SACRA (the plural of *sacrum* = anything dedicated to the gods) is the general Roman term for worship, including the ritual observed in it, the utensils used in it (Ov. *Am.* iii. 13, 28), and even the documents which preserved the memory of the ritualistic usages prescribed for it (cf. e.g. Cic. *de Legibus*, ii. 8, 19 and 20; Varro, *L. L.* v. 50, "in sacris Argeorum scriptum est sic").

Roman writers distinguish two kinds of *sacra* within their own state, viz. *sacra publica* and *sacra privata*. As the limits of the state became extended, many foreign worships were introduced into Rome, while the inhabitants of *municipia* retained their own *sacra* under Roman protection (Festus, s. vv. *peregrina sacra* and *municipalia sacra*); but as all these were included in the *sacra publica*, the rapid growth of the Empire and the social changes accompanying it did not affect the validity of the main distinction, which may be recognised as holding good for all periods of Roman religious history. It may be succinctly explained in the words of Festus (p. 245 a), which were probably themselves drawn by Verrius Flaccus from the books of the *pontifices*: "Publica sacra quae publico sumptu pro populo fiunt, quaeque pro montibus, pagis, curiis, sacellis. At privata quae pro singulis hominibus, familiis, gentibus fiunt." From this definition it seems probable that under the head of public worship were reckoned all rites undertaken by the state as a collective whole, or by such divisions of the state as worshipped collectively (Marquardt, *Staatsverwaltung*, iii.^{2} 120, note 1 and reff.); while private worship was understood as including all other rites, whether on behalf of individuals, households, or even *gentes*. The *sacra gentilicia* have indeed by some been considered to belong to the public worship (Savigny, *Vermischte Schriften*, i. p. 173 foll.; but cf. p. 203, where this view is retracted); but the worship of the *gens* must undoubtedly be taken as analogous to that of the *familia* (Liv. v. 52, 4), as in neither case was there any rite in which the whole number of familiae or gentes took part at one and the same time. It will be sufficient to give some illustrations of the nature of the rites included under the two main divisions, following the indications afforded by the passage of Festus quoted above. We begin with the *sacra privata*, as first in time, though not in importance.

SACRA PRIVATA.—Festus distinguishes three kinds: *pro singulis hominibus*, *pro familiis*, and *pro gentibus*.

1. *Pro singulis hominibus.*—It is by no means clear what rites are to be reckoned under this category. All *sacra solennia* would naturally in early times have as their object the welfare, not of the individual, but of some organic group of individuals. Of prayers and sacrifices however, performed by an individual for his own benefit, we have examples (*e.g.* in Verg. *Aen.* vi. 51, viii. 71; Plin. *H. N.* xxviii. § 10; cf. Arnobius, *adv. Nat.* iii. 43); but these as a rule refer to worship in the field or under peculiar circumstances, in which the individual was temporarily separated from his family, gens, or state, and the remarkable prayer of Scipio in Liv. xxix. 26 is of this kind; yet it is to be noticed that he is here representing not only himself, but his army and the whole Roman people. With prayers are constantly associated *vota*, as in *Aen.* vi. 56–75: these are more natural to the individual, and may be illustrated abundantly by the votive tablets of the later Roman age (see Wilmanns, *Exempla Inscr. Lat.* vol. ii. p. 498 foll.).

2. *Pro familiis.*—Each family was a religious unit of which the paterfamilias was the priest, and the special gods were the Lares (or more properly the singular Lar) and the Penates; the former probably representing the primeval ancestor of the family, and the latter being the protecting deities of the *penus* or store-room of the household. To these daily invocations were offered and also libations at meals; and on all *feriae privatae*, such as the anniversaries of births, the kalends, nones, and ides, and on the Saturnalia, their images were adorned with garlands. The family also had its festivals of mourning, such as the Caristia and the Parentalia in February,

when the tombs of deceased members were visited and certain rites performed there. Lastly, for the benefit of the family and its property, the greater gods were invoked, as may be seen in the form of domestic field lustration preserved in Cato (*de Re Rustica*, 141), where Janus, Jupiter, and Mars, especially the latter, are besought to protect the crops and herds.

All *sacra pro familiis* were imperishable except by the extinction of the family: hence in Roman law the inheritance of a dead man's property involved the acceptance of his sacra, and the phrase *hereditas sine sacris* became a proverb for extraordinary good luck. Accurate rules were supplied in the *jus pontificium* for the devolution of the sacra to heirs of various degrees under various circumstances (see Cic. *de Legibus*, ii. 19–21; Savigny, *op. cit.* p. 153 foll.). The general principle of their succession is thus stated by Cicero (*Legg.* ii. 19): "De sacris autem . . . . haec sit una sententia, ut conserventur semper et deinceps familiis prodantur, et, ut in lege posui, perpetua sint sacra."

3. *Pro gentibus.*—Though familia and gens are words loosely used and often interchanged in Roman literature (cf. Marquardt, *Staatsverw.* vol. iii. ed. 2, p. 130), it is not difficult to distinguish the *sacra gentilicia* from those of the family. They belonged, however, only to patrician gentes (Liv. x. 8, 9), which were the only groups properly so called; and as these gradually died out, their sacra disappeared with them. Thus Gaius (iii. 17) writes of the whole jus gentilicium as obsolete in his day. But there is little doubt that in early times each gens had its own particular place and day for the performance of its sacra: *e.g.* the gens Fabia had a fixed day for a sacrifice on the Quirinal, which was performed by a leading member of the gens (possibly called flamen) *in cinctu gabino* (Liv. v. 46, xxii. 18; Dion. Hal. 9, 19; Cic. *Harusp. Resp.* 15, 32). Each gens originally no doubt had also a common burial-place (Cic. *de Legibus*, ii. 22, 55; *Offic.* i. 17, 55; *de Domo*, 13, 35). It should be added that certain gentes had special worships in their charge ("sacra certis familiis attributa"; Festus, p. 253, where *familiis* is used for *gentibus*): thus the gens Nautia had the care of the sacrae Minervae, the Potitii and Pinarii of those of Hercules, the gens Julia of that of Apollo; but these worships were rather of a public than a private character, *i.e.* they were state worships entrusted to a particular gens (Mommsen, *Staatsrecht*, iii. 19). All sacra privata, it should be noticed, were under the supervision of the pontifices, who were the sole referees in all questions arising out of the jus familiare and the jus gentilicium (Cic. *de Legibus*, ii. 12, 30). See GENS.

SACRA PUBLICA.—In the passage of Festus already quoted these are defined as "quae publico sumptu pro populo fiunt, quaeque pro montibus, pagis, curiis, sacellis." In this definition we see a twofold division: *i.e.* into 1. The public festivals of the calendar, conducted on behalf of the state by its priestly colleges; and 2. Those in which the local communities which had at one time formed divisions of the city took part as a collective whole, though worshipping independently of each other. In each case it should be noted that the rites thus called sacra publica are distinguished from sacra privata, in that they do not belong to independent groups united by real or supposed kinship, but to political divisions of the state or to the state as a whole.

1. *Sacra pro populo.*—Of these, which comprise the whole cycle of the religious festivals of the year, with the exception of one or two to be mentioned under the next head, nothing need be said here, and the student is referred to the various articles which treat of them more particularly. Their distinctive features as compared with the other division of sacra publica are—1. That they were maintained at the expense of the state (*publico sumptu*). 2. That they were conducted in the earliest times by the rex or by the ministers of religion who acted for him, and in later times by the rex sacrificulus, the flamines, or by one or other of the four principal religious colleges.

2. *Sacra popularia* (Festus, ii. 5, 3).—These, as we have seen, are described by Festus as being "pro montibus, pagis, curiis, sacellis." A brief account may be here given of the sacra belonging to each of these divisions, so far as their nature can be ascertained.

a. Pro montibus.—One of the ancient and obscure local divisions of the early state was that into Montes and Pagi, *i.e.* the dwellers in the original seven hill settlements on the Palatine and Esquiline, and the dwellers in the open country belonging to the state (Cic. *de Domo*, 28, 74; Mommsen, *Staatsr.* iii. 112 f.). The common festival of the former was called Septimontium, or Septimontiale sacrum (Suet. *Domit.* 4), and appears in the ancient calendars as Agonalia; it took place on Dec. 11 (*C. I. L.* vol. i. 407). Of the sacrum itself we only know that the flamen Palatualis made an offering on this day, doubtless to Pales, on the Palatine hill; and according to Plutarch, *Quaest. Rom.* 69, that no vehicles were allowed to be used in the old city during the festival,—a survival which is doubtless explained by reference to the crowded and narrow alleys of the town as compared with the open character of the pagi. As festivals of the Montani may perhaps be reckoned also the Laralia or feast of the Lares compitales (cf. LARES) and the Parilia of April 21, the festival of the foundation of the Palatine city: cf. Festus, p. 253.

b. Pro pagis.—These, as might be expected, are of an agricultural character; but it should be noted that what we know of sacra paganalia is derived not from the accounts of the ancient Roman pagi, but from information as to the Italian pagi of later times. To the sacra of these belong the *Sementivae*, varying in date according to the season (Ovid, *Fasti*, i. 657 f.); the *Ambarvalia*, at the end of May, otherwise called Lustratio pagi (cf. AMBARVALIA and LUSTRATIO); and the *Terminalia* or feast of boundaries, at the end of the year (Feb. 23). There can be little doubt that these festivals or their equivalents were among the sacra of the ancient Roman pagi, and were presided over as in Italy generally by a magister pagi, together with his wife the magistra pagi (cf. Marquardt, *Staatsverw.* iii. 198).

3. *Pro curiis.*—For the two festivals which specially belong to the Curiae, see articles FORDICIDIA and FORNACALIA.

4. *Pro sacellis* [see ARGEI].—These sacella can hardly be other than the sacella or sacraria argeorum, which were probably twenty-four or twenty-seven chapels or shrines situated at various points in the four Servian regions of the city.

That these sacella were the centres of ancient divisions of the city, possibly for religious purposes, is highly probable; all we know of them is in the form of citations by Varro (*L. L.* bk. v. 45 foll.) from the "Sacra Argeorum," which was apparently a processional itinerary, and probably also a rule of ritual performance. What was done at the sacella we do not know: a procession seems to have gone round them on March 16 and 17; but it had become so obscure by Ovid's time that he could dispose of it in his *Fasti* in two lines, leaving it somewhat uncertain whether it took place on one day or two. Nor can we be at all sure as to the relation of these rites to the better known Argean procession of May 15. (See ARGEI; and Mommsen, *Staatsrecht*, iii. 122 foll.; Jordan, *Topographie der Stadt Rom*, ii. 237 foll.) [W. W. F.]

SACRAMENTUM. [JUSJURANDUM; VINDICIAE.]

SACRA'RIUM was, according to the definition of Ulpian (Dig. 1, 8, 9, § 1; cf. Serv. *ad Aen.* xii. 199), a place in which sacred things were deposited and kept, whether this place was a part of a temple or of a private house. (Cf. Cic. *Verr.* iv. 3, 5; *ad Fam.* xiii. 2; Suet. *Tib.* 51.) In a temple it was probably, as Marquardt thinks, directly behind the wall of the *cella*, and only the priests could enter it (*Staatsverwaltung*, iii. 168). Thus in the sacrarium of the Capitoline temple the *thensa Jovis Opt. Max.* was kept (Suet. *Vesp.* 5); the *hastae Martis* in the sacrarium of the REGIA; the lituus of Romulus and the ancilia (probably) in the *sacrarium Martis* or *curia Saliorum* on the Palatine [SALII]. Sacrifices also were offered in the sacrarium of Ops Consiva (in the Regia), but they were not open to the public, since into this as into other sacraria those only could enter who held a sacred office. We may perhaps attach a similar significance to the fact that Varro (*L. L.* v. 45) calls the twenty-four chapels of the Argei *sacraria*, not *sacella*. They were chapels covered in from the public gaze, in which the sacred figures were kept, and into which in the processions *ad Argeos* the priests alone entered. Livy (i. 21) gives the same name to a shrine of Fides, to which it appears that he in his priestly office and the flamines alone had access: Tacitus alone uses it of the shrine in which an image was kept for the cult of Augustus at Bovillae (cf. Stat. *Silv.* v. 1, 240). Respecting the sacrarium or lararium of private houses, see LARARIUM. [L. S.] [G. E. M.]

SACRIFICIUM (θυσία) = that largest part of ancient worship which usually consists in presenting to a deity some object on which human life is supported, or even human life itself. Both the Greek and Latin words exclude the idea of the presentation of gifts in the shape of *inanimate* objects, however valuable; the reason for this probably being, as we shall see, that there is in this latter case no notion of communion between the god and the giver, as in the case of the gift of a meal. It will serve, however, to clear the ground, if we briefly indicate the nature of these inanimate votive offerings. Such were, *e.g.*, the treasures of all kinds deposited in Greek temples, and including especially the objects of art so frequently described by Pausanias. These are mentioned in Homer (*Od.* xii. 347), and are found throughout Greek history, though it should be observed that by a natural process, as temples became treasures of a state, they lost their character as the property of the god, and became rather (except in the temples common to all Hellas, *e.g.* at Olympia and Delphi) the property of the state under the god's guardianship. So too, at Rome, the word *sacrum* = "quidquid est quod deorum habetur" (Macr. iii. 3, 2), and *sacrificium* in its widest sense meant the dedication of such objects as altar, statues, land, money, utensils, the bodies of criminals, &c.; but the word generally used for this is *consecratio*.

In the same category may be reckoned the dedication of human beings to the service of a god, as at Delphi and Delos (Sir C. Newton, *Essays*, p. 165), or of models of parts of the human body in which disease has been cured (*C. I. G.* 497, foll. 2439, 6332); of coins dropped into wells by convalescent persons, or to procure rain (Paus. i. 34, 3; cf. Tylor, *Primitive Culture*, ii. 195); of children's hair (reff. in Hermann, *Griech. Alt.* ii. 143; cf. Tylor, ii. 364, who suggests that this is a form of substitution, like the models of limbs). Here too may perhaps be mentioned the Athenian Eiresione and the ὄσχοι (vine-branches) of the OSCHOPHORIA, and lastly, though these approach more nearly to the real nature of sacrifice, the offerings of first-fruits and tithes, whether of freewill or under compulsion as a fine (see Hermann, *Griech. Alt.* ii. 142; *C. I. A.* 191, 482; Newton, 115). At Rome also the first-fruits were probably offered in the oldest cults, *e.g.* by the Vestals (Marquardt, *Staatsverw.* iii. 169). All these various gifts are made the property of the god under the primitive idea that he, like kings, could be pleased and appeased by attention, and that to ask him for a favour without a gift was hopeless (*Il.* ix. 493: στρεπτοὶ δέ τε καὶ θεοὶ αὐτοί). The motive, therefore, underlying them is the same as in the sacrifice proper; but the idea of communion is not present in the case of such gifts, and it is his which best differentiates the true sacrifice from the votive offering. Only in the case of piacular sacrifices, which closely resemble the votive offerings, though accompanied by the idea of purification or atonement, does the idea of communion appear to be absent.

Turning to sacrifices in the restricted sense of the word, we find it difficult to arrange them systematically, so as to give the student a clear view at once of their various objects and details. The old division into bloody and unbloody sacrifices is clearly insufficient, since it leaves the object out of view; and it should be noted that in the last few years much progress has been made towards a right understanding of the inner meaning of sacrificial ritual. The best plan is perhaps to follow in the main the division adopted in the *Encyclopaedia Britannica* by Professor Robertson Smith, as being itself based on a wide acquaintance with such ritual among a great variety of peoples, by which alone the ritual of individual races can be interpreted; and as being easily accessible to English readers. We will therefore treat of sacrificing, both in Greece and Italy, as—A. *Honorific*, i.e. meant to please and do honour to the gods, either by way of enforcing a petition, or expressing gratitude (the *Bitt-* and *Dankopfer* of German writers). This class covers by far the greater part of the field. B. *Piacular* sacrifices, which contain the idea of *expiation* and include most cases of human sacrifice known to us in classical antiquity. C. *Sacramental* or mystical sacrifices, which are, however, rare and obscure both in Greece and Italy. An account of the ordinary features of the ritual observed, especially in animal sacrifices, will be reserved for the conclusion of the article.

A. *Honorific Sacrifices.*—These, whether their object were petition or thanksgiving, were originally regarded as a meal for the god in which the worshippers shared, and therefore included edibles only. (For general evidence from a variety of races, see Tylor, *op. cit.* ch. xviii.) That the older Greeks believed that their gods did enjoy the meal is quite apparent in Homer (*Il.* iv. 48, vii. 201; *Od.* iii. 435, *ἦλθε δ' Ἀθήνη ἱρῶν ἀντιόωσα*), and is illustrated in the vase-paintings by the presence of the deity at the sacrifice. Even then, however, it was rather the sweet savour or the pleasant sight (as when the horns are gilt to please Athene, *Od.* iii. 437) that they enjoyed, and the savage idea that they actually devoured the food was left to survive among the wholly rural populations. (Cp., however, *Od.* vii. 201.) Aristophanes, in the *Pax*, could still ridicule the popular belief, which is seen in the offerings to the dead in tombs, and in Italy also to the Lares and Penates (cf. also Lucian, *de Sacrificiis*, 14). But the notion of the communion of god and man in the meal left very distinct traces long after the actual belief had faded; and from the Homeric age, where a big feast and a sacrifice are almost synonymous (*e.g.* in *Od.* iii. 1 foll.), down to the great city festivals of later times, which supplied the population with food at the expense of the state, it is this firmly-rooted idea that governs the whole character of the ritual.

Honorific sacrifices might be either *occasional* or *regularly recurring*. In Homer, where the undisturbed life of family or city is not represented, the sacrifices are occasional and with a definite temporary object. Such too are found in historical times, and at Athens were called *θυσίαι κατὰ ψηφίσματα* (Dem. *de Cor.* p. 301, § 217): they were often suggested by an oracle, or sometimes were the result of a public vow, as before Marathon (Plut. *de Malign. Herod.* 26). At Rome the sacrifices at *supplicationes* would belong to their class [SUPPLICATIO], and also those *ex voto* and those which occurred in family life on birthdays, at admission into the phratria, at funerals, &c. But in Italy the extraordinary sacrifices were most commonly undertaken for the purpose of divination (*hostiae consultatoriae*), according to the lore of the Etruscan Haruspices [DIVINATIO]. These are also found in Greece, but far less frequently, and it has been doubted whether the art was native with the Greeks (Schömann, *Alt.* ii. 275; *Herm.* ii. 241 foll.) or whether it can be traced in Homer. The idea on which this peculiar turn given to sacrifice appears to be based, is that the god was thought to show his goodwill in the victim: *i.e.* the perfection of the parts of the animal was a sign of the god's satisfaction; their imperfection, of his hostility—he refuses the gift. The same idea is seen in the scrupulous exactness, to be described later on, in the choice of the victim for ordinary sacrifice, and in the belief that it was a bad omen if it came *unwillingly* to the altar.

Where honorific sacrifices are regular and recurring on fixed days of the year, they indicate a higher civilisation, and produce a regulated calendar of city life, such as we are pretty fully acquainted with at Athens and Rome; sacrifice forming at all times the chief part of ancient worship. This city sacrificial system is, however, itself developed out of the regular religious life of the family and the gens. In the Roman family, not only on certain days, *e.g.* on kalends and ides, were sacrifices offered to Lares and Penates, but at every meal some portion was cast into the fire as an offering [LARARIUM], and also at birth, marriage, and funerals. The same was the case with the agricultural operations of the family and gens at certain seasons, *e.g.* at the time of sowing, ploughing, and harvest, and especially at the time, as at Rome in May, when the crops were in danger and needed special religious care (LUSTRATIO; Cato, *R. R.* 141), and at the summer and winter solstices. Thus the ancient sacrificial celebrations corresponded generally with the seasons, and have left their mark in this respect on the modern Christian Calendar.

This regular sacrificial system had, we may note, two results, which are important for the religious history of antiquity:—1. The necessity of a trained priesthood to carry on the tradition of ritual. 2. The gradual destruction of the simple and primitive ideas of sacrifice: the age of formality sets in, and the formalism of the cult gradually destroys its original meaning.

These honorific sacrifices consisted either of drink offerings, incense offerings, or of animal and vegetable food. The use of incense, or sweet-smelling herbs, may have been a comparatively late introduction; but of the rest, there is no sufficient ground for supposing one to be older than another, though some ancient authors, and many modern ones, have imagined these animal sacrifices to be of later date than the unbloody (Plato, *Legg.* vi. 782 C; Ov. *Fast.* i. 337; Plin. *H. N.* xviii. § 7; Plut. *Num.* 8; cf. Pauly, *Real. Encycl.* vol. vi. p. 658). The question would be one rather of the practice in each locality, and would depend on the wealth, and the nature of the wealth, in each; *e.g.* in Boeotia, Copaic eels were an article of sacrifice (Athen. vii. p. 297), and Spartan poverty was in some cases content with fowls (Plut. *Inst. Lac.* 25). Anthropological research does not seem to show that the sacrifice of animals is of later origin; and all we can fairly assume is that in Greece and Italy, as wealth increased and bloody sacrifices became more and more synonymous with feasts, these tended to increase both in number and variety. All these kinds of offerings, it should be noticed, are found in use together as well as separately.

Drink offerings.—These include libations of all kinds; which from Homer downwards we find performed, at meals to domestic deities, or on special occasions, *e.g.* the entering into any treaty or engagement (*Il.* iii. 295; cf. ii. 341), by throwing a few drops from the drinking vessel on the hearth and the ground. So also the Greek, before going to rest, poured a libation to Hermes, the god of sleep (*Od.* vii. 136; Buchholz, *Homerische Realien*, iii. 293). Here also belong the Greek χοαί, or libations to the dead (*Od.* x. 518; cf. Verg. *Aen.* v. 77), and the Roman practice of *profusiones*, i.e. pouring libations on the grave, of wine, water, milk, oil, &c. (Marquardt, iii. 312), on stated occasions, such as the Parentalia in February. Libations consisted usually of unmixed wine in historical times; but when wine could not be had, water would suffice, as in *Od.* xii. 363; and in Greece some deities preferred no wine (Aesch. *Eum.* 107), and Hermes liked a mixture (Schol. Aristoph. *Plut.* 1132). The oldest libations, *e.g.* the χοαί, were probably of milk and honey mixed (μελίκρατον) or of milk alone (Eustath. *ad Od.* x. 519; Soph. *El.* 895), or of oil, if the anointing of sacred stones can be reckoned under this head (Paus. x. 24, 5; Theophr. *Char.* 16; Tylor, ii. 151). So too in the worship of the oldest Roman deities *milk* was used, *i.e.* in that of Rumina, Cunina, the Camoenae, Faunus, Silvanus, Pales (Schwegler, *R. G.* i. 421, note and reff.).

Incense offerings.—Originally, as we saw, the gods were thought to be pleased by the sweet savour of the sacrifice; and this notion was acted on as early as the Homeric age in Greece, by employing sweet-smelling wood (θύον, *Od.* v. 59: a species of cedar wood, cf. *Il.* vi. 269, ix. 495; Hesiod, *Op.* 338) for the fire, and at Rome by the burning of sweet-smelling garden herbs (Verg. *Ecl.* viii. 65, and especially Ov. *Fast.* i. 339). The real incense offering was both rare and costly. Incense, however, became an object of trade in later times, when it was the constant accompaniment of animal sacrifices (Arnob. vii. 26). It is said to have come from Phoenicia by way of Cyprus, where it was used in the cult of Aphrodite Ourania (Empedocles in Athen. xii. p. 510; Hesych. *s. v.* θύα).

Offerings of fruits and cakes.—Fruits were offered in Greece chiefly as tithes or toll of the harvest of some crop (ordered by a Delphic oracle, Theopomp. fragm. 283), not only to Demeter and Dionysus (Paus. viii. 42, 5), the especial deities of corn and wine culture, but to others, according to the local belief in their efficacy. At Athens, and probably elsewhere, there were in most temples tables, near the statue of the god, laid out with fruits of all kinds, as well as with cakes, honey, &c. (Aristoph. *Plut.* 678 and Schol.). This practice, the origin of the Roman lectisternia, is also represented on monuments (Martha, *Les Sacerdoces Athéniens*, p. 50; *Bull. Corr. Hell.* ii. 74). Fruits also figure conspicuously in some Athenian festivals, *e.g.* at the OSCHOPHORIA and the THARGELIA, and boys are seen carrying baskets of fruits and cakes in the northern frieze of the Parthenon (Baumeister, *Denkm.* 1382: hence the names κανηφόροι, κερνηφόροι, &c., for bearers of such utensils in various rites; Lobeck, *Aglaoph.* 26 foll.). So also at the PYANEPSIA, or festival of beans (the cheapest food at Athens), not only were these carried about in pots (χύτραι), but an olive-branch (εἰρεσιώνη), laden with various fruits hung on it, was carried in procession, and fixed at the door of the temple of Apollo. At Rome fruits are less often mentioned (for "primitiae frugum" in a general sense, cf. Tibull. i. 1, 13 foll.), but at least, as a rule, the grain or fruit was cooked. Cakes of all kinds were used in abundance both in Greece and Rome, whether combined with animal sacrifices or independently. In Greece these were called πέλανοι, and πέμματα or πόπανα (Lobeck, *Aglaoph.* 1050 foll.), and were especially used in the cult of Apollo, *e.g.* at Delphi and Delos (Müller, *Dorians*, E. T. i. 343); also in that of Zeus at Athens, at the Erechtheia in the Acropolis (Paus. i. 26, 6), and that of Trophonius (a honeycake, μελιτοῦττα, Ar. *Nub.* 506; Paus. ix. 39); and at the Athenian Munychia and in the worship of Artemis a special kind of cake was used, which was surrounded with torches called ἀμφιφῶντες (A. Mommsen, *Heort.* 404). At Rome, cakes were also in common use, especially in the form of the *mola salsa*—i.e. salt-cakes prepared by the Vestal Virgins from the first ears of each harvest, and used at the Vestalia, Lupercalia, and on the Ides of September (Serv. *ad Ecl.* viii. 82)—and of the *liba*, for the making of which under various forms Cato gives receipts (*R. R.* 75 foll.). So important was the making of these on the right method that special *fictores* were employed for this purpose under the orders of the pontifices (Marquardt, iii. 429).

Both in Greece and Italy the practice was common of making substitutes for animal sacrifices out of dough, paste, wax, &c., as we see in the worship of Zeus Meilichios at Athens (Thuc. i. 126), and in the Roman *maniae*, which Aelius Stilo (Fest. p. 129) described as "ficta quaedam ex farina in hominum figuras" (Lobeck, *Aglaoph.* 1080 foll.). These will be referred to later.

Offerings of animals.—These were of great variety, both as regards the animals themselves and the ritual used. It is not necessary to do more than allude at this point to human sacrifices, which for the most part belong either to our second chief division of piacular offerings, or to our third division of mystic or sacramental sacrifices. To this latter class probably belong those rare examples which seem to be survivals of cannibalism, *e.g.* in the worship of Zeus Lycaon in Arcadia and of Dionysus in Chios, and the occasional sacrifice of captives, as when Themistocles sacrifices Persian prisoners at Salamis to Dionysus Omestes (Plut. *Themist.* 13; *Pelop.* 21). The ordinary honorific animal sacrifices consisted mainly of those animals which had been already tamed by man, and used for food, *e.g.* the ox, sheep, goat, pig, and fowl; thus bearing out the theory that the original idea of such sacrifice is that it was a meal shared in by god and man. Where the victim is not one eaten by man, the sacrifice is almost sure to be piacular or sacramental. The local customs as to the choice of animals were of endless variety, and are hard to explain: it was a complete science to learn the predilections of the gods, which varied even at particular periods of the year. As the temple-priesthood developed [SACERDOS], so no doubt the ritual became more complicated, and had, in larger temples at least, to be fixed in writing: of this we have traces in inscriptions both of Italian and Greek origin (see Dittenberger, *Sylloge Inscr. Graec.* 373, 388, and especially the sacrificial calendar from Cos published in *Journal of Hellenic Studies*, vol. iv. p. 323; for Italy, the great ritual inscription of Iguvium, ed. Bücheler, *Umbrica*, and the *Fasti diurni* in *C. I. L.* vol. i.).

The following general principles may be traced amid a crowd of details. 1. As to *sex*. Male victims were usually sacrificed to male deities, and female to goddesses, both in Greece and Italy (Arnobius, vii. 19, "Diis feminis feminas, mares maribus hostias immolare, abstrusa et interior ratio est, vulgique a cognitione remota," &c. This rule held good in Greece so widely (though not without exceptions: see Stengel, *Quaest. Sacrif.* pp. 1–6) that an exception to it at Aulis in the worship of Artemis, which often exhibits abnormal features, gave rise to an explanatory myth (Paus. ix. 19, 5). The same kind of symbolism is seen in the kindred custom of sacrificing a barren cow to the dead (*Od.* xi. 30), with which may be compared the offering of a pregnant cow to Tellus at the Roman Fordicidia (Ov. *Fast.* iv. 631), and of a pregnant sow to Demeter at Mykonos and Andania (Ditt. 373, 388). 2. As to *colour*. White animals were offered to heavenly deities, black to those of the under-world (Arnob. *l. c.*). Thus in *Il.* iii. 103 a white sheep is to be offered to the Sun, a black one to Earth (cf. inscription from Mykonos, Ditt. 373): in *Od.* xi. 33, to Teiresias in the under-world, black sheep. Black victims were offered to Poseidon in *Od.* iii. 1 foll.: but we find also white ones offered him in later times (Ditt. 373). So at Rome, where the importance and difficulty of getting a white victim for Jupiter led to whitening with pipe-clay (Juv. x. 65, "cretatum bovem"). 3. As to *soundness*. This was always demanded, though it could not be always complied with. It is expressly laid down in one of the most valuable ritual inscriptions we have (Ditt. 388, from Andania, line 70) that the animals are to be *εὔιερα, καθαρά, ὁλόκληρα* (cf. Ditt. 373, line 20, and Pollux, i. 26). Hence the elaborate organisation in some cities to secure the proper selection; of which more at the end of this article. 4. *Animals sacred to a deity were not usually sacrificed to that deity*. This principle, which has a totemistic origin, and is found in full working order in many antique religions (*e.g.* the Egyptian and Mexican), probably was a ruling one in Greece in early times, but can now only be traced in survivals which are often obscure. One or two exceptions may be mentioned. No pig, in some places at least, could be offered to Aphrodite (Hermann, p. 150, note 3; Aristoph. *Ach.* 793): at Athens the goat might not be offered to Athene (Athen. xiii. p. 592), whose aegis or goat-skin points to the goat as the totem of the Aegidae or goat-clan, which had the care of her worship. To her were usually sacrificed bulls and sheep, to Zeus bulls or heifers, to Demeter pigs. For a list of the predilections of Roman deities, see Marquardt, iii. 173. In these and other cases of predilections, it is probable that the practice arose from the well-known rule that a totem-clan did not kill or eat its own totem: but as regards Italy and Greece the subject needs further investigation (A. Lang, *Myth, Ritual and Religion*, ii. 70 foll.; Robertson Smith in *Encycl. Brit.* l. c. p. 135). Instances of the sacrifice of the sacred animal to the god to whom it is sacred are probably of the mystical order of sacrifices, and will be mentioned under that head.

These general principles may be said to have held good both in Greece and Italy. Before leaving this subject we may notice that combinations of animals for sacrifice were not uncommon. The best known example is that of the SUOVETAURILIA at Rome, where the ox, sheep, and pig were combined in the worship of Mars (Cato, *R. R.* 141): with this may be classed the *τριττὺς* of the Greeks, a combination of animals, but not always of the same three. (See *Od.* xxiii. 277: ram, bull, and bear, to Poseidon; and cf. Eustath. *ad Od.* xi. 130; Hermann, § 26, note 2.) Lastly, where the proper victims could not be had, substitutes in the form of cakes were sometimes used, as has been already mentioned (Thuc. i. 126, and Schol.: cf. Herod. ii. 47). In Thebes apples with wooden feet and horns to imitate sheep were used in the cult of Apollo (Pollux, i. 30), and a like practice is recorded of the Locrians (Schömann, 219). Such substitution was also known at Rome, and is enunciated clearly by Serv. *ad Aen.* ii. 116, "Sciendum est in sacris simulata pro veris accipi; unde cum de animalibus quae difficile inveniuntur est sacrificium, de pane vel cera fiunt, et pro veris accipiuntur:" cf. Tylor, ii. 367. But these substitutes are more common as survivals of human piacular sacrifice (see below).

B. *Piacular Sacrifices.*—The general idea of the honorific sacrifice was that the gods might be propitiated with gifts, without any sense of sin being present in the worshipper's mind. From these must be distinguished (though the distinction is not always an easy one) those which have as their object the expiation of some sin, generally in early ages blood-guiltiness *within a group of kin*, or of purification from pestilence, &c., brought about by some sin (*Encycl. Brit.* s. v. *Sacrifice*, p. 136; Tylor, ii. 350). The original idea was that this was inexpiable for the defiled kin, save by the death of the slayer. As the practice of substitution was extended, it came to be applied to such cases, and thus we find not only the sacrifice of human beings by no means uncommon both in Greece and Italy, but survivals of it in the form of substitutes, either of animals or of some kind of puppet, or of symbolic actions which indicate an originally real sacrifice. Further, piacular sacrifices for lesser offences, usually a part of a ritual of lustration, are found in later times, especially in Italy. Some examples must be given of each of these classes of expiatory sacrifice.

That the idea of guilt demanding a human life as expiation was not strange to the Greek mind is plainly seen in the myths, *e.g.* in those of Theseus, Orestes, and Iphigeneia (cf. also Eur. *Phoen.* 914, *El.* 1024; Plut. *Pelop.* 21; Verg. *Aen.* ii. 118: where the blood-guiltiness is, however, not in each case clear). At Athens we find it surviving in the THARGELIA, when two men called *φάρμακοι* (Harpocr. *s. v.*) were driven out of the city and stoned; and in a rite found also at Ephesus at a Thargelia of that neighbourhood (cf. Tzetzes, *Chil.* v. 726

foll.; Hipponax, *Fragm.* 4 foll.; Mannhardt, *Myth. Forsch.* 126 foll.). At Rhodes a public victim was sacrificed at the beginning of the month Metageitnion, for whom a criminal was afterwards substituted (Porph. *de Abst.* ii. 54, where other similar cases are given). At Leucas a criminal was sacrificed to Apollo by being cast from a rock: an age of greater humanity supplied him with feathers to break the descent, and rugs to fall on (Strabo, p. 452). A very similar case, as an expiation for pestilence, is recorded from Massilia by Servius (*ad Aen.* iii. 57; Petron. 141). In this case, as in the Mexican and other savage rites, the victim was cherished ("alendus anno integro publicis et purioribus cibis"); and in all these examples they seem to have been adorned with garlands, &c., on their way to death. Sometimes an animal was substituted for the human victim, as at Potniae, where a goat was substituted for a boy in the bloom of youth (Paus. ix. 8, 1; cf. vii. 19, 2 and 3). Occasionally we meet with the rite surviving only in a symbolic act, as in the well-known case of the whipping of Spartan boys at the altar of Artemis Orthia till the blood was drawn. With this may be compared the striking passage, in Eur. *Iph. T.* 1458, where Athene orders the human sacrifice in expiation for the death of Iphigeneia to be commuted for the drawing of blood by a sword. So too, at the Roman LUPERCALIA, the young men were smeared with the victim's blood, which was then wiped off with wool dipped in milk (cf. a curious parallel in Apollon. Rhod. iv. 700 foll., where purification for a murder is effected by smearing the murderer's hands with the blood of a young pig, and then wiping it off). Examples of the substitution of puppets are not wanting, especially at Rome, where the rush-puppets cast into the Tiber in May [ARGEI] are described by Dion. Hal. as resembling men tied hand and foot, and were generally believed to be substitutes for old men (see especially Mannhardt, *Antike Wald- u. Feldkülte*, 265 foll.); and according to Macrob. i. 7, 34, the oscilla or "effigies maniae suspensae" were substitutes for the sacrifice of boys [OSCILLA]. The meaning of these Roman rites is not, however, fully ascertained.

In the Roman religion proper we have no trace of a regularly recurring human sacrifice without substitution, which is doubtless partly owing to the practical sense of the people, to the value attached to human life, and to the bargaining character of their religion, so well illustrated in the story of Numa in Plutarch, *Numa*, 15. It may probably be traced, however, in the *ver sacrum*, in which the first-born of a tribe were devoted to a god, and sent forth from the city (Nissen, *Templ.* 154; Fest. 379); in the rite of *devotio* (Liv. xxii. 57; Marquardt, iii. 279 and reff.); in the spilling of the blood of a gladiator at the feriae Latinae (Tertull. *Apol.* 9; Marquardt, 297); in the *consecratio* of a criminal, who was thus made *sacer* and the property of the gods (Id. 257); and possibly in the *ritus humanus* of the Vejovis cult (Preller-Jordan, *Röm. Myth.* i. 265, and Macrob. iii. 9, 10, where it is noticeable that the formula of *devotio* includes Vejovis) as well as in the examples above given. In Etruria, and perhaps in other parts of Italy, human sacrifice was well known: see Müller-Deecke, *Etrusker*, ii. 20, and Dennis, *Cities and Cemeteries*, i. 422, 478, ii. 506; Gardthausen, *Mastarna*, plate at end of volume.

It is at Rome, however, that the ordinary piacular sacrifices which do not appear to represent substitution for human victims are best seen. There they form a distinct class, and their immediate object was to expiate, even by anticipation, any error or omission in the performance of ritual, or some sacrilege, however slight, such as the bringing of iron into the sacred grove of the Fratres Arvales (Henzen, *Acta Fratr. Arv.* 22, 136–140; ARVALES). Of this kind were the *hostiae praecidaneae*, offered before the main sacrifice, in order to ensure the efficacy of the latter (Gell. iv. 6, 7; Fest. p. 223: the *προθύειν* of Greek ritual seems to have a different sense). Here also belong the piacula of the supplications [SUPPLICATIO], and all sacrifices ordered to be performed after the occurrence of prodigia. It is difficult to say how far the Italian sacrifices of lustration belong to this class, *e.g.* the suovetaurilia; but the *pihaklu* of the Iguvians (Bücheler, *Umbrica*, p. 314) seem to offer a parallel and to bring them within the class (compare the language of the ritual in Cato, *R. R.* 141). Greek examples of piacular sacrifices not substitutes for human offerings are the *χοιροκτόνοι καθαρμοί* of Aesch. *Eum.* 273; the Bouphonia at Athens, of which more hereafter; the holocaust to Zeus Meilichios in Xen. *Anab.* 7, 8; and many others may be found collected in Hermann, ii. § 23, note 19 and foll., and § 28, note 19, and in Schömann, ii. 239. It should be noted that the piacular sacrifices can in general be distinguished from honorific by the fact of the victim being burnt *whole* or not cooked at all, and at Rome by the fact of its not being used for divination. They did not constitute a meal, but were whole burnt offerings, and, unlike the honorific sacrifices, did not always consist of edible animals, but included horses, asses, dogs (to Hecate), &c. See Stengel, *Quaest. Sacr.* pp. 23 foll.

C. *Mystic or Sacramental Sacrifices.*—This is a class which it is hard to deal with, because the sacrifices here had in historical times lost their original meaning, being survivals from an age of which the culture is only to be studied among other races. They are believed to have their origin in the age of totemistic religion, in which gods are formed out of the totem animals. In that age we find—1. That the totem is not sacrificed to the god out of which it was developed, except on certain solemn occasions. 2. That on these occasions the sacrifice is of the nature of a sacrament, the totem being (as in Mexico) eaten by all the worshippers, who thus in a sense partook of the substance of their god. (J. G. Frazer, *Totemism*, reprinted from *Encycl. Brit.*; W. R. Smith, article *Sacrifice*, p. 137; A. Lang, *Myth, Ritual and Religion*, passim.) Here and there a sacrificial rite in Greece indicates a descent from this age: and others, which are less distinctly to be referred to it, may be noticed under the same head.

In the myth of Dionysus Zagreus, the god when captured by the Titans was torn asunder in the form of a bull (cf. Paus. viii. 37, 3.) This myth reflected the nature of his sacrifices. In these, living animals were torn to pieces—

bulls or fawns—and eaten raw by all the celebrants (Lobeck, *Agl.* 653 foll.). The god, as the animal, was once probably the totem of a tribe; and the worshippers danced about dressed up in the skins, *i.e.* took the god-nature upon them. Cf. for a similar practice of tearing to pieces in Chios, Porph. *Abst.* ii. 55; but here the victim was human, and the origin probably cannibalistic. A Roman parallel may probably be found in the Lupercalia, where, after the ceremony of smearing above alluded to, the priests girt themselves with the victims' skins, and, *before* running round the Palatine, partook of a luxurious feast, which may be a substitutory survival of the old god-eating rite. Somewhat similar in character is the well-known worship of Zeus Lycaon in Arcadia (Paus. viii. 2; 38, 5; Plato, *Rep.* 565 D); where the worshippers tasted the sacrifice, but he who ate the morsel of flesh contained in it was changed into a wolf. Cf. the Hirpi Sorani of Soracte (Mannhardt, *Antike Wald- u. Feldkülte*, 330), where another totemic feature is apparent, *i.e.* the wolves were said to have carried off the flesh from the altar. Again, in the Diipolia at Athens, the sacred bull was sacrificed, but the skin was sewn up and stuffed, and all partook of it, "the life of the victim being renewed in those who ate of it" (Porph. *Abst.* ii. 29). This, as Prof. R. Smith (*l. c.*) has pointed out, is perhaps a relic of a form of blood covenant; for the legend of the festival connects the origin with the adoption of a new family by the Athenian citizens.

In this festival of the Diipolia we notice another feature which suggests a totemistic origin, and of which there are one or two other examples in Greek and Roman ritual. Among totemistic peoples it is the deadliest crime to kill the totemistic animal. Where this animal is sacred, the slayer would pay for its death with his life. Thus not the priest indeed, but the axe which slew the bull at the Athenian Zeus-feast, was solemnly tried and condemned (Paus. i. 24, 4). At Tenedos the sacrificer of the booted-calf (Lang, ii. 233) was stoned and driven into the sea (Aelian, *H. N.* xii. 34). Perhaps with this curious ritual may be compared the story of Apollo flying in terror after slaying the python (Lang, ii. 195). Here also probably belongs the mysterious ritual of the Regifugium at Rome, which has been so strangely confused by many. [REGIFUGIUM.]

Another mystical totemistic feature, already alluded to, is the wearing of the skin of the sacred animal. This, which is a very common feature among totemistic peoples, has also left its traces in Greece, *e.g.* in the Bacchic rites, and in Rome at the Lupercalia at least. As in Mexico, the priest frequently also wore the attributes of the god: examples will be found collected in Back, *De Graecorum caerimoniis in quibus homines deorum vice fungebantur*, Berlin, 1883.

RITUAL.—1. *Greek.* The ordinary ritual of honorific sacrifice must now be more exactly described. Unbloody sacrifices, it should be noted, naturally did not call for the same exactness of observance as those in which animals were offered; while piacular sacrifices, in which the victim was almost always a whole burnt offering, or at least was not shared as a meal (holocaust), were not only comparatively rare, but also needed a simpler ritual than the meal-sacrifice, or followed the ordinary ceremony, at least in its earlier stages. The process to be described is found in all its main features in the Homeric poems. In later times, an endless variety of local usage arose, as the detail was developed partly through the influence of the temple priesthood, partly through the increasing wealth (and consequent ceremonial) of cities as well as temples. We will first describe the Homeric ritual, and then indicate some points in which its leading features became afterwards developed. The student who desires to study the local variation must refer to the works of Hermann, Schömann, Maury, and Martha, already frequently quoted; but more especially to Pausanias, and to the *C. I. G.* and *C. I. A.*

In Homer (see esp. *Od.* iii. 418–463; *Il.* i. 446 foll.) the rite is as follows. The victim, for the choice of which there seems to have been no precise rule, though it must be in a general sense *τέλειος* (*Il.* i. 66; *i.e.* free from blemish), and of a kind appropriate to the god, was led to the altar, where, if an ox, its horns were or might be gilded, to gratify the eyes of the deity. Then follow certain preliminary rites of consecration. Water for lustration was brought, together with a basket of grain (*οὐλαί*: whether ground or not is uncertain): with the former the hands at least of the bystanders were sprinkled, and the latter was cast on the victim and the altar (*χερνίψαντο δ' ἔπειτα καὶ οὐλοχύτας ἀνέλοντο*, *Il.* i. 449; cf. *Od.* iii. 445). When this was done, the chief sacrificer, whether priest or not, offered his prayer (*Il.* i. 451), and at the same time cut some hair from the victim's head and cast it into the flame. This hair, if the sacrifice had relation to a treaty or compact, was divided among the parties concerned (*Il.* iii. 271). Then followed the slaughter of the victim either with axe or knife or both; it was killed kneeling, as it is often represented on sacrificial vases, with its head turned upwards if the sacrifice were to celestial deities, downwards if to those of the under-world (*Od.* iii. 453). During the act of slaughter the bystanding women, if any, cried aloud (*ὀλόλυξαν*)—for what reason is not very clear; perhaps this noise, like the flute-music of later times, was meant to hide the cries of the animal, all unwillingness on its part being held of ill omen. Lastly, the flesh was cut up, the thighs were sliced, and the slices wrapped in double layers of fat and placed on the altar to be wholly consumed for the god, after wine had been poured on them. The entrails were then tasted, and arming themselves with long spits, such as are often seen in vase-paintings (see *e.g.* Baumeister, *Denkm.* p. 1107), and with five-pronged forks (*πεμπώβολα*), the sacrificers set to work to roast the rest of the meat for their own enjoyment. In *Il.* i. 472, this feasting is accompanied by hymns to the god.

This ritual remained practically the same throughout the history of Greek religion. In all Greek literature, down to Lucian, we find the same notions prevalent about the part taken by the god, and the same main features, *e.g.* the lustral water, the grain, the clipping of the hair, and the distribution of flesh between deity and sacrificers. See especially Aristoph. *Pax*, 820 foll.; Lucian, *de Sacrificiis*, 14. The monumental evidence bears this out fully (see Martha, p. 67, note 5). But, apart from the great variety of local usage already referred to, we may note at least three points in which a general development took place in the way of elaborate regulations, and especially as regards—1, the choice of victims; 2, the ceremonial adornments; 3, the apportionment of flesh and skins. A brief reference to each of these is all for which space can here be found.

1. The tendency of temple-worship and priestly influence was to create a number of artificial requirements in respect of the colour, sex, purity and perfectness of victims, especially on great public occasions. This is most singularly illustrated in an inscription from Cos, lately discovered, and edited by Mr. Hicks (*Journ. Hell. Stud.* vol. ix. No. 2, p. 334 foll.). The selection of the ox for sacrifice to Zeus Polieus, on the 19th day of the Coan month Batromius, was a matter of the utmost solemnity and difficulty. A holocaust or piacular offering of a pig had been made on the previous day with a view to good-luck in the selection; but it is obvious from the inscription that the Hieropoioi, who sat at a table with the priest and inspected the oxen as they were driven past, had often great difficulty in choosing. When a second herd was driven in, an ox was to be sacrificed to Hestia, apparently as a further aid; cf. Dittenberger, 338, 70, whence we learn that at Andania (and probably at many other places) the victims underwent an examination by the priest or other official, who affixed a seal (*σημεῖον*) to them if approved of. On the other hand, such elaborate selection must have been well-nigh impossible in the case of the great hecatombs at Athens: there the chief function of the officials seems to have been rather the procuring than the selection of victims. (For the duties of *βοῶναι* and *ἱεροποιοί* at Athens, see Dittenb. 388; Martha, pp. 70 and 71; [BOONAE; HIEROPOEI.]) In the case of private sacrifices, as distinguished from those undertaken by the state, it was no doubt the business of the priest of the temple where the sacrifice was to take place to examine the victim; but so long as it was of the right kind, colour, &c., it is not probable that further rigidity of rule was insisted on.

2. In regard to ceremonial adornment, we find a development chiefly in two particulars, viz. the wearing of wreaths, and the use of instrumental music. Wreaths and garlands, which on the monuments invariably adorn the sacrificer as well as the victim, are not mentioned in Homer (Schömann, p. 228). A few exceptions to this rule are mentioned in later literature, *e.g.* at Paros, in the worship of the *Χάριτες*, and on occasions of domestic grief (Apollodorus, iii. 15, 7; Diog. Laert. ii. 54). The place of the wailing of the women, as represented by Homer, at the moment of slaughter, is taken by the playing of the flutes (in Argos of a trumpet, Pollux, iv. 87), as is often to be seen on sacrificial vase-paintings (Martha, p. 84). The passage of Apollodorus just quoted shows plainly that the absence of these accompaniments of sacrifice at Paros was a very unusual feature, and needed a legend to explain it. Other details, such as the use of oil and honey, the sprinkling of the altar with the blood of the victim, &c., may probably have been at all times in vogue in the temples, though unnoticed in the Homeric accounts of sacrifice. For the development of hymn-singing and dancing in relation to sacrifice, see Duncker, *Hist. of Greece*, vol. ii. ch. 14.

3. In regard to the apportionment of the victim's flesh, which in Homer, as we have seen, was a simple matter, we have in later times, chiefly from inscriptions, a vast number of details and regulations, showing the importance attached to it. Most of these define the portion which is the perquisite of the priest (*θεομοιρία* : *γέρη* : *ἱερώσυνα*). This differed in different worships: frequently it is the legs and skin; sometimes the tongue and shoulder; in *Fragm. Com. Graec.* p. 265 (Didot), the thighs, flank, and left side of the head are mentioned. (See Dittenberger, Nos. 373, 376, 379, and 388, line 85. Also *Journal of Hell. Stud.* l. c. p. 328 and note; Stengel, *op. cit.* p. 15 foll.) The rest of the animal might, in the case of private sacrifices, be taken home by the sacrificer to be used for a meal (the survival of the Homeric practice), or even sent in the form of presents to friends (Schömann, 231). This was, of course, impossible in the case of holocausts, which were rarely honorific sacrifices: *e.g.* it is expressly forbidden, in the inscription from Cos already quoted, to take away any part of the pig which was burnt the day before the Zeus festival. But in public sacrifices undertaken by the state, the disposal of the carcases, which at Athens at least were sometimes counted by hundreds, came to be an important matter of public revenue, about which full information will be found in Boeckh-Fränkel, *Staatshaushaltung*, vol. ii., appendices viii. and viii. b. *Dermaticon* was the general name for this source of revenue; the skin being retained as the special property of the state, while the flesh, after the magistrates had received their portions, was distributed among the whole number of demes, for purposes of feasting (*C. I. A.* ii. 163, 305). In B.C. 334 the revenue arising from the sale of these skins was no less than 5,500 drachmas. Thus the simple primitive sacrifice, with its genuine meaning, came to be developed into a state detail, whose importance was much more material than spiritual.

Greek sacrifice, from a vase-painting (Blümner). The emblematical figure of Nike filling the *φιάλη* shows that it is a sacrifice for victory.

2. *Roman.* The introduction of Greek religious practice at an early period overlaid the true Roman cult, and by degrees almost extinguished it, though a distinction was always maintained by the learned between the *ritus Romanus* and

the *ritus Graecus* (Marquardt, iii. 186). What features of ritual are to be understood by the former term, it is hard to say, except the veiling of the head of the worshipper, which is expressly mentioned by Macrobius (i. 8, 2; iii. 6, 17; Plut. *Q. R.* 10), and the use of laurel or other wreaths (Marquardt, *l. c.*, note 4). It may also be noted that the use of music and dancing at sacrificial rites, which in Greece had such momentous literary results, never developed at Rome into more than the mere accompaniment of *tibicines*, the object of which was to preclude all ill-omened sounds from reaching the ears of the worshippers (Plin. *H. N.* xxviii. § 11). This, however, need not exclude the supposition that rude hymns, such as those which we still possess of the SALII and the FRATRES ARVALES, were at one time in use (R. Peter, *de Romanorum precationum carminibus;* contained in the *Commentationes in honorem Reifferscheidii*, Breslau, 1884, p. 67 foll.). But we know enough to discern that the leading characteristic of the *ritus Romanus* was its solemnity and stillness, especially at the time when the prayer, which was a more essential feature of it than with the Greeks, was being led by the priest. This stillness is indicated, not only by the veiling of the head, but by the fact that the prayer was often not spoken aloud, but only muttered. Thus, in the elaborate and genuinely Italian ritual of the Fratres Atiedii, at Iguvium, we meet with the phrase "tases persnimu" = tacitus precator (Bücheler, *Umbrica*, p. 60, note); which is to be explained as a direction to the priest to murmur below his breath. (See reff. in Marquardt, 178, note 4, and Bücheler, *l. c.*) The more strictly religious, if not spiritual, character of the worship in Italy is also shown by the absence of revelry after sacrifice; or at least of the development of the rite into a matter of public feasting, as at Athens. Another characteristic which was more strongly marked in Italy than Greece was the extreme and superstitious precision required in the whole ritual. The form of prayer which the priest led and the worshippers repeated after him must be gone through without the slightest error; if such error were committed, the whole had to be repeated again. The same rule applied to the ritual of sacrifice itself (Bücheler, *l. c.* p. 81; Arnob. iv. 31; Plut. *Coriol.* 25); and in all such cases the error had to be wiped out by a piacular sacrifice in addition. The same precision was observed in regard to the posture of the worshipper, which differed in different cults: in the *ritus Romanus* it is likely that this posture was a kneeling one in the act of prayer (Marquardt, 179, note 4), while usually the person praying stood with outstretched arms, and looking to the east. In the cult of Tellus and Ops, he touched the earth with his hands (Macrob. i. 10, 21; iii. 9, 12). But to gain an adequate idea of the extraordinary lengths to which this precision in all respects was carried by Italian custom, and maintained by written rules, the student should not fail to consult the Iguvian inscription so often quoted, with the translations and commentaries of Bréal or Bücheler (Bréal, *Les Tables Eugubines;* Bücheler, *Umbrica.* The first and sixth tables afford the best illustrations).

A succinct description of an ordinary Roman sacrifice may be given in conclusion; in which it will now be easy for the student to distinguish some at least of the Greek and Italian elements. For further detail he is referred to Marquardt, 180 foll. (in the new French translation, vol. i. pp. 216 foll.); and for an immense collection of variety of detail, which is however wrongly used as if belonging to a single act of sacrifice, to the article in Pauly's *Encyclopädie*, vol. vi. pt. i. pp. 671 foll.

The victim (*victima* is used of the larger, *hostia* of the smaller animals) was led to the altar adorned with fillet and ribbons (*infulae* and *vittae*); the gilding of the horns in the case of an ox is also mentioned (Henzen, *Act. Fratr. Arv.* 144). On great occasions of lustration, *e.g.* of an army by a general, or of the people by a censor, the leaders of the victims must have names of good omen. The Greek rule held good here also, that the victim must come willingly. Then followed the *immolatio*, also a counterpart of the Greek ritual, which consisted in dedicating the animal by strewing on its head the *mola salsa* or prepared cake (Serv. *ad Aen.* iv. 57); wine and incense were also used for this purpose, and in Verg. *Aen.* vi. 245 the Greek practice is alluded to of cutting hair from the victim's head and casting it into the fire. The beast was then slain, the larger ones with axe or hammer, the smaller with the knife: this was the business, in public honorific sacrifices at least, not of the priest, but of assistants (*cultrarii, popae, victimarii*). When the victim was dead, the most important part of the ceremony began: viz. the extraction and examination of the *exta* and the preparation for burning them on the altar. By *exta* is to be understood the liver, gall, lungs, and heart, with the interior skin. These, and especially the liver, were in all sacrifices except piacular ones subjected to a careful inspection, with a view to ascertain whether the god was pleased; the idea being, as has been already pointed out, that he showed his good and ill will in the organs of the victim. (For the complicated science of augury which grew out of this idea in Italy, see article DIVINATIO; Bouché-Leclercq, *Divination dans l'Antiquité*, vol. iv.) If the inspection were satisfactory (*litare* is the technical word), the priest proceeded to prepare the *exta* either by boiling or by roasting on spits; the latter practice seems to have been confined to the sacrifices of sheep and lambs (Varro, *L. L.* v. 98). They were then laid on a dish, together with certain other parts of the flesh (Arnob. vii. 24), and in this form were called *prosecta* (for other forms of the word see Marquardt, 183; in the Iguvian inscription it is *proseseto*); on this again the *mola salsa* was sprinkled and wine poured (Cic. *Div.* ii. 16, 37), and it was then ready to be placed on the altar (*exta porricere* or *reddere*). That this preparation of the *exta* was the leading feature in the rite, is well shown in the fact that on the *dies intercisi* of the calendar, the slaughter of the victim took place in the morning, and the placing of the *exta* on the altar was delayed till the evening. The additions to the *exta* from other parts of the victim were called *augmenta*; the *magmenta* (Marquardt, 184) sometimes mentioned appear to have been separate dishes, also placed on the altar for consumption. The rest of the flesh, or *viscera* (Serv. *ad Aen.* v. 253), was eaten by those offering the sacrifice, or by the priest in the case of piacular sacrifices (*ib.* iii. 231), where the victim was not burnt whole (cp. Arvales; *C. I. L.* vi. 2104). But we hear very little of priests' portions or of sacrificial feasting; the Romans were never so lavish of their victims as the Greeks, and the absence of a regular temple-priesthood enabled them to dispense with perquisites as a means of securing the priests a livelihood. The inspection and preparation of the *exta* remained the chief object and feature of sacrifice; and thus, in spite of the predominance of the *Graecus ritus*, the peculiar characteristics of the Italian religious temperament were preserved till late times in the Roman ceremonial. (In the foregoing description of the Roman ritual, Marquardt's excellent account has been closely followed.) [W. W. F.]

SACRILE'GIUM, the robbery of sacred things (Sen. *de Ben.* 7, 7; Isid. *Orig.* v. 26), is that form of peculatus which affects sacred property not in private hands: *i.e.* it is the robbery of anything publicly dedicated to the service of the gods. Hence the theft of anything from a private dwelling, though it might be dedicated to the gods, would be a *furtum*, not a *sacrilegium* (cf. Cic. *de Invent.* 8, 11). According to the Twelve Tables, "Sacrum sacroque commendatum qui cleperit rapsitque parricida esto" (Cic. *de Leg.* ii. 9, 22), which does not mean that it was reckoned as parricidium, but that the sacrilegus was tried by the quaestores parricidii. In later times there were changes both in the procedure and in the definition of the crime. It was tried under the *quaestiones perpetuae* [Peculatus; cf. Cic. *Verr.* i. 5, 14), and the crime of sacrilege, besides meaning robbery of temples, was extended to include damage or insult to anything consecrated, and so was made to refer to damage of the city walls, which were sacred (Cic. *N. D.* iii. 40, 94; Plut. *Rom.* 11), and even to climbing over them (Dig. 1, 8, 11); and further, under the Empire, to want of respect for the emperor or his appointments (Capit. *Ant. Phil.* 18; Cod. 9, 21, 1), though such offences were sufficiently dealt with under the law of Majestas. For the conception of what was *sacrum*, see Macrob. iii. 3, 2; Dig. 1, 8, 6, § 3. The punishment of sacrilegium under the Lex Julia was interdictio aqua et igni, for which banishment (*deportatio*) was substituted: under the Empire heavier penalties were affixed—for breaking into temples by night, *damnatio ad bestias* or burning alive; for the same act by day, labour in the mines or banishment (Dig. 48, 13, 6). Compare Rein, *Criminalrecht*, 691; Rein in Pauly, *Real Encyclop.* s. v. *Sacrilegium.* (For sacrilege among the Greeks, see Hierosylia.) [L. S.] [G. E. M.]

SACRO'RUM DETESTA'TIO. [Gens, Vol. I., p. 911 *a.*]

SAECULA'RES LUDI. [Ludi Saeculares.]

SAE'CULUM. [Ludi Saeculares, p. 92.]

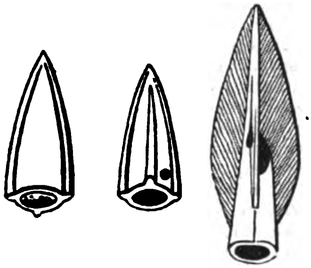
SAGARII. [Sagum.]

SAGITTA (*ὀιστός, ἰός*; Herod. *τόξευμα*), an arrow. The account of the arrows of Hercules (Hesiod, *Scut.* 130–134) enumerates and describes three parts, viz. the point, the shaft, and the feather. Pollux (i. 137) says that the feathered end was called the head of the arrow.

I. The point was denominated *ἄρδις* (Herod. i. 215, iv. 81), whence the instrument, used to extract arrow-heads from the bodies of the wounded, was called *ἀρδιοθήρα.* [Forceps.] Great quantities of flint arrow-heads are found in Celtic barrows throughout the north of Europe, in form exactly resembling those which are still used by the Indians of North America (Hoare's *Anc. Wiltshire, South*, p. 183). Nevertheless the Scythians and Massagetae had them of bronze (Herod. *ll. cc.*).

A large number of flint arrow-heads, some of them finely shaped, have also been found in Italy, in deposits of the Stone age. Specimens may be seen in the prehistoric galleries of the British Museum. The Aethiopians in the army of Xerxes tipped their arrows with a sharpened stone, which they also used for engraving gems (Herod. vii. 69). Mr. Dodwell found black flint arrow-heads in the large tumulus of Marathon, and concludes that they had belonged to the Persian army (*Tour through Greece*, vol. ii. p. 159). Those used by the Greeks were commonly bronze, as is expressed by the epithet *χαλκήρης*, "fitted with bronze," which Homer applies to an arrow (*Il.* xiii. 650, 662). Herodotus, however (vii. 69), speaks as if iron was the natural material to be employed.

The Homeric arrow-head was "three-tongued" (*τριγλώχις*, *Il.* v. 393) and had barbs (*ὄγκοι*, *Il.* iv. 151, 214). Its form is shown by the annexed woodcuts.



Arrow-heads found in Attica.

The two smaller, one of which shows a rivet-hole at the side for fastening it to the shaft, are from the plain of Marathon (Skelton, *Illust. of Armour at Goodrich Court*, i. pl. 44). The third specimen was also found in Attica (Dodwell, *l. c.*). Some of the Northern nations, who could not obtain metal, barbed their arrow-heads with bone (Tac. *Germ.* 46).

The use of poisoned arrows (*venenatae sagittae*) is always represented by the Greek and Roman authors as the characteristic of barbarous nations. It is attributed to the Sauromatae and Getae (Ovid, *Trist.* ii. 10, 63, 64; *de Ponto*, iv. 7, 11, 12); to the Scythians (Plin. *H. N.* xi. 53, § 115), and to the Arabs (Pollux, i. 138) and Moors (Hor. *Od.* i. 22, 3). When Ulysses wishes to have recourse to this insidious practice, he is obliged to travel north of the country of the Thesprotians (Hom. *Od.* i. 261–263); and the classical authors who mention it do so in terms of condemnation (Hom. Plin. *ll. cc.*; Aelian, *H. A.* v. 16). The poison applied to the tips of arrows having been called *toxicum* (*τοξικόν*), on account of its connexion with the use of the bow (Plin. *H. N.* xvi. 10, § 20; Festus, *s. v.*; Dioscor. vi. 20), the signification of this term was afterwards extended to poisons in general (Plaut. *Merc.* ii. 4, 4; Hor. *Epod.* xvii. 61; Propert. i. 5, 6).

II. The excellence of the shaft consisted in being long and at the same time straight, and in being well polished (Hes. *Scut.* 133). The arrows of the Carduchi were more than two cubits long, and were used as javelins by the Greeks (Xen. *Anab.* iv. 2). But the shaft often consisted of a smooth cane or reed (*Arundo donax* or *phragmites*, Linn.: cf. Plin. *H. N.* xvi. 36, § 65), and on this account the whole arrow was called poetically either *arundo* in the one case (Verg. *Aen.* iv. 73, v. 525; Ovid. *Met.* viii. 382), or *calamus* in the other (Verg. *Buc.* iii. 13; Ovid, *Met.* vii. 778; Hor. *Od.* i. 15, 17; Juv. xiii. 80). In the Egyptian tombs reed arrows have been found, varying from 34 to 22 inches in length. They show the slit (γλυφίς, Hom. *Il.* iv. 122; *Od.* xxi. 419) cut in the reed for fixing it upon the string (Wilkinson, *Man. and Cust. &c.* vol. i. p. 309).

III. The feathers are shown on ancient monuments of all kinds, and are indicated by the terms *alae* (Verg. *Aen.* ix. 578, xii. 319), *pennatae sagittae* (Prudentius, *Hamart.* 498), and πτερόεντες ὀϊστοί (Hom. *Il.* v. 171), but it is doubtful if the Homeric epithet has any reference to the feathers. The arrows of Hercules are said to have been feathered from the wings of a black eagle (Hes. *l. c.*).

Besides the use of arrows in the ordinary way, they were sometimes employed to carry fire. Xerxes captured the Acropolis in this manner (Her. viii. 52). Julius Caesar attempted to set Antony's ships on fire by sending βέλη πυρφόρα from the bows of his archers (Dio Cass. l. 34; cf. Pollux, i. 137). A head-dress of small arrows is said to have been worn by the Indians (Prudentius, *l. c.*), the Nubians, and the Aethiopians of Meroe (Claudian, *de Nupt. Honor.* 222; *de III. Cons. Honor.* 21; *de Laud. Stil.* i. 254).

In the Greek and Roman armies the *sagittarii*, more anciently called *arquites*, i.e. archers, or bowmen (Festus, *s. v.*), formed an important part of the light-armed infantry (Caesar, *Bell. Civ.* i. 81, iii. 44; Cic. *ad Fam.* xv. 4). They belonged, for the most part, to the allies, and were principally Cretans. [ARCUS; CORYTUS; PHARETRA; TORMENTUM.] [J. Y.] [A. H. S.]

SA'GMINA were the same as *verbenae*, sacred herbs, especially those which were torn up by their roots from the enclosure of the Capitol, and given by the consul or praetor to the Fetiales when they went to demand reparation or to make a treaty [FETIALES]. They were carried by one of the body called *Verbenarius*, and served to mark the sacred character of the ambassadors: Varro (*ap.* Non. 528) compares them to the caduceus or κηρύκειον (cf. Plin. *H. N.* xxii. § 5; Liv. i. 24, xxx. 43; Dig. 1, 8, § 8; Festus, *s. v.*). There can be no doubt that any herb so gathered would answer the purpose if the true verbena could not be procured: indeed Servius (*ad Aen.* xii. 120) says, "abusive *verbenas* vocamus omnes herbas sacratas ut est laurus oliva vel myrtus." The true verbena or *vervain* is the *verbena officinalis*, which suits Pliny's description of the plant and his comparison of the leaf to an oak-leaf (xxv. § 105). It was used for lustrations, for sweeping the tables of the gods at the Epulum Jovis or at the lectisternia (Id. *ib.*); it was used also for decking the altar (Ter. *And.* iv. 3, 11; Hor. *Od.* i. 19, 14, iv. 11, 7; Ovid, *Met.* vii. 242). The Greek name seems to be ἱερὰ βοτάνη, or περιστερεών, but the Greek equivalent for lustration or for decking the altar was rather the myrtle: cf. Eurip. *Ion*, 120, μυρσίνας ἱερὰν φόβαν ᾇ σαίρω δάπεδον θεοῦ: and Servius, *l. c.*, notes that Terence in using the word *verbena* translates a line (quoted in a corrupt state by Donatus) where it is a myrtle bough (see Wagner *ad* Ter. *l. c.*). Lastly we find a curiously widespread use of the plant in divination and magic: for this purpose it is burnt in Verg. *Ecl.* viii. 65, and Pliny (*l. c.*) speaks of the same use among Eastern nations (cf. Suet. *Vesp.* 7) and among the Celts, where the superstition lingers to this day (*e.g.* in Brittany).

Whatever the etymology of sagmen may be, we must reject the connexion with *sanctus* or *sacer*, which Festus favours. Corssen (*Lat. Spr.* ii. 212) proposes a connexion with *seges* by the root *sag* (σεσαγμένος), but, as it certainly was not used for food, this is not satisfactory. Looking to its use for divination and magic, which we may judge from its being common to so many nations to have been its oldest use, we might suggest rather a connexion with *saga* and *sagire*. [W. S.] [G. E. M.]

SAGUM, a thick woollen cloak or plaid fastened round the neck with a brooch, was the distinctive garb of the Roman citizen in time of war. It was worn not only on the field, but was put on by the whole male population of the city on the occasion of a *tumultus* or other sudden alarm, the consuls alone retaining the toga (Cic. *Phil.* v. 12, 31; viii. 11, 32; xiv. 1, 1). Hence it is contrasted with the toga, the dress of peace, in such phrases as *saga sumere*, *in sagis esse*, and *ad saga ire*. As one would expect in the case of militia providing their own equipment, the sagum was in no sense a uniform, and was worn by country-folk (Plin. *H. N.* viii. § 54) and slaves (Dig. 34, 2, 23, § 2), and was chosen by soldiers as allowing the arms full play. It is shown on countless monuments, the most important being Trajan's Column and the many grave-reliefs found on the banks of the Rhine. These show that it was put on and fastened in the same manner as the *paludamentum*, which was in fact the special sagum which the Imperator wore. The word *sagum* has, besides this, a wider and more general meaning, and is applied to the varieties of cloak known as *birrus*, *laena*, *lacerna* (cf. Martial, viii. 58; Juv. ix. 28), and *abolla* (cf. note in Marquardt, *Privatl.* p. 567). Besides this, the national dress of the Germans (Tac. *Germ.* 17), Gauls (Caes. *B. G.* v. 42), Ligurians (Strabo, iv. p. 202), and Spaniards (Val. Max. iii. 2, 21; Liv. xxix. 3, 5), which still survives in the plaid of the Scotch Highlander and the cloak of the Spaniard, not only went by the same name, but was believed by the Romans to be the original form of the garment, even the name being borrowed from the Celtic. However this may be, cloaks fastened at the neck with a pin are known all the world over; the Greek χλαμὺς being, for instance, as much akin to the sagum as the German varieties. In fact, in later Latin *chlamys* in ordinary use supplanted the old word. There was naturally much variety in shape, cut, and material in saga; and we know that while the Gauls preferred cloth of a check pattern ("*virgatis* sagulis," Verg. *Aen.* viii. 660: cf. Tac. *Hist.* ii. 20, v. 23), the Spaniards were fond of black (Strabo, iii. p. 155). In the late Empire the excellence of the Gallic and Spanish cloth made it popular at Rome, and we hear of *saga Atrebatica* and *Nervica* even in the fourth and fifth centuries A.D. It would further seem that sometimes the sagum was worn with a hood, and also that, as in many Gallic instances, the fibula was occasionally dispensed with (cf. Trebell. *XXX. Tyr.* 10).

The sagum being made for the roughest usage, was of stout stuff, and, like all cloaks which are fastened with a pin, served many other purposes, the most interesting being perhaps that of the "blanket" in which a person was "tossed," this pastime being known as *sagatio.* (Marquardt, *Privatleben*, pp. 561–6; Becker-Göll, *Gallus*, iii. 220; Baumeister, *Denkmäler*, s. vv. *Toga* and *Waffen.*) [W. F. C. A.]

SALAMI'NIA. [Theoris.]

SALA'RIUM, allowance of salt for soldiers and officers; then allowance for salt; and so (though not earlier than the Empire) = stipendium or military pay generally (as in Plin. *H. N.* xxxi. § 89), though the word still included rations. (Salt was once more supplied in kind later: see *Hist. Aug.*, *Claud.* 14, *Prob.* 4.)

Augustus instituted in B.C. 27 a further salarium for governors of provinces, senatorial or imperial. The outfit and travelling expenses of governors (*vasarium*) had previously been voted them by the senate. But though the supply of outfit and necessaries, in money or kind, by no means came to an end, Augustus also paid a fixed money-allowance or "salary" to provincial governors (Dio Cass. lii. 23, liii. 15; Suet. *Aug.* 36). The amounts varied with their rank (Dio Cass. liii. 15), but are not known to us. Dio Cassius (lxxviii. 22) says that in the time of Macrinus a million sesterces were paid; but the provincial governor here mentioned was never allowed to visit his province; and the million sesterces may therefore, it has been thought, have included compensation for the honours and advantages lost, and consequently may be much more than the regular amount. Salaria were also given by various emperors to other persons: the *comites* of the emperor (Suet. *Tib.* 46); legal assessors (*Hist. Aug.*, *Alex. Sev.* 46); poor senators (Suet. *Nero*, 10); rhetoricians and philosophers in all the provinces (*Hist. Aug.*, *Ant. Pius*, 11; cf. Suet. *Vesp.* 18); grammarians, doctors, haruspices, engineers, architects (*Hist. Aug.*, *Alex. Sev.* 44). The various curatores and procuratores were divided according to amount of salary into *sexagenarii* (60,000 sesterces), *centenarii* (100,000), *ducenarii*, and *trecenarii*. Respecting the pay which certain classes of priests received, see Sacerdos and Vectigalia Templorum. [F. T. R.]

SALIENTES. [Fons.]

SALII. These were an ancient guild of priests, traditionally first instituted by Numa for the service of Mars and the guardianship of the sacred shields (Liv. i. 20; Cic. *de Rep.* ii. 14, 26; Dionys. ii. 70; Plut. *Num.* 13; Ov. *Fast.* iii. 378; Fest. p. 131); other traditions represented them as derived from Greece (Fest. p. 320; Plut. *l. c.*; Serv. *ad Aen.* ii. 325, viii. 285); but we should rather regard these rites as a primitive Italian religion, very possibly a relic of superstitions inherited alike by the Greek and Italian stocks, but not borrowed from Greece after the Greeks and Italians were separate nations. It is at least probable that the Salii date from an earlier and ruder state than the age of Numa. They were at any rate widely spread through Italy, for we find them at Alba, Lanuvium, Tibur, Tusculum, Anagnia, Verona (Macrob. iii. 12, 7; Serv. *l. c.*; *C. I. L.* i. 150, v. 4492, vi. 270, x. 5925; see also other inscriptions cited by Marquardt, *Staatsverw.* iii. 428); nor was the name restricted to the priests of a single deity: at Tibur they belonged to the worship of Hercules Victor. In Rome (*i.e.* in the Palatine city) there were originally twelve, forming a collegium with officials, a *magister*, *praesul*, and *vates*: they assembled at the Curia Saliorum on the Palatine, and were called *Salii Palatini* to distinguish them from the other similar guild of twelve *Salii Collini* (called also *Agonales* or *Agonenses*), who were supposed to have been instituted by Hostilius, and had their sacrarium in the Quirinal (Liv. i. 27; Dionys. ii. 70, iii. 32; Serv. *l. c.*). We can scarcely doubt that these two guilds existed in their separate localities when the Palatine and Quirinal were distinct communities, and the doubling of the Salii, like the doubling of the Luperci, tells of the amalgamation of the Quirinal with the Palatine city (compare Mommsen, *Rom. Hist.* i. 56; *Staatsrecht*, iii. 111: Luperci).

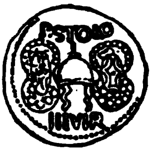
The Salii were patricians (Cic. *de Dom.* 14, 38; Lucan, ix. 477; cf. Lucian, *de Salt.* 20), chosen (by co-optation of the college) from *patrimi et matrimi* in early youth, but, as they held the appointment for life, the colleges contained *seniores* and *juniores* ("hic juvenum chorus, ille senum," Verg. *Aen.* viii. 285): if however one of them became a flamen, augur, pontifex or consul, he passed out of the college of Salii by *exauguratio* (*C. I. L.* vi. 1978); but the assumption of the praetorship and consulship did not *necessarily* vacate the Salian priesthood, as may be seen from the case of Scipio (Liv. xxxvii. 33) and others (Val. Max. i. 1, 9; Macrob. iii. 14). The distinguishing dress of the Salii was an embroidered tunic, a brazen breast-plate, the trabea and the priestly cap [Apex], a sword girt at the side, on the left arm the *ancile* or sacred shield, and in the right hand a short staff with which the shield from time to time was struck. It is significant of their function that in dress they were half-priests, half-warriors. The two collegia were distinct not only in name: the Palatini had their sanctuary on the Palatine hill and were consecrated to Mars; the Collini had their sanctuary on the Quirinal and were consecrated to Quirinus (Liv. v. 52; Stat. Silv. vi. 29), both deities alike presiding over Roman warfare. Each collegium had charge of twelve ancilia. That both guilds had shields is not only the natural view, but is also distinctly stated by Livy (v. 52) in the words "quid loquar de ancilibus *vestris*, Mars Gradive tuque Quirine pater."

The great festival season of the Salii began with March, as the beginning alike of the campaigning and the agricultural season, and occupied the greater part of the month (Dionys. ii.

20; Polyb. xxi. 10, 12; cf. Huschke, *Das alte röm. Jahr*, p. 362). On the 1st of March they were said *arma movere* (τὰ ὅπλα κινεῖν, Lyd. *de Mens.* iii. 15), of which we must conceive the meaning to be that they brought forth the shields from their sacraria: then, equipped as above described, they went through the city in a procession which was continued for several days. They were preceded by trumpeters, and they themselves as they walked beat the shields with their staves, the *praesul* leading their dance in three-time (*tripudium*) and being said *amptruare*, while his followers *redamptruabant*, and the vates leading the Salian chant (see below). There were various stations (*mansiones*) for the annual processsion, at each of which successively the ancilia were deposited for one night (*C. I. L.* vi. 2158), and there the Salii feasted (Fest. p. 329); [for these banquets and their luxury see Hor. *Od.* i. 37, 2; Cic. *ad Att.* x. 9; Suet. *Claud.* 33:] on the next day the procession passed to another mansio. It seems to us possible that in this is to be found the explanation of the fact that "arma moventur" is stated of three days,—March 1st (Lyd. iii. 15), March 9th (Cal. Philoc.), and March 23rd (Lyd. iv. 42): we may suppose that the ceremonies which marked the shields being brought forth from the Curia Saliorum on March 1st, were repeated on the other two days when they were moved from two special mansiones, one probably being the sacrarium of the Regia. The exact progress of the procession cannot be traced out: we know that they offered sacrifice in the Regia (Fest. *l. c.*), where the Pontifex Maximus also and the *Saliae virgines* officiated (the latter, so far as we know, on that day only); they visited the Comitium (Varro, *L. L.* v. 85), the Capitol (Dionys. ii. 70), the Pons Sublicius (Serv. *ad Aen.* ii. 165, which explains the allusion in Catull. 17, 5), in each place with the characteristic dance and chant; probably in each there was a mansio. [For the special March festivals, in which the Salii officiated, see EQUIRRIA; AGONIA; QUINQUATRUS.] It is not certain whether we are to understand from the "30 days" mentioned by Polybius (xxi. 10) that not only the whole month of March was *religiosus* on this account for the Salii, but a whole month in autumn also. The 24th is the last day in March on which their functions are distinctly mentioned; and either immediately after this day, or at the end of the month, the shields were replaced (*condita*) in their sacrarium. As March opened the campaigning season, so October closed it (theoretically, not in practice), and this was marked on the 19th by an *armilustrium*, when the Salii again brought out the ancilia (Varr. vi. 22), and then stored them in their sacrarium till the next season. It is clear from a comparison of Tac. *Hist.* i. 89, Suet. *Oth.* 8, Liv. xxxvii. 33, and Polyb. xxi. 10, that the words *arma moventur* and *arma condita* apply equally to the spring and the autumn ceremonies: the first two passages refer to an expedition in March, the last two to the autumn; in each period for all the days (whatever their true number may have been) between the *arma mota* and the *arma condita*, no member of a Salian college could rightly travel from the place where he was for any expedition. Thus we find Scipio stopped in the autumn, and Otho regarded as unconventional because he refused to be stopped in the spring, "motis necdum conditis ancilibus." We have no precise information as to the parts taken in these ceremonies by the two colleges respectively: we should probably be right in assuming that the 24 Salii of both colleges together joined in the processions above mentioned, which signified the beginning and ending of the war season, with which both were equally concerned; on the other hand, we can have no doubt that on certain days specially belonging to one of the two deities or one of the two localities the chief, if not the sole, part fell to one of the colleges. In the Equirria, for instance, we must suppose the Salii Palatini to have taken the lead or officiated alone as the special priests of Mars, and so also in the tubilustrium, which was on the Palatine; but the Agonia on March 17 would naturally belong to the Salii Collini, who thence derived one of their names.

Carmen Saliare.—This chant, led by the vates of each Salian college, belonged to a very ancient ritual, and was in Quintilian's time scarcely intelligible (Quintil. i. 6, 40: cf. Hor. *Ep.* ii. 1, 86; Varro, *L. L.* vii. 3; Cic. *de Orat.* iii. 51, 197); the surviving portions may be seen in Wordsworth, *Fragments of Early Latin*, 564–566. The verses were called *axamenta*, which is itself a word of disputed origin, probably *not*, as some have said, akin to *axis*, like the Greek *ἄξονες*, inscribed tablets, but rather, as Curtius, Corssen, and Vaniçek agree, it came from the root *ag*, to which belong both ἠμί and *aio*, and therefore signified *utterances*. In their chant the Salii sang not only of Mars, to whom they seem to appeal as the averter of evil influences (perhaps in agriculture as well as in war), and Mamurius, who is doubtless the same as Mars, but also of Janus (Janus Quirinus), Jupiter (Lucetius), Juno and Minerva (Macrob. i. 9, 14, and 15, 14; Varro, *L. L.* vii. 26; Fest. pp. 3 and 122); and afterwards, as though it were a sort of "state prayer," they included the names of the reigning emperor and imperial princes (*Mon. Ancyr.* ii. 21; Tac. *Ann.* ii. 83, iv. 9; Capitol. *M. Anton. Phil.* 21). [For the effect of political changes and developments in the priesthoods, see SACERDOS.]

Ancilia.—These sacred shields were, according to the legends, at first twelve, viz. the shield which fell from heaven and the eleven copies. It is clear that these twelve were in the charge of the Salii Palatini, and, though some (as Ambrosch and Preller) have said that they were kept in the sacrarium of the Regia, we should rather follow Marquardt and Jordan (*Top.* ii. 271) in holding that they were kept in the Curia Saliorum on the Palatine. It was into this *sacrarium Martis* that the praetor or consul setting out for war entered, when, touching the shields, he said, "Mars vigila." With this corresponds the custody of the other twelve *shields* by the Salii Collini in the sacrarium on the Quirinal (Dionys. ii. 70). The *ancile* (for *ancidile*, *amcaedo*, i.e. cut on both sides) was an oblong shield, which would have been a complete oval but for a curved indentation on each side (ἐκτομὴ γράμμης ἑλικοειδοῦς, Plut. *Num.* 13; cf. Varro, *L. L.* vii. 43, "ab utraque parte, ut Thracum, incisa." See PELTA). It is probable that this pattern of shield was handed down from a time when the shields were slung at the back, as is seen in vase-paintings as late as 500 B.C. The indentations then in these "figure of eight" shields were to allow for the free movement of the arms, when drawn back, especially in riding. It is, we think, probable that *ancile* was originally an adjective, and that the full name was *arma ancilia*, as in the calendar for March 9. The shape is clearly shown in the coin of the Licinii representing two ancilia and the priestly cap with the apex.



A representation is often relied upon from a gem in the museum of Florence, which shows two figures bearing ancilia (of the correct shape) hung on a staff. This has an Etruscan inscription, and may safely be pronounced not Roman; even its antiquity is now questioned (see Marquardt, p. 431; Baumeister, *Denk.* p. 1546), but it is likely that it is a correct representation of what did happen—*not* of the Salii in procession, for they carried each his own shield, in warrior-fashion, on the left arm, but of two attendants (Dionys. ii. 70) bearing on a pole the shields (which probably they were not allowed to touch), to deposit them either in their permanent sacrarium, or in one of the *mansiones* for the night. A coin has been found which represents a round shield. This may possibly be, as Marquardt suggests, the special form of the shields borne by the Colline Salii: his other suggestion, that it was a later form adopted for all ancilia, seems to be negatived by the fact that the coin is Domitian's, and therefore was struck at the time when Plutarch was writing of the shape as quoted above. The relief at Anagnia which shows perfectly oval ancilia may represent, as Benndorff says (*Annal. d. Inst.* 1869), a *local* variation in shape, differing from that of Rome. The common-sense view seems to us to be that the type of shield familiar in the time and place where each guild took its origin, was perpetuated and handed down in that guild. In this relief the staves are about as high as a man's shoulder, and have a knob at each end. We cannot agree with Marquardt that Ovid's words (*Fast.* iii. 377) necessarily imply a *round* shield: they only exclude an angular one; and it is clearly impossible that Ovid should not know the shape of the shield carried in his own time by the Salii.

It is beyond the scope of this work to discuss at length the mythological meaning of these rites, but it will be useful to notice briefly one or two considerations which affect the date and order of the ceremonies described above, and also to indicate the authorities for several interesting and some very probable theories about their origin which have been recently put forward. There can be no doubt that the reason why the month of March was the great ceremonial period for the Salii was that it was regarded as the birth month of Mars and the time for resuming warfare; but we may notice as perhaps more than probable the view that this Mars was in primitive Italian religion regarded not only as the giver of victory in war, but also as the deity who drove away the darkness of winter and death, and who, by his reappearance with spring, introduced not only the campaigning, but also the agricultural season. Roscher, in dwelling on the connexion of Apollo and Mars, further maintains with considerable force that a parallel is to be found between the singing and dancing of the Salii and the songs and dances in the worship of Apollo, whose birth-time also is in spring: he compares the ceremonies of the THEOPHANIA at Delphi, the Curetes at Ortygia, and their clashing of arms to avert a hostile power (cf. Strab. xiv. p. 640), and deduces, not of course that the Italian rites were borrowed from the Greek, but that the idea originally underlying both was the same—a new birth of the year or of light, the averting of evil influence, and protection in the future. Closely connected with this is the fact that the Flaminica Dialis showed at this period signs of mourning in her attire, just as she did at the ceremonies of the *Argei* [FLAMEN, Vol. I. p. 866 *a*], and also that it was pronounced an unlucky time for marriages; for it is more probable that this was originally because it was a period of striving against evil powers, than, as Ovid suggests (*Fast.* iii. 373), from associations with war.

We cannot, indeed, accept the view of Usener that the twelve ancilia symbolised twelve new-born suns, nor the less puzzling theory that they represented twelve moons. These theories arise from an idea, which we conceive to be erroneous, that the Salian priests were created for the shields, and were twelve because that was the number of the shields. It is more likely that there were twelve shields for each guild because each guild had twelve priests. In the Palatine city there were accordingly only twelve, but in historic Rome altogether twenty-four. As to the number twelve, whether of Etruscan origin or derived merely from three tribes and four regions, we need not here inquire.

While, however, we venture to dissent from these interpretations of the ancilia, we think that weight should be given to the interesting suggestion of Usener that "Mamurius Veturius" in the Equirria or Mamuralia [see EQUIRRIA], (when, according to Lydus, iv. 36, a man clothed in skins was driven out of the city with peeled rods,) was "old Mars," and that the rite symbolised the old season driven out by the new. It might rather, perhaps, be said that the man driven out represented in scapegoat fashion the darkness of winter and death, who were expelled, not Mamurius himself, and that the Salian cry to Mamurius is merely for his aid in the expulsion; but in any case there seems good reason for comparing these rites with others which have the above symbolical meaning. (See Grimm, *Mythol.* vol. ii. p. 764, E. T. For the references on the mythology in the latter part of this article, the present writer is indebted to unpublished notes of Mr. Warde Fowler: a full discussion will be found in Roscher, *Mars und Apollon*, pp. 25 ff., and Usener, in *Rhein. Mus.* xxx. pp. 215 ff. For the history of the Salii and their functions, see Marquardt, *Staatsverw.* iii. 427–438; Preller, *Röm. Myth.* i. 350; Jordan, *Topog.* ii. 271; and for the ancilia, besides the above, Baumeister, *Denkm.* p. 1546; Benndorff, *l. c.*) [W. S.] [G. E. M.]

SALINAE, sc. *fodinae* (ἅλαι, ἁλοπήγιον), a salt-work. The ancients had many ways of procuring salt, of which Pliny, *H. N.* xxxi. §§ 73–92, gives a summary. They were acquainted with rock-salt (Herod. iv. 181–185; *ἅλες ὀρυκτοί*, Arrian, *Exped. Alex.* 3, 4; *sal nativus*). They obtained salt also from inland lakes (Herod. vii. 30), from natural springs or brine-pits (Cic. *N. D.* ii. 53, 132), and from coasts where the sun dried it out of the sea-water (as the *ἅλες αὐτόματοι* at the mouth of the Borysthenes: Herod. iv. 53 and Dio Chrys. *Or.* 36; Pliny, *l. c.*). But they obtained their largest supplies from works constructed on the seashore where it was adapted for the purpose by being low and easily overflowed by the sea. In order to aid the natural evaporation, shallow rectangular ponds (the *multifidi lacus* of Rutil. *Itin.* i. 478) were dug, divided from one another by earthen walls, and probably like the old salt-pans still visible on many points of the English coast. The sea-water was admitted by channels which could be closed by sluices (CATARACTA; Rutil. i. 481). As the water flowed from one evaporating-pond to another, it became more strongly impregnated with salt (Rutil. i. 475–490). When the brine began at last to crystallise, the maker (*salinator*, *ἁλοπηγὸς*) raked out the salt and left it to drain (Nicander, *Alex.* 519). Works of this kind gave the name of Ἅλαι or *Salinae* to several places in Attica (Steph. Byz.; see Boeckh, *Staatshaushaltung der Athener*, i. 126, ed. 3), Britain (Ptol.), and elsewhere. Cato, *R. R.* 88, gives directions for further purifying common salt.

Brine made as above (*coacto humore*, Plin. *H. N.* xxxi. § 73) was called by the Greeks *ἅλμη*, by the Latins *salsugo* or *salsilago*, and by the Spaniards *muria* (Plin. xxxi. § 83). It was used by the Egyptians to pickle fish (Herod. ii. 77), and by the Romans to preserve olives, cheese, and meat (Cato, *l. c.*). From *muria*, which may be connected with *ἁλμυρίς*, "brine," victuals cured in it were called *salsa muriatica* (Plaut. *Poen.* i. 2, 31).

Under Roman government salt-works were common public property, and were let to the highest bidder. Ancus Martius is said to have established the first salt-work at Ostia (Liv. i. 33; Plin. xxxi. § 89). In Liv. ii. 9 (B.C. 508) we find the government interfering with the price, and the sale of salt becoming a state-monopoly. In B.C. 204 (Liv. xxix. 37) a new *vectigal* was raised out of salt. Livy apparently means that a tax was put on, in addition to the revenue derived from the manufacture, but he is far from being clear. The price of salt was at the same time limited. The *modius* (about a peck) was to be sold for a *sextans* at Rome; but dearer in other parts of Italy, no doubt to cover the cost and risks of transport. In the provinces salt-works were sometimes left to their former owners (persons or towns), who had merely to pay Rome a fixed rent; but the commonest plan was to lease them to *publicani*. The Roman government seems to have been anxious to keep the price of salt down; but still its monopoly was maintained under the Empire (Cod. Just. iv. 61, 11). [F. T. R.]

SALI'NUM, *dim.* **SALILLUM**, a salt-cellar. Among the poor a shell served for a salt-cellar (Hor. *Sat.* i. 3, 14; Schol. *ad loc.*); but all who were raised above poverty had one of silver which descended from father to son (Hor. *Carm.* ii. 16, 13; Liv. xxvi. 36), and was accompanied by a silver *patella*, which was used together with the salt-cellar in the domestic sacrifices (Pers. iii. 24, 25). These two articles of silver were alone compatible with the simplicity of Roman manners in the early times of the Republic (Plin. *H. N.* xxxiii. § 153; Val. Max. iv. 4, § 3). The salt-cellar was no doubt placed in the middle of the table, to which it communicated a sacred character, from the offering of the *mola salsa* to the Lares. [Compare LARARIUM; PATELLA; Becker-Göll, *Gallus*, iii. 398.] In shape the salinum was probably in most cases a round shallow bowl. Probably some of the small silver bowls from Montcornet (Aisne), in the British Museum (referred to under PIPERATORIUM), are salt-cellars. [J. Y.] [G. E. M.]

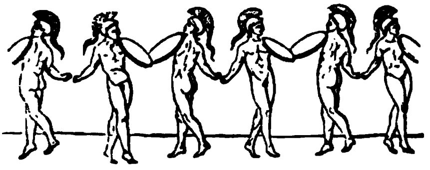
SALTA'TIO (*ὄρχησις*), dancing. The dancing of the Greeks as well as of the Romans had very little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements, and attitudes certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements, however, were accompanied by music; but the terms *ὄρχησις* and *saltatio* were used in so much wider a sense than our word "dancing," that they were applied to designate gestures even when the body did not move at all (Plat. *Legg.* vii. pp. 814, 816; Ovid, *Ars. Am.* i. 595, ii. 305; *saltare solis oculis*, Apul. *Met.* x. p. 251; cf. Grote, *Hist. of Greece*, vol. iv. p. 114).

We find dancing prevalent among the Greeks from the earliest times. It is frequently mentioned in the Homeric poems (*Il.* ix. 186; xiii. 637): the suitors of Penelope delight themselves with music and dancing (*Od.* i. 152, 421; xviii. 304); Ulysses is entertained at the court of Alcinous with the exhibitions of very skilful dancers, the rapid movements of whose feet excite his admiration (*Od.* viii. 265); and from *Od.* xxiii. 134 we may gather that the dancing of the guests was then an ordinary part of a wedding festival.

But a broad distinction must be made between the custom of the heroic age in this particular and of later times, especially as regards Attica. In Sparta, and probably in Doric states generally, the dance was regularly taught both as a gymnastic training and with a view to religious festivals, and boys and girls danced together (see below, *ὅρμος*); but even in Doric states we do not gather that it was, as in the Homeric poems, an ordinary amusement in domestic life, or that it took the place which dancing now does. At Athens, in the age of Pericles and afterwards, we find dances used in certain religious festivals and in the drama [DIONYSIA; CHORUS]; but as regards dancing for amusement in private houses the custom differs altogether from that of the older and simpler times described in the Homeric poems. The dancers are hired to amuse as a spectacle, and when the guests dance themselves it is a sign that they are excited by wine (cf. Alex. *ap.* Athen. iv. p. 134 A; Theophrast. *Char.* 9; Xen. *Hier.* 6, 2). Social dances of men and women together were wholly precluded by the customs regulating the appearance of women in society [MATRIMONIUM, p. 137]; and, when Plato advocates the dancing of young men and maidens together (*Legg.* vi. p. 771), we must notice that he is expressing a desire, not describing what existed. It seems, however, that women in private houses danced together at family festivals such as the Amphidromia (Eubul. *ap.* Athen. xv. p. 668; cf. Aristoph. *Lys.* 408). Still, there was even in this restricted amount of dancing a difference between Greek and Roman habits, which is noticed by Cornelius Nepos (*Epam.* 1), and moreover, as time went on, dancing for mere amusement (though still with separation of the sexes) became commoner again in Greece than it had been in the time of the great Greek writers (cf. Athen. xiv. p. 628 c).

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and accordingly the names of no less than 200 different dances have come down to us. (Meursius, *Orchestr.*; Athen. xiv. pp. 627–630; Pollux, iv. 95–111; Liban. *ὑπὲρ τῶν ὀρχ.*) It would be inconsistent with the nature of this work to give a description of all that are known; only the most important can be mentioned, and such as will give some idea of the dancing of the ancients.

Dancing was originally closely connected with religion: Plato (*Legg.* vii. pp. 798, 799) thought that all dancing should be based on religion, as it was, he says, among the Egyptians. The dances of the Chorus at Sparta and in other Doric states were intimately connected with the worship of Apollo, as has been shown at length elsewhere [CHORUS; HYPORCHEMA]; and in all the public festivals, which were so numerous among the Greeks, dancing formed a very prominent part. All the religious dances, with the exception of the Bacchic and the Corybantian, were very simple, and consisted of gentle movements of the body with various turnings and windings around the altar: such a dance was the *γέρανος*, which Theseus is said to have performed at Delos on his return from Crete (Plut. *Thes.* 21). The Dionysiac or Bacchic and the Corybantian were of a very different nature. In the former the life and adventures of the god were represented by mimetic dancing [DIONYSIA]; the dance called *Βακχική* by Lucian (*de Salt.* 79) was a Satyric dance, and chiefly prevailed in Ionia and Pontus. The most illustrious men in the state danced in it, representing Titans, Corybantians, Satyrs, and husbandmen; and the spectators were so delighted with the exhibition, that they remained sitting the whole day to witness it, forgetful of everything else. The Corybantian was of a very wild character: it was chiefly danced in Phrygia and in Crete; the dancers were armed, struck their swords against their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute. (Lucian, *ib.* 8; Strab. x. p. 473; Plat. *Crit.* p. 54 D.) The preceding woodcut, from the *Museo Pio Clementino* (vol. iv. pl. 2), is supposed to represent a Corybantian dance. Respecting the dances in the theatre, see CHORUS.



Corybantes, from a relief. (Krause.)

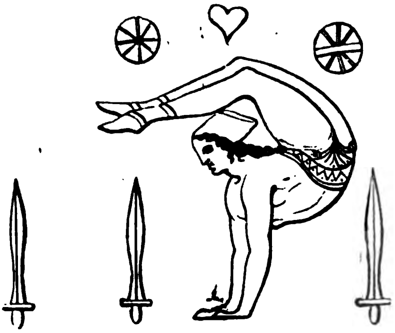
Dancing was applied to gymnastic purposes and to training for war, especially in the Doric states, and was believed to have contributed very much to the success of the Dorians in war, as it enabled them to perform their evolutions simultaneously and in order. Hence the poet Socrates (Athen. xiv. p. 628 f) says:

> οἱ δὲ χοροῖς κάλλιστα θεοὺς τιμῶσιν, ἄριστοι
> ἐν πολέμῳ.

There were various dances in early times, which served as a preparation for war: of such dances the most celebrated was the Pyrrhic (ἡ Πυῤῥίχη), of which *πρύλις* was said to be the name in Crete. For a full account of the Pyrrhic dance in Greece and at Rome, see PYRRHICA.

Another important gymnastic dance was performed at the festival of *γυμνοπαιδίαι* at Sparta, where the chief object, according to Müller (*Dor.* iv. 6, § 8), was to represent gymnastic exercises and dancing in intimate union. Respecting the dance at this festival, see GYMNOPAEDIA.

There were other dances, besides the Pyrrhic, in which the performers had arms; but these seem to have been entirely mimetic, and not practised with any view to training for war. Such was the *Καρπαία* peculiar to the Aenianians and Magnetes, which was performed by two armed men in the following manner: one lays down his arms, sows the ground, and ploughs with a yoke of oxen, frequently looking around as if afraid; then comes a robber, upon which the other snatches up his arms and fights with him for the oxen. All these movements are rhythmical, accompanied by the flute. At last the robber binds the man and drives away the oxen, but sometimes the husbandman conquers. (Xen. *Anab.* vi. 1, §§ 7, 8; Athen. i. pp. 15 f, 16 a; Maxim. Tyr. *Diss.* xxviii. 4.) Similar dances by persons with arms are mentioned by Xenophon on the same occasion. These dances were frequently performed at banquets for the entertainment of the guests (Athen. iv. p. 155 b). At banquets likewise the *κυβιστητῆρες* or tumblers were frequently introduced. These tumblers, in the course of their dance, flung themselves on their heads and alighted again on their feet (*ὥσπερ οἱ κυβιστῶντες καὶ εἰς ὀρθὸν τὰ σκέλη περιφερόμενοι κυβιστῶσι κύκλῳ*, Plato, *Symp.* p. 190 A). We read of *κυβιστητῆρες* as early as the time of Homer (*Il.* xviii. 605; *Od.* iv. 18). They were also accustomed to make their somersault over knives or swords, which was called *κυβιστᾶν εἰς μαχαίρας* (Plato, *Euthyd.* p. 294 D; Xen. *Mem.* i. 3, § 9, *Symp.* ii. 14; Athen. iv. p. 129 d; Pollux, iii. 134). The way in which this feat was performed is described by Xenophon, who says (*Symp.* ii. 11) that a circle was made quite full of upright swords, and that the dancer *εἰς ταῦτα ἐκυβίστα τε καὶ ἐξεκυβίστα ὑπὲρ αὐτῶν*: and it is well illustrated by the following cut taken from the *Museo Borbonico*, vol. vii. tav. 58. (Becker-Göll, *Charikles*, i. 164; Baumeister, *Denkmäler*, p. 584 f.) We learn from Tacitus (*Germ.* 24) that the German youths also used to dance among swords and spears pointed at them.



Tumbler. (*Museo Borbonico.*)

An even more remarkable performance is represented on a vase-painting (*Bull. Napol.* v. tav. 7 = Baumeister, fig. 631), where the performer in a similar position is shooting an arrow with her feet, and another (Tischbein, i. 60 = Baum. 632) is filling from a large amphora a cup which she holds in her foot by means of a cyathus which she holds in the other. It may be noted that Krause in his representation of this last vase-painting wrongly gives three distinct scenes as if they were connected in one whole.

Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature (Macrob. *Sat.* ii. 10; Plaut. *Stich.* v. 2, 11). The dancers seem to have frequently represented Bacchanals: many such dancers occur in the paintings found at Herculaneum and Pompeii in a variety of graceful attitudes. (See *Museo Borbonico*, vol. vii. tav. 34–40; vol. ix. tav. 17; vol. x. tav. 5, 6, 54.)

Among the dances performed without arms one of the most important was the *ὅρμος*, which was danced at Sparta by youths and maidens together: the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Lucian (*de Salt.* 12) says that it was similar to the dance performed at the Gymnopaedia. (Compare Müller, *Dor.* iv. 6, § 5.) Another common dance at Sparta was the *Bibasis* (*βίβασις*), which was much practised both by men and women. The dance consisted in springing rapidly from the ground, and striking the feet behind; a feat of which a Spartan woman in Aristophanes (*Lysistr.* 28) prides herself (*γυμναδδομαί γα καὶ ποτὶ πυγὰν ἅλλομαι*). The number of successful strokes was counted, and the most skilful received prizes. We are told by a verse which has been preserved by Pollux (iv. 102), that a Laconian girl had danced the bibasis a thousand times, which was more than had ever been done before. (Müller, *Dorians*, iv. 6, § 8.)

In many of the Greek states the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasures and enjoyment of men at their symposia. These dancers always belonged to the hetaerae. Xenophon (*Symp.* ix. 2–7) describes a mimetic dance which was represented at a symposium where Socrates was present. It was performed by a maiden and a youth, belonging to a Syracusan, who is called the *ὀρχηστοδιδάσκαλος*, and represented the loves of Dionysus and Ariadne.

Dancing was common among the Romans in ancient times in connexion with religious festivals and rites, and was practised, according to Servius (*ad* Verg. *Ecl.* v. 73), because the ancients thought that no part of the body should be free from the influence of religion. The dances of the Salii, which were performed by men of patrician families, are spoken of elsewhere. [SALII.] For the Pyrrhic dance at Rome, see PYRRHICA. There was another old Roman dance of a military nature, called *Bellicrepa Saltatio*, which is said to have been instituted by Romulus, after he had carried off the Sabine virgins, in order that a like misfortune might not befall his state (Festus, *s. v.*). Dancing, however, was not performed by any Roman citizen except in connexion with religion; and it is only in reference to such dancing that we are to understand the statements that the ancient Romans did not consider dancing disgraceful, and that not only freemen but the sons of senators and noble matrons practised it (Quintil. *Inst. Orat.* i. 11, § 18; Macrob. *Sat.* ii. 10). In the later times of the Republic we know that it was considered highly disgraceful for a freeman to dance: Cicero reproaches Cato for calling Murena a dancer (*saltator*), and adds, "Nemo fere saltat sobrius, nisi forte insanit" (*pro Muren.* 6, 13; *in Pison.* 10, 22; *pro Deiot.* 9, 26; cf. Hor. *Od.* iii. 621).

The mimetic dances of the Romans, which were carried to such perfection under the Empire, are described under PANTOMIMUS. Respecting the dancers on the tight-rope, see FUNAMBULUS. (Meursius, *Orchestra*; Burette, *De la Danse des Anciens*; Krause, *Gymnastik und Agon. d. Hell.* p. 807; Schömann, *Antiq.* p. 58; Becker-Göll, *Charikles*, i. 166; Blümner, *Privatleben*, p. 505; Marquardt, *Privatleben*, p. 109.) [W. S.] [G. E. M.]

SALVIA'NUM INTERDICTUM. [INTERDICTUM.]

SALUTATIO, the name given to one of the forms of attention (*officia*) expected from clients by their patrons at Rome. The client would wait even before daybreak (cf. Mayor on Juv. iii. 127 and v. 19) in the vestibule until the doors of the atrium were opened. There he attended until the patron appeared, and the nomenclator announced the name of the dependent, who brought his morning greeting (*ave*). The callers were commonly divided into various *admissiones*, according to their rank and intimacy, and even men of good position found themselves in the number (Juv. i. 100; Sen. *de Ben.* vi. 33). The clients who were invited to do so, accompanied the patron wherever he might be going. Others, after receiving the dole [SPORTULA] at one house, would hurry off to another, to be similarly rewarded there (Mart. x. 74). The name *salutatores* was used of the clients who earned their living by these attentions. (Cf. Friedländer, *Röm. Sitteng.* i.^{6} 382 ff.; Becker, *Gallus*, ii.^{3} 159 ff.) [A. S. W.]

SAMBU'CA. 1. (*σαμβύκη*, or *σαβύκη*, Arcadius, *de Accent.* p. 107), a harp. The preceding Latin and Greek names are with good reason represented by Bochart, Vossius, and other critics, to be the same as the Hebrew סַבְּכָא (sabbeca), the "sackbut," which occurs in Daniel (iii. 5, 7, 10). The performances of *sambucistriac* (σαμβυκιστρίαι) were only known to the early Romans as luxuries brought over from Asia (Plaut. *Stich.* ii. 3, 57; Liv. xxxix. 6). The *chordae obliquae* which Juvenal (iv. 64) mentions among Asiatic innovations at Rome denote the sambuca. The Athenians considered them as an exotic refinement (Philemon, p. 370, ed. Meineke); and the Rhodian women who played on the harp at the marriage-feast of Caranus in Macedonia, clothed in very thin tunics, were introduced with a view to give to the entertainment the highest degree of splendour. Some Greek authors expressly attributed the invention of this instrument to the Syrians or Phoenicians (Athen. iv. p. 175 d). The opinion of those who ascribed it to the lyric poet Ibycus can only authorise the conclusion that he had the merit of inventing some modification of it, the instrument as improved by him being called Ἰβύκινον (Athen. *l. c.*; Suidas, *s. vv.* Ἰβύκινον, Ἰβυκός, Σαμβῦκαι). Strabo, moreover, represents σαμβύκη as a "barbarous" name (x. 3, § 17). [See also LYRA.]

An illustration is given below of an Egyptian harp, which perhaps represents the sambuca. It is from a painting on an Egyptian tomb. Under the Roman emperors the harp appears to have come into more general use (Pers. v. 95; Spartian. *Hadr.* 26).

Ancient Egyptian harp. (Bruce.)

2. *Sambuca* (σαμβύκη or σανδύκη: see Wescher, *Poliorcet.* p. 61) was also the name of a military engine used in sieges. For its use and construction the authorities are Polyb. viii. 2; Veget. iv. 17; Plut. *Marcell.* 15; Athen. xiv. p. 634 b; Onosand. *Strat.* 42; and an elaborate, but not perfectly clear, description in Bito (ed. Wescher, *l. c.*), where a plan is given. It was a movable bridge for passing either from the ships or the towers of the besiegers on to the walls. The σανδύκη of Bito was a bridge with sheltering bulwarks supported on a high column or cylinder made as a screw, which was turned in any direction by a capstan; the whole being fixed on a platform with wheels, so that it combined tower and bridge. The bridge had a weight at one end to assist in keeping it horizontal, and a ladder at the other by which the soldiers climbed up to it; it was turned with the column upon its screw in the required direction, and raised to a level with the top of the wall by the screw (and probably also by pulleys). The sambuca of Vegetius passed from the besieging tower to the walls, being raised by pulleys; the same tower might have a ram in its lower story. That of Polybius passed on to the walls from two ships anchored together; it was raised by pulleys on the masts, and the soldiers mounted to it by a ladder sheltered with δρύφακτοι. The name (as Vegetius, Polybius, and Athenaeus notice) was given because of a fancied resemblance of the machine, with its upright masts or supports and the ropes from its pulleys, to the harp described above. SAMNI'TES. [GLADIATORES, Vol. I. p. 918 *b*.]

SANDA'LIUM. [SOLEA.]

SANDA'PILA. [FUNUS, Vol. I. p. 892 *a*.]

SAPO. Pliny (*H. N.* xviii. § 191) mentions this as a Gallic invention; it was not, however, our soap, but a sort of pomade or wash ("duobus modis spissus ac liquidus"), made of fat and ashes, and used to give a golden tint to the hair. Pliny adds that it was used in Germany, and even more by men than women of that country (cf. Tac. *Hist.* iv. 61; Juv. xiii. 161, and Mayor *ad loc.*). In fact, most other writers seem to connect it rather with the Germans than the Gauls: Martial calls it "spuma Batava" (viii. 33 = *caustica spuma*, xiv. 26) and "Mattiacae pilae," *i.e.* balls of this composition from Mattiacum in Germany (xiv. 27). Ovid speaks of "Germanae herbae" for dyeing the hair, where the word *herbae* may be applied in ignorance of the materials used to make the dye. The *flavus cinis*, of which Servius (*ad Aen.* iv. 698) says that Cato makes mention, is probably this *sapo*. For the equivalents to our soap used by Greeks and Romans, see FULLO, Vol. I. p. 161. (Becker-Göll, *Gallus*, iii. 161; Marquardt, *Privatleben*, 787; Blümner, *Technologie*, i. 161.) [G. E. M.]

SA'RCINAE. [EXERCITUS, Vol. I. p. 807.]

SARCO'PHAGUS, properly an epithet of *lapis*, a flesh-eating stone from Assos in the Troad, in which Pliny (*H. N.* ii. § 211; xxxvi. § 161) says bodies were buried, and consumed all but the teeth within forty days. The word has come to be commonly used for any coffin (*e.g.* Juv. x. 172), and especially for a coffin in stone with sculptural decorations. The introduction of these into Greece and Rome was due to foreign influence; and they are not found in either before the period of decline. In Egypt they existed from the earliest period, and they were thence introduced into Phoenicia. But the object among these people, as well as in Greece and Rome, was to preserve the body, not to destroy it; hence the name "sarcophagus" is peculiarly inappropriate.

We may distinguish the coffin for the reception of the body, inside the tomb, often plain and sometimes cut in the solid rock, from the ornamental erection of a similar shape placed in a conspicuous position to serve as a monument. But the ornamentation of the one was naturally enough often transferred to the other.

The Egyptian sarcophagus was, as the dwelling of the deceased, sometimes made in the form of a house; and a similar architectural form is found in Greece and Rome. The earliest sarcophagus showing the influence of Greek style comes from Cyprus; here we see the myth of the Gorgon and a hunting scene, on other sides a banquet and a chariot group. Unfortunately, there is no trustworthy record of its discovery. In Lycia, the tomb often takes the form of a large sarcophagus mounted on a base; scenes of life, such as fights and banquets, are favourite subjects. In Greece we do not find sarcophagi till the Hellenistic period, when foreign influences were common. They were at first, like those of Asia Minor, intended as visible monuments outside the tomb; and accordingly we find that the reliefs are never allowed to interfere with the lines of the architectural form (fig. 2). The subjects are often purely decorative; often children are represented in various employments, perhaps because their short and plump figures best suit the field to be filled. Mythological subjects also occur, such as the combat with the Amazons, and a few other scenes.

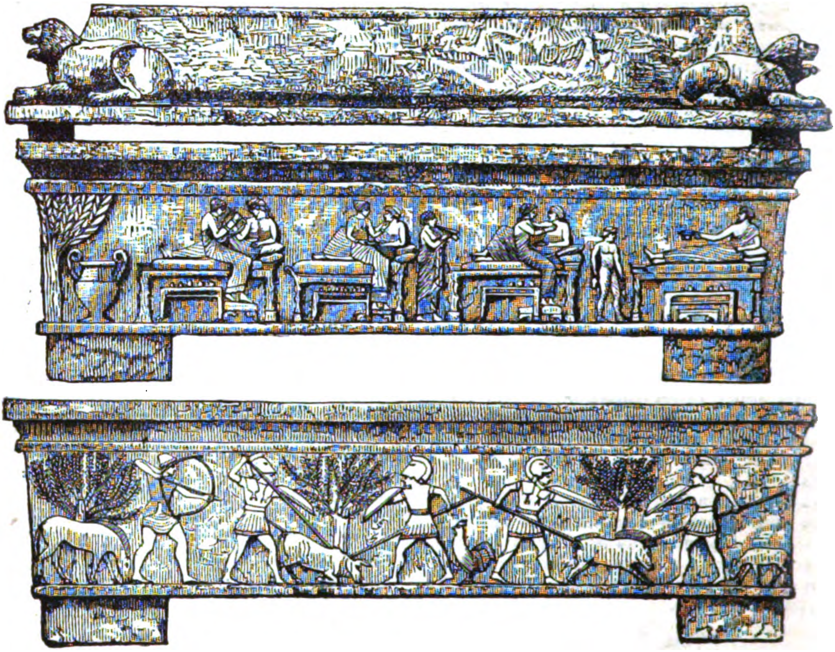

Fig. 1. Sarcophagus from Golgoi in Cyprus. (Cesnola.)

Fig. 2. Sarcophagus found at Patras. (*Arch. Zeit.* 1872.)

Sarcophagi of stone with architectural decoration were made in Rome as early as the third century (*e.g.* the famous ones from the tomb of the Scipios); but the marble ones with scenes in relief belong to imperial times, and are not common till the second century A.D. These form by far the most numerous class of sarcophagi, and are usually meant when the word is used. Partly because they were usually inside the tomb, partly from want of artistic feeling, the reliefs are less subordinate to the structural form; they are often crowded with figures, and even the corners are not clear (fig. 3). The back is usually plain. The execution of these varies from fair Graeco-Roman work to the last and worst attempts of classical art; but the style does not rise above that of handicraft, and figures and groups are repeated from conventional models. The variety of subject is such that it can only be touched on here. A most extensive gallery of mythological scenes, Dionysiac and other processions, Muses, and Cupids may be found on them; also scenes from daily life, and sometimes a succession of scenes, often representing the various ages of man. Sometimes the same is represented by mythological or mystical symbolism.

Here sarcophagus has been taken to mean stone coffin, but the word is often loosely used for a coffin of other material, especially of terra-cotta. Fine painted terra-cotta coffins, of archaic period, have been found in Asia Minor; and also in Etruria they are frequent, ornamented with painting or reliefs. A figure of the deceased often reclines on the top, as in the smaller Etruscan urns or boxes for the ashes of

Fig. 3. Front of Sarcophagus from Genzano. The labours of Hercules. (Brit. Mus.)

the dead, in stone, which may also be regarded as a variety of sarcophagus.

(No complete work on the subject exists, but one has been undertaken by the German Institute. Meanwhile, isolated articles must be consulted, *e.g.* Matz, *Arch. Zeitung*, 1872, p. 11 *sqq.*; Milchhöfer, *Annali d. Inst. Arch.* 1879, p. 87 *sqq.*; Overbeck, *Geschichte der griechischen Plastik*, ii. pp. 475 *sqq.*) [E. A. G.]

SA'RCULUM (*a sarriendo*, Varro, *L. L.* v. 31, σκαλίς, σκαλιστήριον), a hoe. (Hor. *Od.* i. 1, 11; Ovid, *Met.* xi. 36, *Fast.* i. 699, iv. 927; Plaut. *Truc.* ii. 2, 21; Cato, *de Re Rust.* 10; Columella, x. 21.) It was lighter than the Marra (compare Plin. *H. N.* xvii. § 146, xix. § 241), and was sometimes a simple blade, sometimes two-pronged (Pallad. i. 43). It was also used like the Rastrum to cover the seed when sown (Columella, ii. 11), and in mountainous countries it served instead of a plough (Plin. *H. N.* xviii. 19, § 178). Directions for using it to clear the surface of the ground (σκάλλειν, Herod. ii. 14; σκαλεύειν, Schol. *in* Theocrit. x. 14) are given by Palladius (*de Re Rust.* ii. 9). See also Juv. xv. 166, and Mayor's note. [J. Y.] [G. E. M.]

SARISSA. [Exercitus, p. 488 *a*.]

SARO'NIA, a festival celebrated every year at Troezen in honour of Artemis; no particulars are known. (Paus. ii. 32, 9; Spanheim on Callim. *Hymn. in Delum*, 42, p. 414.) [L. S.]

SARRA'CUM, a kind of common cart or waggon, which was used by the country people of Italy for conveying the produce of their fields, trees, and the like from one place to another (Vitruv. x. 1; Juv. iii. 254). Its name, as well as the fact that it was used by several barbarous nations, shows that it was introduced from them into Italy (Sidon. *Epist.* iv. 18; Amm. Marc. xxxi. 2). That persons also sometimes rode in a sarracum, is clear from a passage of Cicero quoted by Quintilian (viii. 3, § 21), who regards the word *sarracum* as low and vulgar. Capitolinus (*Anton. Philos.* 13) states that during a plague the mortality at Rome was so great that it was found necessary to carry the dead bodies out of the city upon the common sarraca. Several of the barbarous nations with which the Romans came in contact used these waggons also in war, and placed them around their camps as a fortification (Sisenna, *ap.* Non. iii. 35), and the Scythians used them in their wanderings, and spent almost their whole lives upon them with their wives and children, whence Ammianus compares such a caravan of sarraca with all that was conveyed upon them to a wandering city. The Romans appear to have used the sarracum for all purposes for which the plaustrum was employed [Plaustrum], and Juvenal (v. 22) even applies it to the constellation which was generally called Plaustrum; but that there must have been some difference in the build is clear from the fact that plaustrum and sarracum are mentioned together in Juvenal and Vitruvius. What the difference was cannot be positively decided: both alike were formed with two wheels as well as with four (*Ed. Diocles.* 15, 23–28); from a general survey of the passages cited it may, however, be surmised that the sarracum was larger and heavier than the plaustrum. (Scheffer, *de Re Vehic.* ii. 31; Marquardt, *Privatl.* 732.) [L. S.] [G. E. M.]

SARTA'GO (τήγανον, τάγηνον), a frying-pan (Juv. x. 63), "a strepitu soni vocata quando in ea ardet oleum" (Isid. xx. 8); the oil being used for frying, as we use butter or fat. In Pliny (*H. N.* xvi. § 55) it is used for melting resin. The shape of a sartago which has been found at Pompeii is exactly like that of a modern frying-pan (see *Mus. Borbon.* iv. tav. 12; Guhl and Koner, ii. 188). For the Greek equivalent, see Athen. vi. pp. 228, 229. [L. S.] [G. E. M.]

SA'TIRA or **SA'TURA**. The word, it would appear, originally meant a mixture or medley. Varro, quoted by Diomedes, p. 486 (Keil), defined *satura* as a dish or compound of various ingredients: "satura est uva passa et polenta et nuclei pinei mulso conspersi; farcimen . . . multis rebus refertum saturam dicit Varro vocitatum." Festus, p. 314 (Müller), and Isidore, *Orig.* xx. 2, 8, say much the same thing. The phrase *per saturam* thus meant "promiscuously," "without distinction," "in no definite order:" thus Lactantius says (*Inst.* i. 21, 13), "Pescennius Festus in libris historiarum per saturam refert," ("he says, among a number of other things, that," &c.); Charisius, p. 194 (Keil), "adverbium . . . omnia in se capit quasi collata per saturam" ("the adverb contains everything in a miscellaneous collection"). As a technical term of law, *per saturam* or *in saturam* denoted a bill the various provisions of which were proposed and voted on, not separately, but in a lump. Thus at the close of a *lex* the words were added, "neve per saturam abrogato aut derogato" (Festus, p. 314); Fronto says (p. 212, Naber), "non sparsa nec sine discrimine aggerata, ut quae per saturam feruntur." As applied to voting, *per saturam* seems to have meant "promiscuously;" in other words, that the voting was taken not individually, but by show of hands, acclamation, or some other rough and ready method. C. Laelius, quoted by Festus, p. 314, says, "quasi per saturam sententiis exquisitis." A number of other passages might be quoted to the same effect.

In literature, *satura* perhaps meant *satura fabula*, a story or piece of writing of miscellaneous contents. If we may trust Livy, who is probably merely reproducing and abridging information derived from some older authority, the word was originally applied to a rude form of drama (perhaps merely a scene) without a plot, which dealt with a miscellaneous variety of subjects. When Livy describes the origin of dramatic performances at Rome (vii. 2, 4), he seems here to have meant by *satura* a simple scene without a plot, acted at first without, but afterwards (under Etruscan influence) with, a regular musical accompaniment and corresponding gestures. This scene or dialogue with musical accompaniment never developed into a play with a regular plot. Livius Andronicus was the first artist who gave up *saturae*, and, under Greek influence, introduced a regular drama: "ab saturis ausus est argumento fabulam serere."

The *fabula*, or regular play, drove the *satura* from the sphere of acted drama, and the word was then applied to a literary composition not written for acting, dealing with a miscellaneous variety of subjects or characters, and composed sometimes in prose and verse, sometimes in verse only, but verse in a variety of metres. (Diomedes, p. 485, "olim carmen quod ex variis poematibus constabat satura vocabatur, quale scripserunt Pacuvius et Ennius;" cf. Isid. *Orig.* v. 16, 1, "saturas scribere est poemata varia condere.")

History of the literary Satura.—Ennius (born 239 B.C.) is mentioned by Horace as the founder of this form of composition (*Sat.* i. 10, 66, "rudis et Graecis intacti carminis auctor"). He wrote several books of *saturas*. Six are mentioned by the ancient grammarians, but in all probability there were more, as some are quoted not by their numbers but by their titles. Of the subjects of the first and second books nothing is known; of the fragments of the second, one is written in trochaic, the other in hexameter verse. The third book, entitled *Scipio*, may have been dedicated to the achievements of the younger Africanus. Some fragments of it remain, written in hexameters, iambics, and trochaics. The titles and fragments of some of the other *saturae* may give some clue to their contents. The *Hedyphagetica* must have treated of gastronomy; the *Epicharmus* and *Euhemerus* of philosophy and mythology. Aulus Gellius (*Noctes Atticae*, ii. 29, 3) preserves a notice that Ennius, in one of his *saturas*, versified, with great success, the fable of the lark and its young ones; but in which book he did this is unknown. Scanty as they are, these fragments clearly show what the *satura* was in the hands of Ennius. It was a literary conversation composed in various metres, the epic hexameter as well as the ordinary metres of the comic drama—whether with an admixture of prose, we do not know. Its subjects might be serious or otherwise, according to the author's fancy. It was, in short, a talk with cultivated society at Rome on the topics of the hour. Pacuvius (about 220–132 B.C.) wrote *saturae* of which nothing remains, and we therefore pass on to the author whose name was inseparably associated with this form of composition, and who was generally accounted, in Latin antiquity, its greatest master. Lucilius (180 or 167–103 B.C.) appears to have devoted himself exclusively to the *satura*. He wrote at least thirty books of *saturae*, each of which, probably, contained several pieces. Of these books the first seems to have been written in hexameters, the rest partly in hexameters or elegiacs, partly in iambics or trochaics. Thus, in external form, the *satura* of Lucilius did not differ much, if at all, from that of Ennius. It was still a brief narrative or picture of life, with an element of dialogue. So much is clear, if only from the remains of the third book, from which Horace copies his *Journey from Rome to Brundisium;* from the scene in the fourth book between Aeserninus and Pacideianus, the rustic supper in the fifth book, and the convivial scenes of the fourteenth and twentieth. The range of his subjects is a very wide one: philosophy, philology, literary criticism, war, contemporary life in all its phases—all find a place in his *saturae*. But an important point of difference must be noticed between Lucilius and his predecessors, which had not escaped the notice of the ancients. Diomedes (p. 485) speaks of the *satira* which was "carmen maledicum et ad carpenda hominum vitia archaeae comoediae charactere compositum, quale scripserunt Lucilius et Horatius et Persius." Lucilius was the first writer who impressed on the *satura* the character of invective which it to a great extent preserved in the hands of Albucius ("cuius Luciliano charactere sunt libelli," as Varro says, *L. L.* iii. 2, 17), Horace, Persius, and Juvenal. With Lucilius the *satura* underwent a new Greek influence, that of the Old Attic Comedy, and became the instrument not only of personal reflection or advice or expostulation, but also of personal attack. The reason of this must be sought, no doubt, partly in the character of Lucilius himself, partly in the circumstances of his age. The period of corruption among the ruling classes at Rome had begun, and was to continue until the end of the Republic. There was plenty of room for a preacher or a satirist or a comedian; but Roman feeling would not allow the stage to be used for political attack, and the Roman Aristophanes was driven back to his ink and paper.

The remains of Lucilius's *saturae*, whatever else they bear witness to, attest beyond doubt an extraordinary vigour, which breathes in almost every surviving line. This was, probably, the main source of his popularity, which never waned so long as Latin literature was alive. Even in the time of Tacitus (*Dial. de Orat.* 23) there were readers who preferred him to Horace. He makes strong protestations of sincerity, nor does there seem any reason to doubt that he was sincere. Horace, in the fourth and tenth satires of his first book, finds fault with his style as slovenly and careless. But this defect was either not discovered or was passed over, not only by Cicero and Varro, but by Quintilian. To Cicero Lucilius is *doctus* and *perurbanus* (*de Orat.* i. § 72); to Varro he was *gracilis*, or elegant (Aulus Gellius, *Noctes Atticae*, vi. 14, 6). Quintilian altogether refuses to subscribe to the censures passed upon him by Horace (*Inst. Or.* x. 1, 93). Fronto (p. 62, Naber) calls him "elegans in cuiusque artis ac negotii propriis." It is probable, then, that the hastiness and imperfection of his workmanship, which are undeniable, blinded Horace to his merits.

The original form of *satura* was adopted by Marcus Terentius Varro (116–27 B.C.) in his *saturae Menippeae*, or *saturae* in the style of the Cynic philosopher Menippus. Quintilian (x. 1, 95) says, "alterum illud etiam prius saturae genus, sed non sola carminum varietate mixtum condidit Terentius Varro;" Probus, on Verg. *Ecl.* vi. 31, "Varro . . . Menippeus, non a magistro . . . nominatus, sed a societate ingenii, quod in quoque omnigeno carmine saturas suas expoliverat." Of the *saturae* there was a very large number, as Quintilian says (*l. c.*), "plurimos hic libros (i.e. *saturarum*) et doctissimos composuit, peritissimus linguae Latinae et omnis antiquitatis et rerum Graecarum nostrarumque." To judge from the scanty fragments which remain, Varro's *saturae* seem to have been pictures of life and society, tinged with a dash of common-sense philosophy, and embracing almost every conceivable point of social, moral, religious, or literary interest. For the ninety titles which have survived, see the edition by Riese, or that by Bücheler, at the end of his Petronius. They give a striking idea of the variety of subjects over which Varro ranged. These pieces are mixtures of prose and verse. The fragments are very brief and inadequate, having been in most cases only preserved by grammarians as giving instances of rare words or forms of words; but, even so, they give a vivid idea of the immense loss which Latin literature has sustained in the disappearance of Varro's *saturae*.

Between Marcus Varro and Horace comes Publius Varro of Atax, whose works are lost, but who, according to Horace, attempted something in the same style as himself, but did not succeed (*Sat.* i. 10, 46, "hoc erat, experto frustra Varrone Atacino Atque quibusdam aliis, melius quod scribere possem").

The *satura* or *sermo* (for so he calls it) is treated by Horace in a way of his own. He does not like the rudeness, as he thinks it, of Lucilius; he looks for more polish of style, more flexibility, more softness of tone, to suit the complexity of life. But, like Lucilius, he writes in hexameters, though often preserving the form of a dialogue. This, so far as it goes, is a mistake, for the hexameter is the metre least of all suited to dialogue. In all other respects the *satura* or *sermo* of Horace seems to be true to the sound tradition; it is a conversation with the age on the topics that interest it.

We now come to the age of Nero, in which the *satura* is represented by two writers of a very different character, Persius (34–62 A.D.) and Petronius (died perhaps 66 A.D.). Persius is a devoted admirer of Horace, but he has not Horace's geniality or lightness of hand. Like his master, he attempts to write *saturae* in hexameters; but he only succeeds in making his natural slowness and obscurity of utterance still more conspicuous. His subjects, too, are exclusively serious: he is not at home out of the region of philosophy and religion; and he is a young student, ignorant of the world. Petronius is a man of the world and a writer of genius. His *satura*, of which unfortunately only fragments remain, is constructed in the manner of Varro, and is a narrative of adventures in a town of Southern Italy, so contrived as to introduce a number of leading types of character—a poet, a freedman, a ship's captain, and others. Each character is so conceived, and represented in a manner so lifelike, as to make Petronius's book something unique of its kind in classical literature. The *dramatis personae* all speak in appropriate style and idiom. The body of the narrative is in prose, but it is interspersed with verse, put mainly into the mouth of the poet Eumolpus, and intended, it is nearly certain, as a parody of Lucan and Seneca.

In the hands of Juvenal (about 47–130 A.D.) the *satura* almost loses its original character; indeed, his satires might with more propriety be called epistles, as the element of dialogue has vanished except in the third and ninth satires. Juvenal writes in hexameters of the most conventional form, and treats his themes in the tone of rhetorical invective. He is entirely dominated by the angry spirit of Lucilius, and in the monotony of indignation forgets that humour and play of sympathy were an essential element of the genuine *satura*; yet, far as he is removed from Ennius, Varro, and Petronius, nay even from Horace, his moral force and mastery of his chosen style are so commanding that he has come to be regarded in literature as the prince of Roman satirists; and it is no doubt largely owing to his influence that the words *satire* and *satirical* have come in English to imply severe, if not ill-natured raillery.

The proper form of the *satura*, a mixture of prose and verse, was adopted in the 4th century by Martianus Capella and in the 6th by Boetius (died 525 A.D.) in his *de Consolatione Philosophiae*, of which an ancient biography (p. xxxi., Peiper) says: "Hos libros per saturam edidit, imitatus scilicet Martianum Capellam, qui prius libros de Nuptiis Philologiae et Mercurii eadem specie poematis conscripserat."

(See Anton Funck, *Satur und die davon abgeleiteten Wörter*, Kiel, 1888; H. Nettleship, *The Roman Satura*, Oxford, 1878; Leo, *Varro und die Satire*, in the *Hermes*, Berlin, 1889. The author of the latter essay is very sceptical as to the independent value of the evidence given by Livy and the Latin authorities.) [H. N.]

SATISDATIO. [ACTIO.]

SATURNA'LIA, the festival of Saturnus, to whom the inhabitants of Latium attributed the introduction of agriculture and the arts of civilised life. Falling towards the end of December, at the season when the agricultural labours of the year were fully completed, it was celebrated in ancient times by the rustic population as a sort of joyous harvest-home, and in every age was viewed by all classes of the community as a period of absolute relaxation and unrestrained merriment. During its continuance no public business could be transacted, the law courts were closed, the schools kept holiday, to commence a war was impious, to punish a malefactor involved pollution. (Macrob. *Sat.* i. 10, 16; Martial, i. 86; Suet. *Aug.* 32; Plin. *Ep.* viii. 7.) Special indulgences were granted to the slaves of each domestic establishment; they were relieved from all ordinary toils, were permitted to wear the *pilleus* the badge of freedom, were granted full freedom of speech, partook of a banquet, attired in the clothes of their masters, and were waited upon by them at table. (Macrob. *Sat.* i. 7; Dio Cass. lx. 19; Justin. xliii. 1, 3; Hor. *Sat.* ii. 7, 5; Martial, xi. 6, xiv. 1; Athen. xiv. 44.)

The public festival began with a *sacrificium publicum* in front of the temple of Saturn in the Forum (Dionys. vi. 1), and then followed the *convivium publicum*, at which senators and knights wore the dinner dress [SYNTHESIS]. In private the day began with the sacrifice of a young pig (Mart. xiv. 70; Hor. *Od.* iii. 17, 14); all ranks devoted themselves to feasting and mirth, presents were interchanged among friends, and crowds thronged the streets, shouting *Io Saturnalia* (this was termed *clamare Saturnalia*). (Catull. 14; Senec. *Ep.* 18; Suet. *Aug.* 75; Martial, v. 18, 19, vii. 53, xiv. 1; Plin. *Ep.* iv. 9; Macrob. *Sat.* i. 8, 10; Serv. *ad* Verg. *Aen.* iii. 407.)

Many of the peculiar customs exhibited a remarkable resemblance to the sports of our own Christmas and of the Italian Carnival. Thus on the Saturnalia public gambling was allowed by the aediles (Martial, v. 84, xiv. 1, xi. 6), just as in the days of our ancestors the most rigid were wont to countenance card-playing on Christmas-eve; the wearing of the *synthesis* and of the *pilleus* (Martial, xiv. 141, vi. 24, xiv. 1, xi. 6; Senec. *Ep.* 18) may find their counterpart in the dominoes, the peaked caps, and other disguises worn by masques and mummers; the *cerei* were probably employed as the *moccoli* now are on the last night of the Carnival; and lastly, one of the amusements in private society was the election of a mock king (Tac. *Ann.* xiii. 15; Arrian, *Diss. Epictet.* i. 25; Lucian, *Saturn.* 4), which at once calls to recollection the characteristic ceremony of Twelfth-night.

Saturnus being an ancient national god of Latium, the institution of the Saturnalia is lost in the most remote antiquity. In one legend it was ascribed to Janus, who, after the sudden disappearance of his guest and benefactor from the abodes of men, reared an altar to him, as a deity, in the forum, and ordained annual sacrifices; in another, as related by Varro, it was attributed to the wandering Pelasgi, upon their first settlement in Italy, and Hercules, on his return from Spain, was said to have reformed the worship and abolished the practice of immolating human victims; while a third tradition represented certain followers of the last-named hero, whom he had left behind on his return to Greece, as the authors of the Saturnalia (Macrob. *Sat.* i. 7). Records approaching more nearly to history referred the erection of temples and altars, and the first celebration of the festival, to epochs comparatively recent, to the reign of Tatius (Dionys. ii. 50), of Tullus Hostilius (Dionys. iii. 32; Macrob. *Sat.* i. 8), of Tarquinius Superbus (Dionys. vi. 1; Macrob. *l. c.*), to the consulship of A. Sempronius and M. Minucius, B.C. 497, or to that of T. Larcius in the preceding year (Dionys. vi. 1; Liv. ii. 21). These conflicting statements may be easily reconciled by supposing that the appointed ceremonies were in these rude ages neglected from time to time, or corrupted, and again at different periods revived, purified, extended, and performed with fresh splendour and greater regularity. (Comp. Jordan, *Topog.* i. 360.) The festival was, no doubt, an old Italian rite of prehistoric date, but the adoption of the *ritus graecus* in its ceremonies, as shown by the uncovered head [SACRIFICIUM, p. 586] and the lectisternium, was due to the order from the Sibylline books in the year 217 B.C. (Liv. xxii. 1, 19). It is suggested by Marquardt that the feasting of slaves, which the Romans took to be a tradition from the golden age when all were equal, may have really originated with the lectisternium in that year; since such general feasting of all ranks was part of the lectisternia (Macrob. i. 6, 13; LECTISTERNIUM).

During the Republic, although the whole month of December was considered as dedicated to Saturn (Macrob. i. 7), only one day, the XIV. Kal. Jan., was set apart for the sacred rites of the divinity: when the month was lengthened by the addition of two days upon the adoption of the Julian Calendar, the Saturnalia fell on the XVI. Kal. Jan., which gave rise to confusion and mistakes among the more ignorant portion of the people. To obviate this inconvenience, and allay all religious scruples, Augustus enacted that three whole days, the 17th, 18th, and 19th of December, should in all time coming be hallowed, thus embracing both the old and new style (Macrob. i. 10). A fourth day was added, we know not when or by whom, and a fifth, with the title *Juvenalis*, by Caligula (Dio Cass. lix. 6; Suet. *Cal.* 17); an arrangement which, after it had fallen into disuse for some years, was restored and confirmed by Claudius (Dio Cass. lx. 2).

But although, strictly speaking, one day only, during the Republic, was consecrated to religious observances, the festivities were spread over a much longer space. Thus, while Livy speaks of the first day of the Saturnalia (*Saturnalibus primis*, Liv. xxx. 36), Cicero mentions the second and third (*secundis Saturnalibus*, *ad Att.* xv. 32; *Saturnalibus tertiis*, *ad Att.* v. 20); and it would seem that the merry-making lasted during seven days, for Novius, the writer of Atellanae, employed the expression *septem Saturnalia*, a phrase copied in later times by Memmius (Macrob. i. 10), and even Martial speaks of *Saturni septem dies* (xiv. 72), although in many other passages he alludes to the five days observed in accordance with the edicts of Caligula and Claudius (ii. 89; xiv. 79, 141).

Among the presents of all kinds which were made at this season (Suet. *Aug.* 75; Plin. *Ep.* iv. 9, 7; Lucian, *Cronosol.* 14–16; Mart. iv. 46, vii. 53, and all book xiv.), we must notice especially the *cerei* and the *sigillaria*. The *cerei* were wax tapers (*funiculi* or *funales* cerei) and were the most ordinary gift (Macrob. i. 7, 33; Varro, *L. L.* v. 64; Mart. v. 18), which may possibly, as some think, have a symbolical reference to the festival of waning light in the season of *bruma*; it may be noticed also that candles were the light of primitive times before oil lamps were known (Varro, *L. L.* v. 119), and so may have belonged to a primitive festival. The *sigillaria* or *sigilla*, which were especially characteristic of the Saturnalia (Sen. *Ep.* xii. 3; Suet. *Claud.* 5; Macrob. i. 11, 49; Spartian. *Carac.* 1, *Hadr.* 17; Mart. xiv. 182), were small figures of terra-cotta and possibly sometimes of dough baked hard (Lobeck, *Aglaoph.* 1079). Some regarded them as relics of a human sacrifice to Saturn (Macrob. i. 11, 48; comp. OSCILLA). Hence the name of the street *Sigillaria* (Gell. v. 4), and the sale or "fair" of statuettes which lasted for four days after the 17th of December was called *sigillaria*; there is no ground for the supposition that certain of the festal days bore that name. (Marquardt, *Staatsverw.* iii. 586 ff.; Preller, *Röm. Myth.* p. 413.) [W. R.] [G. E. M.]

SCABELLUM. [CYMBALUM.]

SCALAE (*κλῖμαξ*). 1. A ladder. These, whether scaling-ladders or ladders for other purposes, had nothing in their construction which calls for comment. 2 (*ἀναβαθμοί*). The staircase of a house [cf. DOMUS, Vol. I. pp. 663 *b*, 665 *b*]. The stairs in ordinary houses were like ladders, except that they had flat steps instead of rungs: they sometimes led directly into the street (Liv. xxxix. 14). *Scalae graecae* differed from these ladder staircases in having the under side of the step enclosed, so that the feet of a person going up them would not be visible from below. The Flaminica was not allowed to ascend a high flight of stairs unless they were of this construction (Gell. x. 15; Serv. *ad Aen.* iv. 646). Compare Becker-Göll, *Gallus*, ii. 223; Nissen, *Pompeii*, 602. [L. S.] [G. E. M.]

SCALPELLUM. [CHIRURGIA.]

SCALPRUM was the name which might no doubt be applied to any instrument which could be said *scalpere*, and so it includes both cutting and chiselling tools. Under the former head we have:—

1. The shoemaker's knife for cutting leather = the Greek *σμίλη* or *σμιλίον* (Hor. *Sat.* ii. 3, 106; Pollux, vii. 83; Plat. *Rep.* i. p. 353 A, *Alc.* i. p. 129 C). There is a distinction between the *σμίλη*, which has a straight blade like an ordinary knife blade, and the *τομεὺς* or *περιτομεύς*, also used by leather-cutters, which had a crescent-shaped blade (Olympiodor. p. 210). Blümner (*Technol.* i. 273) identifies the scalprum with the straight-bladed *σμίλη*, and the *culter crepidarius* with the rounded *τομεύς*.

2. *Scalprum librarium* (*καλαμογλύφος*), a penknife (Tac. *Ann.* v. 8; Suet. *Vit.* 2) = *σμίλη δονακογλύφος* (*Anth. P.* vi. 295), which was used to make the point of the reed-pen. [CALAMUS.]

3. A grafting-knife for gardeners (Plin. *H. N.* xvii. § 119).

4. A surgeon's knife (Cels. viii. 3): both *σμίλη* and *τομεὺς* are names of *ἰατρῶν ἐργαλεῖα* (Poll. iv. 181). [See woodcut under CHIRURGIA.]

As a chisel we have the *scalprum fabrile* (Liv. xxvii. 49), alike for wood and stonê, in form resembling a modern chisel (see cut under CIRCINUS) and = the Greek *γλύφανον*: it was struck with a mallet (*malleus*), for which the Greek equivalent is *κολαπτήρ*, for Rich and Liddell and Scott are probably mistaken in understanding the *κολαπτὴρ* to be a chisel. (See Blümner, *Technologie*, ii. 211, iii. 93.) [G. E. M.]

SCALPTURA (*γλυπτικὴ σφραγίδων*, Poll. vii. 209), the art of engraving gems or hard stones (for the uses of the words *γλύφειν*, *χαράσσειν*, *κολάπτειν*, *scalpere*, *sculpere*, &c., see Blümner, *Technol.* ii. 167 ff. and Lexicons).

The present article deals only with the methods and history of the art of gem engraving. Some account of the minerals employed will be found *s. v.* GEMMA; and of the manner in which gems were worn, *s. v.* ANULUS.

The technical Methods of Gem Engraving.

The gems first employed were of soft materials, such as steatite, and could be engraved either with metal tools, or with pieces of harder stones, such as obsidian. The Ethiopians tipped their arrows with a sharpened stone, *τῷ καὶ τὰς σφρηγῖδας γλύφουσι* (cf. Herod. vii. 69). But nearly all engraved gems were too hard for instruments of metal; cf. Pliny, of the topaz: "sola nobilium limam sentit" (*H. N.* xxxvii. § 109). Accordingly, the different methods of gem engraving are methods for applying minute fragments of a very hard material, in order to produce the desired effect on the gem to be engraved. The ancient modes of procedure were very similar to those of the modern engraver.

The diamond was sometimes used set in a pencil. Thus, Pliny, *H. N.* xxxvii. § 60: minute diamond splinters "expetuntur scalptoribus ferroque includuntur nullam non duritiem ex facili cavantes." So also Solinus says of the hyacinth, "adamante scribitur et notatur" (c. 30, p. 152). Sometimes minute dust of diamonds or Naxian emery powder was mixed with oil, and applied by friction (cf. Dioscor. v. 165, *σμύρις λίθος ἐστίν, ᾗ τὰς ψήφους οἱ δακτυλιογλύφοι σμήχουσι*. Cf. Hesych. *s. v.*, and Blümner, *Technologie*, iii. p. 287).

This might be done by rubbing the mixture on the stone either with a blunt metal pencil worked with the hand, or by a mechanically revolving tool. This tool might either be a drill worked with a bow (like the modern watchmaker's drill; cf. *Cat. of Gems in the British Museum*, Pl. E, No. 305) or might consist of a minute revolving wheel, such as is used by the modern dentist, but fixed in a lathe. The various methods are briefly indicated by Pliny, *H. N.* xxxvii. § 200, "tanta differentia est ut aliae (gemmae) ferro scalpi non possint" (cannot be carved with a metal tool), "aliae non nisi retunso" (only with a blunt pencil, to rub in emery), "omnes autem adamante" (with the diamond point); "plurumum vero in iis terebrarum proficit fervor" (the use of the drill).

A knowledge of the different methods above enumerated is a considerable help in distinguishing the periods of gems, as different kinds of technique prevailed at different times. The drill is much used in the early "island gems" and in the Etruscan scarabs, further described below. It had either a pointed end, which made hemispherical depressions, or a tubular end which produced ring-like grooves. The latter form only occurs in the gems of the islands. On a larger scale it may be traced on the architectural sculptures from Mycenae. (Cf. also *Class. Review*, 1889, p. 374.)

In gems of the later Greek period the drill was supplanted by the wheel, which bit into the stone with its cutting edge. At the best time the whole of the interior of the design was afterwards carefully worked over with the blunt point (*ferrum retunsum*) and emery powder, so as to obliterate the traces of the drill or of the wheel. In late Roman gems, executed hastily with the wheel, the cuts are very apparent. It is often possible to count the number of cuts that have been taken with the wheel. The diamond pencil was only used for the finest work, such as the hair and for the minute final touches. Splinters of ostracias, a word of unknown meaning, were also employed like the diamond point (Plin. *H. N.* xxxvii. § 177). For a full account of the gem engravers' methods, with illustrations, see Mariette, *Traité des Pierres gravées*, vol. i. p. 195; Natter, *Méthode de graver en Pierres fines;* Blümner, *Technologie*, iii. p. 279.

History of Gem Engraving.

In taking a historical survey of Greek gems, we first have to consider the stones associated with the Mycenaean period of culture. These gems are usually known by the inappropriate title of "gems of the islands" (German, *Inselsteine*). They are found at Mycenae (Schliemann, *Mycenae*, figs. 539–541; 'Εφ. ἀρχαιολογική, 1888, pl. 10), and in the closely-allied deposits of Menidi (Lolling, *Kuppelgrab bei Menidi*, pl. vi.) and Spata (*Bull. de Corr. Hellén.* ii. 1878, p. 224). They are also found in the islands of the Aegean, as Melos (*Mittheilungen des Inst. Athen.* 1886, pl. vi.) and at Ialysos in Rhodes (*Cat. of Gems in the Brit. Mus.* Nos. 104–8). The stones are for the most part of one of two forms, either *lenticular* (*i.e.* bean-shaped) or *glandular* (in the form of the sling-bolt). The material most frequently used is steatite, which is comparatively soft; but instances occur of the use of jasper, agate, crystal, and similar hard stones. Figs. 1–3 represent three "island gems." Figs. 1 and 2 are from Menidi, and represent respectively a gryphon and two lions. Fig. 3 is from Melos, and represents a winged Triton and a fish.

Fig. 1.

Fig. 2.

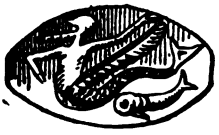

Fig. 3.

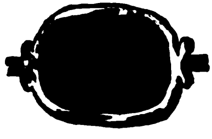
The importance of this class of gems lies in the fact that they show a continuity of development between the periods of Mycenae and of historical Greece. On the one hand, they are found in Mycenaean graves, and occasionally reproduce the characteristic motives of Mycenaean sculpture (comp. the gems, *Brit. Mus. Cat.* pl. A, 106, and 'Εφ. ἀρχ. 1888, pl. 10, fig. 2, with the Gate of Lions); on the other hand, gems of the same style and forms as the preceding are found with Greek mythological types, which, it is to be noted, do not occur at Mycenae. (See above, fig. 3.) Among the types that occur are figures of Pegasos (*Brit. Mus. Cat.* 21–26, pl. A); of a winged Gorgon (*Mittheil. des Inst. Athen.* Abth. 1886, pl. vi. fig. 13); Heracles and Nereus (*Brit. Mus. Cat.* pl. A, 82); a Centaur (*Brit. Mus. Cat.* 84; *Arch. Zeit.* 1883, pl. xvi. fig. 16); and Prometheus (?), on a gem of the late Admiral Spratt. Moreover, these gems are found at Melos, in company with early Greek inscriptions, vases, and terra-cottas, which fix the date of the tombs in which they are found as from the seventh to the fifth century. Until the place is ascertained where the gems in question were manufactured, the question must remain somewhat doubtful; but it seems possible that we have in the "island gems" the products of an art which was able to resist the injury commonly supposed to have been caused by Dorian invaders to the more ambitious arts of Mycenae. It is to be observed that the hardest materials are most frequent at the earliest period—a fact that suggests an art passing through a period of decadence. (Cf. Milchhoefer, *Die Anfänge der Kunst in Griechenland*, p. 39; Furtwaengler and Loeschcke, *Mykenische Vasen;* Duemmler, in *Mittheil. des Inst. Athen.* 1886, p. 170.)

Though the class of gems just described was continuous till historical times, yet it survived as an isolated phenomenon; and for the general history of Greek and Etruscan gem engraving we start from an independent origin.

When the Greeks and Etruscans in historical times were brought into contact with Oriental customs, by the agency of the Phoenicians, they were introduced to two forms of gems which were of great antiquity; namely, the cylinder of Babylonia and Assyria, and the scarabaeus of Egypt. The cylinder was perforated longitudinally for suspension by a cord, or more rarely mounted on a swivel, and had a device engraved round it. It had been used in Babylonia as a seal from time immemorial; but the form did not attract the Greeks or Etruscans, and instances are very rare in which it occurs. We find it principally in deposits immediately subject to Oriental influences, as at Camiros, in Rhodes (*Brit. Mus. Cat.* 132); in Cyprus (Cesnola, pl. iv. 1, 2); and at Tharros, in Sardinia (*Brit. Mus. Cat.* 191). No instance can be quoted by the present writer in which the cylinder has been found in Etruria. The only Greek example known to him was found at Kertch, in a grave of the fourth century (*Compte-rendu*, 1868, pl. 1). King (*Antique Gems and Rings*, i. p. 48) describes a cylinder in the Hertz Coll. (*Sale Cat.* No. 407) engraved by a Greek artist, but immediately under Persian influence.

The scarabaeus, on the other hand, is intimately connected with the history of Greek gem engraving, and still more so with that of Etruscan gem engraving. It owes its origin to Egyptian theology, in which the Egyptian beetle, *Scarabaeus sacer*, with a ball of mud containing its eggs, was emblematic of the deity Kheper, the principle of light, and the creative power of nature. Plutarch (*de Iside*, x.) mentions the beetle, adding that it was worn as a seal by warriors, as being only of the male sex. From its religious significance the scarab became a sacred emblem and amulet, and from early times was buried with the Egyptian dead. As a rule the base of the scarab, in Egypt, contains some simple hieroglyphic inscription, such as the name of a king or of a private person. The materials most commonly used were steatite or porcelain. But we are only concerned with the scarab when it had been adopted as a conveniently shaped object for the engraver outside Egypt, and when all idea of its sacred significance had been forgotten.



When worn, the scarab was either strung on a string, or set in a ring with a swivel (cf. cut, *s. v.* ANULUS, and the account of the ring of Gyges, Plat. *Rep.* ii. 359); or it was set in an immovable box-setting of gold, and formed part of a ring. They were also set, in large numbers, in necklaces and jewellery.

The form of the scarab was probably communicated to the Western nations by the Phoenicians, although recent discoveries at Naucratis suggest that the Greeks were also agents. At Camiros, in Rhodes, a considerable number of scarabaei have been discovered, probably of Phoenician import. They are made principally of porcelain, and are distinguished from their Egyptian prototypes by the blundered hieroglyphics, frequently meaningless, and by remarkable instances of the introduction of Assyrian elements.

The same characteristic indications of Phoenician work present themselves among the scarabaei of Tharros, in Sardinia; but there the hieroglyphics are fewer in number: a new material, green jasper, is introduced, and Greek mythological subjects occur. The scarabs of Tharros are therefore of Phoenician (or rather, of Carthaginian) style, combined with Greek elements. It is moreover probable that they belong to a late date, in many instances to the second century B.C. (*Brit. Mus. Cat.* Introd. p. 13). When the scarabaeus had been imported into Etruria by the Phoenicians, it took firm hold of the national taste — for what precise reasons cannot be explained, but probably only because the form was convenient and attractive. It enters largely into the designs of their jewellery, *e.g.* necklaces, and is worn on rings. Thus the recumbent figure of Seianti Thanunia in the British Museum (*Antike Denkmäler*, i. pl. 20) has her fingers loaded with rings, set with scarabs, as already described.

In the earliest Etruscan tombs only the imported Egyptian or Phoenician scarabaeus of steatite or porcelain occurs. Thus the celebrated Polledrara tomb (near Vulci), whose contents are now in the British Museum, contained, among other Phoenician wares, several porcelain scarabaei. One in particular has the cartouche of king Psammetichos I. (611 B.C.), and fixes the earliest possible date of the tomb. It also gives a date earlier than the Etruscan scarabs proper, which were not represented in the tomb. Etruscan scarabs are most commonly of red sard. The beetle form of the scarab is often carved with care and realistic accuracy. The subjects are usually taken from Greek mythology. The inscriptions are in Etruscan, and generally give in Etruscan form the names of the persons represented, though not always correctly. The name of the artist never occurs, and that of the owner seldom. An example occurs in the British Museum (*Cat.* No. 341), inscribed *Tarchnas* (Tarquinius). The Etruscan scarabs may be divided according to their technique (see above) into two classes: (1) gems principally engraved with the blunt tool and with emery powder, often with much refinement and delicacy. These works are hard to distinguish, apart from the inscriptions, from early Greek work. A celebrated early Etruscan gem, now at Berlin, is here engraved. The design represents, with the true feeling of archaic art, a council of five of the heroes who fought against Thebes. The names are added, viz. *Phylnice* (Polynices), *Tute* (Tydeus), *Amphtiare* (Amphiaraos), *Atresthe* (Adrastos), and *Parthanapaes* (Parthenopaios). (Winckelmann, *Hist. de l'Art*, book iii. chap. 1; Toelken, *Preuss. Gemmensammlung*, 75, 76.) (2) The second kind of Etruscan gems is executed almost entirely by the drill making small hemispherical depressions in the intaglio, or bossy projections in the impression. The resulting design, usually some simple subject, such as a horse, is very rough and is often hard to distinguish. The gems are known as gems *a globolo tondo*.

Gem found at Perugia.

As we have seen, the native Etruscan scarabs are probably not older than 600 B.C. The question which of the two classes above described is the older has been a subject of dispute; but the records of the finds, scanty though they are, seem to show that the gems *a globolo tondo* are the latest. The scarab carefully engraved with the point is found in graves with vases of the black-figured and early red-figured styles; that is, during the fifth century. The rougher gems *a globolo tondo* are found with vases of the fourth century and later. Thus, at Vulci, a gem of this style, representing a satyr with a horse's tail, was found with three red-figured vases of the fourth century; at Tharros a similar gem was found in a tomb of the third century.

Gem Engraving in Greece.—We now turn to the history of gem engraving in historical Greece; and, before discussing gems actually extant, we may review the meagre information contained in ancient literature.

That which has given the strongest impulse to the art of the gem engraver has always been the use of gems for seals. We have already seen that gems were used for seals by Oriental nations long before the time of Homer, and also that engraved rings and stones, such as might well be used for seals, were found amongst the Mycenaean and analogous deposits. But it had been already observed by Pliny (*H. N.* xxxiii. § 12) that the use of seals was unknown to Homer, as they are not used in cases where they seem required, as in *Il.* vi. 169, *Od.* viii. 447.

The question, therefore, when the Greeks began to use seals is one that cannot be answered from literary sources, which are also silent with respect to the beginnings of gem engraving. There are indications, however, that in the beginning of the sixth century B.C. a considerable degree of proficiency in the art had been reached. Thus Solon is said to have made a law, doubtless as a precaution against fraud, that no engraver (*δακτυλιογλύφος*) should retain an impression of a ring that he had sold (Diog. Laert. i. 57). It has been suggested [see ANULUS] that this regulation referred to seals carved in metal rings (*e.g.* Schliemann, *Mycenae*, fig. 530) rather than in gems. But there is independent evidence that gems were in use about the time of Solon (cf. fragment of Solon, *ap.* Stob. 45, 9; and Theogn. *Sentent.* l. 19).

The first gem engraver known by name was Mnesarchos of Samos, father of Pythagoras. He must have lived about 580 B.C., and was a gem engraver of great skill, who sought credit, rather than wealth, from his art (Diog. Laert. viii. 1; Apul. *Florid.* ii. 15, 3). Something may be inferred as to the character of subjects already prevalent for engraving, from the fact that it was a special mark of the followers of Pythagoras not to wear a god in their rings (Diog. Laert. viii. 17).

The second gem engraver known by name was Theodoros, son of Telecles, an artist noted for his versatility, and author of the famous ring of Polycrates. Pliny (*H. N.* xxxvii. §§ 4, 8) describes a stone which had been placed by Augustus in the Temple of Concord at Rome, and which was reputed to be the gem of Polycrates; he states that it was an uncut sardonyx. According to Herodotus (iii. 41), the stone was an emerald. It has been maintained that the stone was uncut, and that the value lay in the material. This was the theory of Lessing (*Ant. Briefe*, 21). But on this question the statements of Pliny are obviously no authority, as he was merely describing a stone supposed in his time to be that of Polycrates. The phrase of Herodotus, *σφρηγὶς χρυσόδετος* (Her. iii. 41; cf. i. 195), distinctly implies an engraved seal, mounted in gold, and was so understood by Pausanias (viii. 14), Tzetzes (*Chil.* vii. 210), and Strabo (xiv. p. 638, *δακτύλιον λίθου καὶ γλύμματος πολυτελοῦς*). Clement of Alexandria (*Paedag.* iii. 246; p. 289 in Potter's ed.) states, on what authority we do not know, that the subject was a lyre. Theodoros seems to have been represented as a gem engraver in a portrait statue made by himself. It is stated (Pliny, *H. N.* xxxiv. § 83) that in this statue he held in the right hand a file, in the left hand "quadrigulam tantae parvitatis ut miraculo pictam (fictam) eam, currumque et aurigam integeret alis simul facta musca." This passage has been brilliantly explained by Benndorf (*Zeitschr. für Oest. Gymnasien*, 1873, p. 406) to mean that Theodoros held a scarabaeus in his hand, with a *quadriga* and charioteer engraved on its base. There is such a scarabaeus in the British Museum (*Cat. of Gems*, pl. D, 254). It should be observed that the same story is told in almost the same words of Myrmecides—in a context which suggests that Pliny himself did not understand the meaning of what he was reporting: "Myrmecides quidem .... inclaruit, quadriga ex ebore, quam musca integeret alis fabricata, et nave quam apicula pinnis absconderet" (*H. N.* vii. § 85, xxxvi. § 43; cf. Aelian, *Var. Hist.* i. 17; Plut. *adv. Stoicos*, 44). Choeroboscos, in Bekker's *Anecd.* ii. p. 651, tells the story in a corrupted form, in which the fly drew the chariot, as well as covered it, with its wings. If we omit an uncertain allusion to one Trausias, in a fragment of a speech by Lysias, *περὶ τοῦ τύπου*, and the amateur productions of Hippias, the sophist (Apul. *Flor.* ii.), there is a break in the literary history till the time of Alexander. The inscriptions, however, sufficiently indicate the common use of rings and seals, and the practice of dedicating them as worthy offerings to a deity. Compare the entries in the treasure list of the Parthenon for 398 B.C.: *σφραγὶς χρυσοῦν δακτύλιον ἔχουσα, Δέξιλλα ἀνέθηκε* ... *σφραγῖδε ὑαλίνα ποικίλα* (coloured glass pastes), *περικεχρυσωμέναι, ἀλύσεις χρυσᾶς ἔχουσαι· ὄνυξ σφραγίς, κ.τ.λ.* (*C. I. G.* 151 B, l. 50).

The employment of a public seal also makes its appearance. So in the Parthenon inventories, early in the fourth century, *γραμματεῖον ὑπὸ τῆς βουλῆς τῆς ἐξ Ἀρείου πάγου σεσημασμένον* (Michaelis, *Parthenon*, p. 298). Cf. *C. I. G. Addenda*, 2152*b*, from Carystus, *τὸν τα]μίαν ἀποσ[τεῖλαι ἀντί]γραφον τοῦδε τοῦ ψηφίσματος σημανθὲν τῇ δημοσίᾳ σφραγεῖδι.* So also *C. I. G.* 2265, 2332, 2347*c*, 2557, 3053. The public seal seems to have served as the seal of an official witness, or to mark an official copy of a document. Such a seal, with the design of a dolphin and a club, frequently occurs among a large deposit of clay impressions of seals, found at Selinus (*Atti dei Lincei, Notizie degli Scavi*, 1883, pl. vii.). The clay seals in question served to secure wooden tablets, and the supposed public seal is in the middle, with the seals of the parties at each side. Before the thread fastening the tablet was severed, the contracting parties admitted the authenticity of the seal (Cicero, *in Cat.* iii. 5, 10; Paulus, *Sententiae*, v. tit. xxv.).

The next engraver after Theodoros, of whom literary record is preserved, is Pyrgoteles. He was chief of his craft in the time of Alexander, as that king issued an edict, "quo vetuit in hac gemma (zmaragdo) ab alio se scalpi, quam a Pyrgotele, non dubie clarissimo artis eius"

(Pliny, *H. N.* xxxvii. § 8). Pliny also states, in more general terms, that Alexander decreed that Apelles alone should paint his portrait and Pyrgoteles engrave it, and Lysippos cast it in bronze (*H. N.* vii. § 125). It may be conjectured that the passage first quoted combines a prohibition and a command, and that Alexander (if there was any truth in the story) ordered that only Pyrgoteles should engrave his portrait, and that Pyrgoteles should engrave it on an emerald.

The remaining engravers known to us are Apollonides and Cronius, who were renowned, in succession to Pyrgoteles; and Dioscorides, who made an excellent portrait of Augustus, used as a seal by Augustus himself and by his successors (Pliny, *H. N.* xxxvii. § 8; Suet. *Aug.* 50).

The foregoing summary of our literary information sufficiently shows that, in writing a history of gem engraving among the Greeks, we are obliged almost exclusively to study the gems themselves, and get little help from the ancient writers.

Greek Gem Engraving before Alexander.

Few Greek examples, comparatively speaking, have been discovered of the scarab; and this form, which was so universally employed by the Phoenicians and the Etruscans, seems to have been but little used by the Greeks. As regards the archaic period, this fact should probably be interpreted as indicating the limited practice of the art among the Greeks in early times, rather than as showing any special distaste for this particular form: for if we except the gems described above, which seem to carry on the tradition of the "gems of the islands," early Greek gems are almost unknown in any form except the scarab, and its immediate derivative the scaraboid.

A few of the most important instances of scarabs proved to be Greek by the inscriptions, as well as by the fact that they were found on Greek soil, may here be quoted. The stones in question are inscribed either with a sentence that admits of no ambiguity; or simply with a proper name in the nominative or genitive case, which may be either the signature of the artist or the name of the owner. There has been much discussion as to the distinction between the two classes. But, while some cases must remain doubtful, the general principle is clear. An owner's name is naturally almost a part of the design, intended readily to catch the eye, in the impression. An artist's signature, on the other hand, is usually unobtrusive, and only visible if sought for. A parallel may be found in the contrast between the conspicuous legends and the minute signatures on a signed coin of Syracuse, or on an English sovereign.

Early Stones inscribed with the names of the Owners.—1. A stone found at Aegina, with an intaglio design of a scarabaeus with wings spread, and inscribed Κρεοντίδα εἰμί (*Bull. dell' Inst.* 1840, p. 140). 2. Scarab: Dolphin, and inscription Θέρσιος ἠμὶ σῆμα, μή με ἄνοιγε: from Greece (*Arch. Zeit.* 1883, pl. 16, fig. 19). 3. A plasma scarab from Pergamon contains a lioness about to attack; above is the inscription Ἀριστοτείχης. Furtwaengler takes Aristoteiches for an artist, contemporary with Semon (see below), and working about 500 B.C. But, according to the principle enunciated above, he seems rather to have been the owner of the seal, as the inscription is very prominent, along the top of the field. The gem is of fine archaic work (*Jahrb. des Inst.* 1888, p. 194; pl. 8, fig. 2). 4. An agate scaraboid in the British Museum (*Cat. of Gems*, No. 482) contains nothing except the name of the owner Isagoras in large letters.

Early Gems inscribed with the names of the Artists.—The gem engravers earlier than the time of Alexander who are known by their works have been recently enumerated and discussed by Furtwaengler (*Jahrb. des Inst.* 1888, p. 194). We quote some of the most important.

(1) The oldest gem known with an artist's signature is a modification of the scarab form, having a satyr's head engraved in relief, in place of the beetle. The stone in question is a steatite, in the British Museum (*Cat. of Gems*, pl. F, No. 479; *Jahrb. des Inst.* 1888, pl. 8, fig. 1). On the base is a draped and bearded citharist, and the inscription Συρίης (or Συρίας) ἐποίησε. Furtwaengler (*ib.* p. 195) ascribes the work on epigraphic ground to Euboea, and proposes a date as early as 550 B.C., *i.e.* between Mnesarchos and Theodoros.

(2) The true scarab form is preserved in a black jasper, found near Troy, and now at Berlin. A nude woman kneels at a fountain, with a spout in the form of a lion's mouth, filling her pitcher. It is inscribed Σήμονος. Semon has been taken for an owner's name by Stephani and Brunn. But Furtwaengler is probably right in taking it, on account of its inconspicuousness, for an artist's signature. The stone is a fine specimen of archaic work on the point of gaining full freedom. Furtwaengler places it about 500 B.C., and it is certainly not much later than this date (*Jahrb. des Inst.* 1888, p. 116, pl. 3, fig. 6).

Among the Greeks the details of the scarab were abandoned early, probably in the fifth century; but the general form was retained, which is known as the scaraboid. Scaraboidal gems have the flat base and convex back of a scarab, but there is no attempt whatever to suggest the details of the beetle. The scaraboid form already occurs amongst Phoenician products at Camiros.

There are few instances in which it seems to have been adopted by the artists who produced the "gems of the islands" (see above). The most common subjects are figures of animals, of somewhat archaic style but worked with great study of detail (*Brit. Mus. Cat.* pl. B, 113, 114, &c.). The most important work on scaraboids belongs, however, to a rather later period, some of the finest of the Greek gems of the fifth and fourth centuries being also engraved on scaraboids.

The scaraboid form was that employed by the most distinguished of Greek gem engravers, known to us from his works, namely, Dexamenos of Chios. The extant works of Dexamenos are (1) Chalcedony scaraboid from Kertch, now in the Hermitage. Flying heron. Inscribed, ΔΕΞΑΜΕΝΟΣ ΕΠΟΙΕ ΧΙΟΣ (*Compte rendu*, 1861, pl. 6, 10; *Jahrbuch des Inst.* 1888, pl. 8, fig. 9). (2) Agate scaraboid from South Russia, now in the Hermitage. Heron standing on one leg, and grasshopper. Inscribed, ΔΕΞΑΜΕΝΟΣ (*Compte rendu*, 1865, pl. 3, fig. 40; *Jahrbuch des Inst.* iii. pl. 8, fig. 7). (3) Chalcedony scaraboid, from Greece (?), now in the Fitzwilliam Museum at Cambridge. A woman seated at her toilet; before her an attendant with mirror and wreath. Inscribed, ΔΕΞΑΜΕΝΟΣ, and with the owner's name ΜΙΚΗΣ (*Jahrb. des Inst.* 1888, pl. 8, fig. 6). (4) A Jasper scaraboid, now at Athens. Contains a male portrait head. Inscribed, ΔΕΞΑΜΕΝΟΣ ΕΠΟΙΕ (*Jahrb. des Inst.* 1888, pl. 8, fig. 8). The authenticity of this gem has been denied. Dexamenos appears to have worked towards the close of the fifth century. He engraved animal forms, as shown by the first two in the above list, with admirable delicacy and grace. In his figures, as seen in No. 3, he is not free from a certain degree of archaic stiffness. His period therefore is that of transition to complete freedom. He is fortunate in the fact that three at least of his reputed works are entirely free from doubt.

The remaining artists, known to us by their signatures, who are assigned by Furtwaengler with fair probability to a period earlier than Alexander, are Athenades, Olympios, Onatas (?), Pergamos, Phrygillos. For a discussion of the works of these artists see Furtwaengler's articles in the *Jahrbuch des Inst.* 1888, pp. 119, 197. Athenades is known only by an intaglio in gold from Kertch (*ib.* pl. 8, fig. 3). Olympios is identified by Furtwaengler with the author of certain signed Arcadian coins, of about 370 B.C. (Gardner, *Types*, pl. viii. fig. 32); and Phrygillos with the author of certain coins of Syracuse of the end of the fifth century (Weil, *Künstlerinschriften der Sicilischen Münzen*, pl. 1, figs. 9, 10).

A good example of a scaraboid inscribed with the owner's name occurs among the Cesnola gems from Curium (Cesnola, *Cyprus*, pl. 40, fig. 14). Above a figure of a horse the name ΣΤΗΣΙΚΡΑΤΗΣ is engraved in such bold and conspicuous characters that it cannot be mistaken for the name of an artist.

Towards the close of the early period, forms for gems other than the scarab and the scaraboid begin to come into use. Thus, one of the finest early gems in the British Museum, with a figure of a citharist, is engraved on a section of a truncated gland (*Cat. of Gems*, pl. F, 555). By the close of the fifth century the Greeks were beginning to discover that a thin slice of stone produced effects by its translucency, and economised material. The scarab and the scaraboidal form were therefore abandoned in Greece, though adhered to in Etruria, at Tharros, and elsewhere.

We have now reviewed the early period of Greek gem engraving. In this art, more than in any other, those characteristics are seen which attract the student in all archaic work. The early gems are distinguished by a certain dainty minuteness and precision—not because the artist is trying to be minute, but because he is taking pains with his work, and devoting patient attention to every detail. Nor is the work minute in the sense that the artist tries to conceal his methods, and to obliterate all trace of the tool. When an archaic gem is highly magnified, it is seen to be a gem enlarged and not a group of sculpture. Further, this dainty minuteness is combined with a measured restraint, characteristic of all archaic work, but particularly of gems. A limited subject is concisely rendered, and no vague compositions are attempted, filled with floating draperies, landscapes, and objects made small by distance.

Gem Engraving from the time of Alexander.

Early in the fourth century the engraver had obtained complete mastery over his materials, and those characteristics which clearly distinguish the earlier gems are henceforth wanting; and accordingly it becomes difficult (with certain notable exceptions) to assign gems with precision to a definite point in a period of several centuries. Moreover, in the case of gems reputed to be signed by the artist, the matter is complicated by difficult questions as to the authenticity of the gems and of the signatures. The course of history is marked more by the introduction of new features, such as the cameo and portraiture, than by a marked development of style. To some extent, however, the gems show the influence of the spirit prevailing in the greater arts. The artist Athenion is well known by a sardonyx cameo, now at Naples: Zeus advances in his chariot, drawn by four horses, and overwhelms two snake-legged giants with the thunderbolt. Signature, ΑΘΗΝΙΩΝ, [ʼΑ(θ)ηνίων] (*Jahrb. d. Inst.* 1888, pl. 8, fig. 19). Athenion may well have worked at Pergamon, and have shared or imitated the spirit which inspired the great Pergamene frieze. This is confirmed by another work of Athenion, preserved in two copies in paste, of each of which only a fragment survives. The two are combined in one sketch in *Jahrb. des Inst.* 1889, p. 85. The subject may be, as Furtwaengler suggests, Eumenes II. of Pergamon driven in a triumphal chariot by Athena.

Portraits.—The development of portraiture on gems was, for the most part, subsequent to the reign of Alexander, though a few earlier examples can be quoted. For example, the disputed gem of Dexamenos, referred to above, contains a characteristic male portrait head. Alexander himself prescribed the manner in which his portrait was to be engraved by Pyrgoteles (see above). But, no doubt, the custom of engraving portraits on the coins, introduced by the early Diadochi at the end of the fourth century, tended to develop the art of portraiture. In later times we hear of portraits used so frequently, and for such various purposes, that there is no occasion for surprise at the number of unidentified portraits in all collections of gems. The portrait of Alexander was used as a signet by Augustus (Plin. *H. N.* xxxvii. § 10), and as a family crest on the rings and other property of the Macriani (Treb. Poll. *de Quieto*). A man might have a portrait engraved on a gem as being that of an ancestor (Val. Max. iii. 5; Cic. *in Cat.* iii. 5, 10), or of a teacher (Cic. *de Fin.* v. 2, 4; cf. Juv. *Sat.* ii. 6), or of a kingly patron (Plin. *Ep. ad Traj.* 74, ed. Keil), or of a predecessor (Plin. *H. N.* xxxvii. § 8), or of a friend (Ovid, *Tristia*, i. 7, 6), or of himself (Suet. *Aug.* 50). The finest examples of portraiture were not engraved in intaglio for seals, but were those occurring on the great cameos described below.

Cameos. — Cameos are works engraved in relief; intaglios have a sunk design. Early Greek cameos seldom occur, because the main object of the engravers was to produce seals. The form occasionally occurs, however, in early Etruscan work: compare certain *gorgoneia* and figures of harpies, in low relief, on sard (*Brit. Mus. Cat.* 244–248; King, *Antique Gems*, i. p. 117). The cameo form also occurs in the satyr's head engraved on the back of the scarab signed by Syries (see above, p. 605). The large onyx, representing a *tragelaphos*, which is mentioned in the Athenian treasure list of 398 B.C. (*C. I. A.* ii. 652 B, 12; cf. GEMMA) was probably a cameo. But it was not till after the time of Alexander that cameo-cutting became an art of importance. There is a remarkable series of portrait cameos which marks the rise of the art. Unfortunately, there is much doubt as to the personages represented, although archaeologists are for the most part agreed that they are members of the lines of the Seleucidae and Lagidae, between 300 and 150 B.C. The cameos in question usually represent the busts of a male and female figure, presumably a sovereign and his consort. The sovereign is usually in full armour. Among the best examples are—(1) The Gonzaga cameo, now at St. Petersburg: subject, Ptolemy Philadelphos and Arsinoe (Visconti); or Ptolemy I. and Eurydike (Müller, *Denkm. der alten Kunst*, i. No. 226 *a*). (2) The Vienna cameo: subject, Ptolemy Philadelphos and Arsinoe, daughter of Lysimachos (Müller, *Denkm. der alten Kunst*, i. No. 227 *a*). See also the Berlin cameo (Müller, i. No. 228), and the cameo in the De Luynes Collection in the French Bibliothèque Nationale (*Gaz. Arch.* 1885, pl. 42, p. 396). These regal cameos are in some instances of a considerable size, and they are worked in fine style, with great wealth of detail. It has been suggested by C. Lenormant (*Trésor de Numismatique*, pl. viii.) that they are the productions of a school of engravers at Alexandria. Such a school seems very possible, though evidence is wanting. We have seen above that Athenion was an artist in cameo who may well have worked at Pergamon in the reign of Eumenes II. (197–159). At about this time, also, the sardonyx was introduced at Rome by Scipio Africanus (Plin. *H. N.* xxxvii. § 85).

At the beginning of the Roman Empire the great cameos appeared which are a development of the regal cameos already described. The imperial cameos are distinguished by their great size, and by the admirable skill with which the artist employs the differently coloured strata of his material, and arranges his composition so as best to fill the space at his disposal.

Cameo of the Sainte-Chapelle.

We may mention some of the finest extant examples. That which was formerly reputed the largest of the series, the Carpegna cameo, formerly in the Vatican and now in the Louvre, has been shown to be made of glass (Buonarroti, *Medaglioni*, p. 427; Müller-Wieseler, *Denkmäler der alten Kunst*, ii. No. 116, and text). The next largest cameo is that of the Sainte-Chapelle, now in the French Bibliothèque Nationale. This magnificent gem is a sardonyx of three layers, and measures 12 in. by 10½ in. It was given by Baldwin II. to Louis IX., and passed into the treasures of the Sainte-Chapelle, from which it was transferred to its present resting-place in 1791. The subject, once interpreted as Joseph in Egypt, is probably Livia and Tiberius enthroned, receiving Germanicus on his return from his campaign in Germany in A.D. 17. Above is a group of deified members of the Julian house, and below a group of barbaric captives. Antonia is seen to the right of Germanicus, Agrippina and Caligula to the left: the group in the heavens contains, according to Bernoulli, the figures of the older Drusus (with the shield), Augustus (with the sceptre), Aeneas (with the sphere), and Germanicus, led by a genius and mounted on Pegasus. (Bernoulli, *Röm. Ikonogr.* ii. pl. xxx. p. 275; Müller, *Denk. der alten Kunst*, i. No. 378; Chabouillet, *Catalogue*, No. 188; Baumeister, *Denkmäler*, fig. 1794.)

Next in importance to the French cameo is the *Gemma Augustea* of Vienna. This is an onyx of two layers, measuring 8⅝ by 7½ inches. This gem was, in the fifteenth century, at the abbey of St. Gernin, at Toulouse, where it had been placed, according to tradition, by Charlemagne. Since 1619 it has been at Vienna. The subject is the Pannonian triumph of Tiberius, 12 A.D. Augustus and Roma are enthroned; they observe Tiberius stepping from his chariot, which is driven by Victory. Germanicus stands beside Roma. Allegorical figures complete the composition on the right; below, Roman soldiers are engaged erecting a trophy and bringing barbarian prisoners. (Bernoulli, *Röm. Ikonogr.* ii. pl. xxix. p. 262; Müller, *Denkm. der alten Kunst*, i. No. 377; Chabouillet, *Gaz. Arch.* 1886, pl. 31; Baumeister, *Denkmäler*, fig. 1793.)

The cameo in the British Museum, with a head of Augustus (*Cat. of Gems*, 1560 and frontisp.), is somewhat of the same order, though a much smaller work than the foregoing. This gem was at first identified as Constantine the younger, and has a considerable resemblance to the bust of that emperor as treated on the coins; but the work seems that of the early Empire, and the features are those of Augustus.

Akin to the great cameos are the vessels carved in precious stones of surprising magnitude, with designs in relief (Cic. *in Verr.* iv. 27, 62: "Vas vinarium, ex una gemma pergrandi, trulla excavata"). First among these is the cup of Oriental sardonyx, known as the cup of St. Denys, or cup of the Ptolemies, and now preserved in the French Bibliothèque Nationale. It is a cup 4¾ inches high, 5⅛ inches in diameter, elaborately carved with Dionysiac emblems and attributes in low relief (Chabouillet, *Catalogue* No. 279; Baumeister, *Denkmäler*, fig. 478). Another famous cup is the Tazza Farnese, now in the Museum at Naples. This is a large shallow cup of onyx. In the interior is an allegorical design relating to Egypt; on the exterior is a Gorgoneion (Millingen, *Anc. Unedited Monuments*, ii. pl. xvii.; *Mus. Borb.* xii. pl. 47). On a vase of onyx at Berlin, see Thiersch, *Abh. d.* 1. *Cl. d. k. Bayer. Akad.* ii. 1, p. 63.

The costliness of the material, and the difficulty of obtaining the effects of layers on different colour on any other than a plane surface, led to the production of the *torcumata vitri*, of which the Portland Vase, exhibited in the British Museum, is the most noted specimen. This is a specimen of true cameo engraving, only distinguished by the fact that the material to be carved is glass. This vase was found in the sixteenth century near Rome. The material consists of a ground of dark blue glass, and an upper layer of opaque white glass, in which the design was engraved, as in a sardonyx. It is supposed that the subjects of the scenes are taken from the myth of Peleus and Thetis (Millingen, *Anc. Unedited Monuments*, p. 27, pl. A; *Brit. Mus. Cat.* 2312; cf. VITRUM). The great Carpegna cameo mentioned above belongs to this class of objects. It closely resembles a sardonyx cameo of five layers, and represents a triumphal procession of Dionysos and Demeter, in a car drawn by Centaurs. It measures 16 by 12 inches. On such glass imitations of sardonyx, see King, *Precious Stones*, p. 308.

Intaglios of the Roman Empire.

For the first two centuries of the Empire, intaglio-engraving maintained a high degree of excellence, especially in its technical qualities and in its power of rendering portraits. After that period the falling away becomes conspicuous. The chief indication of decline is a continually increasing use of the wheel for executing the whole of the design—a method of working which necessarily implies carelessness and want of finish. Pietramari, an authority quoted by King (*Antique Gems*, i. p. 28), thought he had observed indications of wheel-cut work for the first time about the period of Domitian. It is very obtrusive in a gem which can be dated with tolerable accuracy as about 250 A.D. (*Brit. Mus. Cat.* 1106). Another symptom of the decay of gem-engraving is the introduction of gold coins set in jewellery, in the place of gems, a practice dating from about the time of Caracalla. The only gem-engraver of the imperial period whose name is recorded in literature is Dioscorides, the author of a portrait of Augustus, which succeeding princes used as a seal (Plin. *H. N.* xxxvii. § 8; Suet. *Aug.* 50). A considerable number of gems, purporting to be signed by Dioscorides, have been preserved. We also learn from the gem inscriptions, that Dioscorides had sons or pupils named Eutyches and Herophilos. A large number of other gem-engravers are also known from their signatures. The subject is discussed below.

Inscribed Gems.

There are numerous gems extant which purport to be inscribed with the names of the artists. The antiquity of nearly all these inscriptions has been called in question, and it is certain that in a great number of cases either a modern inscription has been added to an ancient work, or else both engraving and inscription are equally recent. The greatest difficulty that attends the study is that of distinguishing the different classes of inscribed gems. And since we have to deal with the frauds of four centuries, there is no branch of archaeological study where it is more important to know something both of the history of taste since the revival of learning, and of the personal characters of the persons who have been collectors.

With the fall of the Roman Empire, gem-engraving became ruder and finally died out. Like many other arts, it only lived on at Byzantium to be communicated again to the West at the revival. Meanwhile the ancient gems were regarded either with reverence or superstition; the best were preserved in reliquaries, and the less important were used as seals. (See S. Thompson's *Photographs from the Collections in the Brit. Mus.* No. 1024.) With the revival of learning the art was again practised, and ancient gems became objects of interest from the antiquarian and artistic points of view. The first beginnings of the revival date from early in the fourteenth century (King, *Handb. of Engr. Gems*, p. 121). Cyriac of Ancona gave attention to gems as well as to other branches of antiquity. In 1445 he describes a gem with a half-length figure of Athena, and quotes, not quite accurately, the inscription ΕΥΤΥΧΗC | ΔΙΟCΚΟVΡΙΔΟV | ΑΙΓЄΑΙΟC ЄΠΟΙ | ЄΙ (Furtwaengler, *Jahrb. des Inst.* 1888, p. 304, pl. 10, fig. 3).

Paul II. (1471) and Lorenzo de' Medici were enthusiastic collectors and patrons. But the gem-engraving of the Cinque Cento period is more easily distinguished from the antique than is that of later times. The artists adhered less minutely to classical models, and as a rule their compositions are more full of detail and more fanciful. There is also a different range of subjects, stories from Roman history being frequently chosen for illustration.

In the sixteenth century antiquarian studies began to influence the subject. In 1570 Fulvius Ursinus published at Rome the first edition of *Imagines Illustrium ex Bibliotheca Fulvi Ursini*. This work contains a collection of portraits, supposed to be authenticated by inscriptions. In the first edition it contains (pll. 21, 23, 53) gems inscribed with the names of Homer, Hesiod, Plato, and also (pl. 49) a head now called Maecenas, and inscribed CΟΛΩΝΟC. The second edition, published at Antwerp in 1598, omits the gems inscribed with the names of Homer, Hesiod, and Plato, and contains the above-mentioned head of Maecenas, and also No. 64 ("Antinous"), inscribed ΕΛΛΗΝ; No. 75 (female head), inscribed ΥΛΛΟΥ (*Jahrb. d. Inst.* 1888, pl. 10, fig. 1); No. 87 (cameo with head of Germanicus), inscribed ΕΠΙΤΥΓΧΑΙΝΟC ЄΠΟΙЄΙ) (*Brit. Mus. Cat. of Gems*, 1859); No. 141 (head ,of Themistocles, inscribed ΘΕΜΙCΤ). In every case the names are explained as those of the persons represented; *e.g.* No. 75 is Hylas. The first edition of this work, with a commentary, appeared at Antwerp in 1606: Faber, *In Imag. Illustr. ex F. Ursini Bibl. Commentarius*. Here there are the same plates of inscribed gems that occur in the previous edition; also a mention of a portrait by Mycon (pref. p. 4; cf. Stosch, *Gemmae*, p. 58); an allusion to Epitynchanos and Zosimos as artists (p. 52), and a discussion of the authorship of certain unsigned gems (Nos. 39, 79, 87). There is also (p. 52) a mention of an Augustus with a radiate crown, signed by Dioscorides, of which nothing is known. On p. 66, the Heracles, signed ΓΝΑΙΟC, is referred to (*Brit. Mus. Cat.* pl. H, No. 1281), and on p. 67 a Cupid and butterfly of Aulos.

During the close of the sixteenth century, and through the seventeenth century, numerous signed gems were becoming known, besides those already mentioned. A list of the most important here follows, stating summarily the date, the subject, the artist, the best publication, and the manner in which the gem first became known. *Jahrb.* 1888 or 1889 refers to Furtwaengler's articles in the *Jahrbuch des Arch. Institutes*, 1888 and 1889.

1585. Artemis of Apollonios (*Jahrb.* 1888, pl. 10, fig. 8), and Hermes of Dioscorides (*Jahrb.* 1888, pl. 8, fig. 22). Seen by Montjosieu (*Gallus Romae Hospes*, in Gronov. *Thes.* ix. p. 790). The Hermes afterwards formed part of the collection belonging to the Duke of Marlborough.

About 1600. Rape of Palladion, by Solon (*Jahrb.* 1888, pl. 8, fig. 29). Seen by Chaduc.

1605. Maecenas of Dioscorides. Seen by Peiresc (Gassendi, *Vita Peirescii*, p. 90). This was probably not identical with the stone now at Paris.

1606. Bearded head with name of Aetion (*Jahrb.* 1888, pl. 11, fig. 12). In possession of Peiresc (Gassendi, *op. cit.* lib. ii. p. 95). Probably modern.

1625. Julia Titi of Euodos (*Jahrb.* 1888, pl. 11, fig. 4). Enumerated among the treasures of the Abbey of St. Denys, where it was attached to a reliquary said to have been given by Charles the Bald. (Doublet, *Hist. de l'Abbaye*, p. 335.)

1627. Medusa of Sosos (?). (*Jahrb.* 1888, pl. 8, fig. 18.) Published by Stefanoni. Now in the British Museum (Carlisle Collection).

Before 1646. Rape of Palladion, by Felix (*Jahrb.* 1888, pl. 10, fig. 7). A part of the Arundel Collection.

1657. Apollo of "Allion" (Stosch, *Gemmae*, pl. viii.). Published by Agostini (ed. of 1657, i. pl. 32, p. 6). Correct reading, ΔΑΛΙΟΝ. Meaning doubtful.

1669. Athena of Aspasius (*Jahrb.* 1888, pl. 10, fig. 10). Published by Canini, *Iconografia*, pl. xcii.

1669. Athena, with name of Apollodotus (Stosch, *Gemmae*, pl. x.). Published by Canini, *op. cit.* pl. xciii. This is probably an owner's name. It was first explained as an artist's signature by Baudelot de Dairval (*De l'Utilité des Voyages*, 1686, i. p. 311).

About 1680. Achilles of Pamphilus (*Jahrb.* 1888, pl. 10, fig. 4). Presented to Louis XIV. (Mariette, *Traité*, ii. p. viii.).

1686. Eros on lion, of Protarchus (*Jahrb.* 1888, pl. 8, fig. 20); and Muse of Onesas (*Jahrb.* 1888, pl. 8, fig. 16). Published by Agostini (ed. of 1686, ii. pl. 55, 7).

Before 1694. Augustus, by Herophilus, son (or pupil) of Dioscorides (*Jahrb.* 1888, pl. 11, fig. 2). In the monastery of Echternach. Described in the *Luxemburgum Romanum* of Wiltheim, who died in 1694. (See Brunn, *Gr. Künstler*, ii. p. 506.)

Before 1701. Heracles and Cerberus of Dioscorides (*Jahrb.* 1888, pl. 3, fig. 1). Published by Beger, *Thes. Brand.* iii. p. 192.

1709. Portrait head of Agathopus (*Jahrb.* 1888, pl. 8, fig. 15). Published by Maffei, *Gemme Antiche*, i. pl. 6.

1709. Strozzi Medusa of Solon (*Brit. Mus. Cat.* pl. H, 1256). Published by Maffei, *op. cit.* iv. pl. 28. Inscription probably modern.

1709. Adonis of Coenus (*Jahrb.* 1888, pl. 10, fig. 20). Published by Maffei, *op. cit.* iv. pl. 20.

In 1712 Orleans (afterwards Regent) suggested that the Solon of the Strozzi gem was its author, and that it was he who had engraved the gem of Fulvius Ursinus previously known as Solon and afterwards as Maecenas. This theory, published by Baudelot de Dairval in 1717 (*Lettre sur le prétendu Solon*), attracted much attention in France to the subject of artists' signatures. But in Italy the Florentine Andreini had already been engaged for several years collecting gems with artists' signatures. By the testimony of Gori (*Columb. Liviae*, 1727, p. 154) it was Andreini who first brought signed gems into high esteem.

In 1724 Philip von Stosch published his *Gemmae antiquae caelatae, Scalptorum nominibus insignitae*, giving all the gems which he considered genuine, inscribed with proper names; all of which he claimed as artists' signatures. From this time onwards there was a great demand for gems with artists' signatures; and it is certain that after this period forgeries became frequent.

Bracci (*Memorie degli Antichi Incisori*, 1784) and others made lists of artists, whose number was continually increasing. At length in 1830 the climax was reached when Prince Poniatowski had formed a collection of signed gems which had been manufactured to meet his order; and so brought the subject for a time into contempt.

The first critical examination of the accumulated material was that of H. K. E. Köhler, whose essay was edited by Stephani, in Köhler's *Gesammelte Schriften*, vol. iii. (1851). Köhler's inquiry was carried on in such a sceptical spirit that he only admitted five gems as having authentic signatures (Köhler, iii. p. 206). The subject has since been reviewed by Stephani, *Ueber einige angebliche Steinschneider: Mém. de l'Académie de Pétersbourg*, vi^e sér. Sciences polit., vol. viii. p. 185; Brunn, *Gesch. der griech. Künstler* (1859), ii. p. 441; Chabouillet, *Gaz. Arch.* 1885–6; and Furtwaengler, *Jahrb. d. Inst.* 1888, 1889. Stephani and Chabouillet are sceptical, while Brunn and Furtwaengler admit a large number of signatures.

Having completed our review of the materials available, we make the following observations.

1. A certain number of signatures may be accepted without the least hesitation. These gems are:—(*a*) Early Greek gems only recently discovered and in a style quite unknown to the forgers; as the gems signed by Dexamenos and Syries. (*b*) Gems whose history can be traced back beyond the revival of art; as the gem of Eutyches and probably that of Euodos. (*c*) Cameos of certain authenticity where the inscription stands out in relief, as in the Gigantomachia of Athenion.

2. A considerable number may be rejected without hesitation. (*a*) Where the inscription is illiterate or impossible, or where ΕΠΟΙΕΙ is shortened to ΕΠ. (*b*) Where the gem is an exact replica of another already famous. (*c*) Where the material is one to which the ancients had no access, e.g. *Brit. Mus. Cat.* 985. (*d*) Where the work appears modern, and the motive of the forger is manifest, as in the Alexander of Pyrgoteles: *Brit. Mus. Cat.* 2307. (*e*) (As a rule) where the source is utterly corrupt, as in the case of the Poniatowski collections.

3. A name on a gem may be genuine, but may be supposed not to represent the artist's signature—(*a*) If it obviously relates to the subject, as Hyacinthus on a gem with a discobolos: *Brit. Mus. Cat.* pl. G, 742. (*b*) If it obviously relates to the person represented, as Aristippus: *Brit. Mus. Cat.* pl. I, 1518. (*c*) If it is found on a late and rudely-cut work, as Thamyras: *Brit. Mus. Cat.* 660. (*d*) If the conspicuousness of the inscription proves it to be an owner's name: see above, p. 605.

4. The various categories above enumerated include a large number of gems; but many remain to be considered. They are of the highly-finished style of the beginning of the Roman Empire, which has been very accurately imitated by modern engravers; and it is in dealing with these that the chief difficulties arise. It must be confessed that much depends on the opinion of the critic, which has to be exercised on a class of objects as to which it is exceptionally difficult to form a judgment based on style. When Furtwaengler selects six gems as genuine out of nearly forty purporting to be signed by Dioscorides, of which Köhler and King accept none, it is obvious that certainty is unattainable.

5. In this state of uncertainty it would be a great aid if we could feel sure that forged names were very rare before the time of Stosch, and that a gem signature known before 1724 had a strong *primâ facie* claim to be considered genuine. It is from this point of view that the list of gems given above is of high importance. Unfortunately, however, it seems to have been a practice to interpolate names of illustrious persons on gems supposed to be portraits. Thus Homer, Hesiod, and Themistocles occur in the first ed. of the *Imagines* of Ursinus. Moreover, a motive for forging artists' names was not wanting from an early time. Already in 1606, it appears from Faber's commentary, quoted above, that the question of authorship excited interest, and the discussion had begun whether unsigned gems could be attributed to the artists whose names were current. When gems are regarded from this point of view, the temptation to forge a signature begins.

In 1686 Baudelot de Dairval (*De l'Utilité des Voyages*, i. p. 399) gives a warning against forged gems, though without specifying the manufacture of inscriptions in particular. The prevalence of fraud in the first half of the eighteenth century is attested by statements of Stosch in 1724 (*Gemmae*, p. xxi., 29), of Gori in 1727 (*Columb. Liv.* p. 155), of Vettori in 1739 (*Dissertatio Glyptographica*, p. 97), and of Bracci (*Memorie*, i. p. 147). In 1754 Natter naïvely confessed (*Traité de la Méthode ant. de graver*, &c. p. xxix.) that he occasionally added artists' names when requested.

6. It is therefore necessary, even with gems published at an early period, to scrutinise closely the forms of the inscriptions. This subject has been most recently investigated by Furtwaengler, in the papers quoted above. The main results of his investigations are the following. The present writer accepts them on the whole, though occasionally differing in opinion as to individual gems.

Genuine inscriptions (*a*) before Alexander. The strokes are usually of an even width; the nom. form is more frequent than the genitive; the earliest inscriptions follow the margin of the stone, while they are in a straight line after about 400 B.C. (*b*) Of the Hellenistic period. The inscriptions are rough and careless; in cameos the letters are in relief; occasionally there are "cups" at the ends of the strokes such as become universal in the next period. (*c*) Of the close of the Republic and beginning of the Empire. The inscriptions are minute and elegant; cameos are inscribed in intaglio; the letters are formed with small cup-like hemispherical depressions at the ends of the strokes, the cups being produced with a drill, and the strokes of the letters with the diamond point.

This method of work was not adopted by modern engravers, according to Furtwaengler, before the time of Sirleti (died 1737). On the operations of Sirleti, cf. Bracci, *Memorie*, i. p. 147. From this the important rule is deduced, that if the inscription has the "cups," and if it was known before 1730, it is genuine. Unfortunately this rule is not quite without exception, the gem with the name Hellen, in the *Imagines* of Ursinus, being rejected by Furtwaengler, though the cups are present (*Jahrb.* 1889, p. 76).

7. From the year 1730 onwards those gems which do not fall within the categories given above can only be judged from their style. Here there is a wide field of difference of opinion among critics, and the subject is in a bewildering state of uncertainty. It is plain, however, that the only way of making progress is systematically to collect certainly authentic and certainly false specimens, and so by degrees to establish standards on which a methodical judgment can be based.

Literature.—A full critical account of engraved gems has not been written. In addition to the works dealing with particular parts of the subject, quoted in the foregoing pages, the following may be mentioned:—Mariette, *Traité des Pierres gravées*, 1750; C. W. King, *Handbook of Engraved Gems*, 1866, and *Antique Gems and Rings*, 1872; A. S. Murray, art. *Gems* in *Encycl. Brit.* 9th ed., vol. x., and Introduction to *Cat. of Gems in the Brit. Mus.* Catalogues have been published of some of the chief public collections: namely, of the Berlin Collection by Winckelmann, *Descr. des Pierres gravées du feu Baron de Stosch* (1760), and Toelken (1835); of the British Museum Collection, by A. S. Murray and A. H. Smith (1888); of the Collection in the Bibliothèque Nationale, at Paris, by Chabouillet (1858); of the cameos at Vienna, by Eckhel (1788) and V. Arneth (1849). A great number of gems in various collections are described by R. E. Raspe, in *A descriptive Catalogue of Gems cast in coloured pastes by James Tassie*, 1791. [A. H. S.]

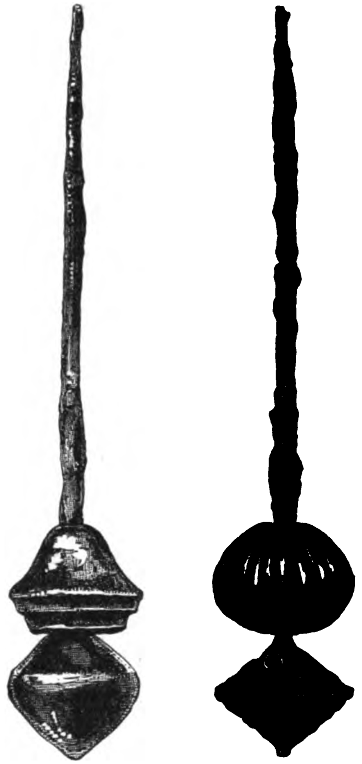
SCAPHEPHORIA. [HYDRIAPHORIA.]

SCAPHIUM (*σκάφιον*), a shallow vessel without a handle, so called because it was shaped something like a boat (cf. CYMBIUM and the English "sauce-boat"), used as a drinking cup (Plaut. *Stich.* iv. 5, 11; *Bacch.* i. 1, 37); sometimes earthenware, sometimes metal; *e.g.* of brass (Lucret. vi. 1045), of silver (Athen. iv. p. 142 d; Cic. *Verr.* iv. 17, 37). It was used also for dipping and pouring water over the body in the bath (Athen. xi. p. 501 e; Plaut. *Pers.* i. 3, 43). In Plut. *Num.* 9 a brazen *σκάφιον* (or *σκαφεῖον*) is used to relight the sacred fire [PRYTANEUM, p. 514], being doubtless a primitive substitute for a concave mirror or burning-glass, and retained by religious conservatism.

Scaphium also = a *matella* of the same shape (Juv. vi. 264, &c.). For the explanation of *σκάφιον κείρεσθαι*, see COMA, Vol. I. p. 498 *a*. [G. E. M.]

SCENA. [THEATRUM.]

SCEPTRUM. In Homer the king carries a sceptre as a badge of his power (cf. *Il.* ii. 86, *σκηπτοῦχοι βασιλῆες*; *ib.* 206, *βασιλεὺς ᾧ ἔδωκε Ζεὺς σκῆπτρον τ' ἠδὲ θέμιστας*), but it is not distinguished by name from other staves, since *σκῆπτρον* is used not only of those borne by men of rank and heralds, but of a beggar's cudgel (cf. *Od.* xvii. 195 and 199, where it is synonymous with *ῥόπαλον*). The king's sceptre, however, was richly ornamented, being covered with gold foil (*χρύσεον*, *Il.* i. 15, &c.) and studded with gold nails (*χρυσείοις ἥλοισι πεπαρμένον*, *Il.* i. 245), which were doubtless for the purpose of attaching the gold plating to the wood. Among the objects found at Mycenae are the head and butt of a staff of this kind, of beaten gold and decorated with a spiral and a leaf pattern (Schuchhardt, *Schliemann's Ausgrabungen*, Leipzig, 1890, p. 285, fig. 251). In classical times, when kings were but little known in Greece, the chief bearers of sceptres were the gods, goddesses, and heroes in works of art. A good instance is the sceptre of the Zeus Olympios of Pheidias, which was adorned with all manner of metals, and surmounted by an eagle (*τῇ δὲ ἀριστέρᾳ τοῦ θεοῦ χειρὶ ἔνεστι σκῆπτρον μετάλλοις τοῖς πᾶσιν διηνθισμένον. ὁ δὲ ὄρνις ὁ ἐπὶ τῷ*



Sceptres of silver plated with gold. (Schliemann's *Mycenae*.)

σκήπτρῳ καθήμενος ἐστὶν ὁ ἀετός, Paus. v. 11, 1). Flowers and fruit are even more common as badges, the sceptres of the gods being in fact strangely like those of men of rank in Assyria described by Herodotus (i. 195), surmounted by an apple, a rose, a lily, or some such thing (cf. Murray, *Journal of Hellenic Studies*, 1889, vol. x. p. 251).

In the Tragedians the word *σκῆπτρον*, though often used metaphorically of royal power (*e.g.* Soph. *O. C.* 426), is still quite general in meaning, the old man's staff or the wayfarer's stick being both so called (Soph. *O. T.* 456; *O. C.* 84; Aesch. *Agam.* 75). The staff, however, that was in everyday use in the fourth and fifth centuries, was plain, and seems only in such exceptional cases as that of Parrhasius to have been of Homeric magnificence (*σκίπωνί τε ἐστηρίζετο χρυσᾶς ἕλικας ἐμπεπαισμένῳ*, Athen. xii. p. 543 c).

At Rome, even more than in Greece, the sceptre, whose Latin name is *scipio* (a word originally borrowed from the Greek), was unknown except as a relic of the heroic and kingly age (cf. Verg. *Aen.* xii. 206) and an attribute of the gods. There is one important exception, that of the magistrate, who appeared in triumphal costume in the *processus consularis* at the games, bearing in his hand a sceptre of ivory, surmounted by an eagle (Juv. x. 43; Prudent. *Peristeph.* 148, "aquila ex eburna sumit arrogantiam gestator ejus ac superbit belluae inflatus osse, cui figura est alitis"). This, however, was an emblem of apotheosis, and, unlike the other *ornamenta triumphalia*, was never worn on other occasions during the life of the *triumphator*, nor was it carried at his funeral. Even when the emperors are represented on coins as bearing it (cf. Antoninus and Volusian's coins), the sceptre is the token of their triumph and not of supreme power.

Livy's story (v. 41) of M. Papirius, the senator, striking the Gaul *scipione eburneo*, is held by Mommsen to be at variance with the usages of after-times and to be a poetic exaggeration, as are the many descriptions which late authors give of the costume of the early Romans. (Buchholz, *Die homer. Realien*, ii. p. 8; Helbig, *Das homerische Epos*, 1887, p. 378; Daremberg and Saglio, *Dict. Antiq.* art. *Baculum;* Mommsen, *Staatsrecht*, 2nd edit., i. 140; *Staatsverwaltung*, ii. p. 587; Marquardt, *Privatleben*, 2nd edit., p. 742; Mayor *ad Juv.* x. 35 foll.) [W. C. F. A.]

SCHOENUS. [Mensura, p. 163.]

SCHOLA. [Ludus Litterarius.]

SCIROPHO'RIA (*Σκιροφόρια*), a festival celebrated at Athens on the 12th of Skirophorion, at which the priestess of Athena and the priests of Poseidon and Helios, overshadowed by a large white umbrella, proceeded from the Acropolis to a place called Skiron. According to some, the solemnity was performed in honour of Athena; according to others, of Demeter and Kore. The umbrella was the symbol of the protection of the Attic soil against the scorching heat of the sun, and was carried by the priest of Erechtheus or a member of the family of the Eteobutadae. (Schol. *ad* Aristoph. *Eccl.* 18; Harpocrat. pp. 168 and 270; Paus. i. 36, § 3; Suid. *s. v.* *Διὸς κῴδιον*; Clemens Alex. *Protrept.* p. 11: cf. A. Mommsen, *Heortol.* p. 440 fol.) [L. S.]

SCI'RPEA. [Plaustrum.]

SCIRPI'CULA. [Calathus.]

SCOBIS, sawdust, was sprinkled over the floor, especially in dining-rooms, so that the dust and any impurities might be swept up with it (Hor. *Sat.* ii. 4, 81; Juv. xiv. 67; cf. Plin. *H. N.* xxxvi. § 184). In smarter houses the sawdust was dyed with saffron or vermilion (Petron. 68). Heliogabalus is said to have had his portico strewn with gold dust, or gold filings (*scobe auri*), and to have regretted that he could invent nothing more costly for the purpose (Lamprid. *Elagab.* 31; for this *scobis*=*ῥίνημα* from metal-working, cf. Plin. *H. N.* xxxiv. § 111; Blümner. *Technologie*, iv. 256). [G. E. M.]

SCOPAE, a broom (*scopae virgeae*, Cato, *R. R.* 156: cf. Hor. *Sat.* ii. 4, 81). These brooms were made commonly of the "wild myrtle" or butcher's broom (*ruscus*) and of the tamarisk (Plin. *H. N.* xxiii. § 166, xvi. § 108), but also of myrtle (Eur. *Ion*, 121), and in richer houses at Rome of palm-twigs. (Hor. *Sat.* ii. 4, 83; Mart. xiv. 82; cf. Juv. xiv. 60; Becker-Göll, *Gallus*, i. 35.) [G. E. M.]

SCORDISCUS. [Ephippia.]

SCORPIO. [Tormentum.]

SCRIBA, a title given to the clerks, or rather secretaries, who formed the highest class of the officials attached to a Roman magistrate. The *scriba* was much more than a mere *librarius* or copyist; thus Cicero, *pro Sull.* 15, 42, 44, distinguishes sharply the *librarii* who copied out the confessions of the Catilinarian conspirators from the *scribae*, the four senators who had taken them down. The compound expression *scriba librarius* is used to denote a superior kind of *librarius:* hence the quaestorian clerks often appear as *scribae librarii.* These were divided into three decuries, presided over by the *sex primi* (Cic. *de Nat. Deor.* iii. 30, 74; Wilmanns, *Inscr.* 1297, 1298, 1809), and had as their especial charge the administration of the treasury (whence they are sometimes called *ex aerario*, *C. I. L.* vi. 1816) and the keeping of the public books. Every governor of a province had two of these treasury-clerks assigned to him to keep his accounts (Liv. xxxviii. 55, 5), and to draw up the statement which he had to give in upon his return (Cic. *in Pis.* 25, 61). Besides them, he would naturally have his own clerks for his private accounts. As the treasury contained the state archives, all the business connected with them, especially the registration of the decrees of the senate, passed through the hands of the *scribae.* There is no definite reference to *scribae* attached to the consuls; but the praetors and the judicial authorities generally were regularly aided by *scribae*, who read the documents laid before the court (Cic. *in Verr.* iii. 10, 26), and drew up the decisions and sentences in due form (Cic. *pro Cluent.* 53, 147). The censors especially were during their term of office in need of such clerical assistance, and sometimes they appear as the authorities in charge of the whole body of public clerks (Liv. iv. 8, 4). Most of the clerks may have belonged to the class of public slaves; but others, again, must have been officials holding a respectable position, for, in the formula of the census, they are mentioned after the censors but before the other magistrates (Varro, vi. 87). At least the more important of the clerks must have been taken from the decuries of the *scribae quaestorii:* the nominations were usually made by the quaestors, but here, as always, a superior magistrate could interfere by the exercise of his overruling powers when he pleased. We learn from the case of Horace that appointments could be, in some cases at least, obtained by purchase. The number of the quaestorian clerks was 27 before the time of Sulla, and was raised by him to 36. As there were probably 11 provincial governors sent out after Sulla's re-arrangements, this left 14 for duty at home. The clerks of the curule aediles, mentioned by Cicero (*pro Cluent.* 45, 126) and Livy (xxx. 39, 7), and often in inscriptions (*e.g.* Wilmanns, 1296, 1300, 1302, 1303, &c.), formed one decuria, presided over by 10 head clerks (*C. I. L.* vi. 1840). They were not much inferior in standing to the former class. We also find mention of clerks to the plebeian magistrates, the tribunes, the plebeian aediles, and the Cerial aediles; but little is known of their functions, and they do not appear to have been important. On the other hand, the first two classes contained men of great knowledge of business and even of law (*C. I. L.* vi. 1819), and these may be compared to the permanent officials of our own public offices. Their services must have been quite necessary to the annually elected magistrates, often young and inexperienced. They formed collectively an *ordo* (Cic. *Verr.* iii. 79, 184), claiming to rank with that of the *equites* (Schol. *in* Juv. v. 3), and it was the gradual establishment of a claim to lifelong tenure of office that led to the sale of posts which the incumbents were willing to vacate. In the provinces they ranked immediately after the staff officers of the governor; but the fact that they received pay (under the Republic called *merces*, under the Empire *salarium*) drew a sharp line between them and the officers who were not *mercenarii.* Hence, as in the well-known case of Cn. Flavius, a *scriba* was not allowed to stand as a candidate for office until he had laid down his *scriptus* or official position. Cicero (*de Off.* ii. 8, 29) mentions another case of a man who had been a clerk under Sulla becoming praetor urbanus under Caesar. In Horace (*Sat.* ii. 5, 56) we have an instance of an inferior magistrate, one of the quinqueviri, turning clerk; he also speaks of the order, to which he himself belonged, in *Sat.* ii. 6, 36, as possessed of influence. In Tacitus they are apparently included in the decuriae, which were largely composed of *libertini* or their descendants. (Cf. Mommsen, *Röm. Staatsrecht*, i.^{3} 331–339.) [A. S. W.]

SCRIPTU'RA, the oldest form of revenue from *ager publicus* (according to Pliny, *H. N.* xviii. § 11), was that portion of the revenue of the Roman commonwealth which was derived from letting out part of the *ager publicus* as pasture-land (Cic. *pro Flacco*, 8, 18). Such parts were called *pascua publica*, *saltus*, or *silva* (cf. Verg. *Georg.* iii. 323), the last name pointing to the feeding of swine on acorns. They were let, like other sources of vectigalia, by the censors to publicani; and the persons who grazed cattle on the pastures (*pecuarii*) had to pay a certain duty to the publicani according to the number and size of the cattle. For fines levied on the pecuarii who evaded this payment, see Liv. x. 23, xxxiii. 42, xxxv. 10; Ovid, *Fast.* v. 283–294. The leges Liciniae of 367 (App. *B. C.* i. 8) and the agrarian law of B.C. 111 set limits to the number of cattle which any one person might graze on the public land: but it is hard to see why a limit should have been imposed, when fees were regularly paid to publicani, and when the publicani were therefore able to pay a large contract-sum into the treasury; the more grazing, the higher the contract.

The amount of the duty is unknown, but the state revenue hence derived through the publicani seems to have been very considerable. From registering the cattle on the lists of the publicani (*scribere*) came the name of the duty itself; the land itself was called *scripturarius ager* (Festus, *s. v.*), and the publicani and their servants *scripturarii.* Cattle sent on the pastures without registration (*pecus inscriptum*) were probably forfeited to the publicani (Plaut. *Truc.* i. 2, 48; Varro, *R. R.* ii. 1). Public pastures were found in Italy (especially in Samnium, Lucania, and Apulia; Varro, *l. c.*; Liv. xxxix. 29) and in the provinces (in Sicily, Cic. *Verr.* ii. 3, 6; *ib.* 70, 171;—in Asia, Cic. *pro Leg. Manil.* 6, 14; *ad Fam.* 13, 65;—in Cyrene, Pliny, *H. N.* xix. § 39).

Scriptura disappeared in Italy as the pasture-land was assigned by agrarian laws to individual owners, and the treasury thus lost a great source of revenue. Even in the provinces the scriptura disappears under the Empire, the emperors taking to themselves the nearly exclusive management and even use of the pascua (Cod. Theod. *de Pasc.* 7, 7; *de Greg. Domin.* 10, 6). [F. T. R.]

SCRU'PULUM, or more properly SCRIPULUM or SCRIPLUM (*γράμμα*), the smallest denomination of weight among the Romans. It was the 24th part of the UNCIA, or the 288th of the LIBRA, and therefore about 18 grains English, which is about the average weight of the scrupular aurei still in existence. [AURUM.]

As a square measure, it was the smallest division of the jūgerum, which contained 288 scrupula. [JUGERUM.] Pliny (*H. N.* ii. § 48) uses the word to denote small divisions of a degree. It was in fact to be applicable, according to the use of the As and its parts, to the 288th part of any unit.

Though the scrupulum was the smallest weight in common use, we find divisions of it sometimes mentioned, as the *obolus* = ½ of a scruple, the *semi-obolus* = ½ of an obolus, and the *siliqua* = ⅓ of an obolus, = ⅙ of a scruple, which is thus shown to have been originally the weight of a certain number of seeds. (*Carmen de Pond.* v. 8–13:—

"Semioboli duplum est obolus, quem pondere duplo
Gramma vocant, scriplum nostri dixere priores.
Semina sex alii siliquis latitantia curvis
Attribuunt scriplo, lentisve grana bis octo,
Aut totidem speltas numerant, tristesve lupinos
Bis duo.")

[PONDERA, p. 455.] [P. S.]

SCULPO'NEAE (*κρούπεζαι*) were wooden shoes, made, as the name implies, each in one piece and hollowed out. They were worn only by peasants and slaves in country work (Cato, *R. R.* 59, 135; Plaut. *Cas.* ii. 8, 59; Trebell. Poll. *XXX. Tyr.* 22; Isid. *Orig.* xix. 34). It seems that there were also wooden shoes called *calones* (Paul. p. 46, 15; cf. Isid. *l. c.*). The Greek *κρούπεζαι, κρούπαλα, κρουπέζια* were, perhaps, originally merely wooden shoes, worn, as Pollux intimates, particularly by the Boeotian peasants, and so called because of the noise which they made (Poll. vii. 87, x. 153). Photius (*s. v.* *κρούπαλα*) says that they were used for treading out olives. But the name belongs especially to the wooden instrument of a double block of wood with a hinge fitted to the feet and used by flute-players to beat time = Latin *scabellum* or *scabillum* [see under CYMBALA, and for illustration see Baumeister, *Denkm.* fig. 1350]. For Greek and Roman shoes in general, see CALCEUS. [G. E. M.]

SCULPTU'RA. [SCALPTURA: for *sculpture*, see STATUARIA.]

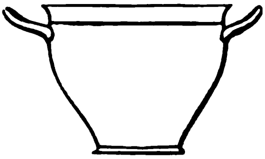
SCUTELLA (Cic. *Tusc.* iii. 19, 46) is rightly explained by Rich as a small tray or salver on which cups could be placed, and not a saucer or dish like its French derivative *écuelle*: for in Ulp. *Dig.* 34, 2, 20, § 10, scutellae are defined as "quae aliquid sustineant," and are specially distinguished from vessels "quae aliquid in se recipiant edendi bibendive causa paratum." (Cf. Becker-Göll, *Gallus*, iii. 395.) [G. E. M.]

SCU'TICA. [FLAGRUM.]

SCUTUM (*θυρεός*), the Roman shield worn by the heavy-armed infantry after 340 B.C., instead of being round like the Greek CLIPEUS, was adapted to the form of the human body, by being made either oval or of the shape of a door (*θύρα*), which it also resembled in being made of wood or wicker-work, and from which consequently its Greek name was derived. Two of its forms are shown in the woodcut at p. 80. That which is here exhibited is also of frequent occurrence, and is given on the same authority: in this case the shield is curved so as in part to encircle the body. The terms *clipeus* and *scutum* are often confounded; but that they properly denoted different kinds of shields is manifest from the passages of several ancient writers (Liv. viii. 8; Plut. *Rom.* 21). In like manner Plutarch distinguishes the Roman *θυρεὸς* from the Greek *ἀσπὶς* in his life of T. Flaminius (p. 688, ed. Steph.). In *Eph.* vi. 16 St. Paul uses the term *θυρεὸς* rather than *ἀσπὶς* or *σάκος*, because he is describing the equipment of a Roman soldier. These Roman shields are called *scuta longa* (Verg. *Aen.* viii. 662; Ovid, *Fast.* vi. 392). Polybius (vi. 23) says their dimensions were 4 feet by $2\frac{1}{2}$, or slightly more. The shield was held on the left arm by means of a handle, and covered the left shoulder. [J. Y.] [A. H. S.]

Scutum. (Bartoli's *Arcus Triumphalis.*)

SCYPHUS (*σκύφος*), a drinking cup with two straight handles on the rim, much deeper than the *κύλιξ* or *calix* and of ruder shape, as may be seen from the woodcut below. It was said to be the cup of Heracles, both as more rustic in form and as holding more, while the CANTHARUS is given to the more refined Dionysus (Macrob. *Sat.* v. 21; Athen. xi. p. 500 a; Serv. *ad Aen.* viii. 288; cf. Plut. *Alex.* 75). This tradition agrees with the fact that it is consistently ascribed by Greek writers to peasant life and the use of herdsmen and shepherds (Athen. xi. p. 498 f, g; *Od.* xiv. 112; Eur. *Cycl.* 390; Theocr. i. 143), and represented as originally of wood, *faginus* (Tibull. i. 10, 8); *δουράτεον* (Athen. *l. c.*), "ingens ligneum poculum" (Serv. *l. c.*). The material was changed to earthenware (Athen. p. 500 a), and then to silver (Varr. *ap.* Gell. iii. 14; Cic. *Verr.* iv. 14, 32), or even gold (*ib.* iv. 24, 54), and in Latin we find it a drinking cup at the tables of the rich, having lost its rustic character (Hor. *Od.* Ep. i. 27, &c.), but no doubt retaining its shape as in the annexed cut. The example given by Marquardt (*Privatleben*, p. 652) is nearly the same, but the sides are straighter.



Ordinary Scyphus. (Dennis.)

Later form of Scyphus. (Dennis.)

Dennis gives as a later and more elaborate form a scyphus with incurved handles (*Cities and Cemeteries of Etruria*, i. cix.). [G. E. M.]

SCY'RIA DIKE (*Σκυρία δίκη*) is thus explained by Pollux (viii. 81): *Σκυρίαν δίκην ὀνομάζουσιν οἱ κωμῳδοδιδάσκαλοι τὴν τραχεῖαν, ἣν οἱ φυγοδικοῦντες ἐσκήπτοντο εἰς Σκῦρον ἢ εἰς Λῆμνον ἀποδημεῖν.* By *τραχεῖα δίκη* is meant one beset with difficulties, in which the plaintiff had to encounter every sort of trickery and evasion on the part of the defendant. On the appointed day of trial (*ἡ κυρία τοῦ νόμου*, commonly the thirtieth day after the commencement of the action, Dem. *c. Mid.* p. 529, § 47, *lex*; cf. *c. Timocr.* p. 720, § 63, *lex*; but the trial might be postponed by agreement between the parties [Dem.] *c. Phaenipp.* p. 1042, § 13 [EMMENOI DIKAI]) both parties were required to be present in court. If the plaintiff was not there, he was non-suited; if the defendant did not appear, judgment was given against him by default. If, however, either party had some good excuse to offer, such as illness, the death of a relative, or inevitable absence abroad (Hyp. *fr.* 204 = Schol. Aristoph. *Plut.* 725; Schol. Dem. *c. Mid.* p. 541; Pollux, viii. 60), judgment was not given. Cause was shown by some friend on his behalf, supported by an affidavit called *ὑπωμοσία*

(Harpocr. *s. v.*; Dem. *c. Olymp.* p. 1174, § 25 f., *ὑπωμοσάμεθα ἡμεῖς τουτονὶ* 'Ολυμπιόδωρον *δημοσίᾳ ἀπεῖναι στρατευόμενον*, etc.; *c. Theocr.* p. 1336, § 43), in answer to which the opponent was allowed to put in a counter-affidavit (*ἀνθυπωμοσία, Lex. Rhet. Cantabr.* s. v.), and the court decided whether the excuse was valid. No *ὑπωμοσία* was allowed in an eisangelia *ἐάν τις τὸν δῆμον τὸν* 'Αθηναίων *καταλύῃ* (Hyp. *pro Eux.* col. 22). It seems to have become a practice with persons who wished to put off or shirk a trial, to pretend that they had gone to some island in the Aegean Sea, either on business or on the public service; and the islands of Scyrus (Photius, *s. v. Σκυρίαν δίκην*), Lemnos, and Imbrus (Hesych. *s. vv.* Ἴμβριος *καὶ* Λήμνιος: Photius, *s. v.* Ιμβριοι) were particularly selected for that purpose. Shammers of this kind were, therefore, nicknamed Lemnians and Imbrians. (*Att. Process*, ed. Lipsius, p. 908 ff.) [C. R. K.] [H. H.]

SCY'TALE (*σκυτάλη*, also *κουτάλη*; from *σκῦτος, κύτος*, leather or hide; see Curtius, *Gr. Etym.* § 683) is the name applied to a secret mode of writing by which the Spartan ephors communicated with their kings and generals when abroad (Plut. *Lysand.* 19; Schol. *ad* Thucyd. i. 131; Gell. xvii. 9; Schol. *ad* Aristoph. *Av.* 1283; Cornel. Nep. *Pausan.* 3). When a king or general left Sparta, the ephors gave to him a staff of a definite length and thickness, and retained for themselves another of precisely the same size. When they had any communication to make to him, they wound round their staff a narrow strip of leather (whence the name), and then wrote upon it the message which they had to send to him. When the strip of writing material was taken from the staff, nothing but single or broken letters appeared, and in this state the strip was sent to the general, who, after having wound it around his staff, was able to read the communication. Ausonius (*Ep.* 23), after suggesting to his friend writing with milk for secrecy, continues:

> "Vel Lacedaemoniam scytalen imitare, libelli
> Segmina Pergamei tereti circumdata ligno
> Perpetuo inscribens versu, qui deinde solutus
> Non respondentes sparso dabit ordine formas."

In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns (Xen. *Hell.* v. 2, § 37). [L. S.] [G. E. M.]

SCYTHAE. [DEMOSII.]

SECE'SPITA, an instrument used by the Roman priests in killing the victims at sacrifices (Suet. *Tib.* 25). According to the definition of Antistius Labeo, preserved by Festus (p. 348, ed. Müller), and Servius (*ad* Verg. *Aen.* iv. 262), it was a long iron knife (*culter*) with an ivory handle, used by the Flamines, Flaminicae, Virgines, and Pontifices. On the annexed coin of the Sulpicia gens, the obverse is supposed to represent a culter, a simpuvium, and a secespita. Its proper purpose seems to have been for opening the body of the victim which had been slain—if a larger victim, with the *securis* or *malleus*; if a smaller, with the *culter*. It is therefore appropriated to the higher order of priests, to whom this function belonged, but who did not themselves slay the victim [SACRIFICIUM]. The sacrifical implements shown below are rightly distinguished (cf. Guhl and Koner, ii. 320) as (1) a *secespita* in its sheath, (2) *cultri* in their case. [W. S.] [G. E. M.]

SECRETA'RIUM. [AUDITORIUM.]

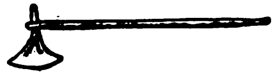
SECTIO. "Those are called Sectores who buy property *publice*" (Gaius, iv. 146; Gellius, iii. 154; Festus, s. v. *sectores*), and property was said *venire publice* when a man's whole belongings were sold by the state; which occurred when he was condemned for certain crimes for which forfeiture was part of the penalty, in cases of *proscriptio* (Cic. *pro Rosc. Am.* 43, 125; Liv. xxxviii. 60; Cic. *in Verr.* i. 20, 52), and lastly, when the state had an unsatisfied claim against a wrongdoer (Liv. xxxviii. 58, 60; Cic. *pro Rabirio Post.* 4, 8), especially for payment of a fine inflicted by way of penalty. For instance, Livy tells us in the passage referred to, that L. Scipio was condemned to pay a fine for misappropriating public moneys, and that the praetor gave notice that unless the fine was paid he should order Scipio to be imprisoned; upon this a tribune put his veto, and the praetor was driven to put the quaestors in possession of his property for purposes of sale. Upon being put in possession (for which the expression *bona publice possidere* is used, Lex Acilia repet., line 9; Lex Servilia, c. 17), the usual course was for the quaestors to give notice of the sale (*sectio*), which took place *sub hasta* (Cic. *Phil.* ii. 26, 64) and transferred Quiritarian ownership, the property being sold in the lump, and the purchaser taking it with all its liabilities (Ascon. *in Verr.* ii. 1, 23, 61, p. 177 Orelli; Dig. 48, 23, 2, 3). That the purchaser here became Quiritarian owner, whereas under a private bankruptcy (*bonorum venditio*) he merely became bonorum possessor, is probably the substance of what Gaius says in a mutilated passage (iii. 80: cf. Varro, *R. R.* ii. 10, 4; Tac. *Hist.* i. 20). The names *sector* and *sectio* are explained by the subsequent breaking up of the property into lots, by the sale of which the sector made his profit (Pseudo-Ascon. *in Verr.* i. 20, 52; *ib.* 23, 61); sometimes, indeed (*e.g.* Tac. *Hist.* i. 90), the things sold by the quaestor are called *sectio* themselves. The sector had a special interdict (Interdictum Sectorium, Gaius, iv. 146) for obtaining possession of the property. Inheritances which fell to the fiscus were sold in the same way, and the sector was here entitled to bring *hereditatis petitio* (Cod. 4, 39, 1). [G. L.] [J. B. M.]

SECTOR. [SECTIO.]

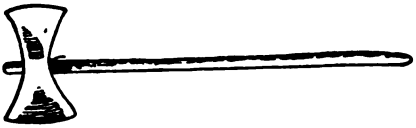
SECTORIUM INTERDICTUM. [INTERDICTUM; SECTIO.]

SECU'RIS (*πέλεκυς, ἀξίνη*), an axe. Under this head are included (1) the workman's axe, (2) the battle-axe, (3) sacrificial axe, (4) the axe of the lictors, equivalent to the headsman's axe.

1. The workman's axe, when used for felling trees, is spoken of in general terms as *πέλεκυς* (*Il.* xxiii. 114; Xen. *Cyrop.* vi. 2, 36, &c.) and *securis* (Verg. *Aen.* vi. 180; Plin. *H. N.* xvi. § 192, &c.); but of these woodcutters' axes there were two patterns, the single-headed and the double-headed. Of these the former (when the distinction was marked) was called *πέλεκυς ἑτερόστομος* (Poll. i. 137) or *ἡμιπέλεκκον* (*Il.* xxiii. 851), and is perhaps distinguished as the *securis simplex* (Pallad. i. 43); the double-headed axe was called *πέλεκυς ἀμφίστομος* or *δίστομος* (Poll. *l. c.*; Eur. *fr.* 534) or *ἀξίνη*, which is strictly used only of the double axe (Hesych.): in Latin it is the *bipennis* (Hor. *Od.* iv. 4, 57; Isid. *Orig.* xix. 19). [Blümner, *Technol.* ii. 202.]

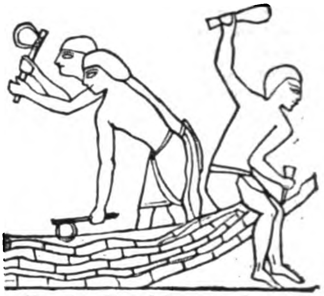


Securis simplex. (Trajan's Column.)



Bipennis. (From a vase-painting.)

The carpenters' or shipwrights' axes are distinguished in Greek as the heavy *πέλεκυς* for rough-hewing the wood, and the small *σκέπαρνον* for afterwards shaping it more finely (*Od.* ix. 391; ASCIA). The following cut of Egyptian shipwrights is worthy of notice, since the form of the *πέλεκυς* there depicted explains what is meant by "shooting through the axe-heads," in *Od.* xx. 574. The difficulties which commentators have found under the idea that the arrow passed through the rings which fastened the axe to the handle, &c., all disappear, if we see that the *πέλεκυς* of the Odyssey had a ring-shaped head. (See Dr. Warre's *Raft of Ulysses*, in *Journ. of Hellen. Studies*, 1883.) A somewhat similar axe, but with two circular holes in the blade, was found in 1889 in the Peloponnesus (*Ephem. Arch.* 1889). [For the Roman carpenter's axe, see ASCIA; DOLABRA.]



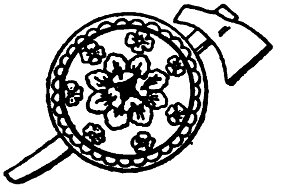
Egyptian shipwrights, with the axe.

2. The use of the axe in war was especially an Asiatic practice. We find the Trojan Peisander (*Il.* xiii. 612) armed with a double axe (*ἀξίνη*), and again in the fight at the ships the combatants fight with double and single battle-axes (*πελέκεσσι καὶ ἀξίνῃσι*): it is possible that there also it is to be understood of the Trojans alone. In agreement with this we find the battle-axe regarded as the characteristic weapon of the Asiatic Amazons, who use both the single and the double (or Carian) axe, as in the scene of Penthesilea's death on the sarcophagus from Thessalonica; and so Horace speaks of the Amazonian battle-axe (*Od.* iv. 4, 20), and Virgil consistently represents the Italian shepherds and Camilla as fighting with this weapon (*Aen.* vii. 184; xi. 696; xii. 306), whether he is merely following Homer, with Trojans substituted for Greeks and Italians for Asiatics, or is hitting upon the truth that the primitive races both in Italy and in Northern Europe fought with the axe, which was in fact a weapon which they had ready to hand for other purposes. (See A. Müller in Baumeister, *Denkm.* p. 2043.) Horace notices it specially of the barbarous tribes in Rhaetia, as though it were a weapon not common in the Roman experiences of warfare with other Teutonic tribes; and it is remarkable that on the scabbard of the so-called "sword of Tiberius" in the British Museum (figured in Vol. I. p. 920 *b*), which was discovered at Mayence, we have a relief of an Amazon armed with a *bipennis*. It would,

Death of Penthesilea. (Relief on a sarcophagus.)

however, be pressing conjectures too far (as A. Müller points out) to say, with Orelli and others, that this figure necessarily symbolises the conquered Vindelicia, and was the sword of honour of Tiberius. We may be content to take it as an additional evidence of the "Amazonian" battle-axe being used among German nations, and regarded as characteristic of them, whereas it had long before been disused in Italy.

3. The sacrificial axe (*securis*, *πέλεκυς*) was used by the attendant ministers (*popae*) for the slaughter of the larger victims. (The distinction, whether always preserved or not, was axe or hammer, *malleus*, for slaughtering cattle, a stone for swine, and a knife for sheep: see Marquardt, *Staatsverw.* iii. 181.) The sacrificial axe figured below is from the relief on the Arcus Argentariorum, and is combined with a vessel which is very likely the Praefericulum.



Sacrificial axe. (From the Arcus Argentariorum.)

4. For the axe of the lictors, see Lictor and Fasces. [G. E. M.]

SECUTO′RES. [Gladiatores, Vol. I. p. 918 *b*.]

SEISACHTHEIA (*σεισάχθεια*), a disburdening ordinance, was the first and preliminary step in the legislation of Solon (Plut. *Sol.* 15). The real nature of this measure was a subject of controversy even amongst the ancients. Philochorus (*fr.* 57; Suid. and Photius, *s. v.*) explains it as *χρεωκοπία*, and this opinion is widely held: Heracl. Pont. ed. Schneidewin, p. 4, 9, *Σόλων . . . καὶ χρεῶν ἀποκοπὰς ἐποίησε τὴν σεισάχθειαν λεγομένην*: Dion. Halic. *Antiq. Rom.* v. 65, *ἄφεσις χρεῶν*: Plut. *Sol.* 15, *τῶν χρεῶν ἀποκοπὴ —τῶν συμβολαίων ἀναίρεσις*: Dio Chrysost. xxxi. 69: Diog. Laert. i. 45; Suid. *s. v.* etc.; cf. also Arist. *Ἀθην. πολ.* papyrus *fr.* i.^{6} l. 14, *τὴν [τῶν] χρεῶν ἀποκοπήν· συμβεβήκει γὰρ αὐτοῖς γενέ[σθαι ταπεινοῖς] καὶ πένησιν.* Only Androtion and some others, whose names Plutarch does not give, describe it as a mere reduction of the rate of interest (*τόκων μετριότης*), a view accepted by Boeckh, *Sthh.* i.^{3} p. 159; Hermann, *Griech. Staatsalterth.* § 106; Curtius, *Griech. Gesch.* i.^{5} p. 318. But such results as Solon claims for his measure, viz. that the mortgage pillars were removed, and that the debtors were liberated, even those sold to foreign countries (*fr.* 36, and Arist. *Ἀθην. πολ.* i.^{6} l. 7 ff.), could not have been brought about by a reduction of the rate of interest (see, moreover, his law, *τὸ ἀργύριον στάσιμον εἶναι ἐφ' ὁπόσῳ ἂν βούληται ὁ δανείζων*, Lys. *c. Theomn.* i. § 18), even when coupled with a lowering of the silver standard. To achieve this, all those contracts in which the debtor had borrowed on the security either of his person or of his land had to be cancelled, and to prevent the recurrence of similar social evils it was forbidden henceforth *ἐπὶ τοῖς σώμασι δανείζειν*, and a limit was fixed beyond which no one was allowed to buy up land (Arist. *Pol.* ii. 4 (7 Bk.) 4). This measure of Solon (*ὁμοῦ βίην τε καὶ δίκην συναρμόσας*, *fr.* 36) seems, no doubt, hard on the rich—yet their riches were ill-gotten (*fr.* 4)—but it was demanded by the circumstances; he did not disturb owners in the possession of the land they had bought, and did not go nearly as far as the Megarians on a similar occasion (Plut. *Quaest. Graec.* 18, p. 295 D, *παλιντοκία*). At the same time Solon effected a reform in measures and in the coinage (Plut. *l. c.* *ἡ ἅμα τούτῳ γενομένη τῶν δὲ μέτρων ἐπαύξησις καὶ τοῦ νομίσματος τιμή*). This reform was, however, not made with a view to assisting debtors by reducing their debts 27 per cent., since 73 old drachmas were worth 100 new drachmas (Grote, *Hist. of Greece*, iii. p. 100 f.). Solon's object clearly was, as Köhler shows (*Mitth. d. d. arch. Inst.* 1885, p. 151 ff.), to open up new fields for Athenian trade. Hitherto the coinage of Athens had been on the Aeginetan system, which prevailed on the mainland of Greece, and on the Cyclades; now the Euboic system was adopted, which was confined to that island and Corinth. The trade to the Black Sea and to Egypt was in the hands of Aegina and Megara, and with these flourishing towns Athens could at that time not compete. The Chalcidians and Corinthians, on the other hand, had planted colonists north of Chalcidice and in Sicily, and thus opened up new districts to Greek trade. With these the Athenians might hope successfully to compete, and, as the result showed, their hope was well founded; hence their coinage system was adopted. From these districts they could import what Athens stood most in need of, viz. timber and grain; and thither they could export oil, which alone of all produce Solon allowed to be exported (Plut. *l. c.* 24), and manufactures, which he encouraged in every possible way. [L. S.] [H. H.]

SELLA. The customs and associations which the Greeks and Romans connected with the attitude of sitting were so different from ours that any account of the seats they used must involve some mention of the ceremonial meaning and etiquette which had grown up round it. Most strange to a modern is the religious and ceremonial use of the posture. To sit at or on a sacred spot or object was in itself an act of supplication (cf. Aesch. *Suppl.* 224, 265; Soph. *O. T.* 2), not merely in the heroic age, but, as we see from the story of Themistocles seating himself on the household hearth of Admetus (Thuc. i. 135), in classical times. In art it is very often shown: for instance, Priam seated on the altar of Zeus at the taking of Troy, Telephos on the hearth of Agamemnon, and Orestes at the omphalos at Delphi (cf. Baumeister, *Denkmäler*, arts. *Iliupersis*, *Telephos*, and *Oresteia*). So too, when being purified from the stain of blood, the sinner sat on the altar, possibly on the skins of the victims, as the novice did when being initiated, and the sorcerer when summoning the spirits of the dead (cf. Vase-painting of Odysseus and the Ghost of Teiresias, *Mon. d. Inst.* iv. 19). In taking omens from birds, the seer, both among Greeks and Romans, was seated (cf. Soph. *Antig.* 999; Serv. *ad Aen.* ix. 4). Chairs also formed an important part of the sacred furniture in many ceremonial processions (cf. Aristoph. *Eccl.* 734; *Av.* 1552), as in the well-known instance of the central group of the East Parthenon frieze, where the priestess is attended by maidens carrying chairs on their heads.

Of the place seats took in the civil life of antiquity it is needless to speak, for the customs by which difference of rank, dignity, or authority was typified by the prominence and magnificence or the reverse of seats, are easily comprehended and too numerous to mention [cf. THRONUS]. It is enough to point to such words as *συνεδρία*, *προεδρία*, *consessus praesidium*, or *sessio*, to show how deeply such ideas had sunk into the national life and language. Nor again does the contempt which in social life the leisured classes felt for the artisans and others who pursued a sedentary occupation (cf. Xen. *Rep. Lac.* i. 3, *οἱ πολλοὶ τῶν τὰς τέχνας ἐχόντων ἑδραῖοί εἰσιν*) call for explanation. The etiquette, too, which regulated such matters, was not unlike our own, for even in the Homeric age it was part of the welcome of a guest to bid him be seated (e.g. *Od.* i. 130). It was also considered an act of necessary politeness to rise in the presence of an older or more honoured man (cf. Cic. *de Sen.* 18, 63, "*assurgi:*" cf. Juv. xiii. 55; Mayor *ad loc.*); and Caesar was accused of aiming at royal power, when he refused to rise in presence of the senate (Liv. *Ep.* cxvi.; Suet. *Caes.* 78; Dio Cassius, xliv. 8), and the emperors showed their authority by sitting between the consuls.

At banquets when men reclined it was considered becoming for boys to sit (Xen. *Symp.* i. 8; Suet. *Claud.* 32), and the rule for women was originally the same (Val. Max. ii. 1, 2), though disregarded in later times. In art even the goddesses are represented as seated, while the gods recline (cf. Baumeister, *Denkmäler*, art. *Zwolfgötter*, fig. 2401); and while the latter were honoured by *lectisternia*, the former were only given *sellisternia*. Many grave reliefs representing a banquet of the deified dead show the same custom, which was by no means confined to the Greeks, for it may be seen on the Assyrian bas-relief of Sardanapalus feasting, now in the British Museum.

On the monuments, especially the vase-paintings, the personages in a mythological scene who are merely spectators are often depicted as seated, especially when they are deities. The most familiar instance is the assembly of gods beholding the Panathenaic procession, on the east frieze of the Parthenon. In *genre* scenes, the use of chairs often shows that the scene takes place indoors, and in many cases helps us to distinguish the mistress from her maids, or the master from his followers.

Seats in antiquity were of almost as many forms as nowadays, but for practical purposes it is sufficient to divide them into three classes: (1) those which have a straight back and arms; (2) those with a back, but no arms; and (3) those which have neither a back nor arms. The first class is described under THRONUS, the second under CATHEDRA, while the present article gives an account of seats in general and the third class in particular.

In Greece, before Homer, seats both with and without backs were used, as is shown by carvings on ivory which have been found at Mycenae (cf. Ἐφημερίς, 1888, Πίναξ B. 3, 2, and 4, 29). These were no doubt not unlike the Assyrian and Egyptian thrones and chairs, which are plainly the ancestors of those used in Greece in historical times. In Homer the general term for seats of all kinds is *ἕδρη*: but, with the exception of the *θρόνος* [THRONUS], which is of the first class mentioned above, and may be assumed to be identical with the thrones on which the gods of later times were seated, there is no information given about the distinctive shapes of the different varieties.

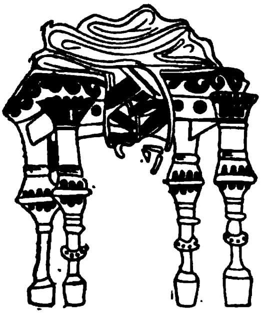
The *κλισμός*, which came next in honour to the *θρόνος*, was apparently used for ease and comfort, since Penelope sat in it spinning (*Od.* xvii. 97), and Telemachus rested in it after a bath (*Od.* xvii. 90). This seems to imply that it had a back, but no arms. It must have been of some height, for a footstool (*θρῆνυς* = later *ὑποπόδιον*) was sometimes used with it (*Od.* iv. 136). The *κλισμὸς* was decorated with metal plates and inlaying, as is shown by the epithets *χρύσειος* (*Il.* viii. 436) and *ποικίλος* (*Od.* i. 132), and was only used by people of rank.

There is a good deal of difficulty in deciding whether the word is always used in a specific sense, and Helbig on account of *Il.* xxiv. 515 and 597 (cf. *Il.* xi. 623, 645), where *κλισμὸς* and *θρόνος* are synonymous, maintains that the usage of the word is not consistent throughout. This would account for the fact that Helen works seated on a *κλισίη* (*Il.* iv. 123). The *κλισίη* is exclusively a woman's chair, and is possibly identical with the *κλιντήρ*,—an easy chair in which one could, like Penelope (*Od.* xviii. 189), take a nap.

The commonest kind of seat was the *δίφρος*: it was for instance given to Odysseus, when he appeared in beggar's rags (*Od.* xix. 97), and it formed part of the furniture of the Thalamos (*Il.* vi. 354), being meant for use, not ornament. It was doubtless, like the *δίφρος* of classical times, merely a stool, without back or arms. Owing to the indefiniteness of the mentions in Homer, it is impossible to identify these various forms with those shown on Assyrian, Egyptian, Phoenician, or early Greek monuments.

In the classical period the generic name for chairs and stools was *καθέδρα* (to be distinguished from the Latin CATHEDRA, which was only used for one kind, the *κλισμός*). For the different varieties, the Homeric names remained in use, the difference in meaning being expressed as follows by Athenaeus (v. 192 e): *ὁ γὰρ θρόνος αὐτὸ μόνον ἐλευθέριός ἐστι καθέδρα σὺν ὑποποδίῳ . . . ὁ δὲ κλισμὸς περιττοτέρως κεκόσμηται ἀνακλίσει, τούτων δὲ εὐτελέστερος ἦν ὁ δίφρος.* Our information, however, on the subject is given by the monuments rather than by literature, and on them we have the great variety of forms shown. The simplest is that of the *δίφρος*, which is of the third class, being without arms or back. It was besides called *σκίμπους*, though this name is also given to benches (*βάθρα* or *χαμαίζηλοι*, i.e. *δίφροι χαμαίζηλοι*), which were sometimes long enough to serve as a bed (cf. Plato, *Prot.* p. 310 C). These chairs are seen on the earliest monuments, and are of every variety of make, from simple four-legged stools to chairs with richly-turned legs, ornamented with inlaying and chased or embossed metal work. They were a most important part of household furniture, especially in the women's rooms (cf. Pollux, x. 47), where they were used not only for sitting at work or the toilet, but as a substitute for tables and shelves on which to lay clothes, vessels, or instruments.

This was also one of the uses to which the chairs, which were carried in sacred processions with the holy vessels, were put (cf. the *διφροφόροι* on the east side of the Parthenon frieze, and Aristophanes, *Eccles.* 734). The *δίφρος* was also used much in workshops by shoemakers, carpenters, smiths, painters, potters, and others of a sedentary employment. [See cut under FICTILE, Vol. I. p. 844 *a.*] It was also part of the furniture of a school, where the master sat on a higher and more dignified seat and the pupils on chairs or benches (*βάθρα*: cf. Plato, *Prot.* p. 315 C, and see cut from vase of Duris in Berlin Museum on page 96). The *δίφρος* was also used out of doors, and it was the custom for well-to-do gentlemen of the old school to have a boy carrying one in attendance as he walked about (Arist. *Eq.* 1384–6: cf. Athen. xii. 512 c). For this purpose a camp-stool (*δίφρος ὀκλαδίας*) was used. The shape, however, was a favourite one, and chairs were often made in it which could not possibly fold up and were meant for ordinary use. The legs were either straight or curved (Inscr., *Hermes*, v. 346).



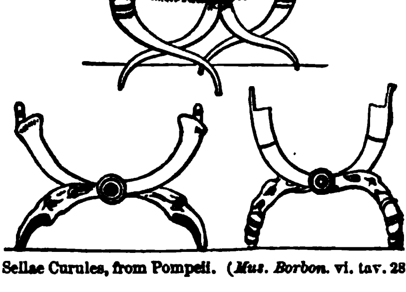
Δίφρος, from a vase-painting. (Baumeister.)

Chairs of all kinds were covered with skins and fleeces in the Homeric age, and at all periods with shawls and coverlets. Cushions (*κνέφαλλα, τύλαι*) were also used, but upholstery was unknown.

The manufacture of chairs flourished, especially in Thessaly, Miletus, and Chios (cf. Critias quoted by Athen. i. p. 28 b). Maple and beech were the woods chiefly used, but harder and more expensive sorts were necessary for those which were inlaid with ivory. Wicker-work chairs are also mentioned (Theophr. v. 3, 4; Plin. *H. N.* xvi. § 174; Cato, *R. R.* 33, 5), and are shown on some monuments (as on the sarcophagus in British Museum; see Baumeister, 1610). The fixed chairs which were set up in theatres or other public places, for certain officials or as a special honour, are described in the article THRONUS.

The Romans made use of all the forms of chair known to the Greeks, and do not seem to have had any peculiar shapes of their own. The general term in Latin is *sedile* (= *καθέδρα*) for all kinds of seats, while the varieties are the *scamnum* or *subsellium* (= *βάθρον*), the *sella* (= *δίφρος*), the *cathedra*, and the *solium*. [THRONUS.]

The *sella* was the commonest form, and was used by all classes, both men and women; whereas the *cathedra* was specially an easy chair for ladies, children, and sickly folk. It was used no less in private houses than in workshops (Cic. *Cat.* iv. 8, 17; *Verr.* iv. 25, 56), and in schools, though whether the pupils were allowed to use it, or were confined to the *subsellia*, has been disputed: Göll, in Becker's *Gallus*, ii. p. 347, maintains, with good reason, against Marquardt, that the pupils had only *subsellia*. [LUDUS LITTERARIUS, p. 97.] Like the *δίφρος*, it might be plain or very highly ornamented, and was covered when in use by a cushion (*pulvinus*), but never upholstered. It was made not only with four upright legs, but in the form of a campstool; and this shape, though in common use for every-day purposes, is best known as peculiar to the *sellae curules* of the higher Roman magistrates, the office they held being on this account called a *magistratus curulis*. The derivation of *curulis* is uncertain, but that from *currus*, which was given by the ancients (cf. Gavius Bassus, quoted by Gellius, iii. 18, and Festus, *Ep.* p. 49), seems best to accord with the customs connected with the magistrate's chair, which was originally, it would seem, placed in the magistrate's chariot. The actual carrying of the chair is not mentioned in historical times; but the underlying idea, that the right of moving the *sella curulis* betokened a jurisdiction that was not confined to any one place, like a *tribunal*, but extended wherever the magistrate had a right to drive, is clear enough (cf. Liv. iii. 11, "consules in conspectu eorum positis sellis delectum habebant"). Even out of Rome, the magistrate brought with him, as symbol of his rule, a *sella castrensis* (Suet. *Galba*, 18). The importance of being seated when acting officially runs through the whole of Roman ceremonial etiquette, subordination being expressed when the people stood before the seated magistrate, equality when the senate sat in his presence. The same was the rule in social life; for the *paterfamilias* received visitors sitting, and younger people or those of lower rank rose in the presence of an older or more honourable man. So, too, the public rose when the magistrate entered the amphitheatre during the games (Suet. *Claud.* 12). The difference in the position of magistrates was also shown by the fact that the *sella curulis* was confined to the consuls and praetors, all magistrates with the consular or praetorian *imperium* (*e.g.* decemviri and tribuni militares: cf. Liv. iii. 44, 9, iv. 7), the Dictator, the Magister Equitum, the Censor, and the Flamen Dialis.



Sellae Curules, from Pompeii. (*Mus. Borbon.* vi. tav. 28.)

The *sella curulis* was a campstool, which, when open, had a square seat and was without a back or arms. Its legs were curved, whence it is called *δίφρος ἀγκυλόπους* by Greek writers (Plut. *Mar.* 5), a form which is shown on numerous monuments, especially coins: cf. a gravestone in the Museum at Avignon (Cahier and Martin, *Mélanges d. Arch.* i. p. 166), where it is shown having a seat of straps, covered with cushions. The *sella castrensis* is shown on the coins of the praetors and quaestors of the Cyrenaica (cf. Longperier, *Rev. Arch.* 1868, p. 106), and is of simpler shape with straight legs.

Sella Castrensis.

The *sella curulis* was also used by magistrates in the municipia (cf. Mommsen, *Staatsrecht*, i. 384). Other magistrates had chairs of office, that of the quaestor having four straight legs, but not arranged for shutting together (cf. Longperier, *Rev. Arch.* 1868, p. 58; called by him *subsellium*), while the tribunes and other colleges had a bench (*subsellium*).

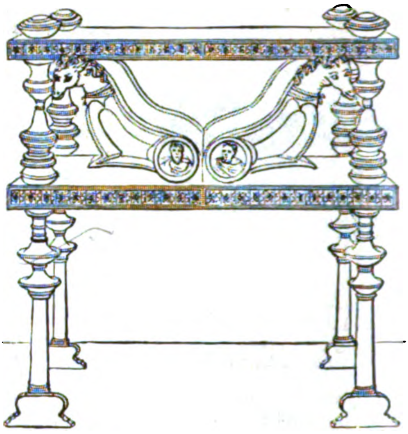
Sella Quaestoris.

The *bisellium* is not a magistrate's seat, and its use was confined to the municipia, where it was given as an honour to the Augustales. It was in this case a double seat, set apart in the amphitheatre and theatre (Orelli, 4044, 4046). The decuriones seem to have had it by right of their office, as the *biselliatus honor* is not given among their titles on inscriptions. Some of the inscriptions are accompanied by a representation of a seat, but it is not at all certain that this is intended to be a *bisellium,* and in one case it is more like a *sella curulis* (cf. Jordan, *Annali d. Inst.* 1862, p. 293; and Castellani, *Bullettino della Commissione Arch. Municip.* 1874, p. 22). In any case there does not seem to be the slightest reason (Varro, *L. L.* v. 128, is not definite) for giving the name *bisellium* to a class of *sellae* found at Pompeii, and represented in the accompanying cut, taken from the specimen in the Hamilton Collection at the British Museum, in which it is to be noted that the supports on which the cushions rested have been wrongly restored as supports below instead of above the seat. [PULVINUS.]

Sella Quaestoris.

Subsellium.

Sedan chairs were known as *sellae gestatoriae*, *portatoriae*, or *fertoriae*, and are contrasted with the litter (*lectica:* cf. Mart. x. 10, 7; xi. 98, 10), though occasionally the distinction is not observed (cf. Mart. iv. 51, where the *ingens hexaphoron* can only be a *lectica*, and yet is called *sella*). These were known in Greece as an Oriental innovation, and were at Rome used by ladies, senators' wives having, it would seem, a special sort (Dio Cass. lvii. 15), but under the Empire their use became common with men. Thus they were used by Augustus (Suet. *Aug.* 53) and Claudius (Dio Cass. lx. 2, *δίφρῳ καταστέγῳ πρῶτος Ῥωμαίων ἐχρήσατο*), and in later times almost universally. They were often large enough to hold two persons (Plin. *Ep.* iii. 5, 15), and were either open (*apertae*) or covered over (*opertae*), and could be shut close (cf. Juv. i. 124), sometimes with windows of "bull's-eye" glass (Juv. iv. 21). Another variety of sedan chair is the *cathedra*, which is probably the same as the *sella muliebris* in Suetonius, *Oth.* 6, and in any case was covered, for Seneca regards it as one of the scandals of his time that women went about in open chairs (*de Benef.* i. 9, 3). The roof of the *sella* was called *arcus* (cf. Tac. *Ann.* xv. 57, where a woman hangs herself from the *arcus*). (Buchholz, *Die hom. Realien*, ii. 138; Helbig, *Das hom. Epos*, 1887, p. 118; Hermann-Blümner, *Lehrbuch*, p. 158; — Becker - Göll, *Charikles*, iii. p. 82; *Gallus*, ii. p. 347, iii. p. 7; —Mommsen, *Staatsrecht*, i. pp. 370 ff., 380 ff.; Marquardt, *Privatleben*, 1886, p. 725; Blümner, *Techn.* v. Index, s. v. *Sessel; Kunstgewerbe*, ii. p. 29; Iwan Müller, *Handbuch*, iv. pp. 379, 381, 386, 509, 519; Daremberg and Saglio, *Dict. Antiq.*, art. *Bisellium*, *Cathedra;* Baumeister, *Denkmäler*, art. *Sessel;* Mayor, *Juvenal*, notes on i. 124, iv. 21.) [W. F. C. A.]



Sella. (British Museum.)

SELLAE EQUESTRES. [EPHIPPIUM.]

SEMENTIVAE. [FERIAE.]

SENATUS. The "senate" or "council of elders" (*seniores:* comp. the Greek *γερουσία*) ranked with the kingship, and the assembly of burgesses among the oldest of Roman institutions, and, like the two latter, existed also among the kindred communities of Latium (Mommsen, *Staatsr.* iii. 836, note 2). Its creation is ascribed by tradition to Romulus (Liv. i. 8). The members of the senate were *senatores*. The collective appellation *patres* (= "chiefs" rather than "fathers") belonged of right to the purely patrician senate of the earliest days, but was transferred to the mixed patricio-plebeian body of later times (Cicero, Sallust, and Livy, *passim*), and used as equivalent to *senatus*. Similarly the two functions inherited by the mixed senate from its patrician predecessor, the appointment of the interrex, and the ratification of votes given by the assembly, are always spoken of as acts of the *patres*, though in fact performed by the senate as a whole. [For this and for Mommsen's rival theory, that *patres* in these cases always meant only the patrician members of the senate, see below.] The fact that the patrician *patres* had once formed the whole senate, and that plebeians were not admitted until a later time, was possibly commemorated by the official term *patres conscripti*; the *conscripti* denoting originally the plebeian members called up by the magistrate (Festus, p. 254; Liv. ii. 1; ~~Mommsen, *Staatsr.*~~ iii. 839; Madvig, *Verfass.* i. 125. Willems, *Le Sénat*, i. 37 *sqq.*, maintains on the contrary that the term means simply "assembled fathers." For Mommsen's view of the inferior position of the plebeian *conscripti*, see below).

I. *Number of the Senate.*—Roman tradition represents the senate as consisting originally of 100 members (Liv. i. 8), and as having been gradually enlarged to 300, though of the steps by which this increase was effected it gives no consistent account. That 300 remained the normal number down to the time of Sulla is generally agreed. From 81 B.C. to the dictatorship of Caesar, the nominal maximum was 600. Under Caesar the numbers rose to 900 (Dio Cass. xliii. 47); under the triumvirs to over 1000 (Suet. *Aug.* 35, "erant enim super mille:" cf. *Mon. Ancyr.* 5, 6). Augustus reduced them once more to 600 (Suet. *l. c.*; Dio Cass. liv. 13); but there is no proof that either by himself or his successors was this limit strictly observed. [The advice given by Maecenas to Augustus not to be particular as to the number of senators (μηδὲν περὶ τοῦ πλήθους αὐτῶν ἀκριβολογούμενος, Dio Cass. lii. 19) may be taken, with Mommsen, to represent the practice of Dio's own time. See Mommsen, *Staatsr.* iii. 850, note 3.]

II. *Admission and expulsion of Senators.*—It was a distinctive peculiarity of the Roman senate, that admission to its ranks was always given, not by popular election or by cooptation, but by the act of the magistrate, who has for the time being the authority *legere in senatum*; and though, as will be shown, his freedom of choice was under the later Republic so restricted by law as to reduce the *lectio senatus* to little more than the formal enrolment of persons with a legal claim to be enrolled, yet his action continued to be indispensable (Val. Max. ii. 3, 1), and under the Empire regained much of its original liberty. The two principles that the senate was only a council of advice for the magistrate, and that the magistrate selected his councillors, though modified in practice by the anxiety of the senate to assert its independence, were never formally abandoned, and were successfully re-asserted by the Caesars. Prof. Mommsen indeed has a theory that in pre-historic times the case was otherwise, and that the original senate, as consisting of the assembled heads (*patres*) of the patrician gentes, was independent as to its composition of the authority of the magistrate (Mommsen, *Staatsr.* iii. 844, 854). That the early senate was composed exclusively of patricians may be safely assumed. It is, moreover, probable that from this original and close connexion with the *gentes* were derived the claims which the patrician senate bequeathed to its patricio-plebeian ~~successor to~~ be the special guardians of the auspicia, and of the ancient order of things bound up with them. But of a strictly representative gentile council there is, as Mommsen himself confesses, no evidence. The senate as first known to us appears as a council composed of patricians, but of patricians selected by the chief magistrate [Liv. i. 8, "Romulus centum *creat* senatores." Willems' theory (*Le Sénat*, i. 26) that the senate was originally a "réunion de tous les *patres familiarum seniores* des familles patriciennes," and that subsequently "le choix royal succéda au droit d'hérédité," is an equally unfounded and a less plausible conjecture].

Starting from the earliest system known to us, that under which the senators were chosen by the magistrate, we have to consider, (1) to what magistrates this right of choice was successively granted; (2) by what conditions, legal or customary, the choice was limited; and (3) the mode in which the *lectio senatus* was carried out.

(1.) [The prerogative of choosing senators belonged at first to the king.] From the king it passed to the consuls, and was during a brief period granted to their temporary substitutes, the *tribuni militum consulari potestate* (Festus, p. 246, "ut reges sibi legebant, sublegebantque quos in consilio publico haberent, ita post exactos eos consules quoque et tribuni militum consulari potestate conjunctissimos sibi quosque patriciorum et deinde plebeiorum legebant"). The date at which it was transferred to the censors is uncertain. That the change was not made before 387 A.U.C. = 367 B.C., the last year in which consular tribunes were appointed, is implied in the passage quoted above from Festus; and it was not therefore coeval with the institution of the censorship itself (443 B.C.). According to the same passage, it was effected by a Lex Ovinia tribunicia: "donec Ovinia tribunicia intercessit qua sanctum est ut *censores* ex omni ordine optimum quemque curiatim (*sic*) in senatum legerent;" and may be assumed to have been, as such, made in the interest of the plebs. We may consequently place it after the passing of the Lex Publilia (339 B.C.), which enacted that one censor must be a plebeian (Liv. viii. 12), since a tribune of the plebs at that period would not have been likely to entrust the choice of senators to patrician magistrates. The first recorded *lectio senatus* by censors is the famous one in the censorship of Appius Claudius Caecus (312 B.C.; Liv. ix. 29), so that the Lex Ovinia and the transference of the *lectio senatus* to the censors may be assigned to some date between 339 B.C. and 312 B.C. (Mommsen, *Staatsr.* ii. 395; Willems, i. 155). With the censors the duty remained down to the close of the Republic, though on two occasions it was entrusted, as an exceptional measure, to a dictator. In 216 B.C., after the battle of Cannae, M. Fabius Buteo was created dictator for this purpose (Liv. xxiii. 22, "qui senatum legeret"); and Sulla exercised the prerogative as dictator in 81 B.C. (Appian, *B. C.* i. 100). Both Julius Caesar and the triumvirs "selected senators" in virtue of the extraordinary powers vested in them. Augustus, true to his general policy, made a partial return to the old practice. Although the censorship proper ceased to exist, and the creation of senators devolved upon the princeps, the old connexion between this act and the censorial authority was not entirely lost sight of. Of the three regular *lectiones senatus* held by Augustus (*Mon. Ancyr.* ii. 1, "senatum ter legi"), the first certainly and the two others probably coincided with the three *census* of Roman citizens taken by him in 28 B.C., 8 B.C., and 14 A.D. Moreover, though under Augustus and his successors both the calling up into the senate of persons legally qualified by the tenure of the quaestorship, and the removal from the list of the names of such senators as had died or proved themselves unworthy, took place annually and quite independently of any censorial authority, the direct admission (*adlectio*) of men freely selected by Caesar was a power only occasionally exercised in the first century and always in virtue of the censorial authority, *e.g.* by Claudius, Vespasian, and Titus (*C. I. L.* v. 3117; Orelli, 3659; Mommsen, *Staatsr.* ii. 877, iii. 857). Domitian, as censor for life, first exercised it continuously. From his time onwards the right was possessed and used by all emperors at their discretion, and without any reference to censorial authority as a power inherent in the imperial prerogative (Mommsen, *Staatsr.* iii. 857).

(2.) The old constitution left the king or consul free to choose as senators the men he thought best fitted for the post. [Full citizenship, free birth (*ingenuitas*), and good character were no doubt always indispensable for a seat in the senate as for a magistracy; but although custom may have limited the choice of the king to patricians, there is no proof that he was prohibited by law from admitting plebeians; and the admission of the latter is represented in tradition as the free act of the king or consul, not as the consequence of special legislation. [Liv. ii. 1. Mommsen's theory, that originally a seat in the senate was an exclusively patrician privilege (*Staatsr.* iii. 870), must stand or fall with his hypothesis mentioned above, of a time when the senate was a representative council of the gentes. As he confesses himself, no traces are discoverable of any formal representation in the senate of the gentes or curiae.] The classical passage in Festus describes the kings and consuls as choosing freely: "conjunctissimos sibi quosque . . . legebant;" so that to be passed over inflicted no disgrace, "praeteriti senatores in opprobrio non erant" (Id. *ib.*). Even by the Lex Ovinia the censors were directed to choose "ex omni ordine optimum quemque;" and Cicero declares (*pro Sest.* 65, 137) that the original intention of the constitution was, that the senate should be open "omnium civium industriae ac virtuti." But this early freedom of choice was gradually restricted. It is probable that the consuls at the end of their year of office had always a claim to be enrolled as senators, and we may assume that this privilege was conceded from the first to *praetores*. When, owing to the transference of the *lectio senatus* to the censors, the revision of the senatorial list took place not annually but quinquennially, the ex-magistrates who had a claim to be enrolled were permitted, after the end of their year of office and while waiting for the next quinquennial *lectio*, to enter the senate-house, and though not yet senators to give their *sententiae* with the rest. Hence the distinction drawn between "senatores" and those "quibus in senatu sententiam dicere licet." (Liv. xxiii. 32; Fest. p. 339; Varro, *ap.* Gell. iii. 18, "qui nondum a censoribus in senatum lecti, senatores non erant, sed quia honoribus populi usi erant, in senatum veniebant, et sententiae jus habebant.") The number of magistracies carrying this privilege increased as time went on. By 216 B.C. it had evidently been extended to the curule aedileship, since Livy, in describing the *lectio* of that exceptional year, plainly includes the curule aedileship among the offices which entitled their holders to a seat in the senate (Liv. xxii. 49, "unde in senatum legi deberent," xxiii. 23; and Mommsen, *Staatsr.* iii. 860, note 3). On the other hand, the minor magistracies, the plebeian aedileship, tribunate, and quaestorship gave no such right as yet; although, as we might expect, former holders of these offices were selected next to ex-curule magistrates, and before such private citizens as had distinguished themselves in war: "primum in demortuorum locum legit, qui post L. Aemilium, C. Flaminium censores curulem magistratum cepissent, necdum in senatum lecti essent . . . tum legit qui aediles, tribuni plebis, quaestoresve fuerant: tum ex iis qui magistratus non cepissent, qui spolia ex hoste fixa domi haberent aut civicam coronam accepissent" (Liv. xxiii. 23). By Sulla's time, if not before, the customary preference hitherto given to ex-holders of the plebeian aedileship and tribuneship had been exchanged for a legal claim both to the provisional seat and *jus sententiae* in the senate, pending the next censorial *lectio*, and to formal enrolment as senators when the time for the *lectio* arrived. [These privileges were apparently given to the tribunes by the plebiscitum Atinium (Gell. xiv. 8, 2, "senatores non essent ante Atinium plebiscitum"), the date of which must fall, according to Mommsen, between 123 B.C. and 102 B.C. (Mommsen, *Staatsr.* iii. 862, note 2). When the plebeian aediles obtained them is uncertain. Mommsen infers, from their inclusion in the Lex Acilia among those "quei in senatu sient," that they had done so before 122 B.C. (*ib.* 861, note 2).] Finally, the same rights were attached to the quaestorship by Sulla (Tac. *Ann.* xi. 22, "viginti quaestores creati supplendo senatui"). But these rights had long lost all value for the holders of the higher offices; since, owing to the gradual establishment of a fixed order of succession to these posts, a man was presumably already a senator by the time that he reached even the lowest curule magistracy. After Sulla, they were of importance only for the quaestorship, which was then legally established as the first step in the ladder of promotion. As a rule even the tribunate was taken after the quaestorship, and its holders were consequently already senators. The effect of these changes was practically to destroy the magistrate's freedom of choice. He still created senators, but as a rule the number of ex-quaestors awaiting his call, and with a legal claim to be called, must have been sufficient to fill the vacancies, and have left no room for others. Of senators admitted by free selection of the magistrate, there is no trace after 70 B.C., until we reach the dictatorship of Caesar. The votes of the people in Comitia in fact gave admission to the senate. (Cic. *pro Cluent.* 56, 154 "judicio populi Romani in amplissimu [illegible] pervenire.") But the "call" of the n [illegible] was still indispensable; and with the [illegible] became once more a reality. The qua [illegible] still retained its right to give a seat; [illegible] true that the transference of the elect [illegible] the quaestorship to the senate by Tibe [illegible] that body in appearance a complete cor [illegible] its own composition, and substituted c [illegible] both for the free choice of the magis [illegible] and for the votes of the people. But it wa [illegible] in appearance; for, apart from the influen [illegible] which his control of the quaestorian elections g [illegible] im, the emperor possessed and exercised [illegible] old right of direct admission, now known as [illegible]ctio, possibly to distinguish it from the old periodic *lectiones* of republican times (Mommsen, *Staatsr.* ii. 877, note). This right, used occasionally (see above) by the earlier emperors, was from the reign of Nerva onwards constantly exercised. The person so admitted was assigned a definite place on the roll, usually "inter tribunicios," occasionally "inter praetorios," and in the 3rd century even "inter consulares;" this titular rank counting as equivalent to the actual tenure of the office itself. The increasing frequency of these *adlectiones* indicates the use of the method as a means of strengthening the emperor's hold over the senate, and of promoting his friends and *protégés* (Mommsen, *Staatsr.* ii. 877 *sqq.*; *Vita Pert.* 6, "cum Commodus adlectionibus innumeris praetorios miscuisset;" *Vita Marci*, 10, "multos ex amicis adlegit").

No qualification of age or property was originally fixed by law for a seat in the senate; but from the time when election to the quaestorship became the normal mode of entry into the senate, the legal age for this office became practically that for the senate also. Under the later Republic it was consequently thirty; from the time of Augustus onwards, twenty-five (Dio Cass. lii. 20; QUAESTOR). A property qualification was first introduced by Augustus, who fixed it at one million sesterces (Dio Cass. liv. 17; Suet. *Aug.* 41; Tac. *Ann.* i. 75, ii. 37). Under Trajan, all candidates for office, and therefore for a seat in the senate, were compelled to invest a third of their property in Italian land (Plin. *Epp.* vi. 19). This proportion was reduced to a fourth by M. Aurelius (*Vit.* 11).

It should lastly be mentioned that in the early days of the Empire the Roman franchise was given to Gauls (Tac. *Ann.* xi. 23), and possibly to other provincials, without the right of standing for office in Rome (*jus honorum*); and to such men, therefore, unless directly admitted by the emperor, the senate-house was closed. But of this special disability no trace is found after the reign of Claudius.

With the right of creating senators was closely connected that of removing them (*loco movere*), or omitting them from the revised list (*praeterire*). Of the mode in which it was exercised by the kings and consuls we know nothing beyond the statement in Festus, that, inasmuch as the magistrate then drew up the list as he chose, no stigma attached to those whose names were left out (Festus, p. 246: see above). It is easy to understand that the senate would resent being [illegible]pletely at th [illegible] trate's mercy; and [illegible] Ovinia, carr [illegible] was when the sena [illegible] lowly establis [illegible] ascendancy (339–312 B.C.), seems to have given greater security to the senator's tenure of his seat. By transferring the "revision of the list" to the censors, it substituted a quinquennial for an annual revision; and though the removal or omission of a name henceforward inflicted disgrace, this was probably due in part to the fact that the censors, possibly under a clause of the law, were obliged not only to be agreed in doing so (App. i. 28; Liv. xl. 51; Cic. *pro Cluent.* 43, 122), but to state in writing their reasons for inflicting the penalty (Ascon. *in tog. Cand.* p. 84; Liv. xxxix. 42, "adscriberent notas"). The power was no doubt abused more than once for party or personal purposes, but in the main the evidence points to the conclusion that the arrangement gave a senator fixity of tenure, unless he were guilty of some act, or had incurred some public disgrace, which by law or custom disqualified him for sitting in the senate (*e.g.* deprivation of his office for misconduct, loss of civic rights, conviction in certain cases in a court of justice, gross immorality, extravagance, &c.). After 70 B.C., when the censors expelled a number of the unworthy members placed on the list possibly by Sulla, the power of expulsion or omission remained in abeyance (Sall., *Cat.* 23, gives an instance, belonging to 70 B.C.), though Cicero in the Laws advocates its revival ("probrum in senatu ne relinquunto," *de Legg.* iii. 3, 7). Under the Empire it came again into exercise. The thorough "purgings" of the overgrown senate by Augustus in 29–28 B.C., and again in 18 B.C., were no doubt exceptional (Suet. *Aug.* 35; Dio Cass. lii. 42, liv. 12), as was that carried out by Vespasian after the civil wars of 69 A.D. (Suet. *Vesp.* 9, "summotis indignissimis"). But alike at the periodic *lectiones* held by Claudius, Vespasian, and Titus as censors, and at the yearly revision of the senatorial list, not only were the names removed of those who had vacated their seats by death, by loss of the necessary property qualification (unless the loss, as frequently happened, was made good by the emperor: Tac. *Ann.* i. 75, ii. 37, xiii. 34; Suet. *Nero*, 10), or by condemnation in a cou[illegible] of law; but those were also expelled who for o[illegible] reason or another were held by the emperor [illegible] be unworthy (*Ann.* ii. 48, "prodigos et [illegible] flagitia egentes;" iv. 42, "quod in acta [illegible] Augusti non juraverat;" xi. 25, "famosos; Suet. *Domit.* 8, "quod gesticulandi saltandiq[illegible] studio teneretur:" the alternative of volunta[illegible] withdrawal was sometimes given, *Ann.* ii. 48[illegible] This power of removal, exercised as it was wi[illegible] increasing freedom and even arbitrariness as ti[illegible] went on, combined with the more frequent [illegible] of the right of *adlectio* completely to destr[illegible] that practical independence of magisterial cont[illegible] which the republican senate had gradually w[illegible] for itself. The senate under the Principa[illegible] became again what it must have been in ear[illegible] days—a body of councillors, largely selected [illegible] the chief magistrate at his discretion, and r[illegible]taining their seats at his good pleasure.

(3.) The mode in which the *lectio* or rev [illegible] the list was carried out has next to be de [illegible] Our knowledge of t[illegible] mences w[illegible] period when the revi [illegible] the senat[illegible] the hands of the cens[illegible] t the earli [illegible] 339 B.C. Although [illegible] *senatus* [illegible] apparently an integra [illegible] f the cen[illegible] the *recognitio equitum* (Mommsen, *Staatsr.* ii. 396, and so Willems), it seems to have immediately preceded it (Liv. xxiv. 18; xxvii. 11, &c.). It was conducted usually by both censors jointly (Liv. xxxii. 7, xl. 50; Willems, i. 241), though on one occasion at least it was decided by lot which of the two should undertake the work (Liv. xxvii. 11, "sors legendi"). The first point, down to 81 B.C., was to select the senator whose name should stand at the head of the list as "princeps senatus" and enjoy the privilege of giving his *sententia* first. This honour belonged by ancient custom to the oldest patrician *censorius* (Liv. *l. c.*; Mommsen, *Staatsr.* iii. 970). After 209 B.C. any patrician *censorius* might be chosen irrespective of seniority. From the time of Sulla onwards, it is not clear that any *princeps senatus* in the old sense was appointed: the list in the Ciceronian age was possibly headed by the senior consular, and at any rate the post, if it survived at all, must have been deprived of most of its importance by the change made in the order of taking the *sententiae*, which took away from the princeps the privilege of being asked first (Varro, *ap.* Gell. xiv. 7; Willems, i. 114, maintains not only that *principes senatus* existed after Sulla, but that they were no longer necessarily patricians. Indeed, the three whose names he gives—Q. Lutatius Catulus, P. Servilius Vatia, and Cicero—were all plebeians. But his arguments are not conclusive). Under the Empire, the emperors, following the example of Augustus (*Mon. Anc. Gk.* 4, 2, *πρῶτον ἀξιώματος τόπον τῆς συνκλήτου*), placed their own names at the head of the list, though only in the case of Pertinax (Dio Cass. lxxiii. 4) was the old title *princeps senatus* revived. The *princeps senatus* chosen, the old list of the senate was gone through, the names of deceased members or of those legally disqualified struck out, those who had risen to higher office in the interval placed in their proper position; and finally, any whom the censors judged unfit, struck off the roll. [In the *lectio* of 216 B.C. there were no such erasions, but this was exceptional (Liv. xxiii. 23).] The vacancies were then filled up according to the order described above, though here again the censors might pass over one or more of the legally qualified claimants. In the completed list the senators were arranged according to their official rank, from the *dictatorii* and *censorii* down to the *quaestorii*; those, if there were any, who had held no office, being no doubt placed last. Down to the time of Sulla, the patricians in each magisterial category took precedence of the plebeians; in the post-Sullan period, the members of each category were arranged simply by official seniority (Mommsen, *Staatsr.* iii. 968; Willems, i. 259). Under the Empire a senator might obtain precedence by the grant of the *jus trium liberorum*, and earlier still by the successful prosecution in a public court of a senator higher in rank than himself, whose place he took (Mommsen, *l. c.* 971; Dio Cass. xxxvi. 40). Those persons directly admitted (*allecti*) by the emperor, among the praetorii or tribunicii, were properly placed below the genuine ex-praetors or ex-tribunes (*Vit. Pertin.* 6). The list when made up was in Republican times read aloud from the rostra (Liv. xxiii. 23); under the Empire it was regularly published (Dio Cass. lv. 3). It held good until the next revision, *i.e.* under the Republic, until the next censors came into office. Under the Empire the revision was annual (Dio Cass. *l. c.*). The official name for the list, "album senatorium," first occurs in Tacitus (*Ann.* iv. 42).

III. *Composition and Character of the Senate.*—The first important change in the composition of the senate must have been effected by the admission of plebeians—a measure ascribed by tradition to Brutus, and certainly anterior to their admission to the consulship. With the opening of the magistracies to plebeians, and the additions made to the list of magistracies giving a legal claim to a seat, the plebeian element in the senate grew in strength; and at the close of the Punic wars largely outnumbered the patrician. (See the calculations made by Willems, i. pp. 265 *sqq.*) The question then arises, how far any distinction was maintained as regards rights and privileges between these two elements? That the interrex was necessarily, and the princeps senatus customarily, a patrician, is certain (see above and art. INTERREX), as also that on the roll patrician senators took precedence of plebeian senators of equal official rank. But on two points there is a division of opinion: (1) Were the functions of appointing the interrex (*prodere interregem*) and of ratifying votes of the assembly (*patrum auctoritas*) reserved exclusively for patrician senators? (2) Were plebeian senators at any time without the right *sententiam dicere?* The first question is answered in the affirmative by Mommsen (*Röm. Forschungen*, i. 218; *Staatsr.* iii. 871) and Madvig (*Verfass.* i. 233, 496); in the negative by Willems (ii. 1 and 33. See also INTERREX). The difficulty in the way of a decision is increased by the ambiguous sense in which the term *patres* is used by ancient writers, and by the fact that while the appointment of interreges had become extremely rare during the period to which our best authorities (Cicero, Livy) belong, the *patrum auctoritas* had long before that time been reduced to a meaningless form (by the Lex Publilia, 339 B.C.). The most probable view on the whole seems to be that, while both acts belonged originally to the senate as a purely patrician body, they were in later times performed by the patricio-plebeian senate as a whole. [Cf. the extension of the term *patres* to cover the whole senate, and the retention of the phrase *patricii magistratus* for the curule offices long after these had been opened to plebeians (Cic. *ad Brut.* i. 5). It is only in connexion with the three earliest interregna under the Republic that Livy speaks of *patricii* (iii. 40, iv. 7, iv. 43; 421 B.C.). On later occasions he speaks always of *patres*, as does Cicero throughout. The *patrum auctoritas* is never expressly connected with the *patricii*. For a full discussion, see Willems, *l. c.*, and INTERREX.] The second question admits of a more confident answer. It is agreed on all hands that in post-Sullan times no distinction is traceable between patricians and plebeians as regards the right *sententiam dicere*, and that the term *pedarii* had no legal value, but merely denoted the lower ranks of senators (*i.e.* in fact the *non-curules*), whose names, from want of time, were rarely reached in taking the *sententiae*, and who were therefore, as a rule, obliged *pedibus ire in sen-*

tentiam, i.e. to cross to one side or the other of the senate-house. [Gell. iii. 18, "qui in alienam sententiam pedibus irent." The explanation of the term quoted in the same passage from Gavius Bassus (1st century A.D.), "Senatores qui magistratum curulem nondum cepissent *pedibus itavisse* in curiam," though in fact *non-curules* and *pedarii* coincide, is a bad guess, which, strangely enough, Willems accepts (*op. cit.* i. 137). The confusion which follows between the *pedarii* and the ex-curule magistrates "nondum a censoribus lecti" is probably due to Gellius himself. The latter class were not senators, but had the *jus sententiae dicendae*; the *pedarii* were senators, but in practice were unable *sententiam dicere*. The confusion is repeated in Lewis and Shortt's Latin Dict. The sense of inferiority associated with the *pedarii* in the senate sufficiently explains the "equites pedarii" of Varro (=common or inferior equites).]

But Mommsen, while agreeing that in the Ciceronian age *pedarius* was merely a conventional epithet describing the actual but not the legal position of the lower senators, holds that in earlier times the term had a statutable meaning, and denoted "plebeian senators directly admitted by consuls or censors, as distinct from those qualified by office"—a class which ceased to exist after 81 B.C. These plebeian senators were, he thinks, legally incapable of delivering *sententiae*, and only allowed to vote (*pedibus ire*). The objections to this theory are: (1) That no such distinction can be drawn between the right *sententiam dicere* and the right to vote. For the Roman senator, the *sententia* and the vote were the same thing, though the *sententia* might be given in different ways, of which the *pedibus ire* was one [see below under Procedure]. (2) That though there were certainly at one time men in the senate with the *jus sententiae* who were not senators, there is no evidence of the existence at any time of senators without this right. (3) There is no proof that there was ever a legally distinct class of *pedarii*, or that the term had ever any other meaning than that which it bore in the Ciceronian age.

The admission of plebeians has been assigned to the early days of the Republic; the period from the Lex Ovinia to the dictatorship of Sulla witnessed another change which stood in close connexion with the growing ascendancy of the senate in the political system. The class of senators freely chosen by the magistrate as distinct from those whom election to office had given a legal claim on his call, gradually disappeared (Cic. *de Legg.* iii. 12, "neminem in summum locum nisi per populum venire"), and the senate came to be composed entirely of actual and ex-officials, to the exclusion of lay interests and opinions — an exclusiveness intensified by the extent to which from 200 B.C. onwards the official class was recruited from a single section of Roman society, that of the *nobiles*. In Cicero's day the only working classification of senators was classification by official rank.

Further changes followed under the Empire. The class of those who, while awaiting the [illegible] *lectio*, were permitted t[illegible] the senate [illegible] give *sententiae* (see abc [illegible] must have ce[illegible] to exist, when the year[illegible]vision enabled emperor to call them i[illegible]mediately on th[illegible] expiry of their year of office. On the other hand, though the official classification continued, and even those directly *adlecti* by Caesar were placed in one official category or another, and though the majority of senators as a rule entered by the old official door, the quaestorship, the increasing number of the *adlecti* unquestionably served not only to strengthen the emperor's control over the senate, but to widen the area from which its members were drawn. The effect of Vespasian's admission of numerous Italians and provincials is specially noticed by Tacitus (*Ann.* iii. 55, "novi homines e municipiis et coloniis atque etiam provinciis—domesticam parsimoniam intulerunt." Senators from the eastern provinces are very rare before the 2nd century). But while in this way the senate became in its composition more representative of the whole Empire, a narrowing effect was exercised by the tendency to confine the senatorial dignity to a particular class, by making it hereditary. The way for this latter change was prepared in the last century of the Republic. In the time of Cicero, the male members of the great families passed into the senate through the quaestorship, almost as a matter of course. The son of a senator was expected and as a rule did thus qualify himself for senatorial rank; and Cicero contrasts the senatorial and official career proper to young nobles, with the quieter and less ambitious course marked out by custom for members of the equestrian order (Cic. *pro Cluent.* 56, 153). But as yet the son of a senator had no legal claim to be himself a senator, nor did he as such enjoy any legal distinctions or privileges. Even the phrase *ordo senatorius* is usually limited in meaning to the actual senate (Mommsen, *Staatsr.* iii. 459). Julius, it is true, extended the restriction on foreign travel from senators to their sons (Suet. *Jul.* 42); but from Augustus dates the first attempt to make the senatorial dignity formally hereditary, and to give the *ordo senatorius*, as distinct from the senate, a legal existence. According to his regulations, the sons of senators were authorised to assume the broad stripe (*latus clavus*) on the assumption of the toga virilis, and to attend meetings of the senate (a revival of an ancient custom, Gell. i. 23). They entered the army as *tribuni militum* or *praefecti alarum*, and were distinguished from other young officers as *laticlavii* (Suet. *Aug.* 38, "liberis senatorum, quo celerius reipublicae assuescerent, protinus a virili toga, latum clavum induere et curiae interesse permisit, militiamque auspicantibus non tribunatum modo legionum, sed et praefecturas alarum dedit ... binos plerumque laticlavios praeposuit singulis alis." The ordinary *trib. mil.* were *angusticlavii*, Suet. *Otho*, 10). From military service they passed on to the quaestorship and a seat in the senate. That under the earlier emperors this career was morally incumbent both on senators' sons and on other young men, to whom the emperor had granted the latus clavus, seems certain (they are described as *honores petituri*: Plin. *Ep.* viii. 14; Dio Cass. lix. 10, *ἐπὶ τῇ τῆς βουλῆς ἐλπίδι*), but there is no proof that in the 1st century A.D. it was legally necessary. [We hear of several cases in which a man either declines to assume the latus clavus, or dis-cards it after a time. Suet. *Vesp.* 2, "latum clavum diu aversatus" (Vespasian); Tac. *Ann.* xvi. 17, "Mela petitione honorum abstinuerat;" *Hist.* ii. 86, "prima juventa senatorium ordinem exuerat;" Ovid, *Trist.* iv. 10, 35. Claudius, however, as censor took a strict view of the obligation (Suet. *Claud.* 24, "senatoriam dignitatem recusantibus equestrem quoque ademit." Augustus, at the *lectio*, in B.C. 13, compelled qualified persons under 35 "βουλεῦσαι" (Dio Cass. liv. 26).] A further illustration of the same policy is the enactment due to Augustus prohibiting both senators and their sons from marriage with *libertinae* (Lex Papia Poppaea, Dig. 23, 2, 23). The development of the policy by the emperors of the 2nd century cannot be traced in detail. At the close of that century, however, we find the two orders, senatorial and equestrian, clearly and sharply distinguished. Each has its own privileges. The careers appropriate to the members of each order are different, and the passage from one to the other difficult and rarely made. [EQUITES; PRINCIPATUS; PROCURATOR.] Suetonius already contrasts "senatoria et equestria officia," *Galb.* 15; cf. *Vita Commodi*, 4, "per laticlavi honorem a praefecturae (sc. *praetorio*, an equestrian office) administratione summovit." By the lawyers of the early part of the 3rd century senatorial rank is treated as strictly hereditary. Not only the sons, but the grandsons of senators are born into the senatorial order, and cannot escape either the honours or the burdens attached to the *dignitas senatoria*. Neither posthumous birth, nor adoption into a family of lower rank, affects their position (Dig. 7, 35, 9, 7). As Mommsen has well said (*Staatsr.* iii. 467), the senatorial order took the place as a hereditary nobility of the *nobiles* of the later Republic, as they had in their turn superseded the patriciate. [For the distinctive privileges and liabilities of the senatorial order as thus constituted, see the next section;—for its general position, cf. Mommsen, *Staatsr.* ii. 865, iii. 466; Madvig, *Verf.* i. 123 *sqq.*; Friedländer, *Sittengesch.* i. 197 *sqq.*]

IV. *Insignia, Privileges, &c.*—In Republican times the senator bore no distinctive title, for "senator Romanus" was never like "eques Romanus" in official use. The title of courtesy *clarissimus*, though not unfrequently applied to senators at an early date, was first formally assigned to them in the 2nd century A.D. (Mommsen, *Staatsr.* iii. 565), and then or soon afterwards extended not only to their sons, but to their wives and daughters. The outward insignia of the senator were always the broad purple stripe on the tunic (*latus clavus*) and the red sandals (*calcei*) with the crescent-shaped buckle (*luna*), and the leathern thongs wound round the leg (*lora*). The former of these insignia was possibly not older than the Gracchan period (*sero*, Plin. *H. N.* xxxiii. § 29); the latter were originally the distinctive mark of the patrician. Under the Empire the latus clavus was assumed by a senator's son on reaching manhood; while the red sandals were worn even in childhood (Stat. *Silv.* v. 2, 28). Separate seats in the theatre were first assigned to senators in 194 B.C. (Liv. xxxiv. 44), and at the shows in the circus by Claudius (Suet. *Claud.* 21). A variety of fresh distinctions were conceded as the senatorial order under the Empire increasingly assumed the character of a hereditary peerage, *e.g.* the right of *entrée* to the imperial presence (Dio Cass. lvii. 11), and of banquets at the public cost (Suet. *Aug.* 35), the use of covered carriages by their wives (Dio Cass. lvii. 15), of silver plating upon their own vehicles (*Vit. Sev. Alex.* 43), and of running footmen (cursores, *Vit. Aurel.* 49). In the 3rd century A.D., and probably earlier still, they were exempt from all burdens, though still eligible for *honores* in their own municipia (Dig. 50, 1, 23, "municeps esse desinit senatoriam adeptus dignitatem, quantum ad munera: quantum vero ad honorem, retinere creditur originem;" cf. the omission in inscriptions of senators of their place of domicile; see Mommsen, *Staatsr.* iii. 2, 887, note 1). Though subject, like other citizens, to the ordinary law, they were outside the jurisdiction of municipal authorities. From Hadrian dated the custom for the emperor to summon only senatorial assessors to sit with him in judgment on a senator (*Vit. Hadr.* 8), a practice revived by Severus Alexander (*Vit.* 21, "ne quis non senator de Romano senatore judicaret"). But the increased outward dignity of their position under the Empire brought with it not only increased risk under the worse emperors, but increased liabilities and restrictions. Their exclusion from trade and from taking state contracts, as also their liability and that of their sons to prosecution under the *leges de repetundis*, date from republican times (Lex Claudia, Liv. xxi. 63: cf. Dig. 50, 5; Lex Acilia de pec. repet. 2; Bruns, *Fontes jur. Rom.* 54; Cic. *pro Cluent.* 55, 150). In addition, Severus Alexander forbade them to lend money except at a low rate of interest (*Vit.* 26). The prohibition issued in Tiberius' reign against intercourse with stage-buffoons (*Ann.* i. 77) was, like that against marriage with *libertinae*, intended to preserve the dignity of the order. But Claudius's edict forbidding praetorian guardsmen to attend the morning levees of senators (Suet. *Claud.* 25) was no doubt provoked by the same jealousy of senatorial interference with the army, which finally led to their exclusion from military commands and from the camps by Gallienus (Victor. *Caes.* 33). The separate taxation of senators did not exist as a system before Diocletian (Mommsen, *Staatsr.* iii. 2, 900 f.). The costly obligation of providing games was a magisterial rather than a senatorial burden. [LUDI; PRAETOR; QUAESTOR. For the privilege originally enjoyed by senators of voting in the *equitum centuriae*, and for their duty of serving as judices in the *quaestiones perpetuae*, see COMITIA; JUDEX; QUAESTIO.]

V. *Procedure.*—The right to hold a meeting of the senate (*senatum habere*), to consult it (*consulere, referre, relationem facere*), and to carry a decree (*senatusconsultum facere*) belonged in the Ciceronian age to consuls, praetors, and tribunes of the plebs; but if all were present in Rome together, they could only exercise it in the above order of precedence. The right no doubt attached to the consulship and praetorship from the moment of their establishment. It was acquired by the tribunate at some period previous to the plebiscitum Atinium (? before 133 B.C.). The right was also given to the dictator, interrex, and praefectus urbi. [See the classical passage, Gell. xiv. 7, 8, "Primum ibi ponit (Varro) per quos more majorum senatus haberi soleret, eosque nominat, dictatorem, consules, praetores, tribunos plebi, interregem, praefectum urbi . . . tribunis plebi senatus habendi jus erat quamquam senatores non essent ante Atinium plebiscitum."] Any one of these magistrates could be prevented from exercising the right by the interference of a colleague, or of a superior, or of a tribune. [INTERCESSIO; TRIBUNUS.] In the earlier times, when the consuls were frequently absent from Rome in the field, the duty of convening the senate constantly developed upon the praetor urbanus (Liv. xxii. 7; xxvi. 21; xlii. 8, &c.). In the Ciceronian age, it is regularly performed by the consuls (Cic. *ad Fam.* xii. 28; CONSUL). Augustus in 23 B.C. was specially empowered to hold a senate as often as he would, even when not consul (Dio Cass. liv. 3), and the power was continued to his successors (Lex de Imp. Vesp. 2, "utique ei senatum habere . . . . liceat, ita uti licuit divo Augusto," &c. Tiberius before he was formally invested with this power convened the senate "tribuniciae potestatis praescriptione sub Augusto acceptae," Tac. *Ann.* i. 7). But even under the emperors it was usually the consuls who convened the senate and presided at its meetings (Plin. *Epp.* ii. 11, "princeps praesidebat erat enim consul;" cf. Id. *Paneg.* 76).

The magistrate who convened the senate determined also the place of meeting, subject, however, to certain conditions. A lawful senate could only be held in a *templum*, and, except in special cases, within the pomerium (Gell. xiv. 7, "in loco per augurem constituto, quod templum appellaretur:" see TEMPLUM). Among the ordinary meeting-places of the senate in republican times were the Curia Hostilia and the temples of Concord, of Castor, of Jupiter Stator, and of Tellus. The senate could be convened outside the pomerium, but "intra milia passuum," if either embassies from states not in alliance with Rome or a pro-magistrate [PROCONSUL; PROPRAETOR] were to take part in the proceedings (Mommsen, *Staatsr.* iii. 930. As meeting-places outside the pomerium, the temples of Apollo and of Bellona are mentioned: Liv. xxxiv. 43; Cic. *ad Fam.* viii. 4; Plut. *Sull.* 30).

The senate could not be summoned to meet before sunrise or sit after sunset (Gell. xiv. 7). But under the Republic there were no fixed days for its meetings any more than for those of the Comitia. Augustus first enacted that there should be two regular meetings held in each month (Suet. *Aug.* 35, "ne plus quam bis in mense legitimus senatus ageretur Kal. et Idibus," Dio Cass. lv. 3). Nor is it clear that in early times there were any days on which a senate could not be lawfully held. But by a Lex Pupia, the date of which Mommsen fixes at about 154 B.C., the magistrates were apparently forbidden to hold a senate upon any day actually appointed for Comitia, or possibly upon any of the days on which Comitia might legally be held (*dies comitiales*, Cic. *ad Fam.* i. 4, "senatus haberi ante Kal. Febr. per legem Pupiam . . . non potest;" Id. *ad Q. Fr.* ii. 2, "consecuti sunt dies comitiales per quos senatus haberi non potest:" cf. *ad Fam.* viii. 8; Mommsen, *Staatsr.* iii. 921–923).

The usual mode of summoning the senate (*cogere senatum*) was by a proclamation issued by one or both the consuls, naming the date and place of meeting, and occasionally stating the special business to be considered (Liv. xxviii. 9, "praemisso edicto ut triduo post senatus ad aedem Bellonae adesset;" Suet. *Caes.* 28, "edicto praefatus se summa de republica relaturum;" Cic. *ad Fam.* xi. 6, "quam edixissent . . . senatus adesset"). The procedure was the same if the magistrate concerned was a praetor or tribune. The magistrate was empowered, if necessary, to compel the attendance of senators by taking pledges for their attendance, or by fining those who failed to appear (Gell. xiv. 7; Cic. *de Legg.* iii. 4, *Phil.* i. 12); but this power was, it would seem, sparingly exercised under the later Republic, and the increased numbers of the senate after 81 B.C., added to the fact that no quorum was required by law, gave little occasion for its use. Under the Empire it was otherwise. Augustus found it necessary not only to fix a quorum (Dio Cass. lv. 3: see below), but to increase the penalties for non-attendance (Dio Cass. liv. 18), and Claudius did the same (Dio Cass. lx. 11: cf. Tac. *Ann.* xvi. 27, "patres arguebat (Nero) quod publica munia desererent").

On the assembling of the senate, usually in the early morning, the senators took their seats, as they chose, upon the benches (*subsellia*) ranged in rows to the right and left of the curule chairs of the presiding magistrates; the latter being so placed as to face the door of the house. [Mommsen, *Staatsr.* iii. 932, has shown that under the Republic neither the ordinary senators nor, as Willems (ii. 173) maintains, the magistrates generally, had any special or fixed seats.] Under the Empire the emperor's chair was placed between those of the consuls (this seat was first assigned to Augustus in 19 B.C.: Dio Cass. liv. 10); and separate seats were assigned to the praetors, tribunes, and possibly to the other magistrates (Mommsen, *op. cit.* p. 934). The proceedings opened with a sacrifice, followed by the inspection of the victim's entrails (Gell. xiv. 7; Mommsen, *op. cit.* p. 935).

(The magistrate who summoned the senate also presided at its meetings, and it is he who, subject to certain customary rules, determines what business shall be laid before the house and in what order. It was his duty, in the first place, to communicate to the senate any news of importance, to read despatches received from officials abroad, and to introduce provincial or foreign deputations (Caesar, *B. C.* i. 2; Cic. *ad Fam.* x. 12, 3; Liv. xliv. 20, 21). On his demand, or with his permission, any individual senator might similarly read letters, communicate information, or make a statement to the house. The same privilege belonged to praetors and tribunes, as having the right to consult the senate, even when not actually presiding.

The magistrate might follow up these preliminary communications by referring one or more of the points raised to the senate for its opinion, and the senate not unfrequently demanded by acclamation that such a reference should be made. It rested, however, with the magistrate to decide whether or not this further step should be taken (Liv. xxx. 21, "conclamatum ex omni parte curiae est, uti referret

P. Aelius praetor;" *ib.* xlii. 3, "ex omnibus partibus postulabatur ut consules eam rem ad senatum referrent;" Cic. *ad Fam.* x. 16; Caes. *B. C.* i. 1, "ut ex litteris ad senatum referretur, impetrari non potuit").

The formal consultation of the senate (*relatio*) was governed by a variety of customary rules. After, usually, an explanation of the business in question ("verba facere," Cic. *ad Fam.* viii. 8; *Phil.* viii. 14, &c.), the magistrate asked the senate "quid de ea re fieri placet," without himself submitting a definite proposition (Sall. *Cat.* 30; Cic. *Cat.* i. 10, iii. 13). Occasionally the magistrate indicated his own view (Liv. xxxix. 39, "sibi nisi quid aliud eis videretur in animo esse . . . comitia habere." For instances of a definite proposition, see Suet. *Caes.* 28, "rettulit ad senatum ut ei succederetur;" Cic. *Phil.* i. 1, "scriptum senatusconsultum quod fieri vellet attulit;" cf. Cic. *Phil.* x. 17). It is significant of the more dependent position of the senate in relation to the emperor that the latter, when consulting the senate, usually made at the same time a definite proposal (see below). The reference to the senate might either be general ("infinite de republica," Gell. xiv. 7; cf. Liv. xxvi. 10, "de summa republica consultatum") or special ("de singulis rebus finite," Gell. xiv. 7; Cic. *Phil.* vii. 1, "de Appia Via et de Moneta"), and the senators might, in giving their *sententiae*, express a wish for the separate reference of some particular question (Cic. *Phil.* x. 24, "de M. Appuleio separatim censeo referendum," *ad Fam.* viii. 8, "ne quid conjunctim referatur"). Custom again prescribed in general terms the order in which the business should be taken: "de rebus divinis priusquam humanis ad senatum referendum esse" (Gell. xiv. 7; cf. Liv. xxii. 9, "ab diis orsus—tum de bello deque republica"); but here again the practice at least of the later Republic allowed a certain weight to the wishes of the senators themselves, who might either directly demand urgency for a particular question (Cic. *ad Fam.* x. 16, "flagitare senatus institit . . . ut referret *statim*"), or indirectly force the magistrate's hand by refusing to give opinions upon any matter until the desired point had been submitted to them (Cic. *ad Att.* iii. 24, "senatum nihil decernere, antequam de nobis actum esset;" *in Pison.* 13, 29, "quum quacunque de re verbum facere coeperatis aut referre ad senatum, cunctus ordo reclamabat, ostendebatque, nihil esse vos acturos, nisi prius de me rettulissetis"). The right of reference (*jus referendi, consulendi senatum, cum patribus agendi*) belonged, exclusively of extraordinary magistrates, to consuls, tribunes of the plebs, and praetors; the latter, however, do not appear to have exercised it except in the absence of the consuls. As between consuls and tribunes, the consul's business took precedence, though it would seem from Cic. *Phil.* vii. 1, that if the questions were small ones, the references of both consuls and tribunes might be put conjointly to the house ("de Appia Via et de Moneta consul; de Lupercis tribunus plebis refert"). To the emperors a special right of reference, as of convening the senate, was granted by statute, in addition to that which they possessed in virtue of the *tribunicia potestas*. This right, granted to Augustus in 23 B.C. on his resignation of the consulship (Dio Cass. liii. 32), and confirmed to his successors (Lex Vespas. 2. Bruns, 128), invested him with the power of making the first *relatio* (περὶ ἑνός τινος, Dio Cass. *op. cit.*) at each meeting of the senate, and was afterwards extended so as to enable him to make four and even five *relationes* before the regular magistrates took their turn ("jus quartae relationis," *Vit. Pert.* 5; "quintae relationis," *Sev. Alex.* 1; cf. Pelham, *Journal of Philology*, xvii. pp. 41, 42). At first at any rate the emperor, like the consul, made his *relatio* in person; or, if unable to do so, communicated it in writing through the consuls (Tiberius, Dio Cass. lviii. 11; Nero, Suet. *Nero*, 15). But from the close of the first century onwards the practice, occasionally adopted by Augustus (Dio Cass. liv. 25) and by Claudius (Id. lx. 2), of employing the *quaestor principis* as the emperor's mouthpiece, became the regular one (QUAESTOR: cf. Digest 1, 13, 1, "quaestores . . . libris principalibus in senatu legendis vacant;" *ib.* 4, "quique epistulas eius in senatu legunt"). The *relationes* of the emperor thus took the form of written "speeches" (*orationes*) or "letters" (*litterae, epistulae*), and are usually referred to as such (Suet. *Tit.* 6; Dig. 23, 2, 16, &c.).

The formal introduction of the business was followed, not by a debate, in the modern sense of the word, but by the taking of the *sententiae* (*sententias rogare, perrogare*) of the individual senators in order. Just as the senate was in theory only a council of advice consulted by the magistrate, so the senator's one duty was to give his opinion (*sententiam dicere*), and technically in this one act both speech and vote were included. But, as we shall see, considerations of convenience, as well as the growing tendency to treat the senate's expression of opinion as a positive decision, developed in practice a process of counting votes actually, though not theoretically, distinct from the taking of *sententiae*.

The magistrate, in taking the *sententiae*, was expected to follow a well-established order of precedence, corresponding in the main to that observed in the official roll (see above). Down to the time of Sulla, the first *sententia* taken was that of the *princeps senatus*. In the Ciceronian age the magistrate might select for this honour any consular, subject only to two restrictions, as (1) he was expected to adhere to the order adopted by him on his first day of office; (2) after the consular elections, *i.e.* during the latter half of the year, he was bound to give the priority to the consuls-designate. The other consulares were taken next, usually in order of seniority; after them the praetorii, aedilicii, &c. [It is possible that in earlier times, before senatorial ascendancy was well established, the magistrate's discretion in this respect was wider (Mommsen, *Staatsr.* iii. 974). The classical passage on the *ordo sententiarum* is Varro, *ap.* Gell. xiv. 7, "singulos autem debere consuli gradatim, incipique a consulari gradu, ex quo gradu . . . antea primum rogari solitum qui princeps in senatum lectus esset, tum autem cum haec scriberet . . . ut is primus rogaretur, quem rogare vellet qui haberet senatum, dum is tamen ex gradu consulari esset;" cf. *ib.* iv. 10; Suet. *Caes.* 21, "post novam adfinitatem Pompeium primum rogare sententiam coepit" (Caesar). For the *consules designati*, comp. Sall. *Cat.* 50: "Silanus primus sententiam rogatus quod eo tempore consul designatus erat;" and Cic. *ad Fam.* viii. 4; Tac. *Ann.* iii. 22.] The right to give an opinion, *jus sententiam dicendae*, belonged to all senators, excepting only the magistrates of the year; the latter being in theory the consulting and not the consulted parties (Liv. viii. 20; Willems, ii. 189). It was only when the emperor made a *relatio* in virtue of his special powers, that the *sententiae* of magistrates were taken (Tac. *Ann.* iii. 17; *Hist.* iv. 41). But every magistrate could at any moment interpose with a speech on the subject in hand. [Mommsen, *Staatsr.* iii. 943. The same author holds that in earlier days plebeians directly admitted to the senate by consuls or censors, without having held a qualifying magistracy, had no *jus sententiae dicendae* (*Staatsr.* iii. 963), but could merely take part (*pedibus eundo*) in the final *discessio*. Of this, however, there is no sufficient evidence.] The question was put to each senator in turn in the simple form "dic M. Tulli (quid censes)" (Liv. i. 32; Cic. *ad Att.* vii. 1), but the modes of reply were various. (1) The senator might rise, discuss the question in a set speech, and close with a formal statement of his opinion, so worded as to form the basis of a decree ("stantem sententiam dicere," Liv. xxvii. 34; Cic. *ad Att.* i. 14, "surrexit, ornatissimeque locutus est." For the form of the closing statement of opinion, comp. *Phil.* xiv. 29, "decerno igitur," &c.; *ib.* x. 25, "quod consul ... verba fecit de litteris de ea re ita censeo;" *ib.* v. 46, "ita censeo decernendum"). It was occasionally drafted in writing beforehand (*Phil.* iii. 20). This method was that which, in cases of any importance, consulars and other prominent senators were expected to adopt (Liv. xxvii. 34). (2) He might, without rising, express his agreement with some previous *sententia*, either *verbo* (Cic. *ad Att.* vii. 3, "dic M. Tulli: σύντομα, Cn. Pompeio adsentior"), or by a nod, or by holding up his hand ("verbo assentiebatur;" Liv. xxvii. 34; cf. Sall. *Cat.* 52, "sedens assensi;" Cic. *ad Fam.* v. 2). (3) He might cross over to the side of a senator with whose opinion he agreed ("pedibus ire in sententiam," Liv. xxvii. 34; Cic. *ad Q. Fr.* ii. 1, 3; *Vit. Aureliani*, 20, "interrogati plerique senatores sententias dixerunt ... deinde aliis manus porrigentibus, aliis pedibus in sententias euntibus, plerisque verbo consentientibus"). By this method, a senator who had already given his *sententia* at length, might indicate that he had changed his mind (Sall. *Cat.* 50, "Silanus ... primus sententiam rogatus ... decreverat: isque postea permotus oratione G. Caesaris pedibus in sententiam Tiberi Neronis iturum se dixerat").

In strictness this orderly taking of opinions on business introduced by a magistrate precluded both the introduction of fresh matter by those consulted, and also any debate in the modern sense of the word. But, in the Ciceronian age, custom sanctioned a freedom of speech really inconsistent with the theory of the procedure. For a senator, when asked for his opinion on a particular point, to seize the opportunity to deliver a lengthy oration on some wholly irrelevant matter, was a privilege thoroughly well recognised and frequently exercised ("egredi relationem," Gell. iv. 10; Tac. *Ann.* ii. 38; Cic. *ad Fam.* x. 28, "quum tribuni plebis...de alia re referrent, totam rempublicam sum complexus"). It was indeed the only means open to the senator of forcing upon the attention of the senate subjects which the magistrates were unwilling formally to bring before it (Cic. *Phil.* vii. 1, "parvis de rebus consulimur ... tamen animus aberrat a sententia, suspensus curis majoribus"). That the presiding magistrate could not compel a senator to speak to the question is clear, and it is doubtful how far he was able to limit the duration of his speech. According to Ateius Capito (Gell. iv. 10), a senator could say, "quicquid vellet ... et *quoad* vellet;" and several instances are recorded in which a measure was, as we should say, "talked out" (Cic. *ad Att.* iv. 3, "calumnia dicendi tempus exemit;" Gell. iv. 10, "eximebat dicendo diem;" cf. Cic. *ad Att.* iv. 2, *ad Q. Fr.* ii. 1, 3). One instance only is recorded in which the presiding magistrate exercised his authority to check this abuse, and then the feeling of the house was decidedly against him (Caesar's arrest of Cato, Gell. iv. 10). On another occasion the senate by resolution decided that the speeches should be brief (Cic. *ad Fam.* i. 2). The *altercationes*, which were not infrequent in the Ciceronian age, were certainly out of order, but were as certainly tolerated (Mommsen, *Staatsr.* iii. 947; Willems, ii. 191).

The theory of the procedure unquestionably implied that the magistrate took the sense of the house on the matter which he had laid before them, by asking each senator in turn to give his opinion (*perrogare sententias*); and there is no evidence that he could, by any form of closure, abridge the process (Mommsen, *Staatsr.* iii. 983, as against Willems, i. 194). It is also possible that in the early days, when the senate was still a subordinate and purely consultative body, the sense of the house as expressed in the course of this process was taken as sufficient, and that no formal division (*discessio*) followed. But when the senate became in fact the governing council, the business before it increased in amount and complexity, and the importance of its decisions increased also. These changes, coupled with the rise in its numbers from 300 to 600, modified the character of the *perrogatio sententiarum*, and necessitated a more exact method of "taking a vote," *i.e.* of determining where the majority of *sententiae* lay. (But the "voting" was not technically distinct from the "giving an opinion;" nor is it conceivable that, as Mommsen holds, there were senators who could vote but who were legally unable *sententiam dicere*.) The accounts we have of the procedure in the senate during the Ciceronian age, make it clear that *sententiae*, in the ~~shape of~~ formal proposals explained and advocated in speeches, were as a rule only given by the highest category of senators, the consulares and praetorii, and that the rest contented themselves with a brief assent (*verbo*), or ranged themselves behind the speaker they agreed with (*pedarii*. The cases of Cato in 63 B.C., who, though only tribunus designatus, gave the *sententia* which was ultimately adopted, and of P. Servilius Isauricus, Cic. *ad Att.* i. 19, were no doubt exceptional). On the *perrogatio* followed, at least in Cicero's time, the *pronuntiatio sententiarum:* where only one definite proposal had been made; or when the sense of the house was clearly in favour of a particular *sententia*, the case was simple. But where, as in the debate on the restoration of Ptolemy Auletes (Cic. *ad Fam.* i. 1 and 2), several conflicting *sententiae* had been given, and there was a real division of opinion, the difficulty was considerable. It rested with the magistrate who had made the *relatio* to take the division on such *sententiae*, and in such order as he thought best; and he might decline to put such as seemed to him inexpedient (Willems, ii. 194; Cic. *Phil.* xiv. 22), or to be covered, or better expressed by others (Cic. *ad Att.* xii. 21, "cur ergo in sententiam Catonis, quia verbis luculentioribus et pluribus rem eandem comprehenderat"). As a rule, however, the *sententiae* were put to the vote in the order in which they had been given. If the first was carried, the rest, if inconsistent with it, naturally fell to the ground. A single *sententia* might lastly be divided and put as two (Cic. *pro Mil.* 14, "divisa est sententia;" cf. *ad Fam.* i. 2). The difficulties involved in the putting a variety of *sententiae* to the house so as to get a clear decision are well described by Pliny (*Epp.* viii. 14, "quae distinctio pugnantium sententiarum quae executio prioribus addentium," &c.). The *sententia* once put (*pronuntiata*), the magistrate took the division by bidding the "ayes" cross to the side of the senate-house on which its author sat, the "noes" to the other (Plin. *l. c.*, "qui haec sentitis in hanc partem, qui alia omnia in illam partem ita . . . in hanc partem, id est in eam in qua sedet qui censuit;" cf. Cic. *ad Fam.* i. 2, "frequentes ierunt in alia omnia;" Festus, p. 261). He then declared on which side the majority was ("haec pars major videtur," Senec. *de Vit. beat.* 2. There is no evidence of any actual counting of heads, any more than when the Speaker in the English House of Commons declares that the "ayes" have it: Mommsen, *Staatsr.* iii. 993).

Such was the regular order of procedure. But in certain cases the *perrogatio sententiarum* might be dispensed with, and a division taken at once (*senatusconsultum per discessionem facere*). This, however, was only allowable where the business was formal, or where no difference of opinion existed (Varro, *ap.* Gell. xiv. 7, "senatusconsultum fieri duobus modis aut per discessionem si consentiretur, aut si res dubia esset, per singulorum sententias exquisitas;" cf. Cic. *Phil.* iii. 24).

The republican order of procedure was maintained with comparatively little change throughout the first three centuries of the Empire (cf. Plin. *Epp.* viii. 14; *Vit. Aurel.* 20); nor can the "lex, quae nunc de senatu habendo observatur" (Gell. iv. 10), possibly the work of Augustus, have effected many alterations of importance. The special *jus referendi* granted to the emperor has been mentioned above. He had also the right as a senator to give his *sententia*, and to give it when he would, usually either first or last (Dio Cass. lvii. 7; Tac. *Ann.* i. 74. The emperors after Tiberius seem never to have exercised this right: Mommsen, *Staatsr.* iii. 977). The claim of the consuls designate to be asked first disappears early in the second century A.D. (*ib.* iii. 976); and lastly, by Augustus, a certain quorum was fixed as necessary for a valid *discessio*. (The exact number required is unknown: *ib.* iii. 990; Dio Cass. lv. 3; Suet. *Aug.* 35). In practice, however, the declining independence of the senate led to a frequent disregard of the elaborate routine of earlier days. A body which met to accept submissively an imperial proposal, to pass a complimentary vote, or decide some trivial point, willingly dispensed with the routine of the *perrogatio*, and its place was taken by the undignified *adclamationes* [Plin. *Epp.* viii. 14, "priorum temporum (sc. under Domitian) servitus . . . etiam juris senatorii oblivionem quandam et ignorantiam induxit," cf. *Paneg.* 54, 75, 76; "consulti omnes atque etiam dinumerati sumus" (under Trajan). For the *adclamationes*, cf. Mommsen, *op. cit.* iii. 951, note 2, and the Script. Hist. Aug. passim, especially *Vit. Alex. Sev.* 6, 7; *Vit. Taciti*, 5].

