; so in numerous vase-paintings, bas-reliefs, and equestrian statues. Later, saddle-cloths, often double or with pads beneath, and fastened with one to three girths, appear with increasing frequency (cf. sarcophagus from Clazomenae, in British Museum). The most elaborate trappings of this kind are seen on Scythian antiquities of the 4th century B.C.: Amazon, as usual, astride on a skin fastened by girths, *Compte Rendu de la Comm. Imp. Arch. St. Pétersb.*, 1862, pl. iv. 4; *ib.* 1864, pl. iii. 1, on Nikopolis vase, pad-saddle, double bordered housings; *ib.* 1866, pl. iv. 1, ditto; *ib.* 1868, pl. ii. 4, star-spangled cloth; *ib.* 1874, p. 184, housings with scales square or fish-like; *ib.* 1872, Scythians (oblong cloths), Getae (none), Sarmatians (none), Parthians (chabraques), Panticapaeans (round, with hanging ornaments). The pad and pendent cloths are seen in the annexed coin of Labienus.



Ephippium, saddle. (From an ancient lamp.)

Ephippium, saddle. (Coin of Labienus.)

The use of trappings was originally regarded as effeminate by the Romans (Varro in Cato, *de Lib. educ.*; cf. Caes. *l. c.*), but they were used in pomps. Their development may be seen by a comparison of the examples appearing on the columns of Trajan, Antonine, and Theodosius (*v.* reff. under COLUMNA), the arch of Constantine, &c. On the first and second, and in the equestrian statue of M. Aurelius, are to be seen cloths alone, and pads filling up the hollow of the horse's back with and without cloths. It is only on the Theodosian Column (*e.g.* the figures of Theodosius and Gratian) that the true saddle, with bow behind and before, appears for the first time. The innovation is still more apparent from the fact that the saddle is placed *over* the most elaborate triple housings of the old type, ornamented with metal scales, bells, and borders. (Cf. Scythian examples above; and, on same column, the scale-housings of the Scythian leader. For Persian origin of saddle: *sella*, *s. equestris*, cf. Veget. 4, Veterin. 6, Sidonius 3, Ep. 3.) Moreover, a new word (*sella*) seems to emphasize the new fashion. ("Lx libras sella cum frenis, xxxv vero averta non transeat," Cod. 12, 51, 12; Cod. Theod. 8. 5, 47; "s. equitatoria," Jornandes; "sedile," Nazarius; of doubtful meaning, "scordiscus militaris," ed. Diocl. x. 2; "sc. malacum," *C. I. L.* viii. 4508; cf.

Zonaras' account of Constans dragging his brother's body *out of* his saddle, A.D. 340: "sella deturbavit.")

The above view, although agreeable to older opinion (*e.g.* Pancirolus, *Rer. Memorab.* ii. tit. 16), was opposed by Ginzrot (*Gesch. d. Fahrw.* vol. ii. c. 26). But the evidence he cites from Egyptian and Oriental usage is irrelevant, and his pictures from Herculaneum and criticism of classical authors misleading.

In the *Compte Rendu* (1863, v. 3) is a representation of Dionysos reclining and Ariadne seated *sideways* (as with women generally, with the exception of Amazons) on a sofa with turned legs, placed on the back of a mule. [J. M.]

E'PHORI (Ἔφοροι). Magistrates called *Ephori* or "overseers" were an ancient Lacedaemonian institution; we find them also in some Lacedaemonian colonies, as in Thera, colonised in early times (*C. I. G.* No. 2448 = Cauer, *Del. Inscr. Gr.*^{2} No. 148: A ἐπὶ ἐφόρων τῶν σὺν Φοιβοτέλει, D ἐπὶ ἐφόρων τῶν σὺν Ἱμέρτῳ: see also Boeckh, *Kleine Schriften*, vi. p. 42), and in the Theraean colony Cyrene (Heracl. Pont. *Polit.* 4 = Müller, *Fragm. Hist. Gr.* ii. p. 212), in Heracleia (*C. I. G.* 5774, 5775 = Cauer, 40, 41), and, by inference, in its metropolis Tarentum: see also Polyb. iv. 4, 2; 31, 2, for Messene. This shows that the ephoralty had early become a firmly-established magistracy in Sparta, whence it passed into the colonies, but scarcely proves, as O. Müller (*Dorians*, ii. p. 116 f.) supposes, that it was a peculiarly ancient Dorian institution. The ephoralty at Sparta is classed by Herodotus (i. 65) among the institutions of Lycurgus (cf. Xen. *de Rep. Lac.* 8, 3; [Plat.] *Epist.* 8, p. 354 B; Diog. Laert. i. 68. Plut. *Agesil.* 5, ascribes it to the Λακωνικὸς νομοθέτης, etc.). Aristotle (*Polit.* viii. 9, 1 S. = v. 11, 1 Bk.; cf. Plut. *Lyc.* 7; Plat. *Legg.* iii. p. 692 A; Cic. *de Rep.* ii. 59, *de Legg.* iii. 16) refers the institution of the ephoralty to king Theopompus, who is said to have founded this office with a view to limiting the authority of the king, and to have justified the innovation by remarking that "he handed down the royal power to his descendants more durable, because he had diminished it;" and the Alexandrine chronographi date its institution from 757–6 B.C., probably because the official lists of ephors began with that year (Busolt, *Griech. Gesch.* i. p. 146, n. 6). These two accounts are not necessarily inconsistent with one another; the ephors may have existed before king Theopompus, but it was in his reign that the lists of ephors were first begun, and probably at the same time some change in their position was effected. It is certain that the ephoralty was not founded with a view of limiting the power of the kings: as late as the second Messenian war the management of the state was entirely in the hands of the kings and the γέροντες (Tyrtaeus, fr. 4 Bergk), and it was many generations after the great Messenian war, as king Cleomenes III. states (Plut. *Cleomen.* 10), that the ephor Asteropus raised and expanded the power of the ephors (τὸν πρῶτον ἐπισφοδρύναντα τὴν ἀρχὴν καὶ ἀνατεινάμενον), whilst according to Diog. Laert. i. 68 Chilon brought about this change. Their number, five, appears to have been always the same (Xen. *Ages.* i. 36; Roehl, *Inscr. gr. antiq. praeter Atticas in Att. Rep.* No. 91, ἐβασίλευον Ἆγις, Παυσάνιας. ἔφοροι ἦσαν Θυιωνίδας, Ἀριστογενίδας, Ἀρχίστας, Σολόγας, Φεδίλας. Timaeus, *Lex. Platon.* s. v., speaks of five μείζους and five ἐλάττους ἔφοροι: and the *Etym. M.* = Bekk. *Anecd.* 257, 28, gives nine as their number). Originally, as Cleomenes is represented as saying, the ephors were appointed by the kings (τοὺς βασιλεῖς ... αἱρεῖσθαί τινας ἐκ τῶν φίλων, cf. Plut. *Apophth. Lacon.* p. 217 C); at a later period they were elected from the people (ἐκ τοῦ δήμου παντός, Arist. *Polit.* ii. 6 (9 Bk.), 14, cf. ii. 3 (6 Bk.), 10; vi. 7, 5 = iv. 9 b Bk.) without any qualification of age or property, and without undergoing any scrutiny (οἱ τυχόντες), so that the δῆμος enjoyed through them a participation in the highest magistracy of the state. The mode of election Aristotle calls very childish (*Polit.* ii. 6 (9 Bk.), 16), and Plato (*Legg.* iii. p. 692 A) describes their office as ἐγγὺς τῆς κληρωτῆς δυνάμεως: cf. also the expression in Plut. *Agis*, 8, διαπραξάμενος ὁ Ἆγις ἔφορον γενέσθαι τὸν Λύσανδρον. They entered upon office at the autumnal equinox (Thuc. v. 19, 36), the beginning of the Lacedaemonian year, and the first in rank (προεστὼς τῶν ἐφόρων, Plut. *Lyc.* 30) gave his name to the year, which was called after him in all civil transactions (Thucyd. ii. 2, v. 25; Röhl, 83, 84, 86, 88, 91). They held their meetings in a public building called ἀρχεῖον, in which they also ate together (Pausan. iii. 11, 2; Plut. *Cleom.* 8, *Agis* 16; ἐφορεῖον, Xen. *Ages.* 1, 36): majority of votes decided (Xen. *Hellen.* ii. 3, 34). On the expiration of their term of office they had to render an account, probably to their successors (Arist. *Rhet.* iii. 18, § 6; Plut. *Agis*, 12).

From want of information scholars have had recourse to various hypotheses as to the original functions and power of the ephors. Thus O. Müller (*Dorians*, ii. p. 119 ff.) supposes that their original duty was the superintendence over sales and over the market (cf. Curtius, *Griech. Gesch.*^{5} i. p. 187); A. Schäfer (*de Ephor. Laced.* p. 7) and Oncken (*Staatslehre d. Arist.* i. p. 276) see in them the rulers (*spartanische Landvögte*) of the five towns of the perioeci after the deposition of the local kings; and Grote (ii. p. 351) a board of specially popular origin in contradistinction to the kings and the senate, etc. Cleomenes III. is represented as saying that the ephors were originally nominated by the kings to act for them in a judicial capacity (πρὸς τὸ κρίνειν) during their absence from Sparta in the first Messenian war (Plut. *Cleom.* 10; cf. *Apophth. Lacon. Anaxilas*, p. 217 C), probably one for each of the five divisions of the town of Sparta, viz. the πόλις itself and the four κῶμαι around it (*Philol. Mus.* ii. p. 50 f.). We learn from Herodotus (viii. 57) that the judicial authority of the kings was limited to certain special cases, adoptions, etc.; and Aristotle (*Polit.* iii. 1, 7) distinctly says that the ephors decided in civil suits (τὰς τῶν συμβολαίων δικάζει τῶν ἐφόρων ἄλλος ἄλλας) and generally in actions of great importance (κρισέων μεγάλων εἰσὶ κύριοι, ii. 6 (9 Bk.), 16). However, it is very unlikely that civil jurisdiction was the starting-point of their power. The very name ἔφοροι points to their having had originally a controlling authority; the edict which they issued on entering upon their office, ordering the citizens to clip their moustaches and to obey the laws (Aristotle in Plut. *Cleom.* 9; Plut. *de Ser. Num. Vind.* p. 550 B; yet see Becker-Göll, *Charikles*, iii. p. 296), is evidently of early date, as is also the custom of openly declaring war on the Helots (Aristotle in Plut. *Lyc.* 28). Such censorial power in the simpler conditions of society carried with it the right of inflicting punishment: owing to this, and especially to the discord of the kings, the ephors encroached upon the royal authority and gained ultimately complete control over the kings. Towards the end of the 6th century the kings, as long as they acted in unity, had exclusively the active management and direction of foreign affairs, subject however to trial and punishment by the ephors in case of misbehaviour (Herod. vi. 82). Thus Cleomenes I. transacted business with foreign ambassadors: with Maeandrius of Samos (Herod. iii. 148), with the Scythian ambassadors (Herod. vi. 84), with Aristagoras of Miletus (Herod. v. 49–51, 97); the ephors were only called upon to act as magistrates of police in sending Maeandrius out of the country (Herod. iii. 148). "The kings could levy war against any state they chose, and no Spartan could impede them on pain of committing sacrilege" (Herod. vi. 56; cf. v. 14, 48 f.). The meaning of this passage cannot be that the kings had only the right of determining the general course and character of each campaign, the right of declaring war resting exclusively with the popular assembly, as has been asserted. The assembly undoubtedly possessed this privilege (Herod. v. 63, 91, etc.), but so did the kings. Cleomenes obeyed the summons of Isagoras and went to Athens with a small force (Herod. v. 70); and when driven back, he invaded Attica again with an army which he had drawn together from all parts of the Peloponnese, "without informing anyone of his object" (74); and Demaratus would certainly not have ventured to leave Cleomenes with a portion of the army, thereby forcing Cleomenes to return also, if the popular assembly had declared war (Herod. vi. 64). But as soon as there was a rupture between the kings, the ephors acquired, by a law, as Dum (*Entstehung u. Entwickl. d. spart. Ephorats*, p. 62) supposes, supreme power in the state. To this points Lysander's remark (Plut. *Agis*, 12), that the power of the ephors was only grounded on the dissensions of the kings, the ephors adding their suffrage to whichever they judged to have given the better advice. Hence, the ephors, acting on behalf of the state (ὑπὲρ τῆς πόλεως), received from the kings every month an oath by which the latter bound themselves to rule according to the laws; and in return for this, the state engaged, through the ephors, to maintain unshaken the authority of the kings, if they adhered to their oath (Xen. *de Republ. Lac.* 15, 7). These laws no doubt insisted on agreement between the kings; since, however, discord was the rule (Herod. vi. 52; cf. Xen. *Hellen.* v. 3, 20), the ephors encroached more and more on the royal authority, until finally the kings came entirely under their control. Dum (p. 107) distinguishes roughly three periods in the development of the power of the ephoralty,—the first extending to the death of Cleomenes I. (*c.* 488 B.C.), when the ephors had power only in time of dissensions between the kings; the second to *c.* 362 B.C., during which their power became more firmly established, they taking to themselves by degrees the prerogatives of the kings; and the third to the abolition of their office by Cleomenes III., *c.* 226 B.C., the period of unlimited rule on the part of the ephors, when they had raised themselves to a position above the council and the popular assembly.

What Plutarch (*Agesil.* 4) says of the time of Agesilaus holds good of this second period, viz. that the ephors and the gerontes enjoyed the greatest power (τῶν ἐφόρων ἦν τότε καὶ τῶν γερόντων τὸ μέγιστον ἐν τῇ πολιτείᾳ κράτος). The ephors acquired the right, originally vested in the kings (cf. Herod. vi. 57), of convening and presiding over the council (Herod. v. 40), and thereby gained a share in the privilege of initiating laws (Plut. *Agis*, 11), since the council had to discuss and vote on all proposed laws, before they were submitted to the popular assembly; until, in the third period, they usurped the exclusive right of initiating laws (Plut. *Lys.* 17; *Agis*, 5; King Agis III. had his proposals for a new division of land and the cancelling of debts submitted to the council by the ephor Lysander: Plut. *Agis*, 8). All capital crimes belonged to the jurisdiction of the council (Arist. *Polit.* iii. 1, 7; cf. vi. 7, 5 = iv. 9b Bk., κύριοι θανάτου καὶ φυγῆς); as presidents the ephors acquired a share in this privilege likewise,—for such cases were laid before them in the first instance,—and they had the power of throwing the accused into prison, even if he were a king (*e.g.* Pausanias, Thuc. i. 131; cf. Plut. *Agis*, 19). The authority of the ephors was further increased by their putting themselves in connexion with the popular assembly, convening its meetings (Plut. *Agis*, 9), and laying measures before it (Thuc. i. 85): the presiding ephor put the question to the assembly (Thuc. i. 87). Acting as representatives of the public assembly—being, in fact, the executive of the state—they transacted business with foreign ambassadors (Herod. ix. 8; Xen. *Hellen.* iii. 1, 1; v. 2, 11), or, if they thought fit, forbade them to enter the Lacedaemonian territory (Xen. *Hellen.* ii. 2, 13); they sent ambassadors abroad (Thuc. vi. 88; Xen. *Hellen.* iii. 2, 23), conducted negotiations with foreign states (Thuc. v. 36), and the first ephor subscribed treaties of peace or alliance (Thuc. v. 19, 24). It is true the names of the kings stood first and continued to do so, until their dignity was finally abolished, but it was a prerogative devoid of all significance. The ephors kept their seats when the kings passed (Xen. *de Republ. Lac.* 15, 6); nay, Agesilaus is said to have shown them his respect by rising (Plut. *Agesil.* 4). The kings continued also to discharge priestly functions for the state (Herod. vi. 56, 57; Xen. *Hellen.* iii. 3, 4), and to consult the oracles either in person (Xen. *Hellen.* iii. 3; iv. 7, etc.) or through special messengers [PYTHII]; but the ephors encroached upon this prerogative too. They consulted the dream-oracle of Pasiphae (Plut. *Agis*, 9; *Cleomen.* 7); and once in eight years they chose a clear and moonless night to observe the heavens, and, if a shooting star was observed falling in a certain direction, it was believed to be a sign that the gods were displeased with the kings, who were accordingly suspended from their functions until an oracle allowed of their restoration (Plut. *Agis*, 11). The kings never lost the prerogative of leading the Spartan army (Xen. *de Republ. Lac.* 15, 2; Arist. *Polit.* iii. 9 (14 Bk.), 2); but they were deprived of the power of declaring war, the popular assembly claiming this as their exclusive right, and declaring war even against the advice of the king (Thuc. i. 80): the ephors, as representatives of the popular assembly, called out the troops (Xen. *Hellen.* iii. 2, 23; 5, 6, etc.) and fixed the strength of the army (Xen. *de Republ. Lac.* 11, 2)—unless the popular assembly had settled that point (Xen. *Hellen.* v. 2, 20)—and the time of starting (Xen. *Hellen.* v. 4, 47); and in the third period the ephors seem to have taken the initiative (Plut. *Cleom.* 6; *Agis*, 13, 14. The account in Plut. *Lys.* 28, *παρώξυνε τοὺς ἐφόρους καὶ συνέπεισε πεμφθῆναι φρουράν*, is contradicted by Xen. *Hellen.* iii. 5, 5, 6), and to have decided which king should lead the army (Plut. *Agis*, 4). In the exercise of their general controlling power—and the vague nature of this office facilitated greatly encroachments and usurpations—they had the right to institute scrutinies (*εὔθυναι*) into the conduct of all the magistrates, which, as Aristotle (*Polit.* ii. 6 (9 Bk.), 18) observes, was a very great gift to the ephoralty. Nor were they obliged to wait till a magistrate had completed his term of office, since, even before its termination, they might exercise the privilege of deposition (Xen. *de Republ. Lac.* 8, 4). Even the kings themselves could be brought before their tribunal, though they were not obliged to answer a summons to appear there, till it had been repeated three times (Plut. *Cleomen.* 10). In extreme cases the ephors were also competent to lay an accusation against the kings as well as the other magistrates, and bring them to a capital trial before the council (Xen. *Hellen.* v. 4, 24; Plut. *Lys.* 19), or they could fine them, as *e.g.* king Agesilaus (Plut. *Agesil.* 5); in the third period they condemned men to death without trial, *e.g.* Agis III. (Plut. *Agis*, 19, 20: cf. Plut. *Apophth.* p. 216 D; and as regards the perioeci, Isocr. *Panath.* § 181) and Thectamenes (Plut. *Apophth.* p. 221 F). Their censorial authority seems to have been unlimited. Two ephors accompanied the king when he took the field (*δρῶντες δὲ ὅτι ποιεῖ ἕκαστος πάντας σωφρονίζουσιν*, Xen. *de Republ. Lac.* 13, 5; Herod. ix. 76; Xen. *Hellen.* ii. 4, 36). The ephors sent instructions to the commanders abroad, and were in direct communication with them (Thuc. viii. 11; Xen. *Hellen.* iii. 1, 1, 7; 2, 6, 12; *σκυτάλαι*, Plut. *Lys.* 12; Thuc. i. 131; Schol. Aristoph. *Av.* 1283, etc.). The booty was no longer divided amongst the victors (Herod. ix. 81), the king receiving a fixed share, but sent to Sparta to the ephors (Plut. *Lys.* 16), who had charge of the treasury (Plut. *Agis*, 16). They inspected the youths every tenth day to see whether they led a healthy life (Aelian, *V. H.* xiv. 7; Athen. xii. p. 550 c ff.), and superintended the choric performances (Xen. *Hellen.* vi. 4, 16) and the gymnastic games (Xen. *de Republ. Lac.* 8, 4). It was the ephors who chastised disobedient boys brought before them by the paedonomus (Xen. *de Republ. Lac.* 4, 6); who punished the suitor of Lysander's daughter, who, on finding that Lysander had left no money, had deserted her (Aelian, *V. H.* vi. 4); who cut two of the nine strings from the instruments of musicians (Plut. *Agis*, 10; *Instit. Lacon.* p. 238 C); who brought a charge against king Leonidas for having married a foreign woman (Plut. *Agis*, 11; Plat. *Alcib.* i. p. 121 C), etc.

The ephoralty was abolished by Cleomenes; but although re-established soon afterwards, it did not recover its former authority, the first *πατρονόμος* being henceforth the *ἐπώνυμος* of the state (*C. I. G.* i. p. 605 ff.). According to Koenig (*τὰ τέλη* et *οἱ ἐν τέλει*, p. 12) by *τὰ τέλη* (Thuc. iv. 15, 1), or *τὰ τέλη τῶν Λακεδαιμονίων* (Thuc. i. 58, etc.), or *τὰ οἴκοι τέλη* (Xen. *Hellen.* iii. 2, 6, etc.), the ephors were meant, whilst *οἱ ἐν τέλει* had a wider sense. [R. W.] [H. H.]

EPI'BATAE (*ἐπιβάται*), soldiers or marines appointed to defend the vessels in the Athenian navy, were entirely distinct from the rowers, and also from the land soldiers, such as hoplitae, peltasts, and cavalry. (Xen. *Hell.* i. 2, § 7, v. 1, § 11; Harpocrat. and Hesych. *s. v.*) It appears that the ordinary number of epibatae on board a trireme was ten. Dr. Arnold (*ad* Thuc. iii. 95) remarks that by comparing Thuc. iii. 95 with cc. 91, 94, we find 300 epibatae as the complement of thirty ships, and also by comparing ii. 92 with c. 102, we find 400 as the complement of forty ships; and the same proportion results from a comparison of iv. 76 with c. 101. In Thucydides vi. 42, we find 700 epibatae for a fleet of 100 ships, sixty of which were equipped in the ordinary way and forty had troops on board. In consequence of the number of heavy-armed men *ἐκ τοῦ καταλόγου* on the expedition, the Athenians appear to have reduced the number of regular epibatae from ten to seven. The number of forty epibatae to a ship mentioned by Herodotus (vi. 15), Dr. Arnold justly remarks (*l. c.*), "belongs to the earlier state of Greek naval tactics, when victory depended more on the number and prowess of the soldiers on board than on the manœuvres of the seamen (Thuc. i. 49); and it was in this very point that the Athenians improved the system, by decreasing the number of *ἐπιβάται*, and relying on the more skilful management of their vessels."

The epibatae were usually taken from the Thetes, or fourth class of Athenian citizens (Thuc. vi. 42); but on one occasion, in a season of extraordinary danger, the citizens of the higher classes (*ἐκ καταλόγου*) were compelled to serve as epibatae. (Thuc. viii. 24.)

The term is sometimes also applied by the Roman writers to the marines (Hirt. *de Bell. Alex.* 11, *de Bell. Afric.* 63); but they are more usually called *classiarii milites*. The latter term, however, is also applied to the rowers or sailors as well as the marines ("classiariorum remigio vehi," Tac. *Ann.* xiv. 4).

(Compare Boeckh, *P. E.* p. 279 = *Sthh.*^{3} i. 349; Gilbert, *Staatsalterth.* i. 310.) [W. S.]

EPIBLE'MA (*ἐπίβλημα*). [AMICTUS.]

EPI'BOLE (*ἐπιβολή*), a fine imposed by a magistrate, or other official person or body (the Areiopagus, Aeschin. *F. L.* § 93; the senate of Five Hundred, Pollux, viii. 51; Boeckh, *Seeurk.* xiv. b, p. 64), for a misdemeanour; cf. *Lex. Rhet. Cantabr* p. 669, 14, *ἔξεστι τοῖς ἄρχουσιν* (Aeschin. *c. Ctes.* § 27) *ἀργυρίῳ ζημιοῦν τοὺς ἁμαρτάνοντας*. The various magistrates at Athens had (each in his own department) a summary penal jurisdiction: *i.e.* for certain offences they might inflict a pecuniary mulct or fine, not exceeding a fixed amount; if the offender deserved further punishment, it was their duty to bring him before a judicial tribunal, the magistrate proposing the penalty.

Thus, in case of injury done to orphans and heiresses, etc. ([Dem.] *c. Macart.* p. 1076, § 75), or of misconduct at the great Dionysia (Dem. *c. Mid.* p. 572, § 179), the archon might fine the parties; Archedemus (probably as one of the Hellenotamiae) inflicted a fine on Erasinides (Xen. *Hell.* i. 7, 2); the generals could fine a phylarch for disobedience ([Lys.] *c. Alcib.* ii. § 5); Nicomachus incurred a fine for not discharging his task within the prescribed term (Lys. *c. Nicom.* § 3); the same power belonged to the *τειχοποιοί* (Aeschin. *c. Ctes.* § 27): cf. [Lys.] *pro Polystr.* § 14; Dem. *c. Nicostr.* p. 1251, § 14, etc. There was need of such power being given to magistrates at Athens (Xen. *Mem.* iii. 5, 16). If the person fined would not submit to it, the magistrate had to lay the case before a court (Lys. *pro Milit.* § 11; [Lys.] *c. Andoc.* § 21); that was always required when a demarch imposed a fine (*C. I. A.* ii. No. 573 b). The amount of the fine (*τὸ τέλος*) which the individual magistrate might inflict, we do not know; the senate of Five Hundred was competent to fine to the extent of 500 drachmas. ([Dem.] *c. Euerg.* p. 1151, § 43; Pollux, viii. 51; EISANGELIA): the priests, the *πρόεδροι* of the public assembly, to the amount of 50 drachmas. (*C. I. A.* ii. No. 841, l. 15; *Lex* in Aeschin. *c. Tim.* § 35; cf. Plat. *Legg.* p. 764, B, C.)

The magistrate who imposed the fine (*ἐπιβολὴν ἐπέβαλε*) had not the charge of levying it, but was obliged to make a return thereof to the treasury officers (*ἐπιγράφειν εἰς τοὺς πράκτορας*, or *ἐγγράφειν τοῖς πράκτορσιν*, or *ἐγγράφειν τῷ δημοσίῳ*), whereupon, like all other penalties and amerciaments, it became (as we should say) a debt of record, to be demanded or recovered by the collectors (Aeschin. *c. Tim.* l. c.).

If the fine was not paid within the prescribed time (*ἡ μὲν ἔκτισις ἦν ἐπὶ τῆς ἐνάτης πρυτανείας*, Andoc. *de Myst.* § 73), a return of it was made to the *ταμίαι* of the goddess (Lys. *pro Milit.* § 6). At their own risk the *ταμίαι* could rescind a fine imposed (Lys. *pro Milit.* § 7; Pollux, viii. 97). (Siegfried, *de multa quae ἐπιβολὴ dicitur*; *Att. Process*, ed. Lipsius, pp. 49, 50, 54, 757–8, 1016–19.)

These *epibolae* are to be distinguished from the penalties awarded by a jury or court of law (*τιμήματα*) upon a formal prosecution, and from the fine of a thousand drachmas, which the accuser in a public action incurred when he dropped his accusation or failed to obtain a fifth part of the votes (cf. SYCOPHANTES), or when a citizen refused to obey the summons to appear as a witness in court without being able to take the *ἐξωμοσία*: in all these cases the magistrates had no discretionary power. [C. R. K.] [H. H.]

EPICHEIROTO'NIA. [CHEIROTONIA.]

EPI'CHYSIS (*ἐπίχυσις*), a wine-jug with a narrow neck and small lip and with a handle (Menand. *fr.* 490 M.); usually of metal, *i.e.* silver among the luxurious, bronze where simplicity was studied (cf. Aristoph. *fr.* 12; Phylarch. *ap.* Ath. iv. 142 d, of Cleomenes king of Sparta). Among the Romans it took the place of the earlier *guttus*, a narrow-necked cruet without a handle (Varr. *L. L.* v. 124; Plaut. *Rud.* v. 2, 32); and glass became the favourite material. It was not unlike a modern claret-jug: the illustration to COTYLA, the figure of the Nereid under PERISCELIS, and the coin under URCEUS, will give a sufficient idea of its shape, which moreover could be considerably varied. See also Guhl and Koner, p. 190, fig. 200, Nos. 26–31. (Rich, *s. v.*; Guhl and Koner^3, p. 193 f.) [W. W.]

EPICLE'RUS (*ἐπίκληρος*, *ἐπικληρῖτις* in Solon and Isaeus: cf. Harpocr. *s. v.* *ἐπίδικος*, and Pollux, iii. 33; *ἔγκληρος*, Eur. *Iph. T.* 682; *Hippol.* 1011), the name given to the daughter or daughters (*γνήσιαι*, Isae. *Pyrrh.* § 67, etc.) of an Athenian citizen who had no son (*γνήσιος*: cf. Arist. *Av.* 1649 f.) to inherit his estate, or whose sons had died without leaving male issue (Thalheim, *Rechtsalterth.* p. 8, n. 2). When there was but one daughter, she was called *ἐπίκληρος ἐπὶ παντὶ τῷ οἴκῳ* (Isae. *Aristarch.* § 4); if there were more, they inherited equally, like our co-parceners (Isae. *Philoct.* § 47; *Ciron.* § 40 f.). The *ἐπίκληρος* was never, in our sense, an heiress; she was, strictly speaking, a person who went with the estate ("qui est à côté de l'héritage," Fustel de Coulanges, *La Cité Antique*, p. 82, n. 4). The heir was either the person to whom her father had devised the property on condition of marrying her, or her son or sons. It was deemed an object of importance at Athens to preserve the *οἶκος*. This was effected, where a man had no child, by adoption (*εἰσποίησις*); if he had no sons or grandsons, but a daughter, he might bequeath his property to any person, but the devisee was obliged to marry her (Isae. *Pyrrh.* § 68; [Dem.] *c. Macart.* p. 1067, § 51): on the other hand, if he died intestate, her nearest relative in order of *ἀγχιστεία* might claim her in marriage, and the inheritance was transmitted through her to a grandson, who was, when of full age, adopted into the maternal grandfather's family (Isae. *Pyrrh.* § 73; [Dem.] *c. Macart.* p. 1053, § 12). Such an epiclerus might be claimed in marriage by her father's brothers, or in default of such by their sons or by the sons of her father's sisters (Isae. *Aristarch.* § 5; *Pyrrh.* § 72), or by her father's uncles (Isae. *Pyrrh.* §§ 63, 74; see also Plat. *Legg.* xi. 924 E–925 A). If the daughter was poor (*θῆσσα*), the nearest of kin was bound by law (Isae. *Cleon.* § 39; *Lex* in [Dem.] *c. Macart.* p. 1067, § 54; Aristoph. Byz. in Miller's *Mélanges*, p. 432, *ἀναγκάζει δὲ τοὺς συγγενεῖς ὁ Σόλωνος νόμος πέντε μνᾶς*, etc.) either to marry her himself or to portion her, the law fixing a sliding scale for the different classes of the census: *e.g.* 500 drachmas, if he be of the highest class, etc. It is true, Harpocration (*s. v.* *ἐπίδικος, θῆτες*) mentions five minas as the fixed amount to be given in any case, but he probably does so because that sum happened to occur in the speech from which he quoted, and this passage does not in any way serve to show that the above law is spurious, as Caillemer (*Le Droit de Succession Légitime*, p. 58) supposes. According to Aristophanes Byz., *l. c.*, the sum was at a later period raised from five to ten minas. If there were several in the same degree of consanguinity, each of them had to contribute their share (*πρὸς μέρος*). The passage of the law referring to the case when there were several *θῆσσαι*, is difficult of explanation. K. Fr. Hermann (*Zeitschr. f. Alterthumsw.* 1840, p. 23) reading *μὴ ἐπάναγκες εἶναι πλέον ἢ μίαν ἐκδοῦναι τῷ γ' ἑνί* instead of *τῷ γένει*, and removing as a gloss to τῷ γένει the words ἀλλὰ τὸν ἐγγύτατα ...ἔχειν, suggests that in case of their being several θῆσσαι and only one next of kin, it was incumbent upon him to portion only one of them. Perhaps the state came to the help of the others (Plut. *Arist.* 27). Caillemer, on the other hand, retaining the reading of the MSS., explains the passage to mean that the family (γένος) had to portion not more than one of them, and that the nearest relations had either to marry or to portion the rest. Upon the nearest relative making his claim (λῆξις, ἐπιδικασία) before the archon (ἐπικλήρων καὶ ὀρφανῶν κύριος, Lys. *de Evandr. Prob.* § 12; *Lex* in [Dem.] *c. Macart.* p. 1076, § 75, etc.) in case of metoecs before the polemarch ([Dem.] *c. Steph.* ii. p. 1135, § 22), public notice was given of the claim: it was written on the σανίς, and read out in the following assembly (Pollux, viii. 95), and at a later day, fixed either by law or arrangement, the herald put the question εἴ τις ἀμφισβητεῖν ἢ παρακαταβάλλειν βούλεται ([Dem.] *c. Macart.* p. 1051, § 5, cf. HERES, iv.). If no one appeared to dispute the claim, the archon (or polemarch) adjudged the heiress to him (ἐπεδίκασεν αὐτῷ τὴν ἐπίκληρον); if other claimants appeared (ἀμφισβητεῖν τῆς ἐπικλήρου), the archon instituted an anakrisis, and a court was held for the decision of the right (διαδικασία τῆς ἐπικλήρου), which was determined according to the Athenian law of consanguinity. We are not informed what happened when several in the same degree of consanguinity claimed an heiress; was she adjudged to the eldest or were the claims decided by lot? (Platner, *Proc. u. Klagen*, ii. p. 255; cf. Aristoph. *Vesp.* 586, and Andoc. *de Myst.* § 117 f., ἐπεδικασάμεθα ἄμφω κατὰ τὴν πρὸς ἡμᾶς ὁμολογίαν.) Even when a woman was already married, her husband was obliged to give her up to a man with a better title; and men sometimes put away their former wives in order to marry heiresses (Isae. *Pyrrh.* § 64; Dem. *c. Eubul.* p. 1311, § 41, *c. Onet.* i. p. 866, § 7). In Isae. *Aristarch.* § 19 the speaker's father was deterred from taking proceedings by the fear of losing his wife, whom the next of kin threatened to claim at law, if he claimed the estate. And even after the decision of the court had been given in favour of one claimant, any other person who could show a better title might bring an action against the husband and claim the heiress ([Dem.] *c. Macart.* p. 1054, § 16). The limit of time for making such a claim we do not know; Caillemer suggests that an heiress could not be claimed after having given birth to a son (*l. c.* p. 42 f.). The estate never passed into the possession of the husband of the heiress (Isae. *Ciron.* § 31; *Aristarch.* § 12, etc.); their son when of full age (ἐπὶ διετὲς ἡβήσας) was adopted into his maternal grandfather's family (Isae. *Pyrrh.* § 73; [Dem.] *c. Macart.* p. 1053, § 12), and took possession of the estate. He then became his mother's legal protector (κύριος), and was bound to find her maintenance (σῖτος). If there were more sons, they shared the property equally ([Dem.] *c. Steph.* ii. p. 1135, § 20; Hyperid. *fr.* 194 Bl.). An heiress was under the special protection of the archon [(Dem. *c. Macart.* p. 1076, § 75), and the law gave anyone the right to bring a criminal prosecution called κακώσεως εἰσαγγελία in certain cases, viz. if an adopted son refused to marry her (Isae. *Pyrrh.* § 45 f.) or in case she was poor, if the next of kin did not marry her himself or portion her, or if she was injured or neglected by her husband (Plut. *Sol.* 20), or if she was injured by strangers ejecting her from her estate (Dem. *c. Pantaen.* p. 979, § 45). (*Att. Process*, ed. Lipsius, pp. 357 f., 575–577, 614–617; Maine, *Early Law and Custom*, p. 104 f.)

The Gortyn Code gives detailed directions as to heiresses (πατρῳῶχοι). It defines (viii. 40) "one shall be heiress, if there be no father or brother from the same father," but the father's estate passed into her possession and remained with her to her death, and had not to be given up, as at Athens, to her son or sons when of full age; her father's surviving brothers in order of age, or in default of such their sons, might claim her in marriage, but by handing over to the nearest applicant a portion of her estate, she might set herself free and marry whomsoever of the tribe she pleased. If the heiress and the rightful claimant (ὁ ἐπιβάλλων) were too young to marry, the heiress was to have her father's house and he half the income of all the property (vii. 29–35); but he lost his share, if when both were grown up (ἡβίων, ἡβίουσα) he refused to marry her. A girl was marriageable at twelve years of age (xii. 31 f.). When the claimant reached a further age and was admitted to the public athletic exercises (δρόμοι), then, if he still refused to marry her, the kinsmen of the heiress were to bring an action and the judge was to order him to marry her within two months; and if he did not do so, he forfeited his claims altogether, and the next of kin succeeded to them (vii. 40–50). If, on the other hand, the heiress refused to wait till the claimant was grown up, or refused to marry him at all, she retained the house and its contents and half of the other property, but was bound to marry some one of the tribe, whom she chose; but if no one was willing, then some one else. The other half of her property went to the rightful claimant (vii. 52–viii. 5). If a married woman became heiress (*e.g.* by the death of her brother), it would seem that her marriage was regarded as dissolved; if children had been born, it rested with her either to re-marry, as it were, her husband, or on surrendering to him half the property to marry anyone else of the tribe; in any case where there were children, the relations had no right to claim the heiress. On the other hand, if no children had been born, the nearest relative might claim her in marriage (viii. 20–30), and she could only release herself from this claim by yielding to him half the property. In case her husband died, the nearest of kin could claim her only if there were no children. There is no mention in this code of an institution corresponding to the enforced portioning of a θῆσσα on the part of her next of kin, as Solon's and Charondas' laws enjoined (Diod. Sic. xii. 18).

The information we possess as to heiresses in Sparta (πατροῦχοι, Herod. vi. 57; Pollux, iii. 33; Timaeus, *s. v.*: Cobet reads παμοῦχοι, *Mnemosyn.* xii. p. 157; or ἐπιπαματίδες, Suid.; ἐμπάμονες, αὐτοπάμονες, Hesych.) is very scanty and contradictory. Besides Herodotus' remark, that it was one of the privileges of the kings to decide to whom among the various claimants for marriage with the heiress the best legal title belonged, we have Aristotle's statement (*Polit.* ii. 6 (9 Bk.), 10, 11 S.): "Although the legislator rightly holds up to shame the sale or purchase of an inheritance, he allows anybody who likes to give and bequeath it. Yet both practices lead to the same result, and nearly two-fifths of the whole country are held by women; and this is owing to the number of heiresses and to the large dowries which are customary. It would surely have been better to have given no dowries at all; or if any, but small or moderate ones. [Here Susemihl supposes a *lacuna:* moreover, it would have been necessary for him to define who was entitled and obliged to marry the heiress.] As the law now stands, a man may bestow his heiress on anyone whom he pleases; and if he die intestate, the privilege of giving her away descends to his heir" (Jowett). We read also in Plut. *Agis*, 5, of a certain ephor Epitadeus (in the first decades of the 4th century, Duncker, *Monatsb. d. Berl. Akad.* 1881, p. 150), who on account of some quarrel with his son proposed a law, that any person should have liberty to give away his house and lot during his lifetime, and also to leave it as he chose by will. O. Müller (*Dorians*, ii. p. 206) suggests that Aristotle confounds the state of things as it existed in his time (in consequence of Epitadeus' law) with the ancient legislation of Lycurgus; Göttling (on Arist. *l. c.*), to free Aristotle from this charge, supposes that the subject of *ἐποίησεν οὐ καλὸν* is not Lycurgus (as Susemihl supplies from § 8), but in general "the lawgiver," and that under this term Aristotle comprises the later innovators of the constitution; Schulin (*d. griech. Testam. vergl. m. d. röm.* p. 39 f.) tries to reconcile the two statements by saying, that Lycurgus' legislation gave the father a limited testamentary power, *e.g.* if he had a son, the *κλῆρος* went with him, and that the law of Epitadeus removed this restriction; Grote (ii. p. 411, n. f.) and Susemihl (n. 299) uphold Aristotle's authority and discredit Plutarch's story. Jannet (*Les Institutions Sociales et le Droit Civil à Sparte*, pp. 90 f., 134 f.) thinks that originally the father had to choose a husband for the heiress from amongst the *ἀγχιστεῖς*; if he died without having done so, the heiress was claimed as of right by the next of kin, and it was one of the privileges of the kings to decide which of various claimants had the best title (Herod. viii. 57. Leonidas compelled Agiatis, the widow of Agis, to marry his son Cleomenes, though at that time too young for a wife, because he was unwilling that anyone else should have her, being heiress to her father Gylippus's great estate: Plut. *Cleom.* 1). Thus uncles marry their nieces (Leonidas married Gorgo, his brother's only child, Herod. v. 48; vii. 205, 239), nephews marry their aunts (Archidamus the grandson of Leotychides married Lampito, his grandfather's only child by a second wife, Herod. vi. 71). It was one of the provisions of Epitadeus's law, that a father might bestow his heiress on anyone whom he pleased. O. Müller concludes from Heracl. Pont. 2 that the Spartan lot of land was indivisible in respect of inheritance: this necessarily required that there should be only one heir, probably always the eldest son, and that the daughters should marry without receiving any dowry; in case there was no son, but only daughters, probably the eldest of these became heiress, and was given in marriage to some person who had no lot of his own, such as the descendant of a younger brother, those nearest of kin having the first claim. This assertion that the Spartan lot of land was indivisible in respect of inheritance is based on a wrong reading in Heracl. Pont. *τῆς ἀρχαίας μοίρας ἀνανέμεσθαι οὐδὲν ἔξεστι*: Schneidewin has restored from MSS. the passage to *πωλεῖν δὲ γῆν Λακεδαιμονίοις αἰσχρὸν νενόμισται τῆς δὲ ἀρχαίας μοίρας οὐδὲ ἔξεστιν*, and shown that the passage relates to sale of land and not to division.

Aristotle speaks of *ἐπίκληροι* in Mitylene and Phocis (*Polit.* viii. 3, 3 S. = v. 4 B). In a Theraean inscr. (*C. I. G.* No. 2448, C. 30 f. = Cauer² 148) the *ἐπίκλαροι* are mentioned as having privileges over other married daughters. In Heracl. Pont. *Polit.* 32 Schneidewin accepts the conjecture *ἐπίκληρος* for the MS. reading *ἐπικλέως* or *ἐπὶ κλέος*, without giving any explanation of this peculiar case. In an inscr. of the 5th century (Achaian according to Fick, Bezzenberger's *Beitr.* v. p. 324; Laconian according to Kirchhoff, *Monatsb. d. Berl. Akad.* 1879. p. 51 f., and Roehl, *I. G. A.* No. 68) it is directed that the legitimate daughters could take from the temple, which served as a bank, their father's property after the legitimate sons had died. With the Lycians the daughters alone could inherit (*τάς τε κληρονομίας ταῖς θυγατράσι λείπουσιν οὐ τοῖς υἱοῖς*, Nicol. Damasc. in Müller, *Fragm. Hist. Gr.* iii. 461; cf. *C. I. G.* No. 4244). See also Nymph. Heracl. in Müller, *l. c.*, p. 15; Herod. i. 173. [H. H.]

EPIDAU'RIA. [ELEUSINIA.]

EPIDEIPNIS. [CENA, p. 397 *b*.]

EPIDEMIURGI. [DEMIURGI.]

EPIDICA'SIA (*ἐπιδικασία*). [HERES.]

EPI'DICUS. [EPICLERUS.]

EPI'DOSEIS (*ἐπιδόσεις*) were voluntary contributions, either in money, arms, or ships, which were made by the Athenian citizens in order to meet the extraordinary demands of the state. When the expenses of the state were greater than its revenue, it was usual for the prytanes to summon an assembly of the people, and after explaining the necessities of the state, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose and mentioned what they would give; while those who were unwilling to give anything, remained silent or retired privately from the assembly. (Plut. *Alcib.* 10, *Phoc.* 9; Dem. *c. Mid.* p. 567, § 162; Theophrast. *Char.* 22; Athen. iv. p. 168 f.) The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till the amount was paid. (Isae. *Or.* 5 [*Dicaeog.*], §§ 37, 38.)

These *epidoseis*, or voluntary contributions, were frequently very large. Sometimes the more wealthy citizens voluntarily undertook a trierarchy, or the expenses of equipping a trireme. (Dem. *c. Mid.* p. 566, § 161.) We read that Pasion furnished 1000 shields, together with five triremes, which he equipped at his own expense. (Dem. *c. Steph.* i. p. 1127, § 85.)

Chrysippus presented a talent to the state, when Alexander moved against Thebes (Dem. *c. Phorm.* p. 918, § 38); Aristophanes, the son of Nicophemus, gave 30,000 drachmas for an expedition against Cyprus (Lysias, *pro Aristoph. bonis*, § 43); Charidemus and Diotimus, two commanders, made a free gift of 800 shields (Dem. *de Cor.* p. 265, § 115). The liberality of Demosthenes himself was especially noteworthy: besides other liturgies, he gave on different occasions three triremes, and also at one time eight talents, to which he afterwards added three more for the building of the walls, one talent after the battle of Chaeroneia, and another for the purchase of corn. These acts of munificence were recorded in the decree by which a crown was voted to him. When in Macedonia on the embassy, he also spent large sums in ransoming Athenian prisoners (Dem. *F. L.* p. 394, §§ 169–70=186–7; Aeschin. *F. L.* § 100). (Boeckh, *P. E.* pp. 586–7=*Sthh.*^{3} i. 686; Schömann, *Assemblies*, p. 292.) [W. S.] [W. W.]

EPIGA'MIA (*ἐπιγαμία*). [CIVITAS (Greek).]

EPI'GRAPHEIS (*ἐπιγραφεῖς*). [EISPHORA.]

EPIMELE'TAE (*ἐπιμεληταί*), curators, the name of various officials at Athens, charged with the care of different public objects. Besides those previously known from the orators and grammarians, several new titles of *ἐπιμεληταί* have been recovered from inscriptions; some, however, are only vaguely mentioned. The most important appear to be the following:—

1. *Ἐπιμελητὴς τῆς κοινῆς προσόδου*, more usually called *ταμίας*, or *ὁ ἐπὶ τῇ διοικήσει*, the chief finance minister or "Chancellor of the Exchequer" [TAMIAS].

2. *Ἐπιμεληταὶ τῶν μοριῶν ἐλαιῶν*, persons chosen from among the Areiopagites to take care of the sacred olive-trees (Boeckh, *P. E.* p. 305 = *Sthh.*^{3} i. 374). The name *ἐπιμεληταὶ* does not occur in the speech of Lysias *περὶ τοῦ σηκοῦ*: in § 25 they are called *γνώμονες* or *ἐπιγνώμονες* (cf. L. and S. *s. v.*); in §§ 7, 29 the entire Areiopagus seems charged with this function. Cf. Gilbert, *Staatsalterth.* i. 266.

3. *Ἐπιμεληταὶ τοῦ ἐμπορίου* were the overseers of the EMPORIUM, and a sort of harbour-masters in the Peiraeus. They were ten in number, and were elected yearly by lot (Harpocrat. *s. v.*; Dinarch. *c. Aristog.* § 10). They had jurisdiction in all breaches of the commercial laws, among which the singular Athenian corn-laws are specially mentioned. It was part of their duty to compel the merchants to bring into the city two-thirds of all corn which had come by sea into the Attic emporium (Aristot. *ap.* Harpocr. *s. v.*); and to enforce the rule which forbade shipment of corn to any other port than Athens (Lex *ap.* Dem. *c. Lacr.* p. 941, § 15; *c. Theocr.* p. 1324, §§ 8, 9). In late inscriptions we find an *ἐπιμελητὴς ἐπὶ τὸν λιμένα* (*C. I. A.* ii. 475) and an *ἐπιμελητὴς ἐπὶ τὸν Πειραιᾶ* (*ib.* ii. 476, iii. 458); probably identical with one another, but different from the *ἐπιμεληταὶ τοῦ ἐμπορίου*. (Boeckh, *P. E.* pp. 48, 81 = *Sthh.*^{3} i. 62, 104; Schömann, *Antiq.* i. 416, E. T.; Gilbert, p. 158; Lipsius, *Att. Process*, p. 98.)

4. *Ἐπιμεληταὶ τῶν μυστηρίων* were, in conjunction with the king archon, the managers of the Eleusinian mysteries. They were elected by open vote, and were four in number; two chosen from the general body of citizens, one from the Eumolpidae, and one from the Kerykes. (Harpocrat., Suid., *s. v.*; Pollux, viii. 90; Bekk. *Anecd.* 219, 15; 279, 20; Dem. *c. Mid.* p. 570, § 171.) Decrees in honour of *ἐπιμ. τῶν μυστ.*, *C. I. A.* ii. 315, 376; the *Κήρυκες* at the mysteries, *C. I. A.* ii. 597 (Gilbert, p. 241).

5. *Ἐπιμεληταὶ τῆς πομπῆς τῷ Διονύσῳ* assisted the first archon (eponymus) in the management of the Greater Dionysia. They were chosen by *χειροτονία* (Dem. *c. Mid.* p. 519, § 15), and were ten in number, one apparently from each tribe (Inscr. in *Ἀθήναιον*, vii. 480); twenty-four in a late inscription, dating from the time when the number of tribes had been raised to twelve (*Ephem. Archaeol.* No. 180; Gilbert, p. 240, n. 6; Schömann, *Antiq.* i. 413, E. T.).

6. *Ἐπιμεληταὶ τῶν νεωρίων*, the inspectors of the dockyards, formed a regular *ἀρχή*, and were not an extraordinary commission, as appears from the speech *c. Everg. et Mnes.* (p. 1145, § 22), Aeschines (*c. Ctes.* § 25), and the inscriptions published by Boeckh (*Urkunden über das Seewesen*), in which they are sometimes called *οἱ ἄρχοντες ἐν τοῖς νεωρίοις*, and their office designated an *ἀρχή*. (No. xvi. b. 104, &c.; No. x. c. 125; No. xiv. c. 122, 138.) We learn from the same inscriptions that their office was yearly, and that they were ten in number. It also appears that they were elected by lot from those persons who possessed a knowledge of shipping.

The principal duty of the inspectors of the dockyards was to take care of the ships, and all the rigging, tools, &c. (*σκεύη*) belonging to them. They also had to see that the ships were seaworthy; and for this purpose they employed a surveyor (*δοκιμαστής*), who was well skilled in such matters. (Boeckh, *ibid.* No. ii. 56.) They had at one time the charge of various kinds of military *σκεύη*, which did not necessarily belong to ships, such as engines of war (No. xi. m), which were afterwards, however, entrusted to the generals by a decree of the senate and people. (No. xvi. a. 195.) They had to make out a list of all those persons who owed anything to the docks ([Dem.] *c. Everg. et Mnes.* p. 1145, §§ 20–22), and also to get in what was due. (Id. *c. Androt.* p. 612, § 63.) We also find that they sold the rigging, &c., of the ships and purchased new, under the direction of the senate, but not on their own responsibility. (No. xiv. b. 190, &c., compared with Nos. xiv. xvi. u.) They had *ἡγεμονία δικαστηρίου* in conjunction with the *ἀποστολεῖς* in all matters connected with their own department. ([Dem.] *c. Everg. et Mnes.* p. 1147, § 26.) To assist them in discharging their duties they had a secretary (*γραμματεύς*, No. xvi. b. 165), and a public servant (*δημόσιος ἐν τοῖς νεωρίοις*, No. xvi. b. 135). For a further account of these inspectors, see Boeckh, *Urkunden*, &c., pp. 48–64.

7. *Ἐπιμεληταὶ τῶν φυλῶν*, the inspectors of the *φυλαί* or tribes, managed the financial affairs of the tribes, and were themselves responsible to the tribesmen: there were at least two for each *φυλή* ([Dem.] *c. Theocrin.* p. 1326, § 15; Inscrr. in *Ἀθήναιον*, v. 339–40; in *C. I. A.* ii. 554, 557–9, 564–5; Gilbert, p. 191 f.).

8. *Ἐπιμεληταὶ τῶν συμμοριῶν*, or *οἱ ἐν ταῖς συμμορίαις*, assisted the *ἡγεμόνες* of the trierarchic symmoriae, and were probably twenty in

number ([Dem.] c. *Everg. et Mnes.* p. 1145, §§ 21, 22; 1146, § 24; Gilbert, p. 352, n. 4).

The *ἐπιμεληταὶ τῶν κακούργων* of Antiphon (*de Caed. Her.* § 17) are usually explained as a loose phrase for the Eleven [HENDECA, HOI]; Gilbert thinks, however (p. 404), that special *ἐπιμεληταὶ* presided over the trials of subject allies, to which this case belonged. Four annual *ἐπιμεληταὶ τῶν δικαστηρίων* are mentioned in quite late inscriptions of Roman times (*C. I. A.* iii. 1017, 1018; Gilbert, p. 162); an *ἐπιμ. τῆς πόλεως* (*C. I. A.* iii. 68, 556, 721); an *ἐπιμ. Λυκείου* (*ib.* 89); an *ἐπιμ. πρυτανείου* (*ib.* 90; Gilbert, p. 158; cf. pp. 27, 244). [W. S.] [W. W.]

EPIRRE'DIUM. [REDA.]

EPISCEPSIS. [MARTYRIA.]

EPI'SCOPI (*ἐπίσκοποι*), inspectors or commissioners, who were sometimes sent by the Athenians to interfere in the affairs of subject states. Harpocration compares them to the Lacedaemonian harmosts, and says that they were also called *φύλακες*: but the harmosts were military commandants, and there can be little doubt that this grammarian has confused *ἐπίσκοποι* with *φρούραρχοι*, the commanders of Athenian garrisons. Both a *φρούραρχος* and *ἐπίσκοποι* are mentioned as sent to Erythrae, with full details of their powers of interference (*C. I. A.* i. 9, 10). The episcopi exercised civil authority, and perhaps judged on the spot small causes where Athenians were concerned (as, *e.g.* in places to which cleruchi had been sent), not of sufficient importance to be referred to the Athenian tribunals: the episcopus in Aristophanes carries two ballot-boxes (*κάδω*, vv. 1032, 1053). From the same source we learn that these episcopi received a salary at the cost of the state to which they were sent, and, what is more strange, that they were appointed by lot. Any Athenian, it seems, was good enough for such a post. (Aristoph. *Av.* 1022 ff., with Schol.; Harpocrat., Suid., *s. v.*; Bekk. *Anecd.* 254, 15; Boeckh, *P. E.* pp. 156, 238 = *Sthh.*^{3} i. 190, 304; Schömann, *Antiq. Jur. Publ.* p. 432, 18, and *Antiq.* i. 436, E. T.; Gilbert, *Staatsalterth.* i. 400 f., 427.) [W. S.] [W. W.]

EPI'STATES (*ἐπιστάτης*), which means a person placed over anything, was the name of two distinct classes of functionaries in the Athenian state; namely, of the chairmen of the Prytanes and Proedri (for whom see BOULÉ, pp. 310 *b*, 311 *a*); and also of the directors of public works (*ἐπιστάται τῶν δημοσίων ἔργων*). These directors had different names, as *τειχοποιοί*, the repairers of the walls; *τριηροποιοί*, the builders of the triremes: *ταφροποιοί*, the repairers of the trenches, &c.; all of whom were elected by the tribes, one from each; but the most distinguished of these were the *τειχοποιοί* (Aeschin. c. *Ctes.* §§ 14, 27, 29, 31). Other public buildings, such as temples, belonged to the department of the chief finance minister (*ὁ ἐπὶ τῇ διοικήσει*); and it was in this capacity that Pericles, and subsequently Lycurgus, undertook so many works of architecture. Sometimes two, three, or five *ἐπιστάται* were specially commissioned to superintend a particular work. Thus the inscription relating to the building of the Erechtheium (temple of Athena Polias), dating from B.C. 409–8 and now in the British Museum, mentions two *ἐπιστάται*, an architect named Philocles and a *γραμματεὺς* or secretary (*C. I. G.* 160 = *C. I. A.* i. 322; cf. *Dict. Geogr.* i. 276 a; Boeckh, *P. E.* p. 203 = *Sthh.*^{3} i. 257). Other inscriptions discussed by Boeckh contain portions of the accounts of similar *ἐπιστάται* of public buildings, one of them the Propylaea; in each case a *γραμματεὺς* is mentioned, and there appears to have been always an expert, like Philocles, to advise professionally (*C. I. A.* i. 314, 315 b; 300 to 302 a; 299; Boeckh, *Sthh.*^{3} ii. 300–310).

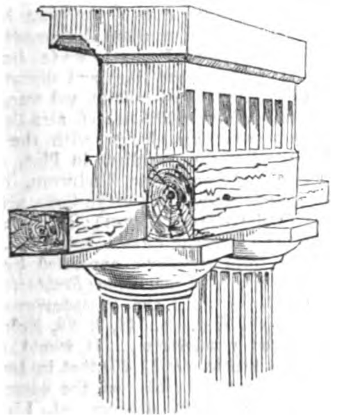
Among the *ἐπιστάται τῶν δημοσίων ἔργων* were reckoned also the road-surveyors (*ὁδοποιοί*, Aeschin. *c. Ctes.* § 25), and those charged with the water supply (*ἐπιστάται τῶν ὑδάτων*, Plut. *Themist.* 31). The directors received the money which was necessary for all these works from the public treasury (*ἐκ τῆς διοικήσεως*, Aeschin. *c. Ctes.* § 31). (Schömann, *Antiq. Jur. Publ.* p. 247, and *Antiq.* pp. 415, 427, E. T.; Gilbert, *Staatsalterth.* i. 249 f.) [W. S.] [W. W.]

EPI'STOLA. [CONSTITUTIO.]

EPI'STOLEUS (*ἐπιστολεύς*) was the officer second in rank in the Spartan fleet, and succeeded to the command if anything happened to the *ναύαρχος*, or admiral (Pollux, i. 96; Xen. *Hell.* i. 1, § 23, iv. 8, § 11, v. 1, §§ 5, 6; once *ἐπιστολιάφορος*, vi. 2, § 25). When the Chians and other allies of Sparta on the Asiatic coast sent to request that Lysander might be reappointed to the command in the Aegaean, he was sent with the title of *ἐπιστολεύς*, because the laws of Sparta did not permit the same person to hold the office of *ναύαρχος* twice (Xen. *Hell.* ii. 1, § 7; Plut. *Lysand.* 7). (Cf. Schömann, *Antiq.* i. 248, 287, E. T.; Gilbert, *Staatsalterth.* i. 64; NAVARCHUS.) [W. S.] [W. W.]

EPISTO'MIUM (*ἐπιστόμιον*). [FISTULA.]

EPISTY'LIUM (*ἐπιστύλιον*) is properly, as the name implies, the architrave, or lower member of an entablature, consisting of one or several beams (in Parthenon, three), resting upon the capitals. Its function is to bind the columns of the peripteron into a whole, and to distribute the weight of the superstructure (Plut. *Pericl.* 13; Paus. *pass.*; Varr. *R. R.* iii. 2; Festus, *s. v.* For epistylium applied where there are only half-columns: Choisy, *Études épigr. sur l'Archit. grecque*; cf. COLUMNA). The component blocks were fastened together and to the capitals by iron clamps; in the Parthenon, further, at the corners (Adamy, *Architekt.* iii. 126; figs. 37, 38). Rules for the height of the epistylium are given by Vitruvius (iii. 3, s. 5, ed. Schn.). In the best examples of the Doric order the front of the architrave was a plain flat surface without carving, but sometimes ornamented with metal shields affixed above each column, as in the Parthenon, where there are also inscriptions between the shields (v. Lucas' model). In the Ionic order, where the epistylium scarcely differs from the frieze, it was cut up into two or usually three slightly overlapping surfaces (*fasciae*), and finished off above with astragal, cymatium, and, in Asia, lysis; in Attica, a simple abacus (Adamy, pp. 253, 275; see woodcuts under COLUMNA, p. 492). In Asia, the underside of the epistylium exhibits a hollow containing a cymatium (Adamy, fig. 117A); in Attica perhaps the same was *painted*. In the Ionic style, the frieze might be wanting, and the *γεῖσον* rest directly on the epistylium (so in the south prostasis of the Pandrosos Cella, and the temple of Athene at Priene, according to Bötticher). In the Corinthian style the arrangement was similar to that in the Ionic, only the triple division was marked by pearl-beading or a cymatium. Originally the architrave was the main beam, laid along the top of the columns to support the roof. When stone was used, a natural limit was set to the length of the blocks, and consequently the distance of the columns, by the impossibility of obtaining pieces of stone or marble beyond a certain size. In the temple of Artemis at Ephesus the blocks were so large that it was a wonder how they could have been raised to their places; Pliny describes the process (*H. N.* xxxvi. § 96). When an intercolumniation was of the kind called "araeostyle," that is, when the columns were more than three diameters apart, the epistylium was necessarily made of wood instead of stone (Vitruv. iii. 2, s. 3, § 5, ed. Schn.); a construction exemplified by the restoration in the annexed woodcut (*Pompeii*, vol. i. p. 143) of the Doric portico, which surrounds three sides of the forum at Pompeii. The holes seen at the back of the frieze received the beams which supported an upper gallery. Epistylium was sometimes used for the whole of the entablature. [J. M.]



Epistylium. (Doric portico at Pompeii.)

EPITA'PHIUM. [FUNUS.]

EPITHALA'MIUM. [MATRIMONIUM.]

EPITI'MIA. [ATIMIA.]

EPITRIERARCHE'MATOS DIKÉ. [TRIERARCHIA.]

EPI'TROPES GRAPHÉ. [EPITROPUS.]

EPI'TROPUS (ἐπίτροπος), which signifies literally a person to whom anything is given in charge (Dem. *c. Aphob.* i. p. 819, § 19; Herod. iii. 63; Xenoph. *Cyrop.* iv. 2, 35, etc.), occurs, however, much more frequently in the sense of a guardian of orphan children. Of such guardians there were at Athens two kinds: (i.) Those appointed in the will of the deceased father (καταλείπειν), usually, but not necessarily, near relatives. The father of Alcibiades and Cleinias appointed Pericles and his brother Ariphron (Plat. *Alcib.* i. p. 104 B; Plut. *Alcib.* 1, προσήκοντες κατὰ γένος); the father of Demosthenes three, two relatives and Therippides (γένει μὲν οὐδὲν προσήκοντι, Dem. *c. Aphob.* i. p. 814, § 4: cf. ii. p. 840, § 15 f.); Plato (Diog. Laert. iii. 43) appointed seven ἐπίτροποι, *i.e.* executors according to Schulin, *d. Griech. Testam.* p. 29 (in Theophrastus' will they are called ἐπιμεληταί, Diog. Laert. v. 56); cf. also Plat. *Legg.* xi. p. 924 A. (ii.) In the absence of directions by will, the next of kin (*tutores legitimi* *), the archon deciding who were best entitled to the office (Pollux, viii. 89, ἐπιτρόπων καταστάσεις) and authorising them to act as guardians (*Argum.* Isae. *Arist.*, κατὰ νόμον ἐπίτροπος τῶν τοῦ ἀδελφοῦ γενόμενος; Lys. *de Aristoph. bon.* § 9, παιδάρια τρία ἠναγκασμένοι τρέφειν—the brother of age, Lys. *c. Theomn.* i. 5; the uncle, Isae. *Cleonym.* § 9, etc.); or, if there were no relatives or none fit to undertake the office, such persons as the archon selected from the whole body of Athenian citizens. The passages quoted above clearly show that Diogenes Laert. (i. 56) is wrong in ascribing to Solon a law μὴ ἐπιτροπεύειν εἰς ὃν ἡ οὐσία ἔρχεται. We have no information as to the number of guardians required; Plato fixes the number at five (*Legg.* xi. p. 924 B). It may be taken for granted that none but citizens, of age and ἐπίτιμοι, could act as guardians; when Pasion appointed a metoec Phormion one of the guardians of his son (Dem. *pro Phorm.* p. 946, § 8), this was probably done because of his ability to carry on the business.

The law ascribed to Solon by Diogenes Laert. has been compared with the law of Charondas (Diod. Sic. xii. 15), which ordained that the nearest kinsmen of the father should manage the property of orphans, but that the orphans should be brought up with the mother's relatives; cf. Gortyn Code, viii. 50 f. At Athens, however, the duties of the guardian comprehended the personal care — the maintenance (τροφή, Lys. *c. Diog.* §§ 9, 20), education (παιδεία, Dem. *c. Aphob.* i. p. 828, § 46; Plat. *Alcib.* i. p. 122 A), and protection of the ward (Aeschin. *c. Tim.* § 16), the assertion of his rights,—and the safe custody and profitable disposition of his inheritance during his minority, besides making a proper provision for the widow if she remained in the house of her late husband. In accordance with these, the guardian was bound to appear in court in all actions in behalf of or against his ward (Dem. *c. Aphob.* i. p. 821, § 26), to perform annually the funeral rites to the deceased parent on behalf of the ward (Isae. *Cleom.* § 10), to give in an account of the taxable capital (τίμημα) when an εἰσφορὰ (the only impost to which orphans were liable) was levied, and make the proportionate payment in the minor's name (Dem. *c. Aphob.* i. p. 815, § 7). With reference to the administration of the ward's estate, a testamentary guardian was bound to execute the trusts of the will (Dem. *c. Steph.* i. p. 1112, § 37; see also Plato's direc-

---

* We find *tutores legitimi* in Sparta (Paus. iii. 5, 7, 'A. δὲ ἐπετρόπευεν αὐτοὺς γένους ἐγγύτατα ὤν), in Syracuse (Plat. *Epist.* vii. p. 345 D, ὄντος μὲν ἀδελφιδοῦ αὐτοῦ, κατὰ νόμους δ' ἐπιτροπεύοντος). For Ephesus two classes of guardians are mentioned, ἢ ὑπὸ πατρὸς καταλελειμμένοι ἢ ὑπὸ δήμου ᾑρημένοι (Dittenberger, *S. I. G.* No. 344, l. 56). A woman as ἐπίτροπος in Erythrae (*ibid.* No. 370, l. 122). The guardian of a Spartan king under age was called πρόδικος (Xen. *Hellen.* iv. 2, 9; Plut. *Lyc.* 3); he was usually the next of kin, *e.g.* Pausanias was guardian of Pleistarchus ἀνεψιὸς ὤν (Thuc. i. 132); cf. Herod. ix. 10.

tions with regard to a certain piece of land, *μὴ ἐξέστω τοῦτο μηδενὶ μήτε ἀποδόσθαι μήτε ἀλλάξασθαι*, etc.). If the deceased had left no will or no specific directions as to its management, two courses were open to the guardian to pursue, viz. either to let it out to farm to the highest bidder (*μισθοῦν τὸν οἶκον*; Ammonius, *s. v.* *οἶκος μὲν λέγεται ἡ πᾶσα οἰκία*), or to keep it in his own hands and employ it as he best could for the benefit of the minor (*διοικεῖν*, Dem. *c. Naus. et Xen.* p. 987, § 8). In the former case he had to make an application to the archon (Isae. *Philoct.* § 36), who thereupon let the inheritance (the whole or in parts) to the highest bidder in presence of a court of justice; the farmer or farmers had to hypothecate real property to guarantee the fulfilment of the contract [HORI], and had to pay an annual percentage (sometimes more than 12 per cent. per annum, Dem. *c. Aphob.* i. p. 831, § 58 f.; cf. *Att. Process*, ed. Lipsius, p. 362 f.). The guardian might himself farm his ward's estates (Schömann on Isae. *Philoct.* § 36). In the latter case he might lay out the money in buying land (Lys. *c. Diogit.* § 23; Dem. *c. Naus. et Xen.* p. 986, § 7), or might lend it out on good security, and here it is said to have been ordained by law that money belonging to a minor should be vested in mortgages, but in no other security (so Boeckh, *Sthh.*^{3} i. p. 170, explains Lys. *fr.* 260 = Suid. *s. v.* *ἔγγειον*: Van den Es, *de Jur. famil.* p. 176, doubts that there was such a law). It seems probable that a constant control of the guardian's proceedings was exercised by the archon (Dem. *c. Onet.* i. p. 865, § 6).

If the guardian violated his duties, by neglecting the maintenance of his ward, by ill-treatment of his person, or by mismanaging his property, he was liable to a criminal prosecution which any Athenian might bring against him during the term of the ward's pupilage, viz. an eisangelia *κακώσεως* (Isae. *Hagn.* § 6), or to a phasis *μισθώσεως οἴκου* (Dem. *c. Naus. et Xen.* p. 991, § 23), if he had not let the estate (but Harpocration, *s. v.* *φάσις*, can scarcely be right in saying that the guardian was liable to phasis *εἰ ἐλάττονος ἢ κατὰ τὴν ἀξίαν μεμίσθωτο*, considering that it was the archon who let the estate; Pollux's (viii. 47) definition is too general, *τοὺς περὶ τοὺς ὀρφανοὺς ἐξαμαρτάνοντας*). Both were *τιμητοί*, and one consequence of conviction was the removal of the guardian (Isae. *Hagn.* § 31). The guardianship expired when the ward attained his eighteenth year; and if the estate had been leased out, the farmer paid in the market-place the capital he had received and the interest (Isae. *Menecl.* § 21; Dem. *c. Aphob.* i. p. 832, § 58); if, however, the inheritance had been managed by the guardian, it was from him that the heir received his property and the account of his disbursements during the minority (Dem. *pro Phorm.* p. 950, § 20). In case the accounts were unsatisfactory, and a compromise could not be effected (Frohberger on Lys. *c. Diogit.* § 2), the heir might institute a *δίκη ἐπιτροπῆς* against his late guardian; this action was *τιμητός* (Dem. *c. Aphob.* i. p. 834, § 67, etc.), and the plaintiff was liable to epobelia upon failing to obtain the votes of a fifth of the dicasts;—or in case the guardian had died, he might bring a *δίκη βλάβης* against the guardian's representatives (Dem. *c. Naus. et Xen.*). The right to sue a guardian for breach of duty was barred by the lapse of five years (Dem. *c. Naus. et Xen.* p. 989, § 17: cf. Plat. *Legg.* xi. p. 928 C). Meier infers from the case of Demosthenes that, where there were several guardians, they incurred a several and not a joint liability. No legal recompense was allowed to guardians for the performance of their duty; but it seems to have been common for testators to give legacies to the guardians, and Meier suggests that the general dishonesty of the Athenian character rendered it necessary thus to bribe guardians to be honest. A particularly flagrant case of violation of trust is that in Lysias, *c. Diogit.* Diogiton, who was both grandfather and uncle of his wards (for he had given his daughter in marriage to his brother), defrauded them of the whole of their inheritance, which, it is contended, amounted to more than fifteen talents.

It is a disputed question whether there was at Athens, besides the archon, a special magistracy to watch over the interests of orphans; Xenophon (*de Vectig.* 2, 7) mentions *ὀρφανοφύλακες* (cf. Photius, *s. v.*), and Demosthenes (*c. Onet.* i. p. 865, § 6) speaks of meetings and discussions held on the subject of his affairs, *καὶ παρὰ τῷ ἄρχοντι καὶ παρὰ τοῖς ἄλλοις*: cf. also the fifteen oldest *νομοφύλακες* charged with the permanent control of the guardians in Plat. *Legg.* xi. p. 924 C. According to Zitelmann, Roby, etc., the *ὀρπανοδικασταί* in Gortyn Code, xii. 21-25, were public officers [COSMI]; according to Comparetti and Merriam (*Amer. Journ. of Arch.* ii. 1), they were guardians appointed by the father before his death. Thalheim (*Rechtsalterth.* p. 140 n.) looks upon the *συνορφανισταί* in Dittenberger (*S. I. G.* No. 344, l. 28, Ephesus, c. 84 B.C.) as a magistracy. It would seem from Heracl. Pontic. (*Polit.* 40) that in Iasus a special magistracy watched over the education of the orphans. (*Att. Process*, ed. Lipsius, p. 549 f.; Schulthess, *Vormundschaft n. Att. Recht.*) [J. S. M.] [H. H.]

EPOBE'LIA (*ἐπωβελία*), as its etymology implies, at the rate of one obolus for a drachma, or one in six ([Dem.] *c. Everg. et Mnes.* p. 1158, § 64, cf. Harp. *s. v.*; Pollux, viii. 39, 48); on the assessment (*τίμημα*: hence called *προστίμημα*. Harp. *s. v.*, and *Lex. Rh. Cant.* *πρόστιμον*) was payable to his successful opponent by the litigant who failed to obtain the votes of one-fifth of the dicasts in a case of *φάσις* (Pollux, viii. 48) and in *δίκαι χρηματικαί* (Bekk. *Anecd.* 255, etc.; Schol. Plat. *Legg.* xi. p. 921 D; cf. Boeckh. *Sthh.*^{3} i. p. 165 f.). As regards *φάσις*, we learn from Theophrastus *π. νόμων*, *fr.* 8 (*Journ. of Phil.* vi. p. 2), that here, as in public accusations in general (but see EISANGELIA and SYCOPHANTES), a fine of 1000 drachmas ([Dem.] *c. Theocr.* p. 1323, § 6) and partial *ἀτιμία* were inflicted: hence Boeckh (*Sthh.*^{3} i. p. 423) suggests that probably the two fines together were inflicted on the unsuccessful plaintiff; whilst Meier is of opinion, that when the *φάσις* was of a purely public nature, the plaintiff had to pay 1000 drachmas; when, however, a private person was injured, and laid a *φάσις* to satisfy his private interests, he became liable to the epobelia. Lipsius (*Att. Process*, p. 301 ff.; cf. Fränkel, Boeckh's *Sthh.*^{3} ii. App. p. 81) thinks that Pollux confounded these two ways of punishment for frivolous prosecutions. The term *δίκαι χρηματικαὶ* is vague; we know from other sources that the plaintiff was liable to this penalty in mercantile causes (Dem. *c. Dionysod.* p. 1284, § 4, etc.; *Att. Process*, p. 637), in charges arising from non-fulfilment of contract (Aeschin. *c. Tim.* § 163) and in causes against guardians (Dem. *c. Aphob.* i. p. 834, § 67). Pollux (viii. 39) says that the litigant who did not get one-fifth of the votes (*ὁ αἱρεθεὶς*), whether plaintiff or defendant, was liable to this penalty, but in the instances given this was the case only when the defeated suitor was the plaintiff: cf. Harp. *s. v. ὅπερ ἐδίδοσαν οἱ διώκοντες τοῖς φεύγουσιν, εἰ μὴ ἕλοιεν*, and Schol. Aeschin. *c. Timarch.* § 163, *οἱ γραψάμενοί τινας καὶ μὴ ἑλόντες.* Of others, however, viz. cross suits (*ἀντιγραφαί*, Pollux, viii. 58), and those in which a preliminary question as to the admissibility of the original cause of action was raised (*παραγραφαί*, Isocr. *c. Callim.* § 3, *ὁπότερος δ' ἂν ἡττηθῇ, τὴν ἐπωβελίαν ὀφείλειν*: cf. 12 and Schol. Aeschin. *c. Tim.* § 163, *ὃ προσώφειλεν ὁ ἁλούς: ἐνομοθέτησε δὲ τοῦτο ὁ Ἀρχῖνος*, etc.; Dem. *c. Steph.* i. p. 1103, § 6), Pollux's statement holds good. As the object of the regulation was to inflict a penalty upon the litigious and recompense their victims, the fine was paid to the successful suitor. (Boeckh, *Sthh.*^{3} i. 430–439.) Fränkel (*l. c.* p. 83) holds that the plaintiff, if defeated, in any case paid the epobelia, whether he gained as many as one-fifth of votes or not (he prefers Libanius, ed. by Förster, in *Hermes*, ix. p. 53, to Pollux), and that the defendant had to pay it only in a *παραγραφὴ* or *ἀντιγραφὴ*, if he got less than one-fifth of the votes. (*Att. Process*, pp. 947–951.) [J. S. M.] [H. H.]

EPO'MIS. [TUNICA.]

EPO'NIA (*ἐπώνια*). [TELOS.]

EPO'NYMUS (*ἐπώνυμος*), having or giving a name, was the surname of the first of the nine archons at Athens, because his name, like that of the consuls at Rome, was used in public records to mark the year [ARCHON]. The expression *ἐπώνυμοι τῶν ἡλικιῶν*, whose number is stated by Suidas, the *Etymologicum Magn.*, and other grammarians, to have been forty, likewise applies to the chief archons of Athens. Every Athenian had to serve in the army from his 20th to his 60th year, *i.e.* during the archonship of forty archons. Now, as an army generally consisted of men from the age of 20 to that of 60, the forty archons under whom they had been enlisted were called *ἐπώνυμοι τῶν ἡλικιῶν*, in order to distinguish them from the *ἐπώνυμοι τῶν φυλῶν.* (Compare Demosth. *ap.* Harpoc. *s. v.* Ἐπώνυμοι, and Bekker, *Anecdota*, p. 245.) At Sparta the first of the five ephors gave his name to the year, and was therefore called *ἔφορος ἐπώνυμος* (Paus. iii. 11, § 2).

It was a very prevalent tendency among the ancients in general to refer the origin of their institutions to some ancient or fabulous hero (*ἀρχηγέτης*, Orac. *ap.* Dem. *c. Macart.* p. 1072, § 66), from whom, in most cases, the institution was also believed to have derived its name, so that the hero became its *ἀρχηγέτης ἐπώνυμος.* Thus each of the Attic demi had its own eponymus or patron. In later times new institutions were often named after ancient heroes, on account of some fabulous or legendary connexion which was thought to exist between them and the new institutions, and the heroes thus became, as it were, their patrons or tutelary deities. A striking instance of this custom are the names of the ten Attic tribes instituted by Cleisthenes, all of which were named after some national hero ([Demosth.] *Epitaph.* p. 1397, &c.; Paus. i. 5). These ten heroes who were at Athens, generally called *the ἐπώνυμοι*, or *ἐπώνυμοι τῶν φυλῶν*, were honoured with statues, which stood in the Kerameikos, near the Tholos (Paus. i. 5, § 1; Suidas and *Etym. M.* s. v. Ἐπώνυμοι). If an Athenian citizen wished to make proposals for a new law, he exhibited them for public inspection in front of one of these statues of the *ἐπώνυμοι*, whence the expressions *ἐκθεῖναι πρόσθεν τῶν ἐπωνύμων*, or *πρὸς τοὺς ἐπωνύμους.* (Aeschin. *c. Ctes.* § 39; Wolf, *Proleg. ad* Demosth. *Leptin.* p. 133. Comp. Schömann, *Antiq.* i. pp. 320, 367, 369, 370, 412, 454, E. T.) [L. S.]

EPOPTAE. [ELEUSINIA, p. 720 *a.*]

EPULO'NES, who were originally three in number (*Tresviri Epulones*), were first created in B.C. 196, to attend to the Epulum Jovis (Valer. Max. ii. 1, § 2; Liv. xxxi. 4; Gell. xii. 8) and the banquets given in honour of the other gods; a duty which had originally belonged to the Pontifices. (Liv. xxxiii. 42; Cic. *de Orat.* iii. 19, 73; *de Harusp. Respons.* 10, 21; Festus, s. v. *Epolonos.*) Their number was afterwards increased to seven (Gell. i. 12; Lucan, i. 602), and they were called *Septemviri Epulones.* We often find *Septemvir Epulonum* as an honorary title in inscriptions (Wilmanns, *Inscript.* 937, 1112, 1115, 1121, 1148, 1150, 1153, 1160, 1186, 1210, 1212). Once *viiviri Epulonum* occurs (*Cal. Praen.* Jan. 17). Julius Caesar added three more (Dio Cass. xliii. 51), but the title of the college seems always to have been Septemviri.

The Epulones formed a collegium, and were one of the four great religious corporations at Rome; the other three were those of the Pontifices, Augures, and Quindecemviri. But, unlike the others, this was from the first open to plebeians. (Dio Cass. liii. 1, lviii. 12; Plin. *Ep.* x. 3; Marquardt, *Röm. Staatsverwaltung*, iii. 333.) [W. S.] [A. S. W.]

E'PULUM JOVIS. [EPULONES.]

EQUI'RRIA or ECURRIA, a festival at which there were horse-races, said to have been instituted by Romulus in honour of Mars, in the Campus Martius. (Festus, *s. v.*; Varro, *L. L.* vi. 13, Müller.) There were two festivals of this name; of which one was celebrated *a. d. iii. Cal. Mart.*, and the other *prid. Id. Mart.* (Ovid, *Fast.* ii. 859, iii. 519.) At a later date this festival was called *Mamuralia*, and a sacrifice was offered to Mamurius (*Calend. Philocali*). If the Campus Martius was overflowed by the Tiber, the races took place on a part of the Mons Caelius, which was called from that circumstance the Martialis Campus. (Paul. Diac. pp. 81, 131, M.) [W. S.] [A. S. W.]

E'QUITES. The traditional account of the origin of the Roman *equites* is as follows:— Livy (i. 13) relates that Romulus raised three centuries of horsemen, called *Ramnenses*, *Titienses*, and *Luceres.* Dionysius (ii. 13) asserts that these were elected, like the senators, by the curies, each of the thirty curies choosing ten men. He also says that the three centuries were divided for military purposes into ten *turmae*, each consisting of 30 men, viz. 10 Ramnes, 10 Tities, and 10 Luceres, the group of ten being commanded by its own *decurio*. This account is hardly consistent with Livy's; nor is Livy's view in harmony with his own remark elsewhere (x. 6), borne out by the language of Cicero (*Rep.* ii. 8, 14) and Varro (*L. L.* v. 55, 81, 89, 91), which speaks of the Ramnes, Titienses, and Luceres as tribes into which the whole nation was divided. Dionysius further says that these horsemen were called *Celeres*, and formed the body-guard of the king: Livy (i. 15) appears to regard the Celeres as a distinct body. Next Livy states that ten *turmae* of Albans were added by Tullus Hostilius (i. 30); the number would thus reach 600. Then he tells us that Tarquinius Priscus did not make any other change in the centuries of horse, but doubled the number, making the three centuries to consist of 1800 men. He is thus inconsistent with himself, and appears to have drawn from some different authority here. Some editors have wished to read, without any authority, MCC for MDCCC, but the alteration is quite unwarranted, the carelessness being characteristic of Livy. Besides, it is clear that there was some authority for this number of 1800, for it is restored to the text of Cicero (*de Rep.* ii. 20, 36) by a certain emendation of C. T. Zumpt's, adopted by all recent critical editors. It is plain that this authority transferred to the time of Tarquinius Priscus the number of the equites, as it existed afterwards under the constitution of Servius Tullius. Mommsen holds it to be certain that there were originally 3 (*H. R.* i. 78), then 6 (i. 88), and after the Servian reform 18 (i. 97) equestrian centuries. Next Livy states (i. 43) that Servius Tullius "equitum ex primoribus civitatis duodecim scripsit centurias," and had also the six other centuries (three having been instituted by Romulus) under the same names by which they had been inaugurated. These last six were undoubtedly patrician originally, but there is no evidence that they remained so (Mommsen, *Röm. Forsch.* i. 135): they were called *sex suffragia*, and consisted of *primi secundique* Ramnes, Titienses, and Luceres. Along with the added twelve, they formed the eighteen centuries of *equites equo publico*, who long continued to be an important body at Rome. It has commonly been supposed that the centuries were of double strength, as is implied in Livy's narrative, but Mommsen has shown that there is no reason to accept this, and that the number of horses supplied by the community was always limited to 1800 (*Hist.* ii. 319).

Both Livy and Cicero agree in stating that each of the equites received a horse from the state (*equus publicus*), or money to purchase one (or rather a pair, one being needed for the attendant; cf. Festus, s. v. *Pararium*), as well as a sum of money for its annual support; and that the expense of its support was defrayed by the orphans and unmarried females; "since," says Niebuhr (*Hist. of Rome*, vol. i. p. 461), "in a military state it could not be esteemed unjust, that the women and the children were to contribute largely for those who fought in behalf of them and of the commonwealth." According to Gaius (iv. 27) the purchase-money for a knight's horse was called *aes equestre*, and its annual forage *aes hordearium*. [AES HORDEARIUM.] The former amounted, according to Livy (i. 43), to 10,000 asses, and the latter to 2,000: but these sums are so large as to be almost incredible, especially when we take into account that 126 years afterwards a sheep was only reckoned at 10, and an ox at 100 asses in the tables of penalties (Gell. xi. 1). The correctness of these numbers has accordingly been questioned by some modern writers, while others have attempted to account for the largeness of the sum. Boeckh (*Metrolog. Untersuch.* c. 29) supposes that the sums of money in the Servian census are not given in asses of a pound weight, but in the reduced asses of the first Punic war, when they were struck of the same weight as the sextans; that is, two ounces, or one-sixth of the original weight. [As.] Zumpt considers that 1000 asses of the old weight were given for the purchase of the horse, and 200 annually for its keep; and that the original sum has been retained in a passage of Varro ("equum publicum mille assariorum," *L. L.* viii. 71). But the view of Mommsen is the most probable, that like the assessments of the Servian constitution generally, the original estimate was made in land, and that it was transformed into a money assessment only at a later time, when the value of landed property had enormously increased (*Hist.* i. 95).

All the equites, of whom we have been speaking, received a horse from the state, and were included in the 18 equestrian centuries of the Servian constitution; but in course of time, we read of another class of equites in Roman history, who did not receive a horse from the state, and were not included in the 18 centuries. This latter class is first mentioned by Livy (v. 7) in his account of the siege of Veii, B.C. 403. He says that during the siege, when the Romans had at one time suffered great disasters, all those citizens who had an equestrian fortune, and no horse allotted to them ("quibus census equester erat, equi publici non erant"), volunteered to serve with their own horses; and he adds, that from this time equites first began to serve with their own horses ("tum primum equis merere equites coeperunt"). The state paid them ("certus numerus aeris est assignatus") as a kind of compensation for serving with their own horses. The foot-soldiers had received pay a few years before (Liv. iv. 59); and two years afterwards, B.C. 401, the pay of the equites was made threefold that of the infantry (Liv. v. 12; see Niebuhr, vol. ii. p. 439). But whether this class of cavalry serving *equis suis* was a permanent institution at Rome, and they formed the ordinary legionary cavalry, or whether on the other hand it was only resorted to under exceptional circumstances, is a question which has long been a matter of keen controversy. Marquardt, who in a special treatise (*Historiae equitum Romanorum libri iv.*, Berlin, 1840) defended the former view, has more recently abandoned it, and holds (*Röm. Staatsv.* ii.^{3} 323) that there is no evidence of a permanent body of cavalry receiving pay from the state, except the 18 centuries. "This does not exclude the possibility that at a later time men of equestrian position served voluntarily with horses of their own, but they never formed a distinct corps." The only strong argument in favour of such a body is that 1800 horse—300 for each legion—would hardly meet all the requirements of military service. But it must not be forgotten that the bulk of the cavalry serving in a Roman army was always furnished by the allies. Our authorities are too incomplete to allow us to come to a very positive conclusion; but at least there is no evidence to upset Marquardt's latest results (cf. Belot, *Histoire des Chevaliers Romains*, 2 vols. Paris, 1866–1873). Mommsen's most recent discussion of the question (*Röm. Staatsr.* iii. 476 ff.) brings him to the opinion that, as a considerable proportion of the *equites equo publico* served as officers, and as at an early date the custom sprang up that an eques retained his horse, after he had ceased to be qualified for active service, vacancies in the ranks of the normal cavalry squadrons were filled up by allowing those who could afford it to serve with their own horses, instead of on foot.

The Roman knights who received horses from the state are frequently called *equites equo publico* (Cic. *Phil.* vi. 5), and sometimes *Flexumines* (or more probably *Flexuntes:* so Detlefsen and Servius on Verg. *Aen.* ix. 606) or *Trossuli* (Plin. *H. N.* xxxiii. § 35; Festus, *s. v.*).

As vacancies occurred in the 18 centuries, the descendants of those who were originally enrolled succeeded to their places, whether plebeians or patricians, provided they had not dissipated their property; for Niebuhr goes too far when he asserts that all vacancies were filled up according to birth, independent of any property qualification. But in course of time, as population and wealth increased, the number of persons who possessed an equestrian fortune also increased greatly; and as the number of equites in the 18 centuries was limited, those persons whose ancestors had not been enrolled in the centuries could not receive horses from the state. It is probable, therefore, that they were allowed the privilege of serving with their own horses amongst the cavalry, instead of the infantry, if they were called upon for active military service.

The inspection of the equites who received horses from the state belonged to the censors, who had the power of depriving an eques of his horse, and reducing him to the condition of an aerarian (Liv. xxiv. 43), and also of giving the vacant horse to the most distinguished of the equites who had previously served at their own expense (Liv. xxxix. 19, 4). For these purposes they made during their censorship a public inspection, in the forum, of all the knights who possessed public horses (*equitatum recognoscunt*, Liv. xxxix. 44; *equitum centurias recognoscunt*, Valer. Max. ii. 9, § 6). The tribes were taken in order, and each knight was summoned by name. Every one, as his name was called, walked past the censors, leading his horse. This ceremony is represented on the reverse of many Roman coins struck by the censors. A specimen is annexed.

If the censors had no fault to find either with the character of the knight or the equipments of his horse, they ordered him to pass on (*traduc equum*, Valer. Max. iv. 1, § 10); but if on the contrary they considered him unworthy of his rank, they struck him out of the list of knights, and deprived him of his horse (Liv. xxxix. 44) or ordered him to sell it (Liv. xxix. 37; Valer. Max. ii. 9, § 6), with the intention no doubt that the person thus degraded should refund to the state the money which had been advanced to him for its purchase (Niebuhr, *Hist. of Rome*, vol. i. p. 433). If he appeared to have neglected his horse, he might be fined (Gell. iv. 12, 2; Festus, p. 108) or deprived of his allowance. At the same review, those equites who had served the regular time, and wished to be discharged, were accustomed to give an account to the censors of the campaigns in which they had served, and were then dismissed with honour or disgrace, as they might have deserved (Plut. *Pomp.* 22).

Inspection of Equites by the Censors. (Roman coin.)

This review of the equites by the censors must not be confounded with the *Equitum Transvectio*, which was a solemn procession of the body every year on the Ides of Quintilis (July). The procession started from the temple of Mars outside the city, and passed through the city over the forum, and by the temple of the Dioscuri. On this occasion the equites were always crowned with olive chaplets, and wore their state dress, the trabea, with all the honourable distinctions which they had gained in battle (Dionys. vi. 13). According to Livy (ix. 46), this annual procession was first established by the censors Q. Fabius and P. Decius, B.C. 304; but, according to Dionysius (*l. c.*), it was instituted after the defeat of the Latins near the lake Regillus, of which an account was brought to Rome by the Dioscuri.

It may be asked, how long did the knight retain his public horse, and a vote in the equestrian century to which he belonged? On this subject we have no positive information; but as those equites, who served with their own horses, were only obliged to serve for ten years (*stipendia*, *στρατείας*) under the age of forty-six (Polyb. vi. 19, § 2), we may presume that the same rule extended to those who served with the public horses, provided they *wished* to give up the service. For it is certain that in the earlier times of the Republic a knight might retain his horse as long as he pleased, even after he had entered the senate, provided he continued able to discharge the duties of a knight. Thus the two censors, M. Livius Salinator and C. Claudius Nero, in B.C. 204, were also equites (Liv. xxix. 37), and L. Scipio Asiaticus, who was deprived of his horse by the censors in B.C. 185 (Liv. xxxix. 44), had himself been censor in B.C. 191. This is also proved by a fragment in the fourth book (c. 2, 2) of Cicero's *De Republica*, in which he says, "equitatus, in quo suffragia sunt etiam senatus;" by which he evidently means, that most of the senators were enabled to vote at the Comitia Centuriata in consequence of their belonging to the equestrian centuries. On the other hand, a man might be deprived of his horse without disgrace, if he were no longer physically fitted for active service (Gell. vi. 32). A passage in Liv. xxvi. 36, 6, proves that it was quite usual for anyone who had held a curule office to have a horse from the state. During the later times of the Republic the knights were obliged to give up their horses on entering the senate, and consequently ceased to belong to the equestrian centuries. This regulation is alluded to in the fragment of Cicero already referred to, in which Scipio says that many persons were anxious that a plebiscitum should be passed, ordaining that the public horses should be restored to the state, which decree was in all probability passed afterwards; "since," as Niebuhr observes (vol. i. p. 433, note 1016), "when Cicero makes Scipio speak of any measure as intended, we are to suppose that it had actually taken place, but, according to the information possessed by Cicero, was later than the date he assigns to Scipio's discourse." This seems to have been the rule after the time of C. Gracchus, as a result of his policy of making the equites a power in the state to counterbalance the senate (cp. Madvig, *Opusc.* i. 74 ff.). That the greater number of the *equites equo publico*, after the exclusion of senators from the equestrian centuries, were young men, is proved by a passage in the work of Q. Cicero, *de Petitione Consulatus* (8, 33), the genuineness of which Prof. Tyrrell has well established (cf. Hor. *A. P.* 341).

The equestrian centuries, of which we have hitherto been treating, were only regarded as a division of the army; they did not form a distinct class or ordo in the constitution. The community, in a political point of view, was only divided into patricians and plebeians; and the equestrian centuries were composed of both. But in the year B.C. 123, a new class, called the Ordo Equester, was formed in the state by the Lex Sempronia, which was introduced by C. Gracchus. By this law all the judices had to be chosen from those citizens who possessed an equestrian fortune (Plut. *C. Gracch.* 5; Appian, *de Bell. Civ.* i. 22; Tac. *Ann.* xii. 60). We know very little respecting the provisions of this law; but it appears from the Lex Servilia repetundarum, passed eighteen years afterwards, that every person who was to be chosen judex was required to be above thirty and under sixty years of age, to have either an *equus publicus* or to be qualified by his fortune to possess one, and *not* to be a senator. Mommsen however holds that the judices were always *equites equo publico*, possibly including also those who had surrendered the horse (iii. 530). The number of judices who were required yearly was chosen from this class by the praetor urbanus (Klenze, *Lex Servilia* [more properly *Acilia*], Berl. 1825: cf. Mommsen in *C. I. L.* i. 54–57; Bruns, *Fontes*,^{5} p. 53 ff.).

As the name of *equites* had been loosely extended from those who possessed the public horses to those who served with their own horses, it now came to be applied to all those persons who were qualified by their fortune to act as judices, in which sense the word is usually used by Cicero. Pliny (*H. N.* xxxiii. § 30) indeed says that those persons who possessed the equestrian fortune, but did not serve as equites, were only *judices*, and that the name of *equites* was always confined to the possessors of the *equi publici*. This may have been the correct use of the term; but custom soon gave the name of *equites* to the judices chosen in accordance with the Lex Sempronia. After the date of Sulla's changes in the constitution, the censorship practically fell into abeyance, and the census was only once taken (B.C. 50) between this time and that of Augustus. Hence there can have been during this period no *equites equo publico* in the proper sense of the term. We are left to conjecture as to the means by which the ranks of the equites were filled. Under Augustus the sons of senators took their places of right among the equites. Although we find this custom in existence, we are not informed that it was introduced by Augustus. Hence it is a probable conjecture of Mommsen's, that Sulla introduced with regard to the equites a self-acting regulation like that which he established for the senate.

The reforms of Sulla entirely deprived the equestrian order of the right of being chosen as judices, but in B.C. 70 the Lex Aurelia ordained that the judices should be chosen from the senators, equites, and tribuni aerarii. It seems pretty clear that the last group must have always possessed the equestrian census, and so have been equites in the wider sense. Hence Velleius (ii. 32) speaks of this law as dividing the *judicia* between the senate and the equites; and Livy (*Ep.* 97) even of its restoring them to the equites [JUDICES]. The statement that Caesar (Suet. *Jul.* 41) limited the judicia to the two classes of senators and equites is probably to be understood as implying that he made the second as well as the third decuria consist of *equites equo publico*; for we find that the three decuries continued to exist after this change. The influence of the order, says Pliny, was still maintained by the publicani (Plin. *H. N.* xxxiii. § 34), or farmers of the public taxes. We find that the publicani were almost always called equites, not because any particular rank was necessary in order to obtain from the state the farming of the taxes, but because the state naturally would not let them to any one who did not possess a considerable fortune. Thus the publicani are frequently spoken of by Cicero as identical with the equestrian order (*ad Att.* ii. 1, § 8). [PUBLICANI.] The consulship of Cicero, and the active part which the knights then took in suppressing the conspiracy of Catiline, tended still further to increase the power and influence of the equestrian order; and "from that time," says Pliny (*l. c.*), "it became a third body (*corpus*) in the state, and to the title of *Senatus Populusque Romanus*, there began to be added *Et Equester Ordo*." (Cf., however, Madvig, *Röm. Verf.* i. 156, note.)

In B.C. 63 a distinction was conferred upon them which tended to separate them still further from the plebs. By the Lex Roscia Othonis, passed in that year, the first fourteen rows of seats in the theatre behind the orchestra were given to the equites (Liv. *Epit.* 99); which, according to Cicero (*pro Mur.* 19, 40) and Velleius Paterculus (ii. 32), was only a restoration of an earlier privilege which may have dated from the time of Gracchus. No importance is to be attached to the statement of Livy (i. 35), who says that special seats were set apart in the Circus Maximus for the senators and equites. They also possessed the right of wearing the Clavus Angustus [CLAVUS]; and subsequently obtained the privilege of wearing a gold ring, which was originally confined to the *equites equo publico*, and probably only granted to these after the time of Gracchus. But the military organisation of the equites was still kept up; and whenever they took part as a body in public functions, as for instance in funerals (cf. Mommsen, ii. 522), they were formed into *turmae* (Tac. *Hist.* ii. 83).

The number of equites increased greatly under the early emperors, and all persons were admitted into the order, provided they possessed the requisite property, without any inquiry into their character or into the free birth of their father and grandfather, which had always been required by the censors under the Republic. Property became now the only qualification; and the order in consequence gradually began to lose all the consideration which it had acquired during the later times of the Republic.

It is commonly asserted that Augustus formed a select class of equites, consisting of those equites who possessed the property of a senator, and the old requirement of free birth up to the grandfather; that he permitted this class to wear the *latus clavus* (Ovid. *Trist.* iv. 10, 35); and also allowed the tribunes of the plebs to be chosen from them, as well as the senators, and gave them the option at the termination of their office to remain in the senate or return to the equestrian order (Suet. *Aug.* 40; Dio Cass. liv. 30). But it is not accurate to speak of these wearers of the *latus clavus* as *equites*, still less to find a technical name for them in the *equites illustres* of Tacitus (Tac. *Ann.* xi. 4, with the note of Lipsius; cf. Mommsen, iii. 562–3). Like the other epithets, *splendidi*, *primores*, *insignes*, and the like, this is merely a descriptive term; and in fact none of the *eq. illustres* of Tac. *Ann.* xi. 4 can have worn the *latus clavus*. A formal division of the equites into classes was made first by Marcus Aurelius and Verus (cf. Madvig, *Röm. Verf.* i. 171).

In the ninth year of the reign of Tiberius an attempt was made to improve the order by requiring the old qualifications of free birth up to the grandfather, and by strictly forbidding anyone to wear the gold ring unless he possessed this qualification. This regulation, however, was of little avail, as the emperors frequently admitted freedmen into the equestrian order (Plin. *H. N.* xxxiii. § 34). When private persons were no longer appointed judices, the necessity for a distinct class in the community, like the equestrian order, ceased entirely; and the gold ring came at length to be worn by all free citizens. Even slaves, after their manumission, were allowed to wear it by special permission from the emperor, which appears to have been usually granted provided the patronus consented (Dig. 40, 10, 3). [ANNULUS.]

Having thus traced the history of the equestrian order to its final extinction as a distinct class in the community, we must now return to the *equites equo publico*, who formed the eighteen equestrian centuries. This class still existed during the latter years of the Republic, but after the reforms of Marius it had entirely ceased to serve as horse-soldiers in the army. The cavalry of the Roman legions no longer consisted, as in the time of Polybius, of Roman equites, but their place was supplied by the cavalry of the allied states. It is evident that Caesar in his Gallic wars possessed no Roman cavalry (Caes. *Bell. Gall.* i. 15). When he went to an interview with Ariovistus, and was obliged to take cavalry with him, we are told that he did not dare to trust his safety to the Gallic cavalry, and therefore mounted his legionary soldiers upon their horses (Id. i. 42). The Roman equites are, however, frequently mentioned in the Gallic and civil wars, but never as common soldiers; they were officers attached to the staff of the general, or commanded the cavalry of the allies, or sometimes the legions (Id. vii. 70; *Bell. Civ.* i. 77, iii. 71, &c.).

When Augustus took upon himself, in B.C. 29, the praefectura morum, he frequently reviewed the troops of equites, and restored, according to Suetonius (*Aug.* 38), the long-neglected custom of the solemn procession (*transvectio*); by which we are probably to understand that Augustus connected the review of the knights (*probatio*) with the annual procession (*transvectio*) of the 15th of July. Dionysius (vi. 13) tells us that as many as 5,000 equites sometimes took part in this procession. From this time these equites formed an honourable corps, from which all the higher officers in the army (Suet. *Aug.* 38, *Claud.* 25) and certain of the chief magistrates in the state were chosen. Admission into this body was equivalent to an introduction into public life, and was therefore esteemed a great privilege; it was granted by the emperor at pleasure through an office (*a censibus*), which was a branch of the department for petitions (*a libellis*) under a high official (Mommsen, iii. 490); and we find it recorded in inscriptions that such a person was *equo publico honoratus*, *exornatus*, &c. by the emperor (Orelli, *Inscrip.* Nos. 3457, 313, 1229). This rank was tenable for life. If a young man was not admitted into this body, he was excluded from all civil offices of any importance, except in municipal towns; and also from all rank in the army (*militia* as opposed to *stipendium*), with the exception of centurion.

All those equites who were not employed in actual service were obliged to reside at Rome (Dio Cass. lix. 9), where they were allowed to fill the lower magistracies, which entitled a person to admission into the senate. They were divided into six turmae, each of which was commanded by an officer, who is frequently mentioned in inscriptions as *Sevir equitum Rom. turmae* I. II., &c., or commonly *Sevir turmae* or *Sevir turmarum equitum Romanorum*. From the time that the equites bestowed the title of *principes juventutis* upon Gaius and Lucius Caesar, the grandsons of Augustus (Tac. *Ann.* i. 3; Monum. Ancyr.), it became the custom to confer this title, as well as that of Sevir, upon the probable successor to the throne, when he first entered into public life and was presented with an equus publicus (Capitol. *M. Anton. Phil.* 6; Lamprid. *Commod.* 1).

It appears to have been the policy of Augustus to divide the administrative functions between the senators and the equites. The government of Egypt was always reserved to the latter, and senators were not allowed to enter it without the emperor's express permission. The smaller provinces to the north of Italy were similarly often placed under equestrian governors: the commanders of the fleets were drawn from the same body; and so were many of the prefects newly instituted by Augustus. Many posts in the general administration were usually filled by knights, *e.g.* the receiverships of customs, and the business of the imperial chancery. Those who held these were required, as a rule, to have completed their time of service as officers in the army.

The practice of filling such offices in the state from the equites appears to have continued as long as Rome was the centre of the government and the residence of the emperor. They are mentioned in the time of Severus (Gruter, *Inscrip.* p. 1001, 5; Papinian, in Dig. 29, 1, 43), and of Caracalla (Gruter, p. 379, 7); and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the Praefectus Vigilum; but they still retained, in the time of Valentinianus and Valens, A.D. 364, the second rank in the city, and were not subject to corporal punishment. (Cod. Theodos. 6, 36.) Respecting the *Magister Equitum*, see DICTATOR.

Staatsverf.* v. 337 ff. and 426 ff., and especially Mommsen, *Röm. Staatsr.* iii. 476–569; Madvig, *Röm. Verf.* i. 155–181.) [W. S.] [A. S. W.]

EQUULEUS. [ECULEUS.]

EQUUS OCTOBER. [PALILIA.]

E'RANI (*ἔρανοι*) was the name given to clubs or societies established for convivial purposes, the members dining together at stated periods, probably once a month. Every member (*ἐρανιστὴς* in Inscr.; *πληρωτὴς ἐράνου*, Dem. *c. Mid.* p. 547, § 101, p. 574, § 184 f.; [Dem.] *c. Aristog.* i. p. 776, § 21; *Etym. M.* s. v. *ἐρανιστής*; Harpocr. *s. v. ἐρανίζοντες*) was bound to pay his monthly subscription (also called *ἔρανος*,* or *φορά, εἰσφορά, σύνοδος*, Koehler in *Mittheil. d. d. Arch. Inst.* 1884, p. 293, n.), which in the society of the Ἡροισταὶ amounted to three drachmas (*C. I. A.* ii. No. 630). Such societies usually united in the common worship of some deity, such as Sarapis (*C. I. A.* ii. No. 617 = Brit. Mus. Inscr. i. 21), for whom they appointed special sacrificial officers (*ἱεροποιοί*, *C. I. A.* ii. Nos. 615, 616, 617). From this point of view they were called *θίασοι* (Athen. viii. p. 362 e), and Aristotle (*Nicom. Ethic.* viii. 9, 5, p. 1160 a) groups *θιασωταὶ* and *ἐρανισταὶ* together as *κοινωνίαι* formed *δι' ἡδονὴν, θυσίας ἕνεκα καὶ συνουσίας*, as opposed to *κοινωνίαι αἳ τοῦ συμφέροντος ἐφίενται*: cf. also Photius, p. 82, *θιάσου, ὥσπερ ἐστὶν ἡ ἀπὸ τοῦ πίνειν συναγωγή*, and Pollux, vi. 8, *τοὺς δὲ συνιόντας συμπότας, ὁμοσίτους συσσίτους, συνουσιαστάς, θιασώτας ἢ θιασίτας, εἰλαπιναστάς, ἐρανιστάς.* Foucart can therefore be scarcely right in distinguishing between *éranes civils* and *éranes religieux* (*Des Assoc. Relig. chez les Grecs*, p. 3). Such clubs had their own common funds (*ὅρος χωρίου πεπραμένου ἐρανισταῖς τοῖς μετὰ Καλλιτέλους*, *C. I. A.* ii. No. 1110; cf. Nos. 1119, 1111, and Rangabé, *Antiq. hellén.* No. 885) and their own laws: *e.g.* the *νόμος ἐρανιστῶν* (*C. I. A.* iii. No. 23), prescribing the dokimasia of new members and the expulsion of disturbing elements; cf. also the Solonian law (Dig. 47, 22, 4) ordaining that any agreement between members should be binding, provided it did not contravene the laws of the state. The *κοινὸν* of such a club might vote and bestow the honour of a crown, and an *ἔπαινος* on deserving members, etc.* The dokimasia was conducted by the *προστάτης*, the *ἀρχιερανιστής*, the secretary, the treasurers, and the *σύνδικοι*. These officials, probably with the exception of the *προστάτης*, were annually chosen by lot (*κληρωτοὶ κατὰ ἔτος*, *C. I. A.* iii. No. 23); yet from Harpocr. *s. v. πληρωτής*, it would appear that the *ἀρχιερανισταὶ* or *ἐρανάρχαι* were at one time elected (Salmasius reads, *τοῖς ἤτοι λαχοῦσιν ἢ ᾑρημένοις*: in an inscr. publ. in the *Revue archéol.* x. 1864, p. 400, a *ταμίας* is called *αἱρεθείς*). Other functionaries were *ἐπιμεληταὶ* (*C. I. A.* ii. No. 616), a *προερανίστρια* (*C. I. A.* ii. No. 617), etc.; it is probably a mere chance that only in connexion with the treasurer is there mention of an oath on entering office (*Revue archéol.* xi. 1865, p. 500). Hesychius' explanation of *πληρωτής*, viz. *ἐράνου συναγωγός*, has led some scholars to suppose that the *ἐρανάρχης* had to advance the necessary sums, if members made default (*ἐκλείπειν τὴν φοράν*). Such clubs numbered among their members women (an *ἔρανος* consisting entirely of women, Keil, *Zur Syll. Inscr. Boeot.* p. 624), foreigners, even slaves.

Ἔρανος is also used in the sense of a contribution made by friends (*ἑταῖροι καὶ φίλοι σοὶ καὶ συνήθεις*, Philem. *fr.* 213 in Kock, *Comic. Att. Fragm.* ii. 1) to assist a person in difficulties, *e.g.* when that person had to pay a heavy fine, or to ransom himself from captivity, etc. As a rule, the person in distress applied to his friends in person for assistance (*συλλέγειν ἔρανον*, Antiph. *Tetral.* i. *β*, § 9; [Dem.] *c. Neaer.* p. 1355, § 31; *c. Nicostr.* p. 1249, § 11 —*συλλέγεσθαι ἔρανον*, Lys. *c. Aeschin.* fr. 1; Dem. *c. Mid.* p. 547, § 101—*ἐρανίζειν τινά*, Dem. *Epist.* iii. p. 1484, § 38); occasionally, however, a friend might undertake the collecting (Aeschin. *de Fals. Leg.* § 41, *συνιστάναι τὸν ἔρανον*), who probably fixed the amount to be paid by each (Corn. Nep. *Epam.* 3). From Diog. Laert. vi. 63, it would seem that sometimes the *ἐρανάρχης* undertook the task of collection for a member of his club; cf. also the inscription from Amorgus, *τοῦ ἐράνου ὃν συνέλεξεν Ἀρισταγόρας* (the *ἀρχέρανος*), Ἀρχαιολ. Ἐφημ. N. S. No. 77. An *ἔρανος πεντακοσιόδραχμος*, *i.e.* one to which each had to contribute 500 drachmas, is mentioned in Dittenberger, *S. I. G.* No. 433, l. 4; whilst the *ἔρανος εἰκοσίμνως* in Lys. *c. Autocr.* fr. 49 (= Pollux, ix. 57) and the *ἔ. τετταρακονταμναῖος* in Dittenberger, No. 462, l. 12, represent the total amount collected. The

---

* Ἔρανος meant originally a meal to which each contributed his share, a picnic (*Odyss.* i. 224; cf. Hesiod. *O. et D.* 722), called later on *δεῖπνον ἀπὸ σπυρίδος* (Athen. viii. p. 365 a; cf. Aristoph. *Acharn.* 1137), when every guest brought his own dish (Xenoph. *Mem.* iii. 14), or *δεῖπνον ἀπὸ συμβολῶν*, when one catered for the rest, and was afterwards repaid by contributions (Aristoph. *Acharn.* 1210, and Schol.; Alexis *fr.* 15 and Athen. iii. p. 117 e in Kock, *Comic. Att. Fragm.* ii. 1; Terent. *Eun.* iii. 4, etc.; cf. Becker-Göll, *Charikles*, ii. p. 296 f.).

* In Rhodes, at least at the time when the inscription was engraved which Newton publishes in *Journ. of Hell. Stud.* ii. p. 357 f., these societies were not the absolute masters of their internal administration; for the decree of the *κοινὸν* of the Euthalidae requires the confirmation of senate and popular assembly.

friends who paid their share are said *ἐρανίζειν τινί* (Dem. *c. Boeot.* i. p. 999, § 18), *εἰσφέρειν ἔρανον*, etc. The relief was looked upon as a friendly loan, repayable by the borrower, probably by instalments (Lys. *c. Aeschin.* fr. 1), when in better circumstances (Theophr. *Char.* 17): it was neither a present (yet see Dem. *de Cor.* p. 329, § 312; [Dem.] *c. Nicostr.* p. 1249, § 9; Theophr. *Char.* 15), nor a loan (*χρέως*), but something between the two (*ἐξ ἐράνου ὄφλημα*, Isae. *Hagn.* § 43: cf. Dem. *c. Aphob.* i. p. 821, § 25; Lyc. *c. Leocr.* § 22). Security for an *ἔρανος* is mentioned in the inscription from Amorgus (quoted above), and in Wescher et Foucart, *Inscr. de Delphes*, No. 139. Some scholars are of opinion that there were actual associations for the purpose of mutual relief, resembling in some degree our friendly or benefit societies; yet this view is shown to be wrong by Van Holst, *de Eran. vet. Graec.* p. 73 ff. (Cf. Caillemer, *Le Contrat de Société à Athènes*, p. 24 ff.; Thalheim, *Rechtsalterth.* p. 65, n. 2.)

For the recovery of such loans when the person assisted was in a position to pay them back, but unwilling to do so, for the decision of disputes amongst the *ἐρανισταί*—*e.g.*, about the payment of each member's share, or the use made of the contributions by the president, etc.—there were special *ἐρανικαὶ δίκαι* [EMMENOI DIKAI]. Plato (*Legg.* xi. p. 915 E) disapproved of lawsuits in such matters, and would not allow them in his republic.

The various purposes for which clubs were formed we learn from the law which Gaius ascribes to Solon, *ἐὰν δὲ δῆμος ἢ φράτορες ἢ ἱερῶν ὀργίων θύται* (Mommsen; *ἢ ναῦται*, MS.) *ἢ σύσσιτοι ἢ ὁμόταφοι ἢ θιασῶται ἢ ἐπὶ λείαν οἰχόμενοι ἢ εἰς ἐμπορίαν, ὅτι ἂν τούτων διαθῶνται πρὸς ἀλλήλους, κύριον εἶναι ἐὰν μὴ ἀπαγορεύσῃ δημόσια γράμματα* (Dig. 47, 22, 4). By *σύσσιτοι* (or *ὁμόσιτοι*, Pollux, vi. 7) probably members of a dinner club are meant; men who either possessed no establishment of their own, bachelors and widowers, or those who preferred taking their meals in male society rather than at home with their wives, combined to form such clubs. According to Plat. *Lach.* p. 179 B, Lysimachus, the son of Aristides, and Milesias, the son of Thucydides, were members of a club of the kind (Schömann, *Griech. Alterth.* i. p. 363).—The *ὁμόταφοι* can scarcely be the *γεννῆται*, who as such had a claim to the *πατρῷα μνήματα* (*ὧν ὅσοιπέρ εἰσι τοῦ γένους κοινωνοῦσιν*, Dem. *c. Eubul.* p. 1307, § 28; cf. [Dem.] *c. Macart.* p. 1077, § 79; Plut. *Cim.* 4; Ps. Plut. *Vitt. X. Oratt.* p. 838 B), for the *γεννῆται* are distinguished from *οἷς ἠρία* (Harpocr. *s. v.* = *τάφοι*) *ταὐτά* in Dem. *c. Eubul.* p. 1319, § 67. Sometimes the *ἔρανος* looked after the burial of its members, *e.g.* Koumanoudes, *Ἐπιγραφαὶ ἐπιτύμβιοι*, No. 2362, *Ἀρτεμίδωρος Σελευκεύς· ἐρανισταί*: cf. also *C. I. A.* ii. No. 621. According to a Rhodian inscription (*Bull. de Corresp. hellén.* 1880, p. 139 ff.) a piece of land was given to the *ἐρανισταὶ* as a present *εἰς ταφία*, which J. Martha explains to mean that the revenue from this piece of land was to be used in defraying the burial expenses of members, whilst in E. L. Hicks' opinion (*Brit. Mus. Inscr.* ii. 360) the land was granted as a burial-ground to certain eranists.—*Οἱ ἐπὶ λείαν οἰχόμενοι* are men banded together for the purpose of privateering, to exercise in time of war the right of reprisal, which corresponds somewhat to the modern letters of marque (Schömann, *Antiq. jur. publ. Gr.* p. 368 n.).—Trading companies are frequently mentioned in inscriptions, *e.g.* *C. I. G.* No. 124 = *C. I. A.* ii. No. 475, *ναύκληροι καὶ ἔμποροι οἱ φέροντες τὴν σύνοδον τοῦ Διὸς τοῦ ξενίου* in the Piraeus; *C. I. G.* No. 2271, l. 35, *τὸ κοινὸν τῶν Τυρίων Ἡρακλεϊστῶν ἐμπόρων καὶ ναυκλήρων*; *Journ. of Hell. Stud.* viii. p. 415, a guild of Thasian merchants had taken Hermes *κερδέμπορος* for their patron-god; they styled themselves accordingly *κερδέμποροι*, and their president was called *ἀρχικερδέμπορος*, etc. Cf. Harpocr. *s. v. κοινωνικῶν· καὶ περὶ τῶν ἑκούσιον κοινωνίαν συνθεμένων ἐμπορίας ἢ τινος ἄλλου*, such as trading companies (Lys. *c. Frument.* §§ 9, 17, 21; Dem. *c. Dionys.* p. 1285, § 7 ff.), mining companies (*οἱ κοινωνοῦντες μετάλλου*, Dem. *c. Pantaen.* p. 977, § 38; Hyperid. *pro Eux.* col. 44; Xen. *de Redit.* 4, 30 f.), farmers of taxes (Andoc. *de Myst.* § 133; Lyc. *c. Leocr.* §§ 19, 58; Plut. *Alcib.* 5), or lessees of the theatre in Piraeus (*C. I. A.* ii. No. 573), etc.—For the constitution, etc., of the various *σύνοδοι τῶν περὶ τὸν Διόνυσον τεχνιτῶν* in Athens (*C. I. A.* ii. No. 551), Thebes (*C. I. G.* No. 1600), Argos (*C. I. G.* No. 3068 C; *C. I. A.* ii. No. 552 b), Teos (*C. I. G.* No. 3067), and Cyprus (*C. I. G.* Nos. 2619, 2620), etc., see A. Müller, *Bühnenalterth.* p. 392 ff. The general name for all such associations was *ἑταιρεῖαι* ("sodales sunt qui ejusdem collegii sunt quam Graeci *ἑταιρείαν* vocant," Gaius, *l. c.*), but in its special sense *ἑταιρεῖαι* meant political clubs. These were not like the preceding societies, recognised and authorised by the state, but were at best only tolerated. Such clubs played an important part in Athenian politics. Themistocles owed much of his power to such a club (Plut. *Alcib.* 2); Thucydides, the son of Milesias, united the aristocrats into an association in opposition to Pericles, until he was ostracised and the *ἑταιρεία* in consequence broken up (Plut. *Pericl.* 11, 14). Yet it was only after the death of Pericles that these clubs became established "conspiracies for the management of trials and elections" (*ξυνωμοσίαι ἐπὶ δίκαις καὶ ἀρχαῖς*, Thucyd. viii. 54; cf. iii. 82-85; Plat. *Theaet.* p. 173 D, *σπουδαὶ ἑταιριῶν ἐπ' ἀρχάς*, and [Andoc.] *c. Alcib.* § 4), which were not very scrupulous in their choice of means, and did not disdain the employment of such measures as false testimony and corruption (Dem. *c. Mid.* p. 560, § 139; *c. Zenoth.* p. 885, § 10; *c. Pantaen.* p. 978, § 39). They were secretly conducted (Plat. *Rep.* ii. p. 365 D), and used to put down the democracy (*ξυνωμότας δὲ ἔλεγον τοὺς ἐπὶ καταλύσει τοῦ δήμου συνερχομένους*, Schol. Aristoph. *Vesp.* 342), and on that account forbidden. (Cf. the first section of the *νόμος εἰσαγγελτικὸς* in Hyperid. *pro Eux.* col. 22, and the *Lex* in [Dem.] *c. Steph.* p. 1137, § 26.) The mutilation of the Hermae was proposed at a convivial meeting of the club to which Andocides belonged (Andoc. *de Myst.* § 61 ff.); the Athenians ascribed the offence to conspirators who wanted to effect a revolution and to overthrow the democracy (Thucyd. vi. 27; Andoc. *de Myst.* § 36). The charge against Alcibiades ran: *συνάγει τὴν ἑταιρίαν ἐπὶ νεωτέροις πράγμασιν*, etc. (Isocr. *de Big.* § 6; cf. Thucyd. vi. 61; Diod. Sicul. xiii. 5). In the days of the Roman empire friendly societies, under the name of ἔρανοι, were frequent among the Greek cities, but were looked upon with suspicion by the emperors as leading to political combinations (Plin. *Epist.* x. 93. 94). [C. R. K.] [H. H.]

ERGA'STULUM was a private prison attached to most Roman farms, called *carcer rusticus* by Juvenal (xiv. 24), where the inferior class of slaves were kept during the night in chains. It appears to have been usually under ground, and according to Columella (i. 6, 3) ought to be lighted by narrow windows, which should be too high from the ground to be touched by the hand. The slaves confined in an ergastulum were usually employed to cultivate the fields in chains. (Plin. *H. N.* xviii. § 21; Flor. iii. 20, 6.) Slaves who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon or were barbarous in their habits were regularly kept. A trustworthy slave had the care of the ergastulum, and was therefore called *ergastularius.* (Colum. i. 8, 7; Ammian. xiv. 11.) According to Plutarch (*Tib. Gracch.* 8), these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarous slaves who were employed to cultivate the conquered lands. In the time of Hadrian and Antoninus, many enactments were made to ameliorate the condition of slaves; and among other measures, Hadrian attempted to abolish the ergastula, but they were never entirely suppressed. They are mentioned by Apuleius, *de Mag.* c. xlvii., where fifteen is given as the minimum number of imprisoned slaves, which constituted an ergastulum. Sometimes the word is used for the body of slaves confined in such a barracoon. (Spart. *Hadrian,* 18, compared with Gaius, i. 53.) For further information on the subject, see Brissonius, *Antiq. Select.* ii. 9; Lipsius, *Elect.* ii. 15, Opera, vol. i. p. 317, &c.; Mayor's notes on Juvenal, viii. 180, xiv. 24. [W. S.] [A. S. W.]

ERI'CIUS, a hedgehog, *i.e.* a military engine full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy. (Caes. *B. C.* iii. 67; Sallust, *ap.* Non. p. 554 M.; Lipsius, *Poliorcet.* v. 4.) [W. S.] [A. S. W.]

EROANTHEIA (ἠροάνθεια) is called a brilliant festival of women, celebrated in Peloponnesus in the spring season (Phot. *Lex.* p. 95; Hesych. *s. v.*). [L. S.]

EROGA'TIO. [AQUAEDUCTUS.]

ERO'TIA or **EROTI'DIA** (ἐρώτια or ἐρωτίδια), the most solemn of all the festivals celebrated in the Boeotian town of Thespiae. It took place every fifth year, and in honour of Eros, the principal divinity of the Thespians. Respecting the particulars nothing is known, except that it was solemnised with contests in music and gymnastics. (Plut. *Amat.* 1; Paus. ix. 31, § 3; Athen. xiii. p. 561.) At this festival married couples made up any quarrels they might have. The worship of Eros seems to have been established at Thespiae from the earliest times; and the ancient symbolic representation of the god, a rude stone (ἀργὸς λίθος), continued to be looked upon with particular reverence even when sculpture had attained the highest degree of perfection among the Greeks, and when Thespiae possessed the world-renowned statue of Eros. (Paus. ix. 27, § 1; compare Schol. *ad* Pind. *Olymp.* vii. 154; Ritschl, in the *Rhein. Mus.* vol. ii. p. 106.) [L. S.]

ERRHEPHO'RIA or **ERSEPHO'RIA** (ἐρρηφόρια or ἐρσηφόρια). [ARRHEPHORIA.]

E'SCHARA (ἐσχάρα). [FOCUS.]

ESSEDA'RII. [ESSEDUM.]

E'SSEDUM, rarely E'SSEDA -AE (Sen. *Ep.* 56, § 4), said to be a Celtic word (Jornand. *de Reb. Get.* c. 2; cf. Ginzrot, i. 377), the name of a chariot used, especially in war, by the Britons, Gauls, and Belgae, perhaps also by the Germans, (Verg. *Georg.* iii. 204; Serv. *ad loc.*; Pers. vi. 47).

According to the account given by Caesar (*Bell. Gall.* iv. 33), and confirmed by Diodorus Siculus (v. 21, 29), the method of using the essedum in the ancient British army was very similar to the practice of the Greeks in the heroic ages, as described by Homer and in the article CURRUS. The principal difference seems to have been that the essedum was stronger and more solid than the δίφρος, that it was open before instead of behind; hence the driver was able to run along the pole (*de temone Britanno excidet,* Juv. iv. 125), and then to retreat with the greatest speed into the body of the car, which he drove with extraordinary swiftness and skill. From the extremity of the pole he threw his missiles, especially the *cateia* (Val. Flacc. *Argon.* vi. 83). It appears also that these cars were purposely made as noisy as possible, probably by the creaking and clanging of the wheels (*strepitu rotarum,* Caes. *l. c.*; compare Tac. *Agric.* 35; *Esseda multisonora,* Claud. *Epigr.* iv.); and that this was done in order to strike dismay into the enemy. The drivers of these chariots were called in Latin *Essedarii* (Caes. *B. G.* iv. 24; Cic. *ad Fam.* vii. 6); there were about 4,000 of them in the army of Cassibelaunus (Caes. *B. G.* v. 19). Tacitus (*Agric.* 12) observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans (Propert. ii. 1, 76; Cic. *ad Att.* vi. 1; Ov. *Am.* ii. 16, 49). Cicero (*Phil.* ii. 24, § 58) mentions the use of it by Antonius as a piece of effeminacy disgraceful to a tribune of the people: in the time of Seneca it seems to have become common; for he reckons "esseda deaurata" among things "quae matronarum usibus necessaria sint" (*fr.* 48, Haase). We find emperors and generals using it as a travelling carriage (Suet. *Calig.* 51; *Galb.* 6). As used by the Romans, the essedum had no seat for the driver: the traveller drove himself (Ov. *l. c.*), and always, it would seem, with a pair of horses, whereas with the cisium the number varied. The essedum, like the cisium, appears to have been kept for hire at the post-houses or stations (*Salonem quinto essedo videbis,* Mart. x. 104). [MANSIO.] The essedum must have been similar to the COVINUS, except that the latter had a cover. (Marquardt, *Privatl.* 712 f.) The *essedarii* of inscriptions are explained by Marquardt (*Privatl.* 706) as the builders, not the drivers of esseda: but other *essedarii* at Rome seem to have been popular favourites in connexion with the gladiatorial shows, and these perhaps were captive Britons compelled to fight in the arena (Suet. *Calig.* 35; *Claud.* 21). [J. Y.] [W. W.]

EUCLEIA (*εὔκλεια*), a festival celebrated at Corinth in honour of Artemis. It is mentioned only by Xenophon (*Hell.* iv. 4, § 2), but no particulars are known about it. [L. S.]

EVI'CTIO. *Evincere* means generally to deprive a person of a thing or right, of which he is in the enjoyment, by legal process (Dig. 5, 2, 21, 2; 5, 3, 17, 55); but far the commonest case of *evictio* is that of the contract of sale [Emptio Venditio]. The vendor not being bound to make the purchaser owner of the thing sold (Dig. 19, 1, 11, 2), things were often bought and sold which did not belong to the vendor; and as the latter could give no better title than he had himself (Dig. 40, 1, 20, pr.), the purchaser was liable to be deprived of the *res vendita* ("evicted") by the lawful owner. Originally there seems to have been no obligation on the vendor to compensate on such "eviction," except in sales by mancipation, when the vendor was bound to return double the price to the purchaser, in such an event (Paul *Sent. rec.* 2, 17, 3): but in ordinary sales it seems to have become usual for the purchaser to stipulate from the vendor for a penal sum of twice the amount of the purchase-money (*stipulatio duplae*) if deprived of the property by any one with a better title. Eventually it became a general rule of law, that if the purchaser was "evicted" by legal process, the vendor must indemnify him (*evictionem praestare*, Dig. 21, 2, 1). But it was necessary that the purchaser should neglect no proper means of defence, when an attempt was made to evict him; and it was his duty to give the vendor notice of the adverse claim (*litem denunciare*) and to pray his aid in defence of the action. (Dig. 21, 2, *de evictionibus et duplae stipulatione*; K. O. Müller, *Die Lehre von der Eviction*, Part 1, Halle, 1851; Bekker, *Zur Lehre von der Evictionsleistung*, *Jahrbuch der Gemein. Rechts*, vi. pp. 229–336; Windscheid, *Pandektenlehrbuch*, §§ 391, 392; Brinz, *Lehrbuch*, vol. ii. § 281; cf. Holtzendorff's *Rechtslexicon*, s. v. "Entwahrung.") [J. B. M.]

EUMO'LPIDAE (*Εὐμολπίδαι*), the most distinguished and venerable among the priestly families in Attica, believed to be the descendants of the Thracian bard Eumolpus, the introducer of the Eleusinian mysteries into Attica (Diod. Sic. i. 29; Apollod. iii. 15, § 4; Lycurg. *c. Leocr.* § 98; Eleusinia, p. 716 *a*). The *ἱεροφάντης* was always a member of the family of the Eumolpidae, as Eumolpus himself was believed to have been the first hierophant. (Hesych. *s. v.* *Εὐμολπίδαι*: Tac. *Hist.* iv. 83; Arnob. v. 25; Clemens Alex. *Protrept.* p. 16, &c.) For the duties and official dress of the hierophant, see Eleusinia 5, p. 720 *b*.

The hierophant was attended by four *ἐπιμεληταὶ τῶν μυστηρίων*, one of whom likewise belonged to the family of the Eumolpidae. [Epimeletae, No. 4.] Other members of their family do not seem to have had any particular functions at the Eleusinia, though, together with the second great priestly family of the Kerykes, they were hereditary guardians of the mysteries. The latter family were variously described as descended from a younger son of Eumolpus, or from Hermes and Aglauros. The Eumolpidae and Kerykes had on certain occasions to offer up prayers for the welfare of the state; for these duties, and for the sacred treasures entrusted to their care, they were individually and collectively responsible (Aeschin. *c. Ctes.* § 18).

The Eumolpidae (perhaps also the Kerykes, as Caillemer conjectures) had also certain judicial powers in cases of *ἀσέβεια*, but only, it would seem, where the mysteries were concerned. Two modes of prosecution for impiety are coupled together, *δικάζεσθαι πρὸς Εὐμολπίδας* and *φράζειν πρὸς τὸν βασιλέα*: the two processes must have been practically identical, the king archon acting as *εἰσαγωγεὺς* or *ἡγεμὼν δικαστηρίου*, and the Eumolpidae furnishing a jury (Dem. *c. Androt.* p. 601, § 27, with Wayte's note). The law according to which they pronounced their sentence, and of which they had the exclusive possession, was not written, but handed down by tradition; and the Eumolpidae alone had the right to interpret it (*ἐξηγεῖσθαι*), or where the law was silent, to act according to their own discretion ([Lys.] *c. Andoc.* § 10; Exegetae). We agree, however, with Caillemer, that the action of the Eumolpidae must have been confined to "spiritual censures," such as exclusion from the mysteries, or reduction of a *μύστης* to the ranks of the uninitiated. In democratic Athens none but purely ceremonial functions were left to the old aristocracy. [Eupatridae; Ephetae.] When, therefore, we read that it was death for an *ἄτιμος* to enter the sacred precinct of Eleusis (Andoc. *de Myst.* § 33), or for anyone to put the suppliant bough (*ἱκετηρία*, *ib.* § 110) in the wrong place or at the wrong time, we may be quite sure that the Eumolpidae, if they declared the "sacred law" on the subject, had no voice in the capital sentence. In some cases, when a person was convicted of gross violation of the public institutions of his country, the people, besides sending the offender into exile, added a clause in their verdict that a curse should be pronounced upon him by the Eumolpidae (Plut. *Alcib.* 22; Corn. Nep. *Alcib.* 4, 5). But the Eumolpidae could pronounce such a curse only at the command of the people, and might afterwards be compelled by the people to revoke it and purify the person whom they had cursed before (Plut. *Alcib.* 33; Corn. Nep. *Alcib.* 6, 5). Cf. Caillemer, *ap.* D. and S., *s. v.* Asebeias Graphé. [L. S.] [W. W.]

EVOCA'TI were soldiers in the Roman army who had served out their time and obtained their discharge (*missio*), but had voluntarily enlisted again at the personal invitation of the consul or other commander (Dio Cass. xlv. 12). Dionysius mentions a cohort of evocati as serving under Siccius in B.C. 455 (x. 43); and these were doubtless the same as the *veterani milites voluntate sequentes*, whom Livy more than once mentions. Flamininus in B.C. 198 took 3,000 evocati with him to Macedonia (Plut. *Flam.* 3); and Polybius (vi. 31, 2) speaks of them as usually present in a Roman camp. They became still more frequent after the reforms of Marius, when service in the army became more of a profession, adopted by choice. The evocati were doubtless released, like the vexillarii, from the common military duties of fortifying the camp, making roads, &c. (Tac. *Ann.* i. 36), and held a higher rank in the army than the common legionary soldiers. They are sometimes spoken of in conjunction with the equites Romani (Caes. *Bell. Gall.* vii. 65), being in this case, like them, supplied with horses, and sometimes classed with the centurions (Caes. *Bell. Civ.* i. 17), receiving, like them, double the usual pay. They appear to have been frequently promoted to the rank of centurions. Thus Pompey induced a great many of the veterans, who had served under him in former years, to join his standard at the breaking out of the civil war, by the promise of rewards and the command of centuries (*ordinum*, Caes. *Bell. Civ.* i. 3). These he had distributed throughout the army (*ib.* iii. 88). We read of two thousand serving under Pompeius at Pharsalia, and of their belonging to certain cohorts in the army. Cicero (*ad Fam.* iii. 6, 5) speaks of a *Praefectus evocatorum.* (See Cic. *ad Fam.* xv. 4, § 3; Caes. *Bell. Civ.* iii. 91; Suet. *Aug.* 56; Lipsius, *De Milit. Rom.* i. 8; Marquardt, *Röm. Staatsverwaltung*, v. 375.)

The name of evocati was also given to a select body of young men of the equestrian order, who were appointed by Galba to guard his bedchamber. (Suet. *Galb.* 10.) This body is supposed by some writers to have existed under the succeeding emperors, and to have been the same as those who are called *evocati Augusti.* But the body-guard of Galba seems only to have been a body raised for the occasion; and the *evocati Augusti* were a standing force, with the rank and distinction of centurions. For further details, see EXERCITUS, p. 792. (Hyginus, *de Mun. C.* 6; Orelli, *Inscrip.* Nos. 3495, 3580, 153.) [W. S.] [A. S. W.]

EUPA'TRIDAE (*εὐπατρίδαι*), the well-born, is the name by which from very early times the aristocracy of Attica was known. At the dawn of history, as in the prehistoric age for which the Homeric poems are our evidence, we find everywhere in Greece a privileged class, standing between the kings and the people, and, on the decline of monarchy, succeeding to the power which had formerly belonged to the kings. It is not necessary, therefore, to discuss their origin. In the earliest state of society we find them gathered in cities, and owning the lands which were cultivated for them by their dependents (cf. DEMUS, 1st paragraph). The memory of this fact was preserved to the latest times (*Εὐπατρίδαι οἱ αὐτὸ τὸ ἄστυ οἰκοῦντες*, *Etym. M.* p. 395, 50); and the neighbourhood of the city formed the district of the *Γελέοντες*, the noblest of the four old-Ionic tribes [GELEONTES]. The Attic Eupatrids included not only the so-called autochthonous nobility, but also those noble gentes which had immigrated: the two branches of the Neleidae, the Codridae, descendants of the last king, and the Alcmaeonidae, had come originally from Messenia (Schömann, *Antiq.* i. 316, 321, E. T.; *Opusc. Acad.* p. 235). This phenomenon repeats itself among the Roman patricians. *e.g.* the Claudii.

In the division of the inhabitants of Attica into three classes, traditionally ascribed to Theseus, the Eupatrids were the first; like other aristocracies ancient and modern, they were entrenched behind a strong rampart of privilege; they were in the exclusive possession of all the civil and religious offices of the state, were the exponents of the law and the authorised interpreters (*ἐξηγηταί*) of things human and divine (Plut. *Thes.* 25; Pollux, viii. 111). The close correspondence of all this with the early institutions of Rome is noticed by Dionysius, who however reckons only two divisions of the Athenians, *εὐπατρίδαι* and *ἄγροικοι*, corresponding to his idea of the patricians and clients (Dion. Hal. ii. 8). The exact relation of the three Theseian classes to the four old-Ionic tribes is still a matter of dispute, some scholars contending that the tribes and phratries were divisions of the Eupatrids alone (Philippi, *Beiträge zu einer Gesch. d. Att. Bürgerrechts*, p. 276 ff.). The better opinion, that the *γεώμοροι* (called also *γεωργοί*) and the *δημιουργοὶ* were also distributed among the tribes, rests on the precise testimony of Aristotle (*ap.* Schol. Plat. *Axioch.*, also in C. Müller, *Fragm. Hist.* ii. 106), supported by various passages in the grammarians; and is defended by Gilbert on very cogent grounds. The *φυλοβασιλεῖς* were necessarily Eupatrids (Pollux, viii. 111), a fact which would not have been mentioned if all members of the phylae had been such. And as regards the phratries, the reconciliation (*αἰδεῖσθαι*) of cases of unintentional homicide was to be effected, in the absence of near relations of the deceased, by ten phrateres chosen from the Eupatrids by the Ephetae (Law [*θεσμὸς*] of Draco, *ap.* Dem. *c. Macart.* p. 1069, § 57). This law is an exception to the usual character of "inserted documents" in the Orators, as its genuineness is proved by *C. I. A.* i. 61; and it clearly implies that there were other phrateres who were not Eupatrids (Gilbert, *Staatsalterth.* i. 112).

The entire history of Athens down to the time of Pericles is the history of the gradual curtailment of the privileges of the Eupatrids. The ordinances of Draco were a concession to popular discontent, and exhibited in writing for the first time the laws which the governing class had hitherto interpreted as they pleased (Grote, pt. ii. ch. 10, ii. 283). The would-be despot Cylon, and the more successful Peisistratus, themselves both Eupatrids, illustrate the tendency then prevailing in Greece to overthrow oligarchy by accepting tyranny. The legislation of Solon made landed property, not birth, the qualification for political power. For an account of further changes see ARCHON, p. 166; AREIOPAGUS, p. 177; and for the legislation of Cleisthenes, DEMUS, pp. 614, 615. But as Solon, like all ancient legislators, refrained from touching religion, certain priestly offices and ceremonial functions, involving no political authority, remained with the Eupatrids down to a very late period of Grecian history. (Schömann, *Antiq. Jur. Publ.* pp. 77 ff., 167 ff.; EPHETAE; EUMOLPIDAE; EXEGETAE.) [L. S.] [W. W.]

EURI'PUS. [AMPHITHEATRUM, p. 113 *a.*]

EUSTYLOS. [TEMPLUM.]

EUTHY'NE and EUTHY'NI (*εὔθυνα*, plur. *εὔθυναι*: later *εὐθύνη*, plur. *εὐθῦναι*: Boeckh, *P. E.* 190 n. = *Sthh.*³ i. p. 241; *C. I. A.* ii. No. 578; cf. Wayte, Dem. *c. Timocr.* p. 717, § 54; *εὔθυνοι*). All public officers at Athens (as Aeschin. *c. Ctes.* § 18, has it, *οὐδεὶς ἀνυπεύθυνος τῶν καὶ ὁπωσοῦν πρὸς τὰ κοινὰ προσεληλυθότων*), both ordinary and extraordinary, *κληρωτοὶ* and *χειροτονητοί* (generals, Lys. *pro Milit.* § 11; ambassadors, Dem. *de Fals. Leg.* p. 367, § 82, p. 406, § 211; *ἀγορανόμοι*, *ἀστυνόμοι*, *δικασταὶ κατὰ δήμους*, Dem. *c. Timocr.* p. 735, § 112; trierarchs, priests and priestesses, etc., Aeschin. *l. c.*); the *ἀγωνοθέται* (*Ἐφημ.* 1862, No. 220; *C. I. A.* ii.

No. 314), even the senate of the Five Hundred and the members of the Areiopagus (Dem. *c. Androt.* p. 605, § 38, and Aeschin. *l. c.* and Schol.: the latter in their administrative capacity) were accountable for their conduct and the manner in which they discharged their official duties. The judges in the popular courts and the diaetetae (cf. EISANGELIA, 3) seem to have been the only authorities who were not responsible. This account, which officers had to give after the time of their office was over, was called εὔθυνα, or mostly in pl. εὔθυναι: and the officers subject to it, ὑπεύθυνοι. The annual ordinary public officers had to render it within thirty days after the expiration of their offices (Harp. *s. v.* λογισταί: Pollux, viii. 45), *i.e.* in the month of Hecatombaeon (the κοσμηταὶ in the month of Boedromion); the treasurer of the revenue, who held his office for four years, in the month of Pyanepsion and Maimacterion of the third year of each Olympiad (Boeckh, *Sthh.*³ ii. p. 111: but see Fränkel, *App.* p. 45, n. 272); and generals might be called back by a decree of the people before the expiration of their office to give an account (Lys. *c. Ergocl.* § 5 f.). Until this duty was fulfilled, the whole property of the ex-officer was in bondage to the state (ἐνεχυράζει τὰς οὐσίας ὁ νομοθέτης τὰς τῶν ὑπευθύνων, etc.; Aeschin. *c. Ctes.* § 21): he was not allowed to travel beyond the frontiers of Attica, to consecrate any part of his property as a gift to the gods, to make his will, or to pass from one family to another by adoption; no public honours or rewards, and no new office could be given to him (Aeschin. *l. c.*; Dem. *c. Timocr.* p. 747, § 150 f.: cf. Plut. *Quaest. gr.* 2, about the βασιλεῖς of Cumae). If within the stated period an officer through whose hands public money had passed, did not send in his account, an action called ἀλογίου δίκη was brought against him (Pollux, viii. 54; *Lex. Rhet. Cant.* s. v.; *Att. Process*, ed. Lipsius, p. 461); in some instances, however, the εὔθυναι were delayed long beyond the specified time (Dem. *de Fals. Leg.* p. 374, § 103: cf. p. 406, § 211; Lys. *pro Milit.* § 11, *de Affect. Tyran.* § 30; Aeschin. *c. Tim.* § 106).

Aristotle (*Pol.* vii. 5, 10 S. = vi. 8 Bk.), in speaking of the ἀρχὴ ληψομένη λογισμὸν καὶ προσευθύνουσα, says, some call them εὔθυνοι, some λογισταί, some ἐξετασταί, some συνήγοροι.* As far as Athens is concerned, we may leave out the ἐξετασταί, because the officers who bore that name had quite different functions (Boeckh, *Sthh.*³ i. p. 363 c). In the time before Eucleides thirty λογισταὶ are mentioned (*C. I. A.* i. No. 32; cf. 226, 228); their relation to the ten λογισταὶ of a later period is not clear. Meier doubts that there was any connexion between them; whilst Boeckh (*Sthh.*³ i. p. 241) supposes that their number was reduced from thirty to ten. As regards the λογισταὶ and εὔθυνοι, G. Hermann (*ü. Boeckhs Behandlung d. gr. Inschr.* p. 220 ff.) took these to be two names for the same class of officials, relying on the statement of Photius, that λογισταὶ were formerly called εὔθυνοι; but Boeckh (*op. cit.* i.³ p. 239 f.) shows conclusively that these two classes of officials existed side by side both before and after Eucleides; besides, Harpocration, *s. v.* λογισταί, distinctly avers that Aristotle pointed out the difference between them.

The grammarians, on the authority of Aristotle, state that the λογισταί, εὔθυνοι, and συνήγοροι were each ten in number, chosen by lot, and that the πάρεδροι of the εὔθυνοι were likewise chosen by lot (*Lex. Seguer.* 276, 17; Photius, 31, 20; Schol. Aristoph. *Vesp.* 691). The *Lex. Cant.* p. 672, 20 has λογιστὰς αἱροῦνται δέκα (ᾑρημένοι, Schol. Aeschin. *c. Tim.* § 1); this Boeckh and Schoell (p. 25, n. 2) consider an inaccurate expression, whilst Meier (*ad l. c.*) and Schömann (*Ant.* i. 407, E. T.) suppose that a change in the mode of their appointment (from cheirotony to choosing by lot) was effected. The πάρεδροι were probably nominated by the εὔθυνοι themselves (thus Boeckh). The functions of these three classes of officers cannot be stated with absolute certainty. All the ὑπεύθυνοι, with the exception of the generals and probably of their subordinate military functionaries, had to send in their accounts (λόγος) to the λογισταί (Aeschin. *c. Ctes.* § 20, ἐγγράφειν λόγον πρὸς τοὺς λογιστὰς καὶ εὐθύνας διδόναι: § 15, λογ. καὶ εὐθ. ἐγγράφειν πρὸς τὸν γραμματέα (of the Senate, Gilbert, *Staatsalt.* i. p. 216, n.) καὶ τοὺς λογιστάς: § 22, λόγον ἀποφέρειν πρὸς τοὺς λογιστάς: cf. *C. I. A.* i. No. 32; ii. Nos. 444, 446), and those who had not had anything to do with the public money had to hand in a written declaration to that effect (Aeschin. *l. c.* § 22). The λογισταί, assisted by the συνήγοροι, examined these accounts within the period of thirty days (*Lex. Cant. l. c.* παρ' οἷς διαλογίζονται πᾶσαι αἱ ἀρχαὶ τά τε λήμματα καὶ τὰς γεγενημένας δαπάνας· καὶ ἄλλους δέκα συνηγόρους, οἵτινες συνανακρίνουσι τούτοις: cf. *C. I. A.* ii. No. 578, the oath of the λογιστὴς of the deme of Myrrhinus, λογιεῖσθαι ἃ ἄν μοι δοκῇ ἀνηλωκέναι: they held their meetings in the λογιστήρια, Andoc. *de Myst.* § 78; Harp.). At this ἀνάκρισις the εὔθυνοι, who seem to have exercised a kind of general financial control and to have been assigned with their πάρεδροι to the several departments (Boeckh, *Securk.* p. 466, and Schol. Plat. *Legg.* xii. p. 945 B), might bring charges against the ὑπεύθυνος (see the oath of the εὔθυνος, *C. I. A.* ii. No. 578, καὶ ἐάν μοι δοκῇ ἀδικεῖν, κατευθυνῶ αὐτοῦ καὶ τιμήσω [ἐπιτίμιον, Schöll] οὗ ἄν μοι δοκῇ ἄξιον εἶναι τὸ ἀδίκημα), and probably private individuals likewise had a chance of doing so (Aeschin. *l. c.* § 23, ἐχρῆν σε . . . ἐᾶσαι τὸν τῶν λογιστῶν κήρυκα κηρῦξαι τὸ πάτριον καὶ ἔννομον κήρυγμα τοῦτο· τίς βούλεται κατηγορεῖν: cf. Dem. *de Fals. Leg.* p. 341, § 2, γραφὴ περὶ τῶν εὐθυνῶν, Andoc. *de Myst.* § 78). We know something about the nature of such charges: Antiphon (*de Choreut.* § 43) argues that the basileus had acted within his rights, since Philocrates had not brought a charge against him on the occasion of the εὔθυναι: again, the generals are said ([Lys.] *pro Milit.* § 11) to have evaded the εὔθυναι, fearing they would be called to account for a fine illegally inflicted; cf. also Lys. *c. Theomn.* i. § 16. On such occasions the sycophantae plied their trade

---

* Λογισταὶ in Eretria (Rangabé, No. 689), in Ephesus, in Gambreium (Dittenberger, *Syll.* Nos. 253, 29; 470, 35), in Delos (*Bull.* vi. p. 25, l. 202), in Tenos, in Issa (*C. I. G.* Nos. 202–206; 1834); ἐξετασταὶ in Erythrae, in Smyrna, in Halicarnassus (Dittenberger, Nos. 370, 25; 171, 54 f.; 371, 33 f.); Ἀπόλογοι in Thasos (Cauer,² *Del.* No. 527; *Journ. of Hell. Stud.* viii. p. 410), in Agrigentum (*C. I. G.* No. 2161). (Gilbert, *Staatsalt.* ii. p. 336, n. 1.)

(Aristoph. *Eq.* 259 ff., 824; [Dem.] *c. Aristog.* i. p. 781, § 37). Even when the accounts were found correct and no accuser appeared, the *λογισταὶ* could not discharge the *ὑπεύθυνος* (*ἐπισημαίνεσθαι τὰς εὐθύνας*, Dem. *de Cor.* p. 310, § 250); this could only be done by a court of 501 judges presided over by the *λογισταί* (Dem. *de Fals. Leg.* p. 406, § 211; *de Cor.* p. 266, § 117; Aeschin. *l. c.* § 19 ff.; *C. I. A.* ii. Nos. 469, l. 61, 470, l. 71; *Lex. Cant.* l. c.), or by the thesmothetae in case of *εὔθυναι* of generals. In case of irregularities being discovered at the *ἀνάκρισις* by the *λογισταὶ* and *συνήγοροι*, it devolved upon the latter to bring the charge before the court (see the oath of the *συνήγορος* in *C. I. A.* ii. No. 578); and if the *εὔθυνος* or a private person had brought a charge, they acted as accusers before the court. Such a cause (*γραφὴ περὶ τῶν εὐθυνῶν*) was *τιμητός* (Suid. *s. v.*), and *κλοπὴ δημοσίων χρημάτων* (Aeschin. *c. Ctes.* § 10; Dem. *c. Timocr.* p. 735, § 112), *δώρων* (Dem. *de Fals. Leg.* p. 429, § 273), and with ambassadors *παραπρεσβεία* were principally the offences charged against officers (*εὐθύνας ὀφλεῖν* is the technical term for being convicted).

In like manner the officers of the demes, the *δήμαρχος*, the *ἱεροποιοί*, the *ταμίαι* (*C. I. A.* ii. Nos. 578, 581, 571) had to give an account after their time of office was over. In the deme of Myrrhinus the demarchus had to render his account before the *εὔθυνος* of the deme who had to award the penalty, the *λογιστὴς* who had to examine the accounts, and ten elected *συνήγοροι*, who, after having been sworn in by the new demarchus (*ὁ νέος*, Köhler), decided the case by secret voting; it was possible to appeal from this decision to a meeting of the demotae; and if the sentence of the *συνήγοροι* was upheld, the fine was increased by one-half. (R. Schöll, *de Synegoris Atticis Comm.*; *Att. Process*, ed. Lipsius, pp. 112–117, 257–269.) [L. S.] [H. H.]

EXAGIA or **HEXAGIA.** [PONDERA.]

EXAGO'GE, ejectment to try the right of property. [EXOULES DIKÉ.]

EXAGO'GES GRAPHE' (*ἐξαγωγῆς γραφή*) might be instituted, it is said, against one who, acting as *κύριος* of an Athenian woman, married her to a foreigner in a foreign land (*Att. Process*, ed. Lipsius, p. 443 f.). Our information concerning this suit is very scanty. Timocrates is charged with having sold his sister to a Corcyrean, an offence deserving capital punishment (Dem. *c. Tim.* p. 763, § 202); he meets the charge by saying that he married her to a foreigner and did not sell her (*τὴν μὲν ἀδελφὴν ἐπ' ἐξαγωγῇ φησὶ μὲν ἐκδοῦναι, πέπρακε δὲ τῷ ἔργῳ*). From this Thonissen (*Droit Pénal*, p. 345 n.) concludes that giving in marriage to a foreigner in due form was not actionable. The action against Aristogiton ([Dem.] *c. Aristog.* i. p. 787, § 55) is very complicated (Lipsius, *Leipz. Stud.* vi. p. 323 f.); he is charged by his own brother with having sold their half-sister to be taken into a foreign country, *ἐπ' ἐξαγωγῇ ἀπέδοτο* (cf. Pollux, iii. 125) *ὥς φησι τὸ ἔγκλημα τῆς δίκης*, etc. The charge is the same, viz. *πρᾶσις ἐπ' ἐξαγωγῇ* (§ 58), and the punishment is the same, viz. death (§ 80), as in Timocrates' case, but the speaker calls as witness the arbitrator in the action (§ 58), and only private actions could be laid before arbitrators; moreover the term *ἔγκλημα* is employed (§§ 58, 80), which is used of private actions only (*Att. Process*, ed. Lipsius, p. 791), yet it is scarcely possible that such an offence could have been the subject of a private action. Dareste (*Plaidoyers polit. de Dem.* ii. pp. 344–346) suggests that it was a private action brought by the brother in order to obtain his half of the price realised by the sale, but the wording of the charge (§ 58) makes this supposition untenable. Lipsius (*Att. Process*, p. 275, n. 209; cf. p. 791, n. 105) does not consider *ἐπ' ἐξαγωγῇ πιπράσκειν* a technical term, and thinks that such an offence had to be proceeded against by a *γραφὴ ἀνδραποδισμοῦ*: cf. the definition of *ἀνδραποδιστής*, given by the Scholiast on Aristoph. *Plut.* 521, *οὐ μόνον ὁ τοὺς ἐλευθέρους δι' ἀπάτης ἀπάγων εἰς δουλείαν* (*Etym. M.* 102, 7), etc.; such offenders were put to death (Xen. *Mem.* i. 2, 62 f.). A third instance of this action is supplied by Ps. Plut. *Vitt. X. Oratt.* p. 834 E. Andocides sent a relative of his as a present (Tzetz. *Hist. Chil.* vi. 373, *πυρῶν πωλεῖ τῷ βασιλεῖ*) to the king of Cyprus, *λάθρα τῶν οἰκείων ἐξαγαγών*, but stole her again when he was to be brought before a court (*μέλλων ἐπὶ τούτοις εἰς δικαστήριον εἰσάγεσθαι*). [C. R. K.] [H. H.]

EXAIRE'SEOS DIKE' (*ἐξαιρέσεως* or *ἀφαιρέσεως δίκη*) was an action brought to recover damages for the attempt to deprive the plaintiff of his slave; not where the defendant claimed a property in the slave, but where he asserted him to be a freeman, or, as in Aeschin. *c. Tim.* § 62, a public slave. As the condition of slavery at Athens incapacitated a man from taking any legal step in his own person, if a reputed slave wished to recover his rights as a freeman, he could only do it by the assistance of one who was himself a freeman,* and who was said *ἐξαιρεῖσθαι* or *ἀφαιρεῖσθαι αὐτὸν εἰς ἐλευθερίαν* (Lys. *c. Pancl.* § 10; *ὡς ἐλεύθερον ὄντα*, Isocr. *Trapez.* § 14) *in libertatem vindicare.* If the *ἀφαιρούμενος*, in resisting the capture of the reputed slave on the part of him who claimed to be the slave's master (*ἄγειν*, [Dem.] *c. Neaer.* p. 1358, § 40; Isae. *pro Eumath.* fr. 15, or *ἄγειν εἰς δουλείαν*, Aeschin. *l. c.*, Isae. *l. c.* fr. 16), used actual violence, he was subject to a *δίκη βιαίων*: if, on the other hand, he meant to contest the master's right, the proper course was to go before the polemarch (*Att. Process*, ed. Lipsius, p. 56), and the master held the slave to bail (*κατεγγυᾶν πρὸς τῷ πολεμάρχῳ*, [Dem.] *l. c.*; *πρὸς τὸν πολέμαρχον*, Isocr. *l. c.*), and the *ἀφαιρούμενος* becomes bail (*διεγγυᾶται*, Pasion for seven talents, Isocr. *l.c.*; Stephanus and two others in [Dem.] *l. c.*: cf. Plat. *Legg.* xi. p. 914 E, *ὁ δ' ἀφαιρούμενος ἐγγυητὰς τρεῖς καταστήσας*, etc.). It was the duty of the polemarch to set the man at liberty *pendente lite.*† At the trial before *οἱ τετταράκοντα* which followed, the reputed owner had to prove his right to the slave, and, if successful, obtained such compensation as the jury chose to award, this being a *τιμητὸς*

---

* The same in the Gortyn Code (l. 14, 15), but ἄγων (εἰς δουλείαν) πρὸ δίκας was forbidden (l. 2).

† From Lys. c. *Pancl.* 9 it would seem that the ἄγων had to set at liberty the slave he claimed, if surety was given that next day some one would reclaim him as a free man.

ἀγών (*Att. Process*, ed. Lipsius, p. 221), and the defendant had to pay to the treasury a sum equal to the damages ([Dem.] *c. Theocr.* p. 1328, § 20); hence it is strange that such actions might be settled out of court, as in the case of Pittalacus, the public slave whom Hegesander laid hold of, asserting that he was his slave (Aeschin. *c. Tim.* § 63; cf. [Dem.] *c. Neaer.* p. 1360, § 45 ff.). The jury would probably take into consideration, in estimating the damages, whether the slave was to be returned to the owner (cf. Lys. *c. Pancl.* 12) or not.

In a speech of Isocrates (*Trapez.* § 13 f. and 49) the defendant, a banker, from whom it is sought to recover a deposit, is charged with having asserted the freedom of his own slave, in order to prevent his being examined by torture respecting the sum of money deposited in his hands. This is remarkable, because the speaker and Menexenus never claimed the slave as their own; the case seems to prove that not only the person who asserted that the slave was his, but also the person who had an interest in the matter that a slave should be recognised as such, was entitled to the ἀγωγὴ εἰς δουλείαν. (*Att. Process*, ed. Lipsius, pp. 657–665.) [C. R. K.] [H. H.]

EXA'MEN. [LIBRA.]

EXAUCTORA'TIO. [EXERCITUS.]

EXAUGURA'TIO is the act of taking away from a place or thing the sacred character which it had received by inauguratio, consecratio, or dedicatio. That such an act was performed by the augurs, and never without consulting the pleasure of the gods by augurium, is implied in the name itself. (Liv. i. 55, cf. v. 54, 69; Dionys. Hal. *Antiq. Rom.* iii. p. 162; Cato *ap.* Festus, s. v. *Nequitum.*) Temples, chapels, and other consecrated places, as well as priests, were considered as belonging to the gods. No consecrated place whatever could be applied for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, without being previously exaugurated; and priests could not give up their sacred functions, nor could a vestal virgin, after the expiration of her thirty years of service, enter into matrimony, without first undergoing the process of exauguratio. (Gellius, vi. (vii.) 7, 4; Jul. Capitol. *M. Antom. Philos.* c. 4.) [L. S.] [A. S. W.]

EXCE'PTIO. [ACTIO.]

EXCU'BIAE. [CASTRA, p. 377 *a*.]

EXCUBITO'RES, which properly means watchmen or sentinels of any kind (Caes. *Bell. Gall.* vii. 69), was the name more particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor (Suet. *Ner.* 8, *Oth.* 6). Their commanding officer was called *tribunus excubitor* (Suet. *Claud.* 42; *Ner.* 9). When the emperor went to an entertainment at the house of another person, the excubitores appear to have accompanied him, and to have kept guard as in his own palace (Suet. *Oth.* 4). [W. S.]

E'XEDRA or EXHEDRA (ἐξέδρα) is properly a recessed seat built out from a portico and opening into it (Marquardt, *Privatl.* 242 n.); usually of a semicircular shape, hence called *absis* in a glossary *ap.* Mai *Auctar. Class.* iii. 459; and probably identical with the *hemicyclium* of Cic. *de Am.* 1, § 2 [HEMICYCLIUM]. Hence it came to mean, among the Greeks, a hall or colonnade furnished with recessed seats, where people met to enjoy conversation; such as the rooms which opened on to the peristyle of the *andronitis* [DOMUS, p. 662 *a*] (Vitruvius says *gynaeconitis*, but this is a mistake, *ib.* 660 *b*); or in the gymnasia and schools of philosophers. Vitruvius reckons exedrae with *peristylia* as open buildings, where colours would fade in the strong sunlight (vii. 9, § 2), but they must have included also covered halls, cool and shady (Lucian, *Anachars.* 16, p. 895 R; Becker-Göll, *Charikles*, ii. 233). Late writers (*e.g.* Pollux, vii. 123) sometimes identify the ἐξέδρα with the παστάς, a room on the side of the peristyle facing the entrance [DOMUS, p. 662 *b*]; but this applies only to Roman times and manners (Hermann-Blümner, *Privatalterth.* p. 150 n.). The use of the word in Eurip. *Orest.* 1449 is peculiar; the slaves are driven, some to the house, some to the stables, others to the ἐξέδραι, *i.e.* apparently to "out-houses:" the gloss ἀπόπατοι, however supported by similar words (ἀφεδρών, θᾶκος), would be a comic touch quite out of keeping.

In early Greece the λέσχη was simply a lounge or place of gossip, not a building at all; in later times the word denoted a larger and more public place of resort than the ἐξέδρα [LESCHE].

Among the Romans the word had a wider meaning, answering to both the Greek terms, ἐξέδρα and λέσχη. Thus it is not only used to signify a chamber for ordinary resort and conversation in a private house, or in the public baths and gymnasia open to the sun and air (Vitruv. v. 11, vii. 9; Cic. *Orat.* iii. 5, § 17, *de Nat. Deor.* i. 6, § 15; Varro, *R. R.* iii. 5, § 8; Ulpian, *Dig.* 9, 3, 5, § 2), but the word is even applied to the hall attached to the theatre of Pompey, which was used as a place of meeting by the senate (Plut. *Brut.* 14, 17). The diminutive *exedrium* also occurs (Cic. *ad Fam.* vii. 23). [P. S.] [W. W.]

EXEGE'TES (ἐξηγητής), an expounder, interpreter, is used both in an ordinary and an official sense. A local guide or *cicerone* is so styled (Strab. xvii. p. 806; Paus. i. 41, § 2); Aeschines, ridiculing Demosthenes for his conduct on the Embassy, calls him the ἐξηγητὴς of the absurd stories with which he regaled his colleagues (Aeschin. *F. L.* § 40). More usually, however, the word was applied to any interpreter of laws, whether sacred or secular, but especially the former (*Etym. M.*, s. v.); thus the whole order of Eupatrids were in the old times νόμων διδάσκαλοι, ὁσίων καὶ ἱερῶν ἐξηγηταί (Plut. *Thes.* 25). Among the Eupatrids, again, the Eumolpidae (*q. v.*) were ἐξηγηταὶ of a special class of sacred laws, those, namely, relating to the Eleusinian mysteries; these laws were unwritten, and of immemorial antiquity ([Lys.] *c. Andoc.* § 10). But with regard to the written and civil laws of Athens in democratic times, the notion of several grammarians that there was a class of ἐξηγηταὶ or expounders of them, answering to the Roman jurisconsults, is untenable, and indeed no longer held; the silence of the orators is sufficient proof that no such persons existed (Ruhnken, on Timaeus, *Lex. Plat.* s. v.). Respecting the ἐξηγητὴς of the laws of Lycurgus at Sparta, who in all probability never existed, see Müller, *Dor.* iii. 11, 2. In Athenian courts, both the dicasts and the presiding judges acted without the guidance of trained lawyers, and required the laws which they administered to be intelligible to plain men. At the same time, the conservatism of ancient religion involved a frequent appeal to experts in purely ceremonial matters. Thus, the guilt of a homicide and the punishment of it were to be determined by the law-courts; but if the homicide were proved accidental or justifiable, the ceremonial expiation, the reconciliation with the relatives of the deceased, and the disposal of the corpse remained as the province of *ἐξηγηταί*: and various other points connected with funerals were referred to them ([Dem.] *c. Everg. et Mnes.* p. 1160, § 68; Isae. *Or.* 8 [*Ciron.*], § 39: in these two passages the persons interested in the burial consult *ἐξηγηταὶ* as to "the right thing to be done"; they are cases of conscience, as is also the somewhat different case in Plat. *Euthyphr.* 4 D). Hence Plato in his ideal laws introduces *ἐξηγηταὶ* of funerals, whom Cicero quoting the passage calls *religionum interpretes* (Plat. *Legg.* xii. 958 D; Cic. *de Legg.* ii. 27, § 67). Elsewhere Plato declares that the laws about all divine things shall be brought from Delphi, and administered by *ἐξηγηταί* (*Legg.* vi. 759 C), who are to be men of venerable age and high character, appointed for life after a strict *δοκιμασία* (*ib.* E): he further entrusts them with the regulation of marriage rites (vi. 775 A). How far these provisions coincided with the real law of Athens we are not in a position to say.

In an official sense, the Exegetae were a board of three persons, to whom application might be made in matters relating to sacred law; they were all to be Eupatrids, and one of them necessarily a member of the family of the Eumolpidae. The mode of their appointment is not known; and the question whether they took cognisance of all appeals from private persons like those mentioned above, or only of public matters, is open to some doubt. They attended in the assembly of the people, and interpreted the *διοσημίαι* or signs from heaven [Ecclesia, p. 701 *b*]; they had thus the power of stopping the business in hand, corresponding to the *obnuntiatio* of the Roman augurs. But we may be sure that the democratic Athenians would not allow an absolute or irresponsible veto to these or any other officials; their action, like that of an Epistates who refused to put the question to the vote, was no doubt liable to impeachment: in practice it is probable that only a smart shower or other unmistakeable phenomenon was allowed to break up the meeting; so that their duty would be purely a formal one. The gloss of Timaeus, identical with the second of the two in Suidas, runs as follows: *Ἐξηγηταὶ τρεῖς γίνονται Πυθόχρηστοι, οἷς μέλει καθαίρειν τοὺς ἄγει τινὶ ἐνισχηθέντας· καὶ οἱ ἐξηγούμενοι τὰ πάτρια.* These grammarians certainly understood the phrase *τὰ πάτρια* in too wide a sense: we may further doubt, with Schömann, whether the Delphic oracle was really consulted. (Pollux, viii. 124 and 188; Suid., *Etym. M.*, *Lex. Rhet.* s. v.; Ruhnken on Timaeus; O. Müller on Aesch. *Eumen.* p. 162 ff.; Schömann, *Antiq.* i. 429, E. T.; Gilbert, *Staatsalterth.* i. 360.) [L. S.] [W. W.]

EXERCITO'RIA A'CTIO was one of those praetorian actions (called by the civilians *actiones adjectitiae qualitatis*) by which principals were made directly suable by third persons who contracted with their agents. This one applied particularly to the case of contracts made by the captain of a vessel as agent, express or implied, of its owner or charterer (*Inst.* iv. 7, 2), its name being derived from *exercitor*, the person "ad quem cottidianus navis quaestus pertinet" (*Inst.* loc. cit.; cf. Dig. 14, 1, 1, 15), whether he actually owned the vessel, or had merely hired or chartered it for a time, definite or indefinite. By this action the *exercitor* could be sued upon all contracts made by the captain (*magister*) in connexion with the vessel or its voyage, *e.g.* repairs ("si quid cum eo ejus rei gratia, cui praepositus erit, contractum fuerit," *Inst.* loc. cit; cf. Dig. 14, 1, 1, 7), because it was as his agent that the *magister* made them; but the other party to the transaction—*e.g.* the shipbuilder who executed the repairs—might always sue the *magister* if he preferred it, the remedy in this case of course being the ordinary action on the contract (e.g. *locati*). It was immaterial whether the *magister* was a slave or *filius familias* of the *exercitor*, or an "extranea persona" (*i.e.* free agent), Gaius, iv. 71, *Inst.* loc. cit.: but his contracts would not bind his principal, so that the *actio exercitoria* would not lie, if he exceeded his commission: if, for instance, being appointed to use the ship for one purpose, he used it for another. If there were several *magistri*, without any partition of their duties (*non divisis officiis*), a contract with one was a contract with all: and if there were several *exercitores*, who appointed a *magister* either out of their own number or not, they were severally answerable *in solidum* for the contracts which he made under his commission: the other contracting party might select which of them he pleased as his defendant in the *actio exercitoria*. [J. B. M.]

EXE'RCITUS (*στρατός*), army. I. Greek. The earliest notices which we possess of the military art among the Greeks are those contained in the Homeric poems. The unsettled state of society in the first ages of Greece led to the early and general cultivation of the art of arms, which were habitually worn for defence, even when aggressive warfare was not intended (Thuc. i. 6). But the Homeric poems contain an exhibition of combined military operations in their earliest stage. Warlike undertakings before the time described in them can have been little else than predatory inroads (*βοηλασίαι*, *Il.* xi. 672). A collection of warriors exhibiting less of organisation and discipline than we see depicted in the Grecian troops before Troy, would hardly deserve the name of an army. The organisation which we see there, such as it was, arose, not from any studied, formative system, but naturally out of the imperfect constitution of society in that age. Every freeman in those times was of course a soldier; but when all the members of a family were not needed to go upon an expedition under the command of their chieftain or king, those who were to go seem to have been selected by lot (*Il.* xxiv. 400). As the confederated states, which are represented as taking part in the Trojan war, are united by scarcely any other bond than their participation in a common object, the different bodies of troops, led by their respective chieftains, are far from being united by a common discipline under the command-in-chief of Agamemnon. A common epithet for allies is "called from afar" (τηλεκλειτοί, *Il.* v. 491, vi. 111). Each body obeys its own leader, and follows him to the conflict, or remains inactive, according as he chooses to mingle in the fight or not. Authority and obedience are regulated much more by the nature of the circumstances, or by the relative personal distinction of the chieftains, than by any law of military discipline. Gifts (δῶρα) were given to them at the end of service; and such may be considered as the beginning of pay being given to soldiers (*Il.* xvii. 225). Agamemnon sometimes urges the chieftains to engage, not by commands, but by taunts (*Il.* iv. 338 ff., 368 ff.). Accordingly, nothing like the tactics or strategy of a regularly disciplined army is to be traced in the Homeric descriptions of battles. Each chieftain with his body of troops acts for himself, without reference to the movements of the rest, except as these furnish occasion for a vigorous attack, or, when hard pressed, call for assistance from the common feeling of brotherhood in arms. The wide interval which in the Homeric age separated the noble or chieftain from the common freeman, appears in as marked a manner in military as in civil affairs. The former is distinguished by that superior skill and prowess in the use of his arms, which would naturally result from the constant practice of warlike exercises, for which his station gave him the leisure and the means. A single hero is able to put to flight a whole troop of common soldiers. The account of a battle consists almost entirely of descriptions of the single combats of the chiefs on both sides; and the fortune of the day, when not overruled by the intervention of the gods, is decided by the individual valour of these heroes. While the mass of the common soldiers were on foot, the chiefs rode in chariots [CURRUS], which usually contained two, one to drive (ἡνίοχος) and one to fight (παραιβάτης). In these they advanced against the antagonists whom they singled out for encounter, sometimes hurling their spears from their chariots, but more commonly alighting, as they drew near, and fighting on foot, making use of the chariot for pursuit or flight. The Greeks did not, like the ancient Britons and several nations of the East, use the chariot itself as an instrument of warfare. Cavalry was unknown at that time to the Greeks, and horsemanship but very rarely practised; the ἱππῆες of Homer are the chieftains who ride in chariots. These chiefs are drawn up in the front of the battle array (*Il.* iv. 297, 505, πρόμαχοι, προμάχεσθαι); and frequently the foot-soldiers seem to have done nothing but watch the single combats of their leaders, forming in two opposite, parallel lines, between which the more important single combats are fought. How they got the chariots out of the way when the foot-soldiers came to close quarters (as in *Il.* iv. 427 ff.) is not described.

Though so little account is usually made of the common soldiers (πρυλέες, *Il.* xi. 49, xii. 77), Homer occasionally lays considerable stress on their orderly and compact array; the Atreidae are honourably distinguished by the epithet κοσμήτορε λαῶν (*Il.* i. 15). Nestor and Menestheus were also skilled in marshalling an army (*Il.* ii. 553, iv. 293 ff.). The troops were naturally drawn up in separate bodies according to their different nations. It would appear to be rather a restoration of the old arrangement than a new classification, when Nestor (*Il.* ii. 362) recommends Agamemnon to draw the troops up by tribes and phratries. Arranged in these natural divisions, the foot-soldiers were drawn up in densely compacted bodies (πυκιναὶ φάλαγγες)—shield close to shield, helmet to helmet, man to man (*Il.* xiii. 130, xvi. 212 ff.). In these masses, though not usually commencing the attack, they frequently offer a powerful resistance, even to distinguished heroes (as Hector, *Il.* xiii. 145 ff., comp. xvii. 267, 354 ff., xiii. 339), the dense array of their spears forming a barrier not easily broken through. The signal for advance or retreat was not given by instruments of any kind, but by the voice of the leader. A loud voice was consequently an important matter, and the epithet βοὴν ἀγαθὸς is common. The soldiers advanced and engaged in battle with loud shouting (ἀλαλητός, *Il.* iv. 436, xiv. 393). The trumpet, however, was not absolutely unknown (*Il.* xviii. 219). Respecting the armour, offensive and defensive, see ARMA. No engines for besieging are found. There were in the army, besides the hoplites, light-armed troops, archers and slingers (*Il.* xiii. 767).

Under the king or chieftain who commands his separate contingent we commonly find subordinate chiefs, who command smaller divisions. It is difficult to say whether it is altogether accidental or not, that these are frequently five in number. Thus the Myrmidons of Achilles are divided into five στίχες, each of 500 men. Five chiefs command the Boeotians; and the whole Trojan army is formed in five divisions, each under three leaders. (*Il.* iv. 295 ff., xvi. 171–197, ii. 494, 495, xii. 87–104.) The term φάλαγξ is applied either to the whole army (as *Il.* vi. 6), or to these smaller divisions and subdivisions, which are also called στίχες and πύργοι (*Il.* xi. 90, iv. 333).

When an enemy was slain, it was the universal practice to stop and strip off his arms, which were carefully preserved by the victor as trophies. The division of the booty generally was arranged by the leader of the troop, for whom a portion was set aside as an honorary present (γέρας, *Il.* i. 118, 368, 392). The recovery of the dead bodies of the slain was in the Homeric age, as in all later times, a point of the greatest importance, and frequently either led to a fierce contest (*Il.* xvi. 756 ff.), or was effected by the payment of a heavy ransom (*Il.* xxiv. 502). (Köpke, *Kriegswesen der Griechen in heroischen Zeitalter;* Wachsmuth, *Hellen. Alterthumsk.* vol. ii. § 110; Grote, *History of Greece*, vol. ii. p. 106; Buchholz, *Die Homerischen Realien*, ii. 1, 303–331.)

After the heroic age considerable impulse was given to the cultivation of the military art by the conquests of the Thessalians (the first Grecian people, apparently, that employed cavalry, to the use of which their conquests were probably in great part owing) and Dorians, among the latter of whom the art of warfare was earliest reduced to system. The distinction of heavy and light armed foot-soldiers of course took its rise with the beginnings of military service, the poorer class being unable to provide themselves with the more efficient, but more costly weapons of those who were better off than themselves. Political considerations tended to make the distinction more marked and systematic. The system of military castes was indeed unknown among the Greeks, though something answering the same purpose existed in the earliest times, when the nobles and their more immediate dependents and retainers, having greater leisure for the cultivation of skill in the use of arms and greater means for procuring them, were separated in that respect by a wide interval from the lower class; while conversely, military superiority was the most direct means of securing political supremacy. Hence, as soon as the distinction between the nobles (the privileged class) and the commonalty (demus) was established, it became the object of the former to prevent the latter from placing themselves on a par with them in military strength, and so the use of the full armour of the heavy-armed infantry was reserved by the former for themselves; and when, in times of distress, it was found necessary to entrust the demus with full armour, the result was not uncommonly a revolution (as was in some degree the case at Mytilene, Thuc. iii. 27). But in the democracies this distinction as regards the kinds of service depended merely upon the greater or less ability of the citizens to procure arms. In the Greek commonwealths all those who enjoyed the privileges of citizens or freemen were held bound to serve as soldiers when called upon, and were provided with arms and trained in military exercises as a matter of course. The modern system of standing armies was foreign to Greek habits, and would have been dangerous to the liberties of the different commonwealths, though something of the kind may be seen in the body-guards, usually of mercenary troops, kept by tyrants. The mercenaries in the pay of Alexander of Pherae formed a considerable army. Practically too, from the continuity of the warlike operations in which they were engaged, the armies of Philip and Alexander of Macedon, and their successors, became standing armies. The thousand λογάδες at Argos (Thuc. v. 67; Diod. xii. 75), the sacred band at Thebes (Plut. *Pelop.* 18), and the Arcadian ἐπάριτοι (EPARITI) were not considerable enough to be called armies. The employment of mercenary troops might have led to the use of standing armies, had it not been that the use of them characterised the decline of the Grecian states, so that the circumstances which led to their employment also rendered it impossible to provide the resources for their maintenance, except when they were immediately needed. Still, as in the case of the Scythian bowmen at Athens, individual corps of mercenaries might be regularly maintained. Slaves were but rarely trusted with arms; and when it was the case, they were usually manumitted. The Greek armies accordingly were national armies, resembling rather the militia than the regular armies of modern times. Their smallness in comparison with modern armies must be noticed. The largest Greek armies we know of as having operated in Hellas proper were, at Plataea, 38,700 hoplites and 69,500 ψιλοί (Herod. ix. 28 ff.); in the first invasion of Attica by the Lacedaemonians, 70,000 (Plut. *Per.* 33); in the invasion of Laconia by Epaminondas, 70,000 (Plut. *de Glor. Ath.* 2). At Mantineia, in 362 B.C., 33,000 Thebans fought against 23,000 Lacedaemonians, according to Diodorus (xv. 84).

In all the states of Greece, in the earliest as in later times, the general type of their military organisation was the *phalanx*, a body of troops in close array with a long spear as their principal weapon. It was among the Dorians, and especially among the Spartans, that this type was most rigidly adhered to. See Tyrtaeus *passim*, who insists on the especial duties of fighting ἐν προμάχοισι, and each keeping his place in the phalanx. The strength of their military array consisted in the heavy-armed infantry (ὁπλῖται). They attached comparatively small importance to their cavalry, which was always inferior (Xen. *Hell.* vi. 4, § 10). Indeed, the Thessalians and Boeotians were the only Greek people who distinguished themselves much for their cavalry; scarcely any other states had territories adapted for the evolutions of cavalry. The Spartan army, as described by Xenophon, was probably in all its main features the same that it was in the time of Lycurgus. The institutions of that lawgiver converted the body of Spartan citizens into a kind of military brotherhood, whose almost sole occupation was the practice of warlike and athletic exercises. The whole life of a Spartan was little else than either the preparation for or the practice of war. The result was, that in the strictness of their discipline, the precision and facility with which they performed their military evolutions, and the skill and power with which they used their weapons, the Spartans were unrivalled among the Greeks, so that they seemed like real masters of the art of war (τεχνίτας τῶν πολεμικῶν), while in comparison with them other Greeks appeared mere tyros (αὐτοσχεδιαστὰς τῶν στρατιωτικῶν, Xen. *Rep. Laced.* xiii. § 5; ἄκροι τεχνῖται καὶ σοφισταὶ τῶν πολεμικῶν, Plut. *Pelop.* 23). The heavy-armed infantry of the Spartan armies was composed partly of genuine Spartan citizens, partly of Perioeci (*e.g.* Thucyd. iv. 8; comp. Grote, *Hist. of Greece*, vol. ii. p. 458). In later times, as the number of Spartan citizens decreased, the Perioeci constituted the larger portion, a fact which renders nugatory all attempts to connect the numbers of the divisions of the army with the political divisions of the Spartan citizens. The proclamation of the levy was called φρουρὰν φαίνειν (Xen. *Hell.* iii. 5, 6; iv. 2, 9, &c.); but if the service was abroad, it was called στρατιὰν ποιεῖν (*ib.* v. 2, 20): cf. A. Bauer in Müller's *Handbuch*, iv. 247. Every Spartan citizen was liable to military service (ἔμφρουρος) from the age of twenty to the age of sixty years. In later times the father of three sons was exempt (Arist. *Pol.* ii. 9, 13). Those beyond that age were, however, sometimes employed in the less arduous kinds of service—as at Mantineia, where they had charge of the baggage (Thuc. v. 72). On the occasion of any military expedition, the kings at first, and afterwards the ephors, made proclamation what class, according to age, were to go on the expedition (τὰ ἔτη εἰς ἃ δεῖ στρατεύεσθαι, Xen. *Rep. Lac.* xi. § 2): as, for example, all citizens between twenty and thirty, or between twenty and thirty-five, &c. (τὰ δέκα ἀφ' ἥβης, τὰ πεντεκαίδεκα ἀφ' ἥβης, &c.). On one occasion (B.C. 418), on a sudden emergency, when probably there was not time to collect the Perioeci, all the citizens of the military age were called forth (Thuc. v. 64).

The political and military divisions of the Spartans were mixed up together in some way which it is not easy to unravel. The whole life of a Spartan was passed in the discipline of a kind of camp. The citizens messed together in companies, and slept in a sort of barracks. It appears from Xenophon (*Rep. Lac.* xi. 4 ff.) that the whole body of citizens of military age was divided into six divisions called μόραι (πολιτικαὶ μόραι he terms them: we are not to read ὁπλιτικῶν: cf. Xen. *Hell.* v. 3, 25), under the command or superintendence of a polemarch, each mora being subdivided into two λόχοι (commanded by λοχαγοί), each λόχος into two πεντηκοστύες (headed by πεντηκοστῆρες), each πεντηκοστὺς into two ἐνωμοτίαι (headed by enomotarchs). Xenophon indeed speaks of four λόχοι, but compare Xen. *Hell.* vii. 4, 20, τῶν δώδεκα λόχων: 5, 20; and E. Müller, *Jahrb. für Phil.* lxxv. 99. The ἐνωμοτίαι were so called from the men composing them being bound together by a common oath (τάξις τις διὰ σφαγίων ἐνώμοτος, Hesych. *s. v.*). It was composed of men of the same age, as is implied in the fact that the members of the enomoty were trained to act together, and that men under thirty or thirty-five years were often detached in a battle to pursue the light troops of the enemy (Xen. *Hell.* iv. 5, 15, 16; Grote, ii. 459). It is to be further noticed that fathers, brothers, and sons appear in different μόραι (Xen. *Hell.* iv. 5, 10); and inhabitants of the same locality did not serve together, for we find the Amycleans scattered through the whole army (*ib.* § 11). These were not merely divisions of troops engaged in actual military expeditions. The whole body of citizens at all times formed an army, whether they were congregated at head-quarters in Sparta, or a portion of them were detached on foreign service. Herodotus (i. 65) speaks of enomoties, triacades (which are not mentioned elsewhere), and syssitia as military divisions, and we learn that the polemarchs presided over the public tables (Plut. *Lyc.* 12). But these were not military divisions, but civil societies framed in Sparta to increase the feeling of comradeship so useful in war (Plat. *Legg.* i. 625 E). It was a principal feature of Spartan discipline that among the youths the elder should teach the younger, and so the well-known relation of the εἰσπνήλας and ἀΐτας was established. (For details, see Gilbert, *Staatsalterthümer*, i. 70.) When a portion of the citizens was sent out on foreign service, the army that they formed was arranged in divisions corresponding to, and bearing the same names as, the divisions of the entire military force of Sparta, *i.e.* of the entire body of citizens of military age. As has already been remarked, an army sent on foreign service consisted of citizens between certain ages, determined according to the number of soldiers wanted. So that, as it would seem, every enomotia of the general body sent out a certain proportion of its numbers for the expedition in question, who (with some Perioeci) formed an enomotia of the army so sent; and the detachment of those enomotiae which formed a mora of the whole body of citizens, formed (apparently) a mora of the army on service. All the accounts that we have of Spartan military operations indicate that the Perioeci who served as heavy-armed soldiers, formed integral members of the different divisions to which they were attached; so that an enomotia, pentecostys, &c., in the field, would contain a number of soldiers who did not belong to the corresponding larger divisions of the whole body of citizens of military age (Thuc. iv. 8, 38; Xen. *Hell.* vi. 4, 15–17, vii. 4, 27). However, Gilbert (*op. cit.* i. 74 ff.) thinks that up to 425 B.C. the Perioeci served apart, and he refers for the time of the Persian Wars to Herod. ix. 10, 11, 28. Thirlwall (*Hist. of Greece*, vol. i. app. ii.) talks of thirty families being *represented in the army* by thirty soldiers; an idea totally at variance with all the accounts that we have. Supposing a family to consist of a father and three sons, if the latter were above twenty, and the father not above sixty years of age, all would be soldiers, liable to be called out for active service at any time; and according to the limits of the age proclaimed by the ephors, one, two, three, or all of them might be called out at once. The strength of a mora on actual service, of course, varied according to circumstances. To judge by the name pentecostys, the normal number of a mora would have been 400; but 500, 600, and 900 are mentioned as the number of men in a mora on different occasions (Plut. *Pelop.* 17; Xen. *Hell.* iv. 5, 12; Schol. *ad* Thuc. v. 66; Diod. xv. 32, &c.; Müller, *Dorians*, iii. 12, § 2, note t). That these variations arose from variations in the number of Spartan citizens (Haase in Ersch and Gruber's *Encyclopädie*, art. *Phalanx*), is an assumption which leaves out of sight the proportion of citizens called out, and the number of Perioeci in the army. (Of the 292 heavy-armed soldiers who surrendered at Sphacteria, 120 were Spartans, Thuc. iv. 38. At the battle of Plataeae, one-half of the heavy-armed soldiers of the Lacedaemonians were Spartans.) When in the field, each mora of infantry was attended by a mora of cavalry (Xen. *Rep. Lac.* xi. 4), consisting at the most of 100 men, and commanded by an hipparmost (ἱππαρμοστής, Xen. *Hell.* iv. 4, § 10; 5, § 12). Plutarch (*Lyc.* 23) mentions squadrons (οὐλαμοί) of fifty, which may possibly be the same divisions. It is not easy, however, to see in what manner the cavalry could have been thus apportioned, or how each mora of cavalry could have "belonged to a mora of infantry without being in close connexion with it" (as Müller says). The cavalry seems merely to have been employed to protect the flanks, and but little regard was paid to it. The feeblest and least ambitious served in the cavalry (Xen. *Hell.* vi. 4, 10). The Spartans generally used mercenary cavalry (Thuc. ii. 9; Xen. *Hipp.* ix. 4). The corps of 300 ἱππεῖς (Herod. viii. 124) formed a sort of body-guard for the king, and consisted of the flower of the young soldiers. Though called horsemen, they fought on foot (Strabo, p. 482). Their commanders were called ἱππαγρέται (Xen. *Rep. Lac.* iv. 3; Hesych. *s. v.*).

Thucydides in his account of the battle of Mantineia (v. 68) describes the Lacedaemonian army as divided into seven lochi, each containing four pentecostyes, and each pentecostys four enomotiae, with thirty-two men in each; so that the lochus here is a body of 512 men, and is commanded by a polemarch. It is clear, therefore, that the lochus of Thucydides, in this instance, answers to the mora of Xenophon. It would be absurd to suppose such a large number to be the ordinary lochus or tactical unit; the largest such tactical lochus known is the Sacred Lochus at Thebes, which consisted of 300. As on this occasion the pentecostys contained four instead of two enomotiae, and as four pentecostyes were thrown together into one division, Thucydides may have been led to call this division a lochus, as being next above the pentecostys, though it was, in fact, a mora commanded by a polemarch (Thirlwall, *l. c.* p. 445; comp. Arnold on Thuc. v. 68). Aristotle appears to use the terms lochus and mora indiscriminately (Λακώνων πολιτ. Fr. 5 and 6; Photius *s. v.* λόχοι). The suggestion of Arnold (*l. c.*) that one of the seven lochi spoken of consisted of the Brasidean soldiers and Neodamodes, who would not be taken account of in the ordinary divisions of the Spartan forces, is not unlikely, and would explain the discrepancy between the number of lochi (or morae) here, and the ordinary number of six morae; but even independently of it, no difficulty need be felt with respect to that particular point, as the whole arrangement of the troops on that occasion was a departure from the ordinary divisions. The Neodamodes were not usually incorporated in the morae (Xen. *Hellen.* iv. 3, § 15). The mora was used for the arrangement in the camp (Xen. *Rep. Lac.* xii. 5), and formed the highest unit for the levy, but tactically it had no importance (Bauer, *op. cit.* 249, note).

It seems a probable opinion that the number of morae in the Spartan military force had reference to the districts into which Laconia was divided. These, including Sparta and the districts immediately around it, were six in number. Perhaps, as Thirlwall suggests, the division of the army may have been founded on the fiction that one mora was assigned for the protection of each district. The same writer also suggests a very probable explanation of the λόχος Πιτανάτης which Herodotus (ix. 53) speaks of, and of which Thucydides (i. 20), though doubtless erroneously, denies the existence. Thirlwall suggests that as each mora consisted of four lochi, the four lochi of the mora belonging to the district of Sparta may have been distributed on the same principle among the four κῶμαι—Limnae, Cynosura, Mesoa, and Pitana—of which Sparta was composed.* Gilbert (*op. cit.* i. 74) supposes that the λόχος was composed of the inhabitants of Pitana, but that its official title was not derived from that district.

A Spartan army, divided as above described, was drawn up in the dense array of the phalanx, the depth of which depended upon circumstances. An ἐνωμοτία sometimes made but a single file (reading εἰς ἕνα), sometimes was drawn up in three or six files (στίχοι, Xen. *Rep. Lac.* xi. 4; or λόχοι, as they are called by Polybius). At the battle of Mantineia the phalanx was eight deep, so that each enomotia made four files (Thuc. v. 68; comp. Xen. *Hell.* iii. 2, § 16, vi. 2, § 21). At the battle of Leuctra it was twelve deep (Xen. *Hell.* vi. 4. § 12). The enomotarch stood at the head of his file (πρωτοστάτης), or at the head of the right-hand file, if the enomotia was broken up into more than one. The last man was called οὐραγός. The divisions of the rows of twelve men each were πεμπάδες (Xen. *Hell.* vii. 3, 6; cf. *Cyr.* ii. 1, 22). It was a matter of great importance that he, like the enomotarch, should be a man of strength and skill, as in certain evolutions he would have to lead the movements (Xen. *Mem.* iii. 1, 8, *Cyr.* vii. 5, 5; cf. iii. 4, 41; Hom. *Il.* iv. 297). The commander-in-chief, who was usually the king (after the affair of Demaratus and Cleomenes it was the practice not to send out both kings together, Herod. v. 75; but comp. vi. 73), had his station sometimes in the centre (as at Mantineia, Thuc. v. 72), but more commonly (as at Leuctra) on the right wing. The deployments by which the arrangements of the phalanx were altered took place under the direction of the enomotarch. When the troops were drawn up in a line in the ordinary battle array, they were said to be ἐπὶ φάλαγγος. Supposing an enomotia to consist of twenty-five men, including its leader, and to be drawn up eight deep, the front line of the army would consist of 288. In an ordinary march the army advanced ἐπὶ κέρως (or κατὰ κέρας, Xen. *Hell.* vii. 4, § 23), the first enomotia of the right wing filing off. and the rest in succession following it; so that if the enomotia was drawn up in three or two files, the whole army would march in three or two files. The most usual arrangement was in two files, εἰς δύο (Xen. *Hell.* vii. 4, § 23, iii. 1, § 22; Polyaen. ii. 1, § 10). According as there were one or two or four columns, the march was called μονοφαλαγγία, διφαλαγγία, τετραφαλαγγία, of which there are the most various species given in the tactical writers (Asclep. 11; Ael. *Tact.* 37). If an army in marching order had to form in phalanx, the movement began with the hindmost enomotia of the column, which placed itself on the left of (παρ' ἀσπίδας) and on a line with (εἰς μέτωπον) the enomotia before it. These two then performed the same evolution with respect to the last but two, and so on, till all were in a line with the first enomotia, which now, with the commander-in-chief at its head, occupied the extremity of the right wing. This evolution was called παραγωγή (Xen. *Rep. Lac.* xi. § 6), a name also given to the reverse movement, when a phalanx had to fall into marching order, and to subordinate movements of the same kind for changing the depth of the phalanx. In the latter the evolutions were conducted on much

---

* Müller (*Dorians*, book iii. c. 3, § 7) talks of a πόλις distinct from these κῶμαι. But the latter were certainly not mere suburbs, but component parts of Sparta itself (comp. Paus. iii. 16, § 9). Haase (*l. c.*) speaks of five divisions of the city besides Pitana, so that the six morae or lochi in the sense of Thucydides corresponded to these six divisions. For this arrangement, there seems no authority, except the statement of the scholiast on Aristoph. (*Lys.* 453), that there were six lochi at Sparta, five of which he names, one of the names being corrected conjecturally by Müller to Μεσοάτης. But there seems here little more than a confused version of the division into six morae.

the same principle. Thus, if the depth of the phalanx was to be diminished by half, the hinder portion of each enomotia marched forwards and placed itself on the left of the half in front of it. Similarly, if the depth had to be increased, the left-hand portion of each enomotia faced about towards the *right*, took up its station in the rear, and then, facing to the left again, assumed its proper position. (Xen. *Rep. Lac.* xi. § 8.) The facing to the right was always the usage, because if the evolution were performed in the face of an enemy, the shielded side could be presented towards him. Wheeling to the right was called ἐπὶ δόρυ: wheeling to the left ἐπ' ἀσπίδα. With the cavalry the former was also called ἐπὶ δόρυ, the latter ἐφ' ἡνίαν. Modifications of this evolution, conducted on the same principle, were employed if the depth had to be increased or diminished in any other proportion. It is very likely that at those points of the files where in such evolutions they would have to separate, there were placed men suitable for taking their station in the front rank, where it was always an object to get the best men. These would answer to the δεκάδαρχοι and πεμπάδαρχοι of Xenophon. (*Cyrop.* ii. 1, 23; comp. *Hipparch.* ii. § 6, iv. § 9.) If an enemy appeared in the rear, it was not enough that the soldiers should face about towards the enemy. The Spartan tactics required that the stoutest soldier should be opposed to the enemy. This was accomplished by the manoeuvre termed ἐξελιγμός. Of this there were three varieties:—1. *The Macedonian.* In this the leader of each file kept his place, only turning towards the enemy; the man behind him (ἐπιστάτης) retreating and again taking up his station behind him, and so on. In this way the army retreated from the enemy by a distance equal to its depth. 2. *The Laconian* (the one usually adopted by the Macedonian phalanx of Philip and Alexander). This was the reverse of the preceding, the rear man remaining stationary and the others advancing successively one before the other. In this way of course the army advanced against the enemy by a distance equal to its depth. 3. *The Cretan.* In this the leader and rearman, the second and last but two, and so on, changed places, so that the whole army remained at the same distance from the enemy. This species was also called χορεῖος (Haase *ad* Xen. *Rep. Lac.* xi. § 9; Müller, iii. 12, § 8; Aelianus, *Tact.* 26, 27, 33). These evolutions would of course leave the general on the left wing. If it was deemed expedient that he should be upon the right, it was not enough that he should simply remove from the left to the right, the whole army had to reverse its position, so that what was the left wing should become the right. This was effected by an exeligmus, termed (at least by the later tacticians) ἐξελιγμὸς κατὰ ζυγά, as contrasted with the ἐξελιγμὸς κατὰ στίχους. Further evolutions were the different kinds of wheelings (ἐπιστροφαί). The quarter wheel was called ἀναστροφή, the half περισπασμός, the three quarters ἐκπερισπασμός, in which one quarter wheel more brought them back to their original position, ἐπικατάστασις. The pivot was the πρωτοστάτης (Hermann-Droysen, i. 42). If the army changed its front by wheeling round through a half circle, round one corner as a pivot, the movement seems to have been expressed by περιπτύσσειν or ἀναπτύσσειν (Xen. *Anab.* i. 10, 9; cf. Hermann-Droysen, i. 47, note 2). One more evolution remains to be noticed. Suppose an enemy appeared on the right, while the army was marching in column, two abreast. The different *lochi* wheeled round through a quadrant of a circle, round their leader, as on a pivot, so that the army presented twenty-four columns to the enemy, consisting of two files each, and separated by a considerable interval from each other. The depth of the whole body was then lessened, and these intervals filled up by the ordinary paragoge, and by the different lochi siding up nearer to each other in case the intervals still remained too great. If it was necessary for the general to take his station on the right, this would be effected, as in other cases, by an ἐξελιγμός (cf. Grote, ii. 457). Similar manoeuvres took place if the enemy appeared on the left, though, as this was the shielded side of the soldiers, and the danger was consequently less, it was frequently thought sufficient to keep the enemy in check by means of the cavalry and light troops. (Xen. *Rep. Lac.* xi. § 10.) Bauer (*op. cit.* 257), however, represents this manoeuvre as being effected according to a different order. He supposes (1) the ordinary παραγωγὴ εἰς μέτωπον παρ' ἀσπίδας to form a phalanx; then (2) a wheel round through a quadrant of a circle to the right or left, according to the quarter from which the enemy appeared. One point that a general had to be on his guard against was the tendency of an army, when advancing ἐπὶ φάλαγγος, to sheer off towards the right, each man pressing closer to his right-hand neighbour in order to protect his unshielded side, so that the right wing frequently got beyond the left wing of the enemy. (See especially the account of the battle of Mantineia, Thucyd. v. 71.) A slight consideration will show that the analogy traced between the evolutions of an army and those of a chorus is by no means fanciful. One kind of ἐξελιγμὸς was, we have seen, called χορεῖος. The importance attached to the war dances among the Spartans as a means of military training was consequently very great. [CHORUS.]