The *relationes* of the magistrates once disposed of by the *perrogatio* and *discessio*, the presiding magistrate dismissed the senate with the words "nihil vos teneo" or "tenemus patres conscripti" (Cic. *ad Q. Fr.* ii. 2, or "nihil vos moramur," *Vit. Marci*, 10). The resolution or resolutions were then formally drafted as senatusconsulta by the magistrate who had made the *relatio* and taken the division ("senatusconsultum perscribere," Cic. *Cat.* iii. 6; *ad Fam.* viii. 8) in the presence of two or more senators ("scribendo adfuerunt," Cic. *ad Fam.* viii. 8; *ad Att.* iv. 17). If the interference of a tribune prevented the "making" of a senatusconsultum, the resolution was nevertheless drafted as a "senatus auctoritas" (Cic. *ad Fam.* viii. 8; TRIBUNUS). The regular form of the senatusconsultum ran as follows:—"Pridie Kal. Oct. in aede Apollinis scribendo adfuerunt . . . quod consul verba fecit de provinciis consularibus, de ea re ita censuere, uti," &c. (Cic. *ib.*). The older decrees commence with the formula "consul (or praetor, tribunus pl.) senatum consuluit" (*e.g.* Senatusconsultum de Bacchanalibus, *C. I. L.* i. 196; de Tiburtibus, *ib.* i. 201). Under the Empire, if the proposal carried had been introduced by the emperor, the words were inserted "auctore Claudio," &c. (Senatusconsultum Hosidianum, Orelli, 3115). Occasionally in the second century a private senator is named as the author of the *sententia* on which the decree is based (Mommsen, *op. cit.* iii. 1009). The number of senators present at the division, but not the numbers for and against, is often stated ("in senatu fuerunt C." *C. I. L.* viii. p. 270). The senatusconsultum thus written out was then entrusted to the quaestors, by them placed in the aerarium and entered in the *tabulae publicae* ("ad aerarium deferre," Tac. *Ann.* iii. 51; Cic. *ad Att.* xiii. 33, "liber in quo sunt senatusconsulta," *C. I. L.* viii. p. 270; "senatusconsultum descriptum et recognitum ex libro sententiarum in senatu dictarum," 138 A.D. [TABULARIUM]. The entry of spurious senatusconsulta was not uncommon in the last days of the Republic: Cic. *Phil.* v. 4, xii. 5). Although the terms of a senatusconsultum were communicated to the individuals or communities interested, and occasionally to the public, by the presiding magistrate (Liv. xlv. 20; Mommsen, *op. cit.* iii. 1014), no official record of the proceedings in the senate was published until Caesar's first consulship in 59 B.C. The *acta senatus* instituted by him on the model of the *acta urbana* were published after each sitting of the senate, and contained, besides the decrees passed, some account of the various *sententiae* given, &c. (Suet. *Caes.* 20, "ut tam senatus quam populi diurna acta confierent et publicarentur." These *acta* were distinct from the *commentarii* or notes kept by magistrates or private senators: Mommsen, *op. cit.* iii. 1015; Hübner, *de senatus Populique R. actis*, Leipzig, 1860). *Acta senatus* continued to be regularly compiled under the Empire, but Augustus discontinued their publication (Suet. *Aug.* 36). The duty of compiling them was by him entrusted to one of the younger senators (curator actorum senatus, later "ab actis senatus;" Tac. *Ann.* v. 4, "componendis patrum actis delectus a Caesare;" Orelli, 5447, "curat(or) actorum senatus (Domitian) 2273 ab actis" (Trajan). The "commentarii senatus" (Tac. *Ann.* xv. 74) are identical with the *acta*. Extracts from the *acta* were occasionally published by order of the senate (Plin. *Paneg.* 75), and the acta themselves could be consulted by privileged students. Mommsen, *op. cit.* iii. 1021).

VI. *Powers of the Senate.*—The patricio-plebeian senate inherited from its patrician predecessor two important prerogatives,—those of ratifying votes of the assembly (*patrum auctoritas*), and of appointing an interrex. The first of these had been reduced to a meaningless form by 287 B.C. (Lex Publilia, 339 B.C; Liv. viii. 12; Lex Maenia, B.C. 338; Cic. *Brut.* xiv. 55; Lex Hortensia, B.C. 287), though as such it long survived (Liv. i. 17). The second retained its reality, but the opportunities for its exercise became rare as the number of the magistrates with the imperium increased, and the necessity for declaring an interregnum more remote [INTERREX]. Apart from these prerogatives, the senate had constitutionally no right or duty whatsoever but that of advising the magistrate when consulted by him.

Its members were, strictly speaking, chosen by him, and he could remove them. Subject to certain restrictions, he convened it when and where he would. He determined what business should be laid before it, and the duty of the senators was merely to give their opinion on the point submitted to them. The "senatusconsultum" was technically nothing more than a recommendation to the magistrate (comp. the phrase in senatusconsulta "si iis videretur"), and its force depended on his adoption of it (so the magistrate was said "facere senatusconsultum;" cf. Mommsen, *op. cit.* iii. 995, for the older use of the term *decretum* as implying a magisterial act). It is clear, in short, that even in Cicero's time the senate was formally dependent on the magistrate. It had no direct relation with any department of administration, and the extent to which it controlled affairs depended, not upon any prerogatives of its own, but upon the readiness of the magistrate to ask its advice and to accept it when asked. The result was that even in the period of its assured ascendancy, and still more in the days of Cicero, the area of its activity alternately contracted or expanded, as the attitude of the executive magistrates was friendly and deferential or the reverse. (Comp. Cicero's description of Antony's change of front in 44 B.C., *Phil.* i. 1: "praeclara tum oratio, egregia voluntas . . . ad hunc ordinem res optimas deferebat . . . . ce . . . Kalendis Juniis . . . mutata omnia: nihil per senatum, multa et magna per populum.") We may safely assume (Mommsen, *op. cit.* iii. 1023) that under the monarchy, and even under the early Republic, the dependence of the senate upon the magistrature was as great in practice as in theory, and its control of affairs proportionately limited. But throughout the period of the great wars (300–146 B.C.) the case was otherwise. It was by the senate that the policy and the administration of the state were really directed; and the magistrates were, with rare exceptions, its obedient servants, consulting it at every step, and conceding to its advice the force of a command ("quasi ministros gravissimi consilii," Cic. *pro Sest.* 65, 137). The causes of the change were various. The constant wars by keeping the chief magistrates constantly in the field threw the responsibility for the safe conduct of affairs upon the senate; the growing complexity of political and administrative questions rendered the senate rather than either the assembly or the magistrate the fittest authority to discuss and settle them; the increase in the numbers of the magistracy, while it gave the senate additional importance as the one body which could so organise and direct them as to secure effective co-operation, weakened the power and diminished the self-reliance of the individual magistrate. To these causes must be added the support afforded to the senate by its intimate connexion with the nobility (Mommsen, *Röm. Gesch.* bk. 3, cap. II). The precise steps by which the senate gained this ascendancy cannot be followed in detail. In some cases where in earlier times the magistrate had consulted the people as well as the senate, the reference to the former was quietly dropped, and a decree of the senate was accepted as sufficient (*e.g.* in the case of the *prorogatio imperii*: see art. IMPERIUM, and Mommsen, *Staatsrecht*, iii. 1091). In others (*e.g.* the arrangement of the *provinciae*; see PROVINCIA), a point originally settled by the magistrates among themselves was regularly submitted to the senate for decision. Naturally, too, where an established custom of consulting the senate grew up, the tendency was to claim for the senate a constitutional right to have its advice both asked and followed. A conspicuous instance of this was the assertion confidently made by senatorial advocates that no measure could legally be introduced into the assembly which had not received the previous sanction of the senate (Liv. xlv. 21, "praetor novo maloque exemplo rem ingressus erat, quod non ante consulto senatu . . . rogationem ferret"). It is also clear that as the senate grew stronger, and the magistrates weaker, the original theory of the nature and force of its senatorial decrees, as nothing but expressions of opinion on particular cases, was lost sight of, or rather was put aside in favour of one better suited to the facts of the case. The replacement of the older *decretum* by *senatusconsultum*, of the phrase *de senatus sententia* by *ex senatusconsulto*, and the introduction of the custom that the magistrate should in making his *relatio* abstain from anticipating the decision of the senate by any definite proposal, are significant illustrations of the change (see *supra*, pp. 628 f.; Mommsen, *Staatsr.* iii. 994 ff.). Not less so was the tendency to regard the senate as capable by decree of suspending or invalidating a law (*e.g.* the suspension of the Republic, eal by the senatusconsultum ultimum; cf. Sallust, *Cat.* 29), or of enacting general regulations for the future (Mommsen, *Staatsr.* iii. 2, 1230), as distinct from special provisions for particular cases. Nor is it surprising that the growth of senatorial ascendancy should have been accompanied by attempts formally to emancipate the senate from the magisterial control which, if no longer effective, was yet irksome. Thus, as we have seen, the magistrate's freedom of choice in the *lectio senatus* was gradually destroyed (see *supra*, pp. 622 f.), the infliction of penalties for non-attendance fell into disuse (Mommsen, *Staatsrecht*, iii. 2, 916), and the licence *egredi relationem* (see *supra*, p. 629) became an established privilege.

The limits of the authority of the senate, at the period of its most complete ascendancy (*circa* 300–133 B.C.), are not easy to define. There were indeed certain things with which the senate had no concern (*e.g.* the election of magistrates), as falling wholly and exclusively within the domain of the people. There are others where its interference was limited properly to a preliminary consideration, while the final decision rested with the assembly (*e.g.* alterations in the constitution, the declaration of war, the ratification of a formal treaty); though in these cases the tendency was to depreciate the importance of, and even to omit the second stage in, the proceeding. Finally, the ordinary routine business of each department was as a rule left entirely to the magistrate in charge of it. But within these limits, there were hardly any administrative questions which the senate might not be called upon to discuss and decide. In the first place, the growing amount and variety of the work to be done necessitated a more systematic division and assignment of departments than had been required in earlier days, and for this delicate business only the senate was fitted. Year after year, from the commencement of the Second Punic war onwards, the consuls consulted the senate *de provinciis;* and the senate decided what these should be, which of them should be consular and which praetorian. [This division was, before 122 B.C., made at the first meeting of the senate in the year: Liv. xxxii. 28 and xxxix. 38. The Lex Sempronia de provinciis consularibus (122 B.C.) enacted that the point must be settled before the consular elections: Sallust, *Jug.* 27; Cic. *de Prov. Cons.* 17. In settling what the provinces should be, the senate varied the arrangements as necessity required: *e.g.* Liv. xlv. 16, "duas provincias Hispaniam rursus fieri quae una per bellum Macedonicum fuerat," Willems, *op. cit.* ii. 544.] It decided further in what cases a *prorogatio imperii* was desirable (Liv. xxvi. 28 and *passim*); and occasionally not only determined whether a province should be consular or praetorian, but assigned it *extra sortem* to a particular individual (apparently only in the case of praetorian provinces, Willems, ii. 273, 545). When, as was the case in the post-Sullan period, all the provinces abroad were taken by promagistrates, whose imperium had been prolonged, the duration of each command was also fixed by the senate's willingness or the reverse to renew the prolongation at the close of each ye[illegible] (Cic. *de Prov. Consul.*, passim; cf. *ad A*[illegible]*essio.* [illegible] "ne provincia nobis prorogetur:" see IMPERIUM; PROVINCIA.) But the control of the senate did not end here. It had also to determine what equipment (*ornatio*) in the way of troops, money, staff, &c., should be granted to each magistrate or pro-magistrate (Cic. *ad Att.* iv. 18, "in ornandis provinciis consularibus;" *ad Q. Fr.* ii. 3, "de ornandis praetoribus;" *in Pison.* 57, "provinciam senatus auctoritate exercitu et pecunia instructam et ornatam"), a right of supply which should have been a more effective check upon the executive than in practice it proved to be. Finally, it may be noted that the actual administration of the various departments was, in a variety of ways, subject to senatorial supervision. Alike at home and abroad, not only was the frequent reference of special points to the senate required from the magistrate by custom, but general regulations were made by senatorial decree for his guidance. In three cases especially the control of the senate was of great importance: in the management of the finances, in the government of the transmarine provinces, and in the regulation of foreign affairs. (1) The income of the Roman state was derived partly from the state property,—the public lands, mines, fisheries, &c.,—partly from taxation. As regards the first, although the alienation of public land by assignation required the sanction of the people, its management was under the supervision of the senate, which authorised surveys of its boundaries, the leasing of lands or mines on certain conditions, and the collection of the dues payable by the lessees. As to taxation, the imposition of a new tax upon Roman citizens was indeed beyond the power of the senate; but inasmuch as after 167 B.C. the burden of taxation fell on the provincials, the restriction was unimportant. On the other hand, it was the senate which determined what a province should pay, and in what form; which granted exemptions, increased the amount, or altered the mode of collection. (Comp. the senatusconsultum as to Macedonia in 167 B.C. Liv. xlv. 18: see also Cic. *Verr.* iii. 16, 42; Mommsen, *op. cit.* iii. 1120 *sqq.* The Lex Sempronia de provincia Asia, which altered the mode of collecting the tithes of Asia, was an infringement of the customary rights of the senate.) The case was much the same with regard to the public expenditure. It was the senate which sanctioned the expenditure, which directed the payments to be made from the treasury—except where these were in a few cases fixed by law,—and which authorised the striking and issue of coins in Rome. (Mommsen, *op. cit.* iii. 1126 *sqq.*; Polyb. vi. 13, *καὶ γὰρ τῆς εἰσόδου πάσης αὕτη κρατεῖ καὶ τῆς ἐξόδου παραπλησίως*; Cic. *in Vat.* 15, 36, describes the "aerarii dispensatio" as a prerogative of the senate.) (2) The organisation, in the first instance, of a new province was usually carried out by a commission of senators in accordance with a decree of the senate [PROVINCIA]; and it was by the senate, as a rule, that any subsequent modifications in its constitution were made, and regulations laid down as to the methods of its administration (Mommsen, *op. cit.* iii. 2, 1211 *sqq.*; Liv. xliii. 2; Cic. *Verr.* ii. 39, *ad Att.* v. 21). It was to the senate that the provincial governor addressed his despatches, and before the senate that provincial deputations appeared.) (3) In foreign relations, it is not easy to define exactly the functions of the senate, as distinct on the one hand from the constitutional rights of the people, and on the other from the authority wielded on the spot by the magistrate or pro-magistrate, vested with the imperium and in command of troops. For a formal declaration of war against a previously friendly power, the consent of the people was constitutionally necessary; while the repulse of invaders and the chastisement of insurgents were matters within the authority of the magistrate himself. But for military expeditions on any considerable scale, or for expeditions outside his province, or against friendly peoples within it, he was expected to obtain the sanction of the senate (Liv. xxxix. 3, 55, xliii. 1; Appian, *Hisp.* 81). The ratification of a formal and permanent treaty of peace, like the formal declaration of war, was properly the act of the people [Polyb. vi. 14, *ὑπὲρ εἰρήνης οὗτος βουλεύεται καὶ πολέμου.* Livy, xxx. 44, describes the conditions of peace with Carthage (201 B.C.), arranged by Scipio, as requiring confirmation "patrum auctoritate populique jussu;" comp. Id. xxix. 12; Sall. *Jug.* 39, "senatus decernit suo atque populi injussu nullum potuisse foedus fieri"]; the arrangement of a temporary truce that of the magistrate. But the terms of a proposed treaty were discussed and settled in the senate. It was before the senate that foreign ambassadors appeared, and by the senate's authority that Roman legati were sent out (Polyb. vi. 13). Of the numerous alliances by which communities were admitted to the status of dependent allies of the Roman people, the majority seem to have been ratified by the senate only. [Mommsen, *op. cit.*, iii. 1172. The ratification by law of Pompey's arrangements in Asia (59 B.C.) was an exception to the rule (Dio Cass. xxxviii. 7).] If to the senate's control of the finances, of the administration of the provinces, and of foreign relations we add its general supervision of matters touching public peace and order in Rome and Italy (described by Polyb. vi. 13), the justice of its claim to be considered the actual ruler of the Roman state will be evident.

But this claim did not pass unchallenged in the last century of the Republic, and during the latter half of that century (70–49 B.C.) it was weakened by the growing ineffectiveness of senatorial control in the very case where it was most needed, in the government of the provinces. The attacks made upon the ascendancy of the senate by the Gracchi, and by the leaders of the popular party after them, were directed in the first place against the claim put forward on behalf of the senate that its *auctoritas* was necessary for any measure which a magistrate wished to bring before the assembly. The question of the legality of this claim, raised by the opposition which the senate offered to the Sempronian agrarian laws, was answered by the successful passing of those laws "contra auctoritatem senatus." Sulla indeed endeavoured to reassert the claim by making the *senatus auctoritas* legally necessary (88 B.C.; Appian, *Bell. Civ.* i. 59, *μηδὲν ἔτι ἀπροβούλευτον ἐς τὸν δῆμον ἐσφέρεσθαι*), but his work was undone in 70 B.C., and thenceforward the independent right of the magistrate to propose and of the people to pass any law, though denied in theory by senatorial advocates (Cic. *de Rep.* ii. 36; *de Legg.* iii. 12), was allowed in practice and was repeatedly exercised. Similarly the summary condemnation of the elder Gracchus' adherents drew from the popular party an emphatic repudiation of the principle that the senate by decree could authorise the consuls to suspend the law of appeal (Plut. *C. G.* 5; Cic. *pro Rab. perd.* 4, 12; *pro Cluent.* 55, 150), and the execution of the Catilinarians in 63 B.C. led to a second reassertion of the inviolability of the law by Clodius in 58 B.C. (Vell. Pat. ii. 45; for a statement of the senatorial view of the force of the decree in this case, comp. Sallust, *Cat.* 29).

More dangerous to senatorial ascendancy was the policy pursued by Gaius Gracchus, who, taking his stand on the legislative independence of magistrate and people, invited the latter to deal by law with a variety of questions, long left by custom to the decision of the senate, such as the distributions of corn, the conditions of military service, the taxation of the provincials, and even the mode of assigning the provinces. [LEGES SEMPRONIAE.] The precedent set by Gracchus was followed by his successors, and in particular the interference of the assembly in the assignment of provincial commands struck at the very roots of the power of the senate (comp. Gabinian and Manilian laws, 67-66 B.C.; Lex Vatinia, 59; Lex Clodia, 58; Lex Trebonia, 55).

But the ascendancy of the senate might have survived these attacks, had it been able to retain its hold over the great officers who led the legions and governed the provinces abroad. While, however, the senate from 81 onwards showed itself increasingly anxious to retain in its own hands the control of the provinces and of foreign relations (see, for instances, Mommsen, *op. cit.* iii. 1171, 1222), the virtual independence of the proconsuls, and the impotence of the senate to enforce the observance by them of its own decrees or of laws, became daily clearer. And this was so not only in the case of great autocratic officers, such as Pompey or Caesar, holding important commands by the direct vote of the people, but of the ordinary provincial governor. (Comp. the advice given by Cicero to Lentulus Spinther to restore Ptolemy Auletes on his own responsibility: *ad Fam.* i. 7, 4.) It was finally in a conflict, not with the popular assembly and its leaders, but with the powerful proconsul of the Gauls, that the senate was decisively defeated.

VII. *The Senate under the Emperors.*—The changes effected by the emperors in the composition and procedure of the senate have been already described. It remains to consider the share it took in the work of government. The restoration of the Republic professedly accomplished by Augustus formally replaced the senate in its ancient position as the recognised council of advice for the executive magistrates. The decay of the *comitia* removed an ancient rival; it transferred to the senate the election of magistrates, and substituted senatorial decrees for laws. In conjunction with the consuls the senate exercised throughout the first century a criminal jurisdiction, such as it had only claimed before in exceptional cases, and, since 122, only under protest from the popular party. The growing insignificance of the old magistracies increased its prestige as the surviving representative of the old Republic, and the one constitutional check on the power of Caesar. And when, on the death or deposition of an emperor, the principate for the moment ceased to exist, it was to consuls and senate that its powers in theory reverted, and from them came constitutionally the proposal to confer them anew upon a successor. [PRINCIPATUS.]

But the political and administrative ascendancy of the senate was gone for ever, and even the partnership with Caesar in the government often claimed for it was unreal and delusive. [For a different view, see Mommsen, *Staatsrecht*, ii. 709; as to the supposed *Dyarchie* of Caesar and senate, comp. *ib.* iii. 1252, "Der souveräne Senat des Principats:" see also PRINCIPATUS.] The period of its real supremacy had been marked by a gradual restriction of the magistrates' control over its composition and procedure. How far-reaching on the other hand was the authority of Caesar in these respects has been shown above. Moreover, under the system established by Augustus, the senate had a double part to play. On the one hand it was still as of old the council which advised, instructed, and even directed the ordinary executive officials, the consuls, praetors, &c., in Rome, and the governors of all provinces other than those of Caesar abroad. Under this aspect it had a sphere of activity conterminous with theirs, covering nominally the administration of affairs in Rome, Italy, and the public provinces. But in the first place this sphere of activity was not only restricted by the wide area originally assigned to Caesar, but became continually narrower as Caesar laid his hand on one after another of the departments properly belonging to the regular magistrates (see for details PRINCIPATUS). Even within these limits the power and influence of Caesar made themselves increasingly felt, to a degree which deprived the action of the senate of all real independence. In the discussion of matters within this sphere, brought forward by the consuls or other magistrates, Caesar, if present, took part as an ordinary senator, but his *sententia* carried a weight which was usually decisive. (Tac. *Ann.* i. 74; ii. 36. This is especially clear in the case of trials before the senate, where Caesar's *sententia* is sometimes treated as equivalent to a judicial verdict, e.g. *Ann.* iv. 31.) In virtue, moreover, of his *tribunicia potestas*, Caesar could and did interfere at any stage of the proceedings: to prevent the making of a *relatio*, the taking of *sententiae*, or the passing of a decree. (In Tac. *Ann.* i. 13, Tiberius is thanked "quia relationi consulum jure tribuniciae potestatio non intercessisset;" comp. *ib.* iii. 70, xiv. 48.) It is evident also that, even under the early emperors, the consciousness of Caesar's overwhelming strength disinclined the senate to discuss or decide any but the most ordinary and unimportant questions except at his suggestion or with his approval, and made it anxious to transfer all serious responsibility to him. (Tac. *Ann.* ii. 35, iii. 32, 52, xiii. 26, "consules non ausi relationem incipere ignaro principe." Plin. *Epp.* vi. 19, "senatus sententiae loco postulavit ut consules desiderium universorum notum principi facerent;" *ib.* vii. 6, "consules omnia integra principi servaverunt." Tac. *Hist.* iv. 4, "eam curam consul designatus ob magnitudinem oneris . . . principi reservabat." Nero thought it necessary to profess his intention of respecting the supposed division of labour between himself and the senate. *Ann.* xiii. 4, "teneret antiqua munia senatus . . . consulum tribunalibus Italia et publicae provinciae adsisterent.") A glance at the three departments of finance, of provincial government, and of foreign relations, over which under the Republic the senate exercised a real authority, will sufficiently illustrate its altered position under the emperors. In that of finance, a limit was at once placed to the senate's control by the existence of the fiscus, which was from the first wholly under Caesar's management [FISCUS]. Over the old state chest, "aerarium populi Romani," the senate retained a nominal supervision, but of its independent management by the senate there is little trace. The expenditure of money from it, or remissions of payments due to it, were indeed, as late as the second century, authorised by senatusconsulta, but on the initiative of the emperor (Tac. *Ann.* ii. 47, iv. 13. A natural exception was the occasional outlay on temples in the emperor's honour). Its custody was by Nero transferred to imperial officers (*praefecti aerarii*, Tac. *Ann.* xiii. 29); and though the fiscus and aerarium remained for long formally distinct, Dio Cassius pronounces the distinction to be at once unreal and difficult to define (Dio Cass. liii. 16, 22). As regards the government of the provinces, the control of the senate was similarly at once restricted in area, and shorn of all real independence [PRINCIPATUS; PROVINCIA]. Over two-thirds of the empire Caesar was sole master, and over the rest he exercised a *majus imperium* which ultimately gave him all that he wanted. Of its old duties in connexion with the assignment even of the so-called "senatorial provinces" all that remained was the formal selection of the same two provinces each year as "consular." In the first century it is true that the responsibility of proconsuls to the senate rather than to Caesar, and the right of the senate to supervise their administration, was recognised in theory and occasionally in practice; but, as has been shown elsewhere [PRINCIPATUS], in the second century even this partial authority disappeared. Over foreign relations the senate retained no independent control whatever, even in name. Although announcements as to foreign affairs were constantly made in the senate or communicated to it by the emperor (Tac. *Ann.* i. 52, ii. 52, iii. 32, 47; Mommsen, *op. cit.* iii. 1107, 1264), and though foreign embassies were sometimes introduced to it by him (Tac. *Ann.* xii. 10; *Hist.* iv. 51), yet the exclusive command of all troops, and the plenary authority to declare war and conclude treaties given to Augustus and his successors, deprived the senate of all real power (Strabo, xvii. p. 840, *καὶ πολέμου καὶ εἰρήνης κατέστη κύριος.* Lex Vespasiani, Bruns, p. 128, "foedusve cum quibus volet facere liceat"). It is lastly significant of the growing dependence of the senate upon Caesar, even within its own sphere, that by the close of the second century even the criminal jurisdiction seems to have been exercised only at the invitation or by direction of the emperor (Mommsen, *op. cit.* ii. 110).

But the senate was also the council of advice for Caesar himself, who possessed by statute a special right of convening it, of laying matters before it, and of carrying *senatusconsulta* (Lex Vespasiani, "utique ei senatum habere, relationem facere remittere, senatusconsulta per relationem discessionemque facere liceat"). Here there was no question of divided authority; from this point of view the activity of the senate was determined by the willingness or reluctance of Caesar to consult it, and to use its decrees, as instruments of his own government, within the sphere assigned to him.

Such a use of the senate had obvious advantages. It was in accordance with republican tradition; it gave an appearance of constitutionalism to imperial rule, without involving any real sacrifice of power; and it divided responsibility. By nearly all the emperors of the first and second centuries the usefulness of the senate in this capacity was fully recognised. The list of questions submitted to the senate by Caesar and of decrees promoted by him (*auctore principe*) is a long one; and besides non-political matters, such as changes in the civil law, regulations as to the theatre and gladiatorial shows, restrictions on luxury, or the expulsion of astrologers (for instances, see Haenel's useful work, entitled, rather inaccurately, *Corpus legum ab Imperatoribus latarum*, Leipzig, 1857, and art. SENATUSCONSULTUM), it includes a variety of subjects directly connected with the general administration of the Empire. (Suet. *Tib.* 30, "de vectigalibus et monopoliis ... etiam de legendo vel exauctorando milite ... denique quibus imperium prorogari aut extraordinaria bella mandari, quid et qua forma regum litteris rescribi placeret;" Tac. *Ann.* xi. 23, grant of *jus honorum* to the Aedui; *ib.* xii. 61, grant of *immunitas* to Cos: comp. Haenel, *op. cit.*)

The usefulness of the senate as a subordinate instrument of Caesar's government outlasted its importance as an independent administrative authority: but even in this capacity it ceased after a time to fill any but a quite insignificant place. By the time of the younger Pliny, the emperor's *relationes*, whether oral or written, were assuming the form of definite proposals, accepted by the senate as a matter of course, and sometimes without even a formal taking of *sententiae*; and the imperial *oratio* or *epistula*, rather than the senatusconsultum which followed, is quoted as authoritative (see *supra*, under PROCEDURE, p. 628). In the third century even this purely formal reference to the senate became rare; and from the reign of Septimius Severus onwards, government by imperial edicts, constitutions, and rescripts is the rule. (Even in the department of civil law, the references to orationes, epistulae, and senatusconsulta rapidly dwindle in number, while those to constitutions and rescripts as rapidly increase. See Haenel, *op. cit.*; Rein, *Privatrecht*, p. 86.)

On two or three occasions during the third century, accident seemed to revive the importance of the senate. The formal investiture of the person chosen to be *princeps*, with the customary powers, had always been accomplished by decree of the senate followed by a vote of the people [PRINCIPATUS], though only rarely had the senate exercised a voice in the selection itself. But both Maximus and Balbinus and Tacitus were actually chosen by the senate, the responsibility of choosing being in the latter case entrusted to the senate with the consent of the army. It is clear, however, that with this delicate and hazardous duty, thrust upon it by the force of circumstances, the senate's renewed activity began and ended; and in spite of the magniloquent language used in the senate on the accession of Tacitus, and of some trifling concessions to its vanity made by that emperor, there was in no sense any revival of senatorial authority. [Schiller's phrase, "Senatskaiserthum," is misleading (*Gesch. d. Kaiserzeit*, i. 795, 872), as also is his description of the reign of Severus Alexander as a "Restauration der Senatherrschaft." With the language used in the senate (*Vit. Tac.* 12), "in antiquum statum redisse rempublicam," &c., compare the naive admission of the consul himself (*ib.* 3), "quare agite, patres conscripti, et principem dicite, aut accipiet enim exercitus quem elegeritis, *aut, si refutaverit, alterum faciet.*"]

The senate of the Republic, and even of the early Empire, was emphatically the central deliberative council of the Empire, and "senators" are the members of this council, with seats and votes in the Curia. But the tendency of imperial policy in the second and third centuries was, on the one hand, to exclude the senate from any effective share in imperial policy, and limit its activity to local Roman or Italian matters; on the other, to create outside it a senatorial order (see *supra*, p. 625). This policy was carried to its extreme point by Diocletian, Constantine, and their successors. The abandonment of Rome by the emperors, and the creation of a second Curia at Byzantium, destroyed the significance of the senate as an imperial institution; while the extension given to the senatorial order, and its importance as a numerous class represented in every part of the Empire, formed an effective contrast with the quasi-municipal councils which at Rome and Constantinople jointly inherited the name of "senate."

Admission to the order—that is, to senatorial rank—was gained either by birth, as the son or grandson of a senator, or as in old times by election to the quaestorship, or lastly as under the early emperors by imperial *adlectio*. But admission by *adlectio* was now attached to the tenure of certain offices in the imperial service. The senatorial order of the fourth and fifth centuries, is in consequence a numerous body, and includes all but the subordinate officials and ex-officials of the Empire. Within this body further degrees of rank were gradually established. The title *clarissimus*, originally common to the whole order, had been by the time of Justinian restricted to the lowest class within it, and above the *clarissimi* stood the *spectabiles*, and highest of all the *illustres*: a classification which was based entirely on the scale of precedence established for the various offices of state. The members of this order enjoyed certain common privileges (*e.g.* the right of being tried on criminal charges before the *praefectus urbi*, and special seats at games), and were liable to certain special burdens,—a liability which extended to their wives and children. (See, for these, Kuhn, *Verf. d. röm. Reichs*, i. 204.) But of this numerous body only a minority actually sat and voted in the senate-house at Rome or Constantinople, for the *jus sententiae*, once the right of every senator, was now limited to the highest class in the senatorial order, that of the *illustres*;

i.e. to the holders and ex-holders of the great offices of state, including ex-consuls, *consulares.* [Mommsen, *Ostgothische Studien*, pp. 487, 488. Schiller, *Gesch. d. Kaiserzeit*, ii. 41, would include also *consulares* in the wider and later use of the term (see CONSUL; CONSULARIS), but allows that the point is doubtful. Among the lower of the offices which gave the "jus sententiae," "honorum lege" (Cassiod. *Var.* v. 41), were those of the "comes rerum privatarum," the "quaestor sacri palatii," and the "vicarius urbis Romae."] To this select consistory of high officials and ex-officials, all appointed by the emperor, were still entrusted a few duties which though robbed of all importance served to connect them with the great past of the senate. They still chose the *consules suffecti*, the praetors, and quaestors,—offices of purely municipal importance, but their choice required confirmation by the emperor. They still passed decrees as to the public games and the schools of the city, and managed an aerarium which was now only a city chest. On rare occasions the emperor submitted to them an edict or constitution, or entrusted to them the trial of a case of treason. But nothing more clearly shows how low this later senate had fallen than the fact that the official president at its meetings, who kept the senatorial roll, admitted new members, and submitted its decisions to the emperor, was not one of the consuls, but the imperial prefect of the city. (See, for the senate of this period, *Cod. Theod.* vi.; *Nov. Just.* 62; Kuhn, *Verf. d. röm. Reichs*, i. 174–226; Schiller, *Gesch. d. Kaiserzeit*, ii. 36–43; Mommsen, *Ostgothische Studien*, pp. 485–493; Lécrivain, *Le Sénat Romain depuis Dioclétien*, Paris, 1888.) [H. F. P.]

SENATUSCONSULTUM. The powers of the senate have been described in the preceding article (pp. 631–635), and it has been seen that the senatusconsultum under the Republic expressed the advice of the senate to the magistrate who sought advice: the carrying out of the resolution so expressed rested with the magistrate: the reference to the senate was a matter of custom, not of definite obligation. The binding character of the advice embodied in the SC. not only varied according to the strength or weakness of the magistrate (though a conflict was rare), but was greater at certain periods (for which see p. 632), when the administrative power left in the hands of the senate gave to its resolutions much greater weight than mere advice would seem to have; and with the change of the constitution under Augustus (see pp. 634, 635), legislation by the emperor through the senate, as expressed in SC^a, superseded the older practice of enacting leges and plebiscita in the Comitia, and continued for about two centuries. Hence senatusconsulta came themselves to be termed leges (Gaius, i. 83–86), though Gaius (i. 4) indicates the constitutional controversy: "Senatusconsultum est quod senatus jubet atque constituit: idque legis vicem obtinet, *quamvis fuerit quaesitum.*" But we must guard against any such idea of their *legislative* force for republican times, and must certainly reject the view of Theophilus (*Paraphr. Inst.* i. 5) that even after the Lex Hortensia SC^a had the force of law.

The senatusconsultum differed from the lex partly in its scope, but especially in its effect. As regards its scope, it concerned chiefly administration, and only exceptionally attempted to regulate public and private rights, as for instance debts (Liv. xxxv. 7; Cic. *ad Att.* v. 21, 13). As regards its effect, whether its object was administrative or partook of the legislative character, as in the exceptional cases alluded to, still it was not law, for its execution depended on the will of the magistrate. It is true that it was not as transitory in historical times as in the early period mentioned by Dionysius (ix. 37; see Mommsen, *Staatsr.* iii. 987); for, if the magistrate neglected to execute it, it remained valid for the next year and until the senate repealed it [Willems however thinks that a fresh relatio was needed, and cites Liv. xlii. 10; Cic. *in Pis.* 2, 4]: but if it became the direction for the succeeding magistrate, it equally depended on his will, and if SC^a were to be made obligatory they were transformed into laws by a rogatio (cf. Cic. *ad Att.* i. 18, 3; *pro Mur.* 32, 67; Liv. xxxix. 19). The Lex Cornelia of B.C. 67, "ne quis nisi per populum legibus solveretur" [LEX, p. 40*b*], is sometimes adduced as a proof of previous legislative power in the SC. which could dispense from the action of the law: but this dispensation without the sanction of the people had been a usurpation by the senate and was checked by the above-mentioned law. It was, as Willems remarks (*Le Sénat*, ii. 117), not exercised till after the time of the Gracchi (cf. Liv. x. 13, xxxi. 50; *Ep.* lvi.). Again, the cases of a resolution "populum ea lege non teneri," or "placere legem abrogari," alluded to in Cicero (*de Legg.* ii. 6, 14; fr. *Corn.* § 11; *Phil.* v. 4, 10, xii. 5, 12; *de Dom.* 16, 41), are not a repeal of laws by the senate, but merely a declaration that the law in question was never rightly passed, either because it contradicted an existing law, or as *contra auspicia*, and therefore to be referred to the augurs (cf. Cic. *in Vat.* 6, 14). As regards the effect of a senatusconsultum on the magistrate, the obligation to carry it out was moral, not legal; yet it must be noticed that the senate could bring certain influences to bear on the magistrate, who either neglected to consult them *more majorum*, or, having consulted, refused to execute the resolution. They might in the earlier period appoint a dictator; they might invoke the interference of the tribunes (Liv. xlii. 21), and a plebiscitum might follow; they might inconvenience him by refusing to entertain any other matters until this was settled (Cic. *in Pis.* 13, 29); lastly, there was always the consciousness that his office was for a year, theirs for life. As a matter of fact conflicts seldom arose, but for an instance see Liv. xlii. 9, 10. The following instances of SC^a under the Republic may be instructive: a SC. "ne quis in urbe sepeliretur;" the SC. de Bacchanalibus, hereafter more particularly mentioned; a SC. de libertinorum tribu (Liv. xlv. 15); a SC. de Macedonia (*ib.* 18); a SC. relating to the costs of the Ludi Megalenses (Gell. ii. 24); a SC. "ne homo immolaretur" (Plin. *H. N.* xxx. § 12); a SC. de provinciis Quaestoriis; a SC. made "M. Tullio Cicerone referente," to the effect "ut legationum liberarum tempus annuum esset;" various SC^a de collegiis dissolvendis; an old SC. "ne liceret Africanas (*bestias*) in Italiam advehere," which was so far repealed by a plebiscitum proposed by Cn. Aufidius, tr.

pl., that the importation for the purpose of the Circenses was made legal (Plin. *H. N.* viii. § 64); and an old SC. by which "quaestio (servorum) in caput domini prohibebatur" (Tac. *Ann.* ii. 30), a rule of law whose foundation Cicero (*pro Milon.* 22, 59) refers to *majores*. The general character of these senatusconsulta shows that, though not equivalent to laws under the Republic, they exercised a control in matters which concerned administration, the maintenance of religion, the rights of the Aerarium and the Publicani, and the treatment of the Italians and Provincials (cf. Liv. xxvi. 34; xxxix. 3; xli. 9).

The resolutions of the senate were called *consulta*, because the magistrate (Consul, Tribune, or Praetor) summoned it to consult upon some special matter which he wished to lay before it (*referre*, *relatio*): thus in the SC. de Bacchanalibus we have "Marcius L. F. S. Postumius L. F. Cos Senatum consoluerunt," and in the SC. de Philosophis et de Rhetoribus (Gell. xv. 11) the Praetor "consuluit." In the enacting part of a lex the populus was said *jubere*, and in a plebiscitum *scire;* but in senatusconsulta the senate is usually said *censere* (e.g. "ita exdeicendum censuere," SC. de Bacch.), though in ordinary language *decernere* is used of it (*e.g.* Cic. *ad Fam.* viii. 8; *ad Att.* i. 19), and the words *decretum* and *senatusconsultum* are often used indiscriminately and with little precision (Gell. ii. 24: cf. Aelius Gallus *ap.* Fest. s. v. *senatus decretum*, and the article on DECRETUM). On this point see also Mommsen, *Staatsrecht*, iii. 994 ff.; B. Pick, *de Senatusconsultis*, ch. i. (Berlin, 1884). The view of Herr Pick, that the clause of the SC. which conveyed the actual resolution was sometimes distinguished as the *decretum*, explains Fest. p. 339.

For the procedure in consulting the senate and obtaining the resolutions thence called senatusconsulta, see SENATUS, § v. The resolution was not reduced to writing until it had been voted (cf. Cic. *Cat.* iii. 6, 13). It was written down (*perscriptum*, less often *scriptum*) in the place of meeting soon after the vote, always on the same day, by the *scribae*. The presiding magistrate retained witnesses for the draft to prevent fraudulent misrepresentation (Cic. *Phil.* v. 4, 12; *ad Att.* iv. 8). These were usually the *auctor sententiae*, some of the supporters of the vote, or in the case of a complimentary vote the friends of the person honoured (Cic. *ad Fam.* xv. 6, 2). The phrase expressing the witnesses is *scribendo adfuerunt* (SC. ARF. in the *de Bacchanalibus*), in Greek versions *γραφομένῳ παρῆσαν*. It is a mistake to suppose that the witnesses were called "auctoritates." In the passage relied on (Cic. *ad Fam.* viii. 8) the preliminary words (which Mommsen, *St.* iii. 1008, needlessly discredits), *SC. Auctoritates*, are descriptive of the two classes of resolutions which follow: the first is a senatusconsultum, the others are auctoritates, since there was an intercessio against them. It is natural and easy to give the same meaning to the word in Cic. *de Or.* iii. 2, 5. [For the text of the former passage, see Tyrrell and Purser, *ad loc.*, critical note.]

The form in which the resolution was drafted is as follows: 1 (often omitted). SC. (or auctoritas, as the case might be). 2 (up to B.C. 47). The *praescriptio*, "senatum consuluit," with name of the *relator*. 3. The date. 4. The place of assembly, *e.g.* "in aede Apollinis." 5. The witnesses, "scribendo adfuerunt." 6. The *relatio*, as a preamble, "quod verba fecit" so and so. 7. The decree "d. e. r. i. c." (de ea re ita censuerunt) "uti," &c.; to this might be added the reason "cum ita se res habeat." After the time of Augustus the number of senators was added. The document often concludes with C. or "censuere." On the authority of Val. Max. ii. 2, 7, some (as B. Pick, *de Senatusconsultis*, p. 21) hold that the tribune affixed the letter T to the resolution against which there was no intercession, when it was drafted and about to be deposited in the tabularium; and, on that theory, the disputed letters in Cic. *ad Fam.* viii. 8, 5, might be TR; but Mommsen takes them to represent C[*ensuere*], referring to the senators, and this is borne out by the fact that in Greek versions we find *ἔδοξεν* so placed. The view of Willems (*op. cit.*) seems probable, that when the SC. was not voted as a whole in one discessio, but each clause (*particula*, Fest. p. 339) separately, we find "censuere" or *ἔδοξεν* at the end of each clause on which a vote was taken; but when it was voted as a whole, the words d. e. r. i. c. sufficed. Lastly, if it was necessary to obtain a law, a clause was added, "ut de ea re ad populum ferretur" (Cic. *ad Fam.* viii. 8, 5). [For the custody of the document, see TABULARIUM, and SENATUS, p. 630 *b*.] As regards the title of the SC. it was named in reference to its contents, "SC. de Bacchanalibus," "SC. ne quis in urbe sepeliretur," &c.; it was never named after the *relator* until the imperial period (see examples below); the SC. Sempronianum in Cic. *ad Fam.* xii. 29 is probably = SC. de Sempronio.

A measure which it was proposed to submit to the senate might be stopped by the *intercessio* of a tribune, who could put a veto on the *relatio* (Polyb. vi. 16): and not only tribunes, but any magistrate of higher or equal rank with the *referens*, might exercise the right of intercessio at the voting (Varro *ap.* Gell. xiv. 7, 6; Cic. *de Legg.* iii. 3, 10), and, though they could not prevent the resolution from being carried (Val. Max. ii. 2, 7; Tac. *Hist.* iv. 9; Cic. *ad Fam.* x. 12, 3), might deprive it for the present of administrative force. A proposal so carried, and invalidated by intercessio, was called "senatus auctoritas" (a term which is also loosely used to denote any expression of opinion by a majority of the senate, whether it became a senatusconsultum or not, Cic. *de Legg.* ii. 15, 37; *de Orat.* iii. 2, 5; *ad Fam.* i. 2, 7, viii. 8). In Livy the technical distinction disappears (see Mommsen, *St.* iii. 1033). [For the totally different *patrum auctoritas*, see p. 631.] It was formally drawn up and recorded, in the hope that, the veto being subsequently removed, it might acquire validity by reference back to and confirmation by the senate, but without being rediscussed (cf. the clause in the SC^{a} in Cic. *ad Fam.* viii. 8: "Si quis huic SC^{o} intercessisset, senatui placere auctoritatem perscribi et de ea re ad hunc ordinem referri;" compare also *ad Fam.* i. 2, 4; i. 7, 4; *ad Att.* iv. 16, 6; Dio Cass. lv. 3). This right of intercessio belonged to the tribunes against one another, the consuls, and praetors; and to consuls against one another and the praetors, but not against the tribunes: but in the later period of the republican history it seems to have been exercised by tribunes only.

If the SC. referred to Latin-speaking communities, nothing beyond the original wording was required; but if it referred to Greeks, a version in Greek was made. The style shows that it was translated in a conventional form at Rome and sent to Greece or elsewhere: no pains are taken to turn such Latinisms as *ἐν Κομετίῳ πρὸ ἡμερῶν ἕπτα εἰδυιῶν Ὀκτωβίων*. Of the SC^a which are known to us of the republican period, some have come down in the original form. They may be classed (following Willems) as 1. Those of which the *Latin text* remains, wholly or in part, engraved in bronze: fragment of *de Bacchanalibus*, in a letter of the consuls "ad Teuranos," B.C. 186 (*C. I. L.* i. 43): part of SC. *de Tiburtibus*, in a letter written by the praetor to the Tiburtes (*C. I. L.* i. 201); the date of this, as Mommsen finally decides, is B.C. 159, and consequently Niebuhr erred in making it the oldest document: fragment of the Latin text of the *de Asclepiade*, B.C. 87 (*C. I. L.* i. 111). 2. *The Greek engraved versions:* fragment of the *de Delphis*, B.C. 198—the oldest existing SC.—(Le Bas, 852*b*): SC., or rather two SC^a, de Thisbis, B.C. 170 (*Ephem. Epig.* i. 278, ii. 102): a fragment *de Prienensibus et Samiis*, B.C. 135 (Le Bas-Waddington, 95, 196); the Greek text *de Asclepio* (*C. I.* i. 112); a fragment *de Aphrodisiensibus*, B.C. 56 (Le Bas-Waddington, 1627); *de Stratonicensibus*, B.C. 39 (*Bull. Corr. Hell.* 1887, 225). 3. *Latin texts or Greek versions preserved in literature:* SC. *de philosophis et rhetoribus*, B.C. 161 (Suet. *Rhet.* i.; Gell. xv. 11); *de hastis Martiis*, B.C. 99 (Gell. iv. 6); *de provinciis consularibus* (Cic. *ad Fam.* viii. 8); three SC^a *de Judaeis*, dated B.C. 139, 133, 44 (Joseph. *Ant.* xiv. 8, xiii. 9, xiv. 10). Besides this we have SC^a about aqueducts in Frontinus, book ii., and various others preserved in more or less the original form in the Digest. [G. L.] [G. E. M.]

The following list of senatusconsulta contains, perhaps, all of them which are distinguished by the personal name of a consul or other magistrate. Numerous SC^a passed under the Empire are referred to in the Latin writers, for which we find no distinctive name, though it is probable that, like Leges, they all had a title; but many of them, being of little importance, were not much cited or referred to, and thus their names were forgotten. Tacitus, for instance, often speaks of SC^a without giving their names, though in some cases we are able to affix the titles from other authorities.

Afinianum: mentioned in Cod. 8, 48, 10, 3; Inst. iii. 1, 14 (where some of the MSS. read Sabinianum, Papinianum, and Fabianum). According to the paraphrase of Theophilus, it enacted that when a man gave one of three sons in adoption the pater adoptans should be bound to leave the adopted son at least a fourth of his property.

Apronianum: probably passed in the time of Hadrian; it enables civitates (*i.e.* municipal corporations) to take an hereditas by way of fideicommissum (Dig. 36, 1, 26; cf. Ulpian, *Reg.* 22, 5). In the same passage Ulpian says that civitates had been enabled by a senatusconsultum to be directly instituted heirs by their freedmen (cf. Dig. 38, 3, 1, 1). Both enactments were occasioned by the want of testamentifactio in civitates, as being *incertae personae* (Ulpian, *l. c.*; Pliny, *Ep.* v. 7); but there does not seem to be any ground for supposing them to be one single senatusconsultum. By construction they were held to entitle municipal corporations instituted as heirs to demand *bonorum possessio secundum tabulas* (Dig. 38, 3, 1, 1). Nerva made it lawful for them to take legacies (Ulpian, *Reg.* 24, 28), a right extended to lawful collegia by a senatusconsultum under Marcus Aurelius (Dig. 34, 5, 20).

Articuleianum (A.D. 101) enabled provincial governors to declare a slave free to whom liberty had been bequeathed by a fideicommissum when the master was domiciled in a different province (Dig. 40, 5, 51, 7).

De Bacchanalibus (B.C. 186): discovered on a bronze tablet, which is now at Vienna, in Calabria, A.D. 1640. The text is given by Mommsen, *C. I. L.* i. No. 196, and in facsimile in the first volume of the inscriptions edited by the Royal Prussian Academy, 1862, Tab. xviii. Its main enactment was the prohibition of the Bacchanalia throughout all Italy (Liv. xxxix. 18): see the article on BACCHANALIA, Vol. I. p. 265. Bynkershoek has written a treatise on this SC. (*de Cultu Religionis peregrinae apud veteres Romanos*, Opusc. i. 412), with which may be compared *Senatusconsulti de Bacchanalibus, &c. Explicatio*, auctore Matthaeo Aegyptio, Neapol. 1729, and Lewald, *de Religionibus peregrinis apud veteres Romanos paulatim Introductis*, Heidelberg, 1844. There appears to be no ancient authority for the name Marcianum sometimes given to this SC., for, though this might have been its proper title if it had been named after one of the consuls of the year, that practice, as we have seen, first came in under the Empire.

Calvitianum: passed under Nero, and confirming the SC. Persicianum (*q. v.*) against a presumption based on a senatusconsultum of Claudius. It enacted that neither a man under sixty years of age, nor a woman over fifty, who intermarried with one another, should be relieved from the disabilities of caelibatus: see JULIA ET PAPIA POPPAEA LEX (Ulpian, *Reg.* 16, 3; Suet. *Claudius*, 23; Plin. *Ep.* viii. 28; Cod. 5, 4, 27).

Claudianum: this enactment, passed by the Emperor Claudius A.D. 52, introduced certain exceptions to the rule of the Jus Gentium, that the status of children is determined by that of their mother, after referring to which Gaius says (i. 83), "We must observe, however, whether the law of nations in any given instance is overruled by a statute or ordinance having the authority of a statute." These exceptions of the SC. Claudianum (in addition to two others stated by Ulpian, *Reg.* 5, 8) are three in number:—

(1) If a female citizen of Rome cohabited or had intercourse with a servus alienus with the consent of the latter's master, the children born of the connexion were to be slaves and the property of the father's owner, though by agreement with the latter she could remain free herself: such agreement, it would seem, might be inferred from the master's not giving her the notice referred to under (3) below. This exception was repealed by Hadrian as "inelegans," who "restituit juris gentium regulam, ut cum ipsa mulier libera permaneat, liberum pariat" (Gaius, i. 84). It appears, however, from Tac. *Ann.* xii. 53, and Paul. *Sent. Rec.* iv. 10, 1, that the woman herself was degraded from the

status of ingenua (if she were freeborn) to that of liberta. Perhaps we should connect with this the anomalous rule, stated in the Codex Theodosianus (iv. 9, 3), that children of a free woman by a servus fiscalis were born Latini.

(2) The children of a free man by a slave woman whom he believed to be free, were to be freeborn if males, slaves and the property of the mother's master if females. This exception, again, was repealed as *inelegans*, and the rule of the Jus Gentium restored, by Vespasian (Gaius, i. 85).

(3) If a free woman cohabited with a servus alienus (known to her to be such) without the master's sanction to the connexion, and persisted in the intercourse after a notice (*denunciatio*) thrice repeated to her to withdraw by the master (or his tutor, curator, or agent, and even without any such notice if the slave belonged to a municipal corporation), the master could have her adjudged to himself as a slave by the magistrate, along with the children born of the intercourse, whether before or after this adjudication. Her property passed with her by a universal succession [Successio] (Paul. *Sent. Rec.* ii. 21 a; Gaius, i. 86). This part of the senatusconsultum was first repealed by Justinian, as "indignum nostris temporibus" (Inst. iii. 12, 1; Cod. 7, 24). It appears from Gaius (i. 91) that some jurists went so far as to maintain that if a woman, being pregnant, was reduced to slavery under the senatusconsultum, the child became a slave on birth, even though actually conceived in civil wedlock (*justis nuptiis*); but this opinion was counter to the rule stated by Gaius (i. 88, 92), Ulpian (*Reg.* 5, 10), and Neratius in Dig. 50, 1, 9, that children born of *justae nuptiae* took the status of the father at the time of conception.

There is some doubt whether the last two exceptions (so far as relates to the status of the children) were established by the SC. Claudianum or by some statute whose name is unknown to us. The latter view is supported by Rein, Huschke, and Bethmann-Hollweg, on account of Gaius' language in i. 85, 86, where he says, "ex *lege* . . . . sed illa pars ejusdem *legis*." In the earlier editions of this work this unknown statute was assumed to be the Lex Aelia Sentia, which, however, does not seem to have dealt with the children born of intercourse between free persons and slaves, but rather with the subjection to patria potestas of children born of marriage between cives and Latinae or peregrinae, after *erroris causae probatio* (Gaius, i. 65, 75). But there seems to be more reason in the view of Zimmern and Rudorff, who held that the term *lex* is in these paragraphs loosely used by Gaius as synonymous with senatusconsultum, and it is difficult to believe that the rules stated under (1) and (3) were not established by the same enactment.

There are other senatusconsulta named after the Emperor Claudius, in particular one which exempted from the disabilities of caelibatus men over sixty who married wives under fifty years of age (Ulpian, *Reg.* 16, 3; Suet. *Claud.* 23): possibly also his enactments relating to "revocatio libertorum in servitutem" and bestowing freedom on slaves abandoned by their masters (Suet. *ib.* 25) were made through the senate. Upon these less known senatusconsulta of Claudius, see Jo. Augusti Bachii *Historia Jurisprudentiae Romanae.*

De Collusione Detegenda: passed in the time of Domitian to restrain fraudulent acquisition of the status of ingenuitas by collusion between masters and slaves, patrons and freedmen (Dig. 40, 16, 1; *ib.* 4). It is sometimes called the SC. Junianum.

Dasumianum: passed under Trajan, and enabling the magistrates to declare free slaves to whom liberty had been bequeathed by fideicommissum, but whose masters were prevented from performing the act of manumission by absence on reasonable grounds: in this case the master was to be patronus (Dig. 40, 5, 22, 2; *ib.* 36, pr.; *ib.* 51, 4–6; cf. Rudorff in Savigny's *Zeitschrift*, xii. pp. 307–311, *Das Testament des Dasumius*).

Hadriani Senatusconsulta. Of the senatusconsulta made on the proposal of Hadrian (*e.g.* Gaius, i. 47, ii. 285; Dig. 5, 3, 20, 6, &c.), and of which a considerable number are enumerated in the work of Bachius referred to at the end of the remarks on the SC. Claudianum, none seem to have been called by the name Hadrianum. [See Juventianum.]

Hosidianum: enacted A.D. 47, and referred to in the SC. Volusianum (see Orelli's *Inscriptiones*, No. 3115). It appears to have prohibited, under severe pecuniary penalties, the pulling down of houses in order to sell the site for more than one gave for it, or to make money in other ways, and is well explained by Bachofen, *Ausgew. Lehren*, pp. 185–227.

Juncianum (A.D. 182) related to the manumission of slaves belonging to other persons than the testator, to whom the latter had bequeathed liberty by a fideicommissum (Dig. 40, 5, 28, 4; *ib.* 51, 8; cf. Zimmern, *Geschichte des römischen Privatrechts*, i. § 203).

Junianum (Dig. 40, 16). [See De Collusione Detegenda.]

Juventianum is the title given by civilians to the senatusconsultum passed at the instance of Hadrian (A.D. 129) after the name of one of the four consuls (two ordinarii and two suffecti) mentioned in connexion with it in Dig. 5, 3, 20, 6; but the real proposal seems to have come from the consules suffecti, who were Titius Aufidius and Oenus Severianus. It enacted that hereditatis petitio should lie for the recovery not merely of res hereditariae from those in whose possession they were, but for restitution of fruits and accessions, and of any gain which a possessor, whether in good or in bad faith, had made thereby (*e.g.* by the sale of a res hereditaria): in fact, its main object seems to have been to settle some old points of dispute relating to things belonging to inheritances which had been sold by persons other than the heir (see Dernburg, *Hereditatis Petitio*, 1852, p. 20 *sq.*): "post senatusconsultum omne lucrum auferendum esse bonae fidei possessori quam praedoni dicendum est," Dig. 5, 3, 28. Another result of the enactment was to make usucapio pro herede revocable by the heir [Usucapio: cf. Gaius, ii. 57; Cod. 3, 31, 7]. Hereditatis petitio (to the article on which reference should be made) thus became a species of "mixed" action; originally "in rem," it now lay for "praestationes personales" as well as for the recovery of property: cf. Cod. 3, 31, 12, 3.

LARGIANUM regulated the succession to the property of Latini Juniani by providing that where the actual manumitter was dead it should not go necessarily to his heres, but to such of his children as were not expressly disinherited by him: "eo SC^{o} actum esse, ut manumissoris liberi, qui nominatim exheredati non sint, praeferantur extraneis heredibus" (Gaius, iii. 64–71; Inst. iii. 7, 4; Cod. 7, 6, pr. and 12; Nov. 78: cf. PATRONUS). The date sometimes assigned to this senatusconsultum (A.D. 42) is wrong; for, though a Largus was consul in that year, his colleague was not called Lupus. It must necessarily fall later than the Lex Junia Norbana, generally supposed to have been enacted A.D. 19, and not later than the death of the jurist Cassius (Gaius, iii. 71), who was consul in A.D. 29.

LIBONIANUM (A.D. 16): enacted that where a man's will was written out for him by another person, any disposition which it contained in the latter's favour should be void and taken *pro non scripto*: for illustrations, see Dig. 48, 10, 6, 1 and 2; *ib.* 22, 7, 6 and 7; Dig. 26, 2, 29. It was added by an edict of the Emperor Claudius that such person should, in addition, incur the penalties of the Lex Cornelia de falsis, though this provision is ascribed to the senatusconsultum itself in the *Collatio Leg. Mos. et Rom.* viii. 7, 1 (Dig. 48, 10, 15, pr.). See FALSUM; and Dig. 48, 10; Cod. 9, 23; Suet. *Nero*, 3.

DE LUDIS SAECULARIBUS (B.C. 18). See Gruter, *Inscr.* p. 326, and Haubold (Spangenberg), *Monumenta Legalia*, p. 163.

MACEDONIANUM: passed according to Tacitus (*Ann.* xi. 13) under Claudius, according to Suetonius (*Vesp.* 11) under Vespasian, and enacting that no action should lie on a loan of money made to a filiusfamilias. It seems, however, that the praetor was in the habit of granting an action where the facts were doubtful, leaving the defendant, if he could prove his title to the benefit of the law, to repel the plaintiff by exceptio SC^{i} Macedoniani. Theophilus says that the name of the enactment was derived from one Macedo, who committed the crime of parricide in order to extricate himself from his pecuniary embarrassments, a story to which some colour is lent by Inst. iv. 7, 7; but other writers affirm that Macedo was a notorious money-lender and usurer, though Dig. 14, 6, 1, which is commonly cited in support of this, makes more for the derivation of Theophilus. The SC. related to no contracts except pecuniary loans, and to these it applied even though veiled beneath some other transaction, such as a loan of wine which the borrower immediately converted into money by sale (Dig. 14, 6, 7, 3); and the rank or age of the filiusfamilias by whom the money was borrowed was immaterial (Dig. *ib.* 2). Such loans, however, were not declared void by the law, so that the "natural" duty [OBLIGATIO] to repay it remained; and if payment was actually made, the *condictio indebiti* was excluded, unless made by the son with money of the father's.

There were certain cases in which the operation of the SC. was excluded: as where the filiusfamilias was a soldier at the time of borrowing the money (Cod. 4, 28, 7, 1), or had a peculium castrense or quasi castrense of his own (Dig. 14, 6, 2), or ratified the contract after becoming *sui juris* (Cod. 4, 28, 2); or if the lender had reason to believe the filiusfamilias to be independent (Dig. 14, 6, 3, pr. and 1). Even the father could be sued if he had assented to the loan either expressly or by implication, or had subsequently ratified it (Cod. 4, 28, 2; *ib.* 7, pr.), or so far as the money had been expended in his interest ("in rem patris versum," Dig. 14, 6, 7, 12 and 13). (Dig. 14, 6; Cod. 4, 28; Inst. iv. 7, 7; Paul, *Sent. Rec.* ii. 10; Loebenstern, *de SC^{o}. Macedoniano*, Marburg, 1828; Dietzel, *Das SC. Macedonianum*, Leipzig, 1856.)

MEMMIANUM: the name usually given to a senatusconsultum passed in the time of Nero to prevent evasion of the disabilities of orbitas [JULIA ET PAPIA POPPAEA LEX], by adopting a child and then emancipating him immediately the inheritance or legacy had been acquired. It appears from Tacitus (*Ann.* xv. 19) that the same device was resorted to in order to escape public burdens (*e.g.* tutela: see Inst. i. 25, pr.), and that this also was in future put a stop to by this enactment—"ne simulata adoptio in ulla parte muneris publici juvaret."

NERONIANUM DE LEGATIS (Gaius, ii. 197, 212, 218, 220; Ulpian, *Reg.* 24, 11^{a}; *Fragm. Vat.* 85). [See LEGATUM.]

NERONIANUM (Paul. *Sent. Rec.* iii. 5, 5): also called Claudianum (Dig. 29, 5, Rubr.) and Pisonianum (Dig. *ib.* 8, pr.), because enacted in the consulship of Nero and L. Calpurnius Piso, A.D. 57. Among its provisions Tacitus (*Ann.* xiii. 32) states the following: "Ut si quis a suis servis interfectus esset, ii quoque, qui testamento manumissi sub eodem tecto mansissent, inter servos supplicia penderent:" to which Paulus adds (*Sent. Rec.* iii. 5, 5 and 6), "sed et hi torquentur, qui cum occiso in itinere fuerunt," and "ut occisa uxore etiam de familia viri quaestio habeatur, idemque ut juxta uxoris familiam observetur, si vir dicatur occisus." In Dig. 29, 5, 8, pr., we find the further provision, "ut si poenae obnoxius servus venisset, quandoque animadversum in eum esset, venditor pretium praestaret, ne emptori injuriam fecisse videatur senatus."

ORFITIANUM: passed under M. Aurelius and Commodus, perhaps A.D. 178 (Ulpian, *Reg.* 26, 7; Capitolinus, *Marc.* 11), and relating to the right of children to succeed to the property of their mother on her decease intestate. Under the law of the Twelve Tables they were excluded, as a woman could have no *sui heredes*, and in the sole case in which they were her agnates (*i.e.* where she was *in manu mariti*) she, as a rule, could leave no property to inherit. By the praetorian bonorum possessio the children were admitted next in succession to agnates (Gaius, iii. 30), but by this senatusconsultum they were preferred even to the latter, and so succeeded in the first rank, though, if the mother had been a freedwoman, the patron was entitled to a share equal to that taken by each child (Dig. 38, 17, 1, 9). The illegitimacy of the children was immaterial (Dig. *ib.* 1, 2; Inst. iii. 4, 3), nor was their right to succeed affected by their undergoing capitis deminutio minima (Inst. *ib.* 2; Dig. *ib.* 1, 8). It is uncertain whether the Senatusconsultum Orfitianum referred to by Paulus (*Sent. Rec.* iv. 14, 1) is the same enactment. This explained the rule of the

Lex Fufia Caninia, that slaves could be manumitted in a will only by name (*nominatim*), by allowing the same effect to an unmistakable description: "officiorum enim et artium appellatio nihil de significatione nominum mutat, nisi forte plures sint, qui eo officio designentur." (Inst. iii. 4; Dig. 38, 17; Cod. 6, 57; Ulpian, *Reg.* 26, 7; Paul. *Sent. Rec.* iv. 10.)

Pegasianum: passed under Vespasian, perhaps in A.D. 73 (Gaius, ii. 254–259; Inst. iii. 23, 5 and 6; Ulpian, *Reg.* 25, 14–16). Its principal provisions are noticed under Fideicommissum and Legatum. Another part of it (or possibly a different senatusconsultum passed by the same consuls Pegasus and Pusio) modified the Lex Aelia Sentia in reference to the capacity of a Latinus Junianus to become a civis (Gaius, i. 31).

Persicianum: passed under Tiberius, A.D. 34. It took away the exemption from the penalties of caelibatus, without exception, from all males over sixty and all females over fifty years of age, who appear till then not to have been subject to the rules of the Lex Julia et Papia Poppaea on this subject: Suet. *Claudius*, 23; Ulpian, *Reg.* 16, 3 (where the reading is Pernicianum).

Pisonianum. [Neronianum.]

Plancianum: assigned by some writers to the time of Vespasian, and making an addition to a rule of law either contained in the Lex Julia et Papia Poppaea, or grafted upon it by construction or some amending enactment, that any fideicommissum which a heres or legatarius bound himself by a written instrument or in any other secret mode to pay or give to a person who was legally incapacitated from taking it should be forfeited to the fiscus (Dig. 30, 103; 34, 9, 10 and 18; 49, 14, 3). Such a fideicommissum was called "tacitum," and was said to be "in fraudem legis," as designed to evade the statute; but if the promise to execute the trust was made openly (*palam*, Dig. 49, 14, 3), there was no *fraus;* and though the fideicommissum would fail by reason of the incapacity of the fideicommissarius to take it, the rights of the fiscus would not necessarily attach, other persons benefited by the will being preferred in such a case of lapse. It would seem that, even where a "tacit" trust had been undertaken, the fiduciarius was entitled to retain his quarta under the SC. Pegasianum [Fideicommissum]; but the SC. Plancianum altered this by denying him the quarta, and also disabled the fraudulent fiduciarius from claiming the fideicommissum as *caducum*, which he could naturally have done if he had children [Legatum; Bona Caduca]: Ulpian, *Reg.* 25, 17; cf. Dig. 34, 9, 11; 35, 2, 59 (where the name of the senatusconsultum is given, and where it is added that the fourth thus forfeited was given to the fiscus by a rescript of Antoninus Pius). The penalty for the fraud applied only to that part of the property to which the fraud itself extended; and if the heres had a larger share in the inheritance than the property tainted with the fraud, he had the benefit of the Lex Falcidia (or more precisely, of the SC. Pegasianum) in respect of the residue: or, as it is expressed by Papinian (Dig. 34, 9, 11), "sed et si major modus institutionis quam fraudis fuerit quod ad Falcidiam attinet, de superfluo quarta retinebitur."

There was a senatusconsultum which enabled a woman who had been divorced to establish the status of her child, even though yet unborn, by a judicial denunciatio addressed to the father within thirty days of the divorce, and which by some writers (*e.g.* Bethmann-Hollweg, *Civil Process*, ii. p. 341; and Windscheid, *Lehrbuch des Pandektenrechts*, ii. § 520, note 5) is called Plancianum; but there seems to be no authority for this in the passages (Dig. 25, 3, 1, 1 and 12) to which they refer.

Rubrianum: enacted *circ.* A.D. 101, and empowering the magistrate to declare free slaves to whom liberty had been bequeathed by fideicommissum, but whose masters attempted to evade the obligation to manumit them by absence (Dig. 40, 5, 26, 7 *sqq.*: cf. Savigny, *Zeitschrift*, &c. xii. pp. 307–311).

Sabinianum. [Afinianum.]

Silanianum. The first senatusconsultum which we definitely know to have been entitled after its proposer, was passed under Augustus, probably A.D. 10, in the consulship of P. Cornelius Dolabella and C. Junius Silanus. In a way it made slaves answerable for their masters' lives, by providing that, where a man was murdered, all his slaves who were in the house with him at the time, or with him elsewhere, should be examined under torture as to the perpetrators and counsellors of the crime, and then put to death for not having rendered him assistance (Dig. 29, 5, 1, pr. and *sq.*; *ib.* 6; —Paul. *Sent. Rec.* iii. 5, *passim*). It would seem from Tacitus (*Ann.* xiv. 42, in his note on which Lipsius refers to Cicero, *ad Fam.* iv. 12) that this was merely an old usage which the senatusconsultum made compulsory in all cases of murder; but slaves who were under the age of puberty did not fall under the enactment, by which, too, freedom was bestowed as a reward on any slave who discovered his master's murderer (Dig. 40, 8, 5; 38, 2, 4, pr.; 38, 16, 3, 4; Cod. 7, 13, 1). It was further provided that, in all cases where it was suspected that a man had been murdered by persons belonging to his own establishment, acceptance of the inheritance before the examination of the slaves should cause its forfeiture to the fiscus from the heres as *indignus* (Paul. *Sent. Rec.* iii. 5, 1, 2 and 10;—Dig. 29, 5, 3, 29; *ib.* 5, 2;—Cod. 6, 35, 3): the same penalty attached to merely opening the will, or applying for the bonorum possessio, and a heavy fine was inflicted in addition. A senatusconsultum passed in the consulship of Taurus and Lepidus (A.D. 11) enacted that the penalty for opening the will of a murdered person could not be inflicted after the lapse of five years, unless it was a case of parricide, to which this *temporis praescriptio* did not apply (Paul. *Sent. Rec.* iii. 5; Dig. 29, 5; Cod. 6, 35).

Tertullianum: stated by Justinian (Inst. iii. 3, 2) to have been passed under Hadrian, but in reality enacted in the reign of Antoninus Pius, who succeeded Hadrian A.D. 138, and was himself succeeded by M. Aurelius, A.D. 161: its precise date seems to have been A.D. 158 (Zonaras, xii. 1). It related to the succession of children, on their dying intestate, by the mother, who had no right to inherit by the Twelve Tables, and whose position was only partially improved in this respect by the Edict (which gave her a title among cognates, postponing her to all agnati) and the Lex Julia et Papia Poppaea. By this senatusconsultum she became entitled to succeed her issue intestate if, being freeborn, she had three, or being libertina she had four children (Paul. *Sent. Rec.* iv. 9; Ulpian, *Reg.* 26, 8; Inst. iii. 3, 2); but she was postponed to children of the deceased (Inst. *ib.* 3; Dig. 38, 17, 2, 9; —Cod. 6, 57, 1, 4; 6, 55, 11), to the father (Ulpian, *loc. cit.*), and to the frater consanguineus (Inst. *ib.*); while other relations were allowed a certain share in the inheritance with her (Inst. and Ulpian, *ll. cc.*). Justinian (Inst. *ib.* 4) did away with the necessity of the *jus liberorum* as a title to the benefits of this enactment, and also with the deductions made in favour of other relations; he preferred the mother to all other persons having a statutory title (*legitimi*), except that brothers and sisters of the deceased shared the inheritance with her: if there were brothers only, or brothers and sisters, it was divided in equal shares between them and her; if sisters only, she and they took in moieties. By Nov. 22, 47, he modified the rule last stated, enacting that even where there were sisters only the division should be *in capita*. As under the SC. ORFITIANUM, the rights of the mother were not affected by her undergoing capitis deminutio minima, or by the illegitimacy of the deceased child.

TREBELLIANUM: *circ.* A.D. 62. Its provisions are described under FIDEICOMMISSUM. (Gaius, ii. 253–258; Inst. ii. 23, 4 *sq.*; Ulpian, *Reg.* 14–16; Paul. *Sent. Rec.* iv. 2; Dig. 36, 1; Cod. 6, 49.)

TURPILIANUM: enacted under Nero, probably in A.D. 61, for the purpose of preventing *praevaricatio*, the fraudulent or collusive abandonment of a criminal charge once preferred. The penalty is described by Tacitus (*Ann.* xiv. 41): "qui talem operam emptitasset vendidissetve, perinde poena teneretur ac publico judicio calumniae [CALUMNIA] condemnatus." [Dig. 38, 2, 14, 2; 47, 15, 3, 3; 48, 16 (ad Senatusconsultum Turpilianum); Cod. 9, 45 (ad SC. Turp.).]

DE USUFRUCTU earum rerum quae usu consumuntur [USUSFRUCTUS].

VELLEIANUM: enacted according to Ulpian (in Dig. 16, 1, 2, 1) in the consulship of M. Silanus and Velleius Tutor. There was a M. Silanus consul with Valerius Asiaticus in A.D. 46 (Dio Cass. lx. 27), and one of the same name with L. Norbanus Balbus in A.D. 19 (Tac. *Ann.* ii. 59): if a Velleius Tutor was consul at all with a Silanus, it was with L. Junius Silanus in A.D. 27; but this would seem to be too early for this senatusconsultum, which, from Ulpian's language in the Digest, cannot well be placed before the reign of Claudius, so that if any date must be assigned to it the first of those given is apparently the most probable. It provided that no action should lie upon any contract of suretyship entered into by a woman as *promissor*; at any rate this was its main effect, as interpreted by responsa of the jurists and imperial constitutions (Dig. 16, 1, 1, pr.; *ib.* 2, 4). It would seem, however, to have been the common practice (as in the case of the SC. Macedonianum) for the praetor to grant the action where there was any doubt as to the facts of the case, leaving the defendant to protect herself by a plea (*exceptio*) based on the senatusconsultum, which is frequently mentioned in the texts, and which could be pleaded against execution even after judgment had been delivered adversely to the woman (Dig. 14, 6, 11). Unlike the SC. Macedonianum, this enactment did not allow of the creation of even a "natural" obligation by the contracts against which it was directed; so that, if a woman paid the debt of another person for which she had made herself answerable in ignorance of her rights under the senatusconsultum, she could recover the money back by *condictio indebiti* (Dig. 12, 6, 40, pr.). There were, however, a variety of cases in which she was disentitled to the protection of this enactment: *e.g.* where she had been guilty of *dolus* towards the creditor (Dig. 16, 1, 2, 3); where the latter had no reason to believe the surety to be a woman (Dig. *ib.* 12); where the guarantee was given for valuable consideration (Cod. 4, 29, 23, pr.), or for a liability which practically was the woman's own; or where the creditor was a minor, and the principal debtor insolvent (Dig. 4, 4, 12).

As to the history of the principle expressed in the senatusconsultum, there are two views. According to one, which is supported by the actual terms of the enactment preserved in the Digest ("tametsi ante videtur ita jus dictum esse, ne eo nomine ab his petitio neve in eas actio detur, cum eas virilibus officiis fungi et ejus generis obligationibus obstringi non sit aequum," Dig. 16, 1, 2), women had been forbidden to become sureties for other persons even by the old Jus Civile, whose rules on this subject had ceased to be operative, and were merely re-enacted by the senatusconsultum; according to the other, the law was no older than edicts of Augustus and Claudius, prohibiting wives from becoming answerable for the debts of their husbands (Dig. 16, 1, 2, pr.), and the greater stringency and extent of the senatusconsultum were due to the recklessness with which women, after Claudius had abolished the tutela legitima of agnati over them, exercised their rights of administering and disposing of their property on behalf of other persons.

[Dig. 16, 1; Cod. 4, 29; Bachofen, *Das Velleianische Senatusconsult, Ausgewahlte Lehren*, pp. 1–58; Hellfeld, *de Intercessione Mulierum et Senatusconsulto Velleiano* (Op. Min. No. 4); Vangerow, *Lehrbuch der Pandekten*, § 581: see also the article on INTERCESSIO.]

VITRASIANUM: by some writers assigned to the reign of Vespasian, by others to that of Hadrian; but without any very substantial reason in either case: it provided that if the owner of a slave to whom a third person had bequeathed freedom of fideicommissum was an infans, and so unable to manumit, the act might be performed on his behalf by the praetor (Dig. 40, 5, 30, 6).

VOLUSIANUM (A.D. 56): penalising the pulling down of houses for the sake of profit (Dig. 18, 1, 52; Orelli, *Inscript.* No. 3115: cf. SC. Hosidianum). Tacitus (*Ann.* xiii. 28) mentions a senatusconsultum passed in this year, and presumably entitled after the consuls (Q. Volusius Saturninus and P. Cornelius Scipio), which limited the powers of the aediles in respect of taking pignora and inflicting fines. Another SC. Volusianum, mentioned in Dig. 48, 7, 6, contained a rule similar to the English law of champerty, that persons who joined in the suit of another, with the bargain that they should share with him the damages awarded by the condemnatio, should incur the penalties of the Lex Julia de vi privata. SEPTIMONTIUM. [Sacra, p. 578.]

SEPTUNX. [As.]

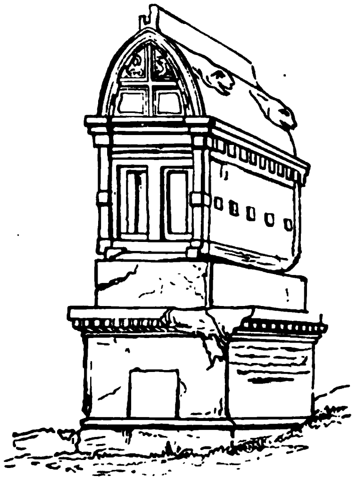
SEPULCRUM. — I. Greek. Sepulchral chambers cut in the rock are found at all periods and in all parts of the Greek world. The so-called "prison of Socrates" at Athens is a well-known example of this kind of grave (Curtius, *Atlas von Athen*, vii. 4). The form and arrangement of these rock-cut tombs are very various. They consist sometimes of a single chamber, sometimes of an assemblage of chambers forming a small catacomb. Generally one or more shelves are cut in the rock, at the side of each chamber, for the reception of the bodies, and for the vases and other objects which are placed beside them. (For accounts of rock-cut graves in Cyprus, at and near Paphos, *J. H. S.* [*Journal of Hellenic Studies*], 1888, p. 264 ff.; at Rhodes, Ross, *Arch. Ztg.* 1850, p. 209; at Selinus in Sicily, Cavallari, *Bullet. Sicil.* v. 1872, p. 10 ff.; in Karpathos, Bent, *J. H. S.* vi. 236.)

In the greater part of the Hellenic world rock-tombs are rather the exception than the rule, and were probably a luxury of the rich; but in Asia Minor, and especially in Phrygia and Lycia, they are found in enormous numbers, and often of elaborate and ornate kinds.

(1) The commonest type of ornate rock-tomb in Lycia is a very close imitation of a wooden structure, in which a framework of beams, the intervening spaces being filled with wooden panels, supports a flat roof with projecting eaves. The minutest details of wood-construction are reproduced in stone. Sometimes the façade only of such a house is cut in a wall of rock; sometimes it stands cornerwise, with two sides free; sometimes it is attached to the rock at the back only; and sometimes it stands entirely free (Benndorf and Niemann, *Reisen in Lykien und Karien*, p. 95 ff.). The interior consists of a small low chamber, generally furnished with three stone couches upon which to place the bodies. In some cases a pointed arch is found above the flat roof, similar to that which forms the top of the sarcophagus tombs (see below). In the later examples the whole façade is gradually assimilated to the typical façade of orthodox Greek architecture, with columns and architrave. The pointed arch then becomes converted into a pediment.

(2) The sarcophagus tombs are very numerous. Benndorf estimates that there are some two thousand of them in Lycia. The following woodcut of a tomb at Antiphellus, taken from Fellows' *Excursion in Asia Minor*, p. 219, gives a typical example; and two specimens may be seen in the British Museum.

In the earlier examples the peculiarities of wood-construction are very closely followed. The arched covering seems to represent a tent-like erection upon the flat roof of the house. As in the case of the rock-tombs already mentioned, there is some assimilation to ordinary Greek architecture in the later examples. This assimilation has been carried some way in the tomb represented in the woodcut.



Tomb in Lycia.

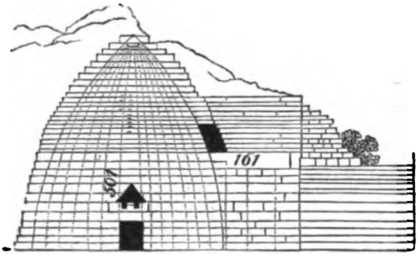
(3) Tombs in the shape of a high square column or pedestal, with a projecting cornice at the top, are found at Xanthos and elsewhere. Benndorf (*op. cit.* p. 108) enumerates eleven of them. The best known example is the "Harpy Tomb"—the sculptures from which are now in the British Museum (*Excursion in Asia Minor*, pp. 126, 231 ff.; *Discoveries in Lycia*, p. 168 ff.).

In Phrygia many rock-tombs are found. In some cases the façade is architectural in character, and ornamented with geometrical patterns (as the "Midas" tomb; Ramsay, *J. H. S.* ix. 380; Perrot and Chipiez, *Histoire de l'Art dans l'Antiquité*, v. p. 82, pl. 48); in other cases the ornament is sculptural, as at the "Lion Tomb" and the "Broken Lion Tomb" (*J. H. S.* ix. 361, 363, 368, &c. For Phrygian tombs, see Ramsay, *J. H. S.* iii. 1, 256, v. 241, ix. 350, x. 147; and Perrot and Chipiez, *op. cit.* pp. 81–147).

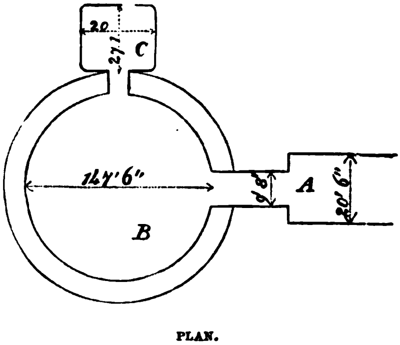
Large temple-tombs or *heroa* are found in various parts of Asia Minor. A central chamber stands upon a high basis or *podium*, and is surrounded by a colonnade. The "Nereid Monument" at Xanthus was of this type, and was probably sepulchral. A somewhat similar tomb at Mylasa in Caria is represented by Fellows (*Discoveries in Lycia*, p. 76). This type found its highest development in the Mausoleum at Halicarnassus in Caria [Mausoleum], which was so widely celebrated in the ancient world that the word *Mausoleum* was used by the Romans in the meaning of a splendid tomb. Large stone or marble structures of this type are seldom found in Greece proper; perhaps to some extent on account of the sumptuary laws, which restrained expenditure upon monuments. Thus, at Athens, it was provided by one of Solon's laws that no one should erect a monument which could not be completed by ten men in the course of three days; and Demetrius

Phalereus forbade the erection of any funeral monument more than three cubits in height (Cic. *de Legg.* ii. 26, 66).

An early and very remarkable form of tomb is that known as the bee-hive, or domed tomb. The best known example of this type is the so-called "Treasury of Atreus" at Mycenae, which is shown in section and plan below. A large circular chamber is built of courses of stones, which gradually overlap until they meet at the apex, so as to form a dome-shaped building, but not a true dome. The space for this chamber is excavated in the side of a hill, so that the whole projects very little above the natural level of the ground. It is approached by a stone-lined passage or δρόμος cut into the slope of the hill. The lintel of the door to which the δρόμος leads is formed of a single enormous block of stone. A door at one side of the domed chamber leads into the small sepulchral chamber cut in the rock. (*Athen. Mittheil.* iv. pp. 177–182; Helbig, *Das homerische Epos*, p. 53.)



SECTION.



PLAN.

A, entrance; B, principal chamber; C, small side chamber.

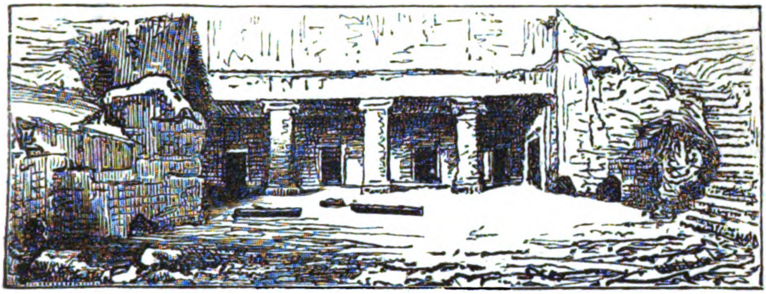
Other graves of a similar type have been found at Mycenae, and at many other places on the eastern shores of Greece; for example, at Menidhi (Acharnae) (Köhler, Lolling, and others, *Das Kuppelgrab bei Menidi*), Spata in Attica, Orchomenos, Nauplia, near the Heraeon in the neighbourhood of Argos, and at Volo in Thessaly. It seems probable that these tombs represent a later stage of the same civilisation which produced the graves excavated by Dr. Schliemann upon the Acropolis at Mycenae; but it is impossible here to discuss the questions which arise in connexion with them. (For references to literature upon the subject, see Helbig, *l. c.*)

The normal form of Greek grave may be considered to be a hole or trench in the ground, whether dug in earth or cut in rock. These are generally found in groups; forming, in fact, cemeteries. They are often marked with a monument; and they contain many objects besides the body. We have therefore to consider (1) the position in which graves were placed; (2) the form of the grave; (3) the monument placed above the grave; (4) the contents of the grave.

1. *Place of Burial.*—In the earliest times it was the custom, in Attica at any rate, for the dead to be buried in their own houses (Plat. *Minos*, 315 D); and traces of graves inside houses have been found at Athens (Curtius, *Atlas von Athen*, p. 19). At Mycenae the very early graves excavated by Dr. Schliemann are within the circuit of the citadel walls; and at certain places the burial of the dead within the city was not forbidden in historical times; as at Sparta (Plut. *Lyc.* 27: [Lycurgus] ἐν τῇ πόλει θάπτειν τοὺς νεκροὺς καὶ πλησίον ἔχειν τὰ μνήματα τῶν ἱερῶν οὐκ ἐκώλυσε), Megara (Paus. i. 43, 3), and Tarentum (Polyb. viii. 30). As a general rule, however, the places of burial were outside the city walls, and frequently by the side of roads and near the gates of the city. Thus at Athens the place of burial for those who had fallen in war was the outer Kerameikos, outside the Dipylon gate, on the road leading to the Academia (Thuc. ii. 34; Aristoph. *Av.* 395; Paus. i. 29, 4); and the common place of burial was outside the Itonian Gate, near the road leading to the Piraeus (Ἠρίαι πύλαι, *Etym. Mag.* and Harpocr. *s. v.*; Theophr. *Char.* 14); while burial within the walls was strictly forbidden (Cic. *ad Fam.* iv. 12, 3). At Tanagra the tombs are outside the ancient town; the three chief cemeteries being on the E., N., and S. (Haussoullier, *Quomodo sepulcra Tanagraei decoraverint*, p. 3), and the groups of tombs chiefly cluster round the roads (*ib.* p. 69).

2. *The Forms of Graves.*—At the Necropolis of Myrina, far the commonest form of grave was an oblong trench cut in the tufa, corresponding in size with the body to be buried. This sometimes had a covering of stone plaques, but often was merely filled in with earth (Reinach and Pottier, *La Nécropole de Myrina*, p. 59). This form of grave was also common at Tanagra; but when it was covered, tiles were used instead of stone plaques, and the trenches are for the most part dug in the earth, not cut in rock (Haussoullier, *op. cit.* p. 60). At Tanagra round pits, 1 ft. 6 in. to 5 ft. in diameter, are also found. At both places the graves are sometimes lined with stone slabs. In Cyprus, in the neighbourhood of Paphos, the tombs consist almost entirely of vaulted chambers, cut in the rock or earth, sometimes with niches radiating from a central chamber. The cut below shows one of the more elaborate rock-tombs (*J. H. S.* ix. p. 264 ff., for a description of the different varieties).

There are various statements in ancient authors as to the orientation of tombs (Plut. *Solon*, c. 10; Aelian, *V. Hist.* v. 14; Diog. Laert. i. 2, 48); but in cases in which careful observations have been made, no uniformity of direction has been found. (Myrina, *La Nécropole* *de M.*, p. 57; Tanagra, Haussoullier, *op. cit.* p. 69; Leontari Vouni, in Cyprus, *J. H. S.* ix. p. 156.)



Tombs at Paphos. (Cesnola.)

3. *Outer Adornment or Monument.* — The earliest kind of mark placed over a grave was probably the simple tumulus. In later times a grave-stone of some kind was generally set up. The shapes of these grave-stones are extremely various. They are divided by Koumanoudes (Ἀττικῆς ἐπιγραφαὶ ἐπιτύμβιοι, p. 18 ff.; cf. Von Sybel, *Die Sculpturen von Athen*, i. p. ix. ff.) into the following classes: — (1) *κιονίσκοι*. Small round columns, often with a simple moulding near the top, below which is the inscription. This is the commonest shape. (2) *πλάκες*, rectangular slabs, lying upon the ground. (3) *στῆλαι*. [See STELA.] (4) *Aediculae* or shrine-shaped stones. The top is generally of pedimental form, supported by pilasters or free columns. The space thus enclosed is filled by a sculptured representation, in very high relief in the later examples. (5) *Mensae* (a term used by Cicero, apparently for monuments of this class). Large rectangular blocks of stone, with architectural ornament at the base and on the cornice. (6) *Hydriae*. Large marble vases, in the shape of a lekythus, or of a tall amphora, of the kind used for funeral purposes [FUNUS], were sometimes set up as funeral monuments. Eustathius (ad *Il.* xxiii. 141) says that *τοῖς πρὸ γάμου τελευτῶσιν ἡ λουτροφόρος, φασίν, ἐπετίθετο κάλπις, εἰς ἔνδειξιν τοῦ ὅτι ἄλουτος τὰ νυμφικὰ καὶ ἄγονος ἄπεισι.* Koumanoudes argues from this passage that these marble vases were *λουτροφόροι*, and marked the graves of unmarried persons, and confirms his view by the fact that out of 171 cases in which the tombstone is a vase or bears a representation of one, all but five are certainly to be referred to unmarried persons. Other passages, however (Demosth. *adv. Leoc.* p. 1086, § 18; Pollux, viii. 66; Harpocr. *s. v.*), seem to show that the *λουτροφόρος* was a figure bearing a vase: as, indeed, the formation of the word would indicate. (7) *θῆκαι*, stone receptacles, for the ashes after cremation; round or square, with a lid. (8) Sarcophagi. The word *στήλη* is also used in a more general sense to include most kinds of funeral monuments; and a fuller discussion of the artistic ornament of funeral monuments will be found in the articles STELA and SARCOPHAGUS.

This classification of Attic monuments will apply with little modification to other parts of Greece. Thus at Tanagra we find classes (1), (3), (4), and in addition tombstones in the shape of altars (Haussoullier, *op. cit.* p. 15 ff., pll. ii.–v.). Altar-tombs are also common in Delos.

4. *The Contents of the Grave.*—It was the universal custom, at all periods and in all parts of the Greek world, to bury objects, of a great variety of kinds and often in great numbers, with the corpse. Our knowledge of the minor Greek arts—pottery, vase-painting, jewellery, terra-cotta work, gem-engraving, &c.—is almost entirely due to this custom. The scores of thousands of vases and terra-cottas contained in the Museums of Europe were, with few exceptions, discovered in tombs.

That the custom goes back to very early times is shown by the rich contents of the Mycenaean graves, now in the Polytechnic Museum at Athens. These include gold and silver cups and ornaments; bronze caldrons and other vessels; bronze sword-blades and other weapons, sometimes decorated with inlaid work of gold or other metals; and other objects, too numerous to mention here.

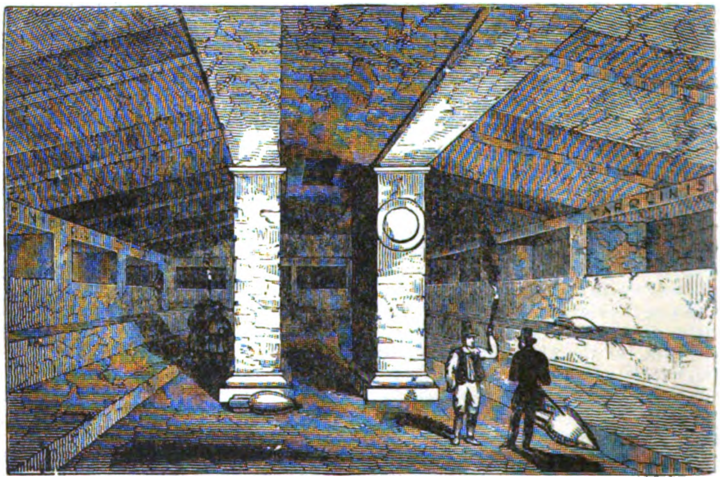
The objects usually placed in tombs may be thus classified (*La Nécropole de Myrina*, p. 105): —(*a*) The vase which contained the ashes, if the body had been burnt. This was most often of pottery, but sometimes of gold, silver, or other precious material. If the body had not been burnt, a coffin was often used. This was either of wood (as in some Greek graves in the Crimea, Stephani, *Compte Rendu*, 1865, pl. vi. 4, 5, p. 9; 1866, pll. i. and ii. p. 6 ff.; 1869, p. 177 ff.; 1875, pl. i. p. 5 ff.), or of earthenware, or of stone. Some forms of earthenware coffins are shown in the accompanying woodcut, taken from Stackelberg, *Die Gräber Hellenen*, pl. 7. (*b*) Objects which apparently belonged to the dead, and were used by him when alive: such as strigils, mirrors, perfume bottles, needles, &c.; rings, brooches, and other personal ornaments, including wreaths and diadems, which were often made of flimsy material for funeral purposes. (*c*) Vessels intended to hold meat and drink for the dead. Sometimes remains of food are found in these vessels. The number of them is sometimes very large; in some tombs at Myrina as many as sixty or seventy earthenware

Earthenware coffins. (Stackelberg.)

bottles and vases were found. (*d*) Small terracotta figures. The reason for placing these in the tomb has been much discussed. (For reff. to literature upon the subject, see *La Nécropole de Myrina*, p. 107, note.) They are specially frequent in Boeotia, and are usually named after Tanagra, the place where they were first found in large numbers. They were sometimes intentionally broken before being placed in the tomb (Haussoullier, *op. cit.* p. 79). Some connexion may be traced between the subject represented and the owner of the grave. Statuettes of women and of female divinities are more common in the graves of women; male divinities, as Dionysus, Heracles, Atys, in those of men; and toys in those of children (*La Nécropole de Myrina*, p. 107; TERRA-COTTA). (*e*) Charon's coin [see FUNUS]. To these must be added a variety of miscellaneous objects, such as engraved gems, earthenware lamps, small objects of bronze, glass bottles and cups, so far as they are not included under the first category.

[The more important books have been frequently referred to in the course of the article. For Greek graves in S. Russia, *Compte Rendu*, 1865, pp. 9 ff.; 1859, pll. v. and vi. For an account of the graves at Poli tes Chrysochou in Cyprus, see *Journal of Hellenic Studies*, vol. xi. 1. For a general account of the subject, Stackelberg, *Die Gräber der Hellenen*; Becker, *Charikles*, 4th English edit., pp. 383–402 = Becker-Göll, iii. 114–167; Hermann-Blümner, *Privatalt.* pp. 373–387, where will be found references to the literature of the subject, which is large and scattered.]

II. ITALIAN. Among the nations of Italy the Etruscans are remarkable for the care which they gave to their graves. These graves are almost always subterranean. The more sumptuous tombs consist of chambers hewn in the rock; either beneath the surface of the ground, or penetrating horizontally into a cliff. A large number of such tombs are described and represented in Dennis's *Etruria*, and the accompanying woodcut of the Tomb of the Tarquins at Cervetri is taken from that work (i. 242).



Tomb of the Tarquins.

It will be observed that this tomb is hewn in imitation of wood-construction; and in fact the sepulchral chambers generally imitate the abodes of the living. For example, a tomb at Corneto (Micali, *Antichi Monumenti per servire alla Storia*, &c. lxiv. 3; Baumeister, *Denkm.* pl. xi. 663) has its roof cut in the form of a *cavaedium displuviatum*. In these tombs the bodies were generally placed upon stone couches, accompanied by numerous vases and other objects (see below). The walls also are frequently adorned with paintings, representing scenes of the cult of the dead, and of daily life, and, in some of the late examples, scenes from Greek mythology. (Baumeister, *Denkm.* p. 512, and figs. 554, 555; Micali, *op. cit.* pll. lxv.–lxx.)

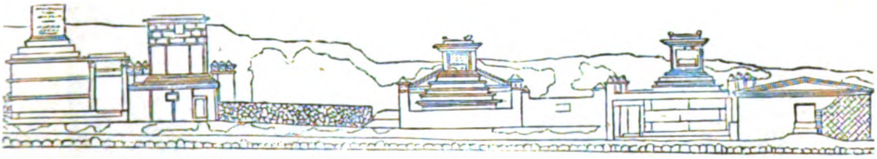
But, as in Greece, so in Italy, rock-tombs are not the most common form. Extensive and careful excavations in the neighbourhood of Bologna, at Falerii, and in other places, have given us full knowledge of several Italian cemeteries. The objects found in graves at Bologna are admirably arranged in the Museo Civico at that place. The results obtained from comparison of them are, shortly, as follows (E. Brizio, *Guida del Museo Civico di Bologna*). The graves may be divided into three classes. (1) *Umbrian.* The graves are oblong, polygonal, or square holes lined with stone. In each tomb is a large earthenware vase, containing the ashes of the burnt body. In a few of the later tombs unburnt skeletons are found, but these are very rare. Arms, knives, and ornaments are found in great numbers; in the earlier tombs of bronze only, in the later of iron also. Vases, spindles, and whorls of pottery also occur in great numbers. In the later tombs a great advance is shown in the skill with which the potter varies the forms and adornment of the vases. (2) *Etruscan.* The earliest Etruscan tombs appear to be of about the same date as the latest Umbrian: possibly of the 6th century B.C. They are distinguished from the Umbrian tombs partly by the method of burial, — two-thirds of the bodies are buried without burning, and one-third only are burnt,—partly by the tombstones, often bearing representations of Etruscan religious scenes, which are placed above the graves, and partly by the contents. The shapes of the bronze objects found are characteristic and varied; and the pottery is almost all of Greek workmanship, or imitated from Greek models. The Greek vases are for the most part red-figured; but vessels of the "Corinthian" style, and an amphora partly black-figured and partly red-figured, have been found in the earlier tombs. (3) *Gallic.* A certain number of graves, of a rather late period, appear to be Gallic in character.

The collection of objects found at Falerii is now displayed in the new museum at the Villa Giulia, outside the Porta del Popolo at Rome. An account of it, by E. Brizio, is published in the *Nuova Antologia* (Dec. 1889, p. 419 ff.). The graves at Falerii consist for the most part of chambers furnished with a number of niches, and so capable of receiving the remains of a number of persons. This peculiarity makes the investigation of the chronological sequence of the graves difficult; for the interments in each chamber extend over a considerable period. It is impossible here to discuss in detail the questions involved. It must suffice to mention one remarkable method of burial. In several cases coffins have been found made of the trunk of a tree, cut in half and hollowed. A similar coffin has been found near Gabii; and at Rome, beneath the *agger* of Servius, a terra-cotta sarcophagus has been discovered, resembling in form the trunk of a tree. This form of tree-coffin appears frequently in Northern Europe, especially in Westphalia.

At Rome, it has been shown by recent excavations that a large cemetery lay on the east side of the city, outside the Porta Viminalis, and that it was still in use in the latest times of the Republic. This was the place of burial for slaves and poor people (Hor. *Sat.* i. 8, 8). The graves are of various kinds; among others *puticuli* or well-graves; that is to say, pits which served as a common grave for the bodies of those who could not afford the expense of separate burial. (Varro, *L. L.* 5, 25: "a puteis puticuli, quod ibi in puteis obruebantur homines, nisi potius, ut Aelius scribit, puticulae, quod putescebant ibi cadavera projecta. Qui locus publicus ultra Exquilias." Festus, *Ep.* p. 216; Com. Cruq. *ad* Hor. *Sat.* i. 8, 10, &c.) Here, too, the bodies of executed criminals were thrown unburied (Hor. *Sat.* i. 8, 17; *Epod.* 5, 99; Dionys. xx. 16). This cemetery was disused from the time of Augustus onwards, and was turned into gardens, to the great improvement of the sanitary condition of the district (Hor. *Sat.* i. 8, 14; Porphyrio and Com. Cruq. *in loc.*).

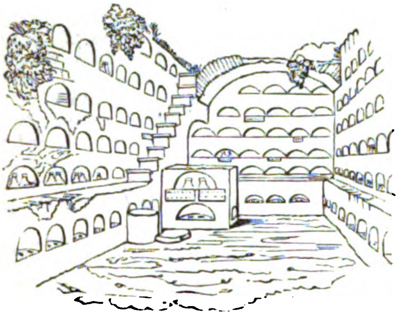
Burial within the city was forbidden, from the time of the Twelve Tables; but exceptions might be made in the case of specially distinguished persons—as, for example, in the case of C. Fabricius (Cic. *de Legg.* ii. 23, 58) and Valerius (Plut. *Q. R.* 79), and generally in the case of those who had celebrated a triumph (Plut. *ib.*). The Vestal Virgins and the emperors were buried in the city, according to Servius (*ad Aen.* xi. 205), because they were not bound by the laws, but Eutropius (8, 5) tells us that Trajan was the only emperor for whom the privilege was used. By a rescript of Hadrian, those who buried a person in the city were liable to a penalty of 40 aurei (Dig. 47, 12, 3, § 5). The practice was also forbidden by Antoninus Pius (Capitol. *Anton. Pius,* 12) and Theodosius II. (Cod. Theod. 9, 17, 6). A similar prohibition was in force elsewhere (*Lex Coloniae Genetivae,* lxxiii.; *Ephem. Ep.* iii. p. 94).

The customary place for the tombs of well-to-do families was by the side of the roads leading out of the city. Many such tombs are still preserved by the side of the roads leading out of Rome, especially the Appian Way, and many more have been destroyed in comparatively recent times. A row of them also stands outside the Herculanean gate at Pompeii. Part of this Pompeian street of tombs is represented in the accompanying woodcut, taken from Mazois, *Pompeiana,* part i. pl. 18. These private tombs vary very widely in arrangement and architecture. In some cases we have underground chambers, similar to those found in Etruria; as, for instance, the tomb of the Scipios on the Via Appia. But generally the tomb consists of a building enclosing a chamber; and in this chamber are placed the urns containing the ashes of the dead. Some not uncommon forms are shown in the above representation of tombs at Pompeii. Other forms are the pyramid, as in the case of the tomb of C. Cestius, near the Porta Ostiensis; the round tower, as in the well-known tomb of Caecilia Metella; and the conical turret, as in the so-called tomb of Virgil near Naples, and the so-called tomb of Aruns or of the Horatii and Curiatii near Albano. This last shape seems to follow an Etruscan model, for conical turrets are the chief feature of the tomb of Porsenna, as described by Pliny (*H. N.* xxxvi. §§ 91–93; Fergusson, *J. H. S.* vi. 207–232). One of the most splendid sepulchral edifices was the Mausoleum of Hadrian (see pp. 149 ff.). (For an enumeration of tombs outside Rome and for references to literature concerning them, see Marquardt, *Privatleben,* pp. 361, 362.)



The Street of Tombs at Pompeii.

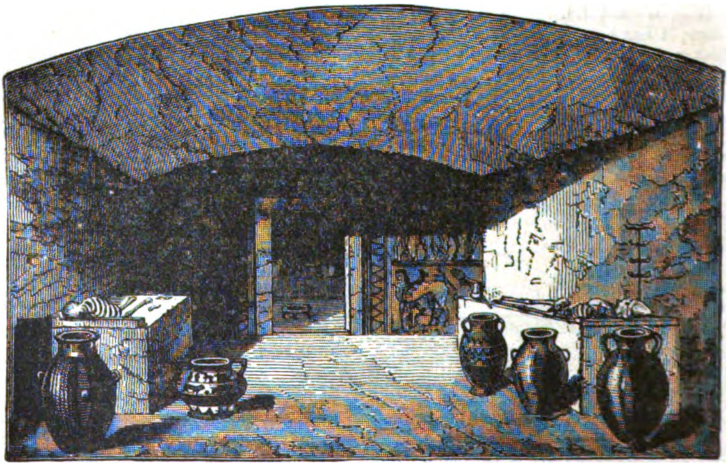
Another form of grave is the *columbarium.* This is found not unfrequently at Rome, but is hardly known elsewhere; probably because land at Rome was much more valuable than at any other place. It consists of a building provided on the inside with a large number of niches, flat at the bottom, arched at the top. Each niche, as a rule, is intended to hold two urns [Ollae], in which the ashes were placed. The name *columbarium* was given to such graves because of the resemblance which these niches bear to the holes of a pigeon-house. The general arrangement of a *columbarium* is shown in the above woodcut, which represents one found in the year 1822 at the Villa Rufini, about two miles beyond the Porta Pia. Columbaria were sometimes provided by great families as a burying-place for their slaves, freedmen, and dependents: *e.g.* by the Statilii Tauri (*Bull. della Commissione arch. municip.* 1875, p. 151 ff.; *C. I. L.* vi. p. 994 ff.), by the Volussi (*C. I. L.* vi. p. 1043), and by Livia (Gori, *Columbarium Liviae Augustae*, 1727; Ghizzi, *Camere sepolcrali de' liberti e liberte di Livia Augusta e de' altri Cesari*, 173; *C. I. L.* vi. p. 877). But most frequently they were erected by burial societies, formed by persons who were too poor to purchase a place of burial for themselves. Considerable light has been thrown upon the constitution and arrangement of these societies by inscriptions, and especially by those found in the year 1852 in a columbarium upon the Via Appia, not far from the tomb of the Scipios (*C. I. L.* vi. p. 939 ff. The inscriptions are given in full, with comments and a description of the columbarium, by Wilmanns, pp. 125–146; Marquardt, *Privatleben*, p. 372). The inscriptions from columbaria are collected in *C. I. L.* vi. p. 875 ff. (cf. Wilmanns, p. 117 ff.); and further references to literature upon the subject are given by Marquardt, *op. cit.* pp. 135, 371, 372.



Columbarium at Rome.

An account of Roman tombs would not be complete without some mention of the Catacombs; but as they were almost exclusively used by the Christians, it must suffice here to refer to the *Dictionary of Christian Antiquities* and the authorities there cited.

Contents of Tombs.—If the body was not burnt, it was placed in the tomb either enclosed in a coffin or sarcophagus [Sarcophagus], or unenclosed. In the latter case in Etruscan tombs it is generally placed upon a couch of stone, as is shown in the accompanying representation of a tomb at Veii (from Birch, *Anc. Pottery*, p. 149). If the body was burnt, the ashes were placed in an urn or pot (*urna*, *olla*).



Tomb at Veii. (Birch.)

The urn takes many forms. The hut-urns found at Albanos [see cut under Tugurium] are made of earthenware, and represent a primitive hut, with a peaked straw roof, similar apparently to the contemporary dwellings of the living (Ghirardini, *Notizie degli Scavi*, 1881, p. 354 ff., pl. v.; Marquardt, *Privatleben*, p. 216; Dennis, *Etruria*, i. lxix.). The urns also in the Bolognese cemeteries and in the columbaria are generally of earthenware. In Etruria a favourite form is a miniature sarcophagus of earthenware or stone, with a recumbent figure upon the lid. Marble, stone, and alabaster are commonly used; and the next woodcut represents a sepulchral urn of marble in the British Museum. The inscription shows that it contained the ashes of Cossutia Prima. It is of an upright rectangular form, richly ornamented with foliage and supported at the side by pilasters. Its height is 21 inches, and its width about 15. Other materials used are glass, and various metals,—lead, bronze, silver, and even gold.

Roman Sepulchral Urn. (Brit. Mus.)

A large number of other objects (of which some mention has been made above) were generally placed in the tomb, apparently with the intention of supplying the dead with the customary apparatus of life. Thus in the early tombs weapons and armour frequently occur. Later, agricultural implements and tools are often found; and in the case of women, articles of the toilet, scent-bottles, ornaments, and so forth. Clothes, money, food and drink, and vessels for containing them, were often added. The last purpose may explain to some extent the large number of vases which are often found in tombs. Several are to be seen in the picture of a tomb at Veii given above. In Etruria Greek vases and native imitations of Greek vases were used in very large numbers for this purpose; and it is from Etruscan tombs that the majority of extant Greek vases comes. With the exception of those which were found at Pompeii, nearly all the objects of daily use in our Museums have been taken from graves. We must add lastly altars, lamps and candelabra, intended for ritual purposes. (For references on this subject, see Marquardt, *Privatleben*, p. 365 ff.)

(Marquardt, *Privatleben*, pp. 340–385; Becker, *Gallus*, 4th English edit., pp. 505–523 = Becker-Göll, iii. 481–547; Raoul-Rochette, *Troisième Mémoire sur les Antiquités chrétiennes des Catacombes*, in *Mém. de l'Acad. des Inscriptions*, vol. xiii. 1838, pp. 529–788; Guhl and Koner, *Life of the Greeks and Romans*, pp. 375–387; Baumeister, *Denkmäler*, art. *Gräber*. For Etruscan tombs, Dennis, *Etruria*. For Pompeian tombs, Overbeck and Mau, *Pompeji*, 4th edit., pp. 396–422. The more important sepulchral inscriptions are conveniently collected by Wilmanns, *Exempla Inscriptionum Latinarum*, cap. ii. vol. i. pp. 49–173.) [FUNUS.] [H. B. S.]

SEQUESTRES. [AMBITUS.]

SERA. [JANUA.]

SE'RICUM (*σηρικόν, βομβύκια*). Silk appears in Roman literature under three different names—*vestes Coae*, *bombycinae*, and *sericae*—though in strict usage only the last was what we should recognise as true silk. For the passages descriptive of the first, see COA VESTIS: it is mentioned by no writer later than Pliny, and we may suppose this industry to have died out early in the Empire. Though Isidore (*Orig.* xix. 22) makes the *Coae* and *bombycinae* identical, there can be no doubt that he was mistaken. The difference was not merely that the one was manufactured in Cos, the other in Assyria (Aristot. *H. A.* v. 19, p. 551; Plin. *H. N.* xi. §§ 76–78; Propert. ii. 3, 15, where *Arabius* is loosely used for "eastern"), but the worms themselves were different. The bombyx of Cos was a species living on the oak, the ash, and the cypress; that of Assyria was the true mulberry silkworm: the material therefore was originally different, but was treated in the same way; for in both districts the insect was allowed to develop itself, and the *pierced* cocoons were used. These were impossible to unwind, because the continuity of the threads had been broken; so they were carded, and then spun like cotton, and gave a coarser silk which is called *galette*. The fact of the worm being left in its wild state to spin on trees whence the deserted cocoon was gathered (cf. Verg. *Georg.* ii. 121; Petron. 119; Plin. *H. N.* vi. § 54; Sil. Ital. vi. 4, xiv. 664; Dionys. Perieg. 752) gave rise to the notion, which we find expressed even in Strab. xv. p. 693, that the silk grew on the leaves, and was scraped off them. Pausanias (vi. 26), however, gives the true account.

The distinction between *vestes sericae* and *bombycinae* is marked in Ulp. *Dig.* 34, 2, 23, 1; Apul. *Met.* viii. 27 (where the priests wear *bombycina:* the image of the goddess is "serico contecta amiculo"). As will be seen from what has already been said, the essential difference lay not in the silkworm (since the produce of the mulberry silkworm was used at all times in India, Persia, and Assyria), but in the fact that the Chinese alone discovered the method of unwinding the cocoon while it was entire, and cultivated the silkworm for that purpose instead of carding the pierced cocoons. This true silk was therefore imported from China, usually overland through Samarcand to the Persian Gulf, thence to Phoenicia or Egypt, and finally to Rome (Procop. *Anecd.* 25; [Arrian,] *Per. M. Eryth.* 56). It is stated by most modern writers (Blümner, Marquardt, Becker-Göll) that the Chinese silk was imported at first in woven pieces (*ὀθόνια σηρικά*), that these were laboriously unravelled, and the silken thread thence obtained re-woven with an admixture of wool. We must confess that this theory, which is antecedently unlikely, seems to us to rest on very slight evidence. Pliny (who merely translates Aristotle), when he speaks of the "redordiri rursusque texere" (xi. § 76) and of the "geminus feminis labor redordiendi fila rursusque texendi," is, like Aristotle, speaking only of carding out cocoons whence to spin a thread and then to weave.

The theory, then, rests on the lines of Lucan (x. 140):

> "Candida Sidonio perlucent pectora filo,
> Quod Niliotis acus percussum pectine serum
> Solvit et extenso laxavit stamina velo,"

which Marquardt takes to mean that the stuff was woven in China, dyed at Sidon, and then unpicked and re-woven in Egypt. But it is dangerous to trust in so technical a matter to poetical description, and moreover the version of Mr. Haskins in his recent edition of Lucan is more probable, "loosened the threads by stretching the fabric;" *i.e.* the material was close-woven by the Chinese and thinned out, so as to be transparent, by the Egyptians: the word *acus*, perhaps, also implies embroidery. If this view is correct, the mixed fabrics which were worn under the earlier Empire must (when made of Chinese silk as *sericae*, not *bombycinae*) have been made of the silk thread (*νῆμα σηρικὸν*) or of the raw silk (*μέταξα*) interwoven with flaxen or cotton thread into a cheaper, lighter, and more transparent dress than the Chinese silk stuffs. This material became more and more fashionable. Even men dressed in silk; and hence the senate, early in the reign of Tiberius, enacted "ne vestis serica viros foedaret" (Tac. *Ann.* ii. 33; Dio Cass. lvii. 15). In the succeeding reigns we find the most rigorous measures adopted by those emperors who were characterised by severity of manners, to restrict the use of silk, while others, like Caligula, encouraged it (Suet. *Cal.* 52; Dio Cass. lix. 12: cf. Joseph. *B. J.* vii. 5; Mart. xi. 9, 27, xiv. 24).

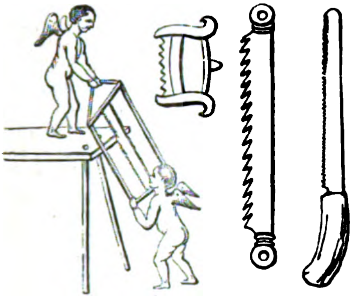
This mixed fabric, based on Chinese silk, was generally called *sericae vestes*, but received a distinct name when the Romans began to import the pure woven silk stuffs, which were called *holosericae* and were introduced by Elagabalus (Lamprid. *Heliog.* 26): the silk flags on the Parthian standards, which struck the eyes of the Romans in the battle of Carrhae more than two centuries earlier, were doubtless of this material (Flor. iii. 11). The expense of it was so great that the successor of Elagabalus, Alexander Severus, never wore it (Lamprid. *Alex. Sev.* 40), and it was said to have been sold for its actual weight in gold (Vopisc. *Aurelian.* 45). Thenceforth, though the general name *sericum*, or *sericae vestes*, included both kinds, and naturally more often means the less costly mixed silk, there was strictly the distinction between *holosericae* (pure silk) and *subsericae* (or *tramosericae*), in which the woof was silk, and the warp of flax or wool (Isid. *Orig.* xix. 22). The increasingly common use of both holosericae and subsericae may be seen as time went on (Solin. p. 202; Vopisc. *Tacit.* 10, *Carin.* 19; Ammian. xxiii. 6; Symmach. *Ep.* iv. 8). Christian writers condemn it (Clem. Alex. *Paedag.* ii. 10; Tertull. *de Pall.* 4); St. Jerome (*ad Marcell.*) says that those who did not wear it were taken for monks: actors were forbidden to wear figured and gold-embroidered silks, but were allowed plain silks (Cod. Theod. 15, 11, 7). We find among trades the sericarii, holosericopratae, and metaxarii (*C. I. L.* vi. 9678, 9893; Cod. Just. 8, 13, 27), and a *σηρικοποιός* (*C. I. G.* 5834).

The production of raw silk (*μέταξα*) in Europe was first attempted under Justinian, A.D. 530. The eggs of the silkworm were conveyed to Byzantium in the hollow stem of a plant from "Serinda," which was probably Khotan in Little Bucharia, by some monks, who had learnt the method of hatching and rearing them. The worms were fed with the leaf of the Black or Common Mulberry (*συκάμινος*: Procop. *B. Goth.* iv. 17; Glycas, *Ann.* iv. p. 209; Zonar. *Ann.* xiv. p. 69, ed. Du Cange; Phot. *Bibl.* p. 80, ed. Roth). The cultivation both of this species and of the White Mulberry, the breeding of silkworms, and the manufacture of their produce, having been long confined to Greece, were at length in the twelfth century transported into Sicily, and thence extended over the South of Europe. (Otto Frisingen, *Hist. Imp. Freder.* i. 33; Man. Comnenus, ii. 8.) The progress of this important branch of industry was, however, greatly impeded even in Greece, both by sumptuary laws restricting the use of silk except in the church service or in the dress and ornaments of the court, and also by fines and prohibitions against private silk-mills, and by other attempts to regulate the price both of the raw and manufactured article. It was at one time determined that the business should be carried on solely by the imperial treasurer (*praefectus thesauro*). Peter Barsames, probably a Phoenician, held the office, and conducted himself in the most oppressive manner, so that the silk trade was ruined both in Byzantium and at Tyre and Berytus; whilst Justinian, the Empress Theodora, and their treasurer amassed great wealth by the monopoly (Procop. *Hist. Arcan.* 25).

(The best treatment of this subject will be found in Pariset, *Hist. de la Soie*, vol. i. pp. 1–90: see also Marquardt, *Privatleben*, pp. 491–499; Blümner, *Technol.* i. 192; Becker-Göll, *Gallus*, iii. 283; Yates, *Textrinum*, p. 160 ff.) [J. Y.] [G. E. M.]

SERRA, *dim.* **SE'RRULA** (*πρίων*), a saw. It is not improbable, as Virgil says (*Georg.* i. 144, a line rejected by some critics), that it was an invention which superseded the primitive use of wedges, but it is at any rate very ancient, and its origin is lost in the mythical ages, being attributed either to Daedalus (Plin. *H. N.* vii. § 188; Sen. *Epist.* 90), or to his nephew Perdix (Hygin. *Fab.* 274; Ovid, *Met.* viii. 246) [CIRCINUS], also called Talos, who, having found the jaw of a serpent and divided a piece of wood with it, was led to imitate the teeth in iron (Diod. Sic. iv. 76; Apollodor. iii. 15). Hyginus and Isidore (*Orig.* xix. 19) make the backbone of a fish the original pattern. In a bas-relief published by Winckelmann (*Mon. Ined.* ii. fig. 94), Daedalus is represented holding a saw approaching very closely in form to the Egyptian saw delineated below. The iron blade of the saw was called *τάρσος* in Greek (Opp. *Hal.* v. 201), *lamina* in Latin (Verg. *Georg.* i. 143); the teeth, *ὀδόντες* and *dentes*. The form of the larger saw used for cutting timber is seen in the woodcut below, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century (Montfaucon, *Pal. Graec.* p. 203). It is of the kind which we call the frame-saw, because it is fixed in a rectangular frame. It was held by a workman (*serrarius*, Sen. *Epist.*

57) at each end. The line was used to mark the timber in order to guide the saw (Sen. *Epist.* 90); and its movement was facilitated by driving wedges with a hammer between the planks (*tenues tabulae*) or rafters (*trabes*). (Corippus, *de Laud. Just.* iv. 45–48.) A similar representation of the use of the frame-saw is given in a painting found at Herculaneum, the operators being winged genii, as in this woodcut (*Ant. d'Ercol.* i. tav. 34); but in a bas-relief published by Micali (*Ital. av. il Dom. dei Rom.* tav. 49) the two sawyers wear tunics girt round the waist like that of the ship-builder in the woodcut under ASCIA. The woodcut here introduced also shows the blade of the saw detached from its frame, with a ring at each end for fixing it in the frame, and exhibited on a tomb-stone published by Gruter.



Serrae.

On each side of the last-mentioned figure is represented a hand-saw adapted to be used by a single person. That on the left is from the same monument as the blade of the frame-saw; that on the right is the figure of an ancient Egyptian saw preserved in the British Museum. These saws (*serrulae manubriatae*) were used to divide the smaller objects. Some of them, called *lupi*, had a particular shape, by which they were adapted for amputating the branches of trees (Pallad. *de Re Rust.* i. 43). It is not unlikely that these were saws with a wide "set" to the teeth. The primitive saws, no doubt, had teeth running in the same line as the blade: it must have been an improvement to have what is called a "set," *i.e.* the alternate teeth bent sideways in opposite directions to prevent the saw from getting jammed in its passage, and the *lupi* for sawing trees would naturally be improved by having a wide "set." This is what Pliny (*H. N.* xvi. § 227) must mean by *alterna inclinatio*.

Pliny (*H. N.* xxxvi. § 159) mentions the use of the saw in the ancient Belgium for cutting white building-stone: some of the oolitic and cretaceous rocks are still treated in the same manner both in that part of the Continent and in the south of England. In this case Pliny must be understood to speak of a proper or toothed saw. The saw without teeth was then used, just as it is now, by the workers in marble, and the place of teeth was supplied, according to the hardness of the stone, either by emery or by various kinds of sand of inferior hardness (Plin. *H. N.* xxxvi. § 51). In this manner the ancient artificers were able to cut slabs of the hardest rocks, which consequently were adapted to receive the highest polish, such as granite porphyry, lapis-lazuli, and amethyst. [MOLA; PARIES.] The *serrula* in Cic. *pro Cluent.* 64, 180, with which the bottom of a chest was cut out, has given rise to some discussion. In a recent number of the *Classical Review* (Oct. 1889) Mr. Owen suggests that it was "a round saw, shaped like a tea-cup inverted, which worked on the bottom of the chest by means of a handle moving on the principle of a brace and bit." A drawing of such a tool is given in the article referred to. We are assured by a working carpenter that, though nothing of the kind is known in the modern trade, it would act efficiently and also more silently than a saw drawn backwards and forwards, assuming that it has a pivot to work on; and moreover that it would not be difficult to make such an implement with a thin "ribbon" saw. We think, therefore, that the suggestion is plausible: otherwise there is no difficulty in imagining a hole first bored in the natural way with a centrebit [see TEREBRUM] and the piece cut out with a small saw, like our "key-hole" saw, with a thin end, toothed on both sides and capable of being turned round. Cicero was, of course, not describing anything that he had seen: the only necessary condition is that it should *not* be of the patterns in most ordinary use. (On the general subject, see Beckmann, *Hist. of Inventions*, i. 361; Blümner, *Technologie*, ii. 216–221.) [J. Y.] [G. E. M.]

SERRA'TUS. Tacitus says of the Germans (*Germania*, 5), "pecuniam probant veterem et diu notam, serratos bigatosque." These were denarii struck under the Roman Republic; the serrati having a serrated edge, the bigati bearing the type of a biga. (Here we have a quadriga.) That the Germans should prefer these coins of the Republic to those of the Empire, inferior in weight and purity, was natural; and treasures found in Germany have confirmed Tacitus's testimony. (Mommsen, *Röm. Münzwesen*, p. 771.) [P. G.]

Denarius serratus.

SERTA. [CORONA, Vol. I. p. 545.]

SERVIA'NA ACTIO. [PIGNUS.]

SE'RVITUS. [SERVUS.]

SERVITU'TES. Where one person has a right over property of another, which he can assert by legal remedy against any one who interferes with its exercise, and not merely against the owner of the property, he is said to have a *jus in re aliena*, and his right belongs to those which are "real" or *in rem*. By the existence of such a right the legal position of the owner is diminished in value: his ownership, which otherwise would be unrestricted, is curtailed, not in duration, but in extension. The presumption of law was in favour of the freedom of property, and the burden of proving his right over it lay on the other party: hence, when a thing was sold as *optima maxima*, this was legally understood to mean that it was warranted free from any real rights in persons other than the owner (Dig. 50, 16, 90 and 169: cf. Cic. *de Leg. Agr.* iii. 2, 7). Two classes of such *jura in re aliena* are known to Roman law: one recognised by the old Jus Civile, and termed *servitutes;* the other of praetorian origin, and known by specific names, viz. EMPHYTEUSIS, PIGNUS, and SUPERFICIES.

The term *servitus* properly denotes the *quasi* non-free condition of an object over which rights are enjoyed by a person other than its owner (Dig. 39, 1, 5, 9), but more commonly it is used to express the deducted right itself. As to such rights in general, there are a few fundamental rules admitting of very brief statement. No one can have a servitude over property of his own ("nulli res sua servit," Dig. 8, 2, 26), so that a servitude will be extinguished *ipso facto* as soon as the person in whom it is vested becomes owner of the property over which it is exercisable (*res serviens*) or *vice versâ.* No one servitude can be the object of another, for "servitus servitutis esse non potest" (Dig. 33, 2, 1); but there can be servitudes over other incorporeal things, *e.g.* over an emphyteusis or a superficies (Dig. 43, 18, 1, 6, 7, 9). Being created solely for the benefit of a determinate subject, servitudes are intransferable, or inseparable from the subject itself (Dig. 10, 2, 15; 8, 4, 12); and, lastly, a servitude must not merely limit the rights of the owner of the *res serviens,* but must confer a positive advantage on the other party (Dig. 8, 1, 15).

These rights may be classified in various ways. They are divided, with reference to the owner of the *res serviens,* into affirmative and negative. If he has to allow the other party to do something from which otherwise he could legally hinder him (*e.g.* to walk across his field), the servitude is affirmative, and is said to consist *in patiendo;* if he is obliged himself to refrain from doing some act which otherwise he would be at perfect liberty to do (*e.g.* to add a story to his house), the servitude is negative, and is said to consist *in non faciendo.* But no servitude can consist *in faciendo,* in the sense of the owner of the *res serviens* being compellable to perform some positive duty: for to this would correspond only a right *in personam,* whereas a servitude is a right *in rem* (Dig. 8, 1, 15, 1). He may owe a positive act in respect of the *res serviens* (*e.g.* to keep a road in repair over which his neighbour has a right of way), but a violation of this duty would generally be redressed by a personal action, not by the real action arising from the servitude. Where the owner of a wall on which his neighbour had the right of support for his house (*servitus oneris ferendi*) undertook to keep the wall in repair, this duty could be enforced (according to Servius Sulpicius, whose view prevailed over that of Aquilius Gallus) by action on the servitude; but the legal principle last stated was so far observed that the owner of the wall was able to release himself from the duty by abandonment (*derelictio*), and could not be compelled to support the house by other means while the wall was being repaired (Dig. 8, 5, 6, 25; *ib.* 8, pr. and 2; 8, 2, 33).

But the current Roman classification of servitudes is into praedial and personal (Dig. 8, 2, 1). A praedial servitude can belong to a man only as being owner or tenant of a parcel of land or a house (*praedium*), whereas he can have a personal servitude without any such restriction. Again, the latter can be enjoyed over any object of property; the former only over another *praedium* (Inst. ii. 3, 3) adjoining (Dig. 8, 3, 5, 1) that in whose favour it exists, and to which it is appurtenant. Thus there can be no praedial servitude without both a *praedium serviens* and a *praedium dominans.* The right must be of such a nature that by it the use and enjoyment of the latter are enhanced or rendered more complete and effectual (Dig. 8, 2, 8, pr.; *ib.* 15, pr.); it is consequently inseparable therefrom, passing with it when conveyed, and its extension is determined only by the requirements of the *praedium dominans* itself (Dig. 8, 3, 5, 1). But the latter's owner must exercise his right with proper regard for those of the owner of the *praedium serviens* ("civiliter modo," Dig. 8, 1, 9), who must himself permit the former to do all acts necessary for its due enjoyment (*e.g.* repairs, Dig. *ib.* 10). The rule "omnes servitutes praediorum perpetuas causas habere debent" (Dig. 8, 2, 28) signifies that the servitude must permanently benefit the *praedium dominans* (whence "neque ex lacu neque ex stagno concedi aquaeductus potest," Dig. *ib.*, and "servitutes [praediorum] ipso quidem jure neque ex tempore, neque ad tempus, neque sub condicione, neque ad certam condicionem constitui possunt," Dig. 8, 1, 4), and also that no right can be a praedial servitude whose enjoyment necessitates constant action on the part of the owner of the *praedium serviens.*

A personal servitude (*servitus personarum,* Dig. 8, 2, 1; *personalis servitus,* Dig. 34, 3, 8, 3) is one which belongs simply to a man *as such,* and not as owner or tenant of this or that land or house: it is limited in duration at least by that of his own lifetime, and, as has been already remarked, can exist over any object of property whatever. All servitudes of this class are affirmative; praedial servitudes can be either affirmative or negative, as will be seen by reference to those of which an account is given below.

Personal servitudes are four in number, viz. USUS, USUSFRUCTUS, *habitatio,* and *operae servorum sive animalium.* Whether the last two were distinct rights from use and usufruct was for a long time a question among the Roman jurists (Dig. 7, 7, 5; 7, 8, 10; Cod. 33, 3, 13: cf. Gaius, ii. 32), but eventually the distinction was admitted. *Habitatio* is the right of living in another person's house, and differs from *usus aedium* in the person who possesses it being entitled to let it out to others (Inst. ii. 5, 5), and from both use and usufruct in the fact that it was not extinguished by his capitis deminutio or by non-user (Dig. 7, 8, 10, pr.). If created by a *donatio inter vivos,* it could be set aside by the heirs of the grantor. *Operae servorum* or *animalium* consisted in a man's having a right to the use and services of another's slave or beast, so long as he or it lived. It differed from a mere *usus* or *ususfructus* in the same respects as *habitatio.*

Praedial servitudes are either rustic or urban (*jura praediorum rusticorum, urbanorum*); a distinction as to the precise rationale of which there are differences of opinion. It is clear that not all servitudes in towns are urban, nor all in the country rustic, for "urbana praedia omnia aedificia accipimus, non solum ea quae sunt in oppidis, sed et si forte stabula sunt vel alia meritoria in villis vel in vicis vel si praetoria voluptati tantum deservientia, quia urbanum praedium non locus facit sed materia" (Dig. 50, 16, 198). Many of the praedial servitudes are referred to by Cicero, *pro Caec.* 13, 19 and 26. Of the urban class the following are the most important:—1. *Oneris ferendi:* the right which a man has to use the wall or edifice of his neighbour as a support for his own (Inst. ii. 3, 1;—Dig. 8, 2, 33; 8, 5, 6, 2). The owner of the servient property had to keep it in repair, but could escape this liability by derelictio. 2. *Tigni immittendi:* the right of planting a beam in or upon a neighbour's wall (Dig. 8, 2, 2 and 6; 8, 6, 18, 2; 8, 5, 8: cf. Tac. *Ann.* xv. 43; Cic. *de Orat.* i. 38, 173). 3. *Protegendi* or *projiciendi:* the right of throwing a balcony or verandah out from one's own house so as to project over one's neighbour's land (Dig. 8, 2, 2; 43, 17, 3, 5, 6, &c.). 4. *Stillicidii:* the right to have the rain-water drip in its natural course from one's roof on to a neighbour's land. A sub-variety is the *servitus fluminis recipiendi, immittendi,* or *avertendi,* the right of throwing such water on adjoining land from a pipe (Dig. 8, 2, 17, 3; *ib.* 20, 3–6;—Varro, *L. L.* iv. 5;—Cic. *de Orat.* i. 38, 173; *Top.* 4, 22;—Vitruv. *de Architect.* ii. 1, vi. 3, vii. 5). 5. *Cloacae immittendae:* the right of emptying a drain into or conducting it through a neighbour's premises (Dig. 8, 1, 7; 43, 23, 1, 4). 6. *Fumi immittendi:* the right of sending one's smoke through the chimney of one who lives above or next door (Dig. 8, 5; 8, 5–7). 7. *Latrinae sive sterculinii:* the right of having a dung-heap against a neighbour's wall (Dig. 8, 5, 17, 2). 8. *Altius non tollendi:* the right of preventing a man from building (or raising buildings already standing) above a certain height (Dig. 8, 2, 2; *ib.* 4 and 11, &c.). 9. *Ne luminibus* and *ne prospectui officiatur:* the right of having one's supply of daylight and one's view uninterfered with by any act of one's neighbour, such as planting of trees or erections of any kind (Dig. 8, 2, 3, 12, 15–17, &c.; Cic. *de Orat.* i. 39, 179; Gaius, ii. 31). 10. *Servitus luminum* or *luminis immittendi:* the nature of which is disputed, but which probably consisted in the right of making windows in a neighbour's wall in order to procure oneself more daylight (Dig. 8, 2, 4, 40; Cod. 3, 34, 8).

We read in the authorities also of a *servitus stillicidii* and *fluminis non recipiendi* (Inst. ii. 3, 1; Dig. 8, 2, 2), a *servitus altius tollendi* (Dig. *ib.*), and a *servitus officiendi luminibus vicini* (Gaius, ii. 31, iv. 3; Inst. iv. 6, 2, &c.), of the nature of which, however, no explanation is given. Such rights are not properly servitudes at all, but were ordinary incidents of ownership, and this treatment of them has caused no little difficulty. According to Theophilus and others, these expressions are simply intended to denote the condition of a praedium after the extinction of a *servitus stillicidii,* &c., to which it was previously subject. Others explain them by reference to local regulations prohibiting buildings above a certain height, &c. (*e.g.* Cod. 8, 10, 12 and 13), which they suppose could be overridden by the establishment of servitudes to the contrary; but this hypothesis seems untenable by reason of the aphorism, "jus publicum privatorum pactis mutari non potest." A third school holds that the object of a grant of a *servitus altius tollendi,* &c., was *partially* to extinguish a *servitus altius non tollendi,* &c. (cf. Dig. 44, 2, 26, pr.).

Of rustic servitudes the following are the most important:—1. *Iter* (or *jus eundi,* Gaius, iv. 3): the right of walking or riding along a footpath on another man's land, and of being carried over it in a litter (Inst. ii. 3, pr.; Dig. 8, 3, 7 and 12); though either of the latter rights might be excluded by express provision (Dig. 8, 1, 4, 1). 2. *Actus* (which includes *iter*): a similar right of driving cattle or vehicles (Isidor. *Orig.* xv. 16;—Dig. 8, 3, 1, pr.; *ib.* 7, pr. and 12, &c.), though the last could be excluded (Dig. 8, 1, 13). 3. *Via* (which includes both *iter* and *actus*): the right of using a regular road (*via munita*) over another's land for heavy traffic with highly-laden waggons ("hastam rectam ferre," Dig. 8, 3, 7, pr.), so that the owner of the *praedium serviens* must lop the trees. The road, in the absence of express agreement, must be at least eight feet where straight, and sixteen where it curved (Dig. 8, 3, 8: cf. Varro, *L. L.* iv. 4; *R. R.* i. 2, 14; Isidor. *Orig.* l. c.). 4. *Aquaeductus:* the right of conducting water on another's land away to one's own in pipes, or over another's land on to one's own by a leat, *e.g.* for the purposes of a mill (Inst. ii. 3, pr.;—Dig. 8, 3, 1, pr.; *ib.* 9). The exercise of this servitude might be limited to the summer or the winter, in which case it was called *aqua aestiva* or *hiberna* in opposition to *aqua quotidiana* (Dig. 43, 20, 1, 2 and 3); or it might be restricted by measure or time (*aqua diurna, nocturna,* Dig. *ib.* 2 and 5, pr.). 5. *Aquae haustus:* the right of taking water in vessels from another's land (Inst. ii. 3, 2;—Dig. 8, 3, 1; *ib.* 3, 3; *ib.* 9), and admitting of the same limitations as those just mentioned (Dig. 8, 3, 2, 1). 6. *Pecoris ad aquam appulsus:* the right of watering one's cattle on the land of a neighbour (Dig. 8, 3, 1, 1; *ib.* 4 and 6). 7. *Jus pascendi:* the right to pasture cattle there (Dig. *ib.* 3, pr., 4 and 6). Besides these, there are mentioned *jura silvae caeduae, cretae eximendae, lapidis eximendi, arenae fodiendae, calcis coquendae,* and other rights without specific names, in Dig. 8, 3, 3, 1 and 2; *ib.* 6; 8, 1, 15, pr.; 43, 20, 1, 28. If a *locus publicus* or *via publica* intervened, no *servitus aquaeductus* could be imposed; but it was necessary to apply to the emperor for permission to form an aquaeductus across a public road. The intervention of a *locus sacer* or *religiosus* was an obstacle to imposing a *servitus itineris* or other right of way, for land of such a character could not by law become "servient."

The modes in which servitudes were created or acquired are six in number, viz.:—1. A disposition *inter vivos* by or in pursuance of a contract. The general form of this was originally *in jure cessio,* though rustic servitudes over *solum Italicum* could be created also by *mancipatio* (Gaius, ii. 29, 30). As provincial soil, not being *in commercio,* could not be conveyed by either of these methods, so neither could servitudes over it be so created (Gaius, *ib.* 31); and its occupiers took refuge (Gaius, *ib.*) in formless agreements, subsequently expressed in a solemn contract (*stipulationes*), by which the owner of the land over which the right was to be created bound himself to allow its enjoyment, or in default to pay a penal sum (*e.g.* Dig. 45, 1, 2, 5). Such agreements would not, however, in themselves bind an alienee of the *praedium serviens*, nor would they confer any right on one of the *praedium dominans;* but the praetors introduced a *utilis actio* by which the latter owner and all his successors in title were enabled to assert the right against the owner of the *praedium serviens* and similar successors of his, so that in this way it acquired a "real" character. In the time of Justinian both *in jure cessio* and *mancipatio* had disappeared, and *pactio et stipulatio*, having apparently been for some time used for this purpose even on *solum Italicum*, remained the universal mode of contractually creating servitudes (Inst. ii. 3, 4). It is contended by many writers that, besides the contract (*pactio et stipulatio*), a *quasi-traditio* or figurative delivery of the right was necessary; but their argument is based on analogy rather than on any real textual authority. 2. In a conveyance of land, whether in Italy by *in jure cessio* or *mancipatio*, or in the provinces by *traditio*, a servitude over it might be reserved (*deductio:* Gaius, ii. 33; Inst. ii. 4, 1;—Dig. 8, 2, 34, 35; 8, 3, 30 and 33), and the same might be done when the land was bequeathed by will. 3. Testamentary disposition. An owner of property might either directly bequeath a servitude over it (which was a very common mode of creating those of the personal class), in which case the right to it was acquired when the "dies legati cessit" [LEGATUM], or he might direct his heir duly to constitute it in favour of a third person as legatee (Paul. *Sent. Rec.* iii. 6, 17; Dig. 8, 4, 16; Inst. ii. 4, 1). 4. *Adjudicatio:* the judge (*a*) awarding to one party in a *judicium divisorium* or partition action a servitude over the whole or a portion of the property which he adjudged to the other (Dig. 7, 1, 6, 1; 10, 2, 22, 3); or (*b*) declaring a servitude duly constituted as against a contumacious defendant who refuses to create it himself; or (*c*) reviving by "in integrum restitutio" [RESTITUTIO] a servitude which had been lost (Dig. 8, 5, 8, 4). 5. Prescription, or enjoyment of the right for a prescribed period of time. Servitudes could not properly be thus acquired apart from the *praedia* to which they were appurtenant (Dig. 41, 3, 10), though it would seem that this principle was at one time not fully admitted (see Cic. *ad Att.* xv. 26), for a Lex Scribonia of uncertain date forbade usucapion of servitudes, except the anomalous class (e.g. *altius tollendi*) spoken of above (Dig. 41, 3, 4, 29). Other writers hold that the principle never applied to urban servitudes, in which there is a greater semblance of uninterrupted possession than in those of the rustic class, and that it was to the usucapion of the former that the Lex Scribonia related. Servitudes over provincial soil could, however, be acquired by *longa quasi-possessio*—actual exercise of the right for ten years if the owner of the *praedium serviens* lived in the same province, for twenty if in another (Dig. 8, 5, 10, pr.; 8, 6, 25); and this title gradually came to be recognised in Italy also, and under Justinian was in full operation (Cod. 7, 33, 12). 6. *Lex:* e.g. the acquisition by a paterfamilias of a usufruct in the *peculium adventicium* of his son (Inst. ii. 9, pr.).

The following are the chief modes in which servitudes were extinguished:—1. Destruction of the *res serviens*, or its withdrawal from *commercium* (Inst. ii. 4, 1; Dig. 7, 1, 2); but if it was restored the right revived (Dig. 8, 2, 20; 8, 6, 14). Personal servitudes perished also if the *res serviens* underwent a complete and essential transformation (Dig. 7, 4, 5, 2 and 3). 2. Praedial servitudes were extinguished by the destruction of the *praedium dominans* or by its ceasing to be *in commercium* (Dig. 8, 2, 20, 2), but were revived by its restoration within the period of usucapio: *e.g.* if a building to which a servitude was appurtenant was pulled down in order to be rebuilt, and was rebuilt in the same form, the servitude revived (Dig. *l. c.*). Similarly, personal servitudes determined with the decease of the person entitled (Inst. ii. 4, 3; Dig. 7, 4, 3, 3), and under the older law *usus* and *ususfructus* were destroyed also by his *capitis deminutio* (Gaius, iii. 83); but by an enactment of Justinian (Inst. *l. c.* and iii. 10, 1; Cod. 3, 33, 16, 2) *capitis deminutio minima* ceased to have this effect. If a personal servitude belonged to a juristic person, it perished with the dissolution of that person (Dig. 7, 4, 21), and also with the lapse of 100 years from its creation in the absence of express provision to the contrary (Dig. 7, 1, 56). 3. Release of the right by the person entitled to the owner of the *res serviens* (Inst. ii. 4, 3), in the form either of bequest (Dig. 30, 86, 4) or of contract: for the latter *in jure cessio* or *mancipatio* was the proper form under the older law (Gaius, ii. 30; Paul. *Sent. Rec.* iii. 6, 28, 32), but under Justinian a bare agreement (*cessio* or *concessio*) sufficed without any formal surrender, and in some cases a tacit release was presumed from conclusive acts (*e.g.* Dig. 44, 4, 4, 12; 8, 6, 8, pr.). There is some ground for supposing that abandonment (*derelictio*) extinguished usufruct, but not other servitudes: its real effect, however, seems to have been to destroy not the usufructuary's rights, but only his liabilities. 4. *Confusio:* in praedial servitudes the vesting of ownership over the *res dominans* and the *res serviens* in the same person; in personal servitudes a similar union of the dominium and the servitus (Dig. 7, 4, 17; 8. 6, 1). Where the right was a usufruct, this was termed specifically *consolidatio* (Inst. ii. 4. 3). If the separate owners of two separate estates jointly acquired a *praedium* which was servient to both, the servitudes were not extinguished; but it was otherwise if the joint owners of a *praedium dominans* jointly acquired the *praedium serviens* (Dig. 8, 3, 27). 5. Non-exercise of the right for a prescribed time: rustic servitudes being lost by non-exercise for two years, personal servitudes by non-user for one year or two according as the *res serviens* was *mobilis* or *immobilis* (Paul. *Sent. Rec.* iii. 6, 30). For the loss of an urban servitude mere non-user was not enough, it being necessary that the owner of the *praedium serviens* should do some positive act, such as raising his house or building up the hole in which his neighbour's beam had rested (Dig. 8, 2, 6). For the loss of servitudes over provincial soil the periods were ten years *inter praesentes*, twenty years *inter absentes*, and these were retained for servitudes of all kinds by Justinian, whether over movables or immovables (Cod. 3, 33, 16, 1; 3, 34, 13). *Habitatio* and *operae*, as has been observed above, were never liable to extinction by non-exercise.

As possession is the actual exercise of the rights of ownership, so the enjoyment or exercise of a right of servitude may be conceived as a quasi-possession, though the Roman jurists sometimes explicitly deny the applicability to them of the conception (*e.g.* Dig. 43, 3, 8; 41, 3, 4, 27; 8, 2, 32, 1), and sometimes speak plainly of *possessio* or *quasi-possessio juris* (Dig. 43, 26, 2, 3; 43, 19, 7; 46, 23, 2) in contrast with *possessio corporis*—the possession of a tangible thing—while Javolenus goes so far as to describe specifically the exercise of servitudes as a taking of possession (Dig. 8, 1, 20). The extension to them of the conception of possession was important when we consider the legal remedies by which they were protected: for, as an owner can assert his dominium in its legal aspect by an action, and protect its actual exercise (*possessio*) by an interdict, so servitudes came by analogy to be the subject of both kinds of remedies. The action by which a person entitled to a servitude was protected against its infringement by any person whatsoever was called *confessoria in rem* (Dig. 8, 5, 2, pr.), its objects being judicial acknowledgment of the plaintiff's right, removal of any impediment to its exercise, compensation for interference, the entering into by the defendant of a "cautio de non amplius turbando" (Dig. 7, 6, 5, 6; 8, 5, 7). In Publician form [PUBLICIANA ACTIO] it could be brought by any person who *bonâ fide* possessed the *praedium dominans*, or in whose favour the *bonâ fide* possessor of property had in good faith constituted a servitude over it. If a servitude was unjustly claimed over property, its owner could take the offensive by bringing an *actio negatoria in rem* against the claimant; its object being to establish the freedom of the property from the alleged right, damages, and security against future disturbance. The plaintiff had, of course, to prove the freedom of his property (Gaius, iv. 3; Dig. 8, 5). The quasi-possessor of a personal servitude, who had "detention" of the object over which it existed, could use the interdicts *utrubi* and *de precario* (Dig. 43, 26, 2, 3) in their original, and *uti possidetis* and *de vi* in their *utilis* form (Dig. 43, 17, 4; *ib.* 16, 3, 15–17). So far as rustic servitudes are concerned, the various rights of way and water were protected by special interdicts—*de itinere actuque privato* (Dig. 43, 19), *de aqua* (Dig. 43, 20), *de rivis* (Dig. 43, 21), *de fonte* and *de fonte reficiendo* (Dig. 43, 22). As to the application of interdicts to urban servitudes, there is a difference of opinion; but the better view would seem to be that only affirmative rights of this class were thus protected (Dig. 43, 17, 3, 6; 43, 23).

Some limitations were imposed on the exercise of ownership at Rome, either upon religious grounds or in the interest of neighbours or of the public generally, and these are sometimes called "legal servitudes," though the name is inappropriate because the property can hardly be termed "servient" in the sense of a genuine servitude. To considerations of religion were due the rules relating to *finis*, a space of five feet in width between adjoining estates, which it was not permitted to cultivate, but which was held sacred and was used by the owners of the adjoining lands for sacrifice. To this class also belong the rules that if a man had buried a dead body on the land of another without his consent, he could not as a general rule be compelled to remove the body, but was bound to make recompense (Dig. 11, 7, 2, 7, 8); and that the owner of a burial-ground to which there is no other access may demand a way to it over adjoining land upon paying reasonable compensation to the owner of the latter (Dig. 12, 7, 12, pr.). Among restrictions imposed upon the exercise of ownership in the interests of adjoining proprietors are the following:—1. A man's duty to fell, at his neighbour's request, trees which grow in his own land, but which hang over the other's house or other building (Dig. 47, 27, 1, pr.–6), and to cut branches, less than fifteen feet from the ground, which hang over any adjoining land which is not his own (Dig. *ib.* 1, 7–9). 2. The rule permitting a man to go on his neighbour's premises to gather the fruits which had fallen thereon from his own trees: with this limitation, that he could go only "tertio quoque die" (Dig. 43, 28). 3. The limitations described under the head of AQUA PLUVIA.

"Legal servitudes" established in the interest of the public at large comprise:—1. A man's obligation to allow any one to come on his land in search of or for the removal of his property (Dig. 10, 4, 15; 39, 2, 9, 1; 19, 1, 25). 2. The obligation of an owner of the bank of a navigable river to allow persons in charge of boats, &c. to land thereon, make fast their vessels, and do all other acts required by their business (Inst. ii. 1, 4; Dig. 1, 8, 5, pr.). 3. According to the Twelve Tables, every owner of land in Rome was required to leave a vacant space two feet and a half in width round any building that he erected (*legitimum spatium*, *legitimus modus*): consequently between two adjoining houses there must be an interval of five feet. This law was doubtless often disregarded, for after the fire in Nero's reign (Tac. *Ann.* xv. 43) it was forbidden to build houses with a common wall (*communio parietum*), and the old *legitimum spatium* was required to be observed: see Dig. 8, 2, 14, where it is referred to in a rescript of Antoninus and Verus. 4. Rules as to the height and form of buildings. Augustus (Suet. *Aug.* 89) fixed the height at 70 feet, and after the great fire Nero made some regulations on the same subject: by Trajan the maximum height was fixed at 60 feet. 5. The owner of land adjoining a public road must, if the latter is partly destroyed by floods or otherwise, surrender a portion of his estate in lieu thereof (Dig. 8, 6, 14, 1; 43, 8, 2, 21). 6. Under the later Roman law a landowner was compelled to allow explorations on his land for minerals in consideration of a royalty of one-tenth the wealth extracted (Cod. 11, 6, 3, 6); and the rule declared that the owners of lands adjoining public aqueducts must permit materials to be taken therefrom for these public purposes upon receiving proper compensation. 7. The owner of timber which another had built into his house or vineyard (*tignum junctum aedibus vineaeve*) could not claim it by action until permanently severed, though when severed he could recover it, and in the meanwhile was entitled to demand double its value (Inst. ii. 1, 29;—Dig. 41, 1, 7, 10; 47, 3, 1). 8. The Twelve Tables forbade the burning or burial of a dead body within the city; a rule which was enforced by a Lex Duilia, and which in the time of Antoninus Pius prevailed both in Rome and other cities.

(Gaius, ii. 28–33; Inst. ii. tits. 3–5; Dig. 7 and 8; Cod. 3, 33 and 34. The best treatises on the subject, apart from the ordinary Manuals of Roman law, are Luden, *Die Lehre von den Servituten*, Gotha, 1837; Hoffmann, *Die Lehre von den Servituten nach röm. Rechte*, 2 vols., Darmstadt, 1838, 1843; Zielonacki, *Kritische Erörterungen über die Servitutenlehre nach röm. Rechte*, Breslau, 1849; Elvers, *Die röm. Servitutenlehre*, Marburg, 1854–1856; Schonemann, *Die Servituten*, 1866; Molitor, *La Possession ... et les Servitutes en Droit romain*, Gand, 1851, pp. 291 *sqq.* For the so-called Legal Servitudes, cf. Dirksen's essay, *Ueber die gesetzlichen Beschränkungen des Eigenthums*, &c. in the *Zeitschrift für gesch. Rechtswiss.* p. 16 *sq.*) [J. B. M.]

SERVUS, 1 (GREEK). The Greek *δοῦλος*, like the Latin *servus*, corresponds to the usual meaning of our word "slave." Slavery existed almost throughout the whole of Greece; and Aristotle (*Pol.* i. 3=p. 1253 b, 4) says that a complete household is that which consists of slaves and freemen (*οἰκία δὲ τέλειος ἐκ δούλων καὶ ἐλευθέρων*), and he defines a slave to be a living instrument, a living chattel (*ὁ δοῦλος ἔμψυχον ὄργανον*, *Eth. Nic.* viii. 13=p. 1161 b, 4; *ὁ δοῦλος κτῆμά τι ἔμψυχον*, *Pol.* i. 4=p. 1253 b, 32). None of the Greek philosophers ever seem to have objected to slavery as a thing morally wrong: Plato in his perfect State only desires that no Greeks should be made slaves by Greeks (*de Rep.* v. p. 469 C), and Aristotle defends the justice of the institution on the ground of a diversity of race, and divides mankind into the free (*ἐλεύθεροι*) and those who are slaves by nature (*οἱ φύσει δοῦλοι*): under the latter description he appears to have regarded all barbarians in the Greek sense of the word, and therefore considers their slavery justifiable.

There was a tradition that in the most ancient times there had been no domestic slaves in Greece, but that the women in all ranks did the house-work themselves (Herod. vi. 137; Pherecrat. *ap.* Ath. vi. p. 263 b=*fr.* 5, M.). We find them, however, in the Homeric poems, our earliest evidence for social conditions in Greece: usually prisoners taken in war (*δοριάλωτοι*), but also kidnapped, and freely bought and sold (*Od.* xv. 483). They were, however, at that time mostly confined to the houses of the wealthy. As on the one hand there were then none of the scruples of later times about enslaving Greeks, so on the other the condition of slavery brought no disgrace with it. The fortune of war levelled all distinctions; men and women of good and even princely birth accepted slavery as part of the chances of life; there are indications, however, as Prof. Mahaffy has pointed out, that such a well-born slave might be treated as "socially his master's equal . . . a member of the same caste society" (*Social Life in Greece*, ed. 3, p. 57). Eumaeus the swineherd and Eurycleia the nurse of Ulysses, with their loyal adhesion to the cause of their absent master, are among the most charming figures in the Odyssey; at the same time they enjoy, as confidential upper servants, all the comforts of life: the inevitable dark side of the institution is shown in the fate of Melanthius and the erring handmaids (*Od.* xxii. 433–477).

Predial slavery does not seem to have existed in the Homeric age; the *θὴς* was in all probability a free man, though a poor and despised one (HELOTES, Vol. I. p. 940 *a*; THETES). But not long afterwards we find serfs *ascripti glebae*, mostly, as in mediaeval times, the result of conquest and migration. Such were the Helots of Sparta [HELOTES], the Penestae of Thessaly [PENESTAE], the Aphamiotae or Clarotae of Crete (Callistr. *ap.* Ath. vi. 263 f; COSMI). To these may be added, although they are little more than names to us, the Bithynians at Byzantium (Phylarch. *ap.* Ath. vi. 271 b; called *προύνικοι*, Poll. vii. 132), the Mariandyni at Heraclea in Pontus (Posidon. *ap.* Ath. vi. 263 d; Strabo, xii. p. 542), and the Cyllyrii at Syracuse (*Κυλλύριοι*, Herod. vii. 155; *Καλλικύριοι*, Suid. *s. v.*, Zenob. *Cent.* iv. 54; *Κιλλικύριοι*, Phot. *s. v.*). Domestic slaves acquired by purchase (*ἀργυρώνητοι* or *χρυσώνητοι*, cf. Isocr. *Plataic.* § 18; Callistr. *ap.* Ath. vi. 263 e) were entirely the property of their masters, and could be disposed of like any other goods and chattels: these were the *δοῦλοι* properly so called, and were the kind of slaves that existed at Athens and Corinth. In commercial cities slaves were very numerous, as they performed the work of the artisans and manufacturers of modern towns. In poorer republics which had little or no capital, and which subsisted wholly by agriculture, they would be few: thus in Phocis and Locris there are said to have been originally no domestic slaves. (Timae. *ap.* Ath. vi. p. 264 c; Clinton, *F. H.* vol. ii. pp. 411, 412.) The majority of slaves were purchased; few comparatively were born in the family of the master, partly because the number of female slaves was very small in comparison with the male, and partly because the cohabitation of slaves was discouraged, as it was considered cheaper to purchase than to rear slaves. A slave born in the house of a master was called *οἰκότριψ*, in contradistinction to one purchased, who was called *οἰκέτης*. ([Dem.] *de Synt.* p. 173, § 24; Ammon. and Suid. *s. v.*) If both the father and mother were slaves, the offspring was called *ἀμφίδουλος* (Eustath. *ad Od.* ii. 290): if the parents were *οἰκότριβες*, the offspring was called *οἰκοτρίβαιος* (Pollux, iii. 76).

It was a recognised rule of Greek national law that the persons of those who were taken prisoners in war became the property of the conqueror (Xen. *Cyr.* vii. 5, § 73), but it was the practice for Greeks to give liberty to those of their own nation on payment of a ransom. Consequently almost all slaves in Greece, with the exception of the serfs above mentioned, were barbarians. It appears to follow from a passage in Theopompus (*ap.* Ath. vi. p. 265 b) that the Chians were the first who carried on the slave trade; and there the slaves were more numerous in comparison with the free inhabitants than in any other place except Sparta (Thuc. viii. 40). In the early ages of Greece, a great number of slaves was obtained by pirates, who kidnapped persons on the coasts, but the chief supply seems to have come from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where the parents frequently sold their children (Herod. v. 6).

At Athens, as well as in other states, there was a regular slave market, called the *κύκλος* (Harpocrat. *s. v.*), because the slaves stood round in a circle. They were also sometimes sold by auction, and appear then to have been placed on a stone called the *πρατὴρ λίθος* (Pollux, iii. 78): the same was also the practice in Rome, whence the phrase *homo de lapide emptus.* [AUCTIO.] The slave market at Athens seems to have been held on certain fixed days, usually the first day of the month (*νουμηνία*, Aristoph. *Eq.* 43, with Schol.). The price of slaves naturally differed according to their age, strength, and acquirements. "Some slaves," says Xenophon (*Mem.* ii. 5, § 2), "are well worth two minas, others hardly half a mina; some sell for five minas and others even for ten; and Nicias the son of Niceratus is said to have given no less than a talent for an overseer in the mines." Boeckh (*P. E.* p. 67 ff. = *Sthh.*^{3} i. 85 ff.) has collected many particulars respecting the price of slaves; he calculates the value of a common mining slave at from 125 to 150 drachmas. The knowledge of any art had a great influence upon the value of a slave. Of the thirty-two or thirty-three sword-cutlers who belonged to the father of Demosthenes, some were worth five, some six, and the lowest more than three minas; and his twenty couch-makers together were worth 40 minas (*in Aphob.* i. p. 816, § 9). Considerable sums were paid for courtesans and female players on the cithara; twenty and thirty minas were common prices for such (Ter. *Adelph.* iii. 1, 37, iii. 2, 15, iv. 7, 24; *Phorm.* iii. 3, 24): Neaera was sold for thirty minas (Demosth. *c. Neaer.* p. 1354, § 29).

The number of slaves was very great in Athens. According to the census made when Demetrius Phalereus was archon (B.C. 309), there are said to have been 21,000 free citizens, 10,000 metoecs, and 400,000 slaves in Attica (Ctesicles, *ap.* Ath. vi. p. 272 c). This statement was formerly criticised on account of the immense disproportion between the slave population and the free (Hume, *Essays*, i. 419, ed. Green and Grose; Niebuhr, *Hist. of Rome*, vol. ii. note 143). It is now admitted, with Boeckh (*P. E.* p. 36 = *Sthh.*^{3} i. 47) and Clinton (*F. H.* ii. p. 391), that in computing the citizens and metoecs the object was to ascertain their political and military strength, and hence the census of only males of full age was taken; while in enumerating slaves, which were property, it would be necessary to compute all the individuals who composed that property. Boeckh's estimate, of a total population of 500,000, made up of 90,000 citizens, 45,000 resident aliens, and 365,000 slaves, is regarded as approximately correct (Büchsenschütz, Göll, Fränkel). During the occupation of Decelea by the Lacedaemonians more than 20,000 Athenian slaves escaped to that place (Thuc. vii. 27). From Hypereides (*fr.* 33, Sauppe, *ap.* Suid. *s. v.* *ἀπεψηφίσατο*) it appears that there were at least 150,000 adult male slaves in Attica; we know that the numbers of females and children were relatively small (see above); and these figures are not inconsistent with the estimate just given for the total slave population (cf. note in Boeckh, *Sthh.*^{3} i. 38). Two other statements in the same passage of Athenaeus must be pronounced far more open to criticism; that of Timaeus, that Corinth once had possessed 460,000, and that of Aristotle, that Aegina had contained 470,000 slaves (Ath. vi. 272 b, d; Schol. Pind. *Ol.* viii. 30). These numbers can only be understood, especially in relation to Aegina, of the early times before Athens had obtained possession of the commerce of Greece. Bursian has further pointed out that they may include the crews of an immense fleet of ships, and the slaves belonging to merchants settled abroad (*Geogr. von Griechenl.* ii. 13 and 79): nevertheless, we hold that Boeckh, in his later editions, is right in pronouncing them exaggerated (*Sthh.*^{3} i. 51). We need not suspect corruption in the texts of these authors; but the best minds among the Greeks were without the evidence which statistics now afford of the limits of population that can be supported on a given area. The Corinthian territory was much smaller than Attica, and at least as mountainous; while that of Aegina does not exceed 42 English square miles, only half of which is capable of cultivation. No doubt slaves were closely packed as regards space; but they would require their choenix of corn a day (at Corinth, *χοινικομέτραι* was a name for the slaves, Ath. *l. c.*); and with the supposed numbers, Aegina would have been dependent upon importation for almost the whole of her food. The light soil of Attica grew about five-sevenths of the corn required for its population [SITOS]; and it is unlikely that the subsistence of any Greek state was on a more artificial footing than this, or that ancient commerce, particularly in those early times, was sufficiently organised to be equal to the strain.

At Athens even the poorest citizen had a slave for the care of his household (Aristoph. *Plut.* init.), and in every moderate establishment many were employed for all possible occupations, as bakers, cooks, tailors, &c. The number possessed by one person was never so great as at Rome during the later times of the Republic and under the Empire, but it was still very considerable. Plato (*de Rep.* ix. p. 578 D, E) expressly remarks, that some persons had fifty slaves and even more. This was about the number which the father of Demosthenes possessed (*in Aphob.* i. p. 823, § 31); Lysias and Polemarchus had 120 (Lys. *in Eratosth.* § 19), Philemonides had 300, Hipponicus 600, and Nicias 1000 slaves in the mines alone (Xen. *de Vect.* 4, §§ 14, 15). It must be borne in mind, when we read of one person possessing so large a number of slaves, that they were employed in various workshops, mines, or manufactories: the number which a person kept to attend to his own private wants, or those of his household, was probably never very large. And this constitutes one great distinction between Greek and Roman slaves, that the labour of the former was regarded as the means by which an owner might obtain profit for the outlay of his capital in the purchase of the slaves, while the latter were chiefly employed in ministering to the wants of their master and his family, and in gratifying his luxury and vanity. Thus Athenaeus (vi. p. 272 e) remarks, that many of the Romans possess 10,000 or 20,000 slaves and even more, but not, he adds, for the sake of bringing in a revenue, as the wealthy Nicias.

Slaves either worked on their masters' account or their own (in the latter case they paid their masters a certain sum a day); or they were let out by their master on hire either for the mines or any other kind of labour, or as hired servants for wages (ἀποφορά). The rowers on board the ships were usually slaves (Isocr. *de Pace*, § 48); it is remarked as an unusual circumstance that the seamen of the Paralos were freemen (Thuc. viii. 73). These slaves either belonged to the state or to private persons, who let them out to the state on payment of a certain sum. It appears that a considerable number of persons kept large gangs of slaves merely for the purpose of letting out, and found this a profitable mode of investing their capital. Great numbers were required for the mines, and in most cases the mine-lessees would be obliged to hire some, as they would not have sufficient capital to purchase as many as they wanted. Generally none but inferior slaves were confined in these mines: they worked in chains, and numbers died from the effects of the unwholesome atmosphere (Boeckh, *On the Silver Mines of Laurion*). We cannot calculate with accuracy what was the usual rate of profit which a slave-proprietor obtained. The thirty-two or thirty-three sword-cutlers belonging to the father of Demosthenes produced annually a net profit of 30 minas, their purchase value being 190 minas, and the twenty couch-makers a profit of 12 minas, their purchase value being 40 minas (Demosth. *in Aphob.* i. p. 816, § 9). The leather-workers of Timarchus produced to their masters two, the overseers three, oboli a day (Aeschin. *in Tim.* § 97): Nicias paid an obolus a day for each mining slave whom he hired (Xen. *de Vect.* 4, § 14). The rate of profit upon the purchase-money of the slaves was naturally high, as their value was destroyed by age, and those who died had to be replaced by fresh purchases. The proprietor was also exposed to the great danger of their running away, when it became necessary to pursue them and offer rewards for their recapture (σῶστρα, Xen. *Mem.* ii. 10, § 1, 2; Plat. *Protag.* p. 310 C). Antigenes of Rhodes was the first who established an insurance of slaves. For a yearly contribution of eight drachmas for each slave that was in the army, he undertook to make good the value of the slave at the time of his running away (Pseudo-Arist. *Oecon.* ii. 35). Slaves who worked in the fields were under an overseer (ἐπίτροπος), to whom the whole management of the estate was frequently entrusted, while the master resided in the city; the household slaves were under a steward (ταμίας), the female slaves under a stewardess (ταμία). (Xen. *Oecon.* 9, § 11; 12, § 2.)

The Athenian slaves did not, like the Helots of Sparta and the Penestae of Thessaly, serve in the armies; the battles of Marathon and Arginusae, when the Athenians armed their slaves (Pausan. i. 32, § 3; Schol. *ad* Aristoph. *Ran.* 33), were exceptions to the general rule.

The rights of possession with regard to slaves differed in no respect from any other property; they could be given or taken as pledges (Dem. *c. Aph.* i. p. 821, § 24; *c. Onet.* i. p. 871, § 27; *c. Pantaen.* p. 967, § 4), and in cases of distraint were among the first "cattle" or "chattels" seized (Dem. *c. Androt.* p. 610, § 56; *c. Timocr.* p. 762, § 197). Nevertheless, Greek slavery, above all at Athens, will compare favourably with the same institution at Rome, or as practised by Christian nations in the New World. Plutarch thought the Spartan slaves the most unhappy in Greece (*Lyc.* 28); but the Helots were by many degrees better off, and more humanely treated, than the droves of slaves who tilled the *latifundia* of the Romans, or pastured their flocks in Calabria and Sicily (cf. CRUX, Vol. I. p. 567 *b*). At Athens, again, they were allowed a degree of liberty and indulgence which seemed surprising to other Greeks. There was no slave costume regulated by law, and differing from the dress of the citizens; the slaves were not to be distinguished externally from the lower class of citizens, and in the richer houses were often better clothed than these; only the wearing of long hair was not allowed them, which, however, was only worn by a few of the citizens. They did not make way in the street; they could not be struck, for fear of assaulting a freeman; and they enjoyed a saucy freedom of speech (ἰσηγορία). The writer of the tract on the Athenian polity, in Xenophon's works, notices these points as characteristic of a commercial state: the slaves were often employed in making money for their masters ([Xen.] *Rep. Ath.* 1, §§ 10–12). They were excluded from the gymnasium (Aeschin. *c. Timarch.* § 138; Plut. *Sol.* 34) and the ecclesia (Aristoph. *Thesm.* 294; Plut. *Phoc.* 34); but they were not forbidden to enter the temples and shrines, or to assist at sacred rites, whether public or private ([Dem.] *c. Neaer.* p. 1374, § 85). On the reception of a newly-purchased slave into a house at Athens, it was the custom to scatter sweetmeats and nuts (καταχύσματα) over him, to be scrambled for by his fellow-servants; but this was rather for the sake of a good omen than on the slave's own account (Aristoph. *Plut.* 768, with Schol.; Dem. *c. Steph.* i. p. 1123, § 74, with Sandys' note; Hermann-Blümner, *Privatalterth.* p. 82).

The denial of legal rights to a slave led to a state of things "almost grotesque in its absurd cruelty" (Mahaffy, p. 241), which however, at least in the time of Demosthenes, was considerably mitigated in practice; the law, namely, by which the taking of slaves' evidence was regulated. When it is said that such evidence in courts of justice was always taken with torture, this does not mean that it was the rule to torture slaves who gave evidence to a fact, but only if they denied any knowledge or appeared to suppress it in the interest of their master. The giving of independent evidence was a personal privilege of freemen, whether citizens or aliens, but excluding women and ἄτιμοι [MARTYRIA, *init.*]; hence the testimony of slaves could not be resorted to in the first instance with the honest desire of getting at the facts of a case. What happened was this. It was assumed that slaves through dread of their master's vengeance would always support his view of the case, but that the truth might be elicited if they were tortured by the other side. Hence we find that in any dispute between two citizens about the most trifling sum of money, or if (as in the speech of Antiphon *de Choreuta*) it was attempted from vindictive motives to import a criminal charge into a case which was *primâ facie* accidental, either might challenge (*προκαλεῖσθαι*) the other to give up his slaves for torture, or tender his own to be similarly examined, on the mere chance that something might be proved. To call for the production of slaves in this way was *ἐξαιτεῖν*, to comply with the demand *ἐκδιδόναι* (Dem. *c. Onet.* i. p. 874, §§ 35, 36). We see this theory in its most repulsive shape in Antiphon, the oldest of the extant orators (cf. Antiph. *de caed. Herod.* § 49, *de Choreut.* § 25; Mahaffy, *l. c.*); in the prosperous days of the Peloponnesian war the Athenians seem to have been harder-hearted than they afterwards became under the influence of misfortune; and in the time of Aristophanes the torture was an every-day or at least frequent incident in the law courts (*στρεβλοῦτε καὶ δικάζετε, Nub.* 620). Afterwards, though the law remained the same, a stronger feeling of humanity sprang up, which finds its expression in many passages of Demosthenes (e.g. *c. Nicostr.* p. 1253, § 22; *c. Conon.* p. 1265, § 27); excuses were made for not complying, though the other side made a strong point of the refusal; the challenge was put forward as a manoeuvre to gain time, or with the hope of scoring a point with the jury, but with no serious expectation that it would be complied with. The Private Orations in general leave the impression that, in this one respect, Athenian practice was more humane than the theory. In his action against his guardian, Demosthenes himself demands the torture of three *female* slaves on the point whether Onetor's sister has really (and not, as he contends, collusively) been divorced by Aphobus; Onetor, who ultimately lost his cause, has the grace to refuse the demand (Dem. *c. Onet.* l. c.; for another example, see Lysias, *Or.* 4, *περὶ τοῦ τραύματος*, § 12). Other questions connected with the torture of slaves are discussed under TORMENTUM. In his relations with his master a slave might naturally expect corporal chastisement, which was the last mode of punishment inflicted on a freeman (Dem. *c. Timocr.* p. 752, § 167); but in the case either of extreme cruelty or of outrage against his chastity, he could take sanctuary in the temple of Theseus [ASYLUM, Vol. I. p. 235 *b*], and there claim the privilege of being sold away from his oppressor (*πρᾶσιν αἰτεῖν*, Plut. *Thes.* 36; Pollux, vii. 13; Aristoph. *Eq.* 1312 with Schol.; *Att. Process*, p. 625 f., Lipsius). His life, unlike that of Roman slaves in republican times, was safe even from his master; he could not be put to death without legal sentence (Eurip. *Hec.* 291, 292; Antiph. *de caed. Herod.* § 34). But the barbarous rule that if a master were murdered (even, it seems, if his life were attempted), and the perpetrator remained undetected, the whole household should be executed, prevailed also at Athens (Antiph. *op. cit.* § 69; Mahaffy, p. 248). Against assault or outrage by any one else than his master the slave was protected by law. (See HYBRIS, Vol. I. p. 983 *b*, and the references there.)

Notwithstanding the comparatively mild treatment of slaves in Greece, their insurrection was not unfrequent (Plat. *Legg.* vi. p. 777 C): but in Attica these insurrections were mostly confined to the mining slaves, who were treated more harshly than the others. On one occasion they murdered their guards, took possession of the fortifications of Sunium, and from this point ravaged the country for a considerable time (Ath. vi. p. 272 f).

Slaves were sometimes manumitted at Athens, though not so frequently as at Rome; but it seems doubtful whether a master was ever obliged to liberate a slave against his will for a certain sum of money, as some writers have concluded from a passage of Plautus (*Casin.* ii. 5, 7). Those who were manumitted (*ἀπελεύθεροι*) did not become citizens, as they did at Rome, but passed into the condition of metoecs. They were obliged to honour their former master as their patron (*προστάτης*), and to fulfil certain duties towards him, the neglect of which rendered them liable to the *δίκη ἀποστασίου*, by which they might again be sold into slavery [LIBERTUS, p. 62 *a*; APOSTASIOU DIKÉ, APROSTASIOU DIKÉ, in Vol. I.].

Respecting the public slaves at Athens, see DEMOSII.

It appears that there was a tax upon slaves at Athens (Xen. *de Vect.* 4, § 25), which Boeckh (*P. E.* pp. 331, 332 = *Sthh.*^{3} i. 403) supposes was three oboli a year for each slave; it is more probable, however, that this was a tax upon the import of slaves, and their transfer by sale, not a license duty paid annually by their owners (Fränkel, n. 546 on Boeckh).

T.; Gilbert, *Staatsalterth.* i. 163–169; Mahaffy, *Social Life in Greece*, ed. 3, p. 240 ff.; and esp. Becker-Göll, *Charikles*, iii. pp. 1–47; Büchsenschütz, *Besitz und Erwerb*, pp. 104–208. [W. S.] [W. W.]

SERVUS, 2 (ROMAN), SERVITUS. In the writings of the Roman jurists and philosophers slavery appears as the chief, if not the only, instance of an opposition between the *jus gentium* and the *jus naturale*. That it was *contra naturam* is repeatedly stated, as by Justinian, in Inst. i. 3, 2 ("servitus . . . . qua quis dominio alieno contra naturam subjicitur"), following Florentinus in Dig. 1, 5, 4 (cf. Inst. i. 2, 2; Athen. vi. pp. 263, 267; Macrob. *Saturn.* i. 7; Augustin. *de Civitate Dei*, xix. 15; Dig. 12, 6, 64; Cod. 7, 24), though the philosophers had considered some forms at least of slavery as natural (Aristot. *Pol.* i. 2, §§ 15, 18: cf. Cic. *de Rep.* iii. 25, 37). That it was due to the *jus gentium*, or universal practice of mankind, is affirmed by Gaius (i. 52); Ulpian in Dig. 1, 1, 4, pr.; Luctatius, in Stat. *Theb.* v.; Dig. 12, 6, 64: the notion being perhaps based on the hypothesis of a tacit compact between the peoples of the earth, as is suggested by Aristotle—*ὁ γὰρ νόμος ὁμολογία τίς ἐστιν, ἐν ᾧ τὰ κατὰ πόλεμον κρατούμενα τῶν κρατούντων εἶναί φασιν* (*Pol.* i. 2).

The relation of the master to his slave is expressed by the term *dominium*, as in the passage cited above from the Institutes: cf. Dig. 50, 16, 215; Aristot. *Pol.* i. 2, 4, *ὁ δοῦλος οὐ μόνον δεσπότου δοῦλος, ἀλλὰ . . . . ὅλως ἐκείνου*: *ib.* 7, *ὁ μὴ αὑτοῦ . . . . ἀλλ' ἄλλου* (cf. *Eth. Nicom.* iv. 3); Zeno in Diog. Laert. vii. 121, *δουλεία, στέρησις αὐτοπραγίας*: Dion Chrysost. *Or.* 15. The master is *dominus* of his slave just as he is *dominus* of his horses or any other object of property, among which he is classified as a *res mancipi* by Ulpian (*Reg.* 19, 1) and Gaius (ii. 15): the slave is conceived not as a *persona*, but as a *res* [Caput: cf. Dig. 50, 17, 209, "servitutem mortalitati fere comparamus"], and the master may accordingly deal with him just as he may with any other *res* of which he is owner; he may sell him, and has *jus vitae necisque* over his person (Gaius, i. 52: cf. Dionys. vii. 69; Plut. *Cato Major*, 21; Appian, *B. C.* i. 98). But there are points in which the slave stands on a different footing from other *res*. The master is said to exercise *potestas* over him, a term properly descriptive of control only over reasonable beings ("verbum potestatis non solum ad liberos trahimus, verum etiam ad servos," Dig. 24, 1, 3: cf. Inst. i. 8, 1); and between "power" over a filiusfamilias and "power" over a slave there was originally perhaps little difference, though in other respects the former always occupied a very superior legal position to the latter. It was through this *potestas* that the slave became, as it were, a member or limb of the *dominus*, whereby he could act as his agent in commerce, and acquired capacity to be heir or legatee under a will. But a person who had a mere *nudum jus Quiritium* in a slave had no *potestas* over him: he must at least have him *in bonis* (Gaius, i. 54). Again, unlike a mere animal, a slave could become free, and thus a *persona*, and his acts and dispositions entail legal consequences as well on his master as on himself. Lastly, the tie of kinship is recognised; the respect which a child owes to its parents is due even between such relations who have been manumitted (Dig. 2, 4, 4, 3), and who are also debarred from intermarrying if within the degrees prohibited by law (Inst. i. 10, 10; Dig. 23, 2, 14, 2).

The extreme exercise of a master's strict right to deal with the person of his slave in any way he pleased was in practice considerably restrained by usage. In the older times slaves were well treated, and ate frequently at the same table with their masters (Macrob. i. 7, 10, 11; Cato, *R. R.* 5), of whose children they were the instructors, nurses, and playmates (Plut. *Cor.* 24; *Cato Major*, 3, 20, 21; Macrob. *l. c.*; Plin. *H. N.* xxxiii. § 26; Sen. *Epist.* 47); and a master who starved or otherwise ill-treated his slaves was punished as a bad citizen by the censors (Dionys. *fragm.* xx. ed. Mai.). The slaves also shared with the free in many of the privileges and offices of religion (Dionys. iv. 14; Cato, *R. R.* 57). Still, when the Roman national habit had been corrupted by the luxury and brutality of the Empire, it was found necessary to legislate against excessive cruelty. A Lex Petronia, enacted perhaps as early as Augustus, and a number of amending senatusconsulta, forbade the arbitrary sale of slaves for combating wild beasts in the arena, even though they had done some act deserving punishment (Gell. v. 14; Dig. 48, 8, 11, 1 and 2; 18, 1, 42). On the other hand, the old practice of putting slaves to the torture for the purpose of discovering their master's murderer was about the same time made a universal statutory rule by the Senatusconsultum Silanianum, which also punished those who refused assistance to the master (Dig. 29, 5). Claudius bestowed freedom on slaves whom their masters exposed on account of ill-health, and threatened penalties for killing them under such circumstances (Suet. *Claud.* 25); and Hadrian forbade the killing of slaves in any case without judicial sanction (Spartian. *Hadr.* 18; Dig. 1, 6, 18, 2). Antoninus Pius enunciated as a general principle that slaves should be entitled to make complaints to the praefectus urbi or praetorio of ill-treatment at their masters' hands (Dig. 1, 12, 1, 8) and obtain protection therefrom (*Coll. Leg. Mos.* iii. 2; Dig. 1, 6, 2), the master being compelled to sell them to some person more humane: if he caused their death, he was (apart from certain excepted cases, Dig. 48, 5, 24; 48, 8, 1, 4, &c.) subjected to the penalties of the Lex Cornelia de sicariis (Gaius, i. 53; Inst. i. 8, 2). It was also enacted that in sales or divisions of property slaves who were nearly related should not be separated (Dig. 21, 1, 35; Cod. 3, 38, 11), and that praedial slaves upon whom the *tributum capitis* was paid should not be removed from the land to which they were attached (Cod. 11, 47, 7). Yet these enactments must not be supposed to have conferred any legal rights upon the slave: they merely limited the general rights of ownership on grounds of expediency, and their rationale is well expressed by Gaius, who says, "male enim nostro jure uti non debemus: qua ratione et prodigis interdicitur bonorum suorum administratio" (i. 53). Yet in the rule stated by Justinian (Inst. iv. 4, 7), that the damages for an injuria to a slave should vary according to his position and employment, we approach very nearly to the conception of a slave as having a *persona* or *caput*: "hanc enim," it is said, "et servum sentire palam est." If a slave was injured by a third person, the master had his remedy in various civil actions (Gaius, iii. 210, 217, 223; Paul. *Sent.* i. 13, 6;—Dig. 47, 10, 15, 34 and 35; 11, 3, 1), and if he was killed wilfully could prosecute the delinquent under the Lex Cornelia de sicariis.

Slaves were incapable of marriage (*sensu legali*) of any kind, but a permanent connexion between two slaves, or a slave and a free person, was called *contubernium* (Paul. *Sent.* ii. 19, 6; Cod. 5, 5, 3). Here the natural relation of parent and child was to some extent recognised, *e.g.* as a *justa causa manumissionis*, Gaius, i. 19: see Aelia Sentia Lex. Accordingly, as has been remarked above, when slaves had become free, and so acquired capacity of intermarriage, they were held to be within the rules as to prohibited degrees.

A slave was as incapable of proprietary as of other rights, and everything conveyed to him, whether by mancipatio or traditio, became *ipso facto* the property of his master ("etiam invitis nobis per servos adquiritur paene ex omnibus causis," Dig. 41, 1, 32): a rule sometimes supposed to be attributed by Gaius (i. 52) and Justinian (Inst. i. 8, 1) to the Jus Gentium, but instances to the contrary are found in the Helots (Plut. *Lycurg.* 24) and among the Germans (Tac. *Germ.* 25). If one master had over him a *nudum jus Quiritium* and he was *in bonis* to another, his acquisitions belonged to the latter only. If a man *bonâ fide* possessed another man's slave or a free person *bonâ fide serviens*, he only acquired in two cases, being entitled to all that the other gained by means of the possessor's property (*ex re ejus*) or by his own labour (*ex operis suis*): the law was the same with respect to a slave in whom a man had only a usufruct. All other acquisition of such slaves or free men *bonâ fide servientes* belonged, according to their condition, to their master or to themselves. If a slave were instituted *heres*, he could only accept the *hereditas* with the consent of his master, in whom it vested immediately on acceptance; but legacies bequeathed to him became the master's without any necessity for acceptance at all (Gaius, ii. 87, &c.).

A master could also acquire possession through his slaves, and usucapion would begin to run from the moment of its acquisition: but, unless the master possessed the slave himself, the latter could not acquire possession of other things for him; for instance, this could not be done by a slave who was in pledge [PIGNUS]. A *bonâ-fide* possessor, *i.e.* one who believed the slave to be his own, could acquire possession through him in the same cases as those in which he could acquire ownership, which excluded acquisition for the pledgee by a slave in pledge: and a usufructuary acquired possession through the slave in the same two cases as the *bonâ-fide* possessor; but, as he did not possess the slave himself, he could not acquire him by usucapio (Gaius, ii. 93; Inst. ii. 9, 4: cf. Savigny, *Possession*, p. 314, ed. 5).

An almost necessary modification of the above-stated principles resulted from the common employment of slaves by their masters in every variety of service and occupation—as mechanics, artisans, clerks, stewards, business managers, actors, surgeons and physicians, teachers, &c.: in which avocations they might by industry and economy (Dig. 15, 1, 39), and even by pecuniary advances which the master often made them in his own interest (Plut. *Cato Major*, 21), accumulate no small wealth, which they were usually allowed by special permission (*concessio*, Dig. 15, 1, 4, pr. and 2) to administer on their own behalf under the name of *peculium*. The *peculium* technically remained part of the master's property (Dig. 41, 1, 37, 1), and could be resumed or appropriated by him at pleasure (Dig. 15, 1, 8); but this does not appear to have been commonly done, the practice being to promise slaves their freedom if they could accumulate a *peculium* of a certain value (Dionys. iv. 24; Tac. *Ann.* xiv. 42). Generous masters even allowed them sometimes to dispose of it on their death-bed (Plin. *Ep.* viii. 16), and on manumission a slave was by law entitled to retain his *peculium* unless expressly reserved by the master (*fragm. Vat.* 261; Dig. 15, 1, 53; Cod. 7, 23; Inst. ii. 20, 20). The institution of *peculium* made it possible for contracts to be entered into between masters and slave (Dig. 15, 1, 49, 2), from which, it is true, no right of action arose (Gaius, iv. 78; Sen. *de Benef.* iii. 19), but which nevertheless created a "natural" obligation [OBLIGATIO]; so that, if after the slave's manumission the master paid him a debt which had arisen before it, he could not redemand the money on the ground that it was not owed (Dig. 12, 6, 64), and his own debts to the master were discharged by automatic reduction, so to speak, of the *peculium*. In the event of external creditors demanding the *peculium* for distribution among themselves on the ground of the slave's insolvency, debts owing to his master by him were first taken into account and deducted (Dig. 15, 1, 5, 4; *ib.* 9, 2); and, if a free man became surety for the debt of a slave to his master or any one else, a right of action arose and he could be sued (Gaius, iii. 119; Inst. iii. 20, 1). *Servi publici*, who belonged to the state, had the special privilege of disposing of half their *peculium* by will (Ulp. *Reg.* xx. 16).

The contracts which a slave made with third persons gave rise, so far as he himself was concerned, only to "natural" obligations, and, though the master could sue upon them, it was a doctrine of the Jus Civile that in no case could any liability attach to the master upon transactions entered into between other persons and those in his power, whether slaves or children: "melior condicio nostra per servos fieri potest, deterior fieri non potest" (Dig. 50, 17, 133). In this respect, however, a change was made by the praetor, though the extent to which the master became suable varied with the circumstances of the case. Where he had either expressly or by implication directed or subsequently ratified the slave's contract, he was made as fully liable in person as if he had actually been the contracting party, the proper action being *quod jussu* [JUSSU QUOD ACTIO], EXERCITORIA, INSTITORIA, or *quasi-institoria* (Gaius, iv. 70, 71; Inst. iv. 7, 1 and 2). Where the slave engaged in trade with a *peculium* with his master's knowledge, and became so embarrassed as to be unable to satisfy his trade creditors in full, the latter could demand a distribution of the *peculium* among themselves, so far at least as it was invested in the business (*merx peculiaris*), in the ratio of their several claims: the division was made by the master, who was here treated as an ordinary creditor, and consequently could not deduct in full debts owing to himself, though he was entitled to a dividend on all his own claims whether arising out of the business or not (Dig. 14, 4, 5–7); but if any creditor was dissatisfied with his conduct of the liquidation, he could get it judicially reviewed by instituting an *actio tributoria* against him (Gaius, iv. 72; Inst. iv. 7, 3; Dig. 14, 4). If the slave made contracts without the master's knowledge or against his orders, the latter might be liable to an *actio de peculio et in rem verso* (Gaius, iv. 73; Inst. iv. 7, 4), in which the judge had firstly to inquire whether the master had himself derived any material advantage from the contract in question, as, if this were the case (*in rem versio*), his own means were liable to that extent; and the benefit which he had obtained might have been so great that the creditor might conceivably get full payment in this manner, as *e.g.* if the slave had borrowed ten sestertia and spent the whole of it in paying his master's debts. But if the latter had derived no material advantage from the slave's contract, or at least not enough to make him liable to the creditor *in solidum*, the judge had to inquire into the amount of the slave's *peculium* (deducting the master's own claims against it) and to condemn the master to pay the creditor from it what was due to him, so far at least as it extended at the date of the condemnation (Dig. 15, 1, 30, pr.). In deducting the master's own claims, any debt owed by the slave to another slave of the same master, but who was part of the debtor's own *peculium* (as was the case with *servi vicarii*, Dig. 15, 1, 17), was not considered (Dig. 17, 1, 17). The master's liability to the *actio de peculio* lasted for an *annus utilis* after the slave died, or was alienated or manumitted (Dig. 15, 2, 1).

The benefit attaching to a slave's contract belonged entirely to the master, and he could not enforce it by action. If the slave was *bonâ fide* possessed, or held in use or usufruct by a third person, the latter derived advantage from his contracts only so far as they involved the slave's own labour (*ex operis suis*), or were made with reference to or upon the credit of the property of the *bonâ-fide* possessor, usufructuary, or usuary (Gaius, iii. 164, 165; Inst. iii. 18, 1 and 2). The benefit of a contract made by a slave belonging to two or more joint owners belonged to them *pro portione dominii*, unless it was entered into by the directions or in the name of one or some of them only (Inst. iii. 18, 3; *ib.* 28, 3).

For delicts committed by a slave against his master, the latter might inflict punishment himself (Dig. 13, 7, 24, 3; 24, 3, 24, 5; Cod. Theod. 9, 12, 1, 2), though after Hadrian he might not put him to death without magisterial authority; but such delicts in no case gave rise to a legal obligation (Gaius, iv. 78; Inst. iv. 8, 6; Dig. 47, 2, 17, pr.; Cod. 4, 14, 6). The effect of wrongs perpetrated by slaves against third persons is discussed under NOXALIS ACTIO; for those pursuable by a criminal prosecution, they were subject to the ordinary procedure, though sometimes the execution of the sentence was entrusted to the master himself (Plut. *Cato Major*, 21; *Monum. Ancyranum*, tab. ii., ll. 1, 2, 3).

It was strictly forbidden to receive or harbour runaway slaves (*fugitivi*, Dig. 11, 4, 1, 1; Cod. 6, 1, 4, 7), in the pursuit of whom the law co-operated with the master by requiring the authorities to render him every assistance (Dig. 11, 4, 1, 2–8; *ib.* 3 and 4; Paul. *Sent. Rec.* i. 6 a, 3–5; Cod. 6, 1, 2): penalties were also imposed on their alienation and acquisition (Paul. *l. c.*; Dig. 48, 15; Cod. 9, 20, 6), and a special class of persons, called *fugitivarii*, made their pursuit and recapture a regular business (Florus, iii. 19; Dig. 19, 5, 18), which however appears later to have become the means of a great deal of fraud (Cod. Theod. 10, 12, 1). The very running away of the slave was regarded as a stealing of himself (Dig. 47, 2, 60), so that he became a *res furtiva* and could not be acquired by USUCAPIO (Inst. ii. 6, 1), and the possession of him remained in law vested in his master (Dig. 41, 2, 50, 1). The kidnapping or enticing away of slaves was dealt with by a Lex Fabia de plagiariis (Inst. iv. 18, 10) and, apparently at least, two senatusconsulta (Florus, *l. c.*; Varro, *R. R.* iii. 14).

Men were either born slaves or made such by law (*servi aut nascuntur aut fiunt*, Inst. i. 3, 4). It was a general rule of the Jus Gentium that children born out of lawful wedlock followed the condition of the mother, whatever might be that of the father (Dig. 1, 5, 24): thus the children of a female slave (*ancilla*) were slaves themselves (Gaius, i. 82), and if born in their master's house were called *vernae*. In one or two cases, however, the general principle was reversed by anomalous rules of law, it being enacted by the Senatusconsultum Claudianum (Gaius, i. 84–86) (1) that the children of a free man by an *ancilla* whom he believed to be free, should be free if males, slaves if females: but this exception to the rule of the Jus Gentium was repealed by Vespasian: (2) that if a free woman cohabited with a slave with his master's sanction, the issue should belong to the latter, though she remained free herself; this was repealed by Hadrian (Gaius, i. 84): (3) that if a free woman knowingly cohabited with a *servus alienus* without the consent of the latter's master, and persisted in the intercourse after prohibition by him, after three denunciations on his part she should be awarded to him as a slave by the magistrate, her children, whether born before or after this award, sharing her fate, and her property going with her person; this was not repealed till the time of Justinian (Inst. iii. 12, 1). The status of a child was determined by that of the father at the time of conception, if born of lawful wedlock; otherwise by that of the mother at the time of birth (Gaius, i. 89): but the latter rule had by the time of Paulus (*Sent. Rec.* ii. 24, 1–3) been altered so far as to admit the freedom of a child born of a slave-mother who at the time of conception had been free, or who had been free at any moment between conception and the birth (Paulus, *l. c.*; Inst. i. 4, pr.; Dig. 1, 5, 5).

Of the modes in which free persons became slaves, one was attributed to the Jus Gentium, the rest to the Jus Civile. The former was capture by an enemy in war (Inst. i. 3, 4), or capture even without war by a nation between which and the captive's people there was no friendly treaty or intercourse (Dig. 49, 15, 5, 2). Prisoners taken by the Roman armies were sold as slaves by the aerarium (Dionys. iv. 24; Liv. iv. 34, vi. 4) or retained by the state as *servi publici* (Polyb. x. 17; Liv. xxvi. 47): very rarely they were distributed among the soldiers by lot (Dionys. iv. 24, 50; Liv. iv. 34). The practice of selling prisoners with a crown on their heads is alluded to in the common expressions *sub corona venire* and *vendere* (Gell. vii. 4: Liv. v. 22; Caes. *B. G.* iii. 16). Persons, however, who had become slaves by capture in war might recover their freedom by POSTLIMINIUM. In certain cases the law allowed a free person to be sold as a slave: *e.g.* those who attempted to evade public burdens by not having their names entered on the census (INCENSI; Dionys. iv. 15, v. 75, xi. 63; Cic. *de Leg.* iii. 3, 7; *Tab. Heracl.* ll. 142–148), or who shirked military service (Varro, *ap.* Non. Marc. i. 67; Val. Max. vi. 3, 4; Cic. *pro Caec.* 34, 99: but cf. Dig. 49, 16, 4, 10), and the insolvent debtor under the old law of execution by MANUS INJECTIO. According to the old law, a *fur manifestus* [FURTUM] was liable to a *capitalis poena* and was adjudged (*addictus*) to the person whose property he had stolen; but it was doubted whether the effect of the addictio was to make him a servus or to put him in the condition of an *adjudicatus* (Gaius, iii. 189). A free man over twenty years of age who collusively allowed himself to be sold as a slave in order to secretly share the purchase-money with the vendor, was as early as the time of Mucius Scaevola refused his *proclamatio in libertatem* by the praetor, and so in effect adjudged a slave: a usage which was confirmed by senatusconsulta (Dig. 40, 13, 3; Inst. i. 3, 4; Cod. 7, 18, 1). This kind of fraud was practised even in the time of Plautus (Pers. i. 3, 58; iii. 1). The mode in which a free woman might become a slave under the SC. Claudianum has been noticed above. By an enactment of Claudius also (Suet. *Claud.* 25), a freedman who had misconducted himself towards his patron might be *revocatus in servitutem;* but this was not the law in the time of Nero (Tac. *Ann.* xiii. 27): however, in the time of Commodus, and possibly earlier, it was the rule that a freedman who had been convicted of gross ingratitude to his patron might be sold as a slave by the latter, or (later) subjected again to his ownership (Cod. 4, 10, 1). Under the emperors it was established that a free man who was condemned to death, to penal servitude in the mines, or to fight with gladiators or wild beasts, became and died a slave (Inst. i. 12, 3; *ib.* 16, 1; —Dig. 48, 19, 8, 11, 12), and so could not leave a valid will (Dig. 28, 1, 8, 4; 28, 3, 6, 6, 7): he was not a slave of the state or the emperor, but a *servus poenae*, and had no master (Dig. 34, 8, 3), so that inheritances and legacies left to him were taken *pro non scriptis* (Dig. 29, 2, 25, 2, 3; 34, 8, 3, pr.). The condition of the children of those condemned to the mines was ameliorated by Justinian's enactment (Nov. 22, 8), that the criminal's marriage should not be dissolved by his condemnation. Apart from these cases, no man could lose his freedom either by private contract (Cic. *pro Caec.* 34, 99; Dig. 40, 1, 2, 37; Cod. 7, 16, 10) or by usucapio (Gaius, ii. 48;—Cod. 7, 14, 6; 7, 22, 3).

Of the modes in which a slave might become free, the chief were MANUMISSIO and POSTLIMINIUM. There were, however, a number of other ways in which liberty was bestowed by the law, without the master's having anything to say in the matter. Thus by the SC. Silanianum slaves were liberated who discovered their master's murderers (Dig. 40, 8, 5), and the same was done by later enactments as a reward for the detection of certain other crimes, such as abduction (Cod. 7, 13, 3) and offences against the mint (Cod. *ib.* 2). The edict of Claudius giving their freedom to slaves whom their master turned out of doors on account of ill-health (Suet. *Claud.* 25; Dio Cass. lx. 29; Dig. 40, 8, 5; Cod. 7, 6, 3) has been already noticed. An enactment of Vespasian did the same for *ancillas* who were exposed to prostitution against the terms of the disposition under which they were acquired (Dig. 37, 14, 7, pr.), and by one of Marcus and Commodus slaves were declared free who were aliened under a promise to manumit, which the alienee failed to perform (Dig. 40, 8, 1): thus if a slave saved enough money to purchase his freedom through a friend, who refused to manumit him, he became free *ipso facto* (Dig. 40, 1, 4, pr.–3). A number of senatusconsulta beginning under Trajan (SC. Rubrianum, Dasumianum, Articuleianum, Vitrasianum, Juncianum) provided in the same manner for the enfranchisement of slaves to whom liberty was bequeathed under a fideicommissum. Freedom could also be acquired by prescription (Dig. 40, 9, 16, 3; Cod. 7, 22, 1–3; Cod. Theod. 4, 8, 3, 5), from the time of Leo, by the slaves attaining certain high offices at court (*e.g.* becoming a *cubicularius*, Cod. 12, 5, 3); and from that of Justinian, subject to certain conditions, by his becoming a monk or spiritual person (Nov. 5, 2, 1; 123, 7, 35). In times of revolution under the Republic, it was not unusual to proclaim the liberty of slaves to induce them to join in revolt (Plut. *Mar.* 41, 42); but these were irregular proceedings, and neither justifiable nor examples for imitation. [J. B. M.]

The preceding account treats of the legal condition of slaves in relation to their masters. It remains to give an account of the history of slavery among the Romans, of the sale and value of slaves, of the different classes into which they were divided, and of their general treatment.

Slaves existed at Rome in the earliest times of which we have any record; but they do not appear to have been numerous under the kings and in the earliest ages of the Republic. According to Dionysius (ix. 25), in B.C. 476 they cannot have amounted to more than one-eighth of the population, and were probably much less (cf. Dureau de la Malle, *Écon. Pol.* i. 225). The different trades and the mechanical arts were chiefly carried on by the clientes of the patricians, and the small farms in the country were cultivated for the most part by the labours of the proprietor and of his own family. But as the territories of the Roman state were extended, the patricians obtained the right of occupying large portions of the ager publicus (Mommsen, i. 276). These estates required a larger number of hands for their cultivation than could readily be obtained among the free population; and since the free men were constantly liable to be called away from their work to serve in the armies, the lands began to be cultivated almost entirely by slave labour. (Cf. Liv. vi. 12; Appian, *B. C.* i. 7, *γεωργοῖς χρωμένων θεράπουσιν ἀντὶ ἐλευθέρων.*) Through war and commerce slaves could easily be obtained, and at a cheap rate, and their number soon became so great that the poorer class of free men was thrown almost entirely out of employment. This state of things was one of the chief arguments used by Licinius and the Gracchi for limiting the quantity of public land which a person might possess (Appian, *B. C.* i. 7, 9, 10); and we know that there was a provision in the Licinian Rogations that a certain number of free men should be employed on every estate (Appian, *B. C.* i. 8). This regulation, however, was probably of little avail: the lands still continued to be almost entirely cultivated by slaves, although in the latest times of the Republic we find that Julius Caesar attempted to remedy this state of things to some extent, by enacting that of those persons who attended to cattle a third should always be free men (Suet. *Jul.* 42). In Sicily, which supplied Rome with so great a quantity of corn, the number of agricultural slaves was immense: the oppressions to which they were exposed drove them twice to open rebellion, and their numbers enabled them to defy for a time the Roman power. The first of these Servile Wars began in B.C. 134 and ended in B.C. 132, and the second commenced in B.C. 102 and lasted almost four years.

Long, however, after it had become the custom to employ large gangs of slaves in the cultivation of the land, the number of those who served as personal attendants still continued to be small. Persons in good circumstances seem usually to have had only one to wait upon them (Plin. *H. N.* xxxiii. § 26), who was generally called by the name of his master with the word *por* (that is, *puer*) affixed to it, as *Gaipor*, *Lucipor*, *Marcipor*, *Publipor*, *Quintipor*, &c.; and hence Quintilian (i. 4, 26), long before whose time luxury had augmented the number of personal attendants, says that such names no longer existed. Cato, when he went to Spain as consul, took only three slaves with him (Apul. *Apol.* p. 431, ed. Ouden). But during the later times of the Republic and under the Empire the number of domestic slaves greatly increased, and in every family of importance there were separate slaves to attend to all the necessities of domestic life. It was considered a reproach to a man not to keep a considerable number of slaves. Thus Cicero, in describing the meanness of Piso's housekeeping, says, "Idem coquus, idem atriensis: pistor domi nullus" (*in Pis.* 27). The first question asked respecting a person's fortune was, "Quot pascit servos?" (Juv. iii. 141). Horace (*Sat.* i. 3, 12) seems to speak of ten slaves as the lowest number which a person in tolerable circumstances ought to keep, and he ridicules the praetor Tullius for being attended by no more than five slaves in going from his Tiburtine villa to Rome (*Sat.* i. 6, 107). The immense number of prisoners taken in the constant wars of the Republic, and the increase of wealth and luxury, augmented the number of slaves to a prodigious extent. The statement of Athenaeus (vi. p. 272 e), that very many Romans possessed 10,000 and 20,000 slaves and even more, is probably an exaggeration; but a freedman under Augustus, who had lost much property in the Civil Wars, left at his death as many as 4,116 (Plin. *H. N.* xxxiii. § 135). Two hundred was no uncommon number for one person to keep (Hor. *Sat.* i. 3, 11), and Augustus permitted even a person that was exiled to take twenty slaves or freedmen with him (Dio Cass. lvi. 27). The mechanical arts, which were formerly in the hands of the clientes, were now entirely exercised by slaves (Cic. *de Off.* i. 42, 150): a natural growth of things, for where slaves perform certain duties or practise certain arts, such duties or arts will be thought degrading to a freedman. It must not be forgotten that the games of the amphitheatre required an immense number of slaves trained for the purpose. [GLADIATORES.] Like the slaves in Sicily, the gladiatores in Italy rose in B.C. 73 against their oppressors, and, under the able generalship of Spartacus, defeated a Roman consular army, and were not subdued till B.C. 71, when 60,000 of them are said to have fallen in battle (Liv. *Epit.* xcvii.).

Under the Empire various enactments, mentioned above (p. 660), were made to restrain the cruelty of masters towards their slaves; but the spread of Christianity tended most to ameliorate their condition, though the possession of them was for a long time by no means condemned as contrary to Christian justice. The Christian writers, however, inculcate the duty of acting towards them as we would be acted by (Clem. Alex. *Paedagog.* iii. 12); but down to the age of Theodosius wealthy persons still continued to keep as many as two or three thousand (Chrysost. vol. vii. p. 633). Justinian did much to promote the ultimate extinction of slavery; but the number of slaves was again increased by the invasion of the barbarians from the North, who not only brought with them their own slaves, who were chiefly Sclavi or Sclavonians (whence our word *slave*; cf. Gibbon, c. 55), but also reduced many of the inhabitants of the conquered provinces to the condition of slaves. But all the various classes of slaves became merged in course of time into the *adscripti glebae*, or serfs of the Middle Ages.

The chief sources from which the Romans obtained slaves have been pointed out above. Under the Republic one of the chief supplies consisted of prisoners taken in war, who were sold by the quaestores (Plaut. *Capt.* Prol. 34) with a crown on their heads (see above, p. 662 *b*), and usually on the spot where they were taken, as the care of a large number of captives was inconvenient (cf. Liv. x. 42, 46). Consequently slave-dealers generally accompanied an army, and frequently after a great battle had been gained many thousands were sold at once (Caes. *B. G.* iii. 16), when the slave-dealers obtained them for a mere nothing. In the camp of Lucullus on one occasion slaves were sold for four drachmae each. The slave trade was also carried on to a great extent, and, after the fall of Corinth and Carthage, Delos was the chief mart for this traffic. When the Cilician pirates had possession of the Mediterranean, as many as 10,000 slaves are said to have been imported and sold there in one day (Strab. xiv. p. 668). A large number came from Thrace and the countries in the North of Europe, but the chief supply was from Africa, and more especially Asia, whence we frequently read of Phrygians, Lycians, Cappadocians, &c., as slaves (Cic. *pro Flacc.* 27, 65).

The trade of slave-dealers (*mangones*) was considered disreputable, and expressly distinguished from that of merchants (*mangones non mercatores sed venaliciarii appellantur*, Dig. 50, 16, 207; Plaut. *Trin.* ii. 2, 51); but it was very lucrative, and great fortunes were frequently realised from it. The slave-dealer Thoranius, who lived in the time of Augustus, was a well-known character (Suet. *Aug.* 69; Macrob. *Sat.* ii. 4; Plin. *H. N.* vii. § 56). Martial (viii. 13) mentions another celebrated slave-dealer in his time, of the name of Gargilianus.

Slaves were usually sold by auction at Rome. They were placed either on a raised stone (hence *de lapide emptus*, Cic. *in Pis.* 15, 36; Plaut. *Bacch.* iv. 7, 17) or a raised platform (*catasta*, Tibull. ii. 3, 60; Persius, vi. 77; Casaubon, *ad loc.*), so that every one might see and handle them, even if they did not wish to purchase them. Purchasers usually took care to have them stript naked (Sen. *Ep.* 80; Suet. *Aug.* 69), for slave-dealers had recourse to as many tricks to conceal personal defects as the horse-jockeys of modern times: sometimes purchasers called in the advice of medical men (Claudian, *in Eutrop.* i. 35, 36). Slaves of great beauty and rarity were not exhibited to public gaze in the common slave-market, but were shown to purchasers in private (*arcanae tabulata catastae*, Mart. ix. 60). Newly imported slaves had their feet whitened with chalk (Plin. *H. N.* xxxv. § 199; Ovid, *Am.* i. 8, 64), and those that came from the East had their ears bored (Juv. i. 104), which we know was a sign of slavery among many Eastern nations. The slave-market, like all other markets, was under the jurisdiction of the aediles, who made many regulations by edicts respecting the sale of slaves. The character of the slave was set forth in a scroll (*titulus*, Sen. *Ep.* 47) hanging round his neck, which was a warranty to the purchaser (Gell. iv. 2; Propert. v. 5, 51): the vendor was bound to announce fairly all his defects (Dig. 21, 1, 1; Hor. *Sat.* ii. 3, 284), and if he gave a false account had to take him back within six months from the time of his sale (Dig. 21, 1, 19, 6), or make up to the purchaser what the latter had lost through obtaining an inferior kind of slave to what had been warranted (Dig. 19, 1, 13, 4; Cic. *de Off.* iii. 23, 91). The vendor might, however, use general terms of commendation without being bound to make them good (Dig. 18, 1, 43; 21, 1, 19). The chief points which the vendor had to warrant, were the health of the slave, especially freedom from epilepsy, and that he had not a tendency to thievery, running away, or committing suicide (Cic. *de Off.* iii. 17, 71). The nation of a slave was considered important, and had to be set forth by the vendor (Dig. 21, 1, 31, 21). Slaves sold without any warranty wore at the time of sale a cap (*pilleus*) upon their head (Gell. vii. 4). Slaves newly imported were generally preferred for common work; those who had served long were considered artful (*veteratores*, Ter. *Heaut.* v. 1, 16), and the pertness and impudence of those born in their master's house (*vernae*: see above, p. 662) were proverbial (*vernae procaces*, Hor. *Sat.* ii. 6, 66; Mart. i. 42, x. 3).

The value of slaves depended, of course, upon their qualifications: under the Republic slaves were not dear, and Cato never gave more than 1500 drachmae for one (Plut. *Cat. Maj.* 4); but under the Empire the increase of luxury and the corruption of morals led purchasers to pay immense sums for beautiful slaves, or such as ministered to the caprice or whim of the purchaser. Eunuchs always fetched a very high price (Plin. *H. N.* vii. § 129), and Martial (iii. 62, xi. 70) speaks of beautiful boys who sold for as much as 100,000 or 200,000 sesterces each (£885 8*s.* 4*d.* and £1770 16*s.* 8*d.*). A *morio* or fool sometimes sold for 20,000 sesterces (Mart. viii. 13). [NANI.] Slaves who possessed a knowledge of any art which might bring in profit to their owners, also sold for a large sum. Thus literary men and doctors frequently fetched a high price (Suet. *de Ill. Gram.* 3; Plin. *H. N.* vii. § 129), and also slaves fitted for the stage, as we see from Cicero's speech on behalf of Q. Roscius (10, 28). Female slaves who might bring in gain to their masters by prostitution were also dear: sometimes 60 minae were paid for a girl of this kind (Plaut. *Pers.* iv. 4, 113). Five hundred drachmae (perhaps at that time about £18) seem to have been a fair price for a good ordinary slave in the time of Horace (*Sat.* ii. 7, 43), and the average price in the time of the Antonines must have been about the same (cf. Wallin, ii. 172). In the fourth century a slave capable of bearing arms was valued at 25 solidi or aurei (Cod. Theod. 7, 13, 13). In the time of Justinian the legal valuation of slaves was as follows: common slaves, both male and female, were valued at 20 solidi apiece (about £12), and under ten years of age at half that sum; if they were artificers they were worth 30 solidi, if notarii 50, if medical men or midwives 60; eunuchs under ten years of age were worth 30 solidi, above that age 50, and if they were artificers also as much as 70 (Cod. 6, 4, 3, 3). Female slaves, unless possessed of personal attractions, were generally cheaper than male. Six hundred sesterces (about £5) were thought too much for a slave girl of indifferent character in the time of Martial (vi. 66); and two aurei or solidi were not considered so low a price for a slave girl (*ancilla*) in the time of Hadrian as to occasion doubt of her having come honestly into the hands of the vendor (Dig. 47, 2, 76). We have seen that in the time of Justinian the legal value of female slaves was equal to that of males; this may probably have arisen from the circumstance that the supply of slaves was not so abundant then as at earlier times, and that therefore recourse was had to propagation for keeping up the number of slaves. But under the Republic and in the early times of the Empire this was done to a very limited extent, as it was found cheaper to purchase than to breed slaves.

Slaves were divided into many various classes: the first division was into public or private. The former belonged to the state and public bodies, and their condition was preferable to that of the common slaves. They were less liable to be sold, and under less control than ordinary slaves: they also possessed the privilege of the *testamenti factio* to the amount of one-half of their property (see above, p. 661), which shows that they were regarded in a different light from other slaves. Scipio, therefore, on the taking of Nova Carthago, promised 2000 artisans, who had been taken prisoners and were consequently liable to be sold as common slaves, that they should become public slaves of the Roman people, with a hope of speedy manumission, if they assisted him in the war (Liv. xxvi. 47). Public slaves were employed to take care of the public buildings (compare Tac. *Hist.* i. 43), and to attend upon magistrates and priests. Thus the aediles and quaestors had great numbers of public slaves at their command (Gell. xiii. 13), as had also the triumviri nocturni, who employed them to extinguish fires by night (Dig. 1, 15, 1). They were also employed as lictors, jailors, executioners, watermen, &c. (Cf. Gessner, *de Servis Romanorum publicis*, Berlin, 1844.)

A body of slaves belonging to one person was called *familia*, but two were not considered sufficient to constitute a *familia* (Dig. 50, 16, 40). Private slaves were divided into urban (*familia urbana*) and rustic (*familia rustica*): but the name of "urban" was given to those slaves who served in the villa or country residence as well as in the town house; so that the words "urban" and "rustic" rather characterised the nature of their occupations than the place where they served ("urbana familia et rustica non loco, sed genere distinguitur," Dig. 50, 16, 166). The *familia urbana* could therefore accompany their master to his villa without being called *rustica* on account of their remaining in the country. When there was a large number of slaves in one house, they were frequently divided into decuriae (Petron. 47), each under the charge of a *decurio*, whose title often occurs in inscriptions; but independently of this division they were arranged in certain classes, which held a higher or a lower rank according to the nature of their occupation. The distinction drawn by Ulpian (Dig. 47, 10, 15, 44) between *bonae frugi*, *ordinarius*, *dispensator* on the one hand, and *volgaris*, *mediastinus*, *qualis-qualis* on the other, is evidently not meant to be technical, but general in its character; and it is doubtful whether the *litterati* or literary slaves were included in any of these classes. Those called *vicarii* are spoken of above (p. 662).

Ordinarii seem to have been those slaves who had the superintendence of certain parts of the housekeeping. They were also chosen from those who had the confidence of their master, and they generally had certain slaves under them, often called *vicarii* (Dig. 15, 1, 17). To the same class also belong the slaves who had the charge of the different stores, and who correspond to our housekeepers and butlers: they are called *cellarii*, *promi*, *condi*, *procuratores peni*, &c. [CELLA.]

The first place in the *familia urbana* was held by the *procurator*, a term applied generally to the agent of another, but especially to the slave who was placed in charge of the household (cf. Cic. *ad Att.* xiv. 16). The *actor* in the *familia rustica* was almost the same as the *vilicus* or bailiff (Colum. i. 8; Plin. *Ep.* iii. 19). The *dispensator* was the slave in charge of the cash and the accounts, usually but not always, in the *familia urbana* (Dig. 1, 16, 166; Suet. *Galb.* 12; *Vesp.* 22). The *dispensator* was sometimes under the procurator, but at other times was directly in relation with his master. In earlier times the *atriensis* had a general charge of the money and of the household (Plaut. *Pseud.* ii. 2, 15).

Volgares included the great body of slaves in a house who had to attend to any domestic duty, and to minister generally to the wants of their master. As there were distinct slaves or a distinct slave for almost every department of household economy, as bakers (*pistores*), cooks (*coqui*), confectioners (*dulciarii*), picklers (*salmentarii*), &c. it is unnecessary to mention these more particularly. This class also included the porters (*ostiarii*), the bed-chamber slaves [CUBICULARII], the litter-bearers (*lecticarii*) [LECTICA], the *pedisequi*, and all personal attendants of any kind.

Mediastini. [MEDIASTINI.]

Litterati, literary slaves, were used for various purposes by their masters, either as readers [ANAGNOSTAE], copyists, or amanuenses [LIBRARII; AMANUENSIS], &c. Others, again, were employed as MEDICI, CHIRURGI, or IATRALIPTAE.

The treatment of slaves, of course, varied greatly according to the disposition of their masters; but they appear upon the whole to have been treated with greater severity and cruelty than among the Athenians. Originally the master could use the slave as he pleased: under the Republic the law does not seem to have protected the person or life of the slave at all, but the cruelty of masters was to some extent restrained under the Empire, as has been stated above (p. 660), and the legal status of the slave was gradually improved. The general treatment of slaves, however, was probably little affected by legislative enactments. In early times, when the number of slaves was small, they were treated with more indulgence, and more like members of the family: they joined their masters in offering up prayers and thanksgivings to the gods (Hor. *Ep.* ii. 1, 142), and partook of their meals in common with their masters (Plut. *Coriol.* 24), though not at the same table with them, but upon benches (*subsellia*) placed at the foot of the lectus. But with the increase of numbers and of luxury among masters, the ancient simplicity of manners was changed: a certain quantity of food was allowed them (*dimensum* or *demensum*), which was granted to them either monthly (*menstruum*, Plaut. *Stich.* i. 2, 3), or daily (*diarium*, Hor. *Ep* i. 14, 41; Mart. xi. 108). Their chief food was the corn called *far*, of which either four or five modii were granted them a month (Donat. in Ter. *Phorm.* i. 1, 9; Sen. *Ep.* 80), or one Roman pound (*libra*) a day (Hor. *Sat.* i. 5, 69). They also obtained an allowance of salt and oil: Cato (*R. R.* 58) allowed his slaves a sextarius of oil a month and a modius of salt a year. They also got a small quantity of wine with an additional allowance on the Saturnalia and Compitalia (Cato, *R. R.* 57), and sometimes fruit, but seldom vegetables. Butcher's meat seems to have been hardly ever given them.

Under the Republic they were not allowed to serve in the army, though after the battle of Cannae, when Rome was in such imminent danger, 8000 slaves were employed by the state for the army, and subsequently manumitted on account of their bravery (Liv. xxii. 57; xxiv. 14–16).

The offences of slaves were punished with severity and frequently with the utmost barbarity. One of the mildest punishments was the removal from the familia urbana to the rustica, where they were obliged to work in chains or fetters (Plaut. *Most.* i. 1, 18; Ter. *Phorm.* ii. 1, 20). They were frequently beaten with sticks or scourged with the whip (of which an account is given under FLAGRUM), but these were such everyday punishments, that many slaves ceased almost to care for them; thus Chrysalus says (Plaut. *Bacchid.* ii. 3, 131):

> "Si illi sunt virgae ruri, at mihi tergum domi est."

Runaway slaves (*fugitivi*) and thieves (*fures*) were branded on the forehead with a mark (*stigma*), whence they are said to be *notati* or *inscripti* (Mart. vii. 75, 9). Slaves were also punished by being hung up by their hands with weights suspended to their feet (Plaut. *Asin.* ii. 2, 31), or by being sent to work in the Ergastulum or Pistrinum. [ERGASTULUM; MOLA.] The carrying of the furca was a very common mode of punishment [FURCA], and slaves were often flogged while bearing it. The cross [CRUX] was a specially *servile supplicium*. The toilet of the

Roman ladies was a dreadful ordeal to the female slaves, who were often barbarously punished by their mistresses for the slightest mistake in the arrangement of the hair or a part of the dress (Ovid, *Am.* i. 14, 15, *Ar. Am.* iii. 235; Mart. ii. 66; Juv. vi. 498, &c.).

Masters might work their slaves as many hours in the day as they pleased, but they usually allowed them holidays on the public festivals. At the festival of Saturnus in particular, special indulgences were granted to all slaves, of which an account is given under SATURNALIA.

There was no distinctive dress for slaves. It was once proposed in the senate to give slaves a distinctive costume, but it was rejected since it was considered dangerous to show them how numerous they were (Sen. *de Clem.* i. 24). Male slaves were not allowed to wear the toga or bulla, nor females the stola; but otherwise they were dressed nearly in the same way as poor people, in tunics and cloaks of a dark colour (*pullati*) and slippers (*crepidae*), or in the country SCULPONEAE or clogs (*vestis servilis*, Cic. *in Pis.* 38, 93).

The rites of burial, however, were not denied to slaves, for, as the Romans regarded slavery as an institution of society, death was considered to put an end to the distinction between slaves and free men. Slaves were sometimes even buried with their masters, and we find funeral inscriptions addressed to the Di Manes of slaves (*Dis Manibus*). It seems to have been considered a duty for a master to bury his slave, since we find that a person who buried the slaves of another had a right of action against the master for the expenses of the funeral (Dig. 11, 7, 31). In 1726 the burial vaults of the slaves belonging to Augustus and Livia were discovered near the Via Appia, where numerous inscriptions were found, which have been illustrated by Bianchini and Gori and give us considerable information respecting the different classes of slaves and their various occupations. Other sepulchres of the same time have been also discovered in the neighbourhood of Rome (cp. Wilmann's *Ex. Inscr. Lat.* i. 125 ff.).

Rom.* vol. iii.; Blair, *An Enquiry into the State of Slavery amongst the Romans*, Edinburgh, 1833; Becker-Göll, *Gallus*, vol. ii. 99–154; Wallon, *Histoire de l'Esclavage dans l'Antiquité*, 2nd ed. Paris, 1879; Marquardt, *Privatleben*, 135–191.) [W. S.] [A. S. W.]

SESTE'RTIUM. [CRUX, Vol. I. p. 568 *b.*]

SESTER'TIUS. This term is a contraction for *semis tertius*, which is the Latin way of expressing 2½. It may be used for various weights and measures: for example, *pes sestertius* is 2½ feet. But it has been more usually applied to coin: the numus sestertius, sestertius, or, as it is rendered in English, sesterce, was the unit according to which sums of money were reckoned by the Romans almost throughout their history. It was expressed on the coins themselves and in documents by the symbol IIS (two units and a semis), or with a line through, ~~IIS~~, a form commonly though incorrectly printed as HS.

According to the view of Mommsen (*Röm. Münzw.* p. 292), when silver coin was first issued at Rome (B.C. 269: As, p. 205) it was based on the equation of the scruple of silver (17·5 grains) to one libral as of 10 ounces, or 2½ of the current reduced asses of 4 ounces. Thus the denarius (10 asses) was equal to 4 sestertii, and the quinarius to 2 sestertii. But this equivalence of the sestertius to 2½ copper asses as current did not last long: in the time of the Hannibalic wars it was decreed that thenceforth 16 asses should go to the denarius and 4 to the sertertius, excepting in case of military pay, in which the old relations were preserved. Up to that time, as the sestertius and the libral as had been equivalent, money had been reckoned in either indifferently; but thereafter the sestertius became the regular unit.

Shortly after its issue the sestertius fell in weight from 17½ to 15 grains. After a time it ceased to be issued as a silver coin, though as a quarter of the denarius it remained as money of account. M. Antony issued sestertii in copper with the marks of value HS and Δ; that is, sestertii of four asses. And Augustus ordained that the sestertius of 4 asses and the dupondius of 2 should be struck in brass (orichalcum), while the as should be minted in copper.

In reckoning sums of money the Romans sometimes, but not often, reckoned by denarii. But far more usually they reckoned either by the libral as (in which case aeris or aeris gravis would be added) or by the sestertius, which was originally the equivalent of the libral as. [As.]

Sestertius of Nero in brass.

Sums up to a thousand sestertii were simply stated in sestertii. But sums of several thousand sestertii were expressed as so many *milia sestertiorum numorum* or *sestertium numum.* Thus *decem milia sestertium* is 10,000 sestertii; and the same amount is sometimes expressed by the formula *decem sestertia*, where sestertia is usually regarded as the plural of a neuter form sestertium (= 1000 sestertii), though to this view there are grammatical objections. Sums of a million sestertii and upwards are expressed by a use of the numeral adverbs in *-ies; centena milia*, a hundred thousand, being expressed or understood. Thus a million sestertii are *decies centena milia sestertium*, a phrase abridged to *decies sestertium.* Similarly, *vicies* and *tricies sestertium* stand for two and three million sestertii, and so on. As an example, we find in Cicero (*Verr.* Act. Sec. i. 39, 100) 2,235,417 sestertii thus expressed: "vicies ducenta triginta quinque milia quadringentos xvii numos" (*i.e.* sestertios). The distinction between units, thousands, and hundreds of thousands of sestertii is conventionally expressed merely by adding lines above or beside the numeral: thus HS X = 10 sestertii; HS $\overline{\text{X}}$ = 10,000 sestertii or 10 sestertia; HS$|\overline{\text{X}}|$ = decies sestertium or 1,000,000 sestertii.

The English equivalent of sums stated in sestertii cannot be accurately ascertained, since different values will be given according to the relation presumed between the value of silver and that of gold; but an approximation sufficient for all purposes will be reached if the metal value of a sestertius or sesterce is taken at twopence, and that of a sestertium at £8 sterling. What was as regards purchasing power the equivalent of a sestertius in modern money, is a different and an insoluble problem. [P. G.]

SEVIR. [AUGUSTALES, Vol. I. p. 259; EQUITES, Vol. I. p. 757.]

SEX SUFFRAGIA. [EQUITES, Vol. I. p. 754.]

SEXTANS. [As.]

SEXTA'RIUS, a Roman dry and liquid measure, which may be considered one of the principal measures in the Roman system, and the connecting point between it and that of the Greeks, for it was equal to the ξέστης of the latter; and there can be little doubt that the ξέστης was not an original Greek measure, but that the word was introduced into the Greek system from the Roman, for the purpose of establishing a unit of agreement. [QUADRANTAL.] It was one-sixth of the *congius*, and hence its name: in the Greek system it was one-sixth of the χοῦς. It was divided, in the same manner as the As, into parts named *uncia*, *sextans*, *quadrans*, *triens*, *quincunx*, *semissis*, &c. The uncia, or twelfth part of the sextarius, was the CYATHUS; its *sextans* was therefore two cyathi, its *quadrans* three, its *triens* four, its *quincunx* five, &c. (Wurm, *de Pond.* &c. p. 118; Hultsch, *Metrologie*, p. 112: cf. the Tables at the end of the volume.) [P. S.]

SE'XTULA, the sixth part of the *uncia*, was the smallest denomination of money in use among the Romans (Varro, *L. L.* v. 171). It was also applied, like the uncia, to other kinds of magnitude. [UNCIA.] [P. S.]

SIBYLLI'NI LIBRI. The books known by this name at Rome down to the destruction of the temple of Jupiter Capitolinus in B.C. 82, were said to have been offered to Tarquinius Superbus (or, according to Varro, to Tarquinius Priscus: cf. Lactant. *Inst. Div.* i. 6, 10; Isid. *Orig.* viii. 8, 5) by a Sibylla, *i.e.* a prophetess, who presented herself before the king with nine books for sale. Upon his refusing to purchase them, she went away and burnt three, and then returning asked the same price for the remaining six. Thinking her mad, the king again declined the purchase; on which she retired once more, burnt another three, and still asked the same price for the three that remained. Tarquin now consulted the augurs, who urged him to buy the books, and give the full price. This he did, and the woman vanished. He then appointed two citizens of rank to keep the books in the temple on the Capitol, with two public slaves to assist them (who were probably Greek interpreters, Zonaras, vii. 11). This is the account given by Dionysius (iv. 62); it is found with slight variations in some other authors (see Marquardt, *Staatsverw.* iii. 353, and notes); Livy, however, does not tell the story. Whatever truth there may be in the details of the legend, it is probable ~~that it was in the reign of the~~ second Tarquin that these books were actually acquired. Tradition is unanimous in ascribing ~~to that~~ reign changes of great importance in the religious history of Rome, the centre point of which changes is the Capitoline temple of Jupiter, where these books were stored. That temple expressed the union in a religious centre of the entire populus of Rome, comprising both patricians and plebeians, and foreshadowed the gradual equalisation of the two orders in all matters of religion, as well as in political rights. (Cf. esp. Ambrosch, *Studien*, p. 196 foll.; Marquardt, iii. 40.) All members of the state, whether Latin, Sabine, or Etruscan, might worship in it; and not only from the sacred triad of Jupiter, Juno, and Minerva, but any god might be the object of worship there. To this Tarquin, then, as well as to his two predecessors, we may ascribe a broad and catholic religious policy, in striking contrast with the narrow civic traditions of the Roman patrician priesthood; and this policy was recognised by the prevailing Roman tradition, which also connected with this king the introduction of the Sibylline books. For these books were not, like some others presently to be mentioned, of Roman or even of Italian origin: they were beyond doubt Greek, and their importance in Roman history is almost wholly concerned with the introduction of foreign and chiefly Greek worship into the Roman religious world.

Whence these books came, and how they were originally compiled, are questions of great obscurity. *Sibylla* was no doubt a Greek word signifying a certain type or ideal of that common phenomenon in antiquity, the inspired prophetess. [See DIVINATIO; ORACULUM.] The earliest mention of a Sibylla is in a fragment of Heracleitus of Ephesus (*ap.* Plut. *Pyth. Orac.* 6; Bywater, fragm. 12, and note), who knew of one only; but in course of time, as in the case of divinities, the type became localised in various cities, and Varro (*ap.* Lact. *l. c.*) knew of no less than ten Sibyllae—Persica, Libyca, Delphis, Cimmeria, Erythraea, Samia, Cumana, Hellespontica, Phrygia, Albunea (or Tiburtina). If we look on these local Sibyllae as merely mythical, but at the same time as suggesting, in some cases at least, localities in which floating prophecy was, as it were, caught and fixed, we cannot be very far wrong; and there is not much doubt as to which of these places it was from which the books came to Rome. The mere tradition that Tarquinius, on his expulsion from Rome, took refuge at Cumae, would in itself be sufficient evidence of an actual connexion between that Greek city and the Roman tyrant (Dionys. vi. 21); and the great majority of ancient authorities directly derive the books from Cumae (cf. Verg. *Ecl.* iv. 4; *Aen.* vi. 42 ff.;—Ov. *Fast.* iv. 158, 257: other references will be found in Schwegler, *Röm. Gesch.* i. 802, note, and Marquardt, iii. 352, note 5). Varro, on the other hand, seems to have believed that their origin was to be found at Erythrae, the reputed home of the most renowned of all the Sibyllae (cf. Serv. *ad Aen.* vi. 36 and 72), arguing that a prophetess who was consulted by Aeneas, according to the Roman form of the legend, could not have lived on till the time of the Tarquinii. The truth seems to be that these oracles came to Rome from Cumae, but had previously found their way thither from Erythrae, in the neighbourhood of which, at Gergis in the Trojan Mt. Ida, we seem to be able, since the researches of Klausen (*Aeneas und die Penaten*, p. 203 foll.), to discern the localisation of the earliest collection of oracles. This collection, according to Heraclides Ponticus (Lactant. *l. c.*; Schol. Plat. *Phaedr.* p. 315; Isid. *Orig.* viii. 8, 6), was formed in the first half of the sixth century B.C., a time when oracles were in great request, and when also the conquest by the Lydians and Persians of the Greek cities of Asia Minor was causing a considerable migration from those parts to Italy and Sicily. For further information on this difficult subject the student may consult Klausen, *l. c.*, and Bouché-Leclercq, *Histoire de la Divination dans l'Antiquité*, vol. ii. pp. 133 ff. The evidence for the Erythraean origin of the Cumaean oracles will be found collected in Marquardt, iii. 352, note 7; the most striking fact in this connexion being the selection of Erythrae, Ilium, and Samos, among other places, for the search for a new collection, after the burning of the Capitoline temple in 83 B.C.

It is naturally impossible to determine how and with what motive these collections were originally formed. At all times in Greece it is likely that there were wandering prophets (χρησμολόγοι) and floating prophecies, in connexion with Dionysiac and Orphic rites, and distinct from the ancient and localised oracles of Dodona, Delphi, and others. It was the theory of Klausen that these were at the height of their influence in the sixth century B.C., and that they represented a kind of "protestant" reaction against the fame, credit, and wealth of the local oracular shrines; and thus came at that time to be collected and arranged. Of late, Bouché-Leclercq, on the ground that the northern coast of Asia Minor is the true home of the Sibylla, has sought to show that the Sibylline type of oracular utterance may be traced to a Trojan origin in the form of Cassandra and Manto, "both victims of Apollo, and both attached by most intimate ties to the worship of that god." But these are no more than hypotheses, and it is not possible to arrive at any certainty in the matter.

As little can be determined about the nature of the collection which found its way to Rome. Something, indeed, is known of the later collection formed after the destruction of the original one, but it is unsafe to argue back from the one to the other. The oracles were said to have been written on palm-leaves (Serv. *ad Aen.* iii. 444), a tree, as Bouché-Leclercq remarks (iv. 289), which was not to be found in Campania; and it is quite possible that this may be merely a fragment of an old mythical tradition of which the substance is lost. Virgil makes use of it when he makes Aeneas urge the Sibylla to foretell his fate in words, instead of committing them to leaves, alluding, however, at the same time to the Roman collection and its guardians:

> "Te quoque magna manent regnis penetralia nostris:
> Hic ego namque tuas sortes, arcanaque fata,
> Dicta meae genti, ponam, lectosque sacrabo,
> Alma, viros: foliis tantum ne carmina manda:
> Ne turbata volent rapidis ludibria ventis."

According to this tradition, it has been supposed that they were referred to in the same way as Eastern nations refer to the Koran and Hafiz: that they did not search for a passage and apply it, but only shuffled the leaves and then drew one (cf. Niebuhr, *Hist. of Rome*, i. 506 foll.). But it is probable that, owing to the secrecy with which all such transactions were guarded by the Roman priests, the method of consultation was unknown even to the Romans themselves. That these prophecies were in the Greek language is almost beyond doubt, and probably they were written in hexameters, like other Greek oracular sayings, and like those of the later collection of which we have remains. Their application to the matter inquired about was no doubt entirely accidental, or subject to the arbitrary dealings of their interpreters; we may perhaps conjecture that it resembled that of the Biblical and Virgilian "sortes" of the Middle Ages, a verse being taken at chance, and twisted in any way so as to suit the circumstances. [SORTES.] And there need be little doubt that the interpreters frequently invented not only the application, but the response itself; as when, in order to drive Hannibal out of Italy, the Magna Mater Idaea was ordered to be brought to Rome (Liv. xxix. 10, 5), or for party purposes, as when Cinna and six tribunes were to be expelled from Italy in order to restore peace and order. (Granius Licinianus, p. 35, Bonn ed.) Another instance occurs in Liv. xxxviii. 45, 3.

They were deposited, as we have seen, in the temple on the Capitol, and placed in charge of *duo viri sacris faciundis*, a title which clearly implies the introduction of new rites (Liv. v. 13, 6). These officials, or priests, were self-electing, retained office for life, were free from military service, and remained patrician until by the Licinian rogations (B.C. 367) their number was increased to ten, and half the number were thenceforth to be of plebeian birth. As was natural, they were the first priesthood opened to the plebeians, their functions having no connexion with the "sacra" of the old patrician gentes (Liv. vi. 37, 12). The number ten held good till towards the end of the Republic, when, probably under Sulla's government, they were again increased to fifteen, which number is first mentioned by Cicero in 51 B.C. (*ad Fam.* 8, 4, 1). [See DECEMVIRI; SACERDOS.] This college of fifteen lasted until the time of Stilicho, who in A.D. 405 burnt the Sibylline books; it is mentioned frequently in inscriptions of the Empire. (See Marquardt, iii. 381, note 7.)

It would seem that the decemviri were not competent to consult the books on their own account, but that every such consultation was ordered by a decree of the senate. The books were the property of the state, the decemviri only their guardians and interpreters; and, like the pontifices and augurs, they were in constitutional practice only the skilled assistants and advisers of the magistrates and senate. (The strictly state character of the oracles is well seen in the story that Tarquin himself punished a duumvir with the death of a parricide for divulging their secrets to a foreigner: Dionys. iv. 62; Val. Max. i. 1, 13.) The senate ordered the decemvirs to inspect (*adire*, *inspicere*) the books, and to interpret the oracle they found applicable, which was rarely if ever made public, but only the general tenor of the reply of the experts. This at any rate seems to have been the case down to B.C. 82, with which period only we are at present dealing; after that time, and the destruction of the original books, the whole system may be said to have become vulgarised. (Marquardt, iii. 382; Liv. vii. 27, xxi. 62; Dionys. iv. 62; Cic. *de Div.* ii. 54, 110.)

It was not on any ordinary occasion that the senate took the important step of ordering a consultation. On examining the passages of Livy in which such consultations are mentioned, it will appear that the books were only had recourse to in the face of alarming prodigies, pestilences, and other such disasters. (Cp. *e.g.* Liv. iii. 10; v. 13; x. 47; xxi. 62; xxii. 1, 9; xxix. 10; xxxvi. 37; xli. 21.) Rarely do we hear of anything like a definite prophecy (Liv. xxix. 10; xxxviii. 45); the result of the consultation is almost always an admonition to adopt a certain *ritual*, in order to expiate evil or avert calamity. It is through this ritualistic authority, and in the corresponding introduction of new forms of worship into the state, that the immense influence on the Roman religion of the Sibylline books, and their interpreters, made itself felt; and it will be necessary here to summarise the innovations due to them.

These momentous changes will be better understood if we recall the character of the purely Italian element in the religion of the early Romans. Their religious ideas were sober, practical, and unimaginative. Their deities were abstract conceptions rather than concrete forms: they were not worshipped in temples with florid ritual, or presented to view in the forms of statues. All worship had an immediate practical object, and the complications of Roman ritual were occasioned by nothing more than the intense desire to make no mistake which might defeat that object. All warmth of religious emotion, such as elsewhere favoured the growth of myth, or choric song and dance, or sacramental mysteries, was absent from the Italian religious mind; the *legal* side of ritual took its place, and at Rome was at all times maintained by the paramount authority of the pontifices. But it was an entirely new aspect of religion which the Sibylline books and their keepers introduced; and though the pontifices were wise in their generation, and antagonism between the two colleges is rarely apparent, they may be regarded historically as rivals—the one as championing the *ritus Romanus*, the other the *ritus Graecus*—through the remainder of Roman history.

First, we have the introduction of a series of new deities: either entirely Greek, as Apollo, Latona, Mater Magna, Aesculapius; or Greek deities attached to a Latin name and a pre-existing Roman idea, as Diana (=Artemis), Ceres (=Demeter), Proserpina (=Persephone), and Hercules, who, originally a form of Jupiter (=Semo Sancus), or possibly the Genius of Jupiter, now absorbed the characteristics of the Greek Hercules. The immediate cause of these introductions was, as we saw, the occurrence of pestilence, famine, or defeat (Liv. v. 13; x. 47; xxi. 62); the motive was the feeling, stimulated by the growing intercourse with foreigners and especially Greeks, that where the home deities did not suffice, or declined their aid, strangers whose worship would be open to all, and not only to patrician gentes, might be found efficacious. Their immediate connexion with the Sibylline books may easily be traced: *e.g.* Apollo is not only the god of prophecy, but a god of *pestilence;* Aesculapius comes in on the same ground; Ceres and Persephone may be connected with the *famines* and distress of the first half of the sixth century B.C., and it may be noted that the worship of the former had always a plebeian character, which illustrates the anti-patrician tendency of the Tarquinian policy, marked as we saw by the introduction of the books. Cybele or the Magna Mater Idaea, the great earth-deity of the original home of the oracles, was invoked to Rome in order to secure the expulsion of Hannibal from Italy, and so end a long series of disasters. (The new cult will be found examined in detail in Marquardt, iii. 358 foll., of which Bouché-Leclercq's account is only an abstract.)

Equally important was the change in *ritual*. This may be traced in the great development, resulting directly or indirectly from the books and the decemviri, in the Roman institution of *ludi*, whether *circenses* or *scenici* [see LUDI]: and especially noteworthy are the two sets of Apolline games, the Ludi Apollinares instituted in time of pestilence in 212 B.C. (Liv. xxv. 12; Macrob. i. 17, 29, "Bello Punico hi ludi ex libris Sibyllinis primum sunt instituti"), and the Ludi Saeculares, the history of which, though obscure, can be distinctly traced to the worship of Dis and Proserpina, and to the influence of these oracles. (Augustine, *Civ. Dei*, iii. 18, writing with Varro before him, so explains their origin. Cf. Marquardt, iii. 387.) The importance of this line of development in the social and religious life of the Romans cannot well be exaggerated. But the character of the new religion is best seen in the *lectisternia*, where the anthropomorphic appearance of the gods, the emotional and individual character of the cult, and the comparative absence of legal restraint and orderly procedure, are in marked contrast with the earlier forms of Roman worship. (See LECTISTERNIUM; and for the details of the Graecus ritus in all these ceremonies, Marquardt, iii. 44 foll., 186 foll.) The student who wishes to understand this contrast fully, should study the accounts of the *lectisternia* carefully, and compare them with the ritual of the Fratres Arvales or that of any of the purely Roman festivals.

The Sibylline books had fairly done their work when they were destroyed by fire in

B.C. 83; in combination with other tendencies and circumstances, they had wrought a revolution in Roman religious ideas, in morals, as well as indirectly in literature and art. The history of the new collection formed in B.C. 76 is far less interesting, and must be briefly summed up here.

While the temple of Jupiter Capitolinus was rebuilding, envoys were sent to various towns in Asia Minor, Greece, and Sicily (and especially to Erythrae, where about 1000 verses were collected), to gather a fresh supply of oracles, which were deposited, like the old ones, in the vaults of the temple on its completion, and given into the charge of the collegium, increased to fifteen previously by Sulla. Whether any fragments of this collection are still imbedded in the "*Oracula Sibyllina*" which have come down to us, is an exceedingly difficult question, and beyond the scope of this article. (Alexandre, *Oracula Sibyllina*, ed. 2, Paris, 1869, with Sibylline bibliography: cf. Bouché-Leclerq, ii. 133, 200;—Marquardt, iii. 351, note 10; 383, note 9. According to Ewald, the earliest extant verses are as early as 124 B.C.; but the great mass are of Jewish and Christian origin. The collection is a strange medley. Cf. also Fabricius, *Bibl. Graec.* i. 227 foll.) Their influence may be traced here and there in subsequent years, as in the famous oracle (real or forged) which forbade Ptolemy Auletes to be restored to Egypt by force of arms (Cic. *ad Fam.* i. 7; Dio Cass. xxxix. 15), or that which prophesied in B.C. 44 that a *rex* was needed to overcome the Parthians (Suet. *Jul.* 79). Augustus, finding spurious verses in circulation, ordered a close inspection, which resulted in the burning of 2000 so-called prophetic books, and in the removal of the genuine ones to the temple of Apollo on the Palatine, which he himself had dedicated (Suet. *Aug.* 31; Tac. *Ann.* vi. 12). Dio Cassius also states that he had some of them, which had faded, written over again by the priests (liv. 17). Others were rejected in the time of Tiberius, who also refused to allow a new volume to be added, as proposed in the senate by Caninius Gallus (Tac. *l. c.*). This later collection was certainly written in Greek hexameters, and, if we interpret Cicero rightly (*de Div.* ii. 54, 111: cf. Varro *ap.* Dionys. iv. 62), some at least of the verses were in the form of acrostics (ἀκροστιχίς); this is not likely, however, to have been the case with all.

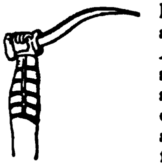
Under the Empire the books were rarely consulted: the duties of the quindecimviri were confined chiefly to the superintendence of the Cybele-worship, which now gained ground rapidly, especially in the month of March (Lucan, i. 599; *C. I. L.* vi. 488 foll.); and their influence was lessened by the arrival of other new cults in which they had no official part, and by the personal supervision of religion by the emperors. Occasional instances, however, of consultation occur. Tiberius, in spite of his proneness to ritual and superstition, had declined to allow an inspection of the books during an inundation of the Tiber in A.D. 15 (Tac. *Ann.* i. 76); but Nero ordered them to be consulted after the great fire in A.D. 64, and the old ceremonies were gone through (*ib.* xv. 44). In the period of intelligent government which followed, we do not seem to hear of them; but in 241, under Gordian, certain serious earthquakes were stopped by their means (Capitolinus, *Gordian*, 26). Again, under Aurelian in 270, when the Marcomanni had crossed the Alps, they were consulted by order of the emperor; and Vopiscus (*Aurel.* 20) gives an interesting account of the manner of this consultation, which shows that the quindecimviri were no longer indispensable, inasmuch as the senators themselves went to the temple of Apollo, and made the necessary search. Julian, as might be expected, was one of the last to make use of them (Ammian. Marc. xxiii. 1, 7). They were in existence in 391 (Symmachus, *Epist.* iv. 34, who was himself a quindecimvir; Claudian, *Bell. Get.* 231); but in the year 400 they were burnt by Stilicho, and Prudentius shortly afterwards alludes triumphantly to the dead superstition of paganism:

> "Mortua jam mutae lugent oracula Cumae."
> *Apoth.* 439 ff.

Lastly, it should be noticed that there are other collections of prophecies mentioned by our authorities, some of which at least were kept with the Sibylline books in the Capitoline temple, and may have been included in the general term *Sibyllini libri*. This was the case with the Etruscan oracles of Begoe or Vegoe (Serv. *ad Aen.* vi. 72), and with the *sortes* of the nymph Albunea of Tibur (Lactant. *Inst.* i. 6, 12). In B.C. 213 the senate ordered the praetor urbanus to investigate a variety of current prophecies, with the result that the *Carmina Marciana* of an unknown Marcius (or of two brothers, according to Cic. *de Div.* i. 40, 89; 50, 115; ii. 55, 113) were declared genuine and given into the charge of the decemvirs. This Marcius was probably a mythical or ideal personage, the name being connected with Mars, in whose worship some of the oldest traces of native Italian oracles are to be found. Livy has preserved the substance of two of these *carmina*, which were probably written in Saturnian verse (Liv. xxv. 12: cf. Macrob. *Sat.* i. 17, 28). All these books and others, such as those of Veii (Liv. v. 15, 11; Cic. *de Div.* i. 44, 100), are included in the general expression "libri fatales," which frequently occurs (Liv. *l. c.*; xxii. 9, 8, where it is synonymous with *libri Sibyllini*; xxii. 57, 6; and other passages). *Libri* alone is almost as common (iii. 10, 7; xxii. 1, 16); and thus it is impossible to draw any distinct line of demarcation between Greek and Italian collections. Even in regard to their usage this is to some extent so; for while, *e.g.*, the Marcian oracles recommend the cult of the Greek Apollo (Liv. xxv. 12), that of genuine Roman deities as well as Greek is found prescribed by the Sibylline books (as in Liv. xxi. 62 and xxiii. 1). The fact seems to have been that the overwhelming prestige of the latter acted by attraction on lesser local collections; and as Rome became the focus of all Italy, so the temple on the Capitol tended more and more to become the centre-point of the floating Italian divination. [W. W. F.]

SICA, a short curved sword, a weapon of the Thracians (*sica Θρακικὸν ξίφος ἐπικαμπές*, *Gloss. Labb.*: cf. Clem. Alex. *Strom.* i. 16, 75; Isid. *Orig.* xviii. 8). It was used therefore by the

Threces in the gladiatorial combats (Suet. *Cal.* 32; Mart. iii. 16): its shape explains the "falx supina" in Juv. viii. 201 (see Mayor *ad loc.*; GLADIATOR, Vol. I. p. 918 *b*). The annexed woodcut, from a terra-cotta lamp, shows a *sica* held by a Thracian (Baumeister, *Denkm.* p. 2099). As being smaller than the ordinary sword, and therefore more easily concealed, and perhaps as being sharp and deadly for a stab, it was the favourite weapon of robbers and murderers (*sicarii*), the *ferrum* with which "grassator agit rem" (Juv. iii. 305: cf. Cic. *Cat.* iii. 3, 8; *pro Mil.* 14, 37); and hence, as a legal term, *inter sicarios* comes to mean "on a trial for murder." [See LEX CORNELIA, p. 39.] [J. Y.] [G. E. M.]



Sica.

SICA'RIUS. [SICA.]

SICI'LICUS. This was the fourth part of the Roman uncia. For its value, see PONDERA, p. 456. [P. G.]

SICLUS (σίγλος or σίκλος) is a transliteration of the word *shekel* used by Semitic nations of West Asia. The shekel was in Syria and Babylon the unit of coinage, and varied in weight according to locality: see PONDERA, *ad init.* The ordinary Persian silver siglos weighed about 86 grains, and was reckoned by Julius Pollux as equivalent to 1½ Attic drachms: the heavy gold shekel of Phoenicia weighed nearly 260 grains. Thus it need not surprise us to find, at a time when the Greek drachma was the universal unit of currency, that the siglos was in some places considered as a tetradrachm, in some places as a didrachm, and in some as a drachm. [P. G.]

SIDA'REUS (σιδάρεος). Julius Pollux (ix. 78) quotes from Strattis a mention of sidarei as small iron coins current at Byzantium. None of these are extant, nor of the celebrated iron coins of Sparta [PELANOR]; but we have several specimens of iron coins issued in the fifth century B.C. at cities of Peloponnesus. [P. G.]

SIGILLA'RIA. [SATURNALIA.]

SIGMA. [TRICLINIUM; MENSA, p. 157 *b*.]

SIGNA MILITARIA. We shall say a few words first on the troops to which the separate standards belonged and the function they fulfilled in the army, and afterwards discuss the form of the standards. The exhaustive, lucid, and learned monograph of A. von Domazewski (*Die Fahnen im römischen Heere*, 1885) must form the basis of any such discussion. In much of what follows, points have been taken for granted which have been supported by evidence in the article EXERCITUS.

Passing over the bundle of hay (*manipulus*) which is said to have been a standard in the time of Romulus (Plut. *Rom.* 8), the principal kinds of military standards may be classed as (1) *signa* (in the special sense), (2) *vexilla*, (3) *imagines*, (4) *aquilae*. It will be advisable to treat the first two together.

(1) and (2) *Signa* and *Vexilla*.—The chief distinctive feature of Roman warfare was that it was mainly carried on with the sword, and that the tactical unit was a small one, viz. the maniple (Varro, *L. L.* v. 88, "manipulos exercitus minimas manus quae unum secuntur signum:" cf. Serv. on Verg. *Aen.* xi. 463). Each of these maniples had a *signum*, Liv. xxvii. 14, 8: "ni C. Decimius Flavus, signo arrepto primi hastati, manipulum ejus signis sequi se jussisset;" but there appears to have been generally, if not always, two *signiferi* in the maniple (Polyb. vi. 24, 6), the second probably to act as a reserve in case the first were disabled or killed; so that we need not suppose that each century had a standard. From thus having a separate standard of its own, each maniple came to be called *signum*, σημαία, *e.g.* Liv. xxv. 23, 16; Polyb. vi. 24, 5.

These *signa* preceded the column on the march, but stood in the hindmost rank of the maniple during the fight. The term *antesignani*, taken together with the fact that where *signa* are spoken of in a battle without any qualification the reference is generally to the *signa* of the hastati (Liv. viii. 11, 7); the insufficiency of the evidence for the existence of other standards to justify the title *antesignani* (e.g. Plin. *H. N.* x. § 16); the probability that the standard-bearers, impeded with the excessively heavy standards, would have been almost sure to have been at once cut down if they stood in the front rank of the sword-fight, and so the rallying-point of the maniple gone (whereas the loss of a standard and its bearer is generally spoken of as an unusual occurrence and a sign of a serious defeat of the division); the fact that the front-rank men could be recalled by the trumpets if they pushed away from the standards—all these points tend to show that the case is not made out, though argued with strong conviction by Domazewski (pp. 10–12), that the standards occupied the front line in the battle. But they undoubtedly were at the head of the column on the march; and their great importance, as the centre-point of the tactical unit, may be shown from the number of phrases in which the word *signa* occurs (*signa tollere*, *signa movere*, *signa ferre*, *signa convertere*, *signa constituere*, *signa obicere*). The word of command was always directed to the standard-bearers (Liv. v. 55, 1; vi. 8, 1), and conveyed to them during the fight by the *tubicines*, who stood near the general, the signal of the *tubicines* being taken up by the *cornicines*.

The *signa* of the legions, then, were the standards of the maniples. Even after the regular introduction of cohorts and centuries as administrative units, the tactical unit remained the maniple consisting of two centuries. Caesar often mentions the maniple and always in connexion with the standards, e.g. *Bell. Gall.* vi. 34, 6, "si continere manipulos ad signa vellet, ut instituta ratio et consuetudo exercitus Romani postulabat:" cf. ii. 15, 1; vi. 40, 1. Even under the Empire the manipular arrangement remained in force as far as the standards were concerned, just as it did as regards the rank of the centurions; and so Tacitus makes mention of maniples (*Hist.* iii. 22; iv. 77, 78), and Dio Cassius, not having a word to express "maniple," renders it by δύο ἑκατονταρχίας (xlviii. 42, 2). In the battle at Forum Gallorum in 43 B.C. there were 22 cohorts and about 60 *signa* lost (Galba *ap.* Cic. *Fam.* x. 30, 5); the numbers show that the *signa* belong to the maniples. In the coins given below we see the legionary *signa* with H(astati) and P(rincipes) on them. But during the Empire the manipular arrangement gradually disappeared, and Vegetius is quite right in saying that in his time (380 A.D.) each century had a *signum*.

That there was no special *signum* for the cohorts may be proved from these considerations: (1) that it would have served no purpose, (2) that there is virtually only one form of legionary *signum* on any representations we know of, and (3) that there is no certain trace whatsoever in the inscriptions or authors of there being two kinds of *signiferi*. When Caesar says (*Bell. Gall.* ii. 25, 1), "quartae cohortis omnibus centurionibus occisis signiferoque interfecto, signo amisso," he is doubtless thinking of the standard-bearer of one of the maniples, probably of that of the hastati: cf. Mommsen in *Eph. Epigr.* iv. 360.

Vexillum (diminutive of *velum*, Festus, p. 377; or perhaps *velum* may be a contraction of *vexillum*, as Cicero says, *de Orat.* 45, 135) was the oldest standard of the Roman army. It was raised on the Janiculum while the Comitia Centuriata were being held (Liv. xxxix. 15, 11; Dio Cass. xxxvii. 28, 1); floating over the general's tent, it gave the signal for battle (Plut. *Fab.* 15; cf. Caes. *Bell. Gall.* ii. 20, 1); it was the rallying-point of the soldiers in the case of a *tumultus* (Serv. *ad* Verg. *Aen.* viii. 1). The *signa* of the maniples during the Republic seem to have had a *vexillum* on them (see the coins below); and, indeed, both the names are applied to the legionary standards by Livy, *secundi hastati signum* (xxvi. 5, 15), *vexilla* [*manipulorum*] (viii. 8, 8), for *vexilla* were the oldest flags in the Roman army. It is probable that the new form of *signum* which had no *vexillum* at all was introduced by Augustus. But *vexilla* were the peculiar standards (1) of those divisions of infantry which were separated from the main division for some special duty, (2) of the troops of discharged veterans called out for further service.

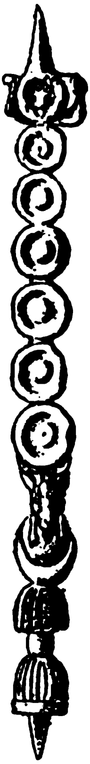
As regards the standards of the cavalry, Domaszewski (pp. 26, 27) draws a distinction between the cavalry of those divisions which consisted of both infantry and cavalry, such as the legions or the *cohortes equitatae;* and those troops which consisted solely of cavalry, such as the *alae* or the *equites singulares*. To the former belonged a *vexillum*, probably because the *signum* was appropriated to the infantry; to the latter both *signa* and *vexilla*—in each case one standard for each *turma*. Where both *signa* and *vexilla* appear, it is to be supposed that the *vexillum* was the original cavalry standard, which was later replaced, when no confusion was likely to ensue, by the more splendid *signum*.

Among the praetorians *signiferi* are found attached, to both the centuries and the cohorts; but, as the praetorians were arranged in maniples (Tac. *Ann.* xii. 56; xv. 33, 58), we may readily suppose from analogy that they were the divisions to each of which a *signum* was allotted.

The *auxilia* and the *numeri* had what we may call *signa*, and we shall speak of these below.

(3) *Imagines.*—In the early Empire *imaginiferi* are found belonging to the legions and to the auxiliary cohorts; each legion and each auxiliary cohort had one *imaginifer*. No evidence is found to prove that they existed among the auxiliary cavalry; yet each *ala* of the latter probably had a *signum* (cf. Tac. *Hist.* ii. 89) on which the emperor's *imago* was fixed. There is an interesting relief of one on a tombstone in Hexham Church, reproduced by Dr. Bruce, *Handbook to the Roman Wall*, p. 79. *Imagines* are never found affixed to the standards of the tactical units except in the case of the praetorians, which was a special body-guard of the emperor. In the legions the *imaginifer* belonged to the first cohort (*C. I. L.* iii. 6178, 20; Veget. ii. 6); in the *cohortes equitatae*, to the cavalry of that body (*C. I. L.* iii. 3256).

(4) *Aquilae.*—From the time of Marius the *aquila* was the standard of the legion. It of course had no tactical significance; but, besides being the sign of union of the whole legion, it marked where the commander happened to be, and accordingly where the main body of the legion was stationed. During the battle it was in charge of the *primus pilus* (Val. Max. i. 6, 11; Tac. *Hist.* iii. 22). In time of peace, during the Republic, it was kept at Rome in the Aerarium with the other standards (Liv. iii. 69, 8). In the camp it was placed in a little shrine (Cic. *Cat.* i. 9, 24; Dio Cass. xl. 18, 1;—Herodian, iv. 4, 5; v. 8, 6); for the standards were held as sacred (Plin. *H. N.* xiii. § 23), and regarded as constituting an asylum (*ib.* i. § 39).



Legionary *Signum* from Mayence.

The Form of the Standards.

(1) *Signa.*—The *signa* of the legions were in the main essentials similar to one another. The pole was a lance with a point at the lower end for fixing into the ground (*οὐρίαχος*, App. *Bell. Civ.* ii. 62; *cuspes*, Suet. *Caes.* 62) and a cross-piece of wood a little above this point to prevent the pole sinking too deep into the ground; sometimes, too, the pole had a handle. The pole was plated with silver (cf. Dexippus *ap.* Müller, *Frag. Hist. Graec.* iii. 682: *ἐπὶ ξύστων ἠργυρωμένων*). Towards the top of the pole was a transverse bar with ribands, sometimes of purple, hanging from it; and these often had at their ends silver ornaments shaped like ivy-leaves. Along this transverse bar there appears to have been placed a plate containing the name of the legion, cohort, and maniple to which the *signum* belonged. Below the transverse bar came a series of discs, probably of silver (Plin. *H. N.* xxxiii. § 58), like the *phalerae*. Hence we can readily believe the statements concerning the

***Signum* from Trajan's Column.**

great weight of the standards: *τὰ τῶν στρατοπέδων σύμβολα . . . , μόλις ὑπὸ τῶν γενναιοτάτων στρατιωτῶν φερόμενα* (Herodian, iv. 7, 7). There were military orders given to the maniple or century; for we know from Zonaras (vii. 21) that these orders were given to whole troops as well as to individuals (*οὐ κατ' ἄνδρα μόνον ἀριστεύσαντα ταῦτα ἐδίδοτο, ἀλλὰ καὶ λόχοις καὶ στρατοπέδοις ὅλοις παρείχετο*). This accounts for the fact that the number of discs varies, sometimes being as many as seven, sometimes only two. We hear that in early times a *φιάλη* was given as a meed of value to a foot-soldier, and *φάλαρα* to a horse-soldier (Polyb. vi. 39, 3); later, that *φάλαρα* were given to both horse- and foot-soldiers; but we may perhaps assume that the *φάλαρα* given to the infantry were of the shape of a *φιάλη*: and just as the *alae* of cavalry got *torques* and were accordingly called *torquata* (Orell. 516; *C. I. L.* vi. 3538), so the *troops* of infantry got saucer-shaped *phalerae*. These discs could be taken off the pole; and poles without them were called *incompta signa*, and appeared as such at military funerals (Tac. *Ann.* iii. 2). *Ornare signa* (Suet. *Claud.* 13) seems to have been the expression used for putting these discs on the pole, though in this passage it is said of the eagle, not of the *signa* properly so called. Below these discs, generally acting as a support, was a crescent moon, which was probably a kind of amulet to avoid ill-luck (cf. Plaut. *Epid.* v. 1, 38 (638); Hesych. *s. v.* *σεληνίς*). Above the transverse box was sometimes a *corona aurea*, sometimes a small shield—both probably kinds of orders, though one cannot feel at all sure in the case of the latter—sometimes a small *vexillum*, which was certainly an order (Sall. *Jug.* 85, 29), sometimes an upstretched hand, the token of fidelity. Again beasts, especially the capricorn, are sometimes found below the discs, chiefly on the military coins of Gallienus, Victorinus, and Carausius. They were of the nature of amulets (cf. Saglio, *Dict. des Antiq.* i. 253). For further details on this point see Domazewski, pp. 54–56.

Two representatives are given above of legionary *signa*. The first is from a tombstone in Mayence (Domazewski, fig. 12): the knobs under the crescent have no special significance. The second (*ib.* fig. 23) is a *signum* taken from Trajan's Column: note the hand and the *vexillum*. The two coins below (*ib.* figs. 34, 35) are consular coins of B.C. 83 and B.C. 49, with an *aquila* between two *signa*.

Signa.

Coin of B.C. 83. Coin of B.C. 49.

The standards of the auxiliary cohorts are so very like those of the maniples that there is no need to give a special representation of them.

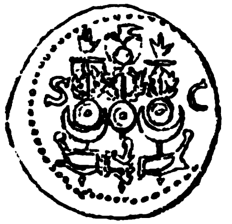
The standards of the *numeri* are, however, noticeable, as they appear to have had figures of animals on the top: cf. Tac. *Hist.* iv. 22, "hinc veteranorum cohortium signa, inde depromptae silvis lucisque ferarum imagines ut cuique genti inire proelium mos est." One surmounted by a bull taken from a relief in the Museum at Chesters (the ancient Cilurnum on the Roman wall) is given by Dr. Bruce (*Lapidarium septentrionale*, 930 = Domazewski, fig. 90).

Praetorian Standard (1).

The standards of the praetorians had, like the *signa* of the legions, the transverse bar and the ribands and their ivy-leaves — sometimes above the bar, occasionally separated by a crown, a *vexillum* or a shield, an upright crown, or an image of a god. The most remarkable difference between these standards and those of the legions was that *crowns* (*aurea*, *muralis*, *classica*, or *vallaris*; see CORONAE) take the place of the *phalerae*. In the middle of the pole was placed a medallion containing a portrait of the emperor, or medallions if there were more emperors than one; the most important crown belonging to the maniples was placed between the medallions if there were two. Above and below the medallions were generally crowns. Above are two praetorian standards from Trajan's Column. On the top of the first is a figure of perhaps Victory before a *vexillum*, then a crown, the eagle surrounded by a crown, the transverse bar and one of its ribands with the ivy-leaf at the end, a crown, an *imago*, a *corona classica* (the beaks are quite plain), a crown, another *imago*, a crown, and a knob as a support. On the top of the other is the point of the lance, next a *vexillum*, crown, eagle surrounded with a crown, transverse bar with ribands, crown, *imago*, *corona muralis*, another crown, another *imago*, a crown, and a knob.

Praetorian Standard (2)

The standards of the *speculatores*, as far as we can make them out, consisted of an upright hand or a crown above the transverse bar. The latter had pendent ribands and ivy-leaves; under it was a *phalera*, a crescent, and the rostrum of a ship: the latter is especially noticeable. The annexed cut is a coin of Galba.

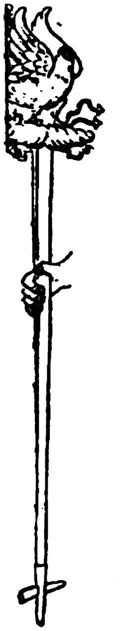


Standards of Speculatores.

(2) *Vexilla.*—The chief feature of the *vexilla* was, that hanging down from the transverse bar was a rectangular fringed piece of cloth which bore the name of the legion and probably that of the emperor. The cloth was sometimes white, sometimes red, sometimes purple (Serv. on *Aen.* viii. 1; Capitol. *Gord.* 8, 3). Occasionally above this piece of cloth, which was the *vexillum* proper, is found a statue of Victory. Annexed is such a *vexillum* from Trajan's Column.

Vexillum, from Trajan's Column.

(3) *Imagines.* — These were medallions of the emperors affixed to poles (*προτομὰς Καίσαρος, αἳ ταῖς σημαίαις προσῆσαν*, Joseph. *Antiq.* xviii. 3, 1: cf. Dio Cass. lxiii. 25, 1, *εἰκόνας*; lxv. 10, 3; Tac. *Hist.* iii. 13, 31), though probably the *imagines* which were destroyed in a revolution are not merely those on the standards, but also the statues and busts of the emperor which were in the camp. That medallions of other emperors than the reigning one—no doubt those of the *divi imperatores*—were carried on the standards, is plain from Tac. *Hist.* iv. 62: "revolsae imperatorum imagines."



Aquila, from a relief at Verona.

(4) *Aquila.* — The eagle was placed on the top of a long pole—sometimes immediately, sometimes resting on a metal plate. It generally held a thunderbolt in its claws, and had its wings extended for flight; we know that it was considered a good omen for an army when starting to see an eagle in flight (Tac. *Ann.* ii. 17; *Hist.* i. 62). Occasionally the eagle was represented as holding an oak-leaf in its beak. It was made generally of silver (Cic. *Cat.* i. 9, 24), sometimes of gold (Dio Cass. xl. 18, 1; Herodian, iv. 7, 7). The pole had a spike, generally a cross-piece of wood above the spike to prevent it sinking too far, and sometimes a handle in the middle for pulling it up. If the legion as a whole had gained any especial distinction or ornament, that ornament was affixed to the pole, as in the case of the *signa*. The annexed *aquila* from the relief at Verona (Domaz. fig. 4) gives a good idea of the standard, though unfortunately the eagle's head is broken off.

Nearly all the material necessary for discussing the *signa* is given by Domazewski, *op. cit.* Besides that, some further assistance may be got from articles by Rein in Pauly, vi. 1179-1182, 2542-3, and Marquardt, *Staatsverwaltung*, ii.^{2} 345, 353-7, 438-9. [L. C. P.]

SIGNI'NUM OPUS. [Pictura.]

SIGNUM. [Exercitus, Vol. I. p. 807; Signa.]

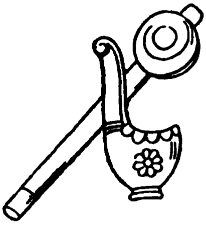
SILENTIA'RII. [Praepositus.]

SILICERNIUM. [Funus, Vol. I. p. 893.]

SI'LIQUA (*κεράτιον*) was the smallest Roman weight, being the sixth part of a scruple, scripulum, or $\frac{1}{144}$ of an ounce. [Pondera.] The siliqua auri is spoken of as a coin in the time of Constantius II.: according to Mommsen (*Röm. Münzwesen*, p. 791), it is represented by the silver coins of the period of the weight of 36 grains, which may have been equivalent to 3 grs., the weight of the siliqua, in gold. [P. G.]

SIMPU'LUM or **SIMPU'VIUM**, a ladle-shaped earthenware vessel, like a cyathus, but of ruder form. Varro (*L. L.* v. 124) tells us that it was supplanted at the dinner table by its Greek equivalent [Cyathus], but retained for sacrifices, and Pliny (*H. N.* xxxv. § 158) notes that it was still, by old custom, made of earthenware. The definition of Festus is, "vas parvum non dissimile cyatho quo vinum in sacrificiis libatur: unde et mulieres rebus divinis deditae simpulatrices dicuntur."

The cut here given is from the relief on the Arcus Argentariorum, and shows the sacred simpulum combined with the malleus used for striking certain victims. [See Securis.]

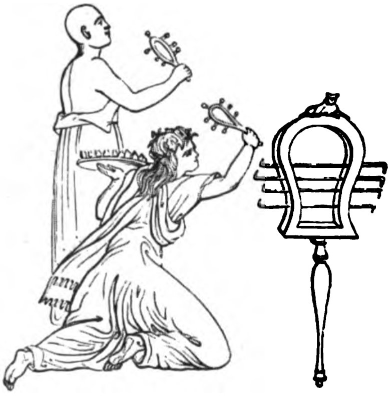


Simpulum and Malleus.

The question naturally presents itself, What was the relation of this vessel to the patera? Representations in Greek art show the wine poured into the patera from a jug. Was the jug similarly used in Roman sacrifices, and filled by means of a simpulum, or was the wine taken from the crater by a simpulum and poured straight into the patera? Our impression is that neither supposition is correct, and that the patera was not used at all in the *ritus Romanus* [see Sacrificium, p. 586], but was introduced along with the *ritus Graecus*, in which the simpulum had no place. The writer has given his reasons for this view in the *Classical Review*, vol. iv. p. 69. It may be observed briefly here: 1. That the patera was the emblem of the Epulones, a comparatively recent order [see Epulones], while the simpulum is the emblem of the Pontifex, who belongs to the old Roman religion (cf. Cic. *de Rep.* vi. 2, 11; Marquardt, *Staatsverw.* iii. 221). 2. That the representation of sacrificial implements in the Arcus Argentariorum shows a simpulum but no patera, which will be intelligible if the two were not used in the same rite. 3. That in the decree relating to silver articles retained for sacred purposes in the year the patella and salinum are mentioned, but not the patera (Liv. xxvi. 36; Patella). This is accounted for if we assume the patera to have been introduced later; the simpulum being always of earthenware would naturally not be mentioned. 4. The words of Varro and Festus cited above tend to show that the simpulum was a form of Roman vessel handed down from primitive times before the introduction of Greek shapes, and with this agrees the mention in Juv. vi. 343 of the *simpuvium* and *niger catinus* of Numa (the latter perhaps a praefericulum) as primitive sacrificial utensils. If the view here taken is correct, we must suppose that the sacrificial simpulum was used in sacrifices *ritu Romano* to take wine from the larger vessel, or crater, and either transfer it to the *capis*, or pour it directly in libation, as appears in the passages of Festus and Pliny. [G. E. M.]

SIPA'RIUM. [Theatrum, p. 821 *b*.]

SISTRUM (*σεῖστρον*), a mystical instrument of music, used by the ancient Egyptians in their ceremonies, and especially in the worship of Isis (Ovid, *Met.* ix. 784; *Amor.* ii. 13, 11, iii. 9, 34; *de Ponto*, i. 1, 38). It was held in the right hand (see woodcut), and shaken, from which circumstance it derived its name (*aera repulsa manu*, Tibull. i. 3, 24). Its most common form is seen in the right-hand figure of the annexed woodcut, which represents an ancient sistrum (cf. Micali, *Mon. ined.* tav. xvii.; Plut. *de Is. et Osir.* pp. 670, 671). Apuleius (*Met.* xi. pp. 119, 121, ed. Aldi) describes the sistrum as a bronze rattle (*aereum crepitaculum*), consisting of a narrow plate curved like a sword-belt (*balteus*), through which passed a few rods, that rendered a loud shrill sound. He says that these instruments were sometimes made of silver or even of gold.



Sistra.

The introduction of the worship of Isis into Italy shortly before the commencement of the Christian era made the Romans familiar with this instrument. The "linigeri calvi, sistrataque turba" (Mart. xii. 29), are most exactly depicted in two paintings found at Portici (*Ant. d'Ercolano*, vol. ii. pp. 309–320), and containing the two figures of a priest of Isis and a woman kneeling at her altar, which are introduced into the preceding woodcut. The use of the sistrum in Egypt as a military instrument to collect the troops is probably a fiction (Verg. *Aen.* viii. 696; Propert. iii. 11, 43).

Sistrum is sometimes used for a child's rattle (Martial, xiv. 54; Pollux, ix. 127). [J. Y.]

SITELLA. [Situla.]

SITO'NAE (*σιτῶναι*). [Sitos.]

SITOPHY'LACES (*σιτοφύλακες*), a board of officers, chosen by lot, at Athens. Their business was partly to watch the arrival of the corn ships, take account of the quantity imported, and see that the import laws were duly observed; partly to control the sales of corn in the market, and take care that the prices were fair and reasonable, and none but legal weights and measures used by the factors; in which respect their duties were much the same as those of the Agoranomi and Metronomi with regard to other saleable articles. Their number, according to the most probable correction of the words of Aristotle (*ap.* Harpocrat. *s. v.*), was the same as that of the other bodies with analogous functions; namely ten, five for the city and five for the Peiraeus (Vömel, *Zeitschr. f. Alterthumsw.* 1852, p. 32; Gilbert, *Staatsalterth.* i. 247; Fränkel, n. 145 on Boeckh). Another reading, followed by Boeckh and the authors of the *Att. Process* (p. 105 Lips.), gives ten for the city and five for the Peiraeus, or fifteen in all. The notion that there were originally only three rests on a false reading in Lysias (*Or.* 22, *κατὰ τῶν Σιτοπωλῶν*, § 8, where Scheibe rightly corrects *τέσσαρες* (δ') for δύο: see his note, and Fränkel *l. c.*). According to Lysias (*ib.* § 16), the *σιτοφύλακες* had *often* been punished with death for mere inability to check the proceedings of the *σιτοπῶλαι*, but the passionate unfairness of this speech indisposes us to accept so extraordinary a statement on its sole authority.

Demosthenes refers to the entry in the books of the Sitophylaces (*τὴν παρὰ τοῖς σιτοφύλαξι ἀπογραφήν*) to prove the quantity of corn imported from Pontus, which (he says) was equal to all that came from elsewhere, owing to the liberality of Leucon, king of the Bosporus, who allowed corn to be exported from Theudosia to Athens free of duty (Dem. *c. Lept.* p. 467. § 32). These books were probably kept by the five who acted for the Peiraeus, whose especial business it would be to inspect the cargoes that were unladen. (Harpocr. *s. v.* Σιτοφύλακες: Boeckh, *P. E.* p. 83 = *Sthh.*^{3} i. 105.)

[C. R. K.] [W. W.]

SITOPO'LAE (*σιτοπῶλαι*). [Sitos.]

SITOS (*σῖτος*), corn. The soil of Attica, though favourable to the production of figs, olives, and grapes, was not so well suited for corn; and the population being very considerable in the flourishing period of the Athenian republic, it was necessary to import corn for their subsistence. According to the calculation of Boeckh, which does not materially differ from that of other writers, there were 135,000 freemen and 365,000 slaves residing in Attica. The country, which contained an area of 64,000 stadia, produced annually about 2,400,000 medimni of corn, chiefly barley. The medimnus was about 1 bushel, 3 gallons, and 5·75 pints, or 48 Attic *χοίνικες*. A *χοῖνιξ* was considered a fair daily allowance of meal (*ἡμερησία τροφή*) for a slave. The consumption of the whole population was about 3,400,000 medimni, requiring therefore an importation of at least a million. It came from the countries bordering on the Euxine Sea (Pontus, as it was called by the Greeks), and more especially from the Cimmerian Bosporus and the Thracian Chersonese; also from Syria, Egypt, Libya, Cyprus, Rhodes, Sicily, and Euboea. The necessities of the Athenians made them exceedingly anxious to secure a plentiful supply, and every precaution was taken for that purpose by the government as well as by the legislator. Sunium was fortified, in order that the corn vessels (σιταγωγοὶ ὁλκάδες) might come safely round the promontory. Ships of war were often employed to convoy the cargo (παραπέμπειν τὸν σῖτον) beyond the reach of an enemy (Dem. *de Cor.* p. 251, § 77; *c. Polycl.* p. 1211, § 17). When Pollis, the Lacedaemonian admiral, was stationed with his fleet off Aegina, the Athenians embarked in haste, under the command of Chabrias, and offered him battle, in order that the corn-ships, which had arrived as far as Geraestus in Euboea, might get into the Peiraeus (Xen. *Hell.* v. 4, § 61). One of the principal objects of Philip in his attack on Byzantium was that, by taking that city, he might command the entrance to the Euxine, and so have it in his power to distress the Athenians in the corn trade. Hence the great exertions made by Demosthenes to relieve the Byzantines, of the success of which he justly boasts (*de Cor.* pp. 254, 307, 326, §§ 87, 241, 302).

As with those commercial states which, in modern times, import a large proportion of their food, a regularly-organised corn trade was a matter of the first necessity to the Athenians. What we learn of this organisation shows the business capacity of the Greeks, which in general was greatly inferior to that of modern Europe or even of the Romans, in a favourable light. The destination of corn-ships was frequently changed by advices after they had sailed (Dem. *c. Dionysod.* p. 1285, § 8 ff.); which could not have been done without a good system of intelligence. This enabled the vendors to sell in the best market, with the natural effect, not merely of raising prices where corn was cheap, but of lowering them where it was dear. Prices were thus brought to an equilibrium: for this, the true sense of συντιμᾶν in the passage just cited, see *Class. Rev.* i. 14. This natural flow of the commodity was checked by the short-sighted selfishness of governments; the Athenian in this respect being in all probability not the worst offender. Athenian legislation aimed at an artificial cheapness at the expense of speculators; exportation was entirely forbidden; and the consignment of corn to any other port than Athens (σιτηγεῖν ἄλλοσε ἢ Ἀθήναζε) was made a capital offence (Dem. c. *Phorm.* p. 918, § 37; Lycurg. *c. Leocr.* § 27). This was the rule for Attic traders, whether citizens or metoecs; while of the corn brought into Peiraeus in foreign bottoms two-thirds were to be carried up into the city and sold there (Harpocr. *s. v.* Ἐπιμελητὴς ἐμπορίου). No one might lend money to a ship that did not sail with an express condition to bring a return cargo, part of it corn, to Athens. If any merchant, capitalist, or other person advanced money or entered into any agreement in contravention of these laws, not only was he liable to the penalty, but the agreement itself was null and void, nor could he recover any sum of money, or bring any action in respect thereof (Dem. *c. Lacrit.* p. 941, §§ 50, 51). Information against the offenders was to be laid before the ἐπιμεληταὶ τοῦ ἐμπορίου [EPIMELETAE, No. 3]. Strict regulations were made with respect to the sale of corn in the market; and the proceedings of the σιτοπῶλαι or middlemen were narrowly watched both by the citizens and the importers (ἔμποροι, Lys. *Or.* 22, § 21). Conspiracies to buy up the corn (συνωνεῖσθαι), or raise the price (συνιστάναι τὰς τιμάς), were punished with death. The statement that they were not allowed to make a profit of more than one obol in the medimnus (*ib.* § 8) is illogical, and contradicted by the whole tenor of the passage: the true reading is δεῖν γὰρ αὐτοὺς κἂν ὀβολῷ μόνον πωλεῖν τιμιώτερον (Fränkel, n. 144 on Boeckh). It was, however, unlawful to buy more than fifty φορμοὶ at a time: the size of this measure is uncertain, but Boeckh supposes it to be nearly the same as a medimnus. These provisions were (or were supposed to be) carried out by the σιτοφύλακες [SITOPHYLACES]. Offences against the corn laws are mentioned by Demosthenes (*c. Timocr.* p. 743, § 136) among those for which no bail was allowed before trial; whether he refers to the σιτοπῶλαι or σιτοφύλακες, or to both, is not clear. These laws were systematically evaded in the pursuit of gain (Lys. *Or.* 22, κατὰ τῶν Σιτοπωλῶν, *passim*; Dem. *c. Dionysod.* l. c.).

In this interference with the natural course of trade, the political economy of the Athenians was scarcely more backward than that of modern Europe, including England, until quite recent times. Our own laws against "forestalling and regrating" were not extinguished until the end of the last century (M'Culloch, n. on Smith's *Wealth of Nations*, p. 237, ed. 1863); in Italy, it appears, bakers and flour-dealers are still liable to summary punishment both from mobs and municipalities. But the wholesale enactment of the death penalty brings out one of the worst features of the Athenian character, and is partly to be accounted for by the fact that the trade was mostly in the hands of aliens, who might be oppressed without remorse. Boeckh, who draws largely from the speech of Lysias *against the Corn-dealers*, seems scarcely aware of the impolicy as well as cruelty of the legislation it describes: an English scholar has criticised it in the true spirit of political economy (Mahaffy, *Social Life in Greece*, ed. 3, p. 403 f.).

We are not surprised to learn that scarcities (σιτοδεῖαι) frequently occurred at Athens, either from bad harvests, the misfortunes of war, or other accidental causes. The state then made great efforts to supply the wants of the people by importing large quantities of corn, and selling it at a low price. Public granaries were kept in the Odeum, Pompeum, Long Porch (μακρὰ στοά), and dockyard at the Peiraeus (Pollux, ix. 45; Dem. *c. Phorm.* p. 918, § 37, where see Paley and Sandys). *Sitonae* (σιτῶναι) were appointed to get in the supply and manage the sale. Demosthenes was appointed on one occasion to that office (*de Cor.* p. 310, § 248). Persons called *apodectae* (ἀποδέκται) received the corn, measured it out, and distributed it in certain quantities (Pollux, viii. 114). Public-spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously (Dem. *c. Phorm.* p. 918, §§ 38, 39). We read of the Athenian state receiving presents of corn from kings and princes. Thus Leucon, king of the Bosporus, sent a large present, for which he had the honour of ἀτέλεια (exemption from customs-duties) conferred on him by a decree of the people (Dem. *c. Lept.* p. 467, §§ 33, 34; cf. Isocr. *Trapez.* § 57). Psammetichus, an Egyptian prince, sent a present in Olymp. 83. 4, Demetrius in Olymp. 118. 2; Spartacus, king of the Bosporus, a few years after. In later times, that made by the Roman Atticus is well known. On the whole of this subject the reader is referred to Boeckh (*P. E.* p. 77 ff. = *Sthh.*^{3} i. 97 ff.), where also he will find the various prices of meal and bread at Athens, and other details, copiously explained. As to the duty payable on the importation of corn, see PENTECOSTE.

Σῖτος is strictly *wheat-flour*, ἄλφιτα *barley-flour*, πυροὶ *wheat*, κριθαὶ *barley*, ἄρτος *wheat bread*, μᾶζα *barley-bread*. Σῖτος, however, is often applied to all kinds of corn, and even in a larger sense to provisions in general.

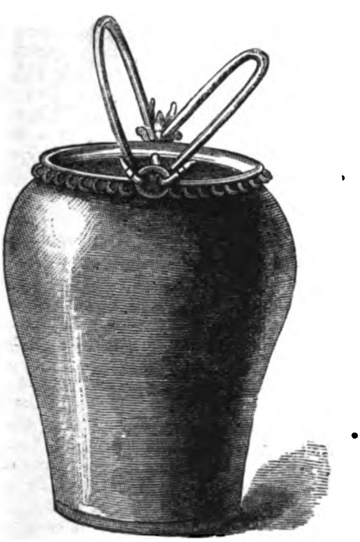
[C. R. K.] [W. W.]

SITOU DIKE (σίτου δίκη). The marriage portion (προίξ) being intended as a provision for the wife, although it was paid to the husband by her father, brother, or other natural guardian (κύριος), if anything happened to sever the marriage contract, or if, after a contract of marriage and after the payment of the marriage portion, the intended husband refused to perform his engagement (Dem. *c. Aphob.* i. p. 811, § 17; ii. p. 839, § 11; iii. p. 854, § 33), the husband or his representative was bound to repay it; or, if he failed to do so, he was liable to pay interest upon it at the rate of 18 per cent. per annum (ἐπ' ἐννέ' ὀβολοῖς τοκοφορεῖν, [Dem.] *c. Neaer.* p. 1362, § 52; 12 per cent., Dem. *c. Aphob.* i. p. 818, § 17). When the property of the husband was seized, the wife's dowry was exempted therefrom [(Dem.] *c. Everg. et Mnes.* p. 1156, § 57; yet see Lys. *de Bon. Aristoph.* §§ 9, 32); but the marriage was not dissolved on that account, as Van den Es (*de Jure Famil.* p. 50) supposes. Caillemer (*La Restitution de la Dot à Athènes*) gives three causes for the dissolution of marriage: (1) death, (2) civil death, and (3) divorce. 1. Upon the death of the husband without children, the wife and her money went back to the natural guardian; but if he died leaving children, she had the option of staying with them or going back to her κύριος. If she did the latter, the children (or their guardian, if they were under age) were bound to pay back the portion to the κύριος, or 18 per cent. interest in the meantime (Isae. *Pyrrh.* § 8 f., § 78); and if she married again, her κύριος was bound in honour to give the same sum to her new husband (Dem. *c. Boeot.* ii. p. 1010, § 7). If she did the former, she renounced thereby her right to her portion, which became the property of the children, who on their part undertook to provide for all her wants (Dem. *c. Phaen.* p. 1047, § 27; *c. Steph.* ii. p. 1135, § 20: cf. also Aeschin. *c. Tim.* § 28). Upon the wife's death without children, her portion went back to her guardian (Isae. *Pyrrh.* §§ 36, 38); but if she died leaving children, and these were of age, their father had to hand over to them their mother's portion, and, if they were not yet of age, he kept it for them until then (Dem. *c. Boeot.* ii. p. 1023, § 50 f.). 2. The law ordains that a person ransomed from the enemy shall become the property of the ransomer if he fails to pay the ransom (Dem. *c. Nicostr.* p. 1250, § 11); such a person would become a slave, and there could be no marriage between a slave and a free woman. There are, however, no instances recorded of this law being set in force and of a marriage being dissolved for that reason. 3. The portion of the wife had to be restored to her κύριος or interest paid upon it as stated above in case of divorce, both when her husband sent his wife away (ἀπόπεμψις, [Dem.] *c. Neaer.* p. 1362, § 52; Isae. *Pyrrh.* § 28: Schömann, *Gr. Alterth.* i.^{3} p. 546, is wrong in supposing that the husband might keep her portion if she had committed adultery), and when the wife left her husband (ἀπόλειψις, Isae. *Pyrrh.* §§ 8, 35, 78; Dem. *c. Onet.* i. p. 866, § 8). Upon the transfer of a woman from one husband to another, which was not uncommon, the προίξ was transferred with her (Isae. *Menecl.* § 9), or the former husband had to pay interest upon it so long as he retained it (Dem. *c. Onet.* i. p. 866, § 7: 10 per cent.).

A woman's fortune was usually secured by a mortgage of the husband's property [HORI]; but whether this was so or not, her guardian, in any of the cases above mentioned, might bring an action against the party who unjustly withheld it—δίκη προικὸς to recover the principal, δίκη σίτου for the interest. The interest was called σῖτος (alimony or maintenance), because it was the income out of which the woman had to be maintained; ἡ διδομένη πρόσοδος εἰς τροφὴν ταῖς γυναιξίν, etc. (Harpocr. *s. v.*; cf. Pollux, viii. 33). In earlier times it was probably customary to pay in kind, *i.e.* in corn or some other sort of provisions (cf. the expression in [Dem.] *c. Stephan.* ii. p. 1135, § 20, τὸν σῖτον μετρεῖν τῇ μητρί, of the son of an ἐπίκληρος who had come of age and taken possession of her inheritance); but it was soon found to be more convenient to commute this for a money payment. The δίκη σίτου was tried before the archon in the Odeum ([Dem.] *c. Neaer.* p. 1362, § 52; Pollux, viii. 33; Bekk. *Anecd.* p. 317; Photius, *s. v.*); in which, according to Boeckh (*Sthh.* i.^{3} p. 110), corn stores were kept, though the passage he quotes (Dem. *c. Phorm.* p. 918, § 37) scarcely bears out this opinion. It is a matter of doubt whether the building of Pericles is meant (Hiller, *Herm.* 1872, p. 391 ff.), or the older one near the spring Enneakrounos (Pausan. i. 14, 1) built by Solon or Pisistratus (Bursian, *Geogr. v. Griechenl.* i. p. 299), the existence of which Wilamowitz denies (*Herm.* 1886, p. 602 n.). This cause, like the δίκη προικός, seems to have belonged to the ἔμμηνοι δίκαι, as it was presumed that the woman could not wait long for the means of her daily subsistence. It was ἀτίμητος, for the damages were clearly liquidated, being a mere matter of calculation, when the payment of the marriage portion was proved (*Att. Process*, ed. Lipsius, pp. 177 f., 510–527).

The regulations about marriage-portions, etc. were different in Gortyna. Whilst at Athens giving a portion, though very usual, was not necessary to establish marriage as such (as distinguished from concubinage), and whilst there the amount of the portion was not fixed, we find that at Gortyna, if the father was willing to give a portion, its amount was regulated by the law of inheritance, viz. it was half a son's share (*φερνὴ δ' ἐστίν, ἂν ἀδελφοὶ ὦσι, τὸ ἥμισυ τῆς τοῦ ἀδελφοῦ μερίδος*, Strab. x. 4, 20), and a daughter thus endowed had no further claim on the inheritance. During marriage the wife's property was regarded throughout as a separate and individual possession. In case of divorce the wife received her own property brought to the marriage, half of the produce of her property, half of what she had "woven," and five staters, if the man was the cause of the divorce (*αἴτιος*, ii. l. 47 ff.). We do not know what the law was if the wife was the cause, *e.g.* if she had been unfaithful; she can scarcely have forfeited her property. There is no reason to suppose it was so at Athens, though it seems from Dittenberger, *Syll. I. Gr.* No. 344, l. 59 f., that at Ephesus in some cases the portion remained with the husband (*γήμαντες καὶ διαλυθέντες μὴ ἀποδεδώκασι τὰς φερνὰς οὔσας ἀποδότους κατὰ τὸν νόμον*). Upon her death without children, the husband had to give to her relatives the same as in a case of divorce, except the five staters (iii. l. 31 ff.); if there were children they inherited her property [HERES, II.]. Upon the husband's death without children, she received her own property, half of what she had "woven," a portion of the produce, and whatever her husband had given her (iii. l. 24 ff.); but if there were children and she married again, she received her own property only and her husband's gifts (iii. l. 17 ff.). Careful provisions were made against her carrying off anything belonging to her husband or children. [C. R. K.] [H. H.]

SI'TULA, *dim.* **SITELLA** (*ὑδρία*), a bucket for drawing water from a draw-well (Dig. 18, 1, 40, § 6) or for carrying it (Plaut. *Amph.* ii. 2, 30; Isid. *Orig.* xx. 15). Those for carrying water were either of earthenware (as in Egypt) and carried two together by a yoke, or of bronze (see Marquardt, *Privatleben*, p. 656). In Plaut. *Cas.* ii. 4, 17, it was a voting-urn; but in this sense we usually find the diminutive form *sitella* (Plaut. *Cas.* ii. 6, 11; Liv. xxv. 3, xli. 18), as also *urna* and *orca* (Verg. *Aen.* vi. 431; Val. Max. vi. 3, 4; Lucan, v. 394; Vopisc. *Prob.* 8). It seems that, as among the Greeks, the urn in which the lots were placed was filled with water; and when this was poured out, the lot which appeared first floating on it was decisive: hence in Plaut. *l. c.*, "Situlam huc tecum afferto *cum aqua et sortes:*" and the expressions in Vopiscus, "qui primum *emergeret*" and "Probi nomen *effusum est*" (cf. Cic. *in Verr.* ii. 51, 127; *in Vatin.* 14, 34; Marquardt, *Privatl.* p. 548). For the difference between *sitella*, the urn from which the names of the tribes or centuries were drawn to determine the order of voting, and *cista* the voting-box, see CISTA. [W. S.] [G. E. M.]



Situla of bronze. (Dennis.)

SMINTHIA (*Σμίνθια*), a festival celebrated at Rhodes (and perhaps elsewhere) in honour of Apollo Smintheus (Athen. iii. p. 74 ff; x. p. 445 a: cf. Hermann, *Gottesd. Alt.* § 67, note 10). As regards the places where Apollo was so named, see Strabo, x. 486, xiii. 604; Schol. *ad Il.* i. 39; Ael. *H. A.* xiii. 5, who speaks of a mouse fed in the temple of Apollo Smintheus. It is beyond our scope to discuss whether the name signifies "mouse-destroyer," and therefore "protector of crops," or whether the mouse symbolised a destroyer of enemies, or whether, as is more recently held, the mouse was a totem: see, however, Lang, *Custom and Myth*, p. 103; Baumeister, *Denkm.* p. 1670 (s. v. *Scopas*), where the subject is illustrated by a representation on a coin. [L. S.] [G. E. M.]

SOCCUS, *dim.* **SO'CCULUS**, denoted a slipper or low shoe, which did not fit closely, and was not fastened by any tie (Isid. *Orig.* xix. 33). Shoes of this description (*e.g.* the *περσικαὶ* and *διάβαθρον*: see CALCEUS) were worn, more especially among the Greeks, together with the PALLIUM, both by men and by women. We find "socci viriles et muliebres" distinguished in *Ed. Diocl.* 9, 25: the latter seem to be usually more ornamented (Plin. *H. N.* xxxvii. § 17; cf. Suet. *Cal.* 52). In the time of the Republic it was considered unbefitting a Roman to wear them (Cic. *pro Rab. Post.* 10, 27), and classed with wearing the pallium instead of the toga.

As was stated under the article BAXA, the soccus was worn by comic actors (Hor. *Ars Poët.* 80, 90), and was in this respect opposed to the COTHURNUS (Ov. *Rem. Am.* 376; Mart. viii. 3, 13; Plin. *H. N.* vii. § 111). The actor of the MIMUS wore neither buskin nor slipper, and

A comic actor wearing Socci.

was therefore called *planipes* (Teuffel, § 7; Mayor, *ad* Juv. viii. 191). The preceding woodcut is taken from an ancient painting of a comic actor, who is dancing in loose yellow slippers (*luteum soccum*, Catull. *Epithal. Jul.* 10). Cf. Marquardt, *Privatleben*, 595; Becker-Göll, *Gallus*, iii. 229. [SOLEA.] [J. Y.] [G. E. M.]

SOCI'ETAS, "partnership," is the name of a contract which arises when two or more persons agree together to conduct for their joint account any lawful business, or to share the profits and loss of any single piece of business, or even of all their havings and doings. According to agreement, the partners may contribute differently either in property or services, and may have different shares in the result. In default of agreement, the shares will be equal. As a rule the share of profits determines also the share of loss, and *vice versâ*; but this also is subject to agreement, only all partners must have some share in the profits. Otherwise, it would be as Cassius used to call it, with an allusion to the fable (cf. Phaedr. i. 5), a "lion-like" partnership (*societas leonina*), and invalid. Mucius (*i.e.* Q. Mucius Scaevola) held that the shares of loss must be the same as the shares of profit, but Servius (*i.e.* Serv. Sulpicius Rufus) held that this was not necessary, and his opinion prevailed (Dig. 17, 2, ll. 29, 30).

Partnership rests on consent, and may either be formed by particular words or inferred from facts ("et re et verbis et per nuntium coiri," Dig. *ib.* 4). It ceases on the death of a partner or on his bankruptcy, or on the extinction of the thing or conclusion of the business which is the object of the partnership, or on the occurrence of the time or condition agreed to, or by notice given by any partner to the others. Civil death (*căpitis deminutio*) in this as in other matters was originally equivalent to natural death; but the later law confined such effect to the loss of liberty or citizenship, while it preserved the theory by holding that in the case of a mere change of status (*min. cap. dem.*) a new partnership arose by the consent of the partners as often as the existing one was dissolved. Notice of retirement is good only if the other partners are not unfairly put to a disadvantage; otherwise the retiring partner has to compensate them, and loses his share in the profits (Gaius, iii. 151–154; Dig. *ib.* 63, 10–65, 14 *sq.*).

A partner must account for all profits made by him in partnership matters, and manage the business as carefully as he does his own. He is liable for losses occasioned by his negligence, and cannot set off against them any profits produced by his exertions (Dig. *ib.* 25, 26). He can recover from his partners any expenses in the conduct of the business which he has properly incurred (Dig. *ib.* 52, 10–15; 60, 61; 67, 2; 72–74). The rights and responsibilities of partners were enforced by a special action, *actio pro socio*; i.e. a suit brought in the character of a partner. It could be brought not only by a partner against his fellows, but by or against a partner's heir, without the heir being himself a partner or being made so by this action (Dig. *ib.* 35–38; 63, 8; 65, 9). It was an action *bonae fidei*, i.e. it took account of equitable considerations on both sides. Hence the judge was called *arbiter* (Cic. *pro Rosc. Com.* 8, 24, 25; Dig. *ib.* 38). Condemnation in such a suit made a man infamous (Gaius, iv. 182; Dig. 3, 2, 1), but, as in other cases of close relationship, was not to be executed with such stringency as to deprive the defendant of the necessary means of subsistence ("in id quod facere potest condemnari oportet," Dig. 17, 2, 63 pr., 3). Other rights of action were not excluded, but their effect was limited to satisfaction in excess of what had been already won by this. It differed from the *actio communi dividundo* by being confined to partners in the strict sense of the term, *i.e.* persons to whom a community of goods has come by their own choice and purpose, and not merely by accident or legal devolution, and by its scope embracing not merely corporeal things, but debts and all kinds of mutual claims and equities (Dig. *ib.* 43; 10, 3, 1–3).

Partnership did not make its members into one legal body: its effects were confined to the members themselves; outsiders were in no way concerned. As a rule a partner bound himself only to third parties; and he could alienate only his own share of the partnership property (68, pr.). But some tendencies towards a different rule are found. From *ad Heren.* ii. 13, 19, it would appear that solidarity among the partners of a bank was sometimes customary ("id quod argentario tuleris expensum ab socio eius recte petere possis"), and the convenience of the public is given as the cause of a similar joint liability in the case of companies of slave-dealers (Dig. 21, 1, 44, 1) and of shipmasters (Dig. 14, 1, 1, 25, 1–4). And when partners appoint a captain of a ship or a manager of a shop, his action makes each and all liable to a suit at the hands of third parties. Of course a person thus singled out would have claims to be reimbursed proportionally by his partner.

As examples of partnerships may be mentioned: between neighbours to buy a field for profit (Dig. *ib.* 52, pr., 31); between an owner of cattle or of land and a farmer to pasture the cattle or till the land (2); trading in cloaks (*sagaria negotiatio*, 4); letting chambers (10); building a common wall (13); contributing horses to make up a team for sale (58, pr.); teaching grammar (71, pr.), &c. One of the Transylvanian wax tablets (A.D. 167) is a record of an agreement for partnership in a banking business (*danistaria*) concluded by stipulation (*C. I. L.* iii. p. 950; also in Bruns, *Fontes*). Two of Cicero's early speeches deal more or less with partnerships. That *pro Roscio Comoedo* relates to a slave belonging to Fannius, whom Roscius agreed to train as an actor, the slave thus trained to be employed for their common profit. The speech *pro Quinctio* relates to a partnership in a grazing farm.

Two special forms of partnership require distinct mention.

1. *Societas universorum bonorum* is often spoken of, and may very probably have originated in the position of brothers who were coheirs (cf. Dig. *ib.* 52, 8; 10, 2, 39, 3; 31, 89, 1), a relationship to which the name of *consortium* seems to have been specially applied (Dig. 27. 1, 31, 4; cf. Gell. i. 9, § 12). In this case all the corporeal property of each partner becomes at once without specific delivery common to both, and their future acquisitions by trade, inheritance, gift, damages for bodily hurt, &c. fell into the common stock (Dig. *ib.* 1–3).

2. *Societates publicanorum.* The companies who farmed the public taxes stood from their magnitude in a different position from ordinary partnerships; but little is known of their legal character. An heir, however, became a partner if accepted by the others, and, if not accepted, still shared in the profits and loss (Dig. *ib.* 59; 63, 8). Such interested persons may be meant by the term *adfines* (Liv. xliii. 16, 2; Kuntze, *Curs.* § 697). The shares (*partes*) in these companies were sold and rose and fell in price (Cic. *pro Rab. Post.* 2, 4; *in Vat.* 12, 29). Some account of their proceedings is given in Cic. *Verr.* ii. 70–77, §§ 170–190. [H. J. R.]

SOCII. The term *socii* is the most general of the many terms used to denote a class of states which, though in partial dependence on Rome and acknowledging to the full the Roman hegemony, were yet, through the possession of certain political privileges, not regarded as subject states, and were therefore strictly outside the circle of provincial administration. It was the most general term, since it denoted the only common bond which united these states with one another and with Rome. The separate relations that Rome might have with these states were manifold, but the basis of this union was the idea of an armed alliance, of which Rome was the head. This is expressed in the word *socius*, and still more clearly in its Greek form of *σύμμαχος*. The socii of Rome were those who were regarded as having entered into a perpetual military alliance with the ruling state; but the term *socius* hardly extends so far as the alliance itself. The original nucleus of this alliance, which embraced the whole of Italy and many states outside Italy, was the Latin league. But the Latins were as a rule distinguished from the socii, chiefly on account of the peculiar privileges they enjoyed in relation to Rome [LATINITAS], which were not shared by the other allied communities. This distinction is shown in such expressions as *socii ac nominis Latini* (Liv. xli. 8, 9), *socii et Latium* (Sall. *Hist.* i. 17), and perhaps in *socii Latini nominis*, if this is to be regarded as an asyndeton (Mommsen, *Staatsr.* iii. p. 661, n. 2 and 3). At the other end of the scale we find socii sometimes used loosely to describe purely subject states. Such usage naturally gained ground after the Social war had merged the Italian states, the original socii, in Rome, and caused a sharp distinction to be drawn between Romanised Italy and the mainly dependent outer world: but the usage is incorrect, and down to the end of the Republic we find the distinction drawn between the socii, whose alliance with Rome necessarily implied some degree of independence, and the purely subject states which fell under provincial rule (Cic. *in Caecin.* 3, 7, "socii stipendiariique." Suet. *Caes.* 25, "omnem Galliam praeter socias civitates in provinciae formam redegit").

The earliest political union under Rome, which formed the type of future unions, was the Latin league. The circle of alliance was subsequently extended outside the bounds of Latium by the break up of confederacies such as the Hernican and the Samnite, and the reception of the states, as well as of the Greek towns of the south of Italy, into the Roman confederacy; while the mixed nationalities of these new acquisitions, and the definite military burdens imposed upon the states so received, gave the alliance a purely military and political significance, in which the older bonds which drew these states together, community of blood and language, were wholly lost. The effect of this extension was to present Italy (Greek, Latin and Oscan) as a united whole, and to create a new nationality, of which the geographical and political significances were coincident, that of the *Italici*. This term was at first coincident with the expression *socii nominisque Latini*; but as the socii soon came to include favoured states in the extra-Italian world, such as Athens and Rhodes, it soon ceased to denote an exclusive political status, and became merely a descriptive expression. To the similar connexion, into which Rome entered with states outside Italy, the already organised Italian alliance gave the form in all its main outlines; there was the same recognition of independence and autonomy which was necessary to constitute alliance, although of necessity certain elements which entered into the Italian were less strongly marked in the extra-Italian union. This was particularly the case as regards the fixed military duties of the allies. In Italy such military requisitions were fixed, regular, and frequent, and the Italians furnished the large portion of the land forces which were Rome's chief source of power: the Greek states, on the contrary, like Neapolis and Rhodes, were generally requisitioned to furnish ships; and as the marine of the Romans attained nothing like the permanent importance of their land army, fixed requisitions on the extra-Italian allies were less frequent, and far less of a ruling element in the bond that connected them with the Romans. But the power to make requisitions always remained an essential part of the theory (Liv. xlv. 25; Polyb. xxi. 1, 4), and this condition was the same for the Italian and the non-Italian socii; it carried with it the idea of subjection as clearly as that of partial independence.

But the notion of subjection was expressed more in the fact than in the legal theory. It was shown most clearly by that intermediate position in which the state in question stood, before the terms of alliance were definitely concluded with it. This was the condition expressed by the word *deditio*. A community that as yet had no definite status in the Roman Empire, and yet sought such a status, had first to surrender itself to the power (*in dicionem*, Liv. xxxvii. 45, 2; *in potestatem*, Liv. xxxix. 54, 7), or the honour (*in fidem*, Liv. viii. 2, 13) of the Roman people, for the expressions "in fidem" and "in dicionem," though they are sometimes distinguished, according as the expectations and desires of the conquered people are considered, express the same condition (Polyb. xx. 9, 12, *παρὰ Ῥωμαίοις ἰσοδυναμεῖ τό τε εἰς τὴν πίστιν αὐτὸν ἐγχειρίσαι καὶ τὸ τὴν ἐπιτροπὴν δοῦναι περὶ αὐτοῦ τῷ κρατοῦντι*). A community that had come into this condition had no legal rights to be considered, and no legal claims to urge. If an alliance was sought and accepted, the terms of this alliance were dictated by the Romans; if such autonomy continued to be possessed by the state as was necessary to constitute it a *socia civitas*, such autonomy was restored to it by the Romans. The international relations that followed this condition of temporary subjection were manifold: and the various relations towards herself that Rome imposed on such communities, as expressed by the terms *foedus*, *libertas*, *αὐτονομία*, cannot be sharply distinguished. These terms, though they may be used to denote different sides of the same status, yet express an ascending scale of rights, *αὐτονομία* involving least, *foedus* most. A state is self-governing (*αὐτόνομος*) in virtue of the enjoyment of its own laws: free (*libera*) in virtue of the nominally sovereign independence it enjoys in relation with Rome. Lastly, *foedus* existed between Rome and any state that had a sworn and therefore binding compact with Rome; but the term *foederati* was apparently not applied to all states that had such a treaty. It was not usually applied to the Latin communities, although strictly speaking they were *foederati* (Cic. *pro Balbo*, 24, 54, "Latinis, id est foederatis"), for the same reason that they did not come under the generic title *socii*, because their position was higher than that of the ordinary socii or foederati. Again the term *foederati* was not employed to denote the dependent kingdoms or dynasties that had terms of alliance with Rome. The standing relations between Rome and these *reges socii* being only regarded as binding during the lifetime of the ruling prince and having to be renewed with his successor, these communities, though regarded as members of the armed alliance, and therefore as *socii*, were not regarded as having their position secured by a lasting and irrevocable alliance, and were not therefore spoken of as *foederati*: and thus we find the *reges* not included in but classed by the side of the *populi liberi* and the *foederati*, in the enumeration of the different kinds of states that stood in any degree of permanent relationship with Rome (Aelius Gallus, *ap.* Fest. s. v. *postliminium*, p. 218, "cum populis liberis et cum foederatis et cum regibus postliminium nobis est ita uti cum hostibus"). The distinction between *liberi* and *foederati* is the distinction between states that were independent of any other sovereign power (Dig. 49, 15, 7, 1, "liber populus est qui nullius alterius populi potestati est subjectus"), and states the independence of which was recognised by a binding treaty. Every *foederata* was of necessity also a *libera civitas*, since no treaty could be concluded with a state that did not possess the sovereign power expressed in *libertas*: but a state might be libera, and have all the advantages which the recognition of independence conferred, without having what was in this case merely a permitted independence, recognised by a treaty the observance of which was guaranteed by the community that dictated it, without being, that is, a *foederata civitas* (ἐπὶ συνθήκαις ἔνορκοι, App. *Bell. Civ.* 1, 102), or as it was sometimes more fully called a *libera et foederata civitas* (Plin. *Ep.* 92; Suet. *Cal.* 3; Niebuhr, *Hist. of Rome*, iii. p. 616; Mommsen, *Staatsr.* iii. pp. 656, 657). In the terms of the foedus concluded between Rome and an Italian or non-Italian state, there was always practically a recognition of semi-dependence in the latter, and an assertion that the fullest hegemony was vested in the central state; but in some of these treaties there was a formal recognition to the same effect contained in the clause that the state to which the treaty was granted "should respect the majesty of the Roman people." A treaty containing this clause did not technically diminish the *libertas* of the state with which it was concluded, but merely asserted—what in every foedus was tacitly implied—the superiority of the state which dictated the treaty (Dig. 49, 15, 7, 1, "hoc adjicitur, ut intellegatur alterum populum superiorem esse, non ut intellegatur alterum non esse liberum." Cic. *pro Balbo*, 16, 35, "ille in foedere inferior cum alterius populi majestas conservari jubetur"). Vague as the expressions *foedus aequum*, *foedus iniquum* are, yet, when strictly employed, they appear respectively to denote a treaty the character of which was determined by the absence or presence of this restrictive clause (Dig. *l. c.*: "is foederatus est item sive aequo foedere in amicitiam venit sive comprehensum est ut is populus alterius populi majestatem comiter conservaret").

Every alliance implies the sacrifice of some rights on the part of the contracting states. The nature of the rights sacrificed on either side shows the equality or inequality of the alliance: and the real dependence of the socii on Rome was strongly marked by the perpetual sacrifice of certain rights on their part which were inconsistent with the hegemony of Rome. Such was the renunciation of the free right of declaring war, which was accompanied by the loss of the parallel right of making independent treaties; the sole exceptions are to be found in the case of the more distant *reges socii*, such as those of Mauritania and Cappadocia, who exercised the right, which was perhaps not formally denied to them, of conducting border wars on their own account. The Roman principle of the separation of interests also insisted on the breaking up of the standing national confederations within the allied states. The merging of the Latin confederacy in Rome had been followed by the break-up of the Hernican and Etruscan leagues, and no hegemony, such as that exercised by Rome over her socii, was permitted to any of these allied states over others, the "octo oppida sub dicione Praenestinorum" mentioned by Livy (vi. 29) being probably an exceptional *clientela* entered into for the purposes of revolt (Mommsen, *Staatsr.* iii. p. 658, n. 1). In the provinces also the ancient *συμμαχίαι* were broken up. This was the case with Athens, whose dependencies when retained became, as the island of Delos did, her actual possessions, which may have been regarded as cleruchies, and which were governed directly by Athenian *ἐπιμεληταί* (Gilbert, *Staatsalterth.* i. p. 425). Similarly, with the entrance of Rhodes into direct *societas* with Rome, her hegemony over Lycia and Caria was lost (Polyb. xxx. 5, 12; Liv. xliv. 15, 1).

The most distinctive duties performed by the allies of Rome were those connected with purposes of war. The idea of the alliance presupposed warlike service, and the position of Rome with respect to her allies no doubt carried with it the right to an indefinite demand for such service whenever occasion required. As regards the Italian allies, there were definite regulations as to the amount of the contingents they were expected to furnish. The same was the case with the Greek states, the usual requisition on which was ships of war. The amount of the contingent was definitely fixed, and in some cases, as in that of the Rhodians, was changed from time to time (Dio Chrysost. *Or.* 31, p. 620), while to some of these states a special exemption from regular service was granted (Cic. *in Verr.* v. 19, 50). But it was from the land army of the Italians, the *togati*, or, as the Roman formula more fully expressed it, the "socii nominisve Latini, quibus ex formula togatorum milites in Italia imperare solent" (*C. I. L.* i. 200), that the main strength of the auxiliary forces was derived. The number of troops required was decreed every year by the senate (Liv. xli. 5, &c.), and the consuls fixed the amount which each allied state was to send, in proportion to its population capable of service. The names of persons so liable were contained in the *formulae* of the several states (Liv. xxii. 57, xxvii. 10, "milites ex formula paratos esse"), service being regulated by the census, which was modelled on that of Rome (Liv. xxix. 15, "censumque in iis coloniis agi ex formula ab Romanis censoribus data"), and under the conditions of the special exemptions from service granted by the treaty ("vacatio rei militaris ex foedere," Lex Jul. Munic. l. 93; *C. I. L.* i. n. 206). The consuls appointed the place and time at which the troops of the socii were to meet him and his legions (Polyb. vi. 21, 4; Liv. xxxiv. 56, xxxvi. 3, &c.). The contingents of the several states remained together in separate cohorts, each under its own commander, and each furnished with its own quaestor (Polyb. vi. 21, 5). The commander was, probably, in most cases the magistrate of the state, as the praetor of Praeneste (Liv. xxiii. 19, 7) and the soldiers of the separate states took the *sacramentum* to their own commander (Polyb. *l. c.*). Besides these separate officers, the consuls appointed twelve prefects, apparently Roman, as commanders of the whole body of the socii, and their power answered to that of the military tribunes in a consular army (Polyb. vi. 26, 5), the whole staff of officers acting in obedience to the consul. These prefects selected ⅓ of the cavalry and ⅕ of the infantry of the socii, who formed a select body called the *extraordinarii*. The remainder were then divided into two large divisions, called the right and the left wing (Polyb. *l. c.*; Liv. xxxv. 5); each of these *alae*, composed of cohorts and commanded by six praefecti, closely resembled a Roman legion, and we find the socii on one occasion organised as legions (Liv. xxxvii. 39). The infantry of the allies, on the occasion of a single levy, was usually more numerous than that of the Romans; their cavalry, which was divided into *turmae*, generally three times more numerous (Polyb. vi. 26). Pay and clothing were given to the allied troops by the states to which they belonged, the quaestors who accompanied each contingent being appointed for this purpose; but Rome furnished them with provisions at the expense of the Republic, the allied infantry receiving the same as the Roman, the cavalry somewhat less [STIPENDIUM]. The right of the allies to share in the distribution of the spoils of war and of conquered lands was freely recognised, and on some occasions they received an equal share with the Romans (Liv. xxxix. 5; xl. 43). But that they had no standing right to such an equal distribution, such as that said to have been possessed in ancient times by the Latin and Hernican confederacies (Dionys. vi. 95; viii. 77), is shown by the fact that on some occasions these proportions were not maintained (Liv. xli. 13). The contingents of the Italian socii are sometimes called *auxilia* (Sall. *Jug.* 39), those of the allies outside Italy being described as *auxilia externa* or *provincialia* (Liv. xxii. 37, 7; xl. 31, 1). After the Social war, however, which merged the Italian allies in Rome, the Italian *auxilia* or *togati* disappear, and the word *auxilia*, during the later Republic and the Empire, always signifies non-Italian contingents, chiefly those which made up the light-armed troops of the Roman forces.

Although the furnishing of regular contingents was not held inconsistent with the autonomy of the states in alliance with Rome, the furnishing of a regular tribute was. It is true that some of the dependent kingdoms paid a tribute (Polyb. ii. 12, 13) which was in the nature of a war-indemnity; but during the early period of the Roman Empire liability to tribute was a token of subjection, and neither the Italian allies nor the *liberae* or *foederatae civitates* in the provinces were subject to it; *foedus* implies *libertas*, and *libertas* (ἐλευθερία) is invariably conjoined with *immunitas* (ἀτέλεια, Paus. viii. 43, ἐλευθερίαν καὶ ἀτέλειαν. Strabo, p. 595, ἐλευθερίαν καὶ ἀλειτουργησίαν. Cic. *in Verr.* iii. 6, 13, "liberae et immunes"). Although this principle was modified to some extent in the later Republic [IMMUNITAS], yet *stipendiarii* was ever the main antithesis to *socii* (Cic. *pro Balbo*, 9, 24; Marquardt, *Staatsverw.* p. 346). This general immunity of the allied states was accompanied by an assertion, such as that contained in the Lex Antonia de Termessensibus of 71 B.C., that their territory was under their own control, and that such public revenues as were raised from it should be raised by their own governments and for their own local purposes (Lex de Term. *C. I. L.* i. n. 204, § i. 10, "quei agri, quae loca, &c., utei antea habeant possideant." Cf. *C. I. G.* 2737, ἔχωσιν κρατῶσιν χρῶνται καρπίζωνταί τε πάντων πραγμάτων ἀτελεῖς ὄντες), and it is on this right that the exemptions from the quartering of troops recognised in the law of Termessus (ii. 5) is based. Rome, however, claimed of her own right to confer exemptions from local burdens on the citizens of such states (Liv. xxiii. 20, 2; *C. I. L.* i. n. 206, l. 93) and to claim exemptions for her own citizens from local dues (Lex de Term. i. 35). The enjoyment of the control of their own territory by the allies was necessarily accompanied by the fullest permission of local administration both in respect to jurisdiction and the power of living according to local ordinances or of making local laws, provided these did not conflict with the terms of the treaty or the conditions expressed in the lex data (Lex de Term. i. 10, "suis legibus utei liceto, quod advorsus hanc legemnon fiat"). As regards jurisdiction, the allied state, if in Italy, was outside the authority of the Roman magistrate; if without the bounds of Italy, of the provincial administrator; and the exercise of jurisdiction by such an official was improper (Cic. *de Prov. Cons.* 3, 6, "omitto jurisdictionem in libera civitate contra legis senatusque consulta;" cf. *pro Domo*, 9, 23). An important fact in the history of the allies is the extent to which they were affected by Roman legislation. A great distinction was observed in this respect between the nearer and the more distinct socii. Circumstances demanded that the near neighbours of the Romans, the *Italici*, should be brought into closer conformity with Roman customs than the more distant allies: and many institutions of the Roman civil law as well as many legislative acts were extended to the former. With regard to the laws mentioned by Cicero, of inheritances, testaments, and "innumerabiles aliae leges de civili jure" which were accepted by the allies ("quas Latini voluerunt adsciverunt," Cic. *pro Balbo*, 8, 21), there is no difficulty, but many others are mentioned as having bound the Italian allies, such as the plebiscitum regulating the *jus creditae pecuniae* (Liv. xxxv. 7) and the sumptuary Lex Didia which was an extension of the Lex Fannia to the Italici apparently against their will (Macrob. *Sat.* iii. 17, 6), in which there is no mention of the usual formula of acceptance, "fundi (*i.e.* auctores, Fest. p. 89) facti sunt." Formal acceptance, however, there may have been in these cases, and this was most distinctly recognised in the important matter of the conferring of the *civitas* [Foederatae Civitates]. As regards this right of acceptance or rejection there was, in accordance with the principle already mentioned, no distinction drawn between a *libera* and a *foederata civitas* (Cic. *pro Balbo*, 8, 20, "foederatos populos fieri fundos oportere non magis est proprium foederatorum quam omnium liberorum"). By far the most striking instance we possess of the direct interference of Rome with the allied states is the Senatusconsultum de Bacchanalibus, which extended penalties to the members of the Bacchanalian conspiracy all over Italy (Liv. xxxix. 19; *C. I. L.* i. n. 190). This was an exceptional assumption of the senate's power even for Rome, and their power, as exercised in this case, was based on their actual control of the Roman world, and does not affect any legal theory of autonomy. The general position of the Roman senate, as regards the allies, was that of a uniting and controlling power. It might revoke grants which, as not being held by a fixed treaty, were terminable at pleasure (Lex de Term. ii. 5, "ne quis magistratus milites introducito nisi senatus nominatim decreverit"), and it adjusted the conflicting claims of states both within and without the bounds of Italy (Liv. xlv. 13; Dittenberger, n. 240): sometimes referring questions respecting the internal difficulties of these states to the decision of Roman *patroni*, with whom they had entered into relations of clientship (Liv. ix. 20; Cic. *pro Sulla*, 21, 60). The senate's control, as it was usually exercised, did not conflict with the amount of autonomy implied in the fact of alliance, since this did not extend to independent international relations. The tenure of independence by a *foederata civitas* lasted theoretically as long as the conditions of the foedus were observed: the autonomy of the states that were merely *liberae* was always from its very nature of a precarious tenure: but the notorious abuse of self-government by a foederata civitas might, during the principate, cause a foedus to be rescinded, and the direct provincial government to replace the misused autonomy (Suet. *Aug.* 47; *Claud.* 25; *Vesp.* 8). The tendency of the imperial administration was towards an equalisation in the position of provincial states, and even when libertas was not taken from the states which possessed it, yet the supervision of these by the διορθωταί or ἐπανορθωταί (*correctores*) and the λογισταί (*curatores*) appointed by the emperor (Mommsen, *Staatsr.* ii.^{2} p. 858; Marquardt, *Staatsverw.* i. p. 358) rendered their position but little different from that of the provincial subject towns: and the libertas, which was the necessary condition of societas, practically disappeared; but the name *liberae* still continued to be applied to certain states even after the extension of the civitas by Caracalla, and down to the time of Constantine (Marquardt, *Staatsverw.* i. p. 359).

(Mommsen, *Staatsrecht*, iii. pp. 645–715; Marquardt, *Staatsverwaltung*, i. pp. 18–89 and pp. 345–353; Walter, *Geschichte des römischen Rechts*, p. 192 ff.) [A. H. G.]

SO'CIUS. [Societas.]

SODA'LES. [Collegium.]

SODALI'TIUM. [Ambitus.]

SOLA'RIUM. [Horologium; Domus.]

SO'LEA. 1. The most primitive form of foot-gear is the sandal. It consists simply of a sole of matting, leather, felt, or wood bound to the foot by thongs and straps. It was not only worn by the Greeks and Romans of all periods, but still survives. In studying its use in classical times, there is great difficulty in distinguishing it from the various forms of boots and shoes which were used side by side with it. Even if we were able to identify the various shapes mentioned in literature with those shown on the monuments, the question would not be settled, for the transition from one class to another is represented by so many intermediate forms that a hard and fast line cannot be drawn.

In the Homeric age the πέδιλα, which were worn by men (*Il.* ii. 44, &c.), are doubtless sandals, for they are called ὑποδήματα (*Od.* viii. 368) and bound to the foot (*Il.* xxiv. 340, &c.). Whether women used them or not is doubtful, though goddesses wore them out-of-doors (*Il.* xiv. 186). The epithets καλά, χρύσεια, ἀμβρόσια, given to them, convey no information as to their shape and make. Those, however, worn by common folk must have been simplicity itself, for we are told how Eumaeus, when setting out for the city, made himself a pair out of a well-dressed ox-hide (*Od.* xiv. 23). Such sandals remained in use in the country, being mentioned by Sappho (*Frag.* 98, Bergk, τὰ δὲ σάμβαλα πεμπεβόηα), and Hesiod's advice to have them lined with felt (*Op.* 541) suggests that they were of the same kind as the sandals, worn over very thick stockings by the peoples of the lower Danube, the form adopted by the Bulgarian army being the best known. Such sandals were made in extremities even out of raw hide, and were known as καρβατίναι (Xen. *Anab.* iv. 5).

In classical times it was not unusual among the Greeks to go barefoot. With the Spartans this was indeed part of their discipline (Xen. *Rep. Lac.* ii. 3, and passages on ἀνυποδησία in Becker-Göll, *Charikles*, iii. 267), and philosophers and others of an ascetic turn adopted the custom of Athens and elsewhere (cf. Theocr. xiv. 5, Πυθαγορικτὰς ὠχρὸς κἀνυπόδητος). Yet even Socrates, the best known of the barefoot philosophers (Aristoph. *Nub.* 103), though he wore no shoes in the snow and ice at Potidaea, put on slippers when going to Agathon's supper (Plato, *Symp.* 174), as was the fashion (Aristoph. *Eq.* 889). The cut and fit of his sandals and shoes was indeed not one of the least of the Greek dandy's anxieties (Plato, *Phaedo*, p. 64 D), and many are the jokes at ill-fitting boots (Aristoph. *Eq.* 321), which were the sure mark of a boor (Theophr. *Char.* 4). The general name for all sandals is *ὑπόδημα*, the word *σανδάλιον* or *σάνδαλον* being also used in the same sense (the old distinction between these words is due to a mistake of Salmasius; cf. Pollux, vii. 84, ed. Kuhn).

The sole of the sandal (*πέλμα, κάττυμα*) was of one piece or several layers of leather. One, for instance, discovered in the Tauric Chersonnese and now at St. Petersburg, has a sole made of eleven or twelve layers of leather, the upper surface being ornamented with gold (Stephani, *Compte Rendu*, 1865; cf. 1881, p. 142, and Taf. iii. 4 and 5). Thick soles were in fact worn, like modern high heels, to give ladies greater height (cf. Xen. *Oec.* 10, 2). Wood was used as well as leather, not only for coarse cheap clogs (*κρούπεζαι, sculponeae*), but for expensive and delicate sandals for ladies' wear (*τυρρηνικά*, Poll. vii. 92; Clem. Alex. *Paed.* ii. 11, 116). A specimen, which however probably belongs to Roman times, was discovered in 1876 near Kertsch in the Crimea. It is formed of three layers, joined together by pegs, the top layer being painted red and covered with leather. Round the edge are a number of pairs of holes for attaching strings or thongs (*Compte Rendu*, 1881, p. 143, with fig.). Cork was also used for soles (cf. Alexis *ap.* Athen. xiii. p. 568).

The most characteristic feature of the sandal was the *ζυγὸς* or *ζυγόν*, a strap which passed across the toes and held it on the foot (Arist. *Lys.* 416, and Schol. *ad loc.*). (In Strabo, vi. p. 259, however, *ἄζυγα σανδ.* certainly means, as Becker takes it in opposition to Bötticher, *odd* sandals, *i.e.* not a pair.) To the *ζυγὸς* was attached a thong, which passed between the great toe and the second toe. This and the other straps which held the other parts of the sole were, as a rule, kept tight by a latchet (*lingula*) over the instep. This was of metal, and of a heart- or leaf-shape. It was part of Parrhasius's magnificence to have had latchets of gold on his slippers (*χρυσοῖς τε ἀνασπαστοῖς ἐπέσφιγγε τῶν βλαυτῶν τοὺς ἀναγωγέας*, Athen. xii. 543 f). The network of straps and thongs was sometimes so thick as to make the sandals practically a shoe, and often reached as far as the calves. Such were doubtless the *ῥαΐδια*, which Pollux (vii. 64) explains as *πολυέλικτον ὑπόδημα*.

Of the different varieties, for the *βλαῦται* see CALCEUS, Vol. I. p. 332. The *βαυκίδες*, which were also fashionable and expensive (Poll. vii. 94), were probably somewhat the same, but only worn by women. Aristophanes also mentions *περιβαρίδες* as a luxurious form of sandal (*Lys.* 45, 47, 53), though Pollux says that it was only worn by slaves. [For the *κρηπίς*, see CREPIDA.]

As we have said, *ὑποδήματα* is a word used vaguely, and, though generally meaning sandals, stands sometimes for shoes. Thus in the Edict of Diocletian we have *ὑποδήματα Βαβυλωνικά*, the Latin equivalents being *soleae Babylonicae* (ix. 17) and *socci Babylonici* (ix. 23). Again, the *περσικαί*, a favourite woman's shoe at Athens (Arist. *Thesm.* 734; *Eccl.* 319), must have had a close upper (cf. Id. *Nub.* 151).

At Rome it was not the custom to go about barefoot, and all freemen wore boots or shoes when out of doors. Sandals and slippers were reserved for indoor use; and to wear them outside, in Greek fashion, was considered effeminate. Indeed, this was the favourite gibe which the Romans of the old school cast at those who found the *pallium* and *crepidae* more comfortable than the *toga* and *calceus*. Scipio the elder (Liv. xxix. 19, 12), Verres (Cic. *in Verr.* v. 33), Antony (Cic. *Phil.* ii. 30), Germanicus (Tac. *Ann.* ii. 59), and Caligula (Suet. *Cal.* 52) scandalised the sticklers at propriety in this way, and the prejudice lingered on even until the age of Hadrian (Gell. xiii. 22, 1).

The wearing of sandals or slippers when going out to supper was, however, quite a recognised one; for as it was the custom to have one's slippers taken off by the slave on reclining at the table (*soleas demere*, Plaut. *Trucul.* 367; *soleas deponere*, Mart. iii. 50, 3), sandals were much more convenient than boots. Hence the phrase *soleas poscere* (Hor. *Sat.* ii. 8, 77, &c.), "to prepare to take leave." Most guests came in a litter, but those who could not afford this walked in boots and carried their *soleae* under their arm (Hor. *Epp.* i. 13, 15). The general name for sandals in Latin is *solea*, *sandalium* being a transliteration which never became naturalised at Rome. [For CREPIDA, see that article.] Of other varieties the *gallicae* are the best known and were longest in use. The Edict of Diocletian mentions a number of different kinds for men and women with single or double soles, for travelling or country wear (*gallicae viriles rusticanae bisoles, gallicae viriles monosoles, gallicae cursoriae, taurinae muliebres bisoles* and *monosoles*, ix. 12), which shows that their use must have been popular and very extended. Of other sorts, those from Patara and Babylon and the Tyrrhenian (v. *ante*) were not peculiarly Roman, but worn all over the Hellenistic world.

The monuments showing Roman sandals do not differ in any important respect from the Greek shapes. (Becker-Göll, *Charikles*, iii. 267, 281; *Gallus*, iii. 227;—Hermann-Blümner, *Lehrbuch*, 181 foll., 196; Guhl and Koner, p. 225; Iwan Müller, *Handbuch*, iv. pp. 404, 409, 427, 432, 806, 880, 930; Marquardt, *Privatleben*, 1886, pp. 322, 595, 705; Baumeister, *Denkmäler*, art. *Fussbekleidung*; Daremberg and Saglio, *Dict. d'Antiq.*, arts. *Blautai*, *Crepida*;—Blümner, *Technologie*, i. 276; *Leben u. Sitten*, i. 60;—Büchsenschütz, *Hauptstätte*, p. 91.) [W. C. F. A.]

2. *Solea*, a shoe for horses or mules. It is a matter for dispute at what date horses were shod for ordinary use in Europe; and a further and different question, when horse-shoes were first attached by nails. In Greek literature of a date before the Roman conquest there is no trace of any shoe for animals at all, except in the case of camels, who, according to Aristotle

(*H. A.* ii. 6 = p. 499 a), on a campaign had a sort of shoe (*καρβατίνη*) bound beneath the foot; but his remark, that this was done because the camel's foot was soft (*σαρκώδης*), makes this passage an argument against the existence of horse-shoes in Greece at that date. It is perhaps hardly necessary to point out that the Homeric epithet *χαλκόπους* (*Il.* xiii. 23), like *χαλκοκρότος* in Aristoph. *Eq.* 551, merely refers to the noise of the horses' hoofs, and is no more an argument as to material than *χαλκεόφωνος*. Further than this we have in Xenophon's *de Re Equestri* not only the argument of his silence about shoes, but also the fact that he gives (ch. 4) directions for the sort of pavement in the stable or stable-yard which would best harden the hoofs. In the *Anabasis* (iv. 5, 36) he describes a practice in the Armenian hill-country of binding bags (*σακκία*: unless we are to read *σακία*, *i.e.* discs, like small shields) under the feet of horses and mules; but this was only in the snow, to prevent them from sinking: some kind of "bog-shoes" is similarly used for horses to this day in Holland and in parts of Scotland (Fleming, *Horse-shoes*, p. 319). Lastly, the evidence of ancient art points the same way. We have no representation of shoes on horses, though on the frieze of the Parthenon, for instance, we should expect to see traces of shoes had they existed, as well as of bridles. It is quite possible that with all their methods for hardening the hoofs, they may have worn out quickly on roads: and as a fact historians note that this happened (Thuc. vii. 27; Diod. xvii. 94).

In Roman literature we find a very slight mention of shoes for mules: the *ferrea solea* left in the mud (Catull. viii. 23): the shoeing of Vespasian's mules (Suet. *Vesp.* 23): the silver shoes of Nero's mules (Id. *Ner.* 30), and the golden shoes of Poppaea's (Plin. *H. N.* xxxiii. § 140; cf. Dio Cass. lxii. 28). Upon these passages it must be remarked (1) that all refer to mules, (2) that they are probably exceptional cases, either for mules with weak or injured feet, or, as in the last two cases, for ostentation. We can have little doubt also that these shoes were not nailed, but bound on as will be described below: Arrian (*in Epict.* 3) speaks of *ὑποδημάτια* for asses.

The use of shoes or sandals made of hemp (*spartei*), bound on injured hoofs, is noticed by Columella (vi. 12), Galen (*de Alim.* i. 9), and Vegetius (i. 26), who gives precise instructions that in case of tender or injured feet they should be *calceati*, the shoes being either iron or hempen and attached by *lemnisci* or *fasciolae*. It is clear that these writers are speaking of use for exceptional cases; and moreover in Columella, i. 73, we find a recommendation that stables should have oak floors, "nam hoc genus ligni equorum ungulas ad saxorum instar obdurat," which implies that he did not mean the horses to be shod. The same deduction, that shoes were only for exceptional cases, may be made from their absence in the list of *ἱππικὰ σκεύη* given by Pollux, x. 56.

As regards nailed shoes, though the lines of Tryphiodorus (Ἰλίου ἅλωσις, 86) *οὐ μὲν ἐπὶ κνήμῃσιν ἀχαλκέες ἔξεχον ὁπλαί*, &c. seems to show that in his time (? 5th century A.D.) it was customary to shoe horses, yet it is impossible to say whether he means nailed shoes or sandals. Beckmann, in the passage which he cites from Leo (*Tactica*, v. 4), is probably right in setting down as the earliest mention of nailed horse-shoes. The words there (describing part of the cavalry equipment) are *σεληναῖα σιδηρᾶ μετὰ καρφίων*, *i.e.* "iron horse-shoes with nails." That this mention in the 9th century A.D. marks the *earliest* use of nailed horse-shoes shaped as they are now, is, we think, a wrong conclusion. Not only have we the relief from Gaul (see Baumeister, *Denkm.* fig. 2322) of a *carruca* drawn by horses with nailed shoes, but also numbers of ancient horses' shoes, not differing in shape from those now in use, have been discovered in France, Switzerland, and Germany, and a few in this country. A description of them with illustration will be found in Fleming (*op. cit.* ch. 3–6). That they are of a high antiquity there is no doubt, but we think him wrong in making some of them as old as the time of Julius Caesar. The evidence from position is not so clear as to necessitate any such belief, and had they been then in use in Gaul we can hardly doubt that they would have been adopted at least to some extent in Italy; and in that case, though it is quite possible that there might be no mention of them in general literature, we should expect it in Vegetius; and still more we should certainly find a forge at Pompeii. It would besides be strange that Caesar does not notice them. We should rather conclude that the Gauls began to nail horse-shoes considerably later than Caesar's time, perhaps after the date of Vegetius, and that the invention spread thence to Italy and Greece. Whether Greece had then, as now, the practice of nailing on iron *plates* with merely a hole in the centre is uncertain: but, inasmuch as it is the Turkish system now, we should judge that this pattern of shoe was brought into the Morea by the Turks, and that the true horse-shoe shape is marked by Leo's word *σεληναῖα*. The objects figured below represent what are often called "Roman horse-shoes." They are found in France and elsewhere: several are in the Museum of Besançon: fig. 1.

Fig. 1.

shows one in the British Museum, found at Reignac (Indre et Loire); another exactly like it

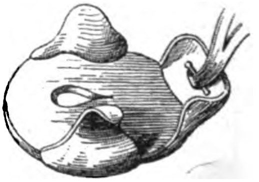


Fig. 2.

Fig. 3.

was found in the Thames among Roman relics, and is described in the *Archaeological Journal*, xi.

p. 416, as a lamp-stand. Fig. 2 (from Fleming) shows one preserved at Besançon. Mr. Fleming (ch. 7) thinks that they are slippers or skids for a wheel [SUFFLAMEN]: but many, if not all, are ill adapted for that purpose. We think that the more correct view is to accept them as "horse-sandals," attached as represented in fig. 3, but used only exceptionally for injured or cracked hoofs. This will account for their not being found more frequently, and also for the fact that they have been discovered close to ancient nailed horse-shoes. (See also Beckmann, *Hist. of Inventions*, ii. 270 ff.; and for still fuller details, Fleming, *Horse-shoes and Horse-shoeing*, ch. 1–7.) [G. E. M.]

SO'LIDUS (*νόμισμα*). The aurei or gold coins issued by the Roman emperors underwent from the time of Nero onwards a gradual but irregular reduction in weight, until they practically ceased to be a measure of value, and gold coin went only by weight. To remedy this state of things, Constantine introduced a new gold coinage, of which the pieces weighed $\frac{1}{72}$ of a Roman libra, about 70 English grains. The importance of this issue and its gradually debased successors is shown by the use in our own time of *soldo*, *sou*, and cognate terms. [P. G.]

SOPHRONISTAE. [GYMNASIUM.]

SORTES, lots. Among the modes of divination practised by the Italian nations, the drawing of lots was one of the most common and most characteristic. We do indeed find it also in Greece (Cic. *de Div.* i. 34, 76), but there it was entirely overshadowed by the prophetic frenzy, and inspiration through dreams. In Italy we must distinguish between the *sortes* which were localised in special temples, and which corresponded more or less to the Grecian oracles [ORACULUM, p. 292], and those which could be drawn by any person and in any place. Of the former kind, we hear specially of the *sortes* at Praeneste (Cic. *de Div.* ii. 41, 85, the *locus classicus* on the subject: cf. Propert. ii. 32, 3; Suet. *Tib.* 63), at Caere (Liv. xxi. 62), at Falerii (Id. xxii. 1), at the temple, celebrated afterwards by Byron, on the Clitumnus (Plin. *Ep.* viii. 8), and at the fons Aponus near Patavium (Suet. *Tib.* 14). It is probable that there were also *sortes* at the oracular seat of Fortuna at Antium, but the evidence is not quite clear that this mode of divination was practised there. The *sortes* were little tablets or counters, made of wood or other materials: after they had been mixed together, a boy would draw one at random, which then was taken as an omen. Some rough verse or proverb was written on each, such as the one mentioned by Livy (*l. c.*), "Mavors telum suum concutit," which appropriately enough is said to have leapt out from the other lots at Falerii when Hannibal was marching towards lake Trasimene. As a prognostication of misfortune, the lots are said to have become miraculously smaller in size (Id. *ib.*). Seventeen lots in bronze, oblong, and pierced with a hole (so that they could be strung together) have been discovered near Padua (and so not far from the fons Aponus above mentioned): the lines written on them are given by Th. Mommsen (*C. I. L.* i. 267–270). As a specimen take the following:—"Est equos perpulcer, sed tu vehi non potes istoc." A peculiar way of drawing the lots, common when more chance was appealed to (without any thought of a prophetic intimation), will be found mentioned under the article SITULA. It is not clear whether the dice mentioned in the passage referred to from Suetonius (*Tib.* 14) would themselves have been called *sortes* or not. The range of prophecy comprised by these "lots" must have been limited, and their application often doubtful; hence we cannot be surprised at what Cicero tells us (*l. c.*), that this kind of divination was in his time obsolete, except at Praeneste. It had, however, been sufficiently famous in its time for the term *sortes* to be a customary name for any kind of oracular deliverance (cf. Cic. *de Div.* ii. 56, 115; Verg. *Aen.* iv. 346, 377. In *Aen.* vi. 72 the word is applied to the Sibylline books). The *sortes* of the fons Aponus had a revival in later times (see the Augustan history, *Claud.* 10; *Firmus*, 3).

While, however, the *sortes* as a branch of official religion died out more rapidly than perhaps any other kind of divination, as an irregular superstition they were the most long-lived of all the elements of heathenism, and lasted far into Christian times. The Sortes Vergilianae were famous (Lamprid. *Alex. Sever.* 14; Spartian. *Hadr.* 2). Just in the same way in which the heathens used Homer or Virgil, and as the Mussulmen of the present day use the Koran and Hafiz, so did Christians use the Bible and Psalter, by opening them at random, and taking the first line on which the eye fell as an indication of future occurrences. (See Augustin. *Confess.* iv. 3; and the very curious sermon *de Auguriis*, numbered cclxxviii. in the appendix to the sermons of Augustine, but probably by Caesarius.) Even the very form of tablets was borrowed from heathenism; they were made either of wood or bread, as we see from their prohibition by the council held at Auxerre (Autissiodurum) about A.D. 578. These *sortes sanctorum* (of which we learn that a volume existed) were frequently condemned by the councils; but so natural was the tendency, that even a conference of orthodox bishops could not help drawing omens from the accidental occurrence of passages in the lessons for the day, and recording them in their minutes (see *Acta Conciliorum*, vol. ii. p. 965. A reference to the words *Sortes* and *Sortilegi* in the index to these Acta will show a number of interesting passages on the subject; cf. also Gibbon, *Decline and Fall*, c. xxxviii., note 51. The curious word *caragi* or *caragii* apparently is used as more or less equivalent to *sortilegi*).

The Sortes Conviviales were tablets sealed up, which were sold at entertainments, and upon being opened or unsealed entitled the purchaser to things of very unequal value; they were therefore a kind of lottery. (Suet. *Aug.* 75; Lamprid. *Heliogabal.* 22.) [W. S.] [J. R. M.]

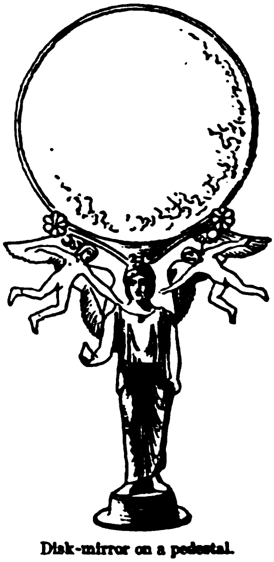
SPECULUM (*κάτοπτρον, ἔσοπτρον, ἔνοπτρον*), a mirror. The mirrors of the Greeks, Romans, and Etruscans consisted almost invariably of small circular disks of metal, which could be placed upright on a table or held in the hand. Mirrors of glass are mentioned by Pliny (*H. N.* xxxvi. § 66) as being made at Sidon, and from a later source (Alex. Aphrod., *Probl.* i. 132 in Ideler, "Physici et medici Graeci minores," i. p. 45) we learn that glass mirrors were coated with tin, not, as with us, with quicksilver (*διὰ τί τὰ ὑέλινα κάτοπτρα λάμπουσιν ἄγαν; ὅτι ἔνδοθεν αὐτῶν χρίουσι κασσιτέρῳ*). No remains of such mirrors exist, however, and they were evidently little used. The usual material was bronze, *i.e.* an alloy of copper and tin, composed, as the analysis of various Roman mirrors has shown (Blümner, *Technologie*, iv. p. 192), of from 19 to 32 per cent. of the latter metal. In Imperial times, the best alloy for mirrors was made at Brundisium (Plin. *H. N.* xxxiii. § 45; xxxiv. § 48). The majority of extant mirrors are of bronze, but some made of silver have also come down to us: see e.g. *Bull. d. Inst.*, 1885, p. 180, a mirror found at Pompeii, and the silver mirror in the tomb of Seianti Thanunia (Brit. Mus.). Silver mirrors came into fashion under the Roman Republic (Pliny, *H. N.* xxxiii. § 45, says in the time of Pompey the Great), and in Imperial times were frequently used, even it is said by maid-servants (Plin. *H. N.* xxxiv. § 48; cf. xxxiii. § 45). They are often mentioned in the Digest (33, 6, 3; 34, 2, 19, § 8). A better reflexion was supposed to be given when the plate of silver was thick (Vitruv. vii. 3). At first, the silver was very pure, but metal of inferior quality was afterwards employed (Plin. *H. N.* xxxiii. § 45). Cheap imitations were manufactured, and some extant mirrors having the appearance of silver are in reality only plated with that metal, or are composed of a mixture of copper and lead (Friederichs, *Berl. ant. Bildw.* ii. p. 86).

There is no mention of mirrors in Homer, and the earliest Greek mirrors extant are not earlier than *circ.* B.C. 500. The prototype of the Greek mirror must, on our present evidence, be looked for in Egypt. The Egyptian mirrors now extant consist of bronze disks of oval or oblate form,—a shape, therefore, nearly the same as that of the Greek mirrors, though somewhat less elegant. They have, like many Greek mirrors, ornamented handles (of wood, stone, or metal), some in the form of the papyrus-sceptre or of a figure of a goddess (see the illustrations in Wilkinson, *Ancient Egyptians*, ed. Birch, vol. ii. pp. 350, 351). From the time of the Attic tragedians onwards mirrors are frequently mentioned in literature (Aesch. in Stob. *Serm.* xviii. 13; Eurip. *Troad.* 1107; *Medea*, 1161; *Orest.* 1112;—Xen. *Cyr.* vii. 1, § 2, &c.), and they are often represented on the monuments. On the vase-paintings female attendants are seen holding them before their mistresses, and among the Greek terra-cottas are figures of women holding circular mirrors while arranging their hair (*Gazette arch.* 1878, pl. 10 = Baumeister, *Denkm.*, art. "Spiegel," fig. 1775; *Gaz. arch.* 1880, p. 39). On the Etruscan terra-cotta sarcophagus of Seianti Thanunia, in the British Museum (from Chiusi), is a reclining female figure holding a mirror. Before dealing with the special characteristics of Greek, Roman, and Etruscan mirrors respectively, it should be stated that wall-mirrors were little used in antiquity. Large metal mirrors were suspended in barbers' shops (Lucian, *adv. Ind.* 29; Vitruv. ix. 9, 2); and we hear, under the Roman Empire, of mirrors large enough to reflect the whole person (Senec. *Quaest. nat.* i. 17, 8, "specula totis paria corporibus;" Ulpian, *Dig.* 34, 2, 19, § 8, "speculum . . . parieti adfixum;" cf. Plin. *H. N.* xxxvi. § 196).

Hand-mirror. (From a relief in the British Museum.)

Greek Mirrors.—Examples of mirrors of Greek workmanship and *provenance* were unknown till recent years, and the number at present discovered (at Corinth and elsewhere) is comparatively small. Like other articles of the toilet, mirrors were buried by the Greeks with the dead. They have two forms: (i.) the disk-mirror with a handle or a stand, (ii.) the box-mirror.

(i.) The disk-mirrors have one side (usually slightly convex) left plain and polished for reflexion. The other side is engraved with a design, or is left plain. The handle is often ornamented, or consists of a statuette—figures of Aphrodite being preferred. Many of these mirrors have a pedestal attached to the statuette, to enable them to be stood upright on the table. Some of the early extant mirrors are furnished with these statuette-stands, and sometimes Erotes, animals, or other ornaments are attached to the lower part of the disk. A good example is figured in the *Arch. Zeitung*,



Disk-mirror on a pedestal.

xxxvii. pl. 12 = Baumeister, *Denkmäler*, art. "Spiegel," fig. 1773.

(ii.) The box-mirror consists of two circular disks shutting into one another, and sometimes united by a hinge. The upper disk or cover is ornamented on the outside with a design in relief, and its interior is polished for reflexion. The lower disk, or box itself, is adorned inside with engraved figures. The reliefs on the box-mirrors and the engraved designs found both on the box- and the disk-mirrors are among the most beautiful and interesting remains of Greek art. The best specimens may be attributed to the 4th century B.C. Good examples may be seen in the Bronze Room of the British Museum. The reliefs usually consist of subjects relating to the cycle of Aphrodite and Dionysos. The relief of "Ganymede carried away by the eagle" (engraved in Collignon, *Man. d'Arch.* p. 351) may be cited as a fine example of this class. Among the finest examples of engravings on mirrors are the Korinthos and Leucas mirror engraved in *Rev. arch.*, N. S., xxiii. (1872), pl. xi. p. 79, and in *Monuments grecs de l'Assoc. des Études grecques*, 1873, pl. iii.; the Genius of the Cock-fights mirror in the Lyons Museum (*Rev. arch.*, N. S., xvii. (1868), pl. xiii. p. 372 ff.); and the Nymph and Pan playing with astragali, in the British Museum (*Classical Review*, vol. iii. p. 86). (On the technique of the "engraved" mirrors, which were perhaps etched as well as engraved, see Blümner, *Technol.* iv. pp. 266, 267.)

Etruscan Mirror. (Dennis.)

ETRUSCAN MIRRORS.—The extant examples, many of which are figured in Gerhard's *Etruskische Spiegel* (continued by Klügmann and Körte), are extremely numerous. They have been found in tombs in Etruria and Latium, some in *cistae*, others placed on the top of vases, or lying separately. They resemble the Greek mirrors in form. Box-mirrors occur, but most of the extant specimens are simple disks with the convex side polished for reflexion and the concave side engraved, and having a handle which was made in one piece with the mirror and sometimes inserted in an outer handle—now often missing—of bone or wood. The Etruscan mirrors that have come down to us are mainly of the fourth and third centuries B.C. The subjects represented are mainly drawn from Greek mythology (especially the Trojan legends), such as the Birth of Minerva, the Birth of Bacchus, Venus and Adonis, Achilles and Thetis, Castor and Pollux, &c. Various scenes from daily life (the toilet, the bath, and the palaestra) are also represented. The names of the personages depicted are nearly always written near them in Etruscan characters (*e.g.* Apul = Apollo; Achle = Achilles; Atunis = Adonis). The designs are nearly always the production of Etruscan copyists of Greek models, especially the vase-paintings. The work is often rough and careless, and the space generally overcrowded with figures. The reliefs on the box-mirrors are much inferior to those on the Greek box-mirrors. Various examples may be seen in the Etruscan Room at the British Museum, among which may be noticed Ganymede carried off by the Eagle, and other figures on the cover of a mirror from Praeneste (*Mon. dell' Inst. arch.* viii. pl. 47, fig. 2). Among the engraved mirrors some elegant and delicately treated designs occasionally occur, such as Semele, &c. on a mirror at Berlin (*Mon. dell' Inst.* i. 56 = Baumeister, *Denkm.* art. "Etrurien," fig. 557); the Healing of Telephus (Gerhard, *Etrusk. Spiegel*, pl. 228 = Baumeister, *Denkm.*, art. "Spiegel," fig. 1774); and the meeting of Helen and Menelaus after the taking of Troy (in the Brit. Mus.: *Mon. d. Inst. arch.* viii. pl. 33).

ROMAN MIRRORS.—These are of little artistic importance, and are usually disk-mirrors provided with an ornamented handle, which is sometimes in the form of a figure. The back of the disk (*i.e.* the side not used for the reflexion) is, if engraved, usually ornamented with decorative patterns and not with a subject-design. Typical examples of various hand-mirrors found at Pompeii may be seen in Overbeck-Mau, *Pompeii*, 4th ed. p. 453, fig. 252.

Gerhard's *Etruskische Spiegel*, Berlin, 1843, &c., continued by Klügmann and Körte; Marquardt - Mommsen, *Handbuch der röm. Alt.* viii. 669, 692, 736; and other authorities cited above in the article.] [W——K W——H.]

SPECUS. [AQUAEDUCTUS.]

SPHAERISTE'RIUM. [GYMNASIUM; PILA.]

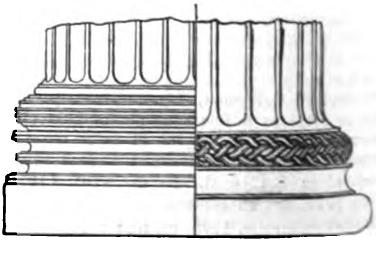
SPHAEROMA'CHIA. [PILA.]

SPHYRE'LATUS (*σφυρήλατος*: or sometimes, as a noun, *σφυρήλατον*, sc. *ἄγαλμα*, or *ἔργον*), "beaten out with the hammer," a simple method of working metal, which was used before the invention of casting, and also, in later times, especially for gold. All the works to which the name is applied by classical authors seem to have been of gold; for instance, the sphyrelatum of Zeus dedicated by Cypselus or the Cypselids (Strabo, p. 376; Plat. *Phaedr.* p. 136 B), a statue made of one of his wives by Darius (Herod. vii. 69), and the close-fitting gold covering made for the body of Alexander the Great (Diod. xviii. 26). And for so soft a material this process was doubtless the best adapted. Hence the comparison by the Pseudo-Theocritus (xxii. 47) of "iron muscles" to a *σφυρήλατος κολοσσὸς* is peculiarly unhappy, and due to an association with *σφυρήλατοι πέδαι*, &c. Though the name *σφυρήλατα* was seldom or never applied to bronze statues (L. and S. quote *χαλκῇ* from *Anth. P.* 14, 2, where the MS. reading is *χρυσῇ*), Pausanias (iii. 17, 6) describes a statue at Sparta made of beaten plates of bronze and riveted together by Clearchus of Rhegium. His statement that it was the earliest of all bronze statues is more consistent with the assertion that Clearchus was the pupil of some primitive artists, such as Dipoenus and Scyllis, than with another that he was the master of Pythagoras of Rhegium. There is, however, no classical authority for giving the name *σφυρήλατον* to a work of this description. [E. A. G.]

SPI'CULUM. [HASTA.]

SPIRA (*σπεῖρα*), *dim.* **SPI'RULA** (Servius in Verg. *Aen.* ii. 217), the base of a column. The word *σπεῖρα* is used in this signification in Greek inscriptions, being applied to the bases of the columns of the Erechtheum and of the temple of Zeus at Labranda (*C. I. G.* 160, l. 64; 2713, 2714). *Spira* is the term regularly used by Vitruvius and other Latin writers in the same signification (see esp. iii. 5, when the forms and proportions are prescribed).

The base, which is absent in Doric columns but always present in those of the Ionic or Corinthian order, may be either *Attic* or *Ionic*; it may be used either with or without a *plinth* beneath it. The *Attic* form [ATTICURGES] consists of an upper and a lower *torus* (*torus superior, inferior*), with a *scotia* (*τροχίλος*) between them, bordered above and below by a *quadra*: it is found in all the Ionic buildings at



Athens, whether they have the Ionic or Attic form of the capital. The example given is from the Erechtheum (see right-hand part of cut). The Ionic consists of an upper torus, and of a lower member and two *trochili*, with double astragali above, between, and below. It is seen in the temple of Athena at Priene (see left half of cut) and elsewhere. That this is the original *Ionic* base is shown by the base of the primitive Ionic column from Naucratis (Petrie, *Naukratis*, i. pl. 3), where the lower part of the base, though not showing the two *trochili*, is of the same general character, and quite different from an *Attic* base.

The upper *torus* is sometimes fluted (ῥαβδωτός), as in the left-hand part of the cut, sometimes ornamented with a plaited ornament, as in the right-hand part; both treatments of the torus of the *Attic* base may be found even in the same building, in the Erechtheum.

In Etruscan columns the base consists simply of a *torus* resting on a *plinth;* in Roman buildings the plinth is almost always present, and all the Greek forms, but especially the *Attic*, are imitated. [E. A. G.]

SPI'THAME (σπιθαμή), *a span*, a Greek measure equal to 3-4ths of the foot. There was no proper Roman measure corresponding to it, but the later writers used *palmus* in this sense; the early writers express the Greek span properly by *dodrans*. [MENSURA, p. 161 *b*; PALMUS.] [P. S.]

SPO'LIA. Four words are commonly employed to denote booty taken in war,—*praeda*, *manubiae*, *exuviae*, *spolia*. Of these, *praeda* bears the most comprehensive meaning, being used for plunder of every description [PRAEDA] *Manubiae* was the money which the quaestor realised from the sale of those objects which constituted *praeda* (Gell. xiii. 24; Cic. *de Leg. Agr.* ii. 22, 59). The term *exuviae* indicates any thing stripped from the person of a foe, while *spolia*, properly speaking, ought to be confined to armour and weapons, although both words are applied loosely to trophies such as chariots, standards, beaks of ships, and the like, which might be preserved and displayed. (See Doederlein, *Lat. Syn.* vol. iv. p. 337; Ramshorn, *Lat. Syn.* p. 869; Habicht, *Syn. Handwörterbuch*, n. 758.)

In the Heroic ages no victory was considered complete unless the conquerors could succeed in stripping the bodies of the slain, the spoils thus obtained being viewed (like scalps among the North American Indians) as the only unquestionable evidence of successful valour; and we find in Homer that when two champions came forward to contend in single combat, the manner in which the body and arms of the vanquished were to be disposed of formed the subject of a regular compact between the parties (Hom. *Il.* vii. 77, &c.; xxii. 258, &c.). Among the Romans, spoils taken in battle were considered the most honourable of all distinctions; to have twice stripped an enemy, in ancient times, entitled the soldier to promotion (Val. Max. ii. 7, § 14); and during the Second Punic War, Fabius, when filling up the numerous vacancies in the senate caused by the slaughter at Cannae and by other disastrous defeats, after having selected such as had borne some of the great offices of state, named those next "qui spolia ex hoste fixa domi haberent, aut civicam coronam accepissent" (Liv. xxiii. 23). Spoils collected on the battle-field after an engagement, or found in a captured town, were employed to decorate the temples of the gods, triumphal arches, porticoes, and other places of public resort, and sometimes in the hour of extreme need served to arm the people (Liv. xxii. 57, xxiv. 21; Val. Max. viii. 6, § 1; Sil. Ital. x. 599), but those which were gained by individual prowess were considered the undoubted property of the successful combatant, and were exhibited in the most conspicuous part of his dwelling (Polyb. vi. 39), being hung up in the atrium, suspended from the door-posts, or arranged in the vestibulum, with appropriate inscriptions (Liv. x. 7, xxxviii. 43; Cic. *Philipp.* ii. 28, 68; Suet. *Nero*, 38; Verg. *Aen.* ii. 504, iii. 286; Tibull. i. 1. 54; Propert. iii. 9, 26; Ovid, *Ar. Am.* ii. 743; Sil. Ital. vi. 446). They were regarded as peculiarly sacred, so that even if the house was sold the new possessor was not permitted to remove them (Plin. *H. N.* xxxv. § 7). A remarkable instance of this occurred in the "rostrata domus" of Pompey, which was decorated with the beaks of ships captured in his war against the pirates; this house passed into the hands of Antonius the triumvir (Cic. *Philipp.* l. c.), and was eventually inherited by the Emperor Gordian, in whose time it appears to have still retained its ancient ornaments (Capitolin. *Gordian.* 3). But, while on the one hand it was unlawful to remove spoils, so it was forbidden to replace or repair them when they had fallen down or become decayed through age (Plut. *Quaest. Rom.* 37), the object being doubtless to guard against the frauds of false pretenders.

Spolia Opima.—This term applied only to spoils which were won in the field of battle by a Roman soldier from the leader of the opposing army. It is usually (though, as will be seen, not invariably) further limited by the condition that the Roman who thus slays and strips the chief opposing general must himself be the actual commander-in-chief of the Roman army (having the *auspicia*). These conditions were only fulfilled on three occasions (Plut. *Marcell.* 8; Propert. v. 11): first, when Romulus took the spolia opima from Acro, king of the Caeninenses; secondly, when A. Cornelius Cossus won them from Lar Tolumnius, king of the Veientes; and thirdly, when Marcellus won them from Viridomarus (or Βριττόμαρτος, as he is called by Plutarch), king of the Insubrians (Liv. i. 10, iv. 20, *Epit.* xx.; Propert. *l. c.*; Plut. *Rom.* 16, *Marcell.* 8; Sil. Ital. i. 133, iii. 587; *C. I. L.* x. 809). We have to notice, however, that Festus, *s. v.*, while he confirms the above limitation, as generally recognised in the use of the term, quotes Varro as saying, "Opima spolia esse etiam, si manipularis miles detraxerit, dummodo duci hostium [sed prima esse utique, quae dux duci. Vetari enim quae a duce recepta] non sint, ad aedem Jovis Feretrii poni." (The reading of Hertzberg, *De Spoliis Opimis* in *Philologus*, i. 331, is here followed.) The quotation from Varro goes on to distinguish the offerings made by the winners of *prima*, *secunda*, and *tertia spolia opima* respectively: and we gather that, though the spolia opima when spoken of without qualification meant rightly the *prima*, i.e. those won by general from general, yet there were also the *secunda*, when they were won by a Roman officer slaying the hostile commander-in-chief, and the *tertia*, when a common soldier performed the same exploit. In the first case *alone* could they be dedicated in the temple of Jupiter Feretrius: in the other two cases, though dignified by the special name, they were no doubt preserved only in the same way as other *spolia*. This view obtains further support from a comparison of Florus, i. 33, 11, with Val. Max. iii. 2, 6; and the probable meaning of Dio Cass. li. 24 is, that when Crassus slew Deldo, king of the Bastarnae, not being *αὐτοκράτωρ στρατηγός*, he could not dedicate the spoils to Jupiter Feretrius, though they *were* opima (*ὡς καὶ ὄπιμα*). It should be observed in conclusion that the term was also used loosely in voting the "spolia opima" to Julius Caesar (Dio Cass. xliv. 4), and by Livy in speaking of the *spolia provocatoria* won in single combat with a subordinate in the hostile army as though they were *spolia opima*, but in this latter case it is probably adopted as the expression of a braggart. The question of *spolia opima* is discussed by Perizonius, *Animad. Hist.* c. 7, and more recently by Hertzberg, in *Philolog.* i. 331: see Marquardt, *Staatsverw.* ii. 579. [W. R.] [G. E. M.]

SPONDA. [Lectus.]

SPO'NDEO. [Obligationes.]

SPO'NGIA (*σπόγγος*), a sponge. The use of sponges has come down from very early times, for the cleansing both of the body (Hom. *Il.* xviii. 414) and of tables (*Od.* i. 111). For the latter purpose, *i.e.* cleaning furniture, walls, and floors, it is more especially noticed in Latin literature (Mart. xiv. 144; Ulp. *Dig.* 32, 7, 12): as regards the use of sponges by invalids in Roman baths, see Balneae, Vol. I. p. 279. Small sponges were often fastened on a stick, and were then called *peniculi* (Ter. *Eun.* iv. 7, 7; cf. Mart. xii. 48; Plaut. *Stich.* ii. 2, 23), and were then used not only with long sticks for cleaning walls, &c., but also with short handles for cleaning boots (Plaut. *Menaechm.* ii. 3, 40; Fest. p. 230). The *penicillus* used for painting was no doubt generally a brush made with hair [Pictura], but for laying on colour broadly and coarsely a *penicillus* made with sponge was also used (Plin. ix. § 148; Blümner, *Technol.* iv. 429). For its use to obliterate writing, see Mart. iv. 10; Liber, p. 59 *a*; Marquardt, *Privatl.* 824; and to this use also we must refer Aesch. *Ag.* 1283. Pliny (*H. N.* ix. §§ 148–150) mentions especially the neighbourhood of Torone, the Syrtes, the Hellespont, and Malea as hunting-grounds for sponges, and the coasts of Lycia for the softest kind. Three kinds are distinguished—the hard and coarse *τράγος*, the softer *μανός*, and the fine *ἀχίλλειον* [cf. Ocrea]. In this he is following Aristot. *H. A.* v. 16, p. 548. The searcher for sponges is called *σπογγοθήρας*, *σπογγοκολυμβητής* or *σπογγεύς* (Poll. i. 96, vii. 137; Athen. vii. p. 282 c; Becker-Göll, *Gallus*, i. 36; Hermann-Blümner, iv. p. 31). [G. E. M.]

SPONSA, SPONSALIA, SPONSUS. [Matrimonium.]

SPONSOR. [Intercessio.]

SPO'RTULA, the diminutive from *sporta* = *σπυρίς*, a wicker basket. In the days of Roman freedom clients were in the habit of testifying respect for their patron by thronging his atrium at an early hour, and escorting him to places of public resort when he went abroad. As an acknowledgment of these courtesies some of the number were usually invited to partake of the evening meal. After the extinction of liberty the presence of such guests, who had now lost all political importance, was soon regarded as an irksome restraint, while at the same time many of the noble and wealthy were unwilling to sacrifice the pompous display of a numerous body of retainers. Hence the practice was introduced under the Empire (probably as early as the time of Nero) of bestowing on each client, when he presented himself for his morning visit, a certain portion of food as a substitute and compensation for the occasional invitation to a regular dinner (*cena recta*); and this dole, being carried off in a little basket provided for the purpose, received the name of *sportula*. Hence also it is termed by Greek writers on Roman affairs *δεῖπνον ἀπὸ σπυρίδος*, which however must not be confounded with the *δεῖπνον ἀπὸ σπυρίδος* of earlier authors, which was a sort of picnic. [Cena, Vol. I. p. 393 *a*.] For the sake of convenience, it soon became common to give an equivalent in money, the sum established by general usage being a hundred quadrantes (Juv. i. 120; Martial, x. 70, 75). Martial indeed often speaks of this as a shabby pittance (*centum miselli quadrantes*, iii. 7; compare i. 60, iii. 14, x. 74), which, however, he did not scorn himself to accept (x. 75), but at the same time does not fail to sneer at an upstart who endeavoured to distinguish himself by a largess to a greater amount on his birthday (x. 26). About the year 87 the practice of inviting clients to the *cena recta* appears to have been revived under the influence of Domitian (cf. Martial, book iii. 7, 14, 60, &c.); but the change was disliked both by patrons and by clients: and a return was generally made to the money dole. The donation in money, however, did not entirely supersede the sportula given in kind, for we find in Juvenal at a somewhat later date a lively description of a great man's vestibule crowded with dependents, each attended by a slave bearing a portable kitchen to receive the viands and keep them hot while they were carried home (iii. 249). If the sketches of the satirist are not too highly coloured, we must conclude that in his time great numbers of the lower orders derived their whole sustenance and the funds for ordinary expenditure exclusively from this source, while even the high-born did not scruple to increase their incomes by taking advantage of the ostentatious profusion of the rich and vain (Juv. i. 95). It is, however, a natural conjecture of Friedländer's, that the small sums of money (less than a shilling a head) so received were regarded by the wealthier as merely formal presents, given by them in turn to their dependents. The custom of rich men receiving such gifts is not mentioned before the death of Domitian. A regular roll was kept at each mansion of the persons, male and female, entitled to receive the allowance; the names were called over in order, the individuals were required to appear in person, and the almoner was ever on his guard to frustrate the roguery of false pretenders (Juv. *l. c.*), whence the proverb quoted by Tertullian (*c. Marcion*, iii. 16), *sportulam furunculus captat*. The morning, as we have seen above (Juv. i. 128), was the usual period for these distributions, but they were sometimes made in the afternoon (Martial, x. 70).

Nero, perhaps imitating the custom of private persons, ordained that, instead of a place at the public banquets (*publicae cenae*) given to the people on certain high solemnities, the poorer citizens should receive a portion of meat, afterwards commuted for a sum of money; but this unpopular regulation was repealed by Domitian (Suet. *Ner.* 16, *Dom.* 7; Martial, viii. 50).

When the Emperor Claudius on one occasion resolved unexpectedly to entertain the populace with some games which were to last for a short time only, he styled the exhibition a *sportula* (Suet. *Claud.* 21), and in the age of the younger Pliny the word was commonly employed to signify a gratuity, gift, or emolument of any description (Plin. *Ep.* ii. 14, x. 118).

(Compare a dissertation on the Sportula by Buttmann in the *Kritische Bibliothek* for 1821; see also Becker-Göll, *Gallus*, ii. 204 ff.; Marquardt, *Privatalt.* i.^{2} 207–212; Friedländer, *Sittengesch.* i. 438–442.) [W. R.] [A. S. W.]

STABULA'RIUS. [RECEPTA ACTIO.]

STA'DIUM (*στάδιον*, pl. in prose most often *στάδιοι*: Doric *σπάδιον*; cf. Lat. *spatium*). **1.** The foot-race course at Olympia and the other places in Greece where games were celebrated. It was originally intended for the foot-race, but the other contests which were added to the games from time to time [OLYMPIA] were also exhibited in the Stadium, except the horse-races, for which a place was set apart, of a similar form with the stadium, but larger: this was called the HIPPODROMUS (*ἱππόδρομος*).

The plan of the Olympic stadium, as discovered by recent excavations, was rectangular. This, however, is exceptional, for most others known to us were terminated at one end by a straight line, at the other by a semicircle having the breadth of the stadium for its base. Round this area were ranges of seats rising above one another in steps.

It was constructed in three different ways, according to the nature of the ground. The simplest form was that in which a place could be found which had by nature the required shape, as at Laodicea. Most commonly, however, a position was chosen on the side of a hill, and the stadium was formed on one side by the natural slope, on the other by a mound of earth (*γῆς χῶμα*), as at Olympia, Thebes, and Epidaurus (Paus. ii. 27, § 6; vi. 20, §§ 5, 6; ix. 23, § 1). Sometimes, however, the stadium was on level ground, and mounds of earth were cast up round it to form seats, and covered with stone or marble. We have two celebrated examples of this construction in the Pythian stadium at Delphi and the Panathenaic at Athens. The former was originally constructed of Parnassian stone, and afterwards covered with Pentelic marble by Herodes Atticus (Paus. x. 32, § 1), who adorned in the same manner the stadium at Athens, which had been originally constructed on the banks of the Ilissus by the orator Lycurgus. The marble covering, which took four years to complete, has now disappeared, but the area is still left, with some ruins of the masonry (Paus. i. 19, § 7; Leake's *Topography of Athens*).

The stadium sometimes formed a part of the buildings of the gymnasium [GYMNASIUM], at other times it was placed in its neighbourhood, and often, as at Athens, stood entirely by itself. That at Olympia was just outside and slightly to the N.E. of the sacred enclosure called Altis.

The size of the Grecian stadia varied both in length and breadth; but this variety is possibly in some cases to be understood of the size of the whole enclosure, not of the length of the part marked out for the race; the latter would naturally have been fixed, while the former differed according to the accommodation to be provided for spectators, or the magnificence which the builder might wish to confer upon the structure. The length of the course, between the pillars which marked the beginning and the end of the race, was always 600 (Greek) feet, but the foot unit varied in size [*vide* MENSURA]. There was a tradition that Hercules measured it out at Olympia originally by his own foot. It is not improbable that Pheidon, who claimed to be a descendant of Hercules, and who presided as agonothete at the Olympic games, may have fixed the length of the stadium according to the standard of measure which he established.

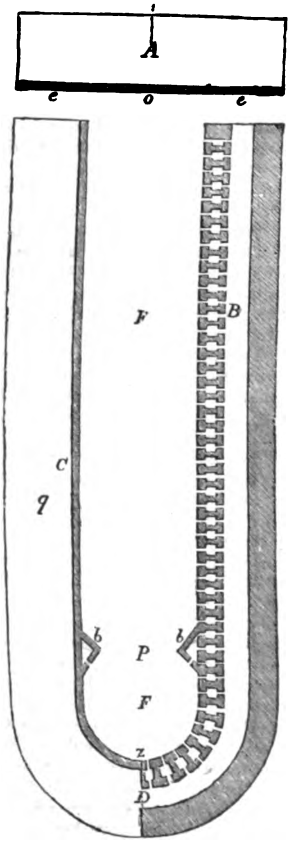
The accounts left by ancient writers of the arrangement of the parts of the stadium are scanty, but from a comparison of them with existing remains of stadia we may collect the following particulars.

At one end a straight wall shut in the area, and here were the entrances, the starting-place for the runners, and (at Olympia) an altar of Endymion. At the other end, at or near the centre of the semicircle, and at the fixed distance from the starting-place, was the goal, which was the termination of the simple foot-race, the runners in which were called *σταδιοδρόμοι*: the race itself is called *στάδιον* and *δρόμος*: in the *δίαυλος δρόμος* the racers turned round this and came back to the starting-place. The starting-place and goal had various names: the former was called *ἄφεσις*, *γραμμή*, *ὕσπληξ*, and *βαλβίς*: the latter *τέρμα*, *βατήρ*, *τέλος*, *καμπτήρ*, and *νύσσα*. The term *γραμμή* is explained as the *line* along which the racers were placed before starting; *ὕσπληξ*, which means *the lash of a whip*, is supposed to have been a cord which was stretched in front of the racers to restrain their impatience, and which was let fall when the signal was given to start; the name *καμπτήρ* was applied to the goal because the runners in the *δίαυλος* and *δόλιχος turned* round it to complete their course. These terms are often applied indifferently to the starting-place and the goal; probably because the starting-place was also the end of all races, except the simple *στάδιον*. The starting-place and goal were each marked by a square pillar (*στῆλαι*, *κίονες κυβοειδεῖς*), and half-way between these was a third. On the first was inscribed the word *ἀρίστευε*, on the second *σπεῦδε*, on the third *κάμψον*. The *δολιχοδρόμοι* turned round both the extreme pillars till they had completed the number of stadia of which their course consisted, which appears to have been different on different occasions, for the length of the *δόλιχος δρόμος* is variously stated at 6, 7, 8, 12, 20, and 24 stadia (Schol. *ad* Soph. *Electr.* 691).

The semicircular end of the area, which was called *σφενδόνη*, and was not used in the races, was probably devoted to the other athletic sports. This *σφενδόνη* is still clearly seen in the Ephesian and Messenian stadia, in the latter of which it is surrounded by 16 rows of seats. The area of the stadium was surrounded by the seats for spectators, which were separated from it by a low wall or podium.

Opposite to the goal, on one side of the stadium, were the seats of the Hellanodicae, for whom there was a secret entrance into the stadium (κρυπτὴ ἔσοδος), and on the other side was an altar of white marble, on which the priestesses of Demeter Chamyne sat to view the games. The area was generally adorned with altars and statues.

Such were the general form and arrangement of the Greek stadium. After the Roman conquest of Greece the form of the stadium was often modified so as to resemble the amphitheatre by making both its ends semicircular, and by surrounding it with seats supported by vaulted masonry, as in the Roman amphitheatre. The Ephesian stadium still has such seats round a portion of it. A restoration of this stadium is given in the following woodcut, copied from Krause.



Stadium at Ephesus, restored.

A is the boundary wall at the Aphesis, 77 feet deep, B C the sides, and D the semicircular end, of the same depth as A; F F the area, including the σφενδονή; *b b* pieces of masonry jutting out into the area; *e e* the entrances; from *o* to *p* is the length of an Olympic stadium; from *q* to *z* the range of amphitheatrical seats mentioned above.

The stadium at Olympia (as distinct from the area which formed the course) was, as has been already mentioned, rectangular, with a breadth of about 32 and a length of 211 metres. The foot of the embankments which enclosed the area was bordered by a ledge of stone. The area itself lay at a depth of about three metres below the level of the adjoining Altis. We may here mention a few details respecting the Olympic stadium restored to view by recent excavations. In the simple course—the στάδιον or δρόμος—the runners merely traversed once the space from the starting line to the goal. But in the double course, or δίαυλος, they traversed this space twice. The judges were stationed at the end where the goal stood. Hence runners in the δίαυλος—and also in the δόλιχος, which always consisted of an even number of στάδια—must be supposed to have started from this end, in order to finish in the immediate presence of the judges. Thus the arrangements for starting were of necessity alike at both ends. At Olympia, accordingly, a row of flags, reaching across the course at either end, formed the common basis on which the competitors took their places before starting. Standing here in a line, they were separated from one another by posts inserted perpendicularly in the stone. The sockets in which these posts stood are still visible. Each is about four Olympia feet distant from the one next to it, thus allowing ample room for that play of arms customary among ancient Greek runners.

Stadia were in later times used for other purposes than running, *e.g.* for wild-beast shows or hunts (κυνηγεσίαι). Hence (as appears from the ruins of the stadium at Ephesus, and from two inscriptions found in the ruins of the stadium at Laodicea) an amphitheatre was sometimes built in connexion with the stadium. The podium was built round the course, and furnished with iron rails as a protection against the wild animals.

Stadia were late in appearing at Rome. Julius Caesar erected a stadium for athletes upon the occasion of his fivefold triumph (Suet. *Jul.* 39). Augustus, too, seems to have built a stadium in the Campus Martius (Id. *Aug.* 43, 45). Domitian also is named as having founded a stadium in which young women competed for prizes in running (Id. *Domit.* 4 and 5). But the exercises of the stadium never attained at Rome the same degree of popularity as those of the circus and amphitheatre.

(Krause, *Die Gymnastik und Agonistik der Hellenen*, p. 131, § 14; Müller, *Archäol. der Kunst*, § 200; OLYMPIA.)

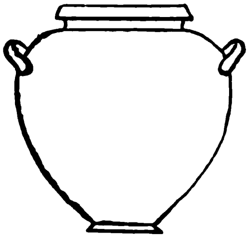
2. The word also signifies the chief Greek measure for itinerary distances, which was adopted by the Romans also, chiefly for nautical and astronomical measurements. It was equal to 600 Greek or 625 Roman feet, or to 125 Roman paces; and the Roman mile contained 8 stadia (Herod. ii. 149; Plin. *H. N.* ii. 23, § 21; Columell. *R. R.* v. 1; Strabo, vii. p. 497). This standard prevailed throughout Greece, under the name of the Olympic stadium, so called because, as above stated, it was the exact length of the stadium or foot-race course at Olympia, measured between the pillars at the two extremities of the course.

As to the length of the Olympic stadium, actual measurement has now put an end to all dispute. From starting-point to goal the distance is 192·27 metres. Divided by 600, this gives ·3205 metre as the length of the Olympic foot. As the Attic and Olympic foot-lengths were considerably less than this, we can understand how the fable obtained credence that the Olympic stadium was originally measured out by the foot of Hêrakles.

Respecting the origin of the stadium as unit of measurement, different opinions have been advanced. A recent view propounded by Prof. Ridgeway [for which see Mensura, p. 161] bids fair to become generally accepted. According to this, the stadium is simply the ancient furrow-length. He traces the institution of this unit back to the time when the Aryan peoples had not yet separated. (*Vide*, in addition to the authors above referred to, Bötticher, *Olympia*,^{2} and *Denkmäler des klassischen Altertums*, Nos. 28, 29, 29^{a}.)

There were multiples of the measure, corresponding to the longer races; thus the δίαυλος was 2 στάδια, and the δόλιχος 6 or more. (See above.) The ἱππικὸν of 4 stadia we may presume to have been the length of one double course in the chariot-race, which would give 2 stadia for the distance between the pillars in the hippodrome. In mathematical geography, the ordinary computation was 600 stadia to a degree of a great circle of the earth's surface. [P. S.] [J. I. B.]

STAMNUS (στάμνος, σταμνίον), an earthenware jar, often with red figures, used to hold wine or oil (Aristoph. *Lys.* 196, cf. *Ran.* 42; Athen. xi. p. 499 e). The word is still so used in Greece. It is sufficiently described by Dennis as "a high-shouldered, short-necked plethoric vase with two small handles." The same writer gives also an "Apulian stamnos," a small and later variety with a lid, probably intended to hold honey or sweetmeats. [G. E. M.]



Stamnos. (Dennis.)

Apulian Stamnos. (Dennis.)

STATER (στατὴρ) was the standard unit both of weight and (more especially) of money, corresponding to the Oriental word *shekel*. As the coins which were the standard units in various districts varied in metal and in weight, the term *stater* was applied in antiquity to a great variety of pieces of money. The Greeks would have called the sovereign, the dollar, and the rupee all staters.

Gold Staters.—The earliest coins struck in gold were the Lydian pieces attributed to Croesus, stamped with the fore parts of a lion and a bull, and weighing about 130 grains. These were called στατῆρες Κροίσειοι: they were succeeded by the Persian gold coins of the same weight, called Darics or στατῆρες Δαρεικοί. About B.C. 400 Athens, Rhodes, Olynthus, and other cities began the issue of gold staters of nearly the same weight (about 133 grains), and this weight was also preserved in the gold staters of Philip and Alexander of Macedon and the successors of Alexander. Thus the gold stater was almost invariably in antiquity an Attic or Euboic didrachm [Pondera] and of the metal value of about 23 shillings. Mr. Ridgeway has in the *Journal of Hellenic Studies* (vols. viii., ix.) produced evidence that the gold stater was originally regarded as representing the value of an ox.

Gold Stater of Alexander.

Silver Staters.—As in Greece proper silver, not gold, was the staple of the currency, the stater was in the cities of that district of silver. Among the Aeginetans the stater, στατὴρ Αἰγιναῖος, was the didrachm of about 194 grains; and among the Corinthians the tridrachm of 135 grains, which was termed in Sicily δεκάλιτρος στατήρ, because it was equal in value to ten Sicilian litrae. But the litra (*q. v.*) was also in Sicily called a stater, as being a local measure of value. In Italy the coins which would elsewhere have been termed staters were called *numi:* as the Tarentine numus, and the Roman denarius and sestertius. At Athens the term stater was applied not only to the gold didrachm, but also to the silver tetradrachm, at all events in later times; and as in the Roman age the Attic drachm was regarded as equivalent to the denarius, and the denarius was the eighth part of a Roman ounce in weight, the stater or tetradrachm was stated to be of the weight of half an ounce. Similarly the Ptolemaic and Hebrew staters were tetradrachms of silver.

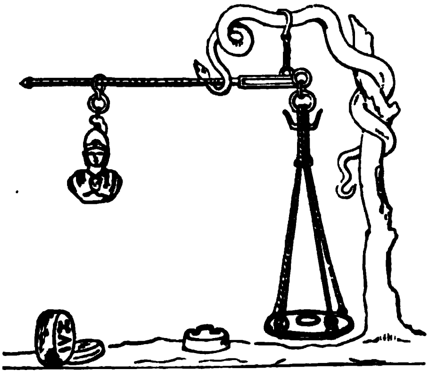
Electrum Staters.—The coins in electrum issued in early times by the Greek cities of Asia Minor were commonly spoken of as staters. Thus we frequently read in Attic inscriptions entries of στατῆρες Φωκαϊκοί, Λαμψακηνοί, and Κυζικηνοί, and Demosthenes speaks of a Cyzicene stater as equivalent in value to 28 Attic drachms (*adv. Phorm.* p. 914): there are reasons for thinking that it was of the same value as a Daric (Gardner, *Numismatic Chronicle*, 1887, p. 185). Cyzicene and Lampsacene staters (weight 248 grains) still exist in great abundance, but few Phocaic staters. Some electrum staters are figured under Electrum.

It has been impossible in this slight summary to quote the passages from ancient writers, Pollux, Hesychius, &c., on which the above statements are based. But by turning to στατὴρ in the index to Hultsch's *Metrologici*

Scriptores, authority will be found for all of them. The common notion that the stater is necessarily a didrachm is erroneous. [P. G.]

STATE'RA, a steelyard. This seems to have been an invention of Italy: according to Isidore (*Orig.* xvi. 24), it was first used in Campania, and was called *trutina campana;* and it may be remarked that in Roman remains generally the steelyard is the commonest form of weighing machine discovered. There can be no doubt that the balance [LIBRA] was a far older contrivance than the steelyard: Blümner (in Baumeister's *Denkmäler*, p. 2078) conjectures as the primitive form a simple bar of wood placed through a ring or loop with the articles to be weighed against each other hung at the two ends. The more elaborate balance was a natural improvement on this, but the steelyard clearly involved more ingenuity and calculation.

An account of the steelyard will be found in Vitruvius, x. 3, 4. The parts defined are the beam or yard (*scapus*) suspended by a hook or chain which is called the handle (*ansa*); in this is the point of revolution (*centrum*), and near it is the *caput*, from which depends the scale (*lancula*): on the other side of the *centrum* the *scapus* is marked with points (*puncta*), which express the weight of objects in the scale as the *aequipondium*, or hanging weight, moves along the beam. This aequipondium was generally adorned with a head divine, human or animal.



Statera. (From Museum at Rome.)

The example here given is from the Museum of the Capitol at Rome. Others differ in having less ornament; and it is common also to find a hook attached to the shorter arm between the *centrum* and the *caput*, which was intended to hold articles whose size and shape made it convenient to hang them on, instead of putting them in the scale, and, as this altered the leverage, there was a double set of *puncta* on the beam to suit either arrangement. A third kind is shown in Baumeister (*Denkm.* fig. 2316), where a weight hangs on one arm of an ordinary balance, this arm being marked with *puncta.* It is clear that this was intended for use either as *libra* or *statera:* in the former case the weight would be detached; in the latter one scale would be detached (or allowance made for it in the *puncta*), and the other would be used as in the steelyard.

It must be observed that, though *statera* is strictly the steelyard, it is often used for a weighing machine of any kind: *e.g.* in Suet. *Vesp.* 25, the *statera* of the dream is clearly a balance with two scales; so also the *aurificis statera* is doubtless a balance of a peculiarly delicate kind contrasted with the *popularis trutina*, or less carefully adjusted balance; for *trutina* is used for any weighing machine, without distinction of form. (An illustration of this goldsmith's balance from an ancient relief is shown in Blümner, *Technologie*, iv. 312.)

The engraving in this article shows various weights (*aequipondia*, *σηκώματα*), such as may be seen in many museums, and of which a large collection may be studied in the British Museum. There was at Rome a special guild of *Sacomarii*, or makers of weights (*C. I. L.* x. 1930; Marquardt, *Privatl.* 713). For a marble altar set up by a guild of Sacomarii at Ostia, see Lanciani, *Ancient Rome*, p. 34, London, 1889. [G. E. M.]

STATIO'NES FISCI. The Fiscus (*q. v.*) was divided into various departments, called *stationes*, according to the different revenues or business belonging to it (Cod. 4, 31, 1; 8, 43, 2; 10, 5, 1). Thus we hear of a *statio hereditatium* (Wilmanns, *Exempla Inscriptionum Latinarum*, 1272); a *statio xx. hereditatium* (Wilmanns, 1272, 1389); a *statio quadragesima Galliarum* (Wilmanns, 1397, 1398; see QUADRAGESIMA); a *statio ferrariarum* (Wilmanns, 1408); a *statio urbana* (Wilmanns, 2810); a *statio marmorum* (Wilmanns, 1377); a *statio annonae* (Orelli, *Inscr.* 4107=4420). We meet also with a *statio privatarum* (Wilmanns, 1277), and a *statio patrimonii Augusti* (Wilmanns, 1353, 2811). Officials connected with a statio are mentioned in the above inscriptions under the names of *procurator*, *praepositus*, *contrascriptor*, *princeps tabularius*, *optio tabellariorum*, *pedisequus.* [F. T. R.]

STATIO'NES MUNICIPIO'RUM. [GRAECOSTASIS.]

STATOR. [EXERCITUS, Vol. I. p. 794 *b*.]

STATUA'RIA ARS. This title will be used in the present article in its widest interpretation, including in fact all that we call by the name "sculpture," whether in relief or in the round, and whatever be the material in which it is executed. For details in various branches of the subject, special articles must be consulted; and for information as to the life, works, and style of the various artists mentioned, see the articles under their respective names in the *Dictionary of Biography and Mythology*. Here will be found—I. a description of the materials and technique of ancient sculpture; and II. a historical sketch of its development and decline, with special reference to the relations and periods of the various schools, and to extant works of sculpture.

I. *Materials and Technique.*

As to materials, we may distinguish (*a*) stone and marble; (*b*) bronze and other metals, such as silver; (*c*) wood, sometimes inlaid and gilded, or with portions in marble (*acrolithi*) or gold and ivory (*chryselephantina*); (*d*) terra-cotta. The technique must be considered in each case separately.

(*a*) *Stone or Marble.*—This is the most important to us, because, from the nature of the materials, nearly all the statues still preserved are of this class. But it must always be remembered that this material had no such preponderance over the others in ancient times as it has in modern museums. But it was at all times very extensively used, and consequently we possess examples of all periods in stone or marble, from the shapeless dolls which show the first rude attempts to represent the human form, through the rise, finest period, and decline of sculpture, to the last decadence of Roman work.

The "invention" of sculpture in marble is traditionally attributed to Melas of Chios and his family, in which Archermus is the best-known name. Like other traditions of "inventions," this must not be insisted upon.

In the earliest period of sculpture, the squareness of the form of the body has often been noticed. Some have wrongly attributed this to an influence of wood technique. It is doubtless due to the fact that the early sculptors, like beginners of to-day, traced first the full aspect or profile of a figure on the front or side of their block, and then worked through at right angles to the surface: traces of this proceeding are clear on some unfinished statues, which have the flat surfaces and corners produced by it not yet rounded off.

Much confusion exists in the opinions of archaeologists as to the extent to which pointing from a finished clay model was used. In some cases points are still visible, not completely worked off the statue. But this is only in the case of late Hellenistic or Roman works, and it may be seriously doubted whether any such practice prevailed in the best times of Greek sculpture. Unfinished Greek statues—of which several exist in Athens—show no sign of it. The block is worked away in successive layers, more delicate instruments being used as the sculpture progressed. For the probable facts as to the use of clay models (*proplasmata*) see *sub voc.*, and also section (*d*) below. The tools mostly used were the punch, with a mallet, and various chisels; in a more advanced stage of the statue a claw chisel was used; it was then finished with an ordinary chisel. Traces of all these processes are clear in unfinished statues. The drill seems to have been used in earlier times only for fixing ornaments, &c. Callimachus is said to have been the first to make sculptural use of it. Later it was extensively used for the hair and the deeper folds of the drapery, and in careless work its marks were never worked off. A very highly polished surface is characteristic of works of the Hellenistic period, and especially of the Pergamene school. The application of colour is a question of great importance, which can now be decided with regard to archaic works, though there is still some difficulty as to statues of later periods. Where rough stone was used, colour was applied to all parts, more or less conventionally—red for the nude parts, and blue for hair, clothes, &c., being the colours most used. But as marble came to be more extensively and afterwards almost exclusively used, the beauty of the material and its exquisite rendering of the texture of the skin naturally precluded the use of colour on the nude parts: this was especially the case with female statues, the white colour for the skin of women being already prevalent on archaic vases. In the best preserved series, the archaic female statues on the Acropolis at Athens, we find the skin and the whole mass of the drapery left uncoloured; red is applied to the hair, lips, and eyes, in the last case with touches in dark purple or brown, and other colours; and the drapery has borders and scattered ornaments painted on it in red, blue, green, and dark purple or brown. A garment is completely coloured only when but a small portion of it shows; *e.g.* the breast and sleeve of a chiton when an outer garment is worn that conceals the rest of it. To judge from this evidence, it seems impossible that in the finest period it was customary to apply colour to the whole or great part of the surface of a statue. (We are, however, told that Praxiteles considered those works to be his best which were improved by the "circumlitio" of the painter Nicias.) Surviving examples of tinted statues of later period —one or two are known—may possibly be either experiments or imitations of terracotta or other materials. But it is impossible to be certain until we have as complete and well-preserved a set of statues surviving from some later period as those on the Acropolis from the time preceding the Persian wars—a discovery perhaps beyond hope.

In the earliest times all kinds of local marble were used; that of Paros, sometimes called lychnites, came early into common use from the fame of local artists, and its excellence made it always remain the favourite. Pentelic marble was extensively used at Athens during and after the fifth century; Hymettic only for inferior work, except in the earliest time. In the Roman period the quarries of Luna, the modern Carrara, were worked very extensively.

(*b*) *Bronze*, *&c.*—Bronze was probably the material most used by the great artists of antiquity, but the ease with which it was destroyed and melted down into useful metal has spared us but few examples. Beside statuettes, which are innumerable, only a few life-size or larger statues remain: among the most important are the archaic bearded head found on the Acropolis at Athens in 1887, a seated statue of a boxer found in Rome in 1886, and the head of Aphrodite in the British Museum. Various mixtures of bronze were known, and preferred by different artists; the Corinthian and Aeginetan were the best known [see AES].

The most primitive method of bronze-working implies no knowledge of casting, but merely hammering plates into the required shape and then riveting them together. Bronze-founding is said to have been "invented" by Rhoecus and Theodorus of Samos, about the middle of the sixth century; the nature and extent of this "invention" are not clear; a colossal bowl of bronze is said to have been made in Samos long before their time. It is doubtful at what period hollow casting of complete statues became usual. This was probably done, as it is now, by the *cire perdue* process. In this process the modelling is finished on a layer of wax over a fire-proof core. A casing is added, and the wax is then melted out and bronze poured in. On a vase, probably of the fifth century, is represented a bronze founder's workshop, where the body, head, and limbs, cast separately, are being finished and inserted into their places by workmen. The final polishing and finish of detail took place after casting, and on the same vase are some workmen employed in these processes, which properly belong to CAELATURA, *q. v.* *Caelatura* also includes all purely decorative work in metal, such as was frequently applied to the details of great statues.

Silver and gold, as well as bronze, were occasionally used for statues; *e.g.* a gold *sphyrelatum* of Zeus was dedicated by the Cypselidae of Corinth at Olympia. Such a work is quite distinct from the *chryselephantina*, which probably are a development of the next material.

(*c*) *Wood*, often gilt and enriched with other materials. This material was extensively used in early times, but naturally has not been preserved: the primitive *ξόανα* were frequently, but not exclusively, of wood; the influence of wood technique on early sculpture has probably been exaggerated. The development of this material is seen in the works of Dipoenus and Scyllis of Crete, and the school they founded in Sparta. First comes the use of ivory and ebony; then the wood is coated with gold, and so the transition is easy to the great chryselephantine works, in which gold and ivory only are seen. Of course such statues must have had a core of wood when small (at Megara the wooden portions of an unfinished gold and ivory statue were preserved): this was replaced by an internal framework when on a large scale. *Acrolithi*, in which the ivory is replaced by marble, and the gold by gilded wood, were a cheap substitute for *chryselephantina*.

(*d*) *Terracotta* was very little used for monumental purposes by the Greeks, though it is said to have been used for temple sculptures at an early period in Italy. But the use of clay-moulding is a question of great importance and difficulty. Figurines in terracotta, mostly made for dedication in temples or burial in tombs, are preserved in very large quantities in all museums. They supply the models of the earliest and rudest art; they reproduce the masterpieces of all periods, and many artists devoted great skill and originality to their manufacture [TERRACOTTA]. These terracottas can only be referred to here for the information they give us as to the larger and more monumental works which form the subject of the present article. But in connexion with this material and the process of modelling it, must be also considered the use of finished clay models in making statues of marble or bronze. The clearest passage concerning this is in Pliny, xxxv. § 156: "Pasitelen, qui plasticen matrem caelaturae et statuariae sculpturaeque dixit, . . . et nihil umquam fecit antequam finxit;" and he makes similar statements as to Arcesilaus. We thus see that the practice was used by the chief artists of the first century B.C. We do not know for certain how much earlier it began. Just above (§ 153), but in confused context, Pliny seems to state that after the time of Lysistratus, the brother of Lysippus, no statues were made without the use of clay models. Thus it seems to be implied that a universal use of finished clay models came in after the end of the fourth century. On the other hand, the famous remark of Polycleitus, who worked mostly in bronze, *χαλεπώτατον τὸ ἔργον, ὅταν ἐν ὄνυχι ὁ πηλός*, seems to imply a use of finished clay models, at least in the case of bronze works, at a considerably earlier date. Great works in gold and ivory also seem to imply a finished clay model after which the scales could be worked. And we hear of one such work (by Theocosmus at Megara) in which, the materials failing, the body was supplied with plaster and clay—doubtless the model prepared for the work. But at least in the case of marble we have seen that execution was more or less free hand in the best period, and that pointing from a finished clay model was certainly not universal till Roman times, if even then. It is at any rate certain that the practice of making first a clay model, whatever was to be the final material, and leaving the rest to copying by more or less mechanical means, was not in use among Greek sculptors, who always carried out the details of practical execution in the final material as far as possible with their own hands. On unfinished works of Greek or even Hellenistic period (*e.g.* the small frieze of Pergamus) puntelli are not usually to be found; they occur on works of the Roman period.

II. *Historical Sketch.*

The beginnings of Greek sculpture may be assigned to about the year 600 B.C. What art existed before in Greece was either purely decorative, or entirely subordinate to foreign influences. It will be well to divide the whole history into periods, for greater facility in its consideration.

1. Before 600 B.C. Earliest traditions; foreign influences.
2. 600 B.C.—480 B.C. Greek archaic—Early schools.
3. 480 B.C.—400 B.C. Greek fifth century—Phidias, Polycleitus.
4. 400 B.C.—320 B.C. Greek fourth century—Praxiteles, Scopas, Lysippus.
5. 320 B.C.—150 B.C. Hellenistic—Asiatic schools.
6. 150 B.C.—300 A.D. Graeco-Roman and Roman.

1. *Before* 600 B.C. *Earliest traditions; foreign influences.*—Before considering Greek tradition, we must first recall the state of foreign arts at this time, and the channels by which they could influence the nascent art of Greece.

Egyptian art had in the seventh century reached a low ebb, having declined since the period of colossal works which accompanied the national revival under the Ramessid dynasty. But another revival took place under the prosperous rule of Psammetichus, marked more by delicacy of execution than greatness of conception. Psammetichus seems to have favoured foreign intercourse, and the first Milesian colony at Naucratis was founded in his reign. The direct influence of Egyptian art on Greece must, however, been less than the indirect, conveyed chiefly through the Phoenicians. The same people probably conveyed to Greece the influence of Assyrian art, which had passed through all the stages of its development before sculpture can be said to have begun in Greece. But at a time when no copies, casts, or drawings of foreign works of art existed, and when artists cannot often have travelled to study foreign masterpieces, the only possible means for conveying foreign influence must have consisted in small and portable articles, arms and utensils, reliefs, statuettes and carvings in ivory, wood, metal, &c., such as could easily be made articles of traffic. Such objects might either be Phoenician imitations, or might be genuine products of the art they represented. With the arts of Asia Minor the case is different. The numerous Greek colonies here superseded any need of Phoenician intermediaries, and intercourse with Phrygia, Lydia, Caria, and Lycia is to be inferred both from tradition and extant remains. Various rock-cut sculptures of Asia Minor, such as the Niobe of Mount Sipylus, were known to the Greeks from early times. Above all, several of the islands served as centres where Oriental and Greek art met: the position of Cyprus in this respect is often misunderstood; the Greek element there was always subordinate, and all arts seem to have lingered and died out, but never to have developed. To Rhodes, on the other hand, may be traced many of the most fruitful influences in early Greece; and it seems probable that a similar position was held in the earliest times by Crete, though this cannot be certainly known till extensive excavations have taken place in that island.

Some vague tradition of the influences just mentioned may be traced in the myths of such creatures as the *Cyclopes*, *Idaean Dactyli*, and *Telchines*—monsters or daemons of superhuman strength and skill. The *Cyclopes* are usually said to come from Lycia; they are usually represented as the builders of colossal walls, such as those of Mycenae and Tiryns; but works of sculpture are attributed to them—a head of Medusa at Argos and the Lions over the gate at Mycenae (which really belong to a Phrygian series). The *Idaean Dactyli*, or Fingers from Mount Ida, are attributed sometimes to Ida in Phrygia, sometimes to Ida in Crete; besides possessing skill in magic, they are said to have invented the working of iron. The *Telchines*, often in later times confused with the Dactyli even in names, seem to belong to Rhodes (Ov. *Met.* vii. 365), but are also connected with Crete and Cyprus. They, too, work in iron and bronze, and also practise magic. To these mythical workmen are attributed such objects as the Trident of Poseidon, the thunderbolts of Zeus, the Sickle of Cronus. It is obviously absurd to look for historical races or persons in such stories; but the countries to which they are assigned may indicate the belief of the Greeks as to the quarters whence were derived the technical appliances of art in the earliest times.

The next step in tradition brings us to *Daedalus* and other names of what is sometimes called the *Heroic period* of art. Late writers describe the improvements made by Daedalus in sculpture, by opening the eyes, separating the legs, and freeing the arms from the body, and ascribe extant works to him, as if he were a historical person. But these statements are obviously mere euhemeristic or rationalistic explanations of old tales of magic; Plato, Euripides, and Aristotle ascribe to him, not only sculptural attainments, but feats of magic, such as are ascribed also to Hephaestus. It is also obvious that statues with eyes shut probably never existed, that the legs are separated in the conventional stride in Egyptian and other imported statuettes, and that the arms remained close to the body far later than any period that could be assigned to Daedalus. In Homer he is only referred to as devising a χορὸς (*i.e.* a dance or dancing-place) for Ariadne—not necessarily as a sculptor; a late misinterpretation identified the actual relief he made with one extant at Cnossus in Crete. But there is no more reason for attributing historical truth to his inventions in the art of sculpture than in that of flying. By the earlier Greeks he was regarded as a mythical inventor and magician, from whom families in Athens and in Crete claimed descent; he became later the personification of early Greek art, and hence, naturally enough, statues of Greek origin and unknown antiquity came to be attributed to him.

One or two other names of artists belong to the heroic period. As the maker of the Trojan wooden horse, *Epeius* has more claim to being mentioned as a sculptor in Homer than Daedalus has; later, at least one extant statue was attributed to him; but his character seems no less legendary. So, too, statues said to have been dedicated by various heroes were probably either imported or native works of unknown antiquity. Even Pausanias notes that a bronze statue said to be dedicated by Ulysses was cast in one piece, and so could not go back to his time. Two or three of the earliest Greek sculptors may perhaps belong to this period before 600 B.C.; but there are as yet no schools, and no regular succession. Some works of decorative relief must, however, be noticed, which, though not properly works of sculpture, are usually included in all books upon the subject. The *Shield of Achilles* is the first of this series. It is not to be imagined that the description in Homer (which, though probably an interpolation, is still as early as 700 B.C.) is derived from any single shield, or even that its individual scenes describe actual reliefs seen by the poet. But though the arrangement is his own, the detailed description of such a work seems to imply that the poet had seen similar subjects similarly treated, though not necessarily by a Greek artist; the nearest analogy is to be found in Phoenician bowls: with these, too, the arrangement in five concentric zones corresponds. The scenes, as in Oriental reliefs, are all from ordinary life. In the *Shield of Heracles*, wrongly ascribed to Hesiod, the same arrangement in zones, but more complicated, is described; but the scenes are already partly mythological.

We may compare these poetical descriptions of imaginary works with the *Chest of Cypselus*, dedicated at Olympia, which Pausanias describes. [ARCA.] Cypselus reigned in Corinth 657–629 B.C.; and as the chest was dedicated by his descendants the Cypselids, it may probably be assigned to the end of the seventh century. (Most authorities place it much earlier, saying that it is the identical chest in which Cypselus was hidden when a child; but even if it were so, the decorations were probably added just before dedication, as their character and the added inscriptions show.) Here the scenes, which were arranged in five friezes along the chest, and were carved in the wood with additions in ivory and gold, are taken entirely from mythology.

The nearest analogy to this work is seen in the Corinthian vases of the sixth century; being a decorative work, it can only be here quoted incidentally, to show the standard attained both in subjects and technical facility at the time when sculpture was first beginning in Greece. It is, however, recorded that certain images of the gods existed even in this earliest period. The only apparent exception to the statement that sculpture is unknown to Homer is offered by the figure of Athena in Troy, upon whose knees the matrons lay a robe. But this need not imply a completely finished statue; those covered in later times with votive drapery were of the rudest and most primitive description. The golden youths bearing torches in the palace of Alcinous, like the golden maidens of Hephaestus, belong to magic rather than to sculpture. Doubtless some of the representations of the gods dated from a very remote period; they are described as mere logs or rough stones, δόκανα or λίθοι ἀργοί, and in some cases are said to have fallen from heaven: these were often ornamented in various ways; often they were wrapped in drapery; sometimes they were plated with bronze: the *Apollo of Amyclae* was a bronze column, with helmeted head and hands and feet attached. Such rude images of the gods exist among all primitive peoples; but it was not the development of these images, of which the type was fixed by religious conservatism, that led to the rise of Greek sculpture. Statues, whether of the worshipper or the god, dedicated in temples, offered freer scope than the temple statue itself; and these were rather enlarged imitations, at first, of imported foreign models, than repetitions of the sacred image.

(For more details as to this period, see ACROLITHI, DAEDALA, DOKANA in Vol. I., and *Dict. Biog. & Myth.*: Cyclopes, Dactyli, Telchines, Hephaestus, Daedalus, Epeius.)

2. 600 B.C.—480 B.C. *Greek Archaic—Early Schools.*—During the rise of Greek sculpture, the artists recorded by literature belong to local schools or even families, which, while they influence one another, preserve a character of their own. It is not always easy to associate these schools with extant works. Tradition assigns various schools, working in various materials, to the islands: Chian marble workers, the family of *Melas*, *Micciades*, *Archermus*, *Bupalus*, and *Athenis;* Samian bronze-founders, *Rhoecus*, *Theodorus*, and *Telecles;* Cretans working in marble and wood, *Dipoenus* and *Scyllis*, the "Daedalids," who worked also in many cities of the mainland, and had scholars in Sparta and elsewhere. Generally we notice the importance of the islands, and not the same islands as in the previous period, except Crete with its tradition of Daedalid masters. Naxos and Paros with their marble quarries, Samos and Chios, in close touch with the art of eastern Asia Minor, and Thasos, are all conspicuous either for recorded artists or actual works that they have yielded.

Among the most primitive statues extant is that of *Hera from Samos*, in Paris (fig. 1), which is merely a round column below, with elaborate drapery. Parts of two similar figures are on the Acropolis at Athens.

From various indications, we are led to believe that what we may best call the Ionic style was in early times of great influence and importance. Several works are still preserved from Asia Minor: the seated statues from the sacred way at Branchidae near Miletus; the earlier temple of the Ephesian Artemis, with sculptured columns, some of them dedicated by Croesus (specimens of both these are in the British Museum); the frieze from the temple of Assos in the Troad (now mostly in the Louvre). A similar character may be noticed in some early Lycian sculptures, probably under Ionic influence — especially the Harpy monument (in the British Museum), and also in works found in some of the islands, and even the N.W. of Greece. Instances are a tombstone relief of a man and a dog (in Naples) from Asia Minor or an island; another tombstone, with a seated lady, a child and attendant (called *Ino Leucothea*, in the Villa Albani at Rome), also from the same region; a relief with Apollo, Hermes and the nymphs from Thasos (in the Louvre), and various tomb reliefs from Thessaly (mostly in Athens). All these works have some characteristics in common, which may be shortly described as softness and laxity of style, as opposed to the hard and precise sculpture of the Peloponnesian schools. Perhaps

Hera, from Samos.
(Louvre.)

Fig. 2.
Winged figure by Archermus. (Athens.)

we may see also the influence of painting in the excellence of composition and general impression, combined with many inadequacies and even carelessness in details, which is often found in the sculpture of Northern Greece and the islands. The artists of the Ionic coast and islands doubtless travelled and exercised a wide influence. It is recorded that the Chian *Archermus* worked at Delos, and a pedestal has been discovered, with his name and that of his father, *Micciades*, to which belongs almost certainly, a female flying figure of very primitive style (fig. 2). It is recorded that *Archermus* was the first to represent Victory with wings, and here is probably the very statue in which he did this. The name of *Archermus*, inscribed in a different alphabet, occurs also on a base on the Acropolis at Athens; in the same place the names of *Endoeus*, *Aristocles*, and many other artists, probably Ionians, have been found. The Ionic influence in Athens is clearly visible in some early architectural sculptures found on the Acropolis, cut in rough stone and entirely coloured. These are mostly the pediments of early temples, and represent in low or high relief the combats of Heracles or Zeus with fish-tailed or snake-tailed monsters—Triton, as at Assos, Typhon, the Hydra, &c., whose tails conveniently fill the angles of the pediment, while the bodies show the heavy and sometimes grotesque forms characteristic of Asiatic Ionic art. The most important series of statues of early Attic art are a set of female figures (similar to others found in Delos and elsewhere), most of which were found in a position where they must have been buried just after the Persian invasion, and therefore date from the period immediately preceding it, say about 550–480 B.C. In these it is possible to trace the gradual development of Attic style, from the rude figures with stiff drapery and grimacing smile inherited from Ionic art, to the graceful drapery and "unconscious" smile noted by Lucian as characteristics of *Calamis*, the representative of this Ionic-Attic school in the fifth century. (The most advanced head of this type is represented in fig. 3.) Such female statues, often dedicated in sacred precincts and representing either a goddess or her worshipper, are the ultimate development of the type first seen in the primitive draped female statuettes found on early Greek sites, and often, doubtless, of foreign origin. A corresponding nude male type was developed into the series of statues commonly called "Apollo," and known by the place where they were found,—the *Apollo of Thera, of Tenea* (fig. 4), &c.

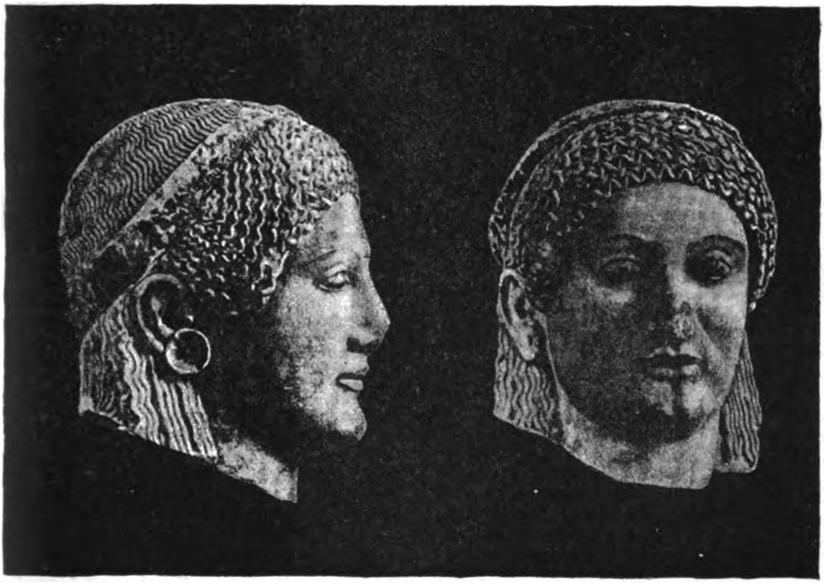

Fig. 3.
Head of statue on Acropolis, Athens.

Discussions have arisen whether these are statues of that god, or portraits of the deceased erected on graves, or athlete statues; the fact is that they simply represent the common male type, and that without special indications, such as attributes or circumstances of finding, it is impossible to decide what was the artist's intention in making them. Here may be quoted especially the *Apollo of Thera*, which may be attributed to an island school. The stela of *Aristocles* also shows the tradition of the Ionic school in Athens. The pictorial and harmonious composition and expression, with the notion of power and rest they convey, offer the greatest contrast to Aeginetan and Peloponnesian works, lively and excellent in muscular detail, but angular and forced in attitude.

In the art of the Peloponnese various influences may be traced; some early grave reliefs from near Sparta, which show the deceased as a hero, with worshippers, are in flat planes with square-cut edges, perhaps a reminiscence of wood technique. The earliest Spartan artists are said to have been scholars of the Cretans *Dipoenus* and *Scyllis*, and to have developed the combination of wood-carving and inlaying into chryselephantine sculpture. The works of this nature by *Theocles*, *Dontas*, and *Doryclidas* were preserved in the treasury of the Megarians and in the Heraeum at Olympia, and some of them were extensive groups. Even into Laconia Ionic influence also penetrated; *Bathycles* of Magnesia was employed to make a "throne" for the *Apollo of Amyclae*, already referred to. This throne must, from the description, have been a kind of carved screen surrounding the statue, ornamented with mythological scenes and statues, including "portraits" of the artist and his assistants. *Gitiadas* of Sparta, whose date relative to the other artists just mentioned is uncertain, made the statue and decorated the temple of Athena Chalcioecus at Sparta; its walls were covered with bronze reliefs of mythological subjects. Perhaps he may represent the Doric style of such decoration, as *Bathycles* does the Ionic; both were to be seen in the treasury of the Sicyonians at Olympia. *Gitiadas* made also statues of Aphrodite and Artemis "under tripods," corresponding to another made by *Callon* of Elis, and this fact is of importance for his chronology.

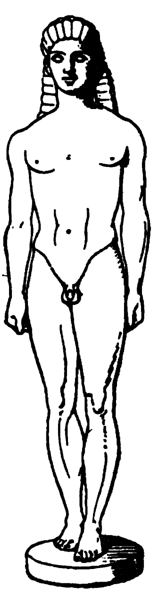

Fig. 4.
Apollo, from Tenea. (Munich.)

Another artist who worked in Sparta was *Clearchus* of Rhegium, also a pupil of Dipoenus and Scyllis, who made a bronze statue of Zeus, beaten in plates and riveted. He was the master of *Pythagoras* of Samos and Rhegium.

Two allied styles, those of Megara and its colony Selinus in Sicily, are known to us by architectural sculptures still preserved. The pediment of the Treasury of the Megarians at Olympia represents a gigantomachy, which both in subject and style strongly resembles the metopes of a Selinus temple of middle period. There is another temple at Selinus considerably older, and probably not much later than the foundation of the colony, and so belonging to the beginning of the sixth century. Its metopes, in high and round relief, but with thick ungainly forms and grotesque subjects and treatment, represent Perseus slaying the Gorgon, Heracles with the Cercopes slung on a stick across his shoulders, and a chariot, the last apparently of a more advanced art. There is also a third and much later temple at Selinus, in which the style of the metopes is graceful, but softer and weaker in composition and execution. In them the nude parts (faces and arms) of female figures are inserted in white marble, the rest being of coarse stone. (All the Selinus sculptures are now in Palermo.)

Many examples of archaic sculpture have been discovered in Boeotia, mostly showing the characteristics of a local school; but a grave relief of a draped man, signed by *Alxenor* of Naxos, shows that here also the influence of Asia Minor and the islands was not unknown; it shows pictorial treatment and remarkable foreshortening. But other works seem to show an independent local style, developing from the most primitive types, as seen in the *grave relief of Dermys and Citylus*, two roughly-shaped male figures, with long hair and no drapery, standing with their backs against a slab and their arms round one another's necks. The most important Boeotian works are a set of nude male statues of the so-called "Apollo" type; the *Apollo of Orchomenus* (fig. 5) has a stolid expression and careful but exaggerated surface rendering of muscles and skin. Several other statues showing similar but more advanced style have been found in the temple of Apollo Ptous. These all show a roundness of waist and conical shape of chest that contrast with Ionic statues. The latest of them has a grimacing smile, perhaps due to Attic or Aeginetan influence, and the forms of the body also approach the Aeginetan style. Similar characteristics may be seen in the Strangford Apollo in the British Museum.

Fig. 5.
Apollo, from Orchomenus. (Athens.)

In the development of the rendering of the nude male figure, the influence of the various athletic games, and of erecting statues of victors in the contests, can hardly be over-estimated. The first portraits of this sort are said to have been dedicated at Olympia about 540 B.C., but some are recorded earlier elsewhere, *e.g.* of Arrachion at Phigaleia, who was victor about 560 B.C., of a most primitive type from its description by Pausanias. But of course the statue need not in all cases be as old as the victory. These statues were doubtless at first mere reproductions of the conventional male type, not to be distinguished from the "Apollo" statues, but a specialisation of the type for various kinds of athletes, and even individual portraits followed: Pliny says that the last were only permitted to those who had been thrice victors. Throughout the course of Greek history the class of athletic statues was especially, but not exclusively, associated with the schools of Argos and Sicyon. In the later archaic period Sicyon is represented by *Canachus*, who made the bronze statue of Apollo at Branchidae, carried off by Xerxes (or Darius). Cicero quotes his works as "rigidiora quam ut imitentur veritatem," and harder than those of *Calamis*. *Canachus*' brother *Aristocles* founded a school of sculptors of athletes that lasted seven generations.

At Argos, *Chrysothemis* and *Eutelidas*, who made athlete statues about 520 B.C., assert in an inscription that they belong to a regular school. But the best known early Argive artist was *Ageladas*, famous as the master of Phidias, Polycleitus, and Myron. He made statues of gods as well as of athletes: his artistic activity was prolonged over an extensive period, from the end of the sixth to the middle of the fifth century or even later; but his style we can only infer from his influence on others. The Argive type was transmitted to and perfected by Polycleitus; but Phidias seems to have added under this influence a Doric earnestness to the Ionic grace of Attic sculpture, and Myron to have developed a different athletic ideal. Other Argive artists are *Glaucus* and *Dionysius*, who made some great groups at Olympia, including an allegorical one of the founder of the games amidst a group of deities and personifications.

The place of Aegina in sculpture seems to be like its geographical position, intermediate between Argos and Athens. Its artists were of wide reputation in early times, and worked at Olympia, Athens, and elsewhere, as well as in their own island. Their favourite material was the Aeginetan bronze. *Smilis* ("the carver"), the earliest Aeginetan artist, is by many regarded as a purely mythical character, like Daedalus, with whom he is sometimes associated; but others regard him as a historical character, quoting the name of Stesichorus as analogous. The Xoanon of Hera at Samos was attributed to him. In historical times *Callon* and *Onatas* are the most prominent names. They flourished about the beginning of the fifth century. Callon is said to have been a pupil of *Tectaeus* and *Angelion*, who themselves were pupils of the Cretan *Dipoenus* and *Scyllis*, and who made the statue of Apollo at Delos. Thus we have two traditional connexions with the primitive sculpture of Samos and Delos. Callon's style is said by Quintilian to be harder than that of Calamis. *Onatas* worked in many places, and several important statues of divinities by him were known to Pausanias. At Olympia he made a group of the heroes before Troy casting lots; and another of the fall of the Iapygian king Opis, for the Tarentines. This last is very similar in subject to the pediments from Aegina now in Munich. Other distinguished artists of Aegina were *Glaukias* and *Anaxagoras*, both of whom worked at Olympia, the former for Gelo of Syracuse and others, and the latter for a common dedication by the Greeks after the battle of Plataea. Even in ancient times, some writers note the distinction between the Aeginetan and Attic styles, as the two best known types of archaic sculpture. The pediments from Aegina, though architectural works and so of marble, not of bronze, supply the most certain evidence as to the Aeginetan style. The composition is not adapted to fill the given field by decorative means, as in the much earlier pediments of the Ionic style, but by a symmetrical and graduated arrangement of the figures. Both pediments are of similar composition, portraying the fight over a fallen warrior in the centre, by warriors standing and kneeling, the corners being filled with other wounded men (fig. 6). The admirable and sculpturesque rendering of all details and the careful study of the nude male form recall the athletic schools. The remains of the east pediment, though more scanty, are the better finished both in details, such as the rendering of veins and in expression of face, the conventional smile being retained but modified; it has been suggested with probability that it was executed by a younger artist, who had to carry out the original design. The names of both *Callon* and *Onatas* have been found on bases on the Acropolis at Athens.

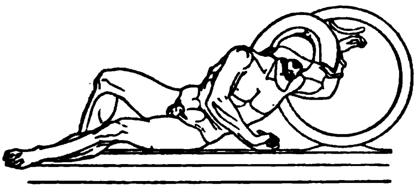

Fig. 6.
Fallen warrior, from Aegina.

Thus it is easy to trace the influence otherwise probably of Aegina upon some classes of Attic sculpture. The influence of athletic sculpture was felt also in Athens, where there was another set of sculptors representing a different tendency from the development of the Ionic style already mentioned. These are *Antenor* and *Critius* and *Nesiotes*. Antenor was employed to make the statues of the Tyrannicides Harmodius and Aristogeiton which were carried off by Xerxes, and replaced by others by Critius and Nesiotes. These statues have been identified on Athenian coins and reliefs, and hence in two marble statues at Naples. It is uncertain whether these reproduce the originals by Antenor or those later made to replace them; but both may probably have represented the same motive. The very fine, but dry and sinewy treatment of the body is remarkable, and more advanced than the treatment of the face (in the one remaining head), drapery, and hair—exactly the reverse of what we find in the Ionic-Attic style. Here may be mentioned also *Hegias*, said to have been the first master of Phidias; he is coupled by Quintilian with the Aeginetan Callon, as harder in style than Calamis.

After these names follow those of the immediate predecessors of Phidias, who belong to the next period. In all the great centres of art local styles and predilections as to subject had already been produced; and it was their rapid development that led up to the great sculpture of the fifth century.

The year 480 B.C., here adopted as the conclusion of the archaic period, forms a convenient boundary. On the one hand, the Persian wars mark the beginning of a new era in Greek art as in Greek history; on the other the expedition of Xerxes has in its material results afforded us the most certain criteria for fixing the age of later archaic and transitional works. On the Acropolis at Athens he defaced all works of art, and the fragments that remained were buried by the Athenians on their return, and replaced by new works, thus affording scope to the artists of the time. But the buried fragments have been recovered, and when pieced together give us an excellent notion of the condition of sculpture immediately before the Persian wars. The same discovery may well be made on other sites that suffered a similar fate. Thus the circumstances of our knowledge as well as the historical crisis make this a fit point at which to review briefly the archaic period, and afterwards to notice the advances that immediately followed.

We have seen that, according to tradition, sculpture took its rise, so far as Greece is concerned, among the islands, Samos, Chios, and Crete; and that it spread on the one hand through Asia Minor, the Aegean Islands, Northern Greece, and Attica, in what we may conveniently name the softer or Ionic style; while on the other hand the Cretan artists had scholars in the Peloponnese, Central Greece, and elsewhere: in most of these regions we find a harder style, which may be named Doric; but even here we sometimes find Ionic artists employed. The two styles concentrated themselves in Argos, Sicyon, and Aegina on the one hand, and in Athens on the other. Towards the close of the archaic period they seem, while retaining their essential characteristics, to have influenced each other to a considerable extent.

(For details as to artists of this period and their works, see *Dict. Biog. and Myth.*:—*Corinth* — Butades (Dibutades). *Samos* — Rhoecus, Theodorus, Telecles. *Chios*—Melas, Micciades, Archermus, Bupalus, Athenis. *Crete*—Dipoenus, Scyllis; their scholars, Tectaeus and Angelion. *Athens*—Simmias, Endoeus, Aristion, Aristocles, Antenor, Amphicrates, Critius and Nesiotes. *Magnesia*—Bathycles. *Sparta*—Hegylus, Theocles, Dontas, Dorycl̆idas, Gitiadas. *Rhegium*—Clearchus. *Sicily*—Perillus. *Aegina*—Smilis, Callon, Onatas, Glaucias, Anaxagoras, Calliteles. *Argos*—Eutelidas and Chrysothemis, Ageladas, Aristomedon, Glaucus and Dionysius. *Sicyon*—Canachus, Aristocles. *Elis*—Callon.)

3. 480 B.C.—400 B.C. *Greek Fifth Century.*—From this period onward it is less necessary to give any connected account, because the style and works of individual artists are far more prominent and better known; and for all such matters the articles in the *Dict. of Biog. and Myth.* must be consulted. Here will be found only such facts of this kind as serve to indicate relation or connexion of different artists and schools, and such notices of extant works as concern more than the individual artists to whom they are assigned.

During the previous period we found all styles of sculpture nearing the perfection of technical development; and we also found that all the artistic centres of Greece had already adopted their own speciality. Hence, in the fifth century, though Aegina disappears in art as in history, Argos and Sicyon remain, as before, noted for athlete statues in bronze, Athens for the variety of its artists and for the use of marble. It was now possible for great artists to express their ideas without the subordination to the difficulties of technical execution, or the constant struggling with those difficulties, that had hitherto been visible even in the highest attainments of sculpture. The attainment of a complete mastery over material difficulties prepared the way for the highest attainments of Greek art. Among the works of this period we meet for the first time with statues that are spoken of with unqualified admiration by classical writers, as of the highest excellence, and not merely interesting for their ancient period or the advance they show on previous attempts. This rapid advance in sculpture corresponds with a similar advance in literature and in thought and feeling, which leads up to the great century of Greece. The expeditions and defeat of the Persians had completely altered the relation of the Greeks to neighbouring peoples. For the ancient nations of the East, vaguely heard of as of unknown power, skill, and wisdom, were substituted the Persians, whom the Greeks hated and could conquer. Hence the feeling of Panhellenic unity, and of the conscious superiority of the Greeks as a race above all other people known to them. The numerous monuments erected from the spoils of the Persians or in commemoration of their defeat gave a new stimulus to all the arts, and the contest itself afforded subjects for both historical and allegorical representation. And in Athens, at least, the constitution was peculiarly favourable for the production of the greatest works; the democratic form of government encouraged that idealisation of the people without which its exploits could not be worthy of the highest artistic commemoration, while the actual predominance of such men as Cimon and Pericles gave the originality, greatness, and continuity of design which a purely popular government could not attain. Moreover, the combination of the Greeks in common dedications, and the successive supremacy of various cities, made larger sums available for artistic expenditure than could have been afforded by isolated states or individuals.

The fittest places for common national dedications were the great religious centres, Olympia and Delphi. Olympia was also noted for the great temple of Zeus, built by the Eleans themselves; both its architectural forms and historical evidence show that it was probably completed about 460 B.C.; and the extant architectural sculptures must be assigned to this period; they consist of metopes over the internal columns of the front and back, representing the labours of Heracles (partly in the

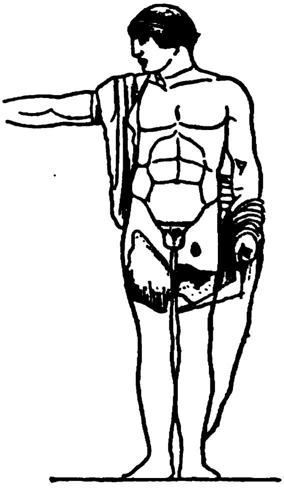

Fig. 7.
Apollo, from Temple of Zeus.
(Olympia.)

Louvre, partly at Olympia), the east pediment with the preparations for the chariot-race of Pelops and Oenomaus, and the west pediment with the battle between the Lapiths and Centaurs. Pausanias ascribes these two pediments to *Paeonius* and *Alcamenes* respectively; and, as Alcamenes is said to have been a pupil of *Phidias*, difficulties have arisen, both as to chronology and as to style. Alternative explanations are that Pausanias was mistaken, or that the pediments were early works, before Alcamenes came under the influence of Phidias. All the sculptures of the temple, beside certain defects of detail that may be due to local execution, show a peculiar style, which is perhaps due to a combination of various influences. They show a breadth and freedom of pictorial composition that contrast strongly with the strict symmetry of the Aegina pediments; but in the execution there is none of the precision and delicacy that mark those groups. The uncertainty of line and carelessness or awkwardness of details must have been remedied to some extent by colour; and the distant effect was more considered than sculptural accuracy. Archaic hardness is thus avoided, and a softness and laxity takes its place. In composition, the pediments are symmetrical, but not monotonously so; they show in many ways an advance towards the perfection we see in the Parthenon; the front or east pediment is quiet, the back or west one full of groups in contorted motion: they have been to a great extent recovered, and are now at Olympia.

Before considering the great architectural sculptures, made under the direction of Phidias, which are the most characteristic surviving specimens of the art of the fifth century, three artists must be mentioned who are, as it were, the forerunners of the highest period,—*Calamis* and *Myron*, who both belong to Athens, and *Pythagoras* of Rhegium (previously of Samos). *Calamis*, as has been said, seems to represent the highest development of the grace and delicacy of treatment properly belonging to the Attic development of the Ionic style, and he is chosen out by Lucian for the expression of face (σεμνὸν καὶ λεληθὸς μειδίαμα, in which we may perhaps see the last relic of the archaic smile) and for the treatment of drapery. Copies of statues by him have been recognised on an altar at Athens. *Myron* inherits the vigour of the athletic Attic school of *Critius* and *Nesiotes*; but as a pupil of *Ageladas* he also fell under Argive influence. Several extant statues after Myron, reproductions of the famous *Discobolus* (see Vol. I. p. 644) and the *Marsyas*, show how completely he had mastered the difficulties of technique. His works even transgress the bonds of sculpturesque treatment in their choice of momentary attitudes and even of contortions,—a natural reaction against the rigidity of early works in the first consciousness of artistic freedom. Myron had scholars in Athens, who seem to have carried these tendencies still farther, and to have selected subjects for the sake of the difficulty or interest of the execution,—the first appearance of "genre" sculpture. The cow by Myron himself, one of the most famous statues of antiquity, seems to belong to the same class of works.

Pythagoras, like Myron, was fond of representing figures in vigorous movement; he also excelled in athlete portrait statues. He is praised by Pliny for symmetry and variety, and he also sought truth to nature in details such as the veins and muscles and hair: his limping Philoctetes was famous for the indication of the effect of his wounded foot on all parts of the body and limbs. Except on gems, no certain copy of a statue by Pythagoras survives, though the attribution to him of extant works, such as the "Choiseul-Gouffier Apollo" in the British Museum (an athlete statue), has been suggested.

Athens was at this time the chief centre of artistic work, and the beautifying of the city, first by Cimon and afterwards by Pericles, attracted foreign artists and encouraged native ones. The delicacy and grace of the Attic-Ionic style was carried to its highest point by *Calamis;* but *Myron* and *Phidias* both studied under Ageladas of Argos, and we find the influence of the Doric schools working strongly in Athens; *e.g.* in a marble head of an athlete and in one of a girl, both on the Acropolis at Athens. It has been suggested that Polygnotus of Thasos, who made many paintings in Athens, may have renewed the N. Ionic influence.

The architectural sculptures of Athens give a good notion of the state of art at this period; they are still to be seen, partly on the Parthenon, the Theseum, the Erechtheum, the temple of Wingless Victory, partly in the Museums of Athens and London. The sculptures of the Parthenon fall into three divisions—the metopes, the pediments, and the continuous inner frieze, which runs round the outside of the cella. It is probable that these three were put up in the order mentioned; and the style is consistent with this supposition. The metopes are of uneven merit, and some of them are the least advanced of the Parthenon sculptures, though others are of the most spirited design. The east pediment represented the birth of Athena; the west, her contest with Poseidon for the land: the surviving statues of these pediments are perhaps the finest works of sculpture extant. The continuous frieze is in very low relief, and shows the most perfect mastery of composition and technique; it represents the Panathenaic procession, horsemen, chariots, men, and women, advancing to the assembly of the gods above the east door. There is no especial reason for attributing the architectural sculptures of the Parthenon to *Phidias*, who is known to have made the chryselephantine statue within the temple, except that he is said to have had the general superintendence of the works of this period in Athens; the Parthenon sculptures show the excellence of those who worked under him. The Theseum sculptures consist of ten metopes at the east front and four on each of the sides adjoining; they show an angular, athletic style which may probably be attributed to the school of *Myron;* they resemble some of the earlier metopes of the Parthenon. The other two friezes of the Theseum, over the second row of columns at the back and front, though continuous, seem to divide themselves into groups derived from the Parthenon metopes. Thus the Theseum and Parthenon seem to be almost contemporary; the Parthenon was probably built between 447 and 434 B.C. The Erechtheum, as it now stands, was later; we know from inscriptions that it was still unfinished in 409 B.C.: a great feature of this building is the portico borne by six *Caryatids;* the Ionic frieze was of white marble figures attached to a background of black Eleusinian marble — a substitute for a coloured background. The temple of Wingless Victory is most famous for its balustrade, with figures of Athena and winged Victories erecting trophies, &c.; they must belong to the close of the fifth century, and show the most beautiful studies of flowing draperies as an accompaniment and background to the figures. But it was not only in temples and public monuments that the perfection of sculpture showed itself at Athens. The influence spread even to the workmen who made tombstones; so that early in the fourth century we find numerous grave-reliefs, votive offerings, headings of decrees, &c., that recall by their style the great period of sculpture of the end of the fifth century.

Outside Athens, Athenian artists were sometimes employed at this time; thus the temple of Bassae near Phigaleia was built by Ictinus, the architect of the Parthenon; and so we may probably see in the frieze of that temple (now in London) the work of his associates. The subjects are the combats with Amazons and Centaurs; but the execution shows an inequality partly due to provincial style; and there is a striving after effect, especially in the treatment of drapery, that seems transitional to the next period.

Similar characteristics may be seen in several other works of this period or slightly later—the acroteria of the temple at Delos, the earlier of the temple sculptures at Epidaurus (both in Athens), the so-called *Nereid monument* from Xanthus in Lycia (now in London), and the reliefs of a tomb at Djölbaschi in Lycia (now in Vienna); but in the pictorial and effective treatment of these works some prefer to see the continuous Ionic tradition, rather than Attic influence. (A similarity is also visible in the Victory at Olympia by *Paeonius*, of the Ionic colony of Mende in Thrace. If he also made the eastern pediment at Olympia, it must have been under very different influence.)

So far works of architectural sculpture have been considered, because they alone survive to show us the style of the Phidian school. But these are only indirectly to be assigned to the master himself or his most distinguished pupils. The great works of which they most carefully superintended the execution were the colossal temple statues of gold and ivory [see CHRYSELEPHANTINA], such as the Zeus at Olympia and the Athena Parthenos at Athens by Phidias, always regarded in antiquity as the highest attainments of sculpture [see cut on p. 316 *a*]. These rich materials were in the fifth century regarded as the most fitting for the execution of great statues of divinities, which embodied a national ideal. The difficulty of technique as well as the expense—the gold alone of the Athena was worth £155,000—prevented the possibility of such works except under favourable circumstances, and in the fifth century alone we find an art with a mastery over material difficulties adequate for the production of such colossal works, and also possessing so noble an ideal of the gods it strove to represent.

Though the Attic school had so wide-spread and so varied an influence, that of the Argive *Polycleitus* was also of the utmost importance; and the narrower and more definite nature of his attainments made them more open to the imitation of subsequent artists than the lofty ideals of Phidias. Many extant works have been recognised as copies of known works of Polycleitus, the *Diadumenus*, the *Doryphorus*, the *wounded Amazon*, &c. It is characteristic of the definite nature of his attainments that he fixed a canon of bodily proportions, which he also embodied in a statue, probably the *doryphorus;* and this canon was accepted by the athlete sculptors of the schools of Argos and Sicyon as fixing a type, till afterwards modified by Euphranor and Lysippus. In details of execution, and especially in the treatment of bronze, his favourite material, Polycleitus is said to have excelled even Phidias; but there was a certain monotony in the conception and even the pose of his works. Though his athletic statues and his canon are his best known works, and most important for their influence on later art, it must not be forgotten that Polycleitus fixed the type of Hera by his chryselephantine statue in the Heraeum at Argos, just as Phidias did those of Zeus and Athena. His school, in Argos and also in Sicyon, numbered many important artists, who seemed to have followed their master closely, and to have held to their traditions with more tenacity than any other school in Greece.

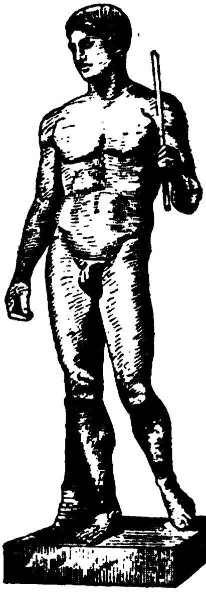

Fig. 8.
Doryphorus, after Polycleitus.
(Naples.)

(For this period, see *Dict. Biog. and Myth.:* Calamis, Myron, Pythagoras; Paeonius of Mende, Phidias, Cimon, Pericles, Polygnotus, Mys. *School of Calamis* — Praxias, Androsthenes. *School of Phidias* — Alcamenes, Agoracritus, Colotes, Thrasymedes, Theocosmus. *School of Myron*—Lycius, Styppax, Cresilas, Strongylion. *Athens* — Callimachus, Demetrius, Pyrrhus, Socrates, Niceratus, Phyromachus (Pyromachus), Dinomenes. *Argos and Sicyon* — Polycleitus, Aristides, Canachus, Periclytus, Antiphanes, Patrocles, Daedalus, Naucydes, Alypus, Polycleitus (younger), Phradmon. *Peloponnese*— Apellas, Nicodamus, Cleoetas, Aristocles. *Megara*—Callicles, Telephanes.)

4. 400 B.C.–320 B.C. *Greek Fourth Century.* —During this period we find that much more depends on the individual character and predilections of the various artists; there is a

tendency, both in choice of subject and in execution, rather to give free scope to the imagination and skill of the artist than to employ him to embody in his works any national ideals or aspirations. The artist was thus more free from any considerations or influences not purely artistic; but already in the fifth century art had risen above the trammels of priestcraft, even in the case of religious sculpture; and it was not an unmixed advantage for the sculptor to be free to work from his own imagination, rather than from those ideals which belonged to the race or the city. Thus in the place of great works like the Olympian Zeus, the Athena Parthenos, or the Hera of Argos, we meet in the fourth century with subtly distinguished impersonations such as the Eros, Pothos, and Himeros of *Scopas*, or the half-human beings of the cycle of Dionysus. Even groups of subordinate divinities before represented, like the Graces, as embodying some attributes of Zeus or other great divinities, are changed to attendants of the cycle of Aphrodite, and treated accordingly. Again, instead of truly sculpturesque representations of permanent character (ἦθος), we notice renderings of more transient passions or excitements (πάθη), as in the raving Maenad of Scopas—subjects obviously not so well adapted to sculpture, though perhaps exhibiting more the skill of the artist.

As might be expected from the freedom and importance of individual artists, we find less limit than before in the number of the schools where artists were trained, and of the centres of their activity. Athens and Argos or Sicyon still remain important, but there are many notable artists who belong to neither; and the statues produced are scattered all over the Hellenic world. Thus Scopas was a native of Paros, and worked in his early years in the Peloponnese, and later in many parts of Asia Minor. The two greatest artists of this period were Scopas and Praxiteles. Scopas, who was probably of Parian origin, and worked in the Peloponnese in his youth and in Asia in his later years, introduced the representation of passionate subjects which afterwards was developed in Pergamus and Rhodes.

Praxiteles represents the highest attainment of the Attic school of marble sculpture, and is famous for the most beautiful forms, as Phidias for the noblest ideals, of Greek sculpture.

Fig. 9.
Head by Scopas, from Tegea. (Athens.)

From the nature of the period, it follows that most of the sculpture surviving which can be assigned to it with certainty may be found under the names of the sculptors: but it should be here stated that recent discoveries have added to these works. Thus there are in Athens two heads (fig. 9) and other fragments from the pediments made by Scopas for the temple of Athena Alea at Tegea, and the basis of the statue of Apollo at Mantinea by *Praxiteles*, with a relief of Apollo Marsyas and the Muses, and above all the Hermes of Praxiteles at Olympia. These are original works, and so superior to the numerous late copies in various museums from the works of these artists. (One of these, a copy of the Faun of Praxiteles, is reproduced in fig. 10.) For the *Mausoleum* sculptures, by Scopas and other artists (now in London), see *sub voc.* In London also are some of the sculptured columns from Ephesus, one of which is recorded to have been carved by Scopas, and the seated statue of *Demeter from Cnidus*, the Mater Dolorosa of ancient sculpture. The group of the Niobids of which copies exist in Florence and elsewhere (fig. 11) belong to this period. Pliny mentions a doubt whether they were by Praxiteles or Scopas; this probably means merely that Roman tradition assigned them to the age when these two masters flourished.

Fig. 10.
Satyr, after Praxiteles. (Rome, Capitol.)

Fig. 11.
Head of Niobe. (Florence.)

Lysippus of Sicyon continued the traditions of the school of Polyclitus; he modified the "canon," so as to make the head smaller in proportion, and the body more slender. These characteristics may be seen in his *Apoxyomenos* (fig. 12). To his school are also attributed certain inventions that imply a tendency towards realism on the one side, and purely academic work on the other — the making of casts from statues, and also the working up of casts made from the living model, both attributed to *Lysistratus*, brother of Lysippus.

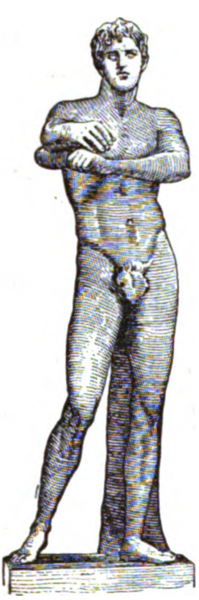

Fig. 12. Apoxyomenos, after Lysippus. (Rome, Vatican.)

Towards the close of this period, the personality of Alexander begins to dominate the art of sculpture. But the influences visible in sculpture were very complicated; and the younger Attic school carried the softness of Praxiteles to an extreme, while elsewhere athletic works tended to harden into anatomical studies; but all these tendencies only developed during the succeeding period.

But besides these tendencies, which ultimately led to the decline of art, we find some artists striving to retain the higher ideals of the fifth century; the most notable is *Damophon* of Messene, who seems in his choice of subjects and of materials to be influenced by the school of Phidias. Thus he may also be regarded as the first instance of a great artist who consciously imitated the style of an earlier period. Fragments of a group by him have been found at Lycosura in Arcadia, and are now in Athens.

(For details concerning sculptors of this period, see *Dict. Biog. and Myth.* *Paros*—Xenophon, Scopas; *Mausoleum*, Leochares, Bryaxis, Timotheus, Pythis. *Athens* — Cephisodotus, Polycles, Euclides, Praxiteles, Cephisodotus the younger, Timarchus, Sthennis, Silanion, Zeuxiades, Apollodorus, Polycrates, Euphranor, Polymnestus, and Cenchramus. *Sicyon*—Lysippus, Lysistratus, Daippus, Euthycrates, Tisicrates, Xenocrates. *Messene* — Damophon. *Thebes*—Hypatodorus and Aristogiton.)

5. 320 B.C.–150 B.C. *Hellenistic; Asiatic Schools.*—The political change which marks the beginning of this period had a great influence upon the history of art as of literature. The conquests of Alexander and their subsequent division opened up the East to Greek enterprise; and it is the new and flourishing cities which thus arose into prominence that form the great art centres of the next period, — Pergamus, Rhodes, Tralles, Ephesus, Alexandria, Antioch: some of these were not of course new cities, but a new era began for all of them with the age of Alexander. In the case of sculpture, the influence of Alexander was in part direct and personal, in part indirect. The numerous portraits of Alexander by *Lysippus* and his followers, in all characters and surroundings, led to a modification of the customary type of face so remarkable that many heads of this period have been misnamed Alexander from their resemblance to him, though the artist probably was merely representing the ordinary type of his school. And other personalities, mostly of the successors of Alexander, came to have almost as great an influence for a time. The courts of these Greek kings in Asia and Egypt formed the chief centres of literature and art, and sculptors as well as others worked under their patronage. Under such influences art strove to make up by the colossal scale of its works and the dramatic effect of its expression for the grandeur and simplicity that were lost; and academic study led to eclecticism, so that we recognise in works of this period methods and characteristics of various earlier schools, united or confused. On the other hand, the artificial life of courts and cities induced a craving for primitive simplicity, which found expression on the one hand in pastoral literature, and in some reliefs with country scenes, under pictorial influence; on the other in representations of child life, which now are more frequently rendered with truth to nature, as in the statue of a boy struggling with a goose, by *Boethus*.

It is an indication of the time that the Rhodians, when they had repelled an invasion, did not seek to honour their god by a statue expressing the national ideal, but to glorify him by erecting the biggest statue known—the colossus of the Sun-god by *Chares*, a pupil of Lysippus, who thus is associated with the new tendencies. A great statue of *Victory from Samothrace* (in Paris) was erected by Demetrius Poliorcetes about 300 B.C.; it shows a spirited treatment, but all the straining after effect that marks the Hellenistic period. But Pergamus was the most important art centre, and the victories of the Greek kings over the Gauls (or Galatians) afforded occasions and subjects for great dedicatory groups. To the period of Attalus I., 241–197 B.C., are to be assigned several statues and groups of Gauls, dying or killing themselves; the best known being the *Dying Gaul* of the Capitol at Rome. Attalus I. also dedicated statues in bronze, half life-size, of contests both between Greeks and Gauls, Persians, or Amazons, and gods and giants on the Acropolis at Athens, of which marble copies exist in many museums. Under Eumenes II., 197–159 B.C., was erected the *great altar at Pergamus*, ornamented with reliefs of the battle of gods and giants (now in Berlin): this, with its struggles, contortions, and dramatic expressions of excitement or pain, is the great example of this style (fig. 13). In the pathetic and dramatic rather than sculpturesque nature of subject and style in all these works we may see the ultimate development of the expression of passion and emotion in marble which Scopas introduced into Asia Minor. An even more extreme instance may be seen in the *Laocoon*, made by *Agesandros* of Rhodes and his companions; another famous group is the *Farnese bull*, or punishment of Dirce, by *Apollonius* and *Tauriscus* of Tralles. Fine specimens of the development of athlete sculpture in the Hellenistic period may be seen in the bronze statue of a boxer found recently in Rome; and a head of another, also in bronze, at Olympia. All these works, and especially those of the Pergamene school, deserve from their magnificent rendering of anatomy and their spirited conception and treatment to be ranked among the greatest achievements of sculpture, though the selection of subjects marks a period of decadence. But some artists still strove to retain the noble ideals and simplicity and breadth of treatment of an earlier time; and the result may be seen in the *Aphrodite of Melos*, which must be assigned to this period. Sometimes the same tendency led to a cold and academic treatment, as may be seen in works like the *Apollo Belvedere* and the *Artemis of the Louvre*. The tendency to local personifications must also be noticed; the first and best known instance is the statue of *Antioch* by *Eutychides*, another scholar of Lysippus.

Fig. 13.
Athena and Giant, from great altar at Pergamus. (Berlin.)

Fig. 14.
Laocoon. (Rome, Vatican.)

The next period is assigned to Graeco-Roman art, but some of the artists who belong to it chronologically may be here mentioned, because they seem to carry on the Hellenistic traditions.

Fig. 15.
Aphrodite, from Melos. (From Murray, *Ancient Sculpture*.)

There is, for instance, an Ephesian family of artists of about 100 B.C., well known for their statues of fighting warriors, especially the so-called *Borghese Gladiator* (in Paris) by *Agasias*, which is unsurpassed as an anatomical study, and a statue from Delos by *Menophilus*. These may be regarded as the last products of the athletic school of Lysippus, though already contemporary with the beginnings of Graeco-Roman sculpture.

(See *Dictionary of Biog. & Myth.*: Alexander, Ptolemaeus, Attalus, Eumenes. *Pergamus* — Phyromachus, Stratonicus, Antigonus. *Rhodes*—Chares, Timocharis, Phyles, Sosipater, Mnasitimus and Teleson, Agesandrus, Polydorus, and Athenodorus. *Asia Minor*—Apollonius, Tauriscus, Apollodorus, Menophilus, Dositheus, Agasias. *Other artists* — Eutychides, Cantharus, Boethus. Other names in this and the succeeding period, for the most part associated only with isolated works, need not be quoted here.)

150 B.C.–312 A.D. *Graeco-Roman and Roman.* —The sack of Corinth 146 B.C.—or, roughly, the middle of the second century—may be regarded as the beginning of the Graeco-Roman era; the era, that is, when Greek artists no more worked either for their art or for their own people, but in order to please the tastes of their conquerors. But it was not only the art of the time that was affected; for from the beginning of this period all the best known works of art already existing were collected at Rome from all quarters, and at the end of it transferred to Constantinople in great numbers; and, thus collected together in great centres, they were more liable to accidents or to wholesale destruction than if scattered in quiet local centres of worship. Obviously no great or original schools are to be looked for in this period; but among the numerous independent Greek artists who worked either in Greece or Rome for the Roman market, some few stand out as of wider influence. Among these are *Arcesilaus* and *Pasiteles*, who both lived in the first century B.C. *Arcesilaus* is said to have sold his proplasmata at higher prices than finished works by others commanded. Of *Pasiteles* and his scholars, *Stephanus* and *Menelaus*, we possess some extant works (fig. 16) which show that he attempted to imitate the severe style of the athlete sculptors of the fifth century. But the majority of sculptors during this period were employed in meeting the enormous demand for sculpture to decorate baths, gymnasia, villas, &c., by the production not so much of original works as of copies of all the favourite statues that had been made by Greek artists of all previous periods,—a process of the utmost importance to us; for now that nearly all the originals have been lost or destroyed, it is this class of copies that now fills the museums of Europe, and more especially of Italy. In addition to copies of statues, sculptors of this age also reproduced as separate works figures from well-known groups or reliefs, and even signed these as the artist, as in the case of the "Farnese" Heracles by *Glycon*, a type originally belonging to the Hellenistic age. Only one branch of sculpture can be said to have had an independent development under Roman influence. Individual and naturalistic portraits had been made in the school of Lysippus, and were continued through the Hellenistic age; such commemoration of the individual was peculiarly pleasing to Roman taste, and Roman portrait statues and busts, especially of the great historical characters of the Augustan age and of the earlier emperors, are of unequalled excellence in their life-like execution and portrayal of personal character.

Fig. 16.
Orestes and Electra, by Stephanus. (Naples.)

In the age of the Emperor Hadrian, who was a great patron of the arts, some revival may be noticed; this is especially associated with the portraits of Antinous, the favourite of the emperor, whose type of face and figure dominates the art of this period almost as those of Alexander dominated that of the Hellenistic age. But after this brief revival, the decline of the art of sculpture was even more rapid than before, until it began a new era in Byzantine times. Under the emperors, sculpture was called upon to commemorate historical events, and especially victories over the barbarians. The reliefs of the Column of Trajan are the finest of these, and represent with spirit and truth to fact the incidents of a Roman campaign. The Column of Antoninus is already very inferior in conception and execution. The various triumphal arches in Rome offered a wide field for decorations of this nature, and in those which still survive it is easy to trace the decline of sculpture from the age of Augustus to that of Constantine. Another favourite field for decoration, in Roman times, was offered by the sculptured *Sarcophagi*, which were covered with reliefs of historical and mythical subjects. The earlier among these show good design and workmanship; but in the later we can see the complete decay of all artistic power and feeling.

A few words may be added as to the preservation and survival of examples of ancient sculpture, and the classes into which they may be divided. When there was no care for the preservation of works of art, either among barbarous invaders or among those in whose possession they remained, it is obvious that only an accident could preserve any statue which was of an intrinsically valuable material, such as bronze or other metal; and though marble statues were not exposed to so great danger, they were constantly burnt for lime or broken up and used for building material. We may roughly assert that the statues that survive owe their preservation to one of three causes—either they were purposely secreted by their worshippers or admirers, as was the case with the *Hermes of Praxiteles* at Olympia and the *Aphrodite of Melos*; or they were accidentally buried amidst the ruins of the buildings that contained them, whether by a sudden destruction, or a gradual decay,—this is the chance that has preserved most of the statues that are recovered by excavation; or they have remained in a conspicuous position, and have been protected by some reverence or superstition, probably mistaken in its origin: thus the bronze statue of Marcus Aurelius on the Capitol was religiously preserved through the dark ages because it was supposed to represent Constantine. In studying the history of ancient sculpture, it is very important to estimate correctly the value of the monumental evidence, and to understand the exact relation of extant statues to the artist or school with which they are associated. In this aspect we may divide all the works of ancient sculpture that survive into four classes, as follows:—

(1) *Originals:* that is to say, statues actually made by the artist to whom they are assigned; but we may here distinguish—(*a*) Originals from the hand of known artists; such works of art as they executed themselves, and which thus show the perfection of their style and execution. Such works are very rare: the *Hermes of Praxiteles* is the finest example. (*b*) Works such as architectural sculptures, which were doubtless designed by some great sculptor, but of which the execution must have been left to assistants; in these, of course, great inequality of execution may be expected. (*c*) Works made in the period and by the artists of the school to which they must be assigned; but merely reproducing the ordinary character and types of that school, by the hand of inferior sculptors or mere artisans: these may vary from very high excellence to careless and inferior work. The best example is offered by the Attic grave reliefs.

(2) *Copies*, as faithful as the artist could make them, from originals by earlier sculptors: to this class belong the great majority of the statues in European museums, and especially in Rome and Italy. These vary very much both in the carefulness of their execution and in their faithfulness to the original from which they are derived. A great deal depends on the period and school of the copyist; if he is not far removed in period or style from the artist who made his original, his copy may very accurately reproduce its character: a Greek copyist is more likely to reproduce the style and spirit of his original, while one of Roman times is more likely to be accurate in the reproduction of details and accessories. Thus the characteristics of the school and period to which the copy must be assigned must always be taken carefully into consideration before any inferences are drawn as to the original from which it is derived.

(3) *Works of Artists who studied or imitated the style of an earlier period.* If these artists succeed completely in catching the spirit and style of the period they study, their works may be difficult to distinguish from those of an earlier period; but in most cases they cannot entirely free themselves from the influences that surround them: thus though in the *Aphrodite of Melos* we see the noble forms and broad treatment of the fifth century, in the artificial arrangement of the drapery the spirit of the Hellenistic age betrays itself. Sometimes we find later artists not merely seeking inspiration from the ideals of an earlier age, but imitating the characteristics of particular schools, as was the case with *Pasiteles* and his associates, who sometimes even made copies that must be assigned to the second class.

Fig. 17.
Dedication to Apollo Citharoedus. (Berlin.)

(4) *Archaistic works:* that is to say, works that imitate the mannerisms and details of execution of the archaic period; it is of course possible for this class in some cases to overlap the last: but the name "archaistic" is commonly applied to more mechanical works, made with an affectation of primitive characteristics. This affectation is introduced either from hieratic influence for dedications; or on decorative principles, the archaic stiffness supplying a conventionality suitable to such use; or, at a late period, from a mere seeking after the quaint or uncouth. Archaistic works must be carefully distinguished from authentic copies of archaic works of art, though sometimes they show the same characteristics as these. In a few cases it is possible to doubt whether a work is really archaic or archaistic, but it is rare to find an archaistic work so free from exaggeration of the mannerisms and quaintnesses of archaic works that any confusion is possible. Thus, in archaistic works the figures walk on tiptoe, and the floating ends of drapery are worked into the stiffest of conventional zigzags, and even curved up in an impossible manner; while in really archaic works, though in some details conventionality may be seen, yet we can also see the attempt of the artist to render nature so far as is possible within the limits of his power of expression. The maker of an archaistic work also betrays himself often by a later treatment of some details, as in the Athena at Dresden, in which, though the folds of the drapery are stiff and conventional, the designs on the border are worked with perfect freedom. But the distinc-

tion always extends beyond details, and the earnest attempt of an early artist to do his best is totally different from the affected mannerisms of a later imitator.

[On special periods or artists, the works published are too numerous to quote, but the following books contain a general treatment of the subject:—Brunn, *Geschichte der griechischen Künstler*, Brunswick, 1853, and Stuttgart, 1859 (the second edition, Stuttgart, 1889, is a mere reprint); Overbeck, *Die antiken Schriftquellen zur Geschichte der bildenden Künste*, Leipzig, 1868 (classical authorities have not been quoted in this article, as they may all be found in this book); Overbeck, *Geschichte der griechischen Plastik*, 3rd edit., Leipzig, 1881-2; Mitchell, *History of Ancient Sculpture*, London, 1883 (excellent for references to the literature of the subject); Murray, *History of Greek Sculpture*, London, 1880-3; Perry, *History of Greek Sculpture*, London, 1882; Paris, *La Sculpture antique*, Paris, 1888; Loewy, *Inschriften griechischer Bildhauer*, Leipzig, 1885. See also the articles on Sculptors and Sculpture in Baumeister, *Denkmäler des classischen Alterthums*, Leipzig, 1885-8.] [E. A. G.]

STELE (στήλη) is the name given to any block (usually of stone or marble) set up for a monumental purpose; thus it is constantly applied in inscriptions to the block on which a public document is to be incised. But the best known use of the term is to denote a monument set up over a tomb, either plain or with merely ornamental decorations, or containing a commemorative inscription, or a portrait of the deceased, painted or in relief, alone or grouped with other figures; combinations of these characteristics are common. The simplest form of stele consists of a plain marble slab or pillar surmounted by an anthemion, and inscribed with the name of the deceased; often two rosettes, side by side, are added—possibly a survival of an anthropomorphic representation. The most common subjects represented on grave reliefs may be thus classified:—

Fig. 1.
Tombstone of Phrasiclea. (Athens.)

(1) *Simple representations of the deceased*, often in some common employment of daily life. Thus the warrior appears fully armed, standing as if on parade (Aristion), or on horseback slaying a prostrate foe (Dexileos). An athlete holds his strigil or exercises, and is attended by his trainer or his slave; a lady sits playing with her jewels, also accompanied by her attendants (fig. 1). A man or child is often represented playing with a pet animal.

(2) *Parting scenes.*—The deceased, standing or seated, takes leave of his or her relatives or friends; family scenes are usually depicted. In later and more elaborate designs a horse appears, as if the deceased were about to start on a journey, and a serpent also is seen as a symbol of the dead. These two symbolic figures are, however, only common in the next class; and in parting scenes of the best period the subject is only indicated by the appearance of melancholy in the faces and attitudes of the persons represented (fig. 2).

Fig. 2.
Parting scene; Stele of Damasistrata. (Athens.)

(3) *Banquet scenes.* — These seem to have originated in a kind of ancestor-worship, as is seen in the very early stelae from Sparta: in them the deceased, as a "hero," holds out a cup as if to require a drink-offering; his wife is seated on another throne behind him, and small worshippers approach with offerings. In later times we find some similar examples; on the painted stele of Lysias at Athens the deceased stands, holding a cup in his hand. In the Spartan reliefs a great serpent coils over the back of the throne, representing, probably, the deceased as the inhabitant of his tomb. In the typical banquet scene of later times the deceased reclines on a couch, and his wife sits on the foot of the couch or on a chair beside it; before them is a feast, of which they partake, and servants with cups or viands take the place of

the worshippers; a snake and a dog are often present; and a horse's head, as a symbol of a journey, often appears in a square at the upper corner (fig. 3). It has been suggested that we should see here the funeral banquet idealised, or the enjoyments of the deceased in another life: the typical succession seems to indicate that we see rather a development of the representation in which the deceased, as a hero, receives offerings from worshippers, and reminds his descendants to give him more; but the enjoyment of those presents in another life is doubtless included. The type of these reliefs is often reproduced in dedications to Asclepius and Hygieia or other minor divinities; and thus we receive a confirmation of the view that the deceased is, originally at least, to be regarded as a deified hero.

Fig. 3.
Tomb-stone with banquet scene. (*Marm. Oxon.*)

Fig. 4.
Marble Stele, found at Sparta. (From Murray, *Ancient Sculpture.*)

The numerous series of Greek stelae which still survive is of great value, not only for their subjects but also for their execution; they were mostly the work of inferior artists or mere artisans, but reflect the style of the greater artists of the place or period to which they belong. The most important are those found in Athens, and preserved either *in situ* in the Outer Ceramicus or in the National Museum at Athens.

The inscription on a grave stele usually gives merely the name of the deceased, with his father's name and his country or deme, and her husband's also in the case of a woman: this simplicity was almost universal in Attica, but simple metrical inscriptions containing the same information are found from the earliest times. Elsewhere, and commonly later, χαῖρε or χρηστὲ χαῖρε is added; but elaborate eulogies are extremely rare, at least before Roman times.

(A complete collection of ancient grave-stelae is now being published by the German Institute, *Die antiken Grabreliefs*, Berlin, 1890. See also Le Bas, *Antiquités figurées*, p. 85; Welcker, *Alte Denkmäler*, ii. p. 232; Stephani, *Der ausruhende Herakles*; Pervanoglu, *Das Familienmahl auf altgriechischen Grabstelen*; Holländer, *De operibus anaglyphis*, &c.; Salinas, *Monumenti Sepolcrali*; *Mittheilungen des deutschen Instituts zu Athen*, ii. p. 459, iv. p. 161, vii. p. 160, &c.; *Journal of Hellenic Studies*, 1884, p. 105; Pottier, *Les Lécythes blancs antiques*; Furtwängler, *Die Sammlung Sabouroff*. A discussion by P. Gardner and references to previous authorities may be found in the *Journal of Hellenic Studies*, 1884, pp. 105–142.) [E. A. G.]

STHE'NIA (σθένια), a festival with contests celebrated by the Argives in honour of Zeus surnamed Sthenius, who had an altar consisting of a large rock in the neighbourhood of Hermione (Hesych. *s. v.* Σθένια: compare Paus. ii. 32, § 7; 34, § 6). Plutarch (*de Mus.* p. 1140 c) states that the πάλη or wrestling, which formed a part of the contests at this festival, was accompanied by the flute; and he also mentions a tradition according to which the festival had originally been held in honour of Danaus, and that it was afterwards consecrated to Zeus Sthenius. [L. S.]

STIBA'DIUM. [MENSA.]

STILLICI'DIUM. [SERVITUTES, p. 653.]

STILUS (γραφίς, γραφεῖον, in late writers στῦλος). There can be no doubt that whatever the origin of the word the correct spelling is *stilus*, not *stylus*, and it is highly probable, if not certain, that the connexion in etymology with στῦλος (whence the spelling *stylus*) is mistaken also: the quantity of the two words is always different, and the root στιγ, whence στίζω, *stimulus*, &c. (Corssen, *Gr. Etym.* 214), suits the meaning better. Since στῦλος is used in this sense only by late writers, it is not improbable that they took it by a false reasoning to represent the Latin word. For the true Greek words *γραφίς* and *γραφεῖον*, see Plat. *Protag.* p. 326 D; Athen. p. 562 c, *πινακίδα καὶ γραφεῖον ἐξηρτημένον* (a line of Macho in 3rd cent. B.C.); Arist. *Phys.* vii. 4, 4; Pollux, x. 59. The stilus signifies—

1. An iron instrument (Ovid, *Met.* ix. 521; Martial, xiv. 21), resembling a pencil in size and shape, used for writing upon waxed tablets (Plaut. *Bacch.* iv. 4, 63; Plin. *H. N.* xxxiv. § 139). At one end it was sharpened to a point for scratching the characters upon the wax (Quintil. i. 1, § 27), while the other end being flat and circular served to render the surface of the tablets smooth again, and so to obliterate what had been written. Thus, *vertere stilum* means "to erase," and hence "to correct," as in the well-known precept *saepe stilum vertas* (Hor. *Sat.* i. 10, 72; Cic. *Verr.* ii. 41, 101). The stilus was also termed *graphium* (Ovid, *Amor.* i. 11, 23; Suet. *Jul.* 82), and the case in which it was kept *graphiarium* (Martial, xiv. 21) or *graphiaria theca* (Suet. *Claud.* 35). The annexed cut is from a picture found in Herculaneum.

Stilus. (*Mus. Borbon.* vol. vi. tav. 35.)

2. A sharp stake or spike placed in pitfalls before an entrenchment to embarrass the progress of an attacking enemy (*Bell. African.* 31; Sil. Ital. x. 415). It was intended to answer the same purpose as the contrivances called *cippi*, *lilia*, and *stimuli* by Caesar (*B. G.* vii. 73).

3. A bronze needle or rod for picking worms off fruit-trees (Pallad. iv. 10, § 20), also a wooden probe employed in gardening operations (Columell. xi. 3, § 53).

Stili were made also of bone or ivory (Isid. *Orig.* vi. 9, 2): a bronze stilus elaborately carved from Orvieto is figured in Baumeister, *Denkm.* 1585. See also Sen. *de Clement.* 1, 14; Augustin. *de Vet. Rel.* 39. The passages cited from Pliny and Suetonius show the possible use of a large-sized stilus as a weapon. [W. R.] [G. E. M.]

STIPENDIA'RII. (1) Persons who received a fixed pay or salary, as *stipendiariae cohortes* (Hirtius, *Bell. Afr.* 43; cf. Livy, viii. 8).

(2) Those peoples in the Roman provinces were so called who had to pay a fixed money tribute, *stipendium*, in contradistinction to the *vectigales* (Cic. *Verr.* iv. 60, 134), who paid *decumae*, or a fixed percentage of the produce of their lands or other income [see VECTIGALIA; PROVINCIAE]. The word *stipendium* was used for "tribute," because it was originally appropriated to the purpose of furnishing the Roman soldiers with pay (*stipendium*, Livy, iv. 36, 60; Tac. *Hist.* iv. 74). All provinces paid stipendium, except Sicily, and except Asia between B.C. 123–48. The money was for the most part raised and paid over by each township.

Later, the lawyers of the Empire distinguished *stipendium* from *tributum*, making both mean a land-tax of fixed amount; but the former was raised in senatorial provinces, the latter in Imperial provinces (Gaius, ii. 21).

(See also under VECTIGALIA, No. 13.)

[F. T. R.]

STIPE'NDIUM (contracted for *stipi-pendium*) is derived from *stips* and *pendo*, from the fact of original payments for service having been made by weight (Varro, *L. L.* v. 36, 50, "Milites stipendia ideo quod eam stipem pendebant;" cf. Plin. *H. N.* xxxiii. § 43): *stips*, of which only the oblique cases are found, meaning a donation in small coin (Dig. 55, 16, 17, "stipendium a stipe—quod per stipes, id est modica aera colligatur;" cf. Festus, pp. 296, 297). Its earliest meaning appears to be that of pay for the army, from which two kindred meanings are derived: that of military service, as in the phrases *facere stipendia*, *emereri stipendia*; and that of a campaign, as in the expressions *semestria*, *annua stipendia*. The sense of a tax or impost is probably a secondary use of the word derived from its primary meaning of military payment, the original taxes being those levied to defray military expenses. (For this meaning, see TRIBUTUM.)

In B.C. 406, at the beginning of the Veientine War, a regular payment (*stipendium*) was first made to the army; previously to this there had been no provision made for the foot-soldiers (*milites*), but each had served at his own cost (Liv. v. 4, "moleste autem ferebat miles de suo sumptu operam reipublicae praebere;" Zonaras, vii. 20, *ἀμισθὶ γὰρ μέχρι τότε καὶ οἰκόσιτοι ἐστρατεύοντο*), although Dionysius says of the year B.C. 466 that a *semestre stipendium* had been given to the army for the supply of provisions (*εἰς ὀψωνιασμόν*, Dionys. v. 47). The more probable date, however, is that of the siege of Veii; the ten years' campaign and the necessity of remaining in winter-quarters making it impossible for the legionaries to furnish their own support (Florus, i. 12, "tum primum hiematum sub pellibus;" Lydus, *de Mag.* i. 46). Previously to this some provision had been made for the equites, not in the way of furnishing them with necessaries during the campaign, but only for the purpose of supplying and maintaining their horses [AES EQUESTRE and AES HORDEARIUM]; but some years after the stipendium had been granted to the infantry we find the equites also receiving a similar support (Liv. v. 7, "equiti certus numerus aeris est assignatus;" Zonaras, vii. 20). This original stipendium, however, was not a regular payment for services (*μισθός*), but an indemnity for the expenses of the soldiers during a campaign; it is described by the expressions *ἐφόδια* (Diodor. iv. 16), *σιτηρέσιον* (Lydus, *de Mag.* i. 45), *ὀψωνιασμός* (Dionys. v. 47); but that it left some margin over as a reward for service seems shown by the words of Livy (v. 4, "miles gaudet nunc fructui sibi rempublicam esse"), as in the time of Polybius, when the stipendium was still regarded as an *ὀψώνιον*, the daily payment certainly exceeded the cost of the provisions supplied (Polyb. vi. 39). The payments were made either half-yearly (Dionys. ix. 59; ix. 17, χρήματα εἰς ὀψωνιασμὸν ἓξ μηνῶν) or yearly (Diodor. xiv. 16), according as the campaign lasted under or over six months. Hence the transference of stipendium from its meaning of "pay" to that of "length of service or campaign." The year of war service began on March 1st, the old official New Year's day, and the six-months' service (*semestre stipendium*) ended with the close of August (Mommsen, *Rechtsfrage zwischen Caesar und dem Senat*, p. 15 *sq.*). Before the creation of the standing army for the purpose of provincial control, a period of service over six months was unusual; but eventually military duties extended over the whole year, a period of service over six months or two periods of six months being regarded as an *annuum stipendium* (Lex Julia Munic. *C. I. L.* 1, n. 206, l. 92, "quae stipendia majorem partem sui quojusque anni fecerit, aut bina semestria, quae ei pro singuleis annueis procedere oporteat"). The usual mode of payment before the time of the dictator Caesar was probably half-yearly; during the Empire, as will be seen in discussing the reforms in the rate of payment, the troops were paid every four months.

The effect of the regular stipendium was that the cost of the provisions given to the Roman soldiers was subtracted from their pay by the quaestor; while the *socii*, who were not paid by the state, had such advances made to them free of charge (Polyb. vi. 39). The allowance for the allies in Polybius' time was, for the infantry ⅔ medimnus of wheat a month, for the cavalry 1⅓ medimni of wheat a month and five of barley. The allowance for the infantry soldier of Rome was the same as that for the infantry soldier of the allied states, but the Roman equites received two medimni of wheat a month and seven of barley. The expenses for fresh supplies of uniform and arms were deducted, like the cost of provisions, from the Roman soldier's pay (Polyb. *l. c.*), and this was still the case in the early Empire. We find, indeed, that C. Gracchus passed a law which gave to the soldiers their uniforms free of charge (Plut. *C. Gracch.* 5); but even if this law was passed, it could not have been permanent, since we find from the complaints of the legionaries in the reign of Tiberius that the cost of uniforms, weapons, and tents was taken from their pay (Tac. *Ann.* i. 17). It is conjectured from two passages in Suetonius (*Jul.* 26 and 68) that in the later Republic corn was sometimes supplied by the state free of charge to the troops, and this certainly seems to be the case in the earlier Empire, since, on the meeting of the legions in the reign of Tiberius, they count among their grievances the fact that the expenditure for arms and uniforms was deducted from their pay, but do not mention the *frumentum*, which, if it had not been supplied gratis, would have been quite the largest item deducted (Tac. *Ann.* i. 17). The praetorian cohorts were first supplied with free corn in Nero's reign (Tac. *Ann.* xv. 72; Suet. *Ner.* 10), and during the later Empire it is known to have been supplied free of charge to the whole army (Lamprid. *Alex. Sev.* 52). The same was eventually the case with arms and uniform, and under the later Caesars the legionary's pay was unburdened by any military expenses (Dig. 49, 16, 14, 1; Lamprid. *l. c.* "non contra eum—Alexandrum—qui annonam, qui vestem, qui stipendia vobis attribuit").

As regards the rate of payment, there is no evidence to show that there was a fixed rate when the stipendium was first introduced. We first hear of regular proportions of pay in the time of Polybius, who tells us that the legionaries received two obols, the centurions four obols, and the equites a drachma a day (Polyb. vi. 39, 12). The drachma is equivalent to the denarius, which was originally worth ten asses; the foot-soldier received two obols, that is ⅓ denarius, or 3⅓ asses a day, which Plautus, leaving out the fraction, calls *tres nummi* (Plaut. *Mostell.* ii. 1, 10). For the year of 360 days this makes for the *annuum stipendium* of the foot-soldier, 1200 asses (360 × 3⅓); of the centurion, who received double this amount, 2400 asses; of the eques, who received a full denarius, 3600 asses. In B.C. 217 the new uncial measurement was introduced, and the denarius is from this time forth worth sixteen instead of ten asses. Pliny, in his account of this lowering of the copper standard, says, "In militari tamen stipendio semper denarius pro decem assibus datus" (*H. N.* xxxiii. § 45): that is, where ten asses (the old denarius) had been given before, the new denarius (sixteen asses) was given now, and "the soldiers received *in silver* as much pay as before" (Boeckh, *Metrol. Unters.* p. 425). The pay, therefore, was still 120 denarii a year, but this, instead of being 1200 asses a year (120 × 10), was 1920 asses a year (120 × 16), or 5⅓ asses a day instead of 3⅓ asses, the former rate of payment. Till the time of Caesar the daily pay of the legionaries was 5⅓ asses; Caesar is said by Suetonius to have doubled the pay (Suet. *Jul.* 26, "legionibus stipendium in perpetuum duplicavit"). If this were strictly true, the pay should have been raised to 10⅔ asses, but we find from Tacitus that it was only raised to ten asses (Tac. *Ann.* i. 17, "denis in diem assibus animam et corpus aestimari"). The true nature of Caesar's reform is explained by Marquardt by reference to a passage in Suetonius, who tells us that Domitian "addidit et quartum stipendium militi aureos ternos." A stipendium is here said to be three aurei; the aureus was twenty-five denarii, and three aurei would be seventy-five denarii or 1200 asses (75 × 16). This shows that 1200 asses were still counted a stipendium in the new coinage as it had been in the old; and since Domitian is said to have added a *fourth* stipendium, Caesar's reform consisted in giving the soldiers three stipendia, reckoned as a stipendium had been in the old coinage (1200 asses) instead of one stipendium reckoned as it had been in the new coinage (1920 asses). The soldiers now, instead of 1920 asses a year, received 3600 asses a year (1200 × 3); that is, as Tacitus says, ten asses a day; or, reckoning the stipendium in denarii, the soldiers from the time of Caesar, instead of receiving 120 new denarii (1920 asses) a year, received 225 new denarii (3600 asses). Domitian increased the pay by three aurei, that is seventy-five denarii, so that after Domitian their pay would have been 300 new denarii a year (225 + 75) (Marquardt, *Staatsverw.* v. p. 93). That Caesar, in raising the pay to three stipendia a year, had made the payments every four months, and that Domitian, although he added a fourth stipendium, still retained this mode of payment, is shown by the passage of Zonaras in which he speaks of Domitian's increase of the pay: *καὶ τοῖς στρατιώταις ἐπηύξησε τὴν μισθοφοράν· πέντε γὰρ καὶ ἑβδομήκοντα δραχμὰς ἑκάστου λαμβάνοντος, ἑκατὸν ἐκέλευσε δίδοσθαι* (Zonar. xi. 29): that is, as Caesar had divided the whole year's pay of 225 denarii into three stipendia of seventy-five denarii each, so Domitian divided the increased year's pay of 300 denarii into three stipendia of 100 denarii each. What the amount of the stipendium was in the time of the old libral as is unknown; but it has been conjectured that it was 240 of these libral asses, which would be about equivalent to 1200 of the later asses, at their value before the year B.C. 217; five of these *asses sextantarii* being, according to Boeckh, equivalent to one libral as (Boeckh, *Metrolog. Unters.* p. 458; Mommsen, *Die römische Tribus*, p. 43). We find in Gaius the mention of an old custom permitting the Roman soldier, in case of his not receiving the stipendium due to him, to distrain on the goods of the officer whose duty it was to administer the pay (Gaius, iv. 26).

Under the Empire the Roman forces were divided into four parts—the legionaries, the home troops (consisting of the urban and praetorian cohorts), the auxilia, and the fleet. Of the strength and rate of payment of these last two branches of the force we know nothing. That the soldiers of the praetorian cohorts received two full denarii—that is, thirty-two asses a day—is implied in the passage of Tacitus (*Ann.* i. 17; cf. 26), where the legionaries claim a full denarius or sixteen asses a day, alleging that the praetorians received *bini denarii*, although it is elsewhere stated that they received double pay (Dio Cass. liii. 11, 5), which, as the legionaries received ten asses a day, would be twenty and not thirty-two asses; and it is possible that this latter statement is strictly true, and that Tacitus makes the legionaries purposely exaggerate the rate of pay of the praetorian. The gross annual amount expended on the legionaries and the home troops in the reign of Tiberius is estimated by Marquardt at 186,840,000 sesterces (*Staatsverw.* v. p. 94), so far as the common soldiers are concerned: for the pay of the higher officers in the period of the early Empire is not known; that of a tribune seems to have been high (Juv. iii. 133), and we find in the third century that it was as much as 250 aurei or 25,000 sesterces (Mommsen in the *Berichte der Kaiserl. Gesellschaft der Wissenschaften*, 1852, p. 240). The historians of the later Empire furnish us with instances of very large annual grants furnished by the emperors, both in money and in kind, to tribunes of the legion (Trebell. Poll. *Claud.* 14, where the grant is called *salarium ex nostro privato aerario:* cf. Vopisc. *Prob.* 4); but these were rather in the nature of private grants made to distinguished officers, such as Aurelian the future emperor, to enable them to maintain more state than their ordinary pay permitted (Vopisc. *Aurel.* 9).

(Marquardt, *Staatsverwaltung*, v. p. 90 *sq.*; Boeckh, *Metrologische Untersuchungen*, p. 423 *sq.*; Dureau de la Malle, *Économie politique des Romains*, i. p. 134 *sq.*; Mommsen, *Die römische Tribus*, p. 31 *sq.*) [A. H. G.]

STIPULA'TIO. [OBLIGATIONES, p. 256.]

STOLA. The *stola* was a garment peculiar to the Roman matron, and was worn as a badge of lawful marriage (cf. Val. Max. vi. 1; Hor. *Sat.* i. 2, 94). It was a *tunica* put on over the shift or *tunica interior*, and reached down to the ankles. There is reason to believe that it was identical with the *tunica recta* or *regilla*, which the bride wore at the marriage ceremony (cf. Becker-Göll, *Gallus*, ii. 27). It was bordered below with a flounce or hem called *instita* (Hor. *Sat.* i. 2, 29), and seems from certain monuments to have also had a purple stripe as a border round the neck. This has been identified with the *patagium*, perhaps correctly, though the passages in which it is mentioned speak of the *patagium* as being of gold (Nonius, p. 540, 4; Tert. *de Pallio*, 3; TOGA), not purple. It had sleeves, reaching down to the elbows, fastened with a row of clasps, and not sewn. If, however, the *tunica interior* had sleeves, the stola was without them, as in the well-known statue of Livia, shown in the accompanying cut.

Statue of Livia.

Like the corresponding Greek garment, the stola was girded (cf. Ennius, *ap.* Non. p. 198, "et quis illaec est lugubri succincta stola;" though this is not conclusive, as is shown below) generally high above the waist, forming a cluster of folds (cf. Martial, iii. 93, 4). This, too, is shown by the monuments on which it appears. The word *stola*, as derived from the Greek *στολή*, had originally a quite general meaning (Nonius, p. 537, 24: "Stolam veteres non honestam vestem solum sed etiam omnem quae corpus tegeret"), and in Ennius it is used of men's as well as women's clothes (*Frag.* ed. Ribbeck, vv. 285, 287, 345). There is no record of the date at which it was adopted by the Roman women, but one cannot be wrong in connecting the change with the transformation which the PALLA had undergone. That is to say, when the palla, which was originally worn like the Doric shift, was used as a shawl or mantle, another undergarment besides the tunica interior became necessary, and that adopted by the matrons was the stola. The disuse of the TOGA, which was in the earliest times worn by women as well as men, is probably not unconnected with this change. However this may be, the *longa vestis* is mentioned as early as the Second Punic War as the privilege of married women (Macrob. *Saturn.* i. 6, 13; cf. *C. I. L.* i. 1194, "ita leibertate illei me, hic me decora[r]at stola"). It remained in use as the garb of the *matronae* (Cic. *Phil.* ii. 18, 44;—Varro, *L. L.* 8, 28; 9, 48; 10, 27) until the time of Tiberius, when it ceased to be fashionable. References to it in literature are, however, none the less frequent in post-Augustan writers (Mart. i. 35, 8, &c.), and in Ulpian it is one of the *muliebria vestimenta:* "quae matris familiae causa sunt comparata" (Dig. 34, 2, 23, 2). Under the Empire, as its use in actual life became less common, it was apparently given a symbolic meaning, and bestowed on matrons who had the *jus liberorum*. Such at least is the most probable explanation of the title *stolata femina*, which occurs as a name of honour on inscriptions, chiefly of the 2nd and 3rd centuries A.D. (Orelli-Henzen, 3030, 7190, note 2; *C. I. L.* iii. 5225, 5283, 6155, p. 998: cf. Hübner, *Hermes*, 1878, xiii. p. 425 *seq.*, and *Comm. phil. in hon. Thes. Mommsenii*, p. 104 *seq.*). Such a stola was doubtless distinguished in some way from that in ordinary use. (Marquardt, *Privatleben*, pp. 60, 573–575, 581; Iwan Müller, *Handbuch*, pp. 803, 876–77; Becker-Göll, *Gallus*, ii. 27, iii. 253; Baumeister, *Denkmäler*, art. *Toga*, p. 1841.) [W. C. F. A.]

STRATE'GUS (*στρατηγὸς*) was the title applied to the chief military commanders in most of the constitutional governments of Greece; as a rule they had the direction of foreign affairs as well as the leadership in war: and, as the control of external relations was the most important part of administration in a Greek state, the *στρατηγία* was practically the chief magistracy in the communities in which it is found.

Strategi were set up in the Ionian states of Asia Minor after the despotisms had been overthrown in 504 B.C. (Herod. v. 38); at Argos we find *οἱ πέντε στρατηγοὶ* who commanded the five Argive lochi (Thuc. v. 59, 72): similar magistrates are also met with at Syracuse (Thuc. vi. 72), in later times in Boeotia (Keil, *Inscrip. Boeot.* p. 114), and in Amorgus (Gilbert, *Staatsalt.* ii. p. 209). They are also found frequently at the head of leagues; after the founding of Megalopolis we find a *στρατηγὸς* at the head of *τὸ κοινὸν Ἀρκάδων* (Xen. *Hell.* vii. 3, 1), and in the third century *στρατηγοὶ* at the head of the *κοινὸν τῶν Ἀκαρνάνων* (Polyb. v. 6; Liv. xxxvi. 11) and the *κοινὸν τῶν Ἀπειρωτᾶν* (Dittenberger, n. 211). They were also the chief military officers of the Achaean and Aetolian leagues [ACHAICUM and AETOLICUM FOEDUS]; and after the reconstruction of the Thessalian alliance in 196 B.C., a strategus appointed yearly is found at the head of this confederacy [TAGUS]. In Egypt, under the Ptolemies and under Roman rule, the *στρατηγοὶ* were the governors of the nomes; over these were the *ἐπιστράτηγοι*, the governors of the three great districts of the Delta, Heptanomis, and Thebais: both these classes of officers being under the authority of the Praefectus Aegypti (Kuhn, *Verfassung des römischen Reichs*, pp. 481–493).

The *στρατηγία* at Athens, according to the unanimous verdict of ancient writers, was the highest political office in the state. Its importance was due to the great extent of the duties of administration which it involved, and to the special power of initiative in legislation with which its holder was invested; while the continuity in the office, due to the possibility of indefinite re-election, rendered possible a continuity of policy on the part of its holder. That this power of permanent administration was actually realised in the history of Athens, there can be no doubt; whether it was definitely contemplated in the theory of the constitution will depend on the view that is taken as to the mode in which the functions of this office were distributed; but in any case it may be asserted that in the *στρατηγία* we have the central point of Athenian administration, and any opinion as to the position of the strategus must inevitably affect our views as to the whole system of executive government at Athens. The strategi formed a college of ten, based on the ten tribes of the Cleisthenean constitution: and the number seems to have continued unaltered, as long as the collegiate principle was observed; it was not until a late period, falling between the years 52 and 42 B.C., that the college of generals was replaced, probably through an act of the dictator Caesar's, by a single magistrate bearing the title *ὁ στρατηγός, ὁ στρατηγὸς ἐπὶ τὰ ὅπλα* or *ἐπὶ τοὺς ὁπλίτας* (*C. I. A.* ii. n. 481, iii. n. 248; Gilbert, *Staatsalt.* i. 156, n. 3).

Amongst the powers of the strategi, the most distinctive was that of summoning the assembly. The debate in the assemblies thus specially convened (*σύγκλητοι*) seems to have been limited strictly to the proposal put before them by the general; and such assemblies took precedence of all other meetings of the *ἐκκλησία* (*C. I. A.* i. 40, l. 57, *ἄλλο δὲ προχρηματίσαι τούτων μηδέ, ἐὰν μήτι οἱ στρατηγοὶ δέωνται*); yet it seems that in convening them the generals could not omit the formality of consulting the *πρυτάνεις*, and that their motions, though standing first on the orders of the day, could only be introduced through the regular standing committee of the *βουλή* (Thuc. iv. 118, *ἐκκλησίαν δὲ ποιήσαντας τοὺς στρατηγοὺς καὶ τοὺς πρυτάνεις, κ.τ.λ.*). An important power, which resulted from this right of convening the assembly on matters of foreign administration, would have been the setting forth of the estimates of the military budget for the year, together with proposals for raising the requisite supplies. Foreign administration and finance must necessarily have gone closely together during the greater part of the history of Athens, and have been united in the same person; but the power of the generals was not limited to initiating measures for such grants; they had the control of the details of expenditure: the moneys voted from the treasuries of Athens for military purposes were placed in their hands (*C. I. A.* n. 273), and there were other extraordinary sources of revenue, such as those from booty (Lys. *c. Ergocl.* § 5), from the payments made by merchant-ships convoyed in time of war (*παρὰ τῶν ναυκλήρων καὶ ἐμπόρων*, Id. *de Bon. Aristoph.* § 50) and from fines imposed at their own discretion, over which they would probably have had entire control. As minister of finance for foreign affairs, it was the strategus who nominated to the trierarchy, in the 4th and probably in the 5th century (Dem. *adv. Boeot.* p. 997, § 8), and who had the *ἡγεμονία δικαστηρίου* in suits arising from it (Suid. *s. v. ἡγεμ. δικαστ.*), as well as a similar presidency in the court constituted for the settlement of disputes arising from the *εἰσφορά* (Suid. *l. c.*). Amongst the special military duties that devolved on the strategi at home were the distribution and command of the home forces, including the *περίπολοι*, and the control of the home defences (*φυλακαὶ κατὰ γῆν καὶ κατὰ θάλασσαν*, Thuc. ii. 24); duties which, after different functions were distributed amongst different members of the college, devolved on the general who bore the title *στρατηγὸς ἐπὶ τῆς χώρας* (Plut. *Phoc.* 32). In the case of certain levies the generals exercised the right of personal selection (Philostr. *Vit. Soph.* i. 23, 1; Lys. *c. Alcib.* i. § 6; Gilbert, *Staatsalt.* p. 303, n. 1). They also had jurisdiction in military matters; the appeals against the levy were made to them (Lys. *de Mil.* § 4), and they had the *ἡγεμονία δικαστηρίου* in the case of the military charges known as the *γραφαὶ ἀστρατείας, λιποταξίου* and *δειλίας* (Lys. *c. Alcib.* i. § 21), which they either undertook in person or remitted to the *ταξίαρχοι* (Dem. *adv. Boeot.* p. 999, § 17). Besides this jurisdiction at home, the general seems to have had the power to punish with death the most serious offences, such as treasonable negotiations with the enemy, and to confer military honours for bravery in the field (Lys. *c. Alcib.* i. § 22; Plut. *Alcib.* 7); while the public funeral for citizens who had fallen in battle (*δημόσιος τάφος*) was proposed by him (Aristoph. *Aves*, 395 *sq.*). The initiative in cases of treason seems also to have been amongst his duties ([Plut.] *Vit. Antiph.* 23); and one of his chief responsibilities was the corn-supply of Athens (*τὴν παραπομπὴν τοῦ σίτου*, Boeckh, *Seeurk.* xiii. p. 423; cf. *C. I. A.* ii. n. 331). The duties of the generals as regards foreign administration must have involved the introduction of most of such business to the assembly; questions arising from treaties or the details of foreign policy must have been usually brought forward by them; while we find that they were responsible for the execution of a treaty, saw that the oath was taken, and that the proper sacrifices were offered on the occasion (*C. I. A.* Suppl. vol. i. p. 10, ll. 67 and 19). The existence of the Athenian Empire also added to the sphere of the general's powers; they must have been the commanders-in-chief of the *φρουραρχοὶ* and the *φρουραί*, which we find in the subject states, as in Erythrae (*C. I. A.* i. 9). They saw to the exaction of the tribute when it was in arrears, by commanding the *ἀργυρολόγοι νῆες* (*C. I. A.* iii. 19); and probably had the levying of contingents from the allies in ships and men (Droysen, *Hermes*, ix. p. 12).

It will be seen from this enumeration of their functions that the generals at Athens were at once leaders in war, ministers of war, foreign ministers, and to a great extent ministers of finance. It is difficult to see how such powers could have been exercised collectively by a college. Distributed they must have been, even in the 5th century B.C., where we as yet meet no trace of the subsequent differentiation of functions; but it is not easy to say how this distribution was effected, whether by agreement amongst the members of the college, or by lot, of the use of which some traces are found (Thuc. vi. 42, 62; viii. 30), or finally by the presidency of one of the members of the college who assigned the duties of the others. It is not until the close of the 4th century, about the year 325 B.C., that we find the practice arising of assigning different spheres of action to the generals on election. As late as the year 306–305 B.C. we find several generals elected for the performance of the same function (*στρατηγοὶ οἱ ἐπὶ τὴν τοῦ πολέμου παρασκευὴν κεχειροτονημένοι*, *C. I. A.* ii. n. 2733); but as early as 349 B.C. a mention is traced of a general with a special competence, the supervision of the *εἰσφορά* (Dem. *Olynth.* ii. p. 26, § 29; Gilbert, *Beiträge*, pp. 35–37), and at a later period we find the functions assigned to the several generals distinctly expressed in the titles borne by each. Such titles are (*ὁ στρατηγὸς*) *ὁ ἐπὶ τὴν Μουνυχίαν καὶ τὰ νεώρια· ὁ ἐπὶ τὸν Πειραιᾶ· ὁ ἐπὶ τὴν χώραν· ὁ ἐπὶ τὴν χώραν τὴν παραλίαν· ὁ ἐπὶ Ἐλευσῖνος· ὁ ἐπὶ τὰς συμμορίας· ὁ ἐπὶ τὴν παρασκευήν· ὁ ἐπὶ τοὺς ξένους· ὁ ἐπὶ τὸ ναυτικόν· ὁ ἐπὶ τὰ ὅπλα* or *ὁ ἐπὶ τοὺς ὁπλίτας*, this last title being borne by the general who stood at the head of the college and was elected to the first place by the people (*χειροτονηθεὶς ἐπὶ τὰ ὅπλα πρῶτος ὑπὸ τοῦ δήμου*, *C. I. A.* ii. 331; Gilbert, *Staatsalt.* i. pp. 221, 222).

The only known insignia of the general were the chlamys or military cloak (Ael. *V. H.* xiv. 10; Plut. *Quaest. Conviv.* i. 4, 2) and the *στέφανος* which was worn by all Athenian magistrates. They had specially reserved seats in the theatre (Theophr. *Char.* 21), and conducted the military processions at the Panathenaea (Dem. *Phil.* i. p. 47, § 26). Their place of business was the *στρατήγιον* (Plut. *Nic.* 5, 15; *Per.* 37; *Phoc.* 8), where they dined at the public cost (Dem. *de fals. Leg.* p. 490, § 190). Special honours were sometimes conferred on successful generals, which took the form of statues ([Andoc.] *c. Alcib.* § 31), of public dinners in the Prytaneum (Aristoph. *Eq.* 709), or of *προεδρία* (*ib.* 575, 702). There is some evidence that the generals received payment on foreign service, and it has been concluded from a passage in Aristophanes (*Acharn.* 602) that the rate was three drachmae a day, which was perhaps given as a *σιτηρέσιον* rather than as a *μισθός*.

There are some difficulties connected with the date at which the generals were elected; but there is almost a consensus of opinion in favour of the view that during the greater part of the 5th century and onwards they were elected towards the close of Munychion, at the beginning of the ninth prytany, and entered office on the first of Hecatombaeon, the beginning of the Attic year (Gilbert, *Beiträge*, p. 7; Beloch, *Attische Politik seit Pericles*, pp. 271–273; Droysen, *Hermes*, ix. p. 16 ff.; K. F. Hermann, *Griech. Staatsalt.* § 148, 7). They would thus have been elected in April or May, and entered office in July, the interval between the two acts being employed no doubt for the purpose of the *δοκιμασία*. But in time of war a general's command might be prolonged beyond his term of office, even though he were not re-elected; thus Laches, who was *στρατηγὸς* during 427–426, was first replaced by Pythodorus, *στρατηγὸς* for 426–425 in the winter of that year (Thuc. iii. 86, 115; Gilbert, *l. c.* p. 14). The generals gave in their names before the nine archons (Poll. viii. 87), and the elections were conducted by them on the Pnyx (Hesych. *s. v.* Πνύξ): election seems to have been preceded by canvassing (Plut. *Phoc.* 8), and was, in the 4th century, not unfrequently tainted by bribery. The generals took an oath on coming into office, a special clause in which was *τοὺς ἀστρατεύτους καταλέξειν* (Lys. *de Mil.* § 15). Besides the ordinary qualifications required for Athenian magistrates, the special qualifications required for the generals were that they should be married and have children, and possess property within the bounds of Attica (Dinarch. *in Demosth.* § 71). There was apparently no qualification of age, but the *στρατηγία* was not usually held before the age of forty (Gilbert, *l. c.* p. 25). Re-election to the office in successive years was frequent; Pericles was general for fifteen years and Phocion forty-five times (Plut. *Per.* 15; *Phoc.* 8). A general might be deposed from office in the 4th century at the *ἐπιχειροτονία* held at the beginning of each prytany, and at the close of his office was subject to the usual audit (*εὔθυναι*), which in his case was conducted before a heliastic jury under guidance of the thesmothetae (Poll. viii. 88). This was mainly concerned with the account of the moneys which had passed through his hands; it was probably on a charge of malversation of funds that Pericles was convicted and fined (Thuc. ii. 65; Plut. *Per.* 23 and 35), but a special *γραφὴ κλοπῆς* might be preferred against him, either at the *εὐθύνη* or after the *ἀποχειροτονία*, together with other charges, such as the *γραφὴ προδοσίας* or *γραφὴ δώρων* [see EUTHYNE; EPICHEIROTONIA].

The question as to what was the precise process of election to the *στρατηγία* is at once the most important of those connected with the office and the most difficult to answer. It is equally doubtful who the electors were, and from what body the elected were chosen; and according to our decision on these points must depend to a large extent our estimate of the position of the *στρατηγὸς* in the state. In the early period of Athenian history the ten generals bore a close relation to the ten tribes; at Marathon each general commanded a tribe (Plut. *Arist.* 5), and Plutarch's language in this passage and in another, where he describes the employment of Cimon and his nine colleagues as judges in the theatre, tends strongly to the view that the general belonged to the tribe which he commanded (Plut. *Cim.* 8, *ἀπὸ φυλῆς μιᾶς ἕκαστον*: but see Gilbert, *Beiträge*, p. 23, who points out that Miltiades, who belonged to the tribe Oeneis, probably commanded the Aeantis). This was, however, certainly not the case at a later period: Pollux tells us that the generals were chosen out of all the citizens (*ἐξ ἁπάντων*, Poll. viii. 86); several instances are found of two generals in the same year belonging to the same tribe; and, as Gilbert says, "It would have violated all considerations of political expediency if the Athenians, through the condition that a general must be taken from each tribe, had robbed themselves of the possibility of employing two gifted and experienced men, because they happened to belong to the same tribe" (*Beiträge*, p. 24). Yet it is known that at the close of the 5th century the generals offered themselves as representatives of special tribes (Xen. *Mem.* iii. 4, 1); and, as they were chosen out of all Athenian citizens, two modes of election have been suggested: either that the generals were elected out of all the Athenian people by the special tribes and for the special tribes, or the view which is held by Droysen, that they were elected for each tribe from all the Athenians by the whole people (*Hermes*, ix. p. 8). The first, though in accordance with modern ideas of representation, is thought to be inconsistent with ancient ideas on the subject (Beloch, *l. c.* p. 279), while the second is contrary to all the analogies of tribal election in Athens (Pastoret, *Histoire de la Législation*, vi. p. 290). A modified view has been put forward by Beloch, which, while it gives a theory of election, contains a definite suggestion as to the distribution of powers within the college. He holds that the college consisted, not of ten equal members, but of a *πρύτανις* and *συνάρχοντες*, on the analogy of the treasurers of Athens and of the Hellenotamiae: the expression *ὁ δεῖνα καὶ συνάρχοντες* being found applied to the *στρατηγία* in an inscription (*στρατηγοῖς Ἱπποκράτει Χολαργεῖ καὶ συνάρχουσιν*, *C. I. A.* n. 273). This president, he considers, was elected by all and out of all, but his nine colleagues each by his own tribe and from his own tribe, one of the ten tribes each year giving up its right to election. Consequently "in nine cases out of ten a general must have belonged to a phyle that was already represented, or conversely, when two generals are found to belong to the same phyle, one of them must be the prytanis" (Beloch, *l. c.* p. 287). This seems confirmed by the fact that between the years 441–0 and 356–5 there are nine certain instances of two generals, but no certain instance of more than two, belonging to the same tribe in the same year (Beloch, *l. c.* p. 276; Droysen, *Hermes*, ix. pp. 3 and 4): this occurs twice when Pericles, once when Laches is general, and one of the names is usually of sufficient eminence for us to consider its bearer a possible president of the college. The *πρυτανεία* of the college he also thinks to be signified by the expression *στρατηγὸς δέκατος αὐτός*, which is twice used in reference to Pericles (Thuc. i. 116; ii. 13). Gilbert had thought that the additions *πέμπτος*, *τέταρτος αὐτὸς* to a general's name signified some superiority of power possessed by that general over his colleagues, and that this power is the same as that expressed in the words *στρατηγὸς αὐτοκράτωρ*: thus *ὁ δεῖνα πέμπτος αὐτὸς* would mean that the general possessed authority over his four colleagues who went on the expedition with him; *ὁ δεῖνα δέκατος αὐτὸς* would signify, not necessarily that the general's nine colleagues went with him on an expedition, but that he possessed the power of an *αὐτοκράτωρ* over the whole college (Gilbert, *Beiträge*, p. 42 *sq.*). It is certain that a general was appointed *αὐτοκράτωρ*, not at the elections, but with reference to a definite service, although it is possible that, in the face of a pressing danger, a general might be elected with autocratic powers at the archaeresia (Plut. *Arist.* 8, *χειροτονηθεὶς αὐτοκράτωρ*). Only the most general instructions were given to such a commander: he was freed from the necessity of consulting the *βουλὴ* and the *ἐκκλησία* on the details of administration, could raise supplies at his own discretion (Thuc. vi. 26), and had perhaps authority over his other colleagues; three generals were so appointed for the Sicilian expedition (Thuc. *l. c.*: *οἱ Ἀθηναῖοι ἐψηφίσαντο εὐθὺς αὐτοκράτορας εἶναι καὶ περὶ στρατιᾶς πλήθους καὶ περὶ τοῦ παντὸς πλοῦ τοὺς στρατηγοὺς πράσσειν ᾗ ἂν αὐτοῖς δοκῇ ἄριστα εἶναι Ἀθηναίοις*: cf. Plut. *Arist.* 8 and 11), and Alcibiades in 408 B.C. was *ἁπάντων ἡγεμὼν αὐτοκράτωρ* (Xen. *Hell.* i. 5, 20). Beloch's theory, on the other hand, is that the *πρύτανις* differed from the *αὐτοκράτωρ* in that a general was appointed *πρύτανις* at the *ἀρχαιρεσίαι*, *αὐτοκράτωρ* with reference to a definite service; that the one had a standing, the other only a temporary superiority over his colleagues; and that the two expressions would have coincided only when one *στρατηγὸς αὐτοκράτωρ* was appointed, in which case the president of the college would undoubtedly have been selected as the general on whom these special exemptions were conferred. If Beloch's theory is valid, this president of the college was the first minister of Athens; and it is no anachronism to speak of "party" government in the sense of "ministerial" government, when we are dealing with Athenian politics.

That this "ministerial" power was realised in later times is shown by an inscription of a *στρατηγὸς ἐπὶ τὰ ὅπλα*, who records that *περιστάντων τῇ πόλει καιρῶν δυσκόλων διεφύλαξεν τὴν εἰρήνην τῇ χώρᾳ ἀποφαινόμενος αἰεὶ τὰ κράτιστα — καὶ τὴν πόλιν ἐλευθέραν καὶ δημοκρατουμένην αὐτόνομον παρέδωκεν καὶ τὰς νομὴς κυρίους τοῖς μεθ' ἑαυτόν* (*C. I. A.* ii. n. 331). For the earlier period of Athenian history, it is difficult to establish a constitutional basis for this power: yet that it existed cannot be doubted. It is shown by the language in which Pericles' position is described (Thuc. ii. 65, *στρατηγὸν εἵλοντο καὶ πάντα τὰ πράγματα ἐπέτρεψαν*: cf. Diod. xiii. 42): he was alone responsible for the conduct of affairs, and had the power to prevent the *ἐκκλησία* from assembling (Thuc. ii. 23, 2). It is true that the expression *ὁ δεῖνα καὶ συνάρχοντες* may only denote a changing presidency; and the expressions *τρίτος*, *τέταρτος*, and even *δέκατος αὐτὸς* may be explained of specially conferred powers, yet something more seems to be demanded for a position such as that of Themistocles at Salamis (Plut. *Arist.* 8), of Pericles during the last fifteen years of his life, and of Nicias in 425 B.C. (Thuc. iv. 28): in these cases a definite leadership of the college seems to be implied, however vague and conjectural may be the powers which we are enabled to attribute to such a presidency.

(Gilbert, *Beiträge zur innern Geschichte Atticus im Zeitalter des Peloponnesischen Krieges*, pp. 1–72; *Handbuch der griechischen Staatsalterthümer*, i. p. 220 ff.;—Beloch, *Die Attische Politik seit Perikles*, Anhang i. pp. 265–330; Droysen, *Hermes*, ix. 1875 (*Bemerkungen über die Attischen Strategen*); K. F. Hermann, *Lehrbuch der griechischen Antiquitäten*, i. *Die Staatsalterthümer* (fünfte Auflage), §§ 123, 2; 129, 9; 148; 152; 166. On minor points see Müller-Strubing, *Aristophanes*, pp. 484 ff.; Müller, *de tempore quo bellum Pelop. initium ceperit*, p. 44.) [A. H. G.]

STRATOR. [EXERCITUS, Vol. I. p. 804 *a*.]

STRENAE (whence the French *étrennes*) were presents given on the 1st of January, as Festus says, "ominis boni causa" (cf. Plaut. *Stich.* v. 2, 24, and the precisely similar French proverb "à bon jour bonne étrenne"). The custom was supposed to be connected with the goddess Strenia, who brought good luck to the household "ab exortu fere urbis strenarum usus adolevit auctoritate Tatii regis, qui verbenas felicis arboris ex luco Streniae anni novi auspices primus accepit" (Symmach. *Ep.* x. 35): these *verbenae* are defined as laurel leaves (Lyd. *de Mens.* iv. 4). The custom is described in Ovid (*Fast.* i. 185 ff.). Some of the actual presents still exist: a cup with the inscription, "Anno novo faustum felix tibi" (Orelli, 4306); a lamp with the same (Id. 4307). Coins also were given, and a gold coin was the best of omens in Ovid's time (*Fast.* i. 221): the poorer client brought a copper coin, and, to represent the gold, a gilded date (Mart. viii. 33, xiii. 27).

New year's gifts were presented to Augustus in the Capitol, even when he was absent (Suet. *Aug.* 57; cf. Dio Cass. liv. 35). [VOTORUM NUNCUPATIO.] The person who received such presents was accustomed to make others in return (*strenarum commercium*); but Tiberius, who did not like the custom on account of the trouble it gave him, and also of the expense in making larger presents in return, frequently left Rome at the beginning of January, that he might be out of the way (Dio Cass. lvii. 8), and also forbade any such presents to be offered him after the 1st of January, as he used to be annoyed by them during the whole of the month (Suet. *Tib.* 34; Dio Cass. lvii. 17). The custom, so far as the emperor was concerned, thus seems to have fallen almost entirely into disuse during the reign of Tiberius. It was revived again by Caligula (Suet. *Cal.* 42; Dio Cass. lix. 24), but abolished by Claudius (Dio Cass. lx. 6); it must, however, have been restored afterwards, as we find it mentioned as late as the reigns of Theodosius and Arcadius (Auson. *Ep.* xviii. 4; Cod. Just. 12, 48; Gothofred. *ad Cod. Theod.* 7, 24, 1).

The festival is inveighed against as pagan by Christian writers (Augustin. *Serm.* 198, 2; Tertull. *de Idol.* 10. Other passages will be found in Graevius, *Thesaur.* xii. p. 409 ff., *strenarum historia*); but it lasted long, and still existed to be condemned by the Quinisextan Council at Constantinople ("Concilium in Trullo"), A.D. 692, if indeed we should not say that the French *étrennes* preserve the custom as well as the name.

On the strenae, see also Marquardt, *Staatsverwalt.* iii. 266; *Privatl.* 251.

[W. S.] [G. E. M.]

STRIAE. [COLUMNA, Vol. I. p. 490 *b*.]

STRIGA. [CASTRA, Vol. I. p. 381.]

STRIGIL. [BALNEAE, Vol. I. p. 278.]

STRO'PHIUM. Greek women wore in place of a corset a large variety of bands and straps, which were bound round the breast either under or over the shift. The names *στρόφιον*, *ζώνιον*, *ἀπόδεσμος*, and even *ταινία* and *μίτρα*, were given to these; but in all the meaning is general, and has no reference to their special purpose. Even *στρόφιον* is used by Athenaeus (xii. p. 543 f.) of the band which Parrhasius wore round his head. Roman matrons seem to have used a kind of corset, the *capitium* (cf. Varro, *L. L.* v. § 131), which, from Juvenal's reference to it (v. 143) as a *thorax viridis*, must have been stiff. Younger ladies wore bands and belts, like the Greek, for the same purpose (Catull. 64, 65). To these the names *amictarium* (Mart. xiv. 149), *taenia* (Apuleius, *Met.* x. 21), *mamillare*, *strophium* (Cic. *de Har. Resp.* 21, 44), and *fascia pectoralis* (Ovid, *A. A.* iii. 274) were given. From Martial (xiv. 65) one may infer that they were usually of leather. The monuments show not only bands girt round the breast of women, but in toilet scenes women bathing are often represented in a short close-fitting vest, which seems to be the *capitium*.

A statuette from Herculaneum shows a nude female figure putting the *fascia* (ταινία) over the breasts (*Ant. di Ercolano*, vi. tav. 17, 3 = Baumeister, *Denkm.* fig. 390).

On many female statues, especially those of the later periods, bands are shown which are not so much for the purpose of supporting the bust, but to keep the folds of a voluminous under-garment from shifting. They pass over the shoulders, cross at the breast, and are brought behind and fastened at the waist. What they were called is not known.

(Becker-Göll, *Charikles*, iii. 226; *Gallus*, iii. 251; Hermann - Blümner, *Privatalterthümer*; Baumeister, *Denkmäler*, art. "Busenband," p. 366; Marquardt, *Privatleben*, p. 484; Iwan Müller, *Handbuch*, pp. 431, 876; Böttiger, *Sabina*, ii. 114.) [W. F. C. A.]

STRUCTOR. [CENA.]

STULTO'RUM FE'RIAE. [FORNACALIA.]

STUPRUM. [ADULTERIUM; INCESTUM.]

SUBLIGA'CULUM. A piece of cloth tied or wrapped round the waist and worn as an apron or loin-cloth is one of the most primitive of garments, and is found in some form or other all the world over. That it was worn in Greece in pre-historic times is shown by the hunters on the inlaid sword-blade from the fourth grave at Mycenae (cf. Schuchardt, *Schliemann's Ausgrabungen*, p. 263, fig. 227; Milchhoefer, *Anfänge*, p. 145) and other monuments of the same age. In later times it is found frequently on archaic bronzes, and on early black-figured vase-paintings, as the dress of smiths and other craftsmen, as well as of labourers (cf. the olive-gatherers on a black-figured vase, in Baumeister, *Denkm.* p. 1047). It was also worn by warriors below their armour, but only in early times, for in later times it was supplanted by the linen shirt or χιτών.

There is some difficulty in tracing the use of the garment in literature. In Homer, for instance, Euryalus the boxer in *Il.* xxiii. 683 wears a ζῶμα, which is undoubtedly a loin-cloth, taking perhaps the shape of bathing drawers; but elsewhere the use of the word is not consistent (being sometimes evidently a kind of belt: cf. Studniczka, *Beiträge*, p. 67 foll.). The fact of the matter seems to be that, owing to the comparative severity of the Greek climate, it was never used, as in the East, as a man's sole garment, except where he was engaged in very violent exercise. Thus, in early times, διαζώματα were worn at the Olympic games (Thuc. i. 6). The custom, however, fell into disuse after Orsippos (Paus. i. 44, 1), who was victor in Ol. 15 (720 B.C.), had run without (cf. *C. I. G.* 1050). In classical times the apron is better known as the characteristic garb of cook (Hegesipp. 'Αδ. i. 7), the general name being περίζωμα or περιζώστρα (see LUCTATIO, and the woodcut on page 82 *b*).

At Rome, as in Greece, the apron or loin-cloth seems to have been an older undergarment than the shirt or TUNICA. It was worn not only by men, but also by women (Mart. iii. 87, 4), and was known as the *subligaculum* (Non. p. 29, 20), *subligar*, or *campestre*. In the Twelve Tables it goes by the name of *licium* (Gaius, iii. 192, 193). Its use in imperial times was chiefly confined to servants (*succincti linteo*, Suet. *Cal.* 26), and it was indeed generally regarded as the characteristic garb of the early Republic. Thus Horace speaks of *cinctuti Cethegi* as models of heroic simplicity (*A. P.* 50; cf. Porphyrion *ad loc.*). So, too, candidates for election had it as part of their old-fashioned costume (Plut. *Coriol.* 14; *Quaest. Rom.* 49, p. 340), while ascetics, like Cato the younger, adopted it as a protest against luxury (Plut. *Cat. Min.* 6; Val. Max. iii. 6, 7). One form of the apron, the *campestre* (cf. Isid. *Orig.* xix. 22, 5), was especially used by soldiers (= περίζωμα, Dionys. Hal.), though it was scarcely sufficient to compete with the *tunica* as a protection from cold (cf. Hor. *Ep.* i. 11, 6), and was doubtless soon given up for the shirt.

Of much the same shape were the drawers worn by actors (Cic. *de Off.* i. 35, 129) and dancers, which were also used by bathers, especially ladies (Mart. *l. c.*). An illustration is given under SALTATIO, p. 594. (Furtwängler, *Archaeologische Zeitung*, 1882, p. 329; 1884, p. 167;—Daremberg and Saglio, *Dict. d'Ant.*, s. v. *Cinctus*, p. 1172; Marquardt, *Privatleben*, pp. 282, 484, 580; Iwan Müller, *Handbuch*, pp. 803, 927; Voigt, *Zwölf Tafeln*, § 169, 31.) [W. F. C. A.]

SUCCE'SSIO is a term employed by the Roman jurists when speaking of the modes in which legal rights are acquired and lost. The relation of person and right, or of right and its subject, varies with the nature of the right itself. In respect of many rights, what is essential and permanent is the person in whom they reside: the rights themselves are merely transitory attributes. But in respect of property (using that term in its widest sense) this relation is reversed. Rights of property can as a rule pass from subject to subject: so far as they are concerned it is immaterial in whom they are vested for the time being, or, as Dr. Bruns has remarked, "as the coat changes its wearer, but itself remains the same, so can the right to the coat change its subject without being changed itself." Successio is the acquisition by one person of a right or rights hitherto vested in another, but not every such acquisition: it is in fact a species of what jurists call "derivative acquisition," of which there are two kinds. In the one a person tranfers to another a portion of his own rights, as where an owner constitutes a *jus in re aliena* [SERVITUTES], such as a usufruct or a right of way, over property of his own in favour of another: here the right of the latter is acquired derivatively, but there is no successio, the owner carving as it were a right differing in orbit from his own out of his own dominium. In the other, which is successio, the right of the one party passes in its integrity to the other, of whom it is said, "Succedit in locum ejus." Here a legal relation is presupposed between the two persons, the one of whom ceases to be invested with the right *eo instanti* that it becomes vested in the other; and to the latter it cannot be (in the eye of the law) a higher, larger, or more valuable right than it was to the former: "non debeo melioris condicionis esse quam auctor meus, a quo jus in me transit," Dig. 50, 17, 175; "nemo plus juris ad alium transferre potest, quam ipse haberet," Dig. *ib.* 54. Thus in the case of the transfer of ownership by traditio, the new ownership begins when the old ownership ceases, and it only arises in case the former possessor of the thing was also owner; that is, prior ownership is a necessary condition of subsequent ownership. Without a legal relation between the two parties, the one of whom intends to transfer his right to the other, there can be no successio. For instance, if A acquires ownership in property hitherto belonging to B by usucapio, B ceases to be its owner, but there is no legal relation between A and B, and therefore no succession: the acquisition by A is original, not derivative. So, too, if B abandons property (*derelictio*) of which A takes possession with the intention of appropriating it, it becomes A's without more ado (Inst. ii. 1, 47): but here again the acquisition is original, and there is no succession. The requirement that the right should vest in the successor contemporaneously with its divestment from the other party is sometimes satisfied by a fiction, as in the succession of a heres: for though there might be a considerable interval between the death and the aditio of the inheritance, yet the latter, when once made, had by a legal fiction relation back to the moment of decease: "heres quandoque adeundo hereditatem jam tunc a morte successisse defuncto intelligitur," Dig. 29, 2, 54; "omnis hereditas, quamvis postea adeatur, tamen cum tempore mortis continuatur," Dig. 50, 17, 138.

Of successio there are two kinds. A man either succeeds to a single right or a number of single rights by themselves, which is called "singular succession:" or he succeeds to the whole property or proprietary relations of another, whereby the individual rights pass also, which is called "universal succession." The Roman phrases are somewhat different. It is said in Dig. 43, 3, 1, 13 (cf. Gaius, ii. 97), "in locum successisse accipimus sive in universitatem sive in rem sit successum:" so too we have "in eam duntaxat rem succedere" (Dig. 21, 3, 3), "in singularum rerum dominium succedere" (Dig. 29, 2, 37), "in rei tantum dominium succedere" (Dig. 39, 3, 24); "in universum jus, in universa bona" (Dig. 23, 3, 3, 1; 39, 2, 1).

In singular succession the person from whom the right passes is called the other's *auctor* (Dig. 50, 17, 175, cited above: "auctorum successio," Dig. 1, 2, 2, 13). As to the rights of which a singular succession is possible, something is said below; but the succession requires an act between the parties capable of transferring the right, whether it be mancipatio, traditio, or mere grant. The object of universal succession is a man's whole property, so far as it exceeds mere life interests, comprising *res incorporales* (*e.g.* what we term "choses in action") no less than *res corporales*, and in most cases his liabilities as well as his rights: the notion upon which it is based being usually a fictitious identity of person between the party hitherto entitled and the successor, so that the former, in relation to the object of succession, is not (as in singular succession) opposed to the latter as a disconnected person, and consequently is not here as a rule termed his *auctor*, though an instance of this (in inheritance) occurs in a constitution of Diocletian in the Codex Hermogenianus. The universal successor may very properly be regarded as and termed successor to a part of the whole, but only because it is such a part: he succeeds to the part because he succeeds to the whole. Of universal succession there is a variety of forms, of which the most important is succession upon death. On a man's decease, his heir or heirs, whether they took by civil (*heredes*) or by praetorian law (*bonorum possessores*), took his property as an ideal whole: "bona autem hic, at plerumque solemus dicere, ita accipienda sunt: universitatis cujusque successionem, qua succeditur in jus demortui, suscipiturque ejus rei commodum et incommodum. Nam sive solvendo sunt bona sive non sunt, sive damnum habent sive lucrum, sive in corporibus sunt sive in actionibus, in hoc loco proprie bona appellabuntur" (Dig. 37, 1, 3, pr.). After the Senatusconsulta Trebellianum and Pegasianum, the same occurred where an heir transferred the whole inheritance to another under a trust [FIDEICOMMISSUM]. In the other cases of universal succession the so-called *passiva* of the person succeeded (*i.e.* his liabilities) did not by the civil law pass to the successor: but by the Edict this was generally so far modified that the latter became answerable for the *passiva* so far as the *activa* (assets) went. They comprise the following:—(1) The passing of a woman in *manum mariti*: "Cum mulier viro in manum convenit, omnia quae mulieris fuerunt viri fiunt dotis nomine," Cic. *Top.* 4, 23:, "cum mulier in manum convenit, omnes ejus res incorporales et corporales quaeque ei debitae sunt coemptionatori adquiruntur, exceptis his quae per capitis deminutionem pereunt. ... ex diverso quod ea debuit quae in manum convenit non transit ad coemptionatorem ... nisi si hereditarium aes alienum fuerit: tunc enim, quia ipse coemptionator heres fit, directo tenetur jure" (Gaius, iii. 83–4); and Gaius goes on to explain that though by the civil law no liability attaches after the coemptio for debts contracted by the woman before it either to herself or the husband, yet the praetor granted *utiles actiones* against her to the creditors, who, unless she were defended, would be put in possession for purposes of liquidation of all property which they might have proceeded against at civil law, but for the coemptio. (2) The giving of an independent person by himself in adrogation: "Si paterfamilias adoptatus sit, omnia quae ejus fuerunt et adquiri possunt, tacito jure ad eum transeunt qui adoptavit" (Dig. 1, 11, 15, pr.). *Mutatis mutandis*, Gaius says precisely the same of this, in respect of debts owed by the adrogatus, as he does of *conventio in manum*. (3) *Bonorum emptio* or bankruptcy, for which see Gaius, iii. 77–81; Inst. iii. 12, pr. (4) The reduction of a free woman to servitude under the Senatusconsultum Claudianum, in which case her whole property passed with her to her new master [SERVUS, 662 *b*]. In many other cases, though the object is to transfer the whole property, it is in fact effected by the transfer of the several things—*e.g.* in gift, in the constitution of a *dos*, in the formation of a *societas*, or the sale of an inheritance by the *heres*.

There are many rights which cannot be acquired by succession at all, and others which can be acquired by universal but not by singular succession. Speaking generally, none can thus pass but proprietary rights: for instance, the rights of *patronatus* over a *libertus civis* could not be bequeathed away to an *extraneus heres*, because, properly speaking, they were personal and based on a fictitious kinship: they devolved on the issue who were in the testator's power at his death, and who were potentially possessed of them even during the ancestor's lifetime

(Gaius, iii. 58). But the *jus patronatus* over a Latinus Junianus could be so bequeathed (Gaius, *ib.*), because it was a mere property right, the freedman becoming a slave again at the moment of his decease (Inst. iii. 7, 4). Yet in some rights there may be a successio which cannot be regarded as of a proprietary nature: *e.g.* the pater can transfer his patria potestas by *datio in adoptionem*, and in some cases the guardian could assign his rights of tutela (Gaius, i. 168 *sq.*).

Real rights, such as ownership, possession, and *jura in re aliena* (with the exception of servitudes), admit of succession of both kinds: they can be transferred by the appropriate mode of conveyance *inter vivos*, and devolve at death on the heir. No servitudes can be succeeded to "singularly," and personal servitudes, being as a rule mere life interests, were generally excluded from universal succession upon death: up to the time of Justinian usus and ususfructus were destroyed by capitis deminutio of every kind, so that they could not, before his change in the law, pass upon a *conventio in manum* or *adrogatio*. Nor can there be any singular succession to obligations or rights *in personam:* if the subject of the right were really changed (by Novatio), the right itself was changed also; and if the right were assigned, there was no real change of subject, but the assignee merely exercised a right of action which remained vested in his assigner: upon this subject see Obligatio.

The terms *successio*, *successor*, *succedere* by themselves have a general meaning and comprise both kinds of succession. Sometimes they denote universal succession without any addition, though where this is so the meaning is usually clear from the context (*e.g.* Gaius, iii. 82), but generally when universal succession is intended the word *universum* or some cognate term is added. *Successio* signifies the inheritance in many passages (*e.g.* "ex testamento successionem obtinere," Cod. 6, 20, 1: cf. Cod. 2, 53, 5, 3; 7, 34, 4; 3, 36, 10), and in some even the heirs (*e.g.* "Nullam ex priore matrimonio habere successionem," Cod. 5, 9, 3, pr.; *ib.* 2): "alienas successiones proprias anteponere" (Cod. 6, 42, 30). In Dig. 28, 2, 23, 1; *ib.* 29, 4, it denotes the substitution of a remoter for a nearer heir (cf. Dig. 38, 9, 1; 50, 17, 194): and in Dig. 20, 3, 3; 20, 4, 3, pr.; *ib.* 12, 9; *ib.* 16, the substitution of a subsequent for a prior mortgagee.

(Savigny, *System*, iii. 8 *sq.*; Puchta, *Institutionen*, § 198; Hasse, *Ueber Universal und Singular-Succession*, "Archiv für civ. Praxis," v. 1; Kuntze, *Die Obligationen und die Singular-Succession im röm. Rechte*, Leipzig, 1856.) [J. B. M.]

SUDARIUM, a linen handkerchief, carried in the hand or in the *sinus*, answering to our pocket-handkerchief, but primarily intended, as the word implies, to wipe the sweat from the brow or face (Quintil. vi. 3, 60; xi. 3, 148). It was a comparatively modern introduction, when fine linen came into use at Rome, which may be placed in the time of Cicero (Cic. *Verr.* v. 56, 146; Hehn, *Kulturpflanzen*, 146): with this agree the mention of the sudarium being used by Vatinius (Quintil. *l. c.*), and the *sudaria Saetaba* (of Spanish linen) spoken of by Catullus (12, 14; 25, 7). The word is borrowed by Hellenistic writers as *σουδάριον* (Luke xix. 20), for which Pollux (vii. 71) says that the older names were *ἡμιτύβιον* (Aristoph. *Plut.* 729) and *καψιδρώτιον*. The later name at Rome was *orarium* (Vopisc. *Aurel.* 48), and other less common names are found, such as *facitergium*, *manupiarium*.

Besides its use for wiping the face, it was worn round the neck (Petron. 67; Suet. *Ner.* 51), and was in the later period (as *orarium*) waved in the circus to signify applause (Vopisc. *l. c.*, cf. *κατασείειν ταῖς ὀθόναις ἐν θεάτροις*: Euseb. *H. E.* vii. 30), for which the lappet of the toga had formerly served (Ov. *Am.* iii. 2, 74). Göll (Becker-Göll, *Gallus*, iii. 268) denies that it was used to wipe the nose, which operation, he says, was performed in "the most primitive fashion." It is difficult to prove or disprove this as a universal rule; and the passage which he cites from Mart. vii. 37 is capable of either interpretation. The word *emungo* may imply the use of a handkerchief or the hand alone, the latter probably in Plautus, and certainly in *Anth. Pal.* vii. 134, Diog. Laert. iv. 46: but it may be questioned whether the use of the pocket-handkerchief was not coming in under the Empire, and the passage in Auct. *ad Herenn.* iv. 54, 67, seems to imply this even for the late Republic: that it was so in the time of Arnobius is clear from the etymology of the word *mucinium*, which (ii. 23) he uses as = *orarium*. [G. E. M.]

SUDATO'RIUM. [Balneae.]

SUFFLA'MEN (*τροχοπέδη*, *ἐποχλεύς*), a drag to check the wheels of carriages or waggons (Juv. viii. 148, xvi. 50). It is defined by the scholiast on the former of these passages as "vinculum ferreum, quod inter radios mittitur dum clivum descendere coeperit reda:" *i.e.* it was usually a simple drag chain which locked the wheel. Rich, however, is mistaken in making the word *τροχοπέδη* an argument for its being a mere "fetter," since Athenaeus (iii. p. 99 c), who quotes that word from Herodes Atticus, and is the only authority for it, says that it was a *ξύλον διαβαλλόμενον διὰ τῶν τροχῶν*, and goes on to state that the same *ξύλον* was called *ἐποχλεὺς* by Simaristus. We must therefore suppose that the ancient drag was sometimes a drag-chain, sometimes a log of wood attached by two chains so as to check the wheel, as may be seen in waggons of the present day. We have no indication of anything like a "slipper" drag. Casaubon reads *ἐποχεὺς* in the passage of Athenaeus, but the occurrence of the word *μόχλος* in the context favours rather the other reading. [G. E. M.]

SUFFRA'GIA SEX. [Equites.]

SUFFRA'GIUM. [Tabella; Civitas.]

SUGGESTUS, SUGGESTUM mean in general any elevated place made of materials heaped up (*sub* and *gero*), and is specially applied: 1. To the stage or pulpit from which the orators addressed the people in the Comitia. [Rostra.] 2. To the elevation from which a general addressed the soldiers (Tac. *Hist.* i. 35; Caes. *B. G.* vi. 3). 3. To the elevated seat from which the emperor beheld the public games (Suet. *Jul.* 76; Plin. *Paneg.* 51), also called *cubiculum*. [Cubiculum.] [W. S.]

SUGGRUNDA'RIUM. [Sepulcrum.]

SUI HERE'DES. [Heres, Vol. I. p. 952.]

SULPURA'TA. [Igniarium.]

SUMPTUA'RIAE LEGES. Sumptuary laws are those by which a state attempts to restrict the expenditure of its individual members. Occasionally regulations of this kind were inherent in the very structure of states of the ancient world, as was the case at Sparta; but more often their necessity was first felt in the later period of a nation's history, when conquest or commercial contact with the outer world had raised the standard of comfort of the people and had created new wants and desires. This is a necessary consequence of advancing civilisation; but, as Roscher says, "There is a limit at which new or intensified wants cease to be an element of higher civilisation, and become elements of demoralisation" (Roscher, *Polit. Econ.* ii. p. 221, E. T.), and this was the standpoint on which the ancient world based its sumptuary legislation. The main object of it was to effect an equalisation, regulated by some standard, in individual life; and although the definite aim at preserving a normal life amongst the citizens was most marked in Greek politics (Arist. *Pol.* ii. 9, 6; v. 11, 8;—Thuc. i. 6, 4), yet this attempt at *exaequatio* was also an element in sumptuary legislation at Rome (Liv. xxxiv. 4). Other objects were to preserve the financial resources of the state, mainly in accordance with the mercantile theory of ancient economic legislation (Tac. *Ann.* ii. 54), to prevent the aggressions of the rich against the poor from the *avaritia* which was a necessary consequence of *luxuria* (Liv. xxxiv. 4), and to banish the jealousies and consequent dangers which the glaring contrast between the lives of rich and poor inevitably fostered in a city state (Arist. *Pol.* iv. 11, 6 and 7; v. 9, 13;—Liv. *l. c.*). Sometimes this legislation attempted to remove definite moral evils, such as drunkenness and other forms of sensuality, from the community, in which they were felt to be growing up (Macrob. iii. 17, 4). The censorship at Rome, and institutions with similar moral functions corresponding to it in the Greek states, were often employed for the restriction of luxury (Arist. *Pol.* iv. 15, 13; Gell. xvii. 21, 39).

The sumptuary legislation of Greece was contained for the most part in the codes of the great lawgivers. A rhetra of Lycurgus is said to have forbidden the Spartans to have their houses made by any more elaborate implements than the axe and the saw (Plut. *Lyc.* 13): simplicity of food and clothing was enjoined to the male members of the population (Plut. *de San.* 12; Arist. *Pol.* iv. 9, 8): iron money was originally the only coinage in use (Plut. *Apophth. Lac. Lys.* 3), and private possession of gold and silver was forbidden even after these metals were employed for public purposes (Xen. *de Rep. Lac.* 7, 6; Plut. *Lys.* 17). By the laws of Zaleucus of Locri, we are told, the citizens of that state were forbidden to drink undiluted wine, except on the order of a physician, under pain of death (Athen. p. 429); while simplicity of dress and a limitation of the number of personal attendants were also enjoined (Diod. xii. 21). The Solonian legislation at Athens contained enactments against expensive female apparel and ornaments, particularly those given in the dowry (φερνή) of a bride (Plut. *Sol.* 20), and against expensive funerals (Plut. *Sol.* 21; Demosth. *in Macart.* p. 1071); there were also laws in force at Athens which limited the number of guests at entertainments (Athen. p. 245). Funeral regulations similar to those of Solon, we are told by Plutarch, existed in his native town of Chaeronea (Plut. *Sol.* 21).

Roman sumptuary legislation was progressive; it did not originate until a comparatively late period in the history of the state, and each law aimed at eradicating some definite and growing evil. The inefficiency of these laws and the extreme difficulty of enforcing them are amply attested (Tac. *Ann.* ii. 55; Gell. ii. 24, 3; Tertull. *Apol.* 6), but, even when recognised, were not sufficient to check further attempts in this direction. The fact that most of these laws dealt with the same subject, namely the expenses of the table, and enjoined very similar restrictions, shows how quickly each of them must have sunk into desuetude.

The earliest sumptuary regulations were those contained in the Twelve Tables limiting the expenses of funerals (Cic. *de Leg.* ii. 23). They were possibly copied from the similar regulations of Solon.

The Lex Oppia, passed in 215 B.C., provided that no woman should possess more than ½ oz. of gold, or wear a dress of different colours, or ride in a carriage in the city or within a mile of it except during public religious ceremonies. This law, which was dictated by the necessities of the Punic war, was repealed twenty years later, in 195 B.C. (Liv. xxxiv. 1–8; Val. Max. ix. 1, 3; Tac. *Ann.* iii. 33).

The Lex Orchia, passed three years after Cato's censorship, and therefore in 181 B.C., was the first law that restricted the expenses of the table. It prescribed a limit to the number of guests that might be invited to entertainments. Cato is said to have opposed its introduction (Festus, s. v. *percemetatum*), but he also opposed its repeal in a speech, fragments of which have been preserved (Macrob. ii. 13, iii. 17; Festus, s. v. *obsonitavere;* Schol. Bob. *in* Cic. *pro Sest.* p. 310; Meyer, *Orat. Rom. Fragm.* p. 91).

This was followed by the Lex Fannia. The date is fixed by Pliny (*H. N.* x. § 71) as 161 B.C., although Macrobius places this law twenty-two years after the Lex Orchia, and therefore in 159 B.C. It was passed in the consulship of C. Fannius and M. Valerius Messala, and grew out of a senatusconsultum, which enjoined that the *principes civitatis* should swear before the consuls that they would not exceed a certain limit of expense in the banquets given at the Ludi Megalenses. Afterwards a consular law was promulgated (Sammonicus Serenus *ap.* Macrob. iii. 17, 4, "ipsi consules pertulerunt"), which went further than the Lex Orchia, in that it prescribed the nature and value of the eatables which were allowed to be consumed. It permitted the expenditure of 100 asses on the Ludi Romani, the Ludi plebeii, and the Saturnalia, and of 30 on some other festival occasions: but on all other days of the year it allowed only 10 asses to be spent. Hence Lucilius speaks of the "Fanni centussis misellos." It further forbade the serving of any fowl but a single hen, and that not fattened. One of its clauses was of a protective character, since it enjoined that only native wines should be consumed (Gell. ii. 24; Macrob. iii. 17; Plin. *H. N.* x. § 71; Tertull. *Apol.* vi.).

The Lex Didia was passed eighteen years later, in 143 B.C. It was a re-enactment of the

Lex Fannia with two alterations. It included in the penalties of the law not only the giver of the feast, which violated its regulations, but also the guests who were present at such a banquet. And it extended the provisions of the Lex Fannia to all the Italici, who had been under the impression that this law applied only to Rome (Macrob. *l. c.*).

The **Lex Licinia** marks the next attempt at sumptuary legislation. It is impossible to assign any certain date to this law. It has been placed by some as late as the second consulship of Crassus and Pompey, 55 B.C. (Meyer, *Orat. Rom. Fragm.*); but Macrobius attributes it to P. Licinius Crassus Dives, and Gellius places it between the Lex Fannia and the laws of Sulla. It probably belongs either to the praetorship or to the consulship of P. Licinius Crassus, and therefore approximately either to the year 103 or to the year 97 B.C. It allowed 100 asses to be spent on the table on certain days, 200 on marriage feasts, and on certain other festivals (such as the Calends, Nones, and Nundinae) 30 asses; it fixed a limit to the amount of meat and fish that was to be consumed on ordinary days, and encouraged the consumption of garden-produce. A senatusconsultum enjoined that the law should come into force as soon as it was promulgated and before it was confirmed. Lucilius and Laevius commemorated the law, and Gellius relates that a Latin orator Favorinus spoke in support of it (Gell. ii. 24, xv. 8; Macrob. *l. c.* On the question of the date see *Dict. of Biog.*, arts. Favorinus and Lucilius).

The general neglect of the preceding laws ("legibus istis situ atque senio obliteratis," Gell. *l. c.*) caused the **Leges Corneliae** of the dictator Sulla to be passed in 81 B.C. He carried a law restricting the expenses on sepulchral monuments (Cic. *ad Att.* xii. 35 and 36) and regulating the cost of funerals, which he violated on the death of his wife Metella (Plut. *Sulla*, 35). Another law restricted the luxury of the table, allowing 30 sesterces to be spent on the Calends, Ides, Nones, the "dies Ludorum," and certain "feriae," three on all other days (Gell. *l. c.*; reading with Gronovius "tricenos" and "ternos." Hertz reads "tricentenos" and "tricenos").

A **Lex Aemilia**, which probably belongs to the consulship of Aemilius Lepidus and Q. Lutatius Catulus, 78 B.C., did not fix a fresh limit to expenses, but laid down regulations as to the kinds and quantities of food. Pliny mentions certain regulations of this kind as being embodied in a sumptuary law which he refers to the consulship of M. Aemilius Scaurus, 115 B.C. (Plin. *H. N.* viii. § 82: cf. Aurel. Victor, *de Vir. ill.* 72); and it is possible that there may have been two Aemilian laws on the subject.

The **Lex Antia**, which was subsequent to the last-named law, but cannot be dated precisely, besides limiting the expenditure on banquets, also limited the class of persons with whom a magistrate might dine out during his time of office (Gell. *l. c.*).

Next came the **Leges Juliae**. The dictator Caesar enforced the former sumptuary laws respecting entertainments, which had fallen into disuse (Dio Cass. xliii. 25; Cic. *ad Fam.* ix. 15, 5); they were not attended to during his absence (Cic. *ad Att.* xiii. 7), but, during his presence in Rome, the enforcement of them was rigorous; guards were placed round the market to seize forbidden luxuries, and sometimes dishes were taken from the tables of private individuals (Suet. *Jul.* 43). He also passed a law prohibiting the use of litters, of purple garments, and of pearls, except in the case of persons of a certain rank or age, or on certain days (Suet. *l. c.*).

The Emperor Augustus, in B.C. 22, passed laws regulating the expenses to be incurred on ordinary and festal days (Dio Cass. liv. 2, 3; Suet. *Aug.* 34). On the former an expenditure of 200 sesterces was permitted, on the latter an expenditure of 300, and on marriage festivals of 1000 sesterces; an edict of Augustus or Tiberius allowed expenses on various festivals to range from 300 to 2,000 sesterces, the increase in the permitted expenditure being allowed in the hope that this concession would secure obedience to the law (Gell. *l. c.*).

Tiberius, in spite of his distrust of the efficacy of sumptuary legislation (Tac. *Ann.* iii. 53, 54), was forced into making regulations to check the inordinate expenses on banquets (Suet. *Tib.* 34; Plin. *H. N.* xxxiii. § 8). To his reign also belongs a senatusconsultum prohibiting the use of gold plate, except in sacred rites, and preventing men from wearing silk (Tac. *Ann.* ii. 33; Dio Cass. lvii. 15, 1). Further sumptuary regulations checking the expenditure on food were made by Nero (Suet. *Nero*, 16); amongst later emperors Antoninus Pius and Marcus Aurelius regulated the expenses of gladiatorial shows (Capitol. *Vit. Antonin.* 12; *Vit. M. Ant. Phil.* 27), and the Emperor Tacitus again prohibited men from wearing silk, and forbade the wearing of gold-embroidered garments (Vopisc. *Vit. Tac.* 10). It was during the later Republic and the early Empire that luxury specially flourished, although the studied simplicity of the courts of Augustus and Tiberius must have had some influence in restraining it. After Galba began a new era of moderation, an effect which Tacitus traces to the decline of private fortunes, to the dangers attending the display of wealth, to the introduction of *novi homines* into the senate and into the best society of Rome, but principally to the influence of Vespasian, a prince "antiquo cultu victuque" (Tac. *Ann.* iii. 55). Other princes whose simplicity of life exercised an influence on the society of their times were Alexander Severus and Aurelian (Lamprid. *Vit. Sev.* 4; *Vit. Aurel.* 49).

(The *loci classici* on Roman sumptuary laws are Gellius, *Noctes Atticae*, ii. 24, and Macrobius, *Saturnalia*, iii. 17. See also Platner, *Exercit. II. de legibus sumptuariis Romanis*, Lips. 1752. On the whole subject of sumptuary legislation, see Roscher's *Political Economy*, ii. p. 220 (E. T.), and his article *Ueber den Luxus*, republished in the *Ansichten der Volkswirthschaft aus dem geschichtlichen Standpunkte.*) [A. H. G.]

SUOVETAURI'LIA, the triple sacrifice of bull, sheep, and pig, in the old Italian ritual of lustration [see Lustratio, Ambarvalia]. The word *solitaurilia* is also found, and was explained at length by Verrius Flaccus (Festus, 293 a) as having the same meaning; see on this question Jordan in Preller's *Röm. Myth.* i. 421. This sacrifice was doubtless of great antiquity in Italy, the three animals representing the most valuable stock of the old Italian farmer. We find it in what was probably its original form in Cato's treatise on Husbandry, where the ritual is given for the lustration of the farm; the animals were driven three times round the fields, and sacrificed with a prayer to Mars. Here we find not only the sacrifice of the three animals when full-grown (*majora*), but also of their young (*lactentia* or *minora*; cf. Henzen, *Acta Fratr. Arv.* p. 143). Next we have the same ritual applied to towns, as in the Amburbia and Ambarvalia, and to the lustration of the people after the census; thus Livy, describing the census of Servius Tullius (i. 44), says, "Ibi (in Campo Martio) exercitum omnem suovetaurilibus lustravit; idque conditum lustrum appellatum, quia is censendo finis erat." The victims were here driven round the host before sacrifice, as in the country round the farm. In each case the ideas lying at the root of the ritual were expiation and purification; the two being inseparable in the old Italian mind, which seems also to have conceived of these religious performances as not only effective in doing away with evil in the past, but as at the same time protective against evil in the future.

The same ritual of the triple sacrifice was applied (in later times only, we may suppose) to other religious ceremonies besides the formal lustration. Thus, in Liv. viii. 10, we find it in the *devotio* of Decius; it is here still in close connexion with Mars, in whose worship it certainly originated (see Cato, *l. c.*). So also, in the sacrifices after the winning of the *spolia opima* (Fest. 189), it is mentioned as taking place in the Campus Martius, and at the altar of Mars. But the connexion with the religion of war gradually extended its use to the worship of other deities in particular aspects: thus we find it in the triumph, offered to Jupiter and other deities (Serv. *ad Aen.* ix. 627; cf. the triumphal sacrifice on the Column of Trajan). It was indeed contrary to the old *jus pontificium* to sacrifice the suovetaurilia to Jupiter (so expressly Ateius Capito in Macrob. iii. 10, 3); and Servius (*l. c.*) mentions the triumph as the only exception to the rule. At the laying of the foundation-stone of the Capitol in Vespasian's reign (Tac. *Hist.* iv. 53) the site of the temple which was to be dedicated to Jupiter, Juno, and Minerva, was previously lustrated by the suovetaurilia; but it does not appear certain that this sacrifice had any direct reference to those deities.

It may be noted that the history of this rite runs in exactly parallel lines with that of the deity with whom it was originally and at all times specially connected. As Mars, the agricultural deity, developed a warlike aspect which eventually became the one by which he was best known; so the suovetaurilia, beginning as an agricultural rite, was later applied to warlike purposes. And as Mars gradually gave way to Jupiter and the Capitoline deities, so his ancient sacrifice came to be transferred to their worship.

Suovetaurilia. (Relief in the Louvre.)

The accompanying cut is from a fine relief now in the Louvre, formerly in Venice. The suovetaurilia is also represented on many other monuments and triumphal arches. [W. W. F.]

SUPERFI'CIES, SUPERFICIA'RIUS. The doctrine of the civil as of our own law, in respect of things attached to the soil, was that they became part of the soil itself, and so the property of its owner: "superficies solo cedit" (Gaius, ii. 73); "omne quod inaedificatur solo cedit" (Inst. ii. 1, 29). Hence, if A built on the land of B, he had no remedy against the latter if he claimed the land by *vindicatio*, unless he was in *bonâ-fide* possession of it himself, in which case, by entering the plea of *dolus malus*, he was entitled to retain possession until B would indemnify him for the expense of building it (Inst. *ib.* 30). If the land were built on land held under a lease, it acquired the name of Aedes Superficiariae (cf. Cic. *ad Att.* iv. 2, "superficies aedium"), but was in no way excepted from the general rule. "Both by Civil and Natural law," says Gaius in Dig. 43, 18, 2, "it belongs to the landowner;" though, if ejected against the terms of his agreement, the builder might of course obtain damages against the latter, but not restitution, by *actio locati*. But owing to historical reasons, as will be seen below, this species of interest became especially common at Rome; and where the right had been conceded by the landowner in perpetuity, or at least for a very long term, the praetor gave it a "real" character by entitling the person to whom it belonged both to real actions and to interdicts; a change based, according to Ulpian, on considerations of public policy: "sed longe utile visum est, quia et incertum erat, an locatio existeret, et quia melius est, possidere potius quam in personam experiri, hoc interdictum perponere et quasi in rem actionem pollieeri" (Dig. 43, 18, 1, 1). The ownership of the proprietor of the soil was not called in question, but superficies, the interest of the other party, acquired the character of a *jus in re aliena*; and in Dig. 30, 86, 4, it is actually termed *servitus*. The right of the superficiarius, whether it extended over the whole house or only over a portion of it (*e.g.* a flat, Dig. 43, 17, 3, 7), was heritable (Dig. 43, 18, 1, 7) and alienable both *inter vivos* and by will: he could assert it against any one by whom it was infringed, and not merely against the owners of the soil (Dig. 30, 86, 4; 39, 2, 19, pr.); had the fullest use of the building and the servitudes annexed to it; could pledge and create servitudes over it available for the duration of his own interest (Dig. 43, 18, 1, 6, 7 and 9; 7, 7, 1, pr.; 13, 7, 16, 2). The duties of the superficiarius were in the main determined by the disposition under which he acquired his right, and usually comprised the payment of a ground-rent (*solarium*) to the landowner (Dig. 6, 1, 74; 20, 4, 13; 43, 8, 2, 17): he also had to pay all rates and taxes with which the building as such was chargeable (Dig. 43, 18, 1, 6). For the recovery of the house, if dispossessed, he could use in their *utilis* forms all the actions which were competent to a dominus, especially vindicatio, actio Publiciana, negatoria, and confessoria (Dig. 43, 18, 1, 1, 3 and 6; 6, 1, 73, 1; *ib.* 74, 75; 6, 2, 12, 3): and against the owner of the soil he could in most cases bring also personal actions on sale or hire (Dig. 43, 18, 1, 1). That he had some sort of possession is proved by his title to interdicts, though as to its precise nature there is a difference of opinion. Some writers maintain that he had representative or derivative possession of the building and the soil as well, but this is disproved by the landowner's capacity to use the interdict Uti possidetis (Dig. 43, 17, 3, 7), for "plures eandem rem in solidum possidere non possunt" (Dig. 41, 2, 3, 5). That he could use the interdicts De vi and De precario in their direct, not *utilis* forms (Dig. 43, 16, 1, 5; 43, 26, 2, pr. and 3), establishes the view of those who attribute to him original possession of the building, and disproves that of others who credit him with a mere *juris quasi-possessio*. The praetor also gave him a special interdict De superficiebus (Dig. 43, 18, 1, pr. and 2), which was *retinendae possessionis causa*, and modelled after Uti possidetis. There is no evidence that the praetor required proof of traditio of the superficies by the dominus to the superficiarius as a condition of granting the latter his real action, though some hold that traditio was essential for the alienation of a superficies already created (cf. Dig. 43, 18, 1, 7). Of the modes in which the right of superficies originated the most important is contract with the owner of the soil, who by gift, exchange, or lease (Dig. 43, 18, 1, pr. and 3; *ib.* 2) might permit the other to build on his land. In Dig. 43, 18, 1, 1, it is said that it might also arise from sale: from which it may be inferred that it did not always originate in the superficiarius' building on *alienum solum*, but that the owner of land with a house on it might sell or let out the latter without the soil for a very long term or in perpetuity: an interest which after *causae cognitio* the praetor might treat as a superficies, it not having been his intention to ascribe civil possession and real rights to any and every lessee: "quod ait praetor .... causa cognita .... sic intelligendum est, ut si ad tempus quis superficium conduxerit, negetur ei in rem actio: et sane causa cognita ei, qui non ad modicum tempus conduxit superficiem, in rem actio competit" (Dig. 43, 18, 1, 3). Besides this, superficies might be created by a legacy in the landowner's testament (Dig. 30, 86, 4) and by adjudicatio in a *judicum divisorium*. Whether it could be acquired by usucapio is disputed: the passages bearing on the point are Dig. 6, 2, 12, 3, and 41, 3, 26.

The modes in which superficies was extinguished are substantially identical with those in which EMPHYTEUSIS determined, though it is a moot point here whether the landowner could evict the superficiarius on non-payment of solarium for two years: see Dig. 19, 2, 54, on which the affirmative opinion is based.

The prominence of superficies at Rome is commonly ascribed to the supposed fact that at one time all land belonged to the state, which refused as a general rule to grant ownership in it to individuals, but was not averse to allowing them to build on a *locus publicus* (Dig. 43, 8, 2, 17), an example of which is found in the assignment of the Aventine to the plebs by the Lex Icilia, B.C. 456 (Dionys. x. 31, 32: cf. Puchta, *Institutionen*, § 244, note e). If this was its origin, there is no doubt that when private property in land was recognised the precedent was largely followed by municipal corporations (of which there is a good instance in an inscription of A.D. 193 in Orelli's *Inscriptiones*, i. No. 39; Bruns, *Fontes*, p. 91: cf. *Zeitschrift für g. R.* xi. 219–238, xv. 335–341) and individuals; so that in later times it was common at Rome for the ground on which Insulae were built to remain the property of the owner of the soil, while other persons had a jus superficiarium in the different stories, in respect of which a rent was paid by them to him.

(Gaius, ii. 73–75; Dig. 43, 18; Niegolewski, *de jure Superficiario*, Bonn, 1848; Rudorff, *Beitrag zur Geschichte der Superficies*, "Zeitschrift für g. R." xi. 219 *sq.*; Schmid, *Handbuch*, ii. pp. 57 *sq.*; Degenkolb, *Platzrecht und Miethe, Beiträge zu ihrer Geschichte und Theorie*, 1867: to these may be added Wächter, *Das Superficiar- oder Platzrecht*, "Abhandlungen der Leipziger Juristen-Facultät," vol. i.) [J. B. M.]

SUPERSTI'TIO. In a certain sense, all Greek and Roman religion may be reckoned as superstition: for none of it was free from error. But it is right to make a distinction between such religious beliefs and practices as were accompanied with lofty thoughts and sound moral tendencies, and others which were merely malevolent or foolish. To the latter alone can the word "superstition" be properly applied. It is impossible, however, to draw any sharp line between religion and superstition; error lies close to truth on these difficult subjects. How far acts positively harmful, such for instance as human sacrifices, were at any time mingled with the official religion of Greece and Rome, is a question not easy to decide, nor does it form the subject of this article. [See SACRIFICIUM; OSCILLA; THARGELIA.]

Our subject here is superstition in the sense of the unlawful and guilty dealing with supernatural powers, a practice which is *ex vi termini* not religion, and of which the popular name is witchcraft. We find, it is true, in early literature the union of medicine with incantation (Hom. *Od.* xix. 457; Pind. *Pyth.* iii. 51), which lasted, though with less credence from educated men, into later times (Plat. *Charmid.* p. 155 E; *Rep.* iv. p. 426 B; Soph. *Aj.* 582, with Jebb's note; Hermann-Blümner, *Privatalt.* 355; MEDICINA): but this was beneficent action and belonged to the medical practice of the day; and moreover it was to some extent connected with a religious idea of prayer to the gods for recovery (cf. Pind. *l. c.*; Plin. *H. N.* xxviii. § 10). Of what would strictly be called witchcraft there is but rarely any mention in the great Greek authors down to the end of the 5th century B.C. There is, of course, the legendary Circe of the Odyssey: but even she is too much a goddess to be a witch; her powers are supposed rightfully to belong to her. Medea comes more near to the idea of a witch (in the ordinary stories of her, which date as early as Pherecydes and Simonides, and the author of the Νόστοι, as at least the argument to the

Medea of Euripides affirms); but Medea also is legendary, and, which also is to be noticed, she comes of a barbarous non-Greek race. The Works and Days of Hesiod is a poem in which we might certainly expect to find notice of witchcraft, if it existed in his day; but there is none. There are indeed some perfectly trivial superstitions in Hesiod, parallel to ours of the unluckiness of "spilling the salt;" but of serious superstition there is none. In Herodotus witchcraft is just mentioned (ii. 33; iv. 105; vii. 191); but in the two former passages it is mentioned in connexion with purely barbarous tribes, in the last passage in connexion with Persia. The Magi of Persia are not, properly speaking, magicians, though the word "magic," is derived from them; they are the priests of a lawful and regular worship, supposed to enjoy certain supernatural powers. Neither in Aeschylus or Sophocles, nor yet in Aristophanes, is there any mention of witchcraft, though in the last-named writer there are passages in which it might most naturally have been introduced; *e.g.* a wizard might have been one of the visitors to Peisthetaerus in the "Birds," just as the oracle-monger is; or again, in the "Clouds," Socrates might have been accused of witchcraft, whereas on the contrary he appears there as a sort of positivist. In Euripides there is mention of the γόης (sorcerer) and the ἐπῳδός (mutterer of incantations, *Hippolyt.* 1038; *Bacch.* 234); and the connexion of incantations with Asia, the "Lydian land," in the last passage, is notable, as pointing to the natural home of magic in the estimation of the Greeks. Yet the mention is of the barest, in both these passages. In Antiphon, at the very end of the 5th century, there is the charge of poisoning brought by a man against his own stepmother; and the stepmother would seem to have defended herself by alleging that she gave the poison as a "philtre," to bring back her husband's love (Antiph. Κατηγορ. Φαρμακ. 9). Here is an approximation to witchcraft, though of a mild sort. Plato, again, mentions sorcerers, *e.g.* in *Symp.* 203 D; but the extraordinarily vague mixture of words in that passage, γόης καὶ φαρμακεὺς καὶ σοφιστής ("sorcerer and poisoner and sophist") is against the view that sorcery was a well-developed or specialised occupation at that date. In another place he speaks (*Gorg.* p. 513 A) of the Thessalian women who "are said" to draw down the moon from heaven. In [Demosth.] *c. Aristogeit.* p. 793, § 79, we have what is perhaps the earliest historical instance (apart from the biblical one, 1 Sam. xxviii. 3, 9) of a woman being condemned to death on the charge of witchcraft; and here, again, the accusation of poisoning is mixed up with the more mysterious offence; though, to the common mind, poisoning was then as mysterious as witchcraft. It will be observed that the close of the 5th century, which is the date when "sorcerers" begin, however vaguely, to be mentioned as moving about *in Greece*, is exactly the era when that sincere religious belief which we find in Aeschylus and Pindar begins to fail, and scepticism, though abhorrent to the multitude, takes a somewhat wide range among inquisitive and thinking men. Pliny, indeed (*H. N.* xxx. § 1), says that a Persian, Osthanes, introduced magic into Greece about the time of the Persian wars; but even if this was so, it was but a seed that was then sown.

The superstition of the "evil eye" is perhaps first mentioned in Aristotle, *Problem.* xx. 34; though the words βασκαίνω and βάσκανος, in the sense of "to envy" or "envious," occur frequently before that date, and in very early writers. (The story of Peisistratus, given by Hesychius, and mentioned under FASCINUM, should, however, be noticed.)

It is not till we come to Theocritus, at the commencement of the 3rd century B.C., that witchcraft appears in full force, as in the well-known second idyll of that writer. (For the remedy of "spitting thrice" for the evil eye, cf. Theocr. vi. 39.) At this period, the mixture of religions over that vast area which was governed by the successors of Alexander, the weakening of each religion as a separate force, and yet the inability of men to do without them, afforded the most favourable possible *nidus* for the birth of irregular superstitions.

At Rome, magical arts are mentioned as early as the laws of the Twelve Tables, which forbid the "charming-away" of another person's crops (cf. Seneca, *Quaest. Nat.* iv. 7, "et apud nos in xii tabulis cavetur ne quis alienos fructus excantassit;" also Apuleius, *de Magia*, 47; Pliny, *H. N.* xxviii. § 17). In B.C. 329, we find a large number of Roman matrons accused and condemned of the practice of poisoning, and perhaps witchcraft as well (Liv. viii. 18: the words *recondita alia* should be noticed): the first time, Livy says, that the offence of poisoning was known in Roman history. He adds, that it was regarded as a prodigy, and as a frenzy on the part of the guilty persons; and to avert similar catastrophes in future, a dictator was appointed, who drove a nail into the right-hand wall of the Temple of Jupiter Optimus Maximus (this *place* is mentioned in vii. 3, where the custom is first recorded),—an ancient rite, originally adopted as a method of computing time, but afterwards employed superstitiously, as a means of warding off diseases bodily or mental. (See also Liv. ix. 28; Plin. *H. N.* xxviii. § 63.)

All through Roman history we find *amulets* worn to avert the malign influence of witchcraft, or of the evil eye [AMULETUM; FASCINUM]: but this difference is noticeable between earlier and later times, that in the earlier times the amulet bears the symbol of the indigenous gods of Italy (Picumnus, Carna, &c.), whereas in the later times all sorts of foreign gods, Oriental and Egyptian, are indicated upon them.

It is when we come to the closing years of the Roman republic, and to the times of the emperors, that we find the most extraordinary development of magical arts which the ancient world affords. The irreligious character of the art is then vividly borne in upon us by the fact that the magician threatens, instead of supplicating, the demons which he invokes (Lucan, vi. 441–492). It is impossible to doubt that at this period attempts were made to injure enemies, and to obtain private advantages, through supernatural means, in such a way as to exhibit magic as a really malevolent, if not also a maleficent, practice. Any injury which it really effected must have been through the fascination which it exerted on its victims; and perhaps such an instance as that in *C. I. L.* viii. 2756 may be of this sort: "Eunia hic sita est Fructuosa. . . . Quae non ut meruit ita mortis sortem retulit. Carminibus defixa jacuit per tempora multa, ut ejus spiritus vi extorqueretur [prius] quam naturae redderetur; cujus admissi vel Manes vel Di caelestes erunt sceleris vindices." It is certain that savage tribes have often supplied examples of the disastrous weakness here supposed. Numerous tablets of contents similar to the above have been found (*C. I. G.* 538, 539, 1034, 5858^b: in Newton's *History of Discoveries at Halicarnassus, Cnidus, and Branchidae*, ii. 719, and others). The method of witchcraft implied in the words "carminibus defixa" in the last-quoted passage speaks for itself. Other methods were, the writing of the name of obnoxious persons on tablets, and marking them with magical signs and characters; the forming of waxen images of a person, and causing them to melt away or destroying them in some other gradual manner, in order that the person himself might share the fate of the image (Verg. *Ecl.* viii. 80; Hor. *Sat.* i. 8, 32); the collection of magical herbs and animal matter: in this last we are at the point where magic touches upon poisoning. Several incantations have been recently found in Cyprus in subterranean tombs (dating probably from the 1st century A.D.), which may now be seen in the British Museum. They consist of thin strips of lead (cf. "plumbeae tabulae," Tac. *Ann.* ii. 69), on which the incantation is scratched, beginning in some such way as "*καταδέω* So-and-so, his shop and all his property." Often words of unintelligible magic jargon are inserted. The strips have been rolled up and nailed on the walls within the tomb: in some cases the material is different, papyrus or a flat piece of talc. It must be observed that the essential point was to effect an entrance into somebody's tomb, no matter whose; since the spirits would then be sure to receive the message, and work the evil. If the tablet could be placed in a temenos of the Furies, it might be laid above ground without so much trouble or risk of fine [see VECTIGALIA TEMPLORUM; TYMBORUCHIA]: but otherwise the interior of a tomb was the only sure place. The same opportunity could doubtless be utilised also for obtaining bones to place under the house of the doomed man (Tac. *l. c.*) or use in other ways (Hor. *Sat.* ii. 8, 22; cf. *Rhein. Mus.* xviii. p. 568; Wessely, *Gr. Zauberpapyrus*). Besides the malevolent aims above indicated, magic also had for its object the obtaining the love of an unwilling person, the search into futurity, and the making of gold (Plin. *H. N.* xxxiii. § 79).

Few Roman writers from Cicero's time onwards are without some mention of witchcraft. The passages in Virgil and Horace are too well known for detailed reference. In Juvenal and Tacitus the astrologers (*mathematici*) are subjects of frequent mention (Juv. vi. 562, xiv. 248; Tac. *Hist.* i. 22, &c.). The death of Germanicus (Tac. *Ann.* ii. 69 *sqq.*) is one of the most curious problems in history for the doubt which it affords as to what exactly caused the fatal result; but, if we are to believe Tacitus (*l. c.*), the enemies of the prince had recourse to magic as one of the means of removing him. The notices of magic in Lucian are well known.

Christian emperors endeavoured, as Pagan emperors had done, to put down all magical arts; but the result was by no means equal to their success in putting an end to the regular heathen worship (cf. Beugnot, *Destruction du Paganisme*, i. 243).

How far the philosophers of Greece and Rome countenanced magic has been a subject of question. Of course such persons as Apollonius of Tyana, whose life is a collection of myths, and Alexander of Abonotichos, who was an arrant knave, are not here in question. But when Pliny, for instance, affirms that Pythagoras practised magic, we must, considering all that we know of Pythagoras from other quarters, withhold our assent. Indeed, the grounds for affirming it of any true philosopher are very slight. Aristotle, according to Origen (*c. Cels.* i. p. 19), clearly rejected it. So also did the celebrated physician Galen (*de Simpl.* vi.), who laments the disposition of a certain Pamphilus to go after sorcery and incantations while picking herbs, and declares that such practices are entirely outside the art of medicine.

The principal writers who may be referred to on this subject are Tiedemann, *Dissertatio quae fuerit artium magicarum origo;* Wachsmuth, *Von der Zauberkunst der Griechen und Römer*, in the *Athenaeum* of Berlin (ii. 209 *sqq.*); Rochas d'Aiglun, *La Science des Philosophes et l'Art des Thaumaturges dans l'Antiquité*, Paris, 1882, &c.; J. A. Hild, *Étude sur les Démons . . . des Grecs*, Paris, 1881; Maury, *La Magie et l'Astrologie dans l'Antiquité*, &c., 1860; and Marquardt, *Staatsverwaltung*, iii. 108–114. To the latter book this article is much indebted. [J. R. M.]

SU'PPARUS. The *supparus*, which by writers of the Silver age was also called *supparum* (cf. Studniczka, *Beiträge*, p. 90, note 68), was a linen garment worn at Rome in the early days of the Republic. It was apparently used by both sexes, though it was a woman's rather than a man's garment (cf. Afranius, *Epist.* p. 180, ed. Ribbeck, "tace, puella non sum supparo si induta sum"). The passage which throws most light on its shape is that of Lucan, where speaking of Marcia, Cato's wife, he says:

> "Humerisque haerentia primis
> Suppara nudatos cingunt angusta lacertos."

This seems to show that the *supparus* was a form of mantle, not a long apron, as a passage in Nonius (p. 540, 8), which is probably corrupt, tells us. Unfortunately it has not yet been recognised on any monument.

From a derivation from the Oscan, which Varro mentions but rejects (*L. L.* 5, 131), it has been thought that it was borrowed from the people of that name. However this may be, there seems little doubt that it is connected with *siparum* and *σίφαρος* (a sail), and through them with *φᾶρος*. This derivation is corroborated by the fact that they are all of linen, and by the curious coincidence that *φᾶρος* also was a name both for mantles, sails, and linen cloth generally. (Studniczka, p. 90 ff.; Iwan Müller, *Handbuch*, pp. 876, 927; Marquardt, *Privatleben*, p. 484.) [W. C. F. A.]

SUPPLICA'TIO. A religious rite, or series of rites, decreed with two different objects: viz., 1, as a solemn act of thanksgiving to the gods on account of a victory or successful campaign; or 2, as an act of humiliation, on account of some calamity, actual or impending, such as pestilence or defeat, or oftener on account of the occurrence of prodigies and portents, which were supposed to threaten evil to the state.

When a supplicatio was decreed in the sense of a thanksgiving, the procedure was as follows:—The senate was consulted by a magistrate, and authorised the consuls to issue an edict fixing the number of days over which it should extend, and other necessary particulars, such as whether it should be confined to the city only, or should take place throughout the extent of the Tribus Rusticae also, or even in the allied Italian communities; and to what god or gods special adoration should be paid (cf. Liv. xxvii. 51, xxxiv. 42, xl. 28, xlv. 3; Cic. *Phil.* xiv. 14, 37, where the senatorial decree is given in full; in this last case in the absence of both consuls, as in many others, the edict is to issue from the Praetor urbanus). This method of procedure was continued even under the Empire (Mommsen, *Staatsrecht*, iii. 2, 1061, note 6).

A supplicatio, in the sense of prayer and expiation, was also set on foot by senatorial decree; but in this case the magisterial edict (*indictio*) was based on the advice of a college of priests (cf. Mommsen, *l. c.*). In simple matters of expiation the senate would refer the question to the pontifices, who decreed the necessary simple *piacula*, according to old Roman custom (Liv. xxiv. 44, 9; xxx. 38, 9), in the form of a novendiale sacrum or obsecratio (Marquardt, *Staatsv.* iii.^{3} 260); but in difficult matters, as for example where the meaning of a portent is doubtful, they refer the question to the keepers of the Sibylline books [DECEMVIRI SACRIS FACIUNDIS], who, after consulting the books, advise a supplicatio, sometimes with the addition of a fast (*jejunium*) or of a novendiale sacrum (Liv. xxxvi. 37). In one instance at least, Livy represents a supplicatio, in this case of one day only, as resulting from a decree of the PONTIFICES (Liv. xxvii. 37; cf. xxxii. 1, where he makes the *haruspices* take the place of the keepers of the Sibylline books). It does not therefore seem certain that in every instance an expiatory supplicatio was the result of an examination of the sacred books; but in the majority of cases it was so, and the ritual of the ceremony must be considered as closely bound up with the Greek forms of religious usage, introduced into Rome through the instrumentality of the books and their interpreters [see LIBRI SIBYLLINI].

The development of the rites of supplicatio in the course of Roman history cannot be traced with certainty. The elaborate ritual of the *Lectisternia*, which formed the chief part of an expiatory supplicatio, as well as (in later times at least) of those which were decreed as thanksgivings (Cic. *Phil.* xiv. 14, 37), belonged to an age in which Greek deities and Greek worship had made their way into the Roman state [see LECTISTERNIA]. All the prominent features of the *Lectisternia* were Greek: the reclining position of the images of the gods; the prostration of the worshippers, and the garlands they wore. Was there a purely Italian germ on which this foreign ritual had engrafted itself? Such a germ may perhaps be found in the Italian piaculum or expiatory sacrifice, which was capable of being extended in length and importance in the case of either periodical lustration or of alarming prodigia, and was often accompanied by processions and other rites, as we see it in the great ritual inscription of Iguvium (Tab. vi. Bücheler, *Umbrica*, pp. 42 foll.). Some even of the features of the *lectisternia* may possibly be traced to an Italian origin (Preller, *Röm. Myth.* i.^{3} 150): Varro, *e.g.*, tells us (*ap.* Serv. *ad Aen.* x. 76) that at the birth of a child a couch was spread in the atrium of the house for Picumnus and Pilumnus—deities whose antiquity is some guarantee for that of the practice; and in the domestic worship of the Lares it was customary to set apart for them a part of each meal, and to use wine, incense, and garlands (Marquardt, iii. 128). Again, the obsecratio, which often formed a part of the general ritual of the supplicatio (as in Liv. iv. 21, 5; xxvii. 11), and which consisted of a formal prayer led by the priests and repeated by the people, in contradistinction to the prayers and prostrations of the *Graecus ritus*, where everyone prayed on his own behalf, betrays a genuine Italian character. But as the Greek spirit entered more and more into religious usage, not only the ordinary features of the *lectisternia*, but elaborate processions of singing virgins, and other such rites as are described in Liv. xxvii. 37, were added to the ordinary ceremony of the supplicatio.

A supplicatio in early times lasted from one to five days (Liv. iii. 63, 5; v. 23; x. 23; xxi. 8). Later on, in proportion as it lost the reality of its religious meaning, its length increased to ten, fifteen, twenty, and even fifty days; but in these cases it seems always to have been a ceremony of thanksgiving, and not of expiation. A supplication of ten days was first decreed in honour of Pompeius at the conclusion of the Mithridatic war (Cic. *de Prov. Cons.* 11, 27), and one of fifteen days after Caesar's victory over the Belgae, an honour which Caesar himself says had never been granted to anyone before (Caes. *B. G.* ii. 35). Later a supplicatio of twenty days was decreed after his conquest of Vercingetorix (*B. G.* vii. 90). From this time the senate seems to have frequently increased the length out of mere compliment to the general (Dio Cass. xliii. 14 and 42; Cic. *Phil.* xiv. 14, 37). In these cases it was of course impossible that all the days should be public holidays [FERIAE]; nor does it seem likely that at any period a supplicatio necessarily implied a holiday (Liv. iii. 5; xl. 28). A supplicatio was in the last age of the Republic usually regarded as a prelude to a triumph, but it was not always followed by one, as Cato reminds Cicero in a letter, after a supplicatio had been decreed in his honour during his proconsulship in Cilicia (Cic. *ad Fam.* xv. 5). The same honour was conferred upon Cicero on account of his suppression of the conspiracy of Catiline; this being the first occasion on which it had been awarded to any one acting in a civil capacity [TOGATUS], as he frequently takes occasion to mention (*Cat.* iii. 6, 10; *in Pis.* 3, 6; *Phil.* ii. 6, 13). [W. W. F.]

SYCOPHANTES (*συκοφάντης*). Plutarch (*Sol.* 24) explains *συκοφαντεῖν* as the informing against a man for exporting figs, and refers to an ancient law forbidding the export. [Different reasons have been suggested for this prohibition: some say that the Athenians wished to keep this fruit to themselves (Ister *fr.* 35=Athen. iii. p. 74 e); others that the law was passed at the time when the fruit had only just been discovered (Schol. Plat. *de Rep.* i. p. 340 D; Photius and Suid. *s. v.* *συκοφαντεῖν*: cf. Schol. Aristoph. *Plut.* 874), probably in order to increase its cultivation in Attica.] Boeckh (*Sthh.* i.^{3} p. 55) prefers to connect *συκοφαντεῖν* with information against the stealing, not the exporting of figs, and suggests that the term may either have arisen out of charges brought by informers against persons who in some time of famine had robbed the sacred fig-trees, or that, since the theft of fruit in general was punished with great severity at Athens (Alciphr. *Epist.* iii. 40), it was in time applied to all those who brought such charges, which came to be looked upon as vexatious and harsh. Lancelot Shadwell (in a commentary on Luke iii. 14) rejects these explanations: "The first and obvious meaning of *συκοφάντης* is not one who shows up them that export figs or steal figs, but one *who discovers figs.*" Starting from Photius' explanation of *σεῖσαι* as *συκοφαντῆσαι*,—*ἀπὸ τῶν τὰ ἀκρόδυα σειόντων. Τηλεκλείδης Ἀμφικτύοσιν· ἀλλ' ὡς πάντων ἀστῶν λῷστοι σεῖσαι καὶ προσκαλέσαντες παύσασθε δικῶν ἀλληλοφάγων* (Mein. *Fr. Comic.* ii. p. 364). *Ἀριστοφάνης Δαιταλεῦσιν· ἔσειον· ἤτουν χρήματ' ἠπείλουν πάλιν ἐσυκοφάντουν* (ii. p. 1040, *fr.* 20),—he supposes "that the usage of *σείειν* in the sense of extorting money was derived from the notion of shaking fruit trees, and that the common notion of *συκοφαντεῖν* was also derived from the same source. *Σείειν καὶ συκοφαντεῖν* (Antiph. *de Saltat.* § 43) describes the operation of one who shakes a fig-tree in order to discover the fruit; for by his shaking the fig-tree, all the ripe figs are made to fall off. When these words are transferred to the business of an informer, *σείειν* means to agitate a man by threatening to inform against him, and *συκοφαντεῖν* means to discover his money; *i.e.* to make him pay a large sum of money in order to escape from the vexation of a lawsuit. Thus a man's money is called his 'figs,' a rich man is said to be 'full of fruit,' one who bleeds easily is said 'to be ripe,' and to extort money from a man is called 'plucking his figs': *e.g.* Aristoph. *Equ.* 324, 259, etc." *

Whatever the term may have signified originally, it came to be applied to all ill-natured, malicious, groundless, and vexatious accusations; it is defined by Suidas, *τὸ ψευδῶς τινὸς κατηγορεῖν*.

Sycophantes, in the time of Aristophanes and Demosthenes, designated a person of a peculiar class, not capable of being described by any single word in our language, but well understood and appreciated by an Athenian. He had not much in common with our *sycophant*, but was a happy compound of the *common barretor*, *informer*, *pettifogger*, *busybody*, *rogue*, *liar*, and *slanderer*. The Athenian law permitted any citizen (*τὸν βουλόμενον*) to give information against public offenders, and prosecute them in courts of justice (Plut. *Sol.* 18). This was done to encourage the detection of crime, and a reward (*e.g.* *τὰ ἡμίση τῶν φανθέντων*, [Dem.] *c. Theocr.* p. 1325, § 13; *C. I. A.* ii. No. 203 b, etc.;—*τὰ τρία μέρη ἃ ἐκ τῶν νόμων τῷ ἰδιώτῃ τῷ ἀπογράψαντι γίγνεται*, Dem. *c. Nicostr.* p. 1247, § 2, etc.) was frequently given to the successful accuser. Such a power, with such a temptation, was likely to be abused, unless checked by the force of public opinion, or the vigilance of the judicial tribunals. Unfortunately, the character of the Athenian democracy—and we may say of any democracy, Plut. *Timol.* 37—and the temper of the judges, furnished additional incentives to the informer (Isocr. *c. Callim.* §§ 9, 10; Xenoph. *Mem.* iv. 8, 5; see, however, Hyper. *pro Eux.* c. 45). Eminent statesmen, orators, generals, magistrates, and all persons of wealth and influence, were regarded with jealousy by the people. The more causes came into court, the more fees accrued to the judges, and fines and confiscations enriched the public treasury. The prosecutor therefore in public causes, as well as the plaintiff in civil, was looked on with a more favourable eye than the defendant, and the chances of success made the employment a lucrative one (*ἐγγλωττογαστόρων γένος*, Aristoph. *Av.* 1695 ff.; *ζῆν ἐκ τοῦ συκοφαντεῖν*, Isocr. *de Permut.* § 164; Xenoph. *Hell.* ii. 3, 12, etc.). It was not always necessary to go to trial, or even to commence legal proceedings. The timid defendant was glad to compromise the cause, to escape the annoyance and anxiety of a public trial, or to save his reputation, for not to have prosecuted nor to have been prosecuted was a much-coveted distinction (Lys. *de Affect. Tyran. Apol.* § 3; Isocr. *c. Euthyn.* §§ 5, 8; Plut. *Comp. Nic. c. Crasso*, 1; Lys. *c. Eratosth.* § 4, *pro Mantith.* § 12; Isae. *Cleon.* § 1; Hyperid. *pro Lycophr.* c. 14, etc.). When Lycurgus bought off an information for a talent, and was charged with this, he said he was much pleased that, after having administered the affairs of the state for so long a time, he was accused rather of giving than of receiving ([Plut.] *Vitt. X. Oratt.* p. 842 B). Rich people who were especially the prey of these informers tried to be on good terms with them (*θεραπεύειν*, Xenoph. *Symp.* 4, 29 f.). When Crito complained to Socrates, that for a man who wished to mind his own business it was difficult to live at Athens,—that at this very time people were bringing actions against him, not because they had suffered any wrong from him, but because they thought that he would rather pay them a sum of money than have the trouble of law proceedings,—Socrates advised him to secure the services of a man skilled in the law, to defend him against them; Crito did so and lived henceforth in peace (Xenoph. *Mem.* ii. 9). There was another source of income for these sycophants: they laid informations against people for money, *e.g.* Cephisius received 1000 drachmas from Callias for laying an information against Andocides (Andoc. *de Myst.* § 121). Thriving informers found it not very difficult to procure

---

* A quite different explanation is suggested by Zenodorus (*τῶν περὶ συνηθείας ἐπιτομὴ* in Miller, *Mélanges de Littérature grecque*, p. 412): *φιλοτιμίαν οὖν ἔχοντες οἱ Ἀθηναῖοι εἰς τὸ πρῶτοι* (l. *πρῶτον*) *αὐτοὶ λαβεῖν σῦκον, καὶ πρὸς ἀγαθοῦ οἰωνοῦ τοῦτο τιθέμενοι εἰς τοὺς ἀγροὺς ἐπεσκόπευον καὶ εἰς τὰς συκᾶς ζητοῦντες τί πέπειρόν τις ἴδοι· καὶ τὸ μὲν πρῶτον συκοσκόπος ἐκλήθη ὁ θεωρήσας αὐτὸ πρώτως, ὕστερον δὲ συκοφάντης, ἀπὸ τοῦ φῆναι τὸ σῦκον καὶ ἄλλοις δεῖξαι. ὁ γοῦν περιέργως ἔχων περὶ τοὺς ἀλλοτρίους βίους καὶ σκοπεύων καὶ ἐμφανίζων συκοφάντης ἐκλήθη.*

witnesses: according to Theopompus (Athen. vi. p. 254 b), Athens was full of *διονυσοκολάκων... ἔτι δὲ ψευδομαρτύρων καὶ συκοφαντῶν καὶ ψευδοκλητήρων*. The character of the *συκοφάνται* will be best understood by the examples and descriptions found in the Attic writers. Aristophanes directs the keenest edge of his satire against them. (See particularly *Acharn.* 818 ff.; *Av.* 1410 ff.; *Plut.* 850 ff.) Demosthenes says: *πονηρὸν ὁ συκοφάντης ἀεὶ καὶ πανταχόθεν καὶ βάσκανον καὶ φιλαίτιον* (*de Cor.* p. 307, § 242; cf. *c. Eubul.* p. 1309, § 34). *Συκοφαντεῖν τριάκοντα μνᾶς* in Lysias (*c. Evand.* § 24) signifies "to extort thirty minas by *sycophant*-like practices." (See further Aeschin. *de F. L.* § 145; Dem. *de Cor.* p. 291, § 189, etc.) That the increase of litigation and perjury was in some measure owing to the establishment of clubs and political associations, and the violence of party spirit, may be gathered from various passages of the Attic writers (Thuc. viii. 54, *ξυνωμοσίαι ἐπὶ δίκαις καὶ ἀρχαῖς*; Dem. *c. Boeot.* i. p. 995, § 2 = ii. p. 1010, § 9, *ἐργαστήριον συκοφαντῶν*; cf. *c. Zenoth.* p. 885, § 10; *c. Pantaen.* p. 978, § 39; *c. Theocr.* p. 1335, § 42).

The Athenian law did indeed provide a remedy against this mischievous class of men. There was a *γραφὴ συκοφαντίας* tried before the Thesmothetae (Poll. viii. 88, 46; the title of Lysias' speech against Aeschines was not *περὶ συκοφαντίας*, as Diog. Laert. ii. 63 says, but *περὶ χρέως*: cf. Sauppe, *Oratt. Att.* ii. p. 251). Any person who brought a false charge against another, or extorted money by threat of legal proceedings, or suborned false witnesses to give evidence that a summons had been served (Boeckh, *Kleine Schriften*, iv. p. 4), was liable to this *γραφή*. He might also be proceeded against by *εἰσαγγελία, προβολή*, or *φάσις* (Isocr. *de Perm.* § 314; Poll. viii. 47). The trial was an *ἀγὼν τιμητός* (Lys. *c. Agorat.* § 65, a fine of 10,000 drachmas: cf. Harpocr. *s. v. παλινaίρετος*; *ἄτιμοι ἐκ συκοφαντίας*, Aeschin. *de F. L.* § 177, cf. Hyper. *pro Eux.* c. 44—according to Heraldus, *Anim.* p. 555, capital punishment was the rule, but Andoc. *de Myst.* § 20 applies to a false *μήνυσις*, not to a *γραφὴ συκοφαντίας*).* Besides this, if any man brought a criminal charge against another, and neglected to prosecute it (*ἐπεξελθεῖν*), he was liable to a penalty of 1000 drachmas, and lost the privilege of instituting a similar proceeding in future, which was considered to be a species of *ἀτιμία* ([Dem.] *c. Theocr.* p. 1323, § 5 f.; *Lex. Rhet. Cantabr.* p. 669, 20 ff.; Dem. *c. Mid.* p. 548, § 103: when a *φάσις* against a merchant was not prosecuted, the punishment of the accuser was specially severe, [Dem.] *c. Theocr.* p. 1324, § 10 f., cf. Heffter, *Ath. Gerichtsverf.* p. 199). The same consequence followed if he failed to obtain a fifth part of the votes at the trial (Dem. *c. Androt.* p. 601, § 26; p. 647, § 80, etc.) except in an *εἰσαγγελία κακώσεως* (Isae. *Pyrrh.* § 47; Dem. *c. Pantaen.* p. 980, § 46), in a charge for destroying a sacred olive (Lys. *pro Sacra Olea*, § 37), and in an *εἰσαγγελία* for political offences up to a certain time, after which the unsuccessful accuser was made liable to a fine of 1000 drachmas without incurring *ἀτιμία* (Poll. viii. 53). The time when this change took place can only be approximately fixed. The accuser was *ἀκίνδυνος* at the date of Hyperides' speech *pro Lycophr.* (c. 7, 10); but when Demosthenes was assailed in the period following the disaster of Chaeronea by every kind of legal engine that could be brought to bear upon him, the accuser became liable to a penalty (and this was most likely the one mentioned by Pollux and Harpocration, viz. 1000 drachmas), or Demosthenes' prominent mention of the fact of his accusers having not received *τὸ μέρος τῶν ψήφων* would be pointless (*de Cor.* p. 310, § 250, *οὐκοῦν ἐν μὲν οἷς εἰσηγγελόμην ὅτε ἀπεψηφίζεσθέ μου καὶ τὸ μέρος τῶν ψήφων τοῖς διώκουσιν οὐ μετεδίδοτε*, etc.). The same fine was incurred if any man denounced a scrutiny against an orator and failed to obtain one-fifth of the votes (Dem. *c. Androt.* p. 599, § 21; p. 600, § 23). The *ἐπωβελία* in civil actions was a penalty of the same kind and having the same object: viz. to prevent the abuse of legal process, and check frivolous and unjust actions. Such were the remedies provided by law, but they were found inefficacious in practice; and the words of Aristophanes (*Plut.* 885) were not more severe than true: "There is no charm against the bite of a sycophantes" (Drumann, *d. Arbeiter u. Communisten in Griechenl.* pp. 96–105; Büchsenschütz, *Besitz u. Erwerb*, p. 568 f.; *Att. Process*, ed. Lipsius, p. 297 n. 285, pp. 413 ff., 914 f., 952 f., 245). [C. R. K.] [H. H.]

SYLAE (*σῦλαι*). When a Greek state declared war against another (Xen. *Hell.* v. 1, 1 and Schol.; Dem. *c. Mid.* p. 570, § 173; Dem. *c. Timocr.* p. 703, § 12, and Wayte's note, etc.), or when it or any of its members had received an injury or insult from some other state or some of its members, and the former was unwilling, or not in a condition, to declare open war, it was not unusual to give a commission or grant public authority to individuals (who sometimes formed a kind of company: *οἱ ἐπὶ λείαν οἰχόμενοι*, Dig. iv. *de Coll.* [ERANI]) to make reprisals. This was called *σύλας* or *σῦλα διδόναι τινὶ κατά τινος* (Dem. *c. Lacrit.* p. 931, § 26; Bekk. *Anecd.* p. 303, 27: *σῦλα δοῦναι κατὰ τῆς Χαλκηδονίων πόλεως· ἐπιγράψαι τὴν πόλιν λῃστεῦσαι*) or *λάφυρον ἐπικηρύττειν, ῥύσια καταγγέλλειν τινί* (Polyb. iv. 26, 36, 53, etc.). Suidas explains *σύλας* by *συλλήψεις* (cf. schol. Dem. *c. Lacrit.* p. 927, and *Etym. M.* s. v. *σῦλαι*). Scheibe (*Jahrb. f. class. Philol. Suppl.* i. p. 352 f.) distinguishes thus between *σῦλαι* and *σῦλα*: "*σῦλον* valere praedam ipsam, *σύλας* autem pignora quae ob pecuniam debitam auferantur (fere i. q. *ῥύσια*);" but see [Arist.] *Oecon.* ii. p. 1347 (ii. 10 Didot), *σῦλον ἔχειν κατά τινος*. Thus, when the Lacedaemonians thought the Athenians had broken the treaty with them by making incursions from Pylus, they issued a proclamation that any of their subjects might commit depredations on the Athenians (*λῄζεσθαι τοὺς Ἀθηναίους*, Thucyd. v. 115). In Lys. *c. Nicom.* § 22, we read *Βοιωτοὺς σύλας ποιουμένους*, because the Athenians were unable to repay two talents which the Boeotians had probably advanced to the Athenian exiles (for the support given to these, cf. Lys. *fr.* 78; Dinarch. *c. Dem.*

---

* Charondas ordained *τοὺς ἐπὶ συκοφαντίᾳ καταγνωσθέντας περιπατεῖν ἐστεφανωμένους μυρίκῃ* (Diod. Sic. xii 12); and Tennes, *τοῖς τὰ ψευδῆ κατηγοροῦσιν ὄπισθεν παρεστάναι τὸν δήμιον πέλεκυν ἐπηρμένον ὡς ἐλεγχθέντας παραχρῆμα ἀναιρεῖσθαι* (Suid. *Τενέδιος ἄνθρωπος*).

§ 25). Demosthenes (*de Coron. Trierarch.* p. 1232, § 13) declares that the deputy-captains of triremes so misbehaved themselves in foreign countries, plundering everybody they came near, that no Athenian could travel safely *διὰ τὰς ὑπὸ τούτων ἀνδροληψίας καὶ σύλας κατεσκευασμένας*, where *ἀνδροληψίας* refers to the arrest of the person, *σύλας* to the seizure of goods (see also *de Cherson.* p. 96, §§ 25, 28). In the *ναυτικὴ συγγραφὴ* in the speech of Demosthenes (*c. Lacrit.* p. 927, § 93), one of the conditions is that goods may be landed only *ὅπου ἂν μὴ σῦλαι ὦσιν Ἀθηναίοις*, *i.e.* wherever the Athenians have no rights of reprisal, and where therefore Athenian ships in their turn were not in danger. When any booty was taken by Athenian subjects, the people of Athens reserved to themselves the right of determining whether it was lawfully taken, whether it ought to be kept or restored, and what should be done with it (Dem. c. *Timocr.* p. 703, § 12, *ὡς ἀποχειροτονήσαθ' ὑμεῖς μὴ φίλια εἶναι*, cf. *argumentum*, p. 695 f.; Minerva of the Parthenon received the tithe, p. 741, § 129, cf. Lys. *c. Polystr.* § 24; Boeckh, *Sthh.* i.^{3} p. 399). The same practice prevailed in other cities, *e.g.* in Chalcedon: *ὑπὲρ δὲ τῶν συλῶν διεδικάσαντο· τοῖς δὲ μὴ δικαίως συληθεῖσιν ἡ πόλις ἀπὸ τῶν προσόδων ἀπεδίδου*, [Arist.] *Oecon.* ii. p. 1347. It would seem that special treaties were made between states for the protection of property against reprisals: thus the covenant between Oeanthia and Chaleion (Rangabé, *Ant. Hellén.* No. 356 b = Hicks, *Gr. Histor. Inscr.* No. 31) prevented either state from injuring foreign merchants whilst visiting the other's port, and gave moreover certain rules for the court at either city before which a foreigner who had unjustly suffered seizure might get redress (cf. *Bull. d. Corresp. hell.* ix. p. 162). Sometimes as a special privilege *ἀσυλία* was granted to individuals: *C. I. A.* ii. No. 46, cf. *C. I. G.* No. 2056, *εἴσπλουν καὶ ἔκπλουν καὶ πολέμου καὶ εἰρήνης ἀσυλεὶ καὶ ἀσπονδεί*, etc. The theatrical artists enjoyed it: cf. *C. I. A.* ii. No. 551, l. 19 ff.: *μὴ ἐξέστω δὲ μηδενὶ ἄγειν τὸν τεχνίταν μήτε πολέμου μήτε εἰρήνης μηδὲ συλᾶν πλὴν ἐὰν χρέος ἔχων πόλει ᾖ ὑπόχρεως καὶ ἐὰν ἰδίᾳ ᾖ ἰδιώτου ὑπόχρεως ὁ τεχνίτας*: l. 84, *μηδὲ συλᾶν μηδὲ ῥυσιάζειν*: cf. Le Bas, *As. Min.* No. 84, *ἀσυλία καὶ ἀσφάλεια καθὼς καὶ τοῖς Διονυσιακοῖς τεχνίταις*. The Athenian grain fleet was usually accompanied by a convoy of men-of-war to protect them against the privateers (Dem. *de Cor.* p. 251, § 77; c. *Polycl.* p. 1211, § 17). The ancient practice may be compared with the modern one of granting letters of marque. (Salmasius, *de Mod. Usur.* p. 211 ff.; R. Dareste, *Revue des Études Grecques*, 1889, p. 305 ff.; Büchsenschütz, *Besitz und Erw.* p. 543 ff.) [C. R. K.] [H. H.]

SYLLOGEIS (*συλλογεῖς*), collectors, the name of two distinct offices at Athens. 1. The *συλλογεῖς τοῦ δήμου*, or Collectors of the People, seem to have been thirty members of the senate (*βουλευταί*) chosen annually, three from each tribe; the three who were Prytanes for the time being acted as presidents. It is further conjectured with great probability that they were identical with the thirty assistants of the Lexiarchi, mentioned as checking the attendance at the assembly (ECCLESIA, p. 698 *b*; Köhler, *Mitth. des Archäol. Inst.* vii. 102 ff.; Fränkel on Boeckh, notes 394, 430). They had also duties in connexion with the state festivals. In the important inscription of 334 B.C. respecting the DERMATIKON (*C. I. A.* ii. 741, Boeckh, *Sthh.*^{3} ii. 107 ff.) they are associated with the *βοῶναι, ἐπιμεληταὶ τῶν Διονυσίων*, and *ἱεροποιοί*, and recorded to have paid in 721 drachmas from the Olympia (properly *Ὀλυμπίεια*, as in the Inscr.; cf. OLYMPIA, p. 273 *b*). 2. There were also *συλλογεῖς* appointed as special commissioners, like the *σύνδικοι* and *ζητηταί* [SYNDICUS; ZETETAE], to make lists of the confiscated property of oligarchs and bring it into the treasury (Isae. *ap.* Harpocr. *s. v.*; *Lex. Seguer.* p. 304, 4, *οἵτινες ἀπεγράφοντο τὰς οὐσίας τῶν ὀλιγαρχικῶν*). Schömann thinks that they were appointed only on one particular occasion, after the expulsion of the Thirty; and the grammarian who writes *ἀπεγράφοντο* may easily have mistaken this for a general rule (Schömann, *Assemblies*, p. 317 = 301 tr. Paley; Meier, *de Bon. Damn.* p. 206; *Att. Process*, p. 125 Lips.; cf. pp. 310, 759, 959). Boeckh does not distinguish the two kinds of *συλλογεῖς* (*P. E.* pp. 158, 215 = *Sthh.*^{3} i. 192, 272). [W. W.]

SYMBOLAEON, SYNALLAGMA, SYNTHE'CE (*συμβόλαιον, συνάλλαγμα, συνθήκη*) are all words used to signify a contract, but are distinguishable from one another. *Συμβόλαιον* is used of contracts and bargains between private persons, and peculiarly of loans of money: thus *συμβαλεῖν εἰς τἀνδράποδα* is to lend upon the security of the slaves, Dem. *c. Aphob.* p. 822, § 27, cf. Isae. *Aristarch.* § 10;—Dem. *c. Zenoth.* p. 884, § 7; *c. Phorm.* p. 907, § 1; *c. Timoth.* p. 1185, § 2; *c. Dionysod.* p. 1284, § 4). *Συνάλλαγμα* signifies any matter negotiated or transacted between two or more persons, whether a contract or anything else (Dem. *c. Onet.* p. 867, § 12; p. 869, § 21;—*c. Apat.* p. 896, § 12;—*c. Timocr.* p. 760, § 192; p. 766, § 213). *Συνθήκη* is used of more solemn and important contracts, not only of those made between private individuals, but also of treaties and conventions between kings and states (Thuc. i. 40, v. 18, viii. 37; Xen. *Hell.* vii. 1, 2; Dem. *de Rhod. lib.* p. 199, § 20; *c. Aristog.* i. p. 774, § 16, etc.). Here we may observe, that *συνθῆκαι* is mostly used in the plural, instead of *συνθήκη*, the only difference being, that strictly the former signifies the terms or articles of agreement, in the same manner as *διαθῆκαι*, the *testamentary dispositions*, is put for *διαθήκη*, *the will*. *Ξυμβολαὶ* and later *σύμβολα* (Harpocr. *s. v.*) signified originally a compact between two states, in late Greek between two private persons [SYMBOLON, DIKAI APO].

As to the necessity or advantage of having written agreements between individuals, see SYNGRAPHE. National compacts, on account of their great importance, and the impossibility of otherwise preserving evidence of them, were almost always committed to writing, and commonly inscribed on pillars or tablets of some durable material (Thuc. v. 23, 47; see Aristoph. *Acharn.* 727). Upon a breach, or on the expiration, of the treaty, the pillars were taken down (Dem. *pro Megalop.* p. 209, § 27).

For breaches of contract various actions were maintainable at Athens: (1) in a general way *συμβολαίων* (Lys. *de Pec. Publ.* § 3, *λαχὼν ὁ πατὴρ παντὸς τοῦ συμβολαίου Ἐρασιστράτῳ*), or *συνθηκῶν παραβάσεως δίκη* (Poll. vi. 153; viii. 31); (2) more specially *χρέους* (Poll. viii. 31), wherever a debt had become due by reason of some previous contract; (3) *ἀργυρίου* (Bekk. *Anecd.* p. 201, *sub fin.*;—Dem. *c. Boeot.* i. p. 1002, § 25; *c. Olympiod.* p. 1179, § 45); Callippus brought this action against Apollodorus, because the latter's father, the banker Pasion, had paid over a certain sum of money deposited with him by Lycon of Heraclea to Cephisiades instead of to Callippus, the proxenus of Heraclea. (4) *ἀφορμῆς* (Dem. *pro Phorm.* p. 943, *argument.* and p. 948, § 12: cf. Caillemer, *Le Contrat de prêt à Athènes*, p. 28 ff.). Apollodorus brought this suit against Phormio, claiming after his father's death a sum of twenty talents alleged to have been transferred to Phormio by his father as part of the working capital of the business; and (5) *βλάβης*, *e.g.* the action against Dionysodorus for the non-fulfilment of a contract ([Dem.] *c. Dionysod.* p. 1291, § 27). The main point of difference might be this: that in a general action for breach of contract, the plaintiff went for unliquidated damages, which the court had to assess; whereas, upon a claim to recover a debt or certain sum, the court had nothing more to do than to determine whether the plaintiff was entitled to it or not; the *ἀγὼν* was *ἀτίμητος*. All such actions were tried before *οἱ τετταράκοντα* (*Att. Process*, ed. Lipsius, pp. 675 f., 697 f.; p. 220 f.). [C. R. K.] [H. H.]

SY'MBOLON, DIKAI APO (*δίκαι ἀπὸ συμβόλων*). The ancient Greek states had no well-defined international law for the protection of their respective members. In the earlier times troops of robbers used to roam about from one country to another, and commit aggressions upon individuals, who in their turn made reprisals, and took the law into their own hands. Even when the state took upon itself to resent the injury done to its members, a violent remedy was resorted to, such as the giving authority to take *σῦλα*, or *ῥύσια*, a sort of national distress. As the Greeks advanced in civilisation, and a closer intercourse sprang up among them, disputes between the natives of different countries were settled (whenever it was possible) by friendly negotiation. It soon began to be evident, that it would be much better, if, instead of any interference on the part of the state, such disputes could be decided by legal process, either in the one country or the other. Among every people, however, the laws were so framed as to render the administration of justice more favourable to a citizen than to a foreigner; and therefore it would be disadvantageous, and often dangerous, to sue a man, or be sued by him, in his own country. The most friendly relation might subsist between two states, such as *συμμαχία* or *ἐπιγαμία*, and yet the natives of each be exposed to this disadvantage in their mutual intercourse. To obviate such an evil, it was necessary to have a special agreement, declaring the conditions upon which justice was to be reciprocally administered. International contracts of this kind were called *σύμβολα*, in older language *ξυμβολαί* (*C. I. A.* iv. No. 96, l. 4; ii. No. 11, l. 13, etc.), defined by Harpocration (*s. v.*) thus, *συνθῆκαι ἃς ἂν ἀλλήλαις αἱ πόλεις θέμεναι τάττωσι τοῖς πολίταις ὥστε διδόναι καὶ λαμβάνειν τὰ δίκαια*: and the causes tried in pursuance of such contracts were called *δίκαι ἀπὸ συμβόλων*. No such agreement has been preserved to us, and a few casual references by writers and some fragmentary inscriptions afford us but little information concerning the terms usually prescribed. Perhaps the most important passage on this subject is [Dem.] *de Halon.* p. 78, §§ 9–14, from which it appears (1) that such agreements in the case of Athens were ratified by a Heliastic court (under the presidency of the Thesmothetae, Poll. viii. 88; Reiske, *Ind. Graec. Dem.*, and Goodwin in *Amer. Journ. of Philol.* 1880, p. 10 ff., wrongly refer the demand of Philip for the right of *κύρωσις* not to the ratification of the agreement itself, but to a confirmation of the judgments rendered by the Athenian courts). The other contracting state was therefore compelled to send envoys to Athens with power to conclude the treaty as it was drawn up and settled by the Thesmothetae and the Heliastic court. Most of the states with whom the Athenians had to deal were content to acquiesce in this regulation. Philip, however, would not submit to it, and demanded that the terms should receive final ratification in Macedonia. Evidently his reason for this was, as is plainly stated by the orator (Hegesippus), that he might introduce in the treaty an admission on the part of the Athenians of the lawfulness of his holding Potidaea.

(2) That by such agreement there was as between the citizens of the contracting cities (and only these, cf. Polyb. xxxii. 37) reciprocity of suing and being sued (cf. Arist. *Pol.* iii. 1, 3 S., *οὐδ' οἱ τῶν δικαίων μετέχοντες οὕτως ὥστε καὶ δίκην ὑπέχειν καὶ δικάζεσθαι· τοῦτο γὰρ ὑπάρχει καὶ τοῖς ἀπὸ συμβόλων κοινωνοῦσι*; see also iii. 5 (9), 11, *σύμβολα περὶ τοῦ μὴ ἀδικεῖν*: thus the *σύμβολα* contained a special provision that a freeman should not be arrested: *μὴ ἐξεῖναι μήθ' εἶρξαι μήτε δῆσαι*, [Andoc.] c. *Alcib.* § 18).

(3) That the principle of such agreements was *causa sequitur forum rei*, i.e. the decision was given in the court of the defendant's city (Platner, *Proc. u. Klag.* i. p. 109), whilst the laws according to which the causes were decided were not those of the adjudging city, but laws made binding by the *σύμβολα* upon those who sued under them.

(4) That *δίκαι ἀπὸ συμβόλων* had the same sphere as the *δίκαι ἐμπορικαί*, and that commercial people would stand in need of them the most.

There were, however, as we learn from inscriptions, some essential points of difference between *δίκαι ἀπὸ συμβόλων* and *δίκαι ἐμπορικαί*. In the latter the suit was held in the state where the contract was made, i.e. *causa sequitur forum contractus*, and was decided by the general laws of that state, and not by the particular stipulations of the *σύμβολα*: thus a *δίκη ἐμπορικὴ* could be maintained against an Athenian on a contract made in Macedonia only if the Athenian was caught in Macedonia. This follows from *C. I. A.* ii. No. 11: suits on contracts made at Athens with Phaselitans must be tried at Athens before the Polemarch *καθάπερ Χίοις*: for all other contracts made with Phaselitans' suits must follow the terms of the *σύμβολα*, and such *δίκαι ἀπὸ συμβόλων* were under the *ἡγεμονία* of the Thesmothetae (Poll. viii. 88). Fränkel (*de Condic. jure jurisdict. soc. Att.* p. 71) and Gilbert (*Griech. Staatsalt.* i. p. 406) wrongly infer from this inscription that the rule of *σύμβολα* was *causam sequi forum contractus*; for the decree makes a special exception as regards contracts made at Athens by Phaselitans. Again, it is evident from *C. I. A.* iv. No. 61 a, l. 17 ff., that *σύμβολα* provided not only that individual citizens of the contracting states might sue one another, but also that one state might sue an individual citizen of the other state or *vice versâ* (*τοῖς ἰδιώταις πρὸς τοὺς ἰδιώτας ἢ ἰδιώτῃ πρὸς τὸ κοινὸν ἢ τῷ κοινῷ πρὸς ἰδιώτην*). In the case of an individual citizen of one state bringing a suit against another state, resort was probably had to a *πόλις ἔκκλητος* (Stahl, *de Soc. Athen. iudiciis*, p. 10. Goodwin, *l. c.* p. 8, supposes that in the *σύμβολα* as a rule such a *πόλις ἔκκλητος* was appointed; see Hicks, *Manual*, No. 149 A, § 6), *i.e.* the court of a third state was called in to decide the dispute: *e.g.* if a citizen of an allied city brought a suit against Athens, it could hardly be expected that an Athenian court would give judgment against Athens; here therefore, for obvious reasons, the rule *causam sequi forum rei* was departed from, and the decision entrusted to the court of a third city agreed upon by the two parties to the suit. (In a similar manner the claim of thirty talents made by the children of Diagoras against the people of Calymna was decided by a Cnidian tribunal, *Anc. Greek Inscr.* ed. Newton, ii. No. 299.) It was a recognised practice among the Greeks to refer disputes to the tribunal of a third state: thus the Corcyrians proposed to Corinth to refer the question of Epidamnus to any Peloponnesian cities which they both should agree upon: Thuc. i. 28, cf. v. 79, *αἰ δέ τις τῶν ξυμμάχων πόλις πόλει ἐρίζοι, ἐς πόλιν ἐλθεῖν ἅντινα ἴσαν ἀμφοῖν ταῖς πολίεσι δοκείοι*, etc.; and such causes were called *ἔκκλητοι δίκαι* (cf. Hesych. *s. v.* *αἱ ἐπὶ ξένης λεγόμεναι καὶ οὐκ ἐν τῇ πόλει*), and the city chosen by the parties to the suit *ἔκκλητος πόλις* (cf. *C. I. A.* ii. No. 308: *ἐπειδὴ τοῦ δήμου τοῦ Ἀθηναίων καὶ τοῦ κοινοῦ τοῦ Βοιωτῶν σύμβολον ποιησαμένων πρὸς ἀλλήλους καὶ ἑλομένων ἔκκλητον τὴν Λαμιέων πόλιν ἀνεδέξατο καθιεῖν τὸ δικαστήριον*, etc., Plut. *Apophth. Lacon.* p. 215 c; Aeschin. *c. Tim.* § 89, etc.). There is no evidence for Hudtwalcker's (*Diäteten*, p. 124 f.) opinion which makes a *πόλις ἔκκλητος* merely one of the two contracting cities to which a case is carried on appeal from the other, each being a city of appeal for all suits tried in the other's courts, so that *e.g.* a Rhodian in a suit with an Athenian tried at Athens could appeal to Rhodes, while an Athenian in a suit with a Rhodian tried at Rhodes could appeal to Athens. As Platner (*l. c.* i. p. 110) and Goodwin (*l. c.* p. 8) point out, the whole purpose of *σύμβολα* with their appointment of suits to be tried in either country would be frustrated if either party at his pleasure could annul the judgment in any suit and carry the case for trial before the courts of his own country.

According to the grammarians, the name *δίκαι ἀπὸ συμβόλων* was given also to the causes which the subject allies of the Athenians sent to be tried at Athens (Bekk. *Anecd.* i. p. 436, 1: *Ἀθηναῖοι ἀπὸ συμβόλων ἐδίκαζον τοῖς ὑπηκόοις· οὕτως Ἀριστοτέλης.* Hesych. *s. v.* *ἀπὸ συμβόλων· ἐδίκαζον Ἀθηναῖοι ἀπὸ συμβόλων τοῖς ὑπηκόοις, καὶ τοῦτο ἦν χαλεπόν.* Poll. viii. 62, *ἀπὸ συμβόλων δὲ (δίκη ἦν) ὅτε οἱ σύμμαχοι ἐδικάζοντο*). The fact that the Athenians had *σύμβολα* both with autonomous and subject allies is placed beyond doubt by inscriptions; *e.g.* from the words *κατὰ τὰς ξυ[μβο]λὰς αἳ ἦσα[ν πρὸ τούτου τοῦ χρόνου]*, *C. I. A.* iv. No. 96, in a decree referring to the Mytilenaeans after their reduction in 427 B.C. we may conclude that the Athenians had *σύμβολα* with them both before and after the revolt. *C. I. A.* iv. No. 61 a and ii. No. 11 (if Köhler's reading in l. 13 is correct: *κατ[ὰ τὰς πρὶν] ξυμβολάς*) show us *δίκαι ἀπὸ συμβολων* with subject allies; and Thucydides (i. 77) also refers to this class of causes (though Boeckh, *Sthh.* i.^{3} p. 476 n.; Grote, *Hist. of Greece*, v. p. 306 n.; and Goodwin, *l. c.* p. 14 f. are of opinion that *δίκαι ξυμβολίμαιοι* are not *δίκαι ἀπὸ συμβόλων*, but suits about *ξυμβόλαια* or business contracts). But *σύμβολα* involve reciprocity, and trials held under them were maintained in the courts of the defendant's city; in statements, however, like *ἐδίκαζον Ἀθηναῖοι ἀπὸ συμβόλων τοῖς ὑπηκόοις*, there is no mention of this reciprocity. However, as Morris (*Amer. Journ. of Philol.* 1884, p. 306) points out, "it would no doubt practically come to pass that most of such suits would, even by the terms of the treaties, have to be tried in Athenian courts. For in most cases the Athenians would be the defendants. The feelings with which the dominant Athenian demos, as a whole, regarded the subject allies, could hardly fail to exhibit themselves in the dealings of individual Athenians with those with whom they had commercial relations; and so it would come to pass that in the great majority of such cases it would be the citizen of an allied state who was the plaintiff, and he must necessarily, therefore, sue in an Athenian court. We may consider also that suits brought against Athenians by citizens of any one of the subject cities would all be tried at Athens; whereas the suits brought by Athenians against any citizens of their tributary states would be tried one at Rhodes, another at Phaselis, another at Samos, and so on. The judicial range, therefore, of the Athenian courts must have greatly surpassed that of the courts of any one of the allies, perhaps of all of them together; and thus, even without any formal infraction of the reciprocity implied by the existence of *σύμβολα*, the impression may easily have come to exist, which the statements quoted from the grammarians express, that it was the Athenians who decided, in accordance with the terms of the several *σύμβολα*, the commercial suits of their subjects."—Perhaps the grammarians mixed up two different sets of causes tried at Athens: viz. the *δίκαι ἀπὸ συμβόλων*—which were tried in the defendant's city, and as was but natural for the most part at Athens—and the causes of the subject allies, which were carried up for trial to Athens, after the allies had been deprived of most of their independent jurisdiction. Only by degrees did the Athenians claim this supreme jurisdiction over the members of their first confederacy. Thus, after the reduction of Chalcis in 446–5 B.C., the Chalcidians were left their own jurisdiction, with this limitation, that all offences which were punishable by disfranchisement, exile, or death were to be sent to Athens for trial (*C. I. A.* iv. No. 27 a, l. 71 ff., *τὰς δὲ* *εὐθύνας Χαλκιδεῦσι κατὰ σφῶν αὐτῶν εἶναι ἐν Χαλκίδι καθάπερ Ἀθήνησιν Ἀθηναίοις πλὴν φυγῆς καὶ θανάτου καὶ ἀτιμίας· περὶ δὲ τούτων ἔφεσιν εἶναι Ἀθήναζε εἰς τὴν ἡλιαίαν τῶν θεσμοθετῶν*, etc.; for the meaning of *ἔφεσις*, cf. *Att. Process*, ed. Lipsius, p. 990 f., and Wilamowitz-Möllendorff, *Aus Kydathen*, p. 88 f.). In the time of the Peloponnesian war, however, Athenian jurisdiction extended much further, as is evident from [Xen.] *de Rep. Athen.* 1, § 16 f., *τοὺς συμμάχους ἀναγκάζουσι πλεῖν ἐπὶ δίκας Ἀθήναζε* (cf. Athen. ix. p. 407 b). Not only were all charges of treason or hostility against Athens carried thither for trial (*C. I. A.* i. No. 38; Aristoph. *Vesp.* 282 f., *Pac.* 639 f.) and the allied cities interdicted from the power of capital punishment (Antiph. *de caed. Her.* § 47); but as appears from Xenophon's mention of *πρυτανεῖα*, civil suits also were decided by the Athenian tribunals. It is not at all probable that all the private suits between citizens of the allied cities were carried up for trial to Athens, yet with our present information it seems impossible to determine which suits were tried at Athens and which were decided in the local courts; perhaps the amount involved decided the point (see *C. I. A.* iv. No. 22 a). Probably the precise regulations were different in the case of different cities. Thucydides (i. 77) seems to refer to the two sets of causes distinguished above: *καὶ ἐλασσούμενοι γὰρ ἐν ταῖς ξυμβολιμαίαις* (Cobet, *Nov. Lect.* p. 432; Hesych. *s. v.* *ξυμβολιμαίας δίκας· Ἀττικοὶ τὰς κατὰ σύμβολα*) *πρὸς τοὺς ξυμμάχους δίκαις καὶ παρ' ἡμῖν αὐτοῖς ἐν τοῖς ὁμοίοις νόμοις ποιήσαντες τὰς κρίσεις φιλοδικεῖν δοκοῦμεν*: in the former clause he refers to the *δίκαι ἀπὸ συμβόλων* which would be tried in the courts of the defendant's city, and in these the Athenians were at a disadvantage, inasmuch as the courts of their allies usually decided against them; in the latter clause he speaks of the causes of the allies tried in Athenian courts (*παρ' ἡμῖν αὐτοῖς*) on the basis of impartial laws for both of them.

Only one cause of this kind is preserved to us, viz. the speech of Antiphon on the death of Herodes. The defendant (Helus) and the accusers, the relatives of Herodes, were citizens of Mytilene (Blass, *Att. Bereds.* i. p. 162, supposes that Herodes was an Athenian, resident as *κληροῦχος* at Mytilene). We learn nothing from this speech as to the proceedings of such a trial except that the preliminary investigation was made on the spot, as we might expect, but that the trial took place at Athens.

Grote (*Hist. of Greece*, v. p. 307 n.) supposes that *δίκαι ἀπὸ συμβόλων* between Athenians and their allies existed only under the second Athenian empire, and that the passages quoted by grammarians from Aristotle apply only to these; but the term *ὑπήκοοι* is surely inapplicable to the members of the second confederacy. (*Att. Process*, ed. Lipsius, pp. 994–1005.) [C. R. K.] [H. H.]

SYMMO'RIA (*συμμορία*). The *symmories* at Athens were, in the fourth century B.C., groupings of citizens for two main purposes—for the contribution (when required) of the war-tax (*εἰσφορά*), and for the fitting out and general supervision of ships of war (*τριηραρχία*). The obscurity of the subject, which is great, arises partly from the scantiness of the evidence, partly from the doubt how far we can assume that the groupings or symmories for the war-tax were the same as those for the navy.

I. The symmories for the war-tax came first in point of time. They were instituted at an important era of Athenian history, the archonship of Nausinicus in B.C. 378, when Athens renewed the confederacy with the islands in the Aegean, and assumed maritime sway for the second time. Of this date we are informed by Philochorus (as quoted by Harpocration, *s. v.* *συμμορία*); but it is Polybius (ii. 62) who tells us that at this time the Athenians made an entire revision and classification of their landed and personal property. Aristotle, indeed (*Polit.* v. 7, 6), implies that such revisions were frequent in Greek states; but not, clearly, on such a scale as this under Nausinicus, which was a systematisation of taxation of a kind never before attempted at Athens. The fourfold Solonic classification of Athenian citizens into Pentacosiomedimni, Hippeis, Zeugitae, and Thetes, was not necessarily abolished by the symmories; but it seems to have been of little practical importance after this date; though Dem. c. *Macart.* p. 1067, § 54, and Isaeus, *de Apollod. Hered.* § 14 (quoted by Boeckh, iv. 5), imply some retention of the old terms.

The first and most difficult question which meets us in consideration of the war-tax symmories is this. Were the 1200, who undoubtedly constituted the trierarchical symmories, also the main (or perhaps the entire) constituents of the war-tax symmories? The most recent German scholarship has answered this question in the negative; and the present writer on the whole adheres to this decision. Those who desire merely to know results may therefore pass on to the next paragraph; but meanwhile, these are the arguments for and against. For the connexion of the 1200 with the war-tax symmories, Isocrates (*de Antid.* § 145) speaks of "the 1200 who pay the war-tax and perform liturgies" (*τοὺς διακοσίους καὶ χιλίους τοὺς εἰσφέροντας καὶ λειτουργοῦντας*). It must be admitted that this is a strong argument; but Isocrates is a loose rhetorical writer, and, writing at a time when the 1200 were prominent, he may have used the term simply as synonymous with "the richest men." Isaeus, whose career is reputed to have terminated at any rate not long after the institution of the trierarchical symmories, also spoke of "the 1200" in his speech against Ischomachus (as we learn from Harpocration, *s. v.* *χίλιοι διακόσιοι*). Still, the speech against Ischomachus may have been delivered after the establishment of the trierarchical symmories, and the reference may be to these. Lastly, the commentator Ulpian, writing on a passage at the close of the second Olynthiac of Demosthenes, gives an elaborate sketch of the constitution of the war-tax symmories, affirming them to have had 1200 members. But Ulpian is demonstrably wrong in important points; for instance, he affirms that there were *two* bodies of 300 at Athens, making up 600 citizens, accounted the richest. But from the orators it is absolutely clear that there was only *one* body of 300; and Ulpian probably got his 600 from a misinterpretation of the passage on which he was commenting. Hence his authority is but small. Now for the arguments *against* the connexion. Demosthenes (*c. Meid.* p. 564, § 155), speaking after the establishment of the trierarchical symmories, refers to this measure as the first occasion when the Athenians made 1200 associates (*ὅτε πρῶτον μὲν διακοσίους καὶ χιλίους πεποιήκατε συντελεῖς ὑμεῖς*), an expression which certainly seems to imply that 1200 associates did not previously exist in the war-tax symmories. Secondly, the historian Philochorus treated of the symmories formed under Nausinicus in his fifth book, but did not treat of the 1200 till his sixth book (Harpocration, *s. vv. συμμορία* and *χίλιοι διακόσιοι*); it must be inferred that the 1200 were appointed at a later date than the original symmories. Thirdly, it seems undoubted that the whole number of citizens who paid the war-tax was more than 1200: Boeckh (iv. 9) has shown this convincingly; but yet why should 1200 citizens be appointed at all in connexion with the war-tax, if not to be the sole payers of it? They would not be separated in this definite way merely because they paid more than the rest; and they seem too many to have been appointed for the sake of the *προεισφορά*, or prepayment of the tax in times of pressing need. Fourthly, the phrase used by Demosthenes (*c. Euerg. et Mnesib.* p. 1145, § 21), in describing the appointment of the trierarchical symmories, should be noticed: "The law of Periander, in accordance with which the symmories were constituted." If the 1200 had been constituted before the law of Periander, why should they need to be constituted again by the law of Periander? for it is a most farfetched supposition to think that two different bodies of 1200 existed, each designed to contain the wealthiest citizens, one intended for the payment of the war-tax, the other for the trierarchy.

It seems therefore that the 1200 had nothing to do with the war-tax symmories. But there was another body, whose connexion with the war-tax symmories it is impossible to deny; and that is the Three Hundred, who so constantly recur in the pages of the Attic orators; whom from Isaeus (*de Philoct. hered.* § 60) we know to have been established a considerable time before B.C. 364, and who by that orator are spoken of almost as if they were the sole payers of the war-tax; an expression which we may fairly construe by Dem. *c. Phaenipp.* p. 1046, as being the sole persons bound to prepay it on behalf of others, or, in other words, under the obligation of the *προεισφορά*. But what was the connexion? Were they the "leaders of the symmories," *ἡγεμόνες συμμοριῶν*, so often mentioned? So it has often been supposed; and if it was so, then we must hold that the symmories were very large bodies, comprising the whole number of taxpaying citizens. But, though this view of the matter has something to commend it, the evidence on the whole tends to another view. The passage in the *Meidias* in which the "leaders" are mentioned (p. 565) gives the idea that they were a much smaller body than 300; and it is hardly possible to resist the impression which that passage (or rather p. 564) conveys, that Meidias was one of the 300, whereas Demosthenes distinctly states that he was not a "leader" (*ἡγεμών*). If then the Three Hundred were not the *leaders* of the symmories, what were they? Only one other conclusion seems possible; they were, themselves, the symmories. Not, of course, that they were the sole taxpayers; the bulk of the taxpaying citizens would be attached to them (*προσνενέμησθε*, Dem. *2nd Olynth.* p. 26) by the tribal tie (for we must hold true of the war-tax symmories, what from Dem. *de Symm.* p. 184 we know to be true of the trierarchical symmories, that they were tribal bodies); but distinctly, the symmories themselves were small, and not large bodies. Nor is this view at all devoid of evidence. For first, assuming that there were two symmories to each tribe, as we know (Dem. *l. c.*) that there were in the trierarchical symmories, or twenty symmories altogether; then Hyperides (*ap.* Harpocr. *s. v. συμμορία*) tells us that there were 15 men in each symmory; and 20×15=300. (It is true that Harpocration, who is puzzled by the statement of Hyperides, interprets *συμμορία* as equivalent here to *συντέλεια*, or the association of trierarchs who managed a single ship; and Lipsius agrees with this. But the terms *συμμορία* and *συντέλεια* were perfectly distinct; moreover there was no fixity in the numbers of a *συντέλεια*, and it is rather curious that while we have 5, 6, 7, 16 *συντελεῖς* mentioned as taking charge of a ship, the number 15 is nowhere mentioned in this relation.) Again, there is a passage in Dem. *c. Boeot. de Nomine*, p. 997, § 5, which clearly shows that the symmories were bodies of limited extent. The speaker, Mantitheus, who is clearly a person of considerable property, is contending against the claim of a certain Boeotus to assume the name of Mantitheus, and pointing out the inconveniences that will ensue if it be allowed; and he instances this: "In what manner will the generals enrol the name, if they enrol Mantitheus into a symmory, or appoint him trierarch?" (*τίνα δ' οἱ στρατηγοὶ τρόπον ἐγγράψουσιν, ἂν εἰς συμμορίαν ἐγγράφωσιν, ἢ ἂν τριήραρχον καθιστῶσιν;*) It is impossible to say that the war-tax symmory is not here meant, for Mantitheus runs through every possible duty which Boeotus and himself might be required to perform; and if the war-tax is not intended by this expression, it occurs nowhere in the list. Clearly, then, the war-tax symmory was a body to which Mantitheus might be appointed, but to which he did not necessarily, as a taxpaying citizen, belong. What, then, can the war-tax symmories have been, but the Three Hundred? and the form of the expression in Dem. *c. Phaenipp.* p. 1040, § 5 ("the generals were arranging the exchanges for the 300"), does at any rate very aptly correspond with this supposition.

If this be so, then the reform under Nausinicus included, besides a revision of the entire property of Athenian citizens, also the establishment of a body of Three Hundred, thirty from each tribe, every thirty being divided into two symmories of fifteen each, and the whole number being the richest men in Athens. For what purpose, then, were these Three Hundred set apart? Doubtless there would be a convenience in having the richest men in the state catalogued and known, even for the mere payment of the war-tax. But for a specific measure of this kind, some more stringent motive seems needed; and such a motive is found in the need for *pre-*

payment of the war-tax, in order that the state might obtain the money without delay. How important this prompt payment was to the state can be readily understood; and while the Three Hundred were permitted to recover from the less wealthy citizens their share of the tax in due course, the advance of the money was a real burden on themselves. The *προεισφορὰ* (by which name the prepayment was known) cannot be shown to have been in use before B.C. 378: whereas Lipsius (in *Jahrbuch der Philologie*, 1878, pp. 297–299) has given strong reasons for thinking that this advance of the war-tax became the normal method after the reform introduced under Nausinicus. And Dem. *c. Phaenipp.* p. 1046, § 25 (before referred to), is strong authority for thinking that the Three Hundred were the only persons liable to pay this advance of the war-tax. At the same time, when the Three Hundred once became an established institution, it is not necessary to suppose that the original motive which prompted their establishment was always borne in mind: thus there can be little doubt that Demosthenes in his minority (when he would not be required to advance the *προεισφορὰ*) belonged to them, just as in the trierarchical symmories there were many members who could not be called upon to discharge the office of trierarch (Dem. *de Symm.* 182, § 17).

At all events, this view gives an intelligible meaning and purpose to the war-tax symmories; while we need not deny that the reform under Nausinicus may have included other elements, as, perhaps, a fresh estimate of the ratable value of each man's property according to his wealth (in the case of the richest persons the ratable value was one-fifth of the whole, Dem. *c. Aphob.* i. p. 816, § 9); but of this we can say nothing. Nor can we absolutely say that no change was introduced into the war-tax symmories when the trierarchical symmories began (B.C. 358); but there is no evidence to this effect, unless the expression of Isocrates (*l. c.*) be regarded as evidence. At all events the opinion of Harpocration (whatever that may be worth—it occurs *s. v. συμμορία*) may be added to the evidence above given that the symmories were essentially limited bodies.

The difficulty of the whole subject is however so great, that it is desirable that a brief summary of the views previously held about it should be here given.

Ulpian considered that the members of the war-tax symmories were 1200 in number, and that they were the sole payers of the tax.

Boeckh considered that the members of the war-tax symmories were 1200 in number, but that they were not the sole payers of the tax; and apparently he regarded the re-arrangement of degrees of taxation as the real, and a sufficient, reason for the symmories altogether.

Lipsius was the first to suggest (*l. c.*) that the 1200 did not belong to the war-tax symmories at all. In substantial meaning, his view does not differ much from that which has been here given; but in nomenclature it differs. He holds that the symmories comprised the great body of taxpaying citizens, and that the Three Hundred merely stood at their head; whereas here the Three Hundred have been described as being, actually, the symmories. Nor is it clear what Lipsius thinks was precisely the object of the symmories—whether a re-arrangement of taxation, or the convenience of the prompt payment of the tax. Here the latter has been said to be the main object, through the *προεισφορά*.

II. The trierarchical symmories were established in consequence of the attempt of the Thebans upon Euboea in B.C. 358, which occasioned an urgent need for ships of war. That need was for the moment supplied by voluntary efforts (Dem. *de Cor.* 259); but this proved the starting-point of a new system, and a law was introduced by Periander (Dem. *c. Euerg.* 1145) and carried, whereby a new set of symmories, of 1200 members, was constituted expressly for the purpose of furnishing triremes expeditiously. For the working of this law, the article TRIERARCHIA must be consulted; but the constitution of the symmories must be briefly stated here, as far as we know it. First, the Three Hundred formed an important part as leading members of the Twelve Hundred (Deinarch. *c. Demosth.* § 42; and compare Aesch. *c. Ctesiph.* § 222; Hyperides *ap.* Harpocrat. *s. v. συμμορία*; and Dem. *c. Meid.* 564); the intention no doubt was that the Three Hundred should still pay the greater part of the expense of a trireme, but for a long time they managed to escape this, and to keep their own contributions down to the level of the poorer members of the Twelve Hundred, until the reform carried by Demosthenes (Dem. *de Cor.* 260, 261). Secondly, we do know with absolute certainty here that there were altogether 20 symmories (Dem. *de Symm.* 182), 2 symmories to each tribe (Id. p. 184), and 60 members to a symmory; but of the whole number of 1200 many were ineffectives (Id. p. 182). The speech of Demosthenes, *de Symmoriis*, was in part intended to correct this; but it had no practical effect. The members of a symmory (5, 6, 7, or even 16) who provided a single ship were called *συντελεῖς*, or collectively *συντέλεια*, which last word must be carefully distinguished from the *συμμορία* out of which the *συντελεῖς* were taken.

With respect to the tribal relations of the symmories, Boeckh has shown (cf. *See-Urkunden*, p. 185, and the passages there referred to) that members of different tribes might unite in the management of one ship; yet Demosthenes (*de Symm.* 184) seems to show that the tribal relation was always intended to exist, and we must remember that a tribe might sometimes be represented by a citizen not belonging to itself. Thus Demosthenes stood in a relation of peculiar alliance to the tribe Pandionis, of which he was not a member (cf. *c. Meid.* 511, 519).

It remains to say a few words on the officers of the symmories. Every symmory, whether for the war-tax or for the trierarchy, had a leader (*ἡγεμών*). It does not, however, appear that the leader had any formal duties; influence no doubt he had. Probably Boeckh is right in thinking that the person whose name is attached, in inscriptions, to the name of the symmory, was the "leader." Every trierarchical symmory had, besides the "leader," an "overseer" (*ἐπιμελητής*). That the overseer had occasionally very difficult duties in the way of recovering public property, and that he was very inefficiently supported in these duties, is obvious from Dem. *c. Euerg. et Mnesib.* passim. The "overseers" were probably the same as the "twenty," mentioned in an inscription referred to by Gilbert (*Griech. Staatsalterth.* i. p. 352, note 4) as connected with the strategi in the choice of trierarchs. Necessarily also in close connexion with the symmories were the officers called διαγραφεῖς, who drew up lists of property, and of the rates due. (Bekker, *Anecd.* 236, 9; Harpocrat. *s. v.* διάγραμμα.)

The symmories of the resident aliens (μετοικικαὶ συμμορίαι), mentioned by Pollux, viii. 144, must be dismissed with merely a reference; we can hardly be said to know anything about them.

Perhaps the powers, elective and judicial, which the generals (στρατηγοί) exercised over the symmories have not been definitely enough stated in the preceding paragraphs. It is another proof of their tribal character; for the generals were tribal officers.

For the rest, the tenor of this article has been to show that the trierarchical symmories were neither identical with, nor yet wholly distinct from, the war-tax symmories; but a development and enlargement of them. And it is to such a conclusion as this, surely, that *à priori* probability points. We have every reason to suppose that the symmories of both kinds lasted as long as Athens continued an independent state.

The principal works that may be consulted on the subject are: Boeckh, *Staatshaushaltung der Athener* (Berlin, 1886—with Fränkel's notes); the same writer's *See-Urkunden* (Berlin, 1840); Thumser, *de Civium Atheniensium Muneribus* (Vienna, 1880); Lipsius (*Jahrbuch der Philologie*, 1878, pp. 289–299); and Gilbert's *Handbuch der Griechischen Staatsalterthümer* (Leipsic, 1881). [J. R. M.]

SYMPHO'NIA (συμφωνία) is mentioned by Cic. *Verr.* iii. 44, 105; Hor. *A. P.* 574; Liv. xxxix. 10; Polyb. xxvi. 10, 5, xxxi. 4, 8 (Dind.), as being a musical entertainment at banquets. We hear also of specially-trained slaves, who were called *symphoniaci*, and were kept by rich men to provide this music (Cic. *Mil.* 21, 55; *Verr.* v. 25, 64: cf. Gell. xix. 3; Macrob. *Sat.* ii. 4, 28): in Cic. *ad Fam.* vi. 9 symphonia means a dinner so accompanied. It was one of the luxuries introduced from Asia about 187 B.C. (Liv. xxxix. 6; Marquardt, *Privatleben*, 181; Becker-Göll, *Gallus*, ii. 147, iii. 373).

There has been much difference of opinion on the question what the symphonia was, and even whether it was vocal or instrumental music. Some, as Rich, hold that it was a sort of drum. This, which is surely highly improbable when we consider its use at dinner-parties, rests on the authority of Isidore (*Orig.* ii. 21) and the lexicographer Ugutio, who follows him (see Du Cange, *s. v.*). It may be remarked on this that Isidore, writing in the 7th century, is probably interpreting a word which he finds in older writers, not describing an instrument which he had seen. On the other hand, Baumeister (*Denkm.* p. 563) connects it with the Italian *sampogna*, and considers it to be a sort of bagpipe: a view which had previously been taken by some commentators on the passages in Dan. iii., where the LXX. translates by συμφωνία the similar Hebrew word (see *Dict. of the Bible*, s. v. Dulcimer). Dr. Pusey, again, in a learned note on this passage (*Lectures on Daniel*, p. 29), holds positively that in Greek and Latin the word never meant an instrument at all, but only chorus singing; and his view might find support in Jerome on St. Luke xv., who says that some Latin writers have wrongly taken it to be an organ, whereas it means only vocal harmony. We cannot, however, be sure whether Jerome is speaking generally or only in reference to this passage.

It seems to us at any rate reasonable to demand that whatever sense is given to *pueri symphoniaci* should agree with that which we accept for symphonia. If the ordinary view is correct, that these slaves were trained singers (so Marquardt, *Privatl.* p. 337; Becker-Göll, *l. c.*), then it would follow that symphonia meant concerted vocal music. But there is, it seems to us, some evidence against this. In the passages cited above from Cicero, Horace, Livy, and Macrobius, it may safely be asserted that the sense suits vocal or instrumental music equally well; and so they bring us no nearer to a conclusion. But when we read in Cic. *Div. in Caecil.* 17, 55, that a praefectus took possession of some *pueri symphoniaci* for his fleet, it seems absolutely necessary to suppose that these were slaves trained to play the flute and distributed through the fleet, to act each as a τριηραύλης. Further confirmation of this may be gathered from the introduction of the symphonia in naval use by Prudentius (in *Sym.* ii. 527), where the glosses (as also Ven. Fortunat. in the 6th cent.) take it to be a wind instrument, whether = *tuba* or *tibia*. Again, in Plin. *H. N.* ix. § 24, "delphinus symphoniae cantu mulcetur et praecipue hydrauli," it is hard to see how it could be coupled with the hydraulus, unless it was an instrument. (The passage in *H. N.* x. § 84 is not decisive.) The same deduction may be made from Petron. 34, where "symphonia" is clearly distinguished from "chorus cantans," as it seems to be also in Cic. *Coel.* 15, 35. Lastly, in spite of Dr. Pusey's denial, it seems to us necessary, in the two passages of Polybius cited at the beginning of this article, to understand συμφωνία as a band of flute-players (the κεράτιον being distinguished from it as a sort of cornet). Whether the flute so used was a special Asiatic pattern, or whether the point which differentiated it as Eastern consisted in the flutes being so graduated as to perform concerted music, cannot be determined: if the latter, the fact of the flutes being arranged for different parts may have distinguished the symphoniaci from the tibicines. We gather from Dig. 9, 2, 22, 1, that the music was so concerted that the loss of one of the symphoniaci would render the rest comparatively valueless, and therefore the damage was estimated in regard to the depreciation of the other "corpora" also, as in the case of a matched team of horses.