When an army was led to attack a height, it was usually drawn up in what were termed λόχοι ὄρθιοι, a term which merely implies that the lochi had greater depth than breadth (παράμηκες μὲν λέγεται πᾶν τάγμα ὃ ἂν τὸ μῆκος ἔχῃ πλεῖον τοῦ βάθους, ὄρθιον δὲ ὃ ἂν τὸ βάθος τοῦ μήκους, Aelian. *Tact.* c. 29). The breadth of the lochi would, of course, vary according to circumstances. They were drawn up with considerable intervals between them. In this way the army presented a considerable front to the enemy, and was less liable to be thrown into confusion than if drawn up in close phalanx, while at the same time the intervals between the lochi were not left so great that the enemy could safely press in between them. (Xen. *Anab.* iv. 2, § 11; 8, §§ 10–19; v. 4, § 22; *Cyrop.* iii. 2, § 6; *Anab.* iv. 3, § 17; Polyaen. *Strat.* v. 16, § 1.) There is no ground for affirming that a λόχος ὄρθιος was drawn up in two files, or even one, as Sturz (*Lex. Xen.*) and Grote (viii. 403) say. Such an arrangement would be perfectly useless for attack. This system of arrangements, which in breaking up the rigid phalanx formed some approximation to the Roman manipular tactics, was not, however, employed except in the particular case mentioned. This was an innovation due to the genius of Xenophon, and it was frequently employed in later Greek tactics.

In special circumstances, such as those of the retreating Greeks in the *Anabasis*, the arrangement in a hollow square was adopted (cf. the *τετράγωνος τάξις* in Thuc. iv. 125), and in the retreat from Syracuse (Thuc. vii. 78); the troops being so placed that by simply facing about they presented a front for battle on whichever side it was necessary. But if the enemy were following, it proved a very bad arrangement (Xen. *Anab.* iii. 4, 19). The term *πλαίσιον* was generally applied to an army so arranged, whether square or oblong. Afterwards the term *πλαίσιον* was restricted to the square, the oblong being called *πλίνθιον*.

Though at first sight the arrangement and manoeuvres of a Lacedaemonian army seem exceedingly complex, they were in reality quite the reverse, owing to the carefully graduated system of subordination which prevailed (*σχεδὸν γάρ τοι πᾶν τὸ στρατόπεδον τῶν Λακεδαιμονίων ἄρχοντες ἀρχόντων εἰσί*, Thuc. v. 66). The commands of the general were issued in the first place to the polemarchs, by these to the lochagi, by these again to the pentecosteres, by the latter to the enomotarchs, and by these last to their respective divisions. From the orderly manner in which this was done, commands were transmitted with great rapidity: every soldier, in fact, regulating the movements of the man behind him, every two being connected together as *πρωτοστάτης* and *ἐπιστάτης*.

In later times the king was usually accompanied by two ephors, as controllers and advisers (Xen. *Rep. Lac.* xiii. 5). These, with the polemarchs, the four Pythii, three peers (*ὅμοιοι*), who had to provide for the necessities of the king in war,—among whom was the *κρεοδαίτης*, who was an important person, the post being held by Lysander (Plut. *Lys.* 23),—the *λαφυροπῶλαι*, and some other officers, such as the *ταμίαι*, treasurers, and the *Ἑλλανοδίκαι*, judges of disputes (Xen. *Rep. Lac.* xiii. 11), constituted the *οἱ περὶ δαμοσίαν* of the king [DAMOSIA]. The polemarchs also had some sort of suite or staff with them, called *συμφορεῖς* (Plut. *Pelop.* 17; Xen. *Hell.* vi. 4, § 14), just as the king had the 300 so-called *ἱππεῖς*. The polemarchs took the place of the king in cases of emergency. With the exception of the enomotarchs, the superior officers and those immediately about them are not to be reckoned with the division which they led. They stood distinct, forming what was called the *ἄγημα* (Xen. *Rep. Lac.* xi. 9).

The Spartan and Perioecan hoplites were accompanied in the field by helots, partly in the capacity of attendants, partly to serve as light-armed troops. The number attached to an army was probably not uniform. At Plataeae each Spartan was accompanied by seven helots; but that was probably an extraordinary case. One helot in particular of those attached to each Spartan was called his *θεράπων*, and performed the functions of an armourer or shieldbearer (Eustath. *ad* Dionys. *Per.* 533). Xenophon (*Hell.* iv. 5, § 14; 8, § 39) calls them *ὑπασπισταί* (cf. Herod. v. 111; Müller, *Dor.* iii. 3, § 2), or *δορυφόροι* (Xen. *Hell.* iv. 5, § 8). In extraordinary cases, helots served as hoplites, and in that case it was usual to give them their liberty (Thucyd. vii. 19, iv. 80, v. 34). Distinct corps were sometimes composed entirely of these Neodamodes. A separate troop in the Lacedaemonian army was formed by the Sciritae (*Σκιρῖται*), originally, no doubt, inhabitants of the district Sciritis. In battle, they occupied the extreme left of the line. On a march, they formed the vanguard, and were usually employed on the most dangerous kinds of service. (Thuc. v. 67, with Arnold's note; Xen. *Cyrop.* iv. 2, § 1.) Similarly the Tegeans laid claim to a position on the right wing (Herod. ix. 26 ff.).

Light-armed troops (*ψιλοί*) are mentioned in the fourth year of the Peloponnesian War (Thuc. iii. 1), and in 424 B.C. a corps of bowmen was established by the Spartans (Thuc. iv. 55). Brasidas used great numbers of such light-armed troops (*ib.* 111, 123, 125); and they appear later in the armies of Agesilaus (Xen. *Hell.* iii. 4, 23) and Archidamus (vii. 4, 22). The peltasts from Orchomenus which Xenophon mentions (*Hell.* vi. 5, 15) were certainly mercenaries; so that we may infer that to a large degree the Spartans used mercenaries and allies for light-armed.

Though the tyrants (*e.g.* Pisistratus, Herod. i. 61) and some Peloponnesian states (*e.g.* Corinth) had previously a large mercenary force (Thuc. i. 60), the first appearance of a *μισθοφόρος ὄχλος ξενικὸς* of the Spartans was in Acarnania in 426 B.C. (Thuc. iii. 109). Brasidas used mercenaries frequently (Thuc. iv. 80; v. 6); also Lysander (Xen. *Hell.* ii. 4, 30), Thibron (who wanted 300 mercenaries from Athens, *ib.* iii. 1, 4), and Agesilaus (*ib.* vi. 5, 15). The expedition of Cyrus gave a great impulse to the development of a mercenary army. In fact, about the time of Agesilaus they were so numerous that Xenophon says the citizens were only used for garrison duty, while mercenaries were employed for war (*ib.* iv. 4, 14); and further (vii. 1, 23) that Arcadian mercenaries (they were the great people for supplying this kind of force: cf. Thuc. vii. 57; Hesych. *s. v.* *Ἀρκάδος μιμούμενος*) were always used for an invasion of Attica. The Carians, too, appear frequently as mercenaries. The Spartans generally contented themselves with sending out thirty of their own body to take the chief posts of command in the army (cf. Bauer, *op. cit.* p. 261). The State used to look for a general of known ability, and it was *he* who used to agree with the soldiers, it was to *him* that the latter used to look for pay and provisions, and so practically they became his soldiers—they were no longer Spartans or Arcadians or Achaeans, but Brasideans or Cyreans. In later times there was a regular market of mercenaries at Taenarum (Diod. xvii. 108). The pay was generally about a drachma a day (Thuc. vii. 27), to the *λοχαγὸς* twice as much, and to the *στρατηγὸς* four times as much (cf. Xen. *Anab.* iv. 6, 1; and Gilbert, *op. cit.* ii. 354). The divisions of the mercenary force were not those of the *φρουρά*. The divisions were much smaller, the *τάξις* being the highest unit for both cavalry and infantry. The *τάξις* of cavalry was commanded by the hipparch, and that of the infantry by the taxiarch. The *τάξις* fell into λόχοι, commanded by λοχαγοί, with substitutes ὑπολοχαγοί (Xen. *Hell.* iv. i, 26; v. 2, 13). This breaking up of the phalanx into smaller tactical units which were capable of being used independently is the chief military feature of the mercenary forces.

When the φρουρὰ was declared, the Spartans generally required, beside the native citizen force, a definite proportion of allies, καὶ τῶν συμμάχων τὸ μέρος (Xen. *Hell.* iv. 6, 3), which was very frequently two-thirds of the available force (Thuc. ii. 10). The number of allies compared with that of the Spartans was very great: in one case the proportion was 10,000 to 1500 (Thuc. i. 107). Later, when the system of mercenaries was fully in vogue, the allied forces could be commuted for a money payment. A hoplite was considered equal to two light-armed, and a horse-soldier to four hoplites—commutation for a hoplite being three Aeginetan oboli (Xen. *Hcll.* v. 2, 21; Diod. xv. 31). The forces of the allies, besides their own commanders (ἀπὸ τῶν πόλεων στρατηγοί, Thuc. ii. 10; Xen. *Rep. Lac.* xiii. 4), had also assigned to them special commanders, who were Spartans. These commanders were called ξεναγοί (Thuc. ii. 75; Xen. *Hell.* iii. 5, 7); and they were sometimes used in times of peace as governors in the allied states (*ib.* v. 2, 7).

The arms of the phalanx consisted of the long spear and a short sword (ξυήλη). The chief part of the defensive armour was the large brazen shield,—generally marked with the letter Λ, signifying Λακεδαιμονίων (Eupolis, *fr.* 359, Kock; Photius, *s. v.* λάμβδα), just as the Sicyonians had Σ on their shields (Xen. *Hell.* iv. 4, 10),—which covered the body from the shoulder to the knee (Tyrtaeus, fr. ii. 23), suspended, as in ancient times, by a thong round the neck, and managed by a simple handle or ring (πόρπαξ). The improved Carian handle (ὀχάνη) was not introduced till the time of Cleomenes III. Besides this, they had the ordinary armour of the hoplite [ARMA]. The helmets were made of felt and called πῖλοι (Thuc. iv. 34, and Arnold's note: though Poppo takes these to be cuirasses). The heavy-armed soldiers wore a scarlet uniform (Xen. *Rep. Lac.* xi. § 3; *Ages.* ii. 7). A day's march in the *Anabasis* was about 15 miles. Droysen (*op. cit.* p. 83) has collected a variety of statistics of the time taken to effect certain marches in Greek history; but we cannot be sure of the distance, owing to our ignorance for the most part of the courses of the Greek roads between the places. In marching through a friendly country a market was usually granted to the soldiers by the inhabitants (Thuc. vi. 44, viii. 95; Xen. *Hell.* iii. 4, 11): in an enemy's country they took what they wanted, getting vegetables and fuel are frequently mentioned, λαχανισμὸς καὶ φρυγανισμός (Thuc. iii. 111, vii. 4), or else made formal requisitions, προνομαί (Xen. *An.* v. 2, 24). In transmarine expeditions the Greek armies often took provisions with them (Thuc. vi. 22, 44): though we hear of ἔμποροι and an ἀγοραῖος ὄχλος following the army (Thuc. *l. c.*; Xen. *Hell.* i. 6, 37; vi. 2, 23), so that no doubt a large part of the provisions were purchased; so, too, we may be certain that the ἐξαμήνου σῖτος mentioned in Xen. *Hell.* iii. 4, 2, and the τροφὴ in Thuc. vi. 93, 94, were money. The baggage and camp-followers came *after* the line of march, except in the rare occasions of night-marches, when they, as being the slowest, went in front (Xen. *An.* vii. 3, 37; *Cyr.* v. 3, 37). We saw that the citizen-soldiers had each a servant, but the mercenaries did not keep such. Besides these servants, there was a large mass of *impedimenta*, such as the traders, booty, cattle, soldiers' mistresses, &c. (Xen. *An.* iii. 5, 9; iv. 1, 14), which Xenophon tells us were a serious shackle on the army (*ib.* iii. 2, 27). Among the Spartans the baggage was all looked after by the ἄρχοντες τῶν σκευοφόρων (Xen. *Hell.* iii. 4, 22; *Rep. Lac.* xiii. 4). The Spartan encampments were circular. Only the heavy-armed were stationed within it, the cavalry being placed to look out, and the helots being kept as much as possible outside. As another precaution against the latter, every soldier was obliged always to carry his spear about with him (Xen. *Rep. Lac.* xii. 4). Though strict discipline was, of course, kept up in the camp, it was less rigorous than in the city itself (Plut. *Lyc.* 22; comp. Herod. vii. 208). Preparatory to a battle the Spartan soldier dressed his hair and crowned himself as others would do for a feast. The Spartans at Corinth, when but a stadium from the enemy, offered the customary sacrifice to Artemis Agrotera (Xen. *Hell.* iv. 2, 20). The signal for attack in ancient times was given by priests of Ares (πυρφόροι), who threw lighted torches into the interval between the two armies (Schol. *ad* Eurip. *Phocn.* 1186). Afterwards it was given not by the trumpet, but by the music of flutes, and sometimes also of the lyre and cithara, to which the men sang the battle song (παιὰν ἐμβατήριος), such as Tyrtaeus wrote (Paus. iii. 17, § 5; Plut. *l. c.*), or raised a wild shout (ἀλαλά, ἐλελεῦ). The object of the music was not so much to inspirit the men as simply to regulate the march of the phalanx (Thuc. v. 70). This rhythmical regularity of movement was a point to which the Spartans attached great importance. The Greeks had not standards like the Roman *signa*. The σημεῖα which we hear of being raised and lowered (Thuc. i. 63) were signals rather than standards. Signals were given by fire-beacons also (φρυκτοί, Thuc. iii. 22, and Arnold's note). Trumpets were little used except to sound the attack (τὸ πολεμικόν) or retreat (τὸ ἀνακλητικόν). (Cf. Hermann-Droysen, i. 54.) To prevent the ranks being broken the soldiers were forbidden to stop in order to strip a slain enemy while the fight lasted, or to pursue a routed enemy. The younger hoplites or the cavalry or light-armed troops were despatched for this purpose (Xen. *Hell.* iv. 4, § 16; v. 14, § 16). All the booty collected had to be handed over to the laphyropolae and ephors, by whom it was sold. The loss in battle was always much greater on the side of the vanquished than on that of the victors: for the wounded of the former could not be carried away, the beaten side not having any start as they have in modern battles; and so either were killed by the victors or bled to death. As average instances may be taken the battles of Delium and Corinth: the defeated party at each of these lost 1 in 7 men, the victors at the former 1 in 26 and at the latter 1 in 23. The loss of the Spartans at Leuctra (1 in 2) was the greatest we know of in an important battle. (Cf. Hermann-Droysen, i. 101.)

The rigid inflexibility of the Spartan tactics rendered them indisposed to the attack of fortified places (Thuc. i. 102). At the battle of Plataeae, they even assigned to the Athenians the task of storming the palisade formed by the *γέρρα* of the Persians (Herod. ix. 70).

In Athens, the military system was in its leading principles the same as among the Spartans, though differing in detail, and carried out with less exactness; inasmuch as, when Athens became powerful, greater attention was paid to the navy. Of the times before Solon, we have but little information. We learn that there were twelve phratriae, and in each of these four naucrariae, each of which was bound to furnish two horsemen and one ship (Photius, Suidas, *s. v.* *ναυκραρία*: Poll. viii. 108). Of the four classes into which the citizens were arranged by the constitution of Solon, the citizens of the first and second served as cavalry, or as commanders of the infantry (still it need not be assumed that the *ἱππεῖς* never served as heavy-armed infantry), those of the third class (*ζευγῖται*) formed the heavy-armed infantry. The Thetes served either as light-armed troops on land, or on board the ships. The same general principles remained when the constitution was remodelled by Cleisthenes. All citizens qualified to serve either as horsemen, or in the ranks of the heavy-armed infantry, were enrolled in a list [Catalogus]. The case of Thetes serving as heavy-armed soldiers is spoken of as an exception to the general rule; and even when it was the case, they were not enrolled in the catalogus (Thucyd. vi. 43). Every citizen was liable to service from his eighteenth to his sixtieth year. On reaching their eighteenth year, the young citizens were formally enrolled (*εἰς τὸ ληξιαρχικὸν γραμματεῖον*), and received a shield and spear in a public assembly of the people, binding themselves by oath to perform rightly the duties of a citizen and a soldier (Aristot. *ap.* Harpocr. p. 241). The actual words of the oath are given in Poll. viii. 105, 106 (cf. Hermann-Droysen, *op. cit.* i. 57). During the first two years, they were only liable to service in Attica itself, chiefly as garrison soldiers in the different fortresses in the country. During this period, they were called *περίπολοι*, and their commander *περιπόλαρχος*. (Harpocr. *s. v.* *περίπολος*: Pollux, viii. 105; Lycurg. *Leocr.* § 76; Thuc. viii. 92.) [Ephebus.] The levies were made under the direction of the generals [Strategi]. The soldiers were selected either according to age, as among the Spartans (Aristot. *ap.* Harpocr. *s. v.* *στρατεία* and Phot. *s. v.* *στρατία*: *ὅταν ἡλικίαν ἐκπέμπωσι, προσγράφουσι ἀπὸ τίνος ἄρχοντος ἐπωνύμου μέχρι τίνος δεῖ στρατεύεσθαι*; the archons being, of course, those in whose year of office they had entered the military service), the expeditions being then called *ἔξοδοι ἐν τοῖς ἐπωνύμοις*: or else according to a certain rotation (Aeschin. *Fals. Leg.* p. 330, § 168, *τὰς ἐκ διαδοχῆς ἐξόδους*). Another kind of levy was that called *ἐν τοῖς μέρεσι*. It appears to have followed the former; each being used alternately (*ἐκ διαδοχῆς*, Aeschin. *Fals. Leg.* § 168). This expression *ἐν τοῖς μέρεσι* is variously interpreted. Some (*e.g.* Droysen, Gilbert, &c.) consider that the levy *ἐν τοῖς ἐπωνύμοις* called out *all* those of the specified years, while that *ἐν τοῖς μέρεσι* only called out a *portion* of these in some specified order of rotation (cf. Dem. *Ol.* ii. 31, *πάντας ἐξιέναι κατὰ μέρος ἕως ἂν ἅπαντες στρατεύσησθε*). Others again (Bauer, Rustow and Köchly) suppose that *ἐν τοῖς μέρεσι* refers, not to the levy by years but by tribes or portions of tribes. (There is a full discussion on the subject by Lange, *Leipziger Studien*, i. 160; cf. Gilbert, *op. cit.* i. 302.) Both these kinds of levies were, however, only partial ones: when the levy was universal, it was said to be *πανδημεί*. The levying-place was generally the Lyceum (Schol. on Aristoph. *Pax*, 356), though occasionally in other places (Andoc. *de Myst.* § 45). Each soldier was expected to be provided with provisions for three days (Aristoph. *Ach.* 197). The services of those below or above the ordinary military age, were only called for on emergencies, or for guarding the walls. (Cf. Thuc. i. 105, ii. 13.) Members of the senate during the period of their office, farmers of the revenue, choreutae at the Dionysia during the festival; in later times, traders by sea also, were exempted from military service (Lycurg. *Leocr.* § 34; Demosth. *c. Neaer.* p. 1353, § 27; *c. Mid.* p. 516, § 15; Aristoph. *Eccles.* 1027, with the Schol.). Any one bound to serve who attempted to avoid doing so, could be accused on a *γραφὴ ἀστρατείας*. This, with the *γραφὴ λιποταξίου* and the *γραφὴ δειλίας*, were the chief indictments to which the soldier was liable [Astrateias Graphé]. The resident aliens commonly served as heavy-armed soldiers, especially for the purpose of garrisoning the city, but only in case of an universal levy (*πανδημεί*). They were prohibited from serving as cavalry (Xen. *de Vect.* ii. § 5; *Hipparch.* ix. § 6). Slaves were only employed as soldiers in cases of great necessity, as at Marathon (according to Paus. i. 32, § 3) and Arginusae (Xen. *Hell.* i. 6, § 17). The levy of the cleruchs and allies appears to have been made *ἐκ καταλόγου* (Thuc. vi. 26), and recruiting was conducted by Athenian officers when the order was given (*στρατιὰν ἐπαγγέλλειν ἐς τοὺς συμμάχους*, Thuc. vii. 17). The Athenians often used the allies solely for their own special wars (cf. Bauer, *op. cit.* p. 290; Grote, v. 199); though when we hear of Lemnians and Imbrians and other peoples who had large numbers of cleruchs serving, such are generally to be understood as referring to the cleruchs.

The dress and armour of the hoplites consisted of a white jerkin (*χλανίς*) which reached down to the hips. Over this was the *θώραξ* [Lorica]; and over this again they wore a cloak which in the case of officers was purple (Aristoph. *Pax*, 1175). Of course in battle they took this off. On their legs were greaves [Ocreae], and on their head a plumed helmet [Galea]. Their arms were a round or oval shield [Clipeus], short sword [Gladius], and lance [Hasta]. These arms the soldier appears to have provided himself, but the orphans of those who fell in battle, on arriving at man's estate, received a *πανοπλία* from the state (Aeschin. *Ctes.* § 154).

Of the details of the Athenian military organisation, we have no distinct accounts as we have of those of Sparta. There was less exactness than among the Spartans. Especially the

Athenians were not so particular that the same individuals should always hold the same positions in the phalanx or its subdivisions (Xen. *Rep. Lac.* xi. 6; Thuc. v. 66); and more frequent exemption from service was allowed than among the Spartans (cf. Bauer, *op. cit.* p. 270). The heavy-armed troops, as was the universal practice in Greece, nearly always fought in phalanx order, very rarely in a square (Thuc. vi. 67). They were arranged in bodies in a manner dependent on the political divisions of the citizens. The soldiers of each tribe formed a separate body in the army, also called a tribe, and these bodies stood in some preconcerted order (Herod. vi. 111; Plut. *Arist.* 5; Xen. *Hell.* iv. 2, § 19, with Schneider's notes). Each *φυλή* appears to have formed a *τάξις* (Lys. *Agorat.* § 82, cf. § 79), and the members of each deme probably stood together (Isaeus, *de Pyrrhi hered.* § 42; Lys. *Polystr.* § 23). A further subdivision was that into *λόχοι* under *λοχαγοί* (Xen. *Hell.* i. 2, 3; *Mem.* iii. 4, 1; Isocr. xv. 117). The strength of the *λόχος*, however, cannot be determined; and it must be remembered that *λόχος* is the most ordinary term for the largest tactical unit, which varied, though it was generally about 100 men (Bauer, *op. cit.* p. 248). The *συσσίτια* or *συσκήνια* (Lys. *Agorat.* § 79; Isaeus, *Nicostr.* § 18) are voluntary unions of friends, and we cannot infer from them that the members belonged to the same deme or even to the same branch of the service. Before Potidaea the hoplite Socrates of Alopece was a *σύσσιτος* of the knight Alcibiades of Scambonidae (Plat. *Symp.* 219 E). Every hoplite was accompanied by an attendant (*ὑπηρέτης*, Thuc. iii. 17), like the Helots among the Spartans, to take charge of his baggage, and carry his shield on a march. Each horseman also had a servant, called *ἱπποκόμος*, to attend to his horse (Xen. *Hell.* ii. 4, 6).

It would appear that in 490 B.C. there was no cavalry (Herod. vi. 112). In the time of Cimon it was 300, soon after 600 (Andoc. *de Pace*, § 5; Schol. on Aristoph. *Eq.* 627), and at the beginning of the Peloponnesian war 1200, of whom 200 were hired Scythian bowmen (Thuc. ii. 13; Aristoph. *Eq.* 225). The number 1000 remained down to the time of Demosthenes (Xen. *Hipp.* ix. 3; Dem. *de Symm.* p. 181, § 13). It is probable that the organisation of cavalry was due to the experience the Athenians obtained in the Persian wars with regard to that service. The cavalry was commanded by two Hipparchs, part of whose duty it was to see that the number was kept up to the 1000 (Xen. *Hipp.* i. 2). The *ἱπποτροφία* was made one of the liturgies of the rich (Xen. *Oec.* ii. 6; Lycurg. *Leocr.* § 139), the performance of which could be enforced by law (Xen. *Hipp.* i. 9). It could only attach to the rich, for an ordinary horse cost as much as three minae (Isaeus, *de Dicaeog. hered.* § 43), and a war-horse would cost a great deal more. Of course those only were required to serve who were physically capable of doing so efficiently; but such were required to serve as long as they were able (Xen. *Hipp.* i. 2): so we find the corps divided into *νέοι* and *πρεσβύτεροι* (*ib.* i. 17; ii. 3). It belonged to the duties of the hipparch to train the horsemen (Xen. *Mem.* iii. 3, 5), especially in being able to leap up on horseback (Xen. *Hipp.* i. 17)—for they had no saddles or stirrups—in throwing the javelin (*ib.* i. 6, 21), and in kinds of sham fights (*ἀνθιππασία*), in which each hipparch commanded five tribes (i. 20, iii. 11; Aristot. *fr.* 56 M.); for the cavalry were divided by tribes (Xen. *Hell.* ii. 4, 31), each governed by a phylarch (Xen. *Hipp.* i. 8). The hipparch appears to have had to examine the horses (Xen. *Mem.* iii. 3, 4), which must have been very necessary when one remembers the various requirements of a war-horse as given by Xenophon (*de re Equestri*, iii. 7, viii. 1). The hipparch and the phylarch were elected by the people (Aristoph. *Av.* 798). At the beginning of the year the *βουλή* held a review of the knights. They went through exercises (*ἀκοντισμός*, *ἀνθιππασία*, &c.) which are described at length by Xenophon (*Hipp.* iii.); and if this examination (*δοκιμασία*) proved satisfactory and the horses seemed suitable (i. 13), a fee for equipment (*κατάστασις*) was paid to each horseman (Suid. *s. v.*). Besides this, pay (*μισθός*) was given to the cavalry to the amount of 40 talents a year, *i.e.* 240 drachmas for each horseman (cf. Dem. *Phil.* i. § 28, p. 48 R.; Boeckh, *Staatshaushaltung*, i.^{3} 317 ff., 340 ff.). A knight regularly appointed could not serve as a hoplite; and if he did not pass the examination and yet attempted to serve, he was disgraced (Lys. *Alc.* ii. 7; i. 8, 9). The arms of the cavalry were two spears of cornel-wood (Xen. *de re Eq.* xii. 12, 13) and a small sword like a cleaver. Full account of the armour is to be found in Xen. *de re Eq.* xii. 1 ff. The cavalry appear to have been an imposing corps, and so were much used in processions (Aristoph. *Ran.* 652; Dem. *Phil.* i. p. 47, § 26; Xen. *Hipp.* iii. 2). Besides the light-armed soldiers drawn from the ranks of the poorer citizens, there was at Athens a regiment of Thracian slaves, armed with bows. The number of these increased from 300, who were purchased after the battle of Salamis, to 1000 or 1200 (Aeschin. *Fals. Leg.* §§ 173, 174; Boeckh, *Staatshaushaltung*, book ii. c. 11). They, however, were generally employed as a sort of police or city guard. Besides these, however, the Athenians had a troop of bowmen of their own citizens, amounting, at the beginning of the Peloponnesian war, to 1600 (Thuc. ii. 13). They were commanded by *τόξαρχοι* (*C. I. A.* i. 79). The two classes of *ἀστικοὶ* and *ξενικοὶ τοξόται* are mentioned in *C. I. A.* i. 433. Besides the 1000 knights, there were at the beginning of the Peloponnesian war 200 *ἱπποτοξόται*, mostly taken from the Scythians (Thuc. ii. 13, compared with Aristoph. *Eq.* 225). It was considered degrading for a citizen to serve in this corps (Lys. *Alc.* ii. 6). They used to ride before the hipparchs (Xen. *Mem.* iii. 3, 1). There is an elaborate account of the military forces of Athens in Boeckh (*op. cit.* i.^{3} 321–339).

For the command of the army, there were chosen every year ten generals [STRATEGI] and ten taxiarchs [TAXIARCHI]. Respecting the military functions of the *ἄρχων πολέμαρχος*, see the article ARCHON. The number of strategi sent with an army was not uniform. Three was a common number. Sometimes one was invested with the supreme command; at other times, they either took the command in turn (as at Marathon), or conducted their operations by common consent (as in the Sicilian expedition).

The practice of paying the troops when upon service was introduced by Pericles (Ulpian. *ad* Demosth. *περὶ συντάξ.* p. 50 a). The pay consisted partly of wages (*μισθός*), partly of provisions, or, more commonly, provision-money (*σιτηρέσιον*). The ordinary *μισθὸς* of a hoplite was two obols a day. The *σιτηρέσιον* amounted to two obols more (Dem. *Phil.* i. § 28, p. 48). Hence the life of a soldier was called, proverbially, *τετρωβόλου βίος* (Eustath. *ad Od.* p. 1405; *ad Il.* p. 951). Higher pay, however, was sometimes given, as at the siege of Potidaea the soldiers received two drachmas apiece, one for themselves, the other for their attendants. This, doubtless, included the provision-money (Thuc. iii. 17). Officers received twice as much; horsemen, three times; generals, four times as much (comp. Xen. *Anab.* vii. 6, § 1; 3, § 9).

As regards the military strength of the Athenians, we find 10,000 heavy-armed soldiers at Marathon (Justin. ii. 9); 8,000 heavy-armed, and as many light-armed, at Plataeae (Herod. ix. 29); and at the beginning of the Peloponnesian war there were 13,000 heavy-armed ready for foreign service, and 16,000 consisting of those beyond the limits of the ordinary military age and of the metoeci, for garrison service (Thuc. ii. 13).

It was the natural result of the national character of the Athenians and their democratical constitution, that military discipline was much less stringent among them than among the Spartans (*χαλεπαὶ γὰρ αἱ ὑμέτεραι φύσεις ἄρξαι*, Thuc. vii. 14), and after defeat especially it was often found extremely difficult to maintain it. The generals had some power of punishing military offences on the spot, such as treasonable correspondence with the enemy (Lys. *Agorat*, § 67); but the punishment for insubordination was trifling (Lys. *Sim.* § 43). For the greater number of offences, the trial only took place after the return of the army home before the generals (Lys. *Alc.* i. 21), or the taxiarchs as their substitutes (Dem. *in Booet. de nom.* § 17), and a jury of persons who had served in the army (Lys. *Alc.* i. 15); the punishments were various kinds of *ἀτιμία* (Andoc. *de Myst.* § 74). Various rewards also were held out for those who especially distinguished themselves for their courage or conduct, in the shape of chaplets, statues, &c. (cf. Aeschin. *Fals. Leg.* § 169). In connexion with these, the *λόγος ἐπιτάφιος*, spoken over those who had fallen in war, and the *τάφος δημόσιος*, must not be omitted. Respecting the provision made for those who were disabled in war, see the article ADYNATI.

The Peltastae (*πελτασταί*), so called from the shield which they bore [PELTA], were a kind of troops of which we hear very little before the end of the Peloponnesian war. The first time we have any mention of them is in Thuc. iv. 111, where they are spoken of as being in the army of Brasidas. With the more frequent employment of mercenary troops a greater degree of attention was bestowed upon the peltastae; and the Athenian general Iphicrates introduced some important improvements in the mode of arming them, combining as far as possible the peculiar advantages of heavy- (*ὁπλῖται*) and light-armed (*ψιλοί*) troops. Thus distant as well as close combat was possible for them (Schol. on Eur. *Rhes.* 311; cf. Plut. *Legg.* vii. 813 E). The great advantage of this light infantry is well sketched by Xenophon (*Hell.* ii. 4, 12). Iphicrates substituted a linen corslet for the coat of mail worn by the hoplites, and lessened the shield, while he doubled the length of the spear and sword. He even took the pains to introduce for them an improved sort of shoe, called after him Ἰφικρατίδες (Pollux, vii. 89). This equipment was commonly adopted by mercenary troops, and proved very effective. The almost total destruction of a mora of Lacedaemonian heavy-armed troops by a body of peltastae under the command of Iphicrates was an exploit that became very famous (Xen. *Hell.* iv. 5, § 11). The peltast style of arming was general among the Achaeans until Philopoemen again introduced heavy armour (Plut. *Philop.* 9) with the Macedonian phalanx.

When the use of mercenary troops became general, Athenian citizens seldom served except as volunteers, and then in but small numbers. Thus we find 10,000 mercenaries sent to Olynthus with only 400 Athenians (Demosth. *Fals. Leg.* p. 425, § 263). With 15,000 mercenaries sent against Philip to Chaeroneia, there were 2,000 citizens (Demosth. *de Cor.* p. 306, § 237). It became not uncommon also for those bound to serve in the cavalry to commute their services for those of horsemen hired in their stead, and the duties of the *ἱπποτροφία* were ill executed. The employment of mercenaries also led in other respects to considerable alterations in the military system of Greece. War came to be studied as an art, and Greek generals, rising above the old simple rules of warfare, became tacticians. The old method of arranging the troops, a method still retained by Agesilaus at the battle of Coronea, was to draw up the opposing armies in two parallel lines of greater or less depth, according to the strength of the forces, the engagement commencing usually very nearly at the same moment in all parts of the line. The tactics employed by Epaminondas were a further development of the Boeotian practice of deepening one point in the attacking line. Thus, while the Greek army was generally drawn up eight deep, at Delium the right Boeotian wing was twenty-five deep (Thuc. iv. 93). Epaminondas at Leuctra not only deepened the left wing to fifty, placing the Sacred Band in front; but he further (and this was a distinct innovation) moved it forward obliquely, *λοξὴ φάλαγξ* (Xen. *Hell.* vi. 4, 12; Diod. xv. 55; Plut. *Pelop.* 23), so as to attack with this tremendous force the centre, and not as usual the wings, of the enemy.

Thessaly under Jason of Pherae had a vast army: 8,000 cavalry and 20,000 hoplites, a large force of peltasts, and 6,000 mercenaries (Xen. *Hell.* vi. 1, 5). This Jason has the distinction of having invented an arrangement of cavalry in the shape of a rhomboid (Asclep. vii. 2; Ael. xvi. 3), but a still greater one in having been the first to take measures for tending soldiers when sick (Xen. *Hell.* vi. 1, 6). The tyrants in Sicily had very large armies, though probably the actual numbers are exaggerations of their conquerors. Gelon is said to have had 10,000 mercenaries; and Dionysius I. an army of 120,000 foot and 12,000 horse, together with every kind of improvement in engines, arms, &c. He paid great attention to cavalry, and had mercenaries from all quarters, Iberians and Gauls (Diod. xv. 70). For a full account of this great military organiser, see Diod. xiv. 42, 43; Grote, x. 240; Hermann-Droysen, *op. cit.* 76; Bauer, *op. cit.* §§ 53, 54. The chief features in the Sicilians were their great enterprise and their readiness to adopt all improvements as well in arms as in tactics: thus, for example, Dion divided his army into λόχοι ὄρθιοι in accordance with the important improvement made by Xenophon (Plut. *Dion*, 45).

Under Philip and the subsequent Macedonian kings, the army was much more systematically attended to, and we have much fuller accounts of it than we have of the armies of free Hellas. Till Philip's time the Macedonians had a very indifferent army. Archelaus indeed did something to improve it; but the exact nature of his improvements we cannot be very certain about (Thuc. ii. 100). Philip was the first to organise the foot-soldiers in a phalanx, and to develop still further the resources of the Macedonian cavalry, which had always been excellent. In times past it was the cavalry who used to protect the country, while the inhabitants fled into the fortified towns (Thuc. *l. c.*); but it is very rarely that we read of foot-soldiers, such as the hoplites of the Lyncestae and the infantry which Perdiccas supplied to Brasidas (Thuc. iv. 124, 83).

During his stay at Thebes, Philip learned the tactics of Epaminondas, though the Macedonians must have learned already much of the Greek method of warfare of that day from the troops of the Athenians and Spartans which were certainly carrying on war in Chalcidice, and from the number of Greek mercenaries which were now everywhere abroad. With special knowledge derived from these sources, and with a population accustomed to monarchical rule, whom he could call out for service and use according to his own judgment for as long as he pleased (cf. Dem. *de Cor.* 305, § 235), Philip organised the Macedonian army. The cavalry were the principal element; they were called his Companions or ἕταιροι, a term applied in Macedonia to persons of distinction (Plut. *Pelop.* 27). Those summoned for service in the infantry were called Foot-Companions (πεζέταιροι), a term which shows that they were a kind of subsequent appendage to the cavalry. These two terms, ἕταιροι and πεζέταιροι, appear to have been originally applied to a picked body-guard (Dem. *Ol.* ii. p. 23, § 17), and gradually to have been extended to the cavalry and infantry generally (cf. Grote, xi. 386). The ἕταιροι, 800 in number (Theopomp. *fr.* 249), were mostly Macedonians, but there were some Greeks and Thessalians amongst them. It has been supposed that there were six ἶλαι of Companions and six τάξεις of Foot-Companions, one raised from each of the six recruiting districts of Macedonia (Grote, *l. c.*). But though the divisions of the cavalry and infantry were called ἶλαι and τάξεις respectively, and there were recruiting districts (cf. the analogous division of Thessaly into four recruiting districts after its conquest, Dem. *Phil.* iii. p. 117, § 26), we cannot be quite certain that there were only six (see Hermann-Droysen, *op. cit.* 108). Thirteen ἶλαι are mentioned in Plut. *Alex.* 16, in such a way as to imply that there were more. A picked body of the cavalry was called the ἄγημα or βασιλικὴ ἶλη. Further divisions of the τάξεις were λόχοι and perhaps σκηναί, the latter consisting of ten men (Anaximenes *ap.* Harpocr. *s. v.* πεζέταιροι: Arrian. *Anab.* iv. 21, 10). If Anaximenes in this passage refers the establishment of the πεζέταιροι *eo nomine* to Alexander, this does not refer, as is thought, to Alexander son of Amyntas, but is probably only due to the practice of ascribing all innovations to and beginning all things from the great Alexander, though Abel (*Makedonien vor König Philipp*, p. 131, note 1) supposes him to refer to the enrolment of Persians in the army by Alexander the Great. The infantry was arranged in a phalanx (Diod. xvi. 3). Their armour consisted of a helmet, metal-plated leather jerkin, greaves, and small circular shield, about two feet in diameter (Asclep. *Tact.* 5), fastened on the arm, not grasped by the hand: for both hands had to be used to hold the sarisa [SARISA], twelve cubits long (Theophr. *Hist. Pl.* iii. 12, 2). They had also a short sword used for thrusting; and accordingly the long sword of the Roman horsemen caused the greater terror (Liv. xxxi. 34, 4). Over the armour they wore a cloak except in battle (Polyaen. iv. 3, 3). Their arrangement was that of a serried mass, a feature due to the influence of Epaminondas; for it was doubtless with a view of facing his method of warfare that Philip first organised the phalanx. Like the Greek hoplites, the phalanx was arranged in ζυγὰ and στίχοι (cf. p. 770 *b*). The armour of the cavalry did not at all differ from the armour of the ordinary heavy-armed horsemen in the Grecian armies. The lance was the ξυστόν, made of cornel-wood (Arr. *An.* i. 15, 5). The riders had no stirrups or saddles (cf. Hermann-Droysen, *op. cit.* 109). A very large portion besides of Philip's army consisted of light-armed troops and mercenaries (Dem. *Phil.* iii. 123, § 49). Philip was most particular about drill (Polyaen. iv. 2, 10); he made the soldiers carry their own provisions, thus getting rid of a great number of waggons; and he allowed no more than one servant for each horse-soldier and one for each ten foot-soldiers to carry such articles as the hand-mills, &c. (Frontin. iv. 1, 6). He supplied the arms to the soldiers (Diod. xvi. 3; Liv. xlii. 52), arranged the different corps and appointed all their commanders himself (cf. Arr. *An.* iii. 5, 5). His especial body-guard were called σωματοφύλακες, and were composed of his closest friends (Diod. xvi. 93; cf. Arr. *An.* vi. 28, 4). A further body closely connected with the king were the Royal Pages (βασιλικοὶ παῖδες), sons of the most distinguished Macedonians, who received a military training at the court. On the cavalry Philip bestowed great care: with the united Thessalians he had 3,000 in his war against the Phocians (Diod. xvi. 35). He took the greatest care in improving the breed of horses (Justin. ix. 2, 16). Even the foot-soldiers were trained to fight on horseback (cf. Arr. *An.* iv. 23, 2); and a peculiar wedge-shaped arrangement of cavalry (ἐμβολοειδὴς τάξις) is attributed to Philip (Arr. *Tact.* xvi. 6). For the Macedonian ἐξελιγμός, see p. 771 *a*. Philip, too, made the greatest improvement in military engines [TORMENTA], such as catapults and besieging-towers: from the sieges of Perinthus and Byzantium a new era dates in the art of besieging towns (Athen. *de Mech.* p. 10; Grote, xi. 262); though we must remember that Dionysius of Syracuse had considerable artillery before Philip's time (Diod. xiv. 42, 48, 50).

One of the chief introductions of Alexander was that of the *ὑπασπισταί*. They held an intermediate position between the heavy-armed Foot-Companions and the quite light-armed. They carried a round shield, a short thrusting-lance, and were clad with a chiton [CHITON], and wore on their head a causia [CAUSIA]. Some time during the campaigns of Alexander, probably after the battle of Arbela, the *ὑπασπισταὶ* were divided into chiliarchies (cf. Arr. *An.* iii. 29, 7), according to Persian custom (cf. Xen. *Cyr.* iv. 1, 4; Diod. xviii. 48). Alexander also divided the cavalry, no longer into *ἶλαι* in the first instance, but into *ἱππαρχίαι* (at first eight, later four, in addition to the *ἄγημα*), which were then divided each probably into two *ἶλαι* and several *ἑκατοστύες* (Arr. *An.* vi. 27, 6): a previous alteration tending towards this arrangement being the dividing of the *ἴλη* into two *λόχοι*, this latter title not having been applied to a division of cavalry previously (Arr. *An.* iii. 16, 3). Prior to the appointment of these *ἱππαρχίαι*, the *chief* commander of the cavalry was called *ἱππάρχης* (*ib.* iii. 27, 4). Besides the heavy cavalry, Alexander also introduced a lighter kind of cavalry, called Sarisophori, used, as Grote (xi. 389) says, like Cossacks for advanced posts or scouring the country. Their sarisa was shorter than that of the phalangites, but much longer than the *ξυστὸν* of the Companions. The Paeonian cavalry were something similar. We hear of a body of reconnoitring *πρόδρομοι* (*i.e.* Paeonians) and Sarisophori in the march to the Granicus (Arr. *An.* i. 12, 7). The Greeks seem to have used but little such reconnoitring parties. The phalanx of Alexander was much less rigid than is usually supposed: according to circumstances, it could be divided into various independently acting corps. We find the infantry sometimes running to the attack (Arr. *An.* i. 26, 3): and a glance at the plan of the battle of Arbela in either Rustow and Köchly's *Griechisches Kriegswesen*, or in Bauer, *op. cit.* Taf. xi., will show the phalanx broken up. However, the normal condition of the phalanx was in close array (*πύκνωσις κατ' ἐπιστάτην καὶ παραστάτην*, Pol. xviii. 30). The breaking-up into separate divisions is mentioned as an exception; it appears to have been often done to allow the chariots of the enemy to rush through (Arr. *An.* i. 1, 8; iii. 13, 6). The phalanx was usually eight deep, though at the Granicus Alexander made it sixteen (Arr. *An.* i. 13, 1). The front of the individual *λόχοι* was greater than the depth, because *λόχοι ὄρθιοι* are early mentioned as quite unusual (*ib.* iv. 25, 2). When standing in close array, each phalangite stood three feet from the soldier at his side and two feet from the soldier behind him. Given the sarisa to be even eighteen feet long, and six of these to be used in grasping and balancing it (Polyb. xviii. 12), the sarisa of the fifth rank would project two feet beyond the first rank. [It is very questionable, however, whether Polybius is in error in this passage in using the word *πήχεις* instead of *πόδας* all through, as Rüstow and Köchly (*op. cit.* 239), followed by Droysen (*op. cit.* 173), think. Hultsch, in his edition of Polybius, adheres to *πήχεις*, and see Grote, chap. xcii. Appendix, and xi. 384. That the longest sarisa was eighteen feet in Alexander's time, and was lengthened afterwards to twenty-one feet, twenty-four feet being the ideal length aimed at, seems the most satisfactory way to explain the various passages.] The other ranks held the sarisa slanting upwards to ward off missiles, but took no other part in the fight except so far as their pressure urged the front ranks forward. On the march the phalangites carried their sarisas on their shoulders; and bringing them down into position for action was called *καταβάλλειν τὰς σαρίσας* (Pol. xviii. 24, 9; Weiss. on Liv. xxxiii. 8, 13). The first man of each file (*στίχος*) was the *λοχαγός*, a soldier of tried bravery and great strength. This method of fighting in phalanx, which was characteristic of the Hellenistic empires down to the end of their existences, is severely criticised by Polybius in various passages, chiefly on the score of its incapability of manoeuvring easily—a disadvantage attaching more to the phalanx of the successors of Alexander than to that of Alexander himself. The phalanx, we are told, required even ground (Pol. xviii. 31; Liv. xxxi. 39, 10), was powerless against an attack from flank or rear (Pol. xviii. 26, 4; Liv. xliv. 41, 6), and in attempting to wheel round was generally thrown into confusion (Liv. xxxii. 18. 16). All this is no doubt true; and the truth was all the more apparent when the phalanx had to face the Roman manipular tactics (Pol. xviii. 29, 30): besides, the phalanx of the successors of Alexander was used generally in the offensive. But we must remember that the phalanx was quite invincible as long as it remained together, and its attack in front irresistible (Pol. *l. c.*), and that it was not subject to any inconveniences greater than those experienced by the ordinary Greek hoplite army (cf. Grote, xi. 385). The strength of the phalanx, according to the tacticians, was 16,384 men—16 men to one Lochus, 16 Lochi to one Syntagma, 2 Syntagmata to one Pentacosiarchy, 2 Pentacosiarchies to 1 Chiliarchy, 16 Chiliarchies to the phalanx (cf. Grote, xi. 386). But this is merely theoretical. The actual numbers of the phalanx varied. It was 10,000 at Sellasia, 16,000 at Cynoscephalae, and 20,000 at Pydna (Droysen, pp. 158, 172). The phalanx of Antiochus at Magnesia consisted of 16,000 men, and was formed in 10 divisions (*μέρη*) of 1600 men each, arranged 50 broad and 32 deep (App. *Syr.* 32; Liv. xxxvii. 40, 1).

We cannot be very certain about the strength of Alexander's army at different times; but even at the outset the Macedonians were distinctly in the minority—12,000 out of 30,000 infantry, 1500 out of 4,500 cavalry (see Grote, xi. 397). The Grecian allied forces stood under Macedonian commanders: the infantry is rarely mentioned, but we hear of the cavalry of the Thessalians and an *ἴλη* from Orchomenus in Boeotia. It is noticeable that mercenary cavalry appear in Egypt (Arr. *An.* iii. 5, 1). We do not hear much of the light-armed troops in Alexander's army. The Agrianes, a people from

Northern Macedonia, were valuable archers. There were, of course, slingers and javelin-throwers, later all kinds of native Asiatic troops, amongst them *ἱππακοντίσται* and *ἱπποτοξόται* (Arr. *An.* iii. 24, 1; iv. 24, 1). The introduction of these native troops after the conquest of the Persian empire led to changes in the army. The phalanx was now made 16 deep; the first three ranks being Macedonians, armed in Macedonian fashion with the sarisa, as was also the last, but the twelve intermediate ranks were Persians, armed with bows and javelins (Arr. *An.* vii. 23, 3; cf. Grote, xii. 73). This phalanx, says Bauer (*op. cit.* 315), is the first example of the union of differently-armed troops, light and heavy, into one tactical body. Droysen (*Gesch. Alex.* ii.^{2} 232) thinks it was intended to be used against the Italians. The Macedonian cavalry was posted on the wings, and was generally used to bear the chief part in the battle after it had been opened by the light troops, the heavy infantry being seldom required in Alexander's battles. Alexander himself usually headed the cavalry on the right wing. It was arranged in *ἶλαι*, separated by intervals (Arr. *An.* v. 15, 2), which advanced to the attack one a little in advance of the other, so that on a plan the different *ἶλαι* would look like a flight of steps. (This is probably the meaning of *ἐξελιγμὸς τῶν ἵππων* in Arr. *An.* iii. 15, 2.) It was quite exceptional if the cavalry were placed in a solid mass (*ib.* v. 17, 4). The extreme wings were generally formed by the Agrianes and other bowmen: next to the cavalry on the right wing, adjoining the heavy infantry, were the Hypaspistae (see Bauer, *op. cit.* p. 316). At Arbela Alexander made use of a considerable reserve (Arr. *An.* iii. 12, 1). The excellence of his cavalry brought about an important alteration in the conclusion of battles; for he used to pursue the beaten enemy (cf. Arr. *An.* iii. 15, 5), a practice not at all usual in Grecian warfare. Another feature in which the excellently-drilled Macedonian army differed from the Grecian was in being able to form in battle array a long distance from the enemy (7 miles at Arbela, Arr. *An.* iii. 9, 3). The use of field artillery is a striking feature of Alexander's tactics. He used it specially to protect the army in crossing a river (Arr. *An.* i. 6, 8), but also in other cases (Arr. *An.* iv. 29, 7). Heavy artillery was of course used in sieges. All the engines were administered by *μηχανοποιοί* (Arr. *An.* ii. 26, 2). Alexander did not use elephants; though he appears to have intended to do so, as he had 200 brought from India (Arr. *An.* vi. 2, 2). There was a very large mass of camp-followers in the army of Alexander, women and children being in it (Arr. *An.* vi. 25, 5), besides the number of soldiers' servants, merchants, and drivers of the waggons, which carried the tents, engines, and other baggage. The Macedonians do not appear to have fortified their camp; but each division of troops had definite positions in the encampment. We hear of Thracians used as pioneers (Arr. *An.* i. 26, 1). We know little about the way the commissariat was administered: and as regards pay, all we know is that the phalangite, who held a position midway between the common soldier and those who were said to get double pay (*διμοιρῖται*), got 10 staters a month (Arr. *An.* vii. 23, 3).

The wars of the Hellenistic period show in many respects a continuation of the later system of Alexander. The armies become much larger, and as a necessary consequence the material much worse, and a still larger proportion than before were mercenaries. Demetrius is said to have had an army of 110,000 men taken from every kind of class and nation (Plut. *Dem.* 43). In Hermann-Droysen (*op. cit.* p. 133 ff.) there are extensive statistics of the strength of the armies of this period. But many of the features of the army of Alexander continue. The large introduction of native troops beside a few Macedonians, the use of cavalry for the first attack, the position of the cavalry and light-armed on the wings, and the phalanx of heavy infantry in the centre, the carrying on of campaigns during the whole year and the extensive use and improvement of artillery, are features we still find exhibited. Also special corps retain their names, such as the *παῖδες βασιλικοί* (Pol. v. 82; Liv. xlv. 6, 7), *σωματοφύλακες* (Diodor. xix. 12), *ἄγημα* (Pol. v. 25), *ἴλη βασιλική* (Pol. v. 84), *ἕταιροι* for the cavalry (Pol. v. 53). But, on the other hand, there are differences. The phalanx comes to be used in the attack, no longer in the defence, and it becomes far more rigid and immovable than it was with Alexander. The sarisa was lengthened to 21 feet. Philopoemen (Pol. xi. 11, § 6) alone appears to have broken up the phalanx into smaller divisions. Pyrrhus (Pol. xviii. 28) placed Italians and phalangites alternately (*ἐναλλάξ*), but apparently without the whole mass being appreciably less serried. This rigid kind of phalanx remained the cardinal feature of the Hellenistic armies of the time: the best soldiers for it were considered to be the Macedonians and Achaeans (Pol. iv. 8); on the wings were generally placed special forces (*ἐπιτάγματα*) to prevent flank attacks (Pol. v. 53). The various Grecian states who aspired to any distinction in war had to adopt it—Aetolians (Liv. xxxviii. 7), Achaeans and Megalopolitans (Pol. ii. 65; Plut. *Philop.* 8), Spartans (Plut. *Cleom.* 11). The smallest division of the Hellenistic phalanx was the *σημαία*, which often appears in Egyptian papyri for bodies of fourteen men (Bauer, *op. cit.* p. 320). The *σπεῖρα*, which is the general term Polybius gives to the Roman cohort, was a larger division. There were no standards. Livy (xxxiii. 7, 2) wrongly applies to the Macedonians Roman customs. The purple cloth (*φοινικίς*) raised on a sarisa in Pol. ii. 66, § 11, was only for a signal. Alexander had after the Indian expedition assigned to certain veterans of the Foot-Companions the privilege of carrying silver shields, and these veterans were called *ἀργυράσπιδες* (Justin. xii. 7, 5) [ARGYRASPIDES]. These are mentioned subsequently in the wars of Eumenes and Antigonus (Diod. xviii. 58), and in the Syrian kingdom (Pol. v. 79, 4). We also hear of phalangites who carried white shields (*λευκάσπιδες*, Plut. *Cleom.* 23) and brazen shields (*χαλκάσπιδες*, Pol. ii. 66). This looks like the introduction of a kind of uniform (cf. the *στρατιωτικαὶ χλαμύδες* and *φοινικοῖ ὑποδύται* in Plut. *Philop.* 11: cf. Plut. *Aemil.* 18; Pol. xxxi. 3). The breastplate of the phalangites appears to have been of great weight and power of resistance (Plut. *Demetr.* 21). The term *ὑπασπισταὶ* appears to be now used no longer for the troops midway between the heavy and light style of armour, but for the body-guard (Diod. xviii. 45; Pol. v. 27; Liv. xlii. 51), as indeed it was occasionally in Alexander's time (Arr. *An.* iii. 8, 3). The 300 with Eumenes were the remains of Alexander's corps (Diod. xix. 28). We also hear of a special body-guard called *Nicatores* (Liv. xliii. 19, § 11; Hesych. *s. v.* *Νικατῆρες*).

In the Hellenistic armies the light-armed and cavalry stood on the wings. Peltasts are found in the Greek armies, and the Greek mercenaries were mostly armed in this style. They are regularly distinguished from the archers, slingers, javelin-throwers, &c. (Pol. viii. 15, § 6). They were divided into *σπεῖραι* and *σημαῖαι* (Pol. v. 4). These only very rarely acted in serried ranks: they generally fought in a scattered manner in small detachments (Liv. xxxv. 29). The best archers were Cretans, who were excellent too at ambushes, raids, and such like irregular warfare (Pol. iv. 8, 68), or Agrianes (Pol. ii. 65, 79): the best slingers were Achaeans (Pol. iv. 61); yet it is noticeable that in the armies of the Achaean league no Achaean slingers appear (Hermann-Droysen, 170, note 3). The cavalry was largely supplied by the Thessalians (Liv. xxxiii. 4; Pol. xviii. 22). It was armed with the heavy breastplate and thrusting-pike (*ξυστόν*), and carried a wooden shield covered with brass (Pol. vi. 25). The Thessalian cavalry was unconquerable when fighting in line and phalanx, but difficult to be used for single combat out of line; the case being just the reverse with the Aetolian cavalry (Pol. iv. 8, xviii. 22). The Aetolian cavalry was divided into *οὐλαμοί* (which was the smallest division, Pol. xviii. 19), *ἶλαι*, and *ἱππαρχίαι*. Cavalry was usually posted eight deep, with intervals between the individual *ἶλαι* (Pol. xii. 18). The statement that in the battle of Gabiene the two *ἶλαι* were posted fifty deep (Diod. xix. 27) is hardly to be believed; rather they were fifty strong (Rustow and Köchly, *op. cit.* 370, note 16). Special kinds of cavalry also used were: (1) the *Median* cavalry, with long lances (*λογχοφόροι*, Diod. xix. 39), probably like the Sarisophori of Alexander; (2) *Tarentini*, light-armed cavalry, using javelins and each having two horses (Pol. iv. 77, xi. 12, xvi. 18; Ael. *Tact.* 45; Liv. xxxv. 28: cf. Pollux, i. 131, *ἅμιπποι*), such being originally mercenaries from Tarentum; (3) *Cataphracti* (Pol. xxxi. 3; Liv. xxxvii. 40) [CATAPHRACTI]. We occasionally hear of *ἱπποτοξόται* (Diod. xx. 113) and scythed chariots (Plut. *Demetr.* 28; Liv. xxxvii. 40). But the most special feature of the Hellenistic armies, especially that of the Seleucids, is the use of elephants. Alexander had no doubt intended to use them, but never did. Seleucus got no fewer than 500 from Sandracottus (Strab. p. 724). The elephants were generally placed before the line in the centre, though sometimes on the flanks, *ἐν ἐπικαμπίῳ* (Diod. xix. 27–29), *i.e.* at an angle with the main line, stretching forward or backward according as they were to be used for attack or defence. Sometimes we find them in a square (Diod. xix. 39). Between the elephants were numerous light-armed, and both used generally to open the battle. Pyrrhus, however, was accustomed to keep them for the final effort—they were the *ultima ratio regis*. The elephants were mostly Indian ones, and were driven by men called Indians (Diod. xix. 84; Liv. xxxviii. 14), except in Egypt, where the African elephant was used (Pol. v. 79, 82). The latter was much inferior to the Indian elephant (*ib.* 84). In the wooden tower (*θωράκιον*) on each beast there were, besides the driver, three or four combatants armed with sarisas or bows (Pol. v. 84; Liv. xxxvii. 40; Strab. p. 709). Sometimes there were coats of mail put on the animals (Liv. *l. c.*), and on their backs were purple trappings (Plut. *Eum.* 14), in front plumes and frontlets (Liv. *l. c.*). There were special commanders for the corps of elephants (Plut. *Eum.* 16; App. *Syr.* 33). One elephant generally used to lead the way (*προηγούμενος*, Diod. xix. 42). When the elephants violently assailed the enemy with tusks and trunk, they were very formidable (Pol. v. 84); but if they did not strike terror at once into their opponents, their influence was frustrated with comparative ease: simple devices, like chains or boards with nails, sufficed to stop their advance (Diod. xviii. 71; xix. 83).

The miscellaneous character of the Hellenistic armies can be very well seen by an examination of the lists of the armies of Eumenes and Antigonus at the battle of Paraetakene (317 B.C.) and of Demetrius at Gaza in 312 B.C. (Diod. xix. 27–29 and 82). Mercenaries were very cheap (Diod. xx. 113). Antigonus promises each Celt no more than a *χρυσοῦς Μακεδονικός*, *i.e.* a stater (Polyaen. iv. 4, 17). The frequent use of Celts is very noticeable (Pol. ii. 65, v. 53): their characteristic is carrying the great oblong shield (*θυρεός*), which is so often portrayed by the Pergamene artists. Owing to the long marches, considerable care was bestowed on the commissariat, as is evidenced by the preparations of Antigonus in his Egyptian expeditions (Diod. xix. 58; xx. 73): for it is to be noticed that military *operations*, ambuscades, forced marches, surprises, and such *κλοπαὶ τοῦ πολέμου*, are more frequent in this period than previously, and these required waiting for opportunities (cf. Rustow and Köchly, *op. cit.* 358 ff.). There was a still larger and more indiscriminate camp-following than in Alexander's time, wives and children of the soldiers being found there in great numbers (Diod. xix. 43; Plut. *Aemil.* 16). The army, says Diodorus (xx. 41), was actually like a colony. Owing to its size, different divisions had sometimes to take up winter-quarters six days' journey from one another (Diod. xix. 37). Great arsenals and military centres were established in the different kingdoms, *e.g.* at Alexandria and Apamea (Strab. p. 752), where the soldiers were drilled during the winter (Pol. v. 66, cf. 63). Field-artillery was occasionally used (Pol. xi. 11, 12). For the camp, which was protected by a rampart and a ditch (Diod. xix. 39), but by a very indifferent palisade (Pol. vi. 42, xviii. 18), see CASTRA. The generals and distinguished officers in close attendance on the monarch wore purple mantles (Pol. xi. 18); hence are called *purpurati* by Livy (xxxi. 35). The bestowing of a purple mantle and a causia was considered a mark of distinction (Plut. *Eum.* 8). The officers sometimes fought with sarisas, and had, like the phalangites, small shields (Diod. xviii. 34), but usually they fought with a *ξυστὸν* on horseback. In Macedonia there were not nearly so many mercenaries as in the other Hellenistic armies; moreover, the armies in that kingdom used generally to be disbanded in winter (Pol. ii. 54, § 14; iv. 67, § 3). In Egypt the Ptolemies enrolled a great number of native Egyptians (Pol. v. 65); but apparently only in consequence of a revolution by the Egyptians (Mahaffy, *Greek Life and Thought*, p. 486): as reserves they had the colonists (*κάτοικοι*) settled in the military colonies (*κατοικίαι*) throughout the country. These colonists were of the most varied nationalities—Greeks, Macedonians, Thracians, Celts, Jews, Cretans. They and their sons (*ἐπίγονοι*) were divided into *σημαῖαι*, and in time of war could be called out for service as infantry or cavalry, but in time of peace they might engage in any business like ordinary civilians. (For full details on these *κάτοικοι* in Egypt, see Lumbroso, *L'économie politique de l'Égypte*, p. 224 ff.; and Hermann-Droysen, *op. cit.* 163.) In Greece at this period, with the exception of the efforts of Philopoemen in the Achaean league and Cleomenes at Sparta, military affairs were in a deplorable state of inefficiency. Mere raids seem to have been most that were attempted; we come across such phrases now as *τὸ λάφυρον ἐπικηρύττειν*.

(The chief work on the Grecian military systems is that of Rustow and Köchly, *Geschichte des griechischen Kriegswesens*, 1852. This is the main foundation of all subsequent treatises, the best of which are *Die griechischen Kriegsalterthümer* by Adolf Bauer, in Iwan Müller's *Handbuch der klassischen Alterthumswissenschaft*, 1887, iv. 226-231, where the vast bibliography on the subject is to be found; and H. Droysen's edition of *Die griechischen Kriegsalterthümer*, in vol. ii. of K. F. Hermann's *Lehrbuch der griechischen Antiquitäten*, 1888. Much information is also to be got from Gilbert, *Handbuch der griechischen Staatsalterthümer*, 1881, and H. Droysen, *Untersuchungen über Alexander des Grossens Heerwesen und Kriegführung*, 1885.

II. ROMAN (down to Septimius Severus). The most generally adopted periods in the development of the army during the Republic is into the *citizen army* of the first six centuries, and what is called the *mercenary army* of the last century dating from Marius. The latter formed a transition to the *standing army* of the Empire. Adopting this division, we shall say something about the legionary and auxiliary force of each period.

I. *From Romulus to Marius: the Citizen Army.*

1. *The early Kings.*—Under the early kings the *legion* or "gathering" (from *legere*, Varro, *L. L.* v. 87)—called in Greek generally *στρατόπεδον*, often *τάγμα, τέλος, στράτευμα* (Dio Cass. xxxviii. 47), *τεῖχος* (*ib.* lxxix. 7)—appears to have consisted of three "thousands" (*milites*) commanded by three *tribuni militum* and three hundred horse (*celeres*) commanded by three *tribuni celerum*. Tradition says (Varro, *L. L.* v. 89, 91) that the Ramnes, Tities, and Luceres each contributed a third to the legion of Romulus, though the Luceres were not in existence at that time. The *tribuni* were so called because they presided over a third part of the whole force (Serv. on *Aen.* v. 560). Besides these regular troops, the old terms *velites* and *arquites* point to a subsidiary force of light-armed, especially archers (Mommsen, *R. H.* i. 79, Eng. trans.). The patricians were the heavy-armed and their clients the light-armed. The method of fighting, if we may judge from the early stories of Livy (*e.g.* i. 10, ii. 6), appears to have been single combats of horsemen in Homeric style. Each warrior, we are told (Festus, s. v. *paribus equis*, p. 121 M.), brought two horses into battle. Instances of single combat appear long after the Republic was established: *e.g.* Cossus (Liv. iv. 19), Q. Fabius (v. 36), Corvinus (vii. 26), Asellus (xxiii. 46, 12), Scipio Aemilianus (Val. Max. iii. 2, 6), but it was no longer more than an exceptional incident of the battle. Still for a long period the cavalry formed among the Romans a highly important department of the army, used either to charge the enemy at the outset and throw them into disorder, which was completed by the advance of the infantry (Liv. i. 30, 9; iv. 47, 2), or to act as a reserve in order to charge at the critical moment (Liv. iii. 62, 8; ix. 39, 8). A still greater superiority in cavalry lasted among the other Italians till much more recent periods. In the Second Punic War it was the most important part of the Capuan army (Liv. xxiii. 46, 11), and the Romans during the flourishing period of the Republic always got the main portion of their cavalry from the Italian allies.

2. *Servius Tullius.*—During the monarchy of Servius Tullius we must suppose the increased army due to the increased population. Under him we find four legions, two of *juniores* from 17 to 46 years (Mommsen, *Staatsrecht*, i.² 487) and two of *seniores* from 47 to 60, with 1800 cavalry. Later the calling out of the *seniores* only took place in great emergencies (Liv. x. 21, 4; cf. vi. 6, 14). The infantry now became the chief department of the army, and was arranged in a phalanx like the Doric one, except that the soldiers had missile weapons borrowed from the Etruscans or Samnites (Sall. *Cat.* 51, 38), especially the *hasta*, called in Sabellian language *quiris* (hence *Quirites*). It is probable too that the Romans also got from the Etruscans the *clipeus*, and from the Samnites the *scutum*, though Mommsen (*R. H.* i. 456, note) in the face of tradition (Diod. *Vat. Fr.* 54; Verg. *Aen.* vii. 665; Festus, s. v. *Samnites*, p. 327 M.), thinks the *clipeus* and *scutum* derived from the Greeks. The men were taken from those who had a stake in the country, the ASSIDUI or LOCUPLETES, who were formed into five classes, paid tribute, and served at their own expense (Festus, s. v. *assiduus*, p. 9 M.); while the *proletarii*, who were outside the classes, were only called out in cases of emergency, and were equipped by the state (Gell. xvi. 10, 11). The phalanx consisted of six rows of 500 men each and 1200 light-armed. Scholars interpret the accounts of the phalanx as given by Livy (i. 43) and Dionysius (iv. 16, 17) differently. Marquardt (*Staatsverwaltung*, ii.² 326) supposes the first two ranks only to have been of the first class and to have had the full armour, viz. helmet [CASSIS, GALEA], breastplate [LORICA], round iron shield [CLIPEUS], greaves [OCREAE]; the third and fourth ranks to have been of the second class, and to have had an inferior suit of armour, viz. breastplate, greaves, oblong leather shield [SCUTUM]; and the fifth and sixth ranks to have been of the third class, and to have had only breastplate and *scutum*. Mommsen, on the other hand (*Röm. Tribus*,

p. 138; *R. H.* i. 99), holds that the first four ranks were taken from the first class, and had the full armour; the fifth from the second class, with the inferior armour; and the sixth from the third class, wearing the third class kind of armour. The fourth and fifth classes, who either formed the rear of the phalanx or more likely fought alongside it, contributed the light-armed or *rorarii*, so called because they opened the battle with a "shower" of missiles ("Tractum quod ante maximas pluvias caelum rorare incipiat," Non. 552, 31), and then retired behind the phalanx (cf. Lucil. x., "Pone paludatus stabat rorarius velox"). But Dionysius says the fourth class formed the seventh row of the phalanx, and carried a *scutum*, sword, and spear; and in this he is followed by Huschke (*Serv. Tull.* 425), while Livy declares that they had "nihil praeter hastam et verutum," *i.e.* fought sometimes in the phalanx with the *hasta*, sometimes as light-armed with the *verutum*. The fifth class, according to Dionysius, was outside the phalanx, but had spears (*veruta*, *σαύνια*) and slings; Livy says they had only slings and stones. The *ferentarii*, who fought with missiles ("quae ferrentur non quae tenerentur"), were the same as the *rorarii* (Varro, *ap.* Non. 520, 12 M.; Festus, p. 369 M.). It is to be carefully remembered that there were twenty centuries of the first class; five of the second, third, and fourth; and seven of the fifth class in each legion. Besides, there were two centuries of artisans (*fabri*, *aerarii et tignarii*) to look after the engines, two of trumpeters (*cornicines*, *liticines*), and one of *accensi velati* (unarmed supernumeraries), who were most likely brought to fill up the places of those who fell (Festus, p. 369), and it is barely possible that they may have acted as a sort of pioneers to clear the roads in advance: for in imperial times a body with this name was a college (Orelli, 2182; *C. I. L.* vi. 1607), and had something to say to road-making (Orelli, 111; and Mommsen in *Annali dell' Instituto*, 1849, pp. 209 ff.). *Adscriptitii* (from the point of view of the levy) or *accensi* (from the point of view of the census) when used alone appear to be generic terms, embracing all those not in the phalanx (Festus, s. v. *adscriptitii*, p. 14 M.), though Livy (viii. 8, 8) and Plautus (*ap.* Varro, *L. L.* vii. 58: "Ubi rorarii estis? En sunt. Ubi accensi? Ecce") distinguish them. Lange (*Röm. Alt.* i.^{3} 535) supposes that the *rorarii* were the fifth class, and the *accensi* the *proletarii*. Subjoined is a table taken from Mommsen (*Die römischen Tribus*, p. 141), which shows the theoretic arrangement, and how the numbers were derived from the four local tribes. We say "theoretic" because, for example, one can hardly suppose that the *seniores* can have been as numerous as the *juniores*. There cannot be a shadow of doubt but that the arrangement was previously a military one (Lange, *R. A.* i.^{3} 456, 464, 522, &c.); for if it were not so, why should a man of sixty years of age be excluded from the centuries (Mommsen, *R. H.* i. 100)?

The cavalry was increased by twelve new centuries by Servius Tullius; and though they still were personally the principal classes in the army, yet in a military point of view they lost their pre-eminence, being now placed on the wings of the phalanx, and in a social point of view they lost their exclusively patrician character. The knights are now the richest of the citizens (Cic. *Rep.* ii. 22, 39), those whose property surpassed that required for the first class, and there was perhaps a fixed sum necessary to enable one to become a knight, as we hear of a *census equester* in 403 B.C. (Liv. v. 7, 5). They no longer had two horses for themselves, but one for themselves and the other for their attendant; and for procuring and keeping these horses they got from the treasury an *aes equestre* and *aes hordearium*, the latter a sum defrayed by a tax on widows and orphans (Marquardt, *op. cit.* ii.^{2} 172). At a triumph they got a threefold share of the booty (Liv. xlv. 43, 7), when planted in a colony a share of land larger than the others (Liv. xxxv. 40, 5; xxxvii. 57, 8), and threefold pay when pay was introduced (Polyb. vi. 39, 12). The number of active knights who received the *aes equestre* remained 1800; but those who acquired the property necessary to become knights, without obtaining the *equus publicus* (i.e. getting the *aes equestre*), increased greatly, and they were the origin of the *ordo equestris* (Liv. ii. 1–10; Lange, *R. A.* ii.^{2} 20 ff.). [EQUITES.] Thus we hear that at the siege of Veii there were many who served without having an *equus publicus* (Liv. v. 7, 5); a passage, by the way, which shows that those who did not get the *aes equestre* probably were not required to serve in the infantry.

3. *Camillus.*—Important changes were introduced into the army by Camillus: (1) payment of the soldiers from the time of the siege of Veii (406 B.C.), in consequence of the necessary continuance of war operations, from summer into winter; (2) certain alterations of arms, plating of helmets and shields with brass, and teaching the soldiers to use long *pila* to ward off the stroke of the Gallic sword (Plut. *Camill.* 40); (3) probable beginning of the breaking up of the phalanx into maniples. This breaking up was most likely introduced in order to resist the first and most dangerous charge of the Celtic sword-phalanx, and was further developed in the Samnite wars, reaching its full perfection in the war with Pyrrhus. The result of the breaking up of the phalanx was that the system of census divisions in the army disappeared, and the arrangement was made to depend on the age and experience of the soldiers: the soldier now advanced from *rorarius* to *triarius* (see below). This was quite necessary, as a better military training was required for steadfastness and efficiency in the small manipular unit than in the solid phalanx, where the inexperienced could not leave their place so easily (Mommsen, *R. H.* i. 454).

But we do not know all the steps in the development of the army to the arrangements it exhibits in the most flourishing period of the Republic, viz. the 6th century of the city. From Camillus to Polybius is over two hundred years, and many changes were effected in that time which we can only guess at. As to the manipular arrangement described by Livy (viii. 8) in his account of the Latin war of 340 B.C., which he appears to have taken without understanding it from some older authority, it is all too confused and uncertain to allow any definite result to be obtained from it (see Weissenborn *ad loc.*, and Madvig, *Verfassung*, ii. 483, 489). For the immense literature which has gathered round the passage, but reached no definite explanations, see Marquardt, *op. cit.* ii.^{2} 360, note 1. Passing by this perplexing description, let us proceed to sketch the state of the army as described by Polybius.

4. *Polybius.*—A certain *property* was still required for service in the army, but it was now only 4,000 asses instead of the 11,000 of Servius Tullius (Polyb. vi. 19, 2). The normal *number* of men in the legion continued as in the time of Servius Tullius, viz. 4,200, roughly 4,000, infantry (cf. for 494 B.C. Dionys. vi. 42; for 381, Liv. vi. 22, 8; for 349, Liv. vii. 25, 8; for 225, Polyb. ii. 24, 13; for 146, Polyb. vi. 21, 9). In especial cases the numbers were 5,200 or 5,000 (Polyb. ii. 24, 3; iii. 107, 10; vi. 20, 8;—Liv. xxvi. 28, 7; xl. 1, 5). It was first in the war against Perseus that the legion was raised to 6,000 (Liv. xlii. 31, 2), and the regular number from Marius's time was 6,200 (Festus, s.v. *sex millium*, p. 336 M.), a number which appears occasionally earlier (Liv. xxix. 24, 14; xxxv. 2, 4). The old quota of cavalry for the legion was 200 (Pol. iii. 107, 10; Liv. xlii. 31, 2), but the usual one for the legion, whether of 4,200, 5,000, 5,200, 6,000, or 6,200, was 300 (see Polyb. and Liv. *ll. cc.*).

Taking then the normal legionary force at 4,200 infantry, it was divided in Polybius's time (vi. 21, 7–9; cf. Gell. xvi. 4, 6) into 1200 *hastati*, 1200 *principes*, 600 *triarii*—these three classes arranged behind one another in the form of a quincunx, and 1200 velites (*γροσφόμαχοι*). The latter are the "youngest and poorest," the hastati "those next them" (*i.e.* in these two respects), the principes "the most vigorous in years" (*τοὺς ἀκμαιοτάτους ταῖς ἡλικίαις*), and the triarii "the oldest" (cf. Liv. viii. 8, 8). All three classes were armed with a metal helmet [CASSIS], having a red or black plume 1½ feet high (Pol. vi. 23, 12), but no visor, a leathern shield [SCUTUM], greaves [OCREAE], a leathern breastplate [LORICA], a short Spanish two-edged sword [GLADIUS], which was worn at the right side while they carried a dagger at the left. The spear of the hastati and principes was the light *pilum* [PILUM], used for throwing, while the triarii carried the *hasta* for thrusting [HASTA]. Besides this armour, the soldier of course had such articles of attire as the *sagum* [SAGUM].

The hastati, principes, and triarii were broken up into thirty "bundles" (*manipuli*), each "bundle" forming the smallest tactical unit which was under one standard (Varro, *L. L.* v. 88; cf. Tac. *Ann.* i. 34, "discedere in manipulos"). The *manipulus* derived its name, if not as indicated from itself being a bundle of men (cf. Madvig, *Verfassung*, ii. p. 486, note), from the bundle or handful of hay (Plut. *Rom.* 8; Ov. *Fast.* iii. 115 ff.) fixed on a pole which served as the standard. Later *signum* was the term for the standard of the maniples (Liv. xxvii. 14, 8), and Polybius very frequently uses *σημαία* for the maniple (though the usual word is *σπεῖρα*, *τάγμα* sometimes being found). Occasionally the maniple had more than one *signum* (Pol. vi. 24, 6). The maniple continued as a recognised division of the army even after the introduction of the arrangement by cohorts (Caes. *B. C.* ii. 28, 1; Tac. *Ann.* i. 34) down to very late times (Amm. Marc. xxi. 13, 9), though we sometimes find it used in a vague sense for any detachment (Tac. *Ann.* xiv. 58, 59). The maniple was further divided into two centuries, each commanded by a centurion, the centurion which commanded the right century being elected before him who commanded the left (Pol. vi. 24).

The *hastati* then formed 10 *manipuli* of 120 men each or 20 centuries of 60 men each. So did the *principes*. The *triarii*, who were always 600, and never varied with the varying numbers of the legion (Pol. vi. 21, 10), formed 10 maniples of 60 men each or 20 centuries of 30 men. To each century 20 *velites* were added (*ib.* 24, 4). The maniple of the first two ranks with its velites was usually arranged with 20 men in front and 8 in depth, according to Nast (*Röm. Kriegsalterthümer*, p. 51) and Marquardt (*Staatsverw.* ii.^{2} 346), on the not very strong grounds that such was the usual depth among the Greeks and among the Romans in the time of Trajan. Mommsen (*R. H.* i. 453) appears to think that the depth was not more than four files, the maniples of the three ranks having a front accordingly of 40, 40, and 20 men; and this seems the preferable view, as the main aim of the manipular arrangement was to encourage the individual mode of fighting. This latter was the cause of the considerable space, it may have been 6 feet, which was allowed in what was called loose array (*laxatis ordinibus*), between each soldier and his fellow-soldier beside or behind him; in close array (*confertis ordinibus*) the space was only 3 feet (cf. Pol. xviii. 13, 6; Liv. xxii. 47, 5; Caes. *B. G.* ii. 25, 1; Veg. iii. 14, though it must be confessed these passages only make for and are not quite conclusive as to such an accurate distinction). The general form of opening the battle was for the *hastati* to hurl their *pila* at a distance of about 10 or 20 paces from the enemy, and then proceed to the attack with the sword, where single combats prevailed. If this did not finish the battle, the *principes* advanced. The *triarii* always acted as a reserve, sometimes at the camp (Liv. v. 19, 7; vii. 23, 7), as was their duty originally (Dionys. v. 15; viii. 86). For further details, see the account of the Battle Array below, p. 807 *b*.

The great advantages of this divided light manipular arrangement as against the serried unwieldy phalanx, are that the former was ready for any emergency, that it was not disarranged by uneven ground, that a small disorder did not break up the whole array as in the phalanx, that the individual soldier was better able to vary his method of fighting according as it is necessary that the maniple, century or individual should engage; and many more which are set forth by Polybius, xviii. 31, 32. Mommsen (*R. H.* i. 455) notices how the Roman military arrangements of this time attained the three great military principles of keeping a reserve (the *triarii*), of combining the distant and close methods of fighting (in the discharge of *pila* preparatory to the sword attack), and in combining the offensive and defensive (the latter especially in the formation of camps).

The 300 cavalry of the legion fell into 10 *turmae* (ἴλαι) of 30 men. Each *turma* was commanded by three *decurions* (ἴλαρχαι) and three *optiones* (οὐραγοί), and had a *vexillum* (Veg. ii. 14). The *turma* stood in three rows, each row having a decurio and an optio in the first and last place, the first elected decurio leading the whole troop (Pol. vi. 25, 1, 2). They charged in close order (Sall. *Jug.* 101, 4), often taking the reins from the horses (Liv. viii. 30, 6; xl. 40, 5); but in standing fight they doubtless extended their ranks if they did not dismount and fight on foot (Liv. xxxi. 35, 5). Originally the cavalry had no armour, only a tunic so as to enable them to leap on and from their horses easily, ox-hide shields incapable of resisting severe thrusts and easily damaged by wet, very light lances with a point only at one end; but in the time of Polybius they had adopted the Greek cavalry equipment, which consisted of breastplate, covering for the loins, greaves, metal helmet, round shield [PARMA], lance, and long sword, "which as soon as they saw they adopted speedily; for the Romans are pre-eminently good at adopting new practices and striving after improvements" (Pol. vi. 25, 3–11). Possibly, as among the Greeks, the horses wore protections for the head, breast, and sides (προμετωπίδια, προστερνίδια, παραπλευρίδια). Saddles appear to have been used in Caesar's time (*B. G.* iv. 2, 5), but they had no stirrups, as may be seen from illustrations, and from the fact that recruits were taught to vault into the saddle (Veg. i. 18).

During the Republic the Roman cavalry was always weak; and its inferiority was so marked as against the fine Campanian cavalry that, in order to be able to contend with it at all, the Romans in 211 B.C. (Liv. xxvi. 4) selected from the legions the most active youths, who carried each a *parma* and seven iron-tipped javelins (*hastae velitares*), 4 feet long each. These youths, whom Livy calls *velites*, used to ride behind the horsemen, and leaping down at a given signal hurl their darts in rapid volleys. This practice of foot-soldiers fighting amongst the cavalry existed also amongst the Germans (Caes. *B. G.* i. 48, 5; Tac. *Germ.* 6), and Caesar formed such a troop of Germans (*B. G.* vii. 65, 4; viii. 13, 2). This practice appears to have been afterwards regarded as a regular specific for strengthening weak cavalry (Veg. iii. 16). Of course *velites*, meaning light-armed, existed long before, as can be seen even in Livy (xxi. 55, 11); but it appears that from this time (viz. 211 B.C.) the *rorarii* disappear, and *velites* is the name for the light-armed of the legion (Liv. xxx. 33, 3). They combined both distant and close conflict (Liv. xxxi. 35, 5), whereas the *rorarii* only fought from a distance; and further the *velites* now formed an integral part of the maniples or *turmae*, whereas the *rorarii* were troops apart.

A word must be said in conclusion on the terms *hastati*, *principes*, and *triarii*, terms which were not clear (*minus illustria*) in the manipular arrangement, as Varro says (*L. L.* v. 89). The front rank is called *hastati*, but their spear was the *pilum*. How is it that the *second* rank is called *principes*, i.e. "the first men"? And the *triarii*, who are also called *pilani*, do not carry the *pilum* at all, but a *hasta* (δόρυ, Pol. vi. 23, 16). We must take refuge in conjecture to explain these difficulties. The terms probably came from the old phalanx, the *principes* or *proci* being the front rank (Festus, p. 249 M.), as *principia* means the front rank often (Liv. ii. 65, 2; Sall. *Jug.* 50, 2), and so being members of the first class. The term *hastati* was one applied to all the members of the phalanx who were all armed with the *hasta*, but it got narrowed down to a portion of what it originally implied when the name of *principes* was appropriated by the first class, just as, for example, the term *dies fasti* became confined to a portion of the Dies Fasti (see Lange, *R. A.* i.^{3} 360, 532), or the term *centuria* to half a century when the maniple was introduced. The *triarii*, the third rank (we should more naturally expect *tertiarii*), used originally, as we saw, to guard the camp. Doubtless in this duty they used the long heavy *pilum* [PILUM]; hence were called *pilani* (Varro, *L. L.* v. 89), a name which was in a measure retained not only in the titles of the centurions, but also in the term *antepilani* as applied to the *hastati* and *principes* (Liv. viii. 8, 7). Now, when the class-distinctions began to be superseded and efficiency made the ground of the arrangement in the legion, the chief and most able soldiers, who socially too were the most important and who had been in the front rank originally and as such still retained the name of *principes*, were not used for the first assault, but kept in case the battle proved a serious one; the inferior classes, the *hastati*, being placed in front. The *triarii* continued to be the reserve. They had been probably the older men left to guard the camp; but now that age meant generally experience, as being used for the reserve these veterans formed the most efficient and tried portion of the army.

II. *From Marius to Augustus—the Mercenary Army.*

The terrible defeat of the Romans at Arausio in 105 B.C. rendered it necessary to make every effort possible to raise sufficient and adequate forces to meet the Northern invaders. This serious pressure hastened and consummated the introduction of changes in the army which the altered political and social condition of the times rendered inevitable sooner or later. The gradual shrinking of the rich upper classes from service (Sall. *Jug.* 85, 3) and the disappearance of the middle class left nothing open but the admission of all free-born citizens to the legions; that is, if an adequate army was to be raised. The census indeed in Polybius's time was only 4,000 asses (vi. 19, 2), but now nothing further was required but free birth,—a recruit need possess nothing but his *caput* (*capite census*). This was the most vital change possible. Men with no stake in the country and nothing to go home to after service, who looked on service as a means for enriching themselves and not as a temporary burden, were certain to become, as they did, faithful followers of their leader if he led them to plunder (Sall. *Jug.* 86, 3) and to care little about their country (Appian, *B. C.* v. 17)—in fact, practically to become mercenaries. It is not without reason, then, that Marquardt (*Staatsv.* ii.² 321) calls the period from Marius to Augustus the period of the Mercenary Army (*Söldnerheer*). The essence of such an army is the supremacy of the general and the equality of the soldiers. All the traditional distinctions of *velites*, *hastati*, *principes*, and *triarii* disappear; their definite and traditional place in the order of battle, their military rank, armour, standards, all were superseded; the recruits were now all on an equality and uniformly trained, a new and severe method of drill and training like that of gladiators having been devised by P. Rutilius Rufus, consul in 105 B.C. (Val. Max. ii. 3, 2). In place of the manipular division, the last mention of which is its use in the Jugurthine War by Metellus (Sall. *Jug.* 49, 6), the unit now becomes that of the *cohort*, viz. a combination of three maniples. Whether it was the maniples beside one another, or the three behind one another, which were massed together, is uncertain, probably the latter. The number of the legion at this time was, roughly speaking, 6,000 (Plut. *Sull.* 9, compared with *Mar.* 35; Appian, *Mithr.* 72; Cic. *Att.* v. 15, 1, compared with Plut. *Cic.* 36); though Caesar had generally less than this number, sometimes not more than about 3,500 men in his legion: *e.g.* the 13th Legion, which he had at Ariminum at the outbreak of the Civil War (Caes. *B. C.* i. 7, 7), consisted apparently of 5,000 (Plut. *Caes.* 32, *Pomp.* 60), but Caesar himself reckons two legions (*B. G.* v. 49, 7) and a few cavalry at 7,000 men. Still, whatever was the strength of the legions, the number of cohorts was always 10. These had no traditional arrangement, and were disposed of in battle just as the general thought fit: perhaps the *triplex acies* (e.g. *B. G.* i. 24, 2), viz. 4 cohorts in front and 3 in each of the other ranks, was the most usual; though the single (*Bell. Afr.* 13, 2), double (Caes. *B. C.* iii. 67, 3), and quadruple lines of battle (*ib.* 89, 3) are also found. The special application of the word *cohors* to a definite portion of a legion must be noticed, beside the technical use of the word to express the divisions of the auxiliary force, the vague use that Livy makes of it by applying it to any division of troops at all (*parmata cohors*, iv. 38, 3), and the misuse by so translating σπεῖρα (xxx. 33, 1, compared with Polyb. xv. 9, 7). The *pilum* was now made the common weapon of the whole legion, the *hasta* of the *triarii* being done away with. The old standards—the eagle, wolf. Minotaur, horse. and boar (Plin. *H. N.* x. § 16)—give place to the silver eagle (Cic. *Cat.* i. 9, 24), which now becomes the chief standard of the legion.

The Roman cavalry had disappeared before Marius. Its last mention is in the Spanish campaign of 140 B.C., where it behaved with great pretension and insubordination (Mommsen, *R. H.* iii. 200); and after the Jugurthine War it vanishes entirely. Even the Italian cavalry had been for long unable to cope with the enemies of Rome: it had been defeated by Hannibal in Italy, and Scipio only won Zama by the cavalry of Masinissa. It vanished completely in the Social War; and after that foreign troops—Gauls, Spaniards, Thracians, and Africans (Plut. *Ant.* 37)—were taken into the service in larger numbers than heretofore. In Caesar's army they were about a fourth or a fifth of the infantry: with 6 legions (=about 21,000 men) he had 4,000 (Caes. *B. G.* i. 15, 1), with 5 legions 5,000 (*B. C.* i. 39, 1); in the army of Brutus at Philippi there were more than 1,000 to the legion (App. *B. C.* iv. 108). Some minor changes and improvements in practical details are attributed to Marius, such as the *muli Mariani*, a forked contrivance fastened on the shoulder of the legionary to enable him to carry his baggage (see below, p. 807*a*), altering the *pilum* [PILUM], taking away the *parma* from the auxiliary troops (Festus, p. 238, s. v. *parmulis*), &c. The numbering of the legions probably began also in this period; certain it is that we find it quite regular in Caesar's time (*C. I. L.* i. 624; Cic. *B. G.* viii. 8, 2). Originally the legions had been numbered according as they were raised (Dio Cass. xxxviii. 47); but then the numbers had no durable significance, owing to the speedy disbanding of the legions.

The Auxiliary Forces under the Republic.

1. *The Socii.*—In the time of Tarquinius Superbus the Latins were incorporated in the Roman army (Liv. i. 52, 6): but on their regaining their independence after the establishment of the Republic, they furnished their contingent to the united army, and held the chief command alternately with the Romans. But after the great Latin War, which ended in 338 B.C., the Latins became *cives sine suffragio.* The members of those municipia who lost their constitution were enrolled in the legions, those who retained their municipal constitution formed self-subsisting divisions, such as the *legio Campana* we hear of in Liv. *Ep.* xii. (cf. Polyb. ii. 24, 14). After the Second Punic War, when the differences of the old municipia ceased by the attainment of the full franchise, such legions disappeared. The other kind of Italian states besides the municipia—viz. the *civitates foederatae* and the *Latin colonies* which retained self-government on the basis of a treaty guaranteeing a definite amount of troops—it was these communities which furnished the *socii* to the Roman armies (cf. Marquardt, *Staatsv.* i.^{2} 25–58, ii.^{2} 390–1).

They contributed nothing to the legions, but had to supply each year a force of auxiliaries for the army, and ships and sailors for the fleet. The allied state raised, swore in and paid (Liv. xxvii. 9, 13) this force, but it was fed during service by the Romans (Polyb. vi. 39, 14). The consul proclaimed by an edict the amount of the force each state was to supply, and where and when it was to assemble; and it appeared there with its own leader and paymaster (ἄρχοντα καὶ μισθοδότην, Polyb. vi. 21, 4, 5).

As to the actual *force contributed*, Polybius varies in his account. Sometimes (iii. 107, 2; vi. 26, 7) he says the force of foot equalled that of the Romans, the horse being three times that of the Roman horse—in both passages *including* the *extraordinarii*, who were one-third of the horse and one-fifth of the foot (see below). At another time he says (vi. 30, 2) that the force of foot equalled that of the Romans, the horse being twice that of the Roman horse—this time *excluding* the *extraordinarii.* He agrees then as regards the horse in all three passages. But the discrepancy is patent about the infantry. All we can say is that Polybius, if he did not make a mistake, was speaking only with a loose approximation in the first two passages, as the expressions πάρισον ("about equal") and πάρισον ὡς ἐπὶ τὸ πόλυ may lead us to infer. The last passage indeed probably gives the correct view; for Polybius, in his account of the battle on the Trebia (iii. 72, 11), gives 16,000 Romans and 20,000 allies as the complete force of infantry of two consular armies. Deducting one-fifth, we get exactly the same number of allied and Roman infantry; but the regular legionary force for two consular armies ought to be 16,800, though Polybius himself, as we saw, speaks of the legion as roughly consisting of 4,000 men (iii. 107, 10). But the force of allies is generally greater than those given in these passages by Polybius. The elaborate schedule of forces available by Rome in 225 B.C. given by Polybius (ii. 24) from Fabius the annalist, and, as it is reproduced in some of its numbers by other historians (Liv. *Ep.* xx.; Diod. xxv. *fr.* 13 Dindorf; Eutrop. iii. 5; Oros. iv. 13; Plin. *H. N.* iii. 138), doubtless derived from official sources, is too defective to decide details with certainty; but it shows that the *active* force of the Romans in that year was only one-fourth that of the allies (see Mommsen in *Hermes*, xi. 49–60). Generally it was about one-half (Vell. ii. 15; Liv. xxxvi. 2, 8). According to Livy (xl. 36, 6), the normal number (*quantus semper numerus*) of allies directly attached to two legions was 15,000 infantry and 800 cavalry, and as a matter of fact we do find these numbers in Liv. xxxiii. 43, 3, xl. 26, 7. Other numbers of allies for two legions are 15,000 and 600 (xxxvii. 2, 4), 15,000 and 500 (xxxiv. 56, 6), 10,000 and 600 (xli. 21, 4), 12,000 and 600 (xli. 9, 2), 20,000 and 800 (xxxv. 20, 4). For further details, see Marquardt, *op. cit.* ii.^{2} 395, note 1; Weissenborn on Livy, xl. 36, 6; and Mr. Strachan-Davidson's *Selections from Polybius*, pp. 22–32.

As to the *divisions* of the allies, they were never independent divisions, but always portions of the combined army (Weissenborn on Liv. ii. 53, 5). In battle the allies were placed on the wings, the two sections being called *dextra* and *sinistra ala* or κέρας (Liv. xxxi. 21, 7; Polyb. vi. 26, 9). After the Latin War in 338 till the end of the Punic Wars, the allied infantry regularly formed *cohortes*, called after the separate nations; thus we have *cohortes Samnitium* (Liv. x. 40, 6), *cohortes Marrucina et Peligna . . . Firmana Vertina Cremonensis duae turmae equitum Placentina et Aesernina* (Liv. xliv. 40, 5, 6). The cohort was the usual contingent for each community, and was at this time the unit of the allied infantry, just as the unit of the Roman troops was the maniple: cohorts and maniples are often opposed (Liv. x. 33, 1; xli. 1). Like the maniple, the cohort had a standard (Liv. xxv. 14, 4), and was regarded as a regular division in the camp [CASTRA]. Each *ala* had 10 cohorts (Liv. x. 43, 3); sometimes we find 15 (Liv. xxx. 41, 5), though perhaps the legion on this occasion was stronger than usual (Weiss. *ad loc.*). The ordinary cohorts were called *cohortes alares* or *alariae*, to distinguish them from the *cohortes extraordinariae* (Liv. x. 40, 8), and in Caesar (*B. G.* i. 51, 1) from the *legionarii.*

The *commanders* of these allies were, for the contingent assigned to 4 legions, 12 *praefecti sociorum*, appointed by the consuls (Polyb. vi. 26, 5). These *praefecti* were Roman citizens (Liv. xxiii. 7, 3; xxv. 1, 3). For a contingent of 2 legions there were 6 *praefecti*, three for each *ala.* Besides these Roman officers, there were the native officers, called ἄρχοντες by Polybius (vi. 21, 5), and *praetores* or even *praefecti* by Livy (xxiii. 19, 7; xxv. 14, 4). The former term was, however, the most common one used by that historian for the generals of foreign states; and the latter native *praefecti* who commanded a cohort must be carefully distinguished from the Roman *praefecti*, who commanded the whole *ala* (Weissenborn on Liv. xxi. 3, 4; xxv. 14, 4).

The number of the *cavalry of the allies*, Polybius says, was three times that of the Romans; accordingly 1800 for two legions. It was divided into 4 *alae* (in the strict sense) of ordinary cavalry (called *equites alarii*, often opposed to *legionarii equites*, Liv. xxxv. 5, 8; xl. 40, 9; Tac. *Ann.* iii. 39; Veg. ii. 1) and two *alae* of *extraordinarii*. The *ala* in this strict sense of squadron of cavalry consisted of 300 men, divided into 5 double *turmae* of 60 men each [CASTRA]. Each double *turma* had a *signum* (cf. Liv. xxvii. 12, 17). This number of 30 always remained constant for the single *turma*, and in case of increase of numbers it was the number of *turmae* which was increased (Hyg. § 16). *Ala* is a general term for a squadron of allied cavalry, just as *cohors* is for a battalion of allied infantry: thus we find during the Republic *alae* of 400 and 500 men (Caes. *Bell. Afr.* 78, 7; Liv. x. 29, 12), just as there were *cohortes* of 460, 500, and 600 men (Liv. xxiii. 17, 8, 11; xxviii. 45, 20). But the *ala* differed essentially from the cohort in this, that while in the latter the soldiers were of the one nation or people, the *ala* was composed of different nationalities. Marquardt (*op. cit.* ii.^{2} 400), however, thinks that as in the camp there was a double turma of equites put beside a cohort of infantry, these latter may have been of the same nationality as the cohort; cf. Liv. xxix. 15, 6—a passage which shows that a double turma of cavalry appears to have been a normal contingent of cavalry from a Latin colony, as a cohort was the normal contingent of infantry (cf. Weissenborn on Liv. xxviii. 45, 20).

The *extraordinarii* (ἐπίλεκτοι) were a picked body of horse and foot from the allies (Fr. Fröhlich, *Die Gardetruppen der röm. Republik*, 1882, pp. 4 ff.). The *extraordinarii pedites* were one-fifth of the infantry of the allies (Polyb. vi. 26, 8). If we take this exactly, we have 8,000 *ordinarii* and 2,000 *extraordinarii* for two legions. But we saw Polybius avoided exact numbers, and it suits the arrangement of the camp and the order of battle (*e.g.* Liv. xxxvii. 39, 7) better if we suppose the *ordinarii* equal to the legionaries, *i.e.* normally 8,400, and place the *extraordinarii* at 1600. These *extraordinarii* were chosen by the *praefecti sociorum* as being most suitable for real service (πρὸς τὴν ἀληθινὴν χρείαν, Pol. vi. 26, 6). They formed four cohorts (Liv. xl. 27, 3; cf. xxvii. 12, 14) of 400 men. The *extraordinarii equites* were one-third of the whole contingent (which normally was 1800, three times that of the legionary cavalry), and accordingly numbered 600. These formed two *alae* (in the strict sense of squadrons of cavalry) of 300 men each (Liv. xl. 31, 3), which were divided into 5 double *turmae* of 60 men each [CASTRA]. The *extraordinarii* formed a class intermediate between the heavy and the light forces. They were used for reconnaissances, flank movements, and generally on difficult services which required vigour and celerity. They appear to have been free from the duties of constructing the camp and keeping watch (see Fröhlich, *l. c.*).

2. The *Auxilia* properly so called did not come into any prominence till the foreign wars of Rome. Though usually they were taken into the service as allies (Festus, p. 17: "Auxiliares dicuntur in bello socii Romanorum exterarum nationum"), yet there are some traces of mercenary forces employed by the Romans in the Punic Wars, *e.g.* Gauls (Zonar. viii. 16) and Celtiberians (Liv. xxiv. 49, 8); but the Cretan archers taken at Trasimene (Liv. xxiv. 30, 13) were sent by Hiero (Polyb. iii. 75, 7). During the wars in the East their numbers increased greatly. After the Social War the class of *socii* disappeared entirely, and there were again but two classes of soldiers: (1) legionaries from Italy, (2) auxiliaries from the provinces, from allied states and princes, and even from independent nations. The number of auxiliary infantry varied according to necessity. We know that they were divided into cohorts, but no more. Some of the cohorts were not armed or disciplined in the Roman fashion, but used their national arms, *sagittarii*, *funditores* (Caes. *B. C.* iii. 4, 3), *cohortes cetratae et scutatae* (Caes. *B. C.* i. 39, 1). The cavalry of the Roman army, however, in Caesar's time consisted entirely of auxiliary troops (Caes. *B. G.* i. 15, 1; i. 42, 5; cf. ii. 24, 4). Italians are found among the cavalry (App. *B. C.* ii. 70), but they are volunteers. The cavalry consisted of Gauls, Spaniards (Plut. *Ant.* 37), Thracians, Numidians (Sall. *Jug.* 38, 6; 68, 2), even Germans (Caes. *B. G.* vii. 13, 1). They were formed into *alae* of about 400 men each, which were subdivided into *turmae* and *decuriae* (*Bell. Afr.* 29, 4), commanded by *praefecti equitum* (Caes. *B. G.* iii. 26, 1), who were doubtless, in the case of allied and independent states, natives (cf. Hirt. *B. G.* viii. 12, 4).

III. *The Imperial Period—the Standing Army.*

The Empire established by the sword had to be retained by the sword, and the army now becomes a standing one,—στρατιῶται ἀθάνατοι, as Dio Cassius calls them (lvi. 40). The emperor is the supreme commander (*imperator*, αὐτοκράτωρ, Dio Cassius, lvii. 8); and to him, as represented by his images carried on a pole, the legions and auxiliaries swore allegiance twice a year, on the date of his accession (Plin. *Epp.* x. 52 (60)) and on the Kal. Jan. (Tac. *Hist.* i. 55), besides of course the oath of allegiance at accession (Dio Cassius, lvii. 3). The oath was administered by the provincial governors in the provinces and by the three praefecti at Rome.

1. *The Legions.*—Under the early Empire the legion contained 10 cohorts and 60 centuries—altogether between 5,000 and 6,000 men. Now that the Pax Romana was established, they were mostly used on garrison duty, and accordingly got again a small quota of cavalry, each legion getting 120 in 4 *turmae* of 30 each. These are the *equites legionis* of Tac. *Ann.* iv. 73; *Hist.* i. 57. From the time of Hadrian the first cohort had 10 centuries (*Eph. Epigr.* iv. 227), as was the case in the latter half of the third century also, according to the arrangement described by Vegetius (ii. 6, 13), which was probably established by Aurelian. This arrangement varied slightly from that of the early Empire. The first cohort had 1105 men in 10 centuries, and 5 *ordinarii* (cf. p. 799 *b*); the other nine cohorts, 555 men in 5 centuries each. Each century consisted of 10 *contubernia* (also called *manipuli*), and each *contubernium* was presided over by a *decanus*: so that the infantry of the legion consisted of 6,100 men and 5 *ordinarii*. The cavalry were 726 soldiers, viz. 132 to the first cohort and 66 to each of the others; arranged in 22 *turmae*, each of 30 men and 3 officers (*decurio*, *duplicarius*, *sesquiplicarius*: cf. Veg. ii. 6, 14; Hyg. § 16; and see below, p. 809 *a*).

Octavian, when in 36 B.C. he took over the 22 legions of Lepidus (Appian, *B. C.* v. 123), amongst which were 8 of Sextus Pompeius, had the command of 45 legions (*ib.* 127, cf. 53). He then disbanded 20,000 veterans (*ib.* 129), all the Pompeian legions (Dio Cassius, xlix. 12), and most of those of Lepidus. At the battle of Actium, Antonius had at most 30 and Octavian 25 (Plut. *Ant.* 61), so that when the victory was won Octavian had a little over 50 legions to dispose of. He retained the first 12 of his own and 6 of those of Lepidus and Antonius. This accounts for two legions being found at times with the same number. He retained these numbers in order not to confuse the soldiers by unnecessary alteration, a distinction being sufficiently marked by the name of the legion, partly perhaps to delude the people that he had only 12 legions, or possibly with a hope that they might be speedily disbanded. Augustus enrolled legions XIII. to XX. in order to face the great German war waged in 3 A.D. against Maroboduus, and afterwards against the Pannonians and Dalmatians (cf. Vell. ii. 104; Suet. *Tib.* 16). In the subjoined list it will be seen that none of these were planted in colonies, and none are found to have duplicates. Legions XXI. and XXII. were added after the defeat of Varus, in which three legions fell (XVII., XVIII., XIX.). As to Legio I., which was probably disbanded after the defeat of Varus (for we hear of a First legion getting its standards from Tiberius, Tac. *Ann.* i. 42), Mommsen supposes its existence from the consideration that a first legion can hardly have been wanting in the army of Augustus. We now add the list of Augustus's legions, which were 25 at his death, 23 after the defeat of Varus (this reconciles Tac. *Ann.* iv. 5 with Dio Cassius, iv. 23, 2), with the localities in which they were stationed, as given by Mommsen (*Res gestae d. Aug.*, pp. 68–9), adding in square brackets here and there a word as to the reason why such and such a legion was disbanded: with a continuation of the legions which were enrolled up to the time of Septimius Severus.

LEGIONS.	QUARTERS.	SPECIAL ACTIONS.	DURATION OF EXISTENCE.
I.	Lower Germany. . .	.. .. ..	Disbanded after defeat of Varus (?).
I. Germanica . .	Lower Germany. . .	.. .. ..	Not mentioned after 70 A.D. [Probably disbanded on account of its conduct in the rebellion of Civilis (Tac. *Hist.* iv. 25, &c.).]
II. Augusta . .	Upper Germany . . .	.. .. ..	Existed in Dio Cassius's time.
III. Augusta . .	Africa	.. .. ..	do. do.
III. Gallica . . .	Syria (Marq. *Staatsv.* ii.² 447, note 7)	Took part in the Parthian war of M. Antonius (Tac. *Hist.* iii. 24)	do. do.
III. Cyrenaica . .	Egypt.	.. .. ..	do do.
IV. Macedonica . .	Spain	At battle of Philippi: hence probably its name	Not mentioned after 70 A.D. [Perhaps disbanded on account of its vigorous support of Vitellius (Tac. *H.* iii. 22).]
IV. Scythica . . .	Moesia	.. .. ..	Existed in Dio Cassius's time.
V. Macedonica . .	Moesia	Took part in African war, 46 B.C. (App. *B. C.* ii. 96), also in battle of Philippi: hence its name. Veterans of this legion planted in a colony at Berytus in 16 B.C.	do. do.
V. Alauda . . .	Lower Germany. . .	Enrolled by Caesar (Suet. *Jul.* 24): in 16 B.C. lost its eagle in Lower Germany (Vell. ii. 97)	Not mentioned after 70 A.D. [Probably destroyed by the Sarmatae (Suet. *Dom.* 6): yet Mommsen (*Eph. Epigr.* v. 214) and Schiller (*Kaiserzeit.* 511) say it was disbanded by Vespasian.]
VI. Victrix . . .	Spain	.. .. ..	Existed in Dio Cassius's time.
VI. Ferrata . . .	Syria	.. .. ..	do. do.
VII. (Subsequently Claudia)	Illyricum.	At battle of Philippi . .	do. do.
VIII. Augusta . .	Illyricum.	Veterans planted at Berytus, 16 B.C.	do. do.
IX. Hispana . . .	Illyricum (Tac. *Ann.* iii. 9; iv. 23)	At battle of Philippi . , .	Not mentioned after Trajan [Probably annihilated by the Brigantes in Britain (Schiller, *l. c.* 607, note 6).]
X. Fretensis . .	Syria	Fought in Sicilian war at the Straits against Sext. Pompeius: hence its name. Veterans of both tenth legions planted at Patrae, 16 B.C.	Existed in Dio Cassius's time.
X. Gemina . . .	Spain	.. .. ..	do. do.
XI. (Subsequently Claudia)	Illyricum	.. .. ..	do. do.
XII. Fulminata . .	Syria	Veterans planted at Patrae 16 B.C.	do. do.
XIII. Gemina . . .	Upper Germany. . .	.. .. ..	do. do.
XIV. Gemina . . .	Upper Germany. . .	.. .. ..	do. do.
XV. Apollinaris . .	Illyricum	.. .. ..	do. do.
XVI. Gallica . . .	Upper Germany. . .	.. .. ..	Not mentioned after 70 A.D. [Probably, like I., disbanded on account of its mutinous conduct in the rising of Civilis (Tac. *Hist.* iv.).]

LEGIONS.	QUARTERS.	SPECIAL ACTIONS.	DURATION OF EXISTENCE.
XVII.	Lower Germany.	.. .. ..	Fell in defeat of Varus, A.D. 9.
XVIII.	Lower Germany.	*C. I. Rh.* 209	do. do.
XIX.	Lower Germany.	Tac. *Ann.* i. 60	do. do.
XX. Valeria Victrix	Illyricum (6 A.D.), afterwards in Lower Germany	.. .. ..	Existed in Dio Cassius's time.
XXI. Rapax	Lower Germany.	.. .. ..	Not mentioned after Domitian. [Disbanded for taking side of Antonius Saturninus.]
XXII. Deiotariana.	Egypt	.. .. ..	Not mentioned after Trajan. [Last mention in *C. I. L.* iii. 36, of year 84 A.D.: if we are not to suppose with Borghesi (iv. 254) that this was the legion annihilated by the Parthians in 162 A.D. (Dio Cass. lxxi. 2).]
Added by Claudius by division of XV. and XXII.			
XV. Primigenia	Lower Germany.	.. .. ..	Disbanded by Vespasian as having revolted to Civilis (Pfitzner, *Gesch. der Kaiserlegionen*, p. 262).
XXII. Primigenia	Upper Germany (Tac. *Hist.* i. 18, 55)	.. .. ..	Existed in time of Victorinus (Cohen, 40, p. 16). For its omission in Dio Cassius, see Marq. *Staatsv.* ii.², 452, note 1.
Added by Nero.			
I. Italica	In Gallia Lugdunensis (Tac. *Hist.* i. 59, 64)	.. .. ..	.. .. ..
Added by Galba.			
I. Adjutrix	Spain (Tac. *Hist.* ii. 67; iii. 44)	Enrolled from the fleet (*C. I. L.* iii. p. 907)	Existed in Dio Cassius's time.
VII. Gemina	Spain (Tac. *Hist.* ii. 11)	.. .. ..	do. do.
Added by Vespasian (Dio Cassius, iv. 24, 3).			
II. Adjutrix.	Pannonia	.. .. ..	do. do.
IV. Flavia	Upper Moesia	.. .. ..	do. do.
XVI. Flavia Firma	Syria	.. .. ..	do. do.
Added by Domitian.			
I. Minervia	Lower Germany.	.. .. ..	do. do.
Added by Trajan.			
II. Trajana, Fortis Germanica	Egypt	Enrolled 109 (*C. I. L.* iii. 79).	do. do.
XXX. Ulpia Victrix	Lower Germany.	Was located for some time in Upper Pannonia (*C. I. L.* iii. p. 482)	do. do.
Added by M. Aurelius.			
II. Italica	Noricum	.. .. ..	do. do.
III. Italica	Rhaetia	.. .. ..	do. do.
Added by Sept. Severus.			
I. Parthica.	Mesopotamia.	.. .. ..	do. do.
II. Parthica.	Alba, near Rome	Henzen, *Annali dell' Inst.* 1867, p. 73.	do. do.
III. Parthica.	Mesopotamia	.. .. ..	do. do.

An interesting list of the quarters of the different legions in the middle of the first century, derived from the Histories of Tacitus, is to be found in Borghesi, iv. p. 240, reproduced by Marquardt, *Staatsv.* ii.² p. 449, note 4; also of their quarters in the middle of the second century in *C. I. L.* vi. 3492 a, b (= Orelli, 3368, 3369). Detailed histories of the separate legions are numerous. See Marquardt's notes; an admirable history of all the legions individually is given by Grotefend in Pauly, iv. 868 ff.

As to the *names* of the legions, they arose from various causes: (1) in the later Republic, sometimes from the place of levy, *e.g.* V. Urbana (*C. I. L.* v. 2514), VIII. Mutinensis, IV. Sorana (see Mommsen on *C. I. L.* x. 5713); (2) from the people against whom they successfully fought, *e.g.* IV. Scythica, or from the place, X. Fretensis; (3) from divinities, *e.g.* I. Minervia; (4) from division of a single legion, *e.g.* Primigenia (this part was probably held the superior, and retained the eagle), or uniting of two, *e.g.* Gemina (Caes. *B. C.* iii. 4, 1), yet cf. also Mommsen, *Res gestae d. Aug.* p. 73, note 1 *fin.*; (5) from certain insignia, *e.g.* probably the V. Alauda, certainly XII. Fulminata (*κεραυνοφόρον*); (6) various epithets expressive of courage and devotion, e.g. *pia*, *fidelis*, *constans*, *victrix*, *aeterna*, *rapax;* (7) up till Caracalla's time, when the emperor's name was added to the legions, except in the case of a few, as VII. and XI. Claudia pia fidelis, it marked the founder, as II. Trajana, XXX. Ulpia Victrix. After Caracalla all legions bore the name of the reigning emperor (cf. Schiller, *Kaiserzeit.* 742, note 1).

2. *The Auxilia.*—Concerning the auxiliary troops under the Empire, Tacitus says (*Ann.* iv. 5): "At apud idonea provinciarum sociae triremes alaeque et auxilia cohortium, neque multo secus in iis virium: sed persequi incertum fuit cum ex usu temporis huc illuc mearent, gliscerent numero et aliquando minuerentur." They consisted of those forces, beside the legions, which were raised in the provinces. Perhaps we may assume that in numbers they were about equal to the legionaries (Suet. *Tib.* 16). They supplied the whole of the cavalry and a large contingent of infantry. The latter (*cohortes auxiliariae*, *sociae*, Tac. *Ann.* i. 49, 51) partly were equipped in Roman fashion, partly retained their native weapons, and as such are styled *sagittarii*, *funditores*, *scutati*, *contarii*, *catafracti* (see Index to *C. I. L.* iii. p. 1148 ff.), or collectively *leves cohortes* or *ferentarius miles* (Tac. *Ann.* i. 51; xii. 35). The latter passage contrasts the swords and *pila* of the legionaries with the *spathae* (broad two-edged swords without a point) and *hastae* of the auxiliaries.

The regular auxiliary cohorts were divided into *cohortes quingenariae* of 480 men, each in 6 centuries (Hyg. § 28); or *cohortes milliariae* of 1,000 men, each in 10 centuries. Some of these cohorts were exclusively infantry, and such were called *peditatae:* but from the time of Vespasian at all events (Tac. *Hist.* iv. 19) it was found necessary, in order to enable the cohort to be an independent body capable of acting efficiently in garrison duty on the frontiers, to join a certain number of cavalry to some cohorts. These were called *cohortes equitatae.* A *cohors quingenaria equitata* would consist of 360 infantry in 6 centuries of 60 each, and 120 cavalry in 6 *turmae* of 20 each (Hyg. § 27; *C. I. G.* 5053): a *cohors milliaria equitata* of 760 infantry in 10 centuries of 76 each, and 240 cavalry in 10 *turmae* of 24 each (cf. Mommsen in *Eph. Epigr.* v. p. 31).

Roman Soldier. (From Iwan Müller's *Handbuch*, vol. iv. p. 745.)

The cavalry were further divided into *alae milliariae* of 960 men each, in 24 *turmae* of 40 each, and *alae quingenariae* of 480 men each, in 16 *turmae* of 30 men each. Josephus (*B. J.* iii. 5, 5) tells us that under Vespasian the cavalry wore helmets and cuirasses; carried a long sword, a long pole (κόντος ἐπιμήκης), and a buckler; and were furnished with a quiver, containing three or more javelins with large points and as broad as spears. Under Hadrian, as we learn from Arrian (*Tact.* 34), they had an iron visored gold-plaited helmet, with a plume of red horse-hair, a light shield, and instead of a cuirass a red Cimmerian tunic (i.e. made of Crimean leather). In the preceding cut we see many of the above accoutrements. The cuirass seems to be of leather. Note also the trousers (*bracae*) and boots.

Besides the names we have mentioned, which distinguished the cohorts according to their character and numbers (*equitatae* or *peditatae*, *quingenariae* or *milliariae*) and the *alae* according to their numbers, some, especially the *alae*, were also called after the provincial governor who first organised them: *e.g.* Auriana (Tac. *Hist.* iii. 5), Petriana, Siliana (*ib.* i. 70), cohors Lepidiana (Diplomata xi. xii. in *C. I. L.* iii. pp. 854, 855), &c. (A full list in Marquardt, *Staatsv.* ii.² 473, note 5: also in Mommsen, *Eph. Epigr.* v. 246 f.) It is quite a mistake to suppose that they got their names from their commanders, as Borghesi has shown (iv. 192) in the case of the *ala Frontoniana*, which appears with many different commanders (cf. *C. I. L.* iii. 788, 789, 793, 5331; *Eph. Epigr.* v. p. 175). Very commonly they are called after the emperor who organised them — *Claudia*, *Flavia*, *Ulpia*, *Aelia* (*C. I. L.* iii. Index, p. 1148 ff.). Sometimes, again, they were called after the country in which they were stationed or had distinguished themselves, e.g. *Ala I. Flavia Augusta Britannica* (Dipl. xxvi.), *Cohors I. Lusitanorum Cyrenaica* (Dipl. xx., xxii.). Also they got such honorary titles as *Augusta*, *Victrix*, *Veterana*, *Pia Fidelis* (*C. I. L.* iii. Index, *l. c.*). The cohorts were numbered progressively only so far as to distinguish cohorts otherwise undistinguished, e.g. *Cohortes I., II., III., IV., Tungrorum milliaria equitata.*

They were raised in the imperial provinces only (Mommsen in *Hermes*, xix. 45), though we hear of a levy in Cyrenaica (Tac. *Ann.* xiv. 18). They were seldom (Josephus, *B. J.* ii. 13, 7) stationed in the same province as they were raised in, nor indeed ever left very long in any one province: see, *e.g.* the transferences of *Cohors I. Thracum* in the Diplomata (ix., xiv., xxxvi.). But as time went on it was found impossible to keep each cohort of one nationality; and very frequently vacancies were filled up by men of other nations, especially from natives of the province in which the division happened to be stationed, *e.g.* among the *Equites Pannonii* in Britain there was a decurio from Spain (Dipl. xxi.); in the *cohortes Alpinorum* and *Lusitanorum* in Pannonia, Pannonians are found (Dipl. xxxix., xlii., xii.).

There appear to have been special corps of auxiliary troops called *equites* and *pedites singulares*, the oldest mention of which is in the time of Vitellius (Tac. *Hist.* iv. 70). They consisted of picked individuals from different nations, and as such differed from the ordinary cohorts and *alae*. One special division of cavalry set apart for the service of the emperor was called *equites singulares Augusti* (see below, p. 795 *b*). Sometimes the cohorts or *alae* had the additional title of *Civium Romanorum* (Tac. *Hist.* iii. 47), which signifies either that the people from whom the corps was raised had citizenship previously, or that it was given to the whole corps—most probably the latter (Mommsen in *Hermes*, xix. 60).

The commanders of the auxiliary cohorts and *alae* were for the most part Romans, and were called *praefecti* (Tac. *Hist.* ii. 59; Dig. 3, 2, 2). The *praefectura cohortis* was the second and the *praefectura alae* the fourth step in the equestrian career of honours, the *primipilatus* being the first and the *tribunatus legionis* being the third (*e.g.* Wilmanns, 1249 b; Stat. *Silv.* v. 1, 94 ff.). Some of the auxiliary cohorts, however, *e.g.* those *equitum singularium* (*C. I. L.* vi. 224, 226, 228, Dipl. li.), and perhaps the *cohortes milliariae*, like the *cohortes praetorianorum*, *vigilum*, *urbanae*, *voluntariorum* (see below), were commanded by *tribuni* instead of *praefecti*, who stood on a level with the *tribuni legionis*: e.g. a *tribunus cohortis* becomes a *praefectus alae* without being *tribunus legionis* often (*C. I. L.* iii. 1193, ix. 5357, x. 3847). In later times the title *tribunus* came to be applied to the chief officers of *all* the cohorts (Boecking, *Not. Dig.* ii. 536).

After the grant of Roman citizenship to all the provinces by Caracalla, the *auxilia* were almost entirely taken from Roman citizens. All that remained outside this category were a few barbarian mercenary troops. These were called *nationes* or *numeri*, and were arranged neither in cohorts nor in *alae*. They were commanded by *praepositi*. The introduction of them may perhaps go back to Trajan (Dipl. xxv.), and they formed the precursors of the Foederati. For the divisions of barbarian cavalry in the third century called *cunei*, see below, p. 808 *a*.

Special Extra-Legionary Troops.

1. *The Cohors praetoria* (σπεῖρα στρατηγίς) *of the Republic* (Mommsen in *Hermes*, xiv. 25–30).—This must have been an old institution, not so much owing to Livy's statement (ii. 21, 5) of its existence at the battle of Lake Regillus as from the title *praetoria* pointing to the time when the praetor was general. But it was not in accordance with the nature of the citizen army, and does not really appear in historical times till the Numantine war in the army of Scipio the Younger. He formed 500 of his friends and clients into a troop which Appian (*Hisp.* 84) calls an ἴλη φίλων and Festus (*s. v.* p. 223 M.) a *cohors praetoria.* They received once and a half the pay of the legionary. But the term ἴλη (*turma*) seems to point to their being cavalry, yet the regular cavalry received three times the pay of the legionary. Mommsen (*l. c.* p. 27, note 3) supposes that it was a privilege of the general to give certain members of this body-guard a horse; that he did so mostly to his *amici*, who were men of good birth; and that it is of these Appian is chiefly thinking; while the notice about increased pay has reference to the mass of the troop who were his clients and served on foot. The term *cohors* can of course be applied to a mixed body of horse and foot. Caesar had only one praetorian cohort (*B. G.* i. 40, 15). Towards the end of the Republic each commander had a praetorian cohort (Sall. *Cat.* 60, 5; Cic. *Fam.* xv. 4, 7, cf. x. 30; App. *B. C.* iv. 7). After the battle of Philippi the various praetorian cohorts had in all 8,000 men (*ib.* v. 3). Later each of the triumvirs had several (*ib.* v. 24; Plut. *Ant.* 39, 53): at the battle of Actium, Octavian had at least five praetorian cohorts (Oros. vi. 19). These *cohortes praetoriae* were soldiers picked from veterans and from the *equites extraordinarii*; they were the successors of the *clients* of Scipio, and had got more and more separated from the body of *friends*, who gradually cease to be soldiers. The two classes are strikingly opposed under Caligula (Suet. *Cal.* 19).

2. *Cohortes civium Romanorum.* — When Italians came to be practically excluded from legionary service and confined to serve in the city troops (see below, p. 806 *a*), such of them as wished to make a profession of arms entered the auxiliary cohorts as volunteers, the more readily as service in the cohorts was lighter than in the legions and rewards quicker (Veg. ii. 3). Hence the origin of these troops which appear under many names: e.g. *Cohors I. Italica civium Romanorum voluntariorum* (Henzen, 6709); *Cohors II. Civium Romanorum* (*C. I. L.* ii. 4114); *Cohors I. Civium Romanorum ingenuorum* (*ib.* v. 3936), and a vast number of titles with the word *voluntariorum* occurring in them in Mommsen's index of cohorts in *Eph. Epigr.* v. 248–9. That scholar supposes (*Res gestae d. Aug.* p. 72, note 1) that the *cohortes voluntariorum* originated from the freedmen Augustus enrolled (Vell. ii. 113; Dio Cass. lv. 31; Suet. *Aug.* 25; Macrob. *Sat.* i. 11, 33, "Caesar Augustus in Germania et Illyrico cohortes libertinorum complures legit quas voluntarias appellavit"); but that they were not recruited afterwards from freedmen, for we find recruits of foreign extraction admitted to them, just as to the auxiliary cohorts, to whom they are further assimilated in having to serve 25 years (*C. I. L.* iii. p. 907). An inscription (*C. I. L.* ix. 5835) shows us that there was a thirty-second cohort of these *voluntarii.* The centurion Cornelius in the Acts of the Apostles (x. 1) belonged to one of these cohorts (ἐκ σπείρης τῆς καλουμένης Ἰταλικῆς). Whether the *Ala I. Civium Romanorum* which recurs so often (Dipl. xi., xii., xxv.) was a similar institution is uncertain. Some of the *cohortes civium Romanorum* at any rate, *e.g.* I., II., had cavalry attached to them (*C. I. L.* vi. 3520; cf. Arrian, ἔκταξις, c. 9, 13).

3. *The Evocati* (ἀνάκλητοι) (Schmidt in *Hermes*, xiv. 321–353).—The ancients (especially Serv. on *Aen.* viii. 1) distinguished three kinds of service: (1) *legitima militia* or *sacramentum*, (2) *tumultus*, (3) *evocatio* (see p. 809 *b*); but logically, as Mommsen has pointed out (*Eph.*

Epigr. v. 142), the division should be state-ordered service, comprising *sacramentum* and *tumultus*, and voluntary service. Those who served in the latter were the *evocati*. It was originally only in periods of great crisis (Serv. on *Aen.* vii. 614) that such invitation was made, not by a magistrate, but by any man of spirit and influence, who called on those who wished their country's safety to follow him. According to strict legal right, these volunteers were not soldiers, but *pro militibus* (Serv. on *Aen.* ii. 157); they did not serve in a legion or a cohort, they had no definite leaders, nor had they any right to demand pay, though probably they always received rewards in larger measure than the ordinary soldiers; certainly they did in later times (Caes. *B. C.* i. 3, 2; cf. Mommsen, *l. c.* 143, note 1). But afterwards it became the practice for generals, no longer in the name of the state but in their own name, to invite, as a rule specially (*nominatim*, Caes. *B. G.* iii. 20, 2), veterans (*B. C.* i. 3, 2) to renew their service. These *evocati* stood in rank above the ordinary soldiers, probably on a level with the centurions (Caes. *B. C.* i. 17, 4; iii. 53, 1; 91, 1; Vell. ii. 70, 3, compared with Dio Cass. xlvii. 46, 4); were perhaps only used in battle, and freed from all ordinary duties (Marquardt, *Staatsv.* ii.^{2} 387, note 6); they had horses on the march (Caes. *B. G.* vii. 65, 5). We find such troops as these in the time of Flamininus (Plut. *Flam.* 3; Liv. xxxii. 3, 3), Marius, Catiline (Sall. *Jug.* 84, 2; *Cat.* 59, 3), Cicero (*Fam.* xv. 4, 3), Caesar (*ll. cc.*; cf. *C. I. L.* x. 3886, 6011), Octavian (Dio Cass. xlv. 12, 3). They played a considerable part in the civil wars, but seldom appear under the Empire, it not being consonant with the order of the standing army to have forces which could not be formed into definite troops (Mommsen, *op. cit.* 144). When they do appear, the invitation was of course made no longer by a private individual, but by the emperor (Tac. *Hist.* ii. 82). Those who responded to the invitation were sometimes called *revocati* (Orelli, 3580). But if they practically disappear under the Empire, a new body was formed, viz. the *evocati Augusti.*

4. The *Evocati Augusti* (Mommsen in *Eph. Epigr.* v. 142–154).—These were a special corps (*σύστημα ἴδιον*, Dio Cass. lv. 24, 8) established by Augustus which continued till Christian times (*C. I. L.* vi. 2870). The *evocati* which he called out after the death of Caesar (Dio Cass. *l. c.*) gave the name; and the features of voluntary service and of not being formed into regular troops, *i.e.* cohorts or legions (App. *B. C.* iii. 40), which these *evocati* possessed, in some measure formed the transition to the *evocati Augusti* properly so called. But the latter differed essentially from the former, who were rather like the regular *evocati* described in the last section, in the following respects:—(1) The *evocati Augusti* had no fixed time of service; the regular *evocati* were released after the crisis which called them out was passed. (2) The *evocati Augusti* were an ordinary and continuous branch of the service: the regular *evocati* extraordinary and temporary. (3) The *evocati Augusti* had civil rather than military functions, e.g. *ab actis fori* (*C. I. L.* ix. 5839), a *quaestionibus praef. praet.* (*ib.* vi. 2755), *architectus* (*ib.* vi. 2755), *librator*, "a surveyor" (*ib.* vi. 2545), *agrimensor* (*Grom. Vet.* p. 121, ed. Lachm.). Such functions as these they had already performed while in the army; and the main cause of the establishment by Augustus of this special body of *evocati* was to get men who had been specially trained in definite branches of state service which were usually administered by soldiers to remain, after they were entitled to discharge, in the performance of their duty outside the regular army. This he effected by giving them increased rank (for they stood next the centurions above the *principales*, *C. I. L.* vi. 1009), increased pay (probably nearly that of a centurion), and the right of carrying a *vitis* (Dio Cass. *l. c.*). They were often employed on special duties; thus we find one appointed to guard Vonones (Tac. *Ann.* ii. 68). Further proof that they were in a measure civilians is that their pay was called *salarium*, not *stipendium*; that *militia in caliga* is always (e.g. *C. I. L.* ix. 5840) opposed to *evocatio*, not to *centurionatus*; and that they never receive the military distinctions of *torques*, *armillae*, *phalerae*, but only a crown (Mommsen, *l. c.* p. 152). Nor did the *evocatus in legione* (less correctly *legionis*) belong to the legion in the same sense as the soldier or centurion. He acts for the legion, *e.g.* caters for it (*C. I. L.* vi. 2893), but does not belong to it. The privilege of invitation to this service, which was coveted so as to avoid becoming a *veteranus* and being discharged, appears to have belonged practically, if not of right, to the city soldiery, and especially to the praetorians: for of all the *evocati* mentioned in inscriptions only three belong to the urban cohorts, one to the fleet of Misenum, the rest to the praetorians. They were probably subject to the *praefectus praetorio* (*C. I. L.* vi. 3445). The body-guard of equestrian youths formed by Galba, whom he called *evocati*, was quite special and temporary (Suet. *Galb.* 10).

5. *Vexillarii* (Mommsen in *Eph. Epigr.* iv. 370–1).—This word has two meanings: (*a*) one who bears a *vexillum* (=*vexillifer*), and this is its general use when it is added to a name to mark a particular branch of duty, e.g. *C. I. L.* iii. 4834; (*β*) one who serves under a *vexillum*, and such is its meaning when used generally and in the plural. Now a *vexillum* and a *signum* differ in that the former is temporary and extraordinary, the latter is fixed and regular. Hence different classes of those who serve under *vexilla*: (1) Those veterans who had served out their time of twenty years, and who for one reason or another, financial or military, were not yet provided for. These were nominally dismissed (*exauctorati*, Tac. *Ann.* i. 36), but remained under a *vexillum* (*ib.* 26). They were treated as a select troop, used only in battle, and were free from all other duties (*ib.* 36). These troops of veterans are usually called *vexilla veteranorum* (Tac. *Ann.* iii. 21; *C. I. L.* v. 4903). (2) Any troop separated from the main body under a special commander had its own *vexillum* (Caes. *B. G.* vi. 36, 3; 40, 4), was called *vexillum* or *vexillatio* (the latter term only in Inscriptions), and its members *vexillarii*. Of this class, besides the quite general expressions *vexilla equitum, tironum* (Tac. *Hist.* ii. 11; *Ann.* ii. 78), we find *vexillationes* of the legions used for making roads, bridges, fortifications, &c. (Tac. *Ann.* i. 20; *C. I. L.* iii. 1979, 1980, 3200), as outposts

through the provinces — such are doubtless the *multae et diversae stationes* Hadrian refers to in his speech to his soldiers at Lambaesis (*C. I. L.* viii. 2532 A, b; cf. *Eph. Epigr.* iv. 528)—or as detachments dispatched to the theatre of war; e.g. *C. I. L.* x. 5829: *T. Pontius Sabinus . . . praepositus vexillationibus milliariis tribus expeditione Britannica* (i.e. Hadrian's expedition), *Leg. VII. Gem.* (stationed in Spain), *VIII. Aug.*, *XXII. Primigen.* (both in Germany). This, as well as the inscription in *Bull. dell' Instit.* 1868, p. 60, *praef. vexillation. eq. Moesiae infer. et Daciae*, shows that a combined band of *vexillarii* need not necessarily be taken from the one province (cf. *C. I. L.* ii. 3272, yet cf. Mommsen *ad loc.*), though usually such was the case (Tac. *Hist.* ii. 100, iii. 22; Wilmanns, 1429). *Vexillarii* of the auxiliary cohorts appear also (Tac. *Hist.* iii. 6). The numbers of a *vexillatio*, though often 1000 (*C. I. L.* viii. 2482, x. 5829), varied: hence the different rank of the commander: for he is sometimes a *praepositus* of equestrian rank, sometimes a *centurion* (*Eph. Epigr.* iv. 524), or a *tribunus legionis* (Henzen, 6453), or a *legatus Augusti* (*C. I. L.* viii. 7050), sometimes a *dux* of senatorial rank. (This term *dux* generally signifies an active military command of an unusual nature, as when a subaltern officer holds command of a legion: cf. *C. I. L.* ii. 4114, and Mommsen in *Eph. Epigr.* i. 135, note 2, and in the appendix to Sallet's *Die Fürsten von Palmyra*, pp. 72–75.) From the time of the Gordians, at any rate (*C. I. L.* viii. 2716), *vexillatio* takes an entirely new signification, viz. that of a troop of cavalry (*ib.* iii. 405, viii. 9045, 255 A.D.), and in this sense it is used in the Code (vii. 64, 9; x. 54, 3): cf. Veg. ii. 1; iii. 4, 10; Kuhn, *Die Verfassung und Verwaltung des röm. Reichs*, i. 133–5.

6. *Frumentarii* (Henzen in *Bull. dell' Instit.*, 1884, pp. 21–29).—There was probably a *numerus* (a very vague term for "troop" under a single commander) of *frumentarii* in each legion (*C. I. L.* vi. 3341), if that inscription does not refer to the special *numerus* at Rome. The *numerus* was commanded by a centurion, who is called in inscriptions *centurio frumentarius* (e.g. *C. I. L.* viii. 2825). They appear in all the provinces which had legions, and even in the *inermes provinciae* (Marquardt, *Staatsv.* ii.² 492–3). Their functions were partly connected with the corn-supply (*C. I. L.* vi. 3340), and as such their inscriptions are found all along the Appian Way to Puteoli (*ib.* x. 1171, 6095, 6575), and nowhere else in South Italy. Their chief station was in Rome, but there was probably a division at Ostia also (Marquardt, *l. c.*). Partly they acted as letter-carriers (Capitol. *Max. et Balb.* 10, 3), partly too as spies (Spart. *Hadr.* 11, 4), and in later times as police (Euseb. *H. E.* vi. 40), a function perhaps confined to the provinces. They appear to have been instituted by Hadrian: for we first hear of them under that emperor, and no *frumentarii* are found to belong to a legion which ceased to exist before Hadrian's time.

With regard to the *numerus frumentariorum* in the city, they nearly always state the legion to which they belonged (*C. I. L.* vi. 3331–3361), a fact which shows that, though practically free from the legion, yet they were technically recognised as belonging to one. Confirmatory evidence on this point is that inscriptions of *frumentarii* have been found in places where the legion to which they are stated to have belonged never lay, *e.g.* in Lambaesis of a *frumentarius* of V. Macedonica, which belonged to Upper Moesia (*ib.* viii. 2867). In the post-Severian times these *frumentarii* had a place in the *castra peregrina* in the Second Region, near Mount Caelius. For further particulars see Henzen, *op. cit.*

The Garrison of the City under the Empire.

1. The *Cohortes Praetoriae* (οἱ δορυφόροι).—These were what the *cohors praetoria* of the Republic developed into under the military monarchy. The *praetorium* was now wherever the emperor was. We have seen above that there were several praetorian cohorts at the end of the Republic (p. 791 *a*). Augustus established nine praetorian cohorts (Tac. *Ann.* iv. 5): three of these he quartered in different parts of Rome, keeping one to act as guard (Tac. *Ann.* i. 7), and the rest he scattered about Italy in places where he was wont to stay himself (Suet. *Aug.* 49; *Tib.* 37). It was a great stroke of Sejanus concentrating the praetorian cohorts into one camp before the Viminal gate; and the vast power this concentration threw into their hands is duly insisted on by historians (Tac. *Ann.* iv. 2; Suet. *Tib.* 37; Dio Cass. lvii. 19, 6). The supreme commander of these was of course the emperor (in Tac. *Ann.* i. 7 he gives the watchword); but from the year 2 B.C. (Dio Cass. iv. 10, 10) the praetorians were commanded in the name of the emperor by two *praefecti praetorio*, sometimes by one, after the time of Commodus by three (Mommsen, *Staatsrecht*, ii.³ 828). For a list of these *praefecti praetorio* up to Diocletian, see Hirschfeld, *Verwaltungsgeschichte*, p. 219 ff.

The number of praetorian cohorts was raised probably by Claudius to 12, for we find the xi. and xii. praetorian cohort mentioned in several inscriptions (*C. I. L.* vi. 2762–2768). Mommsen (*Hermes*, xvi. 644) attributes this increase of the number of cohorts to Claudius, because it certainly is found in existence in Nero's time (*C. I. L.* v. 7003), is not mentioned by Tacitus, and Claudius certainly raised the number of the *cohortes urbanae* (Suet. *Claud.* 25). Vitellius raised the number to 16 (Tac. *Hist.* ii. 93); Vespasian reduced it to 9 (Diploma x.). But before 130 A.D. (*C. I. L.* vi. 208) a tenth must have been added, and this number certainly subsisted till the third century (Diploma lvii., 298 A.D.).

Each cohort was a *cohors milliaria* (Dio Cass. lv. 10, 10; Tac. *Hist.* ii. 93) *equitata*, each century having a *turma* of cavalry (Tac. *Ann.* i. 24, xii. 56; *C. I. L.* vi. 100). We may possibly conjecture that, like the cohorts of the legionaries and auxiliaries, each praetorian cohort was divided into 10 centuries and 10 *turmae*; but such an analogy is not very reliable, for we know that each cohort of the *Vigiles*, though a *cohors milliaria*, had only seven centuries (cf. Mommsen in *Eph. Epigr.* iv. 241). Each cohort was commanded by a tribune (*e.g.* Wilm. 1639). The praetorians were recruited from volunteers coming principally from Italy or the civilised provinces of Spain, Macedonia, or Noricum

(Tac. *Ann.* iv. 5; Dio Cass. lxxiv. 2, 4); and this is fully attested by inscriptions—viz. *C. I. L.* vi. 3885 (147 A.D.); 2381 a, b, c (153–156 A.D.); 2382 a, b (175–178 A.D.): cf. Mommsen in *Hermes*, iv. 118. From the time of Septimius Severus, however, this was changed: the praetorians were recruited from the most tried of the barbarian troops (Dio Cass. *l. c.*), as is attested by the names found in inscriptions, e.g. *C. I. L.* vi. 2385. On the nationalities and native places of the praetorians, see the indices of Bormann and Henzen in *Eph. Epigr.* iv. 322–326; Oscar Bohn, *Ueber die Heimath der Praetorianer*, 1883, and in *Eph. Epigr.* v. 250–258; Mommsen in *Hermes*, xix. 52. The length of service in the praetorian cohorts was 16 years (Dio Cass. iv. 23, 1; Tac. *Ann.* i. 17); the pay from the time of Tiberius, 720 denarii yearly (see below, p. 809 *a*).

A word must here be said on the officer called *trecenarius*, who often appears (e.g. *C. I. L.* ii. 4461, iii. 454. Complete list in *Eph. Epigr.* iv. pp. 242–3). In early times the chief centurion of the first cohort of the praetorians was called *primus ordo* (*C. I. L.* x. 4872); but, owing to the excessive danger to the state of such a special position among a body like the praetorians, it was arranged that the chief centurion of the first cohort should not hold superior rank to the others. The chief centurions of the different cohorts appear to have been called *trecenarii*, probably because they commanded 300 men, certainly *not* because the pay was HS. 300,000, which would be three times that of a *tribunus militum;* and the *trecenarius* ranked on a level with the second centurion of the legion *primus praetorii* (cf. Henzen, 6767, 6877), inferior to the *primus pilus* (*ib.* 6771 and *passim*). Just as the *primus pilus* was the highest position a centurion could gain in the legionary force, so the *trecenarius* was the highest he could gain in the praetorian; and, if promoted, he had to pass to another branch of the army, viz. the legions. Hence the title *ex trecenario* or *ex CCC* (Orelli, 3444, 3457; *C. I. L.* iii. 3427). The *principes castrorum* among the praetorians (Orelli, 3457; *C. I. L.* vi. 216, x. 5064) seem to have been two centurions selected from the *trecenarii*, who, like the *principes* in the legion (Veg. ii. 8), had the general oversight of the camp.

2. The *Cohortes Urbanae, οἱ ἀστικοί* (O. Eichhorst, *De cohortibus urbanis imperatorum Romanorum*, 1865: cf. also *C. I. L.* vi. 2861-2948).—The praetorians and the urban cohorts, both in the lists of veterans and in the Diplomata (*e.g.* x., xlvii.)—see Bormann in *Eph. Epigr.* iv. 317, 318—appear to form one closely connected body, though the urban cohorts were inferior in rank, only getting half the pay of the praetorians (see below, p. 809 *a*), and having to serve twenty years (Dig. 27, 1, 8, 9). Soldiers are advanced from the legions to the urban cohorts, and thence to the praetorians (e.g. *C. I. L.* ii. 4461). They were established by Augustus *in custodiam urbis* (Suet. *Aug.* 49; Dio Cass. lv. 24, 6), put under the authority of the *praefectus urbis* (Tac. *Hist.* iii. 64), and perhaps appointed at the same time as that officer, viz. 24 A.D. (Eichhorst, p. 3). Each cohort had originally 1500 men (Dio Cass. *l. c.*), in Vitellius's time 1000 (Tac. *Hist.* ii. 93), and was commanded by a *tribunus* (Tac. *Ann.* vi. 9; Eichhorst, Nos. 5–25). Each cohort consisted probably of 10 centuries commanded by centurions (Eichhorst, Nos. 26–76 and p. 7). The number of the praetorian cohorts seems to have been four in the time of Tiberius, three for duty in Rome (Tac. *Ann.* iv. 5) and one for service at Lyons (*ib.* iii. 41). After the model of this latter Claudius (Mommsen in *Hermes*, xvi. 645) added two at Puteoli and Ostia to guard against fires (Suet. *Claud.* 25); Vitellius reduced them to four (Tac. *Hist.* ii. 93), while Vespasian increased them to five by creating *Cohors I. Urbana* for service abroad. In Caracalla's time they were four (Dipl. xlix.), and were still in existence at the beginning of the fourth century (*C. I. L.* vi. 1156). This inscription shows that at this time they were located in the *Forum Suarium* in the Seventh Region (Preller, *Die Regionen*, p. 98; Mommsen, *Staatsrecht*, ii.^{2} 1021, note 2).

The history of the urban cohorts is perplexing. It must be remembered that they formed a closely connected body with the praetorians, the numbers of the urban cohorts continuing those of the praetorians. Thus under Tiberius the urban cohorts are numbered X., XI., XII., XIII., the last, viz. XIII., being used for service at Lugdunum (Boissieu, *Inscr. antiques de Lyon*, pp. 353–361). When Claudius raised the praetorian cohorts to 12 and the urban to 6, these latter were probably numbered XIII.-XVIII. We do find about this time XV. (*C. I. L.* x. 1765), XVI. (Henzen, 6767, though this is not strong evidence), XVII. at Ostia (Tac. *Hist.* i. 83), at Lyons (Inscript. of Moulins in Hirschfeld, *Lyon in der Römerzeit*, p. 27), XVIII. (Tac. *Hist.* i. 64). For the possible transferences of these cohorts, see Mommsen in *Hermes*, xvi. 646. Vespasian created the *Cohors I. Urbana* and sent it to Lugdunum, sending XIII. to Carthage. In the second and third centuries XIII. appears at Lugdunum and I. in Africa (Mommsen in *Eph. Epigr.* v. 119, 120). The sending of these select troops to Africa was probably for fiscal purposes, as Africa from Nero's time became highly important in the matter of taxes. Under Antoninus Pius there appear in Rome *cohortes urbanae* X., XII., XIIII. (*C. I. L.* vi. 1009); and note that this inscription proves the simultaneous existence of *Coh. X. Urb.* and *Coh. X. Praet.* In Caracalla's time (Dipl. xlix.), X., XI., XII., XIIII. are the *cohortes urbanae.* After 216 Cohort XIII. disappears; perhaps it was abolished by Severus when he conquered Albinus at Lugdunum (Renier, *Rév. Arch.* 1864, p. 214).

3. The *Statores* (*C. I. L.* vi. 2949–2958).—These appear in the Republic among the apparitors of the provincial governor, on a level with the lictors (Cic. *Fam.* ii. 19, 2; 17, 1; x. 21, 2). Under the Empire they seem to have been entirely confined to the special service of the emperor, and so often called *Statores Augusti* (*C. I. L.* vi. 2949). They took rank between the *cohortes vigilum* and *urbanae*, as one can see from the lists of promotion (*e.g.* Wilmann's, 1598, 1617), and stood in close connexion with the praetorians (Hyg. § 19; cf. *C. I. L.* vi. 1009). They formed a *numerus statorum praetorianorum* (*ib.* x. 1766), consisting of several centuries (*ll. cc.*). Their commander appears to have been called *praefectus* (*Eph. Epigr.* ii. pp. 291, No. 339) or *Curator* (Herzog, *Gall. Narb.* No. 876).

4. The *Cohortes Vigilum, οἱ νυκτοφύλακες*

(*C. I. L.* vi. 1056–1058, 2959–3091).—These cohorts were established by Augustus in 6 A.D. as a night-watch, both to prevent fires and to act as police (Mommsen, *Staatsrecht*, ii.^{2} 1008–1012, where a full account of the night-watch of the Republic is given). They were part of the regular army (Dig. 37, 13, 1), as promotion was made from them to the urban and praetorian cohorts and the legions (Orelli, 3444; *C. I. L.* vi. 2780), but still we find them of a somewhat lower rank than the other corps of soldiers; for their functions required a variety of un-military appliances for rendering aid in case of fire—viz. *centones, siphones, scalae, perticae*—and on this account they appear to have been nicknamed *Sparteoli* (Du Cange, *s. v.*; Tert. *Apol.* 39: cf. Mayor on Juv. xiv. 305); and we find they had assistants with duties essentially those of police, e.g. *carcerarius* and *quaestionarius* (see below, pp. 802 *a*, 803 *b*). The *sebaciarii*, of whom so frequent mention is made in the inscriptions on the walls of the *excubitorium* of Coh. VII. (*C. I. L.* vi. 2998–3091), were men who supplied by the month (*ib.* 3062) tallow lights (*faces sebacias*) to the *vigiles* for use in their patrols. Their standards were the extraordinary *vexilla*, not the ordinary *signa* (*Eph. Epigr.* iv. 356, 370), probably owing to their duties not being altogether strictly military. Accordingly Tacitus passes them over in his enumeration (*Ann.* iv. 5).

They consisted of freedmen (Dio Cass. lv. 26, 5; Strabo, v. p. 235; Suet. *Aug.* 25). According to the Lex Visellia (24 A.D.), a freedman got citizenship if he served six years in the *vigiles*; a later senatusconsultum shortening the period to three years (Ulpian, *fr.* 3, 5; Gaius, i. 32^a, ed. Studemund), and qualifying them for further advance in the army. After Sept. Severus there were many freemen in the *vigiles* (Dio Cass. *l. c.*). The whole corps consisted of seven cohorts of about 1000 men each (in *C. I. L.* vi. 1057 the total in the cohort is 924: *ib.* 1058 it is 960). Each cohort had two regions of the city to look after (Dig. 1, 15, 3, pr.), and in each region a watchhouse (*excubitorium*). Regions 1 and 2 fell to Cohort V., 3 and 5 to II., 4 and 6 to III., 7 and 8 to I., 9 and 14 to VII., 10 and 11 to VI., 12 and 13 to IV. (Jordan, *Topographie der Stadt Rom*, i. 1, 307; cf. ii. p. 573). There were probably equites among the *vigiles*, though Mommsen on *C. I. L.* vi. 3045 thinks not. Each cohort fell into 7 centuries, averaging about 135 men each (*ib.* vi. 1056–1059), under centurions (Mommsen, *Staatsrecht*, ii.^{2} 1009, note 2), and was commanded by a *tribunus* (*C. I. L.* vi. 1599). The whole corps was under the *praefectus vigilum* ὁ ἔπαρχος ὁ νυκτοφυλακῶν (Dio Cass. lii. 33), who was of equestrian rank, not a magistrate, but only appointed *extra ordinem utilitatis causa* (Dig. 1, 2, 33). The only higher equestrian positions were the *praefecti Aegypti* and *praetorio*. In early times his jurisdiction was very restricted, as all serious cases came before the *praefectus urbi*. But under Sept. Severus the jurisdiction of the equestrian *praefectus vigilum* was extended at the expense of that of the senatorial *praefectus urbi*. For further details as to his police jurisdiction, see Dig. 1, 15, 3, 1; 47, 2, 57, 1; 47, 2, 18, 2; 12, 14, 5; 1, 15, 4: and Mommsen, *Staatsrecht*, ii.^{2} 1011. For a list of *praefecti vigilum*, see Hirschfeld, *Verwaltungsgeschichte*, i. 145 ff. Modestinus the jurist was a *praefectus vigilum* (*C. I. L.* vi. 266). The *praefectus* had a deputy, a *subpraefectus* (*ib.* 414 b, v. 8660). These facts have been mostly elucidated from (1) two lists of Cohort V. treated by O. Kellermann, *Vigilum Romanorum latercula duo Caelimontana*, 1835; (2) discoveries made in 1858, which fixed the locality of four stations of the *vigiles* (De Rossi, *Annali dell' Instituto*, 265–297, 391–2); (3) in 1866 the discovery of the *excubitorium* of Coh. VII. and all its inscriptions (*C. I. L.* vi. 2998 ff.).

Non-Roman Troops in the Garrison.

1. *Germani* or *Batavi*.—This troop was instituted by Augustus. Previous to the battle of Actium he had a corps of Calagurritani as a body-guard, but afterwards a *manus* of Germans. These he disbanded after the defeat of Varus (Suet. *Aug.* 49), but they appear again under Tiberius (Tac. *Ann.* i. 24), Caligula (Suet. *Cal.* 43, 45, 55), and Nero (Tac. *Ann.* xiii. 18). They were taken from the German tribes belonging to the Empire, and their duty was the guarding of the imperial family. Thus we find them in the body-guard of Tiberius (*C. I. L.* vi. 4339), Germanicus (*ib.* 4337), sons of Germanicus, Nero and Drusus (*ib.* 4337, 4342), Agrippina (Tac. *Ann.* xiii. 18; Suet. *Nero*, 34), &c. We cannot argue from *C. I. L.* vi. 4334 that they had cavalry among them. They were not divided into centuries and *turmae*, but formed a *collegium* (*ib.* 8802–8809), which fell into *decuriae* just like the *collegia* and *decuriae* of slaves. For these Germans were legally slaves, though practically soldiers; and their being slaves is the mark which distinguishes these *servi milites* from the other foreign troops (cf. Mommsen, *Schweizer Nachstudien*, in *Hermes*, xvi. 459, note 1; also *Hermes*, xix. 30, 31). They were disbanded by Galba (Suet. *Galb.* 12), and do not appear in Tacitus's time, as may be proved from his use of *tum* in *Ann.* i. 24. Nor do they appear in later times either; for the Γερμανοὶ and Βατάουοι mentioned in Herodian (iv. 13, 6) and Dio Cass. (lv. 24, 7; cf. Capitol. *Maxim. et Balb.* 14) are not this German body-guard at all—for none of the inscriptions referring to the German body-guard under that name are later than the Claudian era (Mommsen, *l. c.*), nor do they appear in the Hyginian camp—but are the *equites singulares*, who took their place.

2. The *Equites Singulares Augusti* (Henzen, *Sull' Equiti Singolari*, 1850): cf. *C. I. L.* vi. 3173–3323.—This troop was instituted by either Trajan or Hadrian (*C. I. L.* vi. 3309). Henzen places their origin in Domitian's time, but Tacitus (*Ann.* i. 24) does not mention them, and they are exactly the sort of institution we should expect from Hadrian (cf. H. Schiller, *Kaiserzeit*, 616, note 4). The inscription in Orelli (3525) which refers them to Augustus is utterly spurious. They are sometimes indeed styled *equites singulares* without *Augusti* or *imperatoris* added (Henzen, 26 ff.), but this is exceptional; and they must be carefully distinguished from the ordinary *singulares* of whom something has been said on p. 791 *a*. They appear originally to have been taken from the provinces on the Rhine or the Danube:

none come from Italy or the Gallic or Spanish provinces. They formed a force complementary to the Praetorians, who were mostly raised from these more civilised provinces (Mommsen in *Hermes*, xix. 54). They were connected with the auxiliary cavalry, but stood in a higher grade: thus we find frequent promotions from the auxiliary cavalry to the *Equites singulares Augusti* (*C. I. L.* vi. 3199, 3234, 3238, &c.). If a soldier is promoted from the latter to the former, he becomes a *decurio* in the auxiliary horse (*ib.* vi. 228, l. 17). They ranked close to the Praetorians, as may be inferred from their position in the Hyginian camp (§ 23); but we cannot infer from *C. I. L.* ii. 4147 that the *Equites singulares Augusti* were promoted to be centurions; for the omission of *Eq.* in that inscription renders its validity very questionable (Mommsen in *Hermes*, xvi. 462, note 2). They had probably two divisions, as they had two camps in the city, viz. the *castra priora* (*C. I. L.* vi. 3183, &c.) and the *castra nova* (*ib.* 3217) or *Severiana*, which was built by Septimius Severus (cf. Herodian, iii. 13, 4; cf. Dipl. i.). They left these camps only when the emperor took the field (Hyg. § 23). They seem to have been under the general command of the *praefectus praetorio*, each division having a tribune (*C. I. L.* vi. 224, 226–8). We find, too, perhaps a *praefectus* (*ib.* 3261) and a *praepositus* (Wilm. 1639), but these were probably temporary officers. The *Equites singulares Aug.* wore a helmet without any plume; carried an oval shield, sword, and lance (*ib.* 3214, 3290; Henzen, *op. cit.* p. 50). The figures on these Inscriptions appear to show that they had slaves, and were therefore free themselves,—a fact to be noticed, as this is the main distinction between them and their predecessors, the Germani. They probably possessed Latin rights: for they certainly were not Roman citizens (Dipl. li.); nor again are their names in the inscriptions at all of the usual type of *nomina peregrina*, i.e. cognomen of son with cognomen of father (*e.g.* Adiatullus Vepotali f.), but nearly always they have the regular Italian three names or they omit the praenomen (*C. I. L.* vi. 3309). It is to be noted, too, that the tribe is never added. For further particulars, see Mommsen in *Hermes*, xvi. 460 ff.

The Provincial Militia.

Tacitus often (*Hist.* i. 11; ii. 81, 83; iii. 5) speaks of the *inermes provinciae*, by which he means those provinces in which no legions were stationed. These were (1) Senatorial provinces (except Africa), in which we learn that the proconsuls had some soldiers (Dig. 1, 16, 4, 1; 1, 16, 7, 1) separated from the main corps; but that they were very few Pliny's correspondence with Trajan shows. Pliny had one cohort, but from that he had to give 10 beneficiarii, 2 equites, and a centurion to the praefect of the coast, and more were asked for (Plin. *Epist.* x. 21 (32)). He asked for a century of legionaries for Juliopolis, but was refused (77 [81], 78 [82]). In fact he had so few that *servi publici* were guards of the prison (19 [30], 20 [31]), not as usual in other provinces, *statores*, who were military men. Trajan's reason seems to have been that as few soldiers as possible should be separated from the main corps (*ne milites a signis absint*). At certain points we hear of small military posts in senatorial provinces, *e.g.* at Eumenia in Greater Phrygia, where several high roads met (*C. I. G.* 3902 c). (2) Imperial provinces in which there was no legion stationed. But generally in such a province there was some small force: *e.g.* in Lyons we have seen there was a cohort of urban soldiery; in Dalmatia we find two cohorts at all events (*C. I. L.* iii. p. 282); in Pontus one cohort (Tac. *Hist.* iii. 47). (3) Provinces governed by Procurators, *e.g.* the Cottian Alps (Suet. *Tib.* 37); Rhaetia, in which in 108 A.D. there were 4 *alae* and 11 cohorts = over 8,000 men (Dipl. xxiv.); Noricum, which had 4 *alae* and 14 cohorts (Dipl. lxx.; *Eph. Epigr.* iv. 503); Thrace, which had 2,000 men (Joseph. *Bell. Jud.* ii. 164); Judaea, which had 2 *alae* and 5 cohorts (ib. *Ant.* xix. 2, 9); Sardinia (Dipl. xviii.). But they were so few in comparison to the extent of the country and so scattered that Aristides (i. p. 349) rightly says that the nations do not know where the forces are which keep them in subjection.

To make up for this deficiency of soldiers, there was a threefold kind of militia in the provinces:—

1. *Municipal.*—By the Lex Coloniae Genetivae (Urso in Baetica) we find it incumbent on the municipal magistrates to keep the fortifications in order, and for protection of their boundaries to appoint commanders to lead out armed forces (*armatos educere*), such commanders to have the same authority as the *tribuni militum* in the Roman army (Lex Col. Genet. xcviii., ciii.; *Eph. Epigr.* ii. 110, 112); and we know also that colonies had often to defend themselves (Tac. *Hist.* iv. 65; Amm. Marc. xxv. 9, 2).

2. *Special Provincial.*—E.g. (*a*) the *Praefectus orae maritimae* in Tarraconensis, who was a commander of coast-guards (Dig. 47, 9, 7) and had two cohorts under him (*C. I. L.* ii. 4138),—cf. the *tribunus militum cohortis maritimae* in Baetica (*ib.* 2224); though the title *cohort* points to these being regular imperial troops; (*b*) in Noviodunum there was a *praefectus arcendis latrociniis*, which implies a force for the same purpose (*Inscr. Helvet.* 119); (*c*) various kinds of police officers and their men, *e.g.* εἰρήναρχοι (Dig. 48, 3, 6, pr.), διωγμῖται (Capit. *M. Aurel.* 21), κορυνηφόροι (Marq. *Staatsv.* i. 213). For more about these, see Kuhn, *Verfassung*, i. 43, 44.

3. *General Provincial.*—In times of danger or confusion the main body of youths in a province appears to have been sometimes utilised for military service. This was often the case against the Pirates in Sicily (Cic. *Verr.* v. 17, 43; v. 24, 60). In imperial times we hear of such troops of native youths in not completely civilised provinces, such as Cappadocia, Rhaetia, the Maritime Alps, and Noricum (Tac. *Ann.* xii. 49; *Hist.* i. 68, ii. 12, iii. 5). We hear, too, of a people supporting at its own expense fortresses which probably commanded military roads, *e.g.* the Helvetii (Tac. *Hist.* i. 67). Prior to Hadrian's time such forces were only used locally; but later similar corps often appear among the imperial forces, still retaining their nationality (e.g. *C. I. L.* vii. 1002). Tacitus (*Ann.* l. c.) calls this militia *auxilia provincialium*, Arrian (ἐκτ. chap. 7) τὸ συμμαχικόν, and

Hyginus (chap. 43) *symmacharii* (according to Mommsen's emendation for the corrupt *sumactares*: see *Hermes*, xix. 224). They ranked below even the *classiarii* (*C. I. L.* viii. 2728) and were usually commanded by *praepositi* not of equestrian rank, appointed probably by the provincial governor: sometimes, however, the commander is styled *praefectus* or *tribunus*. Cf. Mommsen in *Hermes*, xix. 228. For further details, see R. Cagnat, *De municipalibus et provincialibus militiis in imperio Romano*, 1880, and Mommsen in *Hermes*, xxii. 547-558.

The higher Officers of the Legions (see especially Madvig, *Die Befehlshaber und das Avancement in dem römischen Heere*, in his *Kleine philologischen Schriften*, No. 10, pp. 477-560).

1. The *Triburi* (χιλίαρχοι).—They were six for each legion, so twenty-four for the four legions, and were chosen originally by the consul. In 362 B.C. the people laid claim to elect six out of the twenty-four (Liv. vii. 5, 9) in the *comitia tributa* (hence called by Asconius, p. 142, *comitiati*, but see Mommsen, *Staatsrecht*, ii.^{2} 562, notes 1, 2); in 311 B.C. they elected sixteen (*ib.* ix. 30, 3), and in 207 B.C. all twenty-four (*ib.* xxvii. 36, 4). They were regular magistrates of the Roman people (see the Lex Acilia, *C. I. L.* i. 198, *passim;* Cic. *Clu.* 54, 148); they canvassed for the post (Sall. *Jug.* 63) and held office for a year (Cic. *Att.* xiii. 33, 3), beginning on Jan. 1st (Cic. *Verr.* i. 10, 30). But the people never claimed to elect more than the twenty-four; so when the number of legions increased, the consuls had the appointment of all the rest. Those tribunes chosen by the consuls were, as opposed to those elected by the people, from the first called *Rufuli* (Liv. vii. 5, 9), because, says Festus (p. 260 M.), Rutilius Rufus brought forward a law fixing their rights. Under Augustus, but apparently not later (Mommsen, *Staatsr.* ii.^{2} 564; *C. I. L.* x. 788), we find the same distinction maintained in the *tribuni militum a populo* (often in Pompeian inscriptions, e.g. *C. I. L.* x. 820, 822, 830, 837, &c.) and the *tribuni militum Augusti* (*ib.* ii. 3852). It was customary in Polybius's time to elect fourteen tribunes who had served five campaigns and ten who had served ten (Polyb. vi. 19, 1); and in the Punic and Macedonian wars tribunes of the soldiers appear who had held the consulship, praetorship, and aedileship; but as a general rule the tribunes were young men of rank: Scipio was one at the age of twenty (Liv. xxii. 53, 1), and Flamininus at that of eighteen (Plut. *Flam.* 1; cf. Madvig, p. 544, note 1). These young men began their duties either by serving in the cavalry or by being *contubernales* of the commander. After getting some little experience in this way, they either entered the civil service by becoming a *vigintivir;* or if they continued in the military service were appointed to the *praefecture of a cohort* of auxiliaries or to the *tribunate of a legion*—both of them equestrian positions (Caes. *B. G.* iii. 7, 3, compared with iii. 10, 2), the latter slightly but not much the more distinguished—and later to the *praefecture of an ala* of cavalry (*C. I. L.* viii. 95, 2394). The arrangement of Claudius whereby the praefecture of the *ala* came before the tribunate of the legion (Suet. *Claud.* 25) was quite transitory. The tribunes wore the gold ring [ANULUS] of the equites (App. *Pun.* 104): if they were of senatorial birth, they were called *laticlavii* (Suet. *Aug.* 38, and the Inscriptions *passim*, e.g. *C. I. L.* x. 3722, *C. I. G.* 3990, χειλίαρχος πλατύσημος), those of equestrian birth *angusticlavii* (Suet. *Otho*, 10). The three positions—viz. *praefectura cohortis*, *tribunatus legionis*, and *praefectura alae*—were the *equestres militiae* often mentioned (*equestribus militiis functus*, Plin. *Epist.* vii. 25, 2; Vell. ii. 111; 104, 3). In later times one who had held these positions was called *a militiis*, *a tribus militiis*, *a iiii. militiis*, ἀπὸ στρατειῶν ἱππικῶν, ἀπὸ τριῶν χιλιαρχῶν, &c. (Evidence in Marquardt, *Staatsv.* ii.^{2} 367, note 8.) In order to get the rank of *eques* the tribunate was sometimes given for six months or a little over it (*semestris tribunatus*, Plin. *Epist.* iv. 4, 2: cf. Juv. vii. 88; *C. I. L.* iii. 101, ix. 4886). Such tribunes appear to have got a full year's salary, viz. 25,000 sesterces; see the Inscription of Torigny.

Under the Empire the tribunes still held a certain command in the legion (Hor. *Sat.* i. 6, 48; Tac. *Hist.* iii. 9), but to all intents and purposes they were subject to the legatus, who, as we shall see, commanded both legions and auxiliary troops. Macer in the Digest (49, 16, 12, 2) enumerates several of the duties of the tribunes: viz. *milites in castris continere*, *ad exercitationes producere* (cf. Veg. ii. 12), *claves portarum suscipere*, *vigilias interdum circumire*, *frumentationibus commilitonum interesse*, *frumentum probare*, *mensorum fraudem coercere*, *delicta secundum suae auctoritatis modum castigare*, *principiis frequenter interesse*, *querellas commilitonum audire* (cf. Tac. *Ann.* i. 44), *valetudinarios inspicere*. Besides these duties, some of which devolved on the *praefectus castrorum* during the early Empire, the tribunes commanded on the march (Lampr. *Alex. Sev.* 50, 2) and in battle (Plin. *H. N.* xxii. 11; Vopisc. *Aur.* 7, 1), took part in the council of war (Caes. *B. G.* v. 28, 3), acted as spokesmen for the soldiers (*ib.* i. 41, 8), kept the lists of the dead and living [by putting the latter Θ (θανὼν: cf. Pers. 4, 13; Mart. vii. 37, 1) and T (τηρούμενος) or V (*vivit*) before the names on the roll (cf. Isidor. *Orig.* i. 24, 1; Marini, *Atti de' Fratelli Arvali*, pp. 165, 609)], granted the discharge to soldiers who had served out their time (Tac. *Ann.* i. 37), also granted leave of absence (Cod. Just. xii. 35 (36), 13, 1), was answerable for the exercise and discipline of the soldiers in the camp (Capit. *Max.* 5, 5; Spart. *Hadr.* 10, 3). From the time of Claudius there were nominal tribunes, who did no duty, but they had only the title (Suet. *Claud.* 25); not like the *tribuni vacantivi* (Lampr. *Alex. Sev.* 15, 3), who appear to have got pay for doing nothing. In Ammianus (xv. 3, 10; xviii. 2, 2) *tribuni vacantes* are tribunes who had served out their time, but in case of emergency were invested with an extraordinary command (Godefroi *ad C. Th.* vi. 18, 1).

2. The *Legatus legionis.*—On days of battle (Caes. *B. G.* i. 52, 1), and when he used to go towards Italy to look after Roman politics (*ib.* v. 1, 1; 25, 5), Caesar was in the habit of appointing special commanders (*legati*) for the legions, one for each. This commander was

retained by Augustus; and in imperial times, to distinguish him from other legati, was styled *legatus legionis*, or more strictly *legatus Augusti legionis* (see examples in Indices to *C. I. L.* passim, *e.g.* viii. 7050, 7). He was of senatorial rank, usually an ex-praetor (Tac. *Hist.* i. 48; *C. I. L.* x. 6006; and the exception proving the rule in Tac. *Ann.* ii. 36, xiv. 28). Previous to being praetors, they could only hold the title of *pro legato* (Tac. *Ann.* xv. 28). The important distinction between the *legati* and the *tribuni* was that the former had command of the legion *and* the annexed auxilia (Tac. *Hist.* i. 57; cf. *C. I. L.* viii. 2582, 2637), while the *tribuni* were strictly legionary officers. The office of *legatus* disappeared under Gallienus, its functions being undertaken by the *praefecti legionum*, who were no longer senators (Aur. Vict. *Caes.* 33, 34).

3. The *Praefectus Castrorum* (Wilmanns in *Eph. Epigr.* i. 81–95).—Passing over the reference to στρατοπεδαρχία put into the mouth of Siccius Dentatus by Dionysius, x. 36 (where it may possibly be a word common people would use for a commander generally: cf. Lucian, *de conscr. Hist.* 21, 30), we only find the *praefectus castrorum* in the Empire, from Augustus to Severus. The locating of the soldiers in fixed camps caused its institution. These officers were created by the emperor (*C. I. L.* x. 4868), chiefly from among *primipili* (Orelli, 3509; Henz. 6758; *C. I. L.* iii. 454, 2028), as being purely military men of non-senatorial rank; and as such they differed from the *legati*, who were senators, and from the more cultured youths who aspired to the *militiae equestres.* These *praefecti* were subject to the *legatus* of the province (Tac. *Ann.* xiv. 37), seem to have held the chief post *after* the *legatus legionis*, though they were not subject to him (Tac. *Ann.* xiii. 39; *Hist.* iii. 14), and probably took his place if it was left vacant from any cause (Tac. *Hist.* ii. 29). We find *praefecti castrorum* advanced to be *praefecti fabrum* and *praefecti classis* (e.g. *C. I. L.* x. 4868). The name of the legion was not added to his title during the first century; for each legion had not a camp, a camp being often formed of several legions (Tac. *Ann.* i. 20; *Hist.* iv. 59), or even of *vexillationes* of separate legions (Dio Cass. lv. 8, who uses φρούραρχος to express *praefectus castrorum*). If several legions were drawn together for a campaign, the united force had only one *praefectus castrorum* (Vell. ii. 112); whereas if it was divided, it had two (Tac. *Hist.* ii. 26, 29; cf. 89). But from the time of Domitian (Suet. *Dom.* 7) each camp had only one legion, and so each legion had one *praefectus castrorum:* accordingly for this time it becomes customary for the *praefectus castrorum* to add the name of his legion to his title—e.g. *C. I. L.* iii. 451, *praef. Kastror. leg. xiii gem.:* gradually the shortened title *praefectus legionis* becomes the usual one, and finally in the post-Severian time, when the senate was being deprived of all its privileges, the senatorial *legati legionum* give place to these *praefecti.* In Egypt, where no senators were permitted to enter without special permission (Tac. *Ann.* ii. 59), the *praefectus castrorum*, even in Augustus's time, took the post held by the *legatus legionis* elsewhere (Joseph. *B. J.* vi. 4, 3); and in the other provinces, just as Augustus sent his non-senatorial procurators to perform certain functions beside the *legati* of the provinces, so in the army he appointed non-senatorial *praefecti castrorum*, well-tried soldiers devoted to his interest, to be a counterbalance to the *legati* of the legions (Wilmanns, *op. cit.* i. 104). The duties of the *praefectus castrorum* are partly given by Vegetius, ii. 10: "Totius positio valli et fossae aestimatio pertinebat. Tabernacula vel casae militum cum impedimentis omnibus nutu ipsius curabantur. Praeterea aegri contubernales et medici, a quibus curabantur, expensae etiam ad eius industriam pertinebant. Vehicula, sagmarii ('pack-horses') necnon etiam ferramenta a quibus materies secatur vel caeditur, quibusque aperiuntur fossae, contexitur vallum, aquaeductus, item ligna vel stramina, arietes onagri ballistae ceteraque genera tormentorum ne deessent aliquando procurabat." He kept discipline in the camp (Tac. *Ann.* i. 20), and so had a certain jurisdiction, but could not punish capitally (*ib.* i. 38). He was often sent with detachments to make roads, bridges, or fortifications (*ib.* xii. 38). During the battle he generally remained in the camp with the reserve (Tac. *Hist.* ii. 26), though he sometimes leads out the reserve forces to battle (ib. *Hist.* ii. 43; *Ann.* xiii. 39). Who performed his duty when he left the camp is not certain; perhaps one of the tribunes (cf. Dig. 49, 16, 12, 2).

4. The *Centuriones*, ἑκατοντάρχαι, ταξίαρχοι (marked in Inscriptions > for Ɔ = 100: cf. P as the symbol for the ἑκατοντάρχης in Greek).—They first become important from the offensive order of battle instituted by Camillus. They were 60 in number, and were appointed by the consul, through the military tribunes, on grounds of merit (Liv. xlii. 53, 34, 35; Polyb. vi. 24). The qualifications required for a centurion are set forth in a weighty sentence of Polybius (vi. 24, 9): they are to be not so much daring and courters of danger as men fit to command and steadfast, the courage of whose souls is deep rather than superficial (βαθεῖς μᾶλλον ταῖς ψυχαῖς); nor should they engage before the battle is joined and commence the fray, but when they are being conquered and hard-pressed they should stand firm and be ready to die in defence of their post. They were arranged partly according as they belonged to the *triarii principes* or *hastati;* partly according to the maniple they were in within these ranks (thus *secundus hastatus*, Liv. xxvi. 5); partly again according as they commanded the first or the second century of the maniple (*prior* or *posterior*); but there does not seem to have been any difference of rank between these latter. It is to be noticed that the *triarii* were called *pilani* (Varro, *L. L.* v. 89), and every *ordo*, whether in the sense of rank or centurion (see below), was called *pilus:* thus *primipili centurio* (Caes. *B. G.* i. 46: cf. *primi ordinis centurio*, Tac. *Ann.* i. 29), *primum pilum ducere* (*ib.* v. 33), *primos pilos ademit* (Suet. *Cal.* 44); and again in the sense of centurion, *octavus pilus prior* (*C. I. L.* v. 7004) and the common *primus pilus.* Thus the lowest centurion was called *decimus ordo hastatus* (Liv. xlii. 34), in which *ordo* = centurion (cf. *primi ordines* below), and notice that it was not thought necessary to add *prior* or *posterior.* There cannot have been any *regular* advancement till the institution of the standing army; but this

advancement (*successio*, Orelli, 3454) developed itself during the Empire. On the introduction of the arrangement by cohorts, the meaning of the three divisions—*hastati*, *principes*, and *triarii*—disappeared, but the names were retained to signify the rank of the centurions, with the number of the cohort usually added. What exactly was the nature of that rank?

There are two main theories: (1) either Marquardt's view, that the first thirty centurions of the legions are *priores* (the first ten *pili*, the second *principes*, the third *triarii*) and the second thirty *posteriores*; or (at least for the period of the manipular arrangement) A. Müller's view (*Die Rangordnung und das Avancement der Centurionen der römischen Legion*, in *Philologus*, xxxviii. 136–148), that the first ten centurions are the *pili priores*, the next ten *pili posteriores*, the next *principes priores*, &c. (2) The theory of Mommsen (*Eph. Epigr.* iv. 229, note 1) and that of A. Müller for the post-Marian organisation, that the rank of the centurion was fixed by the number of the cohort: thus the *primus princeps* was second in the legion, the *primus hastatus* third, the *primus posterior* fourth, and so on; the centurion of the first cohort ranking before those of the second, those of the second before those of the third, and so on. But first let us see who the *primi ordines* were, who so often appear (Caes. *B. G.* vi. 7, 8; v. 30, 1); for it is in discussing these that Marquardt argues for his view of the rank of the centurions.

Marquardt says the *primi ordines* are the ten *priores pili*; for (1) the cohort surely must have had a commander, viz. the first of its six centurions, and these leaders of the cohorts must have held a position of distinction—an *à priori* argument which begs the question; and besides there were no commanders of the cohorts as such recognised in the legions, the only commanding officers being tribunes and centurions. (2) It is impossible to suppose that a centurion who had commanded a maniple or a cohort should have to sink to command a simple century, as must have been the case in (say) the step from *primus hastatus prior* to *decimus princeps posterior*. To which further *à priori* argument we reply that it is just as impossible that the second centurion of the first legion—which had, at least after Hadrian's time, a double number of men, had the charge of the eagle and a definite position of honour in the camp—should rank only twenty-first in the legion. (3) Vegetius (ii. 21) says that soldiers are promoted "ita ut ex prima cohorte ad gradum quempiam promotus vadat ad decimam cohortem et rursus ab ea crescentibus stipendiis cum maiore gradu per alias recurrat ad primam." But this only means that a common soldier of the first cohort, if advanced to be a centurion, begins at the bottom of the centurions of the tenth cohort and works his way up. The other view, that of Mommsen (*op. cit.* 240), sees in the *primi ordines* the three chief centurions of the first cohort, viz. the *primus pilus*, *primus princeps prior*, and *primus hastatus prior*—at least for the time subsequent to Hadrian, and it is certain that they were a definite class then, as may be seen from Hadrian's speech to the army at Lambaesis (*C. I. L.* viii. 2532), "primi ordines et centuriones agiles et fortes more suo fuerunt," and Hyginus (*Grom.* p. 176), "legiones cum signis et aquila et primis ordinibus et tribunis deducebantur." They appear to have been also called *ordinarii* (*C. I. L.* v. 92, 8275, vii. 404; Capitol. *Alb.* 11). But in classical times Mommsen considers that the *primi ordines* were no definite class, but simply the most distinguished centurions ("qui loco et virtute prae ceteris eminerent"), just as the *superiores* and *inferiores ordines* are opposed in Caesar (*B. G.* vi. 40, 7; *B. C.* i. 46, 4). A similar view of the *primi ordines* is held by H. Bruncke (*Die Rangordnung der Centurionen*, 1884), who considers that the only difference in rank among the centurions was between these *primi* or *superiores ordines* and the rest the *inferiores ordines* (Caes. *ll. cc.*).

Now the reason for this view of Mommsen's will be further seen by reverting to the original question of the rank of the centurions. Suppose we hold with Marquardt, how are we to explain Caes. *B. C.* i. 46, 4: "Q. Fulginius ex primo hastato legionis xiv qui propter eximiam virtutem ex inferioribus ordinibus in eum locum pervenerat"? He would only have been 21st in the legion. Again, what could Caesar (*B. C.* iii. 53, 5) mean by "Scaeva centurio quem Caesar ab octavis ordinibus ad primipilum se traducere pronuntiavit"? On Marquardt's theory those *ordines* would have been of too varied rank (8th, 18th, 28th) to be explicit; whereas it doubtless means from the eighth cohort to the first. Further, Mommsen's view will explain Vegetius, ii. 8: "Vetus consuetudo tenuit ut ex primo principe legionis promoveretur centurio primipili;" cf. Henzen, 6747, "P. Aelius Marcellus . . . astatus et princeps et primipilus legionis vii geminae piae felicis." Lastly, the great number of inscriptions marking the *primi principes* and *primi hastati* are additional proofs of the distinction of these positions. It is to be noticed that whereas in these three first centurions the cohort is seldom (Caes. *B. C.* iii. 64, 4) added, it is universal in the centurions from the fourth on (see Mommsen's list, *op. cit.* p. 231 ff.). Mommsen considers a similar arrangement subsisted even before the introduction of the arrangement by cohorts: for the centurions who are mostly mentioned in this age besides the *primus pilus* are the *primus princeps* (Liv. xlii. 34, 8; xxv. 14, 7) and *primus hastatus* (*ib.* xxvii. 14, 8), and why should these latter, the 11th and 21st in the legion on Marquardt's theory, be mentioned?—an argument which tells still more against A. Müller's view that, during the time of the manipular arrangement, the first ten centurions are the *pili priores*, the next ten the *pili posteriores*, the next *principes priores*, and so on; for, according to this view, the *primus princeps* would be 21st, and the *primus hastatus* 41st, in the legion.

The following are a sufficient number taken from Mommsen's list (*Eph. Epigr.* iv. 231–238) to show his arrangement of the order of the centurions.

1. Primus pilus. The term *triarius prior* is an invention of Vegetius, ii. 8. The abbreviation P. P. is often found in Inscriptions, e.g. *P. P. bis iterum* (*C. I. L.* v. 867, vi. 1637). This means that they held the *primipilatus* twice: so Tullius in Liv. vii. 13, 1, who *septimum primum pilum ducebat*, was seven times primipilus (cf. Liv. xlii.

34, 12). Occasionally the second *primipilatus* was taken after one of the *militiae equestres* had been held, so that on discharge he might get the honours of a *primipilaris* (Mommsen on *C. I. L.* v. 867).

2. Primae cohortis princeps prior (Caes. *B. C.* iii. 64, 4). Also called *princeps pretorii* in *C. I. L.* iii. 5293, 2917; Henzen, 6767 (see Mommsen on iii. 830), or simply *princeps* (*ib.* viii. 2841, and *passim*). As he had considerable duties in seeing after the camp (Veg. ii. 8), he had an *adjutor* (Wilm. 1556), *librarius* and *optio* (Henz. 6778). The latter is sometimes called *optio pretorii* (*ib.* 6940).

3. Hastatus primus (Caes. *B. C.* i. 46, 4; *C. I. L.* ii. 4147) or simply *hastatus* (*ib.* viii. 2825).

4. Cohorte i princeps posterior (*ib.* 2883).

5. Cohorte i hastatus posterior (*ib.*).

7. Cohorte ii princeps prior (*Eph. Epigr.* ii. p. 290).

8. Cohorte ii hastatus prior (*ib.* p. 287).

10. Cohorte ii princeps posterior (*C. I. L.* vi. 3584).

12. Cohorte iii pilus prior (*Eph. Epigr.* v. p. 2).

13. Princeps tertius = cohorte iii princeps prior (*C. I. L.* ix. 2770).

17. Cohorte iii hastatus posterior (*ib.* iii. 1480).

21. Cohorte iv pilus posterior (*ib.* vi. 3404).

28. Cohorte v princeps posterior (*ib.* iii. 102).

42. Octavus pilus prior = Cohorte viii pilus prior (*ib.* v. 7004).

43. Octavus princeps (Cic. *ad Brut.* i. 8, 2).

50. Cohorte viiii hastatus prior (*C. I. L.* viii. 2938).

53. Cohorte viiii hastatus posterior (*ib.* 2877).

All centurions carried the *vitis*, with which to inflict punishment on refractory soldiers (Plin. *H. N.* xiv. § 19), and which was a synonym for the centurionship (Juv. viii. 247). In the legion the *primipilus* was held in especial honour. He took part in the council of war (Polyb. vi. 24, 2). In republican times, and for the most part during the Empire, this was the last position in an ordinary soldier's career. When they had finished (*consummaverunt*, Suet. *Cal.* 44; διανύσαντες, Dig. 27, 1, 8, 12) their service, they retired into private life, and were then called *primipilares*. They frequently with large property repaired to municipal towns, where they became great local magnates (Cic. *Fin.* i. 3, 8; Hor. *Sat.* i. 6, 72). For inscriptions of such centurions, see Karbe, *De centurionibus Romanis quaestiones epigraphicae*, 1880, p. 338. They often made sufficient money to enable them to buy equestrian rank for themselves (Orelli, 3049) or for their sons (*C. I. G.* 2793): cf. Mart. v. 58, 10. If they wished to continue in the service, they were employed in important military duties (Tac. *Ann.* ii. 11, iv. 72, xiii. 36; *Hist.* i. 87, iv. 15), sometimes as *praefecti castrorum* (see above, p. 798 *a*) or *praefecti cohortium* (Tac. *Ann.* i. 20): sometimes, too, they got positions in the civil service (Suet. *Cal.* 21; *C. I. L.* v. 698). But in imperial times the *primipilatus* became the first step in the equestrian career, leading to the tribunate of the cohorts of the city soldiery, i.e. *vigiles*, *urbanae*, *praetoriae* (*ib.* 867), occasionally to the tribunate of the legions (*ib.* x. 4868), and then to procuratorships (*ib.* v. 867), and even to the praefecture of the praetorians, *e.g.* Justus Catonius (Tac. *Ann.* i. 29; Dio Cass. lx. 18); cf. Hirschfeld, *Verwaltungsgeschichte*, i. 219–239, 247. Often the honorary title of centurion was given to young men of position by grant of the emperor (Juv. xiv. 193; Suet. *Gramm.* 24; Dio Cass. lii. 25, 6), who, after filling the three posts of the equestrian career —viz. *praefectura cohortis*, *tribunatus legionis*, *praefectura alae* (Wilm. 1259 b; Stat. *Silv.* v. 1, 94)—retired from the service with the title *a militiis* (see above, p. 797 *b*). Both classes of aspirants, the ordinary centurions and the honorary ones, were called *petitores militiae* sc. *equestris* (*C. I. L.* vi. 2485; Wilm. 1602). It is to be noticed that sometimes a young man of rank resigned that rank (*intermissus eques*, Stat. *l. c.*), and became a centurion in hopes of arriving at the lucrative and honoured positions, tribuneships and procuratorships, of the *militia equestris*—which hopes were not always fulfilled (*C. I. L.* iii. 1480).

In republican times and in the early Empire the number of centurions in the legion was 60 (Gell. xvi. 4, 6; Tac. *Ann.* i. 32). But after Hadrian's time it was 59; though the first cohort had double the number of men, yet it had only five centurions (Veg. ii. 8, confirmed by *C. I. L.* viii. 2555), while all the other cohorts had six. And in the list given above it will be seen that there is no *pilus posterior* in the first cohort. If 64 *optiones* occur in *C. I. L.* viii. 2554, we must suppose that the *adjutores*, who as well as the *optiones* belonged to the centurions of the first cohort, are reckoned along with the *optiones*. In the first cohort, according to Vegetius ii. 8 properly corrected, the *primipilus* commanded 400, the *princeps* 200, the *hastatus primus* and *princeps posterior* 150 each, and the *hastatus posterior* 100.

The Inferior Officers (*principales*).

For the title *principales*, see Veg. ii. 7; Dig. 49, 16, 13, 4; *C. I. L.* vi. 221; *Eph. Epigr.* iv. 524. A most exhaustive treatise on these officers is that of P. Caver, *De muneribus militaribus centurionatu inferioribus*, in *Eph. Epigr.* iv. 355 *sqq.*

Mommsen (*Eph. Epigr.* iv. 532) divides the *principales* into two classes: (1) those belonging to a corps, and the commander under which these serve is never mentioned; (2) those belonging to a higher officer, and their title was not fully specified unless they had the name of the officer attached. This was partly because they were special attendants on certain officers (*e.g.* the *stratores*), partly because their rank was determined by the officer whose name they added, this especially in the case of the *beneficiarii*. Adopting this classification, we shall treat of the different *principales* of each class.

I. *The Principales belonging to a corps.*— 1. *The Standard-bearers.* (*a.*) Among the *vigiles* each century had a *vexillarius* (= vexillifer), Orelli, 3480. (*b.*) Among the *praetorians* each century had a *signifer* (*C. I. L.* ii. 2610)—so that we may assume that the *signifer* was a higher functionary than the *vexillarius*. As each cohort had its *signa* [SIGNA], in cases where a *signifer* of a cohort is mentioned, *e.g.* (*ib.* v. 4371), it cannot be decided whether they performed this function in a century or a cohort. (*c.*) Among the *urbanae cohortes*, just as among the praetorians, there were two kinds of *signiferi*, one belonging to the century, the other to the cohort. Mommsen thinks that the *signifer* of the first century was the *signifer* of the cohort (cf. Caes. *B. G.* ii. 25). That Marquardt is quite wrong in supposing that the standard-bearer of the first cohort among the praetorians and the first cohort of the vigiles was called *aquilifer*, while the standard bearer of the century was *signifer*, is shown by the correct interpretation of "AQ praet. urbis" (*ib.* vi. 2880) being *a quaestionibus.* Nor had the first cohort of the vigiles an *aquilifer*, as Marini and Marquardt (*l. c.*) assume on the strength of vi. 1056: "AQ. Julius Julianus centuria Ingenui, AQ. Sittius Chryseros centuria Juvenis;" for (1) there is no sure evidence of an eagle outside the legions, (2) there would be two or more *aquiliferi* in one *cohort*, which is quite incredible. (*d.*) Among the *auxiliary cohorts* a few *vexillarii* are found (*ib.* iii. 3261), but it cannot be proved that they were *vexilliferi.* Also a few *signiferi* (*Eph. Epigr.* iii. 106); and with regard to them it cannot be decided whether or not there were *signiferi* of other divisions than the cohort, though it is probable that each century had its *signifer.* (*e.*) Among the *equites singulares* each *turma* had a *signifer* (*ib.* vi. 3304). (*f.*) Among the *equites*, each *turma* had a *signifer* (*ib.* viii. 2094), also each *ala* (*ib.* iii. 6274), just as the centuries and the cohorts. And as in their case, we cannot decide whether the *signiferi* of the *alae* were the *signiferi* of the first cohorts or not. *Vexillarii alarum* appear (*ib.* iii. 4384), perhaps by an inaccuracy of language, the cause of which possibly may have been that the standard-bearers of the *equites legionarii* were called *vexillarii* to distinguish them from the *signiferi* of the cohorts and centuries—as may be inferred from iii. 4061. (*g.*) The *numeri* had *signiferi* (iii. 1396). (*h.*) As to the legions there is nothing in the inscriptions to decide definitely whether the separate cohorts and centuries had *signiferi* or not. The *signiferi* are said to belong to the legions. Wherever *vexillarii legionum* occur, we can never be sure that they are *vexilliferi.* Most probably, as was the case with the praetorians and the auxiliary cohorts, the standard-bearers of the legions were not called *vexillarii*, either under the Empire or indeed at any time, for σημαιοφόρους in Polyb. vi. 24, 6 = *signiferos.* From Veg. ii. 20 we may infer that, besides the ten *signiferi cohortium*, there were no other in the legions.

As to *Aquiliferi*, there was one for each legion (*C. I. L.* ii. 266). We have shown that there were no *aquiliferi* among the praetorians and the *vigiles.* And as to *Imaginiferi*, "qui imperatorum imagines ferunt" (Veg. ii. 7), there was probably one in each legion (viii. 2935) and in each auxiliary cohort (iii. 3256).

2. *The Trumpeters* [see BUCINA, CORNU, TUBA].—Touching these, Vegetius ii. 22 says: "Ergo quoties ad aliquod opus exituri sunt soli milites *tubicines* canunt: quoties movenda sunt signa, *cornicines* canunt: quoties autem pugnatur, *et tubicines et cornicines* pariter canunt. *Classicum* ita appellatur quod *bucinatores* per cornu dicunt. Hoc insigne videtur imperii, quia classicum canitur imperatore praesente vel cum in militem capitaliter animadvertitur." The watches (*vigiliae*) were signalled by the *cornicen.* The term *aeneator* is probably a generic one, as Suet. *Caes.* 32 says that his *tuba* was taken from him, though Festus (p. 20) identifies him with the *cornicen.* The legionaries and auxiliaries, of course, had trumpeters. Of the urban soldiery, the praetorians had *tubicines*, *cornicines*, and *bucinatores* (vi. 2570, 2379, 2545), the vigiles *bucinatores* only (vi. 1057); in the *cohortes urbanae* the only trumpeter which appears is one *tubicen* (vi. 2404). The *lituus*, we are told (Ascon. in Hor. *Carm.* i. 1, 25), was the trumpet of the cavalry and the *tuba* of the infantry, yet we find the *equites singulares* had a *bucinator* and a *tubicen* (vi. 3176, 3179). The inscription of Orelli, 3519, which mentions a *liticen* of a legion, is Ligorian.

3. *Tesserarii*, "qui tesseras per contubernia militum nuntiarent" (Veg. ii. 7), were one in each century, as is proved principally by the *latercula* of the *vigiles* (vi. 1056). They also appear among the praetorians (vi. 2379 b), *cohortes urbanae* (ix. 1617), legions (vi. 2672), auxiliary cohorts (iii. 5046).

4. *Curatores.*—As the *curatores fisci* only appear in the praetorian (vi. 2375, 6, 27) and urban cohorts (viii. 4874), we may perhaps infer that the rest of the parts of the Roman army had not *fisci.* Accordingly the *curatores turmarum* which we find among the *equites singulares* (vi. 225), auxiliary cavalry (viii. 4510), auxiliary infantry (iii. 6025), are not to be explained as administrators of the military money. They are rather extraordinary commanders (cf. Mommsen in *Archäol. Zeitung*, 1869, p. 126), just as the commanders of veterans were in extraordinary cases called *curatores* (v. 7005).

5. *Custodes armorum.*—They appear very often in the legions (*e.g.* iii. 4275); also frequently in the auxiliary cavalry (iii. 5655), but still more frequently among the *equites singulares* (vi. 3177, 225, 228). The mysterious *armatura* which sometimes occurs (*e.g.* viii. 2569 a, 17) is not to be explained with Borghesi as simply = *miles*, as *miles armatura* occurs in vi. 2699. Mommsen in a letter to Hübner, published in the *Jahrbuch des Vereins für Alterthumsfreunde im Rheinland*, 68, p. 53, explains it as a thoroughly-drilled soldier ("qui a campidoctore omni arte bellandi imbutus fuerit"). The riding school (*basilica equestris*) had also a *custos* (Henz. 6811).

6. *The Drill-masters*—*doctores* and (a higher title) *campidoctores* or *exercitatores.*—They seem to have belonged to the cohort (vi. 533), and are found in all kinds of corps, the *frumentarii* (viii. 1322), *equites singulares*, where he is a centurion (vi. 228), *speculatores* (Wilm. 1617), *equites praetoriani* (vi. 2464).

7. *Optiones*—so called because "chosen" by the decurion or centurion as his assistant in private matters (*rerum privatarum ministrum*, Festus, p. 184; Varro, *L. L.* v. 81), also as his substitute in case of sickness or accident (Veg. ii. 7). With regard to the *optiones* Mommsen's view appears right (*Eph. Epigr.* iv. 449), that there were two classes of them, one belonging to the centuries and superior in rank, the other in a manner supernumerary and outside the cen-

turies, taking care of the *navalia* (Brambach, 1301), *carcer*, *acta* (*C. I. L.* ix. 1617), *equites* (vi. 100), *valetudinarii* (vi. 175). Thus in *C. I. L.* ix. 1617 *optio* alone is distinguished from *optio* of certain functions. We find *optiones* belonging to the centuries in the legions (iii. 3530), praetorians (vi. 2447), *cohortes urbanae* (viii. 4874), *vigiles* (x. 3880). This view is better than that of Caver, who supposes the *optiones* of the special departments were *optiones* of the centuries, who were freed from all functions as such. In the *latercula* of the *vigiles* (*C. I. L.* vi. 1056–1058), Kellermann, Henzen (6791), Wilmanns (1499), Marquardt (ii. 540) supply "optionem a(rcarii), optionem ca(rceris), optionem ba(lnearii), optionem c(ohortis), optionem co[h(ortis)] v." But these functions are not elsewhere mentioned; *optio carceris* is expressed in other parts of the *latercula* by *karc.* or *car.*; and it is not at all plain what an *optio cohortis* can be.

In *C. I. L.* x. 135 the *optio tribunorum quinque* was that tribune of the soldiers who was in command of five *vexillationes*, which were sent on some expedition with their own tribunes, these latter probably *electing* the tribune in question to the chief command: cf. *optio signiferorum* in Brambach, 1048.

8. *Speculatores* appear first in the Civil War (Caes. *Bell. Hisp.* 13; *Bell. Afr.* 37). During the Empire there were ten in each legion (*C. I. L.* ii. 4122; iii. 4452). They were often marked as belonging to cohorts (*e.g.* vi. 2453), though in v. 2832, 5071 we find *speculatores* of centuries. They used to carry despatches (Tac. *Hist.* ii. 73; cf. Liv. xxxi. 24, 4), and sometimes act as executioners (Seneca, *de Ira*, i. 18, 4; St. Mark vi. 27). They were numerous in the praetorian cohorts, and we find them in Tacitus (*Hist.* ii. 11, 23) forming a separate corps, with separate officers *tesserarius*, *optio* (*ib.* i. 25), &c., and having the special function of acting as body-guard to the emperor (Suet. *Claud.* 25). The ninth Diploma (of Vespasian) separates (*C. I. L.* iii. p. 853) the praetorian *speculatores* from the other praetorian cohorts: and such was often the case, but not so after the time of Vespasian, when they were ingrafted among the praetorians. None of the inscriptions which show that the *speculatores* were allocated to the centuries and cohorts can be proved as old as Vespasian. The *speculatores Augusti* (*ib.* iii. 5223) probably belonged to the praetorians.

9. *Carcerarii* (*karc.* or *car.* in the *latercula* of the *Vigiles*) were prison-warders, who generally held also the functions of some other kind of *principalis*, e.g. *beneficiarius* (iii. 3412), *optio* (ix. 1617). There was also a clerk attached to the prison *a commentariis custodiarum* (Orelli, 3206).

10. *Candidati* (strangely omitted by both Marquardt and Caver) are mentioned with other *principales* in *C. I. L.* viii. 2568, 2569, 2618, 2866; iii. 1190. What their function was we cannot say for certain. Mommsen (*Eph. Epigr.* iv. 532, note 2) supposes that they were so called from a white robe they wore in certain ceremonies (compare the white-robed priests of Jupiter Dolichenus, vi. 406, 409). They appear to have been selected for their strength and stature (*Chron. Pasch.* ad ann. 243, 251).

11. *Sacrificial Officers*—*haruspex* (*C. I. L.* viii. 2586, 57) and *victimarius* (Grut. 545, 4).

12. *Artisans.*—Under this head may come the *architectus* (Orelli, 3489; *C. I. L.* viii. 2850), and the *librator* who made aqueducts, such as Nonius Datus at Saldae, who tells us (*ib.* viii. 2728 = Wilmanns, 785) how with the help of the *classici milites* and provincial soldiers (*gaesates*), perhaps Raeti, he cut a tunnel through a mountain, from both ends meeting exactly in the middle (cf. Mommsen in *Arch. Zeitung*, 1871, p. 5). Very similar duties to those of the *librator* were performed by the *canicularius* (Henzen, 6785) and the *aquilex* (Dig. 50, 6, 7). This same section of the Digest mentions as attached to the army coppersmiths, iron-smiths, stone-cutters, roof-builders (*scandularii*), lime-burners, wood-cutters, charcoal-burners; makers of catapults, helmets, bows, arrows, javelins, trumpets, horns, chariots; workers in leather and in lead. There were also the *metatores*, who measured out the camp (Cic. *Phil.* xi. 5, 12), different from the *mensores*, who distributed corn in the legions (*C. I. L.* viii. 2857) and praetorian cohorts (Henz. 6820; cf. Lyd. *de Magistr.* iv. 46). If *mensor* does appear as a land-measurer in *C. I. L.* iii. 586, he does not belong to the legions.