A single member of the συμφωνία was probably the χοραύλης, who appears in Martial, ix. 77, as *choraules*, to avoid the awkward word *symphoniacus*. It is possible, and indeed probable, that symphonia signified also a band composed of different instruments, and not of the flute only, like the private bands in some great houses at the present day: all the evidence seems to us against its meaning a single instrument, except in very late writers (see Du Cange), where the word seems to have been adopted as the term for a flute. In an inscription (Wilmanns, 1344) we find a "Collegium Symphoniacorum" employed for public sacrifices.

The question whether the word *συμφωνία* was adopted as the nearest Greek approach to a Hebrew or Chaldaic word, or whether the Hebrew writer borrowed from the Greek, it is beyond our scope to discuss: reference may be made to *Dict. of the Bible*, and to Dr. Pusey as cited above. [G. E. M.]

SYMPHONI'ACI. [SYMPHONIA.]

SYMPHOREIS (*συμφορεῖς*). [EXERCITUS, Vol. I., p. 772 *a*.]

SYMPO'SIUM (*συμπόσιον, comissatio, convivium*), a drinking-party. 1. GREEK. The *συμπόσιον*, or the *πότος*, must be distinguished from the *δεῖπνον*: for though drinking almost always followed a dinner-party, yet the former was regarded as entirely distinct from the latter, was regulated by different customs, and frequently received the addition of many guests, who were not present at the dinner. For the Greeks did not usually drink at their dinner, and it was not till the conclusion of the meal that wreaths of flowers and wine were introduced, as is explained under CENA [Vol. I. p. 394 *b*]. Thus we read in the Symposium of Plato (p. 176 A) that after the dinner had been finished, the libations made, and the paean sung, they turned to drinking (*τρέπεσθαι πρὸς τὸν πότον*).

The enjoyment of Symposia was heightened by agreeable conversation, by the introduction of music and dancing, and by games and amusements of various kinds: sometimes, too, philosophical subjects were discussed ~~at them.~~ The Symposia of Plato and Xenophon give us a lively idea of such entertainments at Athens. The name itself shows that the enjoyment of drinking was the main object of the Symposia: wine from the juice of the grape (*οἶνος ἀμπέλινος*) was the only drink partaken of by the Greeks, with the exception of water. For palm-wine and beer [CEREVISIA], though known to many of the Greeks from intercourse with foreign nations, were never introduced among them; and the extraordinary cheapness of wine at Athens [VINUM] enabled persons even in moderate circumstances to give drinking-parties to their friends. Even in the most ancient times the enjoyment of wine was considered one of the greatest sources of pleasure, and hence Musaeus and his son supposed that the just passed their time in Hades in a state of perpetual intoxication, as a reward of their virtue (*ἡγησάμενοι κάλλιστον ἀρετῆς μισθὸν μέθην αἰώνιον*, Plat. *Rep.* ii. p. 363 D). It would appear from the Symposium of Plato, that even the Athenians frequently concluded their drinking-parties in rather a riotous manner, and it was to guard against this that such parties were forbidden at Sparta and in Crete. (Plat. *Min.* p. 320 A; cf. Aristoph. *Vesp.* 1253, and the speeches of Dem. *in Conon.* and Lys. *in Simon.*) It is curious that a distinction is preserved in the words *μεθυστικός*, applied to men, and *μέθυσος* to women, a usage which, as Mr. Rutherford remarks (*New Phrynichus*, p. 240), probably originated from an ethical cause: in the man it was more habitual, in the woman more accidental.

The wine was almost invariably mixed with water, and to drink it unmixed (*ἄκρατον*) was considered a characteristic of barbarians (Plat. *Leg.* i. p. 637 E). Zaleucus is said to have enacted a law among the Locrians, by which any one who was ill and drank of unmixed wine without the command of his physician, was to be put to death (Aelian, *V. H.* ii. 37); and the Greeks in general considered unmixed wine as exceedingly prejudicial to physical and mental health (Athen. ii. p. 38). The Spartans attributed the insanity of Cleomenes to his indulging in this practice, which he learnt from the Scythians (Herod. vi. 84). So universal was it not to drink wine unless mixed with water, that the word *οἶνος* is always applied to such a mixture; and whenever wine is spoken of in connexion with drinking, we are always to understand wine mixed with water, unless the word *ἄκρατος* is expressly added (*τὸ κρᾶμα, καίτοι ὕδατος μετέχον πλείονος, οἶνον καλοῦμεν*, Plut. *Conjug. Praec.* 20).

The proportion in which the wine and water were mixed, naturally differed on different occasions. To make a mixture of even half wine and half water (*ἴσον ἴσῳ*) was considered injurious (Athen. *l. c.*), and generally there was a much greater quantity of water than of wine. It appears from Plutarch (*Symp.* iii. 9), Athenaeus (x. p. 426), and Eustathius (*ad Od.* ix. 209, p. 1624), that the most common proportions of water to wine were 3 : 1, or 2 : 1, or 3 : 2. Hesiod (*Op.* 596) recommends the first of these, but it was generally regarded as weak (*ὑδαρής*) and fit *βατράχοις οἰνοχοεῖν* (Athen. x. p. 430 e), and 3 : 2 was the usual proportion for not intemperate drinkers.

The wine was mixed either with warm or cold water: the former, which corresponded to the *Calida* or *Calda* of the Romans [CALIDA], was by far the less common. On the contrary, it was endeavoured to obtain the water as cool as possible, and for this purpose both snow and ice were frequently employed. [PSYCTER.] Honey was sometimes put in the wine (Athen. i. p. 32 a), and also spices (Id. p. 31 e): in the latter case it received the name of *τρίμμα*, and is frequently mentioned by the writers of the New Comedy (Pollux, vi. 18). Other ingredients were also occasionally added (Athen. ii. p. 66; Lucian, *Nigrin.* 31; Aelian, *V. H.* xii. 31).

The mixture was made in a large vessel called the *κρατήρ* [CRATER], from which it was conveyed into the drinking-cups by means of *οἰνοχόαι* or *κύαθοι* [CYATHUS]. The cups usually employed were the *κύλιξ, φιάλη, καρχήσιον*, and *κάνθαρος*, of which an account is given in separate articles. The *ῥυτόν*, or drinking horn, was also very commonly used [RHYTON]. We find several craters on vases representing drinking scenes. (See, for example, *Mus. Borbon.* vol. v. t. 51.)

The guests at a Symposium reclined on couches and were crowned with garlands of flowers, as is explained under CENA. A master of the revels (*ἄρχων τῆς πόσεως, συμποσίαρχος* or *βασιλεὺς*) was usually chosen to conduct the Symposium (*παιδαγωγεῖν συμπόσιον*, Plat. *Legg.* i. p. 641 A), whose commands the whole company had to obey, and who regulated the whole order of the entertainment, proposed the amusements, &c. The choice was generally determined by the throwing of astragali or tali; but we find in Plato (*Symp.* p. 213 E) Alcibiades constituting himself Symposiarch (in Plaut. *Stich.* v. 4, 15, he is called *strategus*). The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink, and also the size of the drinking vessel. Upon those who disregarded his authority he imposed penalties, often absurd acts of buffoonery to make the victim ridiculous (Lucian, *Saturn.* 4): sometimes he ordained similar absurdities on the company generally, or special members of it with a specified penalty in default of performance (Plat. *Symp.* i. 4, 3). To such cases the "leges insanae" (Hor. *Sat.* ii. 6, 69) refer, and it is not surprising that Plato, in the passage cited from the *Laws*, desires *νήφοντά τε καὶ σοφὸν ἄρχοντα* as Symposiarch. The servants (*οἰνοχόοι* and *οἰνηροὶ θεράποντες*), usually young slaves, who had to mix the wine and present it to the company, were also under his orders; but if there was no Symposiarch, the company called for the wine just as they pleased. The dexterity of a well-trained cup-bearer in presenting the *φιάλη*, held *ἐπὶ τῶν δακτύλων ἀκρῶν*, is noticed by Poll. vi. 95; cf. *τοῖς τρισὶ δακτύλοις*, Xen. *Cyrop.* i. 3, 8. This method of holding the *φιάλη ὀμφαλωτὸς* is explained on p. 350 *a*, and is shown in the following woodcut, but it applies only to the *φιάλη*. Other cups, such as the *κύλιξ*, were often similarly filled at the crater and handed round, as may be seen in vase-paintings (Panofka, xxxiv. 2 = Guhl and Koner, fig. 201): but the more usual practice was that the guest held the cylix and the slave filled it with a small wine-jug (*οἰνοχόη*) which he had dipped in the crater and carried round the table (*Od.* ix. 10; Athen. x. p. 42; Xen. *Symp.* ii. 27; *Mon. Inst.* iii. 12).

Before the drinking commenced, it was agreed upon in what way they should drink (Plat. *Symp.* p. 176, A, B), for it was not usually left to the option of each of the company to drink as much or as little as he pleased, but he was compelled to take whatever the Symposiarch might order. At Athens they usually began drinking out of small cups (*μέτρια ποτήρια*, Athen. x. p. 431 e), but, as the entertainment went on, larger ones were introduced (Diog. Laërt. i. 104). In the Symposium of Plato (pp. 213, 214) Alcibiades and Socrates each empty an immense cup, containing eight cotylae, or nearly four English pints; and frequently such cups were emptied at one draught (*ἀπνευστὶ* or *ἀμυστὶ πίνειν*, *ἀμυστίζειν*, Athen. x. p. 431 b; Lucian, *Lexiph.* 8; Suidas, *s. v.* *'Αμυστί*).

The cups were always carried round from left to right (*ἐπὶ δεξιά*), which Latin writers express by "a summo" (Plaut. *Pers.* v. 1, 19; *Asin.* v. 4, 1), and the same order was observed in the conversation and in everything that took place in the entertainment (*ἐπὶ δεξιὰ διαπίνειν*, Plat. *Rep.* iv. p. 420 E; *ἐπὶ δεξιὰ λόγον εἰπεῖν*, *Symp.* p. 214 B; Athen. xi. p. 463 e). The company frequently drank to the health of one another (*προπίνειν φιλοτησίας*, Lucian, *Gall.* 12; Athen. xi. p. 498 d), and each did it especially to the one to whom he handed the same cup. (Compare Cic. *Tusc.* i. 40, 96, "Graeci in conviviis solent nominare, cui poculum tradituri sunt.") Great men on great occasions often made the cup a present to the guest who so received it (Pind. *Ol.* vii. 5; Athen. xiii. pp. 575, 576), whence the word *προπίνω* acquired a new meaning.

Music and dancing were usually introduced, as already stated, at Symposia, and we find few representations of such scenes in ancient vases without the presence of female players on the flute and the cithara. Plato, indeed, decidedly objects to their presence, and maintains that it is only men incapable of amusing themselves by rational conversation, that have recourse to such means of enjoyment (*Protag.* p. 347 C, D; *Symp.* p. 176 E); but this says nothing against the general practice, and Xenophon in his Symposium represents Socrates mightily pleased with the mimetic dancing and other feats performed on that occasion. The female dancers and the players on the flute and the cithara were frequently introduced at the Symposia of young men for another purpose, and were oftentimes actually *ἑταῖραι* [Hetaerae], as we see clearly represented on many ancient vases (see for example *Mus. Borbon.* vol. v. t. 51). Respecting the different kinds of dances performed at Symposia, see Saltatio. The *σκόλια* were indeed a more refined and intellectual kind of music, as they were usually sung only by selected guests who were known to be skilled in music, and often in poetical composition. The song being started by one singer, was continued by any other to whom he handed the lyre and myrtle bough (Aristoph. *Vesp.* 1219; Athen. xv. p. 694 f; Müller, *Lit. of Ancient Greece*, i. p. 249).

Representations of Symposia are very common on ancient vases. Two guests usually reclined on each couch (*κλίνη*), as is explained in Vol. I. p. 393, and illustrated by the following cut from one of Sir W. Hamilton's vases, where the couch on the right hand contains two persons, and that on the left is represented with only one, which does not appear to have been the usual practice. The guests wear garlands of flowers, and the two who are reclining on the same couch hold a *φιάλη* in the right hand.

Symposium, from a vase-painting.

Sometimes there are four or five persons on one couch, as in the following woodcut, taken from Millin (*Peintures de Vases Antiques*, vol. ii. pl. 53). Three young and two older men are reclining on a couch (*κλίνη*), with their left arms resting on striped pillows (*προσκεφάλαια* or *ὑπαγκώνια*). Before the couch are two tables. Three of the men are holding a *calix* or *κύλιξ* suspended by one of the handles to the forefinger, the fourth holds a *φιάλη*, and the fifth a *φιάλη* in one hand and a *ῥυτὸν* in the other. [Calix; Patera; Rhyton.] In the middle Comos is beating the tympanum.

Respecting the games and amusements by which the Symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (*αἰνίγματα* or *γρῖφοι*) were among the most usual and favourite modes of diversion [AENIGMA]. The Cottabos was also another favourite game at Symposia, and was played at in various ways [COTTABOS]. The other games at Symposia, which require mention, are the *ἀστραγαλισμὸς* and *κυβεία*, explained under TALI and TESSERAE; the *πεττεία*, spoken of under LATRUNCULI; and the *χαλκισμός*. The latter consisted in turning round a piece of money placed upright on its edges, and causing it suddenly to stop while moving by placing a finger on its top (Pollux, ix. 118; Eustath. *ad Il.* xiv. 291, p. 986).

Symposium, from a vase-painting.

Lest some of the details above given should convey the idea that a Greek Symposium was a mere drunken revel, we must point out that, as Blümner remarks (*Leben und Sitten der Gr.* ii. 42), it differed in its essential nature from the drinking bout "of the Middle Ages and up to the seventeenth century" (we might put it later); for the main object and usual result was intellectual conversation, as described by Plato, Xenophon, and later writers, although it might sometimes end in excess and disorder. On the other hand, the extreme on this side also must be avoided; we must not suppose that the high philosophic level of Plato's Symposium was universal or indeed anything but exceptional. Socrates was not always of the party, and besides it must be recollected that Plato's scene is designed to introduce philosophy, not primarily to leave an exact picture of manners. On this point there is a chapter by Professor Mahaffy (*Social Life in Greece*), in which he suggests a University supper-party as the standard; and there is much truth in this, for at the universities too we have in an intellectual centre among diverse sets of people all degrees of social converse,—high philosophy, literature, aestheticism, sporting topics (as various as from Olympic games to quail-fights), and sometimes also the riotous ending. (See also Becker-Göll, *Charikles*, ii. 335 ff.; Blümner, *Privatalt.* 245 ff.; Mahaffy, *Social Life in Greece*, ch. xi.) [W. S.] [G. E. M.]

2. COMISSATIO.—That this word (doubtless connected with *κῶμος*) was the strict equivalent at Rome to the Greek symposium (*i.e.* that it was a wine-party quite distinct from the *cena* which preceded it) is clear from several passages. In the *Mostellaria* Callidamates, who has dined elsewhere, says, "me ibi male convivii sermonisque taesum est, Nunc comissatum ibo ad Philolachem;" and so also Demetrius in Liv. xl. 7, at the end of the *cena*, says, "Quis comissatum ad fratrem imus?" (cf. Id. xl. 9.) The above passages relate to Greek life, and it must be observed that this going after dinner from one house to another for the wine-party seems to have been a Greek custom, rather than Roman (it appears, however, in Petron. 65): but at Rome also the distinct break between the cena and the comissatio is noticeable, so that there might be the one without the other, as in Suet. *Dom.* 21, "convivebatur . . . nec ut postea comissaretur;" and there is a passage of St. Ambrose (*de El. et Jejun.* 13) which is worth quoting as a description of manners precisely the same at a much later date, "Cernas poculorum diversorum ordines, vasa exposita aurea et argentea: deinde procedente potu longius contentiones et certamina quis potu praecellat: nota gravis si quis se excuset, si quis temperandum forte vinum putet: et haec donec ad mensas perveniatur secundas: at ubi consummatae fuerint epulae, et putes jam esse surgendum, tunc de integro potum instaurant et cum consummarunt tunc inchoare se dicunt: tunc deferuntur phialae, tunc maximi crateres: mensura proponitur, certatur sub judice; sub lege decernitur." Besides the regular term *comissatio*, Cicero uses sometimes the word *compotatio*; and *convivium*, being a general term for any "convivial" meeting (Cic. *de Sen.* 13, 45), may signify the wine-party as well as the dinner, unless it is contrasted with comissatio: it is used in this sense in Cic. *Tusc.* i. 40, 96.

It is not certain how far *comissatio* was a genuine Roman custom and how far borrowed from the Greeks. The passage of Cic. *de Sen.* 14, 46, implies a custom of social conversation over wine after dinner in old times, but does not, as Marquardt rather fancifully argues, imply a *magisterium* of the wine-party; for Göll is certainly right in saying that the two sentences refer to totally different things. There is, as will be seen, a slight indication of a *magister bibendi* in early times, but not a certainty. The probable account is that the *Graecus mos* brought in the *regular organisation* of the comissatio, on much the same lines as the Symposium described above. We may therefore venture to set down as the "Graecus mos bibendi" at Rome (1) the wreaths and perfumes [CORONA; UNGUENTUM], which were not as a rule worn during dinner, but marked the beginning of the *συμπόσιον* or the comissatio (Plut. *Symp.* iii. 1, 1; Athen. xv. p. 685 d; Mart. x. 19), and were Greek in origin. The gradual rise of this custom is perhaps marked in Pliny's notice of two persons punished for wearing flowers towards the end of the Second Punic War (*H. N.* xxi. § 8). (2) The appointment by the dice of one among the company as president, = the Symposiarch, and called *rex* (Macrob. *Sat.* ii. 1; Hor. *Od.* i. 4, 18), *arbiter bibendi* (Hor. *Od.* ii. 7, 25), and *magister* (Varro *ap.* Non. 142, 8; cf. Hor. *Sat.* ii. 2, 123). From this passage of Varro we may perhaps infer, what is natural enough, that the older Romans had some such president of the party; but the magister here also, like the magisterium of Varro, *L. L.* v. 122, may possibly refer only to a "publicum convivium," and we shall probably be right in regarding as mainly derived from Greece the duties of this post described in the first part of the article—settling the proportions of wine to water, making rules for the entertainment and enforcing penalties (Cic. *Verr.* v. 11, 28); while at those parties which had no such ruler appointed, any guest could follow his own fancy as to drinking much or little, being, as Horace expresses it, "solutus legibus insanis" (*Sat.* ii. 6, 69: the same absence of Symposiarch is signified by the "culpa magistra" of *Sat.* ii. 2, 123). (3) In particular the method of drinking healths (*propinatio*), which is specially noted as *Graeco more bibere* (compare Cic. *Verr.* i. 26, 66, and Ps.-Ascon. *ad loc.*, with Cic. *Tusc.* i. 40, 96). This consisted in naming some person, and then, after touching the wine with the lips, handing the cup to him to drain. Before the general *propinatio* there was a custom, whether widely prevalent or not, of naming some deity. We see this in Plaut. *Asin.* iv. 1, 35, and connected with it is probably the "da Lunae propere novae" of Hor. *Od.* iii. 19, if we reject the very ingenious, but, as it seems to us, too fanciful interpretation which Mr. Verrall (*Studies in Horace*) has given to that passage. In imperial times there was the formal toast to the emperor (Ov. *Fast.* ii. 637; Dio Cass. li. 19); and then the propinatio of different persons according to the fancy of individual guests.

There are, however, some intricate questions connected with the Roman health-drinking which need discussion, especially as regards the number of cyathi. There is, of course, no doubt that the *rex* or *arbiter* fixed the proportions of wine and water just as in the Greek symposium; but it is probably an error to understand the passages, which mention such and such a number of cyathi, as referring to this proportion: it is, we have little doubt, more correct to explain them as specifying the amount of the mixture, whatever its strength, which each cup was to receive. If the drinking was to be hard, large cups were called for (Cic. *Verr.* i. 26, 66; Hor. *Sat.* ii. 8, 35; Plaut. *Curcul.* ii. 3, 81), so that whatever number was imposed might be received by each guest in his cup and drained either at one draught (like the Greek *ἀμυστὶς*) or not, according to the injunctions of the "leges insanae" (cf. Plin. *H. N.* xiv. § 145). Accordingly we find the specified numbers ranging from one cyathus (Mart. i. 106) upwards; and when a man drinks a "septunx" (Mart. iii. 82) or "septeni cyathi" (Plaut. *Pers.* v. 1, 19), it means that he had seven cyathi, *i.e.* a little over half a pint, poured into his cup at once: if he drinks a "bes," it means that he has 8 cyathi in his cup, and so forth. Marquardt has declared for this view, and Göll inclines to it: it appears to us that it should be adopted for the following reasons:—1. The other theory would involve a perpetual change of the mixture in the crater for each *name* that was proposed. 2. In this case the proportions of wine and water would be regulated by the proposer of the toast, instead of, as is commonly believed, by the *rex*. 3. It involves us in difficulties of numbers: is it conceivable that when Martial speaks of drinking "one cyathus" he means a mixture of which $\frac{11}{12}$ was water? (and if he does, what is the use of adding "diluti"?) and again in *Id.* 11 of Ausonius, which well illustrates a vexed passage of Horace:

> "Ter bibe, vel totiens ternos; sic mystica lex est,
> Vel tria potanti, vel ter tria multiplicanti
> Imparibus novies ternos contexere cubum,"

the suggestion of 27 cyathi as a possibility excludes the idea of fractional numbers where the unit = 12 cyathi. No doubt it is seldom that the number does exceed 12, but, as 12 cyathi = about 1 pint, it is natural that the amount allowed to each cup was generally much less: the poet in Hor. *Od.* iii. 19 prefers 9 (rather under a pint) for each draught, the moderate man only 3. In Ovid, *Fast.* iii. 532, this is expressed by "ad numerum bibunt;" and the suggestion (of course a poetical exaggeration) that in drinking *ages* of the guests they might arrive at Nestor's (*i.e.* 90 cyathi) strengthens the argument drawn above from Ausonius.

Similarly, in the fanciful adaptation of the number of cyathi to the name mentioned in each toast, as many cyathi are ordered as there are letters in the name (see Mart. i. 71; xi. 36, where Gaius gives 5 cyathi, Julius 6, and Proculus a *bes* = 7 cyathi); or the different names of the same man taken singly or combined, in the nominative or the vocative, might allow great variety, "Det numerum cyathis Instantis litera Rufi," &c. (Mart. viii. 51).

[For the vessels used, and the means of cooling or warming, see CALDA, COLUS, CRATER, PSYCTER.] The amusements at these parties are mentioned under CENA in Vol. I. p. 397 *b*: that the Romans, as a less witty and refined people than the Greeks, depended more on such amusements and less on conversation, is certainly the case; but it is a matter of degree: the only essential difference lay in the fact that at Rome wives and children might possibly be present at these entertainments, which were often unedifying orgies (cf. Cic. *Verr.* i. 26, 66; Plut. *Quaest. Conv.* vii. 8, 4; Sen. *Ep.* 95; Juv. vi. 425). See further on this subject Marquardt, *Privatleben*, 331–340; Becker-Göll, *Gallus*, i. 203–211. [G. E. M.]

SYNALLAGMA (*συνάλλαγμα*). [SYMBOLAEON.]

SYNDICUS (*σύνδικος*), *an advocate*, is frequently used as synonymous with the word *συνήγορος*, to denote any one who pleads the cause of another, whether in a court of justice or elsewhere. *Συνδικεῖν* also is used indifferently with *συνηγορεῖν* or *συναγωνίζεσθαι* or *συνειπεῖν* (Andoc. *de Myst.* § 150;—Dem. *c. Zenoth.* p. 885, § 12; *c. Steph.* i. p. 1127, § 84; *de Coron. Trierarch.* p. 1232, § 16, etc.; *c. Onet.* i. p. 872, § 31; *c. Mid.* p. 576, § 190;—Hyper. *pro Eux.* c. 25; [Dem.] *c. Dionysod.* p. 1298, § 50, etc.). The state or a corporation or a private individual might be represented by them. Thus, the five (Dem. *c. Timocr.* p. 707, § 23, *lex*) public advocates, who were appointed to defend the ancient laws before the Nomothetae, when new laws in their stead were proposed, are called *σύνδικοι* (Dem. *c. Lept.* p. 501, § 146; only four names are given, but as Wolf, *Proleg.* p. 145, suggests, that of Leptines must be added) or *συνήγοροι* (Dem. *c. Timocr.* p. 711, § 36). The same name was applied to those orators who were sent by the state to plead the cause of their countrymen before a foreign tribunal. Aeschines, for example, was appointed to plead before the Amphictyonic council on the subject of the Delian temple, but for some reason (Philostr. *Vitt. Soph.* i. 18, 4) the council of Areiopagus removed him, and appointed Hypereides in his stead (Dem. *de Cor.* p. 271, § 134, *σύνδικος*: [Plut.] *Vitt. X. Oratt.* p. 840 E, *συνήγορος*). These extraordinary advocates are not to be confounded with the Pylagorae, or ordinary Amphictyonic deputies (Schömann, *de Com.* p. 321). To such *σύνδικοι* refers the law (Dem. *c. Lept.* p. 503, § 152): *μὴ ἐξεῖναι ὑπὸ τοῦ δήμου χειροτονηθέντα πλέον ἢ ἅπαξ συνδικῆσαι*: see also Aeschin. *c. Tim.* § 19, *ἄν τις Ἀθηναίων ἑταιρήσῃ . . . μηδὲ συνδικησάτω τῷ δημοσίῳ*.—The Demarchus and *σύνδικοι* appear as accusers of defaulters before a court of Demotae (Lolling, *Mitth. d. d. archäol. Inst.* iv. p. 203: cf. p. 196). *Σύνδικοι*, annually elected, took part in the *δοκιμασία* of new members of an *ἔρανος* (*C. I. A.* iii. No. 23).—A private individual either chose such advocates himself or his fellow-tribesmen chose them for him (Andoc. *de Myst.* § 150, *οἱ φυλέται οἱ ᾑρημένοι μοι συνδικεῖν*; Dem. *c. Aristocr.* p. 689, § 206; Hyper. *pro Eux.* c. 26, *δέκα συνηγόρους ἐκ τῆς Αἰγηΐδος φυλῆς ᾐτήσω*).

Σύνδικοι was also the name of extraordinary functionaries at Athens, appointed soon after the overthrow of the Thirty Tyrants, who exercised jurisdiction in disputes concerning confiscated property (Harpocr. *s. v. πρὸς οὓς τὰ δημευόμενα ἀπεφέρετο*, etc.), *e.g.* when an information was laid against a man for having in his possession goods which were liable to be seized in execution on behalf of the state (Lys. *de Bon. Aristoph.* § 32), or when somebody's property having been confiscated, a claim was made by a mortgagee or other creditor having a lien thereupon, to have his debt satisfied out of the proceeds (Lys. *de Pecun. publ.*), or by the wife to have her dowry returned (*Att. Process*, ed. Lipsius, p. 525, n. 127). Such a claim was called *ἐνεπίσκημμα*, and to prosecute it *ἐνεπισκήψασθαι* ([Dem.] *c. Timoth.* p. 1197 f., § 45 f.; Harpocr. *s. v.*, etc.). One of the duties of these *σύνδικοι* was to receive informations from the *φύλαρχοι* against those persons who had served in the cavalry under the Thirty Tyrants, and who by a special decree of the people were ordered to restore to the treasury the *κατάστασις*, *i.e.* the sum paid to them by the state for their equipment (Lys. *pro Mantith.* § 7); from this passage it would appear that such money was as a rule not paid back (Boeckh, *Sthh.* i.^{3} p. 319 f.; Grote, *Hist. of Gr.* viii. p. 106, differs from this view). (*Att. Process*, ed. Lipsius, p. 921, n. 443; pp. 123–125;—Schöll, *Quaest. Fisc. Jur. Att.*)

About the *σύνδικοι* in Orchomenus, see Keil, *Syll.* i. B, p. 15: in Sparta, Boeckh, *C. I. G.* i. p. 610; Marquardt, *Röm. Staatsverw.* i. p. 522. [C. R. K.] [H. H.]

SYNE'GORUS (*συνήγορος*) may be translated an advocate or counsel, though such translation will convey to the English reader a more comprehensive meaning than the Greek word strictly bears.

According to the ancient practice of the Athenian law, parties to an action were obliged to conduct their own causes without assistance (Quint. *Inst.* ii. 15, 30); but on the increase of litigation the sciences of law and rhetoric began to unfold themselves, and men who had paid no attention to these were unable to compete with more experienced opponents. To consult a friend before bringing an action, or about the best means of preparing a defence, were obvious expedients. It was but another step to have a speech prepared by such friend out of court, to be delivered by the party himself when the cause was brought to trial. A class of persons thus sprang up, somewhat in the nature of chamber counsel, who received money for writing speeches and giving legal advice to those who consulted them (Isocr. *de Perm.* § 41). [LOGOGRAPHI.] Antiphon was the first who made a profession of it ([Plut.] *Vitt. X. Oratt.* p. 832 C; according to Paus. vi. 17, 8, it was Tisias). Still, whatever assistance the party might have received out of court, the law which compelled him to appear in person at the trial remained in force; although the prohibition to speak by counsel was so far relaxed, that if the party was labouring under illness, or through any physical or mental debility was unable to conduct his own cause without manifest disadvantage, he might (by permission of the court) procure a relation or friend to speak for him. Thus, when Miltiades was impeached for treason, and by reason of a gangrene in his hip was unable to plead his own cause, he was brought on a litter into court, and his brother Tisagoras addressed the people on his behalf (Corn. Nep. *Milt.* c. 7). So, when Isocrates was ill, his son Aphareus spoke for him in the cause about the *ἀντίδοσις* ([Plut.] *Vitt. X. Oratt.* p. 839 C). And in the speech of Demosthenes against Leochares we see that the son conducts his father's cause (p. 1081, § 4). As a general rule, the party was expected to address the court himself; for the judges liked to form an opinion of him from his voice, look, and demeanour; and therefore, if a man distrusted his own ability, he would open the case himself by a short speech, and then ask permission for his friend or friends to come forward (Hyper. *pro Eux.* c. 25 f.; *pro Lycophr.* c. 8 f.; [Dem.] *c. Phorm.* p. 922, § 52; *c. Neaer.* p. 1349, § 14; Aeschin. *c. Ctes.* § 202, etc.: cf. SYNDICUS). This was seldom refused; and in the time of the orators the practice was so well established, that the principal speeches in the cause were not unfrequently made by the advocate. The defence by Demosthenes of Ctesiphon against Aeschines may be cited as an example. In this it will be seen that Demosthenes was as much interested as the defendant himself; and it is further to be observed, that the advocate was looked upon with more favour on this very account; for as no fees were allowed to be taken, a speaker was regarded with suspicion who had no apparent motive for undertaking the cause of another person. Hence we find in most of the *συνηγορικοὶ λόγοι*, that the speaker avows what his motives are; as, for instance, that he is connected by blood or friendship with the one party, or at enmity with the other, or that he has a stake in the matter at issue between them. (See the opening of the speeches of Isaeus *de Nicost. her.* and *de Philoct. her.*; Isocrates, *c. Euthyn.*; and Demosthenes, *c. Lept.* and *c. Androt.*: cf. Lyc. *c. Leocr.* § 138, *ἐκπέπληγμαι μάλιστα ἐπὶ τοῖς μήτε γένει μήτε φιλίᾳ μηδὲν προσήκουσι, μισθοῦ δὲ συναπολογουμένοις ἀεὶ τοῖς κρινομένοις*, etc.) In the cause against Leochares above cited, it is evident that the son had an equal interest with his father in preserving the inheritance, and therefore he would be considered in the light of a party. The law which prohibited the advocate from taking fees, under peril of a *γραφή* before the Thesmothetae ([Dem.] *c. Steph.* ii. p. 1137, § 26; cf. Plat. *Legg.* xi. 15, p. 937 E f.), made no provision (and perhaps it was impossible to make an effective provision) against an influence of a more pernicious kind, viz. that of political association, which induced men to support the members of their club or party without the least regard for the right or justice of the case (*ξυνωμοσίαι ἐπὶ δίκαις καὶ ἀρχαῖς*, Thucyd. viii. 54). Hence the frequent allusions by the orators to the *ἐργαστήρια συκοφαντῶν, μοχθηρῶν ἀνθρώπων συνεστηκότων, παρασκευὰς λόγων, μαρτύρων, συνωμοτῶν*, all which expressions have reference to that system of confederation at Athens, by which individuals endeavoured to influence and control the courts of justice. (See ERANI; SYCOPHANTES; Reiske, *Index in Orat. Att.* s. vv. *Ἐργαστήριον* and *παρασκευή*.) That friends were often requested to plead, not on account of any incapacity in the party, but in order that by their presence they might exert an influence on the bench, is evident from an attentive perusal of the orators. In some cases this might be a properly legitimate course, as where a defendant charged with some serious crime called a man of high reputation to speak in his behalf, and pledge himself thereby that he believed the charge was groundless. (For this reason Lycurgus was in great request as *συνήγορος*: [Plut.] *Vitt. X. Oratt.* p. 841 E; Rutil. Lup. *de Fig.* ii. 4.) With such view Aeschines, on his trial for misconduct in the embassy, prayed the aid of Eubulus and Phocion, the latter of whom he had previously called as a witness (Aeschin. *F. L.* sub fin.).

In cases of dispute concerning the amount of tribute to be paid, the members of the confederacy might either plead their cause themselves (Antiph. *fr.* 48 ff.) or through *συνήγοροι* (Id. *fr.* 13). Five *συνήγοροι* were chosen to represent the *οἶκος Δεκελειῶν* in the assembly of the phratry (*C. I. A.* ii. No. 841 b, l. 31 ff.).

Συνήγοροι (or *κατήγοροι*) was also the name given to the public advocates appointed to manage the prosecution in causes of importance, wherein the state was materially interested, more especially in those which were brought before the court upon an *εἰσαγγελία* (in the fifth century, Lipsius, *Leipz. Stud.* vi. p. 320). Thus, Pericles was appointed, not at his own desire, to assist in the impeachment of Cimon (*εἷς τῶν κατηγόρων ὑπὸ τοῦ δήμου προβεβλημένος*, Plut. *Pericl.* 10). The generals might choose from the senate *συνήγοροι*, not more than ten in number, to assist in prosecuting Antiphon, Archiptolemus, and Onomacles for treason ([Plut.] *Vitt. X. Oratt.* p. 833 E). Public prosecutors were chosen by the people to bring to trial Demosthenes, and others charged with having received bribes from Harpalus (ten *κατήγοροι*, Dinarch. *c. Dem.* § 51; *c. Aristog.* § 6: see also Jebb, *Att. Orators*, i. p. 222). [RHETORICE GRAPHE.] The fee of a drachm (*τὸ συνηγορικὸν*) mentioned by Aristophanes (*Vesp.* 691) was probably the sum paid to the public advocate *per diem* whenever he was employed on behalf of the state.

In ordinary cases, however, the accuser or prosecutor (*κατήγορος*) was a distinct person from the *συνήγορος*, who acted only as auxiliary to him. It might be, indeed, that the *συνήγορος* performed the most important part at the trial, as Anytus and Lycon are said to have done on the trial of Socrates, wherein Meletus was prosecutor; or it might be that he performed a subordinate part, making only a short speech in support. But, however this might be, he was in point of law an auxiliary only, and was neither entitled to a share of the reward (if any) given by the law to a successful accuser, nor liable, on the other hand, to a penalty of a thousand drachmas, or the *ἀτιμία* consequent upon a failure to get a fifth part of the votes. Here we must distinguish between an advocate and a joint prosecutor. The latter stood probably precisely in the same situation as his colleague, just as a co-plaintiff in a civil action. The names of both would appear in the bill (*ἔγκλημα*), both would attend the *ἀνάκρισις*, and would in short have the same rights and liabilities; the elder of the two only having priority in certain matters of form, such as the *πρωτολογία* (*argum.* Dem. *c. Androt.* p. 592). In the proceeding against the law of Leptines, there were two prosecutors, Aphepsion and Ctesippus the son of Chabrias; each addressed the court, Aphepsion first, as being the elder; each had his advocate, the one Phormio, the other Demosthenes (*argum.* p. 453 f.).

There seems to have been no law which limited the number of persons who might appear as advocates, either in public or private causes. There was, however, this practical limitation, that as the time allowed for speaking to either party was in most cases measured by the clepsydra, if either chose to employ a friend to speak for him, he subtracted so much from the length of his own speech as he meant to leave for that of his friend, and the whole time allowed was precisely the same, whatever the number of persons who spoke on one side (this applied also to the public advocates, Dinarch. *c. Dem.* § 114; *c. Aristog.* § 6; for an exception, see HERES, iv.). Both parties were usually (not always: cf. Dem. *F. L.* p. 407, § 213) allowed to make two speeches, the plaintiff beginning, the defendant following, then the plaintiff replying, and lastly the defendant again. These are often called *λόγοι πρότεροι* and *ὕστεροι* respectively, but are not to be confounded with the *συνηγορίαι* or *δευτερολογίαι* which immediately followed the speech of the party in whose favour they were made. (*Att. Process*, ed. Lipsius, pp. 920–925, 759.)

With respect to the custom of producing friends to speak in mitigation of damages or punishment, see TIMEMA. As to the public advocates appointed to defend the old laws before a Heliastic court, see SYNDICUS, NOMOTHETES.

It has been shown clearly by Schömann, that Petitus was wrong in supposing that the orators or statesmen who spoke in the assembly are called *συνήγοροι* (*Legg. Attic.* iii. 3, p. 344 f., "Quamquam inter Magistratus censendi non sint Oratores, tamen *ἐν τοῖς ἰδιώταις* non sunt numerandi, cum expressis verbis distinguantur ab iis in Aeschinis *Or. adv. Tim.* (§ 8), *τρίτον δ' ἐφεξῆς τοὺς περὶ τῶν ἄλλων ἡλικιῶν, οὐ μόνον περὶ τῶν ἰδιωτῶν ἀλλὰ καὶ περὶ τῶν ῥητόρων* . . . Nemo autem temere huic Oratorum albo adscribebatur, sed quotannis decem sorte legebantur, qui drachmam de publico accipiebant, eo, quo orabant, die docet Aristoteles ap. Schol. Aristoph. ad hunc e *Vespis* versum (689): *ἐλάμβανον γὰρ οἱ ῥήτορες δραχμήν, ὅτε συνηγόρουν ὑπὲρ τῆς πόλεως ἢ ὑπὲρ ἄλλου τινός. ἐκ τούτου δὲ φαίνεται ὅτι μισθοφόρος ἦν ἡ ἀρχή. κληρωτοὺς δὲ γενομένους δέκα συνηγόρους Ἀριστοτέλης φησίν.* Qui enim *συνήγοροι* hic dicuntur, ii sunt *ῥήτορες*," etc.). The speakers in the popular assembly are always distinguished by the title of *ῥήτορες* or *δημήγοροι*, or, if they possessed much influence with the people, *δημαγωγοί*: and it is not to be supposed that they constituted a distinct class of persons, inasmuch as any Athenian citizen was at liberty to address the assembly when he pleased; though, as it was found *in practice* that the possession of the *βῆμα* was confined to a few persons who were best fitted for it by their talent and experience, such persons acquired the title of *ῥήτορες*, etc. (Schömann, *de Comit.* pp. 107–109, 210; *Journ. of Philol.* iv. p. 90 f.). There appears, however, to have been a regular appointment of *συνήγοροι*, ten in number, with whom the Scholiast on Aristoph. *l. c.* confounded the *ῥήτορες* or orators, viz. the officers who assisted the Logistae in auditing magistrates' accounts: cf. Bekk. *Anecd.* i. p. 301, 4, *συνήγοροι ἄρχοντες ἦσαν κληρωτοὶ οἳ τοῖς λογισταῖς ἐβοήθουν πρὸς τὰς εὐθύνας τῶν ἀρξάντων τινὰ ἀρχήν*: and *Lex. Rhetor. Cantabr.* p. 672, 24, *Λογιστὰς αἱροῦνται δέκα . . . καὶ ἄλλους δέκα συνηγόρους οἵτινες συνανακρίνουσι τούτοις*: Photius, *s. v. οὐ μόνον οἱ τοῖς ἰδιώταις συναγορεύοντες, ἀλλὰ καὶ ἄρχοντες Ἀθήνησιν.* See also the oath of the *συνήγοροι* of the Myrrhinusians in *C. I. A.* ii. No. 578; R. Schöll, *de Syneg. Att.* p. 30 ff. Aristotle (*Polit.* vii. 5 (8 B), § 10) says that the authorities to whom magistrates rendered their accounts were called in some of the Greek states *εὔθυνοι* (*e.g.* in Teos, Dittenberger, *Syll.* No. 349, 58 ff.), in others *λογισταί* (*e.g.* in Ephesus, Dittenberger, *Syll.* No. 253, 29 ff.; Issa, *C. I. G.* No. 1834, etc.), in others *ἐξετασταί* (*e.g.* in Erythrae, Dittenberger, *Syll.* No. 370, 25; in Nesos, Hicks, *Manual*, No. 138, etc.), and in others *συνήγοροι* (*e.g.* in Iasus, Dittenberger, No. 77, 11; Gilbert, *Handb. d. Griech. Staatsalt.* ii. p. 336). (*Att. Process*, ed. Lipsius, p. 115.) Three *συνήγοροι* are mentioned in a decree of Zelea, to be chosen by lot from amongst nine citizens elected to act as *ἀνευρεταὶ τῶν χωρίων τῶν δημοσίων*, etc. (Dittenberger, *Syll.* No. 113, l. 30 ff.) [H. H.]

SYNGRAPHE (*συγγραφή*) signifies a written contract (*γραμματεῖον*); whereas *συμβόλαιον* does not necessarily import that the contract is in writing; and *ὁμολογία* is, strictly speaking, a verbal agreement (Valesius on Harpocr. *s. v. ἀσυνθετώτατον*); *χειρόγραφον* is a term foreign to Attic law (it first occurs Polyb. xxx. 8, 4).

No particular form of words was necessary to make the instrument valid in point of law, the sole object being to furnish good evidence of the parties' intention. The agreement itself was valid without any writing; and would form the ground of an action against the party who broke it, if it could be sufficiently proved. Hence it was the practice to have witnesses to a parol agreement. The law declared *κυρίας εἶναι τὰς πρὸς ἀλλήλους ὁμολογίας, ἃς ἂν ἐναντίον μαρτύρων ποιήσωνται* ([Dem.] *c. Phaenipp.* p. 1042, § 12; *c. Everg. et Mnes.* p. 1162, § 77; *c. Dionysod.* p. 1283, § 2; Plat. *Symp.* p. 196 C). This was especially the practice in early times (*ἁρμονίαι*, *Il.* xxii. 255; *συνημοσύναι*, *Il.* xxii. 261; or *ῥῆτραι*, *Od.* xiv. 393; Platner, *Notion. juris et just. ex Hom. et Hes. carm. expl.* p. 142 f.; see also Solon's law in Bekk. *Anecd.* i. p. 242, 20 ff.). But as the art of writing became more widely known, parol agreements grew rarer, and contracts were as a rule reduced to writing;* and it seems that for the maintenance

---

* It seems that such contracts were written either on wax tablets or on papyrus. In Dem. *c. Dionysod.* p. 1283, § 1, the borrower has in every respect the advantage over the money-lender: he gets from him money "in hard cash and in sterling coin," and leaves him for it his agreement—*ἐν γραμματειδίῳ δυοῖν χαλκοῖν ἐωνημένῳ καὶ βιβλιδίῳ μικρῷ πάνυ.* Salmasius rightly distinguishes between *γραμματείδιον* and *βιβλίδιον* as regards the material; but his view that by *γραμματείδιον* the *συγγραφὴ* was meant, and by *βιβλίδιον* the *χειρόγραφον*, is not correct, since *χειρόγραφον* is a term foreign to Attic law (*de Mod. Usur.* p. 403: "per *γραμματείδιον* intelligit tabulas syngrapharum, per *βιβλίδιον* chirographa, quia ut syngraphae in tabulis ceratis perscribebantur, ita chirographa in chartaceis, quo *βιβλίδια* appellabantur." *Συγγραφὴ* might be called either *γραμματείδιον* or *βιβλίδιον*, according to the material it was written on. Thus Orus distinguished the two words (*Etym. Magn.* p. 240 *sub fin.*): *ἰστέον ὅτι τινες γραμματεῖον λέγουσι τὸ μικρὸν βιβλίον· ὁ δὲ Ὦρος λέγει ὅτι οὐ λέγεται τὸ μικρὸν βιβλίον γραμματεῖον ἀλλ' ἡ μικρὰ δέλτος*: cf. Birt, *d. antike Buchwesen*, p. 21, "by *βιβλίδιον* we must understand one or more leaves of papyrus." The above explanation given by Gneist (*d. formellen Verträge des neueren röm. Obligationsrechts*, etc., p. 478), by which *καὶ* is taken in a disjunctive sense, is more probable than his suggestion that *βιβλίδιον* was the wrapper or cover of the *συγγραφή*. *Γραμματεῖον* occurs in the newly discovered speech of Hyper. *c. Athenog.* (of which columns 3 and 4 are published in the *Revue des Études Grecques*, 1889, by Revillout, p. 1 ff., and by Reinach, p. 160 ff.), c. 4: *ἦσαν δὲ αὗται συνθῆκαι πρὸς ἐμέ· ὧν ἐγὼ ἀναγιγνωσκομένων μὲν ἤκουον . . . καὶ σημαίνεται τὰς συνθήκας εὐθὺς ἐν τῇ αὐτῇ οἰκίᾳ, ἵνα μηδεὶς τῶν εὐφρονούντων ᾖ ἀκοῦσαι τὰ ἐγγεγραμμένα, προσεγ-*

of an *ἐμπορικὴ δίκη* it was necessary to have a written contract (Dem. *c. Zenoth.* p. 882, § 1). Such contracts were leases (*μισθώσεις*: cf. Dem. *pro Phorm.* p. 945, § 4, *αἱ συνθῆκαι καθ' ἃς ἐμίσθωσε Πασίων τὴν τράπεζαν τούτῳ*: *c. Steph.* i. p. 1111, § 31; *c. Pantaen.* p. 968, § 5), loans of money (Dem. *c. Phorm.* p. 908, § 6; *συγγραφαὶ ναυτικαὶ* and *ἔγγειαι*, *c. Lacrit.* p. 932, § 27, and Bekk. *Anecd.* i. p. 283, 9 f., or *συμβόλαια ναυτικὰ* and *ἔγγεια*, Dem. *c. Apatur.* p. 893, § 3), and all executory agreements, where certain conditions were to be performed. *Ἐκδιδόναι ἀνδρίαντα κατὰ συγγραφὴν* is to give an order for the making of a statue of certain dimensions, of a certain fashion, at a certain price, etc., as specified in the agreement (Dem. *de Cor.* p. 268, § 122; cf. [Andoc.] *c. Alcib.* § 17; Xenoph. *de Re Equest.* 2, 2: see also Dem. *c. Apatur.* p. 897, § 14 f.; *c. Olympiod.* p. 1170, § 10 f.; Lyc. *c. Leocr.* § 23; Aeschin. *c. Tim.* §§ 160, 165, etc.). The rent, the rate of interest, with other conditions, and also the penalties for breach of contract ([Dem.] *c. Nicostr.* p. 1249, § 10; *c. Dionysod.* p. 1291, § 27, etc.), were particularly mentioned in these agreements, and the names of the witnesses ([Dem.] *c. Olympiod.* p. 1170, § 11, etc.) and of the sureties (if any, Dem. *c. Apatur.* p. 904, § 35) were specified. The agreements themselves were sealed by the parties (also by the surety, Dem. *c. Lacrit.* p. 928, § 15), and deposited, before witnesses (p. 927, § 14), with some person (or persons in case of duplicate copies, Dem. *c. Phorm.* p. 916, § 32), mutually agreed on between the parties (*C. I. A.* ii. No. 573; Dem. *c. Phorm.* p 908, § 6; *c. Apatur.* p. 904, § 36; Lyc. *c. Leocr.* § 23, etc.). An example of a contract on a bottomry loan (*ναυτικὴ συγγραφὴ*) will be found in Dem. *c. Lacrit.* p. 926, § 10 ff., where the terms are carefully drawn up, and there is a declaration at the end, *κυριώτερον δὲ περὶ τούτων ἄλλο μηδὲν εἶναι τῆς συγγραφῆς*, "which agreement shall be valid, anything to the contrary notwithstanding" [Fenus] (cf. Dareste, *Bull. de Corresp. Hellén.* 1884, pp. 370–376). Bankers were often chosen as the depositaries of agreements and other documents, having peculiar confidence reposed in them. Money was put into their hands without any acknowledgment, and often without witnesses. They entered these and also the loans made by themselves to others in their books (*γράμματα* or *ὑπομνήματα*), and such entries served practically the same purpose as a *συγγραφή*, being accepted as evidence in courts of justice (Isocr. *Trapez.* §§ 2, 53; Dem. *pro Phorm.* p. 950, § 20; p. 956, § 36, etc. Philippi, however, denies these bankers' books any special authority, *Jahrb. f. class. Philol.* 1866, p. 611 ff.).—In Sparta such agreements were called *κλάρια* (Plut. *Agis.* 13) or *σκυτάλαι* (Photius, *s. v.*); for the peculiar formalities observed in drawing them up, see Schol. Aristoph. *Av.* 1284, and Suid. *s. v. σκυτάλη*. Amongst the Locrians *συγγραφαὶ* were not allowed (Zenob. v. 4). (*Att. Process*, ed. Lipsius, p. 675 ff.)

For *συγγραφαὶ* (*C. I. A.* IV. No. 22 a; Lys. *c. Nicom.* § 17 f.) in the sense of bills prepared by special committees (*συγγραφεῖς*), "ordonnances, une catégorie de mesures législatives qui est distincte des lois et des décrets," see Foucart, *Bull. de Corresp. Hellén.* 1880, p. 248 ff.; Sauppe, *Attica et Eleus.* p. 10 ff. [Nomothetes.] [C. R. K.] [H. H.]

SYNOI'KIA (*συνοικία*) differs from *οἰκία* in this: that the latter is a dwelling-house for a single family; the former is adapted to hold several families, a lodging-house, *insula*, as the Romans would say. The distinction is thus expressed by Aeschines (*c. Tim.* § 124): *ὅπου μὲν γὰρ πολλοὶ μισθωσάμενοι μίαν οἴκησιν διελόμενοι ἔχουσι, συνοικίαν καλοῦμεν, ὅπου δ' εἷς ἐνοικεῖ, οἰκίαν.* The lodging-houses were let mostly to foreigners who came to Athens on business, and especially to the *μέτοικοι*, whom the law did not allow to acquire real property, and who therefore could not purchase houses of their own (Dem. *pro Phorm.* p. 946, § 6). As they, with their families, formed a population of about 45,000, the number of *συνοικίαι* must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas ([Dem.] *c. Steph.* i. p. 1110, § 28). Xenophon recommended that the *μέτοικοι* should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house-proprietors (*οἰκοδομησαμένοις ἐγκεκτῆσθαι*, *de Vect.* 2, 6). The *ἰσοτελεῖς* laboured under no such liability; for Lysias and his brother Polemarchus, who belonged to that class, were the owners of three houses (*c. Eratosth.* § 18). The value of houses must have varied according to the size, the build, the situation, and other circumstances. Those in the city were more valuable than those in the Peiraeus or the country, *caeteris paribus*. Two country-houses are mentioned by Isaeus (*Hagn.* § 42) as yielding a return of a little less than 8½ per cent. interest on the purchase-money. But this probably was much below the average. The summer season was the most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called *ναύκληροι* or *σταθμοῦχοι*, who made a profit by underletting them, and sometimes for not very reputable purposes (Isae. *Philoct.* § 19). Hesychius explains the word *ναύκληρος· ὁ συνοικίας προεστὼς σταθμοῦχος*; and Harpocration (*s. v.*), and *Lex. Rhet. Cantabr.* p. 673, 20, remark that Hyperides used the word in a peculiar sense for *ὁ μεμισθωμένος ἐπὶ τῷ τὰ ἐνοίκια ἐκλέγειν ἢ οἰκίας ἢ συνοικίας.* (Boeckh, *Sth.* i.³ pp. 49, 84, 176 ff.) [C. R. K.] [H. H.]

SYNOI'KIA (*συνοίκια* or *συνοικέσια*), a festival celebrated every year at Athens on the 16th of Hecatombaeon in honour of Athena. It was believed to have been instituted by Theseus to commemorate the concentration of the government of the various towns of Attica and Athens (Thucyd. ii. 15; Steph. Byz. *s. v.* *Ἀθῆναι*). According to the Scholiast on Aristophanes (*Pax*, 1019), an unbloody sacrifice was on this day offered to the goddess of peace (*εἰρήνη*)

γράψας μετ' ἐμοῦ Νίκωνα τὸν Κηφισιέα. ἐλθόντες δ' ἐπὶ τὸ μυροπώλιον, τὸ μὲν γραμματεῖον τιθέμεθα παρὰ Λυσικλεῖ Λευκονοεῖ ... τότ' ἤδη τοὺς φίλους καὶ τοὺς οἰκείους συνήγαγον καὶ τὰ ἀντίγραφα τῶν συνθηκῶν ἀνεγιγνώσκομεν, etc. This same speech in c. 3 and 4 has twice mention of πληρωταὶ τῶν ἐράνων.

[*C. I. A.* i. 157]. This festival, which Plutarch (*Thes.* 24) calls *μετοίκια*, is mentioned both by him and by Thucydides as still held in their days. It must not be connected with the Panathenaea (which was a far more ancient festival), as has been done by some writers, but must be regarded rather as a separate peace festival. (A. Mommsen, *Heortol.* p. 114.) [L. S.]

SYNTAXIS (*σύνταξις*), a contribution, assessment. Under the revived Athenian empire in the 4th century B.C. the PHOROS of the 5th century was euphemistically called by this name. The reassertion of maritime supremacy by the Athenians dates formally from the archonship of Nausinicus (B.C. 378–7); but there are indications that the levying of tribute had begun as early as 380, the date of the *Panegyricus* of Isocrates (*τοὺς νησιώτας δασμολογεῖν*, § 132; *τῶν Κυκλάδων νήσων ἀμφισβητοῦμεν*, § 136). The pretence of equal and honourable alliance was soon dropped, and the new confederacy became as unpopular as the old. These *συντάξεις* are frequently mentioned by the Orators (Isocr. *Areop.* § 2; *de Pace*, § 36; *Antid.* § 113;—Dem. *de Pace*, p. 60, § 13; *de Cor.* p. 305, § 234; *συντάξεις καὶ φόρους*, Isocr. *Panath.* § 116): occasionally in inscriptions (*C. I. A.* ii. 62 and 108; *Mitth. d. Inst.* ii. 142). In Plutarch we find an illustration of the more or less considerate way in which such contributions might be levied (*Phoc.* 7); and of the Athenian habit of calling unpleasant things by soft names (*ὑποκορίζεσθαι*, *Sol.* 15: *τοὺς δὲ φόρους συντάξεις* is one of his instances).

(Boeckh, book iii. ch. 17, "On the Tributes and Allies of Athens after the Anarchy," esp. *P. E.* p. 418 ff. = *Sthh.*³ i. 494 ff., with Fränkel's notes; Grote, cc. 75, 77, vol. vii. pp. 38, 90, ed. 1862, and note on *συντάξεις*, p. 91.) [W. W.]

SY'NTHESIS. The synthesis was a costume specially made for wearing at dinner, and was also known as *vestis cenatoria* (*στολὴ δειπνῖτις*) or *cenatorium* alone. It seems, from the other uses of the word *synthesis*, to have been a suit rather than a single garment, and was apparently easily put on and off, for we hear of dandies wearing several changes of attire at the same dinner (Mart. v. 79, 2). It was most in vogue during the Saturnalia (Mart. xiv. 1, 1, &c.); and it cannot have been altogether a fashion of the times of the Empire, for the Arval brothers wore it at their feasts (*Acta*, 27 [Mai, 218, 219], 17 [Mai, 241]). In their case, as befitted a solemn festival, the synthesis was white; but for ordinary occasions green (Mart. x. 29, 4), purple (Petron. 30), and other bright colours (Mart. ii. 46) were preferred. (Marquardt, *Privatleben*, pp. 322, 371; Iwan Müller, *Handbuch*, pp. 875, 928; Becker-Göll, *Gallus*, i. 15.) [W. C. F. A.]

SYRINX (*σύριγξ*), any sort of pipe or tube (see Dictionaries), but especially the Pan's Pipe, or Pandean Pipe. This was the appropriate musical instrument of the Arcadian and other Grecian shepherds, and was regarded by them as the invention of Pan, their tutelary god (Verg. *Ecl.* ii. 32, viii. 24), who was sometimes heard playing upon it (*συρίζων*: see Theocr. i. 3, 14, 19; Schol. *in loc.*; Longus, iv. 27), as they imagined, on Mount Maenalus (Paus. viii. 36, § 5). It is similarly attributed to Faunus (Hor. *Od.* i. 17, 10). When the Roman poets had occasion to mention it, they called it *fistula* (Verg. *Ecl.* ii. 36, iii. 22, 25; Hor. *Od.* iv. 12, 10; Ovid, *Met.* viii. 192, xiii. 784; Mart. xiv. 63; Tibull. i. 6, 30; Cic. *de Orat.* iii. 61, 225). It was also variously denominated according to the materials of which it was constructed, whether of cane (*tenui arundine*, Verg. *Ecl.* vi. 8; Hom. *Hymn. in Pana*, 15; *ποιμενίῳ δόνακι*, Brunck, *Anal.* i. 489), reed (*calamo*, Verg. *Ecl.* i. 10, ii. 34, v. 2; *κάλαμος*, Theocr. viii. 24; Longus, i. 4), or hemlock (*cicuta*, Verg. *Ecl.* v. 85). In general seven hollow stems of these plants were fitted together by means of wax, having been previously cut to the proper lengths, and adjusted so as to form an octave (Verg. *Ecl.* ii. 32, 36); but sometimes nine were admitted, giving an equal number of notes (Theocr. viii. 18–22). Another refinement in the construction of this instrument, which, however, was rarely practised, was to arrange the pipes in a curve so as to fit the form of the lip, instead of arranging them in a plane (Theocr. i. 129). A syrinx of eight reeds is shown in the gem figured on page 305. The inference from Athen. iv. p. 184 is that the syrinx of joined reeds was an improvement on the single reed-pipe, which he calls *μονοκάλαμος σῦριγξ*: in the tradition there cited Hermes invented the single *σῦριγξ*, Silenus the *πολυκάλαμος*, and Marsyas the method of joining with wax. The annexed woodcut is taken from a bas-relief in the collection at Appuldurcombe in the Isle of Wight (*Mus. Worsleyanum*, pl. 9). It represents Pan reclining at the entrance of the cave, which was dedicated to him in the Acropolis at Athens. He holds in his right hand a drinking-horn [RHYTON] and in his left a syrinx, which is strengthened by two transverse bands.

Pan with Syrinx. (From a bas-relief.)

The ancients always considered the Pan's Pipe as a rustic instrument, chiefly used by those who tended flocks and herds (Hom. *Il.* xviii. 526; Apoll. Rhod. i. 577; Dionys. Perieg. 996; Longus, i. 2, 14–16, ii. 24–26); but also admitted to regulate the dance (Hes. *Scut.* 278). This instrument was the origin of the organ [HYDRAULA].

The *σῦριγξ μονοκάλαμος* was played like our flute, not by a mouthpiece like the *αὐλός* [see TIBIA]: hence the Schol. *ad* Pind. *Pyth.* xii. says that Midas, having broken the mouthpiece, played on the rest of the *αὐλὸς* as if it were a flute, *i.e.* by blowing across the *τρυπήματα*. The *σῦριγξ* of the *αὐλός*, in Plut. *Mus.* 21 and Aristox. p. 28, was probably a *τρύπημα* near the mouthpiece (cf. Baumeister, *Denkm.* p. 561; Tibia). [J. Y.] [G. E. M.]

SYSSI'TIA (*συσσίτια*). The custom of taking the principal meal of the day in public prevailed extensively amongst the Greeks from very early ages. It existed not only with the Spartans and Cretans, amongst both of whom it was kept up till comparatively recent times, but also at Megara in the age of Theognis (*v.* 309), and at Corinth in the time of Periander, who, it seems, abolished the practice as being favourable to aristocracy (Aristot. *Pol.* v. 11 = p. 1313 a, 41). At Athens the practice survived in the public meals for official persons, for which see Prytaneum. Nor was it confined to the Hellenic nation: for according to Aristotle (*Pol.* vii. 10 = p. 1329 b, 7) it prevailed still earlier amongst the Oenotrians in the south of Italy, and also at Carthage, the political and social institutions of which state resembled those of Sparta and Crete (*Pol.* ii. 11 = p. 1272 b, 26). The origin of the usage cannot be historically established; but it seems reasonable to refer it to infant or patriarchal communities, the members of which, being intimately connected by the ties of a close political union and kindred, may naturally be supposed to have lived together almost as members of the same family. But however and wherever it originated, the natural tendency of such a practice was to bind the citizens of a state in the closest union; and accordingly we find that at Sparta Lycurgus availed himself of it for this purpose, though we cannot determine with any certainty whether he introduced it there, or merely perpetuated and regulated an institution which the Spartans brought with them from their mother-country and retained at Sparta as being suitable to their position and agreeable to their national habits. The latter supposition is perhaps the more probable. The Cretan usage Aristotle (*Pol.* vii. 10 = p. 1329 b, 6) attributes to Minos; this, however, may be considered rather "the philosopher's opinion than as an historical tradition:" but the institution was confessedly of so high antiquity, that the Peloponnesian colonists may well be supposed to have found it already existing in Crete, even if there had been no Dorian settlers in the island before them (Thirlwall, *Hist. Gr.* i. 287).

The Cretan name for the Syssitia was Ἀνδρεῖα or Ἄνδρια (Aristot. *Pol.* ii. 10 = p. 1272 a, 3; Ephor. *ap.* Strab. x. p. 483). This title affords of itself a sufficient indication that the public meals were confined to men and youths (cf. Plat. *Legg.* vi. p. 780 E, 781 A); the women and children were supported out of the same revenues, but at their own homes (Aristot. *Pol.* ii. 10 = 1272 a, 17; Dosiadas *ap.* Ath. iv. p. 143 b; cf. Thumser, *Staatsalterth.* p. 143 n.). In some of the Dorian states, however, though not in Crete, it has been inferred from an allusion in Pindar that there were syssitia of the young unmarried women (Pind. *Pyth.* ix. 35; Hoeck, *Kreta*, iii. 123). All the adult citizens among the Cretans partook of the public meals: the companies or messes (*ἑταιρεῖαι*) into which they were distributed for this purpose were likewise called ἀνδρεῖα (Ath. *l. c.*). These companies were perhaps originally confined to persons of the same house and kindred, but afterwards any vacancies in them were filled up at the discretion of the members (Hoeck, iii. 126). The divinity worshipped under the name of Ζεὺς Ἑταιρεῖος (Hesych. *s. v.*) was considered to preside over them. These *ἑταιρεῖαι* are mentioned in inscriptions (Cauer,^{2} 121; Gilbert, *Staatsalterth.* ii. 225 n.; Thumser, *Staatsalterth.* p. 142, n. 5); see further Cosmi, Vol. I., p. 555 *b*.

According to Dosiadas, who wrote a history of Crete (Ath. *l. c.*), there were in every town of the island (*πανταχοῦ*) two public buildings, one for the lodging of strangers (*κοιμητήριον*), the other a common hall (*ἀνδρεῖον*) for the citizens. In the latter of these the Syssitia were given, and in the upper part of it were placed two tables for the entertainment of foreign guests (*ξενικαὶ τράπεζαι*),—a circumstance deserving of notice, as indicating the extent to which the Dorians of Crete encouraged mutual intercourse and hospitality. Then came the tables of the citizens. But besides these there was also a third table on the right of the entrance dedicated to Ζεὺς *ξένιος*, and perhaps used for the purpose of making offerings and libations to the god.

The Syssitia of the Cretans were distinguished by simplicity and temperance. They always *sat* at their tables, even in later times, when the custom of reclining had been introduced at Sparta (Cic. *pro Mur.* 35, § 74). The entertainment began with prayer to the gods and libations (Pyrgion *ap.* Ath. iv. p. 143 e). Each of the adult citizens received an equal portion of fare, with the exception of the "Archon," or "Master of the Tables," who was perhaps in ancient times one of the *κόσμοι*, and more recently a member of the *γερωνία* or council. This magistrate received a fourfold portion: "one as a common citizen, a second as president, a third for the house or building, a fourth for the furniture" (*τῶν σκευῶν*, Heraclid. Pont. 3, § 6 = Müller, *Fragm. Hist.* ii. 212): an expression from which it would seem that the care of the building and the provision of the necessary utensils and furniture devolved upon him. Haase conjectures *τῶν συσκήνων* for *τῶν σκευῶν*, and thinks that the president was enabled, by means of this portion, to confer an honour on any of the members of the mess at his discretion (Schömann, *Antiq.* i. 309 n.). The management of all the tables was under the superintendence of a female of free birth (*ἡ προεστηκυῖα τῆς συσσιτίας γυνή*, Ath. *l. c.* 143 d), who openly took the best fare and presented it to the citizen who was most eminent in council or the field. She had three or four male assistants under her, each of whom again was provided with two menial servants (*καληφόροι*, or wood-carriers, Ath. 143 b). There was a *προεδρία* of strangers, which seems to imply that they were also helped first (Heracl. Pont. *l. c.*; Ath. 143 c). On each of the tables was placed a cup of mixed wine, from which the messmates of the same company drank. At the close of the repast this was replenished, but all intemperance was strictly forbidden by a special law (Plat. *Minos*, p. 320 A).

Till they had reached their eighteenth year, when they were classed in the *ἀγέλαι*, the youths accompanied their fathers to the Syssitia, where orphans also were provided (Hoeck, iii. 185); and the boys waited upon the men

(Ephor. *ap.* Strab. x. p. 483). Sons were seated near their fathers on a lower bench, and received only a half portion of meat: the orphans appear to have received the same quantity as the men, but without any condiments (ἀβαμβάκευτα, Pyrgion *ap.* Ath. iv. 143 e). The boys, like the men, had also a cup of mixed wine in common, which however was not replenished when emptied. During the repast a general cheerfulness and gaiety prevailed, which were enlivened and kept up by music and singing (Alcman *ap.* Strab. p. 482 = *fr.* 22, Bergk^4). It was followed by conversation, which was first directed to the public affairs of the state, and afterwards turned on valiant deeds in war and the exploits of illustrious men, whose praises might animate the younger hearers to an honourable emulation. To each ἀνδρεῖον there was a *παιδονόμος*, who controlled the behaviour and manners of the youths (Ephor. *l. c.*; cf. PAEDONOMI).

In most of the Cretan cities, the expenses of the Syssitia were defrayed out of the revenues of the public lands and the tribute paid by the Perioeci, the money arising from which was applied partly to the service of the gods, and partly to the maintenance of all the citizens, both male and female (Arist. *Pol.* ii. 10 = p. 1272 a, 17); so that in this respect there might be no difference between the rich and the poor. From the statement of Aristotle compared with Dosiadas (Ath. *l. c.*), it appears probable that each individual received his separate share of the public revenues, out of which he paid his quota to the public table, and provided with the rest for the support of the females of his family. This practice, however, does not appear to have prevailed exclusively at all times and in all the cities of Crete. In Lyctus, for instance, a colony from Sparta, the custom was different: the citizens of that town contributed to their respective tables a tenth of the produce of their estates; a practice which may be supposed to have obtained in other cities, where the public domains were not sufficient to defray the charges of the Syssitia. But both at Lyctus and elsewhere, the poorer citizens were in all probability supported at the public cost.

In connexion with the accounts given by the ancient authors respecting the Cretan Syssitia, there arises a question of some difficulty, viz. How could one building accommodate the adult citizens and youths of such towns as Lyctus and Gortyn? The question admits of only two solutions: we are either misinformed with respect to there being only one building in each town used as a common hall, or the number of Dorian citizens in each town must have been comparatively very small.

The Spartan Syssitia were in the main so similar to those of Crete that one was said to be borrowed from the other (Aristot. *Pol.* ii. 10 = p. 1271 b, 22; 1272 a, 3). They were anciently called ἀνδρεῖα, as in Crete, but later φιδίτια (Aristot. *l. c.*; Alcman, *l. c.*). Of this celebrated name three possible etymologies are hinted at by Plutarch (*Lycurg.* 12): (1) That the true form was φιλίτια, "friendly feasts;" this was long accepted as the right explanation (Müller, *Dor.* iv. 3, § 3; Hoeck, iii. 123; Göttling on Aristot. *Oecon.* p. 190; L. and S., ed. 7): (2) from φειδώ, "frugal feasts;" but the first syllable is short (Antiphan. *fr.* 44 M.; Cobet, *Nov. Lect.* p. 728): (3) from ἔδω, to eat, the φ representing a lost digamma; this is the simplest and best (Bielschowsky, p. 12; Gilbert, *Staatsalterth.* i. 71 n.; Thumser, *Staatsalterth.* p. 185 n.). To these Schömann adds a conjecture of his own: (4) from ἵζω, root ἑδ, "sittings" (*Antiq.* i. 271, 545 E. T.). It will be seen that (3) and (4) agree in substituting a labial for a lost digamma, about which there can be no difficulty; βαγὸς is connected with ἄγω, ἀπέλλα with ἀολλής. The Spartan Syssitia differed from the Cretan in the following respects. Instead of the expenses of the tables being defrayed out of the public revenues, every head of a family was obliged to contribute a certain portion at his own cost and charge; those who were not able to do so were excluded from the public tables (Aristot. *Pol.* ii. 10 = p. 1271 a, 35; HOMOEI). The guests were divided into companies generally of fifteen persons each, and all vacancies were filled up by ballot, in which unanimous consent was indispensable for election. No persons, not even the kings, were allowed what was called an ἀφίδιτος ἡμέρα (Hesych. *s. v.*), or excused from attendance at the public tables, except for some satisfactory reason, as when engaged in a sacrifice, or a chase, in which latter case the absentee was required to send a present to his mess (Plut. *Lycurg.* 12; *Agis*, c. 10). Each person was supplied with a cup of mixed wine, which was filled again when required; but drinking to excess was prohibited at Sparta as well as in Crete. The repast was of a plain and simple character, and the contribution of each member of a mess or φιδίτης was settled by law (Thumser, p. 188; Plut. *l. c.*). The principal dish was the μέλας ζωμὸς or black broth, with pork (Ath. iv. p. 141 b). The ἐπάϊκλον or second course (from the Doric ἄϊκλον, a meal) was however more varied, and richly supplied by presents of game, poultry, fruit, &c., and other delicacies which no one was allowed to purchase. Moreover, the entertainment was enlivened by cheerful conversation, though on public matters (Xen. *Rep. Lac.* 5, § 6). Singing also was frequently introduced, as we learn from Alcman (*l. c.*), that "at the banquets and drinking entertainments of the men it was fit for the guests to sing the paean." The arrangements were under the superintendence of the Polemarchs.

The use and purposes of the institutions described above are very manifest. They united the citizens by the closest ties of intimacy and union, making them consider themselves as members of one family, and children of one and the same mother, the state. They maintained a strict and perfect separation between the higher and the subject classes both at Sparta and in Crete, and kept up in the former a consciousness of their superior worth and station, together with a strong feeling of nationality. At Sparta also they were eminently useful in a military point of view, for the members of the Syssitia were formed into corresponding military divisions, and fought together in the field, as they had lived together at home, with more bravery and a keener sense of shame (αἰδὼς) than could have been the case with merely chance comrades (Herod. i. 65). Moreover "they gave an efficacy to the power of public opinion which must have nearly superseded the necessity of penal laws" (Thirlwall, vol. i. p. 289). With respect to the political tendencies, they were decidedly arranged upon aristocratical principles, though no individual of a company or mess was looked upon as superior to his fellows. Plutarch (*Quaest. Sympos.* vii. 9, p. 714 B) accordingly calls them *συνέδρια ἀριστοκρατικά*, or aristocratical meetings, and compares them with the Prytaneum and Thesmothesium at Athens.

The simplicity and sobriety which were in early times the characteristic both of the Spartan and Cretan Syssitia, were afterwards in Sparta at least supplanted by luxury and effeminate indulgence. The change was probably gradual, but the kings Areus and Acrotatus (B.C. 300) are recorded as having been mainly instrumental in accelerating it. The reformer Agis endeavoured but in vain to restore the old order of things, and perished in the attempt. Yet Cicero says that in his time the Lacedaemonians reclined only upon wooden couches, without cushions ("quotidianis epulis in robore accumbunt," *pro Mur.* 35, § 74). Athenaeus, on the other hand, quotes Phylarchus for the luxury, which may have been confined to special occasions (iv. 141 *extr.*, 142: Phylarchus lived about B.C. 215).

[R. W.] [W. W.]

SYSTYLOS. [TEMPLUM.]

T.

TABELLA, the voting tablet, by means of which votes were given at Rome both in the assemblies and in the courts of law.

1. In the assemblies the votes were originally the answers of the individual citizens to the magistrate who consulted the people as to their will and pleasure (*rogavit populum quid vellent juberent*). All evidence goes to show that the answers were originally given *vivâ voce* to the officials (*rogatores*) in attendance on the presiding magistrate. In the case of an election these officials pricked each vote on the tablet which bore the name of the candidate in whose favour it was given, who was said *punctum ferre*, a phrase which remained in use metaphorically after the custom on which it was based had been abandoned (Hor. *Epist.* ii. 2, 99; *Art. Poet.* 343). The result was then reported to the magistrate, who declared elected (*creavit*) the candidates with a majority. The only difficulty in accepting this view arises from the meaning of the word *suffragium*: it can hardly be doubted that this means originally a potsherd, a broken piece of tile (Corssen, i. 397); but there is no evidence or probability that voting by this means was ever practised at Rome in the assembly; the name may have been transferred from the use of the potsherd under other circumstances, but of this there is no proof (Mommsen, *Röm. Staatsr.* iii. 402, n. 1). Wunder's attempt (*Var. Lect.* p. clxvii. *sqq.*) to show that voting by pebbles (*ψῆφοι*) was in use, at least in passing or rejecting proposed laws, has not found favour with scholars. His arguments are derived entirely from passages in Dionysius, which only show that the writer transferred to an earlier time the arrangements of his own day (Mommsen, *ib.* 404, 2). The ballot was introduced first for the election of magistrates, B.C. 139 [TABELLARIAE LEGES]. After this date each voter received one *tabella*, on which were written the names, or more probably (cf. Cic. *pro Domo*, 43, 112) only the initials, of the candidates; and apparently he voted by pricking the tablet at the name of the favoured candidate. It is important to distinguish the *tabella* by means of which the citizens gave their votes, from the *tabula* or list on which the *custodes* checked off the votes, as they were taken out of the *cistae* and reported. (Cf. Tyrrell on Q. Cic. *de Pet. Cons.* 8.)

In voting upon laws after the introduction of the ballot, each citizen was provided with two tickets, one inscribed V. R., i.e. *uti rogas*, for assent; the other A., i.e. *antiquo*, "I approve the old law," for rejection (cp. Cic. *ad Att.* i. 13, 3). When Clodius desired to secure the failure of a *rogatio*, he contrived that no tickets marked V. R. should be issued (Cic. *ad Att.* i. 14, 5). Walther's view (*Geschichte*, i. 126, note 117), that when the Comitia acted as a court the tablets were different, does not seem well supported (cf. Lange, *Röm. Alt.*^{3} ii. 489).

2. In trials the judices were provided with three *tabellae*, one marked A., for *absolvo*, "I acquit;" the second with C., for *condemno*, "I condemn;" the third with N. L., for *non liquet*, "It is not clear to me." The first of them was called *tabella absolutoria*, the latter *tabella damnatorii* (Suet. *Aug.* 33): Cicero also calls the former *littera salutaris*, the latter *littera tristis* (*pro Mil.* 6, 15). In Caesar (*Bell. Civ.* iii. 83) we read that Domitius proposed that the senators who followed Pompeius should on their return to Rome be given each three *tabellae*, by which they might pass a verdict upon those who had remained at Rome: "unam fore tabellam, qui liberandos omni periculo censerent; alteram qui capitis damnarent, tertiam qui pecunia multarent." A tabella marked with the letters L. D. is represented on a denarius of the Caelian gens; and as C. Caelius Caldus introduced one of the *tabellariae leges*, it has been plausibly suggested that these letters denote *Libero* and *Damno* respectively (cf. Spanheim, *Numism.* ii. 198–200, ed. 1706; Mommsen, *Röm. Münzwesen*, p. 636). The annexed cut represents a coin of (Cassius) Longinus *iii vir*, referring to the Lex Cassia; the tablet is marked V. (Mommsen, *ib.* Cf. Cohen, *Monnaie de la République*, pll. xi. and xix.) [A. S. W.]

TABELLA'RIAE LEGES, the laws by which the ballot was introduced in voting in the Comitia; *tabellae* being the tablets overlaid with wax on which votes were secretly inscribed. Secret voting was introduced for the purpose of weakening the power of the optimates. As to the ancient mode of voting at Rome, see TABELLA. There were four enactments known by the name of Tabellariae Leges, which are enumerated by Cicero (*de Legg.* iii. 16, 35). They are mentioned below according to the order of time in which they were passed.

1. **Lex Gabinia**, proposed by the tribune Gabinus B.C. 139, introduced the ballot in the election of magistrates (Cic. *l. c.*); whence Cicero (*Agr.* ii. 2, 4) calls the tabella "vindex tacitae libertatis."

2. **Lex Cassia**, proposed by the tribune L. Cassius Longinus B.C. 137, introduced the ballot in the "Judicium Populi," with the exception of cases of Perduellio. The "Judicium Populi" undoubtedly applies to cases tried in the Comitia by the whole body of the people [JUDEX, Vol. I. p. 1027], although Ernesti (*Index Leg.*) wishes to give a different interpretation to the words. This law was supported by Scipio Africanus the younger, for which he was censured by the aristocratical party (Cic. *de Legg.* iii. 16, 37; *Brut.* 25, 97; *pro Sestio*, 48, 103; —Ascon. *in Cornel.* p. 78, ed. Orelli).

3. **Lex Papiria**, proposed by the tribune C. Papirius Carbo B.C. 131, introduced the ballot in the enactment and repeal of laws (Cic. *de Legg.* iii. 16, 35).

4. **Lex Caelia**, proposed by C. Caelius Caldus B.C. 107, introduced the ballot in cases of Perduellio, which had been excepted in the Cassian law (Cic. *l. c.*; *pro Planc.* 6, 16;—Plin. *Ep.* iii. 20).

There was also a law brought forward by Marius B.C. 119, which was intended to secure freedom and order in voting (Cic. *de Legg.* iii. 17, 38; Plut. *Mar.* 4). [W. S.] [E. A. W.]

TABELLA'RIUS, a letter-carrier. As the Romans had no public post, they were obliged to employ slaves, who were called *Tabellarii*, as special messengers to convey their letters when they had not an opportunity of sending them otherwise (Cic. *Phil.* ii. 31, 37; *ad Fam.* xii. 12, xiv. 22). Those who were out of Italy could get their letters conveyed not only by ships' captains, but also by the special tabellarii of the provincial governor (Cic. *ad Att.* v. 19; *de Prov. Cons.* 7, 15), or by those of the publicani (Cic. *ad Att.* v. 15 and 16): for these tabellarii of proconsuls, see also Auct. *de Bell. Hisp.* 2. [W. S.] [G. E. M.]

TABE'LLIO, a notary (Suidas, *s. v.*). Under the Empire the Tabelliones succeeded to the business of the Scribae in the times of the Republic [SCRIBAE]. They were chiefly employed in drawing up legal documents, and for this purpose usually took their stations in the market-places of towns (Capitol. *Macrin.* 4; Cod. 4, 21, 17; Novell. 73, c. 5, &c.). They formed a special order in the state (Gothofr. *ad Cod. Theod.* 12, 1, 3). [W. S.]

TABERNA. 1. (*σκηναί, γέῤῥα*), a shop or booth. [DOMUS, Vol. I. pp. 679, 680; AGORA, Vol. I. pp. 46, 47.]

2. A wine-shop or tavern. [CAUPONA.]

TABERNA'CULUM, TENTO'RIUM (*κλισίη, σκηνή*), a tent. The former of these words was no doubt originally applied to a shed or hut of boards (cf. Fest. s. v. *tabernacula*; TUGURIUM); but it became the ordinary term for a tent (Cic. *Brut.* 9, 37; Caes. *B. C.* i. 81; Liv. xxii. 42). These were made of skins stretched from wooden supports, like our canvas tents; hence the name *tentoria*, which, as we may gather from Festus (s. v. *contubernales*), is put concisely for *tentoriae pelles*. The tent-maker was called *tabernacularius* (Grut. 6428; Henzen, 6101). Constant supplies of hides for this purpose were drawn from the provinces by armies in the field (Cic. *Verr.* ii. 2, 5, *coria*; *in Pis.* 36, 87, *pellium nomine*). Campaigning was "sub pellibus durare" (Liv. v. 2): during winter the soldiers were either in towns, or, if they held a permanent camp in remote and uncivilised countries, they were lodged in huts of wood, turf or stones [CASTRA]: to keep them in tents during the winter was a mark of severity (Tac. *Ann.* xiii. 35; cf. Caes. *B. G.* iii. 29; Long *ad loc.*). The word *papilio*, "pavilion," may be, as Rich thinks, intended to describe the look of a tent with its curtains looped up. [For the size of Roman tents and their arrangements, see CONTUBERNIUM; Marquardt, *Staatsverw.* ii. 427.]

The *κλισίαι* of Homer were not tents, but wooden or wattled huts; that of Achilles (larger no doubt than the ordinary *κλισίη*, and with separate rooms, but of like material) was of fir-planks and thatched with reeds (*Il.* xxiv. 451), and *εὔπηκτος*, which implies carpenter's work (*ib.* 675). [See Buchholz, *Hom. Realien*, ii. 340.] In later Greek warfare (where any shelter is required) we find generally tents of skins, like those of the Romans, which are usually called *σκηναί* (Xen. *Anab.* i. 5, 12; cf. *σκηνορράφος*, Zonar. p. 1655; Ael. *V. H.* ii. 1), but also *διφθέραι* (Xen. *Anab.* i. 5, 10); *διφθέραι* with iron tent-pegs (Arr. *Anab.* iv. 19): wooden huts were also used and termed *σκηναί*, which explains the burning of the *σκηναί*, as too troublesome to carry, in Xen. *Anab.* iii. 2, 27: so Droysen takes it, but it is also possible that wooden framework for the *διφθέραι* may have been burnt. (See Droysen, *Kriegsalterth.* § 11 = Hermann-Blümner, *Lehrbuch*, ii. 13.) [For the augural *tabernaculum*, see AUGURIA; TEMPLUM *ad init.*] [G. E. M.]

TABLI'NUM. [DOMUS, Vol. I. p. 670 *b*.]

TA'BULA LUSO'RIA (*πίναξ*), a board for playing games, called also ALVEUS from having a raised rim. Ancient backgammon and draughts, and the boards on which they were played, are treated under DUODECIM SCRIPTA and LATRUNCULI respectively. Other games, played with and without dice, are described, though less intelligibly, by the grammarians (Pollux, ix. 97, 98; Eustath. *ad Od.* p. 1397). Bruzza, writing in 1877, states that upwards of 100 tabulae lusoriae, serving for six different games, had been found in Rome and the environs, mostly in the Castra Praetoria and the Catacombs (*Bullett. comunale*, 1877, pp. 81–99); from an examination of subsequent lists it does not appear that any further discoveries of a like sort have been made down to the present time. More than 60 of these are of the type given below, in which 36 letters are arranged in three double rows of six each: others, instead of the letters, have 36 arbitrary signs which served the same purpose; and one in particular repeats 36 times the words *palma feliciter* expressed in a monogram. We have selected a few of the more suggestive examples; in order to make each row consist of six letters, it will be seen that some liberties are taken with the spelling.

1. VICTVS 0 LEBATE
LVDERE 0 NESCIS
DALUSO 0 ELOCU[M].

2. SEMPER 0 IN HANC
TABVLA 0 HILARE
LVDAMV 0 SAMICI.

3. VICTOR VINCAS
NABICE FEELIX
SALBUS REDIAS.

4. INVIDA PVNCTA
IVBENT FELICE
LVDERE DOCTVM.

5. ABEMUS INCENA
PVLLVM PISCEM
PERNAM PAONEM.

BENATORES.

Nos. 1 and 2 are divided in the middle by a representation of the *calculi* with which the game was played; No. 3 by the figure of a sailing ship. Nos. 2 and 4 are metrical, after a fashion. The forms LEBATE (*leva te*, "take yourself off"), NABICE (*naviga*), SALBUS and BENATORES show the confusion of *b* and *v*, as in Spanish and modern Greek; PAONEM illustrates the French *paon*. In No. 1 the M of LOCVM seems to have been inserted by mistake, as the six letters are complete without it. The word BENATORES is of course not included in the letters that mark the board; it may imply that the game afforded a mild excitement to tired sportsmen after their day's work. Nos. 1 and 3 were found in a Christian tomb, and have been quoted to prove that the discipline of the early Church as regards games of chance was not very strict. Compare *Dict. of Chr. Ant.*, s. v. *Dice.*

It is conjectured that this was a game in which each player tried, under certain unspecified conditions, to get three men into a row (Ov. *A. Am.* iii. 365, *Trist.* ii. 481; cf. Isid. *Orig.* xviii. 64). A tabula lusoria described by Martial (xiv. 17) had backgammon and draught boards on opposite sides. (Marquardt, *Privatl.* 836–838.) [W. W.]

TABULAE or **PUGILLARES** (*πίνακες, δέλτοι, πυξίον, πινάκιον, γραμματεῖον*), writing tablets. Although Livy, i. 24, seems to make a formal distinction between *tabulae*, i.e. bronze tablets, and *cera*, yet in general the plural of *tabula* is used to signify thin slips of wood or other material, usually of an oblong shape, covered over with wax, whence *cera* and *cerae* are used for the tablets themselves. The wax, which was written upon by the stilus or *γραφίς* [STILUS], was coloured (red in Ov. *Am.* i. 12, 11, but generally black), so that the letters marked by the stilus were white. The layer of wax was sometimes so thin that the writing was marked on the wood itself below, as may be seen in some tablets that have been preserved. As to renewing the tablets by scraping off the old and pouring fresh melted wax over them, "cera . . . rasis infusa tabellis" (Ov. *Art. Am.* i. 437), see Herod. vii. 239. Ordinary Greek writing tablets were covered with *μάλθη*, a composite and softer wax, which in Dem. *c. Steph.* ii. p. 1132, § 11, is contrasted with the tablets covered with gypsum (*γραμματεῖον λελευκωμένον*: cf. *λεύκωμα, lex ap.* Dem. *Timocr.* p. 707), intended for more permanent documents. This composite wax was, however, termed indifferently *μάλθη* or *κηρός* (compare Aristoph. *Vesp.* 108 and *Fr.* 206). The schoolboy's writing tablet was sometimes a single *tabula* which he carried suspended by a ring (Hor. *Sat.* i. 6, 74, Orelli *ad loc.*; Plaut. *Bacch.* iii. 3, 37): tablets thus hung on the wall of the school-room are shown in the cut from the Duris vase under LUDUS LITTERARIUS (p. 96).

More expensive tablets were made of citron-wood or ivory (Mart. xiv. 3, 5), but the commoner woods were generally used, such as beech, fir, and box (whence the name *πυξίον*). The outer sides consisted of wood; the inner sides only were covered with wax. They were fastened together at the back by means of wires, which answered the purpose of hinges, so that they opened and shut like our books; and to prevent the wax of one tablet rubbing against the wax of the other, there was a raised margin around each, as is clearly seen in the woodcut under STILUS. There were sometimes two, three, four, five, or even more tablets fastened together in the above-mentioned manner. Tablets so folded and bound together were called *codex* or *codicilli* (compare Catull. 42, 5 and 11): where a very large number were combined, they had a handle, by which to carry or to hang them up, and were called *codices ansati* (*C. I. L.* x. 7852). [CODEX.] Two such tablets were called *diptycha* (*δίπτυχα*), which merely means "twice-folded" (cf. *δίπτυχον δελτίον*, Herod. vii. 239) [DIPTYCHA]. The Latin word *pugillares*, which is the name frequently given to tablets covered with wax (Mart. xiv. 3; Gell. xvii. 9; Plin. *Ep.* i. 6), is derived from *pugnus*, *pugillus*, because they were small enough to be held in the hand. Such tablets are mentioned as early as the Homeric poems, which speak of a *πίναξ πτυκτός* (*Il.* vi. 169; Munro *ad loc.*; Jebb, *Homer*, p. 112). Three tablets fastened together were called *Triptycha* (*τρίπτυχα*), which Martial (xiv. 6) translates by *triplices* (*cerae*); in the same way we also read of *pentaptycha* (*πεντάπτυχα*), called by Martial (xiv. 4) *quintuplices* (*cerae*), and of *polyptycha* (*πολύπτυχα*) or *multiplices* (*cerae*). The above are called also *γραμματεῖον* or *γραμματείδιον δίθυρον, τρίπτυχον ἢ πλειόνων πτυχῶν* (Poll. x. 51). [See woodcuts under LIBER, p. 58.] The pages of these tablets were frequently called by the name of *cerae* alone; thus we read of *prima cera, altera cera*, "first page," "second page" (Suet. *Ner.* 17; Hor. *Sat.* ii. 5, 53; Mart. iv. 72). In tablets containing important legal documents, especially wills, the outer edges were pierced through with holes (*foramina*), through which a triple thread (*linum*) was passed, and upon which a seal was then placed. This was intended to guard against forgery, and if it was not done such documents were null and void (Suet. *Ner.* 17; Paulus, *Sent. Rec.* v. 25, § 6; TESTAMENTUM).

Waxen tablets were used among the Romans for almost every species of writing, where great length was not required. Thus letters were frequently written upon them, which were secured by being fastened together with packthread and sealed. Accordingly we read in

Plautus (*Bacch.* iv. 4, 64) when a letter is to be written:

> "Effer cito stilum, ceram, et tabellas, et linum."

The sealing is mentioned afterwards (l. 96). The impression of the seal was made either upon wax (as in Plaut. *l. c.*; Ov. *Am.* ii. 15, 16; Plin. *H. N.* ii. § 137), or upon a specially prepared clay, called *cretula* (Cic. *Verr.* iv. 26, 58), *creta Asiatica* (Cic. *pro Flacc.* 16, 3, where *cera* also is mentioned as the alternative), γῆ σημαντρὶς (Herod. ii 38), σφραγὶς Λημνία (Aret. *de Curat.* 2, 2): see also Cic. *Cat.* iii. 5, 10. For the seals themselves, see SCALPTURA, p. 604. (Compare Cic. *in Catil.* iii. 5.) Tabulae and tabellae are therefore used in the sense of letters (Ovid, *Met.* ix. 522). Love-letters were written on very small tablets, called *Vitelliani* (Mart. xiv. 8, 9), of which word, however, we do not know the origin. Tablets of this kind are presented by Amor to Polyphemus on an ancient painting (*Mus. Borbon.* vol. i. tav. 2).

Legal documents, and especially wills, were almost always written on waxen tablets, as mentioned above; but even when written on parchment or papyrus they were still technically called *tabulae* (Ulp. *Dig.* 37, 11, 1; cf. δέλτοι, Luc. *Tim.* 22). Such tablets were also used for accounts, in which a person entered what he received and expended (*tabulae* or *codex accepti et expensi*, Cic. *pro Rosc. Com.* 2), whence *novae tabulae* mean an abolition of debts either wholly or in part (Suet. *Jul.* 42; Cic. *de Off.* ii. 23). The above are merely some instances of the extensive use of waxen tablets; others are given in Marquardt, *Privatleben*, pp. 804, 805.

Two ancient waxen tablets have been discovered in a perfect state of preservation, one in a gold mine four or five miles from the village of Abrudbànyá in Transylvania, and the other in a gold mine in the village itself. Of this interesting discovery an account has been published by Massmann in a work entitled "Libellus Aurarius, sive Tabulae Ceratae, et antiquissimae et unice Romanae in Fodina Auraria apud Abrudbanyam, oppidulum Transsylvanum, nuper repertae," Lipsiae (1841). An account of these tablets, taken from Massmann's description, will serve as a commentary on what has been said above. Both the tabulae are *triptycha*; that is, consisting of three tablets each. One is made of fir-wood, the other of beech-wood, and each is about the size of what we call a small octavo. The outer part of the two outside tablets of each exhibits the plain surface of the wood; the inner part is covered with wax, which is of a black colour, and is surrounded with a raised margin. The middle tablet has wax on both sides with a margin around each; so that each of the two tabulae contains four sides or four pages covered with wax. The edges are pierced through, that they might be fastened together by means of a thread passed through them. The wax is not thick in either; it is thinner on the beechen tabulae, in which the stilus of the writer has sometimes cut through the wax into the wood. There are letters on both of them, but on the beechen tabulae they are few and indistinct; the beginning of the first tablet contains some Greek letters, but they are succeeded by a long set of letters in unknown characters. The writing on the tabulae made of fir-wood is both greater in quantity and in a much better state of preservation. It is written in Latin, and is a copy of a document relating to some business connected with a collegium. The name of the consuls is given, which determines its date to be A.D. 169. For the great collection of 127 diptychs and triptychs found at Pompeii in 1875, see *Hermes*, xii. 88; Overbeck, *Pomp.*^{4} 489. Wooden tablets written upon with ink, which have been found in Egypt, are noticed by Marquardt (*Privatleben*, p. 802).

Waxen tablets continued to be used in Europe for the purposes of writing in the Middle Ages; but the oldest of these with which we are acquainted belongs to the year 1301 A.D., and is preserved in the Florentine Museum.

The tablets used in voting in the comitia and the courts of justice were also called tabulae as well as tabellae. [TABELLA.] [W. S.] [G. E. M.]

TA'BULAE PU'BLICAE. [TABULARIUM.]

TABULA'RII were notaries or accountants, who are first mentioned under this name in the time of the Empire (Sen. *Ep.* 88;—Dig. 11, 6, 7; 50, 13, 1, § 6). Public notaries, who had the charge of public documents, were also called tabularii (Dig. 43, 5, 3), and these seem to have differed from the tabelliones in the circumstance that the latter had nothing to do with the custody of the public registers. Public tabularii were first established by M. Antoninus in the provinces, who ordained that the births of all children were to be announced to the tabularii within thirty days from the birth (Capitol. *M. Anton.* 9). Respecting the other duties of the public tabularii, see Cod. Theod. 8, 2, and Gothofr. *ad loc.* For the tabularii of the army, see EXERCITUS, Vol. I. p. 803 *a*. [W. S.]

TABULA'RIUM, the place, at Rome and elsewhere, where the *tabulae publicae*, or state archives, were kept, corresponding to the μητρῷον at Athens [ARCHEION]. The *tabulae publicae* comprised rogations, senatusconsulta, and plebiscita; records of finance, of public contracts, of debtors to the state, the censors' registers (*tabulae censoriae*), registers of births and deaths (Capitol. *M. Anton. Phil.* 9); records of judicial matters, not only of trials, but also of jury lists (Cic. *Phil.* v. 5, 15), and records of elections (Cic. *Pis.* 15, 36). But these were not all, at all periods of history, kept together in one place or under one control. The records of the censors and finance were probably from a very early date onwards kept in the treasury in the Temple of Saturn, and under control of the quaestors. [AERARIUM; QUAESTOR.] On the other hand, from the date 447 B.C. the plebeian aediles had charge not only of plebeian archives, but also of senatusconsulta, subject to a general control or right of inspection by the tribunes (Liv. iii. 55; Zonar. vii. 15); and when these records also were transferred to the Aerarium (see below), the quaestors shared with the aediles and tribunes the charge of the state archives in general (see Mommsen, *Staatsr.* ii. 490). This arrangement, giving the custody to aediles and tribunes conjointly with the regular officials of the treasury, lasted till 12 B.C., when Augustus took it away from them on account, as Dio says, of their negligence (Dio Cass. liv. 36; cf. Cic. *de Leg. Agr.* iii. 20, 46). In consequence again of loss and decay of documents, Tiberius A.D. 16

appointed special *curatores tabulariorum publ.* to assist the regular officers of the treasury (Dio Cass. lvii. 16). The changes made by various emperors between *quaestors*, *praetors*, and *praefects* of the treasury are described under Aerarium, Vol. I. p. 36 *a* (cf. Mommsen, *Staatsr.* ii. 557–560).

The *permanent* depository, or tabularium, for plebiscita and senatusconsulta was in the Temple of Ceres until the year 187 B.C., when they were transferred to the Aerarium (Liv. xxxix. 4), which, so far as our evidence shows, became then the sole permanent tabularium at Rome (cf. Serv. *ad Georg.* ii. 502). It may be inferred from this that the burning of the tabularium during civil tumults early in the 1st century B.C., alluded to by Cicero (*pro Rab. perd.* 3, 8; *de Nat. Deor.* iii. 30, 74), must imply that the part of the Temple of Saturn which formed the tabularium was destroyed at that time and afterwards rebuilt. The history of the remains of a so-called tabularium above the Forum, and the precise meaning of the statement that Lutatius Catulus built a tabularium in B.C. 78 (*C. I. L.* vi. 1313, 1314), still need elucidation, but need not be discussed here. [See *Dict. of Geography*, s. v. *Rome;* Middleton, *Rome*, p. 232; O. Richter in Baumeister's *Denkm.* p. 1482; Mommsen, *Ann. Inst.* 1858, p. 211, who thinks that the *substructio* spoken of belonged to the Temple of Jupiter Capitolinus.] There were also *temporary* tabularia at Rome for the *tabulae censoriae*, which seem to have given rise to the belief in a number of permanent tabularia (Burn, *Rome and the Campagna*, p. 97). The fact is that the censors held the census of the people in the Campus Martius, and deposited the records *during their term of office* in the Temple of the Nymphs (Cic. *pro. Mil.* 27, 73), which is believed to have been in the Campus. The equestrian census was held in the Forum, and accordingly its records were deposited by the censors *during their term of office* in the Atrium Libertatis (Liv. xliii. 16), which from Cic. *ad Att.* iv. 16 seems to have been in or near the Forum. At the expiration of their office they deposited all their records in the Aerarium (Liv. xxix. 37), except possibly in very early times, when they seem to have retained them in their private *tablina* (Dionys. i. 74). The existence of these temporary tabularia besides the permanent tabularium of the treasury may be implied in the plural word of Verg. *Georg.* ii. 502; but it is more probable that the poet speaks of *the* tabularium and merely uses the plural for the singular.

It is an error also to regard the Temple of Jupiter Capitolinus as a tabularium (if we mean thereby a receptacle for *tabulae publicae*). The treaties and agreements with foreign states and the senatusconsulta ratifying such agreements were deposited in this temple, but they were always engraved on bronze plates (*tabulae aeneae*, *χαλκώματα*), and were not included in the *tabulae publicae*, nor was their repository called a tabularium. (Polyb. iii. 26; Cic. *Phil.* iii. 12, 30; *ad Fam.* xiii. 36; Suet. *Vesp.* 8; Liv. xxvi. 24; Mommsen, *Staatsrecht*, i. 255.)

As regards the method of entering decrees, &c., on the *tabulae publicae*, see Senatusconsultum, p. 637; Scriba; Mommsen, *Staatsr.* iii. 1011–1021. In the chief town of every province there was a tabularium in which records of surveys and the registers of the census (by Greek writers called *ἀναγραφαί*) were preserved (Marquardt, *Staatsverw.* ii. 313, where numerous inscriptions are cited): it appears, however, that abstracts or copies were also sent to Rome, as is stated by both Tertullian (*adv. Marcion*, 4, 7) and Chrysostom (vol. ii. p. 356 c, Montf.) in treating of the *ἀπογραφὴ* mentioned in the Gospels (Marquardt, *ib.* p. 216). So also there were tabularia in Italian towns for municipal records (Cic. *pro Arch.* 4, 8; cf. *pro Cluent.* 14, 41). [For the *tabularium castrense*, see Exercitus, Vol. I. p. 803 *a.*] [G. E. M.]

TAEDA (*δαΐς*, *Att.* *δᾴς*, *dim.* *δᾳδίον*), a torch of fir-wood, called on this account *pinea taeda* (Catull. 61, 15; Ovid, *Fast.* ii. 558). Hence the name *taeda* is given to the tree itself (Plin. *H. N.* xvi. § 44; cf. Hor. *Od.* iv. 4), for there can be no doubt that "torch" was the primary sense of the word. Before the adoption of the more artificial modes of obtaining light, described under Candela, Fax, Funale, and Lucerna, the inhabitants of Greece and Asia Minor practised the following method, which still prevails in those countries, and to a certain extent in Scotland and Ireland, as well as in other parts of Europe, which abound in forests of pines (Fellows, *Exc. in Asia Minor*, pp. 140, 333–335):—A tree having been selected of the species Pinus maritima, *Linn.*, which was called *πεύκη* by the ancient Greeks from the time of Homer (*Il.* xi. 494, xxiii. 328), and which retains this name, with a slight change in its termination, to the present day, a large incision was made near its root, causing the turpentine to flow so as to accumulate in its vicinity. This highly resinous wood was called *δᾴς*, *i.e.* torch-wood (Thuc. vii. 53); a tree so treated was called *ἔνδᾳδος*, the process itself *ἐνδᾳδοῦν* or *δᾳδουργεῖν*, or more fully *δαδοκοπεῖν πεύκην* (Theophr. *H. P.* v. 16, 2), and a tree so affected is said by Pliny "taeda fieri" (*H. N.* xvi. § 45): the workmen employed in the manufacture are called *δᾳδουργοί*. After the lapse of twelve months the portion thus impregnated was cut out and divided into suitable lengths. This was repeated for three successive years, and then, as the tree began to decay, the heart of the trunk was extracted, and the roots were dug up for the same purpose (Theophr. *H. P.* i. 6, § 1; iii. 9. §§ 3, 5; iv. 16, § 1; x. 2, §§ 2, 3;—Athen. xv. 700 f). These strips of resinous pine-wood are now called *δᾳδία* by the Greeks of Mount Ida (Hunt and Sibthorp, in Walpole's *Mem.* pp. 120, 235).

For the uses of the torch by Greeks and Romans and its significance in marriages and funerals, see Fax. [J. Y.] [G. E. M.]

TAE'NIA. [Vitta; Strophium.]

TAGUS (*ταγός*), a commander or ruler, was more particularly the name applied to the chief magistrate of Thessaly, and to magistrates of the Thessalian towns, at various periods of the history of that country. Under this head it is proposed to give a short account of the constitution of Thessaly.

The Thessalians are said to have been an Epirot tribe, which crossed the Pindus, conquered the country to which it subsequently gave its name, and either drove out or reduced to subjection the original inhabitants (Herod. vii. 176; Thuc. i. 12; Diod. iv. 57). They seem to have settled originally in that part of Thessaly known as *Θεσσαλιῶτις* (Buttmann, *Mythol.* xxii. p. 262), and soon after to have completed the conquest of *Πελασγιῶτις*, for it was to these two districts that the Penestae, who were the remains of the earliest of the native tribes which submitted to their dominion, belonged (Archemach. *ap.* Athen. vi. p. 264; see PENESTAE). They then completed the conquest of the rest of Thessaly, and reduced the neighbouring tribes of Achaeans, Perrhaebi, and Magnetes, with which they had been long at war (Arist. *Pol.* ii. 9, 2), to the condition of permanent dependencies (*ὑπήκοοι*, Thuc. ii. 101, iv. 78, viii. 3; see PERIOECI).

The princes who led the Thessalians to their new homes across the Pindus were, like the leaders of the Dorian invasion, Heracleidae (Pind. *Pyth.* i. 10 *sq.*; Hom. *Il.* ii. 679; Buttmann, *Mythol.* ii. p. 260). As the Heracleidae were found at Sparta in the families of the Agids and Eurypontids, and at Corinth in that of the Bacchiadae, so in Thessaly they were represented chiefly by the Aleuadae and Scopadae; and it is with the names first of Aleuas and later of Scopas that the organisation of Thessaly is connected. Thessaly appears as a united whole under the rule of Aleuas the Red-haired (*Ἀλεύας ὁ Πύρρος*), a semi-mythical personage, to whom no date can even approximately be assigned (Plut. *de Fr. am.* 21; Ael. *de Nat. anim.* viii. 11). We are told, on the authority of Aristotle, that he divided the country into the four districts of Thessaliotis, Phthiotis, Pelasgiotis, and Histiaeotis, which were called *τετράδες* (Harpocrat. *s. v.* *τετραρχία*: Phot., Suid., *s. v.*; Strabo, ix. p. 430). This division, which was probably based on some preceding natural division due to the mode in which the country had been conquered, continued unchanged to the latest times; and that it was not merely nominal, but had a material significance of the nature of which we are ignorant, is shown by the frequency with which it asserted itself as a real element in the Thessalian constitution. Aleuas is also said to have fixed certain regular military contingents, enjoining each *κλῆρος*, which was perhaps a subdivision of the *τετράς*, to furnish forty horsemen and eighty hoplites (Arist. *ap. Schol. vac. in* Eur. *Rhes.* 307). We are further told that the tribute to be paid by the subject states was fixed by a certain Scopas (Xen. *Hell.* vi. 1, 19, *προεῖπε δὲ καὶ τοῖς περιοίκοις πᾶσι τὸν φόρον ὥσπερ ἐπὶ Σκόπα τεταγμένος ἦν φέρειν*), who is assigned by modern authorities to the first half of the sixth century B.C. (Gilbert, *Staatsalt.* ii. p. 8; Buttmann, *Abh. der Berl. Akad.* 1832, p. 190 *sq.*).

From this time to the Persian wars Gilbert thinks that there was always a king of Thessaly, and that he was chosen from the Heracleidae, though not always from the same family of this race. Herodotus calls the Aleuadae "kings of Thessaly" at the time of the Persian invasion (Herod. vii. 6), and he also states that in 510 B.C. Thessaly as a united whole (*κοινῇ γνωμῇ χρεώμενοι*) sent their king *Κινέην ἄνδρα Κονιαῖον* (*Κυτιναῖον*, Stein) to help the Pisistratidae (Herod. v. 63). As late as 454 B.C. we find a certain Orestes of Pharsalus called king of Thessaly (Thuc. i. 111), and even at this period Thessaly may have been a united nation, and the noble families have still considered themselves vassals to a king of their own race and perhaps of their own choosing. There is no evidence to show that the names *βασιλεὺς* and *ταγὸς* were interchangeable; *ταγὸς* may have been one of the titles of the monarch, as "dictator" and "magister populi" were probably amongst the titles of the ancient kings of Rome; and as the king at Athens became the *ἄρχων*, so in Thessaly he may have become the *ταγός* (Buttmann, *Mythol.* ii. p. 275). The office was a temporary resumption of the monarchy, chiefly in respect of its military authority, and was created for the purpose of uniting the independent states of Thessaly for some common purpose. The Tagus was apparently elected by a majority of the states (Xen. *Hell.* vi. 1, 8); and the whole military force of the country was placed under his command: the surrounding tribes, which seem, after the fall of the monarchy, to have been dependent on particular states, as the Perrhaebi in Larisa (Strabo, p. 440), were all brought under the control of this temporary central government (Xen. *Hell.* vi. 1, 9, *πάντα τὰ κύκλῳ ἔθνη ὑπήκοα μὲν ἐστιν, ὅταν ταγὸς ἐνθάδε καταστῇ*). The tribute (*φόρος*), which they seem usually to have paid to the particular states on which they were directly dependent (Strabo, *l. c.*), was now exacted for the common purposes of the league (Xen. *Hell.* vi. 1, 12); and they were made to furnish light-armed troops, which the Tagus levied (*ib.* vi. 1, 9). At the same time he raised the greatest force which the free states of Thessaly were capable of affording, and which amounted on these occasions to 6,000 cavalry and more than 10,000 infantry (Xen. *Hell.* vi. 1, 8).

But such a union of the states of Thessaly was rarely realised; and we meet with no actual instance of the appointment of a Tagus until after the Peloponnesian war. It is not known when the monarchy came to an end, but it probably continued, in name at least, down to the year 454 B.C. (Thuc. i. 111); it was followed by a general break-up of the union of Thessaly; and though the words of Thucydides (iv. 78, 3), *τὸ πάντων κοινόν*, may point to some loose confederacy or common council, and though there seems to have been a strong common democratic sentiment running through the whole country, yet the different states were largely independent of one another and almost entirely under the control of their separate hereditary oligarchies (Thuc. *l. c.*). Thus Larisa was governed by the Aleuadae, Cranon by the Scopadae, and Pharsalus by the Creondae (Herod. vi. 127, vii. 6, ix. 58; Diod. xv. 61, xvi. 14; Schol. in Theocr. xvi. 34). The Aleuadae and Scopadae we know were related (Ov. *Ib.* 512; Buttmann, *Mythol.* ii. p. 270), and perhaps most of the great families of Thessaly were connected, at least by being Heraclidae, and therefore of the original royal race, if not by being offshoots of the Aleuadae, who, we are told, ruled in many cities (Pind. *Pyth.* 10 *ad fin.*, *ἐν δ' ἀγαθοῖσι κεῖται πατρώϊαι κεδναὶ πολίων κυβερνάσιες*). Sometimes a powerful state, like Pharsalus, extended its rule over other smaller cities (Xen. *Hell.* vi. 1, 8), but each of the larger states seems to have been practically independent both in foreign and domestic politics. In 431 B.C., at the commencement of the Peloponnesian war, we find that each of the cities which sent help to the Athenians appointed its own commander, and that the forces from Larisa were led by two generals, each chosen from a separate clan or faction in the city (*ἀπὸ τῆς στάσεως ἑκάτερος*, Thuc. ii. 22); and we also find nobles, like Menon of Pharsalus in 364 B.C., arming their Penestae and taking an independent part in the wars of foreign nations (Dem. *c. Aristocr.* § 238). These instances point to the disorganised condition of Thessaly, which was indeed a noted characteristic of the country throughout its history (Liv. xxxiv. 51). The towns were under the control of a feudal nobility, who maintained their power the more easily through the preponderance of cavalry amongst the Thessalians, which their wealth and the character of the country enabled them to support, and the comparative unimportance of the *ὁπλῖται* (Arist. *Pol.* iv. 3, 3; Thuc. ii. 22; Herod. v. 63; Dem. *l. c.*). The country was distracted at once by clan-feuds and by the struggles of the democracy against the dominant castes. In some states a compromise was for a time effected, as at Larisa, where a mediator (*ἄρχων μεσίδιος*) was at one time called in to allay the feuds in the ruling family (Arist. *Pol.* v. 6, 13), and where different magistrates of a democratic character, called *πολιτοφύλακες* and *δημιουργοί*, were appointed, to satisfy the claims of the popular party (*ib.* v. 6, 6, iii. 2, 2; *Etym. M.* s. v. *δημιουργός*).

The rule of the nobility continued until the close of the Peloponnesian war; and it was not until 404 B.C. that the democratical reaction became strong enough to cause its overthrow. In this year Lycophron of Pherae attempted to raise himself to the position of Tagus of Thessaly (Xen. *Hell.* ii. 3, 4). Unable to secure his election by constitutional means, he made himself tyrant (Diod. xiv. 82), and attempted to unite the whole of Thessaly under his sway. This object was actually accomplished by his successor Jason in 375 B.C. (Xen. *Hell.* vi. 1 *sq.*; Diod. xv. 60): but after the assassination of the latter in 370 B.C., his successors Polydorus, Polyphron, and Alexander of Pherae were unable to maintain the constitutional hegemony, and the office of Tagus developed into an irregular tyranny (Xen. *Hell.* vi. 4, 33; Diod. xv. 61), for the suppression of which the aid of the Thebans under Pelopidas was repeatedly called in.

Meanwhile we find that, about 364 B.C., an attempt was made at a reconstruction of the constitution of united Thessaly, for the purpose of joint action against Alexander of Pherae. We find again the *κοινὸν τῶν θετταλῶν*, composed of the four *τετράδες* (*C. I. A.* ii. n. 88). At its head stood an *ἄρχων*, and each *τετρὰς* seems to have had its *πολέμαρχοι*, with *πέζαρχοι* for the command of the foot-soldiers and *ἵππαρχοι* for the command of the cavalry, and other officers, apparently of a religious character, called *ἱερομνήμονες* (*C. I. A.* ii. n. 88, where *πολέμαρχοι* and *πέζαρχοι* are mentioned; Dittenberger, n. 85—a treaty of alliance between Athens and Thessaly in 361 B.C.—l. 17, *τὸ κοινὸν τὸ θετταλῶν—τὸν ἄρχοντα ὃν εἵλοντο θετταλοί*: l. 24, *ἐξορκώσοσιν Ἀγέλαον τὸν ἄρχοντα καὶ τοὺς πολεμάρχους καὶ τοὺς ἱππάρχους καὶ τοὺς ἱππέας καὶ τοὺς ἱερομνήμονας καὶ τοὺς ἄλλους ἄρχοντας, ὁπόσοι ὑπὲρ τὸ κοινὸ τὸ θετταλῶν ἄρχοσιν*). But this independent organisation was not of long duration. The subsequent usurpations of Sisiphorus and Lycophron induced the aristocracy to call in the assistance of Philip of Macedon, who deprived Lycophron of his power in 352 B.C. (Dem. *Olynth.* ii. p. 19, § 7); and this interference in the affairs of Thessaly paved the way for its subjection to Macedonia, which was effected in 344 B.C.

Philip re-organised the country by instituting tetrarchies (*τετραρχίαι*, Dem. *Phil.* iii. p. 120, § 35; Harpocr. *s. v.*) and decarchies (*δεκαδαρχίαι*, Dem. *Phil.* ii. p. 71, § 24); but it is doubtful whether these two modes of organisation were coexistent, and, if so, what relation the latter bore to the former. The tetrarchy was no doubt a re-institution of the division into *τετράδες*: and the decarchy has been variously explained as a council of ten under which each of the principal cities was placed, or as a similar council which governed each of the four divisions, or as a supreme council which was invested with the government of the whole country: this last alternative being on the whole the most probable (Dem. *l. c.* *τὴν καθεστῶσαν νῦν δεκαδαρχίαν*: see Whiston's note *in loc.*). Thessaly remained henceforth dependent on the Macedonian kings until the year 196 B.C., when the Romans, by the victory of Cynoscephalae, wrested it from Philip V., and restored the autonomy of the country.

From this time we get a renewal of the alliance of the Thessalian states (*κοινὸν θεσσαλῶν*); at the head of this confederacy stood a *στρατηγός*, appointed yearly, and we find the names of such *στρατηγοὶ* recorded both in inscriptions and on coins (*Rev. Arch.* xxxi. 1876, pp. 256, 257). The tribes formerly dependent on Thessaly—the Dolopes, Perrhaebi, and Magnetes—were now constituted as independent states (Liv. xxxiii. 34; Polyb. xviii. 30, 6; see Mommsen, *Staatsr.* iii. p. 658, n. 1): thus we find that the Magnetes had a general council of their own ("Magnetum consilium," Liv. xxxv. 31), and a supreme magistrate who bore the title *Magnetarches* (Liv. xxxv. 39 and 43). The constitution of the separate Thessalian states, as they were organised by T. Quintius Flamininus, was of a timocratic character (Liv. xxxiv. 51, "a cursu maxime et senatum et judices legit, potentioremque eam partem civitatium fecit, cui salva et tranquilla omnia magis expediebant"). On the occasions when the states were summoned to discuss measures which concerned the whole of Thessaly, the general council met at Larisa (Liv. xxxv. 31; xlii. 38, "Thessalorum Larissae fuit consilium").

During the Macedonian and Roman rule we find the word *ταγὸς* occurring frequently as a title of the magistrates of the Thessalian states; it is found in the fourth century B.C. at Pharsalus and Cranon (Cauer, nn. 395 and 400), in the third century at Larisa (Cauer, n. 409 B.C. 219 and 214), and about the year 196, at the commencement of the period of Roman rule, at Cyretiae (*C. I. G.* n. 1770). At Larisa and Cyretiae they were the chief magistrates; thus letters of Philip V. of Macedon and of T. Quintius Flamininus are addressed *τοῖς ταγοῖς καὶ τῇ πόλει χαίρειν* (Cauer, n. 409; *C. I. G.* n. 1770): in other states they appear as directing the proceedings of the ἐκκλησία, and as the executive and finance officers (Cauer, n. 386 a, προστατεύοντος τᾶς ἐκκλησίας τᾶν ταγῶν φίλωνος: Gilbert, *Staatsalt.* ii. p. 15). [Gilbert, *Handb. der Griech. Staatsalt.* ii. pp. 5–16; Buttmann, *Mythologus*, No. xxii. (*Von dem Geschlecht der Aleuaden*); Voemel, *de Thessaliae incolis antiqu.*, Frankf. 1829; Hoew, *de Thessalia Macedonum imperio subjecta*, Gryphiae, 1829; Schömann, *Antiq. Jur. publ. Graec.* p. 401; C. F. Hermann, *Political Antiquities of Greece* (Eng. trans.), § 178; Wachsmuth, *Hellen. Alterth.* i. 2, § 60, p. 106; Duncker, *History of Greece* (Eng. trans.), bk. ii. ch. v.] [A. H. G.]

TALA'RIA (πτερόεντα πέδιλα), coverings for the feet, either boots or sandals, with small wings attached. They are represented in ancient art and literature as the attributes of Hermes (*Il.* xxiv. 340; *Od.* v. 44; Verg. *Aen.* iv. 239, Mercury) and of Perseus (Hes. *Scut.* 216-220; Ov. *Met.* iv. 664 ff.), and had the property of carrying their wearers through the air, over land and sea. On the monuments, Hermes is often (though not invariably) depicted as wearing these winged boots or sandals (see *e.g.* Furtwängler, *Vasenk.* 1753, 2182, 2345; Couze, *Heroen- u. Göttergest.*, Taf. 71, 1; Overbeck, *Gal. her. Bildw.*, Taf. 15, 12). In the Hellenistic and Roman periods the wings are sometimes attached to the bare ankles of Hermes or Mercury (*e.g.* Baumeister, *Denkm.* art. Hermes, fig. 740 = *Mus. Borb.* vi. 2). On the resting Hermes at Naples (Baumeister, *Denkm.* art. Hermes, fig. 738; see also woodcut to the present article) the wings are attached by straps to the feet of Hermes. It should be noted that on early Greek vase-paintings Hermes is found wearing boots, to the upper rim of each of which is attached a curved object. This appears to be a strap for pulling on the boot, and not a rude representation of a wing (Roscher, *Lexikon*, art. Hermes, p. 2400;—Baumeister, *Denkm.* art. Athena, fig. 171; *ib.* art. Herakles, fig. 722; *ib.* art. Dreifuss- und Dreifussraub, fig. 512). Examples of the talaria of Perseus may be seen on the early vase figured in *Monumenti*, vol. x. pl. 52 = Rayet and Collignon, *Hist. de la Céramique*, p. 75, fig. 38; see also Baumeister, *op. cit.*, art. Perseus, fig. 1439, 1440. [W—K W—H.]

Foot with talaria. (From statue of Hermes at Naples.)

TALASSIO. [MATRIMONIUM.]

TALENTUM (τάλαντον) was the heaviest unit of weight in use among the Greeks; and as a talent of gold, silver, or copper was a definite amount of money, varying of course with the standard by which it was weighed, the word stood also for monetary units. A large number of talents were in use in different parts of Greece—the Euboic, the Aeginetan, the Phoenician, &c.—the weights of which will be found in the tables under PONDERA. Pollux (ix. 86) mentions several of these, and gives their value in proportion to the Attic talent. He also remarks that the talent of each district contained 60 minae of that district, and the mina 100 drachmae.

There were, however, one or two talents of a peculiar character which require special mention. The talent of gold of Homer (*Il.* ix. 124; xviii. 507; xxiii. 262) was certainly some quite small amount; and ancient writers conjectured that it was of the weight of a daric (128 grains), a view which modern investigations tend to confirm. Of somewhat greater value was a talent of gold mentioned by the poet Philemon as consisting of three χρυσοῖ or gold staters. Possibly they may have been the equivalent of a talent of copper.

Like all other nations, the Greeks used various talents for different classes of goods. The Babylonians, as we have set forth under PONDERA, had one talent for gold, one for silver, and one for goods. In Athens in historical times the emporic or commercial talent was quite differen from the talent of the mint, bearing to it a relation of about 3 to 2. And even for different sorts of heavy goods special weights were employed. Thus we hear of a talent for weighing wood (ξυλικὸν τάλαντον) as in use at Antioch and at Alexandria; and in all places the Attic weights seem to have been used for drugs. For abundant references to ancient authorities, see τάλαντον in the index to Hultsch's *Metrologici Scriptores.* [P. G.]

TALIO, from *talis*, signifies an equivalent, but it is used only in the sense of a punishment, or penalty the same in kind and degree as the mischief which the guilty person has done to the body of another (cf. Isidor. v. 27, "Talio est similitudo vindictae, ut taliter quis patiatur, ut fecit. Hoc enim et natura et lege est institutum, ut caedentem similis vindicta sequatur"). A provision as to talio occurred in the Twelve Tables: "Si membrum rupit ni cum eo pacit talio esto" (Festus, s. v. *Talionis*; Gell. xxi. 1; Gaius, iii. 223). It appears that, according to this law, a defendant declared guilty in the *actio de membris ruptis* of having broken the limb of the plaintiff was condemned to the penalty of retaliation at the hands of the individual injured or his friends, unless he could agree with his adversary that a pecuniary composition should be substituted for retaliation (*pactum de redimenda talione*). A practice came to be established, that in case of disagreement as to the amount of composition to be paid, the party who had committed the wrong might demand an arbitrator of the magistratus for the purpose of having the damages fixed, so that he could escape from liability to talio by paying a fair composition (Gell. xx. 1, 37, &c.: "hanc quoque ipsam talionem ad aestimationem judicis redigi necessario solitam. Nam si reus, qui depacisci noluerat, judici talionem imperanti non parebat, aestimata lite judex hominem pecuniae dampnabat, atque ita, si reo et pactio gravis et acerba talio visa fuerat, severitas legis ad pecuniae multam redibat"). The punishment of talio was only inflicted under the Twelve Tables on account of the breaking of a limb (*propter membrum ruptum*); for the breaking of a bone (*propter os fractum*) as distinct from a limb, the penalty was 300 asses if the person injured was a freeman, and 150 if he was a slave; for other injuries, 25 asses: such sums being considered adequate compensation in early times of great poverty, as Gaius tells us (iii. 223).

The principle of talio is generally found in systems of primitive law, gradually giving place, as at Rome, to that of pecuniary damages or penalty. Cato, as quoted by Priscian (vi. p. 710, Putsch), says in reference to Punic law: "Si quis membrum rupit, aut os fregit, talione proximus cognatus ulciscatur." Talio, as a punishment, was a part of the Mosaic law: "breach for breach, eye for eye, tooth for tooth; as he hath caused a blemish in a man, so shall it be done to him again" (Levit. xxiv. 20). (Rein, *Das Criminalrecht der Römer*, pp. 37, 358, 816, 915; Rudorff, *Römische Rechtsgeschichte*, ii. 325, note 1; Voigt, *Zwölf Tafeln*, ii. § 132.) [E. A. W.]

TALUS (ἀστράγαλος), the name of a bone in the hind leg of cloven-footed animals which articulates with the tibia and helps to form the ankle-joint (Aristot. *Hist. An.* ii. 1, § 34). In the language of anatomists it is still called *astragalus;* the English name is sometimes "huckle-bone," but more commonly "knuckle-bone" (Germ. *Knöchel*). The astragali of sheep and goats, from their peculiar squareness and smoothness, have been used as playthings from the earliest times, and have often been found in Greek and Roman tombs, both natural and imitated in ivory, bronze, glass, and agate (Propert. iii. 24, 13; Mart. xiv. 14; Ficoroni, *Tav.* 2). Those of the antelope (δορκάδειοι) were sought as objects of elegance and curiosity (Theophr. *Char.* 5; Athen. v. p. 193 f). They were used to play with, principally by women and children (Plut. *Alcib.* 2), occasionally by old men (Cic. *de Sen.* 16, § 58). A painting by Alexander of Athens, found at Resina, represents two women occupied with this game. One of them, having thrown the bones upwards into the air, has caught three of them on the back of her hand (*Ant d'Erc.* i. tav. 1). See the following woodcut, and compare the account of the game in Pollux (ix. 99). Polygnotus executed a similar work at Delphi, representing the two daughters of Pandarus thus employed (παιζούσας ἀστραγάλοις, Paus. x. 30, § 1). But a much more celebrated production was the group of two naked boys, executed in bronze by Polycletus, and called the *Astragalizontes* (Plin. *H. N.* xxxiv. § 55). A fractured marble group of the same kind, preserved in the British Museum, exhibits one of the two boys in the act of biting the arm of his playfellow, so as to present a lively illustration of the account in Homer of the fatal quarrel of Patroclus (*Il.* xxiii. 87, 88). To play at this game was sometimes called πεντελιθίζειν, because five bones or other objects of a similar kind were employed (Pollux, *l. c.*; Hermipp. *fr.* 33 M.); and this number is retained among ourselves. This game was entirely one of skill; and in ancient no less than in modern times, it consisted not merely in catching the five bones on the back of the hand, as shown in the woodcut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight.

Tali. (From a painting at Herculaneum.)

The name was also given to dice for playing games of chance [ALEA]; at first, no doubt, merely the natural bones marked with pips, afterwards of a conventional shape reproducing the peculiarities of the knuckle-bone. The length was greater than the breadth, so that they had four long sides and two pointed ends, one of them called κεραία (Aristot. *l. c.*), the other without a name. Of the four long sides, which alone were marked, two were broader, the others narrower. One of the broad sides was convex (πρηνής or πρανής), the other concave (ὕπτια); while of the narrow sides one was flat and called χῖον, the other indented. This was called κῷον, and as the rarest was also the luckiest throw, marked 6: the χῖον was marked 1, the broader sides 3 and 4, so that the numbers 2 and 5 were wanting. From the difference of their shapes they did not absolutely require to be marked, and sometimes the pips were dispensed with (Poll. ix. 99, τὸ δὲ σχῆμα τοῖς κατὰ τὸν ἀστράγαλον πτώματος ἀριθμοῦ δόξαν εἶχεν). It was the under side of the die, not the upper, that counted, as must be inferred from the fact of the narrowest side giving the highest throw (Marquardt, *Privatl.* 828).

The Greek and Latin names of the numbers were as follows (Pollux, *l. c.*; Eustath. *in* Hom. *Il.* xxiii. 88; Suet. *Aug.* 71; Mart. xiii. 1, 6):—1. Μονάς, εἷς, κύων, Χῖος (Brunck, *Anal.* i. 35, 242); 2. *Ion*, Οἴνη: *Unio*, *Volturius*, *canis* (Propert. v. (iv.) 8, 45; Ovid, *A. A.* ii. 206, *Trist.* ii. 473); 3. Τριάς: *Ternio;* 4. Τετράς: *Quaternio;* 6. Ἑξάς, ἑξίτης, Κῷος: *Senio.*

As the bone is broader in one direction than in the other, it was said to fall upright or prone (ὀρθὸς ἢ πρηνής, *rectus aut pronus*), according as it rested on a narrow or a broad side (Plut. *Quaest. Sympos.* v. 6, p. 680 a; Cic. *de Fin.* iii. 16, § 54).

Two persons played together at this game, using four bones, which they threw up into the air, or emptied out of a dice-box [FRITILLUS]. The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of all was four aces (*jacit volturios quatuor*, Plaut. *Curc.* ii. 3, 78). But the value of a throw (βόλος, *jactus*) was not in all cases the sum of the four numbers turned up. The highest in value was that called *Venus*, or *jactus Venereus* (Plaut. *Asin.* v. 2, 55; Cic. *de Div.* ii. 59, § 121; Propert., Suet. *ll. cc.*), in which the numbers cast up were all different (Mart. xiv. 14), the sum of them being only fourteen. It was by obtaining this throw that the king of the feast was appointed among the Romans (Hor. *Carm.* i. 4, 18; ii. 7, 25) [SYMPOSIUM], and hence it was called *Basilicus* (Plaut. *Curc.* ii. 3, 80). Certain other throws were called by particular names, taken from gods, illustrious men and women, and heroes. Thus the throw, consisting of two aces and two trays, making eight, was denominated *Stesichorus*. A multitude of these names of throws are given by Pollux (vii. 204 ff.), who quotes the following lines from the Κυβευταὶ of Eubulus (*fr.* 57 M.):—

> Κεντρωτός, ἱερός, ἅρμ' ὑπέρβαλλον πόδας,
> κήρυνος, εὐδαίμων, κυνωτός, ἄρτια,
> Λάκωνες, ἀντίτευχος, 'Αργεῖος, δάκνων,
> Τιμόκριτος, ἐλλείπων, πυαλίτης, ἐπίθετος,
> σφάλλων, ἀγυρτής, οἶστρος, ἀνακάμπτων, δορεύς,
> Δάμπων, Κύκλωπες, ἐπιφέρων, Σόλων, Σίμων.

The number of names far exceeds that of possible throws, so that some must have been identical. When the object was simply to throw the highest numbers, the game was called πλειστοβολίνδα (Pollux, ix. 117). Before a person threw the tali, he often invoked either a god or his mistress (Plaut. *Capt.* i. 1, 5; *Curc.* ii. 3, 77–79). These bones, marked and thrown as above described, were also used in divination (Suet. *Tib.* 14).

For the cubical die marked on all six sides, see TESSERA (Eustath. *ad Il.* xxiii. 87, p. 1397; Becq de Fouquières, *Jeux des Anciens*, ed. 2, pp. 325–356; Marquardt, *Privatl.* 826 ff.) [J. Y.] [W. W.]

TAMIAS (ταμίας) was a name given to any person who had the care, management, or dispensing of money, stock, or property of any description, confided to him, as a steward, butler, housekeeper, storehousekeeper, or treasurer. The word is applied metaphorically in a variety of ways. But the ταμίαι who will fall under our notice in this article, are more especially the treasurers of the temples and the revenues of different Greek states.

The name and office of ταμίαι occur in inscriptions throughout the Grecian world. One of the duties most commonly assigned to them was that of paying the expenses of public sacrifices; they are likewise mentioned as responsible for payments for the setting up of pillars with inscriptions, for honorary crowns, for the entertainment of foreign ambassadors and the salaries of those sent out for contracts for leases on behalf of the state, for lending at interest on its account, &c. (See lists of towns and inscriptions, mostly from Dittenberger, in Gilbert, *Staatsalterth.* ii. 334, and the Index.)

In ancient times every temple of any importance had property belonging to it, besides its furniture and ornaments; and a treasury where such property was kept. Lands were attached to the temple, from which rents accrued; fines were made payable to the god; trophies and other valuables were dedicated to him by the public; and various sacred offerings were made by individuals. The wealthiest of all the temples at Athens was that of Athena in the Acropolis, in which were kept the spoils taken from the Persians (τὰ ἀριστεῖα τῆς πόλεως), besides magnificent statues, painting, and other works of art (Dem. *c. Timocr.* 741, § 129). To the goddess large fines were specially appropriated by the law or given by decree of the courts or the assembly; and besides this she received a tenth of all the fines that went to the state, a tenth of all confiscations and prizes taken in war, a sixtieth of the tribute paid by the subject-allies [HELLENOTAMIAE]. Her treasurers were called ταμίαι τῶν ἱερῶν χρημάτων τῆς 'Αθηναίας (*C. I. A.* i. 117 ff., 188), or shortly, ταμίαι τῆς θεοῦ (*ib.* i. 324, &c.), and ταμίαι τῶν τῆς θεοῦ (*See-Urk.* p. 465; *C. I. A.* ii. 612, &c.), even simply ταμίαι (*ib.* i. 273, 299). They appear to have existed from an early period. Herodotus (viii. 51, 53) relates that the ταμίαι τοῦ ἱεροῦ with a few other men awaited the attack of Xerxes upon the Acropolis, and perished in its defence. They were ten in number, chosen annually by lot from the class of Pentacosiomedimni, and afterwards, when the distinction of classes had ceased to exist, from among the wealthiest of Athenian citizens (Harpocr. and Suid., *s. v.* Ταμίαι: Poll. viii. 97; *C. I. A.* i. 32, 299).

In early times there seem to have been as many boards of ταμίαι as there were temples; but in the archonship of Antilochides, 435–4 B.C., they were all united into one board (probably also of ten members), the ταμίαι τῶν ἄλλων θεῶν: while those of Pallas still remained distinct (*C. I. A.* i. 32, 194). Their treasury was at this time transferred to the same place as that of Athena, to the Opisthodomos of the Parthenon, where the state-treasures were also kept (Aristoph. *Plut.* 1193). In the archonship of Eucleides (B.C. 403), or soon after, these two boards were consolidated into one, now called οἱ ταμίαι τῶν ἱερῶν χρημάτων τῆς 'Αθηναίας καὶ τῶν ἄλλων θεῶν (*C. I. A.* ii. 2, 642 ff.). After a few years—the date is fixed by inscriptions at between 390–385 B.C. (Gilbert, i. 236 n.)—they were again separated, and in the time of Demosthenes we find the two bodies of ταμίαι still subsisting, οἱ τῶν τῆς θεοῦ and οἱ τῶν ἄλλων θεῶν (Dem. *c. Timocr.* p. 743, § 136).

All the funds of the state were considered as being in a manner consecrated to Pallas; while on the other hand the people reserved to themselves the right of making use of the sacred monies, as well as the other property of the temples, if the safety of the state should require it (Thucyd. ii. 13). It is to be observed that, though the state-treasure (ὅσια χρήματα) and the sacred treasure (ἱερὰ χρήματα) were kept for security in the same place, the Opisthodomos, they were always under distinct management. On this point the statement of Boeckh (*P. E.* p. 164 = *Sthh.*^{3} i. 200), that the ταμίαι τῆς θεοῦ were the common treasurers of both funds, requires correction from the researches of Kirchhoff (*Abh. d. Berl. Akad.* 1876; Fränkel, n. 268 on Boeckh). In the fifth century the state treasure was in the custody of the Hellenotamiae; the ταμίαι τῆς θεοῦ, and those of the other gods, drew from the sacred treasure what was required for religious purposes, of course on their own responsibility; and they advanced money out of it to the state, in the form of loans bearing interest (*C. I. A.* i. 273), though in hard times the repayment was often delayed. After the Peloponnesian war there must have been for a long time little or no reserve in the state treasury, and no special provision for its custody was wanted.

Payments made to the temples were received by the treasurers in the presence of some members of the senate, just as public monies were by the Apodectae; and then the treasurers became responsible for their safe custody. They had no discretionary power of dealing with the treasure committed to their care; it was by a special decree that Androtion obtained authority to melt down the golden crowns (Dem. *c. Androt.* p. 615, § 70); and if the story is true that they once lent money to the bankers for their own profit (Schol. *ad* Dem. *c. Timocr.* p. 743, § 136), it was an act of embezzlement. As to fines, see EPIBOLE, PRACTORES; and on the whole of this subject, Boeckh, bk. ii. ch. 5.

The treasurer of the revenue, *ταμίας* or *ἐπιμελητῆς τῆς κοινῆς προσόδου*, was a more important personage than those last mentioned. He was not a mere keeper of monies, like them, nor a mere receiver, like the Apodectae; but a general paymaster, who received through the Apodectae all money which was to be disbursed for the purposes of the administration (except the property-taxes which were paid into the war-office, and the tribute from the allies, which was at first paid to the Hellenotamiae, and afterwards to other persons hereafter mentioned), and then distributed it in such manner as he was required to do by the law: the surplus (if any) he paid into the war-office or the Theoric fund. As this person knew all the channels in which the public money had to flow, and exercised a general superintendence over the expenditure, he was competent to give advice to the people upon financial measures, with a view to improve the revenue, introduce economy, and prevent abuses. He is variously called *ταμίας τῆς κοινῆς προσόδου* (Decret. *ap.* Ps.-Plut. *Vitt. X. Oratt.* p. 852 B; in p. 841 B it is simply *ταμίας*), or *τῶν κοινῶν προσόδων* (Plut. *Arist.* 4), or *ὁ ἐπὶ τῆς διοικήσεως* (spurious decrees, *ap.* Dem. *de Cor.* p. 238, § 38, p. 265, § 115), or more usually *ὁ ἐπὶ τῇ διοικήσει*: this last appears to have been the official title (see Inscrr. in Gilbert, i. 233 n.): and was the nearest approach that Athenian institutions admitted to a modern finance minister or "Chancellor of the Exchequer." To him Aristophanes refers in *Eq.* 948. He was elected by *χειροτονία*, and held his office for four years, but was capable of being re-elected. A law, however, was passed during the administration of Lycurgus, prohibiting re-election (*Vitt. X. Oratt.* p. 841 C.); so that Lycurgus, who is reported to have continued in office for twelve years, must have held it for the last eight years under the names of other persons. On the financial career of Lycurgus, see Mahaffy, *Gr. Lit.* ii. 368. The power of this officer was by no means free from control; inasmuch as any individual was at liberty to propose financial measures, or institute criminal proceedings for malversation or waste of the public funds; and there was an *ἀντιγραφεὺς τῆς διοικήσεως* appointed to check the accounts of his superior. On the *πορισταὶ* who at one time assisted him in his duties, see Antiph. *de Chor.* § 49; Aristoph. *Ran.* 1505; Fränkel, n. 273 on Boeckh. [PORISTAE.]

The money disbursed by the treasurer of the revenue was sometimes paid directly to the various persons in the employ of the government, sometimes through subordinate pay offices. Many public functionaries had their own paymasters, who were dependent on the *ταμίας τῆς προσόδου*, receiving their funds from him, and then distributing them in their respective departments. Such were the *τριηροποιοί*, *τειχοποιοί*, *ὁδοποιοί*, *ταφροποιοί*, *ἐπιμεληταὶ νεωρίων*, who received through their own *ταμίαι* such sums as they required from time to time for the prosecution of their works. The payment of the judicial fees (*δικαστικὸν*) was made by the *κωλακρέται*. [COLACRETAE.] The *ταμίαι* of the sacred vessels, *τῆς Παράλου* and *τῆς Σαλαμινίας*, acted not only as treasurers, but as trierarchs; the expenses (amounting for the two ships together to about sixteen talents) being provided by the state. They were elected by *χειροτονία* (Demosth. *c. Mid.* p. 570, § 171; Pollux, viii. 116). Other trierarchs had their own private *ταμίαι*, for the keeping of accounts and better dispatch of business (Boeckh, *P. E.* bk. ii. ch. 6; Schömann, *Antiq. Jur. Publ.* pp. 250, 312).

The duties of the *Ἑλληνοταμίαι* are spoken of in a separate article. [HELLENOTAMIAE.]

The war fund at Athens (independently of the tribute) was provided from two sources: 1st, the property-tax [EISPHORA], and 2ndly, the surplus of the yearly revenue, which remained after defraying the expenses of the civil administration, *τὰ περιόντα χρήματα τῆς διοικήσεως* ([Dem.] *c. Neaer.* p. 1346, § 4). They had under them a treasurer, called *ταμίας τῶν στρατιωτικῶν*, who gave out the pay of the troops, and defrayed all other expenses incident to the service. Demosthenes, perhaps on account of some abuses which had sprung up, recommended that the generals should have nothing to do with the military fund, but that this should be placed under the care of special officers, *ταμίαι καὶ δημόσιοι*, who should be accountable for its proper application: *τὸν μὲν τῶν χρημάτων λόγον παρὰ τούτων λαμβάνειν, τὸν δὲ τῶν ἔργων παρὰ τοῦ στρατηγοῦ* (*de Cherson.* p. 101, § 47). The notion of Boeckh (*P. E.* p. 181 = *Sthh.*^{3} i. 223), Meier (in *Att. Process*), and Schömann (*Ant. Jur. Publ.* p. 252, n. 7), that one of the Strategi was called *στρατηγὸς ὁ ἐπὶ τῆς διοικήσεως*, is now rejected (Fränkel, n. 322 on Boeckh; Lipsius, *Att. Process*, p. 120, n. 243). No such phrase occurs among the special titles of Strategi gathered from inscriptions by Gilbert (*Staatsalterth.* i. 221 f.).

So much of the surplus revenue as was not required for the purposes of war, was to be paid by the treasurer of the revenue into the Theoric fund; of which, after the Archonship of Euclides, special managers were created. [THEORICA.]

Lastly, we have to notice the treasurers of the demi, *δήμων ταμίαι*, and those of the tribes, *φυλῶν ταμίαι*, who had the care of the funds belonging to their respective communities, and performed duties analogous to those of the state treasurers. The demi, as well as the tribes, had their common lands, which were usually let to farm. The rents of these formed the principal part of their revenue. *Φύλαρχοι*, *δήμαρχοι*, and other local functionaries were appointed for various purposes; but with respect to their internal economy we have but scanty information. (Schömann, *Assemblies*, pp. 371–378 = 349–355 tr. Paley; *Ant. Jur. Publ.* pp. 203, 204.) [C. R. K.] [W. W.]

TAPETE (*τάπης*, *τάπις*, or *δάπις*), a piece of tapestry, a carpet.

The use of tapestry was in very ancient times characteristic of Oriental rather than of European habits (Athen. ii. p. 48 n); we find that the Asiatics, and also the Carthaginians, who were of Asiatic origin, and the Egyptians, excelled in the manufacture of carpets, displayed them on festivals and other public occasions, and gave them as presents to their friends (Xen. *Anab.* vii. 3, § 18, 27). They were nevertheless used by the Greeks as early as the age of Homer, sometimes as pillows, sometimes as coverlets (*Il.* x. 156; xvi. 224; xxiv. 230, 645;—*Od.* iv. 298; vii. 337), and by some of the later Roman emperors they were given as presents to the combatants at the Circensian Games (Sidon. Apoll. *Carm.* xxiii. 427). The places most renowned for the manufacture were Babylon (Arrian, *Exped. Alex.* vi. 29, § 5; Sidon. Apoll. *Epist.* ix. 13), Tyre and Sidon (Heliodor. v. p. 252, ed. Commelin.), Sardes (Athen. ii. p. 48 b, vi. p. 255 e, xii. p. 514 c; Non. Marcell. p. 542), Miletus (Aristoph. *Ran.* 542), Alexandria (Plaut. *Pseud.* i. 2, 13), Carthage (Athen. i. p. 28 a), and Corinth (Id. i. p. 27 d). In reference to the texture, these articles were distinguished as those which were light and thin with but little nap, chiefly made at Sardes and called *ψιλοτάπιδες* (Athen. vi. p. 255 e, xii. p. 514 c; Diog. Laërt. v. 72), and those in which the nap (*μαλλὸς*) was more abundant, and which were soft and woolly (*οὖλοι*, Hom. *Il.* xvi. 224; *μαλακοῦ ἐρίοιο*, *Od.* iv. 124). The thicker and more expensive kinds (*μαλλωτοί*) resembled our baize or drugget, or even our soft and warm blankets, and were of two sorts, viz. those which had the nap on one side only (*ἑτερόμαλλοι*), and those which had it on both sides, called *ἀμφίταποι* (Athen. v. p. 197 b, vi. p. 255 e; Diog. Laërt. v. 72, 73), *amphitapae* (Non. Marcell. p. 540; Lucil. *Sat.* i. p. 188, ed. Bip.), or *ἀμφιτάπητες* (Eustath. *in* Hom. *Il.* ix. 200), and also *ἀμφίμαλλοι* or *amphimalla* (Plin. *H. N.* viii. § 193). They were frequently of splendid colours, being dyed either with the kermes (Hor. *Sat.* ii. 6, 102–106) or with the murex (*conchyliata*, *ἁλουργεῖς*, *ἁλιπορφύροι*), and having figures, especially hunting-pieces, woven into them (Sidon. Apoll. *l. c.*: Plaut. *Pseud.* i. 2, 14; *Stich.* ii. 2, 54; Lucret. ii. 35; Oribas. ii. p. 310, ed. Daremberg). These fine specimens of tapestry were spread upon thrones or chairs, and upon benches, couches, or sofas, at entertainments (Hom. *Il.* ix. 200, *Od.* iv. 124, xx. 150; Verg. *Aen.* i. 639, 697–700; Ovid, *Met.* xiii. 638; Cic. *Tusc.* v. 21, 61; LECTUS), more especially at the nuptials of persons of distinction. Catullus (lxiv. 47–220) represents one to have been so employed, which exhibited the whole story of Theseus and Ariadne. They were also used to sleep upon (Hom. *Il.* x. 156; Anac. viii. 1, 2; Theocr. xv. 125; Aristoph. *Plut.* 540; Verg. *Aen.* ix. 325, 358), and for the clothing of horses (*Aen.* vii. 277). The tapestry used to decorate the bier and catafalque at the APOTHEOSIS of a Roman emperor was interwoven with gold (Herodian, iv. 2, p. 82, ed. Bekker). The Orientals upon occasions of state and ceremony spread carpets both over their floors and upon the ground (Aeschyl. *Agam.* 910–960; Athen. iv. p. 131 b, xii. p. 514 c). [For the use of tapestry or Persian carpets as wall-hangings, *portières*, &c., see AULAEA.]

The *toralia* (valances, cf. LECTUS, p. 19 *a*) were sometimes *segmentatae*, i.e. either patchwork, or ornamented with "appliqué" work, pieces of tapestry or of embroidery in gold and colours sewn upon the *toral* (or *vestis*) in different shapes, as squares, rounds or stripes (Juv. vi. 89), and frequently in Arval inscriptions (see Marquardt, *Privatl.* 548). Tertullian calls the process "vestes purpura *oculare*" (*de Pud.* 8).

Besides the terms which have now been explained, the same articles of domestic furniture had denominations arising from the mode of using them, either in the TRICLINIUM (*tricliniaria Babylonica*, Plin. *H. N.* viii. 48, § 196) or in the CUBICULUM (*cubicularia polymita*, Mart. xiv. 150), and especially from the constant practice of spreading them out (*textile stragulum*, Cic. *Tusc.* v. 21, 61; *vestis stragula*, Liv. xxxiv. 7; Hor. *Sat.* ii. 3, 118; *στρωμναί*, Plut. *Lycurg.* p. 86; Athen. iv. p. 142 a, *στρώματα*, ii. p. 48 d). The Greek term *peristroma*, which was transferred into the Latin (Diog. Laërt. *l. c.*; Plaut. *Stich.* ii. 2, 54; Cic. *Phil.* ii. 27, 167), had probably the special signification of *valance* or drapery round the sides of the couch: the distinction is marked in Athen. ii. p. 48 c (cf. v. p. 197 b), and a representation of such *peristromata* on a funeral couch may be seen under FUNUS, Vol. I. p. 890. Its meaning therefore is much the same as that of *toral*, but it probably included (as indeed toral may have done) coverlets so large that they not only covered the couch, as *στρώματα*, but also hung down in drapery (Becker-Göll, *Charikles*, ii. 77; Marquardt, *Privatl.* 586; Semper, *der Stil.* p. 258). The word *plagulae* is sometimes used as equivalent to *stragula* or *στρώματα*, but usually means a curtain [see LECTICA]. [J. Y.] [G. E. M.]

TAPHUS (*τάφος*). [SEPULCRUM.]

TARENTI'NI LUDI. [LUDI SAECULARES.]

TARRHUS (*ταῤῥός*). [NAVIS, p. 224.]

TAU'RIA, a name given to the festival of Poseidon at Ephesus, in which those ministering were called *ταῦροι* (Hesych. *s. v.*; Athen. x. p. 425 c; Artemid. *Oneir.* i. 5). [L. S.]

TAU'RII LUDI. [LUDI TAURII.]

TAUROBO'LIUM. This rite was introduced at Rome when the worship of Syrian and Persian deities was established or extended there under the Antonines (Capitol. *M. Ant. Phil.* 13; Gibbon, *Rom. Emp.* ii. 265), and especially that of Mithras, the Persian sun-god, which lasted down to the end of the third century (Lamprid. *Comm.* 9; Hieronym. *Ep.* 57, vol. iv. 2, p. 591), and of Cybele in its later development [compare MEGALESIA]. A temple of the Magna Mater where these rites of *taurobolium* were celebrated stood on the Vatican, and a portion of St. Peter's is built over its site (*C. I. L.* vi. 494–564): a Mithraeum or temple of Mithras stood in the Campus on the edge of the seventh region and the *Via lata* (*ib.* 749–754); another on the Esquiline (*ib.* 748); others in different parts of Italy, as Ostia (Burn, *Rome and Campagna*, 371). Priesthoods were established with elaborate grades and strange titles, *κόρακες*, *κρύφιοι*, *leones*, *leaenae*, *ἡλιοδρόμοι*, *patres* (Hieronym. *l. c.*; Tertull. *de Cor.* 15). Whether this worship was coloured by an engrafting of a perverted Christianity, it is not our purpose here to inquire (see Tertull. *de Praescr. Haeret.* 40; Matern. 27, 8; Pressensé, *Hist. des Trois Premiers Siècles*, ii. 2, pp. 12–20). A special feature of these mysteries was the baptism of blood from a slaughtered bull or ram (*taurobolium* or *criobolium*), which was supposed to regenerate those who were so sprinkled. In the reign of Julian persons of the highest rank and the great priesthoods of the state participated [SACERDOS, p. 576]. We find a description of the ceremonies in Prudent. *Peristeph.* x. 1011–1050: the persons who were to be so consecrated to regeneration, wearing the *mitra* with a golden circlet and the *cinctus Gabinus*,' were placed beneath a platform upon which a bull or ram decked with garlands and having gilded horns was slain: the blood flowing through the chinks in the platform streamed over those beneath, each of whom was supposed to return home "taurobolio in aeternum renatus" (*C. I. L.* vi. 510). Numerous ancient reliefs represent these rites (see cut under ACINACES; Zoega, *Bassirel.* i. 59, 103; Baumeister, *Denkm.* p. 925). The votive altars have symbols on them: *e.g.*, on one found on the Vatican and dedicated to Cybele by a XV. vir Julius Italicus, A.D. 305, is engraved a pine-tree with a syrinx, pedum, tympana, and the heads of a bull and ram and the words "taurobolium percepi" (*C. I. L.* vi. 497): on an altar to Mithras of the year A.D. 376, two pine-trees, under which respectively are bound a ram and a bull, in the branches hang pedum, fistulae, and sistra. This is dedicated by Ulpius Faventinus: "Augur, pater et hieroceryx Dei solis invicti Mithrae, archibucolus Dei Liberi, hierophanta Hecatae, sacerdos Isidis," and the inscription concludes with the lines—

> "Vota Faventinus bis deni suscipit orbis
> Ut mactet repetens aurata fronte bicornes,"

which probably means that the ceremony is to be renewed in twenty years (*ib.* 504). Especially un-Roman in its phraseology is one which a praefectus urbis dedicates, A.D. 374, to Mater Magna, Hermes, and Attis Menotyrannus, "diis animae suae mentisque custodibus" (*ib.* 499). The *taurobolium* was introduced not only in the rites of Mithras and Cybele, but also in those of Venus Caelestis (*C. I. L.* x. 1546). For further details, see Marquardt, *Staatsverw.* iii. 87 ff.; Pressensé, *l. c.*; Lanciani, *Ancient Rome*, pp. 166, 192. [G. E. M.]

TAXIARCHI (ταξίαρχοι) were military officers at Athens, who were next in rank to the strategi [STRATEGUS]. They were ten in number, like the strategi, one for each tribe, and were elected in the same way, namely by χειροτονία (Dem. *Phil.* i. p. 47, §§ 26, 27; Pollux, viii. 87). In war each commanded the infantry of his own tribe (Dem. *c. Boeot.* i. p. 999, § 17; Aesch. *de fals. Leg.* § 169), and they were sometimes, at any rate, summoned to the council of war (Thucyd. vii. 60). In peace they assisted the strategi in levying and enlisting soldiers; the preparation of the register (κατάλογος) of those liable to service rested upon the demarchs for each deme, and the taxiarchs as representing the tribes, under the strategi. They might also be called upon to act as the deputies of the strategi in military trials (Dem. *c. Boeot.* l. c.).

The taxiarchs were so called from their commanding τάξεις, which were the principal divisions of the hoplites in the Athenian army. Each tribe (φυλή) formed a τάξις, whence we find φυλή used as synonymous with τάξις (Lys. *in Agorat.* §§ 79, 82). As there were ten tribes, there were consequently in a complete Athenian army ten τάξεις, but the number of men contained in each would of course vary according to the importance of the war. Among the other Greeks the τάξις was the name of a much smaller division of troops. The λόχος among the Athenians was a subdivision of the τάξις, and the λοχαγοί were probably appointed by the taxiarchs (Schömann, *Ant. Jur. Publ.* p. 253 ff.). [W. S.] [W. W.]

TAXIS (τάξις). [TAXIARCHI.]

TECTO'RIUM OPUS. [PARIES.]

TEGULA (κέραμος, κεραμίς), a tile, made of baked clay, yellow or red. Under the name of *tegulae* are included (1) wall-tiles = *testae* or *lateres cocti*, so called to distinguish them from the *lateres* or sun-dried bricks [LATER]; for the manner in which these were used in building, see MURUS, pp. 189, 190, and DOMUS, Vol. I. p. 684: (2) having tiles either laid simply as large flat tiles 1½ feet or 2 feet square (*tegulae sesquipedales*, *bipedales*, Vitruv. v. 10, 2; Pallad. i. 19, 1), or in small pieces (*tesserae*) to form patterns (see Birch, *Ancient Pottery*, p. 478; BALNEAE, Vol. I. p. 278; PICTURA, p. 397): (3) flue tiles, either *tubi* or *tegulae mammatae* [see BALNEAE, Vol. I. p. 277]: (4) roofing tiles, which have more particularly to be described in this article. At Rome the houses were (after the period of the ruder thatch) roofed with shingles (*scandulae*), down to the time of Pyrrhus, when tiles began to supersede the old roofing material (Plin. *H. N.* xvi. § 36; Niebuhr, *Hist. of Rome*, vol. iii. p. 559). [For Greek roofs, see DOMUS, Vol. I. p. 663.]

Tiles were originally made perfectly flat, or with nothing more than the hook or nozzle underneath the upper border, which fulfilled the purpose of fixing them upon the rafters. They were afterwards formed with a raised flange on each side, as is shown in the annexed woodcut representing the section of four of the tiles remaining at Pompeii.

Section of tiles at Pompeii.

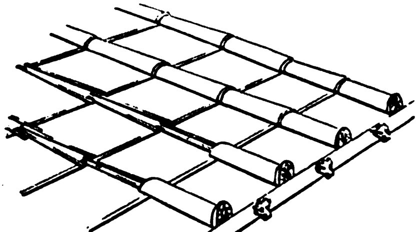
Ornamented fronts of tiles.

Frontons of tiled roof.

In order that the lower edge of any tile might overlap the upper edge of that which came next below it, its two sides were made to converge downwards. This is illustrated in Birch by the annexed flange-tile. See also the next woodcut representing a tiled roof, from a part of which the joint-tiles are removed in order to show the overlapping and the convergence of the sides. It was evidently necessary to cover the lines of junction between the rows of flat tiles, and this was done by the use of semicylindrical tiles called *imbrices* (*καλυπτῆρες*, Dionys. vi. 92; Poll. x.

Flange tile found in London. (Birch.)

157). The first woodcut on preceding page shows the section of three imbrices found at Pompeii, and indicates their position relatively to the flat tiles. This is also shown in the cut below. The roof, by the exact adaptation of the broad *tegulae* and the narrow *imbrices* throughout its whole extent, became like one solid and compact framework (Xen. *Mem.* iii. 1, § 7; *confringit tegulas imbricesque*, Plaut. *Most.* i. 2, 28; Plin. *H. N.* xxxv. § 159). The rows of joint-tiles divided the roof into an equal number of channels, down which the water descended into the gutter (*canalis*) to be discharged through openings made in the lions' heads, the position and appearance of which are shown in the woodcuts. An ornamental arrangement of tiles called *pavonaceum* is mentioned by Pliny (xxxvi. § 159): probably the tiles were then semicircular and overlapped like the feathers in the tail of a peacock. The rows of flat tiles terminated in a variously ornamented front, which rose immediately above the cornice, and of which four specimens are shown in the first woodcut. The first and fourth patterns are drawn from tiles found at Pompeii, and the two intermediate from tiles preserved in the British Museum and brought thither from Athens. The lions' heads upon the third and fourth are perforated. [ANTEFIXA.] The frontons, which were ranged along the cornice at the termination of the rows of joint-tiles, were either painted or moulded in various forms. The first woodcut shows three example of such frontons, which belong to the Elgin Collection in the British Museum. They are drawn on a much larger scale than the other objects in the same woodcut. The invention of these ornaments is ascribed to Butades of Corinth (Plin. *H. N.* xxxv. § 153).



Tegulae.

For greater splendour, especially where tiles were to be used in temple-roofs [TEMPLUM], marble slabs cut like tiles were used (*marmoreae tegulae*, Liv. xlii. 3; Val. Max. i. 2, 20): the invention was ascribed to Byzes of Naxos in the 7th cent. B.C. (Pausan. v. 10, 2). We hear also of bronze and bronze-gilt tiles (Plin. *H. N.* xxxiii. § 57). For the construction of roofs, see DOMUS, Vol. I. pp. 668, 685. (Birch, *Ancient Pottery*, pp. 469–481; Blümner, *Technologie*, ii. 29 ff.; Marquardt, *Privatleben*, pp. 636 ff.)

[J. Y.] [G. E. M.]

TEICHOPOEI (*τειχοποιοί*). Among the various persons to whom was entrusted the management of public works at Athens (*ἐπιστάται δημοσίων ἔργων*). were those whose business it was to build and keep in repair the public walls. It is needless to observe how important to the city of Athens were her walls and fortifications, more especially the long walls, which connected the upper city with the Peiraeus, and which gave it the advantages of an island. These were maintained at considerable expense. The *τειχοποιοί* appear to have been elected by *χειροτονία*, one from each tribe, and, like other similar officers, for a year. They were considered to hold a magisterial office (*ἀρχή*), and in that capacity had a *ἡγεμονία δικαστηρίου*. Aeschines calls them *ἐπιστάται τοῦ μεγίστου τῶν ἔργων*. Funds were put at their disposal, for which they had their treasurer (*ταμίας*), dependent on the treasurer of the revenue (Aeschin. *c. Ctes.* § 27). They were liable to render an account (*εὔθυναι*) of their management of these funds, and also of their general conduct, like other magistrates. The office of *τειχοποιὸς* has been invested with peculiar interest in modern times, on account of its having been held by Demosthenes, and its having given occasion to the famous prosecution of Ctesiphon, who proposed that Demosthenes should receive the honour of a crown before he had rendered his account according to law. As to the nature of the office, and the laws thereto relating, we may probably rely upon the account given by Aeschines. (Aeschin. *c. Ctes.* §§ 14, 17, 24; cf. documents (doubtful) *ap.* Dem. *de Cor.* p. 243, § 55, p. 266, § 118; Boeckh, *P. E.* pp. 170, 203 = *Sthh.*^{3} i. 211, 257.) [C. R. K.] [W. W.]

TELA (*ἱστός*), a loom. The elementary principle of weaving being merely the crossing of threads over and under, it is probable that it first took the form of simple plaiting (Lucret. v. 1349; cf. the term *ἔμπλεξις τοῦ στήμονος*, Plat. *Polit.* p. 282 E); but we have no record of a time when the real loom in some form or other was unknown to the Greeks and Romans. Its construction in many points is clear, but there are also several questions which cannot be answered with certainty, and about which we must be content with conjectures. Even now the dispute whether writers of the Augustan age are speaking of the upright or the horizontal loom cannot be said to be ended.

From plaiting comes naturally the idea of stretching fixed threads and working a cross thread alternately over and under: for everything woven consists of two parts, the fixed thread or warp (*stamen*, *στήμων*), and the woof or weft (*subtemen*, later *trama*,[*] *κροκή*). Instead of *κροκή* we sometimes find *ἐφυφή* used (Plat. *Legg.* v. p. 734 E), and in this passage, as well as in Plat. *Polit.* p. 283 E, we find noticed one of the most important differences between the warp and the weft; viz. that the threads of the former are strong and firm in consequence of being more twisted in spinning, while those of the latter are comparatively soft and yielding. This is in fact the difference which in modern silk manufacture distinguishes *organzine* from *tram*, and in cotton manufacture *twist* from *weft*. Another name for the weft or tram was *ῥοδάνη* (*Batr.* 181; Eustath. *ad Il.* xxiii. 762; *Od.* v. 121).

It may facilitate reference to arrange the parts of the loom under different heads, noting the terms discussed in each:—I. Words connected with the arrangement of the *stamen* (*στήμων*, warp); viz. the framework, *jugum*, *insubuli*, *scapi*, *κελέοντες*; *ordiri*, *διάζομαι*, *καῖρος*: *pondera* *ἀγνῦθες*, *λεῖαι*: II. Those connected with the *licia* or *μίτοι* ("shedding" by leashes or heddles); viz. *arundo*, *liciatorium*, perhaps *insilia* (*κανών*, perhaps *ἀντίον* = "heddle-leaf"): III. With the radius (*κερκίς*, shuttle); viz. *πήνη*, *panus* (bobbin or spool), *subtemen*, *trama* (*κροκή*, weft, woof or tram): IV. With the *spatha*, and the later *pecten* (*σπάθη* and *κτείς* = reed, lay, batten): V. The question of upright and horizontal looms: VI. Style and pattern.

I. The threads of the warp were called *stamina*, *στήμονες*, because they were, at any rate originally, fixed at certain intervals in a row, *upright*, i.e. perpendicularly from the top to the bottom of the loom (Varr. *L. L.* v. 113). For the same reason the very first operation in weaving was to set up the loom, *ἱστὸν στήσασθαι* (Hom. *Od.* ii. 94; Hes. *Op.* 779); and the web or cloth, before it was cut down or "descended" from the loom (*κατέβα ἀφ' ἱστῶ*, Theoc. xv. 35), was called "vestis pendens" or "pendula tela" (Ov. *Met.* iv. 395; *Ep.* i. 10), because it hung down from the transverse beam, which was probably the *jugum*, our "yarn-beam." This transverse beam with the two upright side-posts (*ἱστοπόδες* or *κελέοντες*, Theoc. xvii. 34) formed the whole framework (*ἱστὸς* or *tela*) of the primitive loom. Blümner indeed denies that jugum had this meaning, on the ground that Ovid (*Met.* vi. 55) uses it in speaking of what he believes to be the horizontal loom. But (1) from analogy of the other senses of the word [see Jugum], the only *natural* view is, that in the loom it means the bar connecting the uprights (Ahrens well compares the jugum under which the vanquished passed): (2) this explains the *jugum* of the lyre, which we may suppose to have been named from a resemblance to the loom, the strings stretched from the jugum being compared to the threads of the warp: (3) even if Blümner's theory were right as to the horizontal loom—(for arguments against it, see under V.)—the jugum might still be the cross-bar joining the side-pieces, on which the warp-threads (here called collectively "tela") are bound: and (4) the name of *tela jugalis* (Cat. *R. R.* 10, 14) is then easily explained as being the primitive loom, in which the warp was fastened directly to the jugum, with no second cross-bar or "yarn-beam" underneath, as in the woodcut below. The doubtful words to be noticed in the structure of the loom are *insubuli* and *scapi*. The former is explained by Blümner as = *κανόνες*: the words of Isidore, however (*Or.* xix. 29), "insubuli quia infra supra sunt," seem rather to indicate that the yarn-beam and cloth-beam were together known by this name. In the earliest and simplest frame, as will be shown, where the web was not longer than the loom itself, the top-bar acted as the yarn-beam, and there was no cloth-beam at all, but (as in the Chiusi vase, and in the Icelandic loom represented in fig. 1) it was a useful addition to have a second upper bar as yarn-beam, which might take the form of a roller with a reserve of warp, and again, instead of the *καῖρος* and weights at the bottom of the loom, to have a beam on which the cloth could be rolled as it was made. *Scapi*, according to Blümner, also = *κανόνες*, as in the gloss "scapi, *κανόνες γερδιακοί*:" Rich and Monro (*ad* Lucret. v. 1361) translate it "yarn-beam:" the use of scapus in Plin. *H. N.* xiii. § 77 for the roll of a book would rather suggest the cloth-beam as its part in the loom; but on the whole, if we reason from the ordinary sense of scapus, we may best suppose the scapi of the loom to be the *side-posts* = *κελέοντες*, for which a Latin name is wanted: the epithet "sonans" may refer to the rattling of the loom generally.

The fastening of the warp to the top-bar or *jugum* was called specially *διάζεσθαι*, *στημονίζεσθαι*, and in Latin *ordiri*, *exordiri* (Plaut. *Pseud.* i. 4, 6; *Bacch.* ii. 3, 116; cf. Cic. *de Or.* ii. 33, 145): the handing of the threads for this process, when two persons were setting up the loom, is *προφορεῖσθαι*, which involved some running backwards and forwards, which is the meaning of the word in Aristoph. *Av.* 4 (Schol. *ad loc.*; Hesych. *s. v.*: the rendering in L. and S. is at variance with these authorities). The process is well illustrated by Nonnus (*Dion.* vi. 150):—

> *καὶ ποσὶ φοιταλέοισι παλίνδρομος ἀκμὸν ἀπ' ἀκροῦ*
> *πρωτοπαγῆ ποίησε διάσματα, φάρεος ἀρχήν,*
> *ἱστῷ δ' ἀμφὶς ἔλισσεν.*

This moving backwards and forwards (*ἱστὸν ἐποίχεσθαι*, *Od.* x. 222) belonged to the old fashion of standing to weave, before the fashion of sitting and beginning the web at the bottom of the loom was introduced from Egypt. Nonnus describes it in Epic manner, though the loom at which the worker *sat* no doubt prevailed in his

---

[*] This word is, we venture to think, wrongly explained by Marquardt and Blümner, who, though they admit the later meaning = *subtemen*, assign as its proper meaning "the opening of the warp when parted to let the weft through." If that were the case, and it were nothing but a void, it is difficult to see how it could ever mean a woven piece. In truth both ἤτριον (strictly "the woven thing") and *trama* mean the crossing of threads after the *subtemen* is shot through; hence *trama* came to mean also the *subtemen* itself (Serv. *ad Aen.* iii. 483; Isid. *Or.* xix. 29; Non. p. 149, 22), but in Plin. *H. N.* xi. § 81, it is clearly the web of crossed threads, and this meaning will suit Sen. *Ep.* 90, 24, and Pers. vi. 73, where the bare crossed threads, with the nap worn away, are signified. That *ἤτριον* also means *web* seems clear from Plat. *Phaed.* p. 268 A; Tim. *Lex. Plat.*; Theocr. xviii. 337; *Anth. Pal.* ix. 350.

time. In setting the warp for lighter fabrics the threads were stretched fewer and further apart, and the web was then *ἀραιόστημος* or *μανόστημος*, as opposed to the thicker and coarser *στημόνιον*, *πολύστημος* or *πυκνόστημος*. But the warmth required in winter was secured by driving the softer weft threads closer, *στημόνι δ' ἐν παύρῳ πολλὴν κρόκα μηρύσασθαι* (Hes. *Op.* 538).

It may be supposed that the threads of the warp would easily fall out of place and become entangled unless they were secured at both ends: this in more modern looms is effected by the "yarn-roll" or "yarn-beam" at one end, and the "cloth-roll" at the other. In the older Greek and Roman looms the warp was fastened to the *jugum* at the top, and the lower end of each warp-thread was passed through a loop (*καῖρος*), and also had a weight attached to it to make it hang straight. This lower row of loops (*καῖροι*, *καίρωμα*) must (as Blümner rightly shows, *Techn.* i. 126) be distinguished from the *μίτοι* or *licia* with which they are sometimes confused. This is clear from the explanation in *Etym. Mag.* and Eustath. *ad Od.* vii. 107, *παρὰ τὸν μίτον* [*i.e.* parallel to, but below, the *μίτοι*] *ὑπὲρ τοῦ μὴ συγχεῖσθαι τοὺς στήμονας*. Hence it is probable that the Homeric adjective *καιροσέων* is a mere synonym for *ὑφασμένων*. The weights attached to the end of each warp-thread were called *ἀγνῦθες* or *λεῖαι* (Poll. vii. 36), in Latin merely *pondera* (Sen. *Ep.* 90, 20): they were either simple stones with a hole bored through them, or made of pottery: a great number of these have been found: Blümner refers to Ritschl, *Ueber antike Gewichtsteine*, Bonn, 1866; see also the account of those found at Hissarlik (Schliemann, *Troja*, p. 163); it is possible that many of the terra-cotta "whorls" which he thinks intended for spindles may have been weights for weaving (*ib.* p. 41). In the Scandinavian ode translated by Gray as *The Fatal Sisters*, the weights are warriors' skulls. Perhaps the expression there, "the weights that *play* below," may explain the *λίθον ὀρχηστῆρα* of Nonn. *Dion.* xxiv. 254.

Whilst the improvements in machinery have to a great extent superseded the use of the upright loom in all other parts of Europe, it remains almost in its primitive state in Iceland. The following woodcut is reduced from an engraving of the Icelandic loom in Olaf Olafsen's *Economic Tour* in that island, published in Danish at Copenhagen, A.D. 1780, which will probably illustrate the earlier Greek and Roman loom better than any of the few representations on ancient vases which have been discovered. (For the best of these, Penelope's loom, on a vase from Clusium, see Baumeister, *Denkm.* fig. 2332.) We observe underneath the jugum a roller which is turned by a handle, and on which the web is wound as the work advances. The threads of the warp are divided into thirty or forty parcels, to each of which a stone is suspended for the purpose of keeping the warp in a perpendicular position and allowing the necessary play to the strokes of the spatha, which is drawn at the side of the loom: they correspond to the *καῖρος* or *καίρωμα* described above. These knotted bundles of threads to which the stones were attached often remained after the web was finished, in the form of a fringe. [FIMBRIA.] In the centre of the web we see the attachment of the threads of the warp by means of leashes to three rods (*κανόνες*, *liciatoria*). This important and intricate part of the loom needs some explanation.

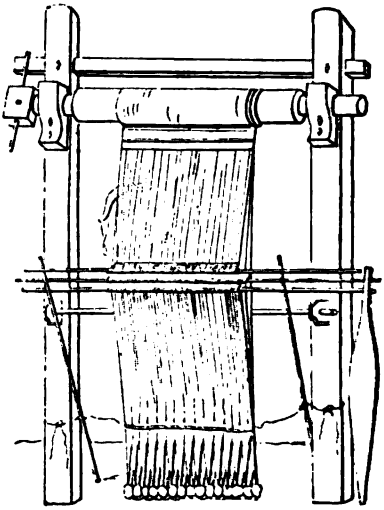


Fig. 1. Icelandic loom.

II. In the most primitive method of weaving it is probable that the passage for the weft was opened merely by a transverse rod (*arundo*, *κανών*) passed through the warp, separating the threads so that they were alternately on either side of the arundo. This seems to be shown in Circe's loom (fig. 4), for we can hardly think Ahrens (*Philog.* xxxv. p. 391) right in taking it to be Circe's magic wand. Such a method of course only admits of plain weaving without a pattern, and moreover the shifting of the arundo would be slow and tedious: in order that the weft might be taken backwards and forwards across the warp passing over or under as might be required, it would be necessary laboriously to raise or depress each thread separately, as in plaiting, unless the improved plan, which was already in use in the Homeric age, of "decussating," or as it is now called "shedding," the warp by leashes (*μίτοι*, *licia*) had been invented. By a leash, or as weavers term it "a heddle," we are to understand a thread having at one end a loop, through which a thread of the warp was passed, the other end being fastened to a straight rod (*κανών*, *arundo*; later *liciatorium*). Thus, supposing that only plain weaving without a pattern is required, so that the weft is merely to pass over and under alternately, and we number the warp-threads 1, 2, 3, 4, &c., all the leashes holding the threads of uneven numbers 1, 3, &c. are tied to one rod or *liciatorium*, while all those holding the threads 2, 4, &c. are tied to another, and by simply moving one rod forward and the other back a free passage is opened for the weft to shoot through. But here, though there might be a coloured stripe by changing at regular intervals the colour of the thread in the weft, or other variations by colouring different threads of the warp (see below), there could be no elaborate colour pattern and no pattern at all of the *texture*. This was produced, just as it is now, by a contrivance for passing over at requisite places a number of warp-threads together, so that the weft might pass under one and over two or under one and over three, and so on. Since it is obvious that it must not be the same single threads that are raised (or, in the upright loom, brought forward) and the same two or more that are depressed (otherwise there would be no weaving at all), it is necessary that there should be an additional set of leashes or "heddles" for every increase of variation, so as to vary the threads which are raised or depressed. When there was one additional set, the weaving was called *bilix*, *δίμιτος*, of which the Icelandic loom in the woodcut above gives an example: with two additional sets it was *trilix*, and then could pass under one and over three: for great complexity of pattern a great many sets of leashes were used (see further below). The details of this part of the subject can be studied in modern weaving. The *principle* of varying the pattern was really exactly the same as in the loom of to-day: the only difference lies in the mechanical contrivances which make the work vastly more rapid. In the earliest times not only the shuttle, but the *liciatoria*, *κανόνες*, or leash-rods ("heddle-leaves"), were worked by the hand. This is signified by Homer:

> ἐπὶ δ' ὤρνυτο δῖος 'Οδύσσευς
> ἄγχι μάλ' ὡς ὅτε τίς τε γυναικὸς ἐϋζώνοιο
> στήθεός ἐστι κανών, ὅντ' εὖ μάλα χερσὶ τανύσσῃ
> πηνίον ἐξέλκουσα παρὲκ μίτον, ἀγχόθι δ' ἴσχει
> στήθεος.—(*Il.* xxiii. 760, imitated by Nonn. *Dion.* vi. 152, 631.)

Here, as rightly explained by Blümner and Marquardt, Odysseus is near to Ajax, as the *κανὼν* or leash-rod is to the breast of the weaver, when she brings it forward with one hand (*ἀγχόθι ἴσχει στήθεος*), in order with the other hand to draw the weft through the "shed," or, as it is expressed, "behind the leashes," *i.e.* behind the warp held in the leashes (*παρὲκ μίτον*). Heyne and others, who make the *κανὼν* the shuttle, not only give the word a wrong meaning, but miss the point, since at the upright loom part of the warp must always be between the shuttle and the weaver, and it is only the *κανὼν* which would be moved nearer the body. It is possible, perhaps probable, that the Greeks and Romans of later times used treadles for moving the *liciatoria*, but we have no direct evidence of it, nor any word to express it: as, however, they worked many machines with the feet, it is unlikely that they omitted to do so in weaving. Some indeed explain INSILIA in Lucret. v. 1352 as *treadles*, but we believe it to be more correctly understood as=*liciatorium* (see Munro *ad loc.*). The Icelandic loom, like the Homeric, has no treadle, and hence we see two rods at the side which can give some help to the single weaver by fixing the leash-rod, as required, while he works the shuttle; but this is clearly a slower process than using the feet to release the hands. The *ἀντίον* (Aristoph. *Thesm.* 822) Blümner explains as a special name of one of the *κανόνες* (cf. Poll. vii. 36).

III. We have described the comparatively coarse, strong and much-twisted threads designed for the *warp* arranged in parallel lines, and the leashes ready to "shed" them: we have now to speak of the shuttle which conveyed the *weft* or *woof* across. This implement was called *κερκὶς* in Greek and *radius* in Latin (Hom. *Od.* v. 62; Plat. *Polit.* p. 281 E, *Cratyl.* p. 388 C; Ov. *Met.* iv. 275, compared with Hom. *Il.* xxii. 448): it is imagined of gold in Homer (*l. c.*), but was usually of wood (Plat. *Cratyl.* p. 389; Ov. *Met.* vi. 132): the end pointed (Soph. *Ant.* 976; Ov. *Met.* vi. 56): the humming sound of its passage is expressed by Aristoph. *Ran.* 1315. The *κερκὶς* or *radius* was strictly, like our shuttle, the receptacle for the "bobbin" (*πήνη πηνίον*, *panus*, *panuvellium*) on which the weft was wound (Hom. *Il.* xxiii. 762; Eur. *Hec.* 470; *Anth. Pal.* vi. 288; Varr. *L. L.* v. 114; Isid. *Or.* xix. 29). The annexed woodcut shows the form in which it is still used in some retired parts of our island for common domestic purposes, and which may be regarded as a form of great antiquity. An oblong cavity is seen in its upper surface, which holds the bobbin. A small stick, like a wire, extends through the length of this cavity, and enters its two extremities so as to turn freely. The small stick passes through a hollow cane, which our manufacturers call a *quill*, and which is surrounded by the woof. This is drawn through a round hole in the front of the shuttle, and, whenever the shuttle is thrown, the bobbin revolves and delivers the woof through this hole. The ancient "shuttles" in the Mayence Museum (Blümner, p. 146) are probably, though not certainly, rightly so named. They are pen-shaped and would have to be turned round for the return passage, only one end being pointed. The process of winding the yarn so as to make it into a bobbin or pen was called *πηνίζεσθαι* (Theoc. xviii. 32), or *ἀναπηνίζεσθαι* (Aristot. *H. A.* v. 19). The reverse process by which it was delivered through the hole in front of the shuttle (see the last woodcut) was called *ἐκπηνίζεσθαι*. Hence the phrase *ἐκπηνιεῖται ταῦτα* means "he shall disgorge these things" (Aristoph. *Ran.* 586; Schol. *in loc.*).

Fig. 2. The shuttle.

IV. Supposing the warp to have been thus adjusted, and the pen or the shuttle to have been carried through it, it was then decussated or "shedded" by drawing forwards the proper rod, so as to carry one set of the threads of the warp across the rest, after which the weft was shot back again (the shuttle being thrown by the hand, as was the case even down to 1738), and by the continual repetition of this process the warp and woof were interlaced; and in "fancy" weaving, with several sets of leashes, the pattern was produced. It was necessary further to close up the weft threads. It has been said above that, after the weft had been conveyed by the shuttle through the warp, it was driven originally in Rome and Greece upwards, as is represented in the first woodcut, but afterwards, according to the prevalent fashion in Egypt, downwards, as in the second (Isid. *Orig.* xix. 22; Herod. ii. 35). Two different instruments were used in this part of the process. The simplest and most ancient was in the form of a large wooden sword (*spatha*, *σπάθη*, *dim.* *σπάθιον*, Plato, *Lysis*, p. 208; Aesch. *Choeph.* 226). From the verb *σπαθάω*, to beat with the spatha, cloth rendered close and compact by this process was called *σπαθητός* (Athen. xii. p. 525 d): when the weft is not driven close, as in light, transparent fabrics, it is called *λεπτοσπάθητος* (Soph. *Fr.* 400): the close texture *πολυσπαθής* (*Anth. Pal.* vi. 39). This instrument is still used in Iceland exactly as it was in ancient times, and a figure of it, copied from Olafsen, is given in the first woodcut.

The spatha was, however, superseded by the comb (*pecten*, *κτείς*), the teeth of which were inserted between the threads of the warp, and thus made by a forcible impulse to drive the threads of the woof close together. (Ovid, *Fast.* iii. 820, *Met.* vi. 58; Juv. ix. 26; Verg. *Aen.* vii. 14; Nonn. *Dion.* xxiv. 253; Poll. vii. 35.) As to its form, we are told only that it was an implement with teeth. Blümner doubts if the example from an Egyptian tomb figured by Rich is a pecten, but we think that the correctness of Rich in this point is established by the very similar pecten of which we give an illustration. It is the comb now used in parts of Asia Minor in the loom shown below (fig. 6), which we believe to resemble closely the later form of the Greek and Roman loom. As a late introduction, instead of the *σπάθη*, it is mentioned only in late Greek writers: it originated in Egypt, whence it is called *Niliacus* in Mart. xiv. 150 (cf. Verg. *Cir.* 179).* Among us the office of the comb is executed with greater ease and effect by the *reed*, *lay*, or *batten*.

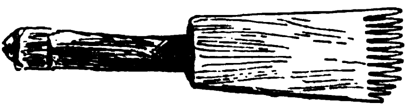

Fig. 3. Weaving comb used in Asia Minor. (Benndorff.)

The lyre [LYRA], the favourite musical instrument of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the loom, with which they were familiar. The terms *jugum* and *stamina* (Ov. *Met.* xi. 169) were transferred by an obvious resemblance from the latter to the former object; and, although they adopted into their own language the Greek word *plectrum* (Ovid, *Met.* xi. 167–170), they used the Latin PECTEN to denote the same thing, not because the instrument used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand and inserted between the strings of the lyre as the comb was between the stamina of the loom (Verg. *Aen.* vi. 647; Pers. vi. 2).

V. *The two kinds of upright looms and the supposed horizontal loom.*—At some time or other a more convenient form of loom was introduced into Europe, in which the web was worked in a flat horizontal frame instead of hanging vertically in front of the weaver. The parts of this loom are the same in nature and object as those described above, except that, as the warp frame lies flat, the leashes or heddles must be worked vertically up and down instead of backwards and forwards; and if the Romans used such a loom, the *licia* and *liciatorium* depended from a cross-beam raised above the flat *tela*. But when this change came, and even whether it belongs to anything earlier than mediaeval times, is a matter of doubt. The view of Blümner and Marquardt is that in the Augustan age the horizontal loom had already superseded in ordinary use the upright loom. We are led to conclude, though with diffidence in opposing such authorities, that the evidence is not only too slight to warrant such an assertion, but that it points the other way: we go far beyond Rich in this view, and hold, with Ahrens, that the horizontal loom does not belong to ancient Greece and Rome at all, and was probably introduced into Europe by the Arabs.

First, as to the passages which speak definitely of a change in looms: Artemidorus speaks of two kinds of looms, the *ἱστὸς ὄρθιος*, at which the weaver is said *περιπατεῖν*, and the *ἕτερος ἱστός*, at which she sits (*Oneirocr.* iii. 36). Similarly, *standing* to weave is called "old-fashioned" by Festus, pp. 277, 8; 288, 33; Serv. *ad Aen.* vii. 14; Hesych. *s. v.* *ἐποιχόμενοι*; Isid. *Orig.* xix. 22. But sitting does not imply the horizontal loom: it merely distinguishes the "Egyptian" fashion of beginning the cloth at the bottom of the loom, as will be seen below. Nor can any argument be drawn from the implements used. Blümner (as was said before) believes *jugum* to be only the beam for hanging *licia* above the horizontal loom, and therefore assumes that all looms, in which a jugum is mentioned, are horizontal: but we cannot accept his view about the meaning of jugum as proved or even likely: if it were, Ovid's "tela jugo vincta est" (see above) must refer to binding the licia on to this beam: but to use *tela* for *licia* would be strange, when we compare "addere licia telae." Then again it is said that the mention of *pecten* implies the horizontal loom because Hesychius says, *s. v.* *σπαθητόν, τὸ ὀρθὸν ὕφος σπάθῃ κεκρουμένον οὐ κτενί*: but this refers to the *tunica recta*, or *regilla* (see below), woven from the top downwards (the weft being driven upwards) in the fashion of the time when the spatha only was used; weaving from the bottom upwards, from which it is distinguished, belonged equally to the upright loom, and in the *Epithalamium Laurentii et Mariae* (*Poet. Lat. Min.* iii. 295, Bahrens) the tela is *suspensa*, but still the pecten is used.

We may remark also that not only does no Greek or Latin writer mention any difference of weaving beyond this upwards and downwards weaving and the positions of sitting and stand-

---

* Blümner wrongly takes the *pecten* in Martial to mean "shuttle;" the distinction is merely between weaving and embroidery, and the *pecten*, as belonging to the loom, is used to express weaving. We are inclined also to agree with Conington in giving *pecten* its usual and correct meaning in the two passages of Virgil where Blümner and Marquardt believe that it was used for *radius* (*Aen.* vii. 14, *Georg.* i. 294). Such confusion of terms is surely a greater difficulty than understanding "argutus" and "percurrit" of the comb.

ing, but of the few representations of weaving which are given in ancient art, none show anything but the upright loom; and lastly, the following passage from Theophylact, archbishop of Bulgaria A.D. 1070, shows that he knew nothing but the two kinds of upright looms: *ἄλλοι δέ φασιν ὅτι ἐν Παλαιστίνῃ ὑφαίνουσι τοὺς ἱστοὺς οὐχ ὡς παρ' ἡμῖν, ὄντων ἄνω μὲν τῶν μίτων καὶ τοῦ στήμονος, κάτω δὲ ὑφαινομένου τοῦ πανίου καὶ οὕτως ἀναβαίνοντος, ἀλλὰ τοὐναντίον κάτω μέν εἰσιν οἱ μίτοι ἄνω δὲ ὑφαίνεται τὸ ὕφασμα* (*ad Joann.* xviii. p. 825).

Fig. 4.

The changes in ancient Greek and Roman looms from the earliest to the latest period of literature we believe to have been as follows. The earliest loom (the Homeric loom and the early Roman loom, the *tela jugalis* of Cato) resembled the Icelandic loom (fig. 1) except that it was a simpler framework without the yarn-beam, and so far like the representation of Circe's loom taken from the Vatican Aeneid (fig. 4). But this representation is an anachronism in making the web begin at the bottom. The author of this ancient picture (whom it is of course absurd to make an authority as to the Homeric loom) has in this point adhered to the fashion of his own day: but in the simpler frame he has probably come near to the primitive pattern. Homer's loom, however, had leashes, which are not given here, besides the simple *κανών*. The essential distinction between the early Greek and Roman looms and the later was that pointed out by Herodotus (ii. 35), that the web began at the top, and therefore the weaver always thrust the weft upwards (*ἄνω τὴν κροκὴν ὠθοῦσι*) in striking it close with the *σπάθῃ*. The *tunica recta* or *regilla*, enjoined with the conservatism of religion for the marriage garment, was woven at this ancient loom ("sursum versum," "in altitudinem," Isid. *Orig.* xix. 22; Fest. p. 277, 8: the words =the *ἄνω ὠθοῦσι* of Herodotus): it was woven also in one piece of the size of the loom frame, as there was no rolling up of the cloth-beam or unrolling of the yarn-beam. At such a loom also, as was said above, the weaver stood, and possibly, in the lack of well-arranged leashes and heddles, had to walk round the loom for the adjustment of the warp threads.

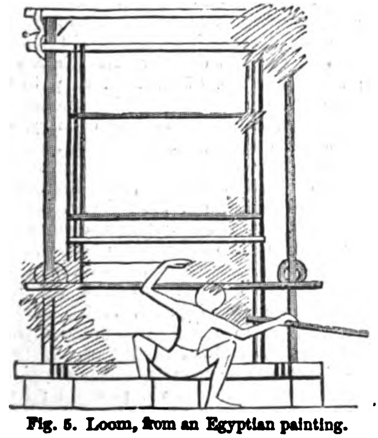

Fig. 5. Loom, from an Egyptian painting.

At a later time, probably quite at the end of the Republic, the Egyptian fashion (Herod. *l. c.*), of beginning the web at the bottom and so weaving in a sitting posture, was introduced. The cut (fig. 5) of an Egyptian weaver from a wall-painting (Wilkinson, *Ancient Egyptians*, vol. ii. 170) illustrates this kind of loom. We think that Wilkinson is right in considering the painting, which Rich (s. v. *subtemen*) gives as an instance of Egyptian horizontal weaving, to be not weaving at all, but the plaiting of mats. An even better illustration of the Egyptian loom as adopted by the later Romans and Greeks is afforded by a sketch of the modern Lycian weaving (fig. 6), which we have taken from Benndorff (*Reise*). The weaver is using the comb described on page 768 *a*.

Fig. 6. Weaver in modern Lycia. (Benndorff.)

We have little doubt that this faithfully reproduces in its form the Roman loom which is characterised as the later kind, though the arrangements of leashes, &c., may often have been more elaborate: this pattern may well have been introduced into Asia Minor at some date later than the time of Herodotus, and have lingered there since. With this Egyptian form came in the other improvements described in I. and IV., the substitution of the *pecten* for the *spatha*, and the discontinuance of the weights (*ἀγνῦθες, λεῖαι, pondera*). It is needless to say that the changes were not made all at once all over the Roman Empire: the older form no doubt lingered in many places, particularly in the more remote countries. Hence the stone weights found in Germany and elsewhere may well belong to a date when at Rome itself the later form of loom prevailed and weights were no longer of any use. Rejecting, as we feel compelled to do, the idea of a horizontal loom, we believe that no further change in the loom took place except the development of dexterity in its manipulation.

VI. After enumerating those parts of the loom which were necessary to produce even the plainest piece of cloth, it remains to describe the methods of producing its varieties, and more especially of adding to its value by making it either warmer and softer, or more rich and ornamental. If the object was to produce a checked pattern (*scutulis dividere*, Plin. *H. N.* viii. § 196; Juv. ii. 97), or to weave what we should call a Scotch plaid (and it is worthy of notice that Pliny attributes this pattern to a Celtic people), the threads of the warp were arranged alternately black and white, or of different colours in a certain series according to the pattern which was to be exhibited. On the other hand, a striped pattern (*ῥαβδωτός*, Diod. Sic. v. 30; *virgata sagula*, Verg. *Aen.* viii. 660) was produced by using a warp of one colour only, but changing at regular intervals the colour of the weft. Of this kind of cloth the Roman *trabea* (Verg. *Aen.* vii. 188) was an example. [TOGA.] Checked and striped goods were no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. [PALLIUM]. The weft also was the medium through which almost every other diversity of appearance and quality was effected. The warp as mentioned above was generally more twisted, and consequently stronger and firmer than the weft: and with a view to the same object different kinds of wool were spun for the warp and for the weft. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket (Plato, *Polit.* p. 302) [FULLO]; and, as stated above, when the intention was to guard against the cold, the warp was diminished and the weft or nap (*κρόξ*, *κρόκυς*) made more abundant in proportion (Hesiod, *Op.* 537; Proclus *ad loc.*). In this manner they made the soft *χλαῖνα* or LAENA [PALLIUM]. On the other hand a weft of finely twisted thread (*ἦτριον*) produced a thin kind of cloth, which resembled our buntine ("lacernae nimia subteminum tenuitate perflabiles," Amm. Marcell. xiv. 6). Where any kind of cloth was enriched by the admixture of different materials, the richer and more beautiful substance always formed part of the weft. Thus the *vestis subserica*, or *tramoserica*, had the weft of silk [SERICUM]. In other cases it was of gold (Verg. *Aen.* iii. 483; Servius *in loc.*)—the invention of Attalus, according to Plin. *H. N.* viii. § 196, and thence called *vestes Attalicae*, but it was probably older in the East and got its name because Attalus prized it; of wool dyed with Tyrian purple (Ovid, *Met.* vi. 578; *Tyrio subtegmine*, Tibull. iv. 1, 122; *picto subtegmine*, Val. Flacc. vi. 228); or of beavers'-wool (*vestis fibrina*, Isid. *Orig.* xix. 22). Hence the epithets *φοινικόκροκος*, "having a purple weft" (Pind. *Ol.* vi. 39), *ἀνθοκρόκος*, "producing a flowery weft" (Eurip. *Hec.* 470), *χρυσεοσπηνήτος*, "made from bobbins or pens of gold thread" (Eurip. *Orest.* 841), *εὔπηνος*, "made with good bobbins" (Eurip. *Iph. in Taur.* 1465), *κερκίδι ποικιλλοῦσα*, "variegating with the shuttle" (Eurip. *Iph. in Taur.* 223), &c.

But besides the variety of materials constituting the weft, an endless diversity was effected by the manner of inserting them into the warp. The terms *bilix* and *δίμιτος*, the origin of which has been explained, probably denoted what we call *dimity* or *twilled* cloth, and the Germans *Zwillich*, where by missing over a certain number of warp-threads a ridged pattern is produced. The poets apply *trilix*, which in German has become *Drillich*, to a kind of armour, perhaps chain-mail, no doubt resembling the pattern of cloth which was denoted by the same term (Verg. *Aen.* iii. 467, v. 259, vii. 639, xii. 375; Val. Flaccus, iii. 199) [LORICA, p. 81]. All kinds of damask were produced by a very complicated apparatus of the same kind (*plurimis liciis*), and were therefore called *Polymita* (Plin. *H. N.* viii. § 196; Mart. xiv. 150), for which *multicia* (Juv. ii. 66) is probably, as Blümner thinks, an equivalent (cf. *Gloss. Philox.* s. v.).

The sprigs or other ornaments produced in the texture at regular intervals were called flowers (*ἄνθη*, Philostr. *Imag.* ii. 28; *θρόνα*, Hom. *Il.* xxii. 440) or feathers (*plumae*). Another term, adopted with reference to the same machinery, was *ἐξάμιτον*, denoting velvet. In the Middle Ages it became *ζάμιτον*, and thus produced the German *sammet*, our *samite*.

As far as we can form a judgment from the language and descriptions of ancient authors, the productions of the loom appear to have fallen in ancient times very little, if at all, below the beauty and variety of the damasks, shawls, and tapestry of the present age. In addition to the notices of particular works of this class, contained in the passages and articles which have been already referred to, the following authors may be consulted for accounts of some of the finest specimens of weaving: Euripid. *Ion*, 190–202, 1141–1165; Aristot. *Mir. Auscult.* 96, = p. 838; Athen. xii. p. 541; Verg. *Aen.* v. 250–257, *Cir.* 21–35; Ovid, *Met.* vi. 61–128; Stat. *Theb.* vi. 64, 540–547; Auson. *Epig.* 26; Lamprid. *Heliog.* 28; Claudian, *in Stilich.* ii. 330–365.

Although weaving was amongst the Greeks and Romans a distinct trade carried on by a separate class of persons (*ὑφάνται*, *textores* and *textrices*, *linteones*; cf. even in the Homeric age the *γυνὴ χερνῆτις*, *Il.* xii. 433), who more particularly supplied the inhabitants of the towns with the productions of their skill (Cato, *R. R.* 135; Plat. *Phaed.* p. 87 B, *Rep.* ii. p. 370 D; Pausan. vii. 21), yet every considerable domestic establishment, especially in the country, contained a loom (Cato, *R. R.* 10, 14), together with the whole apparatus necessary for the working of wool (*lanificium*, *ταλασία*, *ταλασιουργία*). (Hesiod, *Op.* 779; Verg. *Georg.* i. 285, 294.) [CALATHUS.] If in the more luxurious age the most ornamental work was purchased, the slave household (*familia rustica*) at least was thus clothed, and the commoner *stragula* were made (Dig. 33, 7, 12, 5; Paul. *Sent.* 3, 6, 37). In Greece as at Rome in earlier times the matron and her daughters, assisted by female slaves, wove garments for husband, sons and brothers (Plat. *Legg.* vii. p. 805 E; Aesch. *Cho.* 231; Eur. *Ion*, 1417): so of the Roman matron weaving in the *atrium*, Liv. i. 57; Ascon. *in Milon.* p. 43, and even in later times, Arnob. ii. 67; *C. I. L.* vi. 1527, 11602.

When the farm or the palace was sufficiently large to admit of it, a portion of it called the ἱστῶν (*histones*, Varro, *R. R.* i. 2), *textrina* or *textrinum*, was devoted to this purpose (Cic. *Verr.* iv. 26, 58, 59; Isid. *Or.* xiv. 8; cf. Hor. *Od.* ii. 18, 6). The work was there principally carried on by female slaves (*quasillariae*, αἱ ἔριθοι, Theoc. xv. 80; Hom. *Od.* vii. 235, xxi. 350; *C. I. L.* vi. 6639-6646) under the superintendence of the mistress of the house, who herself also together with her daughters took part in the labour, both by instructing beginners and by finishing the more tasteful and ornamental parts (Vitruv. vi. 7, p. 164; Symmachus, *Epist.* vi. 40). But although weaving was employed in providing the ordinary articles of clothing among the Greeks and Romans from the earliest times, yet as an inventive and decorative art, subservient to luxury and refinement, it was almost entirely Oriental. Persia, Babylonia, Egypt, Phoenicia, Phrygia, and Lydia, are all celebrated for the wonderful skill and magnificence displayed in the manufacture of scarfs, shawls, carpets, and tapestry. [Chlamys; Pallium; Tapes.]

For the weaving of sacred robes in Greek temples, see Arrhephoria, Heraea, Panathenaea; and cf. Pausan. iii. 16, 2. (On the construction of the loom, see also Blümner, *Technologie*, i. pp. 120–157; Marquardt, *Privatleben*, 519–527; Ahrens, in *Philolog.* xxxv. 385 ff.) [J. Y.] [G. E. M.]

TELAMO'NES. [Caryatides.]

TE'LETAE (τελεταί). [Mysteria.]

TELO'NES (τελώνης). Most of the taxes and duties at Athens were farmed by private persons, who took on themselves the task of collecting, and made payments in respect thereof to the state. They were called by the general name of τελῶναι, while the farmers of any particular tax were named after it ἐλλιμενισταί, εἰκοστῶναι, πεντηκοστῶναι, or, as the farmers and collectors were often the same persons, εἰκοστολόγοι, πεντηκοστολόγοι, &c. The tax or duty was let to the highest bidder. Several persons (like a *societas* of Roman *publicani*) often joined in the speculation (Plut. *Alcib.* 5); the principal or chairman of the company, in whose name the bidding took place, and who was responsible to the state, was called ἀρχώνης (Andoc. *de Myst.* § 133). Of course securities were required from the farmer or the company for the payment of the dues (Dem. *c. Timoc.* p. 745, § 144; Andoc. *l. c.*). The office was frequently undertaken by resident aliens, citizens disliking it on account of the vexatious proceedings to which it led. The farmer had power to search for and seize contraband or uncustomed goods (Demosth. *Pantaen.* p. 958, § 6); he watched the harbours, markets, and other places to prevent smuggling; brought a φάσις [Phasis] or other legal process against persons whom he suspected of defrauding the revenue, or even arrested them and took them before a magistrate. To enable him to do all this, he was exempted from military service ([Dem.] *c. Neaer.* p. 1353, § 27). The taxes or duties were thus let out (τέλη ἐκδιδόναι) by the ten πωληταί acting under the authority of the senate [Poletae]. The payments (καταβολαὶ τέλους, Dem. *c. Timoc.* p. 731, § 98), regulated by the νόμοι τελωνικοί (*ib.* p. 732), were made at stated Prytaneiai in the senate-house ([Dem.] *c. Neaer.* l. c.). There was usually one payment made in advance (προκαταβολή); the succeeding one or ones were probably called προσκαταβλήματα. (This, at any rate, is the account of Suidas; but it seems inconsistent with Demosthenes' use of προσκαταβλήματα in p. 731. Boeckh, edit. 3, accepts Suidas' account and supposes Demosthenes to be speaking inexactly.) On any failure in payment the farmer became ἄτιμος (*c. Neaer.* l. c.) if he was a citizen, and might be imprisoned (Dem. *c. Timoc.* pp. 745, 746). If the debt were not paid by the end of the ninth Prytaneia (probably the ninth of the year, the last but one, not the ninth from incurring the debt) it was doubled, and, if it were not then paid, the debtor's property was forfeited to the state (Andoc. *de Myst.* § 73; Dem. *c. Timoc.* p. 730). (See the speech of Demosthenes against Timocrates, and Boeckh's *Staatshaushaltung*, edit. 3, p. 406 ff.) [F. T. R.]

TELOS (τέλος), a tax. In enumerating here the taxes of Athens (about which city we know most) we may take the opportunity to mention all the chief sources of Athenian revenue. They may be divided into three groups,—taxes paid at Athens, taxes paid abroad or by foreigners for the benefit of Athens, and income derived not from taxes but from the corporate property of the state.

A. The taxes imposed by the Athenians and collected at home were either ordinary or extraordinary. The former constituted a regular source of income; the latter were only raised upon emergency.

(1) The ordinary taxes were generally farmed out; see Telones. They included (i.) the customs and harbour dues; see Pentecoste. (ii.) Duty paid on all sales in the market (ἐπωνία). The amount is unknown (though Boeckh in the 3rd edit. of his *Staatshaushaltung* thinks it was 1 per cent.). Xen. *de Vect.* 4, 49, probably alludes to the ἐπωνία; and the ἀγορᾶς τέλος of Aristoph. *Ach.* 896 may be identical with it. (iii.) The διαπύλιον (Hesych.) or gate-money is probably different from the above. (iv.) A τριώβολον was paid by freedmen (Harpocr. s. v. μετοίκιον). (v.) The same amount was probably paid by slaveowners for each slave (Xen. *de Vect.* 4, 25). This, Xenophon says, was a very productive tax before the Spartans fortified Dekeleia and encouraged the Athenian slaves to run away. (vi.) The πορνικὸν τέλος, of unknown amount. It was farmed separately (Aeschin. *c. Tim.* § 134). (vii.) The law-court fees (πρυτανεῖα, παράστασις, παρακαταβολή, q. v.) were a lucrative item, especially under the Athenian Empire, when the allies brought suits to be decided at Athens (Thuc. vi. 91). (viii.) Δερματικόν. The value of the skin, horns, &c., of the victims slain at certain public sacrifices (cf. the usage at Sparta, Herod. vi. 56, 57). (ix.) Μετοίκιον. The poll-tax of the resident aliens [Metoeci]: 12 drachmae annually, probably paid by men only. Freedmen paid this tax in addition to the τριώβολον (Harpocr. s. v. μετοίκιον). (x.) The resident aliens also paid a special entrance-fee for the sale of their goods in the market (Dem. *Eubul.* p. 1309, § 34. In this passage, however, the words ξενικὰ τελεῖν are sometimes understood of the μετοίκιον).

(2) The extraordinary taxes at Athens were (i.) the εἰσφορά or property-tax [Eisphora].

This fell also on μέτοικοι (Dem. *Androt.* pp. 609, 612). (ii.) The compulsory services called λειτουργίαι (LEITOURGIA), an institution also found existing elsewhere (Herod. v. 83). Some of these at least were shared by μέτοικοι (Dem. *Lept.* p. 462, § 18). (iii.) Voluntary contributions on extraordinary occasions (ἐπιδόσεις) [EPIDOSIS]: see Lysias, xxx. 26.

B. Of taxes paid by foreigners for the benefit of Athens. (i.) The tribute, φόρος [PHOROS], of the allied states formed in the flourishing period of the Republic a regular and most important source of revenue. In B.C. 413 it was changed to a 5 per cent. duty on all commodities exported or imported by the subject states [EICOSTE]. (ii.) A temporary duty of 10 per cent. (δεκατή) on merchandise passing from or into the Euxine was established in B.C. 409. (Xen. *Hell.* xi. 22; cf. iv. 8, 27, 31; Dem. *Lept.* p. 475, § 60). The charge on other articles may have really helped the Athenian revenue; but the charge on corn must have raised the price of corn at Athens. (iii.) Plunder taken in war: sale of prisoners for slaves.

C. Other sources of revenue were derived by the Athenians from (i.) certain lands of which the state held the tithes. (This however is doubtful; see DECUMAE, Vol. I. p. 604.) (ii.) Rents from public lands (Aristoph. *Vesp.* 658): from pastures, forests, mines, saltworks, rivers; also, the sum paid by the lessee of the theatre. The mines (μέταλλα) must have here constituted the largest item. The silver mines of Laurion, which also yielded other substances, afforded a considerable sum to the state, being rented by persons who worked for their own profit, paying to the state first a sum of money for the privilege of working, and secondly 1–24th of the net produce. The collection of the latter charge was itself probably farmed-out. The labour of mining was performed by slaves. Some particulars about the mining system may be found in Demosthenes' speech against Pantaenetus. The mines at Laurion were exhausted in the time of Strabo (ix. p. 399); the scoriae or waste-products (σκωρία, ἐκβολάς) were then being re-worked, and they can now be again worked at a profit. The valuable gold mines of Skapte Hyle in Thrace (Herod. vi. 46) became Athenian property by the conquests of Cimon. (iii.) Fines and confiscations: see TIMEMA, DEMIOPRATA, and EPIBOLE.

These various sources of revenue, of which Aristoph. *Vesp.* 655–660 gives a rough enumeration (omitting the Leitourgiai), produced in B.C. 423, according to Aristophanes, an annual income of 2000 talents. Xen. *Anab.* vii. 1, 27, says that the Athenians began the Peloponnesian War with 1000 talents coming in annually. Boeckh's calculations (in the 3rd edit. of the *Staatshaushaltung*, vol. i. p. 510) bring him nearest to Aristophanes' estimate. But during the Peloponnesian War the income fell enormously, and it is not easy again to arrive at anything like a fixed sum. (See, however, Dem. *Philipp.* iv. p. 141, § 37.) The orator Lycurgus, "almost the only statesman of ancient times who really understood finance" (Boeckh), is said to have raised the total revenue for a time to 1200 talents (Plutarch, *Vit. Dec. Orat.* vii. § 25).

A land-tax, or charge on the produce of land, seems to have been not uncommon in Herodotus' time (vi. 46), but we do not hear of it at Athens unless it be under the tyranny of the Peisistratidai, who took 5 per cent. (Thuc. vi. 54): the charge seems to have ended with their expulsion. [F. T. R.]

TEMENOS. [VECTIGALIA TEMPLORUM.]

TEMPLUM. It will be well to preface the important part of this article, which relates to temple buildings, by a few remarks about the strict meaning of the word *templum*, and the distinction originally existing between the words *aedes*, *templum*, *sacellum*, *delubrum*, and *fanum*. That this distinction was confused by lax usage, especially in poetry, and that it in time disappeared altogether, must of course be admitted; but that it existed not merely in a very early period of Latin is clear from the fact that Augustus marks it when he calls the Temple of Apollo on the Palatine and that of Mars Ultor *templa*, and others *aedes* (*Monum. Ancyr.* 19: see below).

The word *templum* is from the same root as the Greek τέμενος, *i.e.* some space cut off and separated. Its augural signification was beyond a doubt its genuine Roman use. The templum in augury had a twofold meaning: 1. The space of sky which the augur marked off with his *lituus* by imaginary lines, the *cardo* from north to south and the *decumanus* from east to west, thus dividing the space observed into four regions (Serv. *ad Aen.* i. 92; Varro, *L. L.* vii. 7). From this augural *templum caeli* comes the familiar "caelestia templa" of Lucretius (i. 120, &c.), which, as Munro remarks, "conveys a solemn and stately notion." 2. The space of earth to be included for observations, which was a rectangular space called *locus effatus*, or more fully *locus effatus conceptis verbis*, i.e. a space bounded by points which he announced aloud, naming (*conceptis verbis*) trees or other stationary objects as the limits for observation in each direction. This space also was divided into four regions by lines (*cardo* and *decumanus*, as above), and the observer (usually a magistrate, who as observer was the *auspex* as distinguished from the augur) sat at the point (*decussis*) where these imaginary lines intersected (Varro, *L. L.* vii. 8; Liv. i. 18; Cic. *de Div.* i. 17, 31). It will be seen that in both these senses of the augural templum the idea of *cutting off* (τέμνω) is preserved, and also that the shape of the templum was rectangular. Further, in the place where the observer was to sit (except where there was, as at Rome, a permanently established *auguraculum*: see Vol. I. p. 251 b), the observer pitched a tent [TABERNACULUM], also quadrangular in shape, with a single opening, commanding the spaces of earth and sky which formed the templa. There has been some difference of opinion as to the aspect of this *tabernaculum*. Regell's opinion seems to be correct, that for observing lightning by the *templa in caelo* the tabernaculum looked to the south, but for observing birds by the *templa in terra* it faced the east, whence, as in Liv. i. 18, the south is on the right hand, the north on the left (see Regell in *Jahrb. f. Philol. u. Paedagog.* cxxiii. 607 ff., and Mau's note in Marquardt, *Staatsverw.* iii.² 403). The tabernaculum was called *templum minus*, and thus we have a templum of real as well as of imaginary lines: so Festus (v. 157), "templum est locus ita *effatus* (by imaginary lines) aut ita *saeptus* (by real enclosure) ut [ex] una parte pateat angulosque adfixos habeat ad terram;" and Servius (*ad Aen.* iv. 200), "templum dicunt non solum quod *potest claudi* (by imaginary lines) verum etiam quod palis aut hastis aut aliqua tali re (as in a permanent auguraculum) et linteis aut loris (the linen or leathern tent) aut simili re *saeptum est quod effatum est* (i.e. the imaginary lines are made real: see also Mommsen, *Staatsrecht*, i.^{3} 105). [For the method of taking auspices, see AUSPICIA; and for the connexion between the shape of the pomerium and the augural templum, see POMERIUM, pp. 443, 444.]

This use of templum for augury was, we cannot doubt, the original religious sense of templum, and accordingly, in the extended meanings which the word subsequently takes of consecrated spaces, and later (perhaps not till near the end of the Republic) of buildings, it is still confined to such spaces or buildings as have been "inaugurated" by the augurs, and moreover the shape is still rectangular. Such inaugurated and consecrated places were (1) those for the assembly of the senate, *curiae* (Hostilia Pompeia, Julia) or actual temples of the gods, since the senate could only transact business "in loco per augurem constituto" (Gell. xiv. 7); (2) the Comitia Curiata and Centuriata (Liv. v. 52; Val. Max. iv. 5); (3) the Rostra (Cic. *in Vatin.* x. 24; Liv. viii. 14); (4) a temple in the ordinary sense, *i.e.* a house built for a god and inaugurated as well as consecrated. For the building of a temple, or indeed for any permanent inaugurated *templum*, it was necessary first that the ground should not only be *effatus* (i.e. have pronounced limits), but also be *liberatus;* that is to say, any prior claims upon the ground not merely of private ownership, but of *fana* or *sacella* which might once have been upon it, had to be abrogated [EXAUGURATIO], and the ground and building assigned by the augurs to that deity to whose service it was to be dedicated, and next the temple itself was consecrated by the pontifices (cf. Serv. *ad Aen.* i. 446; Liv. i. 55).

Templum, however, in this sense of a god's house, was probably a comparatively modern equivalent for *aedes* or *aedes sacra*. Jordan (in *Hermes*, xiv. pp. 567 ff.) presses this somewhat far, giving *aedes* as the proper term for a Roman or Italian temple, and *templum* for one in the colonies; and explaining the passage above mentioned from the *Mon. Ancyr.* on the theory that Augustus called the temples at Rome, which were built on publicum solum, *aedes*, while those to Apollo and Mars, built on his privatum solum, he called *templa*. In this same passage, however, he speaks of "duo et octoginta *templa* deum," and it seems to us a truer view that the use of templum for aedes was coming in before the end of the Republic, and that Augustus in speaking by name of pre-existing temples uses the term which originally described them, but in those which he has just built uses the term now in vogue. Cicero certainly uses the word *templum* as "temple" frequently (e.g. *de Div.* i. 2, 4); and the figurative use in Lucretius (iv. 264; v. 103) of the mouth as "templum linguae" and the breast as "templum mentis" implies that *templum* was then the term in common parlance for a building enshrining some deity. It must be noticed that the round shape which we see in the Aedes Vestae and some others did not properly belong to a *templum*, which should follow the rectangular augural temple; and with this agrees the fact alluded to above, that this round aedes was consecrated by the pontifices, but not inaugurated by the augurs, and hence not a possible meeting-place for the senate (Serv. *ad Aen.* vii. 153; Gell. xiv. 7). It is a significant fact that the shrine of the Dea Diva in the Arval grove, which like that of Vesta belongs to the most primitive Roman religion, was also a round building, and it might reasonably be inferred that the round shape was the earlier form for a god's house, just as the circular hut built round a central pole is the early architecture for a human habitation, and that the rectangular temple came later in with the augural *templum*.

The word *delubrum* is derived from the same root as *lavabrum* (or *labrum*), *pollubrum*, &c., and thus meant originally a place of purification (for we must certainly reject the derivation from *delibrare*, "to strip the bark and make a wooden image"): that such a rite of purification belonged to the old unroofed *loca sacra*, where there might be merely an enclosure with an altar or shrine, there can be no doubt; and from this aspect of purification (which in later temples appears in the ἀπορραντήρια or *labra*) such a sacred space might be called *delubrum*, i.e. the dedicated plot of ground within which were rites of purification, and so in the Argean procession "ad aedem dei Fidii in delubro ubi aeditimus habitare solet" the delubrum is clearly the sacred precinct, as distinguished from the aedes, but in time *delubrum*, like *sacellum*, was used both for the sacred enclosed spot and the shrine upon it; cf. "regiis temporibus delubra parva facta" (Varro *ap.* Non. 494), where the delubra are contrasted with the later and more stately aedes or templum. We are here speaking only of strict definition. In poets no distinction between *aedes*, *templum*, and *delubrum* is observed: even Cicero's usage is open to doubt, though it may be remarked that the passages cited by Marquardt as showing a promiscuous use of the words (*N. D.* ii. 43, 83, and various passages in the Verrine orations) are speaking of Sicilian, not of Roman temples. In later prose, though not in Livy, all distinction vanishes (cf. Plin. *H. N.* xxxv. § 144; xxxvi. § 26).

Though *fanum* is found in a general sense for any *locus sacer* consecrated by the pontifices, but not inaugurated [FANUM], and so often means sacred buildings, aedes or sacella, as well as sacred areas such as *luci*, yet it is also true, as Jordan points out, that the strict use of *fanum* did not include aedes or actual houses of the gods at Rome, but only "loca sacra cum aris [or later also "cum aediculis"] *sine tecto;*" and that when it is used of temples it belongs only to temples of non-Roman deities: this explains the origin of *fanaticus*, which was first applied to such "fanatic" priests as those of Isis. (See further on this subject Marquardt, *Staatsverwaltung*, iii.^{2} 151 ff.; and especially Jordan in *Hermes*, xiv. 567 ff.) [G. E. M.]

TEMPLE ARCHITECTURE.

Greek Temples.—Among the Greeks, as among most Pagan races, the temple was not a building in which a congregation met and worshipped, but was rather regarded as the house and treasury of the god.* In the most primitive times temples (in the later sense of the word) seem to have been very rare, their place being taken by an altar in the open air, or by a sacred stone (*βαίτυλος*) which was both the symbol of some divine presence and the place of sacrifice. See Prof. Robertson Smith, *Religion of the Semites*, lect. v. The kingly heroes of Homer, such as Odysseus, themselves played the part of a priest, and offered sacrifice to Zeus Herkeios on the altar in the fore-court of their palaces. Such an open-air altar was discovered by Dr. Dörpfeld in the courtyard of the palace at Tiryns; and this domestic altar survived at the entrance of Greek houses long after actual temples had been built [see DOMUS]. Other primitive forms of temples were natural caves in the rock, or hollow trees, the former being usually associated with the cults of Chthonian deities. The word *μέγαρον*, which is sometimes applied to temples of Chthonian deities, is supposed to be derived from a Phoenician word meaning a cavern or cleft in the rock.

The next stage appears to have been the construction of a small cell-like building, consisting of a mere *cella* or *σηκὸς* without any columns or subdivision into more than one chamber. The most remarkable examples which still exist of this early form of temple are to be seen in the Island of Euboea, especially one near Karystos, on an elevated site on Mount Ocha, overlooking the sea. This is a rectangular stone building, about 40 feet by 24 feet (externally) in plan. In one of the long sides is a small central doorway, formed of three large blocks of stone, between two slit-like windows. The roof consists of large thin slabs, each projecting beyond the course below, till they meet at the ridge. Light and air are given by a hypaethral opening in the stone roof—a long narrow slit, 19 feet long by 18 inches wide. The height of the walls internally is 7 feet. The worship of Hera was the special cult in this part of Euboea.

The words used by the Greeks to denote temples are chiefly these: *ναός*, or in Attic *νεώς*, equivalent to the Latin *aedes*, the "house" of the god; *ἱερὸν* frequently has a more extended meaning, including not only the *ναὸς* but also the sacred enclosure around it, *τέμενος* (Thuc. iv. 90) or *ἱερὸς περίβολος*. In other cases *ἱερὸν* and *ναὸς* are used as equivalent terms, as, *e.g.* by Pausanias (viii. 45, § 3), where he records the building of the Temple of Athene Alea at Tegaea: *Ἀθηνᾶς τῆς Ἀλέας τὸ ἱερὸν τὸ ἀρχαῖον ἐποιήσεν Ἄλεος· χρόνῳ δὲ ὕστερον κατασκευάσαντο οἱ Τεγεᾶται τῇ Θεῷ ναὸν μέγαν.* A peculiar phrase is used by Homer (*Il.* ix. 404) to denote the Temple of Apollo at Delphi: he calls it the *λάϊνος οὐδός*, "stone threshold," as if using a part for the whole building. Other words—such as *μέγαρον*, *ἄδυτον*, *ἀνάκτορον*, *σηκός*—seem to have been taken from terms originally used for parts of domestic buildings, meaning "the hall," "the private chambers," "the royal house," "the cell or inner chamber." The words *μέγαρον* and *σηκὸς μυστικὸς* were especially applied to the abnormal Hall of the Mysteries at Eleusis, which was also called the *τελεστήριον*, in reference to the initiations which there took place. Strictly speaking, it was not a temple at all. The real Temple of Demeter, which stood near the Hall of Initiation, was a very much smaller building.

Returning to the development of the Greek temple, the next stage after the simple *σηκός*, such as that on Mount Ocha, was probably a building with a prostyle portico, constructed mainly of unburnt brick with wooden columns, closely resembling the hall or *μέγαρον* of a pre-Homeric palace, such as that which Dr. Dörpfeld excavated within the Acropolis of Tiryns. The accompanying figures (1 and 2) show the probable

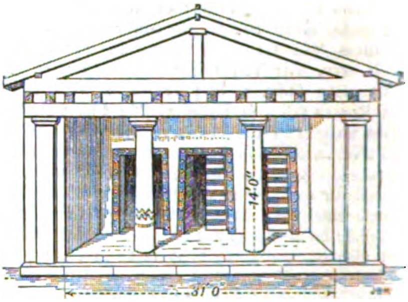

Fig. 1. Restoration of the front of the principal Hall (*μέγαρον*) of the prehistoric Palace at Tiryns.

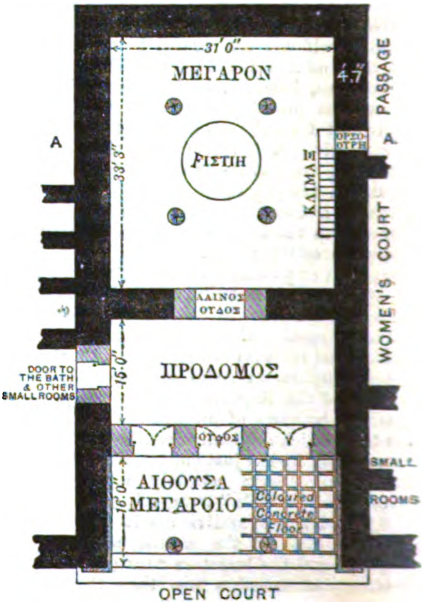

Fig. 2. Plan of the Hall at Tiryns.

---

* One result of the Greek temple being regarded merely as a house for the god, was that in many cases the temple was usually kept shut up. Thus in Athens the Thesmophorion, the Lenaion, and the Eleusinion were only opened on one day of festival in the year ([Dem.] *in Neaer*. p. 1371, § 76); and the Temple of Eurynoma at Phigaleia was always closed (Paus. viii. 41, § 4). In more than one thiasos inscription the priestess is mentioned as *ἀνοίγουσα τὸ ἱερὸν ἐν ταῖς καθηκούσαις ἡμέραις*, implying that on ordinary days the shrine was closed. (See Martha, *Les Sacerdoces Athéniens*, p. 88.)

appearance of this hall when perfect. Both in plan and in its façade it is clearly the prototype of the later stone temples of the Greeks. The walls were of unburnt brick, covered with hard fine stucco decorated with painting; the lowest courses of the wall were of stone, to a height of about two feet above the ground, in order to prevent injury to the unbaked clay of the bricks from rising damp. A sort of survival of this structural stone plinth existed even in the latest temples of the Greeks, which were wholly built of marble: the lowest course immediately above the pavement is usually very much deeper than the rest of the masonry, as if marking a change of material even when none exists. The columns both of the portico and of the inner chamber were of wood, each resting on a carefully levelled block of stone.

This use of crude brick for the walls and wood for the columns appears to have survived in many cases till very late, more especially in the private houses of the Greeks. Dr. Dörpfeld has pointed out that even the *Heraion* at Olympia was originally built in this primitive fashion, but that stone columns were introduced one by one as the wood pillars decayed. Thus we see columns of many different dates among the existing remains. Pausanias (v. 16) mentions one ancient wooden column as still existing *in situ* in the Heraion at the time of his visit. Of the walls nothing remains but the stone plinth, carefully levelled to receive the first course of crude bricks, so the original wall probably was never rebuilt in stone. The entablature was apparently of wood, like the columns, as no remains of stone cornice or architrave were found.

Vitruvius (ii. 3) describes the careful manner in which crude bricks (*lateres*) were made by mixing gravel, pounded pottery, and chopped straw with clay which had been long exposed to the weather. He records that a decree of the city of Utica ordained that none of these bricks should be used till they had been inspected by a magistrate to see if they were thoroughly dried, and had been kept the required time, which was five years, after they had been moulded. [LATER.]

In 1888 an interesting discovery was made by Dr. Halbherr at Gortyn in Crete. Excavations on the site of the *Pythion*, or Temple of the Pythian Apollo, revealed some remains of an early temple built of large blocks of stone without any cement. The building, which from the inscriptions cut on the outside of its walls is apparently a work of the 7th or 6th century B.C., consisted simply of one rectangular chamber, a mere *cella*, without columns or *pronaos*; though in later times a *pronaos* was added in front of the entrance. A very interesting point about this primitive temple was the fact that it had been lined internally with plates of bronze, like the great "beehive tomb" at Mycenae, and other Greek structures of prehistoric date. The bronze pins which fixed these plates still remain on the internal face of the great blocks of which the walls were built. (See Halbherr in *Monumenti antichi*, Part I., 1889; published by the Acad. dei Lincei.)

The last stage of the development of the Greek temple was a building with walls and columns wholly of stone or marble, such as those of which many examples still remain.

Vitruvius (iii. 2) classifies temples according to the arrangement of their columns in the following manner:—I. Ναὸς ἐν παραστάσι, *in antis*, with two columns between the *antae* of the projecting side walls (see fig. 3). [ANTAE.]

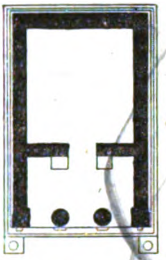

Fig. 3. Plan of the Temple *in antis*. Temple of Themis at Rhamnus in Attica, with a marble throne on each side of the door.

II. Πρόστυλος, *prostylos*, with four columns in front. III. Ἀμφιπρόστυλος, *amphiprostylos*, with four columns at each end (see figure 4).

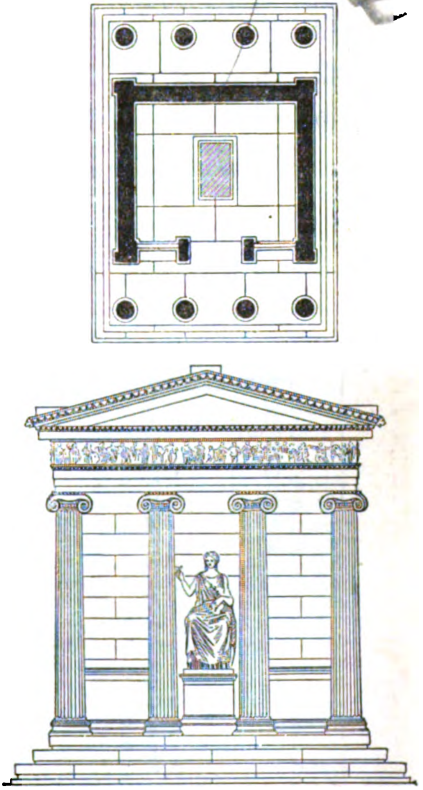

Fig. 4. Plan and façade of the Ionic, amphiprostyle Temple of Nike Apteros, on the Acropolis of Athens.

IV. Περίπτερος, *peripteros*, with columns along both sides and ends (see figure 5). V. Δίπτερος, *dipteros*, with a double range of columns all round (see figure 6). VI. Ψευδοδίπτερος, *pseudo-dipteros*, with one range of columns only, but placed at the same distance from the cella wall as the outer range of

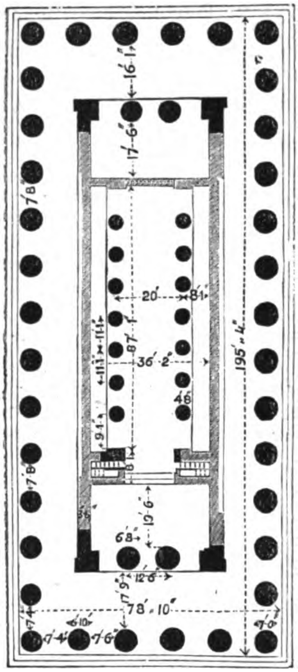

Fig. 5. Plan of the large hexastyle peripteral Temple at Paestum; showing the *pronaos* and *posticum* at the ends of the *cella*, the internal rows of columns and the stairs leading to the gallery over the aisles.

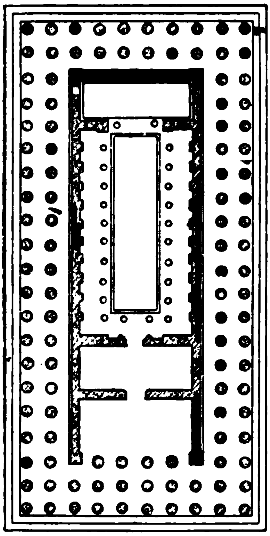

Fig. 6. Plan of the Temple of Apollo Didymaeus, near Miletus, a decastyle, dipteral temple of the Ionic order, with *pronaos* and *prodomus*, or inner vestibule, and, at the other end of the cella, an *opisthodomus*.

the dipteral temple (see fig. 7). VII. Ψευδοπερίπτερος, *pseudo-peripteral*, is another variety which Vitruvius does not give in his list (iii. 2),

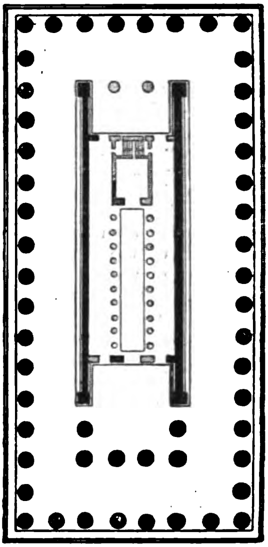

Fig. 7. The great octastyle, pseudo-dipteral Temple in the agora of Selinus in Southern Sicily, with a small inner sanctuary (*adytum*) at the end of the cella.

though he mentions it later on (iv. 8, § 6). This has no complete columns along the sides, but half or "engaged" columns built into the side walls of the cella. The great Temple of Zeus at Agrigentum is an example of this, dating c. 500 B.C. or earlier. This plan was more commonly used by the Greeks for tombs, such as the lion tomb at Cnidus, than for temples. Among the Romans it was very frequently used, as, for example, in the Temples of Concord, Vespasian,

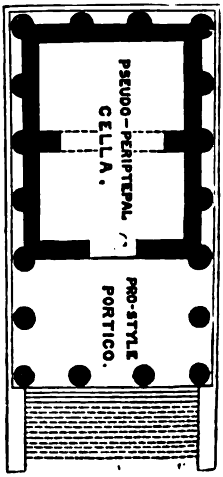

Fig. 8. Plan of the so-called Temple of Fortuna Virilis in the Forum Boarium at Rome. The black shows the part built of tufa: the hatching shows the harder travertine used at points where special strength was needed.

Faustina, and the so-called Temple of Fortuna Virilis in Rome. The main object of this plan was to give greater width to the cella (see fig. 8).

The last class named by Vitruvius is the *Hypaethros*, which appears to be an arbitrary class of his own. He describes the hypaethral temple as having ten columns at each end, and being dipteral along the flanks. Inside the cella are two tiers of columns, one above the other, supporting the roof, in the middle of which is an opening to the sky. As an example he gives the octastyle Temple of Olympian Zeus in Athens. The real fact is that the hypaethral temple does not form a separate category, as any of Vitruvius' last three classes might be hypaethral, the two tiers of columns being common in Greek peripteral temples, as, *e.g.*, in the Parthenon, and in the great temple at Paestum, where some of the upper range of internal columns still exist.

It should be observed that Vitruvius' remarks about Greek temples must be accepted with great caution. He evidently knew very little about them, except perhaps some of the largest Ionic temples in Asia Minor. His ignorance on the subject is shown in many ways, and especially by his statement that the Doric style was unsuited and little used for Greek temples (see Vitruv. iv. 3, §§ 1, 2). In studying Vitruvius' very interesting work, it should always be remembered that he was rather a practical architect than a learned antiquary, and that he had little or no personal knowledge of Greek buildings.

Vitruvius also gives different names to temples according to the number of columns on their fronts, namely :—

Τετράστυλος, tetrastyle, with four columns.
'Εξάστυλος, hexastyle, ,, six ,,
'Οκτάστυλος, octastyle, ,, eight ,,
Δεκάστυλος, decastyle, ,, ten ,,

A peripteral temple could not be less than hexastyle, nor a dipteral temple less than octastyle.

The sacred Hall at Eleusis, which was quite abnormal in plan, had a portico with twelve columns in front. It is very rare to find a Greek temple with an uneven number of columns at its ends. The second temple in point of size at Paestum has nine columns at each end, together with a central row of columns down the middle of the cella. The most probable explanation of this unusual arrangement is that the temple was dedicated to two deities, and therefore was divided longitudinally by a row of pillars. The great pseudo-peripteral Temple of Zeus at Agrigentum has seven engaged columns at each end. These are almost the only examples of Greek temples with an uneven number of columns at the ends. The number of the columns on the flanks varies very much, but is usually more than double that of the fronts. Thus, for example, the following temples —which are all Doric, *hexastyle*, peripteral—have on their flanks—Temple at Aegina and Temple of Nemesis at Rhamnus, 12 columns; Temple of Theseus in Athens, the so-called Temple of Hera at Agrigentum, and the Temple of Zeus at Olympia, 13 columns; great temple at Paestum, 14 columns; temples at Corinth and Bassae, 15 columns; Heraion at Olympia, 16 columns.

Of *octastyle* temples, the Parthenon, and the great Temple of Zeus at Selinus, have on their flanks, 17 columns; the Corinthian Temple of Olympian Zeus in Athens, 20 columns; the Ionic *decastyle* Temple of Apollo at Didyme had 21 columns.

The only other Greek decastyle temple was the Heraion at Samos: the number of columns on its sides has not yet been certainly discovered.

Vitruvius (iii. 3) gives the following list of names for the various classes of temple intercolumniations or spans, measured from column to column in the clear. It should, however, be remembered that this list refers only to late Greek or Roman temples, not to buildings of the best Greek period, about which Vitruvius seems to have known nothing. The figures in this list give the intercolumniations in terms of the diameters of the shafts at the lowest part.

Πυκνόστυλος	●	1½	●	Pycnostyle.
Σύστυλος	●	2	●	Systyle.
Εὔστυλος	●	2¼	●	Eustyle.
Διάστυλος	●	3	●	Diastyle.
'Αραιόστυλος	●	{ more than 3 }	●	Araeostyle.

The larger Greek temples were divided into different parts. The inner space within the front portico was called the *πρόναος*; that at the rear was the *posticum* (see fig. 5); the principal chamber, which usually contained the statue of the deity, was the *cella* or *σηκός*: it was frequently divided into a "nave" and "aisles" by two ranges of internal columns. In some cases, as in the Parthenon and the temple at Corinth, a chamber at the back was walled off from the rest of the cella: this was the *ὀπισθόδομος*; it was used as a treasure chamber. A similar chamber in the Temple of Apollo at Delphi formed an inner sanctuary, *τὸ ἄδυτον*: in it was placed the gold statue of Apollo, the mystic Omphalos, and other sacred objects which only the priests were allowed to approach.

One or more staircases were frequently introduced into the cella. In the Temple of Zeus at Olympia the stairs (*ἄνοδος σκολιὰ*) led to the *ὑπερῷον*, or gallery over the aisles, whence a good view was obtained of the colossal gold and ivory statue by Pheidias (see Paus. v. 10). In the so-called Temple of Concord at Agrigentum, the two stone staircases which led to the roof are still in perfect preservation. Similar staircases in the two other temples at Agrigentum still exist, though they are not so complete (see also fig. 5). In many cases, as in the Parthenon, these stairs appear to have been made of wood.

In the Temple of Concord (so called) at Agrigentum the doorways at a high level still exist, which gave access to the space between the wooden roof and the ceilings of the *pronaos* and *posticum*. In some temples a vestibule, *prodomus*, existed behind the *pronaos* (see fig. 6).

Stylobates and Steps.—The base or *stylobate* of a Greek temple consisted of two or more steps, the height of which was not in proportion to a man's stature, but was fixed by the height of the building. The usual number of steps in Doric temples was three, but a few temples, such as the so-called Theseum in Athens and the

Heraion at Olympia, only had two. In the larger temples, such as the Parthenon, the height of the "riser" of the steps is too great for practical purposes of approach, and so smaller intermediate steps were introduced at certain places to give convenient access to the raised peristyle.

The *cella* floor is usually raised two or three steps above the peristyle. At Paestum the floor of the cella of the great temple is raised to the very unusual height of 4 ft. 9 in. above the top step of the stylobate. In many cases the central portion of the cella floor is slightly sunk below the level of the "aisles:" this was probably intended to receive any rain-water which descended through the open hypaethrum, or, in some cases, to form a shallow tank for water in order to correct the natural dryness of the air in temples which contained a chryselephantine statue, the ivory of which was thought to suffer from the want of some moisture in the atmosphere (Paus. v. 11). In the Temple of Zeus at Olympia the reverse was the case, the surrounding country being damp and marshy, and so the shallow sinking in front of Pheidias' statue was kept full of oil, which was also used as a lubricant for the ivory when it was cleaned by the official φαιδρυνταί. This receptacle was made of black marble with a kerb or rim of white Parian.

The paving of temples was usually formed of large slabs of stone or marble: those in the Parthenon are squares of white marble 1 foot thick and about 4 feet square. In some cases the internal floor was made of a fine hard cement, as, *e.g.* in the temple at Aegina, where the pronaos and the central portion of the cella are paved with cement coloured red. So also the Heraion at Olympia had in the cella a paving of red cement.

The pronaos of the Temple of Zeus at Olympia, built 469–457 B.C., was paved with a curious early kind of mosaic, formed, not of squared *tesserae*, but of natural pebbles of different colours selected from the bed of the river Alpheus. These are set in a fine white cement on a thick bed of concrete. The design consists of Tritons and sea-monsters within a conventional border. This is almost the only example of mosaic of the Greek period that has been found, though mosaics of the Roman period in Greece are far from rare.

In many cases an open gutter, cut out of long blocks of stone or marble, was placed round the lowest step of the stylobate to carry off the rain-water which fell from the eaves of the roof. The water from the roof was discharged through lions' heads placed at intervals along the *cymatium* or top member of the cornice, after the fashion of a mediaeval gurgoyle. Vitruvius (iii. 5, § 15) recommends that only those lions' heads should be pierced which came over the centre of the peristyle columns, to diminish the amount of falling water that the rain could blow towards the cella wall, each column acting as a shelter. The other (unpierced) heads were merely for ornament. The rain-water from the gutters was carried in pipes or open channels to tanks which were built or cut in the rock at various places near the temple: several exist in the Acropolis of Athens close by the Parthenon.

The great Ionic temples of Asia Minor were in some cases raised on a lofty stylobate, consisting of many steps extending all round the building. The Temple of Artemis at Ephesus, dating from the time of Alexander the Great, was constructed with no less than fourteen steps leading up to its peristyle: this great height was, however, exceptional. The decastyle Temple of Apollo at Didyme had only three steps, and the erection of temples on lofty stylobates was rather a Roman than a Greek custom.

Roofs.—Greek temples were roofed with simply framed "principals" and strong rafters, covered with tiles of baked clay, or, in the more magnificent buildings, with slabs of white marble jointed and fitted with the closest accuracy, so that not a drop of water could penetrate. According to Pausanias (v. 10), marble roof-tiles were invented by Euergos of Naxos. The magnificent group of buildings on the Acropolis of Athens were all roofed in this costly manner. Even the stone Temple of Apollo at Bassae was roofed with marble tiles, a fact which Pausanias specially records (viii. 41) as one of the chief glories of the building. In no part of a Greek temple was more elaborate care lavished than in the formation of these marble tiles (σωλῆνες, *tegulae*); each was "rebated" at top and bottom to give the closest possible fit, and each side joint was covered by an overlapping "joint-tile" (καλυπτήρ, *imbrex*), the edges of which were ground down to an absolute accuracy of surface. At the eaves the end of each joint-tile was covered by a καλυπτὴρ ἀνθεμωτός, *antefixa*, an ornament which usually was sculptured with a lotus or acanthus relief. In the temple at Bassae each joint-tile was worked out of the same block of marble as the adjacent roof-tile, involving an immense amount of labour and waste of marble.

Ceilings.—The peristyle, and in some cases the pronaos and posticum, had ceilings under the wooden roof formed of great slabs of stone or marble decorated with a series of deeply-sunk panels or coffers (*lacunaria*), all worked in the solid, and ornamented with delicate enriched mouldings round the edge of each offset. With regard to the wider span of the cella, it is uncertain to what extent inner ceilings were constructed. Probably in some cases wooden ceilings with square *lacunaria* were used; in other cases the rafters of the roof and the underside of the marble tiles were left visible, as is shown by the fact that marble tiles have been discovered with traces of painted ornament on their lower surface. The whole visible woodwork, whether rafters or internal ceiling, was decorated with gold and colour, like the rest of the building. Vitruvius (iv. 2, 2) speaks of roof-panels painted blue by the wax encaustic process.

Screens.—Various parts of a Greek temple were usually shut off by elaborate bronze screens or grills which were frequently gilt. Thus, for example, in the Parthenon, tall bronze screens closed the intercolumniations of the pronaos and posticum. Another screen surrounded the chryselephantine statue of Athene, and the "aisles" of the cella were screened off in the same way from the central space in front of the statue. In some cases these metal screens rested on a marble plinth, but more commonly they were fixed by melted lead into the paving of the temple.

Doorways.—Even in cases where there was a polished marble door architrave, as in the Parthenon and the Propylaea in Athens, it appears to have been usual to fix an inner jamb-lining of wood. This wooden architrave and the valves of the doors were both covered with richly-worked reliefs in gold and ivory, at least in the richer temples. Descriptions of this costly decoration are given in the treasure lists of the Parthenon (see *C. I. A.* ii. 708). The heavy gold plating and ivory reliefs on the doors of the Temple of Athene at Syracuse were stripped off by Verres, as Cicero states in his impeachment. This gold plating made the doors very heavy, and so they were hung, not on hinges, but on massive bronze pivots, which revolved in sinkings in the lintel and sill of the opening. Each valve, in the case of a large doorway, usually ran on a bronze wheel, the marks of which are plainly visible in the Parthenon and in many other temples, on the marble threshold and pavement.

Temple Treasuries (*thesauri*, *θησαυροί*).—In some temples, as *e.g.* the Parthenon and the early temple at Corinth, a special chamber, the *opisthodomus*, was cut off from the rest of the cella as a store-place for the rich treasures in gold and silver which belonged to the temple or had been deposited there as if in a bank. In the Parthenon the opisthodomus appears to have been fitted up with shelves and cupboards. Inventories of the Parthenon treasures cut on marble which still exist mention various objects as being on the first, second, or third shelf, if that is the true meaning of the arrangement according to *ῥυμοί*. Other portions of the Parthenon treasure were kept in the pronaos and in the cella, *ἑκατόμπεδον* or *Παρθενὼν* proper (see Newton and Hicks, *Attic Inscriptions in the Brit. Mus.*, Part I.). In other cases, when there was no separate treasure-room, part of the pronaos or posticum was screened off from the central passage and used as a store-place.

In later times some of the most venerated temples, such as those at Delphi[*] and Olympia, grew so rich in cups, tripods, statuettes, and other votive offerings made of gold and silver, that there was not sufficient room to hold them in the temple itself, and so a number of separate little treasure-houses were built within the sacred precincts. These were often named after various Greek states whose offerings were kept within them. At Olympia a long row of these *thesauri* have been discovered: in design they were like small temples, the cella having either a *prostyle* portico or a portico *in antis*.

Materials and Construction.—The earlier temples were chiefly built of stone, even in districts where marble was plentiful. Very coarse local stones were frequently used, but whether the stone was fine or coarse it was invariably coated with a thin skin of very fine hard cement, usually made of lime and powdered marble or white stone, mixed with white of egg, milk, or some natural size, such as the sap of trees. This beautiful substance, which was almost as hard, white, and durable as marble itself, is similar to the *caementum marmoreum*, the making of which is described at length by Vitruvius (vii. 3, §§ 6–8). The use of this marble cement not only protected soft stone from the weather and made the temple look as handsome as if it had been built of real marble, but it also had the advantage of forming a good, slightly absorbent surface for painted decoration, which seems always to have been applied to Greek buildings. For this reason, even when the temple was built of solid marble, it was not uncommon to coat it with a thin skin or *priming* of marble dust cement for the use of the painter.

In some of the early stone temples, especially in Sicily and at Olympia, terracotta mouldings and enrichments of a very elaborate kind were used to decorate the building. In some cases the whole of the entablature was simply built in squared blocks of stone, and then wholly covered with a casing of moulded terracotta, very carefully jointed and fixed with bronze pins. These terracotta casings were painted with elaborate and delicate patterns in blue and red, brown and white ochres. [TERRACOTTAS.] In other cases the mouldings of the entablature and the like were roughly cut in the coarse stone, and then the fine finished mouldings and enrichments were worked in the marble-dust cement which coated the whole stone-work.

By degrees marble came into use for building temples; at first in a very sparing way, being used only for the sculptured reliefs, and not always for the whole of those. In one of the temples at Selinus no marble is used in the building except a few small bits employed for the nude parts of the female figures in the metopes. All the rest of the sculpture is of the local limestone. At Bassae the use of marble is more extended; the whole of the sculpture and the roof-tiles are of marble. At Aegina the sculpture and only the lower courses of tiles were of marble. A further extension of its use was in the last Temple of Apollo at Delphi, in which the columns of the front were of marble, all the rest of the building (except the sculpture) being of local stone. The Alcmaeonidae of Athens were the contractors for this temple; and though their contract was only for stone, yet they were liberal enough to supply these marble columns for the front of the temple (see Herod. v. 62). Lastly the whole temple from the floor to the roof was built of marble, and in the 4th century B.C. the great temples of Asia Minor were built of marble, even in cases where no marble quarries were at hand. Coloured marbles, though largely used by the Romans, were but little employed in Greek temples.[*]

In Athens the dark grey Eleusinian marble was used in some cases for steps, pavements, or plinths; and in the Erechtheum the main external frieze was made of this dark marble, ornamented with figures carved in white marble in half-relief, and attached to the ground with bronze pins. With this exception nothing but

---

[*] For an account of the Temple of Apollo and the treasures of Delphi, see Middleton, *Journ. Hell. Studies*, vol. ix., 1889, p. 282 *seq.*

[*] The earliest recorded instance of the use of coloured marble in a Greek or semi-Greek building was at Halicarnassus, where the palace and tomb of King Mausaolus, who died in 353 B.C., were decorated with linings of Proconnesian marble (see Pliny, *H. N.* xxxvi. § 47; MAUSOLEUM).

white marble was used in the Athenian temples after the Persian war, at least above the groundline. The native limestone (*πῶρος*) was commonly used for foundations. Many different kinds of decorative materials were used: rosettes and other ornaments of gilt bronze were frequently attached to the eyes of the volutes of Ionic capitals, and in the centres of the panels of the *lacunaria* of the ceilings. Bits of coloured glass or enamels of brilliant tint were inlaid in the interstices of the plait-band ornaments of Ionic capitals and bases. The Erechtheum especially was enriched with bronze and enamel ornaments of many kinds. Rings of gold ornament decorated the bases of the Ionic columns of the Artemision at Ephesus, and we read of the joints in a temple wall at Cyzicus being marked with lines of gold inlay (see Pliny, *H. N.* xxxvi. § 98).

In the marble masonry of the finest Greek temples extraordinary care was taken to fit each block closely to the next. Each block was first cut and rubbed to as true a surface as possible, and then, after it was set in its place, it was moved backwards and forwards till by slow grinding it was fitted with absolute accuracy to the block below it. The drums of the columns were ground true in the same way by being revolved on a central pin fixed in a wooden socket, which was let into the centre of the bed of the drum. Small projecting blocks of marble (*ὦτα*) were left by the masons, first to give a hold to the loops of rope while the drum was being raised to its place, and secondly these projections formed a sort of handle by which the great drum of marble could be made to revolve. Of course, with such perfect fitting as this, no cement or mortar of any kind was used, and with time and pressure the adjacent blocks seem in many cases to have, as it were, grown together, so that when a portion of the wall is thrown down a fracture will often run diagonally through two blocks of marble rather than separate the two at the joint. In the absence of cement great labour and much metal were expended in fastening each block with bronze or iron clamps and dowels, all carefully fixed with melted lead. Every block in the Parthenon, for example, is not only clamped to the adjacent blocks in the same course, but is fixed by upright dowels to the courses above and below,—a refinement of precaution, which to modern builders would seem quite needless; there being no side thrust, and the blocks being of such great size and weight as to be in no danger of any movement, except perhaps during an earthquake.

Optical refinements.—Nothing in the way of human workmanship can be more wonderful than the perfection and minute accuracy with which every part of a Greek temple of the best period was executed. The very elaborate system of curved lines and inclined *axes*, which the highly sensitive eye of the Greek thought necessary to the beauty of a building, shows, more clearly than anything else, how far superior to ours were the aesthetic perceptions and the delicately trained eyesight of the ancient Greek. The general principle of the optical corrections used by the Greeks is explained by Vitruvius, though he appears not to have been acquainted with all their refinements. He writes (vi. 2, § 1): "Acuminis est proprium providere ad naturam loci aut usum aut speciem *detractionibus* vel *adjectionibus* temperaturas efficere, uti, cum de symmetria sit detractum aut adjectum, id videatur recte esse formatum, in aspectuque nihil desideretur."

A careful study of existing Greek temples, and especially of the Parthenon, has shown that the following classes of optical corrections were used.*

I. Entasis (*adjectio*) of columns (Vitruv. iii. 3, § 13): the lines of the shafts, instead of diminishing regularly from bottom to top, are slightly convex, giving a very delicate swelling to the central part of the shaft. A column formed with straight lines appears to get thinner than it ought towards the middle, owing to the effect of the light behind it, which appears, as it were, to eat into or encroach upon the column, especially midway between the top and bottom. This *entasis* is the only one of the many optical refinements of the Greeks which is used in modern buildings.

II. The columns at the angles of peripteral temples were made slightly thicker than the rest, and the intercolumniations at the angles were reduced. The object of this was to prevent the angle columns from appearing thinner than the others on account of their being seen against a brighter background than those which showed against the cella walls—a dark object always appears smaller against a bright ground, such as a sunny sky, than if seen with a dark ground behind it.

III. The main horizontal lines of the temple were formed slightly convex, in order to prevent an appearance of weakness and sinking in the middle. Thus the steps and floor of the stylobate, and the horizontal lines of the entablature, have a very slight and delicate curve, the rise varying, *e.g.* in the Parthenon, from $\frac{1}{450}$ to $\frac{1}{715}$ of the length.

IV. An inward slope of all vertical lines and planes to give an appearance of *stability*. The columns were not set upright, but all sloped inwards towards the building. The cella walls were built "battering;" that is, thicker at the bottom than at the top. Even the principal flat surfaces of the capitals and entablature were made so as to slope inwards.

V. In some cases when the point of sight is near, and the moulding high up, as with the capital of an *anta*, the chief planes of the moulding slope *forwards* instead of inwards, to correct the excessive foreshortening which otherwise would prevent the vertical flat surfaces from being seen from below.

A very interesting inscription has been discovered at Lebadea in Boeotia, giving the specification for the partial rebuilding of a temple there to Zeus. It gives many curious details about the construction of the building, and contains the following clause about the optical corrections which were to be used: *τὰ δὲ ἄλλα ὅσα μὴ ἐν τῇ συγγραφῇ γεγράπται κατὰ τὸν κατοπτικὸν νόμον καὶ ναοποιεῖν ἔστω*,—"as concerns other matters not written in the specification, let them be done according to the

---

* For further information on this subject, the student is referred to the very valuable work on *Athenian Architecture* by F. C. Penrose, 2nd edit., 1888, published by the Dilettanti Society.

optical rules for the construction of temples" (see Choisy, *Études Épigraphiques sur l'Architecture Grecque*, p. 173 *seq.*).

Fig. 9 shows in a very exaggerated form the most important optical corrections in the Parthenon, as discovered by Mr. F. C. Penrose.

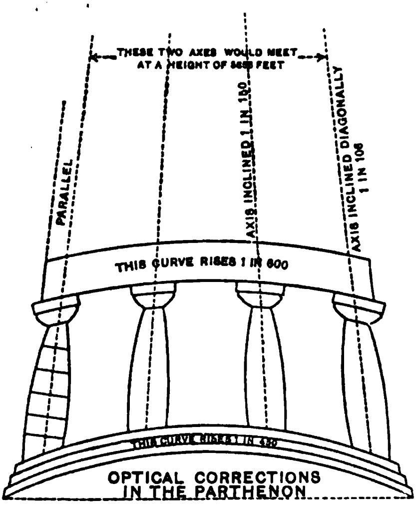

Fig. 9. Diagram showing the various optical corrections used in the Parthenon.

Each block of marble is worked accurately so as to form its proper proportion of these delicate curves, which, *e.g.* in the entablature, amounts only to a rise of 2 inches in 100 feet of length.

The general system of design in a Greek temple is very different from that of such a building as a Gothic cathedral. In the latter the *module* or unit of scale has some relation to the height of the human figure, and great size is gained by *multiplying* parts, not by merely *magnifying* the scale. In a Greek temple the *module* or unit is the diameter of the external columns,* and a large peripteral temple may be exactly like a small one with all its parts magnified. Thus in the largest temples the doorway, magnified in proportion to the size of the columns, has no relation to the human height; and in details, such as the entablature, a large cornice will have no more members than a small one, but merely each member increased in size. Beautiful and unrivalled in execution as Greek architecture is, this want of adaptability, which comes from the use of a single external order only, is a very real practical defect.

Methods of Decoration in Greek Temples.

Sculpture.—In Doric temples the usual parts which were decorated with sculpture were the *pediments* or triangular gables at the ends: these usually contained groups of figures in relief or in the round. The *metopes*, or panels between the triglyphs over the architrave, were filled with reliefs: in some cases, as in the Parthenon, every external metope contained a relief; in other cases only, those on one or both ends. The celebrated Parthenon frieze (ζωοφόρος) was set within the peristyle at the top of the cella wall. At Bassae the frieze was inside the cella, over the "engaged" columns which projected from the side walls of the cella, and there were also sculptured metopes inside the peristyle. In Ionic and Corinthian temples, which had no triglyphs and metopes, a continuous sculptured frieze was usually carried along the main entablature. The *Artemision* at Ephesus was not only decorated with pedimental sculpture and an external frieze, but a number of its columns had their lower drums sculptured with life-sized figures in relief—the *columnae caelatae* of Pliny, *H. N.* xxxvi. § 95. In addition to this some of the columns were set on square sculptured plinths. Even the older temple to which Croesus was a liberal benefactor had columns decorated with reliefs in the same way.

Some Greek temples, such as that at Bassae and the Heraion at Olympia, were constructed with a series of recesses separated by engaged columns along the side walls of the interior of the cella. These were designed to hold single statues of the deities. The celebrated Hermes of Praxiteles stood in one of the shrine-like recesses of the Heraion at Olympia. The more celebrated temples, especially those which stood on the site of some great agonistic contest—such as Delphi, Corinth, and Olympia—were crowded with votive statues, both inside the cella and in the portico and peristyle. At Olympia and Delphi, before the Roman spoliation, the statues in and around the temples must have been numbered by the thousand. A very large proportion of these were of bronze, in many cases thickly plated with gold. Even in Pliny's time the sacred periboli at Olympia and Delphi still contained fully 3,000 statues each (*H. N.* xxxiv. § 36): and at the time of Pausanias' visit to Delphi they must have been more numerous still (see his long account of them x. 8–15, 18, 19, and 24). He names nearly 150 statues at Delphi as being worthy of special notice.

The principles of composition which were applied to the sculpture on Greek temples were mainly these:—In the pediments the interest of the motive usually converged towards the centre. In a continuous frieze the interest was more distributed; in the Parthenon frieze it culminates in the central group over the main entrance. In the metopes combats were favourite subjects, giving strongly-marked diagonal lines of composition, which formed a pleasant contrast to the vertical lines of the triglyphs. When a continuous frieze was sculptured with battle scenes, as is the case at Bassae, the composition formed a series of zigzag lines which gave a continuous flow of action. In all cases great care was taken by the Greek sculptor to make his work harmonise with its architectural surrounding, very unlike modern sculpture on buildings, which usually has no more relation to its position than if it were a mantel-piece ornament.

Painting.—Rich painted decoration in brilliant colours seems to have been used to ornament all the Greek temples. Even the sculpture was

---

* Vitruvius (iv. 3, § 4) makes the *modulus* a half-diameter of the column for convenience of calculation, but the real unit is the whole diameter of the shaft at the bottom, as he has it at iii. 3, § 7.

painted, either wholly or simply set off by a coloured background, and enriched with borders and other patterns on the drapery. Accessories, such as weapons, trappings of horses and the like, were usually of gilt bronze. The mouldings of the entablatures, capitals, and other parts were all picked out in red, blue, and gold, with very minute and elaborate patterns painted on the larger members, in the coffers or panels of the *lacunaria*, and on the cross-beams of marble which supported the great ceiling slabs over the peristyle. Certain enriched mouldings, such as the "bead and reel," appear to have been nearly always gilt, and in almost all the patterns of the richest temples thin bands of gold were used to separate and harmonise the brilliant tints of colour.

The interior of the temple walls was often covered with large paintings of figure subjects: in the Parthenon, for example, the pronaos contained a painting of the rock Aornus and the fissure which drew into it birds flying over it. In the cella were portraits of Themistocles and Heliodorus (see Paus. i. 2, 37): and Pliny (*H. N.* xxxv. § 101) records that in the portico of the Parthenon was a painting by Protogenes of Caunus, representing the sacred triremes Paralus and Ammonias. Similar pictures decorated the internal walls of most Greek temples.

Votive shields of gilt bronze were frequently attached to the architraves of Greek temples, as was the case with the Parthenon, the Temple of Zeus at Olympia, and that of Apollo at Delphi (Paus. v. 10, 2, and x. 19, 3). Part of the Parthenon architrave was decorated with hanging wreaths or festoons of flowers worked in bronze. The positions of these and of the shields are still marked by the stumps of the bronze pins which fixed them to the marble. In some cases sets of votive armour and weapons were hung to the cella walls, both inside and out, as well as *ex-votos* of many other kinds.

Orientation.—Greek temples are usually placed with their *axes* east and west: the front is commonly towards the east. There are, however, exceptions to this rule: the Temple of Apollo at Bassae stands north and south, but has on its east flank the unusual feature of a side door, placed near the statue of the god—possibly to allow the rays of the rising sun to strike the statue of Apollo, who was there worshipped as the deliverer from a fearful pestilence which had devastated the neighbouring city of Phigaleia, about the middle of the 5th century B.C.

Greek temples of the historic and autonomous period were built in two styles, *Doric* and *Ionic*. The Corinthian style belongs to a later period.

Doric Temples.—In the mainland of Greece, in Magna Graecia, and in Sicily, the Doric style was the first to be developed. Almost all the existing Greek temples in these countries are Doric. The chief *archaisms* or points of difference between the early and the fully-developed Doric temples are these:—In the older examples the columns are proportionally shorter and thicker, the architrave is heavier, the intercolumniation is closer, the diminution of the shafts of the columns is proportionally greater; the abacus of the capital is shallow and wide-spreading, the echinus of the capital is formed with a more bulging curve. Entasis and other optical refinements are used in a limited and imperfect way. The shafts of the columns are as far as possible monolithic; marble is used very sparingly or not at all.

The largest number of early Doric temples which still exist are in Sicily; at Syracuse, Agrigentum, Selinus, and Segesta. Another example of very early date is the temple at Corinth. Of the later, fully-developed Doric, the chief examples are in Athens, and at Bassae in Arcadia.

The temple in Aegina occupies an intermediate position in point of date. With regard to the oldest existing temples it is impossible to fix any exact date; there is, however, little doubt but that the two earliest temples at Selinus, and one in Syracuse, of which very little more than two columns now exist, are not later than the end of the 7th century B.C. The latest Greek Doric temple of which any remains still exist is probably that of Athene Alea at Tegaea, which was designed by Scopas in the early part of the 4th century B.C. (see Paus. viii. 45).

The main characteristics of the Doric style are these—columns without bases, with shallow flutings not separated by a fillet. The capital consists of a square *abacus* resting on a slightly curved cushion-like member, which is called the ἐχῖνος (*echinus*), from its resemblance to the shell-fish popularly called a sea-urchin. The architrave which rests on the abaci of the columns is plain, without any sinkings or *fasciae*, such as are used in the Ionic style. Above the architrave comes the frieze, which is divided into triglyphs (τριγλύφοι), and metopes (μετὰ ὀπάς). As Vitruvius quite correctly points out (iv. 2), the Doric order is a survival in stone of a primitive method of construction in wood.

The grooved triglyphs were copies of the ends of the tie-beams of the roof principals. The holes in the upper course of the wall in which the tie-beams rested were called (ὀπαί), and hence the intermediate spaces were the μετ' ὀπαί, *metopes*. In the early wooden buildings the metopes were frequently left open to admit light and air (see Eur. *Iphig.* 113); and in domestic buildings they probably served as an exit for the smoke from the central hearth (Ϝεστία) in the middle of the μέγαρον or hall. In later times the metopes were closed and decorated with painting or sculpture.

Above the Doric frieze was the cornice, the third and last part of the entablature: this was very simple, consisting mainly of a deep overhanging block with a plain flat surface called the *corona*, and on its *soffit* or under-side a series of *mutules*, covered with three rows of three circular projections, *guttae*. The mutules were survivals in stone of the ends of the small rafters, which showed above the ends of the tie-beams. The top member of the cornice, *cymatium*, was originally the upturned edge of the eaves' tiles, and was pierced at intervals to allow the rain-water to escape (see fig. 10).

The description already given of the plans and general arrangement of Greek temples applies to those of the Doric style, except that no Doric *decastyle* temple appears to have been built, though the dodecastyle portico of the Hall of the Mysteries at Eleusis had columns of the Doric order. This, however, was not, as is mentioned above, a temple, but rather a great hall or *μέγαρον*.

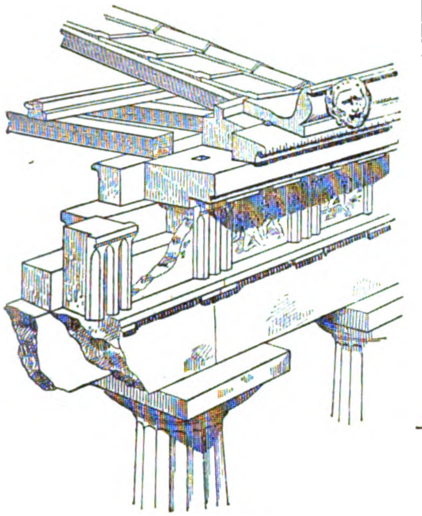

Fig. 10. Drawing to show the construction of the entablature of a Doric temple of the 5th century B.C., and the manner in which it supported the timbers of the roof. One of the pierced lions' heads for rain-water is shown on the top-member (*cymatium*) of the cornice.

The method in which Greek temples were lighted is a rather difficult problem: windows were not used till Roman times, and it appears fairly certain that some form of opening in the roof (*ὀπαῖον*, *hypaethrum*) was the usual way in which light was admitted into the cella.* Prof. Cockerell found at Bassae one of the marble roof-tiles which had formed the border to some such opening. A raised rim or kerb was worked on the tile so as to prevent water dripping from the roof into the interior. The existing circular *hypaethrum* in the dome of the Pantheon in Rome shows the great aesthetic beauuty of such a method of lighting; the inconvenience from rain falling on to the marble paving is comparatively slight.

After a long-established custom of sacrificing on altars in the open air, there was probably a survival of sentiment in favour of having some part of a temple *sub divo*. Both religious and poetical notions have almost always closely associated the notion of the visible sky with the abode of God. Support is given to the hypaethral theory of lighting by a curious passage of Justin, xxiv. 8, who relates that when Delphi was attacked by the Gauls the Pythia and the priests cried out that they saw Apollo descending through the roof opening of the temple—"eum se vidisse desilientem in templum per aperta culminis fastigia." An ingenious theory was invented by Mr. James Fergusson, that the hypaethrum or ὀπαῖον was not over the central space of the cella, but that there was one on each side over the aisle galleries; the light being admitted sideways, through windows like those of a mediaeval clerestory (see Fergusson, *The Parthenon*, 1883). There is, however, little real evidence to support this theory, and the explanation would not apply to those numerous temples which had no "aisles" or internal columns to support a gallery.

The general appearance of the façade of a Doric temple is shown in the annexed figure (No. 11) of the temple at Aegina, as restored by Cockerell from the existing remains. The pediment has fallen, and the sculpture is now at Munich, but most of the columns are very perfect. The date of this temple is probably about the middle or latter part of the 6th century B.C.

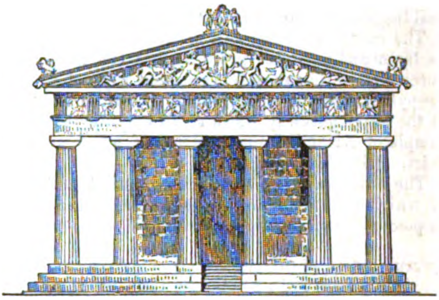

Fig. 11. The façade of the Doric, hexastyle, peripteral temple in Aegina, restored from the existing remains by the late Prof. Cockerell.

It should be observed that some temples of the Doric style had internal columns of a different order. The columns in the opisthodomus of the Parthenon were probably Ionic. At Bassae the internal columns of the cella were Ionic, and at Tegea it is probable that the columns of the pronaos and posticum were Ionic, while those inside the cella were Corinthian (see Paus. viii. 45, § 3 *seq.*). The Propylaea of the Athenian Acropolis has a similar combination of the Doric with the Ionic style.

In the earlier temples all the columns seem to have been Doric, as we see in the great temple at Paestum, where the internal columns still exist.

The so-called *Temple of Demeter*—or, more correctly, the *Σηκὸς μυστικός*—at Eleusis, was a completely different building from ordinary Greek temples, as it was a great hall of meeting for those initiated into the mysteries of Demeter, Kore, and other Chthonian deities. It has recently been excavated and plans of the successive structures made with great care and skill by Dr. Dörpfeld (see *Fouilles d'Éleusis*, Athens, 1889: cf. also Paus. i. 38).

The latest building was a large square hall containing six rows of seven columns each. On three sides, there were two doorways, six in all. The fourth side, which was built against the scarped face of the hill, had no entrance on the ground-floor. It appears probable that the building was in two stories.* On the ground-floor eight tiers of step-like seats were

---

* The windows in the Erechtheum were an addition of the time of Constantine, or even later.

* The upper story was probably used for the production of those striking scenic effects, imitations of thunder and lightning and the like, which were employed by the priests to fill the minds of the neophytes with awe and wonder. Traces of some curious machinery are still visible in the inner propylaeum of the temenus.

placed against all four walls; the lines of seats being broken only by the doorways. In front was the great Doric dodecastyle portico built by Philo in the 4th century B.C. The plan of the whole building is Oriental rather than Greek in character. It closely resembles the "Hall of the Hundred Columns" in the palace of Darius and Xerxes at Persepolis. Dr. Dörpfeld discovered remains of two earlier and smaller buildings of similar plan on the same site.

The sacred temenus was approached through an inner and an outer propylaeum; the larger, outer one, of Roman date, is a close copy of the propylaeum of the Athenian Acropolis. In front of the outer gateway was a small amphiprostyle temple of Artemis, some remains of which still exist. (See *Bull. Cor. Hell.* i. 1885.)

The following are the principal Doric temples of which remains still exist, arranged as nearly as possible in chronological order:—

Syracuse, Island of Ortygia, Temple of Artemis, hexastyle, very archaic, scanty remains. 7th century B.C., or even earlier.

Selinus (Sicily), three temples on the Acropolis, all hexastyle, with 19, 14, and 13 columns respectively on the flanks, of local limestone, very early in style. 7th cent.

Syracuse, Ortygia, Temple of Athene, hexastyle, now built into the cathedral. Late 7th cent.

Selinus, great Temple of Zeus in the Agora (see fig. 7), octastyle, with 17 columns on the flanks: never finished. 7th cent.

Corinth, hexastyle, with 15 columns on the flanks; only 7 columns now remain. Late 7th cent.

Segesta, Sicily, hexastyle, the peristyle perfect, but the cella wholly gone, probably unfinished. 6th cent.

Agrigentum, Sicily, the great Temple of Zeus, *heptastyle*, with 14 columns on the flanks, pseudo-peripteral, slight remains. 6th cent.

Aegina, hexastyle, with 12 columns on the flanks; very perfect (see fig. 11). 6th cent.

Paestum, Lucania, the so-called Temple of Poseidon (see fig. 5), hexastyle, with 14 columns on the flanks, very perfect. 6th cent.

Delphi, Temple of the Pythian Apollo, hexastyle, peripteral; designed by Spintharus of Corinth soon after the burning of the previous temple (the fourth on that site) in the year 548 B.C. Second half of the 6th cent.

Agrigentum, Sicily, three hexastyle temples, two of them very perfect. Late 6th or early 5th cent.

Selinus, the middle temple on the Agora. *c.* 500 B.C.

Assos, Asia Minor, hexastyle, with sculpture on the architrave, very rude in style, scanty remains. *c.* 480 B.C.

Athens, so-called Temple of Theseus, hexastyle, with 13 columns on the flanks, very perfect. *c.* 465 B.C.

Olympia, Temple of Zeus, built by Libon of Elis, hexastyle, with 13 columns on the flanks; little remains standing. 469–457 B.C.

Olympia, the Heraion, a mixture of many dates, mostly destroyed, hexastyle, with 16 columns on the flanks.

Athens, the Parthenon, octastyle, with 17 columns on the flanks, still fairly perfect, built by Ictinus. 450–438 B.C.

Selinus, hexastyle temple in the Agora. Middle of 5th cent.

Sunium, Attica, hexastyle, a few columns only remain. Middle of 5th cent.

Bassae, Temple of Apollo Epicurius, hexastyle, with 15 columns on the flanks, built by Ictinus, still fairly perfect. *c.* 440 B.C.

Rhamnus, Attica, Temple of Nemesis, hexastyle, peripteral; and Temple of Themis, cella with portico *in antis*, and walls of polygonal masonry, a late survival of this early method of building (see fig. 3). Middle of the 5th century.

Eleusis, the Hall of the Mysteries, with a dodecastyle portico, which is a later addition. *c.* 440–220 B.C.

Tegea, Temple of Athene Alea, built by Scopas, hexastyle, with 13 columns on the flanks; date soon after 393 B.C.

Paestum, *enneastyle* temple, and a small hexastyle temple, probably built by native Lucanian architects in the 4th cent. B.C.

Ionic Temples.—The main points in which the Ionic order differs from the Doric are these:—The columns have bases, and the capitals are decorated with volutes and a moulded abacus, instead of the simple echinus and plain abacus of the Doric style. The whole entablature is more elaborate, the architrave being divided into receding planes or bands (*fasciae*), and the members of the cornice more numerous and elaborate. The small cubical projections called *dentils*, which are set closely along the fully-developed Ionic cornice, are one of the chief characteristics of the style, though not always present in Athenian examples. Besides these important differences of design, the whole character of an Ionic temple is more light and graceful than that of a Doric building. Thus Vitruvius fancifully compares the Doric order to the proportions of a man, and the Ionic to those of a woman (Vitruv. iv. 1, §§ 6, 7). The columns are more slender, and so in proportion taller; the diminution and entasis are less. The intercolumniation, or distance from column to column, is wider, giving a lighter effect to the whole building. The flutes on the columns are separated by flat strips or "fillets," and the members of the mouldings are much more largely enriched with carving.

No very early example of an Ionic temple is now in existence; but some very primitive Ionic capitals, which have recently been found deeply buried on the Athenian Acropolis, show that even in Attica the Ionic style, though in an undeveloped form, was used before the Persian invasion. The earliest Ionic temple in Greece proper, which existed till modern times, was a very graceful little building on the Ilissus, close by Athens, but this was destroyed about a century ago. Luckily it is well illustrated in Stuart and Revett's valuable work on Athens. It was a tetrastyle, amphiprostyle building, and from some of its details, especially the absence of dentils in the cornice, seemed a sort of link between the Doric and Ionic styles. It was probably built soon after the Persian invasion, about 475 B.C. The somewhat similar little Temple of Nike Apteros on the Acropolis, which has been carefully rebuilt and is now in a very perfect state, belongs to a rather later date, probably about the middle of the 5th century B.C. It is a mere shrine for a single statue, the cella being little over 12 feet square; and it possesses the remarkable peculiarity of having no front wall to the cella, but only two square pilasters to carry the architrave (see fig. 4). The open end of the cella was closed by a bronze screen fitted in between the pilasters and the *antae*.

Large and magnificent as are the great Ionic temples of Asia Minor, none of them can approach the beauty of the Athenian *Erechtheum*, either in delicate richness of detail or in minute perfection of workmanship. The Erechtheum, which stands to the north of the Parthenon, was rebuilt towards the end of the 5th century on the site of a very primitive temple of Athene Polias, which was burnt by the Persians in 480 B.C. It is a very complicated building, containing a group of many different shrines, and is quite unlike any other Greek temple. The main cella, which had a hexastyle portico towards the east, was subdivided by cross walls, and floors in several different chambers at various levels. Owing to this cella having been gutted to make it into a Christian church, the original plan is now a matter of some doubt. All that is certainly known is that some part, probably the eastern portion of the cella, was the shrine of Athene Polias, and contained a very sacred ancient *ξόανον* or wooden statue of the goddess. This statue is referred to in the official title of the temple as given in an existing inscription of the year 409 B.C., when the building was still in progress; the title is *ὁ νεὼς ὁ ἐμ πόλει ἐν ᾧ τὸ ἀρχαῖον ἄγαλμα.* Another part of the temple was called the Ἐρεχθεῖον, or shrine of Erechtheus, the mythical ruler of Athens, whose presence was symbolised by a living snake which was kept in the building (Herod. viii. 41, and Plut. *Themis*, 10). A third portion of the cella was the Κεκρόπειον or shrine of Cecrops. The building or its temenus also contained the spring of salt water and the olive-tree which were supposed to have been produced by Poseidon and Athene during their contest for the sovereignty of Attica (see Pausanias, i. 26, § 5 *seq.*). On the north of the cella is a very beautiful tetrastyle portico, at a much lower level than the eastern portico: in a vault under the portico floor are traces of the salt spring and the marks made by Poseidon's trident—*σημεῖον τῆς τριαίνης*—which were shown to Pausanias. On the opposite or south side of the main cella is the well-known Caryatid portico, supported by six graceful female figures, one of which is now in the British Museum. The entrance was by a side door in this little porch, leading down by a small flight of steps to the lower level at the west end. In the west wall a doorway gave access to a long sacred enclosure called the Πανδρόσειον in honour of Pandrosos, the one faithful daughter of Cecrops. In this court probably stood the sacred olive and an altar to Zeus Herkeios (see Dion. Hal., quoting Philochorus, *de Deinarcho*, 3). The three windows, which till recently existed in the west wall of the cella over the door, were insertions of a late date, probably of the time of Constantine, when the temple was made into a church. The apse, which was then built at the other end, unfortunately caused the destruction of the east portico, and in fact the whole building was gutted to make it into a single chamber.

The Erechtheum is richer in detail than any other Ionic temple, and is also quite alone in the minute delicacy of the execution of all its ornaments and mouldings. The capitals were decorated with a band of lotus pattern below the necking: the volutes were enriched with ornaments of gilt bronze, and delicate plaited mouldings, both on the capitals and bases, were inlaid with bits of jewel-like enamel. All the mouldings and reliefs were decorated with gold and colour. The whole work was extraordinarily elaborate and costly, and so took many years to execute. It appears not to have been completely finished till after the close of the Peloponnesian war. A very interesting inscription, with a report of its exact state in 409 B.C., is now in the British Museum (see Newton and Hicks, *Greek Inscriptions in British Museum*, i. p. 84).

The following is a list of the chief Ionic temples of which some remains still exist:—

In Greece proper:—

- *Athens:* the temple of Nike Apteros and the Erechtheum on the Acropolis.
- *Olympia:* the circular Philippeion, with 18 Ionic columns outside, and, inside the cella, engaged columns of the Corinthian order: similar in plan to the Roman Temple of Vesta shown in fig. 13.

In Asia Minor:—

- *Sardis:* temple of Cybele, octastyle, with columns 60 feet high, of which only three remain, date about 500 B.C.
- *Xanthus* in Lycia: Heroon of unknown dedication, a small tetrastyle, peripteral building on a lofty *podium*. Its sculpture is now in the British Museum. The date is doubtful, but it is probably not earlier than *c.* 400 B.C.
- *The Troad:* Temple of Apollo Smintheus, octastyle, pseudo-dipteral, with very close (pycnostyle) intercolumniation. Most of the existing building seems to date from a period probably about 400 to 350 B.C.
- *Samos:* Temple of Hera, decastyle, dipteral (see Paus. vii. 4, and Vitruv. vii. Praef. 12). The existing temple is of the 4th cent. B.C. An earlier temple on the same site was built in the 7th cent. B.C. by Rhoecus of Samos; Herodotus mentions it as the largest temple he had seen (see iii. 60, ii. 148, and i. 70). The existing remains were first excavated by the Dilettanti Society in 1812. (See *Antiq. of Ionia*, i. p. 64; and *Bull. Cor. Hell.* iv. p. 383.)
- *Magnesia ad Maeandrum:* Temple of Artemis Leucophryne, hexastyle, pseudo-dipteral, built by Hermogenes about 350 B.C. (See Vitruv. vii. Praef. 12.)
- *Teos:* Temple of Dionysus, hexastyle, also built by Hermogenes about 350 B.C. (See Vitruv. vii. Praef. 12; and iv. 3, 1.) At iii. 3, 8 Vitruvius mentions this temple as an example of *eustyle* intercolumniation. He goes on to say that its architect Hermogenes was the first to invent the pseudo-dipteral plan for a hexastyle temple by omitting the second (inner) range of columns, and so giving a wider ambulatory round the cella for shelter from rain for a crowd of people. (See *Antiq. of Ionia*, Part iv. 1881.)
- *Priene:* Temple of Athene Polias, hexastyle, very similar to the temple at Teos; it was built in the second half of the 4th cent. B.C. and was dedicated by Alexander the Great, as is recorded in the following inscription, which was discovered during the excavations of the Dilettanti Society:— Βασιλεὺς Ἀλέξανδρος ἀνέθηκε τὸν ναὸν Ἀθηναίῃ Πολιάδι.
- *Branchidae* near Miletus: Temple of Apollo Didymaeus; decastyle, dipteral (see fig. 6). This and the temple at Samos were the only two Greek decastyle temples. That of Apollo Didymaeus seems never to have been completed. Vitruvius (vii. Praef. 16) mentions it as one of the four greatest temples of the Greeks, and that its architects were Paeonius of Ephesus and Daphnis of Miletus, about 350 B.C. Pausanias (vii. 5) says that, though unfinished, it is one of the wonders of Ionia. According to Strabo, p. 634, it was left roofless on account of its excessive span. (See *Gaz. des Beaux Arts*, xiii. p. 497, and xiv. 1876.)

Ephesus: Temple of Artemis (Artemision), octastyle, dipteral, built during the reign of Alexander the Great, 356–323 B.C.

In many respects this last was the most magnificent and celebrated of all Greek temples; the last temple built on the site ranked as one of the seven wonders of the world. It should, however, be remembered that the great size of the Artemision was a very important factor in its celebrity. In point of beauty of workmanship and minute refinement of detail it was far surpassed by the earlier Greek temples, such as the Parthenon and the Erechtheum. Between the 7th century B.C. and the time of Alexander the Great three successive temples were built on the same site. 1. The original temple built by Theodorus of Samos, the partner of Rhoecus, who was architect of the Heraion in Samos, probably about the year 630 B.C. 2. The temple which was begun by Chersiphron and finished by his son Metagenes about the end of the 6th century B.C. This temple was burnt by an incendiary, named Herostratus, the night when Alexander the Great was born, in 356 B.C. 3. The last temple built during the reign of Alexander was designed by his favourite architect Dinocrates. (See Pliny, *H. N.* xxxvi. § 98; and Vitruv. x. 2, §§ 11, 12; vii. Praef. 12; and ii. Praef. 1–4). It should be observed that much confusion exists in the statements of Vitruvius, Pliny, and other authors as to the architects of the temple, owing to their not distinguishing clearly between the three successive buildings.

Considerable remains of the last temple, and pavements and foundations of the two earlier buildings, were discovered in the years 1870–6 by Mr. Wood; but unfortunately no satisfactory account or plan of his discoveries has been published. Mr. Wood discovered after long search that the Artemision, surrounded by its extensive temenus, stood, not within the city of Ephesus, but nearly a mile outside the Coressian gate. It had eight columns on the fronts, and probably twenty on the flanks: the stylobate, which consisted of no less than fourteen steps, measured at the lowest step about 418 by 240 feet. The columns were 56 feet high, and about 6 feet in diameter above the base. As has been already mentioned, some of the columns and their pedestals were enriched with sculpture, as were also the *antae*, of very varying degrees of excellence, some being well designed and graceful in motive, while other reliefs are extremely coarse and clumsy. None of the sculpture is remarkable for any high degree of finish or delicacy. The main entrance from the pronaos led, not directly into the cella, but into a large vestibule, part of which was probably shut off for use as a treasury. The temple was enormously rich in statues and votive offerings of all kinds in gold and silver; its doors were most magnificently decorated with plating of gold and ivory. A fragment of one of the bases of the main order, now in the British Museum, has remains of an ornament of pure gold fixed with lead between the double *tori*. The inside of the cella was decorated with a large mural painting of Alexander Ceraunophorus by Apelles and many other pictures, and contained a large number of fine statues by Scopas, Timotheus, Leochares, and other sculptors of the Asia Minor School. The temenus was very large, enclosed by a massive wall, and planted with groves of trees. It formed one of the most sacred sanctuaries of Asia Minor, and was the resort of great numbers of men who were flying from punishment for some misdeed. By degrees the bounds of the *asylum* or sanctuary were enlarged, until they not only extended up to the walls of Ephesus, but even included part of the city, which thus became the resort of evil-doers, and was a great source of trouble to the citizens. Augustus therefore restricted the limit of the space which had the privileges of asylum.

The British Museum also possesses some very interesting fragments which belonged to the second temple, begun about the middle of the 6th century, to which the Lydian king Croesus was a liberal benefactor. These fragments show that the earlier temple had some of its columns decorated with life-sized reliefs after the same fashion as the last building. Some of these were given by Croesus, whose name and dedication were inscribed on the upper torus of one of the bases, some fragments of which are now in the British Museum. One remarkable peculiarity of this 6th-century building was that the large cymatium, which formed the top member of the main cornice, was decorated with figures in relief, which can have been hardly visible owing to their small scale and great height from the ground. See A. S. Murray, *Journ. of Hell. Studies*, vol. x. p. 1 *seq.*

Graeco-Roman Temples.

There are also two very magnificent Ionic temples in Asia Minor which date from the Roman period: these are at *Aphrodisias* in Caria, and at *Aizani* in Phrygia; both are octastyle, pseudo-dipteral buildings, with fifteen columns on the flanks. The elaborate, but somewhat coarse and extravagant, sculptured ornaments show that the date of these two very similar temples is probably not earlier than the 1st or 2nd century A.D. Each was surrounded with an extensive peribolus wall, within which a smaller space is enclosed by an open *porticus* or cloister; in the centre of this the temple itself stands. The temple at Aizani is remarkable for having a fine vaulted crypt under the cella floor, twenty-eight feet wide and fourteen feet high, probably used as a treasure chamber. (See Le Bas, *Voyage Arch. dans la Grèce*, &c. ed. Reinach, 1888; Texier and Pullan, *Asia Minor*, 1865; and the various treatises published during the last hundred years on *The Antiquities of Ionia* by the Dilettanti Society, vols. i. to iv. See also Newton, *Travels in the Levant*, 1865, and *History of Discoveries at Halicarnassus*, &c., 1862.)

The Corinthian Order was the latest development of Greek architecture, and did not come into use till a period of decadence had set in. It is an elaborated form of Ionic, with capitals enriched by two tiers of acanthus leaves instead of the Ionic volutes. Vitruvius (iv. 1, 9) relates a pretty and fanciful story about the origin of the Corinthian capital, which was supposed to have been invented by Callimachus; cf. Paus. i. 26 *ad fin.* The oldest existing example of the Corinthian order is the choragic monument of Lysicrates, in Athens, of 334 B.C., and even this is Corinthian of an incompletely developed type

With the Romans the Corinthian order was a very favourite style for temples, but no purely Greek Corinthian temple is known to exist, though many dating from Roman times are to be found in various parts of the Hellenic world.

The most famous example is the great Temple of Olympian Zeus at Athens, which was designed by a Roman architect named Cossutius for Antiochus Epiphanes about 170 B.C. (see Vitruv. iii. 2, 8, vii. Praef. 15; and Paus. i. 19). The existing remains have been described by F. C. Penrose in the second edition of his *Athenian Architecture*, 1888. The earlier temple was begun about the year 530 B.C. by the Peisistratid tyrants of Athens: it was designed on a very large scale with columns about 7 feet in diameter, but was never completed. Mr. Penrose, during his excavations in 1887, found some of the stone drums of this older temple used as foundations for the marble Corinthian columns of Cossutius' building. He also found traces of a smaller and still older temple than that of Peisistratus. The existing temple, though commenced by Antiochus, was not completed till the reign of Hadrian, who was a very liberal benefactor to Athens. The excavations of 1887 showed that it was *octastyle*, not decastyle, as had previously been thought, thus showing the correctness of Vitruvius' statement on this point (see Vitruv. iii. 2, 8). It was dipteral, with twenty columns on the flanks, and three rows at each end in front of the pronaos and posticum. Part of the cella behind the statue of Zeus was divided by a cross wall, so as to form an opisthodomus. In spite of the cella being (proportionally) very narrow, there were ranges of internal columns, forming two narrow aisles with galleries over them. The size of the temple, measured on the top step of the stylobate, was 354 feet by 135 feet. The magnificent Corinthian columns, of which fourteen are still standing, are 6 ft. 6 in. in diameter, and 60 feet high: the style of the capitals and the beauty of the workmanship make it probable that these columns date from the time of Cossutius, *c.* 170 B.C., rather than from the reign of Hadrian. The gold and ivory statue within the cella was a copy of that by Pheidias at Olympia (Paus. ii. 27, 1). The columns from this temple which Sulla (*c.* 86 B.C.) removed to Rome to use in the Temple of Capitoline Jupiter, were, as Mr. Penrose has suggested, probably monolithic shafts of coloured marble from the interior of the cella (see Plin. *H. N.* xxxvi. § 45).

Circular Greek Temples.

A form of Greek temple not included in the above classification is the *Tholus*, a round building, often surrounded by columns forming a circular peristyle. The *Prytaneum*, which existed in every important Greek city, seems to have been usually a building of this kind. It contained an ever-burning sacred fire in honour of Hestia (*Ἑστία*) or Vesta; so also the Roman temples of Vesta were built on this circular plan.* [PRYTANEUM.] Remains of the famous *Tholus* at Epidaurus have recently been discovered. It was a large handsome building of Parian marble, within the sacred temenus of Asclepios, to whom it was dedicated. It was designed by Polycleitus the younger in the 4th century B.C., and contained mural paintings by Pausias (see Paus. ii. 27; THOLUS).

Another circular temple or *Heroon* was the *Philippeion* at Olympia, remains of which were discovered a few years ago by the German excavators. It was surrounded by a circular peristyle of 18 Ionic columns: the interior of the cella was decorated with engaged columns of the Corinthian order. In design it closely resembled the Temple of Vesta in the Roman Forum, after its rebuilding by Severus (see Paus. v. 20).

For an account of the management, ritual, and property of temples, see SACERDOS, THESAURUS, and VECTIGALIA TEMPLORUM.

Roman Temples.

Little originality was shown by the Romans in the designs of their temples, as in other artistic matters. Though skilful builders and good practical engineers, they had very little talent for art, or even good taste in matters of design; and thus it happened that the special Roman modifications made in designs which they borrowed from others were very usually far from being improvements from the aesthetic point of view. In early times Roman temples were copied from those of the Etruscans; in later times, after the conquest of Greece, the temples of the Romans were imitations of Greek temples, more or less modified to suit their different practical needs.

In its primitive form the Etruscan temple appears to have been a wooden structure, with trunks of trees for columns, widely spaced, and carrying a timber architrave. Terracotta mouldings, friezes, and other enrichments were very largely used, all decorated with rather coarse painting in different-coloured ochres, and the brilliant red *minium*. Terracotta was also used by the Etruscans for sculpture on a large scale, both for the principal statue of the deity within the cella, and also for groups or reliefs in and over the pediment of the façade. Varro (quoted by Pliny, *H. N.* xxxv. § 154), speaking of the Temple of Ceres by the Circus Maximus, remarks that before the introduction of Greek art into Rome, "all things connected with temples were Etruscan." The Etruscans were also remarkable for their technical skill as bronze workers. Much of the oldest Roman sculpture in bronze shows a strong Etruscan influence; and many important statues, such as "the Orator" and the Chimaera in the Museum in Florence, and the Capitoline Wolf in Rome, are evidently the work of Etruscan artists.

The Roman *Tuscan* style was a survival of the ancient Etruscan forms. Vitruvius' dissertation on Tuscan temples appears to be based on the one important example of a temple built in the primitive Etruscan way, which survived till the time of the Empire (see Vitruv. iv. 7). This was the great *Temple of Jupiter Capitolinus*, which stood on the south-western peak of the Capitoline hill, one of the earliest of the Roman temples, which, though frequently burnt and rebuilt, was always restored in the old Etruscan style for religious reasons—hieratic rules being always very conservative. Like the chief temples

tions which were introduced by the Roman or Graeco-Roman architects.

The cella of a Roman temple was usually wider in proportion than that of a Greek temple, and was without "aisles" or inner ranges of free columns, though "engaged" or even complete columns were very commonly set along the internal walls of the cella. Owing to the increased width of the cella, there was frequently no peristyle along the flanks of the Roman temples, but only "engaged" columns on the outside of the cella. Roman temples were very often set, not on a mere stylobate of steps, but on a lofty base or *podium*, with plinth and cornice of its own. The proportion between the front and the sides of the Roman temples was far more variable than it was among the Greeks.

In some Roman temples windows were introduced, as, *e.g.*, in the Temple of Concord in the Forum Romanum. The slope of the roof, and consequently that of the pediments, were much steeper in a Roman than in a Greek temple. Monolithic columns of coloured marble or granite were commonly used, and in matters of construction and decoration generally the differences were very great. Especially under the later Roman Empire there was a great tendency to overload the buildings with ornament. In some cases every member of a cornice was completely covered with carved enrichments, leaving no plain surfaces as a relief to the eye, and to enhance the value of the ornament. A certain amount of vulgarity and gaudiness of effect is characteristic of the temple architecture of the Romans, very much in the same way as with their domestic buildings. In point of beauty of workmanship, Roman temples vary very much. Some of the finest, which were probably built by architects who were Greeks either by blood or by education, are almost as delicate in detail and highly finished as a Greek temple of the 5th century B.C.; especially those which were built in the reign of Augustus, as, *e.g.*, the temples of Concord and of Castor in the Roman Forum. In the 3rd and 4th centuries A.D., or even earlier, the workmanship is very coarse, and the sculptured ornament very weak and clumsy in design. The coarse taste of the Romans led them to care little for the pure beauty of white marble, even though decorated with painting, and so it was with them a common custom to line the whole interiors of the temples with thin slabs or veneers (*crustae*) of richly-coloured marbles, which, from the time of Augustus onwards, were imported in immense quantities from Asia Minor, Greece, Northern Africa, and other countries. Even white marble was but little used before the reign of Augustus, but the discovery of the magnificent quarries at Luna (modern *Carrara*) soon made white marble to be very common among the building materials of Rome, especially as a casing to stone or concrete walls.

Treasures in Roman Temples.—As was the case with Greek temples, vast stores of treasure were frequently preserved in the temples of the Romans. A very fine collection of silver plate, in the form of richly-decorated cups, vases, *paterae*, and statuettes, was discovered in 1830 below the remains of the Temple of Mercury of Canetum in Bernay, Département de l'Eure. This find, consisting of about 80 pieces of plate of various dates from the 3rd century B.C. to the 2nd century A.D., is now preserved in the Bibliothèque Nationale of Paris (see Chabouillet, *Cat. des Camées, etc. de la Bibl. Imp.*, Paris, 1858, p. 418). It was also not uncommon for wealthy Romans to deposit their own plate or money for safe keeping in the treasury of some temple. These Roman treasuries were usually formed under the temple floor in some part of the lofty *podium* on which most Roman temples were built. Remains of these strong rooms are to be seen in several of the temples in the Forum Romanum; they are cellar-like cavities in the immense mass of concrete which forms the bulk of the *podium*. This is the case in the temples of Castor, Divus Julius, Concord, Vespasian, and Saturn. The entrance to the treasury of the Temple of Castor is shown on fig. 14 (cf. Juv. *Sat.* xiv. 260).

In early times the *methods of construction* used in Roman temples were very similar to those of the Greeks. The walls were built of large squared blocks (*opus quadratum*) of the local stone, whatever that happened to be, always coated with a fine hard cement. In Rome itself the earliest temples were built of the soft brown *tufa*, of which the Roman hills chiefly consist,—a stone which decays rapidly under exposure to the weather, but lasted perfectly well as long as it was covered with cement. Towards the close of the Republic harder and more durable stones were used; namely, the volcanic *lapis Albanus* (modern *peperino*) and the *lapis Tiburtinus* (mod. *travertino*), a hard limestone which exists in large beds near Tibur (*Tivoli*). Under the Empire concrete was very largely used for foundations, and for the inner core of walls; it was made of lime, pozzolana (*pulvis Puteolanus*), and broken fragments of stone.

Only a very few of the most magnificent Roman temples were built of solid blocks of marble, as, *e.g.*, the Temple of Apollo on the Palatine hill, built by Augustus, of which no remains are now visible. This splendid building, which was crowded with sculpture by distinguished Greek sculptors and other spoils from Hellenic cities, was most sumptuously decorated with paintings, doors plated with gold and ivory, and the most costly furniture of every description, such as tripods, tables, cups, and even large statues of gold and silver—a perfect museum of Greek art of every period from the 6th century B.C. downwards. Many others of the chief temples of Rome contained very large collections of Greek works of art of all kinds, from colossal bronze statues down to caskets of engraved gems, as, *e.g.*, the Temple of Concord and the Temple of Peace. In fact, the whole of Greece was ransacked to enrich the capital of the Roman conquerors, and it is probable that no Greek city ever possessed so magnificent a collection of Hellenic works of art as did the city of Rome during the reign of Nero, before the great fire destroyed so large a part of the city and its stores of foreign spoils. From one place alone, Delphi, Nero is recorded to have carried away 400 bronze statues, and this was merely one incident in the great system of spoliation which had been carried on almost incessantly, ever since the sack of Corinth by Mummius, in 146 B.C.

On the whole, Roman temples were loftier than those of the Greeks, lighter in their general proportions, and had their columns more widely spaced. The closest (most pycnostyle) intercolumniation that Vitruvius mentions has wider spans than any of the chief Doric temples of the Greeks (see Vitruv. iii. 3, 2).

Roman Orders: I. *Doric* (Vitruv. iv. 3).—This differs from the Greek Doric in many respects. The columns have bases, and the capitals have a moulding above the square abacus, and a *torus* necking some distance below the annulets under the echinus. The shafts were often left unfluted, and the angle triglyphs were placed over the axis of the angle columns, not brought up to the extreme corner of the frieze as in Greek Doric. The mouldings and all the details were different from the Greek prototype.

II. *Ionic* (Vitruv. iii. 5).—This order differs less from the Greek Ionic than is the case with the last-mentioned style. The variations in the capitals, bases, and entablature are not important, and the principal differences between Greek and Roman Ionic temples fall chiefly under the general heads mentioned above—viz. modifications of plan and arrangement.

III. *Corinthian* (Vitruv. iv. 1).—As is stated above, this order was more used by the Romans than by the Greeks, in spite of the fact that the great Temple of Olympian Zeus at Athens was built in the Corinthian style. Owing to its richness of detail, most of the more magnificent temples of the Romans were built in the Corinthian style. The so-called *Composite* order is not really a separate order, but merely a variation of the Corinthian, the chief difference being in the capitals, which have a rather awkward combination of the Ionic volute with the Corinthian acanthus leaves. The earliest existing example of this style is the triumphal arch of Titus on the Summa Sacra Via in Rome. Under the later Empire Composite capitals were very largely used.

The chief temples in Rome of which remains still exist are these:—

The Temple of Vesta, at the south of the Forum Romanum, was one of the most primitive of all the Roman temples; in it was preserved the sacred fire, guarded by the six Vestal Virgins, whose large and magnificent house has, within the last few years, been exposed to view, close by the remains of the temple. This most sacred of all Roman shrines was not a *templum* in the strict meaning of the word, but rather an *aedes sacra*, as it was not consecrated by the augurs, the presence of the sacred fire being sufficient to give it a character of the highest sanctity. It was frequently burnt and rebuilt, the last restoration being that of the Emperor Severus, who rebuilt it as a circular marble Corinthian temple, with 18 columns, on a high podium. The tufa foundations, of which considerable remains still exist, are of much earlier date. Of the marble part nothing remains but fallen fragments of columns and entablature, which are, however, sufficient to give the design of the whole when complete. We repeat here the cut already given under CANCELLI.

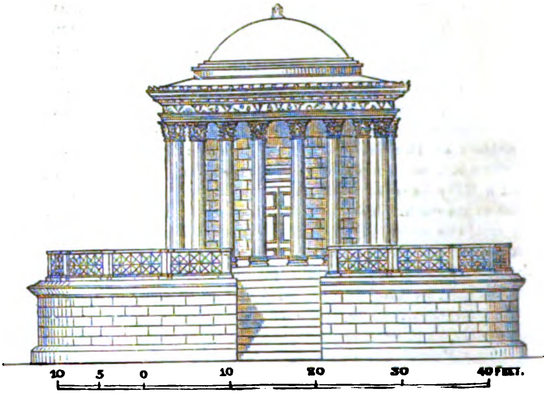

Fig. 13. The Temple (*aedes*) of Vesta, as rebuilt by Severus, restored from existing remains by Comm. Lanciani.

Another circular temple, dedicated to one of the most primitive cults of ancient Rome, was the *Temple of the Dea Dia* in the sacred grove of the *Collegium* of the *Fratres Arvales*, a short distance outside the Porta Portuensis. [For the Arval brothers, see ARVALES.]

The *Pantheon*, built by M. V. Agrippa in the Campus Martius, is the most stately and magnificent of all Roman circular temples. It was, most probably, originally designed as part of the *Thermae* of Agrippa, near to which it stands; but it seems to have been consecrated as a temple to a number of deities as soon as it was completed. It is covered by a magnificent dome 142 feet in diameter, with a circular hypaethral opening at the top. The walls, which are 20 feet thick, are of concrete faced with triangular bricks, and partly covered with a lining of marble slabs both inside and outside. The dome, which is also of concrete, was covered with tiles of gilt bronze. Magnificent monolithic columns of coloured marbles from Phrygia and Numidia are used to decorate the series of altar-recesses round the interior. In front is a stately octastyle portico of the Corinthian order, with monolithic unfluted columns of grey and red granite from Egypt. An inscription on the frieze records its building by Agrippa in 27 B.C. Within the pediment was a large group in bronze of the battle of the gods and the giants. The great doorway still contains its original double doors of massive bronze, divided into moulded panels, with enriched bosses on the framing; the whole was once thickly gilt. With the exception of the *Temple of Divus Romulus*, the son of Maxentius, in the Forum Romanum, the Pantheon is the only Roman building which still retains its original bronze doors *in situ*. Those of the *Curia* are now placed in the main entrance of the Lateran Basilica, having been moved there in the 16th century.

The principal temples which, in part at least, still exist in the *Forum Romanum* are these:—

The *Temple of Castor*, at the south angle of the Forum, was a very fine octastyle, peripteral building of Corinthian style, elevated on a lofty *podium*. Three of its columns of white Pentelic marble are still standing, together with a portion of the rich entablature. The existing temple was built in the reign of Augustus on the site of an older stone temple dedicated to the Dioscuri in commemoration of their appearance in Rome after the battle of Lake Regillus (see fig. 14).

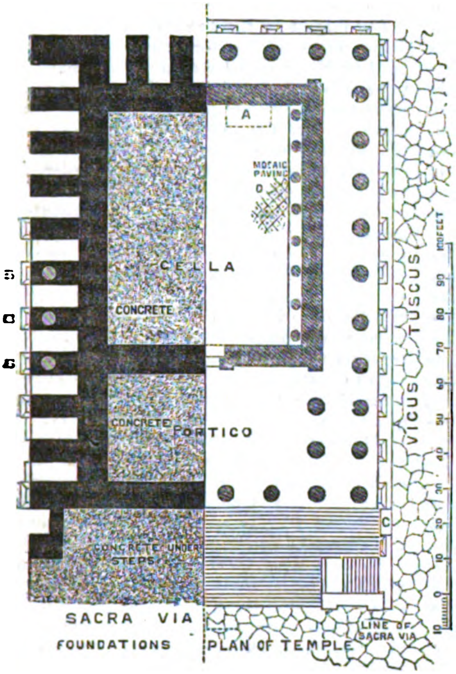

Fig. 14. Plan of the Temple of Castor and Pollux in the Forum Romanum. The right-hand half shows the upper temple, the other half shows the construction of the *podium*, consisting of a great mass of concrete surrounded by walls of *opus quadratum*.

A. Pedestal of one of the two statues.
B B B. Spurs of foundation wall to carry the marble columns.
C. Entrance to a small treasure-chamber in the podium.
D. Existing fragment of mosaic pavement.

The *Temple of Divus Julius* stands close by that of Castor; it was built by Augustus in honour of his adoptive father. Nothing now remains but the massive concrete podium, and a few scattered fragments of marble. Vitruvius (iii. 3, 2) mentions this temple as an example of close or pycnostyle intercolumniation.

The *Temple of Concord*, which was rebuilt by Augustus on an enlarged scale, is abnormal in plan, owing to its position close against the wall of the so-called *Tabularium* of the Capitol. It had a large oblong cella, decorated with rows of internal columns set on a lofty plinth or podium all round the interior, and a lofty hexastyle portico facing on to the Forum, and approached by a long flight of marble steps. The details of the entablature and the internal decorations of the cella are very rich and delicate in execution. On each side of the portico were two large windows to light the cella, which contained a very fine collection of Greek sculpture. Except the great concrete *podium*, little now remains of this once magnificent temple.

The *Temple of Vespasian*, which stands close by that of Concord, was a prostyle, hexastyle building of the Corinthian order. Its rear wall, like that of the Temple of Concord, is set against the front of the "Tabularium." This temple was built by Titus and Domitian in honour of their father: three of its columns are still standing, made of Luna marble.

The *Temple of Saturn* stands in front of the last-named building. The present temple, which occupies the site of one of the oldest of the Roman temples, dates only from a rebuilding in the reign of Diocletian after a fire. It is a prostyle, hexastyle building, of the Ionic order, with columns of granite. It was very carelessly and clumsily rebuilt; some of the columns are set upside down, and the details of mouldings and enrichments are of the coarsest style. In early times part of this temple was used as the public treasury of Rome—the *Aerarium Saturni* (see Servius *ad Aen.* ii. 116, and Macrob. *Saturn.* i. 8).

The *Temple of Faustina* stands at the eastern angle of the Forum. It is a hexastyle, prostyle, Corinthian building, with large monolithic columns of Carystian marble (modern *cipollino*). The temple was built by Antoninus Pius in honour of his wife Diva Faustina, and after his death the temple was jointly consecrated to him also by the Roman senate. With the exception of the back wall of the cella, the building is still very perfect.

Two small bronze shrines, *aediculae*, stood on the verge of the Forum. One of these was the *Shrine of Concord*, near the large marble temple dedicated to that deity (Liv. ix. 46). The other was the bronze *Shrine of Janus*, on the north-east side of the Forum, the doors of which were only closed during the rare times when the Romans were at peace with all the world. This curious little building is very clearly shown on a First Brass of Nero, struck to commemorate the closing of its doors. It is simply a small cella, covered with bronze plates, and decorated with an elaborate frieze of the same metal; the whole was probably gilt.

Though not what we should call temples, yet, in the Roman sense, the *Curia* or Senate-house and the *Rostra* were *templa*, as having been consecrated by the augurs. The present remains of the *Curia*, on the north-east of the Forum, are not older than the time of Diocletian. It is a very simple building of concrete faced with brick; the whole of its marble decorations have been torn away.

The existing *Rostra*, a platform for public speeches, on the north-west side of the Forum, dates from the time of Julius Caesar, 44 B.C. The front of the platform, which is 80 feet long, was faced with white marble, and decorated with the bronze beaks of ships taken at Antium. [ROSTRA.]

Temples in the Imperial Fora.—The five Fora in Rome, which were built under the Empire to relieve the press of business in the old Forum Romanum, each contained an important temple in a central position within the circuit of its walls. The first of these was built by Julius Caesar, near the north angle of the old Forum. Within it was a temple dedicated to Venus Genitrix, whose statue was the work of the Greek sculptor Arcesilaos (Suet. *Jul.* 26, and Plut. *Caes.* 60). No remains of this temple are now visible, the site being covered by modern houses.

The second Forum, that of Augustus, contains the *Temple of Mars Ultor*, dedicated to commemorate the vengeance taken on the murderers of J. Caesar. It is a prostyle, tetrastyle, Corinthian temple: a considerable part of it still exists, close by the *Arco de' Pantani*. The adjoining piece of circuit-wall of the Forum is one of the most imposing of all the ancient remains in Rome; it is built of massive *opus quadratum* of *peperino*.

The next Forum, built by Vespasian near the east angle of the old Forum, contained a very magnificent *Temple of Peace*, richly decorated with Greek spoils in the form of statues in bronze and marble by the most celebrated sculptors. In this temple were also placed the spoils of the Temple at Jerusalem, sacked by Titus in 70 A.D., including the candlesticks, the table of offering and the trumpets, all of gold, which are represented in one of the reliefs inside the Triumphal Arch of Titus on the Summa Sacra Via. No remains of this temple are now known.

The fourth Forum, built by Nerva, contained a fine tetrastyle, prostyle, Corinthian temple dedicated to Minerva. Part of it remained till the year 1606, when it was finally destroyed for the sake of its fine marble columns, which were taken by Pope Paul V. to use in decorating the Basilica of S^{ta}. Maria Maggiore.

The latest Forum, architecturally the most magnificent of them all, was built by Trajan about the year 114 A.D. Its temple stood on the north-east side of the Forum, facing the great triumphal Column of Trajan, which is still one of the most conspicuous and best-preserved monuments of ancient Rome.

The *Campus Martius*, which was the most magnificent portion of ancient Rome, contained a large number of fine temples, mostly crowded with works of art. One group of three temples, set closely side by side, bordered on the small Forum Olitorium. Scanty remains of the three still exist in the church of S. Niccolò in Carcere: they are shown on one of the fragments of the marble plan of Rome, made in the time of Severus, which is now preserved in the Capitoline Museum. Another very magnificent group of temples adjoined the *Porticus Octaviae*.

The Capitoline Hill.—Two of the chief temples of Rome stood on the Capitoline hill; the one on the Tarpeian peak was dedicated to Jupiter Capitolinus. It has been described above.

The opposite peak, the *Arx*, was crowned by the great *Temple of Juno Moneta* ("the Adviser"): it was the site of the early Roman mint, whence *moneta* came to mean "money." The stately Franciscan church of S^{ta}. Maria in Ara Coeli now occupies its site.

A number of smaller temples occupied the depression between the two peaks of the Capitoline hill which was known as the *Asylum*. One of these, the *Temple of Jupiter Feretrius*, dated from pre-historic times, and was popularly said to have been founded by Romulus (Liv. i. 10).

A small, very perfect, circular temple of unknown dedication stands in the Forum Boarium on the Tiber bank, close by the mouth of one of the great drains, *cloacae*. In design and size it closely resembles the Temple of Vesta, shown in fig. 13.

The largest of the temples in Rome was the double *Temple of Roma Aeterna and Venus Felix*, built by Hadrian and Antoninus Pius, and said to have been designed by Hadrian. Remains of its immense concrete *podium* are visible on the north side of the Sacra Via, extending down towards the Colosseum. It was a decastyle, dipteral temple of the Corinthian order, with two apsidal-ended cellae set end to end, and enclosed by the same double peristyle of enormous monolithic columns of porphyry and granite. The concrete walls of the two cellae were faced with blocks of marble and decorated with internal niches and columns of various richly-coloured foreign marbles. Inside the cellae were colossal statues of Venus and Roma, together with many imported statues and other works of art. Throughout the Middle Ages the ruins of this magnificent temple were used as quarries to supply marble and porphyry. The greater part of the sumptuous marble decorations and statues were burnt into lime on the spot in kilns formed of broken pieces of the great granite and porphyry columns. This is the reason why so very little now remains of this enormous building.

The *Temple of Quirinus*, on the Quirinal hill, which existed as early as the time of Vitruvius (reign of Augustus), was also dipteral. It was of the Doric order, with octastyle fronts (Vitruv. iii. 2, 7). No remains of it are now visible.

The two last-named buildings were the only dipteral temples in Rome itself.

For further details on the temples of Rome, see Middleton, *Ancient Rome in* 1888 (Edinburgh, 1888).

Provincial Temples.—A large number of important Roman temples still exist in various provinces of the Empire. The *Temple of Roma* and *Divus Augustus* at Ancyra in Galatia—a Corinthian hexastyle, peripteral building—is of special interest from the walls both of the cella and pronaos being cut with the celebrated inscription of the *Res gestae* of Augustus, which was copied from the sepulchral inscriptions on two bronze pillars in front of the Mausoleum of Augustus in Rome. The text is given, both in Greek and Latin (see Mommsen, *Mon. Ancyr.* 1883). (For this and for other Roman temples in Asia Minor, see Texier and Pullan, *Asia Minor*, 1865, and Perrot et Guillaume, *Explor. Arch. de Galatie*, 1872; others are illustrated by Le Bas, *Voy. Arch. en Grèce, &c.*, ed. Reinach, 1888.)

Northern Africa is also rich in remains of Roman temples of Imperial date. A very remarkable group of temples exists at Suffetula (modern Sbeitta, in Algeria), in the province of Carthage. A handsome *temenus* or *porticus*, surrounded by a colonnade, about 200 feet square, encloses three temples built side by side, of similar size and design, except that the central one has Composite capitals, while the others are Corinthian. Each is a tetrastyle, prostyle building, with engaged columns outside the cella walls. A fine triple archway, inscribed with the names of Hadrian and Antoninus Pius, is set at the entrance into the *temenus*. This system of grouping several temples together was a common Roman custom, intended to give great magnificence of effect.

One of the best-preserved of Roman temples is the so-called *maison carrée* at Nîmes (Nemausus). This is a richly decorated Corinthian building, with a hexastyle, prostyle portico and engaged columns outside the cella walls. Its detail is remarkably delicate and well designed, as is the case with other Roman buildings in Southern France; probably on account of some survival of early influence from the Greek colonists of Massilia (Marseilles) and its neighbourhood.

Romano-British Temples.—In Britain remains of a good many Roman temples have been discovered, but none are in a good state of preservation. Though similar in plan and general design to the temples in Italy, they differ in being usually built of rubble stone-work, made of local materials, instead of the concrete faced with marble which is so common in Rome. Mosaic floors occur frequently, with *tesserae* made of burnt clay and different-coloured limestones, instead of the rich marbles which were used in the mosaics of Italy and Africa. In all cases the walls seem to have been coated with stucco, though very frequently but little of the stucco still remains, owing to its being made of the inferior Oolitic limes, and without the *pozzolana* which gives such enduring strength to the cements and stuccoes of Italy. It was, no doubt, owing to the want of *pozzolana* that the Romans in Britain made comparatively so little use of concrete for building walls and vaults.

At Lydney, in Gloucestershire, a very interesting temple was discovered in 1805, dedicated to a Romano-British deity called *Nodens*, who appears to have been akin to the classical Aesculapius. A very extensive enclosure surrounds the temple, and on one side of it are remains of a large house, designed on the usual Romano-British plan, with its rooms grouped round the four sides of an open *porticus*, very like a mediaeval cloister (see *Archaeologia*, v. p. 208; and Bathurst, *Roman Antiquities of Lydney*, 1810).

The remains of the Roman city of Silchester are specially interesting for the completeness, in plan at least, of the whole group of sacred and secular buildings around the public Forum (see *Archaeologia*, vol. l., p. 263). In most cases, however, Roman cities in Britain have continued to be inhabited ever since the Roman period, and the building of later houses has usually obliterated the remains of the ancient structures. [J. H. M.]

TENSAE. [THENSAE.]

TEPID'ARIUM. [BALNEAE.]

TE'REBRA (*τρύπανον, τρυπάνιον, τέρετρον*), any instrument for boring wood, stone, or metal. Pliny gives Daedalus as the traditional inventor (*H. N.* vii. § 198; cf. SERRA). We find a distinction between *terebra antiqua*, which produced dust (*scobis*), and *terebra gallica*, which produced *ramenta* or shavings (Plin. *H. N.* xvii. § 116; Colum. iv. 29, 15 and 16). The definition is not very clear: some have imagined that the *antiqua* was a simple gimlet, and the *gallica* a centre-bit, of which implement an ancient specimen is preserved in the Zürich Museum (see Blümner, *Techn.* ii. fig. 43, i): the iron part, which alone remains, is like that of a modern centre-bit. A centre-bit, however, would not be a convenient tool for boring a tree in order to graft; and moreover the fact that both Pliny and Columella give as a further distinction of the *gallica* that it does not, like the other kind, generate heat in boring, suggests that the *antiqua* was a drill-borer, in principle like that described in the Odyssey (see below), and the *gallica* a gimlet with a large spiral. It may be added that we should expect the simple pointed drill, worked as Homer describes it, to be an earlier contrivance than a borer with a spiral, which implies more advanced art both in the inventor and the maker. Blümner suggests that the *τρύπανον* and *τέρετρον* correspond respectively to the *terebra antiqua* and *terebra gallica*; but the definition in *Etym. Mag.* makes the *τέρετρον* merely a smaller *τρύπανον*.

We find on monuments one kind of terebra exactly like our gimlet: another kind in common use (and probably the older "invention of Daedalus") was the "bow-drill," a borer twirled round by means of a bow, the string of which was twisted round the handle of the drill. This contrivance lasted till modern times, but has now, we believe, been universally superseded by the "brace" or bent handle. In the cut on page 243 both parts of the bow-drill are shown separately; the compasses (*circini*) lie between them. The shipwright's borer mentioned in *Od.* ix. 384, Eur. *Cycl.* 460, was similar in principle, but on a larger scale. In these passages it is described by the general term *τρύπανον*: it had also a specific name *ἀρίς* (*Anth. Pal.* vi. 103; Poll. viii. 113). The wooden holder for the iron part of the terebra was called *vagina* (Plin. *H. N.* xvi. § 230). More references and several figures from ancient representations of boring implements will be found in Blümner, *Technologie*, ii. pp. 223–226. [G. E. M.]

TERENTI'NI LUDI. [LUDI.]

TERMINA'LIA, a festival in honour of the god Terminus, who presided over boundaries (Dionys. ii. 74; Plut. *Num.* 16, *Qu. R.* 15). His statue was merely a stone or post stuck in the ground to distinguish between properties. The boundary-stone at its first setting up was consecrated with peculiar ceremonies. A trench being dug, a victim was sacrificed: the blood was poured into the trench while the ministrants were veiled (which speaks for the antiquity of the rite and its *Roman* character; cf. SACRIFICIUM, p. 586 *a*): the body of the victim, along with corn, fruits, incense, honey and wine, was cast into the trench and the whole consumed by blazing pine-brands: the boundary-stone was set upon the bed of ashes (Sic. Flacc. p. 141, 8). On the festival the owners of adjacent property crowned the statue with garlands and raised a rude altar, on which they offered up some corn, honeycombs, and wine, and sacrificed a lamb (Hor. *Epod.* ii. 59) or a sucking-pig. They concluded with singing the praises of the god (Ovid, *Fast.* ii. 639, &c.). The public festival in honour of this god (perhaps, as Huschke thinks, in earlier times marking the conclusion of the Roman year) was celebrated at the sixth milestone on the road towards Laurentum (*Id.* 682), doubtless because this was originally the extent of the Roman territory in that direction (Marquardt, *Staatsverw.* iii. 202).

The festival of the Terminalia was celebrated *a. d.* vii. *Kal. Mart.*, or the 23rd of February on the day before the Regifugium. When Cicero in a letter to Atticus (vi. 1) says, "Accepi tuas litteras a. d. v. Terminalia" (*i.e.* Feb. 19), he uses this mode of defining a date, according to Mommsen, because being then in Cilicia he had no official notice of the intercalation which was due that year. But Huschke thinks that this was then the regular mode of expressing that date in ordinary (not intercalated) years. He cites an Inscr. from Capua, 14th Feb. A.U.C. 659, "Pagus Herculaneus scivit a. d. x. Terminalia" (Orelli, 3793). As to the method of intercalation, and the connexion of the date Feb. 23rd with the conclusion of the old Roman year, see CALENDARIUM, Vol. I. pp. 341 *b*, 342; and compare Mommsen, *Chronologie*, p. 38; Huschke, *Das röm. Jahr*, p. 149. [W. S.] [G. E. M.]

TERRACOTTAS. Finding the term *κεραμικὴ τέχνη* too comprehensive, since it included the whole of the potter's art, the Greeks had recourse to certain special names or phrases for works of art modelled or moulded in terracotta: they called the maker of statuettes a *κοροπλάστης* or *κοροπλάθος*; *ἰπνοπλάθος* was one who modelled figures to be fired in a kiln; a relief made from a mould was an *ἔκτυπον* or *ἐκτύπωμα*; and, in general, terracottas were *ἀγάλματα ὀπτῆς γῆς*. The Romans, while using such special words as *antefixa* and *ectypa* for reliefs, designated statues and statuettes of terracotta as *signa fictilia*, and the makers of them *fictores* or *plastae*. They had no extensive art of pottery and vase-painting as had the Greeks; and for that reason the term *ars fictilis* adequately described all their productions in terracotta.

In Greece the oldest application of terracotta as an art independent of the vase-maker was for the roofs and cornices of temples. For this purpose marble is said to have been first introduced by Euergos of Naxos, whom Pausanias (v. 10, 3) confounds with his son Byzes. This happened as early as the seventh century B.C., during the reign of Alyattes in Lydia. But that the invention had not at once found acceptance is certain from fragments of cornices found at Olympia and in Sicily, which show that terracotta had continued to be employed in architecture long after this date. A very careful inquiry on this subject, with plates displaying the original patterns and colours of the archaic terracotta cornices, will be found in a memoir by Dörpfeld and others (*Die Verwendung von Terrakotten*). The designs of these cornices were made from moulds (*τύποι*), and one mould of a lion's head, for example, would be sufficient for a whole cornice. The uniformity of effect was compensated by brightness of colouring. According to tradition, it was a Corinthian, Butades, who first made terracotta masks for the fronts of the roof-tiles; that is, for the cornices of temples. His date has not been ascertained; his personality has been rendered slightly legendary; but the tradition embodies a fact otherwise known, viz. the important position of Corinth in early times as a centre of work in terracotta, having a powerful influence in Greece on the one hand and in Etruria on the other. Meantime as regards the continued use of terracotta in architecture down to Roman times, we may cite the examples of cornices found in the ruins of Pompeii (H. von Rohden, *Die Terracotten von Pompei*, 1880) and the numerous panels with reliefs obtained from the neighbourhood of Rome, of which a specimen will be seen under ANTEFIXA representing the making of the Argo. Or, to take an earlier example from Greece itself: when Pausanias (i. 3, 1) speaks of *ἀγάλματα ὀπτῆς γῆς* on the roof of the Stoa Basileios at Athens, he probably refers to such decorations of the cornice as those just mentioned. The Stoa in question stood in the Ceramicos, at Athens, and the *agalmata* represented Theseus throwing Sciron into the sea and Hemera carrying off Cephalos. Two subjects, unless repeated in the manner just described, could not be regarded as sufficient decoration for a Stoa. Further, it may be inferred that the two groups were in relief, from the fact that the violent action of the figures would not suit sculpture in the round in a material so weak as terracotta. Hemera carrying off Cephalos occurs in a fine archaic relief in the British Museum found at Camiros in Rhodes, and evidently made to be attached as an ornament to some background. For similar reliefs found in Athens, and treated in the same severe but delicate style, see Schöne, *Griechische Reliefs*, pll. 30–35. They may have been made to be attached to the walls of tombs, or for the internal decoration of houses, and would come within the term *τύποι*. The Ceramicos at Athens was so named, according to Pliny (*H. N.* xxxv. § 155), from its being there that Chalcosthenes had his workshop and made rude figures (*cruda opera*) of clay. When marble finally replaced terracotta for architectural purposes, the designs and processes of colouring which had been evolved in the decoration of the clay were transferred without change to the new material.

In Etruria and among the early Romans the application of terracotta to architecture appears to have been more extensive than in Greece. Pliny says (*H. N.* xxxv. § 157), "elaboratam hanc artem Italiae et maxume Etruriae;" and these words follow upon a statement quoted from Varro that all the artistic decorations of temples were of Etruscan workmanship, previous to the time when Damophilos and Gorgasos adorned with sculpture in terracotta and with paintings the temple of Ceres in Rome. Of terracotta was the statue of Jupiter in his temple on the Capitol which Tarquinius Priscus (or perhaps Superbus) commissioned the artist Turrianus to make (Pliny, *loc. cit.*). On high festivals the face of this statue was painted with minium. On the highest point of the front pediment of this temple stood a terracotta quadriga (*κατὰ κορυφὴν ἐπιστῆσαι*, says Plutarch, *Publicol.* 13, but Pliny, *loc. cit.*, is less explicit: "fictiles in fastigio templi ejus quadrigas"). This quadriga had been removed forcibly by Tarquin from Veii, where it had been held sacred and inviolable from a circumstance attending the making of it, as related by Plutarch in the passage just cited. When put into the kiln to be baked, the quadriga, instead of shrinking in size as usual from the drying-up of the moisture in the clay, expanded so much that the roof and sides of the kiln had to be removed to get it out. As regards this technical effect, it may be remarked that the Assyrian tablets with cuneiform inscriptions frequently have a number of small holes punctured in the clay to allow the escape of moisture during the process of baking. In a work of art, however, especially a large group modelled in the round, the only safeguard against its being destroyed by the shrinking of the clay in the kiln lay in its being hollow and thin, so that whatever moisture was in the clay could readily escape. How difficult a task it was to obtain success under such circumstances may be seen in the large sarcophagus from Caere (Cervetri) now in the Etruscan saloon in the British Museum (engraved, Dennis, *Etruria*, 2nd edit. i. p. 227, and *Encyclopaedia Britannica*, 9th edit., *s. v.* Etruria, vol. viii. pl. 8). In this case the clay seems to have been largely mixed with pounded brick, and to have acquired thereby great tenacity. But notwithstanding this precaution, and the fact that the two figures reclining on the lid of the sarcophagus are hollow even to the toes, it will be seen in several places that the shrinkage has seriously damaged the artistic effect. The date of the sarcophagus in question can hardly be later than B.C. 550, and it may thus perhaps fairly be taken as an illustration of the style of art presented by those statues in terracotta, which Pliny says (*H. N.* xxxv. § 157) the early Romans were not ashamed to worship: such for example as the Hercules he mentions, the quadriga and the Jupiter already referred to. Probably also the pediments of the Temple of Jupiter Capitolinus, as of other temples, were occupied with statues of terracotta (Vitruvius, iii. 3, 5, "ornantque signis fictilibus aut aereis inauratis earum fastigia Tuscanico more." Cicero, *de Divinat.* i. 10, 16, "Cum Summanus in fastigio Jovis O. M. qui tum erat fictilis a caelo ictus esset," &c.). What appears to be the front of this Temple of Jupiter, with the quadriga on its apex, and with Jupiter, Juno, Minerva, and other deities in the pediment, is represented on a bas-relief of the time of Marcus Aurelius (engraved, *Mon. dell' Inst. Arch.* v. pl. 36). Cato complained (Livy, xxxiv. 4, 4) that these old-fashioned terracotta decorations of temples were despised in his time. The high antiquity of this branch of art may be seen from the fact stated by Pliny (*H. N.* xxxv. § 159), that among the trade guilds instituted by Numa was one of workers in clay.

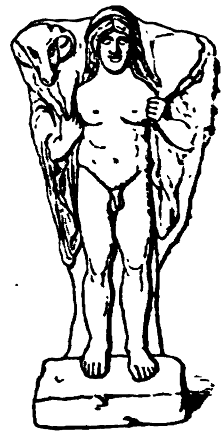
While surpassing the Greeks in the production of large groups in terracotta, the Etruscans failed in their statuettes. We may take as examples two, now in the British Museum, that were found in the Polledrara tomb near Vulci, with objects reaching back to at least B.C. 600, if not half a century earlier. These terracottas (one of which is engraved in Micali, *Monumenti Inediti*, pl. 4, fig. 5), though rude in design, are of a fine clay, and present a combination of colour and gilding from which it could be supposed that in the phrase above quoted from Vitruvius—"signis fictilibus aut aereis inauratis"—this last word may have applied to the terracottas (*fictilibus*) as well as to the bronzes (*aereis*). Terracotta figures combined with vases are of pretty frequent occurrence in the black ware of Chiusi (Clusium), and, like this ware itself, they appear to be imitated from designs in bronze or other metal. It is reasonable to conclude so from the fact that the details on the surface of them are marked by hatched lines, as in metal working. The modelling is always rude, and a considerable antiquity may be claimed for these terracottas; no less than for a small but more freely-modelled vase, in the form of a lion, from Veii, and inscribed in Etruscan characters, *Felthur Hathisnas*, now in the British Museum (Fabretti, *C. I. I.* No. 2561).

Etruscan urns of terracotta are for the most part of a late date, and deal with popular Greek myths and legends, or parting scenes, according to designs evidently invented by Greek artists. The numerous portraits in this material are also as a rule late. But though very deficient in execution, they are mostly marked by great force in the conception, and the broad forms by which it is conveyed. It has been supposed that the Etruscans had obtained this art, or at least a strong impetus to the practice of it, from the artists (*fictores*) Eucheir, Eugrammos, and Diopos, who, to escape the tyranny of Cypselos in Corinth, accompanied Demaratus, the father of Tarquin, to Etruria (Brunn, *Griech. Künstler*, i. p. 529). It is known that Corinth was one of the earliest seats of the fictile art in Greece, and, considering the inexhaustible quantities of fine clay lying close at hand still, it is not strange that this art had flourished there. Etruria, however, surpassed her instructress, at least in the magnitude of her works. It was at Corinth that the idea of a pediment for a temple, doubtless filled with figures in terracotta, was invented (Pindar, *Olymp.* xiii. 21); and it was Butades of Corinth who, as has already been said, was believed to have been the first to introduce into the architectural decoration of temples those antefixal ornaments which have been found at Olympia and in Etruria.

By far the most numerous class of Greek terracottas consists of statuettes, and the great majority of them represent more or less youthful female figures, whence arose the name of *κοροπλάθος* or *κοροπλάστης*, applied to the makers of them. A female figure draped to the ground naturally presented a broad base on which it could stand securely, as compared with an undraped figure with easily-broken ankles to support it. It was not strange, therefore, that the latter—and the same applies to male figures—should have been generally avoided, unless where a convenient attitude, such as sitting on a rock, could be found. Again, whether it was from the unsuitability of the material to the prevalent conceptions of gods and heroes that figures of these latter were not reproduced as terracotta statuettes, the fact remains that deities and heroes are of extremely rare occurrence. Yet it is clear that figures of deities were used for domestic worship, as in the case of a small clay figure of Hephaestos mentioned by the Scholiast of Aristophanes (*Aves*, 436) as seated at the hearth in the character of Ephoros of the fire. Among other deities Aphrodite, Artemis, Eros, and Hermes may be said to have been fairly identified. Scenes from daily occupations are frequent; so also are dolls and playthings, more or less comic, such as the graves round Corinth still yield in numbers. A fair proportion of the statuettes represent what seems to be an ideal of a beautiful young woman, much as in the China ware of our own time.

Except the earliest examples, which are rudely modelled with the hand, these statuettes are made from clay moulds, many specimens of which still exist (see the collection in the Terracotta Room of the British Museum). More correctly, only the front of the figure is made from the mould, the back of it being as a rule merely a plain piece of clay formed by the hand [see ECTYPUS]. Or when the design is carried round the back, as in forming the head for example, it appears to have been usually executed by the hand. Even in the beautiful group of Astragaligusae in the British Museum (*Gaz. Arch.* 1876, p. 97), the back of which, contrary to what is customary in terracottas, is not without considerable attractions, the modelling seems to have been completed in this manner. It was necessary that there should be no undercutting in the mould which would obstruct the removing of the figure from it; for the ancients do not appear to have known the modern process of making piece-moulds. Or if any injury were done in the removing, it would be necessary to restore it afterwards with the hand, just as it was necessary to carry out afterwards in this way whatever part of the design could not be expressed in the mould. The scope thus allowed for variety in the finishing of the figures enabled the coroplastes to give a different appearance to figures from the same mould, in which also he was greatly aided by freedom in the use of bright colours (*τῶν δὲ κοροπλάθων ἴδιον τὸ τὰ χολοβαφῆ βάπτειν*, Pollux, *Onom.* vii. 163). For example, there are two groups from the same mould, the one found in the Crimea and now in St. Petersburg (*Compte-rendu*, 1873, pl. 1, fig. 2), the other found at Naucratis and now in the British Museum (*Naucratis*, Pt. ii. pl. 16, fig. 18), which yet express differently this or that feature of the mould, and show also what changes could be effected by colour. To produce a mould, the first step was to model the desired figure in clay or in wax; if the former material, a core of wood was used, which was called *κάναβος* (Pollux, *Onom.* vii. 164, and x. 189); if in wax, the model was next covered with clay and subjected to fire, upon which the wax melted away, leaving its impression on the clay covering, which then became a mould. This clay covering is called *ἡμίλιγδος* in Pollux (*Onom.* x. 190), and from his description it would appear that the clay was pierced with a number of small holes for the escape of the vapours rising from the melting wax, whence the *ἡμίλιγδος* was compared to a shield pierced by many darts. In most cases the colours are simply painted on the terracotta and easily destroyed, yet instances are not uncommon in which the whole figure is covered with a glaze which gives it the appearance of an enamelled surface. In the best period of this glazed ware the colour is a uniform white. Somewhat later we find white, brown, and green, as in the unique vase from Tanagra, in the British Museum, in the form of a goose, on which rides Eros. Apparently this is a revival of a process which may be seen in certain archaic vases from Camiros, either made or influenced by Phoenician processes. In late Greek and Roman times there is the green glazed ware, consisting chiefly of vases with designs in relief. Among the terracottas found at Pompeii may be mentioned a group painted in bright and varied colours which have been converted by fire into a glaze. This is the interesting group representing Pero giving her breast to her famished father Cimon, and commonly known as the Pietà Romana. This group is further interesting for comparison with the existing ancient paintings of the same subject (Rhoden, *Terracotten von Pompeii*, pl. 47: cf. pp. 58, 59).

There is no class of antiquities with so little of general interest in the subjects they represent as these terracotta statuettes, unless perhaps the Athenian lecythi, which are known to have been made expressly for tombs; and from this comparison, together with the fact of their being mostly found in tombs, it is a reasonable conjecture that they were in many cases made for funeral purposes. Others, doubtless, like the figure of Hephaestos already mentioned, were destined for domestic use. There is still a belief that the female figures among them often represent Demeter or Persephone, though the symbols by which these deities are commonly recognised are more or less wanting. But undoubtedly there are many statuettes which, though not to be positively identified as belonging to the lower world, yet clearly convey an impression of their having been destined for sepulchral ends. Such, for example, are the figure of a youth holding a cock at his side, or female figures holding an egg or a pomegranate. So also the masks with which the tombs of Camiros have enriched the British Museum. For there is little doubt but that the original purpose in making masks of this kind was to cover with them the faces of the dead. Nor would this exclude the giving of others of less than life-size as tributes to the dead. Grotesque figures do not seem appropriate for tombs; yet there they are in not inconsiderable numbers.



Terracotta from Gela. (British Museum.)

It has been found strange that so prolific a profession as that of the coroplastes should not have frequently reproduced the celebrated statues of the Greek masters. Among the known instances may be cited the terracotta here figured as a copy probably from the Hermes Criophoros, by the sculptor Calamis; or again, there is the very fine statuette of a Diadumenus (*Hellen. Journal*, vi. p. 243, pl. 61), which reproduces the canon of Polycletus as modified afterwards by Lysippus.

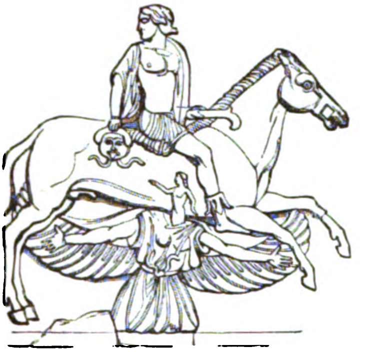
An attempt has also been made to prove that the not very uncommon group of one female figure carrying another on her back is a copy from a group of Demeter carrying Persephone, by Praxiteles, known generally as the *Catagusa*. But in the first place there are doubts as to the meaning of *κατάγουσα* in this instance, a German archaeologist having interpreted it as "spinning" (Loeschke, *Arch. Zeitung*, 1880, p. 102). While there is no good reason for this interpretation, the fact remains that there is no authority for assuming Praxiteles to have represented Demeter and Persephone in this attitude, even if he did represent the one carrying or conducting the other. It is the attitude of play, as in the accompanying group of Eros on the shoulders of a maiden, and answers to the game in daily life called the *Hippas*. These groups are published, and the theory of a Praxitelean origin of them strongly advocated, by M. Rayet, in his *Monuments de l'Art Antique*.

Terracotta from Centorbi in Sicily. (British Museum.)

Judged according to artistic qualities, the oldest Greek statuettes are well represented in the British Museum by a series found in tombs at Camiros, in which, while the head is modelled with some skill and care, the body is only a rudimentary trunk. Colour is sparingly employed. Equally rude is a smaller series from Tegea, in Arcadia, but they are more ambitious in regard to the body, and less so in regard to the head. No colour is applied to them. The terracotta is coarse, and of a dark red colour. A slight advance, but not enough to constitute a new period, will be seen in others from Camiros, where there is an attempt to indicate the limbs in due proportion to the head, where colours are more freely used and the quality of the clay finer. These are mostly female figures seated, with their hands on their knees, and their arms not detached from the mass of the body. It may be regarded as the beginning of a new period, when the drapery comes to be indicated by modelling in the clay, and some action or attribute is conveyed: for example, a female figure holding a dove, as in specimens from Camiros; a female figure, perhaps a priestess, holding a pig for sacrifice, as in specimens from Sardinia; or grotesque figures from Camiros. Occasionally strong contrasts of colours—red and blue—are employed, generally as a mere coating, but sometimes to pick out details of dress not indicated in the modelling. This period did not close till it had attained what may be considered the ideal and best stage of archaic terracottas, as represented by numerous female figures, tall, severe in attitude and aspect, with drapery falling in simple but stately lines, the left hand holding the skirt and the right raised to the breast. Of this stage are the masks already spoken of from Camiros, vases modelled in the form of Sirens, or to imitate the head of Heracles, of Achelöos, apes and other animals: so also the archaic reliefs, emblemata, in the British Museum, representing (1) Bellerophon mounted on Pegasus slaying the Chimaera, from Melos; (2) Perseus, also mounted on Pegasus, which apparently has just sprung from the decapitated body of Medusa, from Melos; (3) group described as Sappho and Alcaeus, from Melos (Welcker, *Alte Denkmäler*, ii. pl. 12, fig. 20). Of the same style and period are the groups of Peleus carrying off Thetis, and Eos carrying off Cephalos, from Camiros. Usually the Melos clay is of a pale colour, better seen in the statuettes than in the reliefs of this period. The Camiros clay is always a faint red, with innumerable fine points in it sparkling like mica. The age of Pheidias, or nearly so, is represented by a few terracottas from Athens. For example, three figures, possibly of Leda holding a swan. The one is a massive, noble figure, standing

Bellerophon and the Chimaera. (From the terracotta in the British Museum.)

nearly nude; in the other two Leda has one foot raised on a rock, and throws up an end of her drapery, as if she were about to spring on the rock: but here, though the two figures are at first sight the same, the action of the arms is in fact reversed, and an extensive yet subtle variety introduced. The one figure is glazed over in a white colour; the other is merely painted white. These three Ledas are in the British Museum, as are also several other female figures of this period from Athens, with white glazed surfaces, and a relief in which one Maenad plays on a tympanon while another dances, the scene being before a temple, indicated by an altar and a column.



Perseus and Medusa. (From a terracotta in the British Museum.)

From the next period of art, as known from the sculptures of the Mausoleum, there are such terracottas as the female figure found by Sir C. T. Newton at Cnidos, closely corresponding in action and drapery with the statue of Artemisia from the Mausoleum, the fragmentary figures from the ruins of that building, and some few examples from other localities, as Athens and Corinth. A slight advance towards florid treatment of drapery and other details may be seen in the terracottas found near Larnaca, in Cyprus, consisting frequently of female figures with high richly-ornamented crowns (see the collection in the British Museum; and Heuzey, *Terres cuites du Louvre*, pl. 15). The climax of this stage is reached in the ordinary type of the terracottas which have been found in such great numbers in the tombs at Tanagra, in Boeotia, since 1873, when this cemetery was first discovered. Some of the tombs are of an archaic character, but the majority are of the age here in question (the 3rd cent. B.C.), and contained statuettes of terracotta, the most beautiful of which were found enclosed in coarse clay vases. They represent usually subjects from daily occupation, or youthful ideal figures, interesting from their costume, and especially for the hat they sometimes wear, suggesting the reference to Sophocles, *Oed. Col.* 314, κρατὶ δ' ἡλιοστερὴς κυνῆ πρόσωπα Θεσσαλίς νιν ἀμπέχει. The attraction exercised by these figures from Tanagra may be judged from the numbers of them that have been engraved and published in almost every form, from the costly volume of coloured designs issued by the German Archäologisches Institut, under the editorship of Prof. Kekulé (Stuttgart, 1878), to the slight outlines of the *Gazette des beaux Arts* (xi. 1875, pp. 297 and 551, and xii. 1875, p. 56), and other publications enumerated in Rayet's *Monuments de l'Art Antique*. Next in rank to Tanagra for the number of interesting terracottas which it has yielded is Myrina, in Asia Minor, where the French carried on extensive excavations in 1880–82. The results appear in the work of MM. Pottier and Reinach, *La Nécropole de Myrina*, 1887 (see also Froehner, *Terres cuites d'Asie Mineure*, 1881), with numerous plates, and containing, among other interesting matter, a detailed account of the processes employed in producing the statuettes: *e.g.* the quality of the clay, with its differences of colour, due partly to differences of firing and partly to materials employed in the preparation; the moulds, of which a large number were obtained, many of them bearing the names of the artists who made them; and the various methods of colouring the statuettes. In these respects the Myrina terracottas do not differ from those of Tanagra. But in an artistic sense they are readily distinguishable by a degree of coarseness and voluptuousness which is wanting at Tanagra, by a greater love of nude forms, and by a strong desire for groups in which accuracy is sacrificed to picturesque effect. At present it is difficult to say from what source the coroplastae, whether at Myrina or at Tanagra, derived their inspiration. In some instances we find types of figures or of attitudes that may very well have been derived from the painted Greek vases of the latest period—towards the end of the 4th cent. B.C. But a more accurate comparison may be found in some of the mural paintings that have survived in Rome and Pompeii, which, if not actually executed in the Hellenistic period, are always believed to be derived from originals of that age. We may assume that the coroplastae by the nature of their profession appealed only to a particular class of sentiments, which required for their gratification nothing more than some easily recognised type of beauty, or some grotesque figure drawn from daily life. Possibly, therefore, much that we do not now understand in the work of the coroplastae would be accounted for if we had any records of the public demands which they worked to supply. So far at least we may agree that these demands had been mostly of a local character, from the fact that the figures of Tanagra, of Myrina, of Cyrene, of Sicily, are distinguishable

Terracotta statue found at Pompeii.

as no other class of Greek antiquities, except the Athenian lecythi. The terracottas from the Cyrenaïca are mostly of a late period, and only rarely possessed of beauty or interest. Late also are those from Centuripa (Centorbi), in Sicily, elongated in figure, sometimes coarsely modelled (Kekulé, *Terracotten von Sicilien*). Of coarse clay and with a preference for pink and white colouring, is the still later and numerous class from Canosa, in Italy, intended mostly to be attached to large ornamental vases. Of life-size terracottas only a small number exist, and these are generally of a late period, such as the statue of an actor from Pompeii figured above.

[A. S. M.]

TERU'NCIUS. [As, Vol. I. p. 203.]

TE'SSERA, *dim.* **TESSE'RULA** and **TESSELLA** (*κύβος*), a square or cube; a die; a token.

The use of small cubes of marble, earthenware, glass, precious stones, and mother-of-pearl for making tessellated pavements (*pavimenta tessellata*, Suet. *Jul.* 46) is noticed under EMBLEMA, in Vol. I.; cf. PICTURA, p. 397.

The dice used in games of chance [ALEA] had the same form, and were commonly made of ivory, bone, or some close-grained wood, especially privet (*ligustra tesseris utilissima*, Plin. *H. N.* xvi. § 77). They were numbered on all the six sides like the dice still in use (Ovid, *Trist.* ii. 473 ff.); and in this respect as well as in their form they differed from the *tali*, which are often distinguished from tesserae by classical writers (Gellius, xviii. 13, § 2; Cic. *de Sen.* 16, § 58). [TALUS.] Whilst four tali were used in playing, only three tesserae were anciently employed. Hence arose the proverb, *ἢ τρὶς ἕξ, ἢ τρεῖς κύβοι*, *i.e.* "either three sizes or three aces," meaning, all or none (Plat. *Legg.* xii. 968 E; Schol. *in loc.* p. 946 a, ed. Turic.; Pherecrates, *fr.* 123 M. = Zenob. *Cent.* iv. 23); for *κύβος* was used to denote the ace, as in the throw *δύο κύβω καὶ τέτταρα*, *i.e.* 1, 1, 4 = 6 (Eupolis, *fr.* 358 M.; Aristoph. *Ran.* 1400; Schol. *in loc.*). Three sizes is mentioned as the highest throw in the Agamemnon of Aeschylus (33). As early as the time of Eustathius (*in Od.* i. 107) we find that the modern practice of using two dice instead of three had been established.

The ancients sometimes played with dice *πλειστοβολίνδα*, when the object was simply to throw the highest numbers. For other games with dice, see DUODECIM SCRIPTA, LATRUNCULI, TALUS; for the boards on which they were played, ALVEUS, TABULA LUSORIA; cf. Becq de Fouquières, *Jeux des Anciens*, ed. 2, pp. 302–324.

Objects of the same materials as dice, and either formed like them or of an oblong shape, were used as tokens for different purposes. The *tessera hospitalis* was the token of mutual hospitality, and is spoken of under HOSPITIUM, p. 981 *b*. This token was probably in many cases of earthenware, having the head of Jupiter Hospitalis stamped upon it (Plaut. *Poen.* v. 1, 25; 2, 87–99). *Tesserae frumentariae* and *numariae* were tokens given at certain times by the Roman magistrates to the poor, in exchange for which they received a fixed amount of corn or money (Suet. *Aug.* 40, 42; *Nero*, 11). [FRUMENTARIAE LEGES.] Similar tokens were used on various occasions, as they arose in the course of events. For example, when the Romans sent to give the Carthaginians their choice of peace or war, they sent two tesserae, one marked with a spear, the other with a CADUCEUS, requesting them to take either the one or the other (Gellius, x. 27).

Various tesserae are preserved in museums, the British Museum being particularly rich in such specimens: the materials are ivory, bone, porcelain, and stone. One class of these are theatrical, *i.e.* were used as tickets of admission, and answer to the *σύμβολα* of the Greeks; another class are agonistic, thought to have been issued on the occasion of public games or contests. Others, again, are believed to have been distributed as *sortes convivales* or as *sparsiones*. The *sortes convivales* were a kind of lottery drawn by guests at a banquet, through which they were entitled to prizes varying in amount (Lamprid. *Heliog.* 22). In the *sparsiones* the tickets were scrambled for, instead of being drawn (Dio Cass. lxi. 18; Martial, viii. 78, 7). There are other miscellaneous tesserae, not included under the above headings. The most interesting class of tesserae are the gladiatorial, of which the British Museum contains about a dozen probably genuine, and other doubtful examples. These are usually carved out of a piece of ivory or bone, of a long shape, and inscribed on the four long sides (cf. TALUS). On the first line is the gladiator's name in the nominative case, on the second his trainer's in the genitive; the third gives the letters SP, followed by the date of the month and day; the fourth the consuls, marking the year. At one end is a hole by which it was suspended. The abbreviation SP stands for SPECTATUS, as is proved by the letters SPECTAT. on a tessera found at Arles. These tesserae were given by the munerarius, or exhibitor of the games, to a gladiator when *spectatus* or approved by passing successfully through a certain number of contests (cf. Hor. *Epist.* i. 2, 2). In one or two exceptional instances the word is SPECTAVIT, explained to mean either (1) that the gladiator, fighting no longer (*emeritus*), became "a spectator" of the games, or (2) that he became an "inspector" of other gladiators. For special discussions of this subject, see Ritschl in *Abh. Bayer. Akad.* 1866, pt. ii. p. 223; Hübner, in *Monatsbericht Berl. Akad.* 1867, p. 747; Mommsen, in *Hermes*, xxi. 266; A. Elter, in *Rhein. Mus.* 1886, p. 517; P. J. Meier, *ib.* 1887, p. 122; *Guide to the Second Vase Room, British Museum.*

From the application of this term to tokens of various kinds, it was transferred to *the word* used as a token among soldiers. This was the *tessera militaris*, the *σύνθημα* of the Greeks. Before joining battle it was given out and passed through the ranks as a method by which the soldiers might be able to distinguish friends from foes. Thus at the battle of Cunaxa the word was "Zeus the Saviour and Victory," and on a subsequent engagement by the same troops "Zeus the Saviour, Heracles the Leader" (Xen. *Anab.* i. 8, § 16; vi. 3, § 25). The soldiers of Xenophon used a verbal sign for the same purpose when they were encamped by night (vii. 3, § 34). Aeneas Tacticus (c. 24) gives various directions necessary to be observed respecting the word. On the *tessera* or watchword in the Roman camp, see CASTRA, p. 377 *b*. [J. Y.] [W. W.]

TESSERACONTE'RES. The invention of war-ships larger than the trireme, viz. quadrireme and quinquereme, belongs to the epoch which follows that of the Peloponnesian War. In the first half of the 4th cent. B.C. the Athenians possessed a few quadriremes; but the quinquereme, which was destined to be the line-of-battle ship of the succeeding century, had not yet become common. At the siege of Tyre (Curt. ii. 4) Alexander had only one quinquereme as his admiral's ship. Later on we find the Carthaginian fleet consisting mainly of vessels of five banks of oars; and from one of these which fell into their hands, and was used as a model, the Romans constructed those fleets which were engaged at Mylae and Ecnomus and the Aegates Insulae. According to Pliny (vii. § 56), it was Alexander who conceived the idea of constructing still larger vessels, and gave orders for building ships of seven or even ten banks. It remained, however, for his successors to carry out these plans, of whom Demetrius Poliorcetes was the most energetic and successful in matters of naval construction. Demetrius himself superintended the building of vessels of fifteen and sixteen banks (Plut. *Dem.* 43), and this passion for huge ships seems to have continued among the Macedonians (cf. Liv. xxxiii. 16, "Regiam unam inhabilis prope magnitudinis quam sedecim versus remorum agebant"). Ptolemy Philadelphus had fourteen ships of eleven, two of twelve, four of thirteen, one of twenty, and two of thirty banks of oars. To surpass these latter, Ptolemy Philopater constructed the Great Eastern of ancient days, the famous Tesseraconteres, a triumph of naval architecture in point of construction, but useless for practical purposes, and in reality only the splendid toy of a despotic king. Her dimensions, as given in Athen. v. p. 203, are as follows:—Length, 420 ft.; breadth (within parodi), 57 ft.; height, forward 72 ft., aft 79 ft. She had four rudders, each 45 ft. long, and her upper tier of oars (*θρανιτικαί*) were 57 ft., weighted with lead inboard. She was *δίπρωρος* and *δίπρυμνος*; had seven beaks, of which one was longer than the rest; also beaks projecting from the catheads (*κατὰ τὰς ἐπωτίδας*). She had twelve *ὑποζώματα*, each 900 ft. long; that is, sufficient to gird her from stem to stern. Her proportions were graceful, and her ornamentation elaborate. Figures of animals, 18 ft. in length, adorned both stem and stern, and every available surface was covered with painting, the whole of the rowing space from the keel upwards being decorated with ivy wreaths and thyrsi. The rowing complement was over 4,000; the marines numbered 2,850; there were 400 seamen (?) for the service of the ship; and below decks a vast multitude of people.

Such, in brief, are the details preserved concerning this remarkable vessel, which however, probably after her trial trip, was left for show in the dock specially constructed for her by a Phoenician engineer.

As regards dimensions, she was about the same as H.M.S. Warrior (420 ft. × 58 ft.), an ironclad of a type now becoming obsolete. It is not possible to be certain as regards the meaning of *δίπρωρος* and *δίπρυμνος*, but Graser's view seems plausible, that she was, in construction, anticipatory of the class of twin vessels (such as the Castalia and Calais-Douvres), which have been tried of late with varying success. It would seem however, from the mention of the seven beaks, that the double prow was prolonged into one, at all events above the water-line, and, in all probability, the double stern likewise, so that the Acrostolia and Aphlasta would be as in other vessels. The four rudder paddles would thus probably have been carried two on each side, as often seen in Egyptian vessels, though Graser seems to suppose one on each side of the two sterns. The disposition of the rowers in the Tesseraconteres has been a matter of much controversy. It is interesting to find that Graser in his detailed description of the Tesseraconteres has adopted for her as for all the larger rates above quinquereme a reduced scale, allowing only 7 instead of 8 square ft. per man for rowing space, and the vertical distance of the banks from 2 ft. to 1 foot. Probably this is also nearer the true measurement in the smaller rates from quinquereme downwards.

Allowing 20 ft. for draught, the Tesseraconteres gave a height of 44 ft. on either side for the insertion of 40 banks of oars. The curvature of the vessel fore and aft, and the consequent contraction of the rowing space, would necessarily diminish the number of men in each tier from the highest to the lowest. Graser, by an ingenious calculation, brings the total number of oarsmen to 4054 (Athen.: *ὀλίγῳ πλείους τῶν τετρασχιλίων*). For the disposition of these (allowing 7 ft. interscalmium) there was for the topmost bank on each side a longitudinal space of 367 ft., in which were seated on either side the 53 thranites (the topmost men of 53 complexus, diagonal lines, of oarsmen), and for the lowest, or thalamite bank, a longitudinal space of 345 ft. Of the 53 complexus, 40 were complete, giving a sum of 1600 on each side. In the remaining 13, incomplete complexus, 427 men found their places on either side (3200 + 854 = 4054). The principle of the *ζύγωσις* must have been similar to that of the trireme [see NAVIS], benches (*ζυγὰ*) being fitted between the vessel's side and the *διαφράγματα*, though in the case of the Tesseraconteres these were probably divided by decks at certain intervals. The upper tiers of oars, when fastened to the *σκαλμὸς* or thowl pin, were almost at equilibrium between the outboard and inboard portions, so that the movement of the whole would not be difficult. The oar-ports of the thalamites must have been dangerously close to the water. Graser places them at 2½ ft. above the water-line less than those of the trireme, which were not under 3 ft. And perhaps this is the reason of the terms in which Plutarch speaks of her (*Dem.* 43): *ἀλλὰ θέαν μόνην ἐκείνη παρέσχε, καὶ μικρὸν ὅσον διαφέρουσα τῶν μονίμων οἰκοδομημάτων φανῆναι πρὸς ἐπίδειξιν, οὐ χρείαν, ἐπισφαλῶς καὶ δυσέργως ἐκινήθη.* [E. W.]

TESTA. [FICTILE.]

TESTAMENTUM is defined by Ulpian as being "mentis nostrae justa contestatio in id sollemniter facta ut post mortem nostram valeat." (Cf. Modestinus in Dig. 28, 1, 1: "Testamentum est voluntatis nostrae justa sententia de eo, quod quis post mortem suam fieri velit.") In this passage the word *justa* means *jure facta*, "as required by law." The word *contestatio* is here equivalent to *testatio*, which is the act of making a solemn declaration before witnesses, and so of making a will or testament (cf. Voigt, *Zwölf Taf.* 1, § 19). Gellius (vi. 12) properly finds fault with Servius Sulpicius for saying that testamentum is compounded "a mentis contestatione." He who made a testamentum was testator (Suet. *Ner.* 17).

In order to be able to make a valid Roman will, the testator must have the *testamentifactio* (Cic. *ad Fam.* vii. 21), which term expresses the legal capacity to make a valid will; the word has also other significations. [HERES.] The right of making a will was the privilege only of Roman citizens who were patresfamilias, except that filiifamilias were allowed to make a will respecting their *castrense* or *quasicastrense peculium.* [PATRIA POTESTAS.] The following persons consequently had not testamentary capacity: those who were in the *potestas* or *manus* of another, or *in mancipii causa* [MANCIPII CAUSA], as descendants subject to power, though with the above-mentioned dispensation in favour of filiifamilias, wives *in manu*, persons in the semi-servile state of *mancipium* and slaves, except that *servi publici* were allowed to dispose of half their *peculium* (Ulp. xx. 16); Latini Juniani died like slaves in respect of property, and so could not make a will; *peregrini* and *peregrini dediticii* were devoid of testamentary capacity; an *impubes* could not dispose of his property by will, even with the sanction (*auctoritas*) of his tutor (for an account of the *substitutio pupillaris*, see HERES). When a male became *pubes* — that is, was fourteen years of age—he became capable of making a will, and a female obtained the power, subject to the limitations explained below, on the completion of her twelfth year: *muti*, *surdi*, *furiosi*, and *prodigi*, "quibus lege bonis interdictum est," had not the *testamentifactio.* The reasons why these several classes had not the *testamentifactio* were: the mutus, because he could not utter the words of *nuncupatio;* the surdus, because he could not hear the words of the *familiae emptor;* the furiosus, because he had not intellectual capacity to declare his will (*testari*) about his property; and the prodigus, because he had no *commercium* (Ulp. *Fragm.* xx. 3). Justinian removed the testamentary incapacity of surdi and muti, which had previously been a subject of imperial dispensation (Cod. 6, 22, 10: cf. Inst. ii. 12, 3). The penalty of testamentary incapacity was imposed on certain classes of persons by statute (Gell. xv. 13; Dig. 28, 1, 18, § 1, 26; Theoph. *ad* Inst. ii. 10, 6). [INTESTABILIS.]

Women had originally no *testamentifactio*, as their right of disposing of property was restricted in order to serve the interest of their agnates, and they had been incapable of making a will in early times on account of their inability to take part in the proceedings of the Comitia, where wills had to be made (cf. Gell. v. 19, "quoniam et cum feminis nulla comitiorum communio est"). When they did acquire the power, they could only exercise it by means of certain juristic contrivances, to which we find references in the writings of Cicero and of Gaius. Of course a daughter in the power of her father, whether she was married or unmarried, and a wife *in manu*, could never make a will, since they could not hold property. The rules therefore as to a woman's power of making a will could only apply to unmarried women after the death of their father or after emancipation from his power, and to married women who were not in the power of a father or a husband (Karlowa, *Die Formen der röm. Ehe*, 96, &c.). In order to qualify a woman who had independent property to make a will, it was necessary that she should cease to be a member of her familia by undergoing a capitis deminutio, a change which required the concurrence of her agnatic tutor. The capitis deminutio was effected by a *coemptio fiduciae causa*, the coemptionator or purchaser of the woman acquiring *manus* over her, though only as a matter of form, and being bound by a fiducia to remancipate her to some one of her choice. The person to whom she was remancipated became her fiduciary tutor, and gave his formal sanction (*auctoritas*) to her will, which was required in order to give it legal validity. It will be seen from the above that a woman was incapable of making a will unless she obtained the consent of her agnatic tutor, who, as being her intestate heir, would be interested in preventing her from disposing of her property. The agnatic tutela of women was abolished by the Lex Claudia (Gaius, i. 157, 171; Ulp. xi. 8); but the auctoritas of a tutor was still required, as a matter of form, to enable a woman to make a will, except in certain privileged cases (Gaius, ii. 112; Ulp. xx. 15). On the recommendation of Hadrian, the senate made the ceremony of *coemptio* unnecessary for the purpose of giving legal validity to a woman's will (Gaius, i. 115 a). Between the time of Gaius and the publication of the Theodosian Code, the *perpetua tutela* of women became obsolete, and with it the last formal difference between their wills and those of men.

In accordance with the above explanation, Cicero observes (*Top.* 4, 18): "If a woman has made a will, and has never undergone a capitis deminutio, it does not appear that the Bonorum Possessio can be granted in pursuance of such will according to the Praetor's edict; for, if it could, the edict must give Bonorum Possessio in respect of the wills of servi, exules, and pueri." The Bonorum Possessio or praetorian title to the inheritance was not given by the Praetor to persons who were incapable of taking the hereditas; accordingly Cicero means that, if a woman made a will without having sustained a capitis deminutio, the will could have no effect at all in giving a praetorian title to the inheritance, any more than the wills of other persons who had not the testamentifactio. The case of Silius (Cic. *ad Fam.* vii. 21) may be a case of a woman's making a will without coemptio, for it appears that a woman (Turpilia) had disposed of property by will, and Servius Sulpicius was of opinion that this was not a valid will, because the will-maker had not the testamentifactio. The following references may be consulted as to this matter:—Cic. *pro Caecin.* 6, 17; *pro Flacc.* 35, 86; *pro Muren.* 12, 27; *ad Att.* vii. 8;—Liv. xxxix. 19; Gaius, i. 150. *Libertae* could not make a will without the auctoritas of their patronus, for they were in the tutela legitima of their patronus: the patron was always allowed to refuse his sanction to such a will. Libertae who had a certain number of children could, however, make a will without the auctoritas of their patronus. [PATRONUS.] The Vestal Virgins had no tutor, and yet they could make a testament. The Twelve Tables released them from all tutela "in honorem sacerdotii" (Cic. *de Rep.* iii. 10, 17; Gaius, i. 145).

In order to constitute a valid will, it was necessary that a heres should be instituted, which might be done in such terms as the following:—"Titius heres esto, Titium heredem esse jubeo." (Ulp. 24, § 15, "Ante heredis institutionem legari non potest, quoniam vis et potestas testamenti ab heredis institutione incipit.") All persons who had the commercium could be heredes; slaves also could be made heredes,—a testator's own slave, if the institution was coupled with his manumission; the slave of another, if there was testamentifactio between the testator and his master, the slave in this case acquiring the inheritance for his master by command of the latter.

But there were many classes of persons who could not be heredes: such were peregrini and peregrini dediticii, as having no commercium, and Latini Juniani, by the provision of the Lex Junia. Whether according to primitive law women could be made heredes is uncertain, but from an early time they were on the same footing as men in this respect, until by the Lex Voconia (B.C. 69) they were made incapable of being heredes to a person in the first class of the census (Cic. *in Verr.* i. 42, 107; Gell. vii. 13). There was a rule that *incertae personae* could not be instituted; hence it was originally impossible to institute posthumous persons, though in course of time forms of instituting and exheredating *postumi sui* were established. [HERES.] Though unascertained persons could not, generally speaking, be instituted, their institution came to be allowed if they were instituted *sub certa demonstratione:* e.g. "ex cognatis meis, qui nunc sunt, si quis filiam meam uxorem duxerit." Justinian made their institution valid in all cases, provided that they became determinate subsequent to the making of the will. Originally juristic persons could not be instituted, since they could not themselves perform the legal act of entering on an inheritance (cf. Ulp. 22, 5: "Nec municipium nec municipes heredes institui possunt, quoniam incertum corpus est, et neque cernere universi neque pro herede gerere possunt, ut heredes fiant"); but this rule was never applicable to the aerarium or to the fiscus, and in the case of other juristic persons exceptions were gradually made to it: thus municipalities were made capable by senatusconsulta of inheriting the property of their own freedmen (Ulp. 22, 5); exceptions were also made by statute in favour of certain gods and goddesses, viz. Jupiter Tarpeius, Apollo Didymaeus, Mars in Gallia, Minerva Iliensis, Hercules Gaditanus, Diana Ephesia, Mater Deorum, Siphylensis quae Smyrnae colitur, Caelestis Salinensis in Carthage (Ulp. *l. c.* § 6). According to the law of Justinian, churches, piae causae, and communes were capable of being instituted; other juristic persons only if specially privileged in this respect.

Besides capacity on the part of the testator and the person instituted heres, there must be a proper observance of the forms required by law for the validity of a will. Thus we come to consider the rudimentary forms of a Roman will and their subsequent modifications. The earliest will or testament was made *calatis comitiis;* that is, in the Comitia Curiata, which were summoned (*calata*) twice a year for this purpose (Gaius, ii. 101; Ulp. 20, 2; Inst. ii. 10, 1, cum Theoph.; Gell. xv. 27). The testamentum calatis comitiis was probably an adoption by a person who had no children of an intestate *suus heres* rather than a will in the strict sense (cf. Schulin, *Das griechische Testament verglichen mit dem römischen;* and as to the use of adoption for the purpose of disposing of an inheritance in Hindoo Law, see Maine's *Ancient Law*, p. 193). The adoption was, we may suppose, of a peculiar kind, the person who was the object of it not being regarded as the testator's son till after the death of the latter, and then only in case there had been no revocation of the disposition. The proceeding would be of a legislative character in its form, somewhat similar to that of arrogation; for the opinion of some writers, that the populus only bore witness to the transaction in its Comitia and did not sanction it, does not seem to rest on good ground. No doubt, however, the consent of the populus was from an early time little more than a formality (Gans, *Erbrecht*, ii. 27; Ihering, *Geist d. r. R.* i. 145; Schulin, *l. c.*; Sohm, *Institutionen*, § 99). A will was also valid in early times which was made *in procinctu;* that is, one declared by a man before his comrades when in the field before the enemy; for an army in movement and under arms is *procinctus* (Festus, *s. v.* Procincta; Gaius, *l. c.*). A third mode of making wills was introduced, which first existed alongside and then superseded the older forms. It was effected *per aes et libram;* that is, by mancipium, whence the name of *testamentum per aes et libram*, or mancipative will.

The origin of this mode of testamentary disposition may have been to enable plebeians to make a will, they being excluded from the Comitia Curiata, but the patricians must have soon found it convenient to use the same form. The power of making provision respecting the disposition of property after death is expressly recognised by the law of the Twelve Tables in the words "uti legassit super pecunia tutelare rei suae ita jus esto," the word *legare* being here equivalent to *legem dicere*—that is, to declare the law which was to govern the devolution of property (Muirhead, *Roman Law*, p. 167, n. 1). Thus, according to the law of the Twelve Tables, if a man had neither made his will at *calata comitia* nor in *procinctu*, and was in imminent danger of death, he would mancipate (*mancipio dabat*) his familia—that is, his patrimonium or family property—to a friend, and request him to carry out his wishes after his death. The *familiae emptor*—that is, the person to whom the familia was conveyed by mancipation—is said by Gaius to have been in the place of heres (*loco heredis*), the testator having instructed him as to what he wished to be given to each legatee after his death. We cannot gather from Gaius that the familiae emptor ever acquired a beneficial interest in the property mancipated to him, as Sir H. Maine (*Ancient Law*, ch. vi.) states, but only loco heredis for the purpose of paying legacies, and possibly for the purpose of paying in the first place the debts of the deceased, though this is not stated. It is not probable that the familiae emptor became personally liable for the testator's debts. His function seems in fact to have been somewhat analogous to that of an executor in English law, especially if only the movable property could be the subject of such a disposition in early times, as may possibly have been the case. That the familiae emptor was regarded as a mere mandatory for carrying out the wishes of the testator, and had no right to derive any benefit from the estate, is shown by the formal words used in the mancipation to him, "familiam pecuniamque tuam endo *mandatela tua custodelaque mea*" (Gaius, ii. 104). We may infer from the fact of the familiae emptor being *loco heredis*, that he could be legally compelled to carry out the testator's wishes, and was not simply bound in good faith to do so. According to Sir H. Maine (*Ancient Law*, l. c.), the effect of the mancipation was to vest the inheritance immediately and irrevocably in the familiae emptor, a mancipation being an *actus legitimus* not admitting of *condicio* or *dies*. But this view of the transaction appears to be defective in that it takes no account of the power of making a qualified mancipation, recognised by the Twelve Tables in the words, "Cum nexum faciet mancipiumque, uti lingua nuncupassit, ita jus esto" (Festus, *s. v.* Nuncupata). Accordingly the familiae emptor would be subject to the terms imposed on him by the nuncupation which was a part of the mancipation, and by these the mancipant would reserve possession of his property during his lifetime, together with a right of revoking his disposition at pleasure. The familiae emptor would, in fact, become merely formal owner of the property. It will be seen from the above that the mancipative will in its rudimentary form was not a unilateral proceeding, like the later will, but a transaction *inter vivos*, not intended to operate as a universal succession to a heres, but made for the purpose of distributing property to legatees by way of singular succession.

In course of time a great change took place in the character of the mancipative will, in that the familiae emptor ceased to fulfil any real function, and was no longer regarded as even the formal owner of the inheritance. The testator by his will, expressed either in writing or by word of mouth at the time of the mancipation, instituted a heres as his universal successor, who was personally liable to creditors, and who took the inheritance subject to any legacies with which the testator had charged it. Henceforward a testamentum may be defined as a last will by which a heres is instituted (Dig. 29, 7, 20: "Julianus ait, tabulas testamenti non intellegi, quibus heres scriptus non est, ut magis codicilli quam testamentum existimandae sint"). The will might be oral or written, but the ordinary practice was to make a written will, so that the dispositions of the testator might not be known till after his death. The mode of proceeding was this (Gaius, ii. 104). The testator, after having written his will (*tabulae testamenti*), called together five witnesses, who were Roman citizens, and a libripens, as in the case of other mancipationes, and mancipated his property (*familia pecuniaque*) [FAMILIA] to some person in compliance with legal forms (*dicis causa*). This person, the familiae emptor, uses these words, which have been already referred to as showing his original function: "Familia pecuniaque tua endo mandatelam tuam custodelamque meam, quo tu jure testamentum facere possis secundum legem publicam, hoc aere (et ut quidam adjiciunt aenea libra) esto mihi empta." The emptor then struck the scales with a piece of money which he gave to the testator as the price of his purchase; after which, the testator, taking the will in his hand, said: "Haec ita ut in his tabulis cerisque scripta sunt ita do ita lego ita testor itaque vos Quirites testimonium mihi perhibetote." This was called the *nuncupatio* or publishing of the will; in other words, the testator's general confirmation of all that he had written in his will, which derived its legal effect from the clause in the Twelve Tables quoted above.

As the familiae emptio was supposed to be a real transaction between the emptor and testator, the testimony of their several families was excluded, and consequently a person who was in the power of the familiae emptor, or in the power of the testator, could not be a witness. If a man who was in the power of another was the familiae emptor, it followed that his father could not be a witness, nor his brother, if the brother was in the power of the father. A filiusfamilias who after his *missio* disposed of his *castrense peculium* by testament, could not have his father as witness nor any one who was in the power of his father. The same rules applied to the libripens, for he was a witness. A person who was in the power of the heres or of a legatee, or in whose power the heres or legatee was, or who was in the power of the same person as the heres or a legatee, and also the heres or a legatee, could all be witnesses, since neither the heres nor the legatees were parties to the mancipation. But Gaius observes that it would be improper for the heres, and the man who is in the power of the heres or in whose power the heres is to witness the will. According to the law of Justinian, a person in the familia of the heres could not be witness to the will (Inst. ii. 10, 10).

The Edict established a less formal kind of will, since it acknowledged the validity of a written will when there had been no mancipatio, provided there were seven witnesses and seven seals, and the testator had the testamentifactio at the time of making the will and at the time of his death (Gaius, ii. 147). The terms of the Edict are given by Cicero (*in Verr.* i. 1, 45). The Edict only gave the Bonorum Possessio or Praetorian title to the inheritance, which was not effective (*sine re*) against the civil title *ab intestato* of an agnate, until it was made so (*cum re*) by a rescript of Marcus Aurelius (Gaius, ii. 120). This so-called Praetorian testament existed in the Republican period. Thus a man had his choice between two forms of making his will; the Civil form by mancipatio, and the Praetorian with seven seals and seven witnesses, and without mancipatio (Savigny, *Beytrag zur Geschichte der röm. Testam.*, *Zeitschrift*, vol. i. p. 78).

The Praetorian testament prepared the way for the abolition of mancipatio, the essential character of a will made according to the Jus

Civile, and in the legislation of Justinian the form of making a testament was simplified. It required seven male witnesses of competent age and legal capacity, and the act must be done in the presence of all, at the same place and at the same time; that is, it must be continuous. The testator might declare his last will orally (*sine scriptis*) before seven witnesses, and this was a good will. If it was a written will, the testator acknowledged it before the witnesses as his last will, and put his name to it, and the witnesses then subscribed their names and affixed their seals. [Cf. Inst. ii. 10, 3: "Sed quum paullatim tam ex usu hominum, quam ex constitutionum emendationibus coepit in unam consonantiam jus civile et praetorium jungi, constitutum est, ut uno eodemque tempore (quod jus civile quodammodo exigebat) septem testibus adhibitis et subscriptione testium (quod ex constitutionibus inventum est), et (ex edicto praetoris) signacula testamentis imponerentur; ut hoc jus tripertitum esse videatur, ut testes quidem et eorum praesentia uno contextu testamenti celebrandi gratia a jure civili descendant, subscriptiones autem testatoris et testium ex sacrarum constitutionum observatione adhibeantur, signacula autem et numerus testium ex edicto praetoris."] The testator might write his will or have it written by another person, but such other person could derive no advantage under the will. [Senatusconsultum Libonianum.]

It is natural that there should be much difference of opinion respecting the nature of the earliest forms of Roman testament, since the evidence which has come down to us on this subject is extremely scanty. Rein (*Das röm. Privatrecht*, p. 373, note) has referred to the modern writers who have discussed this subject (for an account of the views of recent writers, see Schulin, *l. c.*): he has adopted the opinion of Niebuhr, according to which, "as the property of an extinct house escheated to the curia, that of an extinct curia to the publicum of the citizens at large, the consent of the whole populus was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the curiae" (*Hist. of Rome*, vol. ii. p. 338). But there is no evidence of the assertion contained in the first part of this passage; and if this rule as to escheat is admitted to be a fact, the rule that testaments must be confirmed by the pontiff and curiae is no necessary conclusion. Niebuhr further observes that "the plebeian houses were not so connected; but the whole order had a public coffer in the temple of Ceres; and when the army, being assembled in centuries, either on the field of Mars or before a battle, passed the last will of a soldier into a law, it thereby resigned the claims of the whole body to the property." This assertion also is not supported by evidence, and is therefore a mere conjecture against the probability of which there are sufficient reasons.

If we are right in following the opinion of those who think that the testamentum calatis comitiis was carried into effect by means of the adoption of a heres, the consent of the pontiff and curiae was required in order to give it effect, just as in the case of other adoptions or arrogations. [Arrogatio.] But it is said that the power of disposition in the case of a testamentum in procinctu could not depend on the consent of the whole populus, in each particular instance; for the nature of the circumstances excluded such consent. A Roman had therefore full power of disposition in procinctu, and from this it is inferred as a probable conclusion that the will made at the Calata Comitia was not a legislative act, but simply one declared before the populus. This argument does not, however, seem to have much force, since it is highly probable that the testamentum in procinctu was instituted at a time when the consent of the Comitia to wills had become merely formal. The adoption in the Comitia, or the simple designation of a person as adopted, would come to be regarded as the institution of a heres, and so the conception of a heres ex testamento would be established. Hence the institution of a heres in a mancipative will may perhaps have been derived from the idea of the designation of a heres in the Comitia, as universal successor.

Some writers assert that the testamentum in procinctu could only be made after the auspices were taken, which gave the testament the religious sanction; that when the auspices ceased to be taken in the field, this kind of testament ceased to be made; and that the military testaments mentioned about the latter part of the Republic (as by Caesar, *Bell. Gall.* i. 39; Vel. Pat. ii. 5, &c.) were not the same kind of testaments, but purely military testaments made without any form, which in the Imperial period became in common use and of which Julius Caesar probably introduced the practice (Dig. 29, 1, *de Testamento Militis*). Cicero, however, speaks of the will In procinctu (*de Or.* i. 53) as then in use, and he describes it as made "sine libra et tabulis;" that is, without the forms which were used after the introduction of the testamentum per aes et libram. Thus the testamentum in procinctu always retained its characteristic of being exempted from legal *forms*, but as to the *capacity* of the testator it was always subject to the same rules of law as other wills, so far as we know.

The form of the mancipative will seems at first sight to favour the opinion that the testamentum calatis comitiis was simply declared in the presence of the populus, for it is generally admitted, and the extant passages are consistent with the opinion, that the testamentary form *per aes et libram* existed while the two original forms were still in use. Now, in the testamentum per aes et libram there is no pretence for saying that any consent was required, except that of the buyer and seller; for though the five witnesses to the testament (*cives Romani puberes*) may have been representatives of the five classes of Servius Tullius, the classes were represented as witnesses only, not as persons who gave their consent to the act. It seems improbable, it is said, that there could have existed at the same time a form of testamentum to which the consent of the testator was sufficient, and another form in which it was not. But the only possible answer to this argument is that the consent of the sovereign people had become a form, and therefore it was indifferent, so far as concerns this consent, whether the will was made at the Comitia where it would be fully witnessed, or per aes et libram where it would be witnessed by the five representatives. In the time of the classical jurists the testamentum per aes et libram was the ordinary form of testament, according to Jus Civile; it is probable that the testamentum calatis comitiis and in procinctu had long previously become obsolete.

As already observed, there seems to have been no rule of law that a testament must be written. The mancipatio required no writing, nor did the institution of a heres. Thus it is said (Dig. 28, 1, 21) that the heres might either be made by oral declaration (*nuncupatio*) or by writing. Written wills, however, were the common form among the Romans at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word *cera* is often used as equivalent to *tabella;* and the expressions *prima*, *secunda cera* are equivalent to *prima*, *secunda pagina*. The will might be written either by the testator or by any other person with his consent, and sometimes it was made with the advice of a lawyer. It was written in the Latin language, until A.D. 439, when it was enacted that wills might be in Greek (Cod. 6, 23, 21). By the old law a legacy could not be written in the Greek language, though a fideicommissum could be so given. It does not appear that there was originally any signature by the witnesses. The will was sealed, but this might be done by the testator in secret, for it was not necessary that the witnesses should know the contents of the will; they were witnesses to the formal act of mancipatio, and to the testator's declaration that the tabulae which he held in his hand contained his last will. It must, however, have been in some way so marked as to be recognised, and the practice of the witnesses (*testes*) sealing and signing the will became common. (As to the will of Claudius, see Suetonius, *Claudius*, 44.) It was necessary for the witnesses both to seal (*signare*)—that is, to make a mark with a ring (*anulus*) or something else on the wax—and to add their names (*adscribere*). The five witnesses signed their names with their own hand, and their adscription also declared whose will it was that they sealed (Dig. 28, 1, 30). The seals and adscriptions were both on the outside. A senatusconsultum, which applied to wills among other instruments, enacted that they should be witnessed and signed as follows: they were to be tied with a triple thread (*linum*) on the upper part of the margin, which was to be perforated at the middle part, and the wax was to be put over the thread and sealed. Tabulae which were produced in any other way had no validity. (Compare Paulus, *S. R.* v. 25, 6, where *impositae* seems to be the true reading, with Suet. *Ner.* 17.) A man might make several copies of his will, which was often done (*ut vulgo fieri solet*, Dig. 31, 1, 47; a case put to Proculus) for the sake of caution. Both Augustus and Tiberius made two copies of their wills (Suet. *Aug.* 101; *Tiber.* 76). When sealed, it was deposited with some friend, or in a temple, or with the Vestal Virgins; and after the testator's death it was opened (*resignare*) in due form. The witnesses or the major part were present; and after they had acknowledged their seals, the thread (*linum*) was broken and the will was opened and read, and a copy was made; the original was then sealed with the public seal and placed in the archium, whence a fresh copy might be got, if the first copy should ever be lost (Paulus, iv. 6). This practice, described by Paulus, may have been of considerable antiquity. The will of Augustus, which had been deposited with the Vestal Virgins, was brought into the senate after his death (Tac. *Ann.* i. 8): none of the witnesses were admitted except those of senatorial rank; the rest of the witnesses acknowledged their signatures outside of the Curia (Suet. *Tib.* 23).

A passage in a Novel of Theodosius II. (A.D. 439, *de Testamentis*) states the old practice as to the signature of the witnesses. "In ancient times a testator showed (*offerebat*) his written testament to the witnesses, and asked them to bear testimony that the will had so been shown to them (*oblatarum tabularum perhibere testimonium*)," which are almost the words of Gaius. The Novel goes on to state that the ignorant presumption of posterity had changed the cautious rule of the ancient law, and the witnesses were required to know the contents of the will; the consequence of which was that many persons preferred dying intestate to letting the contents of their wills be known. The Novel enacted what we may presume to have been the old usage, that the testator might produce his will sealed, or tied up, or only closed, and offer it to seven witnesses, Roman citizens and puberes, for their sealing and adscription, provided at the same time he declared the instrument to be his will and signed it in their presence, and then the witnesses affixed their seals and signatures at the same time also. A will was opened in the presence of the witnesses to it, so that they might acknowledge their seals, and, having been read, copies of it were allowed to be taken; it was then sealed up and deposited in the public archives (Paul. iv. 6, 1). Valentinian III. enacted that if a testamentum was holographum, witnesses were not necessary.

A fragment of a Roman will, belonging to the time of Trajan, was published by Puggé in the *Rheinisches Museum*, vol. i. p. 249, &c.; and it is explained by Rudorff (*Das Testament des Dasumius*, *Zeitschrift*, &c. vol. xii. p. 301).

The penalties against fraud in the case of wills and other instruments were fixed by the Lex Cornelia. [FALSUM.]

The institution of a heres was essential to a will. A will was either wholly or partly invalid in which sui heredes were neither instituted nor exheredated, but simply passed over in silence; the praetor made a similar rule in the case of emancipati. The rules on this subject are stated in HERES (Roman) and BONORUM POSSESSIO.

A testament which was invalid from the first was *injustum* or *non jure factum*, when the proper forms had not been observed; a void will is sometimes said to be *nullum* or *nullius momenti*, as in the case of a filiusfamilias who is *praeteritus*. A testamentum justum might become either ruptum or irritum or destitutum in consequence of subsequent events (Dig. 28, 3, 1).

A testament became *ruptum* if the testator made a subsequent testament in due form as required by law: and it made no matter whether or not there turned out to be a heres under the second will: the only question was whether there could have been one. If then the heres named in the second will refused the hereditas, or died either in the lifetime of the testator or after his death, and before the cretio, or failed to comply with the conditions of the will, or lost the hereditas under the Lex Julia et Papia Poppaea—in all these cases the paterfamilias died intestate.

The testator must have a capacity to make a will, and continue to have the capacity until his death; but this principle does not apply to mental sanity, for the will was valid if the testator became insane. But the will became *irritum* if the testator sustained a capitis deminutio after the date of the will; or if it failed of effect because there was no heres, it was *destitutum*. If a will failed to take effect for want of a heres, the deceased died intestate; the intestate heir might, however, be bound to carry out the provisions of the will, if requested to do so by fideicommissum. (As to the use of *substitutio* for the purpose of preventing intestacy, see HERES.) If a will took effect, the whole property of the deceased passed to the heirs instituted in the will, whether or not this was the intention of the deceased. The rule "nemo partim testatus et partim intestatus decedere potest" may be explained by the fact of the will having developed out of adoption.

If a man who had made a will was taken prisoner by the enemy, his will was good *jure postliminii* if he returned home; if he died in captivity, it was made as valid by the Lex Cornelia as if he had not been a captive.

Though a will might be injustum and irritum by the Jus Civile, it was not always without effect; for the Bonorum Possessio secundum tabulas might be had by the scriptus heres, if the will was witnessed by seven witnesses, and if the testator had the testamentifactio, at the time of making the will and at the time of his death, though not at some intervening period. The distinction between the case of a will which was invalid Jure Civili for want of due forms, and one which was invalid for want of legal capacity to dispose of property by will, was well recognised in the time of Cicero (*Top.* 11). A will also became ruptum by agnatio; that is, if a suus heres was born after the making of the will who was not either instituted heres or exheredated, as the law required. A quasi agnatio also arose by adoption, or by the in manum conventio, or by succession to the place of a suus heres, as in the instance of a grandson becoming a suus heres in consequence of the death or the emancipation of a son: a will also became ruptum by the manumission of a son, that is, where the son after a first and second mancipation returned into the power of his father. [EMANCIPATIO; HERES.]

A testament was called *inofficiosum* which was made in legal form, "sed non ex officio pietatis." For instance, if a man had exheredated his own children, or passed over his parents, or brothers or sisters, the will was in form a good will; but if there was no sufficient reason for this exheredation or praeterition, the persons aggrieved might have an *inofficiosi querela*. The ground of the complaint was the allegation that the testator was "non sanae mentis," so as to have capacity to make a will. It was not alleged that he was furiosus or demens, for these were technical words which implied complete legal incapacity. Perhaps this fiction of insanity was derived from Greek law, *μανία* of the testator having been the alleged ground under early Attic law for actions brought by relations to set aside wills in which they were disinherited (Schulin, 16; Sohm, *Inst.* § 100, n. 6). No person could maintain a *querela inofficiosi* except brothers and sisters of the same father, and brothers and sisters could only maintain their claim against *scripti heredes* who were *turpes personae*. The complaint also could only be maintained in cases where the complaining parties had no other right or means of redress. Originally the querela could be brought if less than one-fourth of the share of the claimant *ab intestato* was left to him, whether as heir or legatee was immaterial, by the law of Justinian. If any portion, however small, was left by the will to the complaining party, he could not maintain a *querela inofficiosi*, and he was only entitled to so much as would make up his proper share (*portio legitima*). If the judex declared the testamentum to be inofficiosum, it was rescinded, and the querelant succeeded *ab intestato*; but if there were several heredes, the testament would only be rescinded as to him or them against whose institution the judex had pronounced. The querela was tried by the centumviral court, as long as the court existed. [CENTUMVIRI.] (Plin. *Ep.* v. 1; Inst. ii. 18; Dig. 5, *de Inofficioso Testamento*.)

Justinian made various changes in the rules restricting testamentary freedom in favour of near relations. 1st. He provided that if anything was left to such relation he was not to be entitled to the querela, but only to the actio ad supplendam legitimam. 2nd. By 18 Nov. he increased the amount of the *portio legitima*. 3rd. By 115 Nov. he amalgamated the law respecting formal exheredation of sui heredes with that respecting inofficiositas. He obliged ascendants and descendants respectively to institute one another heredes, if there was a right of succession in the event of intestacy, and only allowed exheredation on certain grounds expressed in the statute. A testator had to declare a statutable ground of exheredation in his will. If a relation entitled under this law was instituted, but not so much as his portio legitima was left to him, he had the actio ad supplendam legitimam. If not instituted, he had the querela inofficiosi testamenti, unless he had been exheredated for due cause. The effect of the querela was not to set aside the will altogether, but to let in the querelant to the extent of his intestate share.

The *querela inofficiosi* is explained by Savigny with his usual perspicuity (*System*, &c. vol. ii. p. 127). When a testator passed over in his will any of his nearest kinsfolks, who in the case of intestacy would be his heredes, this gave rise to the opinion that the person thus passed over had merited this mark of the testator's disapprobation. If this opinion was unfounded, the testator had done an unmerited injury to the person, and his remedy was by getting the will set aside, as made under the influence of passion. If the will was set aside, the testator was thereby declared to have died intestate, and the complainant obtained the hereditas which was the immediate object of the querela, or his share of it. But the ultimate object of the querela was the public re-establishment of the injured honour of the complainant, who in this action appeared in a hostile position with respect to the testator who had brought his character into question. Consequently this action had for its ultimate object vindicta, and the peculiarity of the action consisted in the difference between this ultimate object of the action and the immediate object of it (property), which was merely a means to the ultimate object. [VINDICTA.]

There is no evidence to show when the querela inofficiosi was introduced as a mode of setting aside a will. The phrase *testamentum inofficiosum* occurs in Cicero, and in Quintilian (*Inst. Or.* x. 2).

Codicilli were an informal will: they may be defined to be a testamentary disposition of such a kind which does not allow any direct universal succession, and, consequently, neither the direct appointment nor exheredation of a heres, even though the codicilli are confirmed by a testament; but he who was appointed heres by a testament might be requested by codicilli to give the hereditas to another altogether or in part, even though the codicilli were not confirmed by a testament. A legacy could not be given by codicilli, unless the codicilli were confirmed by a will; and this must be the case to which Pliny refers (*Ep.* ii. 16). Acilianus had made Pliny "heres ex parte," but he had also made codicilli in his own handwriting, which, as Pliny alleges, were void (*pro non scriptis habendi*) because they were not confirmed by the will. Now, as already observed, it appears from Gaius (ii. 273) that a person who was appointed heres by a will might be required by codicilli to give the whole hereditas or a part to another, even though the codicilli were not confirmed by a will. But Pliny is speaking of codicilli which were void for want of a testamentary confirmation; and this, as we learn from Gaius, is the case of a legacy given by codicilli which have not been confirmed by a will. This confirmation might be either prospective or retrospective ("si in testamento caverit testator, ut quidquid in codicillis scripserit, id ratum sit," Gaius, ii. 270; "quos novissimos fecero," Dig. 29, 7, 8). This passage of Pliny as to the confirmation of codicilli by a testament has sometimes been misunderstood. It is stated (Dig. 29, 7, 8), "Conficiuntur codicilli quatuor modis: aut enim in futurum confirmantur aut in praeteritum, aut per fideicommissum testamento facto aut sine testamento." These four modes are referred to in Gaius: the first two are contained in the words above quoted, "Si in testamento," &c.: the third is the case of the heres institutus being required to give the hereditas to another person by codicilli non confirmati; and the fourth is the case of a fideicommissum given by codicilli of a person who made no other testamentary disposition. It was a rule of law that codicilli, when duly made, were to be considered (except in a few cases) as incorporated in the will at the time when the will was made, a principle which led to various legal conclusions, which the Roman jurists deduced with their usual precision (Dig. 27, 7, 2).

Originally there was probably no particular form required for codicilli; but there must have been evidence of their containing the testator's intention. Subsequently witnesses were required, and five witnesses were sufficient for codicilli made in writing, if the witnesses subscribed their names to the codicilli (Cod. 6, 36). But a man could, without writing and in the presence of five witnesses, impose a fideicommissum on his heres. A testament which was defective as such, might be effectual as codicilli. The power to make codicilli was the same as the power to make a testament. (Dig. 29, 7, *de Jure Codicillorum;* Inst. ii. 25.)

The articles on HERES, BONORUM POSSESSIO, LEGATUM, FIDEICOMMISSUM, &c., should be read with this article. (Gaius, ii. 101–108; Ulp. *Frag.* xx.; Inst. ii. 10, &c.; Dig. 28, 1; Cod. 6, 23; Vangerow, *Pandekten*, &c., ii. § 427, &c.; Holder, *Erbrecht;* Köppen, *System Erbrechts;* Schirmer, *Handbuch des röm. Erbrecht;* Dernburg, *Beitr. zur Gesch. der röm. Test.*; Vering, *Römisches Erbrecht;* Gans, *Das Erbrecht.*)

[G. L.] [E. A. W.]

TESTIS, a witness. 1. GREEK. [MARTYRIA.] 2. ROMAN. [JUSJURANDUM.]

TESTU'DO (χελώνη), a tortoise, was the name given to several other objects.

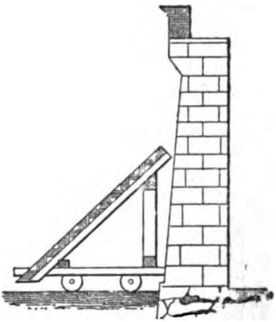
1. To the Lyra, because it was sometimes made of a tortoise-shell. [LYRA.]

2. To an arched or vaulted roof (Verg. *Aen.* i. 505; Cic. *Brut.* 22, 87). Thus, for instance, in a Roman house, when the Cavum Aedium was roofed all over and had no opening or compluvium in the centre, the Cavum Aedium was called Testudo (Varr. *L. L.* v. 161, ed. Müller). [DOMUS, Vol. I. pp. 670, 685.]

3. In military affairs testudo (χελώνη) is used as a generic term for all kinds of movable roofs used to protect men or engines. The first mention of a χελώνη is in Xen. *Hell.* iii. 1, 7. There were different kinds of such shed-like constructions, all of which were made of wood and mounted on wheels.

(*a*) χελώνη κριοφόρος (*testudo arietaria*, Vitruv. x. 19 (13), 7) was a shed-like protection for the battering-ram; see ARIES.

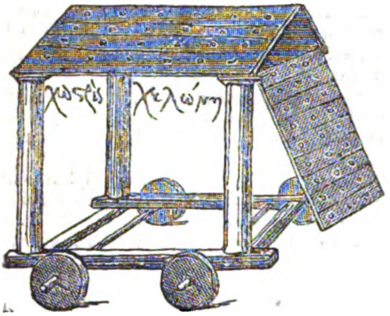
(*b*) χελώνη διορυκτρίς (Apollod. 138, Wescher) or ὀρυκτρίς (Anonym. *ap.* Wescher, p. 214), used for protecting soldiers when they were undermining a wall. Its front was quite perpendicular, so that it could be run up close to the wall; and the line of the roof formed by the two sides, which sides themselves sloped down to the ground, extended backwards as in the accompanying cut (taken from Marquardt, *Staatsverwalt.* ii.^{2} 529; cf. in some measure Wescher, *Poliorcétique des Grecs*, fig. lvii.). This is the way Vitruv. x. 21 (15), 1, and Athen. *de Mech.* 19 Wescher, are to be reconciled; for the figure given by Müller in Baumeister (fig. 577,



χελώνη διορυκτρίς.

vol. i. p. 540) does not agree with Vitruvius, *l. c.*

(c) χελώνη χωστρὶς (Diod. ii. 27; "testudo quae ad congestionem fossarum paratur," Vitruv. x. 20 (14), who elaborately describes it after Philo the Athenian, giving numerous measurements) was used when the ground in front of the walls of a besieged town had to be altered in any way to further the siege, *e.g.* ditches to be filled, acclivities levelled, &c. Its distinctive feature was that it had on the front next the enemy a sloping roof, as in the subjoined cut.



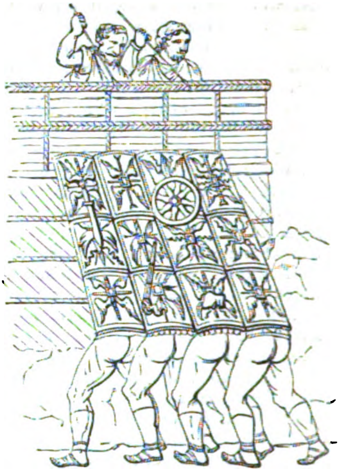
χελώνη χωστρίς.

The size of this testudo, as that of other testudines, of course varied. That described by Philo appears to have been about 39 by 35 feet (Droysen, *Griech. Kriegsalt.* p. 227). All the testudines were as a general rule covered with a double layer of fresh hides, which were stuffed with sea-weed or chaff steeped in vinegar, or other non-inflammable substances (Vitruv. *l. c.*). These coverings were called *centones*, and sacks of this nature were also used for extinguishing fires (Dig. 33, 7, 12) and for receiving the blows of missiles discharged from engines (Caes. *Bell. Civ.* ii. 9).

(*d*) χελώνη ἀρετή (Athen. *de Mech.* 38 Wescher), probably like (*b*), except that its roof appears to have been arched, not pointed. It seems to have been specially adapted to withstand great weights when hurled down on the besiegers (Apollod. p. 138 *fin.* Wesch.).

For further details on these testudines, see Vitruvius, *l. c.*; Apollodorus, pp. 140 ff., 154 ff., Wescher; and Droysen, *Griech. Kriegsalt.* pp. 287 ff.

4. The name of Testudo was also applied to the covering made by a close body of soldiers: the soldiers of the outside rank placing their long semi-cylindrical shaped shields (*clipei*, ἀσπίδες) in front, and the others placing their flat shields (*scuta*, θυρεοί) over their heads to secure themselves against the darts of the enemy. The shields fitted so closely together as to present one unbroken surface without any insterstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them (Dio Cass. xlix. 30). A testudo was formed (*testudinem facere*) either in battle to ward off the arrows and other missiles of the enemy (cf. Liv. x. 29, 6, 12; and *phalange facta* in Caes. *Bell. Gall.* i. 24), or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking them (Dio Cass. *l. c.*; Liv. x. 43; xxxi. 39, 14; xxxiv. 39, 6;—Caes. *B. G.* ii. 6; Sall. *Jug.* 94; Tac. *Ann.* xiii. 39; *Hist.* iii. 27, 31. (See cut annexed, taken from the Antonine Column).



Testudo of shields.

Sometimes the shields were disposed in such a way as to make the testudo slope. The soldiers in the first line stood upright, those in the second stooped a little, and each line successively was a little lower than the preceding down to the last, where the soldiers rested on one knee. Such a disposition of the shields was called *Fastigata testudo*, on account of their sloping like the roof of a building, κεραμωτῷ καταρρύτῳ παραπλήσιον (Polyb. xxviii. 12). The advantages of this plan were obvious: the stones and missiles thrown upon the shields rolled off them like water from a roof; besides which, other soldiers frequently advanced upon them to attack the enemy upon the walls. The Romans were accustomed to form this kind of testudo, as an exercise, in the games of the Circus (Liv. xliv. 9; Polyb. xxviii. 12). [W. S.] [L. C. P.]

TETRADRACHMON. [Drachma.]

TETRARCHA or **TETRARCHES** (τετράρχης). This word was originally used, according to its etymological meaning, to signify the governor of the fourth part of a country (τετραρχία or τετραδαρχία). We have an example in the ancient division of Thessaly into four tetrarchies, which was revived by Philip (Harpocrat. *s. v.* Τετραρχία: Strabo, ix. p. 430; Demosth. *Phil.* iii. p. 117, § 26; Eurip. *Alcest.* 1154; Thirlwall's *Greece*, vi. pp. 13, 14; Gilbert, *Staatsalt.* ii. 13). [Tagus.] Each of the three Gallic tribes which settled in Galatia was divided into four tetrarchies, each ruled by a tetrarch. [Pagus.] (Strabo, xii. pp. 566, 567; Plin. *H. N.* v. § 42.) This arrangement subsisted till the later times of the Roman republic (Appian, *Mithrid.* 46; *Syr.* 50; *Bell. Civ.* iv. 88), but at last the twelve tetrarchs of Gallograecia were reduced to one, namely Deiotarus (Liv. *Epit.* xciv.; Cic. *pro Deiot.* 15; Hirtius, *de Bell. Alex.* 67). Some of the tribes of Syria were ruled by tetrarchs, and several of the princes of the house of Herod ruled in Palestine with this title

(Plin. *H. N.* v. § 16, 19;—Joseph. *Antiq.* xiv. 13, § 1, xvii. 8, § 1, xi. 4, § 18, xvii. 11, § 1, xi. 2, § 2; *Vit.* 11; Marquardt, *Staatsverw.* i. 401).

In the later period of the Republic and under the Empire, the Romans seem to have used the title (as also those of *ethnarch* and *phylarch*) to designate those tributary princes who were not of sufficient importance to be called kings. (Compare Lucan, vii. 227; Sallust, *Catil.* 20; Cic. *pro Mil.* 28, 76, *in Vatin.* 12, 29; Hor. *Sat.* i. 3, 12; Vell. Paterc. ii. 51; Tac. *Ann.* xv. 25.) [P. S.]

TETRASTY'LOS. [Templum.]

TETRO'BOLUS. [Drachma.]

TETTARACONTA, HOI (*οἱ τετταράκοντα*), *the Forty* (Isocr. *Antid.* § 237; Dem. *c. Pantaen.* p. 976 § 33), one of the minor magistracies at Athens, were also called *δικασταὶ κατὰ δήμους*, "district judges" (Id. *c. Timocr.* p. 735, § 112); but except in these passages they seem only to be mentioned by the grammarians. Their number was originally thirty, but was increased to forty after the expulsion of the Thirty Tyrants, in consequence, it is said, of the hatred of the Athenians for the number thirty (Harpocrat., quoting Aristotle; Suid. [in the same words]; Pollux, viii. 100). They were chosen by lot, apparently in equal numbers from each tribe: Demosthenes (*Timocr.* l. c.) speaks slightingly of them as unimportant persons in whom no qualification of property or ability was required. They went on circuits through the demes (urban as well as rural, Lips. *Att. Proc.* p. 91), and decided of their own competence trivial causes where the matter in dispute was not above the value of ten drachmas; beyond that amount they carried the cause before the *διαιτηταί*, and themselves acted as *εἰσαγωγεῖς*: that is, they received the accusation, drew up the indictment, and attended to all that was understood in Attic law by the *ἡγεμονία δικαστηρίου* (Poll. *l. c.*). Isocrates somewhat vaguely describes those who were brought before them as *τούς τ' ἐν τοῖς ἰδίοις πράγμασιν ἀδικοῦντας καὶ τοὺς μὴ δικαίως ἐγκαλοῦντας*. The extent of their jurisdiction in cases of *αἰκία* and *τὰ περὶ τῶν βιαίων* (Dem. *Pantaen.* l. c.) has been a matter of some dispute; but Schömann, Teuffel (*ap.* Pauly, *s. v. τεσσαράκοντα*), and Lipsius are unquestionably right in limiting their power of decision to "slanders and assaults of minor importance" (*nichtpeinliche Injurienklagen*). In aggravated or murderous assaults, including rape [Biaion Dikē], their office must have been that of *εἰσαγωγεῖς*. We cannot suppose their criminal jurisdiction to have been more extensive than their civil; it is not in keeping with Athenian institutions that men who could only decide up to the amount of ten drachmas should have tried offences which were in many cases capital. It has been suggested that in these serious cases (*e.g.* the aggravated assault which forms the subject of the speech *against Conon*) they acted as a jury under the *ἡγεμονία* of the Thesmothetae; but, as we have said elsewhere, their number was much too small for an Athenian jury (cf. *Class. Rev.* i. 15), and it is not likely that they ever acted as *δικασταί* in the ordinary sense. For the Athenian practice of employing small courts only in trifling cases, a *δικαστῶν πλῆθος* in others, cf. Aristot. *Pol.* iv. 13 (16) = p. 1300 b, 23 and 32.

Like other magistrates, they had their *σανίδες* or white boards on which legal notices were posted (Isocr. *l. c.*), and were responsible (*ὑπεύθυνοι*) for their conduct in office. When Demosthenes (*Timocr.* l. c.) speaks of them as having to account for public monies, this must refer to the court fees (*πρυτανεῖα*) deposited by the suitors. Whether they exercised their jurisdiction jointly as a board, or in certain divisions, is not expressly stated; but it is almost certain that they sat by tribes, *i.e.* in boards of four, and that the tribal judges rather obscurely alluded to by Lysias (*c. Pancl.* § 2) and Isaeus (*ap.* Harpocrat. *s. v. ὅτι*) are to be identified with the Forty. Their connexion with the tribes suggests that they may have been established by Cleisthenes, though on this point also we have no precise information. We need not, however, understand that before his legislation no cases were tried in the demes, and that the parties were compelled to go into the city for every little legal dispute (Schömann, p. 474).

The grammarians seem sometimes to have confused the district judges with other officers: with demarchs (Schol. *ad* Aristoph. *Nub.* 37, cf. Schömann, p. 474 n.; *Att. Proc.* p. 53 Lipsius); and under their older name of *τριάκοντα* with the thirty assistants of the Lexiarchi (Phot. *s. v. τριάκοντα*: Ecclesia, p. 698 *b*). The statement of the scholiast Ulpian (on Dem. *c. Mid.* p. 542, § 86) as to the number of the Diaetetae has been proved by inscriptions to be impossible as regards that body [Diaetetae, Vol. I., p. 621 *a*]; whereas the figures given, with the slight correction of Heraldus (*ἦσαν δὲ τεσσαράκοντα, τέσσαρες καθ' ἑκάστην φυλήν*), are exactly applicable to the *κατὰ δήμους δικασταί* (Lips. *Att. Proc.* p. 91 n.). (Cf. Pollux, viii. 40; Harpocrat. *s. v. κατὰ δήμους δικαστής*: *Lex. Seguer.* pp. 306, 15, 310, 21; Schömann, *Ant. Jur. Publ.* p. 267, 10, *Antiq.* i. 473 f., E. T.; and esp. *Att. Process*, pp. 88–93, Lipsius). [W. S.] [W. W.]

THALLO'PHORI (*θαλλοφόροι*). [Panathenaea, p. 327 *a*.]

THALY'SIA (*θαλύσια*), a festival celebrated in honour of Dionysus and Demeter (Menand. Rhet. quoted by Meursius), or according to others of Demeter alone, as it is described by Theocritus in his seventh idyll, and by the grammarians who wrote the arguments to the same. It was held in autumn, after the harvest, to thank the gods for the benefits they had conferred upon men (Spanheim *ad* Callimach. *Hymn. in Cer.* 20 and 137; Wüstemann *ad* Theocrit. *Idyll.* vii. 3). [L. S.]

THARGE'LIA (*θαργήλια*), a festival celebrated at Athens on the 6th and 7th of Thargelion (= about May 24, 25) in honour of Apollo and Artemis (*Etym. M.*; Suidas, *s. v. Θαργήλια*), as their birthdays (cf. Delia), or according to the Scholiast on Aristophanes (*Equit.* 729) in honour of Helios and the Horae; the latter statement, however, is in substance the same as the former. The Apollo who was honoured by this festival was the Delian Apollo, Apollo Patrous (Athen. x. p. 424).

The Thargelia and the Delphinia were the chief festivals of Apollo at Athens. The word *θαργήλια* means generally the fruits of the earth as derived from the sun's heat, or else the first fruits of the crop (*Etym. M.* 443). Now it was an old custom to send an offering of corn each year to the Delian Apollo; and when Apollo was adopted by the Athenians into the circle of their divinities, the offering still continued. This was doubtless the nucleus of the festival.

The first act was the sacrifice of a sheep on the 6th to Demeter Chloe (Schol. on Soph. *Oed. Col.* 1600), who appears to have had a temple on the Acropolis (Schol. on Aristoph. *Lys.* 835). It is an error to suppose that this is the Χλόεια, and that the latter festival was held on the 6th of Thargelion (= about May 24th); for the corn was not green in Thargelion; nor can that month be called περὶ τὸ ἔαρ, which is the time specified by Cornutus for the Chloea (περὶ τὸ ἔαρ Δήμητρι Χλόην θύουσι, *Nat. Deor.* 28), for Dionysius (i. 63) mentions the 23rd of Thargelion as occurring towards the end of summer. Then followed still on the sixth a great purificatory sacrifice (Plut. *Symp.* viii. 1, 2 = 717 Reiske; Diog. Laërt. ii. 44; Harpocrat. *s. v.* φαρμακός). The manner in which this purification was effected is very extraordinary and certainly a remnant of very ancient rites, for two persons were put to death on that day, and the one died on behalf of the men and the other on behalf of the women of Athens. The name by which these victims were designated was σύβακχοι (Hellad. *ap.* Phot. 534) or more usually φαρμακοί (in Ionic, as always in Hipponax, φαρμᾱκοί: cf. Bergk, *Lyr. Graec.* ii. p. 462): according to some accounts both of them were men, but according to others the one who died on behalf of the women was a woman and the other a man (Hesych. *s. v.* Φαρμακοί). On the day when the sacrifice was to be performed the victims were led to the different temples of Apollo in the city,—to those of Apollo Patrous, Delphinius, and Pythius (cf. Mommsen, *Heort.* p. 421),—and afterwards out of the city to a place near the sea, with the accompaniment of a peculiar melody, called κραδίης νόμος, played on the flute (Hesych. *s. v.*). [Schömann (*Griech. Alterthümer*, ii. 456), however, says the κραδίης νόμος does not apply to this: cf. Plut. *de Musica*, 1133.] The neck of the one who died for the men was surrounded with a garland of black figs, that of the other with a garland of white ones; and while they were proceeding to the place of their destiny, they were beaten with rods of fig-wood, and figs and other things were thrown at them. Cheese, figs, and cake were put into their hands that they might eat them. They were at last burnt on a funeral pile made of wild fig-wood, and their ashes were thrown into the sea and scattered to the winds (Tzetzes, *Chil.* v. 726). Some writers maintain that they were thrown into the sea alive, as at Leucas (cf. Strabo, x. 452), but the matter is very uncertain. We are not informed whether this expiatory and purifying sacrifice was offered regularly every year, but from the name of the victims (φαρμακοί) as well as from the whole account of Tzetzes, which is founded on good authorities, it appears highly probable that an actual sacrifice only took place in case of a heavy calamity having befallen the city (νοσούσης τῆς πόλεως), such as the plague, a famine, &c.; and that in ordinary times (cf. Müller, *Dorians*, i. 329) the solemnity was merely formal. Schömann (*op. cit.* ii. 254, 456) is of opinion that the victims were condemned criminals: but while there is no evidence for the statement, there is an *a priori* improbability that a sin offering would be made of those whose lives were forfeit in any case. Tzetzes (*l. c.*) says the victim was τὸν πάντων ἀμορφότερον (a very Greek idea), and Schol. on Aristoph. *Ran.* 733 says they were τοὺς φαύλους καὶ παρὰ τῆς φύσεως ἐπιβουλευομένους, *i.e.* deformed. At Massilia a somewhat similar solemnity was almost certainly formal. One of the poorer classes voluntarily gave himself up to be supported for a year; after which time he was clad in sacred garments, led through the city with execrations heaped on him, and thus bearing as was supposed all the ills of the state was cast out beyond the boundaries (Petron. *ap.* Serv. on Verg. *Aen.* iii. 57). What persons were chosen as victims on such occasions is not mentioned, and we only learn from Suidas (*s. v.* Φαρμακοί) that they were kept at the public expense (δημοσίᾳ τρεφόμενοι).

On the second day of the Thargelia, the 7th, there was offered a thank-offering to the Sun-god; and, as at the Pyanepsia, the children bore about branches of olive, bound with wool, called εἰρεσιῶναι, which they finally hung up before the doors (Schol. Aristoph. *Eq.* 729; *Plut.* 1054). Porphyrius (*Abstin.* ii. 7) gives a long list of natural and artificial products which were offered on this day to Helios and the Horae, beginning with the moist earth (ἰλύς), from which all things spring (cf. Hermann, *Gottesd. Alt.* § 60, 8). The second day of the Thargelia was also solemnised with a procession, and an agon which consisted of a cyclic chorus performed by men and boys at the expense of a choragus (Lysias, *de Muner. accept.* § 1; Antiphon. *de Choreut.* §§ 11, 12, 13; *C. I. G.* 213). At the Thargelia each choragus had two tribes allotted to him, out of which he was to supply a chorus (Antiph. *l. c.*; Schol. on Dem. *Lept.* 465, § 27). The prize of the victor was a tripod, which he was required to dedicate in the Temple of Apollo which had been built by Peisistratus (Suidas, *s. v.* Πύθιον). At the assembly of the Thargelia crowns were proclaimed (Law *ap.* Dem. *Mid.* 517, § 10). The Archon Eponymus and his ἐπιμεληταὶ had the management of the festival (Poll. viii. 89). On this day it was customary for persons who were adopted into a family to be solemnly registered and received into the gens and the phratria of the adoptive parents. This solemnity was the same as that of registering one's own children at the Apaturia (Isaeus, *de Apollod. hered.* c. 15). [ADOPTIO (Greek).]

Respecting the origin of the Thargelia, there are two accounts. According to Istrus (*ap.* Phot. *Lex.* p. 467; *Etym. M.*, and Harpocrat. *s. v.* Φαρμακὸς) the φαρμακοὶ derived their name from a man Φάρμακος, who, having stolen the sacred phials of Apollo and being discovered by the men of Achilles, was stoned to death, and this event was commemorated by the awful sacrifice at the Thargelia. Helladius (*l. c.*), on the other hand, states that at first these expiatory sacrifices were offered for the purpose of purifying the city of contagious diseases, as the Athenians after the death of the Cretan Androgeus were visited by the plague: and there certainly was some connexion between the Delphinia and the Theseus-legend (Mommsen, *op. cit.* 421, note; Preller, *Griech. Myth.* i. 209). But probably this expiatory sacrifice was appointed by Epimenides; for we know (Diog. Laërt. i. 110) that at his suggestion two youths, Cratinus and Ctesibius, were put to death and a plague was stayed. (See Meursius, *Graecia Feriata*, s. v. Θαργήλια: Bode, *Gesch. der lyrisch. Dichtkunst der Hellen.* i. p. 173, &c., where an account is also given of the κραδίης νόμος: K. F. Hermann, *Handb. der Gottesd. Alterth.* § 60, n. 4; Preller, *Griechische Mythologie*, i. 209; Schömann, *Griechische Alterthümer*, ii. 254, 455–6; A. Mommsen, *Heortologie der Athener*, 50, 53, 414–425.) [L. S.] [L. C. P.]

THEATRUM. As the Greek drama sprang from the choral dances round the altar of Dionysus, so the architectural form of the Greek theatre was developed from the circular dancing-place, the ὀρχήστρα. At first there was no chorus distinct from the general body of worshippers, all of whom were free to join in the dance. As soon as a regular Chorus was instituted, it became necessary to reserve a circular space of ground for it. A ring of stones sufficed to mark off this circle. The altar of Dionysus was placed at its centre. The spectators stood around it, and watched the dance. So long as the dramatic element was limited to a dialogue between the Chorus and one actor, that person could stand on a raised place in the middle of the Chorus, and address himself to various points of the circle in turn. But when Aeschylus added a second actor, it became necessary that the actors should play towards some one side. It was no longer possible that the spectators should form a complete circle. They were now arranged in a semicircle, or something like it. But the whole circle of the dancing-place was still, as of old, kept clear for the Chorus. The actors stood facing the spectators, not within the circle of the dancing-place, but on the further side of it. Behind them was the tent

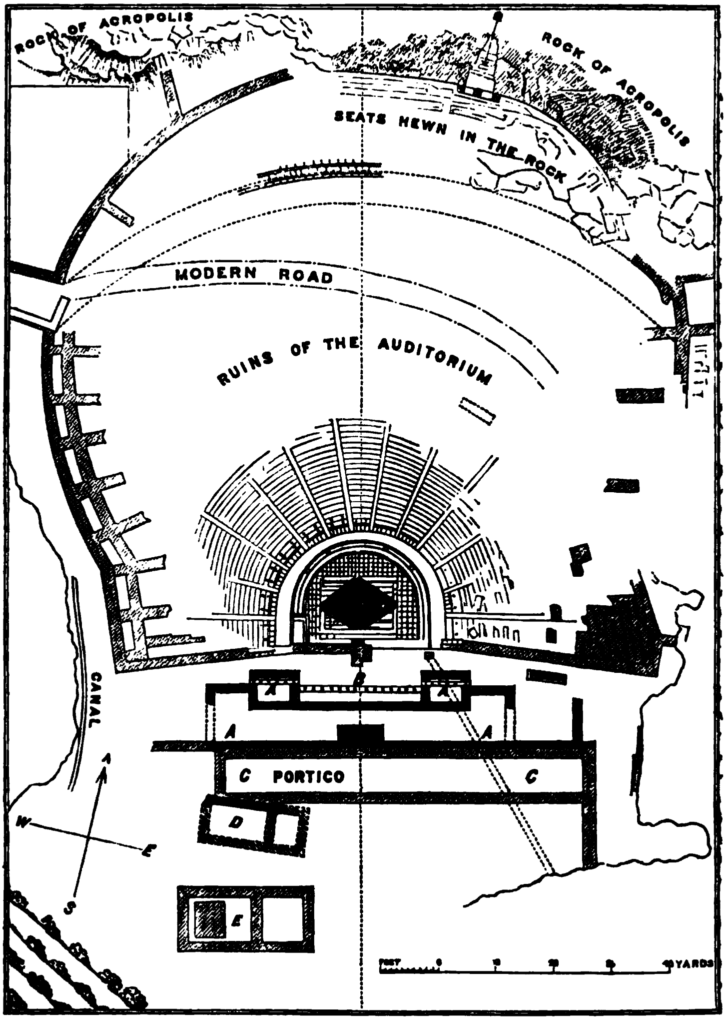


Fig. 1. Dionysiac Theatre.

or booth (σκηνή) in which they dressed. It was an easy improvement to conceal this tent from the spectators by a wooden screen, which could represent the front of a house, or such other background as suited the play. This screen was the προσκήνιον—that which masked the σκηνή. In the matured theatre the term was retained, though its primitive sense may have been forgotten. The "proscenium" was the background visible to the audience, whether this was a temporary wooden structure, or, as in later times, a permanent wall. Then σκηνή came to denote that part of the theatre which belonged to the actors, as distinguished from ὀρχήστρα, the place of the Chorus. Thus the κομμός, a lyric dialogue between Chorus and actor, is defined by Aristotle as θρῆνος κοινὸς χοροῦ καὶ ἀπὸ σκηνῆς (*Poet.* 12): and he uses the phrase ἐπὶ σκηνῆς where we should say, "on the stage" (*ib.* 24).

The oldest theatre of which we have any knowledge is the Dionysiac theatre at Athens. It has generally been supposed that a permanent stone theatre existed in the Λήναιον, or precinct of Dionysus, from the early years of the 5th cent. B.C. This belief rested on a passage in Suidas (*s. v.* Πρατίνας). He states that "in the 70th Olympiad" (500–496 B.C.) Pratinas was exhibiting tragedy, in competition with Choerilus and Aeschylus, when "the wooden benches (ἴκρια) on which the spectators were standing happened to fall; and, in consequence of this (ἐκ τούτων), a theatre was built." But the history of the Dionysiac theatre has been placed in a new light by the recent researches of the German Archaeological Institute at Athens. The excavations, begun in 1886, have yielded the following results, according to Dr. W. Dörpfeld:—(1) In the 5th cent. B.C., and down to about 330 B.C., the precinct contained no permanent building for scenic purposes. There were in it two temples of Dionysus (Fig. 1, *D*, *E*), both to the south of the present theatre. The older of these (*D*), which was the more northerly, dated from a time before Peisistratus. Close to it, on the N.E., was a circular ὀρχήστρα, about 78 feet in diameter, of which traces have been found under the buildings erected by Lycurgus. This ὀρχήστρα was then the only permanent provision for drama. All scenery, therefore, was temporary; and the spectators sat on wooden benches. It is observed that Andocides, in the speech on the Mysteries (399 B.C.), speaks of the conspirators whom he observed within the precinct of Dionysus as ἀπὸ τοῦ ᾠδείου καταβαίνοντας εἰς τὴν ὀρχήστραν, not εἰς τὸ θέατρον (§ 38): and the latter word, when used by Aristophanes, always means "the spectators." (2) The first permanent building for drama in the Λήναιον was that completed by Lycurgus, about 330 B.C. It consisted of a stone wall with two small wings, like towers, projecting from it on right and left (*A*, *A*); the length of the wall between them was about 65 ft. 7 in. The temporary decorations (of wood, with linen hangings) were erected in front of this wall, and supported by the wings. Behind the wall was an oblong room, extending somewhat beyond the wings, and serving for the use of the actors. A portico (*C*, *C*), opening on the precinct of Dionysus, ran along the south side of it. The new orchestra was to the north of this building. Dr. Dörpfeld supposes that it formed, like the older one, a complete circle, and that there was no raised stage; the actors stood on the same level with the Chorus. Rows of stone seats for the spectators were now constructed. After the time of Lycurgus no change, except of detail, took place in the auditorium. (3) At some later date, which cannot be fixed, a permanent stone proscenium (*B*), adorned with columns, and about 10 or 12 ft. high, was built in front of the wall with projecting wings which Lycurgus had erected. As the wings no longer served a practical purpose (in supporting the temporary scenery), they were annexed to the new proscenium, a part being cut off the front of each, so as to bring them more nearly into line with it. (4) An architrave-inscription found in the theatre shows that it was modified and embellished in the reign of "Claudius," by whom Nero seems to be meant. It was probably at this time that the orchestra received its present pavement of Pentelic and Hymettos marble; the significance of the diamond-shaped figure traced in the centre is uncertain. To this period also is referred the erection of a raised stage, supported in front by a sculptured wall. (5) The latest recorded changes in the Dionysiac theatre are associated with the name of a certain Phaedrus, and took place probably in the 3rd cent. (*C. I. A.* iii. 239). To these belong the existing front wall of the stage, adorned with sculpture of an earlier period; also the balustrade which now separates the auditorium from the orchestra, and the partial covering of the orchestra-canal with marble flags.

It is maintained by Dr. Dörpfeld that, not only in the Dionysiac theatre, but in all theatres of the Greek type, the actors stood on the same level with the Chorus; a stage raised above the orchestra was a Roman invention; and where such a stage occurs in a theatre of Greek origin, it is a later addition, made under Roman influence. The Roman raised stage, he thinks, was developed, when a Chorus was no longer used, by depressing the level of the circular orchestra in that part of it—the part furthest from the actors—where the Chorus formerly stood. This startling theory is based chiefly on the nature of the proscenium as it appears in the remains of some Greek theatres. The theatre of Epidaurus (Fig. 2), built about the middle of the 4th century B.C., is the best-preserved example of the Greek type; excavations have lately been made in it by the Greek Archaeological Society (1883).

The orchestra forms a complete circle, defined by a ring of flat stones. Beyond this circle, on the side furthest from the audience, are remains of a wall, about 12 ft. high, adorned with Ionic half-columns, and flanked by slightly projecting wings; there was one door in it, at the middle point. This wall must have been either the background of the scene, or the front of a raised stage. It is argued that it must have been the background, because (*a*) 12 ft. would be too great a height for a stage; (*b*) the width of the stage—about 8 ft.—would have been too small; (*c*) there is no trace of steps leading from the top of the wall to the orchestra. A similar wall occurs in the theatre at Oropus, and is identified as the προσκήνιον by an inscription which it bears. The theatre in the Peiraeus affords another example.

On the other hand, several considerations tell in favour of the received view, that Greek actors, at every period, had a raised stage. (1) The statement of the architect Vitruvius, who wrote about 20 A.D., is decisive, so far as the Roman period is concerned. He states that the Greek theatre had a raised stage, about 10 or 12 ft. high, but narrower than the Roman; the Greeks, he says, called it λογεῖον. Vitruvius uses the word *proscaenium* to describe this stage; and the same use of the term occurs in other writers, both Roman and Greek (cf. A. Müller, *Gr. Bühnenalterthümer*, p. 54, n. 2). Dr. Dörpfeld is therefore reduced to assuming that Vitruvius has made a mistake,—confusing the background of the scene in a Greek theatre with the front of a raised stage. But it is absurd to suppose that Vitruvius should have made such a blunder about the Greek theatres of his own day; and that, having accurately described a raised stage which did not exist, he should also have invented a name for it, λογεῖον. (2) The theatre at Megalopolis in Arcadia has just been excavated by members of the British School at Athens (see an account by Mr. W. Loring in the *Report* of the School for 1890). The date of the theatre may be placed in the second half of the 4th century B.C. Here there is a raised stage, of which the height was originally about 6 ft., and the width about 18 ft. A flight of steps, extending from end to end of it, led down to the orchestra. That it was a stage, and not a background, is proved (*a*) by these steps, (*b*) by the fact that access was given to it by three doors in the wall behind it. There is no reason to doubt that this stage is of the same date as the auditorium. A later Roman stage has been found in front of it. By this example, then, the existence of a raised stage in a Greek theatre of the 4th century B.C. is placed beyond doubt.

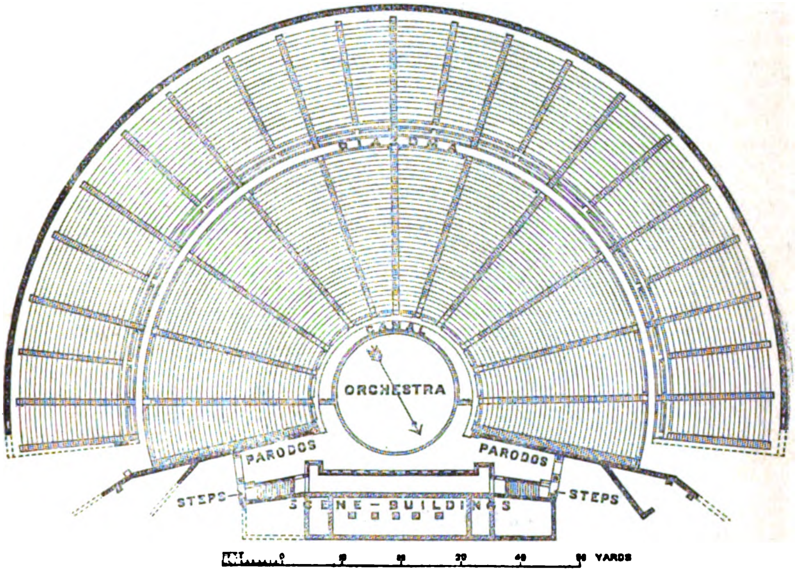

Fig. 2. Theatre at Epidaurus.

(3) With regard to the 5th century B.C., it was not to be expected that any remains of a raised stage should be found; temporary wooden structures would leave no trace. The Greek plays do not supply any literary evidence which can be deemed conclusive. There are some passages which indicate that the place where the actors stood was accessible to the Chorus (*e.g.* Soph. *Oed. Col.* 836 ff.);—as would be the case, if we supposed a stage with steps leading up to it, as at Megalopolis. Among the passages which seem to imply a raised stage, we may notice Ar. *Vesp.* 1514, where Philocleon says, ἀτὰρ καταβατέον γ' ἐπ' αὐτούς. This may, indeed, be rendered, "I must *enter the lists* against them;" but it also implies some change of position, more marked than such as would consist in moving merely from one spot in the orchestra to another, and would be most naturally explained by a descent into the orchestra from the stage. Some vases of Lower Italy, referable to the period 300–100 B.C., depict scenes from the Old Attic Comedy acted on a raised λογεῖον (cf. Baumeister, *Denkm.* pp. 1750 ff.). Plato (*Symp.* p. 194 A) speaks of the tragic poet Agathon as ἀναβαίνοντος ἐπὶ ὀκρίβαντα μετὰ τῶν ὑποκριτῶν. This probably refers, not to a performance in the theatre, but to the προάγων (TRAGOEDIA: cf. A. Müller, p. 365, n. 3). Still, it shows that the idea of placing actors on a raised platform was familiar to Athenians of the 5th century B.C. Even in the days before Thespis, when one member of the Chorus held a dialogue with the rest, he was mounted, we are told, on a kind of table (ἐλεός: Pollux, iv. 123). A recent writer suggests that the source of this story may have been a Comedy in which the beginnings of Tragedy were burlesqued (Hiller, *Rhein. Museum*, xxxix. p. 329). If this were so, it would only show that some sort of raised stage was conceived as necessary for even the most primitive

form of drama. Lastly, there is a strong *a priori* objection to the theory that actors and Chorus stood on the same level. The Chorus were usually drawn up in ranks facing the actors. With his cothurnus and mask, a tragic actor would still not overtop the Chorus by more than a head. Hence, a view of the actors would have almost been wholly denied to spectators whose seats were in the middle part of the lowest row. But those were the seats assigned to the most distinguished persons. This argument cannot be met by saying, as Dr. Dörpfeld does, that the Chorus was "usually" divided into ἡμιχόρια (leaving the actors visible between the two groups). Such an arrangement was not usual, but very exceptional. It may be allowed that, when the stage came to be as high as 12 ft., permanent means of communication between stage and orchestra cannot have existed, though temporary wooden steps might be employed at need. But before stages of that height came into use, such communication had ceased to be requisite, since the Chorus had no longer an active part in drama.

Vitruvius gives the ground-plan of a Greek theatre as follows. Describe a circle for the orchestra, and in it inscribe three squares. One side of one of these squares will represent the front line of the stage (A B). A parallel tangent to the circle will be the back wall of the stage (C D). The stage (*pulpitum*, λογεῖον) must be not less than 10, or more than 12 feet high. Next, parallel with A B, draw a diameter of the circle, E F. It will be seen in the diagram that at E and F the semicircle is so continued as to make a horse-shoe, ending at G H. The curves which thus continue it are segments of circles described from E and F as respective centres, with E F as radius. This is known as "the construction from three centres," viz., E, F, and the centre of the orchestra. The auditorium is shut in by lines which bisect the right angles at I and K. The space between G H and C D is a raised stage.

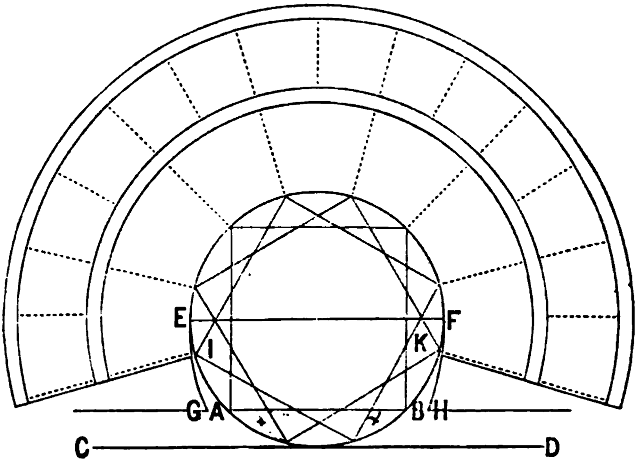

Fig. 3. Greek Theatre of Vitruvius.

The 4th century B.C. was the period at which stone theatres became usual in Greece. We may now proceed to consider their characteristics more in detail.

The ὀρχήστρα.—It has been seen that, even in the matured theatre, the "dancing-place" was still a complete circle, as in the old days of the cyclic choruses. Its central point was sometimes marked, either by a small pit (as at the Peiraeus), or by a stone (as at Epidaurus). Such marks probably indicate the spot on which the altar of Dionysus was to be placed. The word θυμέλη, "a place of sacrifice," means in classical poetry either "a shrine," or, more specifically, "an altar." Lexicographers and scholiasts often mention a θυμέλη in connexion with the theatre; but they do not agree as to what it was, nor do they furnish any certain clue. The most probable conclusion is that the θυμέλη was the altar of Dionysus, in the centre of the orchestra. Another view is that the name θυμέλη was transferred from the altar to a platform in the orchestra on which the altar was placed, and that this platform was the station of the Chorus,—connected by steps with the lower level of the orchestra (κονίστρα) and with the higher level of the stage (λογεῖον). It is true that the use of θυμέλη to denote a kind of stage was current in later times, when *thymelici*, "music-hall artists," were distinguished from actors proper (Isidore, *Orig.* xviii. 47). But this use arose under Roman influences, and cannot be assumed for the Greece of the 5th or 4th century B.C. A channel, to carry off rain-water, often surrounded the orchestra, being bridged by stones at the points from which the stairways led up to the seats.

The Auditorium.—In default of a special term like *cavea*, this is sometimes called θέατρον: though that word, when it does not mean the whole building, more often denotes the spectators (as we speak of "the house"). In the older Greek theatres the public entered by the side-passages (πάροδοι) between the proscenium and the orchestra,—the same which the Chorus used. Sometimes, indeed, we find an alternative mode of access, viz. by a path traversing high ground, and leading directly to one of the upper tiers:

this was the case at Athens, but it was exceptional. A crowd entering by the πάροδοι would find the pressure greatest at the mouths of the semicircular passage between the orchestra and the lowest row of seats,—before the spectators had distributed themselves to the several parts of the house. This fact helps to explain a peculiarity of construction. The lowest row of seats is not, as a rule, completely concentric with the orchestra, but is usually so contrived as to leave a wider space at the points just mentioned. A further advantage of this arrangement was that it afforded a better view to those who sat at each end of the semicircle.

Flights of steps ascending from the orchestra to the highest tier of seats divided the auditorium into wedge-like segments. The Greek word for such a segment was *κερκίς*, which properly meant "radius;" the Latin term was *cuneus.* A further division into upper and lower zones was effected by passages called *διαζώματα*, "girdles" (*praecinctiones*), which ran completely round the semicircle. At Epidaurus there is only one *διάζωμα*, which is not half-way between the lowest and highest tier, but nearer to the latter; and, while the lower zone (between the *διάζωμα* and the orchestra) is divided into only twelve *κερκίδες*, the upper contains twenty-two. At Athens only one *διάζωμα* can now be traced, but there may have been another: the number of *κερκίδες* is thirteen. The word *διάζωμα* can denote, not only the passage itself, but the zone which it marks off: thus "the eleventh row in the upper zone" is expressed by *τὸ ἑνδέκατον τοῦ δευτέρου διαζώματος βάθρον* (*C. I. G.* 4283). *ζώνη* is also used in that sense. Above the highest tier, another open passage ran round the house. The term *ἴκρια* properly denoted the wooden benches on which, in the earlier times, the spectators sat (cf. Ar. *Ach.* 24 f.: *ὠστιοῦνται . . . περὶ πρώτου ξύλου*). When stone seats were introduced,—which at Athens does not appear to have occurred before the time of Lycurgus (*c.* 330 B.C.),—such seats were founded, where it was possible, on the natural rock of the slope. At Athens, as at Megalopolis, artificial substructions were required in several parts, and this must almost everywhere have been the case, more or less. The material used for the seats varied much. Sometimes it is marble, as at Iassus in Caria and Perga in Pamphylia; at Athens and in the Peiraeus, it is (for the ordinary seats) a white limestone, finely wrought; while the smaller provincial theatres were often content with coarser stone and workmanship. The tiers of seats were called *βάθρα* or *ἀναβαθμοί*. At Athens the space allotted to one person was indicated merely by a line engraved on the stone (as at Sparta by a groove): it is described as *ἕδρα*, *τόπος*, *χώρα*, *χωρίον*, or simply *θέα* (*θέαν ἀγοράζειν*, *καταλαμβάνειν*).

The privilege of *προεδρία* in the theatre was given chiefly to four classes of persons: (1) certain priests and priestesses, among whom the priest of Dionysus was foremost: (2) certain magistrates: (3) foreigners who were honoured in an official character, as *πρέσβεις* or *θεωροί*: (4) citizens or foreigners who were honoured in their personal capacity, as benefactors of the state. For such persons special seats were provided, like armchairs, called *θρόνοι* or *καθέδραι*. At Athens these chairs, made of Pentelic marble, occupy the whole of the lowest row, while others are placed in different parts of the house, though in no case higher up than the twenty-fourth row; those assigned to priests or officials bear their titles; thus the central chair of the semicircle is inscribed, ΙΕΡΕΩΣ ΔΙΟΝΥΣΟΥ ΕΛΕΥΘΕΡΕΩΣ. According to one recent view, the chairs in the lowest row date from the time of Lycurgus; it has more generally been supposed that all these chairs are of the Roman age,—as all the present inscriptions certainly are. At Epidaurus several rows of seats with backs and arms were assigned to those who enjoyed *προεδρία*. Elaborate ornament was often applied to such chairs;—the feet being shaped like lion's claws,—the front or back carved with mythical subjects in relief, etc.

The acoustic properties of a Greek theatre would be naturally good, since the actors had a high wall behind them and a rising slope in front. Vitruvius, indeed, says that artificial aid was sought from "brazen vessels," "which the Greeks call *ἠχεῖα*," so placed in the auditorium as to reverberate the voices of the actors. He even speaks of these "resonators" as being nicely adapted to the required musical pitch (ii. 1, 9). The theatre at Aizani in Cilicia has a series of niches above the *διάζωμα*: and similar niches exist elsewhere. According to one view, these niches held the *ἠχεῖα*, while another connects them merely with the substructions of seats. The statement of Vitruvius leaves no doubt that *ἠχεῖα* were used, at least sometimes, in the theatres of his own day: but it remains uncertain whether such a device was employed by the Greeks of an earlier time.

The outer wall enclosing the auditorium ordinarily followed the curve of the semicircle, unless the nature of the ground caused some deviation. At Athens the auditorium was partly bounded on the N. by the steep rock of the Acropolis, while the rest of its boundary was formed by strong walls of conglomerate. Where the external appearance of these walls became important, viz. in the S. and S.W. portions, they were cased with finely-wrought limestone. The general outline at Athens was that of a large segment of a circle, described from a centre considerably N. of the point which served as centre of the orchestra: for a small distance at the S.W. corner the curve passed into a straight line. Examples also occur in which the walls enclosing the auditorium were rectangular, as at Cnidus, and in the smaller theatre at Pompeii. The walls flanking the seats at each end of the semicircle were either carried in a single sloping line from the topmost tier to the orchestra, or built in a series of steps corresponding with the tiers. In the best Greek period such walls were not exactly parallel with the line of the proscenium, but started inwards a little, towards the centre of the orchestra. This was the case at Athens and at Epidaurus.

Scenic Decoration.—The testimonies on this subject are of two classes. (1) Notices in writers chiefly belonging to the Roman age, especially lexicographers and scholiasts. Among these the most important is the grammarian Julius Pollux (*flor.* 170 A.D.), in his *Onomasticon*, book iv., sections 128–132 (*περὶ ὑποκριτῶν σκευῆς*). As has lately been shown by Rohde (*De Iulii Pollucis in apparatu scaenico enarrando fontibus*, Leipsic, 1870), the source principally used by Pollux was a work by Juba, a writer of the later Alexandrian age, entitled Θεατρικὴ ἱστορία, in at least seventeen books; while Juba, in his turn, had sources going back to Aristophanes of Byzantium (200 B.C.), but not further. The besetting fault of Pollux, in abridging from this ample material, seems to have been an omission to distinguish between the normal and the occasional resources of the stage. (2) The second kind of evidence is that derived from the Greek dramatic texts themselves. This source, scanty as it is, is the principal one on which we have to rely in regard to the practice of the 5th and 4th centuries B.C. Not long ago it was the custom to treat the notices in Pollux and the other late authorities as if they could be applied without reserve to the great age of Athenian Tragedy and Comedy. A more critical study has shown the need of greater caution in this respect. It is not difficult to suppose that, when dramatic poetry had culminated, the art of scenic decoration may still have been very rude, while it is probable that much of the apparatus described by late writers had its origin under the Diadochi or the Empire. The history of our own stage could show a similar course, from the triumphs of poetry to those of mechanism.

In the extant plays of Aeschylus, Sophocles, Euripides, and Aristophanes, the action most often takes place in front of a house, with a "practicable" door; sometimes in front of a temple, a cottage, a tent, a cave, or a rock. Painted linen hangings, erected on a wooden frame, would have sufficed for such a background. Aristotle, in sketching the growth of Tragedy, says that Aeschylus added the second actor, and made the dialogue predominate over the choral part, while Sophocles introduced the third actor and the use of *scene-painting* (σκηνογραφία). Now, this last fact must have stood out clearly in Athenian tradition, which Aristotle had every means of knowing, when he thus coupled it with the other novelty as an invention distinctive of Sophocles. It is usually assumed, even by recent writers, that Aristotle is here irreconcilable with Vitruvius, who ascribes the introduction of scene-painting to Aeschylus. Such an assumption is not, we think, necessary. The words of Vitruvius (vii. *praef.* 11) are: "primum Agatharchus Athenis, *Aeschylo docente tragoediam*, scaenam fecit et de ea commentarium reliquit:" and he then goes on to say how the stimulus given by Agatharchus led Democritus and Anaxagoras to develop principles of perspective. The phrase, "while Aeschylus was exhibiting tragedy," merely describes Aeschylus as contemporary with the innovation. Sophocles first exhibited in 468 B.C., twelve years before the death of Aeschylus. Aristotle and Vitruvius are reconciled if we suppose that Sophocles introduced σκηνογραφία in the early days of his career; a fact which will also help us to understand why that improvement was peculiarly associated with his name. Even before Agatharchus had made a beginning of artistic σκηνογραφία, some ruder kind of drawing may have been used. Thus in the *Persae* of Aeschylus (472 B.C.) the palace was probably indicated. In the *Ion* of Euripides (*circ.* 421 B.C.), where the scene is laid at Delphi, the Chorus of Athenian maidens point with admiration to the sculptures which adorn the front of the temple. We may suppose that some representation of these, though not perhaps a very elaborate one, appeared on the proscenium.

With regard to "massive" decoration, as distinguished from a painted background, the objects required by the texts are simple, such as altars, statues of gods or heroes, rocks, and seats. But the texts further prove that certain mechanical appliances were available at need. (1) The ἐκκύκλημα was a small movable stage on wheels, which could be rolled forward through the door in the proscenium. There was room on it for three or four persons, and it was low enough to allow of an actor stepping off it with ease. The most frequent use of the ἐκκύκλημα was when the corpse of a person slain within the house was to be shown to the audience,—sometimes with the murderer standing beside it. The moment at which the ἐκκύκλημα was pushed forward is often, though not always, marked in the text by a reference to the opening of the door. Examples are:—in Aesch. *Ag.*, Clytaemnestra is thus shown standing by the corpses of Agamemnon and Cassandra; in *Cho.*, Orestes with the corpses of Aegisthus and Clytaemnestra: in Soph. *El.*, Orestes and Pylades with the corpse of Clytaemnestra; in *Ant.*, the corpse of Eurydice: in Eur. *Herc. Furens*, Heracles with the corpses of his wife and children; in *Hippol.*, the corpse of *Phaedra*. But this was not the only case in which the appliance was used: it could also be employed for any *tableau* in the interior of a house. Thus in Aesch. *Eum.* the Pythia speaks the prologue in front of the temple, and then the ἐκκύκλημα is used to show Orestes at the omphalos within. Similarly in Soph. *Ai.*, when Tecmessa opens the tent, this machine serves to display Ajax prostrate amid the slaughtered cattle. As appears from some passages, the ἐκκύκλημα could be pushed far enough forward to admit of an actor entering, or making his exit, at the door behind it. It should be noted that the use of the ἐκκύκλημα is not merely an inference from later writers and from hints in Tragedy, but is proved by the two parodies in Aristophanes, where Euripides and Agathon are wheeled out, and are then once more withdrawn from view (*Ach.* 408 ff., ἐκκυκλήθητ' . . . ἐκκυκλήσομαι: *Thesm.* 265, ἐσκυκλησάτω). The exact nature of the ἐξώστρα is uncertain, but it was evidently akin to the ἐκκύκλημα, differing from it, possibly, only in the mode of propulsion. (2) Machinery for showing persons in the air was required by the appearances of the gods, and in some other cases,—as when Medea is seen above the palace in the chariot given to her by the Sun (Eur. *Med.* 1319), or when Trygaeus soars aloft on his beetle (Aristoph. *Pax*, 80). Two different contrivances seem to have been used: both were, of course, concealed by the proscenium. One was an apparatus worked by a wheel (τροχὸς) and ropes (αἰῶραι), and called αἰώρημα,—which was used when the person was to be seen gradually rising into the air, or descending from above. As Trygaeus rises into the air, he begs the operator to be careful: ὦ μηχανοποιέ, πρόσεχε τὸν νοῦν ὡς ἐμέ (Aristoph. *Pax*, 174). So in fragment 3 of the *Daedalus* the machinist is thus directed,—ὁ μηχανοποιός, ὁπότε βούλει τὸν τροχὸν | ἐλᾶν ἀνεκάς, λέγε, χαῖρε, φέγγος ἡλίου. The other device was a sort of platform, projecting from the wings at the back of the proscenium, close to its upper edge. This was the so-called θεολογεῖον, used when the apparition of a god or hero was to be *sudden*, as it is in Soph. *Phil.*, and in Eur. *I. T.*, *Helen.*, *Suppl.* The κρεμάθρα in which Socrates is suspended (Aristoph. *Nub.* 218) is a burlesque of the tragic appliances. (3) Akin to the θεολογεῖον must have been the contrivance used when a person is to appear on the roof of a palace (as the watcher in Aesch. *Ag.*: Antigone and the paedagogus in Eur. *Phoen.*, etc.). A wooden platform, high up behind the proscenium, would have sufficed: according to Pollux, it was called a διστεγία.

These seem to be the only forms of decoration or mechanism which can certainly be inferred from the texts of the tragedians and of Aristophanes. They are all compatible with a temporary wooden structure, and with a comparatively simple phase of scenic art. When, in the course of the 4th century B.C., permanent stone theatres became usual in Greek lands, the general character of scenic decoration was perhaps not at first affected thereby. Behind the proscenium there was now a permanent wall, forming the front of the building assigned to the actors. But the proscenium itself probably continued, for a time, to be temporary,—a wooden structure, with painted hangings. In the Dionysiac theatre, as Lycurgus left it, two small tower-like wings project from each end of the permanent back wall. These, it is conjectured, were designed to facilitate the erection of the wooden proscenium.

It may have been at this period that περίακτοι were first introduced. These were triangular wooden prisms, revolving on a pivot (whence the name), with scenery painted on each of their three faces. One περίακτος was placed at the left wing, and another at the right. They took the place of modern side-scenes, and also served to indicate changes of scene, according to a regular conventional method. The περίακτος on the spectator's right hand represented the locality in which the action was taking place. The περίακτος on his left hand represented a region outside of that locality. If, for instance, the scene of the play was laid at Delphi, the right-hand περίακτος would illustrate that place, while the other might represent the road leading to Athens. The same rule governed entrances and exits: a Delphian would come on from the right, a stranger from the left. If the scene was to be changed from one spot near Delphi to another in the same vicinity, the left-hand περίακτος would be turned so as to present a new face, but the right-hand one would be left unaltered. If the scene was shifted from Delphi to Athens, both περίακτοι would be turned. The first case was technically a change of τόπος: the second, of χώρα.

There are only two Greek plays in which it is necessary to assume a change of scene. In the *Eumenides* the action is transferred from Delphi to Athens: in the *Ajax*, from the front of the hero's tent to a lonely place on the sea-shore. It is probable that, in the first of these examples, the change was merely symbolised, by substituting the βρέτας of Athena for a statue of Apollo; while the building painted on the background was identified, first with the Delphian temple, and then with the Erechtheum. In the second example, if the background was a landscape, nothing was required but to remove the hangings which represented the tent. The use of περίακτοι in the 5th century B.C. cannot be proved from the dramatic literature. On the other hand, they would have been found peculiarly convenient when the old wooden proscenia, with painted hangings, were replaced by stone proscenia adorned with sculpture. At Epidaurus there is such a proscenium, with Ionic half-columns, which is probably of a later date than the rest of the building; and the small wings which slightly project from it at each end may have served, according to a probable conjecture, for the reception of περίακτοι. In the Dionysiac theatre a permanent proscenium was similarly introduced, after the time of Lycurgus. The projecting towers of his scene-building (noticed above) then became wings of the new structure, like those at Epidaurus. There is no evidence that, in addition to revolving scenery, the Greek theatre had scenes which could be shifted on grooves; though the Roman stage, as Servius tells us, had both (*scaena versilis*—*scaena ductilis*: on *Georg.* iii. 24).

Entrances for the actors.—Pollux speaks of three doors in the proscenium, the central one being called θύρα βασίλειος, because the chief persons of the play used it. Vitruvius confirms this statement. Ruins of the Hellenistic or Roman age show sometimes three doors, sometimes five. In the latter case, the two extreme doors may have opened, not on the stage, but on spaces at either side of it (παρασκήνια), used by actors waiting for their turns, or by officials. In the theatre at Megalopolis (4th cent. B.C.) there were three entrances to the stage. Only one entrance is traceable in the remains at Epidaurus, Zea, and Oropus respectively. It is on a level with the orchestra; hence those who disbelieve in a raised stage regard it as the entrance for the actors. But it may have passed beneath a raised stage, serving to give the *employés* of the theatre a direct access to the orchestra. How many doors there may have been in the painted hangings of the old wooden proscenia, we cannot tell. The 5th century texts show that, besides the door or doors in the proscenium, there were also entrances for the actors from the sides, right and left.

Pollux says that when ghosts appeared on the scene they came up either by ἀναπιέσματα (our "trap-doors"), or by the χαρώνιοι κλίμακες. It has generally been supposed that these κλίμακες led from the orchestra to the stage. This is the case at Megalopolis, where the steps extend along the whole front of the λογεῖον. Another theory is that they connected the stage with a passage beneath it, invisible to the spectators.

No curtain was used in the Greek theatre. When a play opened with a group in position (such as the suppliants in the *Oed. Tyr.*), the actors must have simply walked on to the scene, and assumed that position. When one play followed another, and the background had to be changed, that change took place before the eyes of the spectators. In such matters we cannot judge the feelings of Athenians, assembled at the Dionysia, by the requirements of modern playgoers. At Athens dramatic idealism went hand in hand with scenic simplicity.

The Administration of the Theatre.—A Greek theatre was the property of the state, and the performances in it were acts of public worship, under state control. At Athens, in the 5th and 4th centuries B.C., drama accompanied two Dionysiac festivals,—the Lenaea, in January, and the Great Dionysia, in March. (We are not here concerned with the Rural Dionysia, in December,—at which, during this period, no *new* pieces seem to have been acted.) At each festival, both Tragedy and Comedy were produced; but the Lenaea was peculiarly associated with Comedy, and the Great Dionysia with Tragedy. There was a period, indeed, of some fifty years, dating from the first institution of the Great Dionysia (*circ.* 478 B.C.), during which Comedy alone appears to have been produced at the Lenaea. The cost of the performances at each festival was defrayed from three sources. (1) The theatre was let by the state to a lessee, who received the money paid for admission, and in return undertook certain charges. One of these, as appears from an extant document (*C. I. A.* ii. 573), was the maintenance of the building in good repair. Hence the classical name for the lessee, ἀρχιτέκτων (Dem. *de Cor.* § 28): later writers call him θεατρώνης (Theophrastus), or θεατροπώλης (Pollux). He was also bound to provide a certain number of free seats (as for the persons entitled to προεδρία): but for these he was probably reimbursed by the Treasury. The provision of scenery, and of costume for the actors (excepting the choreutae), appears also to have devolved upon the lessee. He was certainly charged with the custody of the scenery and of all the theatrical dresses and properties. He also paid the cashiers, the persons who showed spectators to their places, and all other *employés* of the theatre. (2) The second source of contribution was the choregia. For each festival the Archon Eponymus appointed as many choregi as there were competing poets; at the Great Dionysia the number was usually three for Tragedy and three for Comedy. The choregi were chosen from men nominated by the ten Attic tribes in rotation. The duty of the choregus was to furnish one chorus of fifteen persons for Tragedy, or of twenty-four for Comedy. He provided a suitable place for their training (χορηγεῖον), and maintained them till the festival was over. If the poet did not train them himself, the choregus had to find a χοροδιδάσκαλος. He had also to supply the flute-player (αὐλητής) who preceded the Chorus on entering or quitting the orchestra, and played the occasional music. He purchased the costumes, masks, etc., for the Chorus. But his task was not finished when the Chorus was trained and equipped. He had also to supply any mute persons (κωφὰ πρόσωπα) that might be required for the piece. (3) The third contributor was the state. When a poet had applied to the Archon for a Chorus, and his application had been granted, the Archon next assigned to him three actors, who were paid by the state. It did not rest with the poet to decide which of these three should be πρωταγωνιστής, etc.: he received them from the state already classified according to merit, as actors of first, second, and third parts. This classification rested ultimately on special ἀγῶνες in which actors were directly tried against each other, and which were distinct from the performances at the festivals. If a poet ever required a fourth actor (probably a very rare case), he could only go to the choregus, who might make an "extra grant" (παραχορήγημα). The state also paid the marshals (ῥαβδοῦχοι) who kept order in the theatre, and who were stationed in the orchestra. Lastly, a certain *honorarium* (distinct from the festival-prizes) was paid by the Treasury to each of the competing poets, according to the order in which they were placed by the judges.

The character of the dramatic contests as solemnities conducted by the state was strongly marked in the forms of procedure. A few days before the Great Dionysia, the ceremony called the προάγων ("prelude") was held in the old Odeion near the Enneacrunos. The competing poets, with their respective choregi, were then formally presented to the public; the actors and choruses were also present, in festal, but not in scenic, attire; and the titles of the plays to be produced at the approaching festival were officially announced. When the first day of the Great Dionysia arrived, the dramatic contests were preceded by the transaction of some public business in the theatre. It was then that crowns of honour were awarded for public services, and that the orphans of Athenians slain in war were presented to the citizens. In due course a public herald summoned the first on the list of competing poets. He entered the orchestra, attended by his choregus and chorus, and poured a libation at the thymele to Dionysus. His procession then withdrew; the orchestra was once more empty (until the Chorus should make its dramatic entrance); and the play began. One prize for Tragedy and one for Comedy were awarded by ten judges, taken by lot from a large number of persons whom the senate (with the choregi) had chosen from the tribes. At the close of the contests, five judges (taken from the ten by a second ballot) announced the awards. The successful poets were then crowned, before the audience, by the archon. Shortly after the festival a public meeting, for business connected with it, was held in the theatre. Any complaints of misconduct which might have arisen were then heard; and officials who had distinguished themselves received public commendation.

The Audience.—According to a recent estimate the Dionysiac theatre was once capable of seating about 27,500 persons. It must be remembered that all the upper tiers have been destroyed, and that the ancient capacity was enormously greater than it would appear from the seats which still exist. Plato was using round numbers when he spoke of "more than 30,000 Greeks" as present in the Dionysiac theatre at the tragic contests (*Symp.* 175 E), but it is quite conceivable that the number was sometimes nearer to 30,000 than to 20,000. The vast theatre at Megalopolis could hold, according to one modern computation, no fewer than 44,000 persons. Such numbers become intelligible when we consider that the Greek drama was essentially a popular festival, in which the entire civic body was invited to take part. Even young boys were present, both at Comedy and at Tragedy. Women were certainly present at Tragedy; and a fragment of Alexis shows that, in the 4th cent. B.C., they were admitted to the performances of Comedy also. This, however, was the "Middle" Comedy—very different, in some respects, from the "Old" Comedy of Aristophanes. It would be a natural inference from the seclusion in which Athenian women lived that they were not admitted to the Old Comedy. But against this *a priori* argument may be set another,—viz. that, at the Dionysia, Tragedy and Comedy were merely different sides of one *ἀγών*: those who could participate in one were entitled to share in the other. A line drawn on grounds of decorum would dissever elements which, in the Dionysiac idea, were inseparable. There is no conclusive literary evidence. But one passage in Aristophanes (*Pax* 964 ff.) cannot be naturally explained except on the supposition that women were present. Another passage in the same play (*Pax* 50 ff.) speaks, it is true, of males only: but that is, obviously, because the speaker, a slave, is describing his *δεσπότης* to actual, or future, *δεσπόται*. At Athens the *μέτοικοι* were admitted to the theatre. (Their exclusion from the Lenaea is not proved by Aristoph. *Ach.* 507 f., even if v. 508 be sound.) Foreigners were also admitted, whether officials or private persons.

In the earliest days of Athenian drama, admission was doubtless free of charge; payment may have been introduced after the expulsion of the Peisistratidae, when the city began to find the cost too heavy. In the 5th and 4th centuries B.C. the price of admission for one day was two obols, or not quite 4*d.* Pericles introduced the system by which the state paid two obols to each citizen for each day of the Dionysiac festivals, in order that he might attend the theatre. This *θεωρικὸν* was partly defrayed from the tribute of the allies, and probably began about 454 B.C. It was distributed by the demarchs in the several demes; and, though it was first devised in the interests of the poor, the only condition of obtaining it seems to have been inscription on the *ληξιαρχικὸν γραμματεῖον* of the deme. The number of persons receiving the *θεωρικὸν* in 431 B.C. has been computed at 18,000. In its later and wider form (as extended to non-dramatic festivals) the *θεωρικὸν* became an abuse: in its original form it was substantially a state-grant in aid of education. All seats were of the same class, except those reserved for persons who had the right of *προεδρία*, and who paid nothing. (Cf. Dem. *de Cor.* § 28.) The places of payment were probably in the *πάροδοι* leading to the orchestra. Specimens of ordinary Greek theatre-tickets are extant. These are small leaden coins, bearing on one side some emblem of the theatre, such as a Dionysus with a tripod, or an actor's mask; and on the obverse, the name of an Attic tribe, or a numeral. Many examples have been published by Benndorf (*Zeitschr. f. d. österr. Gymn.* xxvi.). Another kind of theatre-ticket also occurs. This is a small round mark of bone or ivory, bearing on one side some artistic device (such as the head of a deity), and on the other a number (never higher than 15), in both Greek and Roman figures. These were tickets, of the Imperial age, for persons who had *προεδρία*. The numbers probably indicate divisions of the house. How far such division was carried is uncertain. It is a probable conjecture that at Athens a certain portion of the house (perhaps a whole segment, *κερκίς*) was allotted to each of the Attic *φυλαί*. This is confirmed by the occurrence of tribal names on the leaden tickets noticed above; also by the fact that the choregia was organised on a basis of tribes; and, lastly, by the analogy of Roman colonies in which certain *cunei* of the theatre were assigned to certain *curiae*. The members of the senate sat together in a definite part of the Dionysiac theatre (*τὸ βουλευτικόν*, Aristoph. *Av.* 794). For youths between the ages of 18 and 21, a space was similarly reserved (*τὸ ἐφηβικόν*).

The performances began in the morning, and lasted till evening; but it is attested by the comic poet Pherecrates—who gained his first prize in 438 B.C.—that the spectators had usually taken the morning meal (*ἄριστον*) before they came (Athen. x. 464 e). In the next century, however, we hear of performances beginning at daybreak (Aeschin. *in Ctes.* § 76). The older Athenian custom was for all the spectators to wear wreaths (as at a sacrifice); but this had perhaps gone out before 350 B.C. As the whole day was spent in the theatre, the visitors brought light refreshments (*τραγήματα*) with them. Choregi sometimes courted popularity by a distribution of cakes and wine: and Aristophanes has pilloried those rival poets who employed slaves to throw nuts about the house. An Athenian audience was closely attentive,—detecting the slightest fault of speech,—and highly demonstrative. Loud clapping of hands, and shouts of applause, expressed their delight; disapproval found vent in stamping with the feet, hissing, and hooting (*κλώζειν*). Never, probably, has the ordeal for an actor been more severe than it was at Athens. Persons of note who entered the house were recognised with frank favour, or the reverse. Indeed, the whole demeanour of Athenians at the Dionysia appears to have been marked by a certain sense of domestic ease, as if all the holiday-makers were members of one family.

From the latter part of the 4th century B.C. onwards, it became usual to produce drama, not merely at the Dionysia, but on any occasion of special rejoicing; a result partly due to the personal taste of Alexander the Great for theatrical shows of every kind. Hence the theatres gradually lost that sacred character which had been theirs so long as they were set apart for the worship of Dionysus. A further consequence was that they began to be used for various entertainments which had nothing to do with drama, such as the exhibitions of conjurers or acrobats, and, in the Roman age, gladiatorial shows, or combats with wild beasts. Even in the 5th century B.C., indeed, cock-fighting had been held on one day of the year in the Dionysiac theatre,—a custom which legend connected with an omen seen by Themistocles in the Persian wars: but this—unlike the later innovations—was consistent with the *religio loci*, since the cult of Asclepius had points of contact with that of Dionysus. Thus the *προάγων* of the Dionysia (noticed above) was held on the day, and near the place, of the sacrifice to Asclepius.

Mention has been made of the meetings for public business held in the Dionysiac theatre just before and after the Great Dionysia. In the latter part of the 5th century we hear of the citizens convening the ecclesia in the theatre at Munychia, and in the Dionysiac theatre itself, when, under the Four Hundred, the Pnyx was not available (Thuc. viii. 93 f.). By 250 B.C. it had become usual to hold ordinary meetings of the ecclesia in the Dionysiac theatre; though the elections of magistrates (ἀρχαιρεσίαι) continued to be held on the Pnyx. From the 5th century B.C. the theatre had been the regular place for the bestowal of public honours, such as crowns. In later times a theatre was often also the scene of an exemplary punishment. One of the earliest instances is the execution of Hippo in the theatre at Messana, of which place he had been tyrant (*circ.* 338 B.C.; Plut. *Timol.* 34). Sepulchral inscriptions, of the Roman age—sometimes commemorating Christians — have been found both in the Dionysiac theatre and in the Odeum of Herodes Atticus; whence it has been conjectured that, in late times, burials occasionally took place within those precincts. As statues of Themistocles and Miltiades stood in the Dionysiac theatre, so, at every period of Greek antiquity, such places were adorned with monuments of statesmen and soldiers, no less than of poets, musicians, and actors. This was in accord with the true idea of the Greek theatre, which was not merely the home of an art, but also a centre of civic reunion.

THE ROMAN THEATRE.

Rome possessed no theatre of stone till 55 B.C. Just a century earlier such an edifice had been in progress, when P. Cornelius Scipio Nasica procured a decree of the senate for its destruction (Liv. *Epit.* 48). The spirit of the Roman veto on permanent theatres was one which refused to regard the drama except as a passing frivolity. Wooden theatres were erected, and pulled down when the occasion was over. But before the middle of the 1st century B.C. these temporary structures had already begun to show a high elaboration. The building put up by the aedile M. Aemilius Scaurus in 58 B.C. contained 80,000 seats; the proscenium was adorned with pillars of marble and statues of bronze; and the whole work seems to have possessed every element of grandeur except permanence. The old interdict had already lost its meaning; and three years later Pompeius was allowed to erect, near the Campus Martius, the first theatre of stone. The model is said to have been the theatre of Mitylene, and the number of seats 40,000. The theatre of Marcellus, built by Augustus, and named after his nephew, was also of stone, and could hold 20,500 persons. A third such building, with a capacity of 11,510, was completed in 13 B.C. by L. Cornelius Balbus. These are the *trina theatra* of Suetonius (*Aug.* 45). Meanwhile many provincial towns in Italy and elsewhere had long possessed stone theatres, built or altered under Roman influence.

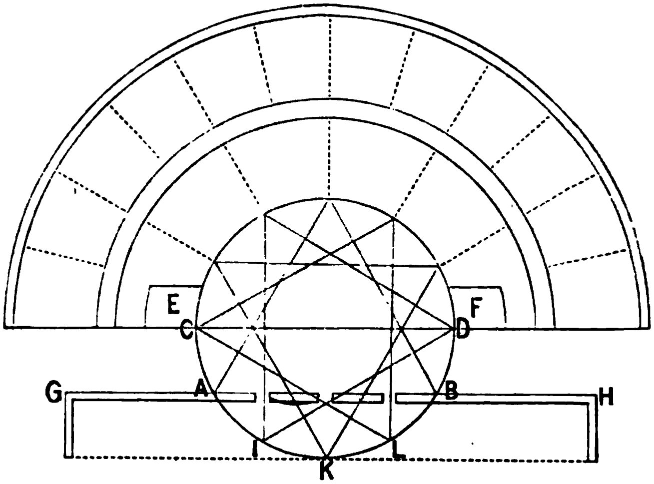

Fig. 4. Roman Theatre of Vitruvius.

The Roman type of theatre is simply the Greek type modified in certain particulars. The ground-plan is thus described by Vitruvius. In a circle of the same diameter which the orchestra is to have, inscribe three equilateral triangles. Take one side of any triangle, and let this be the back wall of the stage, *scaenae frons* (A B). A diameter of the circle, drawn parallel with A B, will represent the line dividing the stage from the orchestra (C D). The seats for the spectators are arranged round the orchestra in semicircles concentric with it. The five points above the line C D, where the angles touch the circumference, are the points from which five flights of steps lead up to the seats, dividing them into six *cunei*. Above the first zone, or semicircular passage (*praecinctio*), the seats are divided into twelve *cunei* by eleven stairways. Just above the points C and D, access is given to the orchestra by two vaulted passages which pass under the upper rows of seats (E, F). The platform of the stage is prolonged right and left, so that its total length (G H) is equal to twice the diameter of the orchestra. In the back wall of the stage there are to be three doors, the positions of which are marked by the points I, K, L. Thus the distinctive features of the Roman theatre are these two: — (1) The orchestra is not, as in the Greek theatre, a circle (or the greater part of it), but only a semicircle. The diameter of the orchestra is now the front line of a raised stage. Consequently the auditorium, also, forms only a half-circle. The primary cause of this change was that the old Dionysiac chorus had disappeared; the orchestra, therefore, had no longer a dramatic use. (2) In the Greek theatre the auditorium and the scene-buildings were not architecturally linked. The πάροδοι were open passages between them. In the Roman theatre the side-walls of the scene-building were carried forward till they met the side-walls of the auditorium. By this organic union of the two main parts the whole theatre was made a single compact building.

These two main differences explain the other points in which the Roman theatre varied from its Greek original. Thus: (i.) Having closed the openings afforded by the πάροδοι, the Romans needed some other access to their semicircular orchestra. Here the arch served them. By cutting off a few seats in the lower rows at the angles right and left of the stage, they obtained height enough for vaulted passages, which ran under the auditorium into the orchestra. (ii.) The solid unity of the Roman theatres lent itself to the Roman taste for decoration of a monumental character. The permanent Greek proscenia, though usually adorned with columns, had been simple. But the richest embellishments of architecture and sculpture were lavished on the Roman proscenia, in which two or more stories were usually distinguished by carefully harmonised modes of treatment. (iii.) A similar magnificence was shown in the external façades. Greek theatres had usually been erected on natural slopes. A Roman theatre was more often built on level ground. The auditorium rested on massive substructions, of which the walls were connected by arches. From the open spaces thus afforded, numerous wide staircases ascended, beneath the auditorium, to the several rows of seats. Corridors, opening on these staircases, ran along the inner side of the semicircular wall which enclosed the auditorium. The exterior of this wall was adorned with columns, having arcades between them, and rising in three or more successive stories, divided by architrave and cornice. Thus, while the architectural significance of a Greek theatre depended wholly on the interior, a Roman theatre had also the external aspect of a stately public building.

With regard to the internal arrangements of the Roman theatre, the following points claim notice. (1) The raised stage (*pulpitum*, λογεῖον) is in some instances on a level with the lowest row of seats behind the orchestra, as at Aizani in Cilicia and Aspendus in Pamphylia. Sometimes, again, the stage is rather higher, but the (originally) lowest row of seats has been abolished, leaving the stage still level with those seats which are actually lowest: this is the case at Pergamum and Assus. In a third class of examples, the stage is higher than the lowest row of seats,—as it is at Orange. The Roman stage in the Dionysiac theatre at Athens is of this class. (2) Awnings were spread over the theatre to protect the spectators from sun or rain. These were usually called *vela*: the term *velaria* occurs only in Juv. iv. 122. Pliny, who describes them as *carbasina vela* (made of linen), says that they were introduced by Q. Catulus, in 78 B.C. (xix. 23). They were supported by masts (*mali*), fixed to the outer walls of the theatre by massive rings or sockets, which can still be seen at Orange or Pompeii. Between the masts were cross-beams (*trabes*), for greater convenience in unfurling the *vela*. Such awnings were of various colours, as yellow, red, dark-blue (Lucr. iv. 75 ff., where see Munro). (3) Until the play began, the stage was concealed by a curtain; which was then lowered. The place into which it sank, just inside of the front line of the stage, can be seen in the larger theatre at Pompeii. At the end of the piece the curtain was drawn up. Hence, where we say, "the curtain rises," the Romans said, *aulaeum mittitur* or *subducitur*: "the curtain is up," *aulaeum premitur*: "the curtain falls," *aulaeum tollitur*. The word *siparium* (from the rt. of σίφαρος, top-sail, *supparum*) meant a folding screen. Apuleius (150 A.D.) describes a kind of ballet as beginning "when the curtain had been lowered, and the screens folded up" (*sipariis complicitis*, *Met.* 10, p. 232; cp. *ib.* 1, p. 7). If these screens were within the curtain, the reason for using them along with it may have been to heighten the effect of a tableau by disclosing it gradually. In the later parts of the piece, they may have served to conceal scene-shifting. Another use is also possible. Theatres of the Macedonian and Roman period sometimes had two stages, the higher being used by the regular actors, the lower by mimes or dancers; and the latter may have been concealed by the *siparium*, as the other by the *aulaeum*. The word *siparium* is regularly associated with comedy or mimes. (Seneca, *de tranq. An.* c. 11, § 8; Juv. *Sat.* 8, 186.) (4) Allocation of seats. The orchestra was reserved for senators. As a special mark of distinction, foreigners (usually ambassadors) were occasionally admitted to it (see Tac. *Ann.* xiii. 54). The rest of the auditorium was called *cavea*. The Lex Roscia, proposed by the tribune L. Roscius Otho in 67 B.C., provided that the fourteen rows of seats in the cavea nearest to the orchestra should be reserved for the equites—excluding any who should have become bankrupt (Cic. *Phil.* ii. § 44). Owing to the large number of equites who had been ruined by the civil wars, Augustus decreed that the privilege given by the Lex Roscia should be enjoyed by any eques who had at any time possessed, or whose father had possessed, the amount of the *equester census*, viz. 400,000 sesterces (Suet. *Aug.* 40). This is probably the Lex Julia Theatralis meant by Pliny (xxxiii. § 8). Augustus farther assigned special portions of the cavea to (1) women; (2) *praetextati*, i.e. boys who had not yet assumed the toga virilis, and their paedagogi; (3) soldiers; (4) married men belonging to the plebs. This was a premium on marriage, like others provided in the Lex Julia et Papia Poppaea. In some provincial theatres the town-councillors (*decuriones*) had seats of honour (*bisellia*) on the rows next the orchestra. Corresponding to the "royal box" in a modern theatre was the *tribunal*, immediately over the stage on the spectator's left. This was occupied by the emperor, or by the president of the performance. A corresponding *tribunal* on the left side was assigned to the Vestals, among whom the empress sat. Thus, from the Augustan age onwards, the contrast between a Greek and Roman theatre was extended to the arrangements for the audience. Instead of the simple Greek distinction between those who had or had not προεδρία, the Roman auditorium exhibited an elaborate classification by sex, age, profession, and rank.

Odeum.

The term ᾠδεῖον, denoting a species of theatre appropriated to musical performances, occurs first in a fragment of the comic poet Cratinus (*circ.* 450 B.C.), with reference to the Odeum of Pericles (Θρᾶτται, *fr.* 1); but it may have been in use from a much earlier time. The oldest recorded example is the Σκιὰς at Sparta, which is said to have been round, and to have been named from the resemblance of its top to a sunshade (*σκιὰς* or *σκιάδειον* : *Etym. Magn.*). It was said to have been built by the architect Theodorus of Samos (*circ.* 600 B.C.). On its walls the Spartans hung up the cithara of the famous musician, Timotheus of Rhodes (*circ.* 400 B.C.),—not as an honour, but as a stigma, because he had marred the ancient simplicity of the instrument by increasing the number of its strings. In the latter part of the 2nd century A.D. the Σκιὰς was still used as a place for public assemblies (Paus. iii. 12, 10). No traces of it remain. The circular brick building of which ruins still exist near the Eurotas seems to have been originally an Odeum, modified perhaps, with a view to other than musical performances, in the Roman age of Sparta. (See Leake, *Morea*, vol. ii. p. 553; Curtius, *Pelop.* ii. 222.)

Athens possessed three ᾠδεῖα. (1) The oldest of these stood near the fountain Enneacrunus by the Ilissus. Its origin is uncertain, but has been conjecturally referred to Peisistratus, or even to Solon. The most probable inference from the notices concerning it is that it was a semicircular building, arranged on the general plan of a Greek theatre, but with a roof. It was in this Odeum that the προάγων was held before the Great Dionysia, as described above. This, too, is the Odeum to which Aristophanes refers as being used for a law-court (*Vesp.* 1109); the scholiast on that passage identifies the place with the scene of the προάγων. The same building must be understood when we read of the Odeum as a rendezvous or a lodging for troops (Xen. *Hellen.* ii. 4, §§ 9, 24), and as a place for the distribution of corn (Dem. *c. Phorm.* § 37: [Dem.] *in Neaer.* § 52). It appears to have been restored, or built anew, by Lycurgus (*circ.* 330 B.C.); for the words of Hypereides (*fr.* 32, *ᾠκοδόμησε δὲ τὸ θέατρον, τὸ ᾠδεῖον*) cannot well refer to the Periclean building,—then little more than a century old.

(2) The Odeum of Pericles stood a little S.E. of the Acropolis and N.E. of the Dionysiac theatre: modern houses cover its probable site. Plutarch preserves a tradition that the shape of the building was intended to recall the tent of Xerxes (*Per.* 13). The fact that the top rose to a peak—like that of the Spartan Σκιάς, as we may suppose—apparently prompted the joke of Cratinus, when he described Pericles, "the Zeus with peaked head" (*σχινοκέφαλος*), as *τᾠδεῖον ἐπὶ τοῦ κρανίου ἔχων* (Θρᾷττ. 1). These notices at least prove that the form was round, and such as to suggest a tent. In the conception of Pericles, the new Odeum, like the new temple of Athena, was associated with the Great Panathenaea. As the final act of the festival was celebrated in the Parthenon, so the Odeum was the place for the performances with which the festival began,—contests of flute-players, singers, and rhapsodes. The Odeum of Pericles was completed about 444 B.C. It was burnt down in 86 B.C. by Aristion, the tyrant of Athens, when he fled before Sulla to the Acropolis. The restoration of the building by Ariobarzanes II. (Philopator), king of Cappadocia, about 60 B.C. is the last recorded incident in its history. It is remarkable that Pausanias speaks as if, at the time of his visit (*circ.* 155 A.D.), the old Odeum by the Ilissus was the principal building of its kind in Athens (i. 14, § 1). He refers to the Odeum of Pericles merely as "a structure" (*κατασκεύασμα*) "said to have been built in imitation of the tent of Xerxes," and does not even name its founder (i. 20, § 4).

(3) The third Odeum at Athens was built by the eminent rhetorician Herodes Atticus, in memory of his second wife, Appia Annia Regilla, who died before 161 A.D. It had not been commenced when Pausanias described Athens; but he mentions it in speaking of the Odeum at Patrae, which was, he says, second only to that of Herodes (vii. 20, § 6). The Odeum of Herodes stood on the south slope of the Acropolis, W. of the Dionysiac theatre. Considerable remains still exist. It was not a round building, but a theatre of the ordinary Roman type, with a roof superadded. Hence Philostratus describes it as *τὸ ἐπὶ Ῥηγίλλῃ θέατρον* (*Vit. Soph.* ii. 1, 5, cf. 8), and Suidas (*s. v.* Ἡρώδης) as *θέατρον ὑπωρόφιον*,—the Latin *theatrum tectum*. It was distinguished by the great splendour of the internal decoration. The ceiling was of cedar,—with probably an open space for light in the middle. The seats in the *cavea* were cased with marble, and divided into an upper and lower zone by a *διάζωμα*. The floor of the orchestra was inlaid with marble mosaic-work. The proscenium, which had three doors, was decorated with columnar arcades, in four successive storeys, and with statuary. A similar mode of decoration, though less elaborate, was applied to the external façade. Behind the proscenium spacious accommodation was provided for the performers. Philostratus mentions a smaller theatre in the Cerameicus at Athens, called, after its founder, the Ἀγριππεῖον, which seems to have been used for rhetorical declamations rather than for music or drama (*Vit. Soph.* ii. 5, 3 and 8, 2).

The building of Pericles and that of Herodes Atticus illustrate the twofold relation of the ancient Odeum to the ancient theatre. (1) The circular Odeum, such as that of Pericles, was the place for music or recitation, as the Greek theatre for drama or chorus. From an artistic point of view, it was the supplement of the Greek theatre. (2) The semicircular Odeum, such as that of Herodes, was merely a roofed Roman theatre; and, as such, it was used not only for music, but for other entertainments also, such as mimes, or even regular drama. In the Roman period the first type continued to exist along with the second. Trajan built a round Odeum at Rome (Paus. v. 12, 4, *θέατρον μέγα κυκλοτερές*), called *ᾠδεῖον* by Dio Cassius (lxix. 4). In many instances where an Odeum is mentioned, the type to which it belonged remains uncertain.

In conclusion, it may be useful to enumerate some of the more important Greek and Roman theatres of which remains exist. The following list is mainly based on that given by Dr. A. Kawerau in Baumeister's *Denkmäler*, pp. 1746 ff. A fuller enumeration, with references to the topographical and archaeological literature in each case, will be found in Dr. A. Müller's *Lehrbuch der griechischen Bühnenalterthümer*, pp. 4–15 (1886).

I. Greece Proper.—*Attica*. 1. The Dionysiac theatre at Athens. Excavated in 1886 by the German Archaeological Institute. 2. Theatre at Zea in the Peiraeus. Excavated in 1880 and 1885 by the Greek Archaeological Society. The orchestra was surrounded by a canal, like that in the Dionysiac theatre. 3. Theatre at Oropus. Excavated in 1886 by the Greek Archaeological Society. The proscenium, with one door, remains. 4. Theatre at Thoricus. Excavated in 1886 by the American School. Remarkable for the irregular curve of the orchestra, which recedes more than anywhere else from the form of a semicircle, and approaches that of a semi-ellipse.—*Epeirus*. Theatre at Dramyssus. The *cavea* well preserved. It had two *διαζώματα*. 2. Theatre at Elatria (now Rhiniassa). A great part of the *cavea* remains.—*Sicyonia*. Theatre at Sicyon. Excavations begun in 1887 by the American School.—*Argolis*. 1. Theatre at Epidaurus. Excavated in 1883 by the Greek Archaeological Society. The best-preserved and finest example of a Greek theatre of the classical age. It was built about 350 B.C. by the younger Polycleitus (Paus. ii. 27, 5). 2. Theatre at Argos. The central part of the *cavea* was hewn from the rock; sixty-seven rows of seats remain, separated by two *διαζώματα*. The two ends of the *cavea* were formed by substructions of rude masonry.—*Arcadia*. 1. Theatre at Mantineia. Notable as an exception to the rule that Greek theatres were built on natural slopes. Here the *cavea* rested on an artificial mound supported by polygonal walls. 2. Theatre at Megalopolis. The largest known to Pausanias (ii. 27, 5). The site was a natural slope, but recourse was had also to an artificial embankment at each horn of the auditorium. Excavations begun here in 1889 by members of the British School at Athens have disclosed the stage and the lowest portion of the seats.

II. Islands of the Aegean Sea.—The older theatre at Delos is that in which the segment of a circle formed by the curve of the *cavea* most largely exceeds a semicircle. The Cretan theatres at Gortyna, Hierapytna, and Lyctus are among those which have the niches intended, as some have supposed, for *ἠχεῖα* (see above).

III. Asia Minor.—Among the theatres of the later Greek or Hellenistic age, those at the following places show a peculiarity in the curve of the *cavea* like that noted above at Delos:—Sidè (Pamphylia), Myra (Lycia), Telmissus (do.), Iassus (Caria), Aizani (Cilicia). The last-named theatre affords another example of the niches mentioned above. Other interesting theatres of the same period are those of Pergamum (excavated in 1885 by the German Expedition) and Assus (excavated in 1883, for the American Archaeol. Institute, by Mr. J. P. Clarke). The Roman theatre at Aspendus (Pamphylia) is the best-preserved ancient theatre in existence. The proscenium has five doors.

IV. Italy.—1. The two theatres at Pompeii. The larger shows a peculiarity in the four lowest rows of seats, which are separated from those above, and appear to have been the places of honour. The stage is also of interest. The smaller theatre was roofed. 2. Theatre at Falerii. One of the best preserved. It was finished in 43 B.C.

V. Sicily.—Theatres at Syracuse, Acrae, Catana, Tauromenion, Tyndaris, and Segesta. The general characteristic of the Sicilian theatres is that they were founded in Greek times and afterwards modified, or reconstructed, under Roman influences.

VI. France.—The Roman theatre at Orange (Arausio) is well preserved. The reconstruction of it by A. Caristie (*Monuments antiques à Orange*, Paris, 1856) conveys a probably just idea of its original beauty. In one respect it forms an exception to the ordinary Roman rule; for use was made of a natural slope to support the *cavea*.

Literature.—Wieseler, *Theatergebäude* (Göttingen, 1851), and art. "Griechisches Theater" in Ersch and Gruber, vol. lxxxiii. (1867), pp. 159–256, where will be found a full account of the authorities on the subject up to that date. Among recent publications it must suffice to mention the following:—Dr. Albert Müller, *Lehrbuch der griechischen Bühnenalthümer* (Freiburg, 1886), pp. 432. A work of practically exhaustive research. Gustav Oehmichen, *Griechischer Theaterbau* (Berlin, 1886). Baumeister's *Denkmäler*, art. "Theatergebäude" by Dr. A. Kawerau, and "Theatervorstellungen" by Dr. Bernhard Arnold (1887). A. E. Haigh, *The Attic Theatre* (1889). For the Greek theatre of the 5th century B.C.: Wilamowitz-Möllendorf, "Die Bühne des Aeschylos" in *Hermes*, xxi. pp. 579 ff.; Sommerbrodt, *De Aeschyli re scaenica* (Berlin, 1876); J. Höpken, *De Theatro Attico saeculi a. Chr. quinti* (Berlin, 1884). For the Roman theatre, J. Marquardt, *Röm. Staatsalterthümer*, vol. iii. (2nd ed., 1885). [R. C. J.]

THENSAE or **TENSAE** (for the orthography and etymology of the word are alike doubtful: *thensae*, *C. I. L.* iii. 2; Henzen, 5407; *tensae*, *C. I. L.* x. 6012; Fest. p. 364) were highly ornamented sacred vehicles, which, in the solemn pomp of the Circensian games [Circus, Vol. I. p. 437 *a*; Ludi Romani], conveyed the statues of certain deities with all their decorations (*exuviae*) to the pulvinaria, and after the sports were over bore them back to their shrines. (Cic. *in Verr.* ii. 1, 59, and note of Pseudo-Ascon. iii. 27, v. 72; Serv. *ad* Verg. *Aen.* i. 21; Festus, *s. v.*; Dio Cass. xlvii. 40; Tertull. *de Spect.* 7.) The thensae were kept in a special building, called *aedes thensarum*, on the Capitol (see Mommsen, in *Ann. dell' Inst.* 1858, p. 203). Their form seems to have been that of the Currus (as shown in the cut in Vol. I. p. 581), but they were elaborately ornamented. Castellani has restored what he considers to be a thensa from remains of bronze reliefs (see Baumeister, *Denkm.* fig. 2325); it has however, as restored, four wheels, while the coin representations seem to show two-wheeled chariots drawn by four horses. It is by no means improbable that thensae varied as to shape, number of wheels and horses, the essential point in their definition being that they were wheeled vehicles for carrying images of certain deities in the *pompa circensis*, as distinguished from the *fercula* in which they were borne on men's shoulders. We know that they were drawn by horses (Plut. *Coriolan.* 25, who calls them *θήσσας*), and escorted (*deducere*) by the chief senators in robes of state, who, along with pueri patrimi [PATRIMI], laid hold of the bridles and traces, or perhaps assisted to drag the carriage (for *ducere* is used as well as *deducere*, Liv. v. 41), by means of thongs attached for the purpose (and hence the proposed derivation from *tendo*). So sacred was this duty considered, that Augustus, when labouring under sickness, deemed it necessary to accompany the thensae in a litter. If one of the horses knocked up or the driver took the reins in his left hand, it was necessary to recommence the procession; and for one of the attendant boys to let go the thong or to stumble was profanation. (Liv. v. 41; Plut. *l. c.*; Ascon. *l. c.*; Arnob. *adv. Gent.* iv. 31; compared with the oration *de Harusp. Resp.* 11, 23; Tertull. *de Cor. Mil.* 13, and *de Spectac.* 7; Suet. *Aug.* 43.)

The only gods distinctly named as carried in thensae are Jupiter and Minerva (Suet. *Vespas.* 5; Dio Cass. xlvii. 40, l. 8, lxvi. 1); but we can hardly doubt that Juno at any rate had the same honour; and, indeed, all three Capitoline deities have thensae on the coins of the Gens Rubria (Eckhel, v. 299; Marquardt, *Staatsverw.* 509, note 3): to this number Mars is usually added on the authority of Dio Cassius (lxxviii. 8), but, in the passage referred to, he merely states that, at the Circensian games celebrated A.D. 216, the statue of Mars, which was in the procession (*πομπεῖον*), fell down; and it is very remarkable that Dionysius (vii. 72), in his minute description of the Pompa Circensis, takes no notice whatever of the thensae, but represents the statues of the twelve gods as carried on men's shoulders, *i.e.* on fercula. That a considerable number of deities, however, received this honour seems probable from the expression of Cicero, in his solemn appeal at the close of the last Verrine oration, "omnesque dii, qui vehiculis tensarum solemnes coetus ludorum initis;" though we cannot determine who these gods were. Among the impious flatteries heaped on Caesar, it was decreed that his ivory statue should accompany the images of the gods to the circus in a complete chariot (*ἅρμα ὅλον*, that is, a *thensa*, in opposition to a mere *ferculum*), and that this chariot should stand in the Capitol immediately opposite to that of Jupiter. (Dio Cass. xliii. 15, 21, 45, xliv. 6; Suet. *Jul.* 76: this is the "acerba pompa" in Cic. *ad Att.* xiii. 44.) Under the Empire the statues of deceased emperors and members of the imperial house were borne in the procession, but of these the statues of princes seem to have been carried on *fercula*, those of princesses not in *thensae*, but in *carpenta*, sometimes drawn by elephants (Suet. *Claud.* 11, *Cal.* 15, *Tit.* 2; Tac. *Ann.* ii. 83).

Similar homage was paid upon high festivals to the images of their gods by other ancient nations. Thus, in the curious ceremonies performed at Papremis connected with the worship of the Egyptian deity, whom Herodotus (ii. 63) imagined to be identical with Ares, the statue, enshrined in a chapel made of gilded wood, was dragged in a four-wheeled car by a body of priests. So also, in the account given by Athenaeus (v. p. 199 f.), after Callixenes of Rhodes, of the gorgeous pageant at Alexandria, during the reign of Ptolemy Philadelphus, we read of a car of Bacchus of prodigious size, most costly materials, and most elaborate workmanship, which was dragged by 180 men.

(Scheffer, *de Re vehiculari*, c. 24; Ginzrot, *Die Wägen und Fahrwerke der Griechen und Römer*. c. 55; but the latter author, both here and elsewhere, allows his imagination to carry him farther than his authorities warrant; Friedländer in Marquardt, *Staatsverw.* iii. 509 ff.)

[W. R.] [G. E. M.]

THEODOSIA'NUS CODEX. [CODEX THEODOSIANUS.]

THEOPHA'NIA (*θεοφάνια*, Herod. i. 54; Poll. i. 34), a festival celebrated at Delphi. A. Mommsen, with tolerable certainty, identifies the festival on the 7th of the Delphic month Bysios (= approximately February), mentioned (without name) by Plutarch, *Qu. Gr.* 9, as the birthday of Apollo, and also the sole day in ancient times for consulting the oracle (probably the *αἰσία ἡμέρα* of Eur. *Ion*, 421). [See ORACULUM, p. 282 *a*.] The word itself signifies the manifestation of the deity = *ἐπιφάνεια τοῦ θεοῦ*. (Mommsen notes that the calendar of the Greek Church still has *τὰ ἅγ. Θεοφάνεια*: in the Western Church *Theophania* was applied to Christmas Day as late as the 4th century.) The deity manifested at Delphi is clearly Apollo, and the time of the year agrees with its being a festival for the opening of spring, symbolised by the return or the new birth of the god of light. Further it is to be noticed that Plutarch (*de ei ap. Delph.* 9) assigns the three winter months in the Delphic year to Dionysus, and the remaining nine to Apollo: hence it appears that the 7th of Bysios marks the beginning of the Apollinean year and the end of the Bacchic.

The ceremonies of the day are nowhere precisely stated, but can be pieced out as follows:—1. A procession with laurel boughs: this was the custom at the time when oracles were given at Delphi, and belonged at other places besides to the day marked as Apollo's birthday (cf. Schol. *ad* Hes. *Op.* 777, *Ἀθηναῖοι ταύτην τιμῶσι δαφνηφοροῦντες*). Similarly at Rome the return of Mars (for whose connexion with Apollo see Roscher, *Apollon u. Mars*) was honoured by fresh laurel boughs (Ov. *Fast.* iii. 13). 2. The prayers and offerings belonging to the oracular day, for which see ORACULUM, p. 282 *b*. 3. A feast with (*a*) offerings of the cake called *φθοΐς*; the day was, according to Plutarch, called *πολύφθοος*, which, though he gives another interpretation, is clearly from *φθοΐς*: (*b*) libations of wine. Herodotus (i. 51) speaks of a huge silver bowl at Delphi, containing 600 amphorae, which *ἐπικίρναται ὑπὸ Δελφῶν θεοφανίοισι*. Other myths, especially those relating to the flight or exile of Apollo, his purification and return, may possibly find their representation in this festival: on these myths we can only refer here to the discussion in A. Mommsen and Roscher. (A. Mommsen, *Delphica*, pp. 280–297; Roscher, *Lexikon*, p. 426.) [L. S.] [G. E. M.]

THEO'RI (*θεωροί*). There can be little doubt that the origin of this word is not *θεὸς* and *ὥρα*, as most of the ancient Lexicographers thought, but is the same as that of *θεάομαι* (Curtius, *Gr. Etym.* 253; L. and S.). Hence it should follow that the original *official* signification of the word (apart from its simple meaning, *οἱ θεώμενοι*) was a *magistrate*, literally "overseer," like *ἔφορος*. We find this title *θεωροὶ* or *θεαροὶ* given, without any religious meaning, to the chief magistrates of certain states; at Mantinea (Thuc. v. 47); at Tegea (Xen. *Hell.* vi. 5, 7; see Gilbert, *Staatsalterth.* ii. 328).

Hence the word acquired the sense with which we are most familiar, *sacred ambassadors* or *delegates* (as though "overseers" of the sacred business), *i.e.* persons sent on special missions (*θεωρίαι*) to perform some religious duty for the state, to consult an oracle, or to represent the state at some religious festival in another land, where among other ceremonies sacrifice would be offered on behalf of their state. Photius, though doubtless wrong in his etymology, expresses the meaning rightly by *τοὺς τὰ θεῖα φυλάττοντας ἢ τὸ θεῖον φροντίζοντας*: Pollux (ii. 55), misled by the double meaning, gives two different roots to the word. These sacred *θεωροὶ* were not permanent officials, but were specially appointed from among the citizens for each occasion. The title apparently belongs to delegates of this kind from any Greek state: *e.g.* the *θεωροὶ* of foreign states made offerings for their own states at the Eleusinia on 17th Boedromion (A. Mommsen, *Heort.* 250; ELEUSINIA, Vol. I. p. 718; cf. Soph. *O. T.* 114), and similarly of the Great Panhellenic games: so, when we find *πρόβουλοι καὶ θεωροὶ* sent by different Greek states yearly to the ELEUTHERIA at Plataea, the former have to do with the political affairs of the confederacy, the latter with the religious part of the festival (Gilbert, *Staatsalterth.* i. 91).

But we are specially concerned with the theori at Athens. Here also there were no standing officials so called, but the name was given to those citizens who were appointed from time to time to conduct religious embassies to various places; of which the most important were those that were sent to the Olympian, Pythian, Nemean, and Isthmian games, those that went for any purpose to consult the oracle at Delphi, and those that led the solemn procession to Delos for the Apollinean spring festival, in which Pisistratus, from political motives, contrived that Athens should take a leading part (see E. Curtius, *Hist. of Greece*, i. 36 E. T.; DELIA). The expense of any such embassy was defrayed partly by the state, partly by a wealthy citizen, to whom the management was entrusted, called *ἀρχιθέωρος*. This was a sort of *λειτουργία*, and frequently a very costly one. In the case of the Delphic theoria for consulting the oracle, the travelling money provided by the state was not large, and the personal expense probably also moderate, but a considerable sum was provided for the Delian theoriae, more than a talent for each of the yearly (lesser) festivals, and (in Ol. 101. 3) nearly 1¼ talent for the greater quadrennial festival (see Fränkel's note on Boeckh, *Staatshaush.* i.^{2} 272): but the magnificence depended mainly on the liberality of the architheoros, to whom it became a point of honour to discharge his office handsomely, to wear a golden crown, to drive into the city with a fine chariot, retinue, &c. Nicias is reported to have incurred unusual expenses in his embassy to Delos; and Alcibiades astonished all the spectators at Olympia by his display (Grote, *Hist.* vi. 389, vii. 72; Thuc. vi. 16).

As to the offices of the Pythaistae (*Πυθαισταί*) and Deliastae, which require some notice here, there is a difference of tradition; but it seems tolerably certain that Harpocration and Hesychius (*s. v.* *Δηλιασταί*) are wrong in making the Deliastae = *θεωροί*, and there is still less warrant for concluding, as most modern authorities have done, that both the Pythaistae and Deliastae had this meaning. What evidence we have leads rather to the conclusion that they were not sent with the missions at all, but were two priestly families, whose duty it was to regulate by observance of celestial omens the time for starting sacred embassies to Delphi and Delos respectively. For the *θεωρία* to Delphi, which made the yearly offering from Athens some time about June (A. Mommsen, *Heort.* 315), the Pythaistae through a period of three months (April–June) watched at the altar of *Ζεὺς Ἀστραπαῖος*, looking northwards to Harma, a district in Mount Parnes near Phyle. Theoretically, no doubt, if no lightning appeared, the offering could not be sent at its normal time in June; but as modern observations (A. Mommsen, *Delph.* p. 315) show that there is always a great deal of lightning in that district during those months, it is probable that there was rarely, if ever, an impediment. The omens having been duly observed, when the embassy to Delphi was started the Pythaistae offered sacrifice in the Pythium at Oenoe: the Deliastae (regarding whose method of observing omens we have no definite particulars) sacrificed for the Delian embassy in the Delium at Marathon (Strabo, ix. p. 404; Athen. vi. p. 234 e; Schol. *ad* Soph. *Oed. Col.* 1047; Hesych. *s. v.* *ἀστράπτει δι' ἅρματος*: A. Mommsen, *Delphica*, p. 314; Curtius, *Hist. of Greece*, ii. p. 8; Töpffer, in *Hermes*, xxx. pp. 321 ff.). [For the sacred ships employed, see THEORIS.] [C. R. K.] [G. E. M.]

THEO'RIA (*θεωρία*). [THEORI.]

THEO'RICON (*τὸ θεωρικόν*: *τὰ θεωρικά*, *sc.* *χρήματα*). Under this name were comprised the funds expended by the Athenian state on festivals, sacrifices, and public entertainments.

There were, according to Xen. *de Rep. Ath.* iii. 8, more festivals at Athens than in all the rest of Greece. Some festivals of course were confined to the members of a particular tribe, deme, or house (DEMUS; PHYLOBASILEIS), and these were provided for out of the private funds of the community which celebrated them. But there were also many public festivals, open to the whole body of the people. At the most important of these, as the DIONYSIA, PANATHENAEA, or THARGELIA, there were not only sacrifices, but processions, theatrical exhibitions, gymnastic contests, and games, celebrated with great splendour and at great expense. A portion of this expense was defrayed by the individuals upon whom the burden of a *λειτουργία* fell for the year, but a considerable part was met by the public treasury (τὸ δημόσιον, τὸ κοινόν). Thus Demosthenes (p. 50) complains that a Dionysiac or Panathenaic festival cost more than any military expedition. The religious embassies, too [THEORI], to Delos or Delphi, or to the Olympic and other great games, drew largely on the public exchequer, though a part of the cost fell on the wealthy citizen who conducted the embassy (the ἀρχιθέωρος: see Plut. *Nic.* 3; Thuc. vi. 16).

But, besides these expenses, the festivals brought with them largess to the people. The Attic drama was at first performed in a wooden theatre, entrance to which was free. But the crowding to get in was inconvenient and dangerous, and after an accident to the timbers about B.C. 500 it was resolved to charge an entrance-fee of two obols, διωβελία ([Dem.] *de Synt.* p. 169, § 10). This fee was paid to the lessee of the theatre (θεατρώνης, θεατροπώλης, ἀρχιτέκτων), who, beside paying a sum to the state for the contract, undertook to keep the theatre in repair. The payment continued to be exacted after the theatre was built of stone. Pericles (Plut. *Per.* 9), to relieve the poorer citizens, passed a law entitling them to receive the price of admission from the state—perhaps because plays were part of a religious ceremony from which it would be impious to exclude citizens. But a direct grant to the lessee, or a reduction of his contract, would have been a measure less liable to abuse. The system ended for a time with the distresses of Athens at the end of the 5th century, but was renewed by Agyrrhius.

The donation was presently extended to entertainments other than theatrical, *e.g.* the Panathenaea (Dem. *Leoch.* p. 1091, § 37), the sum of two oboli a day being given to each citizen who attended. To multiply two oboli thus by the number of days seems the best way of explaining passages in which the amount of the Theoricon is put higher; as at one drachma by Philochorus in Harpocration, and perhaps by Lucian, *Dem. Encom.* § 36; or at four obols, by Demosthenes (*Proem.* p. 1459): but there is no direct proof to be had. The money was paid by demes (Dem. *Leoch.* l. c.). Popular leaders promoted such a use of public money; the appetite of the populace for largess kept growing; and in the time of Demosthenes the well-to-do citizens also seem to share in the distribution ([Dem.] *Phil.* iv. p. 141, § 38. But the passage is not quite clear, and the speech in which it occurs, the Fourth Philippic, is not genuine). Boeckh (*Staatshaushaltung*, ed. 3, vol. i. p. 284) calculates that the sum thus spent annually was 25–30 talents or more.

This mode of expenditure naturally starved other state-services. Surplus revenue should, by the old law ([Dem.] *c. Neaer.* p. 1346, § 4), have been carried to the military fund, and Isocr. *de Pace*, § 82, may mean that surplus φόρος was the original theoric fund; but now everything that could be spared from other branches of expenditure was diverted to the Theoricon: οἱ νόμοι τὰ στρατιωτικὰ τοῖς οἴκοι μένουσι διανέμουσι θεωρικά (Dem. *Olynth.* iii. p. 31, § 11); and the supplies needed for war were left to depend on extraordinary contributions or property-tax (εἰσφορά). In B.C. 350 Apollodorus carried a decree empowering the people to determine whether the surplus revenue might be applied to military purposes, but he was fined for this under a γραφὴ παρανόμων and the decree annulled (*c. Neaer.* pp. 1346–8). Eubulus then tried to perpetuate the existing system by a law making it a capital offence to propose to divert the theoric fund. By this law Demosthenes was embarrassed in his attempts to find money for operations against Philip (see his Olynthiac speeches, 1 and 3), and he has to approach the question of the theoric fund very gradually (p. 14). The law of Eubulus was at last repealed in 338.

Money appropriated to the theoric fund was probably at first disbursed by the Hellenotamiae. After the Peloponnesian War, however, it was controlled by a manager or board of managers (οἱ ἐπὶ τῷ θεωρικῷ, Dem. *de Cor.* p. 264, § 113; ἡ ἐπὶ τῷ θεωρικῷ ἀρχή, Aeschin. 57), who were perhaps elected, one from each tribe, at the period of the Great Dionysia. (But it is uncertain whether there was more than one official; see Boeckh, vol. i. p. 225, and his editor's notes.) The board drew to itself the control of all surplus funds and of many other branches of the administration, as the management of civil expenditure, the office of Apodectae, the building of docks, arsenals, and streets. This encroachment was due to the anxiety of the people that no part of the revenue should be diverted from the theoric fund.

(Harpocr. and Suidas, *s. v.* θεωρικὸν and Εὔβουλος: Libanius, Argument to Demosth. *Ol.* 1; Ulpian on Demosth. *Ol.* 1; Boeckh, *Staatshaushaltung der Athener*, ed. 3.) [F. T. R.]

THEO'RIS (θεωρίς), a trireme kept for sacred embassies [see THEORI]. Of these ships it seems that there were at Athens in early historic times three,—the Delian (Δηλία), the Salaminian (Σαλαμινία), and the Paralus (Πάραλος). The first was so called because it was used (probably exclusively) for Delian theoriae; the second because it was manned originally by natives of Salamis (σαλαμίνιοι); and the third because it was manned by sailors from the Paralia (πάραλοι or παραλῖται). Boeckh indeed says that there were only two, and makes *Delia* another name for the *Salaminia*; but we should rather follow Schömann (*Antiq. of Greece*, p. 441, E. T.) in separating these ships: the language of Plato (*Phaed.* p. 58) and of Plutarch (*Thes.* 3) seems to us quite impossible to reconcile with the view that the ancient ship used for the Delian embassy was the Salaminia. Each writer (and Plato with especial distinctness) speaks of the ship as though it had connexion with the Delian theoria only. It is clear from their account that the Delia was a very old ship, traditionally dating from Theseus, and constantly renewed with fresh timbers, so that, according to Plutarch, its case was used to illustrate things which are the same and yet not the same: the state of the Victory at Portsmouth affords a modern parallel of a ship thus constantly patched because it is a relic. This does not agree with our knowledge of the Salaminia, which was a fast-sailing ship used for various state purposes, and even in naval battles. When the embassy to Delos was started, either at the greater (quadrennial) or the lesser (annual) festival, the Delian ship was crowned with laurel by the priest, and so sent forth: the period of its absence gave a respite to criminals (Plat. *l. c.*; DELIA).

The other two ships were built and manned for speed, and were used not only to convey theori over the sea part of their journey, but also to carry state despatches, to fetch state criminals who were summoned home, and to bring tribute; they served, moreover, as warships (Thuc. iii. 33, vi. 53, 61, viii. 74; Aristoph. *Av.* 147, 1204; Aesch. *in Ctes.* § 162; Phot. *s. v.* *πάραλοι, πάραλος*). Boeckh accuses Photius of erroneously regarding these two ships as one, but the words of Photius (*s. v.* *πάραλοι*) in speaking of the Paralus are *λέγεται δὲ ἡ αὐτὴ καὶ Σαλαμινία· ὕστερον δὲ ἄλλαι δύο προσεγένοντο αὐταῖς*: the last word shows that *ἡ αὐτὴ* must mean "of similar character"; under the word *πάραλος* he plainly distinguishes the two. The crew of the Paralus (and beyond a doubt of the Salaminia also) were always held in readiness, receiving four obols a day throughout the year. To this payment we may refer the office of treasurer (*ταμίας τῆς Παράλου*, Dem. *Meid.* p. 570, § 173), and we may fairly assume that each of the sacred ships had a treasurer; at sea they were commanded by *ναύαρχοι* (Boeckh, *Staatshaus.* i. p. 307; Schömann, *l. c.*). Fränkel in his note (299) shows that Boeckh is mistaken in supposing that for these ships there were also trierarchs. The expenses of the sacred ships were borne by the state, and the *ταμίας* in their case provided at the cost of the state all that for other ships was provided by the trierarch.

In later times we find also the names of Ammonis, Antigonis, and Demetrias; and still later the Ptolemais (Plin. *H. N.* xxxv. § 101; appendix to Phot. p. 676, ed. Porson; Harpocr. *s. v.* *'Αμμωνίς*). Of these the first, built in the time of Alexander, received its name because it was specially intended to convey theoriae to Zeus Ammon: it seems to have taken the place of the Salaminia. (Schömann thinks it an *additional* ship, but see Boeckh, p. 307, and Fränkel's note.) The subsequent addition of the Antigonis and Demetrias thus raised the number to four, as stated by Photius; for the Demetrias no doubt replaced the ancient Delia, which lasted only till the time of Demetrius (Plut. *l. c.*). The names of these later ships and of the Ptolemais suggest a closer connexion with political and less with religious business.

[G. E. M.]

THEOXE'NIA (*θεοξένια*; often simply *ξένια*; sometimes *θεοδαίσια*) were sacred feasts provided for gods or heroes, at which the deities were usually regarded as the guests; but sometimes as the hosts, inviting certain mortals to partake. From these Greek feasts the Roman *lectisternia* were borrowed [LECTISTERNIUM]. We must guard against the idea that the Delphic Theoxenia was the original feast of this kind. Not to speak of other nations where similar observances are found, we have early indications of them among the Greeks. Such was the banquet in Homer (*Il.* i. 425), at which the gods (*θεοὶ δώδεκα*, Schol.) were entertained; and hence *κοινὴ ἑορτὴ πᾶσι τοῖς θεοῖς*, which is the explanation of *θεοξένια* in Hesychius, may be taken to mean that it included the twelve Olympian deities; a meaning, however, which must be greatly extended. There can be no doubt moreover that the cult of special gods or heroes was from a very early time preserved in certain families or tribes, who thereupon set apart a table on certain occasions, such as birthdays (cf. Eur. *Ion*, 805) or times of success and victory, in their honour (see Herod. vi. 127; Pind. *Ol.* iii.; Plat. *Lys.* p. 205 D). This family observance is attested not only by mention in Greek writers, but also by inscribed votive tablets (see Deneken, *de Theoxeniis*, p. 14): the history of the Potitii may be compared with it (Liv. i. 71; Diod. iv. 21; SACRA, p. 578 *a*). The entertainment is commonly spoken of merely as *ξένια*, which word may be used of public as well as private theoxenia (compare Eur. *Hel.* 1666; *C. I. G.* p. 1074; Schol. *ad Nem.* vii. 68, *ad Ol.* iii. 1).

From the gentile or family cult probably arose the more public or national theoxenia, among which should be specially noted the Delphic Theoxenia, which gave the name to the Delphic month Theoxenios (March–April). This was probably, as A. Mommsen remarks, an ancient festival, existing before the time when Apollo reigned at Delphi; and Zeus was originally the chief of the divine guests, for which reason this month was sacred to Zeus (*Delphica*, p. 87). In historical times Apollo and Latona were specially honoured at this Delphic feast. In this, as in other similar ceremonies, the gods seem to have been supposed to feast; not all at one table, but at several tables, singly or in pairs: a couch (*στρώμνη* = *pulvinar*) spread with cushions was placed by each table. It does not appear to have been necessary in Greek custom to place the statue of the deity on his or her couch, as was done in the Roman lectisternium, though that this was sometimes (perhaps, as Deneken says, frequently) done, appears from Val. Max. ii. 2, 1. The god or goddess was *imagined* to be present on the allotted couch, and in vase-pictures this spiritual presence is indicated by some representation of the deity, as in the picture of a *στρώμνη* for the Dioscuri, shown on page 16 of this volume. Athenaeus (ix. p. 372 a) mentions a curious custom that the Delphians offered leeks (*γηθυλλίδες*) to Latona at this festival, and that the offerer of the largest leek received a portion of the feast from the table of Latona. (For various explanations of this custom, see *Delphica*, p. 301: Deneken regards it as a sort of prize for agriculture.) The favour of Apollo to Pindar was shown by a special invitation to his table, the inspired priest crying *Πίνδαρος ἴτω ἐπὶ δεῖπνον τοῦ θεοῦ*,—an honour which was continued for his descendants, and, as it appears, not on this festival only. The Delphian priests were *ex officio* guests with the gods on this day, as representing the mortal participants [compare PARASITI].

But it would be an error to suppose that Apollo was the deity most commonly so honoured. Not to mention a similar entertainment of Zeus Soter and of Pluto at Athens (Athen. vi. p. 239; Kohler in *Herm.* vi. 7; Deneken, p. 4), and of Bacchus and Aesculapius (see below), it must be observed that the favourite divine guests in Greece were deified heroes, probably because they had more frequently traditional ties of hospitality with certain families, as well as because they formed a link between gods and men. Hence it is that we often find Heracles feasted by mortals, and that by far the commonest divine guests were the Dioscuri: indeed some writers appear (erroneously, as it seems to us) to make the cult of the Dioscuri the origin of Theoxenia. This entertainment of the Dioscuri was widespread, particularly of course in Doric states, Sparta, Agrigentum, &c. (Eur. *Hel.* 1666; Pind. *Ol.* iii.; Bacchyl. *ap.* Athen. vi. p. 400; *C. I. G.* ii. 2338, 2374); but also at Athens in the Prytaneum (Athen. iv. 137 e). For the representation in works of art, see the vase-painting alluded to above, and also a relief at Paris from Larissa (cf. Newton, *Trans. of Royal Soc. of Lit.*, ser. 2, vol. ix. p. 436 ff.; Fröhner, *Vases Grecques de Cameiros*). The latter, by its figure of Victory, shows that one motive for the entertainment was the idea that the Twins gave aid in battle, as at Regillus; and this is borne out by a passage in Polyaenus (*Strat.* vi. 1), where Jason of Pherae professes to entertain (*ξενίζει*) the Dioscuri, on the ground that they had given him victory (cf. Diod. viii. 32). For notice of votive tablets commemorating these theoxenia, see Deneken, pp. 15-24. Next to the Dioscuri, perhaps Bacchus was more often the entertained or entertainer at mortal feasts than any other divine being (cf. Paus. i. 2, 5; vi. 26, 1; Athen. xi. p. 465 a). At Andros in this festival there was a miraculous contribution of wine flowing from the temple (Paus. vi. 26, 3). The special name *θεοδαίσια* was given to these entertainments of Bacchus (Hesych.); see also the relief in Baumeister, *Denkm.* fig. 1849. For the tradition of Sophocles entertaining Aesculapius, see Plut. *Num.* iv. 16; *Etym. Mag.* s. v. *Δεξίων*: cf. Paus. x. 32, 8.

(On this subject, see A. Mommsen, *Delphica*, pp. 94, 299–308; Baumeister, *Denkm.* p. 1764, and especially a dissertation by Deneken, *de Theoxeniis*, Berlin, 1881.) [G. E. M.]

THERMAE. [BALNEAE.]

THERMOPO'LIUM. [CALIDA; CAUPONA.]

THESAURUS (*θησαυρός*), a storehouse, treasury. The name is commonly used both in a correct and an incorrect significance, when applied to surviving buildings; but as the incorrect meaning is at least as old as Pausanias, it is also included here. There are (1) the treasuries of various Greek cities dedicated at Olympia and Delphi, (2) the so-called treasuries at Orchomenus, Mycenae, and elsewhere.

(1) At Olympia the whole row of treasuries described by Pausanias has been unearthed. In architectural form they are like small temples of the Doric order, and so are actually called *ναοί* by Polemo (*ap.* Athen. xi. 489–90). They consist of an oblong chamber with a small prodomus, usually *in antis*; the treasury of the Geloans has a portico in front, and also internal columns. They were erected at various periods to contain the costly offerings made by those who dedicated them; but later seem to have been used to contain other treasures and works of art requiring protection by a building (Paus. vi. 19). The treasuries of various cities at Delphi were probably of similar form, and served a similar purpose (Paus. x. 11).

(2) For the circular sepulchral buildings, falsely called "Treasuries," such as the "Treasury" of Atreus at Mycenae, see SEPULCRUM, p. 644 *a*.

(Bötticher, *Olympia*, 2nd edit., Berlin, 1886, pp. 207 *sqq.*; Richter, *de Thesauris Olympiae effossis*, Berlin, 1885; Baumeister, *Denkmäler des classischen Alterthums*, art. "Olympia," pp. 1104 B *sqq.*; Schliemann, *Exploration of the Boeotian Orchomenus: Journal of Hellenic Studies*, 1881, pp. 122 *sqq.*; Schliemann, *Mycenae*, pp. 227 ff.; Thiersch, *Die Tholos der Atreus zu Mykenae*, in *Mittheilungen des deutschen Instituts zu Athen*, 1879, pp. 177 *sqq.*) [E. A. G.]

THESEIA (*θησεῖα*). The festival in honour of Theseus dates from Cimon, who, in obedience to an oracle from Delphi (for the historical and political significance, see Grote, *Hist.* v. 413 ff.), brought the bones of Theseus from Scyros and buried them in the spot upon which the Theseum was built. From this act date the annual *ἐπιτάφια*, or funeral rites in honour of national heroes and of all who died in battle for Athens, including in war-time a funeral oration over the dead [cf. FUNUS, Vol. I. p. 887 *b*]. It is true that we hear of *ἐπιτάφια* earlier than this in memory of those slain at Marathon and Plataea (Diod. xi. 33; Dionys. v. 17); but these, like many other funeral rites and games in various times and places, were celebrated on the spots where the battles were fought. The Epitaphia at Athens, with the sacrifices, feasts, and orations belonging to them, should not be placed earlier than 469 B.C., and we may assume Cimon or one of his contemporaries to be *ὁ τὸν λόγον προσθείς* (Thuc. ii. 35: Curtius here is to be followed rather than Grote). The ceremonies of the *ἐπιτάφια* were conducted by the Polemarch (Poll. vi. 91; ARCHON, Vol. I. p. 168), but the oration was made by some man specially chosen for the occasion (Thuc. i. 34).

The whole Theseus-festival comprised on different days of the month Pyanepsion several distinct ceremonies, which have been elsewhere particularly described, partly representing the story of Theseus, partly the funeral rites which had become connected with his festival. The word *θησεῖα* may be used generally of the whole (Aristoph. *Plut.* 621), but it is usual to find the separate ceremonies mentioned under their own name, and where we find *θησεῖα* alone it commonly refers to the offering and banquet on 8th Pyanepsion and the games of the following day: the phrase *θησεῖα καὶ ἐπιτάφια*, which is often found in inscriptions (see *Heortol.* p. 282), means that day of the Theseus-festival on which the *ἐπιτάφια* took place.

The Calendar of the whole festival may be thus described (following the arrangement of A. Mommsen):—

Pyanepsion VI., the *κυβερνήσια* or steersman's festival, to commemorate the return of Theseus, celebrated at Phalerum, where there were shrines (*ἡρῷα*) of Nausithous and Phaeax, the *κυβερνήτης* and *πρῳρεύς* of the expedition (Plut. *Thes.* 17). (In those years when there was occasion of a public funeral for citizens slain in battle, their bones "lay in state" on Pyanepsion V. and VI.)

Pyanepsion VII., the day of PYANEPSIA: the *ἕψησις τῶν ὀσπρίων* having begun with the evening of the 6th (= the beginning of P. VII.), the feasting on this food belonged to the whole of the day. In the morning of this day took place the OSCHOPHORIA: in the afternoon the *ἐπιτάφια* (and in time of war the oration over the dead. The sacrifice for the slain Amazons seems to have been on this day, πρὸ τῶν θησείων, Plut. *Thes.* 27). [For details see OSCHOPHORIA; PYANEPSIA.]

Pyanepsion VIII. On the evening of the 7th (= the beginning of P. VIII.) took place the offering and banquet in honour of Theseus, and a torch-race for the ἐπιτάφια: in the day, gymnastic contests (cf. Gell. xv. 20, 3).

Pyanepsion IX. Equestrian exercises, processions, and contests. To these last two days belonged especially the name θήσεια. (For a fuller discussion, see A. Mommsen, *Heortologie*, pp. 269–287; and, for the history of the vase-illustration, Harrison, *Mythology and Monuments*, pp. xcviii.–cxlviii.) [G. E. M.]

THESMOPHO'RIA (Θεσμοφόρια). The Eleusinia and the Thesmophoria were the two great festivals held in Attica in honour of Demeter. The Athenian Thesmophoria, which is the best known festival of the name, was solemnised exclusively by women at the time of seed-sowing in October in honour of Demeter Thesmophoros. The many points of interest attaching to the festival, over and above the fact that Aristophanes has written an amusing comedy on the subject, will perhaps justify a somewhat lengthened discussion on its nature and significance.

1. *Demeter Thesmophoros.*—The idea in θεσμοί, θέμιστες (cf. Hesych. *s. v.*), and words derived therefrom, is ordinances as the expression of the will of a divinity, enactments or injunctions invested with the halo of religion, θεσμὸν τὸν μοιρόκραντον ἐκ θεῶν δοθέντα τέλειον, as Aeschylus says (*Eum.* 391); and as such the term is sometimes applied even to written laws, *e.g.* Draco's (Plut. *Sol.* 19; cf. Grote, iii. 76) and Solon's own (Solon, *Frag.* 36 [25], 16, which shows that Aelian, *V. H.* viii. 10 *fin.*, is in error). We have been taught by Sir H. Maine (*Ancient Law*, p. 4 ff.) that the very earliest notion of law was the θέμιστες of Homer, strictly individual (cf. Phot. 87, 16) judgments or "dooms," supposed to be imparted by Θέμις to the king, who was a judge, not a lawgiver. The θεσμοί we are now referring to are somewhat more universal than these. The θεσμοί, says Preller (*Demeter und Persephone*, 350), were ordinances given by each god inside his own sphere, so θεσμὸς Ἀδραστείας (Plut. *de Fato*, 4 = ii. 570). They were the law of the early patriarchal ages; and a patriarchal system of rule was the first which emerged when mankind, arrived at the agricultural stage, came to follow a settled mode of life and live in communities. Now, Demeter was the divinity who presided over agriculture and all the settled laws and customs, the civilisation in fact, which it involved (Isocr. *Panegyr.* 28); the Athenians boasted that corn and laws, πυροὺς καὶ νόμους, were first introduced into their land (Aristot. in Diog. Laert. v. 17): Demeter it was who taught men to sow the earth and reap the fruits: Demeter it was who was reported to have founded marriage, itself a kind of husbandry (ἐπ' ἀρότῳ παίδων γνησίων, as ran the Athenian formula of marriage: Lucian, *Tim.* 17: cf. Aesch. *Theb.* 753; Soph. *O. T.* 1498; Eur. *Phoen.* 18; Plat. Menex. 238; the θεοὶ προηρόσιοι to whom sacrifice was offered before marriage, Plut. *adv. Colot.* 22 = ii. 1119: and the metaphor is retained even in English, cf. Shakespeare's *Ant. and Cleop.* ii. 2, 233), to have thus raised men above the life of savages, to have been the founder of the family, and thus to have rendered the foundation of cities possible, "et leges sanctas docuit et cara jugavit Corpora conubiis et magnas condidit urbes," as the Roman poet Calvus sang (*ap.* Serv. *ad Aen.* iv. 58). As such Demeter is θεσμοφόρος (Diod. v. 5), θεσμία (Paus. viii. 15, 1), θεσμόθετις (Cornut. *N. D.* 28), *legifera* (Verg. *Aen.* iv. 58). The priestess of Demeter imparts the πάτριος θεσμὸς to the bridegroom and bride in the nuptial chamber (Plut. *Praecep. Cong.* init. = ii. 138; cf. also Ael. *V. H.* xii. 47); a woman guilty of illicit connexion was said ἀθέσμως συγγενομένη (Schol. to Aristid. p. 22), opposed to γάμος ἐπὶ παισὶν ἔνθεσμος (Heliod. i. 25); the consummation of marriage is certainly meant by θεσμὸς in the Odyssey (xxiii. 296), where Ulysses and Penelope after all their troubles ἀσπάσιοι λέκτροιο παλαιοῦ θεσμὸν ἵκοντο (no matter what Ameis says); the matrons swore by the goddesses of Eleusis to remain faithful to their marriage vow (Alciphr. iii. 69); the young girls prayed to Demeter for a husband (*ib.* ii. 2, 6). At the Thesmophoria many references were made to the fruitfulness of marriage; and the invocation (Aristoph. *Thesm.* 296–300) of γῆ κουροτρόφος and Calligeneia (see below, § 3 *h*) has a similar reference.

The fundamental principles, then, of an agricultural and therefore settled life, and of the constitution of the family, are the θεσμοὶ Δήμητρος. Little different are the "laws of Triptolemus," who was reputed one of the most ancient lawgivers (Porphyr. *de Abstin.* iv. 22, p. 387), which are veritable θεσμοί, viz. to honour one's parents, to delight the gods with an offering of the crops, and not to ill-treat the domestic animals (Paus. i. 37, 6). Another θεσμὸς of Demeter, ἣν μὴ καθάρῃς κἀλέσῃς οὐ μὴ φάγῃς (Diogenian. v. 17: said to be from the *Triptolemus* of Sophocles, but not given by Dindorf and placed by Nauck, *Frag. Trag.* p. 868, among the Adespota), recalls the scriptural (2 Thess. iii. 10) "if any would not work, neither should he eat," and that earliest and justest of θεσμοί (Gen. iii. 19), "In the sweat of thy face shalt thou eat bread." Similar laws of Buzyges have been before alluded to under AROTOI HIEROI. Finally, to give some indirect evidence that Demeter was the goddess of laws and civil society, it was in her temple that the Amphictyonic assembly at Thermopylae was held (Herod. vii. 200), and meetings of the Achaean League were held under her auspices at Aegium (Paus. vii. 24, 3); a pig was sacrificed to Demeter at Athens by the περιστίαρχοι before the assembly opened (Schol. on Aristoph. *Ach.* 44), and Demeter was one of the goddesses by whom oaths were taken (Demosth. *Timarch.* p. 747, § 151; *Calipp.* p. 1238, § 9), for she was patroness of the assembly of the people.

The expression of reverence which the Greeks felt towards Demeter for all these blessings is well set forth by Diodorus (v. 5) in a passage which deserves quotation: οὐκ ἄξιον δὲ παραλιπεῖν τῆς θεοῦ ταύτης τὴν ὑπερβολὴν τῆς εἰς τοὺς ἀνθρώπους εὐεργεσίας. χωρὶς γὰρ τῆς εὑρέσεως τοῦ σίτου τήν τε κατεργασίαν αὐτοῦ τοὺς ἀνθρώπους ἐδίδαξε, καὶ νόμους εἰσηγήσατο καθ' *οὓς δικαιοπραγεῖν εἰθίσθησαν. δι' ἣν αἰτίαν φασὶν αὐτὴν θεσμοφόρον ἐπονομασθῆναι· τούτων δὲ τῶν εὑρημάτων οὐκ ἄν τις ἑτέραν εὐεργεσίαν εὕροι μείζονα· καὶ γὰρ τὸ ζῆν καὶ τὸ καλῶς ζῆν περιέχουσι.*

2. *The origin of Thesmophoric worship.*—The worship of Demeter was said to have been introduced into Attica by the Gephyraeans (cf. Herod. v. 57, 61; Preller, *Demeter und Persephone*, pp. 391–5). These stated themselves that they came from Eretria originally, but Herodotus thinks that they were Phoenicians. They lived at Tanagra in Boeotia, which had been formerly called **Γέφυρα** (*Etym. M.*). When the rest of the Cadmeans were driven out by the Argives and went to the Encheleis, the Gephyraeans remained in Boeotia at first; but later, being expelled by the other inhabitants of that country, they turned to Athens. The Athenians made them citizens on special terms, *ἐπὶ ῥητοῖς*: which were probably to maintain in repair the bridges over the river Cephisus (Lyd. *de Mens.* viii. p. 45; *Etym. M.* s. v. **Γεφυρεῖς**), for that art was considered recondite in early times (cf. Fr. Lenormant, *Voie Sacrée Éleusinienne*, p. 247); and with injunctions to keep aloof from the other citizens in many respects. They had temples and rites special to themselves (though these cannot have long remained secret: cf. Schol. on Aristoph. *Ach.* 708), and among these the temple and rites of Demeter Achaea (Herod. *l. c.*).

This Demeter Achaea, the *mater dolorosa* of the ancients, was so called from her mourning (*ἄχος*), not from the *ἦχος* of cymbals used in search for Cora (for amongst other reasons the A in *Ἀχαιὰ* is short), and corresponds to the *Ceres deserta* mentioned by Virgil (*Aen.* ii. 714: cf. Plut. *de Isid. et Osirid.* 69; Lobeck, *Aglaoph.* 1225, note x). Welcker (*Griech. Götterl.* i. 359) thinks the original derivation is from *γαῖα* with a prosthetic *α*, and that it refers to Demeter's character as Earth-goddess; and he compares such forms as *βαθυχάïος*, *εὐχάïος*, *τριχάϊξ*. But the derivation is probably onomatopoeic, and similar to that of the obsolete Hebrew אָחָה, "to cry ah! ah!" whence comes אֹחִים, "owls," *ululae*, in Isaiah xiii. 21. We are, of course, not necessarily to *derive* the Greek from the Hebrew. Indeed, none of the attempted Semitic derivations have much to support them (cf. Mommsen, *Heort.* 29, note); but it may be mentioned that Hitzig and Fr. Lenormant identify the Gephyraeans with the Geshurites of Josh. xiii. 13, 1 Sam. xxvii. 8. "ש and ת are constantly interchanged in Semitic, *θ* and *φ* in Greek," says Lenormant (*La légende de Cadmus* in *Annales de Philosophie chrétienne*, xv. (1867), 79), though they draw opposite conclusions, Hitzig maintaining that the Geshurites were Aryans, Lenormant that the Gephyraeans were Semitic.

Again, the worship of Demeter Thesmophoros is connected with Cadmus of Thebes, both of them "orderers." The temple of the goddess had formerly been the house of Cadmus (Paus. ix. 16, 5). Cadmus and indeed the whole grouping of the city-divinities of Thebes bespeak a Cabirian origin. In Aristoph. *Thesm.* 300, among the divinities specially connected with Demeter we find Hermes and the Charites. Now, **Κάδμος λέγεται ὁ Ἑρμῆς**, as *Etym. Gud.* (s. v.) says; he is the attendant on the Great Goddesses, like the Cadmilus of Samothrace: and if the Charites (cf. also *C. I. A.* 5) take the place of Harmonia, that is only parallel to the Lemnian nymphs taking the place of Harmonia in the Cabiric worship of Corinth (Schol. on Pind. *Ol.* xiii. 74). Now, Cadmus is a character partly Pelasgic, partly Phoenician (cf. Maury, iii. 234–253; Lenormant, *op. cit.*). Further, Herodotus (ii. 59, 122, 123, 155), followed by Diodorus (i. 13), expresses himself quite decidedly to the effect that Demeter-worship originally came into Greece from the Isis-worship of the Egyptians: and he is of the same opinion about the rites of the Thesmophoria (ii. 171). He relates that the daughters of Danaus taught these mysteries to the Pelasgian women; that on the Doric conquest of Peloponnesus these rites vanished except among the Arcadians who were not dispossessed by the warrior Dorians. So we find Thesmophoric worship traced back through Thebes to the Cabiri of Samothrace, and then further to the East, Phoenicia or Egypt; but into these dark regions we cannot now follow it.

3. *The Athenian Festival* lasted for five days, and was conducted partly at Halimus on the coast of Attica, partly in the city. We shall first see who took part in the festival, then describe its various parts, and finally discuss its date.

(*a*) *The participants in the Thesmophoria.*—It was to Demeter, chiefly as the goddess presiding over marriage, that the Thesmophoria was celebrated. It was a festival embracing many mystic and secret rites (Aristoph. *Thesm.* 472; *Eccl.* 443), in which women alone could take part; but it was open to all free women of respectable character. Accordingly it was, as Maury says (ii. 223), the national and popular Demeter-festival, in contrast to the Eleusinia, which was the mystical and aristocratic one. From the very nature of the feast to the goddess presiding over marriage, neither slaves (Aristoph. *Thesm.* 294) nor courtesans were allowed to attend; and Lucian (*Dial. Meretr.* 2, 1) is to be explained by supposing that Myrtium watched the procession, not that she took part in the ceremonies. But it is not so certain that unmarried girls took no part, as is assumed by Preller (*Dem. u. Pers.* 343; Fritzsche, p. 580 of his ed. of the *Thesm.*; Schömann, *Gr. Alt.* ii. 483). For it is explicitly stated that *παρθένοι* did take part in the Thesmophoria at Athens (cf. Schol. on Theocr. iv. 25; Lucian, *l. c.*; Plaut. *Aul.* Prol. 36). At Catana Demeter was worshipped "per mulieres et virgines" (Cic. *Verr.* iv. 45, 99); and at Algonus (Strabo, i. 60) *παρθένοι* also appear to have taken part. Nor is there any reason why they should not, when we remember that young girls, *παρθένοι τ' ἔτ' ἄζυγες*, took part in the Bacchic rêvels (Eur. *Bacch.* 694), and that the ancients in large measure held that to the pure all things were pure (cf. *ἀλλ' ἐν τῇ φύσει τὸ σωφρονεῖν ἔνεστιν ἐς τὰ πάντ' ἀεί*, ib. 315). Fritzsche explains away the passage from Lucian by referring it to a *κανηφόρος* who took part in the procession, but not in the mysteries: but the Stenia was not the least coarse part of the festival. We should rather assume that all free adult women could take part in the ceremonies; and if Aristophanes (*Thesm.* 330) calls them *εὐγενεῖς γυναῖκες*, he only means that they were full citizens, as does Plut. *Sol.* 8 when he calls them *τὰς πρώτας γυναῖκας*.

(*b*) *The preliminaries.*—During the first nine nights of Pyanepsion the women who were to take prominent part in the festival were required to observe the strictest chastity (Ov. *Met.* x. 438); and all sorts of strange customs are related as to the particular kinds of herbs the women used to eat or to lie on so as to allay sexual desire (Schol. on Theocr. iv. 25, *κνῦζα*; Schol. on Nicand. *Theriaca*, 70, *κόνυζα*; Plin. *H. N.* xxiv. § 59, *agnon*; Hesych. *s. v. κνέωρον*; *Etym. M.* s. v. *σκόροδον*). The prohibition to eat the pomegranate (Clem. Alex. *Protr.* c. 12 = p. 16 ed. Pott.) belongs generally to Demeter-worship; and we have found it already at Eleusis. [ELEUSINIA.]

Prior to the beginning of the festival proper, each deme chose two of its richest and most important women, who were required to perform the necessary sacrifices, and also to prepare a feast for their fellow-demes-women (Isaeus, *Ciron. hered.* § 19); the expense was borne by the husbands, and was of the nature of a *λειτουργία* (Id. *Pyrrh. hered.* § 80). Accordingly the wives of the richest only were chosen as presidents; and Aristophanes (*Thesm.* 834) proposes an alteration in this custom, urging that this post of high honour be bestowed on women who have borne sons who have signally benefited the state.

(*c*) *The Stenia.*—This is to be considered as the beginning of the festival proper. The women appear to have gone down during the night of the 10th in small bands to Halimus (cf. A. Mommsen, *Heortologie*, 296); probably the women of each deme went together under the leadership of their presidents. As they went they exchanged with one another those kinds of jokes and abuse (Phot. 538; Hesych. *s. v. στηνιῶσαι*) which characterised so many Greek festivals, especially those in honour of Demeter. The abuse and jokes appear to have been very coarse (Cleomed. *Cycl. theor.* ii. p. 91, ed. 1605; cf. Apollod. i. 5, 3, Diod. v. 4, of the festival of Demeter at Syracuse). The derivation of the name *στήνια* is uncertain. Schömann (*l. c.*) supposes it from the halting-places of the companies, where the abuse no doubt was peculiarly rife; Preller (*op. cit.* 339, note 19) from an actual place of that name on the road to Halimus, and he compares the *γεφυρισμοὶ* at the bridge over the Cephisus in the Eleusinia. The place *Στήνια* is hypothetical, but the resemblance to the *γεφυρισμοὶ* is unmistakable.

(*d*) *The Mysteries at Halimus.*—Halimus was a village near Phalerum and Colias, on the west coast of Attica. There was a temple there to Demeter Thesmophoros (Paus. i. 31, 1), and also one at Colias (Hesych. *s. v.* Κωλιάς). Arnobius (*adv. Gentes*, v. 28) refers to the mysteries at Halimus in these words: "Alimontia mysteria quibus in Liberi honorem patris phallos subrigit Graecia et simulacris fascinorum territoria cuncta florescunt"—a passage written about A.D. 295, when all the mysteries of Greece had become confused. In order to properly understand, as far as we can, the mysteries of Halimus, we must turn to other sources.

St. Clement of Alexandria (*Protrept.* 11 = p. 14, 21, ed. Pott.) says: "Do you wish me to tell of Pherrephatta's flower-gathering and her basket and of her rape, how the earth split in sunder and the swine of Eubulus were swallowed up with the disappearing deities—the reason wherefore at the Thesmophoria they 'encrypt' swine and cast them therein (*μεγαρίζοντες χοίρους ἐμβάλλουσι*)? This story the women celebrate in their feasts under varied forms, Thesmophoria, Scirophoria, Arretophoria, all in one shape or another giving a dramatic representation of the Rape of Pherrephatta." [We have coined a word to express *μεγαρίζοντες*, which means "to put into crypts (*μέγαρα*)," as with us "pit" can mean "to put into pits," &c. It appears to have been a ritualistic word, as it is found in Epiphanius, and in connexion too with the Thesmophoria: *αἱ μεγαρίζουσαι καὶ θεσμοφοριάζουσαι γύναικες*, quoted by Lobeck (*Aglaoph.* 832), whose conjecture, *μεγάροις ζῶντας*, though brilliant and widely adopted, is unnecessary.]

Even this passage was very obscure till E. Rohde (*Rhein. Mus.* xxv. 548 ff.) published a valuable scholion on Lucian (*Dial. Meretr.* ii. 1) from a Vatican codex. The scholion is very long, but it is of such capital importance that we must reproduce it at length. "The *θεσμοφορία* (accented paroxytone) is a festival of the Greeks containing certain mystic rites, and these rites are also called Scirophoria (*σκιροφόρια*). It is solemnised on the basis of the somewhat mystical story, that when Cora, as she was gathering flowers, was carried off by Pluto, there at that very place a certain swineherd named Eubuleus was herding his swine, and that they were swallowed up in the chasm (along with the deities). It is in honour of this Eubuleus that swine are cast into the chasms (*χάσματα*) of Demeter and Cora. When the bodies of the swine which have been cast into the crypts (*μέγαρα*) are decayed, certain women who are called *ἀντλητρίαι*, after purifying themselves for three days, descend and bring them up. They go down into the sacred caverns (*ἄδυτα*), bring up the remains, and place them on the altar; and they believe that the man who takes of this offering and mixes it with his seed-corn will have a good crop. Moreover, they say that there are serpents also below, all about in the chasms (*χάσματα*), and that these serpents eat the greater part of what is cast in: wherefore too a rattling is made when the women draw up (*ἀντλῶσιν*) the bodies and when they put back again those well-known figures (*τὰ πλάσματα ἐκεῖνα*), so that the serpents, which they believe to be the guardians of the sacred caverns (*ἀδύτων*), may retire before them. This ceremony is called 'the carrying of things which must not be spoken of' (*ἀρρητοφόρια*), and is performed as equally efficacious for the productiveness of the fruits of the ground and for the generation of human kind. Moreover, too, they bring there sacred emblems which must not be spoken of (*ἄρρητα ἱερά*) made of dough in the image of serpents and the male organs of generation (*ἀνδρῶν σχημάτων*)." [This is the interpretation given by Rohde, p. 552, comparing the *μύλλοι* at Syracuse (Athen. xiv. 647 a): but even so there is no need to emend *ἀνδρῶν* into *αἰσχρῶν*. It would seem as if we should read *ἄλλων*, but the passage from Arnobius quoted above makes for Rohde's interpretation: cf. Clement, *op. cit.* 21=p. 29 Pott.] "And they take boughs of pine (*κώνου*), for that tree is prolific; and into the crypts, as these sacred caverns are called (*ἐς τὰ μέγαρα οὕτως καλούμενα ἄδυτα*), these offerings (*ἐκεῖνα*, *i.e.* both the sacred emblems and the pine-branches) and the swine, as we have already mentioned, are cast, these latter as being so prolific, in order thereby to symbolise the generation of fruit and of human kind—and all as a thank-offering (*χαριστηρία*) to Demeter, for she gave us her corn and civilised (*ἥμερον ἐποίησεν*) the race of men. The account of the feast given above is the mythical; the one before us is the rationalistic (*ὁ δὲ προκείμενος φυσικός*). The name *θεσμοφορία* (paroxytone) arises from the epithet *θεσμοφόρος* applied to Demeter, because she laid down the law or rather her divine injunction (*νόμον ἤτοι θεσμόν*), whereby man is bound to provide for himself and to get by his own labour his daily sustenance (*τὴν τροφὴν πορίζεσθαί τε καὶ κατεργάζεσθαι*)." Rohde supposes that the Scholiast, finding in his text an allusion to the *θεσμοφόρια* (proparoxytone), looked up in some book of ritual and copied down what he found under *θεσμοφορία* (paroxytone). Now, this latter was the name of the day of the mysteries at Halimus, according to the right reading in Photius, 87, 21 (compare with Schol. on Aristoph. *Thesm.* 80), wrongly altered by Porson to *θεσμοφόρια*: cf. Fritzsche, p. 578.

Accordingly, in the description by the Scholiast on Lucian, we have an account of that part of the Thesmophoria which consisted of certain mysteries solemnised by the women at Halimus,—mysteries both striking in themselves and instructive in more points than one.

First of all, let us call to mind other similar sacrifices offered elsewhere to Demeter and Persephone. We read that there was a hole (*βόθρος*) sacred to Demeter Erinnys at Onceum, near Thelpusa in Arcadia, into which live pigs were cast (Paus. viii. 25, 4; cf. Lycophr. *Alex.* 1225, *λωβαῖσιν αἰκισθέντας Ὀγκαίου βόθρου*). The people of Potniae in Boeotia (Paus. ix. 8, 1) used to throw into "crypts as they are called" (*ἐς τὰ μέγαρα καλούμενα*) young pigs, and they relate that these pigs emerged again ["at Dodona," says Pausanias. We do not see how *ἐν Δωδώνῃ* can stand, and hesitatingly with Lobeck (*Aglaoph.* 829, 830) read *ἀναδοθῆναι*: for a verb is certainly required, and what connexion are the Potnians likely to have had every year with distant Dodona?] at the same season of the ensuing year. At the fountain of Cyane, near Syracuse, a live bull was precipitated, in honour of Cora, into a hole where it was supposed that she had disappeared (Diod. v. 4). Into a gulf near Argos, at certain periods, torches were thrown in honour of Cora (Paus. ii. 22, 3).

Next, as regards these crypts, or *μέγαρα*, as they were technically called, Eustathius (on *Od.* i. 1387, 17) says, *ἰδικῶς μέγαρα κατάγεια οἰκήματα ταῖν θεαῖν ἤγουν Δήμητρος καὶ Περσεφόνης*, with the addition of Ael. Dionysius, *εἰς ἃ τὰ μυστικὰ ἱερὰ κατατίθενται*: cf. Hesych. *s. v.* *ἀνάκτορον*. Especial interest attaches to them, as Sir Charles Newton opened one at Halicarnassus. It had been originally circular in form, and amongst its contents were discovered "certain small figures of pigs in marble, and at the very bottom the bones of swine and of some other animals." Taken in connexion with the scholion to Lucian and the passage from St. Clement, it may reasonably be inferred that Sir C. Newton discovered an actual crypt used in the mystic ceremonies of the Thesmophoria. The Scholiast tells both of the live pigs driven down into the crypts and of the images (*πλάσματα*), probably of pigs, which were placed in the crypts after the flesh of the real swine was removed; and both these were actually discovered at Halicarnassus. (See Newton, *Halicarnassus*, 383 ff., 391, 422; cf. Plate lviii.)

But the most interesting point of all is the reason given by the Scholiast for the sacrifice. They believed that the flesh of the swine so offered to Demeter would, if mixed with the seed-corn, magically add to its fertility. We seem to be very far from civilised Periclean Athens here. We are away back in savage times and their magic rites. In savage and even bestial forms Demeter appears elsewhere in Greek religion, *e.g.* Demeter Erinnys (Paus. viii. 25, 4), Demeter Melaina (*ib.* 42, 1–4); but that would be too wide a subject to enter on now. It is more relevant to show by comparison that the custom of mixing blood with the seed-corn *is* a savage custom; and that has been done by Mr. Andrew Lang in an article "Demeter and the Pig" (*Nineteenth Century*, xxi. 563, April 1887: cf. *Myth, Ritual, and Religion*, ii. 260–276), in which he adduces the examples of the Pawnees of America, who used to mix the blood of a human victim with the seed-corn, and of the Khonds in the hill-region of Goomsar, who sacrificed both a pig and a man for the same purpose;* and further Mr. Lang shows how, in the two discoveries of Sir C. Newton at Halicarnassus, "the whole character of Greek religion, its humane and rational, and its wild and magical aspects, are thus combined in the lovely Cnidian statue of Demeter (cf. Newton, *op. cit.* p. 399; cf. Plate lvi.), and in the fragments of bones of sacrificed swine and images of pigs which lay in her subterranean cell."

But though these savage rites came soon, under the wondrous alchemy of the Greek imagination, to be transmuted into parts of a poetical drama; still their savage character remained to the end, intertwined with the beautiful legend of Demeter and her lost daughter. For the mysteries at Halimus were a more or less complete dramatic representation of a portion of that story, as is expressly stated by St. Clement, probably the portion which described the rape of Proserpina (Rohde, p. 557). He seems to preserve even the very order of the representations. We think that here, too, the mysterious ceremony called *δίωγμα* took place (Hesych. *s. v.*), it being a pursuit after the ravished Proserpina; but this is rendered uncertain by the article in Suidas under Χαλκι-

---

* Mr. Frazer (*The Golden Bough*, ii. 48) relates that "in Hessen and Meiningen the flesh of pigs is eaten on Ash-Wednesday or Candlemas, and the bones are kept till sowing time, when they are put into the field sown or mixed with the seed in the bag:" but cf. p. 29, "This is thought to be an infallible specific against earth-fleas and moles, and to cause the flax to grow well and tall."

διωκὸν δίωγμα, viz. *τοῖς Θεσμοφορίοις Ἀθήνησί τι νόμιμον ἐν πολέμῳ γυναικῶν εὐξαμένων διωχθῆναι τοὺς πολεμίους καὶ συνέβη φυγεῖν εἰς Χαλκίδα*. We confess to have no proper notion what this means: Welcker (*Griech. Götterlehre*, ii. 498) supposes that on one occasion of battle the prayer of the women assembled for the Thesmophoria effected the flight of the enemy to Chalcis. For the *calathus* sacred in the rites of Proserpina, see Claudian, *Rapt. Proserp.* 139, and Spanheim *ad Callim.* p. 652; it was worn also as a head-dress in the rites of Demeter (Saglio in *Dict. des Antiq.* i. 813). As to the functions of the *ἀντλήτριαι*, Rohde (p. 554) thinks that they were performed *after* the festival, as otherwise the flesh of the swine would not have had time to putrefy; but from the complexity and detail observed as regards the drawing up of the flesh, and the subsequent consecration of it on the altars and the mixing it with the seed-corn, we are led rather to suppose that these are the ceremonies performed by the assembled women, and that the casting of the swine into the crypt took place some days *before* the actual mysteries were celebrated. Mr. Frazer (*op. cit.* p. 45) holds that the rotted remains of the pigs were not taken up till the next annual festival; and refers to this feature in the ceremony at Potniae to which allusion has been made (Paus. ix. 8, 1). This is possible: but it is not likely that, in a scholion which is so explicit, such an important point would have been omitted.

Lastly, it is to be noticed that the pig was the animal especially sacrificed to Demeter. Why it was so different explanations are given. (1) The mythologists said that when Triptolemus first sowed his crop a pig destroyed his work (*λυμαντικός*, Schol. on Aristoph. *Ran.* 338); therefore did he seize it, place the fruits on its head, and sacrifice it to the goddess (Serv. on Verg. *Georg.* ii. 380; *Aen.* iii. 118). Or, again, they tell that the pig effaced the track of Proserpina as she was being carried away (Ov. *Fast.* iv. 405). (2) The Symbolists find in the pig an emblem of fecundity (*διὰ τὸ πολυτόκον*, Schol. on Lucian). Hence is to be explained the many votive offerings to Demeter of pigs with children on their backs. They are offered to the goddess by parents if haply she will grant them children (Gerhard, *Akademische Abhandl.* ii. 340, note 36). The female womb was called *χοῖρος* (Aristoph. *Ach.* 780 ff.; Schol. on *Vesp.* 1353); cf. *porcus* in Varro, *R. R.* ii. 4, 10. (3) But, besides, the pig was a common and effective *purificatory* offering (Aesch. *Eum.* 283), especially at Eleusis; accordingly, both in statues (*e.g.* that of Demeter Eleusinia in the Louvre: Fr. Lenormant in *Dict. des Antiq.* i fig. 1321) and coins (Cohen, *Méd. Cons.* pl. xli. 7, 8, Vibia gens) Demeter appears with a purificatory torch *and* a pig. Each of the initiates at Eleusis sacrificed a pig on the 17th of Boedromion, the day of the Great Eleusinia, which was called *θύα* (Hesych. *s. v.*), and so apparently on the same day did each family at Athens (*C. I. G.* 523, 7). There is a good picture of a family offering a pig to Demeter and Persephone in Baumeister's *Denkmäler*, p. 416, fig. 457 = D. and S. i. fig. 1310. (4) Mr. Frazer (*op. cit.* ii. 44 ff.) considers that the pig used in the rites of Demeter was nothing else but the goddess herself in animal form (cf. p. 27): for in European folk-lore, as he argues at length (pp. 26 ff.), the pig is the common embodiment of the corn-spirit; the goddess is sacrificed to herself on the ground that she is her own enemy, as was the case with Dionysus. At the Thesmophoria swine's flesh appears to have been eaten (Schol. on Aristoph. *Ran.* 338), and Mr. Frazer considers that "the meal must have been a solemn sacrament or communion of worshippers partaking of the body of the god." We cannot help thinking that the Scholion is too vague and unreliable to base on it such a large conclusion.

(*e*) *The Anodos* (*ἄνοδος*), sometimes called *κάθοδος* (Phot. 87; Schol. on *Thesm.* 585).—On this day, the 12th, the women returned to Athens in procession; and, says the Schol. on Theocr. iv. 25, they carried on their heads the sacred books of the ordinances of Demeter, and, as it were praying, went off to Eleusis (*καὶ ὡσανεὶ λιτανεύουσαι ἀπήρχοντο εἰς Ἐλευσῖνα*). The Schol. on *Thesm.* 585 says that the name *ἄνοδος* came from the women going up to the Thesmophorion, for it lay on a height. We are to explain the strange allusion of the Scholiast on Theocritus to Eleusis, by supposing that the Eleusinion was the goal of the procession (Mommsen, *op. cit.* p. 300), and that either the Eleusinion was originally called the Thesmophorion, or, more probably, the Thesmophorion was part of the Eleusinion (cf. Milchhöfer in Baumeister's *Denkmäler*, i. 198–9). The carrying of the books of the laws on their heads was an old custom with the women (Aristoph. *Eccl.* 222, 3). It was for a long time supposed that Demeter with a volume of laws was represented on one of the metopes of the Parthenon; but this view is given up by Michaelis (*Parthenon*, p. 134, metope xx.). However, there is no doubt that in a vase-painting (Tischbein, IV. xxxvi., reproduced by Fr. Lenormant in *Dict. des Antiq.* i. fig. 1296) Demeter Thesmophoros does appear holding an open roll of laws.

(*f*) *The Scira* (*Σκίρα*).—Returned to Athens, still on the 12th (Mommsen, *op. cit.* 299), the women met for the secret conclave called *Σκίρα*, at which Aristophanes represents them as passing resolutions (*Eccl.* 18); at any rate there was a president (*Thesm.* 834). We cannot tell what the nature of the deliberations were; but that the Scira belonged to the Thesmophoria seems certain. Besides the two passages just quoted, we find in the Scholiast to the latter that the Scira were *τὰ γινόμενα ἱερὰ ἐν τῇ ἑορτῇ ταύτῃ* (sc. Thesmophoria) *Δήμητρι καὶ Κόρῃ*.

Such is the opinion maintained by Mommsen as to the position in the Thesmophoria of the part called Scira; and in deference to his authority we have placed it here, but with much hesitation. That Mommsen (287–289) has proved that the Scira belonged to the Thesmophoria, and not to the Oschophoria as is held by K. F. Hermann (*Gottesd. Alt.* § 56, 7), is certain: but it is not at all clear that the Scira was not part of the ceremony at Halimus. In the first place, we should wish to refer back (§ 3 *d*) to the passage of St. Clement (*Protr.* 11), where he speaks of *θεσμοφόρια* (query *-ία*), *σκιροφόρια ἀρρητοφόρια*, where the first probably, and the third certainly, refer to the mysteries at Halimus, and therefore we may presume that the second does too. Again, the scholion on Lucian says that the *θεσμοφορία* is also called *σκιροφορία*. [Of course, there is no allusion to the Scirophoria held on the 12th of Scirophorion, about the end of June; it is a mere mistake of St. Clement and the Scholiast, Scirophoria for Scira.] Further the scholion on *Thesm.* 854 continues, *οἱ δὲ ὅτι ἐπίσκυρα θύεται τῇ Ἀθηνᾷ*: for the corrupt *ἐπίσκυρα* Fritzsche (*op. cit.* p. 323) conjectures *ἐπὶ Σκίρῳ τῇ Ἀθηνᾷ*, as in Steph. Byz. *s. v.* *Σκίρος*, though the usual form is indeed *Σκιράδι Ἀθηνᾷ* (Paus. i. 36, 4; i. 1, 4). For Athena Sciras, see Preller, *Griech. Myth.* i.^{3} 167 ff. The temple of Athena Sciras at Phalerum was quite close to Halimus (Paus. i. 36, 4); and it was natural that, as the primitive Demeter-worship of Halimus came gradually into connexion with the worship of Athena till it was finally adopted into the Athenian state-religion, it should get especially blended with just that side of Athena-worship which expressed gratitude for the gifts of the Earth (cf. Welcker, *Gr. Götterl.* ii. 283), and with just that temple of Athena, namely the temple of Athena Sciras at Phalerum, where her worship existed long before it was introduced into the city (Mommsen, 54). In a similar manner the Demeter-worship of the Gephyraeans became blended with the worship of Athena and Poseidon (Paus. i. 37, 2; Preller, *de Via Sacra*, p. 18), and Demeter-worship in Cyprus became blended with the presiding national divinity, Aphrodite (Engel, *Kypros*, ii. p. 654;—Paus. ii. 34, 11; vii. 21, 4), as indeed it had a certain connexion with the worship of Aphrodite Colias and of Genetyllis (Lobeck, 630), even in Attica (Preller, *Dem. u. Perseph.* 344; cf. *Gr. Myth.* i. 299).

(*g*) *The Fast* (*νηστεία*) took place on the 13th. "At the Thesmophoria," says Cornutus (*Nat. Deor.* 28), "the women fast in honour of Demeter; either it is that they honour her by a peculiar kind of sacrifice, in that they abstain for one day from the gifts which she has given unto them, or it is in heedful commemoration of the need that in days gone by fell upon men at the hands of this goddess." Seated on the ground and in the deepest gloom, the women fasted, and they did not even offer any sacrifice (Plut. *de Isid. et Osirid.* 69; cf. Aristoph. *Av.* 1517). Originally they appear to have uttered wild mourning and lamentations, *κομμοὶ καὶ θρῆνοι* (Iamblich. *Vit. Pythag.* c. 27, p. 262, ed. Kiessl.). These lamentations point to introduction from the East (cf. Herod. vi. 58), and partook of that piercing (*σκληρὸν*) and Oriental, unmeasured and intemperate expression of grief which Solon and Epimenides (Plut. *Sol.* 12, 21) tried to put down; and in this sense perhaps the solemn words of the Homeric Hymn to Demeter, 479, are to be understood: [*ὄργια δ'*] *οὔπως ἔστι παρεξίμεν οὔτε πυθέσθαι οὔτ' ἀχέειν, μέγα γάρ τι θεῶν ἄχος ἰσχάνει αὐδήν.*

Most scholars after Plutarch (*de Isid.* l. c.; *Demosth.* 30) place this fast in connexion with the fast of nine days which the initiates at Eleusis observed, in imitation, as is supposed, of the fast of Demeter in her grief for the loss of her daughter—and rightly too in part, though we must remember that Persephone did not play any very *prominent* part in Thesmophoric worship generally, and that the lamentations and fasting point also in part to the fact that probably the worship of Demeter as a *θεὸς χθόνιος* had got in some degree mingled with that of the goddess in her other aspects; and it is to an earth-goddess that Iamblichus refers the *κομμοὶ καὶ θρῆνοι* before alluded to. The statement made by Lenormant (*Dict. des Antiq.* i. p. 1059, note 1182) that the reference was to the miserable state of humanity prior to the possession of the gifts of Demeter is in some measure borne out by the evidence adduced, viz. Cornut. *l. c.*, Aristid. *Eleusin.* 417 Dindorf. He also tells us that Cornutus (c. 28) refers to the absence of fire in the Hephaestia at Lemnos as a parallel to the fast of the Thesmophoria, a point alluded to also by Welcker (*op. cit.* ii. 502, note 19), but we have been unable to find the reference.

In Rome fasts in honour of Ceres were solemnised under Greek influence, *e.g.* the *jejunium Cereris* appointed by order of the Sibylline books in 191 B.C. (Liv. xxxvi. 37, 4) to be held every five years (cf. Cic. *Balb.* 24, 55; Festus, s. v. *Graeca sacra*, p. 154 M.); also a *jejunium Cereris* appears in the Calendar of Amiternum for Oct. 4th, a date which nearly coincides with the Thesmophoria (cf. *C. I. L.* i. pp. 325, 403).

(*h*) *The Calligeneia* (Καλλιγένεια).—This was the name given to the last day of the festival, the 14th, the day of rejoicing and holiday after the severe discipline of the previous ceremonies. According to the Schol. on Aristoph. *Thesm.* 298, Καλλιγένεια was a *δαίμων περὶ τὴν Δημήτραν*: cf. Hesych. *s. v.*, who says she is an *ἀκόλουθος*. An important passage of Photius quoted by Kock (*Frag. Com. Att.* i. p. 481 = *Frag. Aristoph.* 335) tells us that Apollodorus said that Calligeneia was the Earth, others a daughter of Zeus and Demeter, while Aristophanes the comedian represented her as the nurse of Demeter. But the real fact probably is that *καλλιγένεια* is an epithet of the goddess herself as the mother of a fair child, just as Persephone is the fair child herself (*καλλίπαις θεά*, Eur. *Orest.* 964).

But, be that as it may, it is agreed that Calligeneia spoke the Prologue of the Second Thesmophoriazusae of Aristophanes (Kock, *l. c.*). The First Thesmophoriazusae (the play which we possess intact) had its scene laid on the day of the *νηστεία*: the Second Thesmophoriazusae probably on the Calligeneia (Fritzsche, p. 585). In Athen. i. 29 we read that Demetrius of Troezen called the Second Thesmophoriazusae *Θεσμοφοριάσασαι* (cf. Kock, *l. c.*), *i.e.* the women who *have* celebrated, not who *are* celebrating, the Thesmophoria. But all the Grammarians call our play the *πρῶται* or *προτέραι Θεσμοφοριάζουσαι* (Fritzsche, *l. c.*); while it may be maintained that Demetrius considered that the really essential parts of the Thesmophoria were the mysteries and the fasting, and wished to convey that when they were done the Thesmophoria was virtually over. During the Calligeneia there was much loose jollification, plenty of festivity (cf. Hesych. *s. v.* *πρυτανεῖον*), sacrifices (Alciphr. iii. 39), and we hear of dances *κνισμὸς* and *ὄκλασμα* peculiar to this occasion (Poll. iv. 100: yet cf. Rohde, *op. cit.* p. 555, note), as well as cakes of obscene shapes (*κτένας*), like the *μύλλος* at the Sicilian festival (cf. Lobeck, *op. cit.*

200); unless the *κτένες* actually point to a rite of the nature of phallic worship, as Theodoretus (quoted by Lobeck) thinks.

(*i*) *The Zemia* (*ζημία*).—The concluding act of the whole festival at the end of the 14th was called *ζημία*, a sacrifice offered *ὑπὲρ τῶν γινομένων* (Hesych. *s. v.*), a kind of sin-offering, probably in atonement for any offences committed during the festival. As such, and as being the last act (*ἐπιτελέωμα*, Harpocr. 122) of the festival, it reminds us of the *πλημοχόαι* in the Eleusinia [ELEUSINIA].

(*j*) *The date of the Festival.*—The Thesmophoria were held in the middle of Pyanepsion (= latter half of October and first half of November); as to this every one is agreed, but there is some difficulty as to the actual days. Photius says (87, 21), *Θεσμοφορίων ἡμέραι δ'· δεκάτη θεσμοφορία, ἑνδεκάτη κάθοδος* (generally called *ἄνοδος*: see above, *e*), *δωδεκάτη νηστεία, τρισκαιδεκάτη καλλιγένεια*: Hesychius (*s. v.* *ἄνοδος*) refers that part of the festival to the 11th; and the Schol. on Aristoph. *Thesm.* 80 (*ἐπεὶ τρίτη 'στὶ Θεσμοφορίων ἡ μέση*) says that the day of the *νηστεία* (which is the day certainly alluded to) was the third day counting the Thesmophoria at Halimus, the middle day if you regard only the Athenian part of the festival (*δεκάτῃ ἐν 'Αλιμοῦντι Θεσμοφόρια* (query *–ία*) *ἄγεται ὥστε τρίτην μὲν ἀπὸ δεκάτης ιβ' εἶναι, μέσην δὲ μὴ συναριθμουμένης τῆς δεκάτης*); and the days are, 10th Mysteries at Halimus, 11th *ἄνοδος*, 12th *νηστεία* (on which day the scene of the Thesmophoriazusae of Aristophanes is laid), 13th *καλλιγένεια*. The Schol. goes on to state that no one can maintain the far-fetched and artificial interpretation (*ἀλλ' οὐδὲ ψυχρεύεσθαί τις δύναται*) that *τρίτη* means *τρισκαιδεκαταία*, as *ἑκταία ἑκαταβόλος σελάνα* means *ἑκκαιδεκαταία*. Nearly all scholars are in agreement with the scholiast: *e.g.* Schömann (ii. 483), Maury (ii. 227), Schäfer (*Demosthenes und seine Zeit*, iii. 359). [Of course, the statement in Plut. *Demosth.* 30, that the *νηστεία* was on the 16th, is quite in error.]

But there is much to recommend "the far-fetched and artificial" interpretation, and it is well supported by A. Mommsen (*op. cit.* 293 ff.). He holds that *τρίτη* = *τρίτη ἐπὶ δέκα*. Not to mention the fact that *τρισκαιδεκάτη* would be troublesome to get into verse and very cumbrous, we know that the days of the month are often given without the decade to which they belonged being specified (Aristoph. *Nub.* 1128; Demosth. *Fals. Leg.* 359, §§ 58, 59). If this is so in the present case, the city festival will be on the 12th, 13th, and 14th, and the 13th will be the middle day of the city festival. Further, this will allow that the nine nights of strict chastity which were enjoined on the women (see above, *b*) should all be in Pyanepsion, the Stenia not beginning till the 10th. Again, the 13th of months generally was considered an unlucky day (cf. Hes. *Op.* 780); no decree is ever found to have been passed on it; while the fourth day of each decade was a lucky day for begetting children (*ib.* 794). Finally the Thesea, which we know in Roman times were lengthened, will not overlap the Thesmophoria if we allow that the latter did not in any sense begin till the 10th. We confess to thinking Mommsen's view the more satisfactory; but must add that Preller (*Griech. Myth.* i. 640, note 1), with that view before him, deliberately rejects it, though he gives no reasons for so doing.

As regards *Θεσμοφορίων ἡ μέση* in Aristophanes (cf. Athen. vii. 307 *f*, *ἡμεῖς νηστείαν ἄγομεν Θεσμοφορίων τὴν μέσην*), the day of the *νηστεία* appears to have been the middle day of the strict Athenian festival. For the whole Thesmophoria, as it existed in Attica in Aristophanes' time, was a blending of the original Mysteries at Halimus, where Demeter-worship was first introduced into Attica, and an Athenian festival. The first two days (the Stenia and the Mysteries) belonged to the former, the last three days to the latter.

We subjoin a table of the dates of the several parts of the festival, according to the ordinary reckoning and to Mommsen.

	Ordinary reckoning.			Mommsen.
Stenia	9	Pyanepsion	(=Oct. 22)	10
Mysteries at Halimus	10	„	„ 23	11
Anodos and Scira .	11	„	„ 24	12
Nesteia. . . .	12	„	„ 25	13
Calligeneia and Zemia	13	„	„ 26	14

4. *Thesmophoric worship outside Attica.*—(*a*) *Greece.* The house of Cadmus in Thebes became the temple of Demeter Thesmophoros (Paus. ix. 16, 5), and Xenophon (*Hell.* v. 2, 29) tells us that the Theban women *ἐν τῇ Καδμείᾳ θεσμοφοριάζειν* (cf. Plut. *Pelop.* 5). At Drymaea in Phocis the Thesmophoria was a yearly festival (Paus. x. 33, 12), Megara had a temple to Demeter Thesmophoros (*ib.* i. 42, 6), and at Argos the daughters of Danaus were said to have taught the Pelasgian women the rites of the goddess (Herod. ii. 171). The temples of Demeter at Aegina (Herod. vi. 91) and Troezen (Paus. ii. 32, 7) had ceremonies connected with them analogous to those of Demeter in Attica: for we hear of a *λιθοβολία* at Troezen (*ib.* § 2), which probably resembled the *βαλλητὺς* of the Eleusinia; and at Aegina of the ribald abuse (Herod. vi. 83), which was characteristic of the *γεφυρισμὸς* in the Eleusinia and of the Stenia in the Attic Thesmophoria. At Troezen, Epidaurus, and Aegina, Demeter and Cora appear under the names of Damia and Auxesia (Herod. v. 82). At Agila in Laconia there was a temple of Demeter to which women only were admitted (Paus. iv. 17, 1), which perhaps points to Thesmophoric worship, and Hesychius (*s. v.* *τριήμερον*) speaks of Thesmophoria at Sparta (cf. possibly *C. I. G.* 1435, of a priestess who served *ταῖν Θεαῖν*). About seven miles from Pellene in Achaea was a temple of Demeter Mysia (Mysius was a man who had entertained Demeter in her sorrow), in which a festival was held lasting for seven days. On the third day not only the men, but all male animals were excluded from the temple, and the women performed mystic rites during the night (*δρῶσιν ἐν τῇ νυκτὶ ὁπόσα νόμος ἐστὶν αὐταῖς*). The next day the men came back; and a contest of abuse ensued (Paus. vii. 27, 9, 10). In Arcadia, Herodotus says (ii. 171), the old original worship of Demeter Thesmophoros survived, as it remained unassailed by the Dorian invaders. No doubt Demeter-worship in Arcadia presented very striking peculiarities and forms, such as are to be gathered from the stories told by Pausanias of

Demeter Erinnys at Thelpusa (viii. 25, 4–5) and of Demeter Melaina at Phigalia (*ib.* 42, 1–4); but these have little affinity with the law-establishing goddess, and even the worship in the great temples of Demeter at Acacesion and Megalopolis show not so much Pelasgian survival as Eleusinian influence; for we know that a considerable missionary propaganda of the Great Goddesses spread itself abroad from Eleusis about the time of Epaminondas (cf. Paus. viii. 37, 1–7; 31, 1–7; Lobeck, *Aglaoph.* 1251; Preller, *Dem. u. Perseph.* 148 ff.). However, about half a mile from Megalopolis there was a temple of Demeter in the Marsh (*ἐν ἕλει*, Paus. viii. 36, 6), where women alone had the right to enter, which points to Thesmophoric worship, and about four miles above Pheneus in Arcadia was a temple of Demeter Thesmia (*ib.* 15, 4).

(*b*) *The Islands and the Colonies.*—With regard to the Thesmophoria at Eretria, Plutarch (*Quaest. Graec.* 31 = ii. 298) asks why the women cook their meat in the sun and not on the fire, and why they do not invoke Calligeneia (*καὶ Καλλιγένειαν οὐ καλοῦσι*); and gives the unsatisfactory answer that it was because the captive Trojan women on the return from Troy were sacrificing the Thesmophoria there, when suddenly a favourable wind sprang up and they had to leave the ceremonies uncompleted. Crete was a very old seat of Demeter-worship [ORPHICA] (cf. Hom. *Hymn. to Demet.* 123; Hes. *Theog.* 971), having among its months two called Eleusinios and Thesmophorios. From Crete it passed to Paros, where it was in the highest degree important (Herod. vi. 134–5): we read that there Timo was *ὑποζάκορον τῶν χθονίων θεῶν*, guarding *τὸ ἕρκος θεσμοφόρου Δήμητρος*, and was accused of having shown to Miltiades sacred emblems which should not have been disclosed to any one of the male sex. The archives of Paros were kept in the temple of Demeter (*C. I. G.* 2557, 22). Cabarnus, who in the legend was said to have pointed out to Demeter where Persephone had been carried off, was the reputed ancestor of the Parian Demeter-priesthood (*C. I. G.* 2384). Perhaps this Parian Demeter-worship was originally a family one; and when later it became a public worship, the family retained the chief priesthood of it, like some of the priesthoods at Eleusis. From Paros it passed to Thasos (Paus. x. 28, 3), if the worship referred to here is Thesmophoric. At Delos there was certainly a Thesmophoria (Athen. iii. 109), where a cake called *ἀχαΐνη* was used (Lobeck, *op. cit.* 1063); and in Cyprus there was a Thesmophoria lasting for nine days (cf. Engel, *Kypros*, ii. 653–4). We hear of Thesmophoric worship in Asia Minor at Ephesus (Herod. vi. 16), Miletus (Steph. Byz. *Μίλητος*), Laodicea (*C. I. G.* 4000, a curious inscription, where see Boeckh's notes), Smyrna (*ib.* 3194, 3211), Priene (*ib.* 2907); in Macedonia (Polyb. xv. 29, 8); in Thrace at Abdera (Diog. L. ix. 43); and even so far away as Panticapaeum (*C. I. G.* 2106–2108). Demeter-worship came into Sicily from Greece, and at Syracuse there was a Thesmophoria in spring (also called Demetria, Diod. v. 4), at which *μυλλοί* cakes of sesame and honey in the shape of *ἐφήβαια γυναικεῖα* were eaten (Athen. xiv. 617); and a Coreia in summer, which was a very splendid feast: in it appeared the traditional *αἰσχρολογία* (Diod. *l. c.*). At Catana there was a worship of Demeter by women only,—her statue was never even heard of by men till Verres stole it (Cic. *Verr.* iv. 45, 99); and at Agrigentum there was a Thesmophoria (Polyaen. v. 1). In Naples and the adjoining country the worship of Demeter was widespread (*C. I. G.* 5799, and perhaps 5838 with Boeckh's note). The rites of Ceres were the only foreign mysteries tolerated by the Romans (Cic. *de Leg.* ii. 9, 21); but they readily accepted her rites, making the Greek priestesses of Demeter (who almost all came from Naples or Velia) Roman citizens (cf. Cic. *Balb.* 24, 55). At Cumae to be priestess of Demeter Thesmophoros was the highest honour to which matrons could aspire (Plut. *Virt. Mul.* 26 = ii. 262); and an inscription of a priestess of the same goddess has been found at Pompeii (*C. I. G.* 5865).

The chief work on the worship of Demeter Thesmophoros is Preller, *Demeter und Persephone*, 335–365; also his *Griechische Mythologie*, i.³ 639–641. As regards the Athenian festival, see A. Mommsen, *Heortologie der Athener*, 287–302; and Fritzsche's edition of the *Thesmophoriazusae*. For further, compare Welcker, *Griechische Götterlehre*, ii. 495–540; Maury, *Histoire des Religions de la Grèce antique*, ii. 222–229; Schömann, *Griechische Alterthümer*, ii. 482–6; K. F. Hermann, *Gottesd. Alterthümer*, § 56, 12–27; Mr. J. G. Frazer, *The Golden Bough*, ii. 44 ff., and *Encyclopaedia Britannica* (ed. 9), s. v. *Thesmophoria;* and, above all, Lenormant's article on CERES in Daremberg and Saglio's *Dict. des Antiquités*, i. 1021–1078. [L. C. P.]

THESMO'THETAE. [ARCHON.]

THETES (*θῆτες*). In earlier times this name denoted any freemen who worked for hire (*οἱ ἕνεκα τροφῆς δουλεύοντες*, Photius, *s. v.*; *ἐλευθερῶν ὄνομα διὰ πενίαν ἐπ' ἀργυρίῳ δουλευόντων*, Pollux, iii. 32). Homer (*Od.* iv. 644) speaks of *θῆτες τε δμῶές τε*, the latter properly signifying those who became slaves by captivity. That Thetes were not *adscripti glebae*, like the Penestae or Helots, appears from *Od.* xi. 489, and still more plainly from *Od.* xviii. 357 ff., where "free contract" and "sufficient wages" are expressly mentioned. (Compare Schömann, *Ant. Jur. Publ.* p. 70; *Antiq.* i. 41 E. T.; SERVUS, p. 656 *b*).

The persons best known by the name of *θῆτες* are the members of the fourth or lowest class at Athens, according to the political division of Solon. They are spoken of under CENSUS (Greek) in Vol. I. The cleruchies (*κληρουχίαι*) of the time of the Peloponnesian war were mostly recruited from them. As Thetes they did not serve in the Athenian army as hoplites, only as *ψιλοί*: but on becoming cleruchs they passed into the class of *ζευγῖται*, and therefore of hoplites. The Athenian armies during the war were thus reinforced by at least 10,000 men (Gilbert, *Staatsalterth.* i. 421).

[C. R. K.] [W. W.]

THOLUS (*θόλος*), a round building, probably the most primitive form of hut, and so preserved traditionally in a house or city. In the Homeric house it stood in a corner of the *αὐλή*, and a rope stretched round it from a column was high enough to hang the unfaithful servants from (*Od.* xxii. 466). It is stated to have served as a storehouse (Schol. *ibid.*); and if so, its resemblance to the θησαυρὸς and also to beehive tombs, like those at Mycenae, is to be noticed. For an account of the Tholus at Athens, see PRYTANEUM. The Tholus at Epidaurus, which was built by Polycleitus, was of remarkable beauty in its execution; its ground-plan and portions of its architecture have been recovered. It was round, and had an external colonnade of the Doric order, and Corinthian internal columns. It contained pictures by Pausias, but there is no record of the purpose for which it was used. The name *tholus* is used later for any circular building. (Tsountás, in Ἐφημερὶς Ἀρχαιολογική, 1885, pp. 30 *sqq.*; Πρακτικὰ τῆς Ἀρχαιολογικῆς Ἑταιρίας, 1883, Πιν. Γ.) [E. A. G.]

THRONUS. The use of the throne as a symbol of kingly power or authority in general is so ancient, that any inquiry into its origin would lead far beyond the earliest records of Greece and Italy. Even on the pre-historic remains found at Mycenae and other sites in Greece and on the islands of the Aegean, seated figures are represented in a way which leaves no doubt that they are receiving homage. Unfortunately these thrones are so poorly represented, that no idea of those then used can be gained from them.

In Homer the θρόνος is distinguished from all other forms of seat [SELLA], and was used by kings and princes. It was not, however, wholly confined to them, for any guest whom the prince wished to honour was given a throne. Telemachus, for instance, shows his respect for Athene when she arrives disguised as Mentes in this way (*Od.* i. 130). It was doubtless on this account that we find the seats of all the guests in magnificent palaces, such as that of Alcinous or the hospitable house of Odysseus, are called θρόνοι (*Od.* xvi. 408). As might be expected from this, the seats of the gods are always θρόνοι, except in one passage (*Il.* viii. 436), where all except Zeus sit on κλισμοί, he taking a θρόνος: but this is quite naturally meant to show his supremacy. The idea, in fact, is the same as that in the mind of the artist of the Parthenon frieze. On the west side, in the assembly of the gods he has given Zeus alone a throne with back and arms, whereas the seats of the other gods are mere stools (cf. *British Museum Guide to Elgin Marbles*, p. 66, No. 29).

The epithets in Homer do not give much information about the shape or appearance of the thrones he mentions. It was high (ὑψηλος, *Od.* viii. 422), and always had a footstool (θρῆνυς, *Od.* i. 131; xix. 57). It was covered with rugs and carpets (*Od.* i. 130; xx. 150) of the richest kind. From the epithets σιγαλόεις, φαεινός, and ξεστός, we may conclude that it was made of wood, turned and highly polished. The wood, however, was often overlaid with gold plating (χρύσειος, *Il.* viii. 442), in the style that the gold-leaf ornaments from Mycenae have made so familiar (cf. Schuchhardt, *Schliemann's Ausgrabungen*, 267 foll.). There is no mention of a throne having arms; but from the account of the death of Antinous, Helbig infers that they were used (*Od.* xxii. 8–20). The earliest monuments showing thrones are the rude terra-cotta statuettes representing goddesses which are found with pottery of the Dipylon and other Geometric styles (cf. *Jahrbuch des d. Arch. Inst.*, Boehlau, 1888). These, however, show little more than that the back was straight and ornamented, and that footstools were generally used. One may, however, trace in the magnificent throne which later ages provided for temple idols, a traditional survival of the gorgeousness of Heroic times. Two of these are the throne of Apollo at Amyclae, the work of Bathycles of Magnesia (Paus. iii. 18, 19), and the throne of Zeus at Olympia, designed and executed by Pheidias (Paus. v. 11). The former, however, was not a throne in the ordinary sense, being a structure built round the old wooden idol (ξόανον), which of course could not be put in a sitting attitude. The latter, however, was in all respects, except its colossal size, a throne; the additional pillars inserted between the legs to support the enormous weight of the statue being the only difference. Pausanias (*loc. cit.*) gives a full description of its structure and decoration. It was made of ivory and gold, ornamented with gems and ebony, sculptured, inlaid, and painted. The back was high and surmounted by sculptured groups of the Graces and Seasons, which rose about the head of the god. Between the legs were eight crossbars, and below was a footstool, the whole covered with a multitude of figures and groups representing mythological heroes and tales. This throne is well shown on the coins of Elis of the time of Hadrian, a small sketch of the famous statue on their reverse (cf. *Journ. of Hellenic Studies*, vol. x. 98). It agrees well with Pausanias, showing the high back, the Sphinx supporting the arm, the cross-bars between the legs and the footstool. It fails to show the two groups standing on the back, and of course gives no idea of the decoration. Magnificent as this throne was, there is nothing beyond its size and artistic merit which might not have been found on the seats of early Greek kings. Even the more or less commonplace forms on the monuments—the grave reliefs in particular—show much variety of design and complicated decoration.

Coin of Elis, showing Zeus enthroned.

The best known of the grave reliefs of the type in which the dead man appears enthroned and receiving the homage of his descendants is the Harpy tomb from Lycia, at the British Museum. It shows us no less than five thrones, the most typical of which are those on the slab, where two seated ladies receive offerings from three women. The lady to the left is on a throne with legs of turned work strengthened by crossbars. The arm which is visible is also of turned wood, and, as in the case of the Olympia throne, is supported by a Sphinx. The lady to the right sits on a throne with very solid square legs, which end above in an early form of the Ionic volute (cf. Puchstein, *Das Ionische Capitell*), and are decorated in the middle with a palmette ornament. The arm ends in a ram's head, and the top of the back is bent over and carved into the shape of a goose's head. Both thrones are thickly cushioned, and both have a footstool. On the other sides of the tomb we see other varieties, one seat having no back, another no arms, while the third has an arm supported by the figure of a Triton, and front legs carved like the fore-legs of a lion. This imitation of a lion's legs and paws is very common, but only in the case of the fore-legs. A series of grave-reliefs however, from Sparta and the neighbourhood (cf. *Mittheilungen des Ath. Inst.* 1877), shows all four legs carved in this way, the back legs being shaped as hind paws. Studniczka has pointed out that this curious feature is only seen elsewhere on vases of the Cyrenaic class, and that it is the pattern in which almost all Egyptian thrones are carved. This leads him to derive the fashion from Egypt (*Cyrene*, p. 9), and the remarkable coincidence of several other shapes makes the hypothesis a probable one.

Thrones, from the Harpy Tomb. (Murray.)

Egypt, however, was not the only country from which the Greeks borrowed their models of thrones, for the connexion with Assyria and the East is even stronger. This is especially to be seen in the use of certain primitive forms of the Ionic capital and the very peculiar variety of the palmette ornament, in which two elliptical cuts are made on each side of the leg, leaving a narrow bar which is used in the decoration as the stalk of a double palmette. Both these are shown by the second throne described above, and both are very common in vase-paintings, of all periods except the very latest. The natural inference is that the work of Oriental cabinet-makers, travelling through Greece proper, was the source from which the Greek carpenter derived his patterns and ornament. Not that he copied slavishly; for the bewildering variety of thrones on vase-paintings makes any simple description impossible, and shows that much invention was bestowed on their manufacture. Some of the fantasy, it is true, must be the artist's; for he gives himself free hand in the matter, and omits backs, arms, and footstool as it may happen to suit his design.

Much more reliable are the copies in stone of actual seats, in which statues were frequently carved; as, for instance, those from the sacred way of Branchidae, now in the British Museum. Such thrones were used by men of authority, such as priests, judges at the games, and teachers in schools (cf. *Bullettino dell' Instituto*, 1890, i. p. 1, "Parodia d' una scena di scuola"). It was with thrones such as these that the Greek of classical times, to whom the insignia of royalty were scarcely known, was acquainted. In later times, especially under the Roman Empire, it became the custom to dedicate honorary seats or thrones in public places, generally the theatre, to the use of distinguished people. Such are the seats of benefactors, priests, archons, generals, and other officials, which still remain in the theatre of Dionysus at Athens (cf. *C. I. A.* iii. 240 *seq.*; and Miss Harrison, *Mythology and Monuments of Ancient Athens*, pp. 273–277). Besides these ceremonial seats, each head of a house had a chair in which he sat and entertained guests, which was not unlike the old *θρόνος* in shape and went by its name.

Such also was the case at Rome, where the *solium* was only used by the paterfamilias, who sat in it of a morning when giving audience to his clients (Cic. *de Leg.* i. 3, 10: "Cum praesertim non recusarem quominus more patris sedens in solio consulentibus responderem"). The *solium* was in form practically the same as the Greek *θρόνος*, and, like it, was the seat of gods. The seat of the teacher, however, was not called *solium* but *cathedra*; a word which is otherwise used as a translation for *δίφρος*, not *θρόνος*. *Solium* is also the name for a peculiar kind of bathing chair, in which the bather sat and had hot water thrown over him. Such chairs are to be seen in many museums (cf. Daremberg et Saglio, *Dict.*, art. *Balneae*, fig. 768). Some, however, seem to have been rather of the nature of a hip bath, and are frequently mentioned by medical writers (Celsus, vii. 26, 5, "in solium ... aquae calidae resupinus demittendus est;" cf. Festus, p. 298 b, 22 M., "Alvei quoque, lavandi gratia instituti, quo singuli descendunt solia dicuntur."

(Baumeister, *Denkmäler*, art. *Sessel*; Iwan Müller, *Handbuch*, pp. 381, 385; Overbeck, *Plastik*, i. 56, 74 foll.; Blümner, *Kunstgewerbe in Alterthum*, i. p. 111, ii. p. 41; Buchholz, iii. ii. 138; Hermann-Blümner, *Privatalterthümer*, p. 158; Helbig, *Das homerische Epos*, pp. 108, 118 foll., 378; Becker-Göll, *Charikles*, iii. 82.)

[W. C. F. A.]

THYRSUS (*θύρσος*), a wand or sceptre carried by Dionysos (Bacchus) and by Satyrs, Maenads, and others engaged in Bacchic rites (Eurip. *Bacchae*, 25, 80, 88, 733, 762, 1099; *Cyclops*, 62, *Βάκχαι τε θυρσοφόροι*; Athen. xiv. p. 631 a; Verg. *Aen*. vii. 390; Hor. *Od*. ii. 19, 8, &c.). It usually consists of a straight staff surmounted by a pine-cone (*Anth. Pal*. vi. 165, *θύρσου χλοερὸν κωνοφόρου κάμακα*), or by a bunch of vine-leaves and grapes or ivy-leaves and berries (Ov. *Met*. xi. 27, 28; Propert. iii. 3, 35). A riband or fillet is found attached to it, just below the pine-cone or the bunch of leaves. On the monuments, the pine-cone appears most commonly to form the head of the thyrsus. The pinecone-headed thyrsus is held by Dionysos on an Attic terracotta of early style figured in Baumeister, *Denkm*., art. Dionysos, fig. 481, and is seen in the hands of Dionysos and a Satyr on an amphora of good style figured *ib*., art. Dionysos, fig. 491 = *Mon. Inst*. vi. vii., Taf. 70. It may also be seen on red-figured vases of the best period (*e.g.* in the British Museum, vases labelled E 164, E 179, E 356, E 372, E 379) and on later vases (British Museum, F 91), on gems (A. H. Smith, *Brit. Mus. Cat. Engraved Gems*, Nos. 957, 1023), on Roman reliefs (*Anc. Marbles in Brit. Mus*. ii. pl. xii.), and on coins (the thyrsus is an occasional type and a not infrequent symbol on coins. It has the pine-cone head). The thyrsus with the ivy-bunch top is found on vases both of the fine (British Museum, E 54, E 109, E 153) and later periods (Brit. Mus. F. 377). Occasionally, as on certain Roman terracotta reliefs in the British Museum (*Descript. of Anc. Terracottas in Brit. Mus*., No. xxi., pl. xiii.; *ib*. No. xxxvii., pl. xx.), the thyrsus has the pine-cone at each end of the staff. An interesting coin of Amisus in Pontus, struck under the influence of Mithridates Eupator (the Great), shows a pinecone-headed thyrsus with the staff formed of a pine-branch: from the riband attached to this thyrsus is suspended a bell on a cymbal, an unusual addition (see Wroth, *Catal. Pontus*, &c. pl. iii. No. 10; p. 18, No. 58: cp. the thyrsus, *ib*. pl. iii. Nos. 7, 8, 9).

Thyrsi, from a Greek vase. (Hamilton.)

The pine-cone or leafy bunch of the thyrsus was sometimes supposed to conceal a spear-head, used as a weapon by Dionysos and his followers. This is what is properly called the *θυρσόλογχος* (Callix. *ap*. Athen. v. p. 200; Diod. Sic. iii. 65, iv. 4; Macrob. *Sat*. i. 19; Lucian, *Bacch*. 4; Ov. *Met*. iii. 667).

It may be added that the pillars of the banquet-chamber built for the great festival of Ptolemy Philadelphus, described by Athenaeus, v. 196 *sq*., represented thyrsi and palm-trees alternately. (For another example of a thyrsus, see woodcut under VANNUS.) [W——K W——H.]

TIARA. To the Greeks the *τιάρα* or *τιάρας* was known only as the head-dress of the Persians. Herodotus, whose information on this point, unlike that of most classical writers, is at first hand, says that it was of soft felt (vii. 61, *τιάρας καλεομένους πίλους ἀπαγέας*: cf. iii. 12), and was worn by the Persians not only when campaigning, but at the more peaceful occupation of sacrificing (i. 132: cf. Serv. *ad Aen*. vii. 247). Later writers add that it was the distinctive dress of the *Magi* (Paus. v. 27, 6; Strabo, xv. p. 734). The only reference to the shape of the *τιάρα* seems to be the comparison of some leather helmets with a knot in the middle of them which Xenophon makes (*Anab*. v. 4, 13, *κράνη σκύτινα κρώβυλον ἔχοντα κατὰ μέσον ἐγγύτατα τιαροειδῆ*).

One particular form, however, the upright *τιάρα*, is often mentioned as being the peculiar badge of the Great King; no one else being allowed to wear it (Xen. *Anab*. ii. 5, 23). Aristophanes, referring to it under the name *κυρβασίαν ὀρθήν* (*Av*. 487), compares it to a cock's comb. This comparison enables us to identify it with the head-dress of Darius on the celebrated South Italian Vase-Painting in the Naples Museum. It is evidently highly adorned with jewels (cf. Val. Flacc. vi. 699), though we cannot trace the diadem which sometimes surrounded it (cf. Xen. *Cyrop*. viii. 3, 13, *εἶχε (Κῦρος) δὲ καὶ διάδημα περὶ τῇ τιάρᾳ*). The tiara which Xerxes in his flight after Salamis gave to the people of Abdera was bedecked with gold (Herod. viii. 120, *δωρησάμενος τιήρῃ χρυσοπάστῳ*), and was doubtless the kingly form. The ordinary tiara is that worn by the youth who stands behind Darius in the vase-painting, and is a felt cap of the kind familiar to us as the Phrygian cap. It is long and conical, and the point falls forward over the brow of the wearer, and, like the upright form, has lappets at each side of the ear, which could be tied under the chin, so that in late Greek it was used of a hood. Sozomen (*H. E*. iii. 14, p. 111) calls a *κουκούλιον* (=*cucullus*) worn by children, a *τιάρα*. The Scholiast on Plat. *Rep*. viii. 553 tells us that the proper name for the upright *τιάρα* is *κίταρις* (or *κίδαρις*), though he adds that Theophrastus says it is Cypriote, not Persian (*τινὲς δὲ καὶ κίταριν λέγουσι τὸ αὐτό· Θεόφραστος δὲ ἐν τῷ περὶ βασιλείας Κυπρίων εἶναι λέγει*). Curtius gives a still fuller account of it under the same name, saying that it is bound round with a blue and white band (iii. 3, 19, "cidarim Persae vocabant regium capitis insigne quod caerulea fascia albo distincta circumibat").

There has been some discussion as to whether *κυρβασία* is identical with the *τιάρα*, or not, but the passage quoted above from Aristophanes and its use in Herodotus (v. 49) seem to place it beyond a doubt. The only passage that conflicts with this view is the description in Herodotus of the caps of the Sacae, which were upright, stiff, and pointed (vii. 64, *Σάκαι . . . κυρβασίας ἐξ ὀξὺ ἀπιγμένας ὀρθὰς εἶχος πεπηγυίας*), but the Sacae were Scythians and not Persians, and the word might well be used in describing the felt or sheepskin caps worn by Tartars and other Asiatic tribes down to this day.

Tiara. (From a coin of Tigranes, king of Armenia, B.C. 83–69.)

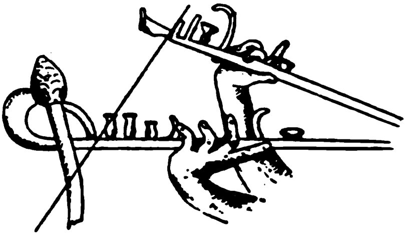
Tiara. (From a coin of Abgarus, king of Edessa.)

Roman writers all use the word in a loose way, and regard it as being especially a Phrygian head-dress, both of men and women (Juv. vi. 516). Thus in Graeco-Roman art it was generally given to Paris, Mithras, and other Asiatic characters; while the kingly tiara falls to the lot of Priam (Verg. *Aen.* vii. 246 and Serv. *ad loc.*; Juv. x. 267). It is interesting to note on a South Italian vase-painting (Baumeister, *Denkmäler*, fig. 792) that Priam, weeping over the dead body of Hector, wears an upright tiara with the "cock's comb."

Later writers spoke of it as Parthian (Sidonius, *Carm.* vii. 98; xxiii. 258), and the Church writers used it for a bishop's mitre (cf. Hieron. *Ep.* 64, n. 13; Eucher. *Instr.* 2, 10). It is needless to say that it had no connexion with the *μίτρα* known as Asiatic to classical writers. [Mitra.] [W. C. F. A.]

TI'BIA. The word *αὐλός*, though it is commonly translated "flute," denotes any kind of wind instrument, with the exception of trumpets and horns. As a rule, however, it is used in a more restricted sense for the double oboe or clarinet, which is familiar to us under the misleading name of the "double flute." This is quite wrong, for the *αὐλὸς* had a mouthpiece (*ζεῦγος*) in which a vibrating reed (*γλῶττα*) was fitted, whereas in the flute the sound is produced by blowing a stream of air across a plain hole in the pipe of the instrument. The true Greek representative of the modern flute is the *σῦριγξ μονοκάλαμος* (fistula), as distinguished from the *σῦριγξ πολυκάλαμος* or Pan's pipe. Both forms—the *σῦριγξ* or flute, and the oboe or *αὐλὸς* proper—are, it would seem, as old as Homer, who tells us that Agamemnon, unable to sleep, heard afar off in Troy *αὐλῶν συρίγγων τ' ἐνοπήν* (*Il.* x. 13). The flute, however, was held in but low esteem, and was thought a fit instrument for shepherds and other country folk. The art of playing the *αὐλός*, or *αὐλητική*, was on the other hand a necessary part of education. In Boeotia it was the national instrument, and as such the Athenians affected to despise it in comparison with the lyre (cf. Böttiger, *Kl. Schriften*, i. 14), though as a matter of fact they used it as much as the other Greeks. It is very frequently seen in works of art, especially vase-paintings, and with the aid of these and the many notices in literature we are able to form an accurate idea of its structure. It consisted of a pipe (*βόμβυξ*, Poll. iv. 70), which in the simplest form was made of reed (*κάλαμος βομβυκίας*, Theophr. *H. P.* iv. 11, 3), but might be of bone, metal, or even ivory. To this was attached by means of a socket of bone (*ὅλμιον* or *ὑφόλμιον*) the mouthpiece (*ζεῦγος*), in which was fixed the vibrating reed (*γλῶττα*). Theophrastus (*l. c.*) says that the sound is best when the mouthpiece and pipe are made from the same length of reed. The instrument thus formed does not seem to have been played alone, but always in pairs. There are, it is true, a few monuments, such as a Roman wall-painting in the British Museum, in which the player has only one pipe in his mouth, but then the other is always to be seen in his other hand in a way that shows he is only preparing to play. The difficulty of playing two instruments at once was obviated by a leather strap which covered the mouth, ran under the ears, and was fastened at the back of the head by a knot or buckle. This curious piece of gear served to prevent a loss of wind and to keep the two mouthpieces in the proper position. It was called the *φορβεία*, *στομίς* or *χειλωτήρ* (cf. Arist. *Vesp.* 582): in Latin, the Capistrum.

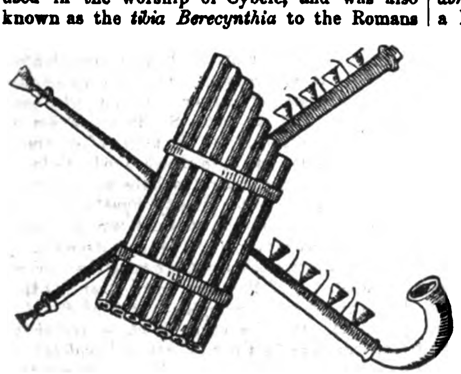
The notes were given by holes (*τρυπήματα*); and as both pipes were played at once, there can originally have been only four or at the most five of these on each. However, it would seem, from a remark of Proclus in his commentary on Plutarch's *Alcibiades* (c. 68, *ἕκαστον γὰρ τρύπημα τῶν αὐλῶν τρεῖς φθόγγους. ὥς φασι τοὐλάχιστον ἀφίησιν*), that two overtones at least could be blown on each of these. The compass was still further extended by the use of additional holes with stops (*παρατρυπήματα*), an invention which was apparently in use by the time of Pronomus, who played in the Dorian, Lydian, and Phrygian keys on the same instrument (Paus. ix. 12, 4). The simplest form of stop shown on the Pompeian wall-paintings consists of a peg, which could be withdrawn when the hole was needed. More complicated is the device in which extra notes are given by short cylinders attached to the pipe near the end. This kind of instrument is frequently seen in late representations of Euterpe, especially on Roman sarcophagi. Yet another invention was to cover the extra holes with movable rings, which the player could slide



Tibia. (From a relief at Naples.)

over or off them as he wished. Both the small cylinders and the rings, with the hooks by which they were pulled round, are well shown by a relief in the Naples Museum (Baumeister's *Denkmäler*, fig. 596). Such no doubt, or something like, was the new-fangled *tibia*, which Horace describes as "orichalco vincta tubaeque aemula," contrasting it with the old-fashioned one, with its few notes, "tenuis simplexque foramine pauco" (*A. P.* 202–3). The two pipes were tuned so that the melody played on one could be accompanied an octave lower on the other.

As the use of the clarinet and oboe became more extended in Greece, various forms giving notes of widely different keys were either introduced from abroad or invented. Aristoxenus, in a quotation given by Didymus (Athen. xiv. p. 634 e), divides the kinds of instruments (*γένη αὐλῶν*) used in his day into five classes: (1) The maiden's (*παρθενίοι*), (2) the boy's (*παιδικοί*), (3) the lyre-player's (*κιθαριστήριοι*), (4) the perfect (*τέλειοι*) and (5) the more than perfect (*ὑπερτέλειοι*) instruments. Didymus tells us that the "perfect" and "more than perfect" varieties are the man's (*ἀνδρεῖοι*), which shows that the classification is intended to proceed on the same scale as the human voice they were made to accompany, rising from the shrill soprano to the deep bass. As this is the case, the list evidently aims at being exhaustive; and Gevaert, in his *Histoire et Théorie de la Musique dans l'Antiquité* (vol. ii. § ii. pp. 271–307), has catalogued the known varieties under these heads as follows:—(1) *παρθένιοι*—the *γίγγρας* of the Phoenicians, the *φῶτιγξ* or cross-flute, and the Phrygian funeral *αὐλός*; (2) *παιδικοί*—the *αὐλὸς ἐμβατήριος*, the *αὐλὸς δακτυλικός*, and the Roman *tibia chorica*; (3) *κιθαριστήριοι*—the *μόναυλος* (sc. *κάλαμος*) and the *αὐλὸς μεσόκοπος*; (4) *τελεῖοι*—the *αὐλὸς Πυθικός*, the *αὐλὸς ἔλυμος* of the Phrygians, the *αὐλὸς βόμβυκος* of the Bacchic worship, the funeral pipe of the Greeks and Romans; (5) *ὑπερτέλιεοι*—the *αὐλὸς σπονδειακός*. These varieties, it will be noticed, include all sorts of wind-instruments, some of which are fifes like the *γίγγρας*, flutes like the *φῶτιγξ*, or horns like the *ἔλυμος*. The last-named deserves special mention, since it was used in the worship of Cybele, and was also known as the *tibia Berecynthia* to the Romans (cf. Hor. *Od.* iii. 19, 18; iv. 1, 22). It ended in a curved horn mouth, and was of great power. Originally and in its proper use it was played alone, but it apparently became the fashion to use it as the left pipe in a pair, or perhaps, to speak correctly, to convert the left pipe into a Berecynthian by adding a curved horn mouth. Such a pair is well shown above by a bas-relief from Zoega, *Bassiril.* i. 14.



Pair of Tibiae and Syrinx.

The invention of the *αὐλός*, even if one refuse to take Homer's Trojans as evidence for the Greeks of his time, must have been an exceedingly early one, and was indeed by the Athenians attributed to the goddess Athene. She, however, was disgusted with the distortion of her face when playing, and threw it away. It was picked up by the Satyr Marsyas, who met an evil end when he contended on his new instrument with Apollo on the lyre. His art, however, did not die with him, but was carried on by Olympos, who brought it to Greece. The myth points in Marsyas to Phrygia as the original home of the instrument, which even nowadays, in a somewhat debased form, is played in both Arabia and Egypt. From whatever land it came, it certainly was firmly established in Greece when History begins. It was indispensable in religious rites not only to accompany hymns and provide music for the dance, but to hallow the libation at every sacrifice. It was equally popular in private life, whether at dinner-time when a flute-girl played, or in the leisure hour, or again in the time of mourning when elegies were sung to its music. Small wonder, then, that its playing became quite a profession, which in Solon's time was recognised officially at the Pythian games. Sacadas at Argos had at that time shown that the *αὐλητὴς* could express with quite as much effect as the harper the story of Apollo's fight with Python, and a contest for *αὐληταὶ* was thereupon founded by the Amphictyons (Paus. x. 7, 3). The vase-paintings of the best Attic period have many representations of such contests. One of the best is in the British Museum, and shows the player mounted on a small platform competing for the prize. [A cut of this is given in Vol. I., p. 358, under CAPISTRUM.] On another vase-painting (Benndorf, *Wiener Vorlegeblätter*, c. 4) a master giving a lesson on the *αὐλὸς* is depicted. On the wall behind hangs the case in which the instrument was carried. It is the *συβήνη* or *αὐλοθήκη*, and is made of a spotted skin, perhaps a lynx (cf. Stephani, *Compte Rendu*, 1869, p. 221); but, to judge from an Attic treasure list, where one of ivory and gold (*συβήνη ἐλεφαντίνη κατάχρυσος*, *C. I. A.* i. 170, 172, 173) is catalogued, was often of more splendid materials. To its side is attached a little box, the *γλωσσοκομεῖον*, in which a change of mouthpieces was kept. A similar lesson (where, however, the teacher is playing) is shown in the cut from the Duris Vase under LUDUS LITTERARIUS, p. 96: the flute-case is seen hanging on the wall in the lower portion.

At Rome the *tibiae* held even a more important place in ritual than in Greece, and the *tibicen* who played it was for most ceremonies quite indispensable. This is especially true of funerals, for so great was the desire to have a large number of *tibicines* to mourn the dead that the tenth of the laws of the Twelve Tables restricted their number to ten (Cic. *de Leg.* ii. 23, 59; Ovid, *Fasti*, vi. 654).

They were also called in to enliven feasts (Quintil. *Inst.* i. 10, 20) as well as to take part in the libation (Plut. *Quaest. Conviv.* 7, 8, 4, § 6).

Besides these uses, the *tibiae* were as necessary to the drama at Rome as in Greece, both to accompany the singers and to amuse the audiences in the interludes (cf. Hor. *A. P.* 204–6). From the *Didascalia* to Terence's comedies, we learn that no less than four different varieties were used in the theatre: (1) the *tibiae pares*, in which both pipes were equal; (2) the *impares*, in which they were unequal; (3) the *duae dextrae*, in which the right was identical in key and note with the left; and (4) the *Serranae*. Varro (*R. R.* i. 2, 15, 16) tells us that the melody was played on the right instrument, which he calls the *incentiva*, and the accompaniment on the left, or the *succentiva;* so that the differences in size and character of the *impares* and *duae dextrae* were intended to make fresh harmonies.

(See an excellent article by K. von Jan, in Baumeister, *Denkm.* s. v. *Flöten;* Gevaert, *Histoire et Théorie de la Musique dans l'Antiquité*, Ghent, 1881, ii. pp. 270 ff. and 647 ff.; Hermann-Blümner, *Privataltherthümer*, p. 318; Iwan Müller, *Handbuch der Kultusalterthümer*, pp. 59, 145; Id. *Bühnenwesen*, p. 262; Marquardt, *Privatleben*, pp. 337, 345, 352; Blümner, *Leben und Sitten*, ii. 148 ff.) [W. C. F. A.]

TIME'MA (*τίμημα*). The penalty imposed in a court of criminal justice at Athens, and also the damages awarded in a civil action, received the name of *τίμημα*, because they were *estimated* or *assessed* according to the injury which the public or the individual might respectively have sustained (Harpocr. *s. v.* *ἀτίμητος ἀγὼν καὶ τιμητός*, etc.; Dem. *de Coron. trier.* p. 1229, § 4. The orators rarely use the word in this general sense). The penalty was either fixed by the special finding of a court (*τίμησιν ποιεῖσθαι*, Isocr. c. *Leoch.* § 6, of the dicasts; *τίμησις*, [Dem.] c. *Nicostr.* p. 1252, § 18; Aeschin. c. *Ctes.* § 197 f.: or *τίμημα*, Lys. c. *Epicr.* § 16; Dem. *de F. L.* p. 434, § 290), or merely declared by the court, having been fixed before: either the law ordaining the penalty for certain crimes, or the people ordering by a decree how the defendant on being found guilty should be punished, or in civil suits, *e.g.* in an action for breach of contract, the parties having attached a certain penalty to the violation of the contract. In the first case the trial was called *ἀγὼν τιμητός* (Harpocr. *l. c.*: *ἐφ' ᾧ τίμημα ὡρισμένον ἐκ τῶν νόμων οὐ κεῖται ἀλλὰ τοὺς δικαστὰς ἔδει τιμᾶσθαι ὅ τι χρὴ παθεῖν ἢ ἀποτῖσαι*), in the second case *ἀγὼν ἀτίμητος* (Harpocr. *s. v.*: *ᾧ πρόσεστιν ἐκ τῶν νόμων ὡρισμένον τίμημα, ὡς μηδὲν δεῖν τοὺς δικαστὰς διατιμῆσαι.* Cf. Schol. Dem. c. *Mid.* p. 543), a distinction which applies to civil as well as to criminal trials. Among the former class must be reckoned also those trials in which the court had to choose between two penalties fixed by law, as *e.g.* in the *γραφὴ δώρων*. Cf. Dinarch. c. *Demosth.* § 60: *οἱ νόμοι . . . περὶ τῶν δωροδοκούντων δύο μόνον τιμήματα πεποιήκασιν, ἢ θάνατον . . . ἢ δεκαπλοῦν τοῦ ἐξ ἀρχῆς λήμματος.*

It is obvious that on a criminal charge two inquiries have to be made: first, whether the defendant is guilty; secondly, if he be found guilty, what punishment ought to be inflicted upon him. It may be advisable to leave the punishment to the discretion of the dicasts, or it may not. In some cases the Athenian lawgiver thought the dicasts ought to have no discretion. Thus, in cases of murder and high treason sentence of death was imposed by the law [PHONOS; PRODOSIA], and in many other cases the punishment was likewise fixed by the law, the tendency being to limit in this way the discretionary power of the dicasts (Strab. vi. p. 260). [EISANGELIA: see the trial of Cephisodotus in 359 B.C. in Dem. c. *Aristocr.* p. 676, § 167, *πέντε ταλάντοις δ' ἐζημιώσατε, τρεῖς δὲ μόναι ψῆφοι διήνεγκαν τὸ μὴ θανάτου τιμῆσαι*, cf. c. *Lept.* p. 481, § 79; and the trial of Lycophron in Hyperid. *pro Lyc.* col. 16, *ἀγωνιζομένῳ δὲ καὶ κινδυνεύοντι οὐ μόνον περὶ θανάτου . . . ἀλλ' ὑπὲρ τοῦ ἐξορισθῆναι καὶ ἀποθανόντα μηδὲ ἐν τῇ πατρίδι ταφῆναι*, cf. *pro Eux.* col. 31, Aeschin. c. *Ctes.* § 252, Lyc. c. *Leocr.* sub fin.] Such *ἀγῶνες ἀτίμητοι* were the *γραφαὶ ἱεροσυλίας, ψευδεγγραφῆς, βουλεύσεως, ἀδίκως εἰρχθῆναι ὡς μοιχόν, ξενίας, δωροξενίας, μοιχείας, ἑταιρήσεως, προαγωγείας, ἀργίας, τραύματος ἐκ προνοίας, ἀστρατείας*, etc. But where the exact nature of the offence could not be foreseen by the lawgiver, or it might so far vary in its character and circumstances as to admit of many degrees of culpability, it might be desirable or even necessary to leave the punishment to the discretion of the dicasts. The law then directed that the same court which passed sentence on the culprit should impose the penalty which his crime deserved; *e.g.* in a *γραφὴ ὕβρεως*, Arist. *Problem.* 29, 16: *ἐπὶ τῇ ὕβρει . . . τίμησις τί χρὴ παθεῖν ἢ ἀποτῖσαι*, cf. Aeschin. c. *Tim.* § 15. To this class belong the *γραφαὶ παρανόμων, παραπρεσβείας, ψευδοκλητείας, κλοπῆς*, etc.

In civil causes the sentence by which the court awarded redress to the injured party would vary according to the nature of his complaint. Where he sought to recover an estate in land, or a house, or a specific thing, as a ring, a horse, a slave (*i.e.* in all *δίκαι πρός τινα*), nothing further was required than to determine to whom the estate, the house, or the thing demanded, of right belonged. [HERES (Greek); OIKIAS DIKE.] The same would be the case in an action of debt, *χρέους δίκη*, where a certain sum was demanded; as, for instance, where the plaintiff had lent a sum of money to the defendant, and at the trial no question was made as to the amount, but the dispute was, whether it was a loan or a gift, or whether it had been paid or not. So, in an action for breach of contract, if by the terms of contract a certain penalty had been attached to its violation, it would be unnecessary to have an inquiry of damages, they being already *liquidated* by the act of the parties themselves (Dem. c. *Dionys.* p. 1291, § 27; p. 1296, § 44, and *Argum.*). In these and many other similar cases the trial was *ἀτίμητος*, *e.g.* of the *δίκαι κατά τινος* and those *ἀποστασίου* and *κακηγορίας* (*Journ. of Philol.* vi. p. 25 f.). On the other hand, wherever the damages were in their nature *unliquidated*, and no provision had been made concerning them either by the agreement of the parties or by the law (*e.g.* in a *δίκη ἀποστασίου, τοὺς ἁλόντας δεῖ δούλους εἶναι*, Harpocr. *s. v.*), they were to be assessed by the dicasts, *e.g.* in the *δίκαι* ἐπιτροπῆς (Dem. *c. Aphob.* i. p. 834, § 67), αἰκίας (Lys. *c. Isocr.* fr. 126 S.), ἐξαιρέσεως ([Dem.] *c. Theocr.* p. 1327, § 19; p. 1328, § 21), ψευδομαρτυριῶν (Dem. *c. Stephan.* i. p. 1115, § 46; *c. Aphob.* iii. p. 849, § 16), βιαίων (Lys. *de caed. Eratosth.* § 32, Solon's law, Plut. *Sol.* 23, being superseded), etc.

The following was the course of proceeding in the τιμητοὶ ἀγῶνες. The accuser proposed in the bill of indictment some penalty. The indictment of Meletus ran: ἀδικεῖ Σωκράτης οὓς μὲν ἡ πόλις νομίζει θεοὺς οὐ νομίζων, ἕτερα δὲ καινὰ δαιμόνια εἰσηγούμενος· ἀδικεῖ δὲ καὶ τοὺς νέους διαφθείρων· τίμημα θάνατος (Diog. Laert. ii. 40); cf. Dinarch. *c. Proxen.* fr. 85 M.: Δείναρχος Σωστράτου Κορίνθιος Προξένῳ ᾧ σύνειμι βλάβης, ταλάντων δύο. Ἔβλαψέ με Πρόξενος, etc. Where the plaintiff's demand arose out of various matters, he would give in his bill of plaint a detailed account, specifying the items, etc., instead of including them in one gross estimate ([Dem.] *c. Aphob.* iii. p. 853, § 30 f.): this seems to have been considered the fairer method, and may be compared to our *bill of particulars*, which the plaintiff delivers to the defendant. He was said τιμᾶσθαι τῷ φεύγοντι ([Dem.] *c. Theocr.* p. 1343, § 70; *c. Aristog.* i. p. 792, § 74, p. 793, § 83), ἐπιγράφειν or ἐπιγράφεσθαι τίμημα (Aristoph. *Plut.* 480; Aeschin. *c. Tim.* § 16 *lex*, *de F. L.* § 14, etc.), and the penalty proposed is called ἐπίγραμμα (Dem. *c. Nausim. et Xen.* p. 985, § 2). When a charge was brought, not by a private individual but by a magistrate *ex officio*, the law required him in like manner to write down the penalty which he thought the case merited ([Dem.] *c. Macart.* p. 1076, § 75 *lex*). After the defendant had been found guilty, the prosecutor was called upon to support the allegation in the indictment and to address the dicasts. Here he said whatever occurred to him as likely to aggravate the charge, or incense the dicasts against his opponents. He was not bound, however, to abide by the proposal made in the bill, but might, if he pleased (in criminal charges probably only with the consent of the court), withdraw his own proposal in favour of the counter-proposition of the defendant (συγχωρεῖν τῷ τιμήματι, [Dem.] *c. Nicostr.* p. 1252, § 18; p. 1254, § 26;—*c. Neaer.* p. 1347, § 6). This was often done at the request of the defendant himself, or of his friends ([Dem.] *c. Theocr.* p. 1343, § 70), but such a withdrawal of the original proposal was not binding upon the dicasts (Platner, *Proc. u. Klagen*, i. p. 199). If the defendant thought the punishment proposed on the other side too severe, he made a counter-proposition, naming the penalty which he considered would satisfy the demands of justice (ἀντιτιμᾶσθαι, Dem. *c. Timocr.* p. 743, § 138; Hesych. *s. v.*; τιμᾶσθαι ἑαυτῷ, [Dem.] *c. Nicostr.* p. 1252, § 18; τιμᾶν ἑαυτῷ, [Dem.] *c. Zenoth.* p. 886, § 15, *c. Aristog.* i. p. 794, § 80—in private actions, Dem. *c. Onet.* ii. p. 878, § 10; i. p. 872, § 32). He was allowed to address the court in mitigation of punishment; to say what he could in extenuation of his offence, or to appeal to the mercy of the dicasts. This was frequently done for him by his relations and friends; and it was not unusual for a man, who thought himself in peril of life or freedom, to produce his wife and children in court, to excite compassion (παράκλησις, Hyper. *c. Demosth.* col. 38; παραγωγὴ τῶν παίδων καὶ γυναικῶν καὶ φίλων, Hermogenes, *Rhet. Gr.* ed. Walz, iv. p. 411; cf. Meier, *de Bon. Damn.* p. 226, and Lys. *c. Alcib.* ed. Frohberger, Introduction, § 8 n.). After both parties had been heard, the dicasts were called upon to give their verdict (τιμᾶν τῷ φεύγοντι; Lys. *c. Nicom.* § 23, τῶν ἐσχάτων τιμᾶν τινι, *c. Epicr.* § 7, θανάτου; Lys. *fr.* 44, τὴν αἰκίαν χρημάτων ἔστι τιμῆσαι, etc.). Here occurs a question about which there has been much difference of opinion, *e.g.* whether the dicasts, in giving their verdict, were confined to a choice between the estimates of the opposing parties, or whether they had a discretion to award what punishment they pleased. Schömann and Boeckh (*Sthh.* i.^{3} p. 441) hold the latter opinion; Meier and Lipsius (*Att. Process*, p. 943) decide for the former (see also Wayte on Dem. *c. Timocr.* p. 743, § 138). Aristotle (*Pol.* ii. 5, §§ 3, 8, 9, S.) tells us that Hippodamus of Miletus (πρῶτος τῶν μὴ πολιτευομένων ἐνεχείρησέ τι περὶ πολιτείας εἰπεῖν τῆς ἀρίστης) proposed that the verdict should not be given by ballot (διὰ ψηφοφορίας), but that each dicast should bring in a tablet with a special statement of his opinion (ἐν ᾧ γράφειν εἰ καταδικάζοι ἁπλῶς τὴν δίκην, εἰ δ' ἀπολύοι ἁπλῶς, κενὸν ἐᾶν, εἰ δὲ τὸ μὲν τὸ δὲ μή, τοῦτο διορίζειν). Upon which proposal Aristotle remarks that its effect would be to make each dicast a διαιτητής: that it was an object with most lawgivers that the dicasts should not confer with each other (μὴ κοινολογεῖσθαι πρὸς ἀλλήλους): and then he comments on the confusion that would arise, if each dicast were allowed to propose a penalty different from that submitted to him by the parties. From passages like Dem. *c. Aristocr.* p. 676, § 167 (quoted above), and p. 688, § 205 (παρὰ τρεῖς μὲν ἀφεῖσαν ψήφους, τὸ μὴ θανάτῳ ζημιῶσαι, πεντήκοντα δὲ τάλαντα ἐξέπραξαν), it is evident that the dicasts had to choose one or other of the two propositions of the accuser and defendant; and this course was, perhaps, the only course that could be adopted with so large a number of dicasts. At the same time it would be absurd to suppose that the Athenian court had no means of controlling the parties in the exercise of that privilege which the law gave them, or that it was the common practice for the parties to submit widely different estimates to the dicasts, and leave them no alternative but the extreme of severity on the one side, and the extreme of mercy on the other. Many passages in the orators are opposed to such a view, and especially the words of Demosthenes, *c. Timocr.* p. 737, § 118. The course of proceeding seems to have been as follows. The prosecutor usually proposed the highest penalty which the law or the nature of the case would admit of, and it was not unusual for the speakers to make allusions to the punishment before the first verdict had been given. In the course of the trial there might be various indications on the part of the dicasts of a disposition to favour one side or the other; they were very animated listeners. They interrupted the speaker to prevent his bringing in irrelevant matter (Hyperid. *pro Eux.* c. 41; Dem. *c. Boeot.* ii. p. 1022, § 47) or to ask for further information (Dem. *c. Spud.* p. 1033, § 17; *c. Stephan.* i. p. 1128, § 87: cf. Andoc. *de Myst.* § 70; Aeschin. *de F. L.* § 7, etc.), and expressed their pleasure or displeasure at what was said in a most marked manner (θορυβεῖν, Isocr. *de Permut.* § 272; Aeschin. *c. Tim.* § 83; Aristoph. *Vesp.* 622, 979; Isocr. *Panath.* § 264; Lys. *c. Eratosth.* § 73 f.: cf. Lyc. *c. Leocr.* § 52; Dem. *c. Eubul.* i. p. 1299, § 1, etc.). All this enabled both parties to feel the pulse of the court before the time had arrived for the second verdict. If the prosecutor saw that the dicasts were greatly incensed against his opponent, and he himself was not mercifully inclined, he would persist in asking for the highest penalty. If he was himself disposed to be merciful, or thought that the dicasts were, he would relax in his demand. Similar views would prevent the defendant from asking for too small a penalty.

As a general rule, only one penalty might be imposed by the court, *παθεῖν ἢ ἀποτῖσαι, ἀμφότερα δὲ μὴ ἐξέστω* (Dem. *c. Lept.* p. 504, § 155), though the law sometimes gave more than one, *e.g.* death and confiscation of property for *φόνος ἑκούσιος*, *ἀτιμία* and confiscation of property (Dem. *c. Aristocr.* p. 640, § 62; *c. Mid.* p. 551, § 113 *lex*; *c. Neaer.* p. 1363, § 52 *lex*: see also the decrees in *C. I. A.* iv. No. 27 a, l. 33; i. No. 31, l. 20; ii. No. 17, l. 51, etc.). Sometimes the law expressly empowered the dicasts to impose an additional penalty (*προστίμημα*) besides the ordinary one. Here the proposition emanated from the dicasts themselves, any one of whom might move that the punishment allowed by the law should be awarded. He was said *προστιμᾶσθαι*, and the whole of the dicasts, if (upon a division) they adopted his proposals, were said *προστιμᾶν*. Timocrates' law is said to deprive the courts of the power of awarding *τὰ προστιμήματα τὰ ἐπὶ τοῖς ἀδικήμασιν ἐκ τῶν νόμων ὡρισμένα* (Dem. *c. Timocr.* p. 700, § 2: cf. Lys. *c. Theomn.* i. § 16). For which wrongful acts such additional punishment might be awarded we do not know: Demosthenes (*l. c.* p. 713, § 41, and p. 732, § 103) mentions imprisonment for state debtors and persons guilty of theft, and *ἀτιμία* was probably awarded in a *δίκη ψευδομαρτυριῶν* (Boeckh, *Kl. Schriften*, iv. p. 123). In some passages *προστιμᾶν* must be understood in the same sense as *τιμᾶν*, *e.g.* in [Dem.] *c. Aristog.* i. p. 790, § 67, *ἀλλ' ὅτι πέντε ταλάντων προσετιμήσατε*: cf. Dinarch. *c. Aristog.* § 12, *πέντε ταλάντων τιμῆσαι τούτῳ* (in the same speech which Lipsius shows to be spurious, *Leipz. Stud.* vi. pp. 319–331; *τίμημα*, p. 796, § 87, is used in the special sense of *τίμημα χρημάτων*, p. 797, § 92); Herodian, *περὶ ἀριθμῶν*, in Stephanus, *App.* p. 205, etc. In other instances the preposition *πρὸς* in the verb *προστιμᾶν* is used with reference to other matters, *e.g.* Dem. *c. Mid.* p. 528, § 44; p. 571, § 176; *c. Everg. et Mnes.* p. 1152, § 43.

In public suits a compromise between the opposing parties was not permitted, the state being directly or indirectly concerned in them; but private suits were frequently settled by arrangement between the parties, even after the trial had begun, and with the assistance of the dicasts (Isae. *Dicaeog.* §§ 17 f., 31; Dem. *c. Pantaen.* p. 978, § 39 f.). With this exception the course of proceeding in private actions with respect to the assessment of damages was much the same as described above. The liability of the plaintiff to the *ἐπωβελία*, which was calculated upon the sum demanded, operated as a check upon exorbitant demands, in addition to that which we have already noticed. (*Att. Process*, ed. Lipsius, p. 208 ff.)

As to the amount of revenue derived by the Athenians from public fines, see Boeckh, *Sthh.* i.^{3} p. 439 f. As to *τίμημα* in the sense of the rateable value of property with reference to the Athenian property tax, see EISPHORA.

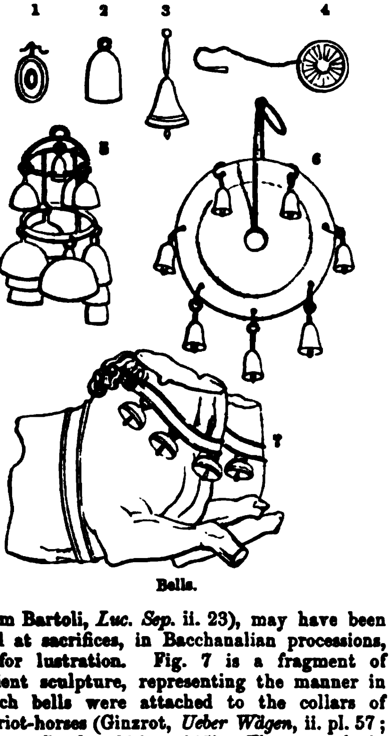
TIMOCRA'TIA. [OLIGARCHIA.]

TINTINNA'BULUM or **AES** (*κώδων*), a bell. Handbells were used among Greeks and Romans for signals of various kinds: *e.g.* for the opening of the market (Plut. *Symp.* iv. 4, 3; Strab. xiv. p. 658), for the opening of the baths (Mart. xiv. 163); to arouse or summon together slaves (Lucian, *de Merc. Cond.* 24, 31; to this use perhaps refers the "tinnitus aeris" in Sen. *de Ira*, 3, 35); for purposes of sentry duty at night, sometimes passed from post to post, as a proof of wakefulness (Thuc. iv. 135; Aristoph. *Av.* 841); [for the same purpose a staff, *σκυτάλη*, or a lantern was sent round: cf. Aen. Tact. 22; Droysen, *Gr. Kriegsalterth.* 264;] and similarly for the use of night watchmen (Dio Cass. liv. 4); for the necks or harness of animals, as at the present day (Eur. *Rhes.* 307; Aristoph. *Ran.* 963).

From the passage in Suet. *Aug.* 91, there is some indication of bells being attached to house-doors; but, from the constant mention of knocking, never ringing, for admission, we cannot suppose that such bells were for the same purpose as our door-bells: perhaps, as Mau thinks, they were rung by the janitor to announce to the slaves within that a visitor was entering (Marquardt, *Privatleben*, 236; cf. Becker-Göll, *Gallus*, ii. 236).

Besides the above practical uses, bells had a religious significance which appears in different forms, starting in all probability from the general idea that they were a preventive against evil influences. Hence we find them in connexion with the worship of Rhea (Wieseler, *Denkm.* ii. 813) and of Dionysus (Nonnus, *Dionys.* xxx. 213), and thus represented in the hands of a Bacchante (Wieseler, *Denkm.* ii. 539), or attached to the thyrsus or tympana (as in a relief in the Vatican), or to a tree sacred to Bacchus (see cut on p. 304): the bell round the neck of the ass on which Silenus rides, as seen on a sarcophagus in the British Museum, may possibly have this significance, though it is also possible that it belongs only to the general custom, mentioned above, of hanging bells round the necks of various animals. The same idea caused them to be used as amulets: cf. Chrysost. *in Ep. ad Cor.* xii. 7, *τὰ περίαπτα καὶ τοὺς κώδωνας τοὺς τῆς χειρὸς ἐξηρτημένους . . . δέον μηδὲν ἕτερον τῷ παιδὶ περιτιθέναι ἢ τὴν ἀπὸ τοῦ σταυροῦ φυλακήν*. Such, no doubt, was the purpose of the bell on a necklace from the Crimea, now in the Hermitage at St. Petersburg (for this and other similar bell-amulets, see Stephani, *Compte Rendu*, 1865, p. 174). A votive hand, such as Chrysostom mentions, is described by Bonnstetten (*Rec. d'antiq. Suisses*, pl. xx. 2, 3). A similar prophylactic use suggested the bells attached to shields (Aesch. *Theb.* 385); and it is not impossible that the bells on the tomb of Porsena may have been intended to avert evil (Plin. *H. N.* xxxvi. § 92; LABYRINTHUS, p. 2 *a*).

The forms of bells were various in proportion to the multiplicity of their applications. In the Museum at Naples are some of the form which we call "bell-shaped;" others are more like a Chinese gong. The bell, fig. 1 in the following woodcut, is a simple disk of bell-metal; it is represented in a painting as hanging from the branch of a tree (Bartoli, *Sep. Ant.* 13; cf. Bötticher, *Baumcultus*, 37). Two bells are shown hanging to a tree on the left in the cut under OSCILLA, on page 304. Figure 2 represents a bell of the same form, but with a circular hole in the centre, and a clapper attached to it by a chain. This is in the Museum at Naples, as well as the bell, fig. 3, which in form is exactly like those still commonly used in Italy and attached to the necks of sheep, goats, and oxen. Fig. 4 is represented on one of Sir W. Hamilton's vases (i. 43) as carried by a man in the garb of Pan, and probably for the purpose of lustration (Theoc. ii. 36; Schol. *in loc.*). Fig. 5 is a bell, or rather a collection of twelve bells suspended in a frame, which is preserved in the Antiquarium at Munich. This jingling instrument, as well as that represented by fig. 6 (from Bartoli, *Luc. Sep.* ii. 23), may have been used at sacrifices, in Bacchanalian processions, or for lustration. Fig. 7 is a fragment of ancient sculpture, representing the manner in which bells were attached to the collars of chariot-horses (Ginzrot, *Ueber Wägen*, ii. pl. 57; *Compte Rendu*, 1876, p. 115). The example in the latter work is a bell of a more ornate kind with a scalloped edge, somewhat resembling the "bell" of a hyacinth (see Atlas of *Compte Rendu*, 1876, Taf. II. 22). [J. Y.] [G. E. M.]



Bells.

TIRO. [EXERCITUS, Vol. I. pp. 805, 806.]

TITHENIDIA (τιθηνίδια), a festival celebrated at Sparta by the nurses who had the care of the male children of the citizens. On this occasion the nurses (τιτθαί) carried the little boys out of the city to the temple of Artemis surnamed Corythallia, which was situated on the bank of the stream Tiasa. Here the nurses sacrificed sucking-pigs on behalf of the children, and then had a feast, probably of the meat of the victims, with which they ate bread baked in an oven (ἰπνίτας ἄρτους, Athen. iv. p. 139; cf. Plut. *Sympos.* iii. 9, *Quaest. Gr.* vii. p. 211, Wyttenb.; Hesych. *s. v.* κορυθαλλίστριαι.) [L. S.]

TITIES or **TITIENSES.** [PATRICII.]

TITII SODALES, a sodalitas or college of priests at Rome, who represented the second tribe of the Romans, or the Tities; that is, the Sabines, who, after their union with the Ramnes or Latins, continued to perform their own ancient Sabine sacra. To superintend and preserve these, T. Tatius is said to have instituted the Titii sodales (Tac. *Ann.* i. 54). The same writer (*Hist.* ii. 95) gives another tradition, that the priesthood was instituted by Romulus in honour of king Tatius, who after his death was worshipped as a god. It is true that Nipperdey rejects this passage as an interpolation contradicting the account in the *Annals*: but Marquardt justly points out that the alternative tradition is supported by Dionys. ii. 52, where it is said that public sacrifices were yearly offered at the tomb of Tatius; and it is not improbable that the priesthood really had this origin, and may rightly be compared (as in the passage of Tacitus) with the later AUGUSTALES, instituted to preserve the cult of Augustus. Whatever their origin, the use of Sabine rites is attested by Varro (*L. L.* v. 85), who derives the name Sodales Titii from Titiae aves, which were observed by these priests in certain auguries; it appears that these priests also preserved the ancient Sabine auguries distinct from those of the other tribes. This priesthood had fallen somewhat into neglect at the end of the Republic (cf., however, Lucan, *Phars.* i. 602), but was restored by Augustus as a distinguished *sodalitas*, in which the members seem to have been of senatorial rank: among them we find the Emperor Augustus, Nero Caesar, the son of Germanicus, and the Emperor Claudius (*Mon. Ancyr. Gr.* 4, 6; *C. I. L.* iii. 381, 1741; vi. 913, 1343; viii. 7050). The favour of Vespasian towards them is testified by *C. I. L.* vi. 934. (Marquardt, *Staatsverwaltung*, iii. 446; SACERDOS, p. 573.) [L. S.] [G. E. M.]

TOCOS (τόκος). [FENUS.]

TOGA (in Greek writers, τήβεννα). The earliest costume of the Roman was a thick woollen cloak worn over a loin-cloth or apron [SUBLIGACULUM]. This woollen cloak was called the *toga*, and was the dress of women as well as men and boys. It was laid aside indoors, or when hard at work in the fields; but, as we learn from the story of Cincinnatus, was the only decent attire out-of-doors. He was ploughing in his field when the messengers of the senate came to tell him that he had been made dictator, and on seeing them promptly sent his wife to fetch his toga from the house, that they might be received with all propriety (Liv. iii. 26, 9). The truth of the story may be doubtful, but it well expresses the Roman sentiment on the subject. As time went on, however, and the Romans became more civilised, their garments changed. They adopted the shirt

[TUNICA] which the Greeks and Etruscans wore, made their toga more bulky, and wore it in a looser manner. The result was that it became useless for active pursuits, such as those of war, in which its place was taken by the more handy SAGUM, and in those of peace, where it was superseded by the LAENA, LACERNA, PAENULA, and other forms of buttoned or closed cloaks. The same process, as is often the case with clothing, that removed it from every-day life and commonplace uses, gave it an increased importance as a ceremonial garment. As early as the third century B.C., and probably even before, it, along with the CALCEUS, was looked upon as the characteristic badge o Roman citizenship. It was denied to foreigners (Suet. *Claud.* 15), and even to banished Romans (Plin. *Ep.* iv. 11, 3), and was worn by magistrates on all occasions as a badge of office. In fact, for a magistrate to appear in a Greek cloak [PALLIUM] and sandals (see instances given in the article SOLEA) was considered by all, except unconventional folk, as highly improper, if not criminal (cf. Cic. *pro Rab.* 9, 26). Augustus, for instance, was so much incensed at seeing a meeting of citizens without the toga, that, quoting Virgil's proud lines, "Romanos rerum dominos gentemque togatam," he gave orders to the aediles that in future no one was to appear in the Forum or Circus without it (Suet. *Aug.* 40). When such was the feeling of the Emperor, it is little wonder that the toga remained the Court dress of the Empire (Spart. *Sever.* 1, 7), though in any case the social usage of Rome would have made it so. It was in it that the clients paid their visit to their patron [SALUTATIO], not forgetting to wear boots (*calceus*) with it (Juv. i. 119; cf. Tertull. *de Pallio*, "calceos . . . proprium togae tormentum:" and for the *calceus*, Mart. i. 103, 5, 6; Hor. *Sat.* i. 3, 31–2). It was also worn by the spectators in the circus at Rome (Suet. *Aug.* 40; Dio Cass. lxxii. 21), and its irksomeness causes Juvenal to sigh for the freedom of the country, where only the dead man, who was buried in it, is bound to wear it (*Sat.* iii. 172; cf. Mart. ix. 58, 8). Martial is equally enthusiastic in his praises of the unconventionality of the provinces (i. 49, 31; iv. 66, 1–3; x. 47, 5; xii. 18, 5, 17); and Pliny the younger makes it one of the attractions of his Tuscan villa that there is no necessity of wearing the toga (*Ep.* v. 6, § 45; cf. vii. 3, § 2). In spite, however, of these protests, its use as an official garment lingered on until the time of Theodosian (Cod. Theod. xiv. 10, 1), when it was supplanted by the PAENULA.