13. *Medici.*—The Army-doctors (Dig. 4, 6, 33, 2), who ranked among the *principales* (*Eph. Epigr.* iv. 524), were an institution of the Empire. Under the Republic the chief officers used to bring their private physicians with them on campaign (Plut. *Cat. Min.* 70; Suet. *Aug.* 11), and these used probably to attend what few wounded soldiers were lucky or unlucky enough to obtain their treatment (cf. Cic. *Tusc.* ii. 16, 38); but we hear that often more soldiers died of their wounds than fell in battle (Liv. ix. 32, 12). But as early in the Empire as Augustus and the regular organisation of the standing army (Vell. ii. 14; Tac. *Ann.* i. 65) attention began to be paid to the medical department. Every division had its *medicus*. There was the *medicus legionis*, perhaps several bearing that title, in each legion, *e.g.* in Legion iii. Aug. (*C. I. L.* viii. 2872, 2874, 2951); each praetorian cohort (Grut. 66, 1) had them, as had the urban cohorts and those of the vigiles, perhaps four in each cohort (*C. I. L.* vi. 1058, p. 201), the *equites singulares Augusti* (Orelli, 1576), cohorts of the auxiliary troops (*ib.* 3507; *C. I. L.* vii. 690), *vexillationes* on garrison duty (*Eph. Epigr.* iv. 530), &c. The doctors were *immunes* (Dig. 50, 6, 7), and sometimes *duplicarii* (i.e. getting double pay), especially in the fleet (*C. I. L.* x. 3443). During the first six centuries of the city there were no professional doctors at Rome (Plin. *H. N.* xxix. § 12); but after Caesar gave citizenship to all professional physicians (Suet. *Caes.* 42), the medical art came to be held in respect by the Romans; and the recognised physicians of the legions, praetorians, and city cohorts were citizens. Doubtless, however, many of their assistants were freedmen and slaves, and in the cohorts of the *vigiles* and auxiliaries freedmen and foreigners may have been the authorised physicians. Marquardt says that the assistants of the regular physicians are those designated as *medici ordinarii* (iii. 4279, 5959); but they are rather, as Mommsen (*Eph. Epigr.* iv. 530, note 3) shows, those who served in the *numeri* in contradistinction to those who served in the legions.

The hospital of the garrison was called *valetu-*

dinarium: for three legions there was one; for five or six, several (Hyg. §§ 35 and 4). It was technically under the superintendence of the *praefectus castrorum* (Veg. ii. 10) or a *tribunus militum* (Dig. 49, 16, 12, 2); but the real officer was the *optio valetudinarii*, who often occurs (*C. I. L.* viii. 2563, ix. 1617), even in Rome (vi. 175). He had a number of male nurses under him (Dig. 50, 6, 7). There was also an infirmary for horses and mules (*veterinarium*, Hyg. § 4) and veterinary surgeons to attend to them (*C. I. L.* v. 2183, a freedman; *C. I. G.* 5117, *ἱππωΐατρος*; Dig. *l. c.*). On the whole of this interesting subject, see René Briau, *L'assistance médicale chez les Romains*, among the *Mémoires présentés par divers Savants à l'Académie des Inscriptions*, $1^{\text{ère}}$ série, t. viii., and Droysen in the *Deutsche militärärtzliche Zeitschrift*, 1874.

II. *The Principales belonging to an officer.*—1. *Clerks.*—Though not all clerks (e.g. *actarius*) appear as belonging to an officer, yet as the majority do, it will be convenient to treat them all under this head. Among the various kinds of clerks are: (*a*) *Librarii* (in Inscriptions, *Lib.* or *Libr.*), who kept the accounts (*rationes pecuniae, frumenti, hordei*, &c.: cf. Veg. ii. 7), differing herein from (*b*) *Commentarienses*, who entered the daily proceedings in journals. Several inscriptions of *librarii* have IM prefixed to the name (*C. I. L.* vi. 3395). This means *immunis* (see below, p. 804 *b*); and such were the *librarii qui docere possint*, those *horreorum, depositorum* (of money deposited by the soldiers), *caducorum* (of the property of intestate and heirless soldier): cf. Dig. 50, 6, 7. The *librarii* do not mark the department of business to which they are assigned, but the officer under which they serve or the division of the army to which they belong. Thus we have *librarii* of the provincial governor (*C. I. L.* iii. 5435), of the legate of the legion (*ib.* 3538), of the tribune of the praetorian cohorts (vi. 2632), of the centurions (Henzen, 6778); also of the legions (vi. 3395, and often), *vigiles* (ib. 221), *equites* (iii. 804), &c. We find *commentarienses* belonging to the provincial governor (*comm. cos.* iii. 2015) and to the *legatus* and *tribunus legionis* (viii. 2586). The *comm. legionis* is the same as the *comm. legati* (ii. 4156).

(*c.*) A *notarius*, who was perhaps a shorthand writer, appears in viii. 2755.

(*d.*) *Exceptores*, "qui verba dictata celeriter accipiebant," belonged to the praef. praet. (Murat. 864, 3), to the provincial *preses* (vi. 2997), to the praef. and trib. of the *vigiles* (vi. 1058).

(*e.*) *Codicillarii*, account keepers, only appear in the *vigiles* (vi. 1056, &c.).

(*f.*) The functions of the *tabularii* are uncertain, though it is certain that the *tabularium castrense* contained the books and accounts of the camp (Marini, *Atti*, p. 499).

(*g.*) Nor is it known who the *capsarii* were, who are mentioned with the *librarii* in viii. 2553, and like them were *immunes* (Dig. *l. c.*).

(*h.*) The *actarii* not only made up accounts (Veg. ii. 19), but also looked after the procuring and distribution of the corn: cf. Aur. Vict. *Caes.* 33, who in this capacity gives them very bad characters. They must be held to have had the same functions as the *actores bonorum privatorum et publicorum*, harsh though it is to etymologically connect *actarii* with *actor* rather than *acta*. We find *actarii legionis* (*C. I. L.* iii. 4232), *cohortis* (3392), *cohortis urbanae* (ix. 1617).

(*i.*) The *exacti* had also to look after the *acta militaria*, and did not differ essentially from the *commentarienses*. He was *ex actis*, and the word is formed like *aborigines*. We find *exacti consularium* (iii. 5812), *legionis* (viii. 2956), *procuratoris* (Boissieu, *Inscr. de Lyon*, p. 253).

(*j.*) The *arcarius* (viii. 3289) and the *dispensator* (3288) were slaves, appointed to guard and dispense actual cash. There were several slaves among the clerks of the camp (cf. *familia rationis castrensis*, viii. 2702).

The functionary called *ab indicibus* (Orelli, 3464; *C. I. L.* vi. 3414) was not a soldier, as the duty only attached to him after discharge from the army.

2. *Quaestionarii* for *a quaestionibus.*—These are torturers (*Cod. Theod.* vi. p. 348). Marquardt indeed urges (ii.^{2} 552, note 1) that though such might belong to the *vigiles*, such cannot belong to the legions, the praetorians (*C. I. L.* vi. 2755), and the *cohortes urbanae* (ib. 2880); for Roman citizens could not be put to the torture. He supposes them to be investigators concerning crimes. But Mommsen replies (*Eph. Epigr.* iv. 421) that *Quaestionarii ex legionibus* are only found with those *legati* who held a province, and so cannot be considered to have held investigations on soldiers only, not to mention the fact that there were many soldiers not Roman citizens. There were at least five *quaestionarii* in the legion (*C. I. L.* viii. 2751; 2586, 45).

3. *Cornicularii*, so called from the adornment (*corniculum*, Liv. x. 44, 5) on their helmets. They were adjutants belonging to each large division of troops. As the *praef. urbi* had no military authority (Mommsen, *Staatsrecht*, ii.^{2} 1020), neither had he a *cornicularius*. During the Republic one belonged to the *tribunus militum* (Val. Max. vi. 1, 11). Under the Empire we find one belonging to the *legatus legionis* (*C. I. L.* iii. 887) and the *tribunus militum* (ib. 5974). If it is signified that there is *one* cornicularius in each legion (*ib.* 4452), the *cornicularius legati* is meant; if two are mentioned, that of the tribune is included. The arrangement of the *commentarienses* was very similar (cf. viii. 2587). Provincial governors probably had two *cornicularii* (iii. 252); hence their office is called *officium corniculariorum* (ib. 3543). Similarly they belonged to *praefecti praetorianorum* (vi. 2776), *vigilum* (1057, 4, 2), *annonae* (xi. 20)—for the *officia annonaria* were among the first civil departments to assume a military form—*castrorum* (iii. 6023 a), to the *subpraefecti vigilum* (vi. 2997), to the tribunes of the praetorians (2440), urban cohorts (2869), *vigiles* (2984); and they also appear in the auxiliary cohorts (Orelli, 4979). We find an *adjutor corniculariorum* (iii. 2052; *C. I. G.* 4453): probably he is the same as the *subcornicularius* (vi. 3596).

4. *Secutor tribuni*, an adjutant who appears only among the soldiery of the city, praetorians (*C. I. L.* vi. 2659), urban cohorts (*ib.* 2931), and *vigiles* (ib. 1056–1058). The inscriptions which mention *secutores* in the legions are uncertain (*Eph. Epigr.* iv. 406). The *adjutor tribuni* only appears among the *vigiles* (*C. I. L.* vi. 220).

5. *Singulares*, so called, says Lydus (*de Mag.*

iii. 7), because they rode one horse. In inscriptions the abbreviation for their title is sometimes (e.g.) *Sinj. Cons.*, sometimes S. C. (*C. I. L.* iii. 5938; vii. 723). They were orderlies belonging to different officers, to the *praef. praet.* (vi. 2634), *trib. praet.* (ix. 1617), *legati legionum* (vi. 3339, 3614), *praef. vigilum* (1056, 3, 1), provincial governor (iii. 5938). They were inferior to the *beneficiarii* (x. 410). There were *equites singulares* as well as *pedites singulares* (viii. 2911, 9393). The *equites* and *pedites singulares* appear to have performed for the *legati* of the provinces and for the praefects and tribunes of the praetorians the same functions which the praetorians did for their leader; accordingly *pedites* and *equites singulares* formed a corps separate from the main body. The *secutores* probably did not differ in function from the *singulares*, but were inferior in rank; hence there are no *secutores* of the *praesides*, or of the *praefecti praet.*, nor *singulares* of the *tribuni vigilum*; while both *secutores* and *singulares* are found belonging to the *tribuni praetorianorum*, who held a middle position (Mommsen in *Eph. Epigr.* iv. p. 404). Cf. Lange, *Hist. Mutat.* p. 50.

6. *Stratores*, to be carefully distinguished from *statores* (see above, p. 794 *b*), belonged only to very high officials, whom they assisted to mount on horseback (Spart. *Carac.* 7): *e.g.* to the emperor (*ib.*), the governors of imperial provinces (*C. I. L.* ii. 4114; iii. 4317, 4836), procurators of provinces (Wilm. 1283), the *praef. praet.* (vi. 3408); but not to the proconsuls of senatorial provinces (Dig. 1, 16, 4, 1). Marquardt (ii.^{2} 548) says they were generally either centurions or decurions: but they are often simply called *milites*, nor is it probable that the purchase of horses (Amm. Marc. xxix. 3, 5) would be assigned to centurions. Again, in Wilm. 1293, we have a *strator* advanced to the position of a *decurio*. The fact is the *strator* retained the name and office, which he thought an honour, even when advanced to higher positions in the army. That the function of *strator* was one held in estimation may be proved from the fact that it is found alone, and not united to any other military position (*e.g.* viii. 2792). He seems to have been generally a legionary soldier, though we find one from the auxiliaries (iii. 2067).

7. *Beneficiarii* were nominees of the higher officers (Liv. ix. 30, 3; Tac. *Hist.* i. 25), who varied in number according to the rank of the officer; *e.g.* the imperial legate of Numidia had thirty, a *tribunis semestris* had five. They were used for most varied services, frequently on police duty (*C. I. L.* iii. 3412; Tert. *de Fuga*, 12). The *legati Aug. pro praetore* used to send their *beneficiarii* into outlying stations (iii. 3949): cf. *Eph. Epigr.* iv. 529. We find *beneficiarii* belonging to the provincial governors, the *legatus legionis*, the tribunes of the legions and of the three departments of the city soldiery, the praefects of the praetorians and of the vigiles, the imperial procurators, but not of the *praefectus urbi*, who had no military authority (Mommsen, *Staatsr.* ii.^{2} 1020; so *pr. ur.* = *praetoris urbani* in *C. I. L.* ix. 1617). Evidence for this list in *Eph. Epigr.* iv. 379 ff. Also there were *beneficiarii* of the tribunes of the *equites singulares* (vi. 3285) and of the auxiliary cohorts (v. 898). Mommsen holds (*Eph. Epigr.* iv. 394, note 1) that it was only the *tribuni laticlavii* or *semestres* who had *beneficiarii*, because they were engaged in civil administration, and not merely in military command.

8. *Immunes.*—The soldier who had fulfilled all duties in the construction of the camp, the watch, and the field was called *munifex* (Festus, p. 33). He who was freed from these duties was called *immunis*. A list of such privileged soldiers is given in Dig. 50, 6, 7, which comprise nearly all the *principales*. But some of the *principales* are called *immunes* simply. They got their privileges from their commander, but it is hard to see how they differed from the *beneficiarii*. We find thus *immunis turmae*, *immunis legionis* (*Eph. Epigr.* iv. 409).

III. *On the Promotion of the Principales.*—The full arguing out of this difficult question would require too much space to be attempted here. However, we have attempted to draw up a list in order of rank, beginning from the lowest; and in doing so have consulted most of the inscriptions bearing on the question, the most important of which are Wilmanns, 1596, 1596 a, 1598, 1617; Orelli, 3176, 3480, 3464; *C. I. L.* ix. 1617, ii. 2610.

1. Secutor.
2. Singularis praef. pr.
3. Beneficiarius trib. (*C. I. L.* x. 410).
4. Tesserarius.
5. Optio [legati].
6. Vexillarius (in vigiles).
7. Siguifer (in praetorians).
8. Curator fisci.
9. Cornicularius tribunis.
10. Beneficiarius praef. pr.
11. Cornicularius praefecti (*C. I. L.* xi. 20).
12. Evocatus Augusti (Wilm. 1584).
13. Centurio.

On this we have to remark (1) that in many of the above inscriptions one or more steps are omitted: *e.g.* in Wilm. 1596 a there is a sudden transition from 6 to 10. Such gaps may possibly be due to omissions on the part of the stone-cutter, but, as is more likely, are evidence of special advancement owing to distinguished merit. Thus in *C. I. L.* v. 898 a *beneficiarius tribuni* is made a *signifer*, obviously from merit, as he is at the same time transferred from a cohort to a legion. Compare *optiones* becoming *evocati* (xi. 19, v. 7160) or centurions (v. 7004, vi. 215), a *signifer* becoming a centurion (viii. 217), &c. (2.) For the omissions of *optio valetudinarii*, *optio carceris*, *optio ab actis* (viii. 4874), which appear in ix. 1617, see the section on *optiones* above (p. 801 *b*). (3.) Where exactly the *librarius* (cf. viii. 217) and the *librator* (= *mensor*; cf. vi. 2545) come is uncertain, but they certainly come before the *tesserarius*: as did also the *commentariensis* (cf. xi. 19, v. 7004) before the *optio*, and the *custos armorum* before the *signifer* (viii. 2094). (4.) A *signifer* sometimes becomes *aquilifer*, and then *curator veteranorum* (v. 3375). (5.) The *codicillarius tribuni* mentioned by Marquardt in his list (ii.^{2} 557) occurs only in the *vigiles*, so is not given in this list. It should take the lowest rank below the *secutor*; for in vi. 1057 (A.D. 205) three names of *codicillarii* appear—Dignus, Gaetulicus, Festus, who in vi. 1058 (A.D. 210) are *secutores tribuni*.

The Levy (*delectus, dilectus*, *κατάλογος*): cf. W. Soltau, *Ueber Entstehung und Zusammensetzung der altrömischen Volksversammlung*, 1880, p. 335 ff.

In the time of the citizen army the levy took place yearly thus. The consuls (Polyb. vi. 19, 5–9) appointed by edict a definite day on which the citizens liable to service were to assemble at the Capitol (Liv. xxvi. 31, 11), in later times at the Villa Publica in the Campus Martius (Varro, *R. R.* iii. 2), if the latter was not the place of the regular arrangement in the ranks as opposed to the levy on the Capitol. Sometimes recruiting officers (*conquisitores*) were used throughout the districts of Italy (Liv. xxiii. 32, 19; xxv. 5, 6), for the most part but not necessarily in times of great danger. After the Lex Plautia Papiria (89 B.C.), when all Italy was liable to legionary service, recruiting by *conquisitores* became constant. They were often most dishonest, and used to sell *vacationes* (Plut. *Crass.* 17; Auct. *Bell. Alex.* 56, 4). Whether the levy was in Rome or by *conquisitores* did not make any difference in the legal position of the soldiers—both kinds were *legitimi milites*.

The tribunes were first assigned as a nucleus to form the four legions in the order of their election (Polyb. vi. 19, 8 ff.): the four junior tribunes first elected and two senior tribunes first elected being assigned to the first legion; the three juniors and three seniors next elected to the second; the next four juniors and two seniors to the third, and the last three juniors and three seniors to the fourth. A tribe was then chosen by lot; the names of four of its members, generally those with lucky names (Festus, p. 137, 15; Cic. *de Div.* i. 45, 102), called out, sometimes at random, sometimes by lot (Val. Max. vi. 3, 4; App. *Hisp.* 49). These, answering to their names (*citati ad nomina respondebant*, Liv. vii. 4, 2), were chosen by the tribunes, one for each of the four legions; then four more (the tribunes of the second legion now having the first choice), and so on. A lot was then cast for the second tribe, and the same procedure followed; and so on till the legion was completed. Most probably all the tribes did not contribute an *equal* quota, for if they did it is hard to see the point of the lot; yet each tribe did contribute a quota, as may be proved from the exception in Livy, iv. 46, 1. Volunteers (*qui voluntate nomina dabant*, Liv. xlii. 32, 6) were frequent. Their legal position in the service differed in no respect from that of those who served under compulsion. The cavalry, in early times, were chosen after the infantry, as the census of the *centuriae equitum* was held after that of the tribes (Liv. xxix. 37, 8); but in Polybius's time (vi. 20, 9) the cavalry were picked first from the equestrian list of the last census and 300 appointed to each legion.

If those bound to serve did not answer to their names, they sometimes had their goods confiscated (Val. Max. vi. 3, 4), or were scourged or imprisoned (Liv. vii. 4, 2), or even in old times sold into slavery (Dig. 49, 16, 4, 10). Certain excuses were allowed: *e.g.* holding a magistracy or priesthood (Plut. *Camill.* 41), absence on state-service (Liv. xxiii. 49, 2), specially-granted remission of service for distinguished bravery (*ib.* 20, 2), physical incapacity (these were called *causarii*, Liv. vi. 6, 14). The inquiry into the validity of the excuses was conducted by the consul (Liv. iii. 69, 7).

The levy being completed, the consuls administered the oath (*sacramento milites rogare* or *adigere*). One soldier stood out and repeated the oath (*sacramentum* or *sacramento dicere*) that he would obey orders and execute the commands of the officer to the best of his ability (Polyb. vi. 21, 2); after that each soldier was called out separately and said *idem in me* (Festus, p. 224 M.). The obligation of the oath lasted till the next campaign, a new oath being required for the new general (Liv. iii. 20, 3; Cic. *Off.* i. 11, 36). Without an oath it was unlawful to fight with the enemy (Cic. *Off.* i. 11, 37), and those who did so were considered bandits (Liv. viii. 34, 10). Desertion was a *nefas* (Senec. *Epist.* 95, 35) and deserved death (Dionys. xi. 43). From the time of Marius the oath was taken once for all for the whole period of service (App. *B. C.* v. 128, 129), and was to the effect "pro republica se esse facturos nec recessuros nisi praecepto consulis post completa stipendia" (Serv. on *Aen.* viii. 1; vii. 614).

Besides this deliberate *sacramentum*, there was frequently in times of great danger (*in tumultu*) a swearing-in of the soldiers *en masse* (*conjuratio*), which first appears in 216 B.C. (Liv. xxii. 38). Something of the kind doubtless also took place when what was technically called *tumultus*, i.e. an Italian or Gallic war, suddenly arose (cf. Serv. on *Aen.* viii. 1). The *conjuratio*, however, differed from the *sacramentum* in that the soldier bound by the latter was not released from service till he received his discharge (*missio*), while he who was sworn-in by a *conjuratio* was legally free from service at the end of the crisis (Mommsen, *Eph. Epigr.* v. 143).

The qualifications for service were after the time of Servius Tullius, besides physical capacity (cf. Polyb. vi. 20, 3) and citizenship, chiefly having a considerable stake in the country, *i.e.* a rated property. The *proletarii* and *capite censi* were enrolled only in times of great danger (Gell. xvi. 10, 11). Plutarch (*Mar.* 9) states that slaves also were deliberately enrolled; and though such did happen occasionally in the confusion of the Civil War (Plut. *Mar.* 41; *Sulla*, 9; *Brut.* 45; Flor. ii. 9; Caes. *B. C.* i. 24, 2; *Bell. Afr.* 19, 3; App. *B. C.* ii. 103, iii. 49), still it was a practice which did not continue in settled times. Even in the age of Theodosius a slave was not allowed to serve in the army (*Cod. Theod.* vii. 13, 8). The lowest census which admitted a man to the army was in the time of Servius Tullius 11,000 asses, but by the time of Polybius (vi. 19, 2) it was only 4,000. In the Social War *libertini* were enrolled (Liv. *Epit.* lxxiv.); and already in the time of Marius the *capite censi* had been taken into the service, the revolutionary nature of which alteration is duly emphasised by ancient writers (Plut. *Mar.* 9; Val. Max. ii. 3, 1; Gell. xvi. 10, 4), and its disastrous results noted by Appian (*B. C.* v. 16), as we have seen above (p. 785 *a*).

Caesar and Pompeius assumed the right of enrolling whole legions of native troops in the provinces (*legiones vernaculae*), who were not citizens (Caes. *Bell. Hisp.* 7; *B. C.* ii. 20). But this practice was restricted by Augustus to the

Eastern provinces. For it is to be especially noted that Augustus made Italy and the West supply the western legions and the East the eastern ones, and so paved the way for the final division of the Empire into the *partes Orientis* and *partes Occidentis* of the Theodosian era (Mommsen, *Die Conscriptionsordnung der röm. Kaiserzeit*, in *Hermes*, xix. pp. 11, 23—a profound and spirited article). But in the West, although the legions were partly raised from communities of Latins and *peregrini*, those who were enrolled were made citizens (ποιησάμενοι δὲ πολίτας, οὕτω καὶ στρατιώτας ἐποιήσατε, Aristides, i. p. 352, Dind.: cf. Tac. *Ann.* iii. 40, xi. 24), and a large number of the soldiers were by birth Roman citizens (Mommsen, *op. cit.* pp. 13, 63). Still we must remember that freedmen served in the *vigiles* (Dio Cass. iv. 26, 5; Suet. *Aug.* 25).

The qualifications for the legionary service under the Empire, besides such physical ones as health, strength, and a certain height, viz. 5 ft. 10 in.—which regulation height was called ἔγκομμα or *incomma* (Veg. i. 5)—and not ever having been convicted of any serious crime, such as adultery (Dig. 49, 16, 4, 7), were: (1) to belong to an urban community, which was considered to be a guarantee of being civilised; (2) free-birth—qualifications which were very often got over. For though formally the legionary in the roll always had his native community attached to his name, still Pannonians and Thracians figure very largely among them; and freedmen were easily made free-born by the fiction of *natalium restitutio* (Mommsen, pp. 16–18): cf. Plin. *Epist.* x. 29, 30.

During the Empire there were seldom regular levies (Vell. ii. 130, 2). We find such indeed after the defeat of Varus (Suet. *Aug.* 24), under Nero (Suet. *Nero*, 44), Vitellius (Tac. *Hist.* iii. 58), Hadrian, M. Aurelius, Maximinus (Mommsen in *Hermes*, iv. 119); but as a general rule vacancies were filled up by volunteers (Dig. 49, 16, 4, 10); and even in the levies getting a substitute was allowed (Plin. *Epist.* x. 30 (39), 1). Gradually *the Italians ceased to take service in the legions;* and as in the legions enrolled in the Vespasian era (*e.g.* I. Adjutrix) they do not appear, while they do appear in those of Nero's time (*e.g.* Leg. xi. at Vindonissa), we may put the consummation of this important result in the time of Vespasian (Mommsen in *Hermes*, xix. 19), though we must remember that this was a result arising from natural causes, and not from any regular legal enactment. In the Digest (*l. c.*) the levy is still in theory universal and exceptionless. The Latin provinces, then, from Vespasian's time contributed more largely to the legions; and as a counterbalance the African forces were from that time on assigned to the Eastern division of the Empire (Mommsen, pp. 9, 19). The second important feature of the imperial conscription was, for the most part, the *local conscription for each legion.* Under Hadrian the African legion was almost exclusively enrolled from Africa and Numidia, and to Hadrian we may attribute the extension of this regulation to the whole Empire (*ib.* 10, 21).

The city-guards were raised by Augustus from the citizens of the old Latin communities; under Tiberius Cisalpine Gaul is added: but up to Severus Italians predominate, though in the second century many soldiers appear who were natives of Spain, Macedonia, and Noricum (Dio Cass. lxxiv. 2). After Severus Italians rarely appear (Mommsen, pp. 52, 53).

From the time of the Social War and the extension of the citizenship by the Lex Plotia Papiria, the *Socii* had vanished entirely, and the legions and auxilia form the two main bodies of the Roman army. The latter were the non-Roman troops raised partly in the provinces, partly from allied kings and nations. In imperial times they generally stand opposed to the legions (Vell. ii. 112, 4). These auxiliary troops were for the most part raised from *peregrini*—in the first instance in definite districts from which they got their names, but the vacancies which arose came to be filled up with natives of other districts, especially from natives of the place where the troop happened to be located. Thus in 60 A.D. (see Diploma ii.) an Illyrian gets his discharge from the *Cohors II. Hispanorum* located in Illyricum (Mommsen, p. 41). These non-citizen troops are designated by the name of the *nation* to which they belonged; for if they belonged to a *town*, they could have served in the legions (*ib.* 25). Local conscription for each division probably began in the case of the auxiliaries before it did in that of the legions (*ib.* 42). By Augustus the auxiliaries were only taken from the imperial provinces and Africa (*ib.* 44), the senatorial provinces supplying in larger measure than the imperial ones the legions and the guard. But as the senatorial provinces had no garrisons, when local conscription was introduced by Hadrian, the legionaries ceased to be taken from them: while those who belonged to urban communities in these provinces, and wished to join the service, served only in the guard, and after the time of Severus not even there (*ib.* 51).

The officers who effected the recruiting under the Empire, which they did by instituting an *inquisitio* (Plin. *Epist.* x. 30 (39), 2), were called *dilectatores* (Wilm. 1256, 1257), officials of senatorial rank in Italy and the senatorial provinces, of equestrian rank in the imperial (Mommsen, *Staatsrecht*, ii.² 819; *Hermes*, xix. 56, 59). Sometimes the levy was held by the proconsul in a senatorial province (Tac. *Ann.* xiv. 18).

The Line of March (Agmen).

The usual order of march in the second century B.C. is described by Polybius (vi. 40, 4 ff.). It was in a single column. First came the *extraordinarii*—that is, if the enemy were in front: for if they were in the rear, the *extraordinarii* were placed in the rear. Next came the *ala dextra* of the allies, followed by its baggage and the baggage of the *extraordinarii.* Then one of the legions, followed by its baggage; then the other legion, followed by its own baggage and that of the *ala sinistra* of the allies, which latter brought up the rear. The cavalry usually followed the divisions of infantry to which they were attached; sometimes, however, they were placed on the flanks. The legions shifted places each day, as did also the *alae*, so that each should get turns in the advantage of first arrival at fresh food and water. In open places where an attack was imminent, the line of march was almost that of battle, into which it could most readily be changed (Tac. *Ann.* ii. 16). Caesar calls it *triplex acies* (*B. G.* i. 49, 1, and *passim*). According to it, the *hastati*, *principes*, and *triarii* marched in three parallel columns beside one another, each maniple having its baggage before it. On any danger approaching, by a movement at one time to the right, at another to the left, the maniple got clear of the baggage, and, having got it in the rear, formed the triple battle array. But Caesar (e.g. *B. G.* ii. 19, 1; cf. viii. 8, 3) often varied this, arranging the whole main body in front, then the whole of the baggage, and behind it a rear-guard. The *triplex acies* is usually called by Livy *agmen quadratum*, which by no means implies a square with four sides (Liv. xliv. 9, 6), but simply a rectangular arrangement (cf. Cato in Non. 204, *fronte longa, quadrato exercitu*): see Liv. x. 14, 7; xxi. 57, 7, &c. But sometimes the Romans formed a hollow square or rectangle, with the baggage in the middle, when a sudden attack was at all expected. We first hear of this arrangement, itself also called *agmen quadratum*, in the Spanish wars (*e.g.* in 151 B.C.; App. *Hisp.* 55), and it was continued in the Jugurthine and Parthian wars (Sall. *Jug.* 46, 100; Plut. *Crass.* 23), and frequently elsewhere (Tac. *Ann.* i. 51, 64; xiii. 40)—from which passages we see also the difference of arrangement on different occasions, sometimes the front and rear being legions and the sides the allies, sometimes a legion being on each side of the square, with the auxiliaries as a front and rear guard, &c.

Nothing is more insisted on by the Roman writers than the great weight of baggage the Roman soldier used to carry: "injusto sub fasce viam cum carpit," says Virgil (*Georg.* iii. 346). Cicero (*Tusc.* ii. 16, 37) says that, besides his shield, sword, helmet, &c., "which he no more reckoned than he did his shoulders, arms, or hands," he had to carry food for half a month or more (Caes. *B. C.* i. 78, 1), sometimes for a whole month (Liv. xliv. 2, 4), one or more stakes, and various odds and ends: of the latter Josephus (*B. J.* iii. 5, 5) mentions a very miscellaneous collection—saw, basket, spade (ἄμην), axe, strap, sickle, rope. The whole weight of the baggage Vegetius (i. 19) estimates at 60 Roman pounds. Marius made an arrangement for carrying all this on a board fastened on to a forked support which was strapped across the shoulders. They were called *muli Mariani* (Frontin. iv. 1, 7: cf. Festus, 24, 148, M.). By this arrangement they could be both more easily carried, and more readily cast aside and resumed when circumstances required it.

The heavy baggage, such as tents, hand-mills, &c., were carried on horses or mules (*jumenta*) driven by *calones*. Every ten men had one tent, thereby forming a *contubernium* (Hyg. § 1; Joseph. *B. J.* iii. 6, 2). [CASTRA.] Each centurion and higher officer had at least one tent. If we suppose each *jumentum* carried one tent, we should have over 2,000 *jumenta* in an ordinary army of 20,000 men, so that the *impedimenta*, even before artillery was much used, was very considerable.

In the time after Hadrian the order of march appears to have been that the legion was divided into two divisions, the first consisting of the first five cohorts arranged from right to left, the second the sixth to the tenth cohorts similarly arranged (Veg. ii. 15).

The Battle Array (*Acies*).

According to Livy (viii. 8, 9 ff.), the ten maniples of the *hastati* stood first, next immediately behind the intervals (*intervalla*, διαστήματα) between the maniples of the *hastati* stood the *principes*, and behind the intervals of these the ten maniples of the *triarii*. The arrangement was that of a *quincunx* (Polyb. xv. 9, 6). Should the *hastati* be defeated, they retired through the intervals of the *principes* (which shows by the way that the intervals between the maniples must have been nearly if not quite as great as the front of the maniple). Should the *principes* likewise be defeated, "the contest came to the triarii" (*res ad triarios redit*), which was a proverb for a most serious state of things. This arrangement was the ordinary one; but sometimes there was a variation, as for example, in the battle of Zama, Scipio, in order to allow a free passage for the elephants through the maniples, drew up the maniples of the three lines straight behind each other (Polyb. xv. 9, 6).

The standards (*signa*, i.e. the standards of the maniples; for there were neither standards of the cohorts nor was the eagle the legionary standard till the time of Marius [SIGNA]) usually stood behind the last row of the maniple. The *signa*, especially alluded to in accounts of battles, are those of the *hastati* (Liv. xxxvii. 39, 8). Hence we see clearly what Livy means when he says (viii. 11, 7), "Caesos hastatos principesque, stragem et ante signa et post signa factam, triarios postremo rem restituisse." The *antesignani*, then, are the *prima acies* (cf. Liv. 47, 2; viii. 39, 4; x. 27, 9); and in a similar sense *postsignani* (a word, however, of late date) is used for the second line, the *principes* (Frontin. ii. 3, 17). If the enemy are repulsed, the *hastati* advance, *signa promota* (Liv. viii. 38, 10); and if the *hastati* have to retire, the *secunda acies ad prima signa successit* (Liv. ix. 32, 8). But sometimes the *signa* certainly appear to have been in the front of the maniples (*Bell. Afr.* 15; Tac. *Hist.* ii. 43), and this was no doubt the usual position not only in the march, but also in a charge in battle ("et signae prae se ferri plenoque gradu ad castra hostium oppugnanda succedere jubet," Liv. xxxiv. 15, 3). *Signum* is, however, often used in the very general sense of the main body (Liv. xxi. 55, 2; xxxviii. 21, 2), and similarly we find it in *miles subsignanus*, used for a legionary soldier in opposition to an auxiliary (Tac. *Hist.* i. 70), and to desert was *relinquere signa* (Liv. v. 6, 4). Somewhat in this sense, too, we must understand the *antesignani* in Caesar, who applies that term apparently to a select body different from the common soldiers (cf. Cic. *Phil.* v. 5, 12), formed inside the legion (Caes. *B. C.* i. 57, 1) from the most active and brave men, three (*Bell. Afr.* 78, 5) or four hundred (*B. C.* iii. 75, 5), who were free from all baggage (*expediti*), and who could be used for sudden exigencies, such as seizing a position (*B. C.* i. 43, 3), reinforcing a hard-pressed division (*Bell. Afr.* l. c.) or fighting among the cavalry (*B. C.* iii. 84, 3). They would be so called because they were independent of the regular organisation of the legion, and mostly used for rapid movements in front of it. H. Schiller (in I. Müller's *Handbuch*, iv. p. 737) says that these corps of *antesignani* probably formed the training school of able subaltern officers.

But something more must be said of the order of battle of the whole combined army, legionaries and allies. The usual order appears to have been the two legions in the centre, flanked on the right by the *ala dextra* of the allies, and on the left by the *ala sinistra*. On the extreme right was the legionary cavalry and the *equites extraordinarii* (Liv. xxii. 45, 7; xxvii. 12, 4); on the extreme left the allied cavalry. But there were frequent variations—sometimes the cavalry was behind the legions (Liv. x. 5, 6), or the allies were in front, the legions in reserve (xxxv. 5, 8), or the legions were on the wings, *e.g.* in the battle of Scipio against Hasdrubal at Ilipa (Polyb. xi. 20, 5). Vegetius (iii. 20)—who is plainly copying from Cato, *de re militari* (cf. Cato *ap.* Nonium, 204), whom Vegetius reproduces word for word—gives a whole series of recognised kinds of attack: (1) *fronte longa quadro exercitu* — the normal kind described above; (2, 3) *obliqua acies*, i.e. right (as at Pharsalia, Caes. *B. C.* iii. 91) or left wing attacking; (4, 5) *sinuata acies*, both wings attacking, legionaries exposed or guarded by light-armed; (6) whole army attack left wing of enemy (usual when a battle ensues on the march); (7) a wing rests on a fixed point (*e.g.* a river or a mountain), so that it cannot be surrounded; (8) *cuneus*, called by the soldiers *caput porcinum* (Veg. iii. 19; Amm. Marc. xvii. 13, 9), viz. the centre projecting like a wedge, a kind of attack to be received by a V-shaped arrangement, called *forfex*. For an example of a *cuneus* and a *forfex*, see Liv. xxxix. 31.

(By way of parenthesis we notice here other meanings of *cuneus*: (1) any division (Augustin. *de Ordin.* ii. 18, 48); (2) any serried band—thus the maniples in battle are so called (Liv. vii. 24, 7) and the Macedonian phalanx (Liv. xxxii. 17, 11); (3) in the later Empire a definite division of cavalry (*Cod. Theod.* v. 4, 1; Not. Dign. *Occ.* 40, 54; cf. *C. I. L.* vii. 218), which appear among German troops (Tac. *Germ.* 6), *e.g.* the Frisii in Britain in the third century (cf. Mommsen in *Hermes*, xix. 232-3).)

In particular emergencies other combinations of soldiers were formed, with special names: e.g. (*a*) *orbis*, a serried, not a hollow, square or mass, which soldiers hard-pressed by the enemy formed (*volvere*, *facere*), to protect themselves on all sides and to prevent themselves being scattered (Sull. *Jug.* 97, 5; Caes. *B. G.* iv. 37, 2); (*b*) *testudo*, used either by the whole army against a violent discharge of missiles, or by a small division in attacking a wall. The front rank held their long half-cylindrical shaped shields before them, and the other ranks, each stooping a little more than the one before it, held their shields closely locked together above their heads so as to form a sloping roof. Full description in Dio Cass. xlix. 30; Liv. xxxiv. 39, 6 [TESTUDO]. (*c*) *globus*, a general word for a closely-formed *attacking* division (Liv. iv. 29, 1; Tac. *Ann.* xiv. 61).

The labours of Hadrian in his organisation and improvement in the discipline of the army are often mentioned (Spart. *Hadr.* 10; Dio Cass. lxix. 9, 4; Au[illegible] Vict. 14, 10). Under him we may place [illegible] definite return to the arrangement by ph[illegible]x, which was the earliest arrangement of a[illegible]n Roman history. Not but that the phalan[illegible]as used earlier. A fight of man against [illegible], which in a broad way of speaking was the style of fighting used in the Republic, had to give way when barbarian hosts were met; for barbarians are far less dangerous to masses than to individuals. In a battle Suetonius Paullinus fought against the Britons he marshalled his forces in three phalanxes, so that they could not be broken (Dio Cass. lxii. 8). But the work of Arrian, *ἔκταξις κατ' Ἀλβάνων* (not *Ἀλανῶν*: see Dio Cass. lxix. 15), legatus of Cappadocia in 136 A.D., which describes officially the arrangement in a phalanx, causes us to fix Hadrian's reign as the period of its definite adoption. The phalanx is eight deep, in close array, the first four lines armed with *pila* (*κοντοφόροι*), the last four with *lanceae* (*λογχοφόροι*) [LANCEA]: cf. Tac. *Hist.* i. 79. The *pila* [PILUM] were to be used by the front rank for piercing, by the other three lines as missiles (Arrian, *op. cit.* 15). The cavalry and artillery stood both on the wings and in the rear of the phalanx (*ib.* 19), and further back still a reserve of picked men to make a charge at the right moment (*ib.* 22, 23). We hear that Caracalla had a phalanx of 16,000 Macedonians (Dio Cass. lxxvii. 7, 1), and Alexander Severus one of 30,000 (Lampr. *Alex. Sev.* 50, 5).

Conditions of the Service.

Augustus, we are told in Suetonius (*Aug.* 49), "quicquid utique militum esset, ad certam stipendiorum praemiorumque formulam astrinxit; definitis pro gradu cuiusque et temporibus militiae et commodis missionum, ne aut aetate aut inopia post missionem sollicitari ad res novas possent:" cf. also Dio Cass. liv. 25, 5, *ἐπὶ ῥητοῖς ... καταλεγόμενος*, and Herodian, ii. 11, 5, where, as in Suetonius, the conditions alluded to have reference to pay while in the service, the number of years' service which was required, and some consideration or reward on discharge.

1. *Pay.*—Prior to the siege of Veii, in 406 B.C., the expenses of the Roman soldier were defrayed by his tribe (Dionys. iv. 19, v. 47), except the knights, who got from the treasury an *aes equestre* to purchase and *aes hordearium* to feed his horse. And even after 406 the pay was rather for maintenance than for remuneration, *ὀψωνιασμὸς* rather than *μισθός*. It was paid at the end of service—for service up to six months, which was a *semestre stipendium* (Liv. xl. 41, 11), six months' pay (Dionys. ix. 59); for service beyond six months, which was an *annuum stipendium* (Liv. xlii. 34, 5), a year's pay (Diod. xiv. 16): cf. Varro *ap.* Non. p. 532, s. v. *aere dirutus*; Liv. xxiv. 11, 8. (The six months were from March to August.) The payment was laid on the conquered (Liv. v. 27, 15; Dionys. ix. 17, 36, 59). Polybius (vi. 39, 15) says that the provisions, clothes, and accoutrements were deducted from the pay; and, though we hear that C. Gracchus brought in a law providing clothes for the soldiers at state expense (Plut. *C. Gracch.* 5), we know that in the

time of the Emperor Tiberius they (Tac. *Ann.* i. 17) complain that they had to supply out of their pay *vestem arma tentoria*—a passage which, by the omission of *frumenta*, proves that at this time their food was supplied by the state, as it certainly was later (Veg. ii. 19, 20; iii. 3). But if the soldier had these items deducted from his pay, it was incumbent on the state to see that there were proper supplies of them (Liv. xxvii. 10, 13; xliv. 16, 2; ix. 29, 4; xxix. 22, 3; xxxiv. 6, 13; xlii. 27, 8. Caes. *B. G.* i. 16, 1; vi. 33, 4).

The amount of the pay in the time of Polybius was two obols a day for the legionary, four for the centurion, and six for the horseman. Now a drachma to Polybius was equal to a denarius, which originally was 10 asses: therefore the annual pay of the legionary for the year of 360 days was 1200 asses, of the centurion 2,400, and of the horseman 3,600. In 217 B.C. the denarius was made equal to 16 asses, but the old reckoning of the denarius (= 10 asses) remained for the soldiers (Plin. *H. N.* xxxiii. 45). Caesar is said to have doubled the military pay (Suet. *Caes.* 26). What he actually did was, he trebled their nominal pay (*i.e.* 1200 asses), but paid them in the new coinage (1 denarius = 16 asses), so that they got 225 denarii a year. There is, however, a certain confusion. In Tac. *Ann.* i. 17 the legionaries say they got 10 asses a day and claim to get a denarius, while Pliny (*l. c.*) says that in military pay the denarius was *always* given for 10 asses nominal; so that the claims of the legionaries appear to be for what they already got. Perhaps the claim was that the 225 denarii, which was now their pay, be paid at 16 asses the denarius, and not at 10. Other troops were paid certainly in denarii, *e.g.* the praetorians (*qui binos denarios acceperint*, Tac. *l. c.*) = 720 denarii a year. Sometime between 27 B.C. and the time referred to in this passage of Tacitus the pay of the praetorians was raised from 1½ of a denarius to 2 denarii, for in 27 they got double the pay of the legionary (Dio Cass. liii. 11). Domitian increased the pay of the legionaries by one-third, so that it was now 300 denarii. From the time of Caesar the payments were made every four months, each payment being called a *stipendium*, so that the soldiers got three *stipendia* each year (Suet. *Dom.* 7; Zonar. xi. 19). The pay of the *cohortes urbanae* is to be inferred from the legacies left to them by Augustus and Tiberius (Dio Cass. lvi. 32, 2; lix. 2, 1, 3), which were doubtless, as in the case of the praetorians and legionaries, one *stipendium*, i.e. 120 denarii; therefore their yearly pay would be 360 denarii. The only superior officer's pay we know of is that of the *tribunus legionis* in the third century, *i.e.* 25,000 sesterces (see Inscription of Torigny).

Military men sometimes, for distinguished bravery or for acting as *emeriti* or *evocati* after their legal period of service had expired, got increased pay; and as such, if the pay was doubled, were styled *duplarii* (*C. I. L.* viii. 2564), *duplicarii* (Varro, *L. L.* v. 90), *dupliciarii* (Bramb. 475); if the pay was increased by one-half, *sesquiplicarii* (*C. I. L.* iii. 3164; Veg. ii. 7). The term *salariarii* points to officers who were employed in civil rather than in strictly military duties; and their years of service are called *salaria* (*C. I. L.* vi. 2495, 2589). It is applied to *adsessores*, *professores*, *medici*, and *evocati*: see Mommsen in *Eph. Epigr.* v. 152.

2. *Length of service and discharge.*—During the Republic the citizens were bound to serve between the completed 17th year and the completed 46th (Gell. x. 28; Mommsen, *Staatsr.* i.^{2} 487), the legionary being bound to serve sixteen or at most twenty campaigns, the horseman ten (Polyb. vi. 19, 2; reading δεκαὲξ for ἓξ οὐ). Under Augustus the legionary had to serve sixteen years (Dio Cass. liv. 25, 6), but afterwards it was fixed at twenty, that of the praetorians being sixteen (*ib.* lv, 23, 1; Tac. *Ann.* i. 17, 78), that of the urban cohorts being twenty (Dig. 27, 1, 8, 9), and that of the auxiliaries being twenty-five: see the Diplomata *passim*, where the formulae are for the legionaries *qui vicena stipendia aut plura meruerant* (e.g. Dipl. vi.), for the auxiliary forces *qui quina et vicena stipendia aut plura meruerant* (e.g. Dipl. ix.). Note *aut plura;* for as a matter of fact we find that soldiers were very commonly retained in the service as *evocati* long after their legal term of service had expired, *e.g.* we have *evocati* of thirty-eight (*C. I. L.* iii. 2818) and forty-six years' service (Mommsen on *C. I. L.* iii. p. 282). After the year 108 A.D., in the Diplomata we always find the privileges of veterans accorded only to those who are discharged (*dimissi honesta missione*), but yet these often appear to be still serving in such and such an army under such and such a leader (*e.g.* Dipl. xxxiv.). After Hadrian's time it appears (see Mommsen in *Eph. Epigr.* v. p. 4, No. 10) that a soldier did not get the *honesta missio* till twenty-five years' service, but during the last five years he was released from the harder duties, or in a later age chosen among the *protectores* (Mommsen on *C. I. L.* iii. 6194). Hence we see how it is that the period of service is said sometimes to be twenty years (Dig. *l. c.*; *Cod. Just.* vii. 64, 9), sometimes twenty-five (Serv. *ad Aen.* ii. 157). Discharge, though properly a function of the emperor, yet is often said to have been performed by such and such a *legatus* (*C. I. L.* iii. 1078, 1172; *Eph. Epigr.* iv. p. 502). In the case of *honesta missio*, if the veterans did not get land, they got a lump sum of money, the praetorians 5,000 *denarii*, the legionaries 3,000 (Dio Cass. lv. 23, 1), which Caligula (Suet. *Cal.* 44) cut down to half and Caracalla raised to 5,000 (Dio Cass. lxxvii. 24). In case of physical incapacity or sickness, a soldier got what was called a *causaria missio*. As to drumming out (*ignominiosa missio*), see below (p. 811 *b*), and compare Dig. 49, 16, 13, 3.

Miscellaneous Features of the Service.

1. *Marriage.*—All the Diplomata give certain privileges with regard to marriage to the person or persons named in each document. The only Roman citizens these privileges are granted to are the praetorians and urban cohorts, and in their case grant them the right of forming full *connubium* with the first woman of foreign birth they marry after discharge, and the consequent legitimacy of the children arising from such a marriage (cf. Gaius, i. 57). Dio Cassius (lx. 24, 3) says that a soldier (meaning doubtless one who was a Roman citizen) could not legally marry while in the service and prior to his

discharge, or at any rate till performance of his full term of service; but Claudius allowed them to do so (*τοῖς στρατευομένοις ἐπειδὴ γυναῖκας οὐκ ἐδύναντο ἔκ γε τῶν νόμων ἔχειν τὰ τῶν γεγαμηκότων δικαιώματα ἔδωκε*). If he was married before joining the army (Dig. 24, 1, 32, 8; 60–62; 49, 17, 6, 8), he could retain his wife, but could not keep her in the camp, and so had to part from her; but as men entered the army about their 18th year, there cannot have been many such cases. The only women in the camp were either *meretrices* (App. *Hisp.* 85) or non-Romans (Liv. xliii. 3, 1): in early times it was a great disgrace for a Roman woman to be in the camp (Serv. on *Aen.* viii. 688; Prop. v. 3, 45). Hence the auxiliaries could easily get wives of their own class; and as they served for a somewhat longer period than the legionaries, they were allowed to marry while still soldiers; and in the Diplomata, which are given in great numbers to the auxiliaries, they get the right of *connubium* with the wives they already have when the latter have got citizenship, or if unmarried the right of *connubium* with whatever wife they chose to marry subsequently to the issue of the diploma. The Roman soldier, then, could not legally marry; and this was the rule before the time of Severus. But by him all soldiers were allowed to have a concubine (technically called *focaria*, Cod. Just. v. 16, 3); and auxiliaries and legionaries were put on the same level. For that is the meaning of *γυναιξί τε συνοικεῖν* in Herodian, iii. 8, 5; not that the soldiers could contract regular *connubium*, as may be seen from the Diplomata subsequent to this date: *e.g.* liii., which runs, "ipsis filiisque eorum quos susceperint ex mulieribus *quas secum concessa consuetudine vixisse probaverint*, civitatem Romanam dederunt et connubium cum iisdem *quas tunc secum habuissent* cum est civitas iis data, aut, si qui tunc non habuissent, cum iis quas postea *uxores* duxissent" (cf. *Eph. Epigr.* v. p. 100). The children sprung from such a *focaria* bore the name of the mother (cf. the four children born to one man from four different *focariae* in Dipl. liii.), were said to have been born in the camp, and all assigned to the tribe Pollia, so as to enable them to take service in the legions (Wilmanns in *C. I. L.* viii. p. 284; Mommsen in *Hermes*, xix. 11, note). In the fourth century all soldiers could marry (*Cod. Theod.* vii. 13, 6), and permission could be granted by the commander to a soldier to keep his wife in the camp (*Cod. Theod.* vii. 1, 3, and Godefroi's notes; *Cod. Just.* ii. 52, 2).

This is Mommsen's view (*C. I. L.* iii. p. 905 ff.), and as it is generally adopted has been set forth fully. But Mispoulet (*Le Mariage des Soldats romains* in the *Revue de Philologie*, 1884, pp. 113–126) has raised some strong arguments against it. The exigencies of a military life, he says, always preclude the majority of soldiers from marriage; but that is different from a legal prohibition of it. It is *à priori* improbable that Augustus, who encouraged marriage so much, would have condemned 200,000 men in the prime of life to celibacy. Again, the inscriptions constantly speak of the *conjux* of a soldier and call him *maritus*: e.g. *C. I. L.* iii. 102, 5949; vii. 23, 25, 121, 245; viii. 3084, &c.; but we do not know the dates of these inscriptions, and we need not suppose that they necessarily speak with strict accuracy, nor that what was *legally* cohabitation may not have been expressed by the more honourable term. But the passages adduced from the Digest are strong: 49, 17, 16, pr., "Dotem filiofamilias datam vel promissam in peculio castrensi non esse respondi (Papinianus)... Dos matrimonio cohaerens;" 23, 2 (*de ritu nuptiarum*), 45, 2, "Plane si filiusfamilias miles esse proponatur non dubitamus, si castrensis peculii ancillam manumiserit, competere ei hoc ius," &c.; 23, 2, 35, "Filiusfamilias miles matrimonium sine patris voluntate non contrahit." These passages cannot be got over by saying that they refer to marriage contracted before entering the service. Mispoulet's explanation of the passage in Dio Cassius is that Claudius allowed the soldiers who could not live with their wives according to military rules, and so did not marry, relief from all the penalties which fell on unmarried civilians—an exceedingly reasonable interpretation of the words. He notices also that Severus's enactment was that wives might *live with* their husbands; and just about that time, as Wilmanns has shown (*l. c.*), the camp at Lambaesis ceased to be lived in by the soldiers: they go to the town and only return to the camp at stated hours. The *connubium* granted by the Diplomata, he says, was the right of full marriage, which would put the children in the position of those born from two Roman citizens, even if one or both of the parents were *peregrinae condicionis*.

2. *Business of the Soldier in peace. Exercises and the Construction of Public Works.*—It was always in accordance with Roman discipline that the soldiers should not get demoralised by inaction, nor should they, as the Emperor Probus put it, eat the bread of idleness ("annonam gratuitam milites comedere non debere," Vopisc. *Prob.* 29): cf. Frontin. iv. 1, 15. In the first place, then, they had to go through the *drill* (see especially Vegetius, ii. 23, and i. *passim*) necessary to keep them in efficient training, which gave the name to the army (*exercitus*, Veg. ii. 23). Hadrian laid great stress on this drill (Spart. *Hadr.* 10, 3), which was held twice a day for recruits, once for full soldiers. They were further trained in wood-cutting, riding, jumping, running, swimming, shooting javelins and arrows, slinging stones, fencing and sparring at a stake with an unpointed wooden stick (*vectis*, Sall. *Hist.* ii. 11; *clava*, Veg. i. 11; *sudes*, Juv. vi. 248; *κυιντανὸν κόντακα*, Cod. Just. iii. 43, 1, i.e. *ludus quintanus*, perhaps so called because often practised in the *via quintana*), &c. Besides this, there was occasionally the *decursio*, an evolution whereby the army divided into two parts, and engaged in a sham fight; this especially after the review (*lustratio*): see Liv. xl. 6, 5; cf. Eckhel, vi. 271, 503. Also once a month the *ambulatio*, i.e. fully armed and equipped to march ten miles forward and ten miles back at the regulation military pace (four miles an hour), sometimes at an accelerated pace (*pleno gradu* = nearly five miles an hour): cf. Veg. i. 9, 27.

Soldiers often executed certain public works. They were never allowed to work for private people (Dig. 49, 16, 12, 1; cf. Liv. *Epit.* xi.): but sometimes they were allowed to build temples and public edifices for the municipalities in the provinces (Dig. 50, 16, 7, 1). In republican times the soldiers were occasionally employed in executing large public works. For example, Flamininus had the road from Bononia to Arretium made by his soldiers (Liv. xxxix. 2, 6); Marius dug the Fossa Mariana from Exagium (St. Gabriel), about 5 Roman miles N. of Arles, to the village of Fos (Fossae Marianae portus), about 28 Roman miles N.W. of Marseilles. The length of the canal was nearly 30 Roman miles. (Full discussion in Desjardins, *Géographic de la Gaule romaine*, i. p. 199 ff.) Sulla diverted the river Cephissus from its channel (Plut. *Sulla*, 16): cf. also Caes. *B. G.* i. 8, 1; *Bell. Afr.* 32, 2.

But the great works of the Roman soldiery appear under the Empire.

(1.) The *Limites*, or frontier fortifications; such as, the *Vallum Hadriani* or Picts' Wall in the N. of England, from Wallsend (Segedunum), E. of Newcastle-on-Tyne (Pons Aelius), to Bowness (Glannibanta), W. of Carlisle (Luguvallium). This work is even now in its ruins one of the most impressive monuments of Roman military greatness. It is well known to all English scholars, with its stations, trenches, mile-castles, &c., thanks to Dr. Bruce's learned and eloquent work (*The Roman Wall*, 3rd edit. 1867). Again, the *Limes Transrhenanus*, from the mouth of the Lahn near Kelheim to the Danube; the *Limes Rhaetiae*, the *Limes Orientalis*, the *Limes Africanus*, &c.

(2.) The *Military Roads*, which were always the main high roads (Quint. ii. 13, 16). From the duties of road-making even veterans were not free (Dig. 49, 18, 4). These roads were everywhere. To take two examples: in Dalmatia, the road from Salonae to Andretium was built by the Seventh Legion (*C. I. L.* iii. 1627); and in Africa the road from Carthage to Thevesta was built by the Third Legion (*C. I. L.* viii. 10048). For more, see the chapters on *Viae Publicae* in the various volumes of *C. I. L.* Both legionaries and auxiliaries worked at these roads: see the important inscription from Coptos in *Eph. Epigr.* v. pp. 5–17.

(3.) Keeping up and extending the *fortifications* already in existence. In all the provinces there are vast numbers of bricks found with the stamp of the legions which executed works there. For British ones, see *C. I. L.* vii. p. 255 *sqq.*

(4.) *Miscellaneous works* (cf. generally Vopisc. *Prob.* 9, 2), such as making bridges (Tac. *Ann.* i. 20), cutting canals (*ib.* xi. 20), building ampnitheatres (ib. *Hist.* ii. 67), temples (*e.g.* that of Aesculapius and Salus at Lambaesis, *C. I. L.* viii. 2579), dredging rivers and harbours (Suet. *Aug.* 18; Liban. i. p. 324, Reiske), planting vineyards (Vopisc. *Prob.* 18, 8), trying to make head against locusts (Plin. *H. N.* xi. 106), even working in mines (Tac. *Ann.* xi. 20), though this was generally one of the severest punishments (Dig. 48, 19, 28, pr.), and as a punishment was not inflicted on soldiers (*ib.* 49, 16, 3, 1).

3. *Rewards and Punishments.*—With regard to *rewards*, it will be sufficient to refer to the Index, *s. v.* Military Rewards, and the various articles mentioned there, such as CORONA, OVATIO, TRIUMPHUS. But a word here may be said on the *punishments*, which Modestinus summarises in the Digest, 49, 16, 3, 1: "Poenae militum hujuscemodi sunt, *castigatio, pecuniaria multa, munerum indictio, militiae mutatio, gradus deiectio, ignominiosa missio.*" (Compare, for many examples, Val. Max. ii. 7, *De disciplina militari.*)

(1.) *Castigatio* could be inflicted even on officers (Val. Max. *l. c.*).

(2.) *Pecuniaria multa* might be deprivation of whole (*ib.* § 5) or part of pay (Liv. xl. 41, 11), the campaign not being reckoned in the year of service. One who thus lost his pay was called *aere dirutus* (Fest. *s. v.*; Non. p. 532).

(3.) *Munerum indictio* could be inflicted only on those who were in some degree *immunes*, by making them *munifices* (Val. Max. ii. 7, 4), which may be regarded as *gradus dejectio.*

(4.) *Militiae mutatio*, degradation, *e.g.* from the cavalry to the infantry (Frontin. iv. 1, 18), or to the *funditores* (Val. Max. ii. 7, 15). This was also called *ordinis ademptio* (cf. *C. I. L.* i. 206, l. 121).

(5.) *Ignominiosa missio*—public drumming-out before the whole army. See the striking scene in *Bell. Afr.* 54, 4. The soldier thus cashiered could not appear at Rome or at the emperor's court (*neque in sacro comitatu*, Dig. 49, 16, 13, 3).

To these add—

(6.) When whole troops were in fault, they were often given barley instead of wheat for food (a punishment inflicted on individuals also, Veg. i. 13), and made to bivouac outside the camp (Polyb. vi. 38, 3): cf. Liv. x. 4, 4; Suet. *Aug.* 24.

(7.) *Decimation* [DECIMATIO].

(8.) *Capital punishment*, which could only be inflicted by the consul during the Republic (Dionys. xi. 43), or by the emperor or *legatus legionis* during the Empire (Dio Cass. lii. 22, 3). It was the penalty for desertion (*desertio*), excessive insubordination, secret correspondence with the enemy, or loss of standards (Dionys. *l. c.*; Joseph. *B. J.* iii. 5, 7; Tac. *Ann.* xiii. 36; Dig. 49, 16, *passim*). It was frequently inflicted in the terrible manner called *fustuarium* [FUSTUARIUM]. (With regard to desertion, it may be parenthetically noted that the *desertor* differed from the *emansor*, in that the former intended to stay away and was brought back, while the *emansor* either came back of himself or at any rate intended to come back—the same distinction as subsisted among slaves between *fugitivus* and *erro.*)

4. *Commissariat.*—Not the least important function of the general was to see that the army had sufficient provisions. When the commissariat had been properly seen to, the campaign or expedition used to begin (cf. Caes. *B. G.* i. 37, 5; ii. 2, 6, &c.). Each foot-soldier in the time of Polybius (vi. 39, 13) used to get per month two-thirds of an Attic medimnus of wheat; each Roman horse-soldier, 7 medimni of barley and 2 medimni of wheat; each horse-soldier of the allies, 5 medimni of barley and 1⅓ medimni of wheat. The extra supply for the horse-soldiers was for the support of two servants for each Roman and one for each ally. The food of the Greeks was mostly barley (cf. Xen. *An.* vii. 1, 37); but the Romans used more wheat, as that is more nourishing for those who have to go through a great deal of physical exertion (Galen, vi. 507, ed. Kuhn). Barley was sometimes, as we have seen, given as a punishment. The soldier used to carry rations for seventeen days (Amm. Marc. xvii. 9, 2; Lampr. *Alex. Sev.*

47), or perhaps in strictness for only sixteen days (see A. Langen, *Die Heeresverpflegung der Römer im letzten Jahrhundert der Republik*, p. 5 ff.). The corn when measured out (*metiri*) to the soldiers was neither ground nor baked. For the former process hand-mills (*molae manuales* or *manuariae*) [Mola] were used, which were carried by the beasts of burden. Once ground, the meal was made into a kind of porridge (*puls*, Plin. *H. N.* xviii. § 83); hence the Romans are jestingly called *pultiphagi*, or *pultiphagonides* (Plaut. *Most.* iii. 2, 143; *Poenul.* prol. 54). Often it was baked into bread (Plut. *Mar.* 7; Plin. *H. N.* xviii. § 12). *Cocta cibaria* are frequently mentioned in the times of the early Republic (Liv. iii. 23, 3; 27, 3); and often reference is made to supplies for the fleet (*ib.* xxi. 49, 7; xxiv. 11, 9; xliv. 35, 13). We do not hear of biscuits (*buccellatum*) till the Empire (Spart. *Pesc.* 10; Amm. Marc. xvii. 8, 2). The soldiers baked their own bread (Plut. *Mar.* 13); and it was only in times of lax discipline that they sold their corn and bought bread day by day (Sall. *Jug.* 44, 5). Meat was quite a secondary article of food in the time of the Republic and early Empire (Caes. *B. G.* i. 48, 6): and it was considered a case of real hardship when life had to be supported on meat alone (Caes. *B. G.* vii. 17, 3; Tac. *Ann.* xiv. 24). It is only in one case, and that when sufficient corn could not be supplied, that Caesar made a requisition on the allies for meat (*B. C.* i. 52, 4). Vegetables (*legumina*) were also occasionally used in case of an insufficient supply of corn (*ib.* iii. 47, 7); and of course salt was always given (cf. Plut. *Crass.* 19). For drink we hear of vinegar being supplied to make the draught called *posca* (Spart. *Pesc.* 10; *Hadr.* 10). Wine was often served out (Veg. iii. 3; cf. Plut. *Ant.* 41), though not by strict disciplinarians (Spart. *Pesc.* 7), and it was often obtained in great quantities when discipline was relaxed (Sall. *Jug.* 44). We know that the price of the corn doled out to the Roman soldier was deducted from his pay (which was called ὀψώνιον by Polybius, vi. 39, 12). Langen (*op. cit.* p. 13) calculates that it amounted to about 40 denarii a year. Anything in the shape of luxuries was supplied by the sutlers (*lixae*), who used to follow the army. They were so subversive of discipline that real soldierly generals used frequently to banish them from following the camp (App. *Hisp.* 85; Sall. *Jug.* 45). The army used often to be supported by quartering it in towns, and the extravagant abuses of this practice in the last century of the Republic are insisted on by Cicero (*pro Imp. Pomp.* 13, 38; cf. Plut. *Sull.* 25; Caes. *B. C.* iii. 5, 2; 31, 4). The frequent practice of Caesar in his wars was to lay a requisition for corn on tributary states, making the magistrates responsible (*B. G.* i. 16, 6; 48, 2; ii. 2, 5, &c.). Indeed, the great Roman skill in organising is shown by the way Caesar was generally so well supplied with provisions, and also by the arrangements by which the large armies of Pompeius (Caes. *B. C.* iii. 5) and Brutus and Cassius (App. *B. C.* iv. 100) were kept in supplies. These supplies were of the nature of a forcible requisition, and there is no evidence of their having been paid for (Langen, *op. cit.* p. 27). The war, as Cato used to say (Liv. xxxiv. 9, 12), should support itself. Magazines (*horrea*) were erected for the supplies to be transported to (Caes. *B. C.* iii. 42, 4). Vesontio, for example, was one (*B. G.* i. 39, 1). In the provinces of the Empire, too, there were large magazines (Tac. *Agr.* 19), whither the provincials brought the corn supply (*annona militaris*, Veg. iii. 3). One of the accounts of the supplies in the imperial magazines tells us that they consisted of vinegar, corn, suet (*larido*), barley, and straw (Capit. *Gord.* 28): another that they consisted of wine, vinegar, biscuits, suet, meat (*Cod. Theod.* vii. 4, 6), probably pork. The duty of transport (*vectura*) lay on the magistrates of the tributary towns (Caes. *B. C.* iii. 32, 2). There is only one case in the later Republic of the supply of the army being dependent on merchants (App. *B. C.* iv. 108), though contracts for military supplies are mentioned in the early history (*e.g.* Liv. xxiii. 49, 10). Foraging was also a frequent means of getting provisions. For details on this and other points connected with the provisions of the army, see Langen, *op. cit.*; for foraging especially, pp. 21–23.

Among the *principales* we have reckoned (p. 803 *a*) the clerks of the stores (*horrei*). We may add the *pecuarius* (*C. I. L.* viii. 2553) and *venatores* (*Eph. Epigr.* iv. 526), who looked after the procuring of the meat, and the *lanii*, who saw to the killing of it (Dig. 50, 6, 7 (6)). For further, cf. Arnold Langen, *Die Heeresverpflegung der Römer*, 1878–1882.

5. *Associations in the Army.*—Belonging to every cohort of the legion, under charge of the *signifer* and subordinate clerks (*librarii depositorum*), was a *follis*, into which one-half of all extraordinary grants of money, such as *donativa*, were paid by the soldiers, and probably also what additional sum each soldier might wish to deposit. There was also a *burial fund* in each legion, to which every soldier contributed a trifle (Veg. ii. 20). We also find kinds of *friendly societies* formed by certain classes of the *principales*. Such a society, as well as the building in which it met (Wilmanns in *C. I. L.* viii. 2552 b; *Comm. in honorem Mommseni*, p. 200, note 62) was called *scola* (*Eph. Epigr.* iv. p. 146). None is more interesting than in *C. I. L.* viii. 2557, the *scola* of 36 cornicines of Legion iii. Aug. at Lambaesis. Each member had to pay an entrance fee (*scamnarium*—his "sitting" apparently, not his "footing") of 720 denarii. If he is ordered across the sea, he gets 200 denarii; when he becomes a veteran he gets an *anularium* (whatever that means) of 500, if promoted 500, if degraded (*quod abominamur*) 250, if he dies his heirs or executors are to get 500—all apparently on condition that his full liability has been paid up. The *scola* of *optiones* in *C. I. L.* viii. 2554 has a quaestor.

For military armour and weapons, see Caliga, Galea, Gladius, Hasta, Lorica, Ocrea, Pilum, Scutum. For Dress, Military Ensigns, Military Engines, see the articles cited in the Index.

(Besides various articles on special points connected with the army which are scattered throughout German periodicals, especially those by Mommsen in the *Ephemeris Epigraphica* and *Hermes*, there are systematic treatises on the Roman army in Lange, *Historia mutationum rei militaris Romanorum*, 1846; Madvig, *Die Verfassung und Verwaltung des röm. Staates*, ii.

465–579; Marquardt, *Röm. Staatsverwaltung*, ii.^{2} 319–612; H. Schiller, in Iwan Müller's *Handbuch der klassischen Alterthumswissenschaft*, vol. ii. In this latter work there is a most extensive and well-nigh complete bibliography of books, monographs, and articles bearing on Roman military affairs.) [L. C. P.]

EXETASTAE (*ἐξετασταί*), special commissioners sent out by the Athenian people to investigate any matters that might claim attention. Thus we find mention of Exetastae being appointed to ascertain whether there were as many mercenaries as the generals reported. It appears to have been no uncommon plan for the commanders, who received pay for troops, to report a greater number than they possessed, in order to receive the pay themselves; in which case they were said "to draw pay for empty places in the mercenary force" (*μισθοφορεῖν ἐν τῷ ξενικῷ κεναῖς χώραις*, Aeschin. *c. Ctes.* § 146). The commissioners, however, who were sent to make inquiries into the matter, often allowed themselves to be bribed. (Aeschin. *c. Timarch.* § 113, *de F. L.* § 177; Bekk. *Anecd.* 252, 6 ff.; Boeckh, *P. E.* p. 292 = *Sthh.*^{3} i. 363; Gilbert, *Staatsalterth.* i. 250.)

Another kind of Exetastae are shown by inscriptions to have existed at Athens for a short time in the early part of the third century B.C. They were auditors of accounts, and are mentioned as checking the expenses of Psephismata (*i.e.* of recording them in the form of inscriptions) and of the erection of statues (*C. I. A.* i. 297, 298, 300; Gilbert, p. 238). In this sense of auditors of public accounts the name occurred in some other Greek states together with those of Euthyni and Logistae (Aristot. *Pol.* vi. 8 = p. 1322 b, 11; Schömann, *Antiq.* i. 146, E. T.) [W. S.] [W. W.]

EXHE'RES. [HERES.]

EXHIBENDUM, ACTIO AD, was a praetorian action *in personam* (*Inst.* iv. 6, 31), usually of a preliminary character, by which a plaintiff who was unable to pursue his right by legal process without the production of a thing could enforce such production upon any person who was able to make it ("exhibere est facere in publico potestatem, ut ei, qui agat, experiundi sit copia," Dig. 10, 4, 2); and it was immaterial whether that person was owner, or had civil or merely natural possession, of the thing in question (Dig. *ib.* 3, 15), or had fraudulently parted with the possession of it (*ib.* 5, 2); but it was essential that the plaintiff should have a pecuniary or proprietary interest in the production, or else the action would not lie: "haec actio ei creditur competere, cujus pecuniariter interest," Dig. *ib.* 13. The right to which the *actio ad exhibendum* was subsidiary might be *in personam*, as where a plaintiff wishes to bring a noxal action on a delict (such as theft) committed by a slave, but is not sure of the precise slave who committed the offence (*ib.* 3, 7): but usually it was *in rem*: e.g. a legatee has a choice under a will from several similar objects, which he wants to see before he can choose (*ib.* 3, 6): the plaintiff's property is on the land of another who will not allow him to enter and remove it (*ib.* 5, 4); or it is connected or mixed with a *res aliena* (e.g. a jewel set in the defendant's gold) and must be separated before he can bring his real action (*ib.* 6, 7).

In default of production the defendant would be condemned in damages (Gaius, iv. 51); the action was one of those known as *arbitrariae*; i.e. under the formulary system of procedure, the judge, having found that the plaintiff was entitled to production, would tell the defendant that if he did not do what was required he would have to pay such sum as the plaintiff deposed on oath the production was worth to him (*jus jurandum in litem*); but under the later law, if it was in the power of the defendant to produce the required object, he would be compelled to do so *manu militari*. It was a question whether a man could bring this action for the production of his adversary's accounts, though the opinion given by Paulus in Dig. 10, 4, 19, is not favourable to it, on the mere ground of its being for the plaintiff's advantage.

In general the *actio ad exhibendum* was (as has been said) preliminary and auxiliary to another; and from this point of view it bears some resemblance to the old Bill of Discovery in English Courts of Equity. In some cases, however, it gave by itself full satisfaction to the plaintiff: viz. where the thing was not forthcoming, and the plaintiff got damages equivalent to any advantage which the production could have given him; and where the plaintiff's property was on land of the defendant, who did not deny his right to it, but merely refused to let him in for the purpose of removal (Dig. 19, 1, 5, 2–5; 19, 5, 16).

(Dig. 10, 4; Cod. 3, 42; Einert, *Tract. de act. ad exhib.*, Lips., 1816; Buhler, *Die Actio ad exhibendum*, Leipzig, 1859; Demelius, *Exhibitionspflicht*; Von Weveld, *Zur Lehre vom gerichtlichen Augenschein*; Vangerow, *Lehrbuch der Pandekten*, vol. iii. § 707.) [J. B. M.]

EXITE'RIA or EPEXO'DIA (*ἐξιτήρια* or *ἐπεξόδια*), the names of sacrifices which were offered by generals before they set out on an expedition. (Xenoph. *Anab.* vi. 5, § 2.) The principal object of these sacrifices always was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter. According to Hesychius, *ἐξιτήρια* was also the name of the day on which the annual magistrates laid down their offices. [L. S.]

EXO'DIA (*ἐξόδια*, from *ἐξ* and *ὁδός*) were old-fashioned and laughable interludes in verses, inserted by the Romans in other plays, but chiefly in the Atellanae (Liv. vii. 2). It is difficult to ascertain the real character of the exodia; but from the words of Livy we must infer that, although distinct from the Atellanae, they were closely connected with them, and never performed alone. Hence Juvenal calls them *exodium Atellanae* (*Sat.* vi. 71), and Suetonius (*Tib.* 45) *exodium Atellanicum*. They were, like the Atellanae themselves, played by young and well-born Romans, and not by the histriones. Since the time of Jos. Scaliger and Casaubon, the exodia have almost generally been considered as short comedies or farces which were performed after the Atellanae; and this opinion is founded upon the vague and incorrect statement of the Scholiast on Juvenal (*Sat.* iii. 174). But the words of Livy, *exodia conserta fabellis*, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Atellanae, which would suggest a false idea of the Atellanae themselves. But as several Atellanae were performed on the same day, it is probable that the exodia were played between them. This supposition is also supported by the etymology of the word itself, which signifies something ἐξ ὁδοῦ, *extra viam*, or something not belonging to the main subject, and thus is synonymous with ἐπεισόδιον. The play, as well as its name of exodium, seems to have been introduced among the Romans from Italian Greece; but after its introduction it appears to have become very popular among the Romans, and continued to be played down to a very late period. (Sueton. *Domit.* 10.) Teuffel (*Röm. Lit.*, § 6, n. 4) considers the exodium to have been a comic play performed after any serious piece, and at first to have had no special connexion with the Atellanae. [COMOEDIA, p. 522 *b*.] [L. S.] [A. S. W.]

EXO'MIS (ἐξωμίς), originally a tunic fastened over the left shoulder only (χιτὼν ἑτερομάσχαλος, Schol. Aristoph. *Vesp.* 444; Phot. and Hesych. *s. v.* ἑτερομ.; Heliod. *Aethiop.* iii. 1; Paus. v. 16, § 2; cf. Plaut. *Mil.* iv. 4, 44), leaving the right shoulder and part of the breast free, and thus distinguished from the ἀμφιμάσχαλος, which was fastened over both. It was especially characteristic of workmen and slaves (Phot. *s. v.*; Schol. Aristoph. *Equit.* 879), Laconizers and Cynics (Ael. *V. H.* ix. 3, 4; Sext. Emp. i. 153; Suid.); while the ἀμφιμάσχαλος was used by the better classes. It was also the dress of old men in comic plays (Pollux, iv. 118), and as such worn by the chorus in the *Lysistrata* (662). Hephaistos as a god of labour (*v.* bronze in Brit. Museum, fig. p. 380, Baumeister's *Denkmäler*; Müller, *Archäol. d. Kunst*, § 366, 6) was commonly represented clothed in the exomis, as was also Odysseus. After Aristophanes' time, short sleeves (χειρῖδες) were introduced in the wide holes of the χιτών, like a blouse, and the terms ἀμφιμ. and ἑτερομ. (ἐξωμίς) were equally applied to the two forms so produced (of one sleeve, Xen. *Mem.* ii. 7, 5; *v.* Rich, p. 659). On the other hand, the long-sleeved tunic, χιτὼν χειριδωτός, was originally peculiar to barbarians, and accordingly appears in representations of Orpheus, the Indian Bacchus, Persians, Scythians, and the paedagogus. Later grammarians starting from the sleeved χ. wrongly interpreted ἐξωμίς "sleeveless" (Aulus Gellius, vii. 12: "citra umerum desinentes"). The exomis, however, was not only a chiton [TUNICA], but also a ἱμάτιον or περίβλημα [PALLIUM]. According to Hesychius (*s. v.* Ἐξωμίς) and Aelius Dionysius (*ap.* Eustath. *ad Il.* xviii. 595), it served at the same time both the purposes of a chiton (διὰ τὸ ζώννυσθαι) and a himation (ὅτι τὸ ἕτερον μέρος ἐβάλλετο); but Pollux (vii. 48) speaks of two different kinds of exomis, one of which was a περίβλημα and the other a χιτὼν ἑτερομάσχαλος. And his account is confirmed by existing works of art. In the *Museo Pio-Clementino* (vol. iv., pl. 11) is a Hephaistos wearing an exomis, which is a himation thrown round the body in the way in which this garment was always worn, and which clothes the body like an exomis when it is girded round the waist. (Cf. Becker-Göll, *Charikles*, iii. p. 112, &c.; Guhl and Koner, ed. 5, p. 206; Hermann-Blümner, *Privatalterth.* p. 176; and the figure in Weiss, *Kostümkunde.*) [W. S.] [J. M.]

Exomis. (Bronze in British Museum.)

EXOMO'SIA (ἐξωμοσία). Any Athenian citizen (probably with the exception of near relatives of the defendant, Isae. *Menecl.* § 33), when called upon to appear as a witness in a court of justice, was obliged by law to obey the summons, unless he could establish by oath that he was unacquainted with the case in question (Pollux, viii. 55, εἰ φάσκοιεν μὴ ἐπίστασθαι ἐφ' ἃ ἐκαλοῦντο: ἢ μαρτυρεῖν ἢ ἐξόμνυσθαι, Dem. *de Fals. Leg.* p. 396, § 176, etc.; *Att. Process*, ed. Lipsius, p. 881, n. 323). This oath was called ἐξωμοσία. Against those who refused to obey the summons without being able to take this oath, a δίκη βλάβης, or, if they had promised to give evidence, a δίκη λιπομαρτυρίου, might be brought by the parties who thought themselves injured by their having withheld their evidence, the fine going to the plaintiffs; or they were specially summoned (κλητεύειν, [Dem.] *c. Neaer.* p. 1354, § 28, ἀναγκάζω μαρτυρεῖν ἢ ἐξόμνυσθαι κατὰ τὸν νόμον, ἢ κλητεύσω αὐτόν, etc.) and threatened with the imposition of a fine of 1000 drachmas, to be paid to the state (Aeschin. *Tim.* § 46; *Att. Process*, ed. Lipsius, p. 494 ff.). Hudtwalcker (*Diaet.* p. 97) and Lipsius (*Att. Process*, p. 910, n. 409) take ἐξόμνυσθαι δίκας in Theophr. *Char.* 6 (Jebb 16) in the sense of ὑπόμνυσθαι, Jebb (p. 230) in that of "making oath (as witness) that he knows nothing of the matter."

2. As a rule, candidates for an office (ἀρχὴ in its proper sense), whether they were to be chosen by lot (ἀρχαὶ κληρωταί) or by show of hands (ἀ. χειροτονηταί), gave in their names to the archons (Isocr. *de Permut.* § 150; [Lys.] *c. Andoc.* § 4; Lys. *c. Phil.* § 33). Suid. *s. v.* ληξιαρχικόν (and Schol. Aeschin. *c. Tim.* § 18) says, καὶ ἐκ ἐκείνων τῶν γραμματείων (sc. ληξιαρχικῶν) κληροῦσι τὰς ἀρχάς, wrongly connecting the name ληξιαρχικὸν with λαχεῖν τὰς ἀρχάς (see Boeckh, *Kl. Schriften*, iv. p. 154, n. 1); but when Plutarch (*Phoc.* 8) says of Phocion that he served more frequently as στρατηγὸς than any one in his time, or before his time had done οὐ παραγγέλλων οὐδὲ μετιών, it is evident that this was not invariably the rule (cf. also Xen. *Hell.* i. 4, 10, οἱ Ἀθηναῖοι στρατηγοὺς εἵλοντο Ἀλκιβιάδην μὲν φεύγοντα, etc.). A person chosen in such a way, or appointed to

serve as ambassador or in any other public capacity, was at liberty to decline the office, if he could take an oath, either himself or by proxy (δι' ἑτέρου, Pollux, viii. 55; cf. Dem. *de Fals. Leg.* p. 379, § 124, and Aeschin. *F. L.* § 95, whence we learn that an oath of this kind had to be made before the assembly), that the state of his health or other circumstances rendered it impossible for him to fulfil the duties connected with it (ἐξόμνυσθαι τὴν πρεσβείαν, τὰς ἀρχάς; cf. Arist. *Pol.* vi. 10 S. = iv. 13 Bk. περὶ δὲ τὰς ἀρχὰς τὸ τοῖς μὲν ἔχουσι τίμημα μὴ ἐξεῖναι ἐξόμνυσθαι, τοῖς δ' ἀπόροις ἐξεῖναι: the arrogant man in Theophr. *Char.* 24 (Jebb 4) assigns the vague reason that he is "too busy"). This oath was likewise called ἐξωμοσία (Harp. *s. v.*; Schol. Aristoph. *Eccl.* 1018, n.; Schol. Aeschin. *F. L.* § 97). Hudtwalcker, *Diaet.* p. 97, calls it wrongly ὑπωμοσία. (Schömann, *Assemblies*, p. 329; Hermann, *Gr. Staatsalt.* §§ 123, 148.)

3. Ἐξωμοσία is also used according to Suidas, *s. v.* (= Schol. Aristoph. *Eccl.* 1018), in the sense of objections raised by the defendant to the admissibility of the plaintiff's action (μὴ δεῖν εἰσάγεσθαι δίκην, εἶτα καὶ τὴν αἰτίαν δι' ἣν οὐκ εἰσαγώγιμος ἡ δίκη, etc.), the same proceeding which is called ἀντιγραφὴ in Lys. *c. Pancl.* §§ 5, 10, and παραγραφὴ since the law of Archinus, passed soon after the expulsion of the Thirty Tyrants (Isocr. *c. Callim.* § 2). Suidas' explanation probably refers to Aristoph. *Eccl.* 1026, and there, according to Platner (*Process u. Klagen*, i. p. 162 n.), ἐξωμοσία is used in the sense of declining an office (2). (*Att. Process*, ed. Lipsius, p. 853 ff.) [L. S.] [H. H.]

EXOSTRA (ἐξώστρα) was one of the many kinds of machines used in the theatres of the ancients, and its introduction was ascribed to Aeschylus. In order to represent a scene in an interior, a movable chamber corresponding to the size of any of the three doors was devised, which was wheeled out (ἐκκύκλημα) or pushed out (ἐξώστρα) (Pollux, iv. 128; ἱερὸν ὠθεῖται, Schol. *ad* Aristoph. *Thesm.* 276; ἐκκυκλεῖται ἐπὶ τὸ ἔξω τὸ Θεσμοφόριον, Schol. Ravenn. *ibid.*; Schol. *ad* Aristoph. *Acharn.* 375). Donaldson thinks the ἐξώστρα was used to exhibit the interior of an upper chamber: this would find support in the late meaning of the word, *balcony*. A special use of both machines was to exhibit to the eyes of the spectators the results or consequences of such acts, as murder or suicide, as could not be permitted to take place in the proscenium, and were therefore described as having occurred behind the scena.

An interesting illustration of the meaning of the word is to be found in Cicero (*de Prov. Cons.* 6, § 14), who, speaking of Piso, says he formerly concealed his vices ("post siparium heluabatur"), but now practised them openly ("jam in exostra heluatur"). (Donaldson, *Theatre of the Greeks*, ed. 7, p. 238 ff.; C. O. Müller, *Eumen.* p. 103, *Kleine Schriften*, i. p. 524; Alb. Müller, *Bühnenalterth.* pp. 142–148, where there is a full discussion of the passages where the contrivance was used.) It must be admitted, on the whole, that the distinction between ἐξώστρα and ἐκκύκλημα is not very clearly made out (see especially A. Müller, p. 148, n. 5).

The name *exostra* was also applied to a peculiar kind of bridge, which was thrown from a tower of the besiegers upon the walls of a besieged town, and across which the assailants marched to attack those of the besieged who were stationed on the ramparts to defend the town (Veget. *de Re Milit.* iv. 21; Polyb. ii. 6, 8). This was a very old device, frequently represented in Assyrian bas-reliefs. [L. S.] [J. M.]

EXOU'LES DIKE' (ἐξούλης δίκη). Ἐξούλη is from ἐξίλλειν, which Harpocration (*s. v.*) explains ἐξωθεῖν καὶ ἐκβάλλειν: cf. Dem. *c. Pantaen.* p. 976, § 35; Lys. *c. Theomn.* i. § 17 (ἀπίλλειν). Meier (*Att. Process*, ed. Lipsius, p. 665 f.) distinguishes two kinds of δίκη ἐξούλης, one (ἣν ἐπάγουσιν οἱ φάσκοντες ἐξείργεσθαι τῶν ἰδίων κατὰ τῶν ἐξειργόντων, Harpocr. *s. v.*) answering roughly to the *interdictum unde vi* of Roman law; the other (μόνων τῶν ἐκ καταδίκης ὀφειλόντων, Caecilius in Harpocr. *s. v.*), later in point of time, corresponding to the Roman *actio judicati*. A δίκη ἐξούλης of the former class was laid before the τετταράκοντα, and was τιμητός; one of the latter before the magistrate who had heard the case from which it arose (except probably when a διαιτητὴς had given an award, Dem. *c. Mid.* p. 540, § 81: cf. Hudtwalcker, *Diaet.* p. 152), and was τιμητὸς or ἀτίμητος according to the nature of the *judicatum*. G. A. Leist (*d. Att. Eigentumsstreit*, p. 45 f.), on the other hand, defines the δίκη ἐξούλης as an action for ejectment resorted to by the plaintiff, when his title to some property was so much better than the defendant's as to be indisputable (ἀναμφισβήτητος). Thus a son or other male descendant (also a son adopted during the testator's lifetime, Dem. *c. Leoch.* p. 1086, § 19) might enter [EMBATEIA], and become possessed of the estate immediately after the owner's death (τοῖς μὲν γάρ, ὅτι γόνῳ γεγόνασιν, οὐδεὶς ἂν δήπου ἀμφισβητήσειε περὶ τῶν πατρῴων, Isae. *Pyrrh.* § 61); such an heir made a formal entry upon the land, and thereby became *seised* or possessed of it; then the adverse claimant came and turned him off (πορευομένων ἡμῶν εἰς τὰ κτήματα, ἐξῆγεν ὁ Λ. οὑτοσὶ φάσκων αὑτοῦ εἶναι, Dem. *c. Leoch.* p. 1090, § 32). This proceeding took place quietly (yet see Dem. *c. Onet.* i. p. 864, § 4) and in the presence of witnesses (Isae. *Pyrrh.* § 22); then the heir might bring against him an action for ejectment. Such an action could also be maintained by a creditor who was prevented from taking possession of some mortgaged property, the ὅροι set up on mortgaged property establishing clearly the rights of the mortgagee (Harpocr. *s. v.*: cf. Dittenberger, *S. I. G.* No. 344, l. 75), or according to Pollux (viii. 59) by a person who had bought property from the state against anyone who disturbed him in the enjoyment of it (cf. Dem. *c. Pantaen.* p. 972, § 19; Dittenberger, *ibid.* No. 76 = *C. I. G.* No. 2691 d, καὶ ἐπώλησαν τὰ κτήματα αὐτῶν δημοσίηι, ἐκτῆσθαι κυρίως τοῖς πριαμένοις), for no action would lie against the purchaser of property sold by the treasury: the fact of the state having ordered the sale would constitute a "parliamentary title, so to speak" (Wayte on Dem. *c. Timocr.* p. 717, § 54). The title to property might also have been established by the decision of a court or the award of an arbitrator (*Etym. M.* οἱ δίκην νικήσαντες ὥστε λαβεῖν χωρίον ἢ οἰκίαν, ἔπειτα ἐμβατεύειν κωλυόμενοι, etc.). To these cases Leist adds some others in which the plaintiff's right is not so clearly established; *e.g.* the cause of Demosthenes against Onetor. Demosthenes having recovered a judgment against Aphobus, proceeded to take his lands in execution. Onetor claimed them as mortgagee, and turned him off; whereupon Demosthenes, contending that the mortgage was collusive and fraudulent, brought an ἐξούλης δίκη. In the instance mentioned in Isae. *Dicaeog.* § 22, Dicaeogenes had covenanted to give the plaintiffs two-thirds of the estate (ἀναμφισβήτητα, § 18 = καθαρὰ καὶ ἀνέπαφα, *argum.*), but he sold these two-thirds to other persons; the plaintiffs incurred the costs (to the amount of 40 minas) of an unsuccessful attempt to eject Micion, one of the purchasers, Dicaeogenes guaranteeing his ownership. The case in Demosth. *c. Zenoth.* p. 882 f. is most complicated. Demon had entrusted a sum of money to Protus, who engaged to purchase corn in Sicily and bring it to Athens. Upon the ship's arrival Zenothemis claimed the cargo, saying that it had been purchased by the captain Hegestratus (drowned at sea), and that he had lent money to Hegestratus upon it. Protus and his partner Phertatus tried to remove him (ἐξάγειν), but he declared that he would not be put out of possession by anyone but Demon (yet from § 21 it would seem that Zenothemis brought an action against Protus and won it); and when Demon removed him at last, he subjected himself to the ἐξούλης δίκη which Zenothemis brought. (Cf. on this case A. Philippi, *Jahrb. f. class. Phil.* 1867, p. 577 f.; and Thalheim, *Hermes*, 1888, p. 202 f.) The consequence to the defendant, if he failed in the action of ejectment, was, that (besides his liabilities to the plaintiff) he was, as a public offender, condemned to pay to the treasury a sum equal to the damages, or to the value of the property recovered in the first action (προστιμᾶν, Dem. *c. Mid.* p. 528, § 44). While this remained unpaid (and we may presume it could not be paid without also satisfying the party), he became, as a state debtor, subject to the disabilities of ἀτιμία (Andoc. *de Myst.* § 73). (*Att. Process*, ed. Lipsius, p. 970.)

These proceedings by entry, ouster, etc., were a relic of ancient times, when, before writs and pleadings and other regular processes were invented, parties adopted a ruder method and took the law into their own hands. There was then an actual ouster, accompanied often with violence and breach of the peace, for which the person in the wrong was not only responsible to the party injured, but was also punishable as a public offender. Afterwards, in the course of civilisation, violent remedies became useless and were discontinued; yet the ceremony of ejecting was still kept up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words "ex jure te manum consertum voco," to go with him to the land in dispute, and (in the presence of the praetor and others) turn him out by force. Afterwards this was changed into the symbolical act of breaking a clod of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased. We may observe also, that the English action of ejectment in this respect resembles the Athenian, that although an *entry* by the plaintiff and an *ouster* of him by the defendant are supposed to have taken place, and are considered necessary to support the action, yet both *entry* and *ouster* are mere fictions of law. In Attic law it was primarily an action for ejectment out of real property, and only by a legal fiction transferred to other property; cf. Harpocration's general statement: καὶ ἐπεργασίας δέ τις εἰ εἴργοιτο (cf. Dem. *c. Pantaen.* p. 976, § 35), δίδωσιν ὁ νόμος δικάζεσθαι πρὸς τὸν εἴργοντα ἐξούλης. καὶ περὶ ἀνδραπόδου δὲ καὶ παντὸς οὗ φησί τις αὑτῷ μετεῖναι (Palmer on Plaut. *Rud.* 847, in *Journ. of Phil.* xvi. p. 38). [C. R. K.] [H. H.]

EXSE'QUIAE. [FUNUS.]

EXSI'LIUM (φυγή), banishment. 1. GREEK. In the heroic ages the general term φυγή (flight) was for the most part applied in the case of those who, in order to avoid some punishment or danger, removed from their own country to another, chiefly when homicide had been committed, whether with or without malice aforethought. Thus Patroclus appears as a fugitive for life, in consequence of manslaughter committed by him when a boy (οὐκ ἐθέλων, *Il.* xxiii. 88). In other instances mentioned in Homer (*Il.* ii. 665, xiii. 695, xv. 335, xvi. 572; *Od.* xv. 224, xxiii. 119) we do not know whether the homicide was accidental or not; the slaying of Molycrus by Hyettus (Hesiod. *fr.* 148=Paus. ix. 36, 6) would, according to later views, have been δίκαιος φόνος. The duty of taking vengeance devolved upon the relatives of the slain man (*Od.* xxiv. 433 ff.), the state holding aloof; the penalty of exile was sometimes remitted, and the homicide allowed to remain in his country on payment of a ποινή, the price of blood, or *weregeld* (Tac. *Germ.* 21),* which was made to the relatives or nearest connexions of the slain (*Il.* ix. 630). In the trial scene in *Il.* xviii. 497 ff., almost every point of importance has been variously explained by scholars. First, as to the exact nature of the point at issue, all agree that it is about the blood-price of a man who has been slain; but whilst Sir H. Maine (*Anc. Law*, p. 377; cf. Gladstone, *Homeric Studies*, iii. p. 126 f.) explains l. 499 f. thus, "One person asserts that he has paid the composition, the other that he has never received it," Hofmeister (*Z. f. vergl. Rechtswissensch.* ii. p. 433 ff.; cf. Leist, *Graeco-Ital. Rechtsgesch.* p. 329; W. Leaf, in *Journ. of Hell. Stud.* x. p. 123 f.) renders it, "One vowed he would give anything, the other refused to accept anything," the question to be decided being whether the relation must or must not refuse the offered composition, *i.e.* whether it was a φόνος ἑκούσιος or ἀκούσιος. Secondly, in the two talents of gold which lie in the midst, P. M. Laurence (*Journ. of Phil.* viii. p. 125 f.) sees the ποινὴ ἀνδρὸς ἀποφθιμένου; but surely two talents is too small a sum to represent the price of a man slain (W. Ridgway, *Journ. of Phil.* x. p. 30 f. and *Journ. of Hell. Stud.* x. p. 136). Schömann (on Isae. p. 24 and *Antiq. j. p. Gr.* p. 73, n. 10) looks upon them as *quasi quaedam* παρακαταβολή, since δίκην εἰπεῖν is used of litigants only; however, the

---

* Cf. Grimm, *Deutsche Rechtsalterth.* p. 661; Thorpe, *Anc. Laws and Inst. of England*, i. p. 187 f.; Roth (*Zeitschr. d. D. Morgenl. Gesellsch.* 1887, p. 673 ff.), *Wergeld im Veda.*

fact that *δίκην εἰπεῖν*, or rather *λέγειν*, occurs in this sense in Attic, decides nothing for Homer, and a phrase like *δίκας σκολιῶς ἐνέποντες* used of the *βασιλεῖς* in Hesiod. *Op. et D.* 258 supports Sir H. Maine's explanation, viz. that the two talents were to be given to him who should explain the grounds of the decision most to the satisfaction of the audience. According to W. Leaf, who distinguishes two scenes, first the dispute in the market-place, when the litigants wish to refer the matter to an *ἵστωρ*, secondly the scene "in court," when the *γέροντες* are the judges, the *ἵστωρ* as president of the council had to assign them to that councillor whose advice he judges to have contributed most to the final decision.

For later terms we must distinguish between voluntary exile and exile appointed as a punishment by law for particular offences. To speak first of the latter: here we must distinguish again between exile *for a specified period* and exile *for life*.

A person convicted of accidental homicide had to leave the country within a specified time by a certain road and to remain in exile until the relations of the slain man pardoned him (Dem. *c. Aristocr.* p. 644, § 72; *c. Mid.* p. 528, § 43, and *lex* in [Dem.] *c. Macart.* p. 1069, § 57 = *C. I. A.* i. No. 61; *αἴδεσις*); his possessions were *ἐπίτιμα*, *i.e.* not confiscated (Dem. *c. Aristocr.* p. 634, § 45; cf. Theophr. *π. νόμων*, *fr.* 14, in *Journ. of Phil.* vi. p. 3). The banishment in this case not being for life, it is reasonable to suppose that if the relatives of the slain man refused to make a reconciliation, the law stepped in and exacted such. According to some, a year was the term of exile (Hesych. *s. v. ἀπενιαυτισμός*, etc.; cf. Plat. *Legg.* p. 865 E), but Philippi (*Areopag u. Eph.* p. 117 ff.) brings forward strong reasons against this opinion, and suggests a longer term than one year (cf. Antiph. *Tetral.* ii. *β*, § 10). It sometimes happened that a fugitive for accidental homicide was charged with murder committed by him before he went into exile; in that case he pleaded on board ship, before a court which sat *ἐν Φρεαττοῖ*, in the Peiraeus (Dem. *c. Aristocr.* p. 645, § 77, and Pausan. i. 28, 12; cf. Harp. *s. v.*).

Banishment for life with confiscation was inflicted on persons who rooted up the sacred olives at Athens (Lys. *pro sacr. olea exsc.* § 41), and on those convicted of *τραῦμα ἐκ προνοίας*, or wounding with intent to kill, even though death might not ensue (Lys. *c. Simon.* § 38, *de vuln. ex industria*, §§ 13, 18; Dem. *c. Boeot.* ii. p. 1018, § 32 [TRAUMATOS EK PRONOIAS GRAPHE]; according to Philippi, p. 113, not banishment for life; cf. Plat. *Legg.* ix. p. 877 B, where it is banishment for life without confiscation). The murder of a non-citizen was punished with banishment, not with death (*Lex. Seguer.* 194, 11; cf. the phrase in decrees in honour of state benefactors; in case an attempt should be made on their lives, the redress shall be the same, *καθάπερ ἂν τὸν Ἀθηναῖον ἀποκτείνῃ*, Dem. *c. Aristocr.* p. 650, § 89, and *C. I. A.* ii. No. 115; *Att. Process*, ed. Lipsius, p. 377 ff.). By the laws of Solon every one was liable to banishment who remained neutral during political contentions (Plut. *Sol.* 20; Gell. ii. 12); this was no longer in force in the days of Lysias (*c. Philon.* § 27): cf. Grote, iii. p. 144, on the law of Ostracism replacing Solon's law, and Mahaffy (*Hermath.* vii. p. 87).

Banishment might also be proposed as penalty by the accuser in a case of *ἀσέβεια*, Plat. *Apol.* p. 373 C (cf. the punishment of the Delians, Boeckh, *Sthh.*[3] ii. p. 92 f., and of Protagoras, Diog. Laërt. ix. 152; Cic. *de Nat. Deor.* i. 63), or a decree might direct the exile of a person: see *C. I. A.* ii. No. 17, *ζημιούντων δὲ αὐτὸν θανάτῳ ἢ φυγῇ οὗπερ Ἀθηναῖοι καὶ οἱ σύμμαχοι κρατοῦσιν* (cf. *C. I. G.* No. 2008); thus on the motion of Themistocles (Plut. *Them.* 6) Arthmius of Zeleia was banished from Athens (Dem. *in Phil.* iii. p. 121, § 42; *de Fals. Leg.* p. 428, § 271; Aeschin. *c. Ctes.* § 258; Dinarch. *c. Dem.* §§ 24, 25). Cf. Plat. *Gorg.* p. 468 B ff. and Schol. Aristoph. *Ran.* 546; Arrian, *Exp. Alex.* i. 10, 6.

In the majority of cases, however, when we hear of exiles (here we do not take into account those banished by political opponents), we must not refer the banishment to a special conviction, but must rather think of voluntary exile, men preferring to leave the country to running the risk of standing their trial. Wilful murder was punished with death and confiscation of property; but the accused could avoid it by leaving the country after the first day of the trial (except according to Pollux, viii. 99, 117, in the case of parricide), nor had the prosecutor any right to prevent him; the murderer was then condemned to perpetual exile and his property confiscated. Hypereides (*pro Eux.* col. 18) gives five instances of eisangelia, and winds up with the remark, "None of them ventured to take his trial, *ἀλλ' αὐτοὶ ᾤχοντο φεύγοντες ἐκ τῆς πόλεως*, and altogether it was rare to see any one of those proceeded against by eisangelia appear in court" (cf. *Journ. of Phil.* vii. p. 108). If such exiles ventured to return, they were immediately put to death (Dem. *c. Aristocr.* p. 630, § 31; [Lys.] *c. Andoc.* § 15; Lyc. *c. Leocr.* § 93); and whoever harboured or entertained any one who had fled from his country to avoid capital punishment, was liable to the same penalties as the fugitive himself (Dem. *c. Polycl.* p. 1222, § 49). Such exiles were not allowed to return home even upon a general amnesty. Thus Solon's law excluded from his comprehensive measure of amnesty those in exile for charges of murder or of subversion of the public liberty (Plut. *Sol.* 19, *ἐπὶ φόνῳ ἢ σφαγαῖσιν ἢ ἐπὶ τυραννίδι*: cf. Dobree, *Adv.* i. p. 181, *φόνος* a private murder, *σφαγή* a massacre, sc. *in motu civili*); and from the general amnesty proposed by Patrocleides after the defeat of Aegospotami, those were excepted who had fled from Athens without standing their trial (*ὁπόσα* [sc. *ὀνόματα*] *ἐν στήλαις γέγραπται τῶν μὴ ἐνθάδε μεινάντων*), and also the classes of exiles which were exempted by Solon's law (Andoc. *de Myst.* §§ 77, 78; Droysen, *de Demoph.*, *Patrocl.*, *Tisam. populisc.*; probably the same restrictions were made when during the Persian wars an act of amnesty was passed, see Jebb, *Att. Or.* i. p. 125 f.). Indeed, against the exiles, a large proportion of whom were at Deceleia assisting the Lacedaemonians in their warfare against Athens, a severe decree was passed by the Athenian assembly (Lyc. *c. Leocr.* § 121); they returned, however, when Athens had to surrender to Lysander (Andoc. *de Myst.* § 80; Xen.

Hell. ii. 2, 20; Plut. *Lysand.* 14; Lys. *c. Eratosth.* § 77). In the general restoration of exiles throughout the Greek cities proclaimed by order of Alexander the Great, and afterwards by Polysperchon, exception is made of men exiled for sacrilege or homicide (Diod. xvii. 109, xviii. 8). There are instances of individuals being allowed to return from exile: Alcibiades and others (Thuc. viii. 97, etc.), Demosthenes (on the proposal of Damon, [Plut.] *Vitt. X. Oratt.* p. 846 D; Plut. *Dem.* 27, etc.). On the decree of Oenobius, by which Thucydides is said to have been recalled (Paus. i. 23, 9; cf. Plin. *H. N.* vii. §§ 30, 110), and on the amnesty after the Sicilian expedition (*πλὴν τῶν Πεισιστρατιδῶν*, Marcell. *Vit. Thucyd.* 32 f.), see Gilbert, *Philol.* 1879, p. 251 ff., and Stahl, *Rhein. M.* 1884, p. 458 ff. To those who received permission to return to Athens, the state restored the value of the confiscated property (Plut. *Alc.* 33; Diod. xiii. 69, and Isocr. *de Big.* § 46; cf. also *Ep.* 8, 3; the four men whom Andocides had named, in addition to the list of Teucrus, as concerned in the mutilation of the Hermae, fled (*de Myst.* § 68), but at the time he delivered his speech on the Mysteries (§ 53) he could refer to them as men *οἳ . . . κατεληλύθασι καὶ ἔχουσι τὰ σφέτερα αὐτῶν*: cf. *C. I. A.* i. Nos. 274–7, and Suppl. p. 35, on the sale of their property). In Phlius those who had bought such property had to give it up on receiving back from the treasury the price they had paid for it (Xen. *Hell.* v. 2, 10); at Athens their title would have been absolute (Dem. *c. Timocr.* p. 717, § 54; *c. Pantaen.* p. 972, § 19).

Under *φυγή*, or banishment, as a general term, is comprehended *Ostracism* (*ὀστρακισμός*). The difference between the two is stated by the Schol. Aristoph. *Vesp.* 941 (cf. Suid. *s. v.*) to be: "*φυγὴ* (*i.e. ἀειφυγία*, banishment for life) differs from ostracism, inasmuch as those who are banished lose their property by confiscation, whereas the ostracised do not; the former also have no fixed place of abode, no time of return assigned, but the latter have." The fixed place of abode is only mentioned here, Philochorus in *Lex. Cant.* s. v. simply stating, *μὴ ἐπιβαίνοντα ἐντὸς Γεραίστου τοῦ Εὐβοίας ἀκρωτηρίου*: see also Thuc. i. 135, about the movements of Themistocles. Of the fragments of Arist. *Polit. Athen.* (Bergk, *Rhein. M.* 1881, pp. 87–115), one relates to ostracism; according to Bergk's reading, it confirms the tradition (Aelian, *V. H.* 13, 24) that Cleisthenes himself fell a victim (though not the first) to his institution. It was introduced after the expulsion of the Pisistratidae, "to drive their friends out of the country." Its nature and objects are thus explained by Arist. *Pol.* iii. 8 (13 Bk.), 2 S. (see, however, § 6 c about its later working): "Democratical states," he observes, "used to ostracise, and remove from the city for a definite time, those who appeared to be pre-eminent above their fellow-citizens, by reason of their wealth, the number of their friends, or any other means of influence." Grote (iv. p. 78 ff.) fully discusses the purpose and working of the ostracism; see especially the note on p. 85, "The practical working of the ostracism presents it as a struggle between two contending leaders, accompanied with chance of banishment to both," and v. pp. 221, 282, etc.: cf. Lugebil, *Jahrb. f. class. Philol.*, Suppl. iv. p. 135 ff.

The manner of effecting ostracism was as follows: In the *κυρία ἐκκλησία* of the sixth prytany of the year, the assembly determined whether such a step was necessary (*Lex. Cant.* s. v. *κυρία ἐκκλησία*); if they decided in the affirmative, a day was named in the eighth prytany for the voting (*ib.* s. v. *ὀστρακισμός*: cf. Schol. Aristoph. *Eq.* 851, and fragm. *Lex. Demosth. Aristocr.*, Blass, *Hermes*, 1882, p. 152); these two important assemblies were fixed at this time on account of the larger attendance at the popular assembly consequent upon the celebration of the Lenaea and of the Dionysia (Gilbert, *Beitr. z. innern Gesch. Ath.* p. 229 ff.). On the appointed day the agora was railed round, with ten entrances left for the citizens of each tribe: by these the tribesmen entered and deposited in urns each his *ὄστρακον* or potsherd (hence ostracism was called *κεραμικὴ μάστιξ*, Meineke, *fragm. Com.* iv. p. 638), with the name of the person written on it whom he wished to be ostracised (*κάτω στρέφοντες τὴν ἐπιγραφήν*). The nine archons and the *βουλὴ* superintended the proceedings. If a total of 6,000 votes had not been recorded, the ceremony ended in nothing; "for no law could be made against any single citizen unless it seemed good to 6,000 citizens voting secretly" (Andoc. *de Myst.* § 87; Dem. *c. Timocr.* p. 719, § 59; [Dem.] *c. Steph.* ii. p. 1132, § 12; and Boeckh, *Sthh.*^{3} i. p. 294). Provided this total was reached, he who had the majority of votes had to leave Athens within ten days. There is a difference of opinion among the authorities, as well as among the commentators, whether the minimum of 6,000 applies to the votes given in all, or to the votes given against any one name. Grote favours the latter opinion (iv. p. 84 n.; cf. Schömann, *Verfassungsgesch. Ath.* p. 81 n.), but the former (Plut. *Arist.* 7) seems the more probable (Lugebil, p. 144 ff.; Fraenkel, *Att. Geschworenger.* p. 92 n.; cf. Thuc. viii. 72). The period of banishment was ten years ([Andoc.] *c. Alcib.* § 2); according to *Lex. Cant.* it was at a later period reduced to five years, but Hyperbolus, the last who was ostracised, had lived six years in exile when he was murdered (Gilbert. p. 231 n.). In some instances persons ostracised were recalled before the ten years had expired: thus Themistocles is said to have himself proposed the restoration of his rival Aristeides from ostracism "a little before the battle of Salamis" (but see Herod. viii. 79, and Corn. Nep. *Arist.* 1), and Pericles did the same with regard to Cimon (Plut. *Per.* 10; *Cim.* 17), and "in both cases the suspension of enmity between the two leaders was partly the sign, partly also the auxiliary cause, of reconciliation and renewed fraternity among the general body of citizens" (Grote, v. p. 185).

Some of the most distinguished men at Athens were removed by ostracism; besides those mentioned before: Hipparchus, the son of Charmus, a relative of the Pisistratidae (Harpocr.; Androtion, *fr.* 5, Didot; Plut. *Nic.* 11): Thucydides, the son of Melesias (Plut. *Per.* 14 etc.); Alcibiades and Megacles, the paternal and maternal grandfathers of the distinguished Alcibiades ([Andoc.] *c. Alcib.* § 34; Lys. *c. Alcib.* i. § 39); Xanthippus, the father of Pericles (Heracl. Pont. c. 1); Callias, the son of Didymus ([Andoc.] *c. Alcib.* § 32); Damon, the preceptor of Pericles in poetry and music (Plut. *Per.* 4); Meno (Hesych. *s. v.* Μενωνίδαι), etc. The last person against whom it was used was Hyperbolus, the lamp-maker, son of Chremes; our information on that point is scanty (for the date cf. Beloch, *d. att. Politik seit Pericl.* p. 339 f.). Thucydides (viii. 73) mentions Hyperbolus only once —in 411 B.C., when he terms him "one Hyperbolus, a person of bad character (*μοχθηρός*), who had been ostracised not from fear of dangerous excess of dignity and power, but through his wickedness and his being felt as a disgrace to the city" (cf. Androt. *fr.* 48, Didot, *διὰ φαυλότητα*, and Plato quoted by Plut. *Nic.* 11, *οὐ γὰρ τοιούτων εἵνεκ' ὄστραχ' ηὑρέθη*); hence, it is said, ostracism was considered degraded and accordingly discontinued. (Philochorus in *Lex. Cant.* s. v. *μετὰ τοῦτον* [sc. Ὑπέρβολον] *δὲ κατελύθη τὸ ἔθος*: cf. Theoph. *π. ν. fr.* 26, *Journ. of Phil.* vi. pp. 6, 23.) Hyperbolus cannot possibly have been so insignificant a person as Thucydides and the comic authors try to make him out: he acted as *ἱερομνήμων* (Aristoph. *Nub.* 623), was *βουλευτής* (Meineke, ii. p. 670), *στρατηγός* (Aristoph. *Pac.* 1319; Schol. *Acharn.* 846), and leader of the democratic party after Cleon's death (Aristoph. *Pac.* 681; cf. *Ran.* 570); and it is especially to be noted that he was slain by the oligarchical conspirators who were aiming to overthrow the democracy at Athens. Plutarch gives three different versions of how Hyperbolus came to be ostracised. The two opposing parties of Alcibiades and Nicias, after the vote of ostracism was decreed, united to turn the vote against Hyperbolus (*Arist.* 7); according to Theophrastus, the opposition at first and the coalition afterwards was not between Nicias and Alcibiades, but between Phaeax and Alcibiades (*Nic.* 11); and in *Alcib.* 13 Plutarch mixes up these two versions (cf. [Andoc.] *c. Alcib.*). Various attempts have been made to reconcile these accounts: thus Zurborg (*Hermes*, 1877, pp. 198–206) suggests that when once the ostracising vote had been formally pronounced and could no more be prevented from taking place, the two opposing parties selected Phaeax and Hyperbolus to take the places of the real party-leaders, Nicias and Alcibiades; Seeliger (*Jahrb. f. class. Phil.* 1877, pp. 739–747) considers the struggle between Nicias and Alcibiades as a pure fiction of Plutarch, etc. However that may be, Hyperbolus was certainly the last person ostracised, but it is anything but certain that ostracism was no longer employed because the ostracism of Hyperbolus was felt "as a gross abuse" of the institution (Grote, vi. p. 378); it is, on the other hand, very probable, as Lugebil and others suggest, that ostracism was formally abolished under the archonship of Eucleides. Mahaffy (*Hermath.* 1881, p. 87 ff.) is of opinion that the disuse of ostracism dates from 417 B.C., and that ostracism was replaced by the *γραφὴ παρανόμων*, "which, though it may have long existed in the special form of an action against direct verbal contradictions of particular laws by new enactments," acquired its importance from the disuse of ostracism.

Ostracism prevailed in other democratical states as well as Athens; namely, at Argos (Arist. *Pol.* viii. 2, 4° S. = v. 2, 5 Bk.), Miletus, and Megara (Schol. Aristoph. *Eq.* 851). From the ostracism at Athens was copied the Petalism (*πεταλισμός*) of the Syracusans, so called from the *πέταλα*, or leaves of the olive, on which was written the name of the person whom they wished to remove from the city for a period of five years. Diodorus (xi. 55–87) affirms that it was so unjustly and profusely applied, as to deter persons of wealth and station from taking any part in public affairs; for which reason it was speedily discontinued. [G. L.] [H. H.]

2. ROMAN. *Exsilium*, according to Paulus in Dig. 48, 1, 2, means banishment inflicted by the state as a punishment, and accompanied by loss of *civitas:* if the person banished did not cease to be *civis*, it was not properly *exsilium*, but *relegatio*. From the infliction of exile (in this specific sense) for crime, however heinous, the early Romans shrank with an abhorrence which it is difficult for us to understand or even realise; it was a punishment unknown to their law for centuries. Thus Cicero says (*pro Caec.* 34) that no Roman was ever deprived of his *civitas* or his freedom by a *lex;* and in the speech *pro Domo* (16, 17, 29) he puts the same thing in a more guarded way by saying, that no *privilegium*, or *lex* directed against an individual, could be enacted so as to affect the *caput* of a Roman citizen unless he was first condemned in a *judicium;* and that no *civis* could lose his freedom or citizenship without his own consent. It was on the same principle that Roman citizens who went out as Latin colonists did not become Latin unless they went voluntarily and registered their names, thereby ceasing to be *cives Romani*. In the passage of the speech for Caecina, already referred to, Cicero says that persons condemned on a capital charge punished by exile did not lose their citizenship till they had been accepted as citizens of some other state: "si non accipiunt, ut Mancinum Numantini, retinet integram causam et jus civitatis." In another place (*pro Balbo*, 11) he alters the form of the proposition by remarking that a Roman who became a citizen of another state *thereby* ceased to be a Roman citizen. It must not be forgotten that in the *pro Caecina* it is one of Cicero's objects to prove that his client had the rights of a *civis*, and in the *pro Domo* to prove that he himself had not been an *exsul*, though he was interdicted from fire and water (for which see below) within 400 miles of Rome (*ad Att.* iii. 4). Now, having been thus interdicted, and having evaded the penalty (to use his own words) "by going beyond the limits," he could only escape the consequences, namely *exsilium*, either by relying on the fact of his not being received as a citizen into another state, or by alleging the illegality of the proceedings against him. The latter is the ground upon which he appears to maintain his case in the *pro Domo:* he alleges that he was made the subject of a *privilegium*, without having been first condemned in a *judicium* (c. 17). At any rate, he was restored by a *lex centuriata* (*ad Att.* iv. 1). Niebuhr asserts that Cicero's interdiction from fire and water did not necessarily deprive him of the *civitas:* but in *ad Att.* iii. 23, Cicero admits by implication that he had lost both his citizenship and his *ordo*, or rank as senator.

These references to Cicero are intended to establish the fact that the Romans had a great horror of compulsory exile carrying with it loss of *civitas*. The explanation of this fact is to be found in the identification, by the ancient world, of "stranger" with "enemy," and in the habit of primitive societies to treat all persons who were not members of their own body politic as absolutely "rightless." The outcast from his tribe and people was no better off than the wild beasts which are the prey of every hunter: he lost everything that made life valuable or even bearable: he became civilly dead, and liable to be reduced to slavery wheresoever he might betake himself.

But though the state hesitated to inflict such a fate as this upon its citizens, yet it did not deny them the privilege of voluntarily withdrawing from its territories in order to escape from what might seem to them even more terrible penalties, or even from the mere disgrace of prosecution (Liv. i. 41, ii. 35, iii. 13, 58, v. 32; Cic. *pro Caec.* 33, 34). Exile was conceived, not as a punishment, but as a means of escaping punishment, which the Romans left open to the accused up to the moment of his condemnation: "Exsilium enim non supplicium est, sed perfugium portusque supplicii: . . . confugiunt quasi ad aram, in exsilium" (Cic. *pro Caec.* 34: cf. Schwegler, *Römische Geschichte*, i. p. 438). Indeed, in the earlier republican period, a Roman citizen might have a right to go into *exsilium* to another state, or a citizen of another state might have a right to go into *exsilium* at Rome, by virtue of certain isopolitical relations existing between such state and Rome. This right was called *jus exulandi* with reference to the state to which the person came; with respect to his own state which he left he was *exsul*, and his condition was *exsilium*; with respect to the state which he entered he was *inquilinus*; and at Rome he might attach himself to a *quasi-patronus* [APPLICATIO]. And Niebuhr may be correct in stating that they who settled in an unprivileged place (*i.e.* one which was not in an isopolitical relation with Rome) did not technically become "exiles" without a decree of the people declaring that their settlement should operate as a legal *exsilium*; thus it appears from Liv. xxvi. 3, that it was declared by plebiscitum that C. Fabius, by going into exile to Tarquinii (which was a municipium, Cic. *pro Caec.* 4), was *legally* in exile. The commonness of this decree, however, seems to require a different explanation; and it seems better to regard the voluntary withdrawal of an accused criminal as an admission of his guilt, which the Romans habitually confirmed by a plebiscitum which gave it a *legal* character (Liv. v. 32, 46), and, in order to prevent the return of the accused, forbade other members of the state to afford him shelter, fire or water: the most common expression is *aquae et ignis interdictio* (Liv. xxv. 4), but to *aquae et ignis* Cicero adds *tecti* (*pro Domo*, 30; cf. Plut. *Marius*, c. 29). When an exile was recalled, the prohibition was removed by an equally solemn legislative act, as is shown by the case of Cicero already referred to. The real purpose of the "interdiction" seems to have been to clear the community from any guilt which it might have incurred in the eye of the gods by letting a criminal escape unpunished. It was no mere political outlawry; it was intended to purify the body politic by casting out its impure elements. Fire and water (πῦρ, *purus*) were the symbols of purity, and could not be dispensed with in the performance of any act or ceremony which possessed a religious significance, *e.g.* sacrifice and marriage (cf. Hartung, *Religion der Römer*, i. p. 198). It was thus not as things indispensable to human life (as Varro represents, *de Ling. Lat.* 4), or as symbolical of mutual human support and sympathy (as has been argued from Dig. 24, 1, 66), that fire and water were denied to the exile; but "along with them, as the marks of a pure society, which the criminal would defile by his further use of them, he is cut off from all share and lot in that society" (Ihering, *Geist des röm. Rechts*, i. p. 288).

Towards the end of the republican period it became not unusual to inflict loss of *civitas* and exile by interdiction of fire and water quite independently of any voluntary withdrawal on the part of the accused: it takes its place as an ordinary criminal sanction or punishment, awarded not by a lex or plebiscitum, but by a judge or judges after trial and conviction (Appian, *de Bell. Civ.* i. 31; Cic. *pro Domo*, 31; *pro Murena*, 23; Dio Cass. xxxvii. 29, xxxviii. 17, 18). The emperors introduced a new form of banishment, *deportatio in insulam*, the criminal being confined, either in perpetuity or for an indefinite time, to an island or some prescribed space on the mainland, but within its limits enjoying personal freedom (Dio Cass. lvi. 27; Tac. *Ann.* iii. 38, 68, 69; iv. 13, 21, 30; vi. 30). This and the old interdiction subsisted side by side as punishments of equal severity (Dig. 28, 1, 8, 1 and 2; 32, 1, 2; Cod. 5, 17, 1), though *deportatio* in fact became the more common: in Gaius (i. 90 and 161) loss of *cicitas* is said to be inflicted by interdiction of fire and water, *deportatio* not being mentioned, and in the passage of Justinian's Institutes (i. 16, 2) which corresponds with Gaius, i. 161, interdiction is spoken of as apparently still existing: but in Dig. 48, 13, 3 Ulpian speaks of *deportatio* having been substituted for interdiction as a punishment for *peculatus*, and perhaps this was the case, or tended to be so, with all crimes. Not every magistrate or judge could award deportation: the praetorian prefects and their deputies were privileged to do so, as was the *praefectus urbi* by a rescript of Severus: but the provincial governors (*praesides*) had to confine themselves to lesser penalties unless specially authorised by the emperor (Dig. 30, 1, 4; 48, 22, 6, 1; 48, 19, 2, 1). Like *aquae et ignis interdictio*, deportation carried with it loss of *civitas*; they were *capitales poenae* because they affected the *caput* of the *civis*. The condemned man lost his *patria potestas* over his children, or, if in *potestas* before himself, was so no longer, for no one could either exercise or be under this power except citizens of Rome; his property was confiscated (Dig. 48, 22, 14, 1), and his testament cancelled, and being a *peregrinus* he was incapable of executing another. But the loss of citizenship did not have the effect of dissolving his marriage (Cod. 5, 16, 24) or depriving him of the capacity of buying and selling, or of doing any other legal acts which could be performed by the *jus gentium*: "jure civili caret, gentium vero utitur," Dig. 48, 22, 15, pr.

Relegatio, which as contrasted with *exsilium* was known under the Republic (Liv. iii. 10,

iv. 4, xl. 41; Cic. *pro P. Sextio*, 12;—and instances of which occur in Sueton. *Aug.* 16, *Tib.* 50; Tac. *Ann.* iii. 17, 68; Suet. *Claud.* 23—was a slighter punishment, appearing in two forms. A person might be forbidden to live at Rome or any other specific place, or an island or some other confined spot might be assigned to him for his residence (Dig. 48, 22, 7, pr. &c.), and this either for a definite or an indefinite time (Dig. *ib.* 7, 2): the penalty might be awarded by the emperor, the senate, the two praefects and the provincial governors, but not by the consuls (*ib.* 14, 2). The *relegatus* retained his *civitas*, and so did not undergo *capitis deminutio*: "relegati in insulam in potestate sua liberos retinent, quia et alia omnia jura sua retinent: tantum enim insula eis egredi non licet" (Dig. *ib.* 4), nor was his property forfeited except by special direction of the judge by whom he was condemned (*ib.* 1, 4), and such forfeiture, whether total or partial, was allowed only in cases of perpetual relegation (Dig. *ib.* 7, 4). How essentially different this form of banishment was from genuine *exsilium* is shown by Ovid (*Trist.* v. 11), who describes himself not as *exsul*, which he considers a term of reproach, but as *relegatus*. Speaking of the emperor, he says—

> "Nec vitam, nec opes, nec jus mihi civis ademit;"

and a little further on—

> "Nil nisi me patriis jussit abire focis."

Cf. also *Trist.* ii. 127, &c. But by the later writers a wider meaning was given to the term *exsilium*, by which it was made to include *relegatio* as well as *deportatio* and *aquae et ignis interdictio*. Thus Marcianus says in Dig. 48, 22, 5, "Exsilium triplex est: aut certorum locorum interdictio, aut lata fuga, ut omnium locorum interdicatur praeter certum locum, aut insulae vinculum, id est relegatio in insulam:" and Paulus (*Sent. rec.* 5, 17, 3) speaks of deportatio as one of the punishments for *mediocria delicta*, while among the *minimae poenae* are *relegatio* and *exsilium*. [J. B. M.]

EXTISPEX. [Haruspex.]

EXTRAORDINA'RII. [Exercitus, p. 787 *a*.]

F.

FABATA'RIUM, a vessel, in which a kind of bean soup (*puls fabacea*, Macrob. i. 12, *med.*) was probably served (Lamprid. *Heliog.* 20). [W. S.]

FABRI are workers in wood, stone, or metal, as *fabri tignarii*, carpenters, *fabri aerarii*, smiths, &c. The workshop was called *fabrica* (Ter. *Ad.* iv. 2, 45; Cic. *N. D.* iii. 22, 55), the name also given to the trade or art of a faber (Cic. *N. D.* ii. 13, 35). The different trades were said to have been divided by Numa (Plut. *Numa*, 17) into nine collegia, which correspond to our companies or guilds. In the constitution of Servius Tullius, the *fabri tignarii* (τέκτονες, Orelli, *Inscrip.* 60, 417, 3690, 4086, 4088, 4184) and the *fabri aerarii* or *ferrarii* (χαλκοτύποι) were formed into two centuries, which were called the "centuriae *fabrum*," and not *fabrorum*. (Cic. *Orat.* 46, 156.) They did not belong to any of the five classes into which Servius divided the people; but the *fabri tignarii* probably voted with the first class, and the *fabri aerarii* with the second. Livy (i. 43) and Dionysius (vii. 59) name both the centuries together: the former says that they voted with the first class; the latter, that they voted with the second. Cicero (*de Rep.* ii. 22) names only one century of fabri, which he says voted with the first class; but as he adds the word *tignariorum*, he must have recognised the existence of the second century, which we suppose to have voted with the second class. (Göttling, *Gesch. der röm. Staatsv.* p. 249.)

The fabri or engineers in the army were under the command of an officer called *praefectus fabrum*. (Caes. *ap.* Cic. *ad Att.* ix. 8, *Bell. Civ.* i. 24; Veget. ii. 9 ff.) Vegetius asserts that there was a praefectus fabrum attached to each legion; and this *may* have been the case. No genuine inscriptions, however, contain the title of praefectus fabrum with the name of a legion added to it. Hence it is more probable that he was the engineer-in-chief to the army as a whole. It was the duty of the fabri not only to repair damaged armour, and to construct and keep in good order the usual siege-material, but also to build bridges, and even to superintend mining operations. Hence the praefectus fabrum held an office of the highest trust and importance (Cic. *Balb.* 28, 63). There were also civil officers at Rome and in the municipal towns, called praefecti fabrum; but we know nothing respecting them beyond their name. Thus we find Praef. Fabr. Romae, Praefectus Fabr. (Wilmanns, 1864); Romae et Tergeste (*ib.* 1624). The subject of the praefecti fabrum is discussed with great accuracy in a letter of Hagenbuchius, published by Orelli (*Inscript.* vol. ii. p. 95, &c. Cf. Borghesi, *Oeuvres*, v. p. 206 ff.; Mommsen in *Hermes*, i. 60). [W. S.] [A. S. W.]

FA'BULA. [Comoedia.]

FACTIO'NES AURIGA'RUM. [Circus, p. 438 *b*.]

FACTOR. [Pila.]

FACTO'RIUM, an oil-press (Pallad. xi. 10, 1), so called from the *factor*, who pressed the olives (Cat. *R. R.* 64, 1; 66, 1). The name *factum* was given to the oil pressed out at one making (Varr. *R. R.* i. 24, 3). [W. S.]

FALA or PHALA. 1. A wooden structure, of considerable height, used in sieges, from which missiles were thrown (Fest. p. 88, 12; Ennius, *ap.* Non. p. 114, 7).

2. *Phalae* are mentioned by Juvenal (vi. 590) along with the *columnae delphinorum* in the circus. Hence they are supposed by some writers to be columns on the *spina* of the circus, supporting the *ova*, as similar columns supported the dolphins. [See Circus, p. 434 *b*, and the cut on p. 435.] But Servius (*ad* Verg. *Aen.* ix. 705) says they were towers on which fights took place, erected between the euripus and the metae; and they were probably movable towers used in the sham fights of the Circus. [W. S.]

FALA'RICA. [Hasta.]

FA'LCULA. [Falx.]

FALSA'RIUS. [Falsum.]

FALSUM. The crime of falsum is not

defined by Roman legal writers, but it consisted of acts of fraud which were injurious to *fides publica*, such as forgery, counterfeiting money, and perverting the course of justice by fraud and perjury. The oldest legislative provisions at Rome against any acts of this description are those of the Twelve Tables, to the effect that a person who gave false testimony should be thrown from the Tarpeian rock (Gell. xxi. 53), and that a judge who took a bribe should be liable to capital punishment (Gell. xxi. 7); but there were trials for false testimony before the enactment of the Twelve Tables (Liv. iii. 24, 25, 29; iv. 21). The next legislation in falsum, so far as we know, was contained in one of the Leges Corneliae passed in the time of the Dictator Sulla, which was divided, according to Cicero, into two heads, the Lex testamentaria and the Lex numaria (*in Verr.* ii. 1, 42), with reference to the two species of the crime the statute was directed against. Cicero states that this lex did not create any new offence, but instituted a *quaestio ad populum* for what had always been a crime. Paulus, who gives its provisions, entitles it Lex Cornelia testamentaria; it is also known by the more general title Lex Cornelia de falsis.

The Lex Cornelia appears to have only included two specific kinds of falsum: (1) forgery and suppression of wills, and (2) adulteration of the coinage.

1. In respect of the first of these, Paulus, citing to some extent the very words of the statute, says, A person is liable under the Lex Cornelia testamentaria "qui testamentum quodve aliud instrumentum falsum sciens dolo malo scripserit, recitaverit, subjecerit, suppresserit, amoverit, resignaverit, deleverit, quive signum adulterinum sculpserit, fecerit, expresserit, amoverit, reseraverit;" and (2) in respect of adulteration of the coin, he says, "quive nummos aureos, argenteos adulteraverit, laverit, conflaverit, raserit, corruperit, vitiaverit." (Paul. 5, 25, 1; Digest (Paulus), 48, 10, 2.) Mr. Justice Stephen (*Hist. of Crim. Law*, ch. ii.) compares with this statement of the law the language of English statutes:—(1) 24 & 25 Vict., c. 98, s. 2, "Whoever with intent to defraud (*dolo malo*) shall forge or alter (*interleverit*), or shall offer, utter, dispose of, or put off, knowing the same to be forged or altered, any will, testament, codicil, or testamentary instrument." "The 24 & 25 Vict. c. 96, s. 29," he adds, "makes it penal to cancel (*deleverit*), obliterate or conceal (*celaverit*), any will," &c. And (2) the 24 & 25 Vict., c. 99, s. 4, declares anyone subject to punishment who shall "impair, diminish, or lighten any of the Queen's gold or silver coin," and s. 3, "whosoever shall gild, or shall with any wash or materials capable of producing the colour or appearance of gold, wash (*laverit*), case over, or colour any piece of gold or silver."

An offence against either branch of this law was a *crimen publicum*, and was under the cognisance of a standing *quaestio*. The punishment of falsum under the law (at least when Paulus wrote) was *deportatio in insulam* for the "honestiores," and the mines, crucifixion, or other degrading punishment for the "humiliores." In place of *deportatio in insulam* the punishment, according to the statute itself, was probably the old form of banishment, known as *ignis et aquae interdictio*. The property of a convicted person was confiscated.

The penalty of the Lex Cornelia was extended by piecemeal legislation to cases not comprised in the lex, but of a similar kind. This supplementary law is sometimes referred in legal treatises to the Lex Cornelia, as if it had been an original part of that law. Thus, according to Paulus, in the passage we have cited at length, the Lex Cornelia applied to any instrument as well as a will: but it appears from Ulpian that this was a subsequent addition made to the lex by a senatusconsultum which was passed in the consulship of T. Statilius Taurus and L. Scribonius Libo (A.D. 16). (*Mos. et Rom. Leg. Coll.* viii. 7; Tac. *Ann.* xix. 40, 41.) The instrument fabricated or falsified might be either public or private, as *e.g.* a rescript or edict of the emperor, an account book, or an instrument of sale.

Persons guilty of falsifying documents are called *falsarii*. As a precaution against such persons, it was enacted in the time of Nero that *tabulae* or written contracts should be pierced with holes and a triple thread passed through the holes, in addition to the signature. (Sueton. *Ner.* c. 17; Paul. v. 25, 6.) In the time of Nero it was also provided that the first two parts (*cerae*) of a will should have only the testator's signature, and the remaining one those of the witnesses. Likewise, in order to prevent fraud, it was enacted under the Emperor Claudius that a person who was employed by a testator to write a will should be liable to the penalty of the Lex Cornelia, if he inscribed a legacy to himself, although he did so at the dictation of the testator. (Cod. ix. 23, 3. Suetonius, *Ner.* c. 17, attributes this law to Nero.) The Lex de Falsis was further extended to fraudulent assumptions of names and rank, and to false pretences, as in the case of a contract to sell a thing to a person, when the vendor had already to sell the same thing to someone else. The *crimen falsi* was also made to include perjury, the corruption of judges, and other kindred offences. By a senatusconsultum in the fourteenth year of Tiberius, the penalties of the law were extended to those who for money undertook to maintain causes, or to procure testimony; and by a senatusconsultum passed somewhat earlier, conspiracies for the ruin of innocent persons were comprised within the limits of the law. It may be noticed in this connexion that by the Lex Cornelia de sicariis the causing the death of a man by bearing false witness against him had been made subject to an *internecivi judicium* (Isidor. v. 25, 17, x. 149; cf. Rudorff, *Rechtsgesch.* § 35, A. 7).

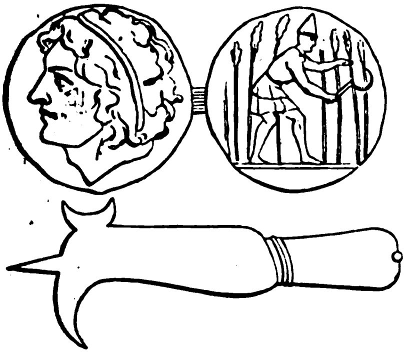
According to Paulus (v. 25, 1), the refusal to accept in payment genuine coin stamped with the head of the princeps was on the same footing as the adulteration of the coinage, though in this case the element of fraud seems wanting. Arrian refers to the fact of such refusal of payment being illegal (*Epict.* 3, 3). The use of false measures and weights was punished as falsum. It appears from numerous passages in the Roman writers that the crime of falsum in its different forms was very common, and especially in the case of wills (cf. *e.g.* Cic. *pro*

Cluent. 44, 125; *Phil.* xiv. 3, 7; *de Off.* iii. 18, 73; Juv. *Sat.* i. 37; Plin. *Ep.* ii. 20). (Paul. iv. 7, §§ 1, 2, v. 25; Dig. 48, 10; Inst. iv. 18, 7; Cod. 9, 22 and 23; Heinecc. *Syntag.* iv. 18, 63; Rein, *Das Criminalrecht der Römer*, 774, &c.; Rudorff, *Rechtsg.* ii. § 116; Geib, *Crim. Recht*, i. 53–55; Stephen, *Hist. of Criminal Law*, i. p. 20.) [E. A. W.]

FALX, *dim.* **FA'LCULA** (*ἅρπη, κοπίς, δρέπανον, poet. δρεπάνη, dim. δρεπάνιον*), a sickle; a scythe; a pruning-knife, or pruning-hook; a bill; a falchion; a halbert.

As CULTER denoted a knife with one straight edge, "falx" signified any similar instrument, the single edge of which was curved. (*Δρέπανον εὐκαμπές*, Hom. *Od.* xviii. 368; *curvae falces*, Verg. *Georg.* i. 508; *curvamine falcis aenae*, Ovid, *Met.* vii. 227; *adunca falce*, xiv. 628.) By additional epithets the various uses of the falx were indicated, and its corresponding varieties in form and size. Thus the sickle, because it was used by reapers, was called *falx messoria;* the scythe, which was employed in mowing hay, was called *falx fenaria;* the pruning-knife and the bill, on account of their use in dressing vines, as well as in hedging and in cutting off the shoots and branches of trees, were distinguished by the appellation of *falx putatoria*, *vinitoria*, *arboraria*, or *silvatica* (Cato, *de Re Rust.* 10, 11; Pallad. i. 43; Colum. iv. 25), or by the diminutive *falcula* (Colum. xii. 18).

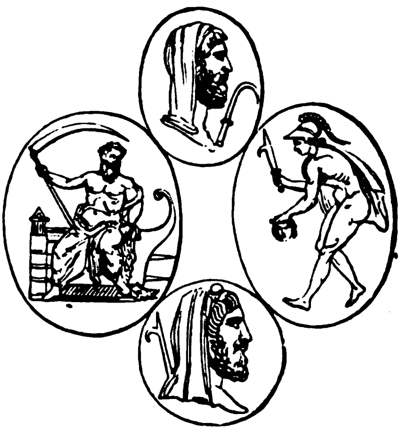
A rare coin published by Pellerin (*Méd. de Rois*, Par. 1762, p. 208) shows the head of one of the Ptolemies, and on the reverse a man cutting down corn with a sickle. (See woodcut.)



Falx. 1. From a coin. 2. From a MS. of Columella.

The lower figure in the same woodcut is taken from the MSS. of Columella, and illustrates his description of the various parts of the *falx vinitoria* (*de Re Rust.* iv. 25). [CULTER.] The curvature in the fore part of the blade is expressed by Virgil in the phrase *procurva falx* (*Georg.* ii. 421). After the removal of a branch by the pruning-hook, it was often smoothed, as in modern gardening, by the chisel. (Colum. *de Arbor.* 10.) [DOLABRA.] The edge of the falx was often toothed or serrated (*ἅρπην καρχαρόδοντα*, Hesiod, *Theog.* 175, 179; *denticulata*, Colum. *de Re Rust.* ii. 21). The indispensable process of sharpening these instruments (*ἅρπην χαρασσεμέναι*, Hesiod, *Op.* 573; *ἅρπην εὐκαμπῆ νεοθηγέα*, Apoll. Rhod. iii. 1387) was effected by whetstones which the Romans obtained from Crete and other distant places, with the addition of oil or water which the mower (*fenisex*) carried in a horn upon his thigh (Plin. *H. N.* xviii. § 261).

Numerous as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geloni were noted for its use (Claudian, *de Laud. Stil.* i. 110). It was the weapon with which Jupiter wounded Typhon (Apollod. i. 6); with which Hercules slew the Lernaean Hydra (Eurip. *Ion*, 192); and with which Mercury cut off the head of Argus (*falcato ense*, Ovid, *Met.* i. 717; *harpen Cyllenida*, Lucan, ix. 661–667). Perseus, having received the same weapon from Mercury, or, according to other authorities, from Vulcan, used it to decapitate Medusa and to slay the sea-monster (Apollod. ii. 4; Eratosth. *Cataster.* 22; Ovid, *Met.* iv. 666, 720, 727, v. 69; Brunck, *Anal.* iii. 157 = *Anth. Pal.* xi. 52). From the passages now referred to, we may conclude that the falchion was a weapon of the most remote antiquity; that it was girt like a dagger upon the waist; that it was held in the hand by a short hilt; and that, as it was in fact a dagger or sharp-pointed blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature (*curvo tenus abdidit hamo*). In the following woodcut, four examples are selected from works of ancient art to illustrate its form. One of the four cameos here copied represents Perseus with the falchion in his right hand, and the head of Medusa in his left. The two smaller figures are heads of Saturn with the falx in its original form; and the fourth cameo, representing the same divinity at full length, was probably engraved in Italy at a later period than the others, but early enough to prove that the scythe was in use among the Romans, while it illustrates the adaptation of the symbols of Saturn (*Κρόνος*: *senex falcifer*, Ovid, *Fast.* v. 627; *Ibis*, 216) for the purpose of personifying Time (*Χρόνος*).



Falx. (From cameos.)

If we imagine the weapon which has now been described to be attached to the end of a pole, it would assume the form and be applicable to all the purposes of the modern halbert. Such must have been the *asseres falcati* used by the Romans at the siege of Ambracia (Liv. xxxviii. 5; cf. Caes. *B. G.* vii. 22, 86; Q. Curt. iv. 19). Sometimes the iron head was so large as to be fastened, instead of the ram's head, to a wooden beam, and worked by men under a testudo (Veget. iv. 14).

Lastly, the Assyrians, the Persians, the Medes, and the Syrians in Asia (Xen. *Cyrop.* vi. 1, § 30, 2, § 7; *Anab.* i. 8, § 10;—Diod. ii. 5, xvii. 53; Polyb. v. 53; Q. Curt. iv. 9, 12, 13; Gell. v. 5; 2 Macc. xiii. 2; Veget. iii. 24; Liv. xxxvii. 41), and the Gauls and Britons in Europe [COVINUS], made themselves formidable on the field of battle by the use of chariots with scythes, fixed at right angles (*εἰς πλάγιον*) to the axle and turned downwards; or inserted parallel to the axle into the felly of the wheel, so as to revolve, when the chariot was put in motion, with more than thrice the velocity of the chariot itself; and sometimes also projecting from the extremities of the axle. [J. Y.]

FAMI'LIA, in Old Latin *famelia*, in Oscan *famelo*, in Umbrian *famedia*, is probably in its original sense a body of persons belonging to a house, a household (Osc. *faa-ma* = house, Sanskr. *dhâ* = to settle, *dhâman* = settlement). The etymology of Festus (s. v. *famuli*), deriving *familia* from the Oscan *famel*, meaning "a slave," is now commonly rejected; and the view of Corssen (Kuhn, *Zeitsch. f. verg. Sprach.* ii. 292), that the fundamental conception of the word is "inheritance," "property," has met with little favour. (Voigt, *XII. Tafeln*, ii. § 72, n. 3; Rossbach, *Röm. Ehe*, A. 42; Curt. *Gr. Etym.* p. 228.) The adjective *familiares* and the substantive *famuli* signify generally the members belonging to a house (Festus, s. v. *familiaris*; Paul. Diac. 86, 16), though the latter word came to denote the slaves of a familia or household. The Latin word for the house or homestead, which was the principal family possession, is *domus;* and the combination *domus familiaque*, for which *familia pecuniaque* was substituted, designates the family in respect of its *familiares* or members, and in respect of its dwelling-place with the property attached to it (Voigt, *l. c.*). The meaning of the word *familia*, which appears to have originally included only the group of *familiares*, was extended so as to comprehend all that is subject to the *manus* or control of a paterfamilias, both free persons, slaves and other objects of property, in this sense corresponding to the Greek *οἶκος*. But the word has generally narrower significations ("familiae—appellatio et in res et in personas diducitur," Dig. 50, 16, 195, § 1). Thus it sometimes means "property;" that is to say, property "as an adjunct or appendage of a household," as *e.g.* in the phrase *familiae erciscundae judicium* and in the connexion of words *ex Cassia familia datum* (Liv. ii. 8, xv. 41).

The Greek *οἶκος* has a similar sense, and we may perhaps also compare the use of *familia* in the writings of Bede as equivalent to the Anglo-Saxon word *hýd*, which probably means the quantity of land appropriated to a family (Earle, *Land Charters*, p. 457). In the description of the mancipative will given by Gaius (ii. 102) the word *familia* is explained by the equivalent *patrimonium*, and the person who received the succession from the testator by mancipation ("qui a testatore familiam accipiebat mancipio") was called *familiae emptor.* It is to be noticed that in the formula adopted by the *familiae emptor*, when he took the testator's estate by a fictitious sale, the word *pecunia* is coupled with *familia*, "Familia pecuniaque tua endo mandatelam custodelamque" (Gaius, ii. 104: cf. Cic. *de Inv.* ii. 50, 148; *de Leg.* iii. 3, 7; Sueton. *Nero*, 4), *familia* probably meaning the family and *pecunia* the property. Various interpretations, however, of the words *familia pecuniaque* in this passage have been proposed. Kuntze (*Excurs.* 107) maintains, though without sufficient ground, that *familia* comprises res mancipi of the testator, and *pecunia* res nec mancipi. Rudorff (*Recht der Vormundsch.* i. 168, A. 3) suggests that *familia* signifies the slaves and *pecunia* cattle (*pecus*). Another conjecture is that *familia* is the property that was originally inalienable, and *pecunia* alienable chattels.

In the passage of the Twelve Tables which declares that in default of any *suus heres* the succession of the deceased shall go to the next agnatus, the word *familia* signifies the succession "agnatus proximus familiam habeto."

Familia sometimes signifies only persons; that is, all those who are in the power of a head of a family, such as descendants, and slaves who were not only objects of dominion, but also in a sense objects of potestas. In another sense *familia* denotes only the free persons who are in the power of a paterfamilias, including natural and adoptive descendants and the wife in her husband's manus. In a more extended sense *familia* includes all those who are connected by agnation; that is, all who are sprung or who are supposed to be sprung from an ascertained common ancestor, and would be in his power if he were living. With this sense of *familia* is connected the *status familiae*, by virtue of which a person belonged to a particular *familia*, and thereby had a capacity for certain rights which only the members of a *familia* could claim. A person who changed this status ceased to belong to the *familia*, and sustained a *capitis deminutio minima.* [ADOPTIO; CAPUT.] Members of the same *familia* were *familiares*, and hence *familiaris* came to signify an intimate friend.

Familia was properly the civil family connected by subjection to patria potestas or by agnation, not the natural family connected only by cognation; but *familia* is sometimes used to signify a natural family. The extent of the terms *agnati* and *cognati* and their legal import are explained under COGNATI.

The word *familia* may be equivalent to *gens*, which comprehended a group of agnatic *familiae*. The relation of the agnatic *familia* and *gens* is explained under GENS.

Familia is frequently used to signify only the slaves belonging to a head of a family (Cic. *ad Fam.* xiv. 4; *ad Quint. Fr.* ii. 6). Slaves who belonged to the same *familia* were called, with respect to this relation, *familiares.* Generally *familiaris* might signify anything relating to a *familia*, e.g. *familiaria sacra.*

The head of a *familia* or household, known originally as *esus* or *erus* (Voigt, *XII. Tafeln*, ii. § 79, n. 9), was a Roman citizen who was sui *juris.* As master of his house (*domus*) and its belongings he was *dominus;* as governor of the *familiares* or members of the household, he was *paterfamilias.* His wife, subject to his manus, was *materfamilias* or house-mother. [MATRIMONIUM.] A *filius-* or *filia-familias* was a male or female descendant in the power of a paterfamilias. The legal incapacities of *filius-* and *filia-familias* and a wife *in manu* may be most appropriately considered under PATRIA POTESTAS.

Familia has also the meaning of a body of persons united in a society for a particular purpose: thus it is applied to a school of philosophers, *e.g.* familia Peripateticorum (Cic. *Div.* ii. 1, 3), to a school of gladiators, and to a corps of recruits. In a sense still more remote from the original, it is sometimes applied to signify a man's living, a man's means of subsistence (Ter. *Heauton.* v. 36). (Savigny, *System des heutigen röm. Rechts,* i. pp. 345, 356; Voigt, *Das Civil- und Criminalrecht der XII. Tafeln,* ii. § 72; Rollet, *De la Famille et la Propriété sous la loi des XII. Tabl.;* Schupfer, *La Famiglia secondo il Diritto Romano;* Muirhead, *Introduction to Law of Rome,* ch. iii.; Maine, *Ancient Law,* chaps. v. and vi.; Roby, *Introduction to the Digest,* p. 48.) [E. A. W.]

FAMI'LIAE ERCISCUNDAE JUDI'CIUM. When several heredes succeeded to an inheritance, whether under a will or by title of intestacy, they held together in common according to the respective shares each might be entitled to. The unity of estate which existed between them could, however, be put an end to by partition. Every heres was entitled to a division of the hereditas, unless the testator had declared, or the co-heredes had agreed, that it should remain in common for a fixed time. The division could be made by agreement among the co-heredes, but in case they could not agree the division was made by compulsory process. For this purpose every heres had against each of his co-heredes a judicium or *actio familiae erciscundae,* which, like the *judicia communi dividundo* and *finium regundorum,* was of the class of *mixtae actiones,* or, as they are sometimes called, *duplicia judicia,* because each heres was both plaintiff and defendant (*actor* and *reus*), though he who commenced the proceedings and claimed an award (*ad judicium provocavit*) was to this extent in the position of plaintiff. This action was given by the Twelve Tables. It was the duty of the *arbitri,* who were appointed by the magistrate for the purpose, to divide the *familia,* which here signifies the property or hereditas as explained in the previous article. The property to be divided consisted of everything which belonged to the succession, with the exception of claims and debts, which by the law of the Twelve Tables were otherwise apportioned (Dig. 10, 2, §§ 5–14;—Cod. 2, 3, 6; 3, 36, 6). The heredes were bound to bring in property of their own to be divided, which they had received from the deceased in his lifetime, as part of their share of the inheritance [BONORUM COLLATIO]. It was the duty of the *arbitri* to divide the inheritance into lots (*partes divisae*), and formally to award each lot to the several parties, according to their respective interests. The judicial award (*adjudicatio*) thus made could not be disputed in any subsequent proceedings. From the joint ownership of co-heredes obligations might arise between them which could be enforced by this action. Thus one heres was answerable to another for injury to the joint property. A co-heres was bound to account for any profit he had made from the inheritance, and could claim to be indemnified for any necessary expenses he had been put to in respect of it.

Erctum ciere is the technical term for the *provocatio ad judicium* in this action, which was expressed in a solemn form of words. (Cic. *Or.* i. 56, 237; Quint. *I. O.* vii. 3, 13; Paul. Diac. 82, 16; Festus, p. 82; Gell. i. 9: cf. Roby, *Introd. to Digest,* p. 50.)

The origin of the root *erc* or *herc* is uncertain (cf. Roby, *op. cit.*; Corssen, *Krit. Beitr.* 39 f.; *Beitr. zur ital. Sprachkunde,* 113). It seems, however, that the word means to divide (Gaius, ii. 219). (Dig. 10, 2; Cod. iii. 36, 38; Voigt, *Die XII. Tafeln,* § 127; Windscheid, *Pandekten,* § 608; Rosshirt, *Testam. Erb.* ii. § 135; Heimbach in Weiske's *Rechtslex.* s. v.) [E. A. W.]

FAMO'SI LIBELLI. [LIBELLUS.]

FANA'TICI. [FANUM.]

FANUM is any locality consecrated by the pontiffs, and is derived by the ancients from *fari,* because the *pontifices in sacrando fati sunt finem* (Varr. *L. L.* vi. 54; Fest. pp. 88, 93). It was a consecrated spot, whether a building was erected upon it or not. Thus we find *fanum* applied to a piece of ground upon which an *aedes* was afterwards built (Liv. v. 50, 2; x. 37, 15), and the word was often used to signify both the consecrated ground and the temple built upon it [TEMPLUM]. The consecrated places in the forum, where the couches of the gods were placed in the *lectisternium* [LECTISTERNIUM], were also called *fana,* in reference to which the phrase *fana sistere* was used (Fest. p. 351). Even a tree struck by lightning was deemed a *fanum* (Fest. p. 92). Everything not consecrated—that is, not a *fanum*—was considered *profanum* (Fest. p. 263; Macrob. iii. 3, 3); and a *res fanatica* might, in accordance with the Pontifical law, be again made into a *res profana* by certain ceremonies (Macrob. iii. 3, 4; Serv. *ad* Verg. *Aen.* xii. 779; Liv. xxxi. 44). (Marquardt, *Röm. Staatsverw.* iii. p. 145.)

Fanatici, properly speaking persons belonging to a *fanum,* were more specifically priests of the goddess of Comana in Cappadocia, whose worship was introduced into Rome under the name of Bellona. They performed the worship with wild and frantic rites, whence the word *fanaticus* obtained its secondary meaning, and has passed into modern languages. They are mentioned in inscriptions under the name of *fanatici de aede Bellonae Pulvinensis* (*C. I. L.* vi. n. 490, 2232, 2235; cf. "fanaticus oestro percussus, Bellona, tuo," Juv. iv. 123). They were also called *Bellonarii* (Acro, *ad* Hor. *Sat.* ii. 3, 223). In celebrating the festival of the goddess they marched through the city in dark clothes, with wild cries, blowing trumpets, beating cymbals and drums, and in the temple inflicting wounds upon themselves, the blood from which they poured out as an offering to the goddess (Tibull. i. 6, 43 *seq.*; Hor. *Sat.* ii. 3, 223; Juv. vi. 511; Mart. xi. 84, 3, xii. 57, 11; Lucan, i. 565; Lamprid. *Commod.* 9; Sen. *de Vit. Beat.* 27; Tertull. *Apol.* 9, *de Pall.* 4; Lact. *Inst.* i. 21, 16).

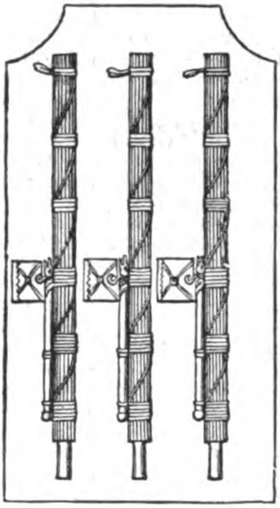
Fanatici was also the name given to the priests of Isis (*C. I. L.* vi. n. 2234) and Cybele (Juv. ii. 112; Prudent. *Perist.* x. 1061), who celebrated their worship with similar orgiastic rites. [CORYBANTES.] (Marquardt, *op. cit.* iii. 75.) [W. S.]

FA'RREUM. [MATRIMONIUM.]

FARTOR (*σιτευτής*) was a slave who fattened poultry. (Colum. viii. 7, § 1; Hor. *Sat.* ii. 3, 228; Plaut. *Truc.* i. 2, 11.) This form of table luxury was early known to the Greeks, who called such birds *σιτευτὰ* or *σιτιστά* (Epigenes *ap.* Ath. ix. p. 384 a = *fr.* 2 M.; other quotations *ap.* Ath. xiv. p. 656 e, &c.). For the *foies gras* of ancient times, cf. Hor. *Sat.* ii. 8, 88; Juv. v. 114, with Mayor's note: and on the feeding of *altiles* among the Romans, AGRICULTURA, pp. 78–80; Marquardt, *Privatl.* 415. Donatus (*ad* Terent. *Eun.* ii. 2, 26) says that the name was given to a maker of sausages, and Orellius (on Hor. *Sat.* ii. 3, 228) prefers this explanation; but comp. Becker-Göll, *Gallus*, iii. p. 369. The name of fartores or *crammers* was given in jest to the *nomenclatores*, who accompanied the candidates for the public offices at Rome, and privately prompted them with the voters' names (Fest. p. 88). [W. S.] [W. W.]

FAS. [FASTI; JUS.]

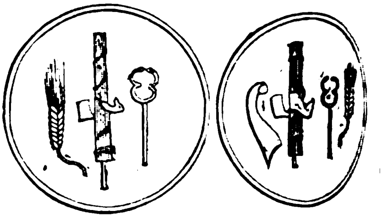
FASCES were rods bound together by a red thong in the form of a bundle, and containing an axe (*securis*) in the middle, the iron of which projected from them. See the following cut, from a relief at Rome. These rods were carried by lictors before the superior magistrates at Rome, and are often represented on the reverse of consular coins. The following cuts give the reverses of four consular coins; in the first of which we see the lictors carrying the fasces on their shoulders; in the second, two fasces, and between them a sella curulis; in the third, two fasces crowned with laurel, with the consul standing between them; and in the fourth, the same, only with no crowns around the fasces.



Fasces. (From the original in the Capitol at Rome.)

Fasces on Consular coins.

The next two cuts, taken from the consular coins of C. Norbanus, contain in addition to the fasces—the one a spica and caduceus, and the other a spica, caduceus, and prora.



Fasces on Consular coins.

The fasces appear to have been in later times made of birch (*betulla*, Plin. *H. N.* xvi. § 75), but in earlier of the twigs of the elm (Plaut. *Asin.* iii. 2, 29; ii. 3, 74). They are said to have been derived from Vetulonia, a city of Etruria (Sil. Ital. viii. 485; cf. Liv. i. 8); but for this there is no real authority (cf. Schwegler, *Röm. Gesch.* i. 278, 581, 671). Twelve were carried before each of the kings by twelve lictors; and on the expulsion of the Tarquins, one of the consuls was preceded by twelve lictors with the fasces and secures, and the other by the same number of lictors with the fasces only, or, according to some accounts, with crowns round them. (Dion. Hal. v. 2.) But P. Valerius Publicola, who gave to the people the right of provocatio, ordained that the secures should be removed from the fasces, and allowed only one of the consuls to be preceded by the lictors while they were at Rome. (Cic. *de Rep.* ii. 31; Valer. Max. iv. 1, § 1.) The other consul was attended only by a single accensus [ACCENSUS]. When they were out of Rome, and at the head of the army, each of the consuls retained the axe in the fasces, and was preceded by his own lictors. (Dion. Hal. v. 19; Liv. xxiv. 9, xxviii. 27.)

When the decemviri were first appointed, the fasces were only carried before the one who presided for the day (Liv. iii. 33); and it was not till the second decemvirate, when they began to act in a tyrannical manner, that the fasces with the axe were carried before each of the ten. (Liv. iii. 36.) The fasces and secures were, however, carried before the dictator even in the city (Liv. ii. 18): he was preceded by twenty-four lictors, and the magister equitum by six.

The praetors were preceded in the city by two lictors with the fasces (Censorin. *de Die Natal.* 24, 3; Cic. *de Leg. Agr.* ii. 34, 93); but out of Rome and at the head of an army by six, with the fasces and secures, whence they are called by the Greek writers *στρατηγοὶ ἑξαπελέκεις*. (Appian, *Syr.* 15; Polyb. ii. 24, § 6, iii. 40, § 9, 106, § 6.) The proconsuls also were allowed, in the time of Ulpian, six fasces (Dig. 50, 16, 14). The tribunes of the plebs, the aediles and quaestors, had no lictors in the city (Plut. *Quaest. Rom.* 81; Gell. xiii. 12), with the exception of the aedile who acted as *judex quaestionis inter sicarios* (Cic. *Cluent.* 53, 147); but in the provinces the quaestors pro praetore were permitted to have the fasces (Cic. *pro Planc.* 41, 98).

The lictors carried the fasces on their left shoulders, as is seen in the coin of Brutus given above; and when an inferior magistrate met one who was higher in rank, the lictors lowered their fasces to him. This was done by Valerius Publicola, when he addressed the people (Cic. *de Rep.* ii. 31, 53; Liv. ii. 7; Val. Max. iv. 1, § 1); and hence came the expression *submittere fasces* in the sense of to yield, to confess oneself inferior to another (Cic. *Brut.* 6, 22).

When a general had gained a victory, and had been saluted as Imperator by his soldiers, his fasces were always crowned with laurel. (Cic. *ad Att.* viii. 3, § 5, *de Div.* i. 28, 59; Caes. *Bell. Civ.* iii. 71.) [LICTOR.] [W. S.]

FA'SCIA, *dim.* **FASCIOLA** (*ταινία, ἀπόδεσμος*), any long narrow strip of cloth employed as a bandage. 1. A band worn round the head as an ensign of royalty (Suet. *Jul.* 79; Sen. *Ep.* 80, § 10) [DIADEMA; first cut to FALX].

2. A band worn by women round the chest for the improvement of the figure (Terent. *Eun.* ii. 3, 23; Propert. v. 9, 49; Ov. *A. Am.* iii. 276, 622; Sen. *fr.* 83, Haase; *Fascia Pectoralis*, Mart. xiv. 134). [STROPHIUM.]

3. A band worn round the legs and shins, a kind of stocking: hence called *fasciae crurales* (Dig. 34, 2, 25) and *tibiales* (Suet. *Aug.* 82). That such bandages also covered the feet is clear from the epithet of *fasciae pedules* (Dig. 34, 2, 26). Cicero reproached Clodius with effeminate habits for wearing purple fasciae upon his feet, and the CALAUTICA, a female ornament, upon his head (*de Har. Resp.* 21, § 44; *Fragm. Or. in Clod. et Cur.*; cf. Non. p. 537). Afterwards, when the toga had fallen into disuse, and the shorter pallium was worn in its stead, so that the legs were exposed, *fasciae crurales* became common even with the male sex. (Hor. *Sat.* ii. 3, 255; Val. Max. vi. 2, § 7; Grat. *Cyneg.* 338; Petron. c. 46.) The Emperor Alexander Severus always wore both fasciae and bracae (Lamprid. *Al. Sev.* 40), even although, when in town, he wore the toga. Quintilian, nevertheless, insists that the adoption of them could only be excused on the plea of infirm health. (*Inst. Or.* xi. 3, § 144.) White fasciae, worn by men (Val. Max. *l. c.*; Phaedr. v. 7, 37), were a sign of extraordinary refinement in dress: the mode of cleaning them was by rubbing them with a white tenacious earth, resembling our pipe-clay (*fasciae cretatae*, Cic. *ad Att.* ii. 3). In the imperial times the Roman soldiers wore such *fasciae* ("si(miles) *tibiale* alienavit," Dig. 49, 16, 14, § 1). The bandages wound about the legs are shown in the illuminations of ancient MSS., *e.g.* in the Vatican Virgil. See also cut under LIBRA, Vol. II. p. 63.

4. The sacking of the bed on which the mattress rested (Cic. *de Div.* ii. 65, § 134; Mart. v. 62, xiv. 159; Becker-Göll, *Gallus*, ii. 333; Guhl and Koner, p. 572, ed. 5).

5. *Fasciae* were also the swaddling clothes in which infants were wrapped (Plaut. *Truc.* v. 13): see cut under INCUNABULA. [J. Y.] [W. W.]

FA'SCIA (*ταινία*), in architecture, signifies (by an obvious analogy with the ordinary meaning of the word) any long flat surface of wood, stone, or marble, such as the band which divides the architrave from the frieze in the Doric order, and the surfaces into which the architrave itself is divided in the Ionic and Corinthian orders. (Vitruv. iii. 5, 10; Guhl and Koner, ed. 5, p. 23.) See EPISTYLIUM and the cuts under COLUMNA, pp. 492–494. [P. S.] [W. W.]

FA'SCINUM (*βασκανία*), fascination, enchantment. The belief that some persons had the power of injuring others by their looks was prevalent among the Greeks and Romans, and, under the name *jettatura*, among the superstitious in modern Italy. The *ὀφθαλμὸς βάσκανος*, or *evil eye*, is frequently mentioned by ancient writers. (Alciphr. *Ep.* i. 15; Heliod. *Aeth.* iii. 7; compare Plin. *H. N.* vii. § 16.) Plutarch, in his *Symposium* (v. 7), has a separate chapter *περὶ τῶν καταβασκαίνειν λεγομένων, καὶ βάσκανον ἔχειν ὀφθαλμόν*. The evil eye was supposed to injure children particularly, but sometimes cattle also; whence Virgil (*Ecl.* iii. 103) says:

> "Nescio quis teneros oculus mihi fascinat agnos."

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the phallus, called by the Romans fascinum, which was hung round the necks of children (*turpicula res*, Varr. *L. L.* vii. 97, ed. Müller). Pliny (*H. N.* xix. § 50) also says that *Satyrica signa*, by which he means the phallus, were placed in gardens and on hearths as a protection against the fascinations of the envious; and we learn from Pollux (viii. 118) that smiths were accustomed to place the same figures before their forges with the same design. Sometimes other objects were employed for this purpose. Peisistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination. (Hesych. *s. v.* Καταχήνη.) Compare AMULETUM, BULLA.

Another common mode of averting fascination was by spitting into the folds of one's own dress. (Theocr. vi. 39; Plin. *H. N.* xxviii. § 39; Lucian, *Navig.* 15, p. 259 R.)

According to Pliny (*H. N.* xxviii. § 39), Fascinus was the name of a god, who was worshipped among the Roman sacra by the Vestal virgins, and was placed under the chariot of those who triumphed as a protection against fascination; by which he means in all probability that the phallus was placed under the chariot. (Müller, *Archäol. der Kunst*, § 436, 1, 2; Böttiger, *Klein. Schr.* iii. p. 111; Becker-Göll, *Charikles*, i. p. 287.) [W. S.] [W. W.]

FASE'LUS. [PHASELUS.]

FASTI. *Fas* signifies *divine law:* the epithet *fastus* is properly applied to anything in accordance with divine law, and hence all those days upon which legal business might, without impiety (*sine piaculo*), be transacted before the praetor, were technically denominated *fasti dies*, i.e. *lawful days*. (For the classification of the days of the year, cf. DIES.) Varro and Festus derive *fastus* directly from *fari* (Varr. *L. L.* vi. 2; Festus, s. v. *Fasti*), while Ovid (*Fast.* i. 47) may be quoted in support of either etymology.

The sacred books in which the *fasti dies* of the year were marked, were themselves denominated *fasti;* the term, however, was employed in an extended sense to denote registers of various descriptions, and many mistakes have arisen among commentators from confounding fasti of different kinds. It will be useful, therefore, to consider separately the two great divisions, which have been distinguished as *Fasti Sacri* or *Fasti Kalendares*, and *Fasti Annales* or *Fasti Historici*.

I. FASTI SACRI or KALENDARES. For nearly four centuries and a half after the foundation of the city a knowledge of the calendar was possessed exclusively by the priests. One of the pontifices regularly proclaimed the appearance of the new moon, and at the same time announced the period which would intervene between the Kalends and the Nones. On the Nones the country people assembled for the purpose of learning from the Rex Sacrorum the various festivals to be celebrated during the month, and the days on which they would fall. (Macrob. i. 15.) In like manner all who wished to go to law were obliged to inquire of the privileged few on what day they might bring their suit, and received the reply as if from the lips of an astrologer. (Cic. *pro Muren.* 11, 25.) The whole of this lore, so long a source of power and profit, and therefore jealously enveloped in mystery, was at length made public by a certain Cn. Flavius, scribe to App. Claudius Caecus (Liv. ix. 46; Plin. *H. N.* xxxiii. § 17; Gell. vi. 9; Val. Max. ii. 5), who, having gained access to the pontifical books, copied out all the requisite information, and exhibited it in the forum for the use of the people at large. From this time forward such tables became common, and were known by the name of *Fasti*. They usually contained an enumeration of the months and days of the year; the Nones, Ides, Nundinae, Dies Fasti, Nefasti, Comitiales, Atri, &c. [CALENDARIUM], together with the different festivals, were marked in their proper places: astronomical observations on the risings and settings of the fixed stars and the commencement of the seasons were frequently inserted, and sometimes brief notices annexed regarding the introduction and signification of certain rites, the dedication of temples, glorious victories, and terrible disasters. In later times it became common to pay homage to the members of the imperial family by noting down their exploits and honours in the calendar, a species of flattery with which Antonius is charged by Cicero (*Philipp.* ii. 34, 87. See also Tac. *Ann.* i. 15).

It will be seen from the above description that these *fasti* closely resembled a modern almanac ("Fastorum libri appellantur totius anni descriptio," Festus); and the celebrated work of Ovid may be considered as a poetical *Year-book* or *Companion to the Almanac*, having been composed to illustrate the Fasti published by Julius Caesar, who remodelled the Roman year. All the more remarkable epochs are examined in succession, the origin of the different festivals explained, the various ceremonies described, the legends connected with the principal constellations narrated, and many curious discussions interwoven upon subjects likely to prove interesting to his countrymen; the whole being seasoned with frequent allusions to the glories of the Julian line. The work however is incomplete, and deals only with the first six months of the year.

Several specimens of *fasti*, more or less perfect, on stone and marble, have been discovered at different times in different places. Mommsen arranges them in the following order:—

1. *Calendarium Pincianum*, engraved about B.C. 30, because Aug. 28 is not noted as *feriatus*, a character given to it in B.C. 29, but the *feriae* on Sept. 23, the birthday of Augustus, are inserted.

2. *C. Allifanum*, of the same date.

3. *C. Tusculanum*, dating from before B.C. 20, because it does not recognise the festival of Mars, in that year assigned to May 12.

4. *C. Venusinum*, probably belonging to B.C. 28.

5. *C. Sabinum*, after B.C. 19, as it notes the festival of the Augustales, Oct. 12, but earlier than the next, because the birthday of Augustus is *fastus*, not *feriatus*.

6. *C. Maffeianum*, after B.C. 8, because it assigns *ludi circenses*, instituted in that year for the birthday of Augustus, but before A.D. 3, because it does not note festivals established in that year.

7. *C. Esquilinum*, of the same date.

8. *Feriale Cumanum*, after the adoption of Tiberius in A.D. 3.

9. *C. Praenestinum*, between B.C. 2 and A.D. 10.

10. *C. Vallense*, between A.D. 7 and A.D. 14.

11. *C. Astiense*, before A.D. 14.

12. *C. Vaticanum*, during the reign of Tiberius (A.D. 14–34).

13. *C. Amiterninum*, after A.D. 16, but probably before A.D. 19.

4. *C. Pighianum*, between A.D. 31 and A.D. 37.

5. *C. Antiatinum*, in A.D. 51.

16–19. *Cc. Farnesianum, Urbinas, Romana* &c. without any certain indications of date, but probably not later than 15.

Mommsen further argues that it was quite natural that all these calendars should have been engraved while the Julian system was not generally familiar, and that they should all belong to Rome or the surrounding towns, because they were of little use except to those who lived in the capital, or visited it frequently. At a later date calendars were published in manuscripts, two of which are extant. Those mentioned above are all fragmentary, except the Cal. Maffeianum. One of the most remarkable, though one of the least entire, is that known as the *Kalendarium Praenestinum* or *Fasti Verriani*. Suetonius, in his short treatise on distinguished grammarians (c. 17), tells us that a statue of Verrius Flaccus, preceptor to the grandsons of Augustus, stood in the lower part of the forum of his native town, Praeneste, near the *Hemicyclium*, on which he had exhibited to public view the fasti, arranged by himself, and engraved on marble slabs. In the year 1771 the remains of a circular building were discovered in the immediate vicinity of the modern Palestrina, together with several fragments of marble tablets, which were soon recognised as forming part of an ancient calendar; and upon further examination no doubt was entertained by the learned that these were the very fasti of Verrius described by Suetonius. An Italian antiquary, named Foggini, continued the excavations, collected and arranged the scattered morsels with great patience and skill; and in this manner the months of January, March, April, and December, to which a very small portion of February was afterwards added, were recovered; and, although much defaced and mutilated, form a very curious and useful monument.

Some of the above, with others of more recent date, are given in the *Corpus Inscriptionum* of Gruter, in the 11th vol. of the *Thesaurus Rom. Antiqq.* of Graevius; in the work of Foggini, entitled *Fastorum anni Romani a Verrio Flacco ordinatorum Reliquiae*, &c., Romae, 1779; and in Jac. Van Vaassen, *Animadverss. ad Fastos Rom. Sacros fragmenta*, Traj. ad Rhen. 1795: to which add Ideler's *Handbuch der mathematischen und technischen Chronologie*, Berlin, 1826. But earlier editions are practically superseded by Mommsen's very exact publication and full discussion in the *Corpus Inscr. Lat.* vol. i. pp. 293–411. Cf. also Bp. John Wordsworth's *Fragments and Specimens*, pp. 266–271, with the notes.

Before quitting this part of our subject, we may make mention of the *Calendarium Rusticum Farnesianum*, or, as it is now more commonly called, the *Menologium Rusticum Colotianum*, now in the Museum at Naples (engraved in Daremberg and Saglio, vol. i. p. 836). This Rural Almanac is cut upon four sides of a cube, each face being divided into three columns, and each column including a month. At the top of the column is carved the appropriate sign of the zodiac; then follows the name of the month, the number of the days, the position of the nones, the length of the day and night, the name of the sign through which the sun passes, the god under whose protection the month was placed, the various agricultural operations to be performed, and a list of the principal festivals. Take May as an example:—

II. FASTI ANNALES or HISTORICI. Chronicles such as the *Annales Maximi*, containing the names of the chief magistrates for each year, and a short account of the most remarkable events noted down opposite to the days on which they occurred, were, from the resemblance which they bore in arrangement to the sacred calendars, denominated *fasti;* and hence this word is used, especially by the poets, in the general sense of *historical records*. (Hor. *Sat.* i. 3, 112; *Carm.* iv. 13, 13, iii. 17, 7.)

In prose writers *fasti* is commonly employed as the technical term for the registers of consuls, dictators, censors, and other magistrates, which formed part of the public archives. (Liv. ix. 18; Cic. *pro Sest.* 14, 33: compare Cic. *Philipp.* xiii. 12, 26; Tac. *Ann.* iii. 17, 18.) Again, when Cicero remarks in the famous epistle to Lucceius (*ad Fam.* v. 12), "Etenim ordo ille annalium mediocriter nos retinet quasi enumeratione fastorum," he means that the regular succession of events meagrely detailed in chronicles fixed the attention but feebly, and was little more interesting than a mere catalogue of names. (Compare *ad Att.* iv. 8.)

A most important specimen of *fasti* belonging to this class, executed probably in the last year of the reign of Augustus, has been partially preserved. Three or four fragments of it were known to the Italian scholars of the 15th century. But in the years 1546–7, several more important fragments of marble tablets were discovered in excavating the Roman Forum, and were found to contain a list of consuls, dictators with their masters of horse, censors with the lustra which they closed, triumphs and ovations, all arranged in regular succession according to the years of the Catonian era. These had evidently extended from the expulsion of the kings to the death of Augustus, and, although defective in many places, have proved of the greatest value in chronology. The different pieces were collected and arranged under the inspection of Cardinal Alexander Farnese, with the assistance of Michel Angelo, and deposited in the Capitol, where they still remain. From this circumstance they are generally distinguished as the *Fasti Capitolini*. A facsimile of all up to that time collected was published by Piranesi at Rome in 1762. In the years 1816–1818, other fragments of the same marble tablets were discovered in the course of a new excavation in the Forum. These were published with instructive dissertations. A most careful edition of the whole is given by Henzen in the *Corpus Inscr. Lat.* vol. i. pp. 415–464. [W. R.] [A. S. W.]

FASTI'GIUM (ἀετός, ἀέτωμα), literally *a slope*, in architecture *a pediment*, is the triangle which surmounts each end of a rectangular building, and which, in fact, represents the gable end of the roof. (See woodcut under ANTAE.) It is composed of the cornice of the entablature which forms its base, the two converging cornices at the sides, and the *tympanum* or flat surface enclosed by them, so called from its resemblance to a three-cornered tambourine (Vitruv. iii. 3, iv. 6; Cic. *de Orat.* iii. 46, § 180; Liv. xl. 2). This flat surface was generally ornamented with sculpture; originally, in the early temples of Zeus, with a simple eagle as a symbol of the god (Pind. *Olymp.* xiii. 29, and Schol. *ad loc.*), an instance of which is afforded by the coin represented in the following woodcut (Beger. *Spicil. Antiq.* p. 6), whence the Greek name ἀετὸς which was at first applied to the *tympanum* and afterwards to the whole pediment; and in after-times with elaborate sculptures in high relief, such as those in the pediments of the Parthenon, the fragments of which are among the Elgin Marbles in the British Museum, where also may be seen a full-sized model of the pediments of the temple of Zeus Panhellenius, at Aegina, with casts of the statues in them, restored. Most of the celebrated Greek temples were similarly adorned. (See Paus. i. 24, § 5; ii. 7, § 3; v. 10, § 2; ix. 11, § 4; Aristoph. *Aves*, 1110.) Terra-cotta figures were applied in a similar manner by the Romans in the early ages. (Cic. *de Div.* i. 10, § 16; Vitruv. iii. 2; Plin. *H. N.* xxxv. §§ 152, 158; xxxvi. § 6.) [ANTEFIXA.]

Fastigium. (From a coin.)

Temple at Aegina, restored. (Fergusson.)

The dwelling-houses of the Romans might have sloping roofs, but ornamental gables were not allowed; hence, when the word is applied to them, it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to a ridge as distinguished from a flat one (Cic. *ad Q. Fr.* iii. 1, 4, § 14; Verg. *Aen.* viii. 491). Among other divine honours, the Romans decreed to Caesar the liberty of erecting a fastigium to his house (Cic. *Phil.* ii. 43, § 110; Florus, iv. 2; Plut. *Caes.* 81; comp. ACROTERIUM), that is, a portico and pediment towards the street like that of a temple. [A. R.] [W. W.]

FAUCES. [DOMUS, p. 671 *a*.]

FAX (φανός), a torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Bellona, Hymen, Phosphorus, by females in bacchanalian processions, and, in an inverted position, by Sleep and Death. In the above woodcut, the female figure in the middle is copied from a fictile vase. The winged figure on the left hand, asleep and leaning on a torch, is from a funeral monument at Rome: the word "Somnus" is inscribed beside it. The other winged figure, also with the torch inverted, is taken from an antique gem, and represents Cupid under the character of Λυσέρως, "the deliverer from love" (Serv. *in* Verg. *Aen.* iv. 520) or "*Lethaeus* Amor" (Ovid, *Rem. Am.* 551). In ancient marbles the torch is sometimes more ornamented than in the examples now produced; but it appears to be formed of wooden staves or twigs, either bound by a rope drawn round them in a spiral form, as in the above middle figure, or surrounded by circular bands at equal distances, as in the two exterior figures. The inside of the torch may be supposed to have been filled with flax, tow, or other vegetable fibres, the whole being abundantly impregnated with pitch, rosin, wax, oil, and other inflammable substances. As the principal use of torches was to give light to those who went abroad after sunset, the portion of the Roman day immediately succeeding sunset was called *fax* or *prima fax*. (Gell. iii. 2, § 11; Macrob. *Sat.* i. 3, § 8.) Torches, as now described, appear to have been more common among the Romans than the Greeks. The use of torches after sunset, and the practice of celebrating marriages at that time, probably led to the consideration of the torch as one of the necessary accompaniments and symbols of marriage. Among the Romans the *fax nuptialis* (Cic. *pro Cluent.* 6, § 15), having been lighted at the parental

Fax. 1. From a relief. 2. From a fictile vase. 3. From an antique gem.

hearth, was carried before the bride by a boy whose parents were alive. (Plaut. *Cas.* i. 30; Ov. *Her.* xi. 101; Servius *in* Verg. *Ecl.* viii. 29; Plin. *H. N.* xvi. § 75; Festus, s. v. *Patrimi.*) The torch was also carried at funerals (*fax sepulcralis*, Ovid, *Her.* ii. 120), both because these were often nocturnal ceremonies, and because it was used to set fire to the pile. Hence the expression of Propertius (v. 11, 46), "Viximus insignes inter utramque facem." The torch-bearer turned away his face from the pile in setting it on fire. (Verg. *Aen.* vi. 224.) [J. Y.] [W. W.]

FEBRUUM. [LUPERCALIA.]

FECIA'LES. [FETIALES.]

FEMINA'LIA were worn in winter by Augustus Caesar, who was very susceptible of cold. (Sueton. *Aug.* 82.) Casaubon supposes them to have been bands or fillets [FASCIA] wound about the thighs; they are more probably to be identified with the BRACAE. These are mentioned under the name *περιμηρίδια* as worn by the Roman horsemen (Arrian, *Tact.* p. 14, ed. Blancard); and the Column of Trajan, the arches of Severus and Constantine, and other monuments of imperial times, present numerous examples of both horse and foot soldiers who wear breeches, closely fitted to the body, and never reaching much below the knees. (See cuts under ABOLLA and ARA, p. 158 *a*.) [J. Y.] [W. W.]

FENESTRA. 1. A window. For the windows of Greek houses, see DOMUS, p. 663 *b*; and for the windows of Roman houses, DOMUS, p. 686 *a*.

2. A loophole in a tower from which arrows and other missiles were discharged. (Caes. *B. C.* ii. 9.)

3. A hole pierced in the lobe of the ear for holding ornaments. (Juv. i. 104.) [INAURIS.] [W. S.]

FENUS (*τόκος*), interest of money. 1. GREEK. At Athens, Solon, among other reforms, abolished the law by which a creditor was empowered to sell or enslave a debtor, and prohibited the lending of money upon a person's own body (*ἐπὶ τοῖς σώμασι μηδένα δανείζειν*, Plut. *Sol.* 15; *de Vit. aere alieno*, 4, p. 828 F: cf. Dem. *de Fals. Leg.* p. 422, § 255, l. 24 f. As regards the other states, see Lys. *c. Agorat.* § 98; Isocr. *Plataic.* § 48; Diod. Sic. i. 79, etc.). No other restriction, we are told, was introduced by him, and the rate of interest was left to the discretion of the lender (*τὸ ἀργύριον στάσιμον εἶναι ἐφ' ὁπόσῳ ἂν βούληται ὁ δανείζων*, Lys. *c. Theomn.* i. § 18; yet see Schol. on Dem. *c. Timocr.* p. 766, *μὴ λαμβάνειν πολλοὺς τόκους*). The only case in which the rate was prescribed by law was in the event of a man separating from his lawful wife, and not refunding the dowry he had received with her. Her trustee or guardian (*ὁ κύριος*) could in that case proceed against him for the principal, with lawful interest at the rate of 18 per cent. (Dem. *c. Aphob.* i. p. 818, § 17, etc.) [DIVORTIUM (Greek).]

Any rate might be expressed or represented in two different ways: (1) by the number of oboli or drachmas paid by the month for every mina; (2) by the part of the principal (*τὸ ἀρχαῖον* or *κεφάλαιον*) paid as interest, either annually or for the whole period of the loan. According to the former method, which was generally used when money was lent upon real security (*τόκοι ἔγγυοι* or *ἔγγειοι*), different rates were expressed as follows:—10 per cent. by *ἐπὶ πέντε ὀβολοῖς*, *i.e.* 5 oboli per month for every mina, or 60 oboli a year = 10 drachmas = $\frac{1}{10}$ of a mina. Similarly:

12 per cent. by *ἐπὶ δραχμῇ* per month.
16 per cent. by *ἐπ' ὀκτὼ ὀβολοῖς*, per month.
18 per cent. by *ἐπ' ἐννέα ὀβολοῖς* per month.
24 per cent. by *ἐπὶ δυσὶ δραχμαῖς* per month.
36 per cent. by *ἐπὶ τρισὶ δραχμαῖς* per month.

The interest was usually paid at the end of the month (Aristoph. *Nub.* 16 ff., 749 ff., and Schol. on 17, and 1129 f.; Theophr. *Char.* 24, ed. Jebb: yet see Dem. *c. Polycl.* p. 1225, § 61, *ἐπειδὴ ὁ ἐνιαυτὸς ἐξῆλθεν*, etc., and *C. I. G.*, No. 1845).

Another method was generally adopted in cases of bottomry, where money was lent upon the ship's cargo or the ship itself or the freightage, for a specified time, commonly that of a voyage. By this method the following rates were thus represented:—

10 per cent. by *τόκοι ἐπιδέκατοι*, *i.e.* interest at the rate of a tenth; 12½, 16⅔, 20, 33⅓, by *τόκοι ἐπόγδοοι*, *ἔφεκτοι*, *ἐπίπεμπτοι*, and *ἐπίτριτοι*, respectively. So that, as Boeckh (*P. E.* pp. 123, 124 = *Sthh.*^{3} i. p. 157) remarks, leaving out of account cases of bottomry which were not necessarily for the space of a year, the *τόκος ἐπιδέκατος* is equal to the *ἐπὶ πέντε ὀβολοῖς*.

The *τόκος ἐπόγδοος* = the *ἐπὶ δραχμῇ* nearly.

The *τόκος ἔφεκτος* = the *ἐπὶ ὀκτὼ ὀβολοῖς* nearly.

The *τόκος ἐπίπεμπτος* = the *ἐπὶ ἐννέα ὀβολοῖς* nearly.

The *τόκος ἐπίτριτος* = the *ἐπὶ τρισὶ δραχμαῖς* nearly.

These nearly corresponding expressions are not to be considered as identical, however closely the rates indicated by them may approach each other in value; although in the age of Justinian, as Salmasius (*de M. U.*) observes, the *τόκος ἐπόγδοος* or 12½ per cent. was confounded with the *centesima*, which is exactly equal to the interest at a drachma or 12 per cent.

The rates above explained occur frequently in the Orators; the lowest in ordinary use at Athens being the *τόκος ἐπιδέκατος* or 10 per cent., the highest *ἐπὶ τρισὶ δραχμαῖς* or 36 per cent. (charged by a banker, Lys. *c. Aeschin.* fr. 1). The higher rates, however, were chiefly confined to cases of bottomry, and denote more than they appear to do, as the time of a ship's voyage was generally less than a year. We find the rate of 10 per cent. mentioned in Dem. *c. Onet.* i. p. 866, § 7; Arist. *Rhet.* iii. 10, 7, p. 1411 a, 15; *C. I. A.* i. No. 283 (cf. Boeckh, *Kleine Schriften*, v. p. 455); *C. I. G.* No. 3599, l. 13 (Ilion). The *ἐπὶ δραχμῇ*, or rate of 12 per cent., was common in the time of Demosthenes (*c. Aphob.* i. p. 820, § 23, p. 824, § 35, etc.; Aeschin. *c. Ctesiph.* § 104; *C. I. G.* No. 93 = *C. I. A.* ii. No. 1055), but appears to have been thought low. The interest of eight oboli or 16 per cent. occurs in that orator (*c. Nicostr.* p. 1250, § 13); and even in the age of Lysias and Isaeus, nine oboli for the mina, or 18 per cent., appears to have been a common rate (Lys. *c. Aeschin.* fr. 1; Isae. *Hagn.* § 42). Aeschines (*c. Tim.* § 107) also speaks of money being borrowed on the same terms. The rate of 25 per cent. occurs in Lys. *de bon. Aristoph.* § 25. On the whole, we may conclude that the usual rates of interest at Athens about the time of Demosthenes varied from 12 to 18 per cent. That they were nearly the same in range, and similarly expressed, throughout the rest of Greece, appears from the authorities quoted by Boeckh (*Sthh.*³ i. p. 165). No conclusions on the subject of the general rate of interest can be drawn from extreme instances on either side, such as a rate of a little more than 1 per cent. (Rangabé, *Antiq. hellén.* i. p. 195 = *C. I. A.* i. p. 147), of 6⅔ per cent. (*Bull. de Corresp. hellén.* v. p. 157, Delphi), of 7 per cent. (in a will, *C. I. G.* No. 2448, i. l. 30–ii. l. 10, Thera), or the exorbitant rates charged by bankers and common usurers (*τοκογλύφοι, toculliones, ὀβολοστάται, ἡμεροδανεισταί*). Thus in the Delphian inscription referred to above the low interest is to be accounted for by the strictness of the terms as regards security: the capital was to be lent on land of double its value and for five years at the outside, and the borrowers had moreover to find sureties. When a banker charged as much as 36 per cent. interest, this was probably because he worked with foreign capital (cf. Dem. *c. Aphob.* i. p. 816, § 11; *pro Phorm.* p. 947, § 11), so that his profit consisted in the difference between the interest which he received and that which he himself had to pay. Some of the common usurers exacted as much as an obolus and a half per day for each drachma (Theophr. *Char.* 6 = 16, ed. Jebb); some exacted compound interest (Theophr. *Char.* 10 = 24 ed. Jebb; Aristoph. *Nub.* 1156: but compound interest is also mentioned in an official document, Rangabé, *Antiq. hellén.* ii. p. 603, cf. *C. I. G.* No. 2335, *εὐθυτοκία*); some deducted the interest before paying out the principal (Plut. *de Vit. aere alieno*, 4, p. 829 B). Money-lenders and bankers in general, from the high profits which they realised, and the severity with which they exacted their dues, seem to have been as unpopular amongst their fellow-citizens as Jews and usurers in more modern times. Demosthenes, indeed, intimates that the fact of a man being a money-lender was enough to prejudice him, even in a court of law, amongst the Athenians (*μισοῦσιν οἱ Ἀθηναῖοι τοὺς δανείζοντας*, *c. Pantaen.* p. 981, § 52). Plato calls money *ξύμβολον τῆς ἀλλαγῆς ἕνεκα* (*de Rep.* ii. p. 371 B; *de Legg.* xi. p. 918 B), and disapproves of lending money upon interest (*de Legg.* v. p. 742 C; for an instance of *ἄτοκον χρέως*, cf. Dem. *c. Nicostr.* p. 1250, § 12). Aristotle holds a similar view; he objects (*Pol.* i. 3, 23 S. = 4, 10 Bk.) on principle to putting money out at interest (*εὐλογώτατα μισεῖται ἡ ὀβολοστατική*), as being a perversion of it from its proper use, as a medium of exchange, to an unnatural purpose, viz. the reproduction or increase of itself; whence, he adds, comes the name of interest or *τόκος*, as being the offspring of a parent like itself. (Cf. Shakespeare's "breed of barren metal.") The Greeks in general, however, looked upon money as upon any other commodity: this view could not but grow up as trade and commerce developed; capital was needed for commercial and industrial enterprise, and from the name for it (*ἀφορμή*) we see that the Greeks looked upon it as the very starting point of business (Dem. *pro Phorm.* p. 947, §§ 11, 12; Harpocr. *s. v.*, etc.).

The arrangement of a loan would of course depend upon the relation between the borrower (*ὁ χρήστης*, Dem. *c. Onet.* i. p. 867, § 12; *c. Zenoth.* p. 885, § 12; *c. Phorm.* p. 946, § 6; cf. Harpocr. *s. v.* *χρῆσται* or *ὁ χρεώστης, χρεωφειλέτης* in inscr. and later Greek) and the lender (*ὁ χρήστης, δανειστής*), and the confidence placed by one in the other. Sometimes money was lent without written bond, or security, or witnesses ([Dem.] *c. Timoth.* p. 1202, § 61), especially by bankers ([Dem.] *c. Timoth.* p. 1185, § 2), since their books seem to have afforded sufficient evidence (Isocr. *Trapez.* 2; *Att. Process*, ed. Lipsius, p. 686, yet see Philippi, *Jahrb. f. kl. Phil.* 1866, p. 611 ff.). Pollux (ii. 152) calls such a loan *χειρόδοτον* (cf. Hesych. *s. v.*; Bekk. *Anecd.* 89, 23, *διὰ χειρὸς δανεῖσαι*: and Diod. Sic. i. 79, *ἀσύγγραφα δανείσασθαι*). But generally a regular instrument (*συγγραφή, συνθῆκαι*: *χειρόγραφον* is a term foreign to Attic law, cf. Gneist, *d. formellen Verträge d. röm. Obligationsrechtes*, p. 437 ff.) was executed by both parties before witnesses, whose names were mentioned in the document, sealed up (to prevent its being tampered with, *συσσημαναμένου* of the surety, Dem. *c. Lacrit.* p. 928, § 15), and deposited before witnesses with a third party, usually a banker (Dem. *c. Phorm.* p. 908, § 6; Lyc. *c. Leocr.* § 23); such agreements were sometimes made in duplicate (Dem. *c. Phorm.* p. 916, § 32). In Sparta such documents were called *κλάρια* (Plut. *Ages.* 13); for the peculiar formalities observed in drawing them up, see Schol. Aristoph. *Av.* 1284, and Suid. *s. v.* *σκυτάλη*. Amongst the Locrians *συγγραφαὶ* were not allowed (Zenob. v. 4; cf. Strabo, vi. p. 260). Witnesses were also present at Athens at the payment of the money borrowed (Dem. *c. Phorm.* p. 915, § 30; *c. Lacrit.* p. 925, § 9). The security for a loan was a third party (*συστῆσαί τινα*, Dem. *c. Spud.* p. 1029, § 6; p. 1032, § 16, etc.; *C. I. A.* ii. No. 570, *τιμήματι* (= *ἀποτιμήματι*, cf. Harpocr. *s. v.*) ἢ *ἐγγυητής*) or an *ἐνέχυρον* or a *ὑποθήκη*. The *ἐνέχυρον* was put into the possession of the lender, and consisted generally of movable property; the *ὑποθήκη* was merely assured to the lender, and generally, though not always, consisted of real or immovable property. [ENECHYRA.] At Athens, when land or house property was given as security, or mortgaged (*συμβόλαιον ἔγγειον*, Dem. *c. Apat.* p. 983, § 3; *δάνεισμα ἔγγειον*, Pollux, iii. 84, viii. 141), pillars [HORI] or stone tablets were placed upon it with the debt, and the mortgagee's name and that of the archon eponymus inscribed (*ἀφορίζειν τὸ χωρίον*, [Dem.] *c. Timoth.* p. 1202, § 61). An unencumbered estate was called an *ἄστικτον χωρίον* (Harpocr. *s. v.*). Without the consent of the creditor no more money might be borrowed on mortgaged property ([Dem.] *c. Nicostr.* p. 1249, § 10; *ἐπιδανεῖσαι*, Bekk. *Anecd.* 259, 1: cf. *C. I. A.* ii. No. 1113, and Dittenberger, *S. I. Gr.* No. 344 (Ephesus), l. 33, *ἐπὶ τοῖς ὑπερέχουσι δανείσαι*). See l. 36 ff. on the treatment of those who had fraudulently contracted a fresh loan on the security of property already mortgaged. If the debtor became insolvent, the mortgaged land passed into the possession of the creditor without legal proceedings (Dem. *c. Spud.* p. 1030, § 7).

This practically excluded metoecs from lending money on the security of land, as they were not entitled to hold such property [Enctesis]. In some parts of Greece there were public books of debt, like the German and Scotch registers of mortgages (Theophr. π. νόμων, fr. 21, in *Journ. of Philol.* vi. p. 4: in Chios, Arist. *Oecon.* ii. p. 1347 b, 35; in Aphrodisias, *C. I. G.* No. 2826; in Smyrna, No. 3282); but they are not mentioned as having existed at Athens.

Bottomry (ἔκδοσις· τὸ ναυτικὸν δάνεισμα, Harpocr. *s. v.*, cf. Dem. *c. Aphob.* p. 816, § 11; τόκος ναυτικός) was considered a matter of so much importance at Athens that fraud or breach of contract in transactions connected with it was sometimes punished with death (Dem. *c. Phorm.* p. 922, § 50). In these cases the loans were generally made upon the cargo shipped (ἐπὶ τοῖς χρήμασι, φορτίοις), sometimes on the vessel itself (ἐπὶ τῇ νηΐ, τῷ πλοίῳ, Dem. *c. Lacrit.* p. 933, § 32; *c. Dionysod.* p. 1283, § 3), and sometimes on the money received or due for passengers and freightage (ἐπὶ τῷ ναύλῳ, [Dem.] *c. Timoth.* p. 1192, § 26; ναῦλον, like "freight," seems to have meant either the charge for carrying cargo, as above, or the cargo itself, as in Dem. *c. Zenoth.* p. 882, § 2, viz. the portion of the cargo belonging to the skipper: Boeckh, *Sthh.*³ i. p. 166, n.). The principal as well as the interest could only be recovered in case the ship met with no disaster in her voyage, a clause to this effect being generally inserted in all agreements of bottomry or ναυτικαὶ συγγραφαί (σωθείσης τῆς νεώς, Dem. *c. Zenoth.* p. 883, § 5; *c. Phorm.* p. 916, § 33; Bekk. *Anecd.* 283, 9). The additional risk incurred in loans of this description was compensated for by a high rate of interest, and the lenders took every precaution against negligence or deception on the part of the borrowers; the latter also were careful to have witnesses present when the cargo was put on board, for the purpose of deposing, if necessary, to a *bonâ-fide* shipping of the required amount of goods at the lender's risk (Dem. *c. Phorm.* p. 915, § 27 f.). The loan itself was either a δάνεισμα ἑτερόπλουν, *i.e.* for a voyage out, or it was a δάνεισμα ἀμφοτερόπλουν, *i.e.* for a voyage out and home. In the former case the principal and interest were paid at the place of destination, either to the creditor himself, if he sailed in the ship (Dem. *c. Callipp.* p. 1242, § 20), or to an authorised agent (Dem. *c. Phorm.* p. 909, § 8; p. 914, § 26). In the latter case the payment was made on the return of the ship (Dem. *c. Lacrit.* p. 926, § 11, within twenty days after the return), and it was specially provided in the agreement between the contracting parties that she should sail to some specified places only. A deviation from the terms of the agreement, in this or other respects, was, according to a clause usually inserted in the agreement, punishable by a fine (τὰ ἐπιτίμια, in Dem. *c. Dionysod.* p. 1294, § 38, twice the amount of the money lent; see also *c. Phorm.* p. 916, § 33, and p. 914, § 23). Moreover, if the goods which formed the original security were sold, fresh articles of the same value were to be shipped in their place (Dem. *c. Phorm.* p. 909, § 9).

The rate of interest would of course vary with the risks and duration of the voyage, and therefore we cannot expect to find that it was at all fixed. Xenophon (*de Vectig.* 3, 7–14) speaks of the fifth and third parts of the capital lent as being commonly given in bottomry, referring of course to voyages out and home. The rate of interest for the time of a voyage from Athens to the Bosporus and back again was 30 per cent. (Dem. *c. Phorm.* p. 914, § 23); for a voyage (lasting three days) from Byzantium to Athens, 10 or 12 per cent. (Athen. vii. p. 292 b); for a voyage from Sestos to Athens, 12½ per cent., upon condition that the trireme should first go to Hierum to convoy vessels laden with corn (Dem. *c. Polycl.* p. 1211, § 17).

The best illustration of the facts mentioned above is found in a ναυτικὴ συγγραφή, given in the speech of Demosthenes against Lacritus (p. 925 ff., §§ 10–13; cf. *c. Dionysod.* p. 1284, §§ 5, 6). Westermann (*Abhandl. d. Sächs. Gesellsch. d. Wissensch.* 1850, p. 136) and Schaefer (*Dem. u. s. Zeit*, iii. B, p. 286, n. 3) consider it spurious; Boeckh calls it "a very carelessly written instrument;" and Blass (*Att. Beredsamk.* iii. 1, p. 502) looks upon it as genuine, "since it would have been too much for any grammarian to fabricate such a document." Two Athenians lent two Phaselitans 3,000 drachmas upon a cargo of 3,000 jars of Mendean wine, on which the latter were not to owe anything else, or raise any additional loan. They were to sail from Athens to Mende or Scione, where the wine was to be shipped, and thence to the Bosporus, with liberty, if they preferred it, to continue their voyage "to the left (*i.e.* northern, to a ship sailing eastward) parts" of the Black Sea as far as the Borysthenes, and then to return to Athens; the rate of interest being fixed at 225 drachmas in 1000, or 22½ per cent. for the whole time of absence. If, however, they did not return to Hierum, a port in Bithynia close to the Thracian Bosporus (*C. I. G.* ii. p. 975), before the early rising of Arcturus, *i.e.* before the 20th of September or thereabouts, when navigation began to be dangerous, they had to pay a higher rate of 30 per cent. on account of the additional risk. The agreement further specified that there should be no change of vessel for the return cargo, and that if it arrived safely at Athens the loan was to be repaid within twenty days afterwards, without any deductions except for loss by payments made to enemies and for jettison (ἐντελὲς πλὴν ἐκβολῆς, etc.), made with the consent of all on board (οἱ σύμπλοι); that till the money was repaid, the goods pledged (τὰ ὑποκείμενα) should be under the control of the lenders, and be sold by them, if payment was not made within the appointed time; that if the sale of the goods did not realise the required amount, the lenders might raise the remainder by making a levy (πρᾶξις) upon the property of both or either of the traders, just as if they had been cast in a suit, and became ὑπερήμεροι (*i.e.* had not complied with a judgment given against them within the time appointed). Another clause in the agreement provides for the contingency of their not entering the Pontus; in that case they were to remain in the Hellespont, at the end of July, for ten days after the early rising of the dog-star (ἐπὶ κυνί), discharge their cargo (ἐξελέσθαι) in some place where the Athenians had no right of reprisals

[SYLAE] (which might be executed unfairly, and would lead to retaliations), and then, on their return to Athens, they were to pay the amount of interest in the bond for the previous year, *i.e.* the lower rate. Lastly, if the vessel were to be wrecked, the cargo was, if possible, to be saved for the benefit of the lenders, any goods that might be saved being the property of both lenders alike (*κοινὰ τοῖς δανείσασι*: cf. Sandys *ad loc.*).

From the preceding investigation it appears that the rate of interest amongst the ancient Greeks was higher than in modern Europe, and at Rome in the age of Cicero. This high rate does not appear to have been caused by any scarcity of money, but by the unwillingness of those who had capital to lend it out at a low rate of interest, since they could use it themselves to more advantage in trade, or, owing to the cheapness of slave labour, in agriculture; hence even the interest on land and house property is proportionately high. Isaeus (*Hagn.* § 42) says that land at Thria was let for 8 per cent. of its value, and houses at Melite and Eleusis for 8⅓ per cent.; in *C. I. A.* ii. No. 600, 12 per cent. is stipulated for an estate. (Boeckh, *Sthh.*³ i. p. 156 ff.; Büchsenschütz, *Besitz u. Erwerb*, p. 478 ff.) [R. W.] [H. H.]

2. ROMAN. The Latin word for interest, *fenus* or *foenus*, originally meant any increase, and was thence applied, like the Greek *τόκος*, to denote the interest or increase of money. "Fenus," says Varro (*ap.* Gell. xvi. 12), "dictum a fetu et quasi a fetura quadam pecuniae parientis atque increscentis." The same root is found in *fecundus*. Fenus was also used for the principal as well as the interest (Tac. *Ann.* vi. 17; xiv. 53). Another term for interest was *usurae*, generally found in the plural, and also *impendium*, on which Varro (*L. L.* v. 183, Müller) remarks, "a quo (*pondere*) usura quod in sorte accedebat, impendium appellatum."

That a high rate of interest is a sign that industry and trade are still in their infancy, is now one of the elementary maxims of political economy. The remark occurs in Hume's Essays (i. 322, ed. Green and Grose), and is applied to the early times of Greece by Boeckh (*P. E.* p. 59 = *Sthh.*³ i. 76) and to those of Rome by Marquardt (*Staatsverw.* ii. 57). As in Attica before the *σεισάχθεια* of Solon, and as in France, Russia, and Ireland at the present day, the tendency of small cultivators is everywhere to sink into debt, to be compelled to mortgage future crops for the sake of immediate subsistence, and, unless specially protected, to fall into the grasp of the usurer. In early Latium this tendency was aggravated by the law of *addictio*, which consigned the debtor to personal slavery [NEXUM], and by the incessant ravages of war. Hence at Rome the rate of interest was originally unlimited; and the grievances of debtors fill a large space in the earliest struggles between the patricians and the plebs (Liv. ii. 23, 27, 29). Not only money but food, and especially seed-corn, was lent on exorbitant usury; a practice which we find prevailing in much later times, long after the direct interest of money had been placed under control. Thus St. Jerome mentions that ten bushels of corn might be lent in winter to be repaid by fifteen at the next harvest (*in Ezechiel*, vi. 18). This form of usury is still practised in Italy (Beauclerk, *Rural Italy*, p. 54).

The first restriction was imposed by the decemviral legislation of the Twelve Tables, B.C. 451, which established *fenus unciarium* as the normal rate. Interest at this time was yearly, as it had once been at Athens (Boeckh, *P. E.* p. 124 = *Sthh.*³ i. 157); and this, as Marquardt observes, is the natural arrangement for an agricultural people, who pay their debts most conveniently when they have gathered in their crops. The explanation of Niebuhr is now universally accepted, that the *fenus unciarium* was an ounce (*uncia*) in the pound (*as*), i.e. a twelfth part of the principal, or 8⅓ per cent. annually. The theories that it could have been either one-twelfth of the centesima paid monthly, *i.e.* 1 per cent. per annum, or one-twelfth of the principal paid monthly, *i.e.* 100 per cent. per annum, err grossly on the side either of defect or excess; it is impossible to believe that creditors would have lent for so little as the one, or that debtors could have paid so much as the other. These improbable conjectures could only have arisen from the notion that the interest must always have been paid monthly; but though towards the close of the republic this was the practice, there is no trace of it in early times (Niebuhr, *Hist. Rom.* iii. 57; Rein, *Römische Privatrecht*, p. 304). On one point, however, the authorities are divided. Niebuhr reckons the *fenus unciarium* on the year of ten months, so that it would amount to 10 per cent. on the year of twelve months; and in this he is followed by Huschke (*Recht des Nexum*, p. 98 ff.) and Mommsen (*Röm. Gesch.* i.³ 274 = i. 220 tr. Dickson), while Walter (*Gesch. des Röm. Rechts*, § 609) and Steuber understand 8⅓ per cent. on the full year. The treatise of Steuber (*Der Zinsfuss bei den Römern*, Basel, 1857) collects and criticises the recent literature of the subject. For the year of ten months, see CALENDARIUM, p. 341 *a*.

Towards the last century of the republic (in the time of Sulla, Niebuhr thinks, and under foreign influence) the interest of money became due on the first of every month: hence the phrases *tristes* or *celeres calendae* and *calendarium*, the latter meaning originally a debt-book or book of accounts. It is not difficult to account for the change; it was probably connected with the modifications made from time to time in the Roman law of debtor and creditor (such as the abolition of personal slavery for debt), the natural effect of which would be to make creditors more cautious in lending money, and more vigilant in exacting the interest due upon it.

The rate of interest was expressed in the time of Cicero and afterwards by means of the *as* and its divisions, according to the following table:—

Asses usurae, or one as per month for the use of 100		= 12	per cent.
Deunces usurae		11	"
Dextantes	"	10	"
Dodrantes	"	9	"
Besses	"	8	"
Septunces	"	7	"
Semisses	"	6	"
Quincunces	"	5	"
Trientes	"	4	"
Quadrantes	"	3	"
Sextantes	"	2	"
Unciae	"	1	"

Instead of the phrase *asses usurae*, a synonym was used, viz. *centesimae usurae*, inasmuch as at this rate of interest there was paid in a hundred months a sum equal to the whole principal. Hence *binae centesimae* = 24 per cent., and *quaternae centesimae* = 48 per cent. So also in the line of Horace (*Sat.* i. 2, 14), "Quinas hic capiti mercedes exsecat," we must understand *quinas centesimas*, or 60 per cent., as the sum taken from the capital. Horace is speaking, however, of spendthrifts and those who prey upon them. Juvenal tells of one Crepereius Pollio, a usurer of this stamp, who offered to lend at 36 per cent. (*triplicem usuram*, *Sat.* ix. 7) and found none who were fools enough to borrow. How usury worked in the provinces in the last days of the senatorial régime is well shown in the *Quart. Rev.*, Oct. 1888; the virtuous Brutus, acting of course through an intermediary and keeping behind the scenes, tried to get 48 per cent. out of the Cyprians, and plagued Cicero, then proconsul of Cilicia, to put on the screw for him. [NEGOTIATORES.] Verres, it is insinuated, over and above his exactions from the wretched Sicilians, made 24 per cent. out of the public money with which he had to buy corn for the Roman people (Cic. *Verr.* iii. 71, § 165). In Rome itself, at the same period, the accumulation of capital brought about a reasonably low though fluctuating rate of interest on good business; Cicero mentions a sudden rise from 4 per cent. to 8 (*ad Att.* iv. 15). Under the early empire we find the now familiar expression "a modest 5 per cent.," while 11 per cent. savours of "sweating" (Pers. v. 150). The endowment of the *alimentarii* at Veleia was invested on mortgage at 5 per cent.; that of another similar charity, the *alimentarii Baebiani* in Liguria, at only 2½ (Henzen, *Tab. alim. Baeb.* p. 27; ALIMENTARII).

If a debtor could not pay the principal and interest at the end of the year, he used to borrow money from a fresh creditor, to pay off his old debt. This proceeding was very frequent, and called a *versura* (compare Ter. *Phorm.* v. 2, 16), a word which Festus (*s. v.*) thus explains: "Versuram facere, mutuam pecuniam sumere, ex eo dictum est, quod initio qui mutuabantur ab aliis, ut aliis solverent, velut verterent creditorem." It amounted to little short of paying compound interest [ANATOCISMUS], another phrase for which was *usurae renovatae*; e.g. *centesimae renovatae* is 12 per cent. compound interest, to which Cicero (*ad Att.* v. 21) opposes *centesimae perpetuo fenore* = 12 per cent. simple interest. The following phrases are of common occurrence in connexion with borrowing and lending money at interest:—*Pecuniam apud aliquem collocare*, to lend money at interest; *relegere*, to call it in again; *cavere*, to give security for it; *opponere* or *opponere pignori*, to give as a pledge or mortgage: hence the pun in Catullus, xxvi.:

> "Furi, villula nostra non ad Austri
> Flatus opposita est, nec ad Favoni:
> Verum ad millia quindecim et ducentos.
> O ventum horribilem atque pestilentem."

The word *nomen* is also of extensive use in money ransactions. Properly it denoted the name of a debtor, registered in a banker's or any other account-book: hence it came to signify the articles of an account, a debtor, or a debt itself. Thus we have *bonum nomen*, a good debt: *nomina facere*, to lend monies (Cic. *ad Fam.* vii. 23), and also to borrow money (Id. *de Off.* iii. 14, § 59). Moreover, the Romans generally discharged debts through the agency of a banker (*in foro et de mensae scriptura*) rather than by a direct personal payment (*ex arca domoque*); and as an order or undertaking for payment was given by writing down the sum to be paid, with the receiver's name underneath or alongside it (see Dem. *c. Callipp.* p. 1236, § 4), hence came the phrases *scribere nummos alicui*, to promise to pay (Plaut. *Asin.* ii. 4, 34); *rescribere*, to pay back, of a debtor (Ter. *Phorm.* v. 7, 29). So also *perscribere*, to give a bill or draft (*perscriptio*) on a banker for payment, in opposition to payment by ready money (Cic. *ad Att.* xii. 51; xvi. 2).

The Roman law of debtor and creditor is given under NEXUM. It is sufficient to remark here that the Licinian laws [LEGES LICINIAE], by which the grievances of debtors were to a certain extent redressed, did not lay any restriction on the rate of interest that might be legally demanded; and it is clear from various circumstances that the scarcity of money at Rome after the taking of the city by the Gauls had either led to the actual abolition of the old uncial rate (*unciarium fenus*) of the Twelve Tables, or caused it to fall into disuse. Nine years, however, after the passing of these laws (Liv. vii. 16), the rate of the Twelve Tables was re-established, and any higher rate prohibited by the bill (*rogatio*) of the tribunes Duilius and Maenius. Still this limitation of the rate of interest did not enable debtors to pay the principal, and what Tacitus (*Ann.* vi. 16) calls the *fenebre malum* became at last so serious that the government thought it necessary to interfere, and remedy, if possible, an evil so great and inveterate. Accordingly, fourteen years after the passing of the Licinian laws, five commissioners were appointed for this purpose under the title of *mensarii* or bankers. These opened their banks in the forum, and in the name of the treasury offered ready money to any debtor who could give security (*cavere*) to the state for it: moreover, they ordered that land and cattle should be received in payment of debts at a fair valuation, a regulation which Caesar adopted for a similar purpose (Suet. *Jul.* 42). By these means Livy (vii. 21) tells us that a great amount of debt was satisfactorily liquidated. Five years afterwards, the legal rate of interest was still further lowered to the *semiunciarium fenus* (Liv. vii. 23, § 3), or the twenty-fourth part of the whole sum (*ad semuncias redacta usura*, Tac. *Ann.* vi. 16); and in B.C. 346 we read of several usurers being punished for a violation of the law (Liv. vii. 28), by which they were subjected to a penalty of four times the amount of the loan (Cato, *de Re Rust.* init.). But all these enactments were merely palliatives; the termination and cure of the evil was something more decisive—neither more nor less than a species of national bankruptcy—a general abolition of debts or χρεῶν ἀποκοπαί. This happened in B.C. 341, a year remarkable for political changes of great importance, and was followed up by the passing of the Genucian laws, which are said to have forbidden the taking of usury altogether.

On this point, indeed, Livy speaks doubtfully ("*invenio* apud quosdam *L. Genucium tribunum plebis tulisse ad plebem, ne fenerare liceret*," vii. 42, § 1): but that all interest had been at one time forbidden by law is stated by Appian (*Bell. Civ.* i. 54) and Tacitus (*l. c.*); the latter adds that it had always been evaded. There was a very simple way of doing so; it only affected Roman citizens, and therefore the usurers granted loans, not in the name of themselves, but of the Latins and allies who were not bound by it (Liv. xxxv. 7). To prevent this evasion the Sempronian law was passed (B.C. 193), which placed the Latins and allies on the same footing in respect of lending money as the full Roman citizens. At last, after many futile attempts to prevent the exaction of interest at any rate and in any shape, the idea was abandoned altogether, and the centesima or 12 per cent. per annum became the legal and recognised rate. Niebuhr, as we have already observed, is of opinion that it was first adopted at Rome in the time of Sulla; but whether it became the legal rate by any special enactment, or from general consent, does not appear. Some writers have inferred (Heinecc. iii. 15) that it was first legalised by the edicts of the city praetors, an inference drawn from the general resemblance between the praetorian and proconsular edicts. Of the latter we have an example in the case of Cicero; he decreed for Cilicia a maximum of 12 per cent., but did not venture directly to oppose the Shylock Brutus in the matter of 48 per cent. with compound interest. ("Quum ego in edicto tralatitio centesimas me observaturum haberem, cum anatocismo anniversario ille ex syngrapha postulabat quaternas," *ad Att.* v. 21, § 11.) The rest of the letter is most amusing.

Whether this inference is true or not, it is admitted that the centesima or 12 per cent. was the legal rate at the end of the republic and also under the emperors. In the case of *fenus nauticum*, however, or bottomry, as the risk was the money-lender's, he might demand any interest he liked while the vessel on which the money was lent was at sea; but after she reached harbour, and while she was there, no more than the centesima could be demanded. Justinian reduced the legal rate to 6 per cent. on ordinary loans, and made 12 per cent. the maximum for *fenus nauticum*, whether at sea or in harbour (Heinecc. iii. 16).

Under the empire we find a very few examples of the practice, more familiar to the Greeks, of reckoning the interest annually, not by months, at a certain fraction of the capital, *e.g.* one-eighth or 12½ per cent. (Henzen, *Inscr.* 7215). After Constantine's changes in the currency, this practice became more common. The yearly interest was now fixed at 3 *siliquae* per *solidus*; and as the *solidus* contained 24 *siliquae*, this amounted to one-eighth of the principal. The Romans had no convenient way of expressing this 12½ per cent., and they transferred the word *centesima* to it; hence the centesima in the times before Constantine means 12 per cent., after him 12½ (Godefroi *ad* Cod. Theod. ii. 33, 1). (Cf. Marquardt, *Staatsverw.* ii. 59–62.) [R. W.] [W. W.]

FERA'LIA. [FUNUS, p. 893 *b*.]

FE'RCULUM (from *fer-o*) is applied to any kind of tray or platform used for carrying anything. Thus it is used to signify the tray or frame on which several dishes were brought in at once at dinner (Petron. 35; Plin. *H. N.* xxviii. § 26); and hence *fercula* came to mean the number of courses at dinner, and even the dishes themselves. (Suet. *Aug.* 74; Serv. *ad* Verg. *Aen.* i. 637; Juv. i. 94 (with Mayor's note), xi. 64; Hor. *Sat.* ii. 6, 104; Mart. iii. 50, ix. 82, xi. 31.)

The ferculum was also used for carrying the images of the gods in the procession of the circus (Suet. *Jul.* 76), the ashes of the dead in a funeral (Suet. *Cal.* 15), and the spoils in a triumph (Suet. *Jul.* 37; Liv. i. 10); in all which cases it appears to have been carried on the shoulders or in the hands of men. This is shown in the annexed cut from the Arch of Titus, where Roman soldiers are carrying on a ferculum the Golden Candlestick. The most illustrious captives were sometimes placed on a ferculum in a triumph, in order that they might be better seen. (Senec. *Herc. Oet.* 110.) [W. S.] [A. S. W.]

FERENTA'RII. [EXERCITUS, p. 782 *a*.]

FERETRUM. [FUNUS.]

FE'RIAE, holidays, were, generally speaking, days or seasons during which free-born Romans suspended their political transactions and their lawsuits, and during which slaves enjoyed a cessation from labour. (Cic. *de Leg.* ii. 8, 19; 12, 29; *de Div.* i. 45, 102.) All feriae were thus *dies nefasti*. But they were distinguished (as Mommsen, *Chron.* p. 233, has shown) by the mark NP, while the *nefasti tristes* were marked simply N. The feriae included all days consecrated to any deity; consequently all days on which public festivals were celebrated were *feriae* or *dies feriati*. But some of them, such as the *feria vindemialis* and the *feriae aestivae*, seem to have had no direct connexion with the worship of the gods. The nundinae, however, during the time of the kings and the early period of the republic, were feriae only for the populus, and days of business for the plebeians, until, by the Hortensian law, they became *fasti* or days of business for both orders. (Macrob. *Sat.* i. 16, 28–30; compare Niebuhr, *Hist. of Rome*, vol. ii. p. 213, &c.; Walter, *Geschichte d. röm. Rechts*, p. 190.)

All feriae were divided into two classes, *feriae publicae* and *feriae privatae*. The latter were only observed by single families or individuals, in commemoration of some particular event which had been of importance to them or their ancestors. As family feriae, are mentioned the *feriae Claudiae, Aemiliae, Juliae, Corneliae*, &c., and we must suppose that all the great Roman families had their particular feriae, as they had their private sacra (Borghesi, *Oeuvres*, viii. 250 ff.). Among the family-holidays we may also mention the *feriae denicales*, i.e. the day on which a family, after having lost one of its members by death, underwent a purification. (Fest. *s. v.*; Cic. *de Leg.* ii. 22, 55; Columell. ii. 22.) Individuals kept feriae on their birthdays (Censor. 2, 3), and other occasions which marked any memorable event of their lives. The Calends, Nones, and Ides of each month were also usually kept as *feriae privatae*, the Calends being sacred to Juno, the Ides to Jupiter. But no public feriae were celebrated on these days (Mommsen, *C. I. L.* i. 375). During the time of the empire the birthday of an emperor sometimes assumed the character of a public holiday, and was celebrated by the whole nation with games and sacrifices. Thus the birthday of Augustus, called Augustalia, was celebrated with great splendour even in the time of Dio Cassius (liv. 34, lvi. 46). The day on which Augustus had returned from his wars (Oct. 12) was likewise for a long time made a holiday (Tac. *Ann.* i. 15, with the note of Lipsius; Dio Cass. liv. 10). The *dies natalicii* of the cities of Rome and Constantinople were at a still later period likewise reckoned among the feriae (Cod. 3, tit. 15, s. 6). It is noteworthy that all the feriae recognised in the Calendars date either from the regal or from the imperial time. No new feriae were added during the republic (Mommsen, *C. I. L.* i. 377 ff.).

All *feriae publicae*, i.e. those which were observed by the whole nation, were divided into *feriae stativae, feriae conceptivae*, and *feriae imperativae*. Feriae stativae or statae were those which were held regularly, and on certain days marked in the calendar (Fest. *s. v.*; Macrob. *l. c.*). To these belonged some of the great festivals, such as the Agonalia, Carmentalia, Lupercalia, &c. Feriae conceptivae or conceptae were held every year, but not on certain or fixed days, the time being every year appointed by the magistrates or priests ("quotannis a magistratibus vel sacerdotibus concipiuntur," Macrob. *l. c.*; Varr. *L. L.* vi. 25, &c.; Fest. *s. v.*). Among these we may mention the feriae Latinae, feriae Sementivae (in the country called Paganalia), and Compitalia. Feriae imperativae are those which were held on certain emergencies at the command of the consuls, the praetors, or a dictator. The books of Livy record many feriae imperativae, which were chiefly held in order to avert the dangers which some extraordinary prodigy seemed to forebode, but also after great victories (Liv. i. 31, iii. 5, vii. 28, xxxv. 40, xlii. 3; Polyb. xxi. 1). They frequently lasted for several days, the number of which depended upon the importance of the event which was the cause of their celebration. But whenever a rain of stones was believed to have happened, the anger of the gods was appeased by a *sacrum novemdiale*, or *feriae per novem dies*. This number of days had been fixed at the time when this prodigy had first been observed (Liv. i. 31). Respecting the legitimate forms in which the feriae conceptivae and imperativae were announced and appointed, see Brisson. *de Form.* p. 107, &c.

On the public feriae the people generally visited the temples of the gods, and offered up their prayers and sacrifices. The most serious and solemn seem to have been the feriae imperativae, but all the others were generally attended by rejoicings and feasting. All kinds of business, especially lawsuits, were suspended during the public feriae, as they were considered to pollute the sacred season; the rex sacrorum and the flamines were not even allowed to behold any work being done during the feriae; hence, when they went out, they were preceded by their heralds (*praeciae, praeclamitatores*, or *calatores*), who enjoined the people to abstain from working, that the sanctity of the day might not be polluted by the priests seeing persons at work (Fest. s. v. *Praecia*: Macrob. *l. c.*; compare Serv. *ad* Verg. *Georg.* v. 268; Plut. *Numa*, c. 14). Those who neglected this admonition were not only liable to a fine, but in case their disobedience was intentional, their crime was considered to be beyond the power of any atonement; whereas those who had unconsciously continued their work, might atone for their transgression by offering a pig. It seems that doubts as to what kinds of work might be done at public feriae were not unfrequent, and we possess some curious and interesting decisions given by Roman pontiffs on this subject. One Umbro declared it to be no violation of the feriae, if a person did such work as had reference to the gods, or was connected with the offering of sacrifices; all work, he moreover declared, was allowed which was necessary to supply the urgent wants of human life. The pontiff Scaevola, when asked what kind of work might be done on a dies feriatus, answered that any work might be done, if any suffering or injury should be the result of neglect or delay, *e.g.* if an ox should fall into a pit, the owner might employ workmen to lift it out; or if a house threatened to fall down, the inhabitants might take such measures as would prevent its falling, without polluting the feriae. (Macrob. *l. c.* and iii. 3; Verg. *Georg.* i. 268, with the notes of Forbiger; Cato, *de Re Rust.* 2; Columella, ii. 22; compare Matt. xii. 11, Luke xiv. 5.) Respecting the various kinds of legal affairs which might be brought before the praetor on days of public feriae, see Digest 2, tit. 12, s. 2.

It seems to have been owing to the immense increase of the Roman republic and of the accumulation of business arising therefrom, that some of the feriae, such as the Compitalia and Lupercalia, in the course of time ceased to be observed, until they were restored by Augustus, who revived many of the ancient religious rites and ceremonies. (Suet. *Aug.* 31.) Marcus Antoninus again increased the number of days of business (*dies fasti*) to 230, and the remaining days were feriae. (Capitol. *M. Anton. Phil.* c. 10.) After the introduction of Christianity in the Roman empire, the old feriae were abolished, and the Sabbath, together with the Christian festivals, were substituted; but the manner in which they were kept was nearly the same as that in which the feriae had been observed. Lawsuits were accordingly illegal on

Sundays and holidays, though a master might emancipate his slave if he liked. (Cod. 3, tit. 12.) All work and all political as well as judicial proceedings were suspended; but the country people were allowed freely and unrestrainedly to apply themselves to their agricultural labours, which seem at all times to have been distinguished from and thought superior to all other kinds of work; for, as mentioned below, certain feriae were instituted merely for the purpose of enabling the country people to follow their rural occupations without being interrupted by lawsuits and other public transactions.

After this general view of the Roman feriae, we shall proceed to give a short account of those festivals and holidays which were designated by the name of feriae.

Feriae Latinae, or simply *Latinae* (the original name was Latiar, Macrob. i. 16, 16; Cic. *ad Quint. Frat.* ii. 4), had, according to the Roman legends, been instituted by the last Tarquin in commemoration of the alliance between the Romans and Latins. (Dionys. Hal. iv. 49.) But Niebuhr (*Hist. of Rome*, ii. p. 34) has shown that the festival, which was originally a panegyris of the Latins, is of much higher antiquity; for we find it stated that the towns of the Priscans and Latins received their shares of the sacrifice on the Alban mount—which was the place of its celebration—along with the Albans and the thirty towns of the Alban commonwealth. (Mommsen, *Hist.* i. p. 41.) All that the last Tarquin did was to convert the original Latin festival into a Roman one, and to make it the means of hallowing and cementing the alliance between the two nations. Before the union, the chief magistrate of the Latins had presided at the festival; but Tarquin now assumed this distinction, which subsequently, after the destruction of the Latin commonwealth, remained with the chief magistrates of Rome. (Liv. v. 17.) The object of this panegyris on the Alban mount was the worship of Jupiter Latiaris, and, at least as long as the Latin republic existed, to deliberate and decide on matters of the confederacy, and to settle any disputes which might have arisen among its members. As the feriae Latinae belonged to the conceptivae, the time of their celebration greatly depended on the state of affairs at Rome, for the consuls were never allowed to take the field until they had held the Latinae. (Liv. xxi. 63, xxii. 1, xxv. 12.) The different dates at which the festival was held may be learnt in part from the fragments of the *fasti* found in the temple at Alba (*C. I. L.* vi. 455 ff., 863 f.; cf. Mommsen, *Hermes*, v. 378–382). This festival was a great engine in the hands of the magistrates, who had to appoint the time of its celebration (*concipere*, *edicere*, or *indicere Latinas*); as it might often suit their purpose either to hold the festival at a particular time or to delay it, in order to prevent or delay such public proceedings as seemed injurious and pernicious, and to promote others to which they were favourably disposed. This feature, however, the feriae Latinae had in common with all other feriae conceptivae. Whenever any of the forms or ceremonies customary at the Latinae had been neglected, the consuls had the right to propose to the senate, or the college of pontiffs, that their celebration should be repeated (*instaurari*, Cic. *ad Quint. Frat.* ii. 6, 3; Liv. xxii. 1, xli. 16). At first they only lasted for one day, to which subsequently a second, a third, and a fourth were added (Dionys. Hal. vi. 95). Niebuhr, however, contends that they lasted for six days, one for each decury of the Alban and Latin towns (*Hist. of Rome*, ii. p. 35; comp. Liv. vi. 42; Plut. *Camill.* 42); but this notion is based upon a very uncertain emendation of Festus, p. 194. The festive season was attended by a sacred truce, and no battle was allowed to be fought during those days. (Dionys. Hal. iv. p. 250, Sylb.; Macrob. *l. c.*) In early times, during the alliance of the Romans and Latins, the chief magistrates of both nations met on the Alban mount, and conducted the solemnities, at which the Romans, however, had the presidency. But afterwards the Romans alone conducted the celebration, and offered the common sacrifice of white oxen (Liv. xli. 16) to Jupiter Latiaris, in the name and on behalf of all who took part in it. The flesh of the victims was distributed among the several towns whose common sanctuary stood on the Alban mount. (Dionys. Hal. *l. c.*; Varr. *L. L.* vi. 25; Schol. Bobiens. in Cic. *Orat. pro Planc.* 9, 23, p. 256, Orelli.) Besides the common sacrifice of oxen, the several towns offered each separately lambs, cheeses, or a certain quantity of milk (Cic. *de Div.* i. 11. 18), or cakes. Multitudes flocked to the Alban mount on the occasion, and the season was one of great rejoicings and feasting. Various kinds of games were not wanting, among which may be mentioned the *oscillatio* (swinging, Fest. s. v. *Oscillum*). It was a symbolic game, and the legend respecting its origin shows that it was derived from the Latins. Pliny (*H. N.* xxvii. 7, 45) mentions that during the Latin holidays a race of four-horse chariots (*quadrigae certant*) took place on the Capitol, in which the victor received a draught of absinthium. At the same time, as many authorities agree in stating (Marquardt, iii. 285, note), the warm blood of a bestiarius was offered to Jupiter Latiaris.

Although the Roman consuls were always present on the Alban mount, and conducted the solemn sacrifice, yet we read that the superintendence of the Latinae, like that of other festivals, was given by the senate to the Aediles, who, therefore, probably conducted the minor sacrifices, the various games, and other solemnities (Dionys. Hal. vi. p. 415). While the consuls were engaged on the Alban mount, their place at Rome was filled by the praefectus urbi feriarum Latinarum. [PRAEFECTUS URBI.]

The two days following the celebration of the Latin holidays were considered as *dies religiosi*, so that no marriages could be contracted. (Cic. *ad Quint. Frat.* ii. 4.) From Dio Cassius we get that in his times the Feriae Latinae were still strictly observed by the Romans, whereas the Latin towns had, at the time of Cicero, almost entirely given up taking any part in them. The Romans seemed to have continued to keep them down to the fourth century of our era. (Lactant. *Institut.* i. 21.)

Feriae Sementivae, or *Sementina dies*, was kept in seed-time at Rome for the purpose of praying to Tellus and Ceres for a good crop; it lasted only for one day, which was fixed by the pontiffs. (Varr. *L. L.* vi. 26, *de Re Rust.* i. 2, *init.*;

Ovid, *Fast.* i. 658, &c.) At the same time the Paganalia were observed in the country (Merkel, *Ov. Fast.* p. clv.).

Feriae vindemiales lasted from the 22nd of August to the 15th of October, and was instituted for the purpose of enabling the country-people to get in the fruits of the field and to hold the vintage. (Codex, 3, tit. 12.) This was a vacation from legal business, but not a *sacrum publicum.*

Feriae aestivae were holidays kept during the hottest season of summer, when many of the wealthier Romans left the city and went into the country. (Gellius, ix. 15, § 1.) They seem to have been the same as the *messis feria* (Cod. 3, tit. 12, s. 2, 6), and lasted from the 24th of June till the 1st of August.

Feriae praecidaneae are said to have been preparatory days, or such as preceded the ordinary feriae; although they did not belong to the feriae, and often even were *dies atri,* they were on certain occasions inaugurated by the chief pontiff, and thus made feriae. On these days a *porca praecidanea* was sacrificed. (Gell. iv. 6.) See AMBARVALIA; COMPITALIA. [L. S.] [A. S.W.]

FERRUM. [METALLUM, Vol. II. p. 167.]

FESCENNI'NA, scil. *carmina,* one of the earliest kinds of Italian poetry, which consisted of rude and jocose verses, or rather dialogues in extempore verses (Liv. vii. 2), in which the merry country folks assailed and ridiculed one another. (Horat. *Epist.* ii. 1, 145.) This amusement seems originally to have been peculiar to country people, but it was also introduced into the towns of Italy and at Rome, where we find it mentioned as one of those in which young people indulged at weddings. (Serv. *ad Aen.* vii. 695; Seneca, *Controv.* 21, *Med.* 113; Plin. *H. N.* xv. 22.) We have rather feeble specimens of these in the four poems by Claudian "in nuptias Honorii Aug. et Mariae." The fescennina were one of the popular amusements at various festivals, and on many other occasions, but especially after the harvest was over. Munro (*on Catullus,* pp. 76 ff.) has well shown how they were employed to avert the evil eye or the envy of the gods on great occasions of good fortune, such as marriages or triumphs. After their introduction into the towns they seem to have lost much of their original rustic character, and perhaps were modified by the influence of Greek refinement (see Verg. *Georg.* ii. 385, &c.; Tibull. ii. 1, 55; Catull. lxi. 127); they remained, however, in so far the same, as they were at all times irregular, and mostly extempore doggerel verses usually in the Saturnian metre, though the specimens which are preserved are in trochaics, and the cretic is called *pes Fescenninus* by Diomedes, p. 479 k. Sometimes, however, *versus fescennini* were also written as satires upon persons. (Macrob. *Saturn.* ii. 4, 21.) That these railleries had no malicious character, and were not intended to hurt or injure, may be inferred from the circumstance that one person often called upon another to answer and retort in a similar strain. The fescennina are asserted by Festus (*s. v.*) to have been introduced among the Romans from Etruria, and to have derived their name from Fescennia, a town of that country. But, in the first place, Fescennia was not an Etruscan but a Faliscan town (Niebuhr, *Hist. of Rome,* i. p. 136), and, in the second, this kind of amusement was at all times so popular in Italy, that it can scarcely be considered as peculiar to any particular place. The derivation of a name of this kind from that of some particular place was formerly a favourite custom, as may be seen in the derivation of *caerimonia* from Caere. Festus gives an alternative derivation from *fascinum,* either because they were thought to be a protection against sorcerers and witches, or because fascinum (*phallus*), the symbol of fertility, had in early times, or in rural districts, been connected with the amusements of the fescennina. This etymology is far more probable. Teuffel (*Rom. Lit.* § 5) needlessly attempts to combine the two, suggesting that Fescennia may have derived its name from *fascinum.* Nettleship (*Journ. Phil.* xi. 190) plausibly assumes a substantive *fescennus,* "a charmer," from *fas,* "saying": hence *fescennini* would be "the verses used by charmers." Ellis in Catull. lxi. 127 prefers the form *Fascennina locutio;* the latter reading being, however, clearly inferior to *jocatio.* [L. S.] [A. S. W.]

FESTI DIES. [DIES.]

FESTU'CA is properly any stem, stalk, straw or haulm of corn, or blade of grass (Varr. *L. L.* v. 31, § 38, "qui homo in pratis per fenisecta *festucas* corradit"). In two passages it is generally explained as a synonym of the praetor's rod (*vindicta*) laid upon the slave's head in MANUMISSIO (Plaut. *Mil. Glor.* iv. 1, 15, "Quid? ea ingenuane an festuca facta e serva libera est?" Pers. v. 175, "non in festuca, lictor quam jactat ineptus"). But Conington on the latter passage has pointed out that the ordinary use of *festuca* would suit these two places equally well; so that after all the traditional rendering may be a mistake, though a very early one (the Schol. has "*virga* qua a lictore percutitur"). Plutarch says that one of the lictors threw stubble (*κάρφος*) on the manumitted slave (*de Ser. Num. Vind.* p. 550 B); and the words *lictor jactat* seem to imply something of this kind rather than touching with a staff. Probably both ceremonies accompanied the act of manumission, the praetor applying the *vindicta* with his own hand, the lictor throwing the stubble. Persius clearly had the passage of Horace in his mind (*Sat.* ii. 7, 76, "quem ter vindicta quaterque Imposita haud unquam misera formidine privet"), but may have chosen the other part of the ceremony for his illustration. The confusion between the two may be as old as Gellius (xx. 10, § 10); for the explanation of the phrase *vis festucaria,* see under DEDUCTOR. A glossary quoted by Conington gives both meanings: "Festuca, *κάρφος· ῥάβδος.*" Cf. also Gaius, *Inst.* iv. 16. [W. W.]

FETIA'LES, a college (Liv. xxxvi. 3) of Roman priests who acted as the guardians of the public faith. It was their province, when any dispute arose with a foreign state, to demand satisfaction, to determine the circumstances under which hostilities might be commenced, to perform the various religious rites attendant on the solemn declaration of war, and to preside at the formal ratification of peace. These functions are briefly but comprehensively defined by Varro (*L. L.* v. 86, ed. Müller): "Fetiales . . . fidei publicae inter populos praeerant: nam per hos fiębat ut justum conciperetur bellum et inde desitum, ut foedere fides pacis constitueretur. Ex his mittebantur, antequam conciperetur, qui res repeterent, et per hos etiam nunc fit foedus," to which we may add the old law quoted by Cicero (*de Leg.* ii. 9, 21), "FOEDERUM, PACIS, BELLI, INDUTIARUM ORATORES FETIALES IUDICESQUE SUNTO (IVS NOSCVNTO, *Madvig*); BELLA DISCEPTANTO." Dionysius (ii. 72) and Livy (i. 32) detail at considerable length the ceremonies observed by the Romans in the earlier ages, when they felt themselves aggrieved by a neighbouring people. It appears that when an injury had been sustained, four fetiales (Varr. *ap.* Non.) were deputed to seek redress, who again elected one of their number to act as their representative. This individual was styled the *pater patratus populi Romani.* (It is an error to suppose that the *pater patratus* was the permanent head of the college: Mommsen, *Staatsr.*^{2} ii. 670.) They were dressed in the garb of priests, and a wreath of sacred herbs gathered within the enclosure of the Capitoline hill (*verbenae, sagmina*) [SAGMINA], was borne before them by one of their number, who was hence called *Verbenarius.* (Plin. *H. N.* xxii. § 5.) Thus equipped, at least two of their number proceeded to the confines of the offending tribe, where they halted and the pater patratus addressed a prayer to Jupiter, calling the god to witness, with heavy imprecations, that his complaints were well founded and his demands reasonable. He then crossed the border, and the same form was repeated in nearly the same words to the first native of the soil whom he might chance to meet; again a third time to the sentinel or any citizen whom he encountered at the gate of the chief town; and a fourth time to the magistrates in the forum in presence of the people. If a satisfactory answer was not returned within thirty days, after publicly delivering a solemn denunciation—in which the gods celestial, terrestrial, and infernal were invoked—of what might be expected to follow, he returned to Rome, and, accompanied by the rest of the fetiales, made a report of his mission to the senate. If the people (Liv. x. 45), as well as the senate, decided for war, the pater patratus again set forth to the border of the hostile territory, and launched a spear tipped with iron, or charred at the extremity and smeared with blood (emblematic doubtless of fire and slaughter) across the boundary, pronouncing at the same time a solemn declaration of war. The demand for redress and the proclamation of hostilities were alike termed *clarigatio,* which word the Romans in later times explained by *clare repetere* (Plin. *l. c.; Serv. ad* Verg. *Aen.* ix. 53, x. 14: cf. Liv. viii. 14, 5). When the Romans had to carry on wars beyond the sea, this proceeding was inconvenient. Hence a characteristic device was adopted. They transferred a piece of land in the Circus Flaminius to a prisoner taken from the enemy, and set up on this before the temple of Bellona a column, which was accounted as standing on hostile territory. (Servius, *l. c.*)

Several of the formulae employed on these occasions have been preserved by Livy (i. 24, 32) and Aulus Gellius (xvi. 4), forming a portion of the *Jus Fetiale* by which the college was regulated. The services of the fetiales were considered absolutely essential in concluding a treaty (Liv. ix. 5); and we read that at the termination of the second Punic war fetiales were sent over to Africa, who carried with them their own verbenae and their own flint stones for smiting the victim. Here also the chief was termed *pater patratus.* (Liv. xxx. 43.)

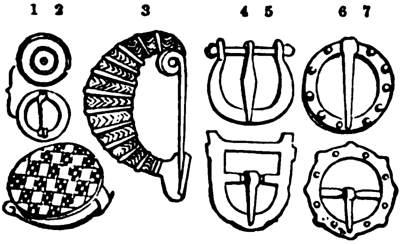
The institution of these priests was ascribed by tradition, in common with other matters connected with religion, to Numa (Dionys. ii. 71); and although Livy (i. 32) speaks as if he attributed their introduction to Ancus Martius, yet in an earlier chapter (i. 24) he supposes them to have existed in the reign of Hostilius. The whole system is said to have been borrowed from the Aequicolae or the Ardeates (Liv. and Dionys. *l. c.*), but this is extremely improbable, and is due only to an etymological explanation: similar usages undoubtedly prevailed among the Latin states; for it is clear that the formula preserved by Livy (i. 32) must have been employed when the pater patratus of the Romans was put in communication with the pater patratus of the Prisci Latini.

The number of the fetiales cannot be ascertained with certainty, but Varro quoted by Nonius (xii. 43) states that it amounted to twenty; of whom Niebuhr supposes ten were elected from the Ramnes and ten from the Titienses. They were originally selected from the most noble families; their office lasted for life (Dionys. ii. 72); and it seems probable that vacancies were filled up by the college (*cooptatione*) until the passing of the Lex Domitia, when in common with most other priests they would be nominated in the comitia tributa. This, however, is nowhere expressly stated. (Mommsen, *l. c.*)

The etymology of *fētialis* is uncertain. Varro (*L. L.* v. 86) would connect it with *fides* and *foedus;* Festus with *ferio* or *facio:* but it is more probably connected with *fateri* and the Oscan *fatium,* so that *fetiales* would be *oratores, speakers.* In early inscriptions we always find *fetialis;* in Greek MSS. the word always appears under some one of the forms φητιάλεις, φετιάλεις, φιτιάλεις: hence there is no doubt as to the orthography. (Cf. Corssen, i.^{2} 422.)

The explanation given by Livy (i. 24) of the origin of the term *Pater Patratus* is satisfactory:—"Pater Patratus ad jusjurandum patrandum, id est, sanciendum fit foedus;" and we may at once reject the speculations of Servius (*ad Aen.* ix. 53, x. 14, xii. 206) and Plutarch (*Quaest. Rom.* p. 279 B); the former of whom supposes that he was so called because it was necessary that his father should be alive, the latter that the name indicated that his father was living, and that he himself was the father of children. [W. R.] [A. S. W.]

FI'BULA (περόνη, περονίς: πόρπη, ἐμπορπίς: ἐνετή), a brooch consisting of a pin (*acus*), and of a curved portion furnished with a hook (κλείς, Hom. *Od.* xviii. 293). The curved portion was sometimes a circular ring or disc, the pin passing across its centre (woodcut, figs. 1, 2), and sometimes an arc, the pin being as the chord of the arc (fig. 3). The forms of brooches, which were commonly of gold or bronze, and more rarely of silver (Aelian. V. H. i. 18), were, however, as various in ancient as in modern times; for the fibula served in dress not merely as a fastening, but also as an ornament. (Hom. *Od.* xix. 256, 257; Eurip. *Phoen.* 805.)



Fibulae, brooches and buckles. (British Museum.)

As specimens of the exquisite workmanship of the more elaborate fibulae, we give two examples from the gold ornament cases of the British Museum.

Fibulae, brooches. (British Museum.)

Women wore the fibula both with the AMICTUS and the *indutus;* men wore it with the amictus only. Its most frequent use was to pin together two parts of the scarf, shawl or cloak [CHLAMYS; PEPLUS; PALLIUM], which constituted the amictus, so as to fasten it over the right shoulder. (Soph. *Trach.* 924–6; Theocr. xiv. 66; Ovid, *Met.* viii. 318; Tac. *Germ.* 17.) [Woodcuts, pp. 3, 158, 315.] More rarely we see it over the breast. The epithet *ἑτερόπορπος* was applied to a person wearing the fibula on one shoulder only (Schol. *in* Eurip. *Hec.* 933, 934); for women often wore it on both shoulders. [Woodcuts, pp. 368, 386.] In consequence of the habit of putting on the amictus with the aid of a fibula, it was called *περόνημα* or *ἐμπερόνημα* (Theocr. xv. 34, 79), *πόρπαμα* (Eurip. *Elect.* 820), *περονατρίς* (Theocr. *l. c.* 15), or *ἀμπεχόνη περονᾶτις* (Brunck, *Anal.* ii. 28 = *Anth. Pal.* vii. 713). The splendid shawl of Ulysses, described in the Odyssey (xix. 225–231), was provided with two small pipes for admitting the pin of the golden brooch; this contrivance would secure the cloth from being torn. The highest degree of ornament was bestowed upon brooches after the fall of the Western empire. Justin II. (Corippus, ii. 122), and many of the emperors who preceded him, as we perceive from the portraits on their medals, wore upon their right shoulders fibulae, from which jewels, attached by three small chains, depended. (Beger, *Thes. Pal.* pp. 407 ff.)

It has been already stated that women often wore the fibula on both shoulders. In addition to this, a lady sometimes displayed an elegant row of brooches down each arm upon the sleeves of her tunic (Aelian, *V. H.* i. 18), examples of which are seen in many ancient statues. It was also fashionable to wear them on the breast (Isid. *Orig.* xix. 30); and another occasional distinction of female attire, in later times, was the use of the fibula in tucking up the tunic above the knee.

Not only might slight accidents to the person arise from wearing brooches (Hom. *Il.* v. 425), but they were sometimes used, especially by females, to inflict serious injuries. The pin of the fibula is the instrument which the Phrygian women employ to deprive Polymestor of his sight by piercing his pupils (Eurip. *Hec.* 1170), and with which the Athenian women, having first blinded a man, then dispatch him (Herod. v. 87; Schol. *in* Eurip. *Hec.* 934). Oedipus strikes the pupils of his own eyeballs with a brooch taken from the dress of Jocasta (Soph. *Oed. Tyr.* 1269; Eurip. *Phoen.* 62). For the same reason we find that *περονάω* meant "to pierce," since *περόνη* was properly the pin of the brooch (*περόνησε*, "pinned him," Hom. *Il.* vii. 145; xiii. 397).

Brooches were succeeded by buckles, especially among the Romans, who called them by the same name. The first woodcut shows on the right hand the forms of four bronze buckles (4, 5, 6, 7), from the collection in the British Museum. This article of dress was chiefly used to fasten the belt [BALTEUS], and the girdle [ZONA]. (Verg. *Aen.* xii. 274; Lydus, *de Magistr.* ii. 13.) It appears to have been in general much more richly ornamented than the brooch; for, although Hadrian was simple and inexpensive in this as well as in other matters of costume (Spartian. *Hadr.* 10), yet many of his successors were exceedingly prone to display buckles set with jewels (*fibulae gemmatae*).

The terms which have now been illustrated as applied to articles of dress, were also used to denote pins variously introduced in carpentry; *e.g.* the linch-pins of a chariot (Parthen. 6, § 4); the wooden pins inserted through the sides of a boat, to which the sailors fasten their lines or ropes (Apoll. Rhod. i. 567); the treenails which unite the posts and planks of a wooden bridge (Caesar, *B. G.* iv. 17); and the pins fixed into the top of a wooden triangle used as a mechanical engine (Vitruv. x. 2). [J. Y.] [W. W.]

FI'CTILE, anything made of earth or clay, earthen, fictile. In Greek the special word for moulding in soft materials, *πλάσσω*, with its derivatives *πλάσμα*, *πλάστης*, *πλαστική*, was gradually applied only to clay, in which sense the words *plastes* and *plastice* passed into Latin. Then, as clay played an important part in the preparation of works in bronze, the use of these words was extended to metal, and still further to statuary in stone and marble. The Latin equivalent of *πλάσσω* is *fingo*, which originally was applied only to the moulding of soft stuffs, but later was used for statuary of all kinds as opposed to *pingo:* in this extended sense we have also *fictor* and *figmentum*, but the usual application of *fictor* is confined to modelling in clay, just as *fictor*, *figlinus*, *figulus* refer only to work in clay. The original term for clay is *κέραμος*, whence the forms *κεραμεύς*, *κεραμεύω*, &c., applied not merely to the potter, but broadly to a worker in clay. From *πηλός* (applied to the clay of the bricklayer, but also to that of the potter) we have *πηλουργός*, *πηλοπλάθος*, corresponding to the poetical use of *lutum*: whereas, however, *argilla* = modelling clay, *ἄργιλος* = clay without reference to its plastic uses, *γῆ κεραμίς* = *terra* or *creta figularis*; hence also *ars cretaria*. (Cf. Blümner, *Technologie*, ii. p. 1.)

We may take it that the history of working in clay has been in all times subject to the same broad laws of development. The primitive barbarian employs as utensils of food or drink the objects of nature that are to his hand, such as shells or horns. He then finds that certain clays take forms readily and harden in the sun: the next step is to a selection of the clay, and then gradually to a purification of it. Then comes baking in artificial heat, and the preparation and polishing of the surface: finally (in the case of pottery), the introduction of the potter's wheel.

It will be convenient to divide the subject into three parts, corresponding with the principal manufactures to which the Fictile Art was devoted: viz. A. *Vases and lamps*; B. *Bricks and tiles*; C. *Statuary and terracottas.*

A. VASE-MAKING.—The general words for pottery in Greek are *κέραμος* and *ὄστρακον*: in Latin, *testa* and *opus figulinum*; this last expression is also applied to bricks, but is usually of finer pottery-ware as opposed to *opus doliare*, rough ware (not necessarily the special making of *dolia*). A potter is χυτρεὺς or χυτροπλάθος, *figulus*. In Greek, special names further indicate the speciality of the potter: thus *καδοποιός*, *ληκυθοποιός*.

i. *The preparation of the Clay.*—As to the processes adopted by the ancients in the preparation of the clay, we have little information. The earliest vases from Hissarlik and the Cyclades are of very coarse clay, in which, either by ignorance or from design, large pebbles and pieces of foreign substances are allowed to remain, the result being a very uneven surface and frequent fissures in the vase. A great deal might be done by levigating the clay (*ὀργάζειν*) while moist, so as to rid it of all grosser substances before moulding it into shape: a still further purification of the clay gave the thin slip, into which the vase when complete was dipped, so as to coat it with a fine surface suitable for polishing. There is no doubt that the extensive commerce in pottery possessed by certain localities was largely due to their propinquity to specially suitable beds of clay. Thus the clay quarries may still be seen near Corinth to which the Corinthian pottery in antiquity owed its reputation: this clay is of a creamy yellow colour, and rather soft to the touch. Much of the Italian ware, the so-called Bucchero Nero, is of an oily surface, and when baked is black all through. The fine clay of Attica, and especially that of Cape Kolias, was celebrated in antiquity not only for its hardness and toughness, but also because it mixed well with ruddle or red ochre (*μίλτος*, *rubrica*): this would be a quality specially desirable for the manufacture of painted vases [see PICTURA]. Colouring matter was frequently applied to the clay; and some makers in Rhodes and Egypt are even said to have mixed sweet-smelling substances in it (see Athen. xi. p. 464 b).

1. Clay quarry. (From a tablet at Berlin.)

The extensive use of pottery throughout the Greek and Roman world rendered the potter's industry a necessity of every community: hence the frequent references in literature to the "Potters' quarter," the Κεραμεικός. At Athens this quarter was without the city and adjoining the necropolis; a site which was no doubt convenient for the makers of painted vases, so largely in use for dedication at the tomb. The potter's ware was also in use for dedication in the temples, as is shown by the large number of vases with dedicatory inscriptions found at Naukratis in Egypt [see VAS]; and in some cases for prizes in the sacred games [see AMPHORA]. This painted ware was largely exported from the chief centres of the different manufactures: in the fourth and fifth centuries B.C. most of it came from Athens; later on, a great deal was made in Southern Italy. At Oria, in Apulia, was found in 1828 a potter's workshop, filled with vases of all kinds, especially of the ware which is frequently found at Bari and the tombs of that district, viz. with the black surface sparsely decorated with wreaths, heads, &c. in white, yellow, or purple colours (see *Bull. dell' Inst.* 1834, p. 55). By the middle of the third century the art of painting vases had practically disappeared altogether [see PICTURA].

In Italy in the olden time, crockery for ordinary purposes was made by every man who could do so on his own estate: almost every village would have had its own pottery, but the ware would be for the most part rough, unglazed, and with little or no decoration. Of Roman glazed ware there were two main classes—the so-called Aretine and Samian wares. The term Aretine is given because large quantities of this ware have been found at Arezzo, the ancient Arretium, a place which is often mentioned in ancient literature for its fabric of red pottery; but it is certain that other places also produced this pottery, and the term must therefore be taken as indicating merely a special style and technique, which was in vogue in the last century B.C. and the first three centuries A.D. Aretine ware is of a fine clay, brilliant red colour, good glaze, and highly decorated with reliefs. The term "Samian," originally applied only to those of its class which were made in Samos, came also to indicate a special style wherever made; it consists usually of bowls decorated with reliefs, which are of harder clay and not the same brilliancy of colour as the Aretine. The great similarity between all Samian ware, wherever it is found, has led many to suppose that either the ware itself or the clay was exported; but considering the widely distant localities in which it is abundantly found, it is probable that the potters knew how to adapt local clays to its fabrication: in some cases we have provincial imitations of Samian ware, which have an orange colour on the surface, besides a great variety of local productions of different kinds. (Birch, pp. 346–362.)

ii. *The modelling of the Clay.*—The use of the potter's wheel (*τροχὸς κεραμικός, τροχός, τόρνος*: *rota figularis*, *rota*, *orbis*) was known in Egypt in very remote times, and in Greece went so far back as to be credited with a legendary origin: the invention is variously ascribed to the Scythian Anarcharsis, and to Talos nephew of Daedalos; others said Hyperbios of Corinth, others again the Athenian Coraebus, or the Athenian people in general. It is familiar at any rate to Homer; who in a well-known passage likens a dance of maidens to the wheel which "a potter deftly turns with his hands, trying if it will run" (*Il.* xviii. 600); and the vases of the period which is usually referred to the time of Homer are certainly wheel-made. The vases, however, of the primitive tombs at Hissarlik and elsewhere, already mentioned, are hand-made, and show no trace of the wheel: they are, moreover, of the rudest form, and as a rule are without a foot, pierced for suspension, and incapable of standing upright, or are constructed with three roughly-modelled legs. The clay of these vases is coarse and the walls thick, and there is little intention of practical utility in the forms adopted: the anthropomorphic tendency, possibly derived from religion, shows itself in the imitation of living forms, the vases assuming frequently the grotesque shapes of men and animals. (See Schliemann, *Ilios*, p. 521, and Baumeister, *Denkmäler*, s. v. *Troja*.)

In the earliest vases from Italy we have the same stage of primitive hand-made ware, which precedes all other fabrics, and is of the roughest description. Near the Alban Lakes a series of these vases was found beneath a stratum of peperino, and they are now in the British Museum: others were found at Rome beneath the foundations of the wall of Servius Tullius, under circumstances which point to their manufacture at a period long antecedent to that date. From the brownish colour which they show, this class of vases has received the name of Brown Ware, as distinguishing them from the Bucchero Nero before mentioned, the vases of which have the clay black all through, and are made on the wheel. (Birch, p. 449.) The most remarkable of the Brown Ware are the so-called "hut-urns," which are in the form of the primitive Italian *tugurium*; one of these in the British Museum is filled with the ashes of the dead, which were introduced by a little door secured by a cord which passed round the vase: the cover or roof is vaulted, and apparently intended to represent the beams of the hut. The decoration of this class of ware is very rude, consisting of punctured or incised lines, spirals, raised zigzags, bosses, and projecting ornaments applied after they were made: they resemble in character the Teutonic vases found on the banks of the Rhine and certain Celtic ones that occur in France and Britain. They have no glaze upon their surface, but a polish produced by friction.

Besides these primitive vases made in potteries where the wheel was not yet known, we should mention here another class of vases which were probably at all periods made by hand. The large pithi (*dolia*) which were used by the ancients for the fermentation of new wine, and which in this case were usually sunk partially into the ground, were often of enormous size: the largest and most perfect of these pithi in modern times was found near the site of the ancient Dardanus in the Troad. Of this vase Mr. Calvert says (*Archaeolog. Journal*, 1859, p. 3): "An idea may be formed of the size from the fact that, when emptied, six persons entered it together, and it contained them all in a sitting posture." The British Museum has two such pithi, from Kamiros and Ialysos in Rhodes, each more than 4 ft. 6 in. high, in which a space of about 18 in. from the base is unornamented, showing how much of the vase was intended to be buried in the ground; and the subject occurs frequently on vase-pictures of Eurystheus hiding in, or the Centaur Pholos drawing wine from, such a half-buried pithos.

It is evident that no wheel would be large enough for the manipulation of these monsters of pottery, which had to be constructed by hand. What the process exactly was, we do not yet know. They seem to have been built up from the bottom with the help of a wooden frame or kernel, *κάνναβος, ξυλήφιον*: but as to what this *κάνναβος* was, the passage of Pollux (vii. 164) does not clearly state. The same word is applied to the "skeleton" employed by the clay modeller, and is also mentioned (Strattis, *Κιν.* 3) as the nickname of a very thin man, so that in all probability it was a skeleton of wood around which the clay was modelled. Some fragments of pithi have been found which are bound together with leaden or bronze cramps; whether these were employed in the construction, or subsequently let in, to strengthen the vase, we cannot say. The construction of pithi was evidently looked upon as a difficult feat of the potter's art, as we see from the proverb applied to those who, neglecting the rudiments of teaching, attempt at once difficult problems: they are likened to one learning the potter's art, who, before he has learnt how to make pinakes (tablets) or other small objects, tries his 'prentice hand upon a pithos (Zenob. *Cent.* iii. 65), *ἐν πίθῳ τὴν κεραμείαν μανθάνειν.*

As to the form or method of handling of the potter's wheel, ancient literature tells us very little: we do not even know whether it was turned always by hand, or whether, as in the modern usage, it was turned by the foot. Homer, in the passage already quoted, speaks only of the hand, *τροχὸν ἄρμενον ἐν παλάμῃσιν*: and in all the representations of a potter's wheel which occur on Greek monuments the hand alone is employed. Blümner (*Techn.* ii. p. 38,

n. 3) quotes a writer of the third century B.C., the son of Sirach (Ecclus. xxxviii. 29 ff.), who mentions definitely the use of the feet, *συστρέφων ἐν ποσὶν αὐτοῦ τροχόν*: but more commonly we find mention of the use of the hand (*e.g.* Plut. *de gen. Socr.* 20, p. 588 F). In the case of a large vase, before which the modeller would have to stand upright, the wheel was only raised a short distance from the ground, and was turned by a boy seated beside it, as we see in the Munich vase-painting representing a potter's workshop (Jahn, *Verzeichniss*, No. 731).

The wheel consisted of a circular disk placed horizontally upon an upright post, upon which it rotated. Specimens have been found in the neighbourhood of Arezzo (Fabroni, *Storia degli ant. Vasi fitt. Aretini*, p. 63) and near Nancy (De Caumont, *Cours d'anc. Mon.* ii. 210): these are described as wheels of terracotta, pierced at the centre to receive the axis of a pivot, and furnished at the circumference with small cylinders of lead: these would serve as a purchase for the hand, while the additional weight would impart steadiness to the rotatory movement.

The accompanying illustration shows a potter at work making a vase upon the wheel. It is taken from the painting on a pinax or small clay tablet in the Berlin Museum, and is one of a large series which were found at Penteskuphia near Corinth in 1879, and date from the sixth century B.C. Many of these pinakes represent different stages of the potter's art, and from the inscriptions it is probable that all were originally dedicated by potters to Poseidon as specimens of their work, which in course of time were removed from the temple or shrine, and buried in a favissa adjoining. From the above we see that the process of pottery at this early date differed but little from that of the present day. The ancient potter placed a lump of clay upon the centre of the wheel, and while he revolved the wheel (*τροχὸν ἐλαύνειν*) he moulded (*ἕλκειν, ducere*) the clay with his hand. While one hand was placed inside the lump of clay, giving it the required form, the palm of the other would be pressed against the outer surface, thus keeping the wall of the vase smooth and thin. That thinness in the walls was a special desideratum, at any rate in the best period, we see from the vases which have come down to us: this is further exemplified by the statement recorded in Pliny (*H. N.* xxxv. § 161), that in his day were still to be seen in a temple at Erythrae two amphorae preserved there in remembrance of a contest between a master potter and his pupil, as to which could throw the thinnest ware. Lucian even speaks of pottery so light as to be blown away by the wind, *ἀνεμοφόρητα καὶ ὑμενόστρακα* (*Lexiph.* 7). In the preceding cut, the potter is seated beside his wheel, which he turns with one hand, while with the other he applies ornament either with a brush or stick: if the ornament was engraved alone, this would have to be done while the clay was still moist; if painted, the vase would be first dried in the air.

2. Potter at work. (From a tablet at Berlin.)

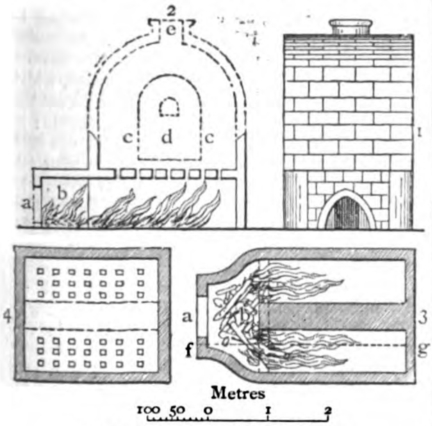
The body of the vase once completed, the surface was smoothed, perhaps as now, with a piece of hard leather or a small strip of wood: Jahn thought that this process is represented upon a vase-painting (*Berichte des G.* 1854, Taf. 1, 2). It was then placed in the air to dry, and the handles, as well as in the case of larger vases the neck and foot, which had been independently constructed, were attached. Great technical skill was shown by the Greek potter in the attachment of the handles, which, in the vases which have come down to us, are rarely broken away at the point of juncture.

The completed vase was now ready for decoration. The various processes of painting and glazing vases are considered under the article PICTURA; other methods of decoration by means of stamping and moulding are mentioned below. In any case, most vases, with the exception of the rudest and most primitive, would be covered with a finely-ground slip, and in certain instances a very fine siliceous glaze, probably formed of soda and well-levigated sand. It was now ready for

iii. *The Baking.*—Some vases, we are told by Pliny (*H. N.* xxxi. § 130; xxxiv. § 170), needed no baking, being used for certain technical or medicinal purposes: these were called *ὠμά, cruda.* Plato (*Legg.* iii. 679 A) mentions the vases of the olden time, distinguishing between those which were baked, *ἔμπυρα*, and those which were unbaked, *ἄπυρα.* Almost all the vases which have come down to us, however, are undoubtedly baked. A vase of great size, such as the pithos above mentioned, would possibly have a special oven for its reception: it is possible that such an oven is shown on one of the Berlin pinakes, where the neck and handles of a large pithos project from the roof of an oven, with flames coming through it: Furtwängler, however (*Berlin Vase Catal.*, No. 802), says that the custom still obtains in Greece of the use of a pithos for the same purpose in the houses of the present day.

The process of baking (*ὀπτᾶν, coquere*) was one of the most critical in the potter's art. The necessary amount of heat required to be accurately adjusted, according to the character of the ware. Most of the Greek pottery is submitted to a great deal of heat; the Etruscan Bucchero Nero, on the other hand, required only a moderate amount: frequent examples have come down to us of discoloured or distorted vases, which have been subjected to too much or too little heat. Often the vases flew in the baking, *φοξά*: or the vases touched one another and lost their shape; or the smoke reached them and spoilt the colour. These mishaps were put down to the malicious influence of evil sprites, and various methods were resorted to counteract this influence: the pseudo-Homeric hymn to the potters (Hom. *Ep.* xiv.) invokes Athene's protection for the vases that are being baked, and mentions the various evil spirits that may injure them if the potters deceive the poet: "the Smasher, Σύντριψ; the Crasher, Σμάραγος; the Unquenchable (*i.e.* overheat), Ἄσβεστος; the Destroyer, Σαβάκτης; and the Fierce Conqueror, Ὠμόδαμος; and may he work many evils to your art!" On the Munich vase the front of the oven is furnished with the head of a Seilenos, as an amulet, ἀποτρόπαιον, intended to avert the evil eye. The quality of baking was judged by tapping (κρούειν, *discutere*) on the surface of the vase, according to the sound it gave out.

The ovens (κάμινοι, *fornaces*) for baking vases seem to have differed very little from those of the present [FORNAX]. The remains of such ovens, dating from a late Roman period, have been found in S. and W. Germany, France, England, and Italy. The most perfect perhaps was that found in 1881 at the little Roman colonia situated between the villages of Heddernheim and Praunheim near Frankfort: it has now been destroyed by the owner of the property on which it was found, but an excellent set of plans were drawn up before its destruction, by Donner, and published in the *Annali dell' Inst.* 1882, Tav. U 3–6, from which they are here reproduced.



3. Plans of furnace at Heddernheim.

The oven as a rule consisted of three different parts: the fire-space, or furnace, which was usually prolonged at the entrance by a channel through which the fuel was passed, *praefurnium*; and the vase-room, or oven proper, which consisted of a domed chamber built over the furnace. The whole was built of burnt, or sometimes of unburnt, bricks, and the interior, floor, and upper surface of the roof were coated with strong cement. The furnace was usually circular, sometimes rectangular; and was usually bisected by a wall, which started from the *praefurnium* and was intended to support the floor of the oven. This floor was pierced with a number of holes to allow the heat to pass through: upon it the vases intended for baking were placed, or else they were hung on the walls: in the oven found at Lezoux a number of iron pegs were driven into the walls for this purpose. In some cases a series of pipes ran from the holes in the floor through the roof of the oven: by this means any smoke or cold air which might otherwise penetrate from the furnace into the oven, and so injure the vases, was carried off. The roof is wanting in nearly all the remains which have come down to us; but all the painted representations point to a vaulted roof, with a hole or chimney at the top through which the flames issue. Into the side of the oven two doors, or one door within another, led from the outside, capable of being hermetically sealed: the smaller of these doors enabled the potter to examine the vases from time to time and watch their progress in baking; the larger door was used for introducing the vases into the oven.

In fig. 3 we have the ground-plan of the furnace, of which *a* represents the mouth; *b* the neck, from which the flames spread throughout the building. The fire-space is divided into two parts by a wall which serves as a support for the floor of the vase-space seen in fig. 5: this floor is perforated with square holes at regular intervals, through which the heat passes to the vases. No. 1 represents the front elevation, and No. 2 the vertical section, of a complete building, made up from the actual remains of Heddernheim restored after the Berlin paintings: the portion restored is marked in dotted lines. In No. 2, *d* represents the door nearly on a level with the floor of the oven, through which the vases are inserted: the smaller aperture within *d* serves as an eyehole through which the vases in process of baking might be periodically inspected: such an arrangement seems to be indicated on some of the Berlin paintings.

4. Exterior of furnace. (Berlin tablet.)

5. Interior of furnace. (Berlin tablet.)

For the processes of painting vases, which would naturally have required special arrangements of baking, see PICTURA.

iv. *Plastic decoration of Vases.*—Under this head we may include all the forms of decorating vases which are not comprised in the process of painting; that is to say, the processes of modelling, moulding, or stamping. In Greek art these processes were never much in favour among the makers of vases: we meet with them in the earliest pottery, and to a considerable extent also in the decline of taste; but at the best Greek period the form of the vase is as a rule as simple as possible, and the decoration is confined to that of colour.

a. In the earliest Greek pottery, plastic forms occur, but these are usually owing principally to the tendency to imitate vases of metal; a tendency which is always making itself felt among the makers of vases in clay. Among the vases of the Mycenae period in the British Museum, is one from Kalymnos in the form of a bull's head, which is the exact parallel of a silver vase found by Schliemann at Mycenae, and which is of the same period: it is obvious that the Kalymnos potter must have had some such metal vase in his mind, for the projecting horns of the bull, which would be strong enough in the metal to resist fracture, are extremely inappropriate when executed in clay. Similarly, in the succeeding period of Dipylon ware, we have the feet and handles of vases frequently modelled in a form which is obviously imitated from the strips of beaten metal used for this purpose in the metal vases of the same period. Even among vases of the sixth century B.C. we find imitations of rivets and nails which in the metal originals would serve to fasten on the handles and feet. In Cyprus, where art was never completely subject to Hellenic influence, fantastic forms prevail throughout.

Another tendency to plastic forms was that which Greek pottery underwent in the importation of objects from Egypt and elsewhere. To the Egyptians was due the idea of the so-called Canopic vase; that is, a vase made more or less in the likeness of the being whose remains it was intended to contain: it was natural that this conception of a vase on the analogy of a living being should be reflected, as it is in the earliest vases, both in the form and often in the decoration, as when the neck of a vase is decorated with a necklace and the handles with ear-rings: the more so, as our own terms for the different portions of a vase—lip, neck, shoulder, body, and foot—imply the same analogy. Thus, from the Egyptian alabaster vases, alabastra, in form of a female figure, we have the Greek alabastra imitating the same form; from the porcelain vases in form of a head, or of various animals, we have a whole series of aryballi imitating, or even creating, similar new shapes. These mostly date from early in the sixth century B.C., and after this date we do not find many such imitations of form except in a few instances of the so-called rhyta, and even these are in the best period of Greek art. In the period of decline (*i.e.* the fourth and beginning of the third centuries B.C.) among the vases of Greek manufacture from Southern Italy we find the same tendency springing up again, but here it is merged with other processes, which combine with it in destroying the simplicity of outline indispensable to the best aims of the potter's art.

b. The same principles are found in the Greek use of *appliqué* decoration. Among the earliest vases it is rarely found, the only instances of its occurrence being a series of cups with black glaze, found at Naucratis and Rhodes, which have an exterior band left uncoloured, on which are small objects, such as knuckle-bones, which have been cast separately in a mould: and a series of the so-called Polledrara ware, the clay of which is black throughout, and which have ornaments in the same clay applied in this method: examples of this ware have come from the Greek settlements in Egypt, and from Mytilene and Italy; both classes date from early in the sixth century B.C. This method reappears in the fourth century, when among the vases now too often crowded with painted figures the desire is felt of emphasising the principal actors in the scene: at first this is effected by the use of gilding for the principal group; then gradually these figures are separately moulded and applied to the vase; and finally we have the entire scene thus rendered in relief, or else a vase is formed by fitting a spout and handle on to a terracotta statuette which has been cast hollow. There is also one class of black aski at this period, which have the upper surface decorated with a subject in relief, which has been cast in a mould: in the British Museum there is exhibited one such relief from an ancient askos, together with the ancient mould from which it was cast. In many of the large vases of Italian fabric, this tendency is for a long time confined to the handles: thus the large kraters of these fabrics have the upper extremity of the handle, which is in the form of a volute, decorated with an *appliqué* Gorgon's mask, while the lower extremity issues again from the vase in the form of swans' necks.

c. The introduction of Oriental cylinders and seals into Greece no doubt suggested the adaptation of the stamped ornament to Greek pottery: an engraved cylinder, revolving on a swivel, needed only to be pressed against the soft clay as it turned upon the potter's wheel and it would give a continuous band of pattern, formed of as many repetitions of the same design as the circumference of the vase could contain. The earliest examples of this class of ware are certain large pithi of uncoloured terracotta, of which the British Museum has three complete examples found in Rhodes, and numerous fragments, with one complete example, from Crete; they may be compared with the fragments of sarcophagi found at Assarlik in Caria: in all these instances the decoration is effected either by means of the cylinder, as above; or by a succession of stamps with figures or patterns in relief. The process was probably also in use among the Greek potters of the Polledrara ware, though at present the examples of it have been mainly found in Italy. After the sixth century B.C., it seems to have dropped entirely out of use among the Greeks: the British Museum has one single exception, a small black-glazed cup of the fourth century B.C., which has a representation of Perseus and Medusa: each of the figures in this scene has been singly stamped upon the soft clay, from a separate stamp.

d. The practice of producing complete vases from moulds is only found in the later periods of Greek pottery: many of the rhyta already mentioned were probably so made, in the form of objects such as the heads of Seileni or nymphs, or the heads of animals, or even occasionally in groups, such as that of a negro devoured by a crocodile: these rhyta are usually coloured, with more or less resemblance to nature, or are covered with a black glaze. Another class of vases produced in this way are certain black aski with reeded or plain bodies and a relief on the upper surface; and a class of phiale omphalobi of the same ware, which have a frieze of figures running around the central boss in the interior: it is uncertain, however, whether these vases were made by Greek or by Roman potters; one such phiale has around the central boss an inscription in archaic characters of the Roman potter Canuleius (*Annali dell' Inst.* 1883, Tav. d' agg. I). On the other hand, a cup of this ware has on the interior the mould of a coin of Syracuse of the third century B.C.

In Etruria, previously to the free importation of Greek pottery, we find the potter's art following much the same line of development. We have, first of all, the primitive hand-made ware, which is modelled into all sorts of grotesque and fanciful shapes, principal among these being the so-called "hut-urn," already alluded to: these are succeeded by the Bucchero or black ware, in which the forms are moulded frequently in imitation of metal, and the decoration follows one or all of the three processes; either it consists of reliefs pressed separately in a mould and attached, or reliefs modelled on the vase freehand, or bands and patterns stamped on the vase. Contemporary with these is also a class of red ware, for which the stamping process alone seems to have been used.

The Roman pottery of early times seems to have been mainly similar to the Etruscan, or to have relied largely upon imported fabrics. From an early site upon the Esquiline we have evidence of a fabric which is evidently derived from an Egyptian origin, and which has a greenish yellow glaze with floral patterns, &c. in relief. In the third century B.C. Roman potters were working in the Greek method, as we see from the vase of Canuleios mentioned above. In the second century B.C. we find the so-called Samian ware coming in, and this seems to have held its own to the exclusion of most other ware throughout Roman times. It is of a remarkably fine and smooth character, varying in colour from a deep red to a pale orange, or iron grey with a bright metallic lustre, and in most cases has plastic decoration in relief. The custom, however, of calling this ware "Samian" appears to rest on no sufficient basis: it has been attempted to show that this ware is traceable to certain "Proto-Samian" pottery found in Greece and the islands; but it is never mentioned by the earlier Greek writers, and seems to have been peculiarly characteristic of Roman pottery. One of the principal seats of its manufacture was Arezzo, the ancient Arretium, and this Aretine ware is frequently mentioned in terms of praise by Roman writers (see Birch, vol. ii. p. 339).

The vases of this ware which are decorated with reliefs are most usually made entirely in a mould; or else the relief was executed *en barbotine*,—that is, by laying on the surface a thin slip, which was then worked up with a tool into the required form. The mould vases, or matrices, were in one piece, as a rule of the same clay as the vase itself, but uncoloured. In the production of vases on this plan, three distinct processes were necessary: first, the making of the stamps intended for the decoration, then the fabrication of the matrix, and, lastly, the formation of the vase within the matrix. The stamps were usually of clay, but were also made in gypsum, wood, and metal: they had a short handle, terminating in a surface slightly convex (so as better to fit the concave side of the matrix), on which was modelled the ornament, either a pattern or figure, or the name of the potter. As the making of these stamps required a certain amount of artistic skill, it is probable that they were in circulation among the numerous potteries, and this accounts for the

6. Specimen of Samian.

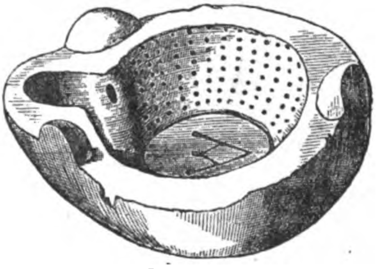
7. Potters' stamps.

fact that vases with similar ornaments have been found in widely distant localities.

For the preparation of the matrix a clay which should possess highly absorbent qualities was necessary, so that it should absorb the moisture of the clay which was pressed into it, and facilitate its drying: for this purpose we find some of these matrices provided with a hole in the base through which the moisture might drain out. They were made on the wheel, and, while the clay was still damp, the designs were pressed in by means of the stamps: the whole was then smoothed and baked hard.

Into the matrix thus prepared, the clay was pressed, and the inner surface of the vase was then formed upon the wheel. When dry, the vase was easily removed from the matrix; a foot, if necessary, was added, and it was now ready for baking. For finishing purposes, modelling tools were employed, of bone or bronze: several of these were found at Arezzo (see Blümner, *Techn.* ii. p. 110).

Most of the lamps which have come down to us are also made in this process: some of the Greek lamps of earlier times are simply open vases made either freehand or on the wheel, and covered with black glaze. The most ordinary form, however, both of late Greek times and throughout the Roman period, have the chamber for the oil covered in, with, as a rule, a decoration in relief upon the upper surface. These were invariably made in a mould by the following process:—First a solid clay mould was made in the form of a lamp, decorated on the upper surface either with a moulded or stamped decoration: around this core a clay matrix was pressed, which was then divided horizontally, so as to form an upper and lower matrix: to ensure the exact fitting of these two parts, either corresponding marks were made, or else a series of knobs were raised in the surface of one part which exactly fitted into corresponding sockets in the other part. Both parts would then have a thin coating of clay pressed in, the two parts of the matrix were joined, and the complete lamp within the matrix was finally allowed to dry, and then baked.



8. Lamp mould.

B. Architectural Objects.—i. *Bricks.*—The general term in Greek for brick-making is πλινθεύειν, and for a brick, πλίνθος; as the usual form of a brick was rectangular, both these words became applied gradually to all objects of this form, without distinction of material: the corresponding term in Latin is *later*, but this word had not the same extended usage.

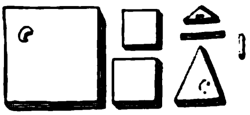
The art of brick-making, one of the simplest and oldest of the fictile arts, was never developed to any considerable extent in Greece; it was in use from very early times, and, like most arts, had its legendary inventors. To the Athenians Euryalos and Hyperbios were attributed the arts of brick-making and house-building; another account mentions Toxius, son of Caelius, as the inventor of building with mortar, the idea having been suggested from the nests of swallows. Of the Greek uses or methods of making bricks very little is known; it is certain at any rate that the Greeks used air-dried bricks and tiles (πλίνθοι ὠμαί, *lateres crudi*) down to Roman times, even for the walls of towns. As a rule, for all important buildings, stone and marble would be used; and in all probability the use of bricks was never extensive in Greece until it had spread thither from Rome.

In the early period of Roman history under the Republic, the usual material for all buildings was air-dried bricks. Vitruvius says that in his time at Rome it was usual to employ stone for the foundations (*pilae lapideae*), bricks for the walls (*structurae testaceae*), and cement for the party walls (*parietes caementicii*). In Imperial times brick was the usual material for both private and public buildings; the walls of more costly buildings would often be of a core of rubble between bricks, or of brick alone, faced with marble slabs.

All that we know of the Greek method is that the earthy clay (πῆλος) was carved out with trowels (ἅμαι) and laid in mould (λεκάναι, see Aristoph. *Aves*, 1145): it was wetted with water and kneaded with the feet, but it is uncertain whether the bricks were modelled by hand or pressed into a mould. The Romans were careful in the selection of clay: they rejected sandy or stony clay, both on account of the weight and liability to damp; a whitish clay was preferred (*terra albida, cretosa*), or else a reddish clay (*rubrica*), or the softer kind of sandy loam (*sabulo masculus*). The special times for brick-making were spring or autumn: after baking it was usual to leave the bricks for some time to dry. Vitruvius recommends the use of those which are two years old and thoroughly dry; and quotes a law of Utica, ordaining that bricks for walls must be five years old. The clay was carefully purified, damped, and mixed with chopped straw; it was then either formed by the hand or pressed in a mould, and set to dry in the sun. In some parts of Spain and Asia Minor bricks are said to have been made so light that they would not sink in water.

The usual size of bricks in Greece was 5 palms square (πεντάδωρα) for public, and 4 palms square (τετράδωρα) for private buildings: in Rome the size usually adopted was the γένος Λύδιον, 1½ Roman foot long by 1 ft. broad (*sesquipedales*). Palladius recommends bricks of 2 Roman feet long (*bipedales*) by 1 ft. broad and 4 in. high: in later times there seems to have been no definite rule as to size.

The form varied according to the purpose for which the brick was intended. The accompanying woodcut, taken from Rich, shows a set of brick



9. Brick forms.

forms which he collected from various Roman buildings: some are triangular, others hemispherical (*tegulae mammatae*): others, intended for circular buildings, such as columns or ovens, have a curved edge: those intended for a floor are either square *tesserae* or long pieces which when put together in a pattern give the so-called *spicata testacea:* and the finer mosaic floor (*opus vermiculatum*) is often made of fragments of different-coloured pottery.

ii. *Tiles.*—The usual system of roofing, both in Greece and Italy, was by means of two sorts of tiles, viz. the flat tile with raised edges (*κέραμος, στεγαστήρ, tegula*), and the curved ridge tiles, laid alternately with the others (*καλυπτήρ, imbrex*). Mention is also made of gutter tiles (*colliciae, tegulae colliciares* or *deliciares*), intended for drawing the rain-water off the roofs as it passed through the gargoyles. The making of tiles was a separate trade from that of brick-making, and tile-makers were called *tegularii, teglarii,* or *figuli a tegulis, figuli ab imbricibus.* (Orellius, 4190; Henzen, 7280.)

The habit of tiling for roofs must have commenced at a very early date, but there is no evidence as to when it was introduced. It seems quite clear from the excavations at Tiryns that the palaces and houses of the pre-Homeric and Homeric periods were not roofed with clay tiles, as in all the excavations on that site no single tile of baked clay has been discovered which can be attributed to those periods. The hut of Achilles, as described in *Il.* xxiv. 450–1, was covered with rushes, and rush thatching was in use in Sardis when that town was taken by the Ionians (Herod. v. 101); but probably for an extensive system of buildings like Tiryns and Mycenae the whole roof was covered with a thick layer of clay, perhaps resting upon a layer of rushes, as is the practice in the East at the present day. In all probability flat roofs continued in use for private houses in Greece down to a late period, for we read of certain ceremonies which took place (the *κῆποι Ἀδώνιδος*: see *Rev. Arch.* 1851, p. 97) upon the house-tops at Athens. But for the roofs of public buildings terracotta tiles must have been employed at an early period, for it was said that Byzes of Naxos first introduced tiles of marble about B.C. 620 (Paus. v. 10, § 2). [TEGULA.]

In Rome, and probably also in Etruria, houses were originally roofed with shingles, and continued to be so down to the time of the war with Pyrrhus, when tiles began to supersede the old roofing material (Plin. *H. N.* xvi. § 10); and in Pompeii the majority of the houses had terracotta tiling.

Tiles were also used in graves to cover the body in the case of inhumation and to line the grave: also for closing the recesses in the chambers within which the little sarcophagi were placed which held the ashes of the dead, and these would have inscriptions stamped or incised, recording the name and titles of the deceased.

The paste of which tiles were made is compact and dense, but generally not so fine as that of bricks. Like bricks, they appear to have been made by means of a mould, but two boards, called *plaision*, were probably sufficient for the purpose. A hole was driven through them when they were intended for roofing, especially for the *opus pavonaceum* or peacock-work, in which they were arranged like scales, being hung by one corner. The flange tiles were probably made in the same way, the flanges being subsequently turned up by the hand of the workman. They were then dried in the sun, and subsequently baked in a kiln: the Romans in early times, as has been stated, used sun-dried bricks and tiles, but these did not last more than five years. For baking bricks and tiles the same form of oven would be used as in the case of vases already described. (See Birch, *Hist. of Pottery*, p. 470.)

iii. *Antefixes, &c.*—The *imbrex* close to the edge of the roof terminated in an upright semi-elliptical surface called the *antefix*, on which was usually a decoration in relief, consisting generally of a palmette (*καλυπτὴρ ἀνθέμωτος*), or some other floral device. The main part of the imbrex was moulded by hand, and the decoration on the antefix stamped or impressed from a mould upon the soft clay. In the British Museum is a large series of archaic terracotta antefixes from Caere, representing heads or busts, and mythological figures such as Gorgoneia, Typhon, Sphinxes, within a floral border; and a series of masks for a similar purpose, but of later date, from Tarentum: all these are highly coloured. [See ANTEFIXA.]

The fictile art was considerably used throughout antiquity for various other architectural purposes, such as for capitals and columns, sills and frames of windows, the crowning portions of cornices and gutter-spouts, and akroteria. The gutter-spouts under the ridge tiles were a very decorative part of terracotta decoration: the most ordinary form of these spouts was a lion's head, such as the Greeks also used frequently for the spout of a fountain, moulded in high relief, the water issuing from the open mouth: other forms were the whole forepart of a lion, cast from a mould in high relief, with the spout issuing from between the forelegs. The moulds for these *antefixa* were probably in extensive circulation, as the same impressions are found in widely distant localities: their use extended back to early Greek times, for the excavations at Olympia and in Sicily and Magna Graecia show that during all the archaic period the Greek artists employed painted terracotta extensively for covering the higher parts of temples. In the inscription referring to the arsenal of the Piraeus (B.C. 346–328) mention is made of *κεραμίδες ἡγεμόνες λεοντοκέφαλοι*: and Rayet in his *Céramique*, pl. 15, gives two good coloured illustrations of such architectural decoration, the one from the cornice and fillet of the treasury of Gela at Olympia, the other from those of the archaic temple (C) at Selinus.

The original intention of this fictile decoration was no doubt the preservation against weather of the early wooden structures: and during the period when public buildings were principally constructed in calcareous tufa, the practice still continued: it was only given up when these buildings came to be constructed in marble, but still continued in localities where marble was difficult to obtain, such as Sicily. At Pompeii in all periods of architecture fictile decoration is extensively employed, but undergoes a curious process of development: in early times the clay is coarse and ill-refined, while the modelling and casting are good; in later times, the material is good, but there is a corresponding want of care in the modelling: the reason being, that in later times the terracotta was seldom exposed, but only served as a basis for stucco decoration. The terracotta mould was generally covered with a thin layer of stucco and then painted (see Von Rohden, *Terracotten von Pompeii*, i. p. 9; and Overbeck, *Pompeii*, p. 469). This use of stucco covering gave rise to the employment of baked clay for many purposes which it had not served before: thus, the shafts of columns in Pompeii are frequently made of bricks coated with stucco; and some very elaborate cylinders of terracotta have been found there, richly decorated, and intended to serve as the protection of the mouths of wells, puteal, with ornaments such as Caryatid or Atlantid figures, garlands or lion masks, in relief, and other ornaments pressed in from a stamp.

In Mesopotamia, where the main principle of architectural construction was clay or mud, it was necessary to protect the walls of buildings from damp and weather: in Assyria and Persia this was effected either by means of slabs of marble, or by a facing of glazed and coloured tiles. This practice transferred itself to the early civilisations of Italy, where, especially in the tomb grottoes, the tufaceous soil was liable to percolation of damp. The habit there grew up of facing the walls of these grottoes, and possibly of the houses also, with slabs of terracotta. There is in the British Museum a series of five such slabs of terracotta which were found in 1874 in a tomb at Caere (Cervetri), to the walls of which they had been attached by means of plaster. They average about ¾ in. thick, and are painted with designs which seem from their style to indicate an Asiatic influence, and to date from about the seventh century B.C. Just as in the exterior decoration of tiles and cornices the labour of the painter was lightened by the assistance of modelling, so no doubt, in the interior wall-decorations, modelling or casting in relief was early resorted to. In the British Museum are several slabs in coloured relief from Capua, representing a procession of chariots, which have probably been used for this purpose, and which date from the fifth century B.C.; and numerous terracotta sarcophagi with reliefs have been found in Etruscan tombs, which show how extensively this art flourished in Etruria. Slabs in low relief were called *protypa*; those in high relief, *ectypa*.

Among the Romans, terracotta decoration was extensively employed in the interior of houses: the most usual form consisted of flat slabs, *antefixa*, about 18 inches in length and 9 inches high; these were cast in a mould, with circular holes left for the plugs or leaden nails by which they were attached to the woodwork or masonry, and after the necessary retouching were fired in a kiln and coloured. The subjects of those which have come down to us are very varied, being principally borrowed from Greek mythological representations, executed under marked Roman influence: sometimes the relief consists of mere ornament, and the treatment is always architectural. Some late examples of such *antefixa* are in the Museum at Sèvres; two of them are inscribed with the names of the makers, Fecinus and Verecundus, probably freedmen or slaves (Brongniart, *Mus. de Sèvres*, p. 16). Birch (p. 492) gives several instances proving the use of such slabs in the decoration of Roman houses and tombs.

Another important use of terracotta was in the making of all sorts of drain pipes (*tubuli fictiles*): these were usually circular for all purposes connected with water, and were probably turned upon the lathe around a core: they were made to almost any size, some being as much as 8 inches in diameter; they are made narrow at one end, with a collar for insertion, and were joined together with mortar. For warming the *tepidaria* and the rooms of baths and other chambers, a rectangular flue tile was used, which had a hole at one side for the ejection of the air; the clay is scored while still moist with patterns of lines, in order to afford a better hold for the cement. They are as a rule of the same paste as the roof-tiles, and average about 16 inches in length.

iv. *Other uses.*—It would be impossible here to enumerate all the various uses to which so handy and adaptable a material was put in antiquity. Besides those already stated, we may mention brick cisterns for holding water, of which examples have been found in Sicily: in Greece public cattle-troughs seem to have been made of this material. In an inscription from Eleusis (Ἐφ ημ. Ἀρχ. 3rd ser., 1883, p. 1) mention is made of "four cattle troughs (*τραπέζας*) for watering beasts of burthen on the road, obtained from Tibeas the potter, *κεραμοπώλης*." Imitation jewellery for the tomb was made in terracotta and gilt; masks of deities intended for religious purposes (*prosopa*); other masks intended to be hung on trees [OSCILLA]; and numbers of cones and disks with inscribed names and perforated for suspension have been found, but whether these were intended as weights for garments, for cattle, or for steel-yards, cannot be ascertained.

v. *Stamped Inscriptions and Emblems.*—The practice of stamping a name or an emblem upon a vase as a mark of the locality or workshop where either the vase or its contents were made, though it was common in Roman times, was rare in Greek pottery, and may indeed be said to have been confined almost exclusively to one class of vases. These were the unpainted amphorae, or diotae [see AMPHORA], which were in extensive commerce from the third century downwards throughout the ancient world; they were chiefly used for the export of wine, but also for that of figs, honey, salt fish and other substances: the amphora which is represented on the coins of Athens after the time of Alexander probably alludes to the large Attic trade in oil which was exported in these vases. The place usually selected for stamping is upon the upper surface of one of the handles and the form of stamp differs according to the locality from which the amphora had been exported. The British Museum has a collection of several hundreds of stamped amphora handles which have been found in the most remotely distant sites all over the ancient world. There seems, however, to have been three principal centres of the export of these amphorae—Rhodes, Cnidos, and Thasos, and each is marked by a slightly different clay, a different form of vase, and a different system of stamping. Though the series extends over a period of at least three centuries, the character of each class is more or less stereotyped, both as regards form, dimensions, and mode of fabrication. The stamps of Rhodes are of two kinds: a circular medallion, which has an emblem like a coin type, such as a rose or a head of Helios, usually surrounded with a legend which gives the name of the eponymous magistrate of the year, a phrourarchos or a priest of the Sun, and a month; or an oblong label, which gives either an emblem with a magistrate's name, or a magistrate's name and that of a month. Those of Cnidos are usually diamond-shaped or oblong, and have an emblem with the name of an eponymous magistrate, who seems to have been a demiourgos, a phrourarchos or an astynomos, and occasionally a second name, perhaps that of the exporter, followed by letters of the word ΚΝΙΔΙΩΝ. The stamps which have been preserved of Thasos are much rarer: they have usually the inscription ΘΑΣΙΩΝ, followed by a name, and an emblem such as a cornucopia or a dolphin. Besides these three classes, specimens are preserved with inscriptions which refer their origin to such sites as Sinope, Bosporos, and Olbia; and there are several kinds which bear monograms, abbreviations, single letters, or merely emblems.

10. Stamped Amphora handles. (British Museum.)

Judging from the character of the writing, it would appear that stamps of two materials were used: in some cases the inscriptions are clearly cut and sharply defined, and would have been impressed from metal stamps, such as have been found in great numbers (though none as yet which can be connected with this special class of diotae): in other cases the lettering is faint and almost illegible, and was probably the result of using a worn wooden stamp. One interesting fact in the study of these inscriptions is that they show the ancients to have come very near the invention of printing: many of these amphora handles have inscriptions made by combinations of single-letter stamps; and in some cases a letter in a word has been wrongly inserted and is corrected with another letter stamped over it.

The intention of these stamps on amphora handles is still a matter of uncertainty, notwithstanding a large amount of study which has been devoted to its elucidation. It is evident that the majority of these inscriptions indicate primarily a date; and many suppose that the date on the handle indicates the time when the wine or other contents were inserted. This is obviously improbable: the stamp is impressed while the clay is wet, and not necessarily at the time of bottling: moreover, the buyers of Rhodian wine all over the world would have had to know by heart the entire list of Rhodian priests of the Sun: and lastly, Cnidos, whose amphora handles are found everywhere throughout the Mediterranean, was not famous for wine, and certainly never in the way of exporting produce. Besides, we know that in instances where vases were employed for preserving, it was usual to seal the mouth with stucco or mud, and on this material to stamp the contents, and possibly the date. The Greeks in this matter probably followed the Egyptian practice. Mr. Petrie found at Daphnae a series of "jar stoppings" of mud and straw, each of which was stamped with the king's name in whose reign the jar which they covered was laid down. What then is the intention of these amphora-stamps? It seems probable that they were the official stamp of the magistrate whose duty it was, as we know from other sources, to certify to the legal capacity. Thus M. Dumont (*Inscr. Cér.* p. 42) quotes the analogy of a marble *σήκωμα* with a similar inscription: the *σήκωμα* was a table of official weights placed in the agora; and the inscription certifies these weights as examined and found correct by the public official. We must recollect in this connexion that the amphora was a distinct measure of capacity, and is frequently so mentioned in Greek inscriptions. We may therefore conclude that all amphorae intended for this purpose were examined and stamped officially before they underwent the final baking. Of course the amphora of Thasos, Rhodes, and Cnidos need not have been all of the same size: our "Winchester pint" is an analogous case; but this accounts for the small variation in shape and size among all the amphorae from any one of these fabrics during the centuries in which they were being produced.

There is another class of terracotta vessels of which the handles decorated and stamped have been extensively found, and of which the annexed cut gives an illustration. These handles are raised from the rim of large circular vessels, about 2 ft. in diameter, and

11. Brazier handle. (British Museum.)

have a portion projecting considerably towards the interior of the vessel. It has been shown that they belong to circular brasiers or fire-pans, and most of them bear the mark of having been used for this purpose. Three such handles stood around the rim, and the interior projections may have served to support the plates or other utensils which were placed over the burning charcoal. The most usual type is that here given; it consists of a bearded head, usually Bacchic in character, of which the long beard forms the interior projection to the vase: others have floral devices, thunderbolts, &c.: a few are inscribed, the inscription forming part of the mould from which the decoration is cast. With two exceptions, all the inscribed specimens bear the name ΕΚΑΤΑΙΟΥ: one in the British Museum has the name ΝΙΚΟΛΑΟΥ: and one from Naucratis has ΦΙΛΑΤΡΟΥ. These brasier handles have been found extensively in Athens, Italy, Egypt, and along the coast of Asia Minor; but it looks as if the casts for the decorations at any rate had been all issued from one fabric. Benndorf (*Reisen durch Lykien*, vol. i. p. 17) mentions a complete circular altar of terracotta in the Musée Fol at Geneva (*Catal.* No. 743) which has handles with similar decorations. (See Dumont, *Inscr. Cér.* p. 410.) From a quantity of these handles which he found at Naucratis, Mr. Petrie concludes that the earliest type had merely a knob in the interior, low down: this was gradually enlarged upwards until the form gradually suggested a bull's head; and as this projected inwards and upwards, more and more it developed into the bearded head, which type became fixed. (Petrie, *Naukratis*, i. p. 42.)

The better class of Roman ware, particularly the Samian and Arretine, is frequently stamped with the maker's name. As a rule the names are those of freedmen or slaves, and they are often ill-spelt and confused. They seem to have been pressed in from a stamp which is either square, round, or oval. The name of the potter is sometimes accompanied by the letters O, or OF, for *officina*, manufactory; or by M for *manu*, or F for *fecit*, the name of course being in the genitive or nominative, according as the case required.

Like the amphorae, so also the Greek lamps seem to have circulated largely in the ancient world, some having been found by Layard at Nimrud. In Roman lamps, and in Greek lamps of the Roman period, it is usual to find inscriptions stamped on the base: these consist either of the name of the potter in the genitive case, or of the names of emperors. A list of such inscriptions is given in Birch, *Hist. of Pottery*, appendix ii., but the intention of them seems to be by no means clear. The inscriptions stamped beneath Roman lamps are extremely numerous, and seem to point to various intentions, though this point is somewhat obscure. The most usual is the formula which gives the name or the mark, or both, of the potter; the potter's name is usually in the genitive, the word *officina* or *manu* being understood or expressed: one such lamp bears the inscription "from the manufactory of Publius and Titus at the Porta Trigemina." Another class refers to the purpose for which the lamp was made, such as a dedication to a deity, or a sepulchral inscription, or bears a reference to the Secular games, during the celebration of which the city of Rome was illumined for three successive nights: it is possible that this last class of lamps may have been specially made for the Secular illuminations: the form of inscription in this last case is SAECVL or SAECVLARIA.

The inscriptions stamped on Greek tiles are as yet very little understood, probably on account of the rarity of such inscribed tiles which have come down to us. Some of these inscriptions, at any rate, seem to refer to a date, in a similar formula to that of the amphora handles, *i.e.* ἐπὶ followed by the name of a magistrate: thus, Birch quotes one from Olbia inscribed:

ΕΠΑΡΙΣΤΩΝ(*os*)
ΑΣΤΥΝΟΜΟ(*υ*)
ΠΟΣΕΙΔΩΝΙΟ(*υ* or *s*)

"(This tile was made) in the aedileship of Ariston." The name following may be the name of the month or of the potter. At Corcyra and elsewhere the stamp is merely ἐπὶ *τοῦ δεῖνος*, the magistracy, whether Prytanis or otherwise, being implied. One in the British Museum has simply ΕΥΦΑΜΟΥ on the edge, with nothing to show whether this refers to maker or magistrate. Some Athenian tiles have the label ΑΘΕ: and some found at Calymna have ΔΙΟ in intaglio or circular labels with monograms in relief on the body of the tile. Some from Sicily have merely a letter, such as Φ, or an emblem, such as the triskelos. All these inscriptions are pressed in from a complete stamp, probably in metal. No Greek inscribed imbrices have as yet been found.

Many of the Roman tiles are inscribed with the names of the consuls of the year in which they were made; this class ranges in date over a period which embraces the second and part of the third centuries A.D.: they occur on the tiles of Italy alone, and it is supposed that a law passed about the time of Trajan obliged the brick and tile makers to affix their distinctive mark upon their wares, possibly as a guarantee of the quality of the clay. These stamps are generally circular, with an emblem in the

12. Tile stamp. (Birch.)

centre around which the inscription is arranged. The illustration on the preceding page is taken from Birch, fig. 185.

In the centre is a figure of Victory, the potters' emblem: around it, commencing on the outer band, is inscribed OPVS DOL(iare) DE FIGVL(inis) PVBLINIANIS E(X) PR(A)EDIS AEMILIAE [S]SEVERAE: "Potwork from the Publinian potteries, from the estate of Aemilia Severa." According to Birch, "The most complete stamps have the date of the emperor or of the consulship, the name of the estate which supplied the clay, of the pottery which baked it, and of the potter who prepared it; sometimes even of the slave who moulded the tile, and the very dimensions of the tile itself." From the *praedia* or estates which produced the clay, the Roman landed proprietors, usually people of high rank, must have derived a considerable income: a large number of these proprietors are names of females: it is supposed that the extensive proscriptions resulted in a deficiency of male heirs, and the large estates in this way devolved upon females. These *praedia* were doubtless placed under the superintendence of freedmen or slaves. The especial manufactory would be distinguished by a name such as the gentile name Publinian given above, or after an emperor, such as Domitian; and instances occur where a second manufactory of the same proprietor is mentioned. The bricks of Praeneste generally show different stamps from those which are found in Rome and the other cities of Latium. Thus on a brick recently found there is the inscription M · LATER · Q · evidently the name of M. Juventius Laterensis, Quaestor, who is known to have given the games at Praeneste, and who was the personal and political friend of Cicero (*Römische Mittheil.* 1887, p. 292).

An important section of these inscriptions are those on the so-called Legionary tiles, *i.e.* those which bear the name of a certain legion, and which are found wherever Roman armies carried their standards in the ancient world. They were probably made by the soldiers themselves, and consequently the name of the maker is seldom added. The stamp is apparently of metal, and usually in the form of a foot or oblong, giving the number and title of the legion. By means of these tiles, it has been possible to trace a great deal of the distribution of the Roman military forces, and the successive changes of their quarters.

The small terracotta cones and pyramids which have been mentioned above are frequently inscribed or stamped with emblems, but these inscriptions give little help in deciding what is the intention of either cone or inscription: sometimes these inscriptions consist of the names of deities; and if the cones were intended to be hung on the necks of cattle, these names might be referred to the deities to whose temple the cattle belonged. Dumont (*Inscr. Cér.* p. 51) supposed that some which are found in tombs may have been placed there in imitation of offerings of food; being led to this conclusion by the inscription ΓΛΥΚΥ (=*γλύκυσμα?*) and ΜΕΛΙ, which occur on two specimens. A similar case is that of the disks of terracotta pierced for suspension: the British Museum has a series of these from Tarentum, on which the word ⊢HMIOBEΛION, or part of it, is stamped: whether this disk represents a half obol weight of some commodity, as has been suggested, cannot now be ascertained. (See *Hell. Journal*, iv. 156; vii. 41.)

At Naucratis in Egypt, and also elsewhere, a series of circular stamps have been found, made of terracotta, about 3 in. in diameter, with a handle at back: the under-surface has a device in intaglio, usually representing some subject related to grapes or grape gathering. Mr. Petrie, who found a number of these (*Naukratis*, i. p. 45, pl. xxix.), calls them "cake stamps:" it seems probable, however, that they were intended for stamping the stucco or mud cap with which the mouth of an amphora containing wine or other preserves was sealed.

C. STATUARY AND TERRACOTTAS.—This part of the subject is naturally so much connected with the art of statuary proper, that it will be best to refer the reader for all general purposes to STATUARY and TERRACOTTA: under this head we shall only refer to the actual methods of working statues and statuettes in clay.

When first the spirit of imitation arises in man in a primitive or savage state, the material most ready and most easily applied is clay: among people of anthropomorphic ideas, it is natural that clay should be very early employed for the imitation of men and animals. The legend of Prometheus, and the use of the word *πλάσσω*, first for modelling in clay and afterwards for statuary in metal and stone, both point to the parentage of these in the fictile art proper.

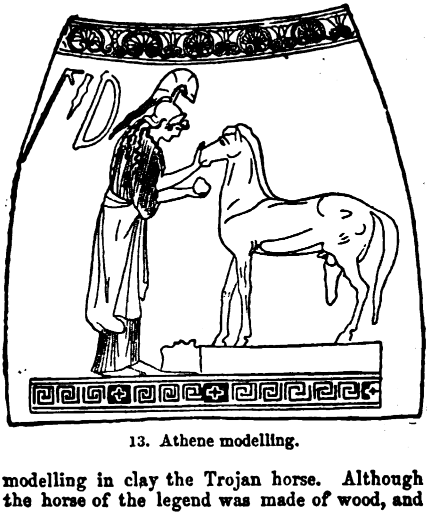
In Greece, statuary in terracotta seems never to have attained respectable rank as an independent art: it lived as the necessary adjunct of the sculptor, who especially, if he worked in bronze, had to mould his design in clay; and sometimes even of the painter, for we are told that Zeuxis used to model in terracotta the subjects which he afterwards painted: otherwise, as an independent art, it was relegated to such humble handicraftsmen as the statuette makers (*κοροπλάθοι, κοροπλάσται*), who made the little figurines (*ζῶα*) of which so many examples have come down to us from Greek tombs, especially from Tanagra. In early times, however, large terracotta statues seem to have been occasionally set up. Pausanias (i. 2, 5; and i. 3, 1) mentions two such *πήλινοι θεοί*, which he saw at Athens, and which dated from very early times; also the unbaked statues of the potter Chalkosthenes, after whose factory the Ceramicus at Athens was named, are mentioned by Pliny (xxxv. § 155). These are but isolated examples of an art which in Greece probably went no farther.

In Italy, on the other hand, terracotta statuary attained much greater importance. The conditions which were mentioned above as bringing this material into use for architecture, held good doubtless for statuary: the limited facilities for obtaining marble caused the early artists of Italy to turn their energies to work in terracotta, which attained there a development which, judging from literary accounts and from actual monuments, must have been considerable. Previously to the period when Italy was flooded with works of Greek art, the Etruscans were as famous for terracotta as for bronze statuary. We read of the earthen group of a quadriga which stood on the Capitoline temple, and which had come from Veii; of the statue of Jupiter on the Capitol, by a Volscian artist, Turrianus of Fregellae; and the *fictiles dei* of these early times are frequently alluded to in the later Roman writers. Specimens of this art have come down to us in the portrait heads of clay which surmount the cinerary vases of early Etruscan art; and also in the nearly life-sized groups of figures which recline on the lids of the sarcophagi from Chiusi and Perugia, and of which one excellent example is in the British Museum. The difficulty of baking so large a group must have been considerable, and the amount of success which these primitive artists have achieved speaks highly for the skill which they had attained. For religious purposes, the art seems to have given place entirely to work in bronze and marble, but it remained still in use in private life, as we see from the terracotta sarcophagi which continued to be modelled down to late times: and Pliny (xxxv. § 156) mentions a certain Arcesilaus, a friend of Lucullus, who was even in that time a noted modeller in terracotta.

The number of Roman terracottas which have come down to us is very large; but the Roman artists seem to have followed mainly in the lines of the Greeks: their figurines are for the most part direct descendants of the Greek statuettes and in some cases even from the same moulds. They are called *sigilla*, and the makers of them *sigillarii* or *figuli sigillares*. For decorative purposes, they seem to have reverted to the practice of modelling larger statues in terracotta: the British Museum has two such statues from Pompeii, which are of imperial times: but probably these were usually covered with stucco and painted.

For the two great classes of statuary in terracotta, two distinct processes would be necessary: that is to say, the larger statues and groups would be modelled by hand, while the smaller statuettes were for the most part cast from a mould.

The accompanying woodcut represents Athene modelling in clay the Trojan horse. Although the horse of the legend was made of wood, and the instruments which hung in the picture are tools for wood-carving, there can be no doubt that the goddess is here represented working in clay, of which a large lump lies at her feet, and a piece is being laid on in her hand: probably the artist wished to represent the preliminary model in clay (*πρόπλασμα, argilla*), which was as necessary a preliminary to sculpture in wood as it was for sculpture in bronze. The process seems to have been much the same as it is at the present day: either the artist modelled his figure entirely freehand, adding piece upon piece of the wet clay, or he had a skeleton or stand of wood (*κάναβος, stipes, crux*), more or less complicated according to the nature of his work, and around this he modelled his clay. The modelling was done with modelling tools and the finger and nail: the rougher work and the preliminary building up, with the hand (*pollice ducere*), the finer work and finishing with the tools: these tools were made of wood, bone, ivory, bronze, &c., and the most usual form is like a stylus, with one end pointed and the other flat. The final touches would be given with the finger-nail, and this, according to the sculptor Polykleitos, was the most crucial part of the operation: from it the expressions were borrowed of *ἐξονυχίζειν, ad unguem facere*, of a work very highly finished.



13. Athene modelling.

These larger statues would as a rule be burnt in an oven: and therein would lie the great difficulty: as the moisture evaporated, the clay would naturally shrink, and if every part did not shrink to the same extent, or evenly throughout, the figure would lose its proportions and possibly crack. We have no evidence as to how the ancients avoided these difficulties: in any case, they probably had special contrivances in the oven for regulating the heat, and assuring an even and gradual drying of every part alike. Otherwise, the ovens for these, and likewise for the smaller statuettes, must have been constructed on the same principle as those described above, for the baking of vases.

The idea of casting from a mould was, as described above, applied to various branches of the fictile art: it seems that the ancients made terracotta casts even from statues in marble and bronze, as we do in plaster. Lystratus, brother of the celebrated sculptor Lysippos, is said to have been the first who adopted this process. Some few of the small statuettes are moulded solid, especially the rougher kinds, such as dolls, neurospasta, &c.: but by far the greater number are cast from moulds. For this purpose the finest clay was used, differing of course according to locality: the usual kind is softer and more porous than that of vases, and varies from a deep red to a pale straw colour. The process is as follows: first a model figure, *protypos*, is made with modelling tools, and from this a mould is taken (usually in one, sometimes in two pieces), which is then baked. The figures, *ektypa*, are made by pressing a thin crust of clay into this mould, and bringing a thin crust across the top: the figure would thus be hollow inside, and open at the base; in the back, which as a rule is left unworked, a hole is cut, in order to allow of the clay contracting evenly without cracks or fissures. When dry, the figure was taken out of the mould and the final touches added; fingers, hats, attributes, where necessary, being separately moulded and attached. It was then ready for the oven, after which the colours were added. It would seem that nearly all ancient works of art in terracotta underwent more or less polychrome decoration, for which see the article PICTURA. [C. S.]

FI'CTIO. Fictions in Roman law are like fictions in English law, of which it has been said that they are "those things that have no real essence in their own body, but are so acknowledged and accepted in law for some especial purpose." The main purpose of fictions is to serve as a means of making new law without involving the difficulty of formulating new rules. They effect this by supposing some fact or condition to exist which is absent, the thing supposed being of such a nature as, being admitted to exist, enables rights or duties to arise or to be put an end to; that is, they extend law by connecting cases outside it with cases covered by it. Legal fictions have often been treated as an object of ridicule (cf. *e.g.* Cic. *in Verr.* ii. 12, 31 on the fiction of civitas explained below, "Judicia hujusmodi; qui cives Romani erant, si Siculi essent: quum Siculos eorum, legibus dari oporteret; qui Siculi, si cives Romani essent"), but historical experience shows that, until legal science is far advanced, they are an indispensable means of effecting legal change.

Fictions were especially congenial to the Roman habit of mind, and we find rules depending on them in all branches of law, — in the *jus sacrum*, where they were used by the pontifices for the purposes of modifying ritualistic and other observances, as well as in *jus profanum*. Fictions especially influenced private law by the use which the praetor made of them in procedure. The word *fictio* itself is a technical term of procedure, signifying a statement, inserted by the praetor in the formula or written instructions which he drew up for transmission to the judex who was to decide the case, of a feigned fact to be taken for the purposes of the decision as if it were real. By means of such *fictiones*, the praetor extended actions to cases to which they were not applicable, according to Jus Civile. Gaius gives us various instances of the extension of law by means of such *fictiones* (Gaius, iv. 34–38). One instance is that of a person who had obtained bonorum possessio or title to an inheritance *ex edicto praetoris*. The bonorum possessor having no civil title as heres had no civil action; he could neither claim to be entitled in law to the property owned by the deceased, nor could he sue for a debt due to the deceased as being legally due to himself. The praetor, however, enabled the bonorum possessor to bring actions by framing *formulae fictitiae*, in which it was feigned that the bonorum possessor was heres (*ficto se herede*). Similarly in the Actio Publiciana the fiction was that the plaintiff had acquired by usucapion the ownership of the thing of which he sought the recovery, in which case he would have been entitled to recover the thing by vindicatio. The formula would run as follows: "Let C. D. be judex. Supposing that the slave who was sold and delivered to Aulus Agerius had continued during a year in his possession, if in that case he would have belonged to Aulus Agerius by the law of the Quirites, then condemn the defendant," &c. A person by being arrogated or a woman by entering into a co-emptio ceased, according to civil law, to be debtors, if they were debtors before. But in order to prevent such capitis deminutio having the effect of defrauding creditors, an *actio fictitia* was given against these debtors, the fictio being that they had suffered no capitis deminutio. Again, some actions, *e.g.* the *actio furti*, could not be brought by or against peregrini, according to the Jus Civile, but the praetor extended these actions to this class of persons by means of a fictio in the formula which obliged the judex to assume that the peregrinus who was suing or being sued was a Roman citizen.

The change from the legis actio to the formulary procedure seems to have been partly carried out by means of *fictiones* (Gaius, iv. 32, 33). The fictio legis Corneliae is an instance of a fictio created by statute. It was necessary that a testator should be civis Romanus at the moment of his death, in order that his will might take effect. If a civis was captured by the enemy and died in captivity, his will was invalid according to this rule, since his civitas was lost by his captivity; but in order to maintain a will in such a case, the Lex Cornelia established a fictio, which supposed the testator to have died in the last moment of his freedom. Fictions gradually disappeared in the later period of Roman law; several which still survived were summarily disposed of by Justinian (*e.g.* Cod. 5, 12, 30; 6, 4, 4; 8, 54, 8;—Ihering, *Geist d. röm. Rechts*). A fiction is sometimes used, not for the purpose of extending or altering the law, but in order to make a legal conception more intelligible. Fictions of this kind are called by some modern writers "dogmatic," the fictions by which legal changes have been carried out being distinguished by the name of "historical." The fiction that a corporation is a person is an instance of a dogmatic fiction. (Demelius, *Die Rechtsfiction*, reviewed by Arndts in *Krit. viertelj. Schrift.* i. 93, &c.; Ihering, *Geist des röm. Rechts*, ii. 284–292; Maine's *Ancient Law*, ch. ii.) [E. A. W.]

FIDEICOMMISSUM was a bequest which a person made by begging his heir or legatee to transfer something to a third person. Such a bequest was one of a fiduciary kind, its execution being entrusted to the good faith of the party to whom the request was made. Fideicommissa were used for some time before they were made legally enforceable, devisees charged with them being at first only under a moral obligation to carry out the wishes of the deceased. This was the position of fideicommissa in the time of Cicero, who distinctly notices the practice of leaving fideicommissa (Cic. *de Fin.* ii. 17, 18): the *commendationes morientium* mentioned by him (*de Fin.* iii. 20, 65) appear to have been fideicommissa. It was not till the time of Augustus that fideicommissa were legally binding. Augustus was induced to enforce them partly by the desire of favouring particular individuals and partly on account of the scandal which some gross breaches of trust had caused. He himself, as heir of Lucius Lentulus, executed a fideicommissum with which he was charged by codicil (Inst. ii. 25, pr.). Jurisdiction over fideicommissa was assigned by Augustus to the consuls. In the time of

Claudius permanent praetores fideicommissarii were appointed, and the power of enforcing fideicommissa was given to the praesides of the provinces. (Suet. *Claud.* 22; Dig. 1, 2, 2, § 32.) Under Titus and subsequent emperors only one praetor fideicommissarius was appointed.

The consuls still retained their jurisdiction over fideicommissa, but only exercised it in important cases (Quintil. *Inst.* iii. 6). Proceedings in respect to fideicommissa always belonged to *extraordinaria*, not to *ordinaria jurisdictio*, i.e. they were not transmitted by a magistratus to a judex, but were entirely under magisterial cognisance. The practice of creating fideicommissa arose from the desire of obtaining greater freedom in respect to the disposition of property after death than the civil law rules of inheritance admitted. The advantages of leaving property by way of fideicommissum rather than by the civil law institution of legatum were numerous (Gaius, ii. 289). A fideicommissum could be more easily created than a legatum. Thus a legatum was not valid unless made by will or by codicil confirmed by will; it was necessary for a testator to use particular forms of words in order to bequeath a legatum and to express his intention in Latin. A fideicommissum, on the other hand, might be left without a will by simple words of request, such as *fideicommitto, peto, volo dari*, and the like. It might either be contained in written documents called *codicilli*, or expressed orally or even intimated simply by a nod ("etiam nutu relinquere fideicommissum in usu receptum est," Ulp. xxv. 3). It required no particular form of words, and might be expressed in Greek. The informal character of fideicommissa made them specially convenient when a man was called on suddenly to make a disposition of his property. Another advantage of fideicommissa was that they could be imposed on persons who could not be made subject to legata, for only a heres could be charged with a legatum; but a fideicommissum, if it consisted of a particular bequest, might be made binding not only on a heres, but also upon a legatarius. A person to whom a fideicommissum was left might himself be subject to a fideicommissum. A fideicommissum which bound a person to transfer an inheritance could only be charged on a heres, but a heres ab intestato as well as a heres ex testamento might be requested to make such a transfer, whereas the latter kind of heres only could be made subject to a legatum. In order to secure the carrying out of his intentions, a testator might request that, if his will failed from some cause to take effect as a will, his heres ab intestato should carry out its provisions as fideicommissa.

Fideicommissa were much used for the purpose of leaving property to persons who were either altogether incapable of taking directly under a will, or who could not take so much as ordinary persons. This was effected by leaving property to some one who was capable of taking according to civil law, or by allowing property to devolve under the rules of intestacy, and adding a fideicommissum for the benefit of some one who was under a total or partial disability. Fideicommissa were used in order to leave property to peregrini, who could not otherwise take. Gaius, when noticing this use of fideicommissa, remarks that the object of leaving property to persons of this class was a principal cause of the establishment of fideicommissa. (Gaius, ii. 285; cf. Theoph. *Paraphr.* ii. 23, § 1.) Fideicommissa were employed as early as the time of Cicero for making bequests to women in order to evade the Lex Voconia [VOCONIA] (Cic. *de Fin.* ii. 17, 18). Similarly fideicommissa were created for the benefit of caelibes and orbi in order to evade the Lex Papia Poppaea [LEX PAPIA POPPAEA]; also for the purpose of bequeathing property to Latini Juniani, incertae personae, postumi alieni, and corporate bodies. In course of time, however, fideicommissa were put on much the same footing as legata in respect to the persons who could take them. Thus, by a senatusconsultum passed in the time of Hadrian, fideicommissa left to peregrini were made forfeitable to the treasury (Gaius, ii. 285). The senatusconsultum Pegasianum prevented fideicommissa being made a means of evading the Lex Papia Poppaea, by giving fideicommissa left with this object to those persons in the will who had children, and in default of such to the treasury, as in the case of hereditates and legata [BONA CADUCA]. (Gaius, ii. 286 a.) By a senatusconsultum of Hadrian it was declared that incertae personae and postumi alieni should be incapable of taking fideicommissa. In consequence of these changes in the law, Ulpian was able to state it as a rule that only those persons are capable of taking fideicommissa who can take legata (Ulp. xxv. 6). But the distinction that Latini Juniani were capable of taking fideicommissa but not legata, remained till this class of freedmen was abolished by Justinian. It was not possible to institute after the death of a person who became heres another heres to take his place, but a request might be made that the whole or part of an inheritance should, on or after the death of the heres, be transferred to another, in which case the heres of the heres would be bound by a fideicommissum to make the required transfer. By requesting each successive transferee of an inheritance to make it over on his death to some other member of a family, a kind of family settlement might be created. Justinian in his 115th Novell placed restrictions on the power of leaving such family fideicommissa. There was a difference between the effect of manumitting a slave by direct bequest and by fideicommissum; if manumitted in the latter way, the slave became the freedman of the person who had been requested to manumit him, whereas a freedman manumitted directly by will was looked on as the freedman of his deceased master (*libertus orcinus*). A person might be bound by fideicommissum to transfer his own property or that of a third party as well as the property of the deceased. If a person failed to execute a fideicommissum at the proper time, he was liable on account of mesne profits and interest, but interest could not be claimed, as a rule, against a heres who had failed to satisfy a legatum.

The differences between fideicommissa of single things and legata, which existed when Gaius wrote, disappeared in later law. The simplification of the law relating to the mode of creating legata and the requirement of formalities for the creation of fideicommissa was a considerable step in this direction (Cod. Theod. iv. 4, 1; Cod. Just. vi. 37, 21). The difference in the forms of action for these two kinds of bequest ceased when the libellary procedure was substituted for the formulary. Justinian entirely assimilated legata and fideicommissa (Dig. 1, 30, 1). A fideicommissum of a specific thing did not pass the property in the thing to the fideicommissarius, but only gave him a personal action against the person who was requested to transfer the thing. ("Jus omne fideicommissi non in vindicatione sed in petitione consistit," Paul. *Sent.* iv. 1, 16.) Justinian changed the law on this subject, giving to a fideicommissarius of a specific thing which had belonged to the deceased, as well as to a legatarius, both a personal action and an *actio in rem* for the recovery of the thing (Cod. vi. 43, 1). The object of a fideicommissum might either be the inheritance, whether the whole or a part (*fideicommissaria hereditas*), or it might be a particular bequest (*fideicommissum rei singulae*).

It is necessary to give some account of the history of the law relating to the universal fideicommissum or fideicommissaria hereditas. A heres requested to transfer the whole or part of an inheritance to some one else is called *fiduciarius*, the person to whom the transfer is to be made being termed *fideicommissarius*. The heres fiduciarius by accepting the inheritance became personally bound to transfer it to the fideicommissarius. Originally the fideicommissarius was considered, when the transfer was made to him, to be in the position of a purchaser (*emptoris loco*), it being usual as a mere formality for the inheritance to be sold to him for a single coin (*nummo uno*). The effect of the transaction was to make the fideicommissarius a particular, not a universal successor; for the fiduciarius having once become heres necessarily continued to be heres, and consequently could not get rid of his liability to the creditors of the deceased. Hence the fiduciarius, in order to secure himself against the liability which he incurred if he accepted the inheritance, required before his acceptance that the fideicommissarius should enter into the same stipulations as were usually entered into between the vendor and purchaser of an inheritance, by which it was covenanted that the fiduciarius should be indemnified on account of all liability in respect to the inheritance. On the other hand, it was agreed that the fideicommissarius (*qui recipiebat hereditatem*) should have whatever part of the inheritance might still come into the hands of the heres, and should be allowed to maintain all actions concerning the inheritance in the name of the heres. (Gaius, i. 248–252.)

A great change was made in the relations of the heres fiduciarius and fideicommissarius by the senatusconsultum Trebellianum, which was passed under Nero A.D. 62. This law provided that on the transfer of an inheritance by a heres fiduciarius all rights of action maintainable by or against him should be transferred to and against the fideicommissarius. The praetor allowed the latter to sue and to be sued by means of *actiones utiles*. A heres who made a transfer under this statute practically ceased to be heres, the fideicommissarius being substituted in his place. The fideicommissarius to whom such a transfer was made, became fully liable for the debts of the deceased, and occupied the position of a universal successor. As this statute relieved the fiduciarius from all liability, the covenants which he had previously insisted on were no longer required. Fideicommissa were, however, sometimes lost, because the heres would not accept the inheritance if he got little or no advantage in so doing; the principle of the Quarta Falcidia, which had not previously applied to fideicommissa, but only to legata, was therefore extended to fideicommissa by the senatusconsultum Pegasianum, passed in the time of Vespasian: by this law a heres had the right of deducting one-fourth of the inheritance before transferring a universal or particular fideicommissum. If several co-heredes were charged with fideicommissa, each was entitled to a fourth of his share of the inheritance. If a fiduciarius took advantage of the senatusconsultum Pegasianum by deducting a fourth under it, he was not relieved by the senatusconsultum Trebellianum from all debts and charges (*onera hereditaria*); in this case the fideicommissarius continued to be a singular successor, like a legatarius partiarius or legatee of a part of an inheritance, and so he was required by the fiduciarius to enter into covenants by which he undertook to be answerable for liabilities in proportion to the share of the inheritance which he received (*pro rata parte*). The effect of these two enactments was this: if the heres was required to restore not more than three-fourths of the inheritance, the senatusconsultum Trebellianum took effect, and the heres was relieved from all liability beyond the proportion of the inheritance which was intended for him. If the heres was required to restore more than three-fourths or the whole, the heres took advantage of the senatusconsultum Pegasianum, but then he was not relieved from liability and could only protect himself by covenants with the fideicommissarius. The senatusconsultum Pegasianum gave the fideicommissarius the right to compel the heres to accept the inheritance (*adire*), but in this case all the benefits of the inheritance as well as its burdens attached to the fideicommissarius (Gaius, ii. 258). By the legislation of Justinian the senatusconsultum Pegasianum was merged in the senatusconsultum Trebellianum, and the following rules were established. The heres who was charged with a universal fideicommissum might always retain one-fourth of the inheritance, if so much had not been left to him by the deceased; if the fiduciarius retained one-fourth, all claims on behalf of or against the inheritance were shared between the fiduciarius and fideicommissarius, according to their respective shares. If the fiduciarius refused to accept the inheritance, the fideicommissarius could oblige him by action to do so; if after having been ordered by a court to enter, the fiduciarius continued to abstain, his acceptance was assumed to have been given. A fiduciarius who was compelled to take the inheritance, lost his quarta and any other advantage he might have derived from the inheritance. The express or implied assent of the fiduciarius was sufficient to transfer the inheritance to the fideicommissarius. The fiduciarius was bound to restore the inheritance at the time named by the deceased, or, if no time was named, immediately after accepting it. He was required to account for all property which had come into his hands, and was entitled to be indemnified for all proper costs and charges which he had sustained with respect to the inheritance; he was answerable for any damage or loss which it had suffered through his *dolus* or *culpa*. Conveyances which the fiduciarius had made of the property of the inheritance were void as against the fideicommissarius. After the transfer had been made to him, the fideicommissarius could maintain the *hereditatis petitio fideicommissaria* against anyone who had possession of the property of the inheritance. (Gaius, ii. 246–289; Ulp. *Fragm.* tit. xxv.; *Inst.* ii. 23, 24; Dig. 30–33, 36; Cod. vi. 37–54; Arndts, *Fortsetzung von Glück*, xlvi. 6–80; Mayer, *Die Lehre von den Legaten Fideicommissen;* Lassalle, *Röm. Erbr.* p. 120, &c.; Rosshirt, *Verm.* i. 120; Heimbach, *Rechtslex.* iv. 286, *s. v.*; Vangerow, *Pandekten*, ii. §§ 528, 556.) [E. A. W.]

FIDEJUSSOR. [INTERCESSIO.]

FIDEPROMISSOR. [INTERCESSIO.]

FIDES. [LYRA.]

FIDI'CULA, or plural -AE, an instrument of torture, consisting of a number of strings (Suet. *Tib.* 62, *Calig.* 33; Mart. v. 51; Cod. Theod. 9, tit. 35, s. 1). The reticence of the ancients on these subjects has been noticed under ECULEUS; there is, however, a passage which throws some light on the mode of its operation (Quintil. *Decl.* 19, § 12, p. 373, Burmann: "tendebam fidiculas,...ut leviter sedibus suis emota compago per singulos artus membra laxaret:" cf. *ib.* 8, pp. 126, 127). We see that, like the *eculeus* and the modern rack, it stretched the limbs until the joints were dislocated (Marquardt, *Privatl.* 180). [W. S.] [W. W.]

FIDU'CIA is a *lex dicta* or supplementary provision sometimes incorporated in a mancipium or *in jure cessio*, whereby a party to whom a right is transferred is obliged to transfer it again at some future time or on some condition being fulfilled. This species of *lex mancipii* or or *jure cessionis* is called *fiducia*, because the obligation which it creates is expressly based on the *fides* of the party to whom the transfer is made (Boeth. *in Top.* p. 340, Or.: "haec mancipatio fiduciaria nominatur idcirco, quod restituendi fides interponitur"); *fiduciam contrahere* is to contract such an obligation; fiducia is also used as equivalent to *res fiduciaria*, meaning the thing which was the object of a *mancipatio* or *in jure cessio fiduciaria:* thus the fiduciarius, or person to whom property is so transferred, is said *fiduciam accipere* (Liv. xxxii. 38, 2; Cic. *Top.* 10, § 42). It follows from the fact of the fiduciary transaction being a *lex dicta* or *lex privata*, that it derived its legal effect from the nuncupatio in a mancipium, or from being a term of an *in jure cessio* (cf. *Tab.* v. 1: "Cum nexum faciet mancipiumque, uti lingua nuncupassit, ita jus est." *Fr. Vat.* 50: "et mancipationem et in jure cessionem lex XII. Tabularum confirmat"). The construction of fiducia that it was a separate agreement annexed (*adjectum*) to a mancipium or *in jure cessio*, and not an integral part of these forms, cannot be accepted, since the enforcement of a *pactum adjectum* was subsequent to the Twelve Tables, and no effect was given at any time to a pact annexed to a formal transaction, such as mancipium. It seems, however, to have become a practice after a time to embody the terms of a fiducia in an independent stipulation, and perhaps the well-known Spanish inscription relating to fiducia describes a subsidiary contract of this kind (*C. I. L.* ii. No. 5042). A fiduciarius, or party who acquired a right but was subject to a fiducia respecting it, was bound either to re-convey to the transferrer ("ut remancipetur, in jure cedatur"), or to convey to a third party, or, in the case of a slave or person in mancipio, the obligation might be that they should be manumitted (*ut manumittatur*). If he was guilty of a breach of trust in these respects, he was liable to an *actio fiduciae*, which was an *actio bonae fidei* (Cic. *de Off.* iii. 15, § 61; ad *Fam.* vii. 12, "ut inter bonos bene agier oportet"), involving infamia as well as damages for the loss his dishonesty had caused. Cicero enumerates the *judicium fiduciae* with that of *tutelae* and *societatis* as "judicia summae existimationis et paene capitis" (*pro Rosc. Com.* 6, § 16), where he is evidently alluding to the consequence of infamia. The *actio fiduciae* could only be maintained by the party transferring the right (the *fiduciae dans*) or his heir, and only the fiduciary (or his heir) was subject to it, not a third party to whom the object of the fiducia was conveyed. The fiduciarius was owner of the *res fiduciaria*, but he was bound to hold it as if he were an agent of the *fiduciae dans*. Thus he was liable if he did not take proper care of the *res*, and he had to account for all profits derived from it (Cic. *pro Caecin.* 3, § 7; *Top.* 17, § 66; Cod. Just. iv. 24, 3); on the other hand, he could claim to be indemnified for his expenses in maintaining it. In some respects the *fiduciae dans* was considered to have an interest in the *res* itself, and not simply a claim against the fiduciarius. If he took possession of the *res*, he did not commit *furtum* (Gaius, iii. 201). If he kept possession for a certain time, he could recover the ownership by *usu receptio*, although he did not fulfil the ordinary conditions of usucapion (Gaius, ii. 59). He could bequeath his interest by way of *legatum per praeceptionem*, according to the opinion of the Sabinians, although jurists of this school maintained that a testator could only bequeath his own property by this form of bequest (Gaius, ii. 220); and a testator who conveyed property with a fiducia which he had previously bequeathed, was not considered to have thereby revoked his bequest (Paul. iii. 6, 16). *Res nec mancipi* as well as *res mancipi* might be *res fiduciariae;* and when the object for which they were conveyed was attained, it was necessary that they should be re-conveyed by mancipatio or in jure cessio. If there was only a simple re-delivery, the ownership was not recovered except by usucapion. A fiduciary conveyance was entered into either with a friend (*cum amico*) or with a creditor (*cum creditore*),—with a friend in order to serve some purpose of family law: thus to enable a woman to escape from the burden of tutela there was a *coemptio fiduciae causa* (Gaius, i. 114), and in the process of emancipation there was a fiducia that the filiusfamilias should be manumitted by the person *qui mancipio accepit*. It was common to make a fiducia with a friend in order to secure the safe custody of property (Gaius, ii. 60: "quo tutius nostrae res apud eum sint." Cf. Boeth. *in Top.* p. 340: "fiduciam—accepit—

si quis tempus dubium timens amico potentiori fundum mancipet, ut ei, quum tempus, quod suspectum est, praeterierit, reddat"); and, in fact, this seems to have been the only legal means of making a deposit or a loan of a specific thing according to early law. Fiducia ceased, however, to be used for these purposes when the real contracts of depositum and commodatum were established.

A fiducia was entered into with a creditor for the purpose of mortgaging property to him, the legal estate being conveyed to the mortgagee on the understanding that there should be a re-conveyance when the debt was paid, as in the English common law mortgage. The mortgagor was frequently allowed to remain in possession of the mortgaged property as a kind of tenant at will, and the legal relation thus created, which is called *precarium*, may have originated in this way. A fiducia might be subject to a condition that the mortgagor should forfeit his right to a re-conveyance, if he failed to pay his debt within a certain time (Cic. *pro Flacc.* 21, § 51; *ad Fam.* xiii. 56;—Cat. *de Re Rust.* 146, 2). Such condition was probably the earliest kind of *lex commissoria* (cf. Pignus). Fiducia as a form of mortgage continued in use after the forms of pignus and hypotheca were recognised on account of the great security which it gave to the mortgagee. There was frequent mention of it in the writings of the classical jurists, but it has no place in Justinian's legislation, other terms having been substituted for fiducia by the compilers in the passages of the Digest where it would have occurred.

The inscription referred to above is on a bronze tablet, and was found some years ago near the mouth of the Guadalquivir; it contains the terms of a fiduciary mortgage, and is thought to be not later than the second century after Christ (*C. I. L.* ii. 5042; Krüger, *Krit. Unters.* 1870, p. 41 ff.; Hübner in *Hermes*, iii. 283 ff.). (Zachariae, *De Fiducia*; Huschke, *Zeitschr. für gesch. Rechtsw.* xiv. 230; Rein, *Privatr.* 245, 349–351; Bachofen, *Das röm. Pfandrecht*, i. 1, § 2, xix. 4; Dernburg, *Das Pfandrecht*, 1, § 2; Voigt, *XII. Tafeln*, ii. § 86; Degenkolb, *Zeitschr. für Rechtsgesch.* ix. 117 ff.) [G. L.] [E. A. W.]

FIDUCIA'RIA ACTIO. [Actio.]

FIGLI'NA ARS. [Fictile.]

FI'GULUS. [Fictile.]

FILIUSFAMILIAS. [Familia.]

FI'MBRIAE (*θύσανοι*: in grammarians also *κροσσοί*), thrums; tassels; a fringe.

When the weaver had finished any garment on the loom [Tela], the thrums, *i.e.* the extremities of the threads of the warp, hung in a row at the bottom. In this state they were frequently left, being considered ornamental. Often also, to prevent them from ravelling, and to give a still more artificial and ornamental appearance, they were separated into bundles, each of which was twisted (*στρεπτοῖς θυσάνοις*, Brunck, *Anal.* i. 416 = *Anth. Pal.* vi. 225), and tied in one or more knots. The thrums were thus, by a very simple process, transformed into a row of tassels. The linen shirts, found in Egyptian tombs, sometimes show this ornament among their lower edge, and illustrate, in a very interesting manner, the description of these garments by Herodotus (ii. 81). Among the Greeks and Romans fringes were seldom worn except by females (*κροσσωτὸν χιτῶνα*, Phalaec. *ap.* Ath. x. 440 d = Brunck, *Anal.* ii. 525: cf. Schweighäuser on Ath. vol. x. p. 428; Jacobs on *Anth. Pal.* i. pt. 2, p. 251; Pollux, vii. 64). We find, however, a *κροσσωτὴν ἐφεστρίδα* worn by Lucullus (Plut. *Lucull.* 28); a long-sleeved tunic with *fimbriae* at the wrists, worn by Julius Caesar (Suet. *Jul.* 45; cf. Clavus Latus, p. 454 *b*. The text of Suetonius may, we think, be defended against Marquardt, *Privatl.* 528 n.). Of their manner of displaying them the best idea may be formed by the inspection of the annexed woodcut, taken from a small bronze, representing a Roman lady who wears an inner and an outer tunic, the latter being fringed, and over these a large shawl or pallium.

Fimbriae. (From an ancient bronze.)

Among barbarous nations the upper garment was often worn by men with a fringe, as is seen very conspicuously in the group of Sarmatians at p. 315 *a*. By crossing the bundles of thrums, and tying them at the points of intersection, a kind of network was produced; the *θυσανὸς δικτυωτός*, hung with bells, which adorned the bier of Alexander the Great, must have been of this description (Diod. xviii. 26). The ancients also manufactured fringes separately, and sewed them to the borders of their garments. They were likewise made of gold thread and other costly materials. Of this kind was the ornament, consisting of a hundred golden tassels, which surrounded the mythical shield of Jupiter, the *αἰγὶς θυσανόεσσα*, and which depended from the girdle of Juno (Hom. *Il.* ii. 448, v. 738, xiv. 181, xv. 229, xvii. 593, xviii. 204, xxi. 400). In consequence of the tendency of wool to form itself into separate bundles like tassels (*θυσανηδόν*, Aelian, *H. A.* xvi. 11), the poets speak of the golden fleece as consisting of them (Pind. *Pyth.* iv. 411; Apoll. Rhod. iv. 1146); and Cicero, declaiming against the effeminacy of Gabinius, applies the same expression to his curled locks of hair (*in Pis.* 11, § 25). [J. Y.] [W. W.]

FINITO'RES. [Agrimensores.]

FI'NIUM REGUNDO'RUM A'CTIO. This was an action having for its original object the determination of a *controversia de fine*, which was a dispute concerning the boundary of five feet (*finis quinque pedum*) interposed between the allotments (*sortes*) [AGRIMETATIO, p. 87 *b*]. According to the law of the Twelve Tables and the Lex Mamilia, this land on the confines of two holdings, which was contributed by the adjacent proprietors in equal portions, could be used by them in common as a way or for turning the plough and for other purposes, but each was restricted from doing anything in respect of it which might injure the other, and hence there were provisions against planting trees or raising buildings on it. If these restrictive conditions were not observed, or if the limits of the boundary were matter of dispute, the *actio finium regundorum* was the appropriate remedy. The action did not apply to *ager arcifinius* or to land in a town, but only to *ager limitatus*. A dispute about land which was not a *finis* is called *controversia de loco*, as opposed to *controversia de fine*, and was tried by means of an ordinary *vindicatio*. It appears that, when the subject of dispute was a *finis*, a title by usucapion to the land in question could not be set up; but if the dispute was about land beyond the limits of a *finis*, a title by usucapion might be asserted. (Cic. *de Legg.* i. 21, § 55; Isidor. *Orig.* v. 2; Hygin. *de Limit.* p. 40, Goes.) It was provided by the Twelve Tables that three *arbitri* should be appointed to try the *actio finium regundorum*, but by the Lex Mamilia only one was required. (Cic. *l. c.*: cf. Cod. Theod. ii. 26, 3.) Justinian made the *finis* subject to the thirty years' prescription, and extended the *actio finium regundorum* so as to make it embrace *controversiae de loco* as well as *de fine*. Thus the action became the regular means of trying boundary disputes. In making his award, it was first of all the duty of the arbiter to find out and re-establish the old boundary (*depalare*, cf. *C. I. L.* vi. 1, 1268; *terminos ponere*, Dig. 4, 8, 44); but if there was not sufficient evidence of it, he was obliged to treat the land in dispute as common, and to partition it between them. His *adjudicatio* or award constituted a complete title to the land assigned under it. He might condemn either of the parties to pay damages for mesne profits and deterioration of land illegally possessed. Each party was also entitled to compensation for improvements made in the portion of land which did not belong to him (Dig. 10, 1). This action belonged to the class of *duplicia judicia*. [FAMILIAE ERCISCUNDAE ACTIO.] (Dig. 10, 1; Cod. Theod. ii. 26; Cod. Just. iii. 39; Rudorff, *Ueber die Gränzscheidungsklage*, *Zeitschr. für geschichtliche Rechtsw.* vol. x. 343; *Grom. Institutionen in der Schr. d. röm. Feldmesser*, in the collection of Blume, Lachmann, and Rudorff, ii. 433–445; Karlowa, *Beitr. z. Gesch. des röm. Civilprocesses*, 141–162; Voigt, *Zwölf Tafeln*, ii. § 150; Vangerow, *Pandekten*, iii. § 658.) [E. A. W.]

FISCALES. [GLADIATORES, p. 918 *a*.]

FISCUS. In the republican period there was only one public treasury, the Aerarium populi Romani, or Aerarium Saturni, as it was called. On the establishment of the imperial power, there was a division of government between the senate as the representative of the populus and the emperor, and in consequence there was a division of the different branches of the public revenue into two departments. The treasury of the senate retained the name of Aerarium, while that of the emperor received the name of Caesaris fiscus or Fiscus. Fiscus was the large basket in which the Aerarium and great banks kept money (Lex repet. v. 67, 68; Cic. *Verr.* iii. 85, 197: cf. Mommsen, *Staatsr.* ii. 958): in this sense it is opposed to the cista or chest in which private persons generally kept their money. Hence in the time of Augustus the word *fiscus* was applied to the central financial department of each branch (*ratio*) of imperial administration: thus we have the phrases *fiscus Asiaticus* (Orelli, *Inscr.* 2905), *Gallicus* (Henzen, 6651), *Judaicus* (Suet. *Dom.* 12), *frumentarius* (Orelli, 790), *castrensis* (Orelli, 2920), and so Suetonius opposes *fisci* in the plural to *aerarium* (Suet. *Aug.* 101); the word occurs in this sense as late as the time of Hadrian (*C. I. L.* 967). But the superior importance of the central imperial treasury led to the practice of appropriating the word *fiscus* to it. The first distinct use of *fiscus* in this sense is found in the writings of the younger Seneca (*de Ben.* iv. 39, 3; vii. 6, 3: cf. Juv. *Sat.* iv. 54, "res fisci est"): *fiscus* is thus commonly opposed by Tacitus to *aerarium* (*e.g.* Tac. *Ann.* ii. 47, 48; vi. 2 and 17). It is a question whether a central imperial treasury was established by Augustus, or whether it was not of later origin. Hirschfeld maintains that there is no evidence of the existence of such an institution under Augustus, but that there were only separate fisci at this time. He even thinks that there was no fiscus under Tiberius in spite of the language of Tacitus to the contrary, and attributes its establishment to Claudius. The common opinion, which we have adopted, is that the institution of a fiscus was an immediate consequence of the share in the government which Augustus undertook. It is true that the emperor's financial administration was not at first so centralised as it afterwards became, which is the explanation of the fisci ceasing in course of time to be mentioned.

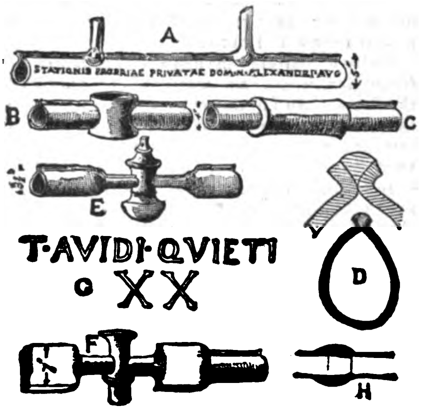
The property of the fiscus was held by the emperor in his public capacity, to be employed for the benefit of the state. The law, however, made no distinction between the rights of the emperor over property intended for public uses and that which he held as a private person ("Res fiscales quasi propriae et privatae principis sunt," Ulp. *Dig.* 43, 8, 2, § 4: cf. Sen. *de Ben.* vii. 6; Tac. *Ann.* iv. 6, 15). Accordingly it passed with the inheritance of a deceased emperor to his *heredes*; and was at first administered by the emperor's freedmen and slaves, not by public officials: so, too, the emperor was under no legal duty to render an account of it, as would have been the case if it had been the property of the state. But as a matter of fact the administration of the fiscus was kept quite distinct from that of other imperial property, and was treated as public; accounts of it being published by some of the earlier emperors. Hence the *res fisci* are frequently opposed to the property which the emperor had acquired for his own use, either by title of inheritance (*patrimonium principis*) or by some other title (*res privatae principis*). Thus while the ownership of fiscal property was vested in the emperor, and not in the state, it was incumbent on him to make use of his rights over such property for the public good; and if his office had terminated, he might have been made responsible by law for failure of duty in this respect (cf. Tac. *Ann.* xiii. 14). In accordance with the system of personal government instituted by Augustus, the fiscus relieved the aerarium from many important public charges. At first the army and navy and the imperial provinces were its principal concern, but new burdens were gradually imposed on it, as of the city corn and water supply, of sacred and public buildings, of the banks and bed of the Tiber, the roads, bridges, and coinage (cf. Statius, iii. 3). The income of the fiscus was derived from the provinces which were assigned to the emperor and from conquered territory, and especially from the land which he held in his own domain, which included Egypt. [PROVINCIA.] The taxes of the senatorial provinces were also to some extent appropriated to the fiscus, and it was also augmented by contributions from the aerarium. Moreover sources of revenue were assigned to it which had previously belonged to the aerarium, as *legata caduca* by a constitution of Caracalla. (Ulp. *Fragm.* xvii. 2.) Gifts from Italian and provincial towns, penalties on account of frauds on the revenue, and forfeitures were also sources of its supply. The emperor frequently subsidised his treasury to a considerable extent from his own private property (cf. *e.g.* Tac. *Ann.* xv. 18). The distinction between the fiscus and the aerarium became merely formal, as the republican treasury lost its independence. Augustus himself did not interfere with the constitution of the Aerarium populi Romani, but he created a special Aerarium militare to provide pensions for veterans, which was supported by the 5 per cent. succession duty (*vicesima hereditatum*), and the duty of 1 per cent. on sales (*centesima rerum venalium*). This subordinate treasury was administered by imperial officers called *praefecti* (Dio Cass. lv. 25). Claudius was the first emperor who assumed the right of nominating an officer to the Aerarium populi. Nero, A.D. 56, appointed two *praefecti aerarii Saturni.* From the time of this latter emperor the distinction between the two treasuries lost its political importance, although the formal consent of the senate to grants of money out of the aerarium was probably required till the time of Diocletian (Frontinus, *de Aquaed.* 115). So long as the formal distinction existed, the law relating to each might be expressed by the terms *jus populi* and *jus fisci* respectively, as it is in Paulus (*Sent. Rec.* v. 12). From the time of Diocletian the word *fiscus* signified generally the treasury of the state, the emperor having concentrated in himself the sovereign power; and so the word *fiscus* had the same wide signification as aerarium in the republican period: accordingly the two words are sometimes used in the Corpus Juris and in earlier writings as synonymous; *fiscus* is, however, frequently interpolated in the Digest for *aerarium.* The administration of the fiscus was similar in many respects to that of the aerarium. It was conducted by imperial officers, called successively *procuratores a rationibus*, *rationales*, and *comites*, who had numerous assistants—*adjutores a rationibus*, *tabellarii*, &c. Hadrian first appointed its chief officers from the Equites instead of from his freedmen, according to the previous practice. The fiscus was represented throughout the empire by its procuratores, whose duties were regulated by imperial mandates. Private persons were in the habit of giving information (*nuntiationes*) to the fiscal officers of forfeitures and other claims due to the fiscus, in order that they might obtain a reward. Actions to which the fiscus was a party were maintained by means of its procuratores. Under Augustus such actions were tried in the ordinary way by a magistratus and a judex, like other suits of the same kind between private persons (Tac. *Ann.* iv. 7, 15; Dio Cass. lvii. 23); but this subjection of the fiscus to the ordinary tribunals was not of long continuance. Tiberius in his later years began to remove fiscal causes from their cognisance, and by a senatusconsultum of Claudius jurisdiction over them was given to the imperial procuratores (Suet. *Claud.* 12; Tac. *Ann.* xii. 60), though the governors of provinces also had a concurrent jurisdiction. Each procurator probably had cognisance of the cases arising within his own department, and was competent to decide them himself, there being an appeal, however, to the emperor. Thus the consequence of this change was to exempt fiscal actions from the ordinary procedure of trial by judices, but the Emperor Nerva deprived the procuratores in Rome and Italy of their jurisdiction, and assigned it to a special praetor and judices. The office of praetor fiscalis does not seem to have been of long continuance. The fiscal procuratores had no power of inflicting fines or criminal punishments, or of taking cognisance of ordinary actions; but, as is shown by various imperial enactments and by notices of historians, they frequently paid little attention to these restrictions. Their arbitrary conduct is to be attributed, according to Mommsen, to the quasi-military position which they were allowed to maintain, soldiers being put at their disposal for the purpose of enabling them to enforce payment of taxes.

Hadrian instituted the office of *advocatus* or *patronus fisci*, whose duty was to act as counsel for the fiscus. An appointment of those who were to fill this office was made from the advocates attached to each court [ADVOCATUS]. Under Diocletian and his successors the fiscal procedure was altogether distinct from that of ordinary actions, the position of the emperor being changed. The fiscus, as the subject of certain rights, came to be legally regarded as a person, by virtue of the same fiction of law which gave a personal existence to corporations, and to the communities of cities and villages. But the fiscus on account of its relation to the emperor differed in many respects from other persons existing by fiction of law; and as an instance, it was never under any incapacity as to taking an hereditas, which, for a long time, was the case with corporations for the reason given by Ulpian. [COLLEGIUM.]

The fiscus was privileged in various ways. Thus the rule applicable to the aerarium, that the time of usucapion or prescription did not run against it, was extended to the fiscus, and the claims of the fiscus had priority over those of other creditors. It was favoured, too, in being an exclusive right of acquiring certain things, and otherwise. The various ways in which property was acquired by the fiscus are enumerated in the Digest (49, 14, 1), many of which may be arranged under penalties and forfeitures. Thus, if a man was led to commit suicide, in consequence of having done some criminal act (*flagitium*), or if a man made counterfeit coin, his property was forfeited to the fiscus. Treasure trove (*thesaurus*) which was found in certain places was also subject to a claim on the part of the fiscus. (Dig. 49, 15; Cod. 10, 1; Cod. Theod. 10, 1; Paul. *Sent. Rec.* v. 12; *Fragm. veteris Jurisc.* "*de jure Fisca*," *ap.* Savigny, *System*, vol. ii.; Mommsen, *Staatsr.* ii. 2, p. 957 ff., from which much of the information in the above article has been taken; Hirschfeld, *Untersuchungen*; Heimbach, art. Fiscus in Weiske's *Rechtslexicon.*) [G. L.] [E. A. W.]

FISTU'CA, an instrument used for ramming down pavements and threshing-floors and the foundations of buildings (Cato, *R. R.* 18, 28; Plin. *H. N.* xxxvi. §§ 185, 186, 188; Vitruv. iii. 3, s. 4, § 1; x. 3, s. 2, § 3); and also for driving piles (Caes. *B. G.* iv. 17). When used for the former purpose, that of making earth solid, it was no doubt a mere log of wood (shod perhaps with iron), with handles to lift it up; just like a paviour's rammer. But in the case cited from Caesar, where it was used for driving the piles of his bridge over the Rhine, it is almost evident that it must have been a machine, something like our pile-driving engine (or monkey), by which a heavy log of wood, shod with iron, was lifted up to a considerable height and then let fall on the head of the pile. It is probable that *fistuca* and *festuca* are two forms of the same word and connected with *fustis*. In the passages of Pliny *festuca*, *festucare* are now read with MS. authority. [P. S.] [W. W.]

FI'STULA (σωλήν), a water-pipe. Vitruvius (viii. 6) distinguishes three modes of conveying water: by channels of masonry (*per canales structiles*), by leaden pipes (*fistulis plumbeis*), and by earthen pipes (*tubulis fictilibus*).* Of these two sorts of pipes the leaden were the more commonly used in distributing the water from aqueducts: though draining-pipes of earthenware were extensively used, as in modern times, and many examples have been found. The lead pipes were made by rolling thick plates, in lengths of ten feet, round a wooden core; the edges were then brought together and soldered with melted lead. The resulting form was not perfectly cylindrical, but pear-shaped in section, having a sort of ridge where the edges of the plate were somewhat roughly joined together. (See fig. D.) The pipes were made of much thicker lead than is the custom now, as much as 20 lbs. to the square foot in existing specimens (Middleton, p. 460); at points where there was heavy hydraulic pressure they were strengthened or replaced by bronze pipes, and the taps and stop-cocks (*epistomia*, figs. E, F) were likewise of that metal.



Fistulae. (From Middleton's *Rome.*)

In the manufacture of these pipes, particular attention was paid to the bore and to the thickness. The accounts of Vitruvius, Frontinus, and other writers are not in perfect accordance; but it appears, from a comparison of them, that two different systems of measurement were adopted,—namely, either by the width of the plate of lead (*lamina* or *lamna*) before it was bent into the shape of a pipe, or by the internal diameter or bore (*lumen*) of the pipe when formed. The former is the system adopted by Vitruvius (*l. c.* § 4); according to him, the leaden plates were cast of a length not less than ten feet, and of a width containing an exact number of *digits* (sixteenths of a foot), which number was of course different for different sized pipes; and then the sizes of the pipes were named from the number of digits in the width of the plates, as in the following table, where the numbers on the right hand indicate the number of pounds which Vitruvius assigns to each ten-feet length of pipe:—

Centenaria,	from a plate	100	digits wide :	1200 lbs.
Octogenaria	,,	80	,, :	960 ,,
Quinquagenaria	,,	50	,, :	600 ,,
Quadragenaria	,,	40	,, :	480 ,,
Tricenaria	,,	30	,, :	360 ,,
Vicenaria	,,	20	,, :	240 ,,
Quindena	,,	15	,, :	180 ,,
Dena	,,	10	,, :	120 ,,
Octona	,,	8	,, :	96* ,,
Quinaria	,,	5	,, :	60 ,,

If this scale is correct, the thickness of the plates must have been the same for pipes of all sizes; namely, such that each strip of lead, ten feet long and one digit wide, weighed twelve pounds. The account of Vitruvius is followed by Pliny (*H. N.* xxxi. §§ 57, 58) and Palladius (ix. 12).

Frontinus, who enters into the subject much more minutely, objects to the system of Vitruvius as too indefinite, on account of the variation which is made in the shape of the pipe in bending up the plate of lead; and he thinks it more probable that the names were derived from the size of the internal diameters, reckoned

---

* The etymological distinction between *fistula* and *tubus* seems to be that the former, which originally signified "a flute," was a small pipe, the latter a large one; but, in usage, at least so far as water-pipes are concerned, it seems that *fistula* is applied to a leaden pipe, *tubus* and *tubulus* to one of any other material, especially of terracotta, as in the above and the following passages. (Varr. *R. R.* i. 8; Colum. i. 5; Plin. v. § 128, xvi. § 224, xxxv. § 159; Frontinus, see below).

* Pliny and Palladius, and even the ancient MSS. of Vitruvius, give here C, which, however, is clearly an error of a transcriber who did not perceive the law of the proportion, but who had a fancy for the round number.

in *quadrantes* (the unit being the digit), that is, *in quarters of a digit;* so that the *Quinaria* had a diameter of five-fourths of a digit, or 1¼ digit, and so on, up to the *Vicenaria*, above which the notation was altered, and the names were no longer taken from the number of *linear quarters of a digit* in the *diameter* of the pipe, but from the number of *square quarters of a digit* in its area. The usual limits of size were from the *Quinaria*, adopted by Frontinus as the standard measure (*modulus*) of the whole system, to the *Centenaria*. This writer mentions, however, a size larger than the *centenaria*, the *centum vicenûm;* and one smaller than the *quinaria*, the *digitus rotundus*, or pipe of exactly a digit in bore ("Digitus rotundus habet diametri digitum unum; capit quinariae septuncem semunciam sextulam"; a roundabout way of expressing $\frac{46}{72}$ or $\frac{5}{8}$, Frontin. c. 26 *extr.*). But the largest pipes now extant exceed 300 *quinariae* (Middleton, p. 466. For further details, see Frontinus, *dc Aquaed.* 24–63, with the notes of Polenus). Another mode of explaining the nomenclature was by the story that when Agrippa undertook the oversight of the aqueducts, finding the *modulus* inconveniently small, he enlarged it to *five* times its diameter, and hence the origin of the *fistula quinaria* (Frontin. 25). Of these accounts, that of Frontinus is the most generally accepted.

The subject of inscriptions on lead pipes was first noticed by Marini (*Atti de' Fratelli Arvali*, Rome, 1795); but it is much more fully treated in the magnificent work of the Commendatore Lanciani (*I Comentarii di Frontino*, Rome, 1880). Recent excavations in Rome have unearthed immense quantities of these inscribed pipes, many of which have unfortunately been melted down as old lead. From those which have been preserved, Comm. Lanciani has identified 81 sites of houses within the walls, 88 in the suburbs, and has gathered much valuable information as to the distribution of water from the various castella, and many collateral historical and topographical facts. The earliest existing inscriptions date from the reign of Augustus, the latest from that of Valentinian II., A.D. 375–392: nearly all the intervening names are included. They are most numerous in the reigns of Domitian, Nerva, Trajan, Severus and Caracalla; after Decius the number steadily declines. The facts usually recorded on them are the name of the reigning emperor, sometimes the consuls of the year, the *Procurator Aquarum*, the plumber who made the pipe, the owner of the house, the name of the estate, the fact of the water being an imperial concession; and many have numerals, showing the capacity of the pipe in *quinariae* (Middleton, p. 462; who adds a copious selection illustrating the above points, pp. 463–465). Our specimen (fig. A) bears the inscription STATIONIS PROPRIAE PRIVATAE DOM. N. ALEXANDRI AUG.; indicating the private water supply of the imperial palace under Alexander Severus. Another, from the Palatine, has [DOM]VS AUGUSTANAE; while a pipe inscribed IMP. AUG. VESPASIANI . STATIO . VRBANA . AUG. belonged to the public water-works of the city. Respecting the uses of pipes in the aqueducts, see AQUAEDUCTUS, p. 154 *a*.

Of the earthen (terracotta) pipes we know very little. Pliny says that they are best when their thickness is two digits (1½ inch), and that each pipe should have its end inserted in the next, and the joints should be cemented; but that leaden pipes should be used where the water rises. The earthen pipes were thought more wholesome than the leaden. (Plin. *H. N.* xxxi. § 57; Vitruv. *l. c.* § 10; Pallad. ix. 11.) Water pipes were also made of leather (Plin. *H. N.* v. § 128; Vitruv. *l. c.* § 8), and of wood (Pallad. *l. c.*), especially of the hollowed trunks of the pine, fir, and alder (Plin. *H. N.* xvi. § 224). [P. S.] [W. W.]

FLABELLUM, *dim.* FLABELLULUM (*ῥιπίς, ῥιπιστήρ, dim. ῥιπίδιον*), a fan. Ancient fans were not so constructed that they might be furled, unfurled, and fluttered, nor were they even carried by the ladies themselves. They were, it is true, of elegant forms, of delicate colours (*prasino flabello*, Mart. iii. 82, 11), and sometimes of costly and splendid materials, such as peacocks' feathers (Propert. iii. 18, 11=ii. 24, 11; Claudian, *in Eutrop.* i. 109; Mart. xiv. 67); but they were stiff and of a fixed shape, and were held by female slaves (*flabelliferae*, Plaut. *Trin.* ii. 1, 22, translating Philemon), by beautiful boys (Strato, *Epigr.* 22), or by eunuchs (Eurip. *Orest.* 1426–1430; Menand. *fr.* 49, Meineke; and as translated by Terence, *Eun.* iii. 5, 47, 50, 54), whose duty it was to wave them so as to produce a cooling breeze. (Brunck, *Anal.* ii. 92.) A gentleman might, nevertheless, take the fan into his own hand, and use it in fanning a lady as a compliment. (Ovid, *A. A.* i. 161; *Amor.* iii. 2, 38.) The woodcut under CATHEDRA shows a female bestowing this attendance upon her mistress. The fan which she holds is apparently made of separate feathers joined at the base, and also united both by a thread passing along the tips and by another stronger thread tied to the middle of the shaft of each feather. Another use of the fan was to drive away flies from living persons, and from articles of food which were either placed upon the table or offered in sacrifice. When intended for a fly-flapper, it was less stiff, and was called *μυιοσόβη*, *muscarium* (Menand. *l. c.*; Brunck, *Anal.* ii. 388, iii. 92; Mart. *l. c.*); and for this purpose was sometimes made of an ox-tail (Mart. xiv. 69; Aelian, *H. A.* xv. 14). The Emperor Augustus had a slave to fan him during his sleep (Sueton. *Aug.* 82); for the use of fans was not confined to females. In short, the manner of using fans was precisely that which is still practised in China, India, and other parts of the East; and Euripides (*l. c.*) says that the Greeks derived their knowledge of them from "barbarous" countries.

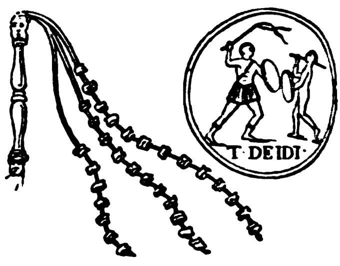
Besides separate feathers, the ancient fan was sometimes made of linen, extended upon a light frame. (Strato, *l. c.*) From the above-cited passage of Euripides and the Scholia upon it, compared with representations of the flabellum in ancient paintings, it also appears to have been made by placing the two wings of a bird back to back, fastening them together in this position, and attaching a handle at the base. (Hence *πτερίναν ῥιπῖδα*, Brunck, *Anal.* ii. 258 = *Anth. Pal.* vi. 306: on this unusual prosody, cf. L. and S., *s. v. ῥιπίς*). Further illustrations have been discovered of late years in the Tanagra terracotta figures (Guhl and Koner, ed. 5, p. 234; Hermann-Blümner, *Privatalterth.* p. 196; cf. Marquardt, *Privatl.* p. 145). The history of fans in all ages and countries has been written by S. Blondel (*Hist. des Éventails*, Paris, 1875) and H. Frunberger (*Gesch. des Fächers*, Leipzig, 1876).

A more homely application of the fan was its use in cookery (Aristoph. *Ach.* 669, 888; Focus). In a painting which represents a sacrifice to Isis (*Ant. d'Ercolano*, ii. 60), a priest is seen fanning the fire upon the altar with a triangular flabellum, such as is still used in Italy. This practice gave origin among classical writers to expressions corresponding to ours, meaning to fan the flame of hope (Alciphr. iii. 47), of love (*ῥιπίζειν*, Brunck, ii. 306), or of sedition (Aristoph. *Ran.* 360; Cic. *pro Flacc.* 23, § 54). [J. Y.] [W. W.]

FLAGRUM, *dim.* Flagellum (*μάστιξ*), a whip, scourge.

It may be broadly stated that the corporal punishment of freemen was, like other forms of torture, "abhorrent to Greek manners" [Crux, p. 567 *a*]. The exceptions noticed by Thalheim (*Rechtsalterth.* p. 127) prove little against this rule. The military and paternal government of Sparta allowed old men to use their walking-sticks (*βακτηρίαι*) on those who were guilty of unseemly conduct in public (*τοὺς ἀκοσμοῦντας*, Dion. Hal. xx. *fr.* 2=13 Kiessling); a very different thing from flogging as commonly understood. We are not surprised to read that Cinadon and his associates, who had planned a wholesale massacre of their fellow-citizens, were scourged on the way to execution (Xen. *Hell.* iii. 3, § 11). But we entirely reject the notion, based only on scholiasts and grammarians and unsupported by contemporary evidence, that the Athenian market was patrolled by men with whips, even if they were only to be used against non-citizens [Agoranomi]. The strong feeling against *ὕβρις*, or open violence, extended even to slaves ([Xen.] *Rep. Ath.* 1, § 10; Aeschin. *c. Timarch.* § 17). Not only was the use of the *μάστιξ* limited to slaves, but we find no trace of its infliction in public, as among the Romans (Liv. ii. 36). A slave who had been flogged was called *μαστιγίας* (Aristoph. *Eq.* 1228, *Ran.* 501, *Lysistr.* 1240; Philem. *fr.* 143 M.), which of course became a term of mockery and contempt. Through the comic writers, *mastigia* passed into Latin (Plaut. *Capt.* iii. 4, 68, and often; Terent. *Adelph.* v. 2, 6). Among the different kinds of whips we find the *σκυτίνη μάστιξ*, Lat. *lorum* or *scutica* (Anacr. *fr.* 19=21 Bergk^4); one called *ὑστριχὶς* with a lash of bristles (Aristoph. *Ran.* 619; *Pax*, 746); another, the most terrible of all, called *ἀστραγαλωτή*, because strung with *ἀστράγαλοι* or knuckle-bones (Crates, *fr.* 32 M. *ap.* Poll. x. 54; Lucian, *Asin.* 38, p. 606 R.; Posidon. *ap.* Ath. iv. 153 a).

At Rome the scourging of citizens had been forbidden from very early times (Liv. x. 9; Cic. *Rab. Perd.* 4, § 12; *in Verr.* v. 66, § 170). Unprivileged persons, and especially slaves, were scourged in a variety of ways, of which the flagellum was the worst (*horribili flagello*, Hor. *Sat.* i. 3, 119). It was a "knout" or "cat," with lashes of knotted cord, or even wire; like the *ἀστραγαλωτὴ* of the Greeks, it might be loaded with knuckle-bones (*tali*, whence *talaria*, sc. *flagella*, Senec. *de Ira*, iii. 19, § 1), or other cruel aggravations (cf. Apul. *Met.* viii. p. 173). The cut below represents a scourge taken from a bas-relief of the statue of Cybele in the Capitoline Museum at Rome. The infliction of punishment with it upon the naked back of the sufferer (Juv. vi. 477) was sometimes fatal (Hor. *Sat.* i. 2, 41), and was carried into execution by a class of persons, themselves slaves, who were called *lorarii*. Some flagella found at Herculaneum consist of several short chains with knobs of metal at the end, attached to a short handle. Rich, who figures one of them, thinks that this sort was the *flagrum*, the other the *flagellum*; other writers treat flagrum and flagellum as equivalent (Marquardt, *Privatl.* 179, n. 3; Becker-Göll, *Gallus*, ii. 176). The stimuli mentioned by Plautus are probably goads or other sharp-pointed instruments used separately (Göll), not spikes fastened to the flagellum (Marquardt); so *μαστιγούμενοι καὶ κεντούμενος*, Xen. *l. c.* Less severe forms of corporal punishment were with the cane (*νάρθηξ*, *ferula*), the leathern strap (*habena*, *scutica*, *lorum*, Hor. *Sat.* i. 3, 119; *Ep.* i. 16, 47, ii. 2, 15; cf. *bubulis exuviis*, Plaut. *Most.* iv. 1, 26); the rope's end (Hor. *Epod.* 4, 3, where the *Hiberici funes* are made of esparto grass, and different from the flagella of *v.* 11). During the Saturnalia the scourge was deposited under the seal of the master. We likewise find that some gladiators fought with the flagellum, as in the coin here introduced: it has two lashes, as is also the case with some driving-whips figured in ancient paintings.



Flagellum.

For the *virgae* of the lictors, see Fasces. For corporal punishment in schools, *ferulae* and *lora* are mentioned (Juv. i. 15, with Mayor's note; Mart. x. 62); see also a curious painting from Herculaneum figured in Rich, *s. v.* "Ludus," and in Milman's *Horace.* [J. Y.] [W. W.]

FLAMEN, the name for any Roman priest who was devoted to the service of one particular god (Divisque alis alii sacerdotes, omnibus pontifices, singulis flamines sunto, Cic. *de Leg.* ii. 8, § 20), and who received a distinguishing epithet from the deity to whom he ministered (*Horum*, sc. flaminum, *singuli cognomina habent ab eo Deo quoi sacra faciunt*, Varr. *L. L.* v. 84). The ancients derived the word from *filum*, as if *filamen*, from the peculiarity of their head-dress (Varr. *l. c.*; Fest. *Epit.* 87; Serv. ad *Aen.* viii. 664, x. 270; Dion. Hal. ii. 64) or from *pilleus* (Plut. *Num.* 7). The real derivation, it is tolerably certain, is from *flare* in a transitive sense, to "blow up" a fire; the flamen was always a *sacrificing* priest. The office is called *flaminium* in the MSS. and editions of Cicero and Livy; inscriptions, and the Medicean MS. of Tacitus (*Ann.* iv. 16), give *flamonium*, undoubtedly the more correct form; rarely *flaminatus* (Inscrr.).

The most dignified flamens were those attached to Diiovis, Mars, and Quirinus, the *Dialis*, *Martialis*, and *Quirinalis*. The two first are said by Plutarch (*l. c.*) to have been established by Romulus; but the greater number of authorities agree in referring the institution of the whole three, in common with all other matters connected with state religion, to Numa (Liv. i. 20; Dion. Hal. ii. 64 ff.). The number was eventually increased to fifteen (Fest. p. 154 b): the three original flamens were always chosen from among the patricians, and styled *Majores* (Gaius, i. 112); the rest from the plebeians, with the epithet *Minores* (Fest. *Epit.* p. 151). Two rude lines of Ennius (*ap.* Varr. *L. L.* vii. 44) preserve the names of six of these, appointed, says the poet, by Numa,—

Volturnalem, Palatualem, Furrinalem,
Floralemque, Falacrem et Pomonalem fecit
Hic idem.....

to which we may add the *Flamen Volcanalis* (Varr. *L. L.* v. 84), the *Flamen Portunalis* (Fest. p. 217 a), and the *Flamen Carmentalis* (Cic. *Brut.* 14, § 56). We find mention of the *Virbialis*, *Laurentialis*, *Lavinalis* and *Lucullaris*, which would raise the number of names to sixteen; but there is nothing to prove that these four were Roman and not merely provincial priests. The most distinguished of all the flamens was the *Dialis*; the lowest in rank the *Pomonalis* (Fest. p. 154 b).

Towards the end of the Republic the Lesser Flamens seem not to have been fully kept up; there is no record of the mode of their election, and some of the names were almost forgotten (Varr. *L. L.* vi. 19). Of the flamens in general we are told that their characteristic dress was the apex [APEX], the laena [LAENA], and a laurel wreath; that they were inaugurated (it does not follow that they were appointed) at the Comitia Calata (Gell. xv. 27; COMITIA, p. 504 *b*); and that they were at all times subject to the authority of the Pontifex Maximus, against whom, however, they sometimes appealed to the people (Liv. *Epit.* xix., xxxvii. 51; Val. Max. i. 1, § 2). The office was understood to last for life; but a flamen might be compelled to resign (*flamonio abire*) for a breach of duty, or even on account of the occurrence of an ill-omened accident while discharging his functions (Liv. xxvi. 23; Val. Max. *l. c.* § 4). The three Greater Flamens were all, it is probable, elected like the Dialis, respecting whose appointment we have the fullest details; though in other respects they led a much less ceremonious life. When a vacancy occurred, three persons of patrician descent, whose parents had been married by the rite of *confarreatio* [MATRIMONIUM], were nominated by the college of pontiffs, and one of these chosen and solemnly installed by the Pontifex Maximus (Tac. *Ann.* iv. 16; Liv. xxvii. 8, cf. xxix. 38; Val. Max. vi. 9, § 3); he was not allowed to refuse, and the word *capere* applied to this act seems to indicate that he was regarded as a prisoner of the god, forcibly impressed for his service. From that time forward he was emancipated from the control of his father, and became *sui juris* (Gaius, i. 130; Ulpian, *Fragm.* x. 5; Tac. *Ann.* l. c.).

The Dialis enjoyed many peculiar honours, counterbalanced by the most burdensome restrictions in the whole compass even of Roman ceremonial religion. A long catalogue of the latter has been compiled by Aulus Gellius (x. 15) from the works of Fabius Pictor and Masurius Sabinus, while Plutarch, in his *Roman Questions* (Nos. 44, 50, 109–113), endeavours to explain their import. The object was evidently to make him, in a literal sense, *Jovi adsiduum sacerdotem*; to compel constant attention to the duties of the priesthood, and to leave no temptation to neglect them. Other priests were obliged to be equally careful when engaged in performing sacred rites; but the Dialis was always on parade, and always in full dress. He had a right to the *toga praetexta*, the *sella curulis*, and to a seat in the senate by virtue of his office; but in early times he was altogether precluded from seeking any civil magistracy, and at a later period the restriction was only partially relaxed. He might not mount upon horseback, nor even touch a horse, nor look upon an army marshalled (*classem procinctam*, Gell. *l. c.*) without the pomoerium; was not allowed to swear an oath (Liv. xxxi. 50; Fest. *Epit.* p. 104), nor to be out of the city for a single night (Liv. v. 52): a regulation so far modified in imperial times, that an absence of two nights was allowed, not more than twice a year, and with the consent of the Pontifex Maximus (Tac. *Ann.* ii. 58, 71). Thus it was impossible for him to undertake the government of a province, and he was seldom elected to the consulship. His right of sitting in the senate, even, had long fallen into abeyance, when it was revived by the claim of C. Valerius Flaccus in B.C. 209 (Liv. xxvii. 8; compare i. 20). In other respects his privileges were curiously mixed up with the corresponding restrictions: in both we can trace the working of the same principles. As every day was a holiday with him (*cotidie feriatus est*, Gell.) he was not allowed either to work himself or to see others working. Whenever he went out, he wore the special apex called *albogalerus*, with an olive-branch twined with white wool (*filum*) attached to its point (*apiculum*); the *laena*, a thick woollen praetexta, woven by the hands of his wife; in one hand he carried a sacrificial knife [SECESPITA], in the other a wand called *commetacula*, with which he kept the people at a distance. For the same purpose he was preceded by a lictor and by criers called *praeciae* or *praeclamitatores*, at whose bidding every one laid aside his work. As emblematic of the divine freedom, he could neither look upon, touch, nor name anything suggestive of bonds or imprisonment: hence he had no knots on any part of his attire, which was fastened instead with clasps (*fibulae*); his ring had to be split so as not to completely encircle his finger (*anulo . . . pervio et casso*, Gell. *l. c.*); he was forbidden to name ivy, on account of its binding properties, or to walk along a path over-canopied by vines, for a similar reason. [These last two prohibitions are wrongly explained by Plutarch: he was under no restrictions as to the use of wine.] If one in bonds took refuge in his house, the chains were immediately struck off, conveyed through the *impluvium* to the roof, and thence cast down into the street; if a criminal on his way to punishment met him (as was also the case with the Vestals), he could neither be scourged nor executed on that day. None but a free man might cut his hair; his beard might only be trimmed with a knife of bronze, the ancient and more sacred metal; the clippings of his hair, and the parings of his nails, were buried beneath a *felix arbor*. All day long he could not take off his head-dress out of doors (his doing so in the house was a concession in later times); nor strip off his tunic, that he might not be exposed *sub oculis Jovis*. No one might sleep in his bed, the legs of which were smeared with fine clay; a box containing sacrificial cakes (*capsula cum strue atque ferto*, Gell.) always stood beside it. The clay on the feet of the bed has been ingeniously explained by Mr. J. G. Frazer; it was an "accommodation" of an old rule which required him to sleep on the ground (*Class. Rev.* ii. 322). Again, he was forbidden to touch or name anything unclean or suggestive of uncleanness, such as a dead body or a *bustum* [FUNUS], though he was not prevented from attending a funeral; a dog, a she-goat (because liable to epilepsy [!], Plut. *Q. R.* 111), beans (because sacred to the dead, Fest. *Epit.* p. 87; LEMURIA), raw flesh, or fermented dough (*fermentata farina*, Gell.), because fermentation implies corruption. To cooked meat or leavened bread when baked there was, it seems, no objection.

Flaminica was the name given to the wife of the Dialis. He was required to wed a virgin according to the ceremonies of *confarreatio*, which regulation also applied to the two other flamines majores (Serv. *ad Aen.* iv. 104, 374; Gaius, i. 112); and he could not marry a second time. Hence, since her assistance was essential to many sacrifices, a divorce was not permitted, and if she died the Dialis was obliged to resign. Their children, if they had any, assisted them in their sacred duties; if not, their place was supplied by *camilli* and *camillae*, who were required to be *patrimi et matrimi*, and in early times to be the offspring of a confarreate marriage [CAMILLI]. The regulations imposed upon the flaminica were similar to those of her husband. In public, her dress consisted of a dyed robe (*venenato operitur*); her hair was plaited up with a purple band in a conical form [TUTULUS]; and her head was covered with a veil (*flammeum*) and a *rica*, the nature of which is somewhat doubtful [RICA]. She likewise carried the *sccespita*. She was prohibited from mounting a staircase consisting of more than three steps (the text of Aulus Gellius is uncertain, but the object must have been to prevent her ankles from being seen); and when she went to the *argei* [ARGEI], she neither combed nor arranged her hair. On each of the nundinae a ram was sacrificed to Jupiter in the regia by the flaminica (Macrob. i. 16).

Flaminia, according to Festus and A. Gellius, was the house of the Dialis, from which it was unlawful to carry out fire except for sacred purposes. The name *flaminia* was also given, according to Festus, to a little or perhaps subordinate priestess (*sacerdotula*) who assisted the *flaminica* in her duties.

After the death of the flamen Merula, who was chosen consul suffectus on the expulsion of Cinna (Vell. Pat. ii. 20; Val. Max. ix. 12, § 5), and who, upon the restoration of the Marian faction, shed his own blood in the sanctuary (B.C. 87), calling down curses on his enemies with his dying breath (Vell. Pat. ii. 22), the priesthood remained vacant until the consecration of Servius Maluginensis (B.C. 11) by Augustus, then Pontifex Maximus. Julius Caesar had indeed been nominated in his 17th year, but was never installed; and during the whole of the above period the duties of the office were discharged by the Pontifex Maximus. (Suet. *Jul.* c. 1, compared with Vell. Pat. ii. 43, and the Commentators. See also Suet. *Aug.* 31; Dio Cass. liv. 36; Tac. *Ann.* iii. 58. The last-quoted historian, if the text be correct, states that the interruption lasted for 72 years only.)

The municipal towns also had their flamens. Thus the celebrated affray between Milo and Clodius took place while the former was on his way to Lanuvium, of which he was then dictator, to declare the election of a flamen (*ad flaminem prodendum*, Cic. *pro Mil.* 10, § 27). After the deification of the emperors, flamens were appointed to offer sacrifices to them both in Rome and in the provinces. Julius Caesar accepted a flamen in his lifetime (Suet. *Jul.* 76; Cic. *Phil.* ii. 43, § 110); Augustus refused all divine honours within the borders of Italy, but after his death the flamen Augustalis appears (cf. AUGUSTALES). These *flamines Divorum* did not, as has been sometimes thought, form a collegium with the *sodales*, but stood in direct relations only with the Pontifex Maximus, i.e. with the emperor himself. We find flamens to emperors who had no *sodales*, as to Julius, Nerva (Plin. *Paneg.* 11), Trajan (*flamen Ulpialis*, *C. I. L.* vi. 1383, Wilm. 1175); and the imperial flamens were required to be patricians, the *sodales* were not. The former were, in fact, mostly taken from the imperial family, *e.g.* the Caesars Germanicus and Nero (Orelli, 660, 664), L. Silanus the victim of Claudius and Agrippina (*C. I. G.* 369), the younger Pertinax (Capitol. *Pert.* 15). In the case of Antoninus Pius, the "flamen ex affinibus" is clearly distinguished from the "sodales ex amicissimis" (Capitol. M. *Ant. Phil.* 7 *extr.*). We do not find flamens assigned to any but actual emperors, excluding other deified persons; nor to empresses, with the exception of the elder Faustina, who received more than one *flaminica* in her husband's lifetime (Capitol. *Ant. Pi.* 6). With the emperors the appointment of a flamen was the natural accompaniment of consecration; and it can only be accidental that no records are preserved of the flamens of such favourite emperors as Vespasian, Titus, and Alexander Severus. Inscriptions show that, following the analogy of the earlier flamens (Dialis, Martialis, Quirinalis, and Jovis, Martis, Quirini), the flamens of the emperors were not called Julii, Augusti, Claudii, &c., but Juliani (Orell. 2242), Augustales (Orell. 2375), Claudiales (Wilmanns, 1174). (Compare Marquardt, *Staatsverw.* iii. 313–319, 453–455; H. Dessau, *de sodalibus et flaminibus Augustalibus*, Berlin, 1877, and in *Ephem. Epigr.* iii. 205 ff.; AUGUSTALES, p. 258 *b*.) [W. R.] [W. W.]

FLAMMEA'RII. [FLAMMEUM.]

FLAMME'OLUM. [FLAMMEUM.]

FLA'MMEUM (sc. *velum*), a flame-coloured veil, worn by a Roman bride, the colour of which is described as *luteus* (Plin. *H. N.* xxi. § 46; "lutea flammea," Lucan, ii. 361). The diminutive *flammeolum* (Juv. x. 334), used of the bridal veil of Messalina, probably indicates only a veil of finer texture than usual. It was a long veil covering the head, and, with the exception of the face, descending over the back to the feet, whence it is described by the grammarians as a kind of dress ("flammea genus amicti," Schol. *ad* Juv. vi. 225; "vestimentum," Fest. p. 92, 16; "flammeo amicitur nubens," Fest. p. 89, 3). It is so represented in works of art, and is frequently mentioned by the Roman writers in connexion with marriage ("flammeum cape," Cat. lx. 8; "flammea sumit," Juv. ii. 124; "flammea texuntur sponsae," Mart. xi. 78, 3; "puellae caput involverat flammeo," Petron. 26, 1). Though the flammeum did not entirely cover the face, yet from its falling over the forehead usually it is described as concealing the countenance ("velare vultus," Lucan, *l. c.*; Mart. xii. 42, 3). When the bride was brought into the nuptial chamber, the veil was removed by the bridegroom (Claudian, *de Laud. Stilich.* ii. 368).

Bride with the Flammeum. (From the Aldobrandine Marriage.)

Festus says (p. 89) that the bride wore the *flammeum* because it was always used by the Flaminica, the wife of the Flamen, who could not obtain a divorce. But this is not correct. It has been pointed out by Rossbach that the *flammeum* was part of the dress of the Flaminica, because it was in ancient times worn by all Roman matrons in performing sacrificial rites. It was originally identical with the *ricinium* and *rica*, except in colour, which is also described as a portion of the dress of the Flaminica, though subsequently the *ricinium* was made smaller and became only a head-dress. [RICINIUM.]

The *flammeum* being a symbol of marriage, *flammea conterit* is said of a Roman matron who changes her husband repeatedly (Juv. vi. 225). The *flammeum* continued to be worn by the bride in the imperial period down to the fourth and fifth centuries, and along with the *palla* was the characteristic dress of the bride (Claudian, *in Nupt. Hon. et Mar.* 284; Mart. Capell. v. p. 538, Kopp). The use of the veil in the marriage ceremony was adopted in the Christian Church, and is described by Tertullian (*de Veland. Virgin.* c. 11) as a praiseworthy heathen custom. The colour of the Christian veil was purple and white, though the name *flammeum* was sometimes used (St. Ambros. *de Virg.* c. 15; *de Inst. Virg.* c. 17). [See *Dict. Christ. Ant.* ii. p. 1108.]

The *flammearii* in Plautus (*Aul.* iii. 5, 36) are usually supposed to be the makers of the *flammeum* or the bridal veil; but as they are mentioned by Plautus along with the *violarii*, they are more probably the dyers of the colour, and are so explained by Festus (p. 89, 11), "flammearii, infectores flammei coloris." This colour, as we have seen, is called *luteus* from *lutum*, "weld" (*reseda luteola*, Linn.). (Marquardt, *Privatl.* pp. 43, 489; Becker-Göll, *Gallus*, ii. p. 29; Blümner, *Techn.* i. p. 243; Rossbach, *Röm. Hochzeit*, &c., Leipz. 1871.) [W. S.]

FLEXU'MINES. [EQUITES.]

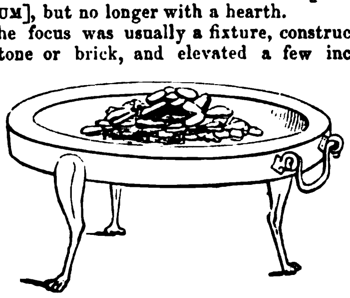
FLORA'LIA, or Florales Ludi, a festival which was celebrated at Rome in honour of Flora or Chloris. It was said to have been instituted in 238 B.C., on the occasion of the dedication of a temple to Flora by the aediles L. and M. Publicius in the Circus Maximus (*C. I. L.* i. 392), at the command of an oracle in the Sibylline books, for the purpose of obtaining from the goddess the protection of the blossoms (*ut omnia bene deflorescerent*, Plin. *H. N.* xviii. § 286: compare Vell. Pat. i. 14; Varr. *de Re Rust.* i. 1). In the consulship of L. Postumius Albinus and M. Popilius Laenas (173 B.C.), it was made an annual festival, at the command of the senate, by the aedile C. Servilius (Mommsen, *Röm. Münzw.* p. 645; compare Ovid, *Fast.* v. 329, &c.), as the blossoms in that year had severely suffered from winds, hail, and rain. By degrees it was extended to six days (April 28—May 3). The celebration was, as usual, conducted by the aediles (Cic. *in Verr.* v. 14, 36; Valer. Max. ii. 10, § 8), and was carried on with excessive merriment, drinking, and lascivious games (Mart. i. 3; Senec. *Epist.* 96). From Valerius Maximus (cf. Schol. *Juv.* vi. 250; Senec. *Epist.* 97, 8) we learn that theatrical and mimic representations formed a principal part of the various amusements, and that it was customary for the assembled people on this occasion to demand the female actors to appear naked on the stage, and to amuse the multitude with their indecent gestures and dances. This indecency is probably the only ground on which the absurd story of its origin, related by Lactantius (*Institut.* i. 20), is founded. The last day was devoted to a beast-hunt in the circus, but there were no races. Similar festivals, chiefly in spring and autumn, are in southern countries seasons for rejoicing, and, as it were, called forth by the season of the year itself, without any distinct connexion with any particular divinity; they are to this day very popular in Italy (Voss. *ad* Verg. *Georg.* ii. 385), and in ancient times we find them celebrated from the southern to the northern extremity of Italy. (See ANTHESPHORIA, and Justin, xliii. 4.) The Floralia were originally festivals of the country people (Preller, *Röm. Myth.* 379), which were afterwards, in Italy as in Greece, introduced into the towns, where they naturally assumed a more dissolute and licentious character, while the country people continued to celebrate them in their old and merry but innocent manner. And it is highly probable that such festivals did not become connected with the worship of any particular deity until a comparatively late period. (Buttmann, *Mytholog.* ii. p. 54.) This would account for the late introduction of the Floralia at Rome, as well as for the manner in which we find them celebrated there. (See Spanheim, *de Praest. et Usu Numism.* ii. p. 145, &c.) [L. S.] [A. S. W.]

FOCA'LE, a covering for the throat (*fauces*), sometimes drawn also over the ears (Mart. iv. 41), made of wool and worn by infirm and delicate persons. Its use by others was regarded as effeminate (Hor. *Sat.* ii. 3, 255; Senec. *Nat. Quaest.* iv. 13; Quintil. xi. 3, § 144; Mart. xiv. 142). [J. Y.] [W. W.]

FOCUS, dim. Fo'culus (**ἑστία**: **ἐσχάρα, ἐσχάρις**, dim. **ἐσχάριον**), a fire-place; a hearth; a brasier. The fire-place, while serving all the requirements of ordinary life, possessed a sacred character both among the Greeks and Romans. In the primitive Greek house the **ἐσχάρα** stood against, or near, the back wall of the **μέγαρον**, the kitchen and living-room of the family: in the more spacious dwellings of a later age it was transferred, with other objects of domestic worship, to a small private chapel, vaulted so as to resemble the Tholos (**θόλος**), the dome-shaped **ἑστία** of the state (Hermann-Blümner, *Privatalt.* p. 151, where the identity of **ἑστία** and **ἐσχάρα** is maintained; Guhl and Koner, ed. 5, p. 97). The well-known use of the hearth as a sanctuary for suppliants occurs as early as Homer (*Od.* vii. 153–169: cf. Apoll. Rhod. iv. 693; Thucyd. i. 136).

Among the Romans the fire-place was dedicated to the Lares of each family (Plut. *Aul.* ii. 8, 16; Cato, *de R. R.* 15; Ov. *Fast.* i. 135, vi. 302); a consecration which did not interfere with its homely uses (Hor. *Epod.* 2, 43; *Epist.* i. 5, 7; Ov. *Met.* viii. 673; Senec. *Cons. ad Helv.* 10, § 7). On festivals the housewife decorated the hearth with garlands (Cato, *de R. R.* 143; Ov. *Trist.* v. 5, 10); a woollen fillet was sometimes added, nor were animal sacrifices unknown (Propert. v. 6, 1–6). The phrase "pro aris et focis" expressed attachment to all that was most dear and venerable (Cic. *N. D.* iii. 40, § 94; Flor. iii. 13). At Rome, likewise, the progress of wealth and refinement led to the removal of the focus and penates to an inner apartment (Marquardt, *Privatl.* 234): the change from the single *atrium* or "house-place" to the more elaborate arrangement of a separate dining-room, culina, and Lararium is described under Domus, p. 670 *a*, 672 *b*. In the Pompeian houses we see the *atrium*, now become a reception room, adorned with a fountain and a marble table [Cartibulum], but no longer with a hearth.

The focus was usually a fixture, constructed of stone or brick, and elevated a few inches above the ground; see the first figure on p. 672 *a*. It was also frequently made of bronze, variously ornamented, and could then be carried from room to room. One is shown under Balneae, p. 276 *b*: another, found at Caere in Etruria, and preserved in the British Museum, is represented in the annexed woodcut.



Focus. (From British Museum.)

The small portable brasier or chafing-dish, called *foculus* or **ἐσχάριον**, was especially used in sacrifices; and the same name was applied to the hollow or fire-pan at the top of an altar (Liv. ii. 12; Cic. *pro Domo*, 47, § 123; Ara.) The movable focus or foculus was also employed in the kitchen (Plaut. *Capt.* iv. 2, 68; Juv. iii. 262), and for keeping things hot was brought into the dining-room (Senec. *Ep.* 78, § 23). The treasures of Herculaneum and Pompeii are rich in illustrations of this kind of focus, whether pictorial or in bronze vessels actually preserved. See Caldarium, and the second cut under Authepsa. [J. Y.] [W. W.]

FOEDERA'TAE CIVITA'TES, FOEDERA'TI, SO'CII. In extending her influence and dominions beyond the seven hills, Rome followed two alternative courses. One was to conclude a treaty of alliance with a community between which and herself there had previously been no relation; the other was to reduce such community to complete subjection by conquest or enforced surrender (Liv. xxxiv. 17; iv. 30; viii. 2). Where there was a treaty of alliance (*foedus*), the allied community was described by the terms prefixed to this note. At first of course such allies were exclusively Italian; in particular the Socii and Latini, who forced on the Social War B.C. 90, though no town which had obtained the Roman civitas, or which was a Roman or Latin colony [Colonia], was said to be foederata. But even long before that war Rome had attached allies to herself by treaty outside Italy, both states governed on the republican principle, and foreign princes (*e.g.* Ptolemaeus Philadelphus, B.C. 273, Dio Cass. 147; and Hiero of Syracuse, a year later, Polyb. i. 16). After the extension of the Roman imperium into the provinces, two kinds of foederati populi or civitates have to be distinguished: those whose territory lay within the bounds of a Roman province, and those which were genuinely foreign (Dig. 49, 15, 7). The latter, however, after the subjection of the kings of Macedon and Syria, were constantly becoming mere tribute payers to Rome (Liv. xlii. 6; xlv. 13, 44), and as a general rule had to be content with concealing their practical vassalage (Sallust, *Jug.* 14; Florus, iii. 1) under the thin disguise of "friends and allies of the Roman people" (Caesar, *B. G.* i. 3, 35, 43; iv. 12; vii. 31;—Cic. *pro lege Manilia*, 5, 12).

The foedera were of three orders (Dig. 49, 15; 5, 2), stipulating merely for friendship between the contracting parties, or for reciprocal hospitality, or for military subvention. Those of the first order (Polyb. iii. 22; Liv. xxxviii. 38) provided that the two states should not engage in war with one another without first making every attempt at an amicable settlement (*e.g.* the treaty with Alba, Dionys. iii. 3), and contained regulations as to the sojourn of the citizens of each on the territory of the other, and the measure of legal protection they should enjoy (*e.g.* Carthage, Polyb. iii. 22–24). Other terms in such treaties, especially when concluded after a war, are exemplified by those with Carthage after the Sicilian

(Polyb. i. 62, iii. 27) and Second Punic wars (Polyb. xv. 18; Liv. xxx. 37), with Philip of Macedon (Polyb. xviii. 27; Liv. xxxiii. 30), and with Antiochus (Polyb. xxii. 26; Liv. xxxviii. 38). Treaties of the second class, which bargained for greater intimacy between the two states, are exemplified by that with the Aedui (Caesar, *B. G.* i. 31). Those providing for military assistance varied with the power and eminence of the allied state: sometimes they placed the parties on an absolute equality (Liv. xxxiv. 57)—*e.g.* those with Camerinum and Heraclea (Liv. xxviii. 45; Cic. *pro Balb.* 20, 47; *pro Archia* 4, 9); with the Aetolians (Liv. xxvi. 24), the Jews (Josephus, *Ant. Jud.* xii. 10, 6), and Rhodians (Appian, *Bell. Civ.* iv. 65, 70): in other cases the socius was subordinated to Rome, being required to "respect her majesty" (Cic. *pro Balb.* 16, 35; Dig. 49, 15, 7, 1): it remained free, but practically was at Rome's orders, as a client at those of his patron (Proculus in Dig. *loc. cit.*), though the Romans admitted their obligation to afford full protection (Liv. xxx. 42; Caesar, *B. G.* i. 43; Hirtius, *de bell. Alex.* 34, 36), and included the socius in their own treaties with neighbouring peoples (Polyb. iii. 22 *sq.*, xv. 18; Liv. xxx. 37, xxxviii. 11, 38).

The condition of the socii and foederati was originally one of tolerable independence, subject to the obligation of furnishing a contingent to the Roman army; but it was continuously depressed by the increasing power of Rome, and the resulting discontent culminated in the Social War, at the termination of which the leges Julia and Plautia Papiria brought the Roman civitas within the reach of all who were domiciled in Italy [Civitas], from whose territories this class of community now disappeared. Civitates foederatae seem, however, to have acquired the benefits of these statutes only on condition of becoming *fundus* (Cic. *pro Balb.* 8, 19).

There were also foederatae civitates in most of the provinces, their treaty of course being anterior to the formation of the province itself: thus there were three in both Sicily and Baetica, and others in Asia Minor: Athens, Rhodes, and Tyre were also federate towns, and Cicero (*pro Scauro*, 44) regards it as a dishonour to Sardinia that in all that island there was no town which "was free and united by friendship with the Roman people." These federate towns in the provinces enjoyed certain privileges not shared by the ordinary provincial town. Their citizens were exempted from payment of the land impost (*vectigal*, Cic. *in Verr.* iii. 6, 13; 40, 91), and perhaps from some of the other ordinary taxes of the state; and they possessed *αὐτονομία*, the independent control of their own affairs, with some measure of legislative and judicial power, excluding the authority of the provincial governor; but this perhaps was more theoretical than practical, especially when a Roman army came their way (Plutarch, *Pomp.* 10). The plebiscitum called Lex Antonia which conferred these rights about 72 B.C. on Termessus in Pisidia, and which has been partially deciphered on bronze, is printed by Ritschl, *Priscae Lat. Monum. Epigr.* xxxi., and Orelli, *Inscriptiones*, i. 204. It is hardly necessary to say that the foederatae civitates were forbidden to embark on any independent foreign policy. They were free to adopt the civil law of Rome in whole or part: thus even before the Social War it was not unusual for the Socii and Latini to adopt Roman leges into their own system, and Cicero (*pro Balbo*, 8, 19) mentions the Lex Furia testamentaria and the Lex Voconia de mulierum hereditatibus, and adds that there were other instances. In such cases the state which adopted a Roman statute was said "in eam legem fundus fieri;" but of course it did not thereby obtain for its citizens any privileges with respect to the Roman state.

But the tendency to uniformity which accompanied the consolidation of the empire favoured the extinction of the provincial foederatae civitates, and they gradually disappeared: many of them voluntarily became coloniae (*e.g.* Tauromenium in Sicily), and others municipia (*e.g.* Messana, Pliny, iii. 8; Gades, Saguntum, and Malaga).

(Zumpt, *Studia Romana*, p. 315; Marquardt, *Staatsverwaltung*, i. 348; Savigny, *Volkschluss der Tafel von Heraclea*, *Zeitschrift*, vol. ix.; Walter, *Geschichte des römischen Rechts*, §§ 94, 95.) [J. B. M.]

FOEDUS. [Foederatae Civitates.]

FOENUS. [Fenus.]