The best account of the shape and the manner of wearing the toga is given by Isidore (*Orig.* xix. 24, 3): "Toga dicta quod velamento sui corpus tegat atque operiat. Est autem pallium purum forma rotunda effusiore et quasi inundante sinu et sub dextro veniens supra sinistrum ponitur humerum." The characteristic feature is the roundness (cf. Quintil. xi. 3, 139: "Ipsam togam rotundam esse et apte caesam velim"), being that which distinguished it from the square Greek cloak or *pallium* and the old Roman *recinium*. That it was in no sense circular is shown by the fact that Dionysius of Halicarnassus (iii. 61) calls it a περιβόλαιον ἡμικύκλιον, and still more by the large series of Roman portrait statues on which it appears. These statues are in fact our main evidence for its shape, and literary mentions can only be used to illustrate their evidence, not to correct it. The older scholars of this century were singularly neglectful of these monuments, though most diligent in collecting and comparing all the numerous passages bearing on the use of the toga. It was not indeed until the last thirty or forty years that the subject was studied from the sculptural point of view by Weiss and Von Launitz, and more recently by A. Müller. Weiss, whom Marquardt follows, regarded the difficulties of the case as solved by a garment of elliptical shape, though with pointed ends, to which a border was sometimes attached (fig. 1). Von Launitz, on the other hand, has shown that though the earlier statues wear a toga of this shape, the more usual and characteristic form shown by later statues cannot be obtained from it. After numerous experiments, which he embodied in a model dress fitting a lay figure and disseminated through German schools, he hit on a complex shape which answers the purpose. It is a crescent, the back of which is an elliptical curve, and has a circular segment of cloth *F R A*, only about a third of the arc across, sewn on to its concave side (fig. 2). Both shapes were of great size, being at least three times the height of a man's shoulder in length. Taking the Von Launitz model as our guide, the method of wearing it is well seen in the statue of Didius Julianus (fig. 3). About

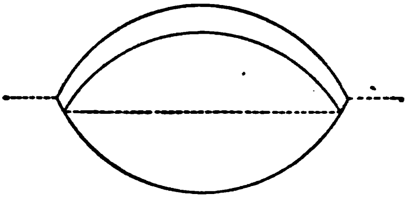


Fig. 1. The Toga, after Weiss.

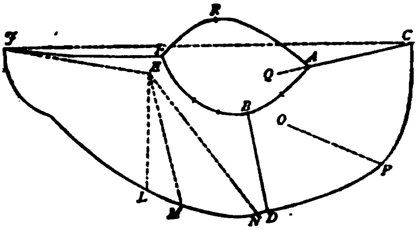

Fig. 2. The Toga, after Von Launitz.

Fig. 3. Statue of Didius Julianus. (From the Louvre.)

a third of the toga (as is seen in fig. 4) is first allowed to hang in front over the left shoulder (in fig. 2, *E* is the point where it is placed on the shoulder), so that its end lies between the wearer's ankles ($a = J$ in fig. 2). Then the rest of the garment is taken and, as Isidore (*l. c.*) tells us, drawn across the back, under the right shoulder, and across the chest in a slanting line, being finally thrown over the left shoulder once more. This done, the weight of the end which is thrown over the left shoulder keeps the whole in its place. Such a description, however, with the exception of the point between the ankles, applies quite as well to a pallium as a toga. In the toga, however, the folds were further complicated first by drawing this part (which hangs down in front from the left shoulder) upwards and allowing it to hang over the fold (*b*), which runs slanting from under the right arm to the left shoulder; and secondly by the fact that this slanting fold, instead of being merely the hem of the cloak turned over, forms a sort of apron or sling running from behind the right shoulder to the left. This curious fold covers the greater part of the left thigh completely, and falls down as far as the knee. It is undoubtedly the part known to the ancients as the *sinus*, and one of the chief merits of Von Launitz's model is the light it throws on a remark of Quintilian's (*FRA* in fig. 2 is the *sinus*). This writer, in the *locus classicus* on the subject (xi. 137 ff.), says that the ancients had no *sinus* on their toga, and that even afterwards they were very narrow ("Nam veteribus nulli sinus; perquam breves post illos fuerunt"). The small piece added to the concave side of the crescent being the *sinus*, this well explains the fact that the earlier forms can be reproduced by a cloak without it of Weiss's pattern. Quintilian, in the passage quoted, is giving his orator rules for the nice management of the toga, and his remarks are of great importance, as an account of the manner of wearing it. He recommends the orator to gird his shirt so that in front it may come a little below the knees, but behind may touch his calves. If he has the right of the *latus clavus*, the shirt may be somewhat lower ("cui lati clavi jus non erit, ita cingatur ut tunicae prioribus oris infra genua paullum posterioribus ad medios poplites usque perveniant"). The toga which goes over this ought to be round and suitably cut, for otherwise it will in many ways be out of proportion. The part of it in front is best when it reaches to the middle of the shins, while the part behind should be higher in the same degree as the girdle is. The *sinus* looks best when it is a considerable height above the hem of the toga, and ought never to be below it. The part of the toga which is drawn under the right shoulder slanting to the left, like a cross-belt, should neither choke one nor be loose. The part of the toga which is put on after it should be lower, for it sits better thus and is kept in place. ("Ipsam togam rotundam esse et apte caesam velim. Aliter enim multis modis fiet enormis. Pars eius prior mediis cruribus optime terminatur, posterior eadem portione qua cinctura. Sinus decentissimus, si aliquanto supra imam togam fuerit nunquam certe sit inferior. Ille qui sub humero dextro ad sinistrum oblique ducitur velut balteus nec strangulet, nec fluat. Pars togae quae postea imponitur sit inferior nam ita et sedet melius et continetur.") He adds that the shoulder and neck ought not to be covered, for this makes the toga look less flowing and takes from its impressiveness. As to the attitude, the left forearm should be at a right angle, and should be in such a position that the edges on the left fall in equal folds side by side.

Fig. 4. Fig. 5.
Sketches to show how the Toga was put on.

Nearly all these peculiarities are borne out by the statues, though of course the sculptor has probably in most cases softened down what was angular in the attitude. It needs no Roman writer to tell that a mantle worn in such a complicated way must have been a serious anxiety to one with fashionable instincts. Tertullian, however, alludes in a most amusing way to the trouble the valet who had to arrange the great man's clothes (*vestiplicus*, Orelli, 2838) took to shape the folds aright the day before and to fix them in their place by tongs, and to the difficulties of wearing it (*de Pallio*, 5: "Prius etiam ad simplicem captatelam eius nullo taedio constat: adeo nec artifice opus est qui pridie rugas ab exordio formet et inde deducat in tilias totumque contracti umbonis figmentum custodibus forcipibus assignet, dehinc diluculo tunica prius cingulo correpta—recognito rursus umbone et si quid exorbitavit reformato partem quidem de laevo promittat, ambitum vero eius ex quo sinus nascitur, iam deficientibus tabulis retrahat a scapulis et exclusa dextera in laevam adhuc congerat cum alio pari tabulato in terga devoto atque ita hominem sarcina vestiat"). The main point in all such arrangements was to make the bandlike fold, which ran across the breast, secure. It is called the *umbo* in the above passage (cf. Persius, v. 33); but, in the humorous description which Macrobius gives of Hortensius's toilet, is spoken of as the *artifex nodus*. Hortensius used a mirror and adjusted his toga so that this band held the folds and creases in their place, and so that they covered just the proper amount of his side and thigh. Such an arrangement was at the best not very reliable, and so we are told that Hortensius sent a summons to a friend, who had jostled him in a passage and disarranged his dress. In fact, he thought the shifting of a crease on his shoulder a deadly offence (*Sat.* iii. 13, 4).

Another mark of the Roman dandy was the enormous size of his toga (*laxitas*), and many are the sneers at the people, to use Cicero's phrase, "velis amictos non togis" (*in Cat.* ii. 10, 20). The size was sometimes such that the garment trailed behind like a tragic actor's; at least this is what Valerius Maximus tells us of Tuditanus (vii. 8, 4; cf. Mart. vii. 35), and we also hear of Caligula catching his foot in the end of his toga that was between his legs and getting a fall (Suet. *Cal.* 35, "ita proripuit se spectaculis ut calcata lacinia togae praeceps per gradus iret"). Such *togae laxae* were associated with curled hair, and roundly abused as bad taste (Tib. i. 6, 39: "tum procul absitis quisquis colit arte capillos, et fluit effuso cui toga laxa sinu;" cf. Seneca, *Contr.* 2, 14), and Ovid advises the lover to avoid them if he is to make a good impression (*Rem. Am.* 679: "nec compone comas quia sis venturus ad illam, nec toga sit laxo conspicienda sinu"); though, if we may trust Tibullus, this was a common lover's fashion (ii. 3, 77: "nunc si clausa mea est si copia rara videndi heu miserum, laxam quid juvat esse togam"). The *locus classicus* is Horace, *Epod.* 4, 7, where he speaks of a freed man who wears a toga some three yards wide and thereby excites universal indignation ("Videsne sacram metiente te viam cum bis trium ulnarum toga, ut ora vertat huc et huc euntium liberrima indignatio"). The older commentators, and even Isidorus, inferred that the length, not the breadth of the toga was meant. Such a length, it is needless to say, would be quite too small; and when one reckons in the *sinus*, which in such cases came down to the skirts of the toga, the dimensions are as possible as a satirist's can be expected to be.

Contrasted with these "sails" of the gilded youth was the modest mantle (*toga arta*: cf. Hor. *Ep.* i. 18, 30), which quiet people, like Augustus, wore (Suet. *Aug.* 73: "togis neque restrictis neque fusis [usus est]"). In some cases, as for instance that of Cato Uticensis (*toga exigua*, Hor. *Ep.* i. 19, 13), this was doubtless an attempt to bring back the old shape, which as Quintilian says had no *sinus*. This is the form which we see on the Etruscan statue called the *Arringatore*, now at Florence; for the Romans held that they had borrowed the toga from the Etruscan. Another statue in Dresden, though the mantle in which it is clad is scarcely round enough for the toga, is generally quoted in illustration of Quintilian's further remark, that the ancient orators must on account of the shape have held their arm, in the same manner as the Greeks, wrapped in the toga. Somewhat the same attitude, a compulsory one during the pupil's *tirocinium* (Cic. *pro Cael.* 5, 11) and which was the rule in Greece [PALLIUM], is shown by another Dresden statue, where the hand seems to have been freed in the course of the speech.

Another mode of wearing the toga was the well-known *cinctus Gabinus*. The name is derived, according to Mommsen, from the long wars of the Romans against Gabii, and was at first purely military, for in the oldest times the toga was worn in war as well as in peace. Its peculiarity was that a fold of the toga was drawn round the body in such a way that it acted as a girdle. (Serv. *ad Aen.* vii. 612: "Gabinus cinctus est toga sic in tergum reiecta ut una (ima?) eius lacinia a tergo revocata hominem cingat:" cf. Isid. *Or.* xix. 24, 7, "Cinctus Gabinus est cum ita imponitur toga ut togae lacinia quae postsecus reicitur attrahatur ad pectus.") At the same time part of the toga was drawn up over the head (cf. Serv. *ad Aen.* v. 755), though this of course cannot have been done in war. The *cinctus Gabinus* was retained long after it had passed out of ordinary use in the ritual of certain warlike sacrifices (cf. Liv. v. 46, 2), as when the Temple of Janus was opened (Verg. *Aen.* vii. 611). It was also used at the AMBARVALIA and the founding of a city (cf. Verg. *Aen.* v. 755, and Serv. *ad loc.*); and it was with their heads thus covered that the Decii devoted themselves as victims for their country (Liv. viii. 9, 9, and 7, 3).

Festus tells us that the *cinctus Gabinus* is referred to in the phrase *classis procincta* (*Epit.* p. 225; cf. p. 56, 12), with which is *procinctu*, the garb in which the *testamentum* was sworn, is connected. However, for ordinary purposes the toga was scarcely used by soldiers, since even where distributions of them to the soldiers are mentioned the number is a very limited one (cf. Liv. xxix. 36, 2, where 1200 togae go to 12,000 tunicae; and Id. xliv. 16, 4, where 6,000 go to 30,000). So much so was this the case that the toga became the typical garb of peace as in Cicero's time (*in Pis.* 30, 73: "Cedant arma togae concedat laurea laudi"). Among other survivals of the old uses of the toga was the custom of wearing it without a tunica beneath (Gell. vii. 12, 3, "viri autem Romani primo quidem sine tunicis toga sola amicti fuerunt"), which was observed by candidates for election until almost the end of the Republic (Plut. *Quaest. Rom.* 49, p. 276 C, *διὰ τί τοὺς παραγγέλλοντας ἄρχειν ἔθος ἦν ἐν ἱματίῳ τοῦτο ποιεῖν ἀχίτωνας*: cf. Id. *Coriol.* 14). Cato Uticensis, like the famous family of Cathegi (*cinctuti*, Hor. *A. P.* 50: cf. Lucan, ii. 543, vi. 794; Sil. Ital. viii. 587), adopted this as one of his habits, though the ordinary Roman, as we have mentioned above, considered it as scarcely decent.

Yet another custom was the survival of the toga as a woman's garment (cf. Serv. *ad Aen.* i. 282), in the case of the *meretrices* and unchaste women who were condemned to wear it (Juv. ii. 68; Mart. ii. 39, x. 52; Cic. *Phil.* ii. 18, 44; Hor. *Sat.* i. 2, 63). The toga of the Roman citizen was white in colour (cf. Mart. viii. 28, 11); but if he were candidate for an office, he sent it to the fuller and then appeared in the *toga candida* (cf. Polybius, x. 4, 8, *τήβεννα λαμπρά*). The dazzling brilliancy of the *toga candida* was given by some special preparation of chalk, according to Isidorus (*Orig.* xix. 24, 6), and this is why Persius speaks of a *cretata ambitio*. This custom was forbidden by a *plebiscitum* in 432 B.C. (Liv. iv. 25, 13), but this never seems to have been enforced. The citizen's toga, or *toga pura*, being the mark of his franchise, was assumed by the young Roman when he was declared to be legally of age. It was on this account known as the *toga virilis*, as opposed to the *toga praetexta* of boys. The assumption of the *toga virilis* took place on the feast of the Liberalia (March 17: cf. Ovid, *Fasti*, iii. 771; Cic. *ad Att.* vi. 1, 12), when the boy was between 14 and 16 years of age, though instances occur in which boys a couple of years older or younger assumed it (cf. Marquardt, *Privatleben*, p. 126 foll.).

The *praetexta* worn by free-born boys (Liv. xxiv. 7, 2: "Liberi nostri praetextis purpura togis utuntur") was an ordinary toga with a purple hem added. Its use was not confined to boys; for it was worn by all the curule magistrates (aediles, cf. Cic. *post. red. in Sen.* 5, 12; and censors, cf. Zonar. vii. 19). It was denied to the quaestors, plebeians, aediles, and tribunes of the Plebs (Plut. *Quaest. Rom.* 81, p. 283 B), though it was one of the privileges of magistrates in the *Municipia* and *Coloniae*. To wear it was a distinction; and ex-curule magistrates, as well as dictators, were buried in it (Liv. xxxiv. 7, 2). They seem to have been also allowed to wear it during their lifetime, but only at public ceremonies or festivals (cf. Cic. *Phil.* ii. 43, 110, "cur non sumus praetextati"). Priests possessed the right of the *praetexta*, though not in all colleges. The Flamen Dialis (Liv. xxvii. 8, 8), the Pontifices, and Tresviri Epulones (Id. xxxiii. 42), the Augurs (Cic. *pro Sest.* 69, 144), and the Arval brothers, are among those mentioned as wearing it. Under the Empire it was common to bestow a *praetexta* as a badge of rank (*ornamentum*). Thus Sejanus was given it by the senate as part of the insignia of praetor (Dio Cass. lviii. 11: cf. for the whole subject Mommsen, *Staatsrecht*, i.^{2} 392; ii. 522). Another kind of toga was the *toga pulla*, a mantle of dark colour which was assumed by those in mourning (*sordidati*), who were said *mutare vestem*. It was of dark colour, whence its name; and was put on not only in cases of bereavement, but in cases of private danger, as for instance when one was impeached (cf. Liv. vi. 20, 1, of M. Manlius), and of public anxiety. In fact, it was one of the ways of making a popular demonstration, and Cicero was prouder of nothing more than of the fact that the senate resolved on a *vestis mutatio* when he went into exile (*post red. in Sen.* 5, 12). In the case of magistrates who had the right to wear the *praetexta*, a common *toga pura*, not a *toga pulla*, was worn.

Under the Republic the most magnificent garment was the *toga picta* of Jupiter Capitolinus (cf. Tertull. *de Corona*, 13), which the triumphant general wore over the *tunica palmata* (Liv. v. 41, 2: "quae augustissima vestis est tensas ducentibus triumphantibusque"). The Praetor Urbanus, however, was also allowed to appear in it, when he rode in the chariot of the Gods into the circus at the Ludi Apollinares (cf. Liv. *l. c.*). The *toga picta* was a toga purpurea, or mantle of purple, covered with gold embroidery, and was very possibly originally the king's attire, though tradition ran that the king only wore the praetexta. Under the Empire, the republican customs were much altered, and all magistrates who gave games wore the toga purpurea; though indeed from a decree of Augustus, that no one except magistrates and senators should wear it, one may infer that its use was by no means so restricted as might otherwise be supposed (Dio Cass. xlix. 16). Even under the Republic the Praetor Urbanus Asellio offered a sacrifice in the triumphal costume, and one of the honours conferred on Julius Caesar was the right of always wearing it at sacrifice (Appian, *B. C.* i. 54, ii. 106). Afterwards the further right of wearing it always and wherever he wished was given him (Dio Cass. xliv. 4, 6;—Cic. *de Divin.* i. 52, 119; ii. 16, 27); and this privilege was retained by Augustus and his successors, though as a rule they only used it on special occasions.

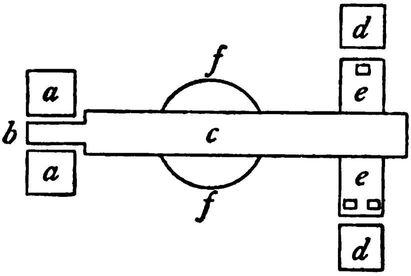
In the second century A.D. the *toga picta* with the *tunica palmata* had already become the official dress of the consuls, and the best representations of it are to be found in their portraits on the diptychs of ivory which they presented to their friends on election. In these, however, the toga has taken quite a new and almost irrecognisable form (cf. Baumeister, *Denkm.* p. 1833, fig. 1923; and Marquardt, *Privatleben*, ed. 2, p. 563, note 1).

Among the varieties of the toga the *trabea* must be mentioned. It probably gets its name from having stripes (*trabes*) of bright scarlet with a purple hem (cf. Isid. *Orig.* xix. 24, 8: "Trabea erat togae species ex purpura et cocco"). It was a very ancient form of the toga, and was worn by the Salii (Dionys. ii. 70) and augurs. According to Servius, there were three different kinds of *trabea*: one of purple only, for the gods; another of purple and a little white, for kings; and a third, that described above for augurs (*ad Aen.* vii. 612; cf. *ad* vii. 188). It does not seem to have been worn by any Romans except the Salii and augurs, though Dionysius says that the knights did so, and cannot be identified on any of the monuments.

(See especially an excellent article by A. Müller in Baumeister, *Denkm.* s. v. *Toga;* Marquardt, *Privatleben*, Index *toga* and *trabea;* Weiss, *Kostümkunde*, p. 435 ff.; Von Heyden, *Die Tracht*, &c. p. 27 ff.; Iwan Müller, *Handbuch*, pp. 804, 876, 928; Mayor *ad* Juv. i. 119, iii. 172, x. 8 and 39, xi. 204; Friedländer, *Sittengeschichte Roms*, i.^{5} p. 151, &c.; Becker-Göll, *Gallus*, iii. p. 198 ff.) [W. C. F. A.]

TO'RCULAR or **TO'RCULUM**, a press for making wine or oil: in Greek, *πιεστήρ*, *πιεστήριον*, or, generally, *ληνός*, which strictly means the vat in which the fruit was trodden or pressed.

The grapes which had been trodden by the feet [see under VINUM] required further mechanical pressure to extract the remaining juice; and the pulp (*sampsa*) of the olive, already separated by the process described under TRAPETUM, had to be treated in a similar machine, to extract the oil. The simplest and earliest contrivance for this purpose was a heavy stone placed over a basket containing the grapes or the olive pulp, and pressed down by a lever, as is shown by a relief in the Naples Museum. This was improved by the press shown in the cut below, representing one found at Stabiae, which bears out the description left by Cato, *R. R.* 18 (cf. Plin. *H. N.* xviii. § 317; Col. xii. 52; Vitruv. vi. 6). Two posts (*a*, *a*), termed *arbores*, were fixed in the floor of the pressing-room (*torcularium*), so as to hold down the tongue (*lingula*, *b*) of the press-beam (*prelum*, *c*) [in some cases a single post, with a hole to receive the *lingula*, answered the purpose, but offered less resistance to the strain]: at a distance = the length of the *prelum*, or beam, a windlass (*sucula*, *e*) was fixed by two other posts (*stipites*, *d d*), and, being turned by crowbars (*vectes*), drew down the beam by a rope attached to it [for *sucula*, see MACHINA, pp. 108, 109]: the pressure fell upon the olive-pulp or the grapes, placed in a basket (*fiscina*) or between lathes (*regulae*): over the basket was laid a flat board (*orbis olearius*): the boarding or bed, upon which the fruit was placed, was called *area* (*f*). To lift up the prelum, when it was required, a pulley (*trochlea*) was hung from a beam above. The word *prelum*, though strictly the press-beam, often stands for the whole press (Hor. *Od.* i. 20, 9; Plin. *H. N.* xvi. § 193, &c.).



Plan of Torcular found at Stabiae. (Blümner.)

As a variation, not very clearly explained, which Pliny dates 100 years before his own time, the prelum was forced down by a screw instead of a windlass: and later, again, this was in great measure superseded by a screw-press, like an ordinary cloth-press [see COCLEA], an upright (*malus*) working as a male screw in an upper cross beam, and being screwed down upon what he calls a *tympanum* (probably a flat round board with rims like a tambourine), beneath which the fruit was placed (*H. N.* xviii. § 317). One advantage of this was that it took much less room than the long prelum.

A simpler press than the above appears in a painting at Herculaneum (Baumeister, *Denkm* fig. 2333), a framework of two uprights joined by cross bars at the top and bottom. The basket of fruit being placed on the lower bar, rows of beams separated by wedges are ranged between the basket and the upper bar, and exercise pressure as the wedges are driven home. (Blümner, *Technologie*, i. 337–342; Rich, *s. v.*; Schneider *ad* Cat. *R. R.*) [G. E. M.]

TORCULARIUM, a shed or out-house where the presses for oil or wine were worked (Cat. 12;—Col. xii. 52, §§ 3–10). The descriptions left by Latin writers on agriculture are confirmed and illustrated by the remains of an actual torcularium, discovered at Stabiae. The central part (probably the *forum*) has a wide open gangway for men or mules carrying in the fruit: in it stands the TRAPETUM for separating the pulp and the stone of the olive: on either side of the central compartment we find a paved chamber separated off by a low stone rim or coping, so that they form two shallow basins: it seems probable to us that these chambers were the *lacus* of Tib. i. 1, 10, Ov. *Fast.* iv. 888, Col. xii. 18, Plin. *Ep.* ix. 20, though Rich and Blümner think differently: the pavement of each chamber slopes in one direction to a point where leaden troughs conduct the liquid into earthenware jars (*labra*) sunk in the floor: in each chamber (or *lacus*) was placed a press [TORCULAR] for oil or wine; the sockets for receiving the various parts (*arbores*, *stipites*) described in the preceding article are seen in the floor, and there is an under-chamber where bolts (*pedicini*) held fast the *arbores*, &c. in their sockets. The juice flowed from the presses along the troughs of the *lacus* into the sunken jars above described, from which the *capulator* ladled out the wine or oil into smaller jars to be placed in the store-room (*cella vinaria*, *cella olearia*). It need not be supposed that there were always two chambers and two presses; but it was a natural arrangement, because the trapetum worked faster than the torcular; so much so that we are told also of an annexe, called *tabulatum* (Col. xii. 52), a sort of small store-room with a number of small tanks (*lacusculi*) lined with stone, in which the *sampsa* or olive pulp was stored, if it could not go directly into the press: the yield (*coactura*) of each day was placed on a sort of wooden rack in a separate *lacusculus*, so that the watery liquid (*amurca*) might flow away through a pipe in the bottom of the tank.

When the torcularium was intended for wine, the basin or *lacus* was as above described, but in the centre compartment the vat for treading the grapes [see VINUM] took the place of the trapetum: the juice trodden out flowed either into jars or, like that afterwards pressed in the torcular, by an arrangement of troughs into the *lacus*, and thence into the *labra*. The words of Isid. *Orig*. xv. 6, "forum est locus ubi uva calcatur," will best agree with the view which we take here, that the centre compartment was called *forum:* not only is the name itself hard to understand if we assign it to the side chambers or basins, as Rich and Blümner have done, but these side chambers, which we take to be the *lacus*, were already occupied by the torcular. (Blümner, *Technol.* i. 343 ff.; Rich, *s. v.*; Schneider, *ad Script. R. R.*, tab. v. and vi.) [G. E. M.]

TOREU'TICE (*τορευτική*). [Caelatura.]

TORMENTUM (*βάσανος*), torture. 1. Greek. In the articles Apotympanismos and Crux it has been argued that the Greeks of pre-Macedonian times were far more humane in their modes of inflicting death than has been generally thought. The modes of capital punishment are enumerated by Pollux (viii. 71: *ὁ δὲ παραλαμβάνων τοὺς ἀναιρουμένους καλεῖται δήμιος, δημόκοινος, ὁ πρὸς τῷ ὀρύγματι καὶ τὰ ἐργαλεῖα αὐτοῦ ξίφος, βρόχος, τύμπανον, φάρμακον, κώνειον*): of these the only wantonly cruel one, the *τύμπανον*, has been shown to have been extremely rare. Vague allusions to burning, impalement, and crucifixion, as recognised modes of execution, are still to be found in works of authority, though no instances can be alleged; the fact being that to the Greeks of the best period such punishments were known only as practised by barbarians or tyrants, and formed no part of legal procedure. In this respect they stood far above the Romans in their dealings with all but the privileged classes, and above the practice of most Christian nations until the present century. Almost the only writer who, to our knowledge, has drawn the just and clear distinction between the excesses of irresponsible persons, whether mobs or individuals, and the mind of the people as expressed in its laws, is Westermann (*ap.* Pauly, *s. v. Supplicium*), whose words have been already quoted (Vol. I. p. 567*a*). Some further illustrations of our previous argument may here be given. The earliest crucifixion recorded to have taken place in Greece is that of the leaders of an insurrection at Sicyon by a Macedonian princess, Cratesicleia, the widow of Alexander, son of Polysperchon, B.C. 314 (Diod. xix. 67). In the previous year Apollonides, an officer of Cassander, had burnt the prytaneum at Argos with 500 political opponents shut up in it (Id. *ib.* 63). No such deeds as these disfigure the annals of free Greece; they follow rapidly on the incursion of Macedonian barbarism. The treatment of servile insurrections affords another contrast. We know how the Romans struck terror on such occasions, not merely into slaves, but into free provincials. The Spartans were in mortal dread of their Helots, and privately made away with those whom they thought likely to prove dangerous [Crypteia]; Greek feeling prevented their resorting to wholesale executions by cruel methods. At Athens, also, we hear of insurrections among the mining slaves [Servus, p. 659], but there are no records of atrocious and unusual punishments.

Judicial torture, employed to extract evidence, was likewise confined at Athens and among the Greeks generally within narrower limits, both as regards the persons on whom it was inflicted and the modes of infliction, than in those European countries which had adopted it from the later Roman law. In particular, the Athenian feeling against barbarity showed itself in very early times (see under Crux, Vol. I. p. 566 *a*, *b*). By a decree in the archonship of Scamandrius, of unknown but probably of early date, it was ordained that no free Athenian could be put to the torture (Andoc. *de Myst.* § 43); and what is more to the purpose, the restriction was fully maintained in practice: Athenian citizens stood in no fear of it (Lys. *c. Agorat.* § 27). Even in the worst times of panic or exasperation, as in the case of the mutilated Hermae, the power to override the law by a special psephisma, though often demanded, was never really acted upon (see the narrative in Grote, ch. 58, and especially the note at v. 175; other instances in [Dem.] *de Synt.* p. 170, § 114, Plut. *Phoc.* 35). The best authorities are agreed that we have no example of the torture of an Athenian citizen (Thalheim, *Rechtsalterth.* p. 29, n. 2; Lipsius, *Att. Process*, p. 896, n. 372). Free aliens, whether *ξένοι* or *μέτοικοι*, stood in general upon the same footing; the masters of emancipated slaves (*ἀπελεύθεροι*) retained the right of giving them up for torture, but Demosthenes expressly says that it would be impious to do so (*οὐδ' ὅσιον παραδοῦναι*, *c. Aphob.* iii. p. 856, § 39, cf. *c. Timoth.* p. 1200, § 55), though non-compliance with an opponent's challenge might prejudice the jury against one's case. Some apparent exceptions are discussed by Boeckh (*P. E.* p. 185 = *Sthh.*^{3} i. 227 f.): the torture of a free man at Mytilene, who held out when a slave confessed (Antiph. *de caed. Her.* §§ 29, 49, cf. Mahaffy, p. 241), may have been under Lesbian and not Attic law, or the Athenians may have been less scrupulous when their subject-allies were concerned: the case in Lysias (*c. Simon.* § 33) is of a Plataean youth, who, as such, was not necessarily an Athenian citizen, and who after all was not put to the torture: the orator only argues that he might have been. Even under the Thirty it is admitted by their bitterest enemy that there was no torture of citizens, though the aliens who were the chief victims of murder and confiscation did not escape it (Lys. *c. Agorat.* §§ 54, 59, 61). But under regular governments freemen, not being citizens, were sometimes tortured at moments of panic, *e.g.* the barber who first spread the news of the Sicilian disaster (Plut. *Nicias*, 30); Antiphon, an Athenian who had lost his rights (*ἀποψηφισθεὶς*, apparently by a *διαψήφισις*, Dem. *de Cor.* p. 271, § 133), and who was accused of a plot to burn the dockyard in Philip's interest. In this case Boeckh (*l. c.*) thinks that the torture was in aggravation of the punishment; the words *στρεβλώσαντες ἀπεκτείνατε*, however, do not mean "put to death by torture," but "put to death *after* torture:" *στρεβλόω*, akin to *στρέφω*, is always used of torture employed to wring out confession, not of vindictive cruelty, for which the word is *αἰκίζεσθαι*. So of the female prisoner, who was probably not a free woman, in Antiphon (*de Venef.* § 20); the words *τῷ γὰρ δημοκοίνῳ τροχισθῆναι παρεδόθη* do not imply that she was racked to death, as *δημόκοινος* is applied to a torturer as well as an executioner. These remarks, it may be repeated, apply only to the free ages of Greece: the record of later times in Polybius and Diodorus is naturally very different, and after two centuries of degeneracy we need not be surprised at the statement of Cicero (*Part. Orat.* 34, § 118, *de institutis Atheniensium, Rhodiorum . . . apud quos liberi civesque torquentur*).

It was in taking the evidence of slaves, whose willing testimony was not accepted, that the torture was most commonly employed: for the rule which prevailed on this subject see MARTYRIA, p. 128 *b*, 129 *a*; SERVUS, p. 658 *b*. The argument often recurs in the orators, that evidence thus extorted was of more value than that of freemen: this was partly, no doubt, owing to the low standard of veracity among the Greeks, but much of it is mere rhetorical artifice; it is to persuade the jury that the other side refuse to tender their slaves for examination, not from humanity, but from the consciousness of a bad case; and we always find it employed when the demand to give them up has been refused (Antiph. *Tetral.* i. 2, § 7, *de Choreut.* § 25; Isae. *Or.* 8 [Ciron.], § 12;—Dem. *c. Aphob.* iii. p. 848, § 13; *c. Onet.* i. p. 874, § 37;—Lycurg. *c. Leocr.* §§ 29, 30). There is good reason to think, as has been seen under SERVUS, that the contemporaries of Demosthenes were more humane in this respect than those of Antiphon. Either party might offer his own slave to be examined by torture, or demand that of his adversary, and the offer or demand was equally called *πρόκλησις εἰς βάσανον*. This *πρόκλησις* was usually in writing, and specified the particular allegations to be substantiated, the "terms of the torture" (*καθ' ὅ τι ἔσται ἡ βάσανος*, Dem. *c. Steph.* i. p. 1120, § 61; cf. *c. Pantaen.* p. 978, § 40). We do not think that these words mean "what kind of torture was to be inflicted:" it appears both from the orators and the grammarians that only one mode of torture was in general use in the Attic courts, the rack (*τροχός*: *τροχίζειν*: *ἀναβιβάζειν ἐπὶ τὸν τρόχον*: cf. ECULEUS). There seem to have been exceptions: a comic passage of course proves nothing (Aristoph. *Ran.* 618 ff.), but cf. Antiph. *de Choreut.* § 23, *βασανίζειν τρόπῳ ὁποίῳ βούλοιτο*: Isocr. *Trapez.* § 15, *μαστιγοῦν τὸν ἐκδοθέντα καὶ στρεβλοῦν*. The suitor who put an opponent's slave to the torture was liable for damages for any loss of time or bodily hurt resulting from it (Dem. *c. Pantaen.* l. c.; Aristoph. *Ran.* 624); a proviso which must have gone some way to check the excesses of cruelty. The state-torturer, a slave, was called *δήμιος* or *δημόκοινος* (Poll. *l. c.*; cf. Thalheim, *Rechtsalterth.* p. 124, n. 8); the parties might themselves agree to act as *βασανισταί*, or choose certain persons for this purpose (Antiph. *de Venef.* § 10; Dem. *c. Pantaen.* p. 978, §§ 40, 42); but we find an agreement repudiated when private *βασανισταὶ* had presented themselves instead of *δημόκοινοι*: the former could not venture to carry out the torture on their own responsibility, and the plaintiff's case broke down (Isocr. *Trapez.* § 15). The torture was usually administered in private: instances occur of its infliction in open court (Aeschin. *de F. L.* § 126; [Dem.] *c. Everg. et Mnes.* p. 1144, § 17), but these are exceptional (*βασανίζειν οὐκ ἔστιν ἐναντίον ὑμῶν*, Dem. *c. Steph.* i. p. 1106, § 16). The general practice was to read at the trial the depositions of the slaves, which were called *βάσανοι* (Hyperid. *ap.* Harpocrat., Suid. *s. v.*; Dem. *c. Nicostr.* p. 1254, § 24), and to confirm them by the evidence of those who had been present at the torture. (*Att. Process*, pp. 889–897, Lipsius; Becker-Göll, *Charikles*, p. 37 ff.; Mahaffy, *Social Life in Greece*, ed. 3, pp. 240–243.)

2. ROMAN. During the time of the Republic, freemen were never put to the torture, at least by lawful authority; the cruelties inflicted on two military tribunes by Pleminius at Locri were the acts of a madman (Liv. xxix. 9). The rule as to slaves' evidence was the same at Rome as in Greece; their voluntary statements were not received except under special circumstances, as when they gave information of conspiracies against the state; they were tortured to make them confess what it was sought to prove. Slaves, however, could not be tortured to prove the guilt of their own master, except in the case of incestus, which was a crime against the gods, or unless the senate made a special exception, as was done in the Catilinarian conspiracy (Cic. *pro Mil.* 22, § 59; *pro Deiot.* 1, § 3; *Partit. Orat.* 34, § 118). Under Augustus the law was so far modified that, when the emperor suspected conspiracy against his government, he could demand the compulsory sale of slaves to the state or to himself, in order that they might be tortured; this did not pass without a protest (Dio Cass. lv. 5; Tac. *Ann.* ii. 30, iii. 67). The suspicious tyrants who immediately followed Augustus extended the law of majestas to the torture of free persons [MAJESTAS]; and we read of cases in which senators and equites were exposed to it (Suet. *Tib.* 58, *Cal.* 27 ff.). Claudius began his reign by abolishing the law of majestas, and is said never to have punished any one under it (Dio Cass. lx. 3); but his wives and freedmen abused his authority, and the practice was revived (Id. *ib.* 15). It remained the general law of imperial times that only freemen of low degree (*humiliores*) could be tortured in prosecutions for majestas: slaves might be compelled to bear witness against their masters in cases of majestas (Cod. 9, 8, 6, 7) and adultery (Dig. 48, 18, 17; Cod. 9, 9, §§ 3, 6, 32). Ammianus takes, perhaps, a malicious pleasure in recording the cruelties inflicted upon free citizens by the Christian emperors Constantius, Valentinian, and Valens (Amm. Marc. xiv. 5, xv. 3, xvi. 8, xviii. 3, xix. 12, xxi. 16, xxvi. 10, xxviii. 1, xxix. 1, 2).

As to the modes of torture, see ECULEUS, FIDICULA, and FLAGELLUM, in Vol. I. Cicero mentions some atrocious cases: "ignes candentesque laminae ceterique cruciatus admovebantur" (*in Verr.* v. 63, § 163: cf. *pro Cluent.* 63, § 177; 66, § 187); but in general we get few details. The hooks (*unci*) with which the bodies of criminals were dragged after execution (Juv. x. 66, with Mayor's note) were likewise employed to lacerate the living (Amm. Marc. xiv. 5; *sulcatis lateribus*, Id. xxvi. 10). The torturers, (*tortores, carnifices*) were probably public slaves (CARNIFEX; cf. Mommsen, *Staatsr.* i.^{2} 313). On the torture of slaves by their masters, see Marquardt, *Privatl.* 180; on the whole subject, Dig. 48, 18, *de Quaestionibus*; Walter, *Gesch. des römischen Rechts*, ed. 1, p. 875 ff.; Rein, *Criminalrecht*, p. 542. [W. S.] [W. W.]

TORMENTUM was a general name for artillery among the ancients.

I. DESCRIPTIVE.—The two main classes of tormenta are those which discharged their missiles (1) horizontally (*εὐθύτονα*), or practically so; (2) at an angle (*παλίντονα*) with the ground. But these are technical terms. The ordinary names of the engines, both in authors (Diod. xvi. 74) and in inscriptions (*C. I. A.* ii. 250; 471, 46; 733 B), were ὀξυβελεῖς and λιθοβόλοι. The former shot arrows, hence their name ὀξυβελεῖς, sc. *καταπάλται* (not *καταπέλται*: cf. *C. I. G.* 2360, 25), and were called *catapultae* by the Romans: the latter discharged stones (*πετροβόλοι, λιθοβόλοι*), and were called in Latin *ballistae*. The arrow discharged from catapults is sometimes called *catapulta* (Plaut. *Pers.* i. 1, 28; Nonius, p. 552); and the stone discharged from *ballistae* called *ballista* (Plaut. *Trin.* iii. 2, 42). The terms *catapultae* and *ballistae* were probably obtained from the Sicilians; and they are used by historians as the two chief classes of engines (Tac. *Ann.* xii. 56; Gell. vii. 3). It must, however, be remembered that *catapulta* was also used as a generic term embracing both classes (Caes. *Bell. Civ.* ii. 9, 3; App. *Bell. Mithr.* 34; Sidon. Apoll. *Carm.* 22, 123).

The structure of both the engines is in the main principles the same: both, as the name *tormentum* points out, deriving their force from torsion, not from the elasticity of a bent body like a bow. We shall first attempt to describe a *εὐθύτονον* or *catapulta* (in the narrow sense), and afterwards set forth the points of difference between it and a *παλίντονον*. The two chief ancient authorities who supply materials are Heron's **Βελοποιϊκά**, and Philon's fourth book *Περὶ βελοποιϊκῶν*. Both writers flourished about 250 B.C. according to Rüstow and Köchly; about 100 B.C. according to Graux (*Rév. de Philol.*, N. S. iii. 92).

1. *Catapulta*, also apparently called *scorpio* in Caes. *B. G.* vii. 25, 2; *Bell. Afr.* 29, 4; Vitruv. x. 10, 15; Sall. *ap.* Non. p. 553: cf. Heron, § 3. This engine consisted of three parts, which we may call the Frame (*πλινθίον, capitulum*), the Pipe (*σύριγξ*), and the Support (*βάσις*). See Fig. 1.

(*a*) The *Frame* consisted of two strong horizontal beams, *a*, *b*, into which four other vertical beams were morticed, *c*, *d* (called *παραστάται*), *e*, *f* (called *μεσοστάται, medianae*). The beams, *a*, *b*, were called *περίτρητα, paralleli, peritreti*, because into the top and bottom of those beams in the centres of the two outside compartments, *g*, were bored circular holes (*τρήματα, foramina*), into which were placed the strings (*τόνοι, funes*) which gave the force which projected the missile. These strings seem to be called *vincla* in Tac. *Hist.* iii. 23. The diameter of these holes was ⅑ of the length of the arrow, and formed the standard measurement according to which all the other parts of the engine were proportioned. Into these holes were placed nuts, *h* (*σώληνες*), sometimes wooden, sometimes of metal, which were circular at the bottom so as to fit into the holes, rectangular in the middle *m*, and again circular at the top, of the same diameter as the standard. The nuts were rectangular in the middle partly to prevent them slipping down through the holes, partly that when required they could be turned round by a wrench, and so the strings tightened; hence this rectangular part got the name of *τριβίς*, from its friction against the frame. Across the middle of the top of the nut ran an iron bar, *n* (*ἐπιζυγίς, cuneolus ferreus*), round which the strings of the engine were stretched. The strings were generally prepared from the sinews of animals, and hence these engines are called *νευρότονοι* (*C. I. A.* 733 B), though sometimes we hear of women's hair being used (App. *Pun.* 93; Hero, §§ 26 ff.; Philo, § 12).

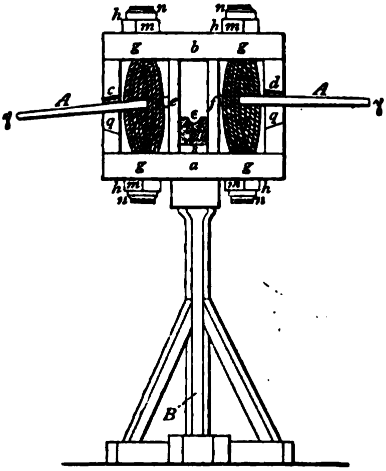


Fig. 1. Catapulta or Scorpio. (From Rüstow and Köchly.)

The instrument (Fig. 2) used for stretching the strings was called *ἐντόνιον*, and consisted of a large wooden frame with a windlass (*ὀνίσκος, sucula*) at each end, two beams *d d* as strengtheners, and a centre compartment just the size of the frame of the catapult. Into this centre compartment the frame, duly provided with its nuts, was fixed and firmly wedged, *k k k k*. The end of the string was fastened to one of the iron bars of the nut at *n* (Fig. 1), drawn through the other nut and fastened round one of the windlasses (suppose *b*). This string was then stretched till it became ⅔ of its original diameter, and fastened by a clamp (*περιστομίς*) to the bar opposite to the one to which it had been originally fixed. Then it was loosed from the windlass, drawn round the bar through the opposite nut, and again strained by the windlass *c*, fastened by another cramp, and so on passing from windlass to windlass till the whole available hollow portion of the nuts was filled with layers (*δόμοι*) of the string. The number of layers was generally about 10. When that was completed, the end of the string was fastened by a very strong clamp. Vitruvius says

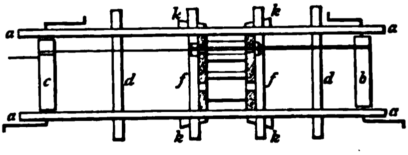

Fig. 2. Ἐντόνιον.

that each string should be stretched till it gave the same note (x. 18 (12), 2; cf. i. 1, 8. Compare Hero, § 28; Philo, § 17).

Through these masses of string from the side turned towards the enemy the thinner ends of two long pieces *A*, *A* (Fig. 1) of non-elastic wood, which formed the arms (ἀγκῶνες) of the bow, were thrust, so that when the engine was not being worked the thicker ends (πτέρνα) rested on the outer side of the μεσοστάται against an iron-plated knob (ὑπόπτερνις). On the other side of the frame, the arms rested about at their centre or two-thirds of the way from the point γ, against a curve *q* (κοίλη, *curvatura*) in the παραστάται, which latter had a bulge on the outer side, so that they should not be wanting in strength. To the ends of the arms γ γ was fixed a very strong string (τοξῖτις), called apparently *libramentum* in Tac. *Hist.* iii. 23, which was the string by which the arrow was shot (Hero, § 30).

(*b*) Now we come to the *Pipe*, which projected backwards from the centre compartment of the frame. It consisted of two parts: (1) the pipe proper (σύριγξ in the narrow sense, *canaliculus*) and (2) what we may call the projector (διώστρα). The pipe proper was a long narrow trough-like construction of wood, open at the end towards the enemy. At its other end it had a windlass for stretching the string, worked by hand-spikes (σκυτάλαι). Running in the pipe, which was dovetailed for about two-thirds of its length, and fitting into this dovetail, was another smaller trough-like construction called the projector (διώστρα), into which the arrow was placed. The trough in the case of this διώστρα was concave, and not angular. At the end of the διώστρα was a hook (χείρ, *epitoxis*), of which a horizontal and a vertical section are given herewith (Fig. 3). It moved on an axle (λ λ) working through a specially inserted frame, θ θ (στήματα). The hook, axle, and frame taken together appear to have been called χελώνιον. The hook consisted of two horizontal prongs with vertical ends; and a hindmost part (ν) very much heavier than the fore part; so much so that, in order to keep the fore part down, the hinder part had to be prized up and supported by a handle, φ (σχαστηρία, *manucla*), which revolved horizontally on a vertical axis, π (called περόνη). On the hinder part of the projector was a ring, ξ, through which one end of a strong cord (ὅπλον, καταγωγίς) was fastened, the other end being fixed to a windlass. (Hero, §§ 5 ff.; cf. Philo, §§ 52 ff.)

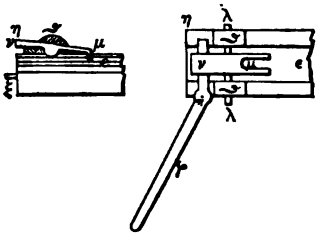

Fig. 3. Plan and section of the "Pipe."

Now, when the engine was to be used, the projector was pushed forwards till the hook, prized up by the handle (σχαστηρία), could catch the projecting string (τοξῖτις). Resting against this string, and in the trough of the projector, was placed the arrow. The projector was then along with the string drawn back by means of the καταγωγίς and the windlasses as far as was required, and the windlass made fast so that the projector could not move. A. Müller in Baumeister's *Denkmäler*, p. 547, and Droysen, *Gr. Kriegsalt.* p. 196, suppose that the pipe had a series of teeth, so that the projector could be fixed at any given point, as we shall see was the case in the γαστραφέτης (see below, § 3). This is probable enough *à priori*, but we do not know the evidence for their opinion, and there was not the same necessity for the teeth in the larger engines as there was in the hand-strung γαστραφέτης. When all was now ready for the shot, the handle was pushed violently from under the heavy side of the hook, which must have been very heavy indeed, for it appears that this side fell down by its own weight, and so released the string, which shot forward the arrow with great velocity. This appears to be what Hero (§ 6) means by "they let the hook loose by tearing away the handle" (ἀπέσχαζον τὴν χεῖρα σπαράξαντες τὴν σχαστηρίαν); otherwise we should suppose that the use of the handle was only to prevent accidental discharge while the string was being drawn back, and that, after it was loosed, as a general rule a blow of a hammer on the hinder part of the hook or something of the kind would have been necessary to release the string.

(*c*) The *Base* of the catapult, which is described by Rüstow and Köchly, and of which they give their principal illustration (*op. cit.* fig. 106), consisted of two supports. Such were required only in the case of very heavy engines, and were not much used, among other reasons because the limits of elevation within which they could be discharged were very circumscribed; they were confined to that allowed by the height of a pin which fixed the frame to the foremost support, and this would not allow a change of elevation of more than a few degrees. The ordinary catapult and that principally described by the ancients had only one support, as in the subjoined illustration, taken from Baumeister, of a catapult built according to the ancient authorities by the *Heidelberger Philologen-Versammlung*. The base consisted of a beam, *q* (ὀρθοστάτης, *columella*), supported on four feet *s*, by four stays, *r*. In the top of this beam was a long circular pivot, *u*, which passed through two horizontal sides of a wooden frame, *t*, whose vertical sides projected considerably beyond its upper horizontal side. Through the vertical sides above the horizontal sides and parallel with them ran a round iron bar on which the pipe rested; and while the whole upper part of the engine could revolve horizontally on the pivot *u*, it could be lowered and elevated vertically by revolving on this bar. At the end of the pipe was a stay, *v* (ἀναπαυστηρία), which could move up and down on the support *w* (ἀντερειδίς), which latter was attached by a ring to the main beam, *q*. The limits of change of elevation of such an engine must have been at all events 8°.

The *length* of the arrow gave the technical name to the size of the engine: so that catapults were classed as three-span (*τρισπίθαμος*), two-ell (*δίπηχος*) = four-span, five-span (*πεντεσπίθαμος*), three-ell (*τρίπηχος*) = six span; that is, 27 inch, 36, 45, 54. This gave the diameter of the *τρήματα* in the frame as about 3, 4, 5, 6 inches. Let us call this diameter x; then we can fix the rest of the measurements of the machine, *e.g.* height of the frame 5·5 x, depth 2 to 1·5 x, breadth 6·5 x, length of pipe 16 x, of *ἀγκῶνες* 7 x each, thickness of each of the *νεῦρα* ⅓ to ⅜ x; minimum breadth for working 13 x, height 18 x, depth 20 x. The weight of a *τρισπίθαμος* was about 85 lbs., and its arrow about ½ lb., and it required two or three men to work it; the weight of a *τρίπηχος* was about 5¼ cwt., its arrow over 4 lbs., and it required five men to work it. The three-span catapult of Agesistratus shot 3⅔ stadia = 2210 feet (Athen. *de Mech.* p. 8 Wescher), but that was considered something very marvellous. At 1000 feet an arrow from a three-span catapult would be driven 2 inches into a board (Rüstow and Köchly, *Kriegsschriftst.* i. p. 330, note m): so that, on the whole, we may take the ordinary effective range at about 1200 feet, the actual distance the arrow would reach being somewhat over this (*ib.* 328, note h). The price of a two-ell catapult they estimate at about 480 drachmas, about £20, reckoning the drachma as a franc.

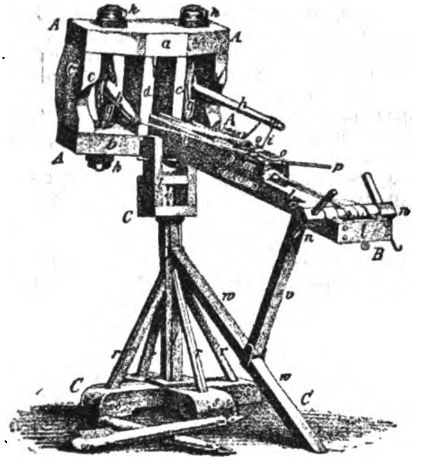

Fig. 4. Catapult. (Baumeister.)

2. *The Ballista* (*παλίντονον*): cf. generally Hero, § 32; Philo, § 6.—The principle of this engine was precisely the same as that of the catapult, the only essential differences being (1) that the hinder part of the pipe rested on the ground to which the pipe itself was inclined at an angle of 45°; (2) that the wooden arms (*ἀγκῶνες*) in the position of rest were not parallel with the ground as in the case of the *εὐθύτονα*, but inclined at an angle of 30°, hence the term *παλίντονον* ("strung at an angle"). The frame consisted of two smaller frames (*ἐνατόνια*, *ἡμιτόνια*), *A A* and *B B*, each of which held one of the sets of strings; these frames were bound together by two strong beams (*κανόνες*), *a a* and *b b:* indeed the whole engine was much larger and in all its parts stronger than the catapults. It was used to discharge beams or stones; accordingly it is the *weight* of the stone which gives the diameter of the *τρήματα* in this case. Along the pipe, *C C*, which had no continuous bottom, but had its sides (*σκέλη*), *c d*, bound together by pegs (*διαπήγματα*), extending longwise were narrow bars of wood (*πτερύγια*), which formed the support for the *δίωστρα* to run on. Chiefly, as it seems, on account of the ladder-like appearance the *διαπήγματα* presented, the pipe in this engine was called *κλιμακίς*. The string (*τοξῖτις*) extending from the ends of the *ἀγκῶνες* was twisted like a rope, and had at its centre a ring (not represented in the plate) which was caught by the *χείρ*.

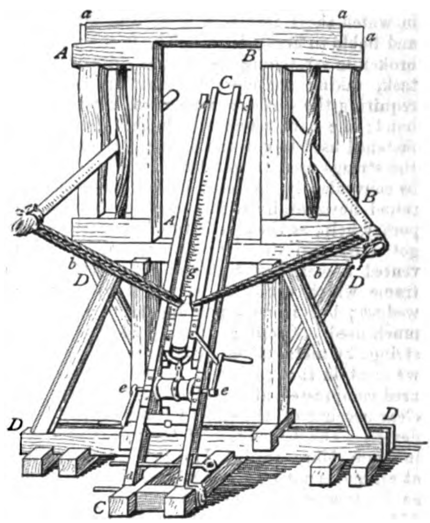

Fig. 5. Ballista. (A. Müller, in Baumeister.)

It would be tedious to give in detail all the various measurements of the parts of a ballista: suffice to say, that the diameter x of the *τρήματα* in dactyls (1 dactyl = about ¾ inch) was estimated by the formula $x = \frac{11}{10}\sqrt[3]{100\,w}$, where w is the weight of the missile in minae (1 mina = about 1¼ lb.); that the length of the arms was 6 x each, of the *τοξῖτις* 12·6 x, of the *κλίμαξ* 16 x; and that the space required for the engine was at least 20 x in depth, 13 x in breadth, and 17 x in height. The size of the engine varied according as the missile was 10, 15, 20, 30, 50, 60 minae: the latter (= 1 talent) was the heaviest missile that was ordinarily used: engines larger than this, as that of Demetrius (Diod. xx. 48) or of Archimedes (Athen. *Deipnos.* 208 c), which threw three talents, were quite exceptions and of little practical use. The average range was probably about 400 yards or a little more, but a large 60 minae ballista appears to have been barely able to throw 220 yards (Droysen, *op. cit.* p. 204). The price of a 10 minae ballista Rüstow and Köchly reckon at 4000 drachmas = £160. That the ballistae cannot have been much used in the field may be proved from their weight; so that they always appear in considerably less numbers than the catapults. At New Carthage we read that Scipio had 120 large catapults and 23 large ballistae (Liv. xxvi. 47, 5)—numbers which probably in themselves are very much exaggerated: at Jerusalem the Jews had 300 catapults and 40 ballistae (*B. J.* v. 9, 2). Examples of the working of ballistae are given in *Bell. Hisp.* 13, 8, and Joseph. *B. J.* iii. 7, 23; it appears that very considerable precision of aim could be acquired by the scorpiones (*Bell. Afr.* 29, 4; Caes. *B. G.* vii. 25, 2).

Philo (§§ 17 ff.) mentions a great many points in which these tormenta were difficult to work and liable to break down. The frame was often broken in stretching the strings,—itself no easy task, taking considerably over an hour, and requiring the *ἐντόνιον*, which was not always at hand: the bars round which the strings were fastened used to cut the strings: the tension of the strings used to get loosened and could only be conveniently tightened by screwing the nuts round horizontally with a wrench—a very temporary help, as the elasticity of the strings soon got exhausted thereby; and so on. Philo invented a means of tightening the strings by a frame which could be narrowed by means of wedges; but it does not appear to have been much used. Ctesibius (Phil. § 14) replaced the strings by metal wires (*χαλκέντονον*); and also we are told that as one of his improvements he used compressed air (*ἀερότονον*), but there is no clear account of the exact nature of this latter device. The description of the so-called *ballista* in Amm. Marc. xxiii. 4, 1, if it can be explained at all and is not pure "bombastische Confusion," as Rüstow and Köchly (*Kriegsschriftsteller*, i. 414) call it, is certainly not of such a nature as to lead to any essential alteration of the description given above from such capable writers as Hero and Philo.

3. The *γαστραφέτης* or "stomach-bow" (cf. Hero, §§ 3 ff.; Bito, p. 61 Wescher) derived its name because it had to be pressed against the stomach and the ground or a wall, when it was being strung. The accompanying cut gives an idea of it. It was not strictly a tormentum, as its force was got from the elasticity of a bow: it was in fact a cross-bow, with a *διώστρα* virtually like that of the catapult. The novel feature of it was that the sides of the *σύριγξ* had a series of teeth, into which two little prongs (*κατακλεῖδες*) on each side fitted, so as to hold the *δίωστρα* at just the point required, and to do so with as little loss of time as possible. It was probably the same as the *arcuballista* of Vegetius (ii. 15, iv. 22). Droysen (*l. c.*) says it was called *σκόρπιος*. The so-called *βαλλίστρα* mentioned by Procopius (*Bell. Goth.* i. 21) was a bow, or most probably from the description a species of *γαστραφέτης*: and similar in principle, but on a very large scale and worked by windlasses, was the *ballista fulminalis* of the treatise *De rebus bellicis*, 8, 10, attached to the *Notitia* (cf. Marquardt, *op. cit.* 524, note 2; and Rüstow and Köchly, *Kriegsschriftsteller*, p. 410). The "four-wheeled ballista" (*ib.*; cf. p. 418) is said to have shot its arrows "not by strings but by rigid bars" (*non funibus sed radiis*). This "riddle," as Rüstow and Köchly call it, still awaits solution.

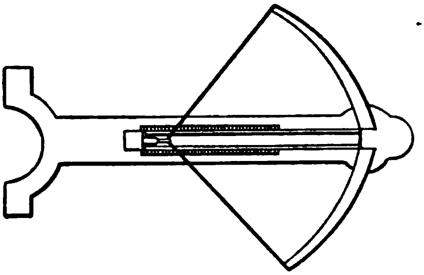

Fig. 6. Γαστραφέτης. (Rüstow and Köchly.)

4. The *onager* (cf. Amm. Marc. xxiii. 4, 4, who calls it *scorpio*).—This appears to have been a Roman construction, and we only hear of it in post-Constantinian times. It may be described as a horizontal one-armed ballista, which shot small stones. The name is said to have been derived from the fact that the wild ass in its flight dashed back stones with its hoofs on its pursuers. The strings which supplied the force were stretched horizontally, and the arm (*ἀγκών*) inserted vertically into them. When the engine was used, this arm, by a string attached to a point near the top, was pulled down by a windlass till it was horizontal, and then secured by a hook, the missiles being hung in a bag at the extremity. Then the hook was struck away with a hammer and the missiles discharged. The arm struck against a bag full of some soft substance attached to the front part of the machine, reaching about ⅔ of the way up the arm. This would have been a rather hard instrument to aim with, if it were not that it threw a number of stones.

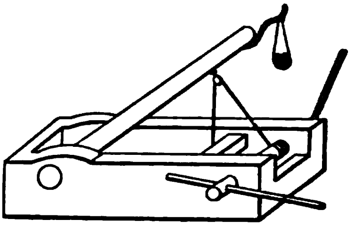

Fig. 7. Onager. (Marquardt.)

II. Historical. — Pliny (*H. N.* vii. § 56) attributes the invention of catapults to the Syrophoenicians; but there is no corroboration of this statement. The passage in 2 Chronicles xxvi. 14, 15, where it is said that Uzziah prepared "slings to cast stones," probably dates from not earlier than the fourth century. In the Hellenic world *tormenta* first appear in the great preparations made by Dionysius against Carthage in 399 B.C. (Diod. xiv. 42, 43), and in the next year they were used in the siege of Motye (*ib.* 50). It was from Sicily that they came into Greece proper (Plut. *Apophtheg.* 219 = ii. 191). The first mention of them there is in a list of articles contained in the Chalcothēcē in Athens (*C. I. A.* ii. 61, 37), of date between 356 and 348. In 340 we read that the Perinthians borrowed artillery from the Byzantines (Diod. xvi. 74), and the siege of Byzantium in the same year by Philip of Macedon is the first occasion we hear of the use of artillery in Greece in any extensive form. Athenaeus, the writer on artillery (p. 10, Wescher), notices the reign of Dionysius in Sicily and the siege of Byzantium as marking epochs in the use of siege-engines, Polyeidus of Thessaly being one of the most celebrated engineers (cf. Grote, xi. 262). On this occasion we hear only of *καταπάλται ὀξυβελεῖς* (Diod. *l. c.*); the first mention of *λιθοβόλοι* appears to be at the siege of Halicarnassus by Alexander in 334 (Arrian, i. 22, 2).

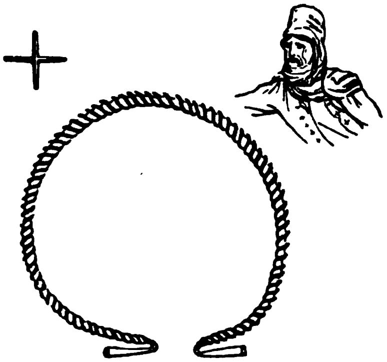
During the period of the Diadochi artillery reached its highest perfection among the ancients. The engines are repeatedly mentioned (Diod. xviii. 12, 51, 70, 71;—*C. I. A.* ii. 807 *b*, 129 ff.; 808 *d*, 53 ff.;—Polyb. iv. 56, 3; v. 88, 7; 99, 7); and artillery practice (*καταπαλταφεσία*) became a regular part of the military training of the ephebi (*C. I. G.* 2360, 25). The Romans did not make any decided improvement or invention in military engines till late in the Empire. Caesar was quite inferior to the Massiliotes in artillery (*Bell. Civ.* ii. 2, 5), and after the battle of Pharsalia had to get engines from Greece and Asia to besiege Alexandria (*Bell. Alex.* 1, 1). It was in siege-work, both attack and defence, but particularly defence, that these engines were employed (Liv. xxvi. 6, 4; xxvii. 15, 5;—Polyb. viii. 7, 6). They were altogether too heavy and cumbersome to be used very extensively in the field; if they were used in the field, it was only for the attack or defence of some strong position (Caes. *B. G.* ii. 8, 4; viii. 14, 5; *B. C.* iii. 56, 1; *B. Afr.* 31, 6), or protecting some movement such as crossing a river (cf. Arrian, i. 7, 8; iv. 4, 4). During the Roman Empire each legion (Tac. *Hist.* iii. 23; Dio Cass. lxv. 4), and perhaps each praetorian cohort (Tac. *Ann.* xii. 56), had its own engines; and in the time of Vegetius (*l. c.*) each century of the legion had a *carroballista*, a large engine drawn by mules and requiring eleven men to work it, and each cohort an *onager*.

Into all the minutiae of the construction of these engines it would be impossible here to enter. For them readers must be referred to Rüstow and Köchly, *Geschichte des griechischen Kriegswesens*, 1852, pp. 378–405; to their edition of the *Griechische Kriegsschrifsteller*, 1853, vol. i., containing Hero's and Philo's Βελοποιϊκά, pp. 187–346, and Vitruvius, x. chaps. 15–18 (10–12), with a valuable translation and notes; to Wescher's *Poliorcétique des Grecs*, 1867, for Athenaeus and Bito (pp. 1–68); to A. Müller's article on *Festungskrieg und Belagerungswesen* in Baumeister's *Denkmäler*, i. 525 ff.; and to Droysen's *Die griechischen Kriegsalterthümer*, chap. ix. pp. 187–204. [L. C. P.]

TORQUES or **TORQUIS** (*στρεπτός*), an ornament of gold, twisted spirally and bent into a circular form, which was worn round the neck by men of distinction among the Persians (Curt. iii. 3; Themist. *Orat.* 24, p. 306 c), the Gauls (Florus, i. 13, ii. 4), and other Asiatic and northern nations (Isid. *Orig.* xix. 30). *Torc* in Celtic and old Irish was probably borrowed from the Latin word (Curtius, *Gr. Etym.* 462). Virgil (*Aen.* v. 558, 559) thus describes it as part of the attire of the Trojan youths:

"It pectore summo
Flexilis obtorti per collum circulus auri."

Ornaments of this kind have been frequently found both in France and in many parts of Great Britain and Ireland (Petrie, *Trans. of R. Irish Acad.* vol. xviii.; *Antiq.* pp. 181–184), varying in size and weight, but almost always of the form exhibited in the annexed woodcut, which represents a torquis found in Brecknockshire, and now preserved in the British Museum. The same woodcut contains a section of this torquis of the size of the original. It shows, as Mr. Petrie observes concerning some found in the county of Meath, "four equidistant radiations from a common centre." The torquis in the British Museum is 4½ feet in length. Its hooks correspond well to the following description of the fall of a Celtic warrior: "Torquis ab incisa decidit *unca* gula" (Propert. iv. 10, 44). A torquis which instead of being bent into a circular form was turned into a spiral, became a bracelet, as is shown in the lowest figure of the woodcut to Armilla. A torquis contrived to answer this purpose is called *torquis brachialis* (Vopisc. *Aurel.* 7). Such bracelets and torques are often found together, having been worn by the same people.



Torques.

The head in the preceding woodcut is that of a Persian warrior in the mosaic of the battle of Issus, mentioned in p. 397. It illustrates the mode of wearing the torquis, which in this instance terminates in two serpents' heads instead of hooks. It was by taking this collar from a Gallic warrior that T. Manlius obtained the cognomen of *Torquatus* (Cic. *de Fin.* ii. 22, 73, *de Off.* iii. 31, 112; Gellius, ix. 13; Non. Marc. pp. 227, 228, ed. Merceri).

Torques, whether in the form of collars or bracelets, no doubt formed a considerable part of the wealth of those who wore them. Hence they were an important portion of the spoil, when any Celtic or Oriental army was conquered, and they were among the rewards of valour bestowed after an engagement upon those who had most distinguished themselves (Juv. xvi. 60; Plin. *H. N.* xxxiii. § 10; Sidon. Apollin. *Carm.* xxiii. 424). The monuments erected to commemorate Roman soldiers and to enumerate the honours which they had obtained, often mention the number of torques conferred upon them. (Maffei, *Mus. Veron.* p. 218.) TO'XOTAE (*τοξόται*). [Demosii.]

TRA'BEA. [Toga.]

TRADI'TIO. [Dominium.]

TRAGOE'DIA. The purpose of this article is to sketch the progress of Greek Tragedy from its origin to its maturity; and to give some account of Roman Tragedy, which was derived from the Greek.

The Dithyramb.—The Dorian worship of the gods, and especially of Apollo, had been accompanied from an early time by choral lyrics, to which an artistic development was given by Alcman of Sparta (660 B.C.) and Stesichorus of Himera (620 B.C.). It was reserved for a man of Aeolian origin to perfect one particular species of the poetry which Dorians had made their own. Arion, of Methymna in Lesbos, lived about 600 B.C. He gave a finished form to the *διθύραμβος*, or choral hymn in honour of Dionysus. The *κύκλιος χορός*—*i.e.* the chorus which stood, or danced, round the altar of Dionysus—received from him a more complete organisation, its number being fixed at fifty. The earliest *κύκλιοι χοροί* of this kind were trained and produced by Arion at Corinth in the reign of Periander. Pindar alludes to this when he speaks of Corinth as the place where "the graces of Dionysus"—the joyous song and dance of his festival—were first shown forth, *σὺν βοηλάτᾳ . . . διθυράμβῳ* (*Olymp.* xiii. 19). The epithet *βοηλάτης* which is there given to the dithyramb probably refers to the fact that an ox was the prize, rather than to a symbolical identification of Dionysus with that animal. In one of his lost poems Pindar had connected the origin of the dithyramb with Naxos, and, in another, with Thebes. This is quite consistent with Corinth having been the first home of the matured dithyramb. It is well known that the dithyramb had existed before Arion's time. The earliest occurrence of the word is in Archilochus (*circ.* 670 B.C.), fr. 79: *ὡς Διωνύσοι' ἄνακτος καλὸν ἐξάρξαι μέλος | οἶδα διθύραμβον, οἴνῳ συγκεραυνωθεὶς φρένας*—a testimony to the impassioned character of the song. Herodotus speaks of Arion as not merely the developer, but the inventor (i. 23); and Aristotle made a similar statement, if we can trust the citation in Photius (*τὸν δὲ ἀρξάμενον τῆς ᾠδῆς Ἀριστοτέλης Ἀρίωνά φησιν εἶναι, ὃς πρῶτος τὸν κύκλιον ἤγαγε χορόν*: *Biblioth. Cod.* 239). But it was natural that the man who developed and popularised the dithyramb should have come to figure in tradition as its inventor. The etymology of *διθύραμβος* is unknown. Plato conjectures that its original theme was the *birth* of Dionysus (*Legg.* p. 700 B). If this was so, at any rate the scope must soon have been enlarged, so as to include all the fortunes of the god.

Earliest "Tragic Choruses."—At Sicyon, *circ.* 600 B.C., *τραγικοὶ χοροί* were in use. This date coincides with the period at which Arion perfected the dithyramb; and we find that these *χοροί* had originally been held in honour of Dionysus. The Sicyonians had diverted them from that purpose, and had applied them to the cult of the Argive hero Adrastus, whose adventures were celebrated by the choruses (Her. v. 67, *τὰ πάθεα αὐτοῦ τραγικοῖσι χοροῖσι ἐγέραιρον*). Cleisthenes, the tyrant of Sicyon, reclaimed these *χοροί* for Dionysus. Two points in this account deserve attention.

(1.) The epithet *τραγικοί* is already given to these choruses, although there was as yet no actor distinct from the chorus. The *σάτυροι* (=*τίτυροι*, "he-goats") were woodland beings, half man, half beast, who attended on Dionysus, and who were conventionally represented with pointed ears, budding horns, a snub nose, and a tail. Some allusion to the satyrs was evidently involved in *τραγικός*, as an epithet of the chorus, and in *τραγῳδία*, as a name for their song. But it is hardly doubtful that these terms also refer directly to the association of an actual goat with the Dionysiac worship. It was the goat that suggested the conventional type of the *σάτυροι*, not the latter that prompted the use of the terms *τραγικὸς* and *τραγῳδία*. The choice of the votive animal is sufficiently explained by the lower side of the nature ascribed to the god, the side which would be most prominent in a rustic carnival. A goat was perhaps sacrificed to Dionysus before the choral song began. But this does not necessarily exclude another hypothesis—viz. that a goat was sometimes the prize. When, in early times, the country people spoke of a "goat-chorus," or a "goat-song," no doubt the literal and the allusive meanings were blended; men thought partly of the goat which was the sacrifice or the prize, partly of the goat-like satyrs who formed the Chorus. The word *τραγῳδία* is often applied to the purely choral performance in honour of Dionysus, when as yet there was no "tragedy" in the later sense. Thus Plato remarks that *τραγῳδία* had existed in Attica before the days of "Thespis and Phrynichus" (*Minos*, p. 321 A). Similarly Athenaeus (630 c) and Diogenes Laertius (iii. 56) speak of the primitive *τραγῳδία* which was performed wholly by a chorus.

(2.) Further, it appears that as early as 600 B.C. *τραγικοὶ χοροί* were not necessarily restricted to the worship of Dionysus, but could celebrate the fortunes of a hero such as Adrastus. This illustrates the peculiar position of Dionysus among the Hellenic deities. According to legend, his entrance into Greece had been opposed; he had endured various insults and trials before his worship was finally established. Dionysus alone was at once a god—superhuman in might—and a hero who had striven like Heracles. The "tragic chorus," which sang the dithyramb, commemorated his *πάθη*—the varying fortunes which had preceded his final triumph. Such a chorus might change its theme to a hero who had experienced like vicissitudes, but not to any other god. Apollo had long been honoured with choruses by the Dorians. But there was no germ of drama in the choral cult of Apollo, because there was no reminiscence of suffering.

Transition from Lyric to Dramatic "Tragedy."—As the central idea of the Dionysiac worship was a vivid sympathy with the fortunes of the god, a certain dramatic element must have entered into it from the first. The energy of the dithyrambic style would itself prompt the dancers to use animated gesture. It would also be natural that their leader should enact the part of Dionysus himself, or of a messenger from him—reciting some adventure, to which the satyr-chorus would then make a lyric response. Greek tradition clearly associated some such rudiments of drama with the primitive τραγῳδία. Thus Diogenes Laertius says: "In early tragedy the Chorus alone *sustained the action* (διεδραμάτιζεν); afterwards Thespis introduced one actor, in order to give rest to the Chorus" (iii. 56). Aristotle, too, states that tragedy was at first "extemporary" (αὐτοσχεδιαστική). and took its rise "from those who led off the dithyramb" (ἀπὸ τῶν ἐξαρχόντων τὸν διθύραμβον: *Poet.* 4). He refers to an effusion, more or less unpremeditated, by the leader, as distinguished from the hymn chanted by the Chorus.

Thespis, a native of Icaria in Attica, flourished about 536 B.C., in the later years of Peisistratus. He was a trainer and leader of dithyrambic choruses, who made an improvement in the mode of performance. Hitherto the leader, who recited an adventure of Dionysus, had addressed the Chorus, and had been answered by them. Thespis now set apart a person specially for dialogue with the leader. As this person had to reply to the leader, he was called "the answerer," ὑποκριτής—which became the regular term for an "actor." This was another step towards drama; but how far it went we do not know, because we do not know what the δράματα of Thespis (as Suidas calls them) were like. The alleged fragments of Thespis in Plutarch, Clement of Alexandria, Pollux, and other writers, are spurious, as Bentley has shown (*Phalaris*, pp. 289 ff., ed. Dyce). Everything would depend on the manner in which the part of the new ὑποκριτής was adjusted to that of the coryphaeus. If the latter was made virtually a second actor, then Thespis might fairly be regarded as the founder of drama proper. If, on the other hand, the dialogue remained comparatively unimportant, and the whole performance continued to be essentially lyric, then Thespis had merely modified the tradition—though in a fruitful way. The latter view seems the more probable. The ancients themselves were divided: some regarded him as the πρῶτος τραγικός: others, as merely improving on Sicyonian tradition (Suidas). Bentley maintained that Thespis composed only pieces of a humorous character; Welcker, that he produced serious tragedy also. Neither view admits of proof. Horace (*Ars Poet.* 276) has given currency to the notion that Thespis went about the country with a strolling company, and acted his plays on a waggon. The fiction may have been suggested by the "jests from a waggon" which were associated with the processions to Eleusis (ἐξ ἁμάξης ὑβρίζειν). When all the evidence has been sifted, Thespis remains to us a famous name, and little more. That he made an epoch in the gradual development is beyond question. But, in the light of such imperfect knowledge as we possess, Aeschylus, not Thespis, must be regarded as the true founder of Tragedy.

The Period between Thespis and Aeschylus.—(1) Choerilus, an Athenian, is said to have gained his first dramatic victory in 523 B.C., and to have been active for some sixty years afterwards. Pausanias (i. 14, § 2) refers to him as δρᾶμα ποιήσαντι Ἀλόπην. Alope was a hapless maiden whom her father Cercyon put to death; and Pausanias quotes the play for some genealogical details about Triptolemus. Here, then, we have a tragedy, connected, by subject, with Eleusis, but not directly with Dionysus. Choerilus is said by Suidas to have composed 160 plays. Only a few words are extant. The view that he excelled in satyr-drama rests on a verse of an unknown poet, ἡνίκα μὲν βασιλεὺς ἦν Χοιρίλος ἐν σατύροις, quoted by Marius Plotius Sacerdos (*circ.* 300 A.D.), in the third book of his *Ars Grammatica*, where he treats of metres. The phrase ἐν σατύροις, however, may have referred to Dionysiac choruses generally, and not to satyr-plays as distinguished from tragedies. (2) Pratinas, a native of Phlius, is said by Suidas to have contended against Choerilus and Aeschylus "in the 70th Olympiad," *i.e.* at some time between 500 and 497 B.C. If the first year of the Olympiad is meant, the date would be the spring of 499 B.C. The tradition that he was the first to write satyr-plays is founded on the words of Suidas, πρῶτος ἔγραψε σατύρους: but it can be traced further back, if "Pratinae" be read for "Cratini" in a note on the *Ars Poetica* (230) by Helenius Acron, the commentator on Terence and Horace (*circ.* 190 A.D.). The satyr-plays of Pratinas were presumably intended to preserve the old type of satyr-chorus, now threatened with extinction by the new improvements. Such an effort would have been natural for one whose native place was not far from Sicyon. Among the scanty fragments of Pratinas, which are almost wholly lyric, the most considerable is a passage of 20 lines from a ὑπόρχημα (Bergk, *Poet. Lyr.* 953 ff.: cf. Nauck, *Frag. Trag.* p. 562). Suidas says that he wrote 60 plays, of which 32 were satyric dramas; unless, with Boeckh, 32 should be altered to 12 (λβ′ to ιβ′). (3) Phrynichus, an Athenian, is said to have gained the tragic prize first in 511 B.C., and for the last time in 476 B.C. His tragedy on the Capture of Miletus must have been produced soon after the date of the event (494 B.C.): it is uncertain whether the title was Μιλήτου ἅλωσις (Her. vi. 21), or Πέρσαι. Eight other of his plays are known by titles, but only a few verses remain (Nauck, *Frag. Trag.* 557 ff.). According to Bentley's conjecture, the *Phoenissae* (on the same subject as the *Persae* of Aeschylus) was the play produced in 476 B.C., when Themistocles was his choregus. In the *Thesmophoriazusae* of Aristophanes the tragic poet Agathon says of Phrynichus that the comeliness of his person was matched by the beauty of his dramas (v. 166). His lyrics, in particular, were admired for their simple grace and sweetness. It seemed as if the birds had taught him to warble (Ar. *Av.* 748 ff.). These lyrics had probably more of an Ionian than of a Dorian or an Aeolian stamp. He was the most popular tragic poet of his time: the audiences to whom Aeschylus made his earlier appeals are described as having been "brought up in the school of Phrynichus" (παρὰ Φρυνίχῳ τραφέντας, Ar. *Ran.* 910).

Aeschylus, a native of Eleusis in Attica, was born in 525 B.C. About 499 B.C. he was already exhibiting tragedy, but it was in 484 that he first gained the prize. The great change which he introduced consisted in adding a second actor, and in making the dialogue more important than the Chorus (τὸν λόγον πρωταγωνιστὴν παρεσκεύασε, Arist. *Poet.* 4). It may be conjectured that this change had been made some years before 484 B.C.; at any rate it was earlier than the date of the *Persae*, 472 B.C. So long as there was only a single actor, that actor might, indeed, assume different parts in succession, but there could be no drama in the proper sense of the word. If, for instance, Phrynichus used only one actor in the "Capture of Miletus," that person might first appear as a messenger, relating the calamity; the Chorus would express their grief; the actor might then reappear as one of the victors or of the vanquished, and give occasion for another choral strain. But the presentment of an action as passing before the eyes of the spectators became possible only when a second actor was added. Aeschylus also gave a new grandeur to the scenic accessories of tragedy. He improved the masks, and introduced new costumes, of which we shall speak presently. The introduction of scene-painting has also been ascribed to him; but it is probable that his use of this aid did not go beyond an elementary form. Aeschylus is essentially the creator of the tragic drama as it existed at Athens during the 5th century B.C. In comparison with Phrynichus and his other predecessors, Aeschylus stood out as "the first of the Greeks" who had "built up" a lofty diction for Tragedy, and who had made it a splendid spectacle. (Ar. *Ran.* 1004 f.)

Sophocles was born in or about 495 B.C., and first gained the tragic prize in 468 B.C., against Aeschylus. He added a third actor. He also raised the number of the tragic chorus from 12 to 15. Hitherto one of the ordinary choreutae had acted as leader. One of the three additional men was now appointed coryphaeus; the other two were destined to serve as leaders of *ἡμιχόρια* when the Chorus was required to act in two divisions (as it does in a passage of the *Ajax*, 866 ff.). Aristotle mentions scene-painting (*σκηνογραφία*) as an improvement distinctive of Sophocles. It cannot be doubted that, though Aeschylus may have used some kind of scene-painting at an earlier date, Sophocles was the dramatist who first made a more thorough and effective use of it, so that it continued to be associated with his name. (Cf. THEATRUM.) The external form of Attic tragedy was now complete.

Occasions on which Tragedy was acted at Athens.—We may next consider the conditions under which tragedy was presented to the Athenian public. Before the time of Peisistratus, the rural Dionysia (*τὰ κατ' ἀγρούς*) afforded the only occasion for the Bacchic choruses in Attica. It is conjectured that Peisistratus was the founder of the Dionysiac festival called the Lenaea. This was held every January in the *Λήναιον* (so named from *ληνός*, a wine-press), the precinct sacred to Dionysus, on the S.E. slope of the Acropolis. The Lenaea witnessed the exhibitions of Thespis, Choerilus and Pratinas, as well as the earlier plays of Phrynichus and of Aeschylus. A regular contest (*ἀγὼν*) for the tragic prize at the Lenaea seems to have existed as early as the days of Thespis and Choerilus. The institution of the Great, or City, Dionysia (*τὰ κατ' ἄστυ*) may probably be referred to the time immediately after the Persian wars, *circ.* 478 B.C. The Great Dionysia then became the chief occasion for Tragedy; and in the middle part of the 5th century the Lenaea seems to have been exclusively the festival of Comedy. About 416 B.C., however, we again hear of Tragedy at the Lenaea. Thenceforth, down at least to the days of Demosthenes, tragic drama accompanied both festivals; though it was more especially associated with the Great Dionysia. At the Anthesteria, the February festival, no drama was exhibited.

Trilogy and Tetralogy.—The form in which Aeschylus produced his tragedies,—during, at least, the later part of his career,—was that of the "trilogy," or group of three. To these was appended a satyr-drama (*σάτυροι*, or *σατυρικὸν δρᾶμα*), so called because the Chorus consisted of satyrs attendant on Dionysus. We have seen that Pratinas was the reputed inventor of the satyr-play, and that its object was to preserve the memory of the "tragic" chorus in its earliest phase. A mingling of seriousness and mirth was characteristic of the Dionysiac worship. Tragedy represented one side of this mood, and Comedy the other. The satyr-drama —true to its origin from the old *τραγικὸς χορός* —was nearer to Tragedy than to Comedy, but contained elements of the latter also; hence it was aptly described as *παίζουσα τραγῳδία* (Demetrius, *de Elocut.* § 169). The trilogy, or group of three tragedies, and the satyr-drama, together made up the "tetralogy." It is not known that Aeschylus himself, or any of the Attic dramatists, used the word *τριλογία* or *τετραλογία*. These terms cannot be traced back beyond the Alexandrian age. But, whether the Attic dramatists did or did not use these words, it is certain that they composed in these forms. The origin of the trilogy has been conjecturally derived from a custom, in the days when there was only one actor, that he should give three successive recitations between the choral songs: but this is doubtful. Nor is it certain, though it is very probable, that Aeschylus was the inventor of the trilogy. His *Oresteia* is the only extant example. In that trilogy, the three plays form successive chapters of one story. A trilogy which has this kind of unity has been called a "fable-trilogy." On the other hand the term "theme-trilogy" has been used to describe three tragedies linked, not by story, but by some abstract idea, such as that of Hellenic victory over the barbarian. Thus, according to Welcker, the *Persae* belonged to a theme-trilogy in which the first play (*Phineus*) related to the Argonauts, and the third (*Glaucus*) to the victory of the Sicilian Greeks at Himera (480 B.C.). The "fable-trilogy" was the type characteristic of Aeschylus. It has been attempted to show, from the recorded titles of his plays, that his trilogies always had the unity either of "fable" or of "theme." But it is more probable that, though he preferred fable-trilogies, he sometimes also produced trilogies in which the plays were wholly unconnected. With regard to the practice of the poets after Aeschylus, these points may be observed. (1) In addition to the Aeschylean examples, ten tetralogies can be traced, ranging in date from 467 to 405 B.C. Five of these belong to Euripides; the other five, to minor tragic poets. (2) Suidas says that Sophocles "began the practice of play contending against play, and not tetralogy against tetralogy." But it is known that Sophocles competed with Euripides on at least two occasions when the latter produced tetralogies, viz. in 438 and in 431 B.C. It cannot be doubted that in each of these cases Sophocles, too, produced four plays. To have competed with a single play against a tetralogy would have argued sterility or arrogance. Sophocles continued to use the tetralogical form, but the tragedies in his trilogy were usually unconnected, as those of Aeschylus had usually been linked. The statement of Suidas is probably founded on a statement of some older writer who was noticing a result of the Sophoclean practice: viz., that the judges of the tragic prize, having to decide between trilogies of unconnected plays, found it easier to pronounce which one play was the best of all, than to determine which trilogy was best as a whole. Thus, though tetralogies were still produced, the contest for the prize would often be one of "play against play." (3) There is no proof that Sophocles, or any poet of his time, ever competed at the Dionysia with one tragedy only. The year 340 B.C. is the earliest in which it is proved that the tragic poets exhibited less than three plays each; and in that year they produced two each. This is proved by a contemporary inscription. (4) The conclusion is that tetralogy continued to be the rule in Tragedy down at least to 400 B.C., and perhaps somewhat longer. It was only by a tetralogy that the old Dionysiac chorus of fifty persons was fully represented. The Aeschylean chorus of 12, and the Sophoclean of 15, roughly symbolised a quarter of that number. Anything less than a tetralogy would have seemed an incomplete tribute to the god. No argument can be drawn from the case of Comedy. Comedies were always produced singly.

The Actors.—In the time of Thespis, poet and actor were identical. In the earlier years of Aeschylus and Sophocles it was still not unusual for a poet to bear a part in the performance of his own tragedies. Thus Sophocles is recorded to have played the title-rôle in his own *Thamyris*, and Nausicaa in his *Plyntriae*. But, when the tragic drama had once been matured, the art of the tragic actor became a distinct profession. According to the degree of the actor's skill—which was tested by special trials—he was classed as a player of first, second, or third parts. We must remember that, until Aeschylus introduced the second actor, the principal performer was not the single actor, but the coryphaeus, since the choral element was more important than the dialogue. It was Aeschylus who, in Aristotle's phrase, first "made the dialogue protagonist." The protagonist played the most important character of the piece, which was often, but not necessarily, the character from which the piece was named. He might take more than one part, if the leading person disappeared long before the end of the play: thus in the *Ajax* the protagonist would play Ajax and Teucer; in the *Antigone*, the heroine, Teiresias, and Eurydice. The deuteragonist usually played the person, or persons, most directly concerned with the principal character;—as Ismene and Haemon in the *Antigone*. The tritagonist took the smaller parts,—as, for example, the part of a king, when, like Creon in the *Antigone*, he was not the chief person of the play (Dem. *de Fals. Leg.* § 247). The Athenian actor went through an elaborate preparation. In the first place, great care was given to the artistic training of the voice (πλάσμα φωνῆς), with a view to flexibility and strength. This was demanded alike by the size of the theatres and by the fineness of the Athenian ear. Deportment was also carefully studied. In Attic Tragedy the movements were usually slow and stately: much, also, depended on statuesque effects. As the masks excluded play of feature, it was all the more necessary that the actor should have command of expressive gesture, especially with the hands. Now and then, though not often, he was required to dance (cf. Eur. *Phoen.* 316); hence his professional training was incomplete without ὀρχηστική.

Costume.—How the tragic actor was dressed before the time of Aeschylus, we do not know; it is only a conjecture that the dress of the Dionysiac priests may have been the model. Aeschylus introduced a type of costume which remained in use throughout the classical period. Its chief elements were the following. (1) A tunic, with stripes of bright colours, sometimes richly embroidered with patterns of flowers or animals. It was girt up high under the breast, and fell in long folds to the feet. The sleeves reached to the hands. Such a tunic was called ποικίλον (Pollux). Women sometimes wore a purple robe, with a long train (συρτὸς πορφυροῦς). (2) Over the tunic, or robe, an upper garment was worn;—sometimes the ἱμάτιον, an oblong piece of cloth; sometimes a mantle, χλαμύς, which was cut in a circular form, and fastened by a clasp on the right shoulder. The chlamys was often very splendid. Some other varieties of garment, with special names, are mentioned; but their nature is often uncertain. Padding was worn under the costume, which was designed to exaggerate all the actor's proportions. (3) A boot, which the Greeks called ἐμβάτης, and the Romans *cothurnus*. The sole was wooden, and the shape such as to fit either foot. The object of this boot—like that of the high girdle—was to increase the actor's apparent stature; and the sole seems to have varied in thickness from some two inches to as many as six, or even more. Indeed, for an inexperienced actor, the difficulty of walking on the ἐμβάτης seems to have resembled that of walking on stilts. We hear of clumsy actors falling; and the support afforded by a long walking-stick was not disdained, where the part admitted of it. (4) Masks. Thespis, according to the tradition, first used pigments to smear the actor's face, and afterwards adopted linen masks of a simple kind. Masks suited to female characters are said to have been used first by Phrynichus. The improvement made by Aeschylus seems to have been the application of painting to the plain linen masks of the earlier period. In the Alexandrian age, if not earlier, the workmanship of tragic masks had become highly elaborate. Pollux gives a list, derived from that age, which includes six types of old men, eight types of young men, and eleven types of women. These various types were distinguished by a regular system of conventional traits, such as the colour of the hair, and the mode of wearing it; the tint of the face; the expression given by the eyebrows; the shape of the forehead, and even the line of the nose: thus a hooked nose (ἐπίγρυπος) was considered appropriate to the ἀναιδής. Each mask was known by a technical name: for example, the suffering heroine was the κατάκομος ὠχρά. [PERSONA.] A mask which did not belong to any regular type, but was made for some exceptional part (such as the horned Actaeon), was called ἔνσκευον πρόσωπον. In the tragic mask a peculiar device was used to raise the height of the forehead. This was a cone-shaped frame (ὄγκος), built up above the face, from which the hair of the mask fell over the brows. The height of the ὄγκος varied with the dignity of aspect desired. (5) Special attributes. A king carried a sceptre; Hermes, a herald's staff (κηρύκειον); the bacchant, a thyrsus, etc. Such an emblem was usually borne in the left hand, in order that the right might be free for gesture: extant works of art show this (cf. Baumeister, *Denkmäler*, p. 1852; Ovid, *Amor.* iii. 1, 13). Warriors had swords, spears, etc. But, except by indications of this nature, the dress was not adapted to the particular part which the actor played. This will not appear strange if it is recollected that Athenian drama was an act of Dionysiac worship. The tragic costume was festal first, and dramatic only in a secondary sense, because, at the Dionysia, art was merely the handmaid of religion. It is said that Aeschylus took some hints from the splendid dresses of the hierophant and the δᾳδοῦχος at the Eleusinian mysteries. (Athen. p. 21e, reading ζηλώσας ἦν with Fritzsche; A. Müller, *Bühnenalth.* p. 229.) This would have been quite in the Aeschylean spirit; but the tradition can no longer be verified. In satyric drama the costume of gods and heroes was the same as in Tragedy, but the chiton was shorter, as livelier movement was required. Silenus, an important figure in satyric drama, was dressed either in "tights," set with tufts of goat's hair, or in a tunic and hose of goat's skin.

In the 5th century B.C. we find great actors specially associated by fame with the poets in whose plays they excelled: as Cleander and Mynniscus with Aeschylus; Cleidemides and Tlepolemus with Sophocles; Cephisophon with Euripides. At a somewhat later period, it became usual for the three competitors in tragedy to receive their protagonists from the archon by lot. But that arrangement seems to have ceased before 341 B.C., when a protagonist played in one piece of a trilogy for each of the three poets. Thus, by successive steps, the connexion between poet and actor had become less and less close.

The Chorus.—In the development of Attic Tragedy the treatment of the Chorus passed through several phases. Even after Aeschylus had made the dialogue more important than the lyric element, he continued to compose choral odes of a length which seemed excessive—or at least archaic—to the next generation. In the *Frogs*, Euripides complains that his rival's Chorus used to inflict on the audience "four strings of lyric verse, one after another, while the actors were silent" (914, ὁ δὲ χορὸς ἤρειδεν ὁρμαθοὺς ἂν | μελῶν ἐφεξῆς τέτταρας ξυνεχῶς ἄν· οἱ δ' ἐσίγων). In the *Supplices* of Aeschylus the Chorus follows up the parodos with eight consecutive pairs of strophes and antistrophes; in the first stasimon of the *Agamemnon* there are six pairs. Such a practice was tolerated, Euripides remarks, only because the audiences of Aeschylus had been accustomed to it by Phrynichus. The Aeschylean treatment of the Chorus bears, in fact, some impress of the still recent period when the Chorus, and not the dialogue, had been "protagonist:" the Chorus has lost its old primacy, but it still claims a large share of attention. Here, as in other respects, Sophocles represents a golden mean. Nothing could be more perfect than his management of the Chorus, given the two conditions under which he worked—viz., a matured drama, in which the dialogue necessarily holds the first place; and secondly, the requirement that the Chorus should continue to be an organic part of such drama. His choral odes have always a direct bearing on the action, by commenting on what has passed, by preparing the mind for what is to come, and, generally, by attuning the thoughts of the spectator to successive moods, in harmony with the progress of the action. Then they are always of moderate length, and often very short. Euripides marks a third phase. The Chorus is now little more than an external adjunct to the drama; the choral songs have often nothing to do with the action. This could hardly be avoided. The Chorus presented difficulties to a poet who, like Euripides, was beginning a transition. When the gods and heroes were handled in the new spirit, the old meaning of the Chorus was lost. It is not a reproach to Euripides, it is rather a proof of insight, that he modified the use of the Chorus in accordance with his dramatic aim, and in perhaps the best manner which that aim permitted.

The Chorus was trained and equipped by the choregus whom the Archon had assigned to the poet [CHORUS; THEATRUM]. The tragic chorus of fifteen entered the orchestra three abreast: this was the arrangement called κατὰ στοίχους ("in files"). The αὐλητὴς walked in front. The leader of the Chorus (κορυφαῖος) walked third in the file nearest the spectators. The two leaders of hemichoria were next to him—one in front of him, as second man of the file, and the other behind him, as fourth. On reaching the orchestra, the Chorus made an evolution to the right, so as to change from three files, five deep, into three ranks, facing the actors, with five men in each rank. This was the disposition κατὰ ζυγά. The file of five men who, on entering, had been nearest the spectators, now formed the front rank: the coryphaeus was in the middle of it, having on his right and left the half-chorus-leaders, who were thence called παραστάται. In dialogue between the actors and the Chorus, the coryphaeus spoke for the Chorus. It is also possible, though not certain, that he alone recited any anapaests which belonged to the choral part. In the delivery of choral odes the strophe was accompanied by a dance-movement towards the right, and the antistrophe by a corresponding movement towards the left; while, during the singing of the epode, the Chorus remained stationary. It would appear that, at least in some cases, the functions of singing and dancing were divided; one part of the Chorus executed the dance, while another sang. The dance proper to Tragedy (ἡ τραγικὴ ὄρχησις) was technically called ἐμμέλεια, a name denoting stately movement in time to music:

as the dance of Comedy was the κόρδαξ, and that of satyric drama the σίκιννις. The ὑπόρχημα—sometimes introduced in Tragedy, either incidentally or in the place of a regular choral stasimon—was a more lively dance, a kind of ballet, in which the best dancers appeared, adapting their movements to the sense of the words sung by the other choreutae. Sophocles often employs it to express sudden emotions of delight or hope,—especially for the purpose of contrast, when a tragic catastrophe is at hand. In a κομμός, or lyric dialogue between actor and Chorus, parts were sometimes assigned to single choreutae. The verses with which the Chorus close a tragedy were not attended by dancing, but were recited to a musical accompaniment. As a rule the Chorus consists of persons belonging to the scene of the action. In such cases the Chorus entered the orchestra, and left it at the close of the play, by the entrance on the spectator's right hand. But the entrance on his left was used if the Chorus represented strangers to the place, as in Aesch. *Suppl.*; Soph. *Phil.*; Eur. *Suppl.*, *Ion*, *Iph. in Aul.* With regard to the first song of the Chorus on entering the orchestra (πάροδος), the extant plays illustrate three different cases. (1.) The play can begin with this πάροδος: as Aesch. *Suppl.* and *Pers.* (2.) The Chorus may enter to the anaepaestic chant after the πρόλογος: as in Soph. *Ant.* and *Aj.* (3.) The Chorus may enter silently, after the πρόλογος, and then begin the πάροδος: as in Aesch. *P. V.*, Soph. *El.*, and often. In some exceptional instances the drama required that the Chorus should enter, not in regular procession, but singly or in small groups (σποράδην); as in Aesch. *Theb.* and Soph. *O. C.* The costume of the Chorus was, like that of the actors, conventional—a chiton, made shorter than the actor's, for convenience in dancing—and a himation. If the Chorus represented mourners, they could be attired in dark-coloured garments (cf. Aesch. *Cho.* 19). Where the Chorus represented sailors (as in Soph. *Aj.* and *Phil.*) hats (πῖλοι) may have been worn; in the *Bacchae* of Euripides, the Chorus seem to have carried the τύμπανα of Bacchants (v. 58). But the general type of costume remained the same, whatever was the special character of the Chorus. Instead of the ἐμβάτης of the tragic actor, they wore the half-boots called κρηπῖδες, which were sometimes white. In satyric drama the Chorus wore a close-fitting dress (σωμάτιον) representing the naked form, with a short apron (or girdle) of goat's skin.

The Innovations of Euripides.—The unsparing satire of Aristophanes, amusing and often instructive as it is, must not blind us to the nobler side of the effort made by Euripides to maintain the place of Tragedy as a living force in the spiritual life of Athens. A change was coming over the old mental attitude of Athenians towards the popular religion and the consecrated mythology. A large and increasing proportion of the spectators in the theatre was now destitute of the training, musical and poetical, which earlier poets could take for granted. The spirit of his age, and the bent of his own genius, led Euripides to renounce much of the ideal grandeur with which Tragedy had been invested by Aeschylus and Sophocles. He made a step from typical towards individual portraiture, relying on the delineation of human passion and human suffering in traits with which the ordinary spectator could sympathise. He was not afraid of being homely, so long as he touched the springs of natural feeling.

At first sight it might seem that, in a dramatist, such a conception deserves nothing but praise. The praise awarded to it must, however, be tempered by regard for the conditions under which the experiment was made. Euripides was not the unfettered creator of a new drama. He inherited and maintained the old framework of Attic Tragedy. He had still only three actors. He had still a Chorus in the orchestra. His materials were still drawn exclusively from the heroic myths. Such Tragedy could be great only so long as it was ideal. Every step by which its persons were brought nearer to everyday life was a step which increased the danger of burlesque. This fact is the element of justice in the attacks made on Euripides by Aristophanes. Euripides gave a signal proof of original genius, not only in the boldness of his conception, but also in the degree of success with which he executed it. Nevertheless his effort was foredoomed to the measure of failure which attends on artists who, in seeking an impossible conciliation, achieve only a clever compromise. Euripides stands between ideal and romantic drama; his Tragedy has lost the noblest beauty of idealism, without attaining to the full charm of romance. But, just for that reason, it was through Euripides, rather than through Aeschylus or Sophocles, that the tradition of Tragedy was derived in the later periods of ancient literature.

We said above that the Aristophanic jests on Euripides, however unfair, are often instructive. This is particularly true of the satire in the *Frogs*. It shows us the points in which Euripides seemed an innovator to those who were familiar with the older school of Tragedy. One such point was his use of the prologue to introduce the persons of the drama and explain its subject:—a clumsy and sometimes ludicrous expedient, which is best excused by the plea that the spectators, no longer familiar with the old mythology, required something in the nature of a modern play-bill. Another novelty ascribed to Euripides is his practice of dressing his suffering heroes in rags,—a detraction from their dignity which probably struck Athenians all the more, because it was also a departure from the conventional type of tragic costume described above. With regard to the frequent use of the *deus ex machina* which has sometimes been made a reproach to Euripides, it is only fair to distinguish between two classes of examples. In some instances his *deus ex machina* is really no better than a mechanical expedient: this might be said of the *Andromache* and of the *Orestes*. But in some other cases the intervention is dramatically warranted by the plot, as in the *Hippolytus* and in the *Bacchae*. In respect to lyrics, Aristophanes represents Euripides as having admitted the more florid style which was becoming fashionable, and having thus destroyed the grave dignity of the old choral song. The extant plays of Euripides indicate that there was some ground for this charge: jingling repetitions of single words are especially frequent; no fewer than sixteen instances occur in 150 lines of the *Orestes*. But the most important innovation made by Euripides in the lyric province was the introduction of florid lyric solos (*μονῳδίαι*), to be sung by an actor on the stage. Perhaps the cleverest stroke in the *Frogs* is the parody of such a *μονῳδία* (1331 ff.), in the course of which the hapless heroine describes herself as *λίνου μεστὸν ἄτρακτον* | *εἱειειειειειλίσσουσα χεροῖν*.

After 400 B.C. Greek Tragedy declined. Numerous tragic poets appeared, indeed, who won more or less applause from their contemporaries; but no one of them rivalled the great masters. In the fourth century B.C. an ordinance was made that some work of Aeschylus, Sophocles, or Euripides should always be produced at the Dionysia along with the new tragedies. Lycurgus (*circ.* 330 B.C.) caused a standard text of those three poets to be deposited in the public archives, with a view to guarding against further corruption by actors; and this text afterwards passed into the possession of Ptolemy Euergetes (247–222 B.C.). Down to about 300 B.C., Athens continued to be the chief seat of Tragedy. Alexandria afterwards became so; and under the Ptolemies tragic composition had many votaries. Among these were the seven poets who, in the reign of Philadelphus (283–247 B.C.), were known as "the tragic Pleiad." It was in 217 A.D. that the edict of Caracalla abolished theatrical performances at Alexandria.

Aristotle defines Tragedy as the imitation of an action which is serious, complete in itself, and of a sufficient magnitude or compass. The instrument of imitation is language, made delightful to the hearers, either (*a*) by metre alone, or (*b*) by metre combined with music. Further, this language is not used in the way of narrative merely, but is conjoined with action on the part of the speakers. The elements of Tragedy are six in number:—*μῦθος*, the story; *ἤθη*, the moral qualities of the persons; *λέξις*, the verbal form; *διάνοια*, the thoughts or sentiments; *ὄψις*, the presentation to the eye (under which Aristotle includes not merely scenic accessories of every kind, but also gesture and dancing); *μελοποιΐα*, musical composition. In every tragedy there is *δέσις*, a tying of a knot, and *λύσις*, a solution. The most effective kind of *λύσις* is that which is introduced by a *περιπέτεια*, a sudden reversal of fortune for the persons of the drama; or by an *ἀναγνώρισις*, the discovery of a previously concealed relationship between the persons. The *ἀναγνώρισις* may or may not be accompanied by a *περιπέτεια*. A *μῦθος* is said to be *πεπλεγμένος* when it involves a *περιπέτεια*, an *ἀναγνώρισις*, or both. It is *ἁπλοῦς* when the *λύσις* is managed without either. Again, a tragedy is *παθητική* when the chief person acts mainly under the influence of *πάθος*, a strong impulse of the mind,—as Medea does. It is *ἠθική* when the chief person acts mainly in accord with a deliberately formed purpose (*προαίρεσις*), as Antigone does. As to the so-called "unities," the unity of *action* is the only one upon which Aristotle insists. The action represented by tragedy must be *one*; it must not be a series of incoherent or loosely-linked episodes. About the unity of *place* he says nothing at all. As to the unity of *time*, he says that Tragedy now seeks, as far as possible, to confine the supposed action within the compass of a single day, or nearly so: but the earliest form of Tragedy, he adds, did not even do this; in it, just as in epic poetry, the time was indefinite. Viewed as a composition, Tragedy consists of the following parts; which are, in Aristotle's phrase, the *μέρη κατὰ τὸ ποσόν*, as distinguished from the six elements named above, which are the *μέρη κατὰ τὸ ποιόν*. All that part of a tragedy which precedes the first choral song is called *πρόλογος*. The part which comes between two choral songs is an *ἐπεισόδιον* (a term probably derived from the reappearance, *ἐπείσοδος*, of the single actor in primitive Tragedy). The *ἔξοδος* is the part after the last choral song. The *πάροδος* is the first utterance of the whole Chorus. The *στάσιμον* is "a choral song without anapaests or trochaics:" *i.e.*, not preceded by an anapaestic march, like the *πάροδος*, nor interrupted by dialogue in trochaic tetrameters, such as that which the Chorus in the *Agamemnon* (*ad fin.*) holds with the actors. The term *στάσιμον μέλος* means literally, a song by the Chorus "at its station" in the orchestra. A *κομμὸς* is a *θρῆνος κοινὸς χοροῦ καὶ ἀπὸ σκηνῆς*, a lyric lament, sustained partly by the Chorus and partly by an actor.

Tragedy is described by Aristotle as *δι' ἐλέου καὶ φόβου περαίνουσα τὴν τῶν τοιούτων παθημάτων κάθαρσιν*, "effecting, by means of pity and terror, that purgation (of the soul) which belongs to (is proper for) such feelings." The word *κάθαρσις* involves a medical metaphor, from the use of purgatives. Tragedy excites pity and terror by presenting to the mind things which are truly pitiable and terrible. Now, pity and terror are feelings natural to men; but they are often excited by unworthy causes. When they are moved, as Tragedy moves them, by a worthy cause, then the mind experiences that sense of relief which comes from finding an outlet for a natural energy. And thus the impressions made by Tragedy leave behind them in the spectator a temperate and harmonious state of the soul. Similarly Aristotle speaks of the enthusiastic worshippers of Dionysus as obtaining a *κάθαρσις*, a healthful relief, by the lyric utterance of their sacred frenzy:—*ὅταν ἐξοργιάζωσι τὴν ψυχὴν μέλεσι, καθισταμένους, ὥσπερ ἰατρείας τυχόντας καὶ καθάρσεως* (*Pol.* viii. 7).

Of the three great tragedians, Sophocles seems to have been on the whole the favourite of Aristotle, who refers to him in the *Poetics* about twenty times, and in all cases, except three, with praise. The *Oedipus Tyrannus* is cited in no less than ten places. Euripides is defended against the critics who had complained that his plays usually ended unhappily; this, says Aristotle, is right in Tragedy, and the proof is that Euripides, "although a faulty composer in other respects, is found to be at least the *most tragic* of poets" (*εἰ καὶ τὰ ἄλλα μὴ εὖ οἰκονομεῖ, ἀλλὰ τραγικώτατός γε τῶν ποιητῶν φαίνεται*: *Poet.* 13). By "most tragic" is here meant, "exciting pity most strongly," —"most pathetic." But in Aristotle's other notices of Euripides censure decidedly predominates over praise. Aeschylus is named only thrice in the *Poetics:* there are further three citations of his plays without his name. Aristotle seems to regard him as belonging to a period when the proper type of Tragedy had not yet been matured. In this connexion it may be noticed that not only are the terms "trilogy" and "tetralogy" absent from the *Poetics*, but there is no indication in the treatise that tragedies had ever been produced otherwise than singly. In one place, indeed (c. 24), there is a reference to "the number of tragedies set for one hearing" (*i.e.* performed in one day); but nothing in the context forbids us to suppose as many poets as pieces. The reason of this silence is simply, doubtless, that the grouping of plays in representation was foreign to the subject with which Aristotle was immediately concerned,—viz. the analysis of Tragedy considered as a form of poetical art. Indeed, the scenic aspect of drama generally receives comparatively little attention from him. The production of scenic effects (**ἀπεργασία τῶν ὄψεων**) is the affair of the stage-manager. The art of the actor, again, is but slightly touched, since it lies outside of the poet's domain.

The Didascaliae.—Aristotle compiled a work called **Διδασκαλίαι**, "Dramatic performances," being a list of the tragedies and comedies produced at Athens in each year. His materials were contemporary records. In the 5th century B.C. it had been customary for the archon, after each festival at which dramas had been performed, to draw up a list of the competing poets, the choregi, the plays, and the protagonists, with a notice of the order in which the judges had placed the competitors. This record was preserved in the public archives. At some time between 450 and 400 B.C. it became usual to engrave such a record on a stone tablet, and to set it up in or near the Dionysiac theatre. Further, the choregus whose poet gained the prize received a tripod from the state, and erected it, with an inscription, in the same neighbourhood. Aristotle's compilation has perished, but its nature is known from citations of it which occur in the Greek Arguments to some plays, in scholia, and in late writers. There are altogether thirteen such citations, five of which cite the **Διδασκαλίαι** with Aristotle's name, and eight without it. They are collected in the Berlin Aristotle (vol. v. p. 1572). About 260 B.C. the Alexandrian poet Callimachus compiled another work of the same kind, **Πίναξ καὶ ἀναγραφὴ τῶν κατὰ χρόνους ἀπ' ἀρχῆς γενομένων διδασκαλιῶν**, "A table and record of dramatic performances from the earliest times." He made use of Aristotle's **Διδασκαλίαι** (Schol. Ar. *Nub.* 552). Works of a similar kind were written by Aristophanes of Byzantium (*circ.* 200 B.C.), and by other scholars of Alexandria and of Pergamum. Several of these writings were extant as late at least as 150 A.D. This appears from Athenaeus, who was able to consult the **Διδασκαλίαι** of Callimachus and Aristophanes, as well as "the Pergamene records" (Athen. p. 336 c). Among the authors of the last-named was Carystius of Pergamum (*circ.* 110 B.C.), who wrote **περὶ Διδασκαλιῶν**. The period covered by the extant fragments of **Διδασκαλίαι** ranges from 472 B.C. (Arg. Aesch. *Persae*) to 388 B.C. (Arg. Ar. *Plut.*).

ROMAN TRAGEDY.

The first half of the 3rd century B.C. was the period at which the influence of Greek literature began to be directly felt by the Romans. Tarentum was the greatest of the Greek colonies in Southern Italy. After the fall of Tarentum in 272 B.C., the intercourse between Romans and Greeks became more familiar. In the First Punic War (263–241 B.C.) Sicily was the principal battle-ground; and in Sicily the Romans had ample facilities for improving their acquaintance with the Greek language. They had also frequent opportunities of witnessing Greek plays. Just after the close of the war the first attempt at a Latin reproduction of Greek tragedy was made by Livius Andronicus (240 B.C.). He was a Greek, probably of Tarentum, and had received his freedom from his master, M. Livius Salinator, whose sons he had educated. He then settled at Rome, and devoted the rest of his life to literary work. It may be conjectured that most of his plays were translated from the Greek. All of them, so far as we know, were on Greek subjects. Among the titles are *Aegisthus*, *Ecus Trojanus*, *Ajax*, *Tereus*, *Hermione*. His Latin style appears to have been harsh and crude. "Livianae fabulae non satis dignae quae iterum legantur" is Cicero's concise verdict (*Brutus*, 18, 71).

Five years after the first essay of Livius Andronicus, a Latin dramatist of greater originality came forward (235 B.C.). Cn. Naevius was probably a Campanian; and the racy vigour with which he could use his native language entitles him to be regarded as the earliest Roman poet. Comedy was the form of drama in which Naevius chiefly excelled; and he turned it to the purposes of political strife, in a spirit similar to that of Aristophanes. But he was also a writer of tragedy. His *Lycurgus* was akin in theme to the *Bacchae* of Euripides; while the titles of his *Andromache*, *Ecus Trojanus*, and *Hector Proficiscens*, show that, like Livius, he drew largely on the Trojan cycle. At the same time he occasionally composed tragedies founded on Roman history, or, as they were technically called, *fabulae praetextatae*. The earliest *praetextatae* on record are his; one of them was called *Romulus*. In the scanty fragments of his works we can recognise his ardour, his self-confidence, his somewhat aggressive vigour, and his gift for terse and nervous expression, of which the familiar "laudari a laudato viro" is a specimen.

The career of Naevius was drawing to a close when Q. Ennius came to Rome (204 B.C.). Ennius, a native of Rudiae in Calabria, was serving as a centurion with the army in Sardinia, when Cato arrived there as quaestor. Ennius followed Cato to Rome; acquired the Roman citizenship in 184 B.C.; and made his permanent abode on the Aventine. Here we have to do with his work only so far as it concerned Tragedy. Although his Annals and his Satires were more characteristic products of his genius, he was also the most popular tragic dramatist who had yet appeared; and it was due to him, in the first instance, that Roman Tragedy acquired the popularity which it retained down to the days of Cicero. About twenty-five of his tragedies are known by their titles. Two of these were *praetextatae*,—one of which, called *Sabinae*, dealt with the intervention of the Sabine women in the war between Romulus and Tatius; while another, the *Ambracia*, turned on the capture of the town of Ambracia in the Aetolian war. The other pieces were on Greek subjects,—about one half of them being connected with the Trojan war. His *Medea* was translated from the play of Euripides, and the opening lines, which are extant, indicate that the version was a tolerably close one. They have a certain rugged majesty which agrees with Horace's description of the style used by Ennius in Tragedy,—"In scaenam missos magno cum pondere versus."

M. Pacuvius, a nephew of Ennius by the mother's side, was a native of Brundusium. He is thus the third instance (Livius and Ennius being the two others) in which early Roman drama is associated with South Italian birth. Pacuvius was born about 219 B.C., and lived to the age of ninety. Of his tragedies, one, called *Paulus*, was a *praetextata;* twelve more are known to have been on Greek subjects; and among these one of the most celebrated, the *Antiope*, was a translation from Euripides. Some remarkable fragments of his *Chryses*—a tragedy concerned, like his *Dulorestes*, with the wanderings of Orestes in search of Pylades—disclose the growth of a Roman interest in physical philosophy, and also in ethical questions. About 400 lines of Pacuvius are extant, but many of these are merely single verses, preserved by grammarians as examples of strange words or usages. Much as Pacuvius was admired on other grounds, his Latinity was not accounted pure by Cicero, who couples him with the comic poet Caecilius in the censure, "male locutos esse" (*Brutus*, 74, 258). Pacuvius was prone to coin new forms of words (such as *temeritudo, concorditas*), and carried the invention of compound adjectives to an extent which sometimes became ludicrous,—as in "Nerei repandirostrum incurvicervicum pecus."

L. Attius was born at Pisaurum, a Roman colony in Umbria, in 170 B.C. The forms Attius and Accius are equally well-attested; but in the Imperial age the form with *tt* became predominant; and the Greeks always wrote Ἄττιος (Teuffel, *Hist. Rom. Lit.* § 119, 1). The aged Pacuvius, having left Rome in ill-health, was spending the evening of his days at Brundusium, when Attius, then a young man, passed through that place on his way to Asia. Attius was entertained by Pacuvius, and read to him his tragedy *Atreus*. The old man found it "sonorous and elevated, but somewhat harsh and crude;" and the younger poet, admitting the defect, expressed his hope that the mellowing influence of time would appear in his riper work. The excellences which Pacuvius recognised must have been present in the maturer writings of Attius, whom Horace calls "altus," and Cicero, "gravis et ingeniosus poeta." The harshness of his earlier style was due, perhaps, to a youthful excess of that "nervous and impetuous" character, as Cicero calls it (*de Orat.* iii. 58, 217), which afterwards distinguished him, and which Ovid expresses by the epithet *animosus*. Attius was far the most productive of the Roman tragic dramatists. The extant notices and fragments indicate, according to one estimate, about 37 pieces; according to another, about 50. Two of these were *praetextatae;*—the *Brutus*, on the downfall of the Tarquins; and the *Aeneadae*, dealing with the legend of the Decius who devoted himself at the battle of Sentinum. There are indications that Attius was a student of Sophocles, though Euripides was probably his chief model. Thus the verse in his *Armorum iudicium* (fr. 10), "virtuti sis par, dispar fortunis patris," is translated from Soph. *Ai.* 550 f. Among his other celebrated tragedies were the *Atreus*, *Epigoni*, *Philocteta*, *Antigona*, *Telephus*. Cicero, in his youth, had often listened to the reminiscences of Attius (*Brutus*, 28, 107). The poet, who was sixty-four at the date of the orator's birth (106 B.C.), must therefore have lived to an advanced age.

The period from 240 to 100 B.C. is the first period in the history of Roman poetry and oratory. And the century from 200 to 100 B.C. marks the flourishing age of Roman Tragedy, as cultivated by Ennius, Pacuvius, and Attius. But Tragedy continued to be a favourite form of composition in the later years of the Republic and in the earlier part of the Imperial age. It became, however, more and more a literary exercise, less and less a form of poetry which could appeal with living force to the mind of the people. In the Augustan age C. Asinius Pollio wrote tragedies which seem to have been acted. Virgil's well-known praise of them, as "sola Sophocleo digna cothurno," must be qualified by the criticism in the *Dialogus de Oratoribus* (c. 21), where Tacitus observes that the harshest traits of earlier Roman tragedy were reproduced in the style of Pollio ("adeo durus et siccus est"). In the same dialogue high praise is given to the *Medea* of Ovid and the *Thyestes* of Varius (c. 12). No fragment of this *Medea* remains, except a few words quoted by Quintilian (xii. 10, 75). Of the *Thyestes* Quintilian says that "it is comparable to any Greek Tragedy" (x. 1, 98); and in another place he quotes it (iii. 8, 45). Two anapaestic fragments are also extant (Ribbeck, *Frag. Lat.* p. 195 f.). But for Ovid and for Varius, as for other less famous poets, Tragedy was now a mere πάρεργον, a field into which they might make occasional excursions, not the province of poetry in which they sought to establish their permanent renown. In the middle of the 1st century A.D. we have eight tragedies on Greek subjects by L. Annaeus Seneca: *Hercules Furens*, *Thyestes*, *Phaedra*, *Oedipus*, *Troades* (*Hecuba*), *Medea*, *Agamemnon*, *Hercules Oetaeus;* also part of an *Oedipus Coloneus* (362 lines), and of a *Phoenissae* (302). A *praetextata* called *Octavia*, which was formerly ascribed to Seneca, was certainly of later origin. The parentage of the other tragedies has also been disputed, but the results of recent criticism confirm Seneca's authorship. The general characteristic of the plays is rhetoric of the most pompous and artificial kind. A fertile and lively fancy is present; the psychology, too, is often acute; but there is no depth either of thought or of feeling. As most of Seneca's Greek models are extant, a comparison is instructive. It serves to shew how completely, in this latest age of Roman

Tragedy, the love of declamation had displaced all regard for the soul and essence of tragic art. The pieces of Seneca were primarily designed, doubtless, for recitation; but it is not impossible that, in Nero's age, they were also acted; and certain scenic hints have been thought to point in that direction (e.g. *Phaedra*, 392 f.). The last Roman writer of Tragedy who claims mention is Curiatius Maternus, whose activity extended from the reign of Nero to that of Vespasian. He wrote both tragedies (as *Medea*, *Thyestes*) and *praetextatae* (as *Domitius*, *Cato*); and his eminent reputation is attested by several passages in the Tacitean *Dialogus* (cc. 2, 3, 5, 11).

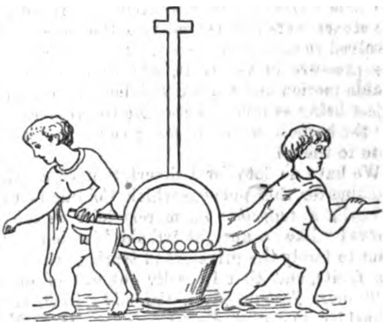
In looking back on the course of Roman Tragedy as a whole, we see, in the first place, that for inspiration and material it was altogether dependent on Greece. Euripides was more especially the master of the Roman dramatists, because, in his hands, Tragedy had become less distinctively Hellenic, and therefore more susceptible of imitation by those who were strangers to the Hellenic spirit. In the plays of Euripides, the Chorus was already ceasing to be an organic part of drama; and the Roman dramatists went only one step farther when they banished the Chorus from the orchestra, leaving to it merely an occasional part in the dialogue. Lyrics of a simple character, with a musical accompaniment, served, indeed, to accentuate the more impassioned moments of a Roman tragedy; but, save for these, the lyric element of the great Attic drama had vanished. In dialogue the iambic and trochaic metres were retained: yet even here the Roman imitation marred the Greek original. Any foot possible for an iambic verse was now admitted in any place except the last. The finer rhythms were thus destroyed. Quintilian says, "Comedy is our weak point" (x. 1, 99). But, so far as the tragic fragments warrant a judgment, Roman Tragedy was, in style, much less successful than Roman Comedy. Comedy had more in common with the *satura*, and the *satura* is the one species of composition in which the Roman mind expressed itself with a truly original force. [SATURA.] At the same time it is clear that there were noble qualities in the Roman Tragedy of the Republic. It was marked by earnestness and by oratorical power; the tones of the statesman and of the soldier were heard in it; it imbued the youth of Rome with the "fas et antiqua castitudo" (as Attius says),—with the lessons of ancestral fortitude and prudence; it taught the men who were conquering the world how they should work, how they should suffer, and how they should rule. So long as Roman Tragedy was doing this, it was living, though its spirit was not Athenian. But this moral and political significance departed with the Republic; and then it was inevitable that Roman Tragedy should descend to the place which it occupies under the Empire. That noble form of drama which the Attic genius had matured, and which is first made known to us in the majestic poetry of Aeschylus, disappears from the ancient world in the rhetoric of Seneca. [R. C. J.]

TRANSENNA, lattice-work. The word is used (1) for a lattice-work across a window [DOMUS, Vol. I. p. 686 *b*], apparently = the "*fenestrae reticulatae*" of Varro, *R. R.* iii. 7, and this must be the meaning in Cic. *de Or.* i. 35, 162: (2) a lattice-work cage for trapping birds [see references under AUCEPS]. It is possible that this was contrived by some sort of spring, though the pattern which Rich gives must be regarded only as a surmise: it is equally possible that the transenna may have been more like an ordinary birdcage, and worked by a decoy. The passage from Sallust (quoted by Macrob. *Sat.* iii. 13, 8), where at a theatrical entertainment an image of Victory is "demissum in transenna," suggests something of the kind — a large wicker cage enclosing the image. Servius (*ad Aen.* v. 488) reads the passage, "demissum transenna," and explains *transenna* as a rope; but this would certainly not agree with the use in Cicero. [G. E. M.]

TRANSTRA. [NAVIS.]

TRANSVECTIO. [EQUITES.]

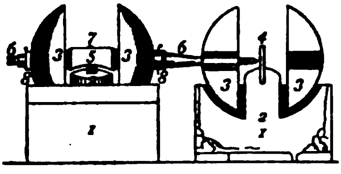
TRAPETUM, a machine for performing the first process in oil-making, that of crushing the olives (θλᾶν, ἀλεῖν, *frangere*, *molere*), so as to separate the pulp from the stone. This was done in early times merely by treading, and it seems to us that the "canalis et *solea*" of Col. xii. 52, 6, which Blümner dismisses as unintelligible, simply refers to treading olives by a wooden shoe (cf. SCULPONEA), with a pipe or trough to carry away the juice. To this succeeded the *mola olearia* and the *trapetum*. The former is preferred by Columella, as being more easily adjusted according to the size of the berries, so as to avoid breaking the kernel (Col. xii. 51): it appears to have been the same in principle as the corn-mill [MOLA], formed of two stones, capable of adjustment, as is described in that article (see also Blümner, *Technol.* i. 331). This appears in the relief from Arles (fig. 1), where two genii are turning round the crushing stone. The distinction from the corn-mill is that the stones are in inverse order; instead of the lower fixed stone being conical and the upper revolving stone hollowed (see cut under MOLA), the fixed lower stone is cup-shaped, and the revolving stone is conical. The upright cross-handled beam is both a pivot for the revolving stone and a means of adjusting the pressure by raising it or lowering it.



Mola olearia, from a relief at Arles.

The form of the trapetum, properly so called, can be ascertained from the remains found at Pompeii and Stabiae. In the cut below, the press found at Stabiae is shown in elevation and section (from Blümner, after Schneider).

The berries were placed in a circular stone basin (*mortarium*, 1), of which the sides were called *labra*: in the centre of this basin stood a column (*miliarium*, 2) to support the poles or levers (*modioli*, 6), on which the crushing stones (*orbes*, 3) rested, and by which they were turned round. These *orbes* were of stone, flat on the inner side and convex on the outer, as if forming two halves of a sphere: they were kept apart by a rectangular box of wood plated with metal, and called *cupa* (5), into which the modioli were fixed, and which served also to support the orbes. This *cupa* revolved round an iron pivot (*columella ferrea*, 4) fixed on the top of the *miliarium* or column, and rested on the column itself. To prevent it from slipping off the pivot, there was an iron pin (*fistula ferrea*, 7). To keep the orbes in position as close to the cupa as was required, a cap (*armilla*, 8) was fastened by a nail to the poles on the outside or convex surface of the stones: this cap not only kept the stones steady, but also to some extent regulated their distance from the labra and their consequent pressure. Two men (for, as Blümner remarks, we have no mention of horses or mules for this labour) moved round the poles, so that the stones bruised the fruit against the sides of the mortar. It must be observed that these poles are to be regarded not as axles, but as levers: the *columella* or pivot was practically the axle on which they worked. Moreover, as the stones were not fastened to the poles, they revolved to some extent on their own axis under the pressure of the fruit, whence there was a double motion and a more yielding pressure, the object being as much as possible to avoid crushing the kernels, which would give an unpleasant taste to the oil.



Trapetum in elevation and section.

We have no data for a description of another machine for this purpose which Columella (xii. 52) calls a *tudicula*: he merely tells us that it worked "like an upright tribula" (which would seem to imply the principle of tearing or carding the fruit), and that it easily got out of order. (Blümner, *Technologie*, i. 326–336; Rich, *s. v.*; Schneider, in *Script. R. R.*) [G. E. M.]

TRAUMATOS EK PRONOIAS GRAPHE (*τραύματος ἐκ προνοίας γραφή*). Our principal information respecting this action is derived from two speeches of Lysias, viz. *πρὸς Σίμωνα* and *περὶ τραύματος ἐκ προνοίας*, though they do not supply us with many particulars. It appears that this action could not be brought by *any* person who had been wounded and assaulted by another, but that it was necessary to prove that there had been an intention (*πρόνοια*) to murder the person who had been wounded (Lys. *c. Sim.* § 41 f.). Cases of this kind were laid before the archon basileus and brought before the Areiopagus ([Lys.] *c. Alcib.* § 15; Dem. *c. Aristocr.* p. 628, § 24; Poll. viii. 117): if the accused was found guilty, he was exiled from the state (Dem. *c. Boeot.* ii. p. 1018, § 32; according to Philippi, *d. Areopag u. d. Epheten*, p. 113 f., not for life) and his property confiscated (Lys. *c. Sim.* § 38, *περὶ τῆς πατρίδος καὶ τῆς οὐσίας τῆς ἐμαυτοῦ ἁπάσης κινδυνεύω*: cf. *de vuln. ex industria*, § 18. Plat. *Legg.* ix. p. 877 B: banishment for life without confiscation of property). This action seems to have been notorious as an instrument of false accusation (Aeschin. *de F. L.* § 93; *c. Ctes.* § 212, etc.). (*Att. Process*, ed. Lipsius, p. 386 f.)

[C. R. K.] [H. H.]

TRE'SVIRI were either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. [The form *triumvir* is quite legitimate, and the gen. plur. is often used as a predicate of a single individual: e.g. *si triumvirum sim*: but it is doubtful whether there is any good authority for the nom. plur. *triumviri*, although it is often found in our texts: MSS. seem always to give *iiiviri*.] The following is a list of the most important of both classes, arranged in alphabetical order.

1. TRESVIRI AGRO DIVIDUNDO. [TRESVIRI COLONIAE DEDUCENDAE.]

2. TRESVIRI CAPITALES appear to have been regularly appointed first in about B.C. 290 (Liv. *Epit.* 11). If Mommsen is right in identifying them with the *tresviri nocturni* (cf. Ussing on Plaut. *Amph.* 155), there is a reference to the office somewhat earlier in Liv. ix. 46, 3, where he says of Cn. Flavius, curule aedile in B.C. 304, "quem aliquanto ante desisse scriptum facere arguit Macer Licinius tribunatu ante gesto triumviratibusque nocturno altero, altero coloniae deducendae:" but this reference is of doubtful authority, not only because Livy ascribes the institution of the office to a later date, but also because it certainly was not a magistracy, as Licinius regards it, until a much later date. At first the *tresviri* were not chosen by the people, but nominated, probably by the praetor urbanus, who at a later time presided at their election. Festus (s. v. *Sacramentum*) gives a quotation from the law by which L. Papirius, a tribune of the commons, enacted that they should be elected: "quicunque praetor posthac factus erit qui inter civis jus dicet, tres viros capitales populum rogato." This law must have been after B.C. 242, for it assumes the existence of at least two praetors, and this also disposes of the conjecture of Niebuhr, that Festus meant L. Papirius, praetor in B.C. 292 (*Hist. Rom.* iii. 407–8): but it must have been before B.C. 124, when they appear in the Bantine law and the law *de repetundis* (*C. I. L.* i. 197, 198).

In criminal cases their main duty was to look to the safer custody of the convicted, and to execute capital punishment (Dig. 1, 2, 2, 30; Liv. xxxii. 26). The usual form of execution was, for the upper classes and for women, strangling in prison (*triumvirale supplicium*, Tac. *Ann.* v. 10), a fate which befell the fellow-conspirators of Catiline (Sall. *Cat.* 55; cf. Val. Max. v. 4, 57, "mulierem praetor . . . capitali crimine damnatam triumviro in carcere necandam tradidit"); slaves were crucified, also under their supervision (Val. Max. viii. 4, 2). They had also the duty of receiving charges (Plaut. *Aul.* 413; *Asin.* 131) and of arresting offenders;

and generally of looking after the police of Rome, for which purpose they had a post in the forum near the Columna Maenia (Cic. *pro Cluent.* 13, 39). Their duty was to go the round of the streets by night, and to seize and punish disorderly characters (Plaut. *Amph.* ad init.: cp. Val. Max. viii. 1, *damn.* 6, "P. Villius triumvir nocturnus a P. Aquilio trib. pl. accusatus populi judicio concidit, quia vigilias neglegentius circumierat"), and, as being charged with the safety of the city, were required to be present at once in cases of fire (ib. *damn.* 5). There is no trace of any independent criminal jurisdiction; even a slave had to be condemned by a regular court; but this does not preclude the administration of such punishment as was necessary to keep order. Hence Arnold (*Hist. of Rome*, ii. 389) goes too far in saying that they "tried by summary process all offenders against the public peace, who might be taken in the fact." There are also indications that in cases virtually criminal, in which private citizens acted as prosecutors by the *manus injectio*, the *tresviri* were appointed by the praetor to act as *judices* (cp. Plaut. *Pers.* 61 ff., discussed by Götz in *Rhein. Mus.* xxx. 167), and Mommsen thinks that the number of these may have been determined with a view to this function. They had further to exact and to pay into the treasury the *sacramenta* due in civil suits, and to decide upon the obligation to serve as *judices* (Cic. *Brut.* 31, 117). Here as in other cases they appear as the assistants of the praetors. Under the Empire their functions were mainly discharged by the *praefectus vigilum*.

3. TRESVIRI COLONIAE DEDUCENDAE were persons appointed to superintend the formation of a colony. They are spoken of under COLONIA, Vol. I. p. 479. Since they had besides to superintend the distribution of the land to the colonists, we find them also called *Tresviri Coloniae Deducendae Agroque Dividundo* (Liv. viii. 16), and sometimes simply *Tresviri Agro Dando* (Liv. iii. 1). The number three was the most usual one, but we also find commissions of five, seven, ten, fifteen, or twenty, as might be determined by the law instituting the colony.

4. TRESVIRI EPULONES. [EPULONES.]

5. TRESVIRI EQUITUM TURMAS RECOGNOSCENDI, or LEGENDIS EQUITUM DECURIIS, were magistrates first appointed by Augustus to revise the lists of the Equites, not at the census but at the *transvectio equitum*, and to admit persons into the order. This was formerly part of the duties of the censors (Suet. *Aug.* 37; Tac. *Ann.* iii. 30).

6. TRESVIRI MENSARII. [ARGENTARII.]

7. TRESVIRI MONETALES. [MONETA.]

8. TRESVIRI REFICIENDIS AEDIBUS, elected in the Comitia Tributa in the time of the Second Punic War, a commission for the purpose of repairing and rebuilding certain temples (Liv. xxv. 7). We do not know why this duty was not left, as usual, to the censors.

9. TRESVIRI REIPUBLICAE CONSTITUENDAE. Niebuhr (*Hist. of Rome*, vol. iii. p. 43) supposes that magistrates under this title were appointed as early as the time of the Licinian Rogations, in order to restore peace to the state after the commotions consequent upon those Rogations (Lydus, *de Mag.* i. 35). Niebuhr also thinks that these were the magistrates intended by Varro, who mentions among the extraordinary magistrates that had the right of summoning the senate, Triumvirs for the regulation of the Republic, along with the Decemvirs and Consular Tribunes (Gell. xiv. 7). We have not, however, any certain mention of officers or magistrates under this name, till towards the close of the Republic, when the supreme power was shared between Lepidus, Antonius, and Caesar (Octavianus), who administered the affairs of the state under the title of *Tresviri Reipublicae Constituendae.* This office was conferred upon them in B.C. 43 by a law of P. Titius the tribune for five years (Liv. *Epit.* 120; Appian, *B. C.* iv. 2–12; Dio Cass. xlvi. 54–56; Vell. Pat. ii. 65; Plut. *Cic.* 46); and on the expiration of the term, in B.C. 38, was conferred upon them again, in B.C. 37, for five years more (Appian, *B. C.* v. 95; Dio Cass. xlviii. 54). The coalition between Julius Caesar, Pompeius, and Crassus, in B.C. 60 (Vell. Pat. ii. 44; Liv. *Epit.* 103), is usually called the first triumvirate, and that between Octavianus, Antony, and Lepidus, the second; but it must be borne in mind that the former never bore the title of tresviri, nor were invested with any office under that name, whereas the latter were recognised as regular magistrates under the above-mentioned title.

10. TRESVIRI SACRIS CONQUIRENDIS DONISQUE PERSIGNANDIS, extraordinary officers elected in the Comitia Tributa in the time of the Second Punic War, seem to have had to take care that all property given or consecrated to the gods was applied to that purpose (Liv. xxv. 7).

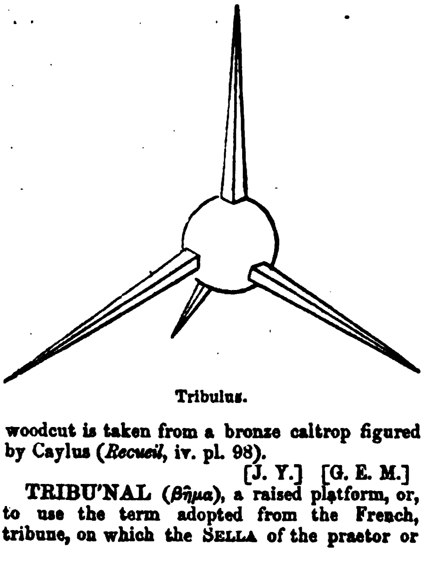
11. TRESVIRI SENATUS LEGENDI were officers appointed whenever required by Augustus to admit persons into the senate. This was previously the duty of the censors (Suet. *Aug.* 37). [W. S.] [A. S. W.]

TRIA'RII. [EXERCITUS, Vol. I. pp. 783–785.]

TRIBON. The *τρίβων* was a variety of *ἱμάτιον*, belonging to the class of the *χλαῖναι διπληγίδες* [see PALLIUM, p. 321], and was the national garb of Sparta, worn by every male over twelve years of age. Its use spread to Athens, having been introduced by such imitators of Spartan life (*λακωνίζοντες*) as Cimon. It is best known in history as the dress of Socrates (Plato, *Symp.* p. 219 B), adopted afterwards by the Cynics, with whom it became a professional costume. The chief merit of the *τρίβων* was that it was worn alone, without a shirt. The references to the "shirtless" condition of the Cynics are countless, from the sneer of Kerkidas at Diogenes as being *διπλοείματος* (cf. Hor. *Ep.* i. 17, 25, "quem duplici panno patientia velat") down to the time of Juvenal, who describes the only difference between the Stoic and the Cynic as being a shirt ("tunica distantia," *Sat.* xiii. 122). The Cynic women followed the same fashion, as did also the wife of Phocion, who on occasion wore her husband's mantle. The *τρίβων* was of a dark colour (*φαιὸς*) and of coarse but thick material. The manner of wearing it seems to have varied according to the length at which the owner wished to have it. It was of coarse woollen cloth, worn with a brooch, but the pinning does not seem to have been invariable, for on many of the statues of philosophers on which it appears there is no brooch or pin shown. [PALLIUM.] [W. C. F. A.]

TRI'BULUM (τρίβολος, a word borrowed from Latin), a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints, either the driver or a heavy weight being placed upon it, and drawn over the corn by a yoke of oxen, for the purpose of separating the grain and cutting the straw (Varro, *R. R.* i. 52; Plin. *H. N.* xviii. § 298; Longus, iii. 30, 2). Together with the *tribulum* another kind of drag, called *traha* or *trahea*, was also used, which, from the explanation of Servius, "vehiculum sine rotis," we may suppose to have been like a carriage-body taken off the wheels, or a sledge without runners (Verg. *Georg.* i. 164; Serv. *ad loc.*; Col. ii. 21). A third variety, the *plostellum Punicum* (Varro, *l. c.*), seems to have been a framework, like the above, placed upon rollers, and used especially in Spain, where we may suppose the Carthaginians to have introduced it. The tribulum and traha are still used in Greece, Asia Minor, Georgia, and Syria, and are described by various travellers in those countries, but more especially by Paul Lucas (*Voyage*, vol. i. p. 182), Sir R. K. Porter (*Travels*, vol. i. p. 158), Jackson (*Journey from India*, p. 249), and C. Fellows (*Journal*, pp. 70, 333). (For the process of threshing, see AGRICULTURA, Vol. I. p. 64.) [J. Y.] [G. E. M.]

TRI'BULUS (τρίβολος), a caltrop, also called *murex* (Val. Max. iii. 7, § 2; Curt. iv. 13, § 36). When a place was beset with troops, the one party endeavoured to impede the cavalry of the other party either by throwing before them caltrops, which necessarily lay with one of their four sharp points turned upwards, or by burying the caltrops with one point at the surface of the ground (Veget. *de Re Mil.* iii. 24; Jul. Afric. 69; Polyaen. 139, 2). The *taleae* (Caes. *B. G.* vii. 73) and the *hami*, *stimuli* or *stili* (*Bell. Afr.* 31), were for the same purpose. They were pieces of wood with curved iron points, buried in the ground. The annexed woodcut is taken from a bronze caltrop figured by Caylus (*Recueil*, iv. pl. 98). [J. Y.] [G. E. M.]



Tribulus.

TRIBU'NAL (βῆμα), a raised platform, or, to use the term adopted from the French, tribune, on which the SELLA of the praetor or presiding magistrate was placed, when he sat to administer justice in any place which might be selected (Liv. xxiii. 32). It is termed *locus superior* in Cic. *Verr.* ii. 42, 102; iv. 40, 85. It is described under BASILICA, Vol. I. pp. 288, 291 (cf. Mommsen, *Staatsrecht*, i.^{2} 400).

There was a tribunal in the camp, which was generally formed of turf, but sometimes, in a stationary camp, of stone, from which the general addressed the soldiers, and where the consul and tribunes of the soldiers administered justice. When the general addressed the army from the tribunal, the standards were planted in front of it, and the army placed round it in order. [ADLOCUTIO; CASTRA, Vol. I. p. 380.] For an instance of a tribunal raised in honour of a deceased imperator, see Tac. *Ann.* ii. 83: for the theatrical tribunal, THEATRUM, p. 821 *b*. [P. S.] [G. E. M.]

TRIBU'NUS. This word seems originally to have indicated an officer connected with a tribe (*tribus*), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced also in the later officers of this name. We subjoin an account of all the Roman officers known under this name.

1. TRIBUNES OF THE THREE ANCIENT TRIBES. At the time when all the Roman citizens were contained in the three tribes of the Ramnes, Tities, and Luceres, the three divisions of infantry, which together made up the legion, were commanded by three *tribuni militum* (φύλαρχοι, Dionys. ii. 7; Dig. 1, 2, 2, 20; Serv. *ad Aen.* v. 560). Niebuhr (*Hist. of Rome*, i. p. 331) supposes that the *tribunus celerum* was the tribune of the Ramnes, the oldest and noblest among the three tribes, and in this opinion he is followed by Göttling (*Gesch. d. Röm. Staatsverf.* p. 166), though it is in direct contradiction to Dionysius (ii. 13) and Pomponius (*de Orig. Jur.* Dig. 1, 2, 2, 15), according to whom the tribunus celerum was the commander of the *celeres*, the king's body-guard.

But Mommsen (*Hist.* i. 78, note) has shown that the term *tribuni celerum* is used in the plural of the three commanders of the horsemen (Dionys. ii. 64), as contrasted with the three *tribuni militum*, and that the view of Pomponius, which identifies the *tribunus celerum* with the Celer mentioned by Valerius Antias (in Dionys. ii. 13), the *magister equitum* under the Republic, and the *praefectus praetorio* of the Empire, is due simply to a misconception of the position held by Brutus in the legend (cf. Dionys. iv. 71; Liv. i. 59). The tribunes of the tribes naturally ceased to exist, when the tribes were done away with in the changes ascribed to Servius Tullius. There is no ground whatever for believing that a law was ever passed under the presidency of one of the tribunes (Mommsen, *Röm. St.* i. 189, note 4); but from the account of Dionysius they appear to have exercised certain priestly functions on behalf of their respective tribes. (Cf. Praen. Fast. for March 19, p. 315, [*adstantibus pon*]*tificibus et trib*[unis] *celer*[um].)

2. TRIBUNES OF THE SERVIAN TRIBES. Under the Servian constitution, each of the four city-tribes, and possibly each of the country *pagi*, which afterwards developed, in a manner as to which we have no definite information, into the

original 16 country-tribes, had its *curator*, or φύλαρχος, whose duty it was to keep the register of the tribe, and of the estates belonging to its members, and to collect when necessary the war-tax (*tributum*), as well as the capitation money (*aes*), levied upon non-citizens (*aerarii*). These *curatores tribuum* were also called *tribuni aerarii*; but whether the body known in the time of Cicero as *tribuni aerarii* were their successors and representatives is a question much disputed of recent years. Madvig (*Opusc. Acad.* ii. pp. 242–263: cf. *Verfassung u. Verwaltung*, i. 182–185) strongly maintains that they were quite distinct, and that there is no trustworthy reference to the *tribuni aerarii* before the law of Cotta in B.C. 70, except as an obsolete office, the name of which was then revived. Mommsen, on the other hand (*Die Römischen Tribus*, pp. 32 *sqq.*: cf. *Röm. St.* iii. 189 ff.), maintains that they were identical. Madvig's view is that the original *tribuni aerarii* were not officials of any kind, much less magistrates, but private persons of substance, who were made responsible for the pay of individual soldiers, especially the *equites*. The chief ancient authorities are an extract from Cato, *ap.* Gell. vi. 10, "pignoris capio ob aes militare, quod aes a tribuno aerario miles accipere debebat, vocabulum seorsum fit;" and Varro, *L. L.* v. 181, "ab eo quoque, quibus attributa erat pecunia ut militi reddant, tribuni aerarii dicti;" where the past tense *debebat* shows that the practice had become obsolete in Cato's time, and the expression *attributa erat* may be taken to indicate that the quaestors assigned to the several contributories the sums which they had respectively to pay. Another argument for Madvig's view is that the *tribuni aerarii* must have been a numerous class to furnish a select body of at least 300 judices, and that they are represented as fairly numerous, even in unimportant country-places like Atina (Cic. *pro Planc.* 8, 21), and as an *ordo* by the side of the *equites* (cf. Calp. *Ecl.* vii. 29). In Cic. *pro C. Rab. ad Quir.* 9, 27, we have in a reference to B.C. 100, "quid de tribunis aerariis ceterorumque ordinum omnium hominibus qui tum arma pro communi libertate ceperant?" Madvig interprets this to mean young men who afterwards became *tribuni aerarii* when the *ordo* was revived in B.C. 70, but this interpretation is very forced. Although we nowhere have express authority for identifying the *curatores tribuum* with the *tribuni aerarii* of the earlier time, it seems impossible to explain the use of the term *tribunus* except by such an identification; and the word *curator* occurs only later on, so that it may well be a descriptive title. When in B.C. 220 the tribes were divided into centuries, the *curatores centuriarum* may have popularly retained the name of *tribuni aerarii*, their number now being 350. They seem to have been elected annually, and were often re-elected.

3. TRIBUNI AERARII. When L. Cotta, the praetor in B.C. 70, carried a law depriving the senators of the exclusive right of serving on juries, which had been restored to them by Sulla, after the reforms of C. Gracchus, he instituted three *decuriae*,—one of senators, one of knights, and one of *tribuni aerarii*. Of this last body we know that they were recognised as an *ordo*; that they were a fairly numerous body not restricted to Rome, but living also in the *municipia*; and that they were closely connected with the equites, and indeed appear to have been sometimes loosely included under this name (cp. Cic. *pro Cluent.* 43, 121; 47, 130). Julius Caesar took away their judicial function (Suet. *Jul.* 41); but Augustus (Id. *Aug.* 32) added to the three *decuriae* a fourth, consisting of *ducenarii*, i.e. men who had half the equestrian census. From this last fact it seems highly probable that the *tribuni aerarii* were also required to possess a definite *census*, though the amount of this is nowhere specified. Mommsen supposes that they had the equestrian *census*, but not the *equus publicus* (*Röm. St.* iii. 533); but this is somewhat doubtful: and Mommsen admits that where they are included among the equites by Cicero, the "courtesy of the advocate" (*ib.* 193, note 2: cf. *pro Font.* 16, 36; *pro Flacc.* 38, 96) is partly at least responsible. Still in *pro Flacc.* 2, 4, he clearly speaks of two-thirds of the jury as belonging to the *equites* (50 out of 75): and Livy (*Ep.* xcvii.) even speaks of the reform of Cotta as giving back the *judicia* to the *equites*: "judicia per M. (*sic*) Aurelium Cottam praetorem ad equites Romanos translata sunt." From Liv. xxiv. 11, 8, it might appear that they had a census of 300,000 asses. Herzog (i. 533) thinks that they were ex-officials, but this assumption is needless, if we identify them with the *curatores* of the centuries. (Cf. Madvig, *Verf. und Verw.* i. 182–185; Mommsen, *Röm. St.* l. c.; Heitland on Cic. *pro C. Rabirio ad Quir.*, App. G; Herzog, *Gesch. d. Röm. Verfassung*, i. 533, 1023–5.)

4. TRIBUNI MILITUM CONSULARI POTESTATE. From the earliest times the Roman infantry had been commanded by *tribuni*, or "tribe-leaders." These were nominated by the king, as commander-in-chief, for the duration of the campaign, and were originally three in number. But when the old tribes were divided, each into a *prior* and a *posterior*, the number of the tribunes came to be six. At this time *legio* was the term applied to the whole army. When, at some time in the course of the fourth century, a varying number of legions was raised each year, the practice was still retained of having six *tribuni militum* for each legion. For their duties and the manner of their appointment, see EXERCITUS. But the term *tribuni militum* came also to be used with a somewhat different application. If the needs of the state required that more than two armies should be sent out, instead of two consuls a larger number of commanders was appointed under the title of *tribuni militum consulari potestate*. The first recorded instance of such an appointment is in B.C. 445, when the plebeians were pressing their claim to be held eligible for the consulship, and the senate in order to avoid a decision upon the point resolved that consular tribunes should be elected. (Liv. iv. 6, 8: "per haec consilia eo deducta est res, ut tribunos militum consulari potestate promiscue ex patribus ac plebe creari sinerent, de consulibus creandis nihil mutaretur.") But there is no definite evidence that this was the date of the first institution of such an office; and the reference to a law permitting it (Liv. iv. 31, 11) may refer to that by which the consulate was substituted for the kingship, as well as to a special law now passed. Another and perhaps

an earlier account (Liv. iv. 7, 2) represents military necessity as the sole reason for the change. Certainly the highest number of consular tribunes was elected in a year (B.C. 405) when the strain of a continuous siege first came upon the state. The *fasti* show that the number varied between three, four, and six, but there were never five. Where eight are mentioned, two seem to have acted as censors, not as consuls, and probably were not strictly speaking tribunes at all. The number five was evidently avoided, as not admitting of an even division of the *fasces* for the twelve months of the year.

It is pretty plain that the *tribuni militum consulari potestate* were simply the ordinary six tribunes, holding office with special powers conferred upon them. If the number sometimes fell below six, this was only because, if an insufficient number were elected with the consular authority, there was no constitutional means of filling up the places with others similarly privileged, and those subsequently elected ranked only as ordinary tribunes.

When in B.C. 367 the Licinian law abolished the office of consular tribune and threw open the consulate to the plebeians, the immediate result was to deprive the people of the right of electing the *tribuni militum*, so that the right had to be restored to them by a special law five years afterwards (Liv. vii. 5: cf. O. Lorenz, *Das Consulartribunat*, Vienna, 1855).

There is no reason to doubt (as has been done by Becker, ii. 2, 137; Schwegler, iii. 112, and others) that the consular tribunes possessed, as their title indicates, the full consular powers, including judicial as well as military functions, and the right of appointing a dictator (Liv. iv. 31). They were elected *auspicato* in the Comitia Centuriata (Liv. v. 52, 16), and enjoyed all the insignia of the consuls; but they had no right to triumph, nor did they become *consulares*, so that they did not by virtue of their office enter the higher ranks of the senate. This was the main practical difference between the consular tribunate and the consulship. The office was definitely abolished by the Licinian law *ne tribunorum militum comitia fierent consulumque utique alter ex plebe crearetur* (Liv. vi. 35); and we never hear of it after this date, except in an abortive suggestion of the tribunes of the commons in B.C. 53 (Dio Cass. xl. 45). Cf. Mommsen, *Röm. St.* ii. 173–184: the account given by Becker, *Röm. Alt.* ii. 2, 136 ff., is in some respects antiquated.

5. **Tribuni plebis.** There can be little doubt that the name of these officers of the commons was derived from that of the tribunes of the soldiers. By the side of the privileged citizens, the *patricii*, there was a body, recognised as belonging to the community, but at first destitute of all political rights, the *plebs*. This body, by the constitution ascribed to Servius Tullius, acquired the right of serving in the army and holding positions of command (*tribunatus*), and at the same time of voting in the assembly of the centuries. Their next step was to constitute themselves into an assembly of their own, the *concilium plebis*, presided over by magistrates of their own, the *tribuni* and *aediles plebis*. According to the generally received tradition, this step was the result of a secession of the plebs to the *mons sacer* in the district of Crustumeria in the year B.C. 494. Whatever may be the historical value of the details, there is no reasonable doubt that about this time the plebs acquired the right of collective action under leaders of their own choice. At first the election was made *comitiis curiatis* (Dionys. vi. 89, ix. 41: cf. Cic. *pro Corn. ap.* Ascon. p. 76): this has been generally taken to mean that the election was made by a purely patrician body; and an attempt has been made to defend this view by assuming that the plebeians, after settling among themselves who their candidates should be, nominated these and no others for the patricians formally to elect, so that they might secure their approval (cf. Bouché-Leclercq, *Institutions Romaines*, p. 69, note). But it is much simpler to suppose that the plebeians alone assembled by curies for the election (so Mommsen and Willems). The tradition further asserts that the tribunes were in B.C. 494 recognised as inviolable by a *lex sacrata* (Liv. ii. 33). Here, again, disputes have arisen. Lange, representing the school of Niebuhr, holds that this was a formal compact, ratified by the fetiales, between the patricians and the plebeians (cf. Dionys. vi. 84, 89; vii. 40). Mommsen, on the other hand, contends that the *lex sacrata* was only a solemn oath, sworn to by the plebs, that they would regard any wrong done to their tribunes as an inexpiable offence, and would avenge it accordingly. This view is supported by the fact that the *plebiscitum* of Icilius in B.C. 492 (Dionys. vii. 22), which assured to the tribunes freedom of speech and the *jus auxilii*, would have been superfluous if the preceding *lex sacrata* had been a compact between the orders. This view is also in harmony with the definition of *sacrosanctus* given by Festus, *s. v.* There is a further discussion as to the number of the original tribunes. The tradition is that they were at first two in number, afterwards raised to five, and then again to ten. But while the oldest authorities speak of B.C. 471 as the date at which the number was raised to five, others represent the two first elected as at once co-opting three others. The increase from five to ten (two from each class) is placed by Livy and Dionysius in B.C. 457 (Liv. iii. 30; Dionys. x. 30), though the former carelessly speaks of ten tribunes in B.C. 480 (ii. 44, 6), and Dio Cassius (cf. Zonaras, vii. 15) gives a different account. These statements are open to much doubt, especially that as to the classes from which the tribunes were taken: such a provision would be quite unexampled, and there seems to have been no reason for it. Probably it was only an illegitimate inference from the number of the tribunes. It seems most probable that there were originally two tribunes and two aediles of the plebs, answering to the two consuls and two quaestors of the community. It is certain that after the decemvirate there were always ten tribunes (Liv. iii. 54, 11, &c.).

The *tribuni plebis* were naturally always plebeians; the only case of a patrician holding the office is when two were co-opted in B.C. 448 (Liv. iii. 65); and this seems doubtful (cf. Mommsen, *Röm. St.* ii. 265, 4). They were elected, perhaps when chosen by the curies, and certainly when chosen by the tribes, under the presidency of the outgoing tribunes. At first, if the number of tribunes elected was not equal to the vacancies, the one or more elected had the power of co-optation; but in B.C. 448 this was done away with by the law of Trebonius (Liv. iii. 65), which enacted that the election should be continued until the full number had been chosen. There was no interregnum allowed, as in the case of the consuls: the plebs was never to be left without its tribunes (Liv. iii. 55; cf. 64, 9). The office was held only for a year; and just as in the case of the consulship, all the tribunes were colleagues, in the sense that each separately could exercise the full power of the office, but could be prevented from acting by the interposition of any of the others.

The functions of the tribunes varied with the legal position of the plebs, of which they were the representatives. Originally the plebs was only a voluntary combination of unenfranchised citizens, and so had no political rights. During this period, of which we have no trustworthy accounts, the tribunes were *non populi sed plebis magistratus*: any powers conceded to them were possessed simply as attaching to the organs of popular force. Next the plebs was recognised as an organised body within the community, and the magistrates of the community were bound by certain restrictions in their action towards the representatives of the commons: that is to say, the tribunes acquired the right of veto, and all that followed from it. Finally, the plebs was so far identified with the community, that its action was regarded legally as the action of the community. This is the stage reached in the Hortensian law of B.C. 287. The tribunes now become magistrates of the community, with positive as well as negative powers, and especially with the right to transact business directly with the senate.

As the tribunes did not originate as magistrates of the community, they had none of the insignia of magistracy, no lictors, fasces, or purple border to their togas; nor had they the curule chair. They had, however, the right of sitting on the *subsellium*, which became a kind of token of their office. As not being magistrates they further had no right of consulting the gods (*auspicia impetrativa*) on behalf of the Roman people, though there may have been a kind of quasi-private plebeian auspices, so that the place where the plebs met was called a *templum* (Liv. ii. 56, 10; iii. 17, 1;—Cic. *pro Sest.* 29, 62; 35, 75). But the plebeian magistrates were all created *inauspicato* (Liv. vi. 41, 5), at least after they were elected by the tribes, and a *plebiscitum* was a *lex inauspicata*. On the other hand, they were not at liberty to neglect omens sent by the gods (*auspicia oblativa*), and a storm broke up a *concilium plebis* as much as the Comitia: hence, too, the *obnuntiatio* held good in the case of plebeian assemblies. But perhaps the latter doctrine was put forward only for the political convenience of the nobles, and never really admitted by the commons (cf. Mommsen, *Röm. St.* ii. 275).

The tribune's duties, again, never included what was understood by the *imperium*: he never had either military command or civil jurisdiction; and his powers did not extend beyond the first milestone from the city. If we distinguish the time before the Hortensian law from that which followed it, we find that for the former the tribunician power consisted essentially in three functions.

1. They had the right to summon meetings of the plebs, and to take votes on resolutions proposed to them. Mommsen finds the basis of their power to lie in the *plebiscitum* passed by Icilius in 472, which was a general oath that they would tolerate no interference with this right on the part of the magistrates. Private persons also interrupting a tribune while speaking were liable to punishment (Val. Max. ix. 5, 2; Plin. *Ep.* i. 23, 2).

2. The right of *intercessio*, or "veto," as it is called (by a term which has little or no ancient authority), was a right within due limits assigned to every magistrate in relation to a colleague or an inferior magistrate. But it acquired an importance in practice with the tribunes, which transcended anything to be found elsewhere. It is very doubtful whether it can have been acquired in its full extent all at once, and the common opinion that it was at first limited to the *jus auxilii* is not based on any good authority. It seems more probable that it was only the outcome of a series of struggles, which our materials do not allow us to trace in detail. But it acquired special importance in the case of the tribunes, partly because they were so destitute of more active functions, and partly because circumstances tended to call forth the exercise of the veto by the tribunes, rather than by any other magistrates. Undoubtedly it was mainly employed for auxilium, *i.e.* for the protection of any citizen (patrician as well as plebeian: Liv. iii. 13, 9; 56, 5; viii. 33, 7; ix. 26, 16) against a magistrate's sentence. To secure that this should be always accessible, the tribunes were forbidden to sleep out of the city during their time of office (the Latin feast alone being an exception), and required to leave their house-doors open night and day. But we find one or two instances where tribunes were exempted from this law by the senate, and sent on special business of importance to generals in the field (Liv. ix. 36, 14; xxix. 20). Their official duties were always discharged in public, and at a later time the regular place for them was the Porcia Basilica.

But the right of veto extended also to proposals brought before the people in the Comitia, as well as to those brought before the plebs. In the latter case this was merely an application of the right to stop a colleague's action: the former seems more surprising, but it probably arose from the need of hindering resolutions which would have interfered with the rights of the commons. We find it employed in a consular election as early as B.C. 483 (Dionys. viii. 90), and in a prosecution by the quaestors in B.C. 459 (Liv. iii. 24, 7). The right of vetoing a resolution of the senate, or rather the action of the magistrate needful for its passing, is mentioned first in B.C. 445 (Liv. iv. 6, 6), but not as any new thing. At this time the tribunes had no right to enter the senate, but sat on their subsellia before the doorways, and did not interfere in the debate, but only during or after the voting. The veto can hardly have been exercised so long as the resolution of the senate was in theory simply advice to the magistrates as to their action. It is probable therefore that it was not employed until the *senatus auctoritas* became constitutionally necessary, in order that a resolution of the commons should be binding on the whole community. If a tribune vetoed the act of any magistrate beforehand, and it was still done, it was not therefore invalidated, but the magistrate was liable to punishment; but if the act was vetoed afterwards, it became legally of no effect. One tribune could impose the veto, and all the others could not remove it; but any one of the tribunes by his veto could stop a colleague from carrying out any threatened punishment for disregard of the veto.

The threat of punishment could naturally only be directed against private persons when discharging some public function (Cic. *pro Cluent.* 27, 74; cf. Sall. *Jug.* 34). We find, however, numerous instances in which the tribunes summoned persons to appear before a *contio*, and there answer questions (Cic. *in Phil.* vi.; *ad Att.* i. 14, 1; xiv. 20, 5; *in Vat.* 10, 24: cf. Gell. xiii. 12, 6).

3. The right of *intercessio* would have been meaningless without the support given to it by the right of *coercitio*, or enforcing obedience, and the latter was a necessary result of the claim of the commons to self-defence. Every action, which was regarded as threatening to the commons or their representatives the tribunes, was exposed to punishment by fine, by seizure of goods, or even by death. The only limits set to this power of the tribunes were those resulting from the interposition of another colleague or from an appeal to the people (*provocatio*). At first the appeal lay solely to the commons; but as it was manifestly unfair that a patrician should have to appeal to a body of which he was not a member (cf. Mommsen, *Röm. Forsch.* i. 209), the Twelve Tables provided that in capital cases the tribunes should prosecute a citizen before the centuries; and that it should be only in cases of fine that the tribes should hear the appeal. If we are right in regarding, with Mommsen, the *sacrosancta potestas* of the tribunes as based upon a revolutionary movement of self-defence, it ought properly to have ceased when the tribuneship, after the fall of the decemvirs, was recognised as a permanent part of the constitution by the Valerio-Horatian law. As a matter of fact both law and oath were employed (Liv. iii. 55) in the re-establishment of the tribuneship; and the two conceptions of "legitimate" and "sacrosanct" power continued to exist side by side, so that both Julius and Augustus were able to make use of the latter for their own purposes.

The cessation of all strife between the orders, to which the Hortensian law bore witness, marked the stage at which the tribunes became *magistrates* of the community. From this time down to the end of the Republic their power was practically always on the increase, except for a very short period. In B.C. 81 Sulla greatly reduced it by depriving them of all power of proposing laws, and by enacting that any one who had held the tribuneship should thereby be disqualified from standing for any other office, so excluding all men of energy and ambition (Liv. *Ep.* lxxxix.; Vell. ii. 30; Appian, *Bell. Civ.* i. 100, ii. 29). But in B.C. 70 Pompeius restored to the tribunes all their old powers and rights (Liv. *Ep.* 97; &c.). Their right of addressing the centuries remained limited to the cases where they appeared as prosecutors, but their freedom of action in relation to the tribes was unrestricted. Their right of veto was restricted only in a few cases, as by the law of Gaius Gracchus in B.C. 123 in relation to the consular provinces, and in trials by the *quaestiones perpetuae* (cf. Mommsen, *Röm. St.* i. 262); practically it became a mere implement of political warfare, as often used against as in the interests of the popular party. It was a result of their magisterial position that they now frequently presided at the election of magistrates, especially in the case of extraordinary appointments. Whether the consul or the tribune presided was doubtless generally determined by the law under which the appointment was made. With regard to their legislative powers, after the Hortensian law there was nothing to prevent legislation upon any matter being brought forward before the tribes by the tribunes, though usage left some questions, especially that of declaring war, to the centuries. Now, too, the *plebiscitum* was described as *lex sive id plebi scitum est*, whence it came naturally to be often called simply a *lex*, as we see from the fragments of the *lex de repetundis* and *de agris dividundis*. As for their power of *coercitio*, this developed into a general right to prosecute for offences against the community, especially in the case of offending magistrates upon the expiry of their term of office (cf. Liv. ix. 26, 12; xli. 7, 10). Most of the numerous instances of their action which are recorded, have to do with consuls, prosecuted for neglect of their duties in the field, or for gross instances of misuse of their powers. But there are cases of the prosecution of private citizens for offences against the state. When the law imposed upon the magistrates the duty of punishing by fine a definite offence, it is generally the aediles, not the tribunes, who take action. Sulla took away from the tribunes their power of prosecuting, and conferred it upon the *quaestio majestatis*: and this continued to exist after the tribunes had had their powers restored to them, so that after this date their action occurs rarely and exceptionally. Finally, as magistrates, the tribunes acquired the right not only of sitting and speaking in the senate, but also of convening and consulting it. But when and how this came to be the practice, we cannot definitely determine. The authorities are inconsistent and self-contradictory. Dionysius (x. 31) represents Icilius as attempting to summon the senate in B.C. 456, but he nowhere indicates that the tribunes really had this power. Livy represents a tribune as present in the senate in B.C. 462 (iii. 9, 11), and as speaking there in B.C. 420 (iv. 44, 7). But the first trustworthy instance is in B.C. 216 (Liv. xxii. 61); and it is most reasonable to suppose that the power of independent legislation given by the Hortensian law was accompanied by the right to consult the senate beforehand as to proposed measures. It never, however, became usual for a tribune to convene the senate instead of the consuls or the praetor urbanus. Under the Empire the right was retained (Tac. *Ann.* vi. 18), but rarely exercised. Besides these definite powers, the tribunes often appear as joining in the common action of the magistrates in times of national danger, or meeting special emergencies by their independent authority (cf. Cic. *in Verr.* ii. 41, 100; *de Off.* iii. 20, 80; Tac. *Hist.* ii. 91; Plin. *Ep.* ix. 13, 19).

Under the Empire the tribuneship became a mere shadow of its former self, the emperor exercising all its functions by virtue of his *tribunicia potestas*. Pliny (*Ep.* i. 23) gives a very interesting account of the manner in which it was regarded in his own day. It appears on the roll of magistracies in the early part of the third century; but disappears after Alexander Severus allowed candidates to proceed from the quaestorship to the praetorship. The name is only retained in the superscription of formal addresses to the senate as late as A.D. 423. Perhaps the title was still formally conferred on a certain number of the senators. (Cf. Mommsen, *Röm. Staatsrecht*, ii. 261–318.) [A. S. W.]

TRIBUS (φυλή), a political division of a people. 1. GREEK. The word φυλή does not occur in Homer, and the political idea which it embodies is undoubtedly post-Homeric. The φῦλον of Homer is a race or breed, *e.g.* of gods, men, animals, even insects (*Il.* xix. 30); more rarely, it is a "tribe" in the sense of nation or people, and this tribe may be an aggregate of septs or clans (κατὰ φῦλα, κατὰ φρήτρας, *Il.* ii. 362). In this passage, and in the phrase Δωριέες τριχάϊκες (*Od.* xix. 177), we see the germs of later institutions.

In the early historic period we find the πόλις or state divided into φυλαί, with more or less reference to a favourite or sacred number which varied in different races. Thus the Ionian number was four, the Dorian three; the four "old-Ionic" tribes occur, with the same names, in other Ionian states besides Athens; and traces of the three Dorian tribes are found in all the countries which they colonised. These tribes were in the first instance genealogical (γενικαί), afterwards local (τοπικαί): on this distinction cf. DEMUS, p. 615*a*. The three Dorian tribes were called Ὑλλεῖς, Δυμανᾶται or Δυμᾶνες, and Πάμφυλοι (Pind. *Pyth.* i. 120 ff.; Herod. v. 68; Steph. *s. vv.*). As usual, the names were said to have been derived from eponymous heroes; the first from Hyllus, son of Hercules, the others from Dymas and Pamphylus, leaders who fell in the invasion of the Peloponnesus. In reality the name Pamphyli points to the aggregation of a number of scattered family elements under a single tribe. Traces of a τρίπολις in Doris are found in Thucyd. i. 107, Diod. xi. 79, but there is no evidence to show that each φυλή occupied a separate πόλις: elsewhere the Dorian τετράπολις is mentioned, as by Strabo (ix. p. 427). The Hyllean tribe ranked first in precedence; the Pamphylians, as a mixed multitude, came last; but at Sparta there does not appear to have been much distinction, for all the freemen there were by the constitution of Lycurgus on a footing of equality. When Herodotus speaks of the Aegeidae as φυλὴ μεγάλη ἐν Σπάρτῃ (iv. 149), he is not to be understood as speaking of a fourth tribe of equal or similar dignity and rank to the other three. He uses the term φυλή in the general sense of γένος or φρατρία (Stein *in loc.* See also Pindar, *Pyth.* v. 101). To these three tribes others were added in different places, either when the Dorians were joined by other foreign allies, or when some of the old inhabitants were admitted to the rank of citizenship or equal privileges. Eight tribes are mentioned in Corinth (Suidas, *s. v.* Πάντα ὀκτώ), four in Tegea (Paus. viii. 53, § 6). In Elis there were twelve tribes, afterwards reduced to eight by a war with the Arcadians (Paus. v. 9, § 6), from which they appear to have been geographical divisions (Wachsmuth, vol. ii. pt. i. p. 17). Sometimes we find mention of only one of the Doric tribes, as of the Hylleans in Cydonia (Hesych. *s. v.* Ὑλλεῖς), the Dymanes in Halicarnassus; which probably arose from colonies having been founded by the members of one tribe only (Wachsmuth, vol. ii. pt. i. p. 15).

Traces of the three old Dorian tribes occur with more or less distinctness at Megara, where they continued up to Roman times (*C. I. G.* 1073; Lebas, ii. 48), though other tribes were added (*C. I. G.* 1072); at Argos (*C. I. G.* 1123, 1128, 1132; Müller, *Frag. Hist. Gr.* iv. 497), where there also existed a φυλὴ τῶν Ὑρναθίων (*C. I. G.* 1130, 1131), probably consisting of citizens of non-Dorian origin, since it occurred also at the neighbouring Aegina and Epidaurus (Müller, *Aegin.* p. 140); at Sicyon, where Cleisthenes changed the names of the three Dorian tribes to Ὑᾶται, Ὀνεᾶται, and Χοιρεᾶται, to insult their members, and added a fourth tribe, the Ἀρχέλαοι, his own ruling family [sixty years after his death the Doric names were restored, and a fourth tribe added, called Αἰγιαλέες after the son of the hero Adrastus (Herod. v. 68)]; at Troezen (Steph. *s. v.* Ὑλλεῖς). Similar evidence in the case of Dorian colonies is found at Cos, where the φυλαί were subdivided into φρατρίαι, and also into τριακάδες and πεντηκοστύες (*Bull. de Corr. Hell.* v. No. 7, p. 217; Cauer,^{2} p. 159); at Thera (*Mitth. deutsch. arch. Inst. Ath.* ii. 73); at Heraclea on the Pontus (οὐσῶν αὐταῖς τριῶν φυλῶν, Aen. Poliorcet. xi. 10); at Epidamnus, where the φύλαρχοι had at one time the control of the government (Aristot. *Pol.* viii. (v.) 1 = p. 1301). In Sicily, the three Dorian tribes occur at Syracuse (*tria genera*, Cic. *Verr.* ii. 51, 127; Plut. *Nic.* xiv.; Holm, *Gesch. Sicil.* i. 418), and at Acragas (προεδρευούσας τᾶς φυλᾶς τῶν Ὑλλέων, *C. I. G.* 5494).

Traces of these tribal subdivisions are also found in Thessaly (see Harpocrat. *s. v.* τετραρχία: τεττάρων μερῶν ὄντων τῆς Θετταλίας ἕκαστον μέρος τετρὰς ἐκαλεῖτο, καθά φησιν Ἑλλάνικος ἐν τοῖς Θετταλικοῖς· ὄνομα δέ φησιν εἶναι ταῖς τετράσι Θετταλιῶτιν, Φθιῶτιν, Πελασγιῶτιν, Ἑστιαιῶτιν. καὶ Ἀριστοτέλης δὲ ἐν τῇ κοινῇ Θετταλῶν πολιτείᾳ ἐπὶ Ἀλεύα τοῦ Πύρρου διῃρῆσθαί φησιν εἰς τέτταρας μοίρας τὴν Θετταλίαν): among the Malians (Thuc. iii. 92, Μηλιῆς οἱ ξύμπαντες εἰσὶ μὲν τρία μέρη, Παράλιοι, Ἱερῆς, Τραχίνιοι), and the Aetolians (Thuc. iii. 94, ἐπιχειρεῖν δ' ἐκέλευον πρῶτον μὲν Ἀποδώτοις, ἔπειτα δ' Ὀφιονεῦσι, καὶ μετὰ τούτους Εὐρυτᾶσιν, ὅπερ μέγιστον μέρος ἐστὶ τῶν Αἰτωλῶν). It is possible that some of these names may denote geographical rather than purely tribal subdivisions. It is a possible conjecture that the four βουλαί of Boeotia, mentioned in Thuc. v. 38 as αἵπερ ἅπαν τὸ κῦρος ἔχουσι, point to a survival of some old quadruple division of Boeotia into tribes.

Of all the Dorian people the Spartans kept themselves the longest unmixed with foreign blood. So jealous were they to maintain their exclusive privileges, that they had only admitted two men into their body before the time of Herodotus (Herod. ix. 33, 35). Aristotle, however, remarks (*Pol.* ii. 9) that there was a tradition that the privilege of citizenship was conferred *ἐπὶ τῶν προτέρων βασιλέων*. Afterwards their numbers were occasionally recruited by the admission of Laconians, Helots, and foreigners; but this was done very sparingly, until the time of Agis and Cleomenes, who created large numbers of citizens. But we cannot further pursue this subject (Schömann, *op. cit.* p. 114).

The subdivision of tribes into *φρατρίαι* or *πάτραι, γένη, τριττύες*, &c., appears to have prevailed in various places (see Gilbert, Index, *s. vv.*). On the *ὠβαί* at Sparta, of which very little is known, see GEROUSIA, Vol. I. p. 914*a*. After the time of Cleomenes the old system of tribes was changed; new ones were created corresponding to the different quarters of the town, and seem to have been five in number (Schömann, *Ant. Jur. Pub.* p. 115; Müller, *Dor.* iii. 5).

Of the colonies in Aeolis, at Ilium we hear of *φυλαί, φυλάρχαι*, and *φρατρίαι*: names of tribes occur, *e.g.* Ἀλεξανδρίς (*C. I. G.* 3615), Ἀτταλίς (*ib.* 3616), Πανθωίς (*ib.* 3617); at Lampsacus we hear of *φυλαί* and *ἑκατοστύες* (Gilbert, *Staatsalt.* ii. 160); at Methymna the citizens were divided into *φυλαί* and *χελληστύες* (Id. *ib.* p. 166).

The four Ionian tribes—Geleontes, Hopletes, Aegicoreis, Argadeis — which are spoken of below in reference to Attica, were found also in Cyzicus, together with two others, Βωρεῖς and Οἴνωπες (*C. I. G.* 3663–4–5). In Samos a *φυλὴ Αἰσχριωνίη* is mentioned by Herodotus (iii. 26), which was probably a Carian race that mingled with the Ionians. In Ephesus five tribes are mentioned, of different races. At Miletus, in the period of its dependence on Athens, the ten Cleisthenean tribes (see below), under the same names as at Athens, formed part of the constitution (Lebas, *Asie Min.* 238 f.). At Smyrna we do not seem to have any trace of tribes until Roman times (Ἀμμωνίς, *C. I. G.* 3264; Ἀρτεμισιάς, *ib.* 3266).

Coming next to the Islands of the Aegean, we find that at Syros the citizens were divided into *φυλαί* and *φρατρίαι* (*C. I. G.* 2347 g); a similar arrangement prevailed at Delos (Gilbert, *ut sup.* p. 206). At Tenos we have the names of ten local *φυλαί*, known by a collective name (as Ἡρακλεῖδαι), or heroic (as Ὑακινθίς: see *C. I. G.* 2338); each of these was subdivided into *φρατρίαι* (*C. I. G.* 2330, 2333). Similar subdivisions prevailed at Andros (*Mitth. deutsch. Arch. Inst. Ath.* i. p. 237) and at Calymna (*Anc. Greek Inscr. in Brit. Mus.* ii. 232 f.).

In Cyrene, according to Aristotle (*Pol.* vii. (vi.) 4), an increase in the number of *φυλαί* and *φρατρίαι* is the result of a more democratical constitution.

In Magna Graecia the only surviving trace of tribal divisions occurs in the case of Thurii, founded B.C. 443 ([Plut.] *Vit. Dec. Or.* 835 D). Here there were ten tribes: Ἀρκάς, Ἀχαΐς, Ἠλεία, Βοιωτία, Ἀμφικτυονίς, Δωρίς, Ἰάς, Ἀθηναΐς, Εὐβοιάς, and Νησιῶτις (Diodor. xii. 11).

Mythic names of Attic tribes, ascribed to the reign of Cecrops, are *Cecropis* (Κεκροπίς), *Autochthon* (Αὐτόχθων), *Actaea* (Ἀκταία), and *Paralia* (Παραλία); and in that of Cranaus, *Cranais* (Κραναΐς), *Atthis* (Ἀτθίς), *Mesogaea* (Μεσόγαια), and *Diacris* (Διακρίς). Afterwards we find a new set of names: *Dias* (Διάς), *Athenais* (Ἀθηναΐς), *Posidonias* (Ποσειδωνιάς), and *Hephaestias* (Ἡφαιστιάς); evidently derived from the deities who were worshipped in the country. (Compare Pollux, viii. 109.) Some of those secondly mentioned, if not all of them, seem to have been geographical divisions; and it is not improbable that, if not independent communities, they were at least connected by a very weak bond of union. But all these tribes were superseded by four others, whose appearance corresponded in time with the Ionic settlement in Attica, and which seem (as before observed) to have been adopted by other Ionic colonies out of Greece. The names *Geleontes* (Γελέοντες), *Hopletes* (Ὅπλητες), *Argadeis* (Ἀργάδεις), *Aegicoreis* (Αἰγικορεῖς), are said by Herodotus (v. 66) to have been derived from the sons of Ion, son of Xuthus (see Eurip. *Ion*, 1596, &c.; Pollux, *l. c.*), after the common Greek custom of inventing a genealogy to account for a term. The question of the true significance of these names has been much debated. The etymology of the last three would seem to suggest that the tribes were so called from the occupations which their respective members followed; the Hopletes being the armed men, or warriors; the Argadeis, labourers or husbandmen; the Aegicoreis, goatherds or shepherds. For the form and etymological meaning of the first name, see article GELEONTES. Curtius regards the tribes as "a fixed number of noble clans, or groups of families, who were recognised as of full blood." Grote repudiates the caste-theory (in common with most modern writers), and gives up any attempt at either explaining the names by etymology or ascertaining their connexion with the original population of Attica. Schömann thinks "that each Phyle was named according to the mode of life and the employment pursued by the majority or the most important part of its members." Thus, "if there was a part of Attica whose inhabitants were principally devoted to the rearing of cattle, especially of goats, the Phyle living there was called the Phyle of the Aegicores." He explains Geleontes as "the illustrious," *i.e.* the nobles, who lived in the capital and its neighbourhood. Whatever be the truth with respect to the origin of these tribes, one thing is more certain, that before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various peoples who inhabited the country continued to be disunited and split into factions.

In the division of the inhabitants of Attica, traditionally ascribed to Theseus, the people were divided into Εὐπατρίδαι, Γεωμόροι (Ἄγροικοι), and Δημιουργοί, of whom the first were nobles, the second agriculturists or yeomen, the third labourers and mechanics. At the same time, in order to consolidate the national unity, he enlarged the city of Athens, with which he incorporated several smaller towns, made it the seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The Tribes or Phylae were divided, each into three *φρατρίαι* (a term equivalent to fraternities, and analogous in its political relation to the Roman *Curiae*), and each *φρατρία* into thirty *γένη* (equivalent to the Roman *Gentes*), the members of a *γένος* being called *γεννῆται* or *ὁμογάλακτες*. Each *γένος* was distinguished by a particular name of a patronymic form, which was derived from some hero or mythic ancestor. We learn from Pollux (viii. 111) that these divisions, though the names seem to import family connexion, were in fact artificial; which shows that some advance had now been made towards the establishment of a closer political union. The members of the *φρατρίαι* and *γένη* had their respective religious rites and festivals, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved. (Compare Niebuhr, *Hist. of Rome*, vol. i. p. 311, &c.)

The exact relation between the four Ionic tribes and the three Theseian classes is still a matter of dispute. It would appear from the statements of ancient writers on the subject that *each* of the four tribes was divided into Eupatridae, Geomori, and Demiurgi; some modern scholars, *e.g.* Philippi and Curtius, hold on the contrary that the tribes and phratries were divisions of the Eupatrids alone, and that the Geomori and Demiurgi were outside of the tribal organisation. The reasons for rejecting this view are given under Eupatridae, in Vol. I.

After the age of Theseus, the monarchy having been first limited and afterwards abolished, the whole power of the state fell into the hands of the Eupatridae or nobles, who held all civil offices, and had besides the management of religious affairs and the interpretation of the laws. Attica became agitated by feuds, and we find the people, shortly before the legislation of Solon, divided into three parties,—*Πεδιαῖοι* or lowlanders, *Διάκριοι* or highlanders, and *Πάραλοι* or people of the sea-coast. The first two remind us of the ancient names of tribes, Mesogaea and Diacris; and the three parties appear in some measure to represent the classes established by Theseus: the first being the nobles, whose property lay in the champaign and most fertile part of the country; the second, the smaller landowners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance. To appease their discords, Solon was applied to; and thereupon framed his celebrated constitution and code of laws. Here we have only to notice, that he retained the four tribes as he found them, but abolished the existing distinctions of *rank*, or at all events greatly diminished their importance, by introducing his property qualification, or division of the people into *Πεντακοσιομέδιμνοι*, *Ἱππεῖς*, *Ζευγῖται*, and *Θῆτες*. The enactments of Solon continued to be the *law* at Athens, though in great measure suspended by the tyranny, until the democratic reform effected by Cleisthenes. He abolished the old tribes, and created ten new ones, according to a geographical division of Attica, and named them after ten of the ancient heroes: *Erechtheis*, *Aegeis*, *Pandionis*, *Leontis*, *Acamantis*, *Oeneis*, *Cecr*[illegible] *Hippothoontis*, *Aeantis*, *Antiochis*. These trib[illegible]e divided each into ten *δῆμοι*, the number of which was afterwards increased by subdivision: but the arrangement was so made, that the several *δῆμοι* not contiguous or near to one another were joined to make up a tribe. [Demus.] The object of this arrangement was that by the breaking of old associations a perfect and lasting revolution might be effected, in the habits and feelings, as well as the political organisation of the people. He allowed the ancient *φρατρίαι* to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a Phyle and Demus, but not in a Phratria or Genos; whence Aristophanes (*Ranae*, 418; *Aves*, 765) says, as a taunting mode of designating new citizens, that they have no phrators, or only barbarous ones (quoted by Niebuhr, vol. i. p. 312). But if made citizens by a complimentary vote, they were allowed to choose their Phratria as well [Civitas, pp. 443 *b*, 444 *a*]. The functions which had been discharged by the old tribes were now mostly transferred to the *δῆμοι*. Among others, we may notice that of the forty-eight *ναυκραρίαι* into which the old tribes had been divided for the purpose of taxation, but which now became useless, the taxes being collected on a different system. The reforms of Cleisthenes were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the Senate of five hundred, fifty were chosen from each tribe. The allotment of *δικασταὶ* was according to tribes; and the same system of election may be observed in most of the principal offices of state, judicial and magisterial, civil and military; as that of the *διαιτηταί*, *λογισταί*, *πωληταί*, *ταμίαι*, *τειχοποιοί*, *φύλαρχοι*, *στρατηγοί*, &c. In B.C. 307, out of compliment to Demetrius [illegible]orcetes, the Athenians increased the number of tribes to twelve by creating two new ones, named *Antigonis* and *Demetrias*, which were afterwards styled *Ptolemais* and *Attalis*; and a thirteenth was subsequently added under Hadrian, bearing his own name (Plut. *Demetr.* 10; Paus. i. 5, § 5; Pollux, viii. 110).

The preceding account is only intended as a brief sketch of the subject, since it is treated of under several other articles, which should be read in connexion with this. [Civitas (Greek); Demus; Phylarchi; Phylobasileis, &c.]

2. Roman. *The Patrician Tribes.*—The derivation of the word *tribus* is uncertain. In view of the three earliest Roman tribes, there is a temptation to connect it with *tres*, and this has

usually been done both by ancient and modern writers. Thus Dionysius (ii. 7) gives as its Greek equivalents τριττὺς or φυλή, while Varro (*L. L.* v. 55) says, "ager Romanus primum divisus in partes tres, a quo tribus appellatur;" cf. also Plut. *Rom.* 20. So, too, Pott (*Etym. Forsch.* i. 217 and ii. 441) and after him Corssen (i. 163) give the derivation as *tri* + *bu* (= bhu = fu: φυ). On the other hand, there is no trace of any connexion with *tres* in any of the extant meanings of *tribuo*, while on the historical side it seems very uncertain whether the division into three tribes was essential to the primitive Roman state. According to the traditional account, the three ancient tribes—the Titienses (or Tities), the Ramnes (or Ramnenses), and the Luceres—were created by Romulus after the death of Tatius: "populumque et suo et Tatii nomine et Lucumonis qui Romuli socius in Sabino proelio occiderat, in tribus tres... descripserat" (Cic. *de Rep.* ii. 8, 14. See also Dionys. ii. 7, Varr. *l. c.*; and cf. Liv. i. 13). But apart from the worthlessness of such definite statements with regard to the legendary period, it is much more probable that the Roman state grew up by a gradual synoikismos of originally independent communities, the number three being accidental and not essential. In this connexion the generally accepted origin of the name Titienses from Tatius the Sabine king cannot be regarded as of slight importance; and if the institution of the "sodales Titii" was, as Tacitus says (*Ann.* i. 54), intended "retinendis Sabinorum sacris," this would certainly seem to show that the Titienses, a Sabine tribe, entered into an already existing Latin community; while the fact that they are usually put in the first place and the Ramnes in the second (Varr. v. 55, 89, 91; Cic. *de Rep.* ii. 20, 36; Festus, p. 344) makes it probable that they entered it as conquerors (Mommsen, *Staatsrecht*, iii. p. 97). That the Ramnes were of Latin race is practically certain, whether the name is connected with Roma or Romulus. The origin of the Luceres is uncertain (Liv. i. 13), nor is it necessary here to discuss the question of their Latin or Etruscan origin, especially as the latter, though very generally assumed, rests on no historical evidence (Varr. v. 55; Plut. *Rom.* 20; Cic. *de Rep.* ii. 8, 14; Fest. p. 119; Niebuhr, *Röm. Gesch.* i. p. 329 ff.; Schwegler, *Röm. Gesch.* i. p. 505, &c.; Madvig, *Verfass. und Verwalt. des röm. Staates*, i. p. 95, &c.). What seems certain is that the synoikismos took place in pre-historic times, and all theories on the subject rest on a very doubtful foundation. Possibly the three tribes coincided locally with the original city which took part in the festival of the Septimontium; and in this case we may perhaps suppose the Titienses to have occupied the fortress in the Subura, the Ramnes the Palatine, and the Luceres the three summits of the Esquiline (but see Liv. i. 33 for another hypothesis). This is, however, at best a plausible conjecture (Mommsen, *Staatsr.* iii. p. 99), though we have Varro's statement (quoted above) that the three tribes were a division of the land as well as of the inhabitants. At some later period, but before the circumvallation ascribed to Servius Tullius, the neighbouring city on the Quirinal seems to have been amalgamated with that of the Septimontium; while, to avoid increasing the number or changing the names of the three ancient tribes, these were now extended by a division into *maiores* and *minores gentes*, the Hillmen (*Collini* as opposed to *Montani*) being limited to the latter, so that there were now *primi* and *secundi* (or *priores* and *posteriores*) *Titienses*, *Ramnes*, and *Luceres* (Festus, p. 344). For the traditional account of this change under Tarquinius Priscus, see Liv. i. 36; Cic. *de Rep.* ii. 20, 36; Dionys. iii. 71; where the direct reference, however, is only to the patrician *centuriae equitum*, to whom alone, in historical times, the names of the three ancient tribes were given. (See also Mommsen, *Staatsr.* iii. p. 31, and *Rom. Hist.* ch. 4; and for the best statement of the contrary view, Volquardsen in *Rhein. Mus.* xxxiii. p. 538 ff.) If this view of a pre-historic synoikismos is correct, then the term *tribus* had no more connexion in its original application with any threefold division, than it had when used of the Servian tribes. It was, no doubt, connected with the same root as *tribuo*, and may possibly have affinity, as Curtius supposes, with the Celtic *treb* (= vicus) (*Grundz. d. gr. Etym.* p. 227). Its original meaning was probably the *territorium* of a community, as *e.g.* the tribus Sappinia (Liv. xxxi. 2 and xxxiii. 37) is clearly a locality in Umbria. So in the *Tabulae Iguvinae* we find "trifu Tadinate" and "trefiper Ijuvina," clearly co-ordinate with "tuta Tadinate" and "tutape Ijuvina," the former being the *territorium*, the latter the civic community of Tadinum and Iguvium (Buecheler, *Umbrica*, pp. 3, 8, and 95; Mommsen, *Staatsr.* iii. p. 95). In Latin, however, owing to the pre-historic synoikismos, *tribus* appears to have the notion of part rather than whole,—an idea which the Servian arrangement still further strengthened. As survivals of the time when the tribes were independent communities, may perhaps be regarded (1) such words as *tribunal* and *contribuere* and *attribuere* = "to join a district to a neighbouring community" (Caes. *B. G.* 60, and Plin. *H. N.* iii. §§ 4, 37); (2) the fact that ten curiae belonged to each tribe, since this finds its analogy in other municipal constitutions, where ten curiae seem to be a usual number (*C. I. L.* viii. 1827, &c.); (3) the original number of the senate was almost certainly 100 (Liv. i. 8; Dionys. ii. 12; Plut. *Rom.* 13; Fest. s. v. *patres*),—a fact which also finds its analogy in the *decuriones* of Italian towns, and the later number of 300 was probably made up by 100 from each of the three tribes when they united; (4) the original number of Vestal Virgins (Fest. p. 344), of augurs (Liv. x. 16; Cic. *de Rep.* ii. 19, 16), and of pontifices was three, or one from each tribe, while on the addition of the *gentes minores* they were raised to six. Festus, p. 344: "sex Vestae sacerdotes constitutae sunt ... quia civitas Romana in sex est distributa partes, in primos secundosque Titienses, Ramnes, Luceres."

That in the pre-Servian period the patrician tribes were used as the basis for taxation and the military levy, we know from Dionysius: *τὰς καταγραφὰς τῶν στρατιωτῶν καὶ τὰς εἰσπράξεις τῶν χρημάτων ... οὐκέτι κατὰ τὰς τρεῖς φυλὰς τὰς γενικάς, ὡς πρότερον, ἀλλά, κ.τ.λ.* (iv. 14, and Varr. v. 181), although for the former we have no details. For the army, each tribe furnished 1000 foot-soldiers, commanded by a *tribunus*. (Varr. v. 89: "milites quod trium milium primo legio fiebat, ac singulae tribus Titiensium, Ramnium, Lucerum, milia militum mittebant;" and v. 81, "tribuni militum quod terni ex tribus tribubus Ramnium, Lucerum, Titium olim ad exercitum mittebantur:" cf. Dionys. ii. 7.) The cavalry were originally represented by three centuries, one from each of the three tribes (Liv. i. 13), or ten men from each of the thirty curies (Fest. p. 55). When the city was enlarged by the addition of the *gentes minores*, these three centuries were increased to six, each apparently containing 300 men (Liv. i. 36), but retaining the old names, "posteriores modo sub isdem nominibus qui additi erant appellati sunt, quas nunc quia geminatae sunt, sex vocant centurias." (See also Cic. *de Rep.* ii. 20, 36.) In later times, in fact, as has been already mentioned, it is only in connexion with these *sex suffragia* (*equitum*) that the names Titienses, Ramnes, and Luceres are retained, since for all other purposes they were superseded by the Servian tribes.

The Servian Tribes.—As an integral part of the so-called Servian reformation,—by which the census was established, the Comitia Centuriata organised upon it, and in consequence the land-holding plebeians made to share the military and financial burdens of citizenship,—there was a new division into tribes. The tribes so created were four in number, and embraced the city as enclosed by the Servian walls (Liv. i. 43; Dionys. iv. 14). The well-known passage in Dionysius (iv. 15) has led many authorities to suppose that Servius, in addition to the four urban tribes, created also twenty-six rustic tribes. He says: *διεῖλε δὲ καὶ τὴν χώραν ἅπασαν ὡς μὲν Φάβιός φησιν εἰς μοίρας ἓξ καὶ εἴκοσιν, ἃς καὶ αὐτὰς καλεῖ φυλάς, καὶ τὰς ἀστικὰς προστιθεὶς αὐταῖς τέτταρας, τριάκοντα φυλὰς τὰς πάσας ἐπὶ Τυλλίου γενέσθαι λέγει· ὡς δὲ Οὐεννώνιος ἱστόρηκεν εἰς μίαν τε καὶ τριάκοντα, ὥστε σὺν ταῖς κατὰ πόλιν οὔσαις ἐκπεπληρῶσθαι τὰς ἔτι καὶ εἰς ἡμᾶς ὑπαρχούσας τριάκοντα καὶ πέντε φυλάς· ἀμφοτέρων μέντοι Κάτων τούτων ἀξιοπιστότερος οὐχ ὁρίζει τῶν μοιρῶν τὸν ἀριθμόν.* But though Fabius Pictor, writing in Greek, may have called the rustic divisions *φυλαί*, this by no means proves that they were technically tribes; and Dionysius himself, no doubt following Varro, prefers the neutral term *μοῖραι*, which probably represents *regiones* or *pagi*. We know for certain that there were only twenty-one tribes as late as 367 A.U.C. (Liv. vi. 5), while at this early period it is extremely improbable that the territory outside the city was as yet distributed among individual owners: it was probably still held in common by the *gentes*, and, if so, was not applicable for division into tribes. For it is well established that only that land fell under the tribes which was held *ex iure Quiritium* by an individual owner; and therefore, while all *ager publicus*, on the one hand, was excluded from them, on the other no less the common gentile property, prior to its distribution among the individual *gentiles*, could not have been included in the tribes. It seems better therefore to suppose that only four tribes were made, and that the division into rustic districts was on some other principle. The names of the four tribes were Sucusana (the later form was Suburana, but the original form is attested both by SVC in inscriptions and by Varro, v. 48), Palatina, Esquilina, and Collina. That this is the fixed order of the tribes appears from Varro (v. 56) and Festus (p. 368); while Cicero also (*de Leg. Agr.* ii. 29, 79) gives Suburana as the first (see also Plin. *H. N.* xviii. § 3). Where a different order is given, it is usually from some definite reason, as *e.g.* in Varro, v. 46, in connexion with the order of the procession to the Argean chapels; in Liv. *Epit.* xx., with reference to the *libertini*; and in *C. I. L.* vi. 10211, in reference to the *frumentationes*. That these tribes, like the patrician, were primarily a division of the land, appears at once from the names, and Dionysius (iv. 14) expressly calls them *τοπικαί* (see also Laelius Felix *ap.* Gell. xv. 27). They may possibly have been engrafted on to the old patrician divisions, Sucusana corresponding with that of the Titienses, Palatina with that of the Ramnes, Esquilina with that of the Luceres, while Collina would embrace the Quirinal city. In this way at least the order of the tribes would be satisfactorily accounted for. The opinion once generally held, that the four tribes embraced the territory outside Rome as well as the city, was to a large extent founded on the assumption that Ostia, the earliest citizen-colony, belonged to Palatina (Grotefend, *Imp. Rom. trib. descript.* p. 67, and Fest. p. 213). This is now, however, given up by Mommsen (*Staatsr.* iii. p. 163) and Kubitschek (*Imp. Rom. trib. discript.* p. 26), since inscriptions show that though a number of the inhabitants at Ostia, possibly the Greek traders or their sons, belonged to Palatina (see below), the colony itself was assigned to Voturia (Wilm. 1720 and 1729, &c.). Neither the Capitol nor the Aventine was included in the Servian tribes, because they were still public and not private property (Liv. vi. 20; Dionys. x. 31 and 32); and both Livy (i. 43) and Pliny (*H. N.* xviii. § 3) limit the four tribes to the inhabited parts of the city.

Extension of the Tribes.—At what date the first rustic tribes were added to the four Servian tribes, it is impossible to say with certainty, nor how many were first created, since tradition is practically silent upon both points. That there were twenty-one tribes in 367 A.U.C. we know (Liv. vi. 5), but that the increase from four to twenty-one was made at one time is on the whole improbable. All the best MSS. of Liv. ii. 21 contain under the year 259 A.U.C. the words "Romae tribus una et triginta factae." To correct this from the Epitome to "una et viginti" is certainly unsafe, since the epitomator may easily have corrected the text from Liv. vi. 5; and there is much to be said for Mommsen's hypothesis that the original reading, till tampered with by an ignorant scribe, was the mere annalistic statement, "Romae tribus factae." The passage again of Dionysius (vii. 64) with regard to the trial of Coriolanus in 263 A.U.C. is clearly corrupt. He says, *μιᾶς γὰρ καὶ εἴκοσι τότε φυλῶν οὐσῶν, αἷς ἡ ψῆφος ἀνεδόθη, τὰς ἀπολυούσας ἔσχεν ὁ Μάρκιος ἐννέα· ὥστ᾽ εἰ δύο προσῆλθον αὐτῷ φυλαί, διὰ τὴν ἰσοψηφίαν ἀπελύετο ἄν, ὥσπερ ὁ νόμος ἠξίου.* As the number twenty-one is inconsistent with the *ἰσοψηφία*, one part of the statement must be rejected. The latter, however, is almost too definite to admit of mistake, and it seems better therefore to assume that Dionysius (or a scribe) carelessly substituted the more familiar number twenty-one, certainly existing for a considerable time previous to 367 A.U.C., for the earlier number twenty; while some similar, but inexplicable, confusion lurks under the numbers *ἐννέα* and *δύο*. But, apart from this confessedly uncertain inference, the list of the earliest seventeen rustic tribes also leads to the conclusion that there was a period when the tribes were twenty in number. The names in alphabetical order, as we know them from texts or inscriptions, are as follows:—Aemilia (Liv. xxxviii. 36), Camilia (*C. I. L.* vi. 2890), Claudia (Liv. ii. 16), Clustumina or Crustumina (Cic. *pro Balb.* 25), Cornelia (Liv. xxxviii. 36), Fabia (Suet. *Aug.* 40), Galeria (Liv. xxvii. 6), Horatia (Wilm. 681), Lemonia (Cic. *pro Planc.* 16), Menenia (Cic. *ad Fam.* xiii. 9), Papiria (Liv. viii. 37), Pollia (Liv. viii. 37), Pupinia (Cic. *ad Fam.* viii. 8), Romulia (Cic. *de Leg. Agr.* ii. 29), Sergia (Cic. *in Vat.* 15), Voltinia (Cic. *pro Planc.* 16), Voturia or Veturia (Liv. xxvi. 22). Of these seventeen names, sixteen were clearly formed in the same way from the names of patrician gentes, some of them known in historical times, others probably extinct at an early period. On the other hand, one only, Clustumina (CLV. not CRV. generally in inscriptions: see also Festus, p. 55, where Crustumina is found in the MSS., but placed between Cluras and Clucidatum), is a place-name similar to those of all the tribes (except Poblilia) created after 367 A.U.C. The inference from this seems irresistible that it was a later creation than the other sixteen. That the earliest rustic tribes bore some sort of relation to the Servian division into PAGI, would seem probable in itself, and receives some slight confirmation from Festus (p. 115), who says, "Lemonia tribus a pago Lemonio, qui est a porta Capena via Latina." But details are wanting, and it is at best an hypothesis, though a probable one, that the sixteen tribes were made when the common gentile property in land was transformed into individual ownership, the former gentile ownership leaving traces in the names of the tribes, which were taken from the more prominent families. With relation to Claudia, the tradition is still extant of the way in which land was assigned to the newly-admitted Claudian gens, and of the subsequent development of the tribe: *χώραν τ' αὐτῷ προσέθηκεν ἐκ τῆς δημοσίας τὴν μέταξυ Φιδήνης καὶ Πικεντίας, ὡς ἔχοι διανεῖμαι κλήρους ἅπασι τοῖς περὶ αὐτὸν* (this seems to imply that it was gentile property) *ἀφ' ὧν καὶ φυλή τις ἐγένετο σὺν χρόνῳ Κλαυδία καλουμένη* (Dionys. v. 40. See also Liv. ii. 16). Though named after patrician gentes, these sixteen tribes were as much local divisions as the earlier and later ones. The position of Claudia is given above by Dionysius, while Livy (*l. c.*) describes the "vetus Claudia tribus" as "ager trans Anienem." Of the Papiria tribus, Festus says, "a Papirio appellata est vel a nomine agri qui circa Tusculum est;" while of Pupinia, which adjoined it, he says (p. 233), "Pupinia tribus ab agri nomine dicta qui Pupinus appellatur, inter Tusculum urbemque situs." Livy also (xxvi. 9) shows that the eighth milestone on the Via Praenestina lay in this tribe (cf. also Cic. *de Leg. Agr.* ii. 35, 96). Romulia again is "ex eo agro quem Romulus ceperat ex Veientibus" (Fest. p. 271). For the attempt to localise Pollia, Fabia, Horatia, and Galeria, see Beloch, *Der ital. Bund*, pp. 29, 30. That all these earliest tribes were in the immediate neighbourhood of Rome, we should suppose from the nature of the case, and it is also expressly stated by Festus (p. 371, s. v. *viatores*). The 21st tribe, Clustumina, was named after the extinct town Crustumerium (Liv. i. 38; Fest. p. 55), in the territory of which was the *mons sacer* to which the plebs seceded in 260 A.U.C. (cf. the expression of Varro, v. 81, "in secessione Crustumerina"). As the result of the secession the plebs were allowed to elect tribunes, at first assembled according to their curies, but, after the Lex Publilia of 283 A.U.C. (Liv. ii. 56; Dionys. ix. 41), according to their tribes. Mommsen with great probability supposes that it was on this occasion, in order to make for voting purposes an unequal number of tribes, that the 21st was added, and that it was called, in memory of the secession, Clustumina (Mommsen, *Staatsr.* iii. p. 153).

As more and more land became the private property of Roman citizens, either by distribution or by the foundation of colonies or by the reception of *peregrini* into the citizen-body, the number of tribes gradually increased, but till the year 367 A.U.C. it still remained at twenty-one. In 366, however, the civitas was given to a number of people from Veii, Capena, and Falerii, and land was distributed among the new citizens (Liv. vi. 4). Accordingly, next year four new tribes were created (Liv. vi. 5): Stellatina (so called from a district near the city of Capena, Fest. p. 343); Tromentina ("a campo Tromento," Fest. p. 367), probably near Veii, since we find citizens of the restored Veii belonging to this tribe (Wilm. 2079; Orelli, 3448); Sabatina ("a lacu Sabate," Fest. p. 342); and Arnensis, perhaps from a river Aro in Etruria. In 372 A.U.C. quinqueviri were appointed to divide the ager Pomptinus in the Volscian land (Liv. vi. 21), and after an interval of some years in 396 two new tribes were made, Pomptina and Poblilia (Liv. vii. 15). That Poblilia (the name of which was apparently not local: see Fest. p. 233) was near the territory of the Hernici, is probable from the fact that later Anagnia, Ferentinum, and Aletrium were assigned to this tribe (Kubitsch., *Imp. Rom. trib. discrip.* p. 22). In 417 A.U.C. the inhabitants of Lanuvium, Aricia, and Nomentum received the civitas (Liv. viii. 14), and in 422 were arranged in the census; two new tribes, Maecia and Scaptia (both named after extinct towns, Fest. pp. 136 and 342), being created (Liv. viii. 17). In 431 A.U.C. the number was raised to thirty-one by the addition of Oufentina and Falerna (Liv. ix. 20), a step no doubt rendered necessary by the distribution of the ager Falernus and Privernas in 415 (Liv. viii. 11), the granting of the civitas to the Privernates in 426, and the colony led to Terracina (Liv. viii. 21), since according to Festus (p. 194) the name Oufentina is derived from a river "in agro Privernati." In 454 A.U.C., perhaps in connexion with the triumph over and punishment of the Aequi and Hernici (Liv. ix. 43 and 45), were created (Liv. x. 9) Aniensis and Teretina ("a flumine Terede," Fest. p. 363); while in 513 the Sabine territories, of which the inhabitants had been admitted into the citizenship in 486 (Vell. Paterc. i. 14, 7) and some other land, perhaps that of the Praetuttiani, were made into two fresh tribes, Quirina and Velina (Liv. *Epit.* xix.). This number thirty-five was never exceeded (Liv. i. 43; Dionys. iv. 15; Cic. *Phil.* vi. 5, 12; Wilm. 679, 888, &c.); but whether the limit was fixed when the last two tribes were made, or in 534, the date of the reform of the Comitia Centuriata (see below), is uncertain. It is possible, though hardly likely, that the name Quirina was intended to mark the completion of the "populus Romanus Quiritium." The derivation, however, of Festus (p. 254), "a Curensibus Sabinis," seems more probable.

Italia tributim descripta.—Up to 513 A.U.C. the tribes were more or less definitely bounded districts, of which the positions are known, imperfectly in the case of the oldest rustic tribes, with greater certainty in the case of those created since 367. While the former class were all in the immediate neighbourhood of Rome, the latter were situated in S. Etruria, Latium, the territory of the Volsci and Hernici, part of Campania, and the Sabine land. But even during this period, probably the original tribe (cf. the expression "vetus Claudia tribus," Liv. ii. 16) in few cases remained absolutely unenlarged, for every assignation of land to Roman citizens, however small, and the establishment of every colony, increased the amount of land to be distributed among the tribes. Only where the amount of land distributed was large, was there any necessity for new tribes: in other cases the land in question was no doubt assigned to the nearest existing tribe. Of the small distributions no annalistic record remains. Of colonies, Tusculum, probably during this period but after 431 A.U.C. (Liv. viii. 37), was assigned to Papiria, Minturnae in 458 to Teretina, Aricia to Horatia in 417 (Liv. viii. 14), Sinuessa to Falerna (Liv. x. 21), Antium in 416 to Voturia. But after the number of the tribes was closed, geographical compactness was lost. All freshly assigned or colonised territory, and all *civitates sine suffragio* admitted to the full franchise, had now to be distributed among the existing tribes; and the further from Rome this process extended, the more disjointed and broken up did the tribes become. To a certain extent, no doubt, the principle was observed of assigning new territory to the nearest tribes; and this, as Kubitschek rightly observes, tended by increasing the number of members to depreciate the importance for voting purposes of the later or outlying tribes. Thus we find Capua, Atella, Acerrae, Suessula, belonging to Falerna; Casinum, Atina, Venafrum, Allifae, to Teretina; Velitrae, Circeii, and Signia, to Pomptina; Anagnia, Ferentinum, Aletrium, to Poblilia; while the Picenian territory distributed by a Lex Flaminia in 522 (Polyb. ii. 21) seems all to have been assigned to Velina. On the other hand, Formiae and Fundi, when taken into the citizenship, were assigned to Aemilia; Arpinum in Apulia and Fulginium in Umbria to Cornelia (Liv. xxxviii. 36); Cliterna in the Sabine land to Claudia (Grotef. p. 46); Falerii to Horatia (Orelli, 1364), &c. This breaking up and mutilation of the tribes was not completely effected till after the Social war, when the civitas was given to all the *peregrinae civitates* south of the Po; and in consequence all the land with very few exceptions, such as at first the ager Campanus, falling into full Quiritary ownership, had to be distributed among the tribes. The manner in which the new territory was distributed is stated differently by our two authorities, Appian and Velleius Paterculus. The former (*B. C.* i. 49) says that they did not enrol the new citizens into the thirty-five tribes, *ἵνα μὴ τῶν ἀρχαίων πλέονες ὄντες ἐν ταῖς χειροτονίαις ἐπικρατοῖεν, ἀλλὰ δεκατεύοντες ἀπέφηναν ἑτέρας ἐν αἷς ἐχειροτόνουν ἔσχατοι.* This probably refers to the Lex Julia of 664, by which the civitas was given to the Latini and the faithful allies (Cic. *pro Balb.* 8, 21), and, if the reading *δεκατεύοντες* is correct, it must mean that ten new tribes were created. On the other hand, Velleius says (ii. 20), "cum ita civitas Italiae data esset, ut in octo tribus contribuerentur novi cives;" *i.e.* the new citizens were confined to eight of the existing tribes. This may, as Kubitschek supposes, refer to the Plautio-Papirian plebiscitum of 665, by which the revolted allies gained the franchise (Cic. *pro Arch.* 4, 7). Kubitschek, reading *δέκα πέντε* for *δεκατεύοντες*, thinks that he can show by inscriptions that the faithful allies in accordance with the Lex Julia were enrolled in fifteen, *i.e.* in a minority, of the thirty-one rustic tribes, while the revolted allies by the Plautio-Papirian law were enrolled in half of the remaining sixteen, viz. Aniensis, Clustumina, Fabia, Falerna, Galeria, Pomptina, Sergia, and Voltinia. The theory is undoubtedly ingenious, and both Kubitschek and Beloch (*Der italische Bund*) make out a very specious case. But the objections are twofold. (1) The evidence of inscriptions, besides being by the nature of the case incomplete, breaks down, as Mommsen shows (*Hermes*, xxii. p. 101 ff.), in several points, since not only are revolted states found in Horatia, Cornelia, and Oufentina, but the faithful allies are found practically spread over all the rustic tribes. (2) Whatever may have been the original distribution into tribes, the restriction was certainly only temporary. Complete equality for the new citizens became part of the democratic programme; and apart from the abortive attempt of Sulpicius, Cinna, apparently twice (Liv. *Epit.* lxxx. and lxxxiv.), gave them the equal franchise, while Sulla almost certainly acquiesced in the arrangement (Liv. *Epit.* lxxxvi). Though, however, the inscriptions, on which Kubitschek and Beloch rely, do not prove all that they suppose, they do nevertheless show that an attempt at grouping neighbouring territories together was still kept up after the Social war; and so we find Aniensis prevalent among the Frentani, Clustumina and Lemonia in Umbria, Fabia and Pomptina in Lucania, Sergia among the Marsi and Paeligni, Voltinia among the Samnites, Papiria in Latium, Menenia in Campania, Aemilia among the Aurunci, Galeria among the Hirpini, and above all Pollia in the Cis-Padane portion of Gallia Cisalpina, which now received the franchise with the rest (cf. in Grotefend Parma, Mutina, Forum Cornelii, Forum Fulvii, Faventia, Pollentia, and many other towns). But, notwithstanding those local groupings, the general result of the distribution of Italy into the tribes was such that the parts of any one tribe could only be given by an enumeration of the different civitates contained in it. Cf. Cic. *de pet. Consul.* 8, 30: "Postea totam Italiam fac ut in animo ac memoria tributim descriptam habeas."

The Tribe and its members.—The tribe, as has been stated, was primarily a division of the land held in Quiritarian ownership, but it was also applied in a personal sense to the owners of the land, and involved certain rights and privileges, duties and responsibilities. Originally only land-owning citizens (*adsidui*) were members of the tribes, but within this limit both patricians and plebeians belonged to them. For later times the presence of patricians in the tribes is abundantly attested; but for the earliest times also the patrician gentile names of the sixteen earliest rustic tribes are conclusive evidence of the same thing, as well as the traditional origin of the Claudian tribe. Membership of a tribe then at first belonged to those citizens who owned land in it, as well as to their agnate descendants; and accordingly, while the tribe, as a division of the land, was immutable, the tribe as a category of persons might be changed, since in theory transfer or loss of landed property implied transfer or loss of tribe. But this strict connexion between landed property and membership of the same tribe must soon have been modified, (1) by those cases in which a citizen owned property in more than one tribe; (2) where *civitates sine suffragio* were admitted to the full franchise, and their territory assigned to some one tribe. In the first case, as personal membership of more than one was impossible, probably the censor *de iure*, but the citizen himself *de facto*, decided to which he should belong. In the second case the citizens of the newly-enfranchised *civitas* would as a rule take the tribe of the territory, even if their landed property lay elsewhere (Liv. xxxviii. 36). As time went on, too, the tendency became greater for membership of a tribe to become hereditary, and so practically unchanging; in so far, that is, as no alteration was caused by the censor's interference. Such interference would at once take place whenever the qualification of landed property was lost, a loss which was at first followed by loss of tribe and transfer to the *aerarii* (Liv. iv. 24, &c.); while, as the disciplinary power of the censorship was developed, the censors acquired the power, by way of punishment for various moral delinquencies, of treating land-owning citizens as though they were not *adsidui*, and placing them also among the *aerarii* (cf. Liv. xxiv. 18, &c.). Conversely, of course, if the disqualification of either kind was removed, citizens would pass from the *aerarii* into a tribe (*ex aerariis eximere*, Cic. *de Orat.* ii. 66, 268). Till 442 A.U.C. only *adsidui* had been members of the tribes, nor was there any distinct difference of rank *de iure* between the urban and rustic tribes, though probably *de facto* from an early period the former were considered as less honourable. But when the *tributum*, which, as will be seen below, was in close connexion with the tribes, was made into a tax assessed on movable as well as immovable property, the connexion between landed property and tribe-membership was weakened, a tendency which was perhaps reflected in the revolutionary measure of Appius Claudius, the censor in 442, by which all citizens, *proletarii* as well as *adsidui*, were enrolled indiscriminately in the tribes (Liv. ix. 46). Whatever may have been the motive of this measure, it was of no long duration, as in 449 Q. Fabius Rullianus, while admitting landless citizens to the tribes, limited them to the four urban tribes, while the landed proprietors still retained exclusive possession of the rustic tribes (Liv. ix. 46; cf. Plin. *H. N.* xviii. § 14, "rusticae tribus laudatissimae eorum qui rura haberent; urbanae vero in qua transferri ignominiae esset, desidiae probro;" Cic. *de Leg. Agr.* ii. 29, 79; Dionys. xix. 18, *τὰς ἀτίμους τῶν φυλῶν*). As a consequence of this measure, all Roman citizens were from this time *ipso facto* members of a tribe, and, accordingly, as it was inadmissible for the censors to deprive any one of his citizenship (Liv. xlv. 15), their disciplinary power was limited to degrading from the rustic to the urban tribes, and this is all that is meant henceforth by the phrases "tribu movere," "aerarium facere." (For a possible instance of the converse process, see Cic. *pro Balb.* 25, 27.) From this time, too, the tribe was regularly added to the full citizen's name, being placed between the father's name and the cognomen, *e.g.* Ser. Sulpicius Q. F. Lemonia Rufus (Cic. *Phil.* ix. 7, 17; *ad Fam.* viii. 8). A consequence of this distinction in rank between the urban and rustic tribes was of course the surrender of any attempt hitherto made at maintaining equality of number among the members of the tribes. While the urban tribes must have contained far more than the rest, we have already seen a similar tendency among the rustic tribes themselves; and the tribes in the immediate neighbourhood of Rome, such as Horatia, Lemonia, Menenia, Romulia, &c., seem to have received few new members, and to have remained the strongholds of the nobility. Whether, as Mommsen thinks is implied by Liv. xl. 51, the censors had the power of enrolling certain categories of non-land-owning citizens in the rustic tribes, must be left uncertain; but there was certainly one class of men, the *libertini*, whose position in the tribes differed from that of the other citizens. At first, we may assume, they were admitted on the same conditions as the rest, but probably in the censorship of C. Flaminius (534 A.U.C.) they were all, whether land-owners or not, limited to the urban tribes (Liv. *Ep.* xx.). Before 586 we find that this was relaxed in the case of those who had a son five years old, or landed property to the value of 30,000 sesterces (Liv. xlv. 15), though it was apparently open to the censors to disregard this rule; and we even find Ti. Gracchus, censor in 586, limiting all freedmen to one tribe to be settled by lot (Liv. *l. c.*; Cic. *de Or.* i. 9, 38). After the Social war, equality in the tribes for the *libertini* was part of the popular programme; but though it was carried by Sulpicius (Liv. *Ep.* lxxvii.), and again by Cinna (Liv. *ib.* lxxxiv.), Sulla restored the former state of things; and neither Manilius in 687 (Cic. *pro Corn.* in Ascon. p. 64), nor Clodius in 695 (Cic. *pro Mil.* 33, 89), were able to effect a change, and the disability of *libertini* seems to have continued under the Empire, since though they were members of the urban tribes, so far as the corn distribution was concerned, the fact that the tribe does not, with few exceptions, appear in the names of *libertini*, probably, as Mommsen argues, proves some inferiority of position. But, with the exception of the *libertini*, we find that, after the Social war, all citizens alike were admitted into the rustic tribes. We have seen that even in earlier times the personal tribe of the newly-enfranchised *cives sine suffragio* followed that to which the territory of their native city was assigned (Liv. xxxviii. 36); and when after the war Italy was practically made into a complexus of fully-enfranchised municipia, each with its own territory, and that territory assigned to a tribe (cf. Cic. *pro Mur.* 20, 42), the inevitable result followed that personal membership in a tribe, irrespective of all other considerations, was decided in the case of each individual, provided that he was *ingenuus*, by his *domus* or *origo* in one of these municipalities. In fact, from this time the Roman civitas had essentially changed its character: Rome was no longer one *civitas* among others, nor even the head of a confederation of *civitates*; it was rather the "communis patria" of all Roman citizens, who were also with few exceptions (Cic. *Phil.* iii. 6, 15) *municipes* of some local community, and it was this local connexion which was marked by the tribe. So closely indeed were membership in a tribe and incorporation in a municipium connected, that where, as in the most ancient rustic tribes within the original ager Romanus, Quiritary ownership of land was unconnected with membership in a municipality, some regrouping of land was necessary, the land belonging formerly to these tribes being assigned to the territory of neighbouring towns, and forming part of the tribe to which those towns belonged; while again in parts, where, as in Picenum, the municipal system had not been developed, probably the praefecturae, as a substitute, assumed municipal rank (Mommsen, *Staatsr.* iii. p. 783). How entirely the tribe was made dependent on the *domus* or *origo* is shown by the fact that a Roman citizen, if transferred to a colony—*e.g.* a legionary veteran settled in a military colony—took the tribe of his new *domus* (cf. a number of cases collected by Grotefend, p. 15 ff., in which two tribes are given in inscriptions, *i.e.* of the new and the original *domus*). From the time when the old distinction between the urban and rustic tribes was thus abolished, another of a less definite character gradually grew up, and was certainly observed during the Empire. While the connexion between a tribe and a municipal territory only applied to the rustic tribes, the urban tribes now contained citizens who, though free-born, were on account of some personal grounds excluded from the former: *e.g.* (1) sons of *libertini* are often found in Palatina or Collina; (2) individuals of Greek birth, personally admitted to the franchise, frequently appear in Collina; (3) illegitimate children are found in Collina, Suburana, and Esquilina; (4) actors and sons of actresses appear in Esquilina; while (5) at the great trading ports, such as Ostia and Puteoli, so many individuals are proved by inscriptions to have belonged to Palatina, that it was formerly supposed that these towns were assigned to that tribe. This, however, was not the case, since Ostia belonged to Voturia, and Puteoli probably to Falerna, and it is a not improbable conjecture of Mommsen that these members of Palatina were Greek traders or their sons who had been admitted to the franchise. The fact that these urban *tribules* were never admitted to the legions or praetorian cohorts, but only to the *cohortes urbanae*, seems to place them half-way between the rustic *tribules* and the libertini (Mommsen, *Staatsr.* iii. p. 443; *C. I. L.* vi. 2389–3884).

Tribes in the Provinces.—With regard to the provinces, it has to be remembered that all provincial land, except in cases where the *ius Italicum* was specially conferred, was *ager publicus*, and therefore necessarily stood outside the tribes. But as soon as the practice began of conferring the Roman franchise upon provincial towns, since, with the exceptions already alluded to, there was no *territorium* on which to attach the tribe, which nevertheless was indispensable to Roman citizens, it was used, as applied to provincials, in a purely personal sense, though in strict analogy with the territorial tribe in Italy. In other words, at the time when a civitas was admitted to the full franchise, the tribe to which its citizens were to belong was specified; while probably, though perhaps not quite so early, even in non-Roman towns, such as Latin colonies, &c., the rule grew up that all individuals within them, who acquired the franchise, should be enrolled in some specified tribe. Prior to the time of Augustus it is hardly possible to find any fixed rules, or any definite grouping, and we find *e.g.* the colonies of Julius Caesar in Gallia Narbonensis assigned to Papiria (Narbo), Teretina (Arelate), Pupinia (Baeterrae), and Aniensis (Forum Julii); but Augustus appears to have aimed at somewhat greater uniformity, and to have generally assigned Galeria for the Spanish provinces, Voltinia for Gallia Narbonensis (see Kubitschek, *de Orig.*, &c., p. 204), Sergia for Dalmatia, Arnensis for Africa, and Collina for the Oriental provinces. Later emperors, though observing a certain method in the matter, took a somewhat different course, and, instead of assigning certain tribes to certain provinces, seem to have made use of their own tribe in grants made by them of the franchise to provincials. Thus Claudius, whose family by a re-grouping of the Claudia tribus seems to have been transferred to Quirina, assigned his Mauritanian colonies Caesarea, Oppidum Novum, Rusuccurium, and Tipasa to that tribe (Grotef. p. 161 ff.); while later in his reign he gave the preference to the original tribe of his house, and so Colonia Agrippinensis, Savaria, Virunum, Celeia, and Juvavum, all belong to Claudia. The Flavian house again belonged, as springing from Reate, to Quirina, and accordingly we find all Flavian colonies, in all parts of the Empire, assigned to that tribe, while the prevalence of Quirina in the Spanish provinces is due to the fact that Vespasian gave the *ius Latii* to all Spanish civitates (Plin. *H. N.* iii. § 30). Though Trajan, as sprung from Italica, would naturally have belonged to Sergia, he assumed his adoptive father's tribe—Papiria (Nerva came from Narnia: see Kubitschek, p. 73), and we find all his colonies in Germany, Moesia, Dacia, and Africa assigned to that tribe (see Mommsen, *Ephem. Epigraph.* iii. p. 230 ff.).

The Tribes as organised for administrative and political ends.—The political activity of the tribes was probably not anterior to the Publilian law of 283 A.U.C. Their original aim was purely administrative, and had reference (1) to the census, (2) to the levy, (3) to the tributum and military pay. As to (1), there is no doubt that the tribes were primarily instituted by Servius as a basis for the census, which formed the essential part of his constitution. So Dionysius (v. 75) describes *τιμήσεις κατὰ φυλὰς τῶν βίων ἐνεγκεῖν* as *τὸ κράτιστον τῶν ὑπὸ Σερουΐου Τυλλίου κατασταθέντων νομίμων*, while Cicero (*de Legg.* iii. 3, 7) says of the censors, "populi partes in tribus discribunto; exin pecunias, aequitates, ordines partiunto" (see also the account of the census of 548 A.U.C. in Liv. xxix. 37, and Cic. *pro Flacc.* 32, 80). (2) The *locus classicus* for the relation of the tribes to the military levy is Polyb. vi. 20, from which it appears that the tribes were summoned one by one in an order appointed by lot (see also Val. Max. vi. 3, 4), four men being taken at every summons from each tribe, one for each legion, until the full number of four legions was made up, so that in theory there were to be an equal number of men in every legion from each tribe. See also Dionys. iv. 14, 2; Liv. iv. 46, where the levy was to be taken not from the whole people, but only from ten tribes. One consequence of all the tribes being represented equally in the army was that the Comitia tributa could on emergencies be held in camp (Liv. vii. 16). That in later times the equal proportion of troops from every tribe was given up, need hardly be said, but probably during the whole of the Republic the levy was in some way based on the tribes, and even under the Empire, though the recruiting now took place through all the provinces, the fact that none but Roman citizens were admitted to the legion still kept up a certain connexion between the levy and the tribes. (See Tac. *Hist.* iii. 58, and Suet. *Ner.* 44.) Only in cases of emergency were legions enrolled from the urban population (Tac. *Ann.* i. 31; and for the relation generally of the tribes to the army, see Mommsen, *Tribus*, pp. 132–143, who, however, has now given up the attempt made there at arithmetical symmetry). (3) The derivation of Varro (v. 81), "tributum dictum a tribubus quod ex pecunia quae populo imperata erat, tributim a singulis exigebatur," is confessedly not correct (for the converse derivation, see Liv. i. 43), and *tributum* most probably comes from *tribuere*, and means that which is partitioned among the citizens. Since, however, the *tributum* was originally levied only upon land, and all *adsidui* were in the tribes, the collection of the tax was naturally and most conveniently made *tributim* (Dionys. iv. 14). Apparently, however, from such passages as Liv. i. 41 and Dionys. iv. 19, the tributum was first levied on the property of the classes as shown by the census (usually "1 pro mille," Liv. xxix. 15); but since the classes and their centuries only came together in the Campus Martius and had no local connexion, it was collected from the various tribes by the *tribuni aerarii*, who had the tribal register showing to what class each tribesman belonged. The primary object of the tributum was to provide pay for the soldiers in war. Up to the year 348 A.U.C. (Liv. iv. 59; Dionys. iv. 19) the stipendium was not paid by the state, but apparently by the tribes themselves, the *tribuni aerarii* being the means both of collecting the money from their *tribules* and paying it to the soldiers whom the tribe provided (Fest. p. 234). After 348 the stipendium was paid by the aerarium, usually at the end of the campaign, after the soldiers had returned home, and it was paid *tributim* by means of the *tribuni aerarii* (Varr. v. 184; Fest. p. 2; Plin. *H. N.* xxxiv. § 1). When, however, campaigns were prolonged beyond a single year, payment was made in camp by the quaestor and connexion with the tribes and *tribuni aerarii* ceased. To carry out these objects a certain organisation was necessary. The tribes were presided over by officials, called at first *tribuni aerarii* from the most important of their functions. Perhaps originally there was one for each tribe. In course of time, as the duty of paying the soldiers was taken from them, and when the reform of the Comitia Centuriata in 534 A.U.C. essentially altered the constitution of the tribes, the name probably disappeared from official language, and that of "curatores tribuum" took its place, while in all probability the number of these was ten for each tribe, five (one for each class) among the seniores, and five for the juniores. To this later period are probably to be referred the words of Dionysius (iv. 14), *ἡγεμόνας ἐφ' ἑκάστης συμμορίας*. It is true that we find eight curatores for the *tribus Sucusana iuniorum* (*C. I. L.* vi. 199, 200; Orelli, 1740, &c.); but these inscriptions date from Vespasian's time, and no doubt the connexion of the tribes with the corn-distribution (see below) and the addition of certain corpora of freedmen (cf. corpus Julianum, Wilm. 1703) altered in many respects the republican organisation. These curatores tribuum were annually elected (*C. I. L.* vi. 144); and if, as is probable, they were the body of men who under the old and nearly obsolete name of *tribuni aerarii* were added as a third decuria of judices by the Lex Aurelia of 684 A.U.C., there must have been a certain property qualification for the office, a survival possibly of the time when they may have had to provide security for the money which passed through their hands (see Mommsen, *Tribus*, pp. 44 ff. and 77 ff.; *Staatsr.* iii. p. 189 ff.). As far as political activity is concerned, the tribes have no importance prior to 283 A.U.C. Up to that time, the tribuni plebis were elected by the plebs assembled according to curies. Dionys. vi. 89, and Cic. *pro Cornel.* in Ascon. p. 76, say in the Comitia Curiata, *i.e.* by patricians as well as plebeians; but Mommsen is probably right in discrediting this statement (*Staatsr.* iii. p. 151). But the local associations which were so much stronger in the tribes made a change desirable to the plebeians; and accordingly the Lex Publilia (Liv. ii. 56) enacted "ut plebeii magistratus tributis comitiis fierent" (cf. also Dionys. ix. 41). That the Comitia tributa, however, in their later sense existed at this date, is extremely improbable; and again we must follow Mommsen in interpreting these statements to mean that the tribunes were now elected by the land-owning plebeians assembled in their tribes (see Zonaras after Dio Cassius, vii. 17, *ἐξεῖναι τῷ πλήθει καὶ καθ' ἑαυτὸ συνιέναι καὶ ἄνευ ἐκείνων* (the patricians) βουλεύεσθαι καὶ χρηματίζειν); and we have already seen reason to believe that it was on this occasion that the 21st tribe, Clustumina, was created. How the concilium plebis gradually assumed wider political activity by the Valerio-Horatian law of 306 (Liv. iii. 55) and the Horatian law of 465, and how eventually the Comitia tributa, *i.e.* the whole populus, patricians and plebeians together, assembled by tribes, became established as one of the recognised organs of legislation, is described in the article on COMITIA TRIBUTA (see also Mommsen, *Röm. Forsch.* i. p. 150 ff., and *Staatsr.* iii. p. 321 ff.); and it is only necessary to lay stress here on the particular features of the assemblies by tribes which made them fitter organs of government than the more cumbrous Comitia Centuriata, viz. the local associations among the members, which made previous informal deliberation possible, and rendered the members more accessible to the influence of leading men. It was mainly perhaps the desire to transfer this local influence into the Comitia Centuriata which caused the reform of that assembly in 534 A.U.C. (See COMITIA CENTURIATA, and Mommsen, *Staatsr.* iii. p. 271 ff.) The tribes, as we have seen, had always been the bases of the census, but hitherto the members of each tribe had been equally distributed among all the centuriae, so that each century was in theory composed of an equal number from each tribe; and so, the *tribules* being scattered, local associations had no means of finding expression. What the reform did was briefly to combine the tribal with the centurial arrangement (Liv. i. 13). Each tribe was divided into *seniores* and *iuniores*, and each of these divisions again into five centuries, corresponding with the five property classes. Each century therefore consisted entirely of members of the same tribe, and was in fact, as Cicero says (*pro Planc.* 20, 49), "unius tribus pars:" and as the 70 centuries of the first class, or possibly the 35 centuriae iuniorum, drew lots for the privilege of voting first, we get such descriptions as "praerogativa Aniensis iuniorum" (Liv. xxiv. 7), "praerogativa Veturia iuniorum" (Liv. xxvii. 6, &c., and cf. Liv. i. 43; App. *B. C.* i. 59; Dionys. iv. 21, who describes the change as of democratic tendency).

Relation of Tribules to one another.—The tribes being originally local districts, the majority of their members were neighbours (Cic. *pro Sext. Rosc.* 16, 47), and were moreover constantly brought together for the various purposes for which the tribes were employed, and from this cause the connexion between them was naturally a somewhat close one. So in Ter. *Adelph.* iii. 3, 85, a *tribulis* is "homo amicus nobis, iam inde a puero." Cicero (*ad Fam.* 13, 23) speaks of Caninius as "amicus et tribulis tuus." Sometimes this *esprit de corps* showed itself in a traditional jealousy of some other tribe, as in the case of Papiria and Pollia (Liv. vi. 37), but more usually in the active support which *contribules* afforded one another (1) in ordinary life, (2) in elections. As to (1) we find a victim of Sejanus appealing for help to his *contribules*, "si semper apparui vobis bonus et utilis tribulis," &c. (Wilm. 1699). On the relation between *tribules* with regard to elections and canvassing, Cicero throws much light in the *pro Plancio* (16–18), while the fact that Vatinius failed to secure the vote of his own tribe Sergia is mentioned as an exceptional disgrace to him (*in Vat.* 15, 37; cf. also *pro Mur.* 33, 69). So again candidates give banquets *tributim* (Cic. *de pet. Consul.* 11, 44) and *spectacula* (*pro Mur.* 34, 72); while Suetonius says of Augustus, "Fabianis et Scaptiensibus tribulibus suis die comitiorum, ne quid a quoquam candidato desiderarent, singulis milia nummum a se dividebat" (*Aug.* 40). These passages show that, even after the Social war, a certain bond between the members of a tribe remained, and of course in earlier times it was still stronger. When we remember that the tribes were constantly coming together to elect their own officers (Orelli, 3094), or judices for the extraordinary courts according to the Lex Plautia (Ascon. *in Cornel.* p. 79), or the centumviri (Fest. p. 54), or to celebrate supplicationes, &c., decreed by the senate (Liv. vii. 28), it is easy to understand how well adapted the Comitia tributa might easily be made, by virtue of all these local associations and sympathies in the hands of skilful leaders, for carrying out a democratic or anti-senatorial policy.

Ordo Tribuum.—That there was a certain definite order of tribes, we know from several passages; although what the order was, we are very imperfectly informed, and are unable to say on what it depended. It was properly applied to decide the order of voting in the Comitia tributa. In this order the four urban tribes came first, arranged as follows: Suburana, Palatina, Esquilina, Collina (Varr. v. 56; Fest. p. 368). This, as we have seen, was originally an order of rank; and that it was retained till the time of Cicero, we may infer from *de Leg. Agr.* ii. 29, 79, "a Suburana usque ad Arniensem nomina vestra proponat." Under the Empire, this was to a certain extent changed, and Palatina and Collina appear to rank above the rest, while the order in connexion with the corn-distribution is Palatina, Suburana, Esquilina, Collina (*C. I. L.* vi. 10211). Of the rustic tribes we only know for certain that Romulia came first (Cic. *l. c.*; Varr. *l. c.*; *C. I. L.* vi. 10211), while Voltinia was probably second (it is so in the inscription referred to), and Arniensis was the last (Cic. *l. c.*).

The Tribes under the Empire.—Under the Empire, or at least since 15 A.D., the administrative and political importance of the tribes disappears (Tac. *Ann.* i. 15). From this time in the provinces and in Italy, membership in the tribe was merely the formal mark of Roman citizenship. In the city itself the tribes still had a purpose, but it was neither political nor administrative. Even in republican times the tribes had usually been made the vehicle by which presents of money or corn were given to the citizens either by the state or by individuals (Ascon. *in Mil.* p. 36; Appian, *B. C.* ii. 143; Cic. *ad Att.* i. 16, 13, &c.). This now became their chief and indeed their only function. How frequent and how extravagant the largesses and *congiaria* given under the Empire were, is sufficiently well known (see Marquardt, *Staatsv.* ii. pp. 114 ff.); but what is important to remember here is that these presents were limited to the citizens resident in the capital. This is expressly stated in some cases (cf. App. *B. C.* ii. 147), and is implied in a great many more (Suet. *Jul.* 83, *Tib.* 20; *Calig.* 17; Tac. *Ann.* ii. 42, &c.), while the phrase *plebs urbana* used in this connexion is another proof, if proof were needed (cf. *Mon. Ancyr.* 3, 16, "trecentis et viginti milibus plebis urbanae sexagenos denarios viritim dedi"). These money presents, as we know, were given *tributim.* So Appian (iii. 23) says that the legacy of Julius Caesar was given by Augustus to the curatores tribuum, while a comparison between Tac. *Ann.* i. 8 and Suet. *Aug.* 101, and Tac. *Ann.* xii. 31, shows that money given *viritim* was given to the tribes (cf. also Mart. viii. 15, 4). But while the *congiaria,* however frequent, were of irregular occurrence, there was another means of relieving the wants of the urban population, which was regular, and indeed of monthly occurrence, viz. *frumentationes* or grants of corn, either *gratis* or at rates lower than the market price, and it was in connexion with these regular *liberalitates* that the tribes gained a new meaning and a new organisation [see FRUMENTATIO]. That, like the money-gifts, they were limited to the city, is abundantly attested. Thus, in the *Mon. Ancyr.* "plebs urbana" is synonymous with "plebs quae frumentum publicum accipiebat;" an inscription (*C. I. L.* vi. 943) speaks of "plebs urbana quae frumentum publicum accipit." (See also App. ii. 120, &c.) Probably in theory they could be claimed by every citizen resident at Rome (Sen. *de Benef.* 4, 28); and the libertini, limited almost entirely, as we have seen, to the urban tribes, were certainly not excluded (Dionys. iv. 24). Probably, however, *de facto,* if not *de iure* (Mommsen thinks from Dig. 32, 35, that it was also *de iure*), members of the senatorial and equestrian orders were not included in the list of recipients. This seems to follow as well from the phrase "plebs urbana," as from the passages where the tribes are distinguished from the more illustrious classes (cf. Stat. *Silv.* iv. 1, 25; Dio Cass. lxi. 7, &c.). There seems also to have been a maximum number fixed from time to time (Trajan, *e.g.,* raised it: Plin. *Panegyr.* 51, and cf. *C. I. L.* vi. 955), as a check upon the claims of those who were not really entitled to receive the corn (cf. Suet. *Jul.* 41; Dio Cass. lviii. 10; Suet. *Aug.* 40), and each recipient was furnished with a ticket (*tessera frumentaria*). The recipients of corn then being the members of the thirty-five tribes resident in Rome, and the monthly distribution being in accordance with old custom arranged *tributim,* the *tribules* not unnaturally formed themselves into corporations analogous to the collegia of which so much is heard under the Empire (cf. Wilm. 679 and 888, "plebs urbana xxxv tribuum," and 1700, "plebs urbana quae frumentum publicum accipit et tribus [xxxv];" also Dig. 32, 35). While the corn seems to have been given out at the Porticus Minucia (Apul. *de Mund.* 35), there were probably granaries for each tribe (cf. Orelli, 3214, "horrearius plebis et tribus Palatinae," and Tac. *Ann.* xv. 18); and it is possible that the corn for a whole tribe was received from the curator annonae at the Porticus Minucia, and then taken to the tribal granary for distribution among the *tribules.* The tribes in this narrower sense differed from the other collegia apparently only in their origin and in the greater number of their members. That there was no common chest is due to the fact that the common store of corn took its place, but we find the *seniores* and *iuniores,* into which the tribes were still divided, entitled "corpora" (Wilm. 1703–1736; *C. I. L.* vi. 198, &c.), while they have the officials usual in a collegium, scribae and viatores (*C. I. L.* vi. 10215), apparitores (Wilm. 1705), accensi (Orelli, 3062), honorati and immunes (Orelli, 3062, 3096): they had common burial-places (*C. I. L.* vi. 10214), and were occasionally remembered in the testament of a rich tribulis (Wilm. 1705). As this organisation was confined to the plebs urbana, the four urban tribes were naturally by far the most numerously represented, and extant inscriptions relate principally to them, and especially to Palatina and Suburana. But all the tribes shared in the organisation, as is shown generally by the phrase "plebs urbana xxxv tribuum," while in particular Romulia and Voltinia (*C. I. L.* vi. 10211), Claudia (Orelli, 3062), Oufentina (Wilm. 1709), and Velina (Pers. v. 73) are specially mentioned in this connexion. An inscription unfortunately incomplete gives us some idea of the proportion of members in the urban and rustic tribes (*C. I. L.* vi. 10211). In Palatina the number of *tribules* (whether of permanent members, or, as is more probable, of members newly admitted within a certain period) is 4191, in Suburana 4068, in Esquilina 1777, in Collina 457, in Romulia 68, and in Voltinia 85. In the course of time, though it was probably not originally contemplated, it became possible even for non-citizens to buy the *tessera frumentaria,* and so a place in the tribe (cf. Juv. vii. 171), and in this way "tesseram emere" (Dig. 5, 1, 52) and "tribum emere" (Dig. 32, 1, 35) came to be convertible terms; and the custom of thus buying a place in a tribe became widely spread, and was frequently resorted to by the rich as a convenient way of providing for old servants and retainers (cf. Dig. 32, 35). So far indeed was this carried that we find a boy of 18 years old having a place in the Esquilina seniorum (Orelli, 3093). Whether membership in a tribe was in these cases bought from individual members, or, as is more probable, from the tribe itself as a corporation, cannot be decided with certainty. A theory put forward by Mommsen in his early monograph on the Roman tribes, though he has since given it up, deserves to be mentioned as not improbable, though perhaps not capable of proof. The corn was at first given, he supposes, not gratis, but at a moderate price, and practically all bona-fide citizens resident in the city participated in the privilege. Gradually, however, within this larger body, a certain number of the poorer citizens received their corn free by means perhaps of *tesserae nummariae* (Suet. *Aug.* 41), and it was this smaller number of persons who became organised in close corporations which in the course of time appropriated the names of the tribes. On this theory the numbers mentioned in the inscription above referred to would be those of the free recipients, not of the tribesmen generally. Hirschfeld, on the other hand (*Philologus,* xxix.), denies that either the *congiaria* or the *frumentationes* were given by means of the tribes at all.

Literature.—Mommsen, *Die römischen Tribus,*

&c., Altona, 1844; *Staatsrecht*, iii. pp. 95 ff., 161 ff., 434 ff., and 779 ff.;—Huschke, *Die Verfassung des Königs Servius Tullius*; Grotefend, *Imperium Romanum tributim descriptum*, 1863; Kubitschek, *de origine et propagatione Tribuum*; Id. *Imperium Romanum tributim discriptum*, 1889;—Beloch, *Der italische Bund*; *Hermes*, xxii. p. 100 ff. [E. G. H.]

TRIBU'TUM, as paid by Romans, took two forms.

(1) A charge on special classes of the Roman people. [Aerarii; Aes Hordearium.]

(2) An extraordinary source of revenue, opposed to the ordinary *vectigalia*. A property-tax, raised when needed, and chiefly to cover the expenses of war (*e.g.* Liv. vi. 32). When regular pay was given to the soldiers [Stipendium], tributum must have been raised practically every year. It was levied, not upon land held in *possessio* [Agrariae Leges], but only on property (*res mancipi*) held by a full title. If the tithes upon *possessio* were not properly paid, tributum would be both heavier and more frequent, since money must be found somehow, and we accordingly find the plebeians complaining at an early time, when they held little or no *ager publicus*, as if tributum were a burden chiefly upon them (Liv. iv. 60, v. 10). The pressure of it on poor people was all the more severe because debts incurred since the last census were not deducted from the valuation of a person's property, so that he had to pay tributum upon property which was not his own, but which he owed, and for which he had consequently to pay interest as well. Still, the tax might be repaid after successful wars (Liv. xxxix. 7; Dionys. v. 47); hence perhaps the complaints against generals who paid all the booty into the treasury instead of using it for repayment. The usual amount of the tax (*tributum simplex*) was one for every thousand of a man's fortune (Liv. xxix. 15); in B.C. 215 it was doubled (*tributum duplex*, Liv. xxiii. 31); and in B.C. 184 it was raised to three in a thousand (Liv. xxxix. 44). It was raised, according to the tribes instituted by Servius Tullius, by the *tribuni aerarii* (Liv. i. 43; Dionys. iv. 14, 15, and see Index), and was therefore not, like other branches of the revenue, let out to farm. It rested originally with the senate to appoint (*indicere*) when the tax should be levied, and to what amount. If, however, Livy (v. 12) can be trusted, the people could, with the aid of *tribuni plebis*, withhold payment. Later, the censors are found fixing the amount (B.C. 184; Liv. xxxix. 44). No citizen was legally exempt; the attempt of the augurs and pontiffs to claim exemption in B.C. 196 came to nothing (Liv. xxxiii. 42). Occasionally, on emergency, the tributum was not raised according to the census, but got in as best it could be, and it was then known as *tributum temerarium* (Festus, s. v. *Tributorum Collationem*). Examples would be the collection of B.C. 387 and that of 210 (Liv. xxvi. 35) repaid in 204 (Liv. xxix. 16). After the successful Third Macedonian War, tributum ceased *de facto* to be levied on Roman citizens ("unius imperatoris praeda finem attulit tributorum," Cic. *de Off.* ii. 22, 76; cf. Val. Max. iv. 3, 8, and Plin. *H. N.* xxxiii. § 56), although it might at any time have been re-imposed (Cic. *pro Flacco*, 32, 80). This state of things lasted till B.C. 43, when in the crisis of the civil wars a similar tax was again levied (Plut. *Aem. Paul.* 38). There has been great discussion as to whether this was a revival of tributum; but probably Dr. Merivale (*History of the Romans under the Empire*, c. 25) is right in saying that it was only "extraordinary contributions" (cf. Willems, *Sénat*, ii. 359; Marquardt, *Staatsverwaltung*, ii. 172). It could at most only be a *tributum temerarium*. Mommsen, however (*Staatsrecht*, iii. 229), maintains that the ordinary tributum was revived in B.C. 43. Whether tributum was raised after this date, there is no distinct proof, but it is unlikely, as the government of the emperors did its best to keep the Roman population free from taxes. The taxes imposed in Italy by Maximianus should rather be classed with the provincial tribute than with the old Roman tributum.

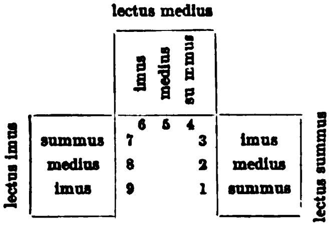
For the tribute of the provincials, see Vectigalia. [F. T. R.]

TRICLI'NIUM, properly a set of three couches round a dining-table, but commonly used also for the dining-room of a Roman house; for its usual position, see Domus. It was of an oblong shape, and according to Vitruvius (vi. 3, § 8) ought to be twice as long as it was broad. The same author (§ 10) describes triclinia, evidently intended to be used in summer, which were open towards the north, and had on each side a window looking into a garden. Many of the houses at Pompeii appear to have had summer dining-rooms opening to the viridarium. The woodcut in Vol. I. p. 894 shows the arrangement of the three couches (*lecti*, κλῖναι), from which the triclinium derived its name. These remain in the "House of Sallust," being built of stone. Three very beautiful *lecti tricliniares* in wood adorned with bronze have been more recently discovered, and are now to be seen in the Naples Museum (cf. Overbeck, *Pompeii*, fig. 227).

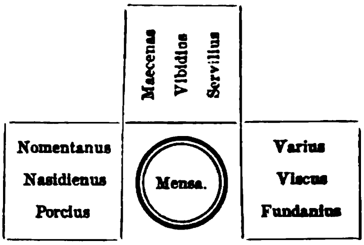
The articles Lectus, Torus, and Pulvinar contain accounts of the furniture used to adapt these couches for the *accubatio*, i.e. for the act of reclining during the meal. When so prepared for an entertainment, they were called *triclinia strata* (Caes. *B. C.* iii. 92; cf. Athen. ii. pp. 47, 48), and they were made to correspond with one another in substance, in dimensions, and in shape (Varro, *L. L.* ix. 47, ed. Müller). As each guest leaned during a great part of the entertainment upon his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of the man who lay behind him, and he was therefore said to lie in the bosom of the other (Plin. *Epist.* iv. 22). But we must not suppose with Lewis and Short that one actually rested on the other. Among the Romans, the usual number of persons occupying each couch was three, so that the three couches of a triclinium afforded accommodation for a party of nine. It was the rule of Varro (Gellius, xiii. 11) that the number of guests ought not to be less than that of the Graces, nor to exceed that of the Muses. Sometimes, however, as many as four lay on each of the couches (Hor. *Sat.* i. 4, 86). Among the Greeks it was usual for only two persons to recline on each couch. [Cena, Vol. I. p. 393.]

In such works of ancient art as represent a symposium, or drinking-party, we always observe that the couches are elevated above the level of the table. This circumstance throws some light upon Plutarch's mode of solving the problem respecting the increase of room for the guests as they proceeded with their meal (*Sympos.* v. 6). Each man in order to feed himself lay flat upon his breast or nearly so, and stretched out his hand towards the table (cf. Plaut. *Mil.* 760); but afterwards, when his hunger was satisfied, he turned upon his left side, leaning on his elbow. To this Horace alludes in describing a person sated with a particular dish, and turning in order to repose upon his elbow (*Sat.* ii. 4, 39; cf. *Carm.* i. 27, 6).

We find the relative positions of two persons who lay next to one another commonly expressed by the prepositions *super* or *supra* and *infra.* A passage of Livy (xxxix. 43), in which he relates the cruel conduct of the consul L. Quintius Flamininus, shows that *infra aliquem cubare* was the same as *in sinu alicujus cubare*, and consequently that each person was considered as *below* him to whose breast his own head approached. On this principle we are enabled to explain the denominations both of the three couches, and of the three places on each couch.



Supposing the annexed arrangement to represent the plan of a triclinium, it is evident that, as each guest reclined on his left side, the countenances of all when in this position were directed, first, from No. 1 towards No. 3, then from No. 4 towards No. 6, and lastly, from No. 7 towards No. 9; that the guest No. 1 lay, in the sense explained, *above* No. 2, No. 3 *below* No. 2, and so of the rest; and that, going in the same direction, the couch to the right hand was *above* the others, and the couch to the left hand *below* the others. Accordingly the following fragment of Sallust (*ap.* Serv. *in* Verg. *Aen.* i. 698) contains the denominations of the couches as shown on the plan; there were, however, only seven guests present, so that two places were vacant, and these were probably 3 and 6: "Igitur discubuere: Sertorius (*i.e.* No. 5) inferior in medio; super eum L. Fabius Hispaniensis senator ex proscriptis (No. 4): in summo Antonius (No. 1); et infra scriba Sertorii Versius (No. 2): et alter scriba Maecenas (No. 8) in imo, medius inter Tarquinium (No. 9) et dominum Perpernam (No. 7)." On the same principle, No. 1 was the highest place (*Locus summus*) on the highest couch; No. 3 was Locus imus in lecto summo; No. 2, Locus medius in lecto summo, and so on. It will be found that in the following passage (Hor. *Sat.* ii. 8, 20–23) the guests are enumerated in the order of their accubation—an order exhibited in the annexed diagram.



Fundanius, one of the guests, who was at the top relatively to all the others, says:

> "Summus ego, et prope me Viscus Thurinus, et infra,
> Si memini, Varius, cum Servilio Balatrone
> Vibidius, quos Maecenas adduxerat umbras.
> Nomentanus erat super ipsum, Porcius infra."

That Maecenas was in the place of honour (No. 6) is evident from the fact that the dinner was given in his honour: that Servilius (No. 4) and Vibidius (No. 5) were next to each other is not less plain from the aside in *vv.* 33, 34. The host himself, Nasidienus, occupies the place No. 8, although No. 7 was the usual place for the master of the feast, because Nomentanus was put next to Maecenas, in order to point out to him the special dainties (*v.* 25). Cf. *Journ. of Phil.* vi. 219, and Palmer on Hor. *l. c.* No. 6 was the place of honour (*ὑπατικός*, Plut. *Quaest. Conv.* i. 3), not, as Lewis and Short still say, after Plutarch, that if a consul were present he might be able to attend to any business that might occur, but simply as being next to the host, a view which Plutarch also gives (cf. Becker-Göll, *Gallus*, iii. 376–386).

The general superintendence of the dining-room in a great house was entrusted to a slave called *tricliniarcha*, who, through the instrumentality of other slaves of inferior rank, took care that everything was kept and proceeded in proper order. [J. Y.] [A. S. W.]

TRIDENS. [Fuscina.]

TRIENS. [As.]

TRIERA'RCHIA (*τριηραρχία*). One of the two extraordinary public services to which wealthy Athenian citizens were liable (the other was the *προεισφορά*): it was classed among the liturgies (*λειτουργίαι*), but the requirement of it was as circumstances necessitated, and therefore it was not an *ordinary* or periodically recurrent (*ἐγκύκλιος*) liturgy. The object of it was to provide for the maintenance (and in some degree for the original equipment) of the ships of war belonging to the state. The person on whom this duty fell was called a Trierarch (*τριήραρχος*); and it would appear that in early times he was captain of the ship which he maintained.

The office of the trierarchy passed through four distinct forms or stages; and though in the remarks which follow it will be impossible to treat of them separately in all respects, the historical sequence will on the whole be preserved. The first stage was from the era of Themistocles to the Sicilian Expedition: during this period each ship was provided for by a single trierarch; the state was wealthy, and no difficulties seem to have been felt in the satisfactory discharge of the office. The second stage was from the Sicilian Expedition to

B.C. 358; two trierarchs to a ship were now the rule; a diminution in the wealth both of the state and of individuals was clearly the reason of this; the trierarchs found that practically more was thrown on them (though we have no reason to suppose an alteration in the nominal duties). From B.C. 358 to B.C. 340, the system of symmories was introduced into the trierarchy, whereby the number of trierarchs to a single ship was still further increased; and lastly, from B.C. 340 to the close of Athenian independence, the double trierarchy again became the rule, through a law carried by Demosthenes, though with what modifications from the old form we do not exactly know; the symmories, probably, were not altogether abolished.

I. The beginning of the trierarchy in the full and proper sense of the word dates from that large increase of the Athenian fleet which Themistocles persuaded the Athenians to make with the produce of the Laurian silver mines, very shortly before the invasion of Xerxes (Herod. vii. 144). Before that time the *naucraries* [NAUCRARIA] had furnished a ship apiece to the commonwealth (*i.e.* 48 altogether in Solon's time, 50 after the reform of Cleisthenes); the naucrarus, or head of the naucrary, would no doubt have a certain responsibility for the ship's maintenance, and would thus be in a position partly analogous to that of the trierarch afterwards; but the measure of Themistocles, through its enlargement of the fleet, gave an occasion for a large development of the individual services of rich men, in which services the Trierarchy proper consisted. So great indeed was the public enthusiasm at that era, that we find Cleinias, at the battle of Artemisium, providing not only the entire equipment of the ship, and the payment of the sailors, but even the ship itself of which he was the captain (Herod. viii. 17). But this was no part of the ordinary duty of a trierarch; though individual donations of triremes to the state are mentioned afterwards (Dem. *c. Meid.* p. 566, § 161; *c. Steph.* p. 1127, § 85); and the passage in the *Meidias* implies that such donations were sometimes expected from the rich. (It has, however, been doubted whether the donation of a ship, even in these cases, may not mean the donation of the equipment merely.) Generally speaking, the state provided the ship itself; the Council of Five Hundred (Βουλή) had the general duty of building ships (Dem. *c. Androt.* p. 599, § 18); but Aeschines (*c. Ctesiph.* § 19) speaks of the tribes being ordered to build them.

In Herodotus (*l. c.*; also viii. 46, 93) the name *trierarch* first occurs; in Thucydides (vi. 31) there is the first statement of their duties, as far as these are indicated by what was done in the Sicilian Expedition. Unfortunately, there are in this passage two considerable ambiguities. Thucydides says that the state furnished the "empty vessel" (ναῦν κενήν): are we then to understand that the state did *not* furnish sail, ropes, and oars, but that these are included among the apparatus (κατασκευαί) which the trierarchs provided? It must appear very strange if this was so; considering that in the *Knights* of Aristophanes, written only nine years before, it is spoken of as customary for the state to give the sail (ἱστίον, v. 918): and in the speech of Demosthenes *de Cor. Trierarch.*, delivered fifty-four years afterwards, it is said to be incumbent on the state to provide the apparatus (τὰ σκεύη) of a ship (p. 1229), *i.e.* the "sailcloth, tow, and ropes" (ὀθόνια καὶ στυππεῖα καὶ σχοινία, Dem. *c. Euerg. et Mnesib.* p. 1145, § 20). Can the state possibly have omitted to provide these things in the most splendidly-furnished expedition that ever issued from the Piraeus? Or, if all these were left to the trierarch, would Thucydides have thought it worth while to intimate specially that the trierarchs provided so small a matter as the figure-heads (σημεῖα)? Hardly; and we must therefore conclude that the "empty ship" includes the largest points of the equipment, while the trierarchs introduced such ornaments and improvements as were not of absolute necessity. (In Thucyd. vi. 8 also, the παρασκευὴ seems to be mentioned as something furnished by the state.)

Again, while Thucydides tells us clearly that the state paid the rowers, and that the trierarchs gave *additional* pay merely to the rowers on the upper bench (θρανῖται), who had the hardest work; it is not quite clear whether the state or the trierarchs paid the wages of the ὑπηρεσία (*i.e.* the servants and petty officers on board). A difference of reading complicates the question; but as Thucydides distinctly says that the trierarchs gave *additional* pay (ἐπιφορὰς) to the ὑπηρεσία, it seems implied that the state was the principal paymaster; and it is natural to suppose this to have been so (and it is confirmed by Thucyd. iii. 17). So far then the work of the trierarch was simply that of extending, for the sake of greater efficiency, the work done by the state; and this part of a trierarch's work was more or less voluntary. But to launch the ship from the harbour, to maintain it in full efficiency and restore it unimpaired, was a trierarch's absolute duty; an obligation expressed in the inscriptions quoted by Boeckh (*See-Urkunden*, p. 197) by the phrase, δεῖ τὴν ναῦν δόκιμον καὶ ἐντελῆ παραδοῦναι. This obligation as a rule ceased when a trierarch had held his office for a year; after which time, if his ship was still wanted for foreign service, so that he could not bring it back to the Piraeus, a successor would be sent out to him; and such an arrival was eagerly expected by the sailors, for a new trierarch brought fresh donations (Dem. *c. Polycl.* p. 1211, § 15). A trierarchy also was held to be terminated if the general furnished no pay to the sailors, or if the ship put into the Piraeus (it being then impossible to keep the sailors together); but the practice was not always consistent on these points (Dem. *c. Polycl.* pp. 1209, 1210, §§ 11–13; Isocr. *c. Callim.* § 60). On the other hand, a trierarch who through any accident was obliged to serve more than his year could charge the extra expense (ἐπιτριηράρχημα) on his successor, and bring an action to recover it if necessary (Dem. *c. Polycl.* l. c.).

The maximum number of ships of war was reached during the first form of the trierarchy, and the trierarchs (each bound to maintain an entire ship) numbered then 400, according to the treatise on the Athenian Republic ascribed to Xenophon (which probably was written in the first part of the Peloponnesian war). The

Anabasis (vii. 1, 27) confirms this number; and the calculation in Thucydides bears this out pretty nearly (comparing ii. 24 with iii. 17). Strabo (ix. p. 395) also says that there were originally 400 places for triremes in the Piraeus.

II. The *second form* of the trierarchy, in which two persons, called Syntrierarchs (*συντριήραρχοι*), shared the office, probably began after the failure of the Sicilian Expedition; but the first actual mention of it (Isocr. *l. c.*) is directly after the battle of Aegospotami. The syntrierarchy mentioned in Lysias, *c. Diogeit.* § 24, took place some time during the eight years which began B.C. 409, but at what exact date is uncertain. From this period onwards we have frequent mention of the trierarchy in the Attic orators; whose testimony, though valuable, is always liable to deduction on personal grounds. Thus, when the speaker in Isocrates (*l. c.*) boasts that he and his brother paid the wages of the rowers in the ship of which they were joint trierarchs, the statement, though perfectly probable, has not the same certainty as if given to us by an impartial historian. Much more definitely can the statement in Dem. *c. Meid.* p. 564, § 154, be challenged; where it is alleged that in the times of the syntrierarchy, "we, the trierarchs, had ourselves to provide crews for our vessels" (*τὰς ναῦς ἐπληρούμεθ' αὐτοί*). No doubt this sometimes happened; but the whole course of the speech against Polycles by the same orator (pp. 1208 *sqq.*) shows that, according to law, the state provided and paid the crews; and the same is implied in the passage of Isocrates just referred to. A careful examination will also show that in the second, as in the first, form of the trierarchy, the state was supposed to pay the *ὑπηρεσία* (servants and petty officers). It is true that Apollodorus (Dem. *de Cor. Trierarch.* p. 1229, § 6) says that he paid money to these himself; but whether as their full wages or as extra pay is not stated: whereas of his rivals he says, "They have not hired any *ὑπηρεσία*, though they claim to have had more than I;" from which the inference is plain that the state gave the hire. In affirming, however, the legal obligation of the state at this period (as in the first period) to pay the wages of crew and servants, it must be remembered that this obligation was by no means always properly discharged. (Cf. the orations of Demosthenes *against Polycles*, *de Coronâ Trierarchiae*, and *against Euergus and Mnesibulus*—the last of which was delivered at the beginning of the *third* trierarchical period.)

The syntrierarchy, during the period in which it prevailed, did not entirely supersede the older and single form. Numerous instances of single trierarchies occur between 411 and 358 B.C.; and in two passages of Isaeus (*Dicaeog.* § 54; *Apollod.* § 67) referring to this period, the single and double trierarchy are mentioned as contemporaneous. Apollodorus was sole trierarch (Dem. *c. Polycl.*) so late as B.C. 361. In the case of a syntrierarchy, the two trierarchs commanded their vessel in turn, six months each (Id. p. 1219), according as they agreed between themselves. Sometimes, however, a trierarch, or pair of syntrierarchs, would let out the whole duties of the office to a contractor. This (*μισθῶσαι τὴν τριηραρχίαν*) was a manifest and great abuse; the work was done inefficiently, and (what was worse) the contractors at times made use of their position, and reimbursed themselves against losses, by privateering on their own account, which led to reprisals on the part of the injured against Athens herself (SYLAE; Dem. *de Cor. Trierarch.* p. 1231, § 13). Such misdoings seem to have been imperfectly reported at Athens, and popular indignation was but little aroused by them; but when a defeat of the Athenian navy took place on one occasion, the trierarchs who had let their office out in this way were tried for their lives, as having deserted their post (Dem. *ib.* p. 1230). The capital sentence, however, was not inflicted, and it is even doubtful if they were punished at all. (See also notices of the practice of letting out the trierarchy in Dem. *c. Meid.* pp. 540, 564; the latter case falling under the system of symmories.)

III. In B.C. 358, the *third form of the trierarchy* began. The attempt of the Thebans upon Euboea in that year occasioned a great need of ships, which were at first supplied by voluntary effort under the urgent persuasion of Timotheus (Dem. *de Chersones.* p. 108, § 30); but as a consequence of this, Periander (Dem. *c. Euerg. et Mnesib.* p. 1145, § 20) introduced in the same year a law, whereby the symmories, already in use for the war-tax, were adapted under altered form to the trierarchy. These trierarchical symmories were the famous 1200, arranged in twenty symmories of 60 persons each (for further information as to whom, and as to their exact connexion with the war-tax symmories, see SYMMORIA). We find them already working in the archonship of Agathocles, 357 B.C. (Dem. *c. Euerg. et Mnesib.* p. 1152, § 44); though the syntrierarchy (as appears from this very speech) had not then been wholly disused, and may have continued some time longer.

The *intention* of the law of Periander was doubtless to increase the efficiency of the navy, by increasing the amount of property applicable to the purposes of the trierarchy (for it has been said above that there were only 400 trierarchs in the first form of the office, and doubtless there were not many more during the syntrierarchy). But the system was not properly managed; and the rich men soon found means to use it, not for the regulation of public burdens, but as a means of escaping from them. What was clearly necessary for its satisfactory working was that, when any number of joint trierarchs had the management of a ship, there should be a due admixture of rich and poor among them; and that the poor should not be too frequently and too largely called upon. But both these evils happened; and Demosthenes in his speech *de Symmoriis* (delivered, or perhaps only written, B.C. 354) in vain tried to introduce a better principle. He would have allowed, on occasions, a body of twelve to join in the office; but only under proper restrictions (*de Symm.* pp. 182, 183, §§ 16–21). Hyperides (ap. Harpocrat. *συμμορία*) complained that five or six wealthy men used to join in a trierarchy (the inscriptions quoted by Boeckh in the *See-Urkunden* mention three, five, six, and seven joint trierarchs); and lastly a law was passed allowing sixteen persons to join together for the purpose (Dem. *de Cor.* pp. 260, 261, §§ 102–105).

It has indeed been supposed, and is possible, that this was the very law of Periander; yet we can hardly think that the Athenians deliberately contemplated sixteen trierarchs to a ship as an ordinary arrangement; and the number sixteen does not specially fit in with symmories of sixty persons each, and was probably introduced on some subsequent occasion. Besides, the evidence is rather that the evil was an increasing one. Demosthenes (*de Cor.* l. c.) describes the final result in these terms: "I saw your navy going to ruin, and the rich earning immunity from other liturgies on the score of trifling expenditure in this, and persons of moderate income losing their property, and the city missing the opportunities of action," &c.

The group of citizens who joined in maintaining a single trireme was called *συντέλεια*, and the individual contributors *συντελεῖς*. (*Συντέλεια* and *συμμορία* are perfectly distinct terms, but the members of a *συντέλεια* were always members of the same *συμμορία*. If the arrangement proposed in Dem. *de Symm.* p. 183, § 20, had been carried out, which it never was, a *συντέλεια* would have been a fraction of a *συμμορία*, and the words of Demosthenes imply that it might then have been called a *small συμμορία*.)

Though the law of Periander practically diminished the burdens of the wealthy, reasons have been given above for thinking that it did not introduce that particular alleviation which is indicated in Dem. *c. Meid.* p. 564, § 154; namely, by taking away the duty of paying the crews from the trierarchs and putting it on the state. In all times the theory was probably the same on this point,—namely, state payment; but in practice the state was often behindhand; so that an orator, by pressing the practice on one side, and the theory on the other, might represent the matter pretty much as he chose.

IV. At last, in B.C. 340, Demosthenes was appointed superintendent of the navy (*ἐπιστάτης τοῦ ναυτικοῦ*) and carried a trenchant reform, which may be called the *fourth form of the trierarchy*. What however this was, we do not exactly know; for the law which is given in Dem. *de Cor.* p. 262, § 106 (under the heading *κατάλογος*), is no longer regarded as genuine, and the references to it in the orators are not quite easy to reconcile with each other. We must, however, conclude from Dem. *de Cor.* p. 261, § 104, that it did to a certain extent restore the syntrierarchy. Hyperides (*ap.* Harpocrat. *συμμορία*) describes it simply in this way: "When Demosthenes saw this, he proposed laws that the 300 should be trierarchs, and the trierarchies have become burdensome" (*νόμους ἔθηκε τοὺς τριακοσίους τριηραρχεῖν, καὶ βαρεῖαι γεγόνασιν αἱ τριηραρχίαι*). Aeschines (*c. Ctesiph.* § 222) tells us that the effect of the law was to reduce the number of ships in the Athenian navy by 65 (apparently from 365 to 300): this, of course, is the representation of an enemy. If 300 ships were needed for service, and two trierarchs were appointed for each, there would be 600 altogether, which is not consistent with what Hyperides says. But we must conclude that as a general rule (in spite of Thucyd. ii. 24) ships not actually employed in service had no trierarchs; and we have no mention at this period of Athenian history of any fleet numbering so many as 150 ships: thus the statement of Hyperides may be practically true, or very nearly so. Whatever the nature of the law, we have reason to believe that its effect was successful; not perhaps so much from the praises which Demosthenes bestows on it, as from the failure of his enemies (Aeschines, *l. c.*) and Deinarchus (*c. Dem.* § 7) to say any real harm of it. The words of Demosthenes (*de Cor.* p. 262) are, however, worth referring to: he tells us that during the whole war carried on after the law was in force, no trierarch implored the aid of the people (*ἱκετηρίαν ἔθηκε*), or took refuge in the temple of Artemis at Munychia, or was put into prison by the persons whose duty it was to despatch the fleet (*οἱ ἀποστολεῖς*), nor was any trireme lost at sea, or lying idle in the docks for want of stores and tackle, as under the old system, when the service (*τὸ λειτουργεῖν*) fell to the poor. It should be observed that Demosthenes (*de Cor.* p. 329, § 311) says that Aeschines was bribed by the leaders of the symmories to nullify the law; but these accusations of the orators against each other must not be taken too seriously.

V. *General observations.*—The inconveniences to which a trierarch was liable in case of inefficient performance of his duties will be seen from the last paragraph; but a reward also (*i.e.* a crown) was sometimes given to the most efficient, as appears from the speech on the *Crown of the Trierarchy*. The trierarchs were *ὑπεύθυνοι* (Dem. *c. Polycl.* p. 1222, § 52), or liable to give an account of the public property entrusted to them, and the public money which on occasions they had to disburse (Dem. *de Cor. Trier.* p. 1231): though Aeschines, forgetful of these facts, represents them as rendering account of their own private funds (*c. Ctesiph.* § 9).

Triremes were assigned by lot to the different trierarchs, as we learn from the epithet *ἀνεπικλήρωτοι* attached to some of the ships in the Athenian navy list (see Boeckh, *See-Urkunden*). The sacred triremes, the Paralus and the Salamis, had special treasurers (*Tamias*) appointed to them (Pollux, viii. 116); and on the authority of Ulpian (*ad* Dem. *c. Meid.* p. 686) it has been believed that the state acted as trierarch for each of them; but in the inscriptions quoted by Boeckh no difference is made between the trierarchs of the Paralus and of other vessels (*See-Urkunden*, p. 169). Some special expenses might no doubt be paid by the state in these cases.

The expenses of the trierarchy seem to have varied from about 40 minae (Dem. *c. Meid.* pp. 539, 540, §§ 77–80) to a talent (Dem. *c. Meid.* p. 564, § 154). A syntrierarchy would cost half this sum. Undoubtedly, therefore, the assertion of Isaeus (*de Dicaeog. hered.* § 10) that men had been trierarchs (or syntrierarchs) whose property was not more than 80 minae, was an exaggeration. Indeed, as a property of three talents was the minimum which rendered a citizen liable to the performance of a liturgy (Dem. *c. Aphob.* 833, § 63; Isaeus, *Pyrrh.* sub fin.), it is absurd to suppose that the trierarchy, the most burdensome of all, would be undertaken for a less sum. (Indeed, Boeckh says, "I am aware of no instance of liability arising from a property of less value than 500 minae.")

VI. *On the exemptions from the Trierarchy.*—By an ancient law, in force B.C. 355, no person, except the nine archons, could claim exemption from the trierarchy, who was of sufficient wealth to perform it, not even the descendants of Harmodius and Aristogeiton. [From Isaeus, *de Apoll. hered.* § 67, it appears that in the time of the single trierarchy no person could be compelled to serve a *second* time within two years after a former service (*δύο ἔτη διαλιπών*). The trierarchy was a ground of exemption from the other liturgies, any of which indeed gave an exemption from all the rest during the year next following that of its service: Dem. *c. Leptin.* pp. 459, 464, §§ 8, 24.]

Yet from other passages it appears that exemptions from the duty of the trierarchy were allowed in cases of which the above law takes no cognisance. Demosthenes (*de Symm.* p. 182, § 14) tells us that a person was exempt if *ἀδύνατος*, or incapable through sudden loss of wealth; so also were "wards, heiresses, orphans, cleruchi, and partnerships (*κοινωνικά*)." Of course, an heiress could only claim exemption while unmarried. Wards were free from all liturgies, during their minority, and for a year after their *δοκιμασία* (Lysias, *c. Diogeit.* 908). By *κληροῦχοι* are meant colonists, who, while absent by command of the state, could not perform a trierarchy. The meaning of partnerships (*κοινωνικὰ*) is doubtful, but probably it means the property of joint tenants, as brothers or coheirs, which had not yet been apportioned to them (Pollux, viii. 184).

VII. *On the legal proceedings connected with the Trierarchy.*—These were either between individual trierarchs, or between trierarchs and the state, and therefore in the form of a *Diadicasia.* They generally arose from a trierarch not delivering up his ship and her rigging in proper order, either to his successor or to the state. If he alleged that the loss or damage of either happened from a storm, he was said *σκήψασθαι κατὰ χειμῶνα ἀπολωλέναι.* Vessels or furniture on which a trial of this kind had been held, were said to be *διαδεδικασμένα.*

The presidency of the courts which tried matters of this sort was vested in the strategi, and sometimes in the superintendents of the dockyard, in conjunction with the *ἀποστολεῖς.* The senate also appears to have had a judicial power in these matters: *e.g.* we meet in various inscriptions with the phrase *οἵδε τῶν τριηράρχων, ὧν ἐδίπλωσεν ἡ βουλὴ τὴν τριήρη.* Boeckh conjectures that the trierarchs of whom this is said had returned their ships in such a condition that the state might have called upon them to put them in thorough repair, or to rebuild them, at a cost for an ordinary trireme of 5,000 drachmae. Supposing that they were not released from this liability by any decree of a court of justice, and that the rebuilding was not completed, he conceives that it must have been competent (in a clear and flagrant case) for the senate to have inflicted upon them the penalty of twice 5,000 drachmae, the technical phrase for which was "doubling the trireme" (*See-Urkunden*, p. 228).

The phrase *ὡμολόγησεν τριήρη καινὴν ἀποδώσειν*, which occurs in inscriptions, does not apply to an undertaking for giving a new trireme, but merely for putting one in a complete state of repair.

The phrase *φαίνειν πλοῖον* (Dem. *c. Lacrit.* p. 941, § 51), to lay an information against a vessel, is used not of a public ship, but of a private vessel, engaged perhaps in smuggling or privateering. [Phasis.]

The articles Leiturgia and Symmoria contain numerous references to the subject of this article.

(Cf. Boeckh's *Staatshaushaltung d. Athener* and *See-Urkunden*; Hermann's *Griech. Antiq.*; Gilbert's *Griech. Staatsalt.*; and Kennedy's translation of the orations of Demosthenes, Appendix.) [R. W.] [J. R. M.]

TRIEROPOEI (*τριηροποιοί*), a board at Athens, reckoned among the directors of public works (*ἐπιστάται τῶν δημοσίων ἔργων*, cf. Epistates), and having a treasurer (*ταμίας*) of their own. Their principal duty was to provide for the building of a certain number (probably twenty, cf. Diod. xi. 43) of new triremes every year. The name appears to occur only in Dem. *c. Androt.* p. 598, § 17; but they are clearly referred to in Aeschin. *c. Ctes.* § 30. In the latter passage we are told that they were neither an *ἀρχὴ κληρωτὴ* nor *χειροτονητή*, but belonged to those *οὓς αἱ φυλαὶ καὶ αἱ τριττύες καὶ οἱ δῆμοι ἐξ ἑαυτῶν αἱροῦνται τὰ δημόσια χρήματα διαχειρίζειν*: but it is clear from Demosthenes that the senate was in some way responsible for their conduct, a fact which is nowhere stated of the *τειχοποιοί* or other similar bodies. Combining the two accounts, it seems likely that they were appointed by the senate, one for each tribe, either as a committee of the Bouleutae themselves or as a subordinate body, and that they either chose their own treasurer or had one chosen for them by the senate, whose responsibility for its delegated authority was thus maintained. (Cf. Boeckh, *P. E.* p. 249 = *Sthh.*^{3} i. 316; *Seeurk.* p. 59; K. F. Hermann, *Staatsalterth.* §§ 126, 161.) [W. W.]

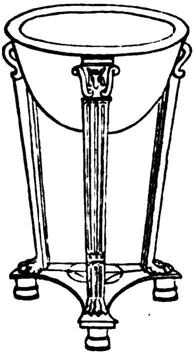
TRIGLYPHUS (*τρίγλυφος*, or *-ον*) is the name given to one of the alternating members of the frieze of the Doric order, the other being called Metopae. The triglyph is divided by two vertical cuts (*canaliculi*) into three bars (*μηροί, femina*); hence its name. It also has a semi-canaliculus at each side. The canaliculi have in early specimens a curved or ogier termination; later they are included by straight lines. Properly there should be one triglyph over each column, and one over each intercolumnium in the Doric order; at the corners this arrangement is slightly modified, so that the triglyph may adjoin the corner of the building. The triglyph seems always to have been painted blue. Triglyphs are supposed to have originated from an imitation of the visible ends of projecting beams in a wooden structure (Vitruv. iv. 2, 4). [E. A. G.]

TRIPOS (*τρίπους*), a tripod, *i.e.* any utensil or article of furniture supported on three feet. More especially—

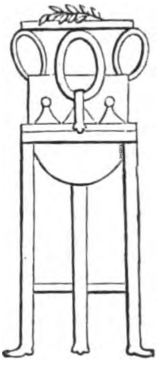
I. A tripod to receive the *λέβης* or caldron for boiling meat, &c. [Leber.] Such a tripod was called *ἐμπυριβήτης* (Athen. ii. p. 37 *f*; cf. Hom. *Il.* xxiii. 702; Soph. *Aj.* 1405): the scene from the story of Medea, painted on the vase which is shown in the cut under Chytra, Vol. I. p. 426, illustrates this use. The bronze caldron, however, and its stand were often made in one piece, and then the whole boiling apparatus was called *τρίπους* (Hom. *Il.* xviii. 344; *Od.* viii. 434), but also *λέβης τρίπους* (Aesch.

Fr. 1). Tripods were also used as stands for mixing-bowls with rounded bottoms (Athen. iv. p. 142; Psycter), and then were called ἄπυροι τρίποδες. For their use as prizes in games, cf. Lebes (Blümner, *Privataltert h.* 168; Id. in Baumeister, *Denkm.* p. 462).

II. A bronze altar, not differing probably in its original form from the tall tripod caldron already described. In this form, but with additional ornament, we see it in the annexed woodcut, which represents a tripod found at Fréjus (Spon, *Misc. Erud. Ant.* p. 118). That this was intended to be used in sacrifice may be inferred from the bull's head with a fillet tied round the horns, which we see at the top of each leg.



Tripod from Fréjus.

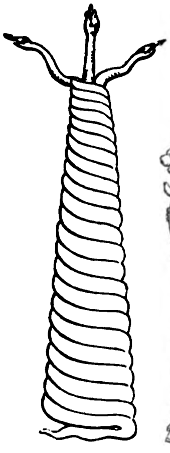


Delphic Tripod.

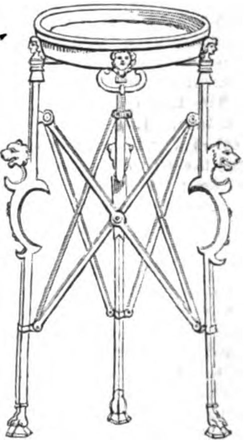
All the most ancient representations of the sacrificial tripod exhibit it of the same general shape, together with three rings at the top to serve as handles (οὔατα, Hom. *Il.* xviii. 378). Since it has this form on all the coins and other ancient remains which have any reference to the Delphic oracle, it has been with sufficient reason concluded that the tripod from which the Pythian priestess gave responses was of this kind. The right-hand figure in the above woodcut is copied from one published by K. O. Müller (Böttiger's *Amalthea*, i. p. 119), founded upon numerous ancient authorities, and designed to show the appearance of the oracular tripod at Delphi. Besides the parts already mentioned, viz. the three legs, the three handles, and the vessel or caldron (λέβης), it shows a flat, round plate, called ὅλμος [Cortina], on which the Pythia seated herself in order to give responses, and on which lay a laurel wreath at other times.

The celebrity of this tripod produced innumerable imitations of it (Diod. xvi. 26), called "Delphic tripods" (Athen. v. p. 199). They were made to be used in sacrifice, and still more frequently to be presented to the treasury both in that and in many other Greek temples (Athen. vi. pp. 231 f–232 d; Paus. iv. 32, § 1). [Donaria.] Tripods were chiefly dedicated to Apollo (Paus. iii. 18, § 5); to the Muses, as connected with Apollo (Hes. *Op.* 658), and to Heracles. In this connexion we may note the myth of the rape of the tripod by Heracles and its recovery by Apollo (Paus. iii. 21, 7; x. 13, 4), which often forms the subject of ancient works of art (cf. Baumeister, *Denkm.* p. 463). The woodcut in Vol. I. p. 158 shows the tripod as an attribute of Apollo. In conformity with the same ideas it was given as a prize to the conquerors at the Pythian and other games, which were celebrated in honour of Apollo (Herod. i. 144). At Athens the successful Choragus received a bronze tripod as a prize. The choragic monuments of Thrasyllus and Lysicrates, the ornamental fragments of which are now in the British Museum, were erected by them to preserve and display the tripods awarded to them on such occasions. For the tripod as the emblem of the xvvir, see Vol. I. p. 601.

A tripod, scarcely less remarkable than that from which the Pythia delivered oracles, and consecrated to Apollo in the same temple at Delphi, was that made from the spoils of the Persian army after the battle of Plataea. It consisted of a golden bowl, supported by a three-headed bronze serpent (Herod. ix. 81; Thucyd. i. 132; Schol. *in loc.*; Paus. x. 13, § 5). The golden bowl having been removed, the bronze serpent, about 15 feet high, was taken to Constantinople, and is still to be seen in the Hippodrome. The first figure in the annexed woodcut is copied from Wheler's engraving of it (*Journey into Greece*, p. 185).



Bronze serpent from Delphi.



Tripod brazier, in the British Museum.

The use of bronze tripods, whether for domestic use or to serve as altars, evidently arose in a great degree from their suitableness to be removed from place to place. To accommodate them as much as possible to this purpose, they are sometimes made to fold together into a small compass, by a contrivance which may be understood from an inspection of the preceding woodcut. The right-hand figure above represents a tripod brazier in the British Museum. A patera or a plain metallic dish was laid on the top, when there was occasion to offer incense, or a grating, when a vessel to be heated or kept hot was placed there. Many of these movable folding tripods may be seen in museums, proving how common they were among the Romans.

III. For the three-legged table bearing this name, see Mensa. [J. Y.] [G. E. M.]

TRIPU'DIUM. [Augur, Vol. I. p. 250 *b*.]

TRIRE'MIS. [Navis.]

TRITAGONISTES. [Histrio.]

TRI'TTYA (τριττύα). [Suovetaurilia.]

TRITTYS (*τριττύς*). [Tribus.]

TRIUMPHUS is probably derived from the shout *triumphe* (connected with *θρίαμβος*) uttered by the soldiers and populace during the procession (Varro, *L. L.* vi. 68, also occurring in the chant of the Arval Brothers), but possibly an early transliteration from *θρίαμβος* itself. (See further Wordsworth, *Fragments and Specimens of Early Latin*, p. 394.)

The triumph was no doubt originally simply the return of the victorious army headed by its general, his first act being naturally the offering of sacrifice to the chief god of the city. A prominent feature in such an entry would be the display of captives and spoil. Here we have the essence of a triumph. (Varro, *l. c.*: "Triumphare appellatum quod cum imperatore milites redeuntes clamitant per urbem in Capitolium eunti Io triumphe." An early triumph of this kind is described in Liv. iii. 29, 4.) It would take place, as a matter of course, after every successful campaign. After the ceremony had been elaborated and its importance thereby increased, there would naturally be a tendency, coincident with the weakening of the executive, to restrict it to exceptional successes, and gradually a body of rules grew up by which the granting of what had become a coveted favour was conditioned and limited. Above all, the consent of the senate became indispensable.

The triumph had two aspects, religious and military. 1. Before a general left Rome for the seat of war, his last act was to go to the Capitol, and there (if a magistrate) procure the auspices, without which the war could not properly be begun, and in every case make vows for the success of his arms (Liv. xlv. 39, &c.; Caes. *B. C.* i. 6; Plin. *Pan.* 5). If the campaign was successful, and a triumph was granted him, this took the form of a progress to the Capitol, there to pay his vows and offer sacrifice to Jupiter. This religious character of the triumph was emphasised by the fact that the general appeared in the procession in the character of the god. His dress was the same, and it was the property of the temple, and brought thence for the occasion. (Hence it is spoken of as *exuviae Jovis*: Suet. *Aug.* 94; cf. Juv. x. 38; Liv. x. 7, 10. Gordian was the first who had the costume as his own: *Vita Gord.* 4; cf. *Vita Alex. Sev.* 40.) So, too, the golden crown (Tertull. *de Coron.* 13) and the sceptre with its eagle belonged to the god; the body of the general was, in early times at least, painted red like that of the image in the temple (Plin. *H. N.* xxxiii. § 111); and the white chariot horses used by the emperors, and earlier by Camillus, recalled the white steeds of Jupiter and the Sun (Liv. v. 23, 5, and *v. inf.*). As to the importance of this identification of the priest (such as the triumphator was on this occasion) with the deity, see Sacerdos.

2. The triumph was also a military act, the last performed by the general in his command, and therefore it was essential that he should during its performance be in full possession of the military imperium; this being inherent in the office of the chief magistrates (consul, praetor, dictator). Although ordinarily in abeyance within the city, such magistrates, if they obtained a triumph during their term of office, were already in possession of the essential qualification, and were consequently enabled (with the previous sanction of the senate) to exercise their military imperium on that occasion within the city. (For difficulties connected with the loss of the *auspicia* in certain cases, see Mommsen, *Staatsrecht*, i. 124, note 5.) So long as the command of the army was regularly taken by one of the chief magistrates during his year of office, the right to a triumph belonged to this class exclusively (in an exceptional case like that of Q. Publilius Philo, consul in B.C. 327, where the command was prolonged beyond the regular term, the right was not lost: Liv. viii. 26, 7); and hence, when during the Second Punic War it became necessary to appoint commanders who were not at the same time holders of one of the regular chief magistracies, the triumph was in such cases refused (*e.g.* P. Scipio in B.C. 206, Liv. xxviii. 38, 4; L. Manlius Acidinus in B.C. 199, Liv. xxxii. 7, 4; Cn. Cornelius Blasio in B.C. 196, Liv. xxxiii. 27; and L. Lentulus in B.C. 200, Liv. xxxi. 20, 3, "exemplum a majoribus non accepisse ut qui neque dictator neque consul neque praetor res gessisset triumpharet." The rule is also stated in Plut. *Pomp.* 14, *ὑπάτῳ ἢ στρατηγῷ μόνῳ [θρίαμβον] δίδωσιν ὁ νόμος*). Later, when it became the practice (finally legalised by Sulla) that the command of an army in a province should only be taken after the expiration of the year of office in Rome, it was found necessary to relax the rule, for the practical reason that, since none of the regular magistrates had the chance of gaining a victory, no triumphs whatever could have been granted. Accordingly, for the later period of the Republic, the triumphs celebrated are ordinarily those of proconsuls and propraetors. The fact that such had already held one of the chief magistracies in the city no doubt facilitated the modification of the old rule; but even where this had not been so, as in the exceptional case of Pompey in B.C. 81 and 71, the triumph was not refused. The imperium in the case of proconsuls and propraetors being granted (by *prorogatio*) strictly for the command in the province only, in order to facilitate the triumph Sulla legalised the practice of treating the imperium as subsisting until the general reached the city (Cic. *ad Fam.* i. 9, 25: cf. Liv. xxxiv. 10; Mommsen, *Staatsrecht*, i. 619, notes 1 and 2). Such extension, however, only availed up to the pomerium, and special legislation (*privilegium*) was necessary to keep the imperium alive within the city on the day of the triumph (voted by the people *ex auctoritate senatus*, Liv. xxvi. 21, cf. xlv. 35). Until this had been passed the general remained without the walls, for if he had entered the city the continuity of his imperium would have been lost, and he would have become a *privatus*, and thereby excluded from a triumph. (Hence Lucullus remained without the city for three years: Cic. *Acad. pr.* ii. 1, 3: cf. the case of Cicero in B.C. 50, *ad Att.* vii. 10.)

After an important victory the general was saluted by his troops as Imperator (a frequent but not universal preliminary to a triumph: Mommsen, *Staatsr.* i. 123); he assumed the *fasces laureati* (Cic. *pro Lig.* 3, 7, *ad Att.* vii. 10), and forwarded to the senate *litterae laureatae* (Liv. v. 28, 13; Plin. *H. N.* xv. § 40; Zon. vii. 21; cf. Tac. *Agr.* 18), *i.e.* a despatch announcing the victory. If the intelligence proved satisfactory, the senate decreed a public thanksgiving [SUPPLICATIO], which was so frequently the forerunner of a triumph, that Cato thinks it necessary to remind Cicero that it was not invariably so (Cic. *ad Fam.* xv. 5, 2). After the return of the general with his army to the neighbourhood of Rome, the next point was to obtain the consent of the senate, but before this could be given certain conditions must have been fulfilled.

1. The triumphator must be to the end of the ceremony in possession of the highest magisterial power—*i.e.* the imperium as belonging to the consul, praetor, dictator, proconsul, and propraetor; and this imperium must have been conferred in regular constitutional course (the *tribuni consulari imperio* were therefore excluded from a triumph; it was otherwise with the triumvirs, Mommsen, *Staatsr.* i. 126 c). This point has been already discussed, but some of its exceptions and consequences remain to be mentioned. When a pro-magistrate was elected consul during his command, his triumph took place on the day on which he entered on his magistracy (*e.g.* Marius in B.C. 104: Mommsen, *Staatsr.* i. 124, note 4). The imperium outside Rome being unlimited, and therefore only exercisable by one person in the same district and at the same time, if there were two commanders only one triumph could be granted, and it was therefore given either to the one of highest rank (*e.g.* a dictator before a consul, a consul before a praetor: Liv. ii. 31, iv. 29, 4; *Ep.* xix.), or, in the case of two consuls, to the one to whose turn the imperium and auspicium came on the day of battle (*e.g.* the battle of the Metaurus: Liv. xxviii. 9, 10). So a triumph could not be claimed by a commander who had won a victory in the district assigned for the exercise of another's imperium (Liv. *l. c.* The battle of the Metaurus was fought in the *provincia* of M. Livius: cf. Liv. x. 37, xxxiv. 10). Exceptions to these rules occur after the First Punic War, and the lesser triumph (*ovatio*) was generally granted if the greater honour was refused. On the same principle one who commanded *alienis auspiciis*, i.e. as the representative of an absent general or the subordinate of one who was present, was excluded from a triumph (Dio Cass. xliii. 42). This rule was broken by Caesar towards the end of his life in the case of his legati (Dio Cass. *l. c.*, Q. Fabius Maximus and Q. Pedius: cf. Mommsen, *Staatsrecht*, i. 127, note 3). This example was followed under the triumvirate (*e.g.* P. Ventidius, legatus of Antony: Dio Cass. xlviii. 41, 5). Lastly, in spite of the rule laid down by Cicero (*de Leg. Agr.* ii. 12, 30), about the necessity of a *lex curiata* for the military imperium, there is an instance towards the end of the Republic of a triumph obtained by one who had never had the imperium so conferred (Cic. *ad Att.* iv. 16, 12; *C. I. L.* i. p. 460, xxvii.).

2. The victory must have been won in a legitimate contest against public foes (*justis hostilibusque bellis*, Cic. *pro Deiot.* 5, 13), and not in a civil war or insurrection of slaves (Val. Max. ii. 8, 7; Dio Cass. xliii. 42; Florus, ii. 10, 9; Lucan, i. 12; Gell. v. 6, 21; Plut. *Caes.* 56). Hence there was no triumph after the capture of Capua in B.C. 211, or of Fregellae in 125, though the former had not the full citizenship, and the latter was only a Latin colony. (The reason given in Val. Max. *l. c.*, that Capua had belonged to Rome and that a triumph was only granted *pro aucto imperio*, is wrong: Mommsen, *Staatsr.* i. p. 129, note 3.) Caesar's triumphs after Thapsus and Munda, and Octavian's after Actium, do not violate this rule, for in each case the victory was represented as having been won over foreigners; while, on the other hand, Caesar celebrated no triumph for Pharsalia. The feeling appears as late as Septimius Severus (Herodian, iii. 9, 1).

3. The victory must have been won in the course of serious fighting (Gell. v. 6, 21); and according to Valerius Maximus (ii. 8, 1), a law enacted that a minimum loss of 5,000 men must have been inflicted on the enemy in a single battle. (By a plebiscitum of B.C. 62 the general had to affirm his returns on oath, and penalties were fixed for falsification.) This rule is obviously of recent date, and even later there are many instances of triumphs granted for general results (in the case of P. Cornelius and M. Baebius, Liv. xl. 38, there had been no war. Cf. viii. 26, 7; xxxvii. 46;—Cic. *in Pis.* 26, 62).

4. The war must have been brought to a conclusion (*debellatum*), so that the army could be withdrawn (*deportatio exercitus*), the presence of the victorious soldiers being an essential part of the ceremony (Liv. xxvi. 21; xxxi. 49). Originally, therefore, the fact of handing over an army at the seat of war to a successor excluded from a triumph. Later, when circumstances compelled the maintenance of permanent armies at a great distance from Italy, the condition as to *deportatio* was dispensed with, provided that the war had been brought to a conclusion (Liv. xxxix. 29, 4).

5. Decisive victories in a war of great extent or duration could be rewarded by a triumph, *i.e.* they were treated as the conclusion of separate wars: *e.g.* in the Hannibalic war the battle of the Metaurus and the capture of Tarentum. The claims for triumphs after the conquest of Sicily and Spain in the same war were only rejected on other grounds (cf. Tac. *Ann.* i. 55; ii. 41).

6. Granting that a chief magistrate had an absolute right to exercise his full imperium within the city on the day of his triumph, the existence of this body of rules implies the recognition of some authority, other than the general himself, which should decide on their applicability. As a matter of fact we find that from the earliest times the senate was so recognised (Liv. ii. 47, 10; iii. 29, 4; 63, 9: cf. Polyb. vi. 13; Sen. *de Ben.* v. 15) that its decision was regularly treated as final (*e.g.* Liv. x. 36, 19; Dionys. ix. 26), and only exceptionally set aside by an appeal to the people (Liv. iii. 63, 8; vii. 17, 9;—Zon. viii. 20), or by violence (cases of L. Postumius Megellus, Liv. x. 37; and Appius Claudius, Cic. *pro Cael.* 14, 34; Suet. *Tib.* 2). We know of no case in which the senate was not first applied to. The point, no doubt, at which that body made its authority felt was the senatusconsultum, without which there could be no grant of public money for the expenses of the triumph (Polyb. vi. 15, 8; Liv. xxxiii. 23, 8: cf. Dio Cass. lxxiv. 2). In the case of pro-magistrates, whose imperium rested on *prorogatio*, the consent of the senate was followed by the *privilegium* allowing the

retention of the imperium within the city for the triumph (see above). It is probably from a confusion with this that it is sometimes said that the consent of the senate must be ratified by the people: *e.g.* Suet. *Fr.* viii. ed. Roth. See Willems, *Le Sénat de la République Romaine*, vol. ii. p. 672, note 2. But the early mention of the co-operation of the people in Liv. iv. 20, of B.C. 437 (cf. Dionys. iii. 59), perhaps points to the existence of a different state of things in early times. The senate met for these deliberations outside the walls, usually in the temple of Bellona (Liv. xxvi. 21, xxxvi. 39) or Apollo (Liv. xxxix. 4), in order that the general might have an opportunity of urging his claims in person. After the erection of the temple of Mars Ultor by Augustus in his forum, at least the final sitting was held there (Suet. *Aug.* 29).

When the day appointed had arrived, the whole population poured forth from their abodes in holiday attire; some stationed themselves on the steps of public buildings, while others mounted scaffoldings erected for the purpose of commanding a view of the show. The temples were all thrown open, garlands of flowers decorated every shrine and image, and incense smoked on every altar (Plut. *Aem. Paul.* 32; Ov. *Trist.* iv. 2, 4). Meanwhile the general, who had passed the night in the Campus Martius (Joseph. *B. J.* vii. 5, 4), addressed his soldiers in a *contio*, and announced the rewards that were to be distributed to the officers and men (Liv. x. 30, 46; xxx. 45, 3; xxxiii. 23, &c.; Plin. *H. N.* xxxvii. § 16; Dio Cass. xliii. 21).

The procession was then marshalled in the Campus, where it was met by the senate and magistrates (Josephus, *l. c.*). Generally the following order was preserved, but naturally there were variations under special circumstances (a good instance of such is the triumph of Aurelian, described in *Vita Aurel.* 33).

1. The magistrates and senate (Dio Cass. li. 21, 9).

2. Trumpeters (*tubicines:* Plut. *Aem. Paul.* 33; Appian, *Pun.* 66).

3. The tangible results of the victory, including spoils of armour, objects materially or artistically valuable, representations of conquered countries, cities, rivers, &c., by means of pictures, models, and allegorical figures (Liv. xxvi. 21, 7; Cic. *Phil.* viii. 6, 18; Tac. *Ann.* ii. 41; Plin. *H. N.* v. § 5. In one of the inner reliefs on the Arch of Titus all the bearers of these are represented wearing laurel wreaths), together with boards on which were painted the names of the vanquished nations and countries. With these were displayed the golden crowns presented to the general by the towns of the conquered province (Liv. xxvi. 21, xxxiv. 52; Plut. *Aem. Paul.* 34. In earlier times they were of laurel: Gell. v. 6, 7).

4. The white oxen destined for sacrifice, with gilded horns, decorated with *vittae* and *serta*, attended by the priests with their implements, and followed by the Camilli, bearing in their hands *paterae* and other sacred vessels and instruments (Plut. *Aem. Paul.* 33).

5. The principal captives in chains (*e.g.* Perseus, Jugurtha, Vercingetorix, Zenobia. The dead Cleopatra was represented by an image: Dio Cass. li. 21, 8).

6. The lictors of the general in red tunics, their fasces wreathed with laurel (Appian, *Pun.* 66. The fasces were probably without the axes: so in the relief of the Arch of Titus. See, however, Mommsen, *Staatsr.* i. 129; LICTOR, p. 66 *a*).

7. *Citharistae* or *ludiones*, dancing and singing as if in exultation over the conquered enemy (Appian, *l. c.*: cf. Dionys. vii. 72).

8. The general himself, in a chariot of circular form (Zon. vii. 21), drawn by four horses.

Triumphal chariot: from a relief. (Montfaucon, *Ant. Exp.* iv. pl. cv.)

As to the use of white horses, *v. sup.* After Camillus (Liv. v. 23; Dio Cass. lii. 13; Plut. *Cam.* 7), we hear of no general venturing to introduce them till Caesar (Dio Cass. xliii. 14, 3), but his example appears to have been regularly followed by the emperors (Suet. *Nero*, 25; Plin. *Pan.* 22. The Augustan poets mention it as an ordinary detail: Ovid, *A. A.* i. 214; Propert. v. 1, 32). Both chariot and horses were adorned with laurel (Suet. *Aug.* 94; Ov. *Ex Pont.* ii. 1, 58; Flor. i. 5, 6; Zon. vii. 8). In the 3rd century, if the triumph was over the Parthians (*triumphus Persicus*), the chariot was drawn by four elephants (*Vita Alex. Sev.* 57, 4; *Gord. Tert.* 27, 9; and cf. the coin of Diocletian and Maximian described in Cohen, *Médailles Impériales*, vi. p. 479, 3). Pompey had unsuccessfully attempted to gain permission for this at his African triumph (Plut. *Pomp.* 14: cf. Marquardt, *Staatsverwaltung*, ii. p. 586, note 7). Incense was burnt in front of the chariot (Appian, *Pun.* 66). The dress of the general (*v. sup.* as to its general character) consisted of a flowered tunic (*tunica palmata*) and gold embroidered robe (*toga picta*), both of purple (Plut. *Aem. Paul.* 34; Liv. x. 7, 9). In his right hand he carried a laurel bough (Plut. *Aem. Paul.* 32; Plin. *H. N.* xv. § 137), and in his left an ivory sceptre crowned by an eagle (Dionys. iii. 61, v. 47; Val. Max. iv. 4, 5; Juv. x. 43). In early times his body seems to have been painted red (Plin. *H. N.* xxxiii. § 111, and *v. sup.*). On his head was a wreath of laurel (Plin. *H. N.* xv. § 137). Behind him stood a public slave, holding over his head the heavy golden crown of Jupiter, made in the form of an oak-wreath (Juv. x. 39; Plin. *H. N.* xxxiii. § 11, xxxviii. § 7; Zon. vii. 21; Tertull. *de Cor.* 13). That this culmination of human and almost divine honours might not provoke the evil consequences of pride, *invidia*, and the evil eye, an amulet (*fascinus*) was worn by him or was attached to the chariot, together with a little bell and a scourge (Plin. *H. N.* xxviii. § 39; Zon. vii. 21; Macrob. *Sat.* i. 6, 9); and the slave who rode beside him whispered in his ear, "Respice post te, hominem te memento" (Tertull. *Apol.* 33, confirmed by Arrian, *Diss. Epict.* iii. 24, 85, and Plin. *H. N.* l. c.: cf. Juv. x. 41). We can hardly suppose that the slave was present in the case of an emperor. The monuments almost invariably show a figure of Victory beside the emperor in the chariot, holding a crown of laurel over his head. A state chair (*sella*) also appears to have belonged to the triumphator, for such is mentioned in connexion with the other triumphal distinctions (Liv. x. 7, 9; Dio Cass. xliv. 6; Suet. *Jul.* 76; Mommsen, *Staatsr.* i. p. 423). His children who were under age (of both sexes) rode with him in the chariot or on the horses (Liv. xlv. 40, 8; Val. Max. v. 7, 1; 10, 2;—Tac. *Ann.* ii. 41; *Vita M. Ant. Phil.* 12, 10; Cic. *pro Mur.* 5, 11; Suet. *Tib.* 6). His grown-up sons rode behind (Liv. xlv. 40, 4) after the *apparitores* (Appian, *Pun.* 66), together with his *legati* and *tribuni* (Cic. *in Pis.* 25, 60; Appian, *Mithr.* 117). Then sometimes came the Roman citizens whom he had rescued from slavery by his victory, in the character of freedmen (Liv. xxx. 45, 5; xxxiii. 23, 6; xxxiv. 52, 12). The rear was brought up by the whole body of the infantry in marching order, their spears adorned with laurel (Plin. *H. N.* xv. § 133), shouting *Io triumphe* (Varro, *L. L.* v. 7; Hor. *Od.* iv. 2, 49; Tibull. ii. 6, 121), and singing songs which contained the praises of the general as well as the coarsest ribaldry at his expense (Liv. iv. 20; 53, 11, &c.;—Suet. *Jul.* 49, 51; Mart. i. 5, 3; other references given in Marquardt, *Staatsverw.* ii. p. 588, note 2. See also Munro, *Criticisms and Elucidations of Catullus*, p. 90).

The procession entered the city by the Porta Triumphalis [Cic. *in Pis.* 23, 55. It seems to have been between the Temple of Isis and the Circus Flaminius (Joseph. *B. J.* vii. 5, 4), and was apparently only opened on these occasions, as there was a special resolution of the senate in the case of the funeral of Augustus, Tac. *Ann.* i. 8]. Here sacrifices were offered to certain deities (Joseph. *B. J.* vii. 5, 4). It then passed through the Circus Flaminius, and through or at least near the theatres in the same region, as affording places for the crowds of spectators (Plut. *Lucull.* 37, Joseph. *B. J.* l. c.), and probably entered the city proper by the Porta Carmentalis, as we know that the Velabrum (apparently the Vicus Tuscus) and Forum Boarium were traversed (Suet. *Jul.* 37; Cic. *Verr.* i. 59, 154). The circuit of the Palatine hill was then made by the Circus Maximus (Cic. *l. c.*; Plut. *Aem. Paul.* 32), and the road between the Palatine and the Caelian, at the end of which the Via Sacra was reached, which conducted the procession to the Forum (Hor. *Od.* iv. 2, 35; *Epod.* 7, 8). The route probably passed along the south side of the Forum (Jordan, *Capitol, Forum, und Sacra Via*, Berlin, 1881). From the end of the Via Sacra started the Clivus Capitolinus, and as the general was about to ascend this the principal captives were led aside into the adjoining prison, and there put to death (Cic. *Verr.* v. 30, 77; Liv. xxvi. 13; Trebell Poll. *Trig. Tyr.* 22. Originally such were beheaded with the axe; in later times they were strangled: cf. Liv. xxvi. 13, 15, with Trebell. Poll. *Trig. Tyr.* 22, 8, and see Mommsen, *Staatsr.* i. 129). To spare the lives of such captives was exceptional. The earliest case is that of Perseus, spared by Aemilius Paulus (Plut. 37), whose example was followed by Pompey (Appian, *Mithr.* 117), Tiberius in his Pannonian triumph of A.D. 12 (Ov. *ex Pont.* ii. 1, 45), and Aurelian in the case of Zenobia (Trebell. Poll. *Trig. Tyr.* 30, 27). The sacrifice in the temple could not begin until the execution had taken place (Joseph. *B. J.* vii. 5, 6).

The general then ascended to the Capitol (Alexander Severus went on foot, *Vita*, 57, 4). When the temple was reached, the laurel branch and the wreaths of the fasces were deposited in the lap of the god (Sen. *Consol. ad Helv.* 10; Plin. *H. N.* xv. § 40; Plin. *Pan.* 8; Sil. Ital. xv. 118; Stat. *Silv.* iv. 1, 41; Pacatus, *Paneg. in Theod.* 9, 5), and in later times a palm branch (cf. Marquardt, *Staatsverw.* ii. p. 589, note 2). Then the victims were sacrificed. The *insignia triumphi*, i.e. the most notable spoils (*e.g.* the recovered standards of Crassus, Dio Cass. liv. 83, and no doubt those of Varus, Tac. *Ann.* ii. 41), were afterwards placed in the temple of Mars Ultor (Suet. *Aug.* 29). Finally, the general with the senate was entertained at a public feast in the temple (Liv. xlv. 39). It was the practice to invite the consuls to this banquet, and then to send a message requesting them not to come, in order, doubtless, that the triumphator might be the most distinguished person in the company (Plut. *Quaest. Rom.* 80; Val. Max. ii. 8, 6). A similar entertainment was provided for the soldiers, and for the citizens in the temple of Hercules (Plut. *Lucull.* 37; Athen. v. p. 221 f).

The whole of the proceedings, generally speaking, were brought to a close in one day; but when the quantity of plunder was very great, and the troops very numerous, a longer period was required for the exhibition. Thus the Macedonian triumph of Flaminius continued for three days in succession (Liv. xxxix. 52; cf. Plut. *Aem. Paul.* 32).

The honours of the triumphator did not end with the day. At public spectacles he appeared with the laurel wreath (Plin. *H. N.* xv. § 126; Val. Max. iii. 6, 5), and in exceptional cases in the *vestis triumphalis* (e.g. L. Aemilius Paulus and Pompey; Auctor, *de Vir. ill.* 56; Vell. ii. 40). It was customary to provide him at the public expense with the site for a house, such mansions being called *triumphales domus* (Plin. *H. N.* xxxvi. § 112). His name was inscribed in the *Fasti Triumphales* (*C. I. L.* i. p. 453); he was allowed to decorate the entrance to his house with trophies (Plin. *H. N.* xxxv. § 7; Cic. *Phil.* ii. 28; Liv. x. 7, 9); and a laurel-wreathed statue standing erect in a triumphal car, displayed in the *vestibulum*, transmitted his fame to posterity (Juv. viii. 3). Finally, after death, his ashes might be deposited within the walls of the city (Plut. *Quaest. Rom.* 79; Mommsen, *Staatsr.* i. p. 426, note 1).

Triumphus in Monte Albano consisted in a procession to the temple of Jupiter Latiaris on the Alban Mount. It took place *jure con-*

sularis imperii (Liv. xxxiii. 23, 3), *sine publica auctoritate* (Liv. xlii. 21, 7), but was only resorted to in case of the refusal of a regular triumph by the senate, and was regarded as an inferior distinction (Liv. xxxiii. 23). Although it was recorded in the *Fasti Triumphales*, it was not equivalent to a triumph in the city; for when Marcellus in B.C. 211 was refused the greater but allowed the lesser triumph (*ovatio*), he still celebrated a triumph on the Alban Mount on the day before the ovation (Liv. xxvi. 21, 6). The first instance was C. Papirius Maso in B.C. 231 (Plin. *H. N.* xv. § 126; Val. Max. iii. 6, 5), and his example was followed by many others (Liv. xxvi. 21, 6; xxxiii. 23, 3; xlii. 21, 7; xlv. 38;—Plut. *Marc.* 22).

Triumphus Navalis.—The earliest on record was celebrated by C. Duilius for his naval victory over the Carthaginians in B.C. 260 (Liv. *Ep.* xvii.; Flor. i. 8, 10; Plin. *H. N.* xxxiv. § 20). Other instances are M. Aemilius Paulus in B.C. 254 (Liv. xlii. 20, 1), C. Lutatius Catulus in B.C. 241 (Val. Max. ii. 8, 2), Q. Fabius Labeo in B.C. 189 (Liv. xxxvii. 60, 6), Cn. Octavius in B.C. 167 (Liv. xlv. 42, 2); and see the *Fasti Triumphales* for the years 497, 498, 513, 526. Of its special details nothing is known. C. Duilius and M. Aemilius Paulus erected *columnae rostratae* to commemorate their victories (Liv. xlii. 20, 1).

Triumphus Castrensis.—A procession of the soldiers through the camp in honour of an officer, inferior to the general, who had performed a brilliant exploit (Liv. vii. 36).

Under the Empire, when the monarch became the sole possessor of the imperium and all commanders were only legati acting under his auspices, the condition stated above as to the possession of the imperium was strictly applied, and the precedent created by Caesar in favour of his legati was only followed by Augustus at the beginning of his reign (Dio Cass. liv. 12; Suet. *Aug.* 38). Even in the case of the holders of the secondary *proconsulare imperium*, the triumph became rare, and then only if they were members of the imperial family (Dio Cass. liv. 24 gives B.C. 14 as the date of the change, when Agrippa refused a triumph as he had done in B.C. 19, Dio Cass. liv. 11). Triumphs were celebrated by Tiberius (B.C. 7, Vell. ii. 97, Dio Cass. lv. 6; and A.D. 12, Vell. ii. 121, Suet. *Tib.* 20), Germanicus (A.D. 26, Tac. *Ann.* ii. 41), and Titus (A.D. 71, associated with his father, Suet. *Tit.* 6). Up to the time of Caligula the proconsuls of Africa held a kind of independent position with an imperium of their own, and they no doubt retained the rights and practices of the republican magistrates with regard to the triumph. Triumphs of such are recorded for B.C. 21 and 19 (Mommsen, *Staatsr.* i. 127, note 5; 132, 133, notes 1 and 2; *Res Gestae D. Aug.* p. 21).

Under these circumstances the custom was introduced of bestowing the *ornamenta triumphalia*, i.e. the right to appear on festivals in so much of the triumphal dress as generals had been allowed to retain under the Republic (viz. the laurel wreath, *v. sup.* Cf. Mommsen, *Staatsr.* i. 422, 423; Marquardt, *Staatsverw.* ii. 591. At the triumph of Claudius in A.D. 44 M. Crassus Frugi appeared in the *tunica palmata*, but this was an exceptional honour; the others who obtained the ornamenta on that occasion wore the *praetexta:* Suet. *Claud.* 17; cf. Dio Cass. li. 20, 2), and, after the completion of the Forum of Augustus in B.C. 2, to have a bronze statue (*statua laureata*) erected there (Dio Cass. lv. 10. Cf. Tac. *Ann.* iv. 23: perhaps to be distinguished from the *statua triumphalis*, Plin. *H. N.* xxxiii. § 131; Tac. *Ann.* xv. 72, *Hist.* i. 79, *Agr.* 40; Plin. *Ep.* ii. 7; Peine, *de Ornamentis Triumphalibus*, c. iv.). Like the triumph, they were decreed by the senate sitting in the temple of Mars Ultor (Dio Cass. lv. 10; Suet. *Aug.* 29). The senate only is generally said to grant the honour (Tac. *Ann.* ii. 52; *Hist.* iv. 4), and even to the emperor himself (Suet. *Claud.* 17); but in the inscriptions of the time of Vespasian and later the words *auctore imperatore* are generally added, and perhaps this was the case earlier (Tac. *Ann.* iii. 72, *Agr.* 40; Dio Cass. lx. 23, 2: cf. Mommsen, *Staatsr.* i. 450, note 3). Under Augustus they appear to have been granted only if the conditions for a regular triumph were in existence (but cf. Dio Cass. li. 20, 2), excepting of course the independent imperium. According to Suetonius (*Tib.* 9), Tiberius was the first to receive them, and there were numerous other instances in the reign of Augustus (Suet. *Aug.* 38). Afterwards, owing to the indiscriminate bestowal of the honour by the Julian emperors (Tiberius rewarded *delators* with it, Dio Cass. lviii. 16: cf. Tac. *Ann.* xi. 20, 3, xii. 3, 2; Suet. *Claud.* 24; *Nero*, 15;—Dio Cass. lx. 23, 2; 31. 7), it was no longer regarded as such (Tac. *Ann.* xiii. 53). Vespasian seems to have restored its position for a time (Marquardt, *Staatsverw.* ii. 592), but the abuses reappeared under Domitian (Plin. *Ep.* ii. 7). The last instance known is of the time of Hadrian (*C. I. L.* iii. 2830). Forty-eight in all have been collected by Peine. In the time of the Antonines and later, when the full triumphal dress was regularly worn by every consul on entry into office and other state occasions (Mommsen, *Staatsr.* i. 399, and note 4), the only military distinction that remained was a *statua inter triumphales*, i.e. in the Forum of Trajan or some other public place reserved for such memorials (*C. I. L.* vi. 1377, 1540, &c.: cf. Trebell. Poll. *Trig. Tyr.* 21. See generally Mommsen, *Staatsr.* i. 449; Marquardt, *Staatsverw.* ii. 592; Peine, *de Ornamentis Triumphalibus*, Berlin, 1885).