FOLLIS, dim. Folli'culus, an inflated ball of leather, no doubt originally the skin of a quadruped filled with air. The Roman games of ball (Marquardt reckons five of them) are described under Pila. The follis was the largest as well as the lightest and softest ball in use, as the *pila* was the hardest, the *paganica* being intermediate between the two (Mart. xiv. 45; cf. vii. 32). According to Marquardt, the follis might be either filled with air (*κενή*) or lightly stuffed with feathers; but this is perhaps a wrong inference, as the *plumea pondera follis* (Mart. iv. 19) may simply mean "light as a feather;" and it is only the *paganica* and *pila* which are expressly stated to have been so stuffed. We must not think, however, of the tightly-blown modern football; it was much more like a child's ball, so soft that it could hurt no one, and hence is recommended as a gentle exercise, fit for small boys and old men, but to which *juvenes* would not condescend (Mart. xiv. 47). The *folliculus* (*τὸ φούλλικλον καλούμενον*) is said to have been invented by one Atticus of Naples, a teacher of gymnastics (*παιδοτρίβης*), for the benefit of Pompeius Magnus (Athen. i. p. 14 f). Augustus, who was rather delicate in health, took to it comparatively early in life, soon after the civil wars (Suet. *Aug.* 83). For the *follis pugilatorius* of Plautus (*Rud.* iii. 4, 16), see Corycus. (Becker-Göll, *Gallus*, iii. 171 ff.; Marquardt, *Privatl.* 819; Guhl and Koner, ed. 5, p. 680.) The term *follis* is also applied to a leather purse or bag (Plaut. *Aul.* ii. 4, 23; Juv. xiii. 61, xiv. 281); and the diminutive *folliculus* to the swollen capsule of a plant, the husk of a seed, or anything of similar appearance (Senec. *Nat. Quaest.* v. 18, § 3; *Ep.* 124, § 11; Tertull. *de Res. Carn.* 52).

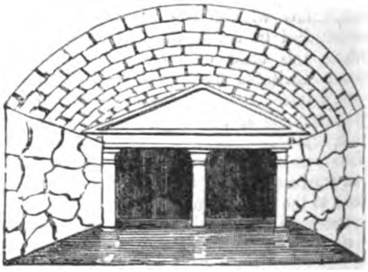
Under the later empire, follis was the name of a small debased coin (see As, last paragraph). In the absence of a better currency, large sums had to be paid in this coinage, which for the purpose was done up in bags, also called *folles*, analogous to the "purses of piastres" still used in reckoning in the East. The number of coins that went to a bag was probably 500, and its worth $\frac{1}{12}$ of a solidus, or less than 1*s*. 1½*d*. From this the follis became, under Constantine and his successors, a "money of account," which was used in reckoning gold and silver as well as copper (Euseb. *H. E.* x. 6, § 1; Cod. Theod. vi. 2, 8; vi. 4, 21). The silver unit in Constantine's system was the *miliarense*, representing the value of $\frac{1}{1000}$ of a pound of gold, now coined into 72 gold *solidi*. The follis of silver contained 125 *miliarensia*, $\frac{1}{8}$ of a pound of gold, or 9 *solidi*. So debased was the coinage at this time, and so high the premium on gold, that the denarius, the unit of copper, had dwindled to $\frac{1}{6000}$ of a gold coin, the solidus, worth no more than the English mark or about 13*s*. 4*d*.; while in the impoverished last days of the Western Empire as many as 7200 denarii went to a solidus (*Novella* of Valentinian III., A.D. 445, tit. 14, § 1). One of the compulsory presents to the emperor, exacted from senators, was also called follis (Marquardt, *Staatsverw.* iii. 236 n.). Many points about the mode of reckoning by folles still remain obscure: the above facts may be regarded as tolerably well established. (Mommsen, *Münzw.* p. 839; Hultsch, *Metrol.* pp. 251, 252; and especially Marquardt, *Staatsverw.* iii. pp. 42–47).

Two inflated skins, constituting *a pair of bellows*, and having valves adjusted to the natural apertures at one part for admitting the air, and a pipe inserted into another part for its emission, were an essential piece of furniture in every forge and foundry (*Il.* xviii. 372, 409, 470; Verg. *Aen.* viii. 449). The Greek word is usually **φῦσαι** from Homer downward, poetically **πρηστῆρες**, Apoll. Rhod. iv. 775: the **ζώπυρα** of Ephorus (*ap.* Strab. vii. p. 303), sometimes translated "bellows" (as by L. and S., ed. 7), are more probably some sort of tinder, touchwood, or "kindlers," Lat. *fomes*, though Photius and Suidas likewise explain **ζωπύρια** or **-εῖα** by **φῦσαι**. According to the nature and extent of the work to be done the bellows were made of the hides of oxen (*taurinis follibus*, Verg. *Georg.* iv. 171), or of goats (*hircinis*, Hor. *Sat.* i. 4, 19), and other smaller animals. The Homeric bellows were small, and used in large numbers; there was one to every melting-pot or crucible (*Il.* xviii. 470). So in Herodotus (i. 68) **δύο φῦσαι** are not "a pair of bellows," but, as the context shows, two distinct pairs, each sending forth a separate blast. The nozzle of the bellows was called **ἀκροφύσιον** or **ἀκροστόμιον** (Thucyd. iv. 100; Eust. on *Il.* l. c.). In bellows made after the fashion of those exhibited in the lamp here introduced from Bartoli (*Ant. Lucern.* iii. 21), we may imagine the skin to have been placed between the two boards so as to produce a machine like that which we now employ. [J. Y.] [W. W.]

Bellows. (From a lamp.)

FONS (**κρήνη**) signifies originally a natural spring of water, but both the Greeks and Romans had artificial fountains, made either by covering and decorating a spring with buildings and sculpture, or by making a jet or stream of water, supplied by an elevated cistern, playing into an artificial basin. Such fountains served the double purpose of use and ornament. Among the Greeks, they formed the only public supply of water except the rain-water which was collected in cisterns [AQUAEDUCTUS]; and at Rome, the poorer people, who could not afford to have water laid on to their houses, no doubt procured it from the public fountains.

Several examples of natural springs, converted into ornamental fountains, in the cities of Greece, have been mentioned under AQUAEDUCTUS. They were covered to keep them pure and cool, and the covering was frequently in the form of a monopteral temple: there were also statues, the subjects of which were suggested by the circumstance that every fountain was sacred to some divinity, or they were taken from the whole range of mythological legends. That at Megara, erected by Theagenes, is described by Pausanias as worth seeing for its size, its beauty, and the number of its columns (i. 40, § 1). That of Peirene at Corinth was adorned with covered cisterns of white marble like grottoes, out of which the water flowed into the open air, and with a statue of Apollo, and was enclosed with a wall, on which was painted the slaughter of the suitors of Ulysses (Paus. ii. 3, § 3; see a paper by Göttling, on the present state of this fountain, and of the *Cranion*, with an engraving of the source of the Peirene, in Gerhard's *Archäologische Zeitung* for 1844, pp. 326, 328; the engraving is given above). Corinth contained numerous other fountains; over one of which was a statue of Bellerophon and Pegasus, with the water flowing out of one of the horse's hoofs (*ib.* § 5); over another, that of Glauce, was the Odeium (*ib.* § 6); and another was adorned with a bronze statue of Poseidon, with a dolphin at his feet, out of the mouth of which the water flowed (Paus. ii. 2, § 7, s. 8). In the same city was another fountain on a still grander scale, namely, that of Lerna, which was surrounded by a colonnade with seats for those who desired a cool retreat in summer; the water was no doubt collected in a spacious basin in the centre

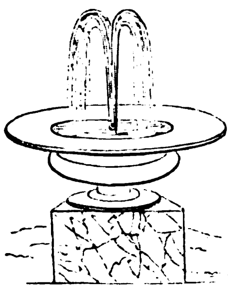


Fountain of Peirene, Corinth.

(*ib.* iv. § 5; see also 5, § 1). Several other fountains of a similar kind to these are described or referred to by Pausanias (ii. 27; iv. 31, 33, 34; vii. 5, 21), among which two deserve special mention, as they were within temples; namely, that in the temple of Erechtheus at Athens, and of Poseidon at Mantineia, which were salt-water springs (i. 26, § 5; viii. 10, § 4). Vitruvius mentions the fountain of Salmacis as among the admirable works of art at Halicarnassus (ii. 8, § 12).

The Romans also erected edifices of various degrees of splendour over natural springs, such as the so-called grotto of Egeria, near Rome, where the natural cave is converted by the architect into a sort of temple (comp. Plin. *H. N.* xxxvi. § 154), and the baptistery of Constantine, now called *S. Giovanni in Fonte*, adjoining the Lateran. A simple mode of decorating less considerable springs was by covering them with a vault, in the top of which was an opening, surrounded by a balustrade, or by a low wall adorned with marble bas-reliefs, one example of which, among many, is seen in a relief representing the twelve gods, now in the Capitoline Museum. In all cases, a cistern was constructed to contain the water, either by cutting it out of the living rock, or (if the spring did not rise out of rock) by building it of masonry. Vitruvius discusses at length the different sorts of springs, and gives minute rules for testing the goodness of the spring, and for the construction of the cisterns (viii. 3, 7). The observations of Vitruvius apply chiefly to those springs and cisterns which formed the sources of the aqueducts.

At Rome, a very large proportion of the immense supply of water brought to the city by the aqueducts was devoted to the public fountains, which were divided into two classes; namely, *lacus*, ponds or reservoirs, and *salientes*, jets of water, besides which many of the castella were so constructed as to be also fountains. (See AQUAEDUCTUS, p. 155 *b*, and the woodcut called the "Trophies of Marius.") Agrippa, who during his aedileship paid special attention to the restoration of the Roman waterworks, is said to have constructed 700 *lacus*, 500 *salientes* (old edd. read 105), and 130 *castella*, of which very many were magnificently adorned; they were decorated with 300 bronze or marble statues, and 400 marble columns (Plin. *H. N.* xxxvi. § 121). There were also many small private fountains in the houses and villas of the wealthy (Plin. *Epist.* v. 6). At Pompeii the fountains are extremely numerous, and that not only in the streets and public places, especially at the junctions of streets (*in biviis*, *in triviis*), but also in private houses. The engraving on p. 152 *b* represents a section of one of these fountains, in which the water pours into a basin; that now given, in which the water is thrown up in a jet, is taken from an arabesque painting on the wall of a house at Pompeii: in the painting, the vase and pedestal rise out of a sheet of water, which may be supposed to represent the *impluvium* in the atrium of a house. (Respecting the fountains of Pompeii, see *Pompeii*, vol. i. p. 131, vol. ii. pp. 71, 78; and Sir W. Gell's *Pompeiana*, vol. i. pp. 390, 395, plates 50, 53.) The proof which these fountains afford, of the acquaintance of the ancients with the chief law of hydrostatics, is noticed under AQUAEDUCTUS, p. 152 *a*.



Jet, from a painting at Pompeii.

The forms given to fountains were as numerous as the varieties of taste and fancy. The large flat vases were a common form, and they are found of 5, 10, 20, and 30 feet in diameter, cut out of a single piece of some hard stone, such as porphyry, granite, basanite, breccia, alabaster, and marble. An ingenious and elegant variety, of which there is a specimen in the Capitoline Museum, is a tripod, up the centre of which the jet passes, the legs being hollow to carry off the water again. Very often the water was made to flow out of bronze statues, especially of boys, and of Tritons, Nereids, Satyrs, and such beings: several of these statues have been found at Pompeii; and four of them are engraved in *Pompeii*, vol. i. p. 104, one of which is given below. On the Monte Cavallo, at Rome, is a colossal statue of a river-god, probably the Rhine, which was formerly in the forum of Augustus; it pours a stream of water into a basin of granite twenty-seven feet in diameter. The celebrated group known as the Toro Farnese, now in the Naples Museum, probably once adorned a fountain. Mythological subjects were also sculptured over the fountains, as among the Greeks; thus at Rome there were the fountains of Ganymede and Prometheus, and the Nymphaeum of Jupiter. (Stieglitz, *Archäol. d. Baukunst*, vol. ii. pt. 2, pp. 76, 79; Hirt, *Lehre der Gebäude*, pp. 399, 403.) [P. S.] [W. W.]

Bronze Fountain. (Pompeii.)

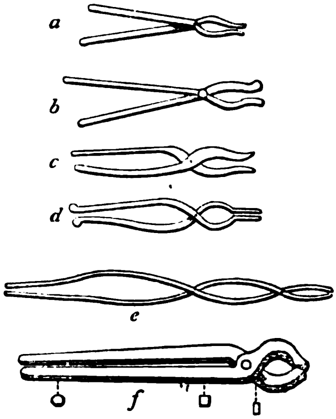
FORCEPS, tongs, pincers, nippers or pliers, were used in antiquity for the same purposes, and with many of the same varieties of shape, as in modern times.

1. A pair of tongs (πυράγρα, θερμαστρίς), for

taking heated metal out of the fire or holding it upon the anvil; used by smiths, and therefore attributed to Vulcan and the Cyclopes: see cuts under INCUS and MALLEUS. (Hom. *Il.* xviii. 477, *Od.* iii. 434; Callim. *Hymn. in Del.* 144; Verg. *Georg.* iv. 175, *Aen.* viii. 453 *forcipe curva*, Ov. *Met.* xii. 277.)

2. As a surgical instrument, a forceps (λαβίς, Hippocr.). Several specimens found at Pompeii are figured under CHIRURGIA, p. 415 *a*, and by Guhl and Koner, p. 707, ed. 5. Among special kinds may be mentioned one for extracting spear- or arrow-heads from wounds (Verg. *Aen.* xii. 404, where Servius gives ἀρδιοθήρα as the Greek equivalent); another for drawing teeth (Cels. vii. 12, § 1), in Greek ὀδοντάγρα, described at some length by Aristotle (*Mechan.* 21), who, here at least, uses θερμαστρὶς as apparently an equivalent term; a variety for extracting the roots of teeth (Cels. *l. c.*), for which ῥιζάγρα is quoted from Paulus Aegineta.

3. In military language, a tenaille; in which sense, however, FORFEX is more used (Amm. Marc. xvi. 11, § 3).



Forcipes. (From ancient monuments, Blümner.)

a, *b*, and *e*, from vase-paintings; *c*, from the altar of Vulcan at Veii; *d*, from a bas-relief; *f*, from an original now in the Zürich Museum.

The word was derived by the ancient etymologists from *forvus* or *formus*, "hot" (Fest. pp. 84, 91, M.; Serv. *ad* Verg. *ll. cc.*); this however, though accepted in some modern dictionaries of repute, as well as by Curtius, *Gr. Etym.* 486, is appropriate only to one of its meanings. It is hardly possible to separate forceps from *forfex* and *forpex;* and the first syllable in each is best explained with Donaldson (*Varron.*² p. 297) as referring to the "opening" or "door" (*foris*) which these instruments make in order to grasp the object. (Blümner, *Technol.* &c. ii. pp. 192, 193.) [W. S.] [W. W.]

FORDICI'DIA, the second of the two festivals of the Curiae (the first being the FORNACALIA), held on the 15th of April. Cows in calf (*fordae*, *hordae boves*, Varro, Ovid, Festus) were sacrificed under the direction of the Pontiffs and Vestals, some in the Capitol, others in the thirty curies (apparently one for each), others again outside the walls of Rome. The unborn calves were extracted and burnt separately by the senior Vestal (*Virgo Vestalis maxima*), and these ashes, together with the blood of the October horse, were used six days later for purposes of lustration at the PARILIA (Ov. *Fast.* iv. 629–640, cf. 733 ff.).

The Fordicidia was one of a series of spring festivals, all celebrated at the opening season of the year on behalf of the fertility of the crops and the increase of cattle. Other forms of the word are *Fordicalia* (J. Lydus, *de Mensib.* iv. 49) *Hordicalia* (Varr. *R. R.* ii. 5, § 6), *Hordicidia* (Fest. *Epit.* p. 102 M.); but all the Calendars, and Varro, *L. L.* vi. 15, have *Fordicidia.* Of the two forms of the adjective, *forda* or *horda bos*, *forda* is the older (cf. *fasena* = *harena*) and better attested (Ovid; Varro, *L. L.*). (Marquardt, *Staatsverw.* iii. 192; cf. pp. 273 n., 331, 350.) [W. W.]

FORES. [JANUA.]

FORFEX, *dim.* FORFICULA (ψαλίς, *dim.* ψαλίδιον), shears (Serv. *in* Verg. *Aen.* viii. 453), used (1) in shearing sheep, as represented in the annexed woodcut, which is taken from a carnelian in the Stosch collection of antique gems at Berlin; (2) in cutting hair (Schol. in Eurip. *Orest.* 954: Brunck, *Anal.* iii. 9; Verg. *Catal.* viii. 9; *ferro bidenti*, *Ciris*, 213); (3) in clipping hedges, myrtles, and other shrubs (ψαλιστοὶ μυρρινῶνες, Hierocles, *ap.* Stob. *Serm.* 65, p. 415).

Forfex, shears. (From a gem.)

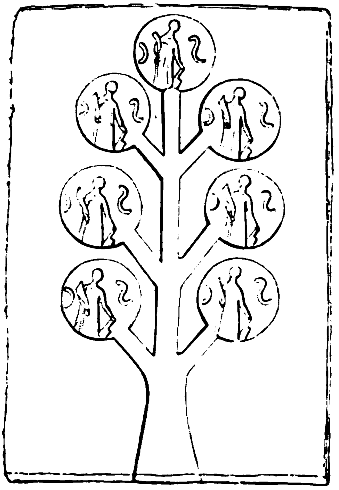
In military manœuvres the forfex was a tenaille, *i.e.* a body of troops arranged in the form of a V, so as to receive and overcome the opposite body, called a *cuneus* (Gell. x. 9).

In architecture the term ψαλὶς denoted a construction which was probably the origin of the arch, consisting of two stones leaning against each other so as to form an acute angle overhead, as is seen in the ruins of Tiryns and other prehistoric buildings (Plat. *Legg.* xii. 947 D; Diod. Sic. ii. 9; see the second cut under ARCUS, p. 171 *b*). Later the ψαλὶς is hardly to be distinguished from the true arch; see references in L. and S., ed. 7. [CAMARA.] [J. Y.] [W. W.]

FORI. [NAVIS; CIRCUS, p. 430 *a*.]

FORMA, *dim.* FORMULA, FORMELLA (τύπος), a pattern, a mould; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making pottery, pastry, cheese, bricks, and coins. Several moulds for use in cookery are among the kitchen utensils found at Pompeii. The moulds for coins were made of a kind of stone, which was indestructible by heat (Plin. *H. N.* xxxvi. § 168). The mode of pouring into them the melted metal for casting the coins will be best understood from the woodcut on next page, which represents one side of a mould, engraved by Seroux d'Agincourt. For the moulds used in casting terra-cottas, see ECTYPUS. Moulds were likewise employed in making walls of the kind now called *pisé*, i.e. clay cast in wooden frames, which were built in Africa, in Spain, and about Tarentum (Varr. *de R. R.* i. 14; Pallad. i. 34; *parietes formacei*, Plin. *H. N.* xxxv. § 169). The shoemaker's last was also called *forma* (Hor. *Sat.* ii. 3, 106), *formula* (Amm. Marc. xxxi. 2, § 6), and *tentipel-*

lium (Festus, *s. v.*), in Greek *καλόπους* (Plat. *Symp.* 191 A). The spouts and channels of aqueducts are called *formae*, perhaps from their resemblance to some of the moulds included in the above enumeration (Frontin. *de Aquaeduct.* 75, 126). [J. Y.] [W. W.]

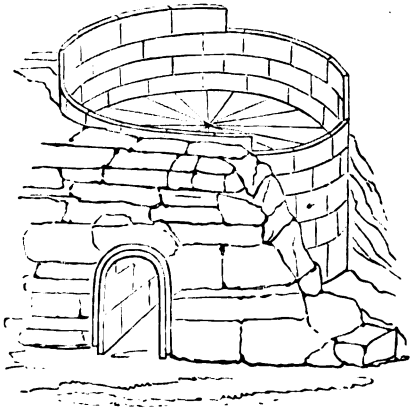


Forma, mould for coins.

FO'RMULA. [Actio.]

FORNACA'LIA, a festival in honour of Fornax, the goddess of furnaces, in order that the corn might be properly baked (Festus, *s. v.*). This ancient festival is said to have been instituted by Numa (Plin. *H. N.* xviii. § 8), and, like the Fordicidia, was celebrated by the Curies, probably in the Forum. The time for its celebration was proclaimed every year by the Curio Maximus, who announced on tablets, which were placed in the Forum, the different part which each curia had to take in the celebration of the festival. Those persons who did not know to what curia they belonged, performed the sacred rites on the *Quirinalia*, called from this circumstance the *Stultorum feriae*, which fell on the 17th of February. The Fornacalia usually preceded this festival, but sometimes coincided with it. It would seem that only plebeians could be ignorant of what curia they belonged to. (Ovid, *Fasti*, ii. 513–532; Varr. *L. L.* vi. 13, with Müller's note; Festus, s. vv. *Quirinalia*, *Stultorum feriae*; Marquardt, *Staatsverw.* iii. 190 f.) The Fornacalia continued to be celebrated in the time of Lactantius (Lactant. i. 20, § 35). [W. S.] [W. W.]

FORNAX, *dim.* Forna'cula, Furnus (*κάμινος*, *dim.* *καμίνιον*), a kiln; an oven; a furnace. The construction of the kilns used for baking earthenware [Fictile] may be seen in the annexed woodcut, which represents part of a Roman pottery kiln discovered near Castor, in Northamptonshire. The dome-shaped roof has been destroyed; but the flat circular floor on which the earthenware was set to be baked is preserved entire. The middle of this floor is supported by a thick column of brick-work, which is encircled by the oven (*furnus*, *κλίβανος*). The entrance to the oven (*praefurnium*) is seen in front. For the account of another oven found at Heddernheim, see Fictile, p. 845. The lower part of a smelting-furnace, shaped like an inverted bell, and sunk into the earth, with an opening and a channel at the bottom for the discharge of the melted metal, has been discovered near Arles (Florencourt, *Ueber die Bergwerke der Alten*, p. 30). In Spain these furnaces were raised to a great height, in order that the noxious fumes might be carried off (Strabo, iii. p. 146). They were also provided with long flues (*longinquae fornacis cuniculo*, Plin. *H. N.* ix. § 133), and with chambers (*camerae*) for the purpose of collecting more plentifully the oxides and other matters by sublimation (*Ibid.* xxxiv. §§ 101, 128, 135, 136, 142, 144). In the primitive forges known to Homer, there was no furnace, only melting-pots (*χόανοι*), each with their separate bellows (*Il.* xviii. 470; Follis). Melting-pots or crucibles have been found at Castor, and at different places in Egypt, in form and material very like those which we now employ (Wilkinson, *Anc. Egypt.* ii. 235, ed. Birch, 1878). A glass-house, or furnace for making glass, was called *ὑελουργεῖον* (Dioscor. v. 182).



Fornax, a kiln. (Discovered near Castor, in Northamptonshire.)

Furnaces of an appropriate construction were erected for casting large statues of bronze (Claud. *de Laud. Stil.* ii. 176), and for making lamp-black (Vitruv. vii. 10). [Atramentum.] The lime-kiln (*fornax calcaria*) is described by Cato (*de R. R.* 38; see also Plin. *H. N.* xvii. § 53; Vitruv. vii. 3). For the *furnus* used in heating baths, see p. 279.

The early Romans recognised, under the name of Fornax, a divinity who presided over ovens and furnaces [Fornacalia]. [J. Y.] [W. W.]

FORNIX, in its primary sense, is synonymous with Arcus (Senec. *Ep.* 90), but more commonly implies an arched vault, constituting both roof and ceiling to the apartment which it encloses (Cic. *Top.* 4, § 22).

From the roof alone, the same word came to signify the chamber itself, in which sense it designates a long narrow vault, covered by an arch of brick or masonry (*tectum fornicatum*), similar to those which occupy the ground-floors of some modern Roman palaces. Three such cells are represented in the annexed woodcut, from the remains of a villa at Mola di Gaeta, which passes for the Formian Villa of Cicero. They are covered internally with a coating of stucco,

Fornices, vaults. (From a villa at Mola di Gaeta.)

tastily ornamented, and painted in streaks of azure, pink, and yellow.

Being small and dark, and situated upon the level of the street, these vaults were occupied by prostitutes (Hor. *Sat.* i. 2, 30; Juv. *Sat.* iii. 156, x. 239, xi. 171; compare Suet. *Jul.* 49), whence comes the meaning of the word *fornicatio* in the ecclesiastical writers, and its English derivative.

A detached triumphal arch, like those of Titus, Sept. Severus, and Constantine, is never called *fornix*, always *arcus triumphalis;* but the former name is applied to ornamental or honorary arches spanning a street, and connected with the adjacent buildings. The two oldest were erected, one in the Forum Boarium and the other in the Circus Maximus, and adorned with trophies by L. Stertinius, who did not even ask for a triumph, B.C. 196 (Liv. xxxiii. 27); the next on the slope of the Capitol by Scipio Africanus, B.C. 190 (Liv. xxxvii. 3). The most frequently mentioned is the *fornix Fabianus* or *Fabii*, on the Sacra Via just where it begins to ascend towards the Arch of Titus (Cic. *de Or.* ii. 66, § 267; *Act. i. in Verr.* 7, § 19; *pro Planc.* 7, § 17); on some slight remains of it discovered in modern times, cf. Middleton, *Anc. Rome in* 1885, p. 207. The fine arch pierced in the wall of the Forum of Augustus (Middleton, p. 258), and now called *Arco de' Pantani*, is of this description, as is also the archway which forms one of the entrances to the Forum at Pompeii. A street in Rome which led to the Campus Martius was called Via Fornicata (Liv. xxii. 36), probably on account of the ornamental arches built across it.

Fornix is also a sallyport in the walls (Liv. xxxvi. 23; cf. xliv. 11); one of the towers of Pompeii, figured by Rich, *s. v.* Fornix, has such an arch at the foot of it. [A. R.] [W. W.]

FORPEX, a pair of curling irons, is sometimes treated as a mere corruption of FORCEPS; and in an obscure passage of Suetonius (*Aug.* 75) both the reading and the sense are doubtful. But the derivation from *pecto* is obviously appropriate; and it seems to have been an old word (Cat. *R. R.* x. 3) revived, like so many others, by late authors (Sidon. Apoll. *Epith.* xv. 184). In the classical period its place was taken by *calamistri* [CALAMISTRUM]. [W. W.]

FORUM. As the plan of the present work does not include a topographical description of the various fora at Rome, the following article only contains a brief statement of the purposes which they served.

Forum originally signifies an open space (*area*) before any building, especially before a sepulcrum (Festus, *s. v.*; Cic. *de Legg.* ii. 24, § 61); the word is no doubt connected with *foris*, and so means any place "out of doors." The characteristic features of a Roman forum were, that it was a levelled space of ground of an oblong form, and surrounded by buildings, houses, temples, basilicas or porticoes (Vitruv. v. 1, 2). The forum at Pompeii, now completely excavated and showing very handsome architectural surroundings, will afford a good general notion of the usual appearance of these places and the way they were laid out. A forum was originally used as a place where justice was administered, and where goods were exhibited for sale (Varr. *L. L.* v. 145, M.). We have accordingly to distinguish between two kinds of fora; of which some were exclusively devoted to commercial purposes and were real market-places, while others were places of meeting for the popular assembly and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called *fora judicialia*, to distinguish them from the mere market-places.

Among the fora judicialia the most important was the *Forum Romanum*, which was simply called *forum*, as long as it was the only one of its kind which existed at Rome. At a late period of the republic, and during the empire, when other fora judicialia were built, the Forum Romanum was distinguished from them by the epithets *vetus* or *magnum*. It was situated between the Palatine, the Capitoline, and the Quirinal hills, and its extent was seven jugera, whence Varro (*de R. R.* i. 2) calls it the "Septem jugera forensia." It was originally a swamp or marsh, but was said to have been filled up by Romulus and Tatius, and to have been set apart as a place for the administration of justice, for holding the assemblies of the people, and for the transaction of other kinds of public business. The memory of its original state was preserved to the latest times by the legend of the Lacus Curtius (Liv. i. 12; Varr. *L. L.* v. 148; Dion. Hal. ii. 42; Plut. *Rom.* 18): but in reality it was drained by the construction of the Cloaca Maxima in the time of the last kings [CLOACA; EMISSARIUM]. In the larger sense, as applied to the whole valley surrounded by the three hills just named, the forum included the comitium, or the place of assembly for the curiae (Varr. *L. L.* v. 155, M.), which was separated from the forum in its narrower sense, or the place of assembly for the comitia tributa by the Rostra. (Niebuhr, *Hist. of Rome*, i. p. 291, note 746, and p. 426, note 990; Walter, *Gesch. des röm. Rechts*, p. 83; Göttling, *Röm. Staatsverf.* p. 155.) These ancient rostra were an elevated platform (*suggestum*), from which the orators addressed the people, and which derived their name from the circumstance that after the subjugation of Latium, its sides were adorned with the beaks (*rostra*) of the ships of the Antiates (Liv. viii. 14). In subsequent times, when the curiae had lost their importance, the accurate distinction between comitium and forum likewise ceased, and the comitia tributa were sometimes held in the Circus Flaminius: but towards the end of the republic the forum seems to have been chiefly used for judicial proceedings, and as a money market: hence Cicero (*de Orat.* i. 36, § 167) distinguishes between a speaker in the popular assembly (*orator*) and the mere pleader: "Ego istos non modo oratoris nomine, sed ne foro quidem dignos putarim." The orators when addressing the people from the rostra, and even the tribunes of the people in the early times of the republic, used to front the comitium and the curia; but C. Gracchus (Plut. *C. Gracch.* 5), or, according to Varro (*de R. R.* i. 2) and Cicero (*de Am.* 25, § 96), C. Licinius, introduced the custom of facing the forum, thereby acknowledging the sovereignty of the people. In 308 B.C. the Romans adorned the forum, or rather the bankers' shops (*argentarias*) around, with gilt shields which they had taken from the Samnites: and this custom of adorning the forum with these shields and other ornaments was subsequently always observed during the time of the Ludi Romani, when the Aediles rode in their chariots (*tensae*) in solemn procession around the forum. (Liv. ix. 40; Cic. *in Verr.* i. 54, § 141, and iii. 4, § 9.) After the victory of C. Duilius over the Carthaginians the forum was adorned with the celebrated columna rostrata [COLUMNA, p. 495 *a*]. In the upper part of the forum, or the comitium, the laws of the Twelve Tables were exhibited for public inspection, and it was probably in the same part that in 304 B.C. Cn. Flavius exhibited the Fasti, written on white tables (*in albo*), that every citizen might be able to know the days on which the law allowed the administration of justice. (Liv. ix. 46.) Besides the ordinary business which was carried on in the forum, we read that gladiatorial games were held in it (Vitruv. v. 1, 2), and that prisoners of war and faithless colonists or legionaries were put to death there. (Liv. vii. 19; ix. 24; xxviii. 28.) Down to the latest times of the republic, the forum was the usual place where funeral games were given; on these occasions it was temporarily enclosed with wooden railings (Cic. *pro Sest.* 58, § 124; CANCELLI).

Before the end of the Second Punic War a small portion only of the space between the Palatine, the north-eastern end of the Capitoline, and the Quirinal was occupied as a Forum or public place of meeting. It does not appear that even in the populous times of the later republic the open space of the Forum was ever enlarged; but overcrowding was in some measure prevented by the building of open basilicas, beginning with the Basilica Porcia in the censorship of Cato, B.C. 184. With the growth of provincial business the courts of law and public buildings must have become more and more inadequate (Burn, p. 75). Out of this state of things arose, in the period between Julius Caesar and Trajan, the Five Imperial Fora.

1. The first of these, and the second forum judiciarium, was built by the dictator Caesar out of the spoils of the Gallic war, and was called *Forum Caesaris* or *Julii*. The site chosen was exceptionally crowded and valuable, immediately to the north-east of the Forum Romanum, and a hundred million sesterces were paid for it. The levelling of the ground cost large additional sums; in the centre stood the magnificent temple of Venus Genetrix, the tutelary goddess of his family, which he had vowed at the battle of Pharsalia (Suet. *Jul.* 26; Plin. *H. N.* xxxv. § 156, xxxvi. § 103; Dio Cass. xliii. 22). For plans of this and the other imperial fora, see Burn, p. 126; Middleton, p. 253. Nothing now remains of this forum but five half-buried arches, figured by Middleton, p. 255.

2. The *Forum Augusti*, the next in date, stood back from the Forum Julii in the same N.E. direction. The central area was occupied by the temple of Mars Ultor, commemorating the battle of Philippi, though it was not finished until forty years later, and dedicated in B.C. 2. (Vell. Pat. ii. 100, § 2.) Augustus further adorned his forum with statues of the most distinguished men of the republic, and issued a decree that only the *judicia publica* and the *sortitiones judicum* should take place in it. (Suet. *Aug.* 29 and 31; compare Dio Cass. lvi. 27; Plin. *H. N.* xxxvi. § 102; Vell. Pat. ii. 39; Ovid, *ex Pont.* iv. 15, 16; Martial, iii. 38, 3; Seneca, *de Ira*, ii. 9; Stat. *Silv.* iv. 9, 15.) After the Forum Augusti had severely suffered by fire, it was restored by Hadrian. (Spart. *Hadr.* 19.)

3. The *Forum Pacis* was built to enclose the Temple of Peace, dedicated by Vespasian A.D. 75. It commemorated the close of the civil wars which had filled the short reigns of Galba, Otho, and Vitellius, the undisputed authority of the emperor, and the taking of Jerusalem (Suet. *Vesp.* 9; Dio Cass. lxvi. 15). According to Pliny (*H. N.* xxxvi. § 102) the three most magnificent buildings in Rome were the basilica of Paullus, the forum of Augustus, and Vespasian's temple of Peace. The site was to the south-east of the Forum of Augustus, but did not quite join it; a wide street from the Subura to the Forum Romanum being left between. This narrow strip afterwards became the Forum Transitorium of Nerva. There are no remains of the Temple of Peace, and the slight existing remains of the forum are referred by Middleton, on account of their construction, to a restoration by Sept. Severus after a fire in the reign of Commodus.

4. The situation of the forum of Nerva has been already indicated. It was called *Transitorium*, on account of the highway which ran through it; or *Palladium*, from containing a temple of Minerva. The two Corinthian columns buried to about half their height, and now called *Colonnacce*, belonged to this temple; part of the outer wall of the forum is also extant, built to correspond with the forum of Augustus both in construction and height (about 100 feet).

5. The *Forum Trajani* was probably the most magnificent of all. It occupied a large space between the Capitoline and Quirinal hills, the latter of which was cut back to a height of 100 Roman feet, as shown by the inscription on the Column of Trajan (for the true explanation of this inscription, see Middleton, p. 270). The entrance was at the lower or southern end, where a triumphal arch, surmounted by a statue of Trajan in a six-horse chariot, divided it from the forum of Augustus. The open space (*area fori*, Gell. xiii. 25, § 2) was surrounded by a double row of porticoes, and enlarged by four enormous apses or semicircular extensions, one of which can still be traced in the slope of the Quirinal. In the centre stood the Basilica Ulpia, which fills the greater part of the modern *Foro Trajano*; beyond it was a cloistered court (*atrium*) surrounding the celebrated column which bears Trajan's name, and flanked by two libraries—one for Greek, the other for Latin

MSS.; at the upper end it was closed by the temple of Trajan, dedicated by his successor. For full topographical details, see Burn, pp. 141–153; Middleton, pp. 268–281.

Fora of Sallust, of Aurelian, and of Diocletian are mentioned in the regionary catalogues, but are mere names to us.

Different from these fora were the numerous markets at Rome, more useful than ornamental, and some of them reaching back to a very high antiquity. The most important was the *Forum Boarium*, or cattle market, occupying a large space between the Velabrum and the Tiber; the notion that it derived its name from the statue of an ox, whencesoever imported (Ov. *Fast.* vi. 477; Plin. *H. N.* xxxiv. § 10), can hardly be right, as it was almost certainly so named long before statues were introduced at Rome. Another legend connected the name with the oxen of Hercules, stolen by Cacus (Propert. v. 9, 19–20). Others which took their names from the goods sold in them were the *forum olitorium* and *piscatorium*, for vegetables and fish (Varr. *L. L.* v. 146; Col. viii. 19), *suarium* for pigs (Dig. 1, 12, 1), *cupedinis* (Varr. *L. L.* v. 41) or *cupedinarium* (Symm. *Ep.* viii. 19) for dainties. On the whole subject see Burn, *Rome and the Campagna*, chaps. v. vi. vii. xii.; Middleton, *Ancient Rome in* 1885, chaps. v. vi. viii. [L. S.] [W. W.]

FOSSA. [CASTRA.]

FRAMEA. [HASTA.]

FRENUM (χαλινός), a bridle, including the bit, headstall, and reins. It was properly the bit as distinct from the reins (ἡνίαι); but in Xenophon (*de Re Eq.* 6, § 7), where he is instructing the groom in the mode of putting it on, χαλινὸς is the whole bridle, the several parts of it the ἡνίαι, στόμιον, and head-piece (κορυφαία). So, in Latin, *frena* in the plural is used for the whole bridle. The invention was mythically ascribed to Athena, who gave it to Bellerophon as the means of subduing Pegasus (Pind. *Ol.* xiii. 85 ff.). The annexed woodcut, from an antique, represents the winged horse submitting to receive it as he slaked his thirst at the fountain of Peirene. In reference to this event, Athena was worshipped at Corinth under the titles Ἱππία and Χαλινῖτις (Paus. ii. 4, §§ 1, 5). The several parts of the bridle, more especially the bit, are engraved from ancient authorities in the treatises of Invernizi (*de Frenis*), Ginzrot (*Ueber Wagen und Fahrwerke*), and Bracy Clark (*Chalinology*, Lond. 1835). Illustrations have been already given under AMPYX, CARPENTUM, CLITELLAE, CURRUS, and EPHIPPIA; to these we add a beautiful specimen from the Castellani Collection in the British Museum. This is of bronze, and was found in Southern Italy; it is believed to date from pre-historic times, and shows the high antiquity of the ornamental bridles described below [cf. CATENA].

Pegasus receiving the bridle.

Ancient bronze bridle. (British Museum.)

The bit (στόμιον, Xen. *l. c.*, Aesch. *Prom.* 1009; rarely δῆγμα, Brunck, *Anal.* ii. 237 = *Anth. Pal.* vi. 233: in Latin *frenum* is the only word in use, but *oreae* is quoted from Titinius, *ap.* Fest. *s. v.*) was commonly made of several pieces, and flexible, so as not to hurt the horse's mouth; for the Greeks considered a kind and gentle treatment the best discipline, although when the horse was intractable, they taught it submission by means of a curb armed with sharp points. Xenophon recommends the use of two bits, a snaffle (λεῖος χαλινός) and a curb (ὁ ἕτερος), the latter with sharp prickles (ἐχῖνοι, *op. cit.* 10, § 6). From the resemblance to wolves' teeth, a bit of this kind was called *lupatum* in Latin (Verg. *Georg.* iii. 208; Hor. *Carm.* i. 8, 7; Ov. *Amor.* i. 2, 15). The bit was held in its place by a strap (ὑποχαλινιδία, sc. ἡνία), or a curb-chain (ψάλιον, Aristoph. *Pax*, 155); a halter or thong, distinct from the reins, was sometimes fastened to this chain or strap by means of a ring, and was used to lead the horse (ῥυταγωγεύς: all three words in Xen. 7, § 1). The upper part of the bridle, by which it was fastened behind the ears, is called by Xenophon κορυφαία (3, § 2; 6, § 7), and it included the AMPYX, which was often ornamental. The cheek-pieces (παρήϊον, Hom. *Il.* iv. 142; παραγναθίδιον, Eustath. *ad loc.*), which joined the headstall to the bit, were also in some cases richly adorned, especially among the nations of Asia; in the passage of Homer the material is stained ivory. The bit, which, though commonly of bronze or iron, was sometimes silver or gold (χρυσοχαλίνων πάταγον ψαλίων. Aristoph. *l. c.*; *fulvum mandunt sub dentibus aurum*, Verg. *Aen.* vii. 279). These precious metals were also either embossed (*frena caelata*, Apul. *de Deo Socr.* p. 54 Elm. = 173 Oud.), or set with jewels (*gemmata monilia*, on the horse of Honorius, Claud. *Epigr.* 18, 9 = 23, 9).

Not only was the bridle dispensed with in the management of creatures invented by the imagination of the poet (Aesch. *Prom.* 287), but of some which were actually trained by man to go without it. Thus the Numidian DESULTOR guided his two horses by the whip, and the Gallic ESSEDARIUS, on the banks of the Rhone, directed and animated his mules entirely by the voice (*frenorumque vicem lingua virilis agit*, Claud. *Epigr.* 1, 10). [J. Y.] [W. W.]

FRIGIDA'RIUM. [BALNEAE, pp. 275, 279.]

FRITILLUS (*φιμός, πύργος*), a dice-box. The dice were sometimes thrown from the hand, but (to prevent cheating) more usually from a dice-box. This was of a cylindrical shape, but, unlike those now in use, tapered towards the top: hence it was called *φιμός* (Aeschin. *c. Timarch.* § 59; Diphil. *fr.* 74 M.) from the resemblance to a muzzle; perhaps also *κημός*, a funnel (see the Lexicons). Another name, from the tower-like shape, was *πύργος* (see the epigram of Agathias quoted under DUODECIM SCRIPTA, l. 23), in Latin *pyrgus* (*Anthol. Lat.* iii. 77, No. 915 Meyer, 193 Riese; Sidon. Apoll. *Epist.* viii. 12), *turricula* (Mart. xiv. 16), *phimus* (Hor. *Sat.* ii. 7, 15), but most commonly *fritillus* (Senec. *Apocol.* 14, § 4; 15, § 1; Mart. iv. 14, xiv. 1; Juv. xiv. 5). It was furnished inside with parallel indentations like steps (*gradus*, Auson. *Comm. Prof.* i. 27; Sidon. Apoll. *l. c.*; *Anthol. Lat.* l. c.), which gave a better spin to the dice. The material was wood (*δουράτεος*, Agathias; *cava buxa*, Auson.), ivory (Sidon. Apoll.), or horn (Schol. Juv. *l. c.*). Some have thought that the *phimus* was a funnel used for dropping the dice into the *fritillus* or *pyrgus*; see Salmasius on *Hist. Aug.* ii. 755 ff., ed. 1671, or the quotations in Orellius on Hor. *l. c.*, in Mayor on Juv. *l. c.* There seems no intelligible reason why two instruments should have been used; *φιμὸς* is the regular word for a dice-box in classical Greek; and common-sense criticism cuts through such pedantries. The notion is rightly rejected by Orellius, Marquardt, Becker and Göll. In Agathias (*l. c.*) the *ἠθμὸς* is no doubt the funnel-shaped upper end of the *πύργος*, not a separate box. The *orca* of Persius (*Sat.* iii. 50) has been identified with the fritillus, but probably refers to a different game (Conington *ad loc.*). (Becker-Göll, *Gallus*, iii. 458; Marquardt, *Privatl.* 825; Guhl and Koner, ed. 5, pp. 353, 672.) [J. Y.] [W. W.]

FRONT'ALE. [AMPYX.]

FRUCTUS. [USUSFRUCTUS.]

FRUMENTA'RIAE LEGES. From the earliest times the supply of corn at Rome was considered one of the duties of the government. Not only was it expected that the government should take care that the corn-market (*annona*) was properly supplied, but likewise that in all seasons of scarcity they should purchase corn in the surrounding countries, and sell it to the people at a moderate price (Liv. ii. 9, 34; iv. 12, 52; x. 11, &c.; xxvi. 40;—Cic. *pro Dom.* 5). This price, which is spoken of as *annona vetus* (Liv. ii. 34), could not rise much, without exciting formidable discontent; and the administration was in all such cases considered to have neglected one of its most important duties. The superintendence of the corn-market belonged in ordinary times to the aediles; but when great scarcity prevailed, an extraordinary officer was appointed for the purpose, under the title of *Praefectus Annonae* (Liv. ii. 27, 5; iv. 12, 8). With the decay of agriculture in Italy, which followed the importation of corn from the provinces, and the decrease of the free population, the government had to pay still further attention to the supply of corn for the city. In addition to this, an indigent population gradually increased in Rome, which could not even purchase corn at the moderate price at which it was usually sold, and who demanded to be fed at the expense of the state. Even in early times it had been usual for the state on certain occasions, and for wealthy individuals who wished to obtain popularity and influence, to make occasional donations of corn to the people (*donatio*, *largitio*, *divisio*; subsequently called *frumentatio*). (Mommsen, *Rom. Hist.* ii. 372.) But such donations were only casual; and it was not till the year B.C. 123 that the first legal provision was made for supplying the poor at Rome with corn at a price much below its market value. In that year C. Sempronius Gracchus brought forward the first *Lex Frumentaria*, by which each citizen was entitled to receive every month a certain quantity of wheat (*triticum*) at the price of 6⅓ asses for the modius, which was equal to nearly 1 peck English.* (Liv. *Epit.* 60; Appian, *B. C.* i. 21; Plut. *C. Gracchus*, 5; Vell. Pat. ii. 6; Cic. *pro Sest.* 48, 103.) This was only a trifle more than half the market price, since in the time of Cicero 3 sesterces = 12 asses were considered a low sum for a modius of wheat (Boeckh, *Metrol. Untersch.* p. 420), and 4 sesterces was about the average price (Dureau de la Malle, *Écon. Pol.* i. 109). It must not be supposed that each person was allowed to receive as much as he pleased every month; the quantity must of course have been fixed, and was probably five modii monthly, as in later times. This quantity was only given to fathers of families; but it was not confined to the poor, as Plutarch (*l. c.*) would imply, for every citizen had a right to it, whether he were rich or poor (*ἑκάστῳ τῶν δημοτῶν*, Appian, *l. c.*; *viritim*, Cic. *Tusc. Disp.* iii. 20, 48); and even Piso, who had been consul, applied for his share at the distribution (Cic. *l. c.*). It appears, however, from the anecdote which Cicero relates about Piso, that each citizen had to apply in person, a regulation which would of itself deter most of the rich. The example that had been set by Gracchus was too tempting not to be followed, although the consequences of such a measure were equally prejudicial to the public finances and the public morality. It emptied the treasury, and at the same time taught the poor to become state-

---

* The older reading in Cic. *pro Sest.* 25, 55, was *semissibus et trientibus*, but the better MSS. here have *senis*, and the Schol. Bob. (p. 300 Or.) has in the lemma *senis*, and in the explanation *senos*. Hence recent editors rightly adopt this reading. Similarly the reading of the older editions of Livy (*Epit.* lx.), *semisse et triente*, is now corrected, according to the indications of the MSS., into *senis et triente*. (Cf. Mommsen, *Die Römischen Tribus*, p. 179, n. 4, and p. 182, n. 18.)

paupers instead of depending upon their own exertions for obtaining a living, and crowded the city with an idle population.

The demagogue Appuleius Saturninus went still further. In B.C. 100 he brought forward his Lex Appuleia, by which the state was to sell corn at $\frac{5}{6}$ths of an as for the modius. The city quaestor Q. Caepio pointed out that the treasury could not bear such an expense (cf. Mommsen, *Gesch. d. Röm. Münzwesen*, p. 560), and the most violent opposition was offered to the measure. It is doubtful whether it ever passed into a law; and it is at all events certain that it was never carried into execution (Auctor *ad Herenn.* i. 12, 21: comp. Cic. *de Leg.* ii. 6, 14). The Lex Livia, which was proposed by the tribune M. Livius Drusus in B.C. 91, was likewise never carried into effect, as it was annulled by the senate, together with all his other laws, as passed in opposition to the auspices. Of the provisions of this Lex Frumentaria we have no account (Liv. *Epit.* lxxi.). About the same time, either shortly before or shortly after the Lex Livia (Mommsen, *Tribus*, p. 181), the tribune M. Octavius, supported by the aristocracy, brought forward the Lex Octavia, which modified the law of Gracchus to some extent, so that the public treasury did not suffer so much. He probably either raised the price of the corn, or diminished the number of modii which each citizen was entitled to receive. (Cic. *Brut.* 62, 222; *de Off.* ii. 21, 172.) Sulla went still further, and by his Lex Cornelia, B.C. 82, did away altogether with these distributions of corn, so that in the language which Sallust puts into the mouth of Lepidus, *populus Romanus—ne servilia quidem alimenta reliqua habet.* (Sall. *Hist. Fragm.* i. 45, 11, Kritz.) But the senate soon found it inexpedient to deprive the people of their customary largesses, as the popular party began to increase in power; and it was accordingly at the desire of the senate that the consuls of B.C. 73 brought forward the Lex Terentia Cassia, which was probably only a renewal of the Lex Sempronia, with one or two additions respecting the manner in which the state was to obtain the corn. The law enacted that each Roman citizen should receive 5 modii a month at the price of 6⅓ asses for each modius. It appears from the various orations of Cicero, that by this law the provinces were obliged to furnish the greater part of the corn at a fixed price, which was paid by the Roman treasury, and that the governors of the provinces had to take care that the proper quantity of corn was supplied. (Cic. *Verr.* iii. 70, 163; v. 21, 52; *pro Sest.* 25, 55; Ascon. *in Pis.* 4, p. 9, ed. Orelli.) Occasionally extraordinary distributions of corn were made in virtue of decrees of the senate. (Cic. *Verr.* l. c.; Plut. *Cat. Min.* 26, *Caes.* 8.)

All the Leges Frumentariae that have been hitherto mentioned had *sold* corn to the people, although at a price much below what the state had paid for it; but as the great party-leaders towards the close of the republic were ready to purchase the support of the people at any sacrifice to the state, the distribution of corn became at length quite gratuitous. Caesar, in his consulship, B.C. 59, had threatened to make it so (Cic. *ad Att.* ii. 19; cf. *pro Dom.* 10, 25); and this threat was carried into execution in the following year, B.C. 58, by the Lex Clodia of the tribune Clodius. The corn was thus in future distributed without any payment; and the abolition of the payment cost the state a fifth part of its revenues. (Cic. *pro Sest.* 25, 55, with Schol. Bob. p. 301, ed. Orelli; Ascon. *in Pis.* 4, p. 9; Dio Cass. xxxviii. 13.) In B.C. 57, Pompey received by the Lex Cornelia Caecilia the superintendence of the corn-market (*cura annonae*) for a period of five years: but no alteration was made in the distribution of corn by virtue of this measure. The only extension which he gave to the distribution was by allowing those citizens whose names had not hitherto been entered in the lists of the censors, to share in the bounty of the state. (Dio Cass. xxxix. 24.) At this time the distribution of corn must have cost the state nearly £700,000 a year.

The dangerous consequences of such a system did not escape the penetration of Caesar; and accordingly, when he became master of the Roman world, he resolved to remedy the evils attending it, as far as he was able. He did not venture to abolish altogether these distributions of corn, but he did the next best thing in his power, which was reducing the number of the recipients. During the civil wars numbers of persons who had no claim to the Roman franchise had settled at Rome, in order to obtain a share in the distributions of corn. The first thing, therefore, that Caesar did was to have an accurate list made out of all the corn-receivers, and to exclude from this privilege every person who could not prove that he was a Roman citizen. By this measure the 320,000 persons who had previously received the corn were at once reduced to 150,000.* Having thus reduced the number of corn-receivers to 150,000, he enacted that this number should not be exceeded for the future, and that vacancies that occurred by death should be filled up every year by lot by the praetor urbanus. (Suet. *Caes.* 55; Dio Cass. xliii. 21.) It is further exceedingly probable that as a general rule the corn was not given even to these 150,000, but sold at a low price, as had been the case at an earlier period; and that it was only to the utterly destitute that the corn was supplied gratuitously: the latter class of persons were furnished with tickets, called *tesserae nummariae* or *frumentariae*. Thus we find it stated (Suet. *Octav.* 41) that Augustus, on one occasion, doubled the number of the *tesserae frumentariae*. If, therefore, the corn was as a general rule not given, but sold, we may conclude that every citizen was entitled to be enrolled in the 150,000 corn-receivers, independently of his fortune. The opposite opinion has been maintained by many modern writers; but the arguments which have been brought forward by Mommsen (*Die Römischen Tribus*, p. 187) and others, render the above supposition exceedingly probable.

The useful regulations of Caesar fell into neglect after his death, and the number of corn-receivers was soon increased beyond the limits of 150,000, which had been fixed by the dictator. This we learn from the Monumentum

---

* It must be borne in mind that this was not a census, as Plutarch (*Caes.* 55) and Appian (*B. C.* ii. 102) state, but simply an enumeration of the corn-receivers.

Ancyranum, in which Augustus (c. 15) enumerates the number of persons to whom he had given congiaria at different times; and there can be no doubt that the receivers of the congiaria and of the public corn were the same. Thus, in B.C. 44, and on the three following occasions, he distributed the congiaria to 250,000 persons; and in B.C. 5, the number of recipients had amounted to 320,000. At length, in B.C. 2, Augustus reduced the number of recipients to 200,000, and renewed many of Caesar's regulations. (Suet. *Octav.* 40; Dio Cass. lv. 10.) He had, indeed, thought of abolishing the system of corn-distributions altogether on account of their injurious influence upon Italian agriculture, but had not persevered in his intention from the conviction that the practice would again be introduced by his successors. (Suet. *Octav.* 42.) The chief regulations of Augustus seem to have been:—1. That every citizen should receive monthly a certain quantity of corn (probably 5 modii) on the payment of a certain small sum. As the number of recipients was fixed by Augustus at 200,000, there were consequently 12,000,000 modii distributed every year. Occasionally, in seasons of scarcity, or in order to confer a particular favour, Augustus made these distributions quite gratuitous: they then became congiaria. [CONGIARIUM.] 2. That those who were completely indigent should receive the corn gratuitously, as Julius Caesar had determined, and should be furnished for the purpose with *tesserae nummariae* or *frumentariae*, which entitled them to the corn without payment. (Suet. *Octav.* 41.)

The system which had been established by Augustus was followed by his successors; but as it was always one of the first maxims of the state policy of the Roman emperors to prevent any disturbance in the capital, they frequently lowered the price of the public corn, and frequently distributed it gratuitously as a *congiarium*. Hence the cry of the populace, *panem et circenses*. No emperor ventured to abolish the public distributions of corn: the most that he dared do, was to raise the price at which it was sold. When, therefore, we find it stated in Dio Cassius (lxii. 18), that Nero did away with the distributions of corn after the burning of Rome, we cannot understand this literally, but must suppose that he either raised the price of the commodity, or, what is more probable, obliged those poor to pay for it who had previously received it gratuitously. The care which the emperors took to keep Rome well supplied with corn is frequently referred to in their coins by the legends, *Annona*, *Ubertas*, *Abundantia*, *Liberalitas*, &c. We find in a coin of Nerva the legend *plebei urbanae frumento constituto*. (Eckhel, vol. vi. p. 406.)

In course of time, the sale of the corn by the state seems to have ceased altogether, and the distribution became altogether gratuitous. Every corn-receiver was therefore now provided with a *tessera*, and this tessera, when once granted to him, became his property. Hence it came to pass that he was not only allowed to keep the tessera for life, but even to dispose of it by sale, and bequeath it by will. (Dig. 5, 1, 52; 39, 1, 49; 39, 1, 87.) Every citizen living in Rome, even freedmen and criminals (Senec. *de Benef.* iv. 28, 2), was competent to hold a tessera with the exception of senators. Further, as the corn had been originally distributed to the people according to the thirty-five tribes into which they were divided, the corn-receivers in each tribe formed a kind of corporation, which came eventually to be looked upon as the tribe, when the tribes had lost all political significance. Hence the purchase of a tessera became equivalent to the purchase of a place in a tribe; and accordingly we find in the Digest the expressions *emere tribum* and *emere tesseram* used as synonymous (Dig. 32, 1, 35). Some fifty of these tesserae are still known to exist (Marquardt, ii. p. 124, note).

Another change was also introduced at a later period, which rendered the bounty still more acceptable to the people. Instead of distributing the corn every month, wheaten bread, called *annona civica*, was given to the people. It is uncertain at what time this change was introduced, but it seems to have been the custom before the reign of Aurelian (A.D. 270–275), as it is related of this emperor that on his return from his Eastern expedition he distributed among the people a larger quantity of bread, and of a different form from that which had been usually given. (Vopisc. *Aurel.* 35; Zosim. i. 61.) The bread was baked by the Pistores, who delivered it to the various depôts in the city, from which it was fetched away on certain days by the holders of the tesserae. (Orelli, *Inscript.* no. 3358.) These depôts had steps (*gradus*) leading to them, whence the bread was called *panis gradilis*; and there were the strictest regulations that the bread should only be distributed from these steps, and should never be obtained at the baker's. (Cod. Theod. xiv. 17, 3, 4.) When Constantine transferred the seat of government to Constantinople, the system of gratuitous distribution of bread was also transferred to that city; and in order to encourage the building of houses, all householders were entitled to a share of the imperial bounty. (Zosim. iii. 32; Socrat. *H. E.* ii. 13; Sozom. iii. 7; Cod. Theod. xiv. 17.) The distribution of bread at Rome was, however, still continued; and the care which the later emperors took that both Rome and Constantinople should be properly supplied with corn, may be seen by the regulations in the Cod. Theod. xiv. tit. 15, *De Canone Frumentario urbis Romae*, and tit. 16, *De Frumento Urbis Constantinopolitanae*. The superintendence of the corn-market, under the emperors, belonged to the *Praefectus Annonae*.

Many points connected with this subject have been necessarily omitted in consequence of our limits. The reader who wishes for further information is referred to: Contarini, *De Frum. Rom. Largitione*, in the Thesaurus of Graevius, vol. viii. p. 923; Dirksen, *Civilist. Abhandlungen*, vol. ii. p. 163 ff.; Mommsen, *Die Römischen Tribus*, Altona, 1844; Kuhn, *Ueber die Korneinfuhr in Rom im Alterthum*, in the *Zeitschr. für d. Alterthumsw.* 1845, pp. 993–1008, 1073–1084; Rein *ap.* Pauly, s. v. *Largitio*; Höckh, *Röm. Gesch.* vol. i. pt. ii., pp. 138 ff., 384 ff.; Walter, *Gesch. des Röm. [W. S.] [A. S. W.]

FRUMENTA'RII, sc. *negotiatores*, corn-dealers or corn-merchants (Cic. *de Off.* iii. 13, § 57; Liv. iv. 12). The latter passage shows their unpopularity in times of scarcity; they were liable to the same charges of "forestalling and regrating" as the Athenian σιτοπῶλαι, and, we may be reminded, as the corn-dealers of modern Europe, England included, until the present century [SITOS]. On the Frumentarii of the legions, see EXERCITUS, p. 793 *a*; on the commissariat in general, p. 812 *a*. A few further particulars may be given here. The frumentarii mentioned by Caesar, or rather Hirtius (*B. G.* viii. 35), are not, as sometimes stated, Roman legionary officers, but Gauls supplying the enemy; and it is uncertain when they were first introduced into the Roman armies. The earliest notice of their employment as spies occurs under Hadrian (Spart. *Hadr.* 11); not only in the provinces, but in Rome itself, they were constantly sending private reports to the emperor (Capitolin. *Macrin.* 12, *Commod.* 4, *Max. et Balb.* 10; Trebell. Poll. *Claud.* 17). This led naturally to false accusation and blackmailing (*cuncta foede diripiebant*, Aurel. Vict. *de Caes.* 39, § 44); and their office was at length abolished by Diocletian. (Cf. Marquardt, *Staatsverw.* ii.^{2} 492–3 = ii.^{1} 476–7; Henzen, in *Bull. dell' Inst.* 1884, pp. 21–29.) [W. S.] [W. W.]

FRUMENTA'TIO. [FRUMENTARIAE LEGES.]

FUCUS (φῦκος) was the general term to signify the paint which the Greek and Roman ladies employed in painting their cheeks, eyebrows, and other parts of their faces. The practice of painting the face was very general among the Greek ladies, and probably came into fashion in consequence of their sedentary mode of life, which robbed their complexions of their natural freshness, and induced them to have recourse to artificial means for restoring the red and white of nature. This at the least is the reason given by some of the ancient writers themselves. (Xen. *Oecon.* 10, § 10; Phintys, *ap.* Stob. *Flor.* lxxiv. 61.) The practice, however, was of great antiquity among the Greeks, and was probably first introduced among the Asiatic Ionians from the East, where the custom has prevailed from the earliest times. The resemblance between the Heb. *pūch*, "paint," and φῦκος, is probably not accidental; the connexion is accepted by Gesenius, *s. v.*, the original meaning of both words being sea-weed, from which an alkaline dye was prepared. Compare Keren-hap-puch = *Cornu stibii*, Job xlii. 14; and *Dict. of Bible*, art. "Paint."

In the Homeric poems both sexes use oil freely after washing [UNGUENTA], but there is no mention of paint or other cosmetics; the phrase ἐπιχρίσασα παρειάς (*Od.* xviii. 172) is explained by ἐπιχρίεσθαι ἀλοιφῇ in *v.* 179. The ladies at Athens, as might have been expected, did not always paint their faces when at home, but only had recourse to this adornment when they went abroad, or wished to appear beautiful or captivating. Of this we have a striking example in the speech of Lysias on the murder of Eratosthenes, in which it is related (§ 17) that the wife, on leaving her husband to visit her paramour, painted herself, which the husband observed on the following morning, remarking, ἔδοξε δέ μοι ἡ γυνὴ ἐψιμυθιῶσθαι. (Comp. Aristoph. *Lysistr.* 149, *Eccl.* 878, *Plut.* 1064; Plut. *Alcib.* 39.) In order to produce a fair complexion, white lead (ψιμύθιον, *cerussa*) was employed (Alexis, *fr.* 96, 17 M.; Xen. *Oecon.* 10, § 2; Aristoph. *Eccl.* 878, 929; Nicostr. ap. Stob. *Flor.* lxxiv. 62). In order to give a blooming tinge to the cheeks, "rouge" was prepared from vegetable reds: a plant named ἄγχουσα, pure Att. ἔγχουσα (Aristoph. *Lysistr.* 48; Xen. *l. c.*), now variously called anchusa, alkanet, ox-tongue or bugloss, the root of which yielded the dye; παιδέρως, a flower (apparently not identified) resembling the rosy hue on the cheeks of young children (Alexis, *fr.* 96, 18 M.; Alciphr. *Ep.* i. 33, iii. 11); the crushed fruit of the mulberry (συκάμινον, Eubul. *fr.* 97 M.; Philippid. *fr.* 19 M.; Phot. *Lex.* p. 547, 7); and φῦκος, used for paint in general, but properly a seaweed, moss or lichen (Aristoph. *fr.* 309 Dind. = 316 M.; and possibly Theocr. xv. 16, but cf. FULLO). Modern cosmetics are not always free from noxious drugs; and besides ψιμύθιον already mentioned, red lead (μιλτός, *minium*, Xen. *l. c.* § 5) and mineral alkali (νίτρον, Att. λίτρον. Aristoph., Theocr. *ll. cc.*) were employed. The usual word for applying paint is ἐντρίβεσθαι, "to rub in," whence the dyes themselves are called ἐντρίμματα (Plut. *Crass.* 24). The eyebrows and eyelids were stained black with στίμμι or στίμμις, *stibium*, a sulphuret of antimony, which is still employed by the Turkish ladies for the same purpose. (Pollux, v. 101.) The eyebrows were likewise stained with ἄσβολος, a preparation of soot. Thus Alexis says (*l. c.* 16),

τὰς ὄφρυς πυῤῥὰς ἔχει τις· ζωγραφοῦσιν ἀσβόλῳ.

(Comp. Juv. ii. 93 ff.) Ladies who used paint were occasionally betrayed by perspiration, tears, &c., of which a humorous picture is given by the comic poet Eubulus (*l. c.*), and by Xenophon (*l. c.* § 8; cf. Plaut. *Most.* i. 3, 119). It would appear from Xenophon (*l. c.* § 5) that even in his time men sometimes used paint, and in later times it may have been still more common: Demetrius Phalereus is expressly said to have done so. (Duris, *ap.* Athen. xii. p. 542 d.)

Among the Romans the art of painting the complexion was carried to a still greater extent than among the Greeks; and even Ovid did not disdain to write a poem on the subject, which he calls (*A. Am.* iii. 206) "parvus sed cura grande libellus opus;" though the genuineness of the fragment of the *Medicamina Faciei*, ascribed to this poet, is doubtful. The Roman ladies even went so far as to paint with blue the veins on the temple, as has been inferred from Propertius (ii. 18, 31 = iii. 9, 31 = iii. 11, 9, L. Müller), "si caeruleo quaedam sua tempora fuco tinxerit:" though this is susceptible of another explanation. The favourite rouge was from a kind of moss (*lichen rocella*, Linn.); another was *purpurissum*, a mixed composition (Plaut. *Most.* i. 3, 104; *Truc.* ii. 3, 35; Plin. *H. N.* xxxv. § 49.) For the more repulsive substances used as cosmetics, see Orellius on Hor. *Epod.* 12, 11; Clem. Al. *Paed.* iii. p. 255 P., κροκοδείλων ἀποπάτοις χρώμεναι καὶ σηπεδόνων ἀφροῖς ἐγχριόμεναι. The ridiculous use of patches (*splenia*), which were common among the English ladies in the reign of Queen Anne and the first Georges, was not unknown to the Roman ladies. (Mart. ii. 29, 9; viii. 33, 22; x. 22;—Plin. *Ep.* vi. 2.)

The more effeminate of the male sex at Rome also employed paint. Cicero speaks (*in Pison.* 11, § 25) of the *cerussatae buccae* of his enemy, the consul Piso; where, however, as *buccae* are more likely to be rouged than whitened, *purpurissatae* is a not improbable conjecture (Marquardt).

On a Greek vase (Tischbein, *Engravings*, ii. 58) we see the figure of a female engaged in putting the paint upon her face with a small brush. (Comp. Böttiger, *Sabina*, i. 24 ff., 51 ff.; Becker-Göll, *Charikles*, i. 261 ff.; *Gallus*, iii. 164 ff.; Hermann-Blümner, *Privatalterth.* p. 200 ff.; Marquardt, *Privatl.* 765.) [W. S.] [W. W.]

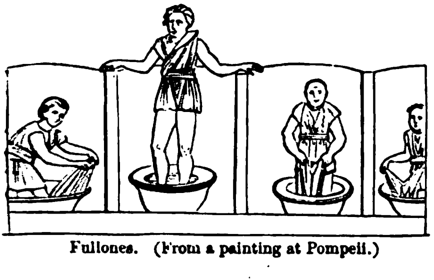
FUGITIVA'RIUS. [Servus.]

FUGITI'VUS. [Servus.]

FULCRUM. [Lectus.]

FULLO (*κναφεύς, γναφεύς*), a fuller, a washer or scourer of cloth and linen. The fullones not only received the cloth as it came from the loom in order to scour and smooth it, but also washed and cleansed garments which had been already worn. As the Romans generally wore woollen dresses, which were often of a light colour, they frequently needed, in the hot climate of Italy, a thorough purification. The way in which this was done has been described by Pliny and other ancient writers, but is most clearly explained by some paintings which have been found on the walls of a fullonica at Pompeii. Two of these paintings are given by Gell (*Pompeiana*, vol. ii. pll. 51, 52), and the whole of them in the *Museo Borbonico* (vol. iv. pll. 49, 50); from the latter of which works the following cuts have been taken. The clothes were first washed, which was done in tubs or vats (*lacus*, *lacunae*), or mortars (*pilae fullonicae*, Cat. *R. R.* 10, § 5; 14, § 2), where they were trodden upon and stamped by the feet of the fullones, whence Seneca (*Ep.* 15) speaks of *saltus fullonicus.* The various operations of the *κναφεῖs* are described by Hippocrates (*de Diaeta*, i. 14): *καὶ οἱ γναφέες τωὐτὸ διαπράσσονται· λακτίζουσι, κόπτουσι, ἕλκουσι λυμαινόμενοι, ἰσχυρότερα ποιέουσι, κείροντες τὰ ὑπερέχοντα καὶ παραπλέκοντες καλλίω ποιέουσι.* The foregoing woodcut represents four persons thus employed, of whom three are boys, probably under the superintendence of the man. Their dress is tucked up, leaving the legs bare; the boys seem to have done their work, and to be wringing the articles on which they had been employed.

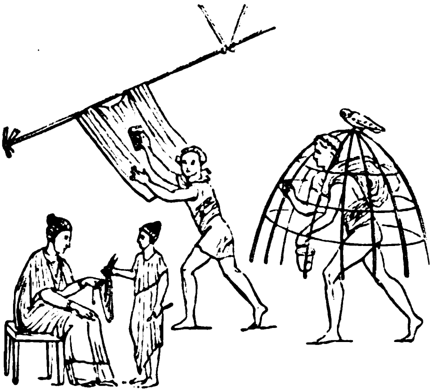


Fullones. (From a painting at Pompeii.)

The ancients were not acquainted with soap until the time of Pliny, who once mentions *sapo* as a Gallic invention (*H. N.* xxviii. § 191); they used in its stead different kinds of alkaline detergents (*ῥύμματα*, Plat. *Rep.* iv. 429 E). The following were the principal substances employed:—1. A species of lye or potash called *κονία*, Lat. *lixivium* (Plat. *Rep.* iv. 430 A; Aristoph. *Ach.* 18, *Ran.* 712; Pollux, vii. 39). 2. Nitrum, or native carbonate of soda (*νίτρον*, Att. *λίτρον*), of which Pliny (*H. N.* xxxi. § 106 ff.) gives a long account. The best *nitrum* came from Chalastra or Chalestra in Macedonia, whence *χαλεστραῖον*, scil. *λίτρον* (Plat. *l. c.*; Plin. *l. c.* §§ 107, 115); it was also found in Egypt in large quantities, but of inferior quality (Herod. ii. 86; Plin. *l. c.* §§ 109, 111). The *νίτρον καὶ φῦκος* of Theocritus (*Idyll.* xv. 16), sometimes explained as cosmetics, are more probably a mineral and a vegetable alkali used for washing wool; *κονία* was prepared from nitrum (Aristoph. *Ran.* 712). 3. Fuller's earth (*creta fullonia*, Plin. *H. N.* xvii. § 46), a sort of alkaline marl, of which there were many varieties; the most celebrated was from the island of Cimolos (*Κιμωλία γῆ*, Aristoph. *Ran.* 713; Theophr. *Char.* 10 and 18; Strab. x. p. 484; Ov. *Met.* vii. 463; and especially Plin. *H. N.* xxxv. §§ 195–198). The Sardinian was also good, but destructive to colours, and hence only suitable for white garments or for the first rough washing of those which were afterwards to be smartened-up (*poliri*, Plin. *l. c.*; *cogi*, *conciliari*, Varr. *L. L.* vi. 43) with Umbrian or Cimolian earth. We must distinguish between fuller's earth, mixed with the water in which the clothes were washed, and the ordinary *creta*, used like pipe-clay for whitening the togas of the *candidati* (Plaut. *Aulul.* iv. 9, 6). 4. The urine of men and animals, mentioned in this connexion by Mnesitheus, an Athenian physician of (probably) the fourth century B.C. (*ap.* Athen. xi. 484 a), but in more general use among the Romans. The fullones derived their supply of it from the public latrines (Mart. vi. 93, xii. 48; Dolium); and they are supposed by Casaubon and others to have paid the *urinae vectigal* raised by Vespasian (Suet. *Vesp.* 23).

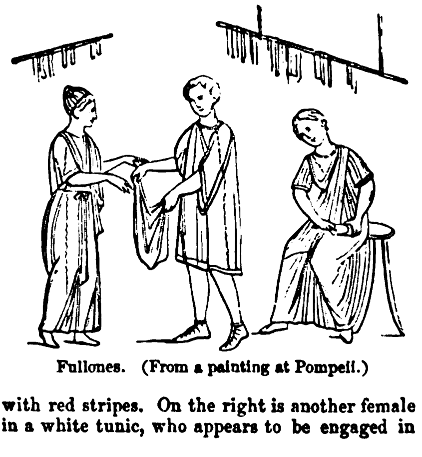
After the clothes had been washed, they were hung out to dry, and were allowed to be placed in the street before the doors of the fullonica. (Dig. 43, tit. 10, s. 1, § 4.) When dry, the wool was brushed and carded to raise the nap, sometimes with the skin of a hedgehog (Plin. *H. N.* viii. § 135), and sometimes with some plants of the teasel kind (*γναφικὴ ἄκανθα*, Dioscor. *Mat. Med.* iv. 160; *spina fullonia*, Plin. *H. N.* xvi. § 244, xxiv. § 111, xxvii. § 92). The carding instrument is called in Greek *κνάφος* (Schol. *ad* Aristoph. *Plut.* 166), in Latin *aena* (Plin. *ll. cc.*). The clothes were then hung on a vessel of basket-work (*viminea cavea*), under which sulphur was placed in order to whiten the cloth; for it was well known that many colours were destroyed by the volatile steam of sulphur. (Apul. *Met.* ix. p. 208; Plin. *H. N.* xxxv. § 175; Pollux, vii. 41.) The preceding account is well illustrated by the first of the two following woodcuts.

On the left we see a fullo brushing or carding a white tunic, suspended over a rope, with a card or brush, which bears considerable resemblance to a modern horse-brush. On the right, another man carries a frame of wicker-work, which was without doubt intended for the purpose described above; he has also a pot in his hand, perhaps intended for holding the sulphur. On his head he wears a kind of garland, which is supposed to be an olive garland, and above him an owl is represented sitting. It is thought that the olive garland and the owl indicate that the establishment was under the patronage of Minerva, the tutelary goddess of the loom. On the left, a well-dressed female is sitting, examining a piece of work which a younger girl brings to her. A *reticulum* [see p. 499 *a*] upon her head, a necklace, and bracelets denote a person of higher rank than one of the ordinary work-people of the establishment.



Fullones. (From a painting at Pompeii.)

In the following woodcut we see a young man in a green tunic giving a piece of cloth, which appears to be finished, to a woman, who wears a green under-tunic, and over it a yellow tunic with red stripes. On the right is another female in a white tunic, who appears to be engaged in cleaning one of the cards or brushes. Among these paintings there was a press, worked by two upright screws, in which the cloth was placed to be smoothened. A drawing of this press is given on p. 464 *a*.



Fullones. (From a painting at Pompeii.)

The establishment or workshop of the fullers was called *Fullonica* (Dig. 39, tit. 3, s. 3), *Fullonicum* (Dig. 7, tit. 1, s. 13, § 8), or *Fullonium* (Amm. Marc. xiv. 11, § 31); *fullonia officina* (Plin. *H. N.* xxxv. § 175). Of such establishments there were great numbers in Rome, for the Romans do not appear to have washed at home even their linen clothes (Martial, xiv. 51). The word πλύνειν denoted the washing of linen, and κναφεύειν or γναφεύειν the washing of woollen, clothes. (Athen. xi. p. 582 d; Pollux, vii. 39, 40, 41; Eustath. *ad Od.* xxiv. 148, p. 1956, 41.) To large farms a fullonica was sometimes attached, in which the work was performed by the slaves who belonged to the *familia rustica* (Varro, *R. R.* i. 16). Woollen garments which had been once washed were considered to be less valuable than they were previously (Petron. 30; Lamprid. *Heliog.* 26); hence Martial (x. 11) speaks of a toga *lota terque quaterque* as a poor present.

The trade of the fullers was considered so important that the censors C. Flaminius and L. Aemilius, B.C. 220, prescribed the mode in which the dresses were to be washed (Plin. *H. N.* xxxv. § 197). Like the other principal trades in Rome, the Fullones formed a *collegium* or *sodalicium* (Fabretti, *Insc.* p. 278; Orelli, 3291 = Mommsen, *Inscr. Regn. Neap.* 2208; Orelli, 4056, 4091) under the protection of Minerva, the patroness of handicrafts (Id. 4091, 7240). As regards legal liability, the fullo was answerable for the property while it was in his possession; and if he returned by mistake a different garment from the one he had received, he was subject to an action *ex locato;* to which action he was also liable if the garment was injured (Dig. 19, tit. 2, s. 13, § 6; s. 60, § 2; 12, tit. 7, s. 2).

(Schöttgen, *Antiquitates Triturae et Fulloniae*, Traj. ad Rhen. 1727; Beckmann, *Hist. of Inventions*, ii. 92 ff., ed. Bohn; Becker-Göll, *Charikles*, i. 316; *Gallus*, iii. 306 ff.; Hermann-Blümner, *Privatalterth.* 415; Marquardt, *Privatl.* 511, and especially Blümner, *Technol.* i. 157 ff.)

[W. S.] [W. W.]

FULLO'NICA. [Fullo.]

FUMA'RIUM. [Vinum.]

FUNA'LE, the neuter form, is probably to be distinguished from Funalis, and means a chandelier or other contrivance for holding a number of lights (Verg. *Aen.* i. 727; Hor. *Od.* iii. 26, 7; Ov. *Met.* xii. 247). This distinction has not always been drawn, and we give in full the evidence upon which it rests. Servius (on *Aen.* l. c. referring to Varro): "Nonnulli apud veteres candelabra dicta tradunt [funalia], quae in capitibus uncinos haberent, quibus affigebant vel candelae vel funes pice delibuti: quae interdum erant minora, ut gestari manu et praeferri magistratibus a cena remeantibus possent." In the last words there is clearly a reference to the story of Duilius (Cic. *de Sen.* 13, § 44; Val. Max. iii. 6, § 4; Sil. vi. 667). Donatus (on Ter. *Andr.* i. 1, 88): "[funus] quod a funalibus dictum est, id est, uncis vel cuneis candelabrorum;" the rest of the passage is corrupt.

Isidor. *Orig.* xx. 10, § 5: "Funalia candelabra apud veteres, quibus funiculi cera vel hujusmodi alimento luminis obliti figebantur. Idem itaque et stimuli praeacuti funalia dicebantur." The mention of *unci*, *uncini*, *cunei*, *stimuli* in these passages is strongly suggestive of the "coronae" often seen in foreign churches, for holding wax lights stuck on spikes. The smaller sort (Serv.) were portable, and carried a single taper. (Marquardt, *Privatl.* 690; Becker-Göll, *Gallus*, ii. 392 f.) [W. W.]

FUNA'LIS, a link or taper, used in the same manner as a torch [FAX], but made of papyrus and other fibrous plants, twisted like a rope, and smeared with pitch and wax. It was indeed, as Antipater describes it, "a light coated with wax" (*λαμπὰς κηροχίτων*, Brunck, *Anal.* ii. 112 = *Anth. Pal.* vi. 249). *Cereus* is both adjective and substantive, and either an epithet or a synonym of funalis: "funalem cereum," Val. Max. iii. 6, § 4; "delectabatur cereo (old edd. *crebro*) [funali] et tibicine," Cic. *de Sen.* 13, § 44, where *funali* is bracketed, perhaps unnecessarily, as a gloss on *cereo* (Reid); *cereus* subst., Plaut. *Curc.* i. 1, 9; Cic. *de Off.* iii. 20, § 80; Senec. *de Brev. Vit.* extr.; *Epist.* 122, § 10; Mart. v. 18, xiv. 42; Macrob *Sat.* i. 7, § 33. Funales are sculptured upon an ancient sepulchral marble preserved in the church of Santa Giustina at Padua (Pignor. *de Servis*, p. 259) and figured by Rich (*s. v.* "Funale"). At the Saturnalia they were presented by clients to their superiors, and were lighted in honour of Saturn (Antipater, *l. c.*; Macrob. *l. c.*), sometimes on other occasions (Cic. *de Off.* l. c.). Compare the preceding article. [J. Y.] [W. W.]

FUNA'LIS EQUUS. [CURRUS, p. 579 *b*.]

FUNA'MBULUS (*σχοινοβάτης*), a rope-dancer. The art of dancing on the tight rope was carried to as great perfection among the Romans as it is with us. (Terent. *Hecyr. Prol.* 4; or. *Epist.* ii. 1, 210; Juv. iii. 77; xiv. 265, '2, with Mayor's note.) If we may judge from a series of paintings discovered in the excavations (*Ant. d'Ercol.* tom. iii. pp. 160–165), from which the figures in the preceding woodcut are selected, the performers placed themselves in an endless variety of graceful and sportive attitudes, and represented the characters of bacchanals, satyrs, and other imaginary beings. Three of the persons here exhibited hold the thyrsus, which may have served for a balancing pole; two are performing on the double pipe, and one on the lyre: two others are pouring wine into vessels of different forms. They all have their heads enveloped in skins or caps, probably intended as a protection in case of falling. The Emperor M. Aurelius, in consequence of the fall of a boy, caused feather-beds (*culcitras*) to be laid under the rope to obviate the danger of such accidents. (Capitol. *M. Ant. Phil.* 12.) One of the most difficult exploits was running down the rope (Sueton. *Nero*, 11) at the conclusion of the performance. It was a strange attempt of Germanicus and of the Emperor Galba to exhibit elephants walking on the rope. (Plin. *H. N.* viii. § 5; Sueton. *Galb.* 6; Sen. *Epist.* 86.) [J. Y.] [W. W.]

Rope-dancers. (From a painting at Herculaneum.)

FUNDA (*σφενδόνη*), a sling. The light troops of the Greek and Roman armies included a certain proportion of slingers (*funditores*, *σφενδονῆται*). In the earliest times, however, the sling appears not to have been used by the Greeks. It is not mentioned in the Iliad; for in the only passage (*Il.* xiii. 600) in which the word *σφενδόνη* occurs, it is used in its original signification of a bandage. But in the times of the Persian wars slingers had come into use; for among the other troops which Gelon offered to send to the assistance of the Greeks against Xerxes, mention is made of 2000 slingers (Herod. vii. 158); and that the sling was then familiar to the Greeks is also evident from allusions in literature (Archil. *fr.* 3, Bergk; Aesch. *Agam.* 1010; Eurip. *Phoen.* 1142; Aristoph. *Av.* 1185). At the same time it must be stated that we rarely read of slingers in these wars; the use of the sling was a barbarian rather than a Greek accomplishment, and found in the highest perfection among Egyptians and Persians, as later among the Spaniards and Baleares. Among the Greeks the Acarnanians, a backward people, attained to the greatest expertness in the use of this weapon (Thuc. ii. 81); and at a later time the Achaeans, especially the inhabitants of Aegium, Patrae, and Dyme, were celebrated as expert slingers. The slings of these Achaeans were made of three thongs (*scutalia*) of leather, and not of one only, like those of other nations. (Liv. xxxviii. 29). To the same period, the days of the Achaean league, is ascribed the invention of the *κεστροσφενδόνη* (*cestrosphendone*, Liv. xlii. 65), described below.

In the early Roman army, slingers formed a part of the fifth or lowest Servian class (Dionys. iv. 17; Liv. i. 43; Fest. *Epit.* p. 369 M.: cf. EXERCITUS, p. 782 *a*; Marquardt, *Staatsverw.* ii. 317); but in the great days of the Punic and Macedonian wars they were no longer to be found in the legions, and the Balearic slingers of Hannibal were opposed by Greek, Syrian, and African auxiliaries (Marquardt, *ib.* 332–3). The people who enjoyed the greatest celebrity as slingers were the natives of the Balearic islands. Their skill in the use of this weapon is said to have arisen from the circumstance that, when they were children, their mothers obliged them to obtain their food by striking it with a sling. (Veget. *de Re Mil.* i. 16; Strab. iii. p. 168.) Most slings were made of leather, but the Balearic were manufactured out of a kind of rush (Strab. *l. c.*). The manner in which the sling was wielded may be seen in the annexed figure (Bartoli, *Col. Traj.* tav. 46) of a soldier with a supply of stones in the sinus of his pallium, and with his arm extended in order to whirl the sling about his head (Verg. *Aen.* ix. 587, 588; xi. 579). Besides stones, bullets, called *glandes* (**μολυβδίδες**), of a form between acorns and almonds, were cast in moulds to be thrown with slings (Lucret. vi. 176; Ovid, *Met.* ii. 727, vii. 777, xiv. 825, 826). They have been found on the plain of Marathon and in other parts of Greece, and are remarkable for the inscriptions and devices which they exhibit, such as thunderbolts, the names of persons, and the word ΔΕΞΑΙ, meaning "Take this." (Mommsen, in *Zeitschrift für die Alterthumswissenschaft*, 1846, p. 782; Guhl and Koner, ed. 5, p. 324.) The ridiculous notion that these bullets melted in the air was widely diffused in the ancient world, and not confined to poetry (Lucret. *l. c.*; Verg. *Aen.* ix. 588; Ov. *Met.* ii. 727, xiv. 826): even the father of science maintains it (Aristot. *de Caelo*, ii. 7: **οἷον καὶ ἐπὶ τῶν φερομένων βελῶν· ταῦτα γὰρ αὐτὰ ἐκπυροῦται οὕτως ὥστε τήκεσθαι τὰς μολυβδίδας**). It may have arisen, as Pauly points out (*s. v.* "Funditores"), from the flattening of the soft metal when it strikes a hard surface. Another missile was called **κέστρος**, a particular kind of bolt with an iron head six inches long, attached to a wooden shaft nine inches long, and the thickness of a man's finger; it was furnished with three short wooden wings, resembling the feathers of an arrow, and was discharged from a sling with two *scutalia*, called **κεστροσφενδόνη** (Liv. xlii. 65; Polyb. xxvii. *fr.* 9 *ap.* Suid. *s. v.* **κέστρος**: Livy here evidently translates Polybius).

Soldier with sling. (From the Column of Trajan.)

Besides slings, stones thrown with the hand alone were likewise used in ancient warfare: the Libyans carried no other weapons than three darts and a bag full of stones (Diod. Sic. iii. 49). The Athenian **ψιλοὶ** annoyed the Spartans in Sphacteria, **τοξεύμασι καὶ ἀκοντίοις καὶ λίθοις καὶ σφενδόναις** (Thucyd. iv. 32), where **λίθοι** seem to be hand-thrown stones; **πετροβόλοι** are mentioned, Xen. *Hell.* ii. 4, § 12. We find them also among the later Romans (Veget. i. 16; ii. 23).

From the resemblance to a sling, funda also means (1) a casting-net, **ἀμφίβληστρον** (Verg. *Georg.* i. 141); (2) a purse or money-bag, from the way it was slung (Macrob. *Sat.* ii. 4, § 31); (3) the bezel of a ring, *i.e.* the rim in which the gem is set, and which holds it as a sling does its stone (Rich): *praestantiores* [*iaspides*] *funda cluduntur ut sint patentes ab utraque parte nec praeter margines quicquam auro amplectente*, a good description of a setting *à jour* (Plin. *H. N.* xxxvii. § 116; cf. § 126). [J. Y.] [W. W.]

FUNDITO'RES. [FUNDA.]

FUNDUS. The primary signification of the word appears to be the bottom or foundation of a thing; and its elementary part (*fud-*) seems to be the same as that of **πυθμὴν** (Curtius, Gr. *Etym.* 263). Some would include **βυθὸς** in the comparison; but that word is connected with **βαθὺς** and **βένθος**, a different root (*ib.* 466). The conjectures of the Latin writers as to the etymology of *fundus* may be safely neglected. Fundus is often used as applied to land, the solid substratum of all man's labours, and means land belonging to a private owner (*locus privatus*). The land constituting a fundus might be situated either in the town or country (cf. Isid. *Orig.* xv. 13, 4: "fundus et urbanum aedificium et rusticum intelligendum est"); but fundus commonly means a country estate only. According to Florentinus (Dig. 50, 16, § 111), the term *fundus* comprised all land and constructions on it; but usage had restricted the name of *aedes* to city houses, *villae* to rural houses, *area* to a plot of land in a city not built upon, *ager* to a plot of ground in the country, and *fundus* to *ager cum aedificiis*. In its more proper sense, however, *ager* only includes the arable land of a fundus. This definition of *fundus* may be compared with the uses of that word by Horace and other writers. In one passage (*Ep.* i. 2, 47) Horace uses *domus* with fundus to denote the land and home of a family, *domus* being apparently there used as equivalent to *aedes*. The term *fundus* often occurred in Roman wills and conveyances, the testator frequently indicating the fundus to which his last dispositions referred, by some name such as Sempronianus, Sejanus; sometimes also with reference to a particular tract of country, as "fundus Trebatianus qui est in regione Atellana" (Brissonius, *de Fundis*, vii. 80). A fundus was sometimes devised *cum omni instrumento*, with its stock and implements of husbandry. Occasionally a question arose as to the extent of the word *instrumentum* between or among the parties who derived their claim from a testator [illegible] 33, 17, 12).

Fundus has a derived sense which flows easily enough from its primary meaning. "Fundus," says Festus, "dicitur, populus esse rei, quam alienat, hoc est auctor" [AUCTOR]. Compare Plautus, *Trin.* v. 1, 7 (*fundus potior*). In this sense *fundus esse* is to warrant or confirm a thing; and in Gellius (xix. 8) there is the expression "sententiae legisque fundus subscriptorque fieri." [G. L.] [E. A. W.]

FUNUS. It is proposed in the following article to give a brief account of Greek and Roman funerals, and of the different rites and ceremonies connected with death and burial.

The tombs, their contents, and the monuments placed over them will be explained in the article SEPULCRUM.

1. GREEK. The Greeks attached great importance to the burial of the dead. They believed that souls could not enter the Elysian fields till their bodies had been buried; and accordingly we find the shade of Elpenor in the Odyssey (xi. 66, &c.) earnestly imploring Ulysses to bury his body. Ulysses also, when in danger of shipwreck, deplores that he had not fallen before Troy, as he should in that case have obtained an honourable burial (*Od.* v. 311). So strong was this feeling among the Greeks, that it was considered a religious duty to throw earth upon a dead body which a person might happen to find unburied (Ael. *V. H.* v. 14); and among the Athenians, those children who were released from all other obligations to unworthy parents were nevertheless bound to bury them by one of Solon's laws. (Aesch. *c. Timarch.* § 14.) The neglect of burying one's relatives is frequently mentioned by the orators as a grave charge against the moral character of a man ([Dem.] *c. Aristog.* i. p. 787, § 54; Lys. *c. Phil.* § 21, *c. Alcib.* i. § 27), since the burial of the body by the relations of the dead was considered a religious duty by the universal law of the Greeks. Sophocles represents Antigone as disregarding all consequences in order to bury the dead body of her brother Polyneices, which Creon, the king of Thebes, had commanded to be left unburied. The common expressions for the funeral rites, *τὰ δίκαια*, *νόμιμα* or *νομιζόμενα*, *προσήκοντα*, show that the dead had, as it were, a legal and moral claim to burial.

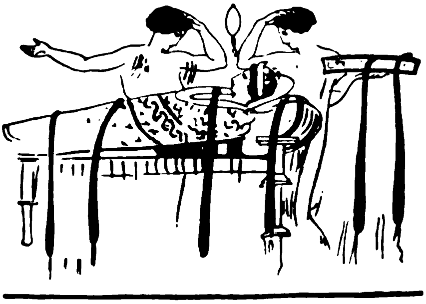
Lucian, in his treatise *de Luctu*, gives a connected account of the customs connected with Greek funerals; and since this account does not differ materially from the information derived from the notices scattered through earlier literature, we may infer that no great change took place in the funeral customs of Greece in historical times.

At the moment of death the eyes and mouth were closed by one of those present (Hom. *Od.* xxiv. 296; Plat. *Phaed.* 118). According to Lucian (*de Luctu*, 10, p. 926), the obol to serve as Charon's fare was at once placed in the mouth of the corpse. This coin was also called *δανάκη* (Hesych. *s. v.*). The custom is first mentioned by Aristophanes (*Ran.* 139), and does not appear to have been in use at a very early date. Confirmation of the practice is given by actual discoveries, for coins are frequently found in Greek tombs, and in some between the teeth of the skeleton. (Seyffert, *de Nummis in ore defunctorum repertis*, Dresden, 1712; Pottier et Reinach, *La Nécropole de Myrina*, p. 106. Other references in Hermann-Blümner, *Privatalterth.* p. 367.) The body was then washed (Plat. *Phaed.* 115 A; Eurip. *Phoen.* 1319, 1667), anointed with perfumes (Hom. *Il.* xviii. 350), and clothed in rich garments, generally white in colour (Paus. iv. 13, 3; Artemidor. ii. 3; Hom. *Il.* xviii. 353). These were buried or burnt with the body, but the number of them was limited by a law of Solon (Plut. *Sol.* 21). A wreath of flowers was placed upon the head (Eur. *Phoen.* 1632; Ar. *Eccl.* 538, *Lys.* 602). Golden wreaths, in imitation of laurel or other foliage, were sometimes used, and have been found in graves. (*La Nécropole de Myrina*, p. 105; Stephani, *Compte Rendu*, 1875, p. 17.)

The corpse, thus prepared, was laid out (*πρόθεσις*, *προτίθεσθαι*) on a bed (*κλίνη*), which appears to have been of the ordinary kind, with a pillow (*προσκεφάλαιον*) for supporting the head and back (Lys. *c. Eratosth.* § 18). By a law of Solon it was ordered that the *πρόθεσις* should take place inside the house (Lex *ap.* Dem. *c. Macart.* p. 1071, § 62). As among the Romans, the feet were turned towards the door (Hom. *Il.* xix. 212; Hesych. *s. v.* *διὲκ θυρῶν· τοὺς νεκροὺς οὕτω φασὶν ἑδράζεσθαι, ἔξω τοὺς πόδας ἔχοντας πρὸς τὰς αὐλείους θύρας*). Vases of a special kind (*λήκυθοι*), probably containing perfumes, were placed beside the body (Ar. *Eccl.* 1032, 538; Schol. Plat. *Hipp. Min.* 368 C, *λήκυθον δὲ ἀγγεῖόν τί φασιν οἱ Ἀττικοὶ ἐν ᾧ τοῖς νεκροῖς ἔφερον τὸ μύρον*). Lekythi were also buried with the coffin, and a large number of them have been found in graves in Attica. Their usual shape is shown in the woodcut under AMPULLA, Vol. I., p. 116 *a*. A few of them are in the ordinary black- and red-figured styles, but the greater number are of a special ware of great beauty, manufactured for funeral purposes. In this ware the ground is white, and scenes are painted upon it in bright colours, in a freer and less rigid style than in the vases with red or black figures. The scene most commonly represented is the bringing of offerings to the tomb; but in other cases we have a picture of some part of the funeral ceremonies, or of Charon preparing to ferry the shade across the Styx. The woodcuts accompanying this article which represent the *πρόθεσις* and the offerings at the tomb are taken from vase-paintings of this class. (See E. Pottier, *Étude sur les Lécythes blancs Attiques, à représentations funéraires*, Paris, 1883; Benndorf, *Griechische und Sicilische Vasenbilder*, Berlin, 1869, &c.; Jahn, *Beschreibung der Vasensammlung K. Ludwigs*, cxxxi. ff.) A honey-cake (*μελιτοῦττα*), intended as a sop for Cerberus, was also placed by the side of the corpse (Ar. *Lys.* 601, and Schol. *in loc.*, *Ἡ μελιτοῦττα ἐδίδοτο τοῖς νεκροῖς ὡς εἰς τὸν Κέρβερον*). Before the door a vessel of water was placed (*ἀρδάνιον*), in order that persons who had been in the house might purify themselves from the pollution of death by sprinkling water on their persons (Ar. *Eccl.* 1033; Poll. viii. 65; Eur. *Alc.* 98).

The near relations of the deceased assembled round the bed on which he was laid, and uttered loud lamentations. Representations of such scenes have been found. Although more violent signs of grief were forbidden by Solon (Plut. *Solon*, c. 21; Cic. *de Legg.* ii. 23, 59), we find that Lucian (*de Luctu*, 12) mentions as accompaniments of the *πρόθεσις*, not only groaning and wailing, but also beating of breasts, tearing of hair, laceration of cheeks, rending of garments, and sprinkling of ashes upon the head. It was perhaps with the object of limiting the time for these excesses of grief that Solon ordained that the burial should take place on the day after the *πρόθεσις*, before sunrise (Demosth. *c. Macart.* l. c.), and that Plato (*Legg.* xii. 959 A) laid down that the *πρόθεσις* should not last longer than was necessary to show that death had really taken place. Solon also commanded that no females under 60 years of age except the nearest relations (**ἐντὸς ἀνεψιαδῶν**) should be allowed to be present while the corpse was in the house (Demosth. *l. c.*). It appears that singers were hired to lead the mourning chant at the **πρόθεσις** (Hom. *Il.* xxiv. 719 ff.; Lucian, *de Luctu*, 20).

The accompanying woodcut, representing the **πρόθεσις**, is taken from Pottier, *op. cit.* pl. i.

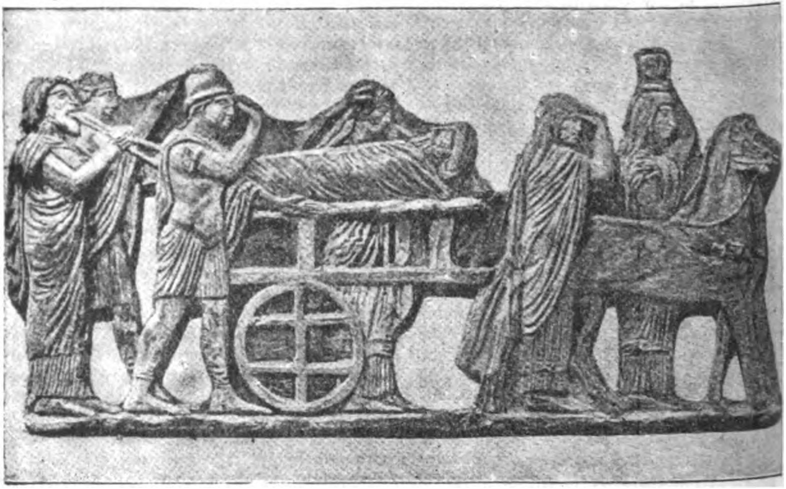


The πρόθεσις. (From a Greek vase.)

The corpse lies upon a couch, and is covered with a rich garment. The head alone is unveiled, and is surrounded with a fillet. Two female figures stand beside the couch, with gestures of grief. One of them carries a tray or basket, across which two taeniae are laid. Other taeniae are placed across the couch. In the background is a mirror, or fan, perhaps intended for the keeping away of flies (cf. Dio Cass. lxxiv. 4, 2; Cod. Just. vii. 6, 5). A list of other illustrations of the **πρόθεσις** is given by Pottier, p. 12, and Benndorf, *Gr. u. Sic. Vasenb.* p. 6. It is sufficient here to mention the Archemoros vase, a large amphora found at Ruv (Gerhard, *Archemoros u. die Hesperiden*, pl. i.; Baumeister, *Denkmäler*, p. 114). In this the corpse of the boy Archemoros is laid upon a couch. One female places a wreath upon his head, while another holds a parasol over him. The **παιδαγωγὸς** stands at the foot of the couch, and two of the attendants carry tables upon which are vases of various kinds with taeniae attached. The centre group is alone given in the cut annexed.

The **πρόθεσις**. (From a Greek vase.)

The funeral (**ἐκφορά, ἐκφέρειν**) took place legally, as has been already remarked, on the day following the **πρόθεσις**. It might, however, be put off several days to allow of the arrival of distant friends (Plut. *Timol.* 39). The early morning was the usual time (Plato, *Legg.* xii. 960 A; Cic. *de Legg.* ii. 26, 66; Heracl. *Alleg. Hom.* c. 68, **ἦν δὲ παλαιὸν ἔθος τὰ σώματα τῶν καμνόντων ἐπειδὰν ἀναπαύσηται τοῦ βίου, μήτε νύκτωρ ἐκκομίζειν μήθ' ὅταν ὑπὲρ γῆς τὸ μεσημβρινὸν ἐπιτείνηται θάλπος· ἀλλὰ πρὸς βαθὺν ὄρθρον ἀπύροις ἡλίου ἀκτῖσιν ἀνιόντος.**) The body was carried on the couch on which it had been lying. In the inscription from Keos (Köhler, *Mittheil. d. Arch. Inst. in Athen*, 1876, 139 ff., l. 10; Dittenberger, *Sylloge*, 468) we find the direction that the corpse should be covered and carried in silence (**τὸν θανόντα φέρειν κατακεκαλυμμένον σιωπῇ μέχρι τὸ σῆμα**), but there is nothing to show that this was general. The bier was borne either by hired bearers (**νεκροφόροι**, Poll. vii. 195), or, in case where it was decided to honour the dead, by specially selected citizens (*e.g.* in the cas Timoleon, Plut. *Timol.* 39). The men walked before the corpse, and the women behind (Dem. *l. c.*), and it appears that musicians were hired to play mournful tunes on the flute and sing dirges (**θρῆνοι**) at the **ἐκφορὰ** as well as at the **πρόθεσις** (Plat. *Legg.* vii. 800 E; Hesych. s. v.



The **ἐκφορά**. (From a stamped terracotta plaque found at the Piraeus.)

Καρίναι; Poll. iv. 75). Those who accompanied the funeral wore mourning garments of a black or dark colour (Hom. *Il.* xxiv. 93; Eurip. *Alc.* 427; Id. *Hel.* 1088; Xen. *Hell.* i. 7, 6; Plut. *Pericl.* 38). In an inscription from Gambreum in the neighbourhood of Pergamum (*C. I. G.* ii. 3562; Dittenberger, 470) it is enjoined that the women should wear dark clothes (ἐσθῆς φαιά), while men and boys have the alternative of wearing white. The head was also shaved or the hair cut as a sign of grief (Hom. *Od.* iv. 197; *Il.* xxiii. 46, 135, 141, 146; Bion. *Idyll.* i. 81; Aesch. *Cho.* 7; Plutarch, *Consol. ad Ux.* 4, and some of the passages cited above as to the colour of the dress).

Representations of the ἐκφορὰ are rare. The foregoing woodcut represents a stamped terracotta plaque found at the Piraeus (in the collection of M. Rayet, *Convoi Funèbre*, No. 75). The corpse lies upon a couch. The head is bare; the rest of the body covered. The couch is placed upon a car drawn by two horses (more usually mules). Mourners accompany it with gestures of grief. A female attendant carries upon her head a vessel, probably to serve for libations. Another attendant plays upon the double flute. (Other representations: Micali, *Monumenti per servire alla storia degli ant. popoli Italiani*, pl. 96, 1; *Monumenti d. Inst.* ix. 39, 40.)

It was the custom, at Athens at any rate, to hold public funerals for those who had fallen in war. Thucydides (ii. 34) describes with some minuteness the proceedings usual on such occasions. The πρόθεσις of the bones took place on a platform (or perhaps in a booth or tent) erected for the purpose in some public place (τὰ μὲν ὀστᾶ προτίθενται πρότριτα σκηνὴν ποιήσαντες). On the day of the funeral, coffins of cypress wood, one for each tribe, were carried upon waggons. Each coffin contained the bones of the members of the tribe to which it was assigned. An empty couch, adorned as for a funeral, was borne in the procession to represent those whose bodies had not been found. The procession was accompanied by any citizens and aliens who wished to attend, and by women who were related to those who had fallen. In Greece, funeral orations were only pronounced at public funerals of the kind described, not, as at Rome, over individuals, even though they were specially distinguished (Dion. Hal. v. 17). This custom seems to have arisen about the time of the Persian wars (Dion. Hal. *l. c.*), and the two best known occasions of its use are those on which Pericles was the selected orator. The first of these was after the Samian war (B.C. 439), and the second at the end of the first year of the Peloponnesian war (Thuc. ii. 34 ff.). In other respects the procedure at a public funeral does not seem to have differed from that in use at private burials.

In spite of the statement of Lucian (*de Luctu*, 21) that the Greeks burnt their dead and the Persians buried them, it is certain, both from literary evidence and also from the excavation of tombs, that burning and burying were both practised by the Greeks. The word θάπτειν is used of the burial of the ashes after cremation, but κατορύττειν refers only to the burial of an unburnt body. Hence when in the *Phaedo* (115 E) Socrates speaks of his body as ἢ καιόμενον ἢ κατορυττόμενον, it is clear that both methods were in use. We hear of burial also among the Spartans (Plut. *Lyc.* 27; Thucyd. i. 134). In Homer we have no mention of any burial without burning; but in graves at Mycenae skeletons were found which showed no traces of fire. Evidence both of burning and burying has been found in graves of a later date in many parts of the Greek world (for references, see Hermann-Blümner, *Privatalterth.* p. 375). In particular the cemetery of Myrina may be mentioned, where the careful investigations of MM. Reinach and Pottier showed that burning and burial had been in use simultaneously, and that burial had been far the commoner way (*La Nécropole de Myrina*, p. 73).

The pile of wood (πυρά) upon which the body was burnt, was sometimes erected over the grave in which the ashes were to be buried. This is proved by the fact that at Myrina the sides of some of the tombs showed traces of fire. We have a full description of cremation in the Homeric period in *Il.* xxiii. 161 ff., where Achilles celebrates the funeral of Patroclus. The pyre is made a hundred feet in length and breadth, and the bodies of sheep, oxen, horses, dogs, and twelve Trojan captives are placed upon it. Honey and perfumes are also poured upon it before it is lighted. From Lucian it appears that similar sacrifices were customary at a much later time (πόσοι γὰρ καὶ ἵππους καὶ παλλακίδας, οἱ δὲ καὶ οἰνοχόους ἐπικατέσφαξαν καὶ ἐσθῆτα καὶ τὸν ἄλλον κόσμον συγκατέφλεξαν ἢ συγκατώρυξαν, *de Luctu*, 14). When the pyre was burnt down, the remains of the fire were quenched with wine, and the relatives and friends collected the bones or ashes (*Il.* xxiv. 791. Illustrated on vases: Gerhard, *Ant. Bildw.* pl. 31 = Baumeister, *Denkm.* p. 307, fig. 322; and *Bull. Napol.* iii. 14 = Baumeister, *Denkm.* p. 308, fig. 323). The remains thus collected were placed in a receptacle sometimes of gold, but generally of a less precious material, and buried. A description of these receptacles, of the other articles placed in the tomb, and of the tomb itself will be found in the article SEPULCRUM.

When bodies were buried without previous cremation, they were generally placed in coffins, which were called by various names, as σοροί, πύελοι, ληνοί, λάρνακες, δροῖται, though some of these names were also applied to the urns in which the bones were collected. The lowering of a coffin into the grave is represented in a vase-painting. (*Mon. Inst.* viii. pl. 4, 1 b; Baumeister, *Denkm.* p. 306.) For further information upon this point, see Stackelberg (*Die Gräber der Hellenen*, pl. 7, 8) and art. SEPULCRUM.

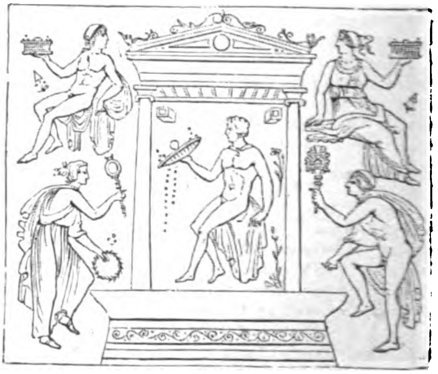
Immediately after the funeral was over, the relations partook of a feast which was called περίδειπνον or νεκρόδειπνον (Luc. *de Luctu*, 24; Cic. *de Legg.* ii. 25, 63; Hegesipp. *ap.* Athen. vii. 290 c). It was the custom that this feast should be given at the house of the nearest relative (Dem. *de Cor.* p. 321, § 355, δέον ποιεῖν αὐτοὺς τὸ περίδειπνον ὡς παρ' οἰκειοτάτῳ τῶν τετελευτηκότων). A number of bas-reliefs have been found representing a meal or banquet. These are known as "banquet-reliefs"; and it is often supposed that we have in them a picture of the περίδειπνον. This view, however, cannot be considered as established. (See P. Gardner, *A Sepulchral Relief from Tarentum*, J. H. S. v. p. 105; Welcker, *Alte Denkmäler*, ii. 242 ff.; Lebas, *Monum. d'Antiq. figur.* p. 89 ff.; Pervanoglu, *Das Familienmahl auf altgriech. Grabsteinen*, Leipzig, 1872; Milchhöfer in *Mitth.* iv. 161; P. Girard, *L'Asclépieion d'Athènes*, p. 102 ff. Other references to literature on the subject: Hermann-Blümner, *Privatalt.* 385.) The annexed cut, which represents a relief of this class, is taken from the *Marmora Oxon.* i. tab. 52, No. 135.

Funeral Banquet. (From a bas-relief.)

Other ceremonies were performed on the third, the ninth, and the thirtieth days after the funeral, and were called respectively **τρίτα**, **ἔνατα**, and **τριακὰς** or **τριακάδες**. (Pollux, viii. 146. See also Schömann on Isaeus, p. 217.) Aristoph. (*Lysistr.* 611, with Schol.) alludes to the **τρίτα**. The **ἔνατα** are sometimes mentioned in connexion with the **τρίτα** (Isaeus, *Menecl.* § 36), sometimes separately (Id. *Cir.* § 39). The rites on the thirtieth day (Pollux, *l. c.* and i. 66, iii. 102; Lexx. *s. v.* **τριακάς**) included a repetition of the funeral feast (Bekk. *Anecd.* p. 268, 19, **καθέδραι, ὑποδοχαὶ ἀνθρώπων· τῇ τριακοστῇ γὰρ ἡμέρᾳ τοῦ ἀποθανόντος οἱ προσήκοντες ἅπαντες καὶ ἀναγκαῖοι συνελθόντες κοινῇ ἐδείπνουν ἐπὶ τῷ ἀποθανόντι, καὶ τοῦτο καθέδρα ἐκαλεῖτο**). The **τριακοστεῖα** are forbidden in the inscription from Keos (*Mitth.* i. 139; Dittenberger, *Sylloge*, No. 468).

It was also the custom to bring offerings to the tomb on certain days in each year (**ἐναγίζειν καθ' ἕκαστον ἐνιαυτόν**, Isaeus, *Menecl.* § 46; Plat. *Legg.* iv. 717 E: **τὰ ἐνιαύσια** in the inscr. from Keos). Herodotus mentions that these annual sacrifices to the dead were called **γενέσια** (iv. 26), from which it is inferred that they were offered on the birthday of the deceased (compare Diog. Laert. x. 18). The name **νεκύσια** was also used in the same sense (Hesychius, **Γενέσια, ἑορτὴ πένθιμος Ἀθηναίοις· οἱ δὲ τὰ νεκύσια. καὶ ἐν τῇ ἡμέρᾳ, τῇ γῇ θύουσι**). The ceremonies which were performed at these stated intervals might be used at any other time, if for some reason it was necessary to appease the departed spirit. The word **ἐναγίζειν** was used for the act of offering, **ἐναγίσματα** for the things offered on these occasions. These consisted of libations (**χοαί**) of wine, oil, milk, honey mixed with water or milk (Aesch. *Pers.* 609 ff.; Eur. *Or.* 113 ff.), which were poured upon the ground (**γάποτοι**, Aesch. *Pers.* 621, *Choeph.* 97). Elaborate banquets were sometimes prepared, burnt in honour of the dead, and buried in a trench (Lucian. *Char.* 22). Wreaths were also placed upon the grave-stones, and they were anointed with perfumes (*ib.*).

The best idea of the rites performed at the grave is given by the numerous representations of them on Lekythi of the class already described. About 600 of these Lekythi have been found, and of these five-sixths bear representations of the bringing of offerings to the tomb. There is little variation in the scene. In the centre is the tomb, generally marked by a *stele*, sometimes by a mound. The *stele* is adorned with *taeniae*, by which sometimes Lekythi are suspended. Several persons on either side of the *stele* bring offerings of wreaths, *taeniae*, vases, birds, fruits, libations, and so forth. These persons are generally standing, but sometimes one is sitting on the pedestal on which the *stele* stands, or on a seat placed beside it. The following cut, which represents one of these scenes, is taken from Millin, *Peint. de Vases*, vol. ii. pl. 27. The tomb is in the form of a **ἡρῷον**, and upon it is a representation of the deceased. References to works in which vases of this class have been published are given by Pottier, *Étude sur les Lécythes blancs Attiques à représentations funéraires*, p. 51. Much importance was attached to the due performance of these annual rites (Isaeus, *de Men. Her.* § 46; *de Apoll. Her.* § 30; *de Philoct. Her.* § 51). In an inscription from Thera (*C. I. G.* 2448) we have a case in which a woman Epikteta left by will a sum of money for the purpose of celebrating annual sacrifices at her tomb.



Offerings presented at the tomb. (From a Greek vase.)

The period of mourning varied in length at different places. At Athens the **τριακὰς** seems to have ended it, on the thirtieth day after the funeral (Lysias, *de caede Erat.* § 14). At Sparta it only lasted eleven days (Plut. *Lycurg.* 27). In the inscription from Gambreum near Pergamum, it is ordered that men are to lay aside mourning in the fourth month, women in the fifth (*C. I. G.* 3562; Dittenberger, 470, l. 14, **ἐπιτελεῖν δὲ τὰ νόμιμα τοῖς ἀποιχομένοις ἔσχατον ἐν τρισὶ μησίν, τῷ δὲ τετάρτῳ λύειν τὰ πένθη τοὺς ἄνδρας, τὰς δὲ γυναῖκας τῷ πέμπτῳ**).

Certain special rites were used in particular cases. A spear was carried in front of the body of any person who had died a violent death, as a symbol of the revenge which was to follow the murderer ([Dem.] *in Euerg. et Mnes.*

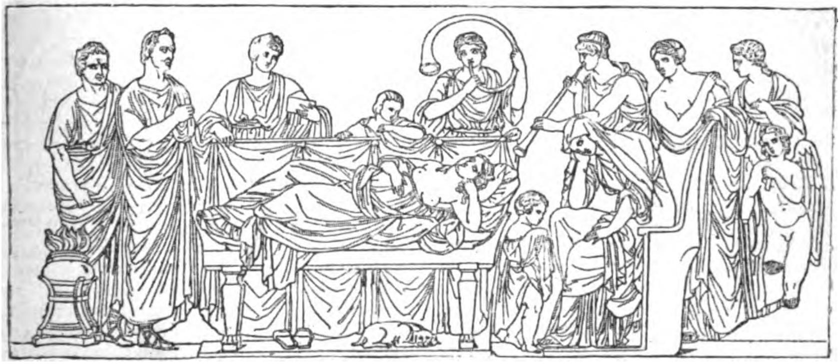
p. 1160, § 87; Eur. *Troad.* 1148; Lexx. *s. v.* **ἐπενεγκεῖν δόρυ**). In the case of those who had committed suicide, the hand which had done the deed was cut off and buried separately. (Aeschin. *in Ctes.* § 244, **καὶ ἐάν τις αὑτὸν διαχρήσηται τὴν χεῖρα τὴν τοῦτο πράξασαν χωρὶς τοῦ σώματος θάπτομεν**). Certain criminals, who were put to death by the state, were also deprived of burial, which was considered to be an additional punishment (Plut. *Them.* 22; Thuc. i. 134). The bodies of those persons who had been struck by lightning were regarded as sacred (**ἱεροὶ νεκροί**); they were not buried with others (Eur. *Suppl.* 935), but usually on the spot where they had been struck (Artemid. *Oneirocr.* ii. 9, p. 146). [BIDENTAL.]

It has been already mentioned that in public funerals of those killed in war, an empty couch was carried in the procession to represent those whose bodies had not been found. In other cases, where a person was supposed to be dead, though his body was not found, funeral rites were performed for him (Eur. *Hel.* 1241 ff.; Charit. iv. 1). If such a person was afterwards found to be alive, he was considered impure, and was not allowed to enter temples till certain rites had been performed. These rites consisted in an imitation of birth and the ceremonies connected with it. The **δευτερόποτμος** or **ὑστερόποτμος** (these were the names which were given to **ὁ δεύτερον διὰ γυναικείου κόλπου διαδύς**, Hesych. *s. v.*) was washed, wrapped in swaddling clothes, and fed with milk. Having been thus born again into life, he was freed from his impurity (Plut. *Q. R.* 5).

[Much of the literature bearing on special points has been referred to in the course of this article. For a general account of the subject, the most important books are J. Meursius, *de Funere;* Stackelberg, *Die Gräber der Hellenen;* Becker, *Charicles*, 4th English edition, pp. 383–402 = Becker-Göll, iii. 114–167; Wachsmuth, *Das alte Griechenland im neuen*, pp. 105–125—the ancient customs compared with the modern—and especially Hermann-Blümner, *Privatalterth.* p. 361 ff., where further references to literature on the subject will be found.]

2. ROMAN. Among the Romans also the burial of the dead was a most solemn duty. It was incumbent upon anyone who found an unburied body at least to cast earth upon it three times (Hor. *Od.* i. 28; Quintil. *Declam.* 5, 6; Petron. 114). If no funeral rites had been performed, the soul of the dead man could not be received among the shades, and wandered homeless upon the earth (Tertull. *de An.* 56, "Creditum est insepultos non ante ad inferos redigi, quam justa perceperint;" Plaut. *Mostell.* 499; Serv. *ad Aen.* iv. 386).

A near relation of the dying person caught the last breath in his mouth (Verg. *Aen.* iv. 684; Cic. *Verr.* v. 45, 118, and perhaps Ov. *Trist.* iv. 3, 41). As soon as he was dead his eyes were closed by one of those present (*claudere oculos*, Lucan. *Phars.* iii. 740; *premere*, Verg. *Aen.* ix. 187; *condere*, Ov. *Trist.* iii. 3, 44; *tegere*, *ib.* iv. 3, 44; *operire*, Plin. *N. H.* xi. § 150). This is shown on a relief on a sepulchral urn from Volterra (*Arch. Ztg.* 1846, plate 47; Baumeister's *Denkm.* p. 309). Then followed the *conclamatio*, variously explained as (1) a cry *in articulo mortis*, which seems probable from Propert. v. 7, 23; Ov. *Trist.* iii. 3, 43: (2) the recall of the dead by uttering his or her name three times, in order to ascertain the fact of death if there was no answer, a custom still in use at the death-bed of a pope: (3) as commonly understood, the lamentation for the dead when there was no longer any possibility of doubt; thus Marquardt (*Privatl.* 336). The mourners called repeatedly the name of the deceased, with loud cries, and exclamations such as *vale* (Lucan. *Phars.* ii. 22; Catull. ci.; Ov. *Met.* x. 62; *Fasti*, iv. 852). We may infer from a Roman relief (Baumeister, *Denkm.* p. 309, after Clarac, *Mus. de Sculpt.* pl. 154) which seems to represent the *conclamatio*, that horns were blown at the same time.



The *Conclamatio*, or lamentation for the dead. (From a Roman relief.)

The body was then washed with warm water (Verg. *Aen.* vi. 218) and anointed with perfumes and spices (Persius, iii. 103; Ov. *Fast.* iv. 853). That this took place after the *conclamatio* we learn from Amm. Marc. xxx. 10: "Post conclamata imperatoris suprema, corpusque curatum ad sepulturam." The corpse was then clothed either in the toga (Juv. iii. 173, and Mayor's note; Mart. ix. 57, 8; Paulus, *Dig.* xv. 3, 19; Artemidor. *Oneirocr.* ii. 3), or in the state robes of any office which had been held by the deceased (Liv. xxxiv. 7; Polyb. vi. 53). The garments in which the corpse was clothed were sometimes splendid and costly (*vestes purpureae*, Verg. *Aen.* vi. 221; *pretiosae*, Val. Max. v. 5, 4. For gold stuffs found in tombs, see Raoul-Rochette, *Troisième Mém. sur les Ant. chrét. des Catacombes*, *Mém. de l'Acad. d'Inscr.* xiii. 1838, pp. 641–650, 735, 736). Precious ornaments were often added. Rings, for example, are often found in graves, and we learn from Prop. iv. 7, 9 ("et solitam digito beryllon adederat ignis"), that they were sometimes burnt with the body. If the deceased had, when alive, received a crown as a reward for bravery or for success in the games of the circus, it was placed upon his head (Cic. *de Legg.* ii. 24, 60; Plin. *H. N.* xxi. 7; Serv. *ad Aen.* xi. 80). Gold wreaths have in several cases been found with skeletons (*Bull. dell' Inst.* 1835, 203–205; Raoul - Rochette, p. 653). Flowers were also used for the adornment of the couch on which the corpse was laid; and a censer (*acerra*) was placed beside it (Fest. *Epit.* p. 18). The annexed cut from a Roman relief in the Lateran Museum (Baumeister, p. 239, after *Mon. Inst.* v. tav. 6) represents the *lectus funebris*, on which the corpse of a female lies dressed. Two female mourners (*praeficae*) stand behind, and by their side a man in the act of putting a garland on the head of the corpse. On each side of the *lectus funebris* is a torch. On the left side is a female blowing the flute, and above another with folded hands; on the right side sit three females, wearing the pilleus (probably manumitted slaves): below is the family of the deceased. Among the Romans, as among the Greeks, it was customary to place a small coin in the mouth of the deceased, for the purpose of paying Charon's passage-money. This is alluded to by Juvenal (iii. 267) and Propertius (iv. 11, 7), but not by earlier writers. Coins, however, have been found in graves of an earlier date than the Second Punic War (*C. I. L.* i. p. 27); and in graves at Praeneste, dating from the third century B.C., coins were actually found in the mouths of the skeletons (*Annali*, 1835, p. 76; *C. I. L.* i. p. 28). In the imperial times the practice was common and widely extended.

The Lectus Funebris. (From a Roman relief.)

The preparations necessary for the due laying out of the body were performed by the *Pollinctores* (Plaut. *Asin.* v. 2, 60; *Poen. Prol.* 63). Two derivations of this word are given by the ancients, both equally improbable, but giving an indication of the functions of the *pollinctor*: "Dicti autem pollinctores quasi pollutorum unctores" (Fulgentius, *de Serm. Ant.* 3); "a polline, quo mortuis os oblinebant ne livor appareret extincti" (Serv. *ad Aen.* ix. 483). It is probable also that the *pollinctor* took the mould of the dead man's face, from which the wax *imago* was made, to be kept in the *atrium* of the house by his descendants, and used in funeral processions in a way shortly to be described. The *pollinctor* was furnished by the *Libitinarius* or undertaker, who entered into a contract for conducting the whole funeral. The latter got his name from the fact that he exercised his business at the temple or grove of Libitina, the goddess of corpses and funerals: *ἐπίσκοπον τῶν περὶ τοὺς θνήσκοντας ὁσίων θεὸν οὖσαν* (Plut. *Num.* 12, § 1; *Quaest. Rom.* 23; Liv. xl. 19, xli. 21; Mayor's note on Juv. xii. 121). Deaths were also registered at this temple (Suet. *Ner.* 39; Dion. Halic. iv. 15); and the offering called *lucar Libitinae* was made [LUCAR]. Undertakers are said *exercere Libitinam* (Val. Max. v. 2, 10), and the expressions *vitare Libitinam*, *evadere Libitinam* are used in the sense of escaping death (Hor. *Carm.* iii. 30, 6: cf. *Sat.* ii. 6, 19; Juv. xii. 121).

When the body had been thus prepared and adorned, it was laid upon a couch of state, generally in the *atrium* of the house, with the feet towards the door (Plin. *H. N.* vii. § 146: Pers. iii. 105). Outside the door of the house were placed branches of cypress or pine (Plin. *H. N.* xvi. §§ 40 and 139; Serv. *ad Aen.* iii. 64), for the purpose of warning those who might be polluted by entering a house in which was a corpse (Servius, *l. c.*). The cypress was apparently only used by those of good position ("et non plebeios luctus testata cupressus," Lucan, iii. 442). We are told by Servius (*ad Aen.* v. 64) that the corpse lay in state for seven days before burial. This can only have been the case in exceptional circumstances, when some form of embalming was used.

Funerals were conducted by the family of the deceased (*funus privatum*) except in cases where a public funeral (*funus publicum*) was voted, either by the senate (Cic. *Phil.* ix. 7) or in provincial towns by the *decuriones*, as a mark of honour or respect to the deceased. (The formula "Huic decuriones funus publicum . . . locum sepulturae decreverunt" occurs in inscriptions: Mommsen, *I. N.* 5250; *C. I. L.* iii. 3055, 3128, 3137: see Wilmanns, 296 ff., and variations of the formulae given there.) We find this honour paid in the case of foreign kings who died in Italy, as Syphax and Perseus (Val. Max. v. 1, 1); and men who had fallen in the service of their country, as Hirtius and Pansa (Val. Max. v. 2, 10). In imperial times it became commoner. Sometimes, though a *funus publicum* was not voted, a subscription was raised to meet the funeral expenses, as in the cases of Menenius Agrippa (Liv. ii. 33, 12), Valerius Publicola (Liv. iii. 18, 16), and Q. Fabius Maximus (Val. Max. v. 2, 3). A particular kind of funeral was appropriate to each grade of the magistracy; the highest being the *censorium funus* (Tac. *Ann.* iv. 15, vi. 27, xiii. 2; *Hist.* iv. 47).

A public invitation was given to all important funerals by a herald (*praeco*). Hence the phrases *funus indicere, funus indictivum* (Suet. *Jul.* 84; Cic. *de Legg.* ii. 24, 61; Varro, *L. L.* v. 160, vii. 42; Festus, p. 334 b, 27, and *Epit.* p. 106, *s. v.*). The formula of invitation has been preserved: "Ollus Quiris leto datus. Exsequias, quibus est commodum, ire jam tempus est. Ollus ex aedibus effertur." (Varro, *ll. cc.*; Festus, p. 254 d, 34: cf. Ov. *Am.* ii. 6, 2; Sil. Ital. xv. 395; Ter. *Phorm.* v. 9, 37.) *Translaticium funus* is used for an unceremonious burial (Suet. *Ner.* 33).

In ancient times all funerals took place by night (Serv. *ad Aen.* xi. 143, "apud Romanos moris fuit ut noctu efferrentur ad funalia"); in later times only those of children (*acerba funera*; Serv. *l. c.* "moris Romani erat ut impuberes noctu efferrentur ad faces;" Sen. *de brev. Vit.* 20, 5; *de Tranq. Animi*, ii. 7), and poor people whose means did not admit of sufficient display for the day-time (Fest. *Epit.* p. 368; Mart. viii. 75). The Emperor Julian issued an edict ordering that all funerals should take place at night, in order that the ordinary business of the day and the worship of the gods might not be interrupted. That funerals in the day-time were a serious obstruction we learn from Hor. *Ep.* i. 6, 42. The torches with which funerals were always accompanied were probably a relic of burial by night, though no doubt they also served for lighting the pyre. (Verg. *Aen.* xi. 142, vii. 337; Tac. *Ann.* iii. 4, at the funeral of Germanicus, "conlucentes per Campum Martis faces;" Pers. iii. 102; Mart. viii. 43; Prop. v. 11, 46, "Viximus insignes inter utramque facem.")

An opportunity for the display of splendour was given by the funeral procession, and was so largely used by families of wealth and position, that we find sumptuary laws to regulate such expenses among the Tables of the Decemviri (Cic. *de Legg.* ii. 23, 59) and the enactments of Sulla (Plut. *Sull.* 35). The order of the funeral procession was regulated by the *designator* or *dissignator*, whose attendants were dressed in black. Their being called "lictors" by Horace appears to be only a joke (*Ep.* i. 7, 5, where Acron says, "Designatores dicuntur qui ad Lucum Libitinae funeri praestanti conducuntur ut defuncti cum honore efferantur"). The order in which the various parts of the procession came is uncertain, but it is generally supposed that at the head of it were the Musicians (*siticines*, Ateius Capito *ap.* Gell. xx. 2), who made use of *tubae* (Gell. *l. c.*; Ovid. *Am.* ii. 6, 6), *tibiae* (Stat. *Theb.* vi. 121; Suet. *Jul.* 84; Ov. *Fast.* vi. 653), and *cornua* (Hor. *Sat.* i. 6, 44). The number of *tibicines* was by the Twelve Tables limited to ten (Cic. *de Legg.* ii. 23, 59). Then followed (at any rate in earlier times) the mourning women, called *Praeficae* (Non. p. 66: "Praeficae dicebantur apud veteres quae adhiberi solent funeri mercede conductae ut et flerent et fortia facta laudarent," Hor. *A. P.* 431; Varr. *L. L.* vii. 70), who sang the *naenia* or *lessus*, a mournful song in praise of the dead man (Cic. *de Legg.* ii. 24, 62; Varr. *de Vita P. R.* lib. iv.). These *Praeficae* are probably represented (before the funeral procession, while the body is still lying in state) in an Etruscan relief (Abeken, *Mittelitalien*, pl. viii.), which is reproduced in the woodcut below.

Then followed in some cases dancers and mimes (Dion. Hal. vii. 72, *εἶδον δὲ καὶ ἐν ἀνδρῶν ἐπισήμων ταφαῖς ἅμα ταῖς ἄλλαις πομπαῖς προηγουμένους τῆς κλίνης τοὺς σατυριστὰς χοροὺς κινουμένους τὴν σικίννην ὄρχησιν, μάλιστα δ' ἐν τοῖς τῶν εὐδαιμόνων κήδεσιν*: *artifices scenici*, Suet. *Jul.* 84), who were allowed, as in a triumph, free licence of jesting. We learn from Suetonius (*Vesp.* 19) that it was the custom for the *archimimus* to wear a mask in the likeness of the deceased, to imitate his speech and manners, and even to make jests at his expense.

The Praeficae. (From an Etruscan relief.)

The most striking part of the procession was probably formed by the *imagines*. We are told by Polybius (vi. 53) that the *imagines*, or wax masks representing distinguished ancestors of the deceased, were brought out from their resting-place in the *atrium*, and each was worn by a man chosen to resemble as nearly as possible the person whom he was supposed to represent, and clothed in the dress of the office which the prototype of the mask had held. Each rode upon a chariot, and was accompanied with due pomp of lictors and other insignia of his office. Thus all the distinguished ancestors of the dead man were present in effigy at his funeral ("semper defuncto aliquo totus aderat familiae ejus qui unquam fuerat populus," Plin. *H. N.* xxxv. § 6). If he was of good birth, many families to which he was related were represented by their *imagines* (Tac. *Ann.* iii. 76; iv. 9), and the actual number was sometimes very great. At the funeral of Marcellus there are said to have been 600 (Serv. *ad Aen.* vi. 802).

Sometimes as a special honour spoils, crowns, and other records of victories and triumphs were carried before the bier. This was done in the case of Augustus (Tac. *Ann.* i. 8; Dio Cass. lvi. 34) and Coriolanus (Dion. Hal. viii. 59). The procession was also swelled by the slaves who were liberated by the will of the deceased, all with shorn heads, wearing the *pilleus* (Liv. xxxviii. 55; Appian, *Mithr.* 2; Cod. Just. 7, 6, 5: "Sed et qui domini funus pileati antecedunt vel in ipso lectulo stantes cadaver ventilare videntur, si hoc ex voluntate fiat vel testatoris vel heredis, fiant ilico cives Romani"). The bier itself was sometimes carried by these liberated slaves (Pers. iii. 106).

The body was placed uncovered on a bier or couch (*feretrum, torus*), which in great funerals was elaborately decorated (Suet. *Jul.* 84). In some cases, probably when decay had begun to disfigure the features, the body was placed in a coffin (*capulus*), and a waxen representation (*effigies*) was exposed to view instead (Tac. *Ann.*

iii. 5; Sil. Ital. x. 568; Appian, *B. C.* ii. 147; Dio Cass. lvi. 34, lxxiv. 4, 2; Herodian, iv. 2, 2). The bier was carried, as mentioned above, by liberated slaves, by near relations (Velleius, i. 11; Plin. *H. N.* vii. § 146; Cic. *Tusc.* i. 35, 85; Val. Max. vii. 1, 1; Hor. *Sat.* ii. 5, 86), or, in the case of emperors, by magistrates and senators (Suet. *Jul.* 84, *Aug.* 100; Tac. *Ann.* i. 8).

In the burial of the poor and of slaves of course all this pomp was absent. Hired bearers (*vespillones*), six (Mart. vi. 77, 10) or four (*ib.* viii. 75, 9) in number, carried the body in a simple wooden coffin or bier, which was not buried with the body (*sandapila*, Mart. ii. 81, ix. 2, 12; *popularis sandapila*, Suet. *Dom.* 17; *orciniana sponda*, Mart. x. 5, 9; *vilis arca*, Hor. *Sat.* i. 8, 9).

The relations of the deceased followed behind the bier, dressed in mourning. The sons of the deceased had their heads veiled, while the daughters went uncovered and with dishevelled hair (Plut. *Quaest. Rom.* 11). Mourning was shown by very much the same signs as in modern times, viz. by the absence of adornment and the wearing of black garments (Juv. x. 245; Prop. v. 7, 28; Tac. *Ann.* iii. 2; *pullus*, Juv. iii. 213). Under the Emperors white seems to have been substituted for black as the mourning colour for women (Plut. *Quaest. Rom.* 26; Herodian, iv. 2, 3; Stat. *Silv.* iii. 3, 3). The women were also in the habit of crying aloud, tearing their hair and lacerating their cheeks in the funeral procession itself (Prop. iii. 13, 27; Serv. *ad Aen.* iii. 67, "Varro dicit mulieres in exsequiis et luctu ideo solitas ora lacerare, ut sanguine ostenso inferis satisfaciant").

In this order the funeral train proceeded to the forum. There it halted before the rostra, the wearers of the *imagines* took their seats upon curule chairs, and the *laudatio funebris* was pronounced, generally by a close relation of the deceased (Polyb. vi. 53; Dion. Hal. v. 17, xi. 39; Plut. *Lucull.* 43; Hor. *Sat.* i. 6, 43); though in the case of a *funus publicum* this function might be assigned by a *senatusconsultum* to one of the magistrates (Quintil. *Instit.* iii. 7, 2). Dionysius (*l. c.*) expressly tells us that the *laudatio* was entirely different from the *ἔπαινος*, which in Greece was pronounced over the grave of soldiers who had been killed in war; for the *laudatio* was used in the case of all distinguished men, whether soldiers or statesmen, and without regard to the way in which they had died. The custom at Rome was very ancient. The earliest instance recorded is the panegyric delivered by Publicola over his colleague Brutus (B.C. 509); from that time onwards it is frequently mentioned both in republican and imperial times, and there are traces of it even after the introduction of Christianity. These funeral orations were preserved (Cic. *Brut.* 16, 61) and sometimes published (Plut. *Fab.* 24; Plin. *H. N.* vii. § 139; Suet. *Jul.* 6), but Cicero and Livy both point out that they were untrustworthy as records of fact (Cic. *Brut.* 16, 61, "his laudationibus historia rerum nostrarum est facta mendosior;" Liv. viii. 40, 4, "Vitiatam memoriam funebribus laudibus reor").

The honour of the *laudatio* seems to have been given by special decree or permission in each case, and not by any defined qualification (Dion. Hal. ix. 54; Tac. *Ann.* iii. 76). Women were not excluded from it; though there was some uncertainty, even among the ancients, as to the date at which the usage was first extended to them (Plut. *Camill.* 8; Liv. v. 50, 5; Cic. *de Or.* ii. 11, 44).

From the forum the procession moved on to the place of burning or burial, which, according to a law of the Twelve Tables, was obliged to be outside the city, though special exceptions were sometimes made (Cic. *de Legg.* ii. 23, 58). [SEPULCRUM.] Both burning and burial were in use among the Romans. Cicero (*de Legg.* ii. 22, 56) and Pliny (*H. N.* vii. § 187) both hold the view that burial was the more ancient custom. Pliny further says that burning was introduced because it was found that the bodies of those killed in distant countries and buried there were dug up and scattered by the enemy. We may conjecture, however, that the change was partly brought about by motives of health and convenience. In certain families the practice of burial was kept up, after burning had become general. Sulla was the first of the Cornelii to be burnt. The reason, according to Cicero and Pliny, of the departure from the custom of his family was, that he feared lest his own bones should receive the same treatment as he had given to those of Marius. In later times burning became far more common than burial, though the latter was always used in the case of children who died before they had cut their teeth ("Hominem priusquam genito dente cremari mos gentium non est," Plin. *H. N.* vii. 72; Juv. xv. 140), and in the case of those who had been struck by lightning. [BIDENTAL.] It seems also that persons of the poorest classes were always buried. After the introduction of Christianity, and probably through its influence, burial again came into use instead of burning. *Sarcophagi*, which are rare in the first century at Rome, become common in the third and fourth, and Macrobius (at the end of the fourth cent.) says that burning was no longer in use in his time ("licet urendi corpora defunctorum usus nostro saeculo nullus sit").

The view that burial was older than cremation is confirmed by some Roman customs. According to Pontifical law, the essential part of the funeral ceremony was the casting of earth upon the face of the corpse (Cic. *de Legg.* ii. 22, 57, "priusquam in os injecta gleba est, locus ille ubi crematum est corpus nihil habet religionis"). Again, when a body was to be burnt, it was the custom to cut off some portion of it, called os *resectum*, which was subsequently buried (Fest. *Epit.* p. 148, "Membrum abscidi mortuo dicebatur, quum digitus ejus decidebatur, ad quod servatum justa fierent, reliquo corpore combusto;" Cic. *de Legg.* ii. 22, 57; Varr. *L. L.* v. 23; Plut. *Q. R.* 24, 60, 79; Reinach and Pottier, *La Nécropole de Myrina*, p. 75). By this means the newer and more convenient method was adopted, while the ancient regulation which prescribed burial was still carried out.

The remaining rites varied, according as the body was to be buried or burnt. In the case of burial the body was placed in the grave either on the bier on which it had been carried, or in a sarcophagus. Numerous objects were also placed in the grave. (For an account of them and of the different kinds of graves, see SEPULCRUM.) The ceremonies which followed had the double object of making the grave a *locus religiosus*, and of purifying the family and house which had been defiled by the presence of a corpse. Earth was thrown upon the face of the dead (Cic. *de Legg.* ii. 22, 57), a pig was sacrificed (*ib.*), and an offering was made to the Lares (*ib.* 22, 55). The day on which these sacrifices took place was called *feriae denicales* (Fest. *Epit.* p. 70). A funeral feast called *silicernium* was also held, apparently on the day of the funeral, and by the grave (Varr. *ap.* Non. p. 48, 8). The period of mourning lasted nine days (*novendiale*), though it is uncertain whether this period was reckoned from the day of death or the day of burial (Serv. *ad Aen.* v. 64; Porphyr. *ad* Hor. *Epod.* 17, 48; Apuleius, *Met.* ix. 30, 31). At the end of this period a *sacrificium novendiale* was offered to the dead (Porphyr. *l. c.*), and a *cena novendialis* was held (Tac. *Ann.* vi. 5).

The burning of a body sometimes took place at the spot where the ashes were to be interred. In this case the funeral pile (*rogus, pyra*) was erected over the trench which was subsequently to be the grave (*bustum*). The body, however, was often burnt at a place near the monument, specially destined for this purpose, *ustrinum, ustrina* (Fest. *Epit.* p. 32). The pyre was built of wood, in the form of an altar (Verg. *Aen.* vi. 177, and Servius *in loc.*). A law of the Twelve Tables ordered that it should not be smoothed with an axe ("rogum ascia ne polito," Cic. *de Legg.* ii. 23, 59). They were sometimes painted (Plin. *H. N.* xxxv. § 49), the sides might be covered with dark leaves (Verg. *Aen.* vi. 216), and cypress-trees were placed in front (Verg. *l. c.*; Ov. *Trist.* iii. 13, 21; Sil. Ital. x. 535). On the top of the pile the corpse was placed, with the couch on which it had been carried (Tibull. i. 1, 61). Many things were placed on the pyre by the relations and mourners, such as clothes, arms (Lucan, ix. 175), ornaments, hunting nets and apparatus (see a will preserved in an inscription, Wilmanns, 315), horses, dogs, birds (Plin. *Ep.* iv. 2). It was also sprinkled with perfumes, gums, and spices (Stat. *Silv.* ii. 1, 158; v. 1, 210; Mart. x. 97; Lucan, viii. 729; Plin. *H. N.* xii. § 83), though *sumptuosa respersio* was forbidden by the Twelve Tables (Cic. *de Legg.* ii. 24, 60).

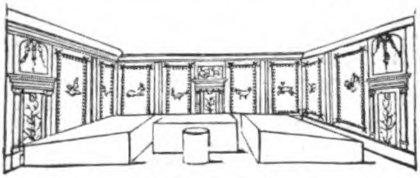
The pyre was lighted by one of the relations, with face turned away (Verg. *Aen.* vi. 224). When it was burnt down, the glowing ashes were extinguished with water or wine (Verg. *Aen.* vi. 226; Stat. *Silv.* ii. 6, 90; Plin. *H. N.* xiv. § 12). Those who had taken part in the funeral uttered a last farewell (Verg. *Aen.* ii. 644, i. 219, iii. 68, xi. 97, and Servius' notes) and departed, while the nearest relations remained to collect the bones and ashes when they were dry. This was probably done as a rule on the day of the funeral. The case of Augustus (Dio Cass. lvi. 42) seems to have been exceptional. The bones were sprinkled with wine (though it is not certain that this sprinkling is to be separated from that mentioned above), dried with a linen cloth, and placed in an urn or box with perfumes and spices (for a description of the various kinds of receptacle used, see SEPULCRUM). Tibullus describes minutely this part of the funeral (iii. 2, 19 ff. See also Ov. *Trist.* iii. 3, 69; *Fast.* iii. 561). The urn was then placed in the sepulchre [SEPULCRUM].

It has already been mentioned that if the body was burnt, the *os resectum* was buried separately. The ceremonies of the *feriae denicales* were used, as in the case of the burial, including the throwing of earth upon the remains of the dead (Cic. *de Legg.* ii. 22, 57). It does not appear at what moment this was done; but the object of it was to consecrate the place of burial, to make it a *locus religiosus*. After the bones and ashes of the deceased had been placed in the urn, the persons present were thrice sprinkled by a priest with pure water from a branch of olive or laurel, for the purpose of purification (Verg. *Aen.* vi. 229; Serv. *in loc.*); after which they were dismissed by the *praefica* or some other person, by the solemn word *Ilicet*, that is, *ire licet* (Serv. *l. c.*). In the case of burning the practices connected with the *silicernium* and the *novendiale* seem to have been the same as in the case of burial (see above). When those who had accompanied the funeral returned home, they underwent a purification called *suffitio*, which consisted in being sprinkled with water and stepping over a fire (Festus, p. 3, s. v. *Aqua et igni*). It was then also perhaps that the house was swept with a special kind of broom. ("Nam exverrae sunt, purgatio quaedam domus, ex qua mortuus ad sepulturam ferendus est, quae fit per everriationem certo genere scoparum adhibito, ab extra verrendo dictarum," Festus, p. 58, s. v. *Everriator*.)

In the case of important funerals, scenic or gladiatorial exhibitions were often given. Gladiatorial combats were originally specially appropriated to funerals, and the word *munus* is used in a special sense for these exhibitions, as a service due to the dead (Tertull. *Spect.* c. 12). *Munera* in connexion with funerals are frequently mentioned by Livy (*Epit.* 16; xxiii. 30; xxxi. 50; xxxix. 46; xli. 28) and others (Suet. *Jul.* 26; Plin. *H. N.* xxxiii. § 53; Cic. *pro Sest.* 58, 124, &c.). Provision was sometimes made for these shows in the will (*C. I. L.* i. 1199 = Wilmanns, 2037; Cic. *in Vatin.* 15, 37; *pro Sulla*, 19, 54; Hor. *Sat.* ii. 3, 84). Scenic exhibitions were less common; but the Didascalia to the *Adelphi* of Terence tells us that that play was performed at the *ludi funebres* of Aemilius Paullus (B.C. 160), and we are informed by Livy that *ludi scenici* as well as gladiatorial combats were exhibited at the death of T. Flamininus (B.C. 174). We also hear of distributions of food (*visceratio*, Liv. viii. 22, xxxix. 46, xli. 28) and public banquets (Suet. *Jul.* 26; Liv. xli. 28).

It remains to give some account of the annual rites performed at the tombs in honour of the *manes*. Certain days in February (13th-21st) were set apart as *dies parentales*, or *parentalia*. The last of these days was specially known as *feralia* (Ov. *Fast.* ii. 569; Cic. *ad Att.* 8, 14, 1; Liv. xxxv. 7). The ceremonies performed at this time are described by Ovid (*Fast.* ii. 533 ff.). Offerings to the Manes (*inferiae*) were brought to the tomb. These consisted of wine and milk (Verg. *Aen.* v. 77, 98, iii. 66; Sil. Ital. xvi. 309), honey and oil (Wilmanns, 883 = Orelli, 642), the blood of victims, especially of black sheep, pigs and cattle (Verg. *Aen.* iii. 67, v. 96;

Arnob. vii. 20), various fruits, bread, salt (Ovid, *l. c.*; Plutarch, *Crass.* 19), and eggs (Juv. v. 84). The tomb was also adorned with wreaths and flowers, especially roses and violets (Ov. *l. c.*; Suet. *Ner.* 57; Verg. *Aen.* v. 79, vi. 884; Tibull. ii. 6, 32, &c.). A meal was also eaten at the grave (Cic. *pro Flacco*, 38, 95). A *triclinium funebre*, intended apparently for this purpose, was found at Pompeii and is represented in the accompanying woodcut. During the *dies parentales* temples were shut and marriages forbidden (Ov. *Fast.* ii. 557 ff.), and the magistrates laid aside the insignia of their office (Lydus, *de Mens.* iv. 24). The terms *parentare*, *parentatio*, were also applied to similar rites performed on other days of the year, such as the day of birth, death, or burial of the person to be honoured. Special days were also appropriated to roses and violets (*rosatio*, *rosaria*, *rosalia*; *violatio*; Plin. *H. N.* xxi. § 11, and frequently in inscriptions: Wilmanns, *Index*, p. 695; *C. I. L.* 2046, 2072, 2090, 2176, 2135, &c.; vi. 9626, 10239, 10248, &c.).



Funeral Triclinium at Pompeii.

(Kirchmann, *De funeribus Romanorum*, 1637; Becker, *Gallus*, 4th English edit., pp. 505–523 = Becker-Göll, iii. 481–547; Raoul-Rochette, *Troisième Mémoire sur les Antiquités chrétiennes des Catacombes*, in *Mém. de l'Acad. des Inscriptions*, vol. xiii., 1838, pp. 529–788; and especially Marquardt, *Privatl.* pp. 340–385.) [SEPULCRUM.] [H. B. S.]

FURCA, dim. FURCULA, FURCILLA (*δίκρανον, δίκρουν ξύλον*), a fork. 1. A two-pronged fork used for various agricultural purposes, *e.g.* haymaking (Varr. *R. R.* i. 49, § 1). It is this kind which gave rise to the proverbial expression "to turn out with a pitchfork," *i.e.* forcibly and without ceremony (*δικροῖς ὠθεῖν*, Aristoph. *Pax*, 637; *δικράνοις ἐξωθεῖν*, Lucian, *Tim.* 12; *furcillis extrudimur*, Cic. *ad Att.* xvi. 2, § 4; *musae furcillis praecipitem ejiciunt*, Catull. cv. 2; *naturam expellas furca*, Hor. *Ep.* i. 10, 24). 2. A wooden fork used as a prop, *e.g.* for vines (Verg. *Georg.* i. 264; ii. 359); for planks to stand on in the Circus Maximus (Liv. i. 35, § 9); for supporting a two-wheeled carriage while the animals were being yoked to it (Greek *στήριγξ*, Lys. *ap.* Poll. x. 157); or as explained by Plutarch of props in general (*ἐκαλεῖτο δὲ φούρκιφερ· ὃ γὰρ Ἕλληνες ὑποστάτην καὶ στήριγμα, τοῦτο Ῥωμαῖοι φούρκαν ὀνομάζουσι*, *Coriol.* 24). 3. The end of the pole of a carriage, forked like a Λ where it joins the axle (Ginzrot, *Wagen und Fahrwerke*, i. 96). This, Marquardt thinks, was the original furca placed round the necks of slaves as an old domestic punishment (*Privatl.* 182). 4. From the earliest times the furca was a well-known instrument for punishing not only slaves, but freemen (Liv. i. 26). Here, however, we must distinguish between the punishment awarded to Horatius at his first trial, which was scourging under a furca followed by hanging (not crucifixion: see CRUX, p. 567 *a*), and the punishment believed in later times to have been *more majorum*, in which the criminal was scourged to death (Tac. *Ann.* ii. 32, xvi. 11; Suet. *Nero* 49 [where it is described]; Aurel. Vict. *Epit.* 5). In these cases the furca was a piece of wood in the form of the letter Λ, which was placed upon the shoulders of the offender, whose hands were tied to it. Slaves were frequently flogged in this way, and were obliged to carry about the furca wherever they went (Liv. ii. 36; Cic. *de Div.* i. 26, § 55; Plut, *Cor.* l. c.; cf. Plaut. *Cas.* ii. 6, 37, *Pers.* v. 2, 78; Donat. *ad* Terent. *Andr.* iii. 5, 12); whence furcifer as a term of reproach (Cic. *in Vatin.* 6, § 15; Hor. *Sat.* ii. 7, 22). A somewhat similar instrument was used in carrying burdens on the neck, and occurs in the reliefs of the Column of Trajan. For the furca in crucifixion, see PATIBULUM. 5. The question of the use of table forks in antiquity has lately been re-opened, but the negative conclusions of Beckmann (*Hist. of Inventions*, ii. 407–414, ed. Bohn) have not been seriously shaken. Forks were doubtless used for kitchen purposes, such as taking down meat from the *carnarium* (Petron. 95), carving, &c.; but the fact that forks for eating are neither mentioned by authors, represented in paintings or sculptures, nor found among the ample domestic stores of Herculaneum and Pompeii, was rightly judged decisive of the question. Some doubtful and unverified exceptions are discussed by Beckmann (*l. c.* p. 411), and more recently by Marquardt (*Privatl.* 308 n.). Some slightly better evidence is now produced. Two silver forks of tasteful design were dug up in Rome in 1874, and pronounced by Castellani to be of the second century; from which date, he thinks, forks were in constant use among the cultivated classes: a bronze fork was also found at Rome, and an iron one at Rondineto, in 1878. Marquardt, while recording these facts, remarks cautiously that further discoveries will perhaps yield a solution. The use of fingers is too well attested to be easily disposed of; cf. CENA, pp. 394 *a*, 397 *a*. (Rich, *s. v.*; Marquardt, *Privatl.* 182 f., 307 f.)

[W. S.] [W. W.]

FU'RCIFER. [FURCA.]
FURIO'SUS. [CURATOR.]
FURNUS. [FORNAX.]
FUROR. [CURATOR.]
FURTI ACTIO. [FURTUM.]

FURTUM, "theft," is the act of unlawfully handling a thing capable of being stolen, with the wrongful intention either of entirely appropriating it, or only of making use of it, or of obtaining possession of it, for the sake of gain. Thus it is defined by Paulus (Dig. 47, 2, 1, 3: cf. Inst. iv. 1, 1) as being "contrectatio rei frandulosa lucri faciendi gratia vel ipsius rei vel etiam usus ejus possessionisve." Movable things only could be objects of furtum, for the opinion of some jurists that there could be furtum of land did not prevail (Dig. 41, 3, 38: cf. Gell. *Noct. Att.* xi. 18). Things without an owner (*res nullius*) as were animals *ferae naturae* in a free state, and things abandoned by their owner, could not be stolen; but everything subject to the will of a paterfamilias, which was not *res immobilis*, was capable of furtum, including free persons under power as well as slaves.

There could be no furtum unless there was an *animus furandi*, or wrongful intention of appropriating property ("furtum ex affectu consistit," Gaius, ii. 50): consequently a person who took the property of another in the belief that it was his own did not commit it. It was not, however, necessary that a person taking a thing should know whose property it was: the bare knowledge of a finder of lost property that it belonged to some one was sufficient to make him liable if he appropriated it. The intention had to be directed to gain; hence an act of interference with the property of another, done merely in a sportive way or maliciously, was not furtum.

An impubes might commit furtum if he was of sufficient capacity to understand what he was doing, and there was a presumption of such capacity if he was bordering on the state of puberty. The *animus furandi*, however clearly manifested by overt acts, did not make a person liable, unless it was accompanied by a *rei contrectatio.* The *contrectatio* consisted in moving a thing from its place; on its taking place the act of furtum was complete, although the design of appropriating the thing was immediately abandoned; but it was requisite that the act should be contrary to the wish of the party whose property was affected by it (*invito domino*), since otherwise the principle "volenti non fit injuria" was applicable. A person was guilty of theft who assisted in carrying it out, though he did not himself handle the *res*, as if a man should jostle you in order to give another the opportunity of taking your money; or drive away your sheep or cattle in order that another might get possession of them: but merely to instigate a furtum without taking part in its execution was not furtum. Furtum might take place in various ways. In its earliest form it may have been confined to acts similar to those which constitute theft and robbery in English law, but it came to have a much wider scope. A man might commit the offence by converting property entrusted to him to his own use (*intervertere, intercipere*), as by unlawfully alienating it. If the intention was only to make a wrongful use of a *res aliena*, it was *furtum usus.* A depositarius would commit a *furtum usus* if he made use of the thing deposited with him. To use a thing lent for use in a different way to that for which it was lent was also *furtum usus.* A debtor might commit furtum by taking possession of a thing which he had given as a pledge (*pignori*) to a creditor; or by taking his property when in the possession of a bonâ-fide possessor, instead of recovering it by means of *vindicatio.* These are cases of *furtum possessionis.* Thus not only a *res aliena* might be an object of furtum, but it was possible in certain cases for an owner to commit furtum in respect of his own property. Accordingly the definition of Paulus is "rei contrectatio fraudulosa" without the addition of "alienae." The distinction between furtum rei, usus, and possessionis was not intended as a classification of theft into three distinct kinds, but only to indicate the extent of the meaning of the term *furtum.* This is well explained by Vangerow, *Pandekten*, iii. § 679.

Furtum was either *manifestum* or *nec manifestum.* It was clearly *manifestum* when the person was caught in the act, and it is probable that at first such furtum did not extend beyond this limit. In various other cases, however, there came to be a difference of opinion as to whether the furtum was manifestum or not. Some jurists thought that it was only furtum manifestum if the *fur* was caught in the place where the theft was committed; others went so far as to hold that it was furtum manifestum if the *fur* was found at any time with the thing stolen in his hands; but this opinion was rejected, and an intermediate one adopted by Justinian, that it was sufficient if the *fur* was detected before he reached the place to which he designed to carry the thing (Gaius, iii. 184; Inst. iv. 1, 3). That which was not furtum manifestum was nec manifestum.

The punishment for furtum manifestum was by the law of the Twelve Tables capital; that is, it affected the caput or legal capacity of the delinquent: a freeman was flogged and assigned as a bondsman (*addictus*) to the injured party, unless he could buy off the claim of the latter to vengeance (Cic. *pro Tull.* § 50; Gell. xx. 1; Gaius, iii. 189): a slave was flogged and thrown from the Tarpeian rock. The Edict of the Praetor subsequently substituted for this punishment an *actio quadrupli*, which entitled the injured party to claim from the thief fourfold the value of the thing stolen. The penalty of the Twelve Tables, in the case of furtum nec manifestum, was *duplum;* that is, double the value of the thing. The reason of this difference of penalty seems to be, that a person who detected a thief in the act would be likely to punish him more severely than if he was discovered afterwards, and in order to prevent the injured party from taking the law into his own hands the same distinction of punishment is adopted by the state. The notion of furtum manifestum is also found in German law (Grimm, *Rechtsalterth.* 637). The action by which the twofold or fourfold penalty was recovered on account of furtum is called *actio furti.* It was brought by the person interested in the safe custody of the thing ("cujus interest rem salvam fore"), who might be its owner or a bonâ-fide possessor of it, or one having a real right in it other than that of ownership, or, as the law came to be established, a person simply holding it as bailee under a contract. The owner of a thing, therefore, had not necessarily this action. A creditor might even have this action against the owner of a thing pledged, if the latter unlawfully deprived him of possession. A person to whom a thing was delivered in order to work upon it, as in the case of clothes given to a tailor to mend, could bring this action against the thief, and the owner could not, for the owner could recover over from the tailor, and so had no interest in the thing not being stolen. But if the tailor was not a solvent person, the owner had the *actio furti*, for then he had an interest. The rule was originally the same in the case of a gratuitous loan for use (*commodatum*), but Justinian allowed the lender to elect whether he would sue the borrower on the contract or maintain *actio furti* against the *fur.*

In the case of *depositum*, the depositee did not undertake the safe custody of the thing (*custodiam praestare*), and he was under no liability except in the case of *dolus*, or of *culpa lata* which was not distinguished from *dolus;* consequently, if the deposited thing was stolen, the depositor alone had the *actio furti*. If a peregrinus committed furtum, he was made liable to this action by the fiction of his being a Roman citizen, and by the same fiction he had a right of action if his property was stolen (Gaius, iv. 37). Recovery of a penalty being the object of the *actio furti*, it could only be maintained against the *fur* himself, not against his heredes. Besides his claim to a twofold or fourfold penalty, the injured party had an action for the recovery of damages, which is called *condictio furtiva*. This action might be brought by the owner of the *res furtiva*, by the bonâ-fide possessor of it, or by anyone who had a real right in it, but not by a mere bailee. The defendant in this action was the *fur*, or, in the event of his death, his heredes.

The question whether the *condictio furtiva* is to be regarded as a delictal or simply as a restitutory action has been much discussed. The fact of the defendant being liable for any loss caused by the furtum, although he has made no gain by it, shows that the action has something of a delictal character. (Windscheid, *Pandekten*, § 359, n. 18.) It is to be noticed that the *condictio furtiva* constituted an exception to the rule that no one could maintain *condictio* on account of property of which he was owner ("nemo rem suam condicere potest"), the exception having been allowed, "odio furum quo magis pluribus actionibus teneantur" (Inst. iv. 6, 14). As the ownership of the thing was not affected by furtum, so it could be recovered from any innocent holder to whom the thief had transferred it. It was a provision of the Twelve Tables that a *res furtiva* could not be acquired by usucapion.

Furtum was not a criminal offence in the time of the republic, but only a civil wrong (cf. Maine, *Ancient Law*, ch. x.); subsequently the injured party was given the alternative of instituting a criminal prosecution or of suing for the twofold or fourfold penalty (Dig. 47, 1, 3; 47, 2, 57, 1). According to the law of the Twelve Tables, if a man was killed whilst committing theft by night, he was lawfully killed; in the daytime he might not be killed unless he resisted with a deadly weapon (*telum*). In the pursuit of a thief the hue and cry might be raised (cf. Petron. *Sat.* 13, 8, "per aliquot vicos secutae fugientem, Prende furem clamant"). The owner of the stolen property conducted the search for it (*quaestio*), questioning anyone he suspected of having it (Plaut. *Poen.* i. 1, 51 f.; Paul. ii. 31, 22); and, if the answer was unsatisfactory, claiming the right of searching the house where he supposed his property to be. Anyone who prevented a person from searching for a furtum or stolen thing was liable to the *actio furti prohibiti*, the penalty being fourfold the value of the thing. The action was given by the Edict, the law of the Twelve Tables having affixed no special penalty in this case, though intentionally concealing stolen property may perhaps have been treated as furtum under it. The Twelve Tables prescribed a solemn form of search for stolen property (*lance et licio quaerere*), which probably originated in *jus sacrum*. A person who went to search the house of another must be naked (*nudus*), all but a cloth (*licium*, not *linteum* as in the MS. of Gaius) round his middle, and must hold a dish (*lancem*) in his hands. Voigt (*XII. Tafeln*, ii. § 139) however maintains that *nudus* does not here mean a naked person, but one having only a tunica on, and no toga.

Various explanations are given by ancient writers of this formal proceeding. (Gaius, iii. 192–194; Gell. xi. 18, § 9; xvi. 10, § 8; Paul. Diac. p. 117, 2: cf. Vangerow, *de furto concepto;* Voigt, *XII. Tafeln*, ii. § 139.) Gaius, who regards the whole proceeding as an absurdity, notices and criticises some of these; the most satisfactory account of the dish is that it was intended to occupy the hands of the searcher, so as to prevent him from introducing property and then asserting that it had been stolen. Plato (*Legg.* xii. 954 A) and Aristophanes (*Nub.* 497–9) notice a similar custom as prevailing in Greece (Meier and Schömann, *Att. Proc.* 485); traces of it are also found in early German law (Grimm, *Rechtsalterth.* 640 f.; *Zeitschr. f. gesch. Rechtswiss.* ii. 91; Sohm, *Proz. der Lex Salica*, 65 ff.). Gellius states that this mode of search was put an end to by the Lex Aebutia, and it is probable that even before this enactment the search was as a rule conducted simply in the presence of witnesses. If the search was successful, and the thing was found in the possession of the *fur* himself, he was treated as a *fur manifestus;* if it was found in the possession of a person who was not the thief, such person, although an innocent receiver of the property, was liable to an action called *furti concepti*, by which the finder recovered three times the value of the thing. If a man gave you a stolen thing in order that it might be found (*conciperetur*) in your possession, rather than in his, this was called *furtum oblatum*, and you had an *actio furti oblati* against him, even if he was not the *fur*, by which a threefold penalty was recovered. The *actiones furti concepti, oblati*, and *prohibiti* were no longer in use in the time of Justinian (Inst. iv. 1, 4), but a person who received property which he knew to have been stolen was liable to the *actio furti*, and the search for stolen property was conducted by public officials only (Dig. 4, 1, 3).

He who took the property of another by force was guilty of furtum; but in the case of this species of furtum, which is called *rapina*, the praetor gave a special action, known as *actio vi bonorum raptorum*. The origin of this action is referred by Cicero (*pro Tull.* c. 8) to the time of the civil wars, when robbery with violence became common. (Savigny, *Ueber Cic. pro Tull.*, Zeitsch. für gesch. Rechtsw. v. 3, 1825: Huschke, *Analecta*, 1826, ii.) Accordingly the edict was originally directed against those who with bodies of armed men ("hominibus armatis coactisque") did injury to the property of another or carried it off ("quid aut rapuerint aut damni dederint"). Subsequently it was found convenient to widen the scope of the action by leaving out the word *armatis*. Thus this word is not found in the edict as cited in the Digest (Dig. 48, 8, 2, pr.). The application of the edict would still, however, have been very limited, if it had been confined to cases where numbers were engaged in the violence or robbery; and so the jurists by a somewhat strained interpretation extended the edict to the case of a single man committing robbery or damage with violence (Dig. 47, 8, 2, 7, Mommsen's ed.), where Savigny would read "hoc enim quod ait 'hominibus coactis' sic accipere debemus 'etiam hominibus coactis,' ut sive solus vim fecerit sive etiam hominibus coactis vel armatis vel inermibus hoc edicto teneatur." The edict originally comprehended devastation of property carried out by violence (*damnum*) as well as robbery (*rapina*); in fact, it seems probable that the special object of the edict was to prevent such high-handed acts of violence as are committed by powerful men in times of disturbance. Under the empire such damnum ceased to be common, so *rapina* became the ordinary offence for which this edict was used, and ultimately the only one; hence in Ulpian's time the action was simply called *vi bonorum raptorum*. In Justinian's legislation the action applied to robbery only, and there was no trace of the other part of the edict. This instructive illustration of the gradual adaptation, even of the edictal law, to circumstances, is given by Savigny, who adopts the above emendation of Dig. 47, 8, 2, 7, by Heyse. By the *actio vi bonorum raptorum* fourfold was recovered, but this included damages as well as penalty.

The following are peculiar kinds of *actiones furti*:—

1. *Actio de tigno juncto*, against a person who employed another person's timber in his building, by which, according to the Twelve Tables, double the value of the materials was recovered. (Dig. 41, 1, 7, 10: cf. Huschke, *ad Leg. XII. Tab. de tign. junct.*; Puchta, *Kleine civilistiche Schriften*, 392, &c.; Voigt, *XII. Tafeln*, ii. § 139.) 2. *Actio de distrahendis rationibus*, also given by the Twelve Tables, on account of the abstraction of the property of a ward by his guardian. 3. *Actio rerum amotarum*, action brought by a man against a woman who had been his wife on account of acts which would have constituted theft if not committed by a wife (Dig. 25, 2, 1).

The special kind of furtum which consisted in cattle lifting, appears to have been originally called *peculatus* (Varro, *L. L.* v. 19, 95; Festus, 237a, 13) [ABIGEI], but in later times *peculatus* is the crime of stealing or embezzling money appropriated to religious or public purposes. (Inst. iv. 1; Dig. 47, 2; Cod. 6, 2; Gaius, iii. 183–209; Gell. xi. 18; Rein, *Das röm. Privatrecht*, 736–754; Puchta, *Institutionen*, iii. § 277; Savigny, *Obligationenrecht*, ii. 300–311; Dollmann, *Die Entwendung*, u. s. w.; Voigt, *XII. Tafeln*, ii. §§ 138, 139, 140; Vangerow, *Pandekten*, iii. § 679; Windscheid, *Pandekten*, §§ 452, 453; Müller, *Institutionen*, § 129; Böcking, *Römisches Privatrecht*, ii. § 31; Keller, *Inst.* § 159; Kuntze, *Inst.* i. 717, 17, ii. 500–4; Danz, *Lehrbuch*, u. s. w. § 15.) [E. A. W.]

FU'SCINA (*τρίαινα*), a trident; more commonly called *tridens*, meaning *tridens stimulus*, because it was originally a three-pronged goad, used to incite horses to greater swiftness. Neptune was supposed to be armed with it when he drove his chariot, and it thus became his usual attribute, no doubt with an allusion also to the use of the same instrument in spearing fish. It is represented in the second cut on p. 416. (Hom. *Il.* xii. 27, *Od.* iv. 506, v. 292; Verg. *Georg.* i. 13, *Aen.* i. 138, 145, ii. 610; Cic. *N. D.* i. 36, § 101; Philostr. *Imag.* ii. 14.) The trident was also attributed to Nereus (Verg. *Aen.* ii. 418) and to the Tritons (Att. *ap.* Cic. *N. D.* ii. 35, § 89; Mart. *de Spect.* 26, 3.)

In the contests of gladiators the *Retiarius* was armed with a trident. (Juv. ii. 143, viii. 203.) [GLADIATOR.] [J. Y.] [W. W.]

FUSTUA'RIUM (*ξυλοκοπία*), called also *fusti percutere*, was a capital punishment inflicted upon Roman soldiers for the highest military offences. It is thus described by Polybius (vi. 37):—When a soldier was condemned, the tribune touched him slightly with a stick, upon which all the soldiers of the legion fell upon him with sticks and stones, and generally killed him upon the spot. If however he escaped, for he was allowed to fly, he could not return to his native country, nor did any of his relatives dare to receive him into their houses. The fustuarium occurs throughout Roman history, in the earliest and latest times. It was inflicted for desertion, cowardice in action, quitting a man's commander, his standard, or his post (Liv. v. 6, § 14; Cic. *Phil.* iii. 6, § 14; Tac. *Ann.* iii. 21; Serv. *ad Aen.* vi. 825); as also for any neglect of duty, such as failure to pass the watchword, &c. which might endanger the safety of an army (Polyb. *l. c.*). Its infliction upon a *primuspilus* by Calvinus, proconsul of Spain in B.C. 39, is mentioned as unusual, and a revival of antique severity (Vell. Pat. ii. 78 *extr.*). (Cf. Marquardt, *Staatsverw.* ii. 553: EXERCITUS, p. 811 *b.*)

This punishment must be distinguished from the *vitis*, the badge of a centurion's authority, and used by him at his discretion upon the heads and shoulders of *gregarii milites* in keeping them up to their work (Juv. viii. 247). Different also from the fustuarium was the *animadversio fustium*, which was a corporal punishment inflicted under the emperors upon free men, but only those of the lower orders (*tenuiores*, Dig. 48, 19, 28, 2). It was a less severe punishment than the flogging with flagella, which punishment was confined to slaves. (Dig. 48, 19, 10; 47, 10, 45.) [FLAGRUM.] [W. S.] [W. W.]

FUSUS (*ἄτρακτος*), the spindle, was always, when in use, accompanied by the distaff (*colus*, *ἠλακάτη*), as an indispensable part of the same apparatus. (Ovid, *Met.* iv. 220–229.) The wool, flax, or other material, having been prepared for spinning, and having sometimes been dyed (*ἰοδνεφὲς εἶρος ἔχουσα*, Hom. *Od.* iv. 135), was rolled into a ball (*τολύπη*, *glomus*, Hor. *Epist.* i. 13, 14; Ovid, *Met.* vi. 19), which was, however, sufficiently loose to allow the fibres to be easily drawn out by the hand of the spinner. The upper part of the distaff was then inserted into this mass of flax or wool, and the lower part was held in the left hand (as in the illustration), or stuck into the girdle, so as to leave both hands free (as in a mosaic figured by Rich, *s. v.* "Neo"). The fibres were drawn out, and at the same time spirally twisted, chiefly by the use of the forefinger and thumb of the right hand (*δακτύλοις ἕλισσε*, Eurip. *Orest.* 1432; *pollice docto*, Claud. *de Prob. Cons.* 177); and the thread (*filum*, *stamen*, *νῆμα*) so produced was wound upon the spindle until the quantity was as great as it would carry.

The spindle was a stick, 10 or 12 inches long, having at the top a slit or catch (*dens*, *ἄγκιστρον*) in which the thread was fixed, so that the weight of the spindle might continually carry down the thread as it was formed. Its lower extremity was inserted into a small wheel called the whorl (*verticillus*, Plin. *H. N.* xxxvii. § 37), made of wood, stone, or metal (see woodcut), the use of which was to keep the spindle more steady and to promote its rotation: for the spinner, who was commonly a female, every now and then twirled round the spindle with her right hand (Herod. v. 12; Ovid, *Met.* vi. 22), so as to twist the thread still more completely; and whenever, by its continual prolongation, it let down the spindle to the ground, she took it out of the slit, wound it upon the spindle, and, having replaced it in the slit, drew out and twisted another length. All these circumstances are mentioned in detail by Catullus (lxiv. 311–319). The accompanying woodcut is taken from a series of bas-reliefs representing the arts of Minerva upon a frieze of the Forum of Nerva at Rome. It shows the operation of spinning, at the moment when the woman has drawn out a sufficient length of yarn to twist it by whirling the spindle with her right thumb and forefinger, and previously to the act of taking it out of the slit to wind it upon the bobbin (*πήνιον*) already formed.

Spinning. (From a relief.)

The distaff was about three times the length of the spindle, strong and thick in proportion, commonly either a stick or a reed, with an expansion near the top for holding the ball. It was sometimes of richer materials and ornamented. Theocritus has left a poem (*Idyll.* xxviii.) written on sending an ivory distaff to the wife of a friend. Golden spindles were sent as presents to ladies of high rank (Hom. *Od.* iv. 131; Herod. iv. 162); and a golden distaff is attributed by Homer and Pindar to goddesses, and other females of remarkable dignity, who are called *χρυσηλάκατοι*.

It was usual to have a basket to hold the distaff and spindle, with the balls of wool prepared for spinning, and the bobbins already spun. (Brunck, *Anal.* ii. 12 = *Anth. Pal.* vi. 160; Ovid, *Met.* xii. 475.) [Calathus.]

In the rural districts of Italy women were forbidden to spin, or even carry a spindle openly, when they were travelling on foot, the act being considered of evil omen. (Plin. *H. N.* xxviii. § 28.) The distaff and spindle, with the wool and thread upon them (*colus compta*), were carried in bridal processions; and were often suspended by females as offerings of religious gratitude, especially in old age, or on relinquishing the constant use of them. Thus the reputed spindle and distaff of Tanaquil were preserved at Rome as relics in the time of Varro. (Plin. *H. N.* viii. § 194.) [Donaria.] They were most frequently dedicated to Pallas, the patroness of spinning and of the arts connected with it. This goddess was herself rudely sculptured with a distaff and spindle in the Trojan Palladium (Apollod. iii. 12, 3). They were also exhibited in the representations of the three Fates, who were conceived, by their spinning, to determine the life of every man; and at the same time by singing, as females usually did whilst they sat together at their work, to predict his future lot (Catull. *l. c.*).

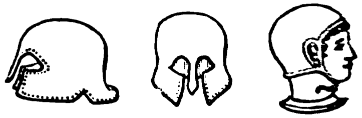
[J. Y.] [W. W.]

G.

GABINUS CINCTUS. [Toga.]

GAESUM. [Hasta.]

GA'LEA (*κράνος*, poet. *κόρυς*, *πήληξ*), a helmet, a casque. The helmet was originally made of skin or leather, whence is supposed to have arisen its appellation, *κυνέη*, meaning properly a helmet of dog-skin, but applied to caps or helmets made of the hide of other animals, not necessarily worn as armour (*ταυρείη*, *κτιδέη*, Hom. *Il.* x. 258, 335; *αἰγείη*, *Od.* xxiv. 230; Herod. vii. 77: compare *κράνη σκύτινα*, Xen. *Anab.* v. 4, § 13; *galea lupina*, Prop. iv. 11, 19), and even to those which were entirely of bronze or iron (*πάγχαλκος*, *Od.* xviii. 377). The leathern basis of the helmet was also very commonly strengthened and adorned by the addition of either bronze or gold, which is expressed by such epithets as *χαλκήρης*, *εὔχαλκος*, *χρυσείη*. The helmet of Hector was made of three such layers (*τρίπτυχος*, Hom. *Il.* xi. 352). Helmets which had a metallic basis (*κράνη χαλκᾶ*, Xen. *Anab.* i. 2, § 16) were in Latin properly called *cassides* (Isid. *Orig.* xviii. 14; Tac. *Germ.* 6; Caesar. *B. G.* iii. 45), although the terms *galea* and *cassis* are often confounded. A casque (*cassis*) found at Pompeii is preserved in the collection at Goodrich Court, Herefordshire. (Skelton, *Engraved Illust.* i. pl. 44.) The perforations for the lining (cf. Ocrea) and exterior border are visible along its edge. A side and a front view of it are presented in the annexed woodcut. A casque very like this, and inscribed with an archaic dedication to Zeus, was fished up from the bed of the Alpheus, near Olympia, and is now in the British Museum (*C. I. G.* No. 29). Among the materials used for the lining of helmets were felt (*πῖλος*, Hom. *Il.* x. 265) and sponge (Aristot. *H. A.* v. 16).

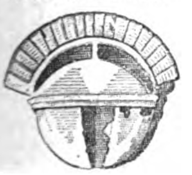


Helmets. (From the collection at Goodrich Court.)

The helmet, especially that of skin or leather, was sometimes a mere cap conformed to the shape of the head, without either crest or any other ornament (ἄφαλόν τε καὶ ἄλοφον, *Il.* x. 358). In this state it was probably used in hunting (*galea venatoria*, C. Nep. *Dat.* iii. 2), and was called καταῖτυξ (Hom. *Il.* l. c.), in Latin CUDO. The preceding woodcut shows an example of it as worn by Diomede in a small Greek bronze, which is also in the collection at Goodrich Court. (Skelton, *l. c.*) The additions by which the external appearance of the helmet was varied, and which served both for ornament and protection, were the following:—

1. The φάλος, which was either single, double (ἀμφίφαλος, δίφαλος, Hom. *Il.* v. 743, xi. 41), or quadruple (τετράφαλος, Hom. *Il.* xii. 384; xxii. 314). It has been held (Liddell and Scott, *s. v.*) that the φάλος was the projecting peak of the helmet. According to this view, τετράφαλος is admittedly unintelligible (L. and S. *loc. cit.*), and it is certain that the φάλος was a ridge of metal, afterwards called κῶνος (Buttmann), which served as a support for the crest. The φάλος is well shown in the cut at p. 189 *b* [LORICA]. Instances occur where there are two or more such ridges. (See Helbig, *Das Homerische Epos*, p. 207.) In the cut below, from a gem with the head of Athene Parthenos, the φάλοι are represented by a Sphinx and two Pegasi.

2. The helmet thus adorned was very commonly surmounted by the crest (*crista*, λόφος, Hom. *Il.* xxii. 316), which was often of horsehair (ἵππουρις, ἱπποδάσεια, Hom. *ll. cc.*; λόφων ἔθειραι, Theocr. xxii. 186; *hirsuta juba*, Propert. iv. 11, 19), and made so as to look imposing and terrible (Hom. *Il.* iii. 337; Verg. *Aen.* viii. 620), as well as handsome (*ib.* ix. 365; εὔλοφος, Heliod. *Aeth.* vii.). The helmet often had two or even three crests. (Aesch. *Sept. c. Theb.* 384. Compare the cut below with the head of Athene, having a helmet with a triple crest.) In the Roman army of later times the crest served not only for ornament, but also to distinguish the centurions (Veget. ii. 13). Cf. Vegetius, ii. 16: "Centuriones vero habebant . . . galeas ferreas, sed transversis et argentatis cristis, ut celerius noscerentur a suis." Compare the annexed cut from a part of a centurion's tomb, from Petronell, showing the transverse crest.



Galea. (Baumeister.)

3. The two cheek-pieces (*bucculae*, Juv. x. 134; παραγναθίδες, Eustath. *in Il.* v. 743), which were usually attached to the helmet by hinges, so as to be lifted up and down. They had buttons or ties at their extremities for fastening the helmet on the head. (Val. Flacc. vi. 626.) A strap passed under the wearer's chin, in the case of the Homeric helmet (*Il.* iii. 371), but apparently cheek-pieces were not movable. The cheek-pieces were often elaborately adorned with reliefs. (Cf. *Antiq. du Bosp. Cimm.* pl. xxviii. fig. 1; Baumeister, fig. 2214.)

4. The beaver, or visor, a peculiar form of which is supposed to have been the αὐλῶπις τρυφάλεια, *i.e.* the perforated beaver. (Hom. *Il.* xi. 353: cf. Hesych. *s. v.*, and Helbig, *Das Homerische Epos*, p. 205.) The gladiators wore helmets somewhat of this kind (Juv. viii. 203), and specimens of them, not unlike those worn in the Middle Ages, have been found at Pompeii. See the woodcut to GLADIATORES.

The five following helmets are selected from antique gems, and are engraved of the size of the originals. [J. Y.] [A. H. S.]

Helmets. (From gems.)

GALERI'CULUM. [GALERUS.]

GALE'RUS or **GALE'RUM**, dim. GALERICULUM, is probably connected with *galea*, and so with γαλέη (cf. the κτιδέην κυνέην of Hom. *Il.* x. 335). It was originally a cap of skin or fur, fitting close to the head, worn by rustics (Verg. *Moret.* 122), hunters (Grat. *Cyneg.* 340, where it is of badger-skin), gymnasts in the palaestra to keep the hair clean (Mart. xiv. 50), and by the old inhabitants of Latium instead of a helmet (Verg. *Aen.* vii. 688; cf. CUDO). For the galerus worn by various priests, *e.g.* the Pontifices Salii and Flamines, and the *albogalerus* or *albus galerus* of the Dialis, see APEX, and compare Juv. viii. 208; Apul. *Apol.* 22, p. 441; Gell. x. 15 *extr.* The word is also applied to a wig, the *empti capilli* of Ovid (*A. Am.* iii. 165; cf. CALIENDRUM); worn not only from vanity or to conceal baldness (Suet. *Oth.* 12), but for the sake of disguise by profligates of both sexes in their nocturnal rambles (Suet. *Ner.* 26 = *capillamentum*, Id. *Calig.* 11; Juv. vi. 120 with the Schol.); and on the stage as part of the make-up (Guhl and Koner, ed. 5, p. 762). (Rich, *s. v.*; Becker-Göll, *Gallus*, iii. 240.) [W. S.] [W. W.]

GALLI (Γάλλοι, in post-Roman authors only), the eunuch priests of Cybele or the Great Mother, whose worship, so far as it can be traced historically, had its original seat in Phrygia (Marmor Parium, *ap.* C. Müller, *Fragm.* i. 544, [βρέτας θ]εῶν μητρὸς ἐφάνη ἐν Κυβέλοις, where it is placed under the reign of Erichthonius, king of Attica, B.C. 1506; Strabo, x. pp. 469, 472, xii. p. 567, where the names Κυβέλη, Δινδυμήνη, &c., are said to be derived from Phrygian localities; Κυβέλην ἀπὸ τοῦ τόπου, Diodor. iii. 58). The myths of Marsyas and Hyagnis, the reputed inventors of the flute, gather round the same region, and are doubtless connected with the use of that instrument in the orgiastic worship of Cybele (cf. *Dict. Biogr.* art. *Marsyas*). The Phrygian language was Indo-European, as appears from the extant inscriptions (Rawlinson's *Herodotus*, vol. i. App. p. 666); and the worship of Cybele has been thought to be also Indo-European; Zend names have been traced in it—Berecyntus = *Berezat*, Corybantes = *Gereuantô* (Labatut in *Rev. Numism. Belge*, 1868, p. 286). Other names, however, are of distinctly Semitic affinities; Rhea perhaps = the Babylonian Ri (Mulita or Mylitta, Rawlinson, *l. c.* p. 605), and Nana more certainly = the Babylonian *Nana*, modern Syrian *Nani* (*ib.* p. 635). Whatever its origin, this cultus spread rapidly over the whole of Asia Minor: Cyzicus was one of its oldest seats, where it is visited by Anacharsis in the sixth century B.C. (Herod. iv. 76; cf. the *οὖρος ἱρὸν μητρὸς Δινδυμήνης*, i. 80); another was Sardis, where a temple of Κυβήβη occurs (Herod. v. 102); but it was especially connected in historic times with Pessinus, in the country afterwards called Galatia, where also, as at Cyzicus, there was a mountain called Dindymon and where Attis was said to be buried (Paus. i. 4, § 5). The name Agdistis was applied both to the mountain which overhung Pessinus (Strabo, xii. p. 567; Paus. *l. c.*) and to the goddess herself (Strabo, x. p. 469). (Ellis, *Comm.* on Catull. lxiii. p. 202.)

The origin of the name of Galli is not absolutely certain, but it was doubtless a native Phrygian word: of course it has nothing to do with the Galatae or Gauls, whose first appearance in these countries dates only from B.C. 278. There is no reason to reject the tradition which derives it from a river in Phrygia: there were two small rivers called Gallus, both tributaries of the Sangarius, and the one which flows by Pessinus must be meant, whose water was fabled to cause this particular form of religious madness. (Ov. *Fast.* iv. 363; Plin. *H. N.* v. § 147, xi. § 261, xxxi. § 9; Herodian, i. 11; Fest. *s. v.* Galli.) A form *gallantes*, as if from *gallare*, "to rave like a priest of Cybele," is cited from Varro (*ap.* Non. p. 119, 5). In their wild, enthusiastic, and boisterous rites the Galli recalled the legends of the Corybantes (Hor. *Carm.* i. 16, 5 ff.; Lucan, i. 565 ff.). According to an ancient custom, they were always castrated (*spadones, semimares, semiviri, nec viri nec feminae*), and it would seem that, impelled by religious enthusiasm, they performed this operation on themselves (Ov. *Fast.* iv. 237; Plin. *H. N.* xi. § 261, xxxv. § 165; Martial, iii. 81, xi. 74; Juv. vi. 512 ff.).

The worship of the Magna Mater was introduced at Rome in B.C. 204, towards the close of the Second Punic War. In the previous year an oracle had been produced from the Sibylline books, that the enemy (Hannibal) might be driven from Italy if the Idaean mother were brought to Rome from Pessinus; and an embassy had been sent to Attalus of Pergamum, the only ally the Romans had in Asia, to request his good offices (Liv. xxix. 10). Attalus made over to the Romans a sacred stone of no great size, probably an aërolite, which the Pessinuntines declared to be the mother of the gods; and on the way the oracle of Delphi was consulted as to the ceremonies to be observed (c. 11). The story of the selection of P. Scipio (the first who was called Nasica) as "the best man in the state" for the honour of receiving it, and the ordeal by which Claudia proved her chastity, is told by Livy in the succeeding chapters (12–14) and by Ovid in the *Fasti*. The temple of the Magna Mater was dedicated in B.C. 191, when the same Scipio was consul (Liv. xxxvi. 36). For the festival then instituted, the college of priests with an *archigallus* and a *sacerdos maxima* at its head, and the priestly dress, see MEGALESIA; and cf. Marquardt, *Staatsverw.* iii. 378–9. As might be expected from their extraordinary fanaticism, the Galli were a poor and despised class of people; for while no other priests were allowed to beg, the *famuli Idaeae matris* were allowed to do so on certain days (Cic. *de Legg.* ii. 9, § 22; 16, § 40; AGYRTAE). The magnificent Attis of Catullus (*Carm.* lxiii) with Ellis' notes, and Ovid's account of the Megalesia (*Fast.* iv. 179–372), should be read in their entirety; to these, therefore, we have given no detailed references. [L. S.] [W. W.]

GA'LLICAE, sc. *soleae* or *crepidae*, were a kind of low shoes intermediate between the *calcei*, which were half-boots, and the *soleae*, which did not cover the foot at all. They thus resembled the CREPIDAE, but were reckoned by the Latin writers among the SOLEAE; the question to which class they belong is discussed in Gell. xiii. 22 (21), § 5. Two specimens, from Gaulish figures on a relief found at Rome, are given by Rich (*s. v.*); one of these is without any fastening, like a slipper, the other laced in front. The wearing of gallicae, as of other *soleae*, was accounted negligent if not effeminate; a point which comes out in the only two classical passages where they are mentioned. In Gellius (xiii. 22) the story is told of one Castricius, a professor of rhetoric under Hadrian, who rebuked his pupils for coming to his lecture *tunicis et lacernis indutos et gallicis calciatos*; not wearing the toga might be excused by custom, but coming *soleati* was altogether wanting in decorum. So Cicero contrasts his own travelling dress with that of Antonius, *cum calceis et toga, nullis nec gallicis nec lacerna* (*Phil.* ii. 30, § 76). The etiquette which prescribed the wearing of calcei within the city, and in official dress everywhere, has been noticed under CALCEUS: we add Cic. *in Verr.* v. 33, § 86; *in Pis.* 6, § 13. Under the later empire gallicae were much more generally worn, and various sorts are mentioned as in common use among the price-lists of the Edict of Diocletian ("gallicae viriles rusticanae bisoles, gallicae viriles monosoles, gallicae cursoriae," *Ed. Diocl.* 9, 12 ff.; Marquardt, *Privat.* 577). [W. W.]

GALLIN'ARIUM. [AGRICULTURA, p. 78 *b.*]

GAME'LIA (*γαμηλία*). The father of the bridegroom or the bridegroom himself gave a feast (*γαμηλία*, Hesych. *s. v.* *δεῖπνον ὃ τοῖς φράτορσιν ἐποίει ὁ γαμῶν*), accompanied by offerings (*ἡ ἐπὶ γάμῳ θυσία ἐν τοῖς φράτερσι γαμηλία*, Pollux, iii. 42; cf. viii. 107), to the members of his phratry, or rather to the *οἰκεῖοι* amongst the phratores (*γαμηλίαν εἰσενεγκεῖν ὑπὲρ τῆς*, Dem. *c. Eubul.* p. 1312, § 43, cf. p. 1320, § 63; Isae. *Or.* 3 [*Pyrrh.*], §§ 76, 79; *Or.* 8 [*Ciron*], §§ 18, 20), on which occasion the bride was introduced to and enrolled amongst the phratores (Harpocr. *s. v.* *ἡ εἰς τοὺς φράτορας εἰσαγ*… *τῶν γυναικῶν*. Cf. *Etym. M.* p. 220, 50 ff.) Thus she became a sharer in her husband's *sacra*. The ceremony probably took place in the month of Gamelion (Meier, *de gentil. Attic.* 2, p. 10; Mommsen, *Heortol.* p. 344); see also Athen. v. p. b, *ὡς νενόμισται ἄγειν συμπόσια περὶ τοὺς γάμους, τῶν τε γαμηλίων θεῶν ἕνεκα καὶ τῆς οἱονεὶ μαρτυρίας*. In Mommsen's opinion there is no difference in meaning between ἡ γαμηλία and *τὰ γαμήλια* (which is explained by Eran. Philo, p. 164, *τὰ τελούμενα ἐν τῇ ἡμέρᾳ ᾗ ὁ γάμος τελεῖται*; cf. Stephanus, *s. v.*). Later in the newly-married woman was introduced to the wives of the demotae by a feast at the Thesmophoria (*ὑπέρ τινος Θεσμοφόρια ἑστιᾶν τὰς γυναῖκας*, Isae. *Pyrrh.* § 80), after which the women of her deme might choose her to be one of the two entrusted with the conduct of the festival (*ἄρχειν εἰς τὰ Θεσμοφόρια*, Isae. *Ciron.* § 19).

Buermann (*Suppl. Jahrb. für. kl. Philol.* 1878, p. 569 ff.) is of opinion that both the wife and the *παλλακή* were betrothed (*ἐγγύησις*) by the *κύριος*; but that the wife alone was introduced to the phratores (*γαμηλία*); but as Philippi points out (*Jahrb. für kl. Phil.* 1879, p. 417), the distinction between *ἐγγυᾶσθαι* and *γαμεῖν*, as indicated by B., is not borne out by the use made of these words by the orators. [L. S.] [H. H.]

GA'MORI (*γάμοροι*). [Geomori.]

GAMOS (*γάμος*). [Matrimonium.]

GA'NEA. [Caupona, p. 388 *b*.]

GAU'SAPE, GAU'SAPA, or GAU'SAPUM, a kind of thick cloth, baize, or frieze, with the nap much longer on one side than the other. In the time of Lucilius (*ap.* Priscian. ix. p. 870 P.) and in that of Horace (*Sat.* ii. 8, 11), a purple gausape was used for wiping dinner-tables between the courses, while Martial (xiv. 138) speaks of it as a table-cover to protect the costly tables of his time: hence it has been inferred that the use of table-cloths was unknown at the earlier period, but had come in with the growth of luxury at the latter (Becker-Göll, *Gallus*, iii. 388). It was used for beds as a counterpane (Mart. xiv. 147), and as a mantle or wrapper after taking a bath (Petron. 28), or in general as a protection against rain and cold (Senec. *Ep.* 53, § 3; Mart. vi. 59). The *paenula* (q. v.) might be either of fur (Mart. xiv. 130) or of gausape (*ib.* 145); the latter, he says, was so bright and comfortable that (like our flannel) it was equally suitable for summer and winter wear. When Pliny tells us (*H. N.* viii. § 193) that gausapa only came into use in his father's time, he probably refers to garments made of it; yet Ovid already speaks of it as worn by both sexes, though naturally it was an eccentric material for a well-dressed lady (*A. Am.* ii. 300). We need not suppose that the *villosa lintea* (*gausapa villosa* in the lemma) of Martial, xiv. 138, were of linen; the word *linteum* can mean any stuff, *e.g.* cotton cloth (Plin. *H. N.* xii. § 39). As Martial (xiv. 152) calls it *gausapa quadrata*, we have reason to suppose that, like the Scotch plaid, it was always, for whatever purpose it might be used, a square or oblong piece of cloth. (See Böttiger, *Sabina*, ii. p. 102.)

Persius calls a perfumed beard *balanatum gausape* (iv. 37), and red or yellow wigs, such as were made of the hair of Germans and fashionable under the empire, *lutea gausapa* (vi. 46); see, however, Conington's note on the latter passage. [L. S.] [W. W.]

GELEONTES (*γελέοντες*), the name of one of the four old-Ionic tribes in Attica. We shall here discuss only the form and etymological meaning of the word, treating the political organisation under Genos and Tribus (Greek).

The four names of the tribes are not peculiar to Attica; they occur in other Ionic states, as at Cyzicus and Teos (Schömann, *Antiq.* i. 129, E. T.; Gilbert, *Staatsalterth.* i. 109, n.). The other three names—*Ὅπλητες*, *Ἀργαδεῖς* or *Ἐργαδεῖς*, and *Αἰγικορεῖς*—point not obscurely to some system of castes or hereditary occupations; and the fourth tribe must no doubt be explained in a similar manner (*ὁ δὲ* [*Ἴων*] *πρῶτον μὲν εἰς τέτταρας φυλὰς διεῖλε τὸ πλῆθος, εἶτα εἰς τέτταρας βίους*, Strabo, viii. p. 383; see also Plut. *Sol.* 23; Plat. *Tim.* 24 A). We are not to suppose that the limitations of caste existed in Attica in historic times, though Plato's ideal republic is essentially a caste system, based on what he believed to have once been the rule in Greece. The name comes down to us under different forms: Herodotus (v. 66) is a witness for *γελέοντες*, Euripides (*Τελέων μὲν ἔσται πρῶτος*, *Ion*, 1579, where however Dindorf after Canter reads *Γελέων*), and Pollux (viii. 111) for *τελέοντες*: while in Plutarch (*l. c.*) the MSS. vary between *τελέοντες* and *γεδέοντες* [Sintenis corrects *γελέοντες*], and in Stephanus Byzantinus (*s. v. Αἰγικορεῖς*) between *γελέοντες* and *τελέοντες*. The letters Γ and Τ, Λ and Δ are so easily confused that these variations prove nothing, and many scholars have preferred *τελέοντες* as capable of the readiest explanation; either "priests" or, following Plutarch, "cultivators" (*γεωργοί*), from different senses of the verb *τελεῖν*. The fact that our two oldest and best authorities, Herodotus and Euripides, agree in ranking this tribe first among the four, makes the latter view impossible; a priestly caste, taking precedence of the *Ὅπλητες* or military men, is at least conceivable. But the unerring evidence of inscriptions is decisive in favour of the less intelligible form *γελέοντες*: in the Cyzicene marble and at Teos (*C. I. G.* ii. 928, 3078–9, 3664–5), as well as in Athens itself (*Διὸς Γελέοντος ἱεροκῆρυξ*, in Ross, *Demen* p. vii. = *C. I. A.* iii. 2). It remains to assign a meaning to the word; and the bearing on this question of a gloss in Hesychius (*γελεῖν· λάμπειν, ἀνθεῖν*) was seen long ago by Hemsterhuis. He explained it as the "noble" or "illustrious," and was followed by Wesseling (on Herod. *l. c.*), Creuzer (*Mythol.* iii. 62), and Schömann (*Assemblies*, 1819, as well as *Staatsalterth.* 1871). The word has been thoroughly discussed of late years by Bergk (*Neue Jahrb. für Philol.* lxv. 401), and especially by Hugo Weber (*Etym. Untersuch.* 40 ff.; cf. Curtius, *Gr. Etym.* 173); it belongs to a widely diffused root expressive of "shining," seen in *glacies*, Germ. *glänzen*, Eng. *glass*, *glance*, *glint*, perhaps also in *γάλα* and *gelu*. The Geleontes, the (self-styled) brilliant or shining ones, were situated in the best part of the country, the neighbourhood of Athens itself [Demus, p. 615 *b*].

This difficulty was left unsolved not only by Thirlwall and Grote, but by such recent writers as Stein (on Herod. *l. c.*) and Liddell and Scott (ed. 7, *s. v. τελέοντες*); it has therefore been thought worth while to give full proofs. (Schömann, *Assemblies*, p. 356 = 336 tr. Paley; *Antiq.* i. 318, 319, E. T.; Gilbert, *Staatsalterth.* i. 109.) [W. W.]

GELOTOPOII. [Parasiti.]

GEMMA, a gem or precious stone (Greek, *λίθος*: there is no Greek word for gems as distinguished from ordinary stones. On the supposed rule of the grammarians that *λίθος*, a precious stone, is feminine, consult Liddell and Scott, *s. v.*).

The desire to possess the precious or semi-precious stones, whether as ornaments or as objects of superstition, is universally prevalent. In any nation, however, it is limited by the geographical conditions, and by the degree of mechanical skill available. At the early stage of civilisation represented on Greek soil by the graves of Mycenae and kindred deposits, the stones found are of no great rarity, but are shaped and polished in a way that proves considerable mastery over hard materials. Thus objects of agate, rock-crystal, sard, and amethyst are elaborately worked and engraved. (Schliemann, *Mycenae*, figs. 307–315; Lolling, *Kuppelgrab bei Menidi*, pl. vi.; *Cat. of Gems in Brit. Mus.* 104–109.) In Homer, however, there are no traces of the use of gems, as there is not any good reason for supposing them to be intended by the ἕρματα τρίγληνα μορόεντα of *Iliad*, xiv. 182; *Od.* xviii. 297. (See Buchholz, *Homerische Realien*, ii. p. 214.) It has long been observed that Homer was unacquainted with the use of seals (Pliny, *H. N.* xxxiii. § 12), and the nearest approach in Homer to the use of gems as ornaments is the employment of the attractive and easily worked amber in jewellery (*Od.* xv. 460, xviii. 295; Helbig, *Das homerische Epos*, p. 183). From these facts it may be inferred that the art of working in hard stones was lost after the Mycenaean period; and this conclusion is confirmed by statistics as to the very early gems known as the "gems of the Islands" [see SCALPTURA]. These gems are found both among Mycenaean and early Greek deposits. But while in the former case they are often of the hard stones mentioned above, in the latter case they are of soft materials, such as steatite. (See Dümmler, *Mittheilungen des Arch. Inst. in Athen*, xi. p. 177.)

The Greeks of historical times had a restricted choice of precious stones, until the conquests of Alexander had opened up intercourse with India. The stone of Polycrates was an emerald, according to Herodotus (iii. 41); but a sardonyx, according to Pliny (*H. N.* xxxvii. § 4). In the treasure lists of the temples of the Acropolis of Athens, the only gems mentioned are the jasper, sard, and onyx, together with the χρυσίτης λίθος, or gold ore. (Compare with this list Plato, *Phaedo*, 110 D, τὰ ἀγαπώμενα, . . . σάρδιά τε καὶ ἰάσπιδας καὶ σμαράγδους.) The gems mentioned in the treasure lists were for the most part set in rings or used as seals, and were therefore of small size. An onyx, however, is mentioned in a list for 398 B.C., which represented a τραγέλαφος and weighed 5 oz. (*C. I. A.* 652 b, l. 12). Another onyx is mentioned in the list for 385 B.C. (*C. I. A.* 667, l. 20), which apparently weighed 42 oz. (But cf. Boeckh, *Staatshaushaltung*, ii.^{3} 247.) Perhaps one of these stones is the "great onyx" reported as broken in the list for 344 B.C. (*C. I. A.* 701, l. 57; cf. *C. I. A.* 676, l. 18).

The state of knowledge as to gems about the time of Alexander is represented by the work of Theophrastus Περὶ Λίθων, the only surviving systematic treatise on the subject in Greek. Though written in 315 B.C., the book has not felt the influence of Alexander's campaigns. Theophrastus surveys, however, the whole basin of the Mediterranean, and Asia Minor. He makes one allusion to Bactria, and a doubtful one to India. The number of gems available for the engraver is now become considerable. Theophrastus enumerates among stones suitable for engraving the emerald, sard, carbuncle (ἄνθραξ), lapis-lazuli (σάπφειρος: see below), jacinth (λυγκούριον), topaz [?] (ὑαλοειδής), chrysoprase [?] (ὄμφαξ), rock-crystal, and amethyst. Among the lost works of Aristotle was a treatise with the same title as that of Theophrastus, of very doubtful authenticity. (Heitz, *Die verlornen Schriften des Aristoteles.*)

For accounts of the extraordinary profusion of precious stones in the East, and among the successors of Alexander, compare Diod. Sic. xviii. 26; Athenaeus, xi. p. 781; Strabo, xv. p. 718, and other passages quoted by Krause, *Pyrgoteles*, p. 113. The extravagant luxury of the Romans of the Empire rivalled that of the Diadochi. Thus Heliogabalus wore gems engraved by the best artists, on his shoes. (Lamprid. *Heliog.* 23; cf. Plin. *H. N.* ix. § 117, and other passages quoted by Krause, *Pyrgoteles*, p. 114.)

This passion on the part of the wealthy for precious stones was naturally favourable to the growth of mineralogical knowledge. Pliny quotes a large number of writers who had treated of gems between Theophrastus and himself. Some of these writers (as Zenothemis, Plin. *H. N.* xxxvii. § 87) seem to have had a personal knowledge of India (cf. King, *Precious Stones*, p. 1). Pliny devotes the 37th or final book of his Natural History to gems, regarding them as the most perfect works of nature. The book consists of an historical introduction (§§ 1–5); of an account of the most important gems, arranged by colours (§§ 6–54); of an account of minor gems in alphabetical order. The book concludes with a few general instructions for detecting fraud. This book is the best representative of ancient science in this branch of mineralogy. In attempting to form from it an estimate of the ancient science, we must neglect the false medicine, sometimes rejected by Pliny (*H. N.* xxxvii. § 53), the magical superstitions, and the trade mysteries (cf. *H. N.* xxxvii. § 57, on the difficulty of breaking diamonds). We then find that the ancients were remarkably close observers of gems, availing themselves of all methods, short of chemical analysis and other instruments of modern physical research. It is said of Democritus that "ne lapidum . . . vis lateret, aetatem inter experimenta consumpsit" (Petron. *Sat.* c. 88). Moreover, in the case of precious stones, minuteness of observation was stimulated by the desire of guarding against or of committing a fraud (*H. N.* xxxvii. § 197 ff.). Besides a minute study of colours of gems, frequently illustrated by Pliny's felicitous comparisons, the tests enumerated involve a study of weight (*H. N.* xxxvii. §§ 98, 199), consistency (*corpore*, § 199), hardness (§§ 98, 113, 200), conductivity (§§ 128, 199), transparency (§ 1[illegible] and *passim*), diffractive power (§§ 87, 13[illegible]), friction (§ 189), crystallography (§§ 26, 56, [illegible] 137, 144, 171, 178), taste (§§ 162, 173), and smell (§§ 139, 145, 147, 174, 185).

There are no traces in Theophrastus of magical properties attributed to gems. In Pliny, the doctrines of the *Magi* are frequently quoted, but usually with ridicule. (Cf. *H. N.*

xxxvii. §§ 118, 142 ff. and *passim.*) Some of the medicinal virtues of gems apparently accepted by Pliny, may appear little better than the doctrines of the Magi. But while Pliny is not in a position to criticise the alleged virtues of gems applied as medicines, he consistently rejects their supernatural powers under other conditions. The magical system is seen fully developed in the *Lithica* of Orpheus. This poem claims to be a statement of the magic properties of gems made by the seer Theodamas to the poet Orpheus. The work is assigned by Tyrwhitt to a time subsequent to the edict of Constantius against magic, in 357 A.D. (cf. lines 73, 74), and not long after Valens. (Tyrwhitt, Περὶ λίθων, *poema Orpheo adscriptum*, London, 1781.) In this view Tyrwhitt is followed by subsequent editors, although Krause (*Pyrgoteles*, p. 6) assigns the work to the 5th century B.C.; and King (*Precious Stones*, pp. 4, 397) dates it "at least as early as the 2nd century B.C." King gives an English verse translation (*Precious Stones*, p. 375).

On the later developments of the magical system of Orpheus until mediaeval times, see King, *Precious Stones*, p. 6.

Much confusion and uncertainty exist as to the true nomenclature of gems. Both in ancient and modern times there has been considerable looseness of usage as to the meaning of names. In many instances where the ancient word exists in modern language, it denotes a stone entirely different from that originally signified. For example, *σάπφειρος* is certainly the *lapis lazuli*, and has no connexion with the sapphire. The correct equivalents of the ancient names are generally given after King and others, in Liddell and Scott's Lexicon (ed. 7).

Literature.—Krause, *Pyrgoteles, oder die edlen Steine der Alten* (learned, but untrustworthy); Lenz, *Mineralogie der alten Griechen und Römer*, Gotha, 1861; C. W. King, *Natural History of Precious Stones and Gems, and of Precious Metals*, London, 1865; Blümner, *Technologie*, iii. 227. On the use of gems in rings, see ANULUS; on the art of gem engraving, see SCALPTURA. [A. H. S.]

GENE'SIA. [FUNUS, p. 888 *a.*]

GE'NIUS. See *Dict. Gr. and Rom. Biogr.*

GENOS (*γένος*). The word *γένος*, connected etymologically with *γένω*, *γίγνομαι*, has reference primarily to birth; and when applied to mark the connexion between a number of individuals, may equally denote the closest natural ties of a common family (*αἷμά τε καὶ γένος*, Hom. *Od.* viii. 503), or the widest natural ties of the race or nation (*ἐξ Ἰθακῆς γένος εἰμί*, *ib.* xv. 267). This connotation is still retained in the word when it is applied to denote certain minor forms of association existing between citizens in the same Greek state, marked by the common performance of certain civil and religious duties, and distinct from the larger and more definitely political forms of association such as the tribe (*φυλή*)—since the latter may, from their purely political significance, be artificially created, and based on the arbitrary distinctions of locality or rank. It is true that it is a common characteristic of Greek civil organisation to take the family as the typical form of unity, and in the creation of new state divisions to imitate its most salient characteristics, the common eponymous hero, from which, in the family or gens, the descent was traced, and the common rites and sacrifices. But to the Greek mind, a common hero and common religious rites were the natural outcome of the narrower or the wider family bonds, those of the *οἰκία* or of the *γένος*. They might be applied artificially in such creations as the tribe or deme. But that the Greeks never merged the one conception into the other is shown by facts of history. Cleisthenes, the Athenian reformer, while he distributed his new citizens into tribes and demes, and possibly into phratries, could not enrol them in the existing *γένη* (Schömann, *Antiq.* i. 364 E. T.). Foreigners obtaining the freedom of the city were, as we know, though necessarily admitted to a tribe or deme, and for certain purposes into a phratry, never enrolled in a *γένος* ([Dem.] *c. Neaer.* p. 1380, § 104); and even within the Athenian *γένη* themselves there was a distinction between the ancient members of the gentes, the *γεννῆται* (Harpocrat. *s. v.* *γεννῆται, οἱ ἐξ ἀρχῆς εἰς τὰ καλούμενα γένη κατανεμηθέντες*: Hesych. *s. v.* *γεννῆται*) and the *ὀργεῶνες*, those standing without this circle, who shared only in some of the sacred rites of the gens (Suid., Phot. *s. v.* *ὀργεῶνες*). This distinction could only have originated with the sense that these ancient members of the gens were connected through true family ties; and if we knew as much about the gentes of the Greek world generally as about those of Attica, we should probably find the same distinction between their members: between those, that is, who had a belief that they were ultimately related and those who had no ground for such a belief: not merely between those who shared in an original distribution of the members of the state and those who shared later in such a distribution. If even we accept the statement of Pollux (viii. 111) that the Athenian *γεννῆται* were in no way related (*οἱ μετέχοντες τοῦ γένους, γεννῆται καὶ ὁμογάλακτες, γένει μὲν οὐ προσήκοντες, ἐκ δὲ τῆς συνόδου οὕτω προσαγορευόμενοι*), which is merely the statement of a fact which he or his authorities believed, and does not necessarily represent the belief of the *γεννῆται* themselves, yet the bonds which united the gens, the transmitted sacred rites and the eponymous hero, had to the Greek mind the force of true family bonds. The hero or god of the gens became the mythical ancestor of the gens, as we see in the case of Hecataeus of Miletus, whose sixteenth ancestor was a god (Herod. ii. 143), the god no doubt of the *γένος* to which he belonged. Again, to get at the *origines* (*τὰ ἀνέκαθεν*) of a man, we have only to point to the god worshipped by his gens, as Herodotus points to the worship of the Carian Zeus by the *συγγενεῖς* of Isagoras the Athenian, as a sign of his descent (Herod. v. 66); while, in this passage of Herodotus, the word *συγγενεῖς*, which ordinarily meant "kinsmen" in Greece, is used as precisely equivalent to *γεννῆται*, and is distinguished from his *οἰκία*, the circle of his more immediate relations (for a similar use, cf. Isae. *Or.* 7). Peculiar rites in a Greek gens were similarly taken as a mark of some ultimate racial connexion between its members. Thus the Gephyraei at Athens, the race to which Harmodius and

Aristogeiton belonged, perpetuated the tradition of their common Phoenician descent by their peculiar sanctuaries and rites in which no other Athenian shared (Herod. v. 57 and 61); while the Athenians, accepting this race token, excluded the Gephyraei from certain minor privileges (Herod. v. 61; Thuc. vi. 56, 1, Arnold's note); no doubt from those religious privileges which were the mark of pure Ionian descent. The mythical head of the gens, the eponymous god or hero, who created the common race, and with it the transmitted priesthoods and the common rites, is known to us mainly in connexion with the greater *γένη*, those that claimed connexion with some superhuman being whose power was recognised by the whole state, or even by the whole Greek world; but it cannot be doubted that the same would be true of every *γένος* in Attica, and probably in Greece, and that the humbler gentes had their common rites, and their ancestral god or hero, as well as the more celebrated (Grote, *Hist. of Greece*, pt. ii. ch. x.). The distinctive marks of a gens were, then, this common mythical ancestry, the common rites and common assemblies (*σύνοδοι*, Pollux, *l. c.*) of its members. The reason why religious community always remained in Greece the main test of membership of a gens was that the common gentile name, which in Rome was the original test of gentilitas [GENS], was not borne along with the individual name by the Greeks. The bond of union between the *γεννῆται* was thus almost exclusively the common religious ancestry, and it is to this source that the other characteristics which distinguished the more prominent gentes in Greece may be traced. Community of religious ancestry gave rise to community of worship, and the importance of the ancestry and worship determined the importance of the gens. Thus the position of the kings at Sparta in historical times depended largely on their sole connexion with Zeus through Heracles his son (Herod. vi. 56); and through this connexion they were regarded as the link which bound the whole state to the king of heaven (Thuc. v. 16, 2, *Διὸς υἱοῦ ἡμιθέου τὸ σπέρμα*). Hence, too, the importance of some of the greater Attic gentes; the Butadae, or the true Butadae (*Ἐτεοβουτάδαι*) as they called themselves, after Cleisthenes had applied their name to the deme in which the greater part of their gens was resident, who, from their hereditary connexion with the worship of Athene Polias and Poseidon Erechtheus, furnished the holders of two of the greatest priesthoods of Athens (Aeschin. *de Fals. Leg.* § 147; Suid. *s. v.* *Ἐτεοβουτάδαι*: *Etym. Mag.* s. v. *id.*). Community of worship might further lead, not merely to the transmission of important priesthoods, but to the inheritance of certain peculiar duties and privileges which the founder of the gens had learnt from his patron deity. Thus the Eumolpidae and Ceryces at Athens were the sole exponents of the mystic ritual of the Eleusinian Demeter (Dem. *c. Androt.* p. 601, § 27; Thuc. viii. 53, 2). The Asclepiadae of Cos with their transmitted medical skill (Steph. Byz. *s. v.* *Κῶς*), the Homeridae of Chios with the gift of poetry (Harpocrat. *s. v.* *Ὁμηρίδαι*), and the Iamidae and Tellidae of Elis with that of prophecy (Herod. v. 44; ix. 33 and 37), are all instances of similar transmitted gifts associated with transmitted cults. Some of these gentes, such as the Asclepiadae and Homeridae, may have developed into schools, and lost, to some extent, the notion of common parentage. But in Sparta, where such peculiarly endowed gentes are numerous, the conceptions of hereditary privilege and actual descent were indissolubly connected. The Talthybiadae at Sparta, the state-heralds, were all *ἀπόγονοι Ταλθυβίου* (Herod. vii. 134); and this was also the case with the hereditary flute-players (*αὐληταί*) and cooks (*μάγειροι*), who handed down their profession from father to son (*κατὰ τὰ πάτρια τελέουσι*, Herod. vi. 60). This was almost a caste system, although marriage without the gens was apparently not forbidden. The pure caste system is met with in Greece in the case of a genuine *δυναστεία*, where the acquisition of supreme power by the gens was accompanied by a rule that all the marriages of its members should be made within it, as in the case of the Bacchiadae, the ruling gens at Corinth (Herod. v. 92, *ἐδίδοσαν δὲ καὶ ἤγοντο ἐξ ἀλλήλων*). In these instances community of blood-relationship and ancestry was very strongly marked. But such cases were exceptional in Greece. As a rule the chief token of descent was community in those peculiar sacred rights which had been connected from time immemorial with the life of the gens, dated back to its foundation, and were associated in idea with its mythical founder. The gens cannot be regarded, as it certainly never regarded itself, as the arbitrary formation of a legislator in founding his state. The statement of Pollux that the *γεννῆται* at Athens were not necessarily related does not conflict with the supposed natural origin of the gens; for in Greece, as in Rome, and in early societies generally, there are artificial modes of recruiting a gens, such as that by adoption (Maine, *Ancient Law*, pp. 130, 131); and by this means even the descendants of newly-created citizens might be admitted into an Athenian gens, if they were already connected with it through marriage (Schömann, *Antiq.* i. pp. 364, 365); while even where blood-relationship did exist between the different *οἰκίαι*, it would not be clearly marked in Greece through the lapse of the common gentile name. Greek speculation, however, which aimed at analysing the complex fact of the state into its simpler component elements, recognised in the *γένος* a development of the common origin which created the *οἰκία* or original unit. Aristotle (*Pol.* i. 2, 5) traces the development of the *πόλις* from the house through the village (*κώμη*). That the ideas of the *κώμη* and the *γένος* are here identical is shown by the use of the word *ὁμογάλακτες*, which is equivalent to *γεννῆται* (Pollux, viii. 111), and includes the *παίδων παῖδες*, and all collateral descendants, to describe the members of the *κώμη*. This *κώμη* or *γένος* is the widest natural unity, the extension of the family to its furthest limits (*κατὰ φύσιν ἔοικεν ἡ κώμη ἀποικία οἰκίας εἶναι*, Arist. *l. c.*: cf. Cic. *de Off.* i. 17). This is a valuable statement, as throwing light upon the Greek conception of the gens—that is, that there was a closer unity of natural relations to be found within it than in the state; but since the method pursued by Aristotle is analytic and not historical, it throws no light on the real historical development of the gens into the *πόλις*, which is a process that cannot be restored by conjecture.

Of the political significance of the γένη of Greece as a whole we can say very little. It is only in the case of the Athenian γένη that we have any full description of their relations to the other divisions of the state, and of the rights and duties of the gens. But in Greek states generally politically privileged γένη are of frequent occurrence. When such exist, the government is to a greater or less degree a δυναστεία. This was the case at Corinth under the Bacchiadae; at Sparta as regards the two kings, and possibly as regards the board of γέροντες, according to one interpretation of a passage in Aristotle (*Pol.* v. 6, 11; but see Jowett *in loc.*); in Crete as regards the election of the Cosmi, who were chosen from certain privileged γένη (Arist. *Pol.* ii. 10, 10); and in Thessaly, the normal government of which was a δυναστεία of certain families, such as the Aleuadae (Thuc. iv. 78, 3; Herod. vii. 6; Plat. *Meno*, p. 70 B). These are all instances of privileged gentes, to which superiority of birth or wealth had given superiority of power. In none of these cases is the gens taken directly as the basis of government. Even in Sparta, where the γέροντες, it is supposed, were chosen from certain prominent families in the state (I. Müller, *Handb.* iv. 1, p. 82), the gens would have only an accidental political significance. That the γέροντες were connected with the thirty ὠβαί seems shown by the Rhetra of Lycurgus quoted by Plutarch (*Lycurg.* 6). Herodotus, who does not mention the obe, says that Lycurgus divided the people into τριακάδες (Herod. i. 65). At Athens τριακάδες meant, either the γένος, each φυλή being divided into thirty of these (Pollux, viii. 111), or a similar fractional subdivision of the deme (Boeckh, *C. I.* n. 101, p. 140). The obes at Sparta represent divisions of the five local phylae (*C. I. G.* 1272, 1274). It is probable that the τριακάδες represented ultimate divisions of the people, like the γένη of Attica; but it is difficult to see how such generic divisions could have borne any relation to the local division of the obe. The significance of the gens at Sparta is quite unknown, as also the meaning of the twenty-seven phratries, which we are told existed there (Athen. iv. p. 141).

In the accounts of the Athenian as in those of the Roman gentes, we find a symmetrical division and distribution of the gentes into the larger units of the state, in Athens into the phratry or trittys and the tribe. Such a distribution could hardly have been realised in fact, when we consider the nature of the gens; while we are never told of any such original distribution by an early lawgiver, nor were they interfered with by later reformers, such as Cleisthenes. They are said to have been connected with the four Ionian tribes of Attica (Arist. *ap.* Schol. Plat. *Axioch.* p. 465; Pollux, viii. 111), each of these tribes being divided into three phratries, and each phratry into thirty gentes. That they were ever connected with the trittys, as is stated in one of the above accounts (Arist. *l. c.*), is improbable. The trittys was a subdivision of the tribe for political, as the phratry for social and religious, purposes; it was probably local, and its lowest subdivision was the smallest political unit, the naucrary (Schömann on Grote, p. 14). The trittys disappears with the political reform of Cleisthenes; the phratries and gentes, as social units, still remained intact, for it is not probable that Cleisthenes increased the numbers of the phratries (Schömann, *Antiq. of Greece*, i. p. 363; cf. I. Müller, *Handb.* iv. 1, p. 144). The gens and the phratry belong to the same category of state divisions; they are divisions whose rights and duties are those of private law. While the gens is a community, the members of which recognised a common ancestor and cultus, the phratry was an association of several such gentes recognising that cultus—the worship of Apollo Patroos and Zeus Herkeios—which was common to all the gentes, and the participation in which was a certain sign of citizenship (Phot. *s. v.* Ἕρκειος Ζεύς: *μετῆν δὲ τῆς πολιτείας οἷς εἴη Ζεὺς Ἕρκειος*: Harpocrat., Suid., s. v. *id.*; Harpocrat. *s. v.* Ἀπόλλων Πατρῷος: Dem. *c. Eubul.* p. 1315, § 54), as is shown by the question that was required to be answered as the δοκιμασία of the Archons, *εἰ Ἀπόλλων ἐστιν αὐτοῖς καὶ Ζεὺς Ἕρκιος;* (Pollux, viii. 85.) It would seem then that every citizen, whether born in or admitted to the citizenship, belonged to a phratry in so far as he shared in the worship of these gods, and he no doubt had his name enrolled as a participator in a phratry. But probably the created citizen (δημοποίητος) did not possess those rights of the phratry which depended on the fiction of relationship,—the right, for instance, of pursuing the murderer of one's φράτωρ (Dem. *c. Macart.* p. 1069, § 57), and this is what Aristophanes means by saying that the new citizens had no phrators or only barbarous ones (Aristoph. *Ran.* 419; *Aves*, 765;—Niebuhr, *Hist. of Rome*, vol. i. p. 312). An admitted citizen, then, was a member of the phratry so far as he shared in the two universal cults, but was not, strictly speaking, a φράτωρ: while a natural citizen could name three degrees of relationship, as being member of a gens and of a phratry. He had first συγγενεῖς, kinsmen where the blood-descent could be proved; γεννῆται, where the common descent was believed, but could not be proved; and φράτορες, where the relationship was merely that of religious unity, carrying with it certain natural rights and obligations between the members called by this name (Dem. *in Eubul.* p. 1306, § 24). The συγγενεῖς as such, in the later sense of the word, had no form of association: it was a distinction within the gens, the only outward form of family unity. Thus the gens had a family register (γραμματεῖον) in which the names of the children of the members were enrolled; the father of the child taking an oath that it had been begotten in union with an Athenian wife duly wedded to him. The reception into the gens was performed at the same time as the reception into the phratry, on the Cureotis, the third day of the Apaturia; and the registers of the phratry and of the gens were apparently identical. The meeting at the Apaturia was properly a meeting for the reception of φράτορες: but if a child admitted into the phratry satisfied all the conditions of being a member of the gens, he became, by this reception, a γεννήτης, and hence a second register for the gens was not required. Yet if we suppose, as we must, that citizens not born so were admitted for religious purposes into the phratry, there must have been members on the phratric register that were not members of a gens: and hence the *φρατερικὸν γραμματεῖον* and *κοινὸν γραμματεῖον* are identical (*C. I. A.* ii. 841 b; Isae. *Or.* 7 [*Apollod.*], § 13, *ἐμὲ ἐποιήσατο υἱὸν ζῶν αὐτὸς καὶ εἰς τοὺς γεννήτας καὶ εἰς τοὺς φράτορας ἐνέγραψε*), for the registration signified at the least possession of full citizen rights, although it might signify the possession of full gentile rights. The oath mentioned above as necessary for admission to the gens was the oath for admission into the phratry (Isae. vii. § 16, *ἦ μὴν ἐξ ἀστῆς καὶ ἐγγυητῆς γυναικὸς εἰσάγειν*: Dem. *in Eubul.* p. 1315, § 54, *ὁ πατὴρ ὀμόσας τὸν νόμιμον τοῖς φράτορσιν ὅρκον ἀστὸν ἐξ ἀστῆς ἐγγυητῆς αὑτῷ γεγεννημένον εἶναι*), and the same ceremonies, the sacrifice and the voting of the phrators applied to both alike, since admission to the phratry necessarily implied admission to the gens, and rejection from the former rejection from the latter; those rejected by the phrators, and by that act declared *νόθοι*, were of necessity excluded from the gens. Similarly all the duties that we read of as belonging to the phrators must have applied *à fortiori* to the gennetes: the duty, for instance, of taking vengeance on a murderer, which attached to the phrators of the murdered man (Draco, *fragm.* ed. Denkenbürger, n. 45; Dem. *c. Macart.* p. 1069, § 57), must have belonged in the first place to the *ἀγχιστεῖς*, in the next to the *γεννῆται*. As the *φρατρίαρχος* stood at the head of the phratry, so at the head of the gens stood the *ἄρχων τοῦ γένους*, who was at the same time high priest of the gens (*C. I. A.* 1276, *ἄρχων τοῦ γένους*: *ib.* 1278, *ἀρχιερεὺς καὶ γενε[άρχης]*). During the democracy, and probably at an earlier period, there was the distinction noticed above between *γεννῆται* and *ὁμογάλακτες*, true members of the gens, and *ὀργεῶνες*, members of the cult. Every phrator was either one or the other of these (Phot. *s. v.* *ὀργεῶνες*: Suid. s. v. *id.* *τοὺς δὲ φράτορας ἐπάναγκες δέχεσθαι καὶ τοὺς ὀργεῶνας καὶ τοὺς ὁμογάλακτας*). Every phrator would be an *ὀργεὼν* so far as he shared in the rites of Apollo Patroos and Zeus Herkeios; whether he could share in other sacred rites of a particular gens, without having the family rights of the gens, is doubtful. (Dig. 47, 22, where *ἱερῶν ὀργίων γεννῆται*—for *ἢ ναῦται*, Nieb.—may imply membership of the gens so far as the rites are concerned.) The true *γεννῆται*, we are told, were the original members of the gens (Harpocrat. *s. v.* *γεννῆται*, *supra*). It is a possible supposition that the Eupatrids were the original *γεννῆται*, as the patricians were the original *gentiles* of Rome, and that membership of the gens to the other *ἔθνη* of the state merely consisted in participation in its rites. In any case it was the nucleus of original full citizens of Athens that constituted the gennetes; and it is probable that at Athens, as at Rome, we see an expansion of the gens; and that consequently there would have been *ὀργεῶνες* participating in the rites of particular gentes, and perhaps also in the *λέσχαι* [LESCHE], besides those participating in the two great cults which were proof of membership of a phratry. Within the circle of the *γεννῆται*, who regarded themselves as connected by blood, we have the inner circle of the *ἀγχιστεῖς*, who were obviously so connected. The *ἀγχιστεία* marked the limits of direct inheritance in cases of intestacy, and extended to the children of cousins *ἀνεψιῶν παῖδες* (Dem. *c. Macart.* p. 1058, § 27); within this circle the Agnates took precedence over the Cognates. This is a mark of the patriarchal organisation of the Athenian gens, at least in historical times, as recognised by Solon in his laws of inheritance (Plut. *Sol.* 21: for their development, cf. Isae. p. 85; McLellan, *Studies in Ancient Hist.* p. 209). A token of the same system is the survival of the *ἄρχων τοῦ γένους* as a factor in the Greek gens; and as the Greek theorists regarded the father as the king of the family, so they regarded the eldest father as the natural head of the gens (Arist. *Pol.* i. 2, 6, *πᾶσα γὰρ οἰκία βασιλεύεται ὑπὸ τοῦ πρεσβυτάτου, ὥστε καὶ αἱ ἀποικίαι*—*i.e.* the *κώμη* or *γένος*—*διὰ τὴν συγγένειαν*): and it is shown further by the fact that the ideal *patria potestas* in which the Roman gens culminated, was represented in the Athenian and in the Greek gens throughout by the eponymous hero. (On the proportions of eponymi to eponymae in the earliest Greek societies, *v.* McLellan, *id.* p. 229.) On the other hand, descent through the mother has been thought to be implied in the curious law of Athens that half-brothers and sisters by the same father might marry, but not those by the same mother (*ἐξεῖναι γαμεῖν τὰς ἐκ πατέρων ἀδελφάς*, Leg. Attic. vi. 1, 4: McLellan, *id.* p. 209). But the object of this law was apparently merely to keep together the property of the family. The necessity existed in the case of a common father, whose property would be divided; in the case of a common mother, where the property would be that of her two husbands, it did not exist; it tended then to keep the property within the father's gens, and thus bears out the theory of descent from the father. Athenian law had many other regulations for the purpose of keeping property together chiefly through the marriage of near relations (Schömann, *Antiq.* i. p. 356), and was equally careful in preserving the existence of the family (*οἰκία*): chiefly through the re-establishment by one of the sons of a married heiress of her father's house (Schömann, l. c.; *Att. Proc.* p. 469; Dem. *c. Macart.* arg.). By this means the property and the *ἱερὰ* were kept within the gens: and outside the circle of *ἀγχιστεῖς* the *γεννῆται* had the inheritance in the last resort, like the gentiles at Rome (Schömann, *Antiq.* i. 364).

GENS. The word *gens*, connected etymologically with *geno* and *gigno*, signifies primarily an aggregate of individuals forming a political union and sprung from a common source. It is thus applied either to the whole or to part of a community, in either case with special reference to common descent. Nationality is defined by Cicero (*de Off.* i. 17, 53) as consisting in community of *gens*, *natio*, *lingua*; and in this sense of common origin, the most marked characteristic of a distinct nationality, it is constantly applied to whole peoples, as in the expressions *gens Numidarum*, *gens Aegyptiorum*, and in the juristic formula of *jus gentium*. The word may, however, denote a narrower form of common descent than that implied in nationality. Wider than the union of the family, and narrower than the bonds of the state or tribe, the gens at Rome was a social union which had, as its theoretical basis, the notion of descent from a common ancestor. The juristic theory of the gens may be expressed by saying that all the individuals constituting it would, if their descent could be traced far enough upwards, have ultimately come within the *patria potestas* of this one common ancestor; and would, accordingly, have borne a common name ("gentilis dicitur ex eodem genere ortus et is qui simili nomine appellatur," Festus, s. v. *gentilis*, p. 94). The first of these elements, common descent, was of necessity a doubtful tie. In most cases it would have been impossible to trace; and accordingly it is the second element, community of name, which, through being taken as a test of the former, was the distinctive and only certain mark of the right to participation in a gens. Those individuals who could through this token lay claim to share in a common gens were called *gentiles*: their relation towards one another and to the gens as a whole was called *gentilitas*. The very essence of the distinction between the relation of *gentilitas* and the relation of *agnatio* is to be sought in the fact that, when the common descent could be traced through all its stages, and the common *patria potestas* in which it ended fixed, there the individuals connected by this bond were *agnati*: when the common descent was only an imaginary fact based on the possession of a common name, the individuals so connected were called *gentiles*. Yet the latter name necessarily includes the former, only differing from it in being wider and less specific. A theory which draws a sharp distinction between the two must deny to the word *gens* the idea of common descent, which really lies at the basis of the conception; and is expressed, not only etymologically by the term itself, but by the outward tokens of the common *sacra*, and common right of inheritance, for which mere community of name, unaccompanied by the idea of descent, could have furnished no justification. The subsequent narrowing of these terms *gentilis* and *gentilitas* through the expansion of the gens not having been accompanied by a corresponding expansion of all the rights implied in it, is connected with the relation of the patrician and plebeian elements to one another in the Roman state. Originally, however, the expression "gentiles mihi sunt qui meo nomine appellantur" (Cincius, *ap.* Fest. *l.c.*) must have been capable of being uttered by everyone who was deemed a member of a gens, and formed indeed his only obvious claim to this position. This is equivalent to saying that the Roman gentes were all originally patrician. For the unit of the gens was the house (*familia*); and the most important members of the gens, those alone who would be capable of exercising such rights in private law as the gens possessed in its collective capacity, would be the *patres* or full heads of households. Assuming the truth of the most probable account of the origin of the Roman patriciate,—namely, that it represented those who were originally the sole full members of the Roman state, and who alone possessed the status of *patres* (whence *patricii*, Mommsen, *Staatsr.* iii. 13),—it follows that the Roman gentes were, as represented by tradition, originally exclusively patrician, and that the terms *gentilis* and *gentilitas* connoted a perfect equality of status among the members of the several *familiae* forming the gens. The restricted meaning which these words came to have in the Roman civil law originated with the evolution of the later plebeian rights. To the original gentes of Rome, those formed by the association of *patres* properly so called, there had from the first been attached a heterogeneous mass of half-free residents in Rome. An element in the state, but yet not in the strict sense a part of the state, these plebeians lived in a state of protected freedom, and in a partial dependence on the full citizens who alone constituted the gens. In this body two main elements may be distinguished: foreigners who had come to Rome on the *jus exsulandi*; emancipated slaves and their descendants [PLEBS]. Amongst this body there was clearly the same capacity for distinction as that which in the patrician aggregate formed the ground of division into gentes. There were groups of individuals who bore a common name and owned a common descent; and the common name and common descent would become more marked as years went on. Their original unity might only have been the unity of dependence on a common patrician house, but, as plebeian rights as such came to be recognised in contradistinction to patrician, the unity of name and blood in the former would be as distinct as its unity in the latter; and the original dependents on the patrician gens would form a *stirps* of their own. In the case of the patrician gens on which they were dependent wholly dying out, the plebeians who bore this name would be the sole representatives of the gens. But sometimes, as in the case of the Claudii, the patrician gens might stand side by side with the plebeian *stirps*, and it is in these circumstances that the question as to the applicability of the terms *gentilis* and *gentilitas* originated. That a patrician Claudius would have been a gentilis, not only to the members of his own order, but to the plebeian Claudii who bore his name, is clear. The question is, whether the reverse was true, whether a plebeian Claudius Marcellus could claim to be a gentilis. The answer is probably in the affirmative, so far as concerned the plebeians as a whole. That certain members of the plebeian order were excluded from *gentilitas* appears in the definition of this term by Scaevola, as quoted by Cicero (*Top.* 6, 29). The requirements of a gentilis are there stated as being, firstly, community of name; secondly, the condition of being the son of an *ingenuus*, which, as it is distinguished from the condition next mentioned, has here probably the signification merely of being born of one who is in a state of freedom, according to the definition in the Institutes (i. tit. 4, "Ingenuus qui statim ut nascitur liber est"), and not what was probably its original meaning, full membership of the gens based on the fact that one's remote ancestors had never been in a state of slavery (Ortolan, i. § 17). This is fully stated in the third condition given by Cicero, "quorum majorum nemo servitutem servivit;" and lastly we have the requirement that no *capitis deminutio* should have been suffered by the person claiming to be a gentilis. It is clear that the third condition which required the ultimate ancestors of a gentilis to have been freemen would have excluded many of the plebeian houses, which had sprung originally from emancipated slaves. But this would not prevent many of the plebeians that had no trace of servile blood in their veins from being gentiles of all who bore their common name. We find that gentile inheritances were shared by the plebeian Minucii (Cic. *in Verr.* i. 45, 115), and gentile sepulchres shared by the plebeian Popilii (*de Leg.* ii. 22, 55); and though it is true that from the patrician point of view, as shown by the words of Decius Mus ("semper ista audita sunt eadem, vos soli gentem habetis"), there would have been no such thing as a plebeian gens, but only a *stirps*, which was an offshoot of the original patrician house, still connected with it by the tie of dependence; and though the presumption, in the case of the co-existence of plebeian and patrician gentes of the same name, was apparently that the former had once been clients of the latter, as in the case of the Claudii and Claudii Marcelli (Cic. *de Orat.* i. 39, 176; PLEBS), yet these are not sufficient proofs of the denial of gentilitas to plebeians as a whole: the less so as the only professedly exact definition of gentilis which has come down to us does not contain a sufficient number of restrictive conditions to exclude all the plebeian elements in the state.

Any attempt to understand the nature of the Roman gens and the theory on which it rested can only be made by comparing it with the other subdivisions of the Roman people. As has been stated above, the gens rested in theory on a natural basis. It represents the widest limits of blood-relationship possible. The gens, then, is intimately connected with those other units, the *familia* and *agnati*, that rest on the basis of kinship. Its distinction from these is the distinction between wider and narrower groups, not between included and excluded elements respectively; the fact being that, as Ortolan states it, the members of a gens might stand to one another in the relation of *agnati*, *gentiles*, and *cognati*, while they possessed a common genealogy, whether natural or civil, peculiarly their own (Ortolan, iii. tit. ii. 1032). The attempt to construct the gens, as Niebuhr did, by an exclusion of these family groups, ends necessarily in making the gens an important political factor in the Roman community, and tracing its origin to the requirements not of private but of public life. "The numerical scale of the gentes," says Niebuhr (*Hist. Rome*, i. p. 319), "is an irrefragable proof that the Roman gentes were not more ancient than the constitution, but corporations formed by a legislator in harmony with the rest of his scheme;" and he further held (*ib.* p. 333) that the gens voted as one in the Comitia Curiata, basing his conclusion on a doubtful expression of Laelius Felix (*ap.* Gell. xv 27), who says, "Cum ex generibus hominum suffragium *feratur*, curiata comitia esse," *genus* being taken as an equivalent, as it not unfrequently is, to *gens*. To maintain that the gens was a political union without blood-relationship or connexion through the *patria potestas* (Niebuhr, *Hist. Rome*, i. p. 314) is to bring it into closer relation with the *curia* and the *tribus* than with the family: to make it a definitely artificial and not a quasi-natural association, and to give it a political importance which there is little evidence to show that it ever possessed. The small amount of corporate action possessed by the gens, and the utter absence of representative power characterising it, which will be touched on subsequently, lead us to suspect that it never could have been an important political factor in the state. Its rights are those of private not of public law, and there are but two exceptions to this general principle, one an apparent exception that rests on traditional accounts,—namely, the political distinction with which the traditional history presents us, between the *gentes majores* and the *gentes minores*; the other a real exception, that rests on modern conjecture, and which is contained in the theory that at one time the gentes were represented in the senate, or at least made the basis for its formation. The distinction between *gentes majores* and *gentes minores* is one that existed within the original patrician gentes. It is said to have originated, in the reign of Tarquinius Priscus, with the reception of fresh members into the body of the patrician senate (Cic. *de Repub.* ii. 20, 36; Liv. i. 35, 6), the members now received being called the *patres majorum gentium* as opposed to the *patres minorum gentium* or original members; and it is further stated that there was a difference of rank observed within the senate between the older and later members, the former having precedence in debate (Cic. *de Repub.* l. c. "majorum gentium quos priores sententiam rogabant"). If we accept this account as historically true, it furnishes no real evidence that the senate was ever organised on the basis of the gentes, or that a difference in grade in the gentes caused a difference in grade in the senate. The more probable conclusion is, that the senate had in the earlier regal period been composed of *patres* chosen from the original full members of the Roman state, from the first gentes therefore that formed this body: that, after the arrival and settlement of fresh gentes, a conservatism was still observed, the patres who entered the senate, no doubt on the nomination of the king, being chosen from this body; that at a later period, which tradition puts in the reign of Tarquin, the advisability was felt of a more unfettered choice of patres; and that consequently these were chosen from the newer gentes. The titles *majores*, *minores* applied to these gentes may simply denote their comparative antiquity: but it is possible that the titles may have arisen, as Cicero suggests in the passage of the *de Republica*, from the respective positions their members had within the senatorial body. The patres now chosen would have a less favoured position as compared with the older patres, and this position would reflect on the position of the gentes to which they belonged; so that, so far from a difference of political position in the gentes giving rise to a difference of position in the senate, the case would be precisely the reverse; and the gentes would only accidentally possess this reflected political character. The memory of this distinction had not died out down to a late period of the Republic, and probably lasted as long as the patrician gentes themselves. We are told by Cicero that the patrician Papirii belonged to the *minores gentes* (*ad Fam.* ix. 21, 2), the only name we know as belonging to this category. The names of the *gentes majores* are not mentioned, but Mommsen conjectures that they may be those who furnished *principes senatus*, such as the Aemilii, Claudii, Cornelii, Fabii, Manlii, and Valerii (*Staatsr.* iii. 31; *Forsch.* i. 259).

The theory that the gentes originally formed the basis of representation in the Roman senate originates mainly with the consideration of the close correspondence of numbers between the gentes and the senate. The full numbers of both are given by tradition as 300; while the symmetrical divisions of the gentes into the 30 curiae, 10 to each, and of the curiae into the three original tribes of the state, seem, if we accept it, to point to a definitely political organisation. This is further supported by the theory that the Roman state was a gradual amalgamation of three domains (*tribus*) into one; and the rise of the senate from 100, its original number as constituted by Romulus, to 300 as its final number, is accounted for by the gradual amalgamation of these three tribes with their 100 gentes each, the *gentes minores* being sometimes identified with the gentes of the last-admitted of these tribes, that of the Luceres (Ortolan, i. § 33); while a parallel to the original centumviral constitution of the senate before the συνοικισμὸς is found in the *centumviri* of the Italian municipia, supposed to be derived from the same invariable division of a *tribus*, or community, into 100 gentes (Mommsen, *Hist. Rome*, i. p. 73). The connexion of the gentes with senatorial representation is therefore not without some theoretical support, although it is never distinctly stated by ancient writers, and it crosses, though it does not absolutely conflict with, the more probable account that the senators were nominated by the king. The chief objections are to be found in the political character it gives to the gens, a character it did not bear in historical times, and also in the symmetrical principle of division such a system implies, a principle which conflicts with the nature of the origin of the gens, which is based not on an artificial but on a natural unity. The political division of the *curia* is not into gentes, according to the best tradition, but into *decuriae*, which is more probably the meaning of the δεκάδες of Dionysius (ii. 7) than gentes; and that there was ever a fixed and normal number for the gentes of Rome, which must from their natural character have fluctuated considerably, is improbable (Mommsen, *Staatsr.* iii. 12). Yet that there may have been some original connexion between the gentes and the senate, not definitely political but accidental, such as that traced in the case of the gentes majores and minores, it is quite possible to imagine.

That the gentes had not, or, if they had, could not have retained, the fixed numbers which the above-mentioned political distribution attributes to them, is shown by the fact that it was possible for new gentes to be added to the community, and even for old gentes to quit it. Thus the reception by the original Roman community of at least six gentes that had once belonged to the parent state of Alba—the Cloelii, Curiatii, Geganii, Julii, Quinctilii (or Quinctii), and Servilii—is mentioned by our authorities (Liv. i. 30; Dionys. iii. 29); and not only were Latin races so received, but Sabine races as well, such as the Valerii (Dionys. ii. 46). These new gentes are spoken of as being *cooptatae in patres* (Liv. iv. 4, "nobilitatem vestram per cooptationem in patres habetis;" Suet. *Tib.* 1, "gens Claudia in patricios cooptata"). This expression probably means nothing more than that their position in the state was conferred on them by a vote of the Comitia Curiata, all the constituents of which were originally *patres*, and therefore the only *gentiles*; so that the alternative expressions of Livy of *cooptatio in patres* and *jussu populi* to describe a reception of this kind, may be taken as denoting the same act. This is not, however, to assign any corporate action to the gens as such. Their corporate action in this case only rests on the original exclusive participation of their members in the *comitia populi*; and such an act would require, as every popular act did, the co-operation of the Roman magistrate,—that is, in early times of the king. We do, indeed, get references to the reception of gentes, to the reception of individuals into gentes, and even to the transference of gentes from the plebeian to the patrician order by the act of the curiae or the king alone, as in the case of Servius and Numa, who are said to have been transferred by the populus from the ranks of the δῆμος to those of the πατρίκιοι (Dionys. iv. 13), and in that of a whole gens, the Octavii being raised by Servius Tullius to the patrician order (Suet. *Aug.* 2). But in all these cases, if they are not merely hypothetical, we must probably understand a joint working of the magistrate and the people. The only mode by which the king or magistrate could have in any way raised the position of a plebeian gens would have been to choose some of its members for the senate, as the first consuls are said to have done (Dionys. v. 13), but even this would not have rendered them patrician. They would have been *patres* in the sense of senators, had the word attained that meaning at this early time, but not *patres* in the sense of heads of households. That the plebeian community at Rome could at this period have been called *gentes* at all is improbable; the gens is a union of *familiae*, and therefore a union of *patres*; the refusal of the title *patres* to this class, the origin of the distinction between *patricii* and *plebeii*, excludes the idea of their union into gentes. To speak of the *plebeia gens* of the Octavii becoming a *patricia gens* is therefore an anachronism; but this does not exclude the possibility of a division of the plebeian community being "coopted" into the gentes by the original Comitia Curiata on the proposal of a magistrate. The reception of fresh gentes ceased, in the course of the Republic, because there was no political assembly composed exclusively of members who fulfilled all the conditions of being gentiles. When we get the conferring of the patriciate again revived, as it was by the dictator Caesar, the power to confer it was received from a vote of the populus; although it afterwards became one of the privileges of the Roman *princeps* (Mommsen, *Staatsr.* iv. 1046). As a gens might be received into the Roman community, so a *gens* might quit it. The only instance of the expulsion of a gens is that of the Tarquinii, and the decree that this whole gens had forfeited its right to be a member of the Roman state was passed by the populus (Liv. ii. 2, "Brutus ad populum tulit ut omnes Tarquiniae gentis exsules essent;" Varro, *ap. Nonium*, p. 222 M., "omnes Tarquinios ejicerent, ne quam reditionis per gentilitatem spem haberent").

The account we have of whole gentes being received into Rome is accompanied by the account that the members of a gens originally kept together in their settlement at Rome. Thus, in the case of the migratory gens of the Claudii, we are told that, on the reception of the *civitas*, they received as well a special tract of territory across the Anio for the settlement of themselves and their clients (Liv. ii. 16; Suet. *Tib.* 1), to be divided up into allotments for the various *familiae* constituting the gens (Dionys. v. 40). This at once suggests an original connexion between the gens and the soil; the fact, that is, that the unity of the gens was one not merely natural (γενική), but also local (τοπική). On this fact, which there is no reason to doubt, and on the traces supplied by juristic tradition of the earliest modes of possession at Rome, a theory has been constructed that the gens originally held a common ownership of the soil. Mommsen points out that the earliest names for Roman territorial possessions are *heredium*, *ager publicus*, and *ager privatus*. The *heredium* was the personal property of the citizen as such, consisting only of two jugera, an amount clearly insufficient for the support of a family; the permittance of private possession of this limited allotment is attributed to Romulus (Varro, *R. R.* i. 10, 2; Plin. *H. N.* xviii. § 7), and seems a modification of some kind of original common possession. The *ager publicus* is the property of the populus Romanus, and the *ager privatus*, if it exclude the *heredium*, can only have been the property of some division of the populus, in all probability of its natural division, the gens. Again, that the terms which denote individual possession (*manus*, *mancipium*) referred originally only to movable property and not to fixed property in land is certain (Mommsen, *Staatsr.* iii. p. 23), and point to a time when some aggregate wider than the family was the owner of the soil. It is tempting to consider this aggregate to have been originally the gens, the only natural unit wider than the family, especially in view of the later rights of inheritance possessed by the gentiles. There is little in the traditional history, however, to bear out the hypothesis. The only one of the larger divisions of the state to which fixed land assignments are said to have been made, was, according to Dionysius (ii. 7), the curia (φράτρα), not the gens; and in the accounts of the early distribution of conquered land, the assignation is represented as being made to individuals (*viritim*, Cic. *de Repub.* ii. 14, 16), not to a larger aggregate. If we hold that the gens was once the common possessor of the *ager privatus* at Rome, the mode of possession can only be a matter of the purest conjecture; whether the system was one of vicarious enjoyment of land allotments, or of a life-tenure in such allotments, or even of heritable but inalienable allotments, the alternatives presented by Mommsen (*l. c.* p. 26), it is impossible to determine.

But, uncertain as the theory of this original common possession is, there were certain reversionary rights of inheritance possessed by the gentiles which may be a relic of such a system. In the case of failure of a *suus heres*, a man's property passed to his *agnati*, and on the failure of *agnati* to the *gentiles*. This order of succession is found laid down in the laws of the Twelve Tables, "Si agnatus nec escit gentiles familiam habento," and would have applied from the first to the patricians who were the only original gentiles. It is in this connexion that the importance of the definition of *gentilitas* asserts itself; and since, as has been shown, a considerable portion of the plebeians would have been gentiles, they would have enjoyed, equally with the patricians, this right of inheritance (see above: cf. Cic. *in Verr.* i. 45, 115). We find this right of the gentiles to inherit in the last resort lasting down to the end of the Republic (Suet. *Jul.* 1); but it was extinct in the time of Gaius (*Inst.* iii. 17), in the second century A.D. It must have been an inheritance by individuals, not, as may once have been the case, by a corporation; and the property must have been divided amongst the members who proved their claims to be gentiles. But the gentiles had rights in their collective capacity as well. The guardianship of the insane was in their hands as laid down by the laws of the Twelve Tables, "Si furiosus escit, ast ei custos ne escit, adgnatum gentiliumque in eo pecuniaque ejus potestas esto." The same reversionary rights of guardianship over women and children belonged to the gentiles (Cic. *pro Domo*, 13, 15; *C. I. L.* vi. 1527; and Mommsen on this Inscription, *Staatsr.* iii. 28, n. 1). Such a *tutela* must have given the gentiles all the rights of a person in Roman law, and it is difficult to see how it could have been exercised except through some personal representative of the gens. In this respect, however, the gens is regarded as capable of corporate action — a capacity of which there are few manifestations in its history. One of these is contained in the accounts we have of the gens as a whole repudiating the use of a *praenomen*, on which dishonour had been cast by the actions of one of its possessors. Thus we read of the patrician Claudii repudiating by common agreement (*consensu*) the praenomen of Lucius, because two of its bearers had been convicted of theft and murder respectively (Suet. *Tib.* 1), and again of the patrician Manlii renouncing by common decision (*decreto*) the praenomen of Marcus (Cic. *Phil.* i. 13, 32). Such an act must have been purely a matter of agreement, and must have depended on the mere will of the members to observe it, since there could have been no legal sanction to render it binding. The circle of the gens was drawn closer by the common worship and sacrifices that belonged to special gentes as such. Their maintenance was regarded as a fact of extreme importance: not so much perhaps out of regard for the welfare of particular gentes, as from the fact that if the special *sacra* of a race died out, the community would lose the favour of the divinity to which they belonged. It is this fact which explains the close connexion of gentile *sacra* with property and inheritances (Maine, *Ancient Law*, pp. 6 and 27). Property in the last resort went to the gentiles; the sacra, that they might be maintained, were a necessary burden associated with it. That the sacra might pass out of the family was of little importance; had they passed out of the gens, there was no security for their continuance, and hence the difficulties that beset the marriage of a woman outside the gens (*gentis enuptio*), as shown in the case related by Livy (xxxix. 19, 5), of Fecenia Hispalla, who was permitted, as a reward for her disclosure of the Bacchanalian conspiracy, to have control of her property and marry without the gens. For by the old Roman law of marriage the property of a woman passed wholly under the power of her husband; and with this dissociation of property from the gens there was a danger of a corresponding dissociation, and consequent non-continuance of the sacra. The same feeling is shown in the marriage of the patrician Verginia with a plebeian, in which case she was allowed to have no further share in the sacra of her family (Liv. x. 23); and one of the forms observed in cases of change of gens, such as that by *adrogatio*, was the *sacrorum detestatio*, or public declaration that the individual seeking this change ceased to claim any participation in the sacra of his race (Mommsen, *Staatsr.* iii. p. 39); while, in cases of adoption requiring a similar change of gens, it was the duty of the pontifices to inquire how the continuity of the sacred rites might be maintained (Cic. *pro Domo*, 13, 35; *de Leg.* 2, 22).

How peculiar rites became attached to particular gentes it is not easy to determine. In some cases they may have gone back to the ante-Roman traditions of the gens, as may have been the case with the peculiar sacrifices of the Claudii (Festus, s. v. *propudi*, p. 238), who are said to have entered the Roman community at a comparatively late period. But we are told that in many cases these *sacra* were in the nature of acquired cults imposed by the community on family groups (Cincius, *ap.* Arnob. iii. 38, "solere Romanos religiones urbium superatarum partim privatim per familias spargere, partim publice consecrare"); and, if this were so, many of these gentile cults would not have had a natural growth, and "would have had as slender a connexion with the gens as the exercise of his office had with the person of the magistrate" (Mommsen, *Staatsr.* iii. p. 19). The worship of Apollo by the Julia gens is probably an instance of such an acquired cult. Connected, as has been seen, with the question of the *sacra gentilicia* is the question of the changing of his gens by an individual. Membership of a gens is either natural, as that by birth, or artificial; and all the artificial modes of membership, such as adoption, adrogation or marriage, are necessarily also modes of exchanging one gens for another. As regards birth, in the time of the exclusively patrician gentes, and before the extension of the *jus conubii* to the plebs (Liv. iv. 1), marriage with a patrician mother, and by the ceremony of *confarreatio*, was necessary to constitute gentilitas for the child. This form of religious marriage also necessitated a change of gens on the part of the wife. Dionysius (ii. 5) tells us that a woman married by the *confarreatio* (*κατὰ τοὺς ἱέρους νόμους*) became a sharer in the property and sacra of her husband (*ἀνδρὶ κοινωνὸν ἁπάντων χρημάτων τε καὶ ἱερῶν*), and there is some slight trace of her originally changing her gentile name as well (Plut. *Qu. Rom.* 30). A similar change of gens, accompanied by a change of citizenship, must have befallen the woman who married by *confarreatio* a member of another community which had the *jus conubii* with Rome. The religious was soon replaced by the secular marriage, requiring mere consensus on the part of the contracting parties; and where the *confarreatio* was still necessary, as in the case of wives of religious officers, such as the Flamen Dialis, we sometimes find the assumption by a wife of her husband's gentilitas in a modified form. She was in her husband's power (*in potestáte viri*) only *sacrorum causa* (Tac. *Ann.* iv. 16). The ordinary marriage by consensus did not lead to a woman's being in the potestas of her husband, except this was assumed by prescriptive right or by *coemptio*. In this case she became a member of the family; but that the logical conclusion was pressed, and that she became a member of the gens, is doubtful, and we must conclude with Mommsen that the anomaly resulted "of a Cornelia being in the power of an Aemilius, a patrician in that of a plebeian, even a Praenestine woman in that of a Roman burgess" (*Staatsr.* iii. p. 36).

The artificial assumption of new family ties through adoption and adrogation might necessitate a change in the gens. Adoption by will, which replaced that through fictitious sale, and adrogation, or the definite renouncing of old family ties by a man who is *sui juris* for the purpose of seeking others, were performed, first through the action of the pontifices, to consider the question of the continuity of the *sacra*, next through the action of the curies, for the purpose of declaring the change of family or gens, and the fact that the rights of the old ones were renounced before those of the new one were assumed (Servius *in Aen.* ii. 156, "consuetudo apud antiquos fuit, ut qui in familiam vel gentem transiret prius se abdicaret ab ea in qua fuerat et sic ab alia acciperetur"). A new gens in these cases is acquired through a new familia. In the case of the recall of the dictator Camillus, if, with Mommsen, we take the proceedings in the Comitia Curiata mentioned by Livy (v. 46) to refer, not to his appointment as dictator, but to his re-investment with his personal rights, this would be an instance of the attainment of a gens, without the intermediate attainment of a fresh familia (Mommsen, *Staatsr.* iii. 41; ADOPTIO; ADROGATIO).

[Mommsen, *Römisches Staatsrecht*, iii. i. pp. 15–42; Becker, *Handb. der Römischen Alterthümer*, Th. ii., Abth. 1; Lange, *Römische Alterthümer*, Bd. i., Abschn. ii. (*Das Gentilrecht*); Niebuhr, *Hist. of Rome*, i. pp. 306 ff. Ortolan's view of the relation of *gentilitas* to *agnatio*, differing from that taken in this article, will be found in his *History of Roman Law* (transl.), p. 588, and in the third volume of that work comprising the commentary on the Institutes of Justinian, tit. ii. § 1.] [A. GENTI'LES. [GENS, p. 907 *a*.]

GENTI'LITAS. [GENS, p. 907 *a*.]

GEO'MORI (*γεωμόροι*; Doric, *γάμοροι*) is the name of the second of the three classes into which the inhabitants of Attica were anciently divided (Plut. *Thes.* 25; Pollux, viii. 111). Aristotle (*ap.* Schol. Plat. *Axioch.* and in C. Müller, *Fragm. Hist.* ii. 106) calls them γεωργοί. This class, together with the third, the δημιουργοί, was excluded from the great civil and priestly offices which belonged exclusively to the Eupatrids, so that there was a great distinction between the first and the two inferior classes; it is not too much to say, indeed, that the Eupatrids were the only fully enfranchised citizens (Gilbert, p. 115). The relation of these three classes to the four old-Ionic tribes and the phratries is touched upon under EUPATRIDAE. On this, and on the kindred question of the precise status of the γεωμόροι, only conjectural results can be arrived at. The name may either signify independent land-owners, or peasants who cultivated the lands of others as tenants. The γεωμόροι have, accordingly, by some writers been thought to be free land-owners, while others have conceived them to have been a class of tenants. It seems, however, inconsistent with the state of affairs in Attica, as well as with the manner in which the name γεωμόροι was used in other Greek states, to suppose that the whole class consisted of the latter only; there were undoubtedly among them a considerable number of freemen who cultivated their own lands, but had by their birth no claims to the rights and privileges of the nobles (Ruhnken on Timaeus, *s. v.* γεωμόροι: Valckenaer on Herod. v. 77, vi. 22; Arnold on Thucyd. viii. 21). The distinction between the γεωμόροι and the δημιουργοὶ was perhaps social rather than political; for in the strictly political point of view both were unimportant, and may at best have been summoned now and then to popular assemblies, like the commonalty in the states described by Homer. This would account for the fact that Dionysius (ii. 8) only mentions two classes of Attic citizens; one corresponding to the Roman patricians, the other to the plebeians. But there was a social stigma attached to those who worked for wages (βάναυσοι καὶ θῆτες, Aristot. *Pol.* iii. p. 1278, 12; καὶ τὸν μὲν γεωργικὸν δῆμον ὁρῶμεν ὄντα, τὸν δὲ ἀγοραῖον, τὸν δὲ βάναυσον, *ib.* iv. p. 1289 b, 32) which placed them below the poorest cultivator or small farmer. Some inferiority is expressed by the term ἐπιγεωμόροι, also applied to the δημιουργοί (*Etym. M.* p. 395, 54; *Lex. Seguer.* p. 257). (Thirlwall, ii. 14; Grote, pt. ii. ch. 10, ii. 280; Schömann, *Antiq.* i. 321, E. T.; Gilbert, *Staatsalterth.* i. 111 ff.)

In Samos the name γεωμόροι was applied to the oligarchical party, consisting of the wealthy and powerful. (Thucyd. viii. 21; Plut. *Quaest. Gr.* 57; Müller, *Dor.* iii. 1, § 4.) In Syracuse the aristocratical party was likewise called γεωμόροι or γαμόροι, in opposition to the δῆμος. (Herod. vii. 155; Hesych. *s. v.* Γάμοροι; Müller, *Dor.* iii. 4, § 4; Göller, *de Situ et Orig. Syrac.* p. 9: cf. Grote, ii. 244; Schömann, *Antiq.* i. 126, 171, E. T.) [L. S.] [W. W.]

GERAERAE. [DIONYSIA.]

GE'RANOS. [HYPORCHEMA.]

GERMA'NI. [COGNATI.]

GEROU'SIA (γερουσία), the council of elders (γέροντες), was the name of the Senate in most Doric states, and was especially used to signify the Senate at Sparta. In connexion with this subject it is proposed to give a general view of the Spartan constitution, and to explain the functions of its legislative and administrative elements. In the later ages of Spartan history one of the most prominent of these was the college of the five ephors; but as an account of the Ephoralty is given in a separate article [EPHORI], we shall confine our inquiries to the kings, the γέροντες or councillors, and the ἐκκλησία or assembly of Spartan freemen.

I. *The Kings.* The kingly authority at Sparta was, as it is well known, coeval with the settlement of the Dorians in the Peloponnesus, and confined to the descendants of Aristodemus, one of the Heracleid leaders, under whom, according to the Spartan legend, the conquest of Laconia was achieved. To him were born twin sons, Eurysthenes and Procles; and from this cause arose the divided royalty, the sovereignty being always shared by the representatives of the two families which claimed descent from them (Herod. vi. 52). A purely formal precedence, involving no substantial inequality of power, was granted to the elder branch, known as the house of the Agiadae or Agidae (the former is more correct: Schömann, p. 225 n.), from Agis son of Eurysthenes; while the other was styled that of the Eurypontidae from Eurypon, a grandson of Procles. Such was the national legend; but the notion that both kings were Heracleids finds little favour from recent criticism (cf. Thumser, p. 158, n. 9). It is more likely that the second house represented another family; and that of the Theban Aegidae, who are believed on other grounds to have taken part in the συνοικισμὸς or Dorian conquest of Sparta, is by far the most probable. The burial-places of the two royal families were in quite different quarters of the city of Sparta (Paus. iii. 12, § 8; 14, § 2); there was a traditional rivalry between them, and they appear never to have intermarried with one another. The double royalty no doubt originated in some circumstances of the earliest times which have not come down to us: that it was the result of a deliberate plan, on the part of the nobles, for weakening the kingly authority by dividing it, is not likely, though such a feeling may have tended to keep up the institution when once established.

The monarchy passed by hereditary descent, not unconditionally to the eldest son, but to the one who was born first during the reign of his father (Herod. vii. 3), and whose mother was of genuine Spartan descent. Marriages with foreigners were interdicted on political grounds; the kings were not to strengthen themselves at the expense of the constitution by means of union with other leading families. If no sons were born, or if the heir to the crown were incapacitated through some serious bodily defect, the nearest agnate succeeded; he it was, also, who acted as guardian and regent (πρόδικος) during a minority. Some of the most famous Spartan careers, for instance those of Lycurgus the legislator and Pausanias the victor at Plataea, arose out of this office of πρόδικος.

The requirement that the kings should be free from bodily defects was a necessary consequence of their priestly character. It was their duty either to perform in person, or to superintend, all the public sacrifices offered on behalf of the state; while in addition to this they held two special priesthoods, those of Zeus Uranius and Zeus Lacedaemon (Herod. vi. 56). For the support of the royal dignity, and of the hospitalities which it involved, public or domain lands were assigned to them in the districts of the perioeci, or provincial subjects, and certain perquisites belonged to them whenever any animal was slain in sacrifice. Besides this, the kings were entitled to various payments in kind (*πασῶν τῶν συῶν ἀπὸ τόκου χοῖρον*), that they might never be in want of victims to sacrifice; in addition to which they received, twice a month from the state, a *ἱρήϊον τέλειον*, to be offered as a sacrifice to Apollo, and then served up at the royal table. Whenever also any of the citizens made a public sacrifice to the gods, the kings were invited to the feast, and honoured above the other guests: a double portion of food was given to them, and they commenced the libations to the gods (Herod. vi. 57). All these distinctions are of a simple and antiquated character, and, so far as they go, prove that the Spartan sovereignty was a continuation of the heroic or Homeric. The distinctions and privileges granted to the king as commander of the forces in war, lead to the same conclusion. These were greater than he enjoyed at home. He was guarded by a body of at least 100 chosen men, more usually 300 (Herod. i. 67; Thucyd. v. 72); and his table was maintained at the public expense: he might sacrifice in his sacerdotal capacity as many victims as he chose, the skins and chines of which were his perquisites; and he was assisted by so many subordinate officers that he had nothing else to do, except to act as priest and strategus. (Xen. *de Rep. Lac.* 13, 15; Herod. vi. 55.)

On the death of a Spartan king the funeral solemnities were celebrated by the whole community. The markets were closed for three days, and all public business was suspended for ten: horsemen went round the country to carry the tidings, and a fixed number of the perioeci, or provincials, were obliged to come from all parts of the country to the city, where, with the Spartans and Helots and their wives, to the number of many thousands, they made loud lamentations, and proclaimed the virtues of the deceased king as superior to those of all his predecessors. (Herod. *l. c.*) At the end of the ten days mourning was changed into festivity, and the accession of the new king was celebrated: the occasion was signalised by the remission of all debts due from private individuals to the state or the king; the words of Herodotus (*ὁ ἐσιὼν ἐλευθεροῖ*, vi. 59) suggest that they were not cancelled, but paid by the new monarch as *largesse*.

In comparison with their dignity and honours, the constitutional powers of the kings were very limited. Their official title seems to have been, not *βασιλεῖς*, but *ἀρχαγέται* and *βαγοί*: the former indicating their presidency of the senate (*γερουσίαν σὺν ἀρχαγέταις καταστήσαντα*, Rhetra *ap.* Plut. *Lycurg.* 6), the latter probably from *ἄγω* with the digamma (*βαγὸς—καὶ βασιλεὺς καὶ στρατηγός· Λάκωνες*, Hesych.; cf. Boeckh on *C. I. G.* i. 83).

In the *γερουσία*, it is probable, their votes counted for no more than those of any other senator; when absent, their place was supplied and their proxies tendered by the councillors who were most nearly related to them, and therefore of a Heracleid family. The presidency of that body was lodged either in the king of the elder house (Thirlwall, i. 319) or, as with the Roman consuls, in the two kings alternately (Schömann, *Antiq.* i. 233, E. T.): the latter supposition is more in accordance with the substantial equality of the royal houses. Herodotus (vi. 57) states that they each had two votes, but this is denied by Thucydides (i. 20); when the votes were equally divided, the president may have had a casting vote, in which case his vote counted as two. The expression of Thucydides, *προστίθεσθαι μιᾷ ψήφῳ*, implies that the kings voted last, which was no doubt the case with the president (Schömann, *l. c.*). Among other prerogatives they had the right of convoking and addressing the public assembly; they appointed the *Πύθιοι* [PYTHII] and the *πρόξενοι* [HOSPITIUM], the latter an important office in a state so jealous of foreigners as Sparta. Their judicial powers were by no means extensive; they tried suits respecting the maintenance of the public roads or the disposal of heiresses (*πατροῦχοι, ἐπιπάμονες*: cf. EPICLERUS, p. 748 *a*); and adoptions took place in their presence. It was only in war that the kings still retained many attributes of the heroic monarchy. In old times they had the right to declare war upon whom they pleased, and any one who hindered them was laid under a curse (Herod. vi. 56); this, however, is not said of the single king, but of the two in joint command (*ἐπ' ἣν ἂν βούλωνται χώρην*), and in Xenophon's time it is *στρατιὰν ὅποι ἡ πόλις ἐκπέμπῃ ἡγεῖσθαι* (cf. *Hellen.* iii. 4, § 3; iv. 7, § 2). After the quarrel between Cleomenes and Demaratus (B.C. 506), a law was passed that for the future one only of the two kings should have the command of the army on foreign expeditions. When they had once crossed the borders of Laconia, in command of troops, their authority became unlimited, except as to capital punishment (Aristot. *Pol.* iii. 9 = p. 1285, 7). They could send out and assemble armies, despatch ambassadors to collect money, and refer those who applied to themselves for justice to the proper officers appointed for that purpose. (Xen. *de Rep. Lac.* 13; Thuc. v. 60, viii. 5.) Two ephors, indeed, accompanied the kings on their expeditions, but those magistrates had no authority to interfere with the king's operations: they simply watched over the proceedings of the army. (Xen. *l. c.*) Moreover, there can be no doubt that the kings were, on their return home, accountable for their conduct as generals (Thucyd. v. 63), and more especially after the increase of the ephoral authority. Their military power also was not connected with any political functions, for the kings were not allowed to conclude treaties or to decide the fate of cities, without communicating with the authorities at home. (Xen. *Hell.* ii. 2, § 12; v. 3, § 24.)

II. *The γερουσία, or Council of Elders.* This body was the aristocratic element of the Spartan polity, and not peculiar to Sparta only, but found, as has been already observed, in other Dorian states, just as a *βουλή* or democratical council was an element of most Ionian constitutions.

The *γερουσία* at Sparta, called in the local dialect *γεροντία*, *γερωχία*, and perhaps *γερωΐα* (Schömann, p. 230; Gilbert, p. 51; Thumser, p. 155), consisted of twenty-eight members, exclusive of the two kings, its presidents. Plutarch (*Lycurg.* 5) gives various explanations of this number; his own, which has been generally followed in modern times, is that, with the kings, the number thirty was made up. Hence it has been very generally supposed that each of the thirty Obae (*ὠβαί*) into which the people were divided was represented by one of the Gerontes (Müller, *Dor.* iii. 5, §§ 3, 8). But the evidence for the number of thirty Obae is very insufficient, and it is now admitted that the connexion between them and the Gerousia is, to say the least, extremely doubtful. Like every Dorian state, Sparta was divided into the three genealogical tribes (*φυλαὶ γενικαί*: cf. DEMUS, p. 615 *a*) of *Ὑλλεῖς*, *Δυμᾶνες*, and *Πάμφυλοι*, whence the Dorians are called *τριχάϊκες*, or thrice divided (*Od.* xix. 177). But it is now agreed that there was another division of the Spartans into local tribes (*φυλαὶ τοπικαί*), the number of which is unknown, but was perhaps five, corresponding to the five *κῶμαι* or villages which made up the city of Sparta, and named, as there is good reason to think, *Πιτάνη*, *Λίμναι*, *Μεσσόα*, *Κυνόσουρα*, and *Δύμη* (Thumser, p. 165 n.). The Obae were subdivisions of these local tribes, not of the three hereditary ones; their number and exact nature are unlike unknown, and any definite conclusions on this point must await further evidence from inscriptions (Gilbert, p. 44). Schömann (p. 231) has well pointed out that it is hard to believe that the kings, who ranked as members of one gens, the Heracleidae, can have represented two different Obae; or again, that so obvious a circumstance as the representation of the Obae in the Gerousia, if it really existed, could have remained so completely concealed from the ancients, and especially from Aristotle. Thumser (p. 165) has in our opinion treated these objections much too lightly.

No one was eligible to the Gerousia till he was sixty years of age (Plut. *Lycurg.* 26), and the additional qualifications were strictly of an aristocratic nature. We are told, for instance, that the office of a councillor was the reward and prize of virtue (Aristot. *Pol.* ii. 9 = p. 1270 b, 24; Demosth. *c. Lept.* p. 489, § 107), and that it was confined to men of distinguished character and station (*καλοὶ κἀγαθοί*). The election was determined by vote, and the mode of conducting it was remarkable for its old-fashioned simplicity. The competitors presented themselves one after another to the assembly of electors (Plut. *Lycurg.* 26); the latter testified their esteem by acclamations, which varied in intensity according to the popularity of the candidates for whom they were given. These manifestations of esteem were noted by persons in an adjoining building, who could judge of the shouting, but could not tell in whose favour it was given. The person whom these judges thought to have been most applauded was declared the successful candidate. Aristotle calls this mode of election childish (*παιδαριώδης*, *l. c.* line 28); and further denounces it because the candidates came forward of their own motion, whereas the best men ought to have been elected even against their will (p. 1271, 10). The office of a councillor was not only for life, but also irresponsible (p. 1271, 15), as if a previous reputation, and the near approach of death, were considered a sufficient guarantee for integrity and moderation. But the councillors did not always prove so, for Aristotle (*l. c.*) tells us that the members of the *γερουσία* received bribes, and frequently showed partiality in their decisions.

The functions of the councillors were partly deliberative, partly judicial, and partly executive. In the discharge of the first they prepared measures and passed preliminary decrees (Plut. *Agis*, 11) which were to be laid before the popular assembly, so that the important privilege of initiating all changes in the government or laws was vested in them. As a criminal court they could punish with death and civil degradation (*ἀτιμία*, Xen. *Rep. Lac.* 10, § 2; Aristot. *Pol.* iii. 1 = p. 1275 b, 10), and that too without being restrained by any code of written laws, for which national feeling and recognised usages would form a sufficient substitute. They also appear to have exercised, like the Areiopagus at Athens, a general superintendence and inspection over the lives and manners of the citizens (*arbitri et magistri disciplinae publicae*, Aul. Gell. xviii. 3), and probably were allowed "a kind of patriarchal authority to enforce the observance of ancient usage and discipline." (Thirlwall, *Hist. of Greece*, vol. i. p. 318.) It is not, however, easy to define with exactness the original extent of their functions; especially as respects the last-mentioned duty, since the ephors not only encroached upon the prerogatives of the king and council, but also possessed, in very early times, a censorial power, and were not likely to permit any diminution of its extent.

III. *The ἐκκλησία, or Assembly of Spartan Freemen.* This assembly possessed, in theory at least, the supreme authority in all matters affecting the general interests of the state. Its original position at Sparta is shortly explained by a rhetra or ordinance of Lycurgus, which, in the form of an oracle, exhibits the principal features of the Spartan polity:—"Build a temple," says the Pythian god, "to Hellanian Zeus and Hellanian Athena; divide the tribes, and institute thirty obas; appoint a council with its princes; call an assembly between Babyca and Knakion, then make a motion and depart; and let there be a right of decision and power to the people:" thus translated in Müller, *Dor.* iii. 5, § 8. The Greek of this *ῥήτρα* is highly curious, and involves some critical points: *Διὸς Ἑλλανίου καὶ Ἀθανᾶς Ἑλλανίας* [*Συλλανίου . . . Συλλανίας*, Sintenis; other conjectures in Thumser, p. 11[illegible], n. 4] *ἱερὸν ἱδρυσάμενον, φυλὰς φυλάξαντα καὶ ὠβὰς ὠβάξαντα* [*τριάκοντα*] *γερουσίαν σὺν ἀρχαγέταις καταστήσαντα, ὥρας ἐξ ὥρας ἀπελλάζειν μεταξὺ Βαβύκας τε καὶ Κνακιῶνος, οὕτως εἰσφέρειν τε καὶ ἀφίστασθαι· δάμῳ δὲ τὰν κυρίαν ἦμεν καὶ κράτος* (*ap.* Plut. *Lycurg.* 6). The technical terms are then explained by Plutarch: *ἐν τούτοις τὸ μὲν φυλὰς φυλάξαι καὶ ὠβὰς ὠβάξαι, διελεῖν ἐστι καὶ κατανεῖμαι τὸ πλῆθος εἰς μερίδας, ὧν τὰς μὲν φυλάς, τὰς δὲ ὠβὰς προσηγόρευκεν. Ἀρχαγέται δὲ οἱ βασιλεῖς λέγονται, τὸ δὲ ἀπελλάζειν, ἐκκλησιάζειν.* The word *τριάκοντα* is commonly (as by Müller) joined to *ὠβάς*, and this is the only evidence for the number of thirty obae (see above); Sintenis places a comma after *ὠβάξαντα,* and joins *τριάκοντα γερουσίαν σὺν ἀρχαγέταις*, an awkward expression which is not likely to have been used in a law; Curtius and others with good reason reject the word as a gloss (Thumser, p. 166, n. 3). On the name *ἀπέλλα,* and the probable meaning of the phrase "between Babyca and Knakion," see under ECCLETI, and cf. SPARTA in *Dict. Geogr.* ii. 1029 a; the text of Plutarch is here defective. The phrase *ὥρας ἐξ ὥρας*, given up by Müller as unintelligible, is now explained of a monthly meeting, "from full moon to full moon," on the authority of the Schol. to Thucyd. i. 67. On occasions of emergency, extraordinary meetings were convened by the kings and, in later times, by the ephors also (Herod. vii. 134).

By this ordinance full power was given to the people to adopt or reject whatever was proposed to them by the king and other magistrates. It was, however, found necessary to define this power more exactly, and the following clause, ascribed to the kings Theopompus and Polydorus, was added to the original rhetra: "but if the people should follow a crooked opinion the elders and the princes shall withdraw" (*αἰ δὲ σκολιὰν ὁ δᾶμος ἕλοιτο τοὺς πρεσβυγενέας καὶ ἀρχαγέτας ἀποστατῆρας ἦμεν*). Plutarch (*l. c.*) interprets these words to mean, "That in case the people does not either reject or approve *in toto* a measure proposed to them, the kings and councillors should dissolve the assembly, and declare the proposed decree to be invalid." With *σκολιὰν* Plutarch supplies *γνώμην*, but probably the word should be *ῥήτραν*: we read in Tyrtaeus *εὐθείαις γνώμαις ἀνταπαμειβομένους*. According to this interpretation, which is confirmed by some verses in the Eunomia of Tyrtaeus, the assembly was not competent to originate any measures, but only to pass or reject, without modification, the laws and decrees proposed by the proper authorities: a limitation of its power, which almost determined the character of the Spartan constitution, and justifies the words of Demosthenes, who observes (*c. Lept.* p. 489, § 107), that the *γερουσία* at Sparta was in many respects supreme —*Δεσπότης ἐστὶ τῶν πολλῶν*. All citizens above the age of thirty who were not labouring under any loss of franchise were admissible to the general assembly or *ἀπέλλα*: but no one except public magistrates, and chiefly the ephors and kings, addressed the people without being specially called upon. (Müller, *Dor.* iii. 4, § 11.) The same public functionaries also put the question to the vote, and the method of voting was by acclamation. (Thuc. i. 80, 87.) Hence, as the magistrates only (*τὰ τέλη* or *οἱ ἐν τέλει*) were the leaders and speakers of the assembly, decrees of the whole people are often spoken of as the decision of the authorities only, especially in matters relating to foreign affairs. The intimate connexion of the ephors with the assembly is shown by a phrase of very frequent occurrence in decrees (*ἔδοξε τοῖς ἐφόροις καὶ τῇ ἐκκλησίᾳ*). An attempt has been made to distinguish between the phrases *οἱ ἐν τέλει* and *τὰ τέλη*: they probably refer to the same persons, according as they are regarded in their individual (*οἱ ἐν τέλει*) or their collective (*τὰ τέλη*) capacity.

"The subjects of discussion in the popular assemblies which we find in the historians are the election of magistrates and Gerontes, decisions upon a disputed succession between pretenders to the crown, votes concerning peace and war, and treaties with foreign states, or finally legislative measures, although we are unable to state definitely which of these subjects were referred originally to the people, and which only at a later time, or which of them were heard before the Great and which before the Small Ecclesia [on this *μικρὰ ἐκκλησία*, mentioned only Xen. *Hell.* iii. 3, § 8, see ECCLETI]. As far as concerns legislation especially, this was in Sparta of so fixed and rigid a nature that the assembly had much less business in connexion with it than in other states; and if we except the gradual extension of the privileges of the ephoralty, which could hardly have resulted without occasional decrees of the people, we find no mention until the times of Agis and Cleomenes of legislative measures which can be regarded as passed by the people, with exception of the permission to use gold and silver in the State treasury, and the law of Epitadeus by which the inalienability of family estates was removed." (Schömann, *Antiq.* i. 235, E. T.)

The commingling of monarchical, aristocratic or oligarchic, and democratic elements in the Spartan constitution was noticed by ancient writers; but the clearer-sighted among them saw what is still more evident to the moderns, that the oligarchic element largely preponderated. Thus Isocrates, who was completely out of sympathy with the democratic institutions of his own country, referring to the greatly increased authority of the kings in war-time, speaks of the Lacedaemonians as "the best governed of the Greeks, an oligarchy in peace, a monarchy in war" (*Nicocl.* § 24). It was also seen that the constitution, as settled by Lycurgus, was greatly altered in character by the usurpation of the ephors; while the complete exclusion of the Perioeci and Helots from all share in the government did not strike them as incompatible with democracy. Thus Plato doubted whether the government of Sparta might not be called a "tyranny," in consequence of the extensive powers of the ephoralty, though it was as much like a democracy as any form of government could well be; and yet, he adds, not to call it an aristocracy (*i.e.* a government of the *ἄριστοι*) is quite absurd. Aristotle, when he enumerates the reasons why the Spartan government was called an oligarchy, makes no mention of the relations between the Spartans and their conquered subjects, but observes that it received this name because it had many oligarchical institutions, such as that none of the magistrates were chosen by lot; that a few persons were competent to inflict banishment and death (*Pol.* iv. 9 = p. 1294 b, 31). In another passage he views the question somewhat differently, insisting more upon the balance of powers in the constitution and less on the predominance of a single element: "Some declare that the best form of government is one mixed of all the forms, wherefore they praise the Spartan constitution: for some say that it is composed of an oligarchy, a monarchy, and a democracy—a monarchy on account of the kings, an oligarchy on account of the councillors, and a democracy on account of the ephors; but others say that the ephoralty is a 'tyranny;' whereas, on the other hand, it may be affirmed that the public tables, and the regulations of daily life, are of a democratic tendency" (*Pol.* ii. 6 = p. 1265 b, 33 ff.). In reality the clearest proof of the essentially oligarchical character of the Spartan government is the jealous exclusiveness with which, in spite of dwindling numbers, they refused to admit new blood. As in other oligarchies ancient and modern, this exclusiveness was not incompatible with the haughty equality of all who stood within the charmed circle; but at Sparta that equality was modified by the distinction, still somewhat obscure, between the *ὅμοιοι* and *ὑπομείονες* [HOMOEI]. The Greeks naturally associated oligarchy with the ostentatious enjoyment of wealth; and as we see from the last-quoted passage, they were sometimes misled by the simplicity and rigour of the Spartan training, and ascribed to a democratic instinct what was really a necessity of class and racial domination. "All Laconia was a camp, the Spartiatae a garrison" [EMPHRURI]; and they remained during the whole course of their history as alien in blood from the subject population as the Normans in England for a short period after the Conquest. The case is pithily summed up by Grote (ii. 127): "Though Greek theorists found a difficulty in determining under what class they should arrange it, it was in substance a close, unscrupulous, and well-obeyed oligarchy—including within it, as subordinate, those portions which had once been dominant, the kings and the senate, and softening the odium, without abating the mischief, of the system, by its annual change of the ruling ephors."

Authorities.—1. For the facts of the Spartan constitution: Schömann, *Antiq.* i. 191–295, E. T.; Gilbert, *Staatsalterth.* i. 44–56; Busolt, *Griech. Gesch.* i. 94–135; Thumser, *Staatsalterth.* pt. i. (1889), in Hermann-Blümner, §§ 23–25, pp. 146–176. 2. For historical criticism of its spirit: Arnold, *Thucydides*, vol. i. App. ii. in the 2nd and subsequent edd., largely modified by Sir G. C. Lewis' review of edit. 1 in *Philol. Mus.* ii. 38–71; Thirlwall, vol. i. ch. 8; Grote, vol. ii. pt. ii. ch. 6. [R. W.] [W. W.]

GERRON (γέρρον, Lat. *gerra*) properly signified anything made of wicker-work. 1. The name of the Persian shields, which were made of wicker-work covered with ox-hide, of an oblong shape, and were smaller and shorter than the Greek shields (ἀντὶ ἀσπίδων γέρρα, Herod. vii. 61, ix. 61; Xen. *Anab.* ii. 1, § 6; *Cyrop.* vii. 1, § 33). 2. For the wattled screens or hurdles called γέρρα in the Athenian Agora, see ECCLESIA, p. 699 *a*.

The Latin *gerrae*, "nonsense" (Plaut. *Asin.* iii. 3, 10; *Epid.* ii. 2, 51; *Poen.* i. 1, 9) seems to be a metaphor from the lightness and flimsiness of wicker-work (Fest. s. vv. *cerrones, gerrae*). The connexion with "queer," Germ. *quer* (Wagner on Plaut. *Trin.* iii. 3, 31), can hardly be maintained. [W. S.] [W. W.]

GLADIATO'RES (μονομάχοι) were men who fought with swords in the circus, the forum, or in later times in the amphitheatre, for the amusement of the Roman people. ("Gladiator est, qui in arena, populo spectante, pugnavit," Quintil. *Declam.* 302.) They are said to have been first exhibited by the Etruscans, and to have had their origin from the custom of killing slaves and captives at the funeral pyres of the deceased. (Tertull. *de Spectac.* 12; Serv. ad Verg. *Aen.* x. 519.) [FUNUS, p. 893 *b*.] A show of gladiators was called *munus*, and the person who exhibited (*edebat*) it, *editor*, *munerator*, or *dominus*, who was honoured during the day of exhibition, if a private person, with the official signs of a magistrate. (Capitol. *M. Anton. Philos.* 23; Flor. iii. 20; Cic. *ad Att.* ii. 19, 3.)

Gladiators were first exhibited at Rome in B.C. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father. (Valer. Max. ii. 4, 17; Liv. *Epit.* 16.) They were at first confined to public funerals, but afterwards fought at the funerals of most persons of consequence, and even at those of women. (Suet. *Jul.* 26; Spartian. *Hadr.* 9.) Private persons sometimes left a sum of money in their will to pay the expenses of such an exhibition at their funerals (Cic. *in Vat.* 15, 37; *pro Sulla*, 19, 54; Hor. *Sat.* ii. 3, 84). Combats of gladiators were also exhibited at entertainments by the degraded nobles of Campania (Athen. iv. p. 153; Sil. Ital. xi. 51), though not at Rome, and especially at public festivals by the aediles and other magistrates, who sometimes exhibited immense numbers with the view of pleasing the people. (Cic. *pro Mur.* 18, 37; *de Off.* ii. 16, 55.) [AEDILES.] Under the empire the passion of the Romans for this amusement rose to its greatest height, and the number of gladiators who fought on some occasions appears almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibited (Dio Cass. lxviii. 15).

Gladiators consisted either of captives (Vopisc. *Prob.* 19), slaves (Suet. *Vitell.* 12), and condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned *ad gladium*, in which case they were obliged to be killed at least within a year; and others *ad ludum*, who might obtain their discharge at the end of three years. (Ulpian, *Collat. Mos. et Rom. Leg.* tit. xi. s. 7, § 4.) Freemen who became gladiators for hire were called *auctorati* (Quint. *l. c.*; Hor. *Sat.* ii. 7, 58, with Acron's note), and their hire *auctoramentum* or *gladiatorium* (Suet. *Tib.* 7; Liv. xliv. 31). They also took an oath on entering upon the service, similar to that which is preserved by Petronius (117): "In verba Eumolpi sacramentum juravimus, uri, vinciri, verberari, ferroque necari, et quicquid aliud Eumolpus jussisset, tamquam legitimi gladiatores domino corpora animasque religiosissime addicimus." (Compare Senec. *Epist.* 7.) Even under the republic free-born citizens fought as gladiators (Liv. xxviii. 21), but they appear to have belonged only to the lower orders, and the profession was considered degrading (cf. Mommsen, *C. I. L.* i. 1418), though to some it had many attractions. Under the empire, however, both equites and senators fought in the arena (Dio Cass. li. 22, lvi. 25; Suet. *Jul.* 39; *Aug.* 43, *Ner.* 12), and even women (Tac. *Ann.* xv. 32; Suet. *Dom.* 4; Juv. vi. 250, &c.; Stat. *Silv.* i. 6, 53); a practice which was at length forbidden in the time of Severus (Dio Cass. lxxv. 16).

Gladiators were kept in schools (*ludi*), where they were trained by persons called *lanistae* (Suet. *Jul.* 26; Cic. *pro Rosc. Amer.* 40, 118; Juv.

vi. 216, xi. 8). The whole body of gladiators under one lanista was frequently called *familia* (Suet. *Aug.* 42). They sometimes were the property of the lanistae, who let them out to persons who wished to exhibit a show of gladiators; but at other times belonged to citizens, who kept them for the purpose of exhibition, and engaged lanistae to instruct them. Thus Spartacus belonged to the school of Lentulus at Capua (Flor. iii. 8), and Caesar had one at the same place. Domitian built four *ludi* at Rome, and there were several others in Italy and the provinces (Caes. *Bell. Civ.* i. 14). The number of gladiators which any citizen might keep was limited by the senate in B.C. 68 (Suet. *Jul.* 10), but Caligula did away with the restriction (Dio Cass. lix. 14). The superintendence of the ludi, which belonged to the emperors, was entrusted to a person of high rank, called curator or procurator. (Tac. *Ann.* xi. 35, xiii. 22; Suet. *Cal.* 27; Wilmanns, *Inscr.* 1290, &c.) The arrangements of a *ludus gladiatorius* are now known to us from one excavated at Pompeii, a plan of which is given in Overbeck's *Pompeii*, p. 170. The gladiators fought in these ludi with wooden swords, called *rudes* (Suet. *Cal.* 32, 54). Great attention was paid to their diet in order to increase the strength of their bodies, whence Cicero (*Phil.* ii. 25, 63) speaks of "gladiatoria totius corporis firmitas." They were fed with nourishing food, called *gladiatoria sagina* (Tac. *Hist.* ii. 88). A great number of gladiators were trained at Ravenna on account of the salubrity of the place (Strabo, v. p. 213).

Gladiators were sometimes exhibited at the funeral pyre, and sometimes in the forum, but more frequently in the amphitheatre. [AMPHITHEATRUM.] The person who was to exhibit a show of gladiators published some days before the exhibition bills (*libelli*), containing the number and sometimes the names of those who were to fight (Cic. *ad Fam.* ii. 8; Suet. *Caes.* 26): *e.g.* at Pompeii we have (*C. I. L.* iv. 1189), "A. Suettii Certi aedilis familia gladiatoria pugnabit Pompeiis prid. Kal. Jun. venatio et vela erunt;" and similar notices. When the day came, they were led along the arena in procession, and matched by pairs (Hor. *Sat.* i. 7, 20); and their swords were examined by the *editor* to see if they were sufficiently sharp. (Dio Cass. lxviii. 3; Suet. *Tit.* 9; Lipsius, *Excurs. ad* Tac. *Ann.* iii. 37). At first there was a kind of sham battle, called *praelusio*, in which they fought with wooden swords, or the like (Cic. *de Orat.* ii. 78, 317; Ovid, *Ars Amat.* iii. 515; Senec. *Epist.* 117), and afterwards at the sound of the trumpet the real battle began. When a gladiator was wounded, the people called out *habet* or *hoc habet;* and the one who was vanquished lowered his arms in token of submission. His fate, however, depended upon the people, who turned up their thumbs if they wished him to be killed (Hor. *Ep.* i. 18, 66; Juv. iii. 36), and ordered him to receive the sword (*ferrum recipere*), which gladiators usually did with the greatest firmness. (Cic. *Tusc.* ii. 17, 41; *pro Sest.* 37, 80; *pro Mil.* 34, 92.) A relief has been discovered at Cacillargues, showing a combat between a Samnite and a retiarius, with four spectators, one of whom, a woman, is holding up her thumbs. There is no clear evidence that the wish that mercy should be shown was expressed by pressing down the thumbs (Plin. *H. N.* xxviii. § 25 is barely to the point): this was indicated rather by waving handkerchiefs (Mart. xii. 29, 7). If the life of a vanquished gladiator was spared, he obtained his discharge for that day, which was called *missio* (Mart. xii. 29, 7); and hence in an exhibition of gladiators *sine missione* (Liv. xli. 20), the lives of the conquered were never spared. This kind of exhibition, however, was forbidden by Augustus (Suet. *Aug.* 45).

Palms were usually given to the victorious gladiators (Suet. *Cal.* 32); and hence a gladiator who had frequently conquered is called "plurimarum palmarum gladiator" (Cic. *pro Rosc. Amer.* 6, 17); money also was sometimes given (Juv. vii. 243; Suet. *Claud.* 21). Old gladiators, and sometimes those who had only fought for a short time, were discharged from the service by the *editor* at the request of the people, who presented each of them with a rudis or wooden sword; whence those who were discharged were called *Rudiarii.* (Cic. *Philip.* ii. 29, 74; Hor. *Ep.* i. 1, 2; Suet. *Tib.* 7; Quint. *l. c.*) If a person was free before he entered the ludus, he became on his discharge free again; and if he had been a slave, he returned to the same condition again, unless he received the cap of freedom (Plin. *Ep.* x. 40). A man, however, who had been a gladiator, was always considered to have disgraced himself, and consequently it appears that he could not obtain the equestrian rank if he afterwards acquired sufficient property to entitle him to it (Quint. *l. c.*); and a slave who had been sent into a ludus and there manumitted, either by his then owner or another owner, merely acquired the status of a *peregrinus dediticius.* (Gaius, i. 13.) [DEDITICII.]

Shows of gladiators were abolished by Constantine (Cod. 11, tit. 43), but appear notwithstanding to have been generally exhibited till the time of Honorius, by whom they were finally suppressed. (Theodoret. *Hist. Eccles.* v. 20.)

Gladiators were divided into different classes, according to their arms and different mode of fighting, or other circumstances. (Cf. Friedländer in *Rhein. Mus.* x. 582 ff.) The names of the most important of these classes is given in alphabetical order:—

Andabatae (Cic. *ad Fam.* vii. 10) wore helmets without any aperture for the eyes, so that they were obliged to fight blindfold, and thus excited the mirth of the spectators. They are generally believed to have fought on horseback, but this is denied by Orelli (*Inscr.* 2577) and Friedländer; the name cannot be derived from ἀναβάτης. It is perhaps Celtic, with the meaning "blind-fighter" (Whitley Stokes, in *Academy*, Feb. 9, 1889).

Catervarii was the name given to gladiators when they did not fight in pairs, but when several fought together. (Suet. *Aug.* 45; *gregatim dimicantes*, *Cal.* 30.)

Dimachaeri appear to have been so called, because they fought with two swords. (Artemid. ii. 32; Orelli, *Inscr.* 2584.)

Equites were those who fought on horseback. (Orelli, 2569, 2577; Cic. *pro Sest.* 59, 126.)

Essedarii fought from chariots like the Gauls and Britons. [ESSEDUM.] They are frequently mentioned in inscriptions. (Orelli, 2566, 2584, &c.: cf. Petron. 45.)

Fiscales were those under the empire who were trained and supported from the fiscus. (Capitol. *Gord.* 33.)

Hoplomachi appear to have been those who fought in a complete suit of armour. (Suet. *Cal.* 35; Martial, viii. 74; Orelli, 2566.) Lipsius considers them to have been the same with the Samnites, and that this name was disused under the emperors, and hoplomachi substituted for it.

Laquearii were those who used a noose to catch their adversaries. (Isid. xviii. 56.)

Meridiani were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators were very lightly armed. (Senec. *Epist.* 7; Suet. *Claud.* 34; Orelli, 2587.)

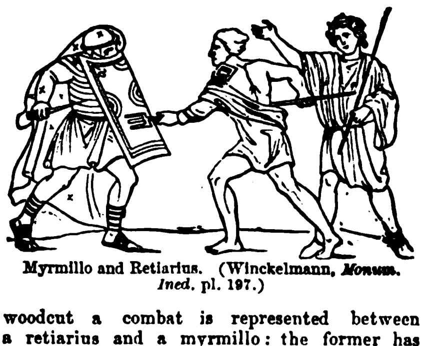
Myrmillones are said to have been so called from their having the image of a fish (*mormyr*, *μορμύρος*) on their helmets. (Festus, s. v. *Retiario.*) Their arms were like those of the Gauls, and they did not differ much from the kind called Galli. They were usually matched with the retiarii or Thracians. (Cic. *Phil.* iii. 12, 31, vii. 6, 17; Juv. viii. 200; Suet. *Cal.* 32, *Dom.* 10; Orelli, 2566, 2580.)

Ordinarii was the name applied to all the regular gladiators, who fought in pairs, in the ordinary way. (Senec. *Epist.* 7; Suet. *Aug.* 45, *Cal.* 26.)

Postulaticii were such as were demanded by the people from the *editor*, in addition to those who were exhibited. (Senec. *l. c.*)

Provocatores fought with the Samnites (Cic. *pro Sest.* 64, 134), but we do not know anything respecting them except their name. They are mentioned in inscriptions. (Orelli, 2566.) The προβοκάτωρ mentioned by Artemidorus (ii. 32) appears to be the same as the provocator.

Retiarii carried only a three-pointed lance, called *tridens* or *fuscina* [FUSCINA], a dagger (Val. Max. i. 7, 8), and a net (*rete*), which they endeavoured to throw over their adversaries, and then to attack them with the fuscina while they were entangled. The retiarius was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he betook himself to flight, and endeavoured to prepare his net for a second cast, while his adversary followed him round the arena in order to kill him before he could make a second attempt. His adversary was usually a secutor or a myrmillo. (Juv. ii. 143, viii. 203; Suet. *Cal.* 30, *Claud.* 34; Orelli, 2578.) In the following woodcut a combat is represented between a retiarius and a myrmillo: the former has thrown his net over the head of the latter, and is proceeding to attack him with the fuscina. The lanista stands behind the retiarius.



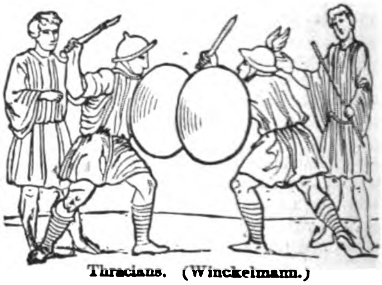
Myrmillo and Retiarius. (Winckelmann, *Monum. Ined.* pl. 197.)

Samnites were so called because they were armed in the same way as that people, with a helmet with a high crest (Juv. vi. 256), and were particularly distinguished by the oblong *scutum*. (Cf. Overbeck's *Pompeii*, p. 164; Liv. ix. 40; Cic. *pro Sest.* 64, 154.)

Secutores are supposed by most writers to be so called because the secutor in his combat with the retiarius pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the *suppositicii*, mentioned by Martial (v. 24), who were gladiators substituted in the place of those who were wearied or were killed. (Suet. *Cal.* 30; Juv. vi. 108, with the Schol., viii. 210.) If the old reading in a letter of Cicero's (*ad Att.* vii. 14) is correct, Julius Caesar had no less than 600 secutores in his ludus at Capua; but we probably ought to read *scutorum* instead of *secutorum*.

Suppositicii. See *Secutores*.

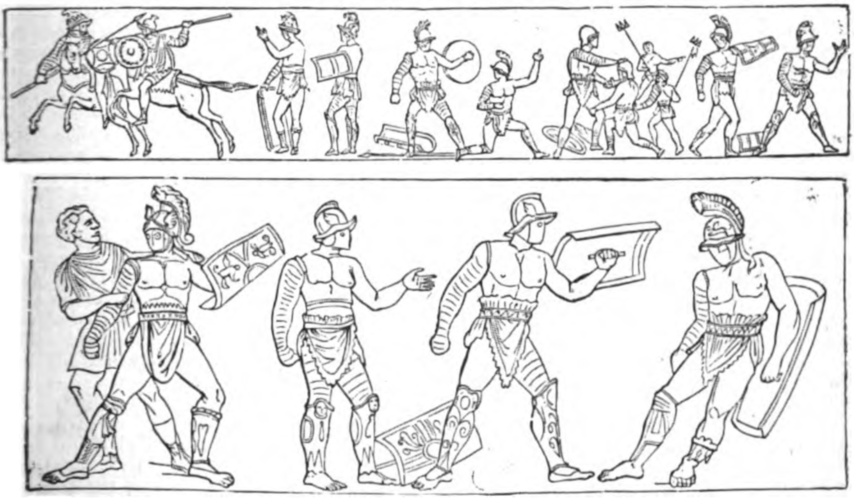
Thraces or *Threces* were armed, like the Thracians, with a round shield or buckler (Festus, s. v. *Thraeces*), and a short curved sword or dagger (*sica*, Suet. *Cal.* 32), which is called *falx supina* by Juvenal (viii. 201), and wore greaves on both legs. They were usually matched, as already stated, with the myrmillones. The annexed woodcut, taken from Winckelmann (*l. c.*), represents a combat between two Thracians, though here the swords are straight. A lanista stands behind each.



Thracians. (Winckelmann.)

Velites had light spears (Ovid. *Ib.* 45; Cic. *de Orat.* ii. 78, 316).

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists. (Plin. *H. N.* xxxv. § 52; Capitol. *Gord.* 3; Vopisc. *Carin.* 18.) Several statues of gladiators have come down to us, which are highly admired as works of art: of these the most celebrated is the gladiator of the Borghese Collection, now in the Museum of the Louvre, and the Dying Gladiator, as it is called, in the Capitoline Museum. The latter is, however, more properly regarded now as a wounded Gaul or other barbarian. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scaurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. These bas-reliefs are represented in the following woodcuts from Mazois (*Pomp.* i. pl. 32; Overbeck, *Pompeii*, p. 165). The figures are made of stucco, and appear to have been moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the frieze are written the name of the person to whom the gladiators belonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with visors, which cover the whole face, and are armed with spears and round bucklers. In the second pair the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hands towards them. His antagonist stands behind him waiting the signal of the people. Like all the other gladiators represented on the frieze, they wear the *subligaculum* or short apron fixed above the hips. The one on the left appears to be a myrmillo, and the one on the right, with an oblong shield (*scutum*), a Samnite. The third pair consists of a Thracian and a myrmillo, or Samnite, the latter of whom is defeated. The fourth group consists of four figures; two are secutores and two retiarii. The secutor on his knee appears to have been defeated by the retiarius behind him; but as the fuscina is not adapted for producing certain death, the other secutor is called upon to do it. The retiarius in the distance is probably destined to fight in his turn with the surviving secutor. The last group consists of a myrmillo and a Samnite; the latter is defeated.

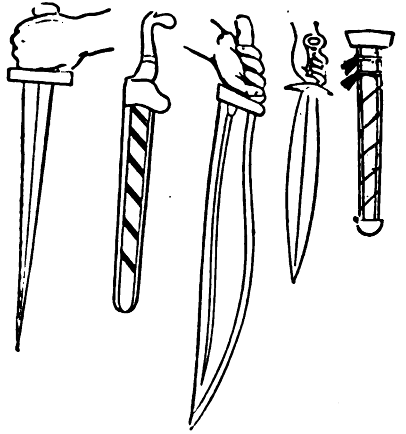


Gladiators. (From a tomb at Pompeii.)

In the second woodcut two combats are represented. In the first a Samnite has been conquered by a myrmillo; the former is holding up his hand to the people to implore mercy, while the latter apparently wishes to become his enemy's executioner before receiving the signal from the people; but the lanista holds him back. In the other combat a myrmillo is mortally wounded by a Samnite. It will be observed that the right arm of every figure is protected by rings of armour, which the left does not require on account of the shield. [VENATIO.] (Lipsius, *Saturnalia*, and *de Amphitheatro* in Graev. *Thesaur.* vol. ix.; Friedländer, *Sittengeschichte*, vol. ii.; Marquardt, *Staatsverw.*, vol. iii.) [W. S.] [A. S. W.]

GLADIUS (*ξίφος*, poet. *ἄορ*, *φάσγανον*), a sword or glaive, by the Latin poets called *ensis*.

The oldest Greek swords were of course of bronze, the one allusion to an iron sword in Homer (*Il.* xviii. 34) being regarded as an interpolation; later they were mostly of iron, though the older metal did not entirely go out of use. Bronze swords of a pre-historic age have been found at Mycenae (Schliemann, *Mycenae*, pp. 283, 304, &c.); some of these have hilts inlaid with gold; they are long and thin in the blade, and resemble the long light swords invented by Iphicrates for his peltasts; they run to 88 centimetres in length, whereas the longest Greek swords now preserved in collections vary between a minimum of 34 and a maximum of 75 centimetres (about 13 and 30 inches respectively). The ancient swords in the British Museum all, without exception, look much shorter than the regulation sword of the British army at the present day. The Homeric sword was cut-and-thrust, with a straight two-edged blade (*ἀμφήκες*, Hom. *Il.* x. 256), rather long and tapering very slightly towards the point. The *σπάθη*, used in early times (Alcae. *fr.* 15), must have had a broad blade, as the name implies, and, according to Droysen, was a cutting sword with blunt point; the word is philologically interesting as having, through the Latin *spatha*, superseded every other word for a sword in the Romance languages (Fr. *épée*, It. *spada*, Sp. *espada*). The hilt of most of the ancient swords is protected by a cross-bar, though sometimes by a very slight one (see cut), and is usually of one piece with the blade; but the ornamented hilts, which are sometimes very tasteful, are of wood inlaid with gold or silver. The scabbard (*κολεός*, Hom. *κουλεόν*, Lat. *vagina*) was either of metal or of leather with metal mountings. The type of the primitive Greek sword does not seem to have greatly altered until the 4th century B.C., when Iphicrates, among his other improvements in arms and armour, greatly increased, or, according to Diodorus (xv. 44), doubled the length of the blade for his peltasts or light infantry, while the hoplites retained the shorter sword of earlier times: the sword thus lengthened does not, however, appear to have exceeded 78 centimetres, or about 31 inches for the blade exclusive of the hilt. The Greeks hung the sword on the left side by a belt passing over the right shoulder, and drew it with the right hand across the body; hence the ACINACES of the Persians, worn on the right side, was noticed by them as exceptional. For the *μάχαιρα* or dagger, sometimes scarcely distinguished from the *ξίφος*, see also PUGIO. (Droysen, *Kriegsalterth.* in Hermann-Blümner, p. 15 f.; Guhl and Koner, ed. 5, p. 319 f.) The *ῥομφαία*, *rhomphaea* or *rumpia*, was a Thracian sword of great length. (L. and S. *s. v.*; Val. Flacc. vi. 98; Gell. x. 25; Claudian, *Epigr.* 22 (27).) In Livy (xxxi. 39) it has been taken for a spear: but the consistent usage of the Greek writers proves this to be a mistake.



Greek Swords and Scabbard. (Guhl and Koner.)

Of the sword used by the Romans before the Second Punic War little is known, and of course nothing from monuments; they then, according to a notice in Suidas (*s. v.* *μάχαιρα*) which apparently comes from Polybius, discarded the native pattern (*τὰς πατρίους ἀποθέμενοι μαχαίρας*) in favour of the Spanish, though (he adds) they could not equal the Spanish workmanship and fineness of the iron. They had learnt, it seems, to appreciate the superiority of the Spanish sword over the Gallic when both were employed against them at the battle of Cannae: Livy describes the two ("Gallis Hispanisque scuta ejusdem formae fere erant, dispares ac dissimiles gladii: Gallis praelongi ac sine mucronibus, Hispano, punctim magis quam caesim assueto petere hostem, brevitate habiles et cum mucronibus," xxii. 46). It has been inferred that the Romans had themselves used the Gallic sword hitherto (Guhl and Koner, p. 776); but in the combat of Torquatus and the Gaul, a century and a half earlier, the Gallic broadsword, so large as to be unwieldy, is already contrasted with the short thrust sword of the Roman (Liv. vii. 10; Claud. Quadrig. *ap.* Gell. ix. 13). The anachronism of these writers, pointed out by Marquardt, consists only in applying the word "Spanish" to the Roman sword then in use; we agree with Rich (*s. v.* Gladius) that the early Roman sword in all probability did not differ much from the contemporary Greek. The Spanish type now introduced was, therefore, larger and heavier than that previously in use, yet still handy, as Livy tells us in the words quoted above. In the Macedonian war the greater size and weight of the Roman sword struck terror into the Greeks (Florus, ii. 7 = i. 23 Jeep). The Romans ever afterwards used the point of their cut-and-thrust sword much more than the edge: Vegetius remarks (i. 12) that the blow of the latter was easily parried by the defensive armour, while with the former (in this resembling the modern bayonet) "two inches of cold steel" often inflicted a fatal wound. That the Roman sword could not have been short is implied in the joke of Cicero upon Lentulus (*i.e.* Dolabella), a man of very low stature, "Who tied my son-in-law to his sword?" (Macrob. *Sat.* ii. 3, § 3.) The British glaive was still larger than the Roman, and *sine mucrone* (Tac. *Agric.* 36); it may thus have been identical, or nearly so, with the old Gallic broadsword. From time immemorial, as in the East down to the present day, gold and jewels have been freely lavished upon the adornment of hilts [CAPULUS] and scabbards. Either will suit the *stellatus iaspide fulva Ensis* of Aeneas (Verg. *Aen.* iv. 261); but Juvenal interprets it of the sheath (v. 44). The golden *acinaces* of Mardonius was a trophy at Athens (Dem. *c. Timocr.* p. 741, § 129; Pausan. i. 27, § 1). The Gauls adorned their swords with pearls (Plin. *H. N.* xxxii. § 23), probably not Oriental but "British" pearls from their own seas (id. xii. § 116).

The Romans, at least from the time that they adopted the Spanish sword, wore it as a general rule on the right side; the dagger, when carried, hung on the left by a separate belt. Polybius—who, it is noteworthy, throughout his description of the Roman arms and armour (vi. 22, 23) uses only the word *μάχαιρα*, not *ξίφος*—says expressly (23, § 6), *ταύτην δὲ περὶ τὸν δεξιὸν φέρει μηρόν, καλοῦσι δ' αὐτὴν Ἰβηρικήν*: and

1. Monument of an Illyrian soldier, found at Bingen
2. Scabbard (Mainz) and swords (various parts of Germany).

mentions no dagger as worn on the other side. The columns of Trajan and Antoninus, and the Roman monuments in Germany collected by Lindenschmidt (*Alterth. unserer heidnischen Vorzeit*), show the sword to the right, and the dagger (which may have been introduced after the time of Polybius) to the left, alike in the case of legionaries, auxiliaries, and cavalry. Curiously enough, Josephus reverses this arrangement (*καὶ μαχαιροφοροῦντες ἀμφοτέρωθεν· μακρότερον δὲ αὐτῶν τὸ λαιὸν ξίφος πολλῷ, τὸ γὰρ κατὰ δεξιὸν σπιθαμῆς οὐ πλέον ἔχει μῆκος*, *B. J.* iii. 5, § 5): as do also some exceptional cases on the monuments; a *signifer cohortis V. Asturum* (Lindenschmidt, pt. xi. pl. 6); an *eques* of a praetorian cohort (Fabretti, *Col. Traj.* p. 226). The problem has been satisfactorily solved by Rich (*s. vv.* "Gladius" and "Cinctorium"), who figures a sword to the left from a bas-relief in the Capitol: the common soldiers wear their swords in the manner described by Polybius, on the right side, suspended by a shoulder-band [BALTEUS]; the officers wear their swords on the left, attached to a belt round the waist; and the swords of the cavalry are longer than those of the infantry. (Cf. Marquardt, *Staatsverw.* ii. 327 f.; Guhl and Koner, ed. 5, p. 775 ff.) [W. W.]

GLANDES. [FUNDA.]

GNOMON (*γνώμων*). [HOROLOGIUM.]

GOMPHI. [VIA.]

GORGY'RA (*γοργύρα*). [CARCER.]

GRADUS (*βῆμα*), *a step*, as a measure of length, was half a *pace* (*passus*), and contained 2½ feet, Greek and Roman respectively; the Greek *βῆμα* therefore was rather more, and the Roman *gradus* rather less, than 2½ feet English. (See the Tables.) 2. Bed-steps [LECTUS, Vol. II. p. 19 *a*]. [P. S.] [W. W.]

GRADUS COGNATIO'NIS. [COGNATI.]

GRAECO'STASIS, "the station of the Greeks," was a place in the Roman forum where ambassadors stood to hear the debates, and had their *προεδρία* or post of honour at the public spectacles anciently held in it. It thus, as Niebuhr remarks (*R. H.* vol. ii., n. 116), resembled the privileged seats in the hall of a parliamentary assembly. It was so called because the first envoys thus honoured were the Greeks of Massilia (Justin, xliii. 5, § 10); the privilege was afterwards extended to foreign ambassadors in general. The *Stationes Municipiorum* may, according to Niebuhr, have been places allotted to municipals for the same purpose; but the allusion in Pliny (*H. N.* xvi. § 236) is too vague to warrant any inference. The Graecostasis, like the Rostra which it adjoined, seems to have occupied a different site before and after the reconstruction of the Forum under Julius Caesar. The older one is described by Varro (*L. L.* v. 155) as a stone platform (*locus substructus*) to the right of the Senate-house (*i. e.* the Curia Hostilia) on the side of the Comitium. It is to this site that the statements in Pliny refer, that when the sun was seen from the Curia coming out between the Rostra and the Graecostasis, it was mid-day; and an accensus of the consul proclaimed the time with a clear loud voice (*H. N.* vii. § 212); and that the brazen shrine (*aedicula*) of Concord, erected by Cn. Flavius, curule aedile in B.C. 303, was placed on the Graecostasis, "quae tunc supra comitium erat" (xxxiii. § 19), implying that in his own time it had been removed. Cicero speaks of it as a vantage-ground from which the debates could be interrupted by disorderly persons (*ad Q. Fr.* ii. 1). The later site of the Rostra was to the south-west of their original position, *i.e.* further from the Comitium and more towards the open part of the Forum: the remains of the Rostra of Julius have within the last few years been excavated and identified beyond a doubt, and a curved platform adjoining them is conjectured with great probability (though without direct evidence) to have been the later Graecostasis, transferred together with the Rostra. The *Graecostadium* of one of the regionary catalogues, the *Curiosum*, is no doubt identical with this later Graecostasis. (Compare Burn, *Rome and the Campagna*, pp. 84, 123, with plans pp. 74, 107; Middleton, *Anc. Rome in* 1885, pp. 148, 163, with plan p. 158.) [W. S.] [W. W.]

GRA'MMATEUS (*γραμματεύς*, Lat. *scriba*), a secretary or clerk, the name of many officials of various kinds in Athens and other Greek states. The higher sort were everywhere concerned in the drawing up of public decrees, and the many such decrees preserved in inscriptions usually record the name of the *γραμματεὺς* who discharged this duty. We find monuments of this kind not only in Greece proper, but throughout the Grecian world, in the Dorian Halicarnassus as well as in the Ionian Samos and Ephesus, in outlying colonies like the Tauric Chersonesus, in the later Achaean and Aetolian leagues. Details of the office are in most cases unimportant or altogether wanting (see Gilbert, *Staatsalterth.* vol. ii., Index, *s. v. γραμματεύς*). Sometimes the functionary is called *γραμματεὺς τῆς πόλεως*, sometimes *γρ. τῆς βουλῆς*: at Lampsacus both titles existed (Gilbert, ii. 159, 160); in Lemnos, Imbros, Scyros, and Salamis there was a *γρ. τοῦ δήμου* (*ib.* i. 424). At Athens a long list of *γραμματεῖς* has been recovered: a *γραμματεὺς τῶν Ἑλληνοταμιῶν* (*C. I. A.* i. 226 ff., 260, 315), *τῶν ταμιῶν* (i. 117 ff., 179 ff., 318), *τῶν λογιστῶν* (i. 226 ff.), *τῶν ἕνδεκα* (Boeckh, *Seeurk.*, p. 535; Poll. viii. 102), *τῶν ἐπιστατῶν* (*C. I. A.* i. 284 ff.), *τῶν εἰσαγωγέων* (i. 37), *τῶν στρατηγῶν* (ii. 222), *τῶν ἐπιμελητῶν τῶν νεωρίων* (*Seeurk.* p. 165), *τῶν σιτωνῶν* (*C. I. A.* ii. 335), *τῶν ἐμπορίου ἐπιμελητῶν* ([Dem.] *c. Theocrin.* p. 1324, § 8). In *C. I. A.* ii. 61 we find mentioned, after the *γρ. τῆς βουλῆς*, *τοὺς ἄλλους γραμμα(τέ)ας τοὺς ἐπὶ τοῖ(ς δ)ημοσίοις γράμμασιν*. It is inferred from Poll. viii. 92 that the three first archons possessed the right of naming their own secretaries (Gilbert, i. 218). Four *ἐπιμεληταὶ τῶν δικαστηρίων* have two secretaries among them (*ib.* i. 162); there is a *γρ.* of the *ὀργεῶνες* (i. 203), and one of the *ἔφηβοι* (i. 299).

Among this crowd of clerks three *γραμματεῖς*, all more or less closely connected with the *βουλή*, stand out from the rest as real state officers: these are partly described under BOULÉ, p. 311 *b*; cf. Pollux, viii. 98. Next to the *ἀντιγραφεὺς τῆς βουλῆς* the most important official in this body was the first secretary, whose full title was *ὁ κατὰ πρυτανείαν γρ. τῆς βουλῆς*, of which *γρ. κατὰ πρυτανείαν* and *γρ. τῆς βουλῆς* were usual abbreviations. He was appointed by lot from among the *βουλευταὶ* to serve the time of each prytany, though he always belonged to a different prytany from that which was in power; and his province was to keep the public records and the decrees of the people made during his term of office (to these his name was prefixed in the formula *ὁ δεῖνα ἐγραμμάτευε*), and to deliver to the thesmothetae the decrees of the senate (Lex. *ap.* Dem. *c. Timocr.* p. 720, § 63). Later we find him called *ὁ περὶ τὸ βῆμα* (Boeckh, *Sthh.*³ i. 230; Gilbert, i. 159).

The second *γραμματεὺς* was elected by the senate, by *χειροτονία*, and was entrusted with the custody of the laws (*ἐπὶ τοὺς νόμους*, Pollux, viii. 98; Dem. *c. Timocr.* p. 713, § 42; *de Cor.* p. 238, § 38). His usual name was *γρ. τῆς βουλῆς*, but in late inscriptions of the imperial time he is also called *γρ. τῶν βουλευτῶν* (Boeckh, *P. E.* p. 187 = *Sthh.*³ i. 233). Further particulars concerning his office are not known.

A third *γραμματεὺς* was called *γρ. τῆς πόλεως* (Thucyd. vii. 10), or *γρ. τῆς βουλῆς καὶ τοῦ δήμου.* He was appointed by the people, by *χειροτονία*, and the principal part of his office was to read any laws or documents which were required to be read in the assembly or the senate (Pollux, *l. c.*; Dem. *F. L.* p. 419, § 249 = 279; *c. Lept.* p. 485, § 94; Suid. *s. v.*). It is admitted by Boeckh (*Sthh.*³ i. 234–5) that there are some difficulties about the second and third of these secretaries, but there seems no sufficient ground for the contention of Gilbert (i. 254) that there was only one until the year B.C. 307–6, after the expulsion of Demetrius Phalereus. The language of Demosthenes (*ὑφ' ὑμῶν γραμματεῖς χειροτονηθέντες δύ' ἔτη διετράφησαν ἐν τῇ θόλῳ*, *de F. L.* l. c.) seems to show that there were in his time at least two *γραμματεῖς* elected by the people and reckoned among the *ἀείσιτοι*: nor is the suggestion countenanced by Fränkel, the recent learned editor of Boeckh.

The assistants to these three *γραμματεῖς*, and to some of those mentioned above as civil or military officers of the state, were called *ὑπογραμματεῖς* or under-clerks (Dem. *de Cor.* p. 314, § 261; Antiphon, *de Choreut.* §§ 35, 49; Lysias, *c. Nicom.* § 29). These persons were either public slaves [DEMOSII] or citizens of the lower orders, as appears from the tone in which Demosthenes speaks of them (*de F. L.* p. 371, § 95 = 109; p. 403, § 200 = 222; p. 419, § 249 = 279; p. 442, § 314 = 360). In all these passages, and in *de Cor.* p. 269 § 127, 314 § 261, Demosthenes is pouring the vials of his contempt upon Aeschines for having been a grammateus; in the third of them he says that Aeschines and his brother were *ὑπογραμματεῖς* before they were *γραμματεῖς*. They were not allowed to hold the same clerkship for two successive years (Lys. *l. c.*; cf. Boeckh, *P. E.* p. 188 n. = *Sthh.*³ i. 237 n.).

The *ἀντιγραφεῖς* or checking-clerks differed from the *γραμματεῖς* in dealing only with the public accounts; they are noticed separately [ANTIGRAPHEIS]. (Boeckh, Bk. ii. ch. 8, much fuller in the third edition; Schömann, *Assemblies*, p. 318 ff.; Gilbert, references as above.) [L. S.] [W. W.]

GRAMMATOPHYLA'CIUM. [ARCHEION; TABULARIUM.]

GRAPHE (*γραφή*), in its most general acceptation, comprehends all state trials and criminal prosecutions whatever in the Attic courts (it is used in this sense but rarely in the classic writers, [Dem.] *c. Steph.* ii. p. 1131, § 9; Xenoph. *Rep. Athen.* 3, 2; an *εἰσαγγελία κακώσεως* is called *γραφή*, Isae. *Hagn.* §§ 28, 31, 35, [Dem.] *c. Theocr.* p. 1332, § 32); but in its more limited sense, those only which were not distinguished as the *εὔθυναι, ἔνδειξις, εἰσαγγελία*, etc. by a special name and a peculiar conduct of the proceedings (cf. Dem. *c. Boeot.* i. p. 998, § 14, *γραφαὶ φάσεις ἐνδείξεις ἀπαγωγαί*; Lys. *c. Agorat.* § 65; *pro Mantith.* § 12, etc.). The principal characteristic differences between public and private actions are enumerated under DIKE, and the peculiar forms of public prosecutions, such as those above mentioned, are separately noticed. Of these forms, together with that of the *Graphe*, properly so called, it frequently happened that two or more were applicable to the same course or action (*e.g.* Dem. *c. Mid.* p. 523, § 28; *c. Androt.* p. 601, § 27); and the discretion of the prosecutor in selecting the most advantageous of his available remedies was attended by results of great importance to himself and to the accused. If the prosecutor's speech (*κατηγορία*), and the evidence adduced by him, were insufficient to establish the aggravated character of the wrong in question, as indicated by the form of action he had chosen, his ill-judged rigour might be alleged in mitigation of the punishment by the defendant in his reply (*ἀπολογία*), or upon the assessment of the penalty after judgment given; and if the case were one of those in which the dicasts had no power of assessing (*ἀτίμητος γραφή*), it might cause a total failure of justice, and even render the prosecutor liable to a fine or other punishment.

The courts before which public causes could be tried were very various; and besides the ordinary Heliastic bodies under the control of the nine archons, or the Eleven, or the logistae, or the generals, the council, and even the popular assembly of the people, occasionally became judicial bodies for that purpose, as in the case of the Dokimasiae of the archons (Dem. *c. Lept.* p. 484, § 90; cf. Pollux, viii. 92), and sometimes in that of Eisangeliae (*Att. Process*, ed. Lipsius, p. 140 f. and p. 325). The proper court in which to bring a particular action was for the most part determined by the subject-matter of the accusation. In the trial of state offences it was in general requisite that the ostensible prosecutor should be an Athenian citizen in the full possession of his franchise (*ὁ βουλόμενος Ἀθηναίων οἷς ἔξεστι*); but on some particular occasions even slaves and resident aliens were invited to come forward and lay informations (*μηνύειν ἀδεῶς τὸν βουλόμενον καὶ ἀστῶν καὶ ξένων καὶ δούλων*, Thuc. vi. 27; cf. Andoc. *de Myst.* §§ 13, 15 ff. *μήνυσις*—slaves inform against their master, a resident alien, Lys. *pro Call.* § 5; cf. Antiph. *de caed. Herod.* § 34, Lys. *pro sacr. olea exsc.* § 16, for the rewards of the *μηνυταί*: if the information proved to be false, they were put to death, Andoc. *de Myst.* § 20). Sometimes in Eisangeliae and other special proceedings the prosecution and conduct of the cause in court was carried on by advocates chosen for the occasion (*συνήγοροι*, [Plut.] *Vitt. X. Oratt.* p. 833 E; *κατήγοροι*, Dinarch. *c. Demosth.* § 51; *c. Aristog.* § 6; Plut. *Pericl.* 10); but with the exception of these temporary appointments the protection of purely state interests seems to have been left to volunteer accusers.

In criminal causes the prosecution was conducted by the *κύριος* in behalf of the aggrieved woman or minor; his *προστάτης* probably gave some assistance to the resident alien in the commencement of the proceedings, though the accusation was in the name of the person aggrieved, who also made his appearance at the trial without the intervention of the patron (*Att. Process*, ed. Lipsius, p. 753 f.: cf. *Hermes*, 1887, xxii. p. 223 ff.). The *ἰσοτελεῖς* enjoyed the same privileges as the citizens (*C. I. A.* ii. No. 121, l. 26; cf. Schubert, *de proxen. Att.* p. 55 f.); and a complete foreigner would upon this occasion require protection from the proxenus of his country. With the exception of cases in which the Apagoge, Ephegesis, Endeixis, or Eisangelia were adopted, in which the accused had to find bail or go to prison (in certain Eisangeliae he was not allowed to be set free on bail), and of accusations at the Euthynae and Dokimasiae, when the accused was or was supposed by the law to be present, a public action against a citizen commenced like an ordinary lawsuit, with a summons to appear before the proper magistrate on a fixed day (Plat. *Euthyphr.* init.). The anacrisis then followed [ANACRISIS]; but the bill of accusation was called a *γραφή* (this term is also used generally for bills in private actions, cf. Dem. *c. Aphob.* i. p. 817, § 12; Lys. *de Aristoph. bon.* § 55; *Att. Process*, ed. Lipsius, p. 232) or *εἰσαγγελία* or *φάσις*, as the case might be, rarely *ἔγκλημα* ([Dem.] *c. Aristog.* i. p. 787, § 58; cf. Hyperid. *pro Lycophr.* col. 14) or *λῆξις* (Dem. *c. Boeot.* i. p. 999, § 17) as in private actions; a public prosecution could not be referred to an arbitrator [DIAETETAE], and if it were compromised, this would render the accuser *ipso jure* (without the action *καθυφέσεως*, *Att. Process*, ed. Lipsius, p. 450) liable to a fine of a thousand drachmas ([Dem.] *c. Theocr.* p. 1323, § 6). The same sum was also forfeited when the prosecutor failed to obtain the votes of a fifth of the dicasts in all cases except those brought before the archon that had reference to injury (*κάκωσις*) done to women and orphans, in a trial for uprooting a moria (Lys. *pro sacr. olea exsc.* § 37), and up to a certain time in Eisangeliae for political offences, likewise in a Probole (*Att. Process*, ed. Lipsius, p. 344), and probably also in such cases where *κατήγοροι* were chosen by the popular assembly (after an *ἀπόφασις* of the Areiopagitic council) to prosecute before a court (for we learn from Dinarch. *c. Dem.* § 54, that sometimes they did not obtain as many as one-fifth of the votes). Besides this penalty, a modified disfranchisement, as, for instance, an incapacity to bring a similar accusation, was incurred upon several occasions. Upon the conviction of the accused, if the sentence were death (on the mode of execution see *Journ. of Philol.* viii. p. 1 ff.) or prison, the presiding magistrate of the court delivered over the prisoner, who remained in the custody of the Scythae during the trial, to the Eleven (*παραδοῦναι τοῖς ἕνδεκα*). If the punishment was confiscation of property, the demarch, as a rule, made an inventory of the effects of the criminal (*τὼ δὲ δημάρχω ἀποφῆναι τὴν οὐσίαν αὐτοῖν*, *i.e.* of Archeptolemus of Agryle and Antiphon of Rhamnus, [Plut.] *Vitt. X. Oratt.* p. 834 A: cf. Harpocr. *s. v.* *δήμαρχος*: and *Lex. Seguer.* 304, 4, *συλλογεῖς*), which was read in the assembly of the people, and delivered to the poletae, that they might hold a sale of the goods, and pay in the proceeds to the public treasury. If the accused was condemned to pay a fine, the presiding magistrate had to give notice of the amount to the *πράκτορες*: and if the fine or any part of it was to go to a temple, the like notice was to be sent to the *ταμίας* of the god or goddess to whom the temple belonged ([Dem.] *c. Macart.* p. 1074, § 71; *c. Aristog.* i. p. 778, § 28). (*Att. Process*, ed. Lipsius, p. 956 ff.) [J. S. M.] [H. H.]

GRAPHIA'RIUM. [STILUS.]

GRAPHIS. [PICTURA.]

GRA'PHIUM. [STILUS.]

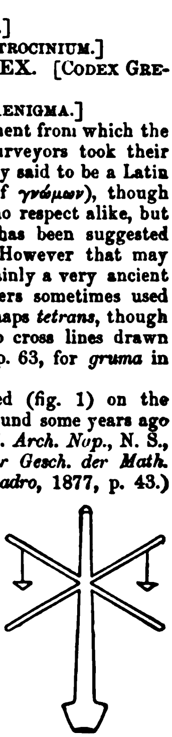
GRASSATORES. [LATROCINIUM.]

GREGORIA'NUS CODEX. [CODEX GREGORIANUS.]

GRIPHUS (*γρῖφος*). [AENIGMA.]

GROMA was the instrument from which the Roman *gromatici* or land-surveyors took their name. The word is generally said to be a Latin version of *γνώμονα* (acc. of *γνώμων*), though the two instruments are in no respect alike, but more recently a connexion has been suggested with *norma* for *(g)norma*. However that may be, *groma* or *gruma* is certainly a very ancient name, for which later writers sometimes used *machinula* or *stella*, and perhaps *tetrans*, though this name belongs rather to cross lines drawn on the ground (cf. Nonius, p. 63, for *gruma* in this sense).

The groma is represented (fig. 1) on the gravestone of a *gromaticus* found some years ago at Ivrea. (Cavedoni in *Bull. Arch. Nap.*, N. S., Anno I.; Cantor, *Vorles. zur Gesch. der Math.* i. 456; Rossi, *Groma e Squadro*, 1877, p. 43.) The design is not in perspective, but, if allowances be made for the inexperience of the artist, it explains fairly well the nature of the instrument. Two small planks crossing one another at right angles are supported on a column or post (*ferramentum*). Plummets (probably four, though there are only two in the monument), are suspended from the planks to guide the operator in securing a vertical position of the column, and a horizontal for the cross-pieces. The small circles at the point of section in the drawing may represent a hole in the continuation of the column for the operator to look through, or a large hole in the cross-pieces to allow of their being tipped up to a certain angle if necessary. The latter is the more likely, for in that case the continuation of the column would serve as a support to prevent the cross from falling. In any case it obstructs the view along the planks.



Groma, fig. 1. (From a gravestone.)

The use of the instrument is obvious. It is intended to guide a surveyor in drawing real or imaginary lines at right angles to one another, more especially in fixing the *cardo* (or N. and S. line) and *decumanus* (or E. and W. line) essential to the orientation of any *templum* or to the division of a Roman camp [Castra]. A very large T square was sometimes used for the same purpose (see below).

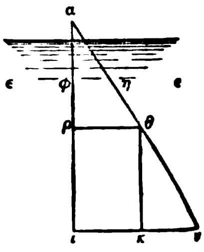
Another very ancient method of drawing long lines at right angles was to stretch a rope round three pegs fixed in the ground, at such distances from one another that the sides of the triangle formed by the rope were in the ratio 3 : 4 : 5. The angle contained between the shorter sides is a right angle (Eucl. i. 48). This method was very early used by the Egyptians, whose *άρπεδονάπται* or "rope-stretchers" were considered by Democritus the masters of geometry in his day (Clemens Al. *Strom.* i. 357). It was employed also at the building of the temple of Edfu, as the inscriptions thereon declare, and was used by Heron himself on occasion (*περὶ διόπτρας*, Props. 21, 22; cf. Cantor, *Vorles.* pp. 55, 56, 324, 325). The knowledge of the ratio 3 : 4 : 5 for the sides of a right-angled triangle was introduced into Greece by Pythagoras, and was for a long time one of the most interesting subjects of Greek geometry (cf. Proclus, *Comm. in Eucl.* i. 47, ed. Friedlein, p. 426).

But the *groma* and all other instruments of the same kind were ultimately superseded, for all purposes requiring any nicety of measurement, by the *dioptra*, an instrument which very closely resembles the modern theodolite. It seems to have been the outcome of many gradual improvements on the *groma*. Heron, who describes it, does not claim it as his own invention, though he is probably responsible for many details of the instrument which he describes. Biton, who seems to be earlier than Heron, says that he had, in his Optics, described a *διοπτίον* to be used in ascertaining the heights of walls, &c. (*Vett. Mathematici*, ed. Thevenot and La Hire, 1693, p. 108), and Heron himself says that the *διόπτραι* of previous writers were many and various. The *dioptra* described by Heron (*Not. et Extraits des MSS. de la Bibl. Impér.* vol. xix. pt. 2, ed. Vincent, p. 157 ff., with a plate) is constructed as follows. A flat brass rod, about eight feet long, with two small sights at each end, is supported on a pillar, which may be adjusted to the perpendicular by comparison with a plummet hanging by its side, the rod being at the same time adjusted to the horizontal by comparison with a water-level attached to it in a groove. The rod is not immediately attached to the pillar, but is supported on a frame which allows it to swing horizontally, and to a less degree vertically. Two screws (*κοχλίδια*) turning cog-wheels (*ὀδοντωτὰ τυμπάνια*) are provided in an ingenious manner to regulate the two movements of the rod. It seems also that a button fixed in the plate of the horizontal cog-wheel stopped the movement when the rod had turned exactly through a right angle in the horizontal plane. The vertical cog-wheel allowed only for a swing of about 45° in that plane. With the *dioptra* were used also two poles of precisely the same kind as those used by modern surveyors. The poles were 20 feet long, marked with measures and provided with an internal slide (*χελωνάριον*), also nearly 20 feet long. The slide was surmounted with a circular disc, coloured half black and half white, which of course was always visible at the top of the pole. The slide could be pulled up by a string until the disc was elevated 40 feet high. It is evident from Vitruvius (viii. 6) and other writers that the *dioptra* was adopted for nice calculations by the Roman surveyors, and the terms used by the *gromatici* (*Grom. Vett.* or *Römische Feldmesser*, ed. Lachmann, &c., Berlin, 1848), e.g. *hortogonium*, *hypotenusa*, *embadum*, *podismus*, *praecisura* (*ἀποτομή*), &c., show how largely their art was derived from Greek sources, especially the works of Heron (Cantor, *Vorles.* i. p. 470).

The treatise on the *dioptra* by Heron, above mentioned, contains a number of propositions illustrative of the use of the instrument. A few examples will suffice: the general aim of all the problems being to find the difference of level between two given points, or to draw a straight line from a point to an unseen point. Thus Prop. 13 is to cut a straight tunnel through a hill from one given point to another: 7 is to find the height of an inaccessible point: 14 and 15 are to sink a shaft which shall meet a horizontal tunnel: 19 and 20 are to find two points at a given distance from one another. The examples given by Heron are seldom purely theoretical. He prefers, when a distance is given, to state it in actual measurement, and thus makes continual use of arithmetic and even of algebraical operations. His geometry is confined almost entirely to the first and the sixth books of Euclid. The measurement of angles by degrees, &c., was never used by the Greeks or Romans for any but astronomical purposes, and even in that field is not found before Ptolemy, though he derived the practice from Hipparchus (*vid.* Theon's *Comm.* ed. Halma, i. p. 110).

The most common problem in the writings of ancient surveyors which have come down to us is that of finding the breadth of a river without crossing it, the Latin *fluminis varatio*.

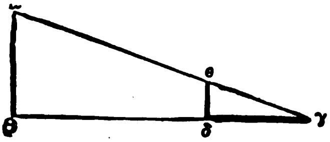
The solution of this is given in the treatise on the *dioptra* (pr. 4) in the 21st chap. of the *Κεστοὶ* of Sex. Julius Africanus (in the *Vett. Mathematici*, pp. 295–6), and by Nipsus in the *Gromat. Vett.* (i. 285–6). In Africanus it is put in strategical form, the inaccessible shore of the river being supposed to be in the occupation of the enemy. His solution is as follows:—$\epsilon\epsilon$ is the accessible shore of the river, α a point on the opposite side. The *dioptra* is set up at a point ι, obviously further from the bank than the breadth of the river, and the sights are directed so that the line $\iota\alpha$ shall cut the river at right angles in ϕ. The *dioptra* is then turned through a right angle and the point υ is taken on $\iota\upsilon$ at right angles to $\alpha\iota$. $\iota\upsilon$ is bisected at κ, and $\kappa\theta$ is drawn parallel to $\alpha\iota$, meeting in θ the line joining $\alpha\upsilon$. From θ again $\theta\rho$ is drawn parallel to $\iota\upsilon$, meeting $\alpha\iota$ in ρ. A preceding proposition (Cantor, *Vorles.* p. 372) of the simplest character has shown that the sides $\alpha\iota$, $\alpha\upsilon$ of the triangle $\alpha\iota\upsilon$ are bisected in ρ and θ. Therefore $\alpha\rho = \rho\iota$, and it remains only to measure $\rho\iota$ and $\phi\rho$, and to deduct the measure



Groma, fig. 2.

of φρ from that of ρι. The remainder is the measure of αφ.

Another mode of solving the same problem is given by the same writer in the same chapter of the Κεστοί. This requires only a very large solid right angle or T square (γνώμων). In figure 3 the thickened lines εδ and δγ represent such a right angle. Then, by similar triangles, αβ : εδ : : βγ : δγ. Of these three distances the last three are known. In the same figure, if αβ be the height of a tower, the triangles are drawn in a vertical plane: εδ is the pillar supporting a tilted *dioptra*, and αεγ is the line from the top of the tower passing through the sights of the *dioptra* and produced to meet the ground. The superior advantages of the *dioptra* over the *groma* are obvious from this last example.



Groma, fig. 3.

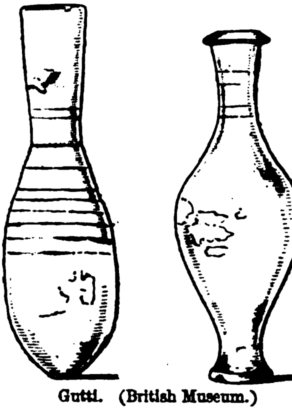
It should perhaps be added that the *Gromatici* Frontinus, Hyginus, &c., above mentioned, were, so far as the extant fragments enable us to judge, judicial officers, engaged chiefly in taking areas, &c., for the purposes of taxation, division, &c. Hence there are not, in the works attributed to them, many of the more nice and difficult problems which are discussed with so much acuteness by Heron and Julius Africanus. Enough, however, is said on such subjects to show that the Roman surveyors were fully learned in the works of their Greek predecessors. (Cf. Rudorff on *Gromatische Institut.* in the *Grom. Vett.* ii. p. 230 *sqq.*; Cantor's *Agrimensoren*, Leipzig, 1875; and AGRIMENSORES, *supra.*) [J. G.]

GROSPHOS (γρόσφος). [HASTA, p. 936 *b.*]

GUBERNA'CULUM. [NAVIS.]

GUSTA'TIO. [CENA, p. 396 *b.*]

GUTTUS (λήκυθος), a vessel with a narrow mouth or neck, from which liquids were poured in drops; hence its name. "Qui vinum dabant ut minutatim funderent, a guttis *guttum* appellarunt" (Varr. *L. L.* v. 124 M.). Varro goes on to say that for pouring out wine at the banquet it had been superseded by the *epichysis* and *cyathus;* but retained its place in sacrificial libations, especially of the domestic sort (Hor. *Sat.* i. 6, 118, with Orelli's note; Plin. *H. N.* xvi. § 185). The guttus was of the plainest shape and materials; it differed from the CAPIS (also used in sacrifices), EPICHYSIS and URCEUS in being without a handle; and was usually of coarse pottery, as in the specimens here figured from the British Museum, though one of beech-wood is mentioned (*faginus*, Plin. *l. c.*). It was in common use as an oil-cruet, whether at table (Gell. xvii. 8, § 5), or at the bath (Juv. iii. 263, xi. 158; cf. BALNEAE, p. 279 *a*, where a guttus and a strigil are engraved together). Oil was also kept in large horns (Hor. *Sat.* ii. 2, 61; Mart. xiv. 52); in the latter passage the lemma has, perhaps improperly, *guttus corneus.* (Marquardt, *Privatl.* 630.)



Gutti. (British Museum.)

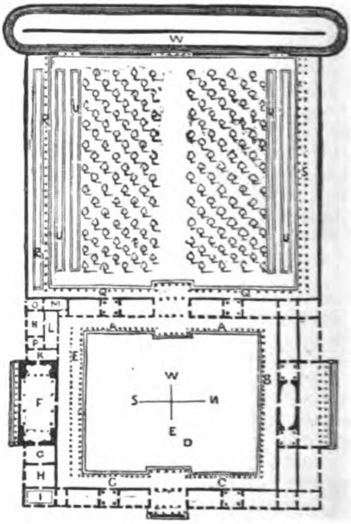
GYMNASIARCHES. [GYMNASIUM.]

GYMNA'SIUM (γυμνάσιον). The whole education of a Greek youth was divided into three parts: grammar, music, and gymnastics (γράμματα, μουσική, and γυμναστική, [Plat.] *Theag.* p. 122 E; *Clitoph.* p. 407 B; Plut. *de Audit.* c. 17), to which Aristotle (*Pol.* viii. 3, p. 1337) adds a fourth, the art of drawing or painting. Gymnastics, however, were thought by the ancients a matter of such importance, that this part of education alone occupied as much time and attention as all the others put together; and while the latter necessarily ceased at a certain period of life, gymnastics continued to be cultivated by persons of all ages, though those of an advanced age naturally took lighter and less fatiguing exercises than boys and youths. (Xen. *Sympos.* i. 7; Lucian, *Lexiph.* 5.) The ancients, and more especially the Greeks, seem to have been thoroughly convinced that the mind could not possibly be in a healthy state, unless the body was likewise in perfect health, and no means were thought, either by philosophers or physicians, to be more conducive to preserve or restore bodily health than well-regulated exercise. The word "gymnastics" is derived from γυμνός (naked), because the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short χιτών. (See the authorities in Wachsmuth, *Hellen. Alterth.* vol. ii. p. 354, 2nd edit.; and Becker-Göll, *Charikles,* vol. ii. p. 219.)

The great partiality of the Greeks for gymnastic exercises was productive of infinite good: they gave to the body that healthy and beautiful development by which the Greeks excelled all other nations, and which at the same time imparted to their minds that power and elasticity which will ever be admired in all their productions. (Lucian, *de Gymnast.* 15.) The plastic art in particular must have found its first and chief nourishment in the gymnastic and athletic performances, and it may be justly observed that the Greeks would never have attained their pre-eminence in sculpture had not their gymnastic and athletic exhibitions made the artists familiar with the beautiful forms of the human body and its various attitudes. (Cf. Curtius, *Hist.* ii. p. 68.) Respecting the advantages of gymnastics in a medical point of view, some remarks are made at the end of this article. But we must at the same time confess that at a later period of Greek history, when the gymnasia had become places of resort for idle loungers, their evil effects were no less striking. The chief objects for which they had originally been instituted were gradually lost sight of, and instead of being places of education and training they became mere places of amusement; and among other injurious practices to which they gave rise, the gymnasia were charged, even by the ancients themselves, with having produced and fostered that most odious vice of the Greeks, the παιδεραστία. (Plut. *Quaest. Rom.* 40, vol. ii. p. 122, ed. Wyttenb.: compare Aristot. *Pol.* viii. 4; Plut. *Philop.* 3; Quintil. i. 11, 5.)

Gymnastics, in the widest sense of the word, comprehended also the agonistic and athletic arts (ἀγωνιστική and ἀθλητική); that is, the art of those who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession [ATHLETAE and AGONOTHETAE]. Both originated in the gymnasia, in so far as the athletae as well as the agonistae were originally trained in them. The athletae, however, afterwards formed a distinct class of persons unconnected with the gymnasia; while the gymnasia, at the time when they had degenerated, were in reality little more than agonistic schools, attended by numbers of spectators. On certain occasions the most distinguished pupils of the gymnasia were selected for the exhibition of public contests [LAMPADEPHORIA], so that on the whole there was always a closer connexion between the gymnastic and agonistic than between the gymnastic and athletic arts. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests, and were places of exercise for the purpose of strengthening and improving the body, or, in other words, places for physical education and training; and it is chiefly in this point of view that we shall consider them in this article.

Gymnastic exercises among the Greeks seem to have been as old as the Greek nation itself, as may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of Grecian story; but they were, as might be supposed, of a rude and mostly of a warlike character. They were generally held in the open air, and in plains near a river, which afforded an opportunity for swimming and bathing. The Attic legends indeed referred the regulation of gymnastics to Theseus (Paus. i. 39, § 3), but according to Galen it seems to have been about the time of Cleisthenes that gymnastics were reduced to a regular and complete system. Great progress, however, must have been made as early as the time of Solon, as appears from some of his laws which are mentioned below. It was about the same period that the Greek towns began to build their regular gymnasia as places of exercise for the young, with baths, and other conveniences for philosophers and all persons who sought intellectual amusements. There was probably no Greek town of any importance which did not possess its gymnasium. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasia have been discovered in modern times. These, however, all belong to a comparatively late date, as does also that recently discovered at Pergamum (Conze, *Ausgr. z. Pergamon*, Berlin, 1880). The earliest remains are those of the gymnasium at Olympia, which cannot be earlier than the end of the fourth century B.C. (Bötticher, *Olympia*, p. 363 ff.). Athens possessed three great gymnasia,—the Lyceum (Λύκειον), Cynosarges (Κυνόσαργες), and the Academia (Ἀκαδημία); to which, in later times, several smaller ones were added. All places of this kind were, on the whole, built on the same plan, though, from the remains, as well as from the descriptions still extant, it is evident that there were many differences in their detail. We have no detailed account of a gymnasium of the best period. The most complete description of a gymnasium which we possess, is that given by Vitruvius (v. 11), which, however, is very obscure, and at the same time defective, in so far as many parts which seem to have been essential to a gymnasium are not mentioned in it. Of the numerous plans which have been drawn, according to the description of Vitruvius (cf. Bluesgen, *De Gymnasii Vitruviani palaestra*, Bonn, 1863; Guhl u. Koner, *Leben der Griechen u. Römer*,^{2} p. 112 ff.; Becker-Göll, *Charikles*, ii. 231 ff.; Bötticher, *Olympia*, l. c., &c.), that of W. Newton, in his translation of Vitruvius, vol. i. fig. 52, may here be given with a few alterations, although some of the details are open to criticism (cf. Becker-Göll, *Char.* ii. 231).



Plan of Gymnasium.

The peristylion (D) in a gymnasium, which Vitruvius incorrectly calls palaestra, is in the form of a square or oblong, and is two stadia (1200 feet) in circumference. It consists of four porticoes. In three of them (A B C) spacious exedrae with seats were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation, might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather. The double portico contained the following apartments: — The Ephebeum (F), a spacious hall with seats in the middle, and one-third longer than broad, destined for the exercises of youths. On the right is the Coryceum (G), used for exercises with the sack (κώρυκος), perhaps the same room which in other cases was called Apodyterium; then came the Conisterium (H) adjoining, where the body was sprinkled with dust; and next to the Conisterium, in the returns of the portico, is the cold bath, λουτρόν (I). On the left of the Ephebeum is the Elaeothesium, where persons were anointed by the aliptae (K). Adjoining the Elaeothesium is the Frigidarium (L), or more probably the Tepidarium, where there was a lukewarm bath. From thence is the entrance to the Propnigeum (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the returns the Laconicum (O) on one side, and opposite the Laconicum, the hot bath (P). These are the more essential and primitive parts of a gymnasium. But in the time of Vitruvius important additions were made to it. On the outside three porticoes are built; one (Q), in passing out from the peristyle, and, on the right and left, the two stadial porticoes (R, S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin the columns, there may be margins for paths, not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet: by this means those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks ξυστός, because in the winter season the athletae exercised themselves in these covered stadia. The ξυστὸς had groves or plantations between the two porticoes, and walks between the trees, with seats of signine work. Adjoining the ξυστὸς (R) and double portico (S) are the uncovered walks (U), which in Greek are called περιδρομίδες, to which the athletae, in fair weather, go from the winter-xystus to exercise. Beyond the xystus is the stadium (W), so large that a multitude of people may have sufficient room to behold the contests of the athletae.

It is generally believed that Vitruvius in this description of his gymnasium took that of Naples as his model; but two important parts of other Greek gymnasia, the apodyterium and the sphaeristerium, are not mentioned by him. Canina (*Arch. Grec.* tav. 132, 133) gives plans of gymnasia at Ephesus and Hierapolis, which widely differ from this.

The Greeks bestowed great care upon the outward and inward splendour of their gymnasia, and adorned them with the statues of gods, heroes, victors in the public games, and of eminent men of every class. Hermes was the tutelary deity of the gymnasia, and his statue was consequently seen in most of them.

The earliest regulations which we possess concerning the gymnasia are contained in the laws of Solon. One of these laws forbade all adults to enter a gymnasium during the time that boys were taking their exercises, and at the festival of the Hermaea. The gymnasia were, according to the same law, not allowed to be opened before sunrise, and were to be shut at sunset. (Lex *ap.* Aeschin. *c. Timarch.* § 12.) Another law of Solon excluded slaves from gymnastic exercises. (Aeschin. *c. Timarch.* § 138; Plut. *Solon*, 1.) Boys who were children of an Athenian citizen and a foreign mother (νόθοι) were not admitted to any other gymnasium but the Cynosarges. (Plut. *Them.* 1.) Some of the laws of Solon relating to the management and the superintendence of the gymnasia, show that he was aware of the evil consequences which these institutions might produce, unless they were regulated by the strictest rules. As we, however, find that adults also frequented the gymnasia, we must suppose that, at least as long as the laws of Solon were in force, the gymnasia were divided into different parts for persons of different ages, or that persons of different ages took their exercise at different times of the day. (Boeckh, *Corp. Inscript.* n. 246 and 2214.) The education of boys up to the age of sixteen was divided into the three parts mentioned above, so that gymnastics formed only one of them; but during the period from the sixteenth to the eighteenth year the instruction in grammar and music seems to have ceased, and gymnastics were exclusively pursued. In the time of Plato the salutary regulations of Solon appear to have been no longer observed, and we find persons of all ages visiting the gymnasia. (Plat. *de Rep.* v. p. 452; Xen. *Sympos.* 2, § 18.) Athens now possessed a number of smaller gymnasia, which are sometimes called palaestrae, in which persons of all ages used to assemble, and in which even the Hermaea were celebrated by the boys, while formerly this solemnity had been kept only in the great gymnasia, and to the exclusion of all adults. (Plat. *Lys.* p. 206.) These changes, and the laxity in the superintendence of these public places, caused the gymnasia to differ very little from the schools of the athletae; and it is perhaps partly owing to this circumstance that writers of this and subsequent times use the words gymnasium and palaestra indiscriminately. (Becker-Göll, *Charikles*, ii. 247 f.) But K. F. Hermann (*Privatalt.* § 36) seems to have proved that the gymnasium was never used for a place of training. (Cf. Hermann-Blümner, *Privatalt.* p. 336 ff.; Grasberger, *Erziehung und Unterricht*, i. p. 244 ff.)

Married as well as unmarried women were, at Athens and in all the Ionian states, excluded from the gymnasia; but at Sparta, and in some other Doric states, maidens, dressed in the short χιτών, were not only admitted as spectators, but also took part in the exercises of the youths. Athenaeus, xiii. p. 566, asserts that the same was the case at Chios. Married women, however, did not frequent the gymnasia. (Plat. *Legg.* vii. 806 A.)

Respecting the superintendence and administration of the gymnasia at Athens, we know that Solon in his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. (But the law of Solon quoted in Aeschin. *in Tim.* § 12, is of very doubtful genuineness.) His laws mention a magistrate, called the Gymnasiarch (*γυμνασίαρχος* or *γυμνασιάρχης*), who was entrusted with the whole management of the gymnasia, and with everything connected therewith. His office was one of the regular liturgies, like the choregia and trierarchy (Isae. *Or.* 6 [*Philoct.*], § 60; *Or.* 7 [*Apollod.*], § 36), and was attended with considerable expense. He had to maintain and pay the persons who were preparing themselves for the games and contests in the public festivals, to provide them with oil, and perhaps with the wrestlers' dust. It also devolved upon him to adorn the gymnasium or the place where the agones took place. (Xen. *de Rep. Athen.* 1, § 13.) The gymnasiarch was a real magistrate, and invested with a kind of jurisdiction over all those who frequented or were connected with the gymnasia; and his power seems even to have extended beyond the gymnasia, for Plutarch (*Amator.* c. 9, &c.) states that he watched and controlled the conduct of the ephebi in general. He had also the power to remove from the gymnasia teachers, philosophers, and sophists, whenever he conceived that they exercised an injurious influence upon the young. (Aeschin. *c. Timarch.* § 12.) Another part of his duties was to conduct the solemn games at certain great festivals, especially the torch-race (*λαμπαδηφορία*), for which he selected the most distinguished among the ephebi of the gymnasia. The number of gymnasiarchs was, according to Libanius on Demosthenes (*c. Mid.* p. 510) ten, one from every tribe. (Compare Demosth. *Phil.* i. p. 50, § 36; *c. Boeot.* i. p. 996, § 7;—Isae. *Or.* 2 [*Menecl.*], § 42.) They seem to have undertaken their official duties in turns, but in what manner is unknown. Among the external distinctions of a gymnasiarch were a purple cloak and white shoes (Plut. *Anton.* 33). In early times the office of gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were 12 or 13 gymnasiarchs in one year. This office seems to have been considered so great an honour, that even Roman generals and emperors were ambitious to hold it. Other Greek towns, like Athens, had their own gymnasiarchs, but we do not know whether, or to what extent, their duties differed from the Athenian gymnasiarchs. In Cyrene the office was sometimes held by women. (Krause, *Gymnastik und Agonistik d. Hellenen*, p. 179, &c.)

Another office which was formerly believed to be connected with the superintendence of the gymnasia, is that of Xystarches (*ξυστάρχης*). But it is not mentioned previous to the time of the Roman emperors, and then only in Italy and Crete. Krause (*ib.* p. 205, &c.) has shown that this office had nothing to do with the gymnasia properly so called, but was only connected with the schools of the athletae. (Cf. Dittenberger, *de Eph.* p. 45.)

An office which is likewise not mentioned before the time of the Roman emperors, but was nevertheless decidedly connected with the gymnasia, is that of Cosmetes. He had to arrange certain games, to register the names and keep the lists of the ephebi, and to maintain order and discipline among them. He was assisted by an Anticosmetes and two Hypocosmetae. This officer appears only after the re-organisation of the gymnasia in the second century B.C., when they served also as places for intellectual instruction. (Cf. Capes, *University of Athens.*)

An office of very great importance, in an educational point of view, was that of the Sophronistae (*σωφρονισταί*). Their province was to inspire the youth with a love of *σωφροσύνη*, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day. (*Etym. M.* s. v.) Their duty not only required them to be present at all the games of the ephebi, but to watch and correct their conduct wherever they might meet them, both within and without the gymnasium. At the time of the Emperor Marcus Aurelius only six Sophronistae, assisted by as many Hyposophronistae, are mentioned. (Krause, *ib.* p. 214, &c.)

The instructions in the palaestrae, sometimes attached to gymnasia, were given by the Gymnastae (*γυμνασταί*) and the Paedotribae (*παιδοτρίβαι*); at a later period Hypopaedotribae were added. The Paedotribes was required to possess a knowledge of all the various exercises which were performed in the gymnasia; the Gymnastes was the superior teacher, and was expected to know the physiological effects and influences on the constitution of the youths, and therefore assigned to each of them those exercises which he thought most suitable. (Galen, *de Valet. tuend.* ii. 9, 11; Aristot. *Polit.* viii. 3, 2.) These teachers were usually athletae who had left their profession, or could not succeed in it. (Aelian, *V. H.* ii. 6; Galen, *l. c.* ii. 3, &c.)

The anointing of the bodies of the youths, and strewing them with dust, before they commenced their exercises, as well as the regulation of their diet, was the duty of the aliptae. [ALIPTAE.] These men sometimes also acted as surgeons or teachers. (Plut. *Dion.* c. 1.) Galen (*l. c.* ii. 11) mentions among the gymnastic teachers a *σφαιριστικός*, or teacher of the various games at ball; and it is not improbable that in some cases particular games may have been taught by separate persons.

The games and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorians, however, they were regarded chiefly as institutions for hardening the body and for military training; among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beauty, and to make it the basis of a healthy and sound mind. But among all the different tribes of Greeks the exercises which were carried on in a Greek gymnasium were either mere games, or the more important exercises which the gymnasia had in common with the public agones in the great festivals.

Among the former we may mention, 1. The ball (*σφαίρισις*, *σφαιρομαχία*, &c.), which was in universal favour with the Greeks, and was here, as at Rome, played in a variety of ways, as appears from the words *ἀπόρραξις*, *ἐπίσκυρος*, *φαινίνδα* or *ἁρπαστόν*, &c. (Plat. *Legg.* vii. p. 797; compare Eustath. on *Od.* viii. 376; Pollux, ix. 104–107.) Every gymnasium contained one large room for the purpose of playing at ball in it (*σφαιριστήριον*). 2. *Παίζειν ἑλκυστίνδα, διελ-*

κυστίνδα, or *διὰ γραμμῆς*, was a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end across a line marked between them on the ground. 3. The top (*βέμβηξ*, *βέμβιξ*, *ῥόμβος*, *στρόβιλος*), which was as common an amusement with Greek boys as in our own days. 4. The *πεντάλιθος*, which was a game with five stones, which were thrown up from the upper part of the hand and caught in the palm. 5. *Σκαπέρδα*, which was a game in which a rope was drawn through the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia. (Hesych. *s. v.*) These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running (*δρόμος*), throwing of the *δίσκος* and the *ἄκων*, jumping and leaping (*ἅλμα*, with and without *ἁλτῆρες*), wrestling (*πάλη*), boxing (*πυγμή*), the pancratium (*παγκράτιον*, *πένταθλον*, *λαμπαδηφορία*), dancing (*ὄρχησις*), &c., are described in separate articles.

A gymnasium was, as Vitruvius observes, not a Roman institution, and Dionysius of Halicarnassus (*Ant. Rom.* vii. 70–72) expressly states that the whole *ἀγωνιστική* of the Romans, though it was practised at an early period in the Ludi Maximi, was introduced among the Romans from Greece. Their attention, however, to developing and strengthening the body by exercises was considerable, though only for military purposes. The regular training of boys in the Greek gymnastics was foreign to Roman manners, and even held in contempt. (Plut. *Quaest. Rom.* 40.) Towards the end of the republic many wealthy Romans, who had acquired a taste for Greek manners, used to attach to their villas small places for bodily exercise, sometimes called gymnasia, sometimes palaestrae, and to adorn them with beautiful works of art. (Cic. *ad Att.* i. 4; *in Verr.* ii. 14, 36.) The Emperor Nero was the first who built a public gymnasium at Rome (Sueton. *Ner.* 12); another was erected by Commodus (Herodian, i. 12, 4). But although these institutions were intended to introduce Greek gymnastics among the Romans, yet they never gained any great importance, as the magnificent thermae, amphitheatres, and other colossal buildings had always greater charms for the Romans than the gymnasia.

For a fuller account of this important subject, which has been necessarily treated with brevity in this article, the reader is referred to Hieronymus Mercurialis, *de Arte Gymnastica*, Libri vi. 1st ed. Venice, 1573, 4th ibid. 1601; Burette, *Histoire des Athlètes*, in the *Mém. de l'Acad. des Inscript.* i. 3; G. Löbker, *Die Gymnastik der Hellenen*, Münster, 1835; Wachsmuth, *Hellen. Alterth.* vol. ii. p. 344, &c. 2d ed.; Müller, *Dor.* iv. 5, § 4, &c.; Becker-Göll, *Charicles*, ii. 213–251; *Gallus*, iii. 168–188; and especially J. H. Krause, *Die Gymnastik u. Agonistik der Hellenen*, Leipzig, 1841, and Dittenberger, *de Ephebis Atticis*, ib. 1863. The histories of education among the ancients, such as those of Hochheimer, Schwarz, Cramer, and especially Grasberger, likewise contain much useful information on the subject. [L. S.] [A. S. W.]

The Relation of Gymnastics to the Medical Art.—The games of the Greeks had an immediate influence upon the art of healing, because they considered gymnastics to be almost as necessary for the preservation of health as medicine is for the cure of diseases. (Hippocrates, *de Locis in Homine*, vol. ii. p. 138, ed. Kühn; Timaeus Locrensis, *de Anima Mundi*, p. 564, in Gale's *Opusc. Mythol.*) It was for this reason that the gymnasia were dedicated to Apollo, the god of physicians. (Plut. *Symp.* viii. 4, § 4.) The directors of these establishments, as well as the persons employed under their orders, the bathers or *aliptae*, passed for physicians, and were called so, on account of the skill which long experience had given them. The directors, called *παλαιστροφύλακες*, regulated the diet of the young men brought up in the gymnasia; the sub-directors, or *Gymnastae*, prescribed for their diseases (Plat. *Legg.* xi. p. 916 A); and the *inferiors* or bathers, *aliptae*, *iatraliptae*, practised blood-letting, administered clysters, and dressed wounds, ulcers, and fractures. (Plat. *Legg.* iv. p. 720 C; Celsus, *de Medic.* i. 1; Plin. *H. N.* xxix. § 4.) Two of these directors—Iccus, of Tarentum, and Herodicus, of Selymbria, a town of Thrace—deserve particular notice for having contributed to unite more closely medicine and gymnastics. Iccus, who appears to have lived before Herodicus (*Olymp.* lxxvii.; Stephan. Byzant. *s. v.* *Τάρας*, p. 693; compare Paus. vi. 10, § 2), gave his chief attention to correcting the diet of the wrestlers, and to accustoming them to greater moderation and abstemiousness, of which virtues he was himself a perfect model. (Plat. *Legg.* viii. p. 839 E; Aelian, *V. H.* xi. 3; Id. *H. A.* vi. 1.) Plato considers him, as well as Herodicus, to have been among the inventors of medical gymnastics. (Plat. *Protag.* p. 316 E; Lucian, *de Conscrib. Hist.* § 35, p. 626.) Herodicus, whom Pliny (*l. c.*) incorrectly calls Prodicus, lived at Athens a short time before the Peloponnesian war. Plato says that he was not only a sophist (Plat. *Protag.* l. c.), but also a master of the gymnasium (Id. *Rep.* iii. p. 406 A), and physician (Id. *Gorg.* p. 448 B), and in fact he united in his own person these three characters. He was troubled, says the same author, with very weak health, and tried if gymnastic exercises would not help to improve it; and having perfectly succeeded in his own case, he imparted his method to others. Before him medical dietetics had been entirely neglected, especially by the Asclepiadae (Id. *Rep.* iii. p. 406 A). If Plato's account may be taken literally (*Phaedr.* p. 227 D), he much abused the exercise of gymnastics, as he recommended his patients to walk from Athens to Megara and to return immediately.* The author of the sixth book *de Morb. Vulgar.* (Hippocr. *Epidem.* vi. c. 3, vol. iii. p. 599) agrees with Plato: "Herodicus," he says, "caused people attacked with fever to die from walking and too hard exercise, and many of his patients suffered much from dry rubbing." A short time after we find, says Fuller (*Medicina Gymnastica*, &c. Lond.

---

* "The distance from Athens to Megara was 210 stadia, as we learn from Procopius (*Bell. Vand.* i. 1). Dion Chrysostom calls it a day's journey (*Orat.* vi.). Modern travellers reckon eight hours (Dodwell, *Class. Tour*, vol. ii. p. 177)." (Cramer, *Anc. Greece*, vol. ii. sect. 13, p. 430.)

1718, 8vo), that Hippocrates (*de Vict. Rat.* iii. vol. i. p. 716), with some sort of glory, assumes to himself the honour of bringing that method to a perfection, so as to be able to distinguish *πότερον τὸ σιτίον κρατέει τοὺς πόνους, ἢ οἱ πόνοι τὰ σιτία, ἢ μετρίως ἔχει πρὸς ἄλληλα*, as he expresses it. Pursuant to this, we find him in several places of his works recommending several sorts of exercises upon proper occasions; as first, friction or chafing, the effects of which he explains (*de Vict. Rat.* ii. p. 701), and tells us that in some cases it will bring down the bloatedness of the solid parts, in others it will incarn and cause an increase of flesh, and make the part to thrive. He advises (*ibid.* p. 700) walking, of which they had two sorts, their round and straight courses. He gives his opinion (*ibid.* p. 701) of the Ἀνακινήματα, or preparatory exercises, which served to warn and fit the wrestlers for the more vehement ones. In some cases he advises the Πάλη, or common wrestling (*ibid.*), and the Ἀκροχειρία, or wrestling by the hands only, without coming close, and also the Κωρυκομαχία, or the exercise of the Corycus, or the hanging ball (see Antyllus, *ap.* Mercur. *de Arte Gymn.* p. 123); the Χειρονομία, a sort of dexterous and regular motion of the hands, and upper parts of the body, something after a military manner; the Ἀλίνδησις, or rolling in sand; and once (*ibid.* p. 700) we find mentioned, with some approbation, the Ἄπειροι Ἵπποι, *Equi Indefiniti*, by which is probably meant galloping long courses in the open field.

As for Galen, he follows Hippocrates in this as closely as in other things, and declares his opinion of the benefit of exercises in several places; his second book, "De Sanitate Tuenda," is wholly upon the use of the *strigil*, or the advantage of regular chafing: he has written a little tract, Περὶ τοῦ διὰ Μικρᾶς Σφαίρας Γυμνασίου, wherein he recommends an exercise by which the body and mind are both at the same time affected. In his discourse to Thrasybulus, Πότερον Ἰατρικῆς ἢ Γυμναστικῆς ἔστι τὸ Ὑγιεινόν, he inveighs against the athletic and other violent practices of the *gymnasium*, but approves of the more moderate exercises, as subservient to the ends of a physician, and consequently part of that art. The other Greek writers express a similar opinion; and the sense of most of them in this matter is collected in Oribasius's *Collecta Medicinalia*. In the extant remains of Antyllus, we read of some sorts of exercises that are not mentioned by Galen or any former author; among the rest the *Cricilasia*, as the translators by mistake call it, instead of *Cricoëlasia*. This, as it had for many ages been disused, Mercurialis himself, who had made the most judicious inquiries into this subject (*de Arte Gymnastica*, 4to, Amstel. 1672), does not pretend to explain; and I believe, says Freind (*Hist. of Physic*, vol. i.), though we have the description of it set down in Oribasius (*Coll. Medic.* vi. 26), it will be hard to form any idea of what it was.

The ancient physicians relied much on exercise in the cure of the dropsy (compare Hor. *Epist.* i. 2, 34, "Si noles sanus, curres hydropicus"), whereas we almost totally neglect it. (Alexander Trallianus, *de Medic.* ix. 3, p. 524, ed. Basil.) Hippocrates (*de Internis Affection.* sect. 28, vol. ii. p. 518) prescribes for one that has a dropsy *ταλαιπωρίαι*, or *fatiguing-exercises*, and he makes use of the same word in his Epidemics, and almost always when he speaks of the regimen of a dropsical person, implying, that though it be a labour for such people to move, yet they must undergo it; and this is so much the sense of Hippocrates, that Spon has collected it into one of the new Aphorisms which he has drawn out of his works. Celsus says of this case (*de Medic.* iii. 21, p. 152, ed. Argent.), "Concutiendum multa gestatione corpus est." The Romans placed great reliance upon the curative effects of exercise; and Asclepiades, who lived in the time of Pompey the Great, brought this mode of treatment into great request. He called exercises *the common aids of physic*, and wrote a treatise on the subject, which is mentioned by Celsus in his chapter "De Frictione" (*de Medic.* ii. 14, p. 82), but the book is lost. He carried these notions so far, that he invented the *Lecti Pensiles* (Plin. *H. N.* xxvi. § 14), or hanging beds, that the sick might be rocked to sleep; which became so popular at that time, that they came afterwards to be made of silver. He had so many particular ways to make physic agreeable, and was so successful in the invention of exercises to supply the place of medicine, that Pliny says (*ibid.* § 12) by these means he made himself the delight of mankind. About this time the Roman physicians sent their consumptive patients to Alexandria, which was done partly for the change of air, but chiefly for the sake of the exercise by the motion of the ship; and therefore Celsus says (*de Medic.* iii. 22, p. 156), "Si vera phthisis est, opus est longa navigatione;" and a little after he makes *Vehiculum* and *Navis* to be two of the chief remedies. As for the other more common exercises, they were daily practised, as is manifest from Celsus, Caelius Aurelianus, Theodorus Priscianus, and the other Latin physicians. And this was apparently done with great success; for Suetonius (*Calig.* c. 3) tells us that Germanicus was cured of a "crurum gracilitas," as he expresses it (by which he probably means an atrophy), by riding; and Plutarch, in his Life of Cicero, gives us an account of his weakness, and that he recovered his health by travelling and excessive diligence in rubbing and chafing his body. (Compare Cic. *Brut.* 91, § 313.) Pliny (*H. N.* xxxi. § 62) tells us Annaeus Gallio, who had been consul, was cured of a consumption by a sea-voyage; and Galen gives us such accounts of the good effects of particular exercises, and they were practised so universally by all classes, that it cannot be supposed but they must have been able to produce great and good effects. However, from an attentive perusal of what we find on this subject in the classical authors, the reader can hardly fail of being convinced that the ancients esteemed gymnastics too highly, just as at the present day they are (in a strictly medical point of view) too much neglected.

[W. A. G.]

GYMNASTES. [GYMNASIUM, p. 928 *b*.]

GYMNE'SII or **GYMNE'TES** (*γυμνήσιοι*, or *γυμνῆτες*) were a class of bond-slaves at Argos, who may be compared with the Helots at Sparta (Steph. Byz. *s. v.* Χίος: Pollux, iii. 83). Their name shows that they attended their masters on military service in the capacity of ght-armed troops, but no particulars are nown about them (Schömann, *Antiq.* i. 133, . T.; Gilbert, *Staatsalterth.* ii. 74). Müller *Dor.* iii. 4, § 2) remarks that it is to these ymnesii that the account of Herodotus (vi. 83) efers, that 6000 of the citizens of Argos having een slain in battle by Cleomenes, king of Sparta Id. vii. 148), the slaves got the government nto their own hands, and retained possession of until the sons of those who had fallen had rown to manhood. Afterwards, when the oung citizens had grown up, the slaves were ompelled by them to retire to Tiryns, and then fter a long war, as it appears, were either riven from the territory, or again subdued. Cf. Müller, *op. cit.* iii. 3, § 2; Schömann, *Antiq.* . 172, E. T.) [W. S.] [W. W.]

GYMNOPAE'DIA or **-AE** (*γυμνοπαιδία* or *αι*: always plural in the best writers, Herod. vi. 67; Thucyd. v. 83; Xen. *Hell.* vi. 4, § 16; Plat. *Legg.* i. 633 C), a festival celebrated at Sparta every year with gymnastic contests in honour of Apollo **Πυθαεὺς** (Pausan.) or **Καρνεῖος** (*Lex. Rhet.* s. v.); Artemis and Leto. The statues of these deities stood in a part of the Agora called *χορός*, and it was around these statues that, at the gymnopaedia, Spartan youths performed their choruses and dances in honour of Apollo. (Paus. iii. 11, § 7.) The festival was held in the middle of summer, in the Attic month Hecatombaeon (July), and lasted for several, perhaps for ten, days; on the last day grown men also performed choruses and dances in the theatre, and during these gymnastic exhibitions they sang the songs of Thaletas and Alcman, and the paeans of Dionysodotus. The leader of the chorus (*προστάτης* or *χοροποιός*) wore a kind of chaplet, called *στέφανοι θυρεατικοί*, in commemoration of the victory of the Spartans at Thyrea. This event seems to have been closely connected with the gymnopaediae, for those Spartans who had fallen on that occasion were always praised in songs at this festival. (Ath. xv. p. 678 b, c; Plut. *Ages.* 29; Hesych., Suid., *Etym. M.*, and Timaeus, *Glossar.* s. v. **Γυμνοπαιδία.**) The boys in their dances performed such rhythmical movements as resembled the exercises of the palaestra and the pancration, and also imitated the dance of tragedy called *ἐμμέλεια* (Hippagoras *ap.* Ath. xiv. p. 631 e). Müller (*Gr. Lit.* i. 289) supposes, with great probability, that the dances of the gymnopaediae partly consisted of mimic representations, as the establishment of the dances and musical entertainments at this festival was ascribed to the musicians, at the head of whom was Thaletas. (Plut. *de Mus.* c. 9.) The whole season of the gymnopaediae, during which Sparta was visited by great numbers of strangers, was one of great merriment and rejoicings (Xen. *Memor.* i. 2, § 61; Plut. *Ages.* 29; Pollux, iv. 14, 104), and old bachelors alone seem to have been excluded from the festivities. (Osann, *de Coelibum apud Veteres Populos Conditione Commentat.* p. 7 ff.; Schömann, *Antiq.* i. 264, E. T.; Plut. *Lycurg.* 15.) The introduction of the gymnopaediae, which subsequently became of such importance as an institution for gymnastic and orchestic performances, and for the cultivation of the poetic and musical arts at Sparta, is generally assigned to the year 665 B.C. (Comp. Meursius, *Orchestra*, p. 12, &c.; Creuzer, *Commentat. Herod.* i. p. 230; Müller, *Dor.* vol. ii. p. 350, &c.) [L. S.] [W. W.]

GYNAECONI'TIS. [DOMUS, pp. 660 *b*–663 *a*.]

GYNAECO'NOMI (*γυναικονόμοι*: the form *γυναικοκόσμοι* only in Pollux, viii. 112) were magistrates in many Greek states, who exercised a certain censorship over the conduct of women and to some extent of men also, especially the young. At Sparta there were *παιδονόμοι*, but not *γυναικονόμοι* [PAEDONOMI]; the far-reaching Spartan discipline brought both sexes alike under the control of the authorities, and such special officers may not have been required. Aristotle mentions them as a well-known institution in two passages of the *Politics* (iv. 12 (15) § 9 = p. 1300, 4 ff.; vi. 5 (8) § 13 = p. 1323, 3 ff.), and each time observes that they were characteristic of aristocracies rather than of oligarchies or democracies; a remark which alone is almost sufficient to prove that they did not exist at Athens in his time (see below). We find them at Chaeronea (Plut. *Sol.* 21 *extr.*; cf. *Att. Process*, ed. Lipsius, p. 30, n. 51); it is to his native town, and not to Athens, that the words of Plutarch refer, that besides women they had also to restrain those men who showed their effeminate character by frantic or immoderate wailing at their own or other people's misfortunes. They occur also at Syracuse (Phylarch. *ap.* Ath. xii. p. 521 b; Gilbert, *Staatsalterth.* ii. p. 255); and are traced through inscriptions at Samos (Gilbert, ii. 152, cf. *Bull.* vii. 79); Andania, where their control of women's dress is mentioned (Gilbert, ii. 337, cf. Dittenberger, *Syll. Inscr.* p. 388, 25 ff.); and Gambreion near Pergamum (*ib.*; cf. *C. I. G.* 8562). The legislation of Solon included many regulations for the government of the Athenian women. They were forbidden to go abroad with more than three changes of apparel and a stated quantity of provisions, to pass though the streets by night otherwise than in a carriage and with a light carried before them, to disfigure their faces, to wail extravagantly at funerals (Plut. *Sol.* 21; Thirlwall, *H. G.* ii. 51). These rules were no doubt enforced by the Areiopagus, then at the height of its power. It was formerly assumed that the *γυναικονόμοι* were here indicated as dating from the time of Solon; but the language of Plutarch, rightly understood, leads to the opposite conclusion. After enumerating the above particulars, he adds: *ὧν τὰ πλεῖστα καὶ τοῖς ἡμετέροις νόμοις ἀπηγόρευται· πρόσκειται δὲ τοῖς ἡμετέροις ζημιοῦσθαι τοὺς τὰ τοιαῦτα ποιοῦντας ὑπὸ τῶν γυναικονόμων.* These words, it will be seen, really refer to Chaeronea in Plutarch's time, not to Solonian Athens. The theory of Boeckh (*Ueber den Plan der Atthis des Philochoros*, p. 24 f., also in his *Kleine Schriften*, v. 422 ff.) that the Athenian *γυναικονόμοι* were first instituted by Demetrius Phalereus (B.C. 317–307), is now universally accepted (Schömann, *Antiq.* i. 535, E. T.; Gilbert, *Staatsalterth.* i. 154; Lipsius, n. 204 on *Att. Process*, p. 109). Besides the indirect evidence of Aristotle and Plutarch just noticed, and the argument from the total silence of the orators on the subject, we have the direct testimony of three writers all contemporary with Demetrius; the comic poets Timocles (*fr.* 32 M.) and Menander (*fr.* 265 M.)

and the historian Philochorus, all cited by Athenaeus (vi. p. 245 b, c). All three describe the γυναικονόμοι as acting under a recent law (καινὸς νόμος): they were now associated with the Areiopagus in the maintenance of public decency and the enforcement of sumptuary laws. They superintended even the meetings of friends in their private houses, *e.g.* at weddings, and on other festive occasions (Philoch. *l. c.*). Meetings of this kind were not allowed to consist of more than thirty persons, and the γυναικονόμοι had the right of entering any house and sending away all the guests above that number: that they also took down the names of the cooks in order to estimate the number of guests, is perhaps only a joke of Menander's. They also controlled the eccentricities of female attire; women who went unsuitably dressed in public were liable to a fine of 1000 drachmas, and these fines were recorded on a tablet suspended to a plane-tree in the Ceramicus (Harpocrat. *s. v.* ὅτι χιλίας: Hesychius, *s. v.* πλάτανος: Pollux, *l. c.*). The number of these officers and the mode of their appointment are alike unknown. The authors of the *Attische Process*, arguing from analogy, regard them as an ἀρχὴ κληρωτή: Hermann (*Staatsalterth.* § 150, n. 5) contends that they were elected by χειροτονία, referring to a passage in the rhetorician Menander (περὶ ἐπιδεικτ. iii. 2, p. 204 Walz), who however, as Lipsius points out, is not speaking of Athens. (Schömann, *Antiq.* i. 149, 498, 535, E. T.; Gilbert, *ubi supra; Att. Process*, pp. 108–110, Lipsius.) [L. S.] [W. W.]

H.

HABE'NA or **-AE** (mostly plural: τὰ ἡνία, αἱ ἡνίαι) was, generally speaking, a leathern thong, by means of which things were held, bound, drawn, or fastened. Hence the word was in particular applied—1. To the reins by means of which horses were guided and managed (Verg. *Aen.* x. 576, xi. 670, 765, xii. 327). The habenae were, as with us, fixed to the bit or bridle [FRENUM]. 2. To the thong attached to a lance, by which it was held and wielded (Lucan, vi. 218); called also *flagellum* (Verg. *Aen.* vii. 731), and more usually *amentum* [HASTA, p. 935*b*]. 3. To the thong which was formed into a sling, by means of which stones were thrown (Lucan, iii. 710; Valer. Flacc. v. 608). [FUNDA.] 4. To straps by which low shoes (*soleae*) or sandals were fastened to the feet (Gellius, xiii. 21, § 4). 5. To the thong of a whip for chastising young slaves (Hor. *Ep.* ii. 2, 15; Ov. *Heroid.* ix. 81), or for whipping a top (Verg. *Aen.* vii. 380). The *habena* was one of the milder forms of corporal punishment (Dig. 29, tit. 5, s. 33, "impuberes servi terreri tantum solent, et habena vel ferula caedi;" Marquardt, *Privatl.* 173). [L. S.] [W. W.]

HABITA'TIO. [SERVITUTES.]

HAERES. [HERES.]

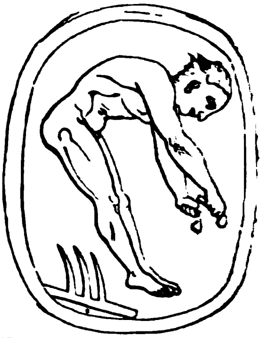
HA'LIA (ἁλία). [GEROUSIA.]

HA'LIA or **HALIEIA** (Ἅλια, Ἁλίεια), one of the principal festivals celebrated in the island of Rhodes, in honour of Helios, Doric Halios, the sun-god. It was held every year, with gymnic and musical contests and a great procession. The prize of the victors in the contest was a white wreath. It was on this occasion, the 24th of the month of Gorpiacus, that the Rhodians drove into the sea a quadriga as an offering to the god. (Schol. *ad* Pind. *Ol.* vii. 146; Xenoph. Ephes. v. 11; Fest. s. v. *October equus;* Näke, *Opusc.* i. p. 339, &c.) [L. S.]

HALMA (ἅλμα). [PENTATHLON.]

HALO'A (ἁλῶα). [ALOA.]

HALTE'RES (ἁλτῆρες) were certain masses of stone or metal which were used in the gymnastic exercises of the Greeks and Romans. Persons who practised leaping often performed their exercises with halteres in both hands; but they were also frequently used merely to exercise the body in somewhat the same manner as our dumb-bells (Crates, *fr.* 11 M.; μολυβδίδας χειροπληθεῖς, Lucian, *Anach.* 27, p. 909 R.; *graves massae*, Juv. vi. 421; Senec. *Ep.* 15, § 4, 56, § 1; Mart. xiv. 49; Pollux, iii. 155, x. 64). Pausanias (v. 26, § 3; v. 27, § 8; vi. 3, § 4) speaks of certain statues of athletes who were represented with halteres. They appear to have been made of various forms and sizes (μακροὶ and σφαιροειδεῖς, Philostr. *de Gymn.* 55). In the rage for female gymnastics, even the heavier sort were used by women (Mart. vii. 67, 6; Juv. *l. c.*). The preceding woodcut is taken from Tassie, *Catalogue*, &c. pl. 46, No. 7978. (Mercurialis, *de Arte Gymnastica*, ii. 12; Becker-Göll, *Gallus*, iii. 183; Krause, *Die Gymnastik und Agonistik der Hellenen*, vol. i. p. 395; Blümner, *Privatalterth.* 346.) [W. S.] [W. W.]



Halteres. (From an engraved gem.)

HAMAXA (ἅμαξα). [HARMAMAXA; PLAUSTRUM.]

HAMAXO'PODES (ἁμαξόποδες), in Latin **ARBUSCULAE**, appear to have been cylindrical pieces of wood, placed vertically, and with a socket cut in the lower end, to receive the upright pivot fixed above a wheel or above the middle of the axis of a pair of wheels, which could thus turn horizontally in every direction. One use of this sort of socket was to unite the axis of the fore-wheels of a chariot to the body (ἁμαξήποδες, Pollux, i. 144, 253; ἁμαξίποδες, Hesych. *s. v.*); another use of it was to attach the wheels of a testudo to the framing in such a manner that the machine might easily be moved in any direction: in fact, the *arbuscula* and the wheel together formed a castor or universal joint (Vitruv. x. 20, s. 14, § 1, ed. Schneid.). Newton (*ad loc.*) supposes that, for the latter purpose, a single piece of timber would be both clumsy and insufficient, and that the *arbuscula* must have been a sort of framing.

(See his figure, No. 114; Ginzrot, *Wagen und Fahrwerke*, i. 91, fig. 3.) [P. S.] [W. W.]

HARMA (ἅρμα). [CURRUS; HARMAMAXA.]

HARMAMAXA (ἁρμάμαξα) is evidently compounded of ἅρμα, a general term, including not only the Latin CURRUS, but other descriptions of carriages for persons; and ἅμαξα, which meant a waggon, having commonly four wheels, and used to carry loads or burthens as well as persons (Hes. *Op. et Dies*, 692; Hom. *Il.* vii. 426, xxiv. 782; *Od.* ix. 241). The harmamaxa was a carriage for persons, in its construction very similar to the CARPENTUM, being covered overhead and enclosed with curtains (σκηνή, Xen. *Cyrop.* vi. 4, § 11; Diod. xi. 56; Charito, v. 2, § 9), so as to be used at night as well as by day (Xen. *Cyrop.* iv. 2, § 15); but it was in general larger, often drawn by four horses or other suitable quadrupeds, and ornamented in a manner more splendid, luxurious, and expensive, and in the Oriental style (Diod. xvii. 35; Aristoph. *Ach.* 70). It occupied among the Persians (Max. Tyr. 34) the same place which the carpentum did among the Romans, being used, especially upon state occasions, for the conveyance of women and children, of eunuchs, and of the sons of the king with their tutors (Herod. vii. 83, ix. 76; Xen. *Cyrop.* iii. 1, § 8; iv. 3, § 1; Q. Curt. iii. 3, § 23). Also, as persons might lie in it at length, and it was made as commodious as possible, it was used by the kings of Persia, and by men of high rank in travelling by night, or in any other circumstances when they wished to consult their ease and their pleasure (Herod. vii. 41; Xen. *Cyrop.* iii. 1, § 40).

The body of Alexander the Great was transported from Babylon to Alexandria in a magnificent harmamaxa, the construction of which occupied two years, and the description of which, with its paintings and ornaments in gold, silver, and ivory, employed the pen of more than one historian (Diod. xviii. 26–28; Athen. v. p. 206 e; Aelian, *V. H.* xii. 64).

The harmamaxa was occasionally used by the ladies of Greece. A priestess of Diana is represented as riding in one which is drawn by two white heifers (Heliod. *Aeth.* iii. 4), and the coins of Ephesus show that this carriage, probably containing also symbols of the attributes and worship of Diana, added to the splendour of the religious processions in that city. [J. Y.] [W. W.]

HARMOSTES (ἁρμοστής, from ἁρμόζω, to fit or join together) is best known as the name of the governors whom the Lacedaemonians, after the Peloponnesian war, sent into their subject or conquered towns, partly to keep them in submission. and partly to abolish the democratical form of government, and establish in its stead one similar to their own (Diod. Sic. xiv. 10; Xen. *Hellen.* iv. 2, § 5; Isocrat. *Paneg.* § 117; Suidas, Hesych. *s. v.*; *Etym. M.* s. v. Ἐπίσταθμοι). Although in many cases they were ostensibly sent for the purpose of abolishing the tyrannical government of a town, and to restore the people to freedom, yet they themselves acted like kings or tyrants, whence Dionysius (*Antiq. Rom.* v. 74) thinks that harmosts were merely another name for kings. How little sincere the Lacedaemonians were in their professions to restore their subject towns to freedom was manifest after the peace of Antalcidas; for although they had pledged themselves to re-establish free governments in the various towns, yet they left them in the hands of the harmosts (Polyb. iv. 27). The character of their rule is sufficiently described by the word κατέχειν, which Isocrates (*l. c.*) and Demosthenes (*de Cor.* p. 258, § 96) use in speaking of the harmosts. (Compare Demosth. *c. Timocrat.* p. 741, § 128; Plut. *Narrat. Amat.* c. 3.) Even Xenophon (*Rep. Lac.* 14, § 2) could not help censuring the Lacedaemonians for the manner in which they allowed their harmosts to govern.

It is not stated how long the office of a harmost lasted; but considering that a governor of the same kind, who was appointed by the Lacedaemonians in Cythera, with the title of Cytherodices, held his office only for one year (Thucyd. iv. 53), it is tolerably certain that the office of harmost was of the same duration (Gilbert, *Staatsalterth.* i. 64, 92).

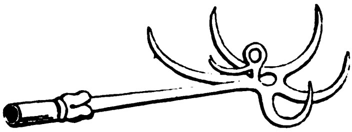
These harmosts appear first in the closing years of the Peloponnesian war; the earliest writer who mentions them is Thucydides, and he once only in his last book (viii. 5). There is reason to think, however, that the name and office were not new, but that ἁρμοσταί had previously existed as Spartan magistrates, twenty in number, charged with keeping order among the Perioeci. The only evidence for this is the Scholiast on Pindar (ἦσαν δὲ ἁρμοσταὶ Λακεδαιμονίων εἴκοσι, *ad Ol.* vi. 154); but it is accepted by Schömann, who thinks the Perioeci were divided into twenty districts, each presided over by a harmost (*Antiq.* i. 205, E. T.), and Gilbert (*Staatsalterth.* i. 38 n.). [L. S.] [W. W.]

HARPAGES GRAPHE (ἁρπαγῆς γραφή). Although the Athenians distinguished ἁρπαγή from κλοπή (Plat. *Legg.* xii. p. 941 B; Aristoph. *Plut.* 372), there does not seem to have existed a γραφὴ ἁρπαγῆς in Attic law. Lucian mentions it (*Judic. vocal.* 1); according to him, it was applicable to cases of open robbery, attended with violence (*Att. Process*, ed. Lipsius, p. 457). [J. S. M.] [H. H.]

HARPAGINE'TULI, a sort of decoration for the walls and ceilings of rooms, thus mentioned by Vitruvius, in a passage where he is speaking of irregular and fantastic ornaments (vii. 5, § 3), "pro columnis enim statuuntur calami, pro fastigiis harpaginetuli striati cum crispis foliis et volutis teneris." The word, not occurring elsewhere, has been given up as inexplicable, or possibly corrupt: the only plausible explanation is that suggested by a painting at Pompeii (*Pitture d'Ercolano*, tom. i. p. 212), which presents an architectural elevation "covered all over with ornaments resembling so many little hooks (*harpaginctuli*, dim. of *harpagones*)." (Rich.) This identification was first made by Bailey, in his *Auctarium* to Forcellini. [P. S.] [W. W.]

HA'RPAGO (ἁρπάγη: λύκος: κρεάγρα: κρεαγρίς), a grappling-iron, a drag, a flesh-hook (Ex. xxvii. 3; 1 Sam. ii. 13, 14 Sept. = *fuscinula* Vulg.; Aristoph. *Eq.* 772, *Vesp.* 1155, *Eccl.* 1002; Anaxipp. *fr.* 6 M.). The iron-fingered flesh-hook (κρεάγρα σιδηροδάκτυλος, Brunck, *Anal.* ii. 215 = *Anth. Pal.* vi. 101) is described by the Scholiast on Aristophanes (*Eq.* l. c.), as "an instrument used in cookery, resembling a hand with the fingers bent inwards, used to take boiled meat out of the caldron." Four specimens of it, in bronze, are in the British Museum.

One of them is here represented. Into its hollow extremity a wooden handle was inserted.



Harpago, flesh-hook. (British Museum.)

A similar instrument, or even the flesh-hook itself (Aristoph. *Eccles.* l. c.; Eurip. *Cycl.* 33) was used to draw up a bucket or to recover anything which had fallen into a well (Menand. *fr.* 730 M.; Hesych. *s. vv.* Ἁρπάγη, Κρεάγρα, Λύκος). For the name λύκος applied to hooked instruments, cf. L. and S. *s. v.*

In war the grappling-iron, thrown at an enemy's ship, seized the rigging, and was then used to drag the ship within reach, so that it might be easily boarded or destroyed (Ἅρπαξ, Moschion *ap.* Ath. v. p. 208 d; Appian, *B. C.* v. 118; *asseres ferreo unco praefixi* (*harpagones vocant*), Liv. xxx. 10, § 16). These instruments appear to have been much the same as the *manus ferreae* (*manus ferreas atque harpagones*, Caes. *B. C.* i. 57; Q. Curt. iv. 9; Dio Cass. xlix. 3, l. 32, 34). The *manus ferreae* were employed by Duilius against the Carthaginians (Flor. ii. 2; Front. *Strateg.* ii. 3, § 24), and were said to have been invented by Pericles (Plin. *H. N.* vii. § 209). [J. Y.] [W. W.]

HARPASTUM. [PILA.]

HARUNDO. [CALAMUS.]

HARU'SPICES, or **ARU'SPICES**, were soothsayers or diviners, who interpreted the will of the gods. They originally came to Rome from Etruria, whence haruspices were often sent for by the Romans on important occasions (Liv. xxvii. 37; Cic. *Catil.* iii. 8, 19; *de Div.* ii. 4, 11). The art of the haruspices resembled in many respects that of the augurs; but they never acquired that political importance which the latter possessed, and were regarded rather as means for ascertaining the will of the gods than as possessing any religious authority. They did not in fact form any part of the ecclesiastical polity of the Roman state during the republic; they are never called *sacerdotes*, they did not form a collegium, and had no magister at their head. The mere fact that they were salaried marks them off sharply from the national priesthoods (*C. I. L.* vi. 2161; *Eph. Epigr.* iii. p. 91). The account of Dionysius (ii. 22) that the haruspices were instituted by Romulus, and that one was chosen from each tribe, is opposed to all the other authorities, and is manifestly incorrect. Claudius first (Tac. *Ann.* xi. 15) founded a collegium of haruspices, which consisted of sixty members (*C. I. L.* vi. 2161). It is an error of the older commentators to suppose that this collegium existed before his time. Cicero (*de Div.* ii. 24, 52), in speaking of a *summus haruspex*, means only a soothsayer of high distinction. He may, however, have been the head of a school in Etruria.

The art of the haruspices, which was called *haruspicina*, consisted (1) in explaining and interpreting the will of the gods from the appearance of the entrails (*exta*) of animals offered in sacrifice, whence they are sometimes called *extispices*, and their art *extispicium* (Cic. *de Div.* ii. 11, 26; Suet. *Ner.* 56); (2) in dealing with the significance of extraordinary phenomena in nature, to which the general name of *portenta* was given (Valer. Max. i. 1, § 1; Cic. *de Harusp. Resp.* 9, 18; Liv. i. 56, 5, v. 15), and averting the evils portended by thunderbolts (cf. Müller, *Etrusk.* ii. 165 ff.); (3) in interpreting the meaning of lightning. But while the last two also fell under the cognizance of the pontiffs and the augurs, the art of the haruspices was supposed to enable them to deal with them with greater detail. (Cf. Mommsen, *Hist.* i. 190.) Their art is said to have been invented by a fabulous Etruscan dwarf Tages (Cic. *de Div.* ii. 23, 50; Festus, s. v. *Tages*), and was contained in certain books called *libri haruspicini*, *fulgurales*, and *tonitruales*. (Cic. *de Div.* i. 33, 72; compare Macrob. *Saturn.* iii. 7; Müller, *Etrusk.* ii. 30.)

This art was at one time considered by the Romans so important, that the senate decreed that ten young Etruscans from each of the states, belonging to the principal families, should always be instructed in it. (Cic. *de Div.* i. 41, 92; cf. Müller's text, and C. O. Müller, *Etrusk.* ii. p. 4.) The senate sometimes consulted the haruspices (Cic. *de Div.* i. 43, 97; ii. 35, 74; Liv. xxvii. 37), as did also private persons (Cic. *de Div.* ii. 29, 62). In later times, however, their art fell into disrepute among well-educated Romans; and Cicero (*de Div.* ii. 24, 51) relates a saying of Cato, often absurdly misapplied to the augurs, that he wondered that one haruspex did not laugh when he saw another. Cicero (*ad Fam.* vi. 18) is very indignant at the admission of a haruspex into the senate. The Emperor Claudius attempted to revive the study of the art, which had then become neglected; and the senate, under his directions, passed a decree that the pontifices should examine what parts of it should be retained and established (Tac. *Ann.* xi. 15); but we do not know what effect this decree produced. Haruspices appear as late as the time of Alaric (Zosimus, v. 41).

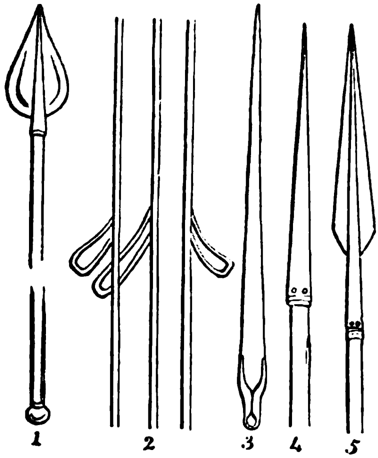
The name of haruspex is sometimes applied to any kind of soothsayer or prophet (Prop. iii. (iv.) 13, 59); whence Juvenal (vi. 550) speaks of *Armenius vel Commagenus haruspex*.

The latter part of the word *haruspex* contains the root *spec*; and Donatus (*ad* Ter. *Phorm.* iv. 4, 28) derives the former part from *haruga*, a victim. The root *har* occurs also in Greek χορδή, *hira*, &c., and denotes "twisted," hence "entrail." (Cf. Corssen, i. 509.) Compare Festus, s. v. *Harviga*, and Varro, *de Ling. Lat.* v. 98, ed. Müller. (Göttling, *Gesch. der Röm. Staatsverf.* p. 213; Walter, *Gesch. des Röm. Rechts*, §§ 142, 770, 2nd ed.; Brissonius, *De Formulis*, i. 29; Marquardt, *Röm. Staatsverw.* iii. 393–398.) [W. S.] [A. S. W.]

HASTA (ἔγχος, παλτόν), a spear. The spear is defined by Homer, δόρυ χαλκῆρες, "a pole fitted with bronze" (*Il.* vi. 3), and δόρυ χαλκοβάρες, "a pole heavy with bronze" (*Od.* xi. 531). The bronze, for which iron was afterwards substituted, was indispensable to form the point (αἰχμή, ἀκωκή, Homer; λόγχη, Xenophon; *acies, cuspis, spiculum*, Ovid. *Met.* viii. 374) of the spear. Each of these two essential parts is often put for the whole, so that a spear is called δόρυ and δοράτιον, αἰχμή, and λόγχη. Even the more especial term μελία, meaning an ash-tree, is used in the same manner, because the pole of the spear was often the stem of a young ash, stripped of its bark and polished. (*Il.* xix. 390, xx. 277, xxii. 328; *Od.* xxii. 259; Plin. *H. N.* xvi. § 62; Ovid, *Met.* xii. 369.) In like manner the spear is designated by the term κάμαξ (Aesch. *Ag.* 66; Eurip. *Hec.* 1155, *Phoen.* 1403; Brunck, *Anal.* i. 191, 226; Antip. Sidon. 34), meaning properly the cane or bamboo, which served also for vine-props and other uses (Hes. *Scut.* 298). Xenophon says that the δόρυ καμάκινον, apparently the usual lance of cavalry in his time, was both weak and heavy, and recommends in its stead two darts of the tough cornel-wood (τὰ κρανέϊνα δύο παλτά, *de Re Eq.* 12, § 12; cf. Theophrast. *H. P.* iii. 12, § 2).