The last triumph recorded is that of Diocletian in A.D. 302 (Eutrop. 9, 27. Marquardt. *Staatsverw.* ii. 591, n. 7, considers the so-called triumph of Belisarius after the recovery of Africa to have been rather a *processus consularis:* Procop. *B. Vand.* 2, 9). The total number of triumphs upon record down to this period amounts to about 350 (Orosius, vii. 9, reckons 320 from Romulus to Vespasian).

After the triumph had assumed its distinctive form, it seems to have been taken as the type of a festival procession in which any of the chief magistrates took part, and hence the procession of the Praetor Urbanus in the Circus Maximus before the games of Apollo was modelled on it (Juv. x. 36 *sqq.*, xi. 194, *similis triumpho*),—a fact which Mommsen is inclined to attribute to the original connexion between the *ludi* and the triumph, both being parts of the public rejoicings after a victory (*Staatsr* i.

p. 397). It is remarkable that the same idea seems to have influenced the funeral procession of Augustus. (It passed through the Porta Triumphalis, an image of Victory accompanied the bier, and boards inscribed with the names of the peoples he had conquered were carried. See Tac. *Ann.* i. 8, 4; Suet. *Aug.* 100.) Under the Empire the triumphal costume became an official imperial dress (as early as Pompey, Vell. ii. 40). Caesar appears to have intended to use it on every public occasion (Dio Cass. xliv. 4; cf. Plut. *Caes.* 61), but Augustus and his successors wore it only at festivals and spectacles. (Domitian, however, more freely: Dio Cass. lxvii. 4, 3; Mommsen, *Staatsr.* i. pp. 401, 423.) Its use by the consuls when they entered upon their office has been mentioned above.

[G. Mᶜ. N. R.]

TRIUMVIRI. [TRESVIRI.]

TROCHUS (*τροχός, κρίκος*), a hoop (Artemid. i. 55;—Ov. *Trist.* iii. 12, 19; *Art. Am.* iii. 338, &c.). The Greek and Roman boys used to exercise themselves like ours by trundling a hoop. It was a bronze ring, and had sometimes bells attached to it (Mart. xi. 21, 2; xiv. 168, 169). It was propelled by means of a hook with a wooden handle, called *clavis* (Propert. iv. 14) and *ἐλατήρ*. From the Greeks this custom passed to the Romans, who consequently adopted the Greek term (Hor. *Carm.* iii. 24, 57). The hoop was used at the GYMNASIUM (Propert. *l. c.*; Ovid, *Trist.* ii. 485); and therefore, on one of the gems in the Stosch Collection at Berlin, which is engraved in the subjoined woodcut, it is accompanied by the vase of oil and the laurel branch, the signs of effort and of victory. On each side of this we have represented another gem from the same collection. Both of these exhibit naked youths trundling the hoop by means of the hook or key. These show the size of the hoop, which in the middle figure has also three small rings or bells on its circumference. (Winckelmann, *Desc. des Pierres Gravées*, pp. 452–455.)

Hoops, from ancient gems.

On the use of *τροχὸς* to denote the potter's wheel, see FICTILE. (Blümner, *Privataltertk.* 293; Marquardt, *Privatleben*, 836.)

[J. Y.] [G. E. M.]

TROJAE LUDUS [more frequently known as *Troja*, in the phrase *Trojam ludere*; in Greek *τὴν Τροίαν ἱππεῦσαι*, Dio Cass. xlix. 43; in Suet. *Cal.* 18, *Trojae decursio*; in Tac. *Ann.* xi. 11, *ludicrum Trojae*], an equestrian sham-fight, performed in the Circus Maximus by boys of high rank (sons of senators, according to Dio Cass. *l. c.*). It was supposed to represent an exercise introduced by Aeneas and the Trojans after their landing in Italy, and celebrated afterwards by Ascanius at Alba (Verg. *Aen.* v. 597). The earliest mention in historical times is the celebration by Sulla in his dictatorship B.C. 81 (Plut. *Cat.* 3, where it is called *παιδικὴ καὶ ἱερὰ ἱππασία ἣν καλοῦσι Τροίαν*): the two boyish leaders on this occasion were Aemilius Scaurus, stepson of Sulla, and Cato the younger. Similarly Julius Caesar, when he returned in triumph to Rome and dedicated the temple of Venus, celebrated *τὴν ἱππασίαν τὴν Τροίαν καλουμένην παίδων τῶν εὐπατρίδων κατὰ τὸ ἀρχαῖον* (Dio Cass. xliii. 23): from the last word it may be inferred that it was a custom older than Sulla, in fact of unknown antiquity, as we should imagine from the traditions connected with it. Augustus celebrated it certainly twice: first in B.C. 27 (Dio Cass. xlix. 43; li. 22; liii. 1; liv. 26), on which occasion Tiberius at the age of 15 was "ductor turmae puerorum majorum" (Suet. *Tib.* 6); secondly at the dedication of the temple of Marcellus, B.C. 12, when his grandson Gaius took a chief part. He then discontinued the celebration because Asinius Pollio complained in the senate that it was a dangerous sport, in which his grandson Aeserninus had broken his leg (Suet. *Aug.* 43). Caligula celebrated it in the first year of his reign when he dedicated the temple of Augustus, and again at the funeral games of Drusilla: and of Nero's boyhood we are told that he often "Trojam lusit" up to the age of 11 (Suet. *Ner.* 7).

The method of celebration may be gathered from Verg. *Aen.* v. 553–603. In this account the Trojan boys are first marshalled in three squadrons of twelve each, under Ascanius, Priamus (son of Polites), and Atys. They come forward ceremoniously, much as the gladiators did, or as the performers in a modern bull-fight do now, to salute the spectators before the combat begins: then they break up their triple formation, and, forming into two equal bands, retire to opposite stations. Such we take to be the meaning of "discurrere pares" and "diductis solvere choris": the *agmen* is the processional line in the opening ceremony; the *chori* the two opposing squadrons. After this, they charged and retired with evolutions so complicated that they seemed to Virgil (supposing him to be an eye-witness of what he describes) comparable to nothing but the Cretan Labyrinth or troops of dolphins at play. It is hard to explain why Virgil introduces the difficulty of three leaders and three companies. In all historical accounts there were two: in the earliest (in the time of Sulla) it is expressly said that there could be only two leaders; and when three candidates appeared, Scaurus, Cato, and Sextus Pompeius, it was necessary that one should retire (Plut. *Cat.* 3): similarly in Tac. *Ann.* xi. 11 we find two leaders named, Britannicus and Domitius. We can hardly doubt that Virgil, under cover of the story of Aeneas, is describing what he actually saw, and this must have been the celebration in B.C. 27. In that contest we know from Suet. *Tib.* 12 that Tiberius was one leader, and from the same chapter it may be inferred that Marcellus was another. We may surmise that Virgil introduced this elaborate account for the same reason which led him to bring in the touching allusion to Marcellus in *Aen.* vi. There may have been a third leader in the preliminary display on that occasion, to give distinction to Sextus Appuleius, the son of Augustus's colleague in the consulship, who, as appears from Tac. *Ann.* ii. 50, afterwards married Marcella, daughter of Octavia. Assuming then that in the real celebration of B.C. 27 there were three leaders for the procession, and that for the combat two lines were formed according to custom under Tiberius and Marcellus, we may suppose that Virgil makes three corresponding leaders in his *Troja*, viz. Julus and Atys out of compliment to Augustus, and a Priamus as appropriate to the Trojan game. [G. E. M.]

TROPAEUM (**τρόπαιον**), a trophy, a sign and memorial of victory, which was erected on the field of battle where the enemy had turned (**τρέπω, τροπή**) to flight, and, in case of a victory gained at sea, on the nearest land. The expression for raising or erecting a trophy is **τροπαῖον στῆσαι** or **στήσασθαι**, to which may be added a genitive with or without **ἀπὸ** or **κατά**. The trophy was often left standing for a number of years (see Thuc. iv. 67, v. 10; and the passages of Pausanias cited below).

When the battle was not decisive, or each party considered it had some claims to the victory, both erected trophies (Thucyd. i. 54, 105; ii. 92). Trophies usually consisted of the arms, shields, helmets, &c., of the enemy that were defeated; and from the descriptions of Virgil and other Roman poets, which have reference to the Greek rather than to the Roman custom, it appears that the spoils and arms of the vanquished were placed on the lopped trunk of a tree, which was fixed on an elevation (Verg. *Aen.* xi. 5; Serv. *ad loc.*; Lucan, i. 135; Stat. *Theb.* iii. 707; Juv. x. 133; Mayor *ad loc.*). It was consecrated to some divinity with an inscription (**ἐπίγραμμα**), recording the names of the victors and of the defeated party (Eurip. *Phoen.* 583; Schol. *ad loc.*; Paus. v. 27, § 7; Verg. *Aen.* iii. 288; Ovid, *Ar. Am.* ii. 744; Tac. *Ann.* ii. 22); whence trophies were regarded as inviolable, which even the enemy were not permitted to remove (Dio Cass. xlii. 58). Sometimes, however, a people destroyed a trophy, if they considered that the enemy had erected it without sufficient cause, as the Milesians did with a trophy of the Athenians (Thucyd. viii. 24). That rankling and hostile feelings might not be perpetuated by the continuance of a trophy, it seems to have been originally part of Greek international law that trophies should be made only of wood and not of stone or metal, and that they should not be repaired when decayed (Plut. *Quaest. Rom.* c. 37, p. 273 c; Diod. xiii. 24). Hence we are told that the Lacedaemonians accused the Thebans before the Amphictyonic council, because the latter had erected a metal trophy (Cic. *de Invent.* ii. 23, 69). It was not, however, uncommon to erect such trophies. Plutarch (*Alcib.* 29, p. 207 d) mentions one raised in the time of Alcibiades, and Pausanias (ii. 21, § 9; iii. 14, § 7; v. 27, § 7) speaks of several which he saw in Greece. (Wachsmuth, *Hell. Alt.* vol. ii. pt. i. p. 424, 1st ed.; Schömann, *Ant. Jur. Publ. Graec.* p. 370; Droysen, *Gr. Kriegsalterth.* p. 94.)

Trophy of Augustus. (*Mus. Capitol.* i. tav. v.)

The trophies erected to commemorate naval victories were usually ornamented with the beaks or acroteria of ships [ACROTERIUM; ROSTRA]; and were generally consecrated to Poseidon or Neptune. Sometimes a whole ship was placed as a trophy (Thucyd. ii. 84, 92).

The Macedonian kings never erected trophies, for the reason given by Pausanias (ix. 40, § 4), and hence the same writer observes that Alexander raised no trophies after his victories over Dareius and in India. The Romans too, in early times, never erected any trophies on the field of battle (Florus, iii. 2), but carried home the spoils taken in battle, with which they decorated the public buildings, and also the private houses of individuals. [SPOLIA.] Subsequently, however, the Romans adopted the Greek practice of raising trophies on the field of battle: the first trophies of this kind were erected by Domitius Ahenobarbus and Fabius Maximus in B.C. 121, after their conquest of the Allobroges, when they built at the junction of the Rhone and the Isara towers of white stone, upon which trophies were placed adorned with the spoils of the enemy (Florus, *l. c.*; Strabo, iv. p. 185). Pompey also raised trophies on the Pyrenees after his victories in Spain (Strabo, iii. p. 156; Plin. *H. N.* iii. § 18; Dio Cass. xli. 24; Sall. *ap.* Serv. *in* Verg. *Aen.* xi. 6); Julius Caesar did the same near Zela, after his victory over Pharnaces (Dio Cass. xlii. 48), and Drusus, near the Elbe, to commemorate his victory over the Germans (Dio Cass. li. 1; Florus, iv. 12). Still, however, it was more common to erect some memorial of the victory at Rome than on the field of battle. The trophies raised by Marius to commemorate his victories over Jugurtha and the Cimbri and Teutones, which were cast down by Sulla and restored by Julius

Coin of M. Furius Philus.

Caesar, must have been in the city (Suet. *Jul.* 11). In the later times of the Republic, and under the Empire, the erection of triumphal arches was the most common way of commemorating a victory, many of which remain to the present day. [ARCUS.] We find trophies on the Roman coins of several families. The above coin of M. Furius Philus is an example; on the reverse, Victory or Rome is represented crowning a trophy. [W. S.] [G. E. M.]

TRO'SSULI. [EQUITES, Vol. I. p. 755.]

TRULLA. 1. A ladle for stirring and skimming (=τορύνη), in which sense *trua* also is used.

2. *Trulla vinaria*, a sort of ladle used like a cyathus for taking wine from the crater (Varro, *L. L.* v. 118; Cic. *Verr.* iv. 27, 62; Hor. *Sat.* ii. 3, 144). It probably differed from the cyathus in having a shallower and flatter bowl at the end of its long handle (*manubrium*). The material was various, wooden or copper (Cat. *R. R.* 13), silver (Cic. *l. c.*), or *murrhina* (Plin. *H. N.* xxxvii. § 20). The passage in Mart. ix. 97 is altogether incompatible with the notion (for which there is no authority) that the trulla had holes like a strainer.

3. A mason's trowel for plastering walls, whence *trullisare* (Pallad. *R. R.* i. 13; Isid. *Orig.* xix. 18). This meaning also negatives the idea of its being perforated. [J. Y.] [G. E. M.]

TRU'LLEUM. [PELVIS.]

TRU'TINA. [STATERA.]

TUBA (σάλπιγξ), a bronze trumpet, distinguished from the *cornu* by being straight while the latter was curved. Thus Ovid (*Met.* i. 98):

> "Non tuba directi non aeris cornua flexi."

(Cf. Vegetius, iii. 5.) Forcellini in his Lexicon (s. v. *Tuba*) is mistaken in supposing that Aulus Gellius (v. 8) and Macrobius (*Sat.* vi. 8), who copies him, intend to affirm that the tuba was crooked. The words of the former do not mean that both the lituus and the tuba were crooked, but that both that kind of trumpet which was called a lituus and also the staff of the augur were crooked, and that it was doubtful which of the two had lent its name to the other. [LITUUS.]

The σάλπιγξ or tuba was employed in war for signals of every description (Thuc. v. 10, vi. 69; Xen. *Anab.* iv. 4, 22; Tac. *Hist.* ii. 29; Caesar, *B. C.* iii. 46; Liv. xxxix. 27). Droysen remarks that the only passage in a Greek historian where κέρας appears to be used for a Greek military signal is Xen. *Anab.* ii. 2, 4; and that there κέρατι is interpolated from *Cyrop.* v. 3, 45. As regards Roman military signals with tubae, cornua and bucina, see EXERCITUS, Vol. I. p. 801.

The trumpet was used also at the games and public festivals (Juv. vi. 249, x. 214; Verg. *Aen.* v. 113; Ovid, *Fast.* i. 716), also at the last rites to the dead (*hinc tuba, candelae*, Pers. iii. 103; Verg. *Aen.* xi. 191; Ovid, *Heroid.* xii. 140), and Aulus Gellius (xx. 2) tells us that those who sounded the trumpet at funerals were termed *siticines*, and used an instrument of a peculiar form. The tones of the tuba are represented as of a harsh and fear-inspiring character (*fractos sonitus tubarum*, Verg. *Georg.* iv. 72; *terribilem sonitum aere canoro*, *Aen.* ix. 503), which Ennius (Serv. *ad* Verg. *Aen.* ix. 503; Priscian, viii. 18, 103, ed. Krehl) endeavoured to imitate in the line

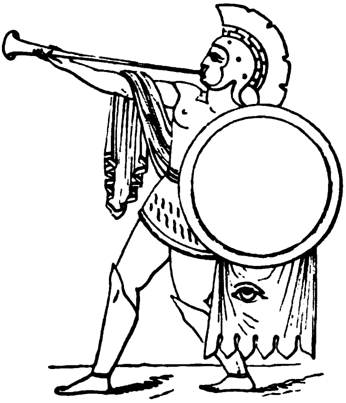
> "At tuba terribili sonitu *taratantara* dixit."

The invention of the tuba is usually ascribed by ancient writers to the Etruscans (Athenaeus, iv. c. 82; Pollux, iv. 85, 87; Diodor. v. 40; Serv. *ad* Verg. *Aen.* viii. 516; Clem. Alex. *Strom.* i. p. 306), and the epithet ληστοσαλπιγκταὶ (*i.e.* robber-trumpeters, Photius and Hesych. *s. v.*; and Pollux, *l. c.*) would seem to indicate that they were equally famous for piracy and trumpeting. It is probable that the σάλπιγξ was of Lydian origin, and was made known in Europe by the Tyrrhenian pirates. It has been remarked that Homer never introduces the σάλπιγξ in his narrative but in comparisons only (*Il.* xviii. 219, xxi. 388; Eustath. and Schol.), which leads us to infer that although known in his time it had been but recently introduced into Greece; and it is certain that, notwithstanding its eminently martial character, it was not until a late period used in the armies of the leading states. By the tragedians its Tuscan origin was fully recognised: Athena in Aeschylus orders the deep-toned piercing Tyrrhenian trumpet to sound (*Eumen.* 567), Ulysses in Sophocles (*Aj.* 17) declares that the accents of his beloved goddess fell upon his ears like the tones of the brazen-mouthed Tyrrhenian bell (κώδωνος, *i.e.* the bell-shaped aperture of the trumpet), and similar epithets are applied by Euripides (*Phoeniss.* 1376, *Heraclid.* 830), and other Greek (Auctor, *Rhes.* 988; Brunck, *Anal.* tom. ii. p. 142) and Roman writers (*Tyrrhenus clangor*, Verg. *Aen.* viii. 526; Stat. *Theb.* iii. 650; *Tyrrhenae clangore tubae*, Silius, ii. 19). According to one account it was first fabricated for the Tyrrhenians by Athena, who in consequence was worshipped by the Argives under the title of Σάλπιγξ (Schol. *ad* Hom. *Il.* xviii. 219; Pausan. ii. 21, § 3); while at Rome the *tubilustrium*, or purification of sacred trumpets, was performed on the last day of the Quinquatrus. [QUINQUATRUS.] In another legend the discovery is attributed to a mythical king of the Tyrrhenians, Maleus, son of Hercules and Omphale (Lutat. *ad* Stat. *Theb.* iv. 224, vi. 404; Hygin. *Fab.* 274; Schol. *ad* Hom. *l. c.*); in a third to Pisaeus the Tyrrhenian (Plin. *H. N.* vii. § 57; Photius,

Soldiers blowing Tubae and Cornua. (From Trajan's Column.)

s. v.), and Silius has preserved a tradition (viii. 490), according to which the origin of this instrument is traced to Vetulonii. (Müller, *Die Etrusker*, iv. 1, 3, 4, 5.)

There appears to have been no essential difference in form between the Greek and Roman or Tyrrhenian trumpets. Both were long, straight bronze tubes gradually increasing in diameter, and terminating in a bell-shaped aperture (*κώδων*), and often having a horn mouth-piece. They present precisely the same appearance on monuments of very different dates, as may be seen from the cuts annexed, the former of which is from Trajan's Column, and the latter from an ancient fictile vase. (Hope, *Costumes of the Ancients*, pl. 156.)



Σαλπιγκτής.

The scholiast on the Iliad (*l. c.*) reckons six varieties of trumpets; but he speaks of metal instruments generally: the first and fifth only are true trumpets with a straight tube; the first he calls the Grecian *σάλπιγξ* which Athena discovered for the Tyrrhenians; the fifth, a Persian trumpet, from its name *καλάμινος*, seems to have been straight like a Greek *σάλπιγξ*, but perhaps slenderer; the sixth, termed by him *κατ' ἐξοχὴν* the *τυρσηνικὴ σάλπιγξ*, he describes as bent at the extremity (*κώδωνα κεκλασμένον ἔχουσα*); but by this we must unquestionably understand the sacred trumpet (*ἱερατικὴ σάλπιγξ*, Lydus, *de Mens.* iv. 6), the *lituus* already noticed at the beginning of this article. (Compare Lucan, i. 431.) Of the others, the second and fourth are not Greek and are of unknown form; the third is a *κάρνυξ*, which was a smaller Gallic trumpet, somewhat bent like the lituus, and ornamented with the head of some animal. (See Cohen, *Méd. Cons.* xix. 3.) Reference may be made for further details to Droysen, *Gr. Kriegsalterth.* 54; Marquardt, *Staatsverw.* ii. 552; K. von Jan, in Baumeister, *Denkmäler*, 1657–1662. [W. S.] [G. E. M.]

TUBILU'STRUM. [QUINQUATRUS.]

TUBUS, TU'BULUS. [FISTULA.]

TUGURIUM, a peasant's hut or cottage (Varro, *R. R.* iii. 1, 3; Cic. *pro Sest.* 43, 93). It is probable that these dwellings in country districts long retained the primitive material for the walls of wooden planks, or sometimes wattles, stuffed with turf. (For the same material *generally* in ancient times, see Fest. *Ep.* p. 12; cf. TABERNACULUM.) The roof was of thatch (Vitruv. ii. 1, 5; Isid. *Orig.* xv. 8, 4; cf. Ov. *Fast.* iii. 184); sometimes of bark (Plin. *H. N.* xvi. § 35). As regards shape, in the earliest times there is no doubt that the hut was circular [for the origin of this shape, see DOMUS, Vol. I. p. 654], with a conical roof covered with thatch, turf, or skins, and kept in place by branches or logs slung over it, as is seen in the pottery "hut-urns," of which an example is given. From this shape was derived that of the Tholos at Athens and the Aedes Vestae at Rome [PRYTANEUM, p. 514 *a*]. How long it was retained for the huts in Italian rural districts it is impossible to say, but we may assume that it was gradually superseded by a rectangular form, though the rude material for the walls and roofs was in the poorer districts unchanged. (Cf. Verg. *Ecl.* i. 69; Marquardt, *Privatleben*, 216.) [G. E. M.]

TULLIA'NUM. [CARCER.]

TUMULTUS, TUMULTUA'RII. [EXERCITUS, Vol. I. p. 805 *b*.]

TU'NICA. The *χιτὼν* or *tunica* was a shirt or shift, and served as the chief under-garment of the Greeks and Romans, both men and women.

1. GREEK. In the earliest period, known to us by the finds in pre-historic graves, its use seems to have been unknown, a loin-cloth or apron [SUBLIGACULUM] being its predecessor. In Homer, however, the linen *χιτὼν* had already become part of the regular costume of men, though it was not yet worn by women, who retained the *πέπλος* as their sole garment [PALLA]. That this Homeric *χιτὼν* was of linen and not of wool is shown by many passages and by the epithets used of it. The *locus classicus* is *Od.* xix. 232, where the shirt of Odysseus is said to have shone like an onion skin; to have glistened like the sunlight, and yet to have been soft. Besides *σιγαλόεις* (cf. *Od.* x. 60), the epithets *νηγάτεος* (*Il.* ii. 43), *εὔννητος* (*Il.* xviii. 596), and *εὔκλωστος* (*Hymn. Ap. Pyth.* 25) are applied to it, and all of these apply to linen better than to wool. This *χιτὼν* or shirt was worn under a woollen cloak or mantle [PALLIUM] during the day, but was taken off on going to bed (cf. *Od.* i. 437, of Telemachus, *μαλακὸν δ' ἔκδυνε χιτῶνα*). It was worn

without a cloak indoors (cf. οἰοχίτων, *Od.* xiv. 488), and even outdoors when taking active exercise, as in dancing (*Il.* xviii. 595). It was also worn under the corslet (θώραξ) in time of war (cf. *Il.* iii. 357; vii. 251). This particular form of tunic is called in *Il.* v. 111 (cf. *Il.* xxi. 31) στρεπτὸς χιτών, and the epithet has given much difficulty to all commentators since Aristarchus. He explained it as meaning a coat of scale-armour (cf. Apollon. *Lex.*). Another interpretation, however, was given by Aristonicus, who took στρεπτὸς to mean "well-spun" (cf. Schol. *ad Il.* xxi. 31), and this seems on the whole the more probable meaning (cf. Studniczka, *Beiträge*, p. 63). Of the shape and size of the χιτὼν there are but few decisive hints in Homer. There is the mention of the trailing shirt of Ionians (*Il.* xiii. 685, Ἰάονες ἑλκεχίτωνες: cf. *Hymn. Ap. Del.* 147), but this is commonly held to be a late insertion. All we can say is that the warrior naturally wore a short χιτών, whatever that in ordinary use may have been like. That he used a girdle when wearing it under a coat of mail seems unquestionable, but there is no evidence that it was girded in ordinary life.

The Homeric χιτὼν was made from the linen cloth that came from the household loom, by sewing up the side. It was accordingly an ἔνδυμα (cf. δῦ, *Il.* xviii. 416; δύσατο, *Il.* xxiii. 739; δῦνεν, *Od.* xv. 61; *indutus*), "put on," not wrapped round the body, like the πέπλος of women (cf. PALLIUM). It does not seem, like the later forms, to have been fastened at the shoulders with brooches or pins; at any rate these are not mentioned. The Homeric χιτὼν appears to have been unornamented except for a fringe (cf. τερμιόεις, *Od.* xix. 242), probably left from the weaving, like that on modern towels. [TELA, p. 766*a*.]

In the period which followed the Epic age, the long χιτὼν came into almost universal use as the costume of men in time of peace, and at the same time was adopted by women. The account of how it became part of the costume of the Athenian women is told by Herodotus in a passage (v. 88) explained in the article PALLA. The change was brought about by the adoption of a linen shift worn under the primitive πέπλος. The process seems to have gone even further, and led to the wearing of two shifts, one over the other, for an edict of Solon forbids the wearing of more than three garments by women (Plut. *Sol.* 21, 5). The fashion, even if it is not referred to in this edict, is at least as old as the 6th century, and can be traced on early red-figure vases and statuettes. It is chiefly on these vases that the vast variety of forms which existed in classical times begin to appear. They may be roughly classified as (1) those which are rectangular and have no sleeves, except the half-sleeves formed by gathering the material together with a girdle at the waist; and (2) those which have sleeves added, either of a different piece of stuff or specially woven at the top. Both have the sides sewn up. Taking the first class, there are two main forms,—those in which the top is left open, and the garment fastened on the shoulders by brooches or pins. This shape is shown in fig. 1, which represents a rectangle of cloth, the old πέπλος in fact, with the ends sewn together and the top folded over all round. This fold is not always present, but is very common. It is usually, but erroneously, known to archaeologists as the διπλοΐς or διπλοΐδιον, but it was really called the ἀπόπτυγμα (cf. Böhlau, *de re Vestiaria*, p. 17). The garment was fastened to the shoulders by brooches at *a* and *a′*, *b* and *b′*. If sleeves were wished for, they could be formed by the simple process of pinning up the top from the shoulder downwards, as in fig. 2. In this case, however, there would be no ἀπόπτυγμα. The second form of this class (1) is shown in fig. 4. In it two rectangles of cloth have been sewn together on three sides, in such a way that a sack is formed with a hole in the bottom for the head to go through, and two holes at the sides for the arms. When girdled round the waist, the seams on each side of the neck become sleeves. This is seen on the female figures in the cut from the Harpy Tomb, under THRONUS. The second class (χιτὼν χειριδωτός), where the sleeves were in a separate piece, or at any rate formed by cutting up the rectangular shape, were considered less genuinely Greek than the former. [MANICA.] Thus Herodotus tells as a characteristic of the Persians that they wore sleeves (vii. 61), and even in Roman times, when their

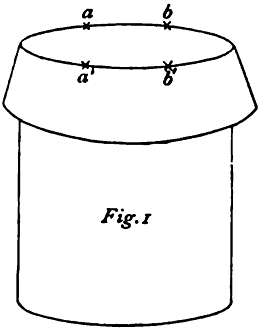

Fig. 2. Statuettes from Herculaneum. (*Mus. Borbon.*)

Fig. 3. Thalia. (British Museum.)

use was universal, it was looked on as in origin a barbaric fashion (Verg. *Aen.* ix. 616). In Art such sleeves form part of the typical Asiatic costume on vase-paintings and other monuments. Yet even in the monuments there are figures like the handmaid on the grave-stone of Thrasiklea, under STELE, with quite tight sleeves. They also are sometimes seen on old men; and, to judge by the inscriptions, in which *χειριδωτὸς χιτωνίσκος* is mentioned, were in common use with women. In later times a sleeved shirt formed part of the traditional costume of the comic actor [see cut under SOCCUS]. It is not easy to give an account of the make of such a garment; but one form of it which belongs to the Hellenistic period, though probably much older, has come down to us in the linen tunics found in the Fayoum. Most of these come from Coptic graves, and many are in a state of perfect preservation. They have been found in such numbers that few large museums are without specimens. The best English collection is at South Kensington. The general shape of the garment as it came from the loom is shown in fig. 5; a kind of cross with very thick vertical and very thin transverse bar. This is folded double and the sides sewn together. The arms of the cross then form sleeves, and form a shirt, the head being thrust through a slit in the centre left while weaving (fig. 6). This form of *χιτὼν* is usually ornamented with two embroidered bands [CLAVUS] falling from the shoulders before and behind, giving the appearance of a surplice and stole seen in front. It is indeed the direct ancestor of the surplice, and may be seen in numberless Roman paintings at Pompeii and elsewhere (cf. cuts under CLAVUS, Vol. I. p. 455 *a*).

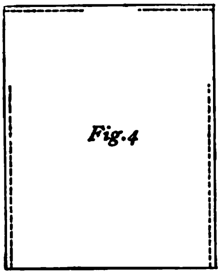

Fig. 4

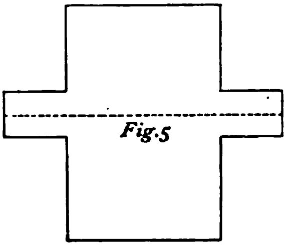

Fig. 5

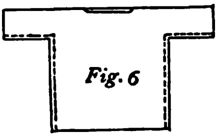

Fig. 6

The methods of wearing these different forms of the *χιτὼν* were very varied. It could be worn long or short, girded or ungirded, alone or in combination, with long or short *ἀπόπτυγμα*. To fix names to the different varieties is a task which so far has baffled scholars and archaeologists, even as far back as Roman times. Thus, for instance, many attempts have been made to discover definite differences between *χιτών*, *χιτώνιον*, and *χιτωνίσκος*, but without success. That they were indefinite, even in classical times, is shown by a glance at the inscription recording the garments in the treasury of Artemis at Brauron (*C. I. G.* i. 155; *C. I. A.* ii. 754). In it *χιτώνιον* is used ten, *χιτὼν* thirteen, and *χιτωνίσκος* thirty times; but in each case defining epithets of colour, material, pattern, shape, and size are added. showing that the difference, if any, cannot have lain in these obvious characteristics. The inscription disposes, if of nothing else, of the view based on Ammonius (p. 148, Valcken.: *χιτωνίσκος μὲν γὰρ ὁ τοῦ ἀνδρὸς χιτών, χιτώνιον δὲ τὸ τῆς γυναικὸς ἔνδυμα*), that the *χιτωνίσκος* was the man's shirt, *χιτώνιον* the woman's shift. The distinction, if there was any, must rather be sought in the use of the diminutive, to prevent a confusion of two shirts or shifts worn one over the other; just as at Rome the *tunica interior* was distinguished from the *stola*.

The epithets in the Brauron inscription, which is the *locus classicus* on the subject, deserve a detailed analysis. First as to colour, there were shifts of white (*λευκός*), purple (*ἁλουργής*), saffron [*κροκωτός*, common as a substantive in Aristophanes, who also uses *κροκωτίδιον*, in every case meaning a *χιτὼν* or *χιτώνιον*, and never a *ἱμάτιον* (PALLIUM), as Hermann (ed. Blümner, p. 188) maintains]; sea-green (*γλαυκειοῦς*), frog-green (*βατραχειοῦς*, cf. *βατραχίς*, a frog-green garment, Arist. *Eq.* 1406), and yellow (*θάψινος*). The material of which they were made was hemp (*στύππινος*), fine flaxen linen (*ἀμόργινος*, cf. Aristoph. *Lys.* 150, *χιτωνίοισι τοῖς ἀμοργίνοις*), and carded wool (*κτενωτός*). They were embroidered (*ποίκιλος*, *περιποίκιλος*, *παραποίκιλος*), and had patterns of stripes (*πυργωτὸς*) and spots (*κατάστικτον*). Some had borders (*περιπηγητός*, *παρυφὴν ἔχει*) of purple (*παραλουργές*, *πλατυαλουργής*), the borders being broad or narrow (*ἡμιυφής*). The epithets referring to the shape and make of the *χιτὼν* are more difficult to explain; the commonest are "double" (*διπλοῦν*) and "single" (*ἁπλοῦν*), and probably signify that the former garment was folded over at the top, forming an *ἀπόπτυγμα*, the latter plain and without this bib-like fold. This explanation would also apply to the difficult word *διπλοΐς*, and its diminutive *διπλοΐδιον*, these simply being doubled shifts of the former kind. If this is so, the *ἡμιδιπλοΐδιον* may be simply a shift of single thickness without the upper fold, or else a doubled one with the *ἀπόπτυγμα* coming down half its length (see second cut under art. AEGIS). Of the remaining epithets in the inscription, the most important are those which mark off two shirts as "a man's" (*ἀνδρεῖος*) and "a boy's" (*καρτὸς παίδειος*).

Turning to the monuments, we find on early black-figured vases (1) that old men wear a long ungirded *χιτὼν* under a *χλαῖνα* (see fig. of Peleus under PALLIUM, p. 318 *b*). This form of *χιτὼν* seems to have been known as the *χιτὼν ὀρθοστάδιος*, which Pollux (vii. 49) says was not girded. This fashion of dress becomes less frequent in later monuments, a short *χιτὼν* reaching down to the knees taking its place. This change is described by Thucydides (i. 6), who says that it was due to a growing simplicity of manners and the adoption of the Spartan style of dress. This was chiefly seen in the adoption of the *τρίβων*, a garment which, being a mantle or plaid rather than a *χιτών*, is to be classed with the *ἱμάτιον*. [PALLIUM; TRIBON.] This long ungirded *χιτὼν ὀρθοστάδιος* remained the professional garb of flute-players and harpers long after it had ceased to be fashionable in ordinary use. The flute-player in the article Capistrum, and the well-known statue of Apollo Citharoedus in the Vatican [see cut on p. 318], both wear it. In early Greek vase-paintings, charioteers also are nearly always represented in this long *χιτών*, leading the older archaeologists in same cases to mistake them for women. Another form of *χιτών*, the short shirt of stout stuff which artisans, labourers, and fishers wore, the *ἐξωμίς*, has been described in an article by itself [Exomis]. It gets its name from the fact that it was worn with one shoulder bare. (2) The women, on the other hand, in archaic art wear the old *πέπλος*: but on early red-figure vases and the female statues discovered in 1886 on the Acropolis at Athens, they are shown wearing a shift under their mantles. Later on in vase-paintings and statuettes of the latter half of the 6th century, some are represented wearing two. This was the custom in Hellenistic times, but is seldom to be traced in the art of the 5th and 4th centuries. This is no doubt due to the artistic elimination which during the best periods of sculpture and painting led the artists to idealise their drapery. When a more realistic school grew up towards the end of the 4th century, the double *χιτὼν* is often seen on female figures, especially on those of the Muses. (See cut on p. 903.) This is the costume which Praxinoa puts on in the famous xvth Idyl of Theocritus, for the feast of Adonis at Alexandria. She receives her visitor in *négligé*, wearing only a *χιτών*, but makes her outdoor toilet by putting on another *χιτὼν* fastened at the shoulders with a brooch (*περονατρὶς*, l. 21; cf. l. 34), and completes it by wrapping a cloak (*ἀμπέχονον*) round her.

It has since the time of Müller been customary to divide the *χιτῶνες* worn by Greek women into two exhaustive divisions, Doric and Ionic. He gave the name of Dorian chiton to the *χιτὼν σχιστός*, which was worn by Spartan girls. This, it has been shown in the article Palla, was the *ἀρχαίη ἐσθὴς* which Herodotus speaks of, identifying it with the *Δωρὶς ἐσθής* (v. 88). It was in fact a survival of the older *πέπλος*. The peculiarity of the Spartan woman was that she wore it alone, being in fact *μονόπεπλος* (Eur. *Hec.* 933) without a *χιτὼν* below. This, as the side was open (*σχιστός*), was considered indecent in the rest of Greece, and many are the sneers in the poets (Eur. *Androm.* 595). The offence against modesty was made even greater by not using a girdle (cf. Soph. *Fr.* 791, *καὶ τὰν νεόρτον, ἃς ἔτ' ἄστολος χιτὼν, θυραῖον ἀμφὶ μηρὸν πτύσσεται, Ἑρμιόναν*, where *ἄστολος* means *ἄζωστος*). It has been remarked in Palla that this garment was not called *χιτὼν* until the 5th century B.C., and it should be noted that Herodotus in this passage is careful to call it *ἐσθής*. It was only because the Spartan women wore it as a single garment that it got the name Dorian. This, however, does not imply that it was unknown in other parts of Greece, where it was worn over an ordinary *χιτών*, and could take several different forms. The distinction between Dorian and Ionic should in fact, if used, refer to material rather than shape; for while the Dorian *χιτὼν* was of wool, the Ionian was of linen. It was from early times characteristic of the peoples of Asia Minor, appearing for instance on archaic monuments, like the statues from the avenue of the temple of Branchidae, now in the British Museum, but had already in the 6th century spread over Greece proper. It was worn even in Sparta, and appears on both men and women on most of the early grave-reliefs found there, so that even on this ground the distinction breaks down.

2. Roman. At Rome, as has been shown in the article Subligaculum, the shirt or tunica was not adopted until a comparatively late date. This is all the stranger when one considers the universality with which the Etruscans of the 5th and 6th centuries B.C. are depicted dressed in it. However, in the last three centuries of the Republic it was an indispensable garment, worn under their cloaks by both men and women.

The man's tunica (*tunica virilis*) was practically identical with the last two forms of the *χιτὼν* described above (figs. 5 and 6), being two pieces of linen or woollen cloth sewn together [cf. Varro, *L. L.* ix. 79, "Non si quis tunicam in usu ita (inusitate) ita consuit ut altera plagula sit angustis clavis, altera latis utraque in suo genere caret analogia": cf. Suet. *Aug.* 94, "Sumenti virilem togam lati clavi resuta ex utraque parte ad pedes decidit"]. Sleeves—that is to say, sleeves down to the wrist—were sometimes worn, but such *tunicae manicatae* (or *manuleatae*) were considered effeminate (Gellius, vi. (vii.) 12: "Tunicis uti virum prolixis utra brachia et usque in primores manus ac prope in digitos Romae atque in omni Latio indecorum fuit. Eas tunicas Graeco vocabulo nostri chirodotas appellaverunt, feminisque solis vestem longe lateque diffusam indecere exstrinaverunt:" cf. Cic. *in Catil.* ii. 10, 22; Suet. *Jul.* 45). Under the Empire, however, such *tunicae* were the ordinary wear of every one (cf. St. Augustine, *de doctr. Chr.* iii. 2, 20, "Talares et manicatas habere apud Romanos veteres flagitium erat nunc autem honesto loco natis, cum tunicati sunt non eas habere flagitium est").

At Rome it was usual to wear two shirts, one over the other, the under being called the *tunica interior* or *subucula*. Both were in the earliest times of wool, and indeed it was not until under the Empire, in the 4th century A.D., that linen was commonly used for making *tunicae*.

The tunica was worn with a girdle fastened round it at the loins, and its length could be varied simply by pulling it through the girdle. Quintilian says that it should just reach below the knees in front and a little lower behind. If however it is a tunica with the latus clavus, it is better to wear it without a girdle at all (xi. 3, 138–9, "Cui lati clavi jus non erit ita cingatur ut tunicae prioribus oris infra genua pallum, posterioribus ad medios poplites usque perveniant. Nam infra mulierum est, supra centuriorum. Ut purpurae recte descendant levis cura est. Notatur interim negligentia. Latum habentium clavus modus est ut sit paullum cinctis summissior:" cf. Suet. *Jul.* 54). For active exercise, when for instance one was travelling (Hor. *Sat.* i. 5, 6), it was girded higher.

Indoors the girdle was thrown aside for the sake of comfort (Hor. *Sat.* ii. 1, 73), but to appear in public without it (*discinctus*), as Maecenas often did (Sen. *Ep.* 114, 4), was considered slovenly (cf. Hor. *Epod.* i. 34, *discinctus nepos*).

It was equally untidy to let one's shirt hang too long, for this savoured of the shop-boy or the woman rather than the gentleman (Plaut. *Pseud.* 1298, "Quis hic homo est cum tunicis longis quasi cauponius?" 1303, "Sane genus hoc muliebriosum est tunicis demissis;" Cic. *pro Cluent.* 40, 111; Hor. *Sat.* i. 2, 25; Propert. v. 2, 38, "Mundus demissis institor in tunicis").

The tunica girt high and tight was the ordinary dress of a slave (Juv. iii. 93, "Horrenti tunicam non reddere servo:" cf. Hor. *Sat.* ii. 8, 70) and of free labourers (Hor. *Ep.* i. 7, 65). If a cloak were worn by the slave, it would be a *sagum* or *paenula*, and Cato, the censor, considered an allowance of one tunica 3½ feet long and one sagum to each slave sufficient for two years. This style of dress is well shown on the figure from Trajan's Column given as an illustration to the article Funda. The tunica of the legionary was practically the same as this, as may be seen from representations of soldiers; the above figure, for instance, from the Arch of Septimius Severus. The shirt worn by ordinary citizens appears in the illustrations on p. 848.

Roman legionary. (From Arch of Severus.)

The *tunica muliebris*, or shift of Roman women, did not differ much from the Greek forms described above. It was the custom, however, to wear two shifts; the upper being called the *stola*, the latter the *tunica interior*, *subucula*, *interula*, or (in late Latin) *camisia*. The article Stola treats of the former, and so it is only the *subucula* which remains to be spoken of. The earliest form of this garment was the Supparum, the first linen garment adopted at Rome. It was worn with sleeves, if the *stola* were without them, but otherwise, except at the neck, is not visible in statues (cf. the statue of Livia in the article Palla), and is in most cases not represented at all. Needless to say, literature is well-nigh silent about it. The *regilla* or *tunica recta* in which the bride was clad on the day of marriage is shown on several sarcophagus-reliefs. It did not differ in shape from that in ordinary use, but, as is explained under Tela (p. 769 *a*), was of a special texture.

(Boehlau, *Quaestiones de re Vestiaria Graecorum*, Weimar, 1884; Studniczka, *Beiträge zur G. d. altgr. Tracht*, Vienna, 1886; Helbig, *Das homerische Epos*, 1887, pp. 115, 175, &c.; W. Müller, *Quaestiones Vestiariae*, Göttingen, 1890; Baumeister, *Denkmäler*, art. Chiton, Toga (Tunica); Iwan Müller, *Handbuch*, *Privataltertümer*, pp. 402, 413, 416, 422, 424, 431, 440, 804, 875, 927; Marquardt, *Privatleben*. See Index, s. v. *Tunica*.) [W. C. F. A.]

TURBO (*στρόβιλος*, *βέμβιξ*), anything that turns round with a whirring noise: hence (1) a top (Cic. *de Fato*, 16, 42; Verg. *Aen.* vii. 378. Tibull. i. 5, 3; Pers. iii. 51). In all these passages the top is a "whipping-top," except in the passage of Cicero, where the argument (see Gell. vii. 2) appears to imply a top which, set going, is left to spin of itself, like a "humming-top." In Greek there seem to be distinct words for the two kinds of tops (cf. Grasberger. *Erziehung*, i. 77–80): *βέμβιξ* is clearly a whipping-top (Aristoph. *Av.* 1461; Cleobul. *ap.* Diog. Laert. i. 82); and it is equally plain that we must take *στρόβιλος* in Plat. *Rep.* iv. p. 436 E and Plut. *Lysand.* 12 to be, like our humming-tops, spun by a string, without the lash to keep it going. We find in Homer (*Il.* xiv. 413) the form *στρόμβος*, which may be either, as far as the sense of the passage guides us, but would naturally be taken as = *στρόβιλος*. *Κῶνος* is given by Photius and Hesychius as a synonym of *στρόβιλος*: but our only description of it refers to the religious use mentioned below (3). The dictionaries give "top" as the meaning of *ῥόμβος*, citing Eur. *Hel.* 1362, where, however, it is clearly not a top, and its use is religious. We doubt if it was ever an equivalent either of *βέμβιξ* or *στρόβιλος*.

(2) Turbo is also used (Cat. 64, 314) for the whorl (*σφόνδυλος*) of a spindle, for which the usual name is *verticillus* [Fusus]. In the five passages of Pliny, which the dictionaries quote for this use of the word (as also in Ov. *Met.* i. 336), a more careful examination will show that *turbo* is there used merely to express a conical shape.

(3) The precise form of the instrument used in religious mysteries and witchcraft, and spoken of as *turbo*, *rhombus*, *κῶνος* and *ῥόμβος*, is a more difficult puzzle. A comparison of the authorities in Latin and Greek leads us to the conclusion that all four are the same thing. which was called *κῶνος* because of its shape and *ῥόμβος* because of the sound which it made. It is described by Clement of Alexandria (*Protrept.* ii. 17 = p. 16) and Arnobius as being used in the mysteries of Dionysus: it was attached by a string and whirled in the air with a rushing noise, as the Scholiast explains (*κῶνος· ξυλάριον οὗ ἐξῆπται τὸ σπαρτίον καὶ ἐν ταῖς τελεταῖς ἐδονεῖτο ἵνα ῥοιζῇ*), with which agrees the passage of Euripides mentioned above, where the *ῥόμβοι* of the Bacchanals are "whirled round in the air." Similarly in the magic use we find the *rhombus* turned to the accompaniment of the incantation (Prop. ii. 28, 35) by means of strings attached to it (cf. "staminea," Id. iii. 6, 26; "licia," Ov. *Am.* i. 8, 7). The uses of the turbo in Hor. *Epod.* xvii. 7 and the rhombus in Mart. ix. 30

are clearly identical. Similarly the metal *ῥόμβος* in Theocr. *Id.* ii. 30 is whirled round while the incantation is sung; but in this instance the ἴυγξ is bound on it (cf. Xen. *Mem.* iii. 11, 17). To this refers the mention in Photius, *ῥόμβος ὃν ἔχουσιν οἱ ἐπιθειάζοντες ὡς τύμπανον*, a misunderstanding of which, and of the Schol. *ad.* Apoll. Rhod. i. 1139, has led to the strange idea that the *ῥόμβος* was sometimes a drum or a tambourine. We may take Photius to mean that the sorcerers used both the rhombus and the tympanum in their conjuring, as in fact the witch in Theocritus does (ii. 36), and as the Bacchanals did.

Mr. Andrew Lang has argued with great ingenuity that the *ῥόμβος* or *κῶνος* in the mysteries resembled the Australian *turndun*, which is whirled round by a string, making a rushing noise, and is used in sacred rites (*Custom and Myth*, pp. 29 ff.). The shape, however, in Greece we must imagine to have been that of a cone or "peg-top," not pointed at both ends like the turndun or "bull-roarer." That in its first origin the *ῥόμβος* or *κῶνος* was a weather-charm seems to us very probable. But we think it less likely that it had to do with raising the wind, which indeed is seldom prayed for, than with attracting the sun. It is possible that a symbolical figure may in some religious uses have been bound upon it, as the ἴυγξ was in some magical practices, and it is easily conceivable that the same method might be employed to draw the heavenly bodies and to draw human beings. There is, no doubt, the simpler explanation that it was used in the mysteries as a plaything merely to represent the childhood of Dionysus (cf. Lobeck, *Aglaophamus*, p. 700); but then we lose all clue to its magic use, and all connexion with the similar customs which Mr. Lang has adduced. [G. E. M.]

TURI'BULUM (*θυμιατήριον*), a censer. The Greeks and Romans, when they sacrificed, commonly took a little frankincense out of the ACERRA and let it fall upon the flaming altar. [ARA.] But also they used a censer, by means of which they burnt the incense in greater profusion, and which was in fact a small movable *foculus* (Aelian, *V. H.* xii. 51). It was not, as Rich represents it, like the swinging censer of more modern times, but in shape was like a candelabrum, of a design Oriental in origin, with a shallow brazier on the top: the material was usually bronze, but sometimes silver (Thuc. vi. 46) and of costly workmanship (Herod. iv. 162; Cic. *Verr.* iv. 21, 46). These turibula could be carried in processions (Liv. xxix. 14; cf. Val. Max. iii. 3, 1). The turibula represented above are in the British Museum. The turibulum was lifted by cords or ribbons attached, as is seen in fig. 1, which is of terracotta with the ancient cord attached, found at Fayoum: fig. 2 represents an Etruscan bronze turibulum.

TURMA. [EXERCITUS, Vol. I. p. 784.]

TURRIS (*πύργος*), a tower.

I. *Stationary Towers.*—The origin of the tower in fortification was doubtless, as Guhl and Koner and others have remarked, a projection of the wall on either side of the gate, to enable the garrison better to defend the entrance [see under PORTA, p. 467 *b*]. From this swelling, so to speak, of the town wall was developed (*e.g.* at Phigalia) the round or square-shaped or hexagonal tower, originally merely a half-moon or three sides of a square, but afterwards enclosed on all sides. The advantage of such an addition at angles of the wall was obvious, and it became also customary to have many such towers rising at intervals, so as to form rallying-points and shelters for the defenders, if an escalade was attempted. Such were the towers on the walls of circumvallation at Plataea [cf. MURUS, p. 186 *a*].

As a further development, they were erected within cities, partly to form a last retreat in case the city should be taken, and partly to overawe the inhabitants. In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of *Acropolis* was given, as at Corinth, Argos, Messene, and many other places. The Capitolium at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Agathocles at Utica (Appian, *Pun.* 14) and that of Antonia at Jerusalem (Joseph. *Bell. Jud.* v. 5, § 8; *Act. Apostol.* xxi. 31).

Lastly, we find towers standing alone as strongholds, such as the tower at Andros instanced by Guhl and Koner (p. 68). We have further examples of this in the tower of Hannibal, on his estate between Acholla and Thapsus (Liv. xxxiii. 48); the *turris regia* of Jugurtha (Sallust, *Jug.* 103); the tower of a private citizen without the walls of Carthage, by the help of which Scipio took the city (Appian, *Pun.* 117); and, in Spain, the tower in which Cn. Scipio was burnt (Appian, *Hisp.* 16). Such towers were common in the frontier provinces of the Roman empire (Ammian. Marcell. xxviii. 2). See also Guhl and Koner, pp. 65 ff.; Droysen, *Kriegsalterth.* p. 254 f.

II. *Movable Towers.*—These were among the most important engines used in storming a fortified place. They were of two kinds. Some were made so that they could be taken to pieces and carried to the scene of operations: these were called folding towers (*πύργοι πτυκτοὶ* or *ἐπτυγμένοι*, *turres plicatiles*, or portable towers, *φορητοὶ πυργοί*). The other sort were constructed on wheels, so as to be driven up to the walls; and hence they were called *turres ambulatoriae*, *subrotatae*, or *mobiles*, *πύργοι ὑπότροχοι* (Veget. iv. 17; Liv. xxi. 11; Onosand. *Strat.* 42). But the *turres plicatiles* were generally made with wheels, so that they were also *ambulatoriae*.

The first invention or improvement of such towers is ascribed by Athenaeus the mechanician (quoted by Lipsius, *Oper.* vol. iii. p. 297) to the Greeks of Sicily in the time of Dionysius I. (B.C. 405). Diodorus (xiv. 51) mentions towers on wheels as used by Dionysius at the siege of Motya. He had before (xiii. 54) mentioned towers as used at the siege of Selinus (B.C. 409), but he does not say that they were on wheels. According to others, they were invented by the engineers in the service of Philip and Alexander, the most famous of whom were Polyidus, a Thessalian, who assisted Philip at the siege of Byzantium, and his pupils Chaereas and Diades (Vitruv. x. 19, s. 13). Heron (c. 13) ascribes their invention to Diades and Chaereas, Vitruvius (*l. c.*) to Diades alone, and Athenaeus (*l. c.*) says that they were improved in the time of Philip at the siege of Byzantium. Vitruvius states that the towers of Diades were carried about by the army in separate pieces. Respecting the towers used by Demetrius Poliorcetes at the siege of Rhodes, see HELEPOLIS.

Appian mentions the *turres plicatiles* (*B. C.* v. 36, 37), and states that at the siege of Rhodes Cassius took such towers with him in his ships, and had them set up on the spot (*ib.* v. 72).

Besides the frequent allusions in ancient writers to the movable towers (*turres mobiles*, Liv. xxi. 11), we have particular descriptions of them by Vitruvius (x. 19, s. 13) and Vegetius (iv. 17).

They were generally made of beams and planks, and covered, at least on the three sides which were exposed to the besieged, with iron, not only for protection, but also, according to Josephus, to increase their weight and thus make them steadier. They were also covered with raw hides and quilts, moistened, and sometimes with alum, to protect them from fire. The use of alum for this purpose appears to have originated with Sulla at the siege of Athens (Amm. Marc. and Claud. Quadrig. *ap.* Lips. p. 300). Their height was such as to overtop the walls, towers, and all other fortifications of the besieged place (Liv. xxi. 11). Vitruvius (*l. c.*), following Diades, mentions two sizes of towers. The smallest ought not, he says, to be less than 60 cubits high, 17 wide, and one-fifth smaller at the top; and the greater 120 cubits high and 23½ wide. Heron (c. 13), who also follows Diades, agrees with Vitruvius so far, but adds an intermediate size, half-way between the two, 90 cubits high. Vegetius mentions towers of 30, 40, and 50 feet square. They were divided into stories (*tabulata* or *tecta*), and hence they are called *turres contabulatae* (Liv. xxi. 34). Towers of the three sizes just mentioned consisted respectively of 10, 15, and 20 stories. The stories decreased in height from the bottom to the top. Diades and Chaereas, according to Heron, made the lowest story 7 cubits and 12 digits, those about the middle 5 cubits, and the upper 4 cubits and one-third of a cubit.

The sides of the towers were pierced with windows, of which there were several to each story.

These rules were not strictly adhered to in practice. Towers were made of 6 stories, and even fewer (Diod. xiv. 51). Those of 10 stories were very common (Hirt. *Bell. Gall.* viii. 41; Sil. Ital. xiv. 300), but towers of 20 stories are hardly, if ever, mentioned. Plutarch (*Lucull.* 10) speaks of one of 100 cubits high used by Mithridates at the siege of Cyzicus.

The use of the stories was to receive the engines of war [TORMENTA], and slingers and archers were stationed in them and on the tops of the towers (Liv. xxi. 11). In the lowest story was a battering-ram [ARIES]; and in the middle one or more bridges (*pontes*) made of beams and planks, and protected at the sides by hurdles; or drawbridges [SAMBUCAE]. Scaling-ladders (*scalae*) were also carried in the towers, and, when the missiles had cleared the walls, these bridges and ladders enabled the besiegers to rush upon them.

The towers were placed upon wheels (generally 6 or 8), that they might be brought up to the walls. These wheels were placed for security inside of the tower.

The tower was built so far from the besieged place as to be out of the enemy's reach, and then pushed up to the walls by men stationed inside of and behind it (Caesar, *B. G.* ii. 30, 31; Q. Curt. viii. 10). The attempt to draw them forward by beasts of burthen was sometimes made, but was easily defeated by shooting the beasts (Procop. *Bell. Goth.* i. 21). They were generally dragged up the AGGER (Hirtius, *l. c.*), and it not unfrequently happened that a tower stuck fast or fell over on account of the softness of the agger (Liv. xxxii. 17; Q. Curt. iv. 6, § 9). They were placed on the agger before it was completed, to protect the soldiers in working at it (Sall. *Jugurth.* 73; Caesar, *B. G.* vii. 22). When the tower was brought up to the walls without an agger, the ground was levelled before it by means of the MUSCULUS.

These towers were accounted most formidable engines of attack. They were opposed in the following ways.

1. They were set on fire, either by sallies of the besieged, or by missiles carrying burning matter, or by letting men down from the walls by ropes, close to the towers, while the besiegers slept (Veget. iv. 18; Sil. Ital. xiv. 305).

2. By undermining the ground over which the tower had to pass, so as to overset it (Veget. iv. 20).

3. By pushing it off by main force by iron-shod beams, *asseres* or *trabes* (Veget. *l. c.*).

4. By breaking or overturning it with stones thrown from catapults, when it was at a distance, or, when it came close to the wall, by striking it with an iron-shod beam hung from a mast on the wall, and thus resembling an Aries.

5. By increasing the height of the wall; first with masonry, and afterwards with beams and planks, and also by the erection of temporary wooden towers on the walls (Caesar, *B. G.* vii. 22; Veget. iv. 19). This mode of defence was answered by the besiegers in two ways. Either the agger on which the tower stood was raised, as by Caesar at the siege of Avaricum (*B. G.* l. c.), or a smaller tower was constructed within the upper part of the tower, and when completed was raised by screws and ropes (Veget. *l. c.*). On these towers in general see Lipsius, *Poliorcet.* in *Oper.* vol. iii. pp. 296–356.

III. Caesar (*B. C.* ii. 8–9) describes a peculiar sort of tower, which was invented at the siege of Massilia, and called *turris latericia*, or *laterculum*. It partook somewhat of the character both of a fixed and of a besieging tower. It was built of masonry near the walls of the town to afford the besiegers a retreat from the sudden sallies of the enemy; the builders were protected by a movable cover; and the tower was pierced with windows for shooting out missiles.

IV. Towers in every respect similar to the *turres ambulatoriae* (excepting, of course, the wheels) were constructed on ships, for the attack of fortified places by sea (Caes. *Bell. Civ.* iii. 40; Liv. xxiv. 34; Appian, *Mith.* 73, *Bell. Civ.* v. 106; Amm. Marc. xxi. 12).

V. Small towers carrying a few armed men were placed on the backs of elephants used in battle (Liv. xxxvii. 40).

(Marquardt, *Staatsverw.* ii. 532 f.; Droysen, *Gr. Kriegsalterth.* 313 ff.) [P. S.] [G. E. M.]

TUTE'LA. [TUTOR.]

TUTE'LAE ACTIO. [TUTOR.]

TUTOR. There were two forms of guardianship in Roman law, the *tutela* and the *cura*, which must be carefully distinguished. The difference between them is explained in the article CURATOR. According to the law of the Twelve Tables, persons not under patria potestas, who by reason of age or sex were incapable of acting for themselves, were under the protection of a tutor for their own interest and for the interest of those who might be their heredes. In the case of such persons a tutor supplied to some extent the place of a paterfamilias. (Cf. Paul. *Frag. Vat.* 304, "tutores quasi parentes proprii pupillorum sunt.") The protection of the tutela was given to impuberes and to women. A tutor derived his name "a tuendo" from protecting another. (Inst. i. 13, 2; cf. Isid. *Orig.* x. 264, "tutor: qui pupillum tuetur, hoc est intuetur.") The tutela or function of a tutor is thus defined by Servius Sulpicius, as cited by Paulus (Dig. 26, 1, 1): "Tutela est vis ac potestas in capite libero ad tuendum eum qui propter aetatem *sua sponte* se defendere nequit, jure civili data ac permissa:" "sua sponte" is probably an interpolation for "vel sexum," which latter words would not be applicable when the tutela mulierum had become obsolete (Voigt, *Zwölf Tafeln*, § 110, n. 6).

The tutela was a kind of potestas, according to the old law; a power similar to the patria potestas, but of a much more restricted character. The power was to be used for the purpose of protection, and hence tutela implies duty (*officium*) as well as right. The object of this right and duty was *in tutela* (Gaius, i. 142; Cic. *pro Rosc. Com.* 6, 16); while, on the other hand, a person who was his own master was said *suae tutelae esse* (Dig. 32, 1, 50, 1; cf. Voigt, *l. c.*, note 2). As to the classification of the different kinds (*genera*) of tutela, the jurists differed. Some made five genera, as Quintus Mucius; others three, as Servius Sulpicius; and others two, as Labeo. The most convenient division is into two genera,—the tutela of impuberes (*pupilli, pupillae*), and the tutela of women. The pupillus or the pupilla is the male or female who is under tutela.

Every paterfamilias had power to appoint by testament a tutor for his children who were in his power: if they were males, only in case they were impuberes; if they were females, also while the perpetua tutela mulierum existed, in case they were above the age of puberty (Gaius, i. 144). Therefore, if a tutor was appointed for a male, he was released from the tutela on attaining puberty (fourteen years of age), but the female still continued in tutela, unless she was released from it by a special exemption, as by the Jus Liberorum under the Lex Julia et Papia Poppaea. A man could only appoint a tutor for his grandchildren, when they would not upon his death come into the power of their father. A father could appoint a tutor for postumi, provided they would have been in his power, if they had been born in his lifetime. A man could appoint a tutor for his wife *in manu*, and for his daughter-in-law (*nurus*) who was in the manus of his son. The usual form of appointing a tutor was this: "Lucium Titium Liberis meis tutorem do." A man could also give his wife *in manu* the power of choosing a tutor (*tutoris optio*); and the optio might be either plena or angusta. She who had the plena optio might either choose a tutor who was to act for her in all her transactions, or might choose a tutor from time to time to act in particular transactions: she who had the angusta optio was limited in her choice to the number of times which the testator had fixed (Gaius, i. 150, &c.).

The power to appoint a tutor by will was either given or confirmed by the Twelve Tables. The earliest instance recorded of a testamentary tutor is that of Tarquinius Priscus being appointed by the will of Ancus (Liv. i. 34), which may be taken to prove this much at least, that the power of appointing a tutor by will was considered by the Romans as one of their oldest legal institutions. The nearest kinsmen were usually appointed tutores; and if a testator passed over such, it was a reflection on their character (Cic. *pro P. Sextio*, 52),—that is, we must suppose, if the testator himself was a man in good repute. Persons named and appointed tutores by a will are called by Gaius *tutores dativi;* in the legislation of Justinian *tutor dativus* means a tutor appointed by a magistrate (Dig. 46, 6, 7; Cod. 5, 30, 5), a tutor appointed by will being *tutor testamentarius;* those who were chosen under the power given by a will were *tutores optivi* (Gaius, i. 154).

If the testator appointed no tutor by his will, the tutela was given by the Twelve Tables to the nearest agnati of the impubes, and such tutores were called *legitimi*. The nearest agnati were also the heredes in case of the impubes dying intestate and without issue, and the tutela was therefore a right which they claimed as well as a duty imposed on them. Perseus (ii. 12) alludes to the claim of the tutor as heres to his pupillus. A brother who was pubes was the legitimus tutor of a brother who was impubes; and if there was no brother who was pubes, the son who was impubes had his father's brother (*patruus*) for his tutor. The same rule applied to females also, till it was altered by a Lex Claudia, which abolished the tutela legitima of women. If there were several agnati in the same degree, they were all tutores. If there were no agnati, the tutela belonged to the gentiles, so long as the Jus Gentilicium was in force (Gaius, iii. 17, and i. 164). Perhaps the agnatorum tutela legitima was created by the Twelve Tables, the tutela having previously devolved at once on the gens, if the impubes belonged to one. The tutela in which a freedman was with respect to his patronus was also legitima; not that it was expressly given by the words (*lex*) of the Twelve Tables, but it flowed from the lex as a consequence (*per consequentiam*, Ulp. *Frag.* tit. 11); for as the hereditates of intestate liberti and libertae belonged to the patronus, it was assumed that the tutela belonged to him also, since the Twelve Tables allowed the same persons to be tutors in the case of an ingenuus, to whom they gave the hereditas in case there was no suus heres (Gaius, i. 165).

If a free person had been mancipated to another either by his parent or coemptionator, and such other person manumitted the free person, he became his tutor fiduciarius by analogy to the case of freedman and patron. (Compare Gaius, i. 166, with Ulp. *Frag.* tit. 11, s. 5.) [EMANCIPATIO; FIDUCIA.]

If an impubes had neither a tutor testamentarius nor legitimus, he had one given to him in Rome, under the provisions of the Lex Atilia, by the praetor urbanus and the major part of the tribuni plebis (as to the date of this law, cf. Liv. xxxix. 9); in the provinces in such cases a tutor was appointed by the praesides under the provisions of the Lex Julia et Titia, B.C. 31. [LEX JULIA ET TITIA.] If a tutor was appointed by testament either *sub condicione* or *ex die certo*, a tutor might be given under these leges so long as the condition had not taken effect or the day had not arrived: and even when a tutor had been appointed absolutely (*pure*), a tutor might be given under these leges until the will should take effect by the heres under it taking the inheritance; but the power of such tutor ceased as soon as there was a tutor under the testament,—that is, as soon as the testament took effect by the existence of a heres under it. If a tutor was captured by the enemy, a tutor was also given under these leges, but such tutor ceased to be tutor as soon as the original tutor returned from captivity, for he recovered his tutela Jure Postliminii.

Even before the passing of the Lex Atilia tutors were given by the praetor in other cases, as for instance, when the legis actiones were in use, the praetor appointed another tutor if there was any action between a tutor and a woman or ward, for the tutor could not give the necessary authority (*auctoritas*) to the acts of those whose tutor he was, in a matter in which his own interest was concerned. Other cases in which a tutor was given are mentioned by Ulpian, *Frag.* 11.

Ulpian's division of tutores is into Legitimi, Senatusconsultis constituti, and Moribus introducti. His legitimi tutores comprehend all those who become tutores by virtue of any lex, and specially by the Twelve Tables: accordingly it comprises tutores in the case of intestacy, tutores appointed by testament, for they were confirmed by the Twelve Tables, and tutores appointed under any other lex, as the Atilia. Various senatusconsulta declared in what cases a tutor might be appointed; thus the Lex Julia de maritandis ordinibus (Papia et Poppaea) enacted that the praetor should appoint a tutor for a woman or a virgin, who was required to marry by this law, "ad dotem dandam, dicendam, promittendamve," if her legitimus tutor was himself a pupillus: a senatusconsultum extended the provision to the provinces, and enacted that in such case the praesides should appoint a tutor; and also that, if a tutor was mutus or furiosus, another should be appointed for the purposes of the lex. The case above mentioned of a tutor being given in the case of an action between a tutor and his ward, is a case of a tutor *moribus datus*; that is, appointed according to customary law. In the Imperial period from the time of Claudius, tutores extra ordinem were appointed by the consuls also.

Only *cives* or those who had the *jus commercii* could be tutores. Thus a person could not be named tutor in a testament, unless he had the testamentifactio with the testator, a rule which excluded such persons as peregrini. The Latini Juniani were excluded by the Lex Junia (Gaius, i. 23). Women could not be tutores. Filiifamilias could be tutores as well as paterfamilias. The tutela was a publicum munus, and hence persons were bound to serve when called on, unless they were under some incapacity or could excuse themselves on some valid legal ground: grounds of excuse (*excusationes*) were age, absence, the being already tutor in other cases, the holding of particular offices, and others which are enumerated in the Fragmenta Vaticana (123–247), and by Justinian in his Institutes (i. 25).

The power of the tutor was mainly concerned with the property and pecuniary interests of the pupillus. The custody of the ward's person was generally assigned by the magistrate to one of his near relations, who might or might not be the same person as the tutor. The care of the child belonged to the mother, if she survived (*custodia matrum*, Hor. *Ep.* i. 1, 22; Dionys. viii. 51; Liv. xxxix. 9, 1; Sen. *ad Marc.* 24, 1), unless the father had otherwise disposed in his will. In a case mentioned by Livy (iv. 9), where the mother and the tutores could not agree about the marriage of the mother's daughter, the magistratus decided in favour of the mother's power (*secundum parentis arbitrium*). But it was the duty of the tutor to exercise a supervision over the pupillus, and to see that he was properly educated and cared for. (Cf. Dig. 26, 7, 12, 3: "Cum tutor non rebus dumtaxat, sed etiam moribus pupilli praeponatur;" Dig. 27, 2; Cod. 5, 49.) In respect of property the tutor's office was "negotia gerere et auctoritatem interponere," though only the auctoritatis interpositio was absolutely essential to the notion of tutela; the administration of property (*rem gerere*) not belonging to the tutor of mulieres.

Auctoritatem interponere.—A pupillus who was an infans—that is, below the age of seven—could not perform any legal act. A pupillus (*major infantia*) could do no act by which he diminished his property without the sanction (*auctoritas*) of his tutor, but any act to which he was a party was valid, so far as concerned the pupillus, if it was for his advantage. Consequently a pupil could contract obligationes, which were for his advantage, without his tutor (Gaius, iii. 107). Thus the natural act of the pupillus became, by auctoritatis interpositio of the tutor, a legal act; and thus the pupillus and his tutor formed one complete person, as to legal capacity to act. [Infans; Impubes.]

No particular form was required for the expression of the tutor's auctoritas, but it had to be given by the tutor himself when the pupillus entered into the transaction which required it (*in ipso negotio*); it could not be transmitted by letter or by a messenger, and it had to be unconditional (Inst. i. 21, 2;—Dig. 26, 8, 8; 9, 5). It could, generally speaking, be withheld by the tutor of an impubes at his discretion.

Auctoritas was necessary in order to give legal effect to any act of a pupillus, by which he might suffer loss, but a pupillus might acquire rights for himself without auctoritas (Inst. i. 21, pr.). Thus a pupillus could not alienate his property without the concurrence of his tutor, but he could receive property by alienation to him simply by his own act; so too, though he could not contract an obligation without his tutor's intervention, he did not require auctoritas in order to bind others by a contract with him. The incapacity of the pupillus is shown by the following instance:—If his debtor paid a debt to the pupillus, the money became the property of the pupillus, but the debtor was not released, because the pupillus might suffer loss by releasing his debtor unless with the co-operation of his tutor; if, however, the pupillus afterwards sued for the debt, while still retaining the benefit of the payment which had been made to him, the praetor allowed the debtor an exceptio doli (Gaius, ii. 84; Cic. *Top.* 11). [Impubes.]

As the act which was made valid by the sanction of the tutor was the act of the impubes, it follows that the auctoritas had no application in the case of a pupillus altogether incapable of performing an illegal act; and so, as an infant or person who had not completed his seventh year was thus incapable, it was not till a pupillus was major infantia that auctoritas could be given to his acts.

Rem gerere.—The tutor had the administration of the property of the pupillus (*rem, negotium gerere*), and was bound to exercise this part of his function according to the best of his ability. It was his duty to prevent the property of the pupillus from suffering any loss that he could avoid, and to make such profit from the property as it was fairly capable of. The tutor was liable to the pupillus not only on account of dolus, but also for such negligence as he did not show in the management of his own property (Dig. 27, 3, 1, pr.: "In omnibus, quae fecit tutor, cum facere non deberet, item in his, quae non fecit, rationem reddet hoc judicio, praestando dolum, culpam et quantum in rebus suis diligentiam"). The obligation between the tutor and the pupillus was one of those arising *quasi ex contractu* (Inst. iii. 27, 2). By an oratio of the Emperor Septimius Severus it was enacted that the tutor should be incapable of alienating praedia rustica and praedia suburbana of the pupillus, unless under an order of the magistrate; and this rule was extended to other property of the pupillus, excepting things of little value and superfluous things (Dig. 27, 9; Cod. 5, 71).

The principle of allowing the tutor to represent the pupillus in legal transactions was gradually admitted. If property was conveyed by mancipium or in jure cessio to a tutor as *negotiorum gestor* of pupillus, the tutor alone acquired legal ownership of it, but in course of time the praetor gave pupillus *vindicatio utilis* for the recovery of it. If property was conveyed by traditio to tutor on account of the pupillus, the latter acquired possession of it in the time of Justinian, and so direct ownership of it. [Dominium.] The tutor was first allowed to acquire choses in action for the pupillus in case of the pupillus infans having no slave, the pupillus being allowed to maintain a right thus acquired by actio utilis: this principle was extended to pupilli who were at a distance from the tutor, and finally was made applicable in all cases. It is to be remembered that a pupillus could always acquire rights through his slaves. A tutor could only bind the pupillus when authorised to do so by the magistrate. A tutor could maintain actions on account of his pupillus (Inst. iv. 10, pr.; Gaius, iv. 82).

In order to secure the proper management of the property of a pupillus or of a person who was in curatione, the praetor required the tutor or curator to give security; but no security was required from testamentary tutores, because they had been selected by the testator; nor, generally, from tutores appointed by a consul, praetor or praeses, for they were appointed as being fit persons (Gaius, i. 199).

The tutor might be removed from his office, if he was misconducting himself: this was effected by the *accusatio suspecti*, which is mentioned in the Twelve Tables (Gaius, i. 182; Dirksen, *Uebersicht, &c. der Zwölf Tafeln*, 599–604).

When the tutela came to an end, the actio tutelae directa could be brought against the tutor by the pupillus for a general account of the property managed by the tutor, and for its delivery to the pupillus, now become *pubes*. If the tutor was condemned in this action, the consequence was infamia. [Infamia.] The Twelve Tables gave the pupillus a special action against the tutor in respect of fraudulent accounting; and if he made out his case, he was entitled to double damages. This appears to be the action which in the Digest is called *actio de rationibus distrahendis*. The tutor could claim to be indemnified for what he had expended or done in the interest of his pupillus, having the actio tutelae contraria against his late pupillus for the purpose of enforcing this liability.

When several tutores were joined in one tutela, the administration might be committed to one of them—called *tutor gerens*, as opposed to *tutor honorarius*. The tutor honorarius was liable, if he did not exercise a proper supervision over the tutor gerens, in case the loss could not be recovered from the latter. The tutela was terminated by the death or capitis deminutio maxima or media of the tutor. A tutor legitimus became disqualified if he sustained a capitis deminutio minima, which was the case if he allowed himself to be adopted (Gaius, i. 195; Ulpian, *Fragm.* 11, 13), since he thereby ceased to be an agnate of the pupillus, but capitis deminutio minima had no effect on the position of a tutor testamentarius or dativus. The tutela ceased by the death of the pupillus, or by his capitis deminutio of any kind. It also ceased when the pupillus attained the age of puberty, which in the male sex was fourteen, as the law came to be determined. [IMPUBES.] In the time of the classical jurists, the tutela might cease by the abdicatio of the testamentary tutor; that is, when he declared "nolle se tutorem esse." Under the law of Justinian the resignation of a tutor was in no case allowed, unless it was approved by the magistrate for some cause which appeared to him reasonable.

The tutela of a tutor was terminated, as we have observed, when he was removed from the tutela as *suspectus*, or when his excusatio was allowed to be *justa;* but in both of these cases a new tutor would be necessary (Gaius, i. 182). The tutela appears to have been regarded at first as having for its object the benefit of the tutor rather than that of the pupillus, as being a means of protecting the family property to which the tutor might succeed: but in later law the idea of duty (*onus*) rather than that of right attaches to the function. The duty became a public one (*publicum munus*), brought more and more under the supervision of the magistrate.

The tutela of women who are puberes requires a separate examination. A woman who was not *in patria potestate* or *in manu viri* was always under a tutela (*in perpetua tutela*), not being capable, like a man *sui juris*, of acting as she pleased on attaining the age of puberty, which was the completion of her twelfth year. The tutor of a woman who was pubes had not, however, the administration of her property, as in the case of an impubes; she managed her own affairs, but the auctoritas of a tutor was required in order to give validity to her acts in certain cases (Gaius, i. 190; Ulp. *Fragm.* 11, 1, 25: cf. Liv. xxxiv. 2, the speech of Cato for the Lex Oppia). The reasons for this restriction on the capacity of women are given by Cicero (*pro Muraena*, c. 12), by Ulpian (*Fragm.* 11, 1), and by Gaius (i. 190); Gaius considers the usual reasons as to the law being founded on the weakness of the sex as unsatisfactory, since women above the age of puberty administer their own property, and the interposition of the tutor is a mere formality. The original object of the law seems to have been to prevent the alienation of her property, and so to secure the succession of her agnati or of her gens, who in early times would always have been her tutores. Gaius remarks (i. 193) that, though in foreign states women were not under the same tutela as under Roman law, they are generally under a quasi tutela; thus the law of the Bithynians requires the contracts of a woman to be sanctioned by her husband or by a son above the age of puberty.

A mulier might have a tutor appointed by her father's testament; or by the testament of her husband if she was in his power (*manus*). A wife in her husband's manus might receive from his will the *tutoris optio* or right of choosing a tutor for herself (*tutor optivus*) (Gaius, i. 150: cf. Liv. xxxix. 19, 5), whereby the right of the agnates might be effectually excluded.

According to the law of the Twelve Tables, women who had no testamentary tutor were in the tutela legitima of their agnati; or, in the case of freedwomen and of emancipated daughters, in the tutela legitima of the patronus or of the parens manumissor. The tutela legitima of agnati was abolished by a law passed under the Emperor Claudius, called the Lex Claudia (Gaius, i. 157). The tutela of patroni was not included within the Lex Claudia. The tutela legitima of agnati and patroni over women could be transferred by in jure cessio, while that of pupilli could not (Gaius, i. 168); but it would seem that it was rather the exercise of the tutor's right than the right itself which was thus transferred, since it is said that on the death or capitis minutio of the tutor cessicius, the tutela reverted to the tutor qui cessit (Gaius, i. 170). A person might become tutor of a woman subject to a fiducia or trust as to the way in which he should exercise his right (*tutor fiduciarius*).

A tutor dativus was given to women by the magistratus under the Lex Atilia, when there was no other tutor, or under a senatusconsultum in the absence of a tutor or in case of a legis actio between a woman and her tutor (Gaius, i. 173, &c.; Ulp. *Fragm.* 11). By the Lex Julia, if a woman was in the legitima tutela of a pupillus, she might apply to the praetor urbanus for a tutor who should give the necessary auctoritas for the purpose of making a dotal settlement (Gaius, i. 178; Ulp. *Fragm.* 11, 20). The Vestal Virgins were exempt from tutela; and both ingenuae and libertinae were exempted from tutela by the Jus Liberorum (Gaius, i. 145, 194); it is to be remembered that a married woman would be in tutela if she were not *in manu viri* [MATRIMONIUM].

Octavia, the sister of Caesar Octavianus, and his wife Livia, were released from tutela by a special enactment (Dio Cass. xlix. 318).

The perpetua tutela of women originated and long continued to exist for the purpose of protecting the agnatic family.

The agnatic tutela was in course of time allowed to be excluded not only by the testamentary disposition of a paterfamilias, or husband with marital power, but also by means of juristic contrivances (Cic. *pro Mur.* c. 12). Thus, a woman for the purpose of escaping from the control of her agnatic tutor would enter into a fictitious marriage with some one, being conveyed to him by means of coemptio, with a fiduciary understanding (*coemptio cum fiducia*) that her supposed husband—the coemptionator or purchaser—should at once release her by remancipatio; she was accordingly remancipated by the coemptionator to some person of her own choice: this person manumitted her by vindicta [Manumissio], and became her tutor fiduciarius (Gaius, i. 114, 115). Thus the woman passed by coemptio from her own family to another, her agnati losing all claims upon her, and her tutor fiduciarius might be compelled by the praetor to give his auctoritas to her acts (Gaius, i. 115; ii. 122). The tutor legitimus might surrender his control of a woman to a tutor cessicius by in jure cessio. Finally, as we have seen, the agnatic tutela was abolished by the Lex Claudia, after which, except in the case of patroni and parentes, the perpetua tutela mulierum only remained a mere form.

The tutela of a woman was terminated by the death of the tutor or that of the woman; by a marriage by which she came *in manum viri;* by the privilege of children (*jus liberorum*); or by her becoming a Vestal Virgin. A woman had no right of action against her tutor in respect of his tutela, for he had not the *negotiorum gestio*, or administration of her property, but only interposed his auctoritas (Gaius, i. 191).

If a woman was in the tutela legitima of a patronus or parens manumissor, the tutor, Gaius tells us (i. 191), could not be compelled to give his auctoritas, except for very weighty reasons ("praeterquam si magna causa interveniat"). Other tutores could be compelled to give their auctoritas, which in their case was a mere form. It is probable that agnatic tutors were in the same position as patroni and parentes,—that is, they were not compelled to give their auctoritas; but Gaius wrote after the agnatic tutela had been abolished.

The special cases in which the auctoritas of a tutor was required were, if the woman had to sue by legis actio or in a legitimum judicium, if she was alienating a mancipable thing [Dominium]; a non-mancipable thing she might alienate without the tutor's sanction (Gaius, ii. 80). Gaius (ii. 47) states that formerly, when a woman was under agnatic tutela, her mancipable things were not subject to usucapion, unless she herself delivered possession of them with the authority of her tutor, and that this was a provision of the Twelve Tables. In other cases, if a res mancipi was transferred by tradition, the purchaser acquired the quiritarian ownership by usucapion [Usucapio]. The passage of Cicero (*pro Flacc.* 34, 84) is in accordance with Gaius; and another passage (*ad Att.* 1, 5), though vaguely expressed, is not inconsistent with his statement. (See Casaubon's note on the passage.) She could not manumit without the auctoritas of a tutor (Ulp. *Fragm.* 1, 17; compare Cic. *pro Cael.* 29, 68). The auctoritas of a tutor was not required, in the case of any obligatio by which the woman's condition was improved, but it was necessary in cases where the woman became bound (Gaius, i. 192, iii. 108; Ulp. *Fragm.* 11, 27; Cic. *pro Caecin.* 25, 72). So, if a woman wished to promise, the auctoritas of a tutor was necessary (Cic. *pro Flacc.* 35). As a woman could alienate res nec mancipi without the sanction of a tutor, she could bind a person to her by lending money (*mutuum*), for by delivery the money became the property of the receiver.

A payment made to a woman was a release to the debtor; if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him (Cic. *Top.* 11; Gaius, ii. 83, 85, iii. 171).

A woman could not make a will without the sanction of her tutor; the rules on this subject are stated under Testamentum. If a woman was not subject to a tutor legitimus, but to a tutor of another kind, the praetor might perhaps in the time of Gaius give bonorum possessio to such will, although the merely formal requisite of auctoritas had not been complied with (Gaius, ii. 121, 122: cf. i. 194, 195).

It may be questioned whether the auctoritas of a tutor was necessary in order to enable a woman to marry without passing *in manum viri* (see, however, Ulp. 11, 22; Cic. *pro Cluent.* 5, 14); but it seems clear that such sanction was required in order to enable a woman to effect a confarreatio or coemptio (cf. Gaius, i. 115).

The tutela mulierum existed at least as late as Diocletian, A.D. 293 (*Vat. Fragm.* § 325). There is no trace of it in the Code of Theodosius, or in the legislation of Justinian. (Gaius, i. 142–200; Ulp. *Fragm.* 11, 12; Inst. i. 13–26; Dig. 26 and 27; Cod. 5, 28–75; Rudorff, *Das Recht der Vormundschaft;* Rein, *Das röm. Privatrecht*, p. 239, &c.; F. Minquet, *Hist. jur. Rom. de Tut.*; S. Szuldrzynski, *de Orig. ac Progr. Tut. Mul.*; Le Fort, *Essai Hist. de la Tutelle;* Voigt, *Zwölf Tafeln*, ii. § 110, &c.) [G. L.] [E. A. W.]

TYMBORUCHIAS GRAPHE (*τυμβωρυχίας γραφή*). Pollux mentions *τυμβωρύχος* in a long list of *ὀνόματα ἐξ ἀδικημάτων ἐφ' οἷς εἰσὶ δίκαι καὶ γραφαί*. No instance of this action at Athens is known to us, yet it is very probable that this action might be maintained not so much against a person who opened a tomb to rob the dead (*Att. Process*, ed. Lipsius, p. 456), as against a person who opened it to inter there some one who was not entitled to burial there: cf. Cic. *de Legg.* ii. 26, 64: "de sepulcris autem nihil est apud Solonem amplius quam 'ne quis ea deleat neve alienum inferat' poenaque est, 'si quis bustum,' nam id puto appellari *τύμβον*, 'aut monumentum,' inquit, 'aut columnam violarit, deiecerit, fregerit.'" The custom of fixing a fine to be paid for infringing the rights of the owner of a grave arose in Lycia, and is not derived from Roman usage (Hirschfeld, *Königsberger Stud.* 1887, pp. 85–144). Hirschfeld considers the inscription of Pinara (*C. I. G.* No. 4259) to be the oldest, and assigns it to the 3rd century B.C.; in it we find all the characteristic points of such inscriptions. He who opens a tomb, or orders another person to do so, is accursed (*ἁμαρτωλὸς ἔστω θεῶν πάντων καὶ Λητοῦς καὶ τῶν τέκνων*), has to pay a fine (*προσαποτεισάτω τάλαντον ἀργυρίου*), and anyone who cares may bring an action against him (*ἐξέστω τῶι βουλομένωι ἐγδικάζεσθαι περὶ τούτων*), *i.e.* the *ἔγκλημα τυμβωρυχίας* (Termessus, *C. I. G.* No. 4336 l.): cf. *ἄγεσθαι τυμβωρυχίας*, Olympus, *C. I. G.* No. 4325 k.; *ὑποκείσ[εται] τῇ τυμβωρ[υχί]ᾳ*, Telmissus, No. 4221 *d. Add.*; *τῷ τῆς τυμβωρυχίας νόμῳ*, Andriace, No. 4303 *m.* From Lycia this custom spread, and the Roman emperors sanctioned the law: cf. *Bull. de Corresp. Hellén.* v. p. 344, Tralles: *ὑπεύθυνος ἔσται τοῖς διατάγμασι καὶ τοῖς πατρίοις νόμοις* (*C. I. G.* iii. p. 1128, Antiphellus: *ὑπεύθυνος ἔσται τοῖς διὰ τῶν θείων δια[ταγ]ῶν ὡρισμένοις*), i.e. *constitutiones Imperatorum* and customary laws. The amount of fine in Lycian inscriptions varies from 250 to (in one instance) 20,000 denarii; in non-Lycian inscriptions some higher amounts occur. The fine is usually paid in Lycia to the *δῆμος* or the *πόλις*; everywhere else usually to the fiscus (*φίσκος*, *ταμιεῖον*), sometimes to deities—Isis at Thebes, *μήτηρ θεῶν Σιπυληνή* in Smyrna, etc.; in isolated cases the money goes to the brothers or the heirs of the grave-owner. A Jewess directs the fine to be paid to her people, a physician to his colleagues, a slave to his mistress and her heirs. The informer received a share of the fine, sometimes one-half, sometimes one-third: *τῆς προσαγγελίας οὔσης παντὶ τῷ βουλομένῳ ἐπὶ τῷ ἡμίσει*, *C. I. G.* No. 4300 *v. Add.*, cf. No. 4293; *εἰσαγγέλλοντος τοῦ βουλομένου ἐπὶ τῷ τρίτῳ μέρει*, No. 4300 *e. Add.*; *τοῦ βουλομένου ἐξελέγχειν ἐπὶ τῷ τρίτῳ μέρει*, No. 4278 *i. Add.*; *οὔσης τῆς κατηγορίας παντὶ τῷ βουλομένῳ ἐπὶ τῷ τρίτῳ μέρει*, No. 4224 *d. Add.*, etc. An action for *τυμβωρυχία* is mentioned also in *C. I. G.* No. 2688 ff. Iasus (cf. Hicks, *Journ. Hell. Soc.* 1887, p. 115), No. 2826 ff. Aphrodisias, No. 3266 Smyrna (Lebas-Waddington, *Voyage Archéol.* iii.), No. 220 Miletus, etc. Of the Attic tomb-inscriptions eleven contain a curse and five fix a fine (*C. I. A.* iii. 2, No. 1417 ff.). These may be added to Hirschfeld's long list as well as some others discovered since the publication of his paper: two of Salonica (*Journ. Hell. Stud.* 1887, p. 374, and *Berl. Philol. Wochenschr.* 1889, No. 41), four of Heraclea in the Propontis (*Berl. Phil. W.* 1888, No. 14), two of Smyrna (*Mitth. d. d. Archäol. Inst.* xii. p. 248), one of Myra (*Journ. Hell. Soc.* 1889, p. 85), three from Ephesus (*Anc. Greek Inscr.*, ed. Newton, iii. p. 253 ff.). [H. H.]

TY'MPANUM (*τύμπανον*). 1. A small drum carried in the hand. Of these, some resembled in all respects a modern tambourine with bells. Others presented a flat circular disk on the upper surface and swelled out beneath like a kettle-drum, a shape which appears to be indicated by Pliny when he describes a particular class of pearls in the following terms:—"Quibus una tantum est facies, et ab ea rotunditas, aversis planities, ob id tympania vocantur" (*H. N.* ix. § 109). Both forms are represented in the cuts below. Fig. 1 is from a painting found at Pompeii (*Mus. Borbon.* tom. vii. tav. 37); fig. 2 is from a fictile vase (Millin, *Peintures de Vases Antiques*, pl. 56), and here the convexity on the under side is distinctly seen. Tympana were covered with the hides of oxen (Ovid, *Fast.* iv. 342; Stat. *Theb.* ii. 78) or of asses (Phaedr. iv. 2, 4), were beaten with the hand (Ovid, *Met.* iv. 30; see cuts), and were much employed in all wild enthusiastic religious rites (Aristoph. *Lysistr.* i. 387), especially the orgies of Bacchus and of Cybele (Catull. lxiv. 262; Claud. de *Cons. Stilich.* iii. 365; Lucret. ii. 618; Catull. lxiii. 8; Verg. *Aen.* ix. 619; Suet. *Aug.* 68; compare Lobeck, *Aglaophamus*, pp. 630, 652), and hence Plautus (*Truc.* ii. 7, 49) characterises an effeminate coxcomb as "Moechum malacum, cincinnatum, umbraticolam, tympanotribam." According to Justin (xli. 2), they were used by the Parthians in war to give the signal for the onset.

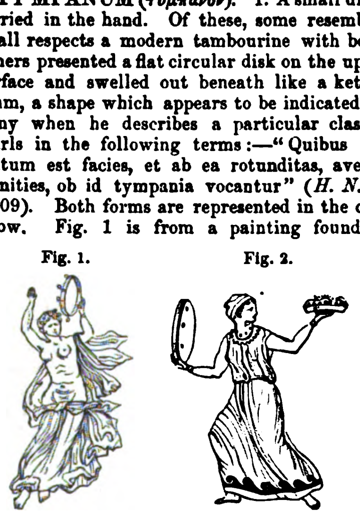

Fig. 1. Fig. 2.

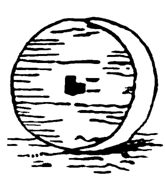
Tympanistriae.

2. A solid wheel without spokes for heavy waggons (Verg. *Georg.* iv. 444), such as is shown in the cut on page 433. These are to this day common in the rude carts of Southern Italy and Greece, and Sir C. Fellows (*Excursions in Asia Minor*, p. 72), from whose work the figure below is copied, found them attached to the farm vehicles of Mysia. "The wheels are of solid blocks of wood, or thick planks, generally three, held together by an iron hoop or tire; a loud creaking noise is made by the friction of the galled axle," a suggestive commentary on the "stridentia plaustra" of Virgil (*Georg.* iii. 536). [PLAUSTRUM; SARRACUM.]

3. Hence wheels of various kinds, a sort of crane worked by a wheel for raising weights (Lucret. iv. 903; Vitruv. x. 4) [MACHINA], a wheel for drawing water (Vitruv. x. 14) [ANTLIA; ROTA], a solid toothed wheel forming part of the machinery of a mill (Vitruv. x. 9, 10), and the like.



Solid wheel, or Tympanum.

4. An architectural term signifying the flat surface or space within a pediment, and also the square panel of a door (Vitruv. iii. 3, iv. 6).

5. A wooden cudgel for beating malefactors, and also a beating post to which they were tied when flogged; hence the Greek verbs *τυμπανίζειν* and *ἀποτυμπανίζειν* are formed (Schol. ad Aristoph. *Plut.* 476; *Ep. to Hebrews*, xi. 35; Pollux, viii. 70). [W. R.]

TYRANNUS (*τύραννος*). The word *τύραννος* has not yet been satisfactorily explained by a Greek etymology, and Boeckh's conjecture that it was a foreign word and came to the Greeks from Lydia or Phrygia, where it is found frequently in inscriptions, is extremely probable (Boeckh, *Comment. ad C. I. G.* n. 3438). The meaning the word conveyed to a Greek mind was that of a man who wielded absolute power, and a power not sanctioned by the ordinances of the state in which it was exercised. This is all that is essential to the notion; yet the later philosophic thought of Greece, combined with actual historical experience, developed an addition to the conception,—namely, that the rule of the *τύραννος* was exercised not in the interests of the subjects, but in that of the ruler. This was a natural consequence of the conception that the rule of the tyrant was always outside the pale of law (Eur. *Suppl.* 445), although it was a deduction not always justified by facts. Aristotle embraces every side of the idea when he defined tyranny proper as "that arbitrary power of an individual which is responsible to no one, and governs all alike, whether equals or betters, with a view to its own advantage, not to that of its subjects, and therefore against their will" (Arist. *Pol.* iv. 10, 4 = p. 1295). The main point of separation between *τυραννὶς* and *βασιλεία* was the self-interested nature of the former government (Arist. *Pol.* iii. 7, 5 = p. 1279; *Eth.* viii. 10, 2), although the early kingships of Greece differed additionally from tyranny in having their privileges and their powers determined by custom (Thuc. i. 13, 1); and thus a king who, like Pheidon of Argos, overstepped the limits of his hereditary power, was accounted a tyrant (Arist. *Pol.* v. 10, 6 = p. 1310). It may be further noticed, in this definition of Aristotle and in the Greek conception generally, that tyranny proper implies *individual* rule.

Tyranny, while always answering in some degree to this general conception, yet had the particular form in which it manifested itself determined by the circumstances of the times and the stage of political development in Greece. We may distinguish two main periods of despotism, that of the 7th and 6th centuries on the one hand, and that of the 4th century on the other; the difference between the earlier and the later of these periods is the difference between symptoms of growth and symptoms of decay in the same nation: and while the former was a result of the natural course of internal development in the states and prepared the way for the free constitutions, the latter was a consequence of the downfall of the free governments and of the external causes which in the 4th century acted on Greek politics as a whole. The early tyrannies grew for the most part out of the oligarchical governments which succeeded the downfall of the monarchies. In Corinth and Thebes the monarchy fell about the middle of the 8th century: in Sparta, at a still earlier period, it had been saved by a limitation of its powers: in Athens it dwindled down to the limited functions of the archonship. Everywhere its power had been replaced by the rule of a nobility, whose special claims to honour were the exclusive possession of the sacrifices and higher religious rites of the state, the exclusive knowledge of its laws, and the sole possession of that political *ἀρετὴ* which resulted from higher birth and from inherited wealth and culture. But in the 7th century B.C. other classes were growing to power by the side of the old nobility,—the classes, namely, which had acquired wealth through commerce, and which were not only excluded from all participation in public affairs, but found their properties exposed to danger from the dynasties that ruled their towns. These formed the largest part of the discontented elements that fostered the despot, as in Corinth, where the revolution took the form of a reaction against the Bacchiadae, who had grossly misused their power and unscrupulously appropriated the profits of commerce (Ael. *Var. Hist.* i. 19; Strabo, p. 325): and the assertion of Thucydides that it was the growing wealth of Greece which gave rise to despotism (Thuc. i. 13) is illustrated both by this instance of Corinth and by that of the neighbouring town of Sicyon, which was renowned only next to Corinth for trade and manufacture (Strabo, p. 382). The tyrannies that developed out of oligarchies in Sicily and southern Italy, at Leontini, Gela, and Rhegium, during the close of the 6th century B.C. (Arist. *Pol.* v. 12, 13 = p. 1316), were probably due to the same assertion of their claims by the rich and unprivileged classes; in other states it was the poorest class, such as the Diacrii of Athens, on the championship of which the despot based his claim to power (Arist. *Pol.* v. 5, 9 = p. 1305; Herod. i. 59); while at other times the element of race entered into the struggle, as at Sicyon, where both the tyrant and his supporters belonged to the Ionian Aegialeis, and the revolution took the form of a reaction against an oppressive Dorian nationality (Herod. v. 68). Throughout Greece we see a period of transition, during which pressing difficulties, national or social, called for settlement; and the adjustment that ensued took the form either of a constitutional dictatorship or of an unconstitutional monarchy. In the former case the contending factions combined in appointing an individual for the settlement of their difficulties who bore the title of *αἰσυμνήτης*. Such an office was held by Pittacus in Mitylene, Zaleucus in Locri, and Solon in Athens; it was the only constitutional form of despotism in the Greek world, and Aristotle describes it as an "elective tyranny" (Arist. *Pol.* iii. 14, 8 = p. 1285), and as combining the characteristics of *βασιλεία* and *τυραννίς* (*ib.* iv. 10, 3 = p. 1295). The aesymnetes was given a body-guard of sufficient force to enable him to carry out his work of renovation (*ib.* iii. 15, 16), and held office either for life or for a term of years or until certain duties had been performed (*ib.* iii. 14, 9). In the later period of tyranny we find an aesymnete, Iphiades of Abydos, who made himself despot (*ib.* v. 5, 9 = p. 1305; Plaes, *Die Tyrannis*, ii. p. 89); and in some states, such as Teos, Cyme, Naxos, and Megara, the aesymnesia developed into a standing magistracy [AESYMNETES]. But such a legitimised despotism was rare in the Greek world. More frequently the reins of government were seized by a man who constituted himself the champion of a section of the people. The demagogue who united military prowess with zeal for the popular welfare was the most ordinary type of despot; this character is found chiefly exemplified by the pretenders who in the 7th and 6th centuries rose to the throne through opposition to the ruling oligarchies, such as Orthagoras at Sicyon, Cypselus at Corinth, Theagenes at Megara, Pisistratus at Athens (Arist. *Pol.* v. 5 and 10; Herod. i. 59); but this type perpetuated itself even in the 4th century: Dionysius of Syracuse was one of the great historic instances of the demagogue-despot (Arist. *Pol.* v. 5, 10), and both Plato and Aristotle affirm this championship of popular causes to be the most settled element in the growth of tyrannies (Plat. *Rep.* viii. 565 D, *τύραννος ἐκ προστατικῆς ῥίζης καὶ οὐκ ἄλλοθεν ἐκβλαστάνει*: cf. Arist. *Pol.* v. 10, 4 = p. 1310). But it was in the earlier tyrannies that this phenomenon was of most importance, as inaugurating a new and necessary phase of political life; they effected, as no other power could have done, the unity of the nations which they governed, and in many cases, as at Athens, their rule first created a national spirit (Herod. v. 66); they were thus the precursors of the democracy, and even where democratic institutions did not follow their overthrow, yet a juster and more equable rule replaced, as at Corinth, the dynastic government of the older oligarchies. The demagogues who made their way to the throne were sometimes sprung from the oppressed classes whom they championed, as Orthagoras of Sicyon, who belonged to the weaker Ionian element of the state, and is said to have been a cook (Diod. viii. 24); in other cases they were members of the oligarchies they overthrew, and made the great powers which they possessed as magistrates a stepping-stone to the crown. It was thus that Phalaris rose to be tyrant of Agrigentum (Arist. *Pol.* v. 10, 6); Lygdamis of Naxos belonged to the old nobility (*ib.* v. 6, 1); at Miletus a tyranny arose out of the office of prytanis (*ib.* v. 5, 8), and according to one account Cypselus of Corinth rose to power by the mode in which he exercised the office of *πολέμαρχος* (Nicol. Damasc. *Frag.* 58). When once he had risen to power, the despot was sometimes enabled to retain his position through popular support; thus Cypselus of Corinth was a popular man who during the whole time of his rule never had a body-guard (Arist. *Pol.* v. 12, 4); and men like Gelo, who based their power on a victory over the national foes, could dispense with the support of armed force (Diod. xi. 23, 26, 48); but as a rule the band of *ἐπίκουροι*, for the support of which the subjects were taxed, was the invariable accompaniment of tyrannis (Arist. *Pol.* iii. 14, 7); this body-guard was usually composed of foreign mercenaries (*ib.* v. 10, 10), such as the Argive soldiers of Pisistratus (Herod. i. 61). Even when the first steps to power were due to popular support, the rise to the tyranny was often effected by a *coup d'état*, as in the case of Pisistratus. Sometimes, even in the older tyrannies, the despotic rule was wholly acquired by the use of armed force. It was thus that Polycrates and afterwards Syloson gained the throne in Samos (Herod. iii. 120; Polyaen. vi. 45), that Aristodemus gained the throne in Cumae (Dionys. vii. 2 to 11), and that Cylon attempted to make himself tyrant of Athens (Herod. v. 71; Thuc. i. 126). The first exercise of the despot's power was usually the banishment of the more powerful members of the faction, which it had been his declared object to resist. Thus the Bacchiadae were expelled from Corinth by Cypselus (Dionys. iii. 46; Strabo, p. 325; Herod. v. 92), and even Pisistratus of Athens, in spite of his otherwise mild rule, found it necessary to banish some of the nobles (Herod. vi. 103; cf. Arist. *Pol.* v. 10, 12). But by the wiser despots no violent change was made in the machinery of government. The Orthagoridae and Pisistratus ruled in accordance with the existing laws (Herod. i. 59; Thuc. vi. 54, 6; Arist. *Pol.* v. 12, 1), the latter taking the precaution of having the great offices in the state filled by members of his own family (Thuc. *l.c.*). When radical changes were introduced, these had more of a social than a political character, and were calculated either to raise the position of one class of the population at the expense of others, or to unite the peoples by means of common festivals, or to give an impulse to democracy by substituting the universal and popular cults for the aristocratic and exclusive worship of the nobles. The first of these changes we find brought about in Sicyon, where the struggles which raised the Orthagoridae to power had an ethnic significance; the hatred of Cleisthenes to the memory of Adrastus, his suppression of the Homeric recitals and his alteration in the tribe-names, were all intended to elevate the Ionic element in the state at the expense of the Dorian (Herod. v. 67 and 68). The aim of uniting the people by festivals may be illustrated by Pisistratus' cultivation of the Panathenaea (Schol. Arist. p. 323); and that of superseding the aristocratic worship by the encouragement given by Cleisthenes of Sicyon and by Periander of Corinth to the popular cult of Dionysus (Herod. i. 23, v. 67). A further object of the despots' policy was to strengthen their position by adding a lustre to their courts. To effect this they patronised arts and letters, as was done by Periander, Pisistratus, and Hiero, and some, like Polycrates of Samos, maintained an almost Oriental splendour (Sayce on Herod. iii. 39); they raised great buildings, such as the temple of Olympian Zeus originated by the Pisistratidae, and the great monuments at Samos built by Polycrates (Arist. *Pol.* v. 11, 9 = p. 1313; Herod. iii. 60), and sent rich offerings to the religious centres of Greece, such as those dedicated by Cypselus and Periander of Corinth, and by Myron of Sicyon at Olympia (Plut. *Sept. Sap. Conv.* 21; Paus. v. 17 to 19, vi. 19, 2). Aristotle attributes these buildings and offerings of the despots to the desire to impoverish their subjects and give them no time to hatch conspiracies (Arist. *Pol.* l. c.); but the more probable object was the desire of personal distinction in their own states and in Greece: and even amongst the later despots we find the revival of this cultivation of Greek art and letters by Maussolus of Halicarnassus and Evagoras of Cyprus (Plin. *H. N.* xxxv. § 49; Isocr. in *Evag.* 20 and 21). The necessities of internal administration showed the true evils of tyrannis. Aristotle characterises the maxims which the despot must employ to preserve his power as being, to create a slavish feeling in the subjects, to create mistrust amongst them, and to allow no prominent men in the state (Arist. *Pol.* v. 11; cf. Herod. v. 92); while the inevitable influence of flatterers and parasites and the system of espionage were other evils that accompanied their rule (Arist. *l. c.*). But there was probably no positive oppression of the general mass of the citizens. Some despots, like Dionysius of Syracuse, might have taxed their subjects heavily (Arist. *Pol.* v. 11, 10); but the Pisistratidae, we are told, only collected one-twentieth of the products of the soil. The artisans, who were not landowners, would thus have been wholly untaxed, and it was to the interest of the despot to provide the lower classes with material for work, and so keep them contented and employed (Ael. *Var. Hist.* ix. 25; Nicol. Damasc. *Frag.* 60). The external policy pursued by the early despots was at once vigorous and prudent. Thucydides, indeed, says that, with the exception of the tyrants of Sicily, the policy of those of Greece generally was characterised by a regard for selfish interests and by an absence of any great foreign activity (Thuc. i. 17); but this judgment is scarcely applicable to despots like Cypselus, who founded some of the most important colonies of Corinth (Strabo, pp. 270, 388), or Periander, who, besides founding Potidaea (Nicol. Damasc. *Frag.* 60), holding Corcyra and capturing Epidaurus (Herod. iii. 50 and 53), is also credited with the institution of the Isthmian games (Duncker, *Hist. of Greece*, ii. p. 371, n. 2), and certainly raised Corinth to a greater height of power than she attained before or after him. Pisistratus of Athens, too, subdued Naxos, purified Delos (Herod. i. 64; Thuc. iii. 104), and pushed his arms as far as Sigeum in the Troad (Herod. v. 94); while Polycrates of Samos founded a maritime empire, and mingled in the politics of Egypt and Persia (Herod. iii. 39 and 44). More manifest, however, was the greatness of the life and works of the early despots of Sicily—of Gelo and Hiero in particular. The power of Gelo of Syracuse was almost commensurate with his aims. These were a union of all the Sicilian Greeks against the barbarian, which he so far effected as to be himself described by the historian as "despot of Sicily" (Σικελίης τύραννος, Herod. vii. 163, cf. c. 157).

But, however powerful the individual tyrant might make himself, it was not in the nature of the tyrannies to last long. They marked a period of transition in Greek politics, and, when their work of destruction and preparation had been effected, there was no further reason for their continuance; they were rarely inherited, and, even when transmitted, fell rapidly through the degeneracy of the holders, who sought to maintain their power by force, and sometimes through quarrels in the ruling house, such as proved the ruin of the earlier and later despotisms at Syracuse (Arist. *Pol.* v. 10, 31). The Orthagoridae ruled at Sicyon for a hundred years, the Cypselidae at Corinth for seventy-three years, the Pisistratidae at Athens, exclusive of the period during which Pisistratus was banished, for thirty-five; and Gelo, Hiero, and Thrasybulus at Syracuse for eighteen years (Arist. *Pol.* v. 12; Herod. i. 60; Eratosth. *ap.* Schol. Aristoph. *Vesp.* 502), but these periods of duration were exceptional (Arist. *l. c.*). The actual overthrow of a tyranny was sometimes due to a general rising of the people, such as that which deposed Thrasybulus of Syracuse (Diod. xi. 67 *sq.*), sometimes to conspiracies inspired by private revenge (Arist. *Pol.* v. 10), but was not unfrequently effected by external force. Thus the Lacedaemonians drove out the Pisistratidae and are credited with having put down other tyrannies (Thuc. i. 18; Herod. v. 92; Arist. *Pol.* v. 10, 30); and similarly the Syracusans, after the death of Thrasybulus and after that of the younger Dionysius, put down despotisms in the other Sicilian states (Arist. *l. c.*; Diod. xi. 68, xvi. 82; Plut. *Tim.* 34).

The earlier despotisms in Greece proper, belonging to a dim period of history, became at an early period obscured by legend and coloured by the later Greek conceptions of tyranny. From these legends was developed the idea of a normal type of despot, which was usually embodied in the person of Periander. He was the standing illustration of the mode in which the true despot preserved and exercised his power (Arist. *Pol.* v. 11), while the events of his life were modelled after that conception of the internal state of the despot, which was such a favourite subject of Greek speculation (Herod. v. 92; cf. Plat. *Rep.* ix. p. 580; Xen. *Hiero*, passim). The so-called "tyrants" of the Greek cities in Asia Minor in the 6th and 5th centuries B.C.—such as Daphnis of Abydos, Aeaces of Samos, Aristagoras of Cumae, and others (Herod. iv. 138)—cannot be classed with the despots of the early period in Greece proper, Italy, and Sicily. They were merely native princes who governed the Greek dependencies of Persia, and who were kept in their position by Persian support; and in their dependence on external aid they bear a greater resemblance to the later despot of the 4th century.

This later despotism differed essentially from the earlier, in that it was not a natural growth and did not arise from internal changes in the Greek communities, but was a product of the general degeneration and of the ever-growing influence of mercenaries. The causes which raised these despots to power were sometimes the influence of the political clubs, but more often the ease of raising mercenaries or of seeking the protection of some strong foreign master (Plaes, *Die Tyrannis*, ii. pp. 38–40). The exceptions to the general rule were the later despotism of Sicily and the government of the Tagi of Thessaly. Dionysius of Syracuse was, like the earlier despots, a demagogue; and with the rule of Jason of Pherae Thessaly began a new life, became a united nation, and took her place among the powers of Greece. But on the whole these despotisms were not the sign of a healthier phase of political life. Many of them were due to the power of Macedon, which sought, like Persia, to rule its dependent states through despots; and most of them were a sign of the impossibility of the continuance of free civic life in Greece.

VAGI'NA. [GLADIUS.]

VALETUDINA'RIUM (νοσοκομεῖον), an infirmary. A detached building or room was commonly found in large houses for the reception of sick slaves, who, we are told, should at once be removed there for better treatment, and, no doubt, for the prevention of infection (Col. xi. 1, 18; xii. 3, 7;—Senec. *de Ira*, i. 16; *Nat. Qu.* 1). We have no satisfactory evidence of anything that can be regarded as a *public* infirmary or hospital in Italy until the end of the 4th century A.D. Though the passages of Seneca cited above might bear this interpretation, there is no reason to consider the valetudinaria which he mentions as anything but infirmaries for slaves in private houses. Attendants for such valetudinaria are mentioned in *C. I. L.* vi. 4475, 9084, 9085. [As regards military *valetudinaria* in camps for sick or wounded soldiers, see EXERCITUS, Vol. I. p. 802 *b*.] The earliest mention of an infirmary or hospital for the poor in Italy seems to be that found in Jerome (*Ep.* iii. 10, *de mort. Fab.*), where we are told that Fabiola, A.D. 380, took care of the sick brought from the streets into a building of this kind: "Primo omnium nosocomium, id est languentium villam, instituit, in quo aegrotantes colligeret de plateis et consumpta languoribus atque inedia membra foveret." Shortly before this (A.D. 372) we hear (Sozom. *Hist. Eccles.* vi. 34) of a hospital at Caesarea established by Basil (primarily, however, for the reception of poor travellers or pilgrims). Vercoutre maintains, probably with reason, that all idea of such an institution was derived by the Romans from the Greeks, whose lead they followed in everything connected with medicine [see MEDICINA, MEDICUS]. We doubt, however, whether this writer is justified in making as much as he does of the Greek *ἰατρεῖα*, or in regarding them as in any sense hospitals. The state physicians, who treated the poor gratuitously in return for their state salary, had in many Greek cities not only their medicines and surgical appliances provided for them by the state, but also a room, or suite of rooms, called *ἰατρεῖον*, which otherwise means merely the consulting-room and dispensary of any physician [MEDICUS]. The description in Galen is *οἶκοι μέγαλοι θύρας μεγάλας φωτὸς πλήρεις ἔχουσιν, οἷοι καὶ νῦν κατὰ πολλὰς τῶν πολέων δίδονται τοῖς ἰατροῖς, οὓς παρωνύμως αὐτῶν ἰατρεῖα προσαγορεύουσι* (Gal. *in* Hippocr. *de Med. Officin.* i. 8). In such rooms it is probable that patients might remain for a time; if, for instance, they were unable to move after an operation: but we lack information which would warrant our crediting Greece with hospitals properly so called earlier than the 4th century. It is possible that the *παιώνιον* at Piraeus, mentioned by Crates, the comedian of the 5th century B.C. (*Fr.* 15, Meineke), may have been something of the kind, but this is doubtful; at any rate, it is not alluded to anywhere else, and can hardly have been an institution lasting or imitated in many other places. The function of hospitals for the poor was, to some extent, performed by the temples of Aesculapius [MEDICUS, p. 154], where the priests no doubt combined a certain amount of medical knowledge (cf. Liv. xlv. 28) with a great deal of quackery and superstitious observance (cf. Aristoph. *Plut.* 665 ff.), and it may, we think, fairly be surmised that the disuse of these temples in Christian times made the necessity of hospitals more apparent, and so led to their institution, in much the same way as in this country the suppression of monasteries, which had largely relieved the indigent poor, made the necessity of Poor-laws immediately evident. (On this subject, see Daremberg, *Hist. de la Médecine*, ch. i.; *Westminster Review*, vol. lii.; and especially three articles by Vercoutre in *Revue Archéol.* 1880, pp. 90, 231, 309 ff.) [G. E. M.]

VALLUM, a term applied either to the whole or a portion of the fortifications of a Roman camp. It is derived from *vallus* (a stake), and properly means the palisade which ran along the outer edge of the top of the agger, but it very frequently includes the agger also. The vallum, in the latter sense, together with the *fossa* or ditch which surrounded the camp outside of the vallum, formed a complete fortification [AGGER], and accordingly the word *vallum* is almost always found in connexion with *fossa*.

The *valli* (*χάρακες*) or *sudes* (Caes. *Bell. Gall.* v. 40, 6; Veg. i. 24, iii. 8), of which the vallum, in the former and more limited sense, was composed, are described by Polybius (xviii. 18, 5 ff., ed. Hultsch = xviii. 1, ed. vulg.: see Mr. Strachan-Davidson's notes on this difficult passage, pp. 416–17) and Livy (xxxiii. 5), who make a comparison between the vallum of the Greeks and that of the Romans, very much to the advantage of the latter. Both used for valli young trees or arms of larger trees with the side branches on them; but the valli of the Greeks were much larger and had more branches than those of the Romans, which had either two or three, or at the most four branches, and these generally on the same side. From their similarity to the antlers of a stag (Sil. Ital. x. 414), they were sometimes called *cervi* (Varro, *L. L.* v. 117, Müller; Caes. *Bell. Gall.* vii. 72, 4: Tibull. iv. 1, 84: cf. Liv. xliv. 11, 4), or *cervoli* (Frontin. *Strateg.* i. 5, 2; Hygin. *de Mun. Castr.* § 51). The Greeks placed their valli in the agger at considerable intervals, the spaces between them being filled up by the branches; the Romans fixed theirs close together, and made the branches interlace, and sharpened their points carefully. Hence the Greek vallus could easily be taken hold of by its large branches and pulled from its place, and when it was removed a large opening was left in the vallum. The Roman vallus, on the contrary, presented no convenient handle, required very great force to pull it down, and even if removed left a very small opening, as the stake itself was so small. The Greek valli were cut on the spot; the Romans prepared theirs beforehand, and each soldier carried three or four of them when on a march (Polyb. *l. c.*; Verg. *Georg.* iii. 346, 347; Cic. *Tusc.* ii. 16, 37; Liv. *l. c.* and *Epit.* lvii.). They were made of any strong wood, but oak was preferred.

The word *vallus* is sometimes used as equivalent to vallum (Caesar, *Bell. Civ.* iii. 63).

A fortification like the Roman vallum was used by the Greeks at a very early period (Hom. *Il.* ix. 349, 350).

Varro's etymology of the word (viz. "vel quod ea varicare [stride over it] nemo potest vel quod singula ibi extrema bacilla furcillata habent figuram litterae V:" *L. L.* v. 117, ed. Müller) is not worth much. The real derivation is probably from the root *var* (*val*), "to protect," whence *vereri*, ἧλος; cf. Vaniçek, pp. 900, 901.

In the operations of a siege, when the place could not be taken by storm, and it became necessary to establish a blockade, this was done by drawing defences similar to those of a camp round the town, which was then said to be *circumvallatum*. Such a circumvallation, besides cutting off all communication between the town and the surrounding country, formed a defence against the sallies of the besieged. There was often a double line of fortifications, the inner against the town, and the outer against any force that might attempt to raise the siege. In this case the army was encamped between the two lines of works.

This kind of circumvallation, which the Greeks called *ἀποτειχισμὸς* and *περιτειχισμός*, was employed by the Peloponnesians in the siege of Plataeae (Thucyd. ii. 78, iii. 20–23). Their lines consisted of two walls (apparently of turf) at the distance of 16 feet, which surrounded the city in the form of a circle. Between the walls were the huts of the besiegers. The walls had battlements (*ἐπάλξεις*), and at every tenth battlement was a tower, filling up by its depth the whole space between the walls. There was a passage for the besiegers through the middle of each tower. On the outside of each wall was a ditch (*τάφρος*). This description would almost exactly answer for the Roman mode of circumvallation, of which some of the best examples are that of Carthage by Scipio (Appian, *Punic.* 119, &c.), that of Numantia by Scipio (Appian, *Hispan.* 90), and that of Alesia by Caesar (*Bell. Gall.* vii. 72, 73). The towers in such lines were similar to those used in attacking fortified places, but not so high, and of course not moveable. [TURRIS.] (Lipsius, *de Milit. Rom.* v. 5, in *Oper.* iii. pp. 156, 157; Poliorc. ii. 1, in *Oper.* iii. 283; Marquardt, *Röm. Staatsverwaltung*, ii.² 419; and the art. CASTRA in Vol. I. of this Dictionary.) [P. S.] [L. C. P.]

VANNUS (*λίκνον*), a winnowing fan, *i.e.* a broad basket, into which the corn mixed with chaff was received after threshing, and was then thrown up into the wind so as to disperse the chaff and leave the grain (Col. *R. R.* ii. 21; Verg. *Georg.* iii. 134). The same process was performed by the (probably) more primitive wooden shovel (*πτύον*, *pala lignea*), an implement with a long handle and broad blade, sufficiently like an oar to account for the passage in the Odyssey where the oar is mistaken for the *ἀθηρηλοιγος* (*Od.* xi. 128; PALA). The expression "mystica vannus Iacchi" in Verg. *Georg.* i. 166 shows that the shape of the basket winnowing fan and the Bacchic *λίκνον* (whence the title *Διόνυσος λικνίτης*) was the same.

The infant Dionysus in the *λίκνον*. (From a terra-cotta in the British Museum.)

The suggestion of Mr. Andrew Lang (*Custom and Myth*, p. 36), that the *mystica* vannus was a magic method of raising the wind, like the whirling of the *turbo* or *rhombus* [TURBO], though ingenious and attractive, must, we think, be rejected. The *λίκνα μυστικὰ* are mentioned by Plutarch (*Alex.* 2) as being covered with ivy, and containing serpents which belonged to the cult of Dionysus. It is probable that sometimes a figure of the infant Dionysus was actually placed in it, though the representation in the antefixa engraved above may only indicate that he was regarded as spiritually present in the processions. We see here the infant god carried in a *λίκνον* or vannus by two figures, a Satyr bearing a thyrsus and a Maenad bearing a torch, both wearing skins [NEBRIS]. Some have wished to trace a symbolism of purification by fire and air [cf. OSCILLA], but we have little doubt that the simpler explanation of the mystic vannus is true. Plutarch speaks of the "Awakening of Dionysus" (*ὅταν αἱ Θυιάδες ἐγείρωσι τὸν Λικνίτην*, *Is. et Os.* 35; cf. *ἀμφιετῆ καλέω Βάκχον—ἐγρόμενον κούραις ἅμα νύμφαις εὐπλοκάμοισιν*, Orph. *Hymn.* 53), which belonged to the Delphic winter month *Δᾳδοφόριος*. The swinging of the basket cradle by the nymphs, who were the nurses of Dionysus, represented the call upon the god of springing vegetation to awake. In winter he is an infant sleeping, as the vegetation sleeps; by spring-time he is to wake and gain his full strength: hence the appropriateness of the corn basket being also the cradle of the god. The idea is illustrated by the German superstition of "waking the corn" described by Mannhardt (*Wald- und Feld-Kulte*, i. 534): perhaps also by the "corn-baby" (see Frazer, *Golden Bough*, ii. 23). The scene on the terra-cotta shows doubtless what the procession of the *λικνοφορία* at Delphi and elsewhere represented: the *λικνοφόροι* (Dem. *de Cor.* p. 313, § 260) bore a cradle in which was either the infant god himself or his attributes, the sacred serpents, &c. (See further on this subject Lobeck, *Aglaoph.* 700; Roscher, *Lexicon der Gr. und Röm. Myth.* pp. 1042 f.; Baumeister, *Denkm.* p. 850.) [J. Y.] [G. E. M.]

VAPPA. [VINUM.]

VAS (legal). [ACTIO, p. 17; PRAES.]

VAS (*vasa*, generic name for earthenware) covers in its extended sense (*a*) *vessels* of all materials; (*b*) *utensils* of every sort; and is (*c*) in a special use applied to the *baggage* of an army.

Earthenware naturally subdivides itself into two classes, embracing firstly those objects of the commonest utility which, once a suitable material and form have been invented, retain that form and material practically unaltered to the end; and, secondly, those which are subject also to the laws of ornament and fashion. Product of primitive civilisation as is the invention of baked clay for household utensils, no art is wholly removed from the influence of its sister arts. Gourds, earlier in use than earthenware vessels, showed men how to shape and ornament them; and metal-work, ornamental glass, and textile industries have all left their mark on the development of Greek and Roman ceramics.

The earliest pottery unearthed on Greek soil is represented in the finds of Dr. Schliemann at **Hissarlik**, and is of a rude type. The manufacture is as yet in almost its first stage. There are vases of very various forms, doubtless meant for special uses, but showing no great adaptation of means to end: in scarcely more than two series have the potters succeeded in establishing fixed types; the one (fig. 1) being that which Dr. Schliemann imagined might represent the Homeric **δέπας ἀμφικύπελλον**, the other (fig. 2)—the "owl-vase"—being noteworthy as marking a first attempt to establish, in the analogy between a vase and a living thing, a principle of design and decoration. [Examples of the shapes: Schliemann, *Ilios*, p. 299, No. 179, and pp. 340 ff., figs. 227 ff., respectively.] This analogy, though helpful, is responsible for many vagaries in early ceramic art. The Hissarlik vases are hand-made—Dr. Schliemann excepts one, figured *Ilios*, p. 214, No. 23—are generally of a dull-black colour produced by the smoke of the furnace impregnating their substance, and have been rubbed, after firing, by a piece of wood or some similar material so as to dress the surface and impart a certain polish. The clay contains many particles of mica, which may be used like pounded granite to bind and strengthen. Handles are not generally employed, and their place is taken by bosses pierced for the passage of a thong by which the vessel might be hung against a wall: a practice sometimes retained in later ware as a mere form of ornament. The vases are never painted, but in a certain proportion of them scratches have been made to serve a first rude idea of design. These scratchings have, Dr. Schliemann states, been in many cases "filled up with white chalk;" but the presence of the chalk may, as in the parallel instance of certain Cypriote vases, be accidental and due to the nature of the soil, which both at Hissarlik and Alambra (Cyprus) is of a limestone formation. A fragment of a large **πίθος** "from the second city" exhibits a second style of ornamentation, the design being given by strips of clay applied in relief. [For the Hissarlik pottery, see Schliemann, *Ilios* and *Troja;* Dumont et Chaplain, *Les Céramiques*, s. v.]

Fig. 1. Two-handled Vase from Hissarlik. (Schliemann, *Ilios*.)

Fig. 2. So-called "Owl Vase" from Hissarlik. (Schliemann, *Ilios*.)

In many ways analogous to the pottery of Hissarlik, but showing a distinct advance upon it, is that obtained from the most ancient graves of Cyprus. The class of ware here indicated is known by the name of the place where most examples have been found, **Alambra** (Dali): elsewhere in Cyprus it has not been discovered except at Larnaca (Kition): both are sites especially associated with Phoenician colonisation. The class consists of vases (*a*) covered with a vitreous slip and baked to a lustrous red, almost vermilion in tint, ranging sometimes, by over-exposure, to black or, by under-exposure, to a light red: the ornamentation is by lines incised generally before, occasionally after, firing. Some specimens of this class are decorated in appliqué with strips of clay, which here and there take shape as serpents. (*b*) Made of extra fine clay, moulded to a very delicate texture. The colour is grey, or pale black; and the vessels are less frequently ornamented with incised lines, and more often by appliqué work: often the vase is left plain. The ware seems to be rather later in date than that mentioned under (*a*).

It is in the Alambra pottery that a distinctive style first emerges, both in form and ornament. Two shapes are characteristic, the first of which is simply a reproduction in clay of the long-stalked gourd which has always been and is to-day the commonest water- or wine-bottle of the Cypriotes: in some cases it has even been fitted with a string and stopper, thus carrying the resemblance into the closest detail. [An example is in the Brit. Mus., 1 V. R., Wall-case 3, No. 1.] The other shape is that of a broad, shallow, handleless cup. Something like a system of ornamentation also appears: the scratches are gathered together to form lozenges and cables, and the field is divided into sections by perpendicular lines. Many of the vases with their bright red colouring set off by the white lines of incision, or their delicate grey tint, are really effective. Their greater merit may be due to

Semitic influence, to which also the use of the wheel is perhaps to be assigned.

Similar vases, though of inferior style, have been found on a number of the Aegean Islands, such as Amorgos, Antiparos, Naxos, Melos: and they represent a distinct epoch in ceramics, an epoch undoubtedly of considerable duration. Already however a new style is growing up, and the introduction of painting opens a great career to the potter. By whom and when painted vases were invented is unknown, nor is it necessary to assume for them a single source. At **Thera** (Santorin), which has, among the Aegean Islands, yielded the richest harvest of early pottery, the new style is found already established. Thera ware is made entirely upon the wheel, and, almost for the first time, vases are furnished with a foot and intended to stand by themselves instead of being hung against a wall. The clay used proves the fabric to be an insular product: while the ornamentation shows a great preference for plant-life, but admits also animal forms. Though great success is not attained, there is a distinct striving to imitate nature. As to colours, red, brown-black, and white are used upon prepared grounds of grey, buff, and a brownish red. By substituting the brush for the point the artist is enabled to ornament also the inside of the vase, and thus a new departure is taken.

Thera pottery is found beneath a lava stratum, and this fact has given it an exceptional value as suggesting the possibility of an approximate date. Geologists, however, are unable to speak either with precision or unanimity; and the opinion now in vogue that the ware belongs to the period 2000–1500 B.C. must stand for what it is worth. Any attempt to date the Hissarlik and Alambra types from that of Thera is without value: Cypriote pottery in particular, owing to its conservativeness, is exceptionally difficult in the matter of chronology.

[For early Cypriote pottery, see an article by Sandwith, *Archaeologia*, xlv. (1877–80), which is especially valuable for its reserve, and for its illustrations in colour (*v.* pl. ix.); also Dümmler, *Mitth. d. Ath. Inst.* xi. pp. 209 f. and A. S. Murray in Cesnola's *Cyprus*. For Thera, Dumont et Chaplain, *Les Céramiques*, s. v. "Type de Santorin," and pll. i. and ii.: the geological question in Fouqué, *Santorin et ses Éruptions*.]

The vases of Thera supply a natural point of transition to the second great stage of early ceramic art represented by the so-called **Mycenaean** ware. Spread over virtually the whole of the ancient classical world, there has been found a class of pottery more or less uniform in technique and ornamentation which has formed the subject of special study by Drs. Furtwängler and Löschcke and has been named by them "Mycenaean." This class divides itself broadly into vases painted (*a*) with opaque, or *matt*, and (*b*) with lustrous, colours (*Mattmalerei*, *Firnissmalerei*). The first division is of less interest, is relatively small, and of greater antiquity. Examples of it occurred only in the deepest layers at Mycenae, and it is not generally found accompanying (*b*) in localities other than Mycenae itself. The decoration is painted in opaque colour, either on red or pale clay: in the former case the tints are violet-brown and red, and white is at times employed, while the surface is polished; in the latter only violet-brown is used, and there is no polishing. The ornaments sometimes show a close analogy to the metal-work which Dr. Schliemann found accompanying the pottery.

(*b*) The introduction of lustrous colours is "a new factor in vase-making;" and is to all intents peculiar to Greek ceramics (including the pottery of peoples taught by Greece). Four different styles may be distinguished:—1. A small class, ground completely covered by black varnish, on which designs are painted in matt white or red. 2. The ground is supplied by a whitish or yellow-brown slip, the ornament painted in black-brown (lustrous). 3. A lustrous, warm-yellow surface is ornamented with paintings in all shades, from yellow to dark brown. 4. Similar but duller both in ground and lustre. Inner face of open vases treated with varnish-colour. Of these styles the third is the important one, and is the one almost solely represented outside the Argolid.

While the classification holds good, the conclusions based upon it by its authors are more open to objection. They found in the Mycenae ware the outcome of a civilisation pre-Dorian but not un-Greek, localised in and about Mycenae, which carried by the channels of trade its manufactures to all parts of the ancient world, so that "the Mycenaean pottery was as exclusively made in the Argolid as the later Attic ware at Athens, or the Corinthian at Corinth." These positions have been, with good reason, often challenged; but an alternative theory has not yet received the stamp of general assent. In any case the problem of Mycenae is bound up with the greater problem of the Mycenaean culture in general as represented especially in its metal-work; and that culture has been variously traced to Phoenicia, Egypt, Crete, and Caria.

Two styles of ornament mark themselves out in "Mycenaean" pottery, and are indebted respectively to *marine forms*, and the conventions of metal-work, the former being especially in favour at Ialysos, the latter at Mycenae. Two shapes also are highly characteristic, the vase with a bow-form handle (*Bügelkanne*) and the cuttle-fish goblet: the first a general receptacle for water, wine, oil, and ointments; the latter a drinking cup, owing both form and ornament to the popularity, probably as great then as now, of a fish which is considered at once a peculiar delicacy and an excellent thirst-producer.

[For Mycenae ware, *v.* Furtwängler and Löschcke, *Mykenische Thongefässe* and *Mykenische Vasen*. A summary of the Mycenae controversy to date is given in the last chapter of Schuchhardt's *Schliemann's Ausgrabungen*.]

A small but most interesting class of early vases is that which imitates Phoenician glass. It is mainly represented by specimens obtained by Mr. George Dennis in 1882 from the tumuli of Bin-tepe near Sardis. The clay is painted with waved lines of the warmest orange and red, and is highly polished. Other imitations of glass ware have been found on different sites, and in Cyprus the style remains down to a comparatively late date.

In the Alambra and especially in the Mycenae pottery a new ornamental style is beginning to assert its claim to notice, the **Geometric**. Owing its origin very largely to the influence of technique in metal, from which it borrows many of its most characteristic members, like the concentric circle, spiral, maeander and cable, and rosette, it soon won independence and makes its first appearance,—in the *Dipylon* vases,—already a matured and established convention. That it attaches itself closely in point of development to the preceding Mycenae ware may seem established by the fact of its being found side by side with the third and fourth varieties of that style: but in reality there is, from a technical point of view, a very perceptible break between the two; the birth of the Geometric style is unknown, and it meets us first as a finished product which a long process of development must have preceded. This fact, coupled with a minute examination of formal style and the elements of ornamentation employed, has naturally suggested an origin in a manner foreign. Furtwängler and Löschcke would regard the Geometric principle in contrast to the Mycenae technique as Dorian compared with pre-Dorian: others, as Kroker (*Jahrbuch*, 1886, pp. 95 f.), have endeavoured to prove a close connexion with Egypt, others with Phoenicia or Ionia. (Older theory of the Geometric vases in Conze, *Annali*, 1877, p. 396 n.) The finest and most numerous specimens however come from Athens, especially from the neighbourhood of the Dipylon (whence the name given to this ware); and a comparatively late oenochoe is marked as Attic by its inscription (*Mitth. d. Ath. Inst.* vi. Taf. 3). That Athens was the main seat of manufacture is practically certain, but this in no way excludes the question where the style first originated, a question which for the present remains open. Nor is the chronology of the Geometric style satisfactorily determined. It may have run its course for five or six centuries, and lasts in Greece proper down to the 6th cent. B.C. Limits of space make it impossible here to give a detailed account of the system of ornament: it will be enough to reproduce an example (fig. 3) which contains almost all the characteristic traits of its class, and to refer for specimens of the dateless conventionalised style to the collection from Cyprus in the British Museum (1 V. R.).

Attention should be specially drawn to the prevalence of forms of aquatic life, the *limitation* of range in the depicting of quadrupeds, and the introduction of scenes from daily life, among which funeral processions and sea-fights deserve most notice. Both matt and lustre colours are used, including red of all shades, brown, and black, while the ground is *generally* of a prepared tone, varying from the palest neutral stone to a deep red. Owing much to Orientalism in its first development, the Geometric style attained so high and lasting a popularity and became so purely conventional that it threatened to crush all life out of ceramic art, when salvation came by a new impulse from the East. Thenceforth two movements, conservative and progressive, manifested themselves. The great merit of the style lies in the training it gave the artist in sureness of hand and eye, and in the perfecting of shapes.

The pottery of **Cyprus** may here be briefly dismissed. Alambra ware, already treated, is in all probability genuinely archaic: absolute certainty is out of the question. Geometric style was early established, and soon drove all competitors from the field: it shows a special preference for concentric circles and aquatic life. The process of development is in a manner retrograde: the later the ware, the simpler and more purely geometric is its ornamentation. Upon an unvarying background of geometric forms foreign influences from time to time superimposed themselves, and vanished, in agreement with political conditions, and thus there came into existence an Egyptian-geometric, an Assyrian-geometric, a Persian-geometric, and, lastly, a Greek-geometric. Finally the style seems to die out about the end of the 4th century, although isolated specimens may go down even to Roman times. No group of vases is to be identified with the Phoenicians. There is no reason to believe that that people ever manufactured pottery to an appreciable extent; though they introduced the potter's wheel and other secrets of the craft from Egypt and Babylon. Pottery is alien to the spirit of their trade, which was concerned with articles of little bulk and high value. Still Phoenicia is responsible (*a*) for the introduction of certain Oriental forms (like the sacred tree); (*b*) for a more lasting Semitic flavour than the temporary dominion of successive conquerors would have imparted. Apart from the accidents of political necessity, identically the same style of ware remained in use for centuries: nor is there any particular reason for assigning a given vase to the end or the beginning of the period. [The report of the last excavations in Cyprus, *Journ. Hell. Stud.* 1890, may be consulted.]

The universal extension of Geometric style gave rise to many local varieties, and from this epoch begin fabrics classed, with greater or less justice, as imitative. Especially was this the case in Italy, the great market for vases, where native ceramic art now entered upon and maintained to the last a rivalry with Greek (continental) wares. It was once, through ignorance, the fashion to attribute all figured vases to Etruria; it is now, through oversubtlety, equally the fashion to attribute everything to Greece proper. By anticipation it may be said here that beside the distinct local Etruscan wares, so well represented at Florence, there were certainly other, and S. Italian Greek, imitations of later Corinthian and Attic pottery; but that these were not, virtually, contemporary with their prototypes, it is difficult to show. To have insisted on the possibly much wider scope of such imitative art, to have protested against the over-hasty generalisations now in vogue, is the great merit of Prof. Brunn; but his attempt to degrade so many figured vases to the level of late Italian imitations has mainly failed, resting as it does primarily on a mistaken view of the epigraphic evidence from vases.

In the Geometric style—to return from this brief digression—new tendencies soon appear. A small class of vases, named after the place of discovery **Phaleron**, embraces a series of jugs (*olpae*) of a peculiar shape, having a narrow body, an extremely high and broad neck, and a trefoil lip. Though not differing in technique from the Dipylon class, these vases introduce new features in the characteristic label ornament of the neck, in a manner of filling the field which is prophetic of later Rhodian style, above all in the employment of new animal types and their treatment, both in design and grouping, on Oriental models. The reaction which manifests itself first in the Phaleron ware soon spread widely, giving birth to an era of transition. Another group of Attic vases shows the same tendency: the finest of them is the Hymettos amphora, No. 56 in the Berlin Antiquarium. Characteristic of the new method as shown in this vase is the heraldic grouping of combatants in pairs. A like process was at work in the islands, especially at Melos and Rhodes. A small class of amphorae (it contains three and a fragment) was early set apart by Conze and named by him "Melian." Though the claim of the vases to a separate title has been disputed, convenience at least has sufficed for its retention. The Melian ware is later in development than much of the Rhodian, but it stands first here because of its far closer connexion with the Dipylon style, as shown in the range of geometric ornaments which still fill the field, and in the manner of rendering the human animal forms as in the spirit of the grouping. There are many features hitherto unknown in these Melian amphorae, and the admixture of Oriental style and design is especially obvious; but these details may be best considered under the heading of Rhodes.

[For Phaleron vases *v.* Dumont et Chaplain, *Les Céramiques*, pp. 101 ff.; Böhlau, *Jahrbuch*, 1887, pp. 44 f.: Hymettos amphora, Furtwängler, *Beschreib. der Vasen S. . . . zu Berlin*, No. 56: Melos vases, Conze, *Melische Thongefässe.*]

Vase-painting then has reached the point at which the tide of **Orientalism,** whose rising has been noted in the transition style beginning with Phaleron, swells into full flood. Rhodes indeed can show examples of the entire process: but it is with the triumph of the Oriental style that the island pottery is specially associated. While under its influence the vase-painter evolved a system of decoration effective and of true beauty, the potter condensed the earlier multiplicity of forms to a few simple and elegant types, the most characteristic among which is an *oenochoe*, resembling that in the next cut. Almost equally characteristic is the *pinax*,

Fig. 3. Vase from Curium in Cyprus. (Cesnola, pl. xxix.)

while *amphora* and *cylix* are taking shape; and, as the Oriental style waxes to its zenith, the *alabastos*—which may conceivably be a Naucratis invention—and the *aryballos* come to the front and are the favourite shapes at Corinth. [ALABASTRUM; ARYBALLUS.] But whereas the types of *oenochoe*, *pinax*, *alabastos*, and *aryballos* are created in the Oriental school, those of the *amphora* and *cylix* are only sketched.

Fig. 4. Oenochoe. (Birch.)

Two alien arts exerted a special influence over the birth of the new style, textiles—in particular, embroidery—and metal-work. Thus the scheme of ornament on a Rhodian *pinax* is comparable to the unit of a brocaded pattern with the threads of the under-web left projecting; and Corinthian designs reproduce the continuous texture and involved lines of close embroidery: while on the other hand the choice of rosettes and anthemia, the alternation of purple and red with a brown-black, the employment of incised lines for details, display a connexion with metal-work. Both arts impel the painter towards polychromy.

Painting at first, like the artists of the Transition, with brown-black varnish on a plain polished ground, Rhodian potters founded a new method when they effected a combination of silhouette and outline-drawing, and left the light parts in ground-colour. Light and shade, discrimination of planes of surface, become thereby possible. A fresh step in advance is made when the red clay is covered throughout with a dull cream-white engobe which can be used to represent flesh-colour with more fidelity to nature. Then white and a new red tint are employed to mark details and differences of surface, and are generally laid on in broad unbroken masses. A more minute discrimination of details but a less spirited and less free conception marks a yet further advance in technique, which is signalised by the use of purple colour and the rendering of outlines and details by incised lines.

These differences in technique allow Rhodian ware to be divided into two main classes, which have been named "Dorian" ("Egyptian") and "Assyrian." The former exhibits a less conventional style, more freedom in the choice of animal types, and among the ornaments with which in this, as in all Rhodian ware, the field is sown, a preference for those of a geometric class and for the Egyptian lotus: the latter practically admits no animals but the lion, bull, and goat, is more distinctly Oriental in its forms, and loves to crowd the field with rosettes. The former again employs white and red for details, but retains outline drawing; the latter alone uses incised lines and purple. In the one a metope arrangement is frequent, and is often forced; in the other, where it occurs, it is only in the modified form of an Assyrian blazon, two animals facing one another and separated by the sacred tree.

Taking Rhodian pottery as a whole, the subjects are drawn almost entirely from the animal creation. Beast forms, the goat, lion, bull, boar, ram, &c.—the first two in overwhelming preponderance—occupy most of the vases: an apparently later group admits further the human figure, and compound shapes like the Sphinx. In this later group one vase stands out from among its fellows. This is the well-known Euphorbos *pinax*, whose importance lies not only in the fact that it is the first instance in which a definite scene—Menelaos and Hector fight over Euphorbos—from a definite source (the Epos) is represented, but because being inscribed with the heroes' names it furnishes other material for a date than that drawn from internal evidence of style. Kirchhoff has thus been enabled to place this vase at the end of the 7th century, and this fixes with approximate certainty the lower limit of the Rhodian period (v. *Studien zur Gesch. d. griech. Alph.*).

It is unnecessary here to discuss the doubts which have been thrown on the claim of Rhodes to be the actual manufacturer of the pottery classed under her name. Other things being equal, the principle is fairly trustworthy that a particular style is native in the place where it is most abundantly found. It is sufficient to refer to the treatment of these and similar questions in e.g. *Egypt Explor. Fund Memoirs*, Naukratis, pts. i. and ii.; *Jour. Hell. Stud.* 1885, pp. 180 ff. [For Rhodian ware in general, v. A. S. Murray in *Revue Archéol.*, Dec. 1882, pp. 342 ff.; Dumont et Chaplain, *Les Céramiques*, s. v.; Salzmann, *Nécropole de Camiros*, for illustrations.]

There is a small class of vases of a peculiar type found in Rhodes, at Naucratis, and in Etruria, to which it has been proposed to give the name "Polledrara," after the large hydria of the British Museum. The distinctive trait of this class is the clay, which is black throughout, and contains numerous particles of mica. The designs are painted in scarlet and purple, and occasionally blue. The origin of the ware is disputed; Naucratis, Lesbos, Rhodes, and Etruria being all suggested as the seat of its manufacture.

Closely resembling this group in material, but very distinct in point of ornament, are the early Italian vases, the so-called **Bucchero.** Dull and rough in appearance at first, like the brown ware which accompanies them, the Italian vases in their more developed state are of lustrous black pottery, with ornaments and scenes moulded in relief from the actual clay of the vase, the Bucchero properly so named. The distinctive feature is the evident attempt to imitate as closely as possible a bronze original: whence both colour and polish, moulding of ornament in relief as though embossed, and treatment of lip and handles.

[Examples illustrated by Micali, *Monumenti Inediti*; Dennis, *Etruria*.]

The polychromatic style, whose commencement has already been seen in Rhodes, reaches its highest development at **Naucratis.** So cosmopolitan a town (Herod. ii. 178) must have brought together all kinds of styles in ceramics, and the absence therefore of geometric, not to mention Mycenae, pottery is to be noted as significant of the stage of vase-painting contemporary with the existence of Naucratis, a town which first became powerful under Amasis, and was ruined under Cambyses (roughly 580–520 B.C.). This furnishes a limit of exclusion for the earlier classes of pottery, a limit which may, according to Mr. Petrie, be pushed further back —to about 650 B.C.—as the oldest remains of the settlement are considerably prior to Amasis. But among the various sorts of earthenware found at Naucratis one group marks itself off as a local fabric; as is proved by a dedication—to the "Aphrodite of Naucratis"—which has been scratched in the clay *before* firing (see *Journ. Hell. Stud.* viii. p. 119). The ware shows a close connexion with, but also a distinct advance upon, that of Rhodes. An opaque white engobe is used, of a tint generally brighter than, but sometimes approaching, that of Kameiros; on this engobe a design is painted in colour, and the technique follows, but extends, that combination of outline and silhouette which Rhodes had introduced. New colours, copied from the Egyptian wall-paintings, are employed, especially a light sienna and an umber red, the latter being a flesh tint for male figures. For female figures flake white is added to the engobe. Each of the chief colours appears in various shades; and the distinction of flesh tints so carefully worked out in Egyptian painting reappears, but after a more haphazard fashion, in Naucratis ware. The most advanced technique in use at Naucratis traces outlines in light sienna and fills in the silhouette with an umber tint.

[For Naucratis pottery, v. *Memoirs of Egypt Exploration Fund*, Naukratis, pt. i. 1884–5, and pt. ii. 1888.]

The excavations at Naucratis produced among other things fragments of the ware known as **Cyrenaic**; and on the strength of this fact the claim of Cyrene to be the maker of the pottery, often disputed before, has been anew called in question. No sufficient reason has, however, as yet been adduced for disregarding the evidence furnished by the best-known Cyrene vase, the Arcesilas cylix, with its strong local colouring. The ware, too, is strikingly metallic in style; and it is not, as Puchstein maintains, to the Cypro-Phoenician, but to the Carthaginian paterae that a debt is due. An artistic connexion of this sort with Carthage is more probable in Cyrene than in Naucratis.

The class is not numerous, but highly distinctive. Its favourite shape is the *cylix*, which thus takes definite rank in the development of vase-painting: but the *hydria*, *deinos*, and *amphora* also occur. A ground-surface is given by a dull smooth slip of light stone colour; and on this the design is painted in black with purple as a subsidiary colour, all main lines and inner details being scratched in. Subjects include mythology and genre;—though not its first appearance, for we have noticed it already in Dipylon ware for example, genre becomes here first of historic interest:—and with much of helplessness in drawing there is decided feeling and often spirit in the scenes. Zones of animals, in particular an aquatic bird, are still retained, and beast and bird forms serve to fill the field in a manner which seems directly borrowed from the bronze paterae already mentioned. Lip and handle, and, in the cylices, stem and foot, are covered with black varnish, a noteworthy change. Mechanical ornament is exceptionally rich.

[The Cyrene vases are put together by Puchstein, *Arch. Zeit.* 1881, pp. 215 ff.: they are exceptionally well represented in the British Museum, 1 V. R. Latest discussion, *Ath. Mitth.* 1886, pp. 90 ff.]

With **Corinthian** ware Orientalism reaches its zenith. Earlier however than Corinthian ware properly so called is a group of vases—almost without exception diminutive *lekythoi* of a peculiar shape, and two-handled cups—which, from their wide distribution must have had as general, as they had a lasting, vogue. As these little vases, by far the finest specimen of which has lately been presented to the British Museum, show a very close connexion with the Corinthian, but also points of difference, and seem moreover to be earlier, they have been named **Protocorinthian.** Like the Cyrenaic, they too owe much in technique and style to Phoenician metal-work. The clay is a fine, clear yellow; the decoration consists mainly of zones of animals, but admits also human figures; an elaborate ornament, composed of the anthemion and lotus, resembling that which subsequently becomes characteristic at Corinth, makes its appearance; and the field, though in general less encumbered, is sown with rosettes. The colours vary from a red-brown to black.

The vast class of vases which groups itself under the name Corinthian was long treated as the oldest Greek ware. The surface in this ware is often so crowded with ornament, that at a few feet of distance the ground-colour cannot be distinguished, and the general effect to the eye, due at once to colour and design, is that of a rich Oriental brocade. This is especially true of earlier specimens, whose subjects, fantastic fish-tailed monsters for example, seem to have been directly chosen for their fitness to cover most space. A like feeling has brought the *alabastos*

---

* Vases with dedications are especially frequent at Naucratis. Pottery was largely used in temple service, and was then marked with the name of the divinity. Numerous similarly inscribed fragments have been found on the Athenian Acropolis.

into peculiar favour. The ground is a clear yellow; the painting in black (often brown, thanks to over-firing), with details in purple and red; while an extreme fondness for incised lines marks the group as a whole. Subjects at first are mainly animals—where possible in friezes—and monsters, the panther and certain winged shapes being characteristic. Often too a vase, especially if an *aryballos*, is decorated solely by an elaborate anthemion ornament. [Most of the principal shapes are illustrated in Birch, *Anc. Pottery*, p. 186. Baumeister, *Denkmäler*, p. 1961, gives cuts mostly of protocorinthian ware.] In the later group human figures become increasingly frequent, and occasionally scenes from ordinary life, or from mythology, appear. An example (fig. 5) is here reproduced from Birch,—the lid of the famous Dodwell vase. In technique there is no change of moment.

Fig. 5. Cover of the Dodwell vase, with boar-hunt. (Birch.)

Before the growing sense that human action is the vase-painter's true subject, Orientalism begins to give way: yet the old tradition lingers in the animal shapes which, having no direct relation to the main subject, still encumber the field. The reform is due to the rise of a new school, whose representative is the potter Timonidas, known also by the plaques of the Akrokorinthos [FICTILE. The Achilles vase, Berlin *Cat.* 846]. A second master was Chares (*Arch. Zeit.* 1864, Taf. 184). This section of Corinthian ware should be especially compared with the previously mentioned Cyrenaic group. The face is generally rendered in silhouette, sometimes in outline, and gradually a practice grows up of distinguishing the faces of female figures by white colour applied directly to the ground. From its first adoption white grew rapidly in favour at Corinth. The duration of this class is fixed by the inscriptions for the 7th–6th centuries B.C.

Yet a later class of Corinthian ware shows the evidence of a strong foreign influence, probably that of Athens. The smaller types previously in vogue disappear, and their place is taken by large vases like the *amphora*, heavy in form and with ring handles, the *hydria*, and so-called *vaso a colonnette* [CRATER]. The clay ground becomes redder, lustre-varnish often replaces the hitherto usual matt colour, white is more largely employed, the field nearly freed of foreign elements, and animals relegated to a separate zone below the main scene. Horsemen and quadrigae are favourite subjects. The fine Berlin vase of "the setting out of Amphiaraos" will serve as an example (Furtwängler, *Beschreib.* 1655).

This last development of Corinthian pottery recalls the history of classical ceramic art to Athenian soil, and henceforth we are concerned almost solely with **Athens.** But before dealing with Athenian ware proper, some side-groups merit notice; and one, the **Chalcidian**, is of exceptional importance. Unfortunately the group, first recognised as Chalcidian through the alphabet of its inscriptions, is as yet vaguely defined. [*V.* Pottier *ap.* Dumont et Chaplain, *Les Céramiques*, pp. 276 ff.; or Klein, *Euphronios*, pp. 65 ff.; and contrast Brunn, *Probleme*, in *Abhandl. d. kgl. bay. Akad.*, Bd. xii. pt. ii., pp. 113 ff.] It is even maintained that the greater part are late S. Italian imitations (Brunn, *l. c.*; and Id. *Abhandl.* Bd. xviii. pt. i.). Certainly the free and spirited rendering, the knowledge here shown of the laws of painting, on vases of, as is assumed, so early a fabric, are ground for surprise. The class consists almost entirely of *amphorae* of a distinctive type (see fig. 6); and is the first to make that type of vase its specialty. As concerns style, the free-grouping without regard to a fixed centre, the *élan* and picturesqueness of conception, and, as to details, the plain long girt chiton of the women, fitting so closely as to reveal each contour of the body, and the peculiar ornament on the neck of the vase, are all alike characteristic. Purple is richly used, incised lines employed with great skill, white less frequently.

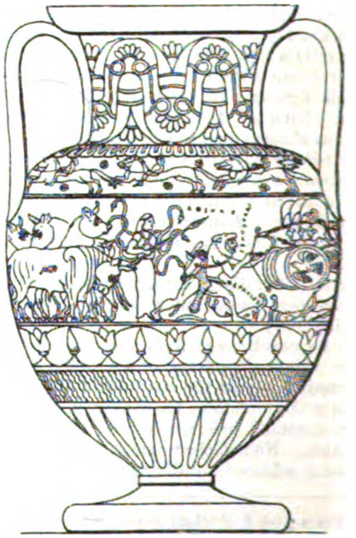

Fig. 6. Chalcidian amphora. (Gerhard.)

Of other **Ionian** fabrics so little has as yet been determined that it will suffice here to remark their preference for a frieze-like system of decoration, a more pictorial treatment, and a tendency to polychromy. One large class of *amphorae* has long been known as **Tyrrhenian** [AMPHORA. The body of the vase is generally more slender than the cut there given from Dennis]. It is distinguished by its shape, its zones of animals, the peculiar ornament—an alternation of maeanders with an 8-rayed star—which separates the animal frieze from the main scene on the shoulder, and by its prodigal use of colours other than black. The origin of these vases is doubtful: all examples hitherto have been found in Etruria, but they are certainly not of local make: Dümmler thinks them "Pontic" (*Röm. Mitth.* 1887, pp. 171 ff., Taf. 8, 9).

One or two vases survive which represent *Boeotian* style of this period; but they are too few in number to allow of general criticism. Being so few, however, it is curious that among them occur the names of two artists, Gamedes and Theozotos. The **Caeretan** *hydriae* are more numerous, better known, and equally distinctive. They exhibit an important change in technique. White and subsidiary colours are no longer painted directly on to the ground-clay, but are laid over the black varnish. Red and white are freely used, the latter sometimes as a flesh-tint for *men:* incised lines are frequent and are firmly drawn. As the side handles of a *hydria* necessarily interrupt a frieze, the decoration is here divided into groups, and that on the reverse is made of less account. The rendering is characterised by an almost reckless freedom, and shows traces of what is very rare in Greek work, humour. As a whole they are comparatively late. Their origin is disputed: Brunn, against general opinion, holds to Helbig's original view (since abandoned by its author) that they are of Etruscan fabric. [Helbig, *Annali*, 1863, pp. 210 ff.; Brunn, *l. c.*; Dumont et Chaplain (Pottier), pp. 264 ff.]

From the 7th century B.C. to the end of the 4th **Athenian** pottery reigns almost without a rival. It has two epochs, the *black-figure* and the *red-figure*, united to each other by a period of transition and experiment. With the exception of the two or three classes of ware just previously described, and some few imitative fabrics, the great mass of **black-figure** pottery hails from Athens. Two vase-shapes are especially in vogue in this ware, *amphorae* and *hydriae*, the former greatly preponderating: both are rapidly perfected in form. [The evolution of the amphora may be followed on p. 1973 of Baumeister's *Denkmäler*. The hydria improves as its centre of gravity mounts and the shoulder-scene shallows and widens.] A new discovery contributed to the rapid advance of Athenian ceramics;—a deep-black varnish of the highest brilliancy, with a surface like polished metal, insensible to ordinary reagents, but not interfering with that porousness of the clay which under a Greek sun is so necessary for the coolness of water or wine. Its manufacture is still a secret: nor is it known where the invention first saw the light. So popular did it immediately become that the vase-painter covered the whole surface with it, leaving as field for the actual picture only a square panel of red ground-colour—that of the natural clay heightened by adding a little rubrica.* Not all potters, however, followed this plan, and subsequently there was something of a reaction. Thus two groups come to be distinguished,—vases which have a panel-field, and those which, though generally marking off reverse from obverse, admit all space between the two handles as ground for the painter. No real difference of technique follows this division. In both the artist first draws his outlines with a full brush of black, fills in the silhouette, and then adds details with the point or with strokes of white and purple-red: but perhaps the panel-painter uses less subsidiary colours and trusts more to careful graving. Always, however, it is rather a question of idiosyncrasy; and the polychromy of some of the later vases is a reaction due to a particular school imbued with a fondness for metallic effects. It is with the masters of black-figure style that the point first comes adequately to express the lines of musculature and bodily form. The rendering of drapery is a mark of relative date. At first the chiton is a straight daub of colour, as in Corinthian ware, and is often purple in hue with perhaps a black girdle: then patterns are scratched in, or elaborately painted on with white: folds begin to be marked, are outlined with the point, and dress gives some hint of the underlying contour of the body. An alternate use of purple and black for the folds is occasionally carried so far as to express light and shade. A like use of purple is to be seen in the treatment of muscles in animals, especially the horse. White is throughout a flesh-tint for female figures, but is also employed, on later vases, for the long chiton of a charioteer and the grey hair of old men.

Drawing is almost entirely in profile: full-face is scarcely rendered with more adroitness than was shown already in the François vase. The eyes of men remain large and round, of women oval and small. In more recent vases a trick grows up of crowding the field with long, purely conventional ivy sprays: equally conventional in rendering are the landscape features sometimes introduced, and no attempt is made at pictorial perspective. Excellence of drawing is seldom a sufficient criterion of date.

The subjects of vases become now of less importance for their general history. In black-figure ware they are mainly mythological, sometimes genre. In mythology the Dionysiac cycle and the feats of Herakles are by far most frequent; after them, the legends of Athena and Hermes. Frequently as scenes from the Epic appear, scarcely any can be traced to the Iliad or Odyssey.

Ornament, as distinct from painted scenes, becomes stereotyped. Almost always the neck of an amphora shows a design of lotus and anthemion hooped together by a cable pattern: dentals unite neck to shoulder: below the field are two zones, the upper a maeander, the lower continuous lotus buds: from the foot shoot up the rays which since Rhodian pottery have held their own. For a hydria, ivy tendrils or chequers border the sides, a running anthemion the bottom, of the field; below which sometimes

---

* So Suidas asserts, but contrast Blümner, *Technologie*, ii. p. 57, as to the result of experiments made on fragments.

an archaistic feeling has restored the Corinthian frieze of animals, but has restored it purely as an ornamental finish.

The different schools of black-figure ware have yet to be recognised: those that are known are, for the most part, concerned with either the commencement or the end of this style and its transition into red-figure. Early enough to be somewhat isolated is the first Athenian masterpiece, the François vase of Florence, in itself an *Epos*. Early also, as is shown by shape, by style of painting, and by arrangement of subject, are a group of amphorae which, from their close connexion with Corinthian ware, are known as Corintho-Attic. Characteristic are their zones of animals; which have often caused them to be confounded in one class with the "Tyrrhenian" (see above). A different *fundamentum divisionis* has served to mark off the **Panathenaic** amphorae [AMPHORA]; which last through the black-figure, and even to the end of the red-figure, period. The archaism of the figure of Athena on the obverse becomes in time a pure convention, the reverse reflecting contemporary style. Many specimens seem never to have been given at the games, and are simply show-plate. Less numerous and of peculiarly elongated form, are the **Prothesis-amphorae**—vases used in the burial service, and with subjects drawn mainly from its liturgy. The finest examples belong to the later red-figure ware.

[François vase, *Mon. dell' Inst.* iv. 545–7; Corintho-Attic, Löschcke, *Arch. Zeit.* 1876; Panathenaic, Urlichs, *Beiträge*, pp. 33 ff.]

Much care was spent by masters of the black-figure style on the evolution of the *cylix*. That this type was in vogue at Cyrene has been already noted, as also that it had acquired a developed shape and style of decoration. The processes at Athens and Cyrene are parallel, and not widely sundered in date, but have little or no influence on one another. The oldest cylices at Athens have that shape with off-set lip, which derives from Rhodes through Corinth. The alteration in form which follows [see under CALIX] is closely connected with changes in the mode of ornamentation. The early cylix having a deep bowl is decorated in frieze fashion; and of the several zones into which the surface is divided by the potter, only one is chosen by the painter. Then comes a new idea: on the lip are drawn tiny groups or animal shapes, each side having a couple of figures, or, more often, one only. The zone below is occupied by inscriptions, the artist's signature or a *χαῖρε καὶ πιὲ εὖ*. This group of vases is known as "Klein-meister." Their strongly metallic appearance proves their indebtedness to foreign influence, communicated through Rhodes. Another experiment is probably the work of the artist Exekias (or, according to some, of Nicosthenes). He uses a shallower vase without off-set lip, and revives the "sacred-eye" ornament previously in favour at Rhodes and Naucratis: making this suffice for the centre, he places the actual scene under and about the two handles. "Eye" vases had a considerable success; but gradually the handles come to be treated as the natural limits of the field, and, the bowl becoming continually broader and shallower, while off-set lips disappear, decoration spreads over the whole outer surface. The inside remains a difficulty. Earlier artists neglected it altogether, or painted only a small medallion in the centre. But fashion wavered to and fro; sometimes the whole inner surface is ornamented with a complete scene and the outside is less regarded; sometimes a medallion is preferred. Especially to be noted are the cylices which have a Gorgoneion for their medallion; for they may first have suggested a new style, which, while the vase is covered with a black ground varnish, leaves the actual figures in the original clay-tint,—as it were, in intaglio.

The *cylix* class is exceptionally fruitful in artists' signatures. Ergotimos and Klitias, who made and painted the great François crater, were followed by Nearchos, whose sons Tleson and Ergoteles, with Ergotimos' son Eucheiros, have signed many of the earlier cylices. Other names are Xenocles, Hermogenes, Archicles, &c. In *amphorae* Exekias takes first place for spirited and careful drawing: Amasis carries nicety of detail almost to extravagance: Hischylos represents transition style.

[For signed vases, early and late, for the characteristics of the great schools, and the questions which group themselves round them, the reader is referred once for all to Klein's two important works, *Die griechischen Vasen mit Meistersignaturen* and *Euphronios*.]

By far the most prolific maker is Nicosthenes, a clever *entrepreneur* who tried experiment after experiment to hit popular taste. Already an introducer of one new fashion in cylices, he is perhaps best known by a group of small amphorae of very peculiar form (fig. 7). The strange flat handles of his amphorae are by a new process made of one piece with the vase. Nicosthenes is a master of the metallic style; but his work distinguishes itself by a plumpness and *naïveté* all his own. A doubt has indeed

Fig. 7. Amphora of Nicosthenes. (Genick, Taf. iv.)

been more than once expressed whether Nicosthenes was an Athenian; and the finding a signed fragment of one of his vases at Naucratis may suggest, whatever his provenance, the source whence many of his novel departures were inspired (*Mem. Eg. Expl. Fund*, Naucratis, pt. i. p. 53). With him too is associated the prevalence, though not the introduction, of yet another technique, in which black figures are painted on a white engobe ground; a technique less new in Greek pottery than novel at Athens. This group is confined to the smaller vases, *oenochoae*, *alabastoi*, above all *lekythoi*. The style does not differ from that usual in black-figure ware; but here, as in the metallic class, a love for nicety, exact finish, and vivid lustre makes itself prominent. It is the triumph of the ornamental school. A peculiarity should be noted in the lekythoi. While the main field is covered by a white engobe, neck and shoulder are left in the natural clay: no difference however is made in decoration, except that the shoulder is left to mechanical ornament. In all vases of the class lip and foot are black. [For Nicosthenes, Klein, *op. cit.*; and Löschcke, *Arch. Zeit.* 1881, pp. 33 ff.]

Nicosthenes is a typical figure. The epoch in Athenian pottery we have now reached—roughly speaking, 500 B.C.—is an epoch of transition and experiment. The vase-painter's art struggles in the throes of a revolution. Process after process is tried and rejected, until at last one style emerges from the chaos, and triumphs as rapidly as completely over all rivals. Many relics of the struggle remain; vases which show the two styles conflicting on obverse and reverse, inner or outer, ornament and scene. The final perfecting of early red-figure technique is marked by the name of Epiktetos: among his chief predecessors of the transition may be named Hischylos and Pamphaios. Precise evidence for the origin and date of red-figure ware is wanting: it seems however to have begun about 500 B.C. (some writers think even under the tyranny of the Peisistratidae), and to have owed its development to the influence of high art. A close connexion may perhaps be supposed with the improvements in painting introduced at this time by Cimon of Cleonae (Pliny, *H. N.* xxxv. § 56). While hitherto Greek ceramic art must, on its formal side, be placed under the heading "ornament," from this point it becomes a branch of painting. The great group of artists who inaugurate the new style are proud of their mission, and spare no pains to perfect what they began.

Among vase-forms it is the *cylix* which is peculiarly the favourite of earlier red-figure painters: its use in fact is a party-badge. Though the new technique had triumphed, it was opposed by a strong conservatism, which, while adopting the new style of painting, clung to old shapes like the amphora and to old traditions in the matter of field and ornament. To this tendency we owe some very beautiful examples of red-figure amphorae, of greater elegance of form, and ornamented with only one figure — sometimes a pair of figures — a side. Among the more advanced types of this class is the "Nolan" amphora. [See AMPHORA.] After the *cylix*, and to some degree succeeding it, come the *stamnos* and *psycter* [see PSYCTER; STAMNUS], which are peculiar to the earlier period: with them, but outlasting them, and continuing in favour to very late times, is the CRATER. At first the handles are placed low down and the form resembles a cup; then, as its sides become straighter, a chalice; lastly, the handles are brought on to the shoulder, and the vase is shaped like an inverted bell. This campaniform crater was adopted also by later S. Italian manufacturers. After 400 B.C. obverse and reverse are more sharply distinguished; the latter being ornamented in a purely conventional manner with three drapery figures (*Mantelfiguren*).

Technique, in red-figure ware, is simple. On a red ground clay, like that of the black-figure ware, the scene is outlined in freehand with broad strokes of a full brush of black varnish over a tracing lightly made with a fine point; the rest of the surface is covered with an even layer of the same colour, and details of organic form and folds of drapery are painted in with a fine pencil, also in black. Details are sometimes given with red colour; in later examples this tint is confined to the musculature, which is better rendered by a shade scarcely standing out from the red ground on which it is painted. Gilding appears towards the close of the so-called "strong" style, and about the same time an attempt is made at polychromy. (Cf. the beautiful Pandora cylix in the British Museum.) But polychromy is soon confined, in the period of finest style, to smaller vases, *lekythoi*, *pyxides*, and *alabastoi*, in sympathy with a more developed taste. [For plastic additions, see under FICTILE.]

Throughout a steady advance in draughtsmanship, contrasting with the conventionalism of black-figure ware, is to be observed. In the school of Epictetos a simple broad treatment, with few or no details of organism, is in vogue; a treatment suited to the subjects then in favour, scenes from palaestra, banquets, and the life of *hetaerae*. There follows a period in which, while simplicity and strength of drawing and grouping remain, details—as of drapery—are fully rendered, but with inadequate success. Among these earlier artists, whose style is known as "strong" or "severe," Euthymides is of conservative tendency; Duris careful and studied, but somewhat wanting in originality; Euphronios and Brygos represent its most perfect form. A wonderful variety of motif, pose, and grouping is attained,—a variety reflected from the subjects where legends of Attic heroes like Theseus, scenes from Epic and even from Lyric have replaced the older crowd of athletes, revellers, and courtesans. But grace and natural truth are still largely wanting: the face is still drawn almost solely in profile, or where full is scarcely successful: foreshortening is rarely attempted: eyes are drawn in full when the face is in side view. The year 430 B.C. may be taken as nearly representing the time of transition from earlier "strong" to later "fine" style. Vase-painting undoubtedly owed most of its progress to a close relation with high art: but this relation, as concerns details, is as yet very incompletely explained. The chief debt must have been to painting, though earlier critics insisted rather on a connexion with sculpture. Above all must be ranked the influence of Polygnotus: yet it remains difficult to lay a finger on direct traces of it. The earliest instance is a two-handled cup, representing the Slaying of the Suitors (*Mon. dell' Inst.* x. 53): and the relation of this vase to Polygnotus' frescoes at Delphi can now be established through comparison with the Gjölbaschi reliefs. Another example is on a cup from Chiusi, showing the washing of Odysseus' feet and Telemachus in the presence of Penelope (Schreiber, *Bilderatlas*, Taf. 63, 3). But neither vase can be earlier than 400 B.C., as is evident, restrained as the style is, from the figures of Penelope and the suitor wounded in the back. The influence of Polygnotus and his school seems at first to have been restricted to effecting improvements in motif and drawing: it is only with the great age of painting in the 4th century that vases begin really to reflect the higher art. To this period then, and not to the time of Polygnotus, should be assigned such changes as the rendering of figures in back view, the distinction of background and foreground, transparency of drapery, different tones of colour to express light and shade, and the upgrowth of polychromy. [A comparatively early example of direct influence of high art upon the vase-painter is the beautiful Kamiros amphora (*pelike*) of the British Museum: note especially the fleeing nymph in middle distance, and the use of blue, gold, and white.—For other views on the connexion between ceramic art and the great schools of painting, *v.* Winter, *Die jüngere att. Vasen*, and papers in *Jahrbuch*, 1887, by Winter, Dümmler, and Studniczka.]

From 430 B.C. onwards the vase-artist rapidly attains perfect command over material and instruments. He no longer shrinks, with the timidity of ignorance, from the more difficult motifs: with full-face, three-quarter face, and profile he is equally familiar. Boisterous strength yields to the grace, charm, and refinement of the family circle. We are introduced to the inner life of Athens, its pleasures, pastimes, and foibles, as well as to its deeper sentiments. It is the reign of Aphrodite and Eros. For Epic the painter gives us the drama. Fashion and luxury are mirrored in the gauze-like drapery with its wealth of embroidery, in the jewels of the women, the modishness of the men. The human figure is no longer swathed in the full folds of Ionic dress; transparent silk replaces the heavier linen robes. Action is dramatic and pictorial; motifs are studied from sculpture and painting. The deities who are presented are those of music, love, song, and revel, Fauns of the woods, Naiads of the sea, or Bacchantes from Dionysus' train.

Standing somewhat away from the red-figure vases, but contemporary with all but the earliest, is the polychrome ware with white ground. The great majority of this class are *lekythoi*,[*] but *pyxides* and *alabastoi* of similar technique also occur, though not among the earliest examples. As the finest and most important specimens are lekythoi, it will suffice to confine this account to them, merely adding that the pyxides also make free use of gilding, which does not appear on lekythoi, and that their subjects are generally those of the gynaeconitis. Two sorts of clay are used, a pale-red and a grey-black, the former being thinner and more fine. Over the clay a white engobe is laid, covering the body and often the shoulder; neck, lip, and foot are in black varnish. The white is laid on first, and possibly while the vase revolves on the wheel. On this white surface a sketch in simplest outline is made with a fine brush of greyish or bluish colour; sometimes, as in most red-figure vases, it is faintly traced with a point. This sketch is then lined in, in monochrome, with black, yellow, or red: and the same tint is employed for folds of drapery as for the outline. Nude figures are rare: a false impression of nudity is conveyed by the loss of strokes which once indicated dress. It is a matter of taste with the individual artist whether the broad surfaces of drapery are coloured in: later examples show careful shading of the dress, and flesh-tints are in a few cases employed, varying according to the person represented. Ornament is only used on the shoulder, but a maeander pattern regularly forms a frame to the top of the field, very rarely appearing below: in one case impressed patterns, ovoles, are found (on an *oenochoe*). The shoulder may be either red (ground-colour), black, or white: the latter colour greatly preponderates, and alone occurs in the most flourishing period. Colours are all opaque, with exception of sienna (when used for outlines), and black: the range is a large one, and includes red of all shades, from carmine to brown, blue, violet, green, yellow, both chrome and ochre, brown and black. Klein (*Euphronios*, p. 97) thinks that they were applied in encaustic. [PICTURA.]

Three classes of lekythoi may be distinguished:—(*a*) Figures generally in red or sienna: subjects entirely funereal: polychromy sober and restrained: style fine. (*b*) Figures in black or brown: subjects generally funereal, but sometimes drawn from family life, the pantheon, or even mythology: polychromy brilliant and often directly pictorial: style fine. (*c*) Figures in yellow: shoulder without engobe: painting almost always monochrome: style decadent, often careless. (For *lekythoi*, *v.* E. Pottier, *Etude sur les Lecythes blancs attiques*.)

Contemporary with the whole of the red-figure and probably with a great part of the black-figure period, are vases simply covered with a lustrous black varnish. In the 4th century these vases become of more importance, are ornamented with gilding, and here and there a figure in polychrome. The majority are moulded, and therefore fall under plastic [FICTILE]: many shapes are of great beauty. Equally to plastic belong vases in the shape of human heads, and, though less decisively, the rhyta. [RHYTON.] Plastic, too, is a group which appears in the latter half of the 4th century, and contains vases formed of human busts modelled in terracotta, surmounted by the neck of a lekythos. Occasionally the vase is more complete, and a plastic figure or group is merely laid upon it. Painting is polychrome. This class is the predecessor of the modelled Capuan ware. [TERRACOTTA.]

The question of mechanical ornament in red-figure ware may be very briefly dismissed. Its principal use is to supply the ground-line of a scene or to give a finish to certain parts, espe-

---

[*] Lekythoi in the ordinary red-figure technique are also common.

cially the joints of a vase, as the lip, union of shoulder and neck, or handles. Conservatism accounts for the not infrequent retention of an ornamental frame to the fields of hydria and amphora: under the handles of early cylices, and especially under those of the stamnos, appear elaborate anthemia. The forms almost solely in use are the maeander, running anthemion, lotos and anthemion, laurel-wreath; the latter of which is invariable on campaniform craters.

The manufacture of red-figure vases ceased in Greece proper about the time of Alexander, and is now transferred to S. Italy. There is no sudden change: in this, as in all periods of Greek ceramic art, the various distinctive styles overlap, and those which, like Geometric or Corinthian, had an especial vogue, even outlasted their immediate successors. There had always existed in Italy native schools of ceramic, but so powerful had been the influence of pure Greek style, so completely had the fabrics of Corinth and Athens secured and kept the market, that with a partial exception in favour of Etruria, none of the Italian potteries ventured more than an imitation of the products of continental Greece. With the opening of the Hellenistic age, however, art becomes provincial; and as sculpture and painting passed to Pergamon and Rhodes and Alexandria, so Magna Graecia inherited the potter's craft. No new world-wide trade, like that of Athens, no important novelty in technique, marked the transference. Although Apulia produced amphorae and crateres of great outward splendour, the decadence of style, which had already begun at Athens, is painfully apparent. Men sought to add fresh life to a waning industry by inventing giant vases and richer shapes, by bringing into play all the resources of polychromy, and even summoning plastic to their aid; but profuse ornament and gaudy colouring scarcely cloak bad drawing and bad taste. Yet the artists had a pride in their work, and signatures, rare since the end of the "strong" style, again occur, though, it is true, in no great number. Two traits are characteristic:—(*a*) The strict relation maintained on most examples between the use of the vase for service at the tomb and its decoration (either a scene of offerings at the tomb, or an appropriate myth): and—where the subject is not funereal —(*b*) the frequent borrowing from the stage (farces especially), and the rendering of other than dramatic scenes with dramatic accessories (cf. Heydemann, *Jahrbuch*, 1886, pp. 260 ff.).

Three separate S. Italian fabrics may be distinguished, **Lucanian, Campanian, Apulian.** The technique in all is that of red-figure ware. Each class exhibits a peculiarity in depicting the human figure, a peculiarity suggestive of difference of social type: each, too, introduces details of national costume.

Lucanian vases may be relatively somewhat older; at least their manufacture seems to have sooner come to an end. Though somewhat helpless in draughtmanship, their style is comparatively restrained; polychromy is little used, and the heavy, clumsy drapery seldom bears a trace of ornament. A favourite shape is the campaniform crater; another, a kind of amphora only found in Lucania, is illustrated by Genick (*Griech. Keramik*, pll. viii. ix. x.). Assteas is a Lucanian master. Earlier Campanian vases imitate both in shape and subjects the so-called "Nolan" amphorae (see above). Later examples show great fondness for polychromy, tints especially prominent being white and yellow—the latter, in most cases, a cheap substitute for gilding. Tendrils of vine, ivy, and other plants are often introduced, as also on Apulian ware, with a happy effect: and occasionally motifs are taken direct from nature (as, *e.g.* a bird singing on a spray). The most important class, and that of highest artistic merit, is the Apulian, a product probably of Tarentine activity. Characteristic are the giant amphorae, one blaze of ornament from head to foot: characteristic too the heavy Doric chin of the men, the slender neck and stout barrel of the horses, the zones of fishes and marine forms employed as ornament. [For Apulian vases, *v.* O. Jahn, *Einleitung*, pp. 218 ff.; Gerhard, *Apul. Vasenb.* (B).]

As regards colours in S. Italian polychrome ware, the red ground-clay is often changed to brown, and white used as a flesh-tint for women, but also, with a dash of yellow, for men. Yellow is perhaps the favourite decorative colour. An example will suffice to show the distribution of tints. On a crater representing the Calydonian hunt all the actors are in red ground-colour, but the boar is black stippled with brown, his eye black on white, his ears, tail, hoofs, and snout brown. His antagonist assails him with a yellow Roman sword, carries a yellow shield with white rim and red inner, and wears a yellow helmet. A dog, white, lined with yellow, leaps against the monster. In the field are tree-boles, white, lined with yellow, and from them spring leafy sprays, also yellow. Under the lip of the vase is an ivy-wreath, with leaves in red ground-colour pointed with black and edged with a broad white outline.

It is doubtful at what time the S. Italian fabrics died out, possibly by 250 B.C.: but already in the 3rd–2nd centuries B.C. *Latin* painted vases appear. Their ornamentation is quite simple and rude,—a spray of vine or olive with perhaps an Eros in the centre (*Annali dell' Inst.* 1884). These are the last painted vases, and they are immediately succeeded by the *Cales* ware, black, metallic, and moulded (Gamurrini, *Gaz. Archéol.* 1879, pp. 47 ff.). Henceforth pottery, for so much life as is left to it, becomes a branch of plastic. On the *Calene* style follow the *Samian* and *Aretine*. Greek ceramic art has given place to Roman. The pottery of Rome is in itself of less importance, and is sufficiently described under FICTILE: but it has a value of its own, as the link by which the secrets of classical ceramic art were communicated to the Northern nations, among whom the Celts rank first. Samian and Aretine vases were freely imitated in Gaul and England, where native fabrics grew up under Roman influence. A valuable and representative collection of Roman and early British pottery is in the Yorkshire Philosophical Society's Museum at York.

The field of decoration in Vases.—At first the field is necessarily vague. An early *principle* of decoration is established by the analogy of a vase to the human body: then in Alambra ware definite units of ornamentation appear, and the surface is divided into compartments. Painting, as at Thera, makes it possible to decorate inner surfaces. In the Mycenae period the high centre of gravity in the prevailing vase-shapes serves to determine the shoulder as principal field: in Dipylon style both shoulder and neck—the latter perhaps especially—receive ornament, and there is a general correspondence between obverse and reverse. In Phaleron oenochoae the panel on the neck and the beginning of a metope style are to be noted; while the divergent rays which decorate in perpendicular lines the lower body of the vase introduce a new conception. The latter practice is perfected at Rhodes, and becomes thenceforth an established principle. Rhodes, too, began to divide the field into zones, proportioned to each other and to their position on the vase, to reserve the neck for mechanical ornament, and to make the junction of neck and shoulder organic by covering it with a band of dentals. Corinthian ware retrogrades: handsome as it undoubtedly is, it is false to the law of development which Greek pottery had already marked out for itself. At Cyrene the influence of metal originals was supreme; but the zones, rays, and dentals of Rhodes are retained. To metal-work is due the medallion and the preference for cylices and their ornamentation on the inner surface. On large vases the centre zone or zones form the field proper; the rest, like the outside of cylices, is given up to mechanical ornament. The main scene is placed, in Chalcidian amphorae, on the body; and above it is a narrow band of animals and horsemen. With Attic black-figure many improvements are introduced. A fixed ornament is adopted for the neck, and the field, divided into obverse and reverse by the handles, is given an internal unity by being framed in, and—as a consequence of the new technique—separated from the rest of the vase. To each of the several shapes, moreover, a special system of decoration begins to be assigned, compounded of three elements,—the zone, panel, and medallion,—of which the first and third belong of right to metal-work; the second is probably equivalent to a metope, and therefore architectural. Of the manner in which a suitable ornamentation for cylices was determined mention has previously been made. It need only be added here that the outer surface was finally adopted as true field, while the school of Epictetus perfected the inner medallion. Framing of the field, in red-figure technique, in amphorae and hydriae, is only retained, as by Andocides, from motives of conservatism. Until the influence of painting was thoroughly felt only a single ground-line was used, and there was no real differentiation of background and foreground. From 430 B.C. onwards the single ground-line is frequently broken up, and the field is treated as though the vase were so much canvas. Figures are also placed in the air, and this practice is subsequently greatly abused. In Campanian and Lucanian pottery as a rule no ground-line is marked: there are a few exceptions. In Apulian an irregular chain of dots serves that purpose, while figures "in the clouds"—forces controlling, and spectators interested in, the action—are represented by busts only.

[For the difficult problem of the relation between obverse and reverse, and the extent to which they mutually explain one another, *v.* J. C. Morgenthau, *Der Zusammenhang der Bilder auf griechischen Vasen.*]

LITERATURE.—*General accounts:* Jahn, *Einleitung zur Beschreibung der Vasensammlung zu München* (München, 1854: in parts obsolete); Birch, *Anc. Pottery* (London, 2nd ed. 1873); Dumont et Chaplain, *Les Céramiques de la Grèce propre* (Paris, 1881: *in progress*); Baumeister's *Denkmäler*, s.v. "Vasenkunde" (München, 1889: a most useful epitome, to which the present article is in many ways indebted); Genick, *Griechische Keramik* (Berlin, 1883: a résumé of types with text by Furtwängler); Lau, *Griechische Vasen* (München, 1877: numerous plates illustrating formal side of Greek pottery).

Special works.—The references given under various sections of this article are in no sense exhaustive, but they will furnish a clue to the most important and recent papers in periodic literature which for vases is of the utmost moment. For the connexion of early ceramics with Homeric culture, Helbig, *Das homerische Epos:* as a sample of modern criticism, Robert, *Bild und Lied:* for Cyprus and Phoenicia, Perrot et Chipiez, *Histoire de l'Art dans l'Antiquité*, vol. iii. Brunn's theories are to be found in *Abh. d. kgl. bay. Akad.* vol. xii. pt. ii. pp. 87 ff., and vol. xviii. pt. i. More extravagant is P. Arndt, *Studien zur Vasenkunde* (München, 1887).

Illustrative works.—The chief publications of figured and other vases may be found catalogued under the names of Tischbein, Millin, Millingen, Böttiger, Stackelberg, Gerhard, Panofka, Lenormant et De Witte, Bröndsted, De Luynes, R.-Rochette, Benndorf, Fröhner, Furtwängler: also in special series like the *Wiener Vorlegeblätter*, or general collections like Müller-Wieseler's, and Baumeister's *Denkmäler*, and the chief archaeological journals. [H. A. T.]

VASA'RIUM. [SALARIUM.]

UDO, a warm close-fitting shoe of felt (Mart. xiv. 140). It is clear that the translation "sock" in dictionaries is wrong, for Dig. 34, 2, 25, § 4, specially distinguishes them as worn "calceamentorum loco," whereas the *impilia* are said to be "vestis loco." The *impilia* therefore take the place of our socks, and are equivalent, or nearly so, to the Greek πῖλοι (Hes. *Op.* 542), which seem to have been strips of felt wrapped round the feet and extending up the leg: so in Plat. *Symp.* p. 220 B, we find ὑποδεδεμένων καὶ ἐνειλιγμένων τοὺς πόδας εἰς πίλους, the first participle referring to the sandals, the second describing the πῖλοι. They were not ordinary articles of Greek clothing, but were worn in extreme cold, *e.g.* at the siege of Potidaea. The name may, however, also have been given to felt-soles (probably = Latin *pedule*), since Pollux (vii. 91) distinguishes πῖλοι from περιειλήματα ποδῶν. The same passage gives as names for a sort of stocking πέλυντρα and ποδεῖα: the latter of these words occurs in Theophr. *H. P.* vii. 12, 8, and is rendered *impilia* by Pliny (*H. N.* xix. § 32) in his translation of that passage. (Becker-Göll, *Charikles*, iii. 284; *Gallus*, iii. 226; — Marquardt, *Privatleben*, p. 502.) [G. E. M.]

VECTIGA'LIA, a term used either (i.) in a narrow sense, = dues levied on *ager publicus*: see below: or (ii.) in a wide sense, = all regular and ordinary sources of Roman revenue, as distinct from the extraordinary *tributum* [TRIBUTUM]. As many of these are treated in separate articles, we need only give a list of them here and explain those which are not elsewhere treated.

1. The tithes paid to the state by those who occupied state-domains in Italy or the provinces [DECUMAE; AGRARIAE LEGES]. Rents of houses and buildings on public lands, *solarium*.

2. The sums paid by those who kept their cattle on the public pastures [SCRIPTURA].

3. Products of the public forests; money raised by sale of timber and of tar (*picariae; vectigal picariarum*; Cic. *Brut.* 22, 84).

4. Income from public buildings and works; markets; bridges [PORTORIUM]; sewers (Ulpian, Dig. 7, 1, 27, 3); water-supply [AQUAEDUCTUS]; baths [BALNEAE]: see Dureau de la Malle, *Économie Politique des Romains*, Bk. iv. cc. 22, 23; and Hirschfeld (cited below).

5. The revenue derived from the salt-works [SALINAE].

6. The revenue derived from mines (*metalla; fodinae aurariae, ferrariae*, &c.) and from minerals of every description. This branch of the public income cannot have been very productive until the Romans had become masters of foreign countries. Till that time the mines of Italy were worked, but this was presently forbidden by the senate (Plin. *H. N.* iii. § 138; xxxiii. § 78; xxxiv. § 2). We do not know the date of this measure, or its motive. It was perhaps passed from distrust of *publicani* (cf. Livy, xlv. 18), or to discourage local minting. Mommsen, *Staatsrecht*, iii. 1117, says the working was forbidden "in the agrarian interest." The mines of conquered countries were, like the *salinae*, partly left to individuals (Plut. *Crassus*, 2; Tac. *Ann.* vi. 19), companies (Cic. *Phil.* ii. 19, 48), or towns, on condition of a certain rent being paid, or they were worked for the direct account of the state, or farmed by *publicani*. In the last case, however, the profits of the *publicani* were limited by the *lex censoria* or contract settling how many labourers might be employed (Plin. *H. N.* xxxiii. § 78). The emperors by degrees got nearly all mines, and quarries too, into their own hands, as belonging either to the *fiscus* or to the *patrimonium Caesaris*, whether they were found in imperial or in senatorial provinces. These were then either let to contractors (*conductores metalli*), or worked directly for the emperor by *procuratores* who had the right to employ soldiers and the forced labour of criminals (*ad metalla damnatio*), or else the right of working was sold to private persons and the product taxed. Among the richest mines known were the gold mines of Aquileia (Polyb. xxxiv. 10) and of Vercellae (Plin. *H. N.* xxxiii. § 4; Strabo, v. 1, 12), and the Spanish silver and iron mines (Polyb. xxxiv. 9; Liv. xxxiv. 21). The gold and silver mines of Macedonia (Herod. v. 17; Liv. xxxix. 24) were closed by the senate; iron was still allowed to be worked (Liv. xlv. 18, 29). There were also various mines in Thrace, Illyricum, Noricum, Africa, Sardinia, and Britain. (See on the last *C. I. L.* vii. p. 220 *sq.*; Hübner in *Rhein. Mus.* N. F. 12). Revenue was also raised in like manner from sandpits (*arenariae*; Dig. 7, 1, 9), chalk-pits (*cretifodinae*; Dig. 7, 1, 13; 24, 3, 7), marble- and ordinary stone-quarries (*lapicidinae*), grindstone- and millstone-quarries (*cotoriae*; Dig. 39, 4, 15), and the vermilion-works in Spain (Plin. *H. N.* xxxiii. § 118). (O. Hirschfeld, *Die Bergwerke; Untersuchungen*, 1876; J. Binder, *Die Bergwerke im römischen Staatshaushalt.* 1880.) [METALLUM, 2.]

7. Revenue from letting-out public fisheries (Polyb. vi. 17; Servius on Verg. *Georg.* ii. 161).

8. The customs-duties [PORTORIUM].

9. *Quinquagesima* (or *Quinta et vicesima*) *mancipiorum venalium*; a duty on slaves sold [QUINQUAGESIMA].

10. *Centesima rerum venalium* [CENTESIMA], a duty on other articles sold. The produce of this tax, like that of No. 11, belonged to the *aerarium militare* [AERARIUM].

11. *Vicesima hereditatium* } see VICESIMA.
12. *Vicesima manumissionum* }

13. The tribute imposed on foreign countries. It has been thought that this was by far the most important branch of the public revenue; but it is difficult to maintain this against the words of Cicero (*pro Leg. Manil.* 6, 14), "ceterarum provinciarum" (except Asia) "vectigalia tanta sunt ut iis ad ipsas provincias tutandas vix contenti esse possimus." So Mommsen writes (*Hist. Rome*, E. T., Bk. iv. c. 11) of the republican period: "The only provinces yielding a considerable surplus were perhaps Sicily, and more especially Asia." The provincial tribute took different forms. It might be (i.) *decumae* of the produce of land (*i.e.* land left to the old owners, and regarded more as private than as public property, though it was still technically *ager publicus*). The *decumae* of course varied in amount from year to year (App. *B. C.* v. 4). The persons paying this charge were called *vectigales*. Or the charge was (ii.) *stipendium*, a tax of fixed amount. The persons who paid this were called *stipendiarii* [STIPENDIARII]. It was (*α*) *tributum soli*, a land-tax. This might be paid in money or in kind (even in hides or skins, Tac. *Ann.* iv. 72). Or it was (*β*) *tributum capitis* (Dig. 15, 8, 7; *φόρος σωμάτων* of App. *Syr.* 50), which might again be a property-tax on wealthy people, or a tax on trades (cf. No. 14), or a poll-tax (*ἐπικεφάλαιον*: plur. *ἐπικεφάλια* in Cic. *ad Fam.* v. 16, 2; paid in Britain, Dio Cass. lxii. 3), so as to reach people who had no land, or no cultivated land. But little is known of these charges. Some of them seem to have varied with a man's census (Cic. *Verr.* ii. 53, 131); and an unproductive estate was perhaps valued and charged according to the number of its columns or of its doors [COLUMNARIUM; OSTIARIUM]. The poll-tax (*exactio capitum*, Cic. *ad Fam.* iii. 8, 5) amounted in Syria and Cilicia to 1 per cent. of a man's census (App. *Syr.* 50), and was specially heavy for the Jews. It was farmed to *publicani* in Cicero's time. Josephus, *Bell. Jud.* ii. 16, 4 (*ἡ καθ' ἑκάστην κεφαλὴν εἰσφορά*), may mean poll-tax or may use the term more widely.

To the above items of provincial tribute must be added a payment in kind; a supply of corn [ANNONA] or other necessaries (wine, oil, meat, fodder; Vegetius, iii. 3). This was probably a later development of the *frumentum in cellam* of republican times [PROVINCIA]. In most provinces it was *annona militaris*, i.e. it fed the army of occupation and the officials, and was paid over on the spot. But Africa and Egypt had to meet not only the *annona militaris*, but also the *annona civica*; i.e. they had to find food for Rome, and later for Constantinople.

Africa had to feed Rome for eight months, Egypt for four (Josephus, *Bell. Jud.* ii. 16, 4). For Britain, see Tac. *Agr.* 19, 31.

14. Taxes on professions or trades (Suet. *Cal.* 40; Hist. Aug., *Alex. Sev.* 24, 32; Cod. Theod. 13, 1).

15. A tax on obstinate celibacy [Aes Uxorium]. The Lex Julia et Papia Poppaea of Augustus' time (which see) imposed penalties very like taxation on unmarried persons of a certain age: see Tac. *Ann.* iii. 25; Plin. *Paneg.* 42.

16. Temporary taxes. (α) A kind of ship-money, levied on coast-towns for their defence against the pirates (Cic. *Verr.* v. 17, 19, 24). (β) *Octava.* In B.C. 31 all *liberti* living in Italy and possessing property of at least 200 *sestertia* had to pay a tax of 12½ per cent. on their property (Dio Cass. l. 6, li. 3). (γ) Temporary exactions imposed between the death of Caesar and the consolidation of the power of Octavianus (Cic. *ad Brut.* 1, 18; App. *B. C.* iv. 5, 32; 5, 67; Dio Cass. xlvi. 31, xlvii. 16, xlviii. 31 and 34, l. 10; and see Tributum). (δ) The new taxes of Caligula (Suet. *Cal.* 40). Among them was the Quadragesima litium. They were probably all repealed by Claudius. (ε) The new taxes of Vespasianus (Suet. *Vesp.* 16, 23; Dio Cass. lxvi. 14). On the *vectigal urinae*, see Dureau de la Malle, *Économie politique des Romains*, Bk. iv. c. 23. [Dolium.] (ζ) Special charge on senators, imposed by Commodus (Dio Cass. lxxii. 16).

Here we may add, as sources of revenue, though they are not strictly *vectigalia*, Nos. 17–21.

17. Aurum Coronarium.

18. Booty taken in war; product of sale of prisoners, &c. [Spolia.]

19. Profit made out of the coinage.

20. Windfalls of various kinds [Bona Caduca; Bona Vacantia]. Fines and confiscated property.

21. Legacies to emperors, sometimes of enormous amount (Suet. *Aug.* 101, *Cal.* 38; Tac. *Ann.* ii. 48, xvi. 11; Dio Cass. lviii. 16), looked after by special *procuratores*.

Under the Republic the senate was the highest authority in matters of finance, but the censors carried out or supervised the details. The collection of duties, taxes, and tributes, was let for the most part to *publicani* for a fixed sum and a fixed number of years [Censor; Publicani]. Under the Empire the authority of the senate was curtailed by the division of provinces between senate and emperor, which led to a separation between *aerarium* and *fiscus*; the senate controlled the former, the emperor the latter [Aerarium; Fiscus]. The chief finance-minister of the early Empire was described as *a rationibus*; afterwards called *procurator a rationibus*; then *procurator summarum rationum*, or *rationalis*. (See on his successive titles and functions O. Hirschfeld in the *Jahrb. f. Philol.* 1868.)

The total income of Rome from all sources cannot be even approximately discovered for any period. Plut. *Pomp.* 45 has the general statement that before Pompey's Eastern conquests the *vectigalia* (*τὰ τέλη*) amounted to 200,000,000 sesterces; and beyond this we cannot well go.

(See Naquet, *Des Impôts indirects chez les Romains*, 1875; O. Hirschfeld, *Untersuchungen aus dem Gebiete der römischen Verwaltungsgeschichte*, 1876; S. Herrlich, *De aerario et fisco Romanorum quaestiones*, 1872.) [F. T. R.]

VECTIGA'LIA TEMPLO'RUM, the revenues of temples.

1. Greek. Ancient temples, like modern churches, often contained large accumulated treasures in the precious metals and other valuable objects. So far as these were merely stored up unproductively (*κειμήλια*), they will not be noticed here: we are concerned only with sources of annual income. We have seen, however, that the productive employment of such treasures dated from a very remote period, and that, before the rise of the *τραπεζῖται*, the temples were the earliest banks in Greece [Argentarii, Vol. I. 180 *b*]. Other revenues, by which the priests were maintained and the splendour of religious establishments supported, are now to be considered.

The first and most important of these was the rent of land. In the heroic age, indeed, there was little other wealth, and it was the monopoly of a royal and noble caste. The same word *τέμενος* denotes both the royal domain and estates belonging to a temple (*τέμενος βωμός τε θυήεις*, Hom. *Il.* viii. 48, xxiii. 148; *Od.* viii. 363). In two instances in the Homeric Catalogue we find expressions implying that the entire territory of a city was sacred to a god: Onchestus in Boeotia is called *Ποσιδήϊον ἱερὸν ἄλσος* (*Il.* ii. 506), Pyrasus on the Pagasaean gulf *Δημητρὸς τέμενος* (*ib.* 696). Wealthy priests are mentioned, who are either royal or noble: Chryses, who offers *ἀπερείσι' ἄποινα* for his daughter (*Il.* i. 13), and Anius (Verg. *Aen.* iii. 80; Ov. *Met.* xiii. 631), are both kings of men and priests of Apollo: in the case of Dares (*ἀφνειός, ἀμύμων, ἱρεὺς Ἡφαίστοιο*, *Il.* v. 9, 10) it may be a question whether his riches are derived from his priesthood or the priesthood bestowed upon a man of birth and wealth. This state of things, which may remind us of the "prince-bishops" of modern Europe, survived to a much later period in Asia Minor and adjoining countries: in several instances a priest is next to the king, and enjoys large landed revenues; among the Albanians of the Caucasus, Strab. xi. p. 503; at Comana in Cappadocia, Id. xii. p. 535; at Cabira or Sebaste and another Comana, p. 557; at Zela, p. 559; these last places are all in Pontus. Actual figures are not wanting: in Morimene, a district of Cappadocia, was a temple of Zeus with 3000 hieroduli, and yielding an income of fifteen talents a year to the priest: this, after Comana, was the next best thing of the kind in Cappadocia (Strab. xii. p. 537). Cato, charged by the senate with the deposition of Ptolemy of Cyprus, proposed to pension him off handsomely as priest of the Paphian Aphrodite (*ὡς οὔτε χρημάτων οὔτε τιμῆς ἐνδεᾶ βιωσόμενον*, Plut. *Cat. Min.* 35).

Temples were also endowed with tithes of various kinds, described under Decumae, Vol. I. pp. 603 *b*, 604 *a*. We add here some further examples. The Athenians, when they conquered Chalcis and divided the lands of the Hippobotae among cleruchs, assigned *τεμένη* to Athena in the Lelantine plain, the richest part of the territory in question: this must have been of the nature of a tithe, though the exact proportion so dedicated is not mentioned (Aelian, *V. H.* vi. 1). On the fall of Mytilene, out of 3000 lots of land they devoted 300 to the gods and sent cleruchs to the remainder (Thucyd. iii. 50). When they planted a colony at Brea, they decreed that whatever lands already belonged to the gods should remain sacred: this was probably their general practice (Inscr. *ap.* Rhangabé, *Ant. Hell.* 785 b, l. 19). We find a *τέμενος* of Athena in Samos (*C. I. G.* 2246); at Aegina (*C. I. G.* [add.] 2638). Brasidas, after the storming of Lecythus in Sithonia, where there was a temple to Athena, dedicated the whole territory to the goddess, and pulled down all the secular buildings (Thucyd. iv. 116). Sometimes the cultivation of lands thus dedicated was forbidden, as in the well-known instance of the Cirrhaean plain on the coast below Delphi, the cause of two sacred wars in the time of Solon and again in that of Philip: the object of this was to give the Delphians exclusive possession of that region, and to secure the approaches to the oracle (Aeschin. *Ctes.* § 107 ff.; Dem. *de Cor.* pp. 277–8, § 151 ff.).

Among the produce of sacred lands are to be reckoned cattle, timber, particular fruits such as vines, figs, or olives, fisheries, and mines. There might be, on the one hand, herds of cattle called *ἄφετοι*, which no one could touch, just as there might be sacred groves from which no stick was allowed to be removed, or which no human foot might enter: but there were others labouring under no such restrictions, and forming part of the substantial endowments of temples. Such were the 3000 sacred cattle at Minoa in Sicily (Diod. iv. 80); and those of Juno Lacinia (Liv. xxiv. 3). In Attica, certain olive-trees (*μορίαι, σηκοί*) growing upon private lands were themselves the property of the goddess, and the oil from them was given away at the Panathenaic festival (Lys. *Or.* 7, *περὶ τοῦ σηκοῦ*). [OLEA, p. 263 *a.*] In the deme Lakiadae was a grove of sacred fig-trees (Pausan. i. 37, § 2; Schömann, *Gr. Alterth.* ii. 188). Pausanias gives examples of fish-ponds which no one might disturb (iii. 21, § 5; vii. 22, § 4); others again where the priests alone were permitted to fish (i. 38, § 1). A Delian inscription is our sole authority for the fact that sea-fisheries sometimes belonged to temples; the language of it, however, is clear and unmistakable: *τὴν θάλατταν τὴν Ἀθηναίων οὖσαν καὶ τὴν ἐν Ῥηνείᾳ ἐμίσθωσαν δέκα ἔτη* (Boeckh, in *Abh. d. Berl. Akad.* 1834). The people of Siphnos granted a tithe of their gold and silver mines to the Pythian Apollo, and prospered exceedingly (Herod. iii. 57; Pausan. xi. 1, § 2; for another case, cf. *C. I. G.* 162).

Temple property, whatever its description, was let on much the same terms as other property. Sacrifices were paid for *ἀπὸ μισθωμάτων* (Isocr. *Areop.* § 29); *i.e.* as explained by Didymus, *ap.* Harpocrat. *s. v.* *ἀπὸ μισθωμάτων*, *ἐκ τῶν τεμενικῶν προσόδων* (cf. Xen. *de Vect.* 4, § 19; Plat. *Legg.* vi. p. 759 E). The Athenian government allowed no perquisites to its officers; hence it required those who purchased animals for sacrifice—the *βοῶναι, ἱεροποιοί*, &c.—to account for the skins of the victims. But whether such money (the *δερματικὸν*) went into the sacred or the state treasury, seems uncertain [DERMATIKON]. The revenue derived by temples from predial serfs and other slaves is more fully treated under HIERODULI.

The more popular shrines, while their permanent treasure was increased by votive offerings [DONARIA], further derived a large annual income from sacrifices and payments by worshippers. This was more particularly the case with oracles, which were not to be consulted gratuitously. So Ion says of his life at Delphi, *βωμοί μ' ἔφερβον οὑπιών τ' ἀεὶ ξένος* (Eurip. *Ion*, 323). The sums to which multitudes of small payments might mount up are shown in the case of the impostor Alexander of Abonoteichos. His charge for consulting his sham oracle was 1 drachma 2 obols; his profits 70,000 or 80,000 drachmas a year (Lucian, *Alex.* 23).

(Schömann, *Gr. Alterth.* ii. 181–246, 297–328; Hermann, *Gottesd. Alterth.* § 20; Boeckh, *P. E.* p. 303 = *Sthh.*³ i. 372; R. Kohts, *de Reditibus Templorum Graecorum*, Göttingen, 1869). [W. W.]

2. ROMAN. In considering the Roman temple-treasuries and the source and management of their revenues, it must be observed that the system was based upon a different idea from that of the Greek temple-treasuries treated of above. Religion at Rome was more entirely an affair of state: the maintenance of religion (apart from the family observances) was a state duty, and even the revenues which were dedicated to religious purposes were under state control. The temples had property: firstly, that which from time immemorial had belonged to the deity and his temple, or had been brought with him when he became part of the Roman order of gods by the incorporation of his original state with Rome; secondly, the lands and dues subsequently given or assigned: but this property was, as will be seen, regarded as part of the state possessions, merely assigned to a special purpose—that of religious service. This view of the matter arose naturally from the fact that in ancient times the king defrayed the cost of religion out of part of his own revenues, being himself responsible for the discharge alike of sacred and political duties.

The temples had a treasury (*arca*) into which flowed revenues from various sources. We have special mention of the *arca* of the Pontifices, the Vestals, and the Fratres Arvales, and there can be little doubt that the case was similar in all temples (*C. I. L.* v. 3924, vi. 1600, 2028, 10284, 13618; and more references in Marquardt, *Staatsverw.* ii. 82). The revenues of these treasuries arose:—1. *From lands:* these were, as was said above, originally part of the king's domain (Dionys. ii. 7, iii. 1); and the same was the case at Alba before its union with Rome (Id. iii. 29). Under the Republic the priestly colleges had lands within and without the city, of which in critical times part was sold for state uses, and any surplus was no doubt ordinarily so appropriated (Symmach. *Ep.* i. 68; Fest. p. 189; Sic. Flacc. p. 162; Oros. v. 18: cf. Liv. i. 20; Dio Cass. xliii. 47; Appian, *Mithr.* 22). This fact and the use of the *lucar* or income from sacred groves for games under state control [LUCAR] show clearly the secular management of the treasuries. In Italy temples were endowed in some cases from ancient rights

(Liv. xxiv. 3), in others by the Romans (*e.g.* the temple of Diana Tifatana at Capua by Sulla; Vell. ii. 25; *C. I. L.* x. 3828). Gifts of land to temples were dedicated by the Pontifex Maximus, and it was necessary that they should be confirmed by a vote of the people, even when the donor was a private person (Fest. p. 318; Gell. ii. 5; Cic. *de Dom.* 49, 127; Mommsen, *Staatsr.* ii. p. 61): the priests had nothing to do with its management; sales and leases were under the authority of the magistrates. The temple land revenues lasted till Christian times (Cod. Theod. 10, 10, 24; 16, 10, 19 and 20); the claim to sell was of course based on the old Roman theory that all *loca sacra* were part of the state domain (Frontin. *de Contr. Agr.* p. 56): hence they were administered by the censor.

2. *Fees on admission to a priesthood.* Considerable sums were paid "pro introitu sacerdotii" (Suet. *Claud.* 9, *Cal.* 22; Dio Cass. lix. 28): the enforcement of such payment rested with the civil magistrates.

3. *Fees paid by subordinate ministers of the temples.* These were themselves paid officials, but they paid fees on their admission.

4. *Profits on victims:* the sale of hides [compare DERMATIKON].

5. *Votive offerings made to the temple* (Dig. 33, 1, 20, § 1; cf. Varro, *ap.* Macrob. *Sat.* iii. 12, 2).

The *arca pontificum* (under control of the senate, with the *arcarius pontificalis* to manage it: Symmach. *Ep.* i. 68) received the proceeds of (*a*) the forfeited deposits called *sacramenta* [see VINDICATIO]; (*b*) fines for damage to, or trespass on, tombs (see Mommsen, *Staatsr.* i. 70) [it is possible that the frequency of these fines may be accounted for by the superstitions mentioned on p. 729 *a*]; (*c*) fines levied on priests by the Pontifex Maximus; (*d*) the property of a Vestal who died intestate.

All the above revenues being, as has been said, under state control, were used for the maintenance of religion primarily, though the surplus might in cases such as those before mentioned be devoted to other purposes. The temple buildings were kept in repair by the state with funds taken from the Aerarium under the authority of the Censors [Vol. I. p. 402]: but the current expenses for regular sacrifices were provided by the temple-treasuries, the priests having doubtless power to draw upon these funds. The great priesthoods were posts of honour like the political magistracies, and, like them, were unpaid; but the working staff of priests, or permanent officials, so to speak, in the service of religion were paid by the state. Maintenance was therefore provided for the Curiones (Fest. *Ep.* p. 49), the Vestals (Liv. i. 20; Tac. *Ann.* iv. 16), and for all those who had to give their services whenever called for, *i.e.* the haruspices and pullarii, and the subordinate attendants, calatores, viatores, &c. For this payment of ministers of religion the revenue from sacred lands was used, and any other funds belonging to the temple treasuries. It may be noticed that the Roman temples (since their property was directly under state control) possessed no temple slaves, such as we find in Greece and in some parts of Italy and Sicily (*e.g.* Eryx and Larinum). [G. E. M.]

VENA'BULUM. [VENATIO, 1.]

VENA'TIO. 1. (*θήρα, κυνηγεσία.*) That hunting was practised as early as the Homeric age, not only for food and profit but also as a sport by the more wealthy, is clear from the description of the hunting-party which Autolycus arranged for Odysseus (*Od.* xix. 429–446), and from its being represented as the pastime of gods and heroes (*Il.* v. 49, xxi. 485; *Od.* vi. 102, xi. 572): as a matter of necessity, we find it of course practised both to get food (*Od.* ix. 154) and to destroy wild beasts dangerous to life and property (*Il.* v. 555, ix. 543; cf. Pausan. i. 27). The animals hunted are lions (*Il.* xvii. 132), panthers (xxi. 573), wild boars (xi. 414), deer (xi. 473; *Od.* x. 159, xix. 227), ibex (*Od.* xvii. 295), hares (*ib.*). As regards the method and appliances, we get information on most points from the passage of the Odyssey alluded to above (xix. 429–446), in which we notice especially the absence of nets as a point of difference from later Greek and Roman hunting [RETE]. The huntsmen (*ἐπακτῆρες*) take the hounds forward to track the boar (cf. *Od.* xvii. 312), and the hunting-party follows armed with spears. The Homeric hunting weapons are spears (*δόρυ, ἔγχος*, *Od.* x. 161, xix. 437), javelins (*ἄκοντες*, *Il.* xi. 551; *αἰγανέαι*, *Od.* ix. 156), bows and arrows (*Il.* xi. 473), clubs (*Od.* xi. 575). It may be noted that Döderlein takes *αἰγανέας* to be arrows in the passage cited above, but he is probably wrong: see *Il.* ii. 774; Buchholz, *Homer. Realien*, ii. § 33.

The later Greek hunting may be best studied in Xenophon's treatise *Cynegeticus*, where, after mention of the divine beings who loved the sport, we find a description of the nets (for which and their use, see RETE), and then an account of the hounds, their breed, their points, powers of scent, &c. Their equipment (*κόσμος κυνῶν*) consists of collars (*δέραια*), leashes or couples (*ἱμάντες*), and broad belts (*στελμονίαι*) with spikes sewn in, to obviate the inconvenience of dogs and bitches hunting together. It is noticeable that as a point of training they are never allowed to hunt foxes, because it takes them off their proper game (*ἐν τῷ δέοντι οὔποτε πάρεισιν*). The *ἀρκυωρός* goes out very early and sets the nets into which the hunted animal is to be driven: the *κυνηγέτης*, who wears a light dress suited for running, and carries a stick (*ῥόπαλον*), brings on the hounds, and the hare is either driven into the nets or run till she falls exhausted, or sometimes is killed by the *ῥόπαλον*. In snowy weather the hare is tracked without dogs, since the snow makes tracking easy and the frost injures the dogs' feet. For hunting deer, a larger and stronger hound, which he calls *Ἰνδική*, is used, and the hunter has javelins: besides the ordinary apparatus of nets, snares called *πεδοστράβαι* are set about the haunts of the herd. This is a wooden clog with a noose to catch the foot, covered lightly with earth: the deer drags this in his flight, which is thus slower and more easily tracked. For wild boars, besides the boar-hounds and nets we find mention of boar-spears (*δόρυ, venabulum*), which are not thrown as javelins, but are slanted to receive a charge (cf. Verg. iv. 131, ix. 553; Plin. *Ep.* i. 6; Cic. *Verr.* v. 3, 7). The *πεδοστράβαι* are used for boars also. Lions and panthers he speaks of as only trapped by pitfalls (with a decoy) or poisoned (cf. Plin.

H. N. viii. § 99). The Roman method of hunting hares, deer, or wild boars was essentially the same as that described by Xenophon (cf. Oppian and Nemesianus). Representations of the Roman sport are found in Pompeian paintings (see Baumeister, *Denkm.* p. 711). [G. E. M.]

2. The name *venatio* was given among the Romans to an exhibition of wild beasts, which fought with one another and with men. These exhibitions originally formed part of the games of the Circus. Julius Caesar first built a wooden amphitheatre for the exhibition of wild beasts, which is called by Dio Cassius (xliii. 22) *θέατρον κυνηγετικόν*, and the same name is given to the amphitheatre built by Statilius Taurus (Id. li. 23), and also to the celebrated one of Titus (Id. lxvi. 24); but even after the erection of the latter we frequently read of Venationes in the Circus (Spart. *Hadr.* 19; Vopisc. *Prob.* 19). The persons who fought with the beasts were either condemned criminals or captives, or individuals who did so for the sake of pay and were trained for the purpose. [Bestiarii.]

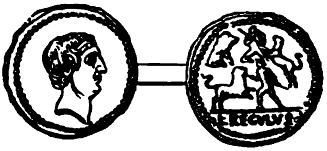
The Romans were as passionately fond of this entertainment as of the exhibitions of gladiators, and during the latter days of the Republic and under the Empire an immense variety of animals was collected from all parts of the Roman world for the gratification of the people, and many thousands were frequently slain at one time. The spectacle was called especially *ludus matutinus*, because, when a gladiatorial combat also was given, the venatio came first early in the day (Friedländer, *S. G.* ii. 349). The first recorded occasion of a venatio was in B.C. 186, in the games celebrated by M. Fulvius in fulfilment of the vow which he had made in the Aetolian war; in these games lions and panthers were exhibited (Liv. xxxix. 22). It is mentioned as a proof of the growing magnificence of the age that in the Ludi Circenses, exhibited by the curule aediles P. Cornelius Scipio Nasica and P. Lentulus, B.C. 168, there were sixty-three African panthers and forty bears and elephants (Liv. xliv. 18; cf. Mart. *Spectac.* passim). From about this time combats with wild beasts probably formed a regular part of the Ludi Circenses, and many of the curule aediles made great efforts to obtain rare and curious animals, and put in requisition the services of their friends. (Compare Caelius's letter to Cicero, *ad Fam.* viii. 9.) Elephants are said to have first fought in the Circus in the curule aedileship of Claudius Pulcher, B.C. 99, and twenty years afterwards, in the curule aedileship of the two Luculli, they fought against bulls (Plin. *H. N.* viii. § 19). A hundred lions were exhibited by Sulla in his praetorship, which were destroyed by javelin men sent by king Bocchus for the purpose. This was the first time that lions were allowed to be loose in the Circus; they were previously always tied up (Senec. *de Brev. Vit.* 13). The games, however, in the curule aedileship of Scaurus, B.C. 58, surpassed anything the Romans had ever seen; among other novelties he first exhibited a hippopotamus and five crocodiles in a temporary canal or trench (*euripus*, Plin. *H. N.* viii. § 96). At the venatio given by Pompey in his second consulship, B.C. 55, upon the dedication of the temple of Venus Victrix, and at which Cicero was present (Cic. *ad Fam.* vii. 1), there was an immense number of animals slaughtered, among which we find mention of 600 lions, and eighteen or twenty elephants: the latter fought with Gaetulians, who hurled darts against them, and they attempted to break through the railings (*clathri*) by which they were separated from the spectators (Senec. *l. c.*; Plin. viii. § 21). To guard against this danger Julius Caesar surrounded the arena of the amphitheatre with trenches (*euripi*). The *pilae* of the amphitheatre were puppets or effigies of straw thrown in to divert the attention of an infuriated animal, or at other times to stimulate and excite him (Mart. *Spectac.* 9, 19). In the first fragment of the speech *pro Cornelio* Cicero speaks of "homines foeneos in medium ad tentandum periculum projectos," *i.e.* to judge of the temper of the animal, whether he would sulk or charge: compare "men of straw," and "fiat experimentum in corpore vili."

In the games exhibited by Julius Caesar in his third consulship, B.C. 45, the venatio lasted for five days and was conducted with extraordinary splendour. Camelopards or giraffes were then for the first time seen in Italy (Dio Cass. xliii. 23; Suet. *Jul.* 39; Plin. *H. N.* l. c.; Appian, *B. C.* ii. 102; Vell. Pat. ii. 56). Julius Caesar also introduced bull-fights, in which Thessalian horsemen pursued the bulls round the circus, and, when the latter were tired out, seized them by the horns and killed them. This seems to have been a favourite spectacle; it was repeated by Claudius and Nero (Suet. *Claud.* 21; Dio Cass. lxi. 9). In the games celebrated by Augustus, B.C. 29, the hippopotamus and the rhinoceros were first exhibited, according to Dio Cassius (li. 22), but the hippopotamus is spoken of by Pliny, as mentioned above, in the games given by Scaurus. Augustus also exhibited a huge snake (Suet. *Aug.* 43), and thirty-six crocodiles, which are seldom mentioned in the spectacles of later times (Dio Cass. lv. 10).

The occasions on which venationes were exhibited have been incidentally mentioned above. They seem to have been first confined to the Ludi Circenses; but during the later times of the Republic, and under the Empire, they were frequently exhibited on the celebration of triumphs, and on many other occasions, with the view of pleasing the people. The passion for these shows continued to increase under the Empire, and the number of beasts sometimes slaughtered seems almost incredible. At the consecration of the great amphitheatre of Titus, 5000 wild beasts and 4000 tame animals were killed (Suet. *Tit.* 7; Dio Cass. xlv. 25); and in the games celebrated by Trajan, after his victories over the Dacians, there are said to have been as many as 11,000 animals slaughtered (Id. lxviii. 15). Under the emperors we read of a particular kind of venatio, in which the beasts were not killed by bestiarii, but were given up to the people, who were allowed to rush into the area of the circus and carry away what they pleased. On such occasions a number of large trees, which had been torn up by the roots, were planted in the circus, which thus resembled a forest, and none of the more savage animals were admitted into it. A venatio of this kind was exhibited by Gordian I. in his aedileship, and a painting of the forest with the animals in it is described by Julius Capitolinus (*Gordian*, 3). One of the most extraordinary venationes of this kind was that given by Probus, in which there were 1000 ostriches, 1000 stags, 1000 boars, 1000 deer, and numbers of wild goats, wild sheep, and other animals of the same kind (Vopisc. *Prob.* 19). The more savage animals were slain by the bestiarii in the amphitheatre, and not in the circus. Thus, in the day succeeding the venatio of Probus just mentioned, there were slain in the amphitheatre 100 lions and the same number of lionesses, 100 Libyan and 100 Syrian leopards, and 300 bears (Vopisc. *l. c.*). It is unnecessary to multiply examples, as the above are sufficient to give an idea of the numbers and variety of animals at these spectacles; but the list of beasts which were collected by Gordian III. for his triumph, and were exhibited by his successor Philip at the Secular Games, deserves mention on account of their variety and the rarity of some of them. Among these we find mention of 32 elephants, 10 elks, 10 tigers (which seem to have been very seldom exhibited), 60 tame lions, 30 tame leopards, 10 hyaenas, an hippopotamus and rhinoceros, 10 archoleontes (it is unknown what they were), 10 camelopards, 20 onagri (wild asses, or perhaps zebras), 40 wild horses, and an immense number of similar animals (Vopisc. *Gordian*, 33).

These spectacles were continued till the 6th century, but had gradually become less destructive to human life, since the bestiarii had more contrivances afforded for their protection and more opportunity allowed them for escape from a dangerous encounter. (See on this point Friedländer, *S. G.* ii. 379.)

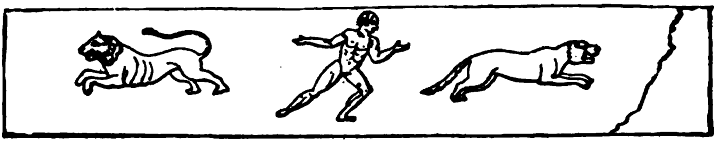
Combats of wild beasts are sometimes represented on the coins of Roman families, as on the annexed coin of M. Livineius Regulus, which probably refers to the venatio of Julius Caesar mentioned above.



Coin of M. Livineius Regulus.

In the bas-reliefs on the tomb of Scaurus at Pompeii, there are representations of combats with wild beasts, which are copied in the following woodcuts from Mazois (*Pomp.* i. pll. 32, 33). On the same tomb gladiatorial combats are represented, which are figured under GLADIATORES.

Fig. 1 represents a man naked and unarmed between a lion and a panther. Persons in this defenceless state had of course only their agility to trust to in order to escape from the beasts: but it must be confessed, as Baumeister notices, that the apparent flight of both animals lacks explanation.



Reliefs from the tomb of Scaurus. Fig. 1.

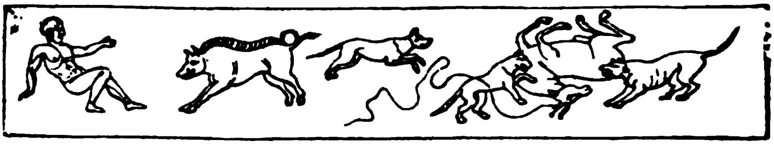


Fig. 2.

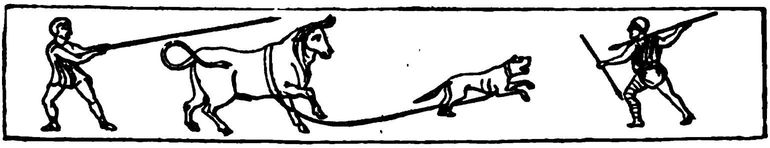

Fig. 3.

In Fig. 2 we see a bestiarius against whom a wild boar is rushing: he has probably lost or broken his spear, and has little chance of escape. In the same relief there is a wolf running at full speed, and also a stag with a rope tied to his horns who has been pulled down by two animals, probably wolves. The third relief is supposed by Mazois to represent the training of a bestiarius: Baumeister with greater probability takes it as a combat. It may result in the two animals attacking either each other or the bestiarii. The man on the left is stimulating the bull with a *venabulum*; the armed bestiarius to the right is watching for a favourable moment to throw his javelin. For the panther attached by a rope to the bull, cf. Sen. *de Ira*, iii. 43. The fourth woodcut represents a man equipped in the same way as the matador in the

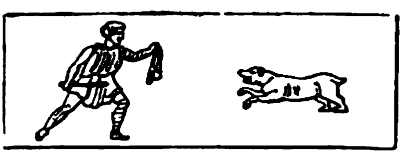

Fig. 4.

Spanish bull-fights in the present day, namely, with a sword in one hand and a veil in the other. The veil was first employed in the arena in the time of the Emperor Claudius (Plin. *H. N.* viii. § 54). The animal is supposed to be intended for a bear. (Friedländer, *S. G.* ii.^{5} 348 ff.; Marquardt, *Staatsverw.* iii. 565; Baumeister, *Denkm.* 2104 ff.) [W. S.] [G. E. M.]

VENEFI'CIUM, the crime of poisoning, is frequently mentioned in Roman history. Women were most addicted to it; but it seems not improbable that this charge was frequently brought against women without sufficient evidence of their guilt, like that of witchcraft in Europe, in the Middle Ages. We find them condemned to death for this crime in seasons of pestilence, when the popular mind is always in an excited state and ready to attribute the calamities under which they suffer to the arts of evil-disposed persons. Thus the Athenians, when the pestilence raged in their city during the Peloponnesian war, supposed the wells to have been poisoned by the Peloponnesians (Thucyd. ii. 48), and similar instances occur in the history of almost all states. Still, however, the crime of poisoning seems to have been much more frequent in ancient than in modern times; and this circumstance would lead persons to suspect it in cases when there was no real ground for the suspicion. Respecting the crime of poisoning at Athens, see PHARMACON GRAPHE.

The first instance of its occurrence at Rome in any public way was in the consulship of M. Claudius Marcellus and C. Valerius, B.C. 331, when the city was visited by a pestilence. After many of the leading men of the state had died by the same kind of disease, a slave-girl gave information to the curule aediles that it was owing to poisons prepared by the Roman matrons. Following her information, they surprised about twenty matrons, among whom were Cornelia and Sergia, both belonging to patrician families, in the act of preparing certain drugs over a fire; and being compelled by the magistrates to drink these in the forum, since they asserted that they were not poisonous, they perished by their own wickedness. Upon this further informations were laid, and as many as a hundred and seventy matrons were condemned (Liv. viii. 18; compare Val. Max. ii. 5, § 3; Oros. iii. 10; August. *de Civ. Dei*, iii. 17). We next read of poisoning being carried on upon an extensive scale as one of the consequences of the introduction of the worship of Bacchus (Liv. xxxix. 8) [BACCHANALIA]. In B.C. 184, the praetor Q. Naevius Matho was commanded by the senate to investigate such cases (*de veneficiis quaerere*): he spent four months in the investigation, which was principally carried on in the municipia and conciliabula, and, according to Valerius of Antium, he condemned 2000 persons (Liv. xxxix. 38, 41). We again find mention of a public investigation into cases of poisoning by order of the senate, in B.C. 180, when a pestilence raged at Rome, and many of the magistrates and other persons of high rank had perished. The investigation was conducted in the city and within ten miles of it by the praetor C. Claudius, and beyond the ten miles by the praetor C. Maenius. Hostilia, the widow of the consul C. Calpurnius, who had died in that year, was accused of having poisoned her husband, and condemned on what appears to have been mere suspicion (Liv. xl. 37). In B.C. 154 two consulars were said to have been poisoned by their wives (Liv. *Ep.* xlviii.; Val. Max. vi. 3, 8). Cases of what may be called private poisoning, in opposition to those mentioned above, frequently occurred: so Quintil. v. 11, 39, "nullam adulteram non eandem esse veneficam" (cf. Auct. *ad Herenn.* 1, 23; Plin. *H. N.* ii. §§ 156, 157). The speech of Cicero in behalf of Cluentius supplies us with several particulars on this subject. Under the Roman emperors it was carried on to a great extent, and some females who excelled in the art were in great request. One of the most celebrated of these was Locusta, who poisoned Claudius at the command of Agrippina, and Britannicus at that of Nero, the latter of whom even placed persons under her to be instructed in the art (Tac. *Ann.* xii. 66, xiii. 15; Suet. *Ner.* 33; Juv. i. 71). For a fuller list of poisoning cases, see Mayor's note on Juv. i. 70.

The first legislative enactment especially directed against poisoning was a law of the dictator Sulla—Lex Cornelia de sicariis et veneficis—passed in B.C. 82, which continued in force, with some alterations, to the latest times. It contained provisions against all who made, bought, sold, possessed, or gave poison for the purpose of poisoning (Cic. *pro Cluent.* 54, 158; Marcian, Dig. 48, 8, 3; Inst. iv. 18, 5). The punishment fixed by this law was, according to Marcian, the deportatio in insulam and the confiscation of property; but it was probably in the earlier period the *interdictio aquae et ignis*, since the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the time of the writers or compilers. [LEX CORNELIA, p. 39.] By a senatusconsultum passed subsequently, a female who gave drugs or poison for the purpose of producing conception even without any evil intent, was banished (*relegata*), if the person to whom she administered them died in consequence. By another senatusconsultum all druggists (*pigmentarii*) who administered poisons carelessly "purgationis causa," were liable to the penalties of this law. [PHARMACOPOLA.] In the time of Marcian (that of Alexander Severus) this crime was punished capitally in the case of persons of lower rank (*humiliores*), who were exposed to wild beasts, but persons of higher rank (*altiores*) were condemned to the deportatio in insulam (Dig. *l. c.*).

The word *veneficium* was also applied to potions, incantations, &c. (Cic. *Brut.* 60, 217; Petron. 118); whence we find *veneficus* and *venefica* used in the sense of a sorcerer and sorceress in general. [SUPERSTITIO.] For the poisons employed, cf. Dioscor. *de Venen.*, and other passages collected by Professor Mayor. It is noticeable that mineral poisons were unknown (Quintil. *Lect.* 350, p. 741 B). See further on this subject Rein in Paully, s. v. *veneficium*, *venenum*; Mayor, *l. c.* [W. S.] [G. E. M.]

VER SACRUM (*ἔτος ἱερόν*). It was a custom among the early Italian nations, especially of the Umbro-Sabellian stock, in times of great danger and distress, to vow to the deity the sacrifice of everything born in the next spring; that is, between the 1st of March and the last day of April, if the calamity under which they were labouring should be removed. (Fest. *Ep.* p. 379; Liv. xxii. 9, 10, xxxiv. 44; Strab. v. p. 250; Sisenna, *ap.* Non. xii. 18; Serv. *ad Aen.* vii. 796.) This sacrifice in the early times comprehended both men and domestic animals, and there is little doubt that in many cases the vow was really carried into effect. But in later times the actual sacrifice was thought cruel, and accordingly the following expedient was adopted. The children were allowed to grow up, and in the spring of their twentieth or twenty-first year they were with covered faces driven across the frontier of their native country, whereupon they went whithersoever fortune or the deity might lead them. Dionysius (i. 16) describes it as happening (*a*) as a thanksgiving for εὐανδρία or νίκη, (*b*) for propitiation: if the former, they offer sacrifices, and send out the colony with good omens; if the latter, in grief, demanding pardon of those sent out. The real occasion, at least in most cases, was doubtless pressure of over-population in the Apennine valleys: the emigration, which was a more merciful course than sacrifice by infanticide, was so like the swarming from a hive that Varro chooses it as an illustration, "cum examen exiturum est . . . ut olim Sabini factitaverunt propter multitudinem liberorum" (*R. R.* iii. 16). Several Italian nations traced their origin to a Ver Sacrum: Samnites, Lucanians, Bruttii, Picentini, Hirpini; the Umbri and Sabini being regarded as autochthons. According to the legendary account, Mars, the national god of Italy, sends guides for the homeless warriors, in the case of the Hirpini a wolf (*hirpus*), of the Picentini (Plin. *H. N.* iii. § 110) a woodpecker (*picus*), of the Samnites an ox (cf. Bovianum). It is probably a truer view to recognise in these legends the ancient animal totems of these tribes than to suppose that the legend arose from the tribal name. That this swarming still went on as late as the time of the First Punic War, is shown by the case of the Mamertini, or "sons of Mars" in Sicily, whose origin is traced to a Ver Sacrum (Fest. p. 158).

In the two historical instances in which the Romans vowed a ver sacrum, that is, after the battle of lake Trasimenus and at the close of the Second Punic War, the vow was confined to domestic animals, as was expressly stated in the vow. (Liv. xxii. 10: for a critical discussion of the words, see Häsenmuller, in *Rhein. Mus.* xix. 1864.) It must be observed that in these two cases it had only a religious significance as a vow, and had nothing to do with emigration. (Liv. *l. c.* and xxxiii. 44; Plut. *Fab. Max.* 4.) For further discussion see Mommsen, *Hist. of Rome*, i. 122; Marquardt, *Staatsverw.* iii. 281; Nissen, *Das Templum*, p. 154 ff.

VESTA'LES (*Virgines Vestales*), the virgin priestesses of Vesta, who ministered in her temple and watched the eternal fire. That they were recognised as a priesthood is clear from their official designation, "*sacerdotes* Vestales" (*C. I. L.* vi. 2128;—Gellius, i. 12, 14; x. 15, 31). They belonged to that oldest class of priesthoods [SACERDOS] whose duties were limited to the service of particular deities, and we have good reason to suppose that they were at least as ancient as any of these. Their existence at Alba Longa is connected with the earliest Roman traditions, for Rhea Silvia, the mother of Romulus, was, according to the legend, a Vestal (Liv. i. 20; Dionys. i. 76); and they are known to have survived at Alba down to the age of the later Empire. The institution is also found at Lavinium and Tibur (Marquardt, *Staatsverw.* iii. 336, reff.; Preuner, *Hestia-Vesta*, 340), and was without doubt originally common to all Latin communities. From Alba it was believed to have been brought to Rome; whether by Romulus or Numa, the Roman antiquaries were not agreed (cf. Schwegler, *Röm. Gesch.* i. 544, note 1). The original number of the Vestals was four (their names are given in Plut. *Numa*, 10), two representing the Rhamnes, two the Tities (Dionys. ii. 67, iii. 67; Festus, 344 b); to these two were added by Tarquinius Priscus or Servius Tullius, to represent the third tribe of the Luceres.

The true explanation of the origin and meaning of this singular priesthood has been recently placed beyond doubt by the researches of anthropologists. The germ of the cult of Vesta is to be found in the great difficulty experienced by primitive man in obtaining *fire*, and in the consequent veneration with which he regarded it when obtained. Convenience suggested that in one house in every settlement a fire should be kept perpetually burning, from which the members of the community could at any time procure the flame. This house was that of the king or chief, whose unmarried daughters were charged with the duty of keeping up the fire; their brothers also, as "kindlers" (*flamines*), had duties of the same kind, perhaps more especially sacrificial. (For the comparative evidence on which this explanation rests, see especially J. G. Frazer, in *Journal of Philology*, vol. xiv., No. 28, pp. 145 foll.: cf. Helbig, *Die Italiker in der Poebene*, p. 53; PRYTANEUM.) From the first, probably, this duty of the chief's daughters was a religious one, and the flame was a sacred flame (Ovid, *Fast.* vi. 291: "Nec tu aliud Vestam quam vivam intellige flammam"); and thus, by a process of development which cannot be entered into here, the fire became a deity whose nature and origin were forgotten (*ib.* vi. 267, "Vesta eadem quae *terra*;" Varro in August. *Civ. Dei*, vii. 16 and 23), and the duties of the chief's daughters were transferred to an organised priesthood, retaining throughout their history the leading characteristic of maidenhood. What had been matter of mere utility becomes symbolic of the life, welfare, and unity of the state; and the sacred hearth continues to be guarded by virgins whose purity of life and antique simplicity of occupation recalled their humble origin even in the latest ages of Roman history. (Jordan, *Tempel der Vesta*, pp. 50 foll., regards the Vestal as in the position of the state representative of the *materfamilias*, and not as the daughter of the rex or pontifex maximus: an opinion which is incompatible with the comparative evidence alluded to above.)

The Vestals may be treated under the heads of (1) qualification, (2) mode of appointment, (3) duties, and (4) privileges.

1. *Qualifications.*—The maiden who was to be a Vestal must not be under six or over ten years of age (Labeo in Gellius, i. 12, 1); she must be perfect in all her limbs, and in full enjoyment of all her senses (Gell. *l. c.*; Marquardt, *Staatsverw.* iii. 339); must be "patrima et matrima," *i.e.* have both parents living; and these parents must be, if not patricians (Mommsen, *Forschungen*, i. 79), at least free and freeborn, persons who had never been in slavery or followed any dishonourable occupation, and who were in residence in Italy (Labeo in Gell. *l. c.*). These rules may have been to some extent relaxed as time went on; we know, for example, that Augustus allowed the daughters of *libertini* to be considered eligible (Dio Cass. lv. 22). But on the whole great care must have been at all times taken to maintain their reputation by attention to these qualifications; and thus the institution survived intact, and without loss of dignity, long after the establishment of Christianity as the state religion.

2. *Mode of Appointment.*—A Lex Papia, of uncertain date, ordained that when a vacancy occurred, the pontifex maximus should name at his discretion twenty damsels qualified as above, one of whom was publicly (*in contione*, i.e. in Comitia calata?) fixed on by lot, an exemption being granted in favour of those who had a sister already a Vestal, whose father was flamen, augur, XVvir, VIIvir, Salius, or Tubicen sacrorum; the betrothed of a pontifex was also excused, and, in the age of the Empire, the daughter of anyone who had the "jus trium liberorum." It was possible also for a parent to offer his child voluntarily to the pontifex maximus to be made a Vestal; in which case, if she were duly qualified, the senate might grant absolution from the terms of the Lex Papia (Gell. i. 12, 10; an example of the last-mentioned procedure in Tac. *Ann.* ii. 86, where two candidates are presented to the senate for selection: cf. Dio Cass. lv. 22).

When the girl was chosen, the ceremony of "captio" by the pontifex maximus took place. This was simply an application of the old legal procedure of "mancipatio per aes et libram," by which personal property, *e.g.* slaves, passed into the possession of the buyer. The pontifex maximus took the girl by the hand and addressed her in a solemn form of words, preserved by Gellius from Fabius Pictor: "Sacerdotem Vestalem quae sacra faciat quae ius siet Sacerdotem Vestalem facere pro Populo Romano Quiritibus uti quae optima lege fuit ita te Amata capio;" where the title *Amata* seems to be simply an honorary one, suggesting perhaps the gentle character of everything in the worship of Vesta. By this ceremony the girl passed out of the potestas of her father, and into that of the pontifex maximus, who here represented in one sense the king, as father to the Vestal, in another the goddess to whose service she was dedicated. Thus she now entered a new and sacred *familia*, the centre of which was the hearth of Vesta, the members the Vestals with the Flamines and Flaminicae, and the paterfamilias the pontifex maximus. She suffered by the process no capitis deminutio, but on the contrary was henceforth qualified to hold property independently and to make a will (Gell. i. 12, 9; Marquardt, iii. 314 and 337; Jordan, *Tempel der Vesta*, p. 82).

The ceremony seems to have been reckoned as legally equivalent to the *inauguratio* of other priests (Gaius, i. 130; Ulpian, *Fragm.* 10, 5). When it was over, she was conducted to the Atrium Vestae; her hair was cut off, and hung, apparently as a dedicatory offering, on a branch of the sacred lotus-tree (cf. Plin. *H. N.* xvi. § 235; Tylor, *Primitive Culture*, ii. 364), but was suffered to grow again, as the recently discovered statues of Vestals clearly prove (Middleton, *Rome in* 1885, p. 200; Marquardt, iii. 338, note 4, with Wissowa's addition). She was then clothed in the white garments of a Vestal (to be described further on), and was sworn to abide in her office and to maintain her virginity for not less than thirty years (Gell. *l. c.*, and vii. 7, 4). If she chose then to resign her office—which seems rarely to have been the case—she became a private individual, and was entitled to marry.

3. *Duties.*—These would seem to have been more complicated than we might suppose: for the Vestal is said to have spent the first ten years of her service in learning them, the next ten years in practising them, and the third decade in teaching them to novices (Dionys. ii. 67; Plut. *Numa*, 10. Jordan, *op. cit.* p. 60, argues that this division of duties could not have always held good; but it may be taken as roughly representing what was the natural and regular course). The chief duty, however, was the simple one of tending the sacred fire; which, as symbolic of the life and religion of the state, might never be suffered to go out. Its extinction was the most fearful of all *prodigia*. If such extinction was the fault of the Vestal on duty, she was stripped and scourged by the pontifex maximus in the dark, with a screen interposed, and he rekindled the flame by the friction of two pieces of wood from a *felix arbor* (Dionys. *l. c.*; Liv. xxviii. 11; Festus, s. v. *Ignis*). Their other daily duties, so far as we know them, were exactly such as the daughters of a primitive household might have performed. They had to bring fresh water on their heads from a sacred spring, *e.g.* that of Egeria; and, as the recent discovery of the house of the Vestals has shown, no water was ever supplied them in pipes (Jordan, *op. cit.* p. 63; and p. 215 of Dissertations in honour of E. Curtius). A marble tank in the peristyle of the house served as a receptacle for the water which they brought (Middleton, *Rome in* 1885, p. 195; Jordan thinks that under the Empire this service was performed by assistants): when used for sacrificial purposes, this was mixed with *muries*, i.e. salt pounded in a mortar, thrown into an earthen jar, and baked in an oven (Festus, 158 b; Serv. *ad Ecl.* viii. 82). They also daily cleansed the temple with a kind of mop, and adorned it with laurel, which was renewed once a year (Marquardt, iii. 343 and reff.). The same homely character of their service is seen in the antique simplicity of the utensils they used; which were all of the most ordinary ware, made of baked

clay, and without ornament (Ovid, *Fasti*, vi. 310; Val. Max. iv. 4, 11).

The Vestals also had certain public duties in connexion with fixed festivals of the calendar. All of these, it should be noticed, belonged to the oldest class of rites, and expressed the religious ideas and interests of the primitive Italian husbandman. Beginning the year on March 1 with the renewal of the sacred fire, they had a share in the FORDICIDIA and PARILIA in April, and on May 1 were present at the women's festival of the Bona Dea. From May 7 to 14, they were busy making their sacrificial cake (*mola salsa*) from the first ripe ears of corn, by pounding it after the fashion of an age when mills were not invented (Helbig, *Die Italiker in der Poebene*, 17 and 72. The mill lately found in the Vestals' house could hardly have been used for the sacred cake, as Middleton suggests, *op. cit.* p. 193: cf. Jordan, p. 64). On May 15 they were present at the primitive rite of the *Argei*, and their presence is evidence for a possible connexion of that ceremony with agricultural interests. From June 7 to 14 was their busiest time; on the 9th fell their own festival of the Vestalia, and on the 15th the *penus* or temple-storehouse of Vesta, which was open during these days, was cleaned out and the refuse carefully removed to a particular spot,—an act probably symbolic of the preparation of barns and garners for the harvest then proceeding. At the true harvest festivals of Consus and Ops Consiva in August they were also present, and once again on the Ides of September at a ceremony possibly connected with the vintage. At the end of the religious year they appear once more, providing *mola salsa* for the LUPERCALIA, the ancient feast of fructification. (For details and evidence, see Marquardt, iii. 343 foll.; Preller, *Röm. Myth.* ii. 164 foll.)

They had in their keeping the blood of the "October equus," and the ashes of the unborn calves sacrificed at the Fordicidia. But of greater importance was the charge of the sacred relics which formed the *fatale pignus imperii*, the pledge granted by fate for the permanency of the Roman sway, deposited in the inmost adytum (*penus Vestae;* see Festus, *s. v.*), which no one was permitted to enter save the Virgins and the chief pontifex. What these objects were no one knew, and it may even be doubted whether the tradition of their existence was not wholly without foundation (so Jordan, *op. cit.* p. 67). Some supposed that they included the Palladium, others the Samothracian gods carried by Dardanus to Troy and transported from thence to Italy by Aeneas, but all agreed in believing that something of awful sanctity was here preserved, contained, it was said, in a small earthen jar closely sealed, while another exactly similar in form, but empty, stood by its side. (Dionys. i. 69, ii. 66; Plut. *Camill.* 20; Lamprid. *Elagab.* 6; Ovid, *Fast.* vi. 365; Lucan, ix. 994.)

We have seen above that supreme importance was attached to the purity of the Vestals, and a terrible punishment awaited her who violated the vow of chastity. According to the law of Numa, she was simply to be stoned to death (Cedrenus, *Hist. Comp.* p. 148, or p. 259, ed. Bekker), but a more cruel torture was devised by Tarquinius Priscus (Dionys. iii. 67; Zonaras, vii. 8) and inflicted from that time forward. When condemned by the college of pontifices, she was stripped of her vittae and other badges of office, was scourged (Dionys. ix. 40), was attired like a corpse, placed in a close litter and borne through the forum attended by her weeping kindred, with all the ceremonies of a real funeral, to a rising ground called the *Campus Sceleratus*, just within the city walls, close to the Colline gate. There a small vault underground had been previously prepared, containing a couch, a lamp, and a table with a little food. The pontifex maximus, having lifted up his hands to heaven and uttered a secret prayer, opened the litter, led forth the culprit, and, placing her on the steps of the ladder which gave access to the subterranean cell, delivered her over to the common executioner and his assistants, who conducted her down, drew up the ladder, and having filled the pit with earth until the surface was level with the surrounding ground, left her to perish deprived of all the tributes of respect usually paid to the spirits of the departed. In every case the paramour was publicly scourged to death in the forum. (Plut. *Num.* 10, *Fab. Max.* 18, *Quaest. Rom.* 96; Dionys. ii. 67, iii. 67. viii. 89, ix. 40; Liv. iv. 44, viii. 15, xxii. 57; Plin. *Ep.* iv. 11; Suet. *Dom.* 8; Dio Cass. lxvii. 3, lxxvii. 16, and *fragg.* xci. xcii. Festus. s. v. *Probrum et Sceleratus Campus.*)

4. *Privileges.*—But if the labours of the Vestals were unremitting and the rules of the order rigidly and pitilessly enforced, so the honours they enjoyed were such as in a great measure to compensate for their privation. They were maintained at the public cost and from sums of money and land bequeathed from time to time to the corporation (Suet. *Aug.* 31, *Tib.* 76; Sicul. Flacc. p. 162, ed. Lachmann). From the moment of their consecration, as we have seen, they became as it were the property of the goddess alone, and were completely released from all parental sway without going through the form of emancipatio or suffering any capitis deminutio (Gell. i. 12, 9). They had a right to make a will, and to give evidence in a court of justice without taking an oath (Gell. x. 15),—distinctions said to have been first conceded by an Horatian law to a certain Caia Tarratia or Fufetia, and afterwards communicated to all (Gell. i. 12; Gaius, i. 145; compare Plin. *H. N.* xxxiv. § 11). Each was preceded by a lictor, like the Flamen Dialis, when she went abroad (Dio Cass. xlvii. 19), consuls and praetors made way for her, and lowered their fasces (Senec. *Controvers.* vi. 8; compare Plut. *Tib. Gracch.* 15), even the tribunes of the plebs respected their holy character (Oros. v. 4; Suet. *Tib.* 2: compare Cic. *pro Cael.* 14, 34; Val. Max. v. 4. § 6), and if any one passed under their litter he was put to death (Plut. *Num.* 10). Augustus granted to them the *jus trium liberorum* (Dio Cass. lvi. 10; Plut. *l. c.*), and assigned them a conspicuous place in the theatre (Suet. *Aug.* 44; Tac. *Ann.* iv. 16), a privilege which they had enjoyed before at the gladiatorial shows (Cic. *pro Muren.* 35, 73). Great weight was attached to their intercession on behalf of those in danger and difficulty, of which we have a remarkable example in the entreaties which they addressed to Sulla on behalf of Julius

Caesar (Suet. *Jul.* 1; compare Cic. *pro Font.* 17; Suet. *Vitell.* 16; Dio Cass. lxv. 18; Tac. *Ann.* iii. 69, xi. 32, *Hist.* iii. 81), and if they chanced to meet a criminal as he was led to punishment they had a right to demand his release, provided it could be proved that the encounter was accidental. Their general dignity and influence are attested by the inscriptions on the pedestals of their statues, recently discovered in the Atrium Vestae (Middleton, *Rome in* 1885, p. 200 foll.). Wills, even those of the emperors, were committed to their charge (Suet. *Jul.* 83, *Aug.* 101; Tac. *Ann.* i. 8), for when in such keeping they were considered inviolable (Plut. *Anton.* 58); and very solemn treaties, such as that of the triumvirs with Sextus Pompeius, were placed in their hands (Appian, *B. C.* v. 73; Dio Cass. xlviii. 37 and 46). Their own persons were inviolable (Plut. *Numa*, 10); and as in so many other points in their life they retained the privileges of the ancient royal household, so after death they were an exception to the law of the Twelve Tables which forbade burial within the pomerium (Serv. *ad Aen.* xi. 206). Their burial-place is not as yet discovered (Marquardt, iii. 309, 341; Lanciani, *Ancient Rome*, p. 142).

Statue of Virgo Vestalis Maxima, from the Atrium Vestae. (Jordan.)

They were attired entirely in white (Suidas, 1010 B). Festus in a doubtful passage (p. 4, 1) describes their dress as a *toga*, and this may have been originally so, and would be in keeping with the antique character of the rest of their life and ritual. But the portrait statues of Vestals lately discovered, dating from the 2nd century A.D., show that in that day at least they wore a stola or long gown, confined by a girdle at the waist, and usually sleeveless; and over this a pallium or loose robe, as is seen in the accompanying cuts. On their head was an *infula*, or diadem-like band (Serv. *ad Aen.* x. 538), from which on each side depended *vittae*; and when sacrificing they wore also the *suffibulum*, which was their especial characteristic. This was a white woollen hood with a purple border, folded over the head and fastened below with a brooch (*fibula*); it is represented only in the statue of the Virgo Vestalis Maxima, of which a cut is given, and corresponds with the description of Festus (p. 349: cf. Varro, *L. L.* vi. 21). The second cut, copied from a gem, represents the Vestal Tuccia, who when wrongfully accused appealed to the goddess to vindicate her honour, and had power given her to carry a sieve full of water from the Tiber to the temple—a convenient legend for checking hasty accusations (Montfaucon, *Ant. Exp.* i. pl. xiv., Supplem. i. pl. vi.; Val. Max. viii. 1, 35; Plin. *H. N.* xxviii. § 2).

The Vestal Tuccia, from an ancient gem.

Of the organisation and interior life of the Vestals, we still know very little. It has been mentioned that they were supposed to spend the first ten years of their service in learning, the second in practising, and the third in teaching, their duties. Thus they seem to have risen gradually in dignity by seniority; and the oldest, under the title of Virgo Vestalis Maxima, acted as a kind of president or lady superior (Marquardt, iii. 340 and reff.: cf. the inscribed pedestals in Middleton, p. 200 foll., especially Nos. 5 and 6, whence it appears that the head of the sisterhood had passed through "omnes gradus sacerdotii"). The Vestalis Maxima had also the title of *antistes* (*C. I. L.* vi. 2139, 2143; cf. Liv. i. 20, 3). All were equally under the supervision of the pontifex maximus, whose duty it was to keep a vigilant eye on the sisterhood: cf. Liv. iv. 44, where a Vestal is denounced to him as guilty of a desire for personal adornment, and ordered to behave more discreetly in future. They all resided together in a house adjoining the Regia and the round temple of Vesta, at the south-eastern corner of the Forum Romanum, and immediately under the north-western end of the Palatine Hill. This house was probably several times burnt and rebuilt; the important remains of it which were excavated in 1883–4, are of Hadrian's time. For a detailed description of it, the student is referred to Middleton's work already quoted, ch. vi.; and for its history and relation to the Regia and the Aedes Vestae, see also Jordan, *Röm. Topographie*, i. pt. 2, pp. 298 foll., 423 foll.; and the same author's *Tempel der Vesta*, passim.

The ample size and accommodation of the house seem to show that after the 1st century A.D. the Vestals were no longer content with their former simplicity of life; it may perhaps have been necessary to their reputation and dignity in a luxurious age, that they should live in comfort if not in splendour. It was partly rebuilt after the great fire of 191 A.D., and continued to be occupied by the Vestals for two centuries after that date, in spite of the public recognition of Christianity (Preuner, *Hestia-Vesta*, p. 442 and notes). The inscriptions show that the sisterhood continued to maintain its prestige and to discharge its duties until towards the end of this period; but in the latter half of the 4th century some members seem to have become Christians, and it is possibly for this reason (as Middleton suggests, *op. cit.* p. 206;

but cf. Lanciani, p. 171) that in the latest inscription in date the name of the Vestal has been erased. This was in A.D. 364; in A.D. 394, after the defeat of Eugenius by Theodosius, and the entry of the latter into Rome, the Vestals were dispersed and their order abolished. (See Zosimus, v. 38; and the story there related of the last of the Vestals.) But the modern Italian nunnery, with its organisation and vows, still recalls the Atrium Vestae and the life of the Vestals, which thus form a connecting link between the most primitive civilisation of Italy and the ideas and practice of modern Christianity. [W. R.] [W. W. F.]

VESTI'BULUM. [Domus, Vol. I. p. 668; Janua.]

VE'STICEPS. [Impubes.]

VESTIS. The history of Greek and Roman dress has been only told in part by the articles which describe various garments and ornaments under their several names. In them the changes which new modes of life, new channels of trade, and new manufactures brought about are only touched on incidentally. The object of the present article is to supply the connecting link, and to give a chronological sketch of the development of the costume of the latest periods that concern us. Unfortunately it can only be a sketch, for the ground is for the most part new, there being no authoritative treatises on the subject. This is due to the fact that the evidence is chiefly to be drawn from the monuments, and that they have not yet been adequately studied. Until they are known with scientific thoroughness, and until this knowledge has been brought to bear on the evidence from literature, the details of the history of Greek and Roman dress cannot be filled in.

The earliest pre-historic remains in Greece and at Hissarlik go back to the Stone age, when metals were unknown, and the potter's wheel had not yet come into use. Yet, even among these, spindle-whorls and what may be regarded as loom-weights are found, showing that thread was manufactured then. Whether this thread was of flax as well as wool has been debated, but the combined evidence of philology and archaeology shows that it was not only known, but woven into stuffs (cf. Schrader, *Sprachvergleichung und Urgeschichte*, p. 361 foll.; Studniczka, *Beiträge zur G. d. altgr. Tracht*, p. 45; Taylor, *The Origin of the Aryans*, pp. 165, 171; Fusus).

Besides these woven garments, the people of these early times must have possessed plaited mats of reeds and rushes, much like those of the fisher-folk of classical times (cf. *φορμός*, Theocr. xxi. 13; cf. Paus. x. 29, 8), and of some anchorites of the Christian era. That such mats were skilfully woven with all manner of patterns, a glance at early pottery, with its plait ornamentation, is sufficient to show. These woven and plaited stuffs were worn with fleeces and dressed skins [Pellis], or in some parts with hats and coats of felt [Pilleus].

The civilisation of the so-called Mycenaean period brought with it many changes in dress, but these have been sufficiently described in the articles which treat of garments mentioned by Homer [Palla; Pallium; Tunica]. One point, however, deserves special mention, the connexion that existed between the people who enjoyed this civilisation and the East. Both Egyptian and Assyrian works of art are found side by side with those of Mycenae, and there can be no doubt that the commerce between them, if not direct, was at any rate a regular one (cf. Furtwängler und Loeschcke, *Mykenische Vasen*). Such a trade must have brought many products of the Eastern looms to Greece, as well as much costly jewellery and furniture. The opening of historical times in the eighth and seventh centuries shows the Oriental influence still strong, but chiefly exercised through the colonists in Ionia. It was from the Lydians (cf. *Λυδοπαθεῖς τινές*, Anacr. *fr.* 155), and afterwards the Persians, that these Ionians borrowed their luxurious ways. This new *ἁβροσύνη* spread from Aeolia and Ionia to Magna Graecia, Sicily no less than to Thessaly and Corinth, and flourished more especially at the courts of the tyrants of this period. The result on dress is to be traced in the number of foreign garments, whose names are to be found in the Lyric poets. Thus *βάσσαρα* (cf. Daremberg et Saglio, *Dict.* i. p. 681) and *κύπασσις* (cf. Studniczka, *loc. cit.* p. 21, note 62; Bassara) were both borrowed from Lydia, and were names of long linen garments, while *σάραπις* is Median. Linen also came from Egypt; and the *φώσσων, ἡμιτύβιον, καλάσιρις*, and *σινδὼν* are words derived from this source (cf. Müller, *Handbuch*, p. 412; Daremberg et Saglio, *loc. cit.* ii. p. 756; Studniczka, *loc. cit.* pp. 47, 51). Besides these linen stuffs were dyed woollen fabrics, especially those of Tyrian purple (*παναλουργέα φάρεα*, Xenophan. *fr.*; *ἁλουργίδες*, Athen. xii. 16) and saffron, the latter owing part at least of its vogue to its use in Dionysiac ritual.

The luxury of this time was, in Greece proper at any rate, chiefly confined to the courts of tyrants; and when their *régime* passed away, a reaction towards simplicity set in, which Thucydides describes (cf. art. Pallium). The chief reform effected was, somewhat like the Jaeger movement of our days, a return to the use of wool in the place of linen, and a reduction in the number of garments worn. However, this must in most cases have been a counsel of perfection, for the variety of clothing shown by fifth-century art would scarcely lead one to suspect that much greater simplicity actually prevailed. This period of what may be called classical Greek dress ends with the foundation of Alexander's empire. The new and close contact with the East that was then established not only brought many new stuffs, such as cotton, but shifted the centre of fashion away from Greece to the new capitals of the Hellenistic world. All manner of fine muslins (*εὐήτριοι σινδόνες*, Nearch. *Peripl. Mar. Er.* 14, 6; cf. Theophr. *H. P.* iv. 4, 8) and other cotton products (*κάρπασος*: cf. Müller, *op. cit.* p. 436; Haverfield, *Journal of Philology*, xiii. 299–302; Daremberg et Saglio, s. v. *carbasus*; Schrader, *Ling. hist. Forsch.* pp. 210, 211), and even silks, became known [Sericum].

In sketching the history of Roman dress, it would be useless to begin with pre-historic antiquities, as we did in the case of Greek dress. Such an inquiry would, it is true, give a glimpse of the mode of life led by the common ancestors of the Umbrians, Romans, and other Italians in the Stone age; but it would throw no special light on Roman civilisation. So great in fact is the gap between these primitive times and the Rome of history that the traditions of the kings give the earliest starting-point. These traditions all go to show that the influence of Etruria on dress, if not on the manners and customs, was great. The form this influence took was recognised in classical times by archaeologists, like Florus, who tells us that the insignia of power were borrowed from Etruria (i. 5, 6: *Inde fasces, trabeae, curules, anuli, phalerae, paludamenta, praetexta, inde quod aureo curru quattuor equis triumphatur, togae pictae, tunicaeque palmatae, omnia denique decora et insignia quibus imperii dignitas eminet*).

The civilisation of the Etruscans was much older than that of the Romans; their commerce was extensive, their manufacturing skill famous throughout the world, and their wealth and luxury very great, to judge by the remains that have been found in their graves. Even apart from the fact that the last dynasty that reigned at Rome, that of the Tarquins, was Etruscan, their debt to Etruria could not be anything else than great. Yet it would be wrong to suppose that the Romans imported more than they needed for ceremonial display. As in all primitive communities, the women of the family and their maids were mostly busied in spinning and weaving wool.

The primitive stage, however, in which garments are worn, as they come direct from the loom, had long since passed at Rome, even in the days of Numa. In his time, if we can believe a tradition, the fullers [FULLONES] and dyers (*infectores*) had already attained the status of forming guilds (cf. Plut. *Numa*, 17). They were only concerned with the dressing of cloth and preparing it for wear, so that there must have been considerable variety in clothes, both as regards colour and finish, even in those early times. Nor were these the only crafts concerned with dress, for the goldsmiths (*fabri aurarii*) also, one of the original nine guilds, were in part at any rate employed in the manufacture of jewellery. Besides, the felters (*coactiliarii*), also a very old craft, must have existed at this date, and provided coats and blankets, not to speak of hats [PILLEUS].

The garments produced by these native industries were for the most part of wool, for the use of linen did not become common at Rome till late in the history of the Republic. The form they took can, to a certain extent, be recovered from tradition, and from their survival in certain ceremonial uses. From these we learn that originally both men and women wore a cloak of wool, the TOGA, and that below it the men had a tightly-girt loin-cloth, the SUBLIGACULUM. The first change was the adoption by both sexes of a woollen shirt or shift, the TUNICA, which from that time became the chief under-garment. Early forms of these garments were used in historic times; the *trabea* [TOGA, p. 849 *b*] for instance, a narrow toga, was the uniform of the *Equites publico equo* and the vestment of certain priests. In the same way the *tunica recta* was worn by the bride on the wedding-day [MATRIMONIUM, p. 142 *b*; TELA, p. 769 *a*]. She also wore the RICINIUM, which was retained by certain priesthoods. Besides the toga, other forms of cloak seem to have been worn in sacred rites, such as the LAENA, which was the vestment of the flamens and augurs, and the palla, the dress of the *flaminica* [FLAMEN; SACERDOS]. Of the various coverings for the head, those of felt were far the oldest at Rome; the *pilleus* and *galerus* of men, the *tutulus* of women, being of this material [PILLEUS].

Towards the end of the third century B.C. the conquest of Magna Graecia had begun to take effect on the Romans. In no respect was the change more evident than in that of dress, where it is shown by the large number of words for new garments and new fabrics derived from the Greek, in the Latin of that period. For instance, it was then that friezes (*amphimallum* or *amphimallus*), linen (*carbasus*), and muslin (*molochina*) first became known. Embroidery (*vestis plumatilis*) and the use of trimmings (e.g. *patagium*), flounces, and other adornments became more common. It was now the fashion to wear more than one under-garment (*tunica*), and sleeves were no longer unusual. Women especially fell victims to Greek fashion, giving the name STOLA (*στολὴ*) to their principal garment, and wearing the STROPHIUM below it, and wrapping the *parapechium* (*παράπηχυ*, Varro, *L. L.* v. 30, 133) over it. The men too, though they still retained the old dress for ceremonial purposes (see article TOGA), adopted the Greek *ἱμάτιον*, giving it the name PALLIUM, the *ἐξωμὶς* and *τριβὼν* under the name of ABOLLA, and the *χλαμὺς* with its name unchanged. This adoption of Greek fashions went on ever increasing until the period of the Empire, when, except for the most ceremonial purposes, the old Roman dress had finally disappeared. Under the Empire, however, the Greek, or rather Hellenistic fashions, changed rapidly. The increase of the means of communication, and the constant influx of provincials and foreigners to Rome, brought a great number of new fabrics, such as fine linens, muslins (*sindon*), soft stuffs (*leporinum*), and silks [SERICUM]. The prevalence of peace and the great growth of wealth created a constant demand for luxurious garments of cloth of gold and rich embroidery. Of such a kind was the *paragauda* (in Greek writers *παραγαύδης*), a sleeved tunic of Syrian origin, which was of the finest wool, with a purple border and embroidered with silk ornaments. It was worn by women, but for men was one of the insignia of office (cf. Ed. Diocl. xvi. 15; Trebell. Poll. *Claud.* 17; Vopisc. *Aur.* 46; Lyd. *de Mag.* i. 17, ii. 4, 13). Even in ordinary use the sleeved TUNICA or STOLA had been supplanted by the DALMATICA, which from the time of Commodus (Lampr. *Commod.* 8, 8, "Dalmaticatus in publico processit;" cf. Lampr. *Heliog.* 26, 2) was worn by both men and women. A companion tunica, but without sleeves, was called the *colobium* [DALMATICA]. Other new garments came from Gaul, such as the CARACALLA and the *bardocucullus*, or *birrus* [BIRRUS; CUCULLUS]. Even trousers [BRACAE] (Ed. Diocl. vi. 46) and breeches (*coxale*, Ed. Diocl. i. 13) were worn at this period.

The chief literary source of our knowledge of Greek dress is Pollux, who in the fourth and seventh books of his *Onomasticon* gives long lists of garments, with short descriptions of their shape and make. Almost equally important, though only describing women's garments, are the inventories of the temples of Artemis at Brauron (*C. I. A.* ii. 715–765) and of Hera at Samos (Curtius, *Inschriften und Studien zur Geschichte von Samos*, pp. 10–21), and the inventory from Thebes (*Bull. Corr. hell.* v. 264). Of these the inscription from Brauron belongs to the beginning of the second half of the fourth century B.C. The passages in Greek writers which mention dress are too numerous and varied to call for comment in an article like the present; it is necessary, however, to point out that great caution must be used in interpreting such incidental descriptions or allusions. In a drama, for instance, the garments worn are those of the stage, which differed in every way from those of every-day life. The characters wearing them appeared for the most part in the antique magnificence of the Heroic age, not in the clothes of common folk. It is in fact only in comedies that we can expect to find ordinary apparel worn and spoken of, though even there the comic characters had extravagant and impossible costumes. For the costume of the stage, see Albert Müller, *Lehrbuch der griechischen Bühnenalterthümer*, pp. 226 foll.; Iwan Müller's *Handbuch*, vol. v. 3 (by Oehmichen), pp. 254–262.

The monumental evidence is that from which we must expect any further extension of our knowledge, but it is of enormous bulk, and has not yet been worked up as a whole. Böhlau, however, in his *de re Vestiaria*, and Studniczka in the *Beiträge zur Gesch. d. altgr. Tracht*, have shown with regard to the early history of dress what results scientific archaeology applied to the subject can produce. The chief difficulty in determining the value of monumental evidence is that of estimating the effect of artistic convention. Thus, for instance, there are a vast number of statues which are nude, because there was an artistic tradition that heroes were so represented. So, too, there are large classes of monuments in which dress is only given the figures as a kind of ornament, to fill up the background, or to suggest movement. As yet, however, no one has formulated these conventions, nor shown how their influence can be eliminated. The chief obstacle is the rapid increase of our knowledge, new discoveries bringing unsuspected variations and unknown specimens to light before the old have been satisfactorily systematised and described.

In current literature the only account of Greek dress besides that of Studniczka, which is based on the idea of historical development, is to be found in Iwan Müller's *Handbuch*, in the section devoted to *Privatalterthümer*, pp. 395–441 *a*. A summary account on the same lines is given by Von Heyden in his *Tracht der Kulturvölker Europas* (Leipzig, 1889). Besides, the older works of Weiss (*Kostümkunde*, 1872) and Köhler (*Trachten der Völker*, Dresden, 1872) contain much that is useful. The two English works—Hope's *Costume of the Ancients* (1841; 2nd ed. 1875), and Moyr-Smith's *Ancient Greek Female Costume* (1882)—contain many illustrations, but are otherwise of little value. The same may be said of Racinet's work in French. Among the standard handbooks, the literature of the subject is best given in Hermann's *Lehrbuch*, vol. iv. *Die griechischen Privatalterthümer* (ed. Blümner, 1882), and Becker's *Charikles* (ed. Göll). Guhl and Koner's *Leben der Griechen und Römer* (1882; Eng. edition by Hueffer), and Blümner's *Leben und Sitten der Griechen*, especially the latter, give good illustrations from the original monuments. The articles in Baumeister's *Denkmäler* (1884, &c.), Daremberg et Saglio's *Dictionnaire des Antiquités*, and Rich's *Companion to the Greek and Latin Dictionary* are also useful in giving monumental evidence. A useful account of how Greek dresses were made and worn, with experiments on models by Conze, is given in Teirich's *Blätter für Kunstgewerbe*, vol. iv. 1875, pp. 61, 74 (Vienna).

For Roman dress Varro, who describes and discusses the derivation of the names of garments in the fifth book of his *de Lingua Latina* (preserved to us by Nonius), is the chief authority. On the subject of dress under the Empire the fragments of the edict of Diocletian, fixing the customs due on articles of dress, are of great interest, as giving a full list of the garments then in use. Of the work of the older scholars, the treatises collected in Graevius's *Thesaurus* give all that is best. Needless to say, they are antiquated, but in the treatises of Ferrarius and Rubenius much that is of value may still be found. In modern literature the histories of Weiss, Kohler, and Von Heyden, and the dictionaries mentioned above, may be consulted. Of the handbooks, Marquardt's *Das Privatleben der Römer* (2nd edit. 1886) and Becker's *Gallus* (ed. Göll) give the literature with great fulness. Guhl and Koner and Iwan Müller's *Handbuch*, vol. iv. 2 (by Voigt), are also useful.

A detailed account of the various articles of Greek and Roman dress, their forms and their uses, will be found under their special names in this Dictionary. [W. C. F. A.]

VEXILLA'RII. [EXERCITUS, Vol. I. p. 792.]

VEXILLUM. [SIGNA MILITARIA.]

VIAE. In legal Latin the word *via* signifies (1) a rural servitude, (2) a regularly made street or road. In the first sense it is distinguishable from the servitudes of *iter* and *actus*. *Iter* is the right of walking or passing along a road; *actus* is the right of walking or passing and driving cattle or vehicles (exclusive of heavy traffic) along a road. *Via* includes both *iter* and *actus*, and is the right of walking or passing and driving cattle, vehicles, or traffic of any description along a *via* properly so called, *i.e.* a regularly made street or road (Ulpian, Dig. 8, 3, 1, 7; and cf. Isidor. *Orig.* xv. 16; SERVITUTES). By the laws of the Twelve Tables (Dig. 8, 3, 8) the minimum width of a *via* was fixed at 8 feet where it was straight, and 16 feet where it turned. Hence *via* differs in this sense also from *actus* and *iter*, which denoted smaller or rougher roads, bridle-paths, drifts, and tracks. As regards the actual width of the different classes of roads, see Burn, *Rome and the Campagna*, Introd. p. liii. note 2; Middleton, *Ancient Rome in* 1888, p. 478.

Ulpian (Dig. 43, 8, 21, 22, 23) distinguished three kinds of *viae*:—1. *Viae publicae, consulares, praetoriae* or *militares*: public high or main roads, constructed and maintained at the public expense, and with their soil vested in the state. Such roads led either to the sea, or to a town, or to a public river (*i.e.* one with a constant flow), or to another public road (Dig. 43, 7, [illegible]

Siculus Flaccus, who lived under Trajan (A.D. 98–117), calls them *viae publicae regalesque*, and describes their characteristics as follows (*de Cond. Agr.* p. 9, ed. Goesius, 1674):—(1) They are placed under *curatores* (commissioners), and repaired by *redemptores* (contractors) at the public expense; a fixed contribution, however, being levied from the neighbouring landowners: (2) they bear the names of their constructors (e.g. *Via Appia*, *Cassia*, *Flaminia*). With the term *viae regales* compare the ὁδοὶ βασιλήιαι of the Persian kings (who probably organised the first system of public roads: see Herod. v. 52, 53), the term ὁδὸς βασιλικὴ in Numbers (LXX.) xx. 17, and Plutarch, *Demetr.* 46, and our own "royal road" and "king's highway." With the term *via militaris* compare the German *Heerstrasse*, and the A.-S. *Here-straet*. So Guest (*Origines Celticae*, ii. 228) identifies the Icknield Way as the *Icen-hilde-weg*, or War-way of the Iceni.

2. *Viae privatae, rusticae*, or *agrariae:* private or country roads, originally constructed by private persons, in whom their soil was vested, and who had the power of dedicating them to the public use. Such roads were subject to a right of way, in favour either of the public or of the owner of a particular estate. Under the head of *viae privatae* were also included roads leading out of the public or high roads to particular estates or settlements. These Ulpian considers to be public roads themselves (Dig. 43, 8, 23).

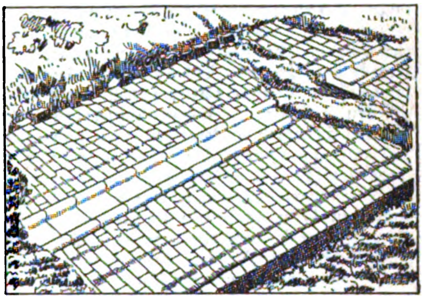
3. *Viae vicinales:* village, district, or cross-roads, leading through or towards a *vicus* or village. Such roads ran either into a high-road, or into other *viae vicinales*, without any direct communication with a high-road. They were considered public or private, according to the fact of their original construction out of public or private funds or materials (Dig. 43, 8, 22). Such a road, though privately constructed, became a public road when the memory of its private constructors had perished (Dig. 43, 7, 3).

Siculus Flaccus (*l. c.*) describes *viae vicinales* as roads "de publicis quae divertunt in agros et saepe ad alteras publicas perveniunt." The repairing authorities, in this case, were the *magistri pagorum* or magistrates of the *pagus* or canton. They could require the neighbouring landowners either to furnish labourers for the general repair of the *viae vicinales*, or to keep in repair, at their own expense, a certain length of road passing through their respective properties.

An attempt will be made in this article to state the main facts concerning the *viae publicae* of the Roman Empire under the heads of I. History; II. Materials and Methods of Construction. Rival theories and minute points of information must be sought for in the list of authorities given below, under the head of III. Literature. It comprises the principal works dealing with the history, construction, and topography of the Roman roads, in four divisions, thus: 1. General Information; 2. *Viae Publicae* in Rome and Italy (within the Eleven Regions of Augustus); 3. *Viae Publicae* in Britain; 4. *Viae Publicae* in the other provinces of the Empire.

I. History.

The public road-system of the Romans was thoroughly military in its aims and spirit: it was designed to unite and consolidate the conquests of the Roman people, whether within or without the limits of Italy proper. Dr. Guest, in commenting on the Itinerary of Antoninus (*Origines Celticae*, ii. 102), describes the system as follows: "With the exception of some outlying portions, such as Britain north of the Wall, Dacia, and certain provinces east of the Euphrates, the whole Empire was penetrated by these *iters*. There is hardly a district which we might expect a Roman official to be sent to, on service either civil or military, where we do not find them. They reach the Wall in Britain; run along the Rhine, the Danube, and the Euphrates; and cover, as with a network, the interior provinces of the Empire." See also Marquardt, *Staatsverwaltung*, i. 559. The following illustration represents part of a magnificent Roman road which is still to be seen on a hill-side at Blackstone Edge, in Lancashire.



Part of a Roman road in Lancashire.

A similar policy, attended by similar success, has been repeatedly followed in more modern days. We need only refer to the roads made by General Wade and Captain Burt in the Scottish Highlands, after the Jacobite rising of 1715 (see Burton, *History of Scotland*, 1689–1748, ii. 246–256, and Burt, *Letters*, ed. Jamieson, 1818); to the Simplon, Cornice, and other military roads of Napoleon I.; and finally to the road-systems of our military engineers and Public Works Department in India.

It is evident that the construction of some visible presentment of this huge network of communications would soon become a practical necessity. A review of the authorities seems to warrant the statement that, in the time of Augustus, a map or chart, founded on the geographical statistics contained in the *Commentarii* of Agrippa, and engraved on marble, was exhibited for public reference in the Portico of Polla or Pola, Agrippa's sister, which was erected in the Campus Martius between B.C. 12 and A.D. 7 (Plin. *H. N.* iii. § 17). It was probably very similar in construction to the marble map of Rome divided into Regions, now known as the Capitoline Plan. It is certain that geographical measurements took place under Augustus; but the story that they were merely completions of a survey originally ordered about 44 B.C. by Julius Caesar, rests on more doubtful authority (see Marquardt, *Staatsverwaltung*, ii. 207 ff.). Vegetius alludes to the early possession of maps by military commanders: "Usque eo ut sollertiores duces itineraria provinciarum . . . non tantum adnotata sed etiam picta habuisse firmentur" (*R. M.* iii. 6). Moreover, a book, perhaps bearing the name of *Chorographia* (it is quoted by Strabo as ὁ χωρογράφος), was constructed from the same *Commentarii* of Agrippa, whose measurements are constantly referred to as authoritative by Pliny.

The marble map which has been mentioned was, most probably, the original authority on which the Antonine and other Itineraries, and the ancient map or chart of the Roman dominions, known as the Peutinger Table, were founded. The Peutinger Table has by some been identified with a copy, made in 1265 by a Dominican monk of Colmar, from a certain original *Mappa Mundi*. Miller, however, whose works on the Peutinger Table are cited below, considers it to be two centuries earlier in date, and to be based on an original constructed in the fourth century A.D., and probably in the reign of Valentinian II. (375–392 A.D.). The remarks of Vegetius, who lived under this emperor, on the use of *itineraria picta*, have already been quoted. The Table was discovered in 1507 by Conrad Celtes (1459–1508) in a German monastery. Celtes bequeathed it by his will (in which he described it as *Itinerarium Antonini*) to Conrad Peutinger, a scholar of Augsburg (1465–1547), for eventual publication. After many vicissitudes, it was bought for 100 ducats, in 1720, by Prince Eugene, and passed, after his death, into the possession of the Imperial Library at Vienna. In the modern sense of the word, the Peutinger Table is not a map at all. It observes neither latitude nor longitude. All the territories and seas depicted on it are drawn out into a continuous narrow strip, almost regardless of their true geographical conformation and relative position. It runs east and west, and its existing remains comprise all the known world between the east coast of Britain and the limits of Alexander's Indian conquests. The westernmost part has been lost. The Table shows the course of the public roads of the Empire, and gives the distances from station to station in miles. Its peculiar shape may perhaps be accounted for by a passage in which Merivale (*H. R.* c. xxxix.) comments on the original marble map: "Its extension along the walls of a gallery or cloister was meant to keep all its parts nearly on the same level." A large globe or circular map, constructed like the *Mappa Mundi* at Venice, would have been more accurate in form, but less easy to consult.

The construction and care of the public roads, whether in Rome, in Italy, or in the provinces, was, at all periods of Roman history, considered to be a function of the greatest weight and importance. This is clearly shown by the fact that the censors, in some respects the most venerable of Roman magistrates, had the earliest paramount authority to construct and repair all roads and streets. Indeed, all the various functionaries, not excluding the emperors themselves, who succeeded the censors in this portion of their duties, may be said to have exercised a devolved censorial jurisdiction (see Mommsen, *Staatsrecht*, ii. 428 ff., 451 ff.). This devolution early became a practical necessity, resulting from the growth of the Roman dominions and the multifarious labours which detained the censors in the capital city. Hence, in Rome and the immediate neighbourhood, as we shall presently see, certain special official bodies successively acted as constructing and repairing authorities. In Italy, the censorial responsibility passed to the commanders of the Roman armies, and, later on, to special commissioners (*curatores*), and, in some cases perhaps, to the local magistrates. In the provinces, the consul or praetor (hence the terms *via consularis*, *via praetoria* = *via publica*) and his legates received authority to deal directly with the contractors (Cic. *pro Font.* 4, §§ 7, 8).

The systems successively pursued in Italy may be illustrated from Livy, who tells us (xxxix. 2) that C. Flaminius (consul 185 B.C.), in his campaign against the Ligurian Friniates, "ne in otio militem haberet, viam a Bononia duxit Arretium." Moreover, his colleague, M. Aemilius Lepidus, made another road, the earlier *Via Aemilia*, from Placentia to Ariminum, where it joined the Via Flaminia (Livy, *l. c.*; and Strabo, v. 1, 11 = p. 217). In 21 A.D. Cn. Domitius Corbulo complained to Tiberius that numerous roads in Italy had become impassable, "fraude mancipum et incuria magistratuum" (Tac. *Ann.* iii. 31). It is uncertain whether the neglectful magistrates here alluded to were the permanent *curatores* of the roads in question, or the municipal magistrates. (See the notes of Lipsius and Orelli in their respective editions of Tacitus.)

But there were many other persons besides the special officials, who from time to time, and for a variety of reasons, sought to connect their names with a great public service like that of the roads. Caius Gracchus, when Tribune of the people (123–122 B.C.), paved or gravelled many of the public roads, and provided them with milestones and mounting-blocks for riders (Plut. *C. Gracchus*, c. 7). Again, C. Scribonius Curio, when Tribune (B.C. 50), sought popularity by introducing a Lex Viaria, under which he was to be chief inspector or commissioner for five years (Appian, *B. C.* ii. 27; Cic. *ad Fam.* viii. 6). Dio Cassius (xlvii. 17) mentions as one of the forcible acts of the triumvirs of 43 B.C. (Octavianus, Antony, and Lepidus), that they obliged the senators to repair the public roads at their own expense. There is little doubt that such a measure would be popular with all but the direct sufferers.

The care of the streets and roads within the Roman territory was, as we have already stated, committed in the earliest times to the censors. An ancient enactment (*ap.* Cic. *Legg.* iii. 31) prescribed thus:—"Censores . . . . urbis templa vias aquas aerarium vectigalia tuento." Appius Claudius Caecus (censor 312 B.C.) paved the Appian Way (Liv. ix. 29); C. Junius Bubulcus and M. Valerius Maximus (censors 307 B.C.) made roads in the country districts at the public expense (Liv. ix. 43); C. Flaminius (censor 220 B.C.) "viam Flaminiam munivit" (Liv. *Epit.* xx.). The censorship (174 B.C.) of Q. Fulvius Flaccus and A. Postumius Albinus was marked by an important step in advance. They made contracts for paving the streets inside Rome, including the Clivus Capitolinus, with lava, and for laying down the roads outside the city with gravel. Side-walks were also provided (Liv. xii. 27). M. Aemilius Scaurus (censor 109 B.C.) paved the later of the two roads known as *Via Aemilia* from Pisae to Dertona. (Aurelius Victor, *de Viris Ill.* c. 72; Strabo, v. 1, 11 = p. 217.)

The aediles, probably in virtue of their responsibility for the freedom of traffic and the police of the streets (Dig. 43, 10), co-operated with the censors and the bodies that succeeded them. Cn. and Q. Ogulnius (aediles 296 B.C.) laid down a pavement on the path or track (*semita*) from the Porta Capena to the Temple of Mars (Liv. x. 23). Again, Agrippa, when he voluntarily became aedile (33 B.C.), spent largely of his own money on the roads.

It would seem that in the reign of Claudius (41-54 A.D.) the quaestors had become responsible for the paving of the streets of Rome, or at least shared that responsibility with the *quatuorviri viarum*, who will presently be mentioned. Suetonius (*Claud.* c. 24) states that the Emperor "Collegio Quaestorum pro stratura viarum gladiatorium munus injunxit." It has been suggested that the quaestors were obliged to buy their right to an official career by personal outlay on the streets (Mommsen, *Staatsrecht*, ii. p. 534). There was certainly no lack of precedents for this enforced liberality, and the change made by Claudius may have been a mere change in the nature of the expenditure imposed on the quaestors.

The official bodies which first succeeded the censors in the care of the streets and roads were two in number, viz. (1) the *Quatuorviri viis in urbe purgandis*, with jurisdiction inside the walls of Rome; (2) the *Duoviri viis extra urbem purgandis*, with jurisdiction outside the walls. Both these bodies were probably of ancient origin, but the true year of their institution is unknown. Little reliance can be placed on Pomponius (Dig. 1, 2, 28–30), who states that the *quatuorviri* were instituted *eodem tempore* with the praetor peregrinus (*i.e.* about 242 B.C.) and the *Decemviri Stlitibus judicandis* (time unknown). The first mention of either body occurs in the Lex Julia Municipalis of the year 45 B.C. (A.U.C. 709). The *quatuorviri* were afterwards called *Quatuorviri viarum curandarum.* Pomponius (*l. c.*) terms them *Quatuorviri qui curam viarum gererent*, and Dio Cassius (liv. 26) *οἱ τέσσαρες οἱ τῶν ἐν τῷ ἄστει ὁδῶν ἐπιμελούμενοι.* The extent of jurisdiction of the *Duoviri* is to be gathered from the same Lex, which gives their full title as *Duoviri viis extra propiusve urbem Romam passus mille purgandis.* Their authority extended over all roads between their respective gates of issue in the city wall and the first milestone beyond. Dio Cassius (liv. 26) simply calls them *οἱ δύο οἱ τὰς ἔξω τοῦ τείχους ὁδοὺς ἐγχειριζόμενοι* (Mommsen, *Staatsrecht*, ii. 603 ff., 668).

The next change was made by Augustus. In the course of his reconstitution of the urban administration he created new offices in connexion with the public works, streets (Mommsen here reads *viarum variarum*), and aqueducts of Rome (Sueton. *Aug.* c. 37). He found the *quatuorviri* and *duoviri* forming part of the body of magistrates known as *vigintisexviri.* These he reduced to twenty members (*vigintiviri*), but retained the *quatuorviri* among them. The latter were certainly still in existence under Hadrian (117–138 A.D.: see an inscription *ap.* Bergier, *Grands Chemins*, i. p. 7). Augustus abolished the *duoviri*, no doubt because the time had come for dealing comprehensively with the superintendence of the roads which connected Rome with Italy and the provinces. Dio Cassius relates (liv. 8) that Augustus personally accepted the post of *προστάτης* or superintendent *τῶν περὶ τὴν Ῥώμην ὁδῶν*. In this capacity he represented the paramount authority which belonged originally to the censors. Moreover, he appointed men of praetorian rank to be *ὁδοποιοὶ* or road-makers, assigning to each of them two lictors (*C. I. L.* vi. 1501). Lastly, he made the office of curator of each of the great public roads a perpetual magistracy, instead of a special and temporary commission, as had been the case hitherto.

The previous state of things seems to have been this. In case of an emergency in the condition of a particular road, men of influence and liberality were appointed, or voluntarily acted as *curatores* or temporary commissioners to superintend the work of repair. The dignity attached to such a curatorship is attested by a passage (*Epp. ad Att.* i. 1) in which Cicero says that one Thermus should have the best chance of becoming Caesar's colleague in the consulship, *propterea quod curator est Viae Flaminiae* (compare also Plin. *Epp.* v. 15). Among those who performed this duty in connexion with particular roads was Julius Caesar, who became curator (67 B.C.) of the Via Appia, and spent his own money liberally upon it (Plut. *Caes.* 5). Certain persons appear also to have acted as *Viarum curatores e lege Visellia.* The inscriptions which contain the little that is known about them have been collected by Mommsen, *Staatsrecht*, ii. 668 ff.

It was not as curator but as consul that Augustus (27 B.C.) restored the Via Flaminia, a road essential to his military expeditions (Dio Cass. liii. 22). He has himself recorded the fact in the *Monumentum Ancyranum* as follows (ed. Mommsen, pp. 86–87, Berlin; Weidmann, 1883): CONSUL . SEPTIMUM . VIAM . FLAMINIAM . AB . URBE . ARIMINUM . FECI . ET . PONTES . OMNES . PRAETER . MULVIUM . ET . MINUCIUM.

A passage from Suetonius (*Aug.* 30) is here in point: "Quo autem facilius undique urbs adiretur, desumpta sibi Flaminia Via Arimino tenus munienda, reliquas triumphalibus viris ex manubiali pecunia sternendas distribuit."

Dio Cassius (*q. v. supra*) states that Augustus assigned the great roads, other than the Flaminian, to certain of the senators to be repaired *at their own expense*, and adds that it was almost impossible to tell who really paid for these repairs. The senators, he says, grudged any expenditure of their own money, and the Emperor's privy purse was practically indistinguishable from the public treasury. Indeed, the concurrent outlay of public and private moneys on the public roads, which so constantly took place, presents a perpetual obstacle to any clear distinction of the two sources.

Plutarch (*Quaest. Rom.* 66) apparently suggests that the Via Flaminia was first paved out of the annual profits of an estate given to the city by *Flaminius quidam.* M. Fonteius, when praetor of Gallia Narbonensis (76–73 B.C.), raised money for repairing the roads by imposing a due on wine (*portorium vini*, Cic. *pro Font.* 5) Agrippa repaired all the public roads, according to Dio Cassius (xlix. 43), *μηδὲν ἐκ τοῦ δημοσίου λαβών*, an expression which probably covers not only his private munificence, but the personal outlay imposed on the senators, and the *pecunia manubialis* mentioned by Suetonius (*Aug.* 30). In the country districts, as has been stated, the *magistri pagorum* had authority to maintain the *viae vicinales*. In Rome itself each householder was legally responsible for the repairs of that portion of the street which passed his own house (Dig. 43, 10, 3). It was the duty of the aediles to enforce this responsibility. The portion of any street which passed a temple or public building was repaired by the aediles at the public expense. When a street passed between a public building or temple and a private house, the public treasury and the private owner shared the expense equally. (See the municipal law quoted by Mommsen, *Staatsrecht*, ii. 505 ff.) No doubt, if only to secure uniformity, the personal liability of householders to execute repairs of the streets was commuted for a paving rate payable to the public authorities, who were responsible from time to time.

We have already said that Augustus, in his capacity as supreme head of the public road-system, converted the temporary *cura* of each of the great roads into a permanent magistracy. The persons appointed under the new system were of senatorial or equestrian rank, according to the relative importance of the roads respectively assigned to them. It was the duty of each curator to issue contracts for the maintenance and repairs of his road, and to see that the contractor who undertook the work performed it faithfully, both as to quantity and quality. Moreover, he authorised the construction of sewers and removed obstructions to traffic, as the aediles did in Rome. It was in the character of an imperial curator, though probably of one armed with extraordinary powers, that Corbulo (as has been already mentioned) denounced the *magistratus* and *mancipes* (*ἐκείνους τε* [*τοὺς ἐπιστάτας*] *καὶ τοὺς ἐργολαβήσαντάς τι παρ' αὐτῶν*, Dio Cass. lix. 15) of the Italian roads to Tiberius. He pursued them and their families with fine and imprisonment for eighteen years (21–39 A.D.), and was rewarded with a consulship by Caligula, who was himself in the habit of condemning well-born citizens to work on the roads (Tac. *Ann.* iii. 31; Dio Cass. lx. 27; Suet. *Calig.* 27). It is noticeable that Claudius brought Corbulo to justice, and repaid the moneys which had been extorted from his victims.

Special *curatores* for a term seem to have been appointed on occasion, even after the institution of the permanent magistrates bearing that title. According to an inscription subsequent in date to A.U.C. 731 (23 B.C.), one P. Paquius Scaeva was appointed *Viarum curator extra urbem Romam ex senatusconsulto in quinquennium* (*C. I. L.* ix. 2845; and see *ibid.* vi. 1501; Mommsen, *Staatsrecht*, ii. 669). It is possible that Scaeva was one of the *ὁδοποιοὶ* appointed by Augustus in A.U.C. 734 (20 B.C.). (Dio Cass. liv. 8, *q. v. supra*.)

The Emperors who succeeded Augustus exercised a vigilant control over the condition of the public highways. Their names occur frequently in the inscriptions to restorers of roads and bridges collected by Gruter (*Corpus Inscrr.* pp. cxlix.–clxiii.). Thus, Vespasian, Titus, Domitian, Trajan, and Septimius Severus were commemorated in this capacity at Emerita; Nero at Corduba; Trajan at Asculum, Augustobriga, and Arganda; Hadrian and Septimius Severus at Braccara; Hadrian at Suessa; Marcus Aurelius at Capua; Caracalla at Malaca. Trajan's care for the communications of his Empire received the following elaborate panegyric from Galen (*Method. Med.* ix. 8): *ἀμέλει ταῦτ' ἐχούσας ἁπάσας τὰς ἐπὶ τῆς Ἰταλίας ὁδοὺς ὁ Τραϊανὸς ἐκεῖνος ἐπηνωρθώσατο· τὰ μὲν ὑγρὰ καὶ πηλώδη μέρη λίθοις στρωννὺς ἢ ὑψηλοῖς ἐξαίρων χώμασιν· ἐκκαθαίρων δὲ τά τε ἀκανθώδη καὶ τραχέα καὶ γεφύρας ἐπιβάλλων τοῖς δυσπόροις τῶν ποταμῶν· ἔνθα δὲ ἐπιμήκης οὐ προσηκόντως ὁδὸς ἦν ἐνταῦθα σύντομον ἑτέραν τεμνόμενος· ὥσπερ καὶ εἰ δι' ὕψος λόφου χαλεπὴ διὰ τῶν εὐπορωτέρων χωρίων ἐκτρέπων.*

The Itinerary of Antoninus, which was probably a work of much earlier date, republished in an improved and enlarged form, under one of the Antonine emperors, remains as standing evidence of the minute care which was bestowed on the service of the public roads (Guest, *Origines Celticae*, ii. 101–118). On the probability of a connexion between the Itinerary and the Peutinger Table (*q. v. supra*), see the works of Bergier (i. 354–359) and Miller cited below.

II. MATERIALS AND METHODS OF CONSTRUCTION.

Viae are distinguished not only according to their public or private character, but according to the materials employed and the methods followed in their construction. Thus we have (Ulpian, Dig. 43, 11, 2)—

(1) *Via terrena*, a plain road of levelled earth.

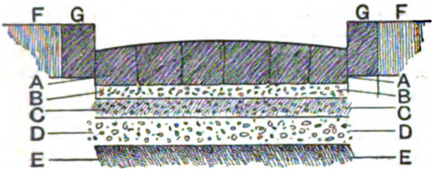
(2) *Via glareata, glarea strata*, an earthen road with a gravelled surface (Liv. xli. 27).

(3) *Via munita, lapide quadrato strata, silice strata*, a regular metalled road, paved with rectangular blocks of the stone of the country, or with polygonal blocks of lava.

The construction of *vias munitae* is said by Isidorus to have been borrowed by the Romans from the Carthaginians: "Primum Poeni dicuntur lapidibus vias stravisse: postea Romani per omnem paene orbem disposuerunt, propter rectitudinem itinerum et ne plebs esset otiosa" (*Orig.* xv. 16, 6). In course of time, the terms *via munita* and *via publica* became identical, but Livy mentions some of the most familiar roads near Rome, and the milestones on them, at periods long anterior to the first paved road—the Appian. Unless these allusions be simple anachronisms, the roads referred to were probably at the time little more than levelled earthen tracks. Thus the Via Gabina is mentioned in Liv. ii. 11 ((*temp.* Porsena, about 500 B.C.); the Via Latina in ii. 39 (*temp.* Coriolanus, about 490 B.C.); the Via Nomentana or Ficulensis in iii. 52 (449 B.C.); the Via Labicana in iv. 41 (421 B.C.); and the Via Salaria in vii. 9 (361 B.C.).

Our best sources of information as regards the construction of a regulation *via munita* are: (1) The many existing remains of *viae publicae*. These are often sufficiently well preserved to show that the rules of construction were, as far as local material allowed, minutely adhered to in practice. (2) The directions for making pavements given by Vitruvius (vii. 1). The pavement and the *via munita* were identical in construction, except as regards the top layer, or surface. This consisted, in the former case, of marble or mosaic, and, in the latter, of blocks of stone or lava. (3) A passage in Statius (*Silv.* iv. 3, 4) describing the repairs of the Via Domitia, a branch road of the Via Appia, leading to Neapolis.

The general construction of a *via munita* is shown in the following woodcut.



Via Munita.

A. *Dorsum* or *agger* viae (hence the phrases *agger publicus* = *via publica; Aurelius Agger* = *via Aurelia:* Sidon. 24, 5): the elliptical surface or crown of the road (*media stratae eminentia*, Isidor. *Orig.* xv. 16, 7), made of polygonal blocks of *silex* (basaltic lava) or rectangular blocks of *saxum quadratum* (travertine, peperino, or other stone of the country). The upper surface was designed to cast off rain or water like the shell of a tortoise. The lower surfaces of the separate stones, here shown as flat, were sometimes cut to a point or edge in order to grasp the *nucleus*, or next layer, more firmly.

B. *Nucleus:* kernel or bedding of fine cement made of pounded potsherds (*testae tusae:* cf. Vitruv. vii. 1, 17) and lime.

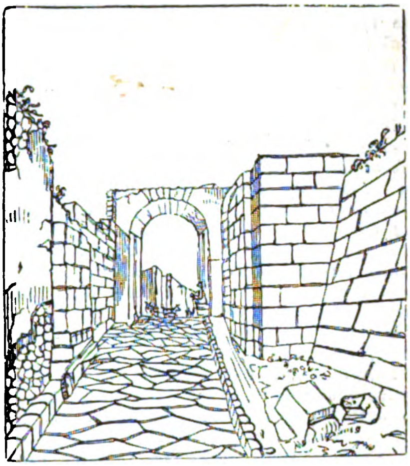
C. *Rudus:* rubble or concrete of broken stones and lime.

D. *Statumen:* stones of a size to fill the hand.

E. Native earth, levelled and, if necessary, rammed tight with beetles.

F. *Crepido*, *margo* or *semita:* raised footway, or sidewalk, on each side of the *via*. It was strengthened by *umbones* or edge-stones (G), and *gomphi* or kerb-stones of greater size and height, which were placed at intervals in the line of *umbones*. *Crepido* seems also to denote the mounds of earth or rubbish on the sides of an unpaved road (Petron. *Sat.* 9: "Vidi Gitona in crepidine semitae stantem"). The general appearance of such a metalled road and footway is shown in the following illustration of an existing street in Pompeii.

The directions given by Vitruvius (*l.c.*) are as follows: "If the bedding is to be laid flush with the ground (instead of on wooden joists), it must first be ascertained whether the ground be thoroughly sound. If it is found to be so, it should be levelled, and then the courses of stones (*statumen*) and rubble mixed with lime (*rudus*) should be successively laid on. But if the ground consist wholly or partly of made or loose earth, it should be very carefully rammed tight with beetles . . . next should come a layer of stones large enough to fill the hand (*statuminetur*), and over them should be laid a course of rubble of stones and lime (*rudus*). If the rubble be new, the proportion of stone to lime should be as 3 : 1. If it be old, as 5 : 2. When the rubble has been laid, it should be thoroughly rammed down with wooden beetles, by gangs of men, to a final thickness of not less than 9 inches. Over the rubble should be laid a course of pounded potsherds, mixed with lime (*nucleus*), in the proportion of 3 : 1, and at least six fingers (=4½ inches) in thickness. The pavement, whether consisting of cut slabs or mosaic cubes, should be well and truly laid, by rule and level, on the top of the *nucleus*."



Street in Pompeii. (Mazois.)

In another passage (v. 9, 7) Vitruvius gives directions for constructing *ambulationes* or gravel paths for walking on. Such a path consisted of a firm foundation of earth, with a layer of charcoal (*carbones*) next to it, and a top-layer or surface of levelled gravel (*sabulo*). It was drained by earthenware pipes (*tubuli*) passing into a covered drain on either side.

Statius (*l. c.*) epitomises the whole process of road-making. "The task," he says, "is first to cut (parallel) trenches, to mark the limits of breadth of the road, and next to carry the excavations deep into the ground. Next, to fill the empty ditch with new materials, and to prepare a bed for the surface of the road: lest the ground give way and afford but a treacherous support to the pavement when weighted. Next, to confine the roadway with edge-stones fixed on each side and with numerous kerb-stones."

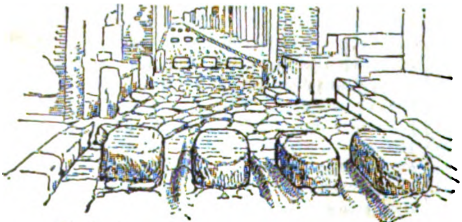
In this passage, *fossa* denotes the ditch made by the removal of the earth between the two parallel *sulci*, down to the point at which a firm earthen foundation can be obtained; *gremium* the three courses below the *Dorsum* or *agger viae*—viz. *statumen*, *rudus*, and *nucleus*.

As has been said, the methods of construction already detailed were followed wherever the soil was of an ordinary character. Where, however, the foundation was of rock, the *statumen* and *rudus* were dispensed with, and the *nucleus* and *dorsum* sufficed. This is the case with an existing portion of the Via Appia near Albano (Burn, *Introd.* p. liv.; Mazois, *Pompéi*, i. 26).

Caius Gracchus was the first to provide the public roads systematically with milestones (Plut. *C. Gracchus*, 7), though Livy, as we have stated above, refers to milestones as existing on certain roads at periods much earlier than the time of Gracchus [MILLIARE]. It is now practically certain that the distances recorded on the milestones of each road were measured from the gate by which that road issued from Rome. The first milestone on the Via Appia was found *in situ* at a distance of exactly a thousand paces from the reputed position of the Porta Capena in the line of the Servian wall (Burn, pp. 49, 432; Middleton, *Ancient Rome in* 1888, pp. 67, 496). In 28 B.C. Augustus erected in the Forum and at the foot of the Capitol the celebrated *Milliarium Aureum* or Golden Milestone (*τὸ χρυσοῦν μίλιον κεκλημένον*, Dio Cass. liv. 8; "Milliarium aureum sub aede Saturni," Tac. *Hist.* i. 27; Suet. *Otho*, 6; "a milliario in capite Romani fori statuto," Plin. *H. N.* iii. § 66). It was, properly speaking, not a milestone, but an Imperial Itinerary or Table of Distances. It bore a gilt tablet, on which were recorded the distances from Rome to which the public roads reached from their respective gates of issue in the city wall. Of these gates there were thirty-seven in Pliny's time (Plin. *l. c.*).

Travelling on the public roads was facilitated by the establishment of (1) *mutationes* (*ἀλλαγαί*) or posting-houses, where horses were changed and vehicles were obtainable if required; and (2) *mansiones* (*καταλύσεις*), stations, khans, caravanserais, or resting-places, where the journey could be conveniently broken. [MANSIONES.] The towns and places where a halt on one ground or the other could be made, are frequently detailed in the Antonine Itinerary. For an account of the Postal or Despatch system created by Augustus, and developed by his successors, see Mommsen, *Staatsrecht*, ii. 1029–1031; Marquardt, *Staatsverwalt.* i. 558 ff.; and a note to Merivale (*H. R.* c. xxxiv.).

The following illustration of a part of the Via Stabiana at Pompeii shows some of the stepping-stones which have puzzled some antiquaries. They are to be found in nearly every street in the town, whatever its breadth. The narrower streets are practically blocked by single large stones in their centres; the broader streets are crossed by rows, containing from two to five stones. Their shape is, generally, a flat-topped oval: larger and smaller stones lying side by side. They measure, very commonly, about 3 feet by 18 inches, and have their longer axis parallel to the footway on either side of the street. The height of the footway ranges from 12 to 18 inches above the carriage-way, and the particular height is, in most cases, that of the stepping-stones also. The surface of the street being elliptical, the stone on the centre stands slightly higher than those at the sides. Many streets are marked with wheel-ruts, some of them deeply cut. They are found both in the interstices between the stepping-stones and elsewhere. The distance from rut to rut measures, as a rule, one yard, which was, accordingly, the gauge of the ordinary vehicles. Such being the facts, three points demand attention: first, the nature and conditions of traffic in a Roman provincial town like Pompeii; secondly, the reasons for erecting stepping-stones of great size in the centre of the carriage-way; and, lastly, the probable mode in which draught animals and carriages passed these stones.



Via Stabiana at Pompeii, with stepping-stones.
(From a photograph.)

Until the reign of Septimius Severus (193–211 A.D.) riding and driving, both in Rome and in the provincial towns, were closely restricted, and at times forbidden, by law. (Lex Julia Municipalis, *ap. C. I. L.* i. 206; Marquardt, *Privatleben*, ii. 727–738; Friedländer, *Sittengeschichte*, i.^{5} 60 ff.). Claudius (41–54 A.D.: some twenty-five years before the destruction of Pompeii) forbade travellers to drive in carriages through provincial towns (Sueton. *Claud.* c. 25). Seneca, it is true, who died in 65 A.D., still nearer to the catastrophe, speaks of the noise of *essedae transcurrentes* at Baiae (*Epp.* 56). But these may have plied principally on the roads to the neighbouring towns, of which Pompeii was one, and Seneca states that the noise did not disturb his studies. Marcus Aurelius (161–180 A.D.) again forbade riding and driving in provincial towns (*Vit.* c. 23; and compare Galen, xi. p. 301, ed. Kühn, for the practice in Rome). Under Severus carriages, in Rome at least, seem to have been more commonly used (Dio Cass. lxiv. 4). But, as late as the reign of Aurelian (270–275 A.D.), we find the emperor preferring to ride into Antioch "quia invidiosum tunc erat vehiculis in civitate uti" (*Vit.* c. 5).

Thus the street-traffic of the ordinary Roman provincial town seems to have resembled that of the Tangier or Tetuan of to-day. Heavy burdens were carried on the backs of horses, mules, or cattle. Walking was the rule, riding on horseback or in a litter was the exception, driving almost unknown. Before the date of the edict of Claudius, and perhaps later, the law was probably indulgent to towns such as Baiae and Pompeii. Thither came the "carriage-company" of Rome to seek health and spend money. In the case of Pompeii carriages and horses were, beyond a doubt, confined to certain streets. An extant inscription shows that the station of the *cisiarii* was not even within the town walls. [See CISIUM.] Other streets were always reserved for foot-passengers, and possibly for litters. Others, again, once open to all traffic, and still bearing the marks of wheels, were afterwards closed to all but foot-passengers by huge stepping-stones or iron gratings.

The deep ruts already mentioned were the natural result of confining the traffic to a few streets. None of these were broad enough to allow of any considerable variation of the track, even had the fixed stepping-stones presented no additional difficulty. Moreover, there is evidence that some of the existing pavements bore traffic for at least 120 years. In one street the edge of the footway bears the inscription EX . K . QVI . (*ex kalendis Quinctilibus*); in another the inscription K. Q. Now the month Quinctilis was renamed Julius in 44 B.C., and Pompeii perished in 79 A.D. It is not surprising that even a small amount of wheeled traffic, unrelieved by the use of springs, and acting on the same stones for so many years, should have left deep traces behind.

The reasons for the erection of very large stepping-stones were, no doubt, at once local and practical. Pompeii occupies the summit and slopes of a small hill. Hence the lower streets, according to the drainage level of the ground, received the rain-water and refuse of the upper. In times of heavy rain the lower streets "must" in Dyer's words "have flowed like a torrent or a Welsh cross-road" (*Pompeii*, c. 3). No sewerage-system could have at once mastered the downward rush of the water. Indeed a similar sight may now be witnessed, during the winter rains, in the heavily-paved streets of Florence, where stepping-stones of the largest size would not be out of place. At Pompeii, where the lie of the ground, together with the close-set stone surface and sides of the streets, provided a ready-made watercourse, side-walks of substantial height were absolutely necessary to foot-passengers. The means of crossing from one side-walk to another, in any weather, were naturally provided by stepping-stones of corresponding size.

Lastly comes the question of the manner in which draught animals and carriages passed the stepping-stones. The wheels passed between the stones, as is shown by the many ruts found *in situ*. A vehicle with wheels three feet apart, and raised on them, say, two feet above the ground, could easily pass over a stone eighteen inches wide and from twelve to eighteen inches high. In the case of vehicles drawn by two animals, it may be conceived that the latter were harnessed loosely and moved in front of the wheel on each side. This arrangement would enable each animal to precede a wheel of the carriage through one and the same interstice of the stepping-stones. The operation must of course have been performed at a very slow walk, and its repetition would soon have become intolerable had the carriage-traffic been large or constant. The case of vehicles drawn by one animal presents more difficulty. It has been held that whilst the wheels passed, as before, on either side of a stone, the animal stepped on or over it. This view can hardly be treated with gravity, even if it be conceived that the surface of the street was somewhat raised by accumulated rubbish. It has been already stated that the stepping-stones often attain a height of eighteen inches and measure three feet in the longer axis which lay along the path of an approaching animal's feet. The better opinion is that carriages drawn by one animal were not admitted into the town at all. [See on the whole question, Dyer, *Pompeii*, Lond. 1868; Mazois, *Pompéi*, Paris, 1824–1838 (with plans); Overbeck, *Pompeii*^{4} (with illustrations); and the works of Presuhn (Leipzig, 1881) and Schöner (Stuttgart, 1877) on the same subject.]

VIA'TICUM (*ἐφόδιον*) is, properly speaking, everything necessary for a person setting out on a journey, and thus comprehends money, provisions, dresses, vessels, &c. (Plaut. *Epid.* v. 1, 9; Plin. *Epist.* vii. 12; Cic. *de Senect.* 18, 66). When a Roman magistrate, praetor, proconsul, or quaestor went to his province, or an envoy on any mission from the senate, the state provided him with all that was necessary for his journey. Hence the provision is called also *legativum* (Dig. 50, 4, 18, 12). But as the state in this as in most other cases of expenditure preferred paying a sum at once to having any part in the actual business, the state engaged contractors (*redemptores*), who for a stipulated sum had to provide the magistrates with the viaticum, the principal parts of which appear to have been beasts of burden and tents (Liv. xli. 1; Dio Cass. liii. 15). Augustus once for all fixed a sum in proportion to their rank to be given to magistrates on setting out for their provinces, so that the redemptores had no more to do with it, nor had any vote to be passed (Cic. *ad Fam.* xii. 3; *Verr.* i. 22, 60;—Suet. *Aug.* 36; Gell. xvii. 2, 13; Dio Cass. lii. 23, liii. 15). The power of demanding these supplies was warranted by the insignia of the magistrates. Envoys were accredited by their ring (Zonar. viii. 6; Legatus, p. 24 *b*). See also Mommsen, *Staatsrecht*, i. 301. [L. S.] [G. E. M.]

VIA'TOR was a servant who attended upon and executed the commands of certain Roman magistrates, to whom he bore the same relation as the lictor did to other magistrates. The name *viatores* was derived from the circumstance of their being chiefly employed on messages either to call upon senators to attend the meeting of the senate, or to summon the people to the comitia, &c. (Cic. *de Senect.* 16, 56; Fest. p. 371; cf. Plin. *H. N.* xviii. § 20). Those magistrates who had no lictors employed their viatores instead (Liv. ii. 56, iii. 56; Cic. *in Vat.* 9, 22; Tribunus). Here they had to carry out the *jus prendendi* but not *vocandi*. On the other hand, those magistrates who had lictors used the lictors as their personal attendants [see Lictor], but the viatores to summon the senate and for other official messages (Liv. vi. 15, viii. 18, xxii. 11, xli. 15; Cic *pro Cluent.* 27, 74). The viatores of the Aerarian quaestors were employed as subordinates in the Aerarium.

Viatores were mostly freedmen or of low birth (Val. Max. ix. 1, 8); but those of the Quaestores aerarii were of equestrian rank (*C. I. L.* xiv. 169, 3544). Mommsen infers from inscriptions that there were three decuriae of viatores for the superior magistrates (one being reserved for consuls), and one decuria for tribunes (see Mommsen, *Staatsrecht*, i. 360 f., and inscriptions there cited). Viatores were employed also as attendants by Augurs, Septemviri Epulones, and Sodales-Augustales (Marquardt, *Staatsverw.* iii. 226). [L. S.] [G. E. M.]

VICA'RII SERVI. [Servus.]

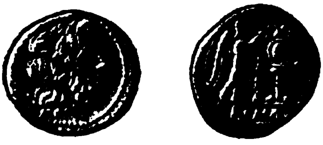
VICE'SIMA, a tax of 5 per cent. (1) *Vicesima libertatis* (*C. I. L.* x. 3875). When a slave was manumitted, the state claimed 5 per cent. on his value, by a law passed in 357 B.C. (Liv. vii. 16; Cic. *Att.* ii. 16, 2; Wilmanns, *Exempla Inscriptionum Latinarum*, 314). The fund thus raised was for some time at least kept in reserve *ad ultimos casus*; e.g. it was used in a crisis of the Second Punic War, B.C. 209 (Liv. xxvii. 10). The amount was doubled by Caracalla and reduced to its original rate by Macrinus (Dio Cass. lxvii. 9, lxviii. 12). The tax, like others, was farmed to *publicani* (Arrian, *Epict.* ii. 1, 26; iv. 1, 33; *C. I. L.* x. 3875); but under the Empire it came to be managed by *procuratores*. The slave paid it (Arrian, *Epict.* iv. 1, 33); if the master chose to pay, the slave was said to enjoy *gratuita libertas* (Suet. *Vesp.* 16).

(2) *Vicesima hereditatium et legatorum*, legacy-duty. This differs from all other *vectigalia* by touching Roman citizens only: it was thus a sort of set-off against the disappearance of *tributum* and the absence of land-tax from Italy. Every Roman citizen had to pay to the *aerarium militare* (Aerarium) 5 per cent. on any inheritance or legacy left him. None were exempt except the nearest relatives of the deceased (*sui heredes*) and persons whose legacy or inheritance did not exceed a certain (unknown) sum (Dio Cass. lv. 25, lvi. 28; Plin. *Paneg.* 37, 39; Hist. Aug. *M. Aur.* 11). Peregrini and Latini who had become Roman citizens had, in a legal sense, no relatives, and were therefore obliged in all cases to pay the duty (Plin. *Paneg.* 37). It is often said to have been introduced by Augustus, in A.D. 6; but it is probably older (Plin. *Paneg.* 42, and Hirschfeld, *Untersuchungen*, p. 62; also Voconia Lex); or was at least tried by the triumvirs in B.C. 40 (App. *B.C.* v. 67). It was of course unpopular (Dio Cass. lvi. 28). Caracalla, in granting the Roman citizenship to all subjects of the Empire, a step which would of itself make the tax far more productive, also doubled the amount; but Macrinus brought it back to 5 per cent. (Id. lxvii. 9, lxviii. 12; Hist. Aug. *Heliog.* 12). It had disappeared altogether before Justinian (Cod. Just. 6, 33, 3). We do not know whether it had to be paid by citizens on property situated in the provinces. The tax was farmed out to *publicani*, and afterwards managed by *procuratores Augusti vicesimae hereditatium*; a *statio hereditatium* occurs in inscriptions [Stationes Fisci]. (O. Hirschfeld, *Untersuchungen aus dem Gebiete der römischen Verwaltungsgeschichte*, 1876.) [F. T. R.]

VICOMAGISTRI. [Vicus.]

VI'CTIMA. [Sacrificium.]

VICTORIA'TUS was the name of a Roman coin of considerable importance in the time of the Roman Republic, so called because it bore the type of Victory crowning a trophy. Its origin is doubtful; but it makes its appearance in Italy towards the end of the 3rd century B.C., first in Campania and then in other parts of the Roman dominions and in Rome itself. The weight is three scruples, or three sestertii; that is to say, three-fourths of the denarius, or about 45 grains. It has been disputed whether the weight of the victoriatus was taken from that of the contemporary coins of Illyria (after B.C. 229), or whether the reverse was the case. The convenience of the coin lay in the fact that it was equal in value to the drachms of the Illyrian, Achaian, Rhodian, Massilian, and other important currencies. Its importance in currency is fully attested by numerous finds. Beside the victoriatus, its half, weighing about 22 grains, also circulated.



Roman Victoriatus.

The weight of the victoriatus soon fell; and at a period put by Mommsen at about B.C. 104, but by other writers earlier, quinarii or half denarii were issued with the types of the victoriatus, and after that time even victoriate coins issued earlier but still in circulation were reckoned only as half a denarius. [P. G.]

VICUS (akin to οἶκος), a term used in different applications.

1. In the earliest times the various Italian nations appear to have lived, not in towns, but in cantons (*pagi*), consisting of an indefinite number of *vici* or homesteads, with one common place of shelter (*arx* or *castellum*) in time of war, sometimes itself called *pagus*. The term *pagus* fell out of use, being replaced by more precise names, but *vicus* continued to denote a hamlet or similar group of buildings, attached to a town; hence the word is often translated "village." Cf. the Lex Rubria and Lex Julia in *C. I. L.* i. 205, 206.

2. In towns the word *vicus* means "a street" or "quarter" (cf. Varro, *L. L.* v. 145: "in oppido vici a via, quod ex utraque parte viae sunt aedificia"). Strictly speaking, it seems to have denoted a block of buildings bounded by the streets (*plateae*) and the alleys (*angiportus*), but it was doubtless used with some latitude (Jordan, *Top. Roms*, ii. p. 80). Cf. *vicus Tuscus*, &c.

3. According to tradition, Servius Tullius divided the city of Rome into four tribes, each subdivided into *vici*, while the country tribes were divided into *pagi*; and when Augustus in B.C. 8 redivided the city into fourteen regions, each region was still subdivided into *vici* (Suet. *Aug.* 30; Dio Cass. lv. 8). It is not always possible to separate our information as to the earlier *vici* from that which bears upon the later ones; but there is no reason to believe that any important changes were made; and perhaps Mommsen is right in regarding the redivision as mainly intended to organise better the worship of the Lares Compitales. The *vici* in the different *regiones* varied in number: the total under Augustus was, according to Pliny (*H. N.* iii. § 66), 265: under Constantine there must have been at least 307. The *vici* were administered by *magistri vicorum* (*vico magistri*), elected, four for each *vicus* (cf. the *basis Capitolina* in *C. I. L.* vi. 975, *ib.* 445 ff.), from the commons, mostly *liberti*: it is probable that the four took turns to act as *magister*. Hadrian fixed the number of *magistri vicorum* at 48 for each region, irrespective of the number of *vici*; and this is the number which we find in the Notitia of the time of Constantine (Jordan, ii. 541 ff.).