The butt-end of the spear was furnished with a spiked metal ferule, called by the Ionic writers σαυρωτήρ (Hom. *Il.* x. 153; Herod. vii. 40, 41; also Polyb. vi. 23), and οὐρίαχος (*Il.* xiii. 443, xvi. 612, xvii. 528), and in Attic or common Greek στύραξ (Xen. *Hell.* vi. 2, § 19; Athen. xii. p. 514 b; στυράκιον, Thucyd. ii. 4; Aen. Tact. 18). By thrusting this into the ground the spear was fixed erect (Verg. *Aen.* xii. 130).

It has been suggested that the Homeric σαυρωτὴρ or οὐρίαχος was a knob or lump of metal to balance the weight of the spear-head and insure steadiness in throwing (Leaf, in *Journ. Hellen. Soc.* iv. 301): it may no doubt have served that purpose as well, but the ancient tradition is constant in favour of there having been a second spike. Many of the lancers (δορυφόροι, αἰχμοφόροι, λογχοφόροι, woodcut, p. 353 *b*) who accompanied the king of Persia had, instead of this spike at the bottom of their spears, an apple or a pomegranate, either gilt or silvered. (Herod., Athen. *ll. cc.*) With this, or a similar ornament, the spear is often terminated both on Persian and Egyptian monuments. Fig. 1 in the annexed woodcut shows the top and bottom of a spear, which is held by one of the king's guards in the sculptures at Persepolis. (Sir R. K. Porter's *Travels*, vol. i. p. 601.) It may be compared with those in the hand of the Greek warrior at p. 189 *b*, which have the spike at the lower end. The spike at the bottom of the spear was used in fighting by the Greeks and Romans, when the head was broken off. (Polyb. vi. 25.)



Hasta, Spear-heads (various).

A well-finished spear was kept in a case (δορατοθήκη), which, on account of its form, is called by Homer a pipe (σύριγξ, *Il.* xix. 387).

The spear was used as a weapon of attack in three different ways:—1. It was thrown from catapults and other engines [TORMENTUM]. 2. It was thrust forward as a pike. In this manner Achilles killed Hector by piercing him with his spear through the neck (*Il.* xxii. 326). The Euboeans were particularly celebrated as pikemen (Hom. *Il.* ii. 543). 3. It was commonly thrown by the hand. The Homeric hero generally went to the field with two spears (Hom. *Il.* iii. 18, x. 76, xii. 298; Pind. *Pyth.* iv. 139). On approaching the enemy he first threw either one spear or both, and then on coming to close quarters drew his sword (Hom. *Il.* iii. 340, xvii. 530, xx. 273–284). The Homeric spears are of enormous length. Hector carries one 11 cubits long (*Il.* vi. 319), and when fighting from the ship's deck Ajax wields one of double the length, 22 cubits (*Il.* xv. 678). Rüstow and Köchly consider these "purely heroic" (cf. the *falarica* hurled by Turnus, Verg. *Aen.* ix. 705); but Xenophon (*Anab.* iv. 7, § 16) positively tells us that the Chalybes used spears of the portentous length of 15 cubits, and we can only suspend our judgment as to the spears of Homer's time (Leaf, p. 300). The point is commonly supposed to have been attached to the shaft by a hollow socket or ferule (αὐλός, *Il.* xvii. 297, with Leaf's note; αἰγανέας δολιχαύλους, i.e. *venabula*, *Od.* ix. 156); but the lance of Hector has the head fastened on by a golden πόρκης, i.e. κρίκος or ring (*Il.* vi. 320, xv. 495). Leaf very justly points out that a gold ring outside a bronze tube would not be of much use, and that the αὐλὸς and πόρκης were probably not employed together. Curiously enough, the spear-heads at Mycenae all have the αὐλός (Schliemann, *Mycenae*, p. 278), while those found at Hissarlik are attached to the shaft by nails (*Ilios*, pp. 475–7; *Troja*, p. 95): in the latter case the ring would come in usefully to prevent the wood from splitting. It is perhaps allowable to suppose that the αὐλὸς was the Greek, the πόρκης the Trojan mode of attachment. The question is more fully discussed by Leaf, *l. c.*

The spear frequently had a leathern thong tied to the middle of the shaft, which was called ἀγκύλη by the Greeks, and *amentum* or *ammentum* by the Romans, and which was of assistance in throwing the spear. The javelin to which the ἀγκύλη was attached was called μεσάγκυλον. (Pollux, i. 136; Schol. *ad* Eurip. *Orest.* 1477; Xen. *Anab.* iv. 2, § 28; Verg. *Aen.* ix. 665; Ov. *Met.* xii. 321; Cic. *de Orat.* i. 57, § 242; *Brut.* 78, § 271.) The annexed figure, taken from Sir W. Hamilton's *Etruscan Vases* (iii. pl. 33), represents the *amentum* attached to the spear at the centre of gravity, a little above the middle.

The *amentum* added to the effect of throwing the lance by giving it rotation, and hence a greater degree of steadiness and directness in its flight, as in the case of a ball shot from a rifle. This supposition both suits the expressions relative to the insertion of the fingers, and accounts for the frequent use of the verb *torquere*, "to whirl or twist," in connexion with this subject. Two fingers were used, the fore and the middle finger: *Ammentum digitis tende prioribus* (Senec. *Phaedr.* 820). We also find mention in the Latin grammarians of *Hastae ansatae*, and Ennius speaks of *Ansatis concurrunt undique telis* (*ap.* Macrob. *Sat.* vi. 1, § 16). The *ansa* was probably the same as the *amentum*, and was so called as being the part which the soldier laid hold of in hurling the spear. (Cf. Saglio, in D. and S., s. v. *Amentum.*)

Spear with amentum. (From an Etruscan vase.)

Under the general terms *hasta* and ἔγχος were included various kinds of missiles, of which the principal were as follows:—

Lancea (λόγχη, Festus, s. v. *Lancea*), the lance, a comparatively slender spear commonly used by the Greeks. Iphicrates, who doubled the length of the sword [GLADIUS], also added greatly to the dimensions of the lance. (Diod. xv. 44; Nep. *Iphicr.* 1, § 3.) This weapon was used by the Grecian horsemen (Polyb. vi. 23); and by means of a cross-bar to it, which is supposed by Stuart (*Ant. of Athens*, vol. iii. p. 47; woodcut, fig. 2) to be exhibited on the shafts of three spears in an ancient bas-relief, they mounted their horses with greater facility. This, however, is a mere conjecture: Xenophon describes the way to mount a horse (*de Re Eq.* 7) and the proper kind of spears for cavalry (*ib.* 12), and nowhere alludes to this or any other artificial help in mounting.

Pilum (ὑσσός), the javelin, much thicker and stronger than the Grecian lance (Flor. ii. 7, = i. 23, Jeep). Its shaft, often made of cornel (Verg. *Aen.* ix. 698; Ovid, *Met.* viii. 408), was 4½ feet (3 cubits) long, and the barbed iron head was of the same length, but this extended half-way down the shaft, to which it was attached with extreme care, so that the whole length of the weapon was about 6 feet 9 inches. Each soldier carried two (Polyb. vi. 23). It was used either to throw or to thrust with; it was peculiar to the Romans, and gave the name of *pilani* to the division of the army by which it was adopted. It was, however, carried by different classes of troops at different times, and at last, apparently, by all the legionaries (EXERCITUS, pp. 784 *b*, 785 *a*). When Marius fought against the Cimbri, he ordered that of the two nails or pins (περόναι) by which the head was fastened to the staff, one should be of iron and the other of wood. The consequence was that, when the *pilum* struck the shields of the enemy, the wooden nail broke; and as the iron head was thus bent, the spear, owing to the twist in the metal part, still held to the shield and so dragged along the ground. (Plut. *Mar.* 25.)

Whilst the heavy-armed Roman soldiers bore the long lance and the thick and ponderous javelin, the light-armed used smaller missiles, which, though of different kinds, were included under the general term *hastae velitares* (Liv. xxvi. 4, xxxviii. 20; Plin. *H. N.* vii. § 201, xxviii. § 34). From γρόσφος, the corresponding Greek term (Polyb. i. 40; Strabo, iv. p. 196), the *velites*, or light-armed, are called by Polybius γροσφομάχοι (vi. 19, 20). According to his description the γρόσφος was a dart, with a shaft about 3 feet long and 1 inch in thickness: the iron head was a span long, and so thin and acuminated as to be bent by striking against anything, and thus rendered unfit to be sent back against the enemy. Fig. 3, in the above woodcut, shows one which was found, with nearly four hundred others, in a Roman entrenchment at Meon Hill, in Gloucestershire. (Skelton's *Engraved Illustrations*, vol. i. pl. 45.)

The light infantry of the Roman army used a similar weapon, called "a spit" (*veru*, *verutum*. Liv. xxi. 55; σαύνιον, Diod. Sic. xiv. 27; Festus, s. v. *Samnites*). It was adopted by them from the Samnites (Verg. *Aen.* vii. 665) and the Volsci (*Georg.* ii. 168). Its shaft was 3½ feet long, its point 5 inches (Veget. ii. 15). Fig. 4, in the above woodcut, represents the head of a dart in the Royal Collection at Naples; it may be taken as a specimen of the *verutum*, and may be contrasted with fig. 5, which is the head of a lance in the same collection. The Romans adopted in like manner the *gaesum*, which was properly a Celtic weapon (Liv. xxviii. 45); it was given as a reward to any soldier who wounded an enemy (Polyb. vi. 37). *Sparus* is evidently the same word with the English *spar* and *spear*. It was the rudest missile of the whole class, and only used when better could not be obtained. (Verg. *Aen.* xi. 682; Serv. *in loc.*, "sparus est rusticum telum in modum pedi recurvum"; Nepos, *Epam.* 9, § 1; Sallust, *Cat.* 56; Gell. x. 25.)

Besides the terms *jaculum*, *spiculum*, and *venabulum* (ἄκων, ἀκόντιον), which probably denoted lighter darts used in hunting as well as in battle (Thucyd. ii. 4; Cic. *in Verr.* v. 3, § 7, *ad Fam.* v. 12, § 5; Verg. *Aen.* x. 52; Serv. *in loc.*; Ov. *Met.* viii. 410; Flor. *l. c.*), we find in classical authors the names of various other spears which were characteristic of particular nations. Thus, Servius (on *Aen.* vii. 164) states that, as the *pilum* was proper to the Romans and the *gaesum* to the Gauls (cf. *Aen.* viii. 661; Propert. v. 10, 42), so the *sarisa* was the spear peculiar to the Macedonians. (On the extraordinary length of the *sarisa*, see EXERCITUS, p. 778; Grote, Excursus on ch. 92; on the spelling of the word, L. and S. *s. v.* *σάρισα.*) The Thracian *ῥομφαία*, *rhomphaea* or *rumpia*, has been compared to the *sarisa* on the strength of a passage in Livy (xxxi. 39), but was really a sword (cf. GLADIUS); whereas the Illyrian *σιβύνη* is justly described as a *venabulum* or hunting-spear (*σιβύνιον*, Polyb. vi. 23, § 9; *σιγύνη*, Herod. v. 9; Antip. Sidon. 13; *sibina*, Enn. *Annal.* vii. 115; *sibyna*, Festus; *sibones*, Gell. x. 25).

The iron head of the German spear, called *framea*, was short and narrow, but very sharp. The Germans used it with great effect either for hurling or thrusting: they gave to each youth a *framea* and a shield on coming of age (Tac. *Germ.* 6, 13, 18, 24; Juv. xiii. 79).

The *falarica* or *phalarica* was a missile of the largest dimensions, deriving its name from the *falae* or wooden towers used in sieges (cf. HELEPOLIS), from which it was usually discharged by an engine (Fest., Non. *s. v.*; Veget. iv. 18; Serv. *ad Aen.* ix. 705; Gell. x. 25). Livy (xxi. 8) describes one employed by the Saguntines, and impelled by the aid of twisted ropes; it was large and ponderous, having a head of iron 3 feet in length, which carried flaming pitch and tow. This sort was weighted near the top by a circular mass of lead (Isid. *Orig.* xviii. 7). We also find a *falarica* hurled from the hand, mostly, however, in poetry as a feat of gigantic strength (Verg. *Aen.* l. c.; Lucan, vi. 196; Sil. Ital. i. 351; Grat. Falisc. *Cyneg.* 342), but in real life by a Spanish tribe (Liv. xxxiv. 14). The *matara*, *mataris* or *materis*, a Celtic word, denotes a broad-tipped spear used by the Gauls (Auct. *ad Herenn.* iv. 32, § 43; Caes. *B. G.* i. 26; Liv. vii. 24; *μάδαρις, παλτοῦ τι εἶδος*, Strab. iv. p. 196; Hesych.); the *tragula* (in some senses, but perhaps not in this one, derived from *traho;* see the Dictionaries) was probably barbed, as it required to be cut out of the wound (Sallust. *ap.* Non. p. 553, 29; Caes. *B. G.* v. 35; Gell. *l. c.*).

The careful antiquarian researches of recent years have led to the discovery of many specimens of Roman weapons, especially in Germany and Switzerland; the results of these finds, styled "important" by Guhl and Koner (p. 772), do not tend to the overthrow of previously established conclusions. A genuine old-German *framea* has not, it appears, yet been dug up out of its native soil (*ib.* p. 775).

Among the decorations which the Roman generals bestowed on their soldiers, more especially for saving the life of a fellow-citizen, was a spear without a head, called *hasta pura* (Verg. *Aen.* vi. 760; Serv. *in loc.*; Festus, s. v. *Hasta;* Sueton. *Claud.* 28; Tac. *Ann.* iii. 21). The gift of it is sometimes recorded in funeral inscriptions.

The *caelibaris hasta* (Festus, *s. v.*) having been fixed into the body of a gladiator lying dead on the arena, was used at marriages to part the hair of the bride (Ov. *Fast.* ii. 559 foll.; Plut. *Quaest. Rom.* 87).

A spear was erected at auctions [AUCTIO], and when tenders were received for public contracts (*locationes*). It served both to announce by a conventional sign conspicuous at a distance that a sale was going on, and to show that it was conducted under the authority of the public functionaries (Cic. *de Off.* ii. 8, § 29; Nepos, *Att.* 6; Festus, s. v. *Hasta*). Hence an auction was called *hasta*, and *hastarium* (Tertull. *Apol.* 13) is either an auction-room or an auctioneer's catalogue: in modern Italian *asta* means only an auction, never a spear. It was also the practice to set up a spear in the court of the CENTUMVIRI.

The throwing of the spear (*ἀκοντισμός*) was one of the gymnastic exercises of the Greeks (Krause, *Gymnastik und Agonistik*, i. 465 ff.; PENTATHLON). On Greek spears in general, cf. Droysen, *Kriegsalterth.* pp. 17–19 in Hermann-Blümner; Guhl and Koner, ed. 5, pp. 314–318; W. Leaf in *Journ. Hell. Soc.* iv. 299 ff.: on Roman, Marquardt, *Staatsverw.* ii. 328 ff.; Guhl and Koner, pp. 772–775. [J. Y.] [W. W.]

HASTA'TI. [EXERCITUS, pp. 783 *a*, 784 *b*.]

HECATOMBAEA. [HERAEA.]

HECATOMBAEON. [CALENDARIUM, Greek.]

HECATOMBE. [SACRIFICIUM.]

HECATO'MPEDON. [PES; TEMPLUM.]

HECATOMPHO'NIA (*ἑκατομφόνια*), an ancient festival or rather custom observed by the Messenians of Ithome, whenever they had killed a hundred enemies. A sacrifice was offered on the occasion to Zeus. (Paus. iv. 19, § 2; Plut. *Romul.* 24.) [L. S.]

HECATOSTE (*ἑκατοστή*). [PENTECOSTE.]

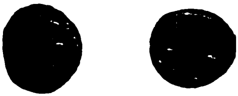
HECTE or **HECTEUS** (*ἕκτη, ἑκτεύς*), and its half, *Hemiecton* or *Hemiecteon* (*ἡμίεκτον, ἡμιεκτέον*), are terms which occur, in more than one sense, in the Greek metrical system, and are interesting on account of the examples they furnish of the duodecimal division.

1. In dry measures, the *hecteus* was the sixth part of the *medimnus*, and the *hemiecteon*, of course, the twelfth part. (Aristoph. *Eccl.* 547; *Nub.* 643, 645.) In the latter passage the *ἡμιεκτέον* is called *τετράμετρον*, as holding 4 choenices. The form *ἡμιεκτέον* is used by Aristophanes, *ἡμίεκτον* by later writers (Dem. *c. Phorm.* p. 918, § 37). The *hecteus* was equal to the Roman *modius*, as each contained 16 *ξέσται* or sextarii. In late Greek the word *ἑκτεὺς* became obsolete, and *μόδιος* took its place, as in the fragments of Galen's metrological writings. (Boeckh, *Metrol. Untersuch.* pp. 33, 200; Hultsch, *Metrol.* p. 82.) [P. S.] [W. W.]

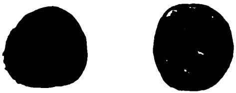
2. In the case of coins also, the hecte was the sixth part of some unit. It would seem from the statement of Hesychius (*s. v.*) that the term was applied to fractional coins, whether of gold, silver, or copper. In this wide sense the silver obol, as being the sixth part of the drachm, would be a hecte. But the name was specially applied to small coins of gold and of electrum (mixed gold and silver). One reason for this may have been that as the mintages of gold and electrum belonged principally to Asia Minor, the unit or stater in those metals followed the Oriental principle of division by thirds, sixths, and twelfths, rather than by halves and quarters. The sixth part of the gold and electrum staters of the cities of Ionia, of Lydia, of Cyzicus and Phocaea, was a coin in frequent use in antiquity, and minted in great quantities. Ἕκται Φωκαΐδες are mentioned as dedicated in the Athenian treasuries in the lists of B.C. 429 and 397 (*C. I. Att.* i. 199, 207). At a later period they were issued jointly with Mitylene, in virtue of a compact of which the text has

come down to us [see Electrum, *ad fin.*]. The hectae of Phocaea of Mitylene and of Cyzicus abound in our museums: they are roundish coins made of a pale mixture of gold and silver, and weighing from 35 to 44 grains.

The twelfth or ἡμίεκτον of electrum was also a common coin. This is mentioned by Julius



Hecte of Phocaea.



Hecte of Cyzicus.

Pollux (ix. 62, quoting Crates) as the equivalent of eight obols of silver; that is to say, if the obols be Attic obols, ninety grains of silver, giving a proportion of value between electrum and silver of 4½ to 1, a proportion which can only have obtained if the electrum were of very base quality [P. G.]

HECTEMO'RII (ἑκτημόριοι), a name given to a class of cultivators in Attica before the time of Solon.

We have examples, among the unenfranchised classes in Greece, of agriculturists who had to pay a fixed quantity of produce and take all the risks of bad seasons: such were the Perioeci and Helots in Laconia [Decumae, *init.*; Helotes]. We also find what is now known as the *métayer* system, under which landlord and tenant divide the produce in a certain proportion. The landlord's share was called μορτή, and land held under *métairie* was ἐπίμορτος γῆ (Pollux, vii. 151, quoting Solon). The ἑκτημόριοι were *métayers* who, according to some ancient authorities, paid a sixth portion to their masters and retained five-sixths for themselves (Plut. *Sol.* 13; Hesych. *s. v.* ἐπίμορτος): according to others, they received only a sixth part (Hesych. *s. v.* ἑκτήμοροι: Phot. *s. v.* πελάται: Eustath. *ad* Hom. *Od.* xix. 28, p. 1854). The correctness of the latter view, first insisted upon by Schömann (*Assemblies*, p. 362), is now generally admitted; had the tenants paid only a sixth, they would have been much better off than the landowners, whereas all the accounts testify to a state of oppression to which Solon applied a remedy. Boeckh, who in his first edition (*P. E.* p. 494) held that the cultivators paid the sixth part, afterwards came round to the opinion of Schömann (*Sthh.*^{2} i. 578). The ἑκτημόριοι belonged to the class of θῆτες, though probably not all θῆτες were ἑκτημόριοι (Schömann, *Antiq.* i. 323 n.). They were also sometimes called πελάται, *i.e.* clients or dependents (Plat. *Euthyphr.* 4 C, with Schol.). (Schömann, *Assemblies*, p. 362; *Antiq. Jur. Publ.* p. 169; *Antiq.* i. 323, E. T.; Hermann, *Staatsalterth.* § 100 n. 16, 101 n. 10; Büchsenschütz, *Besitz und Erwerb*, p. 49 f.; Gilbert, *Staatsalterth.* i. 125 f.)

For the Roman *métayers*, called *partiarii*, see Agricultura, p. 60 *a*; and cf. Gaius, *Inst.* ii. 254, and *ap.* Dig. 19, 2, 25; *pecora partiaria*, i.e. the same system applied to the increase of cattle, Cod. Just. 2, 3, 8. [W. S.] [W. W.]

HEDNA (ἕδνα). [Dos.]

HEGEMO'NIA DIKASTE'RIOU. [Eisagogeis.]

HEGETO'RIA. [Plynteria.]

HEIRGMOU DIKE (εἰργμοῦ δίκη). This was an action for keeping a free person in private custody. There are no orations upon this subject extant. Pollux (vi. 353) mentions εἰργμὸς in a list of ἀδικήματα. The *Lex. Cantabr.* s. v. defines it, εἴ τις τινα ἔδησεν ἢ συνέσχεν ἀδίκως, and quoting Dem. *c. Mid.* p. 562, § 147, hints that Agatharchus the painter might have adopted this remedy against Alcibiades ([Andoc.] *c. Alcib.* §§ 17, 18; Plut. *Alcib.* 16). In Dinarch. *c. Demosth.* § 23, it is mentioned that a miller incurred capital punishment for a like offence. Meier looked upon it as another instance of εἰργμός, whilst Maetzner (*ad l. c.*) and Lipsius (*Att. Process*, p. 410 n.) take it to be a γραφὴ ὕβρεως. If the latter view be correct, the punishment was not so severe as to cause any astonishment (such as Thonissen expresses, *Droit pénal*, p. 294 f.). Quite different from this action was ἀδίκως εἰρχθῆναι ὡς μοιχόν. [Adulterium.] [J. S. M.] [H. H.]

HELE'POLIS (ἑλέπολις). When Demetrius Poliorcetes besieged Salamis in Cyprus B.C. 306, he caused a machine to be constructed, which he called "the taker of cities." Its form was that of a double cube, 45 cubits square and 90 high. It rested on four wheels, each 8 cubits high. It was divided into nine stories, the lower of which contained machines for throwing great stones, the middle large catapults for throwing spears, and the highest, other machines for throwing smaller stones, together with smaller catapults. It was manned with 200 soldiers, besides those who moved it by pushing the parallel beams at the bottom. (Diod. xx. 48.)

At the siege of Rhodes, in the following year, Demetrius employed a helepolis of still greater dimensions and more complicated construction. Besides wheels it had castors (ἀντίστρεπτα), so as to admit of being moved laterally as well as directly. Its form was pyramidal. The three sides which were exposed to attack were rendered fire-proof by being covered with iron plates. In front each story had port-holes, which were adapted to the several kinds of missiles, and were furnished with shutters that could be opened or closed at pleasure, and were made of skins stuffed with wool. Each story had two broad flights of steps, the one for ascending, the other for descending. (Diod. xx. 91; Plut. *Demetr.* 21; compare Vitruv. x. 22.) This helepolis was constructed by Epimachus the Athenian; and a much esteemed description of it was written by Dioclides of Abdera. (Athen. v. p. 206 d.) It was no doubt the greatest and most remarkable engine of the kind that was ever erected. In subsequent ages we find the name of "helepolis" applied to moving towers which carried battering-rams, as well as machines for throwing spears and stones. Engines of this kind were used to batter the walls of Jerusalem at the siege under Titus (Joseph. *B. J.* ii. 19, § 9; iii. 6, § 2). One described by Ammianus does not differ much from the earlier model (Amm. Marc. xxiii. 4, § 10); we find them likewise in the Byzantine

period (Agathias, i. 18; Nicet. Chon. *Jo. Comnen.* p. 14 b). [ARIES; TORMENTUM.]
[J. Y.] [W. W.]

HELIASTAE. [DICASTES.]

HELIOCAMI'NUS. [DOMUS, p. 686 *b*.]

HELIX (ἕλιξ), anything of a spiral form, whether in one plane, as the spiral curve, or in different planes, as the screw.

1. In architecture, the spiral volutes of the Ionic and Corinthian capitals. The Roman architects, while they used the word *volutae* for the angular spirals, retained the term *helices* for the smaller spirals in the middle of each face of the Corinthian capital. (Vitruv. iv. 1, § 12.)

2. In mechanics, the word designates the screw in its various applications; but its chief use was to describe a machine used for launching ships, said to have been invented by Archimedes. (Athen. v. p. 207 a, where Schweighäuser notes that the exact nature of it has not been discovered.) [P. S.] [W. W.]

HELLANO'DICAE (Ἑλλανοδίκαι), the judges in the Olympic and Nemean games, of whom an account is given under OLYMPIA. The same name was also given to the judges or court-martial in the Lacedaemonian army (Xen. *Rep. Lac.* 13, § 11); and they were probably first called by this name when Sparta was at the head of the Greek confederacy. As the name implies, their jurisdiction must have been international, not exclusively Spartan. According to Gilbert (*Staatsalterth.* i. pp. 65, 81), they were not military officers, but attached to the army in a civil capacity, like the κρεοδαίτης, ταμίαι, and λαφυροπῶλαι. [W. S.] [W. W.]

HELLENOTA'MIAE (Ἑλληνοταμίαι), or treasurers of the Greeks, were magistrates appointed by the Athenians to receive the contributions of the allied states. They were first appointed B.C. 477, when Athens, in consequence of the conduct of Pausanias, had obtained the headship of the league of national defence against the Persians. The money paid by the different states, which was originally fixed at 460 talents, was deposited in Delos, which was the place of meeting for the discussion of all common interests; and there can be no doubt that the Hellenotamiae not only received, but were also the guardians of these moneys. Xenophon (*de Vect.* 5, § 5) describes the position of Athens at the head of the confederacy as ἡγεμονία and ἑλληνοταμία (Thuc. i. 96; Plut. *Arist.* 24; Antiph. *de Caed. Her.* § 69; Andoc. *de Pace*, § 38). The office was retained after the treasury was transferred to Athens on the proposal of the Samians (Plut. *Arist.* 25; Diod. xii. 38), but was of course abolished on the conquest of Athens by the Lacedaemonians. The Hellenotamiae were not reappointed after the restoration of the democracy; for which reason the grammarians afford us little information respecting their duties. It is, however, certain from inscriptions that they were ten in number, and, like the Strategi, chosen one from each tribe, not necessarily, but as far as circumstances permitted: for as requiring character and the possession of property they were almost certainly an ἀρχὴ χειροτονητή (Gilbert, *Staatsalterth.* i. 236; Fränkel, n. 307 on Boeckh; *C. I. A.* i. 259, 260). In the case where the occurrence of eleven names has occasioned a difficulty (*C. I. A.* i. 188), there is little doubt that the eleventh is a πάρεδρος or assessor: in other inscriptions (*ib.* 180–183) Ἑλληνοταμίαι and πάρεδροι are coupled together, and Gilbert (*l. c.*) thinks that there was one to each. The Hellenotamiae, during the period of Athenian supremacy, were the most important financial officers after the treasurers of Athena (ταμίαι τῆς θεοῦ), into whose treasury, the Opisthodomos, they carried the collected tribute. A mina in the talent, or $\frac{1}{60}$, was retained as an ἀπαρχὴ for the goddess; the rest was disbursed as it was wanted by the ταμίαι τῆς θεοῦ to the Hellenotamiae, and by them applied mostly to the Theorica and to military objects. It is needless to say that the pretext of defence against the Persians was soon dropped, and that the money of the allies was spent in wars for the aggrandisement of Athens. The time for paying the φόρος into the treasury was, as a rule, in the spring, when the festival of the great Dionysia was celebrated. If the allies were backward in payment, the action of the Hellenotamiae was supplemented by the appointment of ἐκλογεῖς [ECLOGEIS, No. 2]. (Boeckh, *P. E.* p. 176 ff. = *Sthh.*^{3} i. 217 ff.; Schömann, *Antiq.* i. 438, 453, E. T.; Gilbert, *Staatsalterth.* i. 236 f., 398; a classified list of inscriptions in Boeckh, *Sthh.*^{3} i. 217 n.)
[W. S.] [W. W.]

HELLOTIA. [ELLOTIA.]

HELO'TES or **-AE** (Εἵλωτες, Εἱλῶται: *Ilotae*, Liv. xxxiv. 27) were a class of bondsmen subject to Sparta. The whole of the inhabitants of Laconia were included in the three classes of Spartans, Perioeci, and Helots, of whom the Helots were the lowest. They formed the rustic population of the country, dwelling in small villages or on detached farms, both in the district immediately surrounding Sparta and around the towns of the Perioeci. We need not regard them as exclusively or even mainly settled in the low fertile country watered by the Eurotas, where the estates of the Spartans were mostly situated (Gilbert, p. 31); they were doubtless, as cultivators of the soil, diffused over the whole country. Their condition was that of serfs attached to the land, *adscripti glebae*, and they could not be sold away from it; they were regarded as the property of the state, which, while it gave their services to individuals, reserved to itself the power of emancipating them (Ephorus *ap.* Strab. viii. p. 365; δοῦλοι τοῦ κοινοῦ, Paus. iii. 20, § 6). Different etymologies are given of their name. In ancient times it was believed to be derived from the town of Helos on the coast of Laconia (Hellanicus *ap.* Harpocrat. *s. v.* εἱλωτεύειν: Ephorus *ap.* Strab. *l. c.*; Theopompus *ap.* Ath. vi. 272 a; Schol. Plat. *ad Alcib.* i. p. 122 D [p. 919 a ed. Turic.]; Apostolius, *Cent.* vi. 59 = Leutsch, *Paroemiogr.* i. 379). But apart from other improbabilities, it is impossible to form Εἵλωτες from Ἕλος, the inhabitants of which are called Ἕλειοι or Ἑλεᾶται: nor is the difficulty diminished if we treat ἕλος, not as a proper name but in the sense of "marsh," as if "dwellers in the lowlands" were meant. The explanation of Müller (*Dor.* iii. 3 *init.*) as "prisoners" from the root of ἑλεῖν, "to take," like δμῶες from the root of δαμάω, is now universally accepted; and, as he points out, there are traces of it in ancient times by the side of the other (οἱ ἐξ αἰχμαλώτων δοῦλοι γενόμενοι, Schol. Plat., Apostol., *ll. cc.*;

Etym. M. s. v.). Why two classes of the conquered should have received such different treatment as the Perioeci and Helots is a question which goes back to pre-historic times and cannot be satisfactorily answered. The general opinion in the ancient world was that the former had made terms with their conquerors, whereas the latter had surrendered at discretion after resistance, perhaps aggravated by rebellion (Ephor., Theopomp., *ll. cc.*). Müller, as the avowed apologist for the Dorian race, tried to prove that, on their arrival in the Peloponnese, they found a class of agricultural serfs in the land, consisting of the Leleges or other early inhabitants, already deprived of their freedom by the Achaeans, and made no change in their condition. But Schömann has well pointed out that this theory, though not altogether inconceivable, at least contradicts the express statements of ancient writers (Schömann, *Antiq.* i. 194, E. T.; cf. Thumser, *Staatsalterth.* p. 121, n. 2; Gilbert, p. 32, leaves the point undecided). Few would attach any importance to the statement of Pliny, who in a catalogue of inventions (*H. N.* vii. § 200) says, "servitium invenere Lacedaemonii;" but earlier and better writers also ascribed the origin of predial slavery in Greece to the Thessalian and Dorian conquests. (See, besides the passages already referred to, Theopomp. *ap.* Ath. vi. p. 265 b, c.) Schömann further argues that there is no trace of this institution in Homeric descriptions of the heroic age; the lowest in the agricultural scale is the *θής*, a free labourer working on poor wages for a small farmer (*ἀνδρὶ παρ' ἀκλήρῳ*, *Od.* xi. 490): others less correctly make the *θής* a serf or villain (L. and S. *s. v.*; Merry and Riddell, *ad loc.*).

At the end of the second Messenian war (B.C. 668), the conquered Messenians were reduced to slavery, and included under the denomination of Helots. Their condition appears to have been the same, with some slight differences, as that of the other Helots. But, in addition to that remembrance of their freedom, which made not only them, but through their influence the whole class of Helots, more and more dangerous to their masters, they preserved the recollection of their national existence, and were ready to seize any opportunity for regaining it. Henceforward the danger from the servile population became much more serious, and the Spartan precautions against a rising more cruel and unscrupulous; a state of things which in the end was aggravated by the dwindling numbers of the ruling oligarchy. Epaminondas, after the battle of Leuctra, restored the main body of these Messenian Helots to their country, where they no doubt formed the chief part of the population of the new city of Messene (Thirlwall, v. 104, 105; Grote, ch. 78, vii. 197 ff.).

The Helots formed by far the most numerous class of the population. Schömann, after Müller (*Dor.* iii. 3, § 6), reckons them at 224,000 out of a total of 380,000 or at most 400,000; it must be admitted, however, with Büchsenschütz (*Besitz und Erwerb*, p. 139 n.) and Gilbert (*l. c.*) that the calculations upon which this estimate is based are very uncertain. They occupied both the 9,000 larger estates (*κλῆροι*) of the Spartans and the 30,000 smaller lots of the Perioeci. Several families resided in dwellings of their own upon each *κλῆρος*: Müller assumes six or seven, but the *κλῆροι* must have differed greatly in extent and fertility. They cultivated the land and paid to their masters as rent a fixed measure of corn, the exact amount of which had been fixed at a very early period, the raising of that amount being forbidden under heavy imprecations (Plut. *Inst. Lac.* 41, p. 239 d). The annual rent paid for each *κλῆρος* was eighty-two medimni of barley, and a proportionate quantity of oil and wine (Plut. *Lyc.* 8 and 24). It is impossible to accept Müller's calculation, that this represented only a fifth of the produce, and that the Helots kept four-fifths for themselves. Compare the Athenian HECTEMORII. The domestic servants of the Spartans were mostly Helots. They attended on their masters at the public meal; and many of them were no doubt employed by the state in public works. Bought slaves were rare at Sparta, but not altogether unknown: the poet Alcman is said to have been a Lydian slave from Sardis.

In war the Helots served as light-armed troops (*ψιλοί*), a certain number of them attending every heavy-armed Spartan to the field; at the battle of Plataeae, there were seven Helots to each Spartan, and one to every hoplite of the Perioeci (Herod. ix. 10 and 28). These attendants were probably called *ἀμπίτταρες* (*i.e.* *ἀμφιστάντες*, Hesych. *s. v.*), and one of them in particular the *θεράπων* or orderly (Herod. vii. 229; *ὑπασπιστής*, Xen. *Hell.* iv. 5, 14); though *θεράπων* was also used by the Dorians as a general name for armed slaves. The *ἐρυκτῆρες*, mentioned as emancipated Helots, were probably Helots serving in war and not yet free, though they generally became so if they showed distinguished bravery: one of their duties was to carry off the wounded from the ranks (*ἐρύκειν*, akin to *ἐρύειν*). The Helots only served as hoplites in particular emergencies; and it was a universal rule that such service was followed by the bestowal of freedom. The first instance of this kind was in the expedition of Brasidas, B.C. 424: others are recorded in the Peloponnesian and Theban wars (Thucyd. iv. 80, v. 34, vii. 19; Xen. *Hell.* vi. 5, § 28). On the other hand, in the Spartan fleets the general body of the sailors were Helots, and while serving in this capacity they were called *δεσποσιοναῦται*. They may generally have been rewarded with freedom, but it is probably by a mistake that they are spoken of as free during their period of service (Schömann, *Antiq.* i. 198 n.).

The treatment to which the Helots were subjected, as described by the later Greek writers, is marked by the most wanton cruelty. Thus Myron states that "the Spartans impose upon them every ignominious service, for they compel them to wear a cap of dog-skin, and to be clothed with a garment of sheep-skin, and to have stripes inflicted upon them every year for no fault, that they may never forget that they are slaves. And besides all this, if any rise by their qualities above the condition of a slave, they appoint death as the penalty, and their masters are liable to punishment if they do not destroy the most excellent" (Athen. xiv. p. 657 d). And Plutarch (*Lyc.* 28) states that Helots were forced to intoxicate themselves, and perform indecent dances as a warning to the Spartan youth. The general opinion of ancient writers is summed up in the passage of Theopompus already cited (*ap.* Ath. vi. 272 a): *τὸ δὲ τῶν εἱλώτων ἔθνος παντάπασιν ὠμῶς διοικεῖται καὶ πικρῶς.* These statements must be received with some caution, owing to the "rhetorical spirit with which later historians embellished their philanthropic views" (Müller, § 3). Thus Myron, whose work on the Messenian war was a mere romance, absurdly treats the sheep-skin garment and dog-skin cap, universally worn by the peasantry in outlying districts, as badges of insult. The Helots had some at least of the privileges of freemen; their family rights were respected; and they had a certain power of acquiring property. Cleomenes, for instance, offered manumission to every Helot who could pay down five Attic minae; and no fewer than six thousand purchased their freedom for the considerable sum of £20 each (Plut. *Cleom.* 23). In their social relations with their masters, the anecdotes of their treatment (*e.g.* the story of their drunkenness), as Grote puts it, "betoken less of cruelty than of ostentatious scorn." This feeling, it must be remembered, increased in later times as the Spartans made up by increased arrogance for their diminishing numbers. But politically a much darker sentiment prevailed on the part of the Spartan government and the ephors, its leading representatives, at least from the time of the Messenian wars. The chronic dread of insurrection overcame every scruple of good faith or humanity, and the measures of repression described under Crypteia were had recourse to. Here also we find exaggerated statements in late and uncritical writers; but there can be no doubt of the fact related by Thucydides, that on one occasion 2,000 of the Helots who had rendered the greatest service to the state in war, were induced to come forward by the offer of emancipation, and then were mysteriously put to death (Thucyd. iv. 80).

The Helots might be emancipated, but in that case, instead of passing into the class of Perioeci, they formed a distinct body in the state, known at the time of the Peloponnesian war by the general term of *νεοδαμώδεις* (Thucyd. v. 34, vii. 19, 58, viii. 5), but subdivided into several classes. Myron of Priene (*ap.* Ath. vi. p. 271 f) enumerates the following classes of emancipated Helots:—*ἀφέται, ἀδέσποτοι, ἐρυκτῆρες, δεσποσιοναῦται*, and *νεοδαμώδεις*: this, however, is a piece of very careless writing; the terms *ἀφέται* ("discharged") and *ἀδέσποτοι* speak for themselves, but the *ἐρυκτῆρες* and *δεσποσιοναῦται* were probably not emancipated at all (see above), and *νεοδαμώδεις* is the general term which he here confuses with its subdivisions. Besides these, there were the *μόθωνες* or *μόθακες*, who were domestic slaves brought up with the young Spartans, and then emancipated. These were generally or invariably the illegitimate sons of Spartan lords by Helot mothers, and in many cases they attained not merely freedom, but civic rights and even high command; Callicratidas, Lysander, and Gylippus are all said to have been of Mothakic origin (Phylarch. *ap.* Ath. vi. 271 e; Aelian, *V. H.* xii. 43; Müller, *Dor.* iii. 3, § 5). The *νεοδαμώδεις* received permission to dwell where they wished (Thucyd. v. 34); implying, as Müller thinks, a grant of land as their own. On the classes of Spartan citizens, cf. Civitas (Greek), p. 446 ff. (Müller, *Dorians*, iii. 3; Thirlwall, i. 309–313; Grote, pt. 2, ch. 6=ii. 140–145; Schömann, *Antiq.* i. 194–201, E. T.; Gilbert, *Staatsalterth.* i. 31–36; Thumser, *Staatsalterth.* § 19, in Hermann-Blümner.) [P. S.] [W. W.]

HEMERA. [Dies.]

HEMERO'DROMI (*ἡμεροδρόμοι*) were couriers in the Greek states, who could keep on running all day, and were often employed to carry news of important events. As the Greeks had no system of posts, and but few roads, such messengers must have been of great service. They were trained for the purpose, and could perform the longest journeys in an almost incredibly short space of time. (Herod. vi. 105; Plat. *Protag.* 335 E; Corn. Nep. *Milt.* 4; Plut. *Arist.* 20; Paus. vi. 16, § 5.) Such couriers appear to have been kept by most of the Greek states, and were in times of danger stationed on some eminence in order to observe anything of importance that might happen, and carry the intelligence with speed to the proper quarter. Hence we frequently find them called *Hemeroscopi* (*ἡμεροσκόποι*, Herod. vii. 183, 192; Xen. *Hell.* i. 1, § 2; Aeneas Tact. c. 6). That the *Hemeroscopi* were the same as the *Hemerodromi* appears not only from the passage of Aeneas Tacticus just referred to, but also from the words of Livy (xxxi. 24): "ni speculator (hemerodromos vocant Graeci, ingens die uno cursu emetientes spatium), contemplans regium agmen e specula quadam, praegressus nocte media Athenas pervenisset." The Hemerodromi were also called *Dromokerykes* (*δρομοκήρυκες*, Aeschin. *de F. L.* § 130; Harpocrat. and Hesych. *s. v.*). [W. S.] [W. W.]

HEMERO'SCOPI. [Hemerodromi.]

HEMICHRY'SUS. [Aurum; Stater.]

HEMICO'NGIUS. [Congius; and the Tables.]

HEMICY'CLIUM (*ἡμικύκλιον*), a semicircle, is used in much the same senses as Exedra (*q. v.*). 1. A recessed seat, either semicircular in shape or, sometimes, a smaller segment of a circle; Vitruvius (v. 1, § 8) describes one built by himself, which was 46 feet long and 15 deep; it formed the tribunal of a basilica (Guhl and Koner, ed. 5, p. 527). 2. A hall or colonnade furnished with such recesses, and employed for purposes of conversation, either in private houses (Cic. *de Am.* 1) or in places of public resort; coupled with palaestrae, as a sort of clubs for social meeting and gossip (Plut. *Alcib.* 17, *Nic.* 12). In this sense it approaches the meaning of Lesche (Hermann-Blümner, *Privatalterth.* p. 126, n. 5). 3. A semicircular stone or marble alcove in the streets or squares of a town, or in the open air generally. Two such are still standing in the Street of Tombs outside the walls of Pompeii, near the gate leading to Herculaneum; one of these is figured by Rich *s. v.*: a third is at the back of a small apartment open to the street (*Mus. Borbon.* xv. tav. 25, 26). Another, containing a fountain, is in the grounds of a Roman villa at Euren near Trier or Trèves (Guhl and Koner, p. 576). 4. A convex sundial, figured and described under Horologium. [P. S.] [W. W.]

HEMIECTEON, HEMIECTON. [Hecteus.]

HEMILI'TRON. [Litra.]

HEMI'NA (*ἡμίνα* or *ἡμῖνα*), the name of a

Greek and Roman measure, the half of the standard measure of capacity, the *ξέστης*, and therefore equivalent to *κοτύλη*. The word is originally Sicilian; see the quotations from Epicharmus and Sophron, *ap.* Ath. xi. p. 479 a, b, xiv. p. 648 d; in the latter passage one of the speakers declares that it is not good Greek. It is obviously connected with *ἥμισυς* (Hesych. *s. v.*), and some have thought that it was merely a dialectic form; it may, however, have been softened from *ἡμίμνα*, "half a pound." The long penultima favours this derivation; and the saying "a pint is a pound" is approximately true of ancient as well as modern measures. The *ἡμίνα* passed into the Roman metrical system, where it is used with exactly the same force; namely, for a measure which is half the Sextarius, and equal to the Greek Cotyle (Plaut. *Mil. Glor.* iii. 2, 18; Pers. *Sat.* i. 130; Auct. *Carm. de Pond.* 67, 68). It is sometimes found as a dry measure (Plin. *H. N.* xviii. § 9; Cels. iv. 10 and 15). (Cf. Boeckh, *Metrol. Untersuch.* pp. 17, 200, 203; Hultsch, *Metrol.* p. 91 ff.) [P. S.] [W. W.]

HEMIOBO'LION, HEMIO'BOLUS. [Obolus.]

HEMIPO'DION. [Pes.]

HEMI'STATER. [Stater.]

HEMIXESTON. [Sextarius.]

HE'NDECA, HOI (*οἱ ἕνδεκα*), *the Eleven*, were magistrates at Athens of considerable importance. They are always thus called in the classical writers; but in the time of Demetrius Phalereus, their name is said to have been changed into that of *νομοφύλακες* (Pollux, viii. 102), who were, however, during the democracy distinct functionaries. [Nomophylaces.] Another name in the grammarians is *δεσμοφύλακες*, Schol. Dem. *Androt.* p. 601, § 26; *Timocr.* p. 765, § 210; of which *θεσμοφύλακες* (Schol. Aristoph. *Plut.* 1108) must be a corruption.

The time at which the office of the Eleven was instituted is disputed. Ullrich considers the office to have been of an aristocratical character, and concludes from a passage in Heraclides Ponticus (i. § 10) that it was established by Aristeides. Meier, on the other hand, maintains that the office existed not only before the time of Cleisthenes, but probably before the legislation of Solon; but it seems impossible to come to any satisfactory conclusion on the subject. The earliest writer who names them is Antiphon (*de Caed. Her.* § 70). They were annually chosen by lot, one from each of the ten tribes, and a secretary (*γραμματεύς*), who seems to have taken a very important part in the business, and to have had one or more *ὑπογραμματεῖς* under him (Pollux, viii. 102).

The principal duty of the Eleven was the care and management of the public prison (*δεσμωτήριον*), which was entirely under their jurisdiction. On the uses of the prison at Athens, see Carcer. When a person was condemned to death, he was immediately given into the custody of the Eleven, who were then bound to carry the sentence into execution according to the laws. (Xen. *Hell.* ii. 3, § 54.) The most common mode of execution was by hemlock juice (*κώνειον*), which was drunk after sunset. (Plat. *Phaed.* 116 B ff.) The Eleven had under them jailers, executioners, and torturers, who were called by various names (*οἱ παραστάται*, Bekk. *Anecd.* p. 296, 32; *ὁ τῶν ἕνδεκα ὑπηρέτης*, Xen. *Hell.* ii. 3, § 54; *ὁ δημόκοινος*, Antiph. *de Venef.* § 20; Isocr. *Trapez.* § 15; *ὁ δημόσιος*, or *δήμιος*, &c. [Demosii]). When torture was inflicted in causes affecting the state, it was either done in the immediate presence of the Eleven (Dem. c. *Nicostr.* p. 1254, § 23) or by their servant (*ὁ δήμιος*).

The Eleven usually only had to carry into execution the sentence passed in the courts of law and the public assemblies; but in some instances they possessed a *ἡγεμονία δικαστηρίου*. This was the case in those summary proceedings called *ἀπαγωγή*, *ἐφήγησις*, and *ἔνδειξις*, in which the penalty was fixed by law, and might be inflicted by the court on the confession or conviction of the accused without appealing to any of the jury courts (Lys. c. *Agorat.* § 86, *οἱ ἕνδεκα οἱ παραδεξάμενοι τὴν ἀπαγωγὴν ταύτην*: cf. id. *κατὰ τῶν σιτοπωλῶν*, § 2). They also had a *ἡγεμονία δικαστηρίου* in the case of *κακοῦργοι*, because the summary proceedings mentioned above were chiefly adopted in the case of such persons: hence Antiphon (*de Caed. Her.* § 17) calls them *ἐπιμεληταὶ τῶν κακούργων*. The word *κακοῦργοι* properly means any kind of malefactors, but is only applied in Athenian law to thieves (*κλέπται*), house-breakers (*τοιχωρύχοι*), man-stealers (*ἀνδραποδισταί*), and other criminals of a similar kind. (Antiph. *de Caed. Her.* § 9 f; Lys. c. *Theomn.* i. § 10; [Dem.] c. *Lacr.* p. 940, § 47; *Att. Process*, p. 86 Lips.)

The Eleven are also said to have possessed *ἡγεμονία δικαστηρίου* in the case of confiscated property (*εἰσῆγον δὲ καὶ τὰ ἀπογραφόμενα χωρία*, *Etym. M.* p. 338, 35). This statement does not refer, as some have thought, solely to the property of persons condemned to death and sold by the Poletae; in an extant inscription we find the Eleven holding inventories of confiscated property, and their secretary bound on his own responsibility to keep correct accounts of payments made (Boeckh, *Seeurkunden*, p. 535 f.). (Ullrich, *Ueber die Elf-Männer*, appended to his translation of Plato's Meno, Crito, and the first and second Alcibiades, Berlin, 1821; Sluiter, *Lectiones Andocid.* pp. 256–261; *Att. Process*, pp. 81–88 Lips.; Hermann, *Staatsalterth.* § 139; Schömann, *Antiq.* i. 414, E. T.; Gilbert, *Staatsalterth.* i. 243 f.) [W. S.] [W. W.]

HEPHAESTEIA. [Lampadephoria.]

HERACLEIA (*Ἡράκλεια*), festivals celebrated in honour of Heracles, who was worshipped in many parts of Greece not only as a hero, but as a god. Thus we hear of a festival celebrated at Sicyon which lasted two days, the second of which was called Heracleia (Paus. ii. 10, § 1). In Attica we meet with Heracleia in several places, and in some they were celebrated with contests (Harpocrat. p. 139; Demosth. *Fals. Leg.* p. 379, § 125; Aristoph. *Ran.* 651). But no details of their celebration are given, except that the one referred to by Demosthenes took place in the city about midsummer. In Boeotia Heracleia are mentioned at Thisbe (Paus. ix. 32, § 2), at Tipha or Siphae (*ibid.* § 3). At Thebes, the birthplace of the hero, a great festival was held in his honour under the name of Iolaia. Other places where Heracles was honoured with games and contests are known from inscriptions. [L. S.]

HERAEA (*Ἥραια*) is the name of festivals celebrated in honour of Hera in all the towns of Greece where the worship of this divinity was introduced. The original seat of her worship, from which it spread over the other parts of Greece, was Argos; whence her festivals in other places were, more or less, imitations of those which were celebrated at Argos. (Müller, *Dor.* ii. 10, § 1.) The Argives had three temples of Hera: one lay between Argos and Mycenae, 45 stadia from Argos; the second lay on the road to the Acropolis, and near it was the stadium in which the games and contests at the Heraea were held (Paus. ii. 24, § 2); the third was in the city itself (Paus. ii. 22, § 1). Her service was performed by the most distinguished priestesses of the place; one of them was the high-priestess, and the Argives counted their years by the date of her office. (Thucyd. ii. 2.) The Heraea of Argos were celebrated every fifth year, and, according to the calculation of Boeckh (*Abhandl. der Berl. Akad. von* 1818–19, p. 92 ff.), in the middle of the second year of every Olympiad. One of the great solemnities which took place on the occasion, was a magnificent procession to the great temple of Hera, between Argos and Mycenae. A vast number of young men—for the festival is called a panegyris—assembled at Argos, and marched in armour to the temple of the goddess. They were preceded by one hundred oxen (*ἑκατόμβη*, whence the festival is also called *ἑκατόμβαια*). The high-priestess accompanied this procession, riding in a chariot drawn by two white oxen, as we see from the story of Cleobis and Biton related by Herodotus (i. 31) and Cicero (*Tuscul.* i. 47, § 113). The hundred oxen were sacrificed, and their flesh distributed among all the citizens. (Schol. *ad* Pind. *Ol.* vii. 152, and *ad Nem.* x. 39.) The sacrifice itself was called *λεχέρνα* (Hesych. *s. v.*) or "the bed of twigs." (Comp. Welcker on Schwenck's *Etymologische Andeutungen*, p. 268.) The games and contests of the Heraea took place in the stadium, near the temple on the road to the Acropolis. A brazen shield was fixed in a place above the theatre, which was scarcely accessible to any one, and the young man who succeeded in pulling it down received the shield and a garland of myrtle as a prize. Hence Pindar (*Nem.* x. 41) calls the contest *ἀγὼν χάλκεος*. It seems that this contest took place before the procession went out to the Heraeon, for Strabo (viii. p. 556) states that the victor went with his prizes in solemn procession to that temple. This contest was said to have been instituted, according to some traditions, by Acrisius and Proetus (Aelian, *V. H.* iii. 24), according to others by Archinus. (Schol. *ad* Pind. *Ol.* vii. 152; Hermann, *Gottesd. Alterth.* § 52, n. 1).

The Heraea or Hecatombaea of Aegina were celebrated in the same manner as those of Argos (see Schol. *ad* Pind. *Isthm.* viii. 114; Müller, *Aeginet.* p. 149; Hermann, *Gottesd. Alterth.* § 52, n. 19).

The Heraea of Samos, which island also derived the worship of Hera from Argos (Paus. vii. 4, § 4), were perhaps the most brilliant of all the festivals of this divinity. A magnificent procession, consisting of maidens and married women in splendid attire, and with floating hair (Asius, *ap.* Athen. xii. p. 525), together with men and youths in armour (Polyaen. *Strat.* i. 23, vi. 45), went to the temple of Hera. After they arrived within the sacred precincts, the men deposited their armour; and prayers and vows were offered up to the goddess. Her altar consisted of the ashes of the victims which had been burnt to her. (Paus. v. 13, § 5.)

The Heraea of Elis were celebrated every fifth year, or in the fourth year of every Olympiad. (Corsini, *Dissert.* iii. 30.) The festival was chiefly celebrated by maidens, and conducted by sixteen matrons who wove the sacred peplus for the goddess. But before the solemnities commenced, these matrons sacrificed a pig, and purified themselves in the well Piera. (Paus. v. 16, § 5.) One of the principal solemnities was a race of the maidens in the stadium, for which purpose they were divided into three classes, according to their age. The youngest ran first and the oldest last. Their only dress on this occasion was a *χιτών*, which came down to the knee, and their hair was floating. She who won the prize received a garland of olive-boughs, together with a part of a cow which was sacrificed to Hera, and might dedicate her own painted likeness in the temple of the goddess. The sixteen matrons were attended by as many female attendants, and performed two dances; the one called the dance of Physcoa, the other the dance of Hippodameia. Respecting further particulars, and the history of this solemnity, see Paus. v. 16, § 2, &c.; Hermann, *Gottesd. Alterth.* § 51, n. 3.

Heraea were celebrated in various other places; *e.g.* in Cos (Athen. xiv. p. 639, vi. p. 262), at Corinth (Eurip. *Med.* 1379; Philostrat. *Her.* xix. 14), at Athens (Plut. *Quaest. Rom.* vii. 168), at Cnosus in Crete (Diod. v. 72), at Pellene in Achaia (Schol. *ad* Pind. *Ol.* vii. 156; *ad Nem.* x. 82; Aristoph. *Av.* 1421; Krause, *Gymn.* i. pt. 2, p. 715; Hermann, *Gottesd. Alterth.* § 51, n. 28.)

[L. S.] [W. W.]

HERE'DITAS. [Heres.]

HERES. I. Greek. The Athenian laws of inheritance are to be explained under this title. The subject may be divided into five parts, of which we shall speak: 1st, of personal capacity to inherit; 2ndly, of the rules of descent and succession; 3rdly, of the power of devising; 4thly, of the remedies of the heir for recovering his rights; 5thly, of the obligations to which he succeeded.

1. *Of personal Capacity to inherit.*—To obtain the right of inheritance as well as citizenship (*ἀγχιστεία* and *πολιτεία*), legitimacy was a necessary qualification. Those children were legitimate who were born in lawful wedlock or in concubinage with an Athenian woman after legitimation. The validity of a marriage depended partly on the capacity of the contracting parties, partly on the nature of the contract. On the first point little needs to be noticed here, except that brother and sister by the same mother (*uterini*) were forbidden to marry (not in Egypt: cf. Theocrit. xvii. 128 ff., *ἐκ θυμοῦ στέργοισα κασίγνητόν τε πόσιν τε*); but consanguinity in general was so far from being deemed an objection, that marriage between collateral relations was encouraged, in order to keep the property in the family (Andoc. c. *Alcib.* § 33; Lys. c. *Alcib.* i. § 41; Dem. c. *Leoch.* p. 1083, § 10; c. *Eubul.* p. 1305, § 21; Plut. *Cim.* 4, *Themist.* 32). The contract was

made by the husband with the father, brother, or grandfather πρὸς πατρὸς of the intended wife (Dem. *c. Leoch.* p. 1095, § 49; Lex *ap.* [Dem.] *c. Steph.* ii. p. 1135, § 18): then only was she properly betrothed (ἐγγυητή). An heiress, however, was assigned, or adjudged, to the next of kin (ἐπιδικασθεῖσα) by process of law, as explained under EPICLERUS (Isae. *Philoct.* § 14, ἢ ἐγγυηθεῖσαν κατὰ τὸν νόμον ἢ ἐπιδικασθεῖσαν: the ἐγγύη is γάμου ἀπογραφή, Hesych. *s. v.*). No ceremony was necessary to ratify the contract; but it was usual to betroth the bride in the presence of witnesses, and to give a marriage feast, and invite the phratores of the husband, for the sake of publicity. [GAMELIA.] Children of an Athenian mother, not born in wedlock, possessed civic rights (ἐλεύθεροι), and their father could procure for them heritable rights only by an act of legitimation (ποιεῖσθαι, Andoc. *de Myst.* § 124; Dem. *c. Boeot.* i. p. 1003, § 29). Without this act of legitimation —which was possible only if the mother was an Athenian [CONCUBINA]—such children possessed no right of succession (νόθῳ μηδὲ νόθῃ εἶναι ἀγχιστείαν, Isae. *Philoct.* § 47, etc.; *Att. Process*, ed. Lipsius, p. 501 ff.).

2. *Of the Rules of Descent and Succession.**—Here we would premise that, as the Athenian law made no difference in this respect between real and personal estate, the words "heir," "inherit," etc., will be applied indiscriminately to both. When an Athenian died leaving sons, they shared the inheritance (ἰσόμοιροι, Isae. *Philoct.* § 25), like our heirs in gavelkind, and as they now do in France: this was also the case when the sons were by different mothers (Dem. *pro Phorm.* p. 954, § 32), or when a person, after having adopted a son, had sons of his own (Isae. *Philoct.* § 63); for any one adopted into another family lost all rights of succession in the one from which he sprang (Isae. *Astyph.* § 2; *Arist.* § 4; Dem. *c. Leoch.* p. 1089, § 28). The eldest son had no essential advantage over the others (Philippi, *Gesch. d. att. Bürgerr.* p. 193; in Dem. *pro Phorm.* p. 955, § 34 f., πρεσβεῖά τε τὴν συνοικίαν ἔλαβε κατὰ τὴν διαθήκην). Sometimes the sons lived on the joint, undivided property, sometimes they divided the money and possessed the other inheritance in common (Aeschin. *c. Tim.* § 102; Dem. *c. Leoch.* p. 1086, § 18; [Dem.] *c. Eubul. et Mnes.* p. 1149, § 34; Harpocr. *s. v.* κοινωνικῶν; Lys. *c. Diog.* § 4, etc.).

Sisters had no claims to a share, but it was incumbent upon the brothers to give them suitable marriage portions; they were then called ἐπίπροικοι (Harpocr. *s. v.* ἐπίδικος). There was no positive law making it imperative on a brother to give his sister a portion of a certain amount; but the moral obligation to assign her a fortune corresponding to his own rank was strengthened by custom and public opinion, insomuch that if she was given in marriage portionless, it was deemed a slur upon her character (Schömann *ad* Isae. p. 233). Mantitheus gave each of his two sisters a portion

---

* According to the Gortyn Code, on the death of the father the property passed to the children or grandchildren or great-grandchildren; in default of descendants, brothers, their children and grandchildren, succeeded; in default of these came sisters of the deceased, their children and grandchildren; then οἱ ἐπιβάλλοντες, *i.e.* more distant relations, and last of all ἁ κλᾶρος τᾶς ϝοικίας, *i.e.* "the whole number of householders belonging to the family, the κλαρῶται" [COSMI]. Merriam (*Law Code of Gortyna*, p. 27) explains κλᾶρος to be "the descendants, however remote, but still traced, of the original Dorian settler on the original allotment of land;" whilst in Schaube's opinion (*Herm.* 1886, p. 222) ὁ κλᾶρος is the estate itself, the κρέματα went with the κλᾶρος of which the state had to dispose (v. 10–28). The wife could not inherit from her husband (as she did in Erythrae, Dittenberger, *Syll. I. Gr.* 370, l. 150). On the death of the mother leaving children, the father had control (καρτερὸς τὸν ματροίον, i.e. τῶν ματρῴων) of her property until his death or second marriage, but could not sell or mortgage without the assent of the children being of age (vi. 31–46); afterwards it also passed to the children (iv. 43–48). If the mother died childless, her property went back to her heirs (iii. 31–37). In the division of property we meet with a principle, almost unknown elsewhere amongst the Greeks (*C. I. G.* No. 2338, l. 93, Tenos), viz. that the daughters shared with the sons. The houses in the city with their contents, as well as the cattle of the deceased, fell to the sons, whilst the rest of the property was divided among all the children, the daughters receiving each a single share, whilst the sons had each a double share (iv. 29–41: those excepted who had received a dowry on marriage, v. 1–10). There seems to have been a different regulation for the division of the mother's property, telling in favour of the daughters, viz. if the mother left no other property but a house, it fell to the daughters (iv. 46–48; Kirchner, *Rhein. Mus.* 1888, p. 147 f.). An adopted son did not receive an equal share with the natural sons (as at Athens, Isae. *Philoct.* § 63), but only a daughter's share; if there were no sons, but only daughters, he shared equally with them (x. 43—xi. 1). Heirs were not compelled to succeed to an estate encumbered by debts; such an estate was handed over to the creditors (xi. 31 ff.). The division of the κρέματα could be enforced, if any desired it, by the regulation that temporary possession was given to those who wished to divide; the division of certain articles—as crops, clothing—was made by the judge; in case of dispute, the property was sold to the highest bidder and the proceeds divided in the prescribed shares (v. 29 ff.).—F. B. Jevons (*Journ. of Philol.* 1887, p. 98 n.) concludes from Isae. *Philoct.* § 46, that at Athens too property was divided in the same proportion, viz. 2:1, between the male issue of females and the female issue of females: "Euctemon's property was divided between his two grandsons" (by the one daughter) "and the one grand-daughter" (by the other daughter) "in such a way that the granddaughter received one-fifth of the property." But it was not the daughter of Euctemon's daughter, but her mother, Euctemon's daughter (the widow of Chaereas), whom Androcles claimed in marriage with one-fifth of Euctemon's estate. The reading πέμπτου μέρους is rejected by Caillemer (*l. c.* p. 55), Grasshoff (*l. c.* p. 25) and Lipsius (*Att. Process*, p. 576, n. 261).

In Sparta it was a common practice for brothers to live on the joint estate, and Polybius (xii. 6 *b*, 8) even states that they had a wife in common (τρεῖς ἄνδρας ἔχειν τὴν γυναῖκα καὶ τέτταρας, ποτὲ δὲ καὶ πλείους, ἀδελφοὺς ὄντας, καὶ τέκνα τούτων εἶναι κοινά), "to prevent the division of property and to check the population" (Jannet, *Les Instit. Sociales à Sparta*, p. 39). F. B. Jevons (*l. c.* p. 103 f.) tries to show, by referring to Dem. *c. Leoch.*, that at Athens too, when brothers continued to live on the joint undivided property, the daughter of one brother was considered the daughter of the joint family: "the daughter was considered to be and is called by Demosthenes the joint daughter of both brothers . . . and dowered by the brothers jointly." But it is their sister, not a so-called joint daughter, that the two brothers dowered (p. 1085, § 17).

of 20 minas, although the property left him was not large (Lys. *pro Mant.* § 10; cf. Isae. *Pyrrh.* §§ 51, 49; Dem. *c. Aphob.* ii. p. 834, § 65; *c. Boeot.* ii. p. 1014, § 19, *ἐκδοθεῖσα ὑπὸ τῶν ἀδελφῶν τῶν αὐτῆς, ὥσπερ οἱ νόμοι κελεύουσιν*).

On failure of sons and their issue, daughters and daughters' children succeeded [EPICLERUS]; daughters and the children of deceased daughters took *per stirpes* (Grasshoff, *Symb. ad doctrin. jur. attic. de heredit.* pp. 23–30). There seems to have been no limit to the succession in the descending line (Isae. *Ciron.* § 34). If the deceased left grandsons by different sons, it is clear that they would take the shares of their respective fathers. So if he had a granddaughter by one son, and a grandson by another, the latter would not exclude the former, as a brother would a sister, but both would share alike. Of this there is no direct evidence; but it follows from a principle of Attic law, by which, on the birth of a son, his title to his father's inheritance, or to a share thereof, immediately accrued; if then he died before his father, but leaving issue, they claimed their grandfather's inheritance as representing him. It was otherwise with daughters. Their title did not thus accrue; and therefore it was the practice for the son of an heiress to be adopted into his maternal grandfather's house, and to become his son in point of law.

On failure of lineal descendants the collateral branches were resorted to. And first came the issue of the same father with the deceased; viz. brothers and brothers' children, the children of a deceased brother taking the share of their father (Isae. *Hagn.* § 1 ff.; *Apollod.* § 5 f. etc.); and after them, sisters and sisters' children, among whom the principle of representation also prevailed (Isae. *Apollod.* § 19. In Dem. *c. Macart.* p. 1067, § 51, Meier, *Opusc.* i. p. 237 n., inserts *ἀδελφὰς καὶ παῖδας* between *ἢ ἀδελφῶν παῖδες* and *ἐξ αὐτῶν κατὰ ταὐτὰ λαγχάνειν*); sisters' children took *per stirpes.*

Next come the descendants of the same grandfather with the deceased: uncles (Grasshoff, *l. c.* p. 67 ff.), cousins and cousins' children, aunts and their issue. Here the law declared that males and the issue of males should be preferred to females and their issue: *οἱ ἂν ἐκ τῶν αὐτῶν ὦσι, κἂν γένει ἀπωτέρω τυγχάνωσιν ὄντες*, Isae. *Apollod.* § 20; cf. Dem. *c. Macart.* p. 1067, § 51. Thus the grandson of an uncle would exclude the daughter of an uncle, and the grandson of an aunt would exclude the daughter of an aunt. On the same principle Isaeus (*Apollod.* l. c.) contends that the son of a female first cousin prevented his mother's sister from inheriting, although he was further removed from the deceased by one degree; whilst when a brother dies without issue, his sister and the son of a deceased sister would share the inheritance in equal parts. The various explanations of *οἱ ἂν ἐκ τῶν αὐτῶν ὦσι* are fully discussed by Grasshoff, *l. c.* p. 60 ff. (cf. *Att. Process*, ed. Lipsius, p. 586, n. 275), who adopts that of Schömann: "praeferri viros virisque prognatos (scil. feminis iisque qui a feminis descendant), si ex iisdem sint (scil. e quibus feminae et qui a feminis descendant), etiamsi propinquitate sint remotiores (scil. quam feminae et qui a feminis descendant)." Since the law about the preference of males to females is sometimes quoted without any limitation as to its application (Dem. *c. Macart.* p. 1077, § 78; *c. Leoch.* p. 1084, § 12, p. 1098, § 62), Buermann (*Rhein. Mus.* 1877, p. 365) looks upon this as a mere artifice of the speaker. The law (Isae. *Hagn.* § 2, etc.) is said to limit the *ἀγχιστεία* at the *παῖδες ἀνεψιῶν* (and descendants, *Att. Process*, ed. Lipsius, p. 586, n. 275): on this Eubulides founds his pretension to the estate of Hagnias; because he claims as representative (son by adoption) of his maternal grandfather, who was first cousin to Hagnias; whereas the father of his opponent, Macartatus, was second cousin to Hagnias, and as the speaker adds, "it is not proper for any person to possess the estate of Hagnias who belongs to a different branch of the family, as long as there remains any person who sprang from the branch of Hagnias" (Dem. *c. Macart.* p. 1058, § 27 f.).

On failure of first cousins and their issue, the inheritance went to the half-blood by the mother's side (*κατὰ τὰ αὐτά*): brothers and sisters, uncles and aunts *πρὸς μητρὸς* and their children. But if there were no maternal kinsmen within the legal degree, it returned to the *agnati*, or next of kin on the paternal side (*τοὺς πρὸς πατρός*), whose proximity was traced by counting the degrees from the common ancestor (Isae. *Hagn.* § 1 ff.).

The succession of parents to their children is a matter of dispute among the learned, and the reader is referred to *Att. Process*, ed. Lipsius, p. 579 ff., where the different opinions of the scholars who have treated that question are criticised. From the silence of the orators and the absence of any example, it may be inferred that parents could not inherit at Athens. At Athens the maxim *hereditas nunquam ascendit* held only of lineal, not of collateral ascent. For example, an uncle might inherit (Isae. *Cleon.* § 45 f.). So also he might marry the heiress, as next of kin (Isae. *Pyrrh.* §§ 63, 74).

3. *Of the power of Devising.*[*]—That the owner had power to alienate his property during his lifetime, and that such alienation was valid in point of law, both as against the heir and all the rest of the world, is beyond a doubt.

Every man of full age and sound mind, not under durance or improper influence ([Dem.] *c. Steph.* ii. p. 1133, § 16; Isae. *Philoct.* § 9),

---

[*] The right of disposal of property by will is not recognised in the Gortyn Code; adoption is freely allowed, and repudiation (*ἀπείπασθαι*, as in Herod. i. 59) of an adopted son is permitted only on payment of a sum of money as a guest-present to him (xi. 10 f.).

For Sparta, see EPICLERUS.

Isocrates' speech *Aegineticus* gives some information about wills and adoption in Aegina: Thrasylochus, who had no issue and whose brother had died before him (§ 11), adopted before witnesses as his son the husband of his sister and left him his property (§ 12). The will is disputed by a half-sister of Thrasylochus (*οὐ καλῶς οὐδ' ὀρθῶς τὰς διαθήκας εἶναι*, § 34).

It was customary in Boeotia at one time (*πρότερον*) that those who had no children left their property by will to the next of kin (Polyb. xx. 6, 5).

Wills made by women without co-operation of a *κύριος*, Cauer, *D. I. G.*² No. 274 = *C. I. G.* No. 4 (Petilia); Cauer,¹ No. 19 (Calauria); Dittenberger, *S. I. G.* No. 437 (Amorgos);—with the co-operation of the *κύριος*, Cauer,² No. 148 = *C. I. G.* No. 2448 (Thera). (Schulin, *d. Griech. Testament.*)

who was not ὑπεύθυνος (Aeschin. c. *Ctes.* § 21), was competent to make a will; but if he had a son, he could not disinherit him (Dem. c. *Lept.* p. 488, § 102; Isae. *Pyrrh.* § 68—yet see Dion. Halic. *A. R.* ii. 26, ἐξελάσαι τῆς οἰκίας καὶ χρήματα μὴ καταλιπεῖν); although his will might take effect on the contingency of the son not completing his seventeenth year ([Dem.] c. *Steph.* ii. p. 1136, § 24). Legacies might be given to friends and relations, especially to those who performed the office of an executor or testamentary guardian (Dem. c. *Aphob.* i. p. 814, §§ 4, 5; p. 827, § 43; *pro Phorm.* p. 955, § 34 f.; c. *Steph.* i. p. 1110, § 28: cf. the will of Conon in Lys. *de Bon. Arist.* § 39 f.: τῇ μὲν Ἀθηνᾷ καθιέρωσεν εἰς ἀναθήματα καὶ τῷ Ἀπόλλωνι εἰς Δελφοὺς πεντακισχιλίους στατῆρας, τῷ δὲ ἀδελφιδῷ τῷ ἑαυτοῦ, ὃς ἐφύλαττεν αὐτῷ καὶ ἐταμίευε πάντα τὰ ἐν Κύπρῳ, ἔδωκεν ὡς μυρίας δραχμάς, τῷ δὲ ἀδελφῷ τρία τάλαντα, τὰ δὲ λοιπὰ τῷ υἱεῖ κατέλιπε, τάλαντα ἑπτακαίδεκα, *i.e.* not nearly half his estate). And in the division of property among sons, the recommendations of the father would be attended to (Dem. c. *Macart.* p. 1055, § 19; *pro Phorm.* p. 955, § 34). Also a provision, not exceeding a thousand drachmas, might be assigned to an illegitimate child (Harpocr. *s. v.* νοθεία; five hundred drachmas, Schol. on Aristoph. *Av.* 1655). Nor could a man separate his estate from his daughter (Isae. *Pyrrh.* §§ 42, 68 f.), though he might devise the estate to any person on condition of his marrying her.

It was only when a man had no issue that he was at full liberty to appoint an heir. His house and heritage were then considered desolate (ἔρημος καὶ ἀνώνυμος), a great misfortune in the eyes of an Athenian; for every head of a family was anxious to transmit his name and religious usages to posterity. The same feeling prevailed among the Greeks in more ancient times. We learn from Hesychius and the *Etymol. Mag.* that distant relations were called χηρωσταί, because, when they inherited, the house was χηρεύων καὶ ἔρημος. (See Hom. *Il.* v. 158; Hes. *Theog.* 607.) To obviate this misfortune an Athenian might adopt a son either during his lifetime (Isae. *Menecl.* § 10 ff.; *Apollod.* § 1 ff.; Dem. c. *Spud.* p. 1028, § 3; c. *Leoch.* p. 1086, § 19) or by will (Isae. *Apollod.* § 1; *Astyph.* § 1; *Arist.* § 9, etc.) from any citizen's family. An adopted son might not bequeath by will τὰ ἐν τῷ οἴκῳ ὅτῳ ἂν ποιηθῇ (Dem. c. *Leoch.* p. 1100, § 67 f.); Apollodorus interprets this law to apply also to those who had been made citizens ([Dem.] c. *Steph.* ii. p. 1133, § 15, ἐπεποίητο ὑπὸ τοῦ δήμου πολίτης).

Wills were in writing (even the will of Hercules is represented as in writing, παλαιὰν δέλτον ἐγγεγραμμένην ξυνθήματα, Soph. *Trach.* 157 f.), and usually had one (Dem. c. *Aphob.* ii. p. 840, § 15) or more attesting witnesses—friends or relatives of the testator—whose names were inserted in the will (Isae. *Astyph.* § 12, ἐγγεγράφθαι ἐν τῷ γραμματείῳ: not superscribed, as Heraldus, *Animadv.* ii. 5, 16, 20, thought), but who were not required to sign it nor were even necessarily made aware of its contents (Isae. *Nicostr.* § 13). These witnesses could therefore only bear witness to the fact that a will had been made (καταλιπεῖν διαθήκας), not to the genuineness of the will produced. It was considered a badge of fraud if wills were made secretly or in the presence of strangers (Isae. *Astyph.* § 7 ff.). It was not necessary that the testator should write or even sign the will himself; but he sealed it (Isae. *Apollod.* § 1; Aristoph. *Vesp.* 584. From Dem. c. *Aphob.* ii. p. 837, § 5, it does not follow that the witnesses sealed it as well: cf. Philippi, *Symb. ad doctr. jur. att. de syngraphis*, p. 9) and deposited it (sometimes in several copies, Isae. *Apollod.* § 1; Lys. c. *Diog.* § 7) with friends or a magistrate (Isae. *Philoct.* § 7; *Astyph.* § 5 f.; Dem. *pro Phorm.* p. 946, § 7—Isae. *Cleon.* § 14 f.). A will was ambulatory until the death of the maker; he might revoke it (ἀνελεῖν, λῦσαι, Isae. *Cleon.* §§ 14, 18 ff.) either by destroying it or by declaring before witnesses that it was void (ὡς οὐκέτ' αὐτῷ κέοιθ' ἡ διαθήκη, Isae. *Philoct.* § 32; a new will did not in itself revoke an old one), or he might make additions either to the will itself (προσγράψαι) or by a separate codicil (Isae. *Cleon.* § 25). (*Att. Process*, ed. Lipsius, p. 589 ff.)

With respect to the proceeding by which a father publicly renounced his paternal authority over his son, see Apokeryxis.

4. *On the Remedies of the Heir for recovering his Rights.*—A son, whether natural or adopted during the owner's lifetime (Dem. c. *Leoch.* p. 1086, § 19: the statement in Isae. *Pyrrh.* § 61, is too wide), or other male descendant, might enter and take possession of the estate immediately after the owner's death (ἐμβατεύειν εἰς τὰ πατρῷα, Isae. *Pyrrh.* § 62; εἰς τὸ χωρίον, *Astyph.* § 3; εἰς τὴν οὐσίαν, Dem. c. *Leoch.* p. 1090, § 32, etc.). If he was prevented by ἐξαγωγή from so doing, he might bring an action of ejectment against the intruder [Exoules Dike]. Any one who disturbed a minor or a woman in the enjoyment of their patrimony was liable to a criminal prosecution (κακώσεως εἰσαγγελία, Isae. *Pyrrh.* § 62). If any one brought forward legal claims to the estate, he tendered an affidavit (διαμαρτυρία) sworn either by himself or by another, *e.g.* the κύριος (Dem. c. *Leoch.* p. 1096, § 54; Isae. *Pyrrh.* § 2 f.), wherein he declared that the estate was not the subject of litigation (μὴ ἐπίδικον εἶναι τὸν κλῆρον, Isae. *Philoct.* § 4); he also deposited the tenth part of the value of the property in dispute (παρακαταβολή). If then the suitor was resolved to prosecute his claim, he had no other course but to procure a conviction of the witness (who had sworn the affidavit) in an action for false testimony (δίκη ψευδομαρτυριῶν). With respect to the original cause, nothing further was determined than that it could or could not be entertained; if the court decided that the suit could be entertained, the parties proceeded to trial in the manner explained below. When the parties proceeded at once to the trial (without διαμαρτυρία), it was called εὐθυδικίᾳ εἰσιέναι or εἰσέρχεσθαι (Isae. *Apollod.* § 13; *Philoct.* § 3).

Other heirs-at-law and claimants by adoption or devise were not at liberty to enter, until the estate was formally adjudged to them. The proper course was to make application to the archon, who attended at his office for that purpose every month in the year except the last (Scirophorion; [Dem.] c. *Stephan.* ii. p. 1135, § 22, *lex*), or, in case of metoecs and foreigners, to the polemarch (*l. c.* § 23). This application was called λῆξις or *ἐπιδικασία τοῦ κλήρου*: to make an application, *λῆξιν λαγχάνειν*, or *λαγχάνειν*, or *ἐπιδικάζεσθαι τοῦ κλήρου*. The archon caused this application to be inscribed on the *σανίς*, and to be read out at the first regular assembly held after he had received notice; probably at the same assembly the herald asked *εἴ τις ἀμφισβητεῖν ἢ παρακαταβάλλειν βούλεται τοῦ κλήρου ἢ κατὰ γένος ἢ κατὰ διαθήκας* (Dem. c. *Macart.* p. 1051, § 5). The different explanations given by the grammarians as to the difference in meaning between *ἀμφισβητεῖν* and *παρακαταβάλλειν* can scarcely be correct; *παρακαταβάλλειν* seems to imply a claim to the estate, whilst *ἀμφισβητεῖν*, a term of more general import, simply means disputing and objecting to the claim made. The deposit (*παρακαταβολή*) was the tenth part of the value of the property in dispute: it was returned to the party if successful; if not, it went to the treasury. In Isae. *Nicostr.* § 11, a severer penalty is suggested for those who claim an estate *κατὰ δόσιν*, *i.e.* *κατὰ διαθήκας*, viz. that they should pay to the treasury a sum equal to the value of the estate, if unsuccessful.

If no other claimant appeared, the archon adjudged the estate to the first suitor before a heliastic court (*ἐπεδίκασεν αὐτῷ τὸν κλῆρον*: cf. Isae. *Pyrrh.* § 43). If, however, there were adverse claims, he proceeded to prepare the cause for trial (*διαδικασία τοῦ κλήρου*). First came the *ἀνάκρισις*, in the usual way, except that no party was considered as plaintiff or defendant; and the bills in which they set forth their respective titles were called *ἀντιγραφαί* (Harpocr. *s. v.*; Dem. c. *Leoch.* p. 1092, § 39; [Dem.] c. *Olymp.* p. 1175, § 31). The dicasts were then to be summoned, and, whatever the number of parties, one court was held for the decision of all their claims. If any one neglected to attend on the appointed day, and had no good excuse to offer, his claim was struck out of the record (*διεγράφη ἡ ἀμφισβήτησις*), and the contest was carried on between the remaining parties, or, if but one, the estate was awarded to him ([Dem.] c. *Olymp.* p. 1174, § 26). The trial was thus managed. The dicasts had to give their verdict either for one person proving a title to the whole, or for several persons coming in under the same title, as (for instance) two brothers entitled each to a moiety. One balloting box therefore was provided for every party who appeared in a distinct interest (Isae. *Hagn.* § 21) [PSEPHUS]. The speeches were measured by the clepsydra. Each claimant had an *ἀμφορεὺς* of water for his first speech and three *χοεῖς* for the second; in Dem. c. *Macart.* p. 1052, § 8, the speaker complains that he had only *πέμπτον μέρος τοῦ ὕδατος* to conduct the case of Phylomache: there were altogether five claimants, but the brothers Glaucus and Glaucon came in under the same title, claiming a moiety each, hence one balloting box was provided for the two together, but they had each as much time allowed as every other claimant (Caillemer, *l. c.* p. 161 f.). That these arrangements gave rise to fraud and collusion, is clearly shown in the cases above cited.

The verdict, if fairly obtained, was final against the parties to the cause, unless the defeated party won a *δίκη ψευδομαρτυριῶν* (Isae. *Hagn.* § 45; *Dicaeog.* § 14), or put forth a different claim (Dem. c. *Macart.* p. 1051, § 4 ff.). But any other person, who by absence or unavoidable accident was prevented from being a party, might afterwards bring an action against the successful candidate, to recover the estate. If the estate had been claimed *κατὰ δόσιν* and adjudged, it was necessary first to prove that the will was not genuine, before the estate could be claimed *κατὰ γένος* (Isae. *Nicostr.* § 25). The claimant was obliged to pay his deposit (which, if he was unsuccessful, was paid to the party in possession), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death (Isae. *Pyrrh.* § 58; [Dem.] c. *Olymp.* p. 1175, § 29 f.; Dem. c. *Macart.* p. 1054, § 16). (*Att. Process*, ed. Lipsius, p. 603 ff.)

5. *Of the Obligations to which the Heir succeeded.*—The first duty of an heir, as with us of an executor, was to bury the dead and perform the customary funeral rites (*τὰ νομιζόμενα ποιεῖν*, Aeschin. c. *Tim.* § 13 f.); the guardian acted as representative for the heir under age (Isae. *Cleon.* § 10). It is well known what importance was attached to this by the ancients (cf. Gortyn Code, x. 42 ff.). The Athenian law regulated the time of burial, and the order in which the female relations should attend (Dem. c. *Macart.* p. 1071, § 62; Antiph. *de Choreut.* § 34). If no money was left to pay the expenses of burial, still the nearest relatives were bound to defray them; and if they neglected to perform their duty, the chief magistrate (*δήμαρχος*) of the demus in which the death took place, after warning them by public notice (*ἀνελεῖν καὶ καταθάψαι καὶ καθᾶραι τὸν δῆμον*), got the work done by contract, paid for it himself, and was then empowered to sue them for double the amount. When a rich man died, there was no backwardness about his funeral. It is rather amusing to see how eagerly the relations hastened to show respect to his memory, as if to raise a presumption of their being the heirs (Isae. *Nicostr.* § 19; *Astyph.* §§ 4, 32; *Ciron.* §§ 21–24; Dem. c. *Leoch.* p. 1090, § 32).

Children who neglected to bury their parents were liable to a criminal prosecution (*γραφὴ κακώσεως γονέων*), just as they were for refusing to support or assist them in their lifetime. The word *γονεῖς* in this case includes all ancestors (*Att. Process*, ed. Lipsius, p. 355).

Among heritable obligations may be reckoned that of marrying a poor heiress (*θῆσσα*), or giving her in marriage with a portion [EPICLERUS].[*]

---

[*] Plutarch (*Arist.* 27) says of the granddaughter of Aristogeiton: *ἐν Λήμνῳ πυθόμενοι ταπεινὰ πράττειν ἀνδρὸς ἀποροῦσαν διὰ πενίαν κατήγαγον Ἀθήναζε καὶ συνοικίσαντες ἀνδρὶ τῶν εὖ γεγονότων τὸ Ποταμοῖ χωρίον εἰς φερνὴν ἐπέδωκαν*, and of the daughters of Aristeides, (*ἱστοροῦσιν*) *ἐκ τοῦ πρυτανείου τοῖς νυμφίοις ἐκδοθῆναι, δημοσίᾳ τῆς πόλεως τὸν γάμον ἐγγυώσης καὶ προῖκα τρισχιλίας δραχμὰς ἑκατέρᾳ ψηφισαμένης.* Schöll publishes in *Herm.* vol. xxii. (1887), p. 561, an inscription (about 270 B.C.), from which it is evident that the daughters of those who had been honoured with *σίτησις* in the Prytaneion were dowered by the state: (*τὴμ βουλὴν καὶ τὸν δῆμον*) *διδόναι καὶ θυγ[ατ]έρων εἰς ἔγ[δοσ]ιν τὸν δῆμον π[ροῖ]κα [ὅ]σην ἂν βούλ[η]τ[αι]*, etc.

A son or a grandson could not renounce the succession, but a brother might, provided he had not yet entered upon the inheritance ([Dem.] c. *Lacrit.* p. 924, § 4). The heir succeeded to all the claims and the liabilities of the deceased, even beyond the value of the assets, and entering upon an involved (*ὑπόχρεως*) property might lead to the loss of the heir's own property ([Dem.] c. *Timoth.* p. 1196, § 43; Dem. c. *Aphob.* ii. p. 836, § 2; c. *Everg.* p. 1148, § 32; Lys. *de pec. publ.* § 3 ff.; Isae. *Arist.* § 15 f.); fourteen years after Aristaechmus had been sued by his wards, Nausimachus and Xenopithes, and received a release from them, they brought a **δίκη βλάβης** against his heirs (Dem. c. *Nausim.* p. 988, § 13 ff.), and Callippus brought a fresh action (**ἀργυρίου**) against Apollodorus after his father's death (Dem. c. *Callipp.* p. 1240, § 14 ff.). Of course, in case of a mortgage, he was entitled only to the surplus of the mortgaged property, remaining after payment of the debt charged thereon (Dem. c. *Spud.* p. 1030, § 7).

State debtors, such as farmers of the public revenue who had made default, or persons condemned to pay a fine, were disfranchised (**ἄτιμοι**) until they had settled the debt; and the disgrace extended to their posterity. Thus Cimon, son of Miltiades, was compelled to pay a fine of fifty talents which had been imposed on his father; and the story is, that Callias advanced him the money, in return for the hand of his sister Elpinice. (Dem. c. *Androt.* p. 603, § 34; c. *Timocr.* p. 762, § 201; c. *Theocr.* p. 1326, § 17; c. *Macart.* p. 1069, § 58; and Andoc. *de Myst.* § 73.) When the whole of a man's property was confiscated, of course nothing could descend to his heir. It seems to have been a common practice, in such a case, for the relations of the deceased to conceal his effects, or to lay claim to them by pretended mortgages. Against these frauds there were severe penalties, as may be seen from the speeches of Lysias c. *Philocr.* and *de Bon. Arist.* (Meier, *de Bon. Damn.* p. 212).

The posterity of those who were put to death by the people, or were convicted of certain infamous crimes (**ὁπόσοι κλοπῆς ἢ δώρων ὄφλοιεν**, Andoc. *de Myst.* § 74: cf. Dem. c. *Mid.* p. 551, § 113, *lex*), inherited the **ἀτιμία** of their ancestors, a *damnosa hereditas*, which they could not decline or escape from. (Ps.-Plut. *Vit. X. Orat.* p. 834 A; Dem. c. *Aristocr.* p. 640, § 62, *lex*; c. *Macart.* p. 1069, § 57, *lex*.) It may be compared to the corruption of blood following upon attainder in the feudal law. Privileges, on the other hand, **σίτησις ἐν Πρυτανείῳ, προεδρία, ἀτέλεια** were hereditary in the families of Harmodius, Aristogiton, and others (Isae. *Dicaeog.* § 47: cf. Dem. c. *Lept.* p. 466, § 29; Plut. *Dem.* 31; PRYTANEUM), **ἀτέλεια** in the families of Conon and Chabrias; in other instances the granting of a privilege was personal (*C. I. A.* ii. No. 251, etc.), and was only by a special clause extended to the eldest descendant (**ἐκγόνων τῷ πρεσβυτάτῳ ἀεί**, *C. I. A.* ii. No. 331, etc.; Ps.-Plut. *Vit. X. Orat.* p. 850 F, p. 851 D).

Isaeus tells us that parents who apprehended their own insolvency used to get their children adopted into other families, that they might escape the consequences (*Arist.* § 17). This, however, could not be done, after the infamy had once attached (Meier, *de Bon. Damn.* pp. 106, 136; Aeschin. c. *Ctes.* § 21); and from Ps.-Plut. *l. c.* p. 834 A, we learn that those who received the descendants of Archeptolemus and Antiphon into their family incurred the same penalty.

We find no mention of property escheating to the state for want of heirs. This probably arose from a principle of Athenian law, according to which no civic family was suffered to expire; and therefore the property of an intestate was always assigned to such person as was most fit to be his successor and representative.

If a manumitted slave died without leaving children, his property fell to his patron and his patron's family (Isae. *Nicostr.* § 9); sometimes the owner specially reserved to himself the right of succession (*Inscr. recueillies à Delphes par Wescher et Foucart*, p. 226 ff.). The property of metoecs fell to their relations ([Dem.] c. *Steph.* ii. p. 1135, § 22); in default of relations, it fell to the state (Meier, *l. c.* p. 148) or to the **προστάτης** (Caillemer, *l. c.* p. 141). (*Att. Process*, ed. Lipsius, pp. 588, 598 ff.) [C. R. K.] [H. H.]

2. ROMAN. *Heres* or *heredes* signifies the person or persons who succeeded to the entire inheritance of a deceased person under the rules of the Jus Civile; this was a species of universal succession, the whole property being considered a *universitas* [UNIVERSITAS]. Such a succession comprehended all the rights and liabilities of the person deceased, except in so far as they terminated with his life, and was expressed by the term *hereditas*. The word *hereditas* is accordingly defined to be a succession to all the rights of property of the deceased (Dig. 50, 16, 24). As universal successor, the heres was subject to the debts of the deceased, as if he himself had contracted them. Several heredes (*coheredes*) succeeded together to the entire inheritance, though they might take in different proportions. The word *hereditas* may also mean the property and other rights which are the object of the succession. The terms *familia pecuniaque* were used to denote the family and proprietary rights of a paterfamilias, and so sometimes express the rights which devolved on the heres (Cic. *de Inv.* ii. 50, 148; *de Legg.* iii. 3, 7; Gaius, ii. 104; cf. Cic. *Top.* 6; FAMILIA); but they do not necessarily refer to inheritance, and therefore the definition of *hereditas* by those words would be incomplete. The universal succession of the heres who was entitled to the succession by civil law must be distinguished from the universal succession of the *bonorum possessor*, whose title to the inheritance was a praetorian one [BONORUM POSSESSIO]. The succession of a *legatarius* differed from that of a heres, in that it was only a singular one, and consequently a legatarius incurred no liability for the debts of the deceased. The etymological relation of the word *heres* to *herus* seems probable, both being connected with *hir* = χείρ (Curtius, *Gr. Etym.* 199).

A person might become a heres (1) by being named as such (*institutus*, *scriptus*, *factus*) in a will, executed by a competent person, according to the forms required by law [TESTAMENTUM]; or (2) if a person died intestate (*intestatus*), or having made a will which was not valid, the inheritance came to those to whom the law gave it under the rules of intestacy, and was called *hereditas legitima* or *ab intestato*. But a man could not die testate as to part of his property and intestate as to another part, except he were a soldier ("cujus sola voluntas in testando spectatur"). Accordingly, if a man gave a part of the hereditas to one heres or more, and did not dispose of the rest, the heres or heredes *ex testamento* necessarily took the whole. (Inst. ii. 14, § 5; Cic. *de Inv.* ii. 21; Vangerow, *Pandekten*, § 397).

(1.) The institution of a heres was that formality which could not be dispensed with in a will. If the testator named no heres or heredes, and complied with all the other legal forms, still his disposition of his property was not a will (Dig. 29, 7, 20). A will might contain other dispositions besides that of naming a heres, as bequests of legacies, appointment of guardian, &c.; but these were not essential to its validity. The testator might either name one person as heres or he might name several persons as coheredes, and he might divide the hereditas among them as he pleased. The shares of the heredes were generally expressed by reference to the divisions of the as: thus, "heres ex asse" is heres to the whole property; "heres ex dodrante," heres to three-fourths; "heres ex semuncia," heir to one twenty-fourth (Cic. *ad Att.* xiii. 48, vii. 8; Cic. *pro Caecina*, 6, 17; Inst. ii. 14, § 5). If there were several heredes named, without any definite share being given to them, the property belonged to them in equal shares. A heres might be instituted either unconditionally (*pure*), or on the fulfilment of a condition (*sub conditione*), but the institution could not be made defeasible on the occurrence of a future event, nor could it be limited to take effect for a certain period, since a person who once became universal successor always remained so (*semel heres, semper heres*). As to conditions which the heres was bound to perform, they might be any that were not contrary to positive law or positive morality, such as the setting up of statues (Cic. *Verr.* ii. 8, 9, 14), or changing the name (*ad Att.* vii. 8). Immoral and impossible conditions were treated as if there were no conditions mentioned (*pro non scripto*, Inst. ii. 14, 10). In order that a testamentary succession should take place, the testator must have the right of making a will (*testamenti factio activa*). In order to have this capacity, he must be civis or at least have the jus commercii, and not be under any special disability (*intestabilis*). Further the person dying must have such rights as are capable of being transmitted to another; consequently a filiusfamilias could not institute a heres any more than a slave, except in respect of his *peculium castrense* and *quasi-castrense*. Also the person who is instituted heres must have a legal capacity to be heres. He must have this capacity at the time of the institution, or the institution is null; and in order to take he must have the capacity to take (Inst. ii. 19, 4) at the time of the testator's death, and at the time of his accepting the inheritance. This capacity might be expressed by the phrase "testamenti factio" (*passiva*), an expression which had reference not only to the legal capacity of the testator, but also to the legal capacity of the person named heres. As a general rule, only Roman citizens could be named as heredes in the will of a Roman citizen; but a slave could also be named heres, though he had no power to make a will, and a filiusfamilias could also be named heres, though he was under the same incapacity; for a slave, if he belonged to the testator, could, by his master's testament, receive his freedom and become heres; and if he belonged to another, he took the inheritance for the benefit of his master; the filiusfamilias in like manner acquired it for his father, though in the time of Justinian the latter had only a usufruct in it. Persons not Roman citizens, who had received the commercium, could be instituted heredes, and could take legata, but Latini Juniani were an exception to this rule, they being incapable of either making or taking under a will.

Heredes were either *necessarii*, *sui et necessarii*, or *extranei*. The heres necessarius was a slave of the testator, who was made a heres and liber at the same time; and he was called *necessarius* because of the necessity he was under of accepting the hereditas. Thus he became heres by operation of law without any act of his own. A slave was sometimes appointed heres, if the testator thought that he was not solvent, for the purpose of evading the ignominy which was a consequence of a person's property being sold to pay his debts, as explained by Gaius (ii. 154, &c.). In this case the property of the freedman, acquired after manumission, was relieved from all liability on account of the debts of the deceased. The heredes sui et necessarii were those filii- or filiae-familias in the power of the deceased at the time of his death, who by that event became *sui juris*: thus a grandson or granddaughter could not be *suus heres*, unless their father had ceased to be in the power of the deceased in the lifetime of the latter, either by death, adoption, or capitis deminutio. Gaius tells us that these heirs are called self-successors, "because they are members of the family (*domestici heredes*), and even in the lifetime of the parent are deemed to a certain extent co-proprietors" (Poste's *Gaius*, ii. 157). The property of the family was regarded in early times as joint rather than several, and so the children of the family only continued in their enjoyment of it when the paterfamilias died. "*Sui heredes* are called necessary, because they have no alternative, but, willing or unwilling, both in testacy, they become successors" (Gaius, *l. c.*). For a comparison of the Greek law of inheritance on this subject, cf. F. Schulin, *Das Griechische Testament*, &c.; Leist, *Graeco-ital. Rechtsgesch.* i. 81. &c.; and for ancient German law respecting, *Das Kind in der Were*: cf. Behrend, *Anwang und Erbengewere*, cit. by Sohm, *Inst.* § 97, n. 2–4.) Thus the succession of the *suus heres* is assumed in the Twelve Tables as a matter of course; and as they were already in possession of the inheritance, no formal act of entry (*cretio*) could ever have been required of them. Hence, too, the inheritance could not be acquired against them by *usucapio pro herede* (Gaius, ii. 58; iii. 201). The involuntary succession of this class of heredes was a great hardship to them in the event of an insolvent inheritance; hence the praetor permitted them to abstain from the succession (*abstinere se ab* *hereditate*), and to allow the creditors to sell the property (an instance is mentioned by Cic. *Phil.* ii. 16, 42); he also gave the same privilege to a person in the semi-servile state of mancipium, if the latter was manumitted and made heres. [MANCIPIUM.] All other heredes, being independent of the deceased, are called *extranei*. Thus the emancipated children of a person would be *extranei heredes* to him. So, too, as a mother had no potestas over her children, they were *extranei heredes* when instituted in her will.

Extranei or *voluntarii heredes* did not acquire the inheritance until they had accepted it by their own free act. The act of entering on an inheritance by extraneus heres (*hereditatem adire*) might be effected either by an express declaration of intention or by conduct from which an intention to be heres could be inferred; and if it was once carried out, it could not be revoked. Thus, if extranei heredes meddled with the property of the deceased (*pro herede gerere*), they could not afterwards disclaim the inheritance, unless they could claim relief from the praetor on some special ground, as if the person who so meddled was under twenty-five years of age and so belonged to a class who were relieved by the praetor in all cases where they were overreached [CURATOR], and also in cases where they had accepted an insolvent inheritance (*damnosa hereditas*). The Emperor Hadrian gave this relief to a person above twenty-five years of age who had accepted an inheritance and afterwards discovered that it was encumbered with a heavy debt (Gaius, ii. 163). These rules as to the acquisition of an inheritance apply both to testamentary and intestate succession. But a testator might fix in his will a certain time for the *cretio hereditatis;* that is, for them to determine whether they would take the hereditas or not: hence the phrase *cernere hereditatem* (Cic. *ad Att.* xi. 12). The determination was expressed by a formal act of taking possession of the inheritance. Thus, if the testator had written in his will "Heres Titius esto," he might add, "Cernitoque in centum diebus proxumis quibus scies poterisque; quod ni ita creveris exheres esto." (Gaius, ii. 165; Cic. *de Orat.* i. 22.) If the extraneus wished to take the hereditas, he was required to make a formal declaration of his intention within the time named (*intra diem cretionis*). The formal words of *cretio*, which were declared before witnesses in the house of the deceased (Voigt, *Die Zwölf Tafeln*, ii. 372), were "eam hereditatem adeo cernoque." Unless he did this, he lost the hereditas, and he could not obtain it merely by acting as heres (*pro herede gerendo*). If a person was named heres without any time of cretion being fixed, or if he succeeded (*legitimo jure*) to the property of an intestate, he might become heres without any formal declaration of his intention, and might take possession of the hereditas when he pleased; but the praetor was accustomed, upon the demand of the creditors of the testator or intestate, to name a time within which the heres should take possession, and, in default of his doing so, he gave the creditors permission to sell the property. The common form of cretion in a will (*vulgaris cretio*) has been already mentioned. Sometimes the words "quibus sciet poteritque" were omitted, and it was then specially called "cretio certorum dierum" or "cretio continua," which was the more disadvantageous to the heres, as the days began to be reckoned, or, as we say, the time began to run immediately, and it was not reckoned from the time when the heres knew that he was named heres, and had no impediment to his cretion.

Perhaps in ancient Roman law a heres extraneus or voluntarius could only acquire the inheritance by a formal act of *cretio*, and so in the legal terminology of the classical jurists we find that the term *pro herede gerere* signified any informal act of entering upon an inheritance as distinguished from the more regular and formal mode (Gaius, ii. 167; Ulp. 22, § 25). The principle of cretio may thus have been applicable at first in the case of intestate as well as testamentary succession, the object of the cretio clause in a will having been to limit the time within which the formal act of entering upon the inheritance must take place (Voigt, *Jus Naturale*, iii. n. 223; *Die Zwölf Tafeln*, ii. 372). The formalities of cretio had become obsolete before the time of Justinian (Cod. 6, 30, 17; cf. Cod. Theod. 8, 18, 8).

It was not unusual to make several degrees of heredes in a will, which was called *substitutio* (Inst. ii. 15). Thus in the formula beginning "Titius heres esto," after the words "exheres esto," the testator might add, "tum Maevius heres esto cernitoque in diebus centum," &c., and he might go on substituting as far as he pleased. The person first named as heres (*primo gradu*) became heres by the act of cretion; and the substitutus (*secundus heres*, Cic. *Top.* 10; Hor. *Sat.* ii. 5, 48; Tac. *Ann.* i. 8) was then entirely excluded. If the words "si non creveris" were not followed by words of exheredation, this gave some advantage to the first heres; for instance, if he neglected the formality of cretion and only acted as heres, he did not lose all, but shared the hereditas equally with the substituted person. This was the old rule; but a constitution of M. Aurelius made the acting as heres equivalent to cretion, provided that such acting took place within the time of cretion. (Compare Gaius, ii. 177, &c. with Ulpian, *Frag.* xxii. 34.) It was common for a testator to substitute one of his own slaves in the last place, so as to avoid dying intestate, since his slave could not refuse the inheritance.

In the case of *liberi impuberes*, who were in the power of a testator, there might be not only the kind of substitution just mentioned (*vulgaris substitutio*), but the testator might declare that if such children should die under the age of puberty, some person whom he named should be heir to the impubes. This was expressed thus, "Si prius moriatur quam in suam tutelam venerit" (Cic. *de Inv.* ii. 42, *Top.* 10; Gaius, ii. 179), for the termination of impuberty and of the tutela were coincident. [CURATOR.] Thus, as Gaius remarks, one testamentary disposition comprised two hereditates, the testator being obliged to make a will for himself at the same time that he made a will for his son. This was called *pupillaris substitutio* (Inst. ii. 16). This kind of substitution was contained in a clause by itself, and in a separate part of the will, which was secured by the testator's own thread and seal, with a provision in the first part of the will that this second part should not be opened so long as the son lived and was impubes. A paterfamilias could substitute heredes for those in his power, who were impuberes, whether he instituted or disinherited such children in his own will. The object of this substitution was to avoid intestacy. The substitution ceased to have any effect when the child became pubes, and so capable of making a will for himself.

Gaius observes (ii. 183) that all his remarks with reference to substitution for children impuberes at the time of the parent's death, apply to posthumous children, of which there is an example cited by Cicero (*Top.* 10, "Si filius natus esset in decem mensibus," &c.). According to the analogy of *substitutio pupillaris*, ascendants were in the time of Justinian allowed to institute heredes for their descendants, who were insane, in case they should die without recovering their senses: this was called *substitutio quasi pupillaris* or *exemplaris* (Inst. ii. 16, 1; Cod. 6, 26, 9). It was not required in this latter substitution that the ascendant should have the descendant in his power.

If an extraneus was made heres, there could be no substitution to the effect that, if he died within a certain time, another person should be heres; for, as we have observed, a person when he had once become heres continued such. The heres might, however, be charged with a fideicommissum to transfer the inheritance, in which case he was *heres fiduciarius* [FIDEICOMMISSUM].

If a man's own slave was made heres by his will, it was necessary that he should be made free also by the will; the words were, "Stichus servus meus liber heresque esto." But by the law of Justinian the manumission of a slave who had been instituted heres by his master was implied. If a slave who had been instituted was manumitted by his master in his lifetime, he did not become heres necessarius, but might accept the inheritance or refuse it. If he was sold by his master in his lifetime, he could take possession of the inheritance with the permission of his new master, who thus became heres through the medium of his slave. If the slave who was made heres was at that time the property of another person, and not of the testator, he could not take the inheritance without the consent of his master, for if he lost it his master became heres; if such slave was manumitted before taking possession of the inheritance, he might accept it or refuse it as he pleased.

If a man had a son in his power, he was bound either to make him heres, or to exheredate him (*exheredem facere*) expressly (*nominatim*). If he passed him over in silence (*silentio praeterierit*), the will was altogether void (*inutile, non jure factum*).

Daughters and grandchildren, who were *sui heredes*, could be exheredated by a general clause "ceteri exheredes sunto." If they were passed over in silence, the will would still be a valid will; but they took a certain portion of the inheritance by accretion, as it was termed (*scriptis heredibus adcrescunt*). Thus, if the heredes instituti were *sui*, the person or persons passed over took an equal share with them. If the heredes instituti were *extranei*, the person or persons passed over took a half of the whole inheritance; but according to praetorian law the person so passed over might claim what he would have been entitled to if the deceased had died intestate (*bonorum possessio contra tabulas*). A rescript of the Emperor M. Aurelius limited the amount which women could take by the bonorum possessio to that which they could take under the Jus Civile by accretion; and the same was the law in the case of emancipated females. The rules relating to exheredation were altered by the 115th Novella of Justinian.

It was necessary either to institute as heredes, or to exheredate posthumous children *nominatim*, otherwise the will which was originally valid became invalid (*ruptum*); and the will became invalid by the birth either of a posthumous son or daughter, or, as the phrase was, "adgnascendo rumpitur testamentum" (Cic. *de Or.* i. 57). *Postumi* were not only those who were born after the testator's will was made, and came into his power or would have come into his power if he had lived, but also those who might become the *sui heredes* of the testator by the death of some other person in the testator's lifetime. Thus, if a testator's son, who was in his power, had children, and the son died in the testator's lifetime, the grandchildren became *sui heredes*, and the testament became *ruptum* by this *quasi agnatio;* it was therefore a necessary precaution to institute as heredes or to exheredate such grandchildren. The adoption of a son by the testator, on his taking a wife *in manum* after the making of the will, had likewise the effect of invalidating it, unless provision was made for the case. Forms were gradually established by which different classes of *postumi sui* could be either instituted or disinherited.

Postumi alieni,—i.e. *postumi* who would not have been in the power of the testator—could not be instituted in a will till the time of Justinian, who allowed such an institution. The word *postumus* has clearly the same signification as *postremus*, and literally means a child born last. The passage of Gaius is defective when he treats of *postumi;* but the definition of *postumi*, as preserved in the epitome of Gaius, appears to be exact: "Postumorum duo genera sunt; quia postumi adpellantur hi, qui post mortem patris de uxore nati fuerint, et illi qui post testamentum factum nascuntur." Sometimes the word *postumus* is defined only as a child born after a father's death, as we see in some of the *Glossae* and in Plutarch (*Sulla*, 37); but there is no proof that the meaning was limited to such children, and the passages sometimes cited as being to that effect (Dig. 50, 16, 164; 28, 3, 3) have been misunderstood. Other cases in which a valid will became invalidated are more properly considered under TESTAMENTUM.

If an ingenuus died intestate, either from not having made a will, or having made a will but not in due form, or having made a will in due form which afterwards became invalid (*ruptum, initium, inofficiorum*, or if there was no heres under the will (*destitutum*), the hereditas, according to the law of the Twelve Tables, came to the *sui heredes*, and was then called *legitima hereditas* (Gaius, ii. 3, 2). The *sui heredes* were, as we have seen, descendants in the power of the deceased at the time of his death, who by that event became *sui juris*. Adopted children were considered the same as other children; Justinian, however, made considerable modifications in this rule. A wife married *in manum viri* under the early law being considered as a daughter, and a daughter-in-law (*nurus*) married in the same way being considered a granddaughter, were *sui heredes*. Posthumous children, who would have been in the power of the intestate if he were living, were treated as if they had been born in his lifetime, and so were *sui heredes*.

The *sui heredes* took the hereditas in equal shares, if they were children of the deceased. If there was a son or daughter, and children of a son deceased, the children of the deceased son took the portion which their parent would have taken. Thus the distribution among grandchildren was always *in stirpes*—that is, among the stocks or stems sprung from the ancestor—and not *in capita*, or among the individuals in equal proportions: thus, if there were a son, and the sons of a deceased son, the son would take half the hereditas, and the sons of the deceased son would divide the other half. If an intestate had no *sui heredes*, the Twelve Tables gave the hereditas to the agnati (Gaius, iii. 9). The agnati were all those who would be under the power of a common ancestor if he were alive. [See COGNATI.] The hereditas did not belong to all the agnati, but only to those who were nearest at the time when it was ascertained that a person had died intestate. If the nearest agnatus either refused to take the inheritance or died before he had taken possession of it, in neither case did the next in succession, as agnatus, take the inheritance, for the Jus Civile recognised no *successio graduum*. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate, and not he who was nearest at the time of the death, since the intestate heir could not be in question until it was certain that the deceased had left no will. If there were several agnati in the same degree, and any one refused to take his share or died before he had assented to take it, such share accrued (*adcrevit*) to those who consented to take the hereditas.

In the case of women there were some peculiarities. The hereditates of women intestate came to their agnati just as the inheritances of males; but women who were beyond the degree of consanguinei (a term which legally means brothers and sisters) could not take *hereditates ab intestato* according to the interpretation of the Twelve Tables, though the law itself contained no such restriction. Thus a sister might take from a brother or sister as *legitima heres;* but an aunt or a brother's daughter could not be *legitima heres*. Justinian put women on the same footing as men in this respect. The principle of Roman law which gave to those who came into the potestas or manus the quality of children of the family, was followed in this case also: a mother or a stepmother who had come *in manum viri* thereby obtained the status of a daughter; and consequently, as to legitimate succession, there were the same relations between such mother or stepmother and the husband's children as there were among the husband's children themselves. But from the latter period of the republic the wife did not, as a rule, come *in manum viri;* and so as the mother and her children belonged to different familiae, they had no reciprocal rights of succession to one another.

If a person died leaving no *sui heredes*, but only a brother and another brother's children, the brother took all as the nearest agnatus. If there was no brother surviving, and only children of brethren, the hereditas was divided among all the children *in capita;* that is, the whole was equally divided among all the children. If there were no agnati, the Twelve Tables gave the hereditas to the gentiles [GENS].

Gaius (iii. 18 f.) briefly recapitulates the strict law of the Twelve Tables as to the hereditates of intestates:—Emancipated children could claim nothing, as they had ceased to be *sui heredes;* so, too, persons who had ceased to be agnati by reason of capitis deminutio were excluded from the second order [CAPUT]; if the next agnatus did not take possession, he who was next in order could not for that reason make any claim: feminae agnatae who were beyond the degree of consanguineae were shut out; cognati, whose kinship depended on a female, had no mutual rights of succession, and consequently there were no such mutual rights between a mother and her children, unless the mother had come *in manum viri*, and so the rights of consanguinity had been established between them. In short, only those who belonged to the same familia could succeed to one another, according to Jus Civile; the nearest relations had no rights, if they did not belong to this group. Gaius proceeds to show (iii. 25 f.) how these inequitable rules of the civil law were modified by the praetor's edict, which recognised to some extent the principle of cognation, as giving a right to the succession [BONORUM POSSESSIO]. The principle of cognation was gradually recognised by the statute law under the Imperial legislation. Thus the S. C. Tertullianum, enacted under Hadrian, gave a mother the right of succeeding to her children, subject to certain conditions; and in the S. C. Orfitianum, passed under Marcus Aurelius 178 A.D., children were given the right of succeeding to their mother.

Justinian in his 118th Novella remodelled the law of intestate succession, making the principle of cognation the basis of it and disregarding that of agnation.

The heres represented the testator or intestate (Cic. *de Leg.* ii. 19), and had not only a claim to all his property, and all that was due to him, but was bound by all his obligations, except those which were put an end to by death. He succeeded to the sacra familiaria, and was bound to maintain them, but only in respect of the property, for the obligation of the sacra privata was attached to property and to the heres only as the owner of it. Hence the expression "sine sacris hereditas" meant an hereditas unencumbered with sacra (Plaut. *Capt.* iv. 1, 8; *Trin.* ii. 4, 83; Festus, s. v. *sine sacris hereditas*). The sacra familiaria or privata were, in the case of small estates, a great burden to the heres. It was also a religious duty of the heres to bury the deceased (cf. Plaut. *Men.* iii. 2, 27; Paul. Diac. 77, 18).

The heres on acquiring an hereditas was, as we have seen, personally liable on account of the obligations of the deceased, but the legislation of Justinian released him from all the debts and obligations of the testator or intestate, beyond what the property would satisfy, provided he made out an inventory (*inventarium*) of the property in a certain form and within a certain time (Cod. 6, 30, 22). The heres, after satisfying the debts of the deceased, was bound to pay the legacies out of the surplus; but before doing so he was entitled to deduct a fourth for himself, if the bequests exhausted the estate, so as not to leave him this amount. [LEGATUM; FIDEICOMMISSUM.]

The heres could claim any property which belonged to the testator or intestate by *hereditatis petitio* (Dig. 5, 3, 20), which was an action brought against anyone who retained the property of the deceased either on the claim of being heres (*pro herede possidet*) or simply as possessor (*pro possessore possidet*). The action properly belonged to the heres only, though it was in later Roman law extended to the bonorum possessor or praetorian heir as an equitable action. Each heir only claimed his own share (Cic. *pro Rosc. Com.* c. 18). The coheredes shared among themselves the property and bore their share of the debts in the same proportion. For the purpose of partition and settling the affairs of the testator, a sale was often necessary (Cic. *ad Att.* xi. 15). If the parties could not agree about the partition, any of them might institute a partition suit, called *actio familiae erciscundae* [FAM. ERC. ACT.].

The hereditas might be alienated by the form of *in jure cessio*, according to the law as explained by Gaius (ii. 35–37; iii. 85, 87). The nearest agnate, having a right to succeed in case of intestacy, was the only kind of heir who could alienate his right to take the inheritance; the alienee in this case could acquire the inheritance, just as if he had been legitimus heres.

The scriptus heres or heir instituted in a will could only alienate when he had already acquired the inheritance; and after such alienation by anyone who had actually become heres, he still remained heres (*semel heres, semper heres*), and consequently answerable to creditors, but all debts due to them as heredes were extinguished.

The effect of a transfer of an hereditas by heres fiduciarius is explained under the head of FIDEICOMMISSUM.

In early Roman law a mala-fide possessor could acquire property belonging to the inheritance against the heres by usucapion in one year, the object of this rule being to compel the heres to enter on the inheritance without loss of time, so that the sacra might be performed and the creditors satisfied (Gaius, ii. 54, 55; Cic. *ad Att.* i. 5, 6; Sen. *de Ben.* vi. 5, 3; Cic. *pro Flacc.* 34, 85: cf. Voigt, *Zwölf Tafeln*, ii. § 106). The effect of this usucapion was put an end to by the S. C. Juventianum.

From the time of a man's death until it was determined who was his heres, the hereditas was without an owner, and was said *jacere*. When a heres was ascertained, such person was considered to possess all the rights incident to the hereditas from the time of the death of the testator or intestate. But this does not explain how we are to view the hereditas in the interval between the death of the former owner and the time when the heres is ascertained. During such interval, according to one form of expression used by the Roman jurists, the hereditas is a juristical person (*vice personae fungitur*), and is the domina, that is the domina of itself; according to another form of expression, it represents the defunct, and not the person of the future heres. The relation to the legal capacity of the defunct is this: slaves generally belonged to an hereditas. A slave, as is well known, could acquire property for his living master, even without his knowledge; but the validity of the act of acquisition, in some cases, depended on the legal capacity of his master to acquire. Now, while the hereditas was without an ascertained owner, many acts of a slave by which the hereditas might receive additions were strictly void, and such acts could only have their legal effect on the supposition that the slave had an owner of a sufficient legal capacity; and accordingly the law gave validity to the acts of the slave by relation to the known legal capacity of the late owner, and not by reference to the yet unascertained owner who might not have such legal capacity. The hereditas jacens, then, has no owner except an artificial one, but the property continues during this interval in the same legal condition as if the deceased were still living; from the moment that the heres is ascertained, he is considered to have been heres from the time of the death of the deceased. (Savigny, *System*, ii. § 102; Windscheid, *Pandekten*, iii. § 531; Sohm, *Institutionen*, § 96, iii.). The hereditates of freedmen are more properly considered under LIBERTI and PATRONI. (Gaius, ii. 99–190, iii. 1–24; Ulpian, *Fragm.* xxii.; Dig. 28, 29; Vangerow, *Pandekten*, vol. ii.; Windscheid, *Pandekten*, vol. iii.; Hunger, *Das Erbrecht*; Gans, *Das Erbrecht in weltgeschichtlicher Entwickelung*; V. Dalwick, *Versuch einer philosophischen-juristischen Darstellung des Erbrechts*; Lassalle, *Das Wesen des römischen und germanischen Erbrechts*, &c.; Mayer, *Die Lehre von dem Erbrecht*, &c.; Köppen, *System des heutigen römischen Erbrechts*; Schirmer, *Handbuch des römischen Erbrechts.*)

[G. L.] [E. A. W.]

HERMAE (*ἑρμαῖ*), and the diminutive HERMULI (*ἑρμίδια*), statues composed of a head, usually that of the god Hermes, placed on a quadrangular pillar, the height of which corresponds to the stature of the human body (*ἡ τετράγωνος ἐργασία*, Thuc. vi. 27; *τὸ σχῆμα τὸ τετράγωνον*, Paus. iv. 33, § 4). Some difficulties are involved in the question of their origin, and of their meaning as symbols of Hermes. One of the most important features in the mythology of Hermes is his presiding over the common intercourse of life, traffic, journeys, roads, boundaries, and so forth, and there can be no doubt that it was chiefly in such relations as these that he was intended to be represented by the *Hermae* of the Greeks and by the *Termini* of the Romans, when the latter were identified with the Hermae. It is therefore natural that we should look for the existence of this symbol in the very earliest times in which the use of boundary-marks was required; and in such times the symbols would be of the simplest character, a heap of stones or an unhewn block of marble. Now we find that there were in many parts of Greece heaps of stones by the sides of roads, especially at their crossings, and on the boundaries of lands, which were called *ἑρμαῖα* or *ἑρμεῖα*, *ἑρμαῖοι λόφοι* and *ἕρμακες* (Hesych. *s. vv.*: the remarks on the etymology of these words in Buttmann's *Lexil.* and L. and S. ed. 7 should be corrected from Curtius, *Gr. Etym.* 349, 350). A *ἑρμαῖος λόφος* near Ithaca is mentioned in the Odyssey (xvi. 471); Strabo noticed many *ἑρμεῖα* on the roads in Elis (viii. p. 343); and even now an ancient heap of stones may be seen on the boundary of Laconia (Ross, *Pelop.* vol. i. pp. 18, 174). The religious respect paid to such heaps of stones, especially at the meeting of roads, is shown by the custom of each passer-by throwing a stone on to the heap (Nicand. *Ther.* 150); this custom was also observed with reference to the Hermae of later times, at least to those which stood where roads met and served as milestones or direction posts (Brunck, *Anal.* iii. 197, no. 234). Such heaps of stones were also seen by Strabo on the roads in Egypt (xvii. p. 818). Another mode of marking a boundary or other definite locality was by a pillar of stone, originally unhewn, the sacred character of which was marked by pouring oil upon it and adorning it (Theophrast. *Char.* 16; comp. Genesis xxviii. 18, 22, xxxi. 45–48, where both the pillar and the heap of stones are set up for a witness, xxxv. 14).

Of these heaps of stones and pillars, those which marked boundaries were, among the Dorians, dedicated to Apollo Agyieus, the guardian of the streets and highways (Müller, *Dor.* ii. 6, § 6; 8, § 17); a worship which was subsequently introduced into Attica (Aristoph. *Vesp.* 875; Dem. *c. Mid.* p. 531, § 52). At Athens, on the other hand, Hermes was from the first invested with the same offices, and other Greeks borrowed this image from the Athenians (Paus. *l. c.*; cf. i. 24, § 3).

The first attempt at the artistic development of the blocks of stone and wood, by which, in the earliest period of idol-worship, all the divinities were represented, was by adding to them a head, in the features of which the characteristics of the god were supposed to be expressed; and afterwards other members of the body were added, at first with a symbolical meaning. [DAEDALA.] These changes produced the Hermae, such as they are described by the ancient authors, and as we now have them. The phallus formed an essential part of the symbol, probably because the divinity represented by it was in the earliest times, before the worship of Dionysus was imported from the East, the personification of the reproductive powers of nature. So the symbol is described by Herodotus, who ascribes the origin of it to the Pelasgians, who communicated it to the Athenians, and they to the other Greeks. (Herod. ii. 51; Plut. *an Seni ger. sit Resp.* 28, p. 797 f.; Cic. *de Nat. Deor.* iii. 22, § 56; comp. Creuzer's note, in Baehr's edition of Herodotus.) Pausanias gives the same account of the matter (i. 24, § 3; iv. 33, § 3), and also states that the Arcadians were particularly fond of the *ἄγαλμα τετράγωνον* (viii. 48, § 4; where the statue referred to is one of Zeus), which is some confirmation of the tradition which carried back the invention to the Pelasgic times.

In the historical times of Greece, too, it was at Athens that the Hermae were most numerous and most venerated. So great was the demand for these works that the words *ἑρμογλύφος*, *ἑρμογλυφικὴ τέχνη*, and *ἑρμογλυφεῖον* were used as the generic terms for a sculptor, his art, and his studio (Plat. *Symp.* p. 215; Lucian, *Somn.* §§ 2, 7; and the Lexicons).

Houses in Athens had one of these statues placed at the door, called *ἑρμῆς στροφαῖος* or *στροφεύς* (Thucyd. vi. 27; Aelian, *V. H.* ii. 41; Suid. *s. v.*; Pollux, viii. 72; Athen. x. p. 437 b); sometimes also in the court-yard (Lucian, *Navig.* 20, p. 261), which were worshipped by the women as conducive to fecundity, and the great reverence attached to them is shown by the alarm and indignation which were felt at Athens in consequence of the mutilation of the whole number in a single night, just before the sailing of the Sicilian expedition. (Thucyd. vi. 27, with Grote's remarks, ch. 58, v. 146 ff.; Andoc. *de Myst.*; Aristoph. *Lysistr.* 1094, and Schol.; Aristophanes applies the term *ἑρμοκοπίδαι* to the mutilators; see also Phot. *s. v.* *ἑρμοκοπίδαι*.)

They were likewise placed in front of temples, near to tombs, in the gymnasia, palaestrae, libraries, porticoes, and public places, at the corners of streets, on high roads as sign-posts, with distances inscribed upon them (Boeckh, *Corp. Inscr.* No. 12; Brunck, *Anal.* iii. 197; and the epigrams on Hermae in 198 = *Anth. Pal.* vi. 221); and some are still to be seen at Athens with the names of victors in the gymnastic contests inscribed upon them. (Leake, *Athens*, p. 17, n. 1.) They were even made vehicles of public instruction, according to the author of the Platonic *Hipparchus* (p. 228 D–229 B), who says that the tyrant Hipparchus placed Hermae in the streets of the city and in roads throughout Attica, inscribed with moral verses, such as the following:—

> *Μνῆμα τόδ' Ἱππάρχου· στεῖχε δίκαια φρονῶν.*
> *Μνῆμα τόδ' Ἱππάρχου· μὴ φίλον ἐξαπάτα.*

(Comp. Harpocrat. *s. v.* Ἑρμαῖ: Hesych. *s. v.* Ἱππάρχειοι Ἑρμαῖ.) Those which stood at cross roads had often three or four heads (Philoch. *fragm.* 69 Müller; Harpocr. and *Etym. M.* s. v. *τρικέφαλος Ἑρμῆς*: Phot., Hesych. *s. v.* *τετρακέφαλος Ἑρμῆς*: Eustath. *ad* Hom. *Od.* p. 1353, 3).

Numerous examples occur in Pausanias and other writers of their being placed on the boundaries of lands and states and at the gates of cities (*πρὸς τῇ πυλίδι*, *προπυλαῖος*, Paus. viii. 34, § 3, s. 6; iv. 33, § 3, s. 4, &c.; Harpocr.). Small Hermae were also used as pilasters, and as supports for furniture and utensils. (Pollux, vii. 15, 73; Müller, *Archäol.* § 379, n. 2.) Respecting the use of the *Hermae* and *Hermuli* in the Circus, see p. 433, with cuts of the doors of the *Carceres*.

With respect to the form of these works, the essential parts have been already mentioned. A pointed beard (*σφηνοπώγων*) belonged to the ancient type (Artemid. ii. 42). A mantle (*ἱμάτιον*) was frequently hung over the shoulders (Paus. viii. 39, § 4; Diog. Laërt. v. 82). Originally the legs and arms were altogether wanting (Pausanias calls them *ἄκωλοι*, i. 24, § 3), and, in place of the arms, there were often projections to hang garlands upon; but when the reverence attached to the ancient type became less, and the love of novelty greater, the whole torso was placed upon a quadrangular pillar, which tapered towards the base, and finally the pillar itself was sometimes chiselled to indicate the separation of the legs, as may be seen in a tetragonal female statue in the Villa Albani. (Winkelm. *Storia delle Arti*, vol. i. tav. 1.) Sometimes, as above stated, the head was double, triple, and even fourfold. The whole figure was generally of stone or marble; but Cicero (*ad Att.* i. 8) mentions some which were of Pentelic marble, with bronze heads. (Müller, *Archäol. d. Kunst*, § 67.)

Many statues existed of other deities, of the same form as the Hermae, which no doubt originated in the same manner, and which were still called by the generic name of *Hermae*, even though the bust upon them was that of another deity. Several images of this kind are described by Pausanias; one of Poseidon at Tricoloni in Arcadia (viii. 35, § 6), another of Zeus Teleios at Tegea (*ib.* 48, § 4), and another of Aphrodite Urania at Athens (i. 19, § 2). The reason why the statues of the other deities were developed into perfect forms, while those of Hermes so generally (by no means universally) retained their ancient fashion, is obviously on account of the religious significance attached to the symbol of the pillar, as a boundary mark. Where this motive was not called into action, Hermes himself was represented in the complete human form with all the perfection of Greek art, as, for example, in his statues in the *palaestrae*, and in those which embodied others of his attributes. (See Müller, *Archäol. d. Kunst*, §§ 380, 381.)

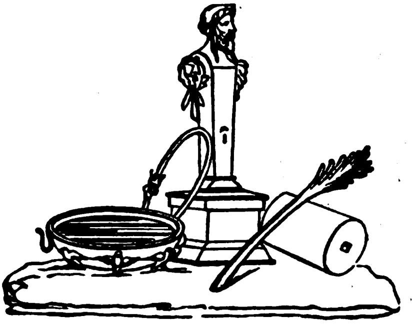
Some statues of this kind are described by a name compounded of that of Hermes and another divinity: thus we have *Hermanubis* (*Anth. Pal.* xi. 360), *Hermares*, *Hermathena* (Cic. *ad Att.* i. 1 and 4), *Hermeracles* (Cic. *ad Att.* i. 10), *Hermeros* (Plin. *H. N.* xxxvi. § 33), *Hermopan* (Bekk. *Anecd.* 1198). It has been disputed whether such figures were composed of the square pillar, as the emblem of Hermes, surmounted by the bust of the other divinity; or, secondly, whether the heads of Hermes and the other god were united, as in the bust of Janus; or, lastly, whether the symbolical characteristics of the two deities were combined in the same statue. The best recent criticism is in favour of the first of the above explanations: "as commonly assumed, they were statues of those deities in the Hermes form, not Janus-like compounds of the two deities named" (Baumeister, i. 604*a*; cf. Müller, *Archäol. d. Kunst*, § 345). Exceptions, however, seem to have existed: a Janus-head of Hermes and Athena in Müller's *Denkmäler*, pl. xlii. No. 526. Some, again, such as the Hermerotes of Tauriscus, mentioned by Pliny among other masterpieces of sculpture, were probably not of a terminal character at all, any more than the Hermaphroditi, of which specimens are extant [HERMAPHRODITUS]. It is not unlikely that they may have been simply hermaphrodite Erotes, like those depicted on some south-Italian vases. It is difficult to believe that the sculptor of the Dirce-group (*Toro Farnese*) would have condescended to the embellishment of terminal figures.

There is still another class of these works in which the bust represented no deity at all, but was simply the portrait of a man, and in which the pillar loses all its symbolical meaning, and becomes a mere pedestal. Even these statues, however, retained the names of *Hermae* and *Termini*. The examples of them are very numerous. A list of these and of the other Hermae is given by C. W. Müller. (Ersch and Gruber's *Encyklopädie*, art. *Hermen*.)

The Hermae of all kinds were in great request among the wealthy Romans, for the decoration of their houses and villas (Cic. *ad Att.* ll. cc.). It is also stated that they used them as posts for ornamental railings to a garden, in which case they were commonly decorated with the busts of philosophers and eminent men, some of which may be seen at the Vatican and other museums, with the square holes in their shoulders into which the transverse rail was inserted. This square hole, however, is also seen in Hermae of old Greek workmanship, in which cases they were probably the sockets of the projections, above mentioned, for hanging garlands on.

The existing remains of ancient art are rich in terminal statues of all the classes which have been described; and specimens of nearly all may be seen in the British Museum, and in engravings in Müller's *Denkmäler der alten Kunst* (vol. i. pl. i. Nos. 3, 4, 5;—vol. ii. pl. xxxi. No. 341; pl. xxxiii. Nos. 376, 386, 387; pl. xxxvi. Nos. 428, 429; pl. xlii. No. 526). The first two examples in Müller are very interesting: the one is a bas-relief, exhibiting a Hermes decorated with garlands and surrounded with the implements of his worship, as shown in the following engraving; the other is also a bas-relief in which we see a terminal bust of Dionysus washed and decorated by a man and three women. Hermae of the bearded Dionysus occur frequently among existing remains (Gurlitt, *Archäol. Schr.* p. 194 ff.) Respecting the Hermae on coins, see Rasche, *Lex. Univ. Rei Num.* s. vv. *Herma*, *Hermathene*, *Hermes*. (C. O. Müller, *Archäol. der Kunst*; Müller and Osterley, *Denkmäler der alten Kunst*; Baumeister, *Denkmäler*, s. vv. *Götterbilder*, *Hermes*.)

[P. S.] [W. W.]



Hermes. (From a bas-relief.)

HERMAEA (Ἕρμαια), festivals of Hermes, celebrated in various parts of Greece. As Hermes was the tutelary deity of the gymnasia and palaestrae, the boys at Athens celebrated the Hermaea in the gymnasia. They were on this occasion dressed in their best, offered sacrifices to the god, and amused themselves with various games and sports, which were probably of a more free and unrestrained character than usual. Hence the gymnasiarch was prohibited by a law of Solon (Aeschin. *c. Timarch.* § 12) from admitting any adults on the occasion. This law, however, was afterwards neglected, and in the time of Plato (*Lysis.* p. 206 D) we find the boys celebrating the Hermaea in a palaestra, and in the presence of persons of all ages. (Becker-Göll, *Charikles*, ii. 62, cf. 49; GYMNASIUM, pp. 927*b*, 928*a*.)

Hermaea were also celebrated in Crete, where, on this occasion, the same custom prevailed which was observed at Rome during the Saturnalia; for the day was a season of freedom and enjoyment for the slaves, and their masters waited upon them at their repasts. (Athen. xiv. p. 639 b; cf. vi. p. 263 f.)

The town of Pheneos, in Arcadia, of which Hermes was the principal divinity, likewise celebrated Hermaea with games and contests. (Paus. viii. 14, § 7; cf. *Journ. Hellen. Soc.* vii. 101.) A festival of the same kind was celebrated at Pellene. (Schol. *ad* Pind. *Ol.* vii. 156, and *Nem.* x. 82.) Tanagra, in Boeotia, likewise celebrated festivals of Hermes Κριοφόρος and Πρόμαχος (Paus. ix. 22, § 2; cf. *Journ. Hellen. Soc.* vi. 95, viii. 11); as did some other places, the particulars of which are not known. (See Index to Hermann's *Gottesd. Alterth.* s. v. Ἕρμαια.) [L. S.] [W. W.]

HERMAPHRODI'TUS (ἑρμαφρόδιτος), a hermaphrodite. This conception belongs to art as well as to mythology, and will here be briefly noticed from the former point of view. "The idea itself was probably derived from the worship of nature in the East, where we find not only monstrous compounds of animals, but also that peculiar kind of dualism which manifests itself in the combination of the male and female" (*Dict. Biogr.* s. v.). The exchange of dresses by Hercules and Omphale, and similar proceedings in Cyprian, Lydian, and Greek worships, are thought to point to the same Oriental origin. The traditional derivation of the name from Hermes and Aphrodite is pronounced doubtful by Baumeister, who thinks that some foreign words may be concealed under it; nothing definite, however, is yet proposed. Hermaphroditus was regarded as an emblem of indissoluble marriage, in opposition to the ready divorces of ancient manners: and chaplets were hung up in his shrine at Athens by widows who desired to testify their fidelity to the deceased (Alciphr. *Ep.* iv. 37). This, according to Baumeister, is also the explanation of the fable of Hermaphroditus and the nymph Salmacis in Ov. *Met.* iv. 285–388.

Five marble statues of this class are extant; the oldest gives its name to the *Sala dell' Ermafrodito* in the Uffizi at Florence; two are in the Louvre, one in the Villa Borghese, the fifth has lately been dug up in Rome (figured *Mon. dell' Inst.* xi. 43). Of these the Borghese and one of the Louvre statues are the most celebrated, but a strong resemblance runs through them all; in each the figure is lying on its side or face downwards, and the delicate outlines of the back, turned towards the spectator, alone suggest the bisexual form. This type is probably derived from the bronze original of the elder Polycles (Plin. *H. N.* xxxiv. § 80), and thus does not go further back than the later Athenian school. Other less modest representations are given by Clarac (pl. 666 ff.). By an obvious symbolism, the hermaphrodite form occurs in reliefs among Bacchanalian dances, Hermae of the bearded Dionysus, and Erotes. (Müller, *Archäol. der Kunst*, §§ 128 n. 2, 392 n. 2; Baumeister, *Denkmäler*, s. v. *Hermaphrodit.*) [W. W.]

HERMATHE'NA. [HERMAE.]

HERME'RACLAE. [HERMAE.]

HERO'NES, baskets or crates. [AERO.]

HERO'ON (ἡρῷον). [APOTHEOSIS; FUNUS, p. 888*b*.]

HESTIA (ἑστία). [FOCUS.]

HESTIASIS (ἑστίασις) was a species of liturgy, and consisted in giving a feast to one of the tribes at Athens (τὴν φυλὴν ἑστιᾶν, Dem. c. *Mid.* p. 565, § 156; Aristot. *Pol.* vi. 7 = p. 1320, 37; Pollux, iii. 67). It was provided for each tribe at the expense of a person belonging to that tribe, who was called ἑστιάτωρ. (Dem. c. *Lept.* p. 463, § 21; c. *Boeot. de Nom.* p. 996, § 7.) Harpocration (*s. v.* Ἑστιάτωρ) states on the authority of the speech of Demosthenes against Meidias, that this feast was sometimes provided by persons voluntarily, and at other times by persons appointed by lot; but, as Boeckh remarks, nothing of this kind occurs in the speech, and no burthen of this description could have been imposed upon a citizen by lot. The ἑστιάτορες were doubtless appointed, like all persons serving liturgies, according to the amount of their property in some regular succession; fortunes under three talents seem to have been excused this and other liturgies (Isae. *Or.* 3 [*Pyrrh.*], § 80). These banquets of the tribes, called φυλετικὰ δεῖπνα by Athenaeus (v. p. 185 c), were introduced for sacred purposes, and for keeping up a friendly intercourse between persons of the same tribe. They are mentioned as given at the great festivals of the Dionysia and Panathenaea (see the newly-discovered scholia on Dem. *Lept.* l. c. in *Bulletin de Corresp. Hellén.* i. 147), as well as at the Thesmophoria, when married men entertained the women on behalf of their wives (Isae. *l. c.*). The entertainment appears to have been of a simple character, including meat but not delicacies (Pollux, iii. 67). Boeckh thinks there may have been 2,000 guests, and the cost, at the low figure of two obols a head, nearly 700 drachmas; Paley suggests a doubt whether more than the fifty βουλευταὶ of each tribe were really entertained (*ad* Dem. *Boeot.* l. c.). The notion of Boeckh, that there were also "great feastings of the people, defrayed from the Theorica," is justly rejected by his editor Fränkel (n. 779); the Theoric fund was spent in dramatic and other shows (θέαι) or distributions of corn (διαδόσεις, διανομαί), not in public dinners. (Boeckh, *P. E.* pp. 452, 465 = *Sthh.*^{3} i. 537, 554; Wolf, *Proleg. ad Lept.* p. lxxxvii. = 45 tr. Beatson.) [W. S.] [W. W.]

HETAERAE (ἑταῖραι). The word ἑταίρα signifies originally a female companion, but in its most common use denotes any woman who lived with (συνεῖναι, πλησιάζειν, χρῆσθαι, Dem. c. *Timocr.* p. 762, § 197) a man in any other connexion than lawful wedlock. It included every shade of meaning from a concubine who might be a wife in all but the legal qualification of citizenship (*e.g.* Aspasia to Pericles; cf. CONCUBINA) to the lowest prostitute. The latter was properly called πόρνη, a more opprobrious term; but usually by the euphemistic name *ἑταίρα* (Ath. xiii. p. 571 d–f, citing comic writers; Anaxil. *fr.* 22 Meineke; Plut. *Sol.* 15). Between different classes of *ἑταῖραι* we find much the same distinctions as in dissolute cities in modern times, modified of course by the prevalence of slavery; the New Comedy, with its Latin adapters Plautus and Terence, and the *ἑταιρικοὶ διάλογοι* of Lucian, exhibit slave-girls owned by *πορνοβοσκοί*, *lenones*; kept mistresses, whether bond or free; private hetaerae living in houses by themselves, or sometimes two or three together; the *demi-monde*, *ἑταῖραι πολυτελεῖς* or *μεγαλόμισθοι*, with more or less fashionable surroundings, represented by the great historic courtesans, Phryne, Lais, &c.; and finally the assertors of women's rights to education and culture, whose lives were almost without reproach, and of whom Aspasia is the type. As persons of this class acted a prominent and influential part in some of the Greek states, we cannot avoid in this work stating their position and their relations to other classes of society. But as their conduct, manners, ensnaring artifices, and impositions have at all times and in all countries been the same, we shall confine ourselves to those points which were peculiar to the hetaerae of Greece.

As might be expected, the fact that young men at Athens, previous to their marriage, spent a great part of their time in the company of hetaerae, was very leniently viewed; though stern moralists thought that it had been otherwise in the "good old times" (Isocr. *Areop.* § 48). Marriage, indeed, produced on the whole a change in this mode of living of young men, but in innumerable instances even married men continued their intercourse with hetaerae, without drawing upon themselves the censure of public opinion; it seems, on the contrary, evident from the manner in which the history of one Lysias, a sophist, is told in the speech *against Neaera* (p. 1351, § 21 ff.), that such connexions after marriage were not looked upon as anything extraordinary or inconsistent, provided a man did not offend against public decency, or altogether neglect his legitimate wife and the affairs of his household, as was the case with Alcibiades. (Andoc. *c. Alcib.* § 14). This irregular condition of private life among the Greeks seems to have arisen chiefly from two causes: first from the unrestrained sensuality of the Greek character; and, secondly, from the generally prevailing indifference between husbands and wives. As regards the latter point, matrimonial life in the historical times of Greece was very different from that which we find described in the heroic age. How this change was brought about is not clear; but it can scarcely be doubted that, generally speaking, the Greeks looked upon marriage merely as a means of producing citizens for the state. (Dem. *c. Neaer.* p. 1386, § 122; Becker-Göll, *Charikles*, iii. 390 ff., &c.) The education of women was almost entirely neglected; they were thought a kind of inferior beings, less endowed by nature, and incapable of taking any part in public affairs and of sympathising with their husbands. In an intellectual point of view, therefore, they were not fit to be agreeable companions to their husbands, who consequently sought elsewhere that which they did not find at home. It is true that the history of Greece furnishes many pleasing examples of domestic happiness and well-educated women, but these are exceptions, and only confirm the general rule. A consequence of all this was, that women were bound down by rules which men might violate with impunity; and a wife appears to have had no right to proceed against her husband, even if she could prove that he was unfaithful (Plaut. *Mercat.* iv. 6, 3), although she herself was subject to divorce if she was detected. But neglect, cruelty, or riotous waste of the wife's fortune, superadded to adultery, rendered the husband liable to a *δίκη κακώσεως*. The case in Alciphron (*Epist.* i. 6), who represents a wife threatening her husband, that unless he would give up his dissolute mode of living, she would induce her father to bring a charge against him, must have been of this latter kind (Becker-Göll, *Charikles*, ii. 88; *Att. Process*, p. 354 Lips.).

But to return to the hetaerae: the state not only tolerated, but protected them, and obtained profit from them. Solon is said to have established a *πορνεῖον* (also called *παιδισκεῖον*, *ἐργαστήριον* or *οἴκημα*), in which prostitutes were kept (Athen. xiii. p. 569 d), and to have built the temple of Aphrodite Pandemos with the profit which had been obtained from them. At a later period the number of such houses at Athens was increased, and the persons who kept them were called *πορνοβοσκοί*, *lenones*. The conduct of the hetaerae in these houses is described in Athenaeus (xiii. p. 568). All the hetaerae of such houses, as well as individuals who lived by themselves and gained their livelihood by prostitution, had to pay to the state a license-duty (*πορνικὸν τέλος*, Aeschin. *c. Timarch.* §§ 119, 120), and the collecting of this tax was every year let by the senate to such persons (*τελῶναι*, or *πορνοτελῶναι*, Philonides, *ap. Polluc.* vii. 202) as were best acquainted with those who had to pay it. The hetaerae were under the superintendence of the *ἀγορανόμοι* (Suidas, *s. v.* *Διάγραμμα*), and their places of abode were chiefly in the Cerameicus. (Hesych. *s. v.* *Κεραμεικός*.) A ridiculous mistake of some late grammarians as to the nature of the *πορνικὸν τέλος* has been noticed under AGORANOMI. Even Boeckh thinks that it was a kind of income-tax on their supposed profits! (*P. E.* p. 333 = *Sthh.*² i. 404.)

The number of private hetaerae, or such as did not live in a *πορνεῖον*, was very great at Athens. They were, however, generally not mere prostitutes, but acted at the same time as flute or cithara players, and as dancers, and were as such frequently engaged to add to the splendour of family sacrifices (Plaut. *Epid.* iii. 4, 64), or to enliven and heighten the pleasures of men at their symposia. Their private abodes, where often two, three, and more lived together, were also frequently places of resort for young men. (Isocr. *Areopag.* § 48.) Most of these hetaerae not only took the greatest care to preserve their physical beauty, and to acquire such accomplishments as we just mentioned, but also paid considerable attention to the cultivation of their minds. Thus the Arcadian Lastheneia was a disciple of Plato (Athen. xii. p. 546 d), and Leontion a disciple of Epicurus (Athen. xiii. p. 588 b); Aspasia is even said to have instructed Socrates and Pericles. Whatever we may think of the historical truth of these and similar reports, they are of importance to the historian, inasmuch as they show in what light these hetaerae were looked upon by the ancients. It seems to have been owing especially to their superiority in intellectual cultivation over the female citizens, that men preferred their society and conversation to those of citizens and wives; and that some hetaerae, such as Aspasia, Lais, Phryne, and others, formed connexions with the most eminent men of their age, and acquired considerable influence over their contemporaries. The free and unrestrained conduct and conversation, which were not subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded; were well calculated to ensnare young men, and to draw the attention of husbands away from their wives. Women, however, of the intellect and character of Aspasia were exceptions; and even Athenian citizens did not scruple to introduce their wives and daughters to her circles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. The disorderly life of the majority of Greek hetaerae is nowhere set forth in better colours than in the works of the writers who belong to the so-called school of the Middle Comedy, and in the plays of Plautus and Terence; with which may be compared Demosth. *c. Neaer.* p. 1355 ff., and Athen. xiii. It was formerly supposed that at Athens a peculiar dress was by law prescribed to the hetaerae, but this opinion is without any foundation. (Becker-Göll, *Charikles*, ii. 103.)

The town most notorious in Greece for the number of its hetaerae, as well as for their refined manners and beauty, was Corinth. (Plato, *Rep.* iii. p. 404 D; Dio Chrysost. *Orat.* xxxvii. p. 119, Reiske; Aristoph. *Plut.* 149, with the Schol.; and Schol *ad Lysistr.* 90; Athen. xiii. p. 573, &c.; Müller, *Dor.* ii. 10, § 7.) Strabo (viii. p. 378) states that the temple of Aphrodite in this town possessed more than one thousand hetaerae, who were called *ἱερόδουλοι*, and who were the ruin of many a stranger who visited Corinth. (Wachsmuth, *Hellen. Alterth.* vol. ii. p. 392.) Hence the name *Κορινθία κόρη* was used as synonymous with *ἑταίρα*, and *κορινθιάζεσθαι* was equivalent to *ἑταιρεῖν*. (Eustath. *ad Il.* ii. 570.) At Sparta, and in most other Doric states, the hetaerae seem never to have acquired that importance which they had in other parts of Greece, and among the Greeks of Asia Minor.

An important question is, who the hetaerae generally were? The *ἱερόδουλοι* of Corinth were, as their name indicates, persons who had dedicated themselves as slaves to Aphrodite; and their prostitution was a kind of service to the goddess. [HIERODULI.] Those *πόρναι* who were kept at Athens in public brothels by the *πορνοβοσκοί* were generally slaves belonging to these *πορνοβοσκοί*, who compelled them to prostitute their persons for the purpose of enriching themselves. The owners of these *πόρναι* were justly held in greater contempt than the unhappy victims themselves. Sometimes, however, they were real prostitutes, who voluntarily entered into a contract with a *πορνοβοσκός*: others again were females who had been educated in better circumstances and for a better fate, but had by misfortunes lost their liberty, and were compelled by want to take to this mode of living. Among this last class we may also reckon those girls who had been picked up as young children, and brought up by *πορνοβοσκοὶ* for the purpose of prostitution. An instance of this kind is Nicarete, a freed-woman, who had contrived to procure seven young children, and afterwards compelled them to prostitution, or sold them to men who wished to have the exclusive possession of them. (Dem. *c. Neaer.* p. 1351, § 18 ff.) Other instances of the same kind are mentioned in the comedies of Plautus. (Compare Isaeus, *Or.* 6 [*Philoct.*], § 19.) Thus all prostitutes kept in public or private houses were either real slaves or at least looked upon and treated as such. Those hetaerae, on the other hand, who lived alone either as mistresses of certain individuals or as common hetaerae, were almost invariably strangers or aliens, or freed-women. The cases in which daughters of Athenian citizens adopted the life of a hetaera, as Lamia, the daughter of Cleanor (Athen. xiii. p. 577), seem to have occurred very seldom; and whenever such a case happened, the woman was by law excluded from all public sacrifices and offices, sank down to the rank of an alien, and as such became subject to the *πορνικὸν τέλος*: she generally also changed her name. The same degradation took place when an Athenian citizen kept a *πορνεῖον*, which seems to have happened very seldom. (Boeckh, *P. E.* p. 333 = *Sthh.*³ i. 404.)

(Fr. Jacobs, *Beiträge zur Gesch. des weiblich. Geschlechts*, in his *Vermischte Schriften*, vol. iv.; Becker-Göll, *Charikles*, ii. 85–104, iii. 306–398; Limburg-Brouwer, *Histoire de la Civilisation morale et religieuse des Grecs;* Wachsmuth, *Hellen. Alterth.* ii. 392 ff.; Hermann-Blümner, *Privatalterth.* p. 254 ff.) [L. S.] [W. W.]

HETAERESEOS GRAPHE (*ἑταιρήσεως γραφή*). This action was maintainable against such Athenian citizens as had administered to the unnatural lusts of another for pay (Aeschin. *c. Tim.* §§ 29, 51, 72, 87; Platner, *Proc. u. Klagen*, ii. p. 221); but only if after such degradation they ventured to exercise their political franchise, *e.g.* speak in the public assembly or bear office in the state, etc. (Aeschin. *c. Tim.* § 19 ff., 195; Pollux, viii. 43; cf. Dem. *c. Steph.* i. p. 1125, § 79). The same action was maintainable against the *κύριος* who hired out a youth under age (not against the youth himself), and against the person who hired another, whether under age or not, for such purposes (such an action was perhaps called *εἰς ἑταίρησιν μισθώσεως*, yet see Aeschin. *c. Tim.* § 13, *κατ' αὐτοῦ μὲν τοῦ παιδὸς οὐκ ἐᾷ (ὁ νόμος) γραφὰς ἑταιρήσεως εἶναι, κατὰ δὲ τοῦ μισθώσαντος καὶ τοῦ μισθωσαμένου*). Such actions belonged to the jurisdiction of the thesmothetae. All three classes of offenders were capitally punished (Aeschin. *c. Tim.* §§ 13, 72, 87, 90). Heffter (*Ath. Gerichtsverf.* p. 172) extended this action also to the *προαγωγοί*: yet there was a special *γραφὴ προαγωγείας* (Aeschin. *c. Tim.* §§ 14, 184). (*Att. Process*, ed. Lipsius, p. 411 f.) [J. S. HETAERI (*ἑταῖροι*). [EXERCITUS, p. 777 *a*.]

HETAIRI'AE (*ἑταιρεῖαι*). [ERANI.]

HEXA'PHORUM. [LECTICA.]

HEXASTY'LOS. [TEMPLUM.]

HEXE'RES. [NAVIS.]

HIEREION (*ἱερεῖον*). [SACRIFICIUM.]

HI'EREUS TON SOTE'RON (*ἱερεὺς τῶν σωτήρων*), priest of the Saviours, that is, of Antigonus and Demetrius, who were received by the Athenians, in B.C. 307, as their liberators with honours and flatteries of every sort. They even went so far as to pay divine honours to these princes under the title of Saviours (*σωτῆρες*), and to assign a priest (*ἱερεύς*) to attend to their worship, who was to be elected annually by Cheirotonia (Plut. *Demetr.* 10). This continued for twenty years till the conquest of Demetrius by Pyrrhus in B.C. 287, when the office was abolished and these extravagant honours annulled (Id. 46). It was formerly believed, on the authority of Plutarch, that while the *ἱερεὺς τῶν σωτήρων* lasted his name was used to mark the year in state records and private documents (*συμβόλαια*) in place of the first archon; and this notwithstanding the fact that the magistrates of these twenty years were in later times called archons, as, for instance, by Diodorus and Dionysius of Halicarnassus. Clinton accounted for this by supposing that the Athenians would not leave upon their Fasti this mark of their humiliation. (Droysen, *Geschichte des Hellenismus*, i. 439; Clinton, *F. H.* ii. 380; Schömann, *Antiq. Jur. Publ. Graec.* p. 359; Thirlwall, vii. 331.) But it has now been convincingly proved that this statement of Plutarch's rests on an error (Schömann, *Antiq.* i. 537 n., E. T.); Grote passes it over in silence, and, if it were true, there would naturally be evidence of it in the many Attic inscriptions lately discovered. On the other honours paid to Demetrius Poliorcetes, cf. Gilbert, *Staatsalterth.* i. 154, 190. [W. S.] [W. W.]

HIERODU'LI (*ἱερόδουλοι*) were persons of both sexes who were devoted, like slaves, to the worship of the gods. They were of Eastern origin, and are most frequently met with in connexion with the worship of the deities of Syria, Phoenicia, and Asia Minor. They consisted of two classes: one composed of slaves properly so called, who attended to all the lower duties connected with the worship of the gods, cultivated the sacred lands, &c., and whose descendants continued in the same servile condition; and the other, comprising persons who were personally free, but had dedicated themselves as slaves to the gods, and who were either attached to the temples or were dispersed throughout the country and brought to the gods the money they had gained. To the latter class belonged the women, who prostituted their persons and presented to the gods the money they had obtained by these means. The pomp with which religious worship was celebrated in the East, and the vast domains which many of the temples possessed, required a great number of servants and slaves. Thus the great temple at the Cappadocian Comana possessed as many as 6,000 hieroduli (Strab. xii. p. 535), and that at Morimene had 3,000 of the same class of persons (Strab. xii. p. 537). So numerous were the hieroduli at Tyre, that the high-priest by their support frequently obtained the regal dignity (Joseph. c. *Apion.* i. 18, 21). These large numbers arose from the idea, prevalent in the East, that the deity must have a certain class of persons specially dedicated to his service and separated from the ordinary duties of life, and that it was the duty of all who had the power to supply as many persons as they could for their service. Thus, kings dedicated as sacred slaves the prisoners whom they took in war, parents their children, and even persons of the highest families sent their daughters to the temples to sacrifice their chastity to the gods, at least till the time of their marriage. This practice of females offering their chastity to the gods was of ancient origin in the East, and seems to have arisen from the notion that the gods ought to have the first-fruits of everything. The custom prevailed at Babylon (Herod. i. 199; Strab. xvi. p. 745), as well as in many other places. (Comp. Heyne, *De Babyloniorum instituto religioso*, &c. in *Comment. Societ. Götting.* vol. xvi. p. 30, &c.) The Greek temples had of course slaves to perform the lowest services (Paus. x. 32, § 8); but we also find mention in some Greek temples of free persons of both sexes, who had dedicated themselves voluntarily to the services of some god, and to whom the term of *hieroduli* was generally applied. We find, again, predial slaves attached to temples, and cultivating their sacred domains (*τεμένη*) on condition, like the Helots and the Thessalian Penestae, of contributing to the temple a large fixed share of the produce. Such were the Craugallidae (or Acragallidae, Aeschin. c. *Ctes.* § 107) in the plain below Delphi; they were probably a remnant of the ancient inhabitants, the Dryopes, reduced to serfdom at an early period (Müller, *Dor.* ii. 3, § 3). Such also were the Venerei of Mount Eryx, though they seem to have included freedmen as well as slaves (Cic. *in Verr.* ii. 8, § 21 ff.; 38, § 92 ff.); with these we may class the Martiales at Larinum in Southern Italy (Cic. *pro Cluent.* 15, § 44). Masters who wished to give slaves their freedom, but were prevented by various causes from manumitting them, presented them to some temple as *ἱερόδουλοι* under the form of a gift or a sale, and thus procured for them liberty in reality. Such cases of manumission frequently occur in inscriptions, and are explained at length by Curtius (*de Manumissione sacra Graecorum*, in his *Anecdota Delphica*, Berlin, 1843, p. 10, &c.; comp. Plut. *Amat.* c. 21, *τῶν ἄλλων δεσποτῶν καὶ ἀρχόντων ἐλεύθεροι καὶ ἄφετοι καθάπερ ἱερόδουλοι διατελοῦσιν*). The female hieroduli, who prostituted their persons, are only found in Greece connected with the worship of divinities who were of Eastern origin, or many of whose religious rites were borrowed from the East. This was the case with Aphrodite, who was originally an Oriental goddess. At her temple at Corinth there were a thousand *ἱερόδουλοι ἑταῖραι* (cf. HETAERAE), and there was also a large number of the same class of women at her temple at Eryx, in Sicily. (Strab. viii. p. 378, vi. p. 272; cf. xii. p. 559.) (Hirt, *Die Hierodulen*, with appendices by Boeckh and Buttmann, Berlin, 1818; Kreuser, *Der Hellenen Priesterstaat, mit vorzüglicher Rücksicht auf die Hierodulen*, Mainz, 1824; Mövers, *Die Phönizier*, p. 359, &c.; Hermann, *Gottesd. Alterth.* § 20, n. 13–16; Schömann, *Antiq.* i. 134 E. T.) [W. S.] [W. W.]

HIEROMANTEIA (*ἱερομαντεία*). [DIVINATIO.]

HIEROME'NIA (*ἱερομηνία, τὰ ἱερομήνια,* Thuc. v. 54) means the "holy season," during which, "as in the *treuga Dei* of the mediaeval Church," all hostilities between different states were suspended (Thuc. v. 54, 2 and schol., *τοῦ γὰρ Καρνείου πολλὰς ἔχοντος ἱερὰς ἡμέρας ἢ καὶ πάσας ἱερὰς μᾶλλον οὐκ ἐστρατεύοντο,* and iii. 56, 1; 65, 1). Then, as Demosthenes says (*c. Timocr.* p. 709, § 29), the law forbade *μήτ' ἰδίᾳ* (see the case of Evander, who, having obtained a verdict against Menippus in a mercantile suit, seized his person while staying at Athens during the Mysteries, Dem. *c. Mid.* p. 571, § 176 ff.) *μήτε κοινῇ* (Socrates remained in prison until the return of the sacred vessel from Delos) *μηδὲν ἀλλήλους ἀδικεῖν μηδὲ χρηματίζειν ὅ τι ἂν μὴ περὶ τῆς ἑορτῆς ᾖ* (the Panathenaic festival; the scholiast confines the *ἱερομηνία* to the day when the Cronia were actually celebrated, whilst in Aug. Mommsen's opinion, *Heortologie*, p. 108, it extended from the Cronia to the Panathenaic festival). See also Dem. *c. Timocr.* p. 708, § 26, p. 716, § 47: the senate discharged from attendance on account of the Cronia, Aeschin. *c. Ctesiph.* § 67: on the popular assembly to be held on the festival of Asclepius (*ἐν τῇ ἱερᾷ ἡμέρᾳ*), and Xen. *de Rep. Ath.* 3, 8: *οὐ δικάζειν* during festivals (Aristoph. *Nub.* 620, and Harpocr. *αἱ ἑορτώδεις ἡμέραι ἱερομηνίαι καλοῦνται*); Dem. *c. Mid.* p. 571, § 176, p. 525, § 34: the same law about the Dionysia as about the Mysteries. The *ἱερομηνία* in connexion with the great festivals included the time before and after them, and special heralds visited the different states of Greece and proclaimed these *σπονδαί* (*e.g.* *Ὀλυμπιακαὶ σπονδαὶ* in Aeschin. *de F. L.* § 12 and schol.); hence they were called *σπονδοφόροι* (*σπ. Ἀλεῖοι*, Pind. *Isth.* 2, 35; *τῶν Κορείων*, Strab. ii. 3, 4, p. 155; cf. Aeschin. *de F. L.* § 133, *οἱ τὰς μυστηριώτιδας σπονδὰς ἐπαγγέλλοντες*, and Thuc. v. 49, 2; viii. 10, 1). The *σπονδαὶ* of the Greater Mysteries lasted from the day of the full moon of Metageitnion (*ἀπὸ ἀρχομηνίας*, *C. I. G.* No. 71; *ἀπὸ διχομηνίας*, Sauppe, *Inscr. Eleus.* p. 6, and *C. I. A.* i. No. 1) to the tenth day of Pyanepsion, and those of the Lesser from the day of the full moon of Gamelion to the tenth day of Elaphebolion (*i.e.* 55 days, thus enabling even those at a distance to travel to Athens and back in safety); cf. *C. I. G.* No. 2954, *ἐν ᾧ μηνὶ* (the Ephesian Artemision) *πανηγύρεις τε καὶ ἱερομηνίαι ἐπιτελοῦνται . . . . καὶ ἀτελειῶν καὶ ἐκεχειρίας εἰς ὅλον τὸν ἐπώνυμον τῆς θεοῦ μῆνα τυχόντα.* Instances are not wanting of the non-observance of this international law: one is related of Agesipolis by Xen. *Hell.* iv. 7 (see also iv. 5, 1, 2); another of the soldiers of Philip of Macedon (Dem. *de F. L. argum.* p. 335, cf. Aeschin. *de F. L.* § 12); a third of the Achaeans by Plut. *Arat.* 28. When, in B.C. 420, the Spartans attacked the Elean fort of Phyrcon and occupied Lepreon *ἐν ταῖς Ὀλυμπιακαῖς σπονδαῖς*, the Eleans condemned them, for this breach of the *ἐκεχειρία*, to a fine of 2000 minas, according to the *Ὀλυμπιακὸς νόμος*: and when the Lacedaemonians replied that the *ἐκεχειρία* had not been proclaimed in Sparta at the time the expedition started, the Eleans pointed out that the *ἐκεχειρία* had been proclaimed in theirs. From the passage *πρώτοις γὰρ σφίσιν αὐτοῖς ἐπαγγέλλουσιν* (Thuc. v. 49), E. Curtius (*Sparta u. Olympia*, p. 131 f.) infers that Sparta was the first state in which the *σπονδοφόροι* made their proclamation; but its meaning clearly is (Busolt, *Forsch. z. griech. Gesch.* i. p. 17 f.), that the *ἐκεχειρία* was first proclaimed in Elis, and that then messengers were sent to the other states. (Hermann, *Ueber griech. Monatskunde*, *Abh. d. hist.-phil. Classe*, ii. 1845, Göttingen; and Pauly, *Real-Encycl.* iii. p. 1331 ff.) [H. H.]

HIEROMNE'MONES (*ἱερομνήμονες*) were the more honourable of the two classes of representatives who composed the Amphictyonic council. An account of them is given under AMPHICTYONES. We also read of Hieromnemones in Grecian states, distinct from the Amphictyonic representatives of this name, and mostly bearing no trace of a sacred character. Thus, officers called *ἱερομνήμονες, ἐπιστάται*, and *μνήμονες* are mentioned by Aristotle (*Pol.* vi. 8 = p. 1321 b, 39) as the custodians of state papers and of the records of judicial decisions (cf. Schömann, *Antiq.* i. 138 E. T.). It is perhaps exceptional that the priests of Poseidon at Megara were called hieromnemones (Plut. *Symp.* viii. 8, § 4). At Byzantium, which was a colony of Megara, the chief magistrate in the state appears to have been called by this name; in a decree quoted by Demosthenes (*de Cor.* p. 255, § 90; compare Polyb. iv. 52, § 4), a hieromnemon is mentioned, who gives his name to the year; and we also find the same word on the coins of this city. (Eckhel, *Doctr. Num.* vol. ii. p. 31, &c.) At Chalcedon, another colony of Megara, a hieromnemon also existed, as is proved by a decree which is still extant. (*C. I. G.* 3794; cf. Müller, *Dor.* iii. 9, § 10.) An inscription found in Thasos also mentions a hieromnemon who presided over the treasury (*C. I. G.* 2161, with Boeckh's commentary, vol. ii. pp. 183, 184).

Besides the representative at the Amphictyonic council, we find at Athens hieromnemones belonging to local and gentile organisations: *ἱερομνήμονες Ἡρακλέους* (*C. I. A.* ii. 785; Fränkel, n. 536 on Boeckh); a *γένος Σαλαμινίων* with an *ἄρχων* and *ἱερομνήμονες* in an inscription published in *Ἀθήναιον*, vi. 274, *Mittheilungen des deutschen archäol. Inst. in Athen*, iv. 265 (Gilbert, *Staatsalterth.* i. 201).

[W. S.] [W. W.]

HIERONI'CAE. [ATHLETAE.]

HIEROPHANTES (*ἱεροφάντης*). [ELEUSINIA, p. 720 *b*.]

HIEROPOEI (*ἱεροποιοί*), commissioners of sacrifices at Athens, were of various kinds. Aristotle classes them with treasurers (*ταμίαι*) and custodians (*ναοφύλακες*) as exercising an office separate from that of priests (*Pol.* vi. 8 = p. 1322 b, 25); in one of the numerous inscriptions referring to them, *ἱερῆς* and *ἱεροποιοὶ* are distinguished (*C. I. G.* 76 = *C. I. A.* i. 32; Boeckh, *Sthh.*³ ii. 45); in another, the latter are classed with *βοῶναι* and *ἐπιμεληταὶ τῶν μυστηρίων* among those who reckoned with the state for the *δερματικόν* (*C. I. G.* 157 = *C. I. A.* ii. 741; Boeckh, *op. cit.* p. 101 ff.; cf. Dem. *c. Mid.* p. 570, § 171; BOONAE; DERMATIKON). The *ἱεροποιοὶ κατ' ἐνιαυτὸν* were a body of ten appointed annually by lot for the state sacrifices in general, including those of quinquennial festivals, but excepting, we are told, the Panathenaea

(Pollux, viii. 107). Several grammarians also expressly state, quoting the high authority of Aristotle, that these hieropoei had nothing to do with the Panathenaea (Phot., *Etym. M.*, s.v.; *Lex. Seguer.* p. 265, 22); but this is either a mistake or refers to a later period: an undoubted inscription of B.C. 410 records that at the Panathenaic festival 5114 drachmas were paid from the treasury for a hecatomb to the *ἱεροποιοὶ κατ' ἐνιαυτόν* (*C. I. G.* 147 = *C. I. A.* i. 188; Boeckh, *Sthh.*³ ii. p. 5, cf. pp. 8, 118). Other hieropoei were assigned to particular deities and their temples, while others again were elected for particular festal celebrations (Schömann, *Antiq.* i. 427, E. T.). It is these last, probably, who are called *ἐπιμήνιοι* in contradistinction to those *κατ' ἐνιαυτόν* (Hesych. *s. vv. ἐπιμήνιοι, ἱεροποιοί*). Demosthenes mentions as a high honour his having been selected "from all the Athenians" as one of three *ἱεροποιοὶ ταῖς σεμναῖς θεαῖς*, *i.e.* to the Eumenides (*c. Mid.* p. 552, § 115); the nomination in this case seems to have belonged to the Areopagus (Müller, on Aesch. *Eum.* p. 179; Schömann, *op. cit.* p. 496). Among festivals mentioned as provided for by hieropoei are those of the Delian Apollo and the Brauronian Artemis (Pollux, *l. c.*), of Bendis, Asclepios, and Ἀγαθῇ Τύχη (*C. I. G.* 157 = *C. I. A.* ii. 741, Boeckh, *l. c.* p. 107). As regards their duties, the mention of the *δερματικὸν* shows that they provided the victims with the money voted them for the purpose, and afterwards accounted for their hides; the actual slaying was probably done by inferior priests, but the hieropoei had to begin the sacrificial ceremonies (*κατάρξασθαι τῶν ἱερῶν*, Dem. *l. c.*). Hence, though really public officers, they are sometimes represented by the grammarians as sacrificing priests (Boeckh, *P. E.* p. 216 = *Sthh.*³ i. 273; cf. Hermann, *Gottesd. Alterth.* § 11, n. 10, § 62, n. 11). [W. S.] [W. W.]

HIEROSY'LIAS GRAPHE (*ἱεροσυλίας γραφή*). This action must be distinguished from the *γραφὴ κλοπῆς ἱερῶν χρημάτων*. The latter was directed against peculation rather than theft of sacred money, to which a fine (the tenfold amount, Dem. *c. Timocr.* p. 735, § 112; p. 740, § 127) was awarded (Antiph. *Tetral.* i. *α*, § 6, *ἱερῶν κλοπῆς δυοῖν ταλάντοιν γεγραμμένος*, cf. *β*, § 9, whence we learn that only a fine could be awarded; Dem. *de F. L.* p. 435, § 293); the former was directed against the offence of robbery from a temple. Euxitheus charges his opponents with having stolen (*ἱεροσυλήσαντες*) the weapons which he had dedicated to Athene (Dem. *c. Eubul.* p. 1318, § 64). (See Syrian. *ad Hermog.* iv. p. 497 Walz: *οἷον ὁ φεύγων ἱεροσυλίας γραφὴν ἐρεῖ, ὡς ἱερόσυλός ἐστιν ὁ φιάλας ἐξ ἱερῶν ἀφαιρούμενος, ὁ στεφάνους, ὁ θυμιατήρια, καὶ ὅσα τοιαῦτα εἰδικῶς ὀνομάζων.*) The offender upon conviction was invariably put to death, whether the value of the thing stolen was great or small (Isocr. *c. Lochit.* § 6; Lyc. *c. Leocr.* § 65; Xen. *Mem.* i. 2, 62), his property confiscated, and his body denied burial within Attic territory (Xen. *Hell.* i. 7, 22; Diod. Sic. xvi. 28), sacrilege being considered one of the most heinous crimes next to murder and high treason (Antiph. *de caed. Herod.* § 10). Demosthenes calls Androtion and his colleagues *ἱερόσυλοι* (*c. Timocr.* p. 738, § 120 ff.); yet they had not committed sacrilege: their offence was, not to have paid the tithe of Athena and the fiftieths of the other gods (*i.e.* their share of the sum realised by the sale of the cargo of the Persian ship captured by Androtion, etc.); hence when the time for payment had lapsed, the regulations with regard to debtors came into force.

Meier concluded from Cicero (*de Divin.* i. 25, 54) that the Areiopagus tried cases of *ἱεροσυλία*: yet from the life of Sophocles, where Hieronymus is quoted as authority, we learn that the case in question was laid before the popular assembly (*ἐμήνυσε—τῷ δήμῳ*). It is evident from Xen. *Hell.* i. 7, 22, and Lys. *pro Call.*, that sacrilege was tried before a heliastic court; as Jebb says (*Att. Or.* i. p. 287), "In the view of sacrilege taken by Attic law its aspect as a robbery seems to have been more prominent than its aspect as an impiety." As regards the particular sacrilege with which Callias was charged, he conjectures from the allusion *τῷ δημοσίῳ βοηθοῦντες* (§ 4), "that it was connected with the sacred treasury on the Acropolis. Kallias may have had some employment under the stewards of the sacred fund which gave him access to the inner chamber of the Parthenon, and may have been accused of profiting by that opportunity to commit a theft." Slaves were allowed upon that occasion to appear as informers against their master—a resident alien—and anticipated their emancipation in the event of his conviction. The argument to [Dem.] *c. Aristog.* i. mentions an *ἀπαγωγὴ* of a sacrilegious person to the *πρυτάνεις*: but Lipsius doubts the correctness of this statement. (*Att. Process*, ed. Lipsius, pp. 139, 376, 458.) [J. S. M.] [H. H.]

HILA'RIA (*ἱλάρια*) seems originally to have been a name which was given to any day or season of rejoicing. The hilaria were therefore, according to Maximus Monachus (Schol. *ad* Dionys. Areopag. *Epist.* 8), either private or public. Among the former he reckons the day on which a person married, and on which a son was born; among the latter, those days of public rejoicings appointed by a new emperor. Such days were devoted to general rejoicings and public sacrifices, and no one was allowed to show any symptoms of grief or mourning (Marquardt, *Staatsverw.* iii. 358).

But the Romans also celebrated Hilaria, as *feriae stativae*, on the 25th of March, in honour of Cybele, the mother of the gods (Macrob. *Sat.* i. 21, § 7); and it is probably to distinguish these Hilaria from those mentioned above, that Lampridius (*Al. Sev.* 37) calls them *Hilaria Matris Deûm.* The day of its celebration was the first after the vernal equinox, or the first day of the year which was longer than the night. The winter with its gloom had passed away, and the first day of a better season was spent in rejoicings. (Vopisc. *Aurelian.* 1.) No allusion to this festival occurs during the time of the republic; the passages of Ovid (*Fast.* iv. 337 ff.) and Valerius Maximus (ii. 4, § 3) refer to the MEGALESIA in the month of April; nor are the Hilaria mentioned in the extant calendars. Hence Marquardt regards them as an invention of the later Empire. The *lavatio* or washing of the goddess and her chariot in the river Almo, just outside Rome, is assigned by Ovid (*l. c.*) to the April festival, but by some late writers to the 27th of March (*a. d. VI. Kal.*

April., Amm. Marc. xxiii. 3, § 7; Vib. Sequest. *de Flum.* p. 329); which is a confirmation of Marquardt's view. We learn from Herodian (i. 10, 11) that, among other things, the statue of the goddess was borne in solemn procession, and before this statue were carried the most costly specimens of plate and works of art belonging either to wealthy Romans or to the emperors themselves. All kinds of games and amusements were allowed on this day; masquerades were the most prominent among them, and every one might, in his disguise, imitate whomsoever he liked, and even magistrates. A passage of Julian (*Or.* 5, p. 168 C) appears to place the Hilaria on the 24th of March, the *Dies sanguinis;* after mentioning the sacred tree on the 22nd (*Arbor intrat*), he adds *τῇ τρίτῃ δὲ τέμνεται τὸ ἱερὸν καὶ ἀπόρρητον θέρος τοῦ θεοῦ* Γαλλοῦ. *ἐπὶ τούτοις* Ἱλάριά *φασι καὶ ἑορταί.* The *θέρος* is explained to mean the reception and emasculation of a new Gallus. The *Dies sanguinis* was a fast day, and certainly not identical with the Hilaria; but the words *ἐπὶ τούτοις*, "after this," may easily mean "on the next day."

The Hilaria were in reality only the last day of a festival of Cybele which began as early as the 15th of March, and was continued at intervals. For the ceremonies of the other days of this festival, see MEGALESIA, Vol. II. p. 156 *b*. [L. S.] [W. W.]

HILAROTRAGOE'DIA. [TRAGOEDIA.]

HIMA'TION (*ἱμάτιον*). [PALLIUM.]

HIPPARCHUS. [EXERCITUS, p. 775.]

HIPPARMOSTES. [EXERCITUS, p. 769 *b*.]

HI'PPICON (*ἱππικόν*, sc. *στάδιον*), a Greek measure of distance, equal to four stadia. According to Plutarch, it was mentioned in the laws of Solon (Plut. *Sol.* 23). Hesychius also mentions it under the name of *Ἵππειος δρόμος*. (Comp. HIPPODROMUS; STADIUM.) [P. S.]

HIPPO'BOTAE (*ἱπποβόται*), the feeders of horses, was the name of the nobility of Chalcis in Euboea, corresponding to the *ἱππεῖς* in other Greek states. On the conquest of the Chalcidians by the Athenians in B.C. 506, these Hippobotae were deprived of their lands, and 4,000 Athenian cleruchi sent to take possession of them. (Herod. v. 77, vi. 100; Strab. x. p. 447; Plut. *Pericl.* 23; Aelian, *V. H.* vi. 1; Thirlwall, ii. 78; Grote, ch. 31, iii. 145.) [COLONIA, p. 477 *a*.] [W. S.] [W. W.]

HIPPODAMEIA (*ἱπποδάμεια*, sc. *ἔργα*) is an adjective derived from the name of the architect Hippodamus of Miletus, who is said to have been the first of the Greeks who built whole cities on a regular architectural plan; and hence the word is applied to such cities, and to the public places and buildings in them. Peiraeus, for example, was designed by Hippodamus, and its market-place was called Ἱπποδάμειος ἀγορά (Xen. *Hell.* ii. 4, § 11), Ἱπποδαμεία ἀγ. (Andoc. *de Myst.* § 45, Harpocrat. *s. v.*) or simply ἡ Ἱπποδαμεία ([Dem.] *c. Timoth.* p. 1190, § 22). Hippodamus flourished during the second half of the fifth century B.C. (See *Dict. of Biogr.*, art. *Hippodamus; Dict. of Geogr.*, art. *Athenae*, pp. 306 *b*, 308 *a*; Müller, *Archäol. d. Kunst*, § 111.) [P. S.] [W. W.]

HIPPO'DROMUS (*ἱππόδρομος*) was the name by which the Greeks designated the place appropriated to the horse-races, both of chariots and of single horses, which formed a part of their games. The word was also applied to the races themselves.

The mode of fighting from chariots, as described by Homer, involves the necessity of much previous practice; and the funeral games in honour of Patroclus present us with an example of the chariot-race, occupying the first and most important place in those games (*Il.* xxiii. 262–650). In this vivid description the nature of the contest and the arrangements for it are very clearly indicated. There is no artificially constructed hippodrome; but an existing land-mark or monument (*σῆμα*, 331) is chosen as the goal (*τέρμα*), round which the chariots had to pass, leaving it on the left hand (336), and so returning to the Greek ships on the sea-shore, from which they had started (365). The course thus marked out was so long that the goal, which was the stump of a tree, could only be clearly seen by its having two white stones leaning against it (327–329), and that, as the chariots return, the spectators are uncertain which is first (450 ff.: the passage furnishes a precedent for betting at a horse-race, 485). The ground is a level plain (330), but with its natural inequalities, which are sufficient to make the light chariots leap from the ground (369, 370), and to threaten an overthrow where the earth was broken by a winter torrent, or a collision in the narrow hollow way thus formed (419–447). The chariots were five in number, each with two horses and a single driver (288 ff.), who stood upright in his chariot (370). The obscure passage 638–642 cannot be relied upon to prove that there ever were two drivers: see Leaf's note.

In a race of this nature, success would obviously depend quite as much on the courage and skill of the driver as on the speed of the horses; a fact which Homer represents Nestor as impressing upon his son Antilochus in a speech which fully explains the chief stratagems and dangers of the contest, and is nearly as applicable to the chariot-races of later times as to the one described by Homer (305–348). At starting, it was necessary so to direct the horses as, on the one hand, to avoid the loss of time by driving wide of the straightest course, and on the other not to incur the risk of a collision in the crowd of chariots, nor to make so straight for the goal as to leave insufficient room to turn it. Here was the critical point of the race, to turn the goal as sharply as possible, with the nave of the near wheel almost grazing it, and to do this safely: very often the driver was here thrown out, and the chariot broken in pieces (334–343, 465–468). There was another danger at this point, which deserves particular notice as connected with the arrangements of the hippodrome of later times. As the horse is easily scared, it can readily be understood that the noise and crush of many chariots turning the goal together, with the additional confusion created by the overthrow of some of them, would so frighten some of the horses as to make them unmanageable; and this is expressly referred to by Homer (468):

> *αἱ δ' ἐξηρώησαν, ἐπεὶ μένος ἔλλαβε θυμόν.*

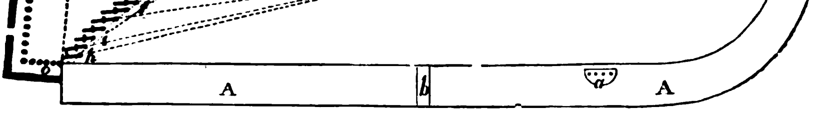
Among the other disasters to which the competitors were liable were—the loss of the whip

(384); the reins escaping from the hands (465); the breaking of the pole (392); the light chariot being overturned, or the driver thrown out of it, through the roughness of the ground, or by neglecting to balance the body properly in turning the goal (368, 369, 417–425, 335); and the being compelled to give way to a bolder driver, for fear of a collision (426–437); but it was considered foul play to take such an advantage (439–441, 566–611). These and similar disasters were no doubt frequent, and, in accordance with the religious character of the games, they were ascribed to the intervention of the deities, whom the sufferer had neglected to propitiate (383–393, 546, 547). The prizes, as in the other Homeric games, were of substantial value, and one for each competitor (262–270). The charioteer accused of foul play was required to lay his hand upon his horses, and to swear by Poseidon, the patron deity of the race, that he was guiltless (581–585). This description is illustrated by the following engraving from an antique Greek vase; in which we see the goal as a mere stone post, with a fillet wound round it: the form of the chariots is well shown, and the attitude of the drivers; each has four horses, as in the earliest Olympic chariot-race; and the vividness of the representation is increased by the introduction of the incident of a horse having got loose from the first chariot, the driver of which strives to retain his place with the others. (Panofka, *Bilder Antiken Lebens*, pl. iii. No. 10.) For other representations of the race and its disasters, see CIRCUS, p. 433 ff.; CURRUS, p. 580.

Chariot-race. (From a vase-painting.)

In no other writer, not even in Pindar, have we a description, at once so vivid and so minute, of the Greek chariot-race as this of Homer's; and it may be safely assumed that, with a few points of difference, it will give us an equally good idea of a chariot-race at Olympia or any other of the great games of later times. The chief points of difference were the greater compactness of the course, in order that a large body of spectators might view the race with convenience, and the greater number of chariots. The first of these conditions involved the necessity of making the race consist of several double lengths of the course, instead of only one; the second required some arrangement by which the chariots might start without confusion and on equal terms. It is now to be seen how these conditions were satisfied in the hippodrome at Olympia; of which the only description we possess is in two passages of Pausanias (v. 15, § 4; vi. 20, § 7 ff.). The reconstruction of this hippodrome by Hirt (*Lehre d. Gebäude*, pp. 147–150), following Alexandre de la Borde, has not been superseded by recent discoveries, and is retained by Baumeister (s. v. *Hippodrom*), and nearly every writer on the subject.

The following is the ground-plan which Hirt (pl. xx. fig. 8) has drawn out from the description of Pausanias. A, B, the sides; C, the rounded end of the hippodrome, with raised seats for the spectators (the dotted line D *d* is the axis of the figure); *a*, place of honour for the magistrates and musicians; *b*, side door, perhaps for the exit of disabled chariots and horses; *c*, seats for the Hellanodicae, the judges of the games; *d*, principal entrance, corresponding to the *porta triumphalis* in a Roman circus; D, the starting-place; *e*, its apex; *f*, *g*, its curved sides; *h*, *i*, &c., up to *l*, stations of the chariots, their directions converging towards the point E; F, G, the goals, or turning-posts; H, the spina; *p*, *p*, small intervals between the spina and the goals; *q*, the winning line; *m*, dolphin used as a signal; *n*, altar, with eagle for signal; *o*, *o*, *o*, portico of Agnaptus.



Ground-plan of Hippodrome at Olympia. (Hirt.)

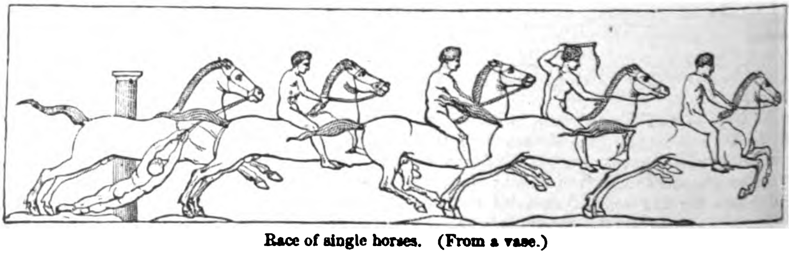
The general form of the hippodrome was an oblong, with a semicircular end, C, and with the right side, A, somewhat longer than the left, B, for a reason to be stated presently. The right side, A, was formed by an artificial mound; the left, B, by the natural slope of a hill. The base of the fourth side, D, was formed by the portico of Agnaptus, so called from its builder. At this end of the hippodrome was the starting-place (ἄφεσις), in the form of the prow of a ship, with its apex, *e*, towards the area, and each of its sides more than 400 feet long. Along both of these sides were stalls (*οἰκήματα*) for the chariots about to start, like the *carceres* in the Roman circus; and it was in the arrangement of these stalls that the peculiarity of the Greek starting-place consisted. According to the view which we follow, the stalls were so arranged as that the pole of each chariot, while standing in its stall, was directed to a *normal point* E, at which, as nearly as possible, each chariot ought to fall into its proper course. As this point, E, was necessarily on the right side of the area (in order to turn the goal on the left hand), and as the corresponding stalls on each side were required to be equidistant from the apex, *e* (as will presently be seen), and of course also from the point E, it follows that the base of the *aphesis* must have been perpendicular to the line E *e*, and therefore oblique to the axis D *d;* and this is the reason why the side A was longer than the side B. The curvature of the sides of the aphesis, *f*, *g*, is a conjectural arrangement, assumed as that which was probably adopted to give more space to each chariot at starting. The front of each stall had a cord drawn across it, and the necessary arrangements were made for letting these cords fall at the right moments. On the signal being given for the race to begin, the cords in front of the two extreme stalls, *h h*, were let fall simultaneously, and the two chariots started; then those of the next pair; and so on, each pair of chariots being liberated at the precise moment when those which had already started came abreast of their position; and when all the chariots formed an even line abreast of the apex of the *aphesis*, *e*, it was a fair start. This arrangement of the *aphesis* was the invention of the statuary Cleoetas, and was improved by Aristeides (perhaps the famous painter; see Hirt, *l. c.*). Cleoetas celebrated his invention in an epigram, which he inscribed on the base of a statue made by him at Athens:

Ὅς τὴν ἱππάφεσιν ἐν Ὀλυμπίᾳ εὕρατο πρῶτος
Τεῦξε μὲ Κλειοίτας, υἱὸς Ἀριστοκλέους.

Hirt's explanation of the *aphesis*, with the rest of his reconstruction of the hippodrome at Olympia, has been accepted by most scholars; among others by Guhl and Koner in the earlier editions of their *Leben der Griechen und Römer*. In the last edition Koner has followed in some particulars the differing views of Count Lehndorff in his *Hippodromos*, and has given a slightly altered ground-plan (Guhl and Koner,^{5} pp. 148–150, with fig. 164). The chief difference is that on this view the chariots are conceived as starting on one side only (the right) of the *aphesis*. On this Baumeister remarks (p. 694 a), that "though containing much that is attractive and in part well founded, it is still open to much doubt."

Precisely the same arrangements were made for the start in the race of single horses (*κέλητες*); and in both cases, as in the race described by Homer, the stalls were assigned to the competitors by lot. How many chariots usually started, cannot be determined; but that the number was large is proved by the well-known story, that Alcibiades alone sent to one race seven chariots. Sophocles (*Elect.* 701–708) mentions ten chariots as running at once in the Pythian games; and the number at Olympia was no doubt greater than at any of the other games. This is probably the reason why the arrangements of a starting-place were so much more complicated in the Greek hippodromus than they were in the Roman circus [CIRCUS]. About the centre of the triangular area of the *aphesis* there was an altar, *n*, of rough brick, which was plastered afresh before each festival, surmounted by a bronze eagle with outstretched wings; and above the apex of the aphesis was a bronze dolphin, *m*. As the signal for the race to begin, the eagle was made to soar aloft, so as to be seen by all the spectators, and the dolphin sank to the ground.

The chariots, thus started, had to pass several times round two goals (*νύσσαι*), the distinction between which is one of the difficult points in the description of Pausanias. On the whole it seems most probable that the one which he describes as having a bronze statue of Hippodameia, holding out the victor's fillet, as if about to crown Pelops with it, was the one nearer to the aphesis, and abreast of the winning line, F; and that the other, G, round which the chariots made their first turn, was that which Pausanias calls "Taraxippus, the terror of the horses." This was a round altar, dedicated to Taraxippus, who was supposed to strike a supernatural terror into the horses as they passed the spot, and whom, therefore, the charioteers sought to propitiate, before the race began, by offering sacrifices and making vows at this altar. Pausanias gives various accounts as to who this Taraxippus was: some modern scholars take the word for an appellation of Poseidon Hippius. He was similarly honoured in the Isthmian hippodrome. At Nemea there was no such



Race of single horses. (From a vase.)

hero, but above the turning point of the course there was a bright red rock, which was supposed to frighten the horses. He adds the remark that the Olympian Taraxippus had by far the most powerful effect upon the horses; and considering that the number of chariots which joined in the race there was greater than at any of the other games, that remark affords a pretty clear proof that the explanation of the supposed supernatural terror is that which has been given above in describing the Homeric race. There are several vase-paintings on which chariots or single horses are exhibited turning the goal, which is represented as a Doric or Ionic column. (See Panofka, *Bilder Antiken Lebens*, pl. iii.) One of these is shown in the foregoing engraving, which exhibits a vivid picture of a race of single horses: the last rider has been unlucky in turning the goal.

There is no authority in the account of Pausanias for the connecting wall, H, between the goals, nor does he state that the winning line, *q*, was marked out as a white line; but these details are inserted from the analogy of the Roman circus. So also is the oblique position of the line of the goals, as compared with the axis of the figure: of course the greatest space was required at E, where the chariots were all nearly abreast of each other.

Respecting the dimensions of the Olympic Hippodrome, we have no precise information; but from the length of the measure called HIPPICON, and on other grounds, it seems probable that the distance from the starting-place to the goal, or perhaps rather from one goal to the other, was two stadia, so that one double course was four stadia. How many such double courses made up the whole race, we are not informed. The width must have been at least as great as the length of each side of the *aphesis*, namely, more than 400 feet. There does not appear to have been much architectural display in the structure, and not many statues. The internal area of the aphesis, D, contained several altars.

The chief points of difference between the Greek hippodrome and the Roman circus are the smaller width of the latter, as only four chariots ran at once, and the different arrangement of the *carceres*. The periods at which the Olympic horse-races were instituted are mentioned under OLYMPIA.

A few other hippodromes in Greece, Syria, and Egypt are mentioned by Pausanias and other writers; but they deserve no special mention. (Cf. Krause, *Gymnastik und Agonistik*, i. 151 ff.; Guhl and Koner, *ubi supra;* Baumeister, *s. v.*)

Among the Romans the term was also applied to an enclosed space for riding and driving in, attached to a garden or villa, and planted with trees (Plin. *Ep.* v. 6, §§ 19, 32; Mart. xii. 50, 5 with Paley's note; "clusus essedo cursus," Id. xii. 57, 23). [P. S.] [W. W.]

HIPPOPE'RAE (*ἱπποπῆραι*), saddle-bags. This appendage to the saddle [EPHIPPIUM] was made of leather or untanned hide (*sacculi scortei*, Festus, s. v. *Bulgae*), and seems not to have changed its form and appearance in ancient or modern times. Its proper Latin name was *bisaccium* (Petron. *Sat.* 31, 9), which gave origin to *bisaccia* in Italian and *besace*, *bissac* in French. By the Gauls, saddle-bags were called *bulgae* [BULGA]. The Greek term *hippoperae* is quoted only from a single passage of Seneca (*Ep.* 87, § 9). [J. Y.] [W. W.]

HI'STION (*ἱστίον*). [NAVIS.]

HI'STRIO (*ὑποκριτής*), an actor. 1. GREEK. The steps by which *ὑποκρίνομαι*, *ὑποκριτής* acquired their dramatic meaning have been variously traced. The primitive sense of "answering" (*i.e.* of the quick repartee of dialogue between the actor and the chorus, *ὑποκρίνεσθαι* implying a more ready and instantaneous reply than *ἀποκρίνεσθαι*) seems quite sufficient for our purpose; as in the gloss of Hesychius, *ὑποκριτὴς ὁ ἀποκρινόμενος πρὸς τὸν χορόν*: and in Pollux iv. 123, *ἐλεὸς δ' ἦν τράπεζα ἀρχαία, ἐφ' ἣν πρὸ Θέσπιδος εἷς τις ἀναβὰς τοῖς χορευταῖς ἀπεκρίνατο.* In the passages quoted by Sommerbrodt (*Rhein. Mus.* xxii. 510) in favour of the meaning "interpret" (Hom. *Il.* vii. 406, xii. 228; *Od.* xv. 169;—Thucyd. vii. 44, § 5), the simple notion of answering suits equally well. (Cf. L. and S., *s. v. ὑποκρίνομαι*: Alb. Müller, p. 170, n. 2.)

It is shown in the articles CHORUS and DIONYSIA that the Greek drama originated in the chorus which at the festivals of Dionysus danced around his altar, and that at first one person detached himself from the chorus and, with mimetic gestures, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person, they were all represented in succession by the same choreutes. Thespis, who was regarded in antiquity as the inventor of tragedy ([Plat.] *Min.* 321 A; Hor. *A. P.* 275), was the first to employ an actor distinct from the chorus; the latter still took the most important part in the performance, but lost something of its original character by becoming an interlocutor in the dialogue. Aeschylus therefore added a second actor, so that the action and the dialogue became independent of the chorus, and the dramatist at the same time had an opportunity of showing two persons in contrast with each other on the stage (Aristot. *Poet.* 4, § 16). Sophocles took the final step by adding a third actor (Aristot. *l. c.*; Diog. Laert. iii. 56; Suid. *s. v.* *Σοφοκλῆς*): and towards the close of his career, Aeschylus found it necessary to follow the example of his younger rival, and to introduce a third actor, as is the case in the *Agamemnon*, *Choëphoroe*, and *Eumenides* (Pollux, iv. 110). This number of three actors was also adopted by Euripides, and remained the limit scarcely ever exceeded in any Greek drama, at least in tragedy. In comedy a somewhat greater license was taken; and though Cratinus kept to the regular three performers, Aristophanes sometimes, and notably in the *Thesmophoriazusae*, employed a larger number.

Some real or apparent exceptions to this rule in tragedy have been keenly discussed, and demand a short notice. For instance, the *Prometheus* is a piece for two actors, yet in the opening scene there are four persons upon the stage—Prometheus, Hephaestus, and the allegorical *Κράτος* and *Βία*. But *Βία* does not speak, and *κωφὰ πρόσωπα* were unquestionably not reckoned: while Prometheus himself, there can be no doubt, was represented by a gigantic lay figure, "so contrived that an actor standing behind the pictorial mountain could speak through the mask. No protagonist could have been expected to submit to the restraint of such an attitude throughout the whole of the play, to say nothing of the catastrophe at the end, when the rocks fall asunder, and Prometheus is dashed down into Tartarus" (Donaldson, *Theatre of the Greeks*, ed. 7, p. 286). This was first pointed out by Welcker (*Trilogie*, p. 30), and is accepted by almost every scholar from G. Hermann to A. Müller (see his references, p. 175, n. 2). In the *Choëphoroe* Aeschylus had three actors, but in v. 900 ff. a fourth seems required, where Pylades, who has been present most of the time as a *κωφὸν πρόσωπον*, begins to speak. The notion of the Scholiast that the *οἰκέτης*, who has only just quitted the stage, reappears as Pylades, is rejected by A. Müller on the ground that the actor has not had time to change his dress. It may be remarked, however, that the Greek tragic actor, in order to assume another character, had only to change an upper garment, a mask, and perhaps a wig: there were none of the minute toilet accessories of the modern "make-up," and the operation may have been got through with much greater rapidity. Once more, in the *Oedipus at Colonos*, a fourth actor must be assumed unless the part of Theseus is divided among all three performers. The former alternative is supported by C. O. Müller (*Diss. on Eumen.* p. 127) and A. Müller (p. 175, n. 4); the latter by K. F. Hermann (*de Distributione Personarum inter Histriones in Tragoediis Graecis*, Marburg, 1840, p. 42) and Donaldson, who observes that "the mask and the uniformity of tragic declamation would make it as easy for two actors to represent one part, as for one actor to sustain several characters" (p. 268 n.). The terms *παρασκήνιον* and *παραχορήγημα* here come in for explanation. The usual meaning of *παραχορήγημα* is of course a subordinate chorus or *ἕτερος χορός* (see L. and S. *s. v.*); but the statement that the word was also applied to the part taken by a fourth actor rests only on the authority of Pollux (iv. 109, 110), where there is almost certainly some confusion in the text. It is more likely that a supernumerary who spoke a few words only, such as the children in the *Medea*, or the above cases of a fourth actor being required, was called *παρασκήνιον*. A. Müller (p. 178) gives full details, but pronounces the question obscure. This sense of *παρασκήνιον* is not noticed in L. and S.

The three regular actors were distinguished by the technical names of *πρωταγωνιστής*, *δευτεραγωνιστής*, and *τριταγωνιστής* (Suidas, *s. v. τριταγωνιστής*: Dem. *de Cor.* p. 315, §§ 265, 267;—*de F. L.* p. 344, § 10; 403, § 200), indicating the more or less prominent part each had to play in the drama. Certain conventional means were also devised, by which the spectators, as soon as an actor appeared on the stage, were enabled to judge which part he was going to perform; thus the protagonist regularly came from a door in the centre, the deuteragonist from one on the right, and the tritagonist from a door on the left-hand side (Pollux, iv. 124). The protagonist naturally undertook the character in which the interest of the piece was intended to centre; not always the title-role (as O. Müller thought), unless it were that of the real hero or heroine (A. Müller, p. 182). It is true that, in six out of the seven extant plays of Sophocles, the title-role is also the leading part (in the remaining one, the *Trachiniae*, the part of Deianira is assigned by common consent to the protagonist); but in the *Cresphontes* and *Oenomaus* of Euripides the title-role was only a third-class part, and as such was taken by Aeschines (Dem. *de Cor.* p. 288, § 180). The conjecture is also unfounded that the protagonist was always the principal messenger (*ἄγγελος*), or again that the narrative of a death (*e.g.* of Hippolytus or Pentheus) was necessarily assigned to the actor of the dead man's part (K. F. Hermann, *op. cit.* p. 33; Donaldson, p. 269; on the other side, Lachmann and A. Müller, *l. c.*). It is an ingenious but rather fanciful notion of O. Müller's (*Griech. Lit.* ii. 57) that the deuteragonist regularly took sympathetic parts as a friend of the hero or heroine, whereas the tritagonist was generally "an instigator who was the cause of the sufferings of the protagonist, while he himself was the least capable of depth of feeling or sympathy": in popular language, that he was the "villain of the piece." This is supported by the recorded fact that Creon in the *Antigone* was a tritagonist's part (Dem. *l. c.*), and by an arrangement of the characters in the Orestean trilogy of Aeschylus which gives the part of Clytaemnestra throughout to the tritagonist. It is a fact not without significance, that the thirty-two extant tragedies contain no "hero" who is also a "villain," like *Macbeth* or *Richard the Third*: but the titles of lost plays show an *Ixion* of Aeschylus, an *Acrisius* and an *Atreus* of Sophocles; and it would seem that the "villain-hero," though rare, was not altogether unknown. It is safer to say with Donaldson (with whom Alb. Müller is substantially in agreement) that the second and third performers "seem to have divided the other characters between them, less according to any fixed rule than in obedience to the directions of the poet, who was guided by the exigencies of his play." As on the modern stage, parts were written for particular actors (*Vit. Soph.* in Dindorf's *Poetae Scenici*, p. ii. 35); a proof that the author, notwithstanding the many conventional restrictions imposed by the sacred character of the Attic drama, had some influence over the choice of his actors.