Besides the oversight of the drains and fountains and a general police supervision under the aediles, the chief duty of the *magistri vicorum* consisted in providing for the worship of the Lares Compitales, at the *sacella* usually erected at the crossways. These formed part of the popular religion, and were maintained by the *collegia compitalicia*: but they acquired increased importance after Augustus added to the two Lares Compitales the Genius Augusti (Suet. *Aug.* 31), fixed the festival, which previously had been *feriae conceptivae*, for two days in May and August (probably the Kalends), and granted the *magistri* the privilege of appearing in the toga praetexta attended by two lictors. (Cf. Marquardt, iii. 200; Ascon. *in Pis.* p. 7.) The Compitalia were probably identical with the Laralia (cf. Mommsen, *C. I. L.* i. p. 393); but quite distinct from the Paganalia.

Our information as to the distribution of the *vici* among the *regiones* is mainly derived from two descriptions of Rome under Constantine, the earlier (A.D. 334) commonly called the *Notitia*, the later (A.D. 357) the *Curiosum urbis Romae regionum* xiv.: the former was at one time ascribed (in an interpolated form) to a non-existent scholar P. Victor; the latter with as little reason to Sex. Rufus. [A. S. W.]

VICUS. [UNIVERSITAS.]

VI'GILES. [EXERCITUS, Vol. I. p. 795.]

VIGI'LIAE. [CASTRA, Vol. I. p. 377.]

VIGINTI SEX VIRI under the Republic, or VIGINTIVIRI under the Empire, a name given to a group of minor magistrates at Rome, who, though of different origin and functions, formed in a certain sense a unity, from the fact that under the Republic it was usual, and under the Empire probably legally requisite, for one of them to be held before a man could become a candidate for the quaestorship. The former name is mentioned by Festus, p. 233, and Dio Cass. liv. 26, and in four inscriptions (cf. *C. I. L.* i. 186), all dating from the time of Augustus. We do not know whether it was in use earlier. The latter occurs in Dio Cass. *l. c.* and lx. 5, and in Tac. *Ann.* iii. 29 (cf. Lipsius' note), but never in inscriptions, where the title of the special office is always used. The magistrates grouped under the name were: 1. *tres viri capitales*; 2. *tres viri aeri argento auro flando feriundo*, sometimes called *monetales*; 3. *quattuor viri viis in urbe purgandis*; 4. *duo viri viis extra urbem purgandis* (abolished in B.C. 20); 5. *decem viri litibus judicandis*; 6. *quattuor praefecti Capuam Cumas* (abolished under Augustus). An account of each of these has been given under its own heading. They were probably all elected at one time by the tribes; but under the Empire they were chosen by the senate, and it was not usual that the emperor should nominate any candidate for these offices. But as it was necessary that candidates should possess the *census senatorius* and the *latus clavus*, those who were not the sons of senators had to seek this from the emperor. The Vigintiviri had not the right of sitting in the senate, which they obtained only by gaining the quaestorship. The Vigintivirate lasted till the 3rd century (Spart. *Did. Jul.* 1), after which we hear no more of it. (Cf. Mommsen, *Röm. Staatsr.* ii. 578–595.) [A. S. W.]

VIGINTIVIRI. [VIGINTI SEX VIRI.]

VILLA, a farm or country-house. The Roman writers mention two kinds of villa,—the *villa rustica* or farm-house, and the *villa urbana* or *pseudo-urbana*, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the *villa rustica* in which the produce of the farm was kept, is distinguished by Columella by a separate name, *villa fructuaria*.

1. The *villa rustica* is described by Varro (*R. R.* i. 11–13), Vitruvius (vi. 9), and Columella (i. 4, § 5 ff.).

The villa, which must be of size corresponding to that of the farm, is best placed at the foot of a wooded mountain, in a spot supplied with running water, and not exposed to severe winds nor to the effluvia of marshes, nor (by being close to a public road) to a too frequent influx of visitors. If there was no running stream, it was accounted of great importance that tanks should be constructed, one under cover for men, one in the open air for the beasts. The villa attached to a large farm had two courts (*cohortes*, *chortes*, *cortes*, Varro, i. 13). At the entrance to the outer court was the abode of the *vilicus*, that he might observe who went in and out, and over the door was the room of the *procurator* (Varro, *l. c.*; Colum. i. 6). Near this, in as warm a spot as possible, was the kitchen, which, besides being used for the preparation of food, was the place where the slaves (*familiae*) assembled after the labours of the day, and where they performed certain indoor work. Vitruvius places near the kitchen the baths and the press (*torcular*) for wine and oil, but the latter, according to Columella, though it requires the warmth of the sun, should not be exposed to artificial heat. In the outer court were also the cellars for wine and oil (*cellae vinariae et oleariae*), which were placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These store-rooms form the separate *villa fructuaria* of Columella; Varro places them in the *villa rustica*, but Vitruvius recommends that all produce which could be injured by fire should be stored without the villa.

In both courts were the chambers (*cellae*) of the slaves, fronting the south; but the *ergastulum* for those who were kept in chains (*vincti*) was underground, being lighted by several high and narrow windows.

The inner court was occupied chiefly by the horses, cattle, and other live stock, and here were the stables and stalls (*bubilia*, *equilia*, *ovilia*).

A reservoir of water was made in the middle of each court, that in the outer court for soaking pulse and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

2. The *villa urbana* or *pseudo-urbana* was so called because its interior arrangements corresponded for the most part to those of a town-house. [DOMUS.] Vitruvius (vi. 8) merely states that the description of the latter will apply to the former also, except that in the town the atrium is placed close to the door, but in the country the peristyle comes first, and afterwards the atrium, surrounded by paved porticoes, looking upon the palaestra and ambulatio.

A striking difference in the general aspect of a country-house from that of a town-house lay in the fact that the blank walls of the latter were replaced by long colonnades, broken by towers, apses, and the like. Cf. the view of a villa near the sea given in a painting from Pompeii by Guhl and Koner, fig. 393.

Our chief sources of information on this subject are two letters of Pliny, in one of which (ii. 17) he describes his Laurentine villa, in the other (v. 6) his Tuscan. The former of these, however, was not, strictly speaking, a *villa*, as it had no estate or farm-buildings attached to it: the latter was connected with a large estate. There are also a few allusions in one of Cicero's letters (*ad Quint.* iii. 1), and, as a most important illustration of these descriptions, the remains of a suburban villa at Pompeii, of which a view and a plan are given by Overbeck, *Pompeii*, p. 325 ff.: cf. Guhl and Koner, fig. 392.

The Tuscan villa was approached by an avenue of plane-trees leading to a colonnade, in front of which was a *xystus* divided into flower-beds by borders of box. This xystus formed a terrace, from which a grassy slope, ornamented with box-trees cut into the figures of animals, and forming two lines opposite to one another, descended till it was lost in the plain, which was covered with acanthus (Plin. v. 6). Next to the portico was an atrium, smaller and plainer than the corresponding apartment in a town-house. In this respect Pliny's description is at variance with the rule of Vitruvius; and the villa at Pompeii has also no atrium. It would appear from Cicero (*l. c.*) that both arrangements were common. Next to the atrium in Pliny's Laurentine villa was a small semicircular peristyle (*porticus in D literae similitudinem circumactae*, where, however, the reading O is also given instead of D). The intervals between the columns of this peristyle were closed with talc windows (*specularibus*; see DOMUS, Vol. I. p. 686), and the roof projected considerably, so that it formed an excellent retreat in unfavourable weather. The open space in the centre of this peristyle seems often to have been covered with moss and ornamented with a fountain. Opposite to the middle of this peristyle was a pleasant *cavaedium*, and beyond it an elegant triclinium, standing out from the other buildings, with windows or glazed doors in the front and sides, which thus commanded a view of the grounds and of the surrounding country, while behind there was an uninterrupted view through the cavaedium, peristyle, atrium, and portico into the xystus and the open country beyond.

The details of the other chambers are less clear; and though in Castell's *Villas of the Ancients* there are numerous plans illustrating them, much is based upon mere conjecture (cf. Schinkel in the *Architekturalbum*, Part 7, Berlin, 1862). There is mention of several chambers, a room with an apse, serving as a library, and servants' rooms; while the other wing is occupied with dining-rooms, baths, a tower, at the base of which are two sitting-rooms, a dining-hall, and another tower with store-rooms. Pliny further describes with much satisfaction the colonnade (*cryptoporticus*) which runs round the garden, and other embellishments.

In the villa at Pompeii the arrangement is somewhat different, and corresponds in its main features with the rules laid down by Vitruvius. The entrance is in the Street of the Tombs. The portico leads through a small three-cornered space, due to the fact that the building does not stand square with the road, into a large square peristyle paved with *opus signinum*, and having an impluvium in the centre of its uncovered area. Round this are various bed-rooms and other small chambers, and a set of bath-rooms. Beyond it is an open hall, resembling in form and position the *tablinum* in a town-house. Next is a long gallery extending almost across the whole width of the house, and beyond it is a large cyzicene oecus, corresponding to the large triclinium in Pliny's villa. This room looks out upon a spacious court, which was no doubt a xystus or garden, and which is surrounded on all sides by a colonnade composed of square pillars, the top of which forms a terrace. In the farthest side of this court is a gate leading out to the open country. As the ground slopes downward considerably from the front to the back of the villa, the terrace just spoken of is on a level with the cyzicene oecus, the windows of which opened upon it; and beneath the oecus itself is a range of apartments on the level of the large court, which were probably used in summer, on account of their coolness.

The other rooms were so arranged as to take advantage of the different seasons and of the surrounding scenery. (For the importance attached to a fine view, cf. Friedländer, *Sittengeschichte Roms*, ii.⁶ p. 200.) Of these, however, there is only one which requires particular notice; namely, a state bed-chamber, projecting from the peristyle in an elliptic or semicircular form, so as to admit the sun during its whole course. This apartment is mentioned by Pliny, and is also found in the Pompeian villa. In Pliny's Laurentine villa its wall was fitted up as a library.

The villa contained a set of baths, the general arrangement of which was similar to that of the public baths. [BALNEAE.]

Attached to it were a garden, *ambulatio*, *gestatio*, *hippodromus*, *sphaeristerium*, and in short all necessary arrangements for enjoying different kinds of exercise. [HORTUS; GYMNASIUM.]

Becker-Göll's *Gallus*, vol. iii. pp. 46–63; Schneider's notes on Columella and Varro, and Gierig's on Pliny, contain many useful remarks. The remains of the Roman villas in England have been discussed (with plans) by Mr. Neville in the *Archaeological Journal*, vols. ii. vi. vii. x. For Pliny's Laurentine villa, cf. Cowan's edition of Pliny, i.–ii. (with a plan), Burn's *Rome and the Campagna*, pp. 411–415 (with a plan), and especially Prof. Aitchison's lecture (with plans) in *The Builder* for Feb. 8, 1890.

[P. S.] [A. S. W.]

VI'LLICUS, VI'LICUS (*ἐπίτροπος* in Greek writers, Plut. *Crass.* 4), a slave who had the superintendence of the *villa rustica*, and of all the business of the farm, except the cattle, which were under the care of the *magister pecoris* (Varro, *R. R.* i. 2). The duties of the vilicus were to obey his master implicitly and to govern the other slaves with moderation, never to leave the villa except to go to market, to have no intercourse with soothsayers, to take care of the cattle and the implements of husbandry, and to manage all the operations of the farm (Cato, *R. R.* 5, 142). His duties are described at great length by Columella (xi. 1 and i. 8), and those of his wife (*vilica*) by the same writer (xii. 1) and by Cato (c. 143).

The vilicus is properly distinct from the *actor* (*οἰκονόμος*) who had charge of finance, payments, &c. The vilicus is, however, sometimes called *actor praedii*. (Marquardt, *Privatleben*, 139.) [P. S.] [G. E. M.]

VINA'LIA. There were two festivals of this name celebrated by the Romans: the *Vinalia urbana* or *priora*, and the *Vinalia rustica* or *altera*. The vinalia urbana were celebrated on the 23rd of April. This festival answered to the Greek *πιθοιγία*, as on this occasion the wine casks which had been filled the preceding autumn were opened for the first time, and the wine tasted (Plin. *H. N.* xviii. § 287). But before men actually tasted the new wine, a libation was offered to Jupiter (Fest. *Ep.* p. 374, 12), which was called *calpar* (Id. p. 65, 13).

The rustic vinalia, which fell on the 19th of August (Plin. *H. N.* xviii. § 289; Varro, *L. L.* vi. 20) and was celebrated by the inhabitants of all Latium, was the day on which the vintage was opened. On this occasion the flamen dialis offered lambs to Jupiter, and while the flesh of the victims lay on the altar he broke with his own hands a bunch of grapes from a vine, and by this act he, as it were, opened the vintage (*vindemiam auspicari*; Varro, *L. L.* vi. 16), and no must was allowed to be conveyed into the city until this solemnity was performed. This day also was sacred to Jupiter only originally (Fest. p. 265, 28), but afterwards to Venus also, being the day of dedication for her temples *in Murcia valle* and *in Luco Libitinae* (Fest. p. 265, 31). The question what Venus had to do with the Vinalia is raised by Ovid (*Fast.* iv. 877), but not answered. We may be content with Varro's account, that Venus took gardens under her protection (*R. R.* i. 1, 6; *L. L.* vi. 20; cf. Fest. *Ep.* p. 58, 14; Marquardt, *Staatsverwaltung*, iii. pp. 333, 374). [L. S.] [G. E. M.]

VINDEMIA'LIS FE'RIA. [FERIAE.]

VINDEX. [ACTIO, Vol. I., p. 14 *b*; MANUS INJECTIO.]

VINDICA'TIO. Actions were divided by the Roman jurists into two classes: real (*in rem*) and personal (*in personam*). Actiones in rem or actions about the title to ownership (*dominium*) and other real rights were called *vindicationes*; actiones in personam or actions for the enforcement of obligations arising from contract and delict were called *condictiones* (Gaius, iv. 2–5; Ulpian, Dig. 44, 7, 25, pr.). Vindicatio in this wide sense includes not only strictly proprietary actions, but also actions respecting family rights and rights of status; as, *e.g.*, an action asserting that a man is free (cf. the expressions in *libertatem, in servitutem, in ingenuitatem vindicatio*). The term *vindicatio* is, however, generally used in legal writings in a narrower sense, signifying simply an actio in rem by which dominium of a corporeal thing is claimed (*rei vindicatio*). *Condictio* also came to have a much more restricted meaning. [ACTIO.] The distinction between *vindicationes* and *condictiones* is an essential distinction, which is not affected by changes in the form of procedure, such as that of the substitution of the formulae for legis actiones. The forms of the legis actio procedure bring most clearly to light the characteristics of a vindicatio, showing how distinctly the early Romans had conceived the idea of individual ownership of property. They also explain the origin of the word *vindicatio*. The five modes of proceeding *lege* (Gaius, iv. 12) were *sacramento, per judicis postulationem, per condictionem, per manus injectionem, per pignoris capionem* (P., J. P., P. C^{m}, Ma^{s} In^{o}, Per Pign. C^{m}). A man might proceed *sacramento* either in the case of an actio in personam or in rem, this action being a general one applicable in all cases where there was no other prescribed by law (Gaius, iv. 13). It was the only legis actio by which an actio in rem could be brought. In this action it was necessary that each party should make himself liable to a penalty (*summa sacramenti*) in the event of his failing in the cause. The condition of the penalty was in fact the existence or non-existence of the right claimed by the plaintiff, whatever that right might be. Thus the process assumed the form of a suit to determine which of the parties had forfeited the penalty, owing to the assertion of right, on which he had staked it, proving unfounded ("utrius sacramentum justum, utrius injustum sit," Cic. *pro Caec.* 33, 97; *pro Domo*, 29, 78), though the real object of the proceeding was to determine the dispute between the litigants. The Praetor took security (*praedes*) from both parties for the amount of the sacramentum; which the party who failed paid as a penalty (*poenae nomine*) to the public treasury [AERARIUM]. The sums of money were originally deposited *in sacro;* what was forfeited was devoted to sacred purposes, whence the term *sacramentum*, the successful party receiving his money back (Varro, *L. L.* v. 36, 180; "utrique ad pontem deponebant," Fest. s. v. *sacramentum:* cf. Voigt, *Zwölf Tafeln*, ii. 6, n. 3, who compares with the sacramentum the *πρυτανεῖα* of Athenian procedure; Meier and Schömann, *Att. Pr.* 603). The *poena* of the sacramentum was *quingenaria;* that is, quingenti (500) asses, in cases when the property in dispute was of the value of 1,000 asses and upwards; and in cases of smaller value it was 50 asses. This was a provision of the Twelve Tables; but if a man's freedom (*libertas*) was at issue, the poena was never more than 50 asses. The penalty appears to have been originally a fixed number of cattle (Voigt, *op. cit.* ii. § 61). Gaius (iv. 16) describes in some detail the form of the actio sacramenti when it was a proceeding for vindicating ownership (*rei vindicatio*). The forms of the action must have been in some respects modified when its object was a servitude or an inheritance.

In the case of an actio sacramenti in personam, there would be no assertion of quiritary right over a specific object, but simply a claim by the plaintiff against the defendant on account of an obligatio between them. If it was an actio in rem—that is, a rei vindicatio—movable things and moving things (*mobilia et moventia*) that could be brought or led into court were claimed before the Praetor (*in jure vindicabantur*) thus (Gaius, iv. 16): he who claimed a thing as his property (*qui vindicabat*), holding a rod in his hand, and laying hold of the thing, it might for instance be a slave, said, "This man I claim as mine by due acquisition by the law of the quirites" ("Hunc ego hominum ex jure quiritium meum esse aio secundum suam causam:" cf. Plaut. *Rud.* v. 3, 86; Cic. *pro Mur.* 12, 26. For a different interpretation of the words *secundum suam causam*, see Voigt, *Zwölf Tafeln*, ii. § 74, n. 11). "See, as I said, I have put my spear on him" ("sicut dixi, ecce tibi, vindictam imposui"); and, saying this, he placed his rod on the thing. The other party then said the same words and performed the same acts. The laying hold of the thing by the vindicant seems to be a symbolical act of self-help, by which possession of the object is taken, while the putting the wand on the thing, which Gaius tells us was a substitute for a spear, is an act of pretended violence ("vis civilis et festucaria," Gell. xx. 10, 6), signifying the intention of the claimant to maintain himself in possession by force against any attack. Accordingly the word *vindicare* (*vindicere, vim dicere*) perhaps originally meant to declare force; that is, to assert one's right to a thing by force. (O. Müller, *Etym. Erörter.*; Bethmann-Hollweg, *Civ. Proc.* i. § 40, n. 23; Voigt, i. § 53, n. 25; ii. § 74.) Cf. Cicero's definition of vindicatio (*de Inv.* ii. 53, 161). This claiming of a thing as property by laying the hand on it, and by using solemn words, together with the touching the thing with the spear or wand, was, when it had been completed by both parties to the action, "in jure manum conserere,"—that is, the parties thus contended before the magistrate for the thing, each asserting by words and acts that he was owner of it ("manu asserere liberali causa" is to take hold in a vindication claiming the liberty of a slave, Plaut. *Poen.* iv. 2, 84; v. 2, 4, 42, &c.): this phrase is as old as the Twelve Tables (cf. Gell. xx. 10, 9, "in jure, apud Praetorem manum consererent"). (For the different modern interpretations of the words *manum conserere*, see Bethmann-Hollweg, *Civ. Proc.* i. § 40.) It is to be noticed that in the vindication no distinction is made between plaintiff and defendant, each party claiming ownership in exactly the same form.

The parties having vindicated the object in turn, the Praetor then said: "Mittite ambo (rem) hominem" ("Let the (thing) man alone") —a command which the claimants obeyed, thus surrendering possession of the property to the magistrate. It would seem that the representative of the state here intervenes in the quarrel in order to prevent the parties from committing a breach of the peace by taking the law into their own hands. Then he who had made the first vindicatio thus addressed his opponent, "Postulo anne dicas qua ex causa vindicaveris" ("I demand a statement of the ground of your claim:" cf. Cic. *pro Mur.* 12, 26). The opponent replied, "Jus feci sicut vindictam imposui" ("I did what I was entitled to do, when I put my spear on him"), thereby refusing to give the ground of his claim (cf. Voigt, *op. cit.*). Then he who had made the first vindicatio said, "Quando tu injuria vindicavisti, *D* aeris sacramento te provoco" ("Since you claim him without any right, I challenge you to stake 500 (or 50 asses, as the case might be), upon the issue of a trial"), to which the other answered by a corresponding challenge. A day was now fixed on which the parties were to appear before the decemvirs or centumvirs for the trial of the issue, or else they were ordered to appear again before the Praetor on the thirtieth day *ad judicem capiendum*. [JUDEX.] The Praetor then awarded to one of the claimants possession of the thing pending the suit, and compelled him to give security to his opponent for the thing in dispute and the mesne profits, or, as it was technically expressed, "jubebat praedes adversario dare litis et vindiciarum" (Gaius, iv. 16: cf. Liv. iii. 47, 56, 58; Gell. xx. 10, 9). The expression *lis et vindiciae* seems to be redundant, the word *vindiciae* (the object of the *vis*) by itself meaning the thing or things which are vindicated (Festus, p. 376 a; cf. Voigt, *op. cit.* ii. § 74, nn. 30, 44).

The Praetor awarded interim possession to one of the claimants ("secundum alterum eorum vindicias dicebat"); no doubt he would as a rule give it to the party who was in possession at the time when the vindication was brought, unless he had acquired possession from the other claimant by violence, or furtively, or by his permission (*vi*, *clam*, *precario*). The party to whom possession was given on this ground would occupy the advantageous position of defendant in the trial before the judex, the burden of proof being on the other side. But in an action between a civis and the Roman people the vindiciae always belonged to the latter (Festus, s. v. *vindiciae*); and in the case of suits respecting a man's freedom, the person whose status was in question was allowed his liberty till the matter was determined, whatever his previous state may have been (*vindiciae secundum libertatem*). If the property which was the subject of vindicatio was land, the Praetor originally went with the parties to the place in question, so that the vindication might there be made. It was possibly the practice for one of the claimants to go through the form of forcibly ejecting the other from the land, which was called the *vis civilis*, or *vis ex conventu*—an act of pretended violence, which would perhaps correspond with the *festucaria vis* in the case of movables. [DEDUCTIO; FESTUCA.] This pretence of an ejectment (cf. English procedure in the old action of ejectment, Keller, *Civ. Pr.* § 28, n. 328) is described by Cicero as a part of the proceedings in an actio in rem by sponsio, and is known as "deductio quae moribus fit," but it seems likely that it originated in the legis actio in rem.

The practice of the Praetor going with the parties to the land in question, which was a means by which the subject of dispute could be exactly defined, was in course of time modified as the Roman state increased in size. Thus it became the practice at the commencement of the action before the Praetor in the forum for each party to challenge his opponent to follow him to the land which he had formally claimed and specifically described in court, the object being "ad conserendam manum in rem de qua agebatur;" the parties then at the command of the Praetor went together to the land accompanied by witnesses (Cic. *pro Mur.* 12, "suis utrisque superstitibus praesentibus istam viam dico, inite viam:" cf. Festus, s. v. *superstites*); and having come to an understanding as to the subject of their dispute and gone through the requisite forms, which would include the feigned ejectment — a supposed conflict between the parties (*manum conserere*)—they returned to court bringing back a clod of earth from the land, which was regarded as the whole *ager* in the subsequent proceedings.

This change in the form of procedure, which change was accomplished "contra duodecim tabulas tacito consensu," led to the phrase "ex jure manum conserere." By the time of Cicero the proceeding had been further simplified. Before the action commenced the parties went to the land and brought back a sod of earth with them; the summons in court to proceed to the land was obeyed by the parties going round the sod of earth, which had been placed at some distance from the tribunal, and returning with it into court. (Cic. *l. c.*; Gell. xx. 10: "ex jure manum consertum] verba sunt ex antiquis actionibus, quae, cum lege agitur et vindiciae contenduntur, dici nunc quique apud Praetorem solent.")

When the formulae became the ordinary mode of procedure instead of the legis actiones [ACTIO], actiones in rem were framed after the new system, although it continued to be possible to bring a legis actio in rem so that it might go to the centumviral court for trial (Gaius, iv. 31, "Tantum ex duabus causis permissum est lege agere; damni infecti et si centumvirale judicium sit"). The conveyance called *in jure cessio* is derived from the actio sacramenti in rem. [CESSIO IN JURE.]

There were two modes of maintaining an actio in rem under the formulary system: 1, *per sponsionem*, which was the earlier, and 2, *per formulam petitoriam* (Gaius, iv. 91).

1. *Per sponsionem.*—The earliest formulae appear to have been derived from the legis actio per condictionem, which was perhaps based on a sponsio, and so to have been actiones in personam. There was no formula in rem concepta (Bethmann-Hollweg, *Civ. Proc.* ii. § 89). The sponsio, however, which was a wager entered into in court by question and answer, originally perhaps a matter of private agreement between the parties, was used as a means of framing a formula for trying an actio in rem, which was analogous in some respects to the use of the sacramentum in the legis actio procedure. The right in rem, which was in question, was made the subject of the sponsio, but the wager itself in this case was pure matter of form for the purpose of framing a formula on it (*sponsio praejudicialis*), the amount of it (*summa sponsionis*) not being really paid by the unsuccessful to the successful party, as was the case when the sponsio was *poenalis* (Gaius, iv. 94). The defendant was challenged by the plaintiff to a sponsio in such terms as these: "Si homo de quo agitur ex jure quiritium meus est, sestertios xxv. nummos dare spondes?" (Cf. Cic. *pro*

Quint. 8, 27.) [The use of the word *si* or *ni* in the sponsio would depend on the fact which was affirmed or rather on the mode of affirmation. Cicero (*pro Caecin.* 23, 65) alludes to the use of these words (*sive*, *nive*). Brissonius (*de Formulis*, v. 7, p. 348) has collected instances of them.] The intentio in this formula [Actio] was that if the slave belonged to the plaintiff the sum of money contained in the sponsio ought to be paid by the defendant to the plaintiff (Gaius, iv. 93, "deinde (i.e. after the sponsio had been entered into) formulam edimus qua intendimus sponsionis summam nobis dari oportere"). If the plaintiff proved the slave to be his property, he was entitled to a judgment, by which he only obtained a judicial declaration of his right; the *summa sponsionis*, which was the supposed object of the action, not being in fact paid to him. Thus, though the action had the formal appearance of an actio in personam, it was in fact simply an actio in rem. We learn from a passage of Cicero (*pro Caecin.* 7, 20) that when land was the subject of a sponsio, a form of fictitious ejectment (*deductio quae moribus*) was gone through, which perhaps was derived from earlier procedure. The defendant would be allowed by the Praetor to retain interim possession of the property in dispute, unless he had acquired it from the plaintiff *vi*, *clam*, or *precario;* but he was obliged to give security to the plaintiff for restitution of the thing, together with mesne profits, if judgment was given for the plaintiff. This security was called "satisdatio pro praede litis et vindiciarum," corresponding to the "praedes litis et vindiciarum" of the legis actio in rem. The judgment in favour of the plaintiff in the actio on the sponsio only declared the right of the plaintiff to the property in question; it did not entitle him to execution, in case the defendant refused to surrender the thing with the profits he had made by it; the *summa sponsionis* having been the formal object of the action, and not damages, no liquidated sum had been fixed for the purpose of execution. Hence a supplementary action for the purpose of assessing damages was necessary, as had also been the case after a legis actio sacramenti in rem; this was called *arbitrium litis aestimandae.*

2. *Per formulam petitoriam.*—The sponsio, owing to the indirect way in which its formula submitted the right in question to the judex, was not a convenient mode of prosecuting an actio in rem, having the defect of obliging the plaintiff, if he was successful, to maintain a further action in order to obtain execution against the defendant, and not allowing the use of equitable pleas (*exceptiones*), since the judex had simply to decide whether or not the right claimed legally belonged to the plaintiff (Keller, *Civil-Process*, § 27). Hence a new kind of formula was invented, called the *formula petitoria*, by which these inconveniences were avoided. The formula appears to be well established in the time of Cicero (*Verr.* ii. 12). The following is given by Keller (*op. cit.* § 28) as an example of it:—"Titius Judex esto. Si paret, illam rem (e.g. hominem Stichum, fundum Cornelianum, L. Annii hereditatem) qua de agitur ex jure Quiritium Auli Agerii esse, neque eam Numerius Negidius Aulo Agerio arbitratu tuo restituet, quanti ea res erit, Numerium Negidium Aulo Agerio condemnato, si non paret, absolvito" (cf. Cic. *in Verr.* ii. 12, 31; Gaius, iv. 92). Here, as Keller has observed, the object is at once attained, which in the actio in rem per sponsionem required a number of acts, viz.: 1, the entering into the sponsio before the Praetor; 2, the publication of the formula *ex sponsione;* 3, the arbitrium litis aestimandae, in case the plaintiff succeeded. The intentio of the formula is a direct claim of ownership on the part of the plaintiff, the defendant not being named in it as in an actio in personam (Gaius, iv. 87). The words from *neque* to *restituet* make the formula a formula arbitraria, of which class of formulae it was the typical instance; the condemnatio from *quanti* to *absolvito* authorises the judex either to condemn the defendant in damages, which the judex is to assess ("quanti ea res est," the thing, "cum omni causa," *i.e.* with fructus and other accretions [Actio]), or to absolve him. Thus it is the duty of the judex in the first place to pronounce (*pronuntiatio*) whether the thing belongs to the plaintiff, or whether restitution is due to him from the defendant. If the finding is for the plaintiff, the defendant has the opportunity of avoiding condemnation by making restitution; if he does not do so, damages are assessed against him. The plaintiff could only claim pecuniary damages under the formulary system, not specific restitution; but the defendant, after there had been a pronuntiatio against him, would often make specific restitution, so far as he was able, in order to avoid the liability to condemnation in heavy damages. The formula by combining the judicium and arbitrium dispenses with the necessity of an arbitrium litis aestimandae, and allows all equitable pleas to be taken into account. In this form of proceeding there was the stipulatio called *judicatum solvi*, by which the defendant, the possessor of the thing claimed, engaged before the Praetor to obey the decree of the judex (Gaius, iv. 91). The *vindicatio rei* was brought by a person who claimed to be owner of property (*petitor*) against the person who was in possession of it, or who had fraudulently made away with the possession of it (*possessor*). It was incumbent on the owner to prove his ownership, and such proof might be a matter of the greatest difficulty where the title of the claimant was a derivative one, since he would have to prove the right of his predecessors in title; the shortness of the period of usucapion, however, greatly facilitated the proof of ownership. The proof of ownership on the part of the plaintiff did not as a matter of course entitle him to judgment in his favour, since the defendant might have a right to keep the thing from the owner, as if he were pledgee or usufructuary, or when he had a lien over the thing for his outlay on it. [Dominium.] Not only a vindicatio rei was maintained by formula petitoria, but also an action respecting a servitude or inheritance. The formula was adapted by means of a fiction to praetorian actiones in rem, of which the actio Publiciana is the chief example (Gaius, iv. 36). The formula petitoria ceased with the system of procedure to which it belonged, but the principles on which it was based were still adhered to. (Kritz, *Darstellung*, Bk. i.; Wetzell, *Der röm. Vind.*; Klagen, *Der Lehre vom Eigenthum;* Brintz, *Pandekten*, §§ 167, 168; Windscheid, *Pand.* § 193; Dominium.) [E. A. W.]

VINDICTA. This word is used by Gaius (iv. 16) in describing the proceedings of a vindicatio for the rod or wand in place of a spear, by which each vindicant forcibly asserted his dominium [VINDICATIO], and it frequently signifies the rod with which a slave was struck when he was manumitted before the Praetor [MANUMISSIO]. Another meaning of vindicta was self-redress exercised by an injured party against the party committing the injury; and hence *vindicta* came to signify "vengeance," "revenge," the Italian *vendetta*. To prevent persons from taking the law into their own hands by forcible self-redress (*vindicta*) was a principal object of early law. Hence money compositions were gradually substituted in the place of vengeance, and actions were instituted for their recovery. In some cases the state itself took vengeance on criminals, and penalties were inflicted on those who broke the peace in seeking private satisfaction for their wrongs (Ihering, *Geist des römischen Rechts*, i. 122, &c.).

The actions which were given on account of delict came to be distinguished according as to whether they had for their object simply compensation, as in the *actio doli*, or simply to give the plaintiff a pecuniary penalty (*poena*), as in the *actio furti*, which was distinct from his claim to compensation, or to give him in one and the same proceeding both compensation and a penalty, as in the *actio vi bonorum raptorum* [FURTUM] (Savigny). There were, however, certain actions which, though they had for their immediate object money or property, had for their ultimate object satisfaction to the personal feelings of the injured party, and the term *vindicta* is used in a special sense to signify the personal satisfaction which is the object of these peculiar actions: *e.g.* the *actio de sepulcro violato*, which is one of them, is said "non ad rem familiarem, magis ad ultionem pertinere in sola vindicta constitui" (Dig. 47, 12, 6 and 10; cf. Dig. 29, 2, 20, § 5).

Civilians describe such actions as "actiones vindictam spirantes." Those actions of which vindicta is the object are distinguished from other actions by the fact that they are not transmissible to the heredes of the injured party, the injury not being so much to his property as to his person, and for the same reason they are not, like proprietary actions, capable of assignment. They also form exceptions to general rules as to the legal capacity of the plaintiff. It was a fundamental rule that a filiusfamilias could not maintain an action on his own account, all property which he acquired being acquired for his paterfamilias. But as vindicta and not damages or other property was the main object of the actions in question, they could, generally speaking, be brought by a filiusfamilias. So, too, a person who had acquired such a right of action did not lose it by a change of status (*capitis deminutio*), e.g. by arrogation, as in ordinary cases. It may, however, be doubted whether Savigny is right in thinking that all actions which were exceptional in these respects were considered to have vindicta for their object.

The following are cases of *actiones vindictam spirantes*:—

1. *Actio injuriarum*, or action on account of insult, by assault, libel, slander, &c. This was an action which could not be maintained by the heredes of the injured party. When a filiusfamilias was the subject of injuria, a wrong was done both to him and to his paterfamilias, for the latter was indirectly affected by the insult. The paterfamilias generally brought not only the action which he had on his own account, but also sued on account of the wrong to his filiusfamilias, as he acquired through his son all rights of action. But the filiusfamilias could bring an action in his own name with the permission of the Praetor, if his paterfamilias was absent, or was in any way prevented from bringing the action. The pecuniary damages, which were the immediate object of the action, belonged to the paterfamilias, so that the only immediate advantage which the filiusfamilias obtained for himself by bringing the action was the vindication of his honour. [It may be noticed that under the canon law a person who was insulted might claim in a judicial proceeding a public apology from the wrongdoer (46 Dist. c. 5).] If the son was emancipated, his right of action belonged exclusively to himself, and was not destroyed by the capitis deminutio (Inst. iv. 4; Dig. 47, 10; Cod. 9, 35).

2. *Actio sepulcri violati*, or action given on account of an intentional act of outrage to a grave or sepulchral monument. This could be brought by the children of the deceased, even if they refused the hereditas. The object was vindicta, which was effected by giving the plaintiff damages, which were assessed by the judex according to the gravity of the offence (Dig. 47, 12, 3, § 8: "qui de sepulcri violati actione judicant, aestimabunt, quatenus intersit, scilicet ex injuria, quae facta est, item ex lucro ejus, qui violavit, vel ex damno, quod contigit, vel ex temeritate ejus, qui fecit"). The right of action was not affected by capitis deminutio. The action could not be maintained by the heredes of the person injured. (If those who had a right to bring this action neglected to do so, any person might sue the delinquent for a penalty limited to 100 aurei by the Edict.)

3. The action on account of obstructing the burial of a corpse (Dig. 11, 7, 9).

4. *Actio de effusis et ejectis*, in respect of injury to a free person by something poured or thrown from a house (Dig. 9, 3, 5, § 5).

5. The action against a libertus in respect of an unauthorised *in jus vocatio* of his patron [PATRONUS]. If the libertus had proceeded against the son of his patron, and the father was absent, the son could institute the suit himself, as in the case of the *actio injuriarum*.

6. *Querela inofficiosi testamenti*, the character of the querelant being supposed to be affected by his disinherison [TESTAMENTUM].

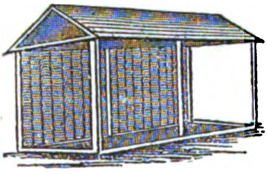
7. Actions for penalties on account of adultery (Dig. 24, 3, 15, § 1). Savigny also includes in this class of actions the *interdictum quod vi aut clam*, since it could be instituted by a filiusfamilias in his own name. He considers that the ground of this capacity of a filiusfamilias was an injury done to him personally by a person who acted in opposition to his remonstrance. If, for instance, the son inhabited a house belonging to his father or one hired from a stranger, and was disturbed in the enjoyment by some act of his neighbour, the filiusfamilias

might have an action for the amount of the damage, but the pecuniary satisfaction would belong to the father, as the case of the actio injuriarum. Savigny further includes in the same category *actiones populares*, which are actions in which the plaintiff claims a sum of money, but not as a private individual; he comes forward as a kind of representative of the state.

A filiusfamilias could bring such an action. By virtue of the *litis contestatio* [ACTIO] the action becomes the same as if it were founded on an obligatio, and this right of action as well as the money which may arise from it is acquired by the filiusfamilias for his paterfamilias. With the *populares actiones* may be classed, as belonging to the same kind, the *interdicta publica* or *popularia*, and that *operis novi nuntiatio* which is for the protection of *publicum jus;* with this distinction, that the proceedings have not for their object the recovery of a sum of money. But in the general capacity of all persons to bring such actions, independent of the general rules as to legal capacity, all these modes of proceeding agree. (Savigny, *System des heutigen römischer Rechts*, ii. 121; Vangerow, *Pandekten*, i. 145.)

[G. L.] [E. A. W.]

VI'NEA. According to the description of *vineae* given by A. Müller in Baumeister's *Denkmäler*, i. pp. 540–1, they differed from the *testudines* very slightly, viz. in not being so large and in having the sides open (Veg. iv. 15). They appear to have been used behind engines of assault to protect the men working those engines. They were called *στοΐδια* in Greek (Athen. *de Mech.* p. 31, Wescher), and Müller thinks that they were small testudines with open fronts and sides covered with skins or wickerwork. Vegetius mentions (*l. c.*) one as 16 feet long, 7 broad, and 8 high. Owing to their smallness, many were put behind one another. They were especially liable to be set on fire by the enemy (Liv. ii. 17, 2; v. 7, 3, &c.). We give a cut from Marquardt (*Staatsverw.* ii.^{2} 530), also adopted by Schiller in Iwan Müller's *Handbuch*, iv. p. 740.



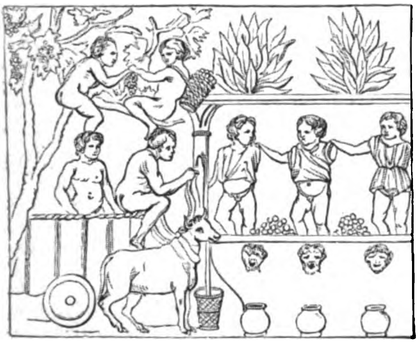
Vinea.

The *ἄμπελοι* described by Apollodorus (p. 141, Wescher) and Rüstow and Köchly (*Griech. Kriegswesen*, p. 313) are probably the *plutei* of the Romans [PLUTEUS]; though Droysen (*Griech. Kriegsalt.* p. 228) says that they are the same as the *vineae;* and certainly the similarity of the name lends some probability to this view. [L. C. P.]

VINUM (*οἶνος*). The general term for the fermented juice of the grape.

It appears pretty well established that the use of wine came to the Greeks from a Semitic source. The word *vinum* is undoubtedly borrowed from *οἶνος*, the neuter form, as in other cases, being due to a misunderstood accusative; and in spite of Curtius (*Gr. Etym.* No. 594) and A. Müller (Bezzenberger's *Beiträge*, i. 294), *οἶνος* is almost certainly of Semitic origin (cf. Arab. and Ethiop. *wain*, Heb. *jain*, which can hardly be, as Renan, *Hist. gén. des Langues Sémitiques*, p. 193, holds, borrowed from the Aryans). Mommsen's belief that *vinum* is not borrowed from *οἶνος*, but that both words go back to the common vocabulary of the two languages, is based mainly upon the hypothesis, now generally discredited, of a Graeco-Italic unity. The earliest home of the vine was the fertile country south of the Caucasus and the Caspian; and here we must place probably the first home of the Semites. So that the use of wine must be regarded as extending partly by land through Asia Minor and Thrace, in connexion with which it is worth while remembering the legend of Lycurgus, and also that Homer lays especial stress on the excellence of Thracian wine, and partly by the agency of Phoenician traders and Carian settlers. Mommsen argues that wine cannot have been introduced into Italy by Greeks: first, because the Latins kept their wine-feasts in honour of the native god Liber, not the Greek Bacchus; secondly, because according to the legend Mezentius demanded from the Latins or the Rutulians a tribute of wine, and the Kelts were attracted to invade Italy by the fame of its wine; and thirdly, because of the place which wine held in the early sacrificial ritual (*Hist. of Rome*, Bk. i. c. 13). A further proof is found in the name *Oenotria*, "land of the vine-pole," by which Italy was known to the Greeks. Hehn holds that legends point clearly to a time when wine was unknown; and that the fact that Jupiter Liber was the father of the vine only indicates a borrowing from Ζεὺς Ἐλευθέριος or Λύσιος. Both in Greece and in Italy wine was the only drink (besides water) at all in common use, and even slaves were freely supplied with it in historic times. But it is plain that wine was both rare and costly in the earlier ages of Italian and Roman history. Romulus is said to have used milk only in his offerings to the gods (Plin. *l. c.*): Numa to have prohibited the sprinkling of wine upon the funeral pyre; a law which Pliny (xiv. § 88) quotes to prove the costliness of wine, but which, like the story about Romulus, rather shows that it was believed to have been unknown in the earliest times. To stimulate the energies of the rustic population, Numa is also said to have ordained that it should be held impious to offer a libation to the gods of wine which had flowed from an unpruned stock. The story that Papirius the dictator, when about to join in battle with the Samnites, vowed to Jupiter a small cupful of honeyed wine (*mulsi pocillum*) if he should gain the victory, does not so much prove, as Pliny thinks, the dearness of wine, as the rough jesting humour of the general, especially as he added that he should follow this with a draught of *temetum* for himself. Soldiers, too, drank it at a triumph (see below). That wine was racked off into amphorae and stored up in regular cellars as early as the era of the Gracchi, Pliny considers proved by the existence in his own day of the *Vinum Opimianum*, described hereafter. But even then no specific appellation was given to the produce of different localities, and the jar was marked with the name of the consul alone. For many years after this foreign wines were considered far superior to native growths (one of the most interesting signs of this being the 23 Rhodian amphorae recently found at Praeneste); and so precious were the Greek vintages esteemed in the times of Marius and Sulla that a single draught only was offered to the guests at a banquet. The rapidity with which luxury spread in this matter is well illustrated by the saying of M. Varro (Plin. xiv. § 96), that Lucullus when a boy never saw an entertainment in his father's house, however splendid, at which Greek wine was handed round more than once; but when in manhood he returned from his Asiatic conquests, he bestowed on the people a largess of more than a hundred thousand cadi. An imitated Greek wine was made at an early date, for making which Cato, 24, 112, and Colum. xii. 37, give rules. Four different kinds of wine are said to have been presented for the first time at the feast given by Julius Caesar in his third consulship (B.C. 46), these being Falernian, Chian, Lesbian, and Mamertine; and not until after this date were the merits of the numerous varieties, foreign and domestic, accurately known and fully appreciated. But during the reign of Augustus and his immediate successors the study of wines became a passion, and the most scrupulous care was bestowed upon every process connected with their production and preservation. Viticulture was very profitable, and the Italian wines became famous even as far as India (Arrian, *Peripl.* 6, 49). Pliny calculates that the number of wines in the whole world deserving to be accounted of high quality (*nobilia*) amounted to eighty, of which his own country could claim two-thirds (xiv. § 87); and in another passage (xiv. § 150) he asserts that 195 distinct kinds might be reckoned up, and that if all the varieties of these were to be included in the computation, the sum would be almost doubled (Plin. *H. N.* xiv. § 150).

The process followed in wine-making was essentially the same among both the Greeks and the Romans. After the grapes had been gathered, they were first trodden with the feet, as is represented in the following cut from an ancient relief (Mon. *Matth.* iii. tab. 45). Afterwards they were submitted to the action of the press. [TORCULAR.]



Treading the grapes. (From a relief.)

The sweet unfermented juice of the grape was termed *γλεῦκος* by the Greeks and *mustum* by the Romans, the latter word being properly an adjective signifying *new* or *fresh* (cf. Cato, *R. R.* 115). Of this there were several kinds distinguished according to the manner in which each was originally obtained and subsequently treated. That which flowed from the clusters, in consequence merely of their pressure upon each other before any force was applied, was known as *πρόχυμα* (Geopon. vi. 16) or *protropum* (Plin. *H. N.* xiv. § 85), and was reserved for manufacturing a particular species of rich wine described by Pliny (*l. c.*) to which the inhabitants of Mytilene gave the name of *πρόδρομος* or *πρότροπος* (Athen. i. p. 30 b. ii. p. 45 e). That which was obtained next, before the grapes had been fully trodden, was the *mustum lixivum*, and was considered best for keeping (Cato, *R. R.* 23; Geopon. vi. 16; Colum. xii. 41). After the grapes had been fully trodden and pressed, the mass was taken out, the edges of the husks cut (*circumcidunt extrema*), and the whole again subjected to the press: the result was the *mustum tortivum* or *circumcisicium* (Cato, *R. R.* 23; Varr. i. 54; Colum. xii. 36), which was set apart and used for inferior purposes.

A portion of the must was used at once, being drunk fresh after it had been clarified with vinegar (Geopon. vi. 15). When it was desired to preserve a quantity in the sweet state, an amphora was taken and coated with pitch within and without; it was filled with *mustum lixivum*, and corked so as to be perfectly air-tight. It was then immersed in a tank of cold fresh water or buried in wet sand, and allowed to remain for a month, six weeks, or two months. The contents after this process were found to remain unchanged for a year, and hence the name *ἀεὶ γλεῦκος*, i.e. *semper mustum* (Geopon. vi. 16; Plut. *Quaest. Nat.* 26; Cato, *R. R.* 120; Colum. xii. 29; Plin. *H. N.* xiv. § 83). This was probably the *οἶνος* of the Gospel parable of the wine-skins: at least it alone fulfils the necessary conditions of the case: cf. Farrar, *Excursus III.* on St. Luke. A considerable quantity of must from the best and oldest vines was inspissated by boiling, being then distinguished by the Greeks under the general names of *ἕψημα* or *γλύξις* (Athen. i. 31 e), while the Latin writers have various terms according to the extent to which the evaporation was carried. Thus, when the must was reduced to two-thirds of its original volume, it became *caroenum* (Pallad. Octobr. tit. xviii.); when one-half had evaporated, *defrutum* (Plin. *H. N.* xiv. § 80); when two-thirds, *sapa* (known also by the Greek names *siraeum* and *hepsema*, Plin. *l. c.*), but these words are frequently interchanged. (See Varr. *ap.* Non. p. 551 M.; Colum. xii. 19.) Similar preparations are at the present time called in Italy *musto cotto* and *sapa*, and in France *sabe.* The process was carried on in large caldrons (*vasa defrutaria*), over a slow fire of chips, on a night when there was no moon (Plin. xviii. § 318), the scum being carefully removed with leaves (Plin. *l. c.*; Verg. *Georg.* i. 296, iv. 269), and the liquid constantly stirred to prevent it from burning (Plin. xxiii. § 62; Cato, *R. R.* 105; Colum. xii. 19, 20, 21; Pallad. xi. 18; Dioscorid. v. 9). These grape-jellies—for they were nothing else —were used extensively for giving body to poor wines and making them keep, and entered as ingredients into many drinks, such as the *burranica potio*, so called from its red colour ("a rufo colore quem burrum vocant"), which was formed by mixing *sapa* with milk (Paul. D., s. v. *Burranica;* compare Ovid, *Fast.* iv. 782), and others described hereafter.

The whole of the mustum not employed for some of the above purposes was conveyed from the *lacus* to the *cella vinaria* (οἰνοθήκη, πιθεών, Geopon. vi. 2, 12), an apartment on the ground-floor or a little below the surface, placed in such a situation as to secure a moderate and equable temperature, and at a distance from dunghills or other objects emitting a strong odour (Varro, *R. R.* i. 13, 6; Plin. xiv. § 133; Geopon. *l. c.*). Here were the *dolia* (πίθοι), otherwise called *seriae* [Dolium], long bell-mouthed vessels of earthenware [hooped tubs of wood (*cupae* = *lignea vasa*) being employed in cold climates only, Plin. xiv. § 132], very carefully formed of the best clay and lined with a coating of pitch (πισσωθέντα, *picata*), the operation (πίσσωσις, *picatio*) being usually performed while they were hot from the furnace. They were usually sunk (*depressa*, *defossa*, *demersa*) one-half or two-thirds in the ground; to the former depth if the wine to be contained was likely to prove strong, to the latter if weak, and attention was paid that they should repose upon a dry bed. They were moreover sprinkled with sea-water or brine, fumigated with aromatic plants and rubbed with their ashes; all rank-smelling substances, such as rotten leather, garlic, cheese, and the like, being removed, lest they should impart a taint to the wine (Geopon. vi. 2, 3, 4; Cato, *R. R.* 23; Varro, i. 13; Colum. xii. 18, 25; Dig. 33, 6, 3). In these *dolia* the process of fermentation took place. They were not filled quite full, in order that the scum only might boil over, and this was also cleared off at regular intervals by skimming, and carried to a distance. The fermentation usually lasted for about nine days; and as soon as it had subsided and the *mustum* had become *vinum*, the dolia were closely covered, the upper portion of their interior surface as well as the lids (*opercula doliorum*) having been previously well rubbed over with a compound of defrutum, saffron, old pitch, mastic, and fir-cones (Geopon. vi. 12; Cato, *R. R.* 107; Varro, i. 65; Colum. xii. 25, 80). The *opercula* were taken off about once every thirty-six days, and oftener in hot weather, in order to cool and give air to the contents, to add any preparation required to preserve them sound, and to remove any impurities that might be thrown up. Particular attention was paid to the peculiar light scum, the ἄνθος οἴνου (*flos vini*), which frequently appeared on the surface after a certain time, since it was supposed to afford indications by its colour and consistence of the quality of the wine. If red (πορφυρίζον), broad, and soft, it was a sign that the wine was sound, though Pliny regards it as a bad sign, except with red wine; if glutinous, it was a bad symptom; if black or yellow, it denoted want of body; if white, it was a proof that the wine would keep well (μόνιμον). Each time that the opercula were replaced they were well rubbed with fir-cones (Geopon. vii. 15; Colum. xii. 38). [Thyrsus.]

The commoner sorts of wine were drunk direct from the dolium, and hence draught wine was called *vinum doliare* or *vinum de cupa* (Dig. 18, 6, 1, 4; Hor. *Epod.* ii. 47, "horna dulci vina promens dolio;" Cic. *in Pis.* 27, 67, "vinum de cupa"); but the finer kinds, such as were yielded by choice localities and possessed sufficient body to bear keeping, were drawn off (*diffundere*, μεταγγίζειν), generally the next spring, into *amphorae*, *cadi* or *lagoenae*, many fanciful precautions being observed in transferring them from the larger to the smaller vessel (Geopon. vii. 5, 6). These *amphorae* were made of earthenware, and in later times occasionally of glass; they were stoppered tight by a plug of wood or cork (*cortex*, *suber*), which was rendered impervious to air by being smeared over with pitch, clay, or gypsum (Cato, *R. R.* 120; Hor. *Carm.* iii. 8, 10). The practice of using cork seems to have been comparatively late, and to have been introduced from Gaul (Hehn, *Kulturpflanzen*,³ p. 511). On the outside the title of the wine was painted, the date of the vintage being marked by the names of the consuls then in office; or when the jars were of glass, little tickets (*pittacia*, *tesserae*) were suspended from them indicating these particulars (Petron. 34). The amphorae were then stored up in repositories (*apothecae*, Colum. i. 6; Plin. *Ep.* ii. 17; *horrea*, Senec. *Ep.* 115; *tabulata*, Colum. xii. 41) completely distinct from the *cella vinaria*, and usually placed in the upper story of the house (whence *descende, testa*, Hor. *Carm.* iii. 21, 7; *deripere horreo*, iii. 28, 7) for a reason explained afterwards.

It is manifest that wines prepared and bottled, if we may use the phrase, in the manner described above, must have contained a great quantity of dregs and sediment, and it became absolutely necessary to separate these before it was drunk. This was sometimes effected by fining with yolks of eggs, those of pigeons being considered most appropriate by the fastidious (Hor. *Sat.* ii. 4, 56), or with the whites whipped up with salt (Geopon. vii. 22), but more commonly by simply straining through small cup-like utensils of silver or bronze perforated with numerous small holes, and distinguished by the various names ὑλιστήρ, τρύγοιπος, ἠθμός, *colum vinarium* (Geopon. vii. 37). [Colum.] Occasionally a piece of linen cloth (σάκκος, *saccus*) was placed over the τρύγοιπος or *colum* (Pollux, vi. 19, x. 75) and the wine (σακκίας, *saccatum*) filtered through (Martial, viii. 45). The use of the *saccus* was considered objectionable for all delicate wines, since it was believed to injure (Hor. *Sat.* ii. 4, 54) if not entirely to destroy their flavour, and in every instance to diminish the strength of the liquor. For this reason it was employed by the dissipated in order that they might be able to swallow a greater quantity without becoming intoxicated (Plin. xiv. § 138, cf. xix. § 53; Cic. *de Fin.* ii. 8, 23). The double purpose of cooling and weakening was effectually accomplished by placing ice or snow in the filter, which under such circumstances became a *colum nivarium* (Martial, xiv. 103) or *saccus nivarius* (xiv. 104).

The wine procured from the *mustum tortivum*, which was always kept by itself, must have been thin and poor enough, but a still inferior beverage was made by pouring water upon the husks and stalks after they had been fully pressed, allowing them to soak, pressing again, and fermenting the liquor thus obtained. This, which was given to labourers in winter instead of wine, was the θάμνα or δευτέριος of the Greeks, the *lora* or *vinum operarium* of the Romans, and according to Varro (Non. p. 551 M.) was, along with sapa, defrutum, and passum, the drink of elderly women. (See Athen. x. p. 440.) The Greeks added the water in the proportion of $\frac{1}{3}$ of the must previously pressed out, and then boiled down the mixture until $\frac{1}{3}$ had evaporated; the Italians added the water in the proportion of $\frac{1}{10}$ of the must, and threw in the skimmings of the defrutum and the dregs of the lacus. Another drink of the same character was the *faecatum* from wine-lees, and we hear also of *vinum praeliganeum* given to the vintagers, which appears to have been manufactured from inferior and half-ripe fruit gathered before the regular period (Geopon. vi. 3; Cato, *R. R.* 23, 57, 153; Varro, i. 54; Colum. xii. 40; Plin. xiv. § 86). We find an analogy to the above processes in the manufacture of cider, the best being obtained from the first squeezing of the apples and the worst from the pulp and skins macerated in water.

In all the best wines hitherto described the grapes are supposed to have been gathered as soon as they were fully ripe and fermentation to have run its full course. But a great variety of sweet wines were manufactured by checking the fermentation, or by partially drying the grapes, or by converting them completely into raisins. The γλυκὺς οἶνος of the Geoponic writers (vii. 19) belongs to the first class. Must obtained in the ordinary manner was thrown into the dolia, which remained open for three days only and were then partially covered for two more; a small aperture was left until the seventh day, when they were luted up. If the wine was wished to be still sweeter, the dolia were left open for five days and then at once closed. The free admission of air being necessary for brisk fermentation, and this usually continuing for nine days, it is evident that it would proceed weakly and imperfectly under the above circumstances. For the *Vinum Dulce* of Columella (xii. 27) the grapes were to be dried in the sun for three days after they were gathered, and trodden on the fourth during the full fervour of the mid-day heat. The *mustum lixivum* alone was to be used, and after the fermentation was finished an ounce of well-ground iris-root was added to each 50 sextarii; the wine was racked off from the lees, and was found to be sweet, sound, and wholesome (Colum. *l. c.*). For the *Vinum Diachytum*, more luscious still, the grapes were exposed to the sun for seven days upon hurdles (Plin. *H. N.* xiv. § 84).

Lastly, *Passum* or *raisin-wine* was made from grapes which were dried in the sun until they had lost half their weight, or plunged into boiling oil, which produced a similar effect, or the bunches after they were ripe were allowed to hang for some weeks upon the vine, the stalks being twisted or an incision made into the pith of the bearing shoot so as to put a stop to vegetation. The stalks and stones were removed, the raisins were steeped in must or good wine, and then trodden or subjected to the gentle action of the press. The quantity of juice which flowed forth was measured, and an equal quantity of water added to the pulpy residuum, which was again pressed and the product employed for an inferior passum called *secundarium*, an expression exactly analogous to the δευτέριος mentioned above. The passum of Crete was most prized (Mart. xiii. 106; Juv. xiv. 270), and next in rank were those of Cilicia, Africa, Italy, and the neighbouring provinces. The kinds known as *Psithium* or *Psythium* and *Melampsythium* possessed the peculiar flavour of the grape and not that of wine; the *Scybelites* from Galatia and the *Aluntium* from Sicily in like manner tasted like must. The grapes most suitable for passum were those which ripened early, especially the varieties *Apiana* (called by the Greeks *Psithia*) and *Scripula* (Geopon. vii. 18; Colum. xii. 39; Plin. *H. N.* xiv. § 8; Verg. *Georg.* ii. 93; Stat. *Silv.* iv. 9, 38). Passum was known to Plautus (*Pseud.* 741).

The Greeks recognised three colours in wines: *red* (μέλας), *white*, i.e. pale straw-colour (λευκός), and *brown* or amber-coloured (κιῤῥός). (Athen. i. p. 32 c.) Pliny distinguishes four: *albus* answering to λευκός, *fulvus* to κιῤῥός, while μέλας is subdivided into *sanguineus* and *niger*, the former being doubtless applied to bright glowing wines like Tent and Burgundy, while the *niger* or *ater* (Plaut. *Menaech.* 915) would resemble Port. (Ussing on *v.* 900 is probably wrong in regarding the epithet as an intentionally absurd one. In modern Greek red wine is called κρασὶ μαυρό.) In the ordinary Greek authors the epithet ἐρυθρὸς is as common as μέλας, and will represent the *sanguineus*.

We have seen that wine intended for keeping was racked off from the dolia into amphorae. When it was necessary in the first instance to transport it from one place to another, or when carried by travellers on a journey, it was put into bags made of goat-skin (ἀσκοί, *utres*), well pitched over so as to make the seams perfectly tight. (Cf. the commentators on Matt. ix. 17 = Mark ii. 22, Luke v. 37, and especially Tristram, *Nat. Hist. Bib.* p. 92.) The cut below, from a bronze found at Herculaneum (*Mus. Borbon.* vol. iii. tav. 28), exhibits a Silenus astride upon one of them. When the quantity was large, a number of hides were sewn together, and the leathern tun thus constructed carried from place to place in a cart, as shown in the illus-

Silenus on a wine-skin. (*Mus. Borbon.*)

tration under AMPHORA. (Compare Lucian, *Lex.* 6.)

Among the ancients recourse was had to various devices for preventing or correcting acidity, heightening the flavour, and increasing the durability of the inferior kinds of wine. This subject was reduced to a regular system by the Greeks: Pliny, xiv. § 120, mentions four authors who had written formal treatises, and the authors of the Geoponic collection, together with Cato, Varro, and Columella, supply a multitude of precepts upon the same topic. The object in view was accomplished sometimes by merely mixing different kinds of wine together, but more frequently by throwing into the dolia or amphorae various condiments or seasonings (*ἀρτύσεις*, *medicamina*, *conditurae*). When two wines were mixed together, those were selected which possessed opposite good qualities and defects (Athen. i. p. 32, 6). Connoisseurs, however, justly valued most those wines which needed no such treatment (Col. xii. 19, 2; Plin. xxiii. § 45).

The principal substances employed as *conditurae* were—1. sea-water; 2. turpentine, either pure, or in the form of pitch (*pix*), tar (*pix liquida*), or resin (*resina*); 3. lime, in the form of gypsum, burnt marble, or calcined shells; 4. inspissated must; 5. aromatic herbs, spices, and gums: and these were used either singly, or cooked up into a great variety of complicated confections.

We have already seen that it was customary to line the interior of both the dolia and the amphorae with a coating of pitch; but besides this it was common to add this substance, or resin, in powder, to the must during the fermentation, from a conviction that it not only rendered the wine more full-bodied, but also communicated an agreeable bouquet, together with a certain degree of raciness or piquancy (Plin. *N. H.* xiv. § 124; Plutarch, *Symp.* v. 3). In Greece the peasants still drink little but *ῥετσινατό*, which is supposed to be a wholesome corrective to bad food. Wine of this sort, however, when new (*novicium resinatum*) was accounted unwholesome and apt to induce headache and giddiness (Plin. xxiii. § 46). From this circumstance it was denominated *crapula.* It was found to be serviceable in checking the fermentation of the must when too violent.

It must be remembered, that when the vinous fermentation is not well regulated, it is apt to be renewed, in which case a fresh chemical change takes place, and the wine is converted into vinegar (*ὄξος*, *acetum*), and this acid, again, if exposed to the air, loses its properties and becomes perfectly insipid, in which form it was called *vappa* by the Romans, who used the word figuratively for a worthless blockhead.

Now the great majority of inferior wines, being thin and watery, and containing little alcohol, are constantly liable to undergo these changes, and hence the disposition to acescence was closely watched and combated as far as possible. With this view those substances were thrown into the dolia which it was known would neutralise any acid which might be formed, such as vegetable ashes, which contain an alkali, gypsum, and pure lime, besides which we find a long list of articles, which must be regarded as preventives rather than correctives, such as the various preparations of turpentine already noticed, almonds, raisins steeped in must, parched salt, goat's milk, cedar-cones, gall-nuts, blazing pine-torches, or red-hot irons quenched in the liquid, and a multitude of others (Geopon. vii. 12, 15, 16, &c.). But in addition to these, which are all harmless, we find some traces of the use of the highly poisonous salts of lead for the same purpose (Geopon. vii. 19), a practice which produced the most fatal consequences in the Middle Ages, and was prohibited by a series of the most stringent enactments. (See Beckmann's *History of Inventions*, vol. i. p. 396, trans.)

Defrutum also was employed to a great extent; but being itself liable to turn sour, it was not used until its soundness had been tested by keeping it for a year. It was then introduced, either in its simple state, in the proportion of a sextarius to the amphora—that is, of 1 to 48—or it was combined with a great variety of aromatics, according to a prescription furnished by Columella (xii. 20). In this receipt, and others of the same kind, the various herbs were intended to give additional efficacy to the nourishing powers of the defrutum, and great pains were taken to prevent them from affecting the taste of the wine. But from a very early period it was customary to flavour wines highly by a large admixture of perfumes, plants, and spices. We find a spiced drink (*ἐξ ἀρωμάτων κατασκευαζόμενος*) noticed under the name of *τρίμμα* by Athenaeus and the writers of the New Comedy (Athen. i. p. 31 e; Pollux, vi. 18), and for the whole class Pliny has the general term *aromatites* (xiv. § 107).

There was another and very numerous family of wines, entitled *οἶνοι ὑγιεινοί*, into which drugs were introduced to produce medicinal effects. Such were *vinum marrubii* (horehound) for coughs; the *scillites* (squill-wine), to assist digestion, promote expectoration, and act as a general tonic; *absinthites* (wine of wormwood), corresponding to the modern *vermuth*, and above all the *myrtites* (myrtle-berry wine), which possessed innumerable virtues (Columell. xii. 32–39; Geopon. viii. 1, &c.).

Pliny, under the head of *vina ficticia*, includes not only the *οἶνοι ὑγιεινοί*, but a vast number of others bearing a strong analogy to our British home-made wines, such as cowslip, ginger, elderberry, and the like; and as we manufacture champagne out of gooseberries, so the Italians had their imitations of the costly vintages of the most favoured Asiatic isles. These *vina ficticia* were, as may be imagined, almost countless, every variety of fruit, flower, vegetable, shrub, and perfume being put in requisition: figs, cornels, medlars, roses, asparagus, parsley, radishes, laurels, junipers, cassia, cinnamon, saffron, nard, malobathrum, afford but a small sample. It must be remarked, that there was one material difference between the method followed by the Greeks and that adopted by the Romans in cooking these potions. The former included the drug, or whatever it might be, in a bag, which was suspended in a jar of wine, and allowed to remain as long as was thought necessary; the latter mixed the flavouring ingredient with the sweet must, and fermented them together, thus obtaining a much more powerful extract; and this is the plan pursued for British wines, except that we are obliged to substitute sugar and water for grape-juice (Geopon. viii. 32, 33, 34; Plin. *H. N.* xiv. § 98 ff.; Colum. *ll. cc.*; Cato, *R. R.* 114, 115).

But not only were spices, fragrant roots, leaves, and gums steeped in wine or incorporated during fermentation, but even the precious perfumed essential oils (*unguenta*) were mixed with it before it was drunk. The Greeks were exceedingly partial to this kind of drink (Aelian, *V. H.* xii. 31). We also learn from Aelian (*l. c.*) that it was named *μυῤῥινίτης*, which seems to be the same with the *μυῤῥίνης* of Poseidippus (Athen. i. p. 32 b), the *μυῤῥίνη* of Hesychius, the *μυρίνης* of Pollux (vi. 2), and the *murrina* of Plautus (*Pseudol.* 745; compare *nardini amphoram*, *Miles Gl.* 824; Paul. D., s. vv. *Murrata potio* and *Murrina*). Others, however, take the *murrina* to be identical with *myrtites*, i.e. wine either made from myrtle-berries or with an infusion of them (Col. *l. c.*; cf. Ussing *ad loc.*). The Romans were not slow to follow the example set them, valuing bitterness so highly, says Pliny (*H. N.* xiii. § 25), that they were resolved to enjoy costly perfumes with two senses; and hence the expressions *foliata sitire* in Martial (xiv. 110) and *perfusa mero spumant unguenta Falerno* in Juvenal (vi. 303).

In a more primitive age we detect the same fondness for the admixture of something extraneous. Hecamede, when preparing a draught for Nestor, fills his cup with Pramnian wine, over which she grates goat-milk cheese and sprinkles the whole with flour (*Il.* xi. 638), the latter being a common addition at a much later epoch (Athen. x. p. 432). So also the draught administered by Circe (*Od.* x. 234) consisted of wine, cheese, barley-meal, and honey; and according to Theophrastus (Athen. i. p. 32 a) the wine drunk in the prytaneum of the Thasians was rendered delicious by their throwing into the jar which contained it a cake of wheaten flour kneaded up with honey. (Compare Plut. *Symp.* i. 1, 4.)

This leads us on to notice the most generally popular of all these compound beverages, the *οἰνόμελι* of the Greeks, the *mulsum* of the Romans. This was of two kinds; in the one honey was mixed with wine, in the other with must. The former was said to have been invented by the legendary hero Aristaeus, the first cultivator of bees (Plin. xiv. § 53), and was considered most perfect and palatable when made of some old rough (*austerum*) wine, such as Massic or Falernian (although Horace objects to the latter for this purpose, *Sat.* ii. 4, 24), and new Attic honey (Mart. iv. 13, xiii. 108; Dioscor. v. 16; Macrob. *Sat.* vii. 12). The proportions as stated in the Geoponic collection were four, by measure, of wine to one of honey; and various spices and perfumes, such as myrrh, cassia, costum, malobathrum, nard, and pepper, might be added. The second kind, the *oenomelum* of Isidore (*Orig.* xx. 3, § 11), according to the Greek authorities (Geopon. viii. 26), was made of must evaporated to one-half of its original bulk, Attic honey being added in the proportion of one to ten. This, therefore, was merely a very rich fruit syrup, in no way allied to wine. The virtues of *mulsum* are detailed by Pliny (*H. N.* xxii. § 60; cf. Geopon. *l. c.*); it was considered the most appropriate draught upon an empty stomach, and was therefore swallowed immediately before the regular business of a repast began (Hor. *Sat.* ii. 4, 25; Senec. *Ep.* 122; Petron. 34), and hence the whet (*gustatio*) coming before the cup of mulsum was called the *promulsis* (Cic. *ad Fam.* ix. 16, 8, and 20, 1). We infer from Plautus (*Bacch.* 967, 1071; compare Liv. xxxviii. 55, 2) that *mulsum* was given at a triumph by the Imperator to his soldiers.

Mulsum (sc. *vinum*) or *οἰνόμελι* is perfectly distinct from *mulsa* (sc. *aqua*). The latter, or *mead*, being made of honey and water mixed and fermented, is the *μελίκρατον* or *ὑδρόμελι* of the Greeks (Geopon. viii. 28; Dioscorid. v. 9; Col. xii. 12, 3; Isidor. *Orig.* xx. 3, § 10; Plin. *H. N.* xiv. § 113), although Pollux confounds (vi. 2) *μελίκρατον* with *οἰνόμελι*. Again, *ὑδρόμηλον* (Geopon. viii. 27) or *hydromelum* (Isidor. *Orig.* xx. 3, § 11) was cider; *ὀξύμελι* (Plin. *H. N.* xiv. § 114) was a compound of vinegar, honey, salt, and pure water, boiled together and kept for a long time; *ῥοδόμελι* was a mere confection of expressed juice of rose-leaves and honey (Geopon. viii. 29).

The ancients considered old wine not only more grateful to the palate but also more wholesome and invigorating (Athen. i. p. 26 a; ii. p. 36 e). Generally speaking, the Greek wines do not seem to have required a long time to ripen (cf. Theocr. vii. 147). Nestor in the Odyssey, indeed, drinks wine ten years old (iii. 391), and wine kept for sixteen years is incidentally mentioned by Athenaeus (xiii. p. 584 b); but the connoisseurs under the Empire pronounced that all transmarine wines arrived at a moderate degree of maturity (*ad vetustatem mediam*) in six or seven (Plin. xiv. 79). Many of the Italian varieties, however, as we shall see below, required to be kept for twenty or twenty-five years before they were drinkable (which is now considered ample for our strongest ports), and even the humble growths of Sabinum were stored up for from four to fifteen (Hor. *Carm.* i. 9, 7; Athen. i. p. 26). Hence it became a matter of importance to hasten, if possible, the natural process. This was attempted in various ways: sometimes by elaborate condiments (Geopon. vii. 24), sometimes by sinking vessels containing the must in the sea, by which an artificial mellowness was induced (*praecox vetustas*), and the wine in consequence termed *thalassites* (Plin. *H. N.* xiv. § 78); but more usually by the application of heat (Plut. *Symp.* v. 3). Thus it was customary to expose the amphorae for some years to the full fervour of the sun's rays, or to construct the *apothecae* in such a manner as to be exposed to the hot air and smoke of the bath-furnaces (Colum. i. 6, 20); and hence the name *fumaria* applied to such apartments, and the phrases *fumosos*, *fumum bibere*, *fuligine testae* in reference to the wines (Tibull. ii. 1, 26; Hor. *Carm.* iii. 8, 11; Juv. v. 35). If the operation was not conducted with care, and the amphorae not stoppered down perfectly tight, a disagreeable effect would be produced on the contents, and it is in consequence of such carelessness that Martial pours forth his maledictions on the fumaria of Marseilles (x. 36; iii. 82, 22; xiii. 123).

The year B.C. 121 is said to have been a season singularly favourable for all the productions of the earth; from the great heat of the autumn the wine was of an unprecedented quality, and remained long celebrated as the *Vinum Opimianum*, from L. Opimius the consul of that year, who slew C. Gracchus. (Cic. *Brut.* 83, 287; Mart. i. 26, 5, &c.) A great quantity had been treasured up and sedulously preserved, so that samples were still in existence in the days of the elder Pliny, nearly two hundred years afterwards. It was reduced, he says, to the consistence of rough honey, and, like other very old wines, so strong and harsh and bitter as to be undrinkable until largely diluted with water. Such wines, however, he adds, were useful for flavouring others when mixed in small quantities (xiv. §§ 55, 94).

Our most direct information with regard to the price of common wine in Italy is derived from Columella (iii. 3, § 10), who reckons that the lowest market price of the most ordinary quality was 300 sesterces for 40 urnae; that is, 15 sesterces for the amphora, or 6*d.* a gallon nearly. At a much earlier date, the triumph of L. Metellus during the First Punic War (B.C. 250), wine was sold at the rate of 8 asses the amphora (Varro, *ap.* Plin. *H. N.* xviii. § 17), but this is quoted as an instance of extraordinary cheapness, and in the year B.C. 89 the censors P. Licinius Crassus and L. Julius Caesar issued a proclamation that no one should sell Greek and Aminean wine at so high a rate as 8 asses the amphora; but this was probably intended as a prohibition to their being sold at all, in order to check the taste then beginning to display itself for foreign luxuries, for we find that at the same time they positively forbade the use of exotic unguents (Plin. *H. N.* xiv. § 95, xiii. § 24).

The price of native wine at Athens was four drachmas for the metretes—that is, about 4½*d.* the gallon—when necessaries were dear, and Boeckh considers that we may assume one-half of this sum as the average of cheaper times. In fact, we find in an agreement in Demosthenes (*in Lacrit.* p. 928) 3000 jars (*κεράμια*) of Mendaean wine, which we know was used at the most sumptuous Macedonian entertainments (Athen. iv. p. 129 d), valued at 600 drachmas. If the *κεράμιον* is rightly estimated as about two-thirds of the ἀμφορεύς, and as holding nearly six gallons, this gives little more than 2*d.* a gallon; but still more astonishing is the marvellous cheapness of Lusitanian wine, of which more than ten gallons were sold for 3*d.* Of course we must remember that the purchasing power of money was far higher then than at present. On the other hand, high prices were given freely for the varieties held in esteem, since, as early as the time of Socrates, a metretes of Chian sold for a mina (Plut. *de Anim. Tranquill.* 10; Boeckh, *P. E.*, Book i. c. xvi.).

With respect to the way in which wine was drunk, and the customs observed by the Greeks and Romans at their drinking entertainments, the reader is referred to the article SYMPOSIUM.

It now remains for us to name the most esteemed wines, and to point out their localities; but our limits will allow us to enumerate none but the most celebrated. As far as those of Greece are concerned, our information is scanty; since in the older writers we find but a small number defined by specific appellations, the general term *οἶνος* usually standing alone without any distinguishing epithet. The wine of most early celebrity was that which the minister of Apollo, Maron, who dwelt upon the skirts of Thracian Ismarus, gave to Ulysses. It was red (*ἐρυθρόν*), and honey-sweet (*μελιηδέα*): so precious, that it was unknown to all in the mansion, save the wife of the priest and one trusty housekeeper; so strong, that a single cup was mingled with twenty of water; so fragrant, that even when thus diluted it diffused a divine and most tempting perfume (*Od.* ix. 208). Pliny (*H. N.* xiv. § 54) asserts that wine was produced in the same region in his own day, which would bear eight times its own amount of water. Homer mentions also more than once (*Il.* xi. 638; *Od.* x. 234) *Pramnian wine* (*οἶνος Πράμνειος*), an epithet which is variously interpreted by certain different writers (Athen. i. p. 22 f). The Scholiast on *Il.* l. c. explains that it got its name from a hill in Caria. It seems to have been rather the name of a kind of vine. (Cf. Ebeling, *Lex. Hom.* s. v.) In after-times a wine bearing the same name was produced in the island of Icaria, around the hill village of Latorea, in the vicinity of Ephesus, in the neighbourhood of Smyrna near the shrine of Cybele, and in Lesbos (Athen. i. p. 30 c, &c.; Plin. xiv. § 54). The Pramnian of Icaria is characterised by Eparchides as dry (*σκληρός*), harsh (*αὐστηρός*), astringent and remarkably strong,—qualities which, according to Aristophanes, rendered it particularly unpalatable to the Athenians (Athen. i. p. 30 c).

But the wines of greatest renown during the brilliant period of Grecian history and after the Roman conquest were grown in the islands of Thasos, Lesbos, Chios, and Cos, and in a few favoured spots on the opposite coast of Asia (Strabo, xiv. p. 637), such as the slopes of Mount Tmolus, the ridge which separates the valley of the Hermus from that of the Cayster (Plin. v. § 110; Verg. *Georg.* ii. 97; Ovid, *Met.* vi. 15); Mount Messogis, which divides the tributaries of the Cayster from those of the Maeander (Strabo, xiv. p. 650); the volcanic region of the Catacecaumene (Vitruv. iii. 3), which still retains its fame (Keppel's *Travels*, ii. p. 355); the environs of Ephesus (Dioscorid. v. 12), of Cnidus (Athen. i. p. 29 a), of Miletus (Athen. *l. c.*), and of Clazomenae (Plin. xiv. § 73 f). Among these the first place seems to have been by general consent conceded to the *Chian*, of which the most delicious varieties were brought from the heights of Ariusium, in the central parts (Verg. *Ecl.* v. 71; Plin. *H. N.* xiv. § 73; Silius, vii. 210), and from the promontory of Phanae at the southern extremity of the island (Verg. *Georg.* ii. 98). The *Thasian* and *Lesbian* occupied the second place, and the *Coan* disputed the palm with them (Athen. i. pp. 28, 29, &c.). In Lesbos the most highly prized vineyards were around Mytilene (Athen. i. p. 30 b; iii. p. 86 e, p. 92 d), and Methymna (Athen. viii. p. 363 b; Pausan. x. 19; Verg. *Georg.* ii. 89; Ovid, *Ar. Am.* i. 57). Pliny (xiv. § 73), who gives the preference over all others to the *Clazomenian* because it was least flavoured with brine, says that the Lesbian had naturally a taste of salt water, while the epithet "innocens," applied by Horace (*Carm.* i. 17, 21), seems to point out that it was light and wholesome.

It may here be observed that there is no foundation whatever for the remark that the finest Greek wines, especially the products of the islands in the Aegean and Ionian seas, belonged for the most part to the luscious sweet class. The very reverse is proved by the epithets *αὐστηρός*, *σκληρός*, *λεπτός*, and the like, applied to a great number, while *γλυκὺς* and *γλυκάζων* are designations comparatively rare, except in the vague language of poetry. "Vinum omne dulce minus odoratum," says Pliny (*H. N.* xiv. § 80), and the ancients appear to have been fully sensible that sweet wines could not be swallowed either with pleasure or safety, except in small quantities. The mistake has arisen from not perceiving that the expressions *οἶνος γλυκὺς* and *οἶνος ἡδὺς* are by no means necessarily synonymous. The former signifies wine *positively sweet*, the latter wine agreeable to the taste from the *absence of acidity*, in most cases indicating nothing more than *sound wine*.

It is well known that all the most noble Italian wines, with a very few exceptions, were derived from Latium and Campania, and for the most part grew within a short distance of the sea. "The whole of these places," says Strabo (v. p. 234), when describing this coast, "yield excellent wine; among the most celebrated are the Caecuban, the Fundanian, the Setinian, and so also are the Falernian, the Alban, and the Statinian." But the classification adopted by Pliny (xiv. § 59 f.) will prove our best guide, and this we shall follow to a certain extent.

In the first rank, then, we must place the *Setinum*, which fairly deserves the title of *Imperial*, since it was the chosen beverage of Augustus and most of his courtiers. It grew upon the hills of Setia, above Forum Appii, looking down upon the Pomptine marshes. ("Pendula Pomptinos quae spectat Setia campos," Mart. xiii. 112; see also vi. 86, ix. 3, x. 74, xiii. 112; Juv. v. 34; Silius, viii. 378; Plin. *H. N.* l. c.) Before the age of Augustus the *Caecubum* was the most prized of all. It grew in the poplar swamps bordering on the gulf of Amyclae, close to Fundi (Mart. xiii. 115). In the time of Pliny its reputation was entirely gone, partly in consequence of the carelessness of the cultivators, and partly from its proper soil, originally a very limited space, having been cut up by the canal of Nero extending from Baiae to Ostia. Cf. Plin. xxiii. § 35: "Caecuba jam non gignuntur." The name, however, continued to be used for any first-class wine (Galen, x. p. 834). Galen (Athen. i. p. 27 a) represents it as generous, full-bodied, and heady, not arriving at maturity until it had been kept for many years (Plin. *l. c.*; Strabo, v. p. 231; Mart. xiii. 115; Hor. *Carm.* i. 20, 9, iii. 23, 2, &c.).

The second rank was occupied by the *Falernum*, of which the *Faustianum* was the most choice variety, having gained its character from the care and skill exercised in the cultivation of the vines; but when Pliny wrote, it was beginning to fall in public estimation, in consequence of the growers being more solicitous about quantity than quality. The *Falernus ager*, concerning the precise limits of which there have been many controversies, commenced at the Pons Campanus, on the left hand of those journeying towards the Urbana Colonia of Sulla (cf. *Dict. Geog.* s. v.); the *Faustianus ager* at a village about six miles from Sinuessa, so that the whole district in question may be regarded as stretching from the Massic hills to the river Vulturnus. Falernian became fit for drinking in ten years, and might be used when twenty years old, but when kept longer gave headaches, and proved injurious to the nervous system (Plin. xxiii. § 34). Pliny distinguishes three kinds, the rough (*austerum*), the sweet (*dulce*), and the thin (*tenue*); Galen (*ap.* Athen. i. p. 26 c) two only, the rough (*αὐστηρὸς*) and the sweetish (*γλυκάζων*). When the south wind prevailed during the season of the vintage, the wine was sweetish and darker in colour (*μελάντερος*); but if the grapes were gathered during weather of a different description, it was rough and tawny or amber-coloured (*κιῤῥός*). The ordinary appearance of Falernian, which has been made a theme of considerable discussion, seems to be determined by a passage in Pliny (*H. N.* xxxvii. § 47), in which we are informed that the finest amber was named *Falerna*. Others arranged the varieties differently; that which grew upon the hill-tops they called *Caucinum*, that on the middle slopes *Faustianum*, that on the plain *Falernum* (Plin. *l. c.*; Athen. i. p. 26 c; Hor. *Carm.* i. 20, 10; Prop. iv. 6; Martial, ix. 95; Silius, vii. 159). It was unknown to Plautus and Cato, but occurs in Catullus and Varro.

In the third rank was the *Albanum*, from the Mons Albanus (*Mons Iuleus*, Mart. xiii. 109), of various kinds, very sweet (*praedulce*), sweetish (*γλυκάζων*), rough (Plin. xxiii. § 36), and sharp (*ὀμφακίας*); it was invigorating (*nervis utile*), and in perfection after being kept for fifteen years (Plin. *ll. cc.*; Mart. xiii. 109; Hor. *Sat.* ii. 8, 14; Juv. v. 33; Athen. i. p. 26 d). Here too we place the *Surrentinum*, from the promontory forming the southern horn of the bay of Naples, which was not drinkable until it had been kept for five-and-twenty years; for, being destitute of richness (*ἀλιπὴς*) and very dry (*ψαφαρός*), it required a long time to ripen, but was strongly recommended to convalescents, on account of its thinness and wholesomeness. Galen, however, was of opinion that it agreed with those only who were accustomed to use it constantly; Tiberius was wont to say that the physicians had conspired to dignify what was only *generous vinegar;* while his successor, Gaius Caesar, styled it *nobilis vappa* (Plin. xiv. § 64; Athen. *l. c.*). Of equal reputation were the *Massicum*, from the hills which formed the boundary between Latium and Campania, although somewhat harsh, as would seem, from the precautions recommended by the epicure in Horace (*Sat.* ii. 4, 51: cf. *Carm.* i. 1, 19; i. 7, 21; iii. 21;—Mart. xiii. 111; Silius, vii. 207), and the *Gauranum*, from the ridge above Baiae and Puteoli, produced in small quantity, but of very high quality, full-bodied (*εὔτονος*) and thick (*πάχυς*). (Athen. *l. c.*; Plin. xiv. § 63: cf. iii. § 60; Flor. iii. 5.) In the same class are to be included the *Calenum* from Cales, and the *Fundanum* from Fundi. Both had formerly held a higher place, "but vineyards," moralises Pliny (xiv. § 65), "as well as states, have their periods of rise, of glory, and of fall." The *Calenum* was light (*κοῦφος*), and better for the stomach than Falernian; the *Fundanum* was full-bodied (*εὔτονος*) and nourishing, but apt to attack both stomach and head; therefore little sought after at banquets (Strabo, v. p. 234; Athen. i. p. 27 a;

Hor. *Carm.* i. 31, 9; Juv. i. 69; Mart. x. 35, xiii. 113). This list is closed by the *Veliternum*, *Privernas*, and *Signinum*, from Velitrae, Privernum, and Signia, towns on the Volscian hills: the first was a sound wine, but had this peculiarity, that it always tasted as if mixed with some foreign substance; the second was thin and pleasant; the last was looked upon only in the light of a medicine, valuable for its astringent qualities (Athen. i. p. 27 b; Plin. *l. c.*; Mart. xiii. 116). We may safely bring in one more, the *Formianum*, from the gulf of Caieta ("Laestrygonia Bacchus in amphora," Hor. *Carm.* iii. 16, 34), associated by Horace with the Caecuban, Falernian, and Calene (Hor. *Carm.* i. 20), and compared by Galen (*ap.* Athen. i. p. 26 e) to the Privernas and Rheginum, but richer (*λιπαρωτέρος*), and ripening quickly.

The fourth rank contained the *Mamertinum*, from the neighbourhood of Messana, first brought into fashion by Julius Caesar (Mart. xiii. 117). The finest, called *Potitianum* (*Ἰωταλῖνος*, Athen. i. p. 27 d), from the fields nearest to the main land, was sound (*ἡδύς*), light, and at the same time not without body. The *Tauromenitanum* was frequently substituted fraudulently for the Mamertinum, which it resembled (Athen. i. p. 27 d; Plin. *l. c.*).

The wine of Etruria was proverbially bad, even that of the Mons Vaticanus (Mart. i. 26, 6; vi. 92, 3, &c.). At Ravenna wine was very cheap and abundant (Mart. iii. 56, 57), and the Rhaetian wine of Verona was famous (Verg. *Georg.* ii. 96; Plin. xiv. § 67).

Of the wines in Southern Gaul, that of *Baeterrae* alone bore a high character. The rest were looked upon with suspicion, in consequence of the notorious frauds of the dealers in the Province, who carried on the business of adulteration to a great extent, and did not scruple to have recourse to noxious drugs. Among other things, it was known that they purchased aloes, to heighten the flavour and improve the colour of their merchandise, and conducted the process of artificial ripening so unskilfully as to impart a taste of smoke, which called forth, as we have seen above, the malediction of Martial on the fumaria of Marseilles (Plin. *H. N.* xiv. § 68).

The produce of the Balearic isles was compared to the first growths of Italy, and the same praise was shared by the vineyards of *Tarraco* and *Lauron*, while those of the *Laletani* were not so much famed for the quality as for the abundance of their supply (Plin. *H. N.* xiv. § 71; Mart. xiii. 118; Silius, iii. 370).

Returning to the East, several districts of Pontus, Paphlagonia, and Bithynia, Lampsacus on the Hellespont, Telmessus in Caria, Cyprus, Tripolis, Berytus, and Tyre, all claimed distinction; and above all the *Chalybonium*, originally from Beroea, but afterwards grown in the neighbourhood of Damascus also, was the chosen and only drink of the Great King (Plin. *H. N.* xiv. § 73; Geopon. v. 2; Athen. i. p. 28 d), to which we may join the *Babylonium*, called nectar by Chaereus (Athen. i. p. 29 f), and the *Βύβλινος* from Phoenicia, which found many admirers (Athen. i. p. 29 b). The last is spoken of elsewhere as Thracian, or Grecian, or Sicilian, which may have arisen from the same grape having been disseminated through these countries. (Compare Herod. ii. 35; Athen. i. p. 31 a.)

Passing on, in the last place, to Egypt, where, according to Hellanicus, the vine was first discovered, the *Mareoticum*, from near Alexandria, demands our attention. It is highly extolled by Athenaeus, being white, sweet, fragrant, light (*λεπτός*), circulating quickly through the frame, and not flying to the head; but superior even to this was the *Taenioticum*, so named from a long narrow sandy ridge (*ταινία*) near the western extremity of the Delta; it was aromatic, slightly astringent, and of an oily consistency, which disappeared when it was mixed with water: besides these we hear of the *Sebennyticum*, and the wine of Antylla, a town not far from Alexandria. Advancing up the valley, the wine of the Thebaïs, and especially of Coptos, was so thin and easily thrown off that it could be given without injury to fever patients; and ascending through Nubia we reach *Meroë*, whose wine has been immortalised by Lucan (Athen. i. p. 33 f; Strab. xvii. p. 799; Hor. *Carm.* i. 37, 14; Verg. *Georg.* ii. 91; Lucan, x. 162; Plin. *H. N.* xiv. § 74). Martial appears to have held them all very cheap, since he pronounces the vinegar of Egypt better than its wine (xiii. 122).

We read of several wines which received their designation, not from the region to which they belonged, but from the particular kind of grape from which they were made, like the Pramnian, or from some circumstance connected with their history or qualities. Names belonging to the former class were in all likelihood bestowed before the most favoured districts were generally known, and before the effects produced upon the vine, by change of soil and climate, had been accurately observed and studied. After these matters were better understood, habit and mercantile usage would tend to perpetuate the ancient appellation. Thus, down to a late period, we hear of the *Aminneum* (*Ἀμιναῖος οἶνος*, Hesych.), from the *Aminnea vitis*, which held the first place among vines, and embraced many varieties, carefully discriminated and cultivated according to different methods (Plin. *H. N.* xiv. § 46; Cato, *R. R.* 6 and 7; Colum. iii. 2, § 7; 9, § 3). It was of Grecian origin, having been conveyed by a Thessalian tribe to Italy (a story which would seem to refer to some early migration), and reared chiefly in Campania around Naples, and in the Falernus ager. Its characteristic excellence was the great body and consequent durability of its wine (*firmissima vina*, Verg. *Georg.* ii. 97; Galen, *Meth. med.* xii. 4; Geopon. viii. 22; Cels. iv. 2; Macrob. ii. 16; Auson. *Ep.* xviii. 32; Seren. Samm. xxix. 544). So, in like manner, the *ψιθίος οἶνος* (Athen. i. p. 28 f), from the *ψιθία ἄμπελος* (Colum. iii. 2, § 24), which Virgil tells us (*Georg.* ii. 93) was particularly suitable for *passum*, and the *καπνίας* (smoke-wine) of Plato the comic poet (Athen. i. p. 31 e), prepared in greatest perfection near Beneventum, from the *κάπνεος ἄμπελος*, so named in consequence of the clusters being neither white nor black, but of an intermediate dusky or smoky hue (Theophr. *H. P.* ii. 4, *C. P.* v. 3; Aristot. *de Gener.* iv. 4; Plin. *H. N.* xiv. § 39; compare xxxvii. § 118, on the gem *Capnias*).

On the other hand, the *Σαπρίας*, on whose divine fragrance Hermippus descants in such glowing language (Athen. i. p. 29 e), is simply some rich wine of great age, "toothless, and sere, and wondrous old" (*ὀδόντας οὐκ ἔχων, ἤδη σαπρὸς . . . γέρων γε δαιμονίως*, Athen. x. p. 441 d; see Eustath. *ad* Hom. *Od.* ii. 340; Casaub. *ad* Athen. i. p. 29). The origin of the title *ἀνθοσμίας* is somewhat more doubtful: some will have it to denote wine from a sweet-smelling spot (Suid. *s. v.*); others more reasonably refer it to the "bouquet" of the wine itself (Hesych. *s. v.*); according to Phanias of Eresus, in one passage, it was a compound formed by adding one part of sea-water to fifty of must, although in another place he seems to say, that it was wine obtained from grapes gathered before they were ripe (Athen. i. p. 32 a; compare p. 462 e).

Those who desire more minute details upon this very extensive subject may consult the Geoponic Collection, books iii. to viii. inclusive; the whole of the 14th book of Pliny's *Natural History*, together with the first sixty sections of the 23rd; the 12th book of Columella, with the commentary of Schneider and others; the 2nd book of Virgil's *Georgics*, with the remarks of Heyne, Voss, and the old grammarians; Galen, vol. vi. 334–339, xiv. 28 ff.; Pollux, vi. foll.; Athenaeus, lib. i. and lib. x.; besides which there are a multitude of passages in other parts of the above authors, in Cato, Varro, and in the classics generally, which bear more or less upon these topics.

Of modern writers we may notice particularly, Prosper Rendella, *Tractatus de Vinea, Vindemia et Vino*, Venet. 1629; Galeatius Landrinus, *Quaestio de Mixtione Vini et Aquae*, Ferrar. 1593; Andreas Baccius, *de Naturali Vinorum Historia*, &c., Rom. 1596, *de Conviviis Antiquorum*, &c., Gronov. Thes. Graec. Antiq.; Sir Edward Barry, *Observations on the Wines of the Ancients*, Lond. 1775; Henderson, *History of Ancient and modern Wines*, Lond. 1824. Some of the most important facts are presented in a condensed form in Becker-Göll's *Gallus*, vol. iii. pp. 412–442, and *Charikles*, vol. ii. 337–352; and in Marquardt, *Röm. Privatalt.* ii. 54–84: cf. also V. Hehn, *Kulturpflanzen*,^{3} pp. 63–84.

[W. R.] [A. S. W.]

VIOCURI. [VIAE.]

VIRGAE. [FASCES.]

VIS. Laws were passed at Rome for the purpose of making various acts of violence criminal. The LEX PLOTIA or PLAUTIA, perhaps named after M. Plautius Silvanus, B.C. 89, appears to have first made *vis* the subject of a special judicium publicum, crimes of violence having previously only been punished when they could be brought under the head of *majestas* or of the *crimen de sicariis et veneficis*. The Lex Plautia was enacted against those who devastated houses, or who occupied public places and carried arms, or who attempted to influence the magistrates and senate by assembling bodies of armed men (Cic. *ad Att.* ii. 24; *de harusp. Resp.* 8, 15; *pro Cael.* 1, 1; the dissertation of Waechter, *Neues Archiv des Criminalrechts*, vol. xiii., reprinted in *Orellii Onomasticon*).

Besides other subsidiary laws under the Republic on the subject of *vis*, the nature of which is doubtful, there was a Lex Julia of the dictator Caesar, which made certain kinds of vis subject to *aquae et ignis interdictio* (Cic. *Phil.* i. 9, 21). Under Augustus the law concerning vis was the subject of two Juliae leges, which consolidated previous enactments and became the basis of subsequent laws. These leges were respectively entitled *de vi publica* and *de vi privata*. There has been considerable difference of opinion as to the meaning of the distinction thus made between vis publica and vis privata. The explanation of some writers is that vis publica was vis exercised by public persons, as by magistrates, while vis privata was that of private individuals. Another view is that vis was *publica* when deadly weapons were employed, *privata* when they were not. The most probable explanation is that originally vis publica meant such vis as was an open violation of a right of the state; vis privata, on the other hand, would be vis which seemed mainly to affect an individual right, though it was made criminal as interfering with the function of the state in maintaining public order (cf. Rein, *cit. infr.*). It is to be remembered, however, that various acts of vis which under the Julian laws were treated as vis privata, were subsequently made vis publica, in order to punish them with greater severity. Hence we find acts mentioned by Paulus (*cit. infr.*) as vis privata included in the Digest under vis publica.

The Lex de Vi Publica did not apply, as the title might seem to import, exclusively to acts against the public peace, and it is not possible to define it except by enumerating its chief provisions (cf. Paul. *l. c.*; Dig. *cit. infr.*). According to the law of the Digest, it was vis publica to collect arms (*tela*) in a house or in a villa except for the purpose of hunting, or going a journey or a voyage, the word *tela* being extensively interpreted so as to be equivalent to *arma*; to attack houses with armed men; to evict a person with an armed force (*hominibus armatis*); to appear in court or in a public assembly with arms for the purpose of intimidation; for a candidate to attempt to influence an election by assembling a mob (*turba*) or a gang of slaves; to cause a mob to assemble for various unlawful purposes; to interfere in various ways with the due administration of justice, as by preventing judices from exercising their functions in security, or by forcibly hindering an accused person from going to Rome to take his trial on the day fixed for it ("ne quis reum vinciat impediatve, quominus intra certum tempus adsit"); to assault or insult ambassadors; for a magistrate to abuse his power by causing a Roman citizen to be tortured (cf. Acts xxiii. 25), or to be executed without allowing an appeal to Rome (cf. Acts xxv. 10–12); for a magistrate to compel people to pay illegal taxes ("qui nova vectigalia exercet"); to interfere by force with the burial of a person; to commit rape; to compel a person by force to promise games or gifts to the people, &c.

The punishment for the violation of the Lex Julia de vi publica was *aquae et ignis interdictio* (subsequently *deportatio in insulam*), except in the case of attacking and plundering houses or villas with an armed band, in which case the punishment was death; and the penalty was the same for carrying off a woman, married or unmarried. The cases enumerated in the Digest as falling within the penalties of the Lex Julia de vi privata, are cases where the act was of less atrocity: for instance, if a man got a number of men together for a riot, which ended in the beating of a person, but not in his death, he came within the penalties of the Lex de Vi Privata.

It was also a case of vis privata when persons assembled in order to prevent a person being brought before the Praetor. The SENATUSCONSULTUM VOLUSIANUM extended the penalties of the lex to those who maintained another in his suit, with a view of sharing the damages awarded to him. The penalty of the law was also extended by imperial enactments to the offence of wrecking ships. It was vis privata to take the law into one's own hands by an act of violence. Thus a creditor who entered on the property of his debtor, which was not hypothecated to him, unless under judicial authority, was guilty of this offence. The penalties of this lex were the loss of a third part of the offender's property; and he was also declared to be incapable of being a senator, or decurio, or a judex; by a senatusconsultum, the name of which is not given, he was incapacitated from enjoying any honour, *quasi infamis*. (Dig. 48, 6, 7; Cod. ix. 12, 13; Paul. *Sent. rec.* v. 26; Rein, *Das Criminalrecht der Römer*, p. 732, &c.; Walter, *Geschichte d. R. R.*; Stephen, *History of the Criminal Law of England*, i. pp. 16, 17.) [G. L.] [E. A. W.]

VIS ET VIS ARMATA. There was an interdict *unde vi* or *de vi* which could be maintained by a man who was forcibly ejected from the possession of a piece of ground or building ("unde tu illum vi dejecisti restituas") against the person who had ejected him. The interdict had two forms, according as to whether deadly weapons had been used in carrying out the ejectment or not. The interdict in the latter case of simple violence is called by Cicero *interdictum quotidianum;* the interdict in case of armed violence was known as *interdictum de vi armata.* When the interdict was brought on account of eviction by ordinary violence, the defendant could defend himself by proving that he himself had been previously evicted by the plaintiff *vi, clam*, or *precario* [POSSESSIO], but he was precluded from this defence if he had been guilty of vis armata. By a constitution of the Emperor Valentinian (Cod. 8, 4, 7), however, it was provided that a person who had evicted another by violence should in all cases restore possessio, and, if owner, should forfeit his property; if not owner, should forfeit the value. Thus the plea that the plaintiff had acquired possession *vi, clam*, or *precario* from the defendant, was excluded in the case of vis quotidiana as well as in that of vis armata. (Dig. 43, 16; Gaius, iv. 154, ed. Poste; INTERDICTUM; POSSESSIO; for an account of the praetorian action *de vi bonorum raptorum*, see FURTUM.) [E. A. W.]

VITRUM (ὕαλος), glass. A singular amount of ignorance and scepticism long prevailed with regard to the knowledge possessed by the ancients in the art of glass-making. Some asserted that it was to be regarded as exclusively a modern invention, while others, unable altogether to resist the mass of evidence to the contrary, contented themselves with believing that the substance was known only in its coarsest and rudest form. It is now clearly demonstrated to have been in common use at a very remote epoch. Various specimens still in existence prove that the manufacture had in some branches reached a point of perfection to which recent skill has not yet been able to attain; and although we may not feel disposed to go so far as Winckelmann (i. c. 2, § 20), who contends that it was used more generally and for a greater variety of purposes in the old world than among ourselves, yet when we examine the numerous collections arranged in all great public museums, we must feel convinced that it was employed as an ordinary material for all manner of domestic utensils by the Egyptians, Greeks, and Romans.

A vitreous glaze is found in remains dating from the earliest periods of Egyptian history, and we find the process of glass-blowing distinctly represented in the paintings of Beni-Hassan, which were executed during the reigns of Usertesen the First and his immediate successors (*circa* 2300 B.C.). The oldest Egyptian glass proper which can be dated with certainty is a vase of opaque blue glass in the British Museum, with a design inlaid in yellow, which includes the name of Thothmes II. (16th cent. B.C.). Vases also, wine-bottles, drinking-cups, bugles, and a multitude of other objects have been discovered in sepulchres and attached to mummies both in Upper and Lower Egypt; and although in most cases no precise date can be affixed to these relics, many of them are referred to an early period. (Wilkinson, *Ancient Egyptians*, iii.^{2} pp. 141 f.; Deville, *L'Art de la Verrerie*, pl. iii.)

The Assyrians also attained to a high degree of skill in glass-making. The oldest piece with a fixed date is an alabastron of bright green glass from the North-west Palace at Nimroud, with the name of king Sargon, B.C. 719 (Layard, *Nineveh and Babylon*, p. 197; Froehner, *La Verrerie ant.* p. 16). This vase is in the British Museum.

A story has been preserved by Pliny (*H. N.* xxxvi. § 191), that glass was first discovered accidentally by some merchants who having landed on the Syrian coast at the mouth of the river Belus, and being unable to find stones to support their cooking-pots, fetched for this purpose from their ship some of the lumps of nitre which composed the cargo. This being fused by the heat of the fire, united with the sand upon which it rested and formed a stream of vitrified matter. The Phoenicians probably learnt the art of glass-making from the Egyptians; but the tale is no doubt connected with the fact recorded by Strabo (xvi. p. 758) and Josephus (*B. J.* ii. 9), that the sand of the district in question was esteemed peculiarly suitable for glass-making, and exported in great quantities to the workshops of Sidon, long the most famous in the ancient world. (See Hamburger and Michaelis on the Glass of the Hebrews and Phoenicians, *Commentar. Soc. Gott.* vol. iv.; Heeren, *Ideen*, i. p. 94.) Alexandria, another centre of the industry, sustained its reputation for many centuries; Rome derived thence a great portion of its supplies, and as late as the reign of Aurelian we find the manufacture still flourishing (Cic. *pro Rabir. Post.* 14, 40; Strabo, *l. c.*; Martial, xi. 11, xii. 74, xiv. 115; Vopisc. *Aurel.* 45; Boudet, *Sur l'Art de la Verrerie né en Égypte; Description de l'Égypte*, vol. ix. p. 213).

Glass is not mentioned in Homer, unless Helbig's theory is accepted that *κύανος* is a blue vitreous glaze (Helbig, *Homerisches Epos*, p. 80). In the deposits of Mycenae and kindred sites, numerous beads, rosettes, pendants, and other ornaments of glass occur. Bottles, however, are very rare; a few only having been found at Ialysos in Rhodes.

There is some difficulty in deciding by what Greek author glass is first mentioned, because the term *ὕαλος*, like the Hebrew word used in the Book of Job (xxviii. 17) and translated in the LXX. by *ὕαλος*, unquestionably denotes not only artificial glass but rock-crystal, or indeed any transparent stone or stone-like substance (Schol. *ad* Aristoph. *Nub.* 768). Thus the *ὕελος* of Herodotus (iii. 24), in which the Ethiopians encased the bodies of their dead, cannot be glass, although understood in this sense by Ctesias and Diodorus (iii. 15), for we are expressly told that it was dug in abundance out of the earth; and hence commentators have conjectured that rock-crystal or rock-salt, or amber, or Oriental alabaster, or some bituminous or gummy product, might be indicated. But when the same historian in his account of sacred crocodiles (ii. 69) states that they were decorated with ear-rings made of melted stone (*ἀρτήματά τε λίθινα χυτὰ καὶ χρύσεα ἐς τὰ ὦτα ἐνθέντες*), we may safely conclude that he intends to describe some vitreous ornament for which he knew no appropriate name. The *σφραγὶς ὑαλίνη* and *σφραγῖδε ὑαλίνα* of an Athenian inscription referred to B.C. 398 (Boeckh, *Corp. Inscr. Gr.* n. 150, § 50), together with the passage in Aristophanes (*Acharn.* 74) where the envoy boasts that he had been drinking with the Great King *ἐξ ὑαλίνων ἐκπωμάτων*, are not decisive. But the early Greek pastes with designs in intaglio, preserved in all museums, make it highly probable that the seals referred to above were of glass. Vessels of glass also appear to be mentioned in the treasure lists at the beginning of the 4th century (*C. I. A.* ii. 645, 646, 656). Setting aside the two problems with regard to glass, attributed to Aristotle, as confessedly spurious, we at length find a satisfactory testimony in the works of his pupil and successor, Theophrastus, who notices the circumstances alluded to above, of the fitness of the sand at the mouth of the river Belus for the fabrication of glass. Blümner, however (*Technologie*, iv. p. 384), questions whether glass was manufactured in Greece itself, even in the time of the Diadochi.

Among the Latin writers Lucretius appears to be the first in whom the word *vitrum* occurs (iv. 604, vi. 991); but it must have been well known to his countrymen long before, for Cicero names it, along with paper and linen, as a common article of merchandise brought from Egypt (*pro Rab. Post.* 14, 40). Glass of Phoenician importation occurs indeed in cemeteries of the 8th century, at Tarquinii (Helbig, *Homerisches Epos*, p. 15). Scaurus, in his aedileship (B.C. 58), made a display of it such as was never witnessed even in after-times; for the *scena* of his gorgeous theatre was divided into three tiers, of which the under portion was of marble, the upper of gilded wood, and the middle compartment of glass (Plin. *H. N.* xxxvi. §§ 114, 189). In the poets of the Augustan age it is constantly introduced, both directly and in similes, and in such terms as to prove that it was an object with which every one must be familiar (*e.g.* Verg. *Georg.* iv. 350, *Aen.* vii. 759; Ovid, *Amor.* i. 6, 55; Prop. iv. 8, 37; Hor. *Carm.* iii. 13, 1). Strabo declares that in his day a small drinking-cup of glass might be purchased at Rome for half an as (xvi. p. 758; compare Martial, ix. 60), and so common was it in the time of Juvenal and Martial, that old men and women made a livelihood by bartering sulphur matches for broken fragments (Juv. v. 48; Martial, i. 42, x. 3; Stat. *Sylv.* i. 6, 73; compare Dio Cass. lvi. 17). When Pliny wrote, manufactories had been established not only in Italy, but in Spain and Gaul also, and glass drinking-cups had entirely superseded those of gold and silver (*H. N.* xxxvi. §§ 192–199), and in the reign of Alexander Severus we find *vitrearii* ranked along with curriers, coachmakers, goldsmiths, silversmiths, and other ordinary artificers whom the emperor taxed to raise money for his thermae (Lamprid. *Alex. Sev.* 24). A list of the glass-workers whose names are known as occurring on extant specimens, is given by Froehner, *La Verrerie antique*, p. 123.

The numerous specimens transmitted to us prove that the ancients were well acquainted with the art of imparting a great variety of colours to their glass; they were probably less successful in their attempts to render it perfectly pure and free from all colour, since we are told by Pliny that it was considered most valuable in this state. It was wrought according to the different methods now practised, being fashioned into the required shape by the blowpipe; or *cut*, as we term it, although *ground* (*teritur*) is a more accurate phrase, upon a wheel; or engraved with a sharp tool, like silver ("aliud flatu figuratur, aliud torno teritur, aliud argenti modo caeiatur," Plin. *H. N.* xxxvi. § 193). The *diatreta* of Martial (xii. 70) were glass cups cut or engraved according to one or other of the above methods. The process was difficult, and accidents occurred so frequently (Mart. xiv. 115) that the jurists found it necessary to define accurately the circumstances under which the workman became liable for the value of the vessel destroyed (Dig. 9, 2, 27, 29). The art of etching upon glass, now so common, was entirely unknown, since it depends upon the properties of fluoric acid, a chemical discovery of the last century.

We may now briefly enumerate the chief uses to which glass was applied. The best idea, however, of the admirable ingenuity and skill of the ancient glass-workers, may be obtained from such a collection as that of the British Museum, or the chief continental cabinets. Specimens of the different types are finely engraved by Froehner, *La Verrerie antique* (1879).

1. Bottles, vases, cups, and cinerary urns. These specimens are extant in immense number and variety. Many which have been shaped by the blowpipe only, are remarkable for their graceful form and brilliant colours. Some have been blown out into moulds, by the blow-pipe, and appear in the form of a bunch of grapes (cf. Achilles Tatius, 2, 3), a shell, or a negro's head. Others are of the most delicate and complicated workmanship. A very remarkable object belonging to the last class, now in the Trivulsi Collection at Milan, is described in the notes to Winckelmann (i. c. 2, § 21) and figured in Vol. I. under DIATRETA. That woodcut, however, hardly does justice to the delicacy of the work, which is

better shown in the photographic plate of Adda, *Ricerche sulle Arti e sull' Industria Romana.* For a description, see DIATRETA, Vol. I., p. 626. A small fragment of a similar vase may be seen in the glass collection of the British Museum. Another cup, found at Strasburg, was dated by the name of the Emperor Maximian (286–310 A.D.). This specimen, which perished in 1870, is engraved by Deville, *L'Art de la Verrerie*, pl. xxxiii A. But the great triumph of ancient genius in this department is the celebrated Portland Vase, formerly known as the Barberini Vase, which is now in the British Museum. It was found in the 16th century at a short distance from Rome, in a marble coffin within a sepulchral vault, pronounced upon very imperfect evidence to have been the tomb of Alexander Severus. The extreme beauty of this urn led Montfaucon and other antiquaries to mistake it for a real sardonyx. Upon more accurate examination it was ascertained to be composed of dark blue glass, of a very rich tint, on the surface of which are delineated in relief elaborately wrought figures of opaque white glass. [See SCALPTURA.] With such samples before us, we need not wonder that in the time of Nero a pair of moderate-sized glass cups with handles (*pteroti*) sometimes cost fifty pounds (*HS. sex millibus*, Plin. *H. N.* xxxvi. § 195). Another method practised with success was that of adding coloured glasses in a fused state to a background, in the manner of enamel. See a medallion with a gryphon, now in the British Museum (*Catalogue of the Slade Collection*, No. 84).

2. Glass Pastes presenting fac-similes, either in relief or intaglio, of engraved precious stones. In this way have been preserved exact copies of many beautiful gems, of which the originals no longer exist, as may be seen from the catalogues of Stosch, of Tassie, and from similar publications. These were in demand for the rings of such persons as were not wealthy enough to purchase real stones, as we perceive from the phrase "vitreis gemmis ex vulgi anulis" (Plin. *H. N.* xxxv. § 48). Large medallions also of this kind are still preserved, and bas-reliefs of considerable magnitude, which successfully imitate precious materials, and in some cases the true material has only been ascertained in quite recent years. (See Winckelmann, i. c. 2, § 27.)

3. Closely allied to the preceding were imitations of coloured precious stones, such as the carbuncle, the sapphire, the amethyst, and, above all, the emerald. These counterfeits were executed with such fidelity that detection was extremely difficult, and great profits were realised by dishonest dealers who entrapped the unwary (Plin. *H. N.* xxxvii. § 197). That such frauds were practised even upon the most exalted in station is seen from the anecdote given by Trebellius Pollio of the whimsical vengeance taken by Gallienus (*Gall.* c. 12) on a rogue who had cheated him in this way, and collections are to be seen at Rome of pieces of coloured glass which were evidently once worn as jewels, from which they cannot be distinguished by the eye. (Plin. *H. N.* xxxvii. § 98; Senec. *Ep.* 90; Isidor. *Orig.* xvi. 15, § 27; Beckmann, *History of Inventions*, vol. i. p. 199, Eng. Trans. 3rd edit.)

4. One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in such a manner as to depict upon the upper surface some figure or pattern, upon the principle of a minute mosaic. The filaments thus combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole of the little column thus formed, and hence, if it was cut into thin slices at right angles to the direction of the fibres, each of these sections would upon both sides represent the design which would be multiplied to an extent in proportion to the total length of the glass threads. Further, if the column is heated and drawn out, the design becomes proportionately minute. When these sections have been again fused together side by side, the result is *millefiori* glass (*Cat. of the Slade Collection*, pl. iv.). Two beautiful fragments evidently constructed in this way are accurately commented upon by Winckelmann (i. c. 2, §§ 22–24); another, more recently brought from Egypt, is shown in Wilkinson's work, Pl. xiv., figs. 5, 6, 7; cf. vol. ii. p. 146. Many mosaic pavements and pictures (*opus musivum*) belong to this head, since the cubes were frequently composed of opaque glass as well as marble, but these have been already discussed under PICTURA, pp. 397 f.

5. One method of decoration employed by the ancients consisted in enclosing designs in gold leaf between two layers of transparent glass. This is most common from the 3rd century A.D., when small Christian subjects are thus represented. Examples also occur of a good Greek period, such as three cups from Canosa, now in the British Museum, perhaps dating from 200 B.C., but these are very rare. The Christian examples have been described by Garrucci, *Vetri ornati di Figure in oro dei Cristiani.* In a few rare examples, the gold leaf has been cut away with a sharp point, in such a way as to produce the effect of a finely-stippled drawing.

6. Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling-houses, just as scagliola is frequently employed in Italy, and occasionally in our own country also. Rooms fitted up in this way were called *vitreae camerae*, and the panels *vitreae quadraturae.* Such was the kind of decoration introduced by Scaurus for the scene of his theatre, not columns nor pillars of glass as some, nor bas-reliefs as others, have imagined. (Plin. *H. N.* xxxvi. § 189; Stat. *Syl.* i. 5, 42; Senec. *Ep.* 76; Vopisc. *Firm.* c. 3; Winckelmann, i. c. 2, § 21; Passeri, *Lucernae Fictiles*, p. 67, tab. lxxi.)

7. The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavations at Pompeii, for not only have many fragments of flat glass been disinterred from time to time, but in the tepidarium of the public baths a bronze lattice came to light with some of the panes still inserted in the frame, so as to determine at once not only their existence, but the mode in which they were secured and arranged. (Mazois, *Palais de Scaurus*, c. viii.

p. 97; *Ruines de Pompéi*, vol. iii. p. 77.) A few specimens of window glass may be seen in the glass collection of the British Museum. [DOMUS, Vol. I. p. 686 *b*.] The same collection also contains a wooden picture-frame of late Graeco-Egyptian origin, with a rebate for a sheet of glass. (Petrie, *Hawara*, pl. xii.)

8. From the time that pure glass became known, it must have been remarked that when darkened upon one side, it possessed the property of reflecting images. We are certain that an attempt was made by the Sidonians to make looking-glasses (Plin. *H. N.* xxxvi. § 193), and equally certain that it must have failed, for the use of metallic mirrors, which are more costly in the first instance, which require constant care and attain but imperfectly the end desired, was universal under the Empire. Respecting ancient mirrors, see SPECULUM.

9. A strange story with regard to an alleged invention of malleable glass is found in Petronius (c. 51), is told still more circumstantially by Dio Cassius (lvii. 21), and is alluded to by Pliny (*H. N.* xxxvii. § 195), with an expression of doubt as to its truth. An artist appeared before Tiberius with a cup of glass. This he dashed violently upon the ground. When taken up, it was neither broken nor cracked, but dinted like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative, upon which the order was given that he should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known.

(1886), p. 744. References to the older literature may be found in the above works.

[W. R.] [A. H. S.]

VITTA, or plural **VITTAE**, a ribbon or fillet, is to be considered (1) as an ordinary portion of female dress; (2) as a decoration of sacred persons and sacred things.

1. When considered as an ordinary portion of female dress, it was simply a band encircling the head, and serving to confine the tresses (*crinales vittae*); the ends, when long (*longae taenia vittae*), hanging down behind (Verg. *Aen.* vii. 351, 403; Ovid, *Met.* ii. 413, iv. 6; Isidor. xix. 31, § 6). It was worn (1) by maidens (Verg. *Aen.* ii. 168; Prop. iv. 11, 34; Val. Flacc. viii. 6; Serv. *ad* Verg. *Aen.* ii. 133); (2) by married women also, the vitta assumed on the nuptial day being of a different form from that used by virgins (Ovid, *Trist.* ii. 252; Prop. v. 3, 15, and 11, 34; Plaut. *Mil. Gl.* iii. 1, 194; Val. Max. v. 2, § 1). From the word *altera* in Prop. v. 11, 34, Marquardt is probably right in deducing that the vitta of married women was a *double band*, whereas the fillet of maidens was single (Marquardt, *Privatleben*, 46; cf. Becker-Göll, *Gallus*, ii. 31: for the wearing of ταινίαι by Greek brides, see Becker-Göll, *Charikles*, iii. 375;—Stephani, *Compte Rendu*, 1872, p. 192; 1874, p. 140).

The vitta was *not* worn by libertinae even of fair character (Tibull. i. 6, 67), much less by meretrices; hence it was looked upon as an *insigne pudoris*, and, together with the *stola* and *instita*, served to point out at first sight the freeborn matron (Ovid, *A. A.* i. 31; *R. A.* 386; *Trist.* ii. 247; *Ep. ex Pont.* iii. 3, 51).

The colour was probably a matter of choice: white and purple are both mentioned (Ovid, *Met.* ii. 413; *Ciris*, 511;—Stat. *Achill.* i. 611). One of those represented in the cuts below is ornamented with embroidery, and they were in some cases set with pearls (*vittae margaritarum*, Dig. 34, 2, 25, § 2).

The following woodcuts represent back and front views of the heads of statues from Herculaneum, on which we perceive the vitta (*Bronzi d'Ercolano*, vol. ii. tav. 72, 75).

Vittae.

A full discussion of the dressing of the hair and further illustration will be found under COMA.

For ταινίαι and vittae in Greek and Roman funerals as used for the decoration of the dead body and of the bier, see FUNUS, Vol. I. pp. 886, 890 (woodcut), and compare Becker-Göll, *Charikles*, p. 122.

2. When employed for sacred purposes, it was usually twisted round the infula [INFULA], holding together the loose flocks of wool, and depending in streamers (Verg. *Georg.* iii. 487, *Aen.* x. 537; Isidor. xix. 30, § 4; Serv. *ad* Verg. *Aen.* x. 538; Lucan. v. 142). Under this form it was employed as an ornament for (1) priests, and those who offered sacrifice (Verg. *Aen.* ii. 221, x. 537; Tac. *Ann.* i. 57); (2) priestesses, especially those of Vesta, and hence *vittata sacerdos* for a Vestal, κατ' ἐξοχήν (Verg. *Aen.* vii. 418; Ovid, *Fast.* iii. 30, vi. 457; Juv. iv. 9, vi. 50; VESTALES); (3) prophets and poets, who may be regarded as priests, and in this case the vittae were frequently intertwined with chaplets of olive or laurel (Verg. *Aen.* iii. 81, vii. 665;—Stat. *Silv.* ii. 1, 26; *Achill.* i. 11; *Theb.* iii. 466); (4) statues of deities (Verg. *Aen.* ii. 168, 296; compare Stat. *Silv.* iii. 3, 3); (5) victims decked for sacrifice (Verg. *Georg.* iii. 487, *Aen.* ii. 133, 156, v. 366; Ovid, *Ep. ex Pont.* iii. 2, 74; Stat. *Achill.* ii. 301); (6) altars (Verg. *Ecl.* viii. 64, *Aen.* iii. 64; ARA, Vol. I. p. 158 *a*); (7) temples (Prop. v. 9, 27; compare Tac. *Hist.* iv. 53); (8) the ἱκετηρία of suppliants (Verg. *Aen.* vii. 237; viii. 128). Here the vittae seem to have served to bind the festoons of wool upon the branches which were borne in the hand (Verg. *Aen.* vii. 237, viii. 128; Hom. *Il.* i. 14; Plut. *Thes.* 18; Soph. *O. T.* 3).

The sacred vittae, as well as the infulae, were made of wool, and hence the epithets *lanea* (Ovid, *Fast.* iii. 30) and *mollis* (Verg. *Ecl.* viii.

64). They were white (*niveae*, Verg. *Georg.* iii. 487; Ovid, *Met.* xiii. 643; Stat. *Theb.* iii. 466), or purple (*puniceae*, Prop. v. 9, 27), or azure (*caeruleae*) when wreathed round an altar to the manes (Verg. *Aen.* iii. 64).
[W. R.] [G. E. M.]

ULNA (ὠλένη), properly the fore-arm from the shoulder to the wrist, is also used for the whole arm, and even for the whole span of both arms; and hence, as a measure of length, it appears to be used with different significations. In most of the passages in which it occurs (Verg. *Georg.* iii. 355; Ovid, *Metam.* viii. 750; Hor. *Epod.* iv. 8) there is nothing to determine its length, but Hultsch is probably right in taking it to be one-third of the ὀργυιὰ or arm-stretch of nearly 6 feet, and therefore one-third of the human body. Hence in Verg. *Ecl.* iii. 105 three ulnae = the size of the body, and so the size of the grave of Caelius. Pliny, however, uses it as equivalent to the ὀργυιὰ, as may be seen from *H. N.* xvi. § 202, xxxii. § 133, compared with § 203 (Hultsch, *Metrol.* p. 78). [P. S.] [G. E. M.]

ULTROTRIBU'TA. [CENSOR, Vol. I. p. 402 *b*.]

UMBELLA. [UMBRACULUM.]

UMBILI'CUS. [LIBER.]

UMBO. [CLIPEUS; TOGA.]

UMBRA'CULUM, UMBELLA (σκιάδειον, σκιαδίσκη). Umbrellas and fans are shown on both Assyrian and Egyptian monuments before the 7th century B.C., and it may be assumed that they came to Greece with other articles of Oriental luxury about that period. By the 5th century, the use of umbrellas was so established at Athens that they were carried by the daughters of the aliens (μέτοικοι) after the Athenian maidens in the procession at the PANATHENAEA [p. 327 *a*]. So far, indeed, were they from appearing strange or incongruous that on the Eastern frieze of the Parthenon the god Eros holds the parasol of his mother Aphrodite. Such umbrellas and parasols appear on vase-paintings, from those of the perfect Attic style down to the latest South Italian wares. The accompanying cut from a vase of the latter class (Millin, *Peintures de Vases Antiques*, vol. i. pl. 70) shows a lady wearing a χιτών [TUNICA] and small ἱμάτιον [PALLA], and holding a parasol over her bare head. In other paintings ladies sit on chairs shading themselves with a parasol, while in not a few a slave holds it above his mistress's head. All these pictures show forms, like those used nowadays, with a frame-work of ribs (*virgae*) which could be opened and shut (Aristophanes, *Eq.* 1347 f., τὰ δ' ἄντ' .... ἐξεπετάννυτο, ὥσπερ σκιάδειον καὶ πάλιν ξυνήγετο: cf. Ovid, *Art. Am.* ii. 209, "ipse tene distenta umbracula virgis").

Umbraculum. (From a vase-painting.)

The use of umbrellas was almost confined to women, for, as has been explained in the article PILLEUS, it was considered effeminate for men to wear a protection against the sun except when travelling. Some luxurious fops or upstarts, however, like the περιφόρητος 'Αρτέμων of Anacreon (Athen. xii. p. 534 *a*), occasionally braved public opinion and used them. In Hellenistic times a large straw hat came into fashion, doubtless as a substitute for the parasol. It is shown on an immense number of terra-cotta figures from Tanagra, Myrina, and all over the Greek world. The θολία which Praxinoa puts on in the famous toilet scene in Theocritus (*Id.* xv. 39) seems to have been something of this kind (Schol. *in* Theocr. *l. c.*; Pollux, vii. 174, x. 127; Jahn, *Arch. Beiträge*, p. 403).

At Rome the practice of using parasols probably came in with the Greek fashions which prevailed in the last two centuries of the Republic. The Roman lady walked with her parasol carried by an attendant slave (*pedisequus* or *pedisequa*; cf. Claud. *in Eutrop.* i. 464, "[Eunuchi] umbracula gestant virginibus;" Mart. xiv. 73, 6), whose place might be taken by a diligent wooer if he wished to win her good graces (Ovid, *l. c.*). Parasols were in great demand at the amphitheatre, for the *velum* was not always sufficient to keep off the sun, and it seems to have been the fashion to adopt the colour—green, &c.—of one's favourite faction on them (Juv. ix. 50; Mart. xiv. 28). [See Paciandi, *de Umbellae gestatione*, Rome, 1752; Baumeister, *Denkmäler*, art. Sonnenschirm; Iwan Müller, *Handbuch*, pp. 433, 440; Hermann-Blümner, *Privatalterth.*, p. 195 f.; Becker-Göll, *Charikles*, i. 201; Blümner, *Leben und Sitten*, p. 73; Marquardt, *Privatleben*, p. 148; Böttiger (ed. Fischer), *Sabina*, pp. 132, 135, 161.] [W. S.] [W. C. F. A.]

U'NCIA. [AS; PONDERA. Table No. XIII. at the end of the volume.]

UNCIA'RIUM FENUS. [FENUS.]

UNCTO'RES. [BALNEAE.]

UNGUENTUM (ἔλαιον, μύρον, σμῆμα or σμῆγμα). The term includes all the products of the perfumer, whether used for health or luxury; oils, ointments, pomatums, essences, salves. The first and simplest of unguents, oil, is mentioned repeatedly in Homer, usually in connexion with the bath (λοῦσαν καὶ χρῖσαν ἐλαίῳ, ἤλειψεν λίπ' ἐλαίῳ are quite stock phrases); and to the latest times it remained associated with bathing and athletic contests [ATHLETAE; BALNEAE]. The more elaborate arts of perfumery had early attained an extraordinary development in the East; the Greeks, for whose practice the comic writers are our fullest witnesses, rapidly acquired the same tastes; the Romans did not wait till they had direct intercourse with the East, but learnt these arts at an early period from the luxurious cities of Magna Graecia.

Among the various and costly oils which were used partly for the skin and partly for the hair, the following are enumerated by Pliny (*H. N.* xiii. §§ 4–18): Delium, Mendesium, irinum, rhodinum or rosaceum, crocinum (cf. Propert. iii. 10, 22=iv. 9, 22 Müller), oenanthinum, amaracinum (cf. Lucret. ii. 847, iv. 1179, vi. 973), melinum, cyprinum, metopium, Panathenaicum, pardalium, narcissinum, sampsuchinum, susinum, sesaminum, telinum, megalium or megalesium, balaninum, nardinum, spicatum. Other favourites, likewise mentioned by Pliny, are myrrh (Propert. i. 2, 3), malobathrum (Hor. *Carm.* ii. 7, 8), costum (Id. *ib.* iii. 1, 44, with Orelli's excursus), amomum (Verg. *Ecl.* iii. 89, iv. 25), cardamomum, cinnamomum, &c., besides mineral products. A regale unguentum made for the Parthian kings was compounded of 25 precious substances (Plin. *l. c.* § 18). Soap, a Gallic or perhaps rather a German invention (Beckmann, *Hist. of Inv.* ed. Bohn, ii. 92), was used as a pomatum rather than a detergent, and imparted to the hair the red or yellow tinge so much in fashion among the Romans: the "sapo, Gallorum hoc inventum rutilandis capillis" of Pliny (*H. N.* xxviii. § 191, where the word *sapo* occurs for the first time) is doubtless identical with the *spuma Batava*, *caustica spuma*, and *Mattiacae pilae* of Martial (viii. 33, 20; xiv. 26 and 27; cf. *Dict. Geogr.* art. *Mattiaci*). This fancy for light hair was as old as Cato: "flavo cinere unctitabant, ut rutilae essent" (*ap.* Serv. *ad Aen.* iv. 698; cf. Val. Max. ii. 1, § 5). The "hair-restorers" also came from Germany: "femina canitiem Germanis excitat herbis" (Ov. *A. Am.* iii. 163). The effects of these *herbae* and *venena* were sometimes disappointing (Id. *Amor.* i. 14 *passim*), when recourse was had to the same country for the false hair which then became necessary (cf. GAUSAPE, last paragraph).

In addition to these oils the ancients also used various kinds of scented powders, called by the general name of διαπάσματα (Theophr. *Odor.* 8; Dioscor. i. 6; [Lucian] *Amor.* 39). To what an excess the habit of using fragrant oils and the ike was carried, appears from Seneca (*Ep.* 86, § 12), who says that people anointed themselves wice or even three times a day. At Rome, however, these luxuries did not pass unrebuked n the time of Scipio (Gell. vi. [vii.] 12, § 5); nd still later, in B.C. 89, the censors positively orbade the sale of exotic unguents (Plin. *H. N.* iii. § 24). The wealthy Greeks and Romans arried their oils and essences with them, specially when they bathed, in small boxes of ostly materials and beautiful workmanship, which were called *narthecia* (Cic. *de Fin.* ii. 7, 22; Mart. xiv. 78; cf. Böttiger, *Sabina*, i. 52). nother very common kind of scent bottle was he ALABASTRUM. It was, however, thought ndignified to carry one's own oil flask to the ublic baths, instead of having it borne by a ave: such persons were called αὐτολήκυθοι (L. nd S., ed. 7, *s. v.*; Sandys, *Excurs. on Dem.* ii. 27 ff.). The traffic which was carried on in hese ointments and perfumes in several towns of Greece and Southern Italy was very considerable. The persons engaged in manufacturing them were called by the Greeks μυρεψοί and μυροπῶλαι (see L. and S. *s. vv.*), by the Romans *unguentarii* (Cic. *de Off.* i. 42, § 150; Hor. *Sat.* ii. 3, 228), or, as they frequently were women, *unguentariae* (Plin. *H. N.* viii. § 14), and the art of compounding them *unguentaria*. In the wealthy and effeminate city of Capua there was a street or square called the Seplasia, which consisted entirely of shops in which unguents were sold (Cic. *in Pison.* 11, § 24; Asconius *ad loc.*; *de Lege Agr.* ii. 34, § 94; *pro Sest.* 8, § 19). On oils and unguents, see especially Becker-Göll, *Gallus*, iii. 157–167. For the cosmetics employed in painting the face, see FUCUS; for the detergents used instead of soap for washing, see FULLO; on the antiquities of the toilet generally, the work of Böttiger, *Sabina oder Morgenscenen im Putzzimmer einer reichen Römerin*, 2 vols. Leipzig, 1806, is not yet superseded. [L. S.] [W. W.]

UNIVERSITAS. The philosophical division of things (*res*) in the widest sense of the term into *res corporales*—objects of the senses—and *res incorporales*—objects of the intelligence only (Cic. *Top.* 5; Sext. Empir. *adv. Mathemat.* 3; Quintil. *Hist.* v. 10, 116; Gell. v. 15; Boeth. *Top.* iii. &c.), was applied to the objects of rights by the Roman jurists (Gaius, ii. 12–14; Dig. 1, 8, 1, 1; Inst. ii. 2, pr. 2), who were perhaps led to this way of regarding the matter by the fact that every action *in rem* related to either a corporeal thing or an incorporeal right ("si paret, rem actoris esse . . . si paret, jus utendi fruendi actoris esse"). If this is so, *res* originally meant in legal phraseology any thing of which it could be said "meum est," whether a corporeal thing or an incorporeal (real) right; but later, by an extension of meaning, *res incorporalis* came to include all rights other than dominium (which fell under *res corporalis* because the Romans habitually identified it with the *thing* over which it existed), especially the rights *in personam* termed *obligationes* (Gaius, ii. 14; Inst. ii. 2, 2).

Every thing which is in its nature divisible can be conceived as consisting of parts, in contrast with which it is itself a unit or universitas (*e.g.* "universitas agrorum," Dig. 50, 16, 239, 8; "fundi," Dig. 41, 4, 2, 6); and if this be done with reference to the subjection of one of those parts to exclusive rights in a person, that part is itself conceived as a unit or independent object of rights, and the whole is regarded *pro diviso*, as though it were divided ("Quintus Mucius ait, partis appellatione rem pro indiviso significari, nam quod pro diviso nostrum sit, id non partem, sed totum esse, Servius non ineleganter partis appellatione utrumque contineri," Dig. 50, 16, 25, 1). But some things consist of parts which cannot be physically divided from it without an essential change in their nature, and in relation thereto such a thing cannot be regarded *pro diviso*; the whole can be the object of rights, but a physical part of it cannot. The stones, for instance, of which a house is built, are not parts of it in the sense that they cannot be removed without a change in their nature, and consequently they can be owned *pro diviso* even while unseparated; but the house itself is an integral part of the soil on which it stands, apart from which it cannot be an independent object of rights; nor can one person own the right arm of a slave, another the left, or one the head and shoulders of a horse, another the hinder quarters. The contrast between the two is thus put by Pomponius: "[unum genus corporum] continetur uno spiritu et Graece ἡνωμένον vocatur, ut homo tignum lapis et similia: alterum quod ex contingentibus hoc est pluribus inter se cohaerentibus constat, quod συνημμένον vocatur, ut aedificium navis armarium" (Dig. 41, 3, 30, pr.).

But a thing, even though physically indivisible (as a slave), may be conceived as consisting of ideal or intellectual parts: *e.g.* one person may own a field or a slave in one-third, and another may own him in two-thirds: "servus communis sic omnium est, non quasi singulorum totus, sed pro partibus, utique indivisis, ut intellectu magis partes habeant quam corpore" (Dig. 45, 3, 5): and if such a part is regarded as the object of exclusive rights, the thing is nevertheless taken *pro indiviso*, and is said to belong to two or more persons in common: no one can say that any particular physical part belongs to him exclusively. Here the whole is corporeal, the parts are intellectual. But conversely there are cases in which, though the parts are corporeal, the whole is intellectual or ideal only; as when there is a number of independent corporeal things not materially connected, but connected in thought owing to some common end or purpose so as to form in idea a whole: *e.g.* the books composing a library, or the sheep which make up a flock (Inst. ii. 20, 18). Where the purpose of the several things, so far from being different from and independent of the general purpose for which the idea is formed, is subservient to that general purpose, such intellectual wholes, consisting of corporeal parts which may be completely changed without *its* ceasing to be the same, are treated as independent objects of property, so that (*e.g.*) they can be pledged (Dig. 20, 1, 13, pr.; *ib.* 34, pr.); they are juristic "things," and are called *universitates rerum*, just as *universitates personarum* are juristic persons, or sometimes *universitates rerum distantium* to distinguish them from the so-called *universitates rerum cohaerentium*, exemplified in the passage of Pomponius cited above. Passages in which these *universitates rerum* (*distantium*) are characterised may be found in Inst. ii. 20, 18;—Dig. 30, 22; *ib.* 7, 1, 70, 3; *ib.* 6, 1, 1, 3; *ib.* 3, pr.

But the term *universitas* is not applied merely to "things" in the narrower signification. Upon its Roman use in the sense of an aggregate of proprietary rights (whether real or personal) and liabilities, especially with reference to hereditas—though we also read of peculia (Dig. 5, 3, 20, 10) and dotes (Dig. 33, 4, 1, 4) as universitates—modern jurists have founded the conception of a "universitas juris," the complex of a man's assets and liabilities, which may be the object of succession, as upon death, adrogatio, conventio in manum, &c. [SUCCESSIO]. And from its other Roman use in the sense of the aggregate of persons belonging to a corporation (Dig. 1, 8, 1, pr.; *ib.* 2, pr.; *ib.* 6, 1; *ib.* 3, 4, 2; *ib.* 7, 1 and 2; *ib.* 46, 8, 9), they have coined the expression *universitas personarum* as denoting one of the species of what are now usually termed "juristic persons."

It is only the individual man who can properly be regarded as the subject of rights and duties, and it is he who determines for himself the ends to which his property shall be devoted. But there are some ends which concern more men than the single individual, and these may often be attained by the formation of a partnership between those to whom they are an object; and others of a wider and more enduring interest still, which are an object to successive generations, *e.g.* to the inhabitants of a town, the citizens of a state, the members of a family, the practitioners of an art—or even to all mankind, as is the case with civilisation and religion. The attainment of these is facilitated by certain funds being set aside and administered for that very purpose; and thus the end seems to resemble man, for to it is ascribed the proprietary capacity which only man can properly possess, and the foundation which is its outward symbol is conceived as a person is said *personae vice, privatorum loco, esse* (Dig. 46, 1, 22; 50, 16, 16), and is described as owner, heir, creditor, and debtor (Dig. 34, 7, 1; *ib.* 4; 1, 3, 49, 4): communities of persons organised for permanent public purposes are in the writings of the Agrimensores (pp. 16, 54, ed. Lachmann) called *persona publica*, *persona colonia*. This is the notion of a juristic person, of which there may be said to be two kinds: corporations (*corporatio*, Nov. Severi, ii., but more ordinarily *corpus* in the authorities: the moderns speak of *universitates personarum*), and funds or property-aggregates devoted to some permanent and definite object, which, so far as proprietary rights are concerned, the state has endowed with personality and legal capacity: these are by modern writers often termed *universitates bonorum*, an expression which the Romans appear to use only in the sense of an inheritance (Dig. 6, 1, 1, pr.; 29, 1, 18, pr.).

Of corporations the following kinds occur:—(1) The Roman State, Respublica, considered as the subject of rights and duties comprised under Private Law: its property, and legal personality in respect of property, are also called Fiscus or Aerarium, though some writers (*e.g.* Baron, *Pandekten*, § 30) treat the Fiscus and State together as a juristic person of anomalous character, which cannot properly be classed as a corporation at all. By the classical jurists *respublica* is most commonly used to express a civitas dependent on Rome, not Rome herself. (2) Political or local subdivisions of the people, such as civitates, municipes, communes or communitas, vicus, colonia, provinciae, fora, conciliabula, castella (the last three, though not mentioned in the legislation of Justinian, occurring in the Tabula Heracleensis, the Lex Rubria de Gallia Cisalpina, and in Paulus, *Sent. rec.* iv. 6, 2). (3) Military subdivisions, such as legions (Dig. 28, 3, 6, 7; 41, 3, 30, pr.;—Cod. 6, 62, 2). (4) Associations of official persons and administrative authorities, of which the body of scribae became one of the most numerous and important through being employed in all branches of the administration. The general name was Scribae, which included the subordinate corporations termed Decuriae librariorum, fiscalium, censualium (Dig. 37, 1, 3, 4; 46, 1, 22; 29, 2, 25, 1;—Cod. 11, 13), whose individual members, called decuriati and subsequently decuriales, had great privileges at Rome and subsequently at Constantinople (Cic. *in Verr.* iii. 79; *ad Quint. fratr.* ii. 3; Tac. *Ann.* xiii. 27; Sueton. *Octav.* 57, *Claud.* 1). Similarly the decuriones of a town were regarded as a corporation distinct from the general body of Municipes, as in Cod. 6, 62, 4; Dig. 4, 3, 15, where it is stated that an action for dolus will not lie against the Municipes, of which a fictitious person cannot be guilty, but that such action will lie against the individual decuriones who administer the affairs of the Municipes. (5) Associations of religious persons, collegia templorum (Dig. 32, 38, 6), such as the priests of the various gods and the Vestal Virgins. (6) Associations for trade and commerce, as Fabri, Pistores, Navicularii (Dig. 3, 4, 1, pr.; 50, 13, 5, 13), the bond between whom was their common calling, though each worked on his own account. Under this head also fall certain partnerships, which, though termed *societates*, had a permanent corporate existence, such as the associations for farming the taxes (*societates publicanorum*), and for working mines (*salinae:* Dig. 3, 4, 1, pr., and 1; 37, 1, 3, 4; 47, 2, 31, 1). (7) The associations in the nature of modern clubs which were called Sodalitates, Sodalitia, Collegia Sodalitia. These were in origin friendly associations for purposes of common feasting and worship, but in course of time many of them acquired a political character, and in periods of commotion became centres of faction and intrigue, their members crowding together in public places (Cic. *ad Quint. frat.* ii. 3), so that at last the senate was compelled to propose a law subjecting those who would not disperse to the penalties of *vis*. According to Asconius, this was followed by a general dissolution of collegia, but in fact those only were dissolved which were of a mischievous character; and under the emperors the rule was established that no collegium of this or the preceding class could be founded without permission from the princeps or senate, which was granted only on special grounds (Dig. 47, 22, 1–3; 3, 4, 1, pr.). (8) There were also in the imperial period Collegia Tenuiorum (Dig. 47, 22, 1, pr.; *ib.* 3, 2), associations of poor people for mutual support, and especially to secure their members decent burial. A man could only belong to one of them: the members might meet only once a month, and paid monthly contributions. To clubs of this class even slaves could belong, on obtaining permission from their masters. Upon the whole subject compare the article on Collegia.

Of the rights comprised in private law, some only can reside in corporations. An independent property or proprietary capacity is essential to the corporate character: "quibus autem permissum est corpus habere .... proprium est ad exemplum reipublicae habere res communes, arcam communem et actorem sive syndicum, per quem, tanquam in republica, quod communiter agi fierique oporteat, agatur fiat" (Dig. 3, 4, 1, 1). Corporations could own, possess, owe, be owed, and institute legal proceedings; they could possess the jus patronatus, but none of the family rights, and many of them, though capable of taking legacies, were excluded from succeeding deceased persons by way of inheritance (Dig. 30, 117, 122; *ib.* 73, 1). A corporation is not identical with its members at any given time, and remains the same "person" unaffected by changes in them (Dig. 3, 4, 7, 2); they do not share *pro parte* in its rights and liabilities ("si quid universitati debetur, singulis non debetur, nec quod debet universitas singuli debent," Dig. *ib.* 7, 1), and can become its debtors and creditors in precisely the same way as other persons can (Dig. *ib.* 9). Their rights and duties, as such members, vary with the character of the corporation itself, which may be established entirely or principally for their benefit, so that sometimes the members for the time being may be entitled to divide its property between themselves on its dissolution. Having no will of its own (Dig. 41, 2, 1), it can perform legal acts only through agents, whether these be its presidents (*magistri, rectores*) or subordinate officials, especially those appointed for the conduct of litigation (*syndici, actores*); and what these agents decide on and do within the scope of their authority is regarded as the determination and act of the corporation itself (Dig. 35, 1, 97; 50, 1, 14). Who are its duly authorised agents is usually defined by its constitution: but in the absence of such definition the aggregate of its members are to be considered its natural representatives, and the acts and resolutions of a majority at a duly summoned meeting to be taken as conclusive (Dig. 19, 160, 1; Cod. 10, 63, 5, 1), unless contrary to positive law or the interests of the public (Dig. 47, 22, 4).

Some corporations were established by the state: but the chief mode in which they arose was the voluntary association of a number of persons (not less than three: Dig. 50, 16, 85) for a common purpose which was neither unlawful nor immoral. Whether a special recognition of the associated persons as a corporation by the state was essential cannot perhaps be regarded as settled; but (notwithstanding Dig. 3, 4, 1; 47, 22, 3, 1) the better opinion would seem now to be that an association might be invested with the corporate character under general law or custom, and that as a rule it could not be denied to any lawful combination of persons so organised as to create a fund of property distinct from that of the associated persons themselves (Windscheid, *Lehrbuch*, § 60, note 3).

A corporation was dissolved by the death or withdrawal of all its members: "In universitatibus nihil refert, utrum omnes iidem maneant, an pars maneat vel omnes immutati sint: sed et si universitas ad unum redit, magis admittitur posse eum convenire et conveniri, cum jus omnium in unum reciderit et stet nomen universitatis" (Dig. 3, 4, 7, 2). But it cannot as a rule be extinguished by a resolution of its members. Of course, where no public interest stands in the way, these can agree unanimously to withdraw from the corporation and so put an end to its existence: but in such a case unanimity is indispensable unless it is provided by the constitution of the corporation itself, that for this purpose (as for others) a majority shall be able to bind a minority. It could also be dissolved by its object becoming unlawful, as where the state prohibits associations of certain kinds which hitherto have been perfectly legal (*e.g.* the collegia sodalitia), or declares a single corporation extinct on grounds of policy (Dig. 7, 4, 21). Upon dissolution, the property of those corporations whose members were jointly entitled to its funds or income was divided among them; in other cases, any resolution of the members made before extinction as to what was to become of it was binding: if there had been no such resolution, the property went as *bona vacantia* to the Fiscus.

The second class of juristic persons (the so-called *universitates bonorum*) are those which are not necessarily supported by any natural person—a support which, as has been seen, was essential to the existence of a corporation: they are so much property, or aggregates of rights and duties, personified and regarded as capable of perpetuating their separate existence and fictitious unity indefinitely. These were uncommon at Rome before the adoption of Christianity as the state religion, though by special favour of the emperor or senate certain temples were endowed with capacity of inheriting property (Ulpian, *Reg.* 22, 6): but after Constantine's religious reformation the character of the juristic person came to be possessed by foundations established for the encouragement of the new worship, such as churches, monasteries, and religious houses generally, and by other institutions of a charitable nature, such as hospitals and almshouses, which Christianity regarded with peculiar favour (Cod. 1, 2, 23; 1, 3, 35, 46). A juristic person of any of these kinds came into existence by the dedication by any one, even in his last will, of property to a permanent end of religious or charitable character: it had full proprietary rights, including capacity to take by inheritance no less than by legacy (Cod. 1, 2, 23; 1, 3, 24, 49): like a corporation, it could act only through agents, the appointment of whom, if not provided for in the constitution of the juristic person by its founder (Cod. 1, 3, 46, 3), was entrusted to the public magistrates (*ib.* 49, 6; *Nov.* 131, 11). Alienation of property belonging to such foundations was subject to important restrictions (*Nov.* 120).

It is disputed whether the character of a juristic person can be ascribed to the successive holders of an office or magistracy (after the fashion of English "corporations sole"): but this would seem to be the case, inasmuch as a legacy to "the emperor" or "the holder of such and such a magistracy" was good without further specification (Dig. 31, 56, 2; 33, 1, 20, 1; 50, 1, 25). There is the same question with regard to a *hereditas jacens*, i.e. a man's property in the interval between his decease and acceptance by an heir, of which it is said "hereditas vice defuncti fungitur, personam defuncti sustinet" (Dig. 41, 1, 33, 2; *ib.* 34; 28, 5, 31, 1, &c.), and which, even while *res nullius*, could acquire fresh rights and incur fresh liabilities. It is difficult to explain such properties without attributing to an inheritance a fictitious juristic personality, while at the same time it is impossible to classify it with either of the two groups of juristic persons treated above.

The term *Universitas* was adopted in the Middle Ages to denote certain great schools, but not *as* schools: it denoted these places as corporations, *i.e.* as associations of individuals. The adjunct which would express the kind of persons associated would depend on circumstances: thus, in Bologna, the expression "Universitas Scholarium" was in common use: in Paris, "Universitas magistrorum." The school as such was called Schola, and from the 13th century most commonly Studium: and if it was a distinguished school, it was called Studium Generale. The first occasion on which the term *universitas* was applied to a great school is said to be a Decretal of Innocent III. of the beginning of the 13th century, addressed "Scholaribus Parisiensibus." (Dig. 3, 4; Puchta, *Institutionen*, § 222; Savigny, *System*, &c. i. p. 378, ii. 235, iii. 8; Dirksen, *Historische Bemerkungen über den Zustand der juristischen Personen nach röm. Rechte*, in his *Civil. Abhandlungen*, ii. 1; Pfeifer, *Die Lehre von den juristischen Personen*, Tübingen, 1847; Uhrig, *Ueber die jur. Personen*, Dillingen, 1854.) [J. B. M.]

VOCATIO IN JUS. [ACTIO, Vol. I. p. 14 *a*.]

VOCONIA LEX. This law was passed on the motion of Q. Voconius Saxa, trib. pleb., with the strong support of the elder Cato, A.U.C. 585 = B.C. 169 (Cic. *Sen.* § 14; Liv. *Epit.* xli.). Its provisions appear to have been two: (1) That, beginning with the censorship of A. Postumius Albinus and Q. Fulvius Flaccus (A.U.C. 581–585), no one enrolled in the burgher list as having a property of 100,000 asses (*qui centum milia aeris census est*) should make any maiden or woman his heir (Cic. *Verr.* i. 42, § 107; Gaius, ii. 274). Vangerow (in his treatise, p. 13) points out that this sum was the maximum qualification for the first class of Servius Tullius' arrangement (Liv. i. 43); and that as Cato's speech contained a reference to this classification, the restriction imposed by this law was in fact imposed upon the *classici* or first class (Gell. vii. 13). Dio Cassius (lvi. 10) gives the limit as 25,000, probably meaning *drachmae*, which were equal to 100,000 sesterces, and that is the amount named by Pseudo-Asconius (*ad* Cic. *Verr.* l. c.). Whether this substitution of "sesterces" for "asses" is due to mistake, or more probably to the tacit substitution in popular interpretation of the current coin for an extinct or disused one, cannot be decided (cf. Marquardt, *Staatsverw.* ii.^{2} p. 15). A Vestal Virgin was allowed to make a woman her heir (Cic. *R. P.* iii. § 17).

(2) Another clause (general in terms, and not confined to the case of women) provided *ne cui plus legatorum nomine mortisve causa capere liceret quam heredes caperent:* and Gaius points out, that if there were many legatees, the portion left to the heir might be very small (Gaius, ii. 226, followed by Theophil. *Inst.* ii. 22). Cicero refers to the law in words which are easily reconcilable with this, but, if taken strictly, mean that no one enrolled (*i.e.* in the first class) could give in legacies an amount more than would come to the heir or heirs (*Verr.* i. 43, § 110); a provision which would secure the heir or heirs at least half the estate. Quintilian's 264th Declamation has "ne liceat mulieri nisi dimidiam partem bonorum dare;" but this, whatever be its worth, is still consistent

with Gaius, as showing the maximum which a woman could take under a will. This second clause was practically repealed by the Lex Falcidia (Gaius, ii. 227).

The Voconian law did not interfere with a woman's rights to her share in an intestate estate (Gaius, iii. 1 *sqq.*), nor with the claim of a daughter, granddaughter, &c. to a share where the will contained no disinheriting clause (Gaius, ii. 124 *sqq.*). Hence a father, though unable to make his only daughter heir by his will (Augustin, *Civ. D.* iii. 21), could bequeath her (not exceeding) one-half of his estate, or, if she was in his power, by omitting to disinherit her, could by the operation of the general law in effect leave her an equal share with other children, or, if strangers were made heirs by the will, could leave her one-half the estate. If he made a will and expressly disinherited her, she could contest the will, as undutiful (*inofficiosum*); and if no good cause for her disinherison were shown, she would obtain at least a share (Paul. iv. 5; Dig. 5, 2). If he made no will, she would get an equal share with other *sui heredes*.

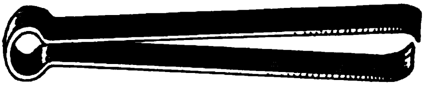
The intention of the Voconian law apparently was to curb the extravagance, by limiting the pecuniary means, of women (Gell. xvii. 6; xx. 1, § 23). One of the interlocutors in Cic. *R. P.* iii. 10 attacks its aim, and also its provisions, by pointing out that by not fixing a maximum sum which a woman could take or hold, the law would work (in one or other of the above-named ways) very unequally in the case of fathers of different degrees of wealth. Moreover, from Cic. *Verr.* l. c., it is clear that rich persons, by not being enrolled, perhaps purposely, perhaps by irregularity in taking the census (cf. Huschke, *Census*, p. 61), were sometimes free from the operation of the law. Trusts (*fideicommissa*), too, afforded another means of escaping what seemed to some an unnatural law. In Cicero's time trusts were not legally enforceable (Cic. *Fin.* ii. 17, § 55); but when after Augustus trusts were protected by the praetor, the Voconian law could thereby be nullified at will (Gaius, ii. 274). Its provisions were relaxed by the Lex Papia Poppaea (Dio Cass. lvi. 10) in favour of those who had children, and it was probably repealed in fact, though not formally, before the time of Gaius (Gell. xx. 1, § 23). What was the interpretation of "census" in this law after the last burgher list was made by Vespasian is not known (Mommsen, *Röm. Staatsr.* ii.^{2} p. 408).

The words of Pliny (*Pan.* 42), "Locupletabant et fiscum et aerarium non tam Voconiae et Juliae leges, quam," &c. probably refer to the claims of the public treasury to inheritances left vacant or legacies lapsed in consequence of violation of the Lex Voconia, and of the Lex Julia de maritandis ordinibus or of that which imposed a 5 per cent. succession duty (*vicesima hereditatum*). Cf. Voigt, *Condict.* p. 227; Huschke, *ZRG.* v. 178. The policy, though not the words, of the Lex Voconia is thought by Paulus (iv. 8, § 20) to have led (*jure civili Voconiana ratione effectum*) to restricting the claims of women as heirs of an intestate estate to those who were *sui heredes* or *consanguineae* and not to further degrees.

Of the many discussions on this law, see particularly Savigny, *Verm. Schr.* i. 407 *sqq.* (1820, 1849); Haase, *Rhein. Mus.* iii. 183 *sqq.* (1829); v. Vangerow, *Lex Voconia* (1863). [H. J. R.]

VOLCANA'LIA, a festival celebrated at Rome in honour of Vulcan, on the 23rd of August (x. *Kal. Sept.*), with games in the Circus Flaminius, where the god had a temple (*C. I. L.* vi. 2295; Jordan, *Ephem. Epig.* i. 36, 230). The sacrifice on this occasion consisted of fishes which the people threw into the fire (Varro, *L. L.* vi. 20), and of a red heifer and a boar-pig (*C. I. L.* vi. 826). That the festival was propitiatory, to stay the destroying fire, is shown not only by the last-mentioned inscription, which alludes to the great fire of Nero's reign, but also by the fact that Stata Mater, who stayed the fire, and Juturna and the Nymphs who supplied water, were associated in the festival (see Marquardt, *Staatsverw.* iii. 9, note 2). This may perhaps explain the selection of fish as the victims. There were *feriae Volcano* also on the 15th of May (Ov. *Fast.* v. 725; Marquardt, *Staatsverw.* iii. 575). [L. S.] [G. E. M.]

VOLSELLAE (τριχολαβίς, τριχολάβιον), a pair of tweezers (Plaut. *Curc.* iv. 4, 21; Mart. ix. 28, 5). The extent to which the practice of pulling out hairs was carried, both among Greeks and Romans, has been noticed under PSILOTHRUM. For the slaves, both male and female, employed for this purpose, see ALIPILUS. Several examples of ancient tweezers have been discovered; some joined with a rivet at the back like scissors, others, as in the illustration, made of flexible metal (Marquardt, *Privatl.* 581; Becker-Göll, *Gallus*, iii. 241).



Volsellae, tweezers; actual size. (From the Roman villa at Brading, Isle of Wight; preserved on the spot.)

Some of the smaller kinds of forceps used as surgical instruments are likewise called volsellae by Celsus (vi. 12, § 1; vi. 18, § 3; vii. 10, § 7). One of these is figured by Rich *s. v.*; see also the cut No. 17 under CHIRURGIA, in Vol. I. [W. W.]

VOTA PUBLICA. These rested on the same principle as the vows and votive offerings made at critical moments, and after an escape from danger by private persons, which have been described under DONARIA. The public vows were made in time of war (Liv. v. 21, xxxvi. 2, xlii. 28; cf. Ov. *Fast.* v. 573); or of pestilence (Liv. iv. 25, xl. 37, xli. 21). A clause often occurs to the effect that the vow is made on condition that the state should be free from trouble for five or for ten years, and such vows are called *vota quinquennalia* or *decennalia* (Liv. xxi. 62; xxx. 2, 27; xxxi. 9; xlii. 28).

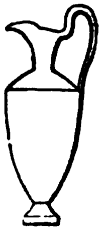
The things vowed, as may be seen from the above passages, were of various kinds, offerings at shrines or at pulvinaria, a tithe of the spoil, votive games [LUDI, p. 84 *b*], or a temple. The most remarkable of all vows was the VER SACRUM, which has been described in a separate article.

The consul or praetor who had been ordered by the senate *suscipere votum* (i.e. to undertake the obligation), or the dictator in times of a dictatorship, publicly announced (*nuncupavit*) the vow and its object in formal words dictated to him by the Pontifex Maximus (Liv. iv. 27, xxxvi. 2). In Liv. xli. 21 we find a case where XVvir sacrorum dictates the vow, and it is announced by the voices of the assembled people; but this, according to Mommsen, was because the vow was intended to bind each individual, not the state as a whole (*Staatsrecht*, i. 244). Finally, the vows were entered in the public records in the presence of witnesses (Fest. p. 173, 13). The fulfilment of the vow at the proper time was under the charge of the magistrate who had announced it, or of his successor, if he had vacated office in the meantime; but it might in case of necessity devolve on another magistrate (cf. Liv. xxxvi. 2). When a commander in the field made a vow, the senate afterwards determined how much money should be assigned for its discharge from the treasury or from the spoils which would otherwise be paid into the treasury (Liv. xxxix. 5; xl. 44).

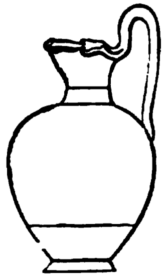
Besides these extraordinary public vows, there was an annual *votum publicum* (of victims to be offered) made by the new consuls on Jan. 1st, "pro reipublicae salute" (the "sollemnis votorum nuncupatio" in Liv. xxi. 63; to this also must be referred the "sollemnia precatus" in the letter of Tiberius, Tac. *Ann.* iv. 70). After the end of the Republic a special vow was added for the emperor's safety (Dio Cass. li. 19). In order, however (as Mommsen thinks), to avoid confusion between the vow for the emperor and that for the state, the 3rd of January became the day for the "votum pro salute principis"; and this day accordingly appears in the Calendars and elsewhere as *votorum nuncupatio* or simply as *vota* (*C. I. L.* i. p. 334; Tac. *Ann.* xvi. 22; Capitolin. *Pert.* 6). In the Greek writers it is called ἡμέρα τῶν εὐχῶν (Dio Cass. lxxix. 8). It was observed in the provinces as well as at Rome (Plin. *Ep.* x. 35, 36), and the practice was so far extended that we find *vota* for various occasions concerning the emperor, his return, his birthday, &c. (see numerous instances in Marquardt), and further for various members of the imperial family. Hence if a private person (as Sejanus) allowed his own name to be added, it was construed as a treasonable usurpation of imperial power (Dio Cass. lviii. 3; cf. lxxv. 14). For further details, see Marquardt, *Staatsverw.* iii. pp. 265–268; Mommsen, *Staatsrecht*, i. 244, ii. 810. [G. E. M.]

VOTO'RUM NUNCUPATIO. [VOTA PUBLICA.]

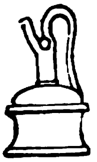
URCEUS (dim. *urceolus*) was a name applied to any sort of jug *with one handle* (Mart. xi. 56, xiv. 106, &c.), used for pouring. Hence in Hor. *A. P.* 22 the urceus is selected as the shape essentially different from the amphora. It is often mentioned as used for pouring water into another vessel (Cato, *R. R.* 10; Plin. *H. N.* xix. § 71), but in this sense is sometimes distinguished as *urceus aquarius* (Cato, *R. R.* 13; Gell. x. 24). In this use it is equivalent to the πρόχοος or πρόχους, which was used as a water jug or ewer [see PELVIS], of which a cut is given from Dennis's *Etruria*. The smaller kind of urceus aquarius served this purpose. The urceus or urceolus was also used for serving the *calda* or *frigida* at table (Mart. xiv. 105), or, like the οἰνοχόη, for wine (Plaut. *Mil.* iii. 2, 18). A common shape of the οἰνοχόη is here given, but there are other forms; sometimes an older shape, less rounded or bellying (see Baumeister, *Denkm.* fig. 2102), sometimes with a more pronounced spout and a base suggestive of a pyxis. This in Birch is called an ἐπίχυσις [EPICHYSIS]; and it is probable that it should be distinguished alike from the ordinary oenochöe and prochous. The oenochöe was used in the symposia, like the totally different cyathus, for dipping wine from the crater and pouring it into the cups, as we see on the vase-painting in Panofka, Pl. xxxiv. 2, for which purpose a jug of the above shape would be unsuitable.



Prochous. (Dennis.)

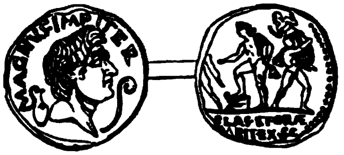


Oenochöe. (Dennis.)



ἐπίχυσις.

To these purposes of the urceus and urceolus must be added the sacrificial use; for Varro says that the *capis* used for wine at sacrifices under the *ritus Romanus* was an urceolus [see CAPIS; SIMPULUM]. Its shape is seen in the annexed coin of the gens Pompeia. The material of the urcei and urceoli was not only earthenware (as in Hor. *l. c.*), but also copper or bronze (Cato, *l. c.*; Juv. x. 64; Mayor *ad loc.*) and silver (Dig. 34, 2, 21). [W. S.] [G. E. M.]



Coin with capis and lituus on the obverse.

USUCAPIO. "Usucapio est adjectio dominii per continuationem possessionis temporis lege definiti" (Dig. 41, 3, 3: cf. Ulpian, *Reg.* xix. 8; Isidor. *Orig.* v. 25): it is the acquisition of full Quiritarian ownership by possession continued for a prescribed period of time. It is not every system of law that recognises this title to property, and there has been no little speculation as to the reasons of its existence at Rome. The rationale suggested by Gaius (ii. 44), "ne rerum dominia diutius in incerto essent," and by other authorities (Dig. 41, 3, 1; Cic. *pro Caec.* 26; Dig. 41, 10, 5, pr.), is regarded by many writers as not satisfying, and the mode in which the subject is introduced by Gaius himself has led to the theory that usucapio originated in the distinction between the so-called Quiritarian and Bonitarian ownerships, a distinction which itself arose from the abandonment in many cases by the Romans of the old established methods of conveyance. It would seem that as in primitive times property belonged, not to the individual, but to the family group, it was according to archaic law practically inalienable. The head of the family administered it on behalf of the group, but he could not by conveyance prejudice the rights of its other members: at Rome alienation first took the guise of a fictitious action at law, just as in England property which was strictly inalienable was enabled to be conveyed by the transparent device of a fine or recovery: the party to whom it was wished to convey the property instituted an action for the purpose of establishing his pretended title to it against the would-be conveyor, who made no defence, and so in effect admitted the plaintiff's right, whereupon the property which was the subject of the action was adjudged to the latter by the praetor. This process was called *in jure cessio*. Owing to its great inconvenience, a less troublesome method of conveyance (*mancipatio*) was subsequently introduced for certain favoured objects of property, probably those in which dealings were most common between man and man, and which were called *res mancipi:* but later still it became established that though the forms of mancipatio or in jure cessio must be strictly observed in order to transfer ownership in res mancipi, that in res nec mancipi might be conveyed by traditio or mere delivery—a conveyance of the jus gentium or natural law. The tables thus were turned, and things which but a little while before were the easiest were now the most difficult to alienate. But the cumbrousness and inconvenience of the old forms in contrast with the simplicity of traditio were now so galling that it became common, when it was wished to convey a res mancipi, to deliver it merely, though the effect of this, as the law prescribed mancipatio or in jure cessio, was that nothing strictly passed except possession; the alienor retained the legal title or jus Quiritium over the property, and the alienee was said to have the thing *in bonis* by a title which we should describe as equitable; the phrase "bonitarian ownership" commonly used to describe his interest is as old as Theophilus. Thus Gaius says (ii. 40): "There was originally in Rome only one kind of ownership: a person was either owner of a thing ex jure Quiritium, or he was not owner at all. But afterwards ownership was divided, so that one man might be owner ex jure Quiritium, and another might have the same thing in bonis." It is supposed that usucapio was introduced simply for the purpose of converting this equitable interest into dominium ex jure Quiritium; for, as Gaius says (ii. 41), "Semel impleta usucapione proinde pleno jure incipit, id est, et in bonis et ex jure Quiritium tua res esse, ac si ea mancipata vel in jura cessa esset." If this hypothesis is correct, we must hold that the changes which have been described as taking place in the law of alienation had occurred, and that the practice of merely delivering res mancipi had become common, before the enactment of the Twelve Tables, which regulated if they did not introduce the law of usucapion (Gaius, ii. 42, 54): but, after all, it does not seem unreasonable to accept the general account of the matter given by the authorities referred to above, and to find the origin of the rules on this subject in the failure of other conditions prescribed for the acquisition of property (such as the requirement of ownership, Gaius, ii. 43, or of capacity of legal action in the alienor), and in the difficulty of proving, after a considerable interval of time, the validity of a conveyance which as a matter of fact was perfectly unimpeachable in respect both of form and of title.

As to the acquisition of property by lapse of time in general, we find two distinct sets of rules in the Roman law: those of Usucapio, which are part of the jus civile, and those of Longi temporis possessio or praescriptio [PRAESCRIPTIO], which were introduced by the praetor through the Edict.

Usucapio appears to have been called in the Twelve Tables *usus* simply: the addition *auctoritas* sometimes found with it (Cic. *Top.* 4; *pro Caec.* 19) denotes the warranty of title incumbent on a vendor by mancipation, or (as some say) the addition of the jural to the actual element (*usus*), with which may be compared the *adjectio domini* in the definition cited above from Dig. 41, 3, 3, though there the proper reading may be *adeptio*, which occurs in the definitions of Ulpian (*Reg.* xix. 8) and Isidorus (*Orig.* v. 25). The time during which the thing must be possessed, that the possession may be converted into ownership, was by the Twelve Tables a year for res mobiles, two years for "fundus" or land (Gaius, ii. 42, 44, 54, 204; Cic. *Top.*; Isidor. *Orig.* loc. cit.): and during this period the possession must be continuous and unbroken (Dig. 41, 3, 16: *ib.* 31, 1; 41, 2, 1, 15; *ib.* 36); the effect of interruption [USURPATIO] was that the previous possession counted for nothing, the time having to commence afresh and run again in full. Nor could the possession of one person be added to that of another; so that if A, having possessed a res mobilis for eleven months, transferred his possession to B, the latter would still require a continuous possession of his own for another year before he acquired the dominium. The only apparent exception to this rule for centuries was that the heir succeeded to and could reckon as his own the possession of the person from whom he inherited (Dig. 4, 6, 30, pr.; 41, 3, 20, 40, &c.), provided no third person had taken possession of the object in the interval between the decease and his own acceptance of the inheritance (Dig. 41, 3, 20; 41, 4, 6, 2): but this is accounted for by the "unity of person" which in the Roman view existed between a deceased man and his heir, and which (as will be seen) they realised most completely in respect of usucapio: and it was not till the time of Antoninus and Severus that the doctrine of accessio temporis or possessionis was admitted upon any transfer of possession *inter vivos*, when by an enactment of those emperors a purchaser was allowed to add to his own possession that of his vendor (Inst. ii. 6, 13). It would seem that subsequently the same thing was done under other circumstances, as the general word *auctores* occurs in Dig. 44, 3, 5, pr.; and there is mention of accessio temporis upon transfer of possession by way of legacy, gift, dowry, pledge, &c. (*e.g.* Dig. 44, 3, 5, pr.; *ib.* 14, 3–5; 41, 2, 13, 6 *sq.*), though we may perhaps infer from Dig. 44, 3, 14, pr. ("de accessionibus possessionum nihil in perpetuum neque generaliter definire possumus, consistunt enim in sola aequitate") that there was no established rule of law in the matter, the praetor judging of the circumstances of each case on the occurrence of litigation, and allowing or disallowing the claim to accessio as he thought right by means of his power to grant actions and exceptiones.

The possession must be civil or juristic possession—that is, to the actual detention there must be superadded the intention to deal with the property as one's own (Dig. 41, 3, 25; *ib.* 13, pr.: see POSSESSIO); and where it is derivative or representative (as in the cases of the sequester, pledgee, and precario rogans), it cannot ripen into dominium, though the possession of the sequester prevents the acquisition of the property per usucapionem by any of the sequestrating parties (Dig. 41, 2, 39). Moreover, the possession must have been acquired by a *justa causa* or *justus titulus* (Inst. ii. 6, pr.; Cod. 7, 29, 4); that is to say, the possessor must have obtained it in some way which would have made him owner, only that in the particular case, owing to some external defect (*e.g.* weakness in the transferor's title, or his incapacity of legal action), acquisition of possession is not equivalent to acquisition of ownership. The *causa* in which the possession originates is in the authorities expressed by the preposition *pro* ("possidet pro empto, pro derelicto, pro donato, pro soluto, pro herede, pro legato, pro dote," &c.). A *titulus putativus* (as where the possessor erroneously supposes there was an intention to vest the property in him, "veluti si quis, cum non emerit, emisse re existimans, possideat: vel cum ei donatum non fuerit, quasi ex donatione possideat," Inst. ii. 6, 11) would not support usucapio (Inst. *loc. cit.*), though it was not hindered if there was a causa of which the possessor was ignorant (Dig. 41, 10, 22), or as to the precise nature of which he was mistaken (Dig. 41, 3, 31, 6), and even in the absence of titulus altogether it could proceed if the possessor believed one to exist through an excusable error of fact (Dig. 41, 10, 5, 1; 22, 6, 4), as where A commissions B to buy a thing for him which B brings him with the fraudulent assurance that he has done so (Dig. 41, 4, 11).

But a person whose possession, notwithstanding the existence of a justus titulus, did not originate in bona fides could not acquire by usucapio (Inst. ii. 6, pr.; Gaius, ii. 43). By bona fides in this connexion seems to be meant a negative rather than a positive mental state—in other words, excusable ignorance of fact with regard to the circumstances which in the particular case prevent acquisition of ownership ("qui *ignorabat* . . . alienum . . . bonae fidei possessor," Dig. 48, 15, 3, pr.: "bonae fides emptor esse videtur, qui *ignoravit* eam rem alienam esse, aut putavit eum qui vendidit jus vendendi habere: puta procuratorem aut tutorem esse," Dig. 50, 16, 109): and the only cases in which its presence can be really a question are cases of materially defective acquisition, as *e.g.* where a non-owner sells and delivers property: here the purchaser, besides this causa (*pro empto*), must not know that it belongs to some one other than the vendor, or that the vendor has no authority to sell (Dig. 50, 16, 109, cited *supr.*). Bona fides was required by Roman law only at the inception of possession (Dig. 41, 1, 48, 1), and in sales also at the time of the contract (Dig. 41, 4, 2, pr., and 13); so that if the possessor discovered his error a moment after the possession became vested in him, usucapio was not hindered. This is expressed in the maxim (which, however, is not classical), "mala fides superveniens non nocet:" but under the canon and modern civil laws the rule is different, the presence of bona fides being required throughout the whole period of possession. If a man's possession commenced in good faith, the fact of his heir's knowledge that the property was not his own was immaterial, there being in contemplation of law no break in the continuity of the possession: and conversely if the ancestor's possession was mala fide in its inception, ignorance on the heir's part of the flaw in his title did not avail to enable him to acquire by usucapio.

There were certain anomalous cases in which some of the rules hitherto stated were varied, or had no application. Thus, if the state sold land which it held in pledge, and the purchaser (*praediator*) allowed the former proprietor to remain two years in possession without making entry and ejecting him, the latter recovered his ownership by what was called *usureceptio ex praediatura* (Gaius, ii. 61). A second species of usureceptio was where a man conveyed property fiduciae causa [PIGNUS], with an agreement for future reconveyance, to a friend for custody, or by way of mortgage: here, if he obtained possession, he could regain the ownership in one year (even though the property was immobilis), unless the original conveyance had been made as security for a debt which remained undischarged, in which case he could thus recover only if he had got possession neither by hire nor by precarium ("usu receptio lucrativa," Gaius, ii. 59, 60). Again, res mancipi of a woman in the guardianship of her nearest agnate had been excepted by the Twelve Tables from the operation of usucapio, unless delivery of them were made by the woman herself with the guardian's auctoritas (Gaius, ii. 47); so that if a man knowingly bought such property from the woman without the tutor's sanction, the requirement of bona fides was unsatisfied: but it was provided by a "constitutio Rutiliana," of which nothing further is known, that he could acquire a full title by usucapio unless before its completion the woman offered to return him the purchase-money (*fragm. Vat.* 1). None of these cases survived to the time of Justinian. Gaius also tells us (ii. 52) that, if a man took possession of a res hereditaria, a piece of property belonging to an inheritance, before the heir, he could acquire it by usucapio in a year (Gaius, ii. 54; Cic. *ad Att.* i. 5), even though a res immobilis, notwithstanding his knowledge that he had no title to it whatever (cf. Plin. *Ep.* 5, 1): this was called possessio or usucapio pro herede (Gaius, ii. 52), and was also *lucrativa* (*ib.* 56), "nam sciens quisque rem alienam lucrifacit." The reason, he says, why even land could in this case be acquired in a year was that an hereditas was a res incorporalis, and therefore fell under the *ceterae res* which the Twelve Tables had enacted should be acquirable in the shorter period: and he accounts for this curious form of usucapio by the desire to induce heirs to make a prompt aditio of inheritances to vhich they were entitled, in order that there night be some one to perform the family sacra, ınd to discharge the deceased's liabilities (ii. 55): onsiderations which also probably will account or the doctrine that there could be no theft of es hereditariae until the heir had taken possession of them (Gaius, iii. 201; Paul. *Sent. rec.* ii. 31, 11; Dig. 47, 2, 68–70; 47, 4, 1, 15). The aw on this subject, however, was altered by a enatusconsultum Juventianum passed at the nstance of the Emperor Hadrian (Gaius, ii. 57), y which it was enacted that, even though the ossessor had retained the property for the ecessary year, the usucapio might be avoided y the heir's proving his original title against im by hereditatis petitio, though, should he not lo so, the right acquired by usucapio would vail against all other persons. Subsequently he wrongful appropriation of res hereditariae f which the heir had not yet possessed himself endered the delinquent liable to a criminal rosecution under the name of *crimen expilatae ereditatis*: "Si quis alienam hereditatem expilaverit, extra ordinem solet coerceri per accusationem expilatae hereditatis, sicut et oratione livi Marci cavetur" (Dig. 47, 19, 1; cf. *ib.* 3). After this change possessio pro herede usually lenotes the interest of a person who had obtained rom the praetor a grant of the bonorum ossessio or praetorian inheritance, which usucapio would convert into ownership; but this ase was obsolete in the law of Justinian's time, n which usucapio pro herede signifies usucapion f a res hereditaria by a person who through an xcusable error believes himself heir (Dig. 41, 3, 3, 1), or of res non hereditariae by the heir vho supposes them to belong to the inheritance Dig. 41, 5, 3).

Usucapio being a "civil" mode of acquisition, y which the possessor became dominus ex jure Quiritium, it followed that no person could vail himself of it who had not the *commercium*: his in particular excluded peregrini, as was ignified by the phrase of the Twelve Tables 'adversus hostem aeterna auctoritas" (Cic. *de Off.* i. 12, 37): so, too, Gaius says (ii. 65), 'usucapionis jus proprium est civium Romanorum." Similarly things which were not *in ommercio*, incapable of being owned by private ndividuals, were excluded from its operation: mong these were *res divini juris*, such as emples and lands dedicated to the gods, sepulchres and their approaches: *res communes* and *es publicae*, especially provincial soil (Gaius, i. 46) and free men (Gaius, *ib.* 48). There vere also a number of other things which could ot be acquired by usucapion, some on account f their actual nature, some by reason of positive nactment.

As the foundation of the right is possession, nd nothing can be possessed but what is corporeal and tangible ("possideri autem possunt, uae sunt corporalia . . . nec possideri intelligitur jus incorporale," Dig. 41, 2, 3, pr.; 41, 3, , 27), a title to mere incorporeal rights, such s servitudes and other jura in re aliena, could ot be established in this manner. It would eem that in respect of urban servitudes this octrine had been reversed—perhaps because in hem there was a greater semblance of physical ossession—and that the acquisition of them by sucapio had to be declared void by statute (the Lex Scribonia: see SERVITUTES): though those writers who suppose that usucapio was introduced solely to perfect the traditio of res mancipi contend that rustic servitudes, or at least some of them, could originate in this manner (Engelbach, *Ueber die Usucapion zur Zeit der Zwölf Tafeln*, Marburg, 1828). But the determination of servitudes by non-user, as to which there was never any doubt (Paul. *Sent. rec.* i. 17; *ib.* iii. 6, 30), was in effect a usucapio of libertas—a phrase actually used, in speaking of the extinction of urban servitudes, in Dig. 8, 2, 6; and it would seem that eventually a title to rights of this class could be established by longi temporis possessio or praescriptio [SERVITUTES].

The withdrawal of certain corporeal things subject to private dominium from the operation of usucapio was due either (1) to the wish to confer a privilege on the owner, or (2) to the character of the property itself. To the former class belong (*a*) res mancipi of women in agnatic guardianship, of which enough has been already said above. (*b*) Property of towns ("usucapionem recipiunt maximè res corporales, exceptis rebus . . . civitatum," Dig. 41, 3, 9: cf. Dig. 6, 2, 12, 2), though their land could be acquired by a praescriptio of twenty years (Paul. *Sent. rec.* v. 2, 4). (*c*) Res immobiles of churches and religious and charitable foundations (*Nov.* iii. 1, 131, 6). (*d*) Property of the fiscus, though *bona vacantia* were not excepted from usucapio until they had been *nuntiata* (Inst. ii. 6, 9; Dig. 41, 3, 18, 24): the same privilege was extended to the private property of the emperor (Cod. 7, 30, 2; 7, 38, 2, 3; 11, 61, 64). (*e*) Things belonging to pupilli or to minors under cura, the alienation of which was prohibited by law (Dig. 27, 9; Cod. 5, 71–74; Dig. 8, 6, 10, pr.; 41, 1, 48, pr.).

To the second class belong the following:—(*a*) Res furtivae, stolen property, which was excepted from usucapio by the Twelve Tables (Gaius, ii. 45; Inst. ii. 6, 2), whose enactment was repeated by a lex Atinia (Inst. *loc. cit.*; Gell. xvii. 7; Cic. *in Verr.* ii. 1, 42; Dig. 41, 3, 4, 6; *ib.* 33, pr.; 50, 16, 215) of unknown date, which added that the vitium furti should be purged as soon as the owner (or his agent to his knowledge) regained possession of the stolen property, or was able to bring a vindicatio for its recovery (Inst. ii. 6, 8). So too if a non-owner pledged a res aliena or gave it to another in usufruct, and subsequently stole it from the pledgee or usufructuary, recovery of possession by the latter made the thing again acquirable by usucapio (Dig. 41, 3, 49). The result was that not even a possessor in good faith of property which had been stolen at any distance of time could acquire a title to it in this manner, and Gaius (ii. 50) observes that it was consequently extremely difficult for a mere bonâ-fide possessor (who was not also Bonitarian owner) to become owner ex jure Quiritium by usucapio of movable property, because any unauthorized dealing with a res which to one's knowledge was aliena (*i.e.* not one's own) was theft in contemplation of law, though he mentions some cases by way of illustration in which it was possible: as where an heir sells property which had been deposited with, or let or lent to, the deceased, but which he believed to belong to the inheritance; or where the usufructuary of a female slave sells or gives away her offspring in the belief that he was entitled to do so: in both of which instances the bona fides of the alienor excludes the presumption of furtum. Fugitive slaves could not be acquired by usucapio on the same principle (Inst. ii. 6, 1), their running away being regarded as a theft of themselves (Cod. 6, 1, 1). Land could not be stolen (Inst. ii. 6, 7), and therefore did not come within the provisions of the Twelve Tables or the Lex Atinia: but it was enacted by leges Julia and Plautia (Gaius, ii. 45, 51;—Dig. 41, 3, 4, 22, 23; *ib.* 48, pr.) that *res vi possessae* (and thus land from which the tenant had been forcibly ousted) should be equally excluded from the operation of usucapio, until the tenant recovered possession or was in a position to bring a vindicatio (Inst. ii. 6, 8). Justinian points out in the Institutes that a title to land in general could be more easily thus acquired than to movable property, because there would be no *vis* in a man's entering on a *locus vacans;* and though he could not become its owner himself, because his possession was mala fide, yet a bonâ-fide possessor to whom the land was conveyed by him without knowledge of the defect in his title could do so (Inst. ii. 6, 7). (*b*) Fundus dotalis, land comprised in a dos, was forbidden to be alienated by the Lex Julia de fundo dotali (Gaius, ii. 63; Inst. ii. 8, pr.), a prohibition which also excepted it from acquisition by usucapio if it came into the possession of a third person after the dos was created (Dig. 23, 5, 16), it being a general rule that wherever alienation of property was forbidden by statute, its usucapion was forbidden also ("alienationis verbum etiam usucapionem continet, vix est enim, ut non videatur alienare, qui patitur usucapi," Dig. 50, 16, 28, pr.). Justinian further enacted (Cod. 5, 12, 30) that to an action brought by the wife against a third person for the recovery of any dotal property, movable or non-movable, no exceptio of usucapio or praescriptio should be pleadable. (*c*) By the Lex Julia repetundarum it was provided that no one should be able to set up a title by usucapio to any property of which a provincial governor had become possessed against the laws relating to extortion (Dig. 48, 11, 8, pr.; 41, 1, 48, pr.): but (as in cases of theft) the *vitium* was removed by the revesting of possession in the owner (Dig. 48, 11, 8, 1). (*d*) It was declared by the Lex Mamilia that the space of five feet which the law required to be left clear between landed estates should not be acquirable by usucapio ("quoniam usucapionem intra quinque pedes esse noluerunt," Cic. *de Legg.* i. 21, 55), though under the law of Justinian it was liable to a thirty years' prescription (Cod. 3, 39, 6). (*e*) Building materials of one man used by another without the former's knowledge were not subject to usucapio so long as they remained part of the structure (Dig. 41, 1, 7, 11; 6, 1, 23, 7). (*f*) Other *res* of less importance excepted from usucapion are those belonging to the so-called peculium adventitium regulare of filiifamilias (Cod. 6, 60, 1; 6, 61, 4), and property which devolves on children of a first marriage owing to the parents' marrying again (*Nov.* 22, 24).

Two peculiar subjects to which usucapio applied under the older law deserve a brief notice. One of the modes in which a husband could obtain manus over his wife was usus, residence under his roof continuously for a year, though she could save her independence by staying away three successive nights (Gaius, i. 110; Gell. *Noct. Att.* iii.; Macrob. *Satur.* i. 3): Cicero mentions this as a way in which manus could originate even in his time (*pro Flacco*, 34), but at the time at which Gaius wrote it was obsolete (i. 111). Originally, too, hereditates were regarded as acquirable by usucapio (Gaius, ii. 54), so that even the sacra passed to the person who became entitled to them in this manner (Cic. *de Legg.* ii. 19 *sq.*; *pro Flacco*, 34; *ad Att.* i. 5), but in the early days of the Empire this doctrine began to be questioned, and by the time of Gaius (*loc. cit.*) it was settled that though res hereditariae could still be thus acquired, the "universitas" could not.

The rules as to acquisition by lapse of time which were established through the Edict originated partly perhaps in the incapacity of peregrini to gain a title to property by the civil law usucapio (though this is more a matter of inference than of positive knowledge: see Puchta, *Institutionen*, § 240, note *b*), and partly also in the exemption of provincial soil from its operation. A person who had acquired a boni-fide possession of land by a justus titulus, and retained it continuously for ten years (or twenty if the alleged owner resided in a different province), was enabled by the edict of the governor to plead in defence to an action brought against him by such owner for its recovery the length of his possession (praescriptio or exceptio longi temporis: see PRAESCRIPTIO), and on proof of his plea the plaintiff would have judgment given against him (Paul. *Sent. rec.* v. 2, 3, 4; v. 5a, 8). The positive enactments excluding certain things from this mode of acquisition on account of a vitium (*e.g.*, res furtivae and in possessae) were as a rule applied here as well as in usucapio: but accessio temporis was generally allowed where the possession had been derived from another person by a genuine succession of title (*e.g.* between donor and donee, testator and legatee, &c.), which in usucapio we have seen was not the case. At first Praescriptio longi temporis operated only as a rule of Limitation, not making the possessor owner, but merely enabling him to repel the action of an owner who had been for a certain period out of possession; but it would seem that in course of time it acquired the operation of usucapio, a man who had possessed provincial land for the time required by the edict being able to bring a real edict for its recovery if he lost possession: "Si quis emptionis vel donationis vel alterius cujuscunque contractus titulo rem aliquam bona fide per decem vel viginti annos possederit . . . posteaque fortuito casa possessionem qui rei perdiderit, posse eum etiam actionem ad vindicandam rem eandem habere sancimus, *hoc enim et veteres leges, si quis eas recte inspexerit, sanciebant*" (Cod. 7, 39, 8, pr.: cf. Dig. 12, 2, 13, 1). Praescriptio also became a title to servitudes on Italian no less than provincial soil (Dig. 8, 5, 10, pr.), and probably also (for peregrini) to res mobiles all over the Empire ("rescriptis quibusdam Divi Magni Antonini cavetur, ut in rebus mobilibus locus sit praescriptioni diutinae possessionis," Dig. 44, 3, 9): indeed, considering its advantages over usucapio in respect of accessio temporis and in some other points (Dig. 41, 3, 44, 5; 20, 1, 1, 2; 44, 3, 5, 1; *ib.* 12; —Cod. 4, 10, 14; 7, 36), it was perhaps sometimes relied upon as a title to soil in Italy. Indeed, the new rules seem to have entirely superseded those of usucapio in the Empire of the Visigoths, whose Lex Romana contains, in the Sentences of Paulus, a title "de Usucapione" (v. 2), the contents of which however relate entirely to longi temporis praescriptio or possessio. In the Eastern empire the two bodies of law subsisted side by side up to the time of Justinian; the acquisition of land being for the most part governed by rules of Praescriptio (for, with the exception of the few towns which had as a favour received a grant of jus Italicum, the whole of its soil was *provinciale*), and that of res mobiles by those of the old usucapio.

Justinian himself completely reformed the law on this subject. In A.D. 528 he issued a constitution definitely establishing the effect of longi temporis praescriptio as a mode of acquiring dominium, a point which seems hitherto not to have been clearly settled (Cod. 7, 39, 8, pr., cited above), and three years later he abolished the old two years' usucapio for land, and with it the distinction between solum Italicum and solum provinciale, enacting that the latter no less than the former should be acquirable in absolute ownership by a possession of ten years if both the parties were domiciled in the same, twenty if in different provinces (Cod. 7, 31). He further substituted for the old usucapio of one year for res mobiles one of three years, assimilated the rules both as to movables and immovables in respect of titulus, bona fides, and the kinds of things which could not be acquired in this manner, and allowed accessio temporis to the fullest extent in which it had been recognised by the praetorian law. The term "usucapio" is in his legislation confined to the acquisition of res mobiles, while that of land is very uniformly described by the terms "longo tempore capio," "longa possessione capio," "diutina possessione capio," "longi temporis possessio" or "praescriptio," though sometimes the two are combined (*e.g.* Inst. ii. 6, pr.: "immobiles ... per longi temporis possessionem ... usucapiantur").

Finally by Cod. 7, 39, 8, pr. and 1, Justinian introduced a new species of Prescription, usually termed "longissimi temporis praescriptio" or "usucapio extraordinaria," and based upon Theodosius II.'s thirty or forty years' limitation of actions [PRAESCRIPTIO], according to which a person who could successfully meet a real action brought against him by another for the recovery of property, movable or immovable, by the plea of thirty years' possession, was empowered, if his own possession had commenced in good faith, to himself bring a vindicatio against third persons: in other words, he was under such circumstances recognised as owner. As in the ordinary usucapio or praescriptio, accessio temporis was allowed to the fullest extent where there had been a succession in title between two possessors: but here there was no requirement of justus titulus; and though res extra commercium could not be thus acquired, all other things excepted from the ordinary usucapion or prescription were subject to acquisition in this longer period except property of pupilli, res dotales, and peculium adventitium regulare. The foundation of this new institution on Theodosius' limitation of actions appears in the rule, that in those cases where the period of limitation was forty years (*i.e.* where the property belonged to the church, a charitable foundation, the Fiscus, emperor or empress) the prescription must be of the same duration: and that where time could not be counted for purposes of limitation, it could not be reckoned for purposes of prescription either: *e.g.* the period during which the original owner was impubes could not be considered.

(Gaius, ii. 41–61; Ulpian, *Reg.* xix. 8; Paul. *Sent. rec.* v. 2; Inst. ii. 6;—Dig. 41, 3–11; 44, 3;—Cod. Theod. 4, 13;—Cod. 7, 26–31; 33–37. For discussions as to the original purpose of usucapio, reference may be made to Engelbach, *Ueber die Usucapion zur Zeit der Zwölf Tafeln*, Marburg, 1828, and Schirmer, *Grundidee der Usucapion*, 1855. For the subject in general, see Puchta, *Institutionen*, §§ 239, 240; Baron, *Pandekten*, §§ 144–147; Vangerow, *Lehrbuch der Pandekten*, §§ 314–325; and in particular Unterholzner, *Verjährungslehre*, 2nd edit., 1858. For titulus, Stintzing, *Das Wesen der bona fides und titulus in der römischen Usucapionslehre*, 1853; Mayer, *Die justa causa bei Tradition und Usucapion*, 1871. [J. B. M.]

USURPATIO and the verb from which it is formed have a variety of meanings in the Roman legal writings. The verb denotes: (1) Simply "to make use of:" *e.g.* "si judicium defuncti non usurpabitur, sed ad irritum vocatum est, petitio relictorum nullo jure procedit" (Cod. 6, 39, 2). (2) "To wrongfully exercise an alleged but non-existent right" ("per vim atque usurpationem vindicare," Cod. 1, 4, 6; cf. Cod. 1, 6, 1: "usurpare illicitum Collegium," Dig. 47, 22, 2: "curam," Cod. 1, 30, 3: "honorem," Dig. 50, 4, 7, 1: "nomen tutoris," Cod. 5, 6, 8). (3) "To appropriate to oneself," as in the common English sense of the word (Dig. 4, 6, 40, 1; 10, 1, 8, pr.; 50, 8, 2, 1). (4) "To preserve a right of servitude by its exercise," as opposed to "non utendo deperdere" (Dig. 8, 6, 6, 1). (5) The interruption of usucapio (Dig. 41, 3, 2; 41, 6, 5). Appius Claudius Caecus, who constructed the Via Appia and brought the Aqua Claudia to Rome, wrote a book *De Usurpationibus*, which was not extant in the time of Pomponius (Dig. 1, 2, 36).

Usurpatio in this last sense most commonly occurred from loss of possession, and even if it were subsequently regained the whole period of usucapio had to commence *de novo* and run again. Before Justinian litis contestatio (to the article on which reference may be made) in an action brought by the owner against the possessor for the recovery of the property interrupted longi temporis praescriptio (Cod. 3, 19, 2; 3, 32, 26), but not usucapio (Dig. 6, 1, 18, 20, 21; 41, 4, 21, 1), and this distinction was retained, apparently by an oversight, in his compilations, though it was not of much importance because, if the defendant lost the action, he still had to give up the property to the plaintiff, notwithstanding the completion of usucapio during its pendency (“usucapio frustra complebitur anticipata lite,” *fragm. Vat.* 12: cf. Dig. 41, 4, 2, 21; 6, 1, 18). Interruption also ensued from a judicial protest addressed by the owner to the possessor, if the latter was a person whom for some reason or other he was disabled from suing (Cod. 7, 40, 2), and possibly also from the owner's being taken captive in war (Dig. 41, 3, 15, pr.; *ib.* 44, 7; 49, 15, 12, 2; *ib.* 22, 3; *ib.* 29). As to the passage in Gellius (iii. 2) and Macrob. *Saturn.* (i. 3) relating to the non-establishment of manus per usum by absence of the wife per trinoctium, see Savigny, *System*, &c., iv. 365; Puchta, *Institutionen*, § 199, note y.

A suspension of usucapio, as distinct from its interruption, enabled the possessor to reckon the period of his possession before it took place: this occurred when the property over which the right was being prescriptively established became vested in an owner privileged in respect of usucapio (*e.g.* the Fiscus, emperor, charitable foundations, &c.), and when the owner was prevented by grounds of law from bringing his real action for its recovery (*e.g.* in the interval allowed to the heir under Justinian's legislation for preparing an inventory of the deceased's property, Cod. 6, 30, 22, 11). [J. B. M.]

USUSFRUCTUS and **USUS** were two of the personal servitudes of Roman law (Dig. 8, 1, 1): for the nature of the distinction between them and praedial servitudes, see SERVITUTES.

Ususfructus is defined as “jus alienis rebus utendi fruendi salva rerum substantia” (Dig. 7, 1, 1; Inst. ii. 4, pr.); it is the “real” right of using and taking the fruits of property, movable (including slaves) as well as immovable, the use of which does not diminish its substance: “est enim jus in corpore, quo sublato et ipsum tolli necesse est” (Inst. *ib.*; Dig. *ib.* 2: cf. Cic. *Top.* 3, “usus enim, *non abusus* legatus est”). The person entitled is called *usufructuarius* or *fructuarius* (Dig. 7, 8, 14, 1–3); the owner of the property subject to the right, *proprietarius* or *dominus proprietatis* (Inst. ii. 4, 3); and his ownership, so long as the usufruct subsists, *nuda proprietas* (Inst. *ib.* 1). Unless otherwise provided by the disposition in which it originated, a usufruct endured for the lifetime of the person entitled and no longer (Inst. ii. 4, 3; Dig. 45, 1, 38, 12): if vested in a juristic person, it could not last beyond a hundred years except by express provision (Dig. 7, 1, 56).

The things over which usufruct could exist were properly only tangible objects of property, in the use of which lies the true and essential notion of a servitude: the right of taking fruits was probably a later extension. Hence the Romans did not recognise a fructus sine usu (Paul. *Sent. rec.* iii. 6, 24; Dig. 7, 8, 14, 1); and if a right (*e.g.*) to take the annual fruits of an estate were given, it was construed either as a usufruct (which was usual in cases of bequest: Dig. 7, 1, 20), or as a mere right in personam and not a servitude at all.

Unless his rights were otherwise limited in the disposition by which they were created, the usufructuary was entitled to the detention or “natural” possession of the property (Dig. 41, 2, 12, pr.; 43, 17, 4;—Gaius, ii. 93; Inst. ii. 9, 4): to make any lawful use of it he pleased (Dig. 7, 1, 12, 1; *ib.* 15, 4; *ib.* 23, 1, &c.), and to take its fruits, whether natural, industrial, or what are termed *fructus civiles*, e.g. money made by letting out a thing on hire (Dig. *ib.* 7, pr. and 1; *ib.* 9, pr.; *ib.* 15, &c.). His title to natural fruits was *perceptio*, actual taking of possession (Inst. ii. 1, 36); but though in the case of land, for instance, he was entitled to collect and keep for himself all the fruits which were already on it, and all that were produced during the time of his enjoyment, he had no right to those which existed on the land when his interest terminated unless he had taken possession of them. Nor had he rights of any kind over accessions of the principal object (*e.g.* the issue of an ancilla, Inst. ii. 1, 37; Dig. 7, 1, 68, pr.; or “insula in flumine nata,” Dig. *ib.* 9, 4), unless they were immediately bound up with so as to form an integral part of it (*e.g.* alluvio), in which case the accession also was subject to the usufruct. He might also exercise all rights annexed to the property, such as praedial servitudes. But all these rights are qualified by the words “salva rerum substantia:” they must not be exercised so as to injure the reversionary interest of the dominus, so that he may not deal with the res fructuaria otherwise than as a “bonus paterfamilias” (Inst. ii. 1, 38): rather he must act as carefully and economically as though he were himself its owner, “boni viri arbitratu” (Dig. 7, 1, 9, pr.; 7, 9, 1, pr.): “causam proprietatis deteriorem facere non debet.” His duties in this respect seem to be of two kinds: firstly, not to put the thing to other or at any rate inferior uses than has been customary (*e.g.* to employ a slave in work of mere drudgery who has been engaged before in artistic or literary occupations: Dig. 7, 1, 15, 1); and secondly, not to change its character, even though it might thus be improved or made more valuable; *e.g.* he may not convert a pleasure into a fruit garden (Dig. *ib.* 13, 4), build on land save so far as is necessary for storage of its fruits (*ib.* 13, 6), or raze buildings already standing. As regards acts of waste, as they would be termed in English law, it would seem that in the absence of provision to the contrary he might, at any rate, dig for minerals, but only if the estate subject to his right was of considerable extent (Dig. *ib.* 9, 3; *ib.* 13, 5): upon this subject see Vangerow, *Lehrbuch der Pandekten*, § 344, notes 1 and 2. These common law rights of the usufructuary might, however, be curtailed by the disposition by which they were created, or even, it would seem, by subsequent agreement between the parties, in respect both of the usus and the fructus, or of either: *e.g.* he might be allowed to take certain kinds of fructus only, or a right which ordinarily is praedial (such as aquae haustus) might be conferred on one man by another as a personal servitude (Dig. 34, 1, 14, 3).

A usufruct might be released to the owner of the property, in Gaius' time (ii. 30) by *in jure cessio* [JURE CESSIO], in Justinian's by any act conclusive of the intention to surrender (Inst. ii. 4, 3): but it could not be alienated by the usufructuary to a third person (Gaius and Inst. *l. c.*;—Dig. 23, 3, 66; 10, 2, 15), though he might assign the exercise or enjoyment of it (even by way of pledge or mortgage), the actual right remaining in himself (Dig. 7, 1, 12, 2; *ib.*

38–40). The effect of an attempt to transfer it absolutely to a third person was in Gaius' time disputed: he himself (ii. 30) says that it was nugatory, while Pomponius, his contemporary, affirms (Dig. 23, 3, 66) that it caused a forfeiture to the dominus: of these two views the first was adopted by Justinian, who reproduces it in the Institutes (ii. 4, 3).

Subject and without prejudice to the usufructuary's rights, the owner of the property might deal with it as he pleased (Dig. 7, 1, 7, 1; *ib.* 13, 7, &c.), *e.g.* alienate or pledge it (Cod. 3, 33, 2): but he could not even with the other's consent create any servitudes over it which would injuriously affect the latter's rights (Dig. 7, 1, 15, 7) or surrender servitudes existing in its favour.

The usufructuary was bound to indemnify the owner for any loss occasioned by his dealing with the property in excess of his legal rights (Inst. ii. 1, 38; Dig. 7, 1, 9, pr. and 2; *ib.* 65, pr.): to see that no servitudes appurtenant to it were extinguished by non-user (Dig. *ib.* 15, 7): to keep buildings in ordinary repair (*ib.* 7, 2) and land in proper cultivation and tenantable condition (Inst. ii. 1, 38): to maintain the numbers of flocks and herds by replacing cattle, &c. which died (*ib.*): to pay all rates, taxes, &c. charged on the property itself (Dig. 7, 1, 7, 2; *ib.* 27, 3), and when his interest determined to restore it to the person entitled along with all accessions (Dig. 7, 9, 1, pr.; *ib.* 9, 3). To secure the performance of these duties he must enter into a cautio usufructuaria [CAUTIO], supported by sureties, with the owner; a practice originally introduced where the usufruct was created by bequest, but subsequently extended to nearly all cases (Dig. 7, 1, 13, pr.; Cod. 3, 33, 4); and until this was done the owner might either refuse to let him have the enjoyment of the property, or bring an action to compel him to give the requisite security (Dig. *loc. cit.*: 7, 9, 7, pr.): and though this obligation might be surrendered by the owner, where the usufruct was based on contract, if a testator bequeathed such a right to another person, and by his will released him from the cautio, the release was taken pro non scripto (Dig. 36, 4, 6, pr.; Cod. 6, 54, 7). For the legal remedies (actions and interdicts) by which the usufructuary and usuary could enforce their rights, reference should be made to the article on SERVITUTES.

The modes in which ususfructus and usus were created were the same in general as for all servitudes, and for these the reader may be referred to the same article. The commonest was testamentary disposition, the right being either bequeathed directly, or the heir being directed to constitute it in favour of the legatee: "ususfructus uniuscujusque rei legari potest, et aut ipso jure constituetur aut per heredem praestabitur: ex causa damnationis [LEGATUM] per heredem praestabitur, ipso jure per vindicationem" (Paul. *Sent. rec.* iii. 6, 17). In certain cases usufruct arose ipso jure in virtue of statutory enactment (*lex*); *e.g.* the pater's usufruct in the peculium adventitium of his son in power (Inst. ii. 9, 1;—Dig. 8, 6, 5; 8, 5, 1, &c.). Similarly, these rights were extinguished in the ways common to all servitudes.

The inconvenience of the rule which, on grounds of both natural and civil law (Inst. ii. 4, 2), excluded from usufruct things "quae usu tolluntur vel minuuntur" (such as money, provisions, and clothes), led to the enactment of a senatusconsultum which legalised bequests of usufruct over such kinds of property, the legatee being entitled to enjoy them on giving security to the heir that on his death or capitis deminutio he would return him things of a similar quantity or quality, or pay him their estimated value (Inst. ii. 4, 2; Dig. 7, 5, 1). As Justinian says, the senate did not introduce a genuine usufruct in such things, for that was impossible, "sed per cautionem quasi usumfructum constituit." The date of the senatusconsultum is not precisely known, but it is supposed to lie between Cicero (on account of *Top.* 3: "Non debet ea mulier, cui vir bonorum suorum usumfructum legavit, cellis vinariis et oleariis plenis relictis, putare id ad se pertinere; usus enim, non abusus legatus est") and the enactment of the Lex Papia Poppaea (A.D. 9), which often speaks of usufruct over part of a whole property. The difference between the new right and usufruct proper lies in the fact that the person entitled became owner of the property in question ("ita datur ut ejus fiat," Inst. ii. 4, 2), so that the notion of a jus in re aliena is entirely absent: he may consume it entirely, and so has not to return it in specie. The main purpose of the innovation was doubtless to enable testators to bequeath a general usufruct over the whole of their property (Dig. 33, 2, 24, pr.; Cod. 3, 33, 1), but such rights were also constituted over nomina or "choses in action," whereby the person to whom they were given became entitled to call in the debt, or to take the interest payable on it (Dig. 7, 8, 2, 1; *ib.* 4): if it was the debtor himself, he was released from the obligation to pay interest, though he must give security for the discharge of the debt at the proper time (Dig. 7, 8, 12, pr. and 1). Whether clothes could be the subject of a true usufruct seems to have been doubtful: Dig. 7, 1, 15, 4; 7, 9, 9, 3, is for the affirmative: Inst. ii. 4, 2, for the negative.

[J. B. M.]

USUS is defined (Dig. 7, 8, 2) by the negation of *frui*: "cui usus relictus est, uti potest, frui non potest." But the right of mere user was not strictly confined to the personal needs of the usuary, *e.g.* the person who had a usus of a house was entitled to lodge there his family, slaves, servants, and freedmen, and apparently even a guest, though this had been doubted (Inst. ii. 5, 2; Dig. 7, 8, 2, 1; *ib.* 3; *ib.* 4, 1): but anything which came under the notion of *fructus* was as a rule denied him, so that he could not let the res usuaria out, or transfer the exercise of his right to a third person even gratuitously (Inst. ii. 5, 1; Dig. 7, 8, 11). The contrast between usus and ususfructus is very characteristically marked in connexion with acquisition through slaves: "de iis autem servis, in quibus tantum usumfructum habemus, ita placuit, ut quidquid ex re nostra vel ex operis suis acquirant, id nobis acquiratur" (Inst. ii. 9, 4). "Per servum usuarium si stipuler vel per traditionem accipiam, an acquiram, quaeritur, si ex re mea vel ex operis ejus. Et si quidem ex operis ejus, non valebit, quoniam nec locare operas ejus possumus: sed si ex re mea, dicimus, servum usuarium stipulantem vel per traditionem accipientem mihi acquirere, quum hac opera ejus utar" (Dig. 7, 8, 14, pr.).

But in certain cases, especially where the usus was bequeathed by will (on the principle "in testamentis plenius voluntates testantium interpretamur," Dig. 50, 17, 12), the *uti* comprised or was interpreted as *frui*: viz. (1) Where the sole utility of the property was in its fruits, as in a usus silvae (Dig. 7, 8, 22), or pecuniae (Dig. *ib.* 5, 2; *ib.* 10). (2) Where the usuary cannot "use" the property at all, or can use it only in part, so that from the other part he would derive no benefit: *e.g.* where the usus is over land with a house, he may live in the house, and take from the fruits of the land so much as he requires for the daily wants of himself, his family, and dependents (Inst. ii. 5, 1; Dig. 7, 8, 12, pr. and 1; *ib.* 15); or where it is over a house too large for his personal needs, he may let the part which he does not want for himself (Dig. 7, 8, 2, 1; *ib.* 4). The usuary was subject to substantially the same duties as the usufructuary, and for securing the performance of these he had to enter into a cautio usuaria (Dig. 7, 9, 5, 1; *ib.* 11): he also had to bear the costs of repairs and to pay the taxes if the property produced no fruits for the owner: otherwise these charges fell on the latter. If the right to fructus was vested separately from the usus in a third person, the latter (or otherwise the owner) could demand access, &c. to the things for the purpose of taking them (Inst. ii. 5, 1; Dig. 7, 8, 10, 4; *ib.* 11, 12, pr., &c.).

(Inst. ii. 4 and 5; Gaius, ii. 30–33; Paul. *Sent. rec.* iii. 6, 17–33; *Fragm. Vat.* 41–93; Dig. 7, 1 *sqq.*; 33, 2;—Cod. 3, 33; Pellat, *Sur la Propriété et sur l'Usufruit*, 1853; Kohnfeldt, *Die sogenannte irregulären Servituten nach römischen Rechte*, 1862; Burkel, *Beiträge zur Lehre vom Niessbrauch*, 1864; Roby, *Introduction to the Digest:* text and commentary on Dig. 7, 1 (1884). On quasi-usufruct, see Held, *Die Lehre vom Ususfructus earum rerum quae usu consumuntur vel minuuntur*, 1848; and Puchta, *Ueber das Alter des Quasiususfructus*, Rhein. Museum für Jurisprudenz, vol. iii. p. 82; and on usus, Beckmann, *Ueber den Inhalt und Umfang der Personalservitut des Usus nach römischen Rechte*, 1861.) [J. B. M.]

XENA'GI (*ξεναγοί*). The Spartans, as being the head of that Peloponnesian and Dorian league which was formed to secure the independence of the Greek states, had the sole command of the confederate troops in time of war, provided that the league did not disapprove of the war (see Herod. v. 75; Gilbert. *Gr. Staatsalt.* i. 96, note); they ordered the quotas which each state was to furnish, and appointed officers of their own to command them. Such officers were called *ξεναγοί*. The generals whom the allies sent with their troops (*ἄρχοντες, στρατηγοί*) were subordinate to these Spartan *ξεναγοί*, though they attended the council of war, as representatives of their respective countries (Thucyd. ii. 7, 10, 75; v. 54; vii. 18;—Xenoph. *Hell.* iii. 5, § 7; *Agesil.* ii. 10). After the peace of Antalcidas, the league was still more firmly established, though Argos refused to join it; and the Spartans were rigorous in exacting the required military service, demanding levies by the *σκυτάλη*, and sending out *ξεναγοί* to collect them: in case of desertion they could fine the state 1 stater a day for each man who was due. (Xenoph. *Hell.* v. 2, §§ 7, 22, 37; vi. 3, § 7;—Wachsmuth, *Hell. Alterth.* vol. i. pt. ii. pp. 114, 241, 1st ed.; Schömann, *Ant. Jur. Pub. Gr.* p. 426; Gilbert, *Gr. Staatsalterth.* i. 95 f.; Thumser, *Gr. Staatsalterth.* i. 214.)

[C. R. K.] [G. E. M.]

XENELA'SIA (*ξενηλασία*). The Lacedaemonians appear in very early times, before the legislation of Lycurgus, to have been averse to intercourse with foreigners (*ξείνοισι ἀπρόσμικτοι*, Herod. i. 65). This disposition was encouraged by the lawgiver, who made an ordinance forbidding strangers to reside at Sparta, without special permission, and empowering the magistrate to expel from the city any stranger who misconducted himself, or set an example injurious to public morals (cf. Herod. iii. 148). Such jurisdiction was exercised by the Ephori. Thucydides (ii. 39) makes Pericles reproach the Lacedaemonians with this practice, as if its object were to prevent foreigners from becoming acquainted with such institutions and means of defence as would be dangerous for an enemy to know. The intention of Lycurgus, more probably, was to preserve the national character of his countrymen, and prevent their being corrupted by foreign manners and vices (as Xenophon says), *ὅπως μὴ ῥᾳδιουργίας οἱ πολῖται ἀπὸ τῶν ξένων ἐμπίπλαιντο* (*de Rep. Laced.* 14, § 4; compare Plut. *Lycurg.* 27; Schömann, *Antiq. of Greece*, p. 278, E. T.). With the same view the Spartans were themselves forbidden to go abroad without leave of the magistrate. Both these rules, as well as the feelings of the people on the subject, were much relaxed in later times when foreign rule and supremacy became the object of Spartan ambition. Even at an earlier period we find that the Spartans knew how to observe the laws of hospitality upon fit and proper occasions, such as public festivals, the reception of ambassadors, &c. (Xenoph. *Mem.* i. 2, § 61). They worshipped a *Ζεὺς ξένιος* and *Ἀθανᾶ ξενία* (Pausan. iii. 1, § 111). The connexion, called by the Greeks *προξενία*, was cultivated at Sparta both by the state and by individuals; of which their connexion with the Peisistratidae is an example; and also that of a Spartan family with the family of Alcibiades (Thucyd. v. 43, vi. 89, viii. 6; Herod. v. 91; compare vi. 57). [HOSPITIUM.] Many illustrious men are reported to have resided at Sparta with honour, as Terpander, Theognis, and others (Schömann, *Ant. Jur. Publ. Gr.* p. 142). Xenophon was highly esteemed by the nation, and made Spartan *πρόξενος*. It is noticeable that though there is no mention of *ξενηλασία* at Crete, yet the Dorian dislike of things foreign is evidenced by the prohibition of foreign travel for young men (Plat. *Protag.* p. 342 D). The *ξενηλασία* at Apollonia, a colony founded by the

Corinthians and Corcyraeans, is mentioned in Ael. *V. H.* xiii. 16. (See further on the subject of the *ξενηλασία*, Thucyd. i. 144, with Arnold's notes; Aristoph. *Aves*, 1013; Harpocr. *s. v. καὶ γὰρ τὸ μηδένα.*) [C. R. K.] [G. E. M.]

XENI (*ξένοι*). [MERCENARII.]

XENIA (*ξενία*). [HOSPITIUM.]

XE'NIAS GRAPHE (*ξενίας γραφή*). This was a prosecution at Athens for unlawfully usurping the rights of citizenship. As no man could be an Athenian citizen, except by birth or creation (*φύσει, γένει* or *ποιήσει, δωρεᾷ*), if one, having neither of these titles, assumed to act as a citizen, he was liable to a *γραφὴ ξενίας*, which any citizen might institute against him (Lys. *c. Agor.* § 60; Isae. *Pyrrh.* § 37;—Dem. *c. Boeot.* i. p. 999, § 18, ii. p. 1020, § 41; *c. Timoth.* p. 1204, § 66; *c. Neaer.* p. 1363, § 52, etc.); or he might be proceeded against by *εἰσαγγελία* (Dinarch. *c. Agasicl.* cf. Hyper. *pro Eux.* c. 19, etc.). If condemned, his property and person were forfeited to the state, and he was forthwith to be sold for a slave ([Dem.] *Epist.* iii. p. 1481, § 29; Schol. Dem. *c. Timocr.* p. 741, etc.). The judgment, however, was arrested, if he brought a *δίκη ψευδομαρτυριῶν* against the witnesses who had procured his conviction, and convicted them of giving false testimony. During such proceeding he was kept in safe custody to abide the event (Dem. *c. Timocr.* p. 741, § 131). [MARTYRIA; *Journ. of Philol.* vi. p. 15 f.] When a person tried on this charge was acquitted by means of fraudulent collusion with the prosecutor or witnesses, or by any species of bribery (Aristotle in *Lex. Rhet. Cantabr.* p. 674: *ἐάν τις δῶρα διδοὺς ἀποφύγῃ τὴν ξενίαν*: cf. Harpocr. *s.v.*), he was liable to be indicted afresh by a *γραφὴ δωροξενίας*, the proceedings in which, and the penalty, were the same as in the *γραφὴ ξενίας*. The jurisdiction in these matters belonged in the time of Demosthenes to the Thesmothetae, but anciently, at least in the time of Lysias (*de Pecun. publ.* § 8), to the Nautodicae.

In order to prevent fraudulent enrolment in the register of the *δῆμοι*, or *ληξιαρχικὸν γραμματεῖον*, which was important evidence of citizenship, the *δημόται* themselves were at liberty to revise their register, and expunge the names of those who had been improperly admitted. From their decision there was an appeal to a court of justice, upon which the question to be tried was much the same as in the *γραφὴ ξενίας*, and the appellant, if he obtained a verdict, was restored to the register; but, if judgment was given against him, was sold for a slave (Dem. *c. Eubul.* p. 1317, § 60 f.; Dionys. Halic. *de Isaeo judic.* 16, *καὶ ἐὰν τὸ δεύτερον ἐξελεγχθῶσι, πεπρᾶσθαι αὐτούς*, etc. Busolt, *d. griech. Staats.- u. Rechtsalt.* § 157, in I. Müller's *Handbuch d. klass. Altertumswissensch.*, probably misled by Plut. *Pericl.* 37, *ἐπράθησαν οὖν ἁλόντες ὀλίγῳ πεντακισχιλίων ἐλάττους*, says that those whose names were expunged from the register were sold for slaves; it was only in case of a person not acquiescing in the verdict of the demotae and appealing to a court of justice (*ἔφεσις*), that, if judgment there also went against him, he was sold for a slave). [DEMUS; PARENGRAPTOI.] For an example of this, see the speech of Demosthenes against Eubulides; Isae. *pro Euphil.* (*Att. Process*, ed. Lipsius, pp. 95–98, 437–441.) [C. R. K.] [H. H.]

XESTES (*ξέστης*). [MENSURA, p. 164 *a*; TABLES.]

XYSTUS. [GYMNASIUM; HORTUS.]

Z.

ZETE'TAE (*ζητηταί*), commissioners of inquiry, were appointed at Athens on special occasions as extraordinary officers, not as a regular magistracy; and were of two kinds, sometimes confused by grammarians (Harpocrat., Poll. viii. 115) and by modern writers. 1. Criminal investigators or inquisitors, to discover the authors of some crime against the state, and bring them to justice. The court of Areiopagus often discharged the office of inquisitors for the state, and were sometimes armed with special powers by the people in assembly [AREIOPAGUS, Vol. I. p. 176 *b*). During the panic consequent on the mutilation of the Hermae, the *βουλὴ* received absolute power to investigate (*ἦν γὰρ αὐτοκράτωρ*, Andoc. *de Myst.* § 15), but *ζητηταὶ* were also appointed (*ib.* §§ 14, 36, 40, 65). This is perhaps the only occasion on which *ζητηταὶ* are mentioned in connexion with an inquiry other than financial. 2. *Ζητηταὶ* were more frequently appointed to search for confiscated property, the goods of condemned criminals and state debtors; to invite and receive information against any persons who concealed, or assisted in concealing them, and to deliver an inventory (*ἀπογραφή*) of all such goods to the proper authorities. The delinquent was then prosecuted, either before the *σύνδικοι* [SYNDICUS], or it might be before the *ζητηταὶ* themselves, if their commission extended to the holding of a *ἡγεμονία δικαστηρίου*. Any person, however, who had claims against the goods which were the subject of such information, might petition to have such claims settled while the confiscation was still in process and before the state had taken possession: this was called *ἐνεπισκήψασθαι* ([Dem.] *c. Timoth.* pp. 1197–8, §§ 45, 46, 47; the subst. *ἐνεπίσκημμα* only in Harpocrat.). Such overhaulings of the treasury by the appointment of *ζητηταὶ* were especially frequent in times of chronic deficit, such as the Social War and the years immediately succeeding it (Dem. *c. Timocr.* p. 703, § 11); but there are earlier examples (Lys. *ἀπολ. δωροδ.* § 16). In the case of the alleged bribery by Harpalus we find a decree *τὴν βουλὴν ζητεῖν* (Dinarch. *c. Dem.* §§ 4, 55). According to Schöll, the *ζητηταὶ* were only introduced for a short time after the expulsion of the Thirty, and then replaced by the *συλλογεῖς*: the more probable opinion, already maintained under SYLLOGEIS, is that the *συλλογεῖς* were appointed only on that single occasion, the *ζητηταὶ* more frequently. They were technically an *ἀρχή*, though classed by Pollux (viii. 114, 115) among the *ὑπηρέται* or underlings [HYPERETES, in Vol. I.]: as Boeckh remarks, it was an office which men of high rank were not ashamed to accept. Another name for commissioners of inquiry into confiscated property was *μαστῆρες* (Hyperid. *ap.* Harpocrat. *s. v.*; Suid., Phot., *s. vv. μαστῆρες* and *μάστειρες*: *Lex. Seguer.* p. 279). The 17th and 19th speeches of Lysias, the *διαδικασία* and *de Bonis Aristoph.*, throw considerable light on the way such inquiries were conducted at Athens. (Harpocrat. *s. v.* ζητητής: Boeckh, *P. E.* p. 158 = *Sthh.*^{3} i. 192; Fränkel, n. 247 on Boeckh; *Att. Process*, p. 126 Lips.; R. Schöll, *Quaestiones fiscales juris Attici ex Lysiae orationibus illustratae*, Berlin, 1873.)

[C. R. K.] [W. W.]

ZEUGITAE (ζευγῖται). [CENSUS, Vol. I. p. 403.]

ZONA. [CINGULUM.]

ZOPHORUS (ζῳοφόρος), "bearing animals or figures," of a panel or relief; hence especially applied to the continuous carved frieze of the Ionic and Corinthian orders, while in Doric buildings the triglyphs and metopes take the place of this member. (Vitruv. iii. 5, 10.)

XIV. Roman Weights.
    (2) Subdivisions of the Uncia.
XV. Roman Money. (1) Weights.
XVI. Roman Money. (2) English Values.

In the construction of these Tables, most use has been made of F. Hultsch's *Griechische und Römische Metrologie*, 2nd ed., Berlin, 1882; but Hultsch's results have been, in some instances, corrected by W. Dörpfeld in *Mittheilungen des Deutschen Instituts zu Athen*, since 1883. The tables of weights and money are founded on the articles AS and PONDERA by Professor Gardner.

The Tables are so arranged as to exhibit the corresponding Greek and Roman measures in direct comparison with each other. In some of the Tables the values are given, not only in our several measures, but also in decimals of a primary unit, for the purpose of facilitating calculations. In others, *approximate values* are given; that is, values which differ from the true ones by some small fraction. Where both French and English determinations are given, these cannot correspond with the utmost exactness, but the discrepancy between them is barely noticeable, save in the highest and lowest measures determined. Fuller information will be found under MENSURA, NUMMUS, PONDERA, and the specific names.

[P. S.] [J. G.]

TABLE I.

GRECIAN MEASURES OF LENGTH. (ATTIC STANDARD.)

I. SMALLER MEASURES.												Decimals of a Metre.	Decimals of a Foot.	Feet.	Inches.
Δάκτυλος												·0185	·0607	..	·7281
2	Κόνδυλος											·037	·1213	..	1·4562
4	2	Παλαστή, Δῶρον, Δοχμή, or Δακτυλοδοχμή										·074	·2427	..	2·9124
8	4	2	Διχάς, or Λιχάς									·148	·4852	..	5·8248
11	$5\frac{1}{2}$	$2\frac{3}{4}$	$1\frac{3}{8}$	Ὀρθοδῶρον								·203	·6673	..	8·0091

NOTE.—For other Standards, see Notes to Table II.

TABLE II.

ROMAN MEASURES OF LENGTH.

I. SMALLER MEASURES.							Decimals of a Metre.	Decimals of a Foot.	Feet.	Inches.
Digitus							·0185	·060675	..	·7281
1⅓	Uncia or Pollex						·0247	·0809	..	·9708
4	3	Palmus					·074	·2427	..	2·9124
12	9	3	Palmus Major (of late times)				·222	·7281	..	8·7372
16	12	4	1⅓	Pes			·296	·9708	..	11·6496
20	15	5	1⅔	1¼	Palmipes		·370	1·2135	1	2·562
24	18	6	2	1½	1⅕	Cubitus	·444	1·4562	1	5·4744

NOTES TO TABLES I. AND II.

A metre is 39·37 English inches: an English foot is ·3048 metre.

It is not thought necessary to give the whole scale of the Uncial divisions of the foot. They can easily be calculated from the Uncia.

Other Standards.—The *relations* of the measures to one another were always, with hardly any exception, those above given: but the *standards* varied in different places and at different times. Thus the Attic *πούς* being ·296 m., the Aeginetan was ·333 m., the Olympic ·3205 m., the Philetaerean ·333 m., the Ionic ·350 m., the Phrygian ·2775 m.

In the West, though the Roman foot was ·296 m., the same as the Attic, the older Italian foot was only ·275 m., and the Drusian foot, used in Gaul and Germany, was ·333 m.

In Egypt, under the Pharaohs, the Royal ell was ·525 m., the smaller ell ·425 m.: under the Ptolemies, the Royal ell was ·533 m., the greater foot ·355 m., and the smaller foot ·308 m.

The Great Babylonian ell was ·550 m., the Royal or Persian ell ·405 m., the Phoenician ell ·4485 m.

Compared with one another, the Attic, Roman, and Phoenician feet are the same: the Aeginetan, Philetaerean, and Drusian are the same: the Italian and Phrygian are the same: the Ionic and Royal (or Greater) Egyptian are the same—either exactly or very nearly indeed.

TABLE III.

GRECIAN MEASURES OF LENGTH. (Attic Standard.)

II. LARGER MEASURES.—LAND AND ITINERARY.											Decimals of a Metre.	Decimals of a Mile.	Miles.	Feet.	Inches.
ΠΟΥ΄Σ											0·296	·0001838	..	..	11·6496
1½	ΠΗ΄ΧΥΣ										0·444	·0002757	..	1	5·4744
2½	1⅔	Βῆμα									0·739	·0004596	..	2	5·124
6	4	2⅖	’ΟΡΓΥΙΑ΄								1·774	·001103	..	5	9·8976
10	6⅔	4	1⅔	Κάλαμος, Ἄκαινα, or Δεκάπους							2·957	·001838	..	9	8·496
100	66⅔	40	16⅔	10	Πλέθρον						29·57	·01838	..	97	0·96
600	400	240	100	60	6	ΣΤΑ΄ΔΙΟΝ or ΣΤΑ΄ΔΙΟΣ					177·4	·11028	..	582	5·76
1200	800	480	200	120	12	2	Δίαυλος				354·8	·22056	..	1164	11·52
2400	1600	960	400	240	24	4	2	Ἱππικόν				·44112	..	2329	11·04
18,000	12,000	7200	3000	1800	180	30	15	7½	Παρασάγγης			3·3084	3	1634	4·8
36,000	24,000	14,400	6000	3600	360	60	30	15	2	Σχοῖνος		6·6168	6	3268	9·6

Note.—The *σχοῖνος*, above given, is that of Herodotus, but the measure seems to have varied in different reaches of the Nile, and the Romans reckoned it about 4 Roman miles. On the parasang, see note to next Table.

TABLE IV.

ROMAN MEASURES OF LENGTH.

II. LARGER MEASURES.—LAND AND ITINERARY.							Decimals of a Metre.	Decimals of a Mile.	Miles.	Feet.	Inches.
Pes							0·296	·0001838	..	..	11·6496
1½	Cubitus						0·444	·0002757	..	1	5·4744
2½	1⅔	Gradus, or Pes Sestertius					0·740	·0004596	..	2	5·124
5	3⅓	2	Passus				1·48	·0009193	..	4	10·248
10	6⅔	4	2	Decempeda, or Pertica			2·96	·001838	..	9	8·496
120	80	48	24	12	Actus (in length)		35·52	·2206	..	116	5·952
5000	3333⅓	2000	1000	500	41⅔	Mille Passuum	1480	·9193	..	4854	..

NOTES TO TABLES III. AND IV.

N.B.—The Roman mile only differs from the English by less than 1-10th.

Ancient Road Measures.—As in Tables I. and II., so here, the relations of the measures to one another are correctly given, but the standards varied. It is proper, therefore, to add the length of various road measures according to the standards in use in different parts of the ancient world.

The Attic *stadium* being 177 m., the Olympic was 192 m., the Ptolemaic 185 m., the Ionic 210 m. (A metre is 39·37 English inches.)

The Romans, using round numbers, reckoned 8 stadia to the mile. According to this relation, the Roman stadium would be 185 m., and the old Italian 165 m.

Similarly, the Greeks reckoned 30 stadia to the parasang, but the parasang was really 30 *Persian* stadia, which were longer than the Greek, being 196·8 m. The true parasang was therefore 5904 m., or 3 miles 1180 yards. (So Oppert, but Hultsch determines it at 5670 m.)

The Gallic *leuga* was 2220 m.; the German *rasta* 4440 m.

TABLE V.

GRECIAN MEASURES OF SURFACE.

(Attic Standard.)

		ORDINARY LAND MEASURES.	Square Metres.	Square Feet.	Perches.	Square Feet.
		ΠΟΥ͂Σ *τετράγωνος* (Square Foot)	0·087	·94245	..	·94245
100		*Ἄκαινα* (Square of the *κάλαμος*)	8·74	94·245	..	94·245
10,000	100	ΠΛΕ΄ΘΡΟΝ	8740	9424·5	34	167·5

NOTES.

The English acre being 160 perches or 4840 sq. yds., the *πλέθρον* is obviously less than ¼ of an acre.

The Egyptian *ἄρουρα* (Herod. ii. 168) was a square of 50 Egyptian ells each way. The ell being taken at 0·524 m., or about 21 English inches, this gives a value of about 820 sq. yds. for the *ἄρουρα*.

TABLE VI.

ROMAN MEASURES OF SURFACE.

ORDINARY LAND MEASURES.										Square Feet.	Acres.	Roods.	Perches.	Square Feet.
Pes Quadratus										·94245	..	..	..	·9425
100	Scrupulum, or Decempeda Quadrata*									94·245	..	..	..	94·245
480	4⅘	Actus Simplex								452·377	..	..	1	180·127
2400	24	5	Uncia†.							2261·89	..	..	8	83·885
3600	36	7½	1½	Clima						3392·83	..	..	12	125·83
14,400	144	30	6	4	Actus Quadratus					13,571·318	..	1	9	231·07
28,800	288	60	12	8	2	Jugerum				27,142·636	..	2	19	189·89‡
57,600	576	120	24	16	4	2	Heredium			54,285·272	1	0	39	107·53
5,760,000	57,600	12,000	2400	1600	400	200	100	Centuria		5,428,527·2	124	2	19	135·25
23,040,000	230,400	48,000	9600	6400	1600	800	400	4	Saltus	21,714,108·8	498	1	37	268·75

---

* This was the square of the *pertica* or standard 10-foot measuring-rod.

† The *As* to which this *Uncia* and the above *Scrupulum* belong is the *Jugerum*. The other uncial divisions of the *Jugerum* may easily be calculated from the *Uncia*. The *Semissis* is, of course, the *Actus Quadratus*.

‡ *i.e.* almost ⅝ths of an acre. The Italian *versus* was about 3/16ths of a jugerum, or nearly 18 perches.

TABLE VII.

GRECIAN MEASURES OF CAPACITY.

I. ATTIC LIQUID MEASURES. (Solonian.)												Gallons.	Pints.	Approximate.	
														Gallons.	Pints.
Κοχλιάριον												..	·008	..	1/120
2	Χήμη											..	·016	..	1/60
2½	1¼	Μύστρον										..	·02	..	1/48
5	2½	2	Κόγχη									..	·04	..	1/24
10	5	4	2	ΚΥ'ΑΘΟΣ.								..	·08	..	1/12
15	7½	6	3	1½	'Οξύβαφον							..	·12	..	⅛
30	15	12	6	3	2	Τέταρτον						..	·24	..	¼
60	30	24	12	6	4	2	Κοτύλη, Τρυβλίον, or Ἡμίνα					..	·48	..	½
120	60	48	24	12	8	4	2	ΞΕ'ΣΤΗΣ (Sextarius)				..	·96	..	1
720	360	288	144	72	48	24	12	6	ΧΟΥ͂Σ			..	5·76	..	6
5760	2880	2304	1152	576	384	192	96	48	8	Roman Amphora (κεράμιον)		5	6·08	6	..
8640	4320	3456	1728	864	576	288	144	72	12	1½	ΑΜΦΟΡΕΥ'Σ ΜΕΤΡΗΤΗ'Σ	8	5·12	9	..

NOTE.—The above table is calculated from the *κύαθος*, as estimated above. If it is estimated at ·045 litre, the *μετρητὴς* will be determined at about 1 pint less.

TABLE VIII.

ROMAN MEASURES OF CAPACITY.

I. LIQUID MEASURES.										Gallons.	Pints.	Approximate.	
												Gallons.	Pints.
Ligula										..	·02	..	$\frac{1}{48}$
4	CYATHUS *									..	·08	..	$\frac{1}{12}$
6	1½	Acetabulum								..	·12	..	$\frac{1}{8}$
12	3	2	Quartarius, *i.e.* ¼th of the *Sextarius*							..	·24	..	$\frac{1}{4}$
24	6	4	2	Hemina or Cotyla						..	·48	..	$\frac{1}{2}$
48	12	8	4	2	SEXTARIUS, *i.e.* ⅙th of the *Congius*					..	·96	..	1
288	72	48	24	12	6	CONGIUS				..	5·76	..	6
1152	288	192	96	48	24	4	Urna			2	7·04	3	..
2304	576	384	192	96	48	8	2	AMPHORA QUADRANTAL		5	6·08	6	..
46,080	11,520	7680	3840	1920	960	160	40	20	Culeus	115	1·6	120	..

* According to the uncial division, the *Sextarius* was the *As*, and the *Cyathus* the *Uncia*.

NOTE.—The above table is also calculated from the *Cyathus*, determined at ·08 pint, and here also a calculation from the *Cyathus* = ·045 litre would make a trifling difference in the *Amphora*.

TABLE IX.

GRECIAN MEASURES OF CAPACITY.

II. ATTIC DRY MEASURES. (Solonian.)								Gallons.	Pints.	Approximate.	
										Gallons.	Pints.
							ΚΥ'ΑΘΟΣ	..	·08	..	$\frac{1}{12}$
1½							'Οξύβαφον	..	·12	..	$\frac{1}{8}$
6	4						ΚΟΤΥ'ΛΗ, or 'Ημίνα	..	·48	..	$\frac{1}{2}$
12	8	2					ΞΕ'ΣΤΗΣ (*Sextarius*)	..	·96	..	1
24	16	4	2				ΧΟΙ͂ΝΙΞ	..	1·92	..	2
96	64	16	8	4			'Ημίεκτον	..	7·68	1	..
192	128	32	16	8	2		'Εκτεύς (equal to the Roman *Modius*)	1	7·36	2	..
1152	768	192	96	48	12	6	ΜΕ'ΔΙΜΝΟΣ	11	4·16	12	..

Note.—The Egyptian *hin* was about 10 κύαθοι: the Persian ἀρτάβη about 48 quarts; the Ptolemaic ἀρτάβη about 48 quarts (= 1 μέδιμνος): the Spartan *medimnus* about 65 quarts: the Ptolemaic *medimnus* about 96 quarts or 3 bushels.

TABLE X.

ROMAN MEASURES OF CAPACITY.

II. DRY MEASURES.								Gallons.	Pints.	Approximate.	
										Gallons.	Pints.
Ligula								..	·02	..	$\frac{1}{48}$
4	**Cyathus***							..	·08	..	$\frac{1}{12}$
6	$1\frac{1}{2}$	Acetabulum						..	·12	..	$\frac{1}{8}$
12	3	2	Quartarius, *i.e.* 1-4th of the *Sextarius*					..	·24	..	$\frac{1}{4}$
24	6	4	2	Hemina or Cotyla				..	·48	..	$\frac{1}{2}$
48	12	8	4	2	**Sextarius**, *i.e.* 1-6th of the *Congius*			..	·96	..	1
384	96	64	32	16	8	Semimodius		..	7·68	1	..
768	192	128	64	32	16	2	**Modius**	1	7·36	2	..

* See also Table VIII and Note.

TABLE XI.

N.B.—One pound *avoirdupois* is exactly 7,000 grains: one ounce *avoirdupois* is 437½ grains. 1 *gramme* is 15·43234 grains.

(A.) Various Oriental Weights.

1. Egyptian.			Grammes. (Approximate.)	Grains. (Approximate.)	Avoirdupois. (Approximate.)
Kat			9	140	⅓ oz.
10	Outen or Ten		90	1400	3⅕ oz.
2. Babylonian Heavy Gold.					
Shekel			16·83	260	⅗ oz.
50	Mina		841·5	13,000	1 lb. 13⁵⁄₇ oz.
3000	60	Talent	50,490	780,000	111³⁄₇ lbs.
3. Babylonian Heavy Silver.					
Shekel			22·4	344	⅘ oz.
50	Mina		1,122	17,200	2 lbs. 7⅓ oz.
3000	60	Talent	67,320	1,032,000	147³⁄₇ lbs.
4. Babylonian Light Gold and Light Silver Standards were exactly half the heavy gold and heavy silver respectively, so that:					
Light Gold Shekel			8·41	130	³⁄₁₀ oz.
Light Silver Shekel			11·2	172	⅖ oz.
5. Phoenician Silver.					
Shekel			14·9	230	⁶⁄₁₁ oz.
50	Mina		745	11,500	1 lb. 10²⁄₇ oz.
3000	60	Talent	44,700	690,000	98⁴⁄₇ lbs.

(B.) Aeginetan and Attic Commercial Weights.

					Grammes.	Grains.
Obol					1·05	16
6	Drachm				6·30	97
12	2	Didrachm (στατήρ)			12·60	195
600	100	50	Mina		630	9,750
36,000	6000	3000	60	Talent	37,800	585,000

(C.) Euboic Weights.

				Grammes.	Grains.
Drachm				4·20	65
2	Stater			8·40	130
100	50	Mina		420	6,500
6000	3000	60	Talent	25,200	390,000

N.B.—Just as the Euboic drachm is ⅓ of the Aeginetan stater, so the Corinthian drachm is ⅓ of the Euboic stater. See Vol. II., p. 449 *b*.

(D.) Attic Weights (Solonian Coinage).

				Grammes.	Grains.
Drachm				4·40	67·5
2	Didrachm or Stater			8·80	135
100	50	Mina		440	6,750
6000	3000	60	Talent	26,400	405,000

N.B.—It will be seen that the ratio of the Aeginetan stater (195 gr.) to the Attic (135 gr.) is a good deal larger than 100:73 or 138:100 or 83⅓:60, which are the ratios ascribed to Solon's reduction of the Attic coinage.

TABLE XII.

GRECIAN MONEY (valued by Weight).*

I. ATTIC COPPER AND SILVER.													£	s.	d.	Farthings.

---

* N.B. The above table is calculated from the weights of existing coins, and gives their value *as bullion*, if silver be taken at 5*s.* an ounce troy. But their value, if compared with English *coined* silver, would be much higher: *e.g.* the shilling weighs 87·27 gr., and contains only about 80 gr. of pure silver. The drachma, of 67·5 gr. pure, is obviously more than ⅔rds of this. For practical purposes it is perhaps better to reckon the drachma as worth about a French franc (9½d.), the *mina* £4. Cf. Table XVI. and notes. An Attic gold talent would be worth £3875, if gold be taken at 2*d.* a grain, and a gold didrachm would be worth £1 2*s.* 6*d.*

Semis . . .	17$\frac{1}{4}$*d.*	6*d.*	1$\frac{7}{16}$*d.*	$\frac{3}{4}$*d.*	..	..	..

NOTE.—The above table gives a good idea of the *size* of the coin, but not so accurate a notion of its *intrinsic value*, for the English sovereign contains $\frac{1}{12}$th alloy, the shilling $\frac{3}{40}$ths alloy, the penny $\frac{1}{20}$th alloy.

The intrinsic value of a gold coin may be determined from the fact that the Bank of England is bound to buy gold bullion at the fixed rate of £3 17*s.* 9*d.* per oz. Troy of 480 grs. Hence, for instance, the *aureus* of Augustus would fetch £1 0*s.* 9½*d.* But the price of silver bullion is not fixed, and has varied within the last 20 years from 5*s.* to 3*s.* 8*d.* per oz. Troy; and similarly the value of copper varies. The relative values, again, of gold to silver and of silver to copper fluctuated considerably in ancient times, as they do now, and the intrinsic values of *e.g.* the *aureus* to the *denarius*, taken now, would not correspond to their relative values of 1 aureus = 25 denarii. Cf. also the article As.

For practical purposes, the *aureus* of Augustus = £1 sterling; the *denarius* = a franc (9$\frac{3}{5}$*d.*); the *sestertius* = 2$\frac{2}{5}$*d.* or $\frac{1}{100}$th of £1. A sum given in *sestertii* may be converted into pounds sterling by dividing it by 100.

LATIN INDEX.

ENGLISH INDEX.

APPENDIX.

THE whole of Volume II. was in type, and Volume I. already published, when the tract ascribed to Aristotle *on the Athenian Constitution* first appeared. The following Appendix shows the principal points on which the conclusions arrived at in the Dictionary require to be modified, if that authority is followed, and also supplies references to several passages of the treatise which support opinions already expressed. In the first part of the Appendix, which bears on articles in Volume I., Dr. Hager is responsible for the notes on Civitas, Eisangelia, Emmenoi Dikai, Endeixis, Epitropus, Eponymus, Euthyne, Exomosia, Exsilium, Heres, Jusjurandum; Mr. Wayte for the remainder. As regards the notes which refer to articles in Volume II., Dr. Hager is responsible for those on Nomos, Paranoias Dike, Prostates tou Demou, Psephus, Seisachtheia; Mr. Wayte for those on Sitophylaces, Synegorus, Tamias, Tettaraconta, Tribus, Trieropoei; Mr. Marindin for the remainder.

APPENDIX TO VOLUME I.

ADYNATI. The quotation from Harpocration can now be corrected from the author's own words. No other rate of payment is mentioned than two obols daily; and a special *ταμίας*, chosen by lot, presided over the distribution ('Αθ. πολ. c. 49).

AGORANOMI. The statement as to their number, five for the city and five for the Peiraeus, is in accordance with the text (c. 51).

ANTIGRAPHEIS. The distinction between these and the GRAMMATEIS is perhaps too strongly emphasised in both articles. The *γραμματεύς*, an assessor to the *βουλή* (*ὃς παρακάθηται*), is appointed *ἐπὶ τοὺς νόμους*, and sees that they are correctly transcribed (*ἀντιγράφεται καὶ οὗτος πάντας*, c. 54).

APODECTAE. They had summary jurisdiction to the value of ten drachmas only: beyond that, *εἰς τὸ δικαστήριον εἰσάγοντες ἔμμηνα* (c. 52).

ARCHON. Against the received tradition that the Medontidae, the early successors of Codrus, held office for life, but without the title of king, the contention of Lugebil and Caillemer (see ARCHON, p. 165 *b*) that both the name and the attributes of royalty survived almost unchanged, has now received important confirmation. In 'Αθ. πολ. c. 3 it is stated that "in the times before Draco" the head of the state was styled *βασιλεύς*, and ruled for life; next to him was a *πολέμαρχος*, or commander-in-chief, who indeed dates back to the period of the real kings; thirdly, an *ἄρχων*, or chief civil magistrate. These two officers were probably elected for a term of years by the Eupatrids, and formed an important check on the autocracy of the titular king. Mr. Kenyon remarks: "The abolition of the title of king as that of the chief magistrate of the state probably took place when the decennial system was established. The name was then retained only for sacrificial and similar reasons, and, to mark the fact that the kingly rule was actually at an end, the magistrate bearing the title was degraded to the second position, while the Archon, whose name naturally suggested itself as the best substitute for that of king, was promoted to the titular headship of the state."

Fresh light is also thrown on the question discussed at p. 166 *b*, as to the time when the election by lot was introduced. We find "the following stages in the history of the method of election to this office: (1) prior to Draco, the archons were nominated by the Areopagus; (2) under the Draconian constitution they were elected by the ecclesia; (3) under the Solonian constitution, so far as it was not disturbed by internal troubles and revolutions, they were chosen by lot from forty candidates selected by the four tribes; (4) under the constitution of Cleisthenes they were directly elected by the people in the ecclesia; (5) after 487 B.C. they were appointed by lot from 100 (or 500, see below) candidates selected by the ten tribes; (6) at some later period the process of the lot was adopted also in the preliminary selection by the tribes" (Mr. K., pp. 59–60; 'Αθ. πολ. c. 22). As regards the number of candidates selected under the arrangement of 487 B.C. the MS. here gives 500, but the writer had previously stated (c. 8) that each tribe chose ten candidates, making a total of 100. It is probable that for *πεντακοσίων* (*φ'*) we should read *ἑκατόν* (*ρ'*).

After the expulsion of Damasias, who in a two years' archonship (B.C. 582–1) tried to establish a tyranny, we have for one year the unprecedented number of *ten* archons, of whom five were Eupatrids, three ἄγροικοι = Geomori, and two Demiurgi (c. 13). The conjecture mentioned at p. 167 *a*, that the tenth tribe, which did not elect an archon, was compensated by having the appointment of the secretary (*γραμματεύς*), is stated as a fact (Ἀθ. πολ. c. 55).

The received account of the abolition of the property qualification (ARCHON, p. 167 *a*) must also be modified. If, according to Plutarch's account, Aristides in 479 B.C. widened the area of eligibility, he may at most have extended it from the *πεντακοσιομέδιμνοι* to the *ἱππεῖς*. It is now definitely stated (Ἀθ. πολ. c. 26) that the *ζευγῖται* first became eligible in 457 B.C., "five years after the death of Ephialtes": which shows incidentally that the murder of Ephialtes must have taken place immediately after the triumph of his democratic legislation in 462. It is a further curious fact, that the property qualification was never entirely abolished by law. The *θητικὸν τέλος*, or lowest class, was still in theory ineligible for any office, but in the time of Aristotle a member of that class was allowed to represent himself as a *ζευγίτης* by a legal fiction (c. 7).

In the archons' oath we get a rational explanation of the *χρυσῆ εἰκὼν* without the absurd addition *ἰσομέτρητος* (see ARCHON, p. 169 *a*). The archons and, it would seem, the diaetetae also, swore that if they accepted bribes they would dedicate a golden image—presumably of equal value to the amount received, though this is not explicitly stated. A somewhat similar explanation is given by Thompson on Plat. *Phaedr.* 235 D (Ἀθ. πολ. cc. 7, 54).

It has generally been held, as by Schömann (*Antiq.* i. 401–2, E. T.), that all magistracies (*ἀρχαὶ* in the technical sense) were unpaid at Athens (cf. HYPERETES, p. 986 *a*). The treatise before us mentions, on the contrary, the pay of many public officers; and there is reason to think that that of the archons was four obols a day, though the passage (Ἀθ. πολ. c. 62) is mutilated and the words *ἐνν[έα ἄρχον]τες* partly conjectural.

AREIOPAGUS. Our account, in all its main features, is thoroughly confirmed by the Ἀθ. πολ. The Areiopagus unquestionably existed before the time of Draco, and till then, it would seem, was the only council: in those times it appointed the archons, who already, after their year of office, were called up into it. It was thus a close corporation of Eupatrids, then the only depositaries of real political power. Draco, whose legislative changes went much further than has hitherto been supposed, was the first to constitute a second *βουλή* (see below, App. under BOULÉ); he also gave additional importance to the ecclesia, which had previously existed only in a rudimentary and uninfluential form, and assigned to it the election of archons.

The conduct of the Areiopagites at the time of the battle of Salamis (Vol. I. p. 176 *a*) was rewarded by a greatly increased respect for their authority; and for the first sixteen years of Athenian naval supremacy (B.C. 478–462) they once more became the ruling power in the state (Ἀθ. πολ. cc. 23, 41). The personality of Ephialtes, who put an end to this state of things, and the precise date of his reforms, now come out more clearly. It was in the archonship of Conon, B.C. 462, that he overthrew the Areiopagus; he was at this time the leader of the democratical party, not Pericles, whose advent to power must be dated some years later. As has been already said (Vol. I. p. 177 *b*), the curtailment of the powers of the Areiopagus was necessary to the expansion of Athens, and must be pronounced justifiable; it was not, however, carried out by constitutional methods: Ephialtes put many Areiopagites to death, and was himself assassinated (Ἀθ. πολ. c. 26).

ASTYNOMI. We have further proof (c. 50) that the Astynomi, and not the Areiopagus, were charged with preventing encroachments of private buildings upon the streets. From the same passage it is clear that windows were not allowed to open back into the street: cf. DOMUS, p. 663 *b*; JANUA, p. 987 *b*.

BOULÉ. The origin of the second or probouleutic council is now definitely ascribed to Draco: the number was 401, chosen apparently by lot from the whole body of citizens (*ἐκ τῆς πολιτείας*, c. 4); for the odd number compare the 51 Ephetae, and the juries of 201, 501, &c. dicasts. The additional member was omitted by Solon, who assigned an equal number to each of the four tribes (c. 8); the ten Cleisthenean tribes and *βουλὴ* of 500 are described in the usual terms (c. 21). The limitations on the powers of the *βουλὴ* are insisted on: the people alone is sovereign, and governs by psephismata and dicasteries (*αἱ τῆς βουλῆς κρίσεις εἰς τὸν δῆμον ἐληλύθασιν*, c. 41; *οὐ κυρία δ' ἡ κρίσις, ἀλλ' ἐφέσιμος εἰς τὸ δικαστήριον*, c. 45). Compare Aristot. *Pol.* iv. 4 = p. 1292, 5. The control of the *βουλὴ* over naval matters through *ἀρχιτέκτονες* and *τριηροποιοί*, subordinate to itself, and the conditions of its receiving the annual compliment (*δωρεάν*, crown, or "vote of thanks"), are in accordance with the text of Demosthenes (*Androt.* pp. 598–9, §§ 17–20; cf. BOULÉ, p. 310 *a*; Ἀθ. πολ. c. 46). The "naval architects," or "master ship-builders," however, are mentioned only by our author. The *ἀρχιτέκτων* of Dem. *de Cor.* p. 234, § 28, is a different person.

The pay of the *βουλευταί*, usually stated as a drachma a day, is given as five obols (Ἀθ. πολ. c. 62). Under the oligarchy of 411 B.C. those of the Four Hundred *βουλευταὶ* who were absent without leave were to be fined a drachma a day (c. 30).

The functions of the Prytanes, Proedri, and Epistatae are clearly and simply explained in accordance with the view now universally held [BOULÉ, p. 311 *a*]. There is only one set of Proedri, one from each of the non-presiding tribes, and there are two Epistatae (c. 44). According to Aristotle (c. 43), the four first prytanies were the longest, having the extra (thirty-sixth) day: our statement (p. 310 *b*) that the four last were the longest is based on an inscription of B.C. 410; but the rule may have changed between that date and the middle of the following century.

CENSUS (GREEK). In this article the property qualification of the Zeugitae is given, on the authority of Boeckh and Schömann, at 150 medimni a year. The more usual statement, following Plutarch (*Sol.* 18) and several passages of the grammarians, puts the figure at 200: a view strongly maintained by Grote (ii. 320 n., ed. 1862). Gilbert (*Staatsalterth.* i. 133) declares that the question cannot be positively decided. To the testimony of later writers in favour of the number 200 is now added the earlier and better authority of Aristotle (Ἀθ. πολ. c. 7), and this must be pronounced by far the most probable opinion.

CIVITAS (Greek). The Ἀθηναίων πολιτεία, if right in this matter, throws a new light upon the legislation of Draco: in a less degree, on that of Solon and Cleisthenes. From c. 4 it appears that Draco not merely codified the law (though this is particularly emphasised in the summary of political changes in c. 41, ἡ ἐπὶ Δράκοντος ἐν ᾗ καὶ νόμους ἀνέγραψαν πρῶτον *), but also gave Athens a constitution. A share in the government (ἡ πολιτεία) was given to all who could furnish a military equipment (τοῖς ὅπλα παρεχομένοις—the same qualification was necessary after the overthrow of the Four Hundred, Thuc. viii. 97: τοῖς πεντακισχιλίοις ἐψηφίσαντο τὰ πράγματα παραδοῦναι, εἶναι δὲ αὐτῶν ὁπόσοι καὶ ὅπλα παρέχονται). This body elected (αἱρεῖσθαι) the more important magistrates. There were property qualifications of varying amount for the different offices, *e.g.* of 100 (?: cf. Appendix, *s. v.* Strategus) minae for στρατηγοὶ and ἵππαρχοι, they had besides to be married and to have children more than ten years old; cf. Dinarch. *c. Dem.* § 71: καὶ τοὺς μὲν νόμους προλέγειν τῷ ῥήτορι καὶ τῷ στρατηγῷ τὴν παρὰ τοῦ δήμου πίστιν ἀξιοῦντι λαμβάνειν, παιδοποιεῖσθαι κατὰ τοὺς νόμους, γῆν ἐντὸς ὅρων κεκτῆσθαι, etc.; the property qualification of the nine archons and the ταμίαι was only 10 minae. Moreover 401 members of this body (over thirty years of age) were elected by lot as senate, and some others were in the same way appointed to some less important magistracies; but as no one could be a member of the senate or hold one of these offices a second time, before all other qualified persons had had their turn, the lot decided merely the order in which such persons should succeed. According to Ἀθ. πολ. the creation of a senate, which has hitherto been ascribed to Solon, was the work of Draco; nor was the property classification Solon's work, for it is incidentally mentioned as existing in the time of Draco, who ordained that for non-attendance at a meeting of the βουλὴ or ἐκκλησία a senator should pay three, two, or one drachma according as he was a πεντακοσιομέδιμνος, a ἱππεὺς or a ζευγίτης. No further information is given as to the functions of βουλὴ and ἐκκλησία; probably they did not exercise any important powers, the Areopagitic council having still (as before c. 3) control over all the magistrates, and being the guardian of the laws (ἡ δὲ βουλὴ ἡ ἐξ Ἀρείου πάγου φύλαξ ἦν τῶν νόμων καὶ διετήρει τὰς ἀρχὰς ὅπως κατὰ τοὺς νόμους ἄρχωσιν: cf. Tisamenus' decree in Andoc. *Myst.* § 84, ἐπιμελείσθω ἡ βουλὴ ἡ ἐξ Ἀρείου πάγου τῶν νόμων, ὅπως ἂν αἱ ἀρχαὶ τοῖς κειμένοις νόμοις χρῶνται); in fact it would seem to have possessed the right of revising decisions (ἐξῆν δὲ τῷ ἀδικουμένῳ πρὸ[ς τὴν τῶν] Ἀρεοπαγειτ[ῶν] βουλὴν εἰσαγγέλλειν ἀποφαίνοντι παρ' ὃν ἀδικεῖται νόμον). These constitutional changes failed, however, to remove the prevailing distress: they did not touch the large class of people who could not furnish a military equipment, and these remained as before ἐπὶ τοῖς σώ[μα]σι δεδεμένοι (cc. 2, 5).

Solon therefore, when he was elected διαλλακτὴς καὶ ἄρχων by the contending parties (κοινῇ), first attacked the economic question, as has been described under Seisachtheia (cf. Ἀθ. πολ. cc. 9, 10). Then all the laws of Draco (θεσμοὶ) except those on homicide were repealed, and the new code of laws (νόμοι, c. 6; θεσμοί, cc. 12, 35) was written on κύρβεις and placed ἐν τῇ στοᾷ τῇ βασιλείῳ (=Harpocr. *s. v.* κύρβεις). The most democratic features of his constitution are said to be: the prohibition of borrowing on the security of a man's person, the right of every one to commence an action for wrong done to him—τὸ ἐξεῖναι τῷ βουλομένῳ [γράφεσθαι, Mr. Kenyon] ὑπὲρ τῶν ἀδικουμένων—and the right of appeal to a court of law—[ᾗ] μάλιστά φασιν ἰσχυκέναι τὸ πλῆθος—ἡ εἰς τὸ δικ[αστήριον] ἔφ[εσι]ς. κύριος γὰρ ὢν ὁ δῆμος τῆς ψήφου κύριος γίνεται τῆς πολιτείας (c. 9). As regards Solon's reconstruction of the constitution, he used the classification of the people according to their property for political purposes (c. 7): offices (archons, ταμίαι, πωληταί, οἱ ἕνδεκα, κωλακρέται) were filled from the first three property classes, some from one, others from another (ἑκάστοις ἀνάλογον τῷ μεγέθει τοῦ τιμ[ή]μ[ατο]ς ἀποδιδοὺς τ[ὴν ἀρ]χήν), *e.g.* only Pentacosiomedimnoi were eligible as archons and ταμίαι, and it was not until 457 B.C. that ζευγῖται were admitted to the archonship (c. 26, the ἱππεῖς must have become qualified before that time), whilst the ταμίαι τῆς Ἀθηνᾶς had to be members of the first class—at least nominally, even in the days of the writer (cc. 8, 47, ἐκ πεντακοσιομεδίμνων κατὰ τὸν Σόλωνος νόμ[ον—ἔτι γὰρ ὁ ν]όμος κύριός ἐστιν,—ἄρχει δ' ὁ λαχὼν κἂν πάνυ πένης ᾖ). To the fourth class, the Thetes, Solon also gave a share of political power for the first time: a voice in the assembly and a seat in the law-courts.

Solon re-established the senate to the number of 400 (100 from each tribe), and left to the Areiopagitic council the guardianship of the laws (νομοφυλακεῖν) and its other important functions, giving it the right to pass judgment on those who conspired to overthrow the constitution (c. 8, καὶ τοὺς ἐπὶ καταλύσει τοῦ δήμου συν[ι]σταμένους ἔκρινεν, Σόλωνος θεν[τός]; cf. the law in c. 16).

Cleisthenes put an end to the four old tribes with their subdivisions, the trittyes and naucraries, and instituted a new set of tribes, ten in number (ἀναμῖξαι βουλόμενος ὅπως μετασχῶσι πλείους τῆς πολιτείας, c. 21), each to contain three trittyes, of which one was taken from the plain, one from the shore, and one from the mountain. See further under Demus. Cleisthenes left the γένη and φρατρίαι and ἱερωσύναι undisturbed, increased the number of the members of the senate to 500 (fifty from each tribe), and introduced the direct election of the principal magistrates (τοὺς στρατηγοὺς ᾑροῦντο κατὰ φυλάς, ἐξ ἑκάστης φυλῆς ἕνα, c. 22) by the

---

* Mr. Kenyon infers from c. 3, ὅπως ἀναγράψαντες τὰ θέσμια φυλάττωσι πρὸς τὴν τῶν [παρανομού]ντων κρίσιν, "that the thesmothetae received their name not merely from the fact that they made law by administering it, but from being the first to lay it down in written decisions. There was, therefore, some written basis of law before the time of Draco."

popular assembly, which, as far as the nine archons are concerned, remained in force until 487 B.C., when selection by lot, closely resembling that of Solon, seems to have been re-introduced. Out of consideration for the new citizens (*νεοπολῖται*) whom Cleisthenes had introduced in large numbers, Cleisthenes altered the official mode of designation (c. 21) [DEMUS]. The account of Cleisthenes' reforms is summed up (c. 22), *τούτων δὲ γενομένων δημοτικωτέρα πολ[ὺ τῆς Σ]όλωνος ἐγένετο ἡ πολιτεία* (cf. c. 41, but see c. 29, Cleitophon's rider)· *καὶ γὰρ συνέβη τοὺς μὲν Σόλωνος νόμους ἀφανίσαι τὴν τυραννίδα διὰ τὸ μὴ χρῆσθαι, τοὺς δὲ ἄλλους θεῖναι τὸν Κλεισθένην στοχαζόμενον τοῦ πλήθους, ἐν οἷς ἐτέθη καὶ ὁ περὶ τοῦ ὀστρακισμοῦ νόμος.*

From c. 40 we learn that Thrasybulus proposed to grant citizenship *πᾶσι τοῖς ἐκ Πειραιέως συγκατελθοῦσι* (*ὧν ἔνιοι φανερῶς ἦσαν δοῦλοι*), and that Archinus instituted against him a *γραφὴ παρανόμων*. This was Thrasybulus *ὁ Στειριεύς*, and Archinus won his case (Aeschin. *c. Ctes.* § 195; one scholiast explains that Thrasybulus proposed civic rights for the orator Cephalus, another for Lysias: cf. [Plut.] *Vitt. X. Oratt.* p. 835 E f).

C. 42 deals with the manner of registration of the youths in the *ληξιαρχικὸν γραμματεῖον*, on completion of their eighteenth year, as it existed in the writer's own time. The demotae having sworn the customary oath, decided by vote *εἰ δοκοῦσι γεγονέναι τὴν ἡλικίαν τὴν ἐκ τοῦ νόμου*, and secondly *εἰ ἐλεύθερός ἐστι καὶ γέγονε κατὰ τοὺς νόμους*. If they were not satisfied on the former point, the particular youth was relegated to the *παῖδες*: if they found that a youth was not *ἐλεύθερος*, the latter might appeal to a court of law, before which the demotae were represented by five *κατήγοροι* elected from amongst themselves; and in case the court decided against the youth, he was sold by the state, whilst, on receiving a verdict in his favour, he was of necessity entered in the register of the deme. A second *δοκιμασία* was instituted by the senate; and if it was found that the name of one under eighteen years had been entered, they inflicted a penalty on the demotae who had admitted him. For details how the youths spent the following two years, see EPHEBUS. The account continues: *φρουροῦσι δὲ τὰ δύο ἔτη . . . καὶ ἀτελεῖς εἰσὶ πάντων καὶ δίκην οὔτε διδόασιν οὔτε λαμβάνουσιν ἵνα μὴ πράγμασι συμμιγεῖεν* (?) *τι, πλὴν περὶ κλήρου καὶ ἐπικλήρου, κἄν τινι κατὰ τὸ γένος ἱερωσύνη γένηται.* (This refers probably to disputes as to who was entitled to the succession in a priestly office: cf. c. 57 and Pollux, viii. 90, *δίκαι δὲ πρὸς αὐτὸν* (*βασιλέα*) *λαγχάνονται . . . ἱερωσύνης ἀμφισβητήσεως*). The second dokimasia on the part of the senate is, it seems, only mentioned here. As regards the *ἀτέλεια*, it is evident from Lys. *c. Diog.* § 24, that orphans were at that time released from liturgies only one year: *οὓς* (*τοὺς ὀρφανοὺς*) *ἡ πόλις οὐ μόνον παῖδας ὄντας ἀτελεῖς ἐποίησεν ἀλλὰ καὶ ἐπειδὰν δοκιμασθῶσιν, ἐνιαυτὸν ἀφῆκεν ἁπασῶν τῶν λειτουργιῶν.* The list of such lawsuits is either not complete—for see the action in Lys. *c. Theomn.* (§ 4, *φαίνομαι οὖν τρισκαιδεκαέτης ὤν, ὅτε ὁ πατὴρ ὑπὸ τῶν τριάκοντα ἀπέθνησκε· ταύτην δὲ ἔχων τὴν ἡλικίαν οὔτε . . . οὔτε ἐκείνῳ ἀδικουμένῳ ἠδυνάμην βοηθῆσ* § 31, *ὃς μόνος* [of the brothers] *ἐπειδὴ τάχισ ἐδοκιμάσθην, ἐπεξῆλθον τοῖς τριάκοντα ἐν Ἀρε Πάγῳ*)—or it applies to the writer's time onl The time of Lysias is referred to by *πρότερ* in c. 60, *πρότερον δ' ἐπώλει τὸν κάρπον πόλις*; cf. Lys. *pro Olea sacr.* § 2, *πρὸς το ἐωνημένους τοὺς κάρπους τῶν μοριῶν*: but t punishment mentioned there (§§ 3, 5, 26, 4 was not death (p. 817 *a*; cf. also App. s. STRATEGUS for the date of the election generals for special duties).

It is stated in c. 26 that in 451 B.C., on th proposal of Pericles, it was decreed *μὴ μετέχει τῆς πόλεως ὃς ἂν μὴ ἐξ ἀμφοῖν ἀστοῖν ᾖ γεγον* (cf. c. 13: among the followers of Pisistrat were also *οἱ τῷ γένει μὴ καθαροί*. The accou goes on: *σημεῖον δ' ὅτι μετὰ τὴν τῶν τυράνν κατάλυσιν* [Mr. Kenyon] *ἐποίησαν διαψηφισμ* [Mr. Kenyon, *διαψηφισμὸν?*] *ὡς πολλῶν κοινωνούντων τῆς πολιτείας οὐ προσῆκον*), and tha the same law prevailed in the time of the write is said in c. 42. No mention is made in th treatise of Aristophon's proposal in B.C. 40 *ὃς ἂν μὴ ἐξ ἀστῆς γένηται νόθον εἶναι*, and o Nicomedes' amendment, *τοὺς δὲ πρὸ Εὐκλεί ἀνεξετάστους ἀφεῖσθαι*, and we know that th became law (Isae. *Cir. Her.* § 43).

We find in c. 55 the proceedings at th dokimasia of the nine archons fully describe The questions as to descent bear out Pollux's statement (viii. 85, *εἰ Ἀθηναῖοί εἰσιν ἑκατέρωθεν ἐκ τριγονίας*); they were: *τίς σοι πατὴρ κα πόθεν τῶν δήμων, καὶ τίς πατρὸς πατὴρ καὶ τίς μήτηρ, καὶ τίς μητρὸς πατὴρ καὶ πόθεν τῶν δήμων· μετὰ δὲ ταῦτα εἰ ἔστιν αὐτῷ Ἀπόλλων πατρῷος καὶ Ζεὺς ἑρκεῖος καὶ ποῦ ταῦτα τὰ ἱερά ἐστιν*, etc.

DECUMAE. We read of Pisistratus (Ἀθ. πολ. c. 16) *ἐπράττετο γὰρ ἀπὸ τῶν γιγνομένων δεκάτην*. This is direct evidence for the tithe, which has hitherto been merely inferred from Thucyd. vi. 54. The difficulty still remains that the sons who levied only an *εἰκοστὴ* are always stated to have been more oppressive than their father. They may have lightened this particular tax, and levied others more burdensome.

DEMUS. The ten Cleisthenean tribes, like the four old-Ionic, were divided *each into three τριττύες*: the number of demes must have been unevenly distributed among trittyes as well as tribes (Ἀθ. πολ. c. 21). *The same* passage confirms what is stated as probable [DEMUS, p. 616 *a*], that before the time of Cleisthenes, Athenians were not *described by* the name of their deme.

DIAETETAE. According to our author (c. 53), they were men of just *sixty years* of age, bound under the penalty of atimia to serve in that capacity for the first year after their superannuation from military *service*. *Cf.* below, App. *s. v.* EPONYMI.

DICASTERION, DICASTES. The dicasteries existed at least as early *as the time* of Solon (c. 9), a point which has been regarded as doubtful. The dicasticon is here expressly referred to Pericles as its *author* (c. 27): no other amount than three obols is mentioned (c. 62). The usual number of the jury in civil cases was 201 if the amount was below 1000 drachmas; above that sum 401 (Ἀθ. πολ. c. 53).

DIOBELIA, DIOBOLON. The evidence on which this payment is ascribed to Pericles is insufficient. Our author (c. 28), who uses the form *διωβολία* (which is found also in the passage cited from the *Politics* of Aristotle), states definitely that it was first established by Cleophon. As regards the words which follow, speaking of an increase by Callicrates, see note on THEORICON.

ECCLESIA. It has been mentioned (App. *s. v.* AREIOPAGUS) that the Ecclesia first took a definite shape in the legislation of Draco. The four regular assemblies in each prytany, of which only the first was called *κυρία*, appear in the text of the 'Αθ. πολ. in accordance with the citations from Aristotle in Harpocration and Pollux [ECCLESIA, p. 697 *b*]. The name of Callistratus does not occur in the account of the *μισθὸς ἐκκλησιαστικός* [*ib.* p. 699 *a*]: it is briefly stated that Agyrrhius first gave an obol, one Heraclides raised it to a *διώβολον*, Agyrrhius again to a *τριώβολον* (c. 41). A very different statement in another part of the work must be left unexplained: *μισθοφοροῦσι δὲ πρῶτον [μὲν ὁ δῆμος] ταῖς μὲν ἄλλαις ἐκκλησίαις δραχμήν, τῇ δὲ κυρίᾳ ἐννέα* (*i.e.* nine obols or a drachma and a half, c. 62). If, as Mr. Kenyon supposes, this doubling and trebling of the pay was the work of demagogues of the fourth century, we should probably have found some mention of it in the orators and grammarians. The word *δῆμος*, it will be seen, has been supplied from conjecture, but seems to give the sense required by the context.

As regards the business taken at each meeting, the details given by the grammarians [ECCLESIA, p. 702 *b*] may be supplemented, but are not contradicted. In the first or *κυρία ἐκκλησία* of each prytany, after the "claims to succession" (*λήξεις κλήρων*) the words *καὶ τῶν ἐπικλήρων* follow, and may easily have dropped out (c. 43). Then follows an account of matters reserved for the *κυρία ἐκκλησία* of the sixth prytany: questions of ostracism, and of the prosecution of informers (*προβολαὶ συκοφαντῶν*). The 'Αθ. πολ., in agreement with other authorities, assigns the second assembly of each prytany to *ἱκετηρίαι*: as to the third and fourth it differs somewhat from Pollux, whose account we had followed: *αἱ δὲ δύο περὶ τῶν ἄλλων εἰσίν, ἐν αἷς κελεύουσιν οἱ νόμοι τρία μὲν ἱερῶν χρηματίζειν, τρία δὲ κήρυξιν καὶ πρεσβείαις, τρία δ' ὁσίων*: *i.e.* not more than three proposals or motions on each of these subjects were allowed in each prytany.

Schömann's conjecture [*ib.* p. 702 b] that the *ἀρχαιρεσίαι* took place in the ninth prytany must now give place to the definite statement that they were in the first prytany after the sixth in which the omens were favourable (*ποιοῦσι δ' οἱ μετὰ τὴν ϛ πρυτανεύοντες ἐφ' ὧν ἂν εὐσημία γένηται*, c. 44). This of course applies only to *ἀρχαὶ χειροτονηταί* such as the Strategi and other military officers: *ἀρχαὶ κληρωταί*, as we have stated *l. c.*, might be filled up at the very end of the year.

EISAGOGEIS. These magistrates were five in number, *δυοῖν φυλαῖν ἕκαστος* (c. 52), instead of the more usual ten.

EISANGELIA. *Εἰσαγγέλλειν πρὸς τὴν τῶν Ἀρεοπαγειτῶν βουλήν* is used in c. 4 (for the time before Solon) of one who had been illegally dealt with by a magistrate, and now pointed out the law which had not been observed (*ἐξῆν δὲ τῷ ἀδικουμένῳ πρὸ[ς τὴν τῶν] 'Αρεοπαγειτ[ῶν] βουλὴν εἰσαγγέλλειν ἀποφαίνοντι παρ' ὃν ἀδικεῖται νόμον*).

Under the rule of the Four Hundred it was proposed to abolish *τὰς τῶν παρανόμων γραφὰς καὶ τὰς εἰσαγγελίας*, etc. *ὅπως ἂν οἱ ἐθέλοντες 'Αθηναῖοι συμβουλεύωσι περὶ τῶν προκειμένων*, etc. (c. 29). Anyone accusing such persons as had come forward with proposals was to be punished most severely: *ἔνδειξιν αὐτοῦ εἶναι καὶ ἀπαγωγὴν πρὸς τοὺς στρατηγούς, τοὺς δὲ στρατηγοὺς παραδοῦναι τοῖς ἕνδεκα θανάτῳ ζημιῶσαι.* (Thuc. viii. 67 gives a much briefer account.)

Among the instances of gross abuse of the eisangelia Hyper. *pro Eux.* col. 19 mentions that of Diognides and the metoec Antidorus against whom an eisangelia was laid, *ὡς πλέονος μισθοῦντες τὰς αὐλητρίδας ἢ ὁ νόμος κελεύει*—this law is quoted in c. 50.

From c. 45 we learn that in former times the senate had summary jurisdiction, *χρήμασιν ζημιῶσαι καὶ δῆσαι καὶ ἀποκτεῖναι*, but that, when they were on the point of putting a certain Lysimachus to death, they were deprived of it by the people. This does not agree with c. 48, *καὶ ταῦτα εἰσπρά[ττειν ἡ βο]υλὴ καὶ δῆσαι [κυρ]ία κατὰ τοὺς νόμους ἐστίν*: cf. *C. I. A.* ii. No. 809 b (B.C. 325–4). In the time of Demosthenes the senate was competent to impose a fine of 500 drachmae (Dem. *c. Everg.* and *Mnes.* p. 1152, § 43), nor was the eisangelia laid by a private individual before the senate, at that time confined to charges against magistrates for not carrying out the laws, as described in c. 45 (*ἔξεστι δὲ καὶ τοῖς ἰδιώταις εἰσαγγέλλειν ἣν ἂν βούλωνται τῶν ἀρχῶν μὴ χρῆσθαι τοῖς νόμοις*).

The passage about the functions of the thesmothetae in Pollux, viii. 87 f., is almost verbally taken from c. 59; thus the statement that they laid the eisangeliae before the popular assembly, which Boeckh considered wrong and due to a misapprehension of some sort, is taken *verbatim* from the 'Αθην. πολ. But whilst the 'Αθην. πολ. has: *καὶ γραφὰς παρανόμων καὶ νόμον μὴ ἐπιτήδειον θεῖναι καὶ προεδρικὴν καὶ ἐπιστατικὴν καὶ στρατηγοῖς εὐθύνας*, Pollux strangely enough omits *προεδρικὴν καὶ ἐπιστατικήν*. Harpocr., *s. v.* *ῥητορικὴ γραφή*, mentions the *πρυτανικὴ καὶ ἐπιστατικὴ γραφή* [RHETORICE GRAPHE].

2. Among the charges laid before the Archon are mentioned in c. 56 *γονέων* (Mr. Wyse) *κακώσεως*, with the remark *αὗται δέ εἰσιν ἀζήμιοι τῷ βουλομένῳ διώκειν*: this seems to point to the *εἰσαγγελία κακώσεως γονέων*, cf. Bekk. *Anecd.* p. 269, 5 f., and Harpocr. *s. v.* *κακώσεως*.

3. In c. 53 the eisangelia against *διαιτηταί* is mentioned: *ἔστι δὲ καὶ εἰσαγγέλλειν εἰς τοὺς διαιτητὰς* (papyrus: Mr. Kenyon reads *δικαστὰς*) *ἐάν τις ἀδικηθῇ ὑπὸ τοῦ διαιτητοῦ, κἄν τινος καταγνῶσιν ἀτιμοῦσθαι κελεύουσιν οἱ νόμοι. ἔφεσις δ' ἐστὶ καὶ τούτοις.* Appeal to a law-court was inferred by Fränkel, *Att. Geschworenger*, p. 73 n., from Dem. *c. Mid.* p. 543, § 91. The reading of the papyrus *εἰς τοὺς διαιτητὰς* ought not to have been altered to *εἰς τοὺς δικαστὰς* on the authority of Harpocr. *s. v.* *εἰσαγγελία*: Bergk's alteration there from *πρὸς τοὺς δικαστὰς* to *πρὸς τοὺς διαιτητὰς* is borne out by

the papyrus. [In the article in Vol. I. p. 710 *b*, Bergk's reading is by a printer's error wrongly given; read also Schol. Plat. *Legg.* p. 920 D instead of p. 926 D.]

EMMENOI DIKAI. In c. 52, the *εἰσαγωγεῖς* are mentioned as still existing. They were five in number, appointed by lot *δυοῖν φυλαῖν ἕκαστος, οἳ τὰς ἐμμήνους εἰσάγουσι δίκας.* The list of the classes of cases coming under this head is longer and more detailed than that given elsewhere: *προικὸς ἐάν τις ὀφείλων μὴ ἀποδῷ κἄν τις ἐπὶ δραχμῇ δανεισάμενος ἀποστερῇ* (*i.e.* 12 per cent.: in Dem. *c. Aphob.* i. p. 818, § 17, *c. Neaer.* p. 1362, § 52, the interest as fixed by law is at the rate of 9 obols, *i.e.* 18 per cent. in case of non-fulfilment of marriage-contract or of divorce) *κἄν τις ἐν ἀγορᾷ βουλόμενος ἐργάζεσθαι δανείσηται παρά τινος ἀφορμήν.*

αἰκίας (this action was brought before the Forty in the time of Demosthenes, Dem. *c. Pantaen.* p. 976, § 33; cf. Schol. Plat. *de Republ.* v. p. 464 E);

ἐρανικαὶ καὶ κοινωνικαί (Harpocr. *s. v. κοινωνικῶν· τάχα δὲ καὶ περὶ τῶν ἑκούσιον κοινωνίαν συνθεμένων ἐμπορίας ἤ τινος ἄλλου*: cf. Dem. *c. Pantaen.* p. 977, § 38, *οἱ κοινωνοῦντες μετάλλου*);

ἀνδραπόδων, ὑποζυγ[ίω]ν (cf. the title of Dinarch. *c. Antiph. περὶ ἵππου*, etc.);

τριηραρχίας καὶ τραπεζιτικαί.

The *δίκαι μεταλλικαὶ* and *ἐμπορικαὶ* are not mentioned, probably because they belonged to the *ἡγεμονία* of the thesmothetae (Dem. *c. Apat.* p. 892, § 12; 'Αθην. πολ. c. 59 = Pollux, viii. 88).

Then follows the sentence *οὗτοι μὲν οὖν ταύτας δικάζουσιν ἐμμήνους εἰσάγ[ον]τες, οἱ δ' ἀποδέκται τοῖς τελώναις καὶ κατὰ τῶν τελωνῶν, τὰ μὲν μεχρὶ δέκα δραχμῶν ὄντες κύριοι, τὰ δ' ἄλλ' εἰς τὸ δικαστήριον εἰσάγοντες ἔμμηνα* (cf. Pollux, viii. 97); here *δικάζειν* seems to refer to the *ἡγεμονία.*

ENDEIXIS. From c. 52 we learn that some *ἐνδείξεις* were laid before the Eleven and some before the thesmothetae. From c. 29 it appears that during the rule of the Four Hundred they were laid before the generals. This measure was directed against those who prosecuted anyone for anti-constitutional propositions. The *ἔνδειξις* against persons who acted as dicasts, though disqualified as state-debtors or *ἄτιμοι*, is discussed in c. 63, *ἐνδείκνυται κατὰ τὸ δικαστήριον εἰσαγγελί[α]* (Mr. Kenyon now reads *ἐ. καὶ [εἰς] τὸ δικαστήριον εἰσάγεται*), *ἐὰν δ' ἁλῷ προστιμ[ῶσιν αὐτ]ῷ οἱ δικασταὶ ὅ τι ἂν δοκῇ ἄξιος εἶναι παθε[ῖν] ἢ ἀποτῖσαι. ἐὰν δὲ ἀργυρίου τιμηθῇ δεῖ αὐτὸν δεδέ[σθαι] ἕως ἂν ἐκτίσῃ τό τε πρότερον ὄφλημ[α ἐ]φ' ᾧ ἐνεδείχθη καὶ ὅ τι αὐτῷ προστιμήσῃ τ[ὸ δικ]αστήριον.*

EPIMELETAE. Three kinds of *ἐπιμεληταὶ* are mentioned in the 'Αθ. πολ., Nos. 3, 4, and 5 in our article. The received account of the *ἐπιμεληταὶ τοῦ ἐμπορίου* (No. 3) is taken mainly from Harpocration, who copied Aristotle. The only point worth noticing is the reading *σιτικὸν* ('Αθ. πολ. c. 51) for the *'Αττικὸν* of Harpocrat. and *ἀστικὸν* of *Lex. Seguer.* p. 255. It appears to us that *'Αττικὸν ἐμπόριον*, a common phrase for "the port of Athens," is the best reading of the three: cf. Dinarch. *c. Dem.* § 96, *τί κατεσκεύακεν οἰκοδόμημα Δημοσθένης ἐν τῷ ἐμπορίῳ τῷ ὑμετέρῳ ἢ ἐν τῷ ἄστει ἢ ἄλλοθί που τῆς χώρας*; where *ἐμπόριον* is simply the Peiraeus. The *ἐπιμεληταὶ τῶν μυστηρίων* (No. 4) are mentioned in c. 57 as associated with the king archon: here also we find nothing that has not been already extracted by Harpocrat. On the *ἐπιμεληταὶ τῆς πομπῆς τῷ Διονύσῳ* (No. 5) there is a difference of some importance. "They were formerly chosen by *χειροτονία*, and paid the expenses [of the greater Dionysia] themselves: but now ('Αθ. πολ. c. 56) by lot, and the state allows them 100 minae for expenses." This change must have been very recent when the tract was written, as *χειροτονία* was still the rule in B.C. 349–8, the date of the *Meid.* (p. 519, § 15). Whether the 100 minae were allotted to each of the ten, or to the whole body, is not clear from the words of the 'Αθ. πολ.: but £400, rather than £4000, is the more likely sum for the Athenians to have voted for the festival.

Another *ἐπιμελητὴς* is mentioned in 'Αθ. πολ. c. 43, and not, it would seem, elsewhere; the *ἐπ. τῶν ὑδάτων.* The office was an important one, as he was elected by *χειροτονία*: and he is apparently to be identified with the *ἐπιστάτης τῶν ὑδάτων* (Plut. *Themist.* 31; EPISTATES). The *κρηνοφύλακες* (Hesych., Phot.) were probably his subordinates, and the *κρηνοφυλάκιον* their place of business.

EPISKEUASTAE. To the list of Athenian public officers must now be added ten *ἱερῶν ἐπισκευασταί*, "repairers of temples," chosen by lot and allowed the very moderate sum of 30 minae (£120) for their department ('Αθ. πολ. c. 50). For the ordinary, unofficial sense of *ἐπισκευαστής*, cf. Dem. *c. Androt.* p. 615, § 6 p. 618, § 78.

EPITROPUS. C. 56 contains a full account (of which Pollux, viii. 89, gives a summary) of the functions of the archon; we quote here the passages which refer to the superintendence he exercised over orphans and their estates: *γραφαὶ δ[ὲ καὶ δ]ίκαι λαγχάνονται πρὸς αὐτόν, ὡς ἀνακρίνας εἶτ' [εἰς δι]καστήριον εἰσά[γει]....*

ὀρφανῶν κ[ακώ]σεως (αὗται δ' εἰσὶ κατὰ τῶν ἐπιτρόπων)

ἐπικλήρου κακώσε[ως] (αὗται δέ εἰσι κατὰ [τῶν] ἐπιτρόπων καὶ τῶν συνοικούντων),

οἴκου ὀρφανικοῦ κακώσεως (εἰσὶ δὲ καὶ [αὗται κατὰ τῶν] ἐπιτρό[πω]ν)....

εἰς ἐπιτροπῆς κατάστασιν, εἰς ἐπιτροπῆς διαδικασίαν, εἰ [πλείονες τῆς αὐτῆς θέλουσ]ιν ἐπίτροποι αὐτὸν ἐγγράψαι...

μισθοῖ δὲ καὶ τοὺς οἴκους τῶν ὀρφανῶν.

EPONYMI. Under this head we have to notice a new explanation of the difficult phrase *ἐπώνυμοι τῶν ἡλικιῶν.* In c. 53 we read *εἰσὶ γὰρ ἐπώνυμοι δέκα μὲν οἱ τῶν φυλῶν, δύο δὲ καὶ τετταράκοντα οἱ τῶν ἡλικιῶν*: and that formerly the names of the *ἔφηβοι* were written *εἰς λελευκωμένα γραμματεῖα*, and in the time of the writer *εἰς στήλην χαλκῆν καὶ ἵσταται ἡ στήλη πρὸ τοῦ βουλε[υτ]ηρίου παρὰ τοὺς ἐπωνύμους.* Mr. Kenyon observes: "It seems that for the purposes of military service a cycle of forty-two years was arranged, to each of which a name was given, probably chosen, like those of the eponymi of the ten tribes, from the heroes of Athenian legendary history. Thus when a youth was enrolled in the lists of the tribes and became liable for military service, his name was entered on a roll, with the name of the year according to the archon and the name of the eponymous hero from whom his military service was to be dated." (The meaning of ὁ ἐπώνυμος ὁ τῷ προτέρῳ [ἔτει] δε διαιτηκὼς is not explained.) "For all official purposes, such as the indication of what years were to be called out for service on any particular occasion, these names were employed:" χρῶνται δὲ τοῖς ἐπωνύμοις καὶ πρὸς τὰς στρατείας, καὶ ὅταν ἡλικίαν ἐκπέμπωσι προγράφουσιν ἀπὸ τίνος ἄρχοντος καὶ ἐπων[ύμου μ]έχρι τινῶν δεῖ στρατεύεσθαι. [App. *s. v.* DIAETETAE.] As a matter of fact the orators use a shorter expression: ψηφισαμένων δ' ὑμῶν ... καὶ τοὺς μέχρι τριάκοντ' ἔτη γεγονότας ἐξιέναι, Aeschin. *F. L.* § 133: ἐψηφίσασθε...καὶ τοὺς μέχρι πέντε καὶ τετταράκοντα ἐτῶν αὐτοὺς ἐμβαίνειν, Dem. *Olynth.* iii. p. 29, § 4: cf. Lycurg. *c. Leocr.* § 39.

EUTHYNE. The λογισταὶ are twice mentioned. From c. 48 we learn that they, ten in number, were appointed by lot from among the members of the senate, to check the accounts of the different officers in each prytany; and in c. 54, λογισταὶ δέκα καὶ συνήγοροι τούτοις δέκα are mentioned as appointed by lot. Then follows a detailed account of the proceedings in the law-courts: if they prove a man guilty of embezzlement (κλοπή: cf. Dem. *c. Timocr.* p. 735, § 112, εἰ μέν τις ἀγορανόμος .... κλοπῆς ἐν εὐθύναις ἥλωκεν, ... τούτῳ μὲν τὴν δεκαπλασίαν εἶναι; Aeschin. *c. Ctes.* § 10; Plut. *Arist.* 4), then the dicasts find him guilty of embezzlement, and he is fined in ten times the amount of the sum proved against him. The same procedure took place in case of bribes (cf. Dem. *F. L.* p. 429, § 273, δῶρα λαβεῖν ἔδοξε πρεσβεύσας), the fine being again tenfold; whilst in the case of ἀδικίου the fine was in the same amount as the fraud, if paid before the 9th prytany, and double the amount if deferred. The δίκη ἀδικίου is mentioned in Plut. *Per.* 32, εἴτε κλοπῆς καὶ δώρων εἴτ' ἀδικίου βούλοιτό τις ὀνομάζειν τὴν δίωξιν of Pericles regarding the expenditure of public money; cf. Harpocr. *s. v.* and Pollux, viii. 31. Two πάρεδροι to each εὔθυνος, appointed by lot, are mentioned in c. 48. The duty of the πάρεδροι was to station themselves in the ἀγοραὶ by the Eponymi of the several tribes, and there to receive complaints against persons who had received their discharge from a court of law within three days from such discharge. The complaint was entered upon a tablet with the name of the complainant and the person accused, together with the amount of the τίμημα (τίμημα [παραλ]αβόμενος, Mr. Kenyon: ἐπιγραφόμενος ?). This he handed to the εὔθυνος who investigated the matter (ὁ δὲ λαβὼν τοῦτο καὶ ἀ[κούσας], Mr. Kenyon: ἀ[νακρίνας] ?); and if he judged the man guilty, he passed over the matter if a private one to the δικασταὶ οἱ κατὰ δήμους οἳ τὴν φυλὴν ταύτην εἰσάγουσιν, but if a public matter to the thesmothetae.

EXOMOSIA. (2.) The exomosia of those enrolled by the καταλογεῖς as horsemen is mentioned in c. 49: οὗτοι (οἱ ἵππαρχοι καὶ φύλαρχοι) παραλαβόντες εἰσφέρουσι τ[ὸν] κατάλογον εἰς τὴν βουλὴν καὶ τὸν πίνακα ἀνοίξαντες, ἐν ᾧ κατασεσημασμένα τὰ ὀνόματα τῶν ἱππέων ἐστί, τοὺς μὲν ἐξομνυμένους τῶν πρότερον ἐγγεγραμμένων μὴ δυνατοὺς εἶναι τοῖς σώμασιν ἱππεύειν ἐξαλείφουσι, τοὺς δὲ κατειλεγμένους [κ]αλοῦσι, κἂν μέν τις ἐξομόσηται μὴ δύνασθαι τῷ σώματι ἱππεύειν ἢ τῇ οὐσίᾳ τοῦτον ἀφιᾶσιν, etc.

EXSILIUM. In c. 22 it is stated that Cleisthenes introduced ostracism (ὃς sc. νόμος ἐτέθη διὰ τὴν ὑποψίαν τῶν ἐν ταῖς δυνάμεσιν, ὅτι Πεισίστρατος δημαγωγὸς καὶ στρατηγὸς ὢν τύραννος κατέστη; cf. Harpocr. *s. v.* Ἵππαρχος). It was in the first place aimed at the supporters of his family who still remained at Athens—the first victim was Hipparchus, the son of Charmus, the law being put in force against him two years after the battle of Marathon, and in 487 B.C. Megacles, the son of Hippocrates, was ostracised—but soon it became to be used εἴ τις δοκοίη μείζων εἶναι, *e.g.* Xanthippus, the son of Ariphron, in 468 B.C., Aristides, Damonides (c. 27). The only foundation for the story that Cleisthenes himself was ostracised is Aelian (*V. H.* xiii. 24). At the approach of Xerxes the persons ostracised were recalled, and it was henceforward ordained that persons ostracised should reside ἐντὸς Γεραιστοῦ καὶ Σκυλλαίου ἢ ἀτίμους εἶναι καθάπαξ, *i.e.* between the extreme south of Euboea and east of Argolis respectively. "The regulation," Mr. Kenyon remarks, "cannot, however, have been strictly observed subsequently; for instance, we find the ostracised Themistocles living in Argos (Thuc. i. 135), and the ostracised Hyperbolus in Samos (Thuc. viii. 73)." These facts, and the statement of Philochorus in *Lex. Rhet. Cantabr.* s. v. ὀστρακισμοῦ τρόπος· μὴ ἐπιβαίνοντα ἐντὸς Γεραίστου τοῦ Εὐβοίας ἀκρωτηρίου, suggest the reading ἐκτὸς instead of ἐντὸς in the Ἀθην. πολ.

GEOMORI. For these, the second of the Theseian classes in early Attica, the name ἄ[γρ]οικοι occurs Ἀθ. πολ. c. 13. The restoration of the illegible letters is undoubted. In a passage already cited (Dion. Hal. ii. 8) the plebs at Rome are called ἄγροικοι in distinction from the εὐπατρίδαι or patricians. Cf. Hesych. *s. v.* ἀγροιῶται: ἄγροικοι, καὶ γένος Ἀθήνησιν, οἳ ἀντιδιεστέλλοντο πρὸς τοὺς εὐπατρίδας· ἦν δὲ τὸ τῶν γεωργῶν, καὶ τρίτον τὸ τῶν δημιουργῶν.

HECTEMORII. The following passage confirms the view taken in the text: καὶ δὴ καὶ ἐδούλευον οἱ πένητε[ς τοῖς] πλουσίοις καὶ αὐτοὶ [καὶ τ]ὰ τέκνα καὶ αἱ γυναῖκες, καὶ ἐκαλοῦντο πελάται καὶ ἑκτημόροι· [ἐπὶ] ταύτης γὰρ τῆς μισθώσεως [εἰ]ργάζοντο τῶν πλουσίων τοὺς ἀγρούς (Ἀθ. πολ. c. 2). Thus the ἑκτημόριοι or ἑκτημόροι (the latter form, given also by Hesychius, seems the correct one) *received* only a sixth part of the produce: ἀντί, however, rather than ἐπί, seems the preposition to be supplied.

HENDECA, HOI. Meier's conjecture as to the early origin of this body is now confirmed: Solon provided for their election, it would seem, out of the first three classes, and is not said to have created the office (Ἀθ. πολ. c. 7). The account of their duties (c. 52) adds no new particulars.

HERES. The Thirty are said (c. 35) to have struck out in Solon's law relative to the right of bequest (περὶ τοῦ δοῦναι τὰ ἑαυτοῦ ᾧ ἂν ἐθέλῃ) the provisions ἐὰν μὴ μανιῶν ἢ γηρῶν ἢ γυναικὶ πιθόμενος, to limit the opportunities of the sycophants (ὅπως μὴ ᾖ τοῖς συκοφάνταις ἔφοδος).

HODOPOEI. We now learn that they were five in number, and appointed by lot: they repaired (*ἐπισκευάζειν*) the roads, having public slaves (*δημόσιοι ἐργάται*) under them (*'Αθ. πολ.* c. 54).

JUSJURANDUM. Some particulars about the oath of the nine archons are supplied by the *'Αθ. πολ.*; it is said that they swear [*καθάπερ*] *ἐπὶ 'Ακάστου* [*τῆς πόλεως ἄρξ*]*ειν*; and this is used as an argument to show that the archon was first associated with the king at the accession of Acastus (c. 3: cf. ARCHON).

The archons were bound to observe the laws of Solon by an oath which was still sworn by them in the time of the writer (c. 7; cf. c. 55): *ἀναβάντες δ' ἐπὶ τοῦτον* (*τὸν λίθον ὑφ' ᾧ τὰ ταμιεῖα ἐστίν*) *ὀμνύουσιν δικαίως ἄρξειν καὶ κατὰ τοὺς νόμους καὶ δῶρα μὴ λήψεσθαι τῆς ἀρχῆς ἕνεκα, κἄν τι λάβωσιν ἀνδρίαντα ἀναθήσειν χρυσοῦν. ἐντεῦθεν δ' ὀμόσαντες*, etc. At the same stone *οἱ μάρτυρες ἐξόμνυνται τὰς μαρτυρίας*.

The treaty in c. 23 (*ἐφ' οἷς* [*ὅρκοις*] *καὶ τοὺς μύδρους ἐν τῷ πελάγει καθεῖσαν*) supplies a parallel to Herod. i. 165 (p. 1046 *a*).

APPENDIX TO VOLUME II.

METOECI. C. 58 confirms the statements (p. 170 *a*) as to their actions at law before the polemarch.

METRONOMI. Fränkel's view as to their number (see p. 170 *b*) is confirmed by *'Αθ. πολ.* c. 51.

NAUCRARIA. The passage in c. 8 clearly makes the *ναυκραρίαι* date from a period before Solon: not only the context, but the tense *ἦσαν νενεμημέναι* admits of no other explanation. The transference of the duties to the demarchi is stated in c. 21.

NOMOS. For Draco's constitutional changes cf. note on CIVITAS.

Solon's law *περὶ τῶν τυράννων* is quoted c. 16. The text is evidently corrupt. Perhaps the law was *ἐάν τις ἐπὶ τυραννίδι ἐπανιστῆται ἢ συγκαθίστῃ τὴν τυραννίδα ἄτιμον εἶναι αὐτὸν καὶ γένος*. In Andoc. *Myst.* § 97 a law is quoted (professedly Solonian) in which the same phrases occur—*κτενῶ . . . . καὶ ἐάν τις τυραννεῖν ἐπαναστῇ ἢ τὸν τύραννον συγκαταστήσῃ*. Dobree inserts *ἐπὶ τῷ* before *τυραννεῖν*: probably in the *'Αθην. πολ.* *τυραννεῖν* was written above *ἐπὶ τυραννίδι*, and a copyist inserted the phrase lower down in the text. The story (Plut. *Sol.* 18) about want of clearness in Solon's laws occurs in c. 9.

Cc. 29 to 32 give at great length the constitutional schemes of the Four Hundred, quoting apparently from original documents.

Of the Thirty it is said (c. 35): *τὸ μὲν οὖν πρῶτον . . . . προσεποιοῦντο διοικεῖν τὴν πάτριον πο*[*λιτ*]*είαν* (the restoration of the "ancient constitution" was included in the terms of peace) *καὶ τοὺς περὶ τῶν 'Αρεοπαγιτῶν καθεῖλον ἐξ 'Αρείου* [*πάγου*] *καὶ τῶν Σόλωνος θεσμῶν ὅσοι διαμφισβητ*[*ήσ*]*εις εἶχον*, *e.g.* in Solon's law regarding testamentary dispositions they abolished the provisions *ἐὰν μὴ μανιῶν ἢ γηρῶν ἢ γυναικὶ πιθόμενος* (Dem. *c. Steph.* ii. p. 1133, § 14 *lex*). Cf. Schol. Aeschin. *c. Tim.* § 39, *ἐλυμήναντο τοὺς Δράκοντος καὶ Σόλωνος νόμους*.

Of the restoration of the democracy after the fall of the Thirty little is said in c. 39: *τὰς δὲ δίκας τοῦ φόνου εἶναι κατὰ τὰ πάτρια, κ.τ.λ.* (the text is unfortunately corrupt), an amnesty was granted with certain exceptions, and in c. 40 an instance is given of the zeal with which Archinus prosecuted a breach of this amnesty (*ἐπεί τις ἤρξατο τῶν κατεληλυθότων μνησικακεῖν, ἀπαγαγὼν τοῦτον ἐπὶ τὴν βουλὴν καὶ πείσας ἄκριτον ἀποκτεῖναι*, etc.: cf. Isocr. *c. Callim.* § 3).

OLEA. We learn from c. 60 that the state management of the *μορίαι* described in the article (p. 263 *a*) was earlier than the date of the treatise *'Αθ. πολ.*, and that the penalty in those older times for damaging one of the trees was death (at an earlier date probably than the oration of Lysias). In the writer's own time the owner of the land where the *μορίαι* grew was obliged to render to the archon 1½ cotylae of oil for each tree, and (since the registers of the trees doubtless remained, so that their destruction entailed no loss of oil upon the state) the state penalty became obsolete. The archon had to hand over the oil so received to the *ταμίαι* at the end of his year of office. The *ταμίαι* stored it in the Acropolis till the Panathenaea, when they delivered it to the athlothetae.

PANATHENAEA. The statement (p. 327 *b*) that the officials of the greater festival were the *Athlothetae*, not the Hieropoioi, is confirmed by cc. 54 and 60. In c. 49 it is mentioned that the selection of weavers of the sacred *πέπλος* (p. 327 *a*) was first in the hands of the *βουλή*, and afterwards of a *δικαστήριον* (see note on *βουλή*).

PARANOIAS DIKE. It was laid before the archon: *ἐάν τις αἰτιᾶταί τινα παρανοοῦντα τ*[*ὰ ἑαυτοῦ κτήματα ἀ*]*πολλύ*[*ναι*], c. 56.

PAREDRI. The number, two for each of the three superior archons, is confirmed by c. 56: also that they were subject to *δοκιμασία* and *εὔθυναι*. The two *πάρεδροι* of the *εὔθυνοι* are mentioned in c. 48.

PHYLARCHI. The surmise that the ten phylarchi were elected by cheirotonia is confirmed by c. 61 [see p. 388 *b*, where a misprint, "one *tribe* commanded the cavalry contingent," should be altered to "one phylarch"]. Their examination of the cavalry roll in presence of the *βουλή*, and in conjunction with the hipparchs, and their register of the vote passed as to the fitness or unfitness of those who pleaded incapacity for service, are mentioned in c. 49.

POLETAE. The statements in the article are confirmed by the account of the Poletae in c. 47 with some additional details. They are said to ratify the lease of revenues conferred on any *τελώνης* by the *βουλή*, in conjunction with the *ταμίας τῶν στρατιωτικῶν* and the superintendents of the theoricon. The Poletae deliver to the *βουλὴ* tablets (*γραμματεῖα λελευκωμένα*) stating the amount of payments (*καταβολαί*) to be made in each prytany. The greater number were made in the 9th prytany of the year (cf. TELONES).

PROBOULI. The statement (p. 493 *b*) in which we followed Grote, that there was no sufficient ground for supposing that the *ξυγγραφῆς αὐτοκράτορες* of Thuc. viii. 67 were the same persons as the *πρόβουλοι* must be modified. In c. 29 we are told that on the motion of Pythodorus twenty persons over forty years of age were elected, in addition to the ten *προϋπάρχοντες πρόβουλοι*, to draw up the constitution under the 400. We should infer, with Mr. Kenyon, that this "pre-existing" board of ten commissioners was a continuation of that mentioned in Thuc. viii. 1; and that the party of Pisander having either reappointed them, or appointed others with the same title, added twenty to carry out the work. So far this treatise justifies Androtion and Philochorus when Harpocration (*s. v. συγγραφεῖς*) cites as speaking of *thirty in all;* and Grote is probably wrong in supposing that they confused the oligarchy of the 400 with that of the Thirty.

PROSTATES TOU DEMOU. In the 'Αθ. πολ. the term *προστάτης τοῦ δήμου* (or *τοῦ πλήθους*) is constantly used in the sense of "leader of the popular party": *e.g.* Solon (*πρῶτος ἐγέν[ετο τοῦ δήμου] προστάτης*, cc. 2, 28), Pisistratus (*δεύτερος*, c. 28), Cleisthenes (cc. 21, 28), Xanthippus, Themistoles and Aristides (cc. 23, 28), Ephialtes (cc. 25, 28), Pericles, Cleon, Cleophon. These are opposed to the leaders for the time being of the other party (*προστ. τῶν ἑτέρων, τῶν εὐπόρων, τῶν γνωρίμων*. Hipparchus, the son of Charmus, is called *ἡγεμὼν καὶ προστάτης* of the *φίλοι τῶν τυράννων*, c. 22).

PRYTANEUM. C. 62 notes that the Athlothetae dined in the Prytaneum in the month in which the Panathenaea was celebrated, from the 4th of the month onwards. It should be observed also that this treatise (c. 43) speaks of the prytanes as still dining together in the Tholos (cf. p. 515 *b*).

PSEPHUS. Unfortunately the greater portion of the detailed account of the procedure in the law-courts is either lost or exists only in a very mutilated condition. On p. 168 ff. we have the description of the voting: of the two *ἀμφορεῖς*, one was of metal, *ὁ κύριος*—the other of wood, *ὁ ἄκυρος*, placed separate (*διαίρετοι*); the *ἀμφορεὺς* of metal is described (Schol. Aristoph. *Equ.* 1147, and Pollux, viii. 123, are correct); *ἔπειτα πάλιν [ὁ κῆρυξ κηρ]ύττ[ει], ἡ τε [τρυπη]μένη τοῦ πρ[ό]τερο[ν λέγοντος] ἡ [δὲ] πλή[ρης το]ῦ ὕστερον λέγοντος . . . . τῶν ψήφων τοῦ μὲν διω[κόν]τος τὰς τετρυπημένας, τοῦ δὲ φ[εύγοντος] [τὰ]ς πλήρεις· ὁποτέρῳ δ' [ἂν πλείω γ]ένη[ται οὗ]τος νικᾷ. ἂν δὲ [ἴσαι, ἀποφεύγει].* (Cf. *Lex. Rhet. Cantabr.* s. v. *ἴσαι αἱ ψῆφοι αὐτῶν.*) *Εἶτ]α πάλιν Τιμῶσι, ἂν δεῇ τιμῆσαι, τὸν αὐτὸν τρόπον ψηφιζόμενοι, τὸ μὲν σύμβολον ἀποδίδοντες, βακτηρίαν δὲ πάλιν παραλαμβάνοντες* (cf. p. 163=Schol. Aristoph. *Plut.* 278; see Dem. *de Cor.* p. 298, § 210), *ἡ δὲ τίμησίς ἐστιν πρὸς ἡμίχουν ὕδατος ἑκατέρων.* That the clepsydra was filled again for the *τίμησις* was known from Aeschin. *c. Ctes.* § 197: *ἤδη τὸ τρίτον ὕδωρ ἐγχεῖται τῇ τιμήσει*, but only now do we learn the amount of water put in, half a *χοῦς*. The time allowed was certainly short, considering that in a *γραφῇ παραπρεσβείας* each side was allowed eleven *ἀμφορεῖς* (Aeschin. *F. L.* § 126), and in an inheritance suit each party was allowed one *ἀμφορεὺς* for the first speech, and the quarter of that, three *χόες*, for the second. (Dem. *c. Macart.* p. 1052, § 8.)

SEISACHTHEIA. This measure, which was a cancelling of all debts, both public and private (c. 6), preceded Solon's legislation, and the reform of the money standard and of the system of weights and measures followed the legislation (c. 10; it was not contemporary with the Seisachtheia, Plut. *Sol.* 15). Some particulars are given as to the monetary standard introduced by Solon: unfortunately the reform of the system of weights and measures is only mentioned as a fact without details.

SITOPHYLACES. Fränkel's view as to their number, five for the city and five for the Peiraeus, is shown to be correct ('Αθ. πολ. c. 51).

STRATEGUS. 'Αθ. πολ., c. 4, speaks of *στρατηγοὶ* in the time of Draco, mentioning the qualification that they must be married, and adding that they must have children over ten years of age. As the text stands we are told of a property qualification of 100 minae; but, since the qualification of an archon (at that time a more important office) was only ten minae. this is unlikely, and *ἕκαστον η'* (implying a qualification of eight minae) may be a truer reading than *ἢ ἑκατόν*.

The election of one strategus from each tribe in the time of Cleisthenes is mentioned in c. 57: we learn also that after the reforms of Cleisthenes they were still of lower rank than the archons and subordinate in military rule to the Polemarch (c. 22, *τῆς δ' ἁπάσης στρατιᾶς ἡγεμὼν ἦν ὁ Πολέμαρχος*). This bears out the account of Herod. vi. 109, 111, placing the growth of their importance later.

From c. 61 we learn that, instead of one being elected as in older times from each tribe, the ten were now chosen by *χειροτονία* from the whole body of citizens (*ἐξ ἁπάντων*), which obviously gave a greater freedom for choosing the best men. It is not, however, stated when this change was made.

The assignment of the five first strategi to special duties is mentioned as fixed and definite: 1. the commander of hoplites on service out of the country: 2. over the local defence and general-in-chief in case of invasion: 3. over Munychia: 4. over the shore (= the *χώρα παραλία* of *C. I. G.* 178, 179, as Mr. Kenyon remarks)—3 and 4 are reckoned together as *ἐπὶ τὸν Πειραιᾶ*: 5. *ἐπὶ τὰς συμμορίας*, the duties specified being to make out the register of the trierarchs, to carry out the *ἀντιδόσεις* and to preside at legal proceedings connected with the trierarchy (cf. p. 892 *a*). The other five strategi were employed as occasion demanded (*τοὺς δ' ἄλλους πρὸς τὰ παρόντα πράγματα ἐκπέμπουσιν*). It is added that the strategus could imprison and fine (*ἐπιβολὴν ἐπιβάλλειν*) anyone guilty of breach of discipline on service, but that the fine was rarely resorted to. It will be seen from the above that the treatise gives a clearer view of the question of election (discussed on pp. 719, 720), and a definite apportionment of their functions in more regular order (cf. p. 718 *a*). In this point the supposed date of the treatise will bear out Gilbert's deduction from inscriptions (*Gr. Staatsalt.* i. p. 221), that the special office of *στρατηγὸς ἐπὶ συμμορίας* began sometime between 334 and 324 B.C.; and agrees also with the fact, which he notices, that a further apportionment of offices, not here mentioned, such as *ἐπὶ τὸ ναυτικόν, ἐπὶ τοὺς ξένους*, &c. (presumably taking up the other five strategi), is traceable first in reference to an event (*C. I. A.* ii. 331) shortly before 315 B.C. (*i.e.* later than the date assigned to 'Αθ. πολ.).*

SYNEGORUS. For the *συνήγοροι τῶν λογιστῶν*, see App. *s. v.* EUTHYNE.

TAMIAS. The *ταμίαι*, who were required by the law of Solon to be *πεντακοσιομέδιμνοι* (cc. 7, 8, 47), are undoubtedly the *ταμίαι τῆς θεοῦ*. Here, again, a legal fiction came in: the property qualification was never actually repealed, but the poorest man was eligible in practice (c. 47). What is said of their duties contains nothing new, the passages having been extracted by the grammarians. The *ταμίαι τοῖς ἄλλοις θεοῖς* or *τῶν ἄλλων θεῶν*, *i.e.* of all except Athena, are mentioned c. 30; the passage, however, refers to the short-lived rule of the Four Hundred. The *ταμίαι* of the sacred triremes (see p. 761 *b*) are mentioned in 'Αθ. πολ. c. 61: *χειροτονοῦσι δὲ καὶ ταμίαν τῆς Παράλου καὶ ἄλλον τῆς* [*τοῦ* 'Α]*μμωνος* (cf. THEORIS; Gilbert, *Staatsalterth.* i. 330, n. 3). On this *ταμίας* see also Köhler in *Mittheil. des archäol. Instituts*, viii. 165 ff. Inscriptions show that the *ταμίας* of the Paralos could also be trierarch of another ship: *C. I. A.* ii. 804 b, line 66, and *ib.* 808. The *ταμίας τῶν στρατιωτικῶν* (p. 761 *b*), in addition to his military duties, is curiously enough associated with the *βουλὴ* in matters connected with the Panathenaic festival (c. 49). See also App. *s. v.* ADYNATI.

TETTARACONTA, HOI. Their origin is now ascribed to Pisistratus ('Αθ. πολ. c. 16); their number at this time is not stated. They reappear under Pericles, B.C. 453, and are then thirty (c. 26). In c. 53 their duties are described: ten drachmas as the limit of their competence to decide; and the traditional reason for the change of number from thirty to forty. The opening words, *Κληροῦσι δὲ καὶ τετταράκοντα, τέτταρας ἐξ ἑκάστης φυλῆς*, now supply documentary evidence for the view maintained in our concluding paragraph (p. 809 *b*), which hitherto has rested partly upon conjecture.

THEORICON. According to c. 43 of 'Αθ. πολ. the superintendents of the *θεωρικὸν* were elected, not chosen by lot: from the same chapter it is clear that there were more than one, since the plural *τῶν ἐπὶ τὸ θεωρικὸν* is contrasted with the singular *ταμίας στρατιωτικῶν*. It is even more impossible to get over (by such an argument as Gilbert uses for the passage in Aeschin. *c. Ctes.* § 25) the words in c. 47, *μετὰ τοῦ ταμίου τῶν στρατιωτικῶν καὶ τῶν ἐπὶ τὸ θεωρικὸν ᾑρημένων ἐναντίον τῆς βουλῆς κατακυροῦσιν*, &c. The evidence therefore from this treatise is opposed to the view supported by Gilbert (*Gr. Staatsalt.* i. 230) and Fränkel (note on Boeckh, *Staatsh.* i. p. 225), and may incline us to hold, with Boeckh, that there were more than one.

As regards the payment of two obols [see DIOBELIA; THEATRUM, p. 819 *b*; THEORICON, p. 526 *a*], there is a passage in 'Αθ. πολ. c. 28, *μετὰ δὲ ταῦτα κατέλυσε Καλλικράτης Παιανιεὺς πρῶτος ὑποσχόμενος ἐπιθήσειν πρὸς τοῖν δυοῖν ὀβόλοιν ἄλλον ὀβολόν*. If this means that Callicrates raised the *θεωρικὸν* for any continued period to 3 obols for a single spectacle, it is at variance with other authorities. But the words *πρῶτος ὑποσχόμενος*, &c. seem to imply that it was a promise of a demagogue, imitated afterwards by others, which was either never carried out at all or revoked soon after. This would illustrate Arist. *Pol.* ii. vii. 19 = p. 1267 b.

THEORIS. The office of a treasurer for the Paralus and the Ammonis or Ammonias is noticed in c. 61 (see note on TAMIAS). That a treasurer of the Salaminia is not mentioned agrees with the account supported by Boeckh and Fränkel (*op. cit.*), that in the course of the 4th century B.C. *Salaminia* ceased to be the name of a sacred ship, appearing as that of an ordinary war-ship (for which a trierarch is mentioned) in the navy records. Fränkel notes as the earliest inscription in which the name so appears one of B.C. 357 (*C. I. A.* ii. 793). If the argument is correct, it follows that from that date until the Ammonis was built we have mention of only one ship, the Paralus, which can have been available for theoriae, other than the mission to Delos. Fränkel has observed that the sacred ships are not included in the navy records. Such names as *Delias*, *Hiera*, *Theoris* occurring in the lists of war-ships do not denote a special destination. The reference to Plutarch should be *Thes.* 23.

TRIBUS. The four old-Ionic tribes were of immemorial antiquity, and were retained unaltered by Solon, being still divided into *τριττύες* and *ναυκραρίαι* ('Αθ. πολ. c. 8). The constitution of Cleisthenes is described at length in c. 21, and the writer brings out forcibly the desire of the legislator to break up the old organisations and party ties: cf. DEMUS, Vol. I. 615 *a*. He did not adopt the number of twelve tribes, as that would have coincided with the old division of the four tribes into twelve *τριττύες*: he divided each of his ten tribes into *τριττύες* on a new principle, assigning one *τριττὺς* to the *ἄστυ*, one to the *παραλία*, and one to the *μεσόγεια*, *ὅπως ἑκάστη* (*φυλὴ*) *μετέχῃ πάντων τῶν τόπων*. The theory, already advanced as probable, that the city and ports now formed ten demes, one belonging to each tribe, thus becomes almost a certainty [DEMUS, *l. c.*].

TRIEROPOEI. See App. *s. v.* BOULÉ. In the words of c. 46, *ποιεῖται δὲ* (*ἡ βουλὴ*) *τὰς τριήρεις, δέκα ἄνδρας ἐξ* [*ἁπάντων*] *ἑλομένη τριηροποιούς*, we suggest that the lacuna is to be supplied with *ἑαυτῆς* rather than *ἁπάντων*. The *τριηροποιοὶ* may possibly have been a subordinate body appointed by, as they were unquestionably responsible to, the *βουλῇ*: but it is more likely that they were a committee of the Bouleutae themselves.

---

* Since the above was in print, a writer in the *Quarterly Review* has given reasons for believing that the date of the treatise is much later (*Q. R.* for April 1891, p. 345).