The number of "supers" was unlimited: they were usually silent, but sometimes spoke a few words, especially when a fourth interlocutor was required (see above): in this case the speaker was occasionally placed behind the scenes, or sheltered from view by the chorus, that the limit of three actors might not be obtrusively violated. Persons of rank and dignity always came upon the stage suitably attended, just as no Athenian lady or gentleman in real life went out without at least one slave: the body-guards of royal personages were a conspicuous feature, so that *δορυφόρος* or *δορυφόρημα* became an equivalent to *κωφὸν πρόσωπον* (see L. and S. *s. vv.*); and in one or two instances (the opening scene of the *Oedipus Tyrannus* and probably that of the *Acharnians*) we have a regular "stage-mob" of citizens like those in *Julius Caesar* and *Wilhelm Tell*.

The acting of female characters by men was greatly assisted by the use of masks; there was no need to assign such parts to beardless youths as in England in the Shakespearian times. In early days the dramatic poets themselves acted in their own plays, and doubtless as protagonists. Of Aeschylus it is further recorded that he was his own ballet-master, and trained his choruses to dance without the aid of a professional *ὀρχηστοδιδάσκαλος* (Ath. i. 21 e). Sophocles appeared only twice on the stage; as Thamyris in the play of that name, accompanying a song on the *cithara*, and as Nausicaa playing at ball, in the *Πλύντριαι*: he then gave up acting on account of the weakness of his voice. After his time it became exceptional for the poet to be also an actor. Aeschylus, who seems to have been usually protagonist in his own plays, employed Cleander as his deuteragonist, and subsequently (after the introduction of a third actor) Mynniscus as tritagonist (*Vit. Aesch.* p. 3, l. 75 Dind.). Cleidemides and Tlepolemus were similarly associated with Sophocles, Cephisophon with Euripides. Among a long list of famous actors during the great period of the Athenian drama, the most conspicuous names are those of Polus and Aristodemus, the latter a political character as well, from having twice been sent on embassies to Philip (Dem. *de F. L.* p. 343, § 12, and often in the Embassy Speeches of both orators). Both of these received enormous salaries: sometimes as much as a talent for two or even one day's performance ([Plut.] *Vitt. X. Oratt.* p. 848 B; Gell. xi. 9, § 2; Boeckh, *P. E.* p. 120=*Sthh.*^{3} i. 153). There was also a younger Mynniscus, contemporary with the comic poets Plato and Menecrates: it must be this Mynniscus, and not the one who played for Aeschylus, who is mentioned in an inscription as protagonist in a comedy (*Μενεκράτης ἐδίδασκεν· ὑποκριτὴς Μυννίσκος*, *C. I. A.* ii. 971 b). Another inscription records the fact of Antiphanes appearing in one of his own plays (*ib.* 972; Thessalus and Athenodorus, contemporaries of Alexander, *ib.* 973; cf. Plut. *Alex.* 10, 29). Each of these inscriptions notices only a single actor, of course the protagonist.

No social stigma attached to the actor's calling (Corn. Nep. *Praef.* 5); distinguished Athenian citizens appeared on the stage as amateurs, and the role of a *τριταγωνιστής*, notwithstanding the scurrilous and exaggerated invectives of Demosthenes, did not detract from Aeschines' position as a soldier and orator. Bad actors, however, to whatever station in life they belonged, were not, on that account, spared; displeasure was shown by whistling or hissing (*συρίττειν*, Dem. *de Cor.* p. 315, § 265; *de F. L.* p. 449, § 337: cf. *c. Mid.* p. 586, § 226); another word is *θορυβεῖν*, probably denoting uproar against the author rather than the actor (Becker-Göll, *Charikles*, iii. 199). For the throwing of fruit or nuts in theatres, and sometimes even of stones, cf. [Andoc.] c. *Alcib.* § 20; Dem. *de Cor.* p. 314, § 262; Athen. vi. p. 245 d, e, ix. p. 406 f. On the other hand, the practice of encoring (*αὖθις*) is inferred from Xen. *Symp.* 9, § 4.

At a later time, when Greece had lost her independence, we find regular troops of actors, who were either stationary in particular towns of Greece, or wandered from place to place, and engaged themselves wherever they found it most profitable. They formed regular companies or guilds (*σύνοδοι τῶν περὶ τὸν Διόνυσον τεχνιτῶν*), with their own internal organisation, with their common officers, property, and sacra. We possess a number of inscriptions belonging to such companies, and can trace them at Athens (*C. I. A.* ii. 551, 552), Thebes (*C. I. G.* 1600), Argos (*C. I. G.* 3068 C, and more in A. Müller, p. 393, n. 7), Teos (*C. I. G.* 3067), Cyprus (*C. I. G.* 2619, 2620), Rhegium (*C. I. G.* 5762). But these actors are generally spoken of in very contemptuous terms; they were perhaps in some cases slaves or freedmen, and their pay was sometimes as low as seven drachmas for a performance (Lucian, *Icaromen.* 29; cf. *Nigrin.* 8, *Necyom.* 16; Theophrast. *Char.* 6). The language of Lucian must, however, be received with caution: he has evidently confused the old Greek estimate of the profession with the much lower Roman one of his own time; and in one passage (*Apol.* 5) writes as though Polus and Aristodemus, free Greeks of the highest consideration, had been liable to the *jus virgarum in histriones*.

(On Greek actors in general, cf. Müller, *Gr. Lit.* ch. 22; Donaldson, *Theatre of the Greeks*, ed. 7, book iii. cc. 1, 2; Becker-Göll, *Charikles*, iii. 195–200; and especially Alb. Müller, *Bühnenalterth.* in Hermann-Blümner, § 14, pp. 170–188: on the "guilds of the artists of Dionysus," § 26, pp. 392–414).

2. Roman. The word *histriones*, by which the Roman actors were called, is said to have been formed from the Etruscan *hister*, which signified a *ludio* or dancer (Liv. vii. 2; Val. Max. ii. 4, § 4; cf. Plut. *Quaest. Rom.* 107). The origin of scenic representations at Rome has been related under Comoedia, p. 521 *b*. The name *histrio* thenceforward lost the signification of a dancer, and was now applied to the actors in the drama. Only the Atellanae [Comoedia, p. 522 *b*] and Exodia were played by freeborn Romans, while the regular drama was left to the histriones, who formed a distinct class of persons.

In the times of Plautus and Terence we find the actors gathered into a company (*grex, caterva*), under the control of a manager (*dominus gregis*, also called *actor* in a technical sense, though *actor* is of course also a synonym of *histrio*). A manager named T. Publilius Pellio (or Pollio) is mentioned by Plautus (*Bacch.* ii. 2, 35–37), and was apparently not in favour with the dramatist: during the short career of Terence his manager was the well-known L. Ambivius Turpio. It was through the manager that a magistrate who was giving games, of which stage-plays formed a part, engaged the services of a company. Brutus, who was praetor in the year of Caesar's death, tried to regain the popularity he had lost through the murder by giving Ludi Apollinares of unusual splendour: and he went all the way to Naples to negotiate with actors, who seem to have been Greeks, besides getting his friends to use their interest in his behalf (Plut. *Brut.* 21). So in imperial times a public singer is said *vocem vendere praetoribus* (Juv. vi. 379). The pay (*merces*: for the distinction between *merces* and *lucar* see Lucar) was on as varied a scale as in modern times: in the first century of the empire an ordinary actor seems to have received five denarii and his food (Senec. *Ep.* 80, § 7; cf. the seven drachmas of Lucian, *Icaromen.* 29, already cited); while at an earlier period "stars" like Roscius and Aesopus, the contemporaries and friends of Cicero, made ample fortunes. Cicero tells us that Roscius could have honourably made 6,000,000 sesterces (*HS. sexagies*, about £48,000) in ten years had he chosen to do so (*pro Rosc. Com.* 8, § 23); and Pliny (*H. N.* vii. § 128) gives half a million (£4000) as his annual earnings. [We have no doubt that Pliny's *HS. D annua* is to be read *quingena sestertia;* the adverbial form *quingenties* (D̄) introduces an absurdity, £400,000 a year, too great even for him.] The tradition preserved by Macrobius (*Sat.* iii. 14, §§ 11–13) is that Roscius alone received 1000 denarii for every day's performance; while Aesopus left a fortune of 20,000,000 sesterces (*HS. ducenties*, or £160,000), acquired solely by his profession; this was afterwards squandered by his son (Hor. *Sat.* ii. 3, 239).

It is clear from the words of Livy (vii. 2) that the histriones were not citizens; that they were not contained in the tribes, nor allowed to be enlisted as soldiers in the Roman legions; and that, if any citizen entered the profession of histrio, he, on this account, was excluded from his tribe. The histriones were therefore usually either freedmen, foreigners, or slaves; the latter specially educated for the stage to their master's profit. Even if *ingenui*, they were legally *infames* ("infamia notantur—qui artis ludicrae pronuntiandive causa in scaenam prodierit," Edict. Praet. *ap.* Dig. 3, 2, 1; cf. Cic. *de Rep.* iv. *fr.* 10 *ap.* Aug. *de Civ. Dei*, ii. 13), and socially in low estimation (Cic. *pro Arch.* 5, § 10; Corn. Nep. *Praef.* 4; Suet. *Tib.* 35). Aesopus seems to have been a freedman of the Claudian gens; but Roscius, the *amor et deliciae* of Cicero, was certainly ingenuus, and probably of good birth (Cic. *de Div.* i. 36, § 79); Sulla gave him the gold ring of equestrian rank. We see that, towards the close of the republic, a few men of position and Greek culture raised themselves above the prejudices of their countrymen, and valued the person no less than the genius of great artists. (Macrob. *l. c.*) When Caesar forced Laberius, an eques advanced in years, to appear on the stage in his own mimes, he was thought to have exceeded the powers even of a dictator, and his victim took a dignified revenge (Macrob. *Sat.* ii. 7, § 3 ff.; the scene is described at length in *Dict. Biogr.* s. v. *Laberius*). Under the emperors men of equestrian rank often appeared, with or without compulsion (Suet. *Aug.* 43; Dio Cass. liii. 31; Suet. *Tib.* 35, *Calig.* 30, *Nero.* 4, 11; Dio Cass. lx. 7, lxi. 17; Tac. *Ann.* xiv. 14, *Hist.* ii. 60); and this circumstance, together with the increasing influence of Greek manners, tended to improve the social position of the actors. At the very beginning of the reign of Tiberius it had become necessary to check the extravagant compliments paid them; "ne domos pantomimorum senator introiret; ne egredientes in publicum equites Romani cingerent" (Tac. *Ann.* i. 77; cf. Senec. *Ep.* 47, § 17; Plin. *H. N.* xxix. § 9; Juv. vii. 88). Their legal status remained the same as regards infamia and exclusion from office; even provincial honours are denied them in the Lex Julia Municipalis of B.C. 45, where they are coupled with gladiators ("queive lanistaturam artemve ludicram fecit fecerit," *C. I. L.* p. 123); though inscriptions show that the rule was not always enforced (Gruter, *Inscr.* 1089, 6 = Orelli, 2625). But the old law was now somewhat modified, by which the Roman magistrates were empowered to coerce the histriones at any time and in any place, and the praetor had the right to scourge them (*jus virgarum in histriones*). Augustus entirely did away with the jus virgarum, and limited the interference of the magistrates to the time when, and the place where (*ludi et scaena*), the actors performed (Tac. *Ann.* i. 77; Suet. *Aug.* 45). But he nevertheless inflicted, of his own authority, very severe punishments upon those actors who, either in their private life or in their conduct on the stage, committed any impropriety (Suet. *l. c.*). After these regulations the only legal punishments that could be inflicted upon actors for improper conduct seem to have been imprisonment and exile (Tac. *Ann.* iv. 14, xiii. 28). The jus virgarum is indeed said to have been restored to the praetor by a law of Augustus himself (Paul. *Sent.* v. tit. 26), not expressly, but by the interpretation put upon this law by the jurists. But this interpretation cannot have become valid till after the reign of Tiberius, of whom it is clearly stated that he refused to restore the jus virgarum, because it had been abolished by his predecessor (Tac. *Ann.* i. 77).

The competition of the actors for public favour was carried to extraordinary lengths, and stirred up factions like those of the Circus. If not as early as the time of Plautus himself, yet at the time when the existing Plautine prologues were composed (probably about B.C. 150–100), we find partisanship (*ambitio*) in full operation (Plaut. *Poen.* prol. 37 ff.; cf. *Amphitr.* prol. 65 ff.). At first palms and inexpensive crowns of gold or silver tinsel were the reward of popularity (Varro, *L. L.* v. 178; Phaedr. *Fab.* v. 7, 34; Plin. *H. N.* xxi. § 6); afterwards, under the empire, presents of money and rich garments (Juv. vii. 243 with Schol.; Capitolin. *M. Ant. Phil.* 11; Lamprid. *Al. Sev.* 33). There was a regularly organised and paid *claque* (the *theatrales operae* of Tac. *Ann.* i. 16; Orelli *ad loc.*: cf. Mart. iv. 5, 8); and over and above that the backers (*fautores*) resorted to actual violence and even bloodshed. Hence Tiberius on one occasion found himself obliged to expel all histriones from Italy (Tac. *Ann.* iv. 14; Dio Cass. lvii. 21); but they were recalled and patronised by his successor (Dio Cass. lix. cc. 3, 5). The emperors as a rule tolerated, sometimes encouraged, and occasionally checked the excesses of the stage. We read of the emperor's private companies (*histriones aulici*, Spartian. *Hadr.* 19; Capitolin. *Verus*, 8) who performed during dinner time (Suet. *Aug.* 74), and were sometimes allowed also to play in the theatres before the people (*publicabantur*). The practice of giving immoderate sums to actors was restricted by Tiberius (Tac. *Ann.* i. 77; Suet. *Tib.* 34); again by M. Aurelius (Capitolin. *M. Ant. Phil.* 11), and by Alexander Severus (Lamprid. *l. c.*). Aurelius ordained a maximum payment of five aurei to each actor, and that no *editor* should exceed the sum of ten aurei; this must mean that there were to be *editores* in number equal to half the actors, for it cannot be thought that he reduced the actors to two for each performance. The restrictions of the Greek stage as to the number of actors never prevailed upon the Roman. (Cf. Marquardt, *Staatsverw.* iii. 516–521.) [L. S.] [W. W.]

HODOPOEI (**ὁδοποιοί**), public officers at

Athens, who had to take care of the roads (*οἱ ὁδῶν ἐπιμεληταί*, Phot. *Lex.* s. v.). They are alluded to, though not mentioned by name, in the fragment of a comic poet of the time of Pericles, now ascribed to Cratinus (*ap.* Plut. *Praec. Reip. Ger.* c. 15, p. 811 F.). Nothing is known about them except that on one occasion, in the time of Aeschines, their duties were discharged by the managers of the Theoric fund (Aeschin. *c. Ctes.* § 25); this, however, appears to have been a temporary abuse, and afterwards rectified. (Boeckh, *P. E.* p. 203 = *Sthh.*³ i. 257; Schömann, *Antiq.* i. 415 E. T.) [W. S.] [W. W.]

HOLOSE'RICA VESTIS. [Sericum.]

HOLOSPHY'RATON, HOLOSPHYRE'-LATA. [Malleus; Metalla.]

HOMOEI (*ὅμοιοι*), the Equals, were those Spartans who possessed the full rights of citizenship, and are opposed to the *ὑπομείονες* or those whose position was in some degree subordinate (Xen. *Rep. Lac.* 10, § 7; *Hell.* iii. 3, § 5; Aristot. *Pol.* v. 7, § 2 = p. 1306 b, 30; cf. p. 1308 a, 12). This distinction seems to have rested not so much upon law as upon custom: the state of the case is well put by Schömann (*Antiq.* i. 217 E. T.): "As far as legal right was concerned, all Spartiatae, rich and poor, cultivated and uncultivated, formed a body of citizens in the possession of equal rights, a demos of *ὅμοιοι*, which, in contrast with the subject classes of Perioeci and Helots, represented a ruling and privileged nobility. But within this ennobled demos of *ὅμοιοι* again there were two distinct classes,—a minority of rich, influential, and cultured citizens, who to a certain extent claimed a kind of superior nobility, and a majority of poor and uncultivated members, who, though equal in the eye of the law, were in reality in an inferior position," and might be described in contrast to them as *ὑπομείονες* or subordinate. The distinction appears to have grown up in later times, as it is not mentioned by any writer before Xenophon: when Aristotle, in the passage just referred to, speaks of the Partheniae as belonging to the Homoei, he probably commits an anachronism. The requisites for full Spartan citizenship, which did not begin before the age of thirty, were (1) ascertained Spartiate birth, (2) education on the Spartan system and a life in conformity with it, (3) payment of subscriptions to the syssitia. Whoever failed in any one of these particulars was excluded from the Homoei. In the institutions ascribed to Lycurgus, every citizen had a certain portion of land: the impoverishment of many through the loss of their lands seems to have been the chief cause of the dangerous discontents which prevailed after the Peloponnesian war, and showed themselves in the conspiracy of Cinadon (*ὅρος δὲ τῆς πολιτείας οὗτός ἐστιν αὐτοῖς ὁ πάτριος, τὸν μὴ δυνάμενον τοῦτο τὸ τέλος φέρειν* [*i.e.* the syssitia] *μὴ μετέχειν αὐτῆς*, Aristot. *Pol.* ii. 6, § 21 = p. 1271 a, 35). Other passages show the insistence upon the Spartan training, and the disqualification attached to a self-indulgent or cowardly neglect of it (Xen. *Rep. Lac.* l. c.; Plut. *Inst. Lac.* 21, p. 238 E; Teles *ap.* Stob. *Floril.* xl. p. 233). Plutarch here tells us that some say (*ἔνιοί φασιν*) that *ξένοι* who underwent the Spartan discipline, "according to the intention of Lycurgus," were accounted citizens; a vague statement, which is contradicted by all we know of the real facts of the Spartan constitution. The Homoei were probably represented in the select bodies called *ἔκκλητοι* and *μικρὰ ἐκκλησία* [ECCLETI]; the contention of Thumser that the *ὑπομείονες* had no share in the popular assembly (*ἁλία* or *ἀπέλλα*) is contrary to the general opinion of scholars, as he himself admits. The Homoei, however, gradually obtained possession of almost all political power. Kopstadt (*ap.* Gilbert, i. 42 n.) thinks that the Homoei alone were enrolled in the three genealogical tribes, the *Ὑλλεῖς, Δυμᾶνες*, and *Πάμφυλοι*, the *ὑπομείονες* in the local tribes only [Gerousia, p. 914 *a*]. (Schömann, *Antiq.* i. 217–221 E. T.; Gilbert, *Staatsalterth.* i. 41 f.; Busolt, *Die Laked. u. ihre Bundesgenossen*, i. 18; *Griech. Gesch.* i. 116; Thumser, *Staatsalterth.* p. 170 in Hermann-Blümner.) [W. S.] [W. W.]

HONORA'RIA ACTIO. [Actio.]

HONORA'RII LUDI. [Ludi.]

HONORA'RIUM. [Advocatus; Lex Cincia.]

HONORA'RIUM JUS. [Edictum.]

HONO'RES. The word may be used in a general sense for any compliment or dignity conferred by a public body. We find it of the thanksgivings decreed by the senate for Caesar's victories in Gaul, "Caesar . . . singularibus ornatus et novis honoribus ac judiciis senatus" (Cic. *ad Fam.* i. 9, 14), and of the compliments showered on Cicero in his provincial quaestorship, "excogitati quidam erant a Siculis honores inauditi" (*pro Plancio*, 26, 64). In a similar loose sense the word is occasionally used for a commission in the army: *e.g.* Caesar (*B. C.* i. 77) says that he restored certain deserters "in tribunicium honorem." But the more strict and technical use of the term confines it to the actual magistracies, whether of the Populus Romanus, of the Plebs, or of a municipium. The position of a judex or a senator does not come within this category, nor does the office of a priest (see Mommsen, *Staatsr.* i.³ p. 8). From the words of Suetonius (*Claud.* 14), "jus et consul et extra honorem laboriosissime dixit," we might infer that even the principate, as not being one of the ordinary magistracies, was likewise excluded. It is in this sense that we hear of the "jus honorum" as a part of the qualities of a full citizen, which might be withheld when the other rights were granted. Tacitus (*Ann.* xi. 23) tells us of certain Gauls who "civitatem Romanam jam pridem assecuti, jus adipiscendorum in urbe honorum expetebant."

The most interesting questions relating to *honores* occur in connexion with the municipal institutions of the later empire. The Digest contains a title (50, 4) "de muneribus et honoribus," in which the distinction between the "honours" and the "burdens" of the community is illustrated by numerous examples. We might expect to find adduced the obvious contrast that an office is sued for voluntarily, and that the burden is compulsorily imposed. It seems not unlikely that this distinction is valid for the offices of the Roman Republic. The chief difficulty is in the case of T. Manlius Torquatus, whom we find pleading with the people (Liv. xxvi. 22) not to elect him consul in a tone which seems to imply that he could not absolutely refuse the office. It is possible, however, to take his words as merely begging them to spare him the necessity of an arrogant rejection of the people's wish. Mommsen (*Staatsr.* i.^{3} p. 470) points out that there is no clear instance of a man being compelled to hold a magistracy against his will; and in the frequent cases of abdication, we never hear of leave to retire being asked. The duties, on the other hand, of a priest (Liv. xxvii. 8) and of a judex (Cic. *pro Rab. Post.* 7, 17) were certainly imposed even against the will of the person; it does not appear that the station of a senator could (apart from special agreements, as in Suet. *Aug.* 40) be declined by any man who had held a qualifying office, and certainly a man once in the senate required the "venia ordinis" (Tac. *Ann.* i. 75) before he could retire. This distinction, however, between *honores* and *munera* will certainly not hold for the municipal magistracies, which under the empire were not avoidable by the properly qualified persons. Such persons might not even refuse to be put over the heads of their seniors in the local senate, if they were better able to provide for the expenses of magistracy: "Sciant igitur locupletiores," says a rescript of Caracalla and Geta (Dig. 50, 4, § 6), "non debere se hoc praetextu legis uti, et de tempore quo quisque in curiam allectus sit, inter eos demum quaerendum, qui pro substantia sua capiant honoris dignitatem." It is even laid down (*ib.* § 12) that a "vacatio muneris publici" does not excuse a man from serving a magistracy, "quia id ad honorem magis quam ad munera pertinet."

Of the two subdivisions of *munera*, those "quae patrimoniis injunguntur" (*ib.* § 6) are easily distinguished from *honores*. We find in this category such services as transport by land and water, "rei vehicularis, item navicularis" (*ib.* § 1). Under this head, notwithstanding a contradiction between two authorities quoted in the Digest (compare § 1 and § 14), we should probably place that species of task work from which the word *munus* seems to be etymologically derived, the "operae ad munitiones," or labour requisitioned for the repair of the walls or streets of the town, since in the Lex Ursonensis (ch. 29) this burden falls on all who own land within the limits of the colony, though they may not be its burgesses. The "munera civilia personalia" (Dig. *ib.* § 1), such as the charge of acting as counsel for the corporation in legal proceedings ("defensio civitatis, id est ut Syndicus fiat"), the duty of registering the assessments ("legatio ad census accipiendos"), and the superintendence of the provision of corn, of water, or of horses for the public games, are assimilated on the one hand to the "privata munera" of the guardian or trustee, and on the other hand to the offices of the community. These "munera personalia" require "sollicitudinem animi et vigilantiam," whereas the other category is of matters "in quo sumptus maxime postulatur." The duty of sitting in the local senate is not mentioned among the *munera*, but it seems to be accurately distinguished from the *honores* (see Mommsen's explanation, *Staatsr.* iii. 640, of the fragmentary passage of Gaius, i. 96), and it would probably fall in the category of *munera*, as that of serving among the "decemprimi" or select men of the decuriones is expressly said to do (Dig. *ib.* § 1). In the Roman senate in like manner the duty of giving advice in answer to the magistrate's question is spoken of by Tacitus (*Ann.* iii. 17) as a munus. The "personalia munera" most nearly approach the *honores* in the case of the "Irenarchae, qui disciplinae publicae et corrigendis moribus praeficiuntur" (Dig. *ib.* § 18), and of the quaestors. This latter post belongs to the "charges" or to the "offices" according to the custom of the particular community; it is undoubtedly a magistracy according to the Law of Salpensa (ch. 26, 27), yet in the Digest (*ib.* § 18) we have "et quaestura in aliqua civitate inter honores non habetur sed personale munus est."

The nearest approach to a definition of the two terms is that of Callistratus (Dig. *ib.* § 14): "Honor municipalis est administratio reipublicae cum dignitatis gradu, sive cum sumptu sive sine erogatione contigens . . . . Publicum munus dicitur, quod in administranda republica cum sumptu sine titulo dignitatis subimus." This is, roughly speaking, a continuation in the municipalities of the Roman practice of ranking only actual magistracies among the *honores*. [J. L. S. D.]

HOPLI'TAE (ὁπλῖται). [ARMA; EXERCITUS.]

HOPLO'MACHI. [GLADIATORES, p. 918 *a*.]

HORA (ὥρα), in the signification of hour, that is, the 12th part of the natural day, did not come into general use among the ancients until about the middle of the second century B.C. The equinoctial hours, though known to astronomers, were not used in the affairs of common life till towards the end of the fourth century of the Christian era. The division of the day was marked very roughly by the position of the sun (Varro, *L. L.* vi. 89). As the division of the natural day into twelve equal parts, both in summer and winter, rendered the duration of the hours longer or shorter according to the different seasons of the year, it is not easy, with accuracy, to compare or reduce the hours of the ancients to our equinoctial hours. The hours of an ancient day would only coincide with the hours of our day at the two equinoxes. [DIES and HOROLOGIUM.] As the duration of the natural day, moreover, depends on the polar altitude of a place, our natural days would not coincide with the natural days in Italy or Greece. Ideler, in his *Handbuch der Chronologie*, has given the following approximate duration of the natural days at Rome, in the year 45 B.C., which was the first after the new regulation of the calendar by J. Caesar; the length of the days is only marked at the eight principal points in the apparent course of the sun.

Days of the year. 45 B.C.	*Their duration in equinoctial hours.*	
Dec. 23	8 hrs.	45 minutes.
Feb. 6	9 ,,	50 ,,
March 23	12 ,,	0 ,,
May 9	14 ,,	10 ,,
June 25	15 ,,	6 ,,
August 10	14 ,,	10 ,,
Sept. 25	12 ,,	0 ,,
Nov. 9	9 ,,	50 ,,

The following table contains a comparison of the hours of a Roman natural day, at the summer and winter solstice, with the hours of our day.

SUMMER SOLSTICE.

Roman Hours.			*Modern Hours.*				
1st hour	.	4	o'clock,	27	minutes	0	seconds.
2nd ,,	.	5	,,	42	,,	30	,,
3rd ,,	.	6	,,	58	,,	0	,,
4th ,,	.	8	,,	13	,,	30	,,
5th ,,	.	9	,,	29	,,	0	,,
6th ,,	.	10	,,	44	,,	30	,,
7th ,,	.	12	,,	0	,,	0	,,
8th ,,	.	1	,,	15	,,	30	,,
9th ,,	.	2	,,	31	,,	0	,,
10th ,,	.	3	,,	46	,,	30	,,
11th ,,	.	5	,,	2	,,	0	,,
12th ,,	.	6	,,	17	,,	30	,,
End of the day		7	,,	33	,,	0	,,

WINTER SOLSTICE.

Roman Hours.			*Modern Hours.*				
1st hour	.	7	o'clock,	33	minutes	0	seconds.
2nd ,,	.	8	,,	17	,,	30	,,
3rd ,,	.	9	,,	2	,,	0	,,
4th ,,	.	9	,,	46	,,	30	,,

11th ,,	.	2	,,	58	,,	0	,,
12th ,,	.	3	,,	42	,,	30	,,
End of the day		4	,,	27	,,	0	,,

Also from Plautus (*Pseud.* 1307) we see that an hour in winter was shorter than one in summer.

The custom of dividing the natural day into twelve equal parts or hours lasted, as we have observed, till a very late period. The first calendarium in which we find the duration of day and night marked according to equinoctial hours, is the Calendarium rusticum Farnesianum. (Ideler, *Handbuch der Chron.* ii. p. 139, &c.; Graev. *Thesaur. Ant. Rom.* viii.; *Mus. Borb.* ii. pl. 44.)

Another question which has often been discussed is whether in such expressions as *prima*, *altera*, *tertia hora*, &c., we have to understand the hour which is passing, or that which has already elapsed. From the construction of ancient sun-dials on which the hours are marked by eleven lines, so that the first hour had elapsed when the shadow of the gnomon fell upon the first line, it might seem as if *hora prima* meant after the lapse of the first hour. In Pers. iii. 4, *quinta dum linea tangitur umbra*, the end of the fifth hour is clearly meant. But the manner in which Martial (iv. 8), when describing the various purposes to which the hours of the day were devoted by the Romans, speaks of the hours, leaves no doubt that the expressions *prima, altera, tertia hora*, &c., mean the hour which is passing, and not that which has already elapsed. Hence *hora nona cenare* means to dine when the ninth hour is beginning, *i.e.* about 2 P.M. (Becker, *Gallus*, ii.^{3} 351 = Becker-Göll, ii. 406 ff.; Mayor on Plin. *Ep.* iii. 1, 8.) [L. S.] [A. S. W.]

HORCUS (*ὅρκος*). [JUSJURANDUM.]

HORDEA'RIUM AES. [AES HORDEARIUM.]

HORI (*ὅροι*) were stone tablets or pillars which were set up on the boundaries of land, or on some conspicuous part of a house, with an inscription stating that the land or house was mortgaged to such and such a person for so much money (Harpocr. *ὅρος* and *ἄστικτον*, and Pollux, iii. 85, ix. 9; [Dem.] *c. Timoth.* p. 1202, § 61, *ἡ οὐσία ἀφωρισμένη*). J. Martha (*Bull. de Corr. Hellén.* i. pp. 235–9; cf. Bursian's *Jahresber.* 1878, vol. xv. p. 37) distinguishes four classes of hori:—

1. Hori of creditors on the property of debtors, as: *ἐπὶ Θεοφράστου ἄρχοντος ὅρος χωρίου τιμῆς ἐνοφειλομένης Φανοστράτῳ Παιανιεῖ* XX, *i.e.* *δισχιλίων δραχμῶν* (*C. I. G.* No. 530 = *C. I. A.* ii. No. 1134). Here the archon's name is mentioned to show the year the mortgage had been made: thus priority of a debt could be established. See also *C. I. A.* ii. No. 1098: *ὅρος χωρίου κοινοῦ Εἰκαδέων· μὴ συμβάλλειν εἰς τοῦτο τὸ χωρίον μηθένα μηθέν.* (*Att. Process*, ed. Lipsius, p. 692, n. 585.)

2. Hori of the wife on the property which her husband was obliged to give as security for the dowry which he received with his wife (*προικὸς ἀποτίμημα*, Pollux, viii. 142; Dem. *c. Onet.* i. p. 871, § 28 ff. etc.); thus *ὅρος οἰκίας ἐν προικὶ ἀποτετιμημένης* HHH *Ἁγνοκλείᾳ*, *C. I. A.* ii. No. 1124; cf. Boeckh, *Sthh.*^{3} i. p. 162 d; *Att. Process*, ed. Lipsius, p. 518, n. 110; Koehler, *Mitth. d. Arch. Inst.* ii. pp. 277–281. In one of the instances given by Koehler the father-in-law had paid only half the dowry of his daughter, whereupon the son-in-law had sent her back; an agreement was finally come to, the father paying the remaining half of the dowry, but deducting the interest on that already paid, for the time during which his daughter had been separated from her husband.

Ὅροι were also placed upon houses and lands on account of money due to a husband for the dowry of his wife: from Dem. *c. Spud.* we learn that the plaintiff was to receive a portion of 40 minas with his wife; 30 were given him in ready money, the remaining 10 were to be paid after the death of Polyeuctus, his father-in-law, who directed by his will that tablets should be placed on the house, *χιλίων δραχμῶν τῆς προικός* (p. 1029, § 6). In these hori the archon is not named; Caillemer (*Études*, No. 5) supposes because the time might be ascertained in other ways, or perhaps because such debts took precedence over all others (*Etym. M.*, s. v. *σύνδικοι*).

3. Hori on the property of those persons to whom the estate of an orphan was let by the archon [EPITROPUS]; for such a person was obliged to hypothecate a sufficient piece of ground or other real property (also called *ἀποτίμημα*). Thus *ὅρος χωρίου καὶ οἰκίας ἀποτίμημα παιδὶ ὀρφανῷ Διογείτονος Προβα(λισίου)*, *C. I. G.* No. 531 = *C. I. A.* ii. No. 1135, etc.: cf. Isae. *Philoct.* § 36. (*Att. Process*, ed. Lipsius, p. 363, n. 459, and p. 693, n. 587.)

4. Hori on property sold *ἐπὶ λύσει*: *e.g.* *ὅρος χωρίου καὶ οἰκίας πεπραμένων ἐπὶ λύσει ἐρανισταῖς τοῖς μετὰ Ἀριστοφῶντος Εἰρεσίδου* T, *i.e.* one talent (Koehler, *l. c.* and Boeckh, *Sthh.*^{3} *l. c.*). Such a transaction was ostensibly a purchase, but really a loan of money secured by the conveyance of property; the debtor continues to occupy it, paying interest on the purchase-money, and possessing the power of redemption within a certain time. Thus Evergus and Nicobulus lent to Pantaenetus 105 minas on a mine-pit and 30 slaves; on the property being transferred to them, they granted a lease of the

mine and slaves to him at a rate equalling the interest of the money, 105 drachmas a month (*i.e.* 12 per cent.), and in the agreement Pantaenetus secured the power of redemption from them within a given period (*λύσις τούτῳ παρ' ἡμῶν ἔν τινι ῥητῷ χρόνῳ*, Dem. *c. Pantaen.* p. 967, § 5).

To conceal the amount of their property persons threatened with *ἀντίδοσις* set up fictitious notices of mortgage on the land ([Dem.] *c. Phaen.* p. 1040, § 5; p. 1041, § 9). The practice of placing these *ὅροι* upon property was of great antiquity at Athens: it existed before the time of Solon, who removed all stones standing upon estates, when he released or relieved the debtors. (Plut. *Sol.* 15; cf. Solon *fr.* 36 Bergk, and Blass, *Hermes*, xv. p. 386 ff.) Theophrastus (*Char.* 10 = 24 ed. Jebb) mentions it as a characteristic of the *μικρολόγος* that he inspects the *ὅροι* day by day. Cf. *C. I. A.* ii. No. 564, a decree of the tribe of Erechtheis: *οἱ ἐπιμεληταὶ . . . βαδίζοντες ἐπὶ τὰ κτήματα δὶς τοῦ ἐνιαυτοῦ ἐπισκοπῶνται . . . τοὺς ὅρους εἰ ἐφεστήκασιν κατὰ τὰ αὐτά*, i.e. *κατὰ τὰς συνθήκας*. [H. H.]

HORISTAE (*ὁρισταί*) were officials chosen to settle boundaries mostly of sacred places (*ἀρχή τις ἐστὶν ἥτις ἀφώριζε τὰ ἴδια καὶ τὰ δημόσια οἰκοδομήματα πρὸς τὰ οἰκεῖα ἑκάστου μέτρα*, Bekk. *Anecd.* p. 287, 18; *Etym. M.* p. 632, 30; Pollux, ix. 9). Thus we learn from Hyper. *pro Eux.* col. 29, 18 ff., that when Philip restored Oropus to the Athenians after the battle of Chaeroneia, and the ten tribes obtained shares of land by lot and a particular mountain fell to the share of the tribes Acamantis and Hippothoontis, doubts were expressed as to the lawfulness of their occupation of it, since the *ὁρισταὶ* had, it was said, assigned it to Amphiaraus (*ἐξελόντες αὐτό*, i.e. *τὸ ὅρος, τῷ θεῷ καὶ ἀφορίσαντες*), as Blass (*Gesch. d. att. Bereds.* iii. 2, p. 54 n.) suggests, a long time ago. These *ὁρισταὶ* were not magistrates of the demes, as Gilbert (*Staatsalterth.* i. p. 195) and O. Müller (*de demis Att.* p. 58) suppose, but a state commission appointed *ad hoc*: thus Schneidewin (*ad l. c.*) explains their number in Hyp. *l. c.* "quinquaginta, opinor, ut binis tribubus deni prospicerent." They are also mentioned in a psephisma of B.C. 418, directing the fixing of the boundaries of *τὸ ἱερὸν τοῦ Κόδρου καὶ τοῦ Νηλέως καὶ τῆς Βασιλῆς* (*τοὺς ὁριστὰς ἐπιπέμψαι ὁρίσαι τὰ ἱερὰ ταῦτα, ὅπως ἂν ἔχῃ ὡς βέλτιστα καὶ εὐσεβέστατα*, *C. I. A.* iv. No. 53 a; cf. Curtius, *Sitzungsber. d. kgl. pr. Akad. Berl.* 1885, p. 437 ff.), and in connexion with the Thesmophorion at Peiraeus (*ἀναγράψαι δὲ τόδε τὸ ψήφισμα τοὺς ὁριστὰς μετὰ τοῦ δημάρχου καὶ στῆσαι πρὸς τῇ ἀναβάσει τοῦ θεσμοφορίου*, *C. I. A.* ii. No. 573 b). In *C. I. A.* iv. No. 27 b, l. 54 f., the Basileus is commissioned *ὁρίσαι τὰ ἱερὰ τὰ ἐν τῷ Πελαργικῷ*.

Ὁρισταὶ are also mentioned for Chios (*Bull. de Corresp. hellén.* iii. 244: (*ἡ οἰκίη*) *ἡ ἐν Ἀνδίνηι ἣν οἱ ὁρισταὶ ὥρι(σαν Κλυ)τιδῶν εἶναι*; Gilbert, *Staatsalterth.* ii. p. 155), for Heracleia (*C. I. G.* No. 5774, i. l. 3 ff. and l. 96 ff. *ἀνεγράψαν τοὶ ὁρισταὶ τοὶ αἱρεθέντες ἐπὶ τὼς χώρως τὼς ἱαρὼς τὼς τῶ Διονύσω* (five in number), *καθὰ [ὤ]ρ[ι]ξαν καὶ ἐτερμ[άξ]αν καὶ [συνεμετρήσαν] καὶ ἐμερί[ξαν]* and ii. l. 2 f. *τᾶς Ἀθάνας* (three in number), cf. Cauer,^{2} No. 40, 41); see also the Rhodian award concerning disputed lands in favour of Priene in *Gk. Inscr. Brit. Mus.* iii. 1, No. 403, l. 12 f., *ἄνδρας ἀποδεῖξαι οἵ τινες κρινοῦντι καὶ ὁρίξουντι καὶ ἀποφανοῦνται*, and No. 405, l. 12, *ὁρισμόν*; in No. 412, l. 9, Hicks supplies *ὁρισταί*. In the Ephesian law (Dittenberger, *Syll.* No. 344) the *διαιρεταὶ* seem to have had similar duties, *ἀφοριζέτωσαν δὲ ἐν τῇ διαιρέσει τῆς χώρας ὁδοὺς πρός τε τὰ ἱερά*, etc.

Demosthenes uses the word metaphorically in *de Rhod. libert.* p. 199, § 29; the civil law of every country prescribes a uniform rule of right for all, the same for the weak as for the strong, but in national affairs right follows might, *οἱ κρατοῦντες ὁρισταὶ τοῖς ἥττοσι γίγνονται*. [H. H.]

HOROLO'GIUM (*ὡρολόγιον*) was the name of the various instruments by means of which the ancients measured the time of the day and night. The earliest and simplest horologia of which mention is made, were called *πόλος* and *γνώμων*. Herodotus (ii. 109) ascribes their invention to the Babylonians, and Prof. Sayce says, "This is perfectly correct;" Favorinus (*ap.* Diog. Laert. ii. 1, 3; compare Suidas, *s. v.* *Γνώμων* and *Ἀναξίμανδρος*) to Anaximander, but this means only that he was the first to set one up in Greece, at Sparta; and Pliny, probably by an oversight (*H. N.* ii. § 187), to his disciple Anaximenes. Herodotus mentions the *πόλος* and *γνώμων* as two distinct instruments. Both, however, divided the day into twelve equal parts, and were a kind of sun-dial. The *γνώμων*, which was also called *στοιχεῖον*, was the more simple of the two, and probably the more ancient. It consisted of a staff or pillar standing perpendicular, in a place exposed to the sun (*σκιάθηρον*), so that the length of its shadow might be easily ascertained. The shadow of the gnomon was measured by feet, which were probably marked on the place where the shadow fell. (Hesych. *s. v.* *Ἑπτάπους σκιὰ* and *δωδεκάποδος*: Pollux, i. 72.) The gnomon is almost without exception mentioned in connexion with the *δεῖπνον* or the bath; and the time for the former was towards sunset, or at the time when the shadow of the gnomon measured 10 or 12 feet. (Aristoph. *Eccles.* 652, with the Schol.; Pollux, *l. c.*; Menander, *ap.* Athen. vi. p. 243; Hesych. *s. v.* *Δεκάπουν Στοιχεῖον*.) The longest shadow of the gnomon, at sunrise and sunset, was 12 feet: it is only in jest that Eubulus, *ap.* Athen. i. p. 8 (*fr.* 118 Meineke), represents it as double the length, where it is consulted by a very big man. The time for bathing was when the gnomon threw a shadow of 6 feet. (Lucian, *Cronos*, c. 17; *Somn. s. Gall.* c. 9.) In later times the name "gnomon" was applied to any kind of sun-dial, and especially to its finger, which threw the shadow, and thus pointed to the hour. Even the clepsydra is sometimes called "gnomon" (Athen. ii. p. 42).

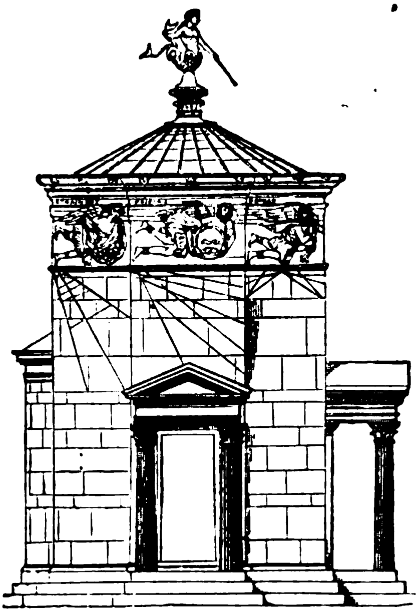
The gnomon was evidently a very imperfect instrument, and it was impossible to divide the day into twelve equal spaces by it. This may be the reason that we find it only used for such purposes as are mentioned above. The *πόλος* or *ἡλιοτρόπιον*, on the other hand, seems to have been a more perfect kind of sun-dial; but it appears, nevertheless, not to have been much used, as it is but seldom mentioned. (Aristoph. *ap. Polluc.* ix. 46.) It consisted of a basin (λεκανίς), in the middle of which the perpendicular staff or finger (γνώμων) was erected, and in it the twelve parts of the day were marked by lines. (Alciphron, *Epist.* iii. 4; Lucian, *Lexiph.* c. 4.)

Another kind of horologium was the *clepsydra* (κλεψύδρα). It derived its name from κλέπτειν and ὕδωρ, as in its original and simple form it consisted of a vessel with several little openings (τρυπήματα) at the bottom, through which the water contained in it escaped, as it were, by stealth. This instrument seems at first to have been used only for the purpose of measuring the time during which persons were allowed to speak in the courts of justice at Athens. The time of its invention or introduction is not known; but in the age of Aristophanes (see *Acharn.* 692; *Vesp.* 93 and 857) it appears to have been in common use. Its form and construction may be seen very clearly from a passage of Aristotle (*Problem.* xvi. 8). The clepsydra was a hollow globe, probably somewhat flat at the top part, where it had a short neck (αὐλός), like that of a bottle, through which the water was poured into it. This opening might be closed by a lid or stopper (πῶμα), to prevent the water running out at the bottom. The clepsydra which Aristotle had in view was probably not of glass or of any transparent material, but of bronze or brass, so that it could not be seen in the clepsydra itself what quantity of water had escaped. As the time for speaking in the Athenian courts was thus measured by water, the orators frequently use the term ὕδωρ instead of the time allowed to them (ἐν τῷ ἐμῷ ὕδατι, Demosth. *de Coron.* p. 274, § 139; ἐὰν ἐγχωρῇ τὸ ὕδωρ, c. *Leoch.* p. 1094, § 45). Aeschines (*c. Ctesiph.* § 197), when describing the order in which the several parties were allowed to speak, says that the first water was given to the accuser, the second to the accused, and the third to the judges. An especial officer (ὁ ἐφ' ὕδωρ) was appointed in the courts for the purpose of watching the clepsydra, and stopping it when any documents were read, whereby the speaker was interrupted; and it is to this officer that Demosthenes calls out: σὺ δὲ ἐπίλαβε τὸ ὕδωρ (*c. Steph.* i. p. 1103, § 8; cf. *c. Conon.* p. 1268, § 36, with Sandys' note). The time, and consequently the quantity of water allowed to a speaker depended upon the importance of the case; and we are informed that in a γραφὴ παραπρεσβείας the water allowed to each party amounted to eleven amphorae (Aeschin. *de Fals. Leg.* § 126), whereas in trials concerning the right of inheritance only one amphora was allowed. (Demosth. *c. Macart.* p. 1052, § 8.) Those actions in which the time was thus measured to the speakers are called by Pollux (viii. 113) δίκαι πρὸς ὕδωρ: others are termed δίκαι ἄνευ ὕδατος, and in these the speakers were not tied down to a certain space of time. The only instance of this kind of actions of which we know, is the γραφὴ κακώσεως (Harpocrat. *s. v.* κάκωσις).

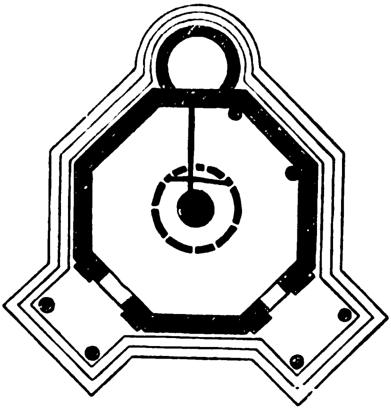
The clepsydra used in the courts of justice however was, properly speaking, no horologium; but smaller ones, made of glass, and of the same simple structure, were undoubtedly used very early in families for the purposes of ordinary life, and for dividing the day into twelve equal parts. In these glass clepsydrae the division into twelve parts must have been visible, either on the glass globe itself, or in the basin into which the water flowed. These instruments, however, did not show the time quite correctly all the year round: first, because the water ran out of the clepsydra sometimes quicker and sometimes slower, according to the different temperature of the water (Athen. ii. p. 42; Plut. *Quaest. Natur.* c. 7); and secondly, because the length of the hours varied in the different seasons of the year. To remove the second of these defects the inside of the clepsydra was covered with a coat of wax during the shorter days, and when they became longer the wax was gradually taken away again. (Aen. Tact. c. 22, § 10.) Plato is said to have used a νυκτερινὸν ὡρολόγιον in the shape of a large clepsydra, which indicated the hours of the night, and seems to have been of a complicated structure. (Athen. iv. p. 174.) This instance shows that at an early period improvements were made on the old and simple clepsydra. But all these improvements were excelled by the ingenious invention of Ctesibius, a celebrated mathematician of Alexandria (about 135 B.C.). It is called ὡρολόγιον ὑδραυλικόν, and is described by Vitruvius (ix. 9; compare Athen. *l. c.*), and more fully by Galen (v. p. 82 K.): cf. Marquardt, *Privatalt.* ii. 377 ff. Water was made to drop upon wheels which were thereby turned. The regular movement of these wheels was communicated to a small statue, which, gradually rising, pointed with a little stick to the hours marked on a pillar which was attached to the mechanism. It indicated the hours regularly throughout the year, but still required to be often attended to and regulated. This complicated crepsydra seems never to have come into general use, and was probably only found in the houses of very wealthy persons. The sun-dial or gnomon, and a simpler kind of clepsydra, on the other hand, were much used down to a very late period. The twelve parts of the day were not designated by the name ὥρα until the time of the Alexandrian astronomers, and even then the old and vague divisions, described in the article DIES, were preferred in the affairs of common life. At the time of the geographer Hipparchus, however (about 150 B.C.), it seems to have been very common to reckon by hours. (Comp. Becker-Göll, *Charikles*, vol. i. p. 321 ff.)

There is still existing, though in ruins, a horological building, which is one of the most interesting monuments at Athens. It is the structure formerly called the *Tower of the Winds*, but now known as the *Horological Monument of Andronicus Cyrrhestes.* It is expressly called *horologium* by Varro (*R. R.* iii. 5, § 17). This building is fully described by Vitruvius (i. 6, § 4), and the following woodcuts show its elevation and ground-plan, as restored by Stuart.

The structure is octagonal; with its faces to the points of the compass. On the N.E. and N.W. sides are distyle Corinthian porticoes, giving access to the interior; and to the south wall is affixed a sort of turret, forming three quarters of a circle, to contain the cistern which supplied water to the clepsydra in the interior. On the summit of the building was a bronze figure of a Triton, holding a wand in his hand; and this figure turned on a pivot, so that the wand always pointed above that side of the building which faced the wind then blowing. The directions of the several faces were indicated by figures of the eight winds on the frieze of the entablature. On the plain wall below the entablature of each face, lines are still visible, which, with the gnomons that stood out above them, formed a series of sun-dials. In the centre of the interior of the building was a clepsydra, the remains of which are still visible, and are shown on the plan, where the dark lines represent the channels for the water, which was supplied from the turret on the south, and escaped by the hole in the centre. Three other Athenian horologia are extant, one in the monument of Thrasyllus, another that of Phaedrus in the British Museum (*C. I. G* n. 522), a third in the Theatre of Dionysus, besides others from different parts of Greece.



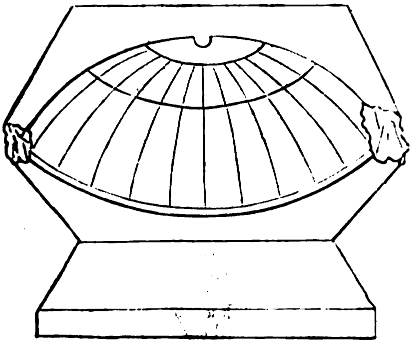
Horological monument of Andronicus Cyrrhestes.



Ground-plan of the above.

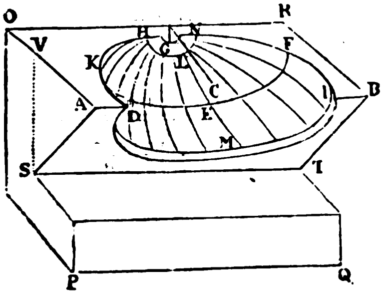
The first horologium with which the Romans became acquainted was a sun-dial (*solarium*, or *horologium sciothericum*), and was, according to some writers, brought to Rome by Papirius Cursor twelve years before the war with Pyrrhus, and placed before the temple of Quirinus (Plin. *H. N.* vii. § 213); Varro (cf. Censorinus, *de Die Nat.* 23) stated that it was brought to Rome from Catina in Sicily, at the time of the first Punic war, by the Consul M. Valerius Messala, and erected on a column behind the Rostra. But this solarium being made for a different latitude did not show the time at Rome correctly. Ninety-nine years afterwards, the Censor Q. Marcius Philippus erected by the side of the old solarium a new one, which was more carefully regulated according to the latitude of Rome. But as sun-dials, however perfect they might be, were useless when the sky was cloudy, P. Scipio Nasica, in his censorship, 159 B.C., established a public clepsydra, which indicated the hours both of day and night. This clepsydra was in after-times generally called *solarium*. (Cic. *de Nat. Deor.* ii. 34, 87; Plin. *H. N.* vii. § 215; Censorin. *de Die Nat.* c. 23.) The word *hora* for hour was introduced at Rome at the time when the Romans became acquainted with the Greek horologia, and was in this signification well known at the time of Plautus (*Pseudol.* 1307). After the time of Scipio Nasica several horologia, chiefly solaria, seem to have been erected in various public places at Rome. In a fragment of the *Boeotia* ascribed by Ribbeck to Aquilius, but by others to Plautus (cf. Ritschl, *Parerg.* 83 ff., 123 ff.), we have *jam oppletum oppidum est solariis*. Cf. Ribbeck, *Frag. Com.* p. 33. A magnificent horologium was erected by Augustus in the Campus Martius. It was a gnomon in the shape of an obelisk; but Pliny (*H. N.* xxxvi. § 73) complains that in the course of time it had become incorrect. Another horologium stood in the Circus Flaminius (Vitruv. ix. 9, 1). Sometimes solaria were attached to the front side of temples and basilicas (Varro, *L. L.* vi. 4; Gruter, *Inscript.* vi. 6). The old solarium which had been erected behind the Rostra seems to have existed on that spot till a very late period, and it would seem that the place was called *ad Solarium*, so that Cicero uses this expression as synonymous with Rostra or Forum (*pro Quint.* 18, 59; *ad Herenn.* iv. 10, 14). Horologia of various descriptions seem also to have been commonly kept by private individuals (Cic. *ad Fam.* xvi. 18, 3; Dig. 33, 7, 12, 23); and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty it was to announce the hours of the day to their masters. (Juven. x. 216, with Mayor's note; Mart. viii. 67; Petron. 26.)

From the number of solaria which have been discovered in modern times in Italy (thirteen having been discovered in the neighbourhood of Rome alone), we must infer that they were very generally used among the ancients. The following woodcut represents one of the simplest horologia which have been discovered; it seems to bear great similarity to that, the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, and is described by Zuzzeri, in a work entitled *D'una antica villa scoperta sul dosso del Tusculo, e d'un* *antico orologio a sole*, Venezia, 1746, and by G. H. Martini, in his *Abhandlung von den Sonnenuhren der Alten*, Leipzig, 1777, p. 49, &c.



Horologium. (From Tusculum.)

The following woodcut shows the same solarium as restored by Zuzzeri.



The same restored.

The breadth as well as the height (A O and P A) are somewhat more than 8 inches; and the length (A B) a little more than 16 inches. The surface (A O R B) is horizontal. S P Q T is the basis of the solarium, which, originally, was probably erected upon a pillar. Its side, A S T B, inclines somewhat towards the basis. This inclination was called ἔγκλιμα, or *inclinatio solarii* and *enclima succisum* (Vitruv. *l. c.*), and shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about 40° 43′, which coincides with the latitude of Tusculum. In the body of the solarium is the almost spherical excavation, H K D M I F N, which forms a double hemicyclium (*hemicyclium excavatum ex quadrato*, Vitruv.). Within this excavation the eleven hour-lines are marked which pass through three semicircles, H L N, K E F, and D M J. The middle one, K E F, represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the other two curves somewhat smaller. The ten middle parts or hours in each of the three curves are all equal to one another; but the two extreme ones, though equal to each other, are by one-fourth smaller than the rest. In the middle, G, of the curve D K H N I J, there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible in the lead by means of which it was fixed. It must have stood in a perpendicular position upon the surface A B R O, and at a certain distance from the surface it must have turned in a right angle above the spheric excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the above woodcut. Another solarium is described in G. H. Martini's *Antiquorum Monumentorum Sylloge*, p. 93 f. (Lips. 1783); cf. Overbeck's *Pompeii*, p. 411.

Clepsydrae were used by the Romans in their camps, chiefly for the purpose of measuring accurately the four vigiliae into which the night was divided. (Caes. *de Bell. Gall.* v. 13; Veget. *de Re Milit.* iii. 8; Aen. Tact. c. 22.)

The custom of using clepsydrae as a check upon the speakers in the courts of justice at Rome is said to have been introduced by a law of Cn. Pompeius, in his third consulship (Tac. *de clar. Orat.* 38), who adds, before that time the speakers had been under no restrictions, but spoke as long as they deemed proper. But there is some inaccuracy here, as Cicero in B.C. 70 (*in Verr.* i. 9, 25) speaks of his *legitimae horae;* in B.C. 63 (*pro Rab. Perd.* 2, 6) his defence is limited to half an hour, and in B.C. 59 (*pro Flacc.* 33, 82) six hours are allotted. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny (*Epist.* ii. 11) states that on one important occasion he spoke for nearly five hours, ten large clepsydrae having been granted to him by the judices, but the case was so important that four others were added. (Compare Plin. *Epist.* vi. 2; Martial, vi. 35, viii. 7.) The law of Pompeius only limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours in the case of prosecutions *de vi.* (Ascon. *in Milon.* p. 37, ed. Orelli.) It is clear from the case of Pliny and others that this restriction was not observed on all occasions. In a case mentioned by Pliny (*Epist.* iv. 9), according to law (*e lege*) the accuser had six hours, while the accused had nine. An especial officer was at Rome as well as at Athens appointed to stop the clepsydra during the time when documents were read. (Apul. *Apolog.* i. and ii.; compare Ernesti, *de Solariis*, in his *Opuscul. Philolog. et Crit.* pp. 21–31; Wöpcke, *Disquisitiones arch. math. circa Solaria veterum*, Berol. 1842; Becker-Göll, *Gallus*, ii. p. 407 ff.; and especially Marquardt, *Privatl.* 370 ff.) [L. S.] [A. S. W.]

HORO'SCOPUS. [ASTROLOGIA, p. 213 *b.*]

HORREA'RII. [HORREUM.]

HO'RREUM (ὡρεῖον, σιτοφυλακεῖον, ἀποθήκη) was, according to its etymological signification, a place in which ripe fruits, and especially corn, were kept, and thus answered to our granary. (Verg. *Georg.* i. 49; Tibull. ii. 5, 84; Hor. *Carm.* i. 1, 7; Cic. *de Leg. Agr.* ii. 33, § 89.) During the empire the name *horreum* was given to any place destined for the safe preservation of things of any kind, when not required for use. Thus we find it applied to a place in which statues were kept (Plin. *Epist.* viii. 18); to cellars (*horrea subterranea*, *horrea vinaria*, Dig. 18, 1, 76); to depôts for merchandise, and all sorts of provisions (*horreum penarium*, Dig. 30, 9, 3). Seneca (*Ep.* 45, § 2) even calls his library a *horreum*. But the more general application of the word *horreum* was to places for storing fruit and corn; and in order to keep the floor dry, and out of the reach of vermin, they were often built, like our own, upon dwarf piers, and were then called *horrea pensilia* or *sublimia* (Colum. xii. 50, i. 6; Vitruv. vi. 6, 4).

In imperial times Rome possessed two kinds of *horrea*. The one class consisted of buildings in which the Romans might deposit their goods, and even their money, securities, and other valuables (Cod. 4, 24, 9), for which they had no safe place in their own houses. Public horrea of this kind are mentioned as early as the time of Antoninus Pius (Dig. 1, 15, 3); again under Alexander Severus (Lamprid. *Al. Sev.* 39; cf. Dig. 10, 4, 5). There were also private *horrea* or warehouses built on speculation in order to be let as strong rooms, like our London "repositories" and "pantechnicons." The second and more important class of *horrea*, which may be termed public granaries, were buildings in which a plentiful supply of corn was constantly kept at the expense of the state, and from which, in seasons of scarcity, the corn was distributed among the poor, or sold at a moderate price. These dated from C. Gracchus and his Lex Sempronia frumentaria; the ruins of the great granary (*horrea populi Romani*) which he built were seen down to the sixteenth century between the Aventine and the Monte Testaccio (Appian, *B. C.* i. 21; Plut. *C. Gracch.* 5; Liv. *Epit.* lx.; Vell. Pat. ii. 6, § 3; Cic. *pro Sest.* 25, § 55). The plan of C. Gracchus was carried further by Clodius, Pompey, and several of the emperors; and during the empire we thus find a great number of public *horrea* which were called after the names of their founders: *e.g.*, horrea Aniceti, Vargunteii, Seiani, Augusti, Domitiani, &c. According to the Regionary Catalogues, the number of these at length mounted up to 291. The officers who superintended them were called *horrearii* or *vilici ex horreis* (Dig. 9, 3, 5, § 3; Hirschfeld, *Getreideverw.* pp. 52, 61). The manner in which corn from these granaries was given to the people differed at different times. (Cf. Mommsen, *Privatl.* 395; *Staatsverw.* ii. 128–9, 469; FRUMENTARIAE LEGES.) [L. S.] [W. W.]

HORTUS (*κῆπος*), a garden. 1. GREEK. Our knowledge of the horticulture of the Greeks is very limited. Curiously enough, however, the mythical and fairy-like garden of Alcinous (Hom. *Od.* vii. 112–130) has one important feature in common with the little that is recorded of the gardens of historical times. This is its strictly utilitarian character: it is divided into a fruit garden, a vineyard, and a garden of herbs, or more literally of *leek-beds* (*πρασιαί*, v. 127); there is no trace of the cultivation of flowers. The fruits named are simple ones—apples, pears, figs, pomegranates, and olives; there is nothing supernatural about them; and the artificial irrigation described is nothing more than has always been practised in Egypt and the East. We may say further, that there is nothing improbable in the idea of a succession of grapes and other fruit having been partially realised by early Greek gardening, though in the Homeric picture, with the various stages of growth and maturity all going on together, poetic embellishment has no doubt been carried far beyond the actual.

The Greeks had evidently little taste for landscape beauties, and the small number of flowers with which they were acquainted afforded but little inducement to ornamental horticulture. The nearest approach to it seems to have been in the sacred groves, which contained ornamental and odoriferous plants and fruit trees, particularly olives and vines. (Soph. *Oed. Col.* 16; Xen. *Anab.* v. 3, § 12.) That of the Grynean Apollo was full of timber trees and flowering shrubs (*δένδρων καὶ ἡμέρων*), pleasant to sight and smell, but without fruit (Pausan. i. 21, § 9).

The only passage in the earlier Greek writers in which flower-gardens appear to be mentioned, is one in Aristophanes, who speaks of *κῆποι εὐώδεις* (*Aves*, v. 1066). At Athens the flowers most cultivated were probably those used for making garlands, such as violets and roses. The rose-garden in Demosthenes (*ῥοδωνιά*, *c. Nicostr.* p. 1251, § 16) was doubtless cultivated for profit, not for the owner's pleasure (cf. Sandys *ad loc.*). The suburbs of Athens abounded with gardens which in like manner must have served to supply the city with flowers and vegetables (Plin. *H. N.* xxxvi. § 16; Pausan. i. 19, § 2). And when we read of books on gardening (*τὰ περὶ κήπων ἐργασίας συγγράμματα*, [Plat.] *Min.* p. 316 E), we may safely assume that they treated the subject from the market-gardener's, not the aesthetic point of view. In the time of the Ptolemies the art of gardening seems to have advanced in the favourable climate of Egypt so far, that a succession of flowers was obtained all the year round. (Callixenus, *ap.* Ath. v. p. 196 d.) Longus (*Past.* ii. 3) describes a garden containing every production of each season, "in spring, roses, lilies, hyacinths, and violets; in summer, poppies, wild-pears (*ἀχράδες*), and all fruit; in autumn, vines and figs, and pomegranates and myrtles." That the Greek idea of horticultural beauty was not quite the same as ours, may be inferred from a passage in Plutarch, where he speaks of the practice of setting off the beauties of roses and violets, by planting them side by side with leeks and onions (*De capienda ex inimicis utilitate*, c. 10). Still it is easy to exaggerate their utilitarian tendencies: if the supply of flowers was regulated by commercial principles, the demand itself testified to a love of flowers for their own sake (cf. Becker-Göll, *Charikles*, i. 310–313).

It need hardly be said that the paradises of the Persian satraps (Xen. *Anab.* i. 2, § 7, ii. 4, § 14; *Cyrop.* i. 3, § 14; *Hell.* iv. 1, § 15) had nothing in common with gardens; they were enclosed parks for the preservation of game.

2. ROMAN. The Romans, like the Greeks, laboured under the disadvantage of a very limited flora. This disadvantage they endeavoured to overcome, by arranging the materials they did possess in such a way as to produce a striking effect. We have two very full descriptions of Roman gardens in the letters of the younger Pliny, referring to his Laurentine and Tuscan villas (Plin. *Ep.* ii. 17, v. 6). In front of the *porticus* there was generally a *xystus*, or flat piece of ground, divided into flower-beds of different shapes by borders of box. There were also such flower-beds in other parts of the garden. Sometimes they were raised so as to form terraces, and their sloping sides planted

with evergreens or creepers. The most striking features of a Roman garden were lines of large trees, among which the plane appears to have been a great favourite, planted in regular order; alleys or walks (*ambulationes*) formed by closely clipped hedges of box, yew, cypress, and other evergreens; beds of acanthus, rows of fruit-trees, especially of vines, with statues, pyramids, fountains, and summer-houses (*diaetae*). The trunks of the trees, and the parts of the house or any other buildings which were visible from the garden, were often covered with ivy. (Plin. *Ep.* v. 6; Cic. *ad Q. Fr.* iii. 1, § 2.) Rich well remarks that "this sketch of Pliny's garden might also pass for a faithful description of the pleasure-grounds belonging to the Villa Pamfili [Doria] at Rome"; and we may add, as a further point of coincidence in taste between the Romans and the modern Italians, their fondness for the *ars topiaria*, which consisted in tying, twisting, or cutting trees and shrubs (especially the box) into the figures of animals, ships, letters, &c. The importance attached to this part of horticulture is proved not only by the description of Pliny, and the notices of other writers (Plin. *H. N.* xvi. § 140, xxi. § 68, xxii. § 76; Martial, iii. 19, 2; Plin. *Ep.* v. 6, § 16), but also by the fact that *topiarius* is the only name used in good Latin writers for the ornamental gardener. Cicero (*Parad.* v. 2) mentions the *topiarius* among the higher class of slaves.

Attached to the garden were places for exercise, the *gestatio* and *hippodromus*. The *gestatio* was a sort of avenue, shaded by trees, for the purpose of taking gentle exercise, such as riding in a litter (Plin. *Ep.* ii. 17, § 13; v. 6, § 17; ix. 7;—Sen. *Ep.* 55 *init.*; Orelli, *Inscr.* 4336). The *hippodromus* (not, as one reading gives the word in Pliny, *hypodromus*) was a place for running or horse exercise, in the form of a circus, consisting of several paths divided by hedges of box, ornamented with topiarian work, and surrounded by large trees. (Plin. *Ep.* v. 6, § 32; Martial, xii. 50, 5; 57, 23.) [HIPPODROMUS.]

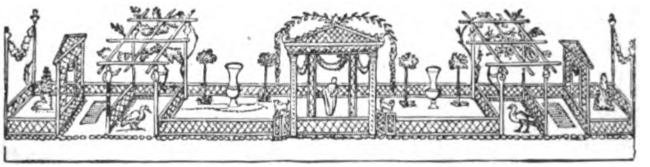
The flowers which the Romans possessed, though few in comparison with the species known to us, were more numerous than some writers have represented; but the subject still requires investigation. Their principal garden-flowers seem to have been violets and roses, and they also had the crocus, narcissus, lily, gladiolus, iris, poppy, amaranth, and others.

Conservatories and hot-houses are not mentioned by any writer earlier than the first century of our era. We then find them closed with *specularia*, i.e. windows of talc (*lapis specularis*) split into thin plates (Plin. *Ep.* ii. 17, §§ 4, 21; Sen. *Ep.* 90, § 25; Martial, viii. 14 and 68, xiii. 127). They were used both to preserve foreign plants and to produce flowers and fruit out of season. Columella (xi. 3, §§ 51, 52) and Pliny (*H. N.* xix. § 64) speak of forcing-houses for grapes, melons, &c. In every garden there was a space set apart for vegetables (*olera*).

Flowers and plants were also kept in the central space of the peristyle [DOMUS], on the roofs, and in the windows of the houses. Sometimes, in a town, where the garden was very small, its walls were painted in imitation of a real garden, with trees, fountains, birds, &c., and the small area was ornamented with flowers in vases. A beautiful example of such a garden was found at Pompeii (Gell's *Pompeiana*, ii. 4).

The phrase *hortus pensilis* is used in two senses: 1. Hanging gardens, *i.e.* terraces rising one above another on arches, of which the Isola Bella on the Lago Maggiore exhibits a modern instance; they are said, mostly by late writers, to have existed on a grand scale at Babylon and the Egyptian Thebes (Plin. *H. N.* xxxvi. §§ 49, 94; Curt. v. 1). 2. A movable frame like our melon or cucumber frames, but placed on wheels, and employed in forcing by market-gardeners (*olitores*). (Plin. *H. N.* xix. § 64, cf. Colum. xi. 3, § 52; Rich, s. v. *Hortus*.)

An ornamental garden was also called *viridarium* (Dig. 33, 7, 8), and the gardener *topiarius* or *viridarius*. The common name for a gardener is *vilicus* or *cultor hortorum*. We find also the special names *vinitor*, *olitor*. The word *hortulanus* is only of late formation. The *aquarius* had charge of the fountains both in the garden and in the house. (Becker-Göll, *Gallus*, iii. 64–88. Böttiger, *Racemationen zur Garten-Kunst der Alten*, affords no real information on ancient gardening, only speculations about Alcinous and the grotto of Calypso.) [P. S.] [W. W.]



A Roman garden. (From a painting at Herculaneum.)

HOSPES. [HOSPITIUM.]

HOSPI'TIUM (ξενία, προξενία). Hospitality is one of the characteristic features of almost all nations previous to their attaining a certain degree of civilisation. In civilised countries the necessity of general hospitality is not so much felt; but at a time when the state or the laws of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was hallowed by religion, it was to some degree observed to the latest period of their existence, and acquired a political importance which it has never had in any other state. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals, or between two states. (*Hospitium privatum* and *hospitium publicum*, ξενία and προξενία.)

1. GREEK. In ancient Greece the stranger, as such (ξένος and *hostis*), was looked upon as an enemy (Cic. *de Off.* i. 12, § 37; Herod. ix. 11; Plut. *Aristid.* 10); but whenever he appeared

among another tribe or nation without any sign of hostile intentions, he was considered not only as one who required aid, but as a suppliant, and Zeus was the protecting deity of strangers and suppliants. (Ζεὺς ξένιος and ἱκετήσιος: Hom. *Od.* xiv. 57, &c. 283, ix. 270, xiii. 213, vii. 164: compare Apollon. *Argonaut.* ii. 1134; Aelian, *V. H.* iv. 1.) This religious feeling was strengthened by the belief that the stranger might possibly be a god in disguise (*Odyss.* xvii. 484). On his arrival therefore, the stranger, of whatever station in life he might be, was kindly received, and provided with everything necessary to make him comfortable, and to satisfy his immediate wants. The host did not inquire who the stranger was, or what had led him to his house, until the duties of hospitality were fulfilled. During his stay, it was a sacred duty of his host to protect him against any persecution, even if he belonged to a politically hostile race, so that the host's house was a perfect asylum to him. On his departure he was dismissed with presents and good wishes (*Odyss.* iv. 37 ff.). It seems to have been customary for the host, on the departure of the stranger, to break a die (ἀστράγαλος) in two, one half of which he himself retained, while the other half was given to the stranger; and when at any future time they or their descendants met, they had a means of recognising each other, and the hospitable connexion was renewed (Schol. *ad* Eurip. *Med.* 613). Hospitality thus not only existed between the persons who had originally formed it, but was transferred as an inheritance from father to son. To violate the laws of hospitality was a great crime and act of impiety, and was punished by men as well as gods (δίκαι κακοξενίας, Aelian, *l. c.*; Paus. vii. 25). Instances of such hereditary connexions of hospitality are mentioned down to a very late period of Greek history; and many towns, such as Athens, Corinth, Byzantium, Phasis, and others, were celebrated for the hospitable character of their citizens. (Herod. vi. 35; Thucyd. ii. 13; Plato, *Crito*, p. 45 C; Stobaeus, *Florileg.* tit. xliv. 40, &c.) But when a more regular and frequent intercourse among the Greeks began to be established, it was impossible to receive all these strangers in private houses. This naturally led to the establishment of inns (πανδοκεῖον, καταγώγιον, κατάλυσις, κατάλυμα), in which such strangers as had no hospitable connexions found accommodation. [CAUPONA.] For those occasions, on which numerous visitors flocked to a particular place for the purpose of celebrating one of the great or national festivals, the state or the temple provided for the accommodation of the visitors either in tents or temporary inns erected about the temple. (Aelian, *V. H.* iv. 9; Schol. *ad* Pind. *Ol.* xi. 51 and 55: compare Plato, *Legg.* xii. p. 952 E; Lucian, *Amor.* 12; Thucyd. iii. 68.) The kind of hospitality which was exercised by private individuals on such festive occasions probably differed very little from that which is customary among ourselves, and was chiefly shown towards friends or persons of distinction and merit, whose presence was an honour to the house wherein they stayed. (Xen. *Oecon.* 2, § 5; Plato, *Protag.* p. 315 D; Becker-Göll, *Charikles*, ii. pp. 3, 4.) In the houses of the wealthier Greeks a separate part (*hospitium* or *hospitalia* and ξενῶνες) with a separate entrance was destined for the reception and habitation of strangers, and was provided with all the necessary comforts for the temporary occupants. On the first day after their arrival they were generally invited to the table of their host; but afterwards their provisions (ξένια), consisting of fowl, eggs, and fruit, were either sent to them, or they had to purchase them themselves. (Vitruv. vi. 7, 4; Apul. *Metam.* ii. p. 19.) [L. S.] [W. W.]

What has been said hitherto only refers to *hospitium privatum*; that is, the hospitality existing between two individuals or families of different states. Of far greater importance, however, was the *hospitium publicum* (προξενία). Boeckh distinguishes two classes of πρόξενοι: 1st, citizens living in their own state and appointed by another state to act as its representatives; and 2nd, citizens appointed by their own state to show hospitality to foreigners in its name. This second class he supposes to have existed in Petilia and in Sparta, where, according to Herodotus (vi. 57), the kings appointed them: "qui magistratus ex civibus Spartanis a regibus nominabantur" (*C. I. G.* p. 11); and again (*l. c.* p. 731), "Spartae fuerunt magistratus quidam vel certe magistratibus similes curatores proxeni, a regibus nominati, iique Spartani qui reciperent peregrinos." Yet there is no reason to suppose that the πρόξενοι either at Sparta or at Petilia were a kind of magistracy, nor that their mode of appointment was different from that in other states. The five proxeni mentioned in the Petilian inscription were the usual proxeni acting as witnesses at the making of a will; and the Spartan proxeni, such as Lichas for Argos (Thuc. v. 76; ταῖς γυμνοπαιδίαις τοὺς ἐπιδημοῦντας ἐν Λακεδαίμονι ξένους ἐδείπνιζε, Xen. *Mem.* i. 2, 61), Clearchus for Byzantium (Xen. *Hell.* i. 1, 35), etc., were probably appointed in just the same way as *e.g.* Coroebus, the proxenus of Athens, the decree of whose appointment is still extant (*C. I. A.* ii. No. 50). Some light is thrown on the passage from Herodotus by an inscription published in the *Bull. de Corr. hellén.* 1881, p. 372 ff.: from this we learn that the Aetolian League ordained that each city of the league should appoint certain citizens to entertain the θεωροί of the king of Pergamum when they came to invite them to the games, and that the magistrates should report the names of these θεωροδόκοι (cf. *C. I. G.* No. 1193, Argolis) to the στραταγὸς or to the πρόξενος. Again, as a stranger could not approach the god without the mediation of a proxenus (Eur. *Hcl.* 146, etc.: cf. the rule of the temple of Apollo at Didymi, ἦν ξένος ἱεροποιῆι τῶι Ἀπόλλωνι προιεράσθαι τῶν ἀστῶν ὃν ἂν θέληι ὁ ξένος, *Revue archéol.* 1874, p. 106), when Matrophanes of Sardes came to Delphi to consult the oracle, a decree was passed (σὺν ψάφοις ταῖς ἐννόμοις): εἶμεν δὲ καὶ τὰν πόλιν τῶν Δελφῶν πρόξενον τᾶς πόλιος τᾶς Σαρδιανῶν, since Sardes was not represented by a proxenus, *i.e.* one of the citizens was appointed to perform the necessary preliminaries to the sacrifice (προθύειν). The Spartan proxeni alluded to by Herodotus were probably citizens who in like manner were called upon to do the honours of the state to foreigners. Such public hospitality is frequently mentioned (Athen. iv. p. 173 e, f; Plut. *Quaest. Gr.* 12, p. 293 E, etc.: cf. Becker-Göll, *Charikles*, ii. 6), and Plato suggests (*Legg.* xii. p. 952 E) that none but persons officially appointed should be allowed to entertain foreigners (cf. Schol. Dem. *c. Mid.* p. 579; Schol. Aristoph. *Av.* 958 ff.) in order to prevent intrigues.

To pass on then to the proxeni as usually understood. Boeckh (*St.h.* i.^{3} p. 65), Wachsmuth (*Hell. Altertumskunde*, i. 1, p. 122), Westermann (*de publ. Athen. hon.* p. 44), etc., compare them to our modern consuls or ministers resident; Meier (*de Proxen.* p. 6) takes proxeny to be an honorary distinction (*honoris titulus*); and Monceaux (*Les Proxénies grecques*, p. 12 f.) explains it as a contract between a state and a citizen of another state, whereby the latter, in return for certain privileges, became there the *προστάτης* of the foreign city. Each of these definitions refers only to one part or another of the office of the proxeni. Part, and part only, of their functions was the same as that discharged by consuls and resident ministers now, with this difference, that the proxeni never were citizens of the state sent out to reside in the foreign state, but were selected from amongst the citizens of that foreign state. The proxeni as long as they resided in their native city represented the interests of the foreign state by which they were appointed, but it frequently happened that they took up their residence in the state itself whose proxeni they were, and in a few instances we read of women being appointed proxeni (cf. the Delphian decree in *C. I. A.* ii. No. 550, conferring proxeny on the Athenian priestess Chrysis): in both these cases the proxeny can only have been an honorary distinction. As we have fullest information concerning the Athenian proxeny, and as the manner of appointment and the privileges connected with the office in other states of Greece varied but slightly, it seems best to discuss the former at length, giving references where necessary to the other states. The *hospitium publicum* among the Greeks arose presumably from the *hospitium privatum*, of which it yet bore certain traces; cf. the phrase *καλέσαι τὸν δεῖνα ἐπὶ δεῖπνον εἰς πρυτανεῖον ἐπὶ ξένια* (*C. I. A.* ii. No. 414, etc.), or *ἐπὶ ξένια εἰς τὸ πρυτανεῖον* (*C. I. A.* ii. No. 209, etc.), and in one instance the tallies: *ποιησάσθω δὲ καὶ σύμβολα ἡ βουλὴ πρὸς τὸν βασιλέα τὸν Σιδωνίων*, etc. (*C. I. A.* ii. No. 86, l. 18 ff.; cf. *C. I. G.* No. 6778, and Xen. *Anab.* ii. 4, 1; *Ages.* 3, 4, etc.). Eustathius dates it back as far as the time of the Trojan war (on *Il.* iii. 204; cf. Liv. i. 1), and Antenor was represented in Polygnotus' painting in Delphi as proxenus (Paus. x. 26, § 7). Proxeni are mentioned in some very early inscriptions, *e.g.* in that from Petilia (*C. I. G.* No. 4), in the Locrian inscription in Koehl (*I. G. A.* No. 322), in the Corcyrean inscription in Rangabé (*Antiq. hellén.* i. No. 318: cf. Paus. iv. 14, § 1). The first proxeni of Athens recorded are Alexander, king of Macedon, *ὁ Φιλέλλην*, whom Mardonius sent to Athens on a political mission (Herod. viii. 136); Arthmius of Zeleia (Aeschin. *c. Ctes.* § 258; Dem. *c. Phil.* iii. p. 121, § 42; Din. *c. Aristog.* § 25); Pindar, who had praised Athens as *ἔρεισμα τῆς Ἑλλάδος*, and to whom they made a present of 10,000 drachmas (Isocr. *Antid.* § 166). The oldest extant decree conferring proxeny dates from the middle of the fifth century (Foucart in *Bull. de Corr. hellen.* 1877, p. 303 ff. = *C. I. A.* iv. No. 27; cf. Sauppe, *de prox. Athen.* p. 4 f.). The principal duties of a proxenus were to receive those persons, especially ambassadors, who came from the state which they represented (Dem. *de Cor.* p. 252, § 82, and Aeschin. *F. L.* § 89; Xen. *Hell.* v. 4, 22; *Symp.* 8, 40; Athen. xiii. 81, p. 603 f); to procure for them admission to the assembly, and seats in the theatre (Pollux, iii. 59; cf. Dem. *de Cor.* p. 234, § 28—Xen. *Hell.* iv. 5, 6), and in general to look after the interests (commercial or political, as the case might be) both of the state by whom they were appointed (*εἰσὶ δὲ πρόξενοι οἱ ἐν ταῖς ἑαυτῶν πατρίσιν ἄλλων προνοοῦντες πόλεων*, Schol. Aeschin. *c. Ctes.* § 138), as if it were their *δευτέρα πατρὶς* (Plat. *Legg.* i. p. 642 B; cf. Dem. *de Rhod. lib.* p. 194, § 15; Xen. *Hell.* vi. 4, 24), and of any individual citizen of that state. Thus Callippus, the proxenus of the Heracleotes at Athens, made inquiries concerning the banking account of Lycon of Heraclea, who had died (Dem. *c. Callipp.* p. 1237, § 5), and the proxenus at Argos took charge of the same person's money when he was carried thither wounded (*l. c.* p. 1238, § 10); a proxenus would assist such persons in the law courts (*Att. Process*, ed. Lipsius, p. 754), advance money to them (Dem. *c. Boeot.* ii. p. 1019, § 36) and ransom them when made prisoners of war (Hyper. *fr.* 79; Thuc. iii. 70 and Diod. xii. 57), etc. Nicias, the proxenus of Syracuse, did his best to dissuade his countrymen from warring against that city (Diod. xiii. 27); Nymphodorus of Abdera used his influence with Sitalces, king of Thrace, to further the cause of the Athenians, whose proxenus he was (Thuc. ii. 29); and in like capacity Artas, the king of the Messapians, assisted the Athenian fleet (Thuc. vii. 33; Polemon Perieg. *fr.* p. 144, ed. Preller). The Pharsalian Polydamas addressed the Lacedaemonians: *πρόξενος ὑμῶν ὢν . . . ἀξιῶ, ἐάν τέ τι ἀπορῶ, πρὸς ὑμᾶς ἰέναι, ἐάν τέ τι χαλεπὸν ὑμῖν ἐν τῇ Θετταλίᾳ συνιστῆται, σημαίνειν* (Xen. *Hell.* vi. 1, 4). The Athenians heard of the intended treachery of the Mitylenaeans from Doxander, their proxenus (Arist. *Pol.* v. 4 = p. 1304 a, 9; Thuc. iii. 2); and Alcibiades reminded the Lacedaemonians that he had done them many good offices, especially after their misfortune at Pylus (Thuc. iii. 89; Plut. *Alcib.* 14); cf. Thuc. ii. 85, etc. Proxeni were usually sent on embassies to the states by whom they had been appointed: Callias to Sparta (Xen. *Hell.* vi. 3, 3 f.), Thrason and Demosthenes to Thebes (Aeschin. *c. Ctes.* § 138 ff.; *F. L.* § 143), Lichas to Argos (Thuc. v. 76), etc.: cf. especially Thuc. v. 43 and Plut. *Alcib.* 14; they mediated between the two states (Plut. *Cim.* 18; Theopomp. in Schol. Aristid. p. 528, ed. Dindorf), sometimes even of their own accord, to judge from the case of Alciphron, the Spartan proxenus at Argos (Thuc. v. 59 f.).

As regards the honours and privileges which a proxenus enjoyed, the various Greek states seem to have followed different principles. At Athens, in very few instances only (e.g. *C. I. A.* i. No. 21; ii. No. 86), is proxeny alone conferred; it is usually coupled with the title of *εὐεργέτης* (cf. Herod. viii. 136; Dem. c. *Lept.* p. 475, § 60), and sometimes with the honour of a golden crown (*C. I. A.* ii. No. 170, 171, etc., usually of the value of 1000 drachmas), and at a later time of an olive wreath (*C. I. A.* ii. No. 423, etc.). Amongst the privileges which were not necessarily included in the proxeny, but were specially granted, sometimes at a later time (*C. I. A.* ii. No. 1 c), as a reward for special services, none was more valuable than that which guaranteed both to themselves and to their property the protection of Athens everywhere and as against all persons whatsoever, it being the duty of the senate together usually with the generals or the prytaneis or both, *ἐπιμελεῖσθαι τοῦ δεῖνος ὅπως ἂν μὴ ἀδικῆται*: and in a decree conferring proxeny on a Delian, there is added *τοὺς ἀμφικτύονας τοὺς ἀεὶ ἀμφικτυονεύοντας ἐν Δήλῳ* (*Bull. de Corr. hellén.* 1879, p. 474 f.); and in *C. I. A.* ii. No. 115, *καὶ ἐάν τις ἄλλος που Ἀθηναίων παρατυγχάνει.* Antipater, the murderer of the Athenian proxenus at Iulis in Ceos, was condemned to death by the Athenian senate (*Mittheil. d. Arch. Inst.* 1877, p. 143, l. 37 f.); ambassadors were sent to king Philip to demand the liberation of the Athenian proxenus at Carystus ([Dem.] *de Halonn.* p. 86, § 38); the Athenian general Ergocles was condemned to death, amongst other reasons, for having injured the Athenian proxeni and citizens (Lys. c. *Ergocl.* § 1; cf. c. *Philocr.* § 2): see also *C. I. A.* ii. *add.* l. c. Smaller or less powerful states could not of course undertake to protect their proxeni on this extensive scale: thus the Acarnanians limited themselves to their own territory (*C. I. G.* No. 1793 a), as did also the Cnosians in Crete (*ἀσφάλειαν πολέμω καὶ εἰρήνας καὶ καταπλέονσι ἐς τὸς Κνωσίων λιμένας καὶ ἐκπλέονσι, αὐτοῖς καὶ χρήμασι τοῖς τούτων ἀσυλεὶ καὶ ἀσπονδεί*, *Bull. de Corr. hellén.* 1880, p. 354). It would seem that some states guaranteed the safety of their proxeni even in case of war with his native city, so that they enjoyed even *ἐμ πολέμῳ εἰρήνην* (Tenos, *C. I. G.* No. 2330), and Polybius (v. 95, 12) tells of a proxenus being set free without ransom; but Nicias experienced no such mercy at the hands of the Syracusans, whom he had served so faithfully (Diod. xii. 57; see also Thuc. iii. 52, 68). A second privilege which the Athenians granted to their proxeni was *πρόσοδος πρὸς τὴν βουλὴν καὶ τὸν δῆμον*, sometimes with the further privilege *πρώτοις μετὰ τὰ ἱερά* (*C. I. A.* ii. No. 209), *i.e.* "statim post peractas res sacras" (Meier, *l. c.* p. 17; cf. Aeschin. c. *Tim.* § 23, and *C. I. G.* No. 3640, *ἔφοδον [ἐπὶ τ]ὰμ βόλλαγ καὶ δᾶμομ μετὰ τὸγ χρημάτισμον [τ]ὸμ περὶ τῶν ἵρων*: and in a late inscription from Ephesus, *μετὰ τὰ ἱερὰ καὶ τὰ βασίλεα, i.e. βασίλεια*, Wood, *Ephes. App.* p. 20). A third privilege was the right to acquire property in Attica (*ἔγκτησις*), sometimes confined to house property (*C. I. A.* ii. No. 42, etc.), sometimes with further limitations: *τῆς οἰκίας αὐτοῦ καὶ γῆς δυεῖν ταλάντοιν* (*C. I. A.* ii. No. 380), or *ἕως ἂν κατέλθωσιν* (*C. I. A.* ii. No. 121), etc.; occasionally this privilege was made hereditary (*C. I. A.* ii. No. 41, etc.). Other privileges were *ἰσοτέλεια* (*C. I. A.* ii. No. 48), *ἀσυλία* (*κα[ὶ πολέμου ὄ]ντος καὶ εἰρ[ήνης]*, etc. *C. I. A.* ii. No. 144), *ἀτέλεια* (*C. I. A.* ii. No. 42, etc.; but rarely granted, as we learn from Dem. c. *Lept.* p. 475, § 60, p. 496. § 131 f.). Only in Dinarch. c. *Dem.* § 45, and Hyper. *fr.* 80, is there anything said about citizenship being conferred together with proxeny by Athens: since not one of the numerous Attic inscriptions on proxeny bears out this statement, it must be considered doubtful, though other states which were as a general rule more lavish with their honours and privileges granted their proxeni citizenship (*e.g.* Mesambria, *C. I. G.* No. 2053 b, c, 2056; Tenos, No. 2330, 2353; Iasus, No. 2673 b, 2676, 2678, etc.) and besides *προδικία* (Delphi, *C. I. G.* No. 1692; *δίκαι πρόδικοι*, Paros, No. 2374 c, *addenda*, p. 1073), *προμαντεία, προεδρία* (Delphi, *C. I. A.* ii. No. 550), *ἐπιγαμία, ἐπινομία* (*Bull. de Corr. hellén.* 1885, p. 242; Dittenberger, *Syll.* No. 320), etc. It is evident that a proxenus could not really enjoy some of these privileges unless he actually took up his residence in the city which had conferred them; nay, in some cases it can be shown that the recipients of proxeny were at the time of their appointment residents at Athens: Archebius and Heracleides, who had taken refuge there (Dem. c. *Lept.* p. 475, § 60), in B.C. 390–89 (this seems to be the earliest instance), the physician Evenor on whom *προξενία* and *εὐεργεσία* (*C. I. A.* ii. No. 186, 1), then *ἔγκτησις* (No. 186, 2), at last *πολιτεία* (No. 187) was conferred because *πρότερόν τε τήν τε εὔνοιαν ἀποδέδεικται τῷ δήμῳ καὶ χρήσιμον ἑαυτὸν παρέσχηκεν κατὰ τὴν τέχνην τοῖς δεομένοις τῶμ πολιτῶν καὶ ἄλλων τῶν οἰκούντων ἐν τῇ πόλει καὶ νῦν ἐπιδέδωκε*, etc.; see also *C. I. A.* ii. No. 380. This was the most privileged class of foreigners (*οἱ προτιμώμενοι τῶν ξένων ὑπ' Ἀθηναίων*, Bekk. *Anecd.* p. 298, 27; they had *πρόσοδον πρὸς τὸν πολέμαρχον*. *C. I. A.* ii. No. 42, etc.). The privileges usually combined with proxeny being so important, there was no lack of aspirants who strove in every possible way to further the interests of the Athenians (*τὰ συμφέροντα τῷ δήμῳ*: these were the *ἐθελοπρόξενοι*, Schol. Thuc. iii. 70, and Pollux, iii. 60, *ἀνανάγραπτον τὴν προξενίαν ἔχων*), and thus to attract their attention. From Hyper. c. *Demad. fr.* 79, we learn what kind of services might secure the coveted distinction: Epicerdes of Cyrene gave the Athenian prisoners in Sicily 100 minas (*C. I. A.* ii. No. 85; cf. Dem. c. *Lept.* p. 469, § 41); Pythodorus of Delos earned the distinction *ἐπειδὴ ἀνὴρ ἀγαθός ἐστι . . . περὶ τὰ χρήματα τὰ τοῦ θεοῦ* (*Bull. de Corr. hellén.* 1879, p. 474, l. 9 f.); two Tyrians brought a supply of grain to Athens (*C. I. A.* ii. No. 170), etc. The various steps leading to the appointment are clearly seen in the five inscriptions concerning Heracleides of Salamis in Cyprus (*Mitth. d. Arch. Inst.* 1883, p. 211 ff.): he was praised and voted a golden crown (of the value of 500 drachmas), *ἐπειδὴ ἐπέδωκεν τὸν σῖτον* (3000 *μέδιμνοι*) *τῷ δήμῳ πεντέδραχμον πρῶτος τῶν καταπλευσάντων ἐμπόρων* in B.C. 330–29, two years later *ἐπέδωκε τῷ δήμῳ εἰς σιτωνίαν* 3000 drachmas, and as a reward in B.C. 325–24 he and his descendants were made *πρόξενοι* and *εὐεργέται*, and the following privileges granted: *γῆς καὶ οἰκίας ἔγκτησιν κατὰ τὸν νόμον καὶ στρατεύεσθαι αὐτοὺς τὰς στρατείας καὶ εἰσφέρειν τὰς εἰσφορὰς μετὰ Ἀθηναίων.* Sometimes the report of ambassadors was the first step (*C. I. A.* ii. No. 50) or friends of the candidate bestirred themselves on his behalf (*οἱ ἔμποροι καὶ ναύκληροι*, *C. I. A.* ii. No. 171); sometimes the would-be proxenus came to Athens to lay his claims before the senate (Ἀθήναιον, v. p. 522; cf. *C. I. A.* ii. No. 423: *δεδό[σθαι δὲ αὐτῷ κ]αὶ [πρ]οξε[ν]ί[αν] καὶ γῆς καὶ ο[ἰκίας ἔγκτησιν] αἰτησα[μέ]νῳ κατὰ τὸ[ν νόμον]*, etc.), or gained over an influential orator to interest himself in his candidature (Dem. *c. Lept.* p. 497, § 132); and some orators found this a very lucrative business (Hyper. *c. Dem.* col. xxiii.; cf. Din. *c. Dem.* § 45), though not without risk, as Hypereides' speech shows, *κατὰ Δημάδου παρανόμων*, for proposing that proxeny should be conferred on Euthycrates. The appointment (usually extending to the descendants) was made by a decree of the people in the usual way. In *C. I. A.* ii. No. 3 and No. 29, we find *ἔδοξε τῇ βουλῇ*: but in the former case the sons of Apemantus had simply asked to have at their own expense the *στήλη* restored on which the decree of proxeny was engraved, and in the latter there is no question of transferring the proxeny to the son, which Köhler (*Herm.* v. p. 17 f.) considered within the competence of the senate (wrongly; cf. *C. I. A.* ii. No. 121), but of engraving the decree on a *στήλη*, which could only be allowed by the senate *ἐὰν καὶ τῷ δήμῳ δοκῇ* (*C. I. A.* ii. No. 89, l. 14 f.). For it was a further distinction when a *στήλη* with the decree engraved was placed in the Acropolis, especially if that was done at the expense of the state (Hartel, *Studien üb. Att. Staatsrecht*, p. 165). A copy of the decree was sent to the city of the new proxenus (*Bull. de Corr. hellén.* 1880, p. 355, l. 51 ff., *καὶ ποττὶ τὸν Ταρσέων δᾶμον ὑποτάξαντας τὸ ἀντίγραφον τῶδε τῶ ψαφίσματος*), and frequently a second *στήλη* erected there, *e.g.* the Delphian decree in *C. I. A.* ii. No. 550, and the decree in *Bull. de Corr. hellén.* 1879, p. 474, l. 20 ff., ordering a second *στήλη* to be placed in the temple of Apollo in Delos at the expense of the Amphictyons. In some cities there were official lists of proxeni, *e.g.* in Thera (*C. I. G.* No. 2450), Anaphe (*C. I. G.* No. 2477 c), Bargylia (Le Bas et Waddington, *Voyage archéol.* v. No. 87, l. 27 f.: *ὅπως ἀναγράψῃ τὸ ὄνομα αὐ[τοῦ π]ατρόθεν ἐν τῇ στήλῃ, ἐν ᾗ καὶ οἱ ἄλλοι πρόξενοι*, etc.). Proxeny might be renounced (*ἀπειπεῖν*, *e.g.* by the elder Alcibiades) and be taken up again (*ἀναλαμβάνειν*, *ἀνανεοῦσθαι*, *e.g.* by his grandson, Thuc. v. 43, vi. 89; cf. the Parian inscription in *C. I. G.* No. 2374 d: *ἀναγράψαι δὲ αὐτοὺς καθάπερ πρότερον ἦσαν προξένους*).

An institution peculiar to Central Greece were the sureties of proxeny (*ἔγγυοι τᾶς προξενίας*: cf. Boeckh to *C. I. G.* No. 1771 ff., and *Bull. de Corr. hellén.* 1883, p. 47 f.). Some states granted the title of proxeni not to individuals of another state, but to the whole population *en masse*, e.g. the Molossians to the Agrigentines (*ἔδοξε τοῖς Μολοσσοῖς προξενίαν δόμειν τοῖς Ἀκραγαντίνοις*, Carapanos, *Dodone et ses Ruines*, p. 52); but this proceeding is not unique, as is said in the *Journ. of Hellen. Soc.* ii. p. 112, for in the list of proxeni of the Delphian temple arranged geographically we find: *ἐν Κυφαίραι ἁ πόλις* (*Bull. de Corr. hellén.* 1883, p. 191, l. 41); cf. also Dem. *c. Mid.* p. 530, § 50. In later times guilds had their own proxeni: thus the Athenian Diodorus was proxenus of the *σύνοδος τοῦ Διὸς τοῦ ξενίου* (*C. I. A.* ii. No. 475, a guild of Delian traders), and the *σύνοδοι τῶν περὶ τὸν Διόνυσον τεχνιτῶν* had proxeni in several places (A. Müller, *Bühnenalterth.* p. 401, n. 3). (Schubert, *de prox. Attica.*) [H. H.]

2. ROMAN. The hospitality of the Romans was, as in Greece, either *hospitium privatum* or *publicum*. Private hospitality with the Romans, however, seems to have been more accurately and legally defined than in Greece. The character of a hospes, *i.e.* a person connected with a Roman by ties of hospitality, was deemed even more sacred, and to have greater claims upon the host, than that of a person connected by blood or affinity. The relation of a hospes to his Roman friend was next in importance to that of a cliens (Gell. v. 13, § 2); or, according to Masurius Sabinus (*ib.* § 5), the hospes had even higher claims than a cliens. The obligations which the tie of hospitality with a foreigner imposed upon a Roman were to receive into his house his hospes when travelling (Liv. xlii. 1), and to protect and, in case of need, to represent him as his patron in the courts of justice (Cic. *Div. in Caecil.* 20, § 66). Private hospitality thus gave to the hospes the claims upon his host which the client had upon his patron; but without any degree of the dependence implied in the clientela. Private hospitality was established between individuals by mutual presents, or by the mediation of a third person (Serv. *ad Aen.* ix. 360), and hallowed by religion; for Jupiter Hospitalis was thought to watch over the *jus hospitii*, as Zeus Xenios did with the Greeks (Cic. *in Verr.* iv. 22, § 48; *pro Deiot.* 6, § 18; *ad Q. Fr.* ii. 12), and the violation of it was as great a crime and impiety at Rome as in Greece. When hospitium was formed, the two friends used to divide between them a *tessera hospitalis* (Plaut. *Poen.* v. 2, 87 ff.), by which they or their descendants—for the connexion was hereditary as in Greece—might recognise one another. From an expression in Plautus ("deum hospitalem ac tesseram mecum fero," *Poen.* v. 1, 25) it has been conjectured that this tessera bore the image of Jupiter Hospitalis. This relation, when once established, could not be dissolved except by a formal act (*renuntiatio*, Liv. xxv. 18; Cic. *in Verr.* ii. 36, § 89), and in this case the tessera hospitalis was broken to pieces (Plaut. *Cistell.* ii. 1, 27). We never find at Rome the indiscriminate and uninquiring hospitality of the heroic age of Greece, but some sort of laws of hospitality were probably common to all the nations of Italy (Aelian, *V. H.* iv. 1; Liv. i. 1). In many cases it was exercised without any formal agreement between the parties, and it was deemed an honourable duty to receive distinguished guests into the house (Cic. *de Off.* ii. 18, § 64; *pro Rosc. Am.* 6, § 15).

Public hospitality, also, seems to have existed at a very early period among the nations of Italy, and the *foedus hospitii* mentioned in Livy (i. 9) can scarcely be looked upon in any other light than that of *hospitium publicum*. But the first direct mention of public hospitality being established between Rome and another city, is after the Gauls had departed from Rome, when it was decreed that Caere should be rewarded for its good offices by the establishment of public hospitality between the two cities (Liv. v. 50). The Caerites thus obtained the right of isopolity with Rome; that is, the civitas without the suffragium and the honores [CIVITAS, p. 448 *b*; COLONIA, p. 480 *a*]. In the later times of the republic we no longer find public hospitality established between Rome and a foreign state; but a relation which amounted to the same thing was introduced in its stead,—that is, towns were raised to the rank of municipia (Liv. viii. 14), and thus obtained the civitas without the suffragium and the honores; and when a town was desirous of forming a similar relation with Rome, it entered into clientela to some distinguished Roman, who then acted as patron of the client-town. But the custom of granting the honour of *hospes publicus* to a distinguished foreigner by a decree of the senate seems to have existed down to the end of the republic (Liv. i. 45, v. 28, xxxvii. 54). The privileges of such a public hospes included a claim to honourable reception, entertainment at the public expense, admission to sacrifices and games and a complimentary present on certain occasions, and the more solid rights of buying and selling in his own name without let or hindrance, and of bringing actions at law without the intervention of a Roman patron (Marquardt, *Staatsverw.* i.^{2} 45). Whether he undertook, in return, any duties towards Roman citizens analogous to those of the Greek proxenus, is uncertain. Public hospitality was, like the hospitium privatum, hereditary in the family of the person to whom it had been granted (Diod. Sic. xiv. 93). The honour of public hospes was sometimes also conferred upon a distinguished Roman by a foreign state. (Boeckh, *C. I. G.* i. n. 1331;—Cic. *pro Balb.* 18, § 41; *in Verr.* iv. 65, § 145. Compare Niebuhr, *Hist. of Rome*, ii. 58; Walter, *Gesch. des röm. Rechts*, p. 54 ff.; Göttling, *Röm. Staatsverf.* p. 216 ff.; Marquardt, as above.) [L. S.] [W. W.]

HO'STIA. [SACRIFICIUM.]

HOSTIS. [HOSPITIUM; POSTLIMINIUM.]

HYACI'NTHIA (Ὑακίνθια), a great national festival, celebrated every year at Amyclae by the Amyclaeans and Spartans. The festival dated from pre-Dorian times, but, like the Cárneia, had been taken over by the Dorians; and was held in honour of the Amyclaean Apollo and of the youthful hero Hyacinthus, whom he accidentally struck dead with a quoit. This Amyclaean Apollo, however, with whom Hyacinthus was associated, must not be confounded with Apollo, the national divinity of the Dorians. (Müller, *Orchom.* p. 327; *Dor.* ii. 8, § 15.) This Hyacinthus is unmistakably a personification of the drying up of vegetation by the heat of summer: the quoit (δίσκος) is the sun's disc, Apollo the god who hurls it (Schömann, *Alterth.* ii. 404). The Hyacinthia lasted for three days, and began on the longest day of the Spartan month Hecatombeus (the Attic Hecatombaeon, Hesych. *s. v.* Ἑκατομβεύς: Manso, *Sparta*, iii. 2, p. 201; called also Ὑακίνθιος from this festival, Stein on Herod. ix. 7). On the first day of the Hyacinthia sacrifices were offered to the dead, and the death of Hyacinthus was lamented. Nobody wore any garlands or sung paeans at the sacrifices, nor was any wheaten bread offered: plain sacrificial cakes, apparently unleavened, were the order of the day, and great abstinence was practised. This serious and melancholy character was foreign to all the other festivals of Apollo. The second day, however, was wholly spent in public rejoicings and amusements. Amyclae was visited by numbers of strangers (πανήγυρις ἀξιόλογος καὶ μεγάλη. Didymus *ap.* Ath. iv. p. 139 e), and boys played the cithara or sang to the accompaniment of the flute, and celebrated in anapaestic metres the praise of Apollo, while others, in splendid attire, performed a horse-race in the theatre. This horse-race is probably the ἀγὼν mentioned by Strabo in connexion with the Hyacinthia (vi. p. 278). After this race there followed a number of choruses of youths conducted by a χοροποιός (Xen. *Ages.* 2, § 17), in which some of their national songs (ἐπιχώρια ποιήματα) were sung. During the songs of these choruses dancers performed some of the ancient and simple movements with the accompaniment of the flute and the song. The Spartan and Amyclaean maidens, after this, riding in chariots made of wickerwork (κάναθρα), and splendidly adorned, went in solemn procession. Numerous sacrifices were also offered on this day, and the citizens kept open house for their friends and relations; and even slaves were allowed to enjoy themselves. (Didymus, *ap.* Ath. iv. p. 139.) One of the favourite meals on this occasion was called κοπίς, and is described by Molpis (*ap.* Ath. iv. p. 140) as consisting of cake, bread, meat, raw herbs, broth, figs, dessert, and the seeds of lupine. Some ancient writers, when speaking of the Hyacinthia, apply to the whole festival such epithets as can only be used in regard to the second day; for instance, when they call it a merry or joyful solemnity. Macrobius (*Sat.* i. 18, § 2) states that the Spartans wore chaplets of ivy at the Hyacinthia as at a Bacchic rite, which can only be true if it be understood of the second day. The incorrectness of these writers is however in some degree excused by the fact, that the second day formed the principal part of the festive season, as appears from the description of Didymus, and as may also be inferred from Xenophon (*Hell.* iv. 5, § 11; compare *Ages.* 2, § 17), who makes the paean the principal part of the Hyacinthia. The third day's ceremonies are not specially described (Schömann, *l. c.*), but, according to the tradition, were of a solemn character, resembling those of the first day. The great importance attached to this festival by the Amyclaeans and Lacedaemonians is seen from the fact, that the Amyclaeans, even when they had taken the field against an enemy, always returned home on the approach of the season of the Hyacinthia, that they might not be obliged to neglect its celebration (Xen. *Hell.* iv. 5, § 11; Paus. iii. 10, § 1), and that the Lacedaemonians on one occasion concluded a truce of forty days with the town of Eira, merely to be able to return home and celebrate the national festival (Paus. iv. 19, § 3); and that in a treaty with Sparta, B.C. 421, the Athenians, in order to show their good-will towards Sparta, promised every year to attend the celebration of the Hyacinthia. (Thuc. v. 23.) [L. S.] [W. W.]

HY'ALUS. [VITRUM.]

HYBRIS, HYBREOS GRAPHE (ὕβρις, ὕβρεως γραφή). The fine instinct of the Greeks for civilisation is nowhere more conspicuous than in the early repression of wanton violence (ὕβρις) in all its forms; and this, notwithstanding a singular disregard of human life. In modern Europe, for example, only a few of the most advanced nations have discontinued the use of arms; among these the wearing of the sword remained a distinction of the upper classes long after it had been dropped by the common people; and the growing practice of carrying revolvers shows that we are still liable to relapse. The Greeks, on the contrary, had abandoned the habit of going armed (σιδηροφορεῖν) at a very early, almost a pre-historic, period; and the Athenians were the first to set the example (Thucyd. i. 5, 6). Aristotle couples together the wearing of arms and the buying of wives as proofs of the barbarism of early Greek custom (*Pol.* ii. 8 = p. 1268 b, 40). In the absence both of wild beasts and roving criminals, the stick [BACTERIA], which no one was without, was regarded as sufficient protection to the lonely traveller. In strict keeping with this sentiment, all approaches to violence were guarded both by law and public opinion. In so backward a community as the Locrians of Italy, where the laws of Zaleucus prescribed mutilations unknown in Greece proper (Dem. *c. Timocr.* p. 744, § 140), there was yet a provision against abusive language (Stob. *Flor.* xliv. 21). "In the case of personal quarrels, it is noted that the Attic law allowed an action for every step in the quarrel, from the use of language 'calculated to provoke a breach of the peace,' through common and aggravated assault, up to grievous bodily harm and manslaughter. . . . Even more marked than this abandonment of arms was the strong feeling about ὕβρις, as they called it; about personal violence, which they would not allow even towards slaves." (Mahaffy, *Social Life in Greece*, ed. 3, pp. 388, 390.)

In Attic law, abusive words (λοιδορία) made the speaker liable to a small summary fine (ἐπιβολή), especially if uttered in a court of law or a sacred precinct; if they extended to certain definite charges against a man's character, the remedy was a κακηγορίας δίκη [KAKEGORIAS DIKÉ; cf. APORRHETA]: it was a legal defence, as in the recent (though not the old) English law of libel, to prove that the charge was true (Dem. *c. Aristocr.* p. 635, § 50). For an assault, whether common or aggravated, the plaintiff had his choice between a private action for damages [AIKIAS DIKÉ] and a public and criminal prosecution (ὕβρεως γραφή), in which, as a τιμητὸς ἀγών, any penalty might be demanded, and in extreme cases death. The former involved fewer risks, and was more commonly chosen, especially by diffident plaintiffs (Dem. *c. Conon.* p. 1256, § 1; cf. *c. Everg. et Mnes.* p. 1158, § 64). But, as has been seen under AIKIAS DIKÉ, αἰκία and ὕβρις might be intentionally confounded with the object of exciting greater odium against the defendant (cf. Dem. *c. Mid.* p. 526, § 38; Aristot. *Rhet.* i. 13, § 10; *Att. Process*, p. 647 Lips.).

In the use of the term ὕβρις there was a further distinction between indecent (δι' αἰσχρουργίας) and other assaults (διὰ πληγῶν: see the Second Argument to the Midias, p. 513, 10). If the offence were of the former kind, it would always be available when the sufferer was a minor of either sex (for the consent of the infant was immaterial), or when an adult female was forcibly violated: and this protection was extended to all conditions of life, whether bond or free (Dem. *c. Mid.* p. 529, § 46; Aeschin. *c. Timarch.* § 17; Hyperid. *ap.* Ath. vi. p. 267 a). It is a moot point whether the γραφὴ ὕβρεως protected slaves in other cases than attempts upon their chastity: Meier and Schömann, in the original *Att. Process*, upheld the limitation to ὕβρις δι' αἰσχρουργίας: the best recent criticism denies it (Hermann, *Staatsalterth.* § 114, n. 7; Becker-Göll, *Charikles*, p. 29 f.; Lipsius, *Att. Process*, p. 399 f.; Thalheim, *Rechtsalterth.* p. 33 f.). [The case, however, in Dem. *c. Nicostr.* p. 1251, § 16, proves nothing either way; cf. Sandys *ad loc.*] Aeschines is careful to state that it was not because the slave had any *rights* that he was thus protected, but for the good of the citizens, that they might learn to repress the habit of personal violence; his expression οὐ γὰρ ὑπὲρ τῶν οἰκετῶν ἐσπούδασεν ὁ νομοθέτης (*c. Timarch.* § 17) affords a curious parallel to the language of St. Paul (μὴ τῶν βοῶν μέλει τῷ Θεῷ, ἢ δι' ἡμᾶς πάντως λέγει; 1 Cor. ix. 9). The legal representative (κύριος) of a female or a minor might, if he pleased, consider the injury as a private rather than a public wrong, and sue for damages in a civil action [BIAION DIKÉ]. To justify an action for ὕβρις διὰ πληγῶν, it was of course necessary to prove that the defendant struck the first blow (ὅταν ἄρχῃ χειρῶν ἀδίκων, Aristot. *Rhet.* ii. 24, § 9; cf. [Dem.] *c. Everg. et Mnes.* p. 1151, § 40). Injury to a slave, if slight, might entitle the master to recover damages for the battery (αἰκία), or if serious for the loss of his services by a δίκη βλαβῆς (BLABES DIKÉ; Lips. *Att. Process*, p. 401, where it is maintained against Meier that there was an αἰκίας δίκη also in the case of slaves).

The ὕβρεως γραφή, as has been already stated, does not seem to have been frequent; there are no speeches extant upon an action of this kind, and the allusions to lost speeches (*e.g.* Athen. *l. c.*) tell the same tale. Besides the more serious character of the γραφή or public prosecution, it was more profitable to obtain compensation for the wrong than the mere punishment of the wrong-doer; the penalty in the latter case accrued to the state and not to the plaintiff. He had also to forfeit 1000 drachmas (ὀφλεῖν χιλίας) if he either relinquished the suit or failed to obtain a fifth of the votes. If, however, the case for the prosecution was both strong and clear, the redress afforded by the public action was prompt and efficient. Besides the legal protectors of women and children, any Athenian citizen in the enjoyment of his full franchise might volunteer an accusation; he had to pay no deposit (πρυτανεῖα) beforehand (Lipsius, *Att. Process*, p. 814): the declaration was laid before the thesmothetae, who, unless hindered by extraordinary public business, were bound to bring it for trial within a month before a Heliastic court. The severity of the sentence extended to confiscation or death; and if the latter were awarded, the criminal was executed on the same day: if a fine were imposed upon him, he was allowed but eleven days for its payment, and he was imprisoned until the claim of the state was liquidated. The law in Demosthenes (*c. Mid.* p. 529, § 47) mentions imprisonment only ἐὰν ἐλεύθερόν τις ὑβρίσῃ: that in Aeschines (*c. Timarch.* § 16) draws no such distinction. Notwithstanding the strong presumption against the genuineness of documents inserted in the text of the Orators, there are some exceptions: and these particular laws have been defended on good grounds (Lipsius, p. 395, n. 565; Thalheim, p. 33, n. 5).

[The speech of Isocrates *against Lochites* (*Or.* 20), and that of Demosthenes *against Conon* (*Or.* 54), each technically an *αἰκίας δίκη*, abound with illustrations of the whole subject of *ὕβρις*. Cf. *Att. Process*, pp. 392–402, Lipsius; Thalheim, *Rechtsalterth.* § 6 = Hermann, *Staatsalterth.* § 61.] [C. R. K.] [W. W.]

HYDRA'LETA. [Mola.]

HYDRAULA. [Hydraulus.]

HYDRAU'LICA MA'CHINA. [Hydraulus.]

HYDRAULUS (**ὕδραυλος**), a water-organ. According to Athenaeus (iv. p. 174 c; cf. Plin. *H. N.* vii. § 125), it was the invention of Ctesibius of Alexandria [Ctesibica Machina]. Ctesibius probably lived about B.C. 250, in the reigns of Ptolemy Philadelphus and Euergetes; not, as stated by Athenaeus (*ib.* p. 174 d), under the second Euergetes 80 years later. He evidently took the idea of his organ from the Syrinx or Pandean pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adapting keys with levers (**ἀγκωνίσκοι**), and with perforated sliders (**πώματα**), to open and shut the mouths of the pipes (**γλωσσόκομα**), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight (Heron, *Spirit.* 228). On this account the instrument invented by Ctesibius was called the water-organ (**ὕδραυλις**, Ath. *l. c.*; **ὑδραυλικὸν ὄργανον**, Heron, *Spirit.*; *hydraulica machina*, Vitruv. x. 13; Schneider, *ad loc.*; Drieberg, *Die pneum. Erfindungen der Griechen*, pp. 53–61; *hydraulus*, Plin. *H. N.* ix. § 24; Cic. *Tusc.* iii. 18, § 43). It is described in an epigram by the Emperor Julian (Brunck, *Anal.* ii. 403 = *Anth. Pal.* ix. 365), who mentions the swift fingers of the performer, but not the water-bellows; and more clearly in the following lines of Claudian (*de Mall. Theod. Cons.* 316–319):—

> "Et qui magna levi detrudens murmura tactu,
> Innumeras voces segetis moderatus aënae,
> Intonet erranti digito, penitusque trabali
> Vecte laborantes in carmina concitet undas."

We have here the keys, the innumerable pipes of metal, the lever as large as a beam which sets the water in motion: if we may accept the probable conjecture of Gräbner, *pedibus* for *penitus* in v. 318, this lever is moved by a pedal. Its pipes were partly of bronze (**χαλκείη ἄρουρα**, Julian; *seges aëna*, Claudian), and partly of reed (**δόνακες**, Julian). The number of its stops, and consequently of its rows of pipes, varied from one to eight (Vitruv. *l. c.*), so that Tertullian (*de Anima*, 14) describes it with reason as an exceedingly complicated instrument. The latest account of these water-organs (Gräbner, *de Hydraulicis veterum Organis*, an inaugural dissertation, Berol. 1867) adds little to what was previously known; and we are still in the dark as to the exact part played by the water, which, besides, must have rendered the instrument much less portable. As invented by Ctesibius, the organ was doubtless hydraulic: but the epigram of Julian omits all mention of the water, and we incline to think that, in later times, the mechanism was simplified and the bellows blown directly by the pedal, as in the modern harmonium; the water-power being retained only in the larger organs, which may have been fixtures. The organ figured below from a coin seems too small to allow room for such an arrangement. Mention is made of this instrument so late as the ninth century of our era: in the year 826, a water-organ was erected by a Venetian in the church of Aquisgranum, the modern Aix-la-Chapelle. (Quix, *Münsterkirche in Aachen*, p. 14.)

The organ was well adapted to gratify the Roman people in the splendid entertainments provided for them by the emperors and other opulent persons. Nero was very curious about organs, both in regard to their musical effect and their mechanism. (Sueton. *Ner.* 41, 54.) A contorniate coin of this emperor, in the British Museum (see woodcut), shows a small organ with a sprig of laurel on one side, and a man standing on the other, who may have been victorious in the exhibitions of the circus or the amphitheatre. It is probable that these medals were bestowed upon such victors, and that the organ was impressed upon them on account of its introduction on such occasions. (Havercamp, *de Num. contorniatis*; Rasche, *Lex. Univ. Rei Num.* s. v. *Hydraulicum Instrumentum.*) The general form of the organ is also clearly exhibited in a poem by Publilius Porphyrius Optatianus, describing the instrument, and composed of verses so constructed as to show both the lower part which contained the bellows, the wind-chest which lay upon it, and over this the row of 26 pipes. These are represented by 26 lines, which increase in length each by one letter, until the last line is twice as long as the first. (Wernsdorf, *Poetae Lat. Min.* vol. ii. pp. 394–413.)

Organ, from a coin of Nero.
(British Museum.)

There can be little doubt that ὑδραύλης, *hydraula* or *hydraules*, denotes the organist (Suet. *Ner.* 54; Petron. *Sat.* 36); and there is, as has been seen, sufficient evidence that the instrument was keyed and gave scope to the skill of the performer. That the hydraules was one who sang or recited to an accompaniment upon the hydraulic organ has been assumed as part of the theory that these organs were only played by mechanism; a conclusion which, we think, raises greater difficulties than it solves. [J. Y.] [W. W.]

HY'DRIA (ὑδρία) is a generic term for any water-jar or water-pot, but specifically applied to a form of vessel more or less nearly resembling the AMPHORA. The hydria, however, had a rounder body and a shorter neck than the amphora. Another distinctive mark is its having three handles; a pair of small ones (ὦτα or ὠτία) at the shoulders, and a large vertical one either at the neck or in the middle of the side. Hence it is called by the Italians *vaso a tre maniche*. The *calpis* (κάλπις) is regarded by some German writers as identical with the hydria (Guhl and Koner; Blümner); according to Dennis, "The name hydria is applied to those of the earliest style which have a squareness about the shoulders, while a later and more elegant variety, with the shoulders rounded off, is generally called calpis:" it is admitted, however, that this distinction is conventional. Compare Birch, p. 364.

Hydria. (Dennis.)

Both forms occur frequently in vase-paintings, in which girls are represented carrying water on their heads, aided by a pad (τύλη, σπεῖρα) resembling a porter's knot (see cut under ARCULUM; a scene of water-drawing in Birch, p. 195). The large third handle made it easier to dip into the water and lift to the top of the head; the two small ones helped to balance it when carried. The hydria as the older form is found mostly on vases with black figures, the calpis with red figures, though the latter sometimes shows archaic designs. For other points of difference, see CALPIS.

The material was in general pottery, but a costly bronze ὑδρία is mentioned ([Dem.] *c. Everg. et Mnes.* p. 1155, § 52). For the use of the water-jug (in this case κάλπις) in Athenian weddings, see MATRIMONIUM, Vol. II., p. 136 *a*. The hydria was employed as a cinerary urn (Plut. *Philop.* 21; Lucian, *Demosth. Encom.* 29; κάλπις, *Anth. Pal.* xii. 74); and as the urn from which the dicasts were drawn by lot (Isocr. *Trapez.* § 33). In Plutarch (*Ti. Gracch.* 11) it is apparently the Roman voting-urn, properly called cista [CISTA]. A golden or gold-mounted κάλπις was used for unguents (Antiphan. *fr.* 106 M.; Polyb. xxxi. 3, § 17); this, of course, must have been much smaller than the ordinary size. Vases of all shapes are found "in miniature" in Etruscan tombs, and must have served a similar purpose. (Guhl and Koner, ed. 5, p. 191; Hermann-Blümner, *Privatalterth.* p. 163; Birch, *Anc. Pottery*, ed. 1873, p. 364; and especially Dennis, *Etruria*, ed. 1878, pp. cx., cxi.) [W. W.]

HYDRIAPHO'RIA (ὑδριαφορία) was one of the services which aliens (μέτοικοι) residing at Athens had to perform to the Athenians at the Panathenaea, and by which it was probably intended to impress upon them the recollection that they were mere aliens and not citizens. The hydriaphoria was performed by the wives of aliens (Pollux, iii. 55); whereas their daughters had on the same occasion to perform the σκιαδηφορία (the carrying of parasols) for the Athenian maidens (Pollux, vii. 134; cf. 174), and their husbands the σκαφηφορία (the carrying of vessels containing offerings of cakes, &c. for the goddess; see Aelian, *V. H.* vi. 1, with Perizonius: Dinarch. *ap.* Harpocrat. *s. v.* σκαφηφόροι, with Valesius). It has been inferred from the words of Aelian that these humiliating services were not demanded of the aliens by the laws of Solon, but introduced at a later period; on such a point, however, the authority of Aelian is of no value. The hydriaphoria was the carrying of a vessel with water (ὑδρία, Aristoph. *Eccles.* 738), which service the married alien women had to perform to the married part of the female citizens of Athens, when they walked to the temple of Athena in the great procession at the Panathenaea. The duties thus imposed upon μέτοικοι were a badge of inferiority, but cost nothing except in dignity: it does not seem correct to compare them, as Boeckh does (*P. E.* p. 538 = *Sthh.*^{3} i. 624), with the liturgies. (Hermann, *Staatsalterth.* § 115, n. 10; Schömann, *Antiq. Juris Publici*, p. 190, *Antiq.* i. 354 E. T.) [L. S.] [W. W.]

HYDROMELI. [VINUM.]

HYLO'RI or **HYLEO'RI** (ὑλωροί, ὑληωροί) are said by Hesychius (*s. v.*) to have been officers who had the superintendence of forests (ὕλην φυλάσσων: compare Suidas, *s. v.*). Aristotle (*Polit.* vi. 5, § 4 = p. 1321 b, 30), who divides all public officers into three classes (ἀρχαί, ἐπιμεληταί, and ὑπηρέται), reckons the ὑλωροί among the ἐπιμεληταί, and says that by some they were called ἀγρονόμοι. They seem to have been a kind of police for the protection of the forests, similar to the German *Förster*. But the exact nature of their office, or the Greek states where it existed, are unknown (Gilbert, *Staatsalterth.* i. 333). It is tolerably certain that Attica was not one of these, for a reason given under AGRONOMI; see, however, Boeckh (*P. E.* p. 303 = *Sthh.*^{3} i. 372). [L. S.] [W. W.]

HYPAETHROS. [TEMPLUM.]

HYPASPISTAE (ὑπασπισταί). [EXERCITUS, p. 778 *a*.]

HYPE'RETES (ὑπηρέτης). The word is derived from ἐρέσσω, ἐρέτης, and therefore originally signifies a rower; but in later times the word was applied to the entire crew of a vessel, as distinct from the ἐπιβάται, soldiers or marines (Thucyd. vi. 31, with Classen's note; Dem. *c. Polycl.* p. 1214, § 25; Polyb. v. 109, § 1). Sometimes, again, the ὑπηρέται or ὑπηρεσία are distinguished from the ναῦται (Dem. *c. Polycl.* p. 1216, § 30; Boeckh, *P. E.* p. 280 = *Sthh.*^{3} i. 349; *P. E.* p. 552 = *Sthh.*^{3} i. 641). Thus, in the Peloponnesian war the Athenian government had paid the wages of all on board (*P. E.* p. 275 = *Sthh.*^{3} i. 344); but in the time of Demosthenes the state paid only the ναῦται, while the trierarchs had to find and pay the ὑπηρεσία (Dem. *de Cor. Trier.* p. 1229, § 6; Fränkel, n. 859 on Boeckh). The name ὑπηρέται was also given to those men by whom the hoplitae were accompanied when they took the field, and who carried the luggage, the provisions, and the shield of the hoplites (Xen. *Cyrop.* ii. 1, § 31). The more common name for this servant of the hoplites was *σκευοφόρος* (Boeckh, *P. E.* p. 271 = *Sthh.*² i. 339).

At Athens the name *ὑπηρέτης*, or the abstract *ὑπηρεσία*, seems to have been applied to a whole class of officers. Aristotle (*Pol.* iv. 15 = p. 1299 a, 20) divides all public offices into three classes,—*ἀρχαί* or magistracies, *ἐπιμέλειαι* or administrations, and *ὑπηρεσίαι* or services. Now all public officers at Athens, in as far as they were the representatives of the people, or the executors of its will, were appointed by the people itself or by the senate; and with the exception of some subaltern military officers, we never find that one public officer was appointed by another. A public officer, therefore, when he appointed another person to perform the lower or more mechanical parts of his office, could not raise him to the rank of a public officer, but merely engaged him as a servant (*ὑπηρέτης*), and on his own responsibility. These *ὑπηρέται*, therefore, were not public officers, properly speaking, but only in as far as they took a part in the functions of such officers. The original and characteristic difference between them and real public officers was, that the former received salaries, while the latter had none (Boeckh, *P. E.* p. 239 = *Sthh.*² i. 304). Among the *ὑπηρέται* were reckoned the lower classes of scribes [GRAMMATEUS], heralds, messengers, the ministers of the Eleven [HENDECA], and others. This class of persons, as might be supposed, did not enjoy any high degree of estimation at Athens (Pollux, vi. 31), and it is clear that they were not always Athenian citizens, but sometimes slaves. [DEMOSII.] (Cf. Schömann, *Assemblies*, p. 307 ff.; *Antiq. Jur. Publ.* p. 235 f.; *Antiq.* i. 400, E. T.)

Other senses of *ὑπηρέτης* are sufficiently explained in the Lexicons. [L. S.] [W. W.]

HYPERO'ON (*ὑπερῷον*). [DOMUS, p. 663 *b*.]

HYPO'BOLES GRAPHE (*ὑποβολῆς γραφή*). Of this action *Lexic. Seguer.* p. 311 says that it was preferred against persons suspected of having been supposititious children; and that if this fact was established at the trial, they were reduced to slavery. Even supposing with Meier (*de Bon. damn.* p. 29) that this action was preferred only when the children thus substituted were not of civic extraction, the punishment seems unnaturally severe; hence Thonissen (*Droit pénal*, p. 343) doubts the correctness of the grammarian's information. Midias was said to be a supposititious child (Dem. *c. Mid.* p. 563, § 149); Isaeus (*Pyrrh.* §§ 15, 36) hints that Phile belonged to the same class; cf. Aristoph. *Thesm.* 407, 511, and Dio Chrys. xv. 8, p. 237, *ὅτι αἱ μὲν ἐλεύθεραι γυναῖκες ὑποβάλλονται πολλάκις δι' ἀπαιδίαν, ὅταν μὴ δύνωνται αὐταὶ κυῆσαι*, etc. (Platner, *Proc. u. Klagen*, ii. p. 72; *Att. Process*, ed. Lipsius, p. 441 f.) [J. S. M.] [H. H.]

HYPOCAUSTUM. [BALNEAE, p. 278.]

HYPOCOSME'TAE (*ὑποκοσμηταί*) frequently occur in Athenian inscriptions of the time of the Roman empire, as assistants of the *κοσμητής*, who at that period was the chief officer who regulated the exercises of the Gymnasium. [Krause, *Gymnastik und Agonistik*, i. 212 ff.; *C. I. G.* 270, 274 (addit.); GYMNASIUM, p. 928 *a*.] [W. S.] [W. W.]

HYPO'CRITES (*ὑποκριτής*). [HISTRIO.]

HYPODE'MA (*ὑπόδημα*). [CALCEUS.]

HYPOGAEUM. [DOMUS, p. 672 *b*.]

HYPOGRA'MMATEUS (*ὑπογραμματεύς*). [GRAMMATEUS.]

HYPO'GRAPHIS. [PICTURA.]

HYPOMEI'ONES (*ὑπομείονες*). [HOMOEI.]

HYPOMO'SIA (*ὑπωμοσία*). [ANACRISIS, init.; DIAETETAE, p. 621 *b*; DIKE, p. 629 *b*.]

HYPO'NOMUS. [EMISSARIUM.]

HYPORCHE'MA (*ὑπόρχημα*) was a lively kind of mimic dance which accompanied the songs used in the worship of Apollo, especially among the Dorians. It was performed by men and women (Athen. xiv. p. 631 c). A chorus of singers at the festivals of Apollo usually danced around the altar, while several other persons were appointed to accompany the action of the song with an appropriate mimic performance (*ὑπορχεῖσθαι*): The hyporcheme was thus a lyric dance, and often passed into the playful and comic, whence Athenaeus (xiv. p. 630 e) compares it with the cordax of comedy. It had, according to the supposition of Müller, like all the music and poetry of the Dorians, originated in Crete, but was at an early period introduced into the island of Delos, where it seems to have continued to be performed down to the time of Lucian. (Athen. i. p. 15 d; Lucian, *de Saltat.* 16; compare Müller, *Dor.* ii. 8, § 14.) A similar kind of dance was the *γέρανος*, which Theseus on his return from Crete was said to have performed in Delos, and which was customary in this island as late as the time of Plutarch (*Thes.* 21). The leader of this dance was called *γερανουλκός* (Hesych. *s. v.*). It was performed with blows, and with various turnings and windings (*ἐν ῥυθμῷ περιελίξεις καὶ ἀνελίξεις ἔχοντι*), and was said to be an imitation of the windings of the Cretan labyrinth. When the chorus was at rest, it formed a semicircle, with leaders at the two wings (Pollux, iv. 101).

The poems or songs which were accompanied by the hyporcheme were likewise called hyporchemata. The first poet to whom such poems are ascribed was Thaletas: their character must have been in accordance with the playfulness of the dance which bore the same name, and by which they were accompanied. The fragments of the hyporchemata of Pindar confirm this supposition, for their rhythms are peculiarly light, and have a very imitative and graphic character. (Pind. *fr.* 71–82 Bergk; cf. Pratinas, *fr.* 1; Boeckh, *de Metr. Pind.* p. 201 f., p. 270.) These characteristics must have existed in a much higher degree in the hyporchematic songs of Thaletas. (Müller, *Hist. of Greek Lit.* i. p. 23 ff.; compare with p. 160 ff.) [L. S.] [W. W.]

HYPOSCE'NIUM. [THEATRUM.]

I. J.

JACULATO'RES (*πεζακοντισταί*). The same as *velites* or *rorarii*. [EXERCITUS, p. 784 *b*.]

JA'CULUM. [HASTA.]

JA'NITOR. [JANUA.]

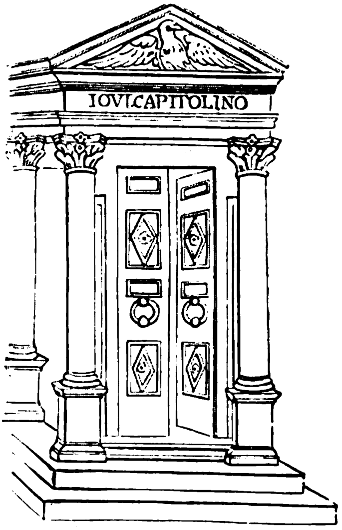
JA'NUA (*θύρα*), a door. Besides being applicable to the doors of apartments in the interior of a house, which were properly called *ostia* (Isid. *Orig.* xv. 7; Verg. *Aen.* vi. 43, 81). this term more especially denoted the first entrance into the house, *i.e.* the front or street door, which was also called *anticum* (Festus, *s. v.*), and in Greek *θύρα αὔλειος, αὐλεία, αὔλιος, αὐλία* (*Od.* xxiii. 19; Pind. *Nem.* i. 19; Menand. *fr.* 238 Mein.; Harpocr. *s. v.*; Theophr. *Char.* 18; Theocrit. xv. 43; Herodian, ii. 1; Charit. i. 2). The houses of the Romans commonly had a back-door, called *posticum*, *postica*, or *posticula* (Festus, *s. v.*; Hor. *Epist.* i. 5, 31; Plaut. *Most.* iii. 3, 27; Suet. *Claud.* 18), and in Greek *παράθυρος*, dim. *παραθύριον*: also *κηπαία*, sc. *θύρα*, because it often led into a garden at the back (Hermipp. *fr.* 42 M.; [Dem.] *c. Everg. et Mnes.* p. 1155, § 53; cf. Plaut. *Stich.* iii. 1, 40–44). Different from this was *ψευδόθυρον*, *pseudothyrum*, a false, *i.e.* secret door, used either for safety or for illicit purposes (Cic. *in Verr.* ii. 20, § 50; *post Red. in Sen.* 6, § 14). For the internal doors, like the *μέσαυλος* or *μέταυλος*, see DOMUS, p. 663 *a*.

The doorway, when complete, consisted of four indispensable parts,—the threshold, or sill; the lintel; and the two jambs.

The threshold (*limen*, *βηλός*, *οὐδὸς ὀδός*) was an object of reverence, and it was thought unlucky to tread on it with the left foot. On this account the steps leading into a temple were of an uneven number, because the worshipper, after placing his right foot on the bottom step, would then place the same foot on the threshold also (Vitruv. iii. 4). Thus the woodcut under ANTAE shows five steps; the well-preserved temple at Nîmes, now called the *Maison Carrée*, is approached by three steps.

The lintel (*jugumentum*, Cat. *de Re Rust.* 14; *supercilium*, Vitruv. iv. 6) was also called *limen* (Juv. vi. 228), and more specifically *limen superum*, to distinguish it from the sill, which was called *limen inferum*. (Plaut. *Merc.* v. 1, 1.) Being designed to support a superincumbent weight, it was generally a single piece, either of wood or stone. Hence those lintels which still remain in ancient buildings astonish us by their great length. In large and splendid edifices the jambs or door-posts (*postes*, *σταθμοί*) were made to converge towards the top, according to certain rules, which are given by Vitruvius (*l. c.*). In describing the construction of temples he calls them *antepagmenta*, the propriety of which term may be understood from the ground-plan of the door under CARDO, where the hinges are seen to be behind the jambs. This plan may also serve to show what Theocritus means by the *hollow* door-posts (*σταθμὰ κοῖλα θυράων*, *Idyll.* xxiv. 15). In the Augustan age it was fashionable to inlay the posts with tortoiseshell (Verg. *Georg.* ii. 463). Although the jamb was sometimes nearly twice the length of the lintel, it was made of a single stone even in the largest edifices. A very striking effect was produced by the height of these doorways, as well as by their costly decorations, beautiful materials, and tasteful proportions.

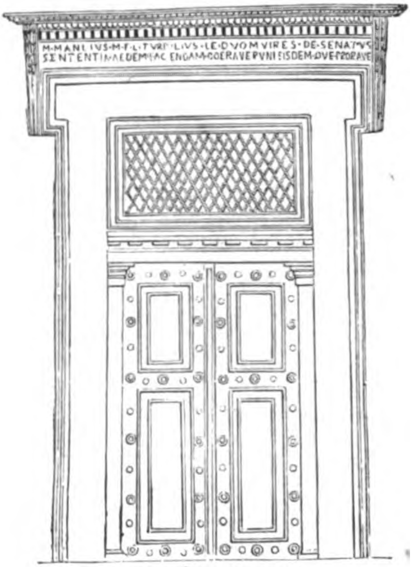
The door in the front of a temple, as it reached nearly to the ceiling, allowed the worshippers to view from without the entire statue of the divinity, and to observe the rites performed before it. These circumstances are illustrated in the accompanying woodcut, showing the front of a small temple of Jupiter. The term *antepagmentum*, which has been already explained, and which was applied to the lintel as well as the jambs (*antepagmentum superius*, Vitruv. iv. 6, § 1), implies that the doors opened inwards. This is clearly seen in the same woodcut, and is found to be the construction of all ancient buildings at Pompeii and other places. In some of these buildings, as for example in that called "the house of the tragic poet," even the marble threshold rises about an inch higher than the bottom of the door (Gell's *Pompeiana*, 2nd Ser. vol. i. p. 144), so that the door was in every part behind the door-case. It was formerly assumed, on the strength of a passage in Plutarch (*Public.* 20), that in the older Greek houses the doors regularly opened outwards. But Plutarch only mentions this as an inference from the language of comedy; and it is probable that the practice had always been exceptional. Aristotle tells us that Hippias laid a tax on such doors (*Oecon.* ii. p. 1347), which doubtless led to the disuse of that mode of construction; and as he taxed at the same time balconies (*δρύφακτοι*) and other projections, it is likely that they had always been regarded as encroachments on the rights of the public. (Cf. Becker-Göll, *Charikles*, i. 92, ii. 146.) In a single instance only were the doors allowed to open outwardly at Rome; an exception was made as a special privilege in



Door of Temple. (From a bas-relief.)

honour of M. Valerius Publicola. (Plut. *l. c.*; Plin. *H. N.* xxxvi. § 112; Marquardt, *Privatleben*, p. 229.)

The lintel of the oblong door-case was in all large and splendid buildings, such as the great temples, surmounted either by an architrave and cornice, or by a cornice only. As this is not shown in the bas-relief above introduced, an actual doorway, viz. that of the temple of Hercules at Cora, is here added. Above the lintel is an architrave with a Latin inscription upon it, and above this a projecting cornice supported on each side by a console, which reaches to a level with the bottom of the lintel. The top of the cornice (*corona summa*, Vitruv. iv. 6, § 1) coincided in height with the tops of the capitals of the columns of the pronaos, so that the doorway, with its superstructure, was exactly equal in height to the columns and the **Antae**. This superstructure was the *hyperthyrum* of Vitruvius (*l. c.*), and of the Greek architects whom he followed. The next woodcut shows (fig. 1) one of the two consoles which support the cornice of a beautiful Ionic doorway in the temple of Minerva Polias at Athens. In the inscription relating to the building of that temple, which is now in the Elgin Collection of the British Museum, the object here delineated is called *οὖς τῷ ὑπερθύρῳ*. Other Greek names for it, used by Vitruvius (iv. 6, § 4), are *parotis* and *ancon*, literally a "side-ear" and "an elbow." The use of consoles, or trusses, in this situation was characteristic of the Ionic style of architecture, being never admitted in the Doric. It is to be observed that Homer (*Od.* vii. 90), Hesiod (*Scut.* 271), and Herodotus (i. 179), use the term *ὑπέρθυρον*, or its diminutive *ὑπερθύριον*, to include the lintel. Upon some part of the hyperthyrum there was often an inscription, recording the date and occasion of the erection, as in the case of the temple of Hercules above represented, or else merely expressing a moral sentiment, like the celebrated "Know thyself" upon the temple at Delphi.



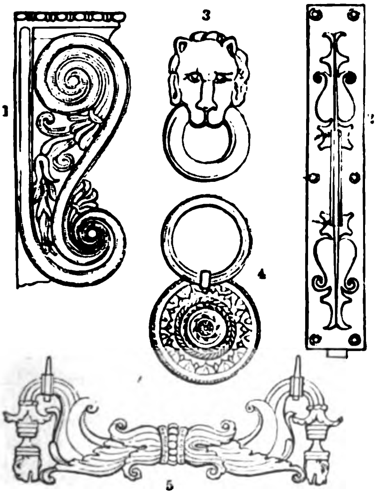
Temple of Hercules at Cora.

The door itself was called *foris* or *valva*, and in Greek *σανὶς*, *θύρετρον*, or *κλισιάς* (more properly *κλεισιάς*, as now read, though against the MSS.). These words are commonly found in the plural, because the doorway of every building of the least importance contained two doors folding together, as in all the instances already referred to. When *foris* is used in the singular, we may observe that it denotes one of the folding-doors only, as in the phrase *foris concrepuit*, which occurs repeatedly in Plautus, and describes the creaking of a single valve, opened alone and turning on its pivots. These pivots made more noise than regular hinges [Cardo]; in Aristoph. *Thesm.* 487, the adulteress pours water on the *στροφεῖς* before going out to her assignation. Even the internal doors of houses were bivalve (Gell's *Pompeiana*, 2nd Ser. vol. i. p. 166); hence we read of "the folding-doors of a bed-chamber" (*fores cubiculi*, Suet. *Aug.* 82; Q. Curt. v. 6; *σανίδες εὖ ἀραρυῖαι*, Hom. *Od.* ii. 344, &c.; *πύλαι δικλαῖ*, Soph. *Oed. Tyr.* 1261). But in every case each of the two valves was wide enough to allow persons to pass through without opening the other valve also. Even each valve was sometimes double, so as to fold like our window-shutters (*duplices complicabilesque*, Isid. *Orig.* xv. 7). The mode of attaching doors to the doorway is explained under the article Cardo.

The remaining specimens of ancient doors are all of marble or of bronze; those made of wood, which was by far the most common material, have perished. The door of a tomb at Pompeii (Mazois, *Ruines de Pompéi*, vol. i. pl. xix. fig. 4) is made of a single piece of marble, including the pivots, which were encased in bronze, and turned in sockets of the same metal. It is 3 feet high, 2 feet 9 inches wide, 4½ inches thick. It is cut in front to resemble panels, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully wrought tombs of Asia Minor and other Eastern countries have stone doors, made either to turn on pivots or to slide sideways in grooves. Doors of bronze are often mentioned by ancient writers. (Herod. i. 179; Plin. *H. N.* xxxiv. § 13.) The doors of a supposed temple of Remus, still existing at Rome, and now occupied as a Christian church, are of this material. The late Professor Donaldson (*Collection of Doorways from Ancient Buildings*, London, 1833, pl. 21) has represented them filling up the lower part of the doorway of the temple at Cora, as shown in the last woodcut, which is taken from him. The four panels are surrounded by rows of small circles, marking the spots on which were fixed rosettes or bosses, similar to those which are described and figured in the article Bulla, and which served both to strengthen and to adorn the doors. The leaves of the doors were sometimes overlaid with gold, which was an Eastern practice, as we see from the doors in the temple of Solomon at Jerusalem (1 Kings vi. 32–35); at other times they were enriched with the most exquisite carving. (Ovid. *Met.* viii. 703; Verg. *Georg.* iii. 26, *Aen.* vi. 20–32). Those in the temple of Minerva at Syracuse, are said by Cicero (*Verr.* iv. 56, § 124) to have exceeded all others in the curious and beautiful workmanship executed upon them in gold and ivory. "It is incredible," says he, "how many Greeks have left writings descriptive of the elegance of these valves." One of the ornaments was "a most beautiful Gorgon's head with tresses of snakes," probably occupying the centre of a panel. In addition to the sculptures upon the valves themselves, the finest statues were sometimes placed beside them, probably at the base of the antepagmenta, as in the magnificent temple of Juno in Samos (Cic. *Verr.* i. 23, § 61). In the fancied palace of Alcinous (*Od.* vii. 83–94) the door-case, which was of silver with a threshold of bronze, included folding-doors of gold: whilst dogs, wrought in gold and silver, guarded the approach, probably disposed like the avenue of sphinxes before an Egyptian temple. As luxury advanced among the Romans metal took the place of wood, even in the doors of the interior of a house. Hence the Quaestor Sp. Carvilius reproved Camillus for having his chamber doors covered with bronze (*aerata ostia*, Plin. *l. c.*).

A lattice-work [CANCELLI] is to be observed above the bronze doors in the last woodcut, Donaldson having introduced it on the authority more especially of the Pantheon at Rome, where the upper part of the doorway is filled with a window such as that here represented.

The folding-doors exhibited in the last woodcut, instead of a rebate such as we employ, have an upright bronze pilaster standing in the middle of the doorway, so as to cover the joining of the valves. The fastenings of the door (*claustra*, Ovid, *Amor.* i. 6, 17; *obices*) commonly consisted in a bolt (*pessulus*; *μάνδαλος, κατοχεύς, κλεῖθρον, Att.* *κλῇθρον*, Soph. *Oed. Tyr.* 1262, 1287, 1294) placed at the base of each *foris*, so as to admit of being pushed into a socket made in the sill to receive it (*πυθμήν*, Soph. *Oed. Tyr.* 1261). The Pompeian doorways show two holes corresponding to the bolts of the two *fores* (Gell, *Pompeiana*, 2nd Ser. vol. i. p. 167); and they agree with numerous passages which mention in the plural number "the bolts," or "both the bolts," of a door. (Plaut. *Aulul.* i. 3, 26; *Curc.* i. 2, 60, 71;—Soph. *ll. cc.*; Callim. *in Apoll.* 6.)



1. Console or bracket, from Erechtheum, Athens.
2. Ancient bolt, Naples Museum.
3–5. Door-handles (ἐπισπαστῆρες).

The above woodcut shows an ancient bolt preserved in the Museum at Naples. (Mazois, *Ruines de Pompéi*, vol. i. part 2, pl. vii.)

By night the front door of the house was further secured by means of a wooden and sometimes an iron bar (*sera*, *repagula*, *μοχλός*) placed across it, and inserted into sockets, on each side of the doorway. (Festus, s. v. *Adserere*; Ovid, *Amor.* i. 6, 24–56.) Hence it was necessary to remove the bar (*τὸν μοχλὸν παράφερειν, ἀναμοχλεύειν*, Eurip. *Med.* 1317) in order to open the door (*reserare*). (Theophrast. *Char.* 18; Plutarch, *Pelop.* 11; Plaut. *Cist.* iii. 18; Ovid, *Met.* v. 120.) Even chamber-doors were secured in the same manner (Heliodor. vi. 9; *cubiculi obseratis foribus*, Apul. *Met.* ix.); and here also, in case of need, the bar was employed as a further security in addition to the two bolts (*κλῇθρα συμπεραίνοντες μοχλοῖς*, Eurip. *Orest.* 1551, 1571; *Iph. Aul.* 345; *Androm.* 951). Where, as in the case of tyrants, midnight assassination was especially dreaded, we read of a bedchamber secured with a portcullis (*καταρράκτης, καταρρακτὴ πύλη*, Plut. *Arat.* 26); the drawbridge of Dionysius (Cic. *Tusc.* v. 20, § 59) is perhaps mythical. To fasten the door with the bolt was *januae pessulum obdere*, with the bar *januam obserare* (Ter. *Eun.* iii. 5, 55, iv. 6, 25; *Heaut.* ii. 3, 37). At Athens a jealous husband sometimes even proceeded to seal the door of the women's apartment. (Aristoph. *Thesm.* 427; Menand. *Incert.* 1, 11.) The door of a bedchamber was sometimes covered with a curtain [VELUM].

In the Odyssey (i. 442, iv. 802, xxi. 6, 46–50) we find mention of a contrivance for bolting or unbolting a door from the outside, which consisted in a leathern thong (*ἱμάς*) inserted through a hole in the door, and by means of a loop, ring, or hook (*κλείς, κληΐς*), which was the origin of keys, capable of laying hold of the bolt so as to move it in the manner required. The bolt by the progress of improvement was transformed into a lock, and the keys found at Herculaneum and Pompeii and those attached to rings (Gorlaei, *Dactylioth.* 42, 205–209) prove, that among the polished Greeks and Romans the art of the locksmith (*κλειδοποιός*) approached very nearly to its present state. (Achill. Tat. ii. 19; CLAVIS.)

The door represented in the first woodcut to this article has a ring upon each valve, which was used to shut the door, and therefore called the *ἐπισπαστήρ*. Herodotus (vi. 91) tells a story of a captive who, having escaped to a temple of Ceres, clung to the rings on the doors with both his hands. This appendage to the door was also called *κορώνη* (Hom. *Od.* i. 441; vii. 90) and *κόραξ* (Posidipp. *fr.* 5 M.; Brunck, *Anal.* iii. 168 = *Anth. Pal.* xi. 203), because sometimes curved like the beak of a raven or crow: or simply *κρίκος*, "a ring" (Harpocrat.). The lowest figure in the last woodcut shows a richly ornamented epispaster, from the collection at Naples. That with a lion's head is taken from a bas-relief representing the doors of a temple, in the collection at Ince-Blundell, near Liverpool.

The third figure is from the Neapolitan Museum.

Before the door of a palace, or of any private house of a superior description, there was a passage leading to the door from the public road, which was called *vestibulum* (Isid. *Orig.* xv. 7; Plaut. *Most.* iii. 2, 133; Gell. xvi. 5) and *πρόθυρον* (Vitruv. vi. 7, 5; Hom. *Od.* xviii. 10–100; Herod. iii. 35, 140). It was provided with seats (Herod. vi. 35). It was sometimes covered by an arch [CAMARA], which was supported by two pillars (Serv. *ad* Verg. *Aen.* ii. 469); and sometimes adorned with sculptures (Verg. *Aen.* vii. 181; Juv. vii. 126). Here persons waited, who came in the morning to pay their respects to the occupier of the house (Gell. iv. 1). In the vestibule was placed the domestic altar [ARA]. The Athenians also planted a laurel in the same situation, beside a figure designed to represent Apollo (Aristoph. *Thesm.* 489; Plaut. *Merc.* iv. 1, 11, 12); and statues of Mercury were still more frequent (Thucyd. vi. 27), being erected there on the principle of setting a thief to catch a thief (Schol. *ad* Aristoph. *Plut.* 1155; HERMAE).

The DONARIA offered to the gods were suspended not only from the ANTAE, but likewise from the door-posts and lintels of their temples (Verg. *Aen.* iii. 287, v. 360; Ovid, *Trist.* iii. 1, 34; Hor. *Carm.* iv. 15, 8; *Epist.* i. 1, 5, i. 18, 56;—Pers. *Sat.* vi. 45; Plin. *H. N.* xxxv. § 4), as well as of palaces, which in ancient times partook of the sanctity of temples (Verg. *Aen.* ii. 503; vii. 183). Victors in the games suspended their crowns at the door of a temple (Pind. *Nem.* v. 53). In like manner persons fixed to the jambs and lintels of their own doors the spoils which they had taken in battle. (Festus, s. v. *Resignare;* Plin. *H. N.* xxxv. § 7.) Stags' horns and boars' tusks were on the same principle used to decorate the doors of the temples of Diana, and of the private individuals who had taken these animals in the chase. Owls and other nocturnal birds were nailed upon the doors as in modern times (Pallad. *de Re Rust.* i. 35). Also garlands and wreaths of flowers were suspended over the doors of temples in connexion with the performance of religious rites, or the expression of public thanksgiving, being composed in each case of productions suited to the particular divinity whom they were intended to honour. In this manner the *corona spicea* was suspended in honour of Ceres (Tib. i. 1, 21; see also Verg. *Ciris*, 95–98). Laurel was so used in token of victory, especially at Rome (Ovid, *Met.* i. 562), where it sometimes overshadowed the CORONA CIVICA on the doors of the imperial palace. (Ovid, *Trist.* iii. 1, 35–49; Plin. *H. N.* xv. § 127; *laureatis foribus*, Sen. *Consol. ad Polyb.* 35; Val. Max. ii. 8, § 7.) The doors of private houses were ornamented in a similar way, and with different plants according to the occasion. More especially, in celebration of a marriage, either laurel or myrtle was placed about the door of the bridegroom. (Juv. vi. 79, 228; Claud. *de Nupt. Hon. et Mar.* 208.) Catullus, in describing an imaginary marriage, supposes the whole vestibulum to have been tastefully overarched with the branches of trees (lxiv. 278–293). The birth of a child was also announced by a chaplet upon the door (Juv. ix. 84), and a death was indicated by branches of cypress placed in the vestibulum (Plin. *H. N.* xvi. § 139; Serv. *in* Verg. *Aen.* iii. 64). In addition to trees, branches, garlands, and wreaths of flowers, the Romans sometimes displayed lamps and torches before the doors of their houses for the purpose of expressing gratitude and joy (Juv. xii. 92). Music, both vocal and instrumental, was sometimes performed in the vestibulum, especially on occasions when it was intended to do honour to the master of the house, or to one of his family (Pind. *Nem.* i. 19, 20; *Isthm.* vii. 3).

It was considered improper to enter a house without giving notice to its inmates. This notice the Spartans gave by shouting; the Athenians and all other nations by using the knocker (*ῥόπτρον*, Eurip. *Ion*, 1612; Aristoph. *fr.* 103; [Lys.] *c. Andoc.* init.; Harpocrat. s. v.), but more commonly by rapping with the knuckles or with a stick (*κρούειν, κόπτειν*. Becker-Göll, *Charikles*, i. 89 ff.; Plat. *Protag.* 310 B, 314 D). In the houses of the rich a porter (*janitor, custos, θυρωρός*) was always in attendance to open the door (Tibull. i. 1, 56). He was commonly a eunuch or a slave (Plat. *l. c.*), and was chained to his post (Ovid, *Amor.* i. 6; Sueton. *de Clar. Rhet.* 3). To assist him in guarding the entrance, a dog was universally kept near it, being also attached by a chain to the wall (Theocrit. xv. 43; Apollod. *ap.* Ath. i. 4; Aristoph. *Thesm.* 423, *Lysistr.* 1215; Tibull. ii. 4, 32–36); and in reference to this practice, the warning *Cave Canem, εὐλαβοῦ τὴν κύνα*, was sometimes written near the door. Of this a remarkable example occurs in "the house of the tragic poet" at Pompeii, where it is accompanied by the figure of a fierce dog, wrought in mosaic on the pavement (reproduced in the Pompeian house at the Crystal Palace). Instead of this harsh admonition, some walls or pavements exhibited the more gracious SALVE or ΧΑΙΡΕ. The appropriate names for the portion of the house immediately behind the door (*θυρών*, Soph. *Oed. Tyr.* 1242; *Electr.* 328) denotes that it was a kind of apartment; it corresponded to the hall or lobby of our houses. Immediately adjoining it, and close to the front door, there was in many houses a small room for the porter (*cella*, or *cellula janitoris*, Sueton. *Vitell.* 16; Varro, *de Re Rust.* i. 13; *θυρωρεῖον*, Pollux, i. 77). [J. Y.] [W. W.]

IATRALIPTA, or IATRALIPTES (Ἰα*τραλειπτής*), a sort of specialist physician, who in the treatment of disease almost confined himself to the use of friction and anointing (*ἰατραλειπτική*, Plin. *H. N.* xxix. § 2). According to Pliny (*l.* c.) the first person who brought this mode of practice especially into notice was Prodicus (or *Herodicus*) in the fifth century B.C. The iatralipta was a superior person to the mere alipta [see the word]; Harpocras, who is called by this title by the younger Pliny (*Epist.* x. 45), obtained from the Emperor Trajan the freedom of the cities of Rome and Alexandria. The word occurs in some editions of Celsus (*de Medic.* i. 1), but the better reading is *alipta*. It is found also in Galen (*de Compos. Medicam. sec. Locos*, vii. 5, tom. xiii. p. 104) and Paulus Aegineta (*de Re Med.* iii. 47). [W. A. G.]

IATROSOPHISTA (*ἰατροσοφιστής*), a medical title under the Roman Empire signifying, according to Du Cange (*Glossar. Med. et Inf. Graecit.*), one who both taught medicine and also practised it, though it would seem more natural, from the etymology of the word, to consider it to mean a professor of medicine. The name is somewhat varied in form by different authors. Socrates (*Hist. Eccles.* vii. 13) calls Adamantius *ἰατρικῶν λόγων σοφιστής*. Stephanus Byzantinus (*s. v.* Γέα) mentions *τῶν ἰατρῶν σοφιστής*: Callisthenes (quoted in Du Cange), *ἰατρὸς σοφιστής*: and Theophanes (*ibid.*) *σοφιστὴς τῆς ἰατρικῆς ἐπιστήμης*. Several ancient physicians are called by this title, *e.g.* Magnus (Theophilus, *De Urinis*, Praef.), Cassius, the author of *Quaestiones Medicae et Naturales*, and others. [W. A. G.]

JENTA'CULUM. [Cena.]

IGNIARIA (*πυρεῖα*), fire-sticks. This contrivance of two specially adapted pieces of wood was one method known to the Greeks and Romans, and probably the most primitive, for producing fire. How far such a method takes us back in the history of civilisation, or how widely it is even now distributed among savage tribes, need not be discussed here: reference may be made to Tylor's *Early Hist. of Mankind*, p. 237; E. Reclus, in *Encycl. Brit.* s. v. *Fire*, &c. Nor need we consider whether the idea was started, as Lucret. v. 199 seems to suggest, by a forest catching fire from friction (cf. Thuc. ii. 77). By Greek and Roman authors it is clearly regarded as having originated in a rude state of life, and so *πυρεῖα* are appropriately made part of the contents of Philoctetes' cave (Soph. *Phil.* 36; it is pressing poetical accuracy too far to contend, as Hermann does, that the *πυρεῖα* there must be flints, because flints are mentioned in line 296): the invention is ascribed to Hermes (*Hymn. ad Merc.* 111). Virgil, however (*Georg.* i. 135), supposes the striking of flints to be the original method, and Pliny (*H. N.* xvi. § 208) conceives the igniaria to have been adopted by scouts on a campaign, or shepherds in the field when flints were not to be obtained. It was probably because of its antiquity that it was the method prescribed for relighting the vestal fire, if by any negligence it went out (Fest. s. v. *Ignis;* Vestales). In Greece the sacred fires seem to have been relighted from the sun's rays by means of concave mirrors (Plut. *Num.* 9).

But, however ancient, the use of igniaria was by no means obsolete in civilised times. "Fire," says Seneca (*Nat. Qu.* ii. 22), "is produced by man in two ways, either struck from a flint or by friction of two pieces of wood" (he omits the burning-glass); and we have elaborate instructions in Greek from Theophrastus, and in Latin from Pliny, as to the selection of wood and the nature of the instruments. It is convenient here to explain how these igniaria were formed, and also to notice briefly the other methods used. The *πυρεῖα*, or igniaria, consisted of the *ἐσχάρα*, a block of soft wood with a hollow in it, and the *τρύπανον* of hard wood, which was twirled round, like an auger, in the hollow of the *ἐσχάρα*. In Latin there were no distinctive names for the two parts, beyond "quod teritur" and "quod terit" (Plin. *l. c.*). For the *ἐσχάρα*, ivy was considered the best wood; for the *τρύπανον*, laurel; but holm-oak and some other woods also could be used, the olive being specially excepted (Theophr. v. 9, 6; Plin. xvi. 207). The sparks produced by this friction, just as those produced by striking the flint, were caught in shavings of wood or dry leaves and grass (Theophr. *l. c.*; Plin. *ib.* 208; Blümner, *Technologie*, ii. 353).

The flint (which was preferred for general use when it could be obtained) appears generally as *lapis*, the word *silex* being used for any hard stone or rock, and by no means appropriated to flint. Pliny (xxxvi. § 138) gives *pyrites* as the name for the best fire-stone; it was struck either by a piece of iron or by another stone (cf. Verg. *Georg.* i. 135; *Aen.* i. 174, vi. 6; Soph. *Phil.* 296). Lastly, the material used as tinder might be ignited by a burning-glass from the sun's rays (Plut. *l. c.*); but it is clear from its omission by Seneca that this was not an ordinary method.

It remains to explain the use of *ramenta sulpurata*, i.e. chips of wood smeared with sulphur (Mart. x. 3). It must not be supposed that these were, like lucifer matches, a *substitute* for the three methods described above. They were merely an improvement upon the simpler kind of tinder, to catch more quickly the spark which still had to be produced by one or other of these methods. This is clear from Plin. xxxvi. § 138, where, speaking of the spark from the flint, he says, "quae excepta sulpure vel fungis aridis vel foliis dicto celerius praebet ignem;" and so Seneca, *Nat. Qu.* i. 1, 8, "apud nos quoque ramenta sulpure adspersa ignem ex intervallo trahunt." From the context it might be supposed that Seneca meant these sulphured chips to be ignited by the sun, but from his expressions in the passage cited above (*Nat. Qu.* ii. 22) it is clear that burning-glasses were not in common use. The effect of sulphur to make a fire spread quickly is noticed by Juv. xiii. 145. The process was much the same as that which prevailed up to the present century: the sparks obtained from the flint or from the igniaria fell on the *fomes* or tinder; as this smouldered the heat ignited the sulphur, and so the *ramenta* caught fire: the matches, in fact, saved time and blowing. These *sulpurata ramenta* were provided by vendors of sulphur, who drove a double trade, joining broken glass with sulphur, hence called *gregale sulpur* (Stat. *Silv.* i. 6, 73; cf. Plin. xxxvi. § 199), and also selling the sulphur matches, or exchanging them for broken glass, which would be sold again when they had mended it with their sulphur. Martial's "sulpurata merx" (xii. 57) may include mended glass as well as matches, but the "pallentia sulpurata" (i. 41) are certainly the yellow *sulpurata ramenta* of x. 3, and not, as Mr. Simcox (on Juv. v. 48) supposes, the glassware mended with and discoloured by sulphur. (See Friedländer, *ad loc.*; Blümner, *Technologie*, iv. 407; Vitrum.) [G. E. M.]

IGNO'BILES. [Nobiles.]

IGNOMI'NIA. [Infamia.]

ILE (*ἴλη*). [Exercitus, p. 784.]

ILLUSTRES. When Diocletian and after him Constantine the Great re-organised the Roman administration, the principal magistrates and officials were divided into three classes:—1. The *Illustres*, who held the first rank;

2. The *Spectabiles;* and 3. The *Clarissimi.* The title of *Illustres* belonged only to the Consules, the Patricii, the Praefectus praetorio, the Praefectus urbi, the Praepositus sacri cubiculi, the Magistri militum, the Magister officiorum, the Quaestor sacri palatii, the Comes sacrarum largitionum, the Comes privatarum, and the Comes domesticorum. Even among the Illustres there was a gradation of rank, the Consuls and Patricii being regarded as higher in dignity than the others. The titles *Sublimissimi, Excellentissimi,* and *Magnifici* are used as synonymous with Illustres. Among the privileges of the Illustres we read that in criminal cases they could only be tried by the emperor himself or by an imperial commission, and that they could appear before the courts by means of procurators. (Cod. Theod. vi. 6, &c., with the commentary of Gothofred; Walter, *Geschichte des römischen Rechts,* § 380, 2nd ed.; Gibbon, *Decline and Fall,* c. 17, vol. ii. p. 21, London, 1846.) [W. S.] [A. S. W.]

IMA'GINUM JUS. [NOBILES.]

IMAGO. Imago was the ordinary Latin word used to signify the copy or likeness of anything ("Imago ab *imitatione* dicta," Festus, p. 112); and, as applied to copies of nature, it includes pictures, statues, busts, or any mode of artistic representation. More particularly, however, *imago* was used to denote the ancestral likenesses which were exhibited in the more public parts of a Roman noble's dwelling. In the houses of the nobility the *imagines* of the forefathers of the head of the household were placed in the *alae,* the two wings which opened out of the hinder part of the *atrium,* or central hall, one on either side (Marquardt, *Privatleben der Römer,* i. p. 233; Vitruv. vi. 3, 6, "Imagines ad latitudinem alarum sint constitutae:" cf. Juv. viii. 19). These imagines were portrait-masks in wax (*expressi cera vultus,* Plin. *H. N.* xxxv. § 6); and the origin of these waxen masks is to be sought, not in the idea of immortalising the features of the dead for the benefit of posterity, but in the ancient beliefs connected with burial and with the life of the dead. That the primary use of the imago was for the purposes of funeral ceremonies is stated by Pliny (*l. c.,* "expressi cera vultus—ut essent imagines quae comitarentur gentilicia funera"); and the original part it played in these ceremonies is shown by the close analogies that we meet with in most of the civilised nations of the ancient world. Benndorf has shown the close resemblance that the Roman imagines bear to the portrait-masks for covering the faces of the dead, which are found in a great many ancient civilisations; they are analogous to the portrait-heads of the Egyptian mummies, and the light masks of gold, silver, bronze, iron, or tin, which are found used for this purpose in Nineveh, Phoenicia, Carthage, and by Schliemann at Mycenae in Greece (Benndorf, *Antike Gesichtshelme und Sepulcralmasken* in the *Denkschriften der Kaiserlichen Academie der Wissenschaften,* xxviii. pp. 302 ff.). The original use of the Roman portrait-masks must similarly have been for covering the faces of the dead. The custom at Rome was to lay out the dead before burial, and in funerals of special distinction this lying in state lasted for seven days (Serv. *ad Aen.* v. 64). For this purpose the services of an embalmer (*pollinctor*) were required; and it is a probable supposition that the services of the *pollinctor* did not end with preparing the body for burial, but that he also fashioned the mask that was to be buried with it. This was done by taking a mould of the face from nature. From this mould he would proceed "to take a cast in wax, to put the finishing touches (*emendare*) and colouring on this waxen image, which was then laid either on the dead man's face or on his effigy" (Benndorf, *l. c.* p. 371). The imagines were then waxen casts from moulds, which were taken from nature; they were faces in relief (*expressi cera vultus*) which received the colours and touches of nature (Lessing, *Sämmtl. Schrift.* x. p. 290). The original mask which was made from the mould was no doubt burnt or buried with the body (Marquardt, *l. c.* p. 236): but a fresh mask might be made from this mould, which was the imago placed in the atrium of a Roman house; and which was used on the occasion of the death of a member of the household, when the imagines of the ancestors formed a part of the funeral procession. Marquardt thinks that the masks might be renewed from time to time, and that on the occasion of such funerals it was not in every case the "fumosae imagines" (Senec. *Ep.* 44, 5; Juv. viii. 8) that were brought to light. The imagines as used in funerals were merely masks which were fitted on to the faces of the actors who represented the dead man's ancestors; but the imagines as kept in the atrium were probably masks fitted on busts. This is the conjecture of Quatremère de Quincy, whose account of the combined uses of these masks, for funeral purposes and for exhibition in the atrium, is extremely probable. He says, "Nothing prevents us from believing that the family portraits in coloured wax had attached to them busts, with the whole head, the neck, the breast, and the commencement of the drapery; but that, for their use in funeral ceremonies, the front part of the head which constituted the face was detached to serve as a mask" (De Quincy, *Le Jupiter Olympien,* p. 37). In the ceremonies of the apotheosis of a deceased emperor described by Herodian, it is not clear whether the imago was a waxen model of the whole form, or a waxen mask fitted on to a statue (Herod. iv. 2, 2, *κηροῦ δὲ πλασάμενοι εἰκόνα, πάντα ὁμοίαν τῷ τετελευτηκότι, ἐπὶ μεγίστης ἐλεφαντίνης κλίνης εἰς ὕψος ἀρθείσης προστιθέασιν*); but we have here probably described a masked statue resembling the masked busts in the atrium. These busts were placed along the walls of the *alae* in small shrine-like recesses (*armaria,* Plin. *H. N.* xxxv. § 6; *ξύλινα ναΐδια,* Polyb. vi. 53), and under each imago was an inscription (*titulus*) giving the name and deeds of the person represented by it. Such inscriptions were called *tituli* (Liv. x. 7, 11), or *indices* (Tibull. iv. 30, "nec quaeris quid quaque index sub imagine dicat"), or *elogia;* having this last name, Mommsen says, because they were regarded as *excerpts* from the fuller *commentarii gentilicii* (Mommsen, *C. I. L.* p. 277, *elogium* from *eligere*). They were brief records of the person's history written in prose, although Atticus, we are told, made a new departure in the composition of tituli by writing them in pointed verse (Corn. Nep. *Attic.* 18). They were in many cases not trustworthy.

family pride sometimes leading to their forgery or falsification (Liv. iv. 16; vii. 40). The imagines were arranged in such an order that, when connected by lines drawn upon the wall, they showed the *stemma* or family tree (Plin. *H. N.* xxxv. § 6, "stemmata vero lineis discurrebant ad imagines pictas"), and the immense length of some of these *gentilia stemmata* (Suet. *Ner.* 37) shows the great antiquity of the practice of preserving the imagines of ancestors; although the fact that some of these pedigrees were traced to a mythical ancestor (Suet. *Galba*, 2) shows that some of these portraits were imaginary representations; that is, if we suppose every link in the chain of descent represented in the atrium of a noble house to have had an imago corresponding to it. On festal days the recesses in which these imagines were kept were thrown open, and the busts crowned with laurel (Cic. *pro Muren.* 41, § 88). The triumphators of a family were regarded with especial pride; there seem to have been two portraits of them in the houses that could boast of this distinction: for we find that, while they had a statue in the vestibule (Juv. vii. 125, "hujus enim stat currus aeneus alti, Quadrijuges in vestibulis"), there was also a full-length portrait of them in the atrium, standing on the triumphal car (Juv. viii. 2, "stantes in curribus Aemilianos"). In this latter passage of Juvenal the portrait is spoken of in connexion with the *stemma* and the *picti vultus majorum*, which shows that this second representation of a triumphator in the atrium was made to bring him into connexion with the table of descent. Whether these full-length portraits to any degree replaced the older waxen masks, or were only used in the case of triumphators, is doubtful. A passage in Martial (ii. 90, 6, "atriaque immodicis artat imaginibus") and one of Vitruvius (vi. 3, 6, "imagines cum suis ornamentis") seem to point to the fact that such full-length portraits were somewhat generally used in later times to represent the more distinguished members of the family (Mommsen, *Staatsr.* i.² p. 429, n. 1).

A complete alteration in the fashion of the magines was caused, during the Empire, through the decreasing number of ancient and noble families, and the rise of new families, who had no imagines, and yet wished to decorate the atrium with portraits. The old waxen masks were now replaced by *clipeatae imagines*, bronze or silver medallions, such as had been long used or the decoration of temples and public places Plin. *H. N.* xxxv. § 6). The senate-house during he Empire was decorated with the medallions *clipei*) of famous orators (Tac. *Ann.* ii. 37, 83); nd at Pompeii the walls of the *alae* in private ouses are adorned with portrait-medallions of his kind (Marquardt, *l. c.* p. 239). These medallions sometimes represented the emperors nd other prominent persons unconnected with he family; but they also replaced the waxen masks as portraits of ancestors (Just. Cod. v. 7, 22), to such an extent indeed that Pliny ells us that in his time the older form of the mago had wholly disappeared (Pliny, *H. N.* xxv. § 6, "Imaginum quidem pictura in totum olevit"). By this is meant only that the ustom of forming such waxen masks as portraits ad ceased, for the older imagines kept in the *armaria* are found as late as the year 276 A.D. (Vopiscus, *Florian.* 6, in which the expression "imagines aperirent" shows that the passage refers to the older waxen masks; Marquardt, *l. c.* p. 239, n. 3).

As has been stated above, the first use assigned to the imagines at Rome was their exhibition in public funerals. This leads to the consideration of the *Jus imaginum*, or the conditions that had to be satisfied by a man before his imago could be exhibited in the funeral processions of any of his descendants. The right was confined to those who had filled the offices of dictator, consul, censor, praetor, and curule aedile: it coexists with the right of the *toga praetexta* and the *sella curulis* (Cic. *in Verr.* v. 14, 36, "togam praetextam, sellam curulem, Jus imaginis ad memoriam posteritatemque prodendae"), and coincides nearly with the possession of curule office, although the interrex, a curule magistrate, does not seem to have been included (Mommsen, *Staatsr.* i.² p. 427, n. 2). We find that the actors at such funerals who wore the imagines of the dead were adorned with the insignia of the offices these had filled in life, with the toga praetexta of the consul or praetor, the purple robe of the censor, or the toga picta of the triumphator, and sat on curule chairs to listen to the laudatio of the member of the race, whose funeral they attended, and to the mention of their own past deeds (Polyb. vi. 53). The *Jus imaginum* must originally have been a sole patrician right, when the patricians filled all the highest offices, and were indeed the only true members of a gens, with which the funeral imagines were intimately connected (Plin. *l. c.* "ut essent imagines quae comitarentur gentilicia funera"); but on the growth of the new nobility of office, which followed on the equalisation of the two orders, it became a privilege of the noble plebeians as well; and the distinction between those who had the *Jus imaginum* and those who had not was equivalent to the distinction between *nobiles* and *novi homines*. This right might, however, be lost after death by one who satisfied the conditions of having held curule office. If it was affirmed by the ruling powers at Rome that a man had not died in the full possession of citizen rights, he lost the privilege of having his imago exhibited, as we see in the case of Brutus and Cassius, the exhibition of whose masks at the funerals of their race was not permitted (Tac. *Ann.* iii. 76, 5); and we find the extinction of this right made part of a penal sentence on a man who had anticipated condemnation by suicide on a charge of *majestas* (Tac. *Ann.* ii. 32, 2, "ne imago Libonis exsequias posterorum comitaretur"). But, as it was possible to fall below this right, so it was possible to rise above it. The representation of the imago was a human privilege; and consequently the deified emperor might not be borne in the procession at the funeral of a member of his race (Dio Cass. xlvii. 19).

Connected with the *Jus imaginum* is the question what restrictions were laid down by the state on the exhibition in public of statues, medallions, or other representations of individual citizens. Mommsen thinks that in the older times at Rome it was forbidden to set up the statue or bust of a living man in a public place, or even in a public part of the house, such as the atrium. In the last two centuries of the Republic this restriction seems to have been removed or neglected; for we find M. Claudius Marcellus, consul in 152 B.C., placing his own statue in the temple of Honos and Virtus founded by his grandfather (Ascon. *in Pison.* p. 12), and L. Fabius Maximus, as curule aedile in 56 B.C., erecting on the Fabian archway a statue of himself (*C. I. L.* i. p. 278; Mommsen, *l. c.* 434, 435). The setting up of the busts and statues of one's forefathers in public seems never to have been forbidden; Pliny, in tracing the origin of the *clipei*, tells us that Appius Claudius, consul in 307 B.C., set up medallions of his ancestors in the temple of Bellona which he had built, with the *tituli honorum* beneath them (Plin. *H. N.* xxxv. § 6), and in the second century B.C. we find the portraits of ancestors taking their place on Roman coins (Mommsen, *Römisches Münzwesen*, p. 462). It is probable that an exhibition of this sort was held by the same standing right as the exhibition in the atrium of those who satisfied the conditions of the *Jus imaginum;* and that therefore it did not require the consent of the state. But the community or the senate might order the setting up of a statue of those who had filled no magistracy, but had done some signal service to the state. Such statues were granted to Horatius Cocles and Cloelia (Liv. ii. 10; ii. 13); and to the boy Aemilius Lepidus by a decree of the senate (Val. Max. iii. 1, 1). Under the Empire, the *princeps* has a standing right of having his statue set up in any public place during his lifetime, and of granting a similar privilege to any officer or magistrate, as Tiberius granted it to Sejanus (Tac. *Ann.* iv. 2, 4; 74, 3). To the emperor's statue, and even to his head on coins, a peculiar sanctity attached; to clasp his imago was equivalent to taking sanctuary, and this right of asylum led to abuses which claimed legal restraint (Tac. *Ann.* iii. 36, 1; Furneaux's note, Gai. *Inst.* i. 53; Mommsen, *Staatsr.* ii.^{2} p. 737, n. 1). The right of individuals to have statues during their lifetime was also extended under the early principate. Augustus ordained that with the honour of a triumph or triumphal ornaments should be joined the erection of a bronze statue of the triumphator (Dio Cass. lv. 10); while Claudius permitted the same honour to those who had built or restored a public building at their own cost (*ib.* lx. 25). But, since the permission to have the triumphal insignia as well as to erect buildings for public uses had to be gained from the senate, the permission to have a statue practically depended on the will of this body, or rather on the will of some member of the ruling house who guided their decisions (Mommsen, *Staatsr.* i.^{2} p. 438).

IM'BRICES. [TEGULA.]

IMMU'NITAS. Immunitas means an exemption from burdens imposed by the state; *munus*, according to the definition of Paulus (Dig. 50, 16, 18), is an "*onus*, quod cum remittatur, vacationem militiae munerisque praestat inde immunitatem appellari." Such a remission might either be granted to individual citizens of a special state from some or all of the munera imposed by that state, or to classes of individuals throughout the Roman world; or the immunitas might take the form of special exemptions granted to whole states from certain duties which they owed to Rome: and in this, its most usual form, immunitas is generally equivalent to exemption from tribute.

This immunity conferred on states was, in the earlier Roman Empire, inseparable from the idea of *societas*, and was not regarded as a special privilege conferred on certain favoured communities amongst the socii. According to the old Roman principle, alliance with Rome excluded *stipendium* of any kind. This was not only the case with the Italians, but with the allied states out of Italy. In any classification the *foederatae* and *liberae civitates* invariably appear as *immunes* [see SOCII]. It is true that in the less organised portions of the Roman Empire the assertion that a nation was free did not necessarily imply that it was *immunis;* on the conquest of Epirus in 167 B.C., though all the Illyrians were declared *liberi*, only some were declared "non solum liberi sed etiam immunes" (Liv. xlv. 26). But the general principle of the taxation of free civic communities did not begin until the period of the later Republic or the early Empire. We find it in the case of Byzantium, which Tacitus describes as tributary (*Ann.* xii. 63), although after the Macedonian war it had been in alliance with Rome and had certainly not been taxed in the early Republic; and in the case of the tributary states of Asia mentioned by Tacitus (*Ann.* ii. 47), two of which, Magnesia ad Sipylum and Apollonidea, were *liberae* (Strabo, xiii. p. 621; Cic. *pro Flacco*, 29, 71). This change is specially noticeable in the East, and probably originated with Pompey's organisation of Asia. Henceforth immunitas was not a necessary accompaniment of autonomy nor even of the *Latinitas* which was conferred on states in the last century of the Republic and in the Empire (Mommsen, *Staatsr.* iii. p. 684 ff.; Marquardt, *Staatsverw.* i. p. 354 ff.); and the immunitas of states became more of an exceptional political privilege. Sometimes it was a special immunity, such as the *beneficium* claimed by the state Tyras in Moesia that its citizens should be freed from the port dues of Illyricum (*C. I. L.* iii. n. 781); sometimes a general exemption from all external burdens, such as that enjoyed by Ilium (Dig. 27, 17, 1; cf. Suet. *Claud.* 25). A mode of establishing immunitas for a state was the conferring of the *jus Italicum*, which implied quiritarian ownership of the soil, and consequently exemption from the land-tribute. This was generally done when the state was declared a *colonia*, but a colonia so created did not necessarily possess this right (Dig. 50, 15, 8, 6, "Divus Antoninus Antiochenos colonos fecit salvis tributis"), although a partial immunitas might be conferred upon it (Dig. *ib.* "Divus Vespasianus Caesarienses colonos fecit non adjecto ut et juris Italici essent, sed tributum his remisit capitis: sed divus Titus etiam solum immune factum interpretatus est"). Many states in Lusitania, Gaul, Germany, Syria, and

Phoenicia, were coloniae and had the *jus Italicum* (Dig. *l. c.*).

The immunitas which was conferred on classes of individuals invariably took the form of an exemption from local burdens, which was granted by Rome either to Romans or to the members of the particular state by which the burdens were imposed. In the leges by which Rome recognised the position of free states she often claimed exemptions for classes of her own citizens; thus in the Lex Antonia de Termessibus the publicani of Rome are exempted from the portoria of Termessus (*C. I. L.* i. n. 204, ii. 35): and the Roman soldiers in the Empire were exempt from duties on all goods which they might carry into or purchase in the provinces for their own use (Tac. *Ann.* xiii. 51; Cod. iv. 61, 3). For another class of munera, personal duties, such as that of being a *tutor*, a limit of age was fixed after which exemptions were permitted (Dig. 50, 6, 4). But, besides such special exemptions, general immunities from local burdens were granted to classes of citizens. Thus during the Empire, and probably by an edict of Augustus, all who belonged to the senatorial order, *i.e.* senators and their direct descendants, were freed from the munera of the community to which they belonged (Dig. 50, 1, 22, 5). They were also freed from the necessity of undertaking its *honores*, which in the municipia were generally regarded as munera, but they retained their position as members of their native state, and were at liberty to fill the local magistracies if they pleased (Dig. 50, 1, 23, "municeps esse desinit quantum ad munera, quantum vero ad honores retinere creditur originem"). Great difficulty was experienced, from an early period of the Empire, in finding citizens willing to undertake public duties in the Italian and provincial towns (see Lex Malacitana, *C. I. L.* ii. n. 1964, c. li.), and the classes of those who claimed an exemption from such burdens (*excusatio municipalium munerum*) were closely scrutinised and were constantly being narrowed. The effective grounds of such *excusatio* were various. One was the number of children possessed by the claimant, another the exercise of certain professions which required release from state burdens "ut necessariam operam publicis utilitatibus exhiberent" (Dig. 50, 6, 6, 12): thus merchants and ship-owners who supplied the state with corn, conductores vectigalium, and certain collegia and corpora of artisans were excused such duties, and a general exemption was granted to rhetors, philosophers, grammarians, and physicians practising their profession in their native state and in Rome (Dig. 27, 1, 6, 8; 50, 6, 6, 12;—Cod. 10, 47 and 48).

Special immunities might further be granted to individuals: the right to confer such immunities was one that Rome reserved to herself both in the foedera and in the laws other than foedera which regulated the rights of her allied states. Exemption from military service was the most frequent of these privileges which she conferred (Lex Jul. Munic. *C. I. L.* i. n. 206, l. 93, "vacatio rei militaris ex foedere," Liv. xxiii. 20, 2), but the power extended to other munera as well, and in the Lex Acilia Repetundarum of 123 B.C. "militiae munerisque publici in sua civitate vacatio" was conferred on any Latin who might convict a Roman citizen under this law (*C. I. L.* i. n. 198, c. 79). During the Empire the exemption from tribute to Rome might be conferred, in an individual case, by a beneficium of the princeps (Suet. *Aug.* 40).

The acts conferring such immunities on states or individuals were called *beneficia* (Cic. *Phil.* i. 1, 3; 7, 17; ii. 36, 91;—Dig. 50, 15, 4, 3); they were, during the Republic, ordained or ratified by a decree of the people (Cic. *Phil.* v. 4, 10), and were revocable if they were no part of a sworn *foedus*. Some immunities of free states might be recalled by the senate through the terms of the lex data (Lex de Term. ii. 6, "ne quis magistratus milites introducito, nisi senatus nominatim decreverit"), and in the case of a foedus being rescinded or libertas being recalled the immunitates they conferred were necessarily lost (Suet. *Tib.* 41). In the Empire such beneficia were conferred by the princeps, and the legal principles regulating them were, that they might be resumed again by the princeps who conferred them, and that their validity ceased with the princeps who had granted them (Mommsen, *Staatsr.* ii.^{2} p. 1126 ff.). This latter principle was instituted by Tiberius (Suet. *Tit.* 8) and continued down to Titus, who introduced the change of conferring all such grants by a single edict (Suet. *ib.*). This principle was followed by later emperors; but this did not exclude special investigation of the grounds of certain exemptions, for instance that of Tyras by Severus (*C. I. L.* iii. n. 781). Prescription was not in every case sufficient to establish a baseless immunity (*C. I. L.* l. c. "nec facile quae per errorem aut licentiam usurpata sunt praescriptione temporis confirmentur"), but the principle was finally developed that immunities granted to states were understood to continue to subsequent generations (Dig. 50, 15, 4, 3). Personal immunities granted to individuals ceased in most cases with their death ("cum persona extinguuntur," Dig. *l. c.*; cf. Dig. 50, 6).

(Mommsen, *Römisches Staatsrecht*, ii.^{2} p. 1126 ff.; iii. p. 684 ff. and p. 474; Marquardt, *Römische Staatsverwaltung*, i. pp. 354–358; Madvig, *Verfassung und Verwaltung des römischen Rechts*, i. p. 84.) [A. H. G.]

IMPE'NDIUM. [FENUS.]

IMPERATI'VAE FERIAE. [FERIAE.]

IMPE'RIUM and IMPERA'TOR. Imperium is the name of the power attaching to the higher magistrate of the Roman People, as soon as he has been fully installed in office by the passing of a Lex Curiata. It is qualified by the nature of the office to which it appertains (Mommsen, *Staatsr.* ii.^{3} p. 845): we have a kingly imperium, a consular imperium, a praetorian imperium, and a dictatorial imperium. In all cases it includes the capacity for both civil and military command. The praetor, for instance, is equally qualified to take command of an army and to administer justice between the citizens; he does both by virtue of the imperium of his office. The details of the manner in which the imperium operates in the processes of Roman Law will be better discussed under JURISDICTIO. Here we have rather to consider the historical and constitutional aspects of the question.

Imperium domi et militiae.—Instead of dividing (as modern states commonly do) the functions of civil and military command, the Romans merely distinguished locally two spheres of administration. Outside the walls (*militiae*, "on service") the imperium exists in all its fulness. Its civil and military powers are exercised at pleasure by every provincial governor. Inside the walls (*domi*) the imperium is, under the Republic, limited by various restrictions; it is subject to the *intercessio* of a colleague, to *provocatio ad populum*, and to extinction by the lapse of the period of time assigned to the office. From the year 494 B.C. the imperium at home is likewise crossed by the rival power of the magistrates of the plebs. From all these restrictions the imperium abroad is free. The difference between the two is not sufficient to make military rule absolutely impossible in the city. On the occasion of a triumph the magistrate (unless he be stopped by a tribune) rides with his army through the street. When the city is actually attacked, it must of course be defended by men enrolled under military discipline, and to the magistrate with imperium the command of these men would necessarily belong; unless, however, he got rid of *intercessio* and *provocatio* by being nominated dictator, he would be somewhat hampered in the exercise of that command. But under ordinary circumstances the distinction between the two localities was enough practically to exclude military government from the space within the walls, to confine the magistrate "at home" to the civil functions of his imperium, and so to justify the verbal opposition of *domi* and *militiae*.

The magistrate legally qualified to act both *domi* and *militiae* was further bound by constitutional custom not to confuse the two spheres, but to mark his entry on the freer field of authority by a solemn exit under special auspices, by the change of dress in which he laid aside the gown of peace for the crimson mantle (*paludamentum*), and by the assumption of the axes which symbolised his enlarged powers. Under the regulations of the later Republic, the occasions on which he was to transfer himself from the one field of government to the other were not left to the discretion of the magistrate, but were marked out for him by the law. The praetor, for instance, who has the *urbana provincia* assigned to him, must remain at home administering justice. Under Sulla's regulations the same appears to have been the case with the consuls, unless the contrary was ordered by a senatusconsultum "ut exeant paludati" (Cic. *ad Fam.* viii. 10), which again could be frustrated by the veto of a tribune. On the other hand, this march out must not be put off too long. If the magistrate allows the last day of his year of office to pass while he is still within the walls, his imperium will lapse along with his magistracy. Probably Sulla's law prescribed a precise time in the December of each year for the ceremony. These points are best illustrated by the situation described in Cicero's speech *de Provinciis Consularibus*, ch. 15; and fully discussed in Mommsen's monograph entitled *Rechtsfrage zwischen Caesar und den Senat*.

Acquisition of the Imperium.—It would perhaps be going too far to say that the imperium was conferred by a Lex Curiata. We find consuls who have failed to obtain this nevertheless holding the senate and conducting the general business of chief magistrate at Rome. It seems to follow that by virtue of their election they can exercise much of the power of their office, and it is that power which is called imperium. Nevertheless it is clear that some of the main functions appertaining to the imperium could not properly be performed unless the magistrate were empowered by a Lex Curiata. Without this the praetor could not sit in judgment (Dio Cass. xxxix. 19), the consul could not hold the assembly for the election of his successors (Dio Cass. xli. 43) nor triumph after a victory (Cic. *ad Att.* iv. 16, 12). It even seems that he could not without it properly take the command of an army at all ("consuli, si legem curiatam non habet, attingere rem militarem non licet," Cic. *de Leg. Agr.* ii. 12, 30). Such rules might, however, be evaded. The Agrarian Law of Rullus (B.C. 63) provided indeed first that a Lex Curiata should be passed for the commissioners, but ordained further that if it were not passed its effects should nevertheless accrue to them. (Cic. *ib.* 11, 28, "quid postea si ea lata non erit? . . . tum ii decemviri, inquit, eodem jure sint quo qui optima lege.") This provision, though Cicero speaks of it as monstrous, could be inserted in any law or plebiscitum creating an extraordinary command. Even in the case of the consul, it was held that the law of Sulla practically dispensed with the necessity for his getting a Lex Curiata before he took command of his province and army. Appius Claudius, consul in 54 B.C., who had been prevented by tribunician intercessio from passing his Lex Curiata, declared nevertheless (Cic. *ad Fam.* i. 9, 25), "se, quoniam ex S. C. provinciam haberet, lege Cornelia imperium habiturum quoad urbem introisset." The law of Sulla manifestly only repeated the old doctrine [see MAGISTRATUS] that the magistrate *cum imperio*, though he may be prohibited from exercising his power except in his own provincia, does not lose it (however long the lapse of time) till he comes again within the city walls. But as the law says, "totidem litteris," that he is to be "cum imperio," this is held by Appius to confer the imperium by implication. Cicero, though he thinks that Lentulus may have a fighting case if he wishes to dispute the claim of Appius to supersede him, nevertheless is clearly of opinion that this claim is good in law ("ne id quidem valde dubium est").

Collision of Imperium.—The rules as to the collision of imperium, when two magistrates, inferior and superior, are acting in one sphere, are the same as those for the collision of auspices [see MAGISTRATUS]. When two magistrates of equal power are acting together "at home," their relations are ruled by the principle of intercessio [see MAGISTRATUS]. As the imperium outside the walls is not subject to intercessio, a different principle there obtains. Two equal magistrates must either agree between themselves who is to command (Liv. xxii. 30, 4), or must divide the army between them (*ib.* 27, 9), or must take command alternately (*ib.* 27, 6). In any case there is always some one whom each soldier is bound to obey without question or interference.

Transition to the Principate.—After the Second Punic War the assignment of definite districts to each single magistrate becomes the rule, and a double command is rare. Each magistrate or pro-magistrate *cum imperio*, having now his locally defined province, is commonly bound not to interfere with his colleagues by exercising any authority in their districts. Nevertheless we have instances in which a co-ordinate or superior proconsular power is committed to a person other than the proper governor of a province. This *infinitum imperium* is ascribed by Cicero (*in Verr.* ii. 3, § 8, and iii. 91, § 213) to M. Antonius, praetor of 74 B.C., who was commissioned against the pirates. Pompey received it for the same purpose by the Gabinian Law (B.C. 67). Pompey had an "aequum imperium cum proconsulibus" (Vell. ii. 31) on any ground within 50 miles of the sea. At a later period (B.C. 57) the *imperium infinitum* was again granted to Pompey as curator of the corn supply of Rome, and it was even proposed, though not carried, to give him a *majus imperium* over that of the ordinary governors (Cic. *ad Att.* iv. 1, 7). Such a superior command was actually voted to the proconsuls Brutus and Cassius in the last days of the Republic. (See Mommsen, *Staatsr.* ii.^{3} p. 655.)

The general rule, that the magistrate must govern his province personally, was also broken through in favour of Pompey. From the year 55 B.C. till Caesar's victory at Ilerda in 49 B.C. he was proconsul of Spain; yet he never set foot in his province, but governed it through legati, while he remained at Rome. In the year 52 he was both consul and pro-consul; for the remaining years he was specially exempted from the rule that the imperium of the pro-magistrate must lapse, as soon as its holder comes within the city walls.

Pompey set a yet more notable precedent for the system of the Principate, when he lent to Caesar for service in Gaul a legion which had pronounced the *sacramentum* in his name. The soldiers so lent owed allegiance to Pompey even while serving in Caesar's army; and when the senate required each of the two proconsuls to send a legion for service against the Parthians, Pompey offered as his contribution that one which was in Caesar's camp. Caesar at once acquiesced in the demand.

Proconsulare Imperium of the Principate.—In B.C. 27 the senate assigned certain provinces to Augustus. He governed them, as Pompey had done, by means of legati, who were invested with the subordinate imperium *pro praetore.* The Emperor remained in the city without forfeiting his proconsular imperium, although it is not clear whether the latter could be exercised over the city itself. Besides his proconsular authority over his own provinces, Augustus had an "infinitum imperium majus," concurrently with his brother proconsuls in the senatorial provinces (Dio Cass. liii. 32, 5; cf. also the case of Germanicus, Tac. *Ann.* ii. 43). The *infinitum imperium* was especially convenient for the command of the fleet which was concentrated in the hand of Augustus. Lastly, every soldier in the empire had pronounced the sacramentum "in verba Caesaris Augusti." The precedent of Pompey's Gallic legion was extended to the whole army: all were soldiers of the Emperor. He either commanded them personally or by his legates, or else lent them to his colleagues in the Proconsulare Imperium or to the proconsuls of the senatorial provinces. Germanicus in Germany and Blaesus in Africa have each an independent imperium, but have only borrowed troops. They may command them in the field, but the Emperor retains the sole appointment of the officers, the sole charge of the recruiting, and the sole right to discharge men from the service. If these powers are ever exercised by another person, it is only by delegation from the Emperor (Mommsen, *Staatsr.* ii.^{3} pp. 848–851).

The Emperor being regarded as continually a general at the head of his army, not only keeps the insignia commonly associated with the name of Imperator, the laurel wreath and laurelled fasces, but has various prerogatives which may be deduced from those of the Republican general. The guard of honour which escorted the commander in the field attends the Emperor at home, and becomes the garrison of the town of Rome. [See PRAETORIANI.] The power of the general to settle his invalided veterans on the lands he has conquered (as Scipio did at the Spanish Italica: Appian, *Hisp.* 38) is interpreted as conferring on the Emperor the right to grant away the *ager publicus;* and the power of rewarding good service on the part of the auxiliary soldiers by the gift of citizenship (Cic. *pro Balbo*, 8, 19) develops into the right to make Roman citizens at will.

It is noticeable that the *proconsulare imperium,* though it was in truth, as Mommsen says (*Staatsr.* ii.^{3} p. 840), "the single definite qualification absolutely necessary to the Princeps, and further sufficient by itself alone to constitute the office," is never mentioned by Augustus himself in the account of his own offices and powers, which is preserved to us in the Monumentum Ancyranum. The assignment of provinces was undoubtedly within the competence of the senate, and it was now held (in extension of the theory propounded by Ap. Claudius) that the senate might therewith confer the power necessary for their government. The official silence gives us to understand that it was a mere matter of administrative arrangement that the charge of certain provinces and armies with the proconsular imperium thereto appertaining was committed to Augustus. [PRINCEPS.]

Title of Imperator under the Republic.—Imperator means, of course, "one possessed of the imperium." Strictly speaking, then, the title should be equally applicable "at home" and "on service." But from a very early period it was felt to be "uncivil" in the magistrate to flaunt his authority in the face of his fellow-citizens at home. The nickname of Imperiosus applied to a Manlius who had unduly magnified his office (Liv. vii. 4, 3) shows the invidious associations of the word. Hence the title of Imperator is never assumed by the magistrate discharging civic functions, nor is the word ever used to describe him. In the army, on the other hand, "Imperator" is the regular mode of address of the soldier to the magistrate under whom he is serving. It is quite clear from Liv. vii. 10, 10, and vii. 16, 5, that this address was used from the first moment that the general took the field, and not only after a victory. The same may be gathered from Appian's story (*Bell. Civ.* iv. 40) of a proscribed man, Rheginus (who had never, so far as we know, won a victory or enjoyed a triumph); one of his old soldiers is described as recognising him with the words: *Ἄπιθι χαίρων, αὐτοκράτορ· τοῦτο γάρ μοι προσήκει καὶ νῦν καλεῖν σε.*
